The simple *ieg* = OHG. *awwa*, *ouwa*, MHG. *ouwe* Ger. *aue*, *au*, corresponded to Gothic type **ahwiwo*, *ahwjō*, a substantivized fem. of an adj. derived from *ahwa* 'water' (OS. and OHG. *aha*, OFris. and ON. *á*, *ǽ*, *á*), with sense of 'pertaining to water', 'watery', 'watered', and hence 'watered place, meadow, island'. A cognate compound frequent in OE. was *ēaland*, lit 'water-land', 'river-land', and a deriv. of the simple *ieg*, *ēg*, exists in *eyot*, *ait*. The ordinary ME. and early mod. Eng. form was *sland*, *iland*. (*Iland* in 14–15th c. may repr. OE. *ēaland* or *eyland*.) In 15th c. the first part of the word began to be associated with the synonymous *ile*, *yle* (of French origin), and sometimes analytically written *ile-land*, and when *ile* was spelt *isle*, *iland* erroneously followed it as *isle-land*, *island*, the latter spelling became established as the current form before 1700.

1. A piece of land completely surrounded by water: formerly used less definitely, including a peninsula, or a place insulated at high water or during floods, or begirt by marshes, a usage which survives in parts of our instances, as Portland Island, Hayling Island, Mochrum or Shell Island, etc.

-ism, *suffix*, repr F. *-isme*, L. *-ismus*, a Gr. *-ισμός*, forming nouns of action from verbs in *-ίζειν*, e g. *βαπτίζειν* to dip, baptize, *βαπτισμός* the action of dipping, baptism An allied suffix was *-ισμα*(τ-), which more strictly expressed the finished act or thing done, and which in some cases is the source of modern *-ism*

Besides its free use as a suffix forming vbs on ordinary sbs and adjs, -ιζω was as mentioned under -IZE) affixed to national names, with the sense to act or 'play' the people in question, and hence to act like, do after the manner of, practise the habits, customs, or language of, side with or adhere to the party of, those people Hence the sb. -ισμος had the sense of acting or doing like, siding with, adhesion to, or speaking like the people or party of, e g Αττικίζειν to Attize, to side with the Athenians, to use the Attic dialect, hence *Αττικισμος*, Attism, a siding with Athens, Attic style of language, etc In LXX -ιζειν with 117) and NT have 'Ιουδαΐζειν to Judaize, to live like the Jews The derivative Ιουδαισμός Judaism, the manner of the Jews, occurs in the LXX (2 Macc ii 21) and NT The Latin *Judaizare* occurs in Tertullian (c 200), *Judaizare* in the Vulgate Origen (c 250) has *Χριστιανίζειν* to play the Christian, act the part of a Christian, practise Christian principles, and Justin Martyr (c 150) has *Χριστιανισμός* the practice of Christians, Christianity Hence late L. *Christianismus* in Tertullian, *christianismus* in Tertullian, Augustine and Jerome On the type of these, *-ισμος -ismus*, became the ordinary ending to form names of religious, ecclesiastical, or philosophical systems, thus *βαπτισμος* is cited by Du Cange from a council of 744 The OE repr of this, *fulluhtes, fulluhtnes, fulluht* (with *c* as prob. the earliest F. example, and appears in Fug as *fatunne, fatunn* in the 15th c But, in the modern form and sense, *Judaisme* is found a 1500, and *christianisme* (a 1500 in Pr.) c 1595 in Eng From the 16th c such formations are numerous.

The following are the chief uses of the suffix

1 Forming a simple noun of action (usually

accompanying a vb in -IZE), naming the process, or the completed action, or its result (rarely concrete), as in *agonism*, *aphorism*, *baptism*, *criticism*, *embolism*, *exorcism*, *magnetism*, *mechanism*, *mesmerism*, *organism*, *plagiarism*, *ostracism*, *syllogism*, *synchronism*, *volcanism* To this group in Gr. belonged *asterism*

b Allied to these, though with affinities to 2, are words in which *-ism* expresses the action or conduct of a class of persons, as *heroism*, *patriotism*, *despotism*, and the more colloquial *blackguardism*, *busybodyism*, *despectadosism*, *priggism*, *scoundrelism*; also the condition of a person or thing, as *barbarism*, *deaf mutism*, *orphanism*, *anomalism*, *mediævalism*, *parallelism*; also *Dalloonism*, with such nonce-words as *bar-mandism*, *old maidism*; *all-roundism*, *cleverism*, *devil-may-care-ism*, *well to do ism*

2 Forming the name of a system of theory or practice, religious, ecclesiastical, philosophical, political, social, etc, sometimes founded on the name of its subject or object, sometimes on that of its founder Such are *Alexandrianism*, *Arianism*, *Arminianism*, *Brahmanism*, *Buddhism*, *Calvinism*, *Catholicism*, *Charlism*, *Christianity*, *Congregationalism*, *Conservatism*, *Epicureanism*, *Judaism* (a 1400), *Latitudinarianism*, *Liberalism*, *Machiavellism*, *Mohammedanism*, *Platonism Positivism*, *Presbyterianism*, *Protestantism*, *Puritanism*, *Pusseyism*, *Quakerism*, *Quietism*, *Radicalism*, *Rationalism*, *Romanism*, *Sacramentalism*, *Taoism*, *Toryism*, *Wesleyanism*, *Whiggism*

These pass into terms of more or less temporary currency, as *Berkeleyism*, *Bonapartism*, *Jeremy Benthamism*, *Canadianism*, *Chartism*, *St Simonism*, with nonce words formed *ad libitum*, as *John Bullism*, *Robert Elsmerism*, *Mahdiism*, and others designating the cult of a person or family, as *Bonapartism*, *Bourbonism*, *Brownism*, *Gladstonianism*, *Salisburyism*, *Stuartism*, etc

b More of the nature of class-names or descriptive terms, for doctrines or principles, are *agnosticism*, *altruism*, *amateurism*, *atheism*, *bimetallism*, *deism*, *egoism*, *egotism*, *empiricism*, *evangelism*, *fanaticism*, *feminism*, *heathenism*, *hedonism*, *idealism*, *imperialism*, *jingoism*, *libertinism*, *monachism*, *naturalism*, *opportunism* *pedobaptism*, *paganism*, *polytheism*, *realism*, *romanticism*, *sansculottism*, *scepticism*, *stoicism*, *theism* *universalism*

These lead the way to nonce-formations of many kinds, often humorous, of which the following are specimens chiefly from newspapers *anti slaveryism*, *anti statechurchism* *anti whole hogism* *can't help myself ism*, *know nothingism*, *Little Peddlingtonism* [∧ *Bosun after dessert*, *nothing artificial*, *eighteenthly ism*, *nihilism*, *I. R. Baim*, *Primrose Leaguism*, *red tapeism*, *Rule-Britannia museum*, *self ism*

3 Forming a term denoting a peculiarity or characteristic, esp of language, e g *Celticism*, *Americanism*, *Anglicism*, *Atticism*, *Devonshirism*, *Gallicism*, *Gr ecism*, *Hebraism*, *Hellenism*, *Latinism*, *Orientalism*, *Scotticism*, *Southernism*, *Westernism*, etc To these add such as *archaism*, *Coelasticism*, *colloquialism*, *modernism*, *newspaperism*, *solecism*, *sophism*, *vulgarism*

Also denoting a peculiarity or characteristic of the language, style, or phraseology of a writer, speaker, character in fiction, etc, as *Brownnigganism*, *Carlylism*, *Dickensy ism*, *Gobbensm*, *Montagueism*, *Macaulayism*, and similar nonce words without number

Adjectives pertaining in sense to sbs in *-ism* are formed in -ISTIC, e g *atheism*, *atheistic*, *naturalism*, *naturalistic*

Iso- ɪ·sō-, before a vowel sometimes **is**, combining form of Gr *ἴσος* equal, used in numerous terms, nearly all scientific, the second element being properly and usually of Greek origin, rarely of Latin (the proper prefix in the latter case being EQUI-) The more important of these words are treated in their alphabetical places, others, of less importance or frequency, follow here

Many recent words of this class are terms of Physical Geography, Meteorology, etc formed on the analogy of *isotherm*, *isotherm*, *isothermal* The Gr originals of which were introduced by Alexander Humboldt in 1817

Isocracy (aisǫ·krăsi) [ad Gr *ἰσοκρατία* equality of power or political rights, f *ἰσο-*, Iso- + *κράτος*, *κρατ-* strength, power see -cracy] Equality of power or rule, a system of government in which all the people possess equal political power

1851 L S *Peoples Liberty* VII 12 It remaineth doubtfull, whether people who live together, may lawfully retaine an Isocracie among them 1796 Southey in *Life* I 265 There is a very seditious Spaniard there now, preaching Atheism and Isocracy 1879 *F* Hall in *Nation* (N Y) XXVIII 155/1 Aspirations after social isocracy, and socialism in all its protean aspects 1895 *Q Rev* Apr 456 A debasing isocracy, which already views with suspicion the cultivation of the highest literature as savouring of patrician insolence

So **Isocrat** (ai sǫkrat) [see -crat] An advocate of isocracy, **Isocra tic** *a*, of or pertaining to or advocating isocracy, **Iso cratize** *v trans.* to practise isocracy

1851 Southey *Comm pl Bk* Ser II (1851) 3.2 The young hopes and the wit of Japhet may force him into a Berkeley interest, he should be for isocratizing 1894 *Daily News* 28 June 6/3 The new name which Mr Allen suggests and Mr Reid adopts is "The Isocratic Party" Isocrats we are, Isocrats let us call ourselves

Isocrymal (aisǫkrai·măl), *a* and *sb Phys Geog* [f Iso- + Gr *κρῦμός* cold + -al] A *adj* Applied to lines on a map, etc, connecting places at which the temperature is the same during a specified coldest part (*e g* the coldest 30 consecutive days) of the year *b sb* An isocrymal line, also **Isocryme** (ai sǫkrɪm)

1850 Dana *Geol* II 1451 The lines are isothermal lines, or, more properly, *isocrymal* lines *Ibid* 1451 It is no objection to using the isotherms, that those towards the equator are much more irregular in course than the two temperate zones 1851 The fitness of the other isocrymals for the purposes of illustrating the geographical distribution of marine species

Isodiabatic (aisǫ·daiăbæ·tik), *a Physics* [f Iso- + Gr *διαβατικός* able to pass through, cf Adiabatic] Relating to or indicating the transmission of equal amounts of heat to and from a body or substance

1890 in *Cent Dict* *Phil Trans* CXLIV 128 It is required to find, by the determination of points, a corresponding curve passing through a given point *B*, such, that the quantity of heat absorbed or emitted by the substance in passing, from any given isothermal curve to another, shall be the same, whether the pressures and volumes be regulated according to the original curve, or according to the curve passing through the point *b* This curve, and the curve *F f*, in their relation to each other, may be called *curves of Equal Transmission* 1899 — *Nature Log* (1865) 345 The lines *F B* and *G H* have the required property, and are said to be isodiabatic with respect to each other

Isodiametric (aisǫdaiămetrik), *a* [f Iso- + Diametric] Having equal diameters, *spec* applied in *Bot* to cells of rounded or polyhedral form, in *Cryst* to crystals having equal lateral axes

1884 Bower & Scott *De Bary's Phaner* 117 The forms of thin walled parenchymatous cells are in the main nearly iso diametric, but there often occur also elongated prismatic, spindle shaped cells, and the like 1885 Goodale *Phys Bot* (1892) 80 Some prismatic shapes [of cells] may be distinguished short or isodiametric, elongated, and flattened

So **Isodiame trical** *a* = prec

1886 *Proc R Soc Edinb* XIII 1 Ser IV 110 Cells which may be either isodiametrical or elongated in a direction either parallel to or at right angles with the axis

Isodomous, **-mum** (aisǫ·dŏmŏs, -mŏm) *Anc Gr. Arch* [Gr *ἰσοδομος* (f *ἰσο-*, Iso- + *δόμος* layer of course in a building) A method of building in which blocks of equal length were laid in courses of uniform thickness, each vertical joint of a course being above the middle of a block in the course next below

1601 Holland *Pliny* II 503 The Greekes haue a kinde of wall which they make of hard pebbles or flint couched one and laid in order by line and leuell like as we doe in brick worke and this kind of building they call in Masonrie Isodomon 1842–76 Gwilt *Archit* (ed 7) Gloss, *Isodomum* one of the methods of building walls practised by the Greeks

Isodomous (aisǫ·dŏmăs), *a* [f as prec + -ous] Of the nature of, or belonging to, Isodomon

1850 Leitch tr *C O Müller's Anc Art* (ed 2) 219 The walls are isodomous or pseudoisodomous often also with oblique joints 1865 C J Newton *Trans Treasur* VII 93 At the foot is a piece of ancient wall, composed partly of polygonal, partly of isodomous blocks

Isodynamic (aisǫdinæ·mik), *a* (*sb*) [f Gr *ἰσοδύναμ-ος* equal in power + -ic after *dynamic*] Of or pertaining to equal force

1 *Phys Geog*, etc Indicating equal (magnetic) force; applied to lines connecting points (of the earth's surface, etc.) at which the intensity of the magnetic force is the same, or to a map or chart on which such lines are marked Also as *sb* An isodynamic line

1837 Brewster *Magnet* 54 M Hansteen has projected on a map of the globe the lines passing through the places in which the magnetic intensity has the same value These lines he calls isodynamic lines or the set of equal force, and they are generally speaking, nearly parallel to each other, and to the lines of equal dip 1839 Sabine (*title*) Report on the Magnetic Isoclinal and Isodynamic Lines in the British Islands 1859 Whewell *Hist Indict* 3d (ed 3) III 52 The intensity of the magnetic force is expressed by charts on which are drawn the isodynamic curves

2 Of equal force, value, or efficacy

1848 *Blackw Mag* LIII 740 Forty gallons of water in the Black Hole of Calcutta, would have been rated as isodynamic with gold

Isodyna·mical, *a* [f as prec + -al] = prec 1

1837 Brewster *Magnet* 31 Professor Hansteen resolved to determine the form of the lines of equal intensity or as he calls them, the *isodynamical* magnetic lines 1890 R M Ferguson *Electr* 44 In 1837, Colonel Sabine published an isodynamical chart of the whole globe

Isodynamous (aisǫdi·năməs), *a Bot* [f as prec + -ous] Growing with equal vigour on both sides = *isobryous* see Iso-

1835 Lindley *Introd Bot* (1848) II 67 Cassini suggests isodynamous or isobryous for dichotyledons 1855 in Mayne

Isogamy (aisǫ·gămi) *Biol* [f Iso- + Gr *γαμος*, *-γαμια* marriage] The union of two equal and similar 'gametes' or cells in reproduction, as in conjugation So **Isogamete** (aisǫ·gămīt) [Gr *γαμέτης*, *γαμετη* spouse], each of the two uniting cells, in isogamy **Isogamous** (aisǫ·gămăs, *a*, characterized by isogamy

1891 Hartog in *Nature* 17 Sept 484 *De Bary*, the union of gametes unlike in size, form, and behaviour *Ibid*, the union may be isogamous, or anisogamous *Ibid*, True Parthenogenesis may occur in the case of the Isogametes (a) Anisogametes male and female (b) Oogametes

Isogen (ai·sǫjĕn) [f Iso- + Gr *γένος* offspring] A line or curve in a diagram showing the various combination of the ages of the parents which are associated with the same average birthrate

1894 F Galton in *Proc Royal Soc* 12 Jan, In natality tables, the ages of the father and mother take the place of the latitudes and longitudes in weather charts and lines of similar birth rates, or, as I would call them, "isogens", take the place of isobars

Isogenous (aisǫ·dʒĕnŏs, *a Biol* [f eccl Gr *ἰσογενής* equal in kind or nature (f *ἰσο-*, Iso- + *γένος* race, descent kind) + -ous] Having the same or a similar origin said of organs or parts, in different groups of animals, derived from the same or corresponding tissue of the embryo So **Isogeny**, the condition of being isogenous

1884 *Wood Nat Hist* (1888) I Introd 17 A general homology may be indicated by the word isogeny, indicating a general community of origin, thus, the metameric indents of worms, arthropods, molluscs, and vertebrates are isogenous, all being derivations of the epidermis

Isogeotherm (aisǫdʒī·ŏpəɹm) *Phys Geog* [f Iso- + Gr *γεω-* earth + *θέρμη* heat, *θερμοτ* hot cf *geothermic*, etc] A line or surface (usually imaginary) connecting points in the interior of the earth having the same temperature, an isogeothermal line

1864 in Webster 1877 Le Conte *Elem Geol* II (ed 2) 78 If the rate of increase were everywhere the same, the isogeotherms would be everywhere concentric 1881 Judd *Volcanoes* 399 In the isogeotherms or lines of equal heat the depths at which the same mean temperature is found within the earth's crust

Hence **Isogeothe rmal**, **Isogeothe rmic** *adjs*, of the nature of an isogeotherm, indicating equal temperatures in the interior of the earth

1832 De la Beche *Geol Man* (ed 2) 13 If we draw lines through all the points which have the same terrestrial temperature these are the *isogeothermal lines* resemble the isothermal, as they are parallel to the equator, but diverge from it in several points 1834 Mrs Somerville *Connect Phys Sc* xxvi (1849) 297 Lines drawn through all those points in the upper strata of the globe which have the same mean annual temperature are isogeothermal lines

Isogon (ai·sǫgŏn) *Geom rare*—° In 7–8 *erron* isagon [f Gr *ἰσογων-ος* of equal angular] A figure having equal angles

1696 Phillips (ed 5) *Isagon* So 1706 in Moxon *Math Dict* 1708 in Bailey

Isogonal (aisǫ·gŏnăl), *a sb* [f as prec + -al cf *hexagonal* etc.]

1 = Isogonic *a* 1 and *sb*

1857 Whewell *Hist Indict* 3d (ed 3) III 52 The values of these elements at any given time ... can be expressed by charts of the earth's surface, on which are drawn the isodynamic, isogonal and isoclinal curves *Ibid* 54 The isogonal curves may be looked upon as deformations of the curves deduced by Euler from the supposition of two poles

2 Having equal angles, equiangular

1878 Gurney *Crystallogr* 21 When the angles between two adjacent planes lying in one zone are equal to each other they constitute an isogonal (or equal angled) zone

Isogonic (aɪsəgɒ·nɪk), *a.*[1] (*sb.*) *Phys. Geog.* [f as prec. + -IC.] Indicating equal angles (of magnetic variation), applied to lines on a map, etc connecting points of the earth's surface where the magnetic declination or variation from the true north, is the same, or to a map, etc exhibiting such lines. Also as *sb.* An isogonic line

1851 J. SABINE in *Mem. Ast. Soc.* XIX. 97 The Isogonic lines have a direct practical importance and value in navigation
1870 R. M. FERGUSON *Electr.* 27 The lines of equal declination are called *isogonic* lines, those of equal dip *isoclinic* and those of equal intensity *isodynamic* lines. 1875 DAVIS *Polaris & its* App. 642 With regard to the variations of the compass, as derived from an isogonic chart. 1892 THOMPSON *Ader. Isogo nic, *a.*[2] *Biol.* [f as next + IC. cf. Gr *γονικός* ancestral.] Characterized by isogonism

In mod. Dicts.

Isogonism (aɪsɒ·gɒnɪzm) *Biol.* [f. Iso- + Gr *γωνός, γονή* offspring + -ISM. Cf. Gr *ἰσο γονια* equality of kind.] The production of sexual individuals of the same structure from different stocks, occurring in some *Hydrozoa*

1884 SEDGWICK & HEATHCOTE in *Camb. Zool.* I. VII. 240 Medusæ of identical structure also, which one would place in the same genus, may form the sexual generations of hydroid stocks belonging to different families: *isogonism*

Isogram (aɪ·sɪgræm) [f. Iso- + GRAM.] A proposed general term for lines on a diagram, etc. indicating equality of some physical condition or quantity, as isotherms, isobars, etc

1889 F. GALTON in *Nature* XL. 183 Isobars, isotherms, and other contour lines (to which the general name *isogram* might well be given)

Isographic (aɪsɒgrɑ·fɪk), *a.* [f. Iso- + GRAPHIC. Cf. Gr *ἰσογραφος* writing like.] = HOMALOGRAPHIC *1*

1872 PROCTOR *Fix. Astron.* XXIII. 283 M. Babinet called it the *Annalographic* projection of the globe, the term *isographic* seems preferable, however

Hence **Isogra phically** *adv.*, in the way of isographic projection

1. *Chem.* Composed of the same elements in the same proportions, and having the same molecular weight, but forming different substances, with different properties (owing to the different grouping or arrangement of the constituent atoms). Said of two or more compounds, or of one compound in relation to another (const. *with*)

This was the sense in which the term was introduced by Berzelius, but many later chemists (e.g. Wanklyn in Watts' *Dict. Chem.* 1865) have applied it in a wider sense, so as to include also the *polymeric* compounds of Berzelius, i.e. those which have the same elements in the same proportions, but the number of atoms in one a multiple of those in the other, e.g. butyric acid $C_4H_8O_2$ and aldehyde C_2H_4O; by these the isomeric compounds of Berzelius have been distinguished as *metameric*. More recent authors again (e.g. Tilden in *Inorganic Chem.* 1886) have used these terms more narrowly, subdividing the *isomeric* Berzelius into *isomeric strictly so called*, and *metameric*, the former being compounds of the same molecular composition, which exhibit the same or closely similar decompositions and transformations, when subjected to the action of the same reagents, such as the C_6H_{14} hydrocarbons, the glucoses, the tartaric acids, etc., the latter, those which exhibit dissimilar transformations under similar circumstances, as propionic acid, methyl acetate, and ethyl formate $C_3H_6O_2$.

Isotheral (aisǫ þĕrăl, ai sǫþĕrăl), *a* and *sb* [f next or its F original *isothère* + -al (The etymological form from Gr would be *isotheral*)]

a *adj* Applied to lines on a map, etc connecting places having the same mean summer temperature b *sb* An isotheral line, an isotherm of mean summer temperature

1839 [see Isochimal] 1850 Dana *Crust* II 1452 There are several reasons why isocrymal are preferable to isotheral lines 1867 Proctor in *Intell Observ* No 60 118 The isotheral of London 1873 J Gwyther *Gl Ice Age* xxx 427 The charts of isotheral and isothermal lines

Isothere (ai sǫþēr) *Phys Geog* [a F *isothère* = *ligne isothère*), introd by Humboldt, 1817, a Gr *ἰσο-* Iso- + *θέρος*, *θερ-* summer] An imaginary line passing through points on the earth's surface that have the same mean summer temperature

1852 Dana *Crust* II 1453 It is no objection to using the isotheres, that those towards the equator are much more irregular in course than the isocrymes

Isotherm (ai sǫþĕrm) *Phys. Geog* [f F *isothermе*, introd by Humboldt, 1817, f Gr *ἰσο-* Iso- + *θέρμη* heat, *θερμ-ός* hot] An imaginary line passing through points on the earth's surface having the same mean temperature, an isothermal line see next

1860 Maury *Phys Geog Sea* (Low) vii 171 The isotherm of 65° skirts the northern limits of the sugar cane 1880 *Times* 26 Aug 11/4 The isotherms are still distinctly of the summer type, but the difference between the temperatures at the inland and the coast stations is smaller

Isothermal (aisǫþē·rmăl), *a* and *sb* [f F *isothermе* (see prec) + -al]

A *adj* Of, pertaining to, indicating, or corresponding to equal temperatures, a *esp* in *Phys Geog* applied to a line (imaginary or on a map, etc) connecting places on the earth's surface at which the temperature for a particular period, or (usually) the mean annual temperature, is the same, also to a map or chart exhibiting such lines

1806 Kirby & Sp *Entomol* IV xlix 484 Fixed by the will of the Creator, rather than regulated by any isothermal lines 1830 Lyell *Princ Geol* I 106 The lines of equal winter temperature do not coincide with the lines of equal annual heat, or the isothermal lines 1880 Haughton *Phys Geog* vi. 278 In Europe 51° N Lat., which corresponds to the same isothermal line as 39° N Lat in America.

b Applied to (imaginary) lines or surfaces of equal heat in a crystal or other body when heated

1854 J Scoffern in *Orr's Circ Sc, Chem* 137 In crystals having two optic axes if a centre of heat be assumed to exist within, and the crystal to be indefinitely extended in all directions, the isothermal surfaces will be ellipsoids with three unequal axes 1871 B Stewart *Heat* § 281 1895 Story Maskelyne *Crystallogr* 1 § 11 As the form is invariably found to be either circular or elliptical, the continuous isothermal surface which would result from the maintenance of a given temperature at a point inside a crystal must be either a sphere, a spheroid, or an ellipsoid.

B *sb* An isothermal line or surface; an isotherm

1822 Dana *Crust* II 1453 The difficulty of dividing this space by convenient isothermals 1872 Nicholson *Palæont* 503 The present limit of trees is the isothermal which gives the mean temperature of 50° Fahr in July, or about the parallel of 69° N latitude 1875 Lyell *Princ Geol* II II xxxiii 231 The planes of the subterranean isothermals or surfaces of equal temperature being thus made to vary 1875 *Academy* 21 Aug 202/1 Professor Mayer describes the method invented by him for obtaining registers of the iso thermals on the sun a disc

+3 *attrib*, corresponding to F *-issue*, L *-issus*, Gr *-ιστής*, forming agent-nouns from verbs in *-ίζειν* (see IZE, consisting of the agential suffix *-της* added to the verb stem, as in *Βαπτίζ-ειν* to dip, *Βαπτισ-τής* dipper, L *baptista*, F *baptiste* baptist cognate to the suffix *-ιστης, -ιστ*

Examples of this use are *Agonistes* combatant, competitor, *λογιστης* calculator, *πολεμιστης* warrior, *σοφιστης* clever man, sophist, *κιθαριστης* player on the cithara, *Ναυστης* sailor, *Ναυσιστης* mariner, *Ναυσιστης* drummer, *Ναυσιστης* a partisan of Athens, one who Atticizes, *Ελλησιστης* a Hellenizer, one who speaks Greek, *Λακωνιστης* one who sides with or imitates Lacedæmon, or uses laconism A few words of this form were taken into Latin during or soon after the classical period, e g *citharista, cymbalista, flautista* (whence F *joueur de flute*), *psaltista, tetanistes* (rope dancer), *sophista tympanista*, the number of these was greatly increased by Christian writers, in the latinizing of scriptural and ecclesiastical terms, such as *agonista, baptista, cathedrista collybista, evangelista, exorcista, psalmista, tocsista* In later use, *-ista* became a favourite formative of names denoting the observers of a particular rule, the holders of special religious or philosophical tenets, or the adherents of particular teachers or here siarchs, but such names as *Catharistae, Origenistae, Platonista*, and in scholastic use *Scotista, Thomista, nominalista, realista*, etc Hence the suffix (with the needful adaptations, e g *-iste*, Eng *-ist* Ger *-ist*, etc) has passed into the modern languages In English, its use has received a wide extension, it being now used not merely as the agent-noun to the *-ize* (as beside *tease*, *tantalize*, *plagiarist*, and in association with nouns of action or function in *-ism*, as in *altruism, altruist*, but also, on the analogy of the multitude of like formations, having no corresponding words in *-ize* or *-ism*, which denominate the professed followers of some leader or school, the professional devotees of some principle, or the practisers of some art In some cases, the form in *-ist* approaches closely to the native agent noun in *-er*, being distinguished only by the more professional or systematic sense which it implies, as *conformer, conformist*, *copier, copyist*, *cycler, cyclist*, *philologer, philologist* Many of the *sbs* in *-ist* give rise to adjs. in *-istic*, -*istical*, but words of modern formation are to a great extent used adjectively unchanged, as in the *royalist* party, a *Bonapartist* plot, *nonconformist* principles.

The following are the chief modern English uses of the suffix

1 Forming a simple agent-noun derived from a Gr verb in *-ίζειν*, and often accompanying an Eng. verb in *-ize* Such are *agonist, antagonist, baptist, catechist, epistomist, evangelist, exorcist, apologist, plagiarist, ostracist, syllogist*

2 Designating a person who practises some art or method, or who prosecutes, studies, or devotes himself to some science, art, or branch of knowledge, originally expressed by a word of Greek formation in *-ία* (Eng *-y*), *-μα(τ)* (*-ma, -m*), *-η -ε*), etc, but in later examples, also by words of Latin or other origin Such are *archæologist, chronologist, economist, etymologist, genealogist, geologist meteorologist, mineralogist, mythologist, philologist, physiologist, zoologist, alchemist, algebraist, anonymist, botanist, chemist, medallionist, microscopist, phlebotomist, physicist, physiognomist, theorist, academist, chirographist, monopolist, rhapsodist, symmetrist, bigamist, monogamist, polygamist, dogmatist, dramatist, epigrammatist, schematist, etc* To these may be added (from I sources) *annalist, capitalist, journalist, memorialist, materialist, moralist, satirist, scientist* (L. *scientia*), etc

These have a possible verb in *-ize*, often in use e g *anatomist, botanist, dogmatist, dramatize, economist, enlighten, journalize, memorialize, moralize, theorize*, etc

3 Designating an adherent or professor of some creed, doctrine, system, or art, which is usually denominated by a cognate *-ism* e g *altruist* (a professor of *altruism*), *animist, atheist, Charlist, deist, egoist, egotist, hedonist, monothelist, pedobaptist, polytheist, ritualist, ventriloquist*, etc, with a large number derived from personal names, as *Bonapartist, Brownist, Buddhist, Calvinist, Darwinist, Hattemist, Scotist, Spinozist, Thomist, Wyclifist*, and nonce-words without limit, as *I Lambist, Lockeist, Stuartist, Wiesmannuist*, etc.

b Formed on an adjective (usually also with a cognate *sb* in *-ism* and often as *adj* in *-istic*), as *devotionalist, externalist, fatalist, formalist, humanist, idealist, imperialist, loyalist, materialist, naturalist, nominalist opportunist, pluralist, positivist, purist rationalist, realist, royalist, socialist, universalist*

4 Formed from other *sbs* (chiefly Latin) without accompanying words in *-ism* or *-ism*, and denoting one whose profession or business is carried on with the thing or subject in question, as *amorist, artist, canonist, casuist, colourist, decretist, dentist, duellist, fashionist, florist, humorist, jurist, linguist, medallist, novelist, nonvaluist, oculist, opinionist, organist, querist, statist, tobacco(n)ist* Also from names of languages, as *Americanist, Anglist, Germanist, Hebraist, Latinist, Slavonist, Sanskritist* Sometimes, from *vbs*, as *conformist, confutist, controvertist, favourist, impartist, separatist specu latist*

b These lead the way to modern formations from current words of all kinds and even from phrases, as *balloonist, billiardist, bimetallist, cellist cocainist, cyclist, fetishist, footballist*, with such nonce-formations as *hammerist, selfist, semi-finalist, truthist, great author, physical forcist, red tapist, second adventist*, etc

Words in *-ist* are treated, according to their importance, in their alphabetical places, or under the Main words on which they are formed, the following are illustrations of some of those more trivial or ephemeral character, nonce-words, and the like

-ister, +-istre, suffix repr Fr *-istre*, a by-form of *-iste*, *-ist*, considered by French etymologists to have arisen through false analogy with words like *ministre* Found in OF at an early date, as in *evangelistre* (12–13th c in Godef *Compl*), beside *evangeliste*, *secretistre*, *decretistre*, *legistre*, *haste* or *latte* (reader), etc From OF, these forms passed into English, where they were spelt first *-istre*, as in *alkamystre*, *decretistre*, *divinistre*, *legistre*, *lustre*, *questistre*, afterwards *-ister*, as in *alchimister*, *chaustier*, *palmister*, *sophister* In this latter form, the *-er* was appropriated with the native suffix *-er*, which appears as an addition to any nouns denoting office or occupation, derived from or through Fr, as *astrologer*, *astronomer*, *geographer*, *parishioner*, *practitioner*, *+musicianer*, etc

It (it), *pron* [The neuter nom and acc of the (orig demonstr) stem *hi*, the nom masc of which is He, q v OE. *hit* was identical in form and sense with OFris *hit* (*het*), OLFrankish *hit*, MDu *het*, *hut*, Du *het*, and in form identical with Goth. *ita*, which remained a demonstr., 'this.' The pronoun was in Goth *ita*, corresp to OLG (OS., OMFrank.) *it*, MHG *it* (*et*), LG *et*, OHG *iz* (*ez*), MHG *ez*, Ger *es*, from the parallel stem *i-*. OE. *hit* was nominative and accusative, the dative and genitive were *him*, *his*, identical with the same cases of the masc. He. During the ME period, *hit* lost its initial *h*, first when unemphatic, and at length in all positions in Standard Eng.; this lectally, the *h* was preserved to a much later period, esp in the north, and in Sc *hit* is still the emphatic, and *it* ('t, 'd) the unemphatic form Dialectally or colloquially, and to some extent in the literary language (though less now than formerly), *it* is further reduced in certain positions to *I* (*e.g. 'Tis, 'twas, 'twere, is't, was't, is't, d'ye, I'll, in I, on I*), which in some dialects becomes, esp after a long vowel, *'d* While in the masc the original acc *hine* was supplanted by the dative *him*, in the neuter, on the contrary, the dative *him* gradually yielded to the acc form *hit, it* This was not yet complete in the beginning of the 17th c. In the 16th c the tendency arose to restrict the genitive *his* to the masculine gender, or rather to the male sex For the neuter was substituted the periphrasis *thereof* or *of it* (mod dial *o't, o'd*), also the uninflected nom -acc. form *it* (used in n. w. dial. from 14th c., and still common in Lancash and parts of Yorksh.), and finally c 1400 a new factitious genitive (possessive) *it's*, ITS The plural neuter has always been in Eng the same as the pl masc. The historical inflection is therefore as follows

	Goth	OE. ME.	16th c	mod E.	dial
N A	ita	hit, it, it	it	it	it, t, d
D	imma	him	him, it	it, 't	" " "
G	is	his	his, thereof, it	its	(his)

The following explanations and illustrations refer only to the nominative and accusative *hit, it*, and to the use of the same form as dative and genitive; for the inflexional HIM, HIS, and ITS, see the separate articles in their alphabetical places.]

2 As nominative of the verb *to be*, *it* refers to the subject of thought, attention, or inquiry, whether impersonal or personal, in a sentence asking or stating what or who this is, as *What is it? Who was it? It is a diamond, a rare ferm, a wold boer, It is I, It was John.* Often when a relative clause implied when not actually expressed, as *Who is it* (that knocks)? *What is it* (that is wanted)? *What was it* (that excited your attention, that did this, etc)? *It was the king* (who appeared, who so acted, etc.) So Fr *ce*, Ger *es*

Formerly the verb agreed in number with the following sb or pron; thus *It ain't I, It is I, it are I, it is I, it were two dragons* When a relative clause is appended, the relative being the subject, its verb usually agrees in number and person with the pronoun *It is I who am a Hebrew It was they who were wrong, not we*

4. When the logical subject of a verb is an infinitive phrase, a clause, or sentence, this is usually placed after the verb, and its place before the verb is taken by *it* as 'provisional' or 'anticipatory subject'.

When the order of th. clauses is reversed, *it* is omitted, but sometimes rhetorically retained

a With an infinitive phrase

In OE the infinitive was in the dative governed by *to*, and its construction was rather that of the I. supine in *-um* after an adj, but this has passed without break into the present use

9 *It* is often used as an indefinite object of a transitive verb, e.g. *to carry it, fight it, face it, bear it*, so in imperatives, as *confound it! hang it!* Also of an intransitive verb, e.g. *to go it, run it, trip it, ride it, flaunt it* And in this way verbs are formed which are in sense upon nouns, with the sense to do, act, or play the person or character to use the thing, e.g. *to king it, queen it lord it, fool it, boat it, cab it, coach it, tram it*, etc. The use now is colloquial

App first used with transitive vbs, but with *ado out, to help it out* in the infinitive, *thereout* And afterwards so omitted, and the usage extended through amphibolous to unit intransitive vbs, as *to flaunt it out to flaunt it* Through vbs having obs of intransitive forms, as *to strut*, it is extended to other obs as *hang gown*, etc. There may have been some influence from *do it* as a substitute, not only for any transitive vb and its object, but for an intransitive vb of action, as in 'he tried to *swim*, but could not *do it*', where *it* is the action in question

+**-ite,** *suffix*¹, corresponding to F. *-ite*, L. *-ita* (*-ītēs*, ad Gr. *-ɣτης*, forming adjs and sbs (of adj origin) with the sense '(one) connected with or belonging to', 'a member of', as in *ὀπλῖτης adj* heavy armed, *sb* a heavy-armed soldier (*ὅπλα* armour), *πολῖτης* citizen (*f πόλις* city) Its fem form is *-ῖτις* (-ITIS). Both the masc and fem forms were extensively used in forming technical names of natural products, diseases, etc.

A frequent use in Gr was to form ethnic and local designations, as *Ἀθηναῖος* Absentis, *Σταγειρίτης* Stagirite, *Συβαρίτης* Sybarite, *Ταρτησσίτης* denizen of Tartarus. Hence, often

used by the LXX to render Heb names in -י, *-ī*, as in Ἰερομιήλιτε Israelite, Λευίτης Levite, Ἀμαληκίτης Amalekite, Ἰσμαηλίτης Ishmaelite, Μωαβίτης Moabite, Σοδομίτης Sodomites, etc Later, in Christian use, in the names of sects, styled either after their locality, their founder, or some tenet, rite, or other characteristic, as ἐρημίτης a desert-dweller, eremite, hermit, Νικολαΐτης Nicolaitans (pl), Ἰακωβίτες Jacobites, Μονοφυσίτης Monophysites, etc Some of the Greek terms (esp those in Christian use) were adopted in Latin, either unchanged in *-ītē* or often in *-īta*, the plural (which was more frequent in use) being in *-īte* than *Magnētītæ, Sybaritæ*, and, in the Vulgate, etc, *Levītæ* or *Levīta Israelītæ, Ismaelītæ, Ammonītæ, Moabītæ, Nicolaītæ, Sodomītæ* (also *Godolīte, Recabītæ*, etc, where the I XX have Γαδδί, Ῥαββάν), and in later and mediæval writers *Marcionīte, Arianīte, Cynicīte, Manichæīte, Monophysītæ*, etc Hence the suffix has passed into Fr and Eng in the form *-ite* pl *-ites* Already in the metrical *Genesis & Exodus* c1250 we find *Ammonit, Arabit*, by Wyclif the Vulgate words in *-ītæ* are duly rendered by forms in *-ites, -yte* In later Biblical version the ending is extended to other tribal names, e g *Καππαδόκαι, Χαναναῖοι*, Vulg *Amorræi, Chananæi*, Wyclif *Amorrei, Chananei* (*-ey*), 1611 versions *Amorites, Canaanites*

Another frequent use of the termination was to form names of minerals and gems (adjectively with λίθος 'stone under stood), e g ἀνθρακίτης anthracite, αἱματίτης blood stone, hæmatite, ὀφίτης snake-stone, serpentine, σταγωνίτης mountain stone, selenite, etc Newly all these occur also in L in Pliny, who moreover adds several not recorded in Greek These have been handed down and increased by mediæval and early modern Latin writers *de proprietatibus rerum*, and have given origin to our modern use of *-ite* in names of fossils and minerals

The following are the chief English uses of the suffix

1 Forming names of persons (Often also used adjectively)

a In words already formed in Gr or L, of the classes above mentioned, and in analogous terms, e g *Aegyrte, Sybarite, Israelite, Levite, Ammonite, Amorite, Benjamite, Canaanite, Gadite, Gileadite, Hamite, Ishmaelite, Rechabite, Reubenite, Semite, Sodomite*, etc, *exemite, Hyonite, Adamite, Jacobite, Marcionite, Masonite, Azymite, Monophysite, Anthropomorphite, Patumite*, etc

b In words of modern formation (*a*) Denoting an inhabitant of a place, as *Sydneyite, Claphamite, Dunhamite, Ludlowite* rare, and usually somewhat contemptuous (*b*) Denoting a disciple, follower, or adherent of a person or doctrine, as *Wycliffite, Campbellite, Dalcite, Glassite, Irvingite, Puseyite, Simeonite, Brontëite, Darwinite, Hugoite, Ruskinite, Shelleyite, Spenserite, Zolaite, Byronite, Cunningeldite, Healyite, Jacobite, Mackinleyite, Parnellite, Peelite*, †*Williamite* (adherent of William III) So *Pre-raphaelite, Sthreo ite, Independent Labourite*, etc

These have a tendency to be depreciatory, being mostly given by opponents, and seldom acknowledged by those to whom they are applied The following are illustrations of some of these formations

1828 Scott *Life of Bell* xviii, I am not a Mac Millanite or a Russelite, or a Hamiltonian, or a Hurleyite, or a Howdenite (*Note*, All various species of the great genus Lamentonian) **1830** *Lonsdale Mag* Aug 250/1 In 1824, the Anglo-antechurches formed a union with the Dalcitechurches in Scotland **1833** *Athenæum* 31 Jan 116/3 Of Musset, as becomes a good Huguenot, he has nothing to say **1868** *Manch Examiner* 13 Jan 3/2 Legislation which is regarded as a violation of that principle by all thorough going Herbert Spencerites **1888** Rider Haggard *Col Quaritch* I, Other folk, yet more learned, declared it to be an ancient British dwelling Mrs Massey was a British dwellingite **1891** *Daily News* 5 Mar 5/2 Swift was a Tolerite before he died **1892** *Athenæum* 1 Oct 444/2 These short stories have not the attractions which the true Zolaite loveth **1895** *Times* 8 Jan 9/5 Ireland will see Healyites and Redmondites battling with Dillonites for the honour of representing the united will of the Irish nation **1897** *Boston Globe* 12 July 3/4 The Shirley country [in the Spen Valley in 1848] is still by Brontëites **1898** *Daily News* 12 Jan 6/6 The new unseen meeting of the Independent Labourites.

2 a *Patronyl* Used to form the names of fossil organisms, animal or vegetable, as *ammonite, belemnite, calamite, dendrite, echinite, encrinite, lignite, trilobite*, etc

These follow the type of Gr Ἀατρωνίτης toadstone, etc, and were at first used in their Latin form in *-ītæ* see the individual words

b *Mineral* The systematic ending of the names of mineral species, comprising names of ancient origin in *-ītes*, as *anthracite, hæmatite, ophite, selenite*, or in *-īte*, as *chlorite, hepatite, hyalite*, and a vast number of modern names in which *-ite* is added to an element expressing colour, structure, physical characters or affinities, or to the name of a locality, discoverer, mineralogist, distinguished scientist, or other person whom the discoverer may have desired to commemorate. Examples are *albite, aurite, melanite, dichroite, graphite, apatite, calcite, syenite, labradorite, leadhillite, humboldtite, wernerite, brewsterite, danaite, darwinite* Earlier names of minerals have in some cases been displaced by names in *-ite*, and some names with other endings as *ane, in*, etc have been conformed to the *-ite* type For names of

rocks, Dana has suggested the differentiated ending *-yte*, founded on *Trachyte*, as in *aphanyte, dioryte, epodosyte*, and the like, but this has not found universal acceptance

3 *Anat.* and *Zool* Used to form terms denoting one of the constituent parts, segments, or joints of a body or organ, as in *somite* a segment of the body, *sorcrite, pleurite, podite, tergite*, a segment of the horn or antenna, *side, foot, back*, etc Cf *cephalostegite, cavopodite, tschiocerite, tschiopodite*

[These forms were introduced in French in 1851 by H Milne Edwards (*Observations sur la symétrie trigonométrique des Crustacées Décapodes*, in *Ann Sci Nat* (Zool) 3, XVI 221) They were app first used in Eng in 1856, by C Spence Bate (*Report Brit Assoc* 1855, 38) but they owe their general use esp to Huxley (*Lect on Comparat Nat Hist* 1857, *Anat Invertebr Anim* 1877, etc) (R A Bather, M A, Brit Mus Museum, South Kensington)]

4 *Chem* Used to form the names of some saccharine substances, glucoses, and other organic compounds, as *dambonite, dulcite, erythrite, inosite, isodulcite, mannite, melampyrite, pinite, quercite, sorbite*, chiefly f the names of plants, also of explosives, as *cordite, dynamite, herculite, melinite*, and of commercial products, as *ebonite, vulcanite*, etc

[In the earlier of these the suffix was in origin apparently the same as in the preceding groups *mannite* being, as it were, the distinctive constituent of *manna*, but in the names of explosives and other products this sense disappears and *-ite* is merely a derivative]

b In Inorganic Chemistry, *-ite* is the systematic termination of the names of the salts of acids denominated by adjectives in *-ous*, e g *nitrite* a salt of *nitrous* acid, *sulphite* a salt of *sulphurous* acid This was part of the systematic nomenclature introduced by Guyton de Morveau and Lavoisier in their *Nomenclature Chimique* of 1787

[In this use, the suffix has no direct connexion with the Gr -ιτης, but was suggested by, and differentiated from, the suffix *-ate* (-ατ) 3), appropriated to salts of acids in *-ic* In the words of the authors cited (*Nomencl Chimique*, p 40), these are "deux noms différentes adaptées à la même racine, de la manière qui a paru le plus convenable au jugement de l'oreille

Sulphate sera le nom générique de tous les sels formés de l'acide sulphurique

Sulphite sera le nom des sels formés de l'acide sulphureux

(p 49) Cette distinction une fois établie nous a donné les *nitrates* et les *nitrites*, les *phosphates* et les *phosphites*, les *acétates* et les *acétites*]

A few of the words in *-ite* have derivative adjs in *-itic*, as *Hamitic, Semitic, dendritic, encrinitic, anthracitic*, *hamatitic*, many of those in group 1 have adjs in *-itish*, as *Israelitish, Mosaitish*

-ite, *suffix*[2], an ending of adjs adapted from l pa pples in *-itus, -ītus*, of vbs in *-ire, -ēre, -ĕre*, as in *eruditus* erudite, *exquisitus* exquisite, *compositus* composite, or from the corresponding Romanic *-ito*, as *favourite*, also of sbs derived from the same or from the cognate l sbs in *-tas*, as *appetitus* appetite Also, of verbs formed from the same pal stems, as *cupidite, unite*, but from stems in *-It*, the verbs usually end in *-it*, as *posit, exhibit, merit*, this was formerly also usual with adjs, as *opposit, reconcilit*

Its (its), *poss pron* [formed in end of 16th c from It + 's of the possessive or genitive case, and at first commonly written *it's*, a spelling retained by some to the beginning of the 19th c]

The original genitive or possessive neuter was His, as in the masc, which continued in literary use till the 17th c. But with the gradual substitution of *sex* for grammatical gender in the concord of the pronouns, the indiscriminate use of *his* for male beings and for inferior animals and things without life began to be felt inappropriate, and already in the ME. period its neuter use was often avoided, substitutes being found in *thereof*, *of it*, *the*, and in N dialect, the genitive use of *het*, *it*, which became very common about 1600, and is still retained in Westerland, Lancashire, N W Yorkshire, Cheshire, Lincolnshire, and adjacent counties Finally, *it's* arose, apparently in the south of England (*London*, Oxford), and appears in books just before 1600. It had no doubt been colloquial for some time previous, and only gradually attained to literary recognition as it was not admitted in the Bible of 1611 (which has *ther-of* besides the *his*, *her*, of old grammatical gender), the possessive *it* occurs once (Lev xxv 5), but was altered (in an edition of 1660) to *its*, which appears in all current editions. *Its* does not appear in any of the works of Shakspere published during his life time (in which and the first folio the possessive *it* occurs 13 times), but there are 9 ex uples of *it's*, and 1 of *its*, in the plays first printed in the folio of 1623 In one of these at least (Hen VIII, i 1 18, see Bailey's note) it is prob Shakspere's own (unless he wrote *his*) By this time *it's* had become common in literature, from which the passes wise use of it soon disappeared, the neuter *his* is found as late as 1675 (see His *poss pron* 3c), the use of the – *its* con tinued almost as late in literature, and is still dialectal, as is also the periphrastic *the* – *of it* (see The *def art* 11 b) – its head – *its* tail *Acts* arose after the *h* of *Art* had been dropped, the form *its* is not found in literary use, but it is the em phatic form of *it* in Scotch (*it's* head *strak Scots Prov*)

-ization, suffix forming nouns of action from vbs in -IZE see next

1865 Dickens *Mut Fr* I xi, He was not aware that he was driving at any *ization*

-ize (also written -ise), suffix forming vbs = F *-iser*, It *-izare*, Sp *izar*, ad. late L *-izāre*, *izāre*, f Gr ἰζειν, formative derivative of vbs.

The Greek verbs were partly intrans, as βαρβαρίζειν to play the barbarian, act or speak as a barbarian, side with the barbarians, τυραννίζειν to side with the tyrants, partly trans as καθαρίζειν to purify, clean, θησαυρίζειν to treasure up Those formed on national, sectarian, or personal names were primarily intransitive, as Ἀττικίζειν to Atticize in manners, to speak Attic, Φιλιππίζειν to act or speak for Philip, to philippize, Ἑλληνίζειν to 'do' the Greek, act as a Greek, speak Greek, Hellenize also, to make Greek A few words of this form connected with or used in early Christianity, were latinized already in the 3rd or 4th c by Christian writers such were *βαπτίζειν baptizāre συναγωγίζειν ecclesiāre, κατηχίζειν catechizāre, σκανδαλίζειν scandalizāre, ἀναθεματίζειν anathematizāre, χριστιανίζειν christianizāre, ἰουδαΐζειν judaizāre* Others continued to be formed both in ecclesiastical and philosophical use e g *exinanire, demonstrare, allegorizare* (Boethius *De sect Anat*), and this became established as the normal form for the latinizing of Greek verbs, or the formation of verbs upon Greek analogies In med L and the mod langs those have been formed also on L or modern national names, and the use has been extended to the formation of verbs from L adjs or sbs This practice probably began first in French, in mod F the suffix has become *-iser*, alike in words from Greek, as *baptiser, évangéliser, organiser*, and those formed after them from L, as *autoriser, civiliser, humaniser* Hence, some have used the spelling *-ise* in Eng, as in French, for all these words, and some prefer *-ize* in words formed in French or Eng from L elements, retaining *-ize* for those of Gr composition But the suffix itself, whatever the element to which it is added, is in its origin the Gr ἰζειν, L *-izāre*, and, as the pronunciation is also with it, there is no reason why in English the special French spelling should be followed, in opposition to that which is at once etymological and phonetic In this Dictionary the termination is uniformly written *-ize* (in the Gr *-ίζ*, the ι was short, so originally in L, but the double consonant *z* (= *dz*, *ts*) made the *syllable* long, when the *z* became a simple consonant, *zd* became *s*, whence Eng *-ise*)

In current English the following groups may be noted

1. Words that have come down from Greek, or have been at some time adopted from Greek, or formed on Greek elements, **a.** with the trans sense of 'make or conform to, or treat in the way of, the thing expressed by the derivation', as *baptize* (prob the earliest *-ize* word in Eng), *anathematize, anatomize, apostrophize, canonize, catechize, cauterize, characterize, christianize, crystallize, diphthongize, harmonize, idolize, monopolize, organize, phlebotomize, stigmatize, symbolize, systematize, tantalize*, **b** with the intrans sense 'to act some person or character, do or follow some practice', as *agonize, apologize, apostatize, botanize, dogmatize, geologize, philosophize, syllogize, sympathize, theorize*.

2 Words formed (in Fr. or Eng) on Latin adjs. and sbs (esp on derivative adjs in *-al, ar, an*, etc), mostly with the trans. sense 'to make (that which is expressed by the derivation)', as *actualize, author ize, brutalize, civilize, colonize, consonantize, devocalize, dramatize, etherealize, familiarize, fertilize, formalize, fossilize, humanize, immortalize, legalize, memorize, nationalize, naturalize, neutralize, patronize, pulverize, realize, satirize, scrutanize, secularize, signalize, solemnize, spiritualize, sterilize, terrorize, vocalize*, trans or intrans., as *cicatrize, extemporize, moralize, particularize*, less frequently only intrans, as *temporize*

3. Words from later sources, as *bastardize, foreignize, jeopardize, villanize, womanize* trans., *gormandize*, and such nonce-words as *cricketize, pedestrianize, tandemize*, intr

4. Words formed on ethnic adjs, and the like, chiefly trans but sometimes intrans, as *Americanize, Anglicize, Gallicize, Germanize, Latinize, Romanize, Russianize*

5 Words formed on names of persons, sometimes with the intrans Greek sense of 'to act like, or in accordance with', as in *Calvinize, Coryatize*, but usually in the trans. sense of 'to treat like, or after the method of, or according to the (chemical or other) process of', as in *Boucherize, Bowdlerize, Bunnellize, galvanize, Grangerize, macadamize, mesmerize, Rumfordize*, with many technical and commercial terms, and nonce-words such as *Gladstonize, Irvingize, Joe Millerize, Merry Andrewize*, without limit

6 From names of substances, chemical and other, in the trans. sense of 'to charge, impregnate, treat, affect, or influence with', as *alcoholize, alkalize, carbonize, de oxidize, hydrogenize, oxidize, ozonize, silverize*, etc., so in nonce words, as *Londonize* to make like London, etc

Verbs in *-ize* have the usual derivative adjs and sbs, as ppl adj in *-ed* (often more used than the vb) as 'sensitized paper', ppl. adj. in *-ing*, chiefly from the intrans use, as 'Judaizing Christians', 'a philosophizing writer', vbl sb in *-ing*, as 'the Bowdlerizing of Shakspere', agent-noun in *-izer* (sometimes coexistent with a formation on the Greek type in *-ist*), as *colonizer* (*colonist*), noun of action in *-ization* (sometimes coexistent with one from Gr in *-ism*), as *civilization, organization* (*organism*)

J

J (dʒē), the tenth letter of the alphabet in English and other modern languages, is, in its origin, a comparatively late modification of the letter I.

In the ancient Roman alphabet, I, besides its vowel value in *ibidem, milites*, had the kindred consonantal value of modern English Y, as in *iactus, iam, Iouem, iustus, adiuro, maior, peior*. Some time before the 6th century, this *y*-sound had, by compression in articulation, and consequent development of an initial 'stop', become a consonantal diphthong, passing through a sound (dy), akin to that of our *di, de*, in *adieu, hideous*, to that represented in our phonetic symbolization by (dʒ). At the same time, the original guttural sound of G, when followed by a front vowel, had changed to that of palatal *g* (g, gy), and then, by an advance of the point of closure, had passed through that of (dɣ, dy), to the same sound (dʒ), so that I consonant and the so called *g* 'soft' came to have, in the Romanic languages, the same identical value. In Italian, this new sound is represented by *g* before *e* and *i*, *gi* before *a, o*, and *u*. Thus, *I gestus, Iesus, iam, iocare, iudicem*, are represented in Italian by *gesto, Gesù, già, giocare, giudice*. But in the other Romanic languages, the letter I was retained with the changed sound, so that, in these, I consonant and *g* 'soft' were equivalent symbols, distinguished only by derivation. In OF. the foregoing words were *gest, Iesu, ia, ioer, iuge*.

In OE., I consonant, so far as it was used, had (as still in all the continental Germanic languages) its Latin value (y), equivalent to OE. *ge, gi*, or *e* before certain vowels, thus we find *ia, iel, eow, iu, iugoð, iung*, as occasional spellings of the words commonly written *geā, geōl, eow, geō* (*giō, giu*), *geogoð* (*giogoð*), *geong* (*giong, giung*). This was especially the case with foreign proper names and other words known through Latin, as *Ianuarius, Iob, Iosues* (= Jove), *Iudea, Iudeus, Iacinþ*, and the ethnic name *Iotas, Iutan* (rarely *Loras*), now rendered 'Jutes'. But the French orthography introduced by the Norman Conquest brought in the Old French value of *i consonant* *g* 'soft' (dʒ), a sound which English has ever since retained in words derived from that source, although in French itself the sound was subsequently, by loss of its first element, simplified to (ʒ).

From the 11th to the 17th c., then, the letter I is represented at once the vowel sound of *i*, and a consonant sound (dʒ), far removed from the vowel. Meanwhile, the minuteness and inconspicuousness of the small i, and its liability, especially in cursive writing, to be confounded with one of the strokes of an adjacent letter, had led in mediæval Latin and general European writing, and thus also in English, to various scribal expedients in order to keep it distinct (See I). Among these, an initial i was often prolonged above or below the line, or both, a final i was generally prolonged below the line, and in both cases the prolonged part or 'tail' came at length in cursive writing to be terminated with a curve, thus arose the forms ı, ȷ. The 'dot', used to individualize the minuscule i, was also used with the tailed form, and thus came the modern j. But this was at first merely a final form of i, used in Latin in such forms as 'filij', and in numerals, as j, ij, iij, vj, viij, xj. It was very little used in English, where *y* had previously been substituted for final *s*, and it was not till the 17th c. that the device of utilizing the two forms of the letter, so that ı, *i*, should remain as the vowel, and ȷ, *j*, be used for the consonant, was established, and the capital forms of the latter, J, *J*, were introduced.

The differentiation was made first in Spanish, where, from the very introduction of printing, we see J used for the consonant, and I only for the vowel. For the capitals, I had at first to stand for both (as it still does in German type, and in all varieties of Gothic or Black Letter), but before 1600 a capital J consonant began to appear in Spanish. (See, for example, Minsheu's Spanish Dictionary of 1599, where I and J are strictly distinguished, though the I and J words are put in one series.) In German typography, almost from the first, some printers employed a tailed form of the letter J or I initially, to distinguish the consonant sound, but this was by no means generally established till much later. According to Watt (*Bibliotheca Britannica*), Louis Elzevir, who printed at Leyden 1595–1616, is generally credited with making the modern distinction of I and Y, and J (which was shortly after followed by the introduction of U and J among the capitals by Lazarus Zetzner of Strasburg in 1619. In England, individual attempts to differentiate I and J were made already in the 16th c., as by Richard Day, who printed books in London after 1578, and George Bishop, who printed the translation of La Primaudaye's *French Academie* in 1586, with *i, j, u, v*, differentiated as in modern use, but had no capital J or U. The J types are not used in the Bible of 1611, nor in the text of the Shakspere Folio of 1623 (but see Jus), these have I for both values, but the latter has a capital Italic J in he ullines in the proper names *John Iuliꝰ, Iulius*, and in the colophon, list of actors, etc., thus showing a tendency to use this in its origin merely as ornamental variety of *I*) as a J. In Cotgrave's French English Dictionary printed in 1611 (and in the reprint of it in 1650), the Roman type used for the French has no capital J, and uses I with both values, but it has the small j which is regularly used in the French words thus Iuſtice, Ajuſter. On the other hand, the italic type, in which the English is printed, has no small *j*, and uses *i* for both vowel and consonant, it has the two capitals, *I* and *J*, but uses them indiscriminately for the consonant, thus Ioyau in *A French*, Ioyaulter *in A Ieweller*. Frequently *J* is used also for the vowel thus Ingenuitꝛement *Ingenuouſly*, Ingenieux *Ingenious*. Thus even when the types *I* and *J* were at hand, their use was not yet regulated. But during the decade which followed (1630–40) *J* or *J*, as upper case have been gradually added to all fonts of type, and the present usage of restricting I to the vowel, J to the consonant appears to have been generally established soon after 1630. (See, under U and V, the simultaneous differentiation of U as vowel, and V as consonant, from the earlier V as initial, u medial and final.)

But though the differentiation of I and J, in form and value, was thus completed before 1640, the feeling that they were, notwithstanding, merely *forms of the same letter* continued for many generations, a vestige of it is still seen in the practice of many persons, who in script write the *J* form (𝒥) for both 𝒥 and 𝒾, and in the omission by printers of J and U from the signatures of the sheets of books. In Dictionaries, the I and J words continued to be intermingled in one series down to the 19th c. Dr Johnson, indeed, under the letter I, says 'I is in English considered both as a vowel and consonant, though, since the vowel and consonant differ in their form as well as sound, they may be more properly accounted two letters'. Nevertheless, he proceeds to treat them practically as one, his first word I being followed by JABBER, JAM by IAMBICK, and this by JASIA, while the three last words of I are JUXTAPOSITION, IVY, JUDOIN. The same practice was followed by Todd, and by Richardson 1820, and even in some later dictionaries. Joddrell in 1820, Webster in 1828, separate I and J, as independent letters. The name of the letter now *jay* (dʒē), was formerly *jy* (dʒi), rhyming with I, and corresponding to French *ji*, this is still common in Scotland and elsewhere.

In printing manuscripts or reprinting books produced before the differentiation of I and J the earlier I has been treated in two different ways. The earlier editors, in most cases, introduced the modern usage into their texts, changing the I of the archetype, when it stood for the consonant, into J. Later editors more usually aim at reproducing the actual form of the original, and retain I with its twofold value. As our quotations are, in the main, from printed editions of MSS., and in some cases from later editions of printed books, they necessarily reflect these differences of editorial practice, and often show J before the 17th c., it is to be remembered that this is usually due to the edition quoted, not to the original scribe or printer.

But in our chronological lists of Forms, which precede the Etymology and Senses, these editorial J's have been disregarded, and the contemporary I alone given down to the date when J was actually in use.

In some modern edition of MS or Black letter books, in which the minuscule i of the original text is reproduced, we yet find a capital J introduced. Thus where probably from the cream tance that the MS or Blk. *I*, or *Ie*, is more like a *J* than an I in appearance, and is actually still used both for I and J.

No word beginning with J is of Old English derivation. Many are from Latin, chiefly through French, some from Greek, and a few from Hebrew and Arabic. There are also numerous modern words from distant languages, Eastern or Western, as *jaguar, jalap, jerboa, jungle, junk*. Besides these, many familiar or colloquial words of recent appearance and obscure history begin with this letter. On account of the phonetic equivalence of *i* consonant or *e* (*y*) and *g* 'soft' in words from Romanic while in native English words as *get, gat, gear, hard*, there was considerable tendency in Middle English to substitute *i* (*y*) for *g* in words from French, as in *iammi, iemme, ientil, ientyl, geol, iest* (and occasionally a counter tendency to use *g* for *i* (*y*) as in *ret, yet, geat, maiestie, majesty, magicate*, of which traces still remain in *gaol, jest, sergeant, serjeant jelly* from Fr *geôle*, etc.

The regular and practically uniform sound of the letter J in English is the consonantal diphthong (dʒ). In the word *hallelujah* (also spelt *Alleluiah*) it has the sound of Roman i consonant (y). The same sound is retained in proper names or alien terms from German and other languages in which the Roman value of *j* is retained, as *Jena* (yē-na), *Jaeger, Joachim, Jungfrau, junker Janos, Javolaer, Jassy*. In a few French words, distinctly recognized as alien, *j* has the French sound (ʒ), as *déjeuner, jeu d'esprit*. In the transliteration of Oriental names, as *Jat, Jehangir, Jan, Jiz, Juggernaut, Jumna*, etc., *j* is used with its English value.

Jackanapes (dʒăk kănēips) Forms α 5 Iac Napes (Nape), Iack (Iake) Napys, 5-6 Iack napis, 6 Iacke Napes (napes), Iack-, Iackenapes *β* 6 Iacke(a napes, Iack or Knap, 7 Jack a-napes, 7 Jack-a-nape or 6-7 Jack(e)an apes (Apes), Jack(e) an apes (-Apes), (7 Jack and Apes), 7 Jack an Ape, Jack-an-Ape, 9 jack an ape, jackanape 8 6-7 Iack(e)-anapes, 7 Jacanapes, jackanapa, jackinapes, 7-jackanapes, 7 Jackanape *Pl* -apes, -apeses, († apa's) [Prob of origin uncertain

So far as yet found, the word appears first as an opprobrious nickname of William de la Pole, Duke of Suffolk (murdered 1450), whose badge was a dog and chain; such as was attached to a tame ape Hence, in a poem of 1519 (see 2 a), in which other noblemen are denominated by their badges or heraldic emblems as the Swan, fiery Cresset, Porcullis, Wheat-ear, etc, Suffolk is styled 'the Ape clogge', and in somewhat later satirical invectives is referred to as an ape, and entitled *Jack Napes*, this being interestingly already a *quasi* proper name for a tame ape, as it is seen to be in 1522 (The converse hypothesis, that Suffolk was for some other reason called 'Jack Napes', and thus this nick name was transferred from him to the ape, does not, on a review of the facts, seem probable) But of *Jack Napes* or *Napys*, and its relation to *ape* or *apes*, no certain explanation can be offered, it was perhaps in its origin, merely a playful or whimsical name for a tame ape, and the *n* might arise as in *nuncle* and *naps* (*birds nest, pigs nap*), or as in the by names *Ned, Nell, Nell*, and the *t* might be in imitation of the *s* of surnames such as *Jukkes, Hobbes, Symmes*, etc, already in use, so that 'Jack Napes paraded a human name and surname If this was the standing of the name, it is easy to understand that it might never attain to literary use, still it became the nick name of Suffolk He thus as it may, the fact remains that *Jack Napes* is the earliest form, of which *Jack's Napes, Jack of Napes* (? Naples), *Jack an ape, Jack and Apes*, are later perversions, app attempts of 'popular etymology' to make the expression more intelligible In accordance with this view, the original sense is here taken as *Jack-ape*, and the *-s* in *-apes* is treated as a derived application, though it is in point of date the earliest use that has come down to us and may possibly, with further evidence, prove to stand for *Jack's ape*

Rep. I. 293 The characters in this act frisk about, here, there, and everywhere, as teasingly as the Jack o Lantern lights which mischievous boys throw with a looking glass on the faces of their opposite neighbours

3 A lantern made of the rind of a large turnip or a pumpkin, in which holes are cut to represent eyes, nose, and mouth, a turnip- or (in U S) pumpkin lantern *North Eng., Sc.*, and *U S*

Hence **Jack-o'-lantern** *v. intr.* *nonce-wd.*, to play or move erratically like a will-o-the wisp

1892 *G. Meredith Diana of Crossways* I. ii. 32 His Puckish fancy jack-o'-lanterning over it

Jack-o-leg see JOCKTIPPO **Jack o'-lent** see JACK-O-LENT **Jackonet** see JACONET

Jack-pla ne. [f. JACK *sb.*[1] + PLANE.] A long heavy plane used by joiners for coarse work

1812 J. SMITH *Panorama of Sc.* & *Art* I. 109 The Jack plane used by joiners, is generally about 17 inches in length

1845 J. NICHOLSON *Operat. Mechanic* 58 The jack plane is used for taking away the rough excrescences in the saw, and removing all superfluous and other uneven parts 1896 I. HARDY *Battlecrease* (1897) 58 The clothes from the jack plane, and no pushing against it day after day and year after year

Hence **Jack plane** *v. trans.*, to smooth with a jack plane

1872 MARK TWAIN *Innoc. Abr.* xii. 76 Surely the smooth turnpikes are Jack planed and sand papered every day

Ja ck-pu dding, *arch.* [JACK *sb.*[1] 35.] A buffoon, clown, or merry-andrew, *esp.* one attending on a mountebank

Jape (dʒēip), *v.* Also 6 **iaape, iape, 6 iaip, gape**. † **jap** [*Jape* sb. and vb. are known from the 14th c., it is not certain whether the vb. or the sb. came first, their derivation is obscure.

In form the vb. agrees with *gape*, *drape*, *skipper* to yelp as a dog), whence there was also the (rare) sb. *jap*, and *japery*, yelping but there appears no approach of sense between this and the Engl. sense of *jape*. On the other hand, *jape* is nearly identical in sense with OF. *gaber*, 'to mock, deride, laugh at', whence there were the sbs. *gab* and *gabe*, also *gaberie*, mockery, raillery, calumny; *gaberer*, *-eor*, mocker, jester, (but notwithstanding a single instance of *gaber* in Godef.), no known phonetic laws enable us to connect *gabe* and *jape*. The suggestion has been made that the two French verbs are combined in the English vb., but of such a process we have no evidence

From its use in sense 3, the vb. began to be held unpolite or indecent in 16th c. (so in Bale, Speght's *Glosse* to Chaucer, and esp. Puttenham), was avoided by polite writers and soon became obsolete. The sb. held on the same line, but has been revived in 19th c. in sense 2 of the sb., 4 of the vb.]

Jaw (dʒɔ), *sb*[1] forms *α* 4-5 **iowe**, 4-6 **iowe**, *β* 5-7 **iawe**, 7-**jaw**, (5 **geaw**, **gowe**, **gew**, 7 **gaugh**) [A word of difficult etymology, on the origin of which the evidence known to us affords conflicting indications It occurs in the form *jowe* from *c* 1375, *c* 1493 we find *jawe*, which before long supersedes *jowe*, from 1530 to *c* 1675 there was a collateral CHAWE Chaucer rimes *jowe* with *clowe* = *pilo*, *clow*, which shows that the sound was not *ŭ*, and thus that the word was not the F *joue* cheek

If, notwithstanding the want of evidence and in spite of the late exemplification of *sh* forms in *chaw-er*, it may be assumed that *jowe* was preceded by a ME **chowe*, presenting an unrecorded OE **ceowe*, *ceówe* wk fem this would be identical with OHG *kauwa*, *chauwa*, early MHG *chúwe*, *chówe*, MHG *kouwe*, *couwe*, early mod and dial Ger *Kau*, *kau*, *kaue* (Grimm) MDu *couwe*, Icelan *kouve*, *kaua*, Da *kave*, . . gauna back to Gl Celt **kauo*- Welsh *gen*, Breton *ken* to CHEW The later *chaw-*, *jaw* would then be parallel to mod ver *kauc* MDu *couwe* Icelan *kauve*, and to ver *kauwa*, Du *kauwen*, OHG Lang CHAW 1, Swabish OHG *kiuwan*, MHG *kiuwen*, MDu *kouwen*, and OE *-ceowan* CHEW, the phonetic relations of which are not clearly settled The spelling with *j* may have been influenced by association with F *joue* cheek, though the frequent passage of *h* into *j* in other words shows that this need not be assumed Cf the phonetic development of OF *chaf*, *ME chavel*, *chauf*, *chalf*, *chavl*, *jowl*, also Marston's JAWN for *chawn* sb and vb]

†**Jehovah** (dʒɪhōu·vă. [The English and common European representation, since the 16th c., of the Hebrew divine name יְהוָה. This word (the 'sacred tetragrammaton') having come to be considered by the Jews too sacred for utterance, was pointed in the O. T. by the Masorites, יְהוִה, with the vowels ' (= ə), ō, ă, of אֲדֹנָי (*adônai*), as a direction to the reader to substitute ADONAI for the 'unutterable name', which is actually done by Jerome in the vulgate translation of Exodus vi. 3, and hence by Luther. Students of Hebrew at the Revival of Letters took these vowels as those of the word יְהוָה. JHVH, JHVH) itself, which was accordingly transliterated in Latin spelling as IeHoVaH), i.e. *Iehouah*. It is now held that the original name was IaHUe(H), i.e. *Jahveh*, or with the English values of the letters, *Jahveh*, and one or other of these forms is now generally used by writers upon the religion of the Hebrews. The word has generally been understood to be a derivative of the verb הָיָה *hâyâh* to be, to exist, as if 'the that is', 'the self existent', or the one ever coming into manifestation', this origin is now disputed, but no conjectured derivation which has been suggested has found general acceptance

1 A member of the 'Society of Jesus', a Roman Catholic order founded by Ignatius Loyola in 1533, and sanctioned by Paul IV in 1540

The object of the Society was to support and defend the Roman Church in its struggle with the tide of Reformation, and to propagate the faith among the heathen The strongest organization of the Order soon rendered it very powerful, and brought it into collision with the civil authority even in Roman Catholic countries, from many of which its members have at times been expelled The secret policy, the organization, and the spiritual principles maintained by many of its representatives, and generally ascribed to the body as a whole have rendered its name odious not only in England, but in Spain, the states of Lowgauges, and have given rise to sense 2, and to the opprobrious sense attached to *Jesuitical, Jesuitry*, and other derivatives

In OE rendered by *hælend* 'saviour (see HEALER), but during the ME period regularly used in its OE (objective) form *Iesu* (*Jesu*) the (L nom) form *Iesus* (*Jesus*) was rare in ME, but became the regular Eng. form in 16th c. Yet in the Rhemish N. Test. 1582, the form *Iesus* was generally used where the Gr has Ἰησοῦς, the Vulg. the *Iesu* in the oblique cases. This was, as a rule, retained in the revised text of 1633, but in the Bishops Bible 1568 but in representing the Gr oblique cases, this has *Iesus* from designedness, from the twenty-first century on, and from the Rhemish 1582, and the version of 1611 *Jesus* was frequent in the earlier forms of the Book of Common Prayer, and survives in some places, as in Litany at such, and in Creeds, rarely in nom. or obj., but frequently in the vocative. In hymns, the possessive *Jesus'* is commonly sung (*sbst use*)

In ME *Jesus* was rarely written in full, being usually represented by the abbreviations ihu, and ihc, ihs, ihus, or ihc, etc. see IHS. These have been erroneously expanded by modern writers as *Jesu*, *Jesus*, the latter occurring once (usually in early illuminated books)

2 Goods thrown overboard from a ship in distress in order to lighten the vessel (and afterwards washed ashore)
The last clause is no part of the etymological meaning but is found as early as 1370, having apparently originated from taking the word as 'that which is *thrown or cast ashore* by the sea' This is directly opposed to the quot from Coke in sense 1, and its true sense in *Les Termes de la Ley* But it is the sense given in recent Law books Spelman and Blackstone took the meaning as 'merchandises thrown overboard and sunk in the sea' Both explanations evidently arose in the attempt to distinguish *jetsam* from *flotsam*, in the phrase *flotsam and jetsam* Etymologically *flotsam* should mean that which is afloat in consequence of a wreck or from the action of the wind or sea itself, *jetsam* that which has been thrown overboard to save the ship, without reference to whether it floats or sinks
(In quot 1370 the word appears to be used as adj or adv)

Jew's trump, Jew's trump. Now *rare*.

Also 6 Iues trounk 9 *dial* Jew-trump [An earlier name than the now usual *Jews' harp*, and formerly equally common in England. In Scotland and N. of England the instrument is still called simply TRUMP, agreeing with the Fr. name *trompe* (f. TRUMP), which is now however mostly displaced by *guimbarde*, *guimbarde*, etc. The simple name *trompe* in this sense has been adduced, it is probable that the name *trump* came from France, esp. as in the Customs Rates of 1545 they are called *Iues trounks* a mistranslation perh. due to the fact that the *trompe* of the elephant is also called in Eng. *trunk*. The first element was certainly *Jews* from the first, perhaps from a belief that this was an imitation of *Jews* or of *Jew*, as bracelets and inept But the attribution of the instrument to the Jews occurs so far as is known, only in English, and there is no actual evidence as to its origin

More or less satisfactory reasons may be conjectured as to the first element, but it is actually indefinite, sold, or sent to England by Jews, or supposed to be so, or that it was attributed to them, as a good commercial name suggesting the trump and trumpery mentioned in the Bible. Whatever argument was neither a trump nor a harp, the ingenuity which conferred upon it these names may well have distinguished it as the trumpet of the Jews. See also what is said by Rev. C. B. Mount in *Notes & Queries*, 23 Oct. 1897, p. 322]

Often assumed to be identical with OF *gigue* a kind of stringed instrument, a rude fiddle, It and Sp *giga*, MHG *gige*, Ger *geige*, but as to this there are difficulties: the OF. word had none of the senses of *jig*, it was also obs long before *jig* is known to have existed, moreover, mod F *gigue* the dance, and dance tune (examplified 1680) is not a continuation of OF *gigue*, but is said by Darmesteter to have been simply adopted from Eng *jig*. In this uncertainty as to the origin and history of the word, the order of senses here presented is provisional, those in 6 are in part directly from the stem of Jig *v*.

Apparently the only way in which *jig* could be connected with OF *gigue*, would be its formation from Jig *v*, the derivation of the latter from F *gigner*, *gingueer* to leap, frolic, gambol, and the formation of the latter from OF *gigue*. But not one of these steps is certain: in particular the senses and chronology of Jig *v* offer difficulties.]

Jolly-boat (dʒǫ·libǫt) [Known only from 18th c origin uncertain

It has been supposed to be a perversion of *Jolywar* or *gelliwatte*, an earlier name app for the same or a similar ship's boat of small size. On the other hand the first element bears a strong (written) resemblance to a name (of unknown origin and uncertain age) applied to small boats of various kinds in many Teutonic languages: e g Du *jolle* (yolle), Sw *jol, jolle, julle*, Da *jolle, jolde, golle, gelle* (in Bischer 1741 *jol or jolle*, Brem Wtb *jelle*, E Fris *jul, jülle*, Wang. *jo'l*), Du *jol* 1682 in Winschooten, Heilam, 1698, has the dim *jolletje* ('small bark or boat') But in all these langs the *j* is = Eng *y*, and the actual corresponding word is E *yole* Eng *yoke* (An alleged F *jol, jolle*, seems only to be the Teutonic word mentioned as a foreign word in an *Encyclopédie* of the 18th c.) Hence, the exact historical relations of these words remain unascertained.]

A clincher built ship's boat, smaller than a cutter, with a bluff bow and very wide transom, usually hoisted at the stern of the vessel, and used chiefly as a hack-boat for small work

[*Note* The etymology of *jolt* vb and sb, and their derivatives, and of words apparently allied in form and sense, is in the present state of the evidence, involved obscurity and difficulty. *Jolt head* is known in 1533, *jolt headed* (in the form *cholt headed*) in 1552, *jolting pate*, app in the sense of *jolt head*, in 1599, and while the vb and sb *jolt*, are not known till 1599 But *jor*-[1], largely identical in sense with *jolt*, is quoted at least from 1530, and may be a century earlier Sense 1 of *jolt*, both in sb and vb, has evident affinities with *jolt*, Jowl *sb*[4], *v*[1], and perh with Jowl *sb*[2], but the other senses of *jolt* vb coincide with those of *jowl* vb *Jolt* has thus the appearance of an alteration of *jor*, influenced by *jowl*, and perh by *jolt head*, which latter is evidently related in some way to Jowl *sb*[2] or Jowl *sb*[4] The form *cholt headed* may recall the dialectal use of the latter (Cf also the mod dial *cholter*, *chowter headed*)

Jolter headed) It has been suggested that *jolt head* may have been a phonetic variant of **joult* or **jowd head*, and that *jolt* vb was a back formation from it, perh through *jolting pate* but this has obvious difficulties, phonetic and semantic. Further evidence may harmonize facts, which are at present somewhat contradictory]

The suggestion has been made that *Jordan* is short for *Jordan-bottle*, and meant orig a bottle of water brought from the Jordan by travellers or pilgrims, rather than was thence transferred to a pot or vessel used by physicians and alchemists, and thence to the chamber utensil But the earlier steps of this conjecture appear to rest upon nothing, but the later form of the word (which may actually be a corruption of something else), and the external probabilities of such an origin Is somewhat against it, though the early accentuation and spellings indicate a French origin, no true of the word has been found in Old French, nor does the med L *jordanus* appear to be known outside England The river Jordan is in I *Jordanes*, a word necessarily familiar to the author of the *Promp Parv* and other glossaries, who used not this, but *jordanus* for the pardon.]

The origin of the *j*, first in JOWL *sb*[3], and then in JOWL *sb*[2] and 3, is at present unaccounted for, there is no OF or other Romanic word to the influence of which it can plausibly be referred This, with the obscurity which attaches to the origin of JOWL *sb*[2] and JOWL *sb*[3], and the fact that all are in recent use levelled under the form *jowl*, makes the group a very puzzling one]

4 How perhaps belongs the phrase *Cheek by jowl*, in earlier usage *cheek by cheek* see Cheek *sb* 5

In this the *j* form is known from 1577, which is somewhat earlier than it is known in the *ch* form above. The earliest variants *check by chole*, *chowl* agree in form butter with Jowl *sb*2 or 3 But it is probable that, by the time the phrase came into use, all three sets were already felt as one The following examples supplement those under Cheek

1 A public officer appointed to administer the law, one who has authority to hear and try causes in a court of justice

As a generic or descriptive term, *judge* is applicable to any person occupying such an official position but by usage, it has, in the United Kingdom, become much restricted as a particular designation, collectively, the members of the Supreme Court of Judicature are 'His Majesty's Judges' so we say 'the Judges of the Supreme Court', 'Common Law Judges', Chancery Judges', 'Equity Judges', 'Judges of Assize or of the Circuit Courts', but individually these are mostly styled (Lord, or Mr) JUSTICE (q v) In Scotland, the Judges of the Court of Session and High Court of Justiciary are individually styled LORD Certain judges have other special designations, as 'President', 'Recorder', etc But the name is regularly given in England to the presiding officer of a County Court, who is officially styled 'His Honour Judge A——' The persons presiding judicially in inferior courts are usually called 'justices' or 'magistrates In the United States 'Judge' is more widely applied to the presiding officer of any judicial court below the 'supreme Court, in which the official name is 'Justice' (see b below). Judge' is also more used as a designation in some British colonies or dependencies Historically, the name is given to certain noted persons as 'Judge Gascoigne', 'Judge Jeffreys
