LABBAI (LUBBAY) (Tamil, *ilappai*, said to be a corruption of *ʿarabī*), a class of Indian Musalmans, also known as Djonakas (Skt *yavana*, "Greek, western"), supposed to be descended from Arab immigrants who intermarried with native women, but now having nothing to distinguish them from the aboriginal people, except their mode of dress and manner of shaving the head and trimming the beard In 1911 they numbered 401,703, found chiefly on the E coast of Southern India Most of them are Sunnīs, of the Shāfiʿī *madhhab*, and their head-quarters are at Nagore, the burial place of their patron saint, Shāh al-Hamīd ʿAbd al-Kādir (ob 1600), commonly known as Kādir Walī or Mīrān Sāhib (see *Gazetteer of the Tanjore District*, p 243) They read the Kurʾān in Tamil translation, written in Arabic characters They are industrious and enterprising, especially as fishermen and traders

Bibliography E Thurston, *Castes and Tribes of Southern India*, Madras 1909, iv 198 *sqq*, Kādir Husain Khān, *South Indian Musulmans*, Madras 1910, p 29 *sqq*, *Manual of the Administration of the Madras Presidency*, Madras 1893, iii 437 (T W ARNOLD)

LABBAIKA [See TALBĪYA]

LABĪD B RABIʿA ABŪ ʿAKĪL, an Arab poet of the pagan period, who lived into the days of Islām (*muhadram*), belonged to the family of Banū Djaʿfar, a branch of the Kilāb, who belonged to the Banū ʿĀmir and therefore to the Kaisī Hawāzin According to Ibn Saʿd, vi 21, he died in 40 (660/661) in the night on which Muʿāwiya arrived in al Nukhaila to conclude peace with Hasan b ʿAlī Others, like Ibn Hadjar, iii 657, whom Noldeke (*Funf Moʿallaqāt*, ii 51) thinks ought to be followed, give 41 A H, others again 42 He is said to have reached an unusually great age (al-Sidjistānī, *K al-Muʿammarīn*, ed Goldziher, ch 61) In fact he makes several allusions to this in his poems The date of his birth can only be approximately fixed Even before 600 A D he seems to have attained a prominent position in his tribe by his command of language As quite a young man he is said to have accompanied a deputation from his tribe to the court of king Abū Kābūs Nuʿmān of al-Hīra (c 580—602), and when the latter was incited against the Banū ʿĀmir by his friend Abū Rabīʿ b Ziyād al-ʿAbsī (of the tribe to which Labīd's mother belonged), Labīd succeeded with a satirical *radjaz* (*Dīwān*, N⁰ 33) in so ridiculing him to the king that he restored his favour to the Banū ʿĀmir A verse from Nuʿmān's answer to his courtier who sought to defend himself from the lampoon on him became proverbial (cf al-Mufaddal, *al-Fākhir*, i 41 *sq*, al-ʿAskarī, *Amthāl*, on the margin of Maidānī, ii 117, 7—18, al-Maidānī, ii 33, *K al-Aghānī*, xv 1 94 *sqq*, 91 *sqq*, xvi 2 22 *sq*, 21 *sqq*, ʿAbd al-Kādir, *Khizānat al Adab*, ii 79 *sqq*, iv 171 *sqq*) In his later poems Labīd also often prides himself on having helped his tribe by his eloquence He remained loyal to his tribe even when a famous poet and scorned the profession of a wandering singer, practised by his contemporary al ʿAshā But the coming of the Prophet Muhammad threw him out of the usual groove We do not know the exact date of his conversion to Islām As early as Djumādā II of the year 8 the chiefs of the tribe of ʿĀmir b Saʿsaʿa, ʿĀmir b Tufail and Arbad b Kais, a stepbrother of Labīd, seem to have negotiated in Medīna about the adhesion of their tribe to the new constitution without reaching any result (see Caetani, *Annali*, ii 90 *sqq*) Both men are said to have soon after come to an untimely end ʿĀmir from plague and Arbad from a lightning stroke, the latter story seems to find confirmation in Labīd's lament for him (*Dīwān*, N⁰ 5) The accusation on the other hand that Arbad attempted to kill the Prophet is quite incredible, for in that case Labīd could hardly have composed several elegies on him and they would certainly not have been included in his *Dīwān* In the year 9 the tribe again sent a deputation to Medīna which included the poet and an agreement was reached Labīd is said on this occasion to have become a Muslim He later migrated to Kūfa where he died Of his family only a daughter is mentioned who is said to have inherited his talent (see al-Maidānī ii 49, 13 *sqq*, al-Ghuzūlī, *Matālīʿ al-Budūr*, i 52, 7 *sqq*)

Labīd's poems were very highly esteemed by the Arabs Al Nābigha is said to have declared him the greatest poet among the Arabs or at least of his tribal group, the Hawāzin, on account of his *Muʿallaka* He himself is said to have claimed third place after Imru 'l-Kais and Tarafa Al-Djumahī (*Tabakāt al-Shuʿarāʾ*, ed Hell, p 29 *sq* places him in the third class of pagan poets along with al-Nābigha al Djaʿdī, Abū Dhuʾaib and al Shammākh I abid showed himself equally master of the *hidjāʾ*, the *marthiya* and the *kasīda* One of his *kasīda's* was adopted into the collection of *muʿallakāt* and is thought by Noldeke (*Funf Moʿallaqāt*, ii 51) to be one of the best specimens of Bedūin poetry Labīd uses the traditional pictures from the animal world — wild asses and antelopes fleeing before the hunter and fighting with his dogs — as charmingly as the usual complacencies about drinking bouts He seems on the other hand to have only cultivated the *nasīb*, because it had been traditional He deals far less with the subject of womans's love than with the description of the *Atlāl* which he likes to compare with

Paris MSS Arab 4439, fol 94v, 152r, 243r, in van Berchem, *Voyage en Syrie*, p 290, note 3, al-Ḳalḳashandī, *Subh al-Aʿshā*, iv 145, transl Gaudefroy–Demombynes, *La Syrie*, p 113 *sq*) The Arab geographers and historians mention many ancient buildings that had survived in the town, they also tell of two castles connected with one another on a hill which commanded al-Lādhiḳīya (Bahā' al-Dīn, in *Hist Or des Croix*, iii 110), a great city-gate, which it took a number of men to open (al-Balādhurī, *op cit*, p 132), and the splendid monastery of Dair al-Fārūs (Masʿūdī, *Murūdj al-Dhahab*, viii, p 281, Dimashḳī, ed Mehren, p 209, Abu 'l-Fidā', *Geogr*, transl Reinaud-Guyard, ii/ii 35, in Ibn Battūta, i 183 *al-Fārūs*) called after *Tall Fārūs* still the name of the eminence to the north of the town (M Hartmann, *Z D P V*, xiv, p 166 and map) A short description of al-Lādhiḳīya is given by Raoul of Caen (*Gesta Tancredi*, ch 144, Rohricht *Z D P V*, x 316 has put together a list of the buildings of the town known from Frankish sources) In spite of the earthquakes and frequent pillaging suffered by the town in course of centuries, it never seems to have been quite desolate and uninhabited The fine, high houses and the straight streets, paved with marble blocks, noted by Ibn al-Athīr and Abū Shāma (*Hist Or des Croix*, i 720, iv 361) and which they say had suffered much when the town was sacked (cf also Yaʿḳūbī, ed de Goeje, *B G A*, vii 258), recall the description of Laodiceia in Poseidonius as a *κάλλιστα ἐκτισμένη πόλις* (Strabo, xvi, p 753), and of the modern town van Berchem says (*J A*, 1902, p 425, cf *Voyage*, i, p 289 *sq*) *la ville de Lattakieh a garde ses rues droites Il est curieux que ce plan, d'aspect tout moderne, existât au moyen âge, il remonte peut-être à l'antiquite, comme certaines rues droites de Damas et Jerusalem* The origin of the straight streets and the square plan of the town (cf Th Schreiber in the *Festschrift fur H Kiepert*, 1898, p 335—348) has been ascribed to architects of the Roman empire (A v Gerkan, *Griech Stadtanlagen*, 1924, passim), but more recently Cultrera has shown that they already existed in the early Hellenistic period and had been borrowed as early as by Hippodamos of Miletus (fifth century) from the architecture of the ancient east (*Architettura Ippodamea*, in *Memorie dell' Accad dei Lincei*, ser v, vol xvii, p 403, 433 *sq*, 473, Cumont, *Fouilles de Doura Europos*, Paris 1916, xix, note 4, 25 *sq*, 483)

LAGHUAT, al-Aghwāt, a town and oasis in Southern Algeria, 250 miles south of Algiers in 2° 55′ East Lat, 33° 48′ N Lat, at 2,400 feet above sea-level In 1911 it had 5,598 inhabitants of whom 595 were Europeans Laghuat which forms part of the "Territoire" of Ghardaia is the capital of a mixed commune and a native commune of 6,650 square miles with 19,810 inhabitants

The town and the oasis lie on the right bank of the Wēd Mzi, which comes from the Djebel Amūr and finally under the name of Wēd Djedi enters the Shott Melghir in the south of the province of Constantine The houses lie in terraces on the slopes of two rocky hills, spurs of the Djebel Tisgarine, the European quarter on the north-west slope and the native quarter on the north-east slope It is defended by a wall and two forts on the summit The oasis extends in a semi-circle north-west and south east of the town The north-west part is the more extensive and contains palmgroves and fields of cereals A canal led by a dam from the Wēd Mzi called the Wēd Lekhier provides for the irrigation of the gardens The palm-trees to the number of 30,000 produce dates of mediocre quality, but they supply the food of the inhabitants The situation of Laghuat between the southern Oran and southern Constantine at the point where roads diverge to the west, to the Ūlād Sidi Shaikh, to the south of the Mzab and to Wargla, to the east to the Zīban and Biskra, makes this place a considerable centre of commerce

History In the tenth century A D there was already on the banks of the Wēd Mzi a little town, the inhabitants of which, after having recognised the authority of the Fātimids, took part in the rebellion of Abū Yazīd The country round was inhabited by wandering Berbers of the family Maghrāwa The Hilāli invasion brought other tribes of the same stock into this region, notably the Ksel, driven out of the Zab, who founded a village called Ben Būta Other Ksūr (Bū Mendala, Nadjal, Sidi Mīmūn, Badla, Kasbat ben Fotūh) were built by other refugees, some of Arab origin (Dawawida, Ūlād bū Zayan), others came from the Mzab These groups together took the name of al-Aghuat

We know very little of the history of this town down to the xviiith century At the end of the

xvɪth century it paid tribute to the Sultān of Morocco, in 1666 the Ksūr of Badla and of Kasbat Fotūh were abandoned In 1698 a Marabout originally from Tlemcen, Si al-Hādjdj ʿAissa, settled at Ben Būta, imposed his authority on the people of the three other Ksūr and on the neighbouring tribe of the Larba Under his leadership the people of Laghuat defeated the people of Ksard al Asafia but were forced to pay tribute to the Sultān of Morocco, Mūlāy Ismāʿīl, who camped under the walls of the town in 1708 After the death of Si al-Hādjdj ʿAissa (1738 A D) the history of Laghuat is reduced to that of the struggle between the two sof who disputed control of it, the Ūlād Serghine, of the south-west quarter and the Hallaf who inhabited the north-east quarter In the middle of these feuds which bathed the oasis in blood, the Turks made their supremacy recognised In 1727 the Bey of Titteri had imposed an annual tribute on the Ksūrians The Mzabīs driven from the oasis where they had acquired a part of the gardens, formed with the nomads of the south a confederation, over which the people of Laghuat triumphed with the help of the Larba Towards the end of the xvɪɪɪth century the Turks reappeared and enforced once more their suzerainty which the Laghuati had been gradually casting off The Bey of Medea fell in the first expedition (1784), but the Bey of Oran, Muhammad al Kabīr, seized the town and destroyed the quarter of the Ūlād Serghine (1786) His successor ʿOthmān then took the field against the Hallaf whom he scattered (1787)

The two enemy factions were not long however in reorganising themselves and civil strife began again until the chief of the Hallaf, Ahmad b Sālim, succeeded in making himself master of Laghuat and the neighbouring Ksūrs (1828) But peace did not last long The Ūlād Serghine supported by ʿAbd al-Kādir regained the upper hand in 1837 Their chief al-Hādjdj al-ʿArbī was appointed khalīfa by the Amīr He could not hold out and was forced to take refuge in Mzab His successor ʿAbd al-Bākī was no more fortunate, although he had 700 regular troops and a cannon In obedience to the Amīr's orders he tried to imprison the notables but this provoked risings and he had to leave Laghuat (1839) Al-Hādjdj al-ʿArbī, again appointed khalīfa, was defeated by Ahmad b Sālim in alliance with the Marabout of ʿAin Mahdī, Tīdjāni, and then taken prisoner Thus becoming again lord of Laghuat, Ahmad b Sālim placed himself under French protection who appointed him their khalīfa in 1844 A French column under the command of Colonel Marey-Monge on this occasion camped at the very gates of Laghuat The French came back again in 1847 but did not definitely install themselves till 1852, when the Sharīf Muhammad b ʿAbdallāh, already lord of Wargla, had gained entrance to the town with the help of a section of the Hallaf To retake it from him a column was sent under General Pélissier Laghuat was taken by storm after a desperate fight in which General Bouscaren and Commandant Morand were killed (December 1852) A permanent garrison was then stationed in Laghuat and it became the base of French operations in the south

Bibliography R Basset, *Les dictons satiriques attribues à Sidi Ahmed ben Yousof*, in *J A*, 1890, E Daumas, *Le Sahara algerien*, Paris 1845, Fromentin, *Un été dans le Sahara*, Paris 1874, Marey Monge, *Expédition de Laghouat*, Algiers 1844, MoulayAhmad, *Voyages dans le sud de l'Algerie*, transl Berbrügger, Paris 1846 (G YVER)

LAḤIDJ, a sultanate in South Arabia with its capital of the same name north west of ʿAden, bounded by the Hawshabī territory on the north, the Fadlī territory on the east, the ʿAkrabī land in the south and the Subaihī territory in the west The capital, called Lahidj or el-Hōṭa lies at a height of 350 feet above sea-level between the two arms of the Wādī Tuban, the Wādī Ṣaghīr and the Wādī Kabīr, in a fertile oasis which, occupying a wide valley, owes its existence to its irrigation by canals led from the mountain streams and wells of excellent water as much as 15 feet deep The town is surrounded by palmgroves and fields on which cereals are grown, notably *durra* (*holcus sorghum*) and different vegetables, in addition to date-palms there are all kinds of fruit trees, including citrons and cocoa-palms, this being one of the most northerly points in Arabia where the latter are found The town which was visited in 1503 by Ludovico di Barthema and in 1810 by V G von Seetzen and which Niebuhr still calls small, while on Wellsted's visit it had about 400 houses and 800 straw or reed huts with almost 5,000 inhabitants, owes its prosperity to the Russo-Turkish war in the course of which in 1878 England temporarily proclaimed a state of siege in ʿAden and evicted the Arabs and Sōmalīs from ʿAden The latter went to Lahidj where they built themselves thousands of huts close to the town, which now form extensive suburbs and considerably increased the number of inhabitants The sea of houses is dominated by the palace of the Sultān, built by Indian architects and four to five stories high with extensive subsidiary buildings, it is entirely built of clay and painted white The palace is surrounded by a clay wall, to the east of which lies the town with its numerous rectangular flat roofed houses, all built of sun-dried bricks made of a mixture of dung, clay, straw and dried grass and one or two stories high The monotony of the picture is broken only by the very simple, insignificant mosques which are outlined in white round the roof To the east of the palace in the shade of beautiful leafy trees and palms is a pleasant looking one-storied bungalow built by the Sultān for foreign guests Round the town are scattered little groups of low straw huts, made of *durra* stems and surrounded by a hedge which are inhabited by Sōmalīs and their families In addition to these there are also Sawāhilīs settled in Lahidj The great mass of the inhabitants however are Yemen Arabs, who live in the numerous houses and mud-huts, which form the town with its narrow, winding, dusty streets A part of the town is reserved for the Jews, who look wretched and are merchants and artisans There are also a few Muslim Jews who are traders All types of the population are met with in the bazaar street which is barely six feet wide Not far from this is the armourers' market where smiths, Arabs and Jews have erected their simple workshops in open booths The principal weapons made here are the fine *djembīyas* while the long cavalry lances, which are used by the Yemen Kabīlīs are made in Dathīna, Ansāb or Hawīr and brought for sale to the Lahidj market In

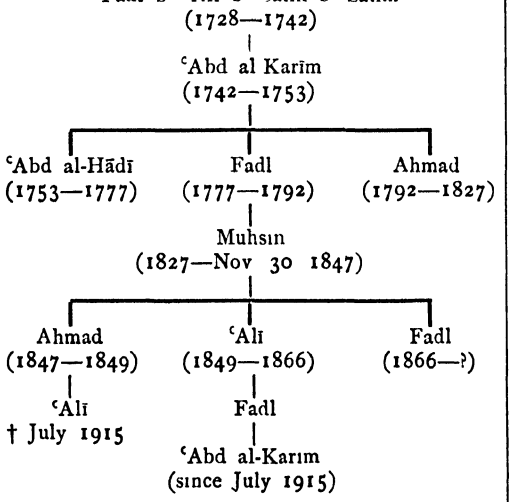
Wellsted's time there were also 30 silk-weavers here, who got their yarn from India The oasis is very well watered and the numerous little canals are fed by the perennial stream which passes not far from the town Lahidj which plays an important part in the caravan traffic is connected by a road with ʿAden and in 1907 was to have been linked up by a railway with ʿAden and Dālīʿ, part of which was actually surveyed but the plan was abandoned England took up the scheme again in 1915 during the war and laid a strategic railway of 1 metre gauge for 25 miles to Lahidj, in 1921 it was extended a few miles beyond the oasis of Lahidj and now reaches Habīl al-Hamrā, 8 miles N W of al Hōtā The continuation of the railway to Sanʿāʾ would open up Southern Yemen and increase the importance of Lahidj

History The name Lahidj (Lahdj) which means a damp low lying area intersected by water channels, a place-name that admirably suits Lahidj, is connected by the genealogists with the Himyar Lahdj b Wāʾil b al-Ghawth b Katan b ʿArīb b Zuhair b Abyan b al-Humaisaʿ and is applied by the geographers to a district in Yemen which forms part of the territory of Abyan north east of ʿAden Al-Hamdānī mentions it among the towns of the Yemen Tihāma and says that in his time the descendants of Asbah b ʿAmr b al-Hārith dhi Asbah b Mālik b Zaid b al Ghawth b Saʿd b ʿAwf b ʿAdī b Mālik b Zaid b Sadad b Zurʿa Himyar al-Asghar were alive Yākūt says the same for the district of Lahidj which included the towns and villages A number of poets, particularly South Arabians, are familiar with the town, e g Kais b Makshūh ʿAmr b Maʿdīkarib, Khudaidj b ʿAmr, Saiyid al-Himyarī, ʿAmr b al Sulaimānī and especially the famous ʿUmar b Abī Rabīʿa, who had property there

After Yemen had been won for Islām, Lahidj shared the fortunes of this extensive province of the Arab empire Lahidj thus passed with Yemen to the Umaiyads and then to the ʿAbbāsids until under al-Maʾmūn the bold ʿAlīd Ibrāhīm b Mūsā b Djaʿfar b Muhammad, drove his governor Ishāk b ʿĪsā al-ʿAbbāsī out of Yemen and made himself independent there In 203 (818/819) the Caliph made a partition of Yemen by which the coast lands from Mecca to ʿAden were put under the governor Muhammad b ʿAbdallāh b Ziyād al-Umawī who founded the town of Zabīd and became the founder of the Ziyādī dynasty which with one interruption (the capture of Zabīd in 293 [905/6] by the Karmatian ʿAlī b al Fadl al-Himyarī al Khanfarī, d 303 [915/16]) ruled over Zabīd until 402 (1011/1012) Lahidj with ʿAden, Abyan, Hadramōt and al Shihr passed into the hands of the Banū Maʿn in the time of the Abyssinian slaves, who ruled the Ziyādī kingdom when the dynasty died out In 439 (1047/1048) ʿAden came under the rule of ʿAlī b Muhammad al-Sulaihī (d 459 = 1066/1067) Zuraiʿ b al ʿAbbās (d 485 = 1092/1093) was installed as governor here and ruled in a practically independent fashion Ibn ʿUmar, the ruler of Lahidj, al-Shihr and Hadramōt, who later seized ʿAden and ruled jointly with his brother Masʿūd, made an alliance with him Their successors succeeded in conquering a great part of the Yemen, but internal discords soon weakened them and in 1152 A D, the caliph al-Mansūr took ʿAden with the help of treachery and was able to hold it until the Aiyūbid al-Malik al-Muʿazzam Tūrān shāh in 1173 A D conquered a great part of Yemen including ʿAden, with whose fate that of Lahidj was henceforth linked Tūrān shāh placed a governor in ʿAden, the brother of the Imām of Sanʿāʾ, Malik al Masʿūd, whose successor Sultān Nūr al Dīn (1233—1249 A D) was the founder of the Rasūlid dynasty of Yemen He soon conquered the whole of the Yemen and ruled it under the nominal suzerainty of the ʿAbbāsid caliph, with whom he quarrelled in 1249 so that Sultān al Malik al-Muzaffar Shams al-Dīn was sent against him and took ʿAden and Lahidj from him In 1251 al Muzaffar granted Lahidj and Abyan to his brothers Mufaddal and Fāʾiz as a fief Lahidj again changed its owner when in 1294 Ibrāhīm b Muzaffar took ʿAden and Lahidj but had soon to part with them again to Dāʾūd, Muzaffar's successor In 1302 Lahidj passed as a fief to the Sharīf ʿImād al-Dīn Idrīs In 1307 the town was pillaged by the Djahāfil, in 1323 ʿUmar b Diwīdān rebelled in Abyān and Lahidj and besieged ʿAden as his son again did in 1325 In 1454 ʿAden with its hinterland passed to the Tāhirids who held it till 1507 The expeditionary force led by Husain al Mushrif which the Mamlūk Sultān Kānsūh al-Ghūrī sent at the request of the Tāhirid Sultān ʿĀmir b ʿAbd al-Wahhāb to prevent the encroachment of the Portuguese in the Red Sea and which conquered a great part of the Yemen, only paved the way for the Turks In 1538 the Turkish governor of Kulzum, Sulaimān Pasha, set out with a fleet and took ʿAden which belonged to the Turkish empire until in 1635 the Turks had to leave the Yemen, which again became independent under the Imāms of Sanʿāʾ Quarrels among the claimants to the imāmate however soon shattered the kingdom and in 1728 the ʿAbdʿalī leader Fadl b ʿAlī b Fadl b Sālih b Sālim, the founder of the dynasty of Lahidj, made himself independent of the Imāms and made Lahidj the capital of his territory In 1735 he took ʿAden His grandson Ahmad b ʿAbd al-Karīm in 1802 concluded through Sir Home Popham a commercial treaty with England but his nephew and successor Muhsin came into conflict with England (1837) through the plundering of the Indian ship Doria Dowlut by his people and thus lost ʿAden, the fort of which passed to England by a preliminary treaty concluded on January 23, 1838, while the Arabs in the town were to remain under the jurisdiction of the Sultān of Lahidj who received in compensation a subsidy of 541 dollars a month On January 19, 1839 the English occupied ʿAden and by a second treaty of June 18, 1839, Captain S B Haines made an arrangement between Sultān Muhsin of Lahidj and England, by which the former agreed to guarantee the security and regularity of the caravan traffic with ʿAden and to maintain a loyal friendship with England, while Haines in return undertook to pay subsidies to the tribes of Fadl, Yāfiʿ, Hawāshib and ʿĀmir and to pay Sultān Muhsin and his descendants 6,500 dollars annually from Dhu 'l-Kaʿda 1254 At the same time the contracting parties agreed to support one another in case of war between the ʿAbdʿalī and Lahidj, to put subjects of the Sultān coming to ʿAden under English jurisdiction during the time of their stay and those who came to Lahidj from ʿAden under that of the Sultān, further all goods belonging to

the Sultān, or his sons were to enter or leave ʿAden free of duty In spite of this treaty the Sultān, who was still sore over the loss of ʿAden, continued to intrigue against the English and supported the attack of the Arabs on ʿAden in 1840 and even had the English representative in ʿAden, Hasan Khatīb, murdered and regularly adopted a hostile attitude towards the English His constant failures however forced him to change his policy and on February 11, 1843 he concluded a new agreement with England which was renewed in a more stringent form on February 20, 1844, before his monthly allowance was again paid to him Muhsin b Fadl, who had again allowed himself to be involved in a war with England in 1846 in which he was defeated, died on November 30, 1847 His son and successor Ahmad maintained friendly relations with England as it was in his best interest to do so He died in 1849 and was succeeded by his brother ʿAlī who resumed a policy of hostility to England and roused the hostility of the tribes against ʿAden On March 7, 1849 a treaty was however concluded with the East India Company which was ratified on October 30, by Lord Dalhousie, but an attitude of constant friendship to England was not thereby secured The Sultān even cut off supplies and it finally came to open fighting in which the Sultān was defeated on March 18, 1858 at Shēkh ʿOthmān so that he had again to reconcile himself to a peaceful policy When in 1873 the Turks in their reconquest of the Yemen advanced on the hinterland of ʿAden, the English occupied Lahidj and the Turks had to retire as a result of English diplomatic negotiations with the Sublime Porte Whether these negotiations were instigated or approved by the Sultān who had lost his independence — only nominal it is true — by the Turkish occupation of his territory, is not known In any case in 1887, as E Glaser records, Sultān Fadl b ʿAlī was receiving a monthly allowance of 1,250 dollars from ʿAden

GENEALOGICAL SURVEY OF THE SULTĀNS OF LAHIDJ



In the World War Turkey assumed the offensive from the Yemen in June 1915 against the English sphere of interest and Turkish troops in conjunction with those of the Imām Yahyā b Hamīd al-Dīn, their ally, under the command of Muhammad Nasr reached Lahidj in their advance on ʿAden where there was a battle with the English and their allies In the course of the fighting the English troops evacuated Lahidj and Sultān ʿAlī b Ahmad was shot A counter-attack on July 21, 1915 restored Lahidj to the English but by August 21 they were again driven out of Lahidj which was occupied by the Turks who held it till the beginning of 1918 It was not till the collapse of Turkey on the Palestine front and the cutting of communications with the Yemen that the position became untenable for the Turkish troops and forced them to retire Since July 1915, ʿAbd al-Karīm b Fadl b ʿAlī has been ruler of the Sultānate of Lahidj

LĀHIDJĀN. 1. A town in Gīlān to the east of the Safīd-Rūd and north of the mountain Dulfāk (cf. the ancient name of a people Δέρβικαι) on the river Čom-khala (Purdesar) which 8 miles higher up flows through Langarūd, the present capital of the district of Rān-i Kūh.

Lāhīdjān although unknown to the early Arab geographers is certainly one of the oldest towns in Gīlān. Its foundation is attributed to the legendary Lāhīdj b. Sām b. Nūḥ. The river Safīd-Rūd divides Gīlān into two parts. In ancient times the river formed the frontier between the Amardoi on the east and the Kadusioi or Gēlai on the west; cf. Andreas, *Amardos*, in Pauly-Wissowa, *Real-Encyclopaedie*. In the Muslim period the part of Gīlān to the east of the river was called Biya-pīsh and that to the west Biya-pas (the word *biya* "water" [cf. Aḥmad Rāzī in Dorn, *Auszüge*, p. 100], corresponds to the Avestan *vaidhi*, "water-course"). According to Kāshānī the people of Biya-pīsh were ʿAlids (Zaidīs) and those of Biya-pas Ḥanbalīs or sectarians of ustād Abū Djaʿfar (= Ṭabarī).

The old dynasty of Biya-pīsh was that of the Kawtum or Hawthum (in the modern Rān-i kūh). Its founder was Nāṣir al-Ḥaḳḳ Ḥasan ʿUtrūsh, a descendant of the Caliph ʿAlī, who preached Zaidī doctrines in Gīlān and died in 304 (917) (Ibn al-Athīr, viii. 61; Ṭabarī, iii. 2292). His descendants are known as Nāṣirwand. Later the family divided into two branches; in the reign of Uldjāitū the lord of Kawtum was Sālūk b. Sālār b. Kaikāwūs b. Shāhinshāh (the descent of this branch is not quite certain); the lord of Lāhīdjān, the most powerful of the princes of Gīlān (or of Biya-pīsh), was Naw-Pādishāh (or Shāh-i naw). When in 706 (1307) Uldjāitū arrived before Lahīdjān (via Tārom-Lowshān-Dailamān-Rustā) Naw Pādishāh submitted to him and thus kept his position.

Lāhīdjān became more generally known as the capital of the dynasty of Biya-pīsh called Kār-Kiyā. These saiyids came originally from the village of Malāt (in the district of Rān-i Kūh). About 769 during the civil war between the two lines of Nāṣirwand, the descendants of Sharaf al-Dīn of Lāhīdjān and those of Amīr Muḥammad of Rān-i Kūh, Saiyid ʿAlī b. Saiyid Kiyā seized Biya-pīsh, Dailamān and some districts of Māzandarān. The power of the Nāṣirwand was re-established in 791—792; in 908 (1502) the troops of Amīr Ḥisām al-Dīn of Fūman (Biya-pas) sacked the town and similar invasions were repeated in 910 (1504) and in 914 (1501) but, except for such interruptions, the dynasty of the Kār-Kiyā lasted till 1000 (1592). The Ṣafawīs had close connections with Lāhīdjān. In the village of Shaikhānbar on the road from Lāhīdjān to Langarūd is the tomb of Shaikh Ibrāhīm Zāhid (d. in 714 = 1314) who was the spiritual father (*pīr*) of Shaikh Ṣafī al-Dīn, the famous ancestor of the Ṣafawid dynasty. Shāh Ismāʿīl I, a fugitive from the Aḳ-Ḳoyunlu, found refuge with the Kār-Kiyā Mīrzā ʿAlī and studied under Mawlānā Shams al-Dīn Lāhīdjī (E. Denison Ross, *The early years of Shah Ismail*, *J.R.A.S.*, 1895, p. 286). These friendly relations were broken in the reign of the Kār Kiyā Khān Aḥmad Khān (943—975 and 985—1000) who was at first imprisoned by Shāh Ṭahmāsp and later driven from the throne by Shāh ʿAbbās, who was indignant at his intrigues with the Ottomans. Aḥmad Khān ended his days in Constantinople (Hammer, *G.O.R.*, ii. 562, 576). In 1000 (1592) Shāh ʿAbbās came to Lāhīdjān and destroyed the garden in front of the castle. During their occupation of Gīlān (1724—1734) the Russians built two forts in Lāhīdjān. Lāhīdjān has now lost all political importance, but has retained its local importance as the centre of one of the largest and richest districts in Gīlān. The town has 2,260 houses with 10,000 inhabitants. There are many tombs there of members of the old ruling family. The district is divided into seven cantons:

	towns	houses
Kūhpāya	50	2,108
Pashmačāh	35	1,059
Kanār-Farīda	63	2,984
Rāh Shāh-i bālā	28	1,965
Gowka	21	656
Čārdeh	5	300
Lashta Nishā	29	775

Bibliography: Yāḳūt, iv., s. v. Lāhidj; *Nuzhat al-Ḳulūb*, ed. Le Strange, p. 163; on the conquest of Lāhīdjān by Uldjāitū cf. the continuer of Rashīd al-Dīn in Dorn, *Auszüge aus muhamm. Schriftstellern*, St. Petersburg 1858, p. 138—152, and Abu 'l-Ḳāsim Kāshānī, *Tārīkh-i Uldjāitū*, MS. of the Bibl. Nationale in Paris, Supp. Persian 1419 (fol. 38—41 contain an important description of Gīlān from Asīl al-Dīn Muḥammad Zawzanī); cf. also d'Ohsson, *Hist. des Mongols*, iv. 488—497; Zahīr al-Dīn Maʿashī, *Tārīkh-i Gīlān wa-Dailamistān* [until 894/1432], ed. Rabino, Rasht 1330 (from the unique Bodleian MS.); ʿAlī b. Shams al-Dīn, *Tārīkh-i Khānī*, ed. Dorn, St. Petersburg 1857 (history of the Kār-kiyā 880—920/1475—1514); Dorn, *Auszüge aus muhamm. Schriftstellern*, St. Petersburg 1858, index; Ritter, *Erdkunde*, viii. 544 *sqq.*; Melgunof, *Das südliche Ufer d. Kasp. Meeres*, Leipzig 1868, p. 230—234 (the retranscription of the rather defective transcription by the translator of the proper names in the Russian original is not always free from errors); Barthold, *Istor.-geogr. očerk Irana*, St. Petersburg 1903, p. 156; Rabino, *Le Guîlan*, *R.M.M.*, 1915—1916, xxxii., p. 291—334, 397 *sqq.* (a valuable work containing a complete toponymy and a synopsis of the history of Gīlān).

2. Several districts in Persia have however derived from the stems *Lāh* and *Lār* [q. v.]: Lāhīdj, an important little town in Transcaucasia west of Shamākha [cf. SHIRWĀN]; Lāhīdjī, a village in the canton of Kurbāl in the province of Fārs; Lāhīdjān, a canton of Mukrī Kurdistān [cf. SAWDJ-BULĀḲ], which the *Sharaf-nāma*, i. 280 calls Lārdjān. There is a village of Lāhīdjān near Ilkhiči, south of Tabrīz and a village of Lāridjān south of the Araxes about 12 miles above the mouth of the river of Ardabīl (Ḳara-Ṣu). The forms *Lāh* and *Lār* may both come from **Laḍh* (cf. the old Persian *Māda*, which gave *Māh* in Persian and *Mar-kh* in Armenian). According to the dictionaries (Vullers) the old name of the town of Lār [q. v.] was Lād/Lādh; the silk called *lādh* is also known as *lāh* (*lāh* however may equally well be explained by *lās*). The change of *d* (*dh*) to *r* is

attested in the Caspian dialects (it is regular in Tātī, in Māzandarānī we have the parallel forms *āzād/āzār*, Melgunof, p 221) The fact that we have districts of Lāhīdjān and Lārīdjān in the adjoining provinces of Gīlān and Māzandarān is remarkable, but still more significant is the fact that Lāhīdj of Shīrwān represents an islet of Īrānian Tāt surrounded by Turks (the Tāt are now found scattered throughout Daghistān, the country round Teherān, Ādharbāidjān, etc) Their present name has a rather general and vague character, cf TĀT The colony of Lāhīdj may have retained the original dialect formerly spoken in the metropolis The name of the silk *lādh/lāh* suggests the former existence of a place called Lād, which produced silk (cf Yākūt, s v Lāhīdj) [Yākūt says that Lāhīdj produces the silk called "Lāhīdjī" which is not of high quality] With the suffix *-ic*, the word *Lāh ic* would mean the people of Lād It remains to be seen if the region of Lāhīdjān is not the ancestral home of numerous *Lāhīdj* colonies At the present day there is spoken in Lāhīdjān — although with certain local peculiarities — the Gilakī dialect but this parent dialect has here exercised a levelling influence, of which the foreign Turkish was incapable in the case of the people of Lāhīdj of Shīrwān As to Lāhīdjān of Kurdistān we may recall the hypothesis of Andreas that the name "Dimla" by which the Zāzā call themselves (north of Diyārbakr) is a metathesis of Dēlam (Dailam) The emigrations from Gīlān, still very obscure, certainly penetrated far to the west — [To the names mentioned one might add perhaps that of Kal'a-i Lāhūdj in Khūzistān (?), cf *Tārīkh i Guzīda*, *G M S*, xiv/1, p 240] (V MINORSKY)

LĀHŌR, capital of the province of the Pandjāb, British India, situated on the river Rāwī, at 31° 35′ north latitude, 74° 20′ east longitude Population in 1911, 228,687, of whom 129,301 were Muhammadans The foundation of Lāhōr is traditionally attributed to a mythical Lava or Loh, son of Rāma, after whom it was named Lohāwar It is not mentioned in the chronicles of the invasion of Alexander the Great, nor is the town described either by Strabo or Pliny, but it may be the Labokla of Ptolemy, which Sir Alexander Cunningham (in his *Ancient Geography of India*) explains as Lavālaka, "the abode of Lava" In the *Mahābhārata*, the Pandjāb is called Tākadesa, or the country of the Tākas According to Huien Tsiang, Tākī was the capital of the Pandjāb in 633 A D He makes no mention of Lāhōr by any name capable of identification as such, though he traversed the entire province and stayed in it for quite two years Possibly the Lohkot of the *Purānas* is Lāhōr The *Deshwā Bhāgā* (a compilation from the *Purānas*) gives an account of a battle between Bānmal, Rādjā of Lavpūr, and one Bhīm Sen Kanēkson, the mythical ancestor of the solar Rādjpūt princes of Central India, is said to have migrated south from Lohkot, an event assigned by Colonel Tod to *c* 145 A D One of the city gateways is known as the Bhātī Gate, the Solankhīs and Bhātīs of Radjputāna point to Lāhōr as the seat of an earlier settlement The first distinct mention of Lāhōr occurs in the history of the campaigns of Subuktagīn, and of Mahmūd of Ghaznī, when the Brahman kings of the Kābul valley, being driven from Pashāwar and Ohind, established their new capital first at Bhēra on the Djhelam, and then at Lāhōr Both Djai Pāl, and his son Anang Pāl, the successive antagonists of the Ghaznī invaders, are called Kādjās of Lāhōr by Farishta, according to whom the Hindū dynasty was subverted in A D 1031, when Lāhōr became the residence of a Muslim governor under the king of Ghaznī A final insurrection of the Hindūs was quelled by Mawdūd in 1042, and the city was left in charge of Malik Ayāz, whom Muhammadan tradition regards as the founder During the reign of Mas'ūd III (1099—1114), Lāhōr became the capital of the Ghaznī dynasty, but was captured in A D 1186 by Shihāb al-Dīn, known as Muhammad Ghorī, the Muhammadan conqueror of India The town was sacked by the Mongols of Čingiz Khān, and of Tīmūr, and in the reign of Mubārak Shāh it was "a desolate waste in which no living thing except the owl of ill-omen had its abode" (Elliot-Dowson, iv 56, 57) Lāhōr remained insignificant throughout the period of the Pathān dynasties In 1436, Bahlol Lodī seized Lāhōr as a first step to power It was plundered by Bābūr's troops in 1524

Even at this time the Pandjāb was an almost uninhabited waste, except for a few walled cities in which the Hindūs could exist in some security from the frontier raiders "The Mongols of Balkh and Kābul every year used to make raids on the Pandjāb, and for this reason the province remained depopulated for a long time, and very little agriculture was carried on Rai Rām Deo Bahtī, of Patiāla, rented the whole Pandjāb from the governor of Lāhōr for 900,000 *takas* (£ 2,000)" (*Bābūr's Memoirs*)

Under the Great Mughals, Āgra, Dihlī, and Lāhōr were the three chief cities and mint towns of the Mughal Empire Akbar held his court here from 1584 to 1598, and repaired and enlarged the fort In the time of Djahāngīr, who made it a secondary capital, Lāhōr reached its zenith of wealth and splendour, the tombs of this emperor and of his famous consort Nūr Djahān, are on the opposite bank of the Rāwī The place fully shared in the misfortunes which attended the decline of the Mughal Empire Situated on the high-road from Afghānistān, it has been exposed to the visitation of every Western invader, and suffered from the successive conquests of Nādir Shāh, Ahmad Shāh Durrānī, and other less famous depredators Lāhōr was a bone of contention between the Sikhs and the Muslims, and the great city of the Mughal princes and their viceroys was reduced to little more than a heap of ruins But the rising of Sikh power under Randjīt Singh (1798 A D) made Lāhōr once more the centre of a flourishing realm It relapsed into anarchy after Randjīt Singh's death Then followed the First and Second Sikh Wars, and annexation to British India in 1849 Since that time the capital of the Pandjāb has grown steadily, and a new town covers a large tract which was recently a wilderness

The native city is a walled town with thirteen gates It has been a municipality since 1867 The old crafts are moribund, but have been replaced by trades of a modern character There are power mills — cotton, flour, iron — and a large agricultural market The European quarter, or Civil Station, lies to the south and east of the city, and is a large administrative, educational, and business centre The older part is known as Anārkalī, and here are the buildings of the Government Secretariat,

University of the Pandjāb, Government College, Medical and Law Colleges, and Museum Anārkalī is connected with the newer Civil Station by a fine thoroughfare called the Upper Mall, on which are the High Court, Cathedrals (Anglican and Roman Catholic), Lawrence Gardens, and Government House Further out is the important military station of Lāhōr Cantonment, formerly known as Miān Mīr Lāhōr is a great railway centre, and the headquarters of a big system, the North Western Railway, with extensive workshops and a large railway colony

LAILA (A), night, *Lailat al barā'a*, *Lailat al-Kadr*, see RAMADĀN

LAILA 'L-AKHYALĪYA, an Arab poetess, daughter of ʿAbdallāh b al-Rahhāl(a) b Kaʿb b Muʿāwiya of the tribe of ʿUkail b Kaʿb She got her name from the fact that her father — according to other traditions one of her ancestors Kaʿb or Muʿāwiya — was known as al-Akhyal (= "the falcon"), perhaps it was a common name in her family and the phrase *nahnu 'l-akhyālu* in her verses glorifying her family may refer to this (*Aghānī*, x 80, *Hamāsa*, p 711) Laila is usually mentioned in connection with her fellow-tribesman Tawba b Humaiyir al Khafādjī, fragments of her laments for him are preserved in the *Kitāb al-Aghānī* She also wrote an elegy on the death of the Caliph ʿUthmān It is also recorded of her that she exchanged lampoons with Nābigha al-Djaʿdī Her conversations with Muʿāwiya, ʿAbd al-Malik and Hadjdjādj b Yūsuf are several times recorded She begged the latter, in her old age to take her to her uncle Kutaiba b Muslim in Khorāsān and she is said to have died on the way She must therefore have flourished in the second half of the first century A H

(H H BRAU)

LAILĀ KHANĪM, with Fitnet Khanîm, the greatest Turkish poetess of the older school, at the end of the romantic and beginning of the modern period Born in Constantinople, the daughter of the Kādī-ʿAsker Moreli-zāde Hāmid Efendi, she received an excellent education ʿIzzet Mollā [q v] contributed most to her poetical development, she was related to him and always retained a grateful memory of him as is shown by her elegy full of deep feeling on his death In her case the lack of information about her is characteristic of the old Turkish conception of women about whom very little is spoken in public She was early married but divorced very soon afterwards She had the reputation of a Lesbian She cared very little about the opinion of the world She lived for her pleasures and her writing A few anecdotes relate to her infringements of the social code of Turkish ladies She joined the Mewlewī and was buried in the Mewlewī convent in Galata She died in 1264 (1848)

Lailā Khanîm left a regular *Diwān* entirely lyrical which was several times printed (Būlāk 1260, Constantinople 1267, 1299 etc) Although she is still completely in the purely Oriental conventional period of Turkish poetry, her place at the end of the old school is not to be denied Her verses are simple and clear and free from the affected bombast of the time and with their classically correct language much easier to understand than the majority of contemporary poets, wherefore admirers of the old school like M Nādjī can find very few "good" verses in her Her hymns (*munādjāt*) and elegies were particularly admired She was celebrated for her ready wit

LAILĀ U-MADJNŪN [See MADJNŪN]

LAITH [See KINĀNA]

LAK, i the most southern group of Kurd tribes in Persia According to Zain al ʿĀbidīn their name (Lāk, often Lākk) is explained by the Persian word *lak* (100,000) which is said to have been the original number of families of Lak The group is of importance as the Zand dynasty arose from it The Lak now living in Northern Lūristan are sometimes confused with the Lūr (Zain al-ʿĀbidīn), whom they resemble from the somatic and ethnical point of view The facts of history however show that the Lak have immigrated to their present settlements from lands further north The Lākki language, according to O Mann, has the characteristics of Kurdish and not of the Lūrī dialects [cf LŪR] Čirikov, *Putewoi Journal*, St Petersburg 1875, p 227, says "the Lur and the Lak speak different dialects and hate one another"

The Lak appear in the *Sharaf-nāma*, i 323 alongside of the Zand, among the secondary Kurd tribes, subjects of Persia According to Rabino, the Lak were settled in Lūristān by order of Shāh ʿAbbās who wished in this way to create some support for the new *wālī* of Lūristān, Husain Khān, whom he had chosen from among the relatives of the old Shāhwardī Atābeg (*Tārīkh-i ʿĀlam-ārā*, p 369) Of these tribes, the Silsila had formerly lived at Māhīdasht (S W of Kirmānshāh), the Dilfān take their name from Abū Dulaf [cf the article AL-KĀSIM B ʿĪSĀ] whose fiefs in the third (ninth) century lying in the north of Lūristān [cf SULTĀNĀBĀD], the Bādjilān of Zohāb [q v] as well as of Lūristān say they come from Mawṣil and are evidently one tribe The Lūristān branch seems to have exchanged its Kurmandjī dialect for

Lākkī during its sojourn among the Lak in the time of Shāh ʿAbbās Even after Shāh ʿAbbās there were several Lak tribes outside of Lūristān Zain al ʿĀbidīn (beg of the xixth century) mentions among the Lak the Zand, the Māfī, the Bādjilān and the Zandī-yi kalā(?) To the last tribe (according to Houtum-Schindler Begele) belonged Karīm Khān Zand (born in Pāriyā, the modern Parī about 20 miles from Dawlatābād on the Sultānābād road) When at Shīrāz, Karīm Khān sent for the Lak tribe of Bairānwand In 1212 (1797) the Bairānwand and the Badjilān actively supported Muhammad Khān Zand in his attempt to take the power from the Kādjār (H J Brydges, *A History of Persia*, London 1833, p 46, 58, R G Watson, *A History of Persia*, London 1866, p 116) Under the Kādjārs several Lak tribes were broken up The Zand have almost completely disappeared, in 1830 remnants of them were to be found among the Bādjilān of Khānikīn (Khurshīd-Efendī, *Siyāhat-nāme-i Hudūd*, Russ transl, p 112, 221), there are still a few Zand families in the Dorā Farāmān district to the S E of Kirmānshāh (*R M M*, xxxviii, p 39), a section of the ʿAmala of Pusht-i Kūh claims to be descended from the Karīm Khān tribe At the present day there are Māfī at Waramīn, Tihrān and Kazwin

According to a good list compiled by Rousseau at Kirmānshāh in 1807 (cf *Fundgruben d Orients*, Vienna 1813, iii 85—98) there were considered as Lak the following tribes Kalhūr, Māfī, Nānakī, Djalilwand, Pāyrawand, Kulyāʾī, Sūfīwand, Bahrāmwand, Karkūkī, Tawallī, Zūyirwand, Kākūwand, Nāmīwand, Ahmadwand, Bohtūʾī, Zūliya, Harsinī, Shaikhwand

According to O Mann and Rabino, the Lak tribes of Lūristān are as follows Silsila (9,000 families), Dilfān (7,470), Tirhān Amrāʾī (1,582 families), the Bairānwand (6,000 families) and Dālwand (1,000 families) forming part of the Bālā-girīwa group, a total of about 15,000 tents The Bairānward and Dālwand live to the east of Khurramābād around the sources of the river which flows through this town, the Silsila and the Dilfān occupy the beautiful plains of Alīshtar and Khāwa respectively while the Tirhān (perhaps = Tarkhān, i e "exempt from taxes") live between the left bank of the Saimara and the lower course of its left bank tributary from Khurramābād The territory occupied by the Lak and including N and N W Lūristān is sometimes called Lakistān

The cohesion of the Lak tribes is evident from the fact that even before 1914 the Silsila, Dilfān and Tirhān were united under the authority of Nazar ʿAlī Khān of the Amrāʾī clan In addition to the bonds of tribe and language, there is that of religion for all the Dilfān and many of the ʿAmala of Tirhān belong to the extremist Shīʿa sect of the Ahl i Hakk (cf SULṬĀN ISḤĀḲ)

Bibliography E Beer, *Das Tarikh-i Zendye*, Leyden 1888, p xviii, xxvi, Zain al-ʿĀbidīn Shīrwānī, *Bustān al Siyāhat*, Tihrān 1315, p 522, O Mann, *Skizze d Lurdialekte*, *S B*, *Ak Wien*, 1904, p 1173—1193, O Mann, *Die Mundarten d Lur-Stamme*, Berlin 1910, p xxii—xxiv to the number of tribes speaking "Lākkī" the author adds the Kalhur of Kirmānshāh and the Mākī of the Pusht i Kūh, Rabino, *Les tribus du Luristan*, *R M M*, 1916, Minorsky, *Notes sur la secte des Ahl-i Hakk*, *R M M*, xl 56

2 Name given themselves by the Ghāzī-Kumuk, a people living on the eastern Koi su in central Daghistān [q v and Erckert, *D Kaukasus und s Volker*, Leipzig 1887, p 248—257 and Dirr, *Die heutigen Namen d kaukasischen Volker*, *Peterm Mitteil*, 1908, p 204—212]

On the other hand the term Lēk in Armenian and Lek i (plural Lek-ebi) in Georgian means the Lezgi/Legzi of Daghistān (where the *e* may certainly name the value of *a/a* Lāgzi) This last name seems to have been applied to the highlanders of Kūrā, living in and around the sources of the Samur, and later to have been extended to all the people of Daghistān, although no people of the Caucasus actually call themselves Lezgi/Legzi Marquart, *Beitrage z Geschichte und Sage v Eran*, *Z D M G*, 1895, xlix, has attempted to explain the Arabic al Lakz by the addition of the Persian suffix *-zī* to the name Lek (or Lak), cf Sagzī, "inhabitant of Sistān" (V MINORSKY)

LAKHM (BANŪ) With the exception of the Lakhmid clan in the ʿIrāk, so frequently celebrated in the old Arab poetry, the pre-ʾIslāmic history of this family is not well known and is full of legend Their traditional genealogical tree is given in the article DJUDHĀM According to it Lakhm was of Yemen origin and was the brother of Djudhām and ʿĀmila These genealogical tables may be taken for what they are worth for Djudhām As to Lakhm, Yemenis and Maʿaddīs claim descent from the powerful Lakhmid dynasty of the ʿIrāk As to the reputed relationship of Lakhm with Djudhām and ʿAmila, it must correspond to facts sufficiently established in the century when Islām first appeared It shows that the three groups were then connected by community of aims and interests This forms a solid guarantee of a genealogical connection even if open to criticism in other respects

Of the three sister tribes, Lakhm was undoubtedly the most illustrious and the oldest also Legend connects it with the descendants of Abraham A Lakhmid is said to have taken Joseph out of the well into which his brothers had thrown him But by the eve of the Hidjra, the vigour of the Lakhm had been sapped, while the ʿĀmila [q v] and notably the Djudhām who under the ʿOmaiyads played a leading part, had increased in importance Two centuries before the Hidjra, the surplus Lakhmid population had spread over the lands in the north of the Peninsula in Syria and Palestine and in ʿIrāk where they established the Lakhmid phylarchate of Hīra [q v and the article DJADHĪMA], continually at war with the Ghassānids of Syria In Syria we find the Lakhm settled in the same cantons as the Djudhām Like the latter, they had adopted Christianity which had also become the official religion of the Lakhmids of Hīra

When Islām appeared, the Djudhām had practically absorbed their relatives, the Lakhm of Syria, a peaceful absorption by mutual agreement In the first century A H the two tribes were usually named together as forming one group, and even when reference is made to a "chief of Lakhm" we can hardly be wrong in thinking he also ruled the Djudhām The *nisba* Lakhmī becomes rare in comparison with Djudhāmī In the wars of Islām, during the conquest of Syria, at Yarmūk, at Siffīn, and later in the course of the campaigns under Yazīd I, against the sacred cities of the Hidjāz, the two tribes fought under the same chiefs and under the same banner "Lakhmī" became

practically reduced to little more than a title of honour Its archaic flavour, the glorious memories which it recalled of the phylarchs of ʿIrāḳ, was very impressive in the "Burke" or "Almanac de Gotha" of the Arabs But as to the Lakhmids, they no longer have a separate existence from the Djudhām When in the lands to the west of the Euphrates, we find them mentioned alone, the name must be taken to mean the Djudhām It is the latter that the chroniclers usually have in mind

LAKHNAU, former capital of the province of Oudh (Awadh), now secondary capital of the United Provinces of Āgrah and Oudh in British India, situated on the river Gumtī, at 26° 52′ N L, 80° 56′ E L Population at the 1911 census, 19,782, of whom 4,461 were Muhammadans Nothing is known of its history prior to the Muhammadan invasion, even the derivation of the name is uncertain, though the first syllable is a contraction of Lačman or Lakhman The oldest part is the Lačman Tila, which was colonised by Shaikhs at the close of the thirteenth century A member of this fraternity, Shāh Mīnā, who died in 1478, gained much saintly repute and his tomb is an object of pilgrimage Lakhnau's prominence began in the time of the Sūrī kings of Dihlī It was occupied by Humāyūn in 1526, and taken by Bābur in 1528, under Akbar it was the chief town of a *sarkār* The decay of the Mughal Empire enabled Saʿādat Khān (1724) to found the dynasty of the Nawāb-wazīrs of Oudh, who ruled as independent governors, and latterly as kings of Oudh, till 1856 Saʿādat Khān, a Saiyid from Persia, of the Shiʿa sect, a wazir of the Empire, destroyed the power of the Shaikhs of Lakhnau, but retained his capital at Faizābād He adopted the fish as the dynastic badge The grandeur of the city dates from the time of Āsaf al-Dawla (1775—1797), the fourth of his line, whose reckless munificence has passed into a proverb, and whose reign was the golden age of Lakhnau, which he made the capital of Oudh East of the beautiful Victoria Park (1887) is a fine group of buildings, the Rūmī Darwāza, the Great Imāmbāṛā, and a mosque, all built by Āsaf al Dawla The second and third are in the Mačhī Bhawan, or old fort, here also is the Lačman Tila, surmounted by the mosque of Awrangzēb The Great Imāmbārā is the chief architectural glory of the city To the same period belongs the Martiniere, built by General Claud Martin, first as a residence for himself, afterwards converted into a school

Saʿādat ʿAlī Khān (1797—1814) constructed the Dilkhushā palace and the Sikandra Bāgh He and his successors continued to adorn the suburbs with public monuments, parks, and country seats The meretricious style of the period marks the decay of Indian Muhammadan architecture

Ghāzī al Dīn Haidar assumed the title of king of Oudh He built the Čhattar Manzil palaces, and the mausoleum called the Shāh Nadjaf

Muhammad ʿAlī Shāh (1837—1842) reformed the administration, and by his economic measures stayed the downfall of his house for two more reigns His name is associated with the buildings at Husainābād During the reign of his son Amdjad ʿAlī Shāh, all the old abuses returned, and the government of the country became utterly paralysed

Wādjid ʿAlī Shāh (1847—1856) was the last king of Oudh He built the Kaisai Bāgh palace, a florid structure of stuccoed and gilt brick

Mal administration by one of the most extravagant courts known to history led to the annexation of Oudh in 1856 during the viceroyalty of Lord Dalhousie Some of the fiercest fighting in the Mutiny took place at Lakhnau, the name of which will be ever remembered in connection with the gallant defence of the Residency

Modern developments have been stimulated and controlled by the wise generosity of the Local Government, and Lakhnau with its suburbs is regarded by many as the finest city in Northern India As a centre of Urdū culture, it is the rival of Dihlī itself and is a seat of learning with unusual facilities for female education The Canning College (1864) in the Badshāh Bāgh, King George's Medical College (1910), and the Isabella Thorburn College for women, are now included in the University Secondary establishments include the Colvin School, and the Reid Christian College The Provincial Museum is also in Lakhnau The Cantonment is the largest military station in the United Provinces The city is a great railway centre, and the head-quarters of the Oudh and Rohilkhand Railway are here There used to be an extensive native manufacture of gold and silver brocade, muslins, embroidery, brass and copper ware, but here as elsewhere indigenous arts have fallen on evil days

LĀLEZĀNĪ [See Mehmed Lālezārī]

LĀM (Banī Lām), an Arab tribe leading a nomadic life on the lower course of the Tigris (ʿAlī Gharbī, ʿAlī Sharkī, ʿAmāra) According to the statistics of Khurshīd Efendi (middle of the xix[th] century) there were over 4,400 families of Banī Lām west of the Tigris (between ʿAmāra and Shatt al-Hayy) and 5,070 east of the Tigris, along the Persian frontier from Mandalī to the region of marshes (*khōr*) into which the Karkha disappears 17,450 families of the Banī Lām went over to Persian territory between 1788 and 1846 (the southern parts of the Pusht-i Kūh, the domains of the wālīs of Huwaiza), some columns were even established east of the Karkha and at Fallāhīya

The Banī Lām claim to come originally from

the neighbourhood of Mecca (Lyclama a Nijeholt, *Voyage*, III 225) and their eponym was their chief Faradj Lām The Banī Lām, for the most part Shīʿīs, were on friendly terms with the wālīs of Huwaiza (the Mushaʿsha', Arab saiyids, q v) who played an active part in Persian politics in the time of the Safawids In 1678, 1715, 1742, 1748 the Banī Lām in connivance with the chief of Huwaiza rebelled against the pāshās of Baghdād Less happy were the relations of the Banī Lām with the Lūr wālīs of Pusht-i Kūh who deprived them of the villages of Bayāt, Deh-i Iurān and Baksāye, but as a rule the Banī Lām got on well with their Lūr neighbours

ʿAlī Ridā Pāshā (in 1836) and Nadjīb Pāshā (after 1843) inflicted heavy defeats on the Banī Lām The central Persian government also (expeditions of Muʿtamid al Dawla in 1841) drove the Banī Iām from the left bank of the Karkha but, protected by the mountains of Pusht-i Kūh to the north and on the east and by the *khōr* to the south, the Banī Lām kept till 1914 a position of autonomy between Turkey and Persia The presence of the Banī Iām and the Sagwand Lūrs between ʿAmāra, Pāy i Pul and Dizfūl had stopped commercial traffic by this direct route

The unity of the tribe was lost in the XIXth century, the section on the right bank and that on the left of the Tigris had each its own shaikh In 1821 the energetic Madhkūr (Matkūr), son of Djandil, succeeded the deposed Shaikh ʿArār but Layard noticed that he had already little authority over his rivals Lady Blunt speaks of Shaikh Mizbān and her son Boneye Shaikh Ghadbān, son of Boneye, at the beginning of the war of 1914 attacked the English force at Ahwāz but was soon disposed of

LAMGHĀNĀT, a district in eastern Afghānistān It is often referred to by Bābur, see W Erskine's translation of his "Memoirs", p 141 and P de Courteille, I 287 The name is fancifully connected with Lamech, the father of Noah (H BEVERIDGE)

LĀMIʿĪ, nom de plume (*takhallus*) of SHAIKH MAHMŪD B ʿOTHMĀN B ʿALI AL-NAKKĀSH, a celebrated Sūfī writer and poet of the early part of the reign of Sulaimān I, the era, not only of the greatest political development of the Turkish empire, but also that in which literature was most cultivated He was born in Brussa, the son of the *defterdār* of Sultān Bāyazīd's treasury His grandfather had been taken by Timurlenk after his invasion to Transoxania (Samarkand) where he learned the art of *nakkāshlīk* (embroidery and painting) there highly cultivated and on his return to Asia Minor introduced the first embroidered saddle On the completion of his theological studies with Mollā Akhawain and Mollā Muhammad b al Hādjdji Hasan-zāde, Lāmiʿī, who had an inclination to Sūfism, became *murīd* with the Nakshbandī Shaikh ʿĀrif bi-'llah Saiyid Ahmad al-Bukhārī He spent his whole life in the calm retirement of a Sūfī, free from external cares and favoured by the patronage of Sultāns Selīm and Sulaimān who frequently showed signs of their favour to him and his numerous family, he lived in Brussa writing industriously till his death in 938 or 940 (1532 or 1533) He was buried in the mosque built by his grandfather on the citadel in Brussa

The versatility and quality of his literary output in prose and poetry is really astonishing But his work was not so much original as translations and

adaptations, as was characteristic of the period which regarded slavish attachment to Persian models as the highest ideal He usually took as his model Djāmī, then the most celebrated poet of Persia with whom he had a further link in their both being Nakshbandis and therefore was called Djāmī i Rūm His prolificity is greater than that of any Turkish writer We have a cycle of nine romantic poems from his pen His importance to Turkish literature is considerable but is greatly exaggerated by von Hammer who devotes the longest monograph in his *Gesch d osm Dichtkunst* (ii 20—195) to him Lāmiʿī's style is still comparatively lucid and simple There is not yet any trace in him of the overwhelming turgidity of the later artificial classicism, yet it must be confessed that most that is beautiful in him is due to his Persian originals Ziyā Pasha in his *Kharābāt* has for this reason paid no attention to him

The list of his works as given in the *Sharaf al-Insān* numbers 24 but in reality there were more His prose writings are the translations of Djāmī's Sūfī works *Nafāhāt al-Uns* (biographies of Sūfīs with the sub-title *Futūh al-Mudjāhidīn li-Tarwih Kulūb al-Mudjāhidīn*) and *Shawāhid al-Nubuwwa* ("The witnesses of prophecy", printed at Constantinople in 1293), the *Sharaf al-Insān*, "The worth of man", considered by Lāmiʿī to be his masterpiece which is a Turkish version of Part 22 of the 51 Arabic tractates (*Rasāʾil*) of the *Ikhwān al Ṣafā*, the struggle between man and animal (ed and transl by Dieterici, Berlin 1858, Leipzig 1879 and 1881 *Thier und Mensch vor dem Konige der Genien*) His works of a religious character are *Muʿammā Asmāʾ al-husnā*, translation and commentary on the 100 verses of Mīr Husain Nīshābūrī on the 99 names of God and *Miftāh al Nadjāt fī Khawāṣṣ al Ṣuwar wa Āyāt* He also wrote a collection of letters, *Munshaʾāt*, a commentary on the *Dībādje-i Gulistān* of Saʿdī, and *ʿIbretnumā* ("Book of examples", a collection of tales and allegories, lith Constantinople, n d), a *Madjmaʿ al Laṭāʾif*, or *Laṭāʾif-nāma* (a collection of often very daring anecdotes, quite in the style of Boccaccio's Decameron, which received its final form from his son, ʿAbd Allāh Lemʿī, also known as a poet) Finally as a kind of transition to pure poetry he wrote two *munāzara* (disputations in the mixture of prose and verse later so popular), namely *Munāzara-i Behār ū-Shitā* ("Disputation between summer and winter", Constantinople 1290, with the title *Munāzara-i Sultān Behār bā Shehryār Shitā*) and *Munāzara-i Nafs ū-Rūh* ("Disputation between Soul and Spirit")

His very much more important poetical works include a large *Dīwān* of about 10,000 verses which contain much that is beautiful and original, besides *kasīda*'s, *ghazel*'s etc it also contains the *Shehr* in 1288, transl by Pfizmaier, *Verherrlichung der Engiu i Bursa* (separately printed at Constantinople *Stadt Bursa*, Vienna 1839)

His great *Mathnawī* poems were of permanent influence, some deal in a popular fashion with stories from Persian legends, namely *Salāmān ū-Absāl* (dedicated to Sultān Selīm), from Djāmī's original, *Wisa ū-Rāmīn* (dedicated to Sultān Sulaimān), from the original of Fakhr Djurdjānī (d 440 = 1048) and a version of Nizāmī al-ʿArūzī al-Samarḳandī, *Wāmik ū-ʿAdhrā* from the Persian original of ʿUnsurī (d 441 = 1050) translated at the express desire of Sulṭān Sulaimān (transl by von Hammer, Vienna 1833), *Farhād nāma* (transl by von Hammer, Stuttgart 1812), *Heft Paikar*, "The seven beauties" (based on Hātifī's *Heft Manzar*, which again goes back to Nizāmī's *Heft Paikar*) Besides the two allegorical dramas *Gūi ū Čawgān* ("Ball and Bat") and *Shamʿ ū-Parwāna*, "Candle and Butterfly", the latter probably from the Persian of Ahlī Shirāzī, he also wrote two *Mathnawī*'s of a religious nature, the *Maktal-i Hazrat i Imām Husain* recalling the Shiʿī *Tuʿziya* (illustrated MS in the ʿĀshir Library, N⁰ 249) and *Mankabat* (or *Manākib*) *Uwais al-Karnī*

Finally there are his political allegories *Husn ū-Dil* from the Persian original of Fattāhī Nīshābūrī and the Turkish version of Ahī (ed , transl and annotated and compared with Lāmiʿī's Turkish version by R Dvorak, *Husn u dil, persische Allegorie von Fattahi aus Nisapur*), the *Khirad-nāma* ("Book of the Intelligence") and the *Djābir-nāma*

(Th Menzel)

LAMṬA, a large Berber tribe of the Barānī family Its exact origin does not seem to have been known to the Arab and Berber genealogists, who simply make them brethren of the Sanhādja, Haskūra and Gazūla, others give them a Himyarite origin like the Hawwāra and the Lawāta

The Lamta were one of the nomad tribes who wore a veil (*mulaththimūn*) One section lived on the south of the Mzāb, between the Massūfa on the west and the Tārga (Tuareg) on the east, they even seem to have extended as far as the Niger In the south of Morocco, in al-Sūs, where there were Lamta who led a nomadic life, in company with the Gazūla, the Lamta occupied the territory nearest to the Atlas On the coming of the nomad Arabs of the Maʿḳil family, the two sections of the Lamṭa were absorbed by the Dhawī Hassān, the remaining sections then joined the Shabānāt, another Maʿḳil tribe, to oppose the Gazūla who joined the Dhawī Hassān

In the territory of the Lamta of al-Sūs at the mouth of the Wādi Nāl (now Wād Nūn) lay the commercial town of Nūl or Nūl of the Lamṭa, the first inhabited place one reaches on coming from the Sahara Several Moroccan dynasties have struck coins there

The jurist Waggāg b Zallū of Sidjilmāsa, a pupil of Abū ʿImrān al-Fāsī, was a member of the tribe of Lamta, one of his pupils was ʿAbd Allāh b Yāsīn al-Gazūlī, founder of the Almoravid empire

The country of the Lamta was noted for the *lamṭīya* bucklers made at Nūl with the skin of the *lamṭ* antelope

Bibliography al-Idrīsī, al-Bakrī, Ibn Khaldūn, *Kitāb al-ʿIbar*, indices, s vv Lamta and Nūl, Leo Africanus, *Description de l'Afrique*, ed Schefer, iii 272, 437 (G S Colin)

LAMTŪNA, a large Berber tribe belonging to the ethnic group of the Ṣanhādja who lived in tents, and led a nomadic life in the desert to the south of Morocco with other tribes whose members veiled their faces with the *liṯhām* [q v] (*muʿaṯhthimūn*)

At first idolators, the Lamtūna embraced Islām and converted also the Negro peoples who lived around them After having had a series of independent kings, they fell into anarchy until Yahyā b Ibrāhīm al Gudalī took control of them, having gone on a pilgrimage to Mecca in 440 (1048—1049) he brought back from Naffīs the jurist ʿAbd Allāh b Yāsīn al Gazūlī, who after having instructed the Lamtūna in the principles of religion and Muslim law, made himself their chief, conquered their neighbours, the Gudāla and Massūfa, and led them to the conquest of Morocco He was the founder of the Almohad empire, also known as the empire of the Mulaththimūn or Lamtūna (cf ALMORAVIDS) At the fall of the Almoravid empire the Lamtūna disappear from the history of Morocco Their name is still borne by some tribes of Mauritania

Bibliography The first paragraphs of the chapter devoted by the Arab historians to the history of the Almoravid dynasty especially Ibn Abī Zarʿ, *Rawd al-Kirtās*, Ibn Khaldūn, *Kitāb al ʿIbar*, ed de Slane, i 235 and 237, al-Bakrī, *Kitāb al-Mughrib*, ed de Slane, 1911, p 164—168 (G S Colin)

LANKORAN (I ENKORAN), the capital of the district of the same name in the province of Bākū Lankoran is the Russian pronunciation of the name which was at one time written Langar-kunān (anchorage), or perhaps Langar-kanān (place which pulls out the anchors) which is pronounced Länkäran in Persian and Lankōn in Tālishī The ships of the Bākū-Enzelī [q v] line call at Lankoran, which has an open roadstead but at 8 miles N E of the town is the island of Sarā, which has an excellent roadstead which shelters the ships in bad weather

In the district of Lankoran, de Morgan found monuments of very great antiquity (dolmens, tombs, cases of exposure of bodies in the Mazdaean (?) fashion), but it is not known at what period the town of Lankoran was founded Certain statements (cf *Taʾrīkh-i ʿĀlam ārā* under the year 940 [1533] in Dorn, *Auszuge*, IV, 283, and Shaikh ʿAlī Hazīn [about 1725 A D], *Tārīkh-i Ahwāl*, ed Balfour, p 157) suggest that the capital of Tālish was originally at Astārā, towards the end of the xviiith century Lankoran became the capital of this khānate The whole district was annexed by the Russians under Peter the Great (treaties of 1723 with Tahmāsp II and 1729 with the Afghān Ashraf) but returned to Persia by the treaty of 1732 Retaken by Count Zubow in 1796, Lankoran was retaken in 1812 by the Persians who fortified it On the 9th Muharram (*ʿāshūrā*) 1228 (Jan 1, 1813), Lankoran was taken by storm by General Kotliarewski after a brave resistance of the Persians This event hastened the conclusion of the treaty of Gulistān (1813) by which Persia ceded to Russia part of Tālish to the north of the river Astārā From 1846 Lankoran was the capital of the district The fortress was dismantled in 1865 Since 1921 Lankoran has formed part of the republic of Ādharbāidjān, a member of the Soviet Union

The population of the town, which was 3,970 in 1867, had reached 11,100 in 1897 The district of Lankoran has an area of 5,000 sq miles and in 1840 had 30,200 inhabitants and in 1861 99,082 Later the district was reduced to 2,000 sq miles in spite of this, its population in 1897 was 125,895 of whom 46 5% were Azarī Turks, Īrānian Tālish 46 2%, Russians 6 9% (in the north) and Armenians (0 2%) The district is composed of 3 zones to the north, an eastern continuation of the steppes of Mughān, to the east, a marshy littoral intersected by lagoons and covered with a rich subtropical vegetation, to the west are wooded mountains running from 5,500 to 7,500 feet above sea-level which rise from the Russian frontier forming the boundary with the Persian province of Ardabīl The district is rich in forests and has good fishing

LĀR 1 Capital of the district of Lāristān, to the southeast of Fārs Very little is known of Lāristān and its early history The country appears to correspond to the land of the dragon Haftān-bōkht which was killed by Ardashīr Pāpakān According to Persian legend, Ardashīr's adversary lived in the village of Alār in the rustāk of Kōdjarān which was one of the maritime rustāks (*rasātik al-sīf*) of the province Ardashīr-Khurra (Tabarī, i 820), Noldeke in his translation of the *Kārnāmak* (p 50) gives the variants Gulār (?) and Kōčārān, the *Shāh-nāme*, ed Mohl, v 308 Kudjārān Lastly the Armenian geography of the seventh century mentions a Khodjēhrastan in Persia (Khuzihrstan) (cf Marquart, *Ērānšahr*, p 44) The prefixing of an *a* to the name Lār is also found in the name of the island of Lār (cf below) Marquart identifies Kočihrān with the castle of Dēgdān near Sīrāf, on the other hand the *Fārs-nāma-yi Nāṣirī* mentions a village of Kudjar-Kūhčar in the canton of Galla-dār (the ancient Fāl /Pāl/ Bāl of Ibn Battūta Khundjbāl = Khundj + Bāl) immediately adjoining Lāristān According to a verse attributed to Firdawsī (cf Vullers, *Lexicon*, s v Lād) but not found in the known editions of the *Shāh-nāme*, the town was

originally called Lād (and fell to Gurgīn Mīlād, one of the heroes of the cycle of the Kayānid Kai Khusraw) This would be a very curious case of the changing of *d* to *r* found especially in Armenian and in the Caspian Tātī dialect (Darmesteter, *Ét.-Iraniennes*, i 73) The *Fārs-nāma-yi-Nāṣirī* mentions another legend according to which the people of Lār in Fārs had come from Lār in Damāwand (cf below) the cold of which they could not endure

The Arab geographers do not mention Lār, for apparently the old routes linking up the chief towns of Fārs, with Sīrāf and Kais, or Hurmūz (by Fasā and Forg) avoided the town of Lār (cf *Nuzhat al-Kulūb*, p 185, 187) According to Hamdallāh Mustawfī, Lār is a wilāyet near the sea and Ibn Battūta alone talks of Lār as "a large town, with springs, considerable rivers and gardens"

Lār had a local dynasty Its princes, relying on the verse already mentioned regarding the presentation by Kai Khusraw of the town of Lād to Gurgīn, son of Mīlād, traced their descent from this hero They were even crowned with the crown of their ancestor and this treasure was among the booty taken by the Safawids in 1010

The first prince of Lār to be converted to Islām (about 100) was Djalāl al-Dīn Īradj The dates become more reliable from the time of the Amīr Kutb al-Dīn Muaiyid Pākūy (?) (594–648) Fourteen of his successors are known but their order is not so certain, when in 748 (1347), Ibn Battūta passed through Lār, the Sultan of Lār, of Turkoman origin, was called Djalāl al Dīn, while according to the genealogy of the Mīlādians, Bākālindjār II was ruling there between 731 and 753 The dependence of Lār on the Muzaffarids is shown by a gold coin of Shāh-Shudjāʿ (760—786) struck in Lār (S Lane-Poole, *The Coins of the Mongols in the British Museum*, 1881, p 240) In 799 the troops of Muhammad Sultān, grandson of Timūr, ravaged the eastern part of Fārs on the lines Kārzīn-Fāl, Djahrom Lār, etc (*Zafar-nāma*, i 809) There are Timūrid and Čaghatai coins struck at Lār (O Codrington, *A Manual of Musalman Numismatics*, London 1904, p 183) In the reign of the Mīlādian Djihānshāh (859–883), the Russian merchant Afanasii Nikitin, passed through Lār in 1469 on his way to Hurmūz and India and in 1472 on his way from Hurmūz to Shīrāz The Mīlādian Nūshīrwān "the just" (930—948) was a poet, musician and author, he died by the hand of a fidāʾī His successor Ibrāhīm Khān submitted to the Safawīs and received the title of *Amīr Dīwān* His son Nūr [Nawrʾ] al-Dahr lived in the time of Sultān Muhammad Safawī Under ʿAbbās I Mīrzā ʿAlāʾ al-Mulk, son of Nūr al-Dahr, was authorised to take the name of Ibrāhīm Khān II The young Khān showed signs of independence and oppressed merchants and travellers This could not be tolerated at a time when Lār lay on the great road between the capital and the sea As a preparation for the occupation of Gombrūn (= Bandar-i ʿAbbāsī) in 1614 (?) and of the island of Hurmūz in 1622, the Beglerbegi of Fārs, Allāhwardī Khān, in 1009 and 1010 (1601) marched against Ibrāhīm Khān and seized his possessions Ibrāhīm II had to surrender to the mercy of Allāhwardī who treated him honourably and took him to Shāh ʿAbbās at Balkh, where he died during an epidemic The government of Fārs was then entrusted to Kādi 'l-Kāsim of Lār, a sincere Shīʿī (*tarīk-i "shāhi sewāni"* [q v] *paimūda*), *Tārīkh-i ʿĀlam ārā*, Tihrān 1314, p 423—426 Buildings of the Mīlādīs are still to be seen at Lār — a mosque and a bazaar of hewn stone covered with stucco The bazaar was restored in 1015, by Kanbar ʿAlī Beg Djah-domi, wazīr of Lār

The memoirs of Shaikh ʿAlī Hazīn contain interesting notes on the domestic life of Lār at the beginning of the xiith (xviith) century (rule of the Afghān Khudādād Khān, passage through Lār of the routed army of Shāh Ashraf, etc) According to ʿAlī Hazīn (p 210) the people of a part of the Lār lands (*garmsīr*) of Lāristān were Shāfiʿīs They had prospered under the Afghāns but Nādir, wishing to reduce them, sent against them the *sardār* of Fārs, Muhammad Khān Balōč The latter met with difficulties at Lār and having come to terms with its inhabitants returned to Fārs In 1146, Muhammad Khān rebelled against Nādir and tried to raise the Shāfiʿīs of Lār The latter maintained a waiting attitude but by order of Nādir they were massacred and scattered Lār was later annexed by a certain Nāsir Khān, formerly a brigand in the *bulūk-i sabʿa* (a region between Lāristān and Kirmān) who received from the Shāh the title of Khān His family (the beglei begi) remained more or less autonomous till 1202 (1845) when the governor-general of Fārs sent troops to Lār and appointed a simple *kalāntar* there (*Fārs-nāma-yi-Nāsirī*)

At the beginning of the xixth century the Balōč Mihrāb Khān invaded Lāristān (Pottinger, *Travels in Beloochistan*, London 1816, p 163) In 1256 (1840) Lār was occupied by the chief of the Ismaʿilīs, Ākā Khān who had rebelled against the Shāh (Schindler, *The Eastern Persian Irak*, p 94)

The town of Lār lying 57 farsakhs to the S E of Shīrāz was very frequently visited by European travellers in the xviith century when it lay on the direct route Shīrāz–Djahrom–Djūyum–Lār–Bandar-i ʿAbbāsī Figueroa (1617), Sir T Herbert (1627), J A Mandelslo (1638), J B Tavernier and Thevenot (1665), Struys (1672), Chardin (1673), Dr J Fryer (1676), Le Brun (1703) At this time there was a factory of the Dutch East India Co at Lār (Thevenot, *Voyage*, Amsterdam 1727, iii 460—476) After the fall of the Safawids, Bandar i ʿAbbāsī became the port for the province of Kirmān only, while Būshīr became the principal port of the Persian Gulf Lār conducted a local trade with the ports of Bandar-i ʿAbbāsī, Linga [q v] and Tāhirī (the older Sīrāf, q v), cf especially Stiffe, *Ancient Trading Centres of the Persian Gulf*, *G J*, 1895, p 166—173 In the xixth century, Lār has been described by Dupré and Stack

Of the 76 bulūks of Fārs, that of Lār called Lāristān is the most extensive (57 × 47 farsakhs, i e about 45,000 square miles) It is bounded on the N W by Baranū, on the S E the bridge of Lātitūn separates it from the nāhiya of Bandar-i ʿAbbāsī This latter had a separate dynasty (the Kalhātī princes of Hurmūz) To the south Lāristān is washed by the Persian Gulf (the ports of Kung, Linga, Mughū, Čārak, Nakhilū) In 1917 A T Wilson found Lār quite prosperous (*Notes on a Journey from Bandar-Abbas to Shiraz*, *Geogr Journ*, Series 1908, p 152—170) On the west it is bordered by the cantons of Mālikī, ʿAlā-marwdasht, and Khundj, on the north-west by the buluk of Djūyum, on the north by the buluk of Dārāb, on the northeast by the *Bulūk-i Sabʿa*

The country is full of mountain ranges running parallel to the shore of the Persian Gulf und has a torrid climate Water is scarce and brackish The river of Lāristān, variously known as Rūdkhāna-yi shūr-i Galladār, Shūr-i Hing, Rūdkhāna-yi Lamzān etc, runs from west to east and flows into the sea a farsakh east of Kung

The subdivisions (*nāhiya*) of the *bulūk* of Lāristān are as follows (their orientation from Lār is given and the distance from it is in farsakhs)

	Nāhiya	Capital	Number of villages
1	Central	Lār	34
2	Shīb-i Kūh-i Lāristān	Bandar-i Čāiak	29
3	Linga	Linga	10
4	Djahāngīriya	Bastak	?
5	Kawrastān	Kashshī	4
6	Mazā'idjān	Izad-Khāst	6
7	Bīkha-yi Ahshām	Bairam	10
8	Bīkha-yi Fāl	Ashkanān	10
9	Fūmistān	Gawbandī	16

Number	Orientation	Distance
2	south	25
3	south-east	45
4	south-east	7–21
5	east	30
6	north	15
7	west	20
8	south-west	22
9	south-west	35

The term *bīkha* in the local dialect means a valley shut in by two ranges of mountains Fūmistān is derived from the word *fūm*, corn

The population of Lāristān is thinly scattered The most important towns are Lār (Dupré 15,000 inhabitants, Stack 1,200 houses, 6,000 inhabitants) and Linga [q v] The majority of the population is Persian In canton N⁰ 6 there are some Bahārlu Turks and Nos 2 and 3 are inhabited by Arabs

Lāristān has Persian dialects of its own (O Mann, *Die Tajik-Mundarten der Provinz Fars*, Berlin 1909, p xxxiv 126—131) and there is even a local literature in them The *Fārs-nāma* mentions Ākhund Mullā Muhammad Bākir ("Suhbat") who was well acquainted with Arabic, Persian and "Darī" Romaskewič has collected some of the poems in the local dialect of the poet Mahdjūr as well as Persian quatrains by several popular poets, natives of Lāristān (Romaskewič, *Pers narod cetwerostishiya*, in *Zapiski*, 1916, xxiii 313, 340)

2 An island in the Persian Gulf now called Abū Shu'aib Nearchus had touched at it on his periplus but does not give the name, which according to Ptolemy was Σῶφδα (in Semitic = isle of seaweed) The Greeks praised the pearl fisheries of Lār Ibn Khurdādhbih calls the island Alār Other variants in the Arab geographers according to Le Strange are Allān and Lān The *Fārs-nāma*, ed Le Strange, p 241 makes it a dependency of the island of Ardashīr-Khurra Yākūt (iv 341) places it between the island of Kais and the port of Sīrāf The Portuguese called it Ilha de Lazão from the village of Lāz (should this be Lādh? — at the east end of it) It is 13 × 2½ miles in area To the east of it lies the little isle of Shitwār (Čitwār) Some ten miles north of Lār on the coast of Fārs lies the little harbour of Nakhilū We do not know if there is any connection between the names of the town and of the island Lār An island "I ārak" ("little Lār") lies south of the island of Hurmūz

Bibliography Tomaschek, *Die Kustenfahrt Nearchs*, in *Sitzber Wiener Akad*, cxxi, 1890, p 55

3 A high valley lying in Māzandarān, on the sources of the Haraz pei The altitude of Lār is from 8,500 to 6,500 feet It lies west of Damāwand The valley is deserted in winter In summer the nomads pitch their tents there The people of Tihrān also go there for summer quarters Stahl however (*Peterm Mitteil*, Ergänzungsheft N⁰ 118, 1869, p 619) found traces of ancient dwellings on the right bank of the river Lār The locality is sometimes called Lāridjān, which must be a plural of Lār-ič, "inhabitant of I ār" (on the suffix *īč*, cf Marquart, *Beitrage*, *Z D M G*, 1895, p 666) The same derivation explains the Arabic transcription al Lāriz (Balādhurī, p 8), one of the cantons of Tabaristān (not however found in the list in Ibn Rusta, p 146) Al-Lāriz formed part of the possessions of al-Masmughān taken in 131 (748) by Abū Muslim (Marquart, *Ērānšahr*, p 127, 137) The term Lāridjān seems to have been applied especially to the place below the high valley of I ār near the modern bridge of Palūr, cf Dih-Falūl in Ibn Isfandiyār, transl Browne, *G M S*, p 67 I āridjān is said to have been the longest inhabited part of Tabaristān Its village Waraka was said to have been the birthplace of Faridūn In the villages lying on the slopes of Damāwand, Stahl saw a festival celebrated in memory of the death of Zohak (Aug 11, cf Morier, *Second Journey*, p 357) At Lāridjān there was a special *marzubān* under the ispahbahs of Tabaristān (Ibn Isfandiyār, *ibid*, p 15, 183, 280) On the district of Lāhidjān (Lāridjān) cf LĀHĪDJĀN — Spiegel (*Varena*, *Z D M G*., 1876, xxxii, p 716–726) was inclined to suppose a connection between Warak (Ibn Isfandiyār, p 15 Waraka, native place of Faridūn = Thraētaona) and the Avestic country Varena The site of Waraka is unknown but in I āridjān there exists a village Wāna, on the disappearance of *r* in Persian dialects, cf *Grundriss d iran Phil*, i/ii p 559, 351

(V Minorsky)

LĀRANDA (also called Karamān from the name of the dynasty which reigned there in the XIVth century), a town in Asia Minor, capital of the kazā of the same name and of the sandjak of Konia, to the S E and 35 miles from this town It is 4,000 feet above sea level, has 2,000 houses, 7,500 inhabitants, 105 mosques, 21 Friday mosques, 4 dervish monasteries, 515 shops, 30 warehouses, 9 cafes, 4 caravanserais, 14 baking ovens, 7 baths, 5 mills, 1 military depot, 110 fountains, 1 barracks, 1 Greek school, 10 Muslim schools, 21 madrasas There are a ruined fortress, mosques and other monuments in ruins from the time of the Karamān-oghlu (mosque of Amīr Mūsā with pillars from ancient buildings) The town was annexed to the Ottoman empire in 1464 To the north is the Kara-Dagh covered with mediaeval monasteries now in ruins (*bin bir kilise* = 1001 churches)

LARI MEHMED [See Mehmed Lari]

LARIN (P, *lārī*), a silver coin current in the Persian Gulf and Indian Ocean in the XVIth and XVIIth centuries It takes its name from Lār [q v], the capital of Lāristān [q v], at which it was first struck, cf Pedro Texeira (*Travels*, Hakl Soc, 1902, p 341) "There is also the city of Lar whence are called larīs, a money of the finest silver, very well drawn and current throughout the East" and Sir Thomas Herbert speaking of Lar in 1627 (*Some Years' Travels*, London 1665, p 130) "near this byzar the larnes are coyned, a famous sort of money" The larin weighed about 74 grains (4 9 grammes) and had a high reputation for the purity of its silver It was worth ten pence in English money (Herbert) or one fifth of a French crown (Tavernier) or 60 Portuguese reis

The larin is in shape quite unlike any other coin It is a thin silver rod about 4 inches long, doubled back and then stamped on either side with inscriptions from dies like any other coin It is admirably described by William Barret in his account of the moneys of al-Basra in 1594 (Hakluyt, *Principal Voyages*, Glasgow 1904, VI 12) "The sayd larine is a strange piece of money, not being round like all other current money of Christianitie, but is a small rod of silver of the greatnesse of the pen of a goose feather where with we use to write and in length about one eighth part thereof, which is so wrested that the two ends meet at the juste halfe part and in the head thereof there is a stamp Turkesco and these be the best current money in all the Indies and six of the larines make a ducat"

The kingdom of Lār ceased to issue these coins after its conquest by Shāh ʿAbbās the Great of Persia (Chardin, *Voyages*, Amsterdam 1735, III 128), but its popularity led to this type of coin being adopted by other states of the Indian Ocean The kings of Hormuz of the latter half of the XVIth century issued larins as did the Shāhs of Persia at Shīrāz and the Ottoman Sultāns at Basra In India they were struck in the XVIIth century by the ʿĀdil Shāhī dynasty of Bīdjāpūr and other rulers and the frequent finds of larins in Western India show how extensive was their circulation there In the Maldive Islands in the early XVIIth century the king struck his own larins as we know from the *Voyage* of F Pyrard de Laval (Hakl Soc, 1887, vol 1, p 232 *sq*) In Ceylon they were also struck, not only by the natives but also by the Portuguese merchants at Colombo, in this island they were twisted roughly into the shape of a fish-hook, whence the term "fish-hook" money These pieces are either uninscribed or bear rude imitations of the Arabic script In Ceylon the "fish-hook" money survived into the XVIIIth century A degenerate descendant of the larin still exists (Philby, *Heart of Arabia*, II 319) on the Arabian side of the Persian Gulf, in Hasa where it is known as a *tawila*, i e the "long" (coin) It is only an inch long and of very base silver, if not copper, without any trace of inscription It is described by Palgrave (*Journey*, etc, London 1865, II 179) who adds that there is a proverb "like a Hasa *tawīl*", applied to any one who like the local currency is of no use away from home

AL-LĀT, an old Arabian goddess The name (from *al-ilāhat*, cf Allah) means "the goddess" but was the proper name of a definite deity, according to the Arabs themselves (e g Ibn Yaʿīsh, ed Jahn, p 44, 23) the sun She is found as early as the Nabataean and Palmyran inscriptions and was later worshipped by various Beduin tribes (e g the Hawāzin, Ibn Hishām, p 849, 13) An oath by al-Lāt is frequently found in the poets, e g Abū Saʿd in Ibn Hishām, p 567, 7, Mutalammis, ed Vollers, p 2, 1, ʿAws b Hadjar, ed Geyer, p 11, 2, and even in al-Akhtal, *Kitāb al-Aghānī*, VII 173 She had her principal sanctuary in the valley of Wadjdj near Tāʾif, where the Muʿattib (ʿAttab) b Mālik b Kaʿb were her priests and a white stone hung with all kinds of decorations was her symbol She is frequently mentioned along with al ʿUzzā (Ibn Hishām, p 145, 7, 206, 2, 871, 6, where Wudd also is mentioned, ʿAws b Hadjar, p 11, 2) and among the Kuraish, she, along with this goddess and Manāt, was held in such high esteem, that Muhammad once went so far as to recognise these three goddesses as intercessors with Allāh but soon afterwards withdrew this (Sūra, liii 15 *sqq*) According to Tabarī, I 1395, 3 Abū Sufyān carried al-Lāt and al-ʿUzzā with him into the battle of Uhud After the capture of Mecca, al-Lāt was destroyed with her sanctuary in Tāʾif by al-Mughīra, who were related to her priests But she was not forgotten, for, according to Doughty, there are still in Tāʾif blocks of stone which the people call al-ʿUzzā, Hubal and al-Lāt, at which they secretly seek help in cases of illness

al-LaṭĪf (a), "the Kind", one of the names of Allāh [q v]

LaṭĪfĪ, properly ʿAbd al-Laṭīf Čelebi of Kastamuni, secretary to the office for administering pious foundations (*ʿimāret kātibi*) He was secretary in Belgrade, came in 950 (1543) to Constantinople to the *wakf* office of Eyūb, then went to Rhodes and Egypt He died in 990 (1582) on the voyage from Egypt to Yanbuʿ on the Red Sea

Laṭīfī was a good poet and an even better stylist He is famous for his collection of biographies of poets, *Tedhkere-i Shuʿarāʾ*, which he finished in 953 (1546) and like Sehī, whose example he was the first to follow, dedicated it to Sultān Sulaimān the Great His love for his native city tempted him to attribute to it a whole series of poets not born there so that his work was jokingly called *Kastamuni nāma* In spite of several inaccuracies, the book, which was printed in 1314 in Constantinople, is indispensable for our knowledge of the older poets of whom he deals with 302 from the time of Murād Khān to his own day His able critical remarks show that he had excellent insight into the nature of the poet's art, but the standard that he imposes on the poets for adoption into his work is not too strict He never published any continuation to his work although he lived for over 40 years after writing it, other works of his are a *Munāzara*, which was edited in 1287 by Tewfik Bey, a regular *Dīwān*, a collection wrongly attributed to Kemāl Pasha-zāde of 100 *hadīth*'s with paraphrases in Turkish verse, a *Risāle-i Ewṣāf-i Istambol*, also *Nathr al-Leʾālī*, *Rabīʿ al-Azhār*, *Anīs al-Fuṣahāʾ*, *Fuṣūl-i arbaʿa* A translation of his *Tedhkere* was made by Thomas Chabert, Zurich 1800 *Latifi oder Biographische Nachrichten von vorzuglichen turkischen Dichtern nebst einer Blumenlese aus ihren Werken*

Bibliography, Sehī, *Hesht Bihisht*, Constantinople 1325, p 138, Ḥuraiyā, *Sidjill-i ʿothmānī*, Sāmī, *Kāmūs al-Aʿlām*, Brusalī M Tāhir, *ʿOthmānlī Muʾellifleri*, iii 134—135, Hammer-Purgstall, *Geschichte der osmanischen Dichtkunst*, iii 286 and do, *Geschichte des osmanischen Reiches*, Smirnow, *Ocerk istorii tureckoj literatury*, St Petersburg 1891 (Korš iv), p 456, Basmadjian, *Essai sur l'histoire*, Constantinople 1910, p 50, the catalogues of the various collections of manuscripts (Th Menzel)

LAWATA, a Berber ethnical group, belonging to the family of Butr, whose eponymous ancestor was Lawā the younger, son of Lawā the older, son of Zahīk Ibn Khaldūn disputes the view of certain Berber genealogists recorded by Ibn Hazm who consider the Lawāta as Saddarāta and the Mazāta as of Coptic origin Others say the Lawāta with the Hawwāra and the Lamta were of Himyarite origin In any case the oldest home of the Lawāta seems most likely to have been the eastern part of North Africa They were found in Egypt to the north between Alexandria and Cairo, to the south in the oases and in al-Ṣaʿīd Some Lawāta led a nomadic life in the region of Barḳa In the Maghrib they lived in the Djabal Lawāta (south of Gabes and Sfax) and it is probably this section that is mentioned by Corippus under the name *Ilaguaten* = Berber *Ilawāten*, others lived in the country round Bougie and in the region south of Tiaret (Tāhert) where they had adopted the Ibādī heresy In Morocco there were Lawāta in the Tādlā (the Zanāra section), in the south of Fās and in the land between Tangier and Arzila

Bibliography al Idrīsī and al-Bakrī, indices, Ibn Khaldūn, *Kitāb al-ʿIbar*, ed de Slane, i 147—150, transl, i 171, 231—236 (G S Colin)

LAWH (a), board, tablet, the first meaning is found in the Kurʾān, Sūra, liv 13, where Noah's ark is called *dhāt alwāh* The second meaning is that of lawh as writing material, e g the tablets of the lawh (Sūra, vii 142, 149, 153, where the plural *alwāh* is used, see *Lisān*, iii 421) *Al-dawāt wa 'l-lawh* (Bukhārī, *Tafsīr al-Kurʾān*, Sūra, iv, bāb 18) corresponds to our "paper and ink" The expression *mā baina 'l-lawhain* "what lies between the two boards" is found in Ḥadīth, to describe the whole Kurʾān (Bukhārī, *Tafsīr*, Sūra lix, bāb 4, *Libās*, bāb 84), cf *mā baina 'l-daffatain* (Bukhārī, *Fadāʾil al-Kurʾān*, bāb 16) — In modern linguistic usage *al-lōh* also means a school child's slate

Al-lawh thus means the tablet kept in heaven which in Sūra, lxxxv 22 is called *lawh mahfūz* (cf ii 1066², 1076a) According to this passage, it is usually described as the "safely preserved" tablet But it is not certain whether the words in this passage are really syntactically connected If we read *mahfūzun*, the word does not go with *lawhin* but with the preceding *kurʾānun* and the translation is "Verily it is a Kurʾān, famous, preserved on a tablet" (see the commentaries), "preserved" i e against alteration

In the commentaries on Sūra, xcvii 1, the tablet is again mentioned "We sent it down (the Kurʾān) in the night of the decree", this refers either to the first revelation made to Muhammad or to the descent of the Kurʾān from that tablet which is above the seventh heaven, to the lowest

The tablet as the original copy of the Kurʾān is thus identical with *umm al-kitāb*

The decisions of the divine will are also written on the *lawh* with the pen *kalam* [q v] We have therefore to distinguish two quite different conceptions

a The tablet as the original copy of the Kurʾān This idea is found in the pseudepigraphical literature In the *Book of Jubilees*, iii 10, it is said that the laws relating to the purification of women after childbed (Leviticus xii) are written on tablets in heaven Jub, xii 28 *sq*, says the same of the law regarding the "feast of booths" (Lev, xxiii 40—43) and Jub, xxxii 15 of the law of tithes (Lev xxvii)

b The tablet as the record of the decisions of the divine will is also found in the *Book of Jubilees* In Jub, v 13 it is said that the divine judgement on all that exists on earth is written on the tablets in heaven Enoch prophecies the future from the contents of these tablets (Book of Enoch, xciii 2, cf lxxxi, ciii 2, cvi 19) The "scripture of truth" is mentioned as early as Daniel, x 21, the contents of which

Daniel announces in prophetic form These ideas are connected with the Babylonian conception of "tablets of fate"

From these passages it is evident that in the pseudo-epigraphic literature also the tablets in heaven are also regarded as the originals of revelation, sometimes as tablets of fate This is sufficient to explain the double meaning of *lawḥ* in Muslim literature

For other passages, cf the Index to Charles, *The Apocrypha and Pseudepigrapha of the Old Testament*, s v "Tablets", it cannot always be said definitely to which of these two conceptions a statement belongs

In mystical and philosophical literature *lawḥ* is given a place in the cosmic system and sometimes explained as *akl faʿʿāl* and sometimes as *nafs kullī* or *umm al-hūlī*

Bibliography The Kurʾān commentaries on the passages quoted, J Horovitz, *Koranische Untersuchungen*, Berlin Leipzig 1926, p 65 *sq* , *Dict of the Technical Terms*, II 1291—1293

(A J WENSINCK)

LAZ, a people of South Caucasian stock (Iberic, "Georgian") now dwelling in the southeast corner of the shores of the Black Sea

The ancient history of the Laz is complicated by the uncertainty which reigns in the ethnical nomenclature of the Caucasus generally, the same names in the course of centuries are applied to differents units (or groups) The fact that the name Phasis was applied to the Rion, to the Čorokh (the ancient Akampsis) and even to the sources of the Araxes also creates difficulties

The earliest Greek writers do not mention the Laz The name Λαξοί, Λᾶξοι is only found after the Christian era (Pliny, *Nat Hist*, IV 4, *Periplus*, of Arrian, XI 2, Ptolemy, V 9, 5) The oldest known settlement of the Lazoi is the town of Lazos or "old Lazik" which Arrian puts 680 stadia (about 80 miles) south of the Sacred Port (Noworossiisk) and 1,020 stadia (100 miles) north of Pityus, i e somewhere in the neighbourhood of Tuapse Kiessling sees in the Lazoi a section of the Kerketai, who in the first centuries of the Christian era had to migrate southwards under pressure from the Zygoi (i e the Čerkes [q v]) who call themselves Adïghe (Adzïghe), the same author regards the Kerketai as a "Georgian" tribe The fact is that at the time of Arrian (second cent B C), the Lazoi were already living to the south of Sukhum The order of the peoples living along the coast to the east of Trebizond was as follows Colchi (and Sanni), Machelones, Heniochi, Zydritae, Lazai (Λᾶξαι), subjects of king Malassus, who owned the suzerainty of Rome, Apsilae, Abacsi (cf ABKHAZ), Sanigae near Sebastopolis (= Sukhum)

During the centuries following, the Laz gained so much in importance that the whole of the ancient Colchis had been renamed Lazica (Anonymous Periplus, *Fragm Hist Graec*, V 180) According to Constantine Porphyrogenetos, *De Admin Imperio*, Ch 53, in the time of Diocletian (284—303), the king of the Bosporus, Sauromatus, invaded the land of the Lazoi and reached Halys (N Marr explains this last name by the Laz word meaning river) Among the peoples subject to the Laz, Procopius (*Bell Got*, IV 2 and 3) mentions the Abasgoi and the people of Suania and Skymnia (= Le čkhum) It is probable that the name Lazica referred to the most powerful element and covered a confederation of several tribes The Laz were converted to Christianity about the beginning of the VIth century "In the desert of Jerusalem" Justinian (527–665) restored a Laz temple (Procopius, *De Aedificiis*, V 9) which must have been in existence for some time before this The Laz also sent bishops to their neighbours (Proc , *Bell Got*, IV 2) In Colchis the Laz were under the suzerainty of the Roman emperors who gave investiture to their kings and the latter had to guard the western passes of the Caucasus against invasions by the nomads from the north On the other hand the monopolistic tendencies of the commerce of Rome provoked discontent among the people of Colchis In 458 King Gobazes sought the help of the Sāsānid Yezdegird II against the Romans Between 539 and 562 Lazica was the scene of the celebrated struggle between Byzantium (Justinian) and Persia (Khusraw II)

According to Procopius, who accompanied Belisarius on his expeditions, the Laz occupied both banks of the Phasis but their towns (Archaeopolis, Sebastopolis, Pitius, Skanda, Sarapanis, Rhodopolis, Mochoresis) all lay to the north of the river while on the left bank which was desert land the lands of the Laz only stretched for a day's march to the south Nearer to Trebizond were the "Roman Pontics" which only means that the inhabitants were direct subjects of the Roman emperor and not of the Laz kings, from the ethnical point of view the "Roman Pontics" could not have been different from the Laz This strip of shore continued longest to shelter the remnants of the Laz

In 1204 with the aid of troops lent by queen Thamar of Georgia, Alexis Comnenus founded the empire of Trebizond, the history of which is very closely connected with that of the southern Caucasus Nicephoros Gregora (V 7) says that the founder of the dynasty had seized "the lands of Colchis and of the Lazes" In 1282 John Comnenus received the title of "Emperor of the East, of Iveria and of the lands beyond the sea" In 1341 the princess Anna Anakhutlu ascended the throne with the help of the Laz The lands directly under the authority of the emperors of Trebizond seem to have extended as far as Makriali while Gonia was under a local dynasty (cf the *Chronicle of Panaretes*, under the year 1376)

In 865 (1461) Sultān Muhammad II conquered Trebizond and as a result the Laz came into contact with Islām, which became their religion (Shāfiʿī) The stages of their conversion are still unknown The fact is that even in the central regions of Georgia (Akhaltsikhe) Islām seems to have gained ground gradually from the XIIIth century (N Marr in the *Bull of the Acad of St Petersburg*, 1917, p 415—446, 478– 506)

In 926 (1519) Trebizond with Batum was made a separate eyālet According to Ewliyā Čelebi who went through this region in 1050 (1640) the five sandjaks of the eyālet were Djanikha (Djanik = Samsun ?), Trebizond, Gümüya (Gonia), Lower and Upper Batum The modern Lazistān was governed from Gonia, for among the kādās of this fortress we find Atina, Sumla, Witče/Biče (= Witse) and Arkhawi (Ewliyā and the version of the *Djihān-numā* in Fallmerayer, *Original-Fragmente*, *Abh d Bayer Akad*, 1846) Hādjdjī Khalīfa and Ewliyā Čelebi deceived by the similarity in sound of Caucasian

names (as also was Vivien de St Martin) proposed a theory of the identity of the name Lezgi and Laz Ewliyā calls Trebizond "former Lezgi wilāyet" Hādjdjī Khalīfa after enumerating the peoples of the district (Lezgi) Mingrelians (Megril), Georgians, Abkhaz (Abaza), Čerkes and Laz, adds that the latter are those who live nearest to Trebizond To the S E of Trebizond in the Čepni mountains he mentions the Turks who "worship as their God (*maʿbūd*) the Shāh of Persia (i e are extreme Shīʿīs) and are associated (*mushtarik*) with the Laz" Hādjdjī Khalīfa and Ewliyā do not agree on the number of the fiefs of Trebizond, Ewliyā only says that the value of the eyālet has depreciated through the unruliness of many of its 41 nāhiye (*Djihān-numā*, p 429, Ewliyā, ii 81, 83—85)

The first serious blow to the feudal independence of the *dere-bey* of Lazistān was only struck at the beginning of the xixth century by the Ottoman Pasha of Trebizond, but Koch who visited the country after his expedition still found most of the hereditary *dere-bey*'s in power, although shorn of some of their liberties He counted fifteen of them Atina (two), Bulep, Artashin, Witse, Kapiste, Arkhawe, Kisse, Khopa, Makria (Makrialı), Gonia, Batum, Maradit (Maradidi?), Perlewan and Čat The lands of the three latter lay however on the Čorokh behind the mountains separating this valley from the river of Lazistān in the strict sense On the other hand among the *dere bey* of Lazistān was the lord of Hamshin, i e of the upper valleys of Kalopotamos and of Furtuna inhabited by Muslim Armenians According to the Armenian historian Lewond, transl Chahnazarian, Paris 1826, p 162, the latter with their chief Hamam of the Amatuni family had settled in the district in the time of Constantine VI (780—797) (the old Tambur was given the name Hamshin < Hamamshem, "built by H") It is evidently this region that Clavijo (1403—1406), ed Sreznewski, St Petersburg 1881, p 383, calls "tierra de Airaquiel" He adds that the people, dissatisfied with their king Ariaquiel (Aiakel?), submitted to the Muslim ruler of Ispir The Hamshin are now Muslims and only those of Khopa have not forgotten Armenian A Hamshin lexicon was published by Kipshidze

With the institution of the wilāyets the sandjak Lazistān became part of the wilāyet of Trebizond Its capital was at first Batum but, after the Russian occupation of Batum in 1878, the administration of the sandjak was transferred to Rize (Rhizaion), detached for this purpose from the old central sandjak of Trebizond Lazistān lying to the west of the Ottoman Russian frontier occupied a strip of coast 100 miles long and 15 to 20 miles broad The kādās of the sandjak were Khopa, Atina and Rize, subdivided again into 6 nāhiye (Samy-Bey, *Kamūs al-Aʿlām*, v 3966) Cuinet, *La Turquie d'Asie*, i 118—121, mentions Of as a fourth kādā and gives 8 (7) nāhiyas (Hamshin, Karadere, Mapawri, Wakf, Kurʿa-yi-sabʿa, Witse, Arkhawi) In 1880 there were in the sandjak 364 inhabited places with 138,467 inhabitants, of above 689 were orthodox Greeks and the rest Muslims (Laz, Turkicised Laz, Turks and "Hamshin") The number of true Laz cannot be more than half the total population

The term Laz is used in the west of Turkey to designate generally the people of the south-east country round the south-east of the Black Sea, but in reality the people calling themselves by this name and speaking the Laz language now live in the two kādās of Khopa (between Kopmush and Gurup) and Atina (between Gurup and Kemer) Laz is spoken in 64 of the 69 villages of the kādā of Atina To these should be added the very few Laz who used to live in Russian territory to the south of Batum These Laz were incorporated in Turkey by virtue of the Turco-Soviet treaty of March 16, 1921, which moved the Turkish frontier to Sarp (to the south of the mouth of the Čoroḳh) Rize and Batum are now outside the Laz country proper

The Laz are good sailors and also practise agriculture (rice, maize, tobacco and fruit-trees) Before 1914 many of them earned a living in Russia as bakers and often came home with Russian wives, who became converts to Islām The Laz are known for their conversatism in religious matters Turkish proverbs and the marionette theatre (*kara goz*) are often very scathing about the Laz (*Lazlarñ tei monu musulman yemez onu*, "the Muslim does not eat Laz jelly", *termoni* from the Greek θέρμος)

The Laz language is closely connected with Mingrelian (which is a sister language of Georgian) but N Y Marr finds in it sufficient peculiarities to consider it a Mingrelian language rather than a dialect In the Lazo-Mingrelian group he believes he can find resemblances to the more Indo-European elements in old Armenian (Grabar) There are two Laz languages, eastern, and western with smaller subdivisions (the language of the Čkhala) Laz is very full of Turkish words It has no written literature but there are local poets (Rashīd Hilmi, Pehliwān oghlu, etc) The Laz are forgetting their own language, which is being replaced by the Turkish patois of Trebizond (cf Pisarew in *Zap*, 1901, xiii, p 173—201) in which the harmony of the vowels is much neglected (cf a specimen in N Marr, *Teksti i rozïskaniya*, St Petersburg, vii, p 55)

The Georgians call the Laz Č'an but the Laz do not know this name "Č'an" is evidently the original of the Greek name Sanni/Tzanni and it survives in the official name of the sandjak of Samsun (Djanīk) From the historical point of view the separation of the Laz and Č'an seems to have taken place in spite of the close relationship between the two of them In the time of Arrian, the Sanni were the immediate neighbours of Trebizond In an obscure passage in this author (cf the perplexed commentary of C Muller in *Geogr Graece Minores*, ad *Arriani Peripl*, 8) he places on the river Of the frontier between the Colchis (Laz?) and the Θυαννικὴ (?) Koch mentions the interesting fact that the people of Of speak a "language of their own" and according to Marr, the people of Khoshnishin (near Atina) speak an incomprehensible language Procopius places the "Sanni who are now called the Tzanni" on the area adjoining the mountains separating Čorokh from the sea (the Parayadres range, the name of which survives in the modern Parkhar/Balkhar) The researches of N Y Marr have shown that the Č'an (Tzanni) had at first occupied a larger area including the basin of the Čorokh and its tributaries on the right bank from which they were temporarily displaced by the Armenians and finally by the Georgians (Kharthli) The chronicles of Trebizond continue to distinguish the Laz from the Tzanids (Τζανίδες) The latter in alliance with

the Muslims attacked the possessions of Trebizond in 1348 and in 1377 were punished by the Emperor At this period the Izzanids must have been in the southwest of Trebizond (besides, the sandjak of Djanik is to the west of this port) Thus the Georgian application of the name Č'an to the Laz may be explained by the confusion of the two tribes, one of whom (the true Č'an living to the south and west of the Laz) was ultimately thrust to the west of Trebizond

LAZARUS is the name in the Gospels of 1) the poor man who finds compensation in Abraham's bosom for the misery of this world (Luke, xvi 19—31), 2) the dead man whom Jesus raises to life (John xi) The Kur'ān mentions neither the one nor the other, but among the miracles with which it credits Jesus is included the raising from the dead (Sūra, iii 43) Muslim legend with its fondness for the miracle of resurrection is fond of telling of the dead whom Jesus revives, but rarely mentions Lazarus Tabarī (*Annales*) talks of these miracles in general According to him, Hām b Nūh is revived by Jesus (i 187) Al Kisā'ī only mentions Sām son of Nūh of those restored to life by Jesus Tha'labī relates, closely following St John's Gospel "al-'Āzir died, his sister sent to inform Jesus, Jesus came 3 (in the Gospel 4) days after his death, went with his sister to the tomb in the rock and caused al-'Āzir to arise, children were born to him" In Ibn al-Athīr the resurrected man is called "'Āzir", the *el* of Ela'zar was taken for the article, as in al-Yāsa' (Elisa) and Alexander (al-Iskandar) or in Āzar in the Kur'ān, whose name Fraenkel derives from Eliezer In Ibn al-Athīr we find Muslim legend endeavouring to increase the miracle, Jesus raises not only 'Āzir (Lazarus) but also his wife (children are born to him), and Sām (son of Nūh), the prophet 'Uzair and Yahyā b Zakarīya (John the Baptist)

LEPANTO, is the Italian form of the name of the Greek town Naupactos which the Turks call Ine Bakhtī This is how the Turkish form is transcribed, e g by Leunclavius (*Annales Turcici*, p 35) while von Hammer (*G O R*, iii 318) transcribes it as Aina Bakhtī, which he translates

"Spiegelglück", in view of the Greek form however it is very probable that the Turks originally pronounced it Ine Bakhtī The town is situated in the ancient Locris, north of the strait which leads from the Ionian Sea towards the Gulf of Corinth, known since the middle ages as the Gulf of Lepanto

After forming from the xiiith century part of the despoty of Epirus, Lepanto fell into the hands of the Venetians who made it one of the strongest places in Greece Muhammad II during his war with Venice therefore undertook an expedition to take the town by land In 1477 Khādim Sulaimān Pasha was given the task but did not succeed (*Tawārīkh-i Āl-i ʿOthmān*, ed Giese, p 115) It was Bāyazīd II who ultimately took the town in 1499 with the help of the Turkish fleet after the latter had defeated the Venetians near the island of Sapienza (Burāk Reʾīs Adasī) in July The town was already being besieged by Mustafā Pasha, beglerbeg of Rūm Ili, Bāyazīd joined the army later The commandei of the garrison had declared he would never surrender until Turkish vessels should enter the strait This happened after the battle of Sapienza, for the Venetians made a feeble resistance The Venetian commander capitulated on Aug 26, 1499 (cf *Tawārīkh-i Āl-i ʿOthmān*, p 127 and ʿĀshīk Pasha Zāde, p 257—258, which gives the date as 3 of Muharram 905 = Aug 10, 1499) Immediately afterwards Bāyazīd built two forts to defend the entrance to the Gulf

Lepanto is particularly celebrated for the famous naval battle fought on Oct 7, 1571, between the Turkish fleet and the Christian fleet consisting of 108 Venetian galleys, 77 Spanish, 6 Maltese, 3 Savoy and 12 Papal in addition to 8 enormous Venetian galeasses (the figures given by the Turkish historians vary considerably) united under the command of Don John of Austria This great combined expedition of the Christian fleets had been provoked by the capture of Cyprus by the Turks under Lala Mustafā Pasha in 1570 and 1571 The Turkish fleet came for the most part from Cyprus with the *ser ʿasker* Pertew Pasha and the Kapudan Pasha ʿAlī and was joined by Uludj ʿAlī Pasha (Ochiali) beglerbeg of Algiers with 20 ships After raids on the coast of Crete and the Ionian Islands it had cast anchor off Lepanto, it was here the Turks learned of the approach of the Christian fleet The Turkish fleet consisted of 300 ships (so von Hammer, Hādjdjī Khalīfa speaks of 180), it was not at the top of its strength on account of the numerous desertions Against the advice of Pertew Pasha and Uludj ʿAlī, the Kapudan Pasha decided to leave the bay of Lepanto and to attack The Christian ships entered the Gulf on Oct 7, the battle which followed only lasted a few hours and ended in the complete destruction of the Turkish fleet, the Kapudan Pasha perished in the battle, Pertew Pasha escaped with difficulty and Uludj ʿAlī who commanded the left wing succeeded in saving 40 vessels This, their first great defeat at sea, is called by the Turks *sînghîn donanma seferi*, the "expedition of the destroyed fleet" The immediate results of this event were not considerable, for the Allies could not take advantage of their success and the Turks very soon succeeded in making good their losses in material, Muhammad Soḳollı [q v] was credited with saying that the empire was rich and powerful enough to make the anchors of the fleet of silver, and the ropes of silk and the sails of atlas (Pečewī, i 499) The moral results however were very great and justify the great importance attached in history to the battle of Lepanto

In June 1687 the Venetian and Austrian forces seized Lepanto, but they had to surrender the town to the Turks by the treaty of Carlowitz (1699), as Venice then held the whole of the Morea, Lepanto remained the only Turkish stronghold in this region The Turkish history of the town ended with the insurrection of the Greeks, as a result of which Naupactos was incorporated in the kingdom of Greece

The defence of Lepanto consisted of 3 successive lines of fortifications on a cone shaped hill, it was the residence of a *sandjak-beg* of the *eyālet* of the Kapudan Pasha (Hādjdjī Khalīfa, *Tuhfat al-Kibār*, p 67a) Its great strategic and maritime importance is explained by Hādjdjī Khalīfa in *Rumili und Bosna*, transl by von Hammer, p 125

Bibliography von Hammer, *G O R*, ii 150, 318 *sq* , iii 592 *sqq* The battle of Lepanto is described by the historians of the xviith century Pečewī, *Taʾrīkh*, Constantinople 1283, p 495 *sqq* , Selāmikī, *Taʾrikh*, Constantinople 1281, p 101 *sqq* , Hādjdjī Khalīfa, *Tuhfat al-Kibār*, Constantinople 1041, fol 42 *sqq* Among later descriptions Djawdat Pasha, *Taʾrīkh*, i 119, Constantinople 1302, and the publication of several documents by Safwat Bey in *T O E M*, N° 9 (Aug 1911) A survey of the extensive European bibliography is given in *G O R*, iii 787, cf also the article by Awiam Galanti in *T O E M*, N° 78, Jan 1924

(J H Kramers)

LERIDA, the ancient *Ilerda*, the Arabic *Lārida*, a town in northern Spain, halfway between Saragossa and Barcelona, now the capital of the province of the same name, with a population of about 29,000 It lies at a height of about 600 feet on the right bank of the Segre (the *Wādī Shikar* of the Arabs, Yākūt, *Muʿdjam al-Buldān*, s v, wrongly makes this another name of Lerida), and forms an important strategical point at the entrance to the plains of Aragon

Lerida, which is undoubtedly of Iberian origin, was taken by Julius Caesar in 49 B C in the first Civil War between him and Pompey In 546 a council met there and it was occupied by the Muslims in the first half of the eighth century It seems to have henceforth shared the fate of Saragossa and to have been an important point for the defence of the Upper Frontera (*al thughr al-aʿlā*) It was later part of the independent kingdom of the Banū Hūd of Saragossa At the division which took place on the death of Sulaimān b Hūd al Mustaʿīn bi 'llāh (1046), it fell to his son Yūsuf but was again taken by the ruler of Saragossa Ahmad al-Muktadir

LEWEND, the name of the members of an irregular militia, which formed part of armed forces of the Ottoman empire during the early centuries of its existence, they were chiefly

employed as soldiers on the fleet in the period when the Turkish navy consisted mainly of the corsair vessels, which the Sultāns employed for their naval expeditions The word *lewendī* seems to have been borrowed like many other naval terms from the Italian The Italian word would have been *levantino* (Sāmī, *Kāmūs-ı Turkī*) or *levantī* (Djawdat Pasha) and was originally used by the Venetians for the soldiers whom they recruited from the inhabitants of their possessions in the Levant, to defend the coasts or serve on the fleet It was the same category of men, i e Christian Greeks, Albanians or Dalmatians, living on the Mediterranean coasts that the Turks used at first After a time Turkish elements from Asia Minor joined them

The lewends were a soldiery almost without discipline whom it was impossible to make use of when the navy came to be regularly organised Even in the time of Muhammad II the use of *ʿazab*'s had been begun for the naval service and under Bāyazīd II, the first regular body of marines was formed, consisting of 400 *ʿazab*'s About the same time the *ʿazab*'s were employed on the galleys as *kurekdjī* in place of the less loyal Christians (Hādjdjī Khalīfa, *Tuhfat al-Kibār*, p 10b) Thus the true lewends were gradually removed from the navy We find however that the word lewend is still used at a later period to indicate the soldiers of the navy, especially the riflemen (*tufenkdjī*, cf Djawdat Pasha), in Constantinople there were two barracks of lewends, belonging to the organisation of the arsenal In a figurative sense, the great naval captains of the XVIth century are also called lewend (e g by Safwat Bey in his article *T O E M*, N° 24)

The lewends after having been removed from the fleet still continued to exist as marauders, especially in Asia Minor where they were a scourge to the country The word lewend thus acquired the meanings of vagabond and rascal, this last meaning has even passed into Persian On the other hand, the Pashas in the province for long continued to recruit their bodyguard among the lewends (cf the picture of a lewend in the plate on p 416 of the third volume of d'Ohsson)

From the end of the XVIIth century, the government found itself forced to take steps to abolish the bodies of lewends still in existence Ordinances of 1695, 1718 and 1720 gave them permission to join the new corps of the *delī* and *gonullu* (Rāshid, *Taʾrīkh*, Constantinople 1282, v 13, 123) Finally a series of military expeditions in 1737, 1747, 1752, 1759 and 1763 exterminated the last bands of this turbulent soldiery, who still existed in different parts of Asia Minor (ʿIzzī, *Taʾrīkh*, p 25, 30, 78, 269, Wāsıf, *Taʾrīkh*, p 117, 234)

LIʿĀN (A), an oath, which gives a husband the possibility of accusing his wife of adultery without legal proof without becoming liable to the punishment prescribed for this, and of denying the paternity of a child borne by the wife "In the language of the Sharʿa, evidence given by the husband, strengthened by oaths, by which the husband invokes the curse (*laʿna* from this the whole process is *a potiori* named) and the wife the wrath of Allāh upon themselves, if they should lie, it frees the husband from *hadd* (the legal punishment) for *kadhf* (accusation without proof of infidelity by persons "of irreproachable character") and the wife of *hadd* for incontinence" (A Sprenger, *Dictionary of the Technical Terms used in the Sciences of the Musulmans, Bibl Indica*, Old Series, II, 1309) On the technical use of the related verbal forms, cf the Arabic lexicons and Dozy, *Suppl aux Dict Arabes*, s v , al-Kastallānī, commentary on al Bukhārī, *Talāk*, 25, at the beginning, al-Zurkānī, commentary on the *Muwaṭṭaʾ*, *Bāb mā djāʾ fi 'l-Liʿān*, at the beginning

I The following Kurʾānic passage is the basis for the regulations regarding the *liʿān* XXIV 6 *sqq* "As to those who accuse their wives (of adultery) without having other witnesses than themselves, the man concerned shall swear four times by Allāh that he is speaking the truth and the fifth time that the curse of Allāh may fall upon him if he is lying, but the woman may avert the punishment from herself if she swears four times by Allāh that he is lying and the fifth time that the wrath of Allāh may fall upon her if he is speaking the truth If Allāh were not gracious and merciful towards you and wise and turning lovingly towards you"

These verses belong to a part of the Kurʾān, apparently composed at one time, containing various regulations about adultery and consisting of XXIV 1—10, 21—26, verses 11—20, which certainly belong to the year 5 were inserted later, our verses must therefore be older (cf Noldeke-Schwally, *Geschichte des Qorans*, I 210 *sq* , H Grimme, *Mohammed*, II 27, puts the Sūra between the battles of Badr [2 A H] and Uhud [3 A H])

They form a regulation in favour of the husband, an exception to the punishment strictly laid down in Kurʾān, XXIV 4 (cf also verses 23—25) for *kadhf* and are therefore, like this penalty, primarily Muslim and have no affinities in Arab paganism in which an institution like the *liʿān* had no place at all (contrary to D Santillana, *Istituzioni di diritto musulmano*, I 221 below) The word *liʿān*, which comes from the Kurʾān, is unknown to the pre Muhammadan poetry

The hadīths concerning *liʿān* are almost entirely (the oldest probably exclusively) exegetical and profess to give the occasion of the revelation of the Kurʾānic verses in question, they are to some extent contradictory (attempts to harmonise them are found in al-Zurkānī, commentary on the *Muwaṭṭaʾ*, *Bāb mā djāʾ fi 'l-Liʿān*), systematised and unreliable (cf Noldeke-Schwally, etc , where further references are given, to which may now be added those in A J Wensinck, *Handbook of Early Muhammadan Tradition*, p 56 *sq* [to p 56 ult may be added, Tir 44, Sūra 24]) Four types may be distinguished among them 1 the husband (unnamed) laments his sad case to Prophet in covert language whereupon the verses are revealed (oldest form), 2 ʿUwaimir b Hārith asks in the same way, first through the intermediary of a friend and then directly of the Prophet (a development of the first type), 3 Hilāl b Umaiya accuses his wife of adultery and is to be punished with *hadd*

for this, when Allāh saves him sometimes by the revelation of the verses (this type probably a development of the first, in which Saʿd b ʿUbāda also is often involved, who had previously with scornful criticism called attention to the possibility of the dilemma which has now actually happened, has of the three the most schematic and not original appearance), 4) some one marries a young woman and finds her not a virgin while she disputes his assertion, the Prophet therefore orders *liʿān* (not exegetic) There are of course other transitional and mixed forms In so far as the hadīths yield nothing new about *liʿān*, this brief outline is sufficient, they are only of importance when they afford evidence for the oldest juristic adaptation of this Kurʾānic institution

2 The first subject of the earliest legal speculation was the question, not touched upon in the Kurʾān, whether *liʿān* makes separation between the husband and wife necessary In many hadīths this question is so expressly (sometimes polemically) affirmed that there must have been a school which approved the continuity of the marriage after the *liʿān* The statement that al-Musʿab b al-Zubair is said to have held this view (Muslim, Nasāʾī) is however based only on an inadmissible interpretation of another hadīth, in which he appears as a contemporary, on the other hand that ʿUthmān al Battī held it may be considered sufficiently proved (al-Zurkānī on the *Muwatta*ʾ) Among the oldest representatives of the other view which later became predominant, that a continuance of the marriage was impossible after *liʿān*, may be included with some probability ʿAbd Allāh b ʿUmar and with certainty al-Zuhrī in whose time it was already *sunna*, and Ibrāhīm al-Nakhaʿī (*Kitāb al-Āthār*), the tracing of this opinion back to ʿAbd Allāh b ʿAbbās, which we find in the hadīths, must however be regarded as unhistorical

Next arises the question how this annulment of the marriage as a result of *liʿān* is to be carried through, whether by a triple *talāk*, which the husband has to pronounce against his wife or by the decision of the judge before whom the *liʿān* is taken or by the *liʿān* itself The first view is undoubtedly based on a large number of traditions, while no trace of its use in law has survived, these traditions are rather interpreted in favour of the second view (cf the *Haaīth* of al-Zuhrī in al-Tabarī, *Tafsīr* and al-Bukhārī, *Talāk*, bāb 30 and *Hudūd*, bāb 43, the tradition in Ahmad b Hanbal, v 330 *sq* forms in its abbreviated form only an apparent exception, a polemic against the first view in al Tayālisī, N⁰ 2667) The second opinion survives in the later legal *ikhtilāf*, apart from the ample testimony to it in hadīth, its oldest representatives known with probability or certainty are ʿAbd Allāh b ʿUmar, al-Zuhrī, in whose time it appears as *sunna*, and Ibrāhīm al-Nakhaʿī (*Kitāb al-Āthār*), its ascription to ʿAbd Allāh b ʿAbbās is again not historical For the third there is no evidence in tradition, it is only found after the rise of the *madhāhib* We seem therefore to have a tendency to development in a particular direction

Other prescriptions about *liʿān* in tradition, going beyond what is laid down in the Kurʾān, are of less importance Thus, when the question is raised at all, it is unanimously laid down that the husband can never marry the wife again at a later date, that a *liʿān* may take place during pregnancy (legal *ikhtilāf* is later attached to their interpretation of this hadīth), that the child has only relationship with its mother as regards kinship or inheritance i e is considered illegitimate Other hadīths say that the *liʿān* must be taken in a mosque and attribute the formula to be spoken there by the *kādī* to the Prophet We are also brought into contact with questions of detail, which play a part in the later *ikhtilāf* by a tradition according to which the Prophet did not allow *liʿān* unless the husband and wife were on equal terms as regards Islām and freedom, a series of older authorities who held the contrary view is quoted in the *Mudawwana*

Details of the further teaching of Ibrāhīm al-Nakhaʿī on *liʿān* are given in the *Kitāb al-Āthār* Two more general pronouncements in Mālik and al Shāfiʿī bring us to the period of the rise of the *madhāhib* Mālik states definitely that it was the *sunna* of al Madīna, about which there is no doubt and no *ikhtilāf*, that the husband and wife after the *liʿān* has taken place could never marry one another again and al-Shāfiʿī says that with *liʿān* divorce of the pair and denial of the paternity of the child was *sunna* of the Prophet

3 The teachings of the separate *madhāhib*, develop the views of their earliest representatives, not entirely on the same lines (e g from the *Muwatta*ʾ, it is to be assumed with probability that Mālik followed the second view regarding the element in *liʿān* which annulled the marriage [cf above], while his school later held the third opinion entirely) The most important regulations of the Fikh regarding *liʿān* that go beyond what has been so far discussed are as follows if the husband accuses the wife of adultery or denies the paternity of his child without being able to prove it in the legally prescribed fashion and she denies his charge, recourse is had to the process of *liʿān* If the husband refuses to pronounce the formulae prescribed for him, he is punished with the *hadd* for *kadhf*, according to Abū Hanīfa, however, imprisoned until he pronounces the formulae, whereby he is set free or is declared to have lied, whereupon he is liable to *hadd* If the wife refuses to pronounce the corresponding formulae, she is punished with the *hadd* for adultery, according to Abū Hanīfa and the better tradition of Ahmad b Hanbal, however, imprisoned until she pronounces the formulae, whereupon she is set free or confesses her transgression and is then liable to *hadd* On the question whether *liʿān* is possible if one partner is or both are not Muslims or not free or not ʿ*adl*, there is wealth of *ikhtilāf*, which cannot be detailed here, the same applies to the possibility of *liʿān* during the pregnancy of the woman, with the object of denying the paternity of the child On this point the strength of the principle that the marriage decides the descent of the child, is remarkable, as is the distinction between two objects of *liʿān* (accusation of the wife of adultery and denial of paternity) which is only a result of later developments In the whole of the earlier period these two objects coincide from the juristic point of view The divorcing element in *liʿān* is, according to the Mālikīs (on their presumed divergence from Mālik himself on this question, cf above) and a tradition of Ahmad b Hanbal, the *liʿān* of the wife, according to al-Shāfiʿī that of the husband, according to Abū Hanīfa and the

better tradition of Aḥmad b Ḥanbal however the verdict of the judges pronounced after the *liʿān* of both Opinions also differ regarding the legal consequences of a later withdrawal of the *liʿān* by the husband, according to Abū Ḥanīfa and one tradition of Aḥmad b Ḥanbal, a new marriage of the two people is possible in this case, according to Mālik al Shāfiʿī and the better tradition of Aḥmad b Ḥanbal it is not, among older authorities only Saʿīd b Djubair is in favour of the first view, while ʿUmar, ʿAlī, ʿAbdallāh b Masʿūd, ʿAbdallāh b ʿUmar, ʿAṭāʾ and al-Zuhrī are quoted as in favour of the second (not all have historical confirmation) which was also held by al-Awzāʿī and Sufyān al-Thawrī Finally it is a disputed question whether the *liʿān* can only be performed orally or (in the case of a dumb person) by gestures, al-Bukhārī devotes chapter 25 of his *Kitāb al-Ṭalāk* to the discussion of this question and the reasons for his attitude to it

4 It is easy to understand that resort was only had to the *liʿān* in extreme cases Thus we find a scholar of Cordova in the fourth century A H pronouncing the *liʿān* against his wife simply in order to revive this *sunna* of the Prophet, which had fallen into oblivion (I Goldziher, *Muhammedanische Studien*, II 21) But it has not yet fallen completely into desuetude, as Muslim law has no other means of disputing the paternity of a child (cf Juynboll, *Handleiding*, p 217, note 2, Santillana, *Istituzioni*, p 222)

LIHYĀN, an Arab tribe, a branch of the Hudhail [q v]. Genealogy Lihyān b Hudhail b Mudrika b al-Yās b Mudar Settled like the other branches of the Hudhail in the country N E of Mecca, the Lihyān do not seem to have had in the period just before and after Islam a history independent of their brethren, it is only rarely that they are mentioned apart from them, e g in *Ḥamāsā*, p 34, a propos of their battles with the warrior-poet Laʾabbata Sharran, Yākūt, *Muʿdjam*, ed Wüstenfeld, II 272, IV 104 (cf *Ḥamāsā* of al Buḥturī, p 80—81, Ibn al Djawālīqī, ed H H Biāu, N° 86 = *S B Ak Wien*, 203, 4, 1927, p 31), II 614 of a battle with the Khuzāʿa The poets of this tribe are as a rule reckoned among those of the b Hudhail — e g Mālik b Khālid al-Khunāʿī, al Mutanakhkhil al Khunāʿī, etc At the time of the preaching of Islām we find them like the rest of the Hudhail under the political influence of the Kuraish This explains their hostile attitude to Muhammad, which resulted in the murder of their chief Sufyān b Khālid b Nubaih by ʿAbdallāh b ʿUmais at the instigation of Muhammad This murder was cruelly avenged by the Lihyān who slew several Muslims in their turn (*yawm al Radjīʿ*, 4 A H , cf HUDHAIL) As there is no further mention of hostile relations between the Muslims and the Lihyān, it is probable that the latter were included in the submission which the Hudhail made to Islām

After the triumph of Muhammad and in the periods following, there is an almost complete lack of information about the Lihyān and there are very few persons of note belonging to this tribe the grammarian al-Lihyānī, whose full name was ʿAlī b Ḥāzim (Khazim) or b al Mubārak, d in 222 or 223 (cf al-Zubaidī, *Ṭabakāt al-Nuḥāt*, ed Krenkow, *R S O* , VIII 145, N° 125, with bibliography, Flügel, *Die gramm Schulen*, p 51) perhaps belonged to it, but other sources (Yākūt, *Irshād*, ed Margoliouth, V 229, *Tādj al-ʿArūs*, X 324, 19) trace his *nisba* al-Lihyānī to the unusual length of his beard (*lihya*)

There was some reason to suspect that the Lihyān at a remoter period of Arab history had played a more important part than that almost unnoticed, which they did later this seems evident from a passage in Ibn al-Kalbī (*K al-Aṣnām*, p 57 = Yākūt, *Muʿdjam*, III 181, 16) who assigns to the Lihyān certain priestly functions (*sadana*) in the cult of the Hudhailī idol Suwāʿ (cf Wellhausen, *Reste Arab Heidentums*², p 18—19), the discovery of several hundreds of inscriptions and graffiti in the north of the Ḥidjāz has not only confirmed this suspicion but revealed the existence of a Lihyānī state several centuries before the coming of Islām These inscriptions, first known from the imperfect copies of Doughty and Huber, were later collected in large numbers (over 900) by Euting and deciphered by D H Muller after preliminary work by J Halévy They are now available in still larger numbers and better known as a result of the discoveries and publications of Fathers Jaussen and Savignac They are almost all in the vicinity of the village of el-ʿOla (especially in the area full of archaeological remains, called *el-Khereibe* and in the rocky cliffs to the east of this) not far to the south of the great Nabataean centre of al-Ḥidjr [q v], Madāʾin Sālih, some have even been found here although in much smaller numbers Their epigraphy closely resembles that of the Minaean inscriptions (which are also found in very large numbers east of el ʿOla) of which the Lihyānī inscriptions represent a dependent or parallel form, but in any case of a decidedly later date (against D H Muller who wrongly thought them older) Their language on the other hand is quite like that of the Thamudaean and Safaitic inscriptions, in Northern Arabic and only differs from classical Arabic by several peculiarities (especially the use of *ha* in place of *al* for the article, and of a participle of the form *mfʿal* in contrast to the form *munfaʿil* of the classical Arabic)

From these inscriptions we learn that el-Ōla — the old name of which is given in the form *D D N* identical with the Dēdān of the Bible — was the capital of a "kingdom of (or of the) Lihyān", of which some of the kings were Talmai I and II (cf the name of Talmai, king of Geshūr, father in law of Absalom, II Sam III 3 and XIII 17), Takhmai, Lawdhān, Hanuʾāsh *M-SḤ-M*, Karibʾīl This kingdom seems to have been for a long period of remarkable size and importance, before it was formed or became quite independent el-Ola-Dēdān was a colony of the Minaeans and formed one of the stages on the great trade route which brought the merchandise of the Yemen and India to the ports of the Mediterranean After the fall of the Minaean kingdom (according to M Hartmann between 230 and 200 B C) the Nabataeans

replaced the Minaeans in the control of trade and settled in al-Ḥiḏjr, but at the same time the Lihyānīs, who had absorbed Minaean civilization formed an independent kingdom and arrested the southward advance of the Nabataeans, the frontier of the two states must have been between al-Ḥiḏjr and el-ʿOla It is probable that these Lihyānīs were simply a section of the Thamūd [q v] whom we find mentioned in the annals of Sargon of Assyria, while there is no ancient reference to the Lihyānīs until Pliny who mentions them (*Hist Nat*, VI 33, 3) under the name of Lechieni Their power must have increased after the fall of the kingdom of Petra (106 A D) and it seems that from this time onwards, they also held al-Ḥiḏjr, abandoned by the Nabataeans

When and how the Lihyān fell in their turn to the position in which we find them in the sixth century forming part of the tribe of Hudhail, and settled in a territory considerably to the south of their original home, we cannot tell, on account of the complete absence of documents Muslim tradition has lost all memory of them and confounds them apparently under the general designation of Thamūd with the Thamūd proper and the Nabataeans of al-Ḥiḏjr a memory but a very vague one of the old kingdom of Lihyān may perhaps have survived in the isolated mention in a tradition that the Lihyān were "remnants of the Djurhum", who later became part of the Hudhail (Tabarī, *Annales*, ed de Goeje, I 749, 11—12, [cf DJURHUM] following Ibn al Kalbī, *Ṭāḏj al-ʿArūs*, X 324, 1—2, following al Hamdānī, probably in *al-Iklīl* and the passage is not found in the text of the *Djazīrat al-ʿArab*) The Thamūdaean graffiti (which used to be called proto-Arab) are a development (later or parallel) of the Lihyānī script, the last stage of which is seen in the Safaitic graffiti, but we are completely ignorant of the historical relations of the peoples who used these similar scripts

The ruins of Dēdān-el-ʿÓla, although they have so far only been superficially explored give us some idea of the advanced stage of civilization to to which the Lihyānīs had attained, besides tombs, some of which are decorated with sculptures in high relief, Fathers Jaussen and Savignac have discovered a sanctuary with a central basin circular in form (for ablutions ?) and ornamented with large statues several important fragments of which have been discovered An inscription in this sanctuary mentions an *afkal* of the god Wadd this term, which certainly is the name of a sacrificial office is not unknown to Muslim Arab tradition (*Aghānī*, XXXIX 686, Ibn Duraid, *K al-Ishtiḳāḳ*, p 197, 7) Among the deities worshipped by the Lihyānīs we find alongside of typically Arab ones like Allāh, al-Lāt, Wadd, Yaghūth and a god Dhū Ghābat of whom we know nothing definite, gods of Aramaean origin, like Balsamen, the god of the sky and, in a theophoric name, Salm, in these names as well as in the use of other Aramaic terms (among them *nafsh* in the sense of "tomb") there is apparent the influence of the Nabataeans, who undoubtedly contributed with the Minaeans to form the character of Lihyānī civilization The presence of Judaean elements, which Muller and Glaser thought they could recognise is on the other hand more than doubtful

LIMNI, Turkish form of the name of the island of Lemnos in the Aegean Sea between Mount Athos and the mainland of Asia Minor about 50 miles S E of the entrance to the Dardanelles In ancient times a possession of Athens, in the middle ages it belonged to the Byzantine empire, in this period, in 901, the island was sacked by the Muslim inhabitants of Crete Towards the end of the middle ages Lemnos had passed into the hands of the Italians who called the island Stalimene (formed with the addition of the Greek preposition εἰς and the article) When the Turks took Constantinople the island belonged to the Genoese lords of Lesbos (Midillu), the Gatelusio Under Bāyazīd I, who had fortified the Dardanelles, Lemnos passed with the other islands under Turkish rule But when Constantinople became the Turkish capital it was inevitable that Lemnos, the largest of the three islands commanding the entrance to the Dardanelles (the others are Imbros and Tenedos, or Bozdja Ada) entered the direct domination of the Turks In 1456 took place Muhammad II's expedition against Ainos as a result of which the Conqueror became lord of the islands of Thasos, Samothrace and Imbros Negotiations had been going on between the lord of Lesbos and the Sultān regarding the payment of tribute But in the course of these negotiations the people of Lemnos, dissatisfied with the rule of Nicolas Gatelusio, brother of the lord of Midillu, voluntarily submitted to the Sultān who appointed Hamza Beg governor of the island and entrusted Ismāʿīl, beg of Gallipoli, with the task of installing him there Gatelusio succeeded in leaving the island before the arrival of the Turks The date of these happenings which are recorded only by the Byzantine historians Ducas (XLV 190) and Chalcocondylas (VIII 248) is not certain, but Ducas who was representative of the princes of Lesbos at the Sultān's court, may be considered a reliable authority In 1457 a Papal fleet drove out the Turks — the Pope had intended to establish an order of Knights on Lemnos — but some time afterwards the same Ismāʿīl Beg recovered Lemnos with the adjoining islands (Zinkeisen, II 235 *sqq*) In 1462 Muhammad became master of Lesbos also In the following year the Turkish possession of Lemnos was disputed by the Venetians whose Admiral Canale in 1467 (A H 872 in Neshrī and Saʿd al-Dīn, according to von Hammer) took Ainos and the islands in this part of the Aegean Sea (cf also Munedjdjim Bashī, III 384), these conquests resulted in Muhammad's great expedition against the island of Euboea or Negropont (in Turkish

ghribos) in 1468 Soon afterwards the Turks stook Lemnos and by the peace concluded with Venice in 1479 this island remained definitely a possession of the Turks In this last year the island of Tenedos was fortified by the Sultān so that the system of defences of the Dardanelles was completed

In July 1656 the Venetians won a victory over the Turkish fleet before the Dardanelles and as an immediate result took Tenedos, Samothrace and Lemnos These conquests were such a threat to the capital that the grand vizier Mustafā Koprulu took energetic measures and sent an army of 4,500 men under the Kapudan Pasha Topal Muhammad, the latter besieged the citadel of Castro for 63 days, after which the Italians capitulated on November 15, 1657 Tenedos was regained from the Turks by the same expedition (Naʿīma, II 578, 85, 633) Finally in 1770 in the Russo-Turkish war Count Orloff laid siege to Castro and after 20 days had obtained its surrender, when the Kapudan Pasha Husan attacked the Russian fleet in the harbour of Mudros (Turkish Munduros), forced the Russians to withdraw on October 24, 1770 (Wāsif, II 118)

Turkey lost Lemnos after the Balkan War By the peace of Athens (November 14, 1913) it had been stipulated that the Powers should delimit the frontiers, and the Powers in February 1914 allotted all the Aegean islands to Greece except Tenedos, Imbros and Castellorizo Turkey, reinforced by a strong public opinion, would not accept this decision, but the outbreak of war in 1914 prevented the negotiations being brought to a satisfactory conclusion In the course of the war the strategic importance of the island for Turkey became manifest, after the failure of the naval attempt to force the Dardanelles, the Entente powers in April 1915 established a naval base in the Gulf of Mudros which lies on the south side of the island to serve as a base of operations for the forces which were to be landed at Gallipoli, to force a road to Constantinople This is how the British admiral's flag-ship in the Gulf of Mudros came to be the scene of negotiations which preceded the Armistice of Mudros between Turkey and the Entente powers on October 30, 1924

In the old administrative division of the Turkish empire the island formed part of the sandjak of Gallipoli which was the sandjak of the Kapudan pasha, after the reforms of the XIXth century Limni became a sandjak in the Bahr-i Safid Vilāyeti including the *kadā*'s of Limni, Bozdja ada (Tenedos) and Imros (Imbros) Castro, a little harbour on the west coast, was always the seat of the governor and had the garrison Cuinet gives 27,079 as the total of the population which has always been predominantly Greek Cuinet gives the Muslims as 2,450 One of the specialities for which Lemnos has always been celebrated since ancient times is "terra sigillata" (Turkish *tīn-i makhtūm*), a kind of earth found near the village of Kokkino on the south coast (where it has been thought to locate the site of the ancient Hephaestia) which is credited with medicinal virtues This bed of clay was unearthed once a year (August 16) to the accompaniment of certain ceremonies at which the Greek priest and the Turkish hodja both assisted (Naʿīma, II 586)

LINGA, a little seaport on the Persian Gulf which lies between Lāristān [q v] and the desert The old port was at Kung, 8 miles east of Linga, the Portuguese had a factory there where they ruled long after the loss of Hormūz (to 1711) In the reign of the Zand dynasty, 1,000 Djawāsim Arabs (Banī Djāshim, Djawāshim, Kowāsim) with their chief Shaikh Sālih came from Ras al-Khaima (ʿOmān) and took Linga from the *kalāntar* of the district Djahāngīrī In 1887 the Persian government took possession of Linga and deported to Teherān the last hereditary shaikh (Kadīb) The present population is very mixed (Arabs, Persians, Hindus, Africans) On the shore at Linga are wharves for building boats for local traffic and the port is fairly busy, but the mountains which rise from 3,500—4,000 feet behind Linga make communication with the hinterland difficult (Lār is 45 farsakhs from Linga)

LISĀN AL-DĪN [See IBN AL-KHATĪB]

LISBON, Portuguese Lisboa, a city at the mouth of the Tagus, now the capital of Portugal, with 435,000 inhabitants, tradition ascribes its foundation to Ulysses and it originally bore the Phoenician name of *Olisippo* Under the Romans it received the name of *Felicitas Julia* and formed a *municipium* It was under the rule of the Alans from 407, of the Visigoths from 585 to 715 when it passed into the power of the Muslims

For the Arabic transcription of the name of Lisbon we find the two forms *Lishbūna* and *Ushbūna* with or without the article (cf especially, David Lopes, *Os Arabes nas obras de Alexandre Herculano*, Lisbon 1911, p 58—59 and the references there given) The most usual ethnic is al Ushbūnī Lisbon was not a large town in the Muslim period but it was nevertheless frequently described by the Arab geographers Al Idrīsī speaks of its ramparts and its castle and of the springs of warm water which rose in the centre of the town It is built, he says, opposite the fort called al-Maʿdan (Almada), so called from the gold dust washed up on the bank by the Tagus It is also from Lisbon that this geographer followed by several authors makes the legendary expedition of the "Adventurers" set out (no doubt to the Canary Islands, cf above II, p 880, s v AL KHĀLIDĀT)

Lisbon very early (by 711) fell into the hands of the Muslims and under the Omayyad caliphs of Cordova formed a part of the district of Balāta, along with Santarem and Cintra The Arab chroniclers record several risings there which were quickly suppressed It was however from the Normans (*Madjūs*) that Lisbon suffered most in this period During their first invasion of al-Andalus in 229 (844) it was there that they disembarked for the first time According to Ibn ʿIdārī, their fleet consisted of 54 galleys and 54 vessels of less

importance, the alarm was given to the caliphs of Cordova by the governor of Lisbon, Wahb Allāh b Hazm Again during the invasions of 966—971, in the reign of al-Hakam II, the Normans began by ravaging the plains of Lisbon after landing at Alcacer do Sal (*Kasr Abī Dānis*) For further details, cf the article MĀDJŪS and the literature there quoted

After the fall of the Omaiyad caliphate of Spain, Lisbon formed part of the independent kingdom founded by the Aftasids [q v] with Badajoz (Batalyaws) as capital Under the Almoravids, it seems to have been taken for a brief period by the Christians and retaken at the end of 504 (1110) by the Emīr Sir b Abī Bakr, at the same time as Santarem, Badajoz, Porto and Evora It was only some 40 years afterwards, in 542 (1147) that it was finally conquered by Alfonso I Henriques of Portugal with the help of a body of Crusaders who were on their way to Palestine under Arnold van Aerschot

Bibliography al-Idrīsī, *Ṣifat al-Andalus*, ed Dozy and de Goeje, text, p 183, transl, p 222, Yākūt, *Muʿdjam al-Buldān*, s v Ushbūna and Lishbūna, Abu 'l-Fidā, *Taḳwīm al-Buldān*, ed Reinaud and de Slane, p 172—173, E Fagnan, *Extraits inédits relatifs au Maghreb*, Algiers 1924, index, Ibn ʿIdārī, *al-Bayān al mughrib*, vol III, ed Lévi Provençal, Paris 1927, index (E LÉVI-PROVENÇAL)

LITHĀM (A) (sometimes also pronounced *liṯām*), the mouth-veil, is a piece of material with which the Beduins concealed the lower part of the face, the mouth and sometimes also part of the nose (see the commentary on Hariri, ed de Sacy, Paris 1821, p 374, 2) It served the practical purpose of protecting the organs of respiration from heat and cold as well as against the penetration of dust (cf Dhu 'l Rumma, N° 5, 43, also N° 39, 24, and 73, 16, and the commentaries on Mutanabbī, p 464, 27 and Harirī, p 374, 2) It also made the face more or less unrecognisable and thus formed a protection against the avenger of blood (Goldziher, *Z D M G*, xli 101) The *lithām* was therefore also sometimes worn as a deliberate disguise by people who did not usually wear it, thus in the *1001 Nights* (ed Macnaghten, i 878) it is worn by a princess, who disguises herself as a man, and (*ibid*, ii 59) by a woman for similar reasons A denominative verb has been formed from lithām, the fifth form of which in particular means "to put on the lithām" (e g *Aghānī*, viii 102, 20, xxi 55, 19, *Aghānī*, ed Kosegarten, p 121, 13, Wright, *Opuscula arabica*, p 111, 2, Harīrī, *Makāmāt*², ii 433, 2), while the eighth form in the meaning "to put on something as lithām" is generally used only metaphorically (see below) *Talthīma* usually means a woman's veil (Cherbonneau in *J A*, 1849, i 64), but *tal thīmat al-bayāḍ* is also found as the distinctive dress of a particular office under the Fātimids their chief kādīs wore it along with the *turban* and *tailasān* (de Sacy, *Chrest*, ii 92) In general however, the *lithām* does not seem to have been worn by town-dwellers

The *lithām* has no considerable importance for Islām from the purely religious point of view, it is forbidden along with certain other garments for the *muḥrim* (Bukhārī, i 390, below)

The custom of wearing a *lithām* was generally disseminated among the Ṣanhādja tribes [q v.] in N W Africa, who are therefore described as *lithām*-wearers, *mulaththimūn* or *awlād al-mutalaththima*, as the Almoravids originated in one of their clans, the Lamtūna, the *lithām* thus came to have a certain political significance The custom of wearing a *lithām* (below the *nikāb*, see Bakrī, p 170) was found in other parts of Africa also, e g in Kānem (Makrīzī, i 193, 33 *sq*) and still prevails among the Tuareg These Africans retained their veils even on journeys into the eastern lands of Islām, where it was not the fashion, while their women went unveiled A tradition of late invention explains these remarkable customs by a story that on one occasion during an attack on a village where there were many women but only a few men, the men put on veils and the women took up arms to deceive the enemy as to their real numbers (Goldziher in *Z D M G*, xli 101), another story has it that after the fall of the Omaiyads, 200 Omaiyads escaped to Africa disguised as women and that the wearers of the *lithām* are descended from them (Wustenfeld, *Der Tod des Huseyn*, p viii) According to Bakrī (text, p 170 = transl, p 321), they never took off the *lithām* and if one of them fell in a battle and lost the *lithām*, not even his friends could recognise him till the *lithām* was put on him again, they also called other men who did not wear the lithām "fly mouthed" The Almohads, particularly Ibn Tūmart, opposed the veiling practised by the Almoravids They continuously insisted that it was forbidden for men to imitate the dress of women, but they did not succeed in abolishing the custom of wearing the *lithām* (Goldziher in *Z D M G*, xli 102) Among further passages, where the term *mulaththim* occurs in this sense may be mentioned ʿAbdallatīf, ed de Sacy, p 483, note 48 (with other references), Fleischer, *Kleine Schriften*, ii 243 (discusses several passages), Marquart, *Die Beninsammlung*, Index, s v *Litāmträger*

The word *lithām* and its derivatives was very much used in figurative language, especially by poets From expressions like "to kiss the lips of the beloved one, which are under their *lithām*" (Dozy, *Vêtements*, p 400, cf *mā tahta 'l-lithāmain* = the face in Mutanabbī, p 464, 27) develops the meaning of *l-th m* "to kiss" (ʿOmar b Abī Rabīʿa, ed Schwarz, p 6, 207, Ibn al-Fārid, *Dīwān*, Marseille 1853, p 125, l 5 from below) and especially *talāthama* = "to kiss one another", *malthama*, the place which is kissed (Farazdak in Dozy, *Supplément*) A girl is given a *lithām* woven out of her own hair (*1001 Nights*, Breslau edition, ii 52, 2), the camel has a *lithām* of foam around its mouth (Dhu 'l-Rumma, p 76, 17), the wolf is *ahammu 'l lithām* = black in the region of the muzzle (Tirimmāh, p 4, 35, of the wolf, we find it said in *Hamāsa*, i 762, 17 *lam yatalaththam*), the wine-jar has a *lithām*, i e a piece of cloth over its mouth (*malthūm*, *Mufaḍḍaliyāt*, ed Lyall, N° 125, 7, cf also Akhtal, ed Salhānī, p 85, 2 and ʿAlkama, ed Socin, ii 43, on jars), the sun is darkened by clouds of dust and is thus given, as it were, a mouth veil (*iltathama*, Mutanabbī, p 601, 15), "as the day (*nahār*) doffed its *lithām*" [description of dawn in Ibn ʿArabshāh, ed Golius, p 64, 3 from below, cf the commentary on Harīrī, *Makāmāt*, p 240, 10 *kashafa ('l-ṣubḥ) al-lithāma*, many titles of books also begin with *Kashf al Lithām*, cf Brockelmann, *G A L*, ii 659],

the *liṯhām* is to be taken from the walls of buildings, i e they are to be exposed (ʿImād al-Dīn, ed Landberg, p 65, 12), to doff the *liṯhām* of one's origin = to confess it freely (Harīrī, *Makāmāt*², ii 426, 3), the archangel Isrāfīl has one of his four wings veiled like a vast mouth-veil (*iltaṯhama*) from heaven down to the seventh earth (Kazwīnī, ed Wustenfeld, i 56, below), a voice may be hidden, *malṯhūm* (Taʾabbaṭa Sharran, ed Ahlwardt, N° 5, 26 = Beirūt ed, 1886, p 10), a further metaphor is found in Ibn al Fārid in de Sacy, *Chrest*, iii 55, verse 25

Bibliography I owe most of the individual quotations above to Prof A Fischer and F Krenkow In general, cf Dozy, *Vêtements*, p 399 *sq* and *Supplement*, ii 516, on the veils of Muslim women, in general, cf Snouck Hurgronje, *Twee populaire dwalingen verbeterd*, *Verspr Geschr*, i 295 *sqq*

(W Bjorkman)

LIWĀʾ (a "flag", from *lawā* to "enrol") means in Turkish official terminology an administrative area, several of which form a *wilāyet* "province" and one is in turn divided into *kazā* "districts" It corresponds pretty much to the *departement* in France It is synonymous with *sandjak* (t "flag") and is used alongside of it The *liwāʾ* is governed by a *mutasarrif*, whence a third synonym *mutasarrif-lik* The institution of the *liwāʾ* goes back to the early days of the Ottoman empire but it was under Mahmūd II in 1834 that the present administrative organisation came into being

LODĪ, the name of a clan of the Ghilzai tribe of Afghānistān A family of this tribe was established in Multān before India was invaded by Mahmūd of Ghaznī, for that district was ruled, in 1005, by Abu 'l-Fath Dāwūd, grandson of Shaikh Hamīd Lodī who had established himself there, but the importance of the tribe dates from the reign of Fīrūz Tughluk when some of its members entered India for purposes of trade, but soon occupied themselves with politics Dawlat Khān Lodī competed with Khidr Khān [q v] for the throne on the extinction of the Tughluk dynasty Malik Bahrām Lodī took service under Malik Mardān Dawlat, governor of Multān, and his eldest son, Sultān Shāh, served Khidr Khān at Multān After the battle on Nov 12, 1405, in which Khidr Khān defeated and slew Mallū (Iḳbāl Khān), Sultān Shāh received the title of Islām Khān and the fief of Sirhind, where he settled with his four brothers and assembled a body of 12,000 horse, mostly of his own tribe His next brother, Kālā, had a son named Buhlūl (usually called "Bahlol" in India), whom Islām Khān adopted, to the exclusion of his own son, Kutb Khān, and married to his daughter Kutb Khān fled to Dihlī and entered the service of Muhammad Shāh the Saiyid, to whom he described his relations as a danger to the state Muhammad sent a force against them and they were defeated and fled to the hills, but almost immediately returned, recovered their possessions, and defeated the minister, Hisām Khān, near Sādhawra In 1442 Dihlī was threatened by Mahmūd Khaldjī II, of Mālwa, and Muhammad Shāh appealed to Buhlūl, who demanded, as the price of his assistance, the execution of his enemy, Hisām Khān and the appointment of Hamīd Khān as minister The feeble king complied, and Buhlūl marched to Dihlī with his contingent and took command of the army The battle with the army of Mālwa was indecisive, but Mahmūd was recalled by the news of a riot in his capital and Buhlūl was hailed as the saviour of the kingdom, and received the title of Khān Khānān and the government of the Pandjāb He shortly afterwards picked a quarrel with Muhammad and besieged him in Dihlī, but retired to Sirhind without capturing the city In 1443—1444, Muhammad died, and was succeeded by his son ʿĀlam Shāh, a feeble monarch who, after a brief and troubled reign in Dihlī, retired to Budāon, which he made his place of residence Buhlūl then marched to Dihlī and ʿĀlam Shāh abdicated in his favour Buhlūl ascended the throne on April 19, 1451, and reigned for thirty eight years He was succeeded, on July 17, 1489, by his son Sikandar, who reigned until November 21, 1517, when he died and was succeeded by his son Ibrāhīm, who was defeated and slain by Bābur on the field of Pānīpat on April 22, 1526

LOJA (a, *Lawsha*), a little town in Andalusia, 35 miles S W of Granada, on the left bank of the Gemil at the foot of an imposing limestone mountain, Periquetes It has now rather less than 20,000 inhabitants but seems to have been more important in the Arab period It was the birthplace of the famous Ibn al-Khatīb Lisān al-Dīn [q v] who wrote an enthusiastic description of it One can still see there the ruins of the *hiṣn* which commanded the town in the Arab period It was repopulated in 280 (893) in the reign of the caliph ʿAbd Allāh b Muhammad This "key of Granada" was besieged in 1488 by the Catholic Kings who took it after a month's siege with the help of a body of English archers

(E Lévi-Provençal)

LOMBOK (usually called by the natives Tanah Sasak), the second in order of the Little Sunda Islands lying east of Java, the Strait of Lombok separates it from Bali, the Strait of Alas

from Sumbawa A not very broad, rather flat, strip runs from east to west approximately through the centre of the island, which is in part extremely fertile and is shut in by hills on the north and south In the north is the volcano of Rindjani revered as holy by a large section of the population The island is one of the richest parts of the Archipelago, the main industries are agriculture and cattle-rearing, the first being on a particularly high level A quantity of the rice which is in part grown on fields excellently irrigated is exported

Even if we exclude the foreign traders settled on the coast towns (especially Buginese, Arabs and Chinese) the population is not homogeneous but consists of two groups which are sharply distinguished territorially also, the smaller western part is inhabited by Balinese, the centre and the east by the much more numerous Sasak The inhabitants of the western part are descendants of the Balinese, who came as conquerors to Lombok in the xviiith and xviiith centuries and gradually extended their power over the whole island, they intermarried very little with the native population, so that they do not differ very much from the people of their original home, their language is Balinese, and they profess the peculiar form of Hinduism and Buddhism which is found in their mother island, with a few exceptions (they have for example adopted a *dewa-slam* into their pantheon and the sacrifices to this Muslim god must not include pork)

The Sasak are the true aborigines of the island, they are quiet and industrious, in their physical features they most closely resemble the Sumbawanese and their language (not yet fully studied) shows a similarity in certain points with the Sumbawanese They have all adopted Islām except for the little group of the Bodha, who have remained pagans, they live quite apart from the rest of the island, especially in the northern districts of Tandjung and Bajan and on the south coast and engage in agriculture of a primitive type They claim to be the descendants of Balinese who immigrated hither in ancient times before the great invasion, there is however no ground for this assertion, physically and linguistically they are in no respect different from the Sasak around them and the name Bodha is also found in other parts of the East Indian Archipelago as an expression used by Muhammadans to indicate groups of people who have remained pagan

Of the earlier history of the island we only know that in the xivth century, it was a possession of the Javanese empire of Madjapahit, we have no really reliable information as to how and when it became converted to Islām Islām probably came to Lombok from Eastern Java at the time of the decline of the Empire of Madjapahit Evidence of a considerable Javanese influence can still be traced, and according to a chronicle in the Javanese language found in Lombok, it was Pangeran Prapèn, the son of Raden Paku (Sunan Giri) who converted Lombok by force to Islām

The Sasak are of course no more orthodox Muslims than any other people in the East Indian Archipelago, but Islām has so far influenced them that we may see in it the reason why, in spite of the long Balinese dominion, there has been no assimilation between Balinese and Sasak They are divided into two groups or sects Waktu lima and Waktu tiga (tĕlu) The former, who live mainly in the plain of Central Lombok are the Orthodox among the Lombok Muslims, their name shows that (in theory at least) they observe the obligations prescribed by Islām of performing 5 (= *lima*) *salāt*'s a day In keeping with this, the name of the *Waktu tiga* (who live mainly in the mountains) would mean that they are of the opinion that three (*tiga*, *tĕlu* = 3) prayers a day are sufficient This is however an improbable explanation Many are of the opinion that the name is to be explained by the fact that the *Waktu tiga* only know of three times of prayer, namely the *ṣalāt* on Friday (or at birth), at death, and at the end of the month of fasting, others say that the full name is *waktu-tĕlu datu*, which is said to be an expression indicating the old paganism (the religion of the time of the three kings, namely the kings of Selaparang, Sakra and Pedjanggi) There is no certainty on the point however In any case the Waktu tiga are regarded, and not without reason, by their countrymen the Waktu lima as half heathens There are few mosques in their country, they leave the performances of practically all religious observances to their religious leaders (*kjahi*) and they do not observe the ordinances regarding the eating of pork, fasting or pilgrimage to Mecca They only observe Muslim principal festivals and their marriage ceremony also shows that they wish to be regarded as Muslims At the same time pagan sacrifices and pilgrimages (which however can also be found among the Waktu lima) play a prominent part in their life In their villages, there is always in addition to the Muhammadan *kjahi* a *pĕmangku*, i e one who acts as an intermediary at the worship of all kinds of spiritual powers from the world of animism It is particularly among the Waktu tiga that we find the custom that the village headman keeps two coarse pieces of cloth woven out of different coloured threads (the one "male" and the other "female") to which offerings are made in cases of illness etc , every household makes a copy on the pattern of these pieces of cloth, which are also treated with reverence

Practically nothing is known of the early period after the conversion of Lombok to Islām, the island was divided into little principalities often at war with one another, the eastern part was under the influence of Macassar and Sumbawa, the western under the influence of Bali In 1674 the Dutch East India Company concluded its first treaty with the princes of Lombok Soon afterwards in 1692 took place the first serious Balinese invasion and about 1740 the king of Karangasĕm succeeded in bringing the whole island under his sway Four small Balinese kingdoms thus arose on Lombok which were frequently at war with one another until in 1838 the king of Mataram overthrew his opponents and ruled over the whole of Lombok Down to 1849 he regarded himself as a vassal of the King of Karangasĕm on Bali, he then placed himself under the suzerainty of the government of the Dutch East Indies The Sasak repeatedly rebelled against their Balinese rulers until finally in 1894 the Dutch intervened with the result that they conquered Mataram, since 1895 Lombok has been directly under Dutch rule and administered jointly with Bali

LUBNĀN (Lebanon) The Arabs have a somewhat confused, almost mysterious idea of Lebanon Here they place the sojourn of the *Abdāl* [q v] They do not distinguish it from the Anti-Lebanon for which they have no special name "Djabal Sanīr" means to the Arabs the section of Anti-Lebanon to the north of the valley of the Baradā [q v] The massif of Hermon has been known since the time of Hassān b Thābit as *Djabal al-Thaldj*, it is the *Djabal al-Sheikh* of modern writers Nor are the Arab geographers agreed about the northern boundary of Lebanon Some include al-Lukkām (Amanus) in it This confusion has been facilitated by the vague popular appellation *Djabal*, which has been applied from the Middle Ages to the present day to the range parallel to the Mediterranean running through Syria from the mouth of the Orontes to Galilee, from this comes the name *Ahl al-Djabal*, *Djabaliyūn*, "mountaineers", applied by the Muslim chroniclers to the Nusairīs, Mutawālis, Druses etc A hadīth tells us that stone from Lebanon was used in building the Kaʿba This tradition perhaps explains why the Arab geographers see in Lebanon the continuation of the long arête which separates the Hidjāz from Nadjd and Syria and Anatolia to the Black Sea The southern frontier of Lebanon is usually made to coincide with the lower valley of the Laitānī, the modern Kāsimīya Current usage, conforming to local tradition, makes the Lebanon lie between this river and the Nahr al-Kabīr (the ancient Eleutherus) on the north This is the region which our historical survey will cover The backward and the scattered population of the Anti-Lebanon has always gravitated in the orbit of the towns of Eastern Syria, while Lebanon with its towns opening to the sea and its flanks watered by the abundant rains yielded by the moisture from the sea, which it gives to the rest of Syria by its rivers, is in economic and political dependence on the centres of the ancient Phoenician country

Lebanon is rarely mentioned by the pre-Muhammadan poets, for example by Nābigha Dhubyānī, whose patrons were phylarchs of Ghassān The name becomes more familiar to their Muslim successors, e g Abū Dahbal al-Djumahī, Nābigha al Shaibānī and ʿAbd al-Rahmān b Hassān, from their attendance at the Omaiyad court Its territory, covered with forests, of mediocre fertility, difficult of access, cut up by deep valleys and torrentuous rivers, from the Arab conquest has offered a place of refuge to several small nationalities, increased from time to time by the influx of all the oppressed and persecuted

The semi-independence which it has never ceased to enjoy has favoured its evolution on individualist lines and the local development of its communities, formed at the expense of orthodox Islām i e the Mutawwalīs, the Druses and the Nusairīs [q v], not to speak of the Christian sects, Malkites, Jacobites and Maronites, these last are nowhere mentioned by name by the Arab writers, when dealing with Lebanon The degree of autonomy won by these groups, religious in their origin but finally strictly national, enables us to follow the fluctuations of Arab penetration and Muslim power in Syria

Each sect, often each district, lived under the rule of petty native dynasties, supposed to be founded by suzerains in Damascus, Baghdād or Cairo They received grants of investiture and were in return liable to certain obligations and military service, when the actual authority was able to force them to it With a remarkable agility, the feudal chiefs of the Lebanon practised the art of manoeuvring through all the turmoils that saw successively installed in the east the rule of the caliphates, Saldjūk Sultānate, Ayyūbids, Franks, Mamlūks and Turkish pashas

Not realising its strategic importance, the Omaiyads and ʿAbbāsids did not think of occupying Lebanon, still thinly populated except in the districts on the coast, they were less far-seeing than the Crusaders, who built massive fortresses on the frontier of the "Mountain" Husn al-Akrād [q v] and Shaḳīf Arnūn This negligence enabled the Djuradjma [q v] to enter Lebanon The establishment of the Maronites in the upper regions of northern Lebanon must have coincided with the coming of these Anatolian invaders and have facilitated the organisation of this Christian group, which was destined to play a preponderating part in the Mountain At the end of the ninth century,

Arabs of Tanūkh, coming from the region of Aleppo carved out for themselves in southern Lebanon a principality, that of the "emīrs of al-Gharb" in the middle of peoples, partly Arabicised and influenced by Shī'a teaching The development of this emīrate was arrested in the eleventh century by the creation of the Frankish dukedoms of Sayâte (Ṣaidā) and Barut (Bairūt) The lordships of Gibelet (Djubail), Batron (Batrūn) and the county of Tripoli depended for support on the Christians of northern Lebanon

After the expulsion of the Franks, the Mamlūks of Egypt entrusted the defence of Bairūt to the Tanūkhids In the xiiith and xivth centuries, the rising against the Mamlūks followed by the extermination of the Mutawwālī and Druse rebels of Central Lebanon made it easier for the Maronites to occupy the lands south of the Nahr Ibrāhīm (Adonis) In the beginning of the xvith century the Tanūkhids joined the Ottomans who were conquering Syria Weakened by internal dissensions they had soon to yield place to the Banū Ma'n of whom Fakhr al Dīn [q v] was the most noteworthy representative In 1696 on the death of the last of the Ma'nids, their political inheritance passed to their relatives, the Banū Shihāb who came originally from the Wādī 'l Taim, on the western slopes of Hermon

The fall of Fakhr al-Dīn had opened Lebanon to Turkish intrigues They were not long in undermining the authority of the Shihabids, constantly struggling with the insubordination and encroachments of the Druse feudal chiefs In the interests of agriculture the Ma'nids had encouraged the immigration of Christians from the north into southern Lebanon This policy was intensified by the Shihabids who were on good terms with the Maronites The most famous of these amīrs was Bashīr [q v] a Christian by birth (b 1767) Resuming the scheme of the Ma'nid Fakhr al Dīn, he worked for half a century in forming a great state of Lebanon Deposed in 1840 he died in exile Direct Turkish rule in Lebanon (1840—1860) perpetuated anarchy and insecurity there and fighting between the Maronites and Druses This ended in the massacre of Christians by the Druses and the landing of French forces to restore order An international commission was appointed to elaborate a "Reglement Organique", the charter of a new autonomy for Lebanon, under the control of Europe At the head of it was a Catholic governor-general, appointed for five years with the approval of the Powers in whom was centralised all the executive power As a counterpoise to this authority, an administrative council was elected in such a way as to secure representation to the various communities From this "Règlement Organique" arose modern Lebanon which owes to it fifty years of prosperity and peace such as it had never before known

The Great War upset everything Turkish forces occupied the Mountain and a Turkish governor was appointed, famine and disease soon decimated the population On April 25, 1920, the conference at San Remo entrusted to France the mandate for Syria and Lebanon On Sept 1 of the same year, at Bairūt, General Gouraud, High Commissioner of the French Republic, solemnly proclaimed the creation of the "État du Grand Liban" with Bairūt as its capital In addition to the "Autonomous Lebanon" created in 1860, this new state included the districts of Tripoli, Saidā and Tyre It stretches from the Nahr al-Kabīr in the north to the borders of Palestine and is bounded on the east by the chain of the Anti-Lebanon Grand Liban is governed separately from the "Confederation Syrienne", with which it reserves the right to conclude agreements It is administered by a French official until a native governor is appointed A representative council of 30 members elected by vote discuss matters of general interest and the budget

According to the last census (1921—1922) the population is 629,000 The Christians number 330,000 of different sects of whom 200,000 are Maronites, 275,000 Muslims (125,000 Sunnīs, 105,000 Mutawwalīs or Shī'īs, 43,000 Druses etc), 3,500 Jews, 20,000 foreigners

LUDD, a town in Palestine, SE of Yāfā, is mentioned in the Old Testament (only in the later books Chr ii 33, Neh vii 37, xi 35, I Chr viii 12) under the name of Lod, in the Greek period as Lydda, the Greek name of Diospolis given in the Roman period did not drive out the old name, the preservation of which was helped by Acts, ix 32 for example It was an important place in the early centuries of the Christian era, the capital of a toparchy, it had a rabbinical school and was the see of a bishop at quite an early date It was particularly famous for the alleged tomb of St George above which a church was built It was conquered with several other towns in Palestine by 'Amr b al-'Āsī and at a later date was the temporary capital of Sulaimān whom his brother, the Caliph Walīd (705—715), had appointed governor of Filasṭīn, until he rebuilt Ramla, after which Lydda began to decline In the tenth century, Mukaddasī mentions the splendid church of St George and the Muslim legend connected with that of the dragon-

slayer, according to which Christ will one day slay Antichrist at the door of this church After the church had been destroyed by the Fāṭimid Caliph Ḥākim (996–1020) and rebuilt once more, it was destroyed in 1099 by the Muslims on the approach of the Crusaders, so that the victors only found the splendid tomb when they arrived Under Christian rule Lydda again became the see of a bishop and a new church was built immediately adjoining the ruins of the old one but was destroyed by Saladin The town never recovered from its complete destruction by the Mongols in 1271 A mosque was erected on the site of the earlier church while the ruins of the church of the Crusaders were handed over to the Greeks who restored them in modern times

LŪDHIĀNA, is the name of a district and town in the Djālandhar Division of the Pandjāb province of British India The tract is an alluvial plain bounded on the north by the river Sutlej and traversed by the old bed of that stream, the area is 1,455 square miles There is some irrigation from the Sirhind Canal The early history is obscure, Sunet is a site where ancient coins are found peculiar to the place The tract is prominent in the annals of the Sikhs In the year 1809 Lūdhiāna town became the British frontier cantonment, and the district assumed almost its present limits at the conclusion of the first Sikh War in 1846 The population of the district in 1921 was 567,622, of whom 30 per cent were Djaṭ Sikhs, fine men and excellent farmers Gudjars, Arains and Muhammadan Radjpūts come next in numbers

The town of Lūdhiāna stands on the Grand Trunk Road close to the Burhanullah, it is an important junction on the North Western Railway The founders were Lōdī Pathāns from whom it took its name After the first Afghān War the exiled family of Shāh Shudjāʿ domiciled here The population in 1921 was 51,880 Lūdhiāna is a busy market town famous for the manufacture of shawls and turbans, of furniture and woodwork, and for wool and silk dyeing Military contractors supply uniforms and accessories to the Indian Army The principal women's hospital of the Province is here, founded by the American Presbyterian Mission, which has its chief station in Lūdhiāna

LUḤAIYA, a harbour at the southern end of the Gulf of Djāzān on the Arabian coast of the Red Sea The little, now unimportant, town lies on what was once an island but has become joined to the mainland in comparatively recent geological times and is separated from it at high tide, while the harbour is dry at low tide The town in Niebuhr's time had no wall around it, but there were ten or twelve towers on the land side at intervals of 250 paces with entrances at a height above the ground reached by a ladder The towers were armed with a few cannons When Ehrenberg visited Luhaiya in 1825 the town was enclosed by walls At the present day there rises behind the town a fort built by the Turks with one or two modern guns The houses of the town are for the most part wretched little straw huts, such as are usual in Tihāma, only a few are built of stone The harbour of Luhaiya is hardly worth the name, as the anchorage is bad and the entrance is made difficult by sunken reefs Even quite small ships have therefore to anchor far from the town and at low water even small boats cannot reach the shore if loaded The drinking-water is brackish and dear The coast around Luhaiya is dry and sterile The main industry of the population, who are mainly Arabs, but include a few banians was and still is fishing and trading Luhaiya owes its importance mainly to the trade in coffee, which is brought down from the highlands, stored, shelled and sold Near the town there are also a few coffee plantations, the produce of which is highly esteemed and used to be reserved for the Sultān of Turkey There was and still is a busy trade with Djidda, Hodeida and ʿAden, mainly conducted by Arab sailing-ships The principal article of export is coffee and corn is imported Luhaiya is connected with Djidda and Hodeida by a caravan road 621 miles long There is also a telegraph line to Hodeida The Eastern Asia Service of the Lloyd Triestino has a three monthly service to Luhaiya

Nothing definite is known about the origin of Luhaiya A Sprenger identified the town with the Μαμάλα κώμη of Ptolemy but this equation seems at best only possible The identification of Luhaiya with the old town of Sambrachate or the harbour of Laupas or Ναπηγοῦς κώμη which E Glaser supports, is very improbable Niebuhr supposes that the harbour only arose in modern times when the demands of the export trade in coffee from the interior required it Here also, as at Mokhā, the hermitage of a Muslim saint is said to have been the nucleus around which the admirers of the saint gradually collected and built the town A chapel was built over his tomb, the vicinity of which was considered auspicious for living and dead At the beginning of the xvith century the Portuguese who call the town Luya for the first time became acquainted with Luhaiya In 1513 Affonso d'Alboquerque entered the harbour on an expedition into the Red Sea Luhaiya then formed part of the territory of the Imāms of Sanʿā' to whom it paid tribute In the second half of the xviiith century Luhaiya suffered from the raids of the Ḥāshid and Bakil tribes, who on one occasion burned it down In spite of this the trade of the town must even then have been not inconsiderable, for about 1760 in Mawsim (April to July) it paid 3,000 dollars from the harbour revenues to the Imām of Ṣanʿā' At the beginning of the xixth century the governor of the Imāms of Sanʿā' made himself independent in Luhaiya, but when the Wahhabīs invaded the Yemen and defeated the *dōla* of Luhaiya, the latter went over to the victors and took from the Imāms of Ṣanʿā' the whole of Tihāma from Luhaiya to Bāb al-Mandab along with Bēt al-Faḳih and a considerable part of the coffee growing country Luḥaiya now seemed to

have a brilliant future before it, for it was to be the main harbour of export not only for the whole of this vast area but of the Wahhabī country also and negotiations were opened with the East India Company, who were invited to establish a factory in Luhaiya Luhaiya's prosperity was again interrupted by the invasion of Muhammad ʿAlī who occupied Luhaiya in 1833 In 1869 we find it in possession of the Turks under whom the port and its hinterland formed a *kadā* in the *sanǧak* of Hodeida Luhaiya was also used by them as a base of operations against the never completely pacified highlands of ʿAsīr, which obtained independence with the collapse of Turkey in the world war Saiyid ʿAlī b Muhammad al-Idrīsī, lord of ʿAsīr who is considerably under Italian influence, has held Luhaiya and Hodeida since 1918

LUKATA (A), an article found (more precisely "picked up") The leading principle in the Muslim law regarding articles lost and found may be said to be the protection of the owner from the finder, sometimes mingled with social considerations The picking up of articles found is generally permitted, although it is sometimes also said to be more meritorious to leave them The finder is bound to advertise the article which he has found (or taken) for a whole year unless it is of quite insignificant value or perishable The particulars of this advertising are minutely regulated by special rules After the termination of the period, the finder, according to Mālik and al-Shāfiʿī has the right to take possession of the article and do what he pleases with it, but according to Abū Hanīfa, only if he is "poor", but the use of the articles as religious alms (*ṣadaka*) even before the expiry of a year is permitted in a preferential clause in Abū Hanīfa and Mālik If the owner appears before the expiry of the period he receives the object back, as he does after the expiry of the period if it is still with the finder, but if the finder has disposed of it in keeping with the law, he is liable to the owner for its value, Dāwūd al-Zāhirī alone recognised no further claim by the loser in this case The establishment of ownership is facilitated, compared with the ordinary process in Mālik and Ahmad b Hanbal (in al-Bukhārī also, cf his superscription to *Lukata*, bāb 1) As regards the finding of domestic animals in the desert, there are special regulations which are less onerous for the finder in the case of injured animals and more onerous when they are not injured Al-Shāfiʿī and Ahmad b Hanbal have similarly some special regulations for articles found in the *Haram*, the sacred territory in Mecca, which at bottom go back to the old idea of a special right of ownership by Allāh in the *Haram* and articles found in it

These prescriptions of the *Fikh* are based on certain hadīths which have been handed down with several variants (cf al-Bukhārī, *Lukata*, Muslim, Constantinople 1329 *sqq*, v 133) which need not be quoted in detail here as they agree with the principles in all essentials But it may be mentioned that in a very old stratum, later worked over, there is mention of a two or three year period In the conception of the primitive jurists the article found is sometimes described as deposited (*wadīʿa*), further, out of special religious scruples, one is careful not to pick up found dates and eat them, as they might belong to the *zakāt*, finally there is a hadīth which forbids the Mecca pilgrims (*hādjdj*) to pick up articles found at all From the superscription by Bukhārī to *Lukata*, bāb 11, it is evident that found articles might be handed over or used to be handed over to a government office, their retention in the finder's care is justified by quoting a special tradition

None of these traditions can be considered historical, at most the prohibition by the Prophet in his address after the occupation of Mecca from keeping articles found in the *Haram* without advertising the index (cf above) may be genuine on account of its antiquated terminology, *Lukaṭa* is not mentioned in the Kurʾān

Bibliography In addition to the pertinent sections in the *Fikh* and *Hadīth* collections cf Th W Juynboll, *Handleiding tot de kennis van de mohammedaansche wet*[3], p 386, E Sachau, *Muhammedanisches Recht*, p 639 *sqq*, D Santillana, *Istituzioni di Diritto Musulmano Malichita*, 1, p 328—329 *sq* (J SCHACHT)

LUḲMĀN, a legendary figure of the period of Arab paganism, who was adopted into the Kurʾān and later legend and poetry The story of Lukmān shows three main stages of development I The pre-Kurʾānic Lukmān al-Muʿammar, the long-lived hero of the Djāhilīya, II The Kurʾānic Lukmān, the wise maker of proverbs, III The post Kurʾānic Lukmān, the writer of fables

I Luḳmān in the old Arab tradition

Even the earlier legends already show Luḳmān in several aspects 1 as Muʿammar, 2 as a hero; 3 as a sage — He is offered a long life He chooses the duration of the lives of seven vultures, he brings up a vulture, when it dies, he keeps a second one and so on, for six vultures, which he survives, but he dies at the same time as the seventh, Lubad The vulture was by far the most popular emblem of longevity among the Arabs (Ps ciii 4, Goldziher, *Abh. zur arabisch Philol*, ii, p li *sqq*), R Basset (*Loqmân Berbère*, p

xxvii—xxix) finds a remarkable parallel in the interpretation given by Sidonius Apollinarius, for example, of Romulus's watching for birds Romulus sees twelve vultures, which means the twelve periods through which Rome will endure The *Kitāb al-Muʿammarīn* of Abū Hātim al-Sidjistānī gives Lukmān second place for longevity Khidr was the longest lived man, and Lukmān the second, who lived seven times the length of a vulture's years, i e $7 \times 80 = 560$ years, but the figure is increased in different stories to 1,000, 3,000 or even 3,500 years The last of the vultures reared by Lukmān was called Lubad = endurance, when Lubad finally lets his wings droop, Lukmān stirs him up to fly again, but in vain, Lubad dies and with him Lukmān Luḳmān, as Damīrī noted, was already celebrated by Nābigha — Various adventures are ascribed to Lukmān such as the heroes of the Djāhiliya always had to go through, he was the first to punish the adulteress by stoning and the thief by cutting off his hand — Lukmān belonged to the tribe of ʿĀd Here we have the old Arab saga coalescing with the Kurʾānic legend ʿĀd, sinful like Sodom, is devastated by drought An embassy is sent to Mecca to pray for rain and Lukmān goes with it In the enjoyment of the hospitality given them the ʿĀdīs forgot the purpose of their journey Reminded of their duty, one of them obtains by prayer a black cloud This cloud brings to the tribe of ʿĀd the destruction which was to be their punishment for rejecting the Prophet Hūd

Lukmān was already known in the pagan period as a sage His wisdom is celebrated by pre-Muslim poets (Horovitz, *Koranische Untersuchungen*, p 133) It is natural to suggest that the old stories refer to more than one person Lukmān's wisdom forms the transition from the Djāhiliya to the Kurʾān

II Lukmān, the maker of proverbs

In Sūra xxxi of the Kurʾān, Muhammad introduces Lukmān as a sage and makes him utter pious admonitions These latter do not bear the stamp of Lukman nor of Muhammad but belong to the common stock of proverbial sayings A characteristic example is the following "If all the trees in the earth were pens, and if God were to swell the sea into seven seas of ink, the words of God would not be exhausted" (Sūra xxxi 26) This great hyperbole is found in hundreds of variants (S Reinhold Kohler, *Und wenn der Himmel war' Papier*, in *Orient und Occident*, ii 546—559, *Ethnologische Mitteilungen aus Ungarn*, i 311—323, 441—453) It is recorded that this saying arose out of a dispute with the *ahbār* of the Jews The *ahbār* insisted that all knowledge was contained in the law, and the saying is directed against them Does this really mean that Muhammad borrowed this hyperbole from the Jews, to whom it really belonged originally? In the admonition of Luḳman "Moderate thy pace, lower thy voice, for of all voices, that of the ass is most hateful" (Sūra xxxi 18) Rendel Harris has found the model in Akhikar "Lower thy head, speak quietly, and look down! For if a house could be built by a loud voice, the ass would build two houses in a day"

Once Muhammad had consecrated Lukmān as the wise utterer of proverbs, everything that was thought pious or sensible could be attributed to him Wahb b Munabbih is credited with saying that he had read 10,000 chapters of Lukmān's wisdom The Arabic collections of proverbs (notably Maidānī) attribute much to Lukmān (see R Basset, *op cit*, xliv—liv) Thaʿlabī devotes a chapter of his *Madjālis* to the wisdom of Lukmān Many sayings seem to link up with the Sūra of Lukmān Sūra xxxi 14 advises reverence for parents but warns against being led astray by parents to worship false gods Thaʿlabī's authority makes Lukmān say "Be amenable to your friends but never so far as to act against God's laws" There is much that recalls Akhikar Lukmān teaches that the rod benefits the child like water the seed In Akhikar we have "Spare not thy son for strokes of the rod are to a boy like dung to the garden" Lukmān says "When thou seest people who remember God, join them, hast thou knowledge it will be useful to you with them and they will increase it, if thou hast none, they will teach thee, when thou seest people who do not remember God, do not join them, for if thou hast knowledge, it will not avail thee, and if thou art ignorant, they will increase thy ignorance" Akhikar says "Join the wise man, then thou wilt become as wise as he, but join not the brawler and babbler, lest thou become associated with him" Lukmān gives excellent advice for one going on a journey and also adds that he should be armed, similarly Akhikar In Maidānī's Arabic proverbs Lukmān is credited with the following admonition "My son, consult the physician before thou fallest ill!" This corresponds to the first saying in Ben Sira's alphabet "Honour the physician before thou requirest him" On the other hand Lukmān's warning against hypocrisy is found in similar form in the *Disciplina clericalis*

Muslim legend is fond of making the sages and wise men of the past into prophets But since Muhammad quotes Lukmān as a sage, the story was told that God offered Lukmān the choice between becoming a prophet or a sage Lukmān chose wisdom and became vizier to King David, who called him fortunate "Hail to thee, thine the wisdom, ours the pain!" Lukmān lived down to the time of the prophet Yūnus (Jonah) He is also called judge of the Jews Muslim legend sometimes also, although very rarely, makes Lukmān a prophet and even gives him the "Madjalla" (*megilla*), the roll of wisdom (Tabarī, *Annales*, i 1208)

III Lukmān, the writer of fables

Luḳmān was honoured by Muhammad and after him as a maker of proverbs A few centuries later he became a writer of fables also, perhaps because *amthāl* meant both proverbs and fables Lukmān thus became the Aesop of the Arabs Much was transferred to Lukmān that was told in Europe of Aesop The tendencies to this can be traced quite early While the very earliest legend saw in Lukmān the hero and Muslim legend makes him a sage, judge, vizier, or even a prophet, the later Oriental legend delights in describing him as a carpenter, a shepherd, a deformed slave, an Egyptian, Nubian or Ethiopian slave, a feature which is obviously modelled on the story of Aesop Lukmān's master orders him to set the best before his guests Lukmān gives them the tongue and heart of a sheep On another occasion his master tells him to set his worst before them Once again Lukmān sets a heart and tongue before them, for there is nothing better than a good tongue and a good

heart and nothing worse than an evil tongue and an evil heart (in Plutarch and in the *Vita Aesopi* of Maximus Planudes the tongue only is mentioned and not the heart) — Lukmān's fellow-slaves on one occasion eat their master's figs and accuse Lukmān At Luḳmān's suggestion the master makes them all drink warm water Lukmān vomits water only, the other slaves figs and water — Lukmān's master in his cups had wagered he would drink up the sea Sobered he asks Lukmān's advice The latter demands of those who had taken up the wager that they should first dam back all the rivers flowing into the sea, as his master had promised to drink up the sea only but not its tributaries The latter is a widely disseminated motive in fairy tales of the type of the Emperor and the Bishop (Walter Anderson, *Kaiser und Abt, F F Communications*, N° 42, p 134—140, especially p 139 where reference is made to Lukmān, Chauvin, *Bibliographie*, viii 60—62) These anecdotes are also found in the *Vita Aesopi* of Planudes (xiv^th^ century), but they are known as early as Plutarch, *Convivium septem Sapientum*

The older Arabic literature does not know fables of Lukmān They first appear in the late middle ages The Paris manuscript published by Jos Derenbourg belongs to the year 1299 and contains 41 fables These fables have often been published and thoroughly discussed in scholarly fashion especially by Derenbourg, R Basset and Chauvin Out of the 41 fables, N° 22 alone has no parallels the thornbush begs the gardener to tend it so that kings may delight in its flowers and fruits, the gardener waters it twice a day and the thornbush overruns the whole garden R Basset recalls the fable of Jotham of the thornbush which destroys everything (*Judges*, ix) All the others with the exception of the thirteenth (the midge and the bull) are found in the Syriac fables of Sophos (= Aesopus) published by Landsberg All are found in Aesop except N° 9 (the gazelle in the well), N° 22 (thornbush), N° 24 (wasp and bee), N° 40 (the man and the snakes) It has been further observed that in these fables the very animals indigenous among the Arabs, the ostrich, the hyena, the jackal and the camel play no part As these fables first appear in the late middle ages there can now be no doubt that we have to deal with a selection of Aesop's fables translated into Arabic

IV Related legendary figures

Lukmān is a manysided figure he is *Muʿammar*, hero, sage, maker of proverbs, and writer of fables It is no wonder then that he has often been compared and identified with other legendary heroes, Prometheus, Alkmaion, Lucian and Solomon Abu 'l Faradj makes Lukmān the teacher of Empedocles Three of these equations deserve closer examination 1) with Balaam, 2) with Aḵẖiḳar and 3) with Aesop The identification with Balaam is old Arabic legend gives the following genealogy Lukmān b Baʿūr b Nāhūr b Tāriḵẖ It is evident that the Kur'ān exegists sought for something corresponding to Lukmān in the Bible They found this in Balaam as the vowels *balaʿ* and *lakama* both mean the same "to devour" This then became a Muslim tradition, which entered the Hebrew *Mishle Sindbad* where Luḳmān is one of the seven wise teachers of the king's son (ed Cassel, p 220 *sq*) and also the *Disciplina clericalis* of Petrus Alphonsus, where the correct text is "Balaam qui lingua arabica vocatus Lucaman" (ed Hilka Soderhjelm, p 3) The Kur'ān exegists had no doubt about this identity The question arises however did Muhammad himself see Balaam in Lukmān? — and next is Luḳmān really Balaam? Derenbourg, Basset and Eduard Meyer (*Die Israeliten und ihre Nachbarstamme*, p 378) answer in the affirmative But it is quite incredible The pre-Kur'ānic tradition about Lukmān, the Kur'ān Sūra, which shows deep reverence for Lukmān, have no single feature of the hated Balaam of the Bible and the Haggada This identification was only made later by Kur'ānic exegists, who wished to connect Lukmān with the Bible at any cost, and made him the son of Beʿor, i e Balaam, just as they sometimes made him the nephew or cousin of Job

Lukmān's similarity to Aḵẖiḳar was also noticed long ago, but it is only quite recently that the identification has found a vigorous champion in Rendel Harris, who devotes the chap vii of his *Story of Ahikar* to it He bases his identification on the agreement of Sūra xxxi 18 with Aḵẖiḳar's warning about the voice of the ass, and on Arab hypotheses which compare Lukmān with other figures in legend and history, notably to the relationship of Lukmān, Aḵẖiḳar and Aesop The story of Aesop shows originally a close relationship to that of Aḵẖiḳar The later legend of Lukmān has borrowed much of the story of Aesop and thus becomes like the Aḵẖiḳar story but in reality Lukmān is not directly connected with Aḵẖiḳar but with Aesop

The development of the Lukmān legend seems varied but clear Lukmān properly belongs to the legends or possibly the history of Arab paganism For even this period already knows the sage Lukmān With Muhammad he becomes the teacher of pious doctrines Incited by the Kur'ān the interpreters of the Kur'ān found Lukmān's sayings in many places and found Lukmān himself in the Balaam of the Bible He was credited with fables in addition to the proverbs and was thus made the Aesop of the Arabs

(BERNHARD HELLER)

LŪLĪ, one of the names for gipsies in Persia, parallel forms are in Persian, *lūrī*, *lōrī* (*Farhang-i Ǧahāngīrī*), in Balūčī, *lōrī* (Denys Bray, *Census of Baluchistan*, 1911, iv 143, gives the popular etymology from *lōr* = "lot, share")

The name *lūlī* is first found in a legend relating to the reign of Bahrām Gūr (420—438 A D) At the request of this Sāsānian King, who wished to amuse his subjects, the Indian king Shangal (?) sent to Persia 4,000 (12,000) Indian musicians Hamza (350 = 961), Berlin-Kaviani, p 38, calls them al-Zutt [q v], Firdawsī (Mohl, vi, p 76—77), Lūriyān, Tha'ālibī (c 429 [1037]), ed Zotenberg, p 567, says that from them are descended the black Lūrī (*al-Lūriyūn al-sūdān*), skilful players of the flute the *Muǧmil al-Tawārīkh* (c 520 [1126]), transl Mohl, *J A*, 1841, xii, p 515, 534, confirms this origin of the Lūrī The Lūlī (plur *Lūliyān*) are often mentioned by Persian poets Mīnūčihrī (Dāmghān–Djurdjān–Ghaznī, vth/xith century), Djamāl al Dīn 'Abd al-Razzāk (d in 388 [1192], Isfāhān), Kamāl Ismā'īl (d in 635 [1237], Isfāhān), Hāfiz (d in 791 [1389], Shīrāz) say that the *lūlī*'s are "black" (like night), petulant (*shūkh*) and elegant (*shangūl*) that they play the flute, that their way of living (*bunagāh* "baggage") is irregular The Persian dictionaries explain *lūrī*/*lūlī* as "shameless, gay, sweet, musician, woman of light morals", etc, cf Vullers [the quotation from Amīr Khusraw (d in 725 [1325] in India), *ibid*, s v Lur refers rather to the inhabitants of Luristān]

The origin of the name *lūlī* has not yet been investigated The term seems to be applied to the inhabitants of the town of Sind which the Arab authors call Arūr or al-Rūr (cf Aras > al-Rās, Alān > al Lān) This town had been conquered by Muhammad b al-Kāsim before 95 (714) (al-Balādhurī, ed de Goeje, p 439, 440, 445) According to al-Bīrūnī, ed Sachau, p 100, 130, the town of Arūr (Aror) lay 30 farsakhs S W of Multān and 20 farsakhs above al-Mansūra In Elliot, *History of India*, London 1867, i 61, 363, the town is called Alor This town, the old capital of the Hindu rādjas of Sind, is now in ruins (on the Indus, in the *tāluka* of Rohri in the district of Sukkur, cf *Imperial Gazetteer of India*, Oxford 1908, vi 4 and xxi 308 Aror and Rohri) The change of *Arōrī/Rūrī into Lōrī/Lūlī is readily explained by the phonetic law of dissimilation of the two *r*'s especially after the change from Aror (Indian) to al-Rūr (Arabic) The descendants of the Indian musicians of Bahrām Gūr (i e the gipsies) seem to have been called after the most important town that the Arab invaders had known, and perhaps before them, the Sāsānians This explanation would locate quite precisely the original home of the *lūlī*/*lūrī*, without in any way prejudicing the ethnical relationship of this tribe

The term *lūlī-lūrī* (unknown in Khorāsān, Ivanow 1914) is particularly found in the S E of Persia, in Kirmān and in Balūčistān *Lūlī* or *lulī* is also found in Turkestan Bābur, ed Ilminsky, p 358, 457, uses "Lūlī" in the sense of "player", Abu 'l-Ghāzī, ed Desmaisons, p 241, 258, 276, 282, mentions in the xvth century a Shaibānid prince of Marw and Ābīward, son of a Lūlī woman Mayew, *Izwěstiya Ross Geogr Obshč*, xii, part iv, p 349, and *Geogr Magazine*, 1876, p 326—330 Lūlī in Eastern Bukhārā, Grenard in Dutreuil de Rhins, *Miss scient dans la Haute Asie*, Paris 1898, ii, p 308 Lūlī and Āghā in Chinese Turkestan, Valikhanow, *Sočineniya, Zapiski Ross Geogr Obshč po ethnografii*, St Petersburg 1904, xxix, p 43 Iulu (sic) and Multānī in Kashghār Lastly it has been suggested that the name of the gipsy tribe in Syria, Nūrī, plur Nawara is derived from Lūlī

The Lōrī/Lūlī gipsies (cf the reference above to their dark skin) must be clearly distinguished from the Lur [q v] highlanders who live in the southwest of Persia, have a fair skin and speak an Irānian dialect with no trace of Indian elements The situation is however slightly complicated by certain minor points In the first place the use of the terms Lūlī, Lurī, Lur, etc is not always quite clear In the confederation of 'Arab tribes of Fārs there is a Lur clan, Sykes, *Ten thousand Miles*, p 330, Rittich, *Pojézdka v Belucistán*, *Izw Geogr Obshč*, 1902, xxxiii/1, p 69 speaks of a Lorī section (Persian pronunciation of Lūrī?) among the Lūlī of Kirmān Edmonds notes the existence of a Luri (?) clan in Luristān in the Dashēnān division of the Bairānwand group In Kurdistān there is a clan Lur-i Kulāhgar [cf SENNA]

Still more confusing is the fact that some Lurs follow the profession of acrobats, bear-leaders, rope dancers (cf Čirikow, p 277) As early as the xivth century, Shihāb al-Dīn al-'Umarī mentions the talent of the Luris in these directions and in our own day we find wandering troops of Lurs as far north as Tabrīz where there is a permanent colony of Karaci gipsies, professional actors and singers It is possible that the special qualifications of the Lur and gipsy players differ somewhat, the Sūzmānī of Kurdistān (cf SARPUI and SENNA) who excel in singing and dancing are not acrobats But we must first of all wait till a special investigation settles to what precise section the wandering Lur artistes belong

There is nothing impossible in a gipsy infiltration into Luristān Whatever was the ethnical entity covered by the name Zutt (on the confusion of the Zutt with the Lūrī see above Hamza, Tha'ālabī) the existence of Zutt colonies in Khūzistān is known as early as the time of al-Hadjdjādj [q v] (cf Hawmat al-Zutt between Arradjān and Rām Hormūz, the modern town of Hindiyān ["the Indians"] may have a similar origin) According to Balādhurī, p 382, when in the second quarter of the first century A H the Zutt had apostacised from Islām, they were joined by the local Kurds, which provoked the punitive expedition of 'Abd Allāh b 'Āmir to Idhadj (= Mālamīr, the future capital of Lur i Buzurg) The alliance of the Zutt and Kurds (= Lurs, q v) at so early a date is curious Under al-Rūr, Yākūt, ii 833 mentions two places in Sind and a small district (*nāhiya*) under Ahwāz in Khūzistān Schwarz, *Persien im Mittelalter*, v 665, identifies this Rūr with the district of al-Lūr (cf LURISTĀN) In the light of what has been said above one might suppose the existence in al Lūr of a very ancient Indian colony But as our sources contain no positive confirmation of this hypothesis [according to Ibn Hawkal, p 176, the "Kurds" were predominant in al-Lūr] the questions of the origin of the name al-Rūr in Khūzistān, of the identity of this al-Rūr with al-Lūr and of the remoter origin of the name Lur must for the present be left open In any case even if the name Lur came from the town of

al Lūr, the origin of the name would not necessarily settle the question of the ethnical origin of this people

As to the general question of the gipsies in Persia, their names in the provinces other than Kirmān and Balūčistān are as follows

in Khoiāsān Kirshmāl (in which a fantastic popular etymology sees *ghair-i shumār*, interpreted as "innumerable", in Transcaucasian Turkish dialects *klrîshmal* means "vaurien", cf the comedies of Fath ʿAlī Akhundow, q v),

in Astarābād and Māzandarān Djūgī and Gāodārī,

in Ādharbāidjān Karačī (and čaghatai Turk means "faithful servant, person near the khān", Abu 'l-Ghāzī, p 145 and Bugadow, ii 45),

in Fārs (and elsewhere) Kāoli (= Kābulī)

The names mentioned may correspond to slight local distinctions not yet fully known Gobineau collected the following names of particular tribes leading a nomadic life in the north of Persia Sanādī (?), Kāsa tarāsh, "cup makers", Budāghi, Adenesīrī [Adhar-narsē ?], Zargar-i Kirmānī, „gold smiths of Kirmān", Shahriyārī (winter at Hamadān, summer near Damāwand), Karzī, Toāi-tabīb (*dawar* + *tabīb* "sheep-doctor" ?), Gāobāz, Bash-kāpān (in Turkish *bash* "head" + *kapan* "he who seizes"?), Gāodārī (bold hunters in Māzandarān, cf de Morgan), Kāshī, Badjumbūn According to Newbold the Persian gipsies fall into two classes Kāoli (or Ghurbatī) and Gāobāz

As names applied to Persian gipsies in general Gobineau gives Beshāwān/Peshāwān (cf the name of the Armenian and Transcaucasian gipsies, the Bosho) and Odjūlī (?) The following names have a general and neutral character Ghurbatī, "living in a foreign land", according to Ivanow, the Persians who confuse *gh* and *k*, see in *kurbati* an offensive allusion to the promiscuity (*kurbat*, "relationship, consanguinity") of which isolated communities in all ages have been accused, the name is sometimes transcribed *kurbatī* and *kurbātī*, Fiyūdj (from the Arabic, *fuyūdj*, "couriers"), Ustākār, Aghā, Ghar bāl-band ("sieve-makers")

The number of gipsies in Persia may be estimated at 20,000 families, or 100,000 souls, of whom 5,000 families are in Ādharbāidjān and 300—500 families in Kirmān (Sykes) The gipsies have an organisation of their own at the head of which is the chief of the Shāh's runners (*shātir-bāshi*) under whom are the provincial deputies (*kalāntar*) In western Persia the gipsies are very little different from the Persian peasantry (Sykes, Ivanow) In Khorāsān they play a considerable part in the life of the rural community as artisans, making and repairing sieves, chains, combs etc In Astarābād the Gāodārī are coppersmiths, carders of wool and cotton (de Morgan) Throughout Persia one sees the black tents of the nameless *īlāt* who must be gipsies It remains to be seen also if the Kurd tribes bearing names like Kharrāt ("turners"), Lurr-i Kulāhgar ("hatters") are not of gipsy origin (cf the article SENNA) In the towns, such as Sabzawār, Nīshāpūr and Tabrīz, the gipsies have quarters of their own There are troops of gipsy dancers and musicians in Persia but they do not seem to be very popular Ouseley gives a description of the dances and of the marionette theatres of the Karačī (Tabrīz) The dancers and singers of the Sūzmānī tribe in Kurdistān have often been described by travellers, cf notably Lycklama and Nijeholt, *Voyage*, iv, p 30—70, Čirikow, *Putewoi Journal*, p 282, 299, 330, Khurshīd-Efendi, *Siyāhet nāme-i Hudūd*, Russian transl, p 119, cf T Thomson, *The Soozmanee are they Gypsies*, *Journ Gipsy Lore Soc*, ii, 1909, p 275—276

The language of the gipsies of Persia (Sykes, de Morgan, Ivanow) has taken its morphology from modern Persian, its vocabulary also is full of Persian words (cf the lists in de Morgan), Indian elements seem to be rarer than in the Romanī of Europe, the language of Kirmān and Khorāsān (Sykes, Ivanow) contains a large number of unrecognisable elements Longworth Dames out of 96 words in Sykes's vocabulary found 12 Indian, 4 Arabic, 28 Persian and 52 of unknown origin He would regard this dialect rather as an artificial secret jargon Denys Bray (quoted by Ivanow) in any case confirms the fact that the Lōrī of Balūčistān is learned by the children as a separate language ("is at any rate acquired naturally by Lōrī children, as a language for the home circle")

The Sūzmānī use Kurdish mainly According to Čirikow they are called Dummī, which must correspond to Dūmān (= Dōm, the name of a low caste in India from which comes the well-known name for gipsies *Rom*) The vocabulary of the Dūmān (Baghdād, Aleppo?) as collected by Newbold, *J R A S*, 1856, p 303 from an informant from Altun-kopru, is full of Kurdish words *kāwar*, "stone", *khoi*, "salt", *lāwak*, "boy" A Kurd tribe in the east of Bohtān bears the suggestive name of Sindī/Sindiyān (the "Sindians") According to the *Sharaf-nāma* the chief of the Kurdikān clan (of the Ziākī) had married a gipsy woman In discussing the relationships of gipsies and Kurds, it should be remembered that in 220 (835) a section of the Zutt settled in Khānikin, i e at the gate of Kurdish territory, cf de Goeje, *Memoire*, p 30, Tabarī, iii 1168

According to Sampson, two categories of gipsy speech may be distinguished according to the fate of the primitive Indian aspirated *mediae* the one changes them into aspirated *tenues*, i e Prākrit, *bhāinī* > *phei* (Armenia, Europe), the other deprives them of aspiration, *bhāinī* > *ben* (Persia, Syria, Egypt) The interest of the Persian dialects lies in the fact that Persia was the first country in which the gipsies sojourned after leaving India (probably in the Sāsānian period) In the gipsy dialects of Persia, as yet very insufficiently studied, we may expect to find traces of a rather archaic phonetic system Ouseley for example found among the Karačī of Tabrīz the word *behn* "sister" which must be older than *phen* or *ben* (cf also *ghora* in Gobineau)

LU'LU', Badr al Dīn Abu 'l Fadā'il al Malik al-Rahīm, Atābeg of al-Mawsil Lu'lu', who had once been his slave, had great influence with the Zangid Nūr al-Dīn Arslān Shāh I and when Nūr al-Dīn on his deathbed (607 = 1210—1211) confirmed the nomination of his son al Malik al-Kāhir ʿIzz al-Dīn Masʿūd as his successor, he appointed Lu'lu' as regent of the kingdom, while the younger son Imād al-Dīn Zangī was given the two fortresses of al ʿAkr and Shūsh near al-Mawsil At the end of Rabīʿ I, 615 (end of June 1218) al-Malik al-Kāhir died after appointing his minor son Nūr al-Dīn Arslān Shāh his successor and Lu'lu' his regent When ʿImād al-Dīn seized the fortress of al-ʿImādiya in Ramadān of the same year (Dec 1218), Lu'lu' sent an army against him Lu'lu''s troops besieged al-ʿImādiya but had to return with nothing effected, whereupon the other fortresses in al-Hakkārīya and al-Zawazān surrendered to ʿImād al-Dīn when the latter made an alliance with the lord of Irbil, Muzaffar al-Dīn Kokburi Lu'lu' sought the assistance of the Ayyūbid al-Malik al-Ashraf, who ruled the greater part of Mesopotamia, and recognised his suzerainty, whereupon al-Ashraf sent an army to Nasībīn to help Lu'lu' if necessary In Muharram 616 (April 1219) ʿImād al Dīn was defeated by Lu'lu''s forces near al-ʿAkr and had to flee to Irbil Peace was however soon afterwards concluded through the intervention of al-Ashraf and the Caliph al-Nāsir, but when the sickly Nūr al-Dīn died in the same or the following year and his brother Nāsir al Dīn Mahmūd, who was some three years old, succeeded him, ʿImād al-Dīn and Muzaffar al-Dīn began to raid and plunder the district of al Mawsil whereupon Lu'lu', who had first sent his eldest son with an army to al-Ashraf to help him against the Franks, appealed for help to Arbeg, al-Ashraf's general in Nasibin Arbeg set out at once and joined Lu'lu' On Radjab 20, 616 (Oct 1, 1219) Lu'lu' was defeated near al-Mawsil, but while he was again collecting his followers around him Muzaffar al Dīn retired After the conclusion of peace, ʿImād al-Dīn occupied the fortress of Kawāshā, and Lu'lu' had again to appeal to Ashraf Muzaffar al-Dīn however induced a number of emirs, among them Ibn al-Mashtūb to secede from al-Ashraf and take up a position at Dunaisir to prevent the latter's passing The emirs however soon changed their views with the sole exception of Ibn al-Mashtūb who went to Irbil He was twice defeated, first by the garrison of Nasibin and then by the troops of Farrūkh Shāh, lord of Sindjār, who took him prisoner When he had been released, he collected a plundering horde around him and ravaged the country far and wide He was defeated by an army of Lu'lu''s and took refuge in the fortress of Tell Aʿfar The latter was besieged and Lu'lu' himself came up from al-Mawsil On Rabīʿ 17, 617 (June 21, 1220) he had to capitulate and Ibn al-Mashtūb was taken prisoner and brought to al-Mawsil After al-Ashraf had made peace with Muzaffar al-Dīn he handed over to Lu'lu' the fortresses of Djudaida, Nasībīn and the governorship of Mesopotamia, to which other fortresses were later added After the death of Nāsir al-Dīn (619 = 1222—1223 or according to others not till 631 = 1233—1234) Lu'lu' was recognised as Atābeg of al-Mawsil and assumed the name of al-Malik al Rahim In 635 (1237—1238) he became involved in war with the Ayyūbid al-Sālih Nadjm al-Dīn The latter took the Khwārizmians into his service and granted them Harrān and Edessa whereupon they seized also the town of Nasibin About three years later they were defeated by the ruler of Halab and Hims and Lu'lu' regained Nasibin with Dārā Lu'lu' had also to fight the lord of Halab, the Ayyūbid al-Nāsir Yūsuf In 648 (1250—1251) he was defeated and Nasibin, Dārā and Kalʿat Sirkiyā fell into the hands of the Aleppo forces Lu'lu' died in 657 (1259) aged over 80, after recognising the suzerainty of Hūlāgū [q v]

LU'LU', 1 A Mamlūk of Saif al-Dawla the ruler of Aleppo, vizier of his son Saʿd al-Dawla and his grandson Saʿīd al Dawla On the latter's assassination, he became guardian of his sons and from 394—400 (1003—1009) independent governor of Aleppo under Fātimid suzerainty, cf the article HAMDANIDS where the bibliography also is given

2 A eunuch and the trusted adviser of the Saldjūk Sultān Ridwān of Aleppo, on the latter's death in 507 (1113) he became Atābeg of his son Alp Arslān al-Akhras (lit "the dumb", so called on account of an impediment in his speech) Alp Arslān who left the government in the hands of Lu'lu' rendered himself hated by his court on account of his crimes and tyrannical conduct and fell a victim to a conspiracy in which Lu'lu' seems to have had a share To retain a firm hold on the reins of government, he appointed Alp Arslan's six year old brother Sultān Shāh his successor who reigned in name till 517 (1123) Anarchical conditions prevailed in Syria throughout the whole period (cf the art HALAB) To retain his power Lu'lu' had to steer a course between the Crusaders, Syrian Atābegs and the Great Saldjūk Sultan Muhammad He promised to hand over Aleppo to the latter but at the same time secretly sought the help of the Atābeg Toghtikīn [q v] of Damascus against him and of Ilghazī of Mārdīn and on the other hand to prevent them becoming too strong betrayed their movements to the Crusaders who were able to inflict damage on them He succeeded in retaining Aleppo with the help of Toghtikīn's cavalry To raise the necessary funds to pay these and his own troops he extorted the last farthing out of his viziers and the wealthier inhabitants of Aleppo He himself never left the citadel for fear of conspiracies When he was at last forced in 510 (1117) to make a journey, either to take his treasures to a friend's care or to get money stored with him, his Turkish bodyguard fell upon and killed him The latter seized his treasure and tried to take Aleppo by surprise but were defeated by the garrison and had to give up the booty Lu'lu' is a typical example of the anarchy in Syria, at the beginning of the Crusades which was only put an end to by the energy and ability of Nūr al Dīn

Bibliography, cf the art HALAB, Kamāl al-Dīn's *Geschichte von Aleppo*, transl by Silv de Sacy, in Rohricht's *Beitrage zur Geschichte der Kreuzzuge*, i, Berlin 1874, p 243, 245—251

(M Sobernheim)

LU'LU'A (A, "pearl"), a fortress near Tarsūs in Cilicia, which was besieged by the Caliph al-Ma'mūn in 217 (832) It was the strongest of the Greek citadels and the one that wrought most havoc among the Muslims, it had a large garrison and was well supplied with arms The caliph, not having succeeded in taking it, blockaded it for a hundred days with two forts, the troops of which routed the Emperor Theophilus, as a result of this defeat, the people of Lu'lu'a appealed to ʿUdjaif b ʿAnbasa who was their prisoner to negotiate for them and capitulated on obtaining safeguards (*amān*) granted by al-Ma'mūn

(Cl Huart)

LUR (in Persian *Lor* with *o* short), an Irānian people living in the mountains in S W Persia As in the case of the Kurds, the principal link among the four branches of the Lurs (Mamāsanī, Kūhgilū'ī, Bakhtiyārī and Lurs proper) is that of language The special character of the Lur dialects suggests that the country was iranicised from Persia and not from Media On the ancient peoples, who have disappeared, become iranicised or absorbed in different parts of Luristān, cf the latter article

The name Local tradition (*Ta'rīkh-i Guzīda*) connects the name of the Lurs with the place Lur in the defile of Mān rūd This tradition is perhaps based on a memory of the town al-Lūr mentioned by the early Arab geographers (Istakhrī, p 195 etc), the name of which survives in Sahrā yi Lur (to the north of Dizfūl) There are several other place names resembling Lur, namely Lī, a district of Djundai Sābūr (Schwarz, *Persien*, p 666, cf the Kūhgilū'ī tribe Lirāwī), which may be to Lūr what *pīl* in Luri is to *pūl* "money" in Persian, Lurdjān (Yāḳūt Lurdadjān, now Luidagān) according to Istakhrī, capital of the canton of Saidan (between Kūh Gilū and the Bakhtiyāris) and lastly there is a place called Lurt (Loit) near Samara

Masʿūdī alone, in his list of "Kurd" tribes, speaks of the Luriīya tribe (which may mean the Lurs connected with the district of al-Lur) In the xiiith century Yakūt uses the names Lūi, Lurr to mean the "Kurd tribe living in the mountains between Khūzistān and Isfahān", he calls the country inhabited by it *bilād al Lur*, or Luristān

These facts show the stages of evolution of the geographical term (perhaps pre-Irānian) into an ethnical name If however we seek an Irānian etymology for the name Lūr, its connection with the first element in Luhr-asp (already proposed by von Bode) at once suggests itself According to Justi, *Iranisches Namenbuch*, Luhr is explained by *rudhira* "red" The place-name Rūr in Yākūt may supply an intermediary form The *Ta'rīkh-i Guzida* gives a popular etymology *Lur* < *lir* "wooded hill" in Luri

Ethnology If the linguistic data connect the Lurs with Fārs, local tradition only regards as true Lurs the tribes who came from the defile of Mān-rūd According to the *Ta'rīkh i Guzida*, p 539, 547, there is in the *wilāyet* of Mān-rūd a village called Kurd near which there is a defile The place called Lur is situated in this *kūl* (the word means in Luri a "little ravine", cf O Mann) The name Mān rūd much resembles that of Mādiyān-rūd (the word *mādiyān* is found as mān/mūn in Lurī, Żukowski, iii 158) but certain historical considerations make us look for it near Māngarra-Mūngaria (cf *Ta'rīkh-i Guzīda*, p 548 on the place lying between Mān rūd, Samhā and Māngarra) The clans (*gurūh*) of the natives of Kūl i Mān-rūd

were later called after the places where they had settled, like the Djangrū'ī (Čangrū'ī, Djangardī) and the Ūtarī (Aztarī) The governing family of the Atābegs of Little Lur belonged to the Djangrawī (the name of their clan, the Salbūrī, Salghūrī should be corrected from Salwīzī, ʿ*Ālam-ārā*, p 369, Salīwarzī, ʿAlī Hazīn, *Tadhkira*, p 135 and Salawarzī in Houtum-Schindler) The *Ta'rīkh i Gusīda* concludes by enumerating the 8 clans (*thuʿab*) of the two principal *gurūh* and the 18 other tribes (*akwām*) of the Lurs

A few names (Māngarra, Anārakī, Djūdakī) correspond to modern names Finally 4 clans are mentioned Sāhī (Sāmī), Arsān (Asbān, Asān), Arkī and Bīhī, who, although speaking Lurī, are not Lurs, the people of the other villages of Mānrūd were peasants (*rūstā'ī*)

About 500 (1106), a hundred (or 400) Fadlawī Kurd families arrived from Syria They came by the north (Shuturān-Kūh) and settled at first on the lands of the Khūrshīdī wazīrs (cf the article LUR-I KŪČIK, cf *Nuzhat al Kulūb*, p 70 under the word *girdlākh*) At the beginning of the viiith (xiiith) century new tribes flocked to the standards of Hazārasp of the Great Lur Among them were two Arab tribes ʿUkaili (ʿAkīlī, cf the place of this name below Shūshtar), and Hāshimī and 28 different tribes (*mutafarika*) among whom we find the Bakhtiyārī (Mukhtārī), the Djawānikī (Marāsilī), the Gōtwand (cf the village near Shūshtar), the Djākī, the Līrāwī, the Mamāsatī (Mamāsanī?) etc According to the *Sharaf-nāma* (i 26) all these tribes also came from Syria These waves of immigration must have had a considerable effect on the ethnical composition of the Great Lur It is probable that the immigrants were Kurds and that traces of them still survived among the Kurds whom Ibn Battūta (ii 21—30) found at the beginning of the xivth century near Bahbahān and Rām Hormūz when on his way to the capital of the Grand Lur There has long been a village of Kurdistān on the Djarrāhī and it had even given its name to this river Shihāb al-Dīn al-ʿUmarī (*N E*, xiii, p 330—332) mentions the existence of Lurs in Syria and Egypt and tells how Saladin (563—589), alarmed by their dangerous ability to climb the steepest ramparts, had them massacred en masse This anecdote throws a light on the causes which produced the arrival in (? return to) Luristān about 600 A H of numerous Īrānian tribes

The southern part of Little Lur was exposed to infiltration by Kurds, especially through the valley of Karkha (cf IAK, just to the north of Susa is a tree *dār-i Bābū*, bearing the name of a clan of the Kurd tribe of Djuzkān, celebrated in the history of the Hasanwaihids, cf Ibn al-Athīr, ix 146, 219) and exposed to Turkish and Mongol invasions (cf the desperate fighting of the Atābegs of the Lur-i Kūčik against the Bayāt and Aiwa [= Bahārlu?] Turks)

In the Safawid period, Turkish tribes were introduced into Luristān from the direction of the Kūh-Gīlū (where traces of them still exist) and Georgian and Armenian colonies to the north of the Bakhtiyārī country On the movements of the population under Nādir, the Zands and Kadjars see below The ethnical situation gradually stabilised at the beginning of the xixth century

The names of the Lur tribes and groups are now quite well known and as we have lists going from 1836 to 1922 a comparison enables us to note the changes that have taken place meanwhile Regroupings seem to be taking place more rapidly among the Lurs than among the Kurds but the general framework of the tribal grouping remains essentially the same

In 1881 (Curzon, ii 274) there were 421,000 Lurs of whom 170,000 were Bakhtiyārī, 41,000 Kūh-Gīlū, and 210,000 Feilī According to Rabino this last section numbered in 1904 31,650 tents (or 130,000 individuals) in Pish-Kuh, and 10,000 tents (or 50,000 individuals) in Pusht-i Kuh (this last figure seems too low)

The Mamāsanī (Mamassanī) group includes 4 main tribes the Bakash, Djāwīdī (Djāwī), Dushmanziyārī and Rustamī (cf the article SHŪL) The Kūh-Gīlū group (Kūh Gālū) includes 3 large tribes (Akādjarī, Bawī and Djākī) The first of these tribes (cf the name of the old Turkish tribe of Aghadjārī) is of a composite character, for of its 9 clans four (Afshar, Begdilī, Čaghatai and Kara-Bāghlī) are Turkish (evidently the remains of the Shāh Sewan to whom the government of Kūh-Gīlū had been given under the Safawīs) and a fifth clan (Tilakūhī) bears the name of a district in Kurdistān of Senna [q v] On the second tribe, Bawī, O Mann notes that it bears the name of an Arab tribe of the neighbourhood of Ahwāz, but there is also a mountain called Bawī to the south of Khurramābād The third tribe, Djākī, is purely Lur and is composed of two main sections Čārbunīča and Līrāwī with very many subdivisions This threefold composition of the Kūh-Gīlū group is typical of many of the Lur tribes

As to the Bakhtiyārī, Sawyer as long ago as 1894 said that their territory was "thoroughly surveyed on a scale of 8 miles to the inch, nearly every tribe visited in their own encampment, everything appertaining to the Bakhtiaris may now be said to be known" But Curzon's tables (1890) are still the last word available to the student Of the two Bakhtiyārī groups Čahār-lang and Haft-lang, the latter is the more important at the present day The Čahār-lang, who used to be in the south are now mainly on the outskirts in the district north of the northern barrier (between Burūdjird and Gulpāyagān)

The main groups of Lur are Tarhān, Dilfān, Silsila (cf IAK) and Bālā-giriwa The tribes of the last group are the Lurs par excellence and have important subdivisions Dirīgwand, Sagwand etc It is possible that the Dirīgwand are the real nucleus of the Lur race Their chiefs are called *mīr*

In contrast to what we find among the Kurds, where the individual members of the tribe are usually much attached to their hereditary chiefs, the Lurs proper (Bālā giriwa) are distinguished by a more democratic feeling The power of the hereditary families of khāns is based on their 'guard' (*kaitul*) but this power is considerably reduced by the authority of the chiefs of the clans (*tushmāl*) The khāns are forced to court the favours of these wild, petty chiefs (Edmonds "uncouth headmen"), the latter are amenable to the solicitations of their neighbours and in this way the tribes are broken up and new groupings take place

Little is known of the ethnology of the Lurs The notes of Duhousset (who commanded a Lur regiment in 1859), *Études sur la popul de la Perse*, p 23, of Khanikoff, *Mém sur l'ethnogra-*

phie de la Perse, Paris 1866, p 15, 110 and 138, and of Damilow only touch the surface of the subject Duhousset particularly notes the peculiar (compressed) form of the skull of the Lurs Edmonds emphasises the difference between the Luis and the Laks, the latter are taller, have purer features and aquiline noses Their women are more beautiful than those of the Lurs The hair of the Lurs is often chestnut coloured, very heavily bearded men are found among the Lurs (The Persians call Luristān *maᶜdan i rīsh*, "mine of beards") The women do not seem to have such liberty among the Luis as among the Kurds According to Edmonds there are no cases among the Kurds of women acting as chiefs of tribes But v Hammer (II 239) mentions under the year 1725 the warlike exploits of the two daughters of the Walī ᶜAlī Mardān Khān

The domestic life and manners of the Bakhtiyārīs have found enthusiastic panegyrists in Layard, Mrs Bishop and Cooper, *Grass*, New York 1925 On the other hand the Lurs have been very severely judged by most travellers, cf Edmonds, *Geogr Journ*, 1922 (*ibid* the speech of General Douglas who was wounded by the Lurs in 1904)

Bibliography for the Mamāsanī (cf the article SHŪL) and the Kūh Gilū, cf especially Hasan Fasāʾī, *Fārs nāma-yi Nāsirī* on which are based Demorgny, *Les tribus du Fars*, *R M M*, 1913, xxii and B Miller, *Kočevŭye plemena Farsa*, *Wost sbornik*, St Petersburg 1916, II, p 213–218 Cf also the lists in Bode, Layard, Sheil, Baring etc (summed up in Curzon, *Persia*, II 317) and those of O Mann, *Die Mundarten d Lur Stamme*, p xv–xxi For the Bakhtiyārī Rawlinson, *A March from Zohab*, p 102—106 (cf Ritter, *Erdkunde*, IX 210—215), Layard, *Descrip of Khuzistan* and especially *Early Adventures*, Curzon, *Persia*, II 286—288 For the Lurs the lists of Rawlinson (Ritter, *Erdkunde*, IV 215—219), Bode, Layard, Čirikow, Houtum-Schindler, O Mann, *l c*, p xxiii and especially the articles by Rabino, *R M M*, 1916, and Edmonds, *Geogr Journ*, 1922

Religion The Christian and Jewish colonies (cf the evidence of Benjamin of Tudela) settled in the village of Kaikha since the Sāsānian period (cf MĀSABADHĀN) may have left some traces in the country A very curious tradition is the story of the conversion of the Bakhtiyārīs to Christianity in the time of Constantine the Great (?) (Hanway, II 168) A mention in the *Taʾrīkh i Djahān gushā*, *G S M*, XVI/2, p 216 shows that in 650 the *mulhid* (Ismāᶜīlis) had gained a footing around Gird-Kūh The Hurūfī heresy had probably also a following in Luristān, for the *murīd* of its founder Fadl Allāh who attempted the life of Sultān Shāhrukh in 1427 was called Ahmad Lur (Browne, *Pers Lit under Tartar Dominion*, p 366) In the Ṣafawid period the wālīs of the Little Lur claimed descent from ᶜAbbās, son of the Caliph ᶜAlī, whose tomb is shown near Sīrwān (Māsabadhān), cf Rawlinson in Ritter, IX, p 402 The esoteric doctrines of the extremist Shiᶜa are wide spread in Luristān The great majority of the Lak are Ahl-i Hakk (ᶜAlī Ilāhī, q v) The Sagwand, Pāpī and Badrāʾī tribes are also followers of this secret religion In the belief of the Ahl-i Hakk, Luristān is the scene of the activities of the third avatar of the divine manifestation who is called Bābā Khoshīn and numbers among his "angels" Bābā Tāhir [q v] An important sanctuary of the sect, the tomb of Shāh-zāde Ahmad (the alleged son of the *imām* Mūsā Kāzim), is in the district of Kūs near Bī-āw (territory of Kalawand) and is kept by Saiyids of the Pāpī tribe, these Saiyids wear red turbans which recalls the predilection for red of the old Muhammira = Khurramīya [q v] whose flags were of this colour

The religion of the Lurs was so little orthodox even from the Shiᶜa point of view that at the beginning of the XIXth century prince Muhammad ᶜAlī Mīrzā had to send for a *mudjtahid* to convert the tribes to Islām (Rabino, p 24) All the Lur and Lak tribes are officially Shiᶜīs (contrast the attachment of the true Kurds to Sunna orthodoxy)

Language Down to the beginning of the XXth century our knowledge of the Lur dialects was confined to 88 words collected by Rich, to 4 Bakhtiyārī verses in Layard and to some thirty words collected by Houtum-Schindler As late as the *Grundriss d iran Phil*, I/2, 1898—1901, p 249, we find the thesis stated that Lurī is closely related to Kurdish and may even be described as one of its dialects The materials of Żukowski (collected in 1883—1886) were finally published the day after the death of the author (d 4/1/1918) The merit therefore of having first established the important fact that Kurdish and Lurī are quite separate ("eine tiefgehende Scheidung des Kurdischen vom Lurī") is due to O Mann This scholar has shown that although there are Kurd tribes in Luristān (cf the article IAK), the true Lurs speak dialects which belong undoubtedly to the S W Iranian group (like Persian and the dialects of Fārs) and not to the N W group (like Kurdish and the "central" dialects)

The Lurī dialects which have none of the asperities of Kurdish (cf KURDS) fall into two categories To the first belong the dialects of the Great Lur Mamāsanī, Kūhgīlu and Bakhtiyārī (the latter has a few insignificant peculiarities of its own), to the second belong the dialects of the Little Lur, i e of the Feili Lurs

Even the first group possesses very few special features compared with modern Persian From the point of view of phonetics *-am* at the end of a word becomes *om*, *-um* (*mīkunam/ikunom*, *ādam/ādhom*), *ū* changes into *ī* *pūl/pīl*, intervocalic *d* gives *dh* (*y*) *midtham/idhim*, the combination *-kht -ft* give *-hdh* and *-ht* (*t*) *dukhtar/duhdhar*, *taft/taht*, initial *kh* becomes *h* *khāna/hona*, etc Peculiar to Bakhtiyārī are the change of intervocalic *m* to *v* *djūwa-djāma* and the occasional change of *sh* to *s* *īsā* = *ishān* It is remarkable that some of these phonetical peculiarities were long ago noted by Hamdallāh Mustawfī (*Taʾrīkh-i Guzīda*, p 537—538) He says that Luri (although full of Arabic words) does not have the peculiarly Arabic sounds, like *kh*, *sh*, *gh*, *f* and *k* Inflection Plural in *-gal*, *-yal*, *-al*, e g *ānhā*, *āngal*, accusative in *a*, *na* instead of *rā* *yūnd*, *got* = *inā guft*, formation of the present *i-* instead of Persian *mī-*, first Persian plural ending in *-īmū(n)* *ikharīmū(n)* = *mīkharīm* Lurī usually forms the preterite of active verbs as in Persian with the help of personal endings (active construction) and not like Kurdish and the majority of Persian dialects (including those of Fārs) which

give the preterite a passive construction Vocabulary In the present and preterite stems Lurī usually follows Persian but we find stems and words unknown in Persian *ẖwanum*, *wandum*, "to throw", *tar-*, *ītarom*, "to be able", *tta*, "eye", etc From the Mongol period, Luri has kept several expressions like *tushmāl*, "chief of a clan", in Mongol, *tushumel*, "official", *kaitul*, "guard of the khān", in Eastern Turkī "camp, laager", cf Budagow, ii 102, *kūrān*, "encampment", in Mongol, *kuren*, "camp, tent"

As to the Feilī group, their dialect differs very little from ordinary Persian (Mann "weiter nichts als ein stark abgeschliffenes Persisch")

There are in Luristān a few islands of Kurds of some importance Such are in the north the Lak tribes [q v] Among the Feilī, the Mahkī group (on the frontier of Kirmānshāh, at Hulailān, and farther south) speaks a southern Kurdish dialect like that of the Kalhur The Kurdishūhān group (to the south of Push-i Kūh) speaks a "kurmandjī" Kurdish Linguistic conditions in the Push-i Kūh still require further study

Bibliography Lerch, *Izslědowanija*, iii, p xi—xiv (German transl, *Forschungen*, ii), O Mann, *Kurze Skizze d Lurdialecte*, *Sitzungsb Berl Akad*, 1904, p 1173—1193, O Mann, *Die Mundarten d Lur Stamme im sud-west Persien*, *Kurd pers Forschungen*, Berlin 1910, part ii (bibliography, list of tribes, Mamāsanī, Kūh-galūʾī, Bakhtiyārī and Feilī texts), D L R Lorimer, *The Phonology of the Bakhtiari*, publ by the R Asiat Society, London 1922, Żukowski († 4 I 1918), *Materialě dl'a izuč pers narečij*, iii dialects of the Bakhtiyārī Čarlang and Haftlang, Petrograd 1922 (texts collected in 1883—1886, vocabularies Bakhtiyarī-Russian and Russian-Bakhtiyārī), Hadank in the preface to O Mann, *Kurdisch-Persische Forschungen*, Berlin 1926, iii/1 On the Mamāsanī and Kūh gilūʾī materials of Romaskewič, cf *Bull Acad de Russie*, 1919, p 452

Literature The Lur tribes and especially the Bakhtiyārīs have a rich popular literature, fairy tales, epic fragments celebrating the exploits of their heroes (like Muhammad Taki Khān Čī-Lang and Hādjdjī Ilkhānī Haft-Lang), lyrics, songs sung at marriages (*wāsinak*) and cradle-songs (*lālāʾī*) These pieces are often pretty and full of sentiment, cf the collections by O Mann and Żukowski (the latter published an article on Persian and Bakhtiyārī lullabies in the *Journ Min Narodn Prosweščě*, Jan 1889), D L R Lorimer and E O Lorimer, *Persian Tales*, London 1919, p 197—351, *Bakhtiari Tales* (translations only)

There are also Lurī poets writing in the established literary forms Husain Kulī Khān Haft-Lang (killed in 1882), Nadjmā Mamāsanī, Daftarī, Fāyid (still alive in 1902), Izadī (d 1905), ʿAlī Asghar Khān Nihāwandī (cf O Mann) A *Miʿradj nāma-yi Bakhtiyārī* by Shaikh ʿAlī Akbar Muʿammam was lithogr at Teherān in 1314 A *ghazal* by Mullā Zulf ʿAlī Kurrānī was published by Y Marr in the *Comptes Rendus de l'Acad de l'U R S S*, 1922, p 55—58, according to Y Marr a *tadhkira* of Bakhtiyārī poets compiled by ʿOmmān-i Sāmānī is in the library of Sālār-i Fātih Another similar tadhkira comes from the pen of Ahmadī-yi Bakhtiyārī

History On the participation of the tribes of Khūzistān and Fārs in the fighting between Arabs and Persians in the early centuries of the Hidjra cf the article KURDS The Caliphs interfered directly in the affairs of the country, especially in Lur-i Kūčik [q v] The fortunes of the Lurs were more closely associated with the Iranian dynasties ruling in Khūzistān, at Shīrāz, Isfahān, Hamadān and on the Zagros the Saffarids, Būyids, Kākwaihids, Hasanwaihids and their successors of the family of Abu 'l-Shawk (cf the article KURDS)

We have coins of the Būyids struck at Idhadj (Codrington) In 323 the Būyid army marched through Luristān (Sūs – Shāpūr-khwāst – Kuradj) The Hasanwaihid Kurds whose capital was at Sarmādj (south of Bīsūtūn) extended their dominions into the valley of the Karkha Shāpūr khwāst (= Khurramābād) formed part of their possessions about 400 (1009) (Ibn al Athīr, ix 89, *Tadjārib al-Umam*, ed Amedroz, ii 291, iii 451) The Kakwaihid Garshāsp sustained a siege by the Saldjūks in Shāpūr-khwāst (434 = 1042) The amirs of this last dynasty later settled in northern Luristān the family of Zangī b Bursuk in Shāpūr-khwāst before 499 (1105), Hisam al Dīn Alpaghūsh at Diz-i Māhkī on the Karkha before 549 (1154) (*Rāhat al-Sudūr*, *G M S*, p 285) A Lurk Hisam al-Dīn Shūhlā or Aksarī is mentioned as lord of Luristān and of a part of Khūzistān between 547 and 570 A long inscription (Kūfic?) on a stele near Khurramābād is still undeciphered [cf a copy in von Bode, ii 298, Rawlinson thought he recognised in it the name of the Atābeg Shudjāʿ al Dīn but according to Curzon it has an earlier date (517 = 1123)]

In any case all attempts from outside to subdue Luristān or to take parts of its territory affected the tribal system very little, the development of which came to a head at the coming of the Atābegs

The principal source for the domestic history of the country is the *Taʾrikh-i Guzīda* (730 = 1330) based in turn on the *Zubdat al-Tawārikh* of Djamāl al-Dīn al-Kāshānī (of which the Preussische Staatsbibliothek only has the first volume, N⁰ 368 of Pertsch's Catalogue) The *Madjmaʿ al Ansāb* (c 743) is based on independent oral tradition but is less accurate The *Djahān ārā* although late (its author Kadī Ahmad died in 975) uses unpublished data The *Sharaf nāma* (1105 = 1596) is based on the *Zubdat al-Tawārikh* or perhaps a good copy of the *Taʾrikh-i Guzīda* According to these sources which supplement the statements of the Arab geographers, the situation in Luristān about 300 (912) was as follows

The Shūl [q v] — who are not mentioned by the Arabs before the Mongol epoch — occupied a part ("half") of Luristān The wilāyet of Shūlistān proper (*Taʾrīkh-i Guzīda*, p 537 and 539, 13) had a governor named Nadjm al-Dīn Akbar (according to the *Madjmaʿ al-Ansāb* the title Nadjm al-Dīn was hereditary among the Shūl) while the Lur territory under the Shūl (probably Kūh-Gilū) had a pīshwā Saif al-Dīn Mākām whose family had been prominent in the country since the Sasanian period, he was of the Rūzbihānī tribe which the *Taʾrikh-i Guzīda* mentions among the Lur tribes The rest of Luristān was ruled by a family of Lur princes (independent of the Shūl) of whom Badr ruled in the Great Lur and his brother Mansūr in the Little Lur Their dates are uncertain Badr's successor was his grandson Nasīr al-Dīn Muhammad

b Khalīl b Badī (according to the *Madjma' al Ansāb*, Nasīr al-Dīn was a nephew of Awrang [Rang] b Muhammad b Hilāl) Nasīr al-Dīn was deposed by the Fadlawī Kurds who founded the dynasty of the Atābegs of the Great Lur and relied for support on tribes who came from outside Luristān (cf above under Ethnology) The same Fadlawī drove the Shūl out of their settlements

We know nothing of Mansūr, brother of the above mentioned Badr The tribes of Little Lur were directly under the caliphs and in the north were subjected to the invaders The founder (about 580) of the native dynasty of the Atābegs of Lur-i Kūčik [q v] had to dispose of a rival Surkhāb b 'Aiyār (probably a scion of the dynasty of Abu 'l Shawk which was called 'Aiyar/Annaz, cf the article KURDS)

The history of the two dynasties of the Atābegs is filled with feuds, murders and executions but in domestic affairs the state of the country was fairly prosperous The Atābegs built bridges and madrasas (Ibn Battūta) and secured a peaceful existence for the inhabitants (cf *Ta'rīkh i Guzīda*, p 550) The revenues of each of the two Atābegs were estimated at a million dīnārs while each of them paid to the Mongol treasury a tribute of 91,000 dīnārs only (*Nuzhat al-Kulūb*, p 70)

In the interval between the Mongols and the rise of Timūr, the two Atābegs were vassals of the Muzaffarids In 788 and 795 Timūr ravaged Little Lur but treated the lord of Great Lur more kindly In 795 Timūr passed through Kūh-Gilū and Shūlistān The Timūrids (cf the article BAIKARA) consolidated their power in Luristan and in 837 the last Atābeg of the Great Lur disappeared

Safawid period The lords of the Little Lur maintained their position and by intrigue even succeeded in extending their power over the plain to the west of the mountains of Pusht-i Kūh After the execution of Shāh-wardī Khān, Shāh 'Abbās installed in his place a *wālī* descended from a lateral line of the old family The possessions of this Wālī, Husain Khān, were, however, somewhat reduced

After the disappearance of the dynasty of the Great Lur the power had passed to the chiefs of the tribes composing this federation Under Shāh Tahmāsp we find the title of Saidār of the local *ulūs* conferred on Tādj mīr, chief of the principal clan, the Astaraki Tādj mīr, having neglected his duties, was executed and replaced by Mīr Djahāngīr Bakhtiyārī (the Astarakī and Bakhtiyārī had come to Luristān after 600, cf *Ta'rīkh i Guzīda*) Djahāngīr under the guarantee of Shāh Rustam of the Little Lur pledged himself to supply annually to the Safawid treasury 10,000 mules In 974 the governor of Hamadān was sent to remind him of his obligation (*Sharaf-nāma*, i 48) Henceforth the Bakhtiyārī tribe becomes of the first rank and, as usual, gives its name to the whole confederation

As to the Kūh Gilū territory, it was governed by Khāns of the Turkoman tribe (Shāhsewen) of Afshār settled among the Lurs In 988 (1580) a dervish impostor claiming to be Shāh Ismā'īl II had a considerable success among the Djākī, Djawānikī and Bandānī tribes who killed several Afshār governors In 1005 as a result of the excesses committed by the Afshār as well as by the Lurs, the governor of Fārs, Allāh-wardī Khān, established the direct centre of his government in Kūh-Gilū (*Ta'rīkh i 'Ālam ārā*, p 198, 358)

We do not know under what circumstances at the end of the Safawid dynasty (*Fārs nāma-yi Nāsirī*) the group of Mamāsanī tribes, who had migrated into the Great Lur (after 600) occupied the ancient Shūlistān (cf SHŪL)

After the Safawids During the troubles provoked by the appearance of the Afghāns before Isfahān, the wālī of Luristān, 'Alī Mardān Khān Feilī (a descendant of the Husain Khān appointed by Shāh 'Abbās), played a considerable part With 5,000 of his men he took part in 1135 (1722) in the defence of the capital He was even appointed commander-in chief of the Persian troops but the other Khāns refused to take orders from him When the Turks invaded Persia in 1725 'Alī Mardān Khān abandoned Khurramābād (which was occupied by Ahmad Pasha) and retired to Khūzistān from which he undertook a diversion against Baghdād The Turks who had gone through the Bakhtiyārī country and reached Fīrūzān had to retire Cf 'Alī Hazīn, *Ta'rīkh-i Ahwāl*, ed Balfour, London 1831, p 115, 134, 137, 148, who was an eye-witness of the events, Hanway, *The Revolutions of Persia*, ii 135, 159, 168, 238, Malcolm, *History of Persia*, London 1829, ii 60–61, von Bode, *Travels*, ii 281—283, Hammer, *G O R*, iv 227

About the same time several Bakhtiyārī khāns (Kāsim-Khān, Safī-Khān) are mentioned as resisting the Afghān and Ottoman invaders but they did not agree well with 'Alī Mardān Feilī In 1137 (1724) 'Alī Muhammad Husain Khān Bakhtiyārī recognised as his suzerain a certain pretender who claimed to be prince Safī Mīrzā The latter's headquarters were in Kūh-Gilū, he was not taken till 1140 (1727) (Hanway, ii 168, 238, Mahdī-Khān, *Ta'rīkh-i Djahān Gushā-yi Nādirī*, Tabrīz 1284, transl into French by Jones, London 1770, p xxvii) The Afghāns do not seem to have penetrated into the Bakhtiyārī country and their expedition in 1724 against Kūh Gilū was a fiasco (v Hammer, ii 210, Malcolm, *op cit*, ii, p 449) By the treaty of 1140 (1727) the Afghān Ashraf ceded Luristān to Turkey with other western provinces The Turks kept it (nominally) till 1149 (1736) when Nādir re-established the status quo (Hanway, ii 254, 347, von Hammer, *G O R*, iv 235, 317)

Under Nādir a certain Turkoman chief named Bābā Khān Čapushlu (Čawushlu) was appointed beglerbeg of Luristān-i Feilī On the other hand 'Alī Mardān II Feilī was entrusted by Nādir with diplomatic negotiations in Constantinople Nādir in 1732 passed through Kūh Gilū with his troops where Muhammad Khān Balūč (the claimant to Shīrāz) was defeated The local Afshars had to support Nādir, who was one of their tribe Several expeditions were sent against the Bakhtiyārī among whom a new chief 'Alī Murād Mamiwand (Čahārlang) had collected together the malcontents In 1732 Bābā Khān Čapushlu was sent against him for the first time In 1149 (1735) Nādir Shāh took the field against him in person going via Djāpalak and Burbuīūd The Bakhtiyārī country was several times invaded but the main blow was directed against the little explored country south of Shuturān-kūh 'Alī Murād was captured and executed The Bakhtiyārī were decimated and deported to Djām and Langar (in Khorāsān) A little later a Bakhtiyārī detachment distinguished itself in the assault on Kandahār (Mahdī Khān,

op cit, p 116, 134, contains interesting geographical details, transl Jones, i 185, ii 18, ʿAlī Hazīn, p 231, 253, Malcolm, ii 21)

The deported Bakhtiyārī returned from Khurāsān immediately after the death of Nādir (*Taʾrīkh-i baʿd Nādiriya*, ed Mann, p 26) and when the dynasty of the latter was extinguished the Bakhtiyārī chief ʿAlī Mardān Khān (who is not to be confused with the two Wālis of Luristān i Feilī) attempted to play a big part In 1163 (1750) along with Karīm Khān Zand he set up at Isfahān a scion of the lateral line of the Safawids (Āl i Dāwūd under the name of Ismāʿīl III) The career of "guardian of the sovereign" acted by Nādir seemed to be certain for him also but Karīm Khān gained the upper hand, the troops of ʿAlī Mardān who included Lak of the tribes of Kalhur and Zangana were defeated in 1752, he escaped to Baghdād but died there by the hand of an assassin, cf Mīrzā Sādiḳ, *Taʾrīkh-i gītī gushā*, quoted by Malcolm, ii 61 and note *r*, Hammer, *G O R*, iv, p 475, 477, R S Poole, *The Coins of the Shahs of Persia*, London 1887, p xxxv, Curzon, ii 289

Karīm Khān [q v] who had disposed of his Bakhtiyārī rival was himself a Lak of the tribe of Zand, settled in the immediate neighbourhood of Luristān i Feilī On the movements of population in his time, cf the articles KURDS and LAK In 1200 (1785) when Djaʿfar Khān Zand had to fall back on Shīrāz a number of Lurs and of Turks assembled at Isfahān under former partisans of ʿAlī Murād Khān but the town was soon occupied by Āḳā Muhammad Kādjār who had nothing better to do than attack the Bakhtiyāris (ʿAbd al-Karīm Shīrāzī, *Taʾrīkh-i Zendīya*, ed Beer, p 29, Malcolm, *op cit*, ii 179 *sq*) which injured his popularity among the tribes

The Lur Bakhtiyārī country was never completely assimilated during the century and a half which the Kādjārs reigned A resumé of the history of the Bakhtiyārīs in the xixth century has been given by Curzon in Ch xxiv of his *Persia* At first the Kunurzī family, descended from the brother of ʿAlī Mardān Khān (cf above), came to the front but the expedition of the governor of Isfahān Manučihr Khān Muʿtamid al-Dawla (whose real name was Yenikolopow, he was an Armenian from Tiflis) in 1841 put an end to the career of the Īlkhānī Muhammad Takī Khān and the family did not recover About 1850 the Bakhtiyārwand (or Baidarwand, a family which claimed to be descended from a shepherd named Pāpī) rose to prominence in the Haft-lang group and in spite of the assassination in 1882 of its chief Husain Kulī Khān (Hādjdjī Īlkhānī) by order of prince Zill al-Sultān retained its wealth and its importance The Bakhtiyārī played a considerable part in the Persian revolution which ended in the deposition of Muhammad ʿAlī Shāh Kādjār in 1909 The Bakhtiyārī country all this time enjoyed perfect autonomy under the rule of its *īlkhānī* and *īlbegi*

The centralising efforts of the Kādjārs had more effect in Luristān-i Feilī (formerly Lur i Kūčik) in as much as, as a result of the governorship in Kirmānshāh of the energetic prince Muhammad ʿAlī at the beginning of the xixth century, the old family of the *wālī*'s of Luristān found its rights reduced simply to the possession of Pusht i Kūh (q v and Čirikow, p 227) The Pīsh-Kūh formed the Persian province of Luristān Muḥammad ʿAlī Mīrzā with troops and artillery marched through this province In 1836 Rawlinson followed him at the head of his Gūrānī regiment After the famous expedition of Manučihr-Khān (1841), his nephew Sulaimān Khān Sahām al-Dawla, governor of Khūzistān, maintained order in Luristān but for the second part of the xixth century Luristān was plunged more or less into a state of anarchy It was not till 1900 that prince ʿAin al-Dawla was able to restore order in Luristān and at this time several explorers travelled freely in the disturbed province But in November 1904 two British officers (Col Douglas and Capt Lorimer) on their way to Khurramābād were attacked and wounded by Lurs A considerable agitation was stirred up among the Lurs (and in western Persia generally) by the appearance among them of the rebel prince Sālār al-Dawla (several times since 1905) In spite of the efforts of the Persian government Luristān remained closed till 1917, when with the help of foreign representatives several caravans went from Dizful to Burūdjird About the same time the Persian government conferred the rank of *wālī* of Pīsh-Kūh on Nazar ʿAlī-Khān Amrāʾī (cf the article IAK), cf Edmonds in the *Geogr Journ*, 1922

It is only since the accession of Ridā Khān (later Shāh Ridā Pahlawī) that the situation in the region inhabited by tribes of Lur origin changed radically and the authority of the Central Government enforced respect for itself through the whole of the south-western provinces

(V MINORSKY)

LUR-I BUZURG, a dynasty of Atābegs which flourished in Eastern and Southern Luristān between 550 (1155) and 827 (1423) the capital of which was Īdhadj (= Mālamīr, q v)

The eponymous founder of the dynasty, also known as Fadlawī, was a Kurd chief of Syria named Fadlōya His descendants (the *Dīthān ārā* mentions 9 predecessors of Abū Tāhir) migrated from Syria and passing through Maiyafārikīn and Ādharbāidjān (where they made an alliance with the Amīra Dibādj [?] of Gīlān) they arrived about 500 (1006) in the plains north of Ushturān-Kūh (Luristān)

Their (1) chief Abū Tāhir (b ʿAlī) b Muhammad distinguished himself in the service of the Salghurid Sunkur (543—556) in an expedition against the Shabānkāra [q v] As a reward Sunḳur gave him Kūh-Gīlūya and agreed to send him to conquer Luristān He succeeded in this Abū Tāhir assumed the title of Atābeg and later quarrelled with Sunkur and made himself independent (c 550) (The *Madjmaʿ al-Ansāb* seems to confuse several individuals under the name Kāʾid ʿAlī, to whom it attributes the following successes the defeat of the Shūl [q v], the deposition of Nāsir al-Dīn, last descendant of Badr, ruler of Luristān, and the defeat of the Khūzistān troops commanded by the Turk Eshek)

Under the son of Abū Tāhir, (2) Malik (sic) Hazārasp (600—626 or 650?), Luristān prospered and new Arab and Iranian tribes flocked into it Hazārasp drove out of Luristān the last remnants of the Shūl and invaded Luristān proper The Shūl migrated to Fārs Hazārasp disputed with the Salghurids the possession of the fortress of Māndjasht (Mungasht, S W of Mālamīr) The possessions of Hazārasp were extended up to a distance of 4 farsakhs from Isfahān The Caliph

Nāṣir (575—622) confirmed to Ḥazārasp the title of Atābeg On the other side Ḥazārasp maintained friendly relations with the Khwārizmshāh Muḥammad and gave his daughter in marriage to his son Ghiyāth al-Dīn (*Ḏj̲ihān-gus̲hā*, *G M S*, xvi/2, p 113, 204) [The *Ḏj̲ihān ārā* mentions two sons of Ḥazārap ʿImād al-Dīn (d 646) and Nuṣrat al-Dīn Kalha (?d in 649), the former bought Zarda-Kūh, where several members of the family were afterwards interred]

(3) Ṭikla (c 655—656), son of Ḥazārasp and his Salghurid wife, successfully withstood four attacks on him by the Salghurid Atābeg of Fārs, who was indignant among other things at the expulsion of the Shūl from Luristān Ṭikla took from Ḥisām al-Dīn Khalīl (?d in 640) certain districts of Lur i Kūčik He defeated the generals sent against him from Khūzistān by the caliph During the Baghdād campaign of Hūlāgū Khān (655), Ṭikla accompanied him in Kitbuka-noin's division (*tuman*) He did not however conceal his feelings about the treatment inflicted on the caliph and Muslims Hūlāgū took umbrage at this and Ṭikla fled to Luristān and shut himself up in Mānd̲j̲asht Hūlāgū pardoned him but later changed his mind and had him executed in Ṭabrīz Ṭikla was buried at Zarda-Kūh

(4) Shams al-Dīn Alp Arghūn succeeded to his executed brother and ruled for 15 years He led a nomadic life His winter residence was at Īdhad̲j and at Sūs (probably Sūsan on the Kārūn above Shūshtar) and his summer one at Dj̲ūy-i sard (on the upper waters of the Zanda-rūd) and at Bāzuft (source of the Kārūn)

His son (5) Yūsuf Shāh had spent his youth with Abaka Khān (663—680) and even after appointed in his father's stead remained at the Mongol court with 200 horsemen He took part in the war against Burāk khān [q v] and distinguished himself in a skirmish with the Dailamis To the possessions of Yūsuf Shāh Abaka added Khūzistān, the region of Kūh Gilūya and the towns of Fīrūzān (7 farsakhs above Iṣfahān) and Djarbādhakān (Gulpāyagān) Yūsuf Shāh went to Kūh-Gilūya and attacked the Shūl settled in the modern Mamassanī country east of Kūh-Gilūya After the death of Abaka, Yūsuf Shāh was forced against this will to go with 2,000 cavalry and 1,000 foot to the help of Aḥmad Takūdar The latter was defeated (683) and the Lurs retreated from Ṭabas to Natanz across the desert where the majority died of thirst After the accession of Arghūn, Yūsuf Shāh went to pay him homage and interceded on behalf of the former vizier Khwād̲j̲a Shams al-Dīn who had taken refuge in Luristān (cf d'Ohsson, iv 5)

His son (6) Afrāsiyāb sent his brother Aḥmad to the court of Arghūn while he himself remained in Luristān where he put to death the members of the former vizier family Their relatives having taken refuge in Iṣfahān, Afrāsiyāb sent his kinsmen in pursuit of them At this moment arrived the news of the death of Arghūn (690) The Lurs killed the Mongol governor of Iṣfahān Afrāsiyāb appointed members of his family to govern in Ḥamadān, Fārs and in the territories reaching to the Persian Gulf and even began to march on the capital The Mongol general Amīr Turak was defeated at Kūhrūd (Kohrūd, near Kāshān) Kaikhatu Khān sent Mongol troops against Afrāsiyāb and troops from Lur-i Kūčik Afrāsiyāb shut himself in Mānd̲j̲asht but after some time went to Kaikhatu who pardoned him Returning to Luristān, Afrāsiyāb massacred his own relatives and a number of the notables Ghāzān Khān (694—703) at first showed himself favourable to Afrāsiyāb but in 696 on the complaint of the Amīr Ḥurkudak of Fārs, Afrāsiyāb was tried and executed at Mahāwand (?) of Farāhān

The rank of Atābeg was next conferred on his brother (7) Nuṣrat al-Dīn Aḥmad (from 695 to 730 or 733) who had spent most of his life at the court of the Īlkhāns According to the *Mad̲j̲maʿ al-Ansāb* he introduced Mongol institutions (*āyīn-i mogh̲ūl*) into Luristān Ḥamdallāh Mustawfī praises his able and prudent administration which repaired the damage done by Afrāsiyāb He was a friend of men of religion and several books were dedicated to him, like the *Taʾrīkh̲ Muʿd̲j̲am fī Aḥwāl-i Mulūk-i ʾl-ʿAd̲j̲am* of Faḍl Allāh Kazwīnī The *Mad̲j̲maʿ al-Ansāb* gives him the title of *pīr* According to Ibn Baṭṭūṭa he built 160 madrasas ("hermitages") of which 44 were at Īdhad̲j and he had roads cut through the mountains

His son and successor (8) Rukn al-Dīn Yūsuf Shāh II (733—740) was also a just ruler His lands (*Mad̲j̲maʿ al-Ansāb*) extended from Baṣra and Khūzistān to Lālalmūstān (?) and Fīrūzān He was buried in the madrasa of Ruknābād

His successor was his son (according to Ibn Baṭṭūṭa his brother) (9) Muẓaffar al-Dīn Afrāsiyāb II (Aḥmad) Ibn Baṭṭūṭa travelling via Mādjūl-Rāmuz-Ṭustar, visited the capital Īdhad̲j or Mālamīr He found the prince given to wine The Arab traveller describes the peculiar customs of the Lurs which he witnessed at the burial of the son of the 'sultān' The latter's possessions included Tustar (Shūshtar) and extended to Garīwā? al-Rukh (the modern Kahvarukh in Čarmahāll west of Fīrūzān) During the ten days the Arab traveller took to cover this distance he found shelter every night in a madrasa At the same time (740) Ḥamdallāh Mustawfī mentions among the possessions of the Great Lur Dj̲ābalak (apparently the district N E of Luristan and west of Gulpāyagān)

Next follows an obscure period According to the anonymous historian of Mirzā Iskandar, the successor of Afrāsiyāb was his son (10) Nawr al-Ward ("rose-bud"), who ruled from 736 (?) to 756 and dissipated the treasures of his ancestors According to the *Ḏj̲ihān-ārā*, Muḥammad Muẓaffar of Fārs (713—760) learning of his dealings with Abū Isḥāḳ Indjū had him blinded at Sūs in 756 His cousin (the *Ḏj̲ihān-ārā* has nephew) (11) Shams al-Dīn Pashang b Yūsuf Shāh II (?) succeeded him and ruled from 756 to 780 At this time Luristān became involved in the civil wars of the Muẓaffarids When Shāh Manṣūr, making Shūshtar his headquarters began a series of raids on the lands of Pashang, Shāh Shud̲j̲āʿ (elder brother and rival of Manṣūr, d 786 = 1384) came to the help of Pashang We have coins of 762 and 764 struck at Īdhad̲j in the name of Shud̲j̲āʿ (S Lane-Poole, *Cat of Oriental Coins in the Brit Mus*, vol vi [London 1881], p 235, 237) After the death of Pashang a struggle began between his two sons (12) Malik Pīr Aḥmad and his younger brother (12*bis*) Malik Hūshang in which the latter was killed (According to the anonymous historian of Iskandar, if he has been rightly understood by Howorth, Aḥmad and Hū-

shang were sons of Nawr al-Waid and the former was the immediate successor of his father) Shāh Mansūr drove out Pīr Ahmad and appointed in his stead a notable named Malik Uwais When Timūr passed through Luristān in 795 Pīr Ahmad came to meet him at Rām Hormuz Timūr later received him graciously at Shirāz, confirmed him by a decree (*āl tamgha*) in his hereditary possessions and allowed him to repatriate 2,000 families of Lurs deported by Shāh Mansūr In spite of this in 798, Timūr took as hostages to Samarkand the brothers of Pīr Ahmad Afrāsiyāb and Mansūr-shāh Timūr afterwards divided Lur i Buzurg (?) between Pir Ahmad and Afrāsiyāb After the death of Timūr, Mīrzā Pīr Muhammad imprisoned Pīr Ahmad in Kuhandiz He was restored in 811 but met his end in a popular rising The son of Pīr Ahmad (13) Abū Sa'īd, kept for two years a hostage at the court of Mīrzā Iskandar at Shīrāz, succeeded his father and died in 820 His son (14) Shāh Husain died in 827 by the hand of his relative (15) Ghiyāth al-Dīn b Kāūs b Hūshang (*12bis*) The latter seized the power but the Timūrid Sultān Ibrāhīm b Shāhrukh sent troops to expel him and thus ended the rule of the Fadlawī family Later the power passed into the hands of local notables of the Bakhtiyārī tribes (*Sharaf-nāma*, i 48)

Bibliography Rashīd al Dīn, ed Quatremère, Wassāf, *Tadjziyat al-Amṣār*, Mudjallad II, history of Yūsuf-shāh and Afrāsiyāb, *Ta'rīkh i Guzīda*, with the history of the Muzaffarids in appendix, *GMS*, p 537—547, 723, 725, 745, based on Rashīd al-Dīn and the *Zubdat al-Tawārīkh* of Djamāl al-Dīn Kāshānī, Muhammad b 'Alī Shabānkārī, *Madjma' al Ansāb* (in 743) appendix [owing to the liberality of the Royal Asiatic Society I have been able to consult the MS Cat Morley, N° xv, which contains the appendix on the Lur-i Buzurg (fol 142—145), the author's statements are somewhat confused], *Zafar nāma*, i 438, 599, 619, 811, Mirkhond, *Rawdat al-Ṣafā*, vol iv , Kādī Ahmad Ghaffārī, *Nigāristān ārā* (in 972), MS British Museum, Or 141, fol 137—140 [I owe the copy to Muhammad-Khān Kazwīnī], contains some useful information, *Sharaf-nāma*, i 23—32, based at the beginning on a good text of the *Ta'rīkh i Guzida*, Khusraw Abaikūhī, *Firdaws al-Tawārīkh*, passage on the Great Lur in the transl of the *Sharaf-nāma* of Charmoy, i/2, p 328—337, Hādjdjī Khalifa, *Djihān-numā*, p 286 (cf Charmoy, *ibid*, i/1, p 100—116), Munadjdjim-bashī, ii 597—598, d'Ohsson, *Histoire des Mongols*, iii 24, 28, 230, 259, 400, 455, 589, iv 5, 12, 62, 94, 114, 169—170, 580, Howorth, *History of the Mongols*, iii 140, 407, 751—754, which uses the statements of the anonymous history of the grandson of Timūr Mirzā Iskandar, written in 815, MS of the British Museum, Or 1566, MS of the Asiatic Museum of Leningrad 566b c

(V MINORSKY)

LUR-I KŪČIK, a dynasty of Atābegs which ruled in Northern and Western Luristān between 580 (1184) and 1006 (1597) with Khurramābād as their capital The Atābegs were descended from the Lur tribe of Djangrū'ī (Djangaidī ?) The dynasty is also known by the name of Khurshīdī from the name of the first Atābeg (It remains to be seen if this name is connected with that of Muhammad Khurshīd, vizier of the former rulers of Luristān before the rise of the Atābegs of Lur-i Buzurg) After 730 the power passed to another line which later claimed to be of 'Alid descent, at this time also the title *malik* succeeded that of *atābeg*

The ancestors of the Khurshīdī had entered the service of Hisām al-Dīn (of the Turk tribe of Shūhlī or Shūhla) who ruled Luristan and Khūzistān about the end of the Saldjūk period (c 550—580 ?)

(1) Shudjā' al Dīn Khurshīd b Abī Bakr b Muhammad b Khurshīd was at first *Shihna* of a part of Luristān on behalf of Hisām al Dīn but after the death of the latter (in 570 or 580) became independent lord of the whole of Lur-i Kūčik He waged war on the Djangrawī (the tribe in which he had originated, but which was then being ruled by his rival Surkhāb b 'Aiyār) and besieged their stronghold Diz-i Siyāh (in the district of Mānrūd and in the "wilāyet" of Samhā ?) The inhabitants handed all Mānrūd over to him but the caliph ordered Shudjā' al Dīn to deliver up to himself the stronghold of Māngarra (Mūngerre north of Kilab) In compensation Shudjā' received the district of Tarārak in Khūzistān Shudjā' al-Dīn drove back the Bayāt Turks who were ravaging Luristān He led a nomadic life and spent the summer at Kirīt (in Bālā-Girīwa) and the winter at Dulur (Dih i Lurān in Pusht i Kūh ?) and at Malāh (?) He died a centenarian in 621 and his tomb was venerated by the Lurs His son Badr was killed by his nephew (2) Saif al-Dīn Rustam b Nūr al-Dīn who became Atābeg and was a good ruler Rustam was succeeded by his brothers first (3) Sharaf al Dīn Abū Bakr and next (4) 'Izz al-Dīn Garshāsp The latter married the widow of Abū Bakr, Malika Khātūn, who was the sister of Sulaimān Shāh Aiwa, later commander-in-chief of the caliph al-Musta'sim [*Abūh* should be altered to *Aiwa*, name of a tribe or a district in the time of the last Saldjūks, cf *Rāhat al-Sudūr*, *GMS*, p 346, *Djahān-gushā*, *GMS*, xvi/2, p 153, *Nuzhat al-Kulūb*, *GMS*, p 107, Defrémery, *Recherches sur quatre princes d'Hamadan*, *JA*, 1847, p 177] When (5) Hisām al-Dīn Khalīl b Badr b Shudjā' killed Garshāsp, a struggle ensued between him and Sulaimān shāh (Shihāb al-Dīn ?) The Lurs took Bahār (near Hamadān) but finally Khalīl was defeated and killed near Shāpūr khwāst in 640 (1242)

His brother (6) Badr al-Dīn Mas'ūd went to the court of Mangū and returned in the train of Hūlāgū This devout man, an authority on Shāfi'ī law, ruled till 658 He showed great kindness to the family of Sulaimān-shāh, when the latter was executed at the taking of Baghdād The sons of Mas'ūd were executed by Abaka, who appointed Atābeg (7) Tādj al-Dīn b Hisām al-Dīn Khalīl (also executed by Abaka in 677)

He had two immediate successors, the two sons of Mas'ūd of whom (8) Falak al-Dīn Hasan ruled a part of Luristān (*dilār*, *wilāy*) and (*8bis*) 'Izz al-Dīn Husain ruled the crown domains (*indjū*) The number of their troops was 17,000 They chastised the Bayāt and reunited under their control all the lands between Hamadān and Shūshtar and between Isfahān and the Arab lands Both died in 692

Kaikhātū appointed as their successor (9) Djamāl al-Dīn Khidr b Tādj al Dīn, who was killed in 693 near Khurramābād by (10) Hisām

al-Dīn ʿOmar b Shams al-Dīn "Darnakī" b Sharaf al-Dīn b Tahamtan b Badr b Shudjāʿ who relied for support on the Mongol tribes settled in the lands adjoining Luristān The other rulers did not recognise this usurper and he had to make way for (11) Samsām al-Dīn Mahmūd b Nūr al-Dīn b ʿIzz al-Dīn Garshāsp who slew a certain Shihāb al-Dīn Ilyās and in turn was executed by Ghāzān in 695

(12) ʿIzz al-Dīn Muhammad b ʿIzz al-Dīn (8*bis*) was a minor and his cousin Badr al Dīn Masʿūd (son of 8) obtained from Uldjāitū the title Atābeg and ruled over a part of Luristān (*dilār*) but later ʿIzz al-Dīn fully established his authority After his death (716 or 720) his widow (13) Dawlat Khātūn retained a semblance of authority while the real power was in the hands of the Mongols Such was the state of affairs when Hamdallāh was writing his *Taʾrīkh i Guzida* (c 730) Later the *malika* (who according to the anonymous historian of Iskandar became the wife of Yūsuf Shāh of the Great Lur) found herself forced to surrender the throne to her brother (14) ʿIzz al-Dīn Husain who received investiture from Abū Saʿid and ruled for 14 years His son and successor (15) Shudjāʿ al-Dīn Mahmud was killed by his subjects in 750

(16) The Malik ʿIzz al-Dīn b Shudjāʿ al-Dīn was only 12 when his father died The vicissitudes of his life are known from the record of them in the *Zafar-nāma* In 785 (1383) the Muzaffarid Shāh Shudjāʿ with his army visited Khurramābād and married the daughter of ʿIzz al Dīn Another of his daughters was married to Ahmad b Uwais Djalaʾir When Timūr arrived in Persia in 788 he was told of the depredations of the Lurs of ʿIzz al Dīn Setting out from Firūz kūh, Timūr by forced marches reached Luristān Burūdjird was laid waste, and the fortress of Khurramābād razed to the ground The ringleaders were thrown down from the tops of cliffs The fate of ʿIzz al-Dīn is unknown and we do not know if he was one of the Atābegs of Luristān to whom in 789 Timūr granted an audience at Shīrāz, but according to the anonymous historian of Mirzā Iskandar, ʿIzz al-Dīn was captured in 790 in the fortress of Rūmiyān (Armiyān, Wāmiyān, situated near Burūdjird) and deported with his son to Turkestān At the end of three years both father and son were released In 793, ʿIzz al-Dīn played a part in the aggrandizement of the Muzaffarid Zain al-ʿĀbidīn, son of his old suzerain Shāh-Shudjāʿ When in 795, Timūr returned to Persia, he went from Burūdjird to Shūshtar Luristān was overrun piece by piece and laid waste by the troops of Mirzā ʿOmar but ʿIzz al Dīn escaped his pursuers In 798 prince Muhammad Sultān, governor of Fārs, extended his authority over all Luristān and Khūzistān In 805 we find a mention of the restoration of the fortress of Armiyān (?) near Burūdjird ordered by Timūr and under 806 the *Ẓafar-nāma* mentions the arrival in Bailakān from Nihāwand of a courier, bearing the head of ʿIzz al-Dīn, whose skin had been stuffed with straw and publicly exposed His son (17) Sidī Ahmad, whose irregularity in the payment of tribute seems to have provoked the punishment of his father, regained his possessions, after the death of Timūr in 807, and ruled till 815 (or 825) (18) Shāh Husain ("ʿAbbāsī", i e descendant of ʿAbbās b ʿAlī b Abī Tālib), another son of ʿIzz al-Dīn, took advantage of the decline of the Timūrids to extend his territory He plundered Hamadān, Gulpāyagān, Isfahān and even undertook an expedition to Shahrazūr where the Bahārlu Turks slew him in 871 (or 873) His son (19) Shāh Rustam supported Ismāʿīl I, at this period the lords of the Little Lur had already adopted the theory that they were of ʿAlid descent The son of Rustam (20) Oghur (or Oghuz) accompanied Shāh Tahmāsp on his campaign of 940 against ʿUbaid Allāh Khān and during his absence his brother (21) Djahāngīr seized the power He was executed in 949 The governor (*lala*) of his son (22) Rustam Shāh handed over the latter to Tahmāsp Shāh who imprisoned him in Alamūt while Muhammadī, another son of Djahāngīr, was hidden by the Lurs at Čangula An impostor in Luristān gave himself out to be Shāh Rustam Tahmāsp, then released the true Rustam who recovered his fief but had to hand over a third of it (*do dang*) to his brother (22*bis*) Muhammadī At the instigation of the wife of Shāh Rustam, the governor of Hamadān seized Muhammadī who was shut up in Alamūt The sons of Muhammadī plunged Luristān and the adjoining provinces into great disorder Ten years later Muhammadī escaped, and conquered Luristān while Shāh Rustam took refuge at the court of the Shāh Muhammadī established good relations with Tahmāsp and Ismāʿīl II but after their death submitted to Sultān Murād III (982—1003), which earned him an extension of his territory by the cantons west of Pusht-i Kūh Mandalī, Djesān, Badrāʾī and Tursak But relations with the Ottomans soon became strained and Muhammadī became reconciled with the Safawīs

(24) Shāhwardī b Muhammadī, who had escaped from Baghdād where he was living as a hostage, received investiture from Shāh Khudābanda after his father's death At the time of the occupation of Nihāwand by the Turks Shāhwardī showed some signs of independence In 1000 good relations with Shāh ʿAbbās were re established with whom Shāhwaidī made the most of his alleged descent from ʿAbbās b ʿAlī and his Shīʿism (*tashayyuʿ wa ʿAbbāsgīrī*) Shāh ʿAbbās married his sister and gave him a Safawī princess in marriage In 1002 Shāhwardī in a pitched battle killed the governor of Hamadān Oghurlu Sultān Bayāt who was trying to levy taxes in Burūdjird Shah ʿAbbas, filled with wrath, left the Khorāsān front and hastened to Khurramābād Shāhwardī crossed the Saimara (Karkhā) and escaped to Baghdād Luristān was given to Sultān Husain b Shāh Rustam In 1003 Shāhwardī was pardoned and restored but he was not long in relapsing In 1006 Shāh ʿAbbās took the field against him a second time Shāhwardī was besieged and slain in the fortress of Čangula (in Pusht i Kūh) Husain Khān b Mansūr beg Salwīzī (?) was given Luristān, except Saimara, Hindmas (?) and Pushti-Kūh which were given to Tahmāsp Kuli Inanlu This may be regarded as the end of the dynasty of the Atābegs of the Little Lur, although the dynasty of "wālis" of Luristān (later of Pusht i Kūh [q v] only) claims descent from Husain Khān who was a cousin of Shāhwardī

LURISTĀN, "land of the Lurs", a region in the SW of Persia In the Mongol period the terms "Great Lur" and "Little Lur" roughly covered all the lands inhabited by Lur tribes Since the Safawid period, the lands of the Great Lur have been distinguished by the names of Kūh Gilū and Bakhtiyārī At the beginning of the xviiith century the Mamasanī confederation occupied the old Shūlistān [q v] and thus created a third Lur territory between Kūh-Gilū and Shīrāz

It is however only since the xvith century that Lur-i Kūčik [q v] has been known as Luristān (for greater precision it was called Luristān i Feilī) In the xixth century Luristān was divided into two parts 1 Pīsh-Kūh, "country on this side of the mountains" (i e east of Kabīr Kūh) and 2 Push-i Kūh (country beyond the mountains) i e west of Kabīr-kūh At the present day the term Luristān usually means Pish-kūh while Push i kūh means the Feilī country

The Mamasanī territory and the Kūh-Gīlū form part of the province of Fārs The capital of the Mamasanī is at Fahliyān (cf SHŪL) Kūh-Gilū (Kūh-Djilūya, Kūh Galū) stretches from Bāsht (west of Fahliyān) to Bihbahān, this last town is the main centre for the tribes of Kūh-Gilū To the south the Kūh Gilū'ī tribes descend as far as the Persian Gulf The mountains of Kūh Gilū and the frontier between its tribes and the Bakhtiyārī are not yet well known The chief rivers of Kūh-Gilū are the Āb-i Shīrīn which is formed by the junction of the Khairābād and the Zohra and in its lower course runs via Zaidān and Hindiyān, and the Āb-i Kurdistān or Djarrāhī, one branch of which later runs into the Karūn [q v] and the other towards Dawrak On Kūh Gilū see the valuable *Fārs-nama-yi Nāsirī* of Hasan Fasā'ī (Tihrān 1313), the itineraries of Stocqueler, Haussknecht (*Routen im Orient*, Map iv), Wells and Herzfeld and the general account in de Bode, i 251—289, ii 327—398, Ritter, *Erdkunde*, ix 132—144 is now very much out of date

The Bakhtiyārī lands stretch from Čahārmahāll (west of Isfahān) to Shūshtar, to the south the Bakhtiyārī march with the Kūh Gilū and to the north they go beyond the northern barrier of Luristān (Shuturān-kūh etc) They are found at Faraidan, Burbuīūd, Djāpalagh, and in the cantons around Burūdjird (even before 1840 many villages had been purchased here by Muhammad Taḳī Khān Čahār-Lang) Roughly speaking the Bakhtiyārī occupy the upper basin of the Zanda-rūd and of the Kārūn [q v] above Shūshtar The works of Layard, Sawyer, Mrs Bishop, Curzon etc give a very accurate picture of this mountainous country, in the centre of which rises the Kūh-i Rang (12,800 feet high) which forms the water shed between the Persian Gulf and the central Persian plateau (It may be asked if the name Kūh-i Rang is not the Mongol *kuren*, "encampment, laager", found in Luristān)

The frontier between the Bakhtiyārī and the Luīs proper follows the western branch of the Āb i Diz, an important tributary of the Kārūn Luristān (Pīsh-kūh) is bounded on the east and west by the convergent streams of the Āb i Diz and the Kaikhā, while in the north the range of the Čihil-nā-bāligḥān, Garrū etc separates Luristān from Nihāwand and Silākhor (district of Burūdjird) To the west of Karkhā Pūsht-i Kūh begins In the northwest the frontier of Luristān runs to the southwest of the districts of Hulailān and Harsīn which belongs to the province of Kirmānshāh

The chief left bank tributary of the Kaikhā is the Kashgān (Rawlinson Kashaghan) which is formed by two arms The northern arms with its tributaries drains the beautiful plains of Hūr rūd, Alishtar and Khāwa The southern arm, separated from the northern one by the Yāfta kūh range, takes the name of the town of Khurramābād [q v] near which it passes After the confluence of the two arms, the Kashgān, running S W, receives on the left bank the combined waters of the Kawgūn and Tāyīn, which flow from Kūh-i Haftād Pahlū (south of Khurramābād) and the northern slopes of the Kūh i Gird These two ranges are at right angles to the mountains which follow the right bank of the Āb-i Diz, which they separate from the valley of the Kaikhā On the right bank the Kashgān receives the Mādiyān rūd, "river of the mare" Above Kashgān the Karkhā receives on its left bank several tributaries of less importance still little known (Rūbār etc) Below Kashgān and also on the left bank, the Karkhā receives the Fānī, Ceilum (Jehlum) and Āb i Zāl This last river with its tributaries Anārak etc rises in the southern slopes of the Kūh i Gird The topography of the right bank of the Āb-i Diz is not well known The sources of the Baladrūd and its right bank tributary the Kir āb lie a considerable distance to the north The Balad-rūd flows into the Āb i Diz between Dizfūl and Susa The Kir āb receives on its right bank the waters of the Kūl-i ab which come down from the high valley of Mūngaira, which with the peaks that surround it form a kind of natural bastion and separate the basin of the Balad rūd from that of the Āb i Zāl The Sahrā-yi Lur plain formerly well irrigated lies north of Dizfūl and south of Kū āb ("pitch-water") whose naphtha spring has been known since ancient times It was probably here that Darius settled a colony of Greeks (Ritter, ix 201)

The interior of Luristān presents a series of mountain ranges, which stretch N W to S E, the direction usual in Persia, and rise one behind the other between the plain of Susiana and the northern barrier (height about 9,000 feet)

Ancient history The lands now occupied by the Lur tribes have been inhabited since the period before the arrival of Īrānians in them This region, being at a considerable distance from Assyria, was mainly under the influence of Elam, Susa where there have been found traces of occupation going back to the third millenium B C, lies just at the entrance to the mountains of the Little Lur The purest traces of the local culture and of this alone are found more to the south-east Just as the Atābegs of the Great Lur had for their capital Īdhadj (= Mālamīr) so in very early times, the lords of this district, the kings of Anpir (Hapirti?), whatever were their relations with the rulers of Susa had control at least of

the Kārūn valley The site of Mālamīr (cf de Bode, Layard, Jéquier in de Morgan, *Deleg en Perse*, 1902, iii 133—143 and Husing, *Der Zagros u seine Volker*, Leipzig 1908, p 49—59) with its purely indigenous (Elamite, non Semitic) inscriptions and bas-reliefs is an important point The recent discovery by Herzfeld (*Reisebericht*, *Z D M G*, 1926, p 259) in the Mamasanī region of a bas relief and bricks bearing Elamite characters (1500—1000 B C) is valuable as indicating the extent of Elamite penetration into the Lur mountains Kūh-Gilū lying between Susiana and Persis may correspond to the still unknown region of Anshan (Anzan) out of which came the ancestors of Cyrus the Great On the survival of this name near Shūshtar, cf *Grundr d iran Phil*, ii 418 (according to Rawlinson Assān)

The antiquities of the valley of the Upper Kārūn (the two Sūsan, Luidagān, the mounds of Salm, Tūr and Iladj) are insufficiently known (Layard, Sawyer) According to Sawyer, the higher Bakhtiyarī lands are "singularly devoid of any ancient landmarks"

For the west part of Luristān in the strict sense of the word see the articles MĀSABADHĀN and PUSHT I KŪH No monuments of very great antiquity have yet been discovered in Pīsh kūh except the caves (Median ?) of Se-darān between Mūngarra and Khurramābād, Čirikow, p 129 The early inhabitants of Luristān were the Kashshu = Κοσσαῖοι who imposed their rule on Babylon between 1760 and 1650 B C The Achaemenids paid the Kossaioi for the right of passage by the Babylon–Ecbatane route These highlanders were temporarily subdued by Alexander the Great Antigonus, pursued by Eumenes, traversed the heart of the Kossaian country, according to Rawlinson on the route Pul-i tang–Keilūn pass–Khurramābād (Ritter, *Erdkunde*, ix, p 335) The Kossaians (who should perhaps be distinguished from the Κίσσιοι = Οὔξιοι = Uwadja = Khūz) spoke a language different from that of their neighbours, but in it we already find proper nouns borrowed from Indo-European Cf E Meyer, *Gesch d Altert*, i/2, Berlin 1913, § 455, Husing, *Der Zagros*, p 24 and Autran in *Les langues du monde*, Paris 1925, p 283 [The name Kashshu has perhaps survived in that of the river Kashgān]

It is also probable that northern Luristān was more or less dependent on the land of Ellipi, often mentioned by the Assyrians This region, which was considerably influenced by Media is now located in the province of Kirmānshāh Cf Andreas, *Alinza*, in Pauly-Wissowa², Streck, *Z A*, xv, 379, *Cambridge Ancient History*, 1924, ii, cf map

We know very little about the Ματιηνοί people who (Herodotos, v 49) were bounded on one side by the Armenians and on the other by the Susians (Reinach, *Un peuple oublie Les Matienes*, *Revue des Etudes Grecques*, 1894, vii, p 313—318)

Here we can only call attention to these various ethnical elements buried in the later strata of Iranian invasions In the name of Fārsān, a canton in the northeast of Bakhtiyārī, we have a reminiscence of the Median tribe of Paraitakenoi (Herodotos, i 110) and of the province of Παραιτακηνή (Strabo, i, p 80) which lay between Media and Persia (in Assyrian Partakka, Partukka, cf Streck, *Z A*, xv, p 363) The Iranicisation must have been accelerated by the formation of the great empires, Achaemenid, Macedonian, Parthian and lastly Sāsanian There are many Sāsānian towns in the valley of the Karkhā Many Sāsānian buildings are attributed by the natives to the Atābegs of Luristān, who were certainly nothing more than the restorers The complicated system of bridges is very remarkable (cf the photographs in de Morgan, *Études Geogr*, ii and *Études Archeol*, Paris 1896–1897, p 360–374) and the roads which may still be traced on the upper courses of the rivers of Susiana The remains of roads, paved or hewn out of the rock, may be seen at Tang-i Saulak (between Bihbahān and Mālamīr) near the Sāsānian bas reliefs (de Bode, i 353, 364), to the east and west of Mālamīr (de Bode, i 390, ii 820 *djadda-yi atābakān*), between Dizfūl and Kirāb (Rawlinson, *A march from Zohab*, p 93), to the south of Khāwa (*djadda-yi Khusraw*, Čirikow, p 216—221) All these works are evidence of a systematic and continuous penetration But since at the end of the fourth (tenth) century the inhabitants of the plain of Khūzistān had not yet forgotten the Hūz language (Mukaddasī, p 418) colonies of the ancient stocks may have survived in isolated corners of the mountains The Lur highlands only assumed their present ethnical character under the Atābegs

The knowledge of the Arab geographers about the Lur country is very summary although they describe the routes between Khūzistān and Fārs (cf Schwarz, *Persien*, p 173—180, Arradjān Shīrāz, p 190 Arradjān-Sumairam), between Khūzistān and Isfahān (the road started from Īdhadj, Ibn Khurdādhbih, p 57, Mukaddasī, p 401) and lastly between Khūzistān and Djibāl As to these last routes, Istakhrī, p 196, reckons from al-Lur to Shāpūr Khwāst 30 farsakhs, from there to Iāshtar (= Alīshtar) 12 farsakhs, from there to Nihāwand 10 farsakhs (the road must be that which follows the upper waters of the Balad-rūd) A few details of this route are cleared up by Mukaddasī, p 401, who gives the following eight stages Karadj (cf the article SUTŪNĀBĀD)–Wasiawand–Dārkan–Khurūdh (certainly = Hūrūd, Hūrūd, north of Khurramābād)–Sābur-khuwās (= Shapūr Khwāst = Khurramābād)-Krkūysh (?)–al Khān–Razmānān–al Lur Mukaddasī, p 418 also makes one suspect the existence of a road along the Āb-i Diz from al-Lur to al-Diz, two stages, from there to Rāyagān one stage, from there to Gūlpāyagān 40 farsakhs through uninhabited country (*mafāza*)

Among the inhabited places in modern Luristān may be noted the following the town of al-Lūr, 2 farsakhs north of Dizfūl (Kantarat Andamish) the site of which should be sought in the plain of Sahrā-yi Lur near Sālihābād, the town of Iāshtar, now disappeared, was certainly in the plain of Alishtar and the town of Shāpūr-Khwāst The exact location of the latter is important for the comprehension of certain events in the fifth (eleventh) century (Ibn al-Athīr, ix 89, 146, 211, x 166, *Ta'rīkh i Guzīda*, p 557) Rawlinson had identified Khurramābād with Shāpūr-Khwāst (cf Le Strange, *The Lands*, etc, p 202, p 668) The combined evidence of Istakhrī, p 196 and 201, of the *Nuzhat al-Kulūb*, p 70, 176 and particularly of the itinerary of Mukaddasī, p 401 fully justify Rawlinson's identification (against Le Strange) The change of name, or moving of the site (cf Schwarz) must have taken

place in the xiiith century The *Nuzhat al-Kulūb* (740 = 1340) which does not include Shāpūr-Khwāst in its enumeration of the towns of the Little Lur is the first source to mention Khurramabād (a town in ruins) It is on the other hand not at all probable that the *wilāyet* of Mān rūd, the alleged ancestral home of the Lurs, is near Khurramabād It should be sought to the north of the town of al-Lur near Mān garra (= Mūngarra) Samhā, mentioned in the *Ta'rīkh-i Guzīda*, p 548, was in Mān-rūd, its fortress Diz-i Siyāh must correspond to the fort of Diz which defends the entrance to Mūngarra and was destroyed by the *wālī* of Pusht-i Kūh in 1895 (Mann, *Die Mundarten der Lurstamme*, p 117) Finally the stronghold of Girīt (*Ta'rīkh-i Guzīda*, p 549, 552) is mentioned by Čirikow, p 133, among the encampments of the tribe of Pāpī (to the south of Khurramābād)

Economic conditions Apart from the Bakhtiyārī districts near Isfahān where there are flourishing villages, the Lur territories inhabited by nomads or semi-nomads only export the products of their cattle-rearing But the future of the mountainous country which lies like an amphitheatre around the plain of Khūzistān is very promising The Lur lands are rich in minerals and especially in petrol The famous wells of Masdjid-i Sulaimān (Maidūn-Naftūn), belonging to the Anglo-Persian Oil Company are in the middle of Bakhtiyārī territory (between Shūshtar and Mālamīr) The same Company whose concession includes all the petrol-bearing lands in the whole of southern Persia is putting into operation its claims in the Kūh Gilū region (to the north of the port of Ganāwa) etc (cf Schweer, *Die turkisch-pers Erdolvorkommen*, Hamburg 1919)

On the other hand the territories now occupied by the Lurs played a considerable part in ancient times, as they lay on the route between the great centres of the Persian empire Their southern part (Kūh-Gilū) may become of great importance for air and railway communication between Mesopotamia and India The Bakhtiyārī country is now traversed by the caravan route connecting Khūzistān with Isfahān and controlled by Lynch Brothers Finally Luristān proper seems destined to be crossed by the main line connecting the Persian Gulf (Mohammara or Khōrmūsā) with Teherān, and perhaps with the Caspian Sea Before the war of 1914 surveys had already been begun for making the Mohammara–Dizfūl–Khurramābād railway by the Persian Railways Syndicate (cf Litten, *Persien*, Berlin 1920, p 63, 88) Since the change of dynasty in Persia, the Persian government proposes to carry through this task itself, cf Millspaugh, *American Task in Persia*, London 1926, p 272

LŪT, the Biblical Lot has in Muslim legend, even as early as in the Kur'ān, an importance which he does not have in the Bible or Haggada As his story is associated with the downfall of the sinful Sadūm (not however mentioned in the Kur'ān) he appears to Muhammad as a prophet of punishment along with Hūd, Sālih, Nūh and Shu'aib as predecessors of Muhammad When Muhammad is accused of being a liar he can console himself with the reflection that before him the people of Nūh, 'Ād, Thamūd, the people of Ibrāhīm and the people of Lūt also called their prophets liars (Sūra, xxii 43) Lūt's people (called *kawm Lūt*, l 13 *ikhwān Lūt*) are usually located between Thamūd and Madyan Lūt in the Kur'ān becomes a *mursal*, messenger of Allāh (xxvi 160, xxxvii 133), a *rasūl amīn*, a reliable prophet (xxvi 162), a participator in wisdom and knowledge (xxi 74) When Ibrāhīm warns his people, Lūt believes him (xxix 25) Lūt is sent to sinners who forbid hospitality (xv 70), waylay strangers and practise sodomy and cruelty such as no other people had before them They threaten him that they will banish those who lead such a moral life saying "if thou preachest right, bring God's punishment upon us" (xxix 28) God thereupon sends his angels of punishment, Ibrāhīm's intercession is in vain (xi 77, 78) The angels come to Lūt His people demand the visitors for sinful purposes In vain Lūt offers his daughters instead He feels himself helpless The angels calm him, saying "We shall save thee, only no one must turn round, thy wife will do it" The city was turned completely upside down (xi 84, xv 74), *sidjil* stones, marked by God, rained upon it

The Kur'ān mentions no other name in the history of Lūt The destroyed city is called *al-mu'tafika* (liii 54) of which the plural is *al-mu'tafikāt* (ix 71, lxix 9) corresponding to the Hebrew *mahpeka*, which is used in the Bible of Sodom

The Kur'ān commentators also know the Biblical story quite accurately (Tabarī, ed de Goeje, i 346, 347) They are able to fill all the gaps and give all names The sins of Sodom are fully described Sadūm has a king of the line of Nimrod The inhabitants worship idols Lūt admonishes them for 40 years (al Kisa'ī) Then God sends three angels Gabriel, Michael and Israfīl (in al Kisā'ī also the soul taker Asriel) Ibrāhim intercedes "Will ye destroy a people among whom there are 300 believers?" No — 300, 200, 100 ? — No — 14 believers? No — This number is assured, Ibrāhim comforts himself, in the belief that Lūt's wife is one of the believers The angels must not destroy Sadūm until Lūt testifies four times to its sinfulness They at once meet Lūt, who testifies After meeting others they encounter Lūt's daughter She invites them into her father's house Lūt orders his people to be silent, especially his wife who has disobeyed him for 40 years (al Kisā'ī) But Lūt's wife deliberately makes a light to show they have visitors or she ostentatiously procures salt (this is why she becomes a pillar of salt) or she actually says "Young men have come to stay with us, with more beautiful cheeks and sweeter fragrance than I have ever seen"

The people demand the young men, Lūt offers his daughters "If we wanted thy daughters, we would know where to find them", they reply Lūt bars the doors At the bidding of the angel he opens them Gabriel blinds the intruders with a blow of his wing They tramp on one another "Save yourself!", they cry, "Lūt's house is bewitched!" As the hour of destruction is at hand, Gabriel (according to others the Angel of Punishment Michael) turns the town upside down, and lifts it up so high that the angels in heaven hear the crowing of the cocks and the howling of the dogs of Sadūm Sidjil stones fall, on each is marked whom it is to strike As Lūt's wife looks sympathetically on her people, she is struck by a sidjil-stone The number of killed varies between 4,000 (Tha'labī) and four millions (Tabarī, ed de Goeje, i 342) All perished, except one who fled to Mecca, brought his sidjil-stone to the haram where it hung for 40 days between heaven and earth, until it finally slew the man who brought it there (Tha'labī)

The Muslim legend gives names to everything and explains them all Lūt takes his name from *lāṭa*, "to attach oneself", because Ibrāhīm's heart was affectionately attached to Lūt (Tha'labī) Lūt's wife is called Halsaka' or Wā'ila, his older daughter Rith (?), the younger Rariya (?) (Tabarī), Zughar (Yāḳūt), or Rawāya (?) (al-Kisā'ī) Not only is Sadūm mentioned, but also other four towns, in whose names may be recognised the Biblical

ʿAmōra, Admah, Sebaʾim and Soʿar Of Soʿar, Thaʿlabī says it was saved (Gen xix 20—22) "because it believed in Lūt"

The Muslim legend has a little in common with the old Haggada (Gen *Rabba*, xlix, 1, *Sanhedrin*, 109b), e g the fact that Abraham thinks he is sure of a certain number of devout people When *Pirke R Elieer* (xxv) describes the daughters of Lūt favourably, when *Midrash Hagadol* (ed Schechter, p 287) calls the angels sent to Sodom, Gabriel and Raphael, Muslim legend may have had some influence on the later Midrash

LŪT B YAHYĀ. [See Abū Mikhnaf]

LUṬF ʿALĪ BEG Ādhar, a Persian poet and biographer of the xviiith century He was born in Isfahān on the 20th Rabīʿ I, 1123 (June 7, 1711) and spent his youth at Kūm and later at Shīrāz, where his father lived while governor of Lāristān and the coast of Fārs under Nādir Shāh After the death of his father, he made the pilgrimage to Mecca and travelled in Persia, finally settling in Isfahān in the service of Nādir's successors He latterly adopted a life of seclusion and put himself under the spiritual direction of Mir Saiyid ʿAlī Mushtāk He died in 1781

Lutf ʿAlī Beg is best known for the collection of biographies of Persian poets which he compiled between 1760 and 1779 under the title of *Ātash-Kāda*, in it he gives biographies of poets in Persian in alphabetical order arranged according to towns and districts The last part deals with 60 contemporaries of the author and is followed by an autobiography The *Ātash-Kāda* was lithographed at Calcutta in 1249 A H and at Bombay in 1277 A H There is a Turkish translation printed at Constantinople in 1259 A H Among his poems was a mathnawī, *Yūsuf u-Zalikha*, from which the author quotes many verses at the end of the *Ātash-Kāda* Lutf ʿAlī Beg was held in considerable esteem by his literary contemporaries, he was particularly intimate with the poet Hātif of Isfahān

Bibliography Ethe, in *Grundriss der iran Philologie*, ii 215, 232, 313, E G Browne, *Persian Literature in Modern Times*, Cambridge 1924, p 282—284 (J H Kramers)

LUṬF ʿALĪ KHĀN was the last member of the Zand dynasty in Persia He was born in 1769, the son of Djaʿfar, son of Karīm Khān Zand [q v] Djaʿfar, who had seized the throne in 1785, had continued the struggle against the Kādjār Agha Muhammad, who had forced him to retire to Shīrāz, where he died on Jan 23, 1789 from poisoning During the short period of the reign of his father, Lutf ʿAlī Khān had been entrusted with the conquest of Lāristān and Kirmān, which he had successfully carried through But after the death of Djaʿfar he was forced to flee from his own army to Kirmān to seek refuge with the Arab lord Būshirʿī With the latter's help, he was able to make himself master of his capital Shīrāz where a certain Saiyid Murād had proclaimed himself king It was chiefly through the efforts of his father's minister Hādjdjī Ibrāhīm who occupied the position of *kalāntar* (mayor) of the town that Lutf ʿAlī succeeded in getting himself again recognised as sovereign After his accession the character of the young man, whose nobility and generosity had hitherto been as much praised as his personal bravery seems to have changed His acts of tyranny and cruelty decided Hādjdjī Ibrāhīm to abandon the cause of the Zands and betray it to the enemy This he did in 1791 when Lutf ʿAlī Khān had set out against Agha Muhammad Khān Hādjdjī Ibrāhīm seized Shīrāz and stirred up Lutf ʿAlī's own troops to mutiny against him The latter fled to the coast and succeeded in collecting a small armed force with which he tried in vain to retake Shīrāz Then followed several years of guerilla warfare waged with incredible vigour by Lutf ʿAlī against the Kādjārs He went up and down the whole of southern Persia, being for some time supported by the lord of Tabas and even temporarily taking Yazd In 1794 being assisted by the chiefs of the district of Garmasīr, he even took Kirmān Here Agha Muhammad besieged him with a large force After four months the town capitulated, Lutf ʿAlī Khān succeeded in once more escaping and reaching Bam but here he was treacherously delivered over to his enemy who had him taken to Tihrān where he was blinded and mutilated and finally put to death Then came the terrible vengeance wreaked by the Kādjārs on the people of the town of Kirmān [q v]

Lutf ʿAlī Khān, the "last chivalrous figure amongst the kings of Persia" (Browne), probably had the sympathy of most of his contemporaries and it is recalled that even Agha Muhammad Khān openly recognised his bravery But as his history was written under the new dynasty of the Kādjars in Persia, the Persian sources could not show much sympathy for him European sources give a more faithful picture of the course of events The more modern Persian historians like Mīrzā Muhammad ʿAlī Khan (*Dawra-i Mukhtasar-i Taʾrīkh-i Īrān*, lith Tihrān 1326, reproduced in Beck, *Neupersische Konversations-Grammatik*, Heidelberg 1914, p 229—256) do not hesitate to describe the action of Hādjdjī Ibrāhīm as treason Hādjdjī Ibrāhīm who soon afterwards became minister tried to justify his conduct to Sir John Malcolm

Bibliography *Taʾrīkh-i Zendiye*, ed Beer, Leyden 1888, J Malcolm, *The History of Persia* 2, London 1829, ii 106 *sqq*, H J Brydges, *The Dynasty of the Kadjars*, London 1833, p cxx *sqq* of the introduction, the text contains a translation of the history *Maʾāthir-i sulṭāniya* of ʿAbd al-Razzāk b Nadjaf Kulī, E G Browne, *A History of Persian Literature in Modern Times*, London 1926, p 143 *sqq* (J H Kramers)

LUTFĪ PASHA, properly HĀDJDJĪ LUṬFĪ Pasha b ʿAbd al-Muʿīn, an important Turkish statesman, scholar and historian, grand vizier in the time of Sultān Sulaimān I al-Kānūnī He was of Albanian descent The date and place of his birth are unknown He was brought up in the imperial *serai*, which he had

appaiently entered through the *dewshirme* for the Janissaiies Much may be learned of his career from his own biographical references in the "History" and in the *Āsaf-nāme* Even in the *seiat* he devoted himself to theological studies, a fondness for which he retained thioughout his whole life

At the accession of Sultān Selīm (1512—1520) he passed from the ranks of the pages as a *čokadār* and filled in succession the following offices at the court *čashnigīr* (taster), *kapudjî bashî*, *mīr-i ʿālam* (bearer of the imperial standard) He then became *sandjak beg* of Kastamuni, beglerbeg of Karaman, of Anatolia and in 941 *kubbe wezīri* He spent a quarter of a century in the foreign service of the Sultan, according to his own account, he was through all the wars and battles in the reign of Sultān Selīm who was very favouiably disposed to him, usually in his train in Rumelia and Anatolia, in Arabia, Syria and Egypt, similarly in the reign of Sultān Sulaiman he took part in the campaigns against Belgrade, Rhodes, Hungary, Vienna, the Kïzïlbash, Baghdād, Corfu etc In 945 (1538) he took part in the campaign to Kara Boghdān as second vizier In 946 (1539) he succeeded as grand vizier Ayās Pasha, who had died of the plague, also an Albanian, at a period when the Ottoman empire was straining its strength to the utmost (The year 944, which was suggested by Kātib Celebi's *Takwim al-Tawārikh*, Constantinople 1146, p 176 adopted by all later historians and so handed down, is incorrect as is proved not only by Lutfi Pasha's own statement but also by an analysis of events) He proved his ability in high army commands, in the fleet and in administrative offices

He sought to carry through with a strong hand the reforms in internal administration which he had long recognised to be necessary, especially economies in the financial system, the abolition of oppressive institutions (*ulak*, privileges of couriers), the development and independence of the navy, the importance of which for Turkey his foresight recognised Earlier than anyone else he saw the beginning of the collapse of the externally so brilliant political system At the same time he conducted negotiations with Venice, Austria and France with great skill and firmness It is note worthy that he was the first to recognise the surpassing genius of Miʿmār Sinān, whom he appointed state architect He was a highly gifted statesman, an energetic inflexible personality, incorruptible and above all intrigue with high ideals and strong religious and scientific leanings In spite of his violent temper he was regarded as a "good natured Vizier"

He was a brother-in law of Sultān Sulaimān, whose sister Shāh Sultān he had married Nevertheless he was summarily dismissed in 948 (1541) when in his rage he used threats to his wife when she reproached him with his inhuman treatment of a Muslim slave-girl His eagerness for reform had naturally gained him few friends at court It is said that only his rank as a *dāmād* saved him from execution Whether the deeper reason for the matrimonial dissensions lay in his love for boys is not clear

Lutfī Pasha was banished with a pension to Dimotika where he had a *čiftlik* Here he gave himself entirely up to his studies, for which he was well qualified by his constant intercourse with theologians and scholars during his whole political career After his return from Mecca to Dimotika — his successor Rustam Pasha was successful in preventing a complete reconciliation with the Sultān — he used his enforced leisure to compose numerous works in Arabic and Turkish He died in all probability after 970 (1562) (so also Munadjdjim bashî), in any case after 961, in Dimotika The date 950 (1543) usually given is impossible as he continued his history down to Ramadān 15, 961 (Aug 14, 1554) and there is no reason to suppose that any other continued the history, on the contrary there are references in the text to events of the year 961 He only left one foundation, a *cesme* in Constantinople, after which the quarter and the Lutfī Pasha mosque take their names, its builder was a defterdār Ahmed Celebī

Lutfī Pasha is the author of 21 works, a list of which he himself gives in his "History", p 1—4 (cf also the list in Hammer-Purgstall, *Geschichte des osman Reiches*[1], iii 703, Flugel, *Katalog der Wiener Handschr*, ii p 224, Tschudi, *Turkische Bibliothek*, vol xii, p xv—xvii) It includes 13 Arabic and 8 Turkish works, to which perhaps may be added the *Kānūn nāme* ascribed to him which he perhaps does not mention as his own because it was the result of his official activities

His theological works have not come down to us, so far as we know According to sources — not however specially biassed in his favour — he had only a moderate knowledge of the different branches of theological study and medicine, which he loved to display with a dilettante's exaggerated opinion of his powers This is not quite convincing however as not only his perhaps quite mediocre theological works but also his really important historical writings, except for the *Āsaf-nāma* have been almost unnoticed

As a poet he is praised by Sehī, who completed his *Hasht Bihisht* in 945 in the time of his grand vizierate But the numerous verses scattered through his history are not by him Verses certainly by him are very mediocre Besides, he does not show much sympathy with poets as the contemptuous attitude to ʿAlī Čelebi, author of the *Humāyūnnāme*, shows, to whom he makes the reproach that he had spent 20 years on this work instead of dealing with questions of *shiʿr*

His importance as a historian cannot however be too highly estimated His *Āsaf-nāma*, a kind of mirror for ministers, a textbook of ethics for viziers in which he sought to make available for his successors his wide experience of administration, obtained a certain success, as the not inconsiderable number of existing manuscripts suggests (ed and transl by R Tschudi, Berlin 1910, ed by ʿAlī Amiri, Constantinople 1326) But his history *Tawārikh-i Āl-i ʿOthmān* is still more important It is now accessible in a, however, rather mediocre, edition (Constantinople 1341, Lutfī Pasha, *Taʾrikhi Turkiya Djumhūriyati Maʿārif Wakālati Nashriyātîndan*, N⁰ 28) from an incomplete copy found by M Tāhir in Brussa supplemented by the formerly unique copy in Vienna by ʿĀlī used by von Hammer (Flugel, ii 224, N⁰ 1001)

Lutfī Pasha not only models his title on those of the old Ottoman chronicles but he copies this primitive style of historiography in his matter and style, which forms a striking contrast to the elaborate Persianistic court style Down to Sultān Bāyazīd he is only a copyist Then however fol-

lows, and this is what makes his history so remarkable, a description of the events of which he himself was an eye-witness in the reigns of three Sultāns (Bāyazīd, Selim and Sulaimān) His account of the reign of Sultān Sulaimān is naturally the most valuable, especially the period of his grand vizierate In contrast to the *shahnāmadjī* and the official *wakʿa nuwīslar*, he gives an absolutely untouched picture of the situation although he is not absolutely free from bias in dealing with other statesmen His two historical works are one of the most important sources for our knowledge of the origins of the weakness and corruption of the Turkish empire in the xvi^th^ century

M

MĀʾ AL-ʿAINAIN al-Shingītī, the name by which the famous agitator in Mauritania [q v] at the end of the xix^th^ century and beginning of the xx^th^ century is best known (several explanations of his soubriquet are given, the literal meaning is "the water of the eyes" but the most satisfactory seems to be that which sees in it simply a euphemism, like that in the expression *Kurrat al-ʿAin*)

Muhammad Mustafā Māʾ al-ʿAinain was the twelfth son of a chief and marabout of great fame in his own country, Muhammad Fādil b Māʾmīn, born at Walāta at the end of the xviii^th^ century and chief of the Moorish tribe of Galāgima in the district of al-Hawd in the south east of Shingīt group After breaking off from the Bakkāya whose religious head was the chief al-Mukhtār al-Kuntī [q v], he founded a new brotherhood affiliated to that of the Kādirīya [q v], to which he gave the name of Fādilīya derived from his own On the death of Muhammad Fādil in 1869, Māʾ al-ʿAinain left the district of al-Hawd to complete his Islāmic studies in Shingīt (on this flourishing Moorish centre, see the long and interesting monograph by a native of the place resident in Cairo, Ahmad b al-Amin al Shingītī, *al-Wasiṭ fī Tarādjim Udabāʾ Shingit*, Cairo 1329 [1911]) Māʾ al-ʿAinain then settled for several years in al-Adrār [q v] but afterwards went further north to the al-Sāḳīyat al-Hamrāʾ country, which was his usual residence from 1884 All this region, which now forms the northern part of Spanish Rio de Oro, was being desolated by murder and brigandage He succeeded in establishing security there, restored the land to cultivation, planted numerous palm-groves and encouraged trade by caravan to Senegal and Shingīṭ in one direction and to Morocco on the other He chose Smāra as his permanent abode and later built a *kasba* for himself there in the Moroccan style on the Wādi Tarzāwā Like the majority of religious leaders of the Saharan countries of North Africa, he practised commerce, politics and the proselytising activities of a marabout and was not long in gathering round him a considerable number of followers who became widely known throughout Morocco by their nickname of "blue men" on account of their costume, consisting of a *djallāba* of *khunt* (a cotton stuff from Guinea), a turban and a burnous, all blue in colour They were also called ʿAinīya, from the name of their master, and *al Shnāgta* (*Shanākita*), "the men of Shingīt"

Māʾ al ʿAinain very soon entered into regular relations with the Sultāns of Morocco He had already made a sojourn in the country on his journey to the holy places of Islām, in the reign of Mawlāy ʿAbd al-Rahmān b Hishām [q v] (1238—1276 = 1822—1859) Later and especially in the reign of Mawlāy al-Hasan [q v] (1290—1311 = 1873—1894) he travelled regularly to Marrākush and to Fās and was welcomed by the Sultān, whom he supplied with slaves (in which he also dealt) When the young Mawlāy ʿAbd al-ʿAzīz [q v] ascended the throne in 1311 (1894), he sent him his homage and went to visit him in 1896 in Marrākush The Sultan gave him a gift in his southern capital of a site for a *zāwiya* of his order and he hired him a steamer to take him with his suite from the Moroccan port of Mogador to that of Tarfāya, the natural harbour of the Rio de Oro for his capital Smāra This little port henceforth became of some importance German ships, Greek and Spanish sailing-vessels disembarked there merchandise from Morocco and considerable cargoes of arms and ammunition, all consigned to the agitator to enable him to supply

his followers and arm the Moorish tribes to enable them to fight French expansion beyond the frontiers of Senegal For several years Māʾ al-ʿAinain was able to maintain in all the vast area under his influence an atmosphere hostile to French penetration into Mauritania He was largely the instigator of the anti foreign outbursts, which after the assassination on May 12, 1905, near Tidjikdja of the explorer Xavier Coppolani decided France to occupy Tāgant in 1906

After these happenings, Mā' al-ʿAinain, having assembled the chiefs of the great Moorish tribes who were in alliance with him, took them to Fās to demand the alliance and assistance of Morocco against France in Mauritania He was favourably received by Mawlāy ʿAbd al-ʿAzīz and succeeded in getting a cousin of the Sultān, Mawlāy Idrīs, sent to al-Adrār as representative of the *makhzen* At the same time Mā' al ʿAinain was authorised to install himself in the Moroccan *kasba* of Tiznīt, to summon to the holy war and to rally around him all the warriors of the Sahara from al Sūs to the region of Sākīyat al-Hamrā' The hopes that Mawlāy ʿAbd al-Aziz had based on the plans of Mā' al-ʿAinain were soon deceived After the occupation of Udjda and the destruction of Shāwīya by the French he had to disown Mā' al ʿAinain The latter had no longer a chance even in his own country, where a fatal blow was struck at his power as a result of the al-Adrār expedition in the course of which French troops led by Colonel Gouraud completely scattered his forces Mā' al-ʿAinain had however not lost all hope of regaining his former influence in his old territory He aimed even higher, when in May 1910 he did not hesitate to proclaim himself Sultān and to attempt the conquest of Morocco, which he thought had been sold to the infidels by the ʿAlawid sovereigns Having united around him all the tribes of the Anti Atlas and of al-Sūs as well as his own followers, he reached Marrākush and from this town tried to take Fās by surprise, taking the road through the Central Atlas But he was checked in his advance near Tadlā [q v] by a column under General Mounier which routed him completely on June 23, 1910 He just managed to escape and reach al-Sūs where he was abandoned by all his followers and had to sell his slaves and flocks in order to live He retired to the *kaṣba* of Tiznit, where he died on 17th Shawwāl 1328 (Oct 28, 1910)

Two years later, the son of Mā' al ʿAinain, Ahmad al-Hība, in his turn attempted to proclaim himself Sultān Proclaiming himself the Mahdī, he set out from Tiznit and entered Marrākush on Aug 18, 1912, where he had himself proclaimed, while his troops put the city to fire and sword But on Aug 29, al-Hiba was defeated at Benguérir by Colonel Mangin, who after a second encounter at Sidi Bū ʿUthmān entered Marrākush on Sept 7 following

Mā' al-ʿAinain, who had very many open or secret followers in Morocco has left in the country the reputation of a true ascetic and a great doctor in Islām "The hair shaved, the face veiled, always clothed in white, he only appeared in public on Fridays to go to the mosque Mā' al-ʿAinain led an austere life, lived exclusively on milk, dates and mutton A well read man, he composed many pious works, books on theology, mystic Sūfism, astronomy, astrology, books full of contemplative reveries, on theological and dogmatic controversies, on metaphysical theories, and of magical formulae to acquire riches and power by occult means Like his father and his brother, he loved to spread among his disciples a reputation as a worker of wonders and a thaumaturgist These magical practices much increased his prestige in Seguiet (al-Sākīyah al-Hamrā') and in Morocco (E Richet, *La Mauritanie*, Paris 1920, p 126—127)

Almost all the works of Mā' al-ʿAinain, alluded to, were lithographed at his expense in Fās He disseminated them widely for his marabout propaganda They are as follows 1 *Adab al-mukhālata maʿa 'l yatīm*, on the margin of *Mufīd al-samiʿ*, N° 20, 1321, 2 *al-Akdas ʿala 'l-anfas*, commentary on the *Wazakāt* of the Imām al-Haramain, 1320, 3 *Dalīl al rifāk ʿalā shams al-ittifāk*, 1321, 3 vol , 4 *Diwān* of mystical poetry, 1316, 5 *Djawāb al muhaklika fī Akhbār al-khirka*, 1302, 6 *Kitāb Fātik al-ratk ʿalā rātik al-fatk*, 1296, 2nd ed in 1309, 7 *Hidāyat al-mubtadi'īn wa-nafʿat al-muntahin*, *urdjūza* on the *nahw*, 1322, 8 *Hudjdjat al-murīd fī 'l djahr bi 'l dhikr ʿala 'l-marīd*, 1321, 9 *Ibrāz al la'āli 'l maknūna fī 'l-asāmi 'l-zāhira wa 'l-mudmara*, 1322, 10 *Izhār al tarīk al-mushtahir ʿala "smaʿ wa-lā taghtarir"*, 1321, 11 *al-Khalās fī hakīkat al-ikhlās*, 1320, 12 *al-Kibrīt al-ahmar*, also printed at Fās in 1324, 13 *Kurrat al ʿainain fī 'l kalām ʿala 'l rūʾya fī 'l-dārain*, 1321, on the margin of N° 10, 14 *Mā yataʿallak bi 'l-hasad*, on the margin of N° 36, 1320, 15 *Madjmaʿ al-durar fī 'l tawassul bi 'l-asmā' wa 'l āyāt wa 'l suwar*, 1309, 16 *al Makāsid al-nūrānīya*, 1306, on the margin of N° 29, 2nd ed in 1320, 17 *Mubsin al mutashawwif ʿalā muntakhab al-tasawwuf*, 1314, 2 vol , 18 *Mufīd al-hādira wa 'l bādiya bi-sharh hādhih al abyāt al-thamānīya*, 1316, 19 *Mufīd al rāwī ʿalā anni mukhāwi*, 1309, 20 *Mufīd al-samiʿ wa 'l-mutakallim fī ahkām al tayammum wa 'l-mutayammim*, 1321, 21 *Mughīt 'l nāzir wa 'l sāmiʿ ʿalā taʿallum al-ʿilm al-nāfiʿ*, 1294, 22 *Munīl al bashsh fī-man yuzilluhum Allāh bi-zill al-ʿarsh*, 1309, 23 *Munīl al-maʿārib ʿala 'l-hamdu li'llāh kifā' al-wādjib*, 1309, 24 *Muntakhab al-tasawwuf*, printed 1325, 25 *Muzhir al-dilālāt al maksūda fī alfāz al tahiyyāt*, 1321, 26 *Muzīlat al-nakad ʿamman lā yuhibb al-hasad*, on margin of N° 11, 27 *Nasihat al-nisā'*, 1321, 28 *Naʿt al-bidāyāt wa-tawsīf al nihāyāt*, 1311, also publ in Cairo in 1324, 29 *Sahl al murtakā fī 'l-hathth ʿala 'l-tukā*, 1306, 30 *al Saif wa 'l mūsā fī kadīyat al-Khidr wa-Mūsā*, 1320, 31 *Saif al-mudjādil li 'l-kutb al-kāmil*, n d , 32, *Saif al-sakt li 'l-mutaʿarrid lanā fī awwal ul-wakt*, n d , 33 *al-Silāt fi fadā il baʿd al salawāt*, 1321, 34 *Silat al-mutarahhim ʿalā silat al rahim*, 1323, 35 *Tabyin al-ghumūd ʿalā naʿt al-ʿarūd*, 1320, 36 *Takyīd yataʿallak bi-hadīth "innama 'l-aʿmāl bi 'l niyāt"*, 1320, 37 *Tanbīh maʿāshir al muridin ʿalā kawnihim li-asnāf al-sahaba tābiʿīn*, 1321, 38 *Tanwir al-saʿid fī 'l-ʿāmm wa 'l-khāss*, 1320, 39 *Thimār al mushar*, collection of poems, printed 1324, 40 *Tibyān al hakk alladhī bi 'l-bātil sahk*, 1321

A short monograph was devoted to Mā' al-ʿAinain by his son Muhammad Takiy Allāh entitled *Mudhakkir al-mawārid bi sīrat Mā' al-ʿAinain dhi 'l-fawā'id*, Fās 1316 A notice of him is also given in the *Wasit* of Ahmad al-Shingītī, p 360—362

(E LÉVI PROVENÇAL)

MAᶜADD, a collective name for certain Arab tribes, in the traditional usage for those of North Arabian origin (Mudar and Rabiᶜa) in contrast to the Yemen tribes This contrast said to be inherent in the name Maᶜadd seems already to be found frequently in the early poets, always presuming the genuineness of the passages in question Thus in a verse of Imru 'l-Kais (Ahlwardt, N⁰ 41, l 5) the term Maᶜadd is used apparently in the sense of excluding the ᶜIbād, Tayy and Kinda, and in Nābigha (Ahlwardt, N⁰ 18, l 1, 2), the Ghassān Tradition also records fighting between Maᶜadd and Yemen in the pre-Muhammadan period (cf Yākūt, II 434, Ibn Badrūn, p 104) At a later period the genealogical term Maᶜadd is even more sharply contrasted with South Arabia, when the rivalry between North and South Arabians had become the dividing political element in the fighting of the Omayyad and ᶜAbbāsid period (passages quoted in Goldziher, see below *Bibl*)

The fact that the name *Banū* is not found combined with Maᶜadd as well as the form of the word itself suggests that Maᶜadd may originally have been of similar foundation and meaning to *Maᶜshar*, a general name for "people", body of people Ibn Duraid (*Ishtikāk*, p 20) long ago suggested the derivation from the root "ᶜdd", "to count, number" not however without adding other very different attempts to interpret it The usual genealogical scheme of Arab tradition has inserted in it the name Maᶜadd as the name of an ancestor of an eponymous series, namely a son of the traditional founder ᶜAdnān Maᶜadd is brought into connection with the history of Mecca by the legend that he married Muᶜāna, a daughter of the Djurhumites From this marriage were born Nizār, father of the tribal eponyms Mudar, Rabiᶜa and ᶜIyād According to Abu 'l-Fidā', *Hist Ante-islamica*, ed Fleischer, p 72 Maᶜadd is even said to have been a contemporary of Nebuchadnezzar

Bibliography Tabarī, I 671 *sqq*, Makdisī (Pseudo-Balkh), ed Huart, IV 101 *sq* On the origin and history of the feuds between North and South Arabia cf Goldziher, *Muhammedanische Studien*, I 78 *sqq*, on the genealogy, *ibid*, p 179 (H H BRAU)

MAᶜARRAT MASRĪN or **MIṢRĪN**, capital of a nāhiya of Halab The name is also written Maᶜarrat Nasrīn which has been wrongly taken as an abbrevation of Maᶜarrat Kinnasrīn (Le Strange, *Palestine under the Moslems*, p 497) In Syriac manuscripts of the eighth century, the town is called Meᶜarret Mesrēn (Wright, *Catalogue of the Syriac MSS in the Brit Mus*, p 454ᵇ, dated 745 A D, Agnes Smith Lewis, *The Old Syriac Gospels or Evangelion da-mepharreshē*, London 1910 a palimpsest under a collection of biographies of holy women, written by a monk Yōhannan Stylites of Bēth Marī Kānūn, a monastery of the town of Meᶜarret-Mesrēn in the Kūrā of Antiochia)

In the year 16, Abū ᶜUbaida defeated a large Greek army which had assembled between Halab and Maᶜarrat Masrīn and then took this town, which capitulated under conditions similar to Halab (al-Balādhurī, *Futūh*, ed de Goeje, p 149) In the reign of the Caliph Mutawakkil, ᶜAmr b Hawbar, a native of Maᶜāthā al-Buraidiya (cf Yākūt, *Mushtarik*, p 400) near Maᶜarrat al-Nuᶜmān, was governor of the town, Kamāl al-Dīn (Freytag, *Selecta ex historia Halebi*, Paris 1859, text p 24, transl p 18) quotes the beginning of a lampoon composed by him on the kādī of Halab, Abū Saᶜīd ᶜUbaid b Djannād (d 231) Nicephoros Phocas took the town in 357 (968) and deported its 1,200 inhabitants to Bilād al-Rūm (Kamāl al Dīn in Freytag, *Z D M G*, XI 228) After the truce of Safar 359 (969—970) between the Greeks and Karghūya, the town passed to the territory of the latter (*op cit*, p 232) In 415 (1024) the Kilābī leader Sālih b Mirdās on his march against Halab sent his follower Abū Mansūr Sulaimān b Tawk against Maᶜarrat Masrīn, the latter took the town and made its governor prisoner (J J Müller, *Historia Meidasidarum*, Bonn 1829, p 14, Rosen, *Zapiski Akad Nauk*, XLIV 378) Shortly before the death of Thimāl (454), the Byzantines took the town by treason (Kamāl al-Dīn in Muller *op cit*, p 52) While Mahmūd advanced on Baalbek (cf HALAB), his uncle ᶜAtīya advanced with the commander of Antakiya and a Byzantine army against Maᶜarrat Masrīn, burnt its outskirts and killed a large number of inhabitants In 491 Yaghi-Basān, prince of Antākiya, died in Maᶜarrat Masrīn, which was taken in Dhu 'l-Hidjdja of the same year or Muharram 492 by the Franks (*Hist Or des Croix*, III 483) They advanced on the town via al-Rūdj, slew all its defenders and destroyed the pulpit of the mosque (*minbar*) (*op cit*, III 579) After the capture of Baldwin of Edessa, the Franks in the district of al Djazr, in al-Fūᶜa, Sarmīn and Maᶜarrat Masrīn were surprised and slain in 497 by the inhabitants (*op cit*, p 592) In 507 (April 1114) a body of Ismāᶜīlīs (Bātinīya in Kamāl al Dīn) who lived in Fāmiya, Maᶜarrat Nuᶜmān and Maᶜarrat Nasrīn (so written here) tried to surprise Shaizar while the Christians were celebrating Easter But they were driven off by the Banū Munkidh (*op cit*, III 548) When Baldwin II approached in 513, the towns of Sarmin and Maᶜarrat Masrīn (*op cit*, III 623) capitulated Tughtakin and Ilghāzī in 514 besieged the Franks in this town into which they had retreated When Baldwin came to their relief, a treaty of peace was concluded by which the Christians were allowed to retain Maᶜarrat Masrīn, Kafartāb, al-Djabal, al-Bāra and other fortresses (Ibn al-Athīr, *Recueil Hist Or d Croix*, I 332, Kamal al-Dīn, *op cit*, III 624 *sq*) When Aksonkor of Mawsil in 520 invaded the country of Sarmīn, al Fūᶜa and Dānith, the Franks encamped across his path at the reservoir (*hawd*) of Maᶜarrat Masrīn, until they withdrew in the middle of Radjab for want of supplies (*op cit*, III 653) The Atabeg ᶜImād al-Dīn Zankī in 524 attacked the suburbs of al-Athārib and Maᶜarrat Masīn, when Alice, the daughter of Baldwin II and widow of Boemund II, rebelled in Antākiya against her father (*op cit*, III 661) Sawār (or (Aswār) of Halab in 527 made a raid on al-Djazr and the citadel of Zardanā, surprised the Franks at Hārim and invaded the territory of Maᶜarrat al-Nuᶜmān and Maᶜarrat Masrīn from which he returned to Halab laden with booty (*op cit*, III 667) In Djumādā I of the year 619 al-Malik al-Salih, the son of al-Malik al Zāhir, received the lands

of Shughr and Bakās, al-Rūdj and Maʿarıat Masrīn, which he exchanged about five years later for ʿAintāb, Rāwandān and Zūb (Kamāl al-Dīn, transl Blochet, *R O L*, v 64, 72, Abu 'l Fidāʾ, *Annales Muslemici*, ed Reiske, iv, Copenhague 1792, p 312)

The town has not been much visited by modern travellers Jullien describes Maʿarrat Masrīn as a large village, lying among sesame fields and olive trees in a rich plain Garrett is enthusiastic about the fertility of the country "the soil there is unusually fertile, fig trees are numerous and roses are growing by roadside" In modern times the name of the town is often written Maʿarrit il-Misrīn (with the article) e g by J B L J Rousseau (*Description du Pachalik de Haleb*, in *Fundgruben des Orients*, Vienna 1814, iv p 11), Ritter (*Erdkunde*, xvii, p 1576), Garrett (*Publi cations of an American Archaeol Expedition to Syria*, New York 1914, part i, p 119) etc

Not to be confused with our town is Maʿarrat al-Ikhwān (also called Maʿarrat al-Akhwān) east of it, sometimes called simply Maʿarra, e g by Seiff (*Zeitschr f Erdk*, 1873, viii, p 24 Maarat), according to whom it is a large village, "which lies bare and exposed with its white sugar cone like roofs on a wide plain" According to al-Djibrīnī of Halab (d 843) and Ibn al Shihna (edited by Abu 'l-Yumn al Bathrūnī in the eleventh century), Maʿarrat Masrīn was earlier called *Dhāt al-Kuṣūr* (*Z D M G*, xxiii 182, Ibn al Shihna, ed Cheikho, Bairūt 1909, p 164 *sq*, Lammens, *M F O B*, 1906, i, p 240) But this statement is due to confusion with Maʿarıat al-Nuʿmān (cf Dussaud, *Topographie historique de la Syrie an tique et medieval*, Paris 1927, p 213, note 4)

Bibliography al Istakhrī, *B G A*, ii, xiv, Suppl to *B G A*, i 61, Ibn Hawkal, in *B G A*, ii 118, al-Makdisī, in *B G A*, iii 54 (*al Maʿarratain*), 156 (*Maʿarrat Kinnasrin*), Ibn Khur dādhbih, in *B G A*, vi 75, Yākūt, *Muʿdjam*, ed Wustenfeld, iv 574, Safī al Dīn, *Marāsid al-Ittilāʿ*, ed Juynboll, iii 120, Abu 'l Fidāʾ, ed Reinaud and de Slane, p 231, Ibn al Shihna, ed Cheikho, 1909, p 157, 165, Le Strange, *Palestine under the Moslems*, p 497, Gaudefroy-Demombynes, *La Syrie a l'epoque des Mamelouks*, Paris 1923, p 109, note 3, H Derenbourg, *Vie d'Ousama*, p 78, Alexander Drummond, *Travels through different cities of Germany, Italy, Greece and several parts of Asia*, London 1754, p 290 (*Maʿtmishriia*), J Berggren, *Resor i Europa och Osterlanderne*, Stockholm 1826, part ii, p 183 (*Maaʿrat Masrin*), Karsten Niebuhr, *Reisebeschreibung nach Arabien u a umliegenden Landern*, Hamburg 1837, vol iii, p 100 (*Maad Masrin*), Thomson, *Bibliotheca sacra and theological review*, New York 1848, v, p 665 (*Maanat* [!] *Nusrim* or *Musrim*), 671 (*Maaʿrat Musnin* [!]), Jullien, *Sinai et Syrie*, Lille 1893, p 284 (*Maʿarrat Mouceirin*), Melchior de Vogue, *La Syrie centrale*, Paris 1861–1867, passim (*Maʿrat meçrin*), Rob Garnett, in *American Archaeol Expedition to Syria*, New York 1914, part i, p 119 (*Maʿarrit il-Miṣrin*)

(E Honigmann)

MAʿARRAT AL-NUʿMĀN, a town in northern Syria, often called simply AL-MAʿARRA It is celebrated as the birthplace of the poet Abu 'l ʿAlāʾ Ahmad al-Maʿarrī [q v] According to al-Samʿānī (*Kitāb al-Ansāb*, reproduced by D S Margoliouth, *G M S*, xx, 1912, fol 536v, l 4) the *nisba* from the place-name was *Maʿarranī* to distinguish it from that of Maʿarrat Nasrīn, *Maʿarnasī* The town probably lay on the site of the ancient Arra which is called Κώμη Ἄρρων οἰνοφόρος in an inscription Yaʿkūbī says that Maʿarrat al-Nuʿmān is an old town in ruins Nāsir-i Khusraw in 438 (1047) found in the town wall a stone column with an inscription in some language not Arabic and Ibn al-Shihna also talks of old pillars being dug up in the town Van Berchem notes the remains of a Greek inscription in the Madrasa (*Voyage*, p 203, note 1)

The town received its new epithet, to distinguish it from the numerous other Syrian towns of the same name, from the Companion of the Prophet, al Nuʿmān b Bashīr, who was governor of this district under Muʿāwiya and whose son died there According to another tradition it is called after al-Nuʿmān b ʿAdī al-Sāṭiʿ of the tribe of Tanūkh An earlier name of the town according to Ibn Battūta and Khalil al-Zāhirī (ed Ravaisse, p 49) was *Dhāt al-Kuṣūṣ*, according to al Dimashkī *Dhāt al-Kasrain*, al Djibrīnī and Ibn al Shihna wrongly give this name to Maʿarrat Masrin [q v] The site of a citadel still bears the name Kalʿat al-Nuʿmān (see below) We have much earlier evidence from another older name, *Maʿarrat Hims* (al-Balādhuri, ed de Goeje, p 131, Abu 'l-Fidāʾ, *Annales Moslemici*, ed Reiske, i, Copenhague 1789, p 226 etc) The district of this town originally formed an *iklim* (κλίμα) of the djund of Hims (Ibn Khurdādhbih, *B G A*, vi 75, cf also — but this is an anachronism, — al Kalkashandi, *Subh al Aʿshā*, iv 142, transl Gaudefroy Demombynes, *La Syrie*, p 109), The Hims gate (see below) is probably also a memory of this It was only from the time of Hārūn al Rashid that the town belonged to the djund of Kinnasrīn, the capital of which at a later date was Halab (Le Strange, *Palestine under the Moslems*, p 36, 39)

As early as 278 (891—892) we find Yaʿkūbī giving the Banū Tanūkh as the inhabitants of the town The district around it was one of the parts of Syria most strongly settled by Maronites (al Maʿsūdī, *Kitāb al-Tanbih*, ed de Goeje, p 153) As there was no running water near the town, its inhabitants had to collect rain-water in cisterns But the country round was rich in olive, fig, pistachio and almond trees, wine was also made here as in the ancient Arra According to Ibn Djubair the orchards stretched for nearly two days' journey from the town and formed one of the richest and most fertile areas in the world South of Maʿarrat al Nuʿmān, just beside the town wall was, according to local tradition, the tomb of Joshua son of Nūn, but Yākūt says his grave was really at Nabulus (cf Goldziher, *Muhammedanische Traditionen uber den Grabesort des Josua*, in *Z D P V*, ii, 13–17) The Djāmiʿ Nabī Allāh Yūshaʿ in Maʿarrat al-Nuʿmān still bears the name of Joshua and has an inscription dated 604 (1207—1201) (van Berchem, *Voyage en Syrie*, p 202, note 4)

When Abū ʿUbaida came to Maʿarrat Hims in the year 16 (637), the people came out to welcome him and promised to pay *djizya* and *kharādj* (al-Balādhuri, ed de Goeje, p 131, Caetani, *Annali dell'Islām*, iii, p 794 § 284) The Caliph ʿUmar II was buried in 101 in the monastery of Simeon (*Dair Simʿān*) at al-Nakīra (Νικέρται) not far from Maʿarrat al-Nuʿmān (Honigmann, *Z S*, i, 1922, p 17, Dussaud, *Topographie historique de*

la Syrie, Paris 1927, p 184) ʿAbdallah b Tāhir appointed by the Caliph al-Maʾmūn in 207 as successor of his father in the governorship of Syria, destroyed the fortifications of Maʿarrat al-Nuʿmān, while fighting against Nasr b Shabith and many small towns like Hisn al-Kafr and Hisn Hunāk (Kamāl al-Dīn in Freytag, *Selecta ex historia Halebi*, Paris 1819, p 20) In 290 the Karmatians under Sāhib al-Khāl ravaged the country round Maʿarrat al-Nuʿmān, Hims, Hamā and Salamīya, slew many inhabitants of these towns and carried off the women and children into captivity The Banū Kilāb in 325 (936–937) entered Syria from al-Nadjd and advanced on Maʿarrat al Nuʿmān The commander there, Muʿādh b Saʿīd, went out to al Burāghīthī (site unknown) to meet them but was captured there with the greater part of his army, and only later released by the Kilābī Abu 'l-ʿAbbās Ahmad b Saʿīd, governor of Halab The latter and the Kilābī Yānis in 332 were driven from Halab by al-Husain b Saʿīd b Hamdān, Saif al-Dawla's uncle and pursued beyond Maʿarrat al-Nuʿmān as far as Hims Ikhshīd the governor of Egypt in 333, advanced against Saif al-Dawla as far as Maʿarrat al-Nuʿmān, which he took Muʿādh b Saʿīd whom Ikhshīd had again installed there as governor was slain in battle at Kinnasrīn by Saif al Dawla In 357 (968) the emperor Nicephoros Phocas took the town and destroyed its chief mosque and most of the walls When Karghūya seized Aleppo, Zuhair the governor of Maʿarrat al Nuʿmān joined the Hamdānid Saʿd al Dawla (358) and set out with him from Manbidj against Aleppo, it was only when the Greek Turbasī brought help to Karghūya that the pair retired to al-Khunāsira and Maʿarrat al-Nuʿmān In the treaty between Nicephoros and Karghūya (Safar 359) Maʿarrat al Nuʿmān was promised to the latter Saʿd al-Dawla held out in it for three years Bakdjūr had deposed and imprisoned Kharghūya in Halab and made himself sole ruler (364 = 975) Saʿd al-Dawla set out from Hims against him and with the Banū Kilāb whom he had won over to his side by promising them lands at Hims besieged Zuhair, who was an ally of Bakdjūr, in Maʿarrat al-Nuʿmān He forced his way with his followers into the town through the Hunāk gate, when they were repulsed, they burned the Hims gate Zuhair thereupon surrendered and was executed in the citadel of Fāmiya, the citadel of Maʿarrat al-Nuʿmān was plundered by the conqueror When Rammāh, a Mamlūk of Saif al-Dawla ("al Saifī") rebelled in 396 in Maʿarrat al-Nuʿmān against Saʿīd al-Dawla, the latter with Luʾluʾ went to besiege the town but retired to Halab on the approach of Bandjutakin (Freytag, *Locmani Fabulae*, p 45, l 6), Luʾluʾ who had seized the power in Halab in 392, next year had Kafr Rūma in the district of Maʿarrat al-Nuʿmān and the fortress in the Arwādj (the two districts of al-Rūdj, cf Rosen, *Zap Insp Akad Nauk*, xliv, p 237, note 200) destroyed to prevent them falling into the hands of his enemies When the Hamdānid Nāsir al-Dawla in in 434 took the field against the Mirdāsid Muʿizz al-Dawla Thimāl, he occupied Maʿarrat al-Nuʿmān In 452 on his campaign against his nephew Mahmūd, Thimāl spent eight days in the town, the inhabitants suffered severely as the Arabs on account of the severe winter were billeted in the houses and did much damage there Mahmūd after occupying Halab in 457 allotted Maʿarrat al-Nuʿmān to the Turk chief Hārūn, on Shawwāl 17, 458, the latter entered the town with Turks, Dailamīs, Kurds, and men of the tribe of al Awdj, about 1000 fighting men besides camp-followers They pitched their camp before the gate at which public prayers were said Although excellent discipline prevailed among them and no one injured the olive-trees and vineyards or even took water for their animals without paying for it, the inhabitants breathed more freely when they left the town again to assist Mahmūd on his campaign against the Kilābīs In 462 Turks in large numbers came out of Byzantine territory against Halab, went via Urtik to al-Djazr, Maʿarrat al-Nuʿmān, Kafartāb, Hamā, Hims and Rafanīya, and laid Syria waste in dreadful fashion The Turk Tutush in 472 undertook a campaign from Damascus against the north of Syria, he burned the region of Djabal al-Summāk and Djabal Banī ʿUlaim, extorted enormous sums from the people of Sarmin and Maʿarrat al-Nuʿmān and plundered the country east of Maʿarrat al-Nuʿmān, he laid siege to Tall Mannas (*Θελμενισσός*) in vain and burned Maʿarratarīha (the ancient *Μαγαραταρίχων κώμη*) in the district of Kafartāb His son Ridwān in 488 gave the town of Maʿarrat al-Nuʿmān with its lands to Sukmān b Urtuk Soon after the taking of Antākiya (491) the Franks advanced on our town, supported by the people of Tall Mannas, and all the Christians in Maʿarrat al Nuʿmān itself but they were defeated between these two towns In the beginning of 492 they again besieged the town with a large army (then an *urbs munitissima*, Will of Tyre, vii 9) and took it, killing almost the whole population, 20,000 men, women and children (*Hist or des Croisades*, iii 482 *sq*) Maʿarrat al-Nuʿmān was, like Jerusalem in the same year, completely sacked and the walls and mosque destroyed During the siege the Franks had destroyed all the gardens round the town and the Kilābīs, who had come to the help of Ridwān consumed all the supplies of the district so that the country was completely starved In 496 Ridwān reconquered the lost fortresses At the end of 514, he concluded a treaty with the Franks by which the latter were allotted Maʿarrat al Nuʿmān, Kafartāb, al-Bāra and and a part of Djabal al Summāk etc In 531 (1137) the Atābeg Zangī regained Maʿarrat al-Nuʿmān When the inhabitants asked to have restored to them the estates of which the Franks had deprived them, he demanded the original charters of ownership from them but they had been destroyed He therefore had search made in the books of the office of the financial department of Halab (*Dafātir Dīwān Halab*) and found from the old payments of *kharādj* what families had owned property and restored them (Ibn al Athīr, ed Tornberg, xi 34 = *Hist or des Crois*, i 423, Abu 'l-Fidāʾ, *Annales Moslem*, ed Reiske, iii 470, v 274) Zangī razed the walls While King Fulco of Jerusalem was putting down a rising in Antākiya, Turkoman tribes entered the district of Maʿarrat al-Nuʿmān and Kafartāb but were driven out again by the Franks who thereupon conquered Kubbat b Mulaib (Kamāl al-Dīn, *Hist Or d Crois*, iii 667, where our town is meant by al Maʿarra, not Maʿarrat Masrīn as Rohricht, *Gesch d Konigr Jerusalem*, p 197 assumes)

The Byzantine emperor John II Comnenos in 532 (1138) invaded the district of Maʿarrat al-

Nuʿmān and then turned suddenly against Shaizar [q v.] which he besieged in vain The earthquake of 552 (1157—1158) wrought great havoc in Maʿarrat al-Nuʿmān (Kamāl al-Dīn, transl Blochet, in *R O L* iv 529)

Ṣalāḥ al Dīn in 584 (1188) went from Halab to Maʿarrat al-Nuʿmān from which he made a pilgrimage to the Shaikh Abū Zakarīyāʾ al-Maghribī who lived at the tomb of the Caliph ʿUmar Towards the end of the reign of Salāh al-Dīn (c 1191) the town formed part of the Syrian possessions of Taḳī al-Dīn (*Hist Or d Croix*, v 14) Maʿarrat al-Nuʿmān is several times mentioned in the wars between Salāh al-Dīn's sons About 589 it belonged to al-Malik al-Muzaffar b Taki al-Dīn ʿUmar Later we find its possession alternating between Hamā and Halab An old Shāfiʿī madrasa was built, according to the inscription on its gateway, in the reign of the Ayyūbid Sultān of Hamā, al-Malik al-Mansūr Muhammad I (plan in Creswell, *B I F A O*, xxi 13), it is by the same architect as the lofty square minaret of the great mosque Ibn al Mukaddam in 596 (1159) owned the towns of Fāmiya, Kafartāb and 25 estates in the district of Maʿarrat al-Nuʿmān In 597 the town was sacked by Sultān al-Malik al Zāhir Ghāzī of Halab and seems to have belonged to him for a period An inscription dated 604 (1207—1208) still bears his name Al-Malik al ʿĀdil in 598 went from Damascus via Hamā to Tall Safrūn where al Malik al-Mansūr of Hamā joined him His opponent al-Malik al Zāhir of Halab concluded a treaty with him by which he was to cede Kal at al-Nadjm to Afdal and the part of Maʿarrat al-Nuʿmān which he held to al-Malik al-Mansūr About 619 and 692 the town belonged to the lord of Hamā, al-Malik al Nāsir, it then passed temporarily to al-Malik al-Muʿazzam ʿĪsā of Damascus who placed a governor in it (Kamāl al-Dīn, transl Blochet, *R O L*, v 65, Maḳrīzī and Ibn Wāṣil, *R O L*, ix 497 *sqq* , Abu 'l Fidāʾ, *Annal Mosl*, ed Reiske, iv 312) During this fighting the lands of Maʿarrat al-Nuʿmān and Hamā were ravaged by a horde of Arabs under Mānīʿ (*R O L*, v 68) On the advice of Saif al-Dīn b Abī ʿAlī al-Hudhbānī, al-Malik al-Muzaffar of Hamā in 631 (1233—1234) had the citadel of Maʿarrat al-Nuʿmān rebuilt, but by 635 al-Malik al-Nāsir of Halab seized the town again and after a brief siege the citadel also The news of its fall was brought to Halab by a carrier-pigeon (*R O L*, v 100, 105, Abu 'l-Fidāʾ, *op cit*, v 404, 434, 596) The Khwārizmīs, routed by Čingis Khān, entered Syria over the Furāt and advanced via al-Djabbūl, Tall Aʿzāz and Sarmīn to Maʿarrat al-Nuʿmān which then belonged to Halab The geographer al Dimashkī also reckons the town to Halab

After the victory of Baibars over the Tatars at ʿAin Djālūt where the Mongol general Ketboghā who had been left behind in Syria by Hūlāgū fell, Khosrawshāh the Tatar lord of Hamā left Syria Sultān Kutuz thereupon restored this town along with Bārīn and Maʿarrat al-Nuʿmān, which had belonged for 23 years to Halab in 658 (1259) again to its original owner al-Malik al-Mansūr of Hamā

Henceforth with slight interruptions Maʿarrat al-Nuʿmān was in the possession of the lords of Hamā In the years 710 (1310) the Sultān granted Bārīn and our town to Abu 'l-Fidāʾ as a fief but he had to return them to Halab by 713 (1313) as the conditions of ownership had become extremely obscure on account of the frequent changes in the land-books and repeated grants by the Sultān (Abu 'l-Fidāʾ, *Annales Moslem*, v 274) A journey by the prince to Egypt in 716 resulted in the restoration of the town and citadel to him and a charter of presentation was prepared (*op cit*, v 302, 304) Abu 'l-Fidāʾ quotes a portion of a poem which the Aleppo secretary (*kātib al-inshāʾ*) Shihāb al-Dīn Mahmūd composed on the event (*op cit*, v 306) But by the end of the same year he had again to cede the town to Muhammad b ʿĪsā (*op cit*, v 310)

The district of Hamā was confiscated in 742 and placed under the Egyptian governor as a separate province (*djund*), henceforth Maʿarrat al-Nuʿmān formed a wilāyet of this province (al-Kalkashandī in Gaudefroy Demombynes, *La Syrie à l'epoque des Mamelouks*, p 233) In the Mamlūk period the town had seven gates (according to the *al-Rawd al-Miʿṭār fī Akhbār al-Aḳṭār*, quoted in al-Kalkashandī, Cairo, iv 142) the Halab gate, the great gate, that of Shith, called after the adjoining tomb of Seth, the garden gate, the Hims Gate and the like gate (*kadhā* probably a double gate of Hims) Maʿarrat al-Nuʿmān was a station of the Egyptian pigeon-post (al-ʿUmarī, *Taʿrīf*, transl R Hartmann, *Z D M G*, lxx 501, al Kalkashandī, iv 393)

After the battle of Marḍj Dābik in 922 (1516) the town passed to the Ottomans Della Valle a century later found here (1616) a native chief under Turkish suzerainty and the Agha who lived there in Pococke's time while paying tribute to the Porte retained complete independence Troilo found in the town "zwey schone Wirths Häuser, das eine war ziemlich baufällig, das andere aber noch wohl zugerichtet, umb und umb mit breiten langen bleyern Taffeln bedecket" Seetzen describes Maʿarrat al-Nuʿmān as the most northerly place in the Pashalik of Damascus (Sūrīya) Walpole was a guest of the mutasarrif of the town The district of the town later became a kadāʾ of the liwā of Halab When Sachau passed through it in 1879, a kāʾimmakām was living there, the frontier with Hamā was at Khān Shaikhūn After the world war the town was included in the territory under French mandate According to Sachau it has about 40 well built houses and with its well cared for gardens and fields looks a peaceful and prosperous country town, while van Berchem calls it "a large village of rather dismal appearance", it lies in a monotonous but well tilled plain at the foot of the eastern edge of the plateau of the Djebel Rīhā In the north-west it is commanded by the high hill on which stand the ruins of the mediaeval citadel (on the map by R Garett and F A Norris, in *Americ Archael Exp to Syria*, i 50 and *Princeton Exp*, Divis ii, Sect B part 3, Kalʿat in Nuʿmān is wrongly placed north-east of the town, cf however also van Berchem, *Voyage*, p 202 and Eli Smith in Ritter, *Erdk*, xvii 1067 and Sachau, *Reise*, p 94) Among the architectural features of Maʿarrat al-Nuʿmān the most notable, next to the great mosque, is the already mentioned Shāfiʿī Madrassa (built in 595) A notable building of the Ottoman period is a large square caravanserai on the south side of which is a fine gateway with an inscription of 974 (1566—1567) Sykes was shown by the Kāʾimmakām as one of the sights of the place the (alleged ?) tomb of the poet Abu 'l-ʿAlāʾ

(E HONIGMANN)

MAʿBAD, ABŪ ʿABBĀD MAʿBAD B WAHB, was one of the great singers and composers of the early Umaiyad period He belonged to Madīna and was a client of ʿAbd al-Raḥmān b Katan (cf *Aghānī*, i 19) of the house of Wābiṣa of the Banū Makhzūm He was a half-caste, his father being a negro In his youth he was an accountant, but having taken music lessons from Sāʾib Khāthir, Nashīt al-Fārisī and Djamīla [q v] he adopted music as a profession and soon made a name for himself During the reign of ʿAbd al-Malik (65—86 = 685—705) he carried off the prize at a tournament of song organised by Ibn Ṣafwān at Makka He sang at the courts of al-Walīd I (86—96 = 705—715), Yazīd II (101—105 = 720—724), and al-Walīd II (125—126 = 734—744), the second of these treating him with unheard of favour On the death of Ibn Suraidj [q v] about the year 107 (726), Maʿbad became the leading singer, and when al-Walīd II was called to the throne, Maʿbad, although an old man, was invited to his court at Damascus Here he was honourably treated and received a gift of 12,000 pieces of gold Shortly afterwards he was again commanded to appear at court, but he was very ill when he arrived Paralysis intervened, and although he was lodged in the palace itself, and had every possible attention, he died (125 = 743) At his funeral, the caliph and his brother al-Ghamr, walked in front of the bier, whilst the renowned songstress Sallāma al-Kass, one of Maʿbad's pupils, chanted one of his elegies

Maʿbad must undoubtedly be counted among the "four great singers" (*Aghānī*, i 98, 151, ii 127) whatever opinions may be held as to the others A poet of Madina said "Ṭuwais, and after him Ibn Suraidj, excelled [in singing], but pre-eminence belongs to Maʿbad" Ishāk al-Mawṣilī (cf ii 439) said "Maʿbad was a consummate singer, and his compositions reveal a talent superior to all his rivals" Poets like al-Buhturī [q v] and Abū Tammām [q v] have shown the worth of Maʿbad in Arabian musical history Among the compositions of Maʿbad his most famous were the seven known as the "Cities" (*Mudun*) or "Fortresses" (*Ḥuṣūn*), whilst five others were celebrated as the *Maʿbadāt* His fame was made by his adoption of a grandiose (*kāmil tāmm*) style of composition in the rhythms (*ikāʿāt*) called *thakil* or "heavy" Among his pupils were Ibn ʿĀʾisha, Mālik al-Ṭāʾī [q v], Yūnus al-Kātib [q v], Siyat, Sallāma al Kass and Habbāba

AL **MAʿBARĪ**, ZAIN AL DĪN wrote about the year 985 (1577) for Sultān ʿAlī ʿĀdil Shāh of Bīdjapūr (d 987 = 1579) a brief history of the spread of Islām in Malabar, the coming of the Portuguese and their campaigns against the Muslims from 908 to 985 (1498—1578) The work is preserved in Brit Mus MS, N° 94, India Office N° 714 and 1044, 5 and in Morley, *Catalogue of Historical MSS*, N° 13 and is entitled *Tuḥfat al Mudjāhidīn*, extracts were given by John Briggs in *Ferishta*, *History of the rise of the Mahomedan power in India*, London 1829, iv 531 *sqq* and it was translated by M I Rowlandson, *Tohfut ul-Mujahideen, an historical work in the Arabic language*, London, Or Transl Fund 1833 and ed by D Lopez, *Historia dos Portugueses no Malabar, por Zinadim, manuscripto arabe do seculo XVI puchcado e traduzido*, Lisbon 1898

(C BROCKELMANN)

MACASSAR, an important seaport on the island of Celebes, on the Bay of Macassar, it is the capital of the administrative district of "Celebes en Onderhoorigheden" and also of the division of it of the same name administered by an assistant-resident By the native population the town which has made very great

progress in the last few years, is still often called by its original name of Udjung-pandang (Djum pandang) The Dutch gave it the name Macassar from the kingdom of the same name The heart of the Macassar country is the former principality of Gowa, which was put under the direct rule of the Dutch East India government in 1911 and is a remnant of the once very powerful kingdom of Macassar The area inhabited by the Macassars in the wider sense stretches over the whole southern part of the southwestern peninsula of Celebes, as well as over the island of Saleier and several groups of island in the neighbourhood The remainder of southern Celebes is inhabited by Buginese who are closely related to the Macassars and whose language, manners and customs are very similar

The Macassars do not differ much in physical appearance from the Javanese, they are of above medium height and in general well built Their mode of life, dress and dwellings are simple The main industry is agriculture which is very successful on the generally fertile soil in the plains rice is grown, often on wet fields, in the mountains maize particularly, but also vegetables and leguminous plants and cocoa-nuts The cattle-rearing also is not unimportant The native industries which are carried on in the houses of natives are not on a very high level, the work of the gold and silversmiths is relatively good An unfavourable verdict has often been passed on the character of the Macassars but this seems to be exaggerated, they find it difficult to submit to a regular life but for the rest they are not difficult to govern Among their vices are their fondness for dice and cockfighting Originally three classes were distinguished in Macassar society, the princes and nobles, the people, and the slaves Slavery has now been abolished even in the districts under independent rule

The population generally professes Islām and its laws are on the whole conscientiously observed and the Muslim principal feasts faithfully celebrated But one cannot of course say that Islām regulates the whole of their social and religious life The customs which survive from an earlier period are very numerous and form a striking contrast to the ideas of Islām In every village there is still to be found a little building which is used for the worship of the spirits of the animistic period (the chief of whom is Karaeng Lowe, i e the "great prince") and where heathen priests offer sacrifices There can therefore be no question of fanaticism and the very simple mosques are in general in disrepair The highest Muhammadan office is filled by the *kali*, usually a man of princely descent, who used formerly to be appointed and dismissed by the king He had control of all matters relating to worship and he also gave legal decisions in questions of inheritance and played an official part in marriages and divorces There were lower officials under him who acted as preachers and precentors, performed the offices of a sexton and gave elementary religious instruction Their knowledge of Islām is usually very slight The revenues of their clergy consists of the *sakka* (*zakāt*), the *pitara* (*fiṭra*) and of presents on all sorts of occasions at which they take part, and of a certain percentage (*tjuke*) on the division of inheritances The *sakka* is irregularly and unsatisfactorily paid, the *pitara* much better

No particulars are known of the earlier history of Macassar and of the regions inhabited by the Macassars in general In the middle of the xivth century they were under the rule of the Hindu-Javanese kingdom of Madjapahit According to the native chronicles of the royal houses of Gowa and Tello, which, at least so far as the earliest period is concerned, are largely mythical, the Gowa originally consisted of an alliance of nine small districts each under a noble, after the government had passed into the hands of one man and the kingdom had expanded, to include for example the lands of what was later Tello, Gowa is said, after the death of the sixth king (at the same time the first whom the chronicles represent to us as an ordinary mortal), to have been divided between his two sons, the one became ruler of Gowa and the other of Tello It is certain that, so far as our knowledge goes, there were always close relations between these two kingdoms and that there was a certain degree of unity about them, they were known together to Europeans as the "kingdom of the Macassars" About the year 1512 Malays from Sumatra were given permission to settle in Macassar and it was perhaps they who first brought Muslim ideas to South Celebes When the Portuguese appeared there in the middle of the century, they found only a few foreigners there, who were Muslims, it was not till the beginning of the xviith century that the Macassars in general adopted this new religion During the reign of Tunidjallo (1505—90), Bābullāh, king of Ternate, came to Macassar, concluded a treaty and at the same time attempted to introduce the Muslim religion into South Celebes In 1603 Sultān ʿAlā uddēn and one of his brothers became converts to Islām, which thereupon spread rapidly over Gowa and Tello, chiefly through the influence of Karaeng Motawaiya, administrator of Gowa and prince of Tello We find traditions about the first preaching of Islām in South Celebes, similar to those of other parts of the archipelago There they are particularly associated with a certain Dato-ri-Bandang, a Minangkabau peasant from Kotatĕngah, who is said to have landed about 1606 in Tello and to have preached the Muslim faith, at the same time performing all kinds of miracles Next to him, the two main apostles of Islām are said to have been his contemporaries Dato ri-Tiro and Dato Patimang Their tombs are still much visited

In the first half of the xviith century the kingdom of Macassar extended very much, so that it brought under its suzerainty almost the whole of Celebes, Buton, Flores, Sumbawa, Lombok and the east coast of Borneo The Dutch East India Company, which had a good deal of trouble with the Macassars, did not succeed till 1637 in concluding a treaty with them which permitted freedom of trade but allowed them no permanent settlement But as Macassar caused the Company further difficulties in the Moluccas, a war resulted in which the town was burned By the peace concluded in 1660, the king lost a portion of his territory, the Portuguese were forbidden to remain in the kingdom while the Company were allowed to settle and trade freely in Macassar Peace was again broken in 1665, the Admiral of the Dutch East India Company, Speelman, sailed with a large fleet to Celebes, destroyed the Macassar fleet and forced the king to sign a treaty of peace ("Bongaaisch Verdrag", 1667, confirmed in 1669), whereby

the suzerainty of Macassar over Celebes was finally destroyed Even after this, the relations of the Company and later of the Dutch government with the kingdom were not good Tello was incorporated in the government territory in 1856 and leased to the prince of Gowa In 1905 an armed expedition was sent to Gowa, since 1911, it has been under direct rule

(W H Rassers)

MADAGASCAR. With its area of 228,340 sq m, Madagascar is the third largest island in the world after New Guinea (234,770 sq m) and Borneo (284,630 sq m) Its area is a little greater than that of France (207,000 sq m), Belgium (11,373) and Holland (12,740) combined It is oriented from N N E to S S W and measures 1,000 miles in its greatest length and 350 in its greatest breadth with a coast line of 3,000 miles The latest estimates put the native population at three millions

The island was called *al-Komr* by the Arabs, *Bukini* (lit where there are (*ni*) *Buki*) by the Bantus of the neighbouring East African coast and by certain Malagasy tribes The Portuguese called it "Island of St Laurence" because they discovered it on that saint's day, August 10, 1506, and finally it became known as Madagascar from Marco Polo's name for it The orthography جزيرة القمر unvocalised gave rise to the false etymology *Djazirat al-Kamar* "island of the moon" with which the Portuguese historians became acquainted in the xvith and xviith centuries and which survived down to the end of the xixth century among the sailors of Southern Arabia

The name *Komr* appears for the first time in the *Kitāb Sūrat al-Ard* of Muhammad b Mūsā al-Khwārizmi (d 220 = 835 or 230 = 845), in which mention is made of the famous "mountain of Komr", جبل القمر in which the Nile was reputed to rise But the interpretation by جبل القمر "mountain of the moon" was already old in the ninth century for it is found as early as the ὄρη σεληναῖα of Ptolemy which the majority of Arab geographers and notably al-Khwārizmī took as a model The mountain called "of Komr" or "of the moon" is mentioned by all the Muslim geographers who deal with eastern Africa We shall see below how and to what degree the name of this mountain is connected with that of Komr = Madagascar

In my memoir entitled *Le K'ouen-louen et les anciennes navigations interoceaniques dans les Mers du Sud* (*J A*, 1919, vol 13 and 14), I have endeavoured to trace the origin of the name Komr, the documents there utilised enable it to be connected with the name of the Kmers and of the 崑崙 K'un-lun of the Chinese The Chinese sources take us also to East Africa in which the *Cu fan če* of Čao Ju-kua (1225) reproducing word for word two passages of the *Lin wai tai ta* of Čow K'iu-fei (1178) locates a land of *K'un-lun ts'en k'i kuo* "land of the Zangs of K'un lun", which is close to a large island (= Madagascar) which is the regular home of the *p'en* or *rokh* of the Arabs, whose feathers are so large that they can be used for holding a half-*mudd* of water The old name of Madagascar has survived in modern geography in the name of the Comoro Islands, the little archipelago lying to the N W of the island

In his *Exploração portugueza de Madagascar em 1613* (*Bol Soc Geogr* of Lisbon, 7th series, 1887, p 313—356), Father Luis Marianno refers to the Malagasies as *Buque* (more correctly *Bûki*), which is also found in later travellers It is the name given by the Eastern Bantu to the large African island *Bûki*, or with the addition of the locative suffix *-ni Bukini Bûki* is to be connected with the Malagasy word *vâhuâki* "king-

dom, subjects" (phonetically *vāhwāka*), which is a plural Bantu form (*wa-Bûki*) malagasized *va-* < Bantu plural form, *wa* + euphonic intervocalic Malagasy *h* + *wāka* This radical is identical with the reduplicated form used by the Arab geographers, *Wakwāk* or *Wākwāk* [q v] and phonetically equivalent to the *Bûki* of the early travellers and the Eastern Bantu *wa-Bûki*, "the Malagasies" and *Bukini*, "Madagascar" This explanation seems preferable to that which I had proposed in 1904 in *J A*, vol III, p 496 *sqq* I think we must agree that the Malag *vāhûaka* comes from *wă Bûki* and recognise a Bantu substratum in the Malag word

The present name of Madagascar is given by Marco Polo in the form *Madeigascar* (cf *The Book of Ser Marco Polo*, ed Sir Henry Yule and Cordier[3], II, p 411 *sqq*) Yule long ago pointed out that Marco Polo had not visited Madagascar and only knew it by hearsay, and that the information he gave about it really related to the adjoining east coast of Africa The origin of this name is as follows As I have already pointed out in studying once more this chapter of Marco Polo, *Madeigascar* is undoubtedly a slightly erroneous formation of the form *Zang bār* and should be corrected to *Madeigas-bār* = "land of the Malagasies", just as *Zang-bār* means "land of Zang or of the Zangs" (cf *Memoires Soc de Ling de Paris*, vol XIII, 1905—1906 *Trois etymologies malgaches*, p 418—422), where زنج بر should be corrected to زنجبار) This correction is justified by the following facts In the *Travels* already quoted, Father Luis Marianno mentions a kingdom of the S E of Madagascar which he calls *Mitacassi*, *Matacaci*, *Matacasi* (or *Matakasi*) Three years later in 1616, Father d'Almeida, travelling in the same country also mentions a kingdom of *Matacassi* Cauche in his *Relation*, published in 1651 by Morisot (*Relations veritables et curieuses de l'Isle de Madagascar et du Bresil*, p 10, 49, 99, 124, 127, 134), mentions a province called *Madegache* by some and by others *Madegasse*, the inhabitants of which he calls *Malegasses* and *Mallegasses* He also uses the term *Madagascarois*, but with the wider sense of the whole island and its inhabitants Flacourt (*Histoire de la grande isle Madagascar*, 1661, p 1) says "The island of Sainct Laurens is called Madagascar by the geographers, by the inhabitants *Madecase*, by Ptolemy *Menuthias*, by Pliny, *Cerne* , but its real name is *Madecase*" Later writers are all more or less inspired by the work of Flacourt and need not be discussed here All these different readings go back to two forms *Madagasi* and *Malagasi* which correspond exactly to two main categories of dialects those with dental *d* and those with liquid *l* It is the latter form that came to prevail over the whole island, sometimes with the sibilant *Malagâsi* and sometimes with the palatal *Malagâši* Both are paroxytons The modern vernacular frequently uses the abbreviated form *gâši* and even *gâš* These facts seem to justify the explanation suggested above for the name *Madagascar* which we owe to Marco Polo

The doublet, *Malagâsi-Madagâsi*, *Malagâsi-Mâdagâši* is obscure According to the morphology of the language it may represent a form * *mala* or * *mada* + *gâsi* which recalls nothing, whether we take the form with soft letters *mada-gâsi* or that with hard noted by the Portuguese *mata-kâsi* Nor do we know whether we have to deal with a western Indonesian root or a Bantu stem In any case it is probable that we have to deal here with a foreign tribal name, the eastern or western origin of which can no longer be explained from an ancient or modern language

In the Arab geographers the first detailed account of the island of Komr-Madagascar is found in the *Kitāb Nuzhat al-Mushtāk fi Ikhtirāk al-Āfāk* (1154) of al-Idrīsī who included the large African island in the country of the Zangs "The people of the island of Zābag = Sumatra", he says, "in the seventh section of the first clime come to the country of the Zangs in large and small ships and use it as a centre for trading in their merchandise as they understand one anothers' language" (MS 2221 of the *Bibl Nat Paris*, f 29*a*, l 15) This passage is very important as it shows that in the XIIth century, Madagascar, wrongly located in the country of the Zangs, had been long before colonised by immigrants from Sumatra who had introduced their language into the island and Malagasy was derived from it In the eighth section of the same clime the island of Komr Madagascar is situated seven days' sail from the Maldives Its king lives in the town of Malāy This is an island four months' journey in length It begins near the Maldives and ends in the north opposite the islands of China The geographer of Roger of Sicily, as his map shows, has combined into one huge island Madagascar, Ceylon and a part of Sumatra In the ninth section, we are told that the people of Komr and the merchants of the land of the Mahārādja (= Sumatra) come to the inhabitants of the east coast of Africa and are welcomed by them and trade with them (cf my *Relations de Voyages*, Index, s v *Komr* and *Komor*)

Yākūt in his *Muʿdjam* (completed in 1224) says simply (vol IV, p 174) "al-Komr is an island in the centre of the sea of the Zangs, which contains no larger island than this It contains a large number of towns and kingdoms Each king makes war on the others Amber and the leaf *al-komāri* (sic) are found on its shores This is a perfume, it is also called betel flower Wax is also obtained from it" The *Kitāb al Mushtarik* of the same author contains identical information taken from the *Muʿdjam* (ed Wüstenfeld, p 358) but the latter text has more correctly "the leaf *al-komri*"

Abu 'l-Hasan ʿAlī b Saʿīd al-Maghribī, best known as Ibn Saʿīd, was born in 1208 or 1214 near Granada and died at Damascus in 1274 or in Tunis in 1286 The Bibliothèque Nationale in Paris has a copy catalogued as Ms n° 2234, a treatise on general geography which runs from f 1 to 117 and is entitled "The book collected and epitomised by ʿAlī b Saʿīd al-Maghribī the Spaniard of the Book of the Geography (of Ptolemy) in seven climes, and he has added to it longitudes and latitudes from the book of Ibn Fāṭima" This copy of the original manuscript is dated 714 (1314—1315) and belonged to the celebrated geographer Abu 'l-Fidā' The text contains in a few lines information of the highest importance to the following effect "The Komr who have given their name to the mountain of this name situated in eastern Africa are brothers of the Chinese They originally lived with the Chinese in the eastern regions of the earth, i e

in the interior of the Asiatic continent Discord having broken out between them, the latter drove the Komr to these islands After a certain period of time, dissensions broke out among the Komr who had migrated into these islands, the king and his family migrated once more and went to the large island of Komr = Madagascar and the King settled in a town of this large island, called Komrīya These Komr immigrants to the large island increased in numbers and spread through the different centres of the island, but new dissensions broke out and provoked a new exodus and many of them went to settle in the south at the beginning of inhabited land along the mountain which bears their name" (cf *Relations de Voyages*, II 316 *sq*) If we translate these successive migrations into terms of modern geography, we get the following The Komr, related to the Chinese, originally inhabited Central Asia, migrated from the interior of the continent where they were neighbours of the Chinese to the adjoining maritime lands and islands (= Indo-China, Malay Peninsula and Indonesia, in Decade II, Book IX, Chap IV of *Da Asia*, p 352 of the little edition of 1777, the Portuguese historian Joan de Barros says that the Javanese claim to have originally come from China) They later migrated from Indonesia, more accurately from Sumatra (cf my *Empire sumatranais de Çrivijaya* in *JA*, 1922, vol XX) to the large island which bears their name, the island of Komr = Madagascar and from there to the land of the mountain of Komr, the famous mountain in which the Nile was thought to rise = East Africa

The first migration, that from Central Asia to the coasts of trans Gangetic India certainly took place long before our era Several centuries must have passed between the departure of the emigrants from the plateaus of Eastern Tibet, their expansion in the region of the coast, from Burma to Indo-China and their crossing to Indonesia Ibn Saʿīd lived in the XIIIth century How then could he have known of events that took place several millenia before his time and are not recorded elsewhere? Neither the history nor legends of the Far East knows anything of such happenings The Indianists, Sinologists, and Indo Sinologists whom I have consulted cannot think of any text or inscription directly or indirectly referring to them I am surprised at such a question being raised by a comparatively late Arabic text and I know no satisfactory answer I was prepared by my studies on Madagascar to accept Ibn Saʿīd's statement that the large African island was colonised by Sumatrans whose ancestors had come from the Asiatic Continent, this is exactly what Ibn Saʿīd tells us The agreement between the Arabic text and historical events is striking, but this undeniable agreement is unexpected for we do not know as well as we ought, how and where such information could have been obtained in the XIIIth century I put forward the hypothesis (*Relations de Voyage*, II 320) that Ibn Saʿīd might have got the information at the court of Hūlāgū where he spent some time in the XIIIth century But we know from his biographers that the Spanish traveller lived in Baghdād, studying assiduously at the 36 libraries of that city and making extracts from manuscripts He may have found in these works the statements he has so fortunately preserved for us

A contemporary of Ibn Saʿīd, Damīrī or Nadjm al-Dīn Abu 'l-Fath Yūsuf b Yaʿḳūb b Muhammad, better known as Ibn al-Mudjāwir al-Shaibānī of Damascus, prepared his *Taʾrīkh al Mustabṣir* (Cod *al-Mustansir*) in 1230 (MS 6021 of the Bibl Nat in Paris) In the 25 folios devoted to the history of ʿAden, 72 *a*, *b* deals with the voyages of the Komr from their original home to ʿAden and notably in 626 (1228) from Madagascar to the African coast and to ʿAden (cf *JA*, vol 13, 1919, p 469—483)

The following geographers Shams al Dīn Abū ʿAbdallāh Ṣūfī al-Dimashkī (d 1325), Abu 'l-ʿAbbās Ahmad al Nuwairī (d 1332), Abu 'l-Fidāʾ (1273–1331), Ibn Khaldūn (d 1375), Maḳrīzī (1365–1442) tell us nothing particular about the island of Komr The towns, which some of them locate in the great African island, are really in Ceylon or farther east or cannot be identified (cf *Relations des Voyages*, index, s v *Komor* and *Komr*)

In the XVth century Ibn Mādjid (cf SHIHĀB AL-DĪN AHMAD B MĀDJID) in his *Kitāb al-Fawāʾid* (cf my *Instructions nautiques et routieres arabes et portugais*, fol 1, p 68*a*, *b*) includes the island of Komr among the ten large islands of the world and mentions it after the Arabian peninsula "The island which is the second in size", he says, "is the island of Komr It is now an island (sic) The information I have collected orally does not agree about its length or breadth for it is quite apart from the world and the inhabited climes of the earth This is why there is doubt on the subject In the large books on geography it is said to be the largest of the inhabited islands Between it and the land of Sofāla and the islands dependent on it (= the Mozambique Channel) there are islands and reefs In spite of this sailors are able to pass among the islands and reefs The island of Komr takes its name from that of Kāmrān, son of ʿAmur son of Shem son of Noah To the south it has the sea which the Greeks called Okiyānūs, this is the ocean surrounding the world (*al-Muhīt* in Arabic) It is the beginning of the southern darkness, which is to the south of this island of Komr" Ibn Mādjid frequently mentions the island of Komr in his other Nautical Instructions also and it undoubtedly is Madagascar

With Sulaimān al-Mahrī (cf below) our information becomes more definite In his *al-ʿUmdat al mahrīya* in Chap IV, dealing with the islands and sailing routes along their coasts (cf *Instructions nautiques et routieres arabes et portugais*, vol II, f 22*a*), he says "Let us begin with the island of Komr because it is a large island which stretches along the coast of Zang and Sofāla Its northern extremity is called Rās al-Milh (= Amber Cape), it lies in 11 *iṣbaʿ* of Naʿsh ($\alpha, \beta, \gamma, \delta$ of the Great Bear = 8° 37′ South, the true latitude is 11° 57′) Its southern extremity which is called Hūfā (? = Cape Sainte Marie) is in 3 *iṣbaʿ* of Nash (= 21° 37′ south, the true latitude is nearly 25° 38′) according to some, in 1 *iṣbaʿ* of Naʿsh (= 24° 51′ south) according to others This latter latitude is the more accurate There is a difference of opinion about the direction of the sea-routes along its coasts, because this island is remote from the inhabited earth There are two opinions regarding the direction of the route along its east coast according to some one should sail S W ¼ W according to others S W There is a third opinion that one should go W S W from one end to the other of the island The last two are those of the older sailors

masters In my opinion, adds Sulaimān al-Mahrī, it is possible that the route should be W S W, then S W ¼ W, then S W and in another direction still for two reasons the first that it is a large island, that its coast is long and the route is also long The second reason is that the directions given have not been verified on account of the fewness of the voyages made to this island and the insufficient nautical knowledge of those who have been there Sailing masters (*muʿallim*) of Zang have told me that the route on the east coast from Rās al-Milh to the place where Naʿsh is 8 *isbaʿ* (= 13° 30′) south is to the south and from this place to the south end of the island is S–¼–S W I have recorded that the route on its west coast from Rās al Milh to the place where Naʿsh is 8 *iṣbaʿ* (= 13° 30′ S) is to the south, and from this place to the south end of the island S–¼–S–W On the west coast from Rās al Milh to the place where Naʿsh is 6 *iṣbaʿ* (= 16° 44′), the coast is perfectly safe, from 6 *iṣbaʿ* to its south end there is a *rikk* ("bank" or "shallow") about 2 *zām* (= 6 hours) sail or more in length to the neighbourhood of the coast Between the island of Komr and the coast (east coast of Africa) there are four large inhabited islands, near one another, to which the people of Zang go The first of these islands is Angazidya (= Great Comoro) It is in 11 *isbaʿ* ¼ of Naʿsh (= 9° S approx , Mioni, the capital of Angazidya, is in exactly 11° 40′ South) Between it and the African coast it is 16 *zām* (= 48 hours) sailing The second, Mulālī (our Mohali), is in 11 *isbaʿ* of Naʿsh (= 8° 37′ S, true Lat about 12° 20′), the third Dumūnī (capital of Anjouan) which is in 11 *iṣbaʿ* of Naʿsh (= 8° 37′ S, true Lat 12° 15′) is to the east of Mulālī, the fourth Mawutū (our Mayotte) is in 10 *iṣbaʿ* ½ of Naʿsh (= 9° 25′ S, true Lat 12° 46′ 55″) To the east of these islands lies a great reef of rocks, about 4 *zām* (= 12 hours) sail, usually called *ʿAin al-Bahr* ("eye" or 'source of the sea') The harbours of the west coast of Komr are Langāni (15° 17′ S), Saʿda [true Lat approx 13° 54′] and Manzalādjī (= the bay of Mahadzamba, whose west point is in approx 15° 12′ Lat) Those of the west coast are Bender Banī Ismaʿil (in the same latitude as Langāni on the west coast), and Bīmāiūh (= Vohemar in 15° 21′ 15″) All these ports are dangerous (for ships) except Langāni Know that between Rās al-Milh and the coast of Zang, there are 50 *zām* = (150 hours) sail, and 20 *zām* (= 60 hours) to the east of Rās al-Milh there is an inhabited island called Munawwarā (one of the southern Maldives?) To the southeast of the island of Komr lie numerous islands called Tīrakhā (the Mascarene Islands), they are 12 *zām* (= 36 hours) sail from the island of Komr"

In his *Kitāb al-Minhadj al-fākhir* (f 73*b* of the same MS), Sulaimān al-Mahrī gives another description of the island of Komr which does not differ from that given above Four pages earlier on f 71*b* he mentions several other harbours of the island of Komr with their latitude calculated from the altitude of the Great Bear

Island of Munawwarā by 11 *iṣbaʿ*, Bender Ismāʿīl or Banī Ismāʿīl on the east coast and Lūlangānī or Langānī on the west by 10 *iṣbaʿ*, Bīmārūh on the east coast, Anāmil on the west by 9 *iṣbaʿ*, the island of Amber (*Djazīrat al-ʿAnbar*) on the east coast and Bender al-Nūb on the west by 8 *isbaʿ*, Noshim (?) on the east coast and Malawīn (?) on the west by 7 *iṣbaʿ*, Manakāra on the east coast (true Lat 22° 08′ 30″) and Bender (al-)Shuʿbān, "port of the banks", by 6 *isbaʿ*, Bender Hadūda on the east coast and Bender Kūrī on the west by 4 *isbaʿ*, Wabaya (according to the Turkish text of Sidi ʿAlī, the name is illegible in MS 2559) on the east coast and Bender Hīt (or Hait) on the west coast by 3 *isbaʿ* Bender Hadūda (sic) on the east coast, no name known on the west coast in this latitude by 2 *iṣbaʿ*, Bender Kūs (or Kaus) on the east coast and the bay of Kūrī on the west coast by 1 *iṣbaʿ*, the majority of the names of harbours, which are sometimes found on both coasts recall nothing known elsewhere

Malagasy undoubtedly belongs to the western Indonesian group of the Malayo-Polynesian family Down to the adoption of the Arabic alphabet, the language was only oral and, so far as we know, never written down in any alphabet The lack of epigraphic material on the one hand and of ancient monuments on the other deprives us of any chance of regaining the past history of this vast island Before the XVIth century, a few Arabic and Chinese texts would constitute our only documents, if the linguistic substrata did not yield us some valuable information These substrata are of two kinds, Bantu and Sanskrit

These former are divided into three categories

1 The borrowings of relatively recent date from Swahili, which in turn got them from Arabic, of the type Malag *bahari*, "sea" < Swahili *bahari* < Arabic *bahr*, Malag *kamba*, "cocoanut fibre rope" < Swahili *kamba* < Arabic *kinbar*, *kanbar*, Malag *sukani*, "rudder" < Swahili *usukani* < Arabic *sukkān* These loanwords are practically only found in the maritime dialects of the N W and W coasts

2 The borrowings from Swahili of the type Malag *būzu*, "baobab" < Swahili *mbûyu*, Malag *bwāna*, "master", "sir" < Swahili *bwāna*, Malag *kibāba*, "measure for rice" < Swahili *kibâba*, "measure of about a quart", etc Like the preceding, these loanwords are found almost solely in the maritime dialects of the west coast, it may therefore be assumed that they also are of recent introduction

3 The following words are, on the other hand, used either in the old and modern coast dialects or in the dialects of the centre and east, that is outside of the zone frequented by the sailors of the east coast of Africa, Zanzibar and the Comoros They are found in manuscripts of the Bibliotheque Nationale and in old records of travel, they are not borrowings, but belong to an old substratum of the language

Malag *amb̂ûa* "dog" < Bantu *mbwa*,
Malag *akânga* "guinea-fowl" < Bantu *kanga*,
Malag *amp̂ûndra* "ass" < Bantu *punda*,
Malag *anômbi*, *aûmbi*, *ûmbi* "ox" < Bantu *ngômbe*,
Malag *angânu* "tale, fable" < Bantu *ngano*,
Malag *anôndri*, *aûndri ûndri* "sheep" < Bantu *nôndi*,
Malag *finêngu*, *fnnêngu* "green pigeon" < Bantu *ninga*,
Malag *gîdru* "kind of lemur" < Bantu *ngedere* "little black monkey",
Malag *kâzi* in the tribal name *Kazi-mambu* "madame" < Bantu *mkazi* "woman, wife",

Malag *kúnguna* "bog" < Bantu *kunguni*,
Malag *kūnku*, *kōnko* "mangrove" < Bantu *mkoko*,
Malag *kwēra* "parroquet" < Bantu *kwaru*,
Malag *múngo*, *mohúngo*, *mahógo* "manioc" < Bantu *muhogo*,
Malag *mushāvi*, *musávi* "sorcery" < Bantu *mshawi* "sorcerer",
Malag *mushungu* "poison" < Bantu *ushungu* "vegetable poison in which arrows are steeped",
Malag *úsi* "goat" < Bantu *mbuzi*,
Malag *papángu* "milvus aegyptius" < Bantu *panga*, *kipanga* "falcon",
Malag *sambu* "ship" < Bantu *čombo*,
Malag *vahíni* "stranger to the country or place where one is" < Bantu *wagéni* "foreigners",
Old Malag *vazāka*, modern Malag *vazāha* "stranger (means particularly foreigners of white race)" < Bantu *wuzúngu* "white strangers, Europeans", etc

The place names of Madagascar further show a certain number of names of villages on the coast and of rivers running into the sea which are also Bantu, some Swahili and others ordinary Bantu They are referred to in my memoir on *L'Origine Africaine des Malgaches*, *J A*, 1908, vol II

The Sanskrit substratum contains many words of various classes

1 Names of gods, spirits and of caste

Old Malag *Yana-hāri*, modern Malag *Zana-hāri*, "the supreme deity", lit "the sun god", cf *Čam Yan-harĕi* < Indonesian *yan*, "god", Sanskrit *hari*, "sun", the sun deified

Old Malag *taivadey*, "god of evil", *cam debata* < Sanskrit *devata*, "deity" (for the inverse semantic progress, cf Sanskrit *deva*, "god" > Zend *daēva*, Pahl *dēv*, Pers *dīv*, "evil spirit")

Old Malag *Rau* in the expressions *hanin rau vulan*, lit "eaten by Rāhu the moon" = eclipse of the moon, *alin-rau masuandru*, lit "obscured by Rahu the sun" = eclipse of the sun

Malag *andrián*, *andriana*, "noble", "of royal or noble caste" < Kawi *ārrya* < Sanskr *árya*, etc

2 Names of the months

The names of the months in the Indian calendar are found in the dialects of all the tribes of Madagascar They have not however been preserved in the original order and a month that is placed at the beginning of the year by one tribe is put at the middle or end by another On the other hand *śrāvana*, *āśvina* and *phālguna* are not found in the Malag lists, they are replaced by two *asāra*'s (large and small), two *fisāka* (large and small) and a month called *bita* (?)

Skr *pauṣa* > Malag *fāusha*, *fósha*, *fúsha*, *fúsa*,
Skr *māgha* > Malag *máka*,
Skr *caitra* > Malag *ashútri*, *asútri*, *shútri*,
Skr *vaiśākha* > Malag *fishāka*, *fisāka*, *shāka*,
Skr. *jyaistha* > Malag *tsihiá*, *hiahiá*,
Skr *āṣāḍha* > Malag *ashára*, *asára*,
Skr *bhādrapada* > Malag *vatravátra*,
Skr *kārttika* > Malag *hatsíha*, *hashíha*, *hashía*,
Skr *margaśirṣa* > Malag *shíra* in *vula-shíra* "the month or moon of shíra",
cf also Skr *varṣa* "season of the rains" > Malag *vāratsa*, *vāratra* in *faha-vāratsa*, *faho-vāratra* "season of hurricanes"

3 Common words

Skr *koṭi* "10 millions" > Malag *kéti* "100 miles" > old Malag *héti* > modern Malag *hétsi* "100 miles",
Skr *laca* "glass" > Malag *kāca* > old Malag *hátsa*,
Skr *alābu* "melon, pumpkin" > Malag *lábu*, Batak *tābu* > Malag *távu*
Skr *megha* "cloud" > Malag *mēga* > old Malag *míka*,
Skr *tāmbūla* "betel" > Javanese *tĕmbula* > old Malag *tambúru*,
Skr *tāla* "kind of palm-tree" > Batak *otal*,
Malag, Javanese, Sundanese *lontar* > Malag *dára* "kind of palmtree",
Skr *upavāsa* "fast" > Malag *puwāsa* > old Malag *afuče* "act of fasting",
Skr *catur* "four" > Atchinese *čato* "a square game played by women" > Malag *kátra*,
Skr *mandapa* "building erected on the occasion of a fête, a pavilion" > Mal *mĕndapa*, pavilion, building in which guests are received > Malag *lāpa*, in composition *dāpa*, "royal residence, court, palace, tribunal, a roof in the centre of the village under which business is discussed",
Skr *tantra* "manual, book, magic treatise" > Balinese *tantri* "story, fable, in which animals are the principal characters" > Malag *tantára* "story, legend, tale",
Skr *tamraka* "copper" > Malag *tĕmbāga* > Balinese *barak* "red copper" > Malag *varáhi*, *varáhin*, *varáhina*,
Skr *śringavera* "ginger" > Malag *shakarívu* and the form with metathesis *sakavíru*, etc

Introduced by Muslims speaking Arabic, Islām has left numerous traces in Madagascar, the first and most important is the Arabic alphabet The task of adapting the Arabic alphabet to the transcription of Malagasy was delicate and difficult It was however satisfactorily accomplished The Malagasy sounds *b*, *d*, *f*, *h*, *l*, *m*, *n*, *r*, *s*, were transcribed by the corresponding Arabic letter The other sounds were rendered as follows Malag *g* by ع, guttural *n* by ع and sometimes by غ, the group *ng* also by غ, the sounds *dr* and *tr* which in Merina represent practically the *dr* and *tr* of the English *drive* and *travel* (they are pronounced a little farther back in the non-Merina dialects) generally by ڕ, sometimes by ر with a *tanwīn* (e g *antendri*, "date palm" is rendered by أڕ and the context alone indicates whether ڕ is to be read *dr* or *tr*), Malag *t* by ط with a point below, *ts* by Arabic ب, Malag *v* by و but the Arabic ص is also pronounced *v* Arabic رمضان *ramadān* > Malay *ramavá*, Malag *z* by ى pronounced *z* نى "little child", the sound *dz* by ڒ and in modern Arabic-Malay sometimes by ڎ The islāmicised non Semitic peoples, who have adopted the Arabic alphabet and who have to transcribe the occlusive *p* have employed various notations The Malays have rendered it by ڤ, the Persian and following them the Muslims of the Comoro archipelago by ب, the Swahilis of East Africa by ب, the Malagasies adopted an unexpected solution of the problem down to the xviiith century they rendered *p* by ڤ, i e ڤ,

surmounted by a vertical *tashdīd*, then by ب Contrary to Malay each letter is vocalised, which renders the reading of Malagasy-Arabic texts easy in spite of the variations in orthography, which are too numerous to be given here

The Arabic-Malagasy alphabet was once used over a very considerable area, at the present day, it is only used on the S E coast where very many natives were still using it at the end of the xixth century The Malag Muslims of the N W and W prefer to use the Arabico Comoro or Arabico-Swahili alphabet The latter renders by ﺐ a *tr* identical with the Malag *tr* but this form is only used in the island of Anjouan The dialect of this island which has a *ž* transcribes it by ﺠ, the *č* of Persian and Turkish The Arabic letters ب, ج, ح, د, ر, ص, ص, ط and ف are only found in Malagasy, when Arabic words are quoted and they are pronounced respectively *s*, *h*, *k*, *dz*, *z*, *s*, *v*, *z*, and *k*

Malagasy manuscripts in the Arabic character bear the generic name of *shura-be* "great writing", i e "sacred writing" They used to be difficult to obtain, the owners gave them an esoteric character which did not allow their contents to be communicated to a stranger I was able to get some copied and to acquire a few others between 1890 and 1894 The Bibliothèque Nationale in Paris has ten, of which eight are undoubtedly old MSS 2, 3, 4 and 5 came from the old Abbey of St Germain des Prés, N° 6 is also old, although it was only acquired in 1820 Thanks to an interlinear transcription and Latin translation by a European, which can be dated on palaeographical grounds between 1595 and 1620, it may be presumed that N° 7 reached Europe in the second half of the xvith century and must therefore have been written before that date According to an MS note by Langlès, "MS 8 seems to have been brought to France in 1742", the MS 5132 wrongly classed with the Arabic manuscripts is also an old Malagasy manuscript MS N° 1 given by the Duc de Coislin to the Abbey of St Germain des Prés has coloured drawings, coarsely executed of men, animals, trees, and cabalistic figures but not a single line of text MS N° 13 is a copy of four short modern manuscripts With the except of 1 and 13, all the manuscripts are on native paper, written with the *kalam* with native ink Flacourt gives a detailed description of them in his *Histoire de la grande isle Madagascar* (p 194 *sqq* of the edition 1661) The subject matter of the manuscript is very varied There does not seem to have been a *shura-be* prototype out of which all the others proceeded In an apparent disorder, the result of the fancy of the author or the copyist, we find collected sūras of the Kur'ān, interminable lists of the names of Allāh, and of names of angels, Arabic religious texts with interlinear Malagasy translations (cf the facsimile publ in *N E*, vol xxxviii, 1904, p 457), Arabic-Malagasy glossaries, magic texts, and invocations in large numbers, magic squares and formulae, texts showing the magic influence, good or bad of the planets, signs of the zodiac, lunar mansions, months, and days of the week, of the male and female character of the twelve Muhammadan months (Muharram is male, Safar is female, and so on, in MS N° 2 *sq*, 26b), of patterns for amulets (*hirizi* < Arabic حرز)

The sūras of the Kur'ān are not reproduced in the order which was settled at the revision ordered by the Caliph ᶜOthmān MS 6 gives them in the following order *fātiha*, cxiv, cxiii, cxii and so on to xcvii (f 2a etc) Then come verses 1—4 of Sūra xciv, verse 256 of ii, verse 16 and beginning of verse 17 of iii The same MS also contains Sūra xxxi (f 136b) and f 136b—138b, verses 158—159, 137, 256—259, 284—286 of Sūra ii and verses 25—26 of Sūra iii

Here we may mention several texts of particular importance, one of which is certainly unexpected MS 3 contains a bilingual glossary of 36 common words, Malagasy and Dutch, the two languages being transcribed into Arabic characters It was published in *B T L V*, vol lxi, 1908 I have suggested that it must have been compiled by the interpreter of Frederik de Houtman, "who had spent four years with the Dutch and spoke their language well" He had supplied Houtman with "his collection of Malagasy words"

MS 5 contains from f 85a to 88a an Arabic poem with Malagasy translation in honour of a certain Laila (I have not yet been able to ascertain if this is the lover of Madjnūn, or of some Lailā in Arabic literature) The piece begins "The poets said" and ends "the girl who possesses beauty and kindness" The Arabic verses are of an unusual inaccuracy and show that whoever reproduced them had a very superficial knowledge of the language and poetry

MS 8 (f 52b to 56b) preserves a *khutba* in Arabic entitled اَلدُّعَا لِلْخَطِيب (*sic*) pronounced *Aladua ra lakatibu* (*ra* is the Malagasy article), "the Khatib's prayer" Not a line in it is correctly written and some words are absolutely unrecognisable Under the transformations they have undergone however we still find the formulae used in this sermon The following are successively mentioned in the *khutba* the Prophet and his family, the first four caliphs, ᶜĀ'isha, Fātima, her sons Hasan and Husain, the two uncles of the Prophet, Hamza and al-ᶜAbbās, then the Caliph Abū Ahmad ᶜAbd Allāh al-Mustaᶜsim bi'llah (the text has *bi-l-dīn Allāh*) Amīr al-Mu'minin Further on there is a reference to Sultān هَاهَا هَد, son of Sultān ᶜOthmān The mention of the last of the ᶜAbbāsid caliphs seems to indicate that the Malagasy converts to Islām, among whom this *khutba* was in use, had been converted by Arabs who had left Baghdād or a country under al-Mustaᶜsim in this caliph's reign, i e between 640 and 656 (1242—1258) We cannot explain otherwise how his name appears with the title "Commander of the Faithful" in a *khutba* used in Madagascar As to the Sultān هَاهَا هَد (perhaps we should read هَاهَا هدا and translate "Sultān هَاهَا who is here", the *khatib* then indicating the Sultān in question), I have not been able to identify him As it is written, the name is neither Arabic nor Malagasy MSS 7 and 8 contain two identical versions of a religious text which I published in *N E* (xxxviii 449 *sqq*) In a passage devoted to the glorification of the month of Ramadān, the anonymous author succes-

sively invokes the prophets of the Old Testament, Jesus and Mary, the Prophet Muhammad, the first four caliphs, Hasan and Husain and finally Abū Hanīfa al-Nuʿmān, the great Sunnī Imām, and Muhammad b Idrīs al-Shāfiʿī, the founder of the Sunnī school which bears his name The mention of these two learned men and the *khuṭba* already mentioned are evidence of the orthodox character of certain Muslims of Madagascar and perhaps one may say of the generality of Muslims on the southeast coast But the same manuscript N⁰ 8 contains a Persian text which prevents us putting forward this conjecture This latter text which is still unique is found on ff 25*a*—27*b* The last lines invoke the *ʿashara mubashshara*, then, the first eight *imām*'s of the Shiʿa sect of the "Twelvers" (cf ITHNĀ ʿASHARĪYA) to whom the author has added ʿAlī Akbar ("ʿAlī the elder"), son of Husain and half-brother of ʿAlī Zain al ʿĀbidīn The mention of these *imām*'s of whom the last named, ʿAlī al-Riḍā, reigned from 183 (800) to 202 (818) is valuable, for it implies that the writer of this text belonged neither to the schismatic sect of the Zaidīya founded in 695 A D nor to the schismatic Shiʿa sect of the Ismāʿilīs which dates from 765 A D, but to the orthodox Shiʿa sect of the "Twelvers" This is important, for the Persians whom historical tradition makes come from Shīrāz and colonise Kilwa on the east coast of Africa and the island of Anjouan in the Comoro Archipelago were Zaidīyas (cf G Ferrand, *Les Sultans de Kilwa*, in *Memorial Henri Basset*, in the press) who cannot come into consideration in the present case The Imāmīya, whose presence in Madagascar is evident from MS N⁰ 8 thus form a separate group different from that of the Persians who had immigrated to the adjoining coast of Africa

The Arabic-Malay manuscripts which I possess, those of the University Library of the Faculty of Letters in Algiers and the others which I have been able to see are, as a rule, similar in contents to those of the Bibliothèque Nationale, with the exception of the *khutba* and the Persian text, which so far as I know are found nowhere else Quite a considerable number of manuscripts like MS 13 contain genealogies of kings of the Southeast, from which all these documents come, and local histories One of them gives details of I a Casa's campaign in the Imuru of 1659—1663 (cf *N E*, 1907, xxxix)

The majority of the religious texts which are found in the Arabic Malagasy MSS of the Bibl Nat are translated into Malagasy The Arabic part is very incorrect and the Malay translation shows that the exegists of Madagascar understood very little of it The illustrious and lamented Goldziher, to whom nothing Islāmic was foreign, was interested in the texts which I published Comparing three translations of the Malagasy text with the Arabic text he concluded that "the meaning of the fundamental ideas was most gravely misunderstood" (*L'École supérieure des Lettres et des Medersas d'Alger au XIVe Congres des Orientalistes*, in *R H R*, 1905)

The borrowings of the Malagasies from the Arabs who converted them to Islām are many and are found through all the tribes of the island without exception The most notable are the names of the days of the week *alatsinainy*, *talata*, *alarubia*, *alakamisy*, *zuma*, *asabutsy*, *alahadi* We may note that the Arabic article has been retained for Monday, Wednesday, Thursday, Saturday and Sunday but dropped for Tuesday and Friday The names of the days are here given in the Merina dialect, the forms of the other dialects show the regular phonetic variations

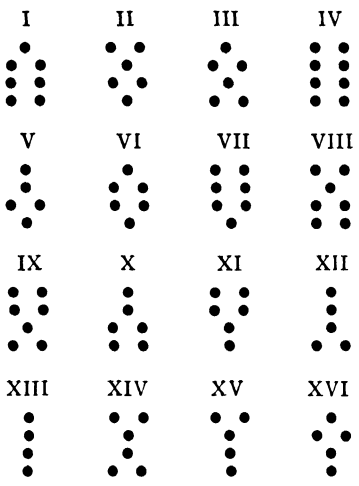
2 The names of the twelve months in Merina and in the dialect of some other tribes reproduce the Arabic names of the twelve signs of the Zodiac *alahamadi*, *adauro*, *adizauza*, *asurutani*, *alahasati*, *asumbula*, *adimizana*, *alakarabu*, *alakausi*, *adidzadi*, *adalu* and *aluhutsi* in which we can readily recognise *al-ḥamal*, *al-ṯaur*, *al-ǧauzāʾ*, *al-surṭān*, *al asad*, *al sunbula*, *al-mīzān*, *al-ʿakrab*, *al-kaus*, *al-ǧadi*, *al-dalū* and *al hūt* Quite a number of tribes do not know the Merina series, but still use the names of Sanskrit origin given above (p 68, col *a*)

3 The names of the 28 days of the month (the S E Malagasies however once had a year of 366 days) which are recorded by Flacourt (*Histoire*, 1661, p 174) recall those of the 28 lunar mansions of the Arabs According to the empirical method adopted by al-Ṣūsī and other writers, i e dividing the 28 mansions by 12 the latter are evenly distributed among the signs of the zodiac "Know", says al Sikli, "that each of the signs of the zodiac has two mansions and a third" (A C de Motylinski, *Les Mansions lunaires des Arabes, texte de Mohammed al-Moqrī*, transl and annot, Algiers 1899, p 68) In Madagascar to get rid of the fractions, three mansions have been attributed to the first fourth, seventh and tenth signs, and two to each of the eight others

Signs of the Zodiac		Lunar Mansions	
I	Alahamadi	1	Asharatain < al-sharatain
		2	Alabutain < al-butain
		3	Azuriza < al-thuraiā
II	Adauru	4	adabara < al dabarān
		5	alahaka < al-hakʿa
III	Adizauza	6	alahana < al-hanʿa
		7	azira < al dhira
IV	Asurutani	8	anasara < al-nathra
		9	atarafi < al-tarf
		10	alizaba < al-ǧabha, etc

The Arabic names of the lunar mansions thus become the names of the 28 days of the Malagasy months Mentioned along with the day of the week, they take the place of the ordinal which the Arab-Malagasy texts rarely indicate by a figure This method seems to have now fallen into disuse for ordinary purposes and is hardly used except in sorcery

4 The *shikili* (dialectical variants *sikili*, *sikidi* < *shikl*, "figure") is the art of divination, its object is to find out what is not known and the means of discovering a remedy against it Used throughout the island with slight variants from one tribe to another, *sikidi*, to take the form generally used, is a direct derivative from the *ʿilm al-raml*, lit the science of sand or Arab geomancy (cf the *Kitāb al Fasl fī Uṣūl ʿIlm al-Raml* of Shaikh Muhammad al-Zanātī, lith Cairo, n d) Shaikh al-Zanāti's table from which is derived all those in use in Madagascar comprises the following 16 figures



Each figure of the table bears a name of its own and is composed of a certain number of dots, maximum eight (IV) and minimum four (XIII) Four figures have five dots (V, XII, XV and XVI), six have six dots (II, III, VI, X, XI, XIV) and four have seven dots (I, VII, VIII, IV) Each figure governs (حكم) a certain number of things or beings, according to the question put to the diviner, the latter considers very carefully the figure relating to the question asked The influence of each of the figures comes from the sign of the zodiac, planet, day, Arab month and from one of the four elements to which it corresponds It is also lucky or unlucky, male or female, *tālib* (applying to the person consulting the fates) or *matlūb* (applying to the question asked), it is more or less strong and powerful سرعة in such and such conditions, and it also shows in what state the thing asked shall be realised The 16 figures of the table are divided into different groups each bearing a particular name

the *dawākhil*, "those who enter" which number three (XI, II, XV) If they are present in a large number in the *sidiki* effected by the diviner, it is a very auspicious sign and the questioner will certainly obtain what he seeks If one of the *dawākhil* proves to be the first figure, the object sought enters, i e is obtained,

the *khawāridj*, "those who go out" are three in number (III, X, XII) If they are several times represented in the *sidiki* effected by the diviner, it is an unlucky omen and the object sought will be unobtainable If one of the *khawāridj* proves to be the first figure, the object "goes out", i e is lost to the seeker,

the *munkālib*, "those who return" (IV, V, VI, IX, XIV, XVI) are sometimes lucky, sometimes unlucky, according to circumstances If one of the *munkālib* is the first figure, the operation will remain without a definite result,

the *thawābit*, "those who are fixed, who do not vary" are the figures I, II, X, XI, XIII, XV They are lucky and assure that the seeker will gain his end,

the *manāhis*, "the dismal" are figures III, VII, VIII, XI If the first figure is one of the *manāhis* the questioner will not obtain what he asks, or will not escape the misfortune he fears

The figures I, IV, VII, X are called *awtād* "the pious" If the four figures found in it are similar, success is assured

Figures II, V, VIII, XI are called *mādiali al-awtād*, "what concerns the pious" If the four figures found in it are similar the desire expressed, will be realised

Figures III, VI, IX, XII are called *zailat al awtād*, "the end of the pious" If the four figures found in it are similar, the object desired is coming and will arrive or the desire is completely realised at the moment of consulting the diviner

The sixteen figures are also divided into two groups of eight, one is called *shikl al-ṭālib*, "figure of him who asks", these are the eight who represent him who is consulting the fates, the other *shikl al-matlūb*, "figure of the thing sought", i e those who have to answer the request If the first figure of the *sikidi* is among the eight *tālib*, and the seventh among the eight *matlūb*, it is a very good omen If on the other hand, the first figure is *matlūb* and the seventh *tālib*, it will be impossible to avert the evil fate It must also be enquired if the fifteenth figure of the operation of the diviner is *tālib* or *maṭlūb*, if *tālib*, it is lucky and if *matlūb*, unlucky

If the *sikidi* is consulted on behalf of a sick man the presence of figures VIII, VI, V, XIV, IX, IV, XIII indicates his approaching end

The four first figures of the table are also called *buyūt al-aiyām*, "hours of the days" Repeated several times they indicate that the thing sought will be realised in the course of a day The four following (V—VIII) are called *buyūt al djumʿāt*, "houses of the weeks" and indicate an interval of a week, the four others (IX—XII) *buyūt al-shuhūr*, "houses of the months" indicate an interval of a month and the last four (XIII—XVI) *buyūt al-sinin*, "houses of the years" indicate an interval of one or several years If one of the houses of the days occupies a position other than the first four, the interval increases in proportion as it is remote from the first four places On the other hand if one of the houses of the weeks, months or years is found before its place, the interval diminishes in proportion to its nearness to the first figure

The figures I, III, V, and X mark the direction of the east, VIII, XII, XIV and XV, the direction of the west, II, IV, VI and VII, the direction of the north, and IX, XI, XII and XVI, the direction of the south

Figure I of the preceding table is called *al-haiyān* or *dāhika* The first of these names has passed into Malagasy in the form *alahizani* It represents the person who comes to consult the diviner, its zodiacal sign is Pisces, its planet Jupiter, its day Thursday and its element, the sea The corresponding figure is the fifteenth It is lucky, male and *tālib*, i e it is one of the eight figures representing him who consults the fates Its month is Dhu 'l Hidjdja If in the preparation of the *sikidi* it occupies the first place, the thing demanded will be realised after an interval of three days The amount of happiness and success which it brings will be greater if it occupies the first place

Figure II (*kabdat al-dākhila*, Malag *alakausi*) is that of wealth, riches, possessions and estates, and merchandise of all kinds Its sign of the Zodiac is Sagittarius, its planet, the Sun, its day, Sunday, its element, fire The corresponding figure

is the tenth It is lucky, feminine and *maṭlūb*, i e it is one of the eight figures which represent the thing sought Its month is Djumādā al-Awwal If it occupies the fourth place, the desire of the seeker will be accomplished after an interval of 55 days, if it is in the fifth place, it is still propitious, if in the fourth it indicates greatness

Figure III (*kabḍat al khārid̲ja*, Malag *adalu*) is that of the family, especially brothers and sisters Its sign of the Zodiac is Rās Djawzahīr (< Pers *gaw-i-zahr* "the head of the Dragon"), its planet Saturn, its day, Saturday The corresponding figure is the tenth It is unlucky, male and *tālib* If it is in the fourteenth place, the interval necessary for the accomplishment of the desire formulated is 150 days It reaches the maximum size in the ninth place and strength in the third Its metal is gold

Figure IV (*al-d̲jamaʿa* > Malag *dzama*, *zuma*) is that of the country, gardens and burners of the dead Its sign of the Zodiac is Virgo, its planet Mercury, its day, Wednesday The corresponding figure is the fourteenth, its element black earth It is good or bad according to circumstances and *maṭlūb* Its month is Djumādā al-Ākhir If it is in the fourteenth place, the interval before the realization of the desire expressed is 20, 55 or 150 days It is large in the sixth place and strong in the fifth and tenth Its metal is silver

Figure V (*al kawsad̲j* < Pers *kūsad̲j* or *al-farah*, Malag *adzkasadzi*) is that of children and bearers of news Its sign of the Zodiac is Libra, its planet Venus, and its day, Friday The corresponding figure is the twelfth The south wind is its element It is neither good nor bad, it is *tālib* and female Its month is Radjab If it occupies the fourteenth place the desire expressed is satisfied the day following It is large in the twelfth place and strong in the fourth, eighth and eleventh Its metal is gold

Figure VI (*al-t̲hikāf*, Malag *alikula*, *alukula*) is that of the sick, of cries, of war, of slaves, of loss of property, of remedies and of ships (sailing ships of the Western Indian Ocean) Its sign of the Zodiac is Aquarius, its planet, Mercury, its day, Saturday The corresponding figure is the seventh Its element is the west wind It is good or bad according to circumstances, *tālib* or *matlūb* Its month is Dhu 'l-Kaʿda, it is female If it is in the fourteenth place, the interval before accomplishment of the desire expressed, will be fifteen days It is large in the ninth place and strong in the eighth, eleventh and twelfth Its metal is silver

Figure VII (*ankis* > Malag *alikisi*) is that of husband and wife, of women and of sexual relations Its sign of the Zodiac is Capricorn, its planet, Saturn, its day, Saturday and its element earth The corresponding figure is the sixth It is unlucky, *tālib* or *matlūb*, and male or female according to circumstances Its month is Shawwāl If it is in the fourteenth place, it indicates an interval of 36 days before an answer to the question asked the diviner is obtained It is large and strong in the second, ninth and twelfth Its metal is silver

Figure VIII (*homrā* > Malag *alahumura*, *alaimura*) is that of death and removal Its sign of the Zodiac is the Ram, its planet Mars, its day, Tuesday Its corresponding figure is the sixteenth, its element, fire It is unlucky, *tālib* and male Its month is Muharram If it is in the fourteenth place, it indicates an interval of 21 days It is large in the first and strong in the fourth Its metal is iron

Figure IX (*bayād* > Malag *alibiava*, *adibidzadi*) is that of departure and of those who clothe the dead in white linen Its sign of the Zodiac is Cancer, its planet, the moon, its day, Monday Its corresponding figure is the thirteenth and its element is water It is neither lucky nor unlucky but may be one or other according to circumstances It is *ṭālib* and female, its month is Djumādā al-Ākhir In the fourteenth place it indicates an interval of ten days for the accomplishment of the desire expressed It is large in the ninth and strong in the eleventh Its metal is copper

Figure X (*nasrat al-khāridja*, Malag *asuralahi*) is that of strength and of rulers Its Zodiacal sign is Leo, its planet is the sun, its day, Sunday, its element fire It is male, *tālib* and very lucky Its month is Dhu 'l-Kaʿda In the fourteenth place the interval before the accomplishment of the desire is 32 days It is large in the tenth and strong in the thirteenth Its metal is gold

Figure XI (*nasrat ad dākhila* > Malag *asuravavi*) is that of life in towns, of return to the domestic hearth, of ambition, friendship and of children Its sign of the Zodiac is Taurus, its planet Venus, its day Friday, its element, black earth The corresponding figure is the fifth It is male, lucky and *tālib* Its month is Ramadan If it is in the fourteenth place, ten months will have to pass before the realization of the desire It is strong in the fourteenth place and large in the eleventh Its metal is copper

Figure XII (ʿ*otbat al khāridja* > Malag *karidza*) is that of enemies, cunning and ambushes Its sign of the Zodiac is Dhil al-Djawzahir, "the Dragon's tail", its planet Saturn, its day Saturday The corresponding figure is the third, its elements are water and terra firma It is unlucky, *matlūb* and feminine If it is in the fourteenth place, the interval before the accomplishment of the desire is 66 days It is large in the twelfth and strong in the thirteenth Its metal is iron

Figure XIII (*tarik* > Malag *taraiki*) is that of the road which leads to the house of death, to the cemetery Its sign of the Zodiac is Cancer, its planet, the Moon, its day, Monday The corresponding figure is the ninth, its element is water It is lucky, *matlūb* and female Its month is Dhu 'l-Kaʿda If it is in the fourteenth place, the interval before the accomplishment of the desire will be 50 days It is large in the fourteenth and strong in the fifteenth Its metal is copper

Figure XIV (*id̲jtimāʿ* > Malag *aditsima*, *aditsimai*) is that of learned men, of remedies, of knowledge, aims and medicine Its sign of the Zodiac is Gemini, its planet, Mercury, its day, Wednesday The corresponding figure is the fourteenth Its element is the wind It is lucky or unlucky, male or female, *tālib* Its month is Djumādā al-Ākhir In the fourteenth place which is its own, it indicates an interval of 6 months before the accomplishment of the desire It is large in the fourteenth and strong in the fifteenth Its metal is iron

Figure XV (ʿ*otbat al-dākhila*, Malag *alihutsi*) is that of the judge Its Zodiacal sign is Pisces, its planet is Jupiter, its day, Thursday and its element, water The corresponding figure is the

first It is lucky, male or female and *ghālib* Its month is Shawwāl In the fourteenth place the interval before accomplishment of the desire will be 55 days It is large in the fourth and strong in the eleventh Its metal is iron

Figure XVI (*nakī al khadd* > Malag *kizu*) is that of the end of all things and the last of the *sikidi* Its sign of the Zodiac is Scorpio, its planet Mars, its day Tuesday and its element water The corresponding figure is the eighth It is lucky or unlucky, male or female and *matlūb*, its month is Djumādā al-Awwal In the fourteenth place it indicates an interval of seven days before the realization of the desire It is large on the fourteenth and strong in the sixteenth which is its own Its metal is copper

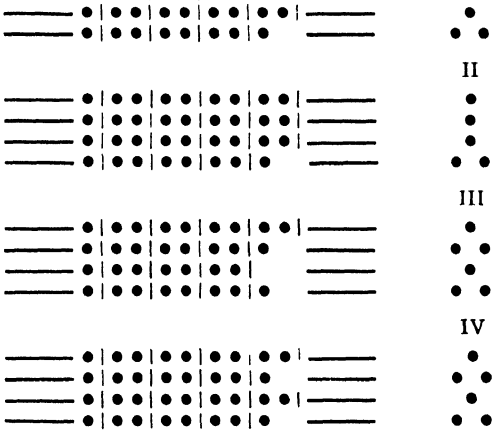
These are the sixteen figures of the *sikidi* and the signification given them in Madagascar

As its Arabic name shows, this "science of the sand" was first practised by tracing lines or dots on the sand, in Arabic one says *darab al-ramī* "to strike the sand", to describe the preparation of the *ʿilm al-raml* On the east coast of Africa in Swahili the same operation is called *kupiga bao*, lit "to strike the planchette" (which implies that the dots forming the sixteen figures are inscribed on a planchette) or *ramli*, a Bantuised form of the Arabic *raml* "sand" At the first the lines or dots were traced on the sand, then on a planchette of wood and lastly as in Madagascar on paper According to another Malagasy method, the diviner also uses grains of sand, or seeds, especially those of the *fanu* tree (*Piptadenia chrysostachys*, Bth)

When requested to consult the fates by the *sikidi*, the diviner first of all pronounces the invocation "Awake, O God, to awaken the Sun! Awake, O Sun, to awaken the Cock! Awake, O Cock, to awaken Man (*olumbeluna*)! Awake, O Man, to awaken the sikidi, not that it may lie, not that it may lead us to error, not that it may make a laughing stock, not that it may say foolish things, not that it may deal with any matter of no importance, but that it may search out secrets, that it may see what is beyond the mountains and the other side of the forest that it may see what no human eye can see Arise! for thy skill which comes from the Muslims with long hair (sic! *silamu be vulu*), from the high mountains, from Raburubuaka, from Tsipelaketsiketsika, from Zafit simaitu (eponym of a tribe of the south-east converted to Islām), from Andriambavitualahi, from Rakelihuranana, from Ianakara (eponym of another south-eastern tribe, converts to Islām), from Andrinoni-Sulanatia, from Vazimba (a dwarf tribe, of African origin as the name shows, the old owners of the soil), from Anakandriananahitra, from Rakelilavavulu (lit the little man with long hair)! Arise! for we do not have thee for nothing, for thou are dear and cause expense! We have taken thee in exchange for a fat zebu cow with a large hump And for money on which there was no dust (i e coins which are still circulating) Awake! for thou hast the confidence of the ruler and thou expressest the judgment of the people If thou art a sikidi that can speak, a sikidi that can see and that does not repeat (only) the gossip of people, the hen killed by its owner, the ox killed in the market, the dust which clings to the feet (i e a *sikidi* who does not repeat what everyone knows), awake, on the mat which is on this very spot!"

(cf *Antananarivo Annual* and *Madagascar Magazine*, 1886, p 221) If the diviner operates with seeds, he takes up a few at random and counts them two by two until at the end he has one or two which are placed at the top of the figure The operation is repeated four times which gives the four rows of dots of the first figure

When the diviner works on paper, he traces with the *kalam* a line in the form of the arc of a circle, the centre of which is indicated by a dot The sum of the dots and initial and final curves (each of which counts as a dot) must not exceed 14, although the *mpisikidi* is understood to make the dots without counting them He then draws three other concentric curves in the same way This done, the dots are counted two by two and line by line from left to right A vertical line separates the groups of two dots from one another After the last vertical line there remains either the final curved line which counts as a dot, either a point or a line, i e two dots This or these are written opposite each line and given figures I, II, III, IV



The four first figures are called in Arabic, *ummahāt* "the mothers"

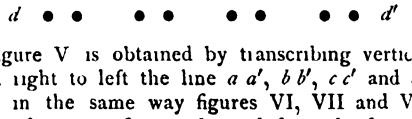


Figure V is obtained by transcribing vertically from right to left the line *a a'*, *b b'*, *c c'* and *d d'* give in the same way figures VI, VII and VIII These four new figures derived from the four first are called *al banāt* "the daughters"

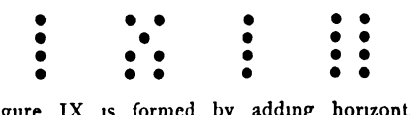

Figure IX is formed by adding horizontally the dots of I and II (in the addition ● + ● = ●●, ● + ●● = ●, ●● + ●● = ●●) All the other figures are similarly formed III and IV give X, V and VI give XI, VII and VIII give XII, IX and X give XIII, XI and XII give XIV,

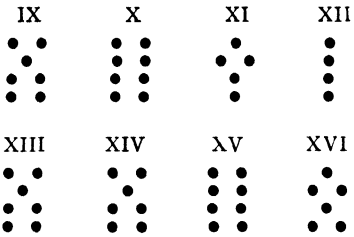
XIII and XIV give XV, and XV and I give XVI The eight last figures are called *banāt al-banāt* "the daughters of the daughters"



These sixteen figures contain the fate of the inquirer and the diviner has to give him the meaning of each of them by interpreting them from the table of Shaikh al-Zanātī, which was given above (p 71*a*) We may therefore imagine what a high place the *sikidi* occupies in Malagasy life, and the very numerous circumstances in which recourse is had to it The diviner was and undoubtedly still is the true manager of it In practice it is consulted for every act of private and public life whether of the individual, family, clan or tribe I have not been able to learn how one becomes a *mpisikidi* It is the speciality of certain individuals without distinction of sex or birth A diviner or a sorcerer may be man or woman (I have never known a woman sorcerer but have heard that there are such) The sorcerer may be of royal birth, noble or freeman (I have never heard of a sorcerer or diviner who was a slave, although slaves have been executed on charges of sorcery) The diviner or the sorcerer is very often the son or daughter of a diviner or a divineress, which assures him an extensive clientèle, for he or she is supposed to inherit the paternal (or maternal) secrets The sorcerer or diviner may be either native or foreigner I was taken for a diviner during a stay of forty months at Mananjary (S E coast) by the Muslim *mpisikidi*'s of the district, who treated me as colleague after I had shown them my knowledge of Islām It was in this way that I was enabled to be initiated gradually into the practice of *sikidi* and appeal was sometimes made to it

The area of dissemination of the *ʿilm al-raml* in Africa is considerable It is found in Dārfūr and the *Travels* of Burton in Dahomey reveal the existence of practices closely allied to *sikidi* among a West African people who are however not Muslim (cf G Ferrand, *Musulmans a Madagascar*, III, p 141 *sqq*)

5 The great annual festival of the *fandruana* or the bath is only a survival under another form of the old *ʿīd al-fiṭr* [q v] On this identification cf G Ferrand, *Note sur un Calendrier malgache et le fandruana*

According to the evidence of the Portuguese discoverers and especially of Flacourt, the Muslim Malagasies of the S E of the XVIIth century fasted during Ramadān, recited the obligatory prayers, read the Kur'ān, but drank fermented liquors and raised and ate pork There were *khaṭīb*'s in the S E so that assemblies of the faithful took place, but there is no mention of the existence of mosques in the early travellers and Flacourt says definitely in his preface that "the nation of which he is going to speak has no idols or temples" As in Siam [q v] the success of Islām was only mediocre in Madagascar Malagasy does not readily assimilate foreign beliefs and customs and the latter do not profoundly modify native beliefs and customs His whole philosophy is contained in the proverb *mami ni aina*, "life is sweet", he thinks it good to be alive the strict observation of the Kur'ānic prescriptions would have upset too much his usual life and customs Allāh proscribes fermented liquors, standing stones, games of chance and consulting the fates as abominations invented by Satan But these abominations are particularly dear to the Malagasies, they are particularly devoted to alcoholic liquors and to gambling, believe firmly in soothsaying and standing stones (*tsangambatu*) are held in honour throughout the whole island No doubt they veneiate Allāh, the Kur'ān, the Prophet and saints of Islām but it is a purely verbal reverence and they are not really islāmised to the degree, that for example are the negroes of the adjoining east coast of Africa

The conversion of the Malagasies to Christianity was also a failure At the time of the conquest of the island in 1895 they were quite disposed to be converted en masse to Roman Catholicism, thinking it would please us, they had to be warned that the French goveinment only attached importance to iespect for the laws and respected the religious convictions of every one whatever they were This fact of which I was a witness is more eloquent than any other and throws an illuminating light on the past

The evidence quoted above and especially that of comparative philology enable us to draw up the following scheme of the settlement of Madagascar so far as our knowledge at present goes

I Many legends give the old Vazimba, now disappeared, as *tumpu-n tani* or ancient masters of the soil i e the autochthons The name which is found in East Africa is clearly Bantu and represents an older *wa zimba* Malag *vazimba* They are said to have been of small stature They were perhaps negrillos

II There was an important immigration of African Bantus prior to our era of which we have an evidence in a certain substratum of African words which has survived in the modern language

III There was next an important immigration of Hinduised Indonesians from Sumatra (cf G Ferrand, *L'Empire sumatranais de Çrivijaya*) in the second—fourth centuries A D A word like the Malag *hētsi* < old Malag *hēti* = 100,000 < Malav *kĕti* 100,000 < Sanskrit *koṭi* 10,000,000 is over many others testifying to this fact These Indonesians modified the somatological, cultural and linguistic type of the negritic Bantus who peopled Madagascar

IV Arrival of Arabs in the sixth–ninth centuries and conversion of the Malagasies to Islām These Arabs probably came from the Persian Gulf and belonged to the Sunna

V Another immigration of Sumatrans at the end of the tenth century I consider the Wākwāk to be western Indonesians, as I shall explain in the article WĀKWĀK The *Book of the Wonders of India* (*ʿAdjāʾib al-Hind*, ed by van der Lith and transl by M Devic) mentions a piratical campaign by these Wāḳwāk in 334 (945) in the Western India Ocean It is probable that we have here a reference to the migration led by Ramini the

"Sumatran" or Ramınıa "the Sumatran" (fem) His elder son Ra-Hadzı was the ancestor of the tribe of Zafin-d-Ramını, "the descendants of Ramını", of the S E coast of Madagascar The younger son, Ra-Kuka, went into the interior of the island, reached the plateau of Imerina where he married a Vazimba woman Ra Kuba was the ancestor of Huva who bear his name

VI Coming of Persians of the sect of the "Twelvers" later than the reign of ʿAlī al-Ridā (183—202 = 800—818)

VII Coming of other Arabs in the reign of the ʿAbbāsid caliph al-Mustaʿsim, in the middle of the thirteenth century of our era

Bibliography G Grandidier, *Bibliographie de Madagascar*, Paris 1906 (it contains all the works published at this date) The more important collections are A Grandidier, Charles Roux, Cl Delhorbe, H Froidevaux and G Grandidier, *Collection des ouvrages anciens concernant Madagascar*, printed and manuscripts from 1500 to 1800, Paris 1903—1920, 9 vols , *Revue de Madagascar*, 1900—1911, 12 vol , *Colonie de Madagascar*, *Notes, reconnaissances et explorations*, Tananarive 1897—1900, 6 vol , *The Antananarivo Annual and Madagascar Magazine*, Tananarive 1885—1900, 24 annuals fascicules in 6 volumes, Gabriel Ferrand, *Les musulmans a Madagascar et aux îles Comores*, Paris 1891, 1893, 1902, 3 vol , do , *Essai de grammaire malgache*, Paris 1903, do , *Un texte arabico malgache du XIVeme siecle, Notices et Extraits*, 1904, vol xxxviii , do , *Essai de phonetique comparee du malais et des dialectes malgaches*, Paris 1904, do , *Un texte arabico malgache en dialecte sud oriental*, in *Recueil de memoires publies en l'honneur du XIVème congres des Orientalistes par les professeurs de l'École superieure des Lettres d'Alger*, Algiers 1905, do , *Prieres et invocations magiques en malgache sud oriental d'apres le Ms 8 de la Bibliotheque Nationale*, *Actes du XIVeme congres des Orientalistes*, Paris 1906, vol ii , do , *Relations de voyages et textes geographiques arabes, persans et turks relatifs a l Extreme Orient du VIIIème au XVIIIeme siecles*, Paris 1913 and 1914, 2 vol , do , *La legende de Ramınia d apres un Ms arabico malgache de la Bibl Nat* [MS 13], *J A* , 1902, vol xix , do , *L'element arabe et souahili en malgache ancien et moderne*, *J A* , 1903, vol ii , do , *Un chapitre d'astrologie arabico-malgache*, *J A* , 1905, vol vi , do , *Les îles Ramny, Lâmery, Wâkvâk, Komor des geographes arabes et Madagascar*, *J A* , 1907, vol x , do , *L'origine africaine des Malgaches*, *J A* , 1908, vol xi , do , *Les voyages des Javanais a Madagascar*, *J A* , 1910, vol xv , do , *Le K'ouen-louen et les anciennes navigations interoceaniques dans les mers du Sud*, *J A* , 1919, vol xiii and xiv , do , *Les Bantous en Afrique orientale d'apres les textes egyptiens, grecs, arabes et chinois*, *J A* , 1921, vol xvii , do , *Notes sur la transcription arabico-malgache, Memoires de la Soc de linguistique de Paris*, vol xii , do , *Trois etymologies arabico-malgaches, ibid* , do , *Du traitement de quelques noms arabes passes en malgache, Notes de phonetique malgache, Un vocabulaire malgache-arabe, ibid*, vol xv , do , *Notes de phonetique malgache* (contd), *Deux cas de determinatif en malgache, ibid*, vol xvii , do , *Les migrations musulmanes et juives à Madagascar*, *R H R* , 1905, do , *Textes magiques malgaches, ibid*, 1907, do , *Notes sur la region comprise entre les rivières Mananjara et Yavibola (sud est de Madagascar), Soc de Geog de Paris*, 1st quarter 1896, do , *Note sur le calendrier malgache et le Fandruana*, *Le destin des quatre elements dans la magie malgache, Rev des Études ethnographiques et sociologiques*, 1908, vol i , do , *Note sur l'alphabet arabico-malgache, Anth* , 1909, vol iv , Hugues Berthier, *Manuel de langue malgache (dialecte merina)*, Tananarive 1922, 2 vol , A Grandidier, *Histoire physique, naturelle et politique de Madagascar*, vol iv *Ethnographie de Madagascar* by A and G Grandidier, 1908—1914, 2 vol , *Bulletin de l'Academie malgache*, appearing since 1902 (GABRIEL FERRAND)

AL-**MADĀ'IN**, a mediaeval Arab town or rather a group of towns in al-ʿIrāk (Babylonia) about 20 miles S E of Baghdād lying on either side of the Tigris in two almost equal portions The name al-Madā'in (plur of *al-Madīna*) „the towns" is explained from the fact that the two capitals situated opposite one another, Seleucia on the west, the Greek city founded by Seleucus I between 312 and 301 B C , and Ctesiphon on the east (the first reference to which is in 221 B C), the winter residence of the Parthian and Sāsānian kings, with several other places close at hand were regarded as forming a whole The Semitic Aramaeans who formed the bulk of the population under the Arsakids and Sāsānians comprised the whole group under the name *Māhōzē* or *Medīnāthā* "the towns", which latter word the Arabs adopted in the plural form al-Madā'in peculiar to their language Following the Sāsānians, the Arabs reckoned seven towns in al-Madā'in, the official names of which they partly arabicised

On the west bank lay Weh-Ardeshīr, corrupted by the Arabs to Behrasīr (often wrongly read Bahurasīr and Nahr Shīr or Sīr, cf Streck, *Babylonien*, p 262, note 3) The name does not mean "good (is) Ardeshīr" as it is often explained but "house (i e foundation) of Ardeshīr" (cf thereon, Noldeke, *W Z K M*, xvi , 1902, p 7 *Weh* = Aram *Bē*) In Syriac and Talmudic literature Behrasīr is usually called *ʾōkhē* (= Koche of the late classical writers) and *Māhōzā* (= "the town") It occupied the lower southern half of the former Greek town A parasang (c 3 miles) north of it was the village of Darzanīdān (also Darzīdān), arabicised to Darzīdjān On the east bank stood Ctesiphon The Arab historians and geographers usually reproduce this name, which is not Greek but very probably indigenous (Iranian?) by *Taisafūn*, but we also find Tusfūn and Tusbūn corresponding exactly to the presumed Pahlavi form (Tosfōn, Tosbōn) On these placenames cf the very full discussion by Streck in Pauly-Wissowa, *l c* , Suppl vol iv 1102 *sq* Not uncommonly the town on the east bank, much more important for the Muslims, is called al-Madā'in (e g in al-Istakhrī, *B G A* , i 87, 1) About an hour's journey away, south of Ctesiphon stood Weh Antiokh-i Khosraw (= Antiocha, house of Khosraw) The Arabs usually called this city founded by Khusraw I Anusharwān, which was settled with the deported inhabitants of Antioch ad Orontem destroyed in 540 and is said to have been planned on the model of the Syrian capital,

Rūmīya = Rome or (New) Rome or Byzantium The Syriac sources distinguish this new foundation from the older towns by the name *Māhōzā ḥᵉḏattā* = "New town"

We know nothing further about the three other towns of al-Madā'in, which made up the number seven so popular in the east and was here no doubt deliberately chosen The exact forms of their names are not even known

As early as the Parthian period there was a stone bridge to convey the traffic between the two thickly populated banks of the Tigris, which the historian Hamza al-Isfahānī (cf his *Ta'rīkh*, ed Gottwaldt, p 31, 10) describes as a marvel, but already in his day (beginning of the fourth = tenth century) there was no longer any trace of it Under the Sāsānians a second bridge (of boats?) was erected In the Muslim period however there was still only a bridge of boats

In Taisafūn-Ctesiphon two main quarters are distinguished, the northern "old town", Arab *al Madīna al-ʿatīka* and the southern, Asfānabr (Asbānabr, Asfābūr, and other variants of the name)

The "old town" probably represents the oldest settlement on the east bank, the foundation of the Parthian period In it was a royal palace which the Arabs called *al-Kasr al-abyad* = "the white palace" (there were other palaces of the same name elsewhere, cf the article KAL'A-I SEFID), probably the residence originally of the Sāsānian kings built by one of the last Arsakids or first Sāsānians The southern quarter Asfānabr also included a royal residence, the *īwān* (= pillared hall, palace), usually described more definitely by the Arab authors of the middle ages as *Īwān Kisrā* (= Pers Khosraw, Chosroes the general title of the Sāsānian kings among the Arabs, cf Streck, *Seleucia u Ktesiphon*, p 37, note 1) Its builder is known with certainty to have been Sapor (Sābūr) I (241—272 A D) It may be noted that later Arab historians often confuse the "white palace" and the Īwān

It can hardly be supposed that the site of al-Madā'in, so favoured by nature, at the point where the Euphrates and Tigris most nearly approach each other, was without any considerable settlement until the time of Seleucus I There is on the contrary every indication that the town of *Akshak* (written ideographically *Uḥ-ki*) dating back to remote antiquity like its successor *Upi*, the *Opis* of the classics, cannot well be located anywhere else than on the site of the sister towns of Seleucia and Ctesiphon or in the immediate neighbourhood What the Arab writers say about the founder of al-Madā'in is worthless They ascribe the foundation to mythical kings of the old Īrānian epic like Djamshīd and Tahmūrath or other celebrated rulers of the east (like Nimrūd or Iskandar-Alexander, for Nimrūd see Abu 'l-Faraj-Barhebraeus, *Ta'rīkh Mukhtaṣar*, Beirūt ed, p 20, 5)

For the pre-Muhammadan history of al-Madā'in which does not fall within the scope of this work cf Streck, *Seleucia und Ktesiphon*, and the pertinent articles in Pauly-Wissowa The Arabic sources contain much valuable information for the Sāsānian period, the most notable is Tabarī's history (cf Noldeke, *Gesch der Perser und Araber zur Zeit der Sasaniden*, Leyden 1879) We may here mention that under the later Sāsānians, Ctesiphon, to some extent, lost its popularity as the winter capital, for they, especially Khosraw II Parwēz (599—628), preferred Dastagerd to it, three days journey to the north on the very old "royal road" [cf DASTADJIRD]

We have fairly full information about the conquest of al-Madā'in by the Arabs, especially the great chronicles of Tabarī (1 2426—2456) and Ibn al-Athīr (ed Tornberg, III 396—403, cf also Caetani, *Annali dell' Islām*, III 732 *sq*, Wellhausen, *Skizzen und Vorarbeiten*, VI 68 *sqq*, and Streck, *Seleucia u Ktesiphon*, p 38—41) After the glorious battle of al-Kādisīya, which made the Arabs masters of 'Irāk west of the Tigris (cf above, II, p 612b), the Caliph 'Omar ordered Sa'd b Abī Wakkās, who was then in command of the Muslim troops operating in the 'Irāḳ, to march on the Persian capital Sa'd advanced, fighting several battles on the Tigris and appeared before Behrasīr in the first half of January 637 (= end of 16 A H) The strongly fortified town which was bravely defended was besieged and stormed in vain for two months In the end the Persians whose supplies were exhausted fled by night unnoticed over the river so that when the Arabs stormed the town soon afterwards they found it quite deserted A few days later the invaders were able by using a convenient ford to cross the Tigris, much swollen by the spring floods This almost miraculous crossing effected without any loss is a much celebrated event in Muslim history, it is one of the famous "days" of the period of the conquest The Persians had not expected that the Arabs would win their way across The king had taken refuge with his family and court in Hulwān [q v], the army had retired to Djisr Nahrawān (about 24 miles north of Ctesiphon) Only a few regiments remained at the palace in the capital At the end of March 637 Sa'd made his triumphal entrance through the deserted streets The progress of the Arab operations had not given the Persians sufficient time to carry off the vast treasures accumulated in Ctesiphon These all fell into the hands of the victors The Arabic sources give many interesting details of the very valuable objects which were captured not only in Ctesiphon but in the pursuit of the Persian army The total value of the booty taken in Ctesiphon was estimated at 900 million dirhems (of a nominal value of nine pence but it varied a great deal)

The occupation of the Sāsānian capital, the greatest royal city in nearer Asia, may be said to be the most important event of the period of Islām's splendour, the period of the great campaigns of conquest In the "Old town" the victorious Sa'd built the chief mosque — the first Muslim place of worship to be built in the 'Irāḳ

Al-Madā'in was not destined to be the residence of the Arab governor of the 'Irāḳ, on the contrary it sank under Muslim rule to be a mere provincial town It was soon overshadowed by the newly founded Arab military colonies of Kūfa, to which the gates of Ctesiphon were transported — a symbolic custom found elsewhere in the Arab east — Basra and Wāsiṭ Basra and Kūfa now became the political and intellectual centres of Mesopotamia until the Caliph al-Mansūr built Baghdād and the political and cultured centre of gravity of the land gravitated thither The foundation of Baghdād dealt al-Madā'in its death blow it was now called upon to yield the building material necessary for the new capital of the caliphate,

just as Babylon had done for Seleucia centuries before

In the history of the Umaiyad and ʿAbbāsid periods al Madā'ın was as a rule no longer of any prominence It only played a part of some importance ın the cıvil wars of the first two centuries of Islām, those provoked by the Khārıdjıs as well as those provoked by the ʿAlıds The Muslım ınhabıtants of al-Madā'ın were, ıt seems, always strong supporters of the Shīʿa They were also hostile to the Khārıdjī movement As early as 658 there was fightıng around al-Madā'ın be tween ʿAlī and the Khārıdjīs An attempt by the latter (ın 664) to seize Ctesiphon from Behrasīr was thwarted by the commander there who had Shīʿa sympathies, by destroyıng the brıdge of boats The Khārıdjīs however later succeeded ın twice gaınıng temporary possession of al-Madā'ın, e g ın 688 when the Khārıdjī group of the Azrakiya [q v] wrought great slaughter among the Muslıms who dıd not belong to their party The second occupatıon of al-Madā'ın ın 696 was achieved by the Khārıdjī leader Shabīb b Yazīd On these events cf J Wellhausen, *Dıe religıos-polıt Oppositıons-parteıen ım alten Islam* (= *Abh G W G*, N F, vol v, N⁰ 2 [1901]), p 21, 36, 43, 45, R Brunnow, *Dıe Charıdschıten unter den ersten Omaıyaden*, Leyden 1884, p 22, 92 Wıth the death of Shabīb b Yazīd, the power of the Khārıdjīs was broken, but as late as 751 ʿAbbāsid troops had to be sent to suppress a leader of these rebels, cf A Muller, *Der Islam ım Morgen- und Abendlande*, ı 440

As regards the ʿAlıd wars ın the ʿIrāk the most ımportant campaign was that of Hasan to al-Madā'ın ın the year 661 Hasan lıved there ın the "white palace" Cf on thıs expedıtıon, the Arabıc accounts of whıch dıffer not ınconsıderably Weıl, *Geschıchte der Chalıfen*, ı 244, Flügel, *Gesch der Araber*, Leıpzıg 1867, p 158—159, A Muller, *op cıt*, ı 336 and especıally J Well hausen, *Das arabısche Reıch und sein Sturz*, Berlın 1902, p 67—68 In the latei Shīʿa troubles al Madā'ın appears ın 684—686 and 744 as supportıng the ʿAlıds, cf Wellhausen, *Dıe religıos-polıt Oppositıonspart*, p 72, 73, 80, 98 The ımportance of al-Madā'ın as an objectıve ın these cıvil wars ıs evident from the fact that ın those days the mılıtary road from Basra to Kūfa dıd not go through the desert along the Arabıan bank of the Tıgrıs but went across the canals to the Tigrıs at al-Madā'ın and from thence over further canals to the Euphrates, cf Wellhausen, *Dıe religıos-polıt Opp*, p 85, note 3

The Calıph al-Ma'mūn was repeatedly forced to lead an army against al-Madā'ın ın 811, when ın the troubles that arose over the succession on the death of Hārūn al-Rashīd the Barmecıde ʿImrān b Mūsā defended the town against Ma'mūn (cf ı, p 665ᵃ) and ın 815 when an ʿAlıd rebel Abu 'l-Sarāyā (al Sarī b Mansūr, cf ıv, p 170) who had seized the town was besieged ın ıt For the rest we do not hear much more of al-Madā'ın ın the ʿAbbāsid period, ıts two maın components, Taısafūn and Behrasīr, contınued for several centuries more to enjoy the modest exıstence of small country towns As regards Rūmīya whıch was ıncluded ın the system of towns formıng al-Madā'ın, the Calıph al-Mansūr had temporarıly held hıs court there ın 754 and had caused Abū Muslım [q. v] to be treacherously murdered there (Yāḳūt, ıı 867, 2, Streck, *Babylonıen*, ıı 268) But about the mıddle of the tenth century thıs place accordıng to al Masʿūdī (*Murūdj al-Dhahab*, ed Paris, ıı 200) was already completely deserted the wall round ıt built of thick brıcks was the sole relıc of ıt left When Yāḳūt wrote ın the early decades of the xıiıth century (cf hıs *Muʿdjam*, ı 768, v 447, 7) the whole of the east sıde of al-Madā'ın, ı e Taısafūn ın particular was already completely deserted, on the west bank still stood Behrasīr, a small town, practically a vıllage, ınhabıted by peasants who practised only agrıculture It was now known as al-Madā'ın

When Hūlāgū with hıs Mongol hordes was advancıng to conquer the Calıph's capıtal ın 1257, he pıtched hıs camp ın the ruins of the Īwan and ın the followıng year, after he had been joıned by the troops of the Mongol prınces, he marched on Baghdād, cf Rashīd al-Dīn, *Hıst des Mongols de la Perse*, ed Quatremère, Paris 1836, p 266

The author of the *Marāsıd al-Ittılāʿ* (ed Juynboll, ıı 62) who wrote an epıtome of Yāḳūt and dıed ın 1338 ıs also acquaınted with Bahrasīr as a lıttle town ınhabıted exclusıvely by Shīʿıs, as ıs also Bākuwī who about 1403 prepared a synopsıs of the geography of al-Kazwīnī [q v], cf the French translatıon of the latter *Talkhīṣ al-Āthār* by de Guignes ın *N E*, ıı, 1789, p 424 When Bahrasīr became deserted ıs unknown Presumably the dısastrous ınvasıon of the Mongols under Tīmūr at the begınnıng of the xvth century whıch was so fatal to so many once flourishıng towns of the lands of the Euphrates and Tigrıs also caused the collapse of thıs last settlement ın the territory of al-Madā'ın

It was not tıll the xıxth century that a modest vıllage arose on the sıte of Ctesiphon, a lıttle north of the ruins of the *Īwān Kısrā*, ın sıght of the hıghly venerated sanctuary of *Salmān Pāk* and called after hım Thıs consısted on my vısıt ın 1927 of a sıngle street of mud-houses and Khāns where the numerous Shīʿī pılgrıms who pass through here are put up The buildıng materıal ıs maınly supplıed by the ruins of the *Īwān* especıally of the north wıng of ıts great hall whıch collapsed ın 1888, cf Herzfeld, *op cıt*, ıı 63

In the Great War the sıte of al-Madā'ın was the scene of desperate fightıng, momentuous ın ıts results Thıs ıs usually called the Battle of Ctesiphon When the Anglo-Indıan army under General Townshend ın the late autumn of 1915 began an advance from the fortress of Kūt al-ʿAmāra along the Tigrıs to the north to try to take Baghdād, ıt was defeated on the 22nd and 23rd November 1915 ın the dıstrıct of the ruins of al-Madā'ın by the Turks The fightıng took place maınly on the east bank, the Brıtish lıne of battle ran on the east of the ruins of the Īwān and the lıttle vıllage near ıt Thıs reverse forced Townshend to retire to Kūt al-ʿAmāra, whıch was soon afterwards surrounded by the Turks and capıtulated after a five months' sıege on April 29th 1916 For further partıculars of thıs battle, the greatest on the Mesopotamıan front ın the world war, see the works on thıs subject, cf especıally General Townshend's *My Campaign ın Mesopotamıa* (London 1919), p 193 *sq*, 171—184, with plan of the battle (map 7)

In connectıon with thıs brıef sketch of the hıstory of al-Madā'ın ıt may be mentıoned that one of the most dıstınguished scholars ın the

field of Arabic history was born here, namely ʿAlī b M al-Madā'inī [cf the next article], born 753, d between 830 and 845 His work itself has not survived but may be partly reconstructed from the numerous extracts in Balādhurī, Tabarī, Yāḳūt, the *Kitāb al-Aghānī* etc so that we have an idea of its contents, cf Brockelmann, *G A L*, I 140—141 and J Heer, *Die hist und geogr Quellen zu Ǧāqūt's Georgr Worterbuch* (Strassburg 1898), p 5—6, 67—68 (on the chapter al-Madā'in in Balādhurī) Darzanīdān (Darzīǧān), already mentioned above and included in the heptapolis of al-Madā'in, was the birthplace of the famous traditionist and historian al-Khaṭīb al Baghdādī (d 463 = 1071) on him cf vol II, p 929 *sq* and Bergstrasser, in *Z S*, II 207—208 In the introduction to his biographical lexicon he gives a brief sketch of the history of al-Madā'in, making a special point of noting the companions of the Prophet who came to this town and took part in its conquest, cf G Salmon, *al-Ḫaṭīb al-Bagdādī, Introduction topographique à l'hist de Bagdad* (Paris 1904), p 13, 25, 175—181, or p 85—93 of the Arabic text

As to the mint history of al-Madā'in, neither the name al-Madā'in, nor as we might perhaps expect, Taisafūn or Behrasir is found on the coins of the Muslim period, on the other hand we have a considerable number of pieces with the inscription *al-Bāb* "the gate" which undoubtedly belong to our city The Arabs adopted the custom of the Sāsānians who gave their coins struck in Ctesiphon the mint name *Bābā* = "the gate", which is to be interpreted like "Sublime Porte" as an official epithet of their royal capital (cf the official designation of Constantinople as *Dar-i Seʿādet* "Gate of Bliss") We have not only a series of Arabic coins with the mint name al-Bāb down to the end of the Umaiyad period but also a few pieces of Sāsānian type with the legend Bābā, on the latter (specimens of the year 67—68) cf Nutzel, *Katalog der oriental Munzen in den kgl Museen zu Berlin*, I (1898), p 102 Coins are also found occasionally with the mint *al Madīna al-ʿatīka*, the name of the northern quarter of Ctesiphon (with the Sāsānian Royal palace cf above) For the Arab coins of the mint al-Bāb cf articles of various writers in *Z D M G*, XIX 394, XXXI 148 *sq*, XXXIII 691, XXXIX 25, 38, XLIII 702, cf also Streck, *Sel und Ktes*, p 37—88 and the references there given

Here we can only refer briefly to the important part which al-Madā'in played in the church history of the east independent of Rome, especially Nestorian Christianity The see of Seleucia, said to have been first erected in the time of the apostles, was the premier diocese in the east As supreme head of all the Nestorian bishops, in the Sāsānian period as well as in that of the Caliphs as patriarch of the east the occupant of the see of Seleucia bore the title Katholikos A number of important synods were held at his official residence in the course of centuries The episcopal cathedrals were in Behrasīr (New Seleucia) which the Syriac sources usually called Kōkhē (cf above) hence the official title of the patriarchate, "Church of Kōkhē" Besides the official church of the bishop there were in al-Madā'in in the quarters on either bank a whole series of other Christian churches, the names of which are occasionally found in Syriac and Arabic texts From Seleucia the Nestorian church developed considerable missionary activity, extending even to the Far East and reached its zenith in the period from the sixth to the ninth century Under the ʿAbbāsids 25 metropolites — the first in rank after the Katholikos was the bishop of Kaskar [q v] — each of whom in turn had 6–12 suffragans under him, acknowledged the authority of the see of Seleucia All the metropolites received their investiture in the cathedral of Kōkhē Soon after the foundation of Baghdād (762) the Katholikos also moved from Behrasīr (Kōkhē), now declining politically and commercially, to the new capital of the empire in order, as religious and political head of the Christian community, the more effectually to champion their interests there at the court of the Caliph, where he usually enjoyed considerable prestige But each new patriarch continued to be ceremonially installed in the mother church at Kōkhē (probably down to the end of ʿAbbāsid rule) For further information on the significance of al-Madā'in in oriental church history cf Streck, *Babylonien*, II 274—275, do, *Sel und Ktesiph*, p 42—7, 64 (sources in Syriac literature), J Labourt, *Le Christianisme dans l'empire perse*, Paris 1904

That al-Madā'in was also for some time an important centre of the gnostic sect of the Manichaeans may be mentioned here, but it is doubtful whether their founder, Mānī (Manes), as is often supposed came from Ctesiphon itself, cf thereon most recently Schaeder, in *Isl*, XIV 23

Finally it may be briefly recalled that al-Madā'in possesses considerable interest for the history of Judaism, especially for the Talmudic period of it As in the Hellenistic period, the Jews under Sāsānian and Arab rule had also their main settlement on the west bank in Behrasir which in Jewish sources is usually called Māhōzā, "the town" There, as in the Greek Seleucia (cf Streck, *Sel und Ktes*, p 10, 21), they formed an exceedingly high percentage of the inhabitants, indeed at times they seem to have been in the majority That they are described as very rich is not surprising in view of the great importance of al-Madā'in as a trading centre down to the time of the rise of Baghdād At the same time their character is unfavourably described by the Māhōzenes, it differed from that of the other Jews of Babylonia which is perhaps mainly to be explained by the fact that there were many proselytes among them They also had a famous college, which was however only the intellectual centre of Babylonian Judaism under Rabā bar Yoseph (b 229 A D), a native of Māhōzā, and at other times was inferior to the other Jewish centres of learning in Babylonia, Nehardea, Sura and Pombeditha For further Jewish accounts of al-Madā'in, cf A Berliner, *Beitr zur Geogr und Ethnogr Babyloniens im Talmud und Midrasch*, Berlin 1883, p 19, 23—24, 39—43, 61—62, see also Streck, *Sel und Ktes*, p 27, 63 and 64 (Bibliography)

Apart from the wretched little modern village of Salmān Pāk the whole of the area of the town of al-Madā'in measuring about 60 square miles is quite uninhabited It is only from the middle of the XVIIIth century that we have more or less full accounts of it by European travellers cf. Streck, *Sel und Ktes*, p 47—8 The first systematic topographical and archaeological examination of the extensive ruined site was made by E Herzfeld, who visited it five times between 1903 and

1911 He dealt fully with the results of his examination in 1914 in the second volume (not published till 1920) of his and Sarre's *Archaologische Reise im Euphrat- und Tigrisgebiet*, cf II, p 46—76 and the pictures on Plates xxxix—xliv (Vol III) and cxxii—cxxviii (Vol IV) Herzfeld gives (II 51) the first plan of the whole area prepared by him in 1911, cf this reduced to ¼ of the original also in Streck, *Sel u Babyl*, p 50 and in Pauly-Wissowa, *op cit*, Vol IV, 1106

Of the towns on the west bank, notably Seleucia, there has survived from the Hellenistic period only remnants of the old city wall (*al-sūr*), a double wall of gigantic dimensions, on the north and (less considerable) south side The whole west side of the old city is now sunk in a permanent swamp (*hōr*) formed since 1900 of the annual inundations Within the south half of the ancient city walls, there now rise from the otherwise flat plain two mounts of rubble about 15 feet high (*djaraʿa*, which in the ʿIrāk is practically synonymous with *tell*), namely the *Djaraʿat al-Bārūda* and the *Djaraʿat bint al Kādī* The former which takes its name (powder-millhill) from a powder-mill which used to stand there to supply the Turkish troops, may, from the finds of pottery, conceal an important part of the Sāsānian foundation of Behrasir The second hill with the legendary name *Djaraʿat* (or *Kaṣr*) *bint al Kadi* = "hill or castle of the Kādī's daughter" may very well mark the site of the several times mentioned citadel of Seleucia-Kōkhē Beyond the above mentioned permanent swamp, further hills and walls may be seen — Tell ʿUmair (or Djaraʿat ʿUmar), Khusāf or Abū Hulaifīya, al-Sūsfīya, al Khiyamīyāt and Tell al-Dhahab They perhaps all fell within the area of Seleucia, and probably come from suburbs of it

The ruins on the east bank, those of Ctesiphon, begin about a mile above the village of Salmān Pāk After isolated wall-like ruins of walls and canals, the first considerable unit we reach is a large quarter of the town running for a mile along the Tigris opposite the Hellenistic Seleucia averaging 400 yards in breadth enclosed by a primitive much destroyed wall of clay — hence the name *al-Tuwaiba*, "the little clay-wall" Within this area lie a few fairplaces with palmgroves, mulberry trees and fields Al-Tuwaiba with its immediate vicinity must mark the site of Madīna al-ʿAtika, the northern quarter of Ctesiphon A second area filled with ruins is found around the village of Salmān Pāk and around the *Īwān*

The village street of Salmān Pāk leads in a straight line to the much veneiated tomb of Salmān al-Fārisī (Salmān the Persian) or, as it is usually called locally, of Salmān Pāk, "the Pure" He is said to have been the first Īrānian to have adopted Islām and as "Apostle to the Persians" is one of the most popular Shiʿī saints According to Muslim tradition he died at an advanced age in 656 or 657 in al-Madā'in, where the Caliph ʿOmar appointed him governor, it should be noted however that the Arab stories of Salmān's share in the conquest of the ʿIrāk and in the government of al-Madā'in are little credible Cf on Salmān vol IV, p 116 and Streck, *Sel und Ktes*, p 53—54 The mausoleum with the alleged grave of Salmān which is crowned by a dome (it used to be shown in the vicinity of Isfahān!) stands on the south side of a court enclosed by a high white turreted wall and in its present form may date from the first half of the XVIIth century, when it was renovated by Sultān Murād IV (1623—1640) In 1904—1905 the building was restored A description of the interior by Kāzim al-Dudjaili is given in Herzfeld, *op cit*, II, p 262, note 1

South-west of Salmān Pāk about 1,000 yards from it close to the bank of the Tigris is a second Muslim tomb with a dome, that of Hudhaifa b al-Yamān, one of the "councillors" of Muhammad The latter, an ardent champion of the ʿAlid cause, obtained, we are told, great merit by building the first mosque in al-Madā'in and died in 657 in Kūfa, on him see Balādhurī, p 289, Tabarī, I 2452, Streck, *Babylonien*, II 262, Herzfeld, *op cit*, II 59

The tradition that these two companions of the Prophet are buried here is old and goes back to the third (ninth) century — the earliest reference is in Yaʿkūbī, *B G A*, VII 320 Of the thousands of Persian pilgrims who annually visit the great Shīʿa shrines of the ʿIrāk (Kerbelā', Nadjaf, Kāzimain and Sāmarrā) many chose to visit Salmān Pāk as one of the stages on the way out or home

K Niebuhr (cf his *Reisebeschreibung nach Arabien*, Copenhagen 1778, II 306) heard of a tomb of a third companion of the Prophet in al-Madā'in, namely that of ʿAbd Allāh b Salām, [*q v*] a Jew of al-Madīna The latter — a strenuous opponent of ʿAlī — never came to the ʿIrāk so far as we know The *Sālnāme-i Baghdād* of 1317 (1906), p 256 (according to Herzfeld, *op cit*) mentions in addition to Hudhaifa a certain ʿAbd Allah al Ansārī, buried in al-Madā'in, but I think his statement like that of Niebuhr (or rather his informants) is not to be relied upon There is possibly some confusion with ʿAbd Allāh b Sabā, who is said to have been of Jewish origin and accompanied the Caliph ʿAlī to the ʿIrāk, but was there banished by him, as his extravagant enthusiasm for him made him a nuisance, to al-Madā'in, where he may have died Details of his end are not known Herzfeld suggested ʿAbd Allāh b Hubāb, who, according to Masʿūdī (IV 410), was murdered by the Khāridjis in 38 (658) while acting as ʿAlī's representative in al Madā'in As the interior of Salmān's sanctuary is said to contain two graves, the second may be claimed as that of this uncertain ʿAbd Allāh and not as that of the last Caliph Mustaʿsim executed by Hūlāgū, as Mignon, *Travels in Chaldaea*, London 1829, p 78 says he is followed by W Ainsworth, *Narrative of the Euphrates Expedition*, London 1888, II 276 For the existence of a tomb of a Caliph at al-Madā'in there is no literary authority

As to the second area of ruins, which begins south of Salmān Pāk, its centre is formed of the great hall of Tāk-i Kisrā ("arch of Kisrā"), the glory of the celebrated Īwān, which will be dealt with briefly below In the immediate vicinity of the Tāk, four groups of ruins may be distinguished of which the most notable is an oblong mound 20 feet high in the south, called locally *Harīm-i Kisrā* = "the harem of Kisrā" or *al-Dbāʿi*, "the hyena-hill" It certainly conceals a single building All these groups of ruins which fringe the Tāk on the four sides undoubtedly belong to the palace of the Īwān, which must have covered an area about 400 yards long and 300 broad Some 500 yards S E of the ruins of al-Tāk, behind an irrigation canal the surface shows fewer but continuous remains

came into use, first, I believe, in Rashīd al-Dīn (*Hist. des Mongols de la Perse*, ed. Quatremère, p. 266) Yāḳūt (i. 425), as well as Bākuwī (c 1400) after him, know only the arched hall flanked by two wings as remains of the Īwān The building remained in this state practically unaltered till 1888 when on April 5th on the occasion of a high flood the northern front wing collapsed, probably undermined by the ruthless robbery of bricks. An attempt was made a few years ago to save the threatened south wing by securing its foundations. Pictures of the Ṭāḳ-i Kisrā before and after 1888 may be found in Fr Langenegger, *Die Baukunst des Irāk* (Dresden 1911), p 16

The *Ḳaṣr al-Abyad*, the "White Palace", has completely disappeared At the capture of Ctesiphon it was spared by the Arabs like the Īwān The Muslim general Sa'd took up his quarters in it It met its fate in the reign of the Caliph al-Muktafī (902–908) who had it destroyed to provide building material to complete the al-Tādj palace on the east side of Baghdād, cf Streck, *Babylonien*, i 122, ii 259, Herzfeld, *op cit*, ii 63

Systematic excavations have never been conducted on the site of al-Madā'in The antiquities found here come from isolated chance finds, for a list of these see Pauly-Wissowa, Suppl iv, p 1166–1167 The Deutsche Orientgesellschaft has just (the autumn of 1927) begun excavations here and it is to be hoped that this enterprise, which is on a considerable scale, will yield valuable results for the archaeology, history and topography of Seleucia and Ctesiphon, especially on disputed points which can only be decided by the spade

Bibliography *B G A*, ed de Goeje, Yāḳūt, *Mu'djam*, ed Wüstenfeld, Tabarī, Ibn al-Athīr (ed Tornberg), see the Indices to these works under al-Madā'in, Behrasīr, Īwān, Kasr al-Abyaḍ, Rūmīya, Taisafūn, *Kitāb al-Aghānī*, indices by Guidi, s v — There is valuable material for the Christian history of al-Madā'in in the *Kitāb al-Midjdal*, a history of patriarchs by Mārī b Sulaimān of the xiith century and in the abbreviation of the work continued to the xivth century by 'Amr b Mattā and Ṣalībā b Yūhannā, see H Gismondi, *Maris, Amri et Slibae de patriarchis Nestorian commentaria* (text and Lat transl), 3 parts, Rome 1888–1899 Of late mediaeval Oriental works may be mentioned Hamd Allāh al-Ḳazwīnī, *Nuzhat al-Kulūb* (*G M S*) p 44–46 or 50–52 (transl) and the already mentioned Bākuwī (cf *N E*, ii., 1789, p 424) A naive description of al-Madā'in is given in a Turkish account of the end of the xviith century entitled *Kitāb Manāsik al-Ḥadjdj*, Bianchi translated this into French in *Recueil de Voyages et de Memoires, publ par la Société de Géographie*, ii., p 81 *sq* (or p. 131) On the references, which contain minor errors, in Firdawsī's *Shah-nāma*, see Nöldeke, *Das iranische Nationalepos*, p 49 (in the *Grundr der iran. Philol*, Vol ii). — For further information from Oriental authors s G Le Strange, *The Lands of the Eastern Caliphate* (Cambridge 1905), p 33–35; Streck, *Babylonien nach den arab Geographen*, ii. (Leyden 1901), p 246–279 and do, *Seleucia und Ktesiphon* (= *Der alte Orient*, vol xvi, Heft 3–4), Leipzig 1917 See also the articles KOCHE by Weissbach in Pauly-Wissowa, *Realenzykl der klass. Tscherikover, *Die hellenist. Städtegründungen* (= *Philologus*, Suppl vol xix, 1927, Heft 1), p 90–92 — A historical topographical sketch of al-Madā'in from the earliest times to the present day is given by the Baghdād Carmelite Father Anastase in Arabic, in *al-Machriq*, v. (Beirūt 1902), p 673–681, 740–746, 780–786, 834–840 (giving extracts mainly from Arab authors and European travellers), J. M Patchatchy, *Le palais de Chosroes*, in the Arab. periodical *Lughat al-'Arab* (Baghdād), 1914, No 8 — In Ritter's *Erdkunde von Asien*, xi (1844), p 852–865 the accounts of various early European travellers are utilised For the modern topography of al-Madā'in and the questions of archaeology and history of art arising out of the buildings there, the main authority is now E Herzfeld's *Seleukeia und Ktesiphon* in the already mentioned *Archaol Reise*, ii 46–76, 262, note 1 (suppl) For further bibliography cf Streck, *Babylonien*, *loc cit*, do, *Sel u Ktes*, p 64 and Herzfeld, p 46, note 1 and p 49, note 1 (M STRECK)

MADĀ'IN ṢĀLIḤ [See AL-HIDJR]

AL-MADĀ'INĪ, 'ALĪ B MUḤAMMAD B 'ABD ALLĀH B ABĪ SAIF ABU 'L-ḤASAN, an Arab historian and writer, a client of the Kuraish family of the 'Abd Shams b 'Abd Manāf, was born in 135 (752) in Basra, where he was a pupil of the theologian Mu'ammar b al-Ash'ath, but he became interested in *Adab* and history, he lived for a time in al Madā'in but moved from there to Baghdād, where he was closely associated with Ishāk b Ibrāhīm al-Mawsilī in whose house he died in 225 (840), according to the *Fihrist* in 215 (830), according to others not till 231 (845) His literary activity was very extensive and included works on the history of the Prophet, of the Kuraish, of the conquests and the caliphate as well as the history of poets and lighter literature (*adab*) The *Fihrist* gives 239 titles of works from his pen but this includes the *Kitāb al-Diawābāt* twice and many of the works may have been quite short On the other hand this list is not complete Although later writers using his works only rarely give their titles, we can add the following to the list in the *Fihrist* Among historical monographs omitted is the *Kitāb Akhbār Zufar b al-Hārith* used by Yāḳūt (*Mu'djam*, iv 369) following a MS of Sukkarī (cf Heer, *Die hist und geographischen Quellen in Yāḳūts geogr Wb*, Strassburg 1898, p 5) Among *adab* works is omitted especially the *K al-Faradj ba'da 'l-Shidda* (cf Wiener, *Isl*, iv 276 *sqq*), often used by al-Tanūkhī, also the *K al-Samir*, cited ii 174, 2 by the same, the *K al-Mugharribīn* used by 'Abd al-Kādir al-Baghdādī (cf *Khizānat al-Adab*, ii 109, 1). The titles of his works seem to have varied often Thus the *K al-Nisā' al-Fawārik* cited by 'Abd al-Kādir, *Khizānat al-Adab*, i 408, 11, is doubtless identical, one may say, with the *K al-Nisā' al-Nāshizāt* cited *ibid*, iv 366, 5 below and 479, 15 and the *K. al-Nawākih wa 'l-Nawāshiz* of the *Fihrist*, 102, 1, as doubtless is the *K Zakan Iyās* in al-Maidānī, i 220, 12 with the *K. Akhbār Iyās b. Mu'āwiya* in *Fihrist*, 104, 15 and the *K. Akhbār al-Ḳuṣṣāṣ* in Mas'ūdī, ii 70, 2 with the *K. al-Ḳiṣṣāṣ wa*

'l-Akrād of the *Fihrist*, 103, 14 There still exist only parts 1 and 2 of the *K al-Ta'āzī* (*Fihrist*, 104) in the Zāhirīya of Damascus (cf Habīb al-Zaiyāt, *Khaza'in al-Kutub fi Dimashk wa-Ḍawāhīhā*, p 28, N° 1, 3) Of his historical works his *K Akhbār al-Khulafā' al-Kabīr* seems to have been the most comprehensive It came down to the reign of al-Mu'tasim Tabarī's account of the end of the reign of the caliph Hishām in 125 and the beginning of the reign of al-Walīd seems to be based on it, although for Umaiyad history he generally prefers Abū Mikhnaf The *K al-Dawla al-'Abbāsiya*, according to Yāḳūt, *Irshād*, v 315, 8, consisted of several books, some of which were still available to him in Sukkarī's manuscript He is wrong however in thinking that this work was unknown to Ibn al-Nadīm, for it is evidently the *K al-Dawla* of the *Fihrist*, 103, 12, but it was omitted in the copy used by him Of his historical monographs, the one used most copiously by Tabarī was his history of Khurāsān, the title of which *K Futūh Khurāsān* already given in the *Fihrist*, 103, 10, made its subject plain, it is a most important source for the history of Central Asia in the period of the Muslim conquest His history of Basra (*Fihrist*, p 103, 6) seems also to have been Ṭabarī's main source for his account of this town As his authority Ṭabarī gives 'Umar b Shabba, in one passage he definitely mentions the latter's *K Akhbār Ahl al-Baṣra* (II 168, 10), perhaps he knew Madā'inī's work through the intermediary of 'Umār b Shabba Lastly Madā'inī's work on the Khārijīs was used not only by Tabarī but also by Balādhurī in the *K al-Ashrāf* (Ahlwardt's *Anonymus*), by Mubarrad in the *Kāmil* and Abu 'l-Faradj al-Isfahānī in the *K al Aghānī* His separate work on the battle of Nahrawān may have been used by Tabarī for the year 38 From his history of Madina (*Fihrist*, p 103, 23) al-Balādhurī seems to have taken his statements in the *K al-Futūh*, p 11, 2, 13, 6, 47, 17 and he seems to have been acquainted with Madā'inī's numerous other monographs on the history of the conquest Among al-Madā'inī's pupils, al Zubair b Bakkār was the best known continuer of his work, which was however rendered obsolete in the next generation by the systematic works of Balādhurī and Tabarī

Bibliography *Kitāb al-Fihrist*, p 100–104, Yāḳūt, *Irshād al-Arib*, ed Margoliouth, v 309–318, Wüstenfeld, *Die Geschichtsschreiber der Araber*, N° 47, Brockelmann, *G A L*, I 140

MADĀR [See GHĀZĪ MIYĀN]

MĀDDA (A), a philosophical term = *hayūlā*, Gr ὕλη is, like its correlative *ṣūra*, Gr εἶδος, a word of varied significance In general it means that which can possibly exist (*δυνάμει*) but which really is not (has no form) but may become something through the adoption of opposed determinatives (forms). As the realisation of the possible is conceived as advancing by stages, a lower stage of form may again be conceived as material for a higher form of development The question is further complicated even in Aristotle by the distinction between a physical and a logical material (this consists in the conception of species, which is formed by the specific differentia) and by the division of the physical into a heavenly and an earthly material In addition there were further different, especially neo-Platonic, influences among the Arab philosophers

The fourfold division of matter is very common, e g in the *Ikhwān al-Ṣafā'* I prime matter, either directly or indirectly an emanation from the divine being, i e an intelligible matter conceived, according to Pseudo-Empedocles, as the first emanation but usually explained as in neo-Platonism as the last in the series (spirit, soul, nature), often defined as the efflux of light from the light of God, 2 the matter of the universe as a whole, especially and permanently, of the heavenly spheres, which first of all adopts the indefinite form of corporeality (extent) or at once the three definite dimensions, 3 the matter of the four earthly elements, fire, air, water and earth, 4 energy, which is already formed in some way, but can be used for definite purposes, e g wood, stone etc

In agreement with Aristotle the philosophers regard God as pure immaterial form Only an extreme mystic like 'Abd al-Karīm al-Djīlī, can call Him the *hayūlā* of the world As regards the lower spirits (spirits of the spheres, angels etc) opinions differ, but most thinkers find it easy to assume an intelligible matter, and even to recognise in the first created, the highest world spirit, a material principle, next however they are fond of distinguishing this intelligible matter as receptive and the earthly sensual matter as passive — Different opinions are expressed regarding the *principium individuationis* in the comparatively speaking purer Aristotelians we find the tendency to seek it in matter and in those who are more inclined to Platonism in form All insist, although with varying emphasis, upon the desire of matter for form more than the love of form for union with matter

As to logical matter, it may be noted in conclusion that the three modalities of judgment (necessity, possibility and impossibility) are described as "matters" (Ibn Sīnā) — Cf also the article 'UNSUR (TJ DE BOER)

MA'DHANA [See MANĀRA]

MADHHAB. [See FIKH]

MADHḤIDJ, an Arab tribe of Yemen origin, traced by the genealogists to Mālik b Udad, who is said to be descended in the fourth generation from Kahtān and to have received his name Madhḥidj from a hill of this name on which he and his brother Taiy were born His sons are said to have been Sa'd al-'Ashīra, Djald, Yuhābir called Murād, and Zaid called 'Anz The Madhḥidj whose tribal lands are said to have lain near Tardj "on the road to Yemen" (Yāḳūt, s v) and whose brother tribes were Khath'am and Murād, were, according to tradition, at war with the 'Āmir b Sa'sa'a about the time of the appearance of Muhammad, in the course of this war was fought the battle of Faif al-Rih In the Muslim period, families of the tribe of Madhḥidj were predominant in Kūfa along with those of Kinda and Hamdān

Bibliography Tabarī, *Indices*, Ibn Duraid, *Kitāb al-Ishtikāk*, ed Wüstenfeld, p 237, al-Bakrī, ed Wüstenfeld, p 721, cf Wüstenfeld, *Tabellen* I and *Register*, Wellhausen, *Sturs des arab Reiches*, p 248 (H H BRAU)

MADĪD, the second metre in Arabic prosody, very little used on account of a certain heaviness in its rhythm In theory it consists of four feet in each hemistich and the prosodists quote in support of this several anonymous verses In practice there are only three

There are three *ʿarūd* and six *darb*

First *ʿarūd*	*fāʿilātun*	*fāʿilun*	*fāʿilātun*	*fāʿilātun*	*fāʿilun*	*fāʿilātun*			
Second *ʿarūd*	*fāʿilātun*	*fāʿilun*	*fāʿilun*	*fāʿilātun*	*fāʿilun*	*fāʿilān*			
	〃	〃	〃	〃	〃	〃	*fāʿilun*		
	〃	〃	〃	〃	〃	〃	*fʿilun*		
Third *ʿarūd*	〃	〃	*faʿilun*	〃	〃	*faʿilun*			
	〃	〃	〃	〃	〃	*fʿilun*			

Fāʿilātun may become *faʿilātun*, it only changes into *fāʿilātu* (without *n*) if *fāʿilun* which follows it retains its long vowel *Fāʿilun*, except in the second *ʿarūd* with its third *darb*, only changes into *faʿilun* when *fāʿilātun* preserves its *n*

(MOH BEN CHENEB)

AL-MADĪNA, a town in Arabia, the residence of Muhammad after the Hidjra, and capital of the Arab empire under the first caliphs The real Arabic name of the town was Yaṯhrib, Jathrippa (this is the correct reading) in Ptolemy and Stephan Byzantinus, Jthrb in Minaean inscriptions (M Hartmann, *Die arabische Frage*, p 253 *sq*) Al-Madina on the other hand is a descriptive word "the town" and is taken from the Aramaic, in which *Medinta* means strictly, "area of jurisdiction" and hence town (of some size) In the Meccan sections of the Kur'ān it is found as an appellative with the plural *al-Madā'in*, while in the Madīna Sūras al-Madīna is used as a proper name for the new residence of the Prophet (IX 102, 121, XXXIII 60, LXIII 8) The old name Yaṯhrib on the other hand is found only once (XXXIII 13) It is evident from these references that the usual explanation of the name as "the town" (of the Prophet) is a later one It is rather to be supposed that it was a result of the existence of a strong Jewish element in Yaṯhrib that the Aramaic loan-word became the regular name of the town It is analogous to the originally South Arabian Hadjar [q v] "town", which is applied to the capital in Baḥrain Of the Madīnese poets, Kais b al-Khaṭīm uses the name Yaṯhrib exclusively while Hassān b Thābit and Kaʿb b Mālik use both names, which is also the case with Muhammad's ordinance of the community (Ibn Hishām, p. 341 *sqq*)

Madīna is situated in the Hidjāz on a plain sloping very gently towards the north, the boundaries of which are marked in the north and north-west by the hills of Uhud [q v] and ʿAir about four miles from the town, two outer spurs of the range which forms the boundary between the Arabian highlands and the low lying coastlands (Tihāma) West and east the plain is bounded by the Harras or Lābas, barren areas covered with black basalt but the eastern Harras lie at a greater distance and leave between them and the town room for more fertile patches so that the eastern frontier of the plain is really formed by a row of low black hills In the south the plain stretches away farther than the eye can reach Its noteworthy feature is a richness in water unusual in Arabia All the water-courses come from the south or from the Harras and flow to the north, where they combine at Zaghāba and then take a westerly course to the coast in the wādī Idam As a rule they only contain water after rain but they keep the level of the subterranean water fairly high so that there are a considerable number of wells and springs After heavy rains the open square of al-Munākha (see below) forms a lake and considerable inundations are not rare and may even be dangerous to the buildings in the southern part of the town One such flood was particularly threatening in the reign of the Caliph ʿUthmān so that he had a dam built as a protection against it (Balādhurī, p 11) and even worse were those of the years 660 and 734 A H, when the wall created by the great volcanic outburst was broken through by the water (Samhūdī-Wustenfeld, p 23) The water is in places salt and unpalatable, and different governors of the town have made aqueducts to bring to the town good water from wells of sweet water farther to the south The water courses have different names in the west al-ʿAkīk with W Buthān and Ranūnā, in the east W Kanāt with Mahzūr and Mudhānib (or -nīb) The soil is of salty sand, lime and loamy clay and is everywhere very fertile, particularly in the south Datepalms flourish exceedingly, also oranges, lemons, pomegranates, bananas, peaches, apricots, figs and grapes The winters are cool and wet, the summers hot but rarely sultry Modern travellers say the air is pleasant but not very healthy and fevers are and always have been a plague, especially for newcomers as Muhammad's followers had frequently to learn (Balādhurī, p 11, Farazdak, ed Boucher, p 9, 13, Burckhardt, *Reisen in Arabien*, p 482 *sqq*, 605, Burton, *A Pilgrimage*, p 176 *sq*, Wensinck, *Mohammed en de Joden*, p 31, H Lammens, *Fāṭima*, p 54, Goldziher, *Muhammedanische Studien*, II 243) The Umaiyads called the Town "the filthy" in contrast to the honorific *al-ṭaiyiba* which the Prophet is said to have given it (Goldziher, *op cit*, II 37)

The way in which Madīna is favoured by nature forms a striking contrast to Mecca which lies in a rocky valley where corn does not grow (Sūra XIV 40) From the very beginning it was not a regular town but a collection of houses and cottages which were surrounded by gardens and cultivated fields, the inhabitants of which were devoted to agriculture and therefore contemptuously called "Nabataeans" by the Beduins These scattered settlements only gradually became consolidated to a townlike agglomeration, which however lay farther north than the later town, as the name Yaṯhrib according

to Samhūdī (Wüstenfeld, *Geschichte der Stadt Medina*, p 37) was especially associated with a place west of the tomb of Hamza where the Banū Hāritha settled The town which arose in this way was not surrounded by a wall so that its defences were the thick groves of palms and the orchards which surrounded the houses As they were less thick on the north and west sides, these were most exposed to hostile attacks The little forts (*ṣ.tum*, plur *āṭām* or *uḏjum*, plur *āḏjām*) which were built in considerable numbers formed a substitute for a wall and the inhabitants could retire into them in times of trouble

There were in later times no reliable traditions regarding the origin and earliest history of Madina and the historians endeavoured to fill the gap themselves and as elsewhere made the Djurhum (q v and also Krauss, in *Z D M G*, lxx 352) and the quite unhistorical ʿAmalekites play a part in it (cf also Hassān b Thābit, ed Hirschfeld, N⁰ 9, verse 6) It is only with the coming of Jews to Madīna that we are on surer ground, but the historians know so little of the exact period of these settlements that they connect them sometimes with Moses, sometimes with the deportation of the Jews under Nebuchadnezzar, and sometimes with the conquest of Palestine by the Greeks or by the Romans According to various references in the Talmud there were Jews in Arabia in the early centuries of the Christian era and this certainly means North Arabia in the main (see Hirschfeld, *Beitrage zur Erklarung des Koran*, p 49 *sq*) and that they were numerous is evident from the existence of Jewish communities in Taimāʾ, Hiḏjr (Jaussen and Savignac, *Mission*, p 150, 242), Khaibar, Wādi 'l-Kura, Fadak and Maknā, to which may be added that in Madina Everywhere in these oases they took over and developed the cultivation of the soil, and it was probably due to them, that these scattered settlements each developed into a kind of town, evidence of this is found in the Aramaic name Madīna for Yathrib According to the definite statement of Hassān b Thābit (N⁰ 9, verse 8 in Hirschfeld) they built a number of small forts in this town But that they were not the first to do this may probably be concluded from the fact that the earliest inhabitants were not pure Beduins (according to Lammens, *Tāʾif*, p 72, these forts were built after the model of those of the Yemen) The Jewish tribe of Kainukāʿ played a prominent part in the immigration, as at a later period one of the principal markets in the western part of the town was called after it But gradually the tribes of Kuraiza and Nadīr came to be the leading ones in Madīna Jewry The former dwelled with the Bahdal on the W Mahzūr, the Nadir on the W Buthān (*Kitāb al-Aghānī*, xix 95, where the Jewish tribes and the judaized Arab tribes are detailed) While in this passage, as usual, the Kuraiza and the Nadīr are numbered among the pure Jews, according to a notable statement in the historian Yaʿkūbī (ed Houtsma, ii 49, 52) they were not pure Jews but judaized clans of the Arabic tribe of Djudhām, which Noldeke has repeatedly emphasized as a genuine tradition Now it is historically certain that at that time there were many Jewish proselytes (cf Ibn Kutaiba, *Kitāb al-Maʿārif*, p 299) but in spite of this there are decisive reasons for believing that the Jewish element in Madīna did not arise in this way It is of special significance that the Kuraiza and Nadīr are frequently called the *Kāhināni*, the "two (tribes of) priests", which shows that the Jews knew their genealogy and laid stress upon their descent (cf e g Ibn Hishām, p 660, 18 "thou revilest the pure of the two tribes of priests") The same thing is seen from the fact that Nadīrī Safiya married by Muhammad is described as belonging to the family of Aaron (Ibn Saʿd, viii. 86, 1) But the decisive fact is the way in which the Prophet speaks in the Madina sūras to the Jews there He apostrophises them as sons of Israel and reminds them that God has raised them above all men (ii 44, 116), he brackets them with the ancient Israelites as if they had taken part in the Exodus from Egypt (ii 46 *sq*), Allāh gave Moses the scriptures so that they might be rightly guided (ii 50), they break the laws which he bound them to observe at the treaty of alliance (ii 77 *sqq*) etc Such expressions suggest as clearly as possible that he regarded them as true descendants of the ancient Israelites There must therefore have been in addition to the judaized Arabs a stock of true Jews, and indeed it is obvious that without such there could have been no proselytes Wellhausen moreover has aptly pointed out that the Arabian Jews by their language, their knowledge of the scriptures, their manner of life, their fondness for malicious mockery, secret arts, poison, magic, and cursing, and their fear of death, make an unusual impression which cannot be explained simply by the judaizing of pure Arabs But on the other hand it must not be forgotten that the Jews in Arabia were very much influenced by their surroundings and had assumed a character of their own For example we find among them the division into tribes and families, characteristic of the Arabs, with the obligations associated with this The names of these tribes cannot be traced to old Jewish names but are thoroughly Arabic in appearance, which is also true of their personal names among which true Jewish names like Samawʾal and Sāra are rare The arabicisation of the Jews is particularly notable in the poems which are ascribed to Jews, most of which might have been equally well written by Beduins (see Noldeke, *Beitrage zur Kenntniss der Poesie der alten Araber*, p 52 *sqq*)

While the Jews were supreme in other places like Khaibar, al-Fadak etc, the position was changed in Madina as a result of a new immigration which the Arabs associate with the bursting of the dam at Maʾrib [q v] and the migrations of South Arabian tribes produced by it In this way the two so-called Kaila tribes, Aws and Khazradj [q v], came to Madīna No particulars of their coming are recorded, but from an interesting verse in Ibn Khurdādhbih (*B G A*, vi 128) and Yākūt, iv 460, it is evident that they were for a long time subject and tributary to the Jews and that this part of Northern Arabia was at this time under Persian rule, in keeping with the usual Jewish policy of maintaining friendly relations with Persia Later the Kaila Arabs however succeeded in casting off the Jewish yoke and bringing the Jews under their rule According to tradition the occasion of this was that a powerful Jewish king named Fityaun, who exercised the jus primae noctis, was murdered by a Khazradjī Mālik b al-ʿAdjlān to save his threatened sister — a widely disseminated motif (cf. K

Schmidt, *Jus primae noctis*, 1882, and also *R E J*, 1883, p 156 *sqq*) on which too much stress should not be laid As to later events there are two different traditions some make Mālik after his deed seek the help of a Ghassānid ruler, Abū Djubaila (cf the name Djabula among the Ghassānids), others of a South Arabian Tubba', As'ad Abikārib (c 430, M Hartmann, *Die arabische Frage*, p 482, 497) In this second story, Wellhausen finds some support in some old verses and assumes that Tubba' is here an erroneous popular name for a later Abyssinian viceroy There is however nothing in these verses about an attack of the South Arabians on the Jews of Madīna alone but on the inhabitants of the town together, so that Wellhausen further supposes this attack may have so weakened the Jews hitherto predominant that the Arab inhabitants succeeded in breaking their supremacy, but this is of course no more than an attractive hypothesis In any case the name Abraha in Kais b al-Khatīm, N° 14, verse 15, cannot be used as a basis for further hypotheses for it is certainly not the celebrated Abraha [q v] who is meant Besides, these stories contain legendary allusions to Muhammad's future appearance in Madina, which betray at least a later recasting by Muslims

The new lords of Yathrib took over the forts occupied by the Jews and built several more (Samhūdī, p 37) They also learned "Nabataean" arts from them and began to cultivate palms and pursue agriculture The Khazradjīs, whose principal family was Nadjdjār (or Taim al Lāt), as the most powerful tribe assumed the leadership and occupied the centre of the town where the modern Madīna lies West and south of them lived other Khazradjī tribes while the territory of the Hārith ran to the east The Awsīs, who also comprised several families, settled south and east of their brethren, the Nabīt in the northeast separated by the Hārith from their kinsmen The two principal Jewish tribes Nadīr and Kuraiza preserved a certain amount of independence and retained their lands under the Awsīs while the Kainukā' retained their lands in the southwest although their main industry was practising the goldsmith's art Further details of the parts occupied by the tribes and families are given in Samhūdī (Wustenfeld, p 29 *sq*, 37 *sq*) but these can only now be partly identified Besides there were in Madina, in addition to the Jews and the immigrant Kaila tribes several Arab tribes, some of which were already there when the former came They were closely connected with the Jews and were partly judaized The settlement of affairs reached in this way gave the town a period of peace, which was however gradually broken as an increasing enmity arose between the two Kaila tribes, as was not infrequently the case with Arab brother tribes At first it was individual families that fought one another but the conflagration gradually spread until the existence of the whole town was threatened The quarrel began with the feud of Sumair, so-called after an Awsī named Sumair This was settled by an arbitrator but it was not long till renewed friction led to renewed hostilities, of which the so-called feud of Hātib was the most serious We are introduced to this second period by the poems of Kais b al-Khatīm of the Awsī family of al Nabīt The fighting throughout ended unfavourably for the Awsīs and the Nabīt were finally driven from their possessions In their need the Awsīs appealed for help to the two principal Jewish tribes They at first refused it, but when the Khazradjīs had foolishly slain some Jewish hostages, they concluded an alliance with the Awsīs and declared themselves ready to assist them It was no longer a fight between a few families but a struggle between the two great rival tribes in their full strength and other inhabitants of Yathrib, even the Beduins of the country round also took sides At Bu'āth [q v] after long preparations a decisive battle was finally fought It at first looked as if the Awsīs were again to be defeated The tables were turned and the Khazradjīs suffered a severe reverse It is interesting to note that 'Abdallāh b Ubaiy of the Khazradjīs on this occasion displayed the same irresolution that he did later in his opposition to Muhammad, he took the field with the others but did not enter the battle On the day of al-Sarāra he actually ran away The battle of Bu'āth restored the equilibrium between the principal tribes, but the continual fighting had sapped the strength of the town and the bitter feeling which continually revealed itself made the lives of the inhabitants more and more unendurable Then a momentous change took place when the people of Madina, who required a leader with a strong hand, and Muhammad, who had only to a slight extent succeeded in winning over the Meccans to his religious views, came into contact with one another

The Kaila tribes at the time of their immigration to Yathrib had been heathens like the great majority of the Arabs The principal deity they worshipped was Manāt [q v], after whom the Awsallāh were originally named but they also reverenced among others al-Lāt (cf the name Taim al Lāt already mentioned) Through living alongside of Jews they became influenced by their religious and moral ideas, but unfortunately we know very little of their spiritual outlook before the coming of the Prophet The poet Kais deals in the Beduin style mainly with the quarrels between the tribes and families and rarely refers to religious matters He nowhere mentions the local deities but refers to Allāh (No 6, verse 22) whom he calls the creator (5, 6, cf Goldziher, *Z D M G*, lvii 398), which is in itself sufficient to prove Jewish or Christian influence Of him he says in N° 11, verse 8 "Allāh will only what he will", verse 13, 12 "Praise be to Allāh, the lord, the lord of the building" refers to the Ka'ba in Mecca, the *masdjid* covered with carpets (5, 14) The three days in Minā are mentioned in 4,4 which shows that they then as later in the Muslim poets gave the young men an opportunity for love-affairs with women of other tribes In rejecting a life after death, 6, 22, he is quite on a level with the pagan Meccans Alongside of such representatives of a mixed religion there were others whose conceptions had developed farther through contact with Jews or Christians, so that they were reckoned hanīfs [q v] as they definitely rejected the popular deities and had assumed a tendency to asceticism Abu 'l-Haitham and As'ad b Zurāra for example professed monotheism before they became acquainted with Muhammad (Ibn Sa'd, III/II 22, 139) A Khazradjī, Abū Kais Sirma b Abī Anas, wore sackcloth and laid stress on levitical purity, he actually thought of becoming a Christian but gave up the idea and adopted Islām when an old man (Ibn Hishām, p 347 *sq*) A man of the Awsī tribe,

Abū ʿĀmir ʿAbd ʿAmr b Ṣaifī was known as "the monk" from his ascetic mode of life, he later became an enemy of the Prophet, left Madīna and fought against him on the side of the Meccans, he is also said to have supported those who built a rival mosque at the time of the Tabūk campaign (Ibn Hishām, p 411, Ibn Saʿd, III/II 90, 7, Wāḳidī-Wellhausen, p 310) In evidence of such influence of Christians in Madīna one might quote a verse of Hassān b Thābit (ed Hirschfeld, p 133, 17), but this probably refers to a later period and opportunities of mixing with them were to be found in many places in Arabia One result of living alongside of Jews in Madīna was that the art of writing was quite well known there (cf Ibn Kutaiba, *Kitāb al-Maʿārif*, p 132 *sq*, 166, Balādhurī, p 473 *sq*, Ibn Saʿd, III/II, *passim*)

The spiritual influence of the Jews on the Arab inhabitants of Madīna became an important factor in the relations between them and Muhammad, for it made them receptive to his religious ideas with which they became acquainted by visits to Mecca and in other ways How finally a treaty was concluded between him and several representatives of the Madinese, by which the latter pledged themselves to take him into their community and to defend him as if he were one of themselves and how he and those of his followers who were still faithful to him thereupon migrated to Madīna is related in the article MUHAMMAD After a brief stay in the southern suburb of Kubāʾ he entered the town and took up his abode with a Khazradjī, Abū Aiyūb Khālid b Zaid, with whom he lived till a dwelling was arranged for him He is said to have left the choice of the site to the movements of his camel — if the story is true, a very clever move not only from the religious but also from the political point of view In any case it is certain that hardly anything ever showed so clearly his gift, based on his unshakeable belief in his prophetic call, of leading men to follow his will, as the fact that he succeeded in a very short time in bringing some kind of order into Madina, hopelessly split up by feuds, and making a kind of unity out of the heterogeneous elements in the town, the earlier Arab inhabitants of Yathrib, the later immigrants, now predominant Kaila tribes, the Muhādjirūn from Mecca and the Jews or judaized Arabs We get a glimpse of the first step towards this goal from the ordinance of the community preserved in Ibn Hishām, p 341 *sqq* ("Book of the fines", cf Tabarī, Glossary s v *ʿkl*) which Wellhausen, *Skizzen und Vorarbeiten*, IV 67 *sqq* and following him Caetani, *Annali dell' Islām*, I 395 *sqq* and Wensinck, *Mohammed en de Joden te Medina*, p 78 *sqq* have discussed It is most interesting for its omissions and it lacks to a marked degree clear and logical fundamental ideas, because Muhammad was content temporarily with what could be attained and avoided everything that might cause strife In it he calls himself the messenger of Allāh, but there is no reference to his divine inspiration His object is to form a unified *umma* out of the inhabitants of Madīna and this is defined from the religious side as the community of believers from Mecca and Yathrib But the non-believers are not excluded, for the *umma* coincides rather with the town of Madīna which included also Jews and heathens, of whom it is not demanded that they should adopt Islām The tribes retain their autonomy as regards blood-vengeance and ransoming of prisoners, but against the rest of the world generally the affording of protection was obligatory on every member of the community without exception and no one could conclude peace separately with the enemies of the community (particularly the Kuraish) All important matters, out of which misfortune might befall the community, were to be brought before Allāh and Muhammad The valley of Yathrib was to be *haram* (or *harām*) for all who were bound by this ordinance The whole document thus alternates continually between religious and purely political clauses in a very opportunist fashion It never became of great importance and it soon fell into oblivion as it was rendered obsolete by the rapid progress of events, certainly not against the wish of Muhammad whose plans went far beyond what was laid down in it The main cause of its loss of importance was the breach which soon occurred between Muhammad and the Jews, which the latter provoked by their scornful criticism of Muhammad's revelations, especially of the weak points revealed in his reproduction of stories from the Old Testament This meant a serious threat to his authority and in addition the Jews endeavoured to destroy the agreement reached in Madīna by endeavouring to revive the old hostility between the two Kaila tribes (Ibn Hishām, p 385 *sqq*, cf Sūra, III 114 *sqq*) To meet these difficulties, which of course were very welcome to his enemies in the town, Muhammad worked hard to unite his followers for a common object, the war with the Meccans, by which he could at the same time avenge the resistance offered him there It was at first difficult for him to arouse enthusiasm for this war among the Muhādjirūn and even more the Ansār but finally, when a fortunate accident occurred to help him, he succeeded in bringing about a war with the Meccans which led to the momentous victory at Badr On the further fighting of this campaign, the battle of Uhud and the war of the ditch, cf the article MUHAMMAD The latter campaign gets its name from the ditch (*Khandak* q v) which Muhammad on the advice of a Persian (Salmān) had dug around the unprotected parts of the town and which, in spite of its modest dimensions (it is said to have been a fathom broad), formed a serious obstacle to the enemy Ibn Djubair in the XIIth century still saw traces of it, an arrowshot west of the town On its further course cf Wensinck, *Mohammed en de Joden*, p 26, 31 The Meccans in this fighting gave him very material assistance by their lack of warlike ability and energy, and the war contributed to consolidate his position in Madina, aided not a little by the lack of resolution among the Munāfikūn who never managed to seize opportunities favourable to them He was thus not only in a position to continue the war against his native city but also to repay the Jews in ruthless fashion for all the annoyance they had caused him After the battle of Badr, the Ḳainukāʿ were driven out of the town and after the battle of Uhud, which went against the Prophet, the same fate was meted out to a Kāhin tribe, the Naḍīr But the worst lot was that of the Kuraiza, whom in spite of the intercession of the Awsīs he had massacred These events however do not show the Jewish tribes in a favourable light as they made no attempt to help one another but left each other

in the lurch in most cowardly fashion The Ḳuraiẓa alone at the massacre showed a courage which to some extent atones for their previous attitude In this way Muhammad succeeded in disposing of the danger that threatened him from the Jews, for the Jews who were left in Madīna were of no importance and caused him no serious difficulties

With the treaty of Hudaibiya in the year 6 A H [cf MUḤAMMAD] the war with the Kuraish was practically finished, for in it his genius for diplomacy succeeded in bringing them to recognise Madīna as a power equal in importance to Mecca The official conclusion of the struggle was the bloodless occupation of his native city in 8 A H However great a triumph this was for the Prophet, it produced a new feud which was to prove fateful for Islām after the death of Muhammad Even before the decisive turn in the struggle with Mecca, in the campaign against the Banū Mustalik, the ill feeling between the emigrants and a section of the people of Madīna came to a head in threatening fashion and ʿAbdallāh b Ubaiy delivered several boastful speeches and threatened to expel the troublesome intruders (cf Sūra, lxiii 8), which he naturally denied when the Prophet later took him to task But when Muhammad had entered Mecca, his faithful followers in Madīna became anxious, as they feared he would now abandon their town and return to his native place He calmed them however and declared that he would live and die with them (Ibn Hishām, p 824) But when he began to treat the Meccans with great clemency and after the battle at Hunain was striving to win them over to his religion by rich gifts, the Anṣār with justice felt themselves slighted and once again feared that he would abandon them But he delivered them a speech in which he reminded them how he had united them when they were living in hostility to one another and declared his gratitude for all that they had done for him, and when he concluded by asking them to be satisfied if others went home with captured herds but they with the messenger of Allāh, they burst into tears and withdrew satisfied (Ibn Hishām, p 885 *sq*) While in such stories there may be an echo of the later antagonism between the Anṣār and the Kuraish, they undoubtedly give a not inaccurate idea of the feelings which found expression at this time It is all the more remarkable that according to various indications there must have been an opposition to Muhammad at the time of the Tabūk campaign in Madīna His orations against the Munāfiḳūn in the ninth Sūra sound unusually excited and recall those of the Meccan period with their threats of punishment There is also the notable, but unfortunately not quite clear story of the Masdjid al-Dirār (cf also Lammens) which some men had built south of the town in the land of the ʿAmr b ʿAwf and which he sanctioned until he saw that its object was to provoke dissension among the believers for the benefit of his former enemies (Sūra, ix 108 *sqq*), wherefore he had it destroyed According to one story, the already mentioned Hanīf Abū ʿĀmir was the moving spirit in it, (Ibn Hishām, p 906 *sq*, Wāḳidī-Wellhausen, p 410 *sq*, Ṭabarī, i 1704 *sq*, Ibn Saʿd, III/ii 36, 8, 96, 13) In any case Muḥammad succeeded in again restoring peace, probably assisted by the fact that the leader of the Munāfiḳūn died soon afterwards

Faithful to his promise, the Prophet remained in Madīna till his death on June 8, 632 According to a reliable tradition (Tabarī, i 1817, Ibn Saʿd, II/ii 57, 2, 58, 28, 59, 1, 71, 6), his corpse lay unburied for a whole day, so that its putrefaction was far advanced when it was finally buried under ʿĀʾisha's house, apparently a result of the great confusion into which his death had thrown the town The unity created by his strong hand at once fell to pieces, the Anṣār assembled and chose the Khazradjī Saʿd b ʿUbāda as their chief, while others proposed that the government should be shared between the Anṣār and the Muhādjirūn ʿUmar's rapid and vigorous intervention however succeeded in thwarting these plans so threatening to Islām and carrying through the election of Abū Bakr as Caliph He and his two successors resided in Madīna which thus became the capital of the rapidly growing empire Abū Bakr and ʿUmar, like the Prophet, were buried under the house of ʿĀʾisha, while ʿUthman's body was brought in the darkness on a door to the Jewish cemetery amidst objurgations and stone-throwing In this period no one thought of strengthening the defences of the capital, not even during the *ridda* after the Prophet's death and still less later when the holy wars were waged exclusively in foreign lands ʿUthmān had the forts taken down, but remains of them could be seen as late as the tenth century (Masʿūdī, *K al-Tanbih*, *B G A*, viii 206)

ʿAlī's reign brought a complete change for Madīna When the great civil war broke out between him and his rivals and the decisive battles were fought in the provinces, the Caliph recognised that the vast empire could not possibly be governed from the remote corner of the world in which Madīna lay While the earlier caliphs had remained in the capital and sent out armies of conquest from it, ʿAlī placed himself at the head of his troops and set out from Madīna in Oct 656, never again to see it He made Kūfa his capital and after Muʿāwiya's victory Damascus took its place Madīna now sank, like its old rival Mecca, to the rank of a provincial town, unaffected by the current of the world's events What pious old folks thought of this change is reflected in a characteristic tradition (Dīnawarī, p 152 *sq*) according to which several prominent Anṣār tried to induce ʿAlī to abandon his plan of leaving Madīna "What thou dost lose in the form of prayers in the mosque of the Prophet and the course between his tomb and his pulpit is of more value than what thou expectest to find in the ʿIrāḳ, reflect how ʿUmar used to send his generals to war, there are still just as capable men amongst us as then!" But the Caliph replied "The wealth of the state and the armies are in the ʿIrāḳ and attacks threaten from the Syrians, and I must be near them"

Madīna with its venerable associations and the tomb of the Prophet could not of course become quite unimportant, on the contrary, its sanctity increased in the eyes of Muslims, the more the figure of Muhammad became important in their conceptions, but the life of the town became more and more remote from the real world in which actual history was being unfolded Hither retired all who wished to keep aloof from the turmoil of political happenings, like ʿAlī's son Hasan, after he had abandoned all his claims (Tabarī, ii 9, Dīnawarī, p 232). Husain also went there from Kūfa, but left it again to make his desperate attempt to gain his rights, and it is significant that none of the Madīna Anṣār

went with him (Wellhausen, *Die Oppositionsparteien*, p 69) When he was slain, his wives and son were brought to Madīna, where they lived in peace and took no further part in the fighting ʿAlī's son, Muhammad b al-Hanafīya, resided in Madīna (Dīnawarī, p 308) It was not however only relatives and ardent followers of the Prophet, who preferred to live here in his city, but several of his former enemies, the Umaiyads, also felt attracted thither by the quiet and easy life and would not go to Damascus (Lammens, *Études sur le califat de Moawiya*, p 35) In this way Madīna gradually became the home of a new population, consisting of people who wished to enjoy undisturbed the great wealth which the wars of conquest had brought them Life there became more and more luxurious until finally the holy city became so notorious (*Kitāb al-Aghānī*, xxi 197, 19), that during a rising in the year 127 (745) the last Umaiyad Caliph Marwān II could ask one of the participants in it how it was that the wines and singing-girls of Madīna had not held him back from taking part in it (Tabarī, ii 1910) Such stories remind us of Doughty's description of the present inhabitants of Madīna (*Travels in Arabia*, 3rd ed , p 151 "carding, playing, tippling in arak, brutish hemp smoking, ribald living") This was the golden period of Madīna about the glories of which the poets sang Flourishing, well-watered gardens and meadows surrounded the town, and there were a number of splendid palaces built by wealthy Kuraish, especially in the Wādi 'l-Akīk of which traces can still be found (cf Batanūnī, *Riḥla*, p 261 *sq* , Lammens, *Moawiya*, p 228)

Another section of the people of Madīna was attracted thither by the quiet life, although for other reasons Their object was not worldly enjoyments but they devoted themselves to the memories in the town of its sacred past, by collecting and studying the legal and ritual enactments dating from the Prophet, in so far as they were based on the *sunna* of Madīna and the *iḏjmāʿ* there The most distinguished representative of this group was Mālik b Anas (d 179 = 795), the author of the *Muwaṭṭaʾ*, who as founder of the Mālikī school gathered many pupils around him (Goldziher, *Muhammedanische Studien*, ii 213 *sqq*) One of them, Ibn Ḥabāla, composed the first history of the town of Madīna (199 = 814) but it has not survived

Madīna was now ruled by governors appointed by the Caliph, lists of whom are given by Tabarī and Ibn al-Athīr The town was however not entirely unaffected by the wars of the first centuries after Muhammad In the reign of Yazīd, feeling in Madīna, even among the Umaiyads, was more or less hostile to the Caliph and many took the side of his rival ʿAbd Allāh b Zubair in Mecca The expedition of the governor ʿAmr b Saʿīd, which Yazīd ordered, was a failure In 63 (682/3) the Madīnese rebelled openly, appointing ʿAbd Allāh b Hanzala as their leader and building a wall with a ditch to defend the town on the north The Caliph sent an army under the leadership of Muslim b ʿUkba which took up its quarters on the Harra N E of the town and fought the battle of the Harra, which ended in the defeat of the Madīnese — according to the usual story, a result of the treachery of the Banū Ḥāritha That the inhabitants were abandoned to the ill-treatment of the Syrian troops is probably a malicious libel (Wellhausen, *Das arabische Reich*, p 98 *sq*). Towards the end of Umaiyad rule, in the year 130(747/8), the Khāridjīs under Abū Ḥamza defeated the Madīnese at Kubaid, but he was surprised by Marwān's troops and slain (Tabarī, ii 200 *sqq* , *B G A* , viii 327) When the ʿAbbāsids became supreme, two ʿAlid brothers, Muhammad and Ibrāhīm, sons of ʿAbd Allāh, made an attempt to fight for their rights Muhammad who called himself al-Mahdī appeared in Madīna in 145 (762/3) where he found not a few adherents, among them Mālik b Anas and Abū Ḥanīfa He endeavoured in various ways to imitate the example of the Prophet, used his sword, had the ditch dug by him round the town restored (see above) etc The Caliph sent his relative ʿĪsā b Mūsā with 4,000 men against him and when he bridged the ditch by throwing a couple of doors over it and entered the town, most of al-Mahdī's followers lost heart, as was usual with the supporters of the ʿAlids, and when he renewed the hopeless struggle, he was mortally wounded About 20 years later (169 = 786) another ʿAlid arose, Husain b ʿAlī, against the ʿAbbāsids After ravaging Madīna he was driven out and slain at Fakhkh near Mecca In spite of the harm he did to the town of the Prophet, he was celebrated by the ʿAlid party as a martyr (Tabarī, iii 551 *sqq* , Ibn al-Athīr, vi 60 *sqq*) In the caliphate of Wāthik, Madīna suffered severely from the attacks of the Sulaim and the Banū Hilāl Bogha the elder [q v] came to their assistance in 230 (844/5) and imprisoned the Beduins When he left the town again, the latter succeeded in breaking out of prison, the Madīnese however discovered their escape and put them to death (Ibn al-Athīr, vii 12) Their love for Wāthik was shown by their lamenting him every night after his death (*ibid*, vii 21)

In the centuries that followed, Madīna is only rarely mentioned by the historians, and what they tell us about it is of little interest as a rule When the Fāṭimids became lords of Egypt and were threatening the holy cities in the Ḥiḏjāz, a wall was at last built round Madīna This was erected in 364 (974/975) by the Būyid ʿAḍud al Dawla but enclosed only the central part of the town It was restored in 540 (1145/1146) by a vizier of the sons of Zangī But as a considerable proportion of the inhabitants lived outside the wall without protection from the attacks of the Beduins, the Atābeg of Syria, Nūr al-Dīn Mahmūd b Zangī, in 557 (1162) built a second wall of greater extent with towers and gateways The present wall, 35–40 feet high, was built by the Ottoman Sultān Sulaimān b Salim the Magnificent (1520—1566) of basalt and granite (Samhūdī-Wustenfeld, p 126) A trench was dug around it The same Sultān brought a covered aqueduct from the south into the town Finally the wall was raised to a height of 80 feet by Sultān ʿAbd al-ʿAzīz, which height it has retained

A feud between the governors of Mecca and Madīna with a battle at Dhu 'l-Hulaifa is recorded for the year 601 (1203) The Meccan leader who had set out to besiege Madīna was put to flight but obtained support from other amīrs, whereupon the Madīnese abandoned further hostilities (Ibn al-Athīr, xii 134)

In 654 (1256) Madīna was threatened by a volcanic eruption, known as the fire of Ḥiḏjāz It began on the last day of Djumādā I with a

slight earth-quake which increased in vigour each succeeding day Then a glowing stream of lava burst forth which, as the chroniclers tell us, devoured rocks and stones but fortunately flowed to the east of the town and then continued its way northwards The inhabitants sought protection in the Mosque of the Tomb, praying and confessing their sins The belief in the latter's inviolability, which was thus strengthened, was soon to be shattered by the conflagration described below

Under the rule of the Turks Madīna continued to lead a quiet life, little heeded by the outside world, and it is rarely mentioned, a circumstance much facilitated by the fact that the holy city could not be entered by non Muslims Radical changes only came about in the xix^th century In 1804, the Wahhābīs took the town, plundered its treasures and prevented pilgrimages to the Tomb of Muhammad An attempt to destroy the dome over the tomb failed, but the great treasures in pearls, jewels etc, presented by pious visitors to the mosque were carried off It was not till 1813 that Muhammad ʿAlī's son Tusūn succeeded in retaking the town and at the treaty of peace in 1815 ʿAbd Allāh b Saʿūd recognised Turkish suzerainty over the holy places in the Ḥiḏjāz Muhammad ʿAlī however paid no attention to this, but sent another son Ibrāhīm to continue the war against Ibn Saʿūd and in 1818 he took Darʿīya and razed it to the ground, whereupon he returned to Madina The sacred cities once more belonged to the Turks and the Grand Sharīf of Mecca even forbade pilgrims from Ibn Saʿūd's territory to enter Mecca This restoration of Turkish rule brought at least one important innovation the building of the Ḥiḏjāz railway from Damascus to Madīna in 1908 It was primarily intended for pilgrims but was also of military importance and therefore suffered severely in the world war Through the intervention of the Grand Sharīf Husain b ʿAlī b ʿAbd al-Muʿīn, the fighting and the intrigues in North Arabia became more and more involved He first posed as a faithful servant of the Turkish Sultān but later he rebelled and on Nov 6, 1916 had himself proclaimed king of the Ḥiḏjāz and joined the English After the peace which ended the world war the Turkish troops evacuated Madina in 1918 In the meanwhile a stronger opponent to Husain had arisen in ʿAbd al-Azīz b Saʿūd, who had once more raised the Wahhābīs to a position of supremacy Husain's bold move in assuming the title of caliph found no support among the Arab chiefs, and the people of the Ḥiḏjāz forced him to abdicate Ibn Saʿūd seized this opportunity, entered Mecca in October 1924 and forced Husain's son ʿAlī to leave the town The two holy cities are therefore now both in the hands of the Wahhābīs, who are however now more tolerant and permit visits to the Mosque of the Tomb and other holy places and only forbid actual worship there

In spite of the inaccessibility of Madīna to all non-Muslims the reports of various modern travellers enable us to form a fairly clear picture of it, which can only be briefly outlined here In keeping with the configuration of the ground, the plain on which Madīna lies is divided into an upper southern part and a lower northern part, *al-ʿālīya* and *al-sh̲āfila*, names found even in the earliest writers Al-ʿālīya is reckoned to run to the above mentioned village of Kubāʾ, 3 miles away, al-sh̲āfila to the hill of Uhud The older wall encloses the town proper, the already mentioned later wall which is now partly in ruins encloses the western rather large suburb of al-ʿAnbarīya and "camp of the camels", *barr al-munāk̲ha*, 400 yards broad lying between it and the town Here is pointed out the traditional site of the *musallā*, the Prophet's place of prayer, a tradition probably worthy of credence, as otherwise it would have been natural to locate it in the great mosque mentioned below Along the south side of the wall runs the road of the funeral processions, *Darb al-D̲janāza*, which leads to the old general burial-place, *Bak̲īʿ al-G̲harkad* (so called after the plant *nitraria retusa*) in the east of the town Among the thousands who are buried here are the little son of the Prophet, Ibrāhīm, his wives (whether also his daughter Fāṭima is disputed see below), many of his companions, al-ʿAbbās, Muhammad al-Bākir, D̲jaʿfar al-Ṣādik, the already mentioned jurist, Mālik b Anas, and many others At the north-west corner of the town stands the castle built on to the town wall There are several gates in the walls, including the Bāb al-S̲hāmī in the north, the Bāb al-D̲jumʿa in the east, and the Bāb al-ʿAnbarīya in the west From a spring of fresh water in the village of Kubāʾ an aqueduct runs into the town, first laid by Marwān when governor of Madīna It frequently fell into disrepair and was restored for example by several Ottoman sultāns, on the last occasion by ʿAbd al-Ḥamīd after the Wahhābīs had destroyed it The damage not infrequently done by floods has already been mentioned In 734 the Madinese were prevented for six months by an inundation from visiting the grave of Hamza The streets of Madīna are clean but narrow and only the main streets are paved The houses are well built of stone and a number have two stories Several of them are surrounded by gardens, but the houses with gardens are mainly found outside the north and south wall, especially towards the south where vegetable gardens and orchards alternate with palmgroves and cornfields The dates of which there are 70 varieties are, as in ancient times, one of the principal products The pilgrim traffic is however the most important source of revenue for the inhabitants, who let their dwellings to the strangers and guide them to the sacred places and instruct them about ritual duties The *muzawwirūn* here play the same role as the *mutawwifūn* in Mecca Burton (ii 189) gives the number of inhabitants as 16,000–18,000, in addition to 400 men in the garrison Wavell (p 63) in 1908 put it at 30,000, excluding soldiers and pilgrims, while Batanūnī gave 60,000 including many foreign visitors The results of the world war have of course altered these conditions in many ways The population used to increase gradually by visitors settling often permanently in the sacred city Of descendants of the old Anṣār there are very few left in Madīna, according to Burckhardt there were only ten families in his time There are a number of S̲hiʿīs in the suburbs

Madina possesses no sanctuary venerated from remote times like the Kaʿba, on the other hand it possesses compensation for this of inestimable value in Muslim eyes in the mosque which encloses Muhammad's grave and is the goal of countless pilgrims Some teachers even put this sanctuary higher than the Meccan one, but this view is not general, and the visiting of this mosque is not obligatory like the pilgrimage to Mecca

and also may be undertaken at any time According to unanimous tradition the Prophet was buried under ʿA'isha's house, where also the two first caliphs found their last resting-place Further, all the earlier stories agree that Muḥammad soon after his arrival in Madīna had a mosque built, which he enlarged after the taking of Khaibar, and they are also agreed that the dwellings of his wives were close by so that ʿĀ'isha's house with the grave could easily have been taken into the mosque That there is nothing improbable in itself in a mosque having been built in the time of the Prophet is shown by the mention of a rival mosque, Sūra ix 108 *sqq*, cf xxiv 36 But Caetani, *Annali*, i 432 *sqq*, has disputed with important arguments the correctness of the tradition and from various statements drawn the conclusion that originally on the site of the later mosque there was more probably only the *dār* of Muhammad with a courtyard and various dwellings If this is right, it is not known who built the mosque, but probably it was erected not long after Muhammad's death, for the rapidly increasing reverence for the Prophet must very soon have aroused the desire to bring his resting-place into touch with his religion To this mosque, early built, can then be referred what tradition tells us of Muhammad's mosque — a simple building of brick with pillars of palm stems and a roof of branches According to the same tradition, ʿUmar had it extended and after him ʿUthmān who replaced it by a building of stone and mortar with a roof of teak When Marwān was governor of Madīna, he had a *maksūra* of coloured stones erected, but no important advance was made till the reign of Walīd, who commissioned the then governor, afterwards caliph, ʿUmar b ʿAbd al-ʿAzīz, in 87 (706) to adorn the building in greater splendour For this ʿUmar used Greek and Coptic builders, and the Byzantine emperor is said to have contributed 1,000 *mithkāl* of gold and a large quantity of mosaic stones towards it On this occasion four minarets were placed at the corners of the sanctuary and the roofs covered with plates of lead The mosque remained unaltered till the reign of al Mahdī After this Caliph had visited Madīna, it was rebuilt and extended in 162 (778—779) and its length was now 300 and its breadth 200 ells In the following century another restoration was necessary and was carried through by al Mutawakkil in the year 247 (861—862)

Of the mosque which thus came into existence there are very full descriptions by Ibn ʿAbd Rabbihi (d 328 = 940), Mukaddasī (375 = 985), Ibn Djubair who travelled in the east in the years 578–581 (1182/83—1186/87), and also Yākūt Of the many details given by these authors only a few can be quoted here As is quite evident from several of these descriptions, the mosque had the form, always retained later, of an open court-yard covered with sand or gravel, *ṣaḥn*, which was surrounded on all four sides by rows of pillars In the eastern part of the southern pillared hall was the holy of holies, the tomb of the Prophet, with the tombs of Abū Bakr and of ʿUmar It is described by Yākūt (iv 458) as a high building, separated at the top only by a space from the roof of the pillared hall Regarding the relative positions of the three graves there were in his time different views North of them, according to some traditions, was the tomb of Fātima while according to others this was in the general burying ground The part of the pillared hall lying west of the graves bore the name *al-Rawḍa*, the garden, from an alleged utterance of the Prophet The total number of pillars is said to have been 290, those in the southern part were stuccoed, with gilded capitals, the others were of marble The walls were adorned with marble, gold, and mosaic Along the southern border of the *Rawḍa* ran a barrier, with which several highly venerated relics were associated — the remains of the trunk of a tree, on which Muhammed used to lean, and especially his *minbar* or pulpit According to tradition Muʿāwiya wished to remove this, but immediately a vigorous earthquake began and he abandoned the idea and instead raised it by an upper structure five steps higher Al-Mahdī later wished to remove this addition, but he was dissuaded from doing this as the nails had been driven into the old *minbar* (Yaʿkūbī, ed Houtsma, ii 283, Tabarī, iii 483, Muḳaddasī, ed de Goeje, p 82) According to the descriptions it had 8 steps and there was a slab of ebony over the seat which visitors might touch The remnants of the tree-trunk were kissed and stroked with the hands, an interesting imitation of ancient Arabian religious customs Among the various treasures of the mosque was the Madīna standard manuscript of the canonical text of the Kur'ān prepared by ʿUthmān The mosque had 19 doors of which only four, two in the east and two in the west, were opened There were three minarets, two at the corners of the north side and one at the southern corner

While the Mosque of the Tomb escaped the volcanic eruption already mentioned (654 = 1256) it suffered in the same year from a fire due to the carelessness of a caretaker, which destroyed a part of it An appeal to the caliph of Baghdād for assistance to rebuild it remained unanswered as the ʿAbbāsid dynasty was then tottering before its fall, which was to take place two years later Only the roof was repaired in the year after the fire in makeshift fashion, the rubble was not even cleared away from the tombs but remained there for over two centuries Several of the Mamlūk Sultāns showed some interest in the sanctuary, among them Baibars I, who, according to Muḏīr al-Dīn (Cairo 1283, p 434), placed a railing round the tomb of the Prophet and had its roof gilt, while others sent workmen and materials, and notably al-Mansūr Kalā'ūn in 678 (1279) to mark the site of the tomb built a dome over it covered with plates of lead Ashraf Ṣaif al-Dīn Kā'it Bey (873—890 = 1468—1495) was however the first to deal with the mosque in really energetic fashion and he had the minaret at the southeast corner, al-Rā'isīya, taken down and rebuilt A great calamity then fell upon the mosque for, in a terrible thunderstorm in 886 (1481), it was struck by lightning and partly destroyed, and the library with its valuable manuscripts of the Kur'ān perished Samhūdī, who lost his own library on this occasion, gives an account of the conflagration The indefatigable Sultān however sent a large number of workmen with tools and materials, and in 889 (1484) the building was restored and among other alterations the dome over the tomb was enlarged, he also presented the brass railing which surrounds the *maksūra* On this occasion, the Sulṭān also presented to the town baths and a hypocaust for

them, an aqueduct and a water mill, as well as a large number of valuable books to replace those destroyed Its misfortunes however were not at an end for in 898 (1492) it was again struck by lightning, the Rā'isīya at the southeast corner was destroyed and had to be rebuilt The mosque received its present form by an extension to the north, made by ʿAbd al-Madjīd in 1270 (1853—1854) which Burton saw before its completion The many inscriptions which cover the walls, include various Sūras and formulae and the mystic prayer *al Burda*

In modern times we have descriptions by Burckhardt (unfortunately incomplete, as he was ill during his stay), by Burton (1853), a brief one by Wavell in 1908—1909 and a good one by al-Batanūnī (1910) In their main outlines they give much the same picture as the older ones The mosque stands in the centre of the town proper, a little to the east Al-Batanūnī gives the length from north to south as 385 feet, the breadth on the north side as 285 feet and on the south side as 220 feet The court (*al-ṣaḥn* or *al-haswa*) is covered with sand or gravel and enclosed on all four sides by pillared halls, of which the largest on the south side encloses the actual *masdjid* The pillars in this part are covered with marble with gilt ornamentations All the pillars in the mosque, 327 in number, support arches on which rest little domes like divided oranges Of the pillars 22 are in the eastern part of the southern hall (the *maḳṣūra*), the sanctuary proper with the tomb of the Prophet "The Garden", i e the area between the tomb and the *minbar*, is 70 feet long and 50 broad The *maksūra* is enclosed on the south, where the mosque is extended by a row of pillars, by a brass grille with the relics already mentioned and the beautiful *miḥrāb* of the Prophet with an indication of the direction of prayer The present *minbar* is of marble with gilding, a gift of Murād III in 998 (1590) The *maḳṣūra*, the holy of holies of the mosque, a quadrangle 50 feet long from north to south and 47 feet broad, is surrounded by a green polished brass railing through which a door, Bāb al-Rahma or Bāb al-Wufūd, leads to al-Rawda It encloses an area which is called *al hudjra*, in allusion to ʿĀ'isha's house It cannot be accurately described as it is covered with green silk and is not seen by visitors The covering, which recalls the covering of the Kaʿba, is said to have been first presented by the mother of Hārūn al-Rashīd Nūr al-Dīn Zangī is said to have cleared a new area around the older *hudjra* to protect the tomb In the *hudjra* are the tombs of the Prophet and of the first two caliphs, according to the usual belief in the following order the most southern is the tomb of Muhammad with the head to the west, next him Abū Bakr with his head beside Muhammad's feet and on the north ʿUmar with his head beside Abū Bakr's shoulders A fourth, empty grave is said to be intended for Jesus after his parousia On the north side of the large *maḳṣūra*, another smaller one adjoins it, which, according to an assumption still disputed by many, contains the tomb of Fāṭima Two doors on the east and west side connect it with the large *maksūra* 106 hanging lamps are placed in this, the most sacred part of the mosque, and in addition in the Rawḍa there are candelabra of crystal In the court of the mosque, approximately east, is a quadrangular area shut off by an iron grille, which is called Fāṭima's garden Of the 15 palms which grew there in the time of Ibn Djubair, Burton saw only 12, al Batanūnī mentions several small palms planted round a high one Behind the boundary is the so-called "Prophet's well" The mosque has four minarets at the four corners and according to Burton a fifth in the centre of the west side, but this is not mentioned by al-Batanūnī Five doors give admittance to the sanctuary on the west the Bāb al-Salām and Bāb al-Rahma, on the north the Bāb al-Madjīdī, on the east the Bāb Djibrā'īl (or al-Baḳīʿ) and Bāb al Nasā' They are all closed at night From the descriptions already quoted, the mosque was not impressive when seen from the outside, as the houses were built so thickly round it that an open view of it could not be obtained Even the richly ornamented Bāb al-Salām only looked like the termination of a street running from the west But this seems now to have been altered, as according to Musil, *Zur Zeitgeschichte von Arabien*, p 34, all the houses in the immediate vicinity of the mosque were removed in 1916

The immediate vicinity of the city of the Prophet is of course very rich in places with which are associated anecdotes and traditions of him The most important of these is the hill of Uhud [q v] with the graves of those who fell for the faith there It is rivalled by the village of Kubā' where Muhammad on his arrival in his new home stayed from Monday till Thursday (Ibn Hishām, p 335) The village, which was at that time occupied by the ʿAmr b ʿAwf, is according to the Arab geographers 2 miles, according to Burckhardt, 3—4 hours from Madīna, to be accurate it is about 3 miles The surrounding gardens which are exceedingly rich in all kinds of fruit and vegetables extend for 4 or 5 miles (Burckhardt) Burton describes how the village appeared to him as he approached it "a confused heap of huts and dwelling houses, chapels and towers, with trees, between foul lanes, heaps of rubbish and yelping dogs" Tradition marks the spot where the Prophet's camel knelt (*al-mabrak*) and here also was the mosque mentioned in Sūra, ix 109 built out of piety, as well as its counterpart, the *Masdjid al-Dirār*, destroyed by Muhammad's orders (cf. Wakidī—Wellhausen, p 411, Ibn Saʿd, III/i 32, 8, and above) The mosque of Kubā' with its simple minaret was in ruins in Burckhardt's time, but has since been replaced by a stone structure

MADĪNAT AL-SALĀM [See BAGHDĀD]

AL-MADĪNAT AL-ZĀHIRA, the capital founded near Cordova by the famous ʿĀmirid Hādjib al-Mansūr [q v] in 368(978–979) Because he did not wish to deal with state affairs in the palace of the Umaiyad Caliphs in Cordova nor at the royal palace at Madīnat al-Zahrā', al Mansūr decided to build a town which would include his palace and those of the principal court dignitaries This town was built a short distance from Cordova on the banks of the Guadalquivir [q v] Since the exact site of al Madīnat al Zāhira has not been discovered, one must be content, when trying to locate the site, with the very vague indications given by the Arab historians, indeed not one of the Arab historians has left any description of the ʿĀmirid town According to Ibn Hazm, in a passage of his *Tawk al Hamāma* (ed Petrof, Leyden 1914, p 104), it lay to the east of Cordova, but on the other hand some Spanish archaeologists think they have identified it on the south-west of this town Al-Madīnat al-Zāhira must not be confused with the palace, al-ʿĀmiriya, the name of a *munya* or villa outside the city walls which was given to al-Mansūr by one of his Umaiyad masters, the site of which seems to have been identified

According to Ibn ʿIdhārī, the greater part of al-Madīnat al Zāhira was finished in two years Al-Mansūr settled there in 370 (980—981) He transported thither the different administrative offices and the treasury, and gave land round his palaces to his courtiers, so that Madīnat al-Zahrā', the town of the Umaiyad Caliphs, was almost supplanted and practically deserted The merchants also came to trade there, a few years after its foundation, al-Madīnat al Zāhira had become a large town

After al-Mansūr, al Madīnat al-Zāhira, was the capital of his son and successor ʿAbd al Malik, who had a new palace built there After his death his brother ʿAbd al-Rahmān, known as Sanchol, installed himself as well there But he was soon defeated by Muhammad b Hishām b ʿAbd al-Djabbār al-Mahdī [q v] This usurper occupied the ʿĀmirid town and seized the treasures which were there For three days he gave it over to the most thorough pillage Having sacked the town he gave orders to fire it and to destroy it absolutely (Djumādā II, 399 [January 1009])

Bibliography Ibn ʿIdhārī, *al-Bayān al-Mughrib*, II, ed Dozy, p 294 *sqq*, transl Fagnan, p 457 *sqq*, III, ed E Lévi-Provençal, Index, esp p 61—66, al-Makkarī, *Nafh al Tīb* (*Analectes*) I 380, al Nuwairī, *Nihāyat al-ʿArab*, *Histoire d'Espagne*, ed and transl into Spanish by M Gaspar Remiro, in *Revista del Centro de Estudios Historicos de Granáda*, 1916, VI 44—45, R Dozy, *Histoire des Musulmans d'Espagne*, III 179, R Velázquez Bosco, *Medina Azzahra y Alamiriya*, Madrid 1912, p 20—22, G Marçais, *Manuel d'Art musulman* (Architecture, Tunisie, Algérie, Maroc, Espagne, Sicile), Paris 1926, I 248 (E LÉVI-PROVENÇAL)

MADĪNAT AL-ZAHRĀ', the ancient capital of the Umaiyad Caliphs of Cordova, the ruins of which are still in existence about 5 miles to the west of this latter town, at the place called *Cordoba la Vieja*, on one of the last spurs of the Sierra Morena overlooking the valley of Guadalquivir [q v]

The western Arab historians give us a great deal of information on the foundation of this royal town, upon the period which marked its prosperity and upon the causes which led to its fall It was the great Caliph ʿAbd al-Rahmān III al-Nasir [q v], who decided upon building it, and its construction was begun during the reign of this sovereign at the end of the year 325 (936) The chroniclers say that one of his concubines having left him a large sum of money, al-Nāsir wished to utilize this sum for the payment of the ransoms of the Spanish Muhammadan prisoners of war in the kingdoms of Léon and of Navarre As the envoys who had been sent for this purpose failed to find any prisoners whom they could ransom, the Caliph's favourite al-Zahrā' is said to have advised him to employ the legacy to build a town to which she would give her name This anecdote is without doubt legendary, at least in several points The work of building the town was carried on for many years (from 13 to 40 years according to historians), it lay around the palace of the Caliph Six thousand hewn stones were used every day, not to mention other materials, the necessary marble was chiefly imported from Ifrīkiya, and no less than 4,313 columns were required, if we may believe Ibn ʿIdhārī According to the same author it was the crown prince al Hakam himself who directed operations The name of the chief architect, Maslama b ʿAbd Allāh, has also been preserved

The building of Madīnat al Zahrā' engaged not less than 10,000 workmen Account was taken in the planning of the town of the very steep slope of the site and al-Idrīsī gives a clear account of how this slope was utilized The town was built on three terraces, the upper part was set aside for the palace and its appurtenances, the middle one was devoted to gardens, the lower one contained private dwelling-houses and the Great Mosque

ʿAbd al-Rahmān removed with all his court to Madīnat al-Zahrā', as he felt the Caliph's palace of Cordova which faced the cathedral mosque and overlooked Guadalquivir too small, and this became his favourite residence His successors al-Hakam II and Hishām II lived there for the most part during their reigns, and further embellished the town of al-Nāsir It appears, however, to have very soon fallen into decay, especially from the time when it had as rival the residence of the ʿĀmirid Hādjibs, al-Madīnat al-Zāhira [q v] It was pillaged on several occasions by the Berber mercenaries who had rebelled against Cordova The year 401 (1010) marked its final fall A century and a half afterwards in the time of Idrīsī, the walls alone remained and vestiges only of the palace A few inhabitants still lingered in it

A beginning was made in exploring and systematically excavating the ruins of Madīnat al-Zahrā'

about the year 1910, under the direction of the Spanish archaeologist, R Velázquez Bosco The first work done was the excavation of the double rampart dividing the upper terrace of the town from the middle terrace and from certain parts of the palace A large number of carved stones have been brought to light

(E LÉVI-PROVENÇAL)

AL **MADJARRA**, the Milky Way (the place, path, road of moving)

The Name It is probably taken in the first place from the Greek γαλαξίας *al dāʾira al-labanīya* or *al-darb al labanī*, the circle or path which looks like milk Other names are *ṭarīk al-halīb*, the road of milk, as it has the colour of milk, *ṭarīk al-labbāna*, the road of the place where there is milk, and hence metaphorically *umm al-samāʾ*, mother of heaven, who feeds the heavens as with milk, *ṭarīk al tibn*, path of straw and *darb* or *darīb al tabbāna*, path of the place where there is straw Similarly the Milky Way is called in Persian *kāhkeshān*, straw-puller, or *kāhkinçān* or *rāh i kāhkeshān*, path of the strawpuller, in Turkish *samān ughrīsī* or *samān kapān*, straw or fodder thief Whether names connected with straw go back to Greek or Oriental ideas is uncertain Gundel (*op cit*) holds the latter view In the East the Milky Way is the hay, straw and meal, which Peter or Saint Vinire (Venus) lost and blessed by God flew to heaven Another Turkish name is *hādjdjiler*, path of the pilgrims

Other Arabic names are *bāb al-samāʾ*, gate of heaven, and *al-sharadj* or *al-ashradj*, gap, probably from the idea that the Milky Way corresponds to a gap or split through which one can see the shining heaven Another name is *umm al-nudjūm*, mother of the stars, because no part of the heavens is so rich in stars The stars are also to have leprosy (*darbat al nudjūm*) Among the Kazan Tatars the Milky Way is called "Path of the Wild Goose" and among the Altai Tatars ("Path of Hoar-Frost" (frosted way)

The name *nahr al-madjarra*, River of the Madjarra, is noteworthy The Milky Way is regarded as a river, this is evident from the passages in ʿAbd al-Rahmān al Sūfī in his work on the constellations, in al-Bīrūnī in his *Kitāb al-Tafhīm* towards the end and in the *Chronology* (text, p 345, transl, p 348), in al-Kazwīnī in the *Cosmography* (text, I, p 37, transl, p 18) and in many others In these passages the constellation of Sagittarius or the eight stars forming the 20th station of the moon which are called the Ostriches *al-naʿāʾim* are described Four of the stars which lie on the Milky Way are called *al-naʿām al-wārid*, the ostrich going to drink, the four others lie at the side of the river of the Milky Way and are called *al naʿām al sādir*, the ostrich returning from drinking (cf e g L Ideler, *op cit*, p 184 and Hyde, *Ulugh Beg's Tabulae*, Oxford, p 23)

Description of the Milky Way A description of the Milky Way, the stars and constellations in it, is given by Ptolemy in the *Almagest* (Bk VIII, Ch 2) and the Muslim translators have borrowed from this The editors have treated it in different ways Al-Tūsī for example in his edition of the *Almagest* gives the description as fully as in Ptolemy, but he does not use the translation by al Hadjdjadj, as I was able to show Ibn Sīnā on the other hand, who gives a brief synopsis of the contents of the *Almagest* in the *Shifāʾ* (Healing) gives no such description, he deals here in the same way as he does with the Tables which he omits

The very full treatment of the Milky Way is followed in Ptolemy by a description of the method of making a globe of the heavens on which the Milky Way is represented Ibn Sīnā, for example, took over this section word for word in a form which we also find elswhere It is therefore exceedingly probable that the Milky Way was represented on one or other celestial globe, of which a whole series is recorded It does not seem to be on the extant globes (cf H Schnell, *Die Kugel mit dem Schemel*)

An independent description of the whole Milky Way as full as that in Ptolemy, I have not been able to find in Arabic works A brief description is given by Abū Hanīfa al Dīnawarī (in al Marzūkī, *Kitāb al-Azmina wa'l-Amkina*, Haidarābād 1332, II 9—12) The description of al-Dīnawarī leaves much to be desired and the text is not quite correct The former is in keeping with ʿAbd al-Rahmān al Sūfī's verdict, according to which al Dīnawarī was very well acquainted with the verses on the Milky Way but his astronomical knowledge was insufficient (it may be noted that ʿAbd al Rahmān mentions an Ibn Kunaza, while there is a Muhammad b Kunaza in al-Marzūkī)

The anonymous writer mentioned in the *Bibliography* gives a brief description of it

ʿAbd al-Rahmān al-Sūfī unfortunately only gives a description of one part of it He mentions the part of the Milky Way between the great, the bright Milky Way (*al-madjarra al ʿazima*) and the falling Eagle (Lyra) (*kitʿat al-madjarra*, here at γ Cygni the Milky Way divides) ʿAbd al-Rahmān follows this stretch up to ξ Scorpii In many cases the position of stars e g in the Ship is given from their position with respect to the Milky Way Schjellerup has given details in the tables appended to the synoptic account, p 5 *sqq*

In the *Kitāb al-Tafhīm* of al-Bīrūnī we read "al-Madjarra of the Arabs, Kāhkashān of the Persians and Rah Bihisht of the Hindus is an aggregation of a very large number of small stars

They form an almost perfect large circle, which runs between Gemini and Sagittarius, sometimes narrow, sometimes wide, in some places it is dense, in others not Aristotle thinks that the Milky Way consists of stars surrounded by vapour like the halo round the moon and the mist (in the sky) and the comets"

Theory of the Milky Way On the nature of the Milky Way and the cause of its shining there are a number of views, which follow the same lines as those of the ancients (cf O Gilbert, *Die meteorologischen Theorien des griechischen Altertums*, Leipzig 1907, index, s v *γάλα*) I now give al-Karāfī's account of it

Al-Karāfī (d 1285—1286) who wrote a work on Optics ("Noteworthy consideration of what the eyes grasp in 50 questions or problems"), says in the 49th question "Why do we see a black haze on the moon? Is this an illusion or reality?" and continues

"Connected with this question is that of the Milky Way which looks like a road in the sky We are told 1 It is the gate of heaven 2 It consists of small stars which are crowded so closely together that the eye cannot distinguish one from the other 3 It is said to be a vapour, which has risen from the earth and solidified under the cone of the fixed stars One part forms a black burned body This is the case in the centre of the Milky Way A part lies in places which are far away from those in which there is burning, these are the two sides of the Milky Way These places appear white 4 Finally we are told that the Milky Way consists of something whose shape is inserted in the heavens and which is in some part of the earth, to which the way cannot be found and which cannot be reached"

Of these four views the second is nearest the truth

The anonymous author of the Berlin manuscript also tells us very fully about the different views and the nature etc of the Milky Way, here is the passage in question "Learned men have many and varied views on the nature and substance of this belt Some say that it is a part of the upper sphere and thicker and coarser than the rest of it It is therefore visible, while the rest is not, as the latter is exceedingly fine This corresponds to the opinion of the philosopher Diodorus (Diyūdūrūs)"

"According to Aristotle this belt consists of vapours which have collected together and ascended into the sky through the intermediary of the stars As vapours are continually rising, they retain their shape There is a contradiction in this If we assume that the belt is formed by rising vapours, they cannot possibly be always seen at one and the same place in the sky, nor can they be seen from all places on earth and they cannot maintain one and the same distance from the stars and the ascendants"

"If the belt is always seen in the same way and has permanently the same form, if it is seen in all climes, if its distance from the stars and the ascendants is always the same, this is a sure indication that the belt does not originate in vapours as these completely lack these qualities"

"Some learned men are agreed that the Milky Way, al-Madjarra, has its origin in the fact that small stars have become combined in this figure (*āthār*) and offer themselves jointly to the view On account of their smallness they do not look like shining stars as they are joined together and give their light together (the light of the single stars forming one whole) This is the origin of the shining and the figure which we see This view is one which is intelligible and men adopt it"

"We say that the Milky Way is a limb of the sphere of the fixed stars As it is a thick limb, which is thicker than the other limbs, it completely absorbs the light of the sun, corresponding to what the other limbs take up, i e as the stars do This corresponds to the view of him who says that the latter are thick limbs of their sphere Each limb takes up light in proportion to its density But this density is the cause of light being reflected to us [1])"

"Many learned men attack the Aristotelian view — as was done even in ancient times — and regard the latter view (5) as the most probable"

The anonymous writer therefore lays it down quite generally that the Milky Way cannot be in the ether, it has always one and the same form quite independently of the position from which it is seen and does not alter its position

Abu 'l-Faradj (Bar Hebraeus) in his work ("Elevation of the spirits, on the shape of heaven and of the earth", transl by F Nau, Paris 1899, p 92 *sq*) has a section on the vapour-stars [2]) (*kawkab sahābī*) and the Milky Way He says "In the heavens there are some white patches, vapour stars Some think these are a part of the Milky Way as like it they resemble clouds They also think that they consist of a very large number of very small stars lying very close to one another, like the mane below the lion which is in the shape of an ivy leaf Those who believe this also say that the whole Milky Way consists of very small stars joined together The Milky Way is obviously neither smoke nor vapour in the air, as the Peripatetics say, since the moon and the planets experience no change in their light as they pass through the Milky Way (it must therefore lie outside the sphere of Saturn) but on the contrary rather affect the Milky Way" [3])

The following note may be added on patches of nebulae

Among the nebulae known to the Muslims are the Magellan clouds which were observed by merchants in Makdashūh They saw there a white patch of cloud which never came down and never changed its position (al-Kazwīnī, *ʿAdjāʾib al-Makhlūkāt*, vol II, p 40)

At quite an early date Ibn al-Haitham thoroughly and fully proved that the Milky Way is not in the air, but in the heavens and at a distance which is very great in proportion to the diameter of the earth, from the absence of a parallax, e g from the fact that it has the same position with respect to the fixed stars at different points on the earth The anonymous writer also points this out (E Wiedemann, *Über die Lage der Milchstrasse nach Ibn al-Haitham*, in *Sirius*, XXXIX ,

1) According to this, the anonymous writer would believe that the fixed stars, the Milky Way etc, receive light from the sun, a view that is contradicted by Ibn al Haitham and others cf below

2) In the tables and astronomical works only the vapour stars (nebulae) mentioned by Ptolemy a-e given

3) There is an error here The Milky Way would have to be below the sphere of Saturn but above the atmosphere like the planets — The alterations in the brightness of the Milky Way are phenomena caused by dazzling

1906, p 113—115), ʿAlī b Rıdwān however challenged Ibn al-Haıtham's view (Suter, N⁰ 232) Ibn al-Haıtham replıed to hım and presumably others (E Wiedemann, *Ibn al-Haıtham, Ein arabischer Gelehrter*, ın *Festschrift f J Rosenthal*, Leıpzıg 1906, p 173, N⁰ 40 and 62, Ibn Abī Usaıbiʿa, ıı 104, 5 from below)

The Mılky Way ıs mentıoned ın a whole serıes of verses, partıcularly by modern poets I have publıshed 22 of these ın the *S B P M S Erlangen* wıth the help of A Fıscher (Leıpzıg), Kowalskı (Cracau), Hell (Erlangen) and Krenkow (Beckenham)

MADJD AL-DAWLA, Abū Tālib Rustam b Fakhr al-Dawla, a Būyıd After the death of hıs father Fakhr al-Dawla [q v], Madjd al-Dawla, who, accordıng to the usual statement, was then four years of age, accordıng to another eleven (whıle Ibn al Athīr, *al-Kāmil*, ıx 48 says he was born ın 379 [989/990] whıch does not agree wıth eıther of these statements) was proclaımed as successor under the regency of hıs mother Saıyıda In 388 (998) Kābūs b Washmgīr [q v] seızed the two provınces of Djurdjān and Tabarıstān, to whıch was added by the treaty of peace Māzandarān also, and later he brought Gılān also under hıs rule In 397 (1006—1007) Madjd al-Dawla wıth the help of the vızıer al-Khatīr Abū ʿAlī b ʿAlī b al-Kāsım attempted to overthrow hıs mother but he was taken prısoner by hıs brother Shams al-Dawla [q v] and the Kurd chıef Badr b Hasanawaıh, whereupon Shams al-Dawla took control of the government His rule dıd not last long, however, after a year Madjd al-Dawla was released and agaın recognısed as ruler, whıle hıs brother retıred to hıs governorshıp of Hamadhān In 405 (1015) the latter succeeded ın seızıng the town of al-Raıy, Saıyıda and Madjd al-Dawla had to take to flıght, but were soon able to return because Shams al-Dawla was prevented from followıng them by a mutıny ın the army and had to leave the field Saıyıda held the reıns of government tıll her death (419 = 1028/1029), whıle Madjd al-Dawla, who although extremely ınterested ın learnıng, otherwıse caıed only for hıs numerous harem, paıd no heed to affaırs of state After Saıyıda's death complete chaos reıgned In the begınnıng of the year 420 (1029) Sultān Mahmūd b Subuktegīn [q v] undertook a campaıgn ınto the ʿIrāḳ When Madjd al-Dawla wrote to hım and complaıned of the rebellıous spırıt of hıs army, the Sultān sent a consıderable body of troops agaınst Raıy and ordered the commander to seıze Madjd al-Dawla When the troops appeared the latter went to them and was at once seızed along wıth hıs son Abū Dulaf The Sultān hımself then set out agaınst Raıy, seızed the town and had Madjd al-Dawla sent ın chaıns to Khorāsān

MADJDHŪB (a, "attracted") denotes ın the termınology of the Sūfīs a person who ıs drawn by the Dıvıne attractıon (*djadhba*), so that wıthout trouble or effort on hıs part he attaıns to unıon wıth God In other words, the *madjdhūb* experıences the ecstatıc rapture of losıng hımself ın God, and ıs thereby dıstınguished from the *sālik* ("traveller"), who makes the journey to God, stage by stage, wıth conscıous endeavour and purpose The opınıon favoured by antınomıan derwīshes, that the *madjdhūb* ıs superıor to the *sālik* finds expressıon ın the sayıng "One *djadhba* (act of drawıng) from God ıs equıvalent to all the (devotıonal) work of mankınd and *djınn* (*ʿamal al-thakalaın*)", but ıt ıs generally recognısed that, whether *djadhba* or *sulūk* [q v] preponderate, both are needed ın order to reach perfectıon Those ın whom *djadhba* precedes *sulūk* and constıtutes the predomınant element ın theır spırıtual lıfe are called *madjdhūb-ı sālik*, whıle conversely those wıth whom *sulūk* comes fırst are known as *sālik-ı madjdhūb* Although the terms *madjdhūb* and *sālik* are employed by Hallādj (Massignon, *Passion*, ıı 905) and occur

frequently afterwards, their application in a narrower sense to those who repudiate or acknowledge the moral and religious law is characteristic of the derwīsh fraternities, which, as is well-known, differ widely from each other in their theory and practice concerning this matter

MADJĪD (A), [See ALLĀH]

MADJNŪN In Arabic, Persian and Turkish literature the epithet *al madjnūn*, i e "the man possessed by a *djinnī*", "the madman", is preeminently associated with Kais b al-Mulawwah (according to others, the name of his father is Muʿādh), the *madjnūn* of the Banū ʿĀmir b Saʿsaʿa, the story of whose passion for Lailā, daughter of Saʿd, a woman of the same tribe, is celebrated throughout the Muhammadan world Kais is said to have died about 80 AH (*Fawāt*, Būlāk 1283, ii 172), but it seems doubtful whether he can be regarded as a historical person, and this view is supported by the statements of early Muslim authorities (*Aghānī*, i 167—169, cf Ibn Khallikān, ed Wustenfeld, N° 105, p 150, 8, and Ibn Khaldūn, *Mukaddima*, ed Quatremere, ii 196, 2 fr foot = *Aghānī*, i 169, 4 fr foot, where *madjnūn* is described as one of three persons who never existed), while Ibn al-Kalbī declared that the story of Madjnūn and the poems attributed to him were fabricated by a man of the Banū ʿUmaiya (*ibid*, i 167, 4 fr foot) Stripped of the pictoresque details with which later poets have embellished it, the story is a simple one Kais meets Lailā amongst a party of women, falls in love at first sight and slaughters his camel to make a feast for her His love is returned, but her father refuses to give her to him in marriage, and soon afterwards she becomes the wife of Ward b Muhammad al-ʿUkailī Kais, crazed with despair, passes the rest of his days in solitude, wandering half-naked in the hills and valleys of Nadjd, making verses on the subject of his unhappy love, and only seeing Lailā at rare intervals until his death The development of this love-tale of the Arabian desert into one of the popular themes of Persian romantic and mystical poetry was begun by Nizāmī of Gandja, in whose *Khamsa* the *Lailā ū-Madjnūn* occupies the third place Of other poems bearing the same title, the best-known in Persian literature are those by Amīr Khusraw of Dihlī, Djāmī and Hātifī, and in Turkish, by Hamdī (see the abstract in Gibb, *History of Ottoman Poetry*, ii 175—190) and Fuzūlī (*ibid*, iii 85—88, 100—104) — Sūfī writers find in Madjnūn a type of the soul which through tribulation, self devotion and self-abandonment aspires to be united with God

MADJRĀ or MODJRĀ, a term in prosody, meaning the vowel of the *rawī* or the consonant which is repeated at the end of each line of a *kasīda* (cf KĀFIYA) (MOH BEN CHENEB)

AL-**MADJRĪṬĪ**, his full name was ABU ʾL-KĀSIM MASLAMA B AHMAD AL-FARADĪ AL-HĀSIB (the arithmetician) AL-MADJRĪṬĪ AL KURṬUBĪ (the Cordovan) AL ANDALUSĪ (the Spaniard) We know little of his life He was born in Madrid but in what year is not known Various dates are given for his death, which must lie between 395 (1004) and 398 (1007) In Madrid he studied the science of mensuration under an authority on the subject, ʿAbd al-Ghāfir, who was also famous for his geometrical knowledge Al-Madjrītī later moved to Cordova where he lived in the reigns of Hakam II (350—366 = 961—976) and Hishām II (366—399 = 976—1009) He died before the outbreak of the fighting and confusion (*fitna*) which led to the fall of the Umaiyads From his place of birth and place of long residence he was given the two names al-Madjrītī and al Kurtubī Like so many others scholars, al Madjrītī is mentioned in laudatory terms by the biographers He was the leader (*imām*) in mathematical knowledge, including mensuration He surpassed his predecessors in knowledge of the doctrine of the spheres and the movements of the stars He devoted particular attention to the observation of the heavenly bodies and made a special point of comprehending the *Almagest* Whether al-Madjrītī also dealt seriously with medicine we do not know but among his pupils were several who did On the works on occult subjects ascribed to him, cf below

We are told of a journey to the east from which he brought back Greek and Arabic manuscripts which he adapted for the requirements of the west Spanish astronomy was thus given a more independent position, for before the middle of the tenth century, as the survey given by Sanchez Perez shows, the Spanish representatives of astronomy and mathematics were of little importance either in numbers or ability There were among them no scholars to compare with the Banū Mūsā, Thābit b Kurra, Ibn al-Haitham, al-Battānī etc But even after the time of al Madjrītī, Djābir b Aflah and al Zarkalī are really the only two of distinction Perhaps we should also mention the much used Abu ʾl-Hasan al Marrākushī, but his works are for the most part compilations

In Cordova, where al-Madjrītī lived for a considerable time, he founded — probably as a result of his journey — a school which produced a number of distinguished scholars, such as Ibn al-Samh (Suter, N° 194, also a physician), Ibn al-Saffār (Suter, N° 196), al-Kirmānī (Suter, N° 205?) Ibn Khaldūn (Suter, N° 227, also a physician), al Zahrāwī (mathematician and physician, (Suter, N° 190) These men spread and developed the teachings of al-Madjrītī and his methods, al-Zarkālī also based his work upon them — It is however questionable whether al-Madjrītī owes his fame more to the widely circulated occult writings which are probably pseudepigraphic or to his astronomical teaching, for his literary activity in this latter field was not great

Of his astronomical works, his version of the book of tables (*zīdj*) of Muhammad b Mūsā al Khwārizmī, which is one of the earliest books of tables in Islām, is of special importance He converted the tables which are based on the era of

Yazdadjird into tables based on the Muhammadan era He also to some extent replaced the meridian of Arīn by that of Cordova, and he also gave the approximate positions of the planets for the beginning of the Hidjra On the other hand, he did not notice a series of errors in the older book Mention may be made of some other astronomical works of his a work in which he gives a short method of equating the stars (*Taʿdīl al-Kawākib*) in the tables of al-Battānī, a work on the astrolabe which survives in Latin, a translation of the planisphere of Ptolemy, the latter was translated into Latin in 1143 by Hermann Secundus of Tolosa His interest in astronomy led al-Madjrītī to deal with the principle of the transversal, in which he developed the views of Ibn̲ābit b Kurra His *Fī Tamām ʿIlm al-ʿAdad* (On the Perfection of the Doctrine of Numbers) or *al-Muʿāmalāt* On Business-calculations) is mathematical Whether the *Kitāb al-Ahdjār* (on stones) and the work on the procreation of animals are genuine, need not be discussed here

It has also been suggested that al Madjrītī wrote the *Iḵẖwān al Safā*, but his supposed occupation with a work of this kind may be traced to the fact that he either wrote a similar work or a supplement to it or that he edited it and then he or his pupil Kirmānī introduced it into Spain Whether he inserted separate sections like those on minerals, plants and animals seems to be doubtful

Two other works belong together in subject matter, *Rutbat al-Ḥalīm fī 'l Kīmiyā* and *Ghāyat al-Ḥakīm fī 'l Siḥr*, "the Goal of the Learned in Magic", which are ascribed in the manuscripts to al-Madjrītī, although he never mentions himself in them I J Holmyard after a thorough study of the question does not believe they are by al-Madjrītī, the main reason being that al-Madjrītī died before the *fitna*, while these works were not written till after this period The earlier biographers do not mention them among the works of al-Madjrītī, and it may well be doubted whether works of this kind were in keeping with his mental attitude Both the works deal with occult subjects The *Ghāya* treats of talismans, amulets, etc Ḥādjdjī Khalīfa, iv 166, in dealing with the science of talismans (*ʿilm al ṭilsamāt*), says that in it al-Madjrītī expounded very fully but not always intelligently the principles of the science The *Rutba* is of an alchemical nature, Ḥādjdjī Khalīfa, v 230 *sq* also quotes al Madjrītī among the alchemists Holmyard, *op cit*, gives the gist of the book

Bibliography J Sanchez Perez, *Biografias de matematicos arabes* etc, Madrid 1921, p 86, N° 84 (containing very full references) J Perez quotes among other works *Bull di Bibliografias* etc, di B Boncompagni, v, 1872, p 427, this is a work which, like all by Steinschneider, contains a very full bibliography It refers not however to Maslama but to Mashā Allāh C Brockelmann, *G A L*, i 243, N° 4, H Suter, *Die Mathematiker u Astronomen* etc, *Abhandlungen zur Geschichte der mathem Wissenschaften*, x, 1900, p 76, N° 176 and xiv, 1902, p 167, I Leclerc, *Histoire de la medecine arabe*, i, 1876, p 422, L Gonzalvo, *Über al-Madjrītī* (*Homenaje a Francisco Codera*), x 353—355, *Bibliotheca arabico-hispana*, ii 564, N° 1257, H Suter, *Die astronomischen Tafeln des Muḥ b Mūsā al-Ḵẖwārizmī in der Bearbeitung von Muslama Ibn Ahmed al-Madjrītī* (*Kgl danske Vidensk Selsk Skrifter*, J Reakke, *histor og philolg Afd*, iii, 1904), E J Holmyard, *Maslama al-Madjrītī and the Rutbatu 'l-Ḥakīm*, in *Isis* (ed Suter), vi, 1924, p 293—305, H Burger and K Kohl, A Bjorno, *Thabit's Werk uber den Transversalen satz* etc, *Abhandlungen zur Geschichte der Naturwissenschaften* etc, vii, 1924, p 23, 79, 83

MĀDJŪDJ [See Yādjūdj wa Mādjūdj]

MADJŪS (a), the Zoroastrians The Greek word *μάγος* (which itself renders an Īrānian word, cf old Persian *magush*, new Persian *mugh*) passed into Arabic through an Aramaic medium According to the Arabic lexicographers, *Madjūs* is a collective like *Yahūd*, in the singular *Madjūsī* is to be used, the religion of the Madjūs is called *al-Madjūsiyya* The lexicographers cite from the root *V m dj s* a iind form (*madjdjasa*) and a vth (*tamadjdjasa*) In a poem, cited in the *Lisān* and the *Tādj al-ʿArūs* the phrase *nār madjūsa* is found, if we only could be sure, that this poem is really (as is asserted in the *Lisān*) a composition of Imru 'l-Kais and al Tawʾam al-Yashkurī conjointly, the word would already occur in the oldest Arabic literature extant

In the lexica, the word *Madjūs* is derived from a proper name, *Mindj Kūsh*, which name, according to them, is the Persian equivalent for Arabic *saghīr al udhnain* ("with little ears") This man, named Mindj Kūsh, they say, is not the same as Zoroaster, but lived before him, and was the first who proclaimed the religion of the Magians This is one instance of the many etymological and aetiological enormities of Arabic antiquarians (cf *Lisān*, viii 98 *sq*, *Tādj al-ʿArūs*, iv 245, Lane, *Lexicon*, s v) Incidentally, it may be noted that in Arabic literature the word *Madjūs* is also used to denote the peoples of Northern Europe, viz the Scandinavians (cf Dozy, *Recherches*, ii 250 etc, Appendice N° xxxiv, p lxxvi, *Rerum normannicarum fontes arabici collegit et ed* A Seippel, i, Christiania 1896)

In the Kurʾān the word *Madjūs* occurs once (xxii 17), with this verse, ii 59 and v 73 are to be compared In these three places the *Ahl al-Kitāb* [q v] are mentioned, but it is only in xxii 17 that the name Madjūs is also found In this same verse, however, the *Mushrik*'s also are mentioned, who, of course, can by no means be included in the term *Ahl al-Kitāb* Now, in Muslim law, the Zoroastrians are, it will be seen, treated as if they belonged to the *Ahl al Kitāb*, but this conception cannot be based on the Kurʾānic verse xxii 17 Also, the commentators (al Baidāwī, ed Fleischer, p 629, al-Zamakhsharī, *Kashshāf*, p 901, al Rāzī, *Mafātih al-Ghaib*, iv 554, al-Naisābūrī in marg al-Tabarī, *Tafsīr*, ed Cairo, xvii 74 etc) give nothing that can point to the fact of the Madjūs being, theoretically, *Ahl al-Kitāb* The words of al Rāzī, who states that the Madjūs are those who do not follow a real prophet, but only a *mutanabbi'*, might suggest, that he takes Madjūs to be a sect intermediate between the real *Ahl al-Kitāb* and the *mushrik*'s, the heathen Al-Naisābūrī also says that the prophet of the

Madjūs — who, moreover, are dualists — is no real prophet but a *mutanabbi'*, the *mushrik*'s, on the other hand, have no prophet at all, nor a sacred scripture In Arabic historical literature the Zoroastrian Persians are themselves occasionally called *mushrik*, e g al Balādhurī, ed de Goeje, p 302, 303, 380, 387 (*mushrik*), p 407 (*kuffār*) Finally it must be added that the Kur'ān-verse xxii 17 seems to be a later addition to this Sūra (cf Noldeke Schwally, *Gesch des Qorāns*, i 214 the verse must be Madīnic)

In the *Hadīth*, which represents the theory of Muslim law, there is not very much to be found on the Madjūs in particular (cf A J Wensinck, *Handbook of early Muhammadan Tradition*, s v *Madjūs*) The substance of the *Hadīth* concerning the Magians is, that they are to be treated like the *Ahl al-Kitāb*, and, in consequence, are bound to pay the *djizya* Practically, the rising Muslim state power could not follow any other way The subjection of Īrān would have become impossible, had the Arabs considered the Zoroastrians as mere heathens, who were to be given the choice either of Islām or the sword And, even before that time, dealing with the Zoroastrians of Bahrain in this rigorous way, would have been a grave political fault Thus tradition, though it also hands down an account of how the prophet gave the Zoroastrians of Bahrain the choice of either Islām or death, reports, that ʿAbd al-Rahmān b ʿAwf stated that the prophet had accepted the *djizya* from these Madjūs This tradition was regarded as authoritative afterwards, and the other, stating that the prophet refused to consider Madjūs otherwise than as *mushrik*'s, was abandoned (cf Abū Dāwūd, xix 29 = vol ii 30) ʿAbd al Rahmān b ʿAwf is said to have delivered his statement on an occasion when the Khalīfa ʿUmar felt doubtful whether he should accept the *djizya* from the Īrānians, or not (cf al-Balādhurī, ed de Goeje, p 267 the prophet, according to ʿAbd al-Rahmān, had said "*sunnū bihim sunnat ahl al kitāb*") There is a tradition relating that ʿUmar, a year before his death, wrote to Djazʿ b Maʿūya, regarding the Madjūs, instructing him, to put to death every sorcerer (*sāhir*), to separate each Madjūsī from his wife and children, and to forbid the practice of *zamzama* (the muttering of Zoroastrian prayers, new Persian *bādj* or *bāz*) Djazʿ began to execute these rigid orders, and ʿUmar refused to accept the *djizya* from the Madjūs, until ʿAbd al Rahmān b ʿAwf asserted that the prophet had accepted it from the Madjūs of Bahrain (Abū Dāwūd, *loc cit*, Ibn Hanbal, *Musnad*, i 190, 194, al-Bukhārī, *Sahih*, Cairo 1304, ii 144 *sqq*) Al-Bukhārī, moreover (ii 145) cites the following answer given to a Persian ambassador "Our prophet has commanded us to fight you, until you serve God, and Him alone, or until you pay the *djizya*" So here likewise the Madjūs are put on the same level as the *Ahl al-Kitāb* The determination of the position of the Zoroastrians in respect of the Muslim state, is the main point of the *Hadīth* concerning them Moreover, there is a tradition in al Dārimī, *Farāʾid*, bāb 42, regulating the hereditary portion of Zoroastrians (not altogether clear, however) Other, not very important traditional matter respecting the Madjūs is cited *Lisān*, viii 99, Lane, *Lexicon*, s v *fitra*, the article KADARĪYA

The traditions of the Muslims about Zoroaster are in accordance with their idea of the Zoroastrians being a kind of inferior *Ahl al-Kitāb* Al-Tabarī relates, that Zarādusht b Isfimān (Isfimān is an adaptation of the Awestic *Spitama*, the name of the ancestor of the family to which Zoroaster belonged) laid claim to the title of a prophet, after three years of the reign of king Bishtāsb (the Awestic *Wishtāspa*) had elapsed (i 675 *sq*), the same historian reports, on the authority of Hishām b Muhammad al Kalbī, that Zarādusht, who by the Madjūs is said to be their prophet, was, according to the learned men of the *Ahl al-Kitāb* an inhabitant of Palestine, and a servant of one of the disciples of the prophet Jeremiah He committed a fraud against his master, who cursed him, so that he became leprous Zarādusht then went to Ādharbaidjān and began to promulgate the religion called Madjūsiya, afterwards he proceeded to Balkh, where Bishtāsb resided This king became a convert to the religion of Zarādusht, and compelled his subjects to embrace that religion also (i 648, cf al Thaʿlibi, *Histoire des rois des Perses*, ed Zotenberg, p 256)

Another tradition, likewise preserved in al-Tabarī's work, brings Zarādusht together with a Jewish prophet ڕۆ (vocalisation uncertain), who was sent to Bishtāsb, and, at his court, met with Zarādusht, and the sage Djāmāsb (Awestic *Djāmāspa*, the minister of Wishtāspa and son-in law of Zoroaster) Zarādusht is said to have noted down in Persian the teachings which the Jew delivered in Hebrew Bishtāsb, and his father Luhrāsb (Awestic *Aurwataspa*) had been Sābians before ڕۆ and Zarādusht proclaimed their religion (Tabarī, i 681, 683) These traditions aim at bringing the Zoroastrian faith into a certain connection with the Jewish religion in the one, Zoroaster is an apostate Jew, in the other, he acts in agreement with a Hebrew prophet In the *Hadīth* there is a saying of Ibn ʿAbbās "when the prophet of the Persians had died, Iblis wrote for them the lore of the Madjūs" (*inna ahl Fāris lammā māta nabīyuhum kataba lahum Iblis al-Madjūsīya* Abū Dāwūd, *Kharādj*, bāb 29 = ii 30) This isolated tradition might perhaps in some way be connected with the reports about ڕۆ

Some Arabic authors, of course, had a better knowledge of Zoroaster and his religion, cf for instance al-Balādhurī, ed de Goeje, p 331, where it is stated, that according to the Madjūs, Zarādusht came from Urmiya, and, especially, al Shahrastānī, *Kitāb al-Milal* (ed Cureton, p 182 etc), whose scientific treatise, however, contributes nothing to the knowledge of the ideas about Zoroastrianism prevalent among the *Fakīh*'s It is enough to say, that al Shahrastānī whose, information goes back to Īrānian sources, gives a succinct, but, in general, correct account of Zoroaster and the Madjūs, whom he subdivides into three principal sects the *Kayūmarthīya*, the *Zarwānīya* and the *Zarādushtīya*, the latter, according to him, properly the followers of Zoroaster The Madjūs are, he rightly remarks, not *Ahl al-Kitāb*, but, like the dualists, only possessing some thing like an inspired scripture (*shubhatu kitāb*, p 179), before the rise of the Madjūsīya, the Persians professed the religion of Ibrāhīm (p 180)

Respecting the treatment of the Zoroastrians during the Islāmic conquest, the following data may be given

1) al-Yaman Muhammad had sent envoys to that country, who, among other things, had to collect the *djizya* from those who preferred to remain Christians, Jews or Madjūs (al-Balādhurī, p 69) The Zoroastrians of al-Yaman (the so-called *Abnā'*) were said to be descendants from the Persians of the army of Wahriz, who, by order of Khusraw I, carried back Saif b Dhi Yazan to that country Muhammad, when sending an army to al-Yaman against the pseudo prophet al-Aswad, recommended its general, to try and win over to his side these Zoroastrians, who were treated tyrannically by al Aswad One of these Madjūs, Fairūz b al-Dailami, had already embraced Islām, the most distinguished man among the *Abnā'*, Dādhawaih (Dādhūyā), also became Muslim, and, at his advice, the remaining *Abnā'* followed They helped energetically to put down al-Aswad So we see, that in al-Yaman the Madjūs were treated like *Ahl al Kitāb*, after which followed their spontaneous conversion to Islām

2) ʿUmān There was a tradition that the prophet commanded Abū Zaid to take the *sadaka* from the Muslims of ʿUmān, and the *djizya* from the Madjūs of that country (al Baladhuri, p 77)

3) Bahrain In the year 8 (629/630) Muhammad sent out al-ʿAlā' b ʿAbdallāh al Hadrami to Bahrain, most of the Arabs of that country embraced Islam, and so did Sēbukht, the Persian *marzbān* of Hadjar (the capital), and some other Zoroastrians The greatest part of the Madjūs of the country, however, remained faithful to their religion, and had to pay the *djizya*, like the Jews and the Christians, who, in Bahrain, did not embrace Islam Some Arabs criticized Muhammad, because he pretended to accept the *djizya* only from the *Ahl al Kitāb*, and now accepted it from the Madjūs of Hadjar On that occasion Sūra v 104 was revealed (al-Baladhurī, p 78 etc) Here it can be seen, that in the oldest Islam it was by no means regarded as a matter of fact that the Madjūs were to be reckoned under the *Ahl al-Kitāb* During the Khalifate of Abū Bakr an insurrection took place in Bahrain, the Madjūs refusing to pay the *djizya* This rebellion was not put down before the khalifate of ʿUmar (*ibid*, p 85)

4) Irān Before entering upon the particulars of the state of the Madjūs in Irān, it may be remarked that in Armenia the Madjūs were treated like the Jews and the Christians They were obliged to pay the *djizya*, but enjoyed security for their persons and their possessions In the capitulation of the town of Dabil (Dwin) to Habib b Maslama, the Christians, Jews and Madjūs are comprised alike under these conditions The *kanā'is* and *biyaʿ* are also mentioned as remaining in the possession of their old masters, it may be assumed, that here under these words, which properly design Jewish and Christian sanctuaries, the fire-temples of the Zoroastrians are understood also (al-Balādhurī, p 200)

In Irān, the regular treatment of the places which surrender themselves is the imposition of the *djizya* and the *kharādj* (which, at this time, in most cases were identical terms for "tribute" in general, cf DJIZYA and KHARĀDJ, but cf al-Balādhurī, p 314, where *djizya* = capitation and *kharādj* = ground-tax) Thus, the inhabitants are reduced to the state of *dhimmi*, as if they really were *Ahl al-Kitāb* This is the case e g on the subjection of Mahīūd, Bandanidjain (al-Balādhurī, p 265), Hulwān, Karmāsīn (*ibid*, p 301), Nihāwand (*ibid*, p 306), Dīnawar, Sirwān, Sarmara (*ibid*, p 307), Hamadhān (*ibid*, p 309), Isfahān (*ibid*, p 312 *sq*), Ahwāz (*ibid*, p 377 here the prisoners of war were released by order of ʿUmar, to cultivate the land, under the obligation to pay *kharādj*, there being not enough Arabs for the purpose), Djundai Sābūr (*ibid*, p 382), Djurra, Arradjan, Shīrāz, Darabdjird (*ibid*, p 388 at Dārābdjird, the chief authority in the town was a Zoroastrian priest, a *hirbadh*), Tabas and Kurīn (*ibid*, p 403 they concluded a treaty with ʿUmar, which later was confirmed by ʿUthman b Affan), Naisābūr, Nasa (*ibid*, p 404), Ilūs (*ibid*, p 405), Harāt, Badghis and Bushandj (*ibid*, p 405), Marw (*ibid*, p 405 *sq*) The term *sālahūhu ʿalā (dirham)*, often occurring in our source, must be understood as meaning a tribute, this appears from the last mentioned passage p 405 *sq*

Not always, however, did the subjugation of the Īrānian places come to pass without bloodshed In Raiy a massacre ensued, but there seem to have been no religious motives for it (al Baladhuri, p 317) If a town had offered a strong resistance, it might happen, that only a limited number of persons were included in the *amān* This was the case at Sarakhs, where, according to the treaty, only 100 men were spared, the *marzbān* had not included himself in the number, and was, accordingly, killed, while the women were made captives by the conquerors (*ibid*, p 405) At Sūs a similar event occurred, here the number of men, comprised in the *amān*, was 80, or, as others said, 100 (*ibid*, p 378 *sq*) At the conquest of Manadhir all the men were killed, and the rest of the population was taken captive (*ibid* p 378) But another stronghold, though resisting the Muslims vigorously, obtained a capitulation, by which its inhabitants became *dhimmi* (*ibid*, p 317 *sq*) A great slaughter was made at the conquest of Istakhr, where 40,000 Īrānians lost their lives, most of the nobles belonging to the *ahl al buyūtāt* and the *asāwira* perished there, as it seems, not in the defence of the town, but after its capture (*ibid*, p 389 *sq*)

When the Zoroastrians were received as *dhimmi*'s, their religious practices must, of course, be respected Thus al Farrukhān paid the Muslims, on behalf of the inhabitants of Raiy and Kumis, 500,000 *dirham*, while the Muslims promised, among other things, not to destroy any fire-temple (*ibid*, p 318) When Ādharbāidjān was subdued and made tributary, the treaty, which its *marzbān* concluded with the Arab commander, contained also the stipulation, that no fire-temple should be destroyed, and that the people of Shiz were not to be hindered in their dancing festivals and other practices (*ibid*, p 326) It goes without saying, that in the countries, inhabited by Zoroastrians, soon after the appearance of the Arabs, mosques also were built, destined in the first place for the religious worship of the conquerors, the *masdjid djāmiʿ* which Saʿd b Abī Wakkās constructed at al-Madāʾin, was the earliest building of that kind in al-Sawād (*ibid*, p 289) Under the khalifate of ʿUthmān, a *masdjid* was built at Raiy, in which town later on, under the khalifate of al-Mansūr, a *masdjid djāmiʿ* was erected by order of the future khalīfa al Mahdī, in 158 (775) (*ibid*, p 309) At Tawwadj, its conqueror ʿUthmān b Abī

ʿĀsī caused mosques to be erected for the Arab population, which he transported to that country (*ibid*, p 386), in Arradjān a *masdjid* was built by the governor al Hakam al-Hudjamīnī (*ibid*, p 392)

Already at the period of the conquest, there occur numerous conversions from Zoroastrianism to Islām As T W Arnold (*The Preaching of Islām*, p 177 etc) observes, there were several reasons, why it was not very difficult for the Persians to exchange their religion for Muhammadanism The *djizya*, moreover, which the Zoroastrians were bound to pay, could no longer be required from those who had become Muslim Soon after the battle of Djalūlāʾ some *dihkān*'s embraced Islām, and, consequently, became freed from paying the *djizya* (al Balādhurī, p 265) The inhabitants of Isfahān, on the other side, being invited by al-Ashʿarī, to accept Islām, preferred to give the *djizya*, but some noblemen from the same town became Muslims, and had, therefore, only to pay the *kharādj* (for their lands *wa-anifū min al djizya fa aslamū ibid*, p 312 *sq*) The inhabitants of Kazwīn likewise became Muslim out of aversion to the *djizya* (*ibid*, p 321), and so did those of al-Kākizān (*ibid*, p 323)

A Zoroastrian, who had become Muslim and then apostatized, forfeited, of course, his life, this happened e g with the *dihkān* of Maisān, who was killed by al-Mughīra b Shuʿba (*ibid*, p 343) Other instances of the progress of Islām, we find in the case of Ādharbāidjān When al-Ashʿath for the first time governed this country, he ordered the Arab settlers whom he himself had brought into the land, to invite the population to Islām These efforts were successful, as al-Ashʿath, under the khalifate of ʿAlī, a second time became governor of Ādharbāidjān, he found, that most of the population had become Muslim (*ibid*, p 328 *sq*)

The conversion to Islām of some individuals seems to have been brought about chiefly by the admiration of the rapid successes of the Muslims (instances to be found in al Balādhurī, p 374, 381), a case of forced conversion is that of al-Hurmuzān [q v] Converts to Islām, whose original name had a too pronounced Zoroastrian meaning, had to exchange that name for an Arab one the Khalīfa al Maʾmūn, e g appointed a certain Māyazdār (comp Pahlawī *myazd*, the Zoroastrian offering of food, the long *ā* of the Arabic transliteration causes, however, a difficulty for this explanation) governor of Tabaristān, Rūyān and Danbāwand this Māyazdār had to change his name into Muhammad (*ibid*, p 339) Also the father of Hasan al-Basrī [q v], who was one of the prisoners, taken after the conquest of Maisān, altered his name, Fairūz, to Yasār (*ibid*, p 344), although this Persian name could scarcely offend a Muslim ear but, after he became a *mawlā*, a change of name became necessary

After the conquest, Zoroastrianism, for the time being, continued to exist in many parts of Īrān, not only in countries which came relatively late under Muslim sway (e g Tabaristān, cf KHURSHĪD II), but also in those regions which early had become provinces of the Muslim empire In almost all the Irānian provinces, according to al-Masʿūdī, fire-temples were to be found „the Madjūs", he says (ed Barbier de Meynard, iv 86) „venerate many fire-temples in ʿIrāk, Fārs, Kirmān, Sidjistān, Khurāsān, Tabaristān, al-Djibāl, Ādharbāidjān, Arrān" (he adds also "in Hind, Sind and Sin") This general statement of al Masʿūdī is fully supported by the mediaeval geographers, who make mention of fire-temples in most of the Irānian towns The toleration, then, from the part of the Muslims, must have been greater in mediaeval times than in modern ones That, however, not all Zoroastrians felt happy under a non-Zoroastrian government, appears from the fact, that a number of Madjūs, the ancestors of the Parsi's of to-day, emigrated to India Their landing on the coast of Gudjarāt is said to have taken place in the year 716 of the Christian aera

Conversion to Islām may have been, in many cases, "peaceful and to some extent, at least, gradual" (Arnold, *loc cit*, p 181) On the other hand, it is evident, that for a Zoroastrian, desirous to attain to some prominent position, conversion to Islām was indispensable Among the well-known converts from Zoroastrianism may be cited Ibn al-Mukaffaʿ [q v], Sāmān Khudāt, the founder of the dynasty of the Sāmānids [q v], the poet Dakīkī [q v], etc

Occasionally, the Muslim magistrates, it seems, assisted the Zoroastrian clergy against heretics al-Shahrastānī (*K. al-Milal wa'l-Nihal*, ed Cureton, p 187) relates, how Abū Muslim of Naisābūr, on an accusation from the part of the *mubadh* of the Zoroastrians, caused a sectarian to be killed It seems, however, that this man, who had been a Zoroastrian, and now promulgated a new creed, held tenets calculated to cause disturbance

A history of the relations between the Muslim state and the Persian Zoroastrians (for neither the Indian Zoroastrians, the Pārsīs, nor the internal history of the Zoroastrian community concern us here) can only be written, when the mass of Persian historical literature of the Middle Ages and modern times will be completely accessible The position of the Zoroastrians has become worse in course of time Their number seems to have greatly diminished by the disturbances which ensued after the death of Nādir Shāh (1160 = 1747), when the Afghāns destroyed the Zoroastrian quarter at Kirmān, and by the war between Agha Muhammad Khān Kadjar and Lutf ʿAlī Khān (see also KIRMĀN) In modern times the number of Zoroastrians in Persia is estimated by v Houtum-Schindler (1879) at 8,499 at all, by Browne (1887/1888) at 7,000—8,000 for Kirmān, and Yazd and environs alone [but elsewhere (*A year among the Persians*, p 370) he gives for Yazd and its environs alone 7,000—10,000] and for Bahrāmābād 20—25 The *Encycl Britannica* (1911) has the number 9,000 for the whole of Persia

In 1854, there were in Yazd and its environs 6,658 Zoroastrians, of whom ± 25 were merchants, and the rest small husbandmen and labourers (Karaka, *History of the Parsis*, i 55) The same author gives for Kirmān (in 1884, the date of the book?) no more than 450, for Tihrān ± 50 merchants, and a small number of humbler position, who were employed as gardeners in the palace of the Shāh At Shīrāz, some Zoroastrian families were found, who exercised the trade of shop-keepers Further more, there are Zoroastrians at Kāshān and Būshahr (v Houtum-Schindler) The Gebers of Bākū are Indian Pārsīs (cf BĀKŪ)

According to Browne, there are in Persia 5

dakhma's (tower-shaped buildings, where the Zoroastrians depose the bodies of the deceased, to be devoured by birds of prey) one South of Tihrān, two at Kirmān, and two at Yazd The number of fire-temples is given by v Houtum-Schindler as 4 for Yazd, 18 for its environs, and 1 for Kirmān Karaka (1 60) knew (1884) in Yazd and its environs as many as 34 greater or lesser fire temples Van Houtum-Schindler says, that the social position of the Zoroastrians in those places, where there are only few of them (Tihrān, Kāshān, Shīrāz, Būshahr), was a tolerably good one, because they were respected as being honest traders But at Kirmān their condition was less favourable, and at Yazd still worse In the first half of the XIXth century, the levying of the *djizya* was still a source of misery for all Persian Gebers, because they were helplessly exposed to the extortions of the government functionaries However, even at the time van Houtum-Schindler wrote (1879), the Indian Pārsīs, in virtue of a covenant with the Persian government, paid the *djizya* (valued at + 920 *tūmān*) for their co-religionists, so that the extortions of the fisc in collecting that tax came to an end In 1882 the *djizya* of the Zoroastrians was abolished (Karaka 1 74) For this, and other improvements, as also the foundation of schools, the Persian Zoroastrians are indebted to the "Persian Zoroastrian Amelioration Fund", a Parsī institution

But, especially at Yazd, the situation of the Gebers, during the second half of the XIXth century, was far from good Browne relates, that at Yazd they were treated with more contempt than the Jews or the Christians, they were not permitted to ride on horse-back, fire-temples which had decayed, were not to be restored, etc The then governor, ʿImād al Dawla, had, it is true, put an end to some of the more serious iniquities, e g the putting into practice of the quaint maxim, that a Zoroastrian, who had become Muslim, acquired by that conversion a right to the property of his non-converted kinsmen Although at Kirmān the treatment of the Gebers was better than at Yazd, Browne had heard of wrongs done to them, e g forced conversions to Islām of children and young girls

The *Bibliography* regarding the Persian Zoroastrians (and also the so called Gabri, cf especially K Hadank's *Introduction*, to O Mann, *Die Mundarten von Khunsar*, p lxvii *sqq*) has been given in the article KIRMĀN (V F BUCHNER)

AL-**MADJŪS** The historians of the Maghrib and of Muslim Spain give the generic name of Madjūs "pagans, fire worshippers" to the Scandinavian pirates known in England as Northmen (Norsemen) and also to the Normans of France who on several occasions in the middle ages attempted landings on the coasts and expeditions against the frontiers of the Muslim west

The first invasion of Spain by Northmen was in 230 (844) In the month of Dhu'l-Hidjdja 229 (Aug/Sept 844), a fleet of 54 large vessels and as many small barks anchored before Lisbon [q v] and the forces they carried landed at the mouth of the Tagus The Caliph ʿAbd al-Rahmān II, warned by the governor of Lisbon, Wahb Allāh b Hazm, gave instructions to the governors of his coast-provinces to prevent any surprise attacks The Norman forces seized Cadiz from Lisbon, then the province of Sidona (Shadhūna) and finally Seville [q v] which they took by storm on Oct 1, 844 It was not till November that they were forced to seek the shelter of their vessels by the Muslim armies sent against them Other bands at the same time ravaged with fire and sword the whole coast from Lisbon to Trafalgar and one of them reached a point in Africa where the little town Āsilā (Arzila [q v]) was founded soon afterwards, but took to flight on the approach of the Berbers of the region

After this invasion, the leader of the Norse hordes seems to have sent an ambassador to the Caliph ʿAbd al Rahmān II to propose a peace The Umayyad sovereign agreed to his request and sent to discuss the terms of the treaty a diplomat of his entourage, Yahyā b al Hakam al-Bakri al-Djayyāni, known as al Ghazāl The latter reached Silves, where he entered a ship which after various adventures took him to the Norse leader Al Ghazal returned to his master after an absence of 20 months The account of his ambassy has been preserved for us by Ibn Dihya, who got it from the vizier Iammām b ʿAlkama, a friend of al Ghazāl

Fifteen years later, in 244 (858), Spain and the Maghrib again suffered a Norse invasion We have accounts of it by Ibn al-Kūtiya, al Bakrī and Ibn ʿIdhārī It lasted several years, at least till 247 (861) The Northmen began by seizing the town of Nukūr in Morocco They then appeared at the mouth of the Guadalquivir but without success, they then seized Algeciras where they burned the great mosque They appear to have then had an encounter at sea with the fleet of the Caliph Muhammad b ʿAbd al-Rahmān

We have fuller details of the invasions which followed In 355 (966), the Danes, who had come to the assistance of the first Duke of Normandy, made an expedition against Muslim Spain, on the interested advice of Richard I This lasted three years The invaders, always called Madjūs by the Arab historians, appeared first at Kasr Abi Dānis (Alcacer do Sal) and landed in the country round Lisbon which they laid waste The Caliph al-Hakam sent against them a fleet from Seville which met theirs in the estuary of the Tagus At the same time a battle was fought on land near Lisbon in which the Muslims were defeated The Danes then extended their efforts to Galicia and in 970 seized St Iago da Campostello In the next year, they again attacked Muslim Spain but they were much weakened by the losses they had suffered in the north of the Peninsula and they do not seem to have dared to land anywhere

It is also to the Madjūs (the name being accompanied by the more precise one of الارمانتون = *Alordomant*) that the Arabs attribute the celebrated taking in the following century of the town of Barbastro (Barbushtar) to the N W of Saragossa, on the borders of Aragon The historian Ibn Hayyān wrote a detailed account of it, which is preserved by Ibn ʿIdhārī A Norman expedition, in which French knights shared, which was evidently led by Guillaume de Montreuil, succeeded in capturing Barbastro in 456 (1064) This success and the barbaric treatment inflicted on the population made a deep impression on Muslim Spain In the next year the king of Saragossa, Ahmad b Sulaimān Ibn Hūd al-Muktadir, with an army reinforced by a contingent of cavalry sent by the Seville ruler, al Muʿtadid Ibn ʿAbbād, recaptured Barbastro, where a weak garrison left

by the Normans on their return to France could offer only a brief resistance and was almost entirely wiped out

Bibliography The various invasions of Spain by the Madjūs have been subject of a learned monograph by the Dutch Orientalist R Dozy, *Les Normands en Espagne*, in his *Recherches sur l'histoire et la litterature de l'Espagne pendant le Moyen-âge*, 3rd edition Paris–Leyden 1881, vol II, p 250—371 At the beginning references are given to the earlier works by Werlauff, Mooyer, Kruse and Kunik To the Arabic sources mentioned by Dozy may be added vol III of the *Kitāb al-Bayān al-mughrib* of Ibn ʿIdhārī, ed E Lévi-Provençal, Paris 1927, p ٣٢٥ *sqq* Cf also his *Histoire des Musulmans d'Espagne*, Leyden 1861, vol IV, p 125—126 and Kristoffer, *La premiere invasion des Normands dans l'Espagne musulmane en 844*, Lisbon 1892 (E Lévi-Provençal)

MAḌMŪN is I in the legal institution of the *damān* [q v] "surety", a term which occurs in the following connections *madmūn ʿanhu* "debtor" *madmūn lahu* or *ʿalaihi* "creditor", *madmūn* (*bihi*) "pawn" For the parties to the agreement and the article in question in a bond, the rules hold which apply to all other contracts

Bibliography For details of the pertinent chapters in the Fikh books and Sachau, *Muhammed Recht*, p 385 *sqq*, Khalil, *Mukhtaṣar*, transl Santillana, II 249 *sqq*, Tornauw, *Moslem Recht*, p 139 *sqq*, van den Berg, *Principes du droit musulman*, transl France de Tersant, Algiers 1896, p 101 *sq*

2 In the chapters of the Fikh books which deal with the law of obligations, *madmūn* is used for the thing for which one is liable or responsible, i e is bound to replace In this way *damān* comes to mean in the wider sense, "liability, obligation to restore" in contracts This liability consists either in the producing of something identical (*mithl*) i e of a thing of the same quality and quantity (*sifatan wa waznan*), e g in edible things (*mithlīyāt*) which are measured by quality, weight, or number (*mawzūn wa-makīl wa-maʿdūd*) or in the value of the thing (*ḳima*) e g in non-edible things (*mukawwamāt*) which have a special individuality, and are therefore *ʿain* = species

Bibliography The chapters on the conditions of legal agreements in the Fikh books

(O Spies)

MADRAS Presidency, the southernmost province in British India, occupies the whole of the southern portion of the Peninsula with an area of 142,260 sq m, total population (1921) 42,318,985, of whom 2,840,488 (nearly 7%) are Muhammadans The majority of these are Sunnis, 2,681,945 (93 60 per cent), Shīʿis 54,114 The only Native State with a Muhammadan ruler is Banganapalle (255 sq m), population 36,692, of whom only 19% are Muhammadans The language spoken by the majority of the Muhammadans of the province is Malayālam (1,108,865 i e 387 per 1,000, including almost all the Māppillas [q v]), Hindustānī, 335 per 1,000, Tamil, 209 per 1,000

History Southern India began to suffer early in the XIVth century from plundering raids carried out by the Muhammadans established in the north, until the rise of the Hindu kingdom of Vidjaya- the southward expansion of Muhammadan power for more than two centuries When in 1564 the four Sultans of the Muslim kingdoms of the Deccan, — Bīdjāpur, Bīdar, Ahmadnagar and Golkonda, — joined forces against this powerful Hindu state, in a single decisive battle (Tālikota, January 1565) they effected the ruin of Vidjayanagar and utterly destroyed the capital, and its territories were for the most part incorporated in the kingdoms of Bīdjāpur and Golkonda In 1686 and 1687 Awrangzeb [q v] conquered these two kingdoms and made them part of the Mughal empire After Āsaf Djāh, the first Nizām of Haidarābād, had made himself independent, in 1724, the Nawāb of the Carnatic [q v], also styled the Nawāb of Arcot (Arkāt) from the name of his capital, became his chief subordinate in the South of India When in the middle of the XVIIIth century the English and the French were in conflict with one another in Southern India, each espoused the cause of a different claimant for the office of Nawāb of the Carnatic The support of British troops under the command of Robert Clive assured the success of Muhammad ʿAlī (ob 1795), but papers seized at Siringapatam after its capture in 1799 having proved that both he and his son and successor, though nominally allies of the British, had been in secret correspondence with Tīpū Sultān [q v], Lord Wellesley, then Governor-general of India, declared them to be public enemies of the British Government, and in 1801 concluded a treaty with a grandson of Muhammad ʿAlī, named Aʿẓam al-Dawla, according to which he resigned the government of the Carnatic into the hands of the East India Company, but retained the titular dignity and received a considerable pension The present representative of the family bears the title of Prince of Arcot and has the position of the premier native nobleman of Madras The greater part of the existing Presidency of Madras consists of the territories annexed by Lord Wellesley

Madras City, on the shore of the Bay of Bengal, in 3° 4′ N and 80° 15′ E, is the capital of the presidency of the same name, population (1921) 526,911, of whom 113 in every 1,000 are Muhammadans

MADRASA [See Masdjid]

MADRID The present capital of Spain has kept the name it had in the Muslim period *Madjrīt* (ethnic *al-Madjrītī*) Arab geographers describe it as a little town grouped round a strong fortress, with a khutba mosque, at the foot of the Djabal al-Shārāt, the Sierra de Guadarrama, and a dependency of the province of Toledo It was especially known for its potteries It had only an unimportant history, but gave birth to several famous Muslim scholars, among whom the most important was Abu 'l Kāsim Maslama b Ahmad al Madjrītī, who lived in the second half of the fourth century and on whom cf Brockelmann, *G A L*, I 243 Madrid was taken in 476 (1083) by King Alphonso VI According to a Christian tradition, Ramiro II had previously held possession of it for a short time during his campaign against the Muslims in 327 (939) It was on the site

of Castille had the church dedicated to the Virgin of the Almudena built

Bibliography al Idrīsī, *Sifat al-Andalus*, ed Dozy and de Goeje, text, p 189, transl, p 229, Yākūt, *Muʿdjam al-Buldān*, ed Wustenfeld, s v , Ibn ʿAbd al-Munʿim al-Himyarī, *al-Rawd al-miʿtār* (MS in private collection), s v , E Fagnan, *Extraits inédits relatifs au Maghreb*, Paris 1924, p 93 (E Lévi Provençal)

MADURA, an island north of Eastern Java, with the sea of Java on the north and the strait of Madura on the south, a narrow strait separates it from the residency of Surabaya For administrative purposes it forms a separate residency along with several small adjoining islands From the geological point of view Madura is a continuation of the limestone hills of the residences of Rembang and Surabaya in Java, it is doubtful whether the statement in the *Nāgarakrtāgama* (Ballad XV, verse 2, also the earliest mention of the island) that Madura only became separated from Java at the beginning of the third century A D is of any historical value The ground is hilly, large parts of the country are not at all fertile Although agriculture is becoming more and more important with the completion of irrigation works, the quantity of rice grown is quite insufficient for the wants of the dense and still rapidly increasing population, they have frequently to live partly or completely on maize Every year many Madurese leave their land for a certain period to seek work in various ways in Eastern Java, the comparatively unfertile nature of the soil has always forced the inhabitants to emigrate permanently to the Eastern residencies of Java and these are therefore with the exception of a few districts inhabited by a population which speaks Madurese Of more importance for the Madurese than agriculture is the rearing of domestic animals (cattle, horses, goats and sheep) The Madurese cattle are probably the best in the whole archipelago, many draught animals and fat stock are annually exported A very popular sport is bull racing, the beasts used for this are bred and looked after with the greatest care The Madurese have a certain preference for the trade of a wandering pedlar, on the coast and on the islands the main source of livelihood is fishing and fish-breeding

The population is closely related to that of Java, the customs at birth, marriage and death agree in general with those that prevail there There are however striking differences The Madurese is more heavily built, more energetic and enterprising than the Javanese, he is also less sophisticated He is said to be faithful, reliable, economical and even avaricious Dress, houses and farms of the Madurese look less cared for than those of the Javanese, the houses are not as in Java close together in settlements but are scattered The Madurese are specially fitted for hard heavy work and less for occupations which require skill and application Alcoholic beverages are much drunk, but little opium is taken The language is also related to Javanese and much influenced by it, the literature consists mainly of translations and versions of Javanese works

Islām is the generally prevailing religion The Madurese have no tendency to fanaticism but as a rule they faithfully perform the principal duties of their religion, the great Muslim feasts are duly observed All receive the usual elementary religious instruction and many are not content with this only We have no exact or reliable information as to the period of their conversion and the manner in which it came about, the stories given in the native sources do not agree But as Madura has politically always been closely connected with Java (in the Hindu period it was subject to the kingdoms of Tumapĕl and Madjapahit, at a later date it was under the adipati of Surabaya and then under the Sultān of Mataram) and as it is quite close to the district through which the new religion entered Java, it may well be assumed that between the first dissemination of Muslim ideas on Java and on Madura not a great deal of time passed The complete conversion of the island to Islām seems to have taken place quickly and without difficulty Hindu rule had never made a deep impression According to native tradition Madura belonged to the Muhammadan coalition which overthrew the Hindu Javanese kingdom of Madjapahit Until 1623 Madura (which was divided into five small states) formed part of the territory of the adipati of Surabaya In this year it was acquired by Mataram and a Madurese prince appointed governor When in 1678 a grandson of his, Trunadjaya, rebelled against Mataram, endeavoured to make Madura independent and even aimed at rule over Java, the ruler of Mataram sought the intervention of the Dutch East India Company In 1679 Trunadjaya was taken prisoner, in 1705 Mataram recognized the suzerainty of the Dutch East India Company (which had existed in reality since 1683) over the eastern part of Madura and in 1743 over the whole island The Company and after them the Dutch government for a considerable time always avoided intervention in the internal affairs of the island, as the rulers of Madura had repeatedly performed important services, they were treated — often to the injury of their subjects — less as servants of the Company than as independent allies From the middle of the XIXth century the power of the rulers was gradually limited, since 1885 the whole island has been directly under Dutch rule

(W H Rassers)

MADYAN SHUʿAIB, a town on the east side of the Gulf of Akaba The name is, connected with that of the tribe of Midianites known from the Old Testament (lxx Μαδιαμ, Μαδιαν, in Josephus Μαδιηνῖται, ἡ Μαδιηνὴ χωρα) but it can hardly be used without further consideration to identify the original home of this tribe, as the town might be a later Midianite settlement and besides it is difficult to fix the real home of such wandering tribes In the Old Testament a town of Midian is not mentioned (not even in I Kings, xi 18 where "Maʿon" should probably be read) On the other hand Josephus (*Archaeology*, ii 11, 1) knows Madiane as a town on the Erythraean Sea as does Eusebius (*Onomast*, ed Lagarde, p 276), in Ptolemy (vi 7, 2) it is mentioned as a town on the coast and called Modiana or Modouna while in another passage he gives it as an inland town under the name Madiama, a difference which is explained by the actual position of the town In Muhammad's time there is only one reference (in Ibn Ishāk) to the town of Madyan, when the Prophet sent an expedition under Zaid b Hāritha thither There are occasional references in the poet Kuthayyir (in Yākūt, d 723), who speaks of the monks there and in the record of Muhammad b al-Hanafiya's journey to Aila In the geographers we find Madyan only as a town near the coast, six days' journey from Tabūk, it was the second station on the pilgrims' road from Aila to Madīna and was a dependency of Madīna In the sixth century Yaʿkūbī speaks of its position in a district rich in springs and watercourses, gardens and date groves and of its mixed population Istakhrī says it is larger than Tabūk and describes from his own observations the spring there, from which Moses watered the flocks of Shuʿaib (see below), it was now covered by a house which had been built over it The town then began to decline gradually In the xiith century Idrīsī says it is an unimportant little trading centre with scanty resources, in the xivth century Abu 'l-Fidā' says it was in ruins Only in recent times has it been visited e g by Ruppell, Burton and Musil The extensive ruins, which the Arabs call Maghā'ir Shuʿaib after the cave-tombs, lie about 16 miles east of the port of Maknā in 28° 28′ N Lat in the southern part of the valley of al Badʿ which is rich in streams and palms and other trees According to Burton the whole district between 29° 28′ and 27° 40′ is called Ard Madyan

In the Kur'ān following the Old Testament there are repeated references to Madyan as a people for example in the stories of Moses' stay with them (xx 42, xxviii 21 *sqq*, 45), where his father-in-law (Jethro in the O T) is still anonymous, or in one of the stereotyped legends of prophets in which the Madyan are punished because they would not believe their prophet Shuʿaib (vii 83—91, xi 85—98, xxix 35 *sq*) This Shuʿaib was later identified with the father-in-law of Moses, for which there is no authority in the Old Testament But perhaps the real truth is that Shuʿaib had originally nothing to do with Madyan In the older Sūras (xv 78, xxvi 176 *sq*, xxxviii 12, l 13) it is not the Midianites but the *Ashāb al-Aika* (the people of the thicket) who are his enemies and it is therefore very possible that Muhammad only later combined an indigenous story of the people of the thicket and their Shuʿaib with the Midianites of the Old Testament

MAGHNAṬĪS, MAGHNĀṬĪS, MAGHNĪṬĪS, Lodestone and Compass

I The Lodestone and Magnetism

The lodestone is a widely disseminated mineral, and is therefore frequently mentioned by geographers and cosmographers, for example in the pseudepigraphical *Petrology* of Aristotle, by al-Dimishḳī, al Kazwīnī, al-Tāfāshī, Ibn al-Fakīh, al-Kalkashandī, etc Of Amid and Hashadjī, it is said that the lodestone is found there as a hard rock According to Ibn Sīnā, the Indian is the best and al-Kazwīnī makes it come from India Like the Greeks and Romans, the Arabs also discussed the properties of the lodestone and its effects on iron They found that the lodestone can hold an iron needle (a ring), this a second, a third and so on, so that a chain is formed

The power of attraction of the lodestone was defined Most writers say that a lodestone can lift double its weight in iron, and one from Hashadjī three times Djābir b Hayyān al Ṣūfī possessed a particularly strong one Djābir b Hayyān ascertained that it could work through bronze Other information is given by Shams al Dīn al-Dimishḳī, p 73, or 85 of the work mentioned below (cf also E Wiedemann, *Beitrage*, II 3 *Über Magnetismus*, *S B P M S Erlangen*, xxxvi, 1904, p 322)

Knives and swords rubbed on lodestone, according to Ibn al-Fakīh and al-Kalḳashandī became themselves magnetic They consist also, like needles, of iron which contains carbon, i e steel They are stronger than the lodestone and do not lose their power of attraction as the former does

It was noticed that in needles which floated on water the end rubbed pointed sometimes to the north and sometimes to the south, apparently according as it was rubbed with one or the other pole of the magnet, there appears to be no suspicion that the end not rubbed had also changed Utārid al Hassab's statement that there are three kinds of lodestone is probably connected with the effects on the magnetised needle one he says attracts, the second repels, and in the third one side attracts and the other repels

The Arabs devoted much attention to the theory of these phenomena — with how little satisfactory results is evident from the remark of Ibn Butlān — "It is very annoying for us to feel that we do not know this with certainty (the cause of the attraction of iron), although we perceive it with the senses" Djābir b Hayyān explains the power as a spiritual one, classing it with scents Al-Tughā'ī includes the lodestone among the stones which contain spirits (see E Wiedemann, *Beitrage*, xxiv *Zur Alchemie bei den Arabern*, *S B P M S Erlg*, xliii, 1911, p 82) Al-Rāzī seems to have dealt with its attraction through vacant space in a work which has not survived, entitled *Kitāb ʿIlla Djadhb Hadjar al Maghnāṭis li 'l-Hadīd wa-fihi Kalām kathīr fi 'l-Khalā'* i e "Book on the reason why the *Maghnāṭis* attracts iron in it there is much discussion of empty space" (see Ibn Abī Usaibiʿa, I 320) Ibn Sīnā develops views which are very obscure in his *Kitāb al-Shifā'* (*Makāla* 2), Ibn Hazm is more lucid in his *Kitāb Tawk al-Hamāma fi 'l-Ulfa wa 'l-Ullāf* Al-Kazwīnī traces the attraction to a similarity of natures, through which love and attraction between them arose at the beginning of their existence The Arabs are very fond in poetry and prose of comparing the effect of the magnet on iron to that of the lover on the beloved

That there are many fables associated with this power of attraction is to be expected Idols etc of iron are said to be kept suspended in the air by lodestones (cf E Wiedemann, *Beitr* xii *Über Lampen und Uhren*, *S B P M S Erlgn*, x, 1907, N° viii, p 207) Nails were drawn out of ships and they were thus caused to sink, as was the case with Sindbad's According to al Kazwīnī (*ʿAdjā'ib al-Makhlūkāt*, I 172) there are submarine mountains at Kulzum which have this effect Therefore, he says, the beams of ships in the Red Sea were bound together with ropes The lodestone is said to be especially effective if it is kept for a time in goat's blood, which is of course false The lodestone is occasionally used in medicine (cf Ibn Sīnā and Ibn al Baitār, s v) In alchemy its name means "lion" and "he with the brilliant eye"

Besides the lodestone, which attracts iron, quite a number of other stones are given, which have the same quality with respect to other bodies, for example, gold is the magnet of quicksilver, etc Numerous statements about such attracting bodies, which include a number of plants, are given in the *ʿAdjā'ib* of Shams al-Dīn Dimishḳī (cf the *Bibliography*) in the Arabic text p 73—77, in the translation p 85—89 Al-Kazwīnī also gives a number of such magnets under the word *Lākit* ("picking, collecting") among the minerals

II The Compass

The Arabs of the East became acquainted with the compass through Chinese sailors, without however at first giving it a special name, there was considerable traffic between the Persian etc ports and Southern China Thence it came to Syria and then to the Mediterranean ports of Europe The compass had very probably however already reached the north of Europe by the trade-route of the Russian rivers as early as the eighth or ninth centuries This explains why the compass was known earlier in the north than in the south of Europe and perhaps explains also why the Norsemen were able to undertake long voyages by sea (cf R Hennig, *Verhandl der Gesellsch deutscher Naturforscher* etc, 84th Versammlung 1912,II/II, p 95)

In deciding the direction by means of a magnetic needle, the Muslims used the end which pointed to the south, as Mecca lay to the south of most places in Syria etc the Kibla [q v] corresponded almost exactly to the south

The oldest passage in which the word *karamīṭ* perhaps corresponding to "magnet" (*calamita*) occurs is given by Dozy for the year 239 (854) in *Supplement*, II, 337 who found it in *al-Bayān al Mughrib* (*Histoire de l'Afrique et de l'Espagne*) edited by him Serious objections have however been raised to interpreting the word as compass in this passage (*M S O S*, Berlin, x 1—2, 1900, p 268) From the fact that in narratives of travels of the ninth century A D and that in al-Masʿūdī (923) the directions are given in the same way as on compasses, G Ferrand concludes that the compass was already in use then The next oldest absolutely certain reference is in the *Djāmiʿ al-Hikāyāt* of ʿAwfī, it is in his *Lubāb al-Albāb* (ed Browne and Mīrzā Muhammad Kazwīnī) A

captain during a storm in the Red Sea or Persian Gulf finds his true course by means of a fish, of which we are expressly told that it had been rubbed with a maghnātīs A similar statement regarding the use of a magnetic fish at sea is made by al-Makrīzī in his *Kitāb al-Khiṭaṭ* (Būlāḳ 1270, i 240, Cairo 1324, i 357, *Z f Phys*, xiv, 1924, p 166)

A very full description of the compass and its use in the Mediterranean was given in 640 (142/43) by a certain Bailak al-Kabadjakī in the *Kitāb Kanz al-Tudjdjār fī Maʿrifat al-Ahdjār* A needle which was rubbed with a "female" lodestone is placed diagonally through a rush or piece of straw etc Sometimes a cross made of two straws is used The arrangement is floated on water set to rotate by a lodestone held in the hand and moved in a circular direction, the latter is then quickly withdrawn The needle places itself pointing to the south, which is the same as the kibla The turning is probably regarded as magical, but it has a physical significance By the turning the often very tenacious skin of the water is broken and the apparatus bearing the magnet is enabled to move freely The turning is however not always done, but the needle with its support is simply placed on the water

Al-Zarkhūrī describes several forms of compass in a work on mechanical toys, for example a small beautifully painted fish, in which a magnetic needle is placed In place of the fish, which might hurt the feelings of pious worshippers, a wooden disk with a *miḥrāb* drawn upon it is also used Finally an apparatus just like our compass is described Two magnetic needles are placed symetrically in the centre under a circular piece of paper Under the centre of the paper a funnel is placed which turns on a point, the whole is enclosed in a cylindrical receptacle with a glass top and is called *hukk al-kibla* "vessel, box for the kilba", or *bait al-ibra*, "house of the needle", according to Niebuhr the same name is still given to the compass At the present day similar compasses are used along with a simple sundial Another very full description is given by a certain Muhammad b Abi 'l-Khair al-Hasanī in his *al-Nudjūm al-shārikāt* (cf E Wiedemann in the *Z fur Physik*, xiii, 1923, p 113 there is a manuscript in Bairūt in addition to those mentioned here Whether the Cambridge one was written in 1103 or 1588 cannot be ascertained with certainty) The needle is fastened to a copper plate hollowed out or raised in the centre and placed on a copper stand One end of the needle, no doubt the south end, has something put on it to mark it

An important passage in an anonymous work "preparation of the bowl (*tāsa*) to ascertain the ḳibla and points of the compass" is in a Berlin manuscript (Ahlwardt, N⁰ 5811) Here the point of the needle points south, the eye to the north, (The rubbing [*hakk*] of the needle explains the peculiar modern name *hikk* for the compass)

It would take us too far to deal here with the box compass proper which is called in Turkish e g *pusula* from the Italian We will only note that on the rhomb-card the south is called *al-kibla* and also *al-djanūb* (cf thereon for example K Foy, *Die Windrose bei den Osmanen und Griechen mit Benutzung der Bahrīya des Admirals Pir i-Reis vom Jahr 1520*, *M S O S*, Berlin xi /2 1908, 234 *sqq*)

On the Compass J Klaproth, *Lettre à M Al de Humboldt sur l'invention de la boussole*, Paris 1834, E Wiedemann, *Über Geschichte des Kompasses bei den Arabern*, *Verhandl der physikalischen Gesellschaft*, vol ix, 1908, p 764—773, xi, 1909, p 262—266, xxi, 1919, p 665—667, *Z fur Physik*, xiii, 1923, p 113—116, xiv, 1923, p 240, xxiv, 1924, p 166—168, G Ferrand, *Notes sur l'histoire orientale* (*Contribution a l'histoire de la boussole*), *Publications de l'Institut des hautes etudes marocaines*, *Melanges Rene Basset*, i, 1923, p 1—16

In the *Beitrage* ii the earlier literature is collected This is also done in other works e g by Clément Mullet on the Compass Of special importance are the works of A Schuck (*Der Kompass* etc, Hambourg 1911, 1915 *sqq*), which also deal with the Bussole in China

(E Wiedemann)

MAGHRĀWA, a large confederation of Berber tribes, belonging to the Zanāta group and related to the confederations of the Banū Ifran [q v] and Banū Irnīyān These tribes, who led a nomadic life, in the middle ages roved over the country between the valley of the Chélif as far as Tlemcen and the mountains inhabited by the Madyūna They were easily converted to Islām and their chief Ṣūlāt b Wazmār is to have gone to Madīna to the Caliph ʿUthmān and been confirmed by him in his rule over the Maghrāwa This is why this confederation came to consider themselves clients of the Umaiyads of Spain and supported, sometimes by force of arms, the cause of this dynasty in the Maghrib This chief Sūlāt was succeeded by his son Hafs and he by his son Khazar, with whom the Arab amīrs of al-Kairawān had to deal at the time of the rebellion of Maisara in 122 (739) On his death his son Mu-

hammad after the early successes of Idrīs I in the Maghrib, brought him the submission of the Maghrāwa and returned Tlemcen to him, which he had just taken from the Banū Ifran, the Maghrāwa thus became one of the principal supports of the Idrīsid dynasty at its beginning

The grandson of this Muhammad b Khazar, a contemporary of Idrīs I, also called Muhammad, resisted the Fātimids [q v] When the general of the Mahdī ʿUbaid Allāh, Masāla b Habbūs, had seized the Idrīsid possessions in the Central Maghrib and placed over them the chief of the Miknāsa Mūsā b Abi 'l-ʿAfiya, the chief of the Maghrāwa rebelled and brought under his flag a large number of Berber tribes In 309 (921—922) he routed the army sent against him under Masāla, whom he slew with his own hand But the next year, the Maghrāwa, faced with a new Fātimid offensive, had to take refuge in the region of Sidjilmāsa But some time afterwards, the Umaiyad Caliph of Cordova ʿAbd al Rahmān III al-Nāsir, wishing to annex the Maghrib to his dominions, summoned the Maghrāwa to his assistance and with the help of Muhammad b Khazar was able to bring under his sway all the central Maghrib except the region of Tāhert The son of the Maghrāwid amir al-Khair b Muhammad was installed as governor in Oran The Banū Ifran and Mūsā b ʿAbi 'l-ʿAfiya also joined the Umaiyads (first half of the tenth century) But all these submissions to the wishes of the Umaiyads were only dictated by self-interest and when Muhammad b Khazar died at al Kairawān in 350 (961) he had become the vassal of the Fātimid sovereign al-Muʿizz

The successor of ʿAbd al-Rahmān III in the caliphate of Cordova, al-Hakam al Mustansir, like his father sommoned the Maghrāwa to their old allegiance, their chief Muhammad b al-Khair b Khazar thereupon threw off Fātimid suzerainty Knowing the enemies that this defection was going to cause him, al-Muʿizz invited Zīrī b Manād, chief of the Sanhadja to attack the chief of the Maghrāwa A battle was fought in 360 (970—971) between the Maghrāwa and the Sanhādja commanded by Bologgin b Zīrī the Maghrāwa were completely routed, but a little later they were able to take their revenge, owing to the assistance of Djaʿfar b ʿAlī b Hamdūn, lord of al-Msīla and al-Zāb Next year Bologgīn b Zirī in the name of the Fātimids led a great expedition against the Zanāta and subjected them completely in the Central Maghrib The Maghrāwa had once again to take refuge in Sidjilmāsa and, after the return of Bologgīn to Ifrikiya, they definitely abandoned central Maghrib and settled in Morocco It is from this time that two of their families were able to found two short lived kingdoms, that of the Banū Zīrī b ʿAtīya at Fās and that of the Banū Khazrūn at Sidjilmāsa and at Tripoli

The Maghrāwa of Fās After the defeat suffered by the Maghrāwa in the central Maghrib, the descendant of Khazar, Muhammad b al-Khair, crossed the sea to seek the help of the famous ʿĀmirid Hādjib al Mansūr b Abī ʿĀmir [q v] The latter sympathised with him in his troubles and sent an expedition to the Maghrib under Djaʿfar b ʿAlī b Hamdūn The Spanish army with contingents from the Banū Ifran and the Maghrāwa took up a position near Ceuta and in view of its strength Bologgīn b Zīrī refrained from attacking it and set out to subdue all Morocco

In 373 (983—984) the Maghrāwa, after the departure of the Spanish governor Ibn ʿAskalādja, were chosen by al Mansūr to rule Morocco in his stead In 377 (987—988) the hādjib appointed as his vassal to rule the western Maghrib, the amīr of the Maghrāwa, Zīrī b ʿAtīya b ʿAbd Allāh b Khazar The latter made Fās his residence and settled his tribe around the town By orders of al-Mansūr he waged war on the Sanhādja and notably increased his dominions towards the east In 382 (992) he made a journey to Cordova on the invitation of the hādjib In spite of the assertions — frequently contradictory — of the historians, it seems that the reign of Zīrī b ʿAtīya was rather troubled and that changes of fortune placed on the throne of Fās sometimes the Maghrāwid prince and sometimes his Ifranid rival Yaddū b Yaʿlā On his return to Fās, Zīrī found his place occupied by Ibn Yaʿlā and it was only after a murderous struggle that he succeeded in regaining his throne But, finding Fās not sufficiently central in position, he decided, like his Spanish suzerain, to build a capital for himself and the principal chiefs of his confederation In 384 (994) he laid the foundations of the town of Wadjda (Oujda) and came with his court to live there At the same time he tried to throw off the suzerainty of Cordova and relations were finally broken off between him and al Mansūr Ibn Abī ʿĀmir sent against him an expedition under the freedman Wādih a battle was fought on the banks of the Wadī Rdāt and the Spanish army defeated The hādjib then sent another force under the command of his own son ʿAbd al Malik al-Muzaffar On this campaign Zīrī was twice routed in 387 (997) He sought to take refuge in Fās, but the inhabitants prevented him entering it and ʿAbd al-Malik soon afterwards entered the capital Zīrī had to go to the Sahara, later he tried to create a principality for himself in the land of the Sanhādja He laid siege to their capital Āshīr [q v] but before he could take the town, he died of the consequences of an old wound in 391 (1000—1001)

On the death of Zīrī b ʿAtīya, the Maghrāwa proclaimed his son al-Muʿizz, he began his reign by endeavouring to regain the favour of al-Mansūr b Abī ʿĀmir The latter recognised him, and his successor ʿAbd al-Rahmān al-Muzaffar appointed him governor of Fās and western Maghrib in 393 (1002—1003) He received from Cordova letters of investiture for all Morocco, except the land of Sidjilmāsa, which was kept for the Banū Khazrūn Morocco seems to have had peace and a certain degree of prosperity in the reign of al-Muʿizz, who died in 417 (1026) or 422 (1031)

His successor was his cousin on the father's side Hamāma b al-Muʿizz b ʿAtīya He took advantage of the anarchy then prevailing in Spain to strengthen his position He surrounded himself with literary men and legal authorities But in 424 (1032—1033) the pretender of a rival dynasty Abu 'l Kamāl Tamīm b Zīrī al-Ifranī marched from Salé on Fās Hamāma took the field against him with the Maghrāwa but they were defeated Tamīm entered Fās the same year and persecuted the Jewish population As to Hamāma, he reached Wadjda (Oujda) and Tenes and gathered there considerable forces, with which he marched on Fās in 429 (1037—1038) Tamīm had to withdraw from Fās and returned to his own capital, Shella [q v],

Hamāma then continued to reign till his death, which probably took place in 431 (1039—1040)

After him the power passed to his son Dūnās Quickly suppressing a rebellion by one of his cousins, he devoted his reign to the embellishment of Fās which was then beginning to become a great city, with a large population and a busy trade This prince died in 452 (1060)

The successor of Dūnās b Hamāma in Fās was his son al-Futūh, but on his accession his right to the throne was disputed by his brother ʿAdjīsa He made himself master of part of the capital, the "bank" (*ʿidwa*) of al-Karawiyīn, while al-Futūh established himself on the opposite bank, that of al-Andalus The two brothers fought in the town itself and the inhabitants were divided into two camps Morocco was engulfed in anarchy and it was only after three years of fighting that al-Futūh was able to reign undisputed in al-Fās, after ʿAdjīsa had been killed A gate of this city pierced in the south-west wall still bears his name, another in the north wall bears the name of his brother in a slightly corrupted form (*Bāb Gīsa*)

Al-Futūh was driven from his capital in 454 (1062) by the Hammādid sovereign Bologgīn b Muhammad This was the time when the Almoravids were beginning to invade Morocco After the departure of al-Futūh, the Maghrāwa appointed one of his relatives to succeed him, Muʿansur (or Muʿannasar?) b Hammād b al-Muʿizz b ʿAtīya, who was proclaimed in 455 (1063) and took up the struggle against the Saharan invaders He succeeded in defeating one of the lieutenants of Yūsuf b Tāshfīn and retaking Fās, which he had lost The Almoravids having laid siege to the city, the amīr of the Maghrāwa attempted a sortie in the course of which he met his death (460 = 1067—1068) The people of Fās then proclaimed his son Tamīm But the capital was taken by Yūsuf b Tāshfīn two years later and the young ruler put to death along with a large number of Maghrāwa and Banū Ifran This was the end of the dynasty of the Maghrāwa of Fās This city, which had enjoyed a certain amount of prosperity under the early members of the dynasty and had been extended by them, later suffered a great deal, according to western historians, from their tyranny and exactions

According to Ibn Khaldūn, in the period of the decline of Maghrāwa power in Fās, there was at Āghmāt, at one of the entrances to the Great Atlas on the plain of Marākush, a little dynasty of amīrs belonging to the same confederation The last of these chiefs who flourished about 450—460 (1058—1067) was called Laggūt b Yūsuf b ʿAlī He was defeated and slain by the Almoravids when they made their successful thrust to the north of Morocco

The Maghrāwa of Sidjilmāsa (Banū Khazrūn) — At the instigation of the hādjib of Cordova, al Mansūr Ibn Abī ʿĀmir, a Maghrāwa chief in 366 (976/7), had taken Sidjilmāsa [q v] which for over two centuries had been governed by amīrs of the Miknās branch of the Banū Midrār This chief who was called Khazrūn b Falfūl b Khazar, proclaimed the suzerainty of the Umayyads of Spain in Sidjilmāsa and sent to Cordova the head of the last Midrārid ruler al Muʿtazz bi 'llāh Khazrūn received from al-Mansūr the governorship of the town and kept it till his death He was succeeded by his son Wānūdīn The latter had to defend himself against the invasion of the Sanhādja in western Maghrib and in the end was confirmed in his governorship by the Umayyads in 390 (999) after a period of disgrace On the fall of the Spanish caliphate he proclaimed himself independent, seized the region of Dra (Darʿa) and in 407 (1016—1017) took Sufrūy (Sefrou [q v]) and the valley of the Wādī Malwiya (Moloua) His son and successor Masʿūd was defeated, deprived of his lands and slain by the Almoravids in 445 (1053—1054) Ten years later, the last of the Banū Khazrūn, who still held out in Sufrūy, were in their turn scattered

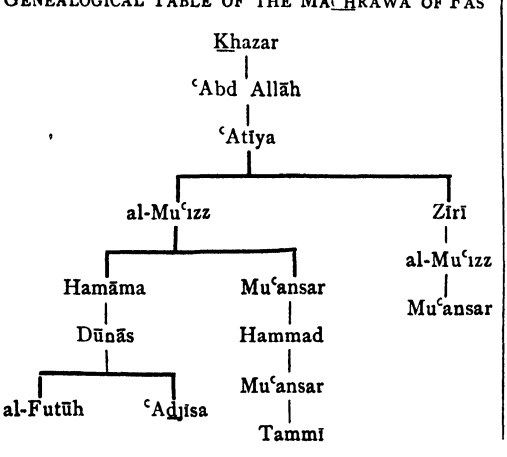
GENEALOGICAL TABLE OF THE MAGHRĀWA OF FAS



MAGHRIB, the name given by Arab writers to that part of Africa which modern writers on geography call Barbary or Africa Minor and which includes Tripolitania, Tunisia, Algeria and Morocco The word "Maghrib" means the West, the setting sun, in opposition to "Mashrik", the East, the rising sun (Levant), but as Ibn Khaldūn remarks, the general denomination was applied to a particular region The extent of this area, moreover, varies according to different authors Some Oriental writers include in the Maghrib not only Northern Africa but also Spain, the majority, however, reserve the name Maghrib for the first of these countries But they are not in agreement upon the boundaries to be assigned to it on the East On the other hand they are in agreement about the Northern, Western and Southern boundaries To the North, Maghrib is bordered by the "Roman Sea" (Mediterranean) To the West it extends as

far as the "Surrounding Sea", also called the "Green Sea", the "Sea of Darkness", and by foreigners called, according to Ibn Khaldūn, Okeanos or Atlant (Atlantic Ocean), which stretches from Tangier to the desert of Temtūna (Abu 'l-Fidā') or only, according to Ibn Khaldūn, as far as Asafī (Saffī) and Deren (Great Atlas) To the South it stretches as far as the barrier of moving sands, separating the country of the Berbers from the land of the Negroes, that is to say the Erg [cf ʿAREG] and as far as the rocky region called "*hammada*" (Ibn Khaldūn) Some districts situated outside this limit, such as Būda, Tamentīt, Gūrara, Ghadames, Fezzān, Waddān, are sometimes considered as belonging to Maghrib although they are in reality countries of the Sahara As regards the Eastern boundary, certain authors made it extend as far as the sea of Kulzum (the Red Sea) and thus include in the Maghrib, Egypt and the country of Barka [see the article BARKA] Others, whose opinion is adopted by Abu 'l Fidā', make it coincide with the actual frontier of Egypt, from the oases as far as the "Akabat" which is on the sea between Barka and Alexandria (Akabat el-Kebīra) Ibn Khaldūn does not accept this delimitation, because, he says, the inhabitants of the Maghrib do not consider Egypt and Barka as forming part of their country The latter commences only at the province of Tripoli and encloses the districts of which the country of the Berbers was composed in former times Ibn Saʿīd and the later Maghribī writers such as al-Ẓyānī and Abū Raʾs limit themselves to reproducing with a few variations in detail, the boundaries of Ibn Khaldūn As to Yākūt he confines the Maghrib to the country stretching from Miliana to Sūs (ed Wustenfeld, IV 513)

Confined within the sixth "clime" the Maghrib is divided into several regions Ibn Hawkal (*Description* transl de Slane, *J A*, 1841) distinguishes two of them the Eastern Maghrib from the frontier of Egypt as far as Ẓuwila in Tripolitania and the Western Maghrib from this point to Sūs al-Aksā, but the division commonly accepted is that into three regions, Ifrīkiya, Central Maghrib and Farther Maghrib (Abu 'l-Fidā', Ibn Khaldūn etc) Ibn Saʿīd adopts a slightly different division, Ifrīkiya, outer Maghrib, and further Sūs Ifrīkiya stretches from Kasr Ahmed near Misratā (Ibn Saʿīd) to Bougie, Central Maghrib from Bougie to Mulūya (Ibn Khaldūn), Farther Maghrib from Mulūya to Asafī and to Deren, to which must be added al-Sūs which forms as might be said, according to Ibn Khaldūn, an island or country detached from all others and surrounded by seas and mountains

AL-MAGHRIBĪ, the name of several viziers

1 ʿALĪ B AL-HUSAIN, ABU 'I-HASAN Like his father, ʿAlī was one of the intimate friends of the Hamdānid Saif al-Dawla of Halab He had also great influence with his son Saʿd al-Dawla, but when a cloud came over their friendship, ʿAlī left Halab and went to al-Rakka to Bakdjūr, who had been one of Saif al-Dawla's Mamlūks and persuaded him to enter into negotiations with the Fātimid caliph al-ʿAzīz bi 'llāh [q v] with whom ʿAlī had had relations for a long time When Bakdjūr had been given the governorship of Damascus by al-ʿAzīz, at the suggestion of ʿAlī whom he had made his vizier, he set out against Halab but was defeated in Safar 381 (April 991) whereupon ʿAlī fled to al Rakka When Saʿd al Dawla took this town, ʿAlī fled to Kūfa, from whence he wrote to al-ʿAzīz and asked permission to come to Egypt In Djumādā I of the same year (July–Aug 991) he reached Egypt and by his advice the caliph sent an army in 383 (993–994) under Mangūtegīn, then governor of Damascus, against Halab where Abu 'l Fadā'il, son of Saʿd al Dawla, had now succeeded his father ʿAlī, who took part in the campaign as Mangūtegīn's secretary, was bribed by Luʾluʾ, the leader of the Hamdānids and persuaded Mangūtegīn to retire, pretending that he lacked supplies When the Caliph heard of this, he ordered Mangūtegīn to resume the siege without delay and dismissed ʿAlī at once, who therefore returned to Egypt ʿAlī made himself very popular with the caliph al-Hākim, who succeeded his father al-ʿAzīz in 386 (996) as did his son al Husain also After a few years, however, he was sacrificed to the suspicions of al Hākim and on the 3rd Dhu 'l Kaʿda 400 (June 18, 1010) ʿAlī was executed along with his brother Muhammad and two sons

Bibliography Ibn al-Athīr, ed Tornberg, IX 61—63, 233, al-Makrizī, *al-Khitat*, Būlāk 1270, II 157, Ibn Taghrībirdī, *al-Nudjūm al-zāhira*, ed Popper, II 5—7, 149

2 AL-HUSAIN B ʿALĪ, ABU 'L-KĀSIM, called "*al-wazir al-Maghribi*", son of the preceding, was born in Egypt on the 13th Dhu 'l-Hidjdja 370 (June 19th, 981) In 400 (1010) when his father was executed, al Husain fled from Egypt to al-Ramla to Hassān b al Mufarridj, amīr of the Banū Taiyiʾ, and induced him to forswear his allegiance to the Caliph al-Hākim and pay homage to the ʿAlid amīr of Mecca, Abu 'l-Futūh al-Hasan b Djaʿfar The latter came to al-Ramla and was proclaimed caliph But when Hassān was bribed by al-Hākim Abu 'l Futūh had to return to Mecca while al-Husain sought refuge with Fakhr al-Mulk, vizier of the Būyid Bahāʾ al-Dawla Although as an Egyptian he was subject to the ʿAbbāsid Caliph al Kādir, he was permitted to accompany Fakhr al-Dawla to Wāsit and remained there till his death He then went to al-Mawsil where the ʿUkailid Karwash took him into his service as secretary In 414 (1023) the Būyid governor of ʿIrāk Musharrif al Dawla appointed him vizier But the very next year he quarrelled with the Turkish mercenaries and fled to Karwāsh But as he quarrelled with the ʿAbbāsid Caliph on some trifling matter, he had to leave al-Mawsil in the same year He then went to the court of the ruler of Diyār Bakr, Nasr al-Dawla [cf MARWĀNIDS] who gave him a sanctuary Al-Husain died at Mayyāfārikīn on 13th Ramadān 418 (Oct 17, 1027) and was buried in Kūfa

3 MUHAMMAD B DJA'FAR B MUHAMMAD B 'ALI, ABU 'L-FARADJ, grandson of a brother of the preceding When Abu 'l-Faradj grew up, he left Egypt and went to the 'Irāḳ where he lived for a time After various vicissitudes he returned to Egypt and was appointed head of the *Dīwān al-Djaish* by the vizier al-Bārizī He held his office till the dismissal of al-Bārizī, the latter's successor had him arrested While Abu 'l-Faradj was still in prison, he was himself appointed vizier on 25th Rabi' II, 450 (June 21, 1058) and given the titles "*al-Wazīr al-adjall al-kāmil al-awhad safīy Amīr al-Mu'minīn wa-Khālisatuhu*" After a few years (9th Ramadān 452 = Oct 7, 1060) he was dismissed and given the control of the chancellery (*Dīwān al-Inshā'*) He died in 478 (1085—1086)

MAGES [See MADJŪS]

MAGNESIA (MAGHNĪSA, MANISSA), the ancient *Magnesia ad Sipylum*, the capital of the Sandjak (now wilāyet) of Sarūkhān in the wilāyet of Smyrna, on the northern slope of the Magnisa Dagh Sipylus mountains, and two miles to the south of the river Gediz and 20 miles N East of Smyrna The town, celebrated in Greek and Roman antiquity, was occupied by the Turcoman Amīr Sarūkhān in the year 713 (began 28th April 1313) and was the capital of his principality and of that of his son Sulaimān, who was buried there with his father in the *turbe* of the family

Yildirim Sultān Bāyazīd seized it in the year 792 (began 20th Dec 1389) Tamerlane collected his treasures there in the year 1402, after the restoration of the Ottoman power, the town saw the rebellion of Burkludje Mustafā, a partisan of the Shaikh Badr al-Dīn at the end of 1416, Murād II made it one of the first towns in his kingdom and built a palace there in 1444 which is now in ruins Murād III also contributed to beautifying Maghnīsa with the Murādiya mosque built in 1591 In 1633 the town was sacked during the rebellion of Elyās Pasha In 1890 Cuinet put the population at 35,000

Bibliography Sāmī, *Kāmūs*, p 4348, Cuinet, III 536–542, Hammer, *G O R* 2, p 113, F Babinger, *Scheych Bedr ed-Dīn*, in *Isl*, XI (1921), p 31 *sqq*, Schlumberger, *Numism de l'Or latin*, Paris 1878, p 478 *sqq*, Heyd, *Storia del Commercio* etc, p 554 (ETTORE ROSSI)

MAḤALLA, an Arabic word which, like *mahall* from the same root, originally means a place where one makes a halt Mahalla thus came to have the special meaning of a quarter of a town, a meaning which has also passed into Turkish (e g the *Yeñi Mahalle* quarter in Constantinople), into Persian and Hindūstānī (where the popular pronunciation is *muhalla*), the term formerly applied to a quarter of a town used to be *dār* (as in old Baghdād) The *mahalla*'s are often under the administration of a special official called *mukhtār* In Egypt the word *mahalla* is frequently found as the first element in the names of towns and villages Here the primitive meaning of place, locality has been preserved, while quarters of a town are rather called *khiṭṭa* especially in al-Fustāt and Alexandria According to the *Mushtarik al-Buldān*, there are about 100 places in Egypt called al-Mahalla, 'Alī Pasha Mubārak gives over 30 in *al-Khiṭaṭ al-djadīda* (XV 21 *sq*) in addition to the large town of al-Mahalla al-Kubrā [q v]

(J H KRAMERS)

MAḤALLA AL-KUBRĀ or MAHALLA KABĪR is the modern name of an important town in the Delta of the Nile at some distance to the west of the Damietta arm, north-east of Tanta It lies on the Tur'at al-Milāh canal, a branch of the Bahr Shībīn

In view of the large number of Egyptian geographical names compounded with *Mahalla*, the identification of the town with the names mentioned by earlier Arabic writers is a matter of some difficulty Maspero and Wiet indentify it with the Coptic Tishairi (Amélinau, *La geographie de l'Égypte à l'epoque copte*, Paris 1893, p 262), but this identification is rendered doubtful by the fact that al-Mahalla is a purely Arabic name (and it also remains to be proved that it is a rendering of the Coptic name just mentioned), and because the work of Abū Sālih on the Christian buildings of Egypt makes no mention of this town The earliest author who knew a town called al-Mahalla or al Mahalla al-Kabira is al-Maḳdisī (p 55, 194, 196, 200), he tells us that it was a town of al Rif built in two parts, one called Sandafā (or Sandafā), but the statement that the town was situated on the river by Alexandria (p 200) seems to be an error Al-Bakrī seems to know the same town under the name Mahallat Mahrūm (*Kitāb al-Masālik wa 'l-Mamālik*, Brit Mus MS) Idrīsī, *Description de l'Afrique*, p 158, calls the town simply al-Mahalla and knows a canal called after it Yāḳūt's statements are confused, for he speaks of a town called Mahallat Dakalā and of another Mahallat Sharkiyūn (IV 428), both of which seem to refer to the same place Mahallat Sharkiyūn in Yākūt — which he also calls Mahallat al-Kubrā — forms one town with Sandafā and on the other hand he says that Mahalla Dakalā between al-Kāhira and Dimyāt is the largest of the Mahalla that he knows (cf also Abu'l-Fidā', II 160), while the geographer al-Dimishkī (p 231) knows Mahalla Dakalā as the capital of the Kūra of Dakahla, Ibn Duḳmāḳ (V 82) says that the governorship of this town was regarded as "the little vizierate" (*al-wizāra al-saghira*)

The name Mahallat Sharkiyūn is again found in al-Maḳrizī (ed Wiet, III 207) It is clear from these writers that the town was an important commercial centre from the tenth century onwards It does not seem however to have played any considerable part in history, although 'Alī Pāsha Mubārak quotes some events that took place there, from al-Makrīzī and al Djabartī In Egypt in the XIXth century the town had to give way to Tanta, which became the capital of the *mudīrīya* of al-Gharbīya, while al-Mahalla became the capital of a smaller administrative area, 'Alī Mubārak estimates its inhabitants at 50,000, while the 1928 Baedeker only gives it 33,500 It is at present a centre of the cotton trade, raw cotton is there cleaned in the factories Of the many individuals who bear the *nisba* al-Mahallī, the most celebrated is Djalāl al-Dīn al-Mahallī [q v] who was born here

(J H KRAMERS)

MAHARI or **MAKARI**, a negro tribe also called Kotoko, living on both banks of the Lower Logone below Musgum and on both banks of the Lower Chari from Lake Chad to Fort Lamy and Kusseri

They are usually divided into three groups the Lagwere on the Logone, where they are mixed with Musgu, the Semsir at Kusseri and the Sung wal Kwe at Gulfei These natives do not seem to be autochthonous, the first occupants of the country according to tradition were the Kerebina, who are perhaps related to the ancient people of the Sao or Sô As a rule, tall and slim, lank and bony, they have a narrow head and dark skin, they make three parallel cicatrices on the forehead, the middle one of which runs from the top of the nose to the roots of the hair They speak languages akin to the Sao, Kuri and Buduma They are nearly connected with the Musgu, with whom they form the Massa group The Kanuri have passed on to them the Muslim religion and a certain degree of civilization

The Makari or Kotoko are agriculturists and fishermen, they grow different kinds of millet, maize earthnuts and grind their corn with a quern Fishing provides them with an abundant supply of food, they follow it in large pirogues, about 40 feet long and two to four feet wide These crafts which are propelled by poles or paddles, have a flat bottom and a raised bow and stern, they are built of strong planks bound together with fibre passed through holes which after being tied, are calked with various barks This is how they come to be described as sewn They carry 25 to 30 persons The Kotoko fish with a large net mounted on two forks placed in different directions at the front and manoeuvred by a lever This net is lowered to touch the bottom, then a little piroque rowed by children drives the fish towards the fishing boat by striking the water with poles The apparatus is lifted as soon as the fish have entered it

The homes of the Makari are built of clay, are fairly large and comparatively comfortable The walls are about 6 feet high, they have an elliptical door about 5 feet high, the roof is of straw and hemispherical in shape Inside is a bed of clay, shelves of clay to hold household utensils and the fireplace Sometimes there is also a bed made of thongs of hide laced round a framework

There are few isolated homes in the Makari country, they are generally grouped in villages of which the most important are Logone, Gana (Little Logone), Karnak Logone or Logone Berni (Great Logone) and Kusseri They used all to be surrounded by circular ditches and clay walls pierced by several narrow gates These defences were intended to protect the inhabitants from the frequent attacks of their neighbours

The population includes smiths, potters, weavers and a few traders There are a few Arabs among them Politically the Makari belonged to the ancient empire of Bornu [q v] They were divided into several small vassal states, that of Karnak Logone showed more independence

MAHBŪB, the name given in North Africa and Egypt (cf Dozy, *Supplement*, s v) to the Turkish gold sequin, contraction for ZERMAHBŪB [q v]

MAHDAWĪS, the followers of Saiyid Muhammad Mahdī, of Djawnpūr, near Banares, 847—910 (1443—1504), who declared that he was the promised Mahdī [q v] and by his preaching gained a number of adherents in Ahmadābād [q v] and other parts of Gudjarāt His followers credited him with the power of working miracles, raising the dead, healing the blind and the dumb, etc For a time they were allowed to profess their faith unmolested and add to their number by proselytising, but in the reign of Muzaffar I, Sultan of Gudjarāt (1513—1526) they were persecuted and many of them put to death Awrangzēb [q v] also persecuted them when in 1645 he was governor of Ahmadābād In consequence of these persecutions, the Mahdawīs to the present day practise *takiya* [q v] and wish to pass as orthodox Muslims, their exact number is therefore uncertain, but they are found in small groups in most parts of Gudjarāt, in Bombay, Sind, the Dakhan [q v] and Upper Hindustān They believe that Saiyid Muhammad was the last *Imām*, the promised *Mahdī*, and in consequence of his having come, they are said by their religious opponents neither to repent for their sins nor to pray for the souls of their dead They observe certain ceremonies peculiar to themselves at marriages and funerals By their enemies they are styled *Ghair-Mahdīs*, i e those who do not believe in a *Mahdī* who is still to come, but the Mahdawīs themselves apply this designation to other Muhammadans as having failed to recognise the *Mahdī* who has already appeared

Bıblıography Sikandar b Muhammad, *Mirāt-ı Sikandarī*, p 136—138, Bombay 1891 (English transl by Fazlullah Lutfullah Faridi, p 90—91), H Blochmann, Translation of the *Ā'ın ı Akbarī*, Introduction, p iv—v, Calcutta 1873, Djaʿfar Sharīf, *Qanoon-e-Islam*, 2nd ed, p 171—172, Madras 1863, ed W Crooke, p 208—209, Oxford 1921, *Gazetteer of the Bombay Presidency*, vol ix, part ii, p 62—64, Bombay 1899, *Hastings' Encyclopaedia of Religion and Ethics*, vi 189 (Goldziher on Ghair Mahdi), Goldziher, *Vorlesungen uber den Islam*², Heidelberg 1925, p 364 (T W ARNOLD)

AL-MAHDĪ (A), means literally "the guided one", and, as all guidance (*hudā*) is from Allāh, it has come to mean the divinely guided one, guided, that is, in a peculiar and individual way For Allāh, in the intense and immediate theism of Islām, is guiding every one and everything in the world, whether by the human reason or by the instincts of the lower animals, to a knowledge of Himself and to what is needed for their existence and continuance (*Lisān*, xx 228, foot) One of His names is *al hādī*, "the Guide" (Kur'ān, xxii 53, xxv 33), and the idea of His guidance is reiterated in the Kur'ān For a statement of its different kinds see Baiḍāwī on Kur'ān, i 5 (Fleischer's ed, i 8, ll 21 *sqq*), *Mufradāt*

of al-Rāghib al-Isfahānī, p 560 of ed Cairo 1324, *al-Maḳṣad al-asnā*ʾ of al-Ghazālī, p 80 of ed Cairo 1324 But it is singular that the word *mahdī* (the passive participle of the I Stem) never occurs in the Kurʾān and that the passive of that stem occurs only four times In the usage of the Kurʾān, the VIII stem, *ihtadā*, strictly "he accepted guidance for himself", is used as a quasi or reflexive passive Thus the man whom Allāh guides is not simply "guided" but reacts himself to the divine guidance

There seems to be no original authority for the vocalisation *al-Muhdī* which Edward Pococke gave as N⁰ xvi of the Signs in his *Porta Mosis*, ii 263 of ed 1655, with the meaning "director", cf Lane's note in the *Supplement* to his lexicon, p 3042 c Margoliouth (article cited below, p 337a) suggests that it may mean "the giver" and refers to traditions (see below) of the Mahdī bestowing uncounted wealth, but there does not seem to be any oriental authority for this epithet Also, the verb used in these traditions is *aʿṭā*

But one who is *mahdī*, or *al mahdī*, is in a different position, he is absolutely guided It is used of certain individuals in the past and of an eschatological individual in the future Thus the *Lisān* (xx 229, l 9 from below) quotes from a tradition "the usage of the khalīfas who followed the right way and were guided" (*sunnatu 'l khulafāʾ al-rāshidīn al-mahdīyīn*), meaning the first four khalīfas, and goes on to state that it is applied especially, as a name, to the Mahdī of whom the Prophet gave good tidings that he would come in the End of Time There are many other instances of the non-eschatological application of the term *mahdī* to historical personages Goldziher (*Vorlesungen*, p 267, v, note 12, 1) has gathered a number of such cases Thus Djarīr (*Nakāʾid*, ed Bevan, N⁰ 104, v 29) applies it to Abraham and Hassān b Thābit (*Dīwān*, ed Tunis, 24, 4) to Muhammad, see, too, Ibn Saʿd (xi 94, 9) It is often applied by Sunnites to ʿAlī, in distinction even to the other three khalīfas, thus in *Usd al-Ghāba* (iv 31, 3) he is *hādīyan mahdīyan*, and Sulaimān b Surad calls Husain, after his death, "Mahdī son of the Mahdī" (Tabarī, *Taʾrīkh*, ed Leyden, Ser ii 546, 11) Farazdak and Djarīr applied it as an honorific even to the Umaiyad khalīfas As applied by the pious to ʿUmar II, the Umaiyad (Ibn Saʿd, v 245, 5), it seems to have been more than an honorific, he was regarded as a real *mudjaddid* [q v] and under peculiar divine guidance In the view of later Islām he was the first of these "renewers" of the Faith and the eighth and last of these would be either the Mahdī, a descendant of the Prophet, or ʿĪsā (*al-masīh al-muhtadī*), according to the two positions, cf article ʿIsā See on the whole question of the *Mudjaddid* and his relation to the Mahdī Goldziher, *Zur Charakteristik us-Suyûṭī's*, in *S. B Ak Wien*, lxix, p 10 *sqq* It is characteristic of Islām to take a very pessimistic view of human nature, men always fall away from the faith and have to be brought back This will be so especially towards the end of the world Men will become thoroughly secular and Allāh will leave them to themselves The Kaʿba will vanish, and the copies of the Kurʾān will become blank paper, and its words will vanish, also, from the memories of men They will think only of poems and songs Then the end will come

In a similar heightened sense the term Mahdī was applied by Ibn al-Taʿāwīdhī (*Dīwān*, ed Margoliouth, p 103, 5, 6) to the ʿAbbāsid khalīfa al-Nāsir (A H 575—622), he is the Mahdī and no other eschatological Mahdī need be looked for In a narrower but more true etymological sense it came to be applied to converts to Islām, Allāh had guided these to the right Way For such, Turks use the more Kurʾānic term *muhtadī*, see above for the distinction Goldziher (p 268) gives cases In a heightened sense, also, the term was applied very early (A H 66) to Muhammad b al-Hanafīya, a son of ʿAlī by another wife than Fātima After the death of Husain at Karbalāʾ, Mukhtār b Abī ʿUbaid put forward this Muhammad as a claimant of the khalīfate and called him "the Mahdī, son of the legatee (*al-wasī*)", a term applied to ʿAlī by those who asserted that the Prophet had bequeathed the headship of the people to him (Tabarī, *Taʾrīkh*, ii 534) This was after the deaths of Hasan and Husain, the two sons of ʿAlī by Fātima, the daughter of the Prophet, and shows a different drift as to the inheritance of the Imāmate from that of the Shīʿite legitimists This Muhammad was heir as the son of ʿAlī and not as possessing the blood of the Prophet He seems himself to have declined the dignity thus thrust upon him but, *malgré lui*, he became the founder of the Kaisānīya sect which looked for his return from his grave in Mount Radwā, where he remains undying This was maintained by the poet Kuthayyir (d 105 = 723) and by the Saiyid al-Himyarī (d 173 = 789, *Aghānī*, viii 32, cf Masʿūdī, Paris ed, v 180 *sqq*) Muhammad thus became an "expected Mahdī", *mahdī muntazar*, like the Hidden Imām of the Twelver Shīʿites. For the position of the Kaisānīya see Shahrastānī's *Milal wa-Nihal*, ed on margin of Ibn Hazm, i 196, Mukhtār, disgusted with Muhammad, eventually founded the Mukhtārīya sect which was strict Shīʿite and upheld Husain b ʿAlī (Shahrastānī, p 197) The whole episode is interesting as showing the extreme fluidity of the religio-political parties at the time It also shows very clearly how the term *mahdī* gradually hardened from being a general honorific into a special designation, and even a proper name, for a restorer of the Faith in the last days

The Hidden Imām of the Twelver Shīʿites, whose return (*radjʿa*) is awaited, is also called, by the Shīʿa, al-Mahdī But his status is entirely different from that of the future restorer looked for by the Sunnites The very essence of Sunnite Islām is that the Muslim people shall rule itself and can attain truth and certainty by its own exertions When, at any time, its qualified scholars (*mudjtahid*'s) have applied the three *uṣūl* — Kurʾān, *Sunna*, *Kiyās* — to any point of Islām and have come to an agreement (*Idjmāʿ*) on it, that point is assured and the acceptance of it as of faith is binding on all Muslims The idea of an absolute Mahdī, therefore, as an infallible guide, suggests too much that *taklīd* [q v], which the later Sunnite theologians rejected Sunnite Islām, as Goldziher has taught us, is a recoil against the idea of blind submission to any human teacher Even ʿĪsā, as restorer, is called *muhtadī*, which is much less emphatic in its suggestion of infallibility Yet the masses demanded an absolute restorer and it was among the masses that the belief in a Mahdī was, and is, strong To return — the

Mahdī, or ʿĪsā when he comes as a restorer and ruler, will restore and apply that Consensus of Islām which has been reached by the successive generations of *muǧtahid*'s Thus the Muslim people not only rules itself but is also the ultimate and infallible interpreter of the revelation through the Prophet The Shīʿites, on the other hand, admit no such authority either in the Muslim people or in their own *muǧtahid*'s, by Kur'ān, *Sunna*, *Kiyās* and *Iǧmāʿ* no certainty can be reached Certainty can only be gained from the instruction (*taʿlīm*, cf Goldziher's *Streitschrift des Gazālī gegen die Bāṭinīya-Secte*, passim) of the hidden *Imām* who is divinely protected (*maʿṣūm*) against all error and sin and whose function it is to interpret Islām to men The *muǧtahid*'s of the Shīʿa are his intermediaries with men, but they in their intermediation may err When the Hidden *Imām* returns he will rule personally by divine right He is called a Mahdī, but it is in a different sense from any Sunnite use of that term The idea of protection against error and sin (*ʿiṣma*, see article above, ii, p 543) seems to have been introduced into Sunnite Islām from the Muʿtazilite system by Fakhr al-Dīn al-Rāzī (d 606 = 1209, see, further, Goldziher in *Isl*, iii 238—245), but there it has been limited strictly to prophets No "successor" (*khalīfa*) can enjoy it and the Mahdī, for those Sunnites who expect him, is strictly an ultimate khalifa of the Prophet For those Sunnites who look to ʿĪsā to play the part of the Mahdī he will not return as a prophet in his own right It will not be a return (*raǧʿa*) in his case but simply a "descent" (*nuzūl*) and he will rule according to the law (*sharīʿa*) of Muhammad, see article ʿĪsā above, ii, p 525 As all Shīʿite sects agree on this status of their *Imām* it is unnecessary to go into further details on them, see in general, article SHĪʿA

Another important point of difference between Shīʿites and Sunnites as to the Mahdī is that he is an essential part of the Shīʿite creed but not of the Sunnite That there will be a final restorer of the faith all Sunnite Islām believes as a part of its eschatology, but not that he will be called Mahdī There is no mention of the Mahdī in either of the two *Sahih* s, of Muslim or of Bukhārī Similarly Sunnite systematic theologians do not deal with him The *Mawākif* of al-Iǧi has nothing on him, nor, indeed, on any of the Signs of the Hour (*ashrāt al-sāʿa*, cf article KIYĀMA) Nasafī in his *ʿAkāʾid* has, of these, only al-Daǧǧāl (see article above, vol i, p 886) and the Descent of ʿĪsā, Taftazānī, in his commentary, gives ten Signs but not the Mahdī Even al-Ghazālī, a popularizing theologian, has nothing on the Signs in the last Book of his *Ihyāʾ*, that on eschatology, and has only a slight allusion in the Book dealing with the *Hadīth* (ed 1334, i 218, *Ithāf*, the commentary of the Saiyid Murtadā, iv 279) to the coming of al-Daǧǧāl, the descent of ʿĪsā and his slaying of al-Daǧǧāl, there is no mention of the Mahdī either in the text or in the commentary Al Ghazālī's whole point in this passage is to stress the final falling away from the faith of all men to which reference has been made above

It was, then, in the hearts of the Muslim multitude that the faith in the Mahdī found its resting-place and support In the midst of growing darkness and uncertainty — political, social, moral, theological — they clung to the idea of a future deliverer and restorer and of a short millenium before the end This belief is, therefore, expressed in a multitude of later traditions, often expansions and expositions of better authenticated and older traditions, and often linking themselves to old stories of inter-tribal and inter dynastic conflicts in the civil wars after the murder of ʿUthmān We, therefore, find among them references to historical movements and sects which had failed in their time but had left remains, if only a name, to add to the confusion of this eschatological picture These are gathered up in later edifying collections, such as the *Tadhkira* of Abū ʿAbd Allāh al-Kurtubī (d 671 = 1272, Brockelmann, *G A L*, i 415) which we have in a *Mukhtaṣar* by al-Shaʿrānī (d 973 = 1565, Brockelmann, ii 335, ed Cairo 1324) and the *Mashārik al-Anwār* of a modern writer, Hasan al-ʿIdwī al Hamzāwī (d 1303 = 1886, Brockelmann, ii 486, many editions)

But the clearest presentation of the alleged basis for this belief is given by Ibn Khaldūn (d 808 = 1406) in his *Mukaddima* (ed Quatremère, ii 142 *sqq*, Būlāḳ, folio ed, 1274, p 151 *sqq*, transl by De Slane, ii 158 *sqq*) "A section on the descendant of Fātima and what the people hold as to him and on clearing up the obscurity as to that It has been commonly accepted (*mashhūr*) among the masses (*al-kāffa*) of the people of Islām, as the ages have passed, that there must needs appear in the End of Time a man of the family of Muhammad (*min ahl al-bait*) who will aid the Faith (*dīn*) and make justice triumph, that the Muslims will follow him and that he will reign over the Muslim kingdoms and be called al Mahdī The appearance of al Daǧǧāl and of the other Signs of the Last Day (*ashrāt al-sāʿa*), which are established in sound tradition (*al-sahih*) will come after him ʿĪsā will descend after his appearance and will kill al-Daǧǧāl or will descend along with him and aid him in that killing, and in Worship ʿĪsā will follow the Mahdī as his *Imām* In support of this position traditions are used which some authorities on tradition have alleged and which others have disputed and often opposed with other narrations The later Sūfīs have followed another course and method of proof in the case of this descendant of Fātima and often seek support, as to that, in the mystical "unveiling" (*kashf*) which is the basis of their method"

This is a very careful statement of the strictly popular drift in Ibn Khaldūn's time, a drift with which he evidently had no sympathy He goes on to give formally 24 traditions bearing upon this restorer and adds six variants, criticizing the authenticity of them all In only 14 of these is this restorer named Mahdī For references to traditions on the Mahdī in Aḥmad b Hanbal's *Musnad*, Abū Dāʾūd's *Sunan*, Tirmidhī's *Ṣahīh* and Ibn Māǧa's *Sunan*, see Wensinck's *Handbook of early Muhammadan Tradition* under MAHDĪ, in the *Masābīh al-Sunna* of al-Baghawī, see ii 134 of ed Cairo 1318 and in the *Miṣhkāt al-Maṣābīh*, see p 399—401 of ed Dihlī 1327 All these, however, have only a certain number of the mass of traditions quoted by Ibn Khaldūn In the *Tadhkira* of al Kurtubī, on the other hand, there is (p. 117—121 of ed Cairo 1324) a further mass of luxuriant detail which Ibn Khaldūn had evidently disdained to incorporate, cf his later reference to the town Māssa, p 173, l 7 In the *Tadhkira* the Prophet, for example, foretells the future conquest and re-conquest of Spain by name Al-

Kurṭubī died in 617 (1272) in the first years of the Naṣrids of Granada when Granada was the only part of Spain left to the Muslims He and those around him felt grievously the need of such a restorer and Mahdī, and detailed traditions sprang up as to his coming. The situation called for a mightier and more specific champion of Islām than ʿĪsā whose business strictly was to kill al Dadjdjāl. Devotion, also, to the blood of the Prophet, of whom the Mahdī was to come, and which was so strong even in the Sunnite Maghrib, may have helped this Al-Kurtubī's Mahdī was to come from the Maghrib as opposed to the earlier ones who were to come from Syria or Khurāsān He will come from a place in the Djabal of the Maghrib, on the shore of the sea, called Māssa, they will swear allegiance to him there and again, a second time, at Mecca Here the tradition joins and attempts to explain an earlier one, given by Abū Dāʾūd and quoted by Ibn Khaldūn (p 148, see, also, below), telling of an expedition against Kalb and of the booty of Kalb, thus linking up with the earliest inter-tribal conflicts This western Mahdī will also kill al-Sufyānī who is supported by Kalb This is not the place to enter upon the story how the Marwānid branch of the Umaiyads supplanted their cousins, the Sufyānids But from the mystery connected with the voluntary abdication and speedy death of Muʿāwiya II, and the succession of Marwān b al-Hakam and the sudden death or assassination of Walīd b ʿUtba b Abī Sufyān (*tuʿtina wa-sakaṭa maiyitan*, Masʿūdī, Paris, ed, v 170) at the burial of Muʿāwiya II, there seems to have sprung an Imāmite party among the Umaiyads (*kawl al Umawīya min al-Imāmīya*, al-Ghazālī in Goldziher's *Streitschrift*, p 14 of the Arabic text), yet this Walīd appears later alive in Tabarī's narrative In the account of Khālid b Yazīd in the *Aghānī* (xvi 88) there is a story that he was the first to start this (*wadaʿa khabar al-Sufyānī wa-kabbarahu wa-arāda an yakūna liʾl-nās fīhi taʿamun*), although that is also denied and a more general and earlier origin is asserted In the civil war at the rise of the ʿAbbāsids one of the "white", i e Umaiyad, revolts was in support of the claims of "the Sufyānid of whom there used to be mention" (*wa-kālū hādha ʾl Sufyānī ʾlladhī kāna yudhkaru*, Tabarī, *Taʾrīkh*, Cairo ed, ix 138, anno 132, Ibn al-Athīr, *Kāmil*, v 207 of ed Cairo 1301) Apparently the Sufyānids continued to assert their claims in the under-ground Imāmite fashion against the Marwānids and, later, the ʿAbbāsids, supporting themselves with traditions, as all the parties did The details are exceedingly obscure for this was one of the lost causes of Islām and has left only a name and that name under the general opprobrium which fell upon the Umaiyads in all later Islām, Sunnite and Shīʿite An earlier stage in this appears in a tradition quoted by Ṭabarī (d 224 = 838) in his commentary on Kurʾān, xxxiv 50 (Part xxii, p 63 foot) The Prophet mentioned a dissension (*fitna*) which would arise between the East and the West Then there would come forth al-Sufyānī from the Dry Wādī (*al-wādī ʾl-yābis*, otherwise unknown, in Yākūt, iv 1000, "the Wādī of Yābis from a man; it is said that al-Sufyānī will come from it in the End of Time") "in that outburst of his", or "when his time comes" (*fī fawrihi dhālik*) Much is said of the armies he will send out and the destruction he will spread, slaying 300 chiefs of the Banu ʾl-ʿAbbās until Djibrīl is sent against him and destroys him His appearance, thus, for Tabarī, is not eschatological and there is nothing about the Mahdī and the End of Time But in an apocalypse incorporated by Muhyi ʾl Dīn Ibn ʿArabī in his *Muhādarat al-Abrār* and studied in detail, historically and astrologically, by Richard Hartmann in his *Islamische Apocalypse aus der Kreuzzugszeit* and dated by him about 576 (1180), this tradition is used, expanded and brought into the eschatological picture, and al-Sufyānī is finally killed by the Mahdī A hundred years later al-Kurtubī expands it still further and calls al-Sufyānī Muhammad b ʿUrwa For other references on al Sufyānī see Goldziher, *Streitschrift*, p 52, note 1, Snouck Hurgronje, *Der Mahdi*, in *Verspreide Geschriften*, i 155, De Goeje, *Frag hist ar*, ii 526, Van Vloten, *Recherches sur la domin ar*, p 61, Lammens, *Le califat de Yazid*, i 17, *Moʿāwiya II ou le dernier des Sofiānides*, p 43

It is obviously impossible to give in detail the traditions bearing on this restorer, but their types can be indicated and some recurrent characteristics The great majority are put directly in the mouth of the Prophet, a very few go back to ʿAlī If there remain of the world a single day Allāh will lengthen it until he sends this restorer, the world shall not pass away, the Hour shall not come until then He will be of the People of my House (*min ahl baitī*), of my kindred (*min ʿitrī*), of my Nation (*min ummatī*), of the offspring of Fātima (*min walad Fātima*), his name will be my name and his father's name my father's name He will resemble the Prophet in disposition (*khulk*) but not in appearance (*khalk*), this is put in the mouth of ʿAlī He will be bald of the forehead, hook nosed, high nosed He will find the world full of evil and oppression and ungodliness, if a man say "Allāh! Allāh!" he will be killed He will fill the world with equity and justice, he will beat men until they return to Allāh (*al-hakk*) The Muslims will enjoy under him a prosperity the like of which has never been heard of, the earth will bring forth its fruits and the heavens will pour down its rain, money in that day will be like that which is trodden under foot and will be uncounted, a man will stand up and say "O Mahdī, give to me", and he will say "Take!" and he will pour into his robe as much as he can carry It is suggested that this is a *tafsīr*, legitimate or illegitimate, of a tradition in the *Sahīh* of Muslim "There will come in the end of my nation a khalīfa who will scatter wealth, not counting it" See many references for this munificent khalīfa and the abundance of money in the last days in Wensinck, *Handbook of Tradition*, p 100*b*, foot But in this tradition, as in all Muslim and Bukhārī, there is no mention of the Mahdī Again the Mahdī is of us, the People of the House. Allāh will bring him suddenly and unexpectedly (? *yuṣlihuhu-llāhu fī lailatin*) He will rule five, seven, nine years There are frequent allusions to his coming in a time of dissensions (*fitan*) These will be such that it will take a voice from heaven to still them, saying "Your Amīr is so-and-so" (Ibn Khaldūn, p 162) This is very like an ironical comment, but it is cited as a simple foretelling. In these earlier traditions he will come from the East (al-Mashriḳ; Khurāsān), from beyond the River (Oxus); in later times (e. g. Ḳurṭubī

and Ibn Khaldūn, p. 171—176) he was to come from the wide, unknown, lands of the Maghrib The original Black Banners (*rāyāt sūd*) tradition about the ʿAbbāsids, apparently forged to lead them to support the ʿAlids, does not mention the Mahdī (Ibn Khaldūn, p 153), but in an evidently later form there is added, "for he is the khalīfa of Allāh, the Mahdī" (Ibn Khaldūn, p 159) One long tradition (Ibn Khaldūn, p 148) may be given entire as an illustration of a type and because of the later expansion and use of it by Kurṭubī "There will arise a difference at the death of a khalīfa and a man of the people of al-Madīna will go forth, fleeing to Mecca Then some of the people of Mecca will come to him and make him go out (apparently rise in insurrection) against his will and they will swear allegiance to him between the *Rukn* and the *Makām* And an army will be sent against (or, "to", *ilā*) him from Syria but will be swallowed up in the earth in the desert (*al-baidā'*) between Mecca and al-Madīna Whenever the people see that, the *Abdāl* ("Substitutes" or "Nobles") of Syria and the *Aṣḥāb* ("Companions" or "Sectaries", see Lane, p 2059*b*) of al-ʿIrāḳ will come to him and they will swear allegiance to him Thereafter there will arise a man of Kuraish with maternal grandfathers of Kalb So he will send against them an army and it will overcome them and that will be the expedition (*baʿth*) of Kalb And oh! the disappointment of those who will not have part in the booty of Kalb! He will divide the wealth and rule over the people according to the *sunna* of their Prophet and he will subject himself to the support of Islām He will remain seven or nine years and then die and the Muslims will pray over him" This is evidently an echo of the early ʿAlid conflicts and is not eschatological nor does it mention the Mahdī But its motifs of the *Abdāl* and of the earth swallowing up in the desert (*al-baidā'*) re-appear in other traditions which are concerned with the End of Time (p 156, 161) and it is worked into al-Kurtūbī's tradition of the Mahdī from the Maghrib Again, in a tradition evidently eirenic between the ʿAbbāsids and the ʿAlids, the Muslims are exhorted to "turn to the youth of the tribe of Tamīm (*ʿalaikum bi 'l-fata 'l-tamīmī*) for he will come from the East and will be the standard-bearer of the Mahdī" (Ibn Khaldūn, p 162) But it is plain, too, that the doctrine of the Mahdī arose late and was not generally received Thus the doctrine of al Dadjdjāl is fixed in all Muslim eschatology, official and popular, but a tradition tries to assert that belief in the Mahdī is more of Faith than belief in him "Whoever denies the Mahdī is an unbeliever but whoever denies al-Dadjdjāl is only a denier" (Ibn Khaldūn, p. 144) On the other hand a tradition asserts that there is no Mahdī but ʿĪsā The upholders of the Mahdī tried to turn this by saying that it means that no one ever spoke in the cradle (*mahd*, Kurʾān, iii. 41) except ʿĪsā (Ibn Khaldūn, p 163, Kurṭubī, p 118) For al-Kahṭānī, another restorer who is not mentioned in any of the collections of traditions used above, see article ḲAḤṬĀN, above, vol ii, p 630*a* and Snouck Hurgronje's article *Der Mahdi*, p. 12 (*Verspr Geschr.*, i 156)

The later, therefore, we go and the more popular are our sources the more fixed do we find the belief in the eschatological Mahdī. The more, too, the Muslim masses have felt themselves oppressed and humiliated, either by their own rulers or by non-Muslims, the more fervent has been their longing for this ultimate restorer of the true Islām and conqueror of the whole world for Islām And as the need for a Mahdī has been felt, the Mahdīs have always appeared and Islām has risen, sword in hand, under their banner It is impossible here to give the history of these risings See for details upon them the article *Mahdī* by Margoliouth in Hasting's *Encyclopedia of Religion and Ethics*, viii 336—340 and Goldziher, *Vorlesungen*, p 231, 268, 291 For the Sudanese Mahdī, see especially Snouck Hurgronje's article *Der Mahdi*, reprinted in *Verspr Geschr*, i, p 147—181 This contains, also, a fundamental discussion of the origin and history of the idea of a restorer in Islām, see also beneath, s v MUHAMMAD AHMAD

Bibliography has been given in the course of the article The three important treatments of the subject are undoubtedly those by Snouck Hurgronje, Goldziher and Margoliouth

(D B MACDONALD)

AL-MAHDĪ, ABŪ ʿABD ALLĀH MUHAMMAD, an ʿAbbāsid Caliph His father was the Caliph al-Mansūr, his mother was called Umm Mūsā bint al Mansūr b ʿAbd Allāh and belonged to the family of the old Himyarite kings When the governor of Khurāsān ʿAbd al-Djabbār b ʿAbd al-Rahmān [q v] rebelled, the Caliph sent his son Muhammad al-Mahdī with an army against him, the real commander was Khāzim b Khuzaima After taking ʿAbd al-Djabbār prisoner, al-Mahdī by his father's orders undertook an expedition against Tabaristān which had to submit to him [cf DĀBŪYA] In 144 (761—762) he returned to the ʿIrāk where he married Raita, the daughter of the Caliph Abu 'l-ʿAbbās al-Saffāh For the next few years he lived in al-Raiy ʿĪsā b Mūsā had long been designated as successor to the throne but he was persuaded by al-Mansūr to waive his rights in favour of al-Mahdī, and after the death of al-Mansūr in Dhu 'l Hidjdja 158 (Oct 775) al-Mahdī was recognised as Caliph He made himself very popular by his liberality and gentleness, although several cruel deeds are credited to him For example he had the son of the vizier Abū ʿAbd Allāh Muʿāwiya b ʿUbaid Allāh [q v] executed on a mere suspicion and another vizier Yaʿḳūb b Dāwūd who had fallen into disfavour with him was thrown into a prison so dark that he lost the use of his eyes In 160 (776—777) a rebellion broke out in the always unruly Khurāsān, the leader of the rebels, Yūsuf b Ibrāhim, was however defeated and taken prisoner whereupon the Caliph had him executed in the cruellest fashion The war against Byzantium was continued under al-Mahdī In continual raids to plunder and devastate the marches, the two opponents sought to do each other as much harm as possible, there was however never any thought of permanently occupying any territory temporarily conquered On the whole the advantage lay with the Muslims and in the early stages they advanced as far as Angora Michael Lachanodrakon however with a Byzantine army advanced against them, destroyed the fortress of al-Hadath [q v], which however was soon rebuilt, and laid the land waste as far as the Syrian frontier (162 = 778/779) In the following year al-Mahdī equipped a great expedition in which his son Hārūn took part against

the Byzantines and in 165 (782) Hārūn took the field again, accompanied by the Caliph's favourite al-Rabīʿ b Yūnus, later vizier This time the Muslims penetrated to the Bosphorus and the Empress Irene was forced to make a three years' truce and to promise to pay an annual tribute In Ramadān 168 (March/April 785), however, the truce was broken by the Byzantines and hostilities lasted till the death of al-Mahdī, without however any decision being reached In his reign appeared the sectarian fanatic al-Muḳannaʿ, who gave the Caliph's troops much trouble and sustained a long siege in a fortress in the region of Kashsh, till finally he poisoned himself in 163 (779/780) in order not to fall alive into the hand of his enemies In other parts of the empire also, heretics, especially real or alleged Manichaeans (*Zindīḳ*), were treated with the utmost severity Al-Mahdī acquired great merit by his work for the peaceful development of his empire, new roads were laid down and the postal system improved, trade and industry reached a prosperity hitherto unknown and scholars were richly rewarded At the same time there appeared an undesirable tendency to extravagance, which in the end was to prove really fatal, and with al-Mahdī began that expenditure of the revenues on useless luxury, which contributed not a little under his successors to the ruin of the ʿAbbāsid empire In time the Caliph fell under the control of his courtiers and in particular allowed himself to be guided by his chamberlain al-Rabīʿ b Yūnus and especially by his wife al-Khaizurān, formerly a slave who was the mother of two sons, Mūsā and Hārūn As early as 160 (776) homage had been paid to the former as successor designate under the name of al-Hādī in place of ʿĪsā b Mūsā [q v] and six years later al-Mahdī had his younger son Hārūn proclaimed as successor to al-Hādī But as Khaizurān preferred Hārūn and he was also supported by the Barmecides, the Caliph decided to alter the succession in favour of him, al-Hādī, who was then in Djurdjān refused to agree Al-Mahdī thereupon set out to discuss the matter with him in person, but died suddenly on the 22nd Muharram 169 (Aug 4, 785) in Māsabadhān at the age of 43 As a ruler he was undoubtedly one of the best among the ʿAbbāsids

AL-MAHDĪ. [See IBN TŪMART]

AL-MAHDĪ. [See MUḤAMMAD AḤMAD]

AL-MAHDĪ, MUHAMMAD B HISHĀM B ʿABD AL-DJABBĀR B ʿABD AL-RAHMĀN AL-NĀṢIR, ABU 'L-WALĪD, eleventh Umaiyad Caliph of Spain He held power on two occasions, first as successor to Hishām II, al-Muʾaiyad [q v], and again after Sulaimān b Hakam al-Mustaʿīn [q v], in the period of general rebellion which at the beginning of the ninth century immediately preceded the establishment through Muslim Spain of petty independent rulers, the *Mulūk al-Ṭawāʾif*

The third of the ʿĀmirid hādjibs, ʿAbd al-Rahmān b al-Mansūr, surnamed Sanchol, from the moment he succeeded his brother ʿAbd al-Malik al-Muzaffar abandoned himself to all sorts of excesses and was able to take advantage of the weakness of the titular caliph, Hishām II al-Muʾaiyad, to get himself designated heir-presumptive This decision at once aroused the indignation of various members of the caliph's family, thus excluded from the throne, they arranged that one of their number, Muhammad b Hishām b ʿAbd al-Djabbār, a great grandson of ʿAbd al-Rahmān III al-Nāsir, who had many followers among the people of Cordova should head a rebellion Advantage was taken of an expedition, which ʿAbd al Rahmān Sanchol, following the example of his father and brother, was to lead in person against the Christians of Galicia, to raise the standard of rebellion On the 16th Djumāda II, 399 (Feb 15, 1009) Muhammad b Hishām attacked the palace of Cordova where the caliph Hishām was with a small number of followers who had remained faithful to him He captured the palace and at once took steps to make Hishām sign his abdication and had himself proclaimed caliph The whole population of Cordova was in arms and plundered the ʿĀmirid town Madīnat al-Zāhira [q v] All the treasure accumulated there including a vast sum in money was seized and brought to the new caliph who to destroy ʿĀmirid power for ever, demolished completely and set fire to the town which the great hādjib al-Mansūr had built only a few years before At the same time, Muhammad b Hishām who had adopted the honorific *lakab* of al-Mahdī took steps to meet the counter-attack certain to be made by ʿAbd al-Rahmān Sanchol Warned of what had happened in Cordova and of the destruction of al-Madīnat al-Zāhira, the hādjib, full of anxiety, pitched his camp at Kalʿat Rabāḥ (Calatrava [q v]) and endeavoured to secure the fidelity of his troops who were mainly Berbers He was soon forced to witness their defection and went to Cordova in the hope of finding new partisans there But on the way back he was captured by emissaries of al-Mahdī in a monastery of the Sierra Morena and executed at the end of Djumādā II, 399 (March 1, 1009) His body was crucified in Cordova

Muhammad al-Mahdī, once the power was in his hands, soon alienated the principal Berber chiefs of his army as well as his relatives of the Umaiyad house A rebellion against him was planned by his adversaries The Berbers put at their head an Umaiyad pretender, Hishām b Sulaimān b al-Nāsir, whom they proclaimed [caliph with the title al-Rashīd, and laid siege to Cordova Al-Mahdī made a sortie, routed them and the pretender was killed The Berbers then chose a new Umaiyad prince, Sulaimān b Hakam, and at the same time appealed for assistance to Sancho Garcez

and his Christians In spite of all the efforts of al-Mahdī, the blockade of Cordova became more and more strict He then tried to put on the throne the caliph Hishām II b al-Mu'ayad whom he had himself deposed and then given out that he was dead, but this was in vain On 16th Rabī' I, 400 (Nov 7, 1009) the palace of the caliph was in the hands of the besiegers Al-Mahdī's only hope was to hide himself The pretender of the Berbers, Sulaimān, received the oath of allegiance at al-Cordova and assumed the honorific title of al-Musta'īn bi'llāh

In the following month al-Mahdī was able to leave Cordova secretly and seek refuge in Toledo where he was well received by the inhabitants He then sought and obtained an alliance with the Catalans (*Ifrandj*) who marched with him on Cordova in Shawwāl 400 (May June 1010) The town was taken and the second reign of al-Mahdī began with a bloody persecution of all the Berbers in Cordova To avenge the wrongs of their fellow-countrymen in the capital, the Berbers in the army of Sulaimān al-Musta'īn returned to besiege the city Al-Mahdī, betrayed by his servants, was slain during the siege in the palace in Cordova by some 'Āmirid slaves on the 8th Dhu'l-Hidjdja 400 (July 23, 1010) His first reign lasted nine months, the second less than two

MAHDĪ KHĀN, Mīrzā Muhammad Mahdī Astarābādī b Muhammad, historian of Nādir Shāh of Persia, whose deeds he recorded in the *Ta'rīkh-i Djahān Gushāy-i Nādirī*, this work written in Persian is an excellent complement to those by James Fraser and Jonas Hanway on the conqueror In it Mahdī Khān details the life of Nādir from his birth to his death while other Persian writers only deal with periods of it (e g Muhsin b Hanīf records only the expedition to India in his *Djawhar i Şamşam*, 'Abd al-Karīm Kashmīrī in his *Bayān i Wāki'* confines himself to the period from this expedition to 1784) W Jones in his introduction to the *Ta'rīkh* of Mahdī Khān says that "the narrative of these perpetual rebellions is somewhat dry and fatiguing", as to the boundless praise which he bestows on the author's style, especially the descriptions of spring at the beginning of each year, it is exaggerated, in these descriptions all the images used had been employed to satiety for years before It is true that some works of the period are still more hackneyed Mahdī Khān himself gives free train to this vexatious tendency in another version of history of Nādir which comes down to the year 1748 only *Durra-i Nādira*, in a style uniformly artificial and elaborate Malcolm (*History of Persia*) reproaches Mahdī Khān with having been too flattering to Nādir, he recognises however that the historian has spoken frankly of the cruelties which were a blot upon the latter part of the reign Mahdī Khān was Nādir's secretary This is revealed not only in the accuracy of his details but in certain statements also Mahdī, for example, says that he was with the prince when the latter received news of the birth of a grandson (transl Jones i 191), at the end of his reign Nādir sent him on a diplomatic mission to the Sultān of Turkey (ii 179) H Brydges (Abd-er-Razzak, *History of the Kajars*, London 1833, p clxxxi, note) also credits him with secretarial duties Besides his historical works, Mahdī Khān compiled his celebrated Eastern Turkish-Persian dictionary entitled *Sanglākh* (1173 = 1760) a valuable thesaurus enriched with examples taken from the Turkish classics (Mir 'Alī-Shīr, *Bābur-Nāma* etc), the publication of this work of which there are two abbreviations is highly desirable

AL-MAHDĪ LI-DĪN ALLĀH AHMAD, a title and name of several Zaidī Imāms of the Yaman

About 250 years after al-Hādī Yahyā, the founder of the Zaidīya [q v] dynasty of the Yaman, his direct descendant, the Imām al-Mutawakkil 'ala 'llāh Ahmad b Sulaimān had, between 532 and 566 (1134—1170), restored the kingdom to its extent in al-Hādī's period, with Sa'da, Nadjrān and for a time also Zabīd and San'ā' A generation later (593—614 = 1197—1217) the hill country from Sa'da to Dhamār was again ruled by one man, al-Mansūr bi'llāh 'Abd Allāh b Hamza, not a descendant of al-Hādī but of a Rassid, i e one of the family of al Hādī's grandfather, al-Kāsim b Tabātabā, the spiritual founder of the Zaidīyas of the Yaman Al-Mansūr was twice able to enter San'ā', he was also recognised as Imām by the Kaspid Zaidīs, the Nuktawī, but even before his death his power had become restricted by the last Ayyūbid Sultān of the Yaman, al Malik al-Mas'ūd, once more to the land of Kawkabān After his death his sons, first Muhammad 'Izz al-Dīn, then the Imām Ahmad al-Mutawakkil tried their fortune in the south, while one of al-Hādī's descendants and his namesake al Hādī Yahyā b al-Muhsin created a petty imāmate around Sa'da An attempt to unite the divided forces of the dynasty was made by

a Al-Mahdī li-Dīn Allāh, his full official title, one previously met with among the Zaidīs, was al-Mahdī li Dīn Allāh, Ahmad b al-Husain b Ahmad b al-Kāsim b 'Abd Allāh b al-Kāsim b Ahmad b Ismā'īl Abu 'l-Barakāt The uncertainty about his genealogy, that occurs may be explained from the fact that, as is also found in the superscription and signature to his *Khalīfat al-Kur'ān* (see *Bibl*) there is a jump from Ismā'īl Abu 'l-Barakāt to Ismā'īl al-Dībādj (cf de Zambaur, Table B), he himself expressly says that his genealogy meets that of al-Mansūr in al-Kāsim b.

Ibrāhīm, i e that he was a Rassid His reign of ten years during which the Yaman was harassed by plague and famine does not reveal a great ruler nor even any real and consistent authority, but gives a remarkable picture of conditions in South Arabia, when for want of a definite line of succession, success alone decided how far an ʿAlid pretender was able to hold his own among his kinsmen and with any forces he could gather to make a stand against foreign foes In 646 (1248) Ahmad had himself proclaimed Imām in the fortress of Thula in the highlands of Hadūr, northwest of Ṣanʿā', by arrangement with the Banū Hamza, i e the family of the late Imām al-Mansūr, and with the benevolent tolerance of Asad al-Dīn Muhammad b al-Hasan, the brother's son of the first Rasūlid Sultān, al-Malik al-Mansūr Nūr al-Dīn ʿOmar b ʿAlī b Rasūl But he was defeated by Nūr al-Dīn and besieged in Thula, and in 647 (1250) we find him having to fight with the Banū Hamza who had again deserted him He was saved by the death of Nūr al-Dīn who was killed by his own Mamlūks in Zabīd, an event which is probably connected with contemporary Mamlūk attempts on the Egyptian Ayyūbids, Asad al-Dīn who wished to make his governorship in Sanʿā' independent, is also accused of instigating it The latter continued active under Nūr al Dīn's son and successor al-Muzaffar Yūsuf, rebelling and suing for peace alternately, sometimes on the side of the Imām and sometimes intriguing against him Al-Mahdī, who in the meanwhile had bound Shams al Dīn Ahmad, son of the late Imām and chief of the Banū Hamza, to joint action with him, took Sanʿā' in the beginning of Djumādā I 648 (July 1250), although harassed by Asad al-Dīn who held the fortress of Birāsh, he was able to extend his rule to the south as far as Dhamār But before a year had expired al-Mahdī had to abandon Sanʿā' Asad al-Dīn indeed sold him the fortress of Birāsh but it was just on account of this that the final breach occurred between them Asad al-Dīn again went over to al Muzaffar who had the governorship of the Yaman granted him by the Caliph al-Mustaʿsim, who is even said to have sent assassins (*Sīra*, see *Bibl*, fol 237*a*) against the Imām In a thoroughly Zaidī fashion, however, his fate was decided not by foreign foes but by the Zaidīs themselves He quarrelled with his ablest and most ardent supporter, Shaikh Ahmad al Rassās With the help of the Rasūlids, Shams al-Dīn made himself Imām of the Zaidis in 652 (1254) in the old capital of Saʿda Al-Mahdī was again confined to his original territory The very next year a Zaidī assembly pronounced his deposition, as unworthy Of the 10,000 infantry and several hundred horse men of the earlier fighting, he had still 2,000 infantry and 300 cavalry, but these also left him in the decisive battle of Wādī Shuwāba, which runs from Sanʿā' parallel in the northwest to the Wādī Khārid He was slain at the age of 42, his head sent round as a trophy and treated shamefully but finally buried with his body in the little Wādī of Dhū Bīn (Dhenebān) His inglorious end did not prevent his tomb from becoming a wonder-working abode of grace, his biographer calls him the "martyr on the path of Allāh and the commander of the faithful" and many miracles are recorded of him even from his lifetime His assassination at the beginning of 656 (1258) falls in the same year as the execution of his old enemy, the last ʿAbbāsid Caliph, al-Mustaʿṣim Legend says that the messenger who was to carry the news to Baghdād learned on the way that the caliph had met his fate on the same day

While in his *Daʿwa* (see *Bibl*) al-Mahdī collected the usual Zaidī arguments with the regular sayings from the Kurʾān and hadīths practically in the traditional form as a general appeal to support the Zaidī cause and himself, his *Khalīfa* is a passionate personal protest against his deposition and an attempt to bring back his enemies especially Shams al-Dīn Aḥmad, to the loyalty they had sworn to him This, he reproaches them, was as unrighteous as the recognition of Muhammad's authority as a Prophet by the Umaiyads

The Shams al-Dīn Ahmad above mentioned, who adopted the official title of al Mutawakkil and recognised the Rasūlids as his overlords, was at once challenged by a rival Imām in the person of Abū Muhammad al-Hasan b al-Wahhās The position remained the same for the next 50 years The *Tatimma* gives nine men, the last being al-Nāsir Salāh al-Dīn Muhammad b ʿAlī, who succeeded in obtaining some recognition as imāms in the period between al-Mahdī Ahmad b al-Husain and

b AL-MAHDĪ LI DĪN ALLĀH AHMAD B YAHYĀ B AL-MURTADĀ b Ahmad b al-Murtadā b al-Mufaddal b Mansūr b al Mufaddal b al-Hadjdjādj b ʿAlī b Yahyā b al-Kāsim b Yūsuf al-Daʿī b Yahyā al-Mansūr b Ahmad al-Nāsir The last named ancestor was the son and second successor of Yahyā al-Hādī After the death of al-Nāsir Salāh al-Dīn, a kādī ʿAbd Allāh b al-Hasan al-Dauwārī worked with a few partisans on behalf of his sons who were still minors But the ʿUlamāʾ, anxious to consolidate the power which was gradually breaking up, placed in the mosque of Djamāl al-Dīn in Sanʿā' three claimants ʿAlī b Abi 'l Fadāʾil, al-Nāsir b Ahmad b Muhammad and Ahmad b Yahyā b al-Murtadā and these three were to decide on one of their number The choice fell on Ahmad b Yahyā, the youngest of them In spite of his objections, he had to give in to their argument that "one who has gone deeply into learned problems with their subtle points, cannot be incapable of conducting worldly affairs" They at the same time promised him their advice and support (*Tatimma*, fol 72a) But on the very night on which he was proclaimed, the kādī al Dauwarī succeeded in getting homage paid to his candidate (end of 793 = 1391) Ahmad b Yahyā and his adherents at once left the town in a body and withdrew to the hills to the Banū Shihāb, a clan of the Hamdānids His abode was betrayed by one of the Shihāb Fighting went on for 13 days in which the enemy lost about 50 men and the Imām 10 The latter then went farther into the mountains and his claims were recognised in Ānis also Among his special supporters were al-Hādī b al Muʾaiyad, son of a former Imām, and Ibn Abi 'l-Fadāʾil He was also asked by people in Ṣaʿda to receive their homage But he was surprised by his enemies and as he would not interrupt his ritual ablutions and prayers to fight, he surrendered under a promise that no harm would befall him In spite of this, as the *Tatimma* tells us, which is however much biassed in his favour, 80 of his men were massacred, he himself was taken to Ṣanʿā' where he was kept a prisoner for 7 years

and 3 weeks (794—801) Liberated with the help of his warders, he lived a further 40 years, "tossed up and down the country", devoting himself entirely to learning until he died in Ẓafār (end of 480 = 1437) of the plague in the Yaman, which had already carried off with many notables including the rival Imām ʿAlī b Ṣalāḥ al-Dīn According to the *Tatimma* (fol 75a) Ibn al-Murtadā was born in 775 (1373) in Dhamār, according to other sources (see Rieu, in *Brit Mus Cat Suppl*, N° 365) in 764 (1363) at Ānis

The choice of Ibn al Murtaḍā as Imām was a mistake, inasmuch as he lacked the necessary military and administrative ability On the other hand he had another qualification in perfection As a result of a careful education and a thirst for learning from his youth upwards, he wrote a great deal, dogmatic, legal and paraenetic, he was also a poet and worked at grammar and logic The kindness of his warders, who supplied him with ink and paper, enabled him to compose the law book *al-Azhār fī Fikh al-Aʾimma al-aṭhār* (Berlin MS 4919) on which he wrote a commentary His most valuable work is still his theological and legal encyclopaedia, *al-Bahr al-zakhkhār* (Berlin MS 4894—4907) on which he likewise wrote a commentary Although not the work of an original scholar, it is a rich and well arranged compilation, which deserves attention, if only for the part of the introduction which compares the various religions, as the distinctions between them are seen from quite a different point of view to that of Ashʿarī or Shahrastānī

About 80 years after al-Mahdī Ahmad b Yahyā, from 922 (1516), the Turks had begun to occupy Yaman and to hold it with varying fortunes (see Kutb al-Dīn al-Makkī, *al-Bark al-Yamānī fī 'l-Fath al-ʿOthmānī*, in S de Sacy, in *N E*, IV 412–504 and A Rutgers, *Historia Jemanae sub Hasano Pascha*, Leyden 1838) In his struggle with them al-Mansūr bi'llāh al-Kāsim b Muhammad, a descendant of al-Hādī in the 17th generation, was able about 1000 A H to restore the present imāmate in Sanʿā' (see A S Tritton, *The Rise of the Imams of Sanaa*, Oxford 1925) Of his sons, Muhammad al-Muʾaiyad succeeded him Even in his reign but still more after his death in 1054 (1644), when his successor Ismāʿīl, another son of al-Kāsim, was making his way with difficulty against his many brothers and nephews, one of al Kāsim's grandsons began to come to the front, afterwards the Imām

c AL-MAHDĪ LI DĪN ALLĀH AHMAD B AL-HASAN B AL KĀSIM His father was not Imām but distinguished himself in the wars against the Turks and was also a scholar In 1049 Ahmad appeared in the hills of Wuṣāb, in 1051 he besieged Dhamār without success, in 1053 he was in Mecca with many members of his family on the pilgrimage Just at the accession of Ismāʿīl, he set out with another cousin against Ṣanʿā' At first he came to terms with the Imām but then fought in different places for his own hand, e g at Thula and again in the Djebel Wuṣāb In 1070 he won Hadramawt for Ismāʿīl, to which the Zaidīs had been summoned by the disputes for the throne When in 1087 (1676) on the death of Ismāʿīl he himself assumed the imāmate, a nephew, al-Kāsim b Muhammad al-Muʾaiyad, proclaimed himself Imām and was recognised particularly in the remoter territory in the south towards al-Tihāma in Zabīd A Zaidī assembly of leading Sharīfs and ʿUlamāʾ met, at which Ahmad was with some difficulty recognised as the legitimate Imām. Although this did not mean that he enjoyed the authority of a sovereign, since his rivals and the other amīrs remained as independent as before, yet peace and security reigned in the country But Aḥmad b al-Hasan died soon afterwards in 1092 (1681) in al-Ghirās near Shibām which had been built by the first Turkish conqueror Hasan Pasha After the short and weak reign of his son al-Mutawakkil Muhammad (to 1097 = 1686), family feuds broke out again Among the later Imāms of this Kāsimid dynasty another Ahmad b al Husain b al-Kāsim (from 1221 = 1806) again bore the official title of al-Mahdī li-Dīn Allāh

AL-MAHDĪ ʿUBAID ALLĀH, first Fāṭimid Caliph (297—322 = 909—934) His origins are obscure He is also known as Saʿīd, and is believed to have been the grandson of the celebrated Persian sectarian ʿAbd Allāh b Maimūn al-Kaddāh (the oculist), the Ismāʿīlian leader, but he claimed to be a true descendant of the Prophet through his daughter Fāṭima By some he was supposed to be the brother of the twelfth *Imām*, according to others, the son of one of the strange "hidden" *Imāms* of the Ismāʿīlīs His spectacular rise to power was coincident with a sudden outburst of Shīʿite fervour centred in the vexed question of the legitimacy of the Caliphate, involving the mystical doctrine of the Imāmate and the appearance of a long-expected *Mahdī* [q v] It was the culmination of Ismāʿīlian propaganda and was in alliance with the Karmatian heresy of Arabia Throughout the history of these times one can discern how in reality such zealous schismatics traded their esoteric doctrines and allegorical interpretations to the advancement of their own private political ends

North Africa witnessed the crucial stages of the Fāṭimid rising, the prime instigator being apparently a *dāʿī*, Abū ʿAbd Allāh al-Shīʿī [q v], who proclaimed himself the precursor of the Mahdī An ambitious factionist of undeniable ability and or-

ganising genius, in the end his own astuteness and love of power brought about his undoing Nevertheless it was to him that ʿUbaid Allāh owed his throne and title While the former was sowing the seeds of sedition amongst the Berber tribes of North Africa, ʿUbaid Allāh was making his way with his family from Salamīya in N Syria to Kairawān (902 A D) In passing through Egypt disguised as a merchant he narrowly escaped imprisonment at the hands of a suspicious governor Perhaps judicious bribery helped him on his way until he found himself with his son thrown by the Benī Midrār, supporters of the ʿAbbāsids, into a dungeon in Sidjilmāsa Meanwhile his generalissimo was operating elsewhere in his favour with the help of the wild Benī Kitāma whose services he had enlisted A victorious entry into Sidjilmāsa marked the release of ʿUbaid Allāh — though there are suspicions that the real prisoner was slain before the surrender — and his proclamation as the true spiritual head of Islām, al-Mahdī, Commander of the Faithful The Aghlabid monarch Ziyādat Allāh III was overthrown and driven into exile in Egypt, while on Jan 15, 910 A D (29th Rabīʿ II, 297) the new Mahdi and his son made their triumphal entry into Rakkāda

Following his elevation to supreme control ʿUbaid Allāh entered on a policy of extending the bounds of his dominions Not only had he enemies on all sides, even within his own camp lurked traitorous allies and fickle adherents Those who had raised him from the dungeon found very soon that he was now their master The estrangement between him and his chief supporters is said to have originated in the disappointment felt by the latter that he was incapable of working the miracles expected of such a divine personage Abū ʿAbd Allāh was forced to play a subordinate part, and becoming embittered thereby, began spreading sedition amongst the unsettled Berber tribesmen But the Mahdī was quite capable of dealing with the situation A Shaikh of the Kitāma Berbers, heading a deputation asking for clear proofs of his spiritual claims, was summarily beheaded Shortly after this he waylaid Abū ʿAbd Allāh and his brother ʿAbd al-ʿAbbās and had them assassinated (298 = 911) The other brother Abū Zākī was sent to Kairawān with a letter ordering his execution As the Mahdī himself said in justifying such acts against quondam supporters "Satan caused them to slip and I have purified them by the sword" Riots ensued, but the bold handling of the populace by the Mahdī and his personal courage averted disaster and firmly established the secular power, if it did not demonstrate the spiritual virtues, of the Fātimid dynasty

ʿUbaidallāh's foreign policy led him to despatch Hassān b Kulaib of the Benī Kitāma as governor to Sicily in order to further the Fātimid cause The Huwara and Luwata tribes of Tripolitana were vanquished, while the Mahdī's forces were also victorious against Muhammad b Khazar at Tiharet But following Abū ʿAbd Allāh's death, the Benī Kitāma, who were murmuring against the Mahdī, were attacked in April 912, chiefly by their old enemies, the people of Kairawān who never liked their savage manners The Benī Kitāma rose in a general revolt and appointed a new Mahdī, named Kadū, but after considerable fighting they were defeated The Tripolitans were also involved in a struggle with the Berbers (300 A H) But the most important events of this reign were the attacks on Egypt The Mahdī's son, Abu 'l-Kāsim, was sent in command of the forces, while a fleet operated under Khubasa Tripoli, Barka, and then Alexandria (302 = 914) were taken, until the victorious army was checked outside Fustāt by the eunuch Mūnis, the Egyptian commander A second expeditionary force (916—917) repeated the feats of the previous one and devastated the Delta and ravaged the Faiyūm, only to be checked once more at Old Cairo, while the fleet of 80 vessels was destroyed at Rosetta (307 = 920) by the Khalifa's smaller but more efficient fleet under Greek mariners Once more the Fātimid ranks had to withdraw Nevertheless the dominion of the Mahdi extended from the borders of Egypt to the confines of the Idrisid stronghold in Morocco His fleets spread terror throughout the Mediterranean Malta, Sicily, Sardinia, and the Balearic Islands felt his influence, while his secret-service agents were to be found throughout Andalusia A revolt in Sicily in favour of an Aghlabid prince Ahmad b Ziyādat Allāh affected his sway in that island, but his administration generally was strong and secure, albeit rigorous and unmerciful The year 926 found him taking up his residence in the new city he had founded on the Tunisian coast, named after himself al-Mahdīya [q v] (the "Africa" of Froissart) This became his capital instead of Kairawān (16 mls distant) The new town was founded in 303 (916) and was situated on a projecting peninsula called Djazīrat al-Far It was strongly fortified with high and massive walls, and colossally heavy gates, enclosing the palace and the royal barracks A natural harbour was improved to shelter 100 vessels of war On the mainland lay the faubourg of Zawila intended as a place of residence for traders and the general public After a reign of 25 years ʿUbaid Allāh died on the 4th March 934 (14th Rabiʿ I, 322) at the age of 63, and was succeeded by his son Abu 'l Kāsim under the title of al-Kā'im bi-Amrallāh

AL-**MAHDĪ**'s, a dynasty of Zabīd in the Yaman When the founder of the dynasty, ʿAlī b Mahdī [q v], died in the middle of 554 (1159) soon after the taking of Zabīd, the power of the dynasty which had been concentiated in his personality, was seriously threatened, especially as his sons Mahdī, ʿAbd al-Nabīʾ and ʿAbd Allāh quarrelled It is not quite clear whether Mahdī at first obtained the throne (so ʿOmāra in Kay [see *Bibl*], p 129) or whether he ruled jointly with ʿAbd al-Nabīʾ, the latter taking charge of civil and the former of military affairs (so Khazradjī in Kay, p 294) In any case, in the wars abroad we find Mahdī appearing as conqueror of Lahidj in 556 and of Djanad in 558 He died, at the end of 558 or beginning of 559 (end of 1163) in Zabīd ʿAbd al-Nabīʾ now became sole ruler but although driven from power for a brief period by ʿAbd Allāh he was able to consolidate his position and in continual fighting was able to retain the kingdom in Yaman and the great treasure which his father had accumulated His power extended from al-Tihāma over the mountains of Dhu 'l Kalā and the towns south of Djanad and Taʿizz He celebrated his victories in poems, for example that in 560 (1164) over Wahhās, son and successor of Ghānim b Yahyā of the Hasanid branch of the Sulaimānids, who after being driven out of Mecca had founded a dynasty in the mountains around Zafār and Taʿizz When ʿAbd al-Nabīʾ besieged ʿAden in 568 (1172) the Zuraiʿids there [cf BANU 'L-KARAM] obtained the support of a great coalition led by the Hamdānid ʿAlī b Hātim in Sanʿāʾ which included the Yām tribes related to the Hamdānids and Zuraiʿids ʿAbd al-Nabīʾ suffered an annihilating defeat in 569 at Ibb and again farther south near Taʿizz Although ʿAlī b Hātim could not carry the war into al Tihāma as the Beduins would not follow him, ʿAbd al Nabīʾ had to give up the siege of ʿAden On his return to Zabīd, he met a stronger enemy and thus met his end In the same year the Ayyūbid Tūrānshāh, sent by his brother Saladin, invaded Yemen Guided by the Sulaimānid al Kāsim, the brother of Wahhās who had fallen in battle, Tūrānshāh took Zabīd after two days' fighting on 9th Shawwāl 569 (May 14, 1174) ʿAbd al-Nabīʾ and his two brothers Ahmad and Yahyā were thrown into prison Nine months later when Tūrānshāh on his campaign of conquest in the mountains of the Yaman was at Dhū Djibla west of Ibb, he heard of troubles in al Tihāma and had all three brothers executed in Zabīd

AL-**MAHDĪYA**, a town on the east coast of Tunisia, is the "town of Africa" of the European historians of the Middle Ages It is built between Sousse and Sfax on a small peninsula more than a mile in length and less than 500 yards in breadth, which terminates the cape of Africa and is connected to the mainland by a narrow isthmus "much as the hand is joined to the wrist" The site was without doubt occupied by a Phoenician factory and by a Roman settlement, which it has not been possible to identify Its name comes from the Shiʿī Mahdī ʿUbaid Allāh, who in 300 (912) founded and fortified it, after having consulted the oracles and foreseeing the dangers which would threaten the Fatimid dynasty A rampart of rubble of which a few towers are in existence ran along the coast towards the south, the wall protected the port, an ancient Phoenician harbour excavated out of the rock, which the ships entered under a large gate flanked by two strong defensive works A little farther on, towards the point was the naval arsenal From the side of the isthmus, the rampart, which is very strong and strengthened by round and square towers, had a wall in front of it and was pierced by a gate which still exists Flanked by two salients with inclined sides entrance is gained under an arch 45 yards in length (*al-skifa, al kahlā*) The highest point of the peninsula is occupied by an old Turkish *kaṣba*, built on the probable site of the palace of Mahdi In front towards the west, probably lay the palace of his son al Kāʾim The town owes to the Fātimids also a great mosque built near the sea, of which considerable remains still exist, notably an ornamental porch A customs-house was at hand (*dār al muhāsabāt*), beyond the peninsula the suburb of Zawīla (ancient Zella?) of which the site is still known and where remains have been found, amongst other things glass ware

The Mahdī ʿUbaid Allāh after leaving Rakkāda near al Kairawān, came to live at al Mahdīya in the year 308 (921) Having become the capital of the empire, the town prospered It was, according to ʿIdhārī, the richest city in Barbary The son of ʿUbaid Allāh, al Kāʾim, was besieged there for over five months (January-September 945) by Abū Yazīd, "the man with the ass", a Khāridjī agitator, who starting from Tawzer made himself master of the whole of Ifrīkiya The failure of the blockade of al-Mahdīya was the first stage in the downfall of the heretic More than a century after, al Mahdīya, which had been the refuge of the Fātimids when in danger, served also as an asylum to their unconquered vassals, the Zirid Amirs, the victims of the Hilālī invasion In the year 449 (1057) the Zirid al-Muʿizz abandoned a-Kairawān for al-Mahdīya From that place he and his successors set themselves to recover the lands they had formerly ruled From there they also turned their activities to the sea Al-Mahdīya, where the corsairs were now equipped, became and was to remain

down to modern times the most active centre of Tunisian piracy The expeditions of the Muslim corsairs provoked attacks from the Normans of Sicily, Pisan and Genoan raids on the town along the coast In 1087, al-Mahdīya fell into the hands of the combined Christian forces The Normans again took it in 1148 Then they were blockaded in it by land and by sea during the conquest of Ifrīḳiya by the Almohad ʿAbd al-Muʾmin Having become once more a Muslim town, it was retaken and pillaged in 1180 Then it concluded with William II, the King of Sicily, a treaty of peace The Normans were able to trade with it During the ruinous campaigns of the B Ghānīya [q v], Almoravid Amīrs, al-Mahdīya was for a short time in the hands of an adventurer ʿAbd al-Karīm al-Ragrāgī who took the title of Caliph These troubles led to the installation in Ifrīkiya of a governor of the Almohad family of the B Hafs Al-Mahdīya was henceforth one of the principal towns of the kingdom of the Hafsids Its government was generally confided to one of the sons of the sovereign of Tunis

The persistent activity however of the Corsairs provoked in the year 1390 a new Genoan expedition supported by Charles VI, King of France, who sent his galleys and his knights against "cette mâlement forte ville d'Auffrique" (Froissart) Al-Mahdīya resisted but was forced to pay a tribute to the Christians In 1539, after the conquest of Tunis by Charles V, the town received a Spanish garrison In the following year the corsair Dragut took it by surprise Taken prisoner by the fleet of Andrea Doria, then released, Dragut came back and installed himself in al Mahdīya On the 8th September 1550, Doria seized the town from Dragut "prince of Africa", after a memorable seige Charles V offered the charge of it to the Knights of Malta but they refused it, so he ordered it to be dismantled Al-Mahdīya, after falling once more into the hands of the Muslims, arose from its ruins and remained under Turkish rule until the 1xth century, the nest of corsairs, the terror of Christian merchants that it had been for nearly 300 years It is now a quiet little town of about 10,000 inhabitants, who live by fishing and by the product of their oil works

(G. MARÇAIS)

AL-**MAHDĪYA**, formerly called AL-MAʿMŪRA, a town of Morocco, on the Atlantic coast at the mouth of the Wādī Sabū (Sebou), built on a rocky promontory which dominates the valley of the river Situated on the southern extremity of the plain of Gharb and 20 miles to the North East of Salé (Salā) it enjoys a geographical position of the first importance A port is shortly to be created here for ships of heavy tonnage, which cannot sail up the Wādī Sabū as far as the river port of Kenitra (Ar al-Kunaitira, "the little bridge") situated 6 miles as the crow flies from the mouth of the river

It is generally agreed that the site of al-Mahdīya corresponds to that of one of the earliest Phoenician settlements founded by Hanno in the fifth century B C on the Atlantic coast of Morocco — the factory of Thymiateria Nothing is known of the later history of this foundation and we have to wait till the fourth century A H (tenth A D) to get the first mention in Arab writers of the town at the mouth of the Wādī Sabū under the names al-Maʿmūra ("the populated, the flourishing"), Halk ("the mouth") al-Maʿmūra or Halḳ Sabū According to the chronicler Abu 'l-Kāsim al-Zayyanī [q v] the modern town was founded by the short lived dynasty of the Banū Ifren [q v] which settled on the Atlantic side of Morocco at the end of the tenth century of our era In the second half of the XIIth, the Almohad Sulṭān ʿAbd al-Muʾmin built there one of his dockyards for his navy (*dār al-ṣināʿa*) Later, down to the XVIth century, al-Maʿmūra's history is obscure — it was a small trading centre to which European ships came for the products of the country

Al-Maʿmūra, when the Christians of the Iberian peninsula made their offensive against Morocco, was one of their first objectives, on June 24, 1515 a large Portuguese fleet anchored at the mouth of the Wādī Sabū and a landing force of 8,000 men occupied the town without a blow being struck The Portuguese made themselves a strong base in al-Maʿmūra, built fortifications there, remains of which still exist, but they were only able to hold it for a short time The Muslims drove the Christians out of al-Maʿmūra at the end of the same year, inflicting very heavy losses upon them

Al-Maʿmūra re-enters history when at the end of the XVIth century it became a formidable nest of European pirates, who under the leadership of an English captain, Mainwaring, practised piracy along the whole Atlantic coast and became a terior to the seafaring centres of Europe This state of things was put an end to when Spain, which in 1610 had occupied the port of Larache (al-ʿArāʾish, q v), a little farther north, made a landing at al-Maʿmūra in August 1614, after negotiations with the Moroccan ruler, the Saʿdian Mawlāy Zaidān The town was taken and the Spanish fleet withdrew leaving a strong garrison of 1,500 men The captured town was given the name of San Miguel de Ultramar

The Spanish occupation of al Maʿmūra was to last 67 years, during which it was several times fiercely attacked by the Muslims, particularly the "volunteers of the faith" (*Mudjāhidūn*), who mobilised to drive the Christians from the various points on the coast where they had established themselves under the active leadership of the chief al-ʿAyyāshī of Salé The principal attacks on San Miguel de Ultramar were delivered in 1628, 1630

and 1647 In 1681 (1092 A H) the ʿAlawid Sulṭān Mawlāy Ismāʿīl [q v] laid siege to the town and finally took it by storm He then gave it the name of al-Mahdiya, the name of al-Maʿmūra only survived as that of the great forest of cork-oaks which lies between Salé and the lower valley of the Wādī Sabū — It may be noted that for a few years at an earlier date the name al-Mahdīya had been borne in Morocco by the little military station founded by the Almohad Caliph ʿAbd al-Muʾmin on the site of the future Ribāt al Fath (Rabat), on the south bank at the mouth of the Wādī Salā (the modern Wād Bū-regreg) [cf the article RABAT] Al-Mahdīya was occupied by French troops in 1911

Considerable remains survive at al-Mahdīya, dating from the brief Portuguese occupation, the Spanish occupation or from the date when it was definitely retaken by the Muslims Around the citadel (*kaṣba*) runs a continuous rampart with a ditch These defences are entered by two gates, — one very massive, with two Arabic inscriptions, dates from the XVIIth century The other, a simple postern, dating from the Spanish occupation, opens on the steep slope which runs down to the rives Inside beside a few hovels and a little mosque are the ruins of the Muslim governor's palace of the XVIIIth century Between the foot of the citadel and the bank of the Wādī Sabū for a length of 200 yards and a breadth of about 40 may still be seen buildings consisting of a series of square chambers completely isolated from one another and each protected by a double wall These were probably granaries, which need not be earlier than the end of the XVIIth century, and are not, as has been suggested, of the Phoenician period

MAḤKAMA. [See MEHKEME]

MAḤMAL (or more correctly MAHMIL, A), the name of the splendidly decorated empty litters, which since the XIIIth century have been sent by Muhammadan princes on the Hadjdj to Mecca, to display their independence and claims to a place of honour at the ceremony The camel which bears the mahmal is not ridden but led by the bridle It goes at the head of the caravan and is regarded as its sanctifying element What extravagance the rivalry of princes led to is shown by the mention of a maḥmal adorned with much gold, pearls and jewels, which was sent in 721 (1321) from the ʿIrāḳ to Mecca (*Die Chroniken der Stadt Mekka*, ed F Wustenfeld, ii, 1859, p 278) The maḥmal which is most esteemed, that which accompanied the pilgrim caravan from Cairo, is described by Lane as a square wooden framework, with a pyramid at top and covered with black brocade richly worked with inscriptions and ornamental embroidery in gold, in some parts upon a ground of green or red silk, it is bordered with a fringe of silk and silver balls are fixed to the corners and to the top of the pyramid On the front of the pyramidal roof is a view of the Kaʿba embroidered in gold In the brief description given by Burckhardt of the Egyptian mahmal it is added that it is decorated with ostrich feathers According to him there was only a prayer-book in the empty interior, which on its return was exhibited in Cairo and kissed by the people, according to Lane on the other hand there are two silver receptacles in the mahmal which contain two Kurʾāns, one in a scroll, the other in book form The mahmal is carried by a fine tall camel, which after the pilgrimage is spared any further work On their arrival in Mecca the mahmals are hailed with joy and led through the crowded streets in a solemn procession after which they go with the pilgrims to ʿArafāt where they occupy a position reserved for them It used to be generally supposed that the covering of the Egyptian mahmal was used to cover the tomb of Muhammad or the Kaʿba but this is wrong, the *kiswa* is of course taken to Mecca with the great pilgrim caravan but it has nothing to do with the mahmal

According to Makrīzī the custom of sending a mahmal to Mecca was first introduced in 670 A H by the Mamlūk Sultān Baibars but others attribute it to the Sharīf Abū Numaiy, it is also said that it was a princess going on the pilgrimage in a splendid litter that gave Baibars the idea of sending one with the pilgrim caravan This is however only a story, and it is a much more important question whether the custom did not arise at an earlier date and whether it did not originally have a direct religious significance It is natural to recall the portable sanctuaries of the Arabs and the mahmal particularly reminds one of the description which Musil (*Die Kultur*, 1910, p 8 *sq*) gives of the "Abū Zhur al Markab" of the Rwāla tribe a framework of thin pieces of wood adorned with ostrich feathers which is fastened on to the saddle of a pack-camel and is the visible centre of the tribe This would at any rate lead us to the practical significance of the later mahmal, a visible sign of independence and claim to suzerainty of the various Muslim states It is just this significance which gives the mahmals a certain historical interest as political changes and rivalries are reflected in them in course of time There have occasionally been rulers who by sending mahmals gave expression to their endeavour to obtain recognition as sovereigns and protectors of the sharīfs, only to be soon driven from power again by others That the Egyptian mahmal came to obtain a place of honour, that from Syria being the only other at all comparable to it, was a result of the political influence of the Mamlūk Sultāns It is noteworthy that Ottoman rule made no alteration in this respect and an attempt to send a mahmal from Constantinople met with no success In 1807 an interruption was

caused by the conquest of Mecca by the Wahhābīs who forbade this empty pomp so hateful to them, but this ceased when they were driven out and Muhammad ʿAlī's rule again gave the Egyptian mahmal pride of place

After the World War the sending of a mahmal from Syria stopped Difficulties arose between the Egyptian government and King Husain (1915—1924) regarding the powers of the heads of a field-hospital which was to accompany the mahmal as well as regarding the ceremony of its reception, which twice resulted in the mahmal not being sent

When Ibn Saʿūd had become king of the Ḥiḏjāz, long negotiations took place over the mahmal The Wahhābī ruler insisted on the music which usually accompanied the mahmal being omitted and all sort of superstitious customs being dropped, he also protested against the armed escort as a denial of his sovereignty The attempt made in 1926 to harmonize the demands of the two sides came to nothing a fight broke out between the Ikhwān of Ibn Saʿūd and the Egyptian soldiers which was only stopped by the personal intervention of Ibn Saʿūd Since then the Egyptian government has not sent a mahmal, but neither does it any longer send a new *kiswa* for the Kaʿba to the Ḥaḏjḏj

MAHMŪD I, twenty fourth Ottoman Sultān, reigned 1143—1168 (1730—1754) He was born on the 3rd Muharram 1108 (Aug 2, 1696), the son of Mustafa II — the *Siḏjill i ʿOṯmānī* gives the date 7th Ramadān 1107 (April 10, 1696) — and had spent his life in seclusion up to his accession He came to the throne through the mutiny of the Janissaries under Patrona Khalil, a mutiny which cost the grand vizier Ibrāhim Pasha, the Kapudan Pasha and the Kiaya Beg their lives, and forced Sultān Ahmad III to abdicate in favour of Mahmūd, these events took place on the 17th Rabiʿ I, 1143 (Oct 1, 1730) The mutiny, which really had the sympathy of most of the *ʿulamā'* and seems to have been in the nature of a social revolution (Jorga), was only suppressed after some time through the efforts of the Kīzlar Agha Beshīr, before its suppression a certain number of appointments to important offices dictated by the rebels had to be conceded and the many palaces built in the luxurious reign of Ahmad III were allowed to be pillaged After the Janissaries had been pacified by considerable largesse on the accession of the Sultān, Beshīr Agha succeeded in plotting the death of Patrona Khalīl, who was assassinated on Nov 15, 1730 The Kīzlar-agha continued to exercise a preponderating influence on affairs of state, the Sultān, who was by nature more interested in literature and in the erection of more or less useful buildings, did nothing to throw off this influence, which on the whole was for the good of the state One of the consequences of this system was the very frequent changes of grand viziers — there were no fewer then 16 in Mahmūd's reign — but the state possessed a number of able men who worked for the good of the empire in the offices of grand vizier, reʾis efendi and kiaya beg The state finances were kept in good order, as much by the confiscation of any great fortunes amassed by high officials as by a financial system which made no distinction between the public treasury and the personal revenues of the Sultān The situation abroad was also favourable, especially after the peace of Belgrade in 1739, which secured to Turkey a fairly long period of peace in Europe

At the beginning of the reign, Turkey was at war with Persia The campaign of 1731 was favourable to the Turks, who reconquered Kirmānshāh and took Hamadan (battle of Konḏjān, Sept 15), Urmiya and Tabrīz, however, by a peace signed on Jan 10, 1732 by the serʿasker and grand vizier Topal ʿOthmān Pasha, Turkey gave up Tabriz and Hamadān This peace neither pleased the powers in Constantinople, who replaced the grand vizier by Hekīm Zāde ʿAlī Pasha [q v] nor Tahmāsp Kuli Khān, who on his return from Herāt had dethroned Shāh Tahmāsp and was making new preparations for war On Oct 6, 1732, the Porte issued a formal declaration of war and in December a Persian army invaded Mesopotamia, took Kirkūk and laid siege to Baghdād, the great battles of this campaign were those of Duldjailik on the Tigris, where the Persians were defeated (July 19, 1733), and that of Kirkūk, where a week later the Turks suffered a defeat which involved the death of the ser-ʿasker Topal ʿOthmān Pasha In the same year, the Persian war produced a conflict with Russia, provoked by the Khān of the Crimea's march through the Caucasus to reinforce the Turkish troops fighting against Persia Russia declared she could not allow the passage of the Tatars through the country of the Kumuk and the Kaitak, which she regarded as under her authority, the Khān's force was therefore held up and several battles were fought in Daghestān between Turks and Russians The negotiations opened at Constantinople showed more and more that a war with Russia would be inevitable and they were finally broken off by the siege and capture of Azof by the Russians in March 1736 Meanwhile the war with Persia, which had ceased in 1734 on an armistice being concluded by the Pasha of Baghdād, had been resumed in 1735 when Ahmad Kopiulu was appointed serʿasker The campaign was unfortunate for the Turks They lost a number of towns in the Caucasus, however the development of affairs in Persia where Tahmāsp Kuli, afterwards Nādir Shāh, proclaimed himself king on Dec 1, 1735 in his camp on the Caucasian front, was favourable to the peace negotiations which were begun at this time These negotiations ended in a peace signed at Constantinople on Oct 17, 1736, the frontiers of the two countries remained as they had been fixed in the time of Murād IV In the same year a Russian army invaded and laid waste the Crimea, although negotiations still went on, first at Constantinople and then in the country Austria, posing as mediator, took an active part in these negotiations, which were finally broken off at the Congress of Niemirow in Aug 1637, when it became evident that Austria was really Russia's ally, so that Turkey had to

deal with two adversaries The war began badly for the Turks who lost Nīsh to the Austrians and Oczakow to the Russians Nīsh however was won back in Oct 1737 During the next two years fortune was rather on the side of the Turkish armies under the grand vizier Yegen Muhammad Pasha The conclusion of the war was marked by the appearance of the forces of the grand vizier Hādjdjī Muḥammad before Belgrade in July 1739 It was before this town that the famous peace of Belgrade (Sept 18) was negotiated with the assistance and mediation of the French Ambassador, the Marquis de Villeneuve, by which Turkey again obtained possession of the town Russia was included in the same treaty and had to promise to demolish the fortifications of Azof

This ending of the war in a way very advantageous to the Porte was followed by a long period of peace with the states of Europe, which, as a result of the Seven Years' War, had no time to devote to plans for the partition of Turkey From 1743 to 1746 there was a new Persian war It began through the demands of Nādir Shāh to have the Persian Shi'a recognised as a fifth *Madhhab*, that of the Dja'farīya, the Porte at first gave an evasive answer but after they had become convinced that Nādir Shāh intended to make himself lord of Mesopotamia, the Shaikh al-Islām gave a *fatwā* against the recognition of the Dja'farīya In 1743 Nādir Shāh took Kirkūk and laid siege to al Mawsil, only to be forced to raise it after a while In the following year the scene of hostilities shifted to the Caucasus The Porte then attempted to support a Persian pretender of the Safawid family, whom it sent off with great pomp to Kars, in 1746 the Turkish ser-'asker, the former grand vizier Yegen Muhammad, fell in the battle of Murād Tepe in Kurdistān During all this time, peace negotiations were going on in Constantinople and conducted through the Turkish commander in chief During these negotiations Nādir Shāh had dropped his demand for the recognition of the Dja'farīya and finally agreement was reached on the basis of the frontiers of Murad IV (Sept 4, 1746) In July of the same year the all powerful Beshīr Agha died at the age of 96, in spite of the efforts of the grand vizier al-Sayyid Ḥasan Pasha, his successor Beshīr Agha the younger succeeded in procuring the same influence in affairs This new regime only lasted till 1752 when there was reason to fear a new outbreak of discontent among the Janissaries and the 'ulamā' also, the Sultān seems therefore to have decided to sacrifice the Kīzlar Agha by having him treacherously assassinated along with some other favourites (July 10, 1752) Two years later, on Friday, Dec 13, 1754, Mahmūd himself died suddenly on his way from the mosque, he was buried in the Yeñi Djāmi'

The Sultān left a pleasing memory behind him, it is even said of him that he took a personal part in the affairs of state (*Sidjill-i 'Othmānī*, *l c*) although the sources give little evidence of this He did not continue the splendours of the court of his predecessor, respecting public feeling which had led to the latter's fall Mahmūd is especially celebrated for the large number of buildings he had erected, in Constantinople he built no less than four *ceshme* and he began the building of the Nūr-i 'Othmānī mosque This activity was equally displayed in the provinces This Sultān also acquired considerable merit by founding four libraries in the capital, those of Aya Sofia, the Wālide Djāmi'-i mosque, the Fātih mosque and the Ghalata Serāyi The reign of Mahmūd is further marked by the display of a very skilful diplomatic activity by the Porte, conducted by several very able re'īs efendis, like Rāghib Pasha [q v] They had profited by the lessons of European diplomats and also by the advice of the famous French renegade Bonneval, who lived in Constantinople from 1729 till his death in 1747 and introduced several useful reforms into the army But in spite of appearances, the Ottoman empire was far from being a strong power as the historian Djewdet Pasha (*Ta'rīkh i Djewdet*, 1302 ed, i 63) has very justly remarked, therefore, in the period of anarchy that followed in Persia the death of Nādir Shāh, the Porte consistently declined to interfere in Persian affairs From time to time minor revolts contributed to weaken the strength of the empire, besides the always dangerous Janissaries, there were several risings in Anatolia (e g Sarī Beg Oghlu in Aidin in 1739) It was also in the reign of Mahmūd I that the Wahhābīs first began to give trouble to the government In Egypt the Mamlūk begs succeeded in ruling the country in practical independence, in spite of the energetic steps taken by Rāghib Pasha, when the latter was governor of this province As to foreign relations, it is interesting to note that it was in this reign that France, which became very influential after the peace of Belgrade, succeeded in 1740 in obtaining the celebrated capitulation which became in time the most important document on the extra-territorial rights of foreigners in Turkey

Bibliography The principal Turkish sources are the imperial historiographers *Ta'rikh Sāmi we Shākir we-Subhī*, Constantinople 1198 (years 1143—1156), *Ta'rīkh-i 'Izzī*, Constantinople 1199 (year 1157—1165) and the beginning of the *Ta'rikh-i Wāsif*, Constantinople 1219 (beginning in 1166), then there are the reports of certain embassies like the *Tahkik we-Tewfīk* of Rāghib Pasha on the peace negotiations with Nādir Shāh in 1736, a manuscript which was used by von Hammer There are also several works still in manuscript on the history of the reign of Mahmūd I, noted by Babinger, *G O W*, Leipzig 1927, p 332 The same author (*op cit*, p 289) also quotes a series of monographs in Turkish which deal with the wars of Nādir Shāh For these wars, a complementary source is the biography of Nādir Shāh by *Mahdī Khān* and Hanway, *A Journal of Travels from London through Russia into Persia*, 1753 — General sketches of the reign of Mahmūd I are given in von Hammer, *G O R* ², Pesth 1836, iv 266—482, Zinkeisen, *Geschichte des Osmanischen Reiches in Europa*, v, Gorha 1857, p 629–847, Jorga, *Geschichte des Osmanischen Reiches*, Gotha 1911, iv 409—462 (J H KRAMERS)

MAHMŪD II, the twenty-ninth sultan of the Ottoman Empire, reigned from 1808 until 1839 He was the son of 'Abd al Hamīd I and was born on the 20th July 1784 (13th Ramadān 1199, cf *Sidjill-i 'Othmānī*, i 73) He succeeded to Mustafā IV on July 28, 1808, directly after the tragic events, which had led to the assassination of Salīm III [q v] Mahmūd himself had a narrow escape from the fate of Salīm Until his coming to the throne he had lived in seclusion and during the preceding year his intercourse with the

dethroned sultan had undoubtedly exercised a great influence on Mahmūd's ideas, making him appear afterwards as Salīm's avenger

The grand-vizierate of Mustafā Bairaḳdār Pasha, the consequence of the latter's victory, lasted only until November 1808, a revolt put an end to his reformatory tyranny and to his life The next years were taken up by the war against the Russians, who had occupied the Danubian principalities in December 1806 Endeavouring to continue their conquests on the southern side of the Danube, the Russians met with more resistance from the Turks than had been expected, it was, however, due principally to the increasing danger of a Franco-Russian war, that the Turks obtained the peace of Bucarest, signed on May 28, 1812, and negotiated, on the part of the Turks, by Ghālib Efendi By this peace, Turkey had only to cede Bessarabia to Russia In the meantime the new sultan had inaugurated a policy of internal consolidation of the empire, a policy which lasted until the Greek revolt in 1820 began to absorb all the strength of the state He put an end to the almost independent position of the *aʿyān* in Rumelia and to that of the numerous derebeys in Anatolia, especially to the families of the Kara ʿOthmān Oghlu in Sarukhān and Aidin and of the Capan Oghlu in the region of Kaisarīye [cf DERE BY] The sultan's authority was equally reestablished in southern Mesopotamia after the death of Sulaiman Pasha of Baghdād in 1810 The aid of Muhammad ʿAlī Pasha of Egypt had to be invoked to repress the Wahhābī power in Arabia, Mekka and Medīna were reconquered in 1813 by Tusun Pasha [cf IBN SAʿŪD] In Serbia it was only after years of trouble that an arrangement could be attained, which left Milosch as supreme *knez* of this principality The submission of Bosnia only took place after 1821 On the contrary ʿAlī Pasha of Yanina succeeded in keeping his strong position during this period, not till 1820 were the Turkish troops able to lay siege to Yanina In Constantinople the sultan took severe measures to maintain order, especially against the dangerous element of the Janissaries

During this time the diplomatic difficulties with Russia, relating to the interpretation and the execution of the peace treaty, continued, especially with regard to the regime in Moldavia and Wallachia These difficulties were to become a real danger after the Greek insurrection had broken out

This insurrection, being in a way a consequence of the autocratic regime of ʿAlī of Yanina, and secretly favoured by Russia, began in 1820 with the appearance of Alexander Ipsilanti in Rumania and a feeble revolt in Morea, instigated by Demetrius Ipsilanti The first reactions on the Turkish side were numerous executions at Constantinople, including that of the Greek patriarch Then Turkish troops entered Rumania, where Ipsilanti was easily beaten As this military action provoked sharp protests from Russia, whose ambassador Strogonow left Constantinople, the Turkish troops were soon withdrawn for the greater part But in 1822 the insurrection in Morea spread quickly, Tripolitza and Corinth fell into the hands of the insurgents In the same year ʿAlī of Yanina was murdered In May 1823 the Acropolis of Athens was surrendered by the Turks, the latter, however, remained on the whole stronger than the Greeks In order to avoid all difficulties with Russia, the Porte had evacuated in 1823 the whole of Rumania, while declaring that, henceforward, she would suffer no more foreign intervention in her internal affairs But Russia continually came forward with new claims (e g the division of Greece into three principalities, after the model of the principalities on the Danube), at the same time the other European powers no longer remained indifferent towards the Greek affairs, partly because public opinion began to be influenced by the philhellenic movement, and partly because they feared that Russia might gain too much profit from the weakness of the Ottoman Empire In these years Turkey had even to sustain a war with Persia occasioned by Persian incursions into Kurdistān, this war was ended by 1823 During the years 1824 and 1825, while Turks and Greeks were waging a guerilla war by land and sea, and while amongst the Greeks there reigned complete anarchy, nothing decisive happened The situation was only changed by the death of Alexander I of Russia (December 1, 1825) — which brought to the throne Nicolas I, much more inclined to make short work of the Turks — and by the combined action in Morea of Egyptian and Turkish troops under the command of Ibrāhīm Pasha, son of Muhammad ʿAlī This action was crowned by complete success, for Morea was entirely subdued, and on April 23, 1826 the fortress of Missolonghi capitulated after a siege of more than six months

The Turkish successes encouraged the sultan to realise his long considered project to form a new army, trained and equipped after the European fashion These new troops were recruited from the Janissaries Their inauguration took place on June 4, 1826 and occasioned, ten days afterwards, the revolt of the Janissaries which ended in the complete and bloody extermination of these once famous troops (June 16) The extermination of the Janissaries is an act that will always be connected with the name of Mahmūd II, it made a formidable impression in the whole country and the reform party — who spoke of it as the *waḳʿa-i ḫairīye* — considered it as the beginning of a new era of prosperity The first consequences, however, were disastrous, the strength of the empire was weakened to a degree, which made itself felt more and more in the development of the relations with Russia Hoping to get rid of the everlasting demands of Russia, the Porte had given still more concessions by the convention of Akkerman (September 25, 1826), but soon afterwards followed an agreement between Russia, Great Britain, France and Prussia with regard to the Greek question (July 7, 1827), which prevented the Turks from the suppression of the insurrection Though directed, since the beginning of 1827, by the fanatical Pertew Efendi as Reʾīs Efendi, Turkish diplomacy was powerless against this new intervention One of the consequences of the agreement of the powers was the destruction of the Turco-Egyptian fleet in the Gulf of Navarino, on October 10, 1827, without previous declaration of war, by the English, French and Russian naval forces Subsequently the diplomatic relations with these countries were broken off, but, when war actually broke out, it was only with Russia

The Russian war, inaugurated by a declaration of war by Russia (May 7, 1828), was particularly disastrous for Turkey. The Russians immediately

occupied Rumania and crossed the Danube, while on the Oriental front they took Kars and Akhalčik in the Caucasus In 1829 the debacle was completed by the occupation of Adrianople by General Diebitch, on August 19 Thus, by the peace treaty of Adrianople of September 14, 1829, the Porte was obliged to make all the concessions required of her Russia gave back nearly all her conquests, but obtained the payment of a heavy war indemnity As to Greece, Turkey had to accept the decision of the great powers, which meant absolute independence In the following years the new frontier and the future relations between Turkey and the new state were regulated by special conventions

The principal political facts of the nine last years of Mahmūd's reign were the conflict with Muḥammad ʿAlī of Egypt and the Russian intervention, which was its consequence and put Turkey in a state of dependence on Russia The activity of Muhammad ʿAlī [q v] began in 1831 with the invasion by Ibrāhīm Pasha of the territory of the pasha of ʿAkka, this town was besieged and fell in May 1832 Within a short time Damascus and Aleppo also submitted to Ibrāhīm The military measures of the sultan were unable to stop the advance of the Egyptian troops, who marched from Syria into Asia Minor, the Turkish General Rashīd Pasha was beaten by them in the battle of Konya (December 21, 1832) and was himself made a prisoner The Porte then was obliged to accept the aid offered by Russia and the mediation of France, the result of which was an agreement, concluded on April 8, 1833 at Kutāhiya, with Ibrāhīm Pasha, Muhammad ʿAlī had to be recognised as pasha of Syria while the province of Adana was given to Ibrāhīm In the meantime Russian troops had been landed in the Bosporus These were only withdrawn after the conclusion of the notorious treaty of Hunkiār Iskelesi, signed on July 4, 1833 between Turkey and Russia The treaty was a defensive alliance and contained a secret clause by which Turkey undertook to prevent any eventual enemies of Russia from entering into the Black Sea Thus Turkey became still more politically linked to Russia, without the other powers being able to hinder this

On the other hand Mahmūd continued with tenacity the consolidation of his authority in the interior The principal agent of this policy was the former grand-vizier Rashīd Pasha, appointed governor of Sīwās after his return from Egyptian captivity He succeeded in establishing order in eastern Anatolia and in Armenia, especially by subduing the Kurdish tribes After his death, in 1836, he was replaced as ser-ʿasker by Hāfiz Pasha The latter, unlike Rashīd, was in favour of the introduction of modern tactics into the Turkish army, in his successful expeditions in the north of Mesopotamia he was accompanied by the Prussian lieutenant von Moltke, one of the army instructors who had been sent by the King of Prussia These military measures of Maḥmūd had also in view the strengthening of the frontier on the Syrian side, in order to be prepared for a new conflict with Muḥammad ʿAlī This event happened only after 1838, when Khusraw Pasha [q v], the zealous reformer and ancient enemy of the Egypt, came again into power as president of the new Turkish cabinet. The next year Hāfiz Pasha, appointed again as ser-ʿasker in Kurdistān, crossed the Euphrates and occupied ʿAintāb, but he was completely beaten by the Egyptians under Ibrāhīm Pasha, in the battle of Nizib, on June 24, 1839 This battle left Turkey again in a desperate condition, just a week before the death of Mahmūd himself

During the same period the sultan had to suppress dangerous and repeated revolts in Albania and Bosnia, the situation in Serbia had remained quiet after a *khatt-i sharif* of 1830 In 1837, the situation in the interior had become sufficiently stabilised for Mahmūd to undertake a journey in his European provinces, which journey was an unheard of breach with the traditional customs of the Ottoman rulers It was to be one of his last public acts Mahmūd died on July 1, 1839 at Constantinople in his palace of Čanlīdja, above Scutari

It is quite clear, from the many descriptions we possess of this sultan, that he was a strong personality, who made his own ideas prevail in the government of his empire In his immediate entourage only few first rate men were to be found But the task which Mahmūd had set himself, of reforming the empire after the European model was nearly super human in the extremely unfavourable political circumstances that prevailed during his reign To which must be added the enormous difficulties presented by the traditional institutions and views existing in all ranks of the Turkish people of those days (cf e g the severe judgement by von Moltke, p 434 *sqq*) Mahmūd has often been compared, as a reformer, with Peter the Great, though the conditions were quite different On the other hand he has been blamed for having commenced his reforms where he should have finished ("par la queue"), for demolishing things existing without being capable of constructive activity, especially in Turkey of to-day Mahmūd is judged severely (cf Halide Edib, *Memoirs*, London 1926, p 237 *sqq*) It is very probable, however, that without the drastic measures of this sultan, the following period of the *Tanzīmāt* [q v] would have been an impossibility (cf Rosen, i 300 *sqq*) The most important reform was that of the army, it brought about the extermination of the Janissaries, but the formation of an army after the European fashion did not succeed till much later, the most zealous reformers, such as Khusraw Pasha, had only very vague ideas about what it really meant The most useful work was done by the Prussian military instructors By sending young officers to military schools in Western Europe, Mahmūd prepared, however, a more efficient reorganization In the government system there gradually developed a cabinet of ministers of state after the Western fashion, at a certain period in 1837, the ancient title of *ṣadr-i aʿẓam* was even temporarily abolished, and the ministers received the new title of *wekil* Moreover, by a *firmān* of October 1826, Mahmūd had opened the way to the development of a better and more dignified position of the state functionaries, this *firmān* abolished the sultan's right of confiscating the possessions of the functionaries after their death. It was, however, a long time before a new corps of real and loyal functionaries came into existence The men whose services Mahmūd was obliged to use were too often highly corruptible, a circumstance ot which the other powers,

especially Russia, took advantage in a large degree

Mahmūd II lies buried in the *turbe* that bears his name, it was constructed in Stambul on the Dīwān Yolu by his son and successor ʿAbd al-Madjīd

Bibliography The Turkish historical works deserve more attention than has been paid so far to them The more accessible ones are Djawdat Pasha's *Taʾrīkh*, Constantinople 1303, vol ix—xii, comprising the period from 1223 to 1241, and its continuation, the *Taʾrīkh* of Ahmad Lutfī, Constantinople 1290—1306, vol i—vi, comprising the period from 1241 to 1255 Other printed sources are Abū Bakr, *Wakʿa i dyedide*, Constantinople 1332, *Taʾrīkh-i ʿAtā*, Constantinople n d , Mahmad Asʿad, *Üss i Zafer*, Constantinople 1243, a monograph on the extermination of the Janissaries, Mahmad Thureiyā, *Nukhbat al-Wakāʾiʿ*, Constantinople (cf also Babinger, *G O W*, p 387) European general treatments of this period Zinkeisen, *Geschichte des Osmanischen Reiches in Europa*, vii, Gotha 1863, p 561 *sqq* (until 1812), Rosen, *Geschichte der Turkei*, Leipzig 1866, vol 8 (after 1826), Jorga, *Geschichte des Osmanischen Reiches*, v, Gotha 1913, p 182—387 A valuable contemporary source is H von Moltke, *Briefe über Zustande und Begebenheiten in der Turkei*, Berlin 1883 (J H Kramers)

MAHMŪD I, Nāsir al Dīn, was Sultān of Bengal from 1446 to 1460 When the ferocious tyranny of Shams al Dīn Ahmad Shāh, grandson of the usurper, Rādjā Kāns, or Ganesh, could no longer be borne, he was put to death, and Nāsir Khān, one of his amirs, seized the throne, but after a reign of one week was slain by his amīrs, who would not submit to one of their own number Their choice fell on Mahmūd, who was a descendant of Ilyās, the founder of the old royal house, and he was raised to the throne He reigned with justice and clemency for twenty-six years, and restored and beautified the city of Gawr On his death in 1460 he was succeeded by his son Bārbak Shāh

MAHMŪD II, Nāsir al Dīn was the third of the Habashī, or African Sultāns of Bengal He succeeded his father in 1494, but was a mere puppet in the hands of one minister after another His first minister, an African entitled Habash Khān, was slain by a rival, another African known as Malik Badr the Madman, who afterwards slew Mahmūd, he having occupied the throne for no more than six months, and usurped the throne

MAḤMŪD III, Ghiyāth al-Dīn, was one of the eighteen sons of ʿAlāʾ al-Dīn Husain Shāh of Bengal He remained loyal to his eldest brother, Nāsir al-Dīn Nusrat Shāh, throughout his reign, but after his death slew his son, ʿAlāʾ al-Dīn Fīrūz Shāh, in 1533, and ascended the throne During a troubled reign of five years he never ruled the whole of Bengal Shīr Khān Sūr, who ultimately ascended the throne of Dihlī, was already powerful in Bihār, and allied himself to Mahmūd's rebellious brother-in-law, Makhdūm-i ʿĀlam, who was governor of Hādjdjīpūr Shīr Khān defeated an army sent against him by Mahmūd, but Makhdūm was less fortunate, and was slain in another battle Shīr Khān then forced the Teliyāgarhī defile, invaded Bengal, and besieged Mahmūd in Gawr in 1537 Mahmūd appealed to Humāyūn Shāh of Dihlī for aid, and Shīr Khān was recalled to Bihār by a rebellion in that province, but left his son Djalāl Khān to continue the siege of Gawr In April, 1538, Mahmūd was forced to evacuate Gawr, and fled, leaving his capital and his sons in the hands of Djalāl Khān Shīr Khān returning from Bihār, then pursued Mahmūd, overtook him, forced him to a battle, and defeated him Mahmūd was wounded and fled, and nothing more is known of him

MAHMŪD, Shihāb al Dīn, the fourteenth king of the Bahmanī dynasty of the Dakan, was raised to the throne at the age of twelve on the death of his father, Muhammad III, on March 22, 1482, and remained under tutelage throughout his reign of thirty-six years The ascendency of his first minister, Malik Hasan Bahrī, Nizām al Mulk, who had been responsible for the death of Mahmūd Gāwān [q v] was distasteful to the Foreign *amirs* of the kingdom, at the head of whom was Yūsuf ʿĀdil Khān of Bīdjāpūr, and the assassination of this minister, ordered by the young king, embittered the relations between him and the Dakanī party, which attempted to dethrone him in 1487 The plot was discovered and frustrated, and was followed by a massacre of the Dakanīs, ordered by the king But the youth could not stand alone, and was completely dominated by his next minister, Kāsim Barīd al-Mamālik, a Turk In 1490 Ahmad Nizām al-Mulk, governor of Djunnār and son of Malik Hasan Bahrī, proposed to Yūsuf ʿĀdil Khān and Fath Allāh ʿImād al Mulk of Berār that they should proclaim their independence of the king of the Dakan, and both accepted the proposal In the numerous wars of the reign Mahmūd was no more than a figurehead, being carried into the field by his minister, who issued orders without any pretence of consulting his nominal master's wishes Mahmūd made more than one attempt to free himself from the control of Kāsim Barīd al Mamālik, and of his son Amir ʿAlī, who succeeded him in 1504, but each attempt resulted only in the tightening of his bonds In 1512 Sultān Kulī Kutb al-Mulk, who had been appointed governor of Telingāna in 1494, followed the example of the other provincial governors and declared himself independent, and in 1518 Mahmūd died, worn out with debauchery Four puppets followed him on the throne of Bīdar, and his line was finally extinguished in 1527, when Amīr ʿAlī Barīd al-Mamālik assumed the royal title in Bidar

MAHMŪD, NĀṢIR AL-DĪN, Sultān of Dihlī, was the son of Shams al Dīn Īltutmish by the daughter of Kutb al-Dīn Aibak [q v] In 1246, when the nobles at Dihlī were growing weary of the sloth, incompetence, and tyranny of Masʿūd, Mahmūd, then about 18 years of age, was governor of Bahrāič, and hastened secretly to the capital when he learned that the throne was likely to become vacant On June 10, 1246, Masʿūd was deposed and thrown into prison, where he died shortly afterwards, and Mahmūd, his uncle, was enthroned in the Green Palace He was an amiable and pious prince, with a taste for calligraphy, which he displayed in making copies of the Kurʾān, but as a ruler he was a mere cipher He was well served by Ghiyāth al Dīn Balban, whose daughter he married, and who ultimately succeeded him on the throne Balban restored the royal authority in the Pandjāb, the Dūāb, Mewāt, Multān, Nāgawī, and northern Mālwa, but his enemies had been busy during his absence from court, and on his return attempted to assassinate him He frustrated this design, but was banished from court The nobles soon grew weary of the arrogance of the eunuch Raihān, who had supplanted him, and Balban and other nobles assembled their troops at Bhātinda Raihān and the king marched against them, but as most of the nobles in the royal camp were in sympathy with Balban, who hesitated to attack the king, serious hostilities were avoided, and the royal army retreated The nobles at court now prevailed upon the king to dismiss Raihān, who was banished, first to Budāun, and afterwards to Bahrāič, a reconciliation between the king and Balban was effected, and they returned together to Dihlī in January, 1255 Raihān was soon discovered to be in communication with Kutlugh Khān of Bayāna, who had secretly married the king's mother, and the eunuch was captured and put to death In 1256 Mahmūd and Balban marched against Kutlugh Khān, who fled, and when he was pursued, in 1257, into Sirmūr, again fled and took refuge with Kishlū Khān, the rebellious governor of Multān and Uch Balban marched against the rebels, but they evaded him and marched on Dihlī Finding, however, that preparations had been made to receive them, and that Balban was menacing their retreat they fled, and in 1259 joined an army of Mughuls which was invading the Pandjāb It was feared that the Mughuls would attack Dihlī, but they retired without crossing the Sutladj Order was then again restored in the Dūāb, and in the following year the Meos of Mewāt expiated by a terrible punishment a long series of crimes Their country was ravaged, and 250 of their principal men were brought to Dihlī and put to death with torture In a second expedition 12,000 of them, men, women, and children were put to the sword Meanwhile negotiations had been in progress with Hulāgū Khān at Tabrīz, and in 1260 a Mughul envoy reached Dihlī and promised, in his master's name, that raids into India should cease At this point a hiatus of nearly six years occurs in the history of the Muslims in India, and the next fact which is recorded is that Mahmūd died on Feb 18, 1266, and was succeeded by Balban

MAHMŪD II, NAṢIR AL-DĪN, was the grandson of Fīrūz Shāh, of the Tughluk dynasty, and was placed on the throne of Dihlī on March 8, 1393, on the death of his elder brother Humāyūn (Sikandar Shāh) and was never more than a puppet in the hands of intriguing ministers The eunuch Sarwar, deputed by him to quell a Hindu rebellion in Awadh, received the title of Sultān al Shārk, and never returned to Dihlī, but established his independence in Djawnpūr Another *amīr*, Sārang Khān, became virtually independent in the Pandjāb, and the minister Saʿādat Khān, resenting his supersession by Mukarrab Khān, set up Mahmūd's cousin Nusrat as a rival king within the narrow limits of the kingdom of Dihlī In 1398 Mallū, the brother of Sārang Khān, murdered Mukarrab Khān and assumed complete control of Mahmūd, who conferred on him the title of Ikbāl Khān Nusrat Shāh was then driven into the Dūāb, but the kingdom of Dihlī was in a state of utter confusion when, in October, 1398, news was received that the Amīr Timūr [q v] had crossed the Indus and taken Multān He reached Panipat on Dec 2, and meanwhile the capital had been filled with fugitives, fleeing before him The resources of the kingdom were so restricted that no adequate preparations could be made to resist him, and Mahmūd and Mallū were filled with terror, but such troops as could be collected were assembled within the walls, and on Dec 15, the king and his minister marched forth to meet the invader, who had crossed the Djamna from his camp at Lonī They were utterly defeated, and fled by night, Mallū to Baran in the Dūāb, and Mahmud to Gudjarāt, and afterwards to Mālwa Timūr left Dihlī on Jan 1, 1399 when his work of plunder, devastation, and bloodshed was finished, and Mahmūd's rival, Nusrat Shāh, occupied the ruins of the capital, but was expelled by Mallū, and driven into Mewāt, where he shortly afterwards died Mallu returned to Dihlī in 1400, and in 1401 was rejoined by Mahmūd In 1402 Mallū, carrying Mahmūd with him, marched to Kannawdj to attack Ibrāhim Shāh of Djawnpūr, but Mahmūd, weary of the domination of Mallū, fled and joined Ibrāhim, who, however, received him so ill that he again fled, and established himself in Kannawdj Mallū then made a fruitless attempt to recover Gwāliyār, and returned to Kannawdj in order to recapture Mahmūd, but was baffled by the strength of its defences and returned to Dihlī He attempted to subdue Khidr Khān of Multān, but was defeated and slain by him in November, 1405 After his death Dawlat Khān Lodi became the virtual ruler of Dihlī, and at his invitation Mahmūd returned to his capital The rest of his reign was spent in attempts to re-establish his authority in Sāmāna, Sambhal, and Baran, and to punish Ibrāhim of Djawnpūr for his reception of him when he had fled from Mallū, but he was obliged to conclude an inglorious peace with Ibrahīm, and his success in other directions was neutralized by the advance of Khidr Khān, who pretended that Timūr had appointed him his viceroy in India, and in 1406 stripped Mahmūd of all his possessions beyond the walls of Dihlī except the Dūāb, Rohtak, and

Sambhal In 1409 and 1410 Khidr Khān captured Rohtak, Nārnawl, three towns to the south of Dihlī, and Fīrūzābād, and besieged Mahmūd in his capital, which was only saved by a famine which compelled the invader to retire In 1413 Mahmūd died, the last of his line, at Kaithal, after a nominal reign of twenty years

MAḤMŪD, SHĀH SHARKĪ, succeeded his father, Ibrāhīm Shah, on the throne of Djawnpūr in 1436 In 1443 he obtained permission from Mahmūd I of Mālwa to punish Nasīr Khān, governor of Kālpī, which was a fief of Mālwa, for breaches of the law and customs of Islām committed by him, but Mahmūd of Mālwa repented of his complaisance, and war broke out between Mālwa and Djawnpūr Hostilities, which were indecisive were terminated by a compromise In 1452 Mahmūd Sharkī, on the invitation of some disaffected nobles, attacked Dihlī in the absence of Bahlūl Lodī, but was defeated and compelled to retreat to Djawnpūr The foolish act of aggression served only to arouse in Bahlūl a sense of the danger to Dihlī of the existence of an independent kingdom in Awadh and in 1457 he marched to attack Mahmūd, who, however, died before he could meet him in the field

Bibliography ʿAbd Allāh Muhammad b ʿUmar, *Zafar al-Wālih bi-Muzaffar wa-Ālih*, ed E Denison Ross under the title of *An Arabic History of Gujarāt*, London 1910, Muhammad Kāsim Firishtā, *Gulshan i Ibrāhīmi*, Bombay lith ed of 1832, Nizām al-Dīn Ahmad, *Tabakāt-i Akbarī*, ʿAbd al-Kādir Badāʾūni, *Muntakhab al Tawārikh*, text and translation by Ranking, all in the Bibliotheca Indica series of the Asiatic Society of Bengal (I W HAIG)

MAHMŪD I, SAIF AL-DĪN, BEGARHA, the greatest of the Sultāns of Gudjarāt, was a younger son of Muhammad I, Karim, and was born in 1444 In 1458 the nobles dethroned his nephew, Dāwūd, a vicious and depraved youth, and placed Mahmūd on the throne The boy immediately displayed great courage and resource in the suppression of a serious conspiracy and rebellion at the beginning of his reign, and in 1461/1462 he marched to the assistance of the youthful Nizām Shāh of the Dakan, whose dominions had been invaded by Mahmūd I of Mālwa He compelled the invaders to retire and frustrated a second attempt to invade the Dakan In 1466/1467 he attacked and defeated the Rādjā of Girnār in Kāthiāwār, which had been independent since the capture of the fortress by Muhammad b Tughluk of Dihlī in 1348, and reduced him to the position of a vassal In 1470 he again invaded Girnār, and on Dec 4, captured the Rādjā's stronghold and compelled him to accept Islām, thus putting an end to the Čudāsama dynasty, which had reigned in Girnār for about 1,000 years The Rādjā became an amīr of Gudjarāt, and received the title of Khān-Djahān, and Mahmūd founded, near Girnār, a new fortress, which he named Mustafā-ābād He then invaded Kačch and suppressed a rebellion in that province, carrying its leaders, who were compelled to accept Islām, to Mustafā-ābād as hostages In 1472 he crossed the Rann and marched into Sind, to assist Djām Nanda (Nizām al-Dīn) who was beset by rebels He crushed the rebellion, and after his return marched to Dwārkā, to punish the Rādjā, Bhīm, who had plundered a ship belonging to a Muslim merchant Dwārkā and Bait Shankhodhar, the robber chief's stronghold, were taken, and a Muslim governor was appointed to manage the small state Bhim himself was captured and executed Mahmūd's next expedition was against some Malābārī pirates who had harassed the coast near Khambāyat (Cambay), and whose depredations were checked by the capture and execution of some of their number Rādjā Patāi of Čāmpāner had long encouraged brigandage in the kingdom of Gudjarāt, and Mahmūd now retaliated by raiding some districts of his state On his return to Ahmadābād he discovered a plot to depose him, formed by some of his nobles, who were weary of his ceaseless activity, but the malcontents, who were well aware of the dangers which threatened the kingdom, were brought to their senses by his threat to perform the pilgrimage to Makka, leaving his young son as regent After restoring order in various districts of his kingdom he marched, in December, 1482, to settle accounts with Čampāner The fortress fell, after a siege of two years, at the end of 1484 and the Rādjā and his Minister, having refused, after five months' imprisonment, to accept Islām, were put to death In 1491 Mahmūd was disturbed by acts of piracy and aggression committed against his subjects by Bahādur Gilānī, a rebel in the Konkan, and his protests compelled the nobles of the distracted kingdom of the Dakan to unite for the purpose of crushing the rebel In 1507 Mahmūd's fleet, under Malik Aiyāz of Diū, participated with that of Malik Ashraf Kānsūh, of Egypt, in the victory over the Portuguese fleet, in which the gallant young Lourenço de Almeida, son of the viceroy, was slain, and later in the same year he invaded Khāndesh and placed on the throne of that kingdom his daughter's son, ʿĀlam Khān, whose father was descended from the ruling family of Khāndesh, and who ascended the throne under the title of ʿĀdil Khān In this campaign he was opposed by Nizām Shāh of Ahmadnagar In 1511 a mission from Shah Ismāʿil Safawī of Persia arrived in Gudjarāt for the purpose of inviting Mahmūd to accept the Shīʿa faith, but he refused to see the heretics He had now been ailing for some time, and on Nov 23, 1511, he died, at the age of sixty nine (lunar) years, after a reign of rather more than fifty three years He was a tall, burly man, of commanding appearance, and was, besides being an able administrator, both warlike and chivalrous His nickname of Begarha has been variously explained, but it undoubtedly had reference to his capture of the two great fortresses (*gaṛh*) of Girnār and Čāmpāner His elder brother had died of poison, and strange stories are told of his precautions against a like fate He is said to have gradually absorbed poisons into his system until he was so impregnated with them that a fly settling on his hand instantly died Butler refers to this strange prophylactic treatment in the lines

"The King of Cambay's daily food
Is asp, and basilisk, and toad"

He was also distinguished by his voracious ap-

petite His daily allowance of food was between twenty and thirty pounds' weight, and before going to sleep he placed two pounds, or more, of boiled rice on either side of his couch, so that he might find something to eat on whichever side he awoke When he rose in the morning he swallowed a cup of honey, a cup of butter, and from 100 to 150 bananas

(T W HAIG)

MAHMŪD III, SAʿD-AL DĪN, of Gudjarāt, was the son of Latīf Khān, third son of Muzaffar II On the death of Bahādur Shāh Muhammad Shāh Fārūkī of Khāndesh was offered the crown of Gudjarāt, but died on his way thither The choice of the nobles then fell on Mahmūd, the heir male, but his cousin, Mubārak II of Khāndesh, in whose custody he was, and who had himself expected an offer of the crown of Gudjarāt, refused to surrender him, until an army from Gudjarāt compelled him to do so The prince was escorted back to his country, and on Aug 8, 1537, was enthroned as Mahmūd III, being then only eleven years of age For the first three or four years of his reign he was a puppet in the hands of powerful ministers, and when he escaped from tutelage proved himself to be weak and inefficient His attempt, in 1546, to recover Dīū from the Portuguese, was a miserable failure, brutally avenged by him on the few Portuguese prisoners in his hands In 1549 he retired to Mahmūdābād, where he lived in slothful luxury, ruining his constitution with drugs On Feb 15, 1554, he was stabbed, as he lay in a drunken stupor, at the instigation of an attendant named Burhān al-Dīn, who attempted to usurp the throne, but was slain by the nobles The discovery of an heir was no easy matter, for Mahmūd, dreading an heir as a possible competitor, had taken the barbarous precaution of procuring an abortion whenever a woman of his harem became pregnant The choice of the nobles ultimately fell on a young prince entitled Radī al Mulk, the great grandson of Shakar Khān, a younger son of Ahmad I, and he was raised to the throne under the title of Ahmad II

(T W HAIG)

MAHMŪD I, KHALDJI, of Mālwa, was the son of Malik Mughīth, sister's son to Dilāwar Khān, the first independent Sultān of Mālwa On May 12, 1436, Mahmūd caused his cousin, Muhammad Ghūrī, a debauched and barbarous prince, to be poisoned, frustrated an attempt to enthrone his young son, Masʿūd, and offered the crown to his own father, Mughīth, who refused it, whereupon Mahmūd himself ascended the throne He was beset by difficulties, and after quelling a rebellion raised on behalf of Ahmad, a Ghūrī prince, repelled an invasion by Ahmad I of Gudjarāt, who attempted to restore Masʿūd to his father's throne A pretender was set up in Čanderī, and died while Mahmūd was besieging the fortress, but he was obliged to turn immediately against Dongar Singh of Gwāliyār, who had taken advantage of the disturbed state of Mālwa to invade the country He expelled the Hindūs and returned to Māndū, whence he was summoned, in 1440, by a faction among the nobles of Dihlī, who offered him the throne He marched to Tughlukābād, but his partisans failed him, and he was met by the army of Muhammad Shāh the Sayid, under Bahlūl Lodī After some indecisive fighting he agreed to retire, assenting the more readily owing to news of a serious rebellion in Māndū On his return he found that the rebellion had been suppressed by his father, and in 1442 he invaded Mewār to punish the Rānā for the assistance which he had given to the pretenders who had troubled the early years of his reign He had considerable success in the campaign, but retired without attempting to besiege Čitor On his return to Māndū he quarrelled with Mahmūd Shāh Sharkī [q v] of Djawnpūr, regarding Nasīr Khān, the turbulent ruler of Kālpi, but after an indecisive campaign the two kings made peace on the basis of a compromise In October, 1446, he again invaded Mewāi, extorted some tribute from the Rānā, established his own authority in Ranthambhor, compelled Awhad Khān of Biyāna to do homage and pay tribute, and collected tribute from the Rādjā of Kota He left a force to besiege Čitor, but the siege was not formed In 1450 he invaded Gudjarāt to establish his claim to the allegiance of Kanak Das, Rādjā of Čāmpāner, but gained nothing except an instalment of tribute from the Rādjā, and in the following year he suffered a severe defeat during a second invasion of Gudjarāt. In 1451 he subdued the turbulent Hāra Rādjputs on his northern frontier, and later in the year invaded Berār and besieged Māhūr, but retired when the Bahmanī king marched to its relief In 1455 he again invaded Mewār, recaptured Adjmer, collected tribute from minor chieftains, and harassed and plundered large tracts in Rādjputānā In 1461 he was induced to invade the Dakan, where he defeated the army of the boy-king, Nizām Shāh, and besieged him in his capital, but was obliged to retire by the news that Mahmūd I of Gudjarāt was marching to the assistance of Nizām Shāh, and suffered severely at the hands of the Korkūs of the Melghāt during his retreat He invaded the Dakan in the following year, but before he could effect anything was again obliged to retire by Mahmūd I of Gudjarāt In the same year Kherla, a fortress of Berār held by him, was taken by the officers of the Bahmanī king, but he succeeded in recovering it In 1466 he again invaded Mewār, but though he defeated Rānā

Kumbha in the field he failed to take his capital by surprise, and returned to Māndū In 1468 he marched to Čanderī, and his officers captured and destroyed the fortress of Karahra On his way back to Māndū he suffered severely from the heat, and on June 1, 1469, he died, at the age of sixty eight He was the greatest of the Muslim kings of Mālwa, and under him the kingdom reached its greatest extent The "column of victory" at Čitor is said to commemorate Rānā Kumbha's victories over Mahmūd I of Gudjarāt, and Mahmūd I of Mālwa, but if this be so it is more mendacious than most lapidary inscriptions, for the successes of Mewār against Mālwa were gained by Sangrama against Mahmūd II, not by Kumbha against Mahmūd I Mahmūd's fame had reached distant Egypt, for he received an envoy from the phantom ʿAbbāsid *Khalīfa*, who formally recognized him as Sultān of Mālwa He was a zealous Muslim, and restored the use in all public offices of the inconvenient lunar calendar of Islām, and, while he gloried in his successes against the "infidels", was careful to excuse himself for his attacks — often unjustifiable — on sovereigns of his own faith

(T W HAIG)

MAḤMŪD II, ʿAIĀ' AL DĪN, Khaldjī, of Mālwa, was raised to the throne on May 2, 1511, on the death of his father, Nāsir al-Dīn Khaldjī The early days of his reign were disturbed by rebellions on behalf of his brothers, and of other pretenders, and he was once driven from his capital, but was enabled to return and expel the rebels by the assistance of Mednī Rāy, with a force of Rādjpūts The king soon had reason to repent of having accepted their aid, for Mednī Rāy assumed the place of minister, and the dominance of the Hindūs alienated and disgusted all the Muslim nobles of the kingdom Bihdjat Khān, governor of Čanderī, openly espoused the cause of a pretender, and Mahmūd, while engaged in correspondence with him, was disturbed by news of a revolt in his capital and of the invasion of his kingdom by Muzaffar II of Gudjarāt, but the revolt was suppressed, and the invader was recalled to Gudjarāt by domestic disturbances After protracted negotiations the pretender fled, and Bihdjat Khān received Mahmūd at Čanderī and endeavoured, but in vain, to free him from the influence of the Hindūs Mahmūd returned to Māndū early in 1514 and fell entirely under the control of the Rādjpūts, at whose instance he put to death many of the Muslim nobles of the kingdom The arrogance of the Hindūs at length became intolerable, and in 1517 Mahmūd fled to Gudjarāt and sought aid of Muzaffar II, who led an army into Mālwa to restore his authority, captured Māndū, and massacred the Rādjpūts who had held it The rest of the Rādjpūts in the state established themselves on its northern border and transferred their allegiance to Rānā Sangrama of Čitor Muzaffar retired to Gudjarāt leaving 10,000 horse to assist Mahmūd, and Mahmūd besieged Gāgrawn, held by Hemkaran for Mednī Rāy The Rānā marched to its relief, and Mahmūd, turning aside to meet him, suffered a severe defeat, and was wounded and captured Sangrama received him courteously, but compelled him to surrender his crown jewels He might now have annexed Mālwa, but, fearing to arouse the hostility of every Muslim ruler in India, made a virtue of necessity, and replaced Mahmūd on his throne A few years later Mahmūd harboured and encouraged Čānd Khān, brother of Bahādur Shāh of Gudjarāt, and a pretender to his throne Bahādur invaded Mālwa and besieged Māndū Mahmūd's sloth and negligence infected his army, and on March 17, 1531, Bahādur captured the city, and Mahmūd appeared before him Mālwa was annexed to Gudjarāt, and Mahmūd and his family were sent towards Čāmpāner, to be imprisoned there On April 12 the camp was attacked by a force of Bhīls and Kolīs, and Mahmūd's guards, fearing a rescue, put him to death His seven sons were conveyed to Čāmpāner, and nothing more is known of their fate

MAHMŪD B ISMĀʿĪL [See IBN KĀDĪ SIMĀWNĀ]

MAHMŪD B MUHAMMAD B MALIKSHĀH, a Saldjūk ruler in the ʿIrāḳ (511—525 = 1118—1131), ascended the throne as a boy of 13, being the eldest of his father's five sons To his misfortune, his trusted advisers only troubled about their own interests and made the young Sultān take various steps which were fatal to the prosperity of his reign Anusharwān in al-Bondārī mentions no fewer than ten such fatal mistakes, the result was that even in the early years of his reign several ambitious Turkish emīrs were in open rebellion while his father's Great Hādjib ʿAlī Bār, who, during the latter's illness, had had and still retained control of the vast treasures which the latter had hoarded up, dissipated them in a very short time and let the young Sultān lead a gay life Especially dangerous to him were the atābegs of his brothers Masʿūd and Toghril, who found the opportunity a favourable one to dispute the sultanate on behalf of their infant protégés The result was that in 513 (1119) Sandjar, the Sultān's powerful uncle, was forced to interfere and marched on al Rayy after an attempt to appease him had failed Mahmūd was then forced to allow matters to come to an open fight but his troops were defeated at Sāwa [q v] and nothing was left for him but to go to the victor and accede to the demands made by him Fortunately Sandjar, whose mother was Mahmūd's grandmother, was favourably disposed to his nephew and announced himself content to add to his territory a few districts, e g al-Rayy, but otherwise received Mahmūd in a friendly fashion and even gave him one of his daughters in marriage Thereupon he retired and left Mahmūd without his help to make the best of the difficulties that faced him in the ʿIrāḳ These were bad enough, for the Atābeg of Masʿūd, whom Ibn al-Athīr calls Aiyaba Djuyūsh-beg (cf *Recueil*, II 132, note), in conjunction with the unruly Malik al-ʿArab Dubais [q v] was plotting to proclaim his protegé Sultān The plan failed however Aiyaba's troops were routed at Asadābād (514) and Masʿūd's unlucky vizier, the celebrated Arabic poet al-Tughrāʿī [q v], was captured and soon afterwards put to death on the pretext

that he was an infidel The two brothers readily made friends again as Masʿūd was still a mere child, Aiyaba escaped, was afterwards pardoned by Mahmūd, but lost to Aksonkor al-Bursukī [q v] the governorship of Mōsul which he had previously held Dubais was preparing the Sultān still further trouble and soon found this opportunity, because Toghrïl, who with his Atābegs had meanwhile been given the province of Arrān as *iktāʿ* could not withstand the Georgians there, who had taken Tiflīs in 515 (cf Brosset, *Histoire de la Georgie*, i 365, Matthias of Edessa, ch 230—232, Ibn al Farikī in Ibn al Kalānisī, ed Amedroz, p 205), and came to the ʿIrāk to seek help from Mahmūd The latter himself took the field against the Georgians without doing much and Toghrïl, who had now returned to his province, soon received a visit there from Dubais, who persuaded him to set out to the ʿIrāk against the caliph al Mustarshid As they had no success in this enterprise, they went to Sandjar to lodge complaints against the Caliph and Mahmūd Sandjar thereupon went to al-Raiy and sent an invitation to Mahmūd to come to answer the charges (522 = 1128) Mahmūd was received with honours and instructed to restore Dubais to his territory in Hilla while Toghrïl and Masʿūd who was also with him, went off with Sandjar Mahmūd however did not find the caliph inclined to tolerate Dubais in his neighbourhood, and the Sultān withdrew his claims for a sum of 100 000 dinārs and went to Hamadhān There had been trouble between Mahmūd and the Caliph before and in 520 (1126) for example there had been open fighting in the streets of Baghdād between the Arabs and the Sultān's Turkish troops In all these circumstances Mahmūd proved unequal to his task, while he left the business of government to his viziers, among whom al Sumainami and al Dargazīnī (or al Anasrābādī as Ibn al-Athir always has it) were the most prominent, he spent his time with his hawks and hounds, which, according to Mirkhwānd, were 400 in number and wore jewelled collars and coverings embroidered with gold It became worse when he devoted himself to sensual pleasures and as a result of his sexual excesses fell ill and died at Hamadhān at the early age of 27 (Shawwāl 15, 525 = Sept 10, 1131) Nevertheless he was by no means an insignificant figure, he had a good acquaintance with Arabic and was celebrated in a long panegyric by Haisa-Baisa [q v] Ibn al Athir lauds his gentleness and emphasises that he never, as Sultāns usually did, laid violent hands on the property of his subjects

Bibliography in the article SELDJUKS, cf also Ibn Khallikān, *Wafayāt*, Cairo 1299, ii 519 *sq*

MAHMŪD of Ghazna, one of the most famous of Muslim conquerors, was the elder son of Subuktigīn and was born in 969 A D In 994 Nūh II of Bukhārā appointed Subuktigīn governor of Khurāsān, as a reward for assistance received from him, and Subuktigīn appointed as his deputy his son Mahmūd, who took Nīshāpūr from the Ismāʿīlī heretics and made it his capital On his death in 997 Subuktigīn left his throne to his younger son, Ismāʿīl, but Mahmūd marched to Ghazna, defeated his brother, and ascended the throne in 999 Begtūzūn, an *amīr* of Mansūr II of Bukhārā, attempted to deprive Mahmūd of the government of Khurāsān, but failed, and the Sāmānid dynasty was shortly afterwards extinguished, its dominions being divided between Mahmūd and Ilak Khān of Kāshghar The *Khalīfa* al-Kādir now recognized Mahmūd as king of Ghazna and Khurāsān, and conferred on him the title of Amin al Milla, and later that of Yamīn al-Dawla, from which his successors are sometimes known as the Yamīnī dynasty Mahmūd now made a vow to invade India and chastise the infidels every year of his life, and during the remaining thirty years of his life led no fewer than seventeen raids into India After an expedition in the year 1000 he defeated and captured Djaipāl I of the Pandjāb in 1001, and took the town of Ūnd Djaipāl was released on promising to pay tribute, but would not survive his disgrace, and burned himself to death, leaving his kingdom to his son, Anandpāl Mahmūd received the title of Ghāzī, and in 1003 subdued Sīstān Khalaf b Ahmad, whom he defeated, saved his life by addressing his conqueror as "Sultān", a title which so pleased Mahmūd that he bore it ever afterwards, being, it is said, the first Muslim sovereign to do so In 1004 he invaded the Multān state, and besieged its ruler, Dāwūd, who had adopted the Carmathian heresy, for seven months in his capital Dāwūd saved his kingdom by abjuring his heresy and undertaking to pay tribute, and Mahmūd returned to his dominions in time to meet Ilak Khān, who had invaded them, near Balkh He defeated the invader and put him to flight, but while he was thus engaged Sukhpāl, a son of Anandpāl, who had accepted Islām and received the title of Nawāsā Shāh, recanted and rebelled Mahmūd marched towards Bheira, Sukhpāl's capital, but before his arrival there his officers had captured Sukhpāl, who was compelled to disgorge 400,000 *dirhams*, and was imprisoned for life Mahmūd then invaded the district of Ghūr, conquered it, and compelled the inhabitants to accept Islam Meanwhile the princes of India had formed a confederacy to defend their country and their religion, and when Mahmūd crossed the Indus in 1008 he was met at Ūnd by a great army composed of the troops of Anandpal and those of the Rādjās of Udjdjain, Gwāliyār, Kālindjar, Kannawdj, Dihlī, and Adjmar Their combined forces nearly succeeded in defeating Mahmūd, but after a hotly contested battle he won the day, and the Hindūs fled The Rādjās lost faith in each other, and the confederacy was dissolved Mahmūd pressed on to the fortress of Bhawan and the temple of Nagarkot or Kāngra, the gates of which were opened to him after a siege of seven days The enormous plunder which the temple yielded whetted Mahmūd's appetite for further exploits of the same nature In 1009 he again invaded the Pandjāb and plundered the country and slaughtered its inhabitants Anandpāl, who dared not attack him, purchased peace by the payment of an indemnity, a promise of tribute, and an undertaking to allow him unrestricted passage through the Pandjāb in future Dāwūd of Multān had by now relapsed into heresy, and in 1010 Mahmūd invaded his kingdom, took his capital, and after slaughtering and mutilating great numbers of his heretical subjects sent him to end his days as a prisoner in Ghūr In 1011 Mahmūd marched through the Pandjāb to the plunder of the wealthy temple of Thānesar The Rādjā fled, and Mahmūd plundered the temple, the city and the kingdom, and carried off the idol Čakravartin,

with much booty and large numbers of captives, to Ghazna

In 1012 Mahmūd's officers subdued Ghardjistān, and he compelled the Khalīfa al-Kādir to cede to him those districts of Khurāsān which he had not yet occupied, but the Khalifa returned a stern refusal to Mahmūd's demand for Samarkand, and Mahmūd was obliged to apologize for his presumption

Anandpāl had now died and had been succeeded by his son, Trilokanpāl, a weak monarch who committed the management of his affairs to his son, Nidar Bhīm, or "Bhīm the Fearless" Bhīm reversed the submissive policy of his grandfather, and in 1013 Mahmūd was obliged to invade the Pandjāb in order to keep the road to Hindūstān open In the spring of 1014 he defeated the Hindū prince in the Margala Pass, captured the fortress of Nandana, and pursued him into Kashmir, but was unable to come up with him, and was obliged to return A second invasion of Kashmīr was equally unsuccessful, he failed to take Lohkot, and in the spring of 1016 he retired, with heavy loss, from his only unsuccessful campaign in India, losing, on his way, many of his men in the flooded Djihlam In the same year he marched to Khwārizm to avenge the death of his sister's husband, Abu 'l-ʿAbbās Maʾmūn, who had been slain by rebels He crushed the rebellion and appointed one of his own officers, Altūntāsh, to the government of his new conquest In the autumn of 1018 he set out on his long meditated expedition into Hindūstān, whither Trilokanpāl and Nidar Bhīm had retired He crossed the Djamna on December 2 and received the submission of the Rādjā of Baran, 10,000 of whose subjects accepted Islām He next defeated Rādjā Kulčand of Mahāban, who to avoid disgrace stabbed his daughter and son, and then himself He sacked and destroyed the splendid cities of Mathurā and Bindrāban and, leaving the greater part of his army there, marched with a picked force, to Kannawdj, defended by seven forts on the Ganges Its ruler, Rādjyapāla, fled, leaving his capital undefended, the seven forts were plundered in one day, and the city was sacked Asnī, further down the Ganges, shared its fate, and Mudjhāwan, "the Fort of the Brahmans", was plundered after its defenders had been slain to a man Rādjā Čand of Sharwa fled, but this city was sacked, and he was overtaken and defeated on January 6, 1019 Mahmūd then set out on his return march to Ghazna with a large number of elephants, 3,000,000 *dirham*'s, much other plunder, and captives so numerous that slaves were to be had for two or three *dirham*'s each On his return he founded at Ghazna his great mosque, the "Bride of Heaven" Rādjā Nanda of Kālindjar and the Rādjā of Gwāliyār had marched to Kannawdj after Mahmūd's retreat, and had punished Rādjyapāla for his cowardly desertion of his capital by putting him to death They were attempting to form a new confederacy of Hindū princes when Mahmūd, in 1019, invaded Hindūstān to frustrate their design He defeated Trilokanpāl on the Rāmganga and then turned to confront Rādjā Nanda, who was marching to meet him with a great army, at the sight of which even Mahmūd quailed Nanda, however, was smitten with a sudden panic and fled in the night, leaving his camp to be plundered by Mahmūd, who obtained, with much other booty, 580 elephants, in addition to 270 already taken from Trilokanpāl Then, fearing lest his retreat through the Pandjāb should be cut off, he returned to Ghazna In 1021 he resolved to provide himself with a base for future raids, and having invaded Swāt and Badjawr and compelled the inhabitants to accept Islām he attacked, but again failed to capture, the fortress of Lohkot, and, raising the siege, marched into the Pandjāb Trilokanpāl was dead, and Nidar Bhīm fled and took refuge with the Rādjā of Adjmar, where he died in 1026 Mahmūd was thus able to annex the Pandjāb, and brought it under his own sway In 1022 he again invaded Hindūstān and attacked the fortresses of Gwāliyār and Kālindjar, but left their rulers in possession of them on their promising to pay tribute On his return to Ghazna he mustered his army, and in 1023 invaded Transoxiana to establish his authority there The smaller chiefs hastened to pay him homage, the ruler of Samarkand was brought before him in chains and was sent as a prisoner to Kālindjar, as were also the chiefs of the Saldjūk tribe, 4,000 families of which Mahmūd, though he was apprehensive of their power, transported into Khurāsān In 1025 Mahmūd set out on the most famous of his raids into India, the expedition to Somnāth The insolent boasts of the Brāhmans had annoyed him, but it was the reputed wealth of the temple that prompted the enterprise He crossed the Indian desert after elaborate preparations, plundered both Adjmir and Anhilwāra, and reached Somnāth in the middle of January, 1026 Within two days his troops had stormed the ramparts and entered the city, but the temple was more strongly defended, and while he was attacking it he learned that the Hindū princes of Gudjarāt, who had fled before his arrival, had rallied to the defence of the idol, and were before the city Leaving a force to continue the siege of the temple, he marched against them, and, after a battle in which he narrowly escaped defeat, put them to flight Their defeat sealed the fate of the temple, which was almost immediately captured Mahmūd plundered it of its vast treasures and broke up its idol, a huge *lingam* From Somnāth he marched to punish Param Deo, Rādjā of Anhilwāra, for the attempt to relieve the temple, but the Rādjā fled, leaving his stronghold and its treasures to the conqueror It is said that Mahmūd was so captivated by the beauty and climate of Gudjarāt that he was with difficulty dissuaded by his officers from making Anhilwāra his capital, and leaving Ghazna to his son, Masʿūd On his return march through the Sind desert his army suffered severely, and after crossing the desert was harassed by the Djāts, but succeeded in reaching Ghazna with its spoils In 1027 Mahmūd undertook his last expedition into India, in order to punish these Djāts He collected a flotilla of boats at Multān, and, owing partly to their superior construction, defeated the Djāts in a naval battle on the Indus, and carried off their families, which they had removed for safety to islands in the river

The remainder of Mahmūd's life was devoted to the western provinces of his empire He wrested ʿIrak, Rayy and Isfahān from the Buwayhids, invested his son Masʿūd with the government of the newly conquered territory, and employed himself in establishing order and security on the caravan routes throughout his wide dominions, and in extirpating the heretics whom the Shiʿa Buwayhids had tolerated In 1029 he returned from Rayy to

Balkh, and marched in the spring to Ghazna, where, on April 30, 1030, he died, at the age of sixty-three, worn out with the labours of forty years

Mahmūd was far from being the zealous champion of the faith depicted by Muslim historians Occasionally he encouraged, and even compelled Hindūs and others to accept Islām, but the propagation of the faith was never the primary object of any of his campaigns Temples were attacked rather because they contained treasure than because they contained idols, and he did not hesitate to employ bodies of unconverted Hindūs, even against his brethren in the faith He has been described as miserly but he loved money chiefly as the source of power He adorned Ghazna with noble buildings and his court was in that age the chief resort of poets and men of learning, and was adorned by al-ʿUtbī, al-Bīrūnī, ʿUnsurī, Asadī, ʿAsdjadī, Minūčihrī, Firdawsī, and many other poets and men of letters His scurvy treatment of Firdawsī is to be attributed rather to the malice of a personal enemy than to the meanness of the king, and the poet's mode of resenting it placed him beyond the pale of forgiveness Mahmūd was one of the great figures in Islāmic history, and though his warlike career left him no leisure for the acquisition of learning he knew how to appreciate and reward literary merit in others

MAHMŪD GĀWĀN, ʿIMĀD AL-DĪN, Khwādja, was born in A D 1405, of a family which had long held high office in the small principality of Gīlān, and is said to have taken the name of Gāwān, by which he was afterwards known in India, from Kāwān, his birthplace He received a good education and as a young man made the pilgrimage to Mekka While he was there his family fell into disgrace, so that he could not safely return home Refusing offers of employment in other parts of Persia he became a merchant, and in 1455 sailed from the Persian Gulf for India, and landed at the port of Dābhol Thence he proceeded to Bidar, the capital of the Bahmanī kings, and was well received by ʿAlāʾ al Dīn Ahmad II, who was then reigning He received the command of 1,000 horse and was sent to quell the rebellion of Djalāl Khān in Telingāna His conspicuous success secured his position as one of the leading nobles of the kingdom, and after the death of Ahmad II in 1457 he received from his son and successor, Humāyūn, the title of *Malik al-Tudjdjār* ("Chief of the Merchants"), then highly esteemed During Humāyūn's short reign he was employed in suppressing rebellion and restoring order in Telingāna, and on the king's death, in 1461, was associated by his widow with herself and Khwādja Djahān the Turk in a council of regency The foreign enemies of the kingdom took advantage of the childhood of the new king, Nizām Shāh, and Mahmūd Gāwān bore an honourable part in repelling the invasion of the Rādjā of Urīsa, who was forced to pay a large indemnity Mahmūd Khaldjī I of Mālwa next invaded the Dakan, defeated the army of Nizām Shāh, and menaced the existence of the state Mahmūd Gāwān succeeded in enlisting the aid of Mahmūd I, Begarha, of Gudjarāt, and with his help defeated and expelled the invader Nizām Shāh died in 1463, and the kingdom was governed for his younger brother, who succeeded as Muhammad III, by the same council of regency, but the arrogance and ambition of Khwādja Djahān the Turk so aroused the suspicions of the queen-mother that she ordered her young son to put him to death She shortly afterwards retired from public life, leaving Mahmūd Gāwān, now entitled Khwādja Djahān, sole regent In 1469 he was sent to subdue the Konkan, and to suppress the pirates of that region, and, in a series of campaigns extending over three years, conquered the country and captured Goa, then one of the principal ports of Vidjayanagar On his return to Bīdar he was received with great honour and his position as first noble of the kingdom was assured In 1472 he brought the seige of Belgaum to a successful conclusion, but the chief service which he rendered to the Bahmanī kingdom was the reform of its administration It had originally been divided into four great provinces, Gulbarga, Dawlatābād, Berār, and Telingāna, to which the name of *tarāf* was given, and the power of the *tarafdār*, or provincial governor, was almost absolute He collected the revenue, raised, paid and commanded the army, and appointed all officials, his responsibility to the king being limited to maintaining order, keeping the people contented, remitting to the capital the quota of revenue due, and joining the king, when summoned, with the contingent of troops which he was bound to supply Even in the early days of the kingdom rebellions raised by provincial governors had not been unknown, but the system had worked well on the whole so long as the limits of the kingdom were comparatively narrow, and the kings were energetic, but the kingdom now stretched from sea to sea, the provinces were unwieldy and the defects and dangers of the old system were apparent to all Mahmūd Gāwān divided each of the original *tarafs* into two, so that their number became eight Berār was divided into the two *tarafs* of Gāwīl and Māhūr, Dawlatābād into Dawlatābād and Djunnār, Gulbarga into Gulbarga and Bidjāpūr, and Telingāna into Warangal and Rādjāmahendrī The powers of the *tarafdārs* were at the same time curtailed These reforms were resented by all the old *tarafdārs*, and by none more than by Malik Hasan Bahrī, Nizām al-Mulk, *tarafdār* of the great province of Telingāna, who was posted to the new *taraf* of Rādjāmahendrī, and found his power, his influence, and his emoluments reduced by more than half He was the leader of the Dakanī party and Mahmūd, though he had done all in his power to end the strife between the Dakanis and the Foreigners, was a foreigner, and was regarded by all as the leader of the Foreign party In 1481, the royal camp being then in Telingāna, Hasan Bahrī took advantage of the absence of Mahmūd's chief supporter, Yūsuf ʿĀdil Khān the Turk, who had been sent on an expedition into the eastern provinces of the kingdom of Vidjayanagar, to compass the downfall and death of Mahmūd The minister's

confidential secretary was induced, by misrepresentation, to affix his master's seal to a folded paper The paper was blank, and the conspirators wrote, above the deal, a treasonable letter to the Rādjā of Urīsa, inviting him to invade the kingdom The letter was shown to the king when he was drunk, and he at once summoned Mahmūd, who, though warned by his friends that mischief was afoot, insisted on obeying the order He was asked by the king what was the punishment of treason and unhesitatingly replied, "Death by the sword" He was then confronted with the letter, and though he declared it to be a forgery the king paid no heed to him, but bade the executioner do his office, and withdrew Mahmūd knelt down and repeated the symbol of his faith, and the executioner, Djawhar by name, struck off his head An order for the plundering of his camp was then issued, and his followers were dispersed The king was much disappointed by the examination of his late minister's affairs He had, throughout his official life continued his mercantile transactions, and lived frugally on his profits His great official emoluments were expended on the troops and establishments which he maintained and on public works, and the balance was disbursed in alms, in the king's name as well as in his own Muhammad III understood, too late, the value of the servant whom he had so summarily put to death, and his remorse was bitter Mahmūd was a great statesman and public benefactor I earned himself, he was a munificent patron of learning, and built at Bīdar a magnificent college, the ruins of which are still to be seen The only private property which he left at his death was a splendid library He is one of the foremost figures in the political history of India, and his death was the cause of the fall of the dynasty which he had served so well, for it destroyed the confidence of the nobles in the town, and hastened the advent of the day when the provincial governors proclaimed their independence

MAHMŪD PASHA, grand vizier in the reign of the Ottoman Sultān Muhammad II, often called Welī Mahmūd Pasha He was born in Aladja Hisar (Krushewatz) in Serbia, of Christian parents, according to Chalcocondylas, his father was Greek and his mother Serbian Taken in his youth to Adrianople, he was brought up at the court of Murād II, and began his public career on the occasion of the accession of Muhammad II in 1451 Soon afterwards he became Beglerbeg of Rūmīlī, according to the historian Ramadān Zāde Mehmed (Kučuk Nishāndjī) he had been also *Kādīʿasker* [q v] As Beglerbeg, he took part in the capture of Constantinople After this event he was appointed grand vizier in 1453, the office had been empty since the execution of Čenderelī Khalīl Pasha As grand vizier, Mahmūd Pasha frequently accompanied the Sultān on his campaigns but in 1456—1458 he was appointed to conduct the operations against the Serbs, while the Sultān conquered the Morea, in 1459 Muhammad himself advanced against Serbia which was completely subdued, during this war Mahmūd Pasha's brother was the leader of the Turcophil party in Serbia In 1460 and 1461 the grand vizier took part in the expedition against Sinope and Trebizond as commander of the fleet while Muhammad led the army by land The capture of Trebizond was mainly due to Mahmūd Pasha, he was related to a high dignitary of the court there so that some Greek authors talk of treachery (Fallmerayer, *Geschichte des Kaiserthums Trapezunt*, p 279) In 1462, Mahmūd accompanied the Sultān against the Woiwod of Wallachia, Wlad Dracul and in the following year as commander of the fleet he was sent to conquer Lesbos and forced the Duke of Lesbos to capitulate In the same year he drove the Venetians out of the isthmus of Corinth In the Bosnian campaign of 1464, Mahmūd prepared the way for the Sultān's advance by taking the principal towns of the country In the war that followed with Mathias, king of Hungary, Mahmūd forced the latter to raise the siege of Zvornik In 1466 he aided the Sultān in the campaign which was to put an end to the power of the Karamānoghlu and defeated the Kaiamanid Ishāk Beg near Larenda The latter himself escaped and this fact combined with the too humane treatment which the governor wished to apply to the people of Konya and Lārenda and the intrigues of the second vizier Rūm Muhammad Pasha, brought the Sultān to dismiss him on the return march to Constantinople Mahmūd Pasha then governed the sandjak of Gallipoli for some time In 1472 he again became grand vizier The Sultān wished in that year to send him against Uzun Hasan but was persuaded by Mahmūd to send Ishāk Pasha in his place, in the following year he accompanied the Sultān against the Ak Koyunlu, who were finally routed after the Ottomans themselves had suffered the defeat of Beg Bazar In the same year Mahmūd was again dismissed, the reason alleged was a lack of zeal in the pursuit of the fugitives He then retired to the village of Khāss Koy near Adrianople Next year he came to the capital on the occasion of the funeral of Prince Mustafā, this opportunity was taken to calumniate him to the Sultān on account of the intimacy which had existed between Mustafā and Mahmūd Pasha This was sufficient to get him imprisoned in the castle of Yedi Kule and executed a few days later in Rabīʿ I, 879 (July—Aug 1474)

Mahmūd Pasha was one of the most popular grand viziers His name still survives in the mosque which he built at Stambul in 868 (1463—64) on a site originally occupied by a church, in the mosque is the *turbe* of the founder He also erected a *medrese*, a *mekkeme*, a *mekteb*, a well and a *hammām* There is a legendary story entitled *Menākib-nāme i Mahmūd Pasha*, in which his unjust execution is specially emphasised (printed in Fr Dieterici, *Chrestomathie Ottomane*, Berlin 1854), the historian Sadr al-Dīn in his *Tādj al-Tawārīkh* (i 557) also devotes a chapter to the *Wākiʿa-i Mahmūd Pasha* Mahmūd Pasha was the patron of a number of men of letters and scholars, who dedicated their works to him He was himself a poet but it is uncertain whether he wrote under the *takhallus* of ʿAdanī or ʿAdlī There is a *Dīwān* of ʿAdlī (printed Constantinople 1308) which is generally attributed to Sultān Bāyazīd II but Gibb

(*Hist Ott Poetry*, II 25 ff) thinks it should be attributed to Mahmūd Pasha

MAHPAIKER [See KÖSEM]

MAHR (A), Hebrew *Mohar*, Syriac *Mahrā*, "bridal gift", originally "purchase-money", synonymous with *sadāk* which properly means "friendship", then "present", a gift given voluntarily and not as a result of a contract, is in Muslim law the gift which the bridegroom has to give the bride when the contract of marriage is made and which becomes the property of the wife

1 Among the pagan Arabs the mahr was an essential condition for a legal marriage and only when a mahr had been given did a proper legal relationship arise A marriage without a mahr was regarded as shameful and looked upon as concubinage In the romance of ʿAntar the Arab women, who are being forced to marry without a mahr, indignantly reject such a marriage as a disgrace Victors alone married the daughters of the conquered without giving them a mahr

In the pre Islāmic period, the mahr was handed over to the *walī*, i e the father, or brother or relative in whose guardianship (*wilā*) the girl was Here the original character of the marriage by purchase is more apparent In earlier times the bride received none of the mahr What was usually given the woman at the betrothal is the *ṣadāk*, the mahr, being the purchase price of the bride, is given to the walī

But in the period shortly before Muhammad, the mahr, or at least a part of it, seems already to be given to the woman According to the Kurʾān, this is already the prevailing custom By this amalgamation of mahr and sadāk the original significance of the mahr as the purchase price was weakened and became quite lost in the natural course of events There can be no doubt that the mahr was originally the purchase price But the transaction of purchasing in course of long development had become a mere form The remains, however, as they survived in the law of marriage in Islām, still bear clear traces of a former marriage by purchase

2 Muhammad took over the old Arab patriarchal ceremony of marriage as it stood and developed it in several points The Kurʾān no longer contains the conception of the purchase of the wife and the mahr as the price, but the mahr is in a way a reward, a legitimate compensation which the woman has to claim in all cases The Kurʾān thus demands a bridal gift for a legal marriage "And give them whom ye have enjoyed their reward as a wedding gift" (lit *farīda* "allotment of property", Sūra, IV 28) and again "And give the women their dowries voluntarily" (Sūra, IV 3), cf also Sūra, IV 29, 38, V 7, IX 10

The bridal gift is the property of the wife, it therefore remains her own if the marriage is dissolved "And if ye wish to exchange one wife for another and have given one a talent, take nothing of it back" Even if the man divorces the wife before he has cohabited with her he must leave half the mahr with her (Sūra, II 237–238)

Down into the Muslim period the wife was considered after the death of the husband as part of his estate, the heir simply continued the marriage of the deceased Such levirate marriages are found in the Old Testament also Muhammad abolished this custom, which still remained in his time, by Sūra, IV 23 "O ye, who are believers, it is not permitted to you to inherit women against their will"

3 There was an ample store of traditions about the mahr and these pave the way for the theories laid down by the jurists in the fikh books From all the traditions, it is clear that the mahr was an essential part of the contract of marriage According to a tradition in Bukhārī the mahr is an essential condition for the legality of the marriage "every marriage without mahr is null and void" Even if this tradition, so brief and to the point, is not genuine, a number of traditions point to the fact that the mahr was necessary for the marriage, even if it only consisted of some trifling thing Thus in Ibn Māḏja and Bukhārī traditions are given, according to with the Prophet permitted a marriage with only a pair of shoes as mahr and approved of a poor man, who did not even possess an iron ring, giving his wife instruction in the Kurʾān as mahr

A few hadiths endeavour to show that the mahr must be neither too high nor too low From the traditions we also learn what mahr was given in particular cases in the Prophet's time for example, the bridal gift of ʿAbd al-Rahmān b ʿAwf was an ounce of gold, that of Abū Huraira of 10 ūkiya and a dish, that of Shahal b Saʿd an iron ring

In the hadiths we again frequently find the Kurʾānic regulation that in a divorce after cohabitation the woman has the right to the whole mahr

4 According to Muslim fikh-books, marriage is a contract (*ʿakd*) made between the bridegroom and the *walī* of the bride An essential element in it is the mahr or *ṣadāk*, which the bridegroom binds himself to give to the bride The marriage is null without a mahr The jurists themselves are not quite agreed as to the nature of the mahr Some regard it practically as purchase-money (e g Khalil "the mahr is like the purchase-money") or as an equivalent (*ʿiwad*) for the possession of the woman and the right over her, so that it is like the price paid in a contract of sale, while other jurists see in the mahr a symbol, a mark of honour or a proper legal security of property for the woman

All the things can be given as mahr that are things (*māl*) in the legal sense and therefore possible to deal in, that is can be the object of an agreement The mahr may also — but opinions differ on the point — consist in a pledge to do something or in doing something, e g instructing the woman in the Kurʾān or allowing her to make the pilgrimage The whole of the mahr can either be given at or shortly after the marriage or it may be paid in instalments When the latter is the case it is recommended to give the woman a half or two-thirds before cohabitation and the rest afterwards The woman may refuse to allow consummation of the marriage before a part is given

Two kinds of mahr are distinguished

a Mahr musammā, "definite mahr", the amount of which is exactly laid down in the wedding contract

b Mahr al-mithl in which the amount is not exactly laid down, but the bridegroom gives a bridal gift befitting the wealth, family and qualities of the bride This *mahr al mithl* is also applied in all cases in which nothing definite about the mahr was agreed upon in the contract

The mahr becomes the property of the wife and she has full right to dispose of it as she likes In the case of any dispute afterwards as to whether certain things belong to the mahr or not, the man is put upon oath

The Sharī'a lays down no maximum or minimum for the amount of the mahr, but limitations were introduced by the various law-schools, the Hanafīs and Shafi'īs insist upon 10 dirhems as a minimum and the Mālikīs three dirhems The difference in the amount fixed depends on the economic conditions in the different countries where the madhhabs in question prevail

If the man pronounces a divorce, the mahr must be paid in every case if cohabitation has taken place, but the bridegroom may withdraw from the marriage before it is consummated, in this case he is bound to give the woman half the mahr

MAHRA, a land on the southeast coast of Arabia on the Indian Ocean between Hadramōt, the coast of which is inhabited by the Ka'aitī (Ge'ēti), and Zafār, the Arabs however and modern geographers include Zafār itself, formerly the town only and now the country, the old frankincense region [see ZAFĀR], in Mahra, so that Mahra may be said to be the country between Hadramōt and 'Omān (cf al Istakhrī, *B G A*, i 12, 27, Ibn Hawkal, *ibid*, ii 17, al-Mukaddasī, *ibid*, iii 53, Yākūt, *Mu'djam*, iv 700, al Idrīsī, ed Jaubert, Paris 1836, i 48, Ibn Khaldūn [in Kay, *Yaman*, London 1892, p 132]) This connotation of Mahra seems to have been already known to the Greeks of the fourth century B C, Theophrastus, *Hist Plant*, ix 4, 2, numbers among the lands of Arabia which yield spices, along with Saba', Hadramōt and Katabān, a fourth, Μαμάλι (var Μάλι) A satisfactory identification of this land, which would also explain the name has not been made Of the various attempts to explain it, given in the article SABA' in Pauly-Wissowa, *Realencycl der klass Altertumswiss*, coll 1331 *sqq* [cf the article SABA', iv, p 6ª] that which suggests Μαμάλι is a corruption of Μιναῖοι (Μαιναῖα) which Strabo, xvi 768 gives with the three South Arabian kingdoms above mentioned, following Eratosthenes — these two authors represent one original source, Eratosthenes and Strabo are two different sources — is certainly wrong The identification of Μάλι with Mahra proposed by A Sprenger, *Die alte Geographie Arabiens*, Berne 1875, p 92, 263, 266, without however any attempt at proving it and also adopted by Fr Hommel, *Ethnologie und Geographie des alten Orients*, Munich 1926 (I v Muller, *Handbuch der Altertumswissenschaft*, Sect iii, Pt 1, vol i) p 137, is worthy of attention It was naturally to be expected that the botanist Theophrastus, whose duty it was to give as full a list as possible of lands in Arabia producing aromatic plants, should mention the real land of frankincense, Zafār or in a wider sense Mahra, including Zafār On the other hand, it is not to be denied that the mention in Theophrastus of a Mamali or Mali, which is quite unknown, after three well-known names, is remarkable, as it must of course be an important country, fit to be compared with Saba', Hadramōt and Katabān Simply for this reason E Glaser's various attempts to identify it (*Skizze der Geschichte und Geogr Arabiens*, ii, Berlin 1890, p 3, 35 *sq*, 40, 132, 153 *sqq*, 217), not one of which is tenable (cf *Realencycl*, s v Saba', col 1333 and here SABA', iv, p 5ª), may be discarded The passage in Theophrastus has been wrongly interpreted as mentioning Mamali only as the home of the cinnamon plant (see SABA, iv, p 5ª and the literature there given to which may be now added Hommel, *Ethnologie* [= *Grundriss*], p 517, note 2) Although Mahra is not suggested without certain inherent probability, the question still arises how has it come to be called Mamali or Mali, which must remain more or less a puzzle As the first two letters in Mahra and Mali are the same, it may be supposed that there is a corruption in the third letter of Mali The name seems to conceal the Greek transcription of Mahra, which in the form MAPI (from MAPA), was corrupted to MAAI, because it was of course unintelligible to the Greek copyists, or it might have been altered by a learned editor with gemination of the first syllable to MAMAAI, especially as this form might seem to him to be superficially supported by the Μαμάλα κώμη in Ptolemy, iv 7, 5 A further corroborating factor is that Theophrastus' description of the hilly country, where the λιβανωτός grows, with the ὄρος ὑψηλὸν καὶ δασυ καὶ νιφόμενον, from which rivers pour down to the plain and which was visible to sailors from the coast, agrees very well with the description of the χώρα λιβανωτοφόρος ορεινή τε καὶ δύσβατος of the land of Zafār [q v] in the *Periplus Maris Erythraei* § 29 (cf the ὄρη ὑψηλα καὶ πετρώδη καὶ ἀπόκοπα § 32, very probably the Karā mountains), and also recalls Carter's statement that nowhere else in South Arabia is there so much running water as in the frankincense country This undeniable agreement is not affected by the fact that, according to Theophrastus, the frankincense country mentioned by him was in possession of the Sabaeans The fact that he mentions this land as a fourth with Saba', Hadramōt and Katabān and at the same time says that the Sabaeans were lords (κύριοι) of this frankincense country, suggests that the country which was quite a considerable distance from their original home, had passed to Saba' by direct conquest or automatically with the occupation of the

whole territory of some formerly independent power This may have been either its ancient rival Katabān, which, although still an independent kingdom, no longer exercised sovereign rights over the frankincense country and about two centuries later lost its independence to Saba', or the ancient kingdom of Hadramōt, which with the frankincense country was in the time of Juba a part of the Sabaean kingdom, already ruled by the Himyarīs (according to Pliny, *Nat Hist*, xii 52 *sq*, see SABA') and to which, certainly in the time of the Periplus, i e in the Himyar period of the early centuries A D, long after the beginning of the dissolution of Sabaean rule, the frankincense country belonged, but it may however have also done so before Saba' became a great power Hommel assumes (*op cit*, p 140 and notably p 655) quite a close ethnic connection between the Hadramōtīs and the Minaeans and he definitely says that the Hadramōtī Minaeans were those who took possession of the frankincense land, which geographically also appears most natural No convincing argument can be brought against the evidence of Theophrastus that in his time or in that of his authority, perhaps Andrœsthenes (cf *Realencycl*, s v Saba', col 1306), the frankincense country was not independent, but belonged to Saba', so that the latter was already a great power, which possessed the hegemony of South Arabia and numbered its weaker neighbours among its feudatories The frankincense land only became independent early in the Christian era That the campaigns of the Sabaeans extended considerably to the east may be deduced from the Sirwāh inscription (Glaser, N° 1000) (cf Hommel, *op cit*, p 658 *sq*) On the unjustified alteration in the text (Σάρα) in Theophrastus, see SABA', iv 6a (to the literature there quoted may now be added Hommel, *op cit*, p 516 *sq* and 653 *sq* [in addition to 138]) To support the assumption that the Katabānians occupied the frankincense land, it is not necessary to presume Gebbān as a later name of Katabān (in allusion to the Gebbanitae in Pliny, vi 153, cf MA'ĪN, on Glaser's chronological error in the period of Katabānian occupation of the frankincense country, see ẒAFĀR, N° 4) The expression *l amanat* in the longer titles of the south Arabian kings of the last epoch means, according to Hommel in *Handbuch der altarabischen Altertumskunde*, ed by D Nielsen, Copenhagen–Paris–Leipzig 1927, p 96, note 5, "perhaps the frankincense coast as the "southland" of Hadramōt", it might well be interpreted as a general name of the southern coastlands, at a later date still included in Yemen, in contrast to the lands of Saba', Dhū Raidān and Hadramōt preceding it in the title

Sprenger's remark, *Das Leben und die Lehre des Mohammad*, Berlin 1865, iii 437 "The Mahrites were called Sachalites by the Greeks", is misleading, the land around the Sachalite Gulf is in the conception of the authors of the Periplus and of Ptolemy not only Mahra, but also the land lying east of it and especially the part of al Shiḥr in the wider sense lying west of it, the land of the Ka'aitī (cf the article IOBARITAI in *Realencycl*) [The *regio turifera* in Pliny, xii 52 (vi 161) is probably to be understood as Ẓafār in the narrower sense but may include Mahra to which alone Glaser refers it (*Die Abessinier in Arabien und Afrika*, Munich 1895, p 125, see at the beginning) The ἐξ Ἀραβίης used in Herodotos, ii 73, in the story of the phoenix is practically a reference to Mahra (Hommel, *op cit*, p 138) although it is not mentioned by name On the Ἀβασηνοι in Stephanus, see below]

The inscriptions which, according to Pliny, *Nat Hist*, vi 150, are inscribed on stone pillars on an island off the South Arabian coast (cf the article RHINNEA in the *Realencycl*) cannot, as Ritter for example (*Erdkunde*, Vol viii, Sect i, Pt xii, Berlin 1846, p 290) thought, be attributed "to the Mahri who were settled in the neighbourhood of Cane" but were probably Minaean (or Nabataean) The position of the emporium of Κανή which according to the *Periplus*, § 27 and Pliny, vi 104 belonged to the frankincense country and is also mentioned by Ptolemy, vi 7, 10 cannot be definitely ascertained Recently several scholars, following Glaser, *op cit*, p 175, C Landberg, *Arabica*, iv, Leyden 1897, p 75 *sq* and *Etudes sur les dialectes de l'Arabie Meridionale*, i (Hadramoût), Leyden 1901, p 196 and earlier writers (see the list in *Realencycl*, s v Saba, col 1330), have again expressed the view that this port is probably to be located at Ḥiṣn al-Ghurāb (Nielsen in *Handbuch*, *op cit*, p 8) while Sprenger, *Geographie*, p 82 *sq* had placed it at Bāl Hāf Since Sprenger, nothing new has been produced in favour of the old view and against his localisation In favour of the latter is the description in the *Periplus*, § 27 according to which two uninhabited islands, the Ὀρνέων νῆσος ("Bird Island") and Τρούλλας were 120 stadia distant from Kane These, according to Sprenger, are the islands of "Halany and Gibus, also called al-Sikka" (to be written Hillāniya and Kanbūs also called Sakha, see Landberg, *Arabica*, iv 66) Their mention makes certain the reference to Bāl-Hāf as the opposite point on the coast from which they are 110 and 130 stadia distant respectively, but not to Ḥiṣn al Ghurāb which, according to Carter is only a mile from Hillānya Landberg himself tells us that the island of Kanbūs seems never to have been inhabited The distances from Kane adduced by Glaser from Ptolemy, which besides varying in the manuscripts, naturally yield nothing really convincing in favour of Ḥiṣn al-Ghurāb (particularly of "Ra's al-'Asida, the equivalent of Cape Kane, west of Kane", according to Glaser, *op cit*, p 216, but this promontory of al-'Asida is at Bāl-Hāf!), these measurements can equally well be made to fit Bāl-Hāf H v Maltzan, *Reise nach Südarabien*, Brunswick 1873, p 225 *sqq* who could not yet have known of Sprenger's view, had already called attention to the *l n'* (he transcribes it Cane) occurring in the (third) smaller inscription of Ḥiṣn al-Ghurāb (a reproduction in Landberg, *Arabica*, iv, Pl ix), and connected it with "Cane Emporium", J H Mordtmann, *Z D M G*, xxxix (1885), 233 likewise explained it as Κανή, the harbour of the citadel of al Ghurāb Even if we readily grant that the uncertain word in the text of the inscription, most recently and probably definitively published and translated by B Moritz in *W Z K M*, xxxiv (1927), p 72, really reproduces the name Κανή, this does not prove, as Sprenger, *op cit*, p 83 has pointed out, that the ancient seaport lay on the present rocky point of Ḥiṣn al-Ghurāb It must also be remembered that the names of many Arabian harbours have in course of time been transferred to other places in the vicinity, e g Ẓafārī [q v, N° 4] and Mirbāt Landberg's

objection (*Arabica*, IV 76) that the *Periplus*, if Κανή had been Bāl-Hāf, would not have said (§ 29) that after Kane came another gulf running far inland, the Σαχαλίτης, but would have mentioned the harbour of Bīr ʿAlī to the east of it, is not a cogent one The *Periplus* gives a list of the most important gulfs of South Arabia and the comparatively small bay of Bīr ʿAlī might easily be overlooked behind the broad Sachalite gulf which runs far inland, especially as the use of the term Σαχαλίτης is a fairly elastic one (cf the article IOBARITAI in *Realencycl*) and the list of the places on the coast in the *Periplus* is not as a rule scientifically complete and exact but sometimes even gives wrong names (e g Μόσχα), to say nothing of the fact that in many places on the South Arabian coast, the harbourage conditions have changed since ancient times Landberg himself (*op cit*, p 65) observes that the promontory of Hisn al-Ghurāb must have had a different appearance in earlier times M Hartmann, also, who had previously, *Die arabische Frage* (*Der islamische Orient*, II), Berlin 1909, p 175, 371 declared for the older views, said later in the very same work, p 418, 614 that he had now adopted Sprenger's opinion The *k-n-*ʾ in the inscription is still not sufficient ground for the conclusion that the identification of Κανή with Bāl-Hāf should be rejected in opposition to Sprenger, who himself appreciated the force of this evidence The form of the name used by Sprenger, Bâ-l-Hâff (Būl-Hāf), is incorrect however (as also is Glaser's Bā el-Haff, cf Landberg, *Hadramoût*, p 195), *bā* is equivalent to *ibn* But Sprenger rightly recognised that in this name there is preserved a memory of a son of al-Hāf, the son of Kudāʿa and ancestor of the Mahra (al-Bakrī, I 19, *Tādj al-ʿArūs*, III 551, see below)

The Arab geographers had no accurate knowledge of Mahra, nor of Hadramōt, modern explorers have found out much more about these regions Al-Hamdānī, *Sifa Djazirat al-ʿArab* (ed D H Müller, Leyden 1884), p 45 mentions al-Asʿā — which Landberg *Hadramoût*, p 158, wishes to restore to al Ashghā from manuscript preferences — as the capital of Mahra, which, according to Glaser, *Abessinier*, p 87 stretches to the district lying roughly between Damkōt and Rās Darbat ʿAlī, almost in the centre of the modern coast region of Mahra On p 53 he says, as do Ibn al-Mudjāwir and others after him, that the Mahra people also inhabit Sokotrā (on the conversion to Christianity of the mixed population of Sokotrā, see Yākūt, *Muʿdjam*, III 102, al-Masʿūdī, *Murūdj*, III 36 *sq* etc , further particulars in the article SOKOTRĀ) On p 51 *sq*, he talks of the Mahra tribes and their fighting and on p 86 *sq* of the road from Hadramōt to Mahra and tells us about the tomb of the Prophet Hūd This sanctuary on the frontier between Hadramōt and Mahra is still held in particular veneration and is much visited by the inhabitants of these two lands (a text from Hadramōt showing this is given in Landberg, *Hadramoût*, I 432 *sq*) — The Arab geographers include Mahra in the Yemen, e g Yākūt, *Mushtarik*, p 394, see the reference to the Mikhlāf Mahra in Yākūt, *Muʿdjam*, IV 700, who in this, his main reference, also repeats the view that Mahra is the name of a tribe and that the correct form is Mahara (a Balād Maharāt in Mahra is mentioned on IV 697) It is sometimes more accurately defined as "in extreme (furthest) Yemen", e g Yākūt, *Muʿdjam*, I 280, II 510 (= *Mushtarik*, p 166), III 366, IV 345, 495, *Mushtarik*, p 415 The Arabs speak of a Nadjd in the land of the Mahra (Yākūt, *Muʿdjam*, I 280, III 681, IV 345, 495, 697, *Mushtarik*, p 394, 415, cf al-Mukaddasī, *op cit*, p 98, al-Tabarī, ed de Goeje, I 1980) This is the Nadjd (or Nadjdī) which Carter also mentions as a district in which the frankincense especially flourishes, the highland country about two days' journey north of the coast within the latitude which Carter has also defined, although too narrowly [cf ZAFĀR] The Mahra are also said to be inhabitants of the coastland of al-Shihr [q v], for example by al-Masʿūdī, I 333 and Yākūt, *Muʿdjam*, IV 387 and we find the land of Mahra is called al-Shihr (al Istakhrī, *op cit*, p 25 = Ibn Hawkal, *op cit*, p 32 *sq*, al-Idrīsī, I 48, Ibn Khaldūn, ed Kay, *op cit*, p 132, cf al Hamdānī, *Sifa*, p 51 and al Bakrī on *al-Asʿā*, the statement in Rommel, *Abulfedae Arabiae Descriptio*, Gottingen 1802, p 32 *sq*, is obscure) Al-Shihr however in the later and modern use of the name is applied to the coast not only of Mahraland proper but of the land of Zafār also, that is of the frankincense country generally, i e the "frankincense coast" which is identified by many modern writers with the Mahra country but at the same time includes the part of the Hadramōt which adjoins on the west (cf Ibn Khaldūn, *op cit*, p 132), i e in general the name of the shores of the Gulf of the Moon, finally in a still wider sense, the name of the whole coast between ʿAden and ʿOmān

Al Istakhrī, *op cit*, p 25, and almost in the same words, Ibn Hawkal, *op cit*, p 32, also al-Masʿūdī, I 333 *sq*, al Idrīsī, I 48, 150, Abu 'l-Fidā' (see Rommel, *op cit*, p 33), Ibn Khaldūn (*loc cit*) describe Mahra as a desert in which there are no palms and no agriculture and the inhabitants therefore are not acquainted with bread Carter, like these Arab writers, also emphasises the contrast between the frankincense region and the dreary desert west and east of it and more recent travellers like Bent agree with him The only possessions of the inhabitants, according to these authorities, are goats and very fine camels, particularly renowned for their swiftness, mentioned also by al Hamdānī, *op cit*, p 100, 201, Ibn Hishām, *Sīra*, ed Wustenfeld, p 963 and the poets as well as the *Lisān al-ʿArab*, VII 36, *Kāmūs*, I 455 and *Tādj al-ʿArūs* (*Mahriya*, the *Lisān* quotes three plural forms *Mahāriyu*, *Mahārin*, *Mahāriā*, on the first cf Howell, *Grammar*, I 997, 1000) The camel which Muhammad chose for himself out of the booty after the battle of Badr had been purchased in Mahra, his governor in the Yemen procured Mahra camels for the Caliph Sulaimān b ʿAbd al-Malik (714—717) (al-Kazwīnī, *ʿAdjāʾib*, ed Wustenfeld, II 41) Ibn Hawkal (*ibid*, Ibn Khaldūn, *op cit*, cf al-Idrīsī, I 48) adds that the Mahra live on meat, milk and its products, and fish (cf al-Mukaddasī, *op cit*, p 100) and that they also feed their camels and goats on fish Yākūt, *Muʿdjam*, IV 700, records a note that the Mahrī camels do not take their name from the land but from the ancestor of the Mahra's, Mahra b Haidān (cf al-Djawharī, also *Lisān*, *Kāmūs* and *Tādj*, *loc cit*, and Rommel, *op cit*, p 33) According to Landberg, *Hadramoût*, p 87, and others the Mahrī riding camels have for long had a bad reputation, as they are really not swift, the best of this kind are said to be those of the Banū

Subaih (N E of ʿAden) and of the Dhiyāb It is doubtful whether we may assume with Landberg that their fame takes us back to a period when the Mahra occupied a great part of South Arabia In any case, I Hirsch, *Reisen in Sud Arabien, Mahra Land und Hadramoût*, Leyden 1897, p 77 refers to the "celebrated Mehri riding-camels" which in his time were called *matiye* in al-Shihr

The above mentioned authors and al-Mukaddasi, *op cit*, p 98 also record that there was frankincense in the country which was exported Al Idrīsī lays stress on the commerce which was one mode of livelihood of the Mahra Parts of their land are also reckoned to ʿOmān In 226 (840) Mahra was for a short time tributary to ʿOmān Ibn al-Mudjāwir, who visited Mahra and Sokotrā in 618 A H says that the Mahra also inhabit the mountainous country of Zafār and the islands of Soḳotra [q v] and Masira In the division of the Yemen into two parts, Tihāma and Nadjd, according to al-Muḳaddasi, *op cit*, p 53, 70, Mahra with the town of al-Shihr is a dependency of Nadjd (see Sprenger, *Die Post- und Reiserouten des Orients, Abhandl fur die Kunde des Morgenl*, iii 3, Leipzig 1864, p 109)

Yākūt (e g *Muʿdjam*, i 154, 280, ii 175, 510 [= *Mushtarik*, p 166], 881, iii 366, 681, 691, iv 345, 495 [= *Mushtarik*, p 394], 697), mentions places in or near Mahra and distances on roads from and to Mahra are given by Yāḳūt *Muʿdjam*, iv 626, 700, al Istakhrī, *op cit*, p 27 *sq* (= Ibn Hawkal, *op cit*, p 17, 33 *sq*) — According to Ibn Khaldūn, *op cit*, p 132, Hadramōt and al Shihr (Mahra) were under one king, in olden times however, al-Shihr had been the land of the ʿĀd, the predecessors of the Mahra who had come from Hadramōt In the legends of the ʿĀd and the prophet Hūd, a part is played by the land of Mahra, poor in water, which adjoined the country of this mythical people (al-Tabarī, ed de Goeje, i 233 *sq*), the Mahra call the interior of their country al-Ahkāf (cf Landberg, *Hadramoût*, p 157), where according to tradition (see al Masʿūdi, iii 106, 271 etc) the home of the ʿĀd was located [cf WABĀR] Mālik b Himyar al Shihr is said to have been the first of the Kahtānis to settle there and he was succeded by his son Kudaʿa, whose possessions were limited to Mahra and he in turn by his son al Hāf, whose great grandson was Mahra b Haidān b ʿAmr (Yākūt, *Muʿdjam*, iv 700, Ibn Khaldūn, *op cit*, p 132 etc, cf above) In the early days of Islām (year 12 A H), Mahra was one of the rebellious districts against which Abū Bakr and his generals had to wage war, al Tabarī, i 1881, 1929 (on the subjection of the Musailima), p 1963, 1976 *sq* (al-ʿArfadja's campaign against Mahra), p 1980 *sq* (victorious campaign of al-ʿIkrima against Mahra), the conquest of Mahra was much facilitated by schisms among the enemies of Islām in the country The Mahris participated in the great campaign of conquest which began under the Caliph ʿUmar I, and some settled with other South Arabians in al-Fustāt where a street (*Khiṭaṭ mahra*) bore their name (cf F Wustenfeld, *Die Geographie u Verwaltung von Agypten nach dem Arabischen des Abu 'l-Abbâs Ahmed ben ʿAli al Calcaschandi I, Abh Kgl Ges d Wiss zu Gottingen*, xxv, 1879, p 51 *sq*, al Kalkashandi, *Subh al Aʿshā*, iii, Cairo 1914, p 331)

Of modern explorers F Fresnel was the first to bring back accurate information about Mahra In 1837 he obtained some information about conditions along this coast through his intercourse in Djidda with merchants from Hadramōt or Mahra (in *Journ As*, 3rd Ser, 1838, vol v 507 *sqq*, vol vi 529 *sqq*), he gave an account of Gishin, the capital of Mahra and the Sultān whose authority did not extend beyond the walls of the city His description of the boundaries of the country was incorrect Much more detailed and accurate were the topographical data collected by Captain S B Haines, who was appointed in 1834 to make an astronomical and nautical survey of the South Arabian coast from Bāb al-Mandab eastwards (as far as Rās al-Hadd) In his *Memoir of the South and East Coast of Arabia* (in *J R Georg Soc*, London 1845, xv/i 104 *sqq*), he describes the western boundary of Mahra, the Wādī Masile, which is rich in water and well tilled by the Mahra and contains many villages lying among palm groves He then gives his short notes on the town of Sēhūt east of the Wādī and corroborates Fresnel's account of Gishin about which he is the first to give fuller details C Niebuhr, *Beschreibung von Arabien*, Copenhagen 1772, p 287, had already mentioned "Keschin" and the independent shaikh there, who was also lord of Sokotrā, he also gives a plan of the harbour from a drawing by an Englishman, whom he had met in Bombay (Pl xvii) Haines observes, like later writers, that Gishin is only a wretched little village of at most 300—400 inhabitants, which consists mainly of reedhuts and has only a few stone houses and that the trade there is very slight He also gives some details of the Mahra people and its tribal divisions, its customs and dress, and in confirmation of Fresnel's observations their attitude to Islām, which only the chiefs profess, while the people are indifferent to the Kurʾān and are not even able to perform the daily salāts He ends by giving the promontories and villages on the coast east of Sēhūt as far as the eastern frontier of Mahra towards Zafār The English officers cooperating in this survey of the coast visited only a few points on it, which were practically confined to the Gulf of Gishin because their duty was really confined to surveying the coast west of Mahra Valuable information about the Mahra is given in H J Carter's *Notes on the Mahra Tribe of Southern Arabia with a Vocabulary of their Language*, in *J R A S*, Bombay Branch, July 1847, vol ii, p 339 *sqq* Maltzan combined ethnological research with his study of the Mahra language (in the introduction of his edition of *Adolph von Wrede's Reise in Hadhramaut*, Brunswick 1873 [the preface is dated 1870], p 18 *sqq*, and 28 *sqq*, and in his article cited below) but regarding the country itself which he never entered, he knows no more than the English naval officers The extracts in Ritter, *op cit*, xii 625 *sqq*, and 635 *sqq* he says, are sufficiently accurate according to his own information The coastlands east of Wādi Masile to Rās al-Hadd, i e Mahra, Zafār and ʿOmān he however calls the great "terra incognita of Oceanic Arabia" "The names Mahra and Gâra (also written Gara)" by which the two countries on the coast are distinguished, he described as "not clearly defined" (*op cit*, p 28) We now know that these are the Mahra and Kara (the hill-people of Zafār) and the language of the latter is Karawi (Grawi) or Shhawri, in modern times also called Hakili, or Shehrāt [cf ZAFĀR] Maltzan recognised

that the two peoples are fundamentally different in language, mode of life, and religion from the people of Central Arabia

Glaser, *Skizze*, II, p 26, wrongly identifies Μεινᾶι in Strabo, XVI 768 (quoting Eratosthenes) with Mahra (*Realencycl*, s v *Saba*, 1334 *sqq*) On p 20 he gives the land of Hadramōt (after the fall of the "Abyssinian-Arab kingdom") too great an extent (as far as Mirbāt) On his note that the Ἰωβαρῖται of Ptolemy are the hill-peoples of all Mahra cf *Realencycl*, s v IOBARITAI — As a result of the enquiries made by him on his travels in Arabia, he states (*Abessinier*, p 87) that there are now three different divisions of the Mahra tribes the eastern is called Shehrāt or Zair and inhabits, according to his information, the coast from Rās Nūs (55° 17′ East Long from Gr), according to another authority from the island of Masīra, to Rās Darbat ʿAlī (53° 3′ East Long), the western that to which the name Mahra is generally applied, stretches from Rās Darbat ʿAlī to Sēhūt, while the third group inhabits Sokotrā (cf above on Ibn al-Mudjāwir) — L Hirsch gives not a little new and valuable information about the people of the southwestern coast His account of Mahra is based on his ten days' stay (1893) in Gishin (or Gishn, transcribed Kishin or Kishn, Hirsch writes sometimes [*op cit*, p 48, 50, 52 *sq*] Gischin and sometimes Kischin, like W Hein and others [p 2 etc], he gives "Käschen" in the Index as the Mahrī pronunciation which is also given by Jahn [see below]) Of the wretched little capital of the country, he tells us, practically agreeing with Haines before him and Hein and Bent after him, that it consists almost entirely of isolated mudhouses in a ruinous condition and a few ragged tents and reedhuts which, being scattered aimlessly over a wide area, leave irregular wide open spaces between them Even the palace of the Sultān whose rule over Gishin and Sēhūt and other places on the coast is quite nominal, as he can do nothing without the approval of his Beduins, is a broken down mud building, there is said to be only one building in the town that is kept clean, the house of another Sultān According to Hein, the most imposing of the mud houses, which are not built according to any system, is that occupied by the reigning Sultān's bodyguard There is nothing like a regular market or regulated trade there Even the most rudimentary necessities of life are acquired by barter and money is unknown From the government buildings a little mosque may be seen While Maltzan, corroborating Fresnel and Haines, pointed out (*Wrede's Reise*, p 29), that the Mahra have long been distinguished as heretics from the great majority of the orthodox and indeed can hardly be called Muslims at all, Hirsch says that at least in Gishin and Sēhūt, the Mahra are no less attached to Islām than any other Arabs, he saw them regularly performing their *ṣalāt* This contradiction may perhaps be explained by the observation already made by Haines on the same question According to Hirsch the ruling Sultāns or Shaikhs are pure Arabs and not Mahra's In any case the attitude to Islām of Beduins living north of the coast territory is quite superficial The Sultān of Gishin belongs to a dynasty which has also a kind of suzerainty over Sokotrā The Mahra coast, like Sokotra is under British suzerainty Hirsch (p 76 *sq* and on his map) gives the names of several places on the coast east of Gishin Th Bent (*Southern Arabia*, London 1900, p 280) notes the striking contrast between the sandy plain of Gishin, which he did not succeed in reaching, and the fertile stretch of the coast of Zafār Shortly before his arrival in Zafar (in the winter of 1894—1895) the wālī residing in al-Hāfa had been fighting with the Mahra tribes The coast-town of Rakhyūt, west of Raisūt, has a little fort to defend it from the Mahra Bent gives a more detailed account of the Mahra who live in Sokotrā [q v]

The statement in A Jahn (*Sudarabische Expedition* of the Vienna Academy of Sciences, III, 1902, *Die Mehri-Sprache in Südarabien*), p 1 "The Mehri is the language of the South Arabian coast between Hasuwel and Dafâr which is called *bilad mahra* by the Arabs" — is misleading Haswēl lies roughly in the centre of the Mahra coast in 50° 9′ East Long, N E of the capital Gishin — W Hein, who was sent out by the Vienna Academy to continue the work of collecting specimens of the language begun by the South Arabian expedition, arrived in Gishin with his wife in 1902 During his stay of 66 days, during which his work was much impeded as he was interned most of the time, he collected, among other information, statistical and topographical data for the adjacent parts of the coast and also for the interior (see his article, *Ein Beitrag zur Statistik Südarabiens*, in the *M Geogr Ges*, Vienna 1903, p 219 *sqq*) In D H Muller's preface to vol IX of the South Arabian Expedition, introductory remarks to W Hein's record of his journey are given (p VIII *sqq*) According to him Gishin is the name of the whole stretch of country along the coast from Rās Shirwēn to Rās Derdja for a breadth of 5 to 15 miles About 2 miles to the north of the coast a ridge runs parallel to it Immediately on the coast lie the dhura fields of the district of Maghlōl, behind it, the centre Gishin, the district of Rihbēt, in which the Sultān lives, east of it the most important district Yentūf, west of Rihbēt Salāla, the western boundary of which is the Wādi Ghabūri Further inland lies Durūb, where prominent Sultāns have their homes Hein clears up many statements by Hirsch and gives further topographical details about the surroundings of the capital Gishin has an area of about 80 square miles Hein estimated the permanent population at 2,386, Hirsch put that of the capital and its immediate neighbourhood at about 500

From the results of exploration so far, it appears that the country of Mahra stretches from Wādī Masile eastwards to Rās Darbat ʿAlī i e from 51° 13′ to 53° 3′ East Long and between 16° and c 17° 30′ N Lat The Mahra rule the lower course of the main wādi which runs through Hadramōt No European has yet penetrated into the interior of the country, their presumed original home, it was however equally unknown to the Arab geographers

In the coast district of al Shihr (Mahra to ʿOmān) old south Arabian dialects are still spoken, which differ essentially from Arabic and indeed from Semitic in general The Mahra as a rule speak very little Arabic Al Istakhrī, *op cit*, p 25, Ibn Hawkal, *op cit*, p 32, al-Idrīsī, I 48, 150 who identifies it with the old Himyarite language, Ibn al-Mudjāwir [cf SOKOTRĀ], Abu 'l-Fidā' (see Rommel, *op cit*, p 33) and others describe it as unintelligible to Arabs Al-Hamdānī also (*Ṣifa*,

p 134) calls their language a jargon and al-Masʿūdī, i 333, points out differences between it and Arabic Fresnel was the first, apart from early vague reports of a peculiar language in Hadramōt, to establish the existence of a hitherto unknown language quite different from Arabic "in the interior of Yemen towards Hadramōt" He had become acquainted with it from natives who called it Ehkili This name however he gave (*Note sur la langue Himyarite*, *J A*, 1838, 3rd Ser, vi 79 *sqq*) not only to Mehri or what he considered as such but to other South Arabian dialects and, as Maltzan has already pointed out, to Himyarite also, although we must confess that this (or Sabaean) has several features in common with Mehrī Ritter, *op cit*, xii 46 ff, 254 and others followed Fresnel's error, including Sprenger, *Das Leben und die Lehre des Mohammad*, iii 437, it is however quite an old mistake, it was made by Ibn Duraid (see Wustenfeld, *Genealogische Tabellen*, Register, p 280) whom Sprenger follows (on al-Idrisī see above) Haines (see above) said that the language of the Mahra was strange to the Arabs With these earlier and recent statements may be compared Landberg's observation given by Hommel, *Ethnologie*, p 153, that, "according to the statements of Arabs, Beduin tribes of the great desert of el-Rubaʿ el-khālī north of Hadramōt and the frankincense coast speak a language which the ordinary Arabs do not understand", this, according to Hommel, could best be explained if a Mahra dialect were spoken there M v Oppenheim (*Vom Mittelmeer zum Persischen Golf*, Berlin 1900, ii 332) was told that in el-Rubʿa el-khalī lived people who spoke a language unintelligible to the Arabs and he supposed that this was Mehrī After Fresnel, Carter (see above) studied Mehri and particularly Maltzan (*Ueber den Dialect von Mahra*, *Z D M G*, xxv [1871], 196 *sqq*, *Dialectische Studien über das Mehri*, ibid, xxvii [1873], 225 *sqq*, *Dialect von Mahra*, ibid, p 252 *sqq*) He was the first to give scientific proof of the difference between this language and Arabic in vocabulary and grammar He also classed Mahra and Kara together as Ehkili and describes it as a modern dialect of old Himyarite, from which he said it was descended through an unknown intermediary He called attention to the similarity with Ethiopic and its modern forms, Geʿez and Amhārīc, and presupposed a homogeneous group distinct from Kurʾānic Arabic (see also his edition of Wrede's *Reise*, p 30 ff) In Sprenger's belief (*Geographie*, p 268), the Semites of Ethiopia are of Mahrī origin

Maltzan's studies in spite of their defects were most valuable preliminary work Glaser was the first to define more accurately the limits within which Mehri was spoken (*Abessinier*, p 87) Fresnel, Maltzan and Glaser had not been in Mahra or Ẓafar, but they ascertained the existence of the two dialects Fresnel in Djidda, Maltzan and Glaser in ʿAden (Glaser, *Abessinier*, p 184) The latter states (*Skizze*, ii, p 96) that the Hakilī live east of Hadramōt and western Mahra (on the form of the word cf Hommel, *Ethnologie*, p 235), and their language is called Shehrāt, while the dialect of the territory west of it is "Mahrī (certainly not Ehkilī!)", similarly on p 178 *sq* In his *Abessinier*, p 185, also he identifies the Karā people with the Hakili [as does Hommel, *op cit*, p 153, who says "*krā* (villages) is the Arabic name for the native tribe of Hakilī, whose language is called Shehrāt"] Hakilī is the name given by Glaser (*Skizze*, ii, p 95) to the inhabitants of Mahra whose tribal name in the form Ehkili, Fresnel took for the name of the language spoken there and thus introduced it into European philological literature Landberg's opinion (*Arabica*, v, Leyden 1898, p 153) that the name Ehkili is "toute a fait juste a coté de *la vraie forme* Hak[i]li", is contradicted by Hirsch's testimony (*op cit*, p 52, from Sēhūt) that the name Ehkili applied by European scholars to Mehrī is unknown there and simply means "barbaric, unintelligible" Hommel records (*op cit*, p 153) that Glaser had interesting specimens of the Karā dialect and of Mehrī and Sokotrī, but these have not been published

Glaser (cf *Skizze*, ii, p 20, 96, 181 *sq*, 246, 503, *Abessinier*, p 84 *sqq* and Hommel, *Ethnologie*, p 12, 148, 150 *sqq*) further developed these ideas of Maltzan on the South Arabian-Ethiopic group of languages According to the latter, the Ethiopic alphabet came from the Axum inscriptions and that of the later literature in the Geʿez language from a variety of the alphabet of the South Arabian inscriptions, once common in the Mahra country and the frankincense land in general was the ancestral home of the Semitic Abyssinians and Amhārs Against the view that the name of the latter is a plural of Mahra, it is sufficient to quote the form Amkhār (Hommel, *op cit*, p 152, N⁰ 182) There is no reason to doubt contacts between Mehri and Ethiopic (Hommel, p 153) That in ancient times members of the people called Habashat in the South Arabian inscriptions (cf Glaser, *Skizze*, i, p 25—27 and *Abessinier*, p 28) were settled in Arabia is suggested by the mention of the Ἀβασηνοί in Stephanus Byzantinus s v from Uranius' *Arabica* (μετα τους Σαβαίους Χατραμῶται, Ἀβασηνοί) and the Ἀβισσα πόλις in Ptolemy, vi 7, 11 (in Ẓafār, q v) From the first passage, Glaser, *Abessinier*, p 88 has concluded that the *Abasenoi* lived east of Hadramōt, while in *Skizze*, i, p 26 he had previously supposed that by the land of the *Abasenoi* was understood the whole coast from eastern Hadramōt to Mahra and islands lying off it his further identification, which however had been suggested by his predecessors, of the *Abasenoi* with the Abyssinians (cf *Sabaische Denkmäler* by J H Mordtmann and D H Muller, Vienna 1883, p 40, where attention is called to the Ahbashān of the inscriptions) is however worthy of attention C Conti Rossini in his article *Sugli Habasāt* (*R A L*, Vol xv, Ser 5ª, 1906, p 39—59) has however shown that the old home of the Habashat of the South Arabian and Axumite inscriptions was in the southwest of Arabia and on the plains along the coast west of Sanʿā', roughly between Luhaiya and Zabīd In the *Abasenoi* of Uranius, Rossini rightly sees only an isolated section of this people or a military settlement Glaser moreover (*Skizze*, i, p 27) had at once identified the people Σωλατε mentioned in the Monumentum Adulitanum (cf D H Muller, *Epigraphische Denkmäler aus Abessinien*, *Denkschr Ak Wiss*, xliii, p 5, 7 *sq*) with the Mahra and the people of the islands off the coast, which cannot at all be considered proved In any case one cannot draw any deductions from the spread of Mehrī regarding the extent of an old Habasha kingdom (with Glaser, *Skizze*, p 179) nor assume that as late as 100 B C the kings of Habashat

were established in the land of Mahra (Hommel, *Ethnologie*, p 151)

D H Müller and his collaborators were the first to collect and investigate texts in the Mahra language in a systematic and comprehensive fashion In Vol IV of the *Sudarabische Expedition*, Vienna 1902, *Die Mehri- und Soqotri-Sprache* (I) he published Biblical texts, stories, poems and proverbs, which he collected for the most part on the Swedish steamer placed at the disposal of the expedition from the mouths of natives, who had been taken on board in ʿAden and Sokotrā For Mehrī in particular, he had a single authority, the same man as Jahn had In the third volume of the same collection appeared *Die Mehri-Sprache in Südarabien* by A Jahn, texts and glossary, Vienna 1902 On these two works cf the brief review by Glaser, *Zwei Wiener Publikationen über den habaschitisch puntischen Dialekt in Südarabien*, *Beilage der Münchener Allgemeinen Zeitung*, 1902, N⁰ 186 and 187 of 16th and 18th August, and the very thorough and expert criticism by Landberg, *Die Mehri-Sprache in Südarabien von A Jahn und D H Müller, kritisch beleuchtet*, Leipzig 1902 (Vol II ed by D H Muller, *Soqotri-Texte*, Wien 1905, forms Vol VI of the collection)

The already mentioned traveller W Hein had in 1902 in Gishin with the assistance of various natives collected Mehrī and Hadramī texts He died in 1903 before he was able to put his material into its final form, D H Muller edited and published it in vol IX of the collection (*Mehri and Hadrami-Texte*, Vienna 1909) Some of these texts are also included in vol VII, *Shauri Texte* (III) by D H Muller, Vienna 1907 and supplied with Shhawrī and Sokotrī parallels

M Bittner's grammatical studies in Mehrī are full of matter and excellent in method (see *Bibl*) The modern South Arabian dialects in spite of some features in common with Sabaean cannot be explained as daughter-languages and the last surviving relics of the South Arabian language which is found in the Sabaean and Minaean inscriptions (Jahn, *op cit*, p 1, see also SOKOTRĀ) In them, especially Mehrī and Sokotrī, we can at most recognise with Hommel, *op cit*, p 152 "a daughter language of south Arabian dialects formerly spoken there (in Mahra-land and on Sokotrā)", a pronouncement to which Maltzan had already come very near On the other hand Glaser went too far when he described Mehrī and Sokotrī as remains of the oldest "Puntic" Arabic or (*Das Weihrauchland und Sokotra*, *Beilage der Münchener Allgem Zeitung*, 1899, N⁰ 120 and 121 of May 27 and 29) as descendants of the old language of Habashat from which Ethiopic and Amharic are also said to come (see Hommel, *op cit*, p 153, note 1 and 4 and in Nielsen's *Handbuch*, p 91)

According to Vollers (*Z A*, XXII 223) the South Arabian dialects go back to the time of the settlement from ʿOmān, the immigrant Azd, not long before the coming of Islām, had occupied Mahra from ʿOmān and influenced its language by their dialect So early as al-Masʿūdī, I 333 we find the Mahra described as a mixed people Glaser (*Skizze*, II, p 188 and 96) also speaks of the influence of eastern and north eastern peoples on the Mahra language, but he wrongly ascribes to Parthian and Indian elements "the notable corruption of the Arabic language in the district of Mahra This" hypothesis is in any case sufficient to help to explain the similarity of ʿOmānī to the neighbouring dialect of Zafār As regards Mehrī, the possibility of older and deeper causes for its fundamental divergence from Arabic must be taken into consideration That the foundations for the modern South Arabian dialects were laid not much before the coming of Islām is not probable The Mahra may, as has already been suggested, be the remains of an original population, which was driven into the inhospitable south from more habitable territory by later immigrations of Arab tribes Even now, as Glaser, *Skizze*, p 187 tells us, the whole area in which Mahra is spoken is becoming more and more Arabic because no foreign people is now predominant in these regions, but traders who are mainly Arab The cultural level of the Mahra is very low They have never played a part of any note in history

Bibliography The Arab authors and the modern travellers, whose works come into consideration have been mentioned in the context with bibliographical references (Fresnel, Haines, Carter, Maltzan, Sprenger, Glaser, Hommel, Landberg, D H Muller, Hirsch, Hein, Jahn) We may further add Hein, *Vorläufiger Bericht über die Reise nach ʿAdn und Gischin*, in *Anz Akad Wien*, XXXIX, 1902, of 18th June, 2 *Südarabische Itinerarien*, *M G G W*, LVII, 1914, p 32 *sqq*, and to the literature on the language Ewald, *Über die himjarische Sprache*, in A Hoefer's *Zeitschrift für die Wissenschaft der Sprache*, I, Berlin 1846, p 311 *sqq*, and especially M Bittner, *Studien zur Laut- und Formenlehre der Mehrisprache in Südarabien*, I—V, *S B Ak Wien*, CLXII *sqq*, 1911—1915, 2 *Neues Mehri Material*, *W Z K M*, XXIV 70 *sqq*, also N Rhodokanakis, *Zur Formenlehre des Mehri*, *S B Ak Wien*, CLXV, 1910, Jahn, *Grammatik der Mehri Sprache*, ibid, CL, 1905

AL-**MĀʾIDA** (A), the Table, title of the fifth Sūra of the Kurʾān

AL **MAIDĀNĪ** AḤMAD B MUḤAMMAD ABU 'L FADL, Arabic philologist born in Maidān Ziyād, a quarter of Nīsābūr, pupil of the Kurʾān exegist and philologist ʿAlī b Aḥmad al Wāḥidī, teacher of Samʿānī among others, died in his native town on 25th Ramadān 518 (Oct 27, 1124) His principal work, the great collection of proverbs *Madjmaʿ al-Amthāl*, exists in numerous MSS (listed by Hidāyat Husain in Cat Buhar, N⁰ 400, also Paris, N⁰ 5861, 6511, 6702), pr Būlāḳ 1284, Cairo 1310, lith Teherān 1290, with I at transl by G W Freytag, *Arabum proverbia*, Bonn 1838–1843, synopsis *al-Durr al muntakhab* by al-Kāsim b Muḥammad al Bakrādjī († 1169 = 1756), Berlin, Ahlwardt, N⁰ 8672, anonymous metrical version by an Ottoman, Gotha 1250, do with commentary by Ibrāhīm al-Ahdab al-Bairūtī entitled *Farāʾid al Laʾāl fī Madjmaʿ al-Amthāl*, Bairūt 1312 (1895) His Arabic Persian Dictionary *al-Sāmī fī 'l-Asāmī* is arranged in subjects in the following categories *a* technical terms of fikh, *b* living, *c* heavenly, *d* earthly things, finished on 14th Ramadān 497 (June 11, 1104), in many MSS (s *Cat Lugd Bat*, I, N⁰ CV, Brockelmann, *G A L*, I 284, also Paris, N⁰ 5883, 6592, Cambr, *Suppl*, N⁰ 750, Brit Mus, Or 6241, ascribed to Thaʿālibī, and in a very different form ibid, s *Oriental Studies to* E G Browne, p 149, N⁰ 88), lith,

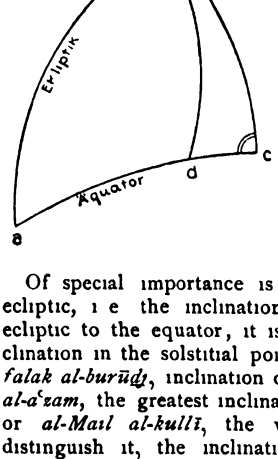
along with al-Tha'ālibī's *Sirr al-Adab fī Madjārī 'Ulūm al-'Arab*, Teherān n d , s Weijers, *Orientalia*, i 368 *sqq* , two anonymous commentaries thereon Leyden, N⁰ cvi , cvii (s Weijers, *op cit* , i 371 *sqq*), a synopsis prepared by his son Abū Sa'īd Sa'īd († 539 = 1144 , s Suyūtī, *Bughyat*, p 254) in the order of al-Djawharī's *Ṣaḥāḥ* entitled *al-Asmā fī 'l-Asmā* is perhaps in Leyden, N⁰ cviii Besides a grammar *Nuzhat al Tarf fī 'Ilm al-Ṣarf* (Brit Mus , Or 5964, pr Stambul 1299), a syntax with Persian notes *al-Hādī li 'l-Shādī*, with anonymous commentary on the verses Leyd clxii (also Paris, Schefer, N⁰ 6066), and minor grammatical treatises (Leyden, N⁰ clxviii , Paris, N⁰ 4000), he wrote a critique of al-Djawharī's *Ṣaḥāḥ*, mainly based on al-Azharī's († 370 = 980) *Tahdhīb al-Lugha*, entitled *Kaid al-Awābid min al-Fawā'id*, Berlin, Ahlwardt, N⁰ 6942

Bibliography al-Anbarī, *Nuzhat al-Alibbā'*, p 466, Yākūt, *Irshād al Arīb*, ii 107, Ibn Khallikān, Būlāk 1299, p 157, al Suyūtī, *Bughyat al-Wu'āt*, p 155, Quatremère, *Memoire sur la vie et les ouvrages de M* , *J A* , Ser 2, vol i, 1828, p 177—233 (mainly extracts from the *Madjma' al-Amthāl* s do , *Proverbes arabes de M* , ibid , March 1838, p 211 *sqq*) (C Brockelmann)

AL-**MAIL** (A), the inclination, a factor which plays a very important part in astronomy

The first inclination (*al-Mail al awwal*) is an arc of the circle which goes through the two poles of the equator and one degree (point) of the ecliptic, namely the arc which lies between this point and the equator This circle is perpendicular to the equator The second inclination (*al-Mail al-thānī*) is an arc of the circle, which goes through the two poles of the ecliptic and a point of the ecliptic, namely the arc which lies between this point and the equator This circle is perpendicular to the ecliptic

In the figure let *a b* be the ecliptic, *a c* the equator, *b c* be perpendicular to *a c*, *b d* perpendicular to *a b*, then *b c* is the first and *b d* the second inclination For the calculation it is important that we should have a right angle in each of the two spherical triangles, *a b c* and *a b d* The first inclination is also called *Mail al-falak mu'addil al-nahār*, inclination towards the equator



Of special importance is the obliquity of the ecliptic, i e the inclination of the plane of the ecliptic to the equator, it is equal to the first inclination in the solstitial points It is called *Mail falak al-burūdj*, inclination of the ecliptic, *al-Mail al-a'zam*, the greatest inclination, *al-Mail kulluhu* or *al-Mail al-kullī*, the whole inclination To distinguish it, the inclination of any degree is called *al-Mail al-djuz'ī*, the degree-inclination

If it is a question not of points on the ecliptic but of some star, the arc corresponding to the first inclination is called *bu'd*, "interval" that corresponding to the second *'ard*, "width" We speak in the first case quite generally of declination, in the second of latitude

The obliquity of the ecliptic is one of the fundamental magnitudes of the solar system It was therefore continually being calculated anew and almost always so as to obtain the altitudes of culmination α_1 and α_2 of the sun at the summer and winter solstices The sun is at these times at the same distance from the equator, north in one case and south in the other The obliquity of the ecliptic is the $\frac{\alpha_1 - \alpha_2}{2} = \varepsilon$ It should be mentioned that Muhammad b Sahbāh (c 875) claims to ascertain the magnitude from three different points (O Schirmer, *op cit* , p 52)

The first method was that used by Hipparchus, Ptolemy and Eratosthenes, using the most varied instruments, the two rings, the quadrant and the armillary spheres In the Muhammadan period these observations were continued with larger and larger instruments and account taken of the fact that the sun does not always enter the solstices in question by day but may do so at night, that the heavens may be obscured at the time etc From observations made before and after the time in question the value has to be obtained by interpolations This is how al-Khudjandī, for example, worked (on the instruments used, cf e g E Wiedemann and Th W Juynboll, *Avicennas Schrift uber ein von ihm ersonnenes Beobachtungsinstrument*, *Acta orientalis*, v , 1926, p 81—167) The values ascertained have been calculated by O Schirmer (O Schirmer, *Studien zur Astronomie der Araber*, *S B P M S Erl* , lviii 1926, p 30—90) From the measurements, it was found that the obliquity of the ecliptic decreases in course of time, i e that the plain of the ecliptic approaches the plain of the equator A conspectus of the views of Muslim scholars on this question has been given by O Schirmer (*op cit*)

Further expressions used in this connection are *al ufk al mā'il*, the inclined horizontal, it means any horizontal, except that of the equator, i e the horizontal inclined towards the horizontal of the equator *Khatt mā'il 'an khatt al-istiwā'*, i e the line which is inclined towards the equator, this is a line (a circle) which lies parallel to the equator on the globe of the earth either north or south *Falak mā'il 'an falak mu'addil al-nahār* has a corresponding meaning on the globe of the heavens, *irtifā' alladhī lā mail li-samtihi*, third altitude in the first vertical i e the vertical which goes through the eastern and western points of the horizontal (E Wiedemann)

MAIMANA, situated at 36° N and 64° 45′ E , was formerly known as al-Yahūdān, al-Yahūdiya (Yāḳūt also calls it Yahūdān al-Kubrā), but the name was changed to Maimana, "the auspicious town", for the sake of good omen It is at present the capital of the little province of Almār in Afghān Turkistan on the trade route between Herāt and Balkh Afghān Turkistān includes the western Khānates of Sar-i-pul, Shibarghān, Andkhui and Maimana, sometimes classed together as the Čahār Wilāyat Dost Muhammad took this territory from Bukhārā in the year 1855, the sovereignty remained in dispute between Kābul and Bukhārā, till it was settled in favour of Kābul by the Anglo-Russian agreement of 1873

The low spurs and offshoots of the Band-i Turkistān range subside gently into the Oxus plains and this favoured part of Afghānistān is

rich in agricultural possibilities Until Maimana was visited by Professsor Vambéry in 1863, but one European, Captain Stirling, had set foot within it According to Vambéry, the place consisted of some fifteen hundred mud huts and a dilapidated brick bazar Its inhabitants are Uzbeks with a sprinkling of Tādjiks, Herātis, Jews, Hindus and Afghāns Trade is now considerable and Maimana is renowned for its carpets and other stuffs made partly of wool and partly of camel's hair It traffics with Persia and Baghdād in raisins, aniseed and pistachio nuts Horses are good, plentiful and cheap

Bibliography A Vambery, *Travels in Central Asia*, London 1864, p 244, C Le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, p 424, Th Holdich, *The Gates of India*, London 1910, p 249

(R B WHITEHEAD)

AL-MAIMANDĪ, SHAMSU 'L KUFĀT ABU 'L-KĀSIM AHMAD B HASAN, the famous wazīr of Sultān Mahmūd of Ghazna, was a foster-brother of the Sultān, and had been brought up and educated with him Hasan, the father of Ahmad, was the *ʿĀmil* of Bust under Subuktigin, but on a charge of misappropriation of the revenue, he was put to death In 384 (994), when Amīr Nūh b Mansūr the Sāmānid conferred on Mahmūd the command of the troops of Khurāsān, Mahmūd put Ahmad at the head of his correspondence department After this Ahmad rapidly rose in the service of his master, and occupied in succession, the posts of *Mustawfī-i Mamlukat* (Accountant General), *Sāhib-i Dīwān-i ʿArd* (Head of the War Department), and *ʿĀmil* of the provinces of Bust and Rukhkhādj In 404 (1013), Sultān Mahmūd appointed him wazīr in place of Abu 'l-ʿAbbās al-Fadl b Ahmad al-Asfarā'inī For twelve years, Ahmad managed the affairs of the growing empire of Sultān Mahmūd with great tact and diplomacy Ahmad was very strict and exacting, and did not tolerate any evasion of duty or departure from the usual official procedure, with the result that many of the dignitaries of the Empire became his enemies and worked to bring about his ruin He was disgraced and dismissed in 415 (1024), and sent as a prisoner to the fort of Kālindjar, in the southern Kashmir hills After his accession to the throne, Sultān Masʿūd, whose cause Ahmad had always supported, re-appointed him *wazīr* in 422 (1031) Ahmad died in Muharram, 424 (December, 1032)

Ahmad is considered to be one of the greatest of Oriental wazīrs He was a learned man, encouraged scholars and showed great respect to them, and ordered all official correspondence to be carried on in Arabic instead of Persian

Bibliography al-ʿUtbī, *Kitāb al-Yamīnī* (Lahore ed), p 266—274, *Āthāru 'l-Wuzarā'* (India Office MS, N° 1569), fol 89b—106a, and scattered notices in *Taʾrīkh i Masʿūdī* of Baihakī

(M NAZIM)

MAIMŪNA, the last wife that Muhammad married She was the daughter of al-Hārith of the Hawāzin tribe of Saʿsaʿa and a sister-in-law of ʿAbbās After she had divorced her first husband, a Thakīfī, and her second, the Kuraishī Abū Rukm, had died, she lived as a widow in Mecca where the Prophet wooed her, primarily no doubt for political reasons, on the *ʿumra* allowed him in the year 7 His wish to marry her in Mecca was refused by the Meccans in order not to prolong his stay there, the marriage therefore took place in Sarif, a village north of Mecca Her brother-in-law ʿAbbās acted as her guardian at the ceremony The question whether the Prophet on this occasion was still in the *ihrām* or not is a much disputed and variously answered question The bridal gift is said to have been 500 dirhams Maimūna survived the other wives of the Prophet and died in 61 (681) in Sarif, where she is said to have been buried on the spot where she was married

MAIMŪNĪ. [See IBN MAIMŪN]

MAISĀN, the name of a district in southern ʿIrāk

The origin and significance of this name, which fell into disuse in the late middle ages, is unknown There is no certain trace of it in the cuneiform inscriptions, for the Babylonian *Mish*, which Hommel (*Ethnogr und Geogr des alt Orients*, Munich 1926, p 261, 263) identifies with it is as little worthy of serious consideration as the Old Testament *Mēshā'* (מֵישָׁא, Gen x 30) which Biblical exegists frequently quote Maisān first appears in the form Μεσήνη in Strabo in the first century A D Ptolemy gives Μαισανίτης κόλπος as the name for the innermost part of the land of the Persian Gulf The word is certainly not Greek, the meaning "middle land", the land between two rivers, may be dismissed as a fanciful etymology The territory of Mesene is in the cuneiform inscriptions the region of the southern Kaldu states, especially the most southerly Bīt-Yakīn, at the same time we find in them the term the sea-land (*māt-tāmdi*) as almost identical with Bīt-Yakin, the part of Mesene between the Tigris and Khūzistān was in the Babylonian period the home of the nomadic Aramaic tribe of Gambulu, cf Streck, *Assurbanipal*, Leipzig 1916, iii 778, 783, 796—97

In classical literature Mesene is usually absolutely synonymous with *Charakene* Mesene or Charakene appears in the second century B C (after ca 129) as a small independent kingdom founded by a certain Hyspaosines, our knowledge of whom is practically limited to his coinage After an existence of three and a half centuries Ardashir I put an end to this kingdom shortly after his accession, between 224 and 227 A D for Arabic sources for this event, see Noldeke, *Gesch d Araber und Perser zur Zeit der Sasaniden*, Leyden 1879, p 13 (Tabarī, i 818) In the strict sense of the word, Charakene is only the delta of the Euphrates and Tigris before the junction of the two streams, the land on the north was Mesene we have no information about the eastern and western frontiers of Charakene Perhaps, as Weissbach suggests (see *Bibl*), Mesene was only later conquered by the rulers of Charakene and its name transferred to this southern district

The Talmud knows Mesene as *Mēshān* (and *Mēshūn*), Syriac literature as *Maishān* Among the Persians we have *Mēshūn* and the Armenians *Mēshun*, cf thereon Schaeder, *op cit*, p 11 The Arabs took the word over as Maisān, but we occasionally also find Maishān (e g Tabarī, iii 1980, 5) The old name Mesene is perhaps concealed in that of the little town of Mashān, which, according to the Arab sources, was near Basra and was celebrated as the birthplace of the Makāma

poet Harīrī (q v , Yākūt, *Mu'ǧam*, ed Wüstenfeld, IV 536, Yākūt, *Irshād al-Arīb*, ed Margoliouth, VI 167, Kazwīnī, *Āthār al-Bilād*, ed Wüstenfeld, p 308)

As in the case of Mesene-Charakene, we have no exact information about the mediaeval Arab Maisān, which would enable us to define exactly the area and boundaries of the district According to Yākūt, IV 714 and Kazwīnī, p 310, Maisān is "an extensive district with numerous villages and palm groves between Basra and Wāsit, the capital of which is also called Maisān" This district formed the sixth in the old Sāsānian division into *sawād*, which was taken over by the Arabs [q v] and was called *Shādh-i Bahman* or "the Tigris district", the name Furāt-Basra is also found It was divided into four divisions (*tassūdj*, q v) namely, Bahman Ardashīr, Maisān, Dastumaisān and Abaz-Kubādh, according to Kudāma (*B G A*, VI 236, 12), these four divisions of the Tigris district later passed into the administrative district of Basra All four *tassūdj* are to be located on the east side of the Tigris Bahman Ardashir, the capital of the district of the same name, lay on the left or north bank of the Tigris, opposite Ubulla on the west or south side of the river (the latter roughly on the site of the modern 'Ashshār, the port of modern Basra) The second division, Maisān in the narrow sense, must have been that in which stood the capital of the whole district of the same name *Al-Madhār* however usually figures as such in the Arabic sources, it may be supposed that this was the successor of an older town called Maisān The locality of al-Madhār cannot be exactly fixed (see below), it lies on the east bank of the Tigris, about thirty miles (as the crow flies) north of Kurna Dastumaisan also is to be sought east of the Tigris, in the region of al-Madhār, probably south or south east of it As to the fourth district, Abaz-Kubādh, a name, which Marquart, *op cit*, p 41 and Herzfeld, *Isl*, XI 150 would emend to Izadh-Kawādh (Kubādh), relying on Hamza al-Isfahānī (*Ta'rīkh*, ed Gottwaldt, p 57), this also must be placed east of the Tigris not too far from al-Madhār A reference in Kudama (p 235, 15 *sq*) agrees very well with this, according to which the four divisions of the land of Maisān lay east of the Tigris

Even under the Sāsānians there was a separate Nestorian ecclesiastical province of Maishān, which was again divided into four subdivisions, the bishoprics of Perāt de Maishān, Karkhā de Maishān, Bēth Raimā and Nehar Gūl (Gūr), cf especially Sachau, *op cit*, p 48 *sq* Marquart, *op cit*, assumed it as certain that these four dioceses must correspond to the four political divisions of the district of Maisān This view in itself probable and first found by Sachau, p 49 as worthy of consideration is untenable, as Schaeder, *op cit*, p 29 *sq* has shown Perāt de Maishān is certainly identical with Bahmān, but the second bishopric Karkhā de Maishān does not correspond to the tassūdj of Maisān or Madhār but is to be located much farther south in the district of the modern Muhammara Bēth Raimā very probably lay not on the east but on the west bank of the Tigris at some distance N E of Basra, so that it does not even come into consideration as the equivalent of one of the four Arab divisions Nehar Gūl (Gūr) may be equated to *Nahr Dīr* of the Arab geographers (see Sachau, *op cit*, p 51, Schaeder, *op cit*, p 37) This is to be sought towards Khūzistān somewhere in the neighbourhood of Huwaiza (see below) Whether the fourth tassudj Abaz-Kubādh corresponds to it cannot be settled

If then the capitals of all four divisions of the Tigris district are to be located on the east bank of the river, the lands on the west bank, also included in the sawād must have belonged to the same district as did the whole delta down to the Persian Gulf, for there is no district to which only the doubtful western and southern divisions might be allotted In the Sāsānian period, according to the Furfan fragments (cf Schaeder, *op cit*, p 28), the term Maisān was usual for the whole of southern 'Irāk (or Mēshūn) and this remained the case under the Arabs But according to the Muslim sources, it does not seem to have been limited to the south proper but to have extended a considerable distance northwards The quotations above given from Yākūt and Kazwīnī show that Maisān was considered to stretch northwards to Wāsit (q v and vol I, p 676, II, art KASKAR), indeed it is most probable that the extreme N E frontier of the area known as Maisān lay in the vicinity of the modern Kūt al Amāra (q v , the *Mādharāyā* of the Arab geographers, cf 969 *sq* , Streck, *Babylonien*, II 310 *sq*) The district of Kaskar also stretched up to here and seems in the main to have included lands east of the Tigris (cf KASKAR) To avoid misunderstandings it should here be expressly mentioned that for the Arab period, of the present course of the Tigris only the Shatt al-'Arab and the stretches as far as al-Madhār come into question, in those days the Tigris bed corresponded with that of the Nahr al Gharrāf (Shatt al-Haiy) which was the western boundary of the district of Kaskar For further details of the hydrography of Maisān, see below Maisān is occasionally used as synonymous with Kaskar, cf Schaeder, *op cit*, p 14, 17 *sq* Maisān probably stretched to the east as far as the alluvial land of the sawād, up to the frontier of Khūzistān in places beyond the present frontier of 'Irāk At least Huwaiza (the modern Hawīza [q v]) which is now on Persian soil, is expressly mentioned as a town belonging to Maisān

The swamp regions, *al-Batā'ih*, for the most part came within the area of Maisān On this cf AL-BATĪHA and the articles on al-Batā'ih al-Hālīya and al-Djazā'ir by 'Alī Sharkī in the periodical *Lughat al-'Arab*, IV (Baghdād 1927), p 375–384, 474–477, 526–530 and VI 277–279, also Hāshim al-Sa'dī, *Djughrāfiyat al-'Irāk*[2], Baghdād 1927, p 40, where the more important of the swamps (*hōr*'s) are given In modern times the practically synonymous name *al-Ahwār* (plur of *hōr*) is used for al-Batā'ih (see 'Alī Sharkī, *op cit*, IV 376) The two specifically 'Irāki words *hōr* and *khōr*, which are very often used indiscriminately in European works, especially on maps (usually the one form *khōr*) (cf AL-BAṬĪHA where *khōr* is wrongly given for *hōr*), have to be carefully distinguished For *hawr* (older alternative *hawl*), popularly *hōr* = "permanent swamp, temporary lake, land liable to inundation" (cf *B G A*, ed de Goeje, IV 370, G le Strange, *J R A S*, 1895, p 298) and *al-khawr*, popularly *khōr* = "arm of a river, creek, lagoon-like gulf", cf especially the remarks of Père Anastase-Marie, the editor of the Baghdād periodical *Lughat al-'Arab*, in M Lidzbarski, *Das Johannesbuch der Mandaeer* (Giessen 1915, p 145)

One of the divisions of the Tigris district was called, as already mentioned, Dast-i Maisān. The

name is also vocalised Dastu- and Dasta Maisān in our Arabic texts Ibn Khallikān always writes the Persian form Dasht i Maishān, cf *Marāṣid al-Iṭṭilāʿ*, ed Juynboll, v 468 *Dast*, *dasht* can here only be the Persian *dasht* = "plain" Schaeder's assumption, *op cit*, p 34, that Dast represents an abbreviation of the Pahlavi Daskert (Arabic Daskara, q v) seems to me hardly tenable Why this division in particular was distinguished as the "plain of Maisān" from Maisān proper (especially from the second division of the district), is however not apparent Could it here have been a more level plain, less filled with swamps? In any case, it is not correct to equate Dast-i Maisān without more ado to Maisān (as does G I e Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, p 43) Yākūt (ii 574) thus defines Dast i Maisān "It is an important district between Wāsit, Basra and al-Ahwāz [q v] (= Khūzistān, q v) lying near to the last-named The capital is Basāmatā, Dast i Maisān is not identical with Maisān but is connected with it, it is also said that it is a district with the capital al-Ubulla and Basra belonging to it" Nothing further is known of Basāmatā, here mentioned as the capital of Dast-i Maisān, the form in which the name is handed down varies (see the variants in the *Marāṣid*, ed Juynboll, v 468), it is apparently identical with Basāmīya, which al Mukaddasī (*B G A*, iii 114, 9) details among the places of the district of Wāsit (cf Tabarī, iii 1958, 17, *Z D M G*, xxix 660, xxxix 26)

From the rather general remarks in Yākūt the boundaries of the district of Dast-i Maisān cannot unfortunately be ascertained We are brought a step forward by a note in Ibn Rosta (*B G A*, vii 94, 22) which expressly states that a place named ʿAbdasī, frequently mentioned in Arabic sources, is in Dast-i Maisān When Yākūt in another connection (iv 275, 2–3) mentions ʿAbdasī alongside of Dast-i Maisān (i e distinguishing the two), as a division of Kaskar, this probably is an inaccuracy From the passage of Ibn Rosta quoted it is further evident that ʿAbdasī must have been above al Madhār in the direction of Wāsit In keeping with this is an itinerary given by Kudāma (*B G A*, vi 126, 5–6), according to which a road from Wāsit via Bādhibīn (5 farsakhs S or S E of Wāsit, cf Yākūt, i 461) to Basra passed successively through ʿAbdas (= ʿAbdasī) and al-Madhār The distance of Bādhibīn from ʿAbdas is put at 5 stages (*sikka*'s), and from ʿAbdas to al-Madhār at 8, cf also Streck, *Babylonien*, i 13—14 As a *sikka* on the average may be put at 4—5 miles (see Streck, *op cit*, p xv) the distance from Bādhibīn to ʿAbdasī may be estimated at 30—40 miles, from Bādhibīn to Wāsit was about 15 miles To this location of ʿAbdasī agrees very well a note in Ibn Hawkal (*B G A*, ii 159, 13) who says that the date-palm groves of the district of Basra stretched without interruption for over 20 parasangs = 150 miles from ʿAbbadān (then away to the south on the seashore, *q v*) as far as ʿAbdasī(!), the latter must therefore mark the northern limit of the then district of Basra From the passages mentioned we have to look for ʿAbdasī a fair distance to the north of al-Madhār, probably rather near the bank of the eastern arm of the Tigris which was dry in the middle ages The position given to ʿAbdasī by G Le Strange in his map to Ibn Serapion (*J R A S*, 1895) and in *The Lands of the Eastern Caliphate* (map ii) — south of al-Madhār on the left bank of the Tigris (in map ii) or on the right bank opposite al Madhār — seems untenable For further reference to ʿAbdasī (with the variants ʿAbdāsī, ʿAbdās or ʿAbdas, according to Hamza al-Isfahānī in Yākūt, iii 603, 19, a Persian word) see *B G A*, iv (glossary), p 94

The approximate identification of the position of ʿAbdasī, which we have obtained, gives us a clue to that of Dast-i Maisān This must have been above Maisan proper (with al Madhār), and have comprised roughly the most northern part of the whole district of Maisān in the wider sense It should be noted that the order in which the four divisions of the Tigris district are officially given (Bahman Ardashīr, Maisān, Dast-i Maisān, Abaz Kubādh, see above) is apparently that from south to north or rather north east To the east Dast i Maisān extended as far as Khūzistān But it should not be forgotten that the eastern frontier of Maisān during the caliphate must have undergone changes as a result of several alterations in the organisation of the provincial administration (cf Schwarz, *op cit*, p 290, 291), this explains the apparent contradictions in our sources, in which one and the same place is sometimes put in the ʿIrak, sometimes in Ahwāz [q v] (Khūzistān, q v, ʿArabistān, see ʿARABKĪR)

When we know definitely that Dast-i Maisān was separated by the division of Maisān from that of Bahman Ardashīr to which Ubulla belonged, it appears rather remarkable that in Ibn Khordādhbih as well as in Yākūt (cf Streck, *op cit*, p 16, 19) Dast-i Maisān is equivalent to Ubulla If this is not simply a mistake, it might at most be explained, as Schaeder does (*op cit*, p 35), by saying that under the ʿAbbāsids the headquarter for the collection of taxes for Dast-i Maisān was moved to Ubulla The whole system of division into sawad, originally simply made for convenience in taxation, had lost any practical importance, at least under the later rulers of this dynasty We are further definitely told that the Tigris district later passed under Basra, where no doubt some of the officials of the old administrative district were moved to towns near Basra like Ubulla

A part of Dast-i Maisān was known as *Djūkhā* It must have lain to the west of the modern course of the Tigris roughly from al Madhār to ʿAbdasī Ibn Rosta (*op cit*, p 95) tells us that in Djūkhā between the two towns just mentioned, a part of the Tigris water used at one time to collect into swamps, before the river altered its bed in the direction of Wāsit From the accounts of the campaigns of the Khārijīs in the Umaiyad period when the Djūkhā was a favourite place for these rebels to assemble (see vol ii, p 905b), it is evident that this district must have occupied the position here sketched out for it, cf Wellhausen, in *N G W Gott*, N S, vol v, n° 2 (1901), p 22 Whether al Djūkhā stretched as far as the Nahr al-Gharrāf (Shatt al-Haiy) and even beyond it, we do not know There is a Tell Djōkhā at some distance from the west bank of the Nahr al Gharrāf, to be exact in 45° 52′ E Long Greenw and 31° 45′ N Lat It is possible that the mediaeval name of the division Djūkhā has survived in that of this mound, which conceals the ruins of the very ancient, not unimportant town of *Umma* (ideographically written *Giš-Ukh*)

For Umma, which is mentioned in inscriptions as early as 3200 B C, and disappeared from history even before the time of Hammurabi, see Hommel, *op cit*, p 354—355, 1019, 1102 (Index) and Unger in the *Reallexik der Vorgeschichte*, xv (1928), p 3—4 Names like Djūkhā, Djawkhā, Djawkhān are found elsewhere in the mediaeval geographical nomenclature of ʿIrāḳ and Khūzistān, see Yākūt, i 669, 15—16, ii 143, 144, i, iii 15, 13, cf on Djūkhā (Djawkhā) also Schaeder, *op cit*, p 23

In southern ʿIrāk, to which the district of Maisān of the Arab middle ages roughly corresponds, in course of time far reaching changes have taken place in the appearance of the country The history of the hydrogiaphy of this area is thus a very complicated problem and the solution of topogiaphical questions especially difficult The first thing to note in this connection is the fact that the Persian Gulf, the Khalidj al Basra or al-Fāris, as the modern inhabitants of al-ʿIrāk call it (cf Hāshim al Saʿdi, *op cit*, p 20, 41, ʿAbd al-Razzāk al Hasanī, *op cit*, p 115, *Lughat al-ʿArab*, iii 58, and the article BAHR AL-FĀRIS), stretched much farther north in ancient times and the middle ages than it does to-day In the Babylonian period it was a lagoon almost as wide as a sea called *Nāru Marratu* (see Streck, *Assurbanipal*, Leipzig 1916, iii 796) and stretched northwards nearly as far as 31° N I at The lagoon must have stretched from Kurna in a westerly direction indicated by the later course of the Euphrates or the modern swamps (*hōr*'s) of Abū Kelām and al-Hammār, as far as the region of the mound of ruins of Abū Shahrain (c 12 miles S W of al Mukaiyir Ur) Abū Shahrain, the ancient Eridu, certainly lay on the shore of this lagoon as we know from inscriptions found there, cf Langdon, *Ausgrabungen in Babylonien seit 1918* = *A O*, xxvi (1928), p 3—4, Weissbach's objections to the equation Abū Shahrain = Eridu (in Pauly-Wissowa, *op cit*, vi 1205) are now disposed of From Kurna the lagoon probably sent an arm to the east as far as the Kārūn The land south of Kurna beyond Basra on both sides of the broad arm of the sea now marked by the bed of the Shatt al-ʿArab was probably only partly under water in ancient times (cf Herzfeld, in Sarre-Heizfeld, *Archaolog Reise im Euphrat und Tigrisgebiet*, vol i Berlin 1911, p 251), although it was probably exceedingly swampy In any case in the Saigonid period, the Euphrates, Tigris, Kerkhā, and Kāiūn all entered the sea or rather the lagoon running up from it by separate mouths Cf also AL-BAṬĪHA and ii, p 777

If then the question of the extent of the advance of the delta since the beginning of the historical period can be approximately answered, it hardly seems possible to allot accurately the increase in land to each century, as we do not know if the sea always retired at a constant rate In the middle ages ʿAbbadān (q v and below) in 48° 22′ E Long Greenw and 30° 12′ N Lat, c 45 miles in a direct line from Basra, was still regarded as the most southerly town of the ʿIrāk According to Ibn Battūta's *Travels* (ed Paris, ii 18) in the first half of the xivth century, it was already an hour's journey from the coast This distance has now increased to over 20 miles In the last 50 years there has been an average increase of land of at least $2^1/_2$ miles a century For further information on the steady formation of land by alluvial deposits at the north end of the Persian Gulf cf SHATT AL-ʿARAB, S Genthe, *Der Pers Meerbusen*, Marburg 1896, p 54 *sq*, *The Persian Gulf* (= *Handbooks of the Historical Section of the Foreign Office*, No 76, London 1920), p 13, Hāshim al Saʿdī, *op cit*, p 51—52 Since the last century the most southerly settlement immediately on the sea has been the telegraph and lighthouse station of Fāo, on this cf below

On the hydrographical conditions in Southern ʿIrāk, especially the course of the Euphrates and Tigris and the canal systems connected with them, as well as the swamps there (al-Batīha [q v] or al-Batāʾih), we have a full and lucid description of the beginning of the tenth century in the part of the *Geography* of Ibn Serapion that has survived to us, see the pertinent passages in Le Strange's edition, in *J R A S*, 1895, p 9—10 (sect i—ii), 28—30 (sect xiii—xvi), and translation and notes on p 33 *sq*, 46 *sq*, 296—311

The Tigris, probably, was in ancient times forked at the site of the modern Kūt al ʿAmāra [q v], the Mādharāyā of the mediaeval Arabic sources (see above), into an eastern and western arm For four centuries the main body of the Tigris has used the eastern bed running via ʿAmāra to Kurna, while the western arm, a more canal-like channel only navigable at high water, has connected it with the Euphrates This western arm is in modern European literature known as *Shatt al-Haiy* This seems to be a name coined by European travellers, apparently first found in the last decades of the xviiith century (in Beauchamp, see Ritter, *Erdkunde*, xi 973) Shatt al-Haiy = "river of al-Haiy" was and still is the name given locally to the northern stretch of the river reaching as far as Haiy, but its whole course is usually called in the ʿIrāk *Nahr al-Gharrāf* (cf the quotations noted below from the works of Hāshim al-Saʿdī and ʿAbd al-Razzāk al-Hasanī), Yākūt (ii 533, 5 *sq*, iii 781, 3) already knows Nahr al-Gharrāf as the name of one of the five arms of the Tigris and of a district belonging to it The Nahr al-Gharrāf was at one time called *al Musarhad*, cf *Lughat al ʿArab*, i 51 At the little town of al-Haiy the Nahr al-Gharrāf divides into five channels of which only the western *Abū Djuhairāt* has any water, while the eastern *Shatt al-ʿAmā* (or *Aʿmā*, on the name cf above ii 777) is now quite dry, cf *Lughat al-ʿArab*, i 51, with note and correction on p 225 *sq* Four miles above Shatia the main western arm also divides into two channels the large *Nahr al Shatia* in the west, which enters the Tigris at Nāsiriye (Nāsriye, see KŪT AL-ʿAMĀRA), the capital of the *liwā* of Muntafik — for some years joined by a branch line to the station of al-Mukaiyir-Ur (Ur-Junction) on the Baghdād-Basra railway —, and the smaller eastern *Nahr Badīʿa* (*Badʿa*) said to have been originally dug out by the Muntafik which enters the Hōr al-Hammār somewhat east of Sūk al-Shiyūkh [q v]

On the Nahr al Gharrāf (Shatt al-Haiy) and the territory through which it flows, of which now as in the Turkish period, the northern part (including al-Haiy) belongs for administrative purposes to the *liwā* of Kūt (al-ʿAmāra) and the southern to the *liwā* of al-Muntafik, cf vol i, p 676, ii 513 *sq* and KŪT AL-ʿAMĀRA, and Streck, *Babylonien*, ii 311 *sq*, *Lughat al-ʿArab*, i 51 *sq*, 152, 217, 219,

222—226, Hāshim al-Sa'dī, *op cit*, p 17, 25, 142, 144 *sq*, 147, 159, 162 *sq*, 'Abd al Razzāk al-Hasanī, *op cit*, p 41 *sq*, 68, 109—113, 130 Here we may emphasise once more that the whole river and canal system of the Nahr al-Gharrāf, especially the wide area between the Nahr al-Gharrāf in the west, the Tigris in the east and the Euphrates in the south have only been very insufficiently explored as yet The accounts of the older travellers are given in Ritter, *Erdkunde von Asien*, xi 935 *sq*, 973, 998 *sq*, cf also H Petermann, *Reisen im Orient*, Leipzig 1861, ii 82, 138—139, E Sachau, *Am Euphrat und Tigris*, Leipzig 1900, p 66—80 (with map ii) and A Liedekerke Beaufort, in *Babyloniaca*, vii, Paris 1922, p 110—116

The bifurcation of the Tigris at Mādharāyā (or Kūt al-'Amāra) is certainly very old, and may be assumed for the old Babylonian period at least The ruins of Tellō (the old town of Lagesh), N E of al-Shatra, and of several neighbouring mounds of ruins (like al-Hibba, Serghul) are at a short distance to the east of the modern Nahr al-Gharrāf, on an arm (canal?) or older bed of it It is possible that the western bed of the Tigris, Nahr al-Gharrāf, is of artificial origin (cf above ii, p 513 *sq*) and was a canal dug at a remote period planned to give a convenient connection with the Euphrates The western arm of the river was in all probability the regular course of the Tigris in the Babylonian period (cf also the sketch map in Meissner, *Babylonien und Assyrien*, vol i), it is only since the last centuries B C that the main channel of the Tigris, for reasons not known to us, must have made its way into the eastern modern river bed Under the later Sāsānians another change took place, originally connected with the great extension of the swampy area of the Batīha According to a note in Yākūt (i 669, 5), the Tigris had already ceased in the reign of Bahrām V Gūr (420—438) to flow in the direction of al Madhar and instead of this had chosen the route of the arm that runs towards Kaskar In any case burstings of dams which took place, especially in the reigns of Kubādh Pērōz (457—484) and Khusraw II Parwēz (590—628) (cf i, p 676), considerably furthered this development It is certain that at the beginning of Muslim rule, the Tigris was using the western bed exclusively The eastern was quite dry as far as al Madhār, and only after this town did it contain water again On the state of the river in the middle ages cf especially the descriptions in Ibn Rosta (*B G A*, vii 94, 21 *sq*) and thereon G Le Strange, in *J R A S*, 1895, p 300 *sq* and Schaeder, *op cit*, p 21 *sq*, see also Le Strange, *The Lands of the Eastern Caliphate*, p 27—28 and above i, p 969 *sq*

In the early decades of the ninth (xv^th^) century the Tigris was still flowing in its western bed, but in the next century it again altered its course and sent the mass of its water to the eastern bed, so that this again became the usual route for navigation It was used as such, as we know from European travellers (see I e Strange, *The Lands* etc, p 28 *sq*) at least since the middle of the xvi^th^ century, the eastern arm has remained the Tigris proper to the present day

The stretch of the eastern Tigris which alone was filled with water in the middle ages, south of al-Madhār, the Didjlat al-'Awrā' (cf below), joined the Nahr Abī 'l-Asad, which flowed out of the Batīha, according to Ibn Serapion, probably a little below the modern Kurna, cf i 676, 969 *sq*, ii 119 Yākūt's account differs seriously from Ibn Serapion's description of the Lower Tigris How far Yākūt, who lived 300 years after Ibn Serapion, reflects an alteration in the river system, it is impossible to say According to Yākūt (ii 553, 3 *sqq*, cf thereon Streck, *Babylonien*, i 39—40 and above i, p 676), the Tigris after passing Wāsit divided into five arms, which reunited at a place called al-Matāra This Matāra (var Matāiā and Matār in *B G A*, ii 53, 15, iii 161, 3) lay a day's journey from Basra i e about halfway between this town and Kurna

These five arms of the Tigris were, he says, the Nahr Sāsī, Nahr Gharrāf, Nahr Dakla, Nahr Dja'far and Nahr Maisān Sāsī is mentioned in another passage in Yākūt (iii 11, 10) as a place above Wāsit Gharraf has already been mentioned as the usual modern name for the western arm of the Tigris (Shatt al-Haiy) The Nahr Dakla (apparently the Aramaic form of the Arabic Didjla) flowed, according to Yākūt, iv 830, 22, or v 838, 2, near the Nahr Abī 'l-Asad and east of the Nahr Dja'far The latter was (see Yākūt, v 838, 2) between Wāsit and Nahr Dakla The Nahr Maisān, finally, seems to be identical with the Didjla al-'Awrā' from al-Madhār to the mouth of the Nahr Abī 'l-Asad (cf also Yākūt, i 603, 4)

The bed of the upper Didjlat al-'Awrā' which seems to have been dammed at al-Madhār was apparently also fed by the waters of the Nahr Abī 'l-Asad The Arab geographer Kudāma (*B G A*, vi 233, 3—4) says, "After leaving the Batīha, the Tigris divides into two arms, the one of which goes to Basra and the other to al-Madhār" On the banks of the Nahr Maisān, "between al Madhār and Basra", lay the village of al Bazzāz (Yākūt, i 603, 4)

As to the Euphrates, we are told that in the middle ages it poured its waters into the Batīha in two channels below Kūfa and Hilla, like the main body of the Tigris in the west, cf especially Ibn Serapion, ed G Le Strange, in *J R A S*, 1895, p 10, 16 *sq* (and p 47, 260), G Le Strange, *The Lands* etc, p 74 and above ii, p 513, *sq*, art AL FURĀT

The Nahr Abī 'l-Asad, which runs out of the Batīha and is often described by the Arab geographers as the eastern section of the (western) Tigris (cf above and Yākūt, iv 830, 22) might with a certain amount of justice also be claimed as the last stretch of the Euphrates It is in this sense that Yākūt (iv 561, 22) says that al-Matāra, mentioned above, is "on the bank of the Tigris and of the Euphrates at the junction of the two" On the alterations in the lower course of the Euphrates in the later middle ages down to the xvii^th^ century we have very little information (cf AL-FURĀT), but we may assume that since about the xv^th^ century, at latest since the beginning of the xvi^th^, the whole volume of the Euphrates no longer disappeared in the swamps but a portion ran in a definite channel which roughly coincided with the course of the modern bed, and ultimately used the channel of the Nahr Abī 'l Asad and thus effected a direct communication with the Eastern Tigris From the reports of European travellers (see G I e Strange, *The Lands* etc, p 28 *sq*) it is evident that at the junction of the two rivers there stood since at least the middle of the xvi^th^ century a castle named al-Kurna (now a small

town, see also below, IV 364) Since the great scheme for regulating the Euphrates was carried out by Willcocks in the first decade of this century (cf II, p 515a and SHAṬṬ AL-ʿARAB) only a small and insignificant arm of the Euphrates now flows out at Kurna while its main arm cuts through the swamps of al-Hammār in a new channel and enters what is now called the Shatt al-ʿArab above Karmat ʿAlī (c 10 miles N of Basra) On this modern Euphrates channel called after Karmat ʿAlī (popularly Kurmat and Gurmat ʿAlī) cf Hāshim al-Saʿdi, *op cit*, p 20, 6 *sq*, 36, 10, 159, 5 *sq*, ʿAbd al-Razzāk al-Hasanī, *op cit*, p 69, 2, *Lughat al-ʿArab*, I 365, 8 *sq*, IV 527, 3, *Mesopotamia* (*Handbooks of the Foreign Office*, N° 63), London 1920, p 6, 52 *sq*, 55 and cf II, p 515

The Eastern Tigris from al Madhār to its mouth on the Persian Gulf bore in the middle ages the name of Didjlat al-ʿAwrāʾ = the "one-eyed Tigris" (on this cf above, II 777), cf especially Ibn Rosta (*B G A*, VII), p 94 *sq* and Ibn Serapion (*J R A S*, 1895, p 28, 299—303), Streck, *Babylonien*, I 41—42, G Le Strange, *The Lands* etc, p 43, Schaeder, *op cit*, p 21—23 and cf I, p 676, 969 *sq*, II, p 513 *sq* Yākūt (IV 830, 22) however limits the name Didjlat al-ʿAwraʾ to the stretch from al-Matāra to the sea, i e the combined Euphrates and Tigris At the same time we find other special names for this last section among the Arab authors of the middle ages like Didjlat al-Basra (the Tigris of B), Faid al-Basra (cf e g Yākūt, III 931, 10), Bādhaward (Yākūt, I 462, 11) A specifically Persian name is Bahmanshīr = the river of the district of Bahman Ardashir (cf II, p 777, see Yākūt, I 770, 20)

Even in the Babylonian period the lower Tigris seems to have had a special name, Surāpu, see Meissner, *op cit*, p 5 For nearly two centuries the combined Euphrates and Tigris has been known as Shatt al-ʿArab = "the river of the Arabs", because its banks, although since 1640 (with interruptions) they have been in parts incorporated in the Persian kingdom, are almost exclusively inhabited by Arab tribesmen (The name Shatt al-ʿArab is found in the middle of the XIth century in Nāsir-i Khusraw [*Sefernāme*, ed Schefer, p 89] but this is the only early occurrence) In its lower half the Shatt al-ʿArab has since that date formed the often contested frontier between Persia and Turkey or (since the World War) the Kingdom of ʿIrāk, about an hour's journey above (or west of) Muhammara, the eastern bank becomes Persian Cf also the article SHAṬṬ AL-ʿARAB and *The Persian Gulf* (*Foreign Office Handbook*, N° 76), London 1820, p 15, 54

The stretch of the Didjlat al-ʿAwrāʾ corresponding to the modern Shatt al-ʿArab in the middle ages sent out numerous canals on either side, the very complicated canal-system of the country round Basra was especially celebrated The most important canals on the west bank were the Nahr Maʿkil (still to day the name of a small village, an hour above al-ʿAshshār) and the Nahr Ubulla (apparently the modern Nahr al ʿAshshār) which united at the town of Basra and connected it with the Tigris The mediaeval Nahr Abi 'l Khasīb, c 15 miles south of Basra on the west side, may also be mentioned this still exists to day and has given its name to a district and its capital (belonging to the sandjak of Basra), see Cuinet, *op cit*, p 23, ʿAdb al-Razzāk al-Hasanī, *op cit*, p 118 Of the canals on the west bank the most important was the Nahr Bayān (cf Schwarz, *Iran im Mittelalter*, p 311, 390—391) The Nahr Bayān formed an artificial channel connecting the Tigris and the Kārūn, we have also mediaeval references to a similar communication between these two rivers Another canal still in existence on the west side is the Nahr Rayān (Rayānʾ, modern Riyān) north of the Nahr Bayān The most northern canal on the east side which left the Tigris about the neighbourhood of the modern Kurna, was called Nahr al-Mubārak, not Nahr al Madhār (cf thereon de Goeje, in *J R A S*, 1895, p 749, emendation to *J R A S*, 1895, p 30, 2, 307, 308 and Streck, *Babylonien*, I 41) Generally speaking, there are not now so many canals in the Shatt al-ʿArab as there were in the middle ages The best account of conditions in the caliphate is that of Ibn Serapion see the text in *J R A S*, 1895, p 29—30 (thereon p 303—311), cf also Streck, *Babylonien*, I 42 and G Le Strange, *The Lands* etc, p 46—48 Cf particularly the article *al-Basra wa-Anhāruha*, which gives a list of old and new names of canals, in *Lughat al-ʿArab*, III (1913), p 57—68, 128—132 and p 673—674 (additions) and p 700—704 (indices), al-Nabhāni, *al Tuhfa al-Nabhaniya fī Taʾrikh al-Djazīra al-ʿArabīya*, 2nd ed Cairo 1342 (1923), II 15—53

After the hydrography of the district of Maisān, we may now deal briefly with the more important places in it The mediaeval Arab geographers give as its capital the already frequently mentioned al-Madhār on the eastern bank of the Tigris, 4 days journey from Basra The Shiʿa inhabitants according to Yākūt (VI 468) had a splendid mosque here with the tomb of ʿAbd Allāh b ʿAlī who fell at Karbalāʾ in the year 680, on this see the references in Wustenfeld, *Genealogische Tabellen der arab Stamme*, *Register* (1853), p 8 and Yākūt, VI 506, cf also HAWĪZA This sanctuary still survives and it enables us — which has not been noticed before (hence, for example, the inaccurate locations by G Le Strange in *J R A S*, 1895, p 300 and in *The Lands* etc, p 42) — to define quite exactly the site of al-Madhār The name al-Madhār is no longer known on the spot, as of the old town the highly revered ʿAlid sanctuary is all that remains, the place is now called simply ʿAbd Allāh b ʿAlī Keppel, who paused here on his way up the river in 1824, speaks erroneously of "the residence of Sheikh Abdilla bin Ali, an Arab chief", cf his *Personal Narrative of a Journey from India to England* (London 1827), I 91 According to Chesney's map (see *Expedition for the Survey of the Rivers Euphrates and Tigris*, London 1856, Atlas, Pl x), ʿUzair and ʿAbd Allāh are only 10 miles apart in a direct line, a figure which has however to be doubled when allowing for the many windings of the river if one goes by boat The traveller Schlaffli, who in 1862 went down the Tigris on a steamer, took two hours to go from ʿAbd Allāh b ʿAlī to ʿUzair, cf his *Reisen im Orient* (Winterthur 1864), p 137, Rich took six hours to ascend (Ritter, XI 945) On my own journey in March 1927 I visited ʿAbd Allāh b ʿAlī, the steamer covered the distance from here to ʿUzair with the river in favourable condition in not quite three hours ʿAbd Allah b ʿAlī lies on a slight eminence ten minutes from the left bank of the Tigris, which describes a curve here The mosque of the tomb with its dome

visible from a long distance off stands within the south side of an oblong court, to which entrance is given by a door in the slightly built north wall The *Makāma* poet al-Harīrī, born in Mashān (near Basra) is said by Yākūt (iv 468) to have died in al-Madhār As Ibn Rosta (*B G A*, vii), p 95, 21 tells us, the tides came up as far as al-Madhār, this agrees with Schlaffli's observation (*op cit*) The tide indeed is sometimes perceptible as far up as the town of Kal'at Sālih, farther north, cf Hāshim al-Sa'dī, *op cit*, p 39, 2, cf also *The Persian Gulf Pilot*, London 1898, p 295 Opposite al-Madhār, on the west bank was the little town of al-Hātrā (Yākūt, iv 947, 6)

When Yākūt observes in one passage (iv 714) that the capital of Maisān was also called Maisān, he can only be referring to al-Madhār, the centre of the district of Maisān in the narrower sense, not perhaps, Furāt Maisān, for which we also find an abbreviated form Maisān The name al-Madhār probably first came into existence in the Muslim period, perhaps for a new foundation on the site of the old town of Maisān

As to Kal'at Sālih already mentioned on the left bank of the Tigris which like 'Abd Allāh b 'Alī belongs to the *liwā'* of 'Amāra, see Hāshim al-Sa'dī, *op cit*, p 151, 'Abd al-Razzāk al Hasanī, *op cit*, p 123—134 and *Lughat al-'Arab*, iv 377, 2, 378, 4, 536 This town of modern origin a couple of hours' journey below 'Abd Allāh b 'Alī has now about 3,000 inhabitants (including many Mandaeans) The site of al Madhār cannot be marked by Kal'at Sālih for al-Madhār was certainly of moderate extent and the 'Alid mosque is to be sought within it and not in its vicinity

As to 'Uzair already mentioned (now usually pronounced 'Azēr), south of 'Abd Allāh b 'Alī on the west bank of the Tigris, it is especially mentioned that it belonged to the district of Maisān, see Yākūt, iv 319, 714, Kazwīnī, *Athār al-Bilād*, ed Wustenfeld, ii 310 The proper name of this place with the alleged tomb of Ezra ('Uzair) in the middle ages was, according to Arabic and Jewish sources, Nahr Samuia (popularly Simmara), cf e g Yākūt, iv 840, 20 Cf on 'Uzair especially D S Sassoon, *op cit* (see *Bibl*), J R Ghanīma, *op cit* (see *Bibl*), p 189 *sq* and the article 'UZAIR

The town of 'Abdasī ('Abdas etc) to the north of al-Madhār has already been discussed On the town of Huwaiza (now Hawīza) also belonging to Maisān see above 1, p 676 and art HAWĪZA, to the *Bibliography* may now be added Layard in *J R G S*, xvi (1846), p 34—36, J de Morgan, *Mission scientif en Perse, Étude geograph*, ii, Paris 1895, p 278 and Schwarz, *Irān im Mittelalter*, p 392 *sq*, *Lughat al-'Arab*, vi 277 *sq* An extensive swamp (*hōr*) (cf 1, p 676) takes its name from this town, the water from which flows into the Tigris a little south of Kurna, cf Hāshim al-Sa'dī, *op cit*, p 21, 1

The modern towns of importance on the Nahr al-Gharrāf (Shatt al-Haiy) are of recent origin and are still developing They are from north to south Haiy (Kūt al-Haiy), a town with 9,000—10,000 inhabitants (cf above and 1, p 676, *Lughat al-'Arab*, i 152, 224), Kal'at Sikkar with 1,500 and Shatra with 7,000 inhabitants, on these three places cf Cuinet, *op cit*, iii 290, 310 *sq*, 312—315 (where Kalfat Sakar is wrongly given for Kal'at Sikkar), Sachau, *Am Euphrat und Tigris*, Leipzig 1900, p 69 *sq*, 'Abd al-Razzāk al-Hasanī, *op cit*, p 111—113, 130 *sq*, Hāshim al Sa'dī, *op cit*, p 147, 162—163

At the spot which up till some two centuries ago was regarded as the junction of the Euphrates and Tigris stands the little town of Kurna (Korna, Gurna) with 2,000 inhabitants It is not known to have existed in the middle ages, on it cf above and Mignan, *Travels in Chaldaea*, London 1829, p 284 *sq*, Ritter, xi 1018—1023, Cuinet, *op cit*, iii 211 *sqq*, 'Abd al-Razzāk al-Hasanī, *op cit*, p 119, Hāshim al-Sa'dī, *op cit*, p 156, *Lughat al 'Arab*, iii 57 Halfway between Kurna and Basra must have stood al-Matāra where, according to Yākūt, the two arms of the Tigris, or the Euphrates and Tigris met in the middle ages, cf above About 3 hours' journey above Basra on the right bank of the river is the little village of Karmat 'Alī, where as already mentioned, the main stream of the Euphrates flows into the Tigris or the Shatt al-'Arab

In the Muslim period, Basra was the largest and most important town in the old district of Maisān and in practice its capital, although under the 'Abbāsids, al Madhār may have for a considerable period been regarded as the official capital On Basra, mediaeval Basra, modern Basra and al-'Ashshār, cf the article BASRA

Al-'Ashshār stands approximately on the site of Ubulla which as a suburb and port on the Tigris for the mediaeval Basra was of some importance In our sources we are expressly told that Ubulla lay north of the canal which bore its name, partly on an island, which was formed by the Tigris and the two canals of Nahr al-Ma'kil and Nahr al-Ubulla which joined one another at Basra The modern Nahr al-Khōra which leaves the Shatt al-'Arab about one hour south of al 'Ashshār, cannot be the Nahr al-Ubulla (in spite of *Lughat al-'Arab*, iii 63) The modern al 'Ashshār, the principal commercial centre of southern 'Irāk, is only a little inferior to Basra as regards numbers of population The two together have now a population of 50—60,000 On Ubulla, the ancient Ἀποδόγον ἐμπόριου (s Pauly-Wissowa, *Reallex der klass Altertumswiss*, Suppl -Bd, i 111), cf G Le Strange, *J R A S*, 1895, p 306 and *The Lands* etc, p 47, Drouin, *a a O* (s *Litt*), p 9, Sachau, *Abh Pr Ak W*, 1919, N° 1, p 20, 51 *sq*, *Isl*, xi 151, *Lughat al-'Arab*, v 477, vi 200, 1 and the art AL UBULLA

Opposite al-'Ashshār, on the east bank of the Shatt al 'Arab stands the little town of al Tanūma (cf *Lughat al-'Arab*, iii 129, 3, 230, 9, 'Abd al-Razzāk al-Hasanī, *op cit*, p 118, Hāshim al Sa'dī, *op cit*, p 156, 6) On its site or at least somewhere in the neighbourhood, there was already in ancient and mediaeval times an important harbour, known to Pliny as Forat (cf also Drouin, *op cit*, p 8) In the Talmud (see Berliner, *op cit*, p 44) and in Syriac sources it is called Perāt de Maishān, in the mediaeval Arab authors Furat Maisān or Furāt al-Basra In Syriac and Arabic texts we also find Perāt or Furāt, without the addition of Maisān, with Furāt = Euphrates the name has no connection When the first Sāsānian king Ardashīr I refounded the city it received from him the new name of Bahman-Ardashīr, shortened to Bahmanshīr, see Hamza al-Isfahānī, *Ta'rīkh*, ed Gottwaldt, p 37 *sq*, 46 and *Isl*, xi 149 Cf the above mentioned

specifically Persian name of the Didjlat al-ʿAwrāʾ and Bamshīr (= Bahmanshīr) as a name of an arm of the Kārūn (cf II, p 777) That Furāt Maisān was opposite Ubulla on the left bank is quite clear from the Arabic references cf Wellhausen, *Abh G W Gott*, N F, v, N⁰ 2 (1901), p 34 and Schaeder, *op cit*, p 31 The identification of Furāt Maisān with the modern Basra or even with old Basra (Berliner, *op cit*), which has been championed by different scholars (Noldeke in *S B Ak Wien*, 1893, Abh IX, p 18, Marquart, *op cit*, p 41, Sachau, *Abh Pr Ak W*, 1919, N⁰ I, p 49, only suggested as a possibility by Herzfeld in Sarre-Herzfeld, *Archaol Reise im Euphrat- und Tigrisgebiet*, I 251) is therefore untenable Perāt de Maishān was the see of the Nestorian metropolitan which was later moved to Basra (first certain reference in 893), cf Sachau, *op cit*, p 49 and Schaeder, *op cit*, p 31 *sq* The old name of the diocese Perāt de Maishān was still frequently used in place of Basra even after the transfer of the episcopal see If we have on one occasion, c 900 A D, a mention of a bishop of Maishān simply, we should refer it to Perāt de Maishān rather than to Karkh de Maishān (so Sachau, *op cit*, p 50) because the abbreviation Maishān for Perāt de Maishān is found elsewhere in Syriac literature (cf Schaeder, *op cit*, p 32–33) As to the coins of the Omaiyad period of the mint of Maisān, this is probably to be explained also as al-Furāt Maisān and not as Karkh Maisān (so Mordtmann, *Z D M G*, XXXIII 126) or Maisān (al Madhār) as Schaeder, *op cit*, p 34 thinks Abu 'l-Fidāʾ, *Takwīm al-Buldān* (ed Reinaud, p 296), also is obviously thinking of Furāt Maisān not Maisān (al-Madhār) when he says "Maisān is a little town in the lower part of the land of Basra"

On the east bank of the Shatt al-ʿArab about where the Eulaeus or Dudjail (the modern Kārūn [q v]) joins it, Alexander the Great built a new town on the site of an older settlement, which he called Alexandreia after himself After its restoration by one of the Seleucids, it was known as Antiocheia When Spasines (Hyspaosines) created a kingdom of his own in Mesene-Charakene, Alexandreia-Antiocheia became his capital and was known as Χάραξ Σπασίνου, under this name (Aramaic Karkhā Aspasinā or simply Karkhā) it is mentioned in the Palmyrene inscriptions Another refoundation of the town is ascribed to Ardashīr I, hence its official designation in the Sāsānian period as Astarābādh Ardashīr (also abbreviated to Astābādh), cf Noldeke, *Gesch d Araber und Perser zur Zeit der Sāsāniden* (Leyden 1879), p 14, Marquart, *op cit*, p 41, Herzfeld, *Isl*, XI 150, Hamza al-Isfahānī, *op cit*, p 47, gives the (corrupt?) form of the name Inshā Ardashīr The older name Karkhā more exactly defined by the addition "of Maishān" remained in existence The Syriac texts always write Karkhā de Maishān There was a Nestorian bishopric here, which seems soon to have disappeared under Islām, see Sachau, *op cit*, p 49—50 and Schaeder, *op cit*, p 33 The Arabs took over the Syriac name as Karkh [q v] Maisān, cf e g Yākūt, IV 207, 1 The Persian traveller Nāsir i Khusraw who visited the ʿIrāk about 443 (1051) (cf his *Sefernāme*, ed Schefer, p 89) mentions, besides Basra, in the district of Maisān a place called ʿAkr Maisān, probably an inaccurate reproduction of Karkh Maisān The site of Karkh Maisān is usually sought on that of the Persian port of Muhammera, which has only arisen since about 1812, or at least in its immediate neighbourhood, cf Andreas in Pauly-Wissowa, *Realenzykl*, I 1394 *sq*, Droin, *op cit*, p 7, Herzfeld in Sarre-Herzfeld, *Archaologische Reise*, I 251, Sachau, *op cit*, p 50, Schaeder, *op cit*, p 33 This identification does not have been absolutely certain Karkh Maisān is perhaps to be located farther to the north, cf e g the objections of Mordtmann in *S B Bayr Ak*, 1875, vol II, Suppl Heft, III, p 14 Cf also on Alexandreia Charax Spasinu-Karkh Maisān the important article "Alexandreia" by Andreas in Pauly-Wissowa, *Realenzykl*, I 1390 *sqq* and the article Charax Spasinu by Weisbach, *ibid*, III 2122, Droin, *op cit*, p 7—8, 15, Schaeder, *op cit*, p 31 *sq* On coins struck in Karkh Maisan of the Arsakid and Sasānian periods cf Mordtmann, *Z D M G*, XXXIII 126 *sq* and G F Hill, *Catalogue of Greek Coins of Arabia and Persia in the British Museum* (London 1922), cf also MUHAMMERA and also vol II p 777

In the middle ages the most southerly town in the ʿIrāk was ʿAbbādān, which then lay on the coast — under the later ʿAbbāsids it was already some distance from it — and was an important harbour Cf above and the article ʿABBĀDĀN

At the beginning of the twentieth century it was still an insignificant little village It is only since the last twenty years that it has undergone an unexpected development because of the Anglo-Persian Oil Company making it the terminus of their pipes from Shuster and Maidān-i Naftūn (cf II, p 779b) The oil is now pumped into tank-steamers at ʿAbbādan, important factories, warehouses etc have been built there Brēm, five minutes west of ʿAbbādān proper, has developed into a flourishing town which bears the name Brēm ʿAbbadān or ʿAbbādan al-Hadītha = New ʿAbbādān On the meaning of the word *brēm* (a particular kind of date) cf *Lughat al-ʿArab*, I 125, 1 *sq*, 443, 5, III 592, 2 from below In Brēm are the ruins of a palace or castle said to date from the time of the Caliph Harūn al Rashīd, cf *Lughat al-ʿArab*, I 126, 9 *sq* ʿAbbādān is now next to Basra-ʿAshshār and Muhammera the largest and most important town in the whole of the Shatt al-ʿArab On the other places on the island of ʿAbbādān cf *Lughat al ʿArab*, I 128, 3 *sq* The island, which before the war belonged to the Shaikh of Muhammera who was under Persian suzerainty, was leased about 1911 by England for 99 years On mediaeval ʿAbbādān cf *Lughat al-ʿArab*, I 121—129, on modern ʿAbbādān and the works of the Persian Oil Company, *ibid*, I 176–184, W Schweer, *Die turk-persisch Erdolvorkommen*, Hamburg 1919, p 52, 112—115

At ʿAbbādān close to the sea-coast there stood in the middle ages the lighthouses known as *al-Khashabāt* [q v]

As has already been pointed out, ʿAbbādān is now over 20 miles from the sea The most southerly place in the ʿIrāk for about a century has been the important lighthouse and telegraph station at Fāo [q v], built on the shore of the Persian Gulf, on it and the district, cf Cumet, *op cit*, III 268—270, ʿAbd al Razzāk al-Hasanī, *op cit*, p 118, Hāshim al-Saʿdi, *op cit*, p 21, 155, 3 from below, cf above and art SHATT AL-ʿARAB The Turks fortified this important strategic point (see *Persian Gulf* [*Handbooks* etc], p 54, *Meso-*

potamia [*Handbooks* etc], p 48, 63, al-Nabhānī, *loc cit*, II 142—146)

It may be here mentioned that the Zindj, the African negro slaves, settled in the southern ʿIrāk (cf ZINDJ and 1, p 676), during their rebellion in the second half of the ninth century, built several strong places west of the Shatt al-ʿArab, which they used as bases during their struggle with the armies of the Caliph Their main bulwork was the town of al-Mukhtāra (Yākūt, IV 831, 5) on the Nahr Abi 'l Khasīb (see above), south of Basra Other strongholds were called al-Manīʿa and al-Mansūra When al-Muwaffak, the brother of the Caliph al Muʿtamid, undertook command of the military operations against the Zindj, he pitched his camp opposite these places on the east bank of the Shatt al ʿArab, this camp soon grew into a considerable town, called al-Muwaffakīya with mosques, bazaars and even a mint But when in 883 the capture of al-Mukhtāra broke the power of the rebels and the dangerous servile war was over, this new foundation of al-Muwaffak seems to have been soon abandoned again On al-Muwaffakīya and the three strongholds of the Zindj above mentioned cf Weil, *Geschichte der Chalifen*, II 456, 462, 464, Lang, *Z D M G*, xl 610, A Muller, *Der Islām im Morgen- und Abendl*, I 585 *sq*, Noldeke, *Orientalische Skizzen* (1892), p 174—183, (= *Sketches from Eastern History*, p 146 *sqq*), de Goeje, *Mem sur les Carmathes*, Leyden 1886, p 103

The population of Maisān in the early centuries of Islām still had a strong admixture of Persian blood, it was therefore regarded as not quite equal to the pure blooded Arabs who were proud of the purity of their stock We thus see why the poet al-Akhtal thinks he can most effectually insult Arabs by calling them people from the Maisān district of Azkubādh (cf the verse in Yākūt, I 233, 6) I e, by denying them to be Arabs, cf Goldziher, *Muhammed Stud*, I (Halle 1889), p 118 and cf *idem*, p 119, note 1, the quotation from the *Kitāb al-Aghāni*, (XVII 65, 23) This naturally produced a reaction among the Maisān Arabs The celebrated poet and historian Sahl b Hārūn [q v] of Dast-i Maisān, a fanatical believer in the doctrine of the equality of all Muslims (*Shuʿūbīya*, q v) on the other hand, extols the blue blood of the people of Maisān (cf Goldziher, *op cit*, I 161)

The Muslim inhabitants of Maisān were in the middle ages as at the present day for the most part Shīʿīs The number of Jews does not seem to have been considerable before the invasion of the Arabs At the present day there is only a considerable community of them in Basra The alleged tomb of Ezra in ʿUzair (cf above), a much-visited place of pilgrimage also honoured by Christians and Muslims, is in Jewish hands

Christianity is said, according to legend, to have reached Maisān in the first century A D A quite legendary person named Māni, said to be a disciple of Jesus, is regarded as the apostle of the Gospel in Central and Southern ʿIrāk, cf Raabe, *Geschichte des Dominus Mari*, I eipzig 1893 (Dissert), p 57—58 and Streck, *Babylonien*, II 286 *sq* This much is certain that as early as 410 A D there was a separate Nestorian ecclesiastical province with 4 dioceses, cf *Z D M G*, xlii 394, Marquart, *op cit*, p 41 and Sachau, *op cit*, p 48—52

The remarkable sect of the Mandaeans (the Sābi'a of the Kur'ān, q v), now called Subbē, had from their early times their headquarters in southern ʿIrāk, in Maisān, especially in the swamp country On their geographical distribution in the XIXth century cf Chwolson, *Die Ssabier und der Ssabismus* (St Petersburg 1850, I 124—125) and Euting, in *Das Ausland* (1876), p 224—225 According to enquiries which I made in 1927 of Mandaeans, the number of Mandaeans in the larger towns of the ʿIrāk may be approximately estimated as follows in ʿAmāra and Hawīza 1,000 each, in Kalʿat Sālih and Muhammera 500 each, in Basra 300 and in Kurna 100 The language of the Mandaeans, who represent a remnant of the original native Aramaic population of Babylonia, is probably identical in the main with the Aramaic idiom which was once predominant in southern ʿIrāk, the dialect of the old kingdom of Mesene Charakene, the Meshān dialect as it is called in the Targum, cf Noldeke, *Mandaische Grammatik* (Halle 1875), XXVI and Pognon, *Inscript mandaites des coupes de Khouabir* (Paris 1898—1899), p 13—14, 224

On the Indian people of the Djat (Arab Zutt) and the Zindj from East Africa, who were settled on the soil of Maisān at the end of the first (seventh) or in the third (ninth) century, see above 1, p 676 and the articles ZINDJ and ZUṬṬ

As to the industries of the people of Maisān in the middle ages we need only mention the mats made here, which are praised as the best of their kind, cf S Fränkel, *Die aram Fremdwort im Arabisch* (Leyden 1886), p 92 The reed-beds of the marshes supplied excellent material for them in enormous quantities Even at the present day the manufacture of reed mats continues to give employment to many hands, for the people of the flat lands in southern ʿIrāk like to use long tun shaped huts called *serifa*'s, the walls of which are made of reed-matting

The history of Maisān since the introduction of Islām practically coincides with that of the ʿIrāk, especially that of the northern part (the province of Basra and the Batiha), the reader may therefore be referred to the articles ʿIRĀK, BASRA and AL-BAṬĪḤA Here we will only point out that the administrative district of the Tigris belonging to Maisān was conquered with Dast i Maisān in the year 14 (635), on this conquest cf Balādhurī, *op cit*, p 340—346 and Caetani, *Annali dell' Islām*, III 252, 301—304 (§ 6 and 81—86), VI 108 (Index s v Maysān)

Al Madhār, the capital of Maisān, was the scene of important military happenings at the time of the Arab invasion and frequently later also In the year 12 (633) al-Khālid and al-Muthannā fought a great battle with the Persians at this town, the first in their invasion of the ʿIrāk This battle is sometimes called after an adjacent canal, called al Thinī (Yākūt, I 937, 17) The defeated Persians are said to have lost 30,000 men in this encounter, cf Balādhurī, *op cit*, p 242, 9, Tabarī, *op cit*, V 2026—2029, al-Masʿūdī, *op cit*, IV 209, Muller, *Der Islām*, I 228, Caetani, *op cit*, II 959—962 (§ 196—200) In the fighting with the Khāridjīs for whom the district of Djūkhā in Dast i Maisan frequently served as a hidingplace, there was a desperate battle in 47 (664) in and around the town of al Madhār These rebels were forced to retreat by the Kūfans under the leadership of Maʿkil b Kais, cf Wellhausen, *Abh*

G W Gött, N S, v, N° 2 (1901), p 22—23 In the campaigns against the ʿAlids, Musʿab b Zubair at al-Madhar in 67 (686) inflicted a serious reverse on the army sent by Mukhtār under the command of Ahmad al-Nakhlī, which had very grave results for the Shiʿa cause championed by Mukhtār, cf Yākūt, *op cit*, iv 468, Weil, *op cit*, p 83 and above i, p 676 Several centuries later, there was again fighting at al-Madhāi, on this occasion with varying results. This was during the struggle between Abū Kālidjār and Djalāl al-Dawla in 421 (1030) in connection with the disputed succession among the Būyids, see above i, p 94b

(M Streck)

MAISARA, a Berber chief of the Maghrib, who rebelled against Arab authority in 122 (739/40) He belonged to the tribe of the Matghāra and the historians give him the surname of al-Hakir "the low-born" because he was of humble origin and before his rebellion had been a water-seller in the market of al-Kairawān

After the recall of Mūsā b Nusair at the end of the first century A H, rebellion began to smoulder in North Africa ʿUmar b Abd Allāh al-Murādī, governor of Tangier, and a grandson of ʿUkba b Nāfiʿ, Habib b Abī ʿUbaida, governor of Sūs, were inflicting grievous wrongs on the Berbers by treating them, as regards taxation, as a conquered people not converted to Islām, and by taking the fairest of their women to send as slaves to Damascus The general Habib having been sent from Sūs with his troops to the conquest of Sicily, his departure was the signal for insurrection A movement on a large scale broke out, at its head the Berbers put Maisara al-Matghārī With the related tribes of the Miknāsa and Baraghwāta [q v] Maisara advanced on Tangier and seized it The Arabs tried in vain to withstand him, the governor of Spain, ʿUkba b al-Hadjdjādj, even crossed the Strait to help Tangier but his efforts were in vain It was not long before Maisara was dismissed and killed by his own followers but his successor Khālid b Hamīd al-Zanātī was more fortunate at the beginning of 123 (740) he inflicted on the Arabs on the banks of the Wādī Shalif (Chelif) the disastrous defeat known as the "battle of the nobles" (*ghazwat al-ashrāf*) It required a great expeditionary force to be organised in the east in order to overcome finally this general rebellion, which was not done without considerable losses

MAISIR, casting lots by arrows, a method by which a head of cattle was divided This was the custom of the Arabs before Islām The word seems almost to mean lucky chance, easy success, from *yasira*, to be easy, *yassara*, to succeed, cf *maisara*, comfort, riches A group of ten Arabs used to buy a young camel, which was cut into ten portions and the *yāsir* presiding distributed the portions among his companions by means of arrows on which he had written their names and which he drew at random out of a bag In another system 28 portions were made of the animal, there was one part for the first arrow, 2 for the second and 3 for the third and so on up to 7, the three last got nothing These arrows were deposited with the guardians of the temple in Mecca

The game was considered a pagan practice and the Kurʾān (ii 216 and v 92) forbade it along with wine and idols as a major sin

The word *maisir* has acquired a wider sense among the commentators and in certain traditions

Zamakhsharī gives it the same sense as *kimār* [q v] According to a tradition of the Prophet, *maisir* is applied also to dice "these accursed dice are the *maisir* of Persia (*maisir al-ʿadjam*)", according to a tradition attributed to ʿAlī it is also to be extended to backgammon and chess (presumably in so far as dice were used in these games) and according to Ibn Sīrīn to every practice in which there is an element of chance

Cf the Dictionaries, the *Kāmūs*, Djawharī, Zamakhsharī, *Kashshāf*, ed Nassau Lees, i 380, al-Yaʿḳūbī, ed Houtsma, i 300 *sqq* , Huber, *Über das Maisir genannte Spiel*, Freytag, *Einleitung*, p 170 *sqq* (B Carra de Vaux)

MAISŪN, daughter of the Kalbī chief Bahdal b Unaif [q v], mother of the Caliph Yazīd I We do not know if after her marriage with Muʿāwiya she retained the Christian religion which had been that of her family and of her tribe A few verses are attributed to her in which she sighs for the desert and shows very slight attachment for her husband But the attribution to Maisūn of this fragment of poetry, which is in any case old, has been rightly disputed She took a great interest in the education of her son Yazīd and accompanied him to the desert of Kalb where the prince passed a part of his youth, this temporary separation from her husband gave rise to the legend of her repudiation by Muʿāwiya She must have died before Yazīd became Caliph

Bibliography This is given in Lammens, *Études sur le regne du calife omaiyad Moʿāwia I* (*M F O B*, iii), p 286—287, 305, 312—314 (H Lammens)

MAISŪR (Mysore) (Skt mahisha-Canūru "buffalo town"), the premier Hindu State in India, is a principality in Southern India under the British protection, having an area of 29,433 square miles, between 11° 36′ and 15° 2′ N and 74° 38′ and 78° 36′ E Its Hindu rulers preserved their independence until the middle of the xviiith century when Haidar ʿAlī [q v] took possession of the country It remained in his and his successor, Tipū Sultān's [q v], possession until the capture of Seringapatam by the British in 1214 (1799) Maisūr was then restored by Lord Wellesley to the old Hindu dynasty The majority of the Musalmans are Sunnis, very few being Shiʿīs Of Muhammadan buildings the most noteworthy are the Gumbaz or Mausoleum of Haidar ʿAlī and Tipū at Gandjam, and the Daryā Dawlat, a summer palace at Seringapatam The population at the census of 1911 was 5,806,193, of whom 314,494 are Musalmans, mostly Sunnīs The capital of the principality bears the same name, Maisūr The languages spoken are Canarese, Hindustānī, Tamil and Telegu

Bibliography Imperial Gazetteer of India, Mysore and Coorg, Calcutta 1908, *Census of India*, 1911, vol xxi, Bangelore 1912 (M Hidayet Hosain)

MAITA (a), feminine of *mait*, dead (used of senseless things), as a substantive it means an animal that has died in any way other than by slaughter In later terminology the word means firstly an animal that has not been slain in the ritually prescribed fashion, the flesh of which therefore cannot be eaten, and secondly all parts of animals whose flesh cannot be eaten, whether because not properly slaughtered or as a result of a general prohibition against eating them

In addition to Sūra xxxvi 33 where *maita* appears as an adjective, the word occurs in the following passages in the Kurʾān in the first of these meanings xvi 116 "He has forbidden you *maita* blood, pork and that over which another than Allāh has been invoked, if however anyone is forced (to eat these) without wishing to transgress or sin, Allāh is merciful and indulgent" (of the third Meccan period, since vi 119 may refer to this context and the appearance of the same exception for cases of coercion in vi 146 [cf below] is then only easily explained in view of the whole trend of the passage, if there were an earlier passage, namely xvi 116, in which it was given full justification, cf Noldeke-Schwally, *Geschichte des Qorāns*, i 146 *sq* , Grimme, *Mohammed*, ii 26 transfers the whole Sūra to the later Meccan period), vi 140, 146 "They have said 'What is in the womb of this cattle belongs to the males, and is forbidden to our females', but if it is *maita* (still born), all have a share in it Say I find in what is revealed to me nothing forbidden, which must not be eaten, except it be *maita* or congealed blood or pork — for this is filth — or a slaughter at which another than Allāh is invoked, but if anyone is forced (to eat it) without wishing to commit a transgression or sin, thy heart is merciful and indulgent" (of the third Meccan period, cf Noldeke Schwally, i 161, Grimme, ii 26), ii 168 "He has forbidden you *maita*, blood, pork and that at which another than Allāh is invoked but if anyone is forced (to eat it) without wishing to commit a sin or transgression, it is not reckoned as a sin against him, Allāh is merciful and indulgent" (of the year 2 of the Hidjra, before the battle of Badr, cf Noldeke-Schwally, i 178, Grimme, ii 27) v 4, 5 "Forbidden to you is *maita*, blood, pork, that at which another than Allāh is invoked, and that which has been strangled, killed by a blow or a fall, or by the horns (of another beast), that which has been eaten by wild beasts — with the exception of what is made pure — and that which hath been sacrificed to idols But if anyone in (his) hunger is forced to eat of them without wishing to commit a sin, Allāh is merciful and indulgent" (in all probability revealed after the valedictory pilgrimage of the year 10, cf Noldeke Schwally, i 227 *sq* , Grimme, ii 28 dates the Sūra to the year 7)

It is quite evident from Sūra, vi 140 that the *maita* was of some significance for the Meccans in the many laws about food with which Arab paganism was acquainted (cf Wellhausen, *Reste arabischen Heidentums*, 2nd ed , p 168 *sqq*) Although it is no longer possible to define exactly the part it played (even the statements recorded by Tabarī from the earliest interpreters of this passage, which moreover only refers to a detail, reveal the complete disappearance of any reliable tradition), it may be assumed without misgiving that the Kurʾānic prohibition contained a corresponding pre Islāmic prohibition, although it perhaps modified it Both go back to the religious reluctance to consume the blood of animals, and indeed in all the Kurʾān passages quoted, blood is mentioned alongside of *maita* It is unnecessary to assume that Muhammad was influenced by Judaism on this point and the suggestion may be rejected especially as the prohibition in its stereotyped form occurs again in Sūra ii 168 just at the time of vigorous reaction against Judaism and Sūra vi 147 (Madīnese, a

late insertion) which contrasts the prohibition of *maita* etc with the Jewish laws relating to food What Muhammad understood by *maita*, he tells us himself in the latest passage dealing with it, v 4 in the second half of the verse the principal kinds of *maita* are given (with the exception of the animal that dies of disease), which had already been mentioned in general terms, the commentators were thus able to interpret the single cases given as examples wrongly as different from the *maita* proper The purification (in the Kur'ān only mentioned in this passage) must mean ritual slaughter, by which, even if done at the last moment, the animal does not become *maita* but can be eaten

These prescriptions of the Kur'ān are further developed in the Traditions According to the latter it is forbidden to trade in *maita* or more accurately its edible parts, some traditions (mainly on the authority of Ahmad b Hanbal) even forbid any use being made of all that comes from *maita*, others again expressly permit the use of hides of *maita* An exception from the prohibition of *maita* is made in the cases of fish and locusts, these are in general considered as the two kinds of *maita* that are permitted, i e no ritual slaughter is demanded in their case (because they have no "blood", cf above) While some traditions, extending this permission by the earliest *kiyās*, say that all creatures of the sea, not only fishes, can be eaten without ritual slaughter, including even seafowl (in this case it is said that "the sea has performed the ritual slaughter"), others limit the permission to those animals and fishes which the sea casts up on the land or the tide leaves behind in contrast to those which swim about on the water But there is also quoted a saying of Abū Bakr expressly declaring what swims on the surface to be permitted In this connection we have the story of a monster cast up by the sea (sometimes described as a fish) which fed a Muslim army under the leadership of Abū 'Ubaida when they were in dire straits, but in this tradition and in the interpretation that has been given it (that they only ate of it out of hunger i e took advantage of the Kur'ānic permission for cases of need) is clearly reflected the uncertainty that prevailed about such questions as were on the border line In the Traditions, we find it first laid down that portions cut out of living animals are also considered *maita* The way is at least paved for the declaration that all forbidden animal-dishes are *maita* The regulations found in the Kur'ān appear again here, e g the permission to eat *maita* in case of need and slay properly dying animals at the moment to prevent them becoming *maita*

Some traditions handed down through Hammād from Ibrāhīm al Nakha'ī bring us to a somewhat late period (in the *Kitāb al-Āthār*) one says that of the creatures of the sea only fishes can be eaten, another, which is found in two versions, limits the permission to what is thrown up by the sea or left behind by the tide, ritual slaughter is not demanded in this case The question whether the embryo of a slaughtered dam requires a special purification i e ritual slaughter, is raised in one tradition and decided in the affirmative

The most important regulations of Muslim law about *maita*, which express the last stage of development are as follows It is unanimously agreed that *maita* in the legal sense is impure and "forbidden" (*harām*) i e cannot be eaten and also that fish are exceptions to this, the Mālikīs and Hanbalīs also except the majority of creatures of the sea, and according to the more correct Shafi'ī view, this applies to all marine creatures (the Hanbalīs here hold the opinion of Ibrāhīm al-Nakha'ī, except that the two ideas of "thrown up" and "swimming on the surface" are later overlaid and destroyed by the to some extent synonymous "slain by another cause", "died of itself") The edible parts of *maita* are also *maita*, as are the bones, hair etc among the Shāfi'īs, but not the Hanafis, and among the Mālikīs only the bones, the hide when tanned, is considered pure and may be used Emergency slaughter (*dhakāt* or *tadhkiya*, ritual slaughter in general is *dhabh* or *nahr*) is according to the Hanafīs and the better known view of the Shafi'īs (also according to al-Zuhrī) permitted, even if the animal will certainly die, provided it still shows signs of life at the moment of slaughter According to the view predominant among the Mālikis, such slaughter is not valid and the animal becomes *maita* (in contrast to Mālik's own view) The question of the embryo (cf above) is answered in the affirmative by the Hanafis, following Ibrāhīm al-Nakha'ī and Abū Hanīfa (al Shaibānī himself held the Mālikī view, to be mentioned immediately) but in the negative by the Mālikīs and Shāfi'īs (in this case it is said that "the ritual slaughter of the dam is also the ritual slaughter of the embryo") except that the Malikis made it a condition that the embryo should be fully developed (Mālik himself also demanded its slaughter "to draw the blood from it" in the case where the embryo had been dropped) That anyone who is forced to eat *maita* may do so, is the unanimous opinion, only on the questions whether one is bound to eat *maita* to save his life, whether he should satisfy his hunger completely, or only eat the minimum to keep life alive etc, there is a difference of opinion The Shafi'īs and Hanbalīs further demand that one should not have been brought to these straits through illegal action (a different interpretation of the Kur'ānic regulations)

A clear definition of *maita* and its distinction from other kinds of forbidden animal foods was never reached Sometimes it is separated on the authority of the Kur'ānic passage itself from its own 4 subdivisions given in Sūra v Sometimes its validity is extended over extensive allied fields As is evident from the Fikh books, this terminological uncertainty has not infrequently caused still further confusion in the discussion of differences of opinion

Bibliography Lane, *Ar Engl Lexicon*, s v, the books of Hadīth and Fikh, Wensinck, *Handbook of Early Muhammadan Tradition*, s v, Juynboll, *Handleiding tot de kennis van de Mohammedaansche Wet*[3], p 169 *sq* (J SCHACHT)

MAIYĀFĀRIḲĪN, a town in the north east of Diyārbakr [q v] The other Muhammadan forms of the name are Māfārkīn, Mafārkīn, Fārḳīn (whence the name of origin al-Fārikī) etc The town is called in Greek Martyropolis, in Syriac Mīpherḳēt, in Armenian Nphrkert (later Muharkin, Muphargin) According to Yākūt, iv 702, the old name of the town was Madūr-sālā (read *kāla* < **matur-khalakh* in Armenian, "town of the martyrs") On the identification of Tigranocerta with Maiyāfārikīn see below

Geography The town lies to the south of the little range of the Hazrō which rises like the first tier of the amphitheatre of the mountains, the higher parts of which consist of the summits (Darkōsh, Antok) rising to the south of Mūsh and separating the course of the eastern Euphrates (Murād-čai) from those of the Tigris and its left bank tributaries

Maiyāfārikīn lies 25 miles north of the Tigris and 12 west of the Batmān su It is watered by a little river (now called the Fārkīn-su) which flows into the Batmān-su 12 miles to the south-east, an important left bank tributary of the Tigris which drains the wild and mountainous country south of Mūsh (the cantons of Kulp and Ṣāsūn) The old names of the Batmān-su are Nicephorius (Roman period), Nymphios (Byzantine period), Syriac Kallath, Arabic Sātidamā (a word of Aramaic origin transcribed Shithithma in Armenian and explained as "drinker of blood", Armen Geogr of the seventh century, Marquart, *Ērānšahr*, p 161), Armenian Khalirt and perhaps Mamushel (Faustus of Byzantium) Some of these identifications, as we shall see, are still uncertain

Maiyāfārikin is the meeting place of a number of roads from the north following the different streams which go to form the Batmān su 1 Čabakhdjūr (on the Muradčai)–Dhu 'l-Karnain–Idje–Boshāt–Maiyāfārikīn, 2 Mūsh–Kulp–Pāsūr–Maiyāfārikin, 3 Mūsh–Khoit–Tingirt (= Ṣāsūn)–Maiyāfārikin Routes 3 and 4 passing Ṣāsūn are still little known The distance between Diyārbakr and Maiyāfārikin is about 45 miles The old road Diyārbakr–Bitlis, which used to run through Maiyafārikīn, now runs farther south and crosses the Batmān-su south of Almadīn (Diyārbakr – Sinān – Zok – Weisikaranī – Bitlīs)

Maiyāfārikīn has thus lost the advantage of being a stage on the road between Armenia and upper Mesopotamia Since 1260 it has no longer been a political centre around which gravitated the interests of the country around It retains only its importance as a market for the produce of the mountainous and pastoral country drained by the Batmān-su

Ancient History The mountains to the north of Maiyāfārikīn have long sheltered the remnants of ancient aboriginal peoples About 600 A D, Georgius Cyprius (ed Gelzer, p 48), mentions the Khothaitai and Sanasounitai there who gave their names to the districts of Khoit and Ṣāsūn Marquart (1916) supposes there are elements of the aboriginal language in names like *M-Ipher kēt and *Ma-mush-el(i) which are, he says, formed with Caucasian ("sud-kaukasisch"?) prefixes According to tradition (Yākūt, iv 703), the founder of Martyropolis, Marūthā b Layūtā, was the son of a woman of the mountains, and Marquart sees in Layūtā a mutilated form of the name of the people Urtā(n) < Urartu (*Handes Amsorya*, 1915, p 96, 1916, p 126) The Marwānid Abū Nasr was married to the daughter of Sankharib, lord of the Sanāsuna, cf Amedroz, in *JRAS*, 1903

Lehmann-Haupt thinks he can recognise at Maiyāfārikīn traces of an ancient Assyrian settlement, "eine von Haus aus assyrische Anlage" (*Armenien*, I, 396, 398)

Tigranocerta = Maiyāfārikīn(?) As early as 1838 von Moltke had suggested that Maiyāfārikīn was the ancient Tigranocerta i e the new capital founded by Tigranes II about 80 B C, which was taken by Lucullus after the victory won on the banks of the Nicephorius (Oct 6, 69 B C) and again in the reign of Nero by the legate Corbulo (c 63 A D), it is regularly mentioned down to the middle of the fourth century A D Other scholars had sought Tigranocerta at Sirt (d'Anville), Arzan (H Kiepert, 1873), near Kefr-Djōz (Kiepert 1875), at Tell-Armen west of Nisibīn (E Sachau, cf DUNAISIR) etc Late Armenian tradition gives the name Tigranocerta to Diyārbakr Moltke's idea was taken up vigorously by Lehmann-Haupt and W Belck, after their expedition to Armenia in 1898—99

On the north wall of Maiyāfārikīn is a mutilated Greek inscription It was deciphered and published by Lehmann-Haupt, who attributes it to the Armenian King Pap (369—374), which is quite in keeping with the known facts of the reign of this monarch In spite of his criticism of the details of Lehmann-Haupt's hypothesis, Marquart (1916) has rather corroborated him by bringing forward new considerations

In view of the many contradictions found in the classical sources regarding Tigranocerta the question comes to be, if Maiyāfārikīn is not Tigranocerta, what other unknown town existed here in the time of Pap, unless the stones on which the inscription is engraved and which are now hopelessly disarranged ("in heillosei Verwirrung") were brought from another place when Martyropolis was being built?

The main objection to the identification of Tigranocerta with Maiyāfārikin is that, according to Eutropius, vi 9, 1 and Faustus, v 24, Tigranocerta was in Arzanene (Ałdznikh), on the other hand the river Mamushet seems to have formed in the fourth century the western frontier of this latter province From this fact (Hubschmann, *Die altarmen Ortsnamen, Indogerm Forsch*, 1904, p 473—475), it seems that Tigranocerta ought to be placed east of the Batmān-su if this river is identical with the Mamushet This last name was connected by Marquart with the name al-Musūliyāt, which Mukaddasi, p 144, gives to one of the tributaries of the Tigris (on the left bank) and apparently corresponding to the Batmān-su [A district of Musūliya(?) still exists farther east on the upper course of the Bidlīs-čai, in the area of the ancient possessions of the Batrīk Mushālīk, cf Kisrawī, in Yākūt, ii 551—552]

To reconcile the statements of Faustus, iv 24 and 27, with the position of Maiyāfārikin (12 miles W of the Batmān su), Marquart proposes to identify the Mamushet = Nicephorius with the Fārkin-su while the Musūliyāt would be applied to the whole system of the Batmān-su (Nymphios, Sātidamā etc) The insignificance of the Fārkīn-su, which rises in the hills about 3 miles north of Maiyāfārikīn (Ibn al-Azrak calls its source Ra's al-'Ain, the *Djihān-numā*, p 437 'Ain al-Hawd) and does not suit the description of the hermitage of Mambrē, which, according to Faustus, must have been on the right bank, makes Marquart's hypothesis less attractive If finally we consider the position of Maiyāfārikīn from the point of view of the interests of Tigranes, one is forced to admit that against an enemy coming from the west (Lucullus!) Tigranocerta = Maiyāfārikīn was devoid of natural defences, while in the event of an enemy coming from the east it ran the risk of being easily cut off from Armenia on the main road from Bitlīs (the ancient Κλεισοῦρα Βαλαλείσων, cf Tomaschek,

Sasun, *Sitzungsb A W Wien*, Vienna 1895, p 8) On the other hand Maiyāfārikīn from its position later played an important part in the defensive system of the Byzantine empire

In these circumstances and before a more detailed study has been made on the spot, it is a mistake to think that all the difficulties in the identification of Tigranocerta have been cleared up

Maiyāfārikīn = Martyropolis The identity of these two towns is quite certain The Christian sources (Syriac, Armenian and Greek) referring to the foundation of Martyropolis are numerous A Syriac "history" (*tash*ʿ*ithā*) kept in the Jacobite church of Maiyāfārikīn was translated for the historian of the town, Ibn al-Azrak, and is given in a synopsis in Yākūt, iv 703—707 and Kazwīnī, ii 379—380 (transl with notes in Marquart, *Handes Amsorya*, 1916, p 125—135)

The town is said to have been founded on the site of a "large village" (*kaiya* ʿ*azima*) by the bishop Marūthā (Mār Maiūtha) who had obtained the authority of Yezdegird I of Persia to do so This ecclesiastic flourished between c 383 and 420 (on the sources for his biography cf Marquart, *op cit*, p 91—92, 125) The town of Martyropolis to which Marūthā brought the remains of the Christian martyrs of Persia is mentioned for the first time in 410 The etymology of the Syriac name Mīpherkēt is uncertain (cf above) In Armenian the town is mentioned for the first time in the Geography of the viiith century as Nphrkert (once Nphret)

By the peace of 297 with Diocletian, the province of Sophanene, within which Martyropolis lay, had become part of the Roman empire Even after the disastrous peace made by Jovian (363) Sophanene remained to the Emperor Under Theodosius II (401—450), the new town, situated quite near the frontier, acquired considerable importance and became the capital of Sophanene (= Great Tsophkh) The town was still insufficiently fortified and in 502 the Sāsānian Kawādh b Pērōz seized it and carried the inhabitants off to Khūzistān where he founded for them the town of Abaz-Kobadh (Yākūt, iv 707) (Weh-Āmidh-Kawādh = Arradjān, cf Marquart, *Ērānšahr*, p 41, 307) Anastasius began the fortification of Martyropolis but Justinian, after his accession (527), was the first to reorganise completely the eastern frontier between Dārā and Trebizond Martyropolis, the headquarters of a commander under the strategos of Theodosiopolis (Erzerūm), became one of the most important military centres Procopius, *De aedificiis*, iii, gives a complete description of the walls of the town, the height and thickness of which were doubled and a full account of the system of defences (outer walls, advanced forts etc), cf Adontz, *op cit*, p 10—12, 140—142 In 589 the town fell into the hands of the Sāsānians but in 591 came back to the Byzantines in return for the support given by the Emperor Maurice to Khusraw II Heraclius held it till the year 18 = 639 (Yākūt, *l c*) [The date is not given in Muralt, *Chronogr byz*, i]

The vicissitudes of Martyropolis probably explain the fact that in the Armenian Geography of the seventh century (ed Patkanow, transl, p 45, Marquart, *Ērānšahr*, p 18 and 161) the Persian province of Ałdznikh (Arzanene) is separated from Tsophkh (Sophanene) by the line of the Khahirt (= Baṭmān-su) while in the description of parts of Armenia Nphṛet (= Nphrkert) figures as one of the 10 cantons of Arzanene

Christian legend as preserved by Ibn Azrak and Yākūt gives very full details of the building of the town in the time of Mār Marūthā the arches (*ṭikān*) of the walls in which the remains of the martyrs were placed, the eight gates of the town, the names of which are carefully recorded, the convent of SS Peter and Paul, the buildings erected by the three ministers of the Byzantine emperor, each of whom built a tower and a church There is still to be seen in Maiyāfārikīn the ruins of a magnificent basilica and of the Church of the Virgin (al-ʿAdhrā) Miss Gertrude L Bell, who has studied these monuments, dates the basilica "not much later than the beginning of the fifth century", and suggests that the Church of the Virgin was one of the two built by Khusraw II in recognition of the assistance lent by Maurice, cf Abu 'l-Faradj, *Muḵhtaṣar*, ed Pocock, p 98

Under Islām In 19 (640) in the reign of the caliph ʿUmar, Maiyāfārikīn was taken by ʿIyād b Ghanm without a blow being struck (Balādhurī, p 175—6) and henceforth shared the lot of Diyārbakr

The intermediate character of the position occupied by Maiyafārikīn puzzled Arab geographers Ibn Rusta, p 106, puts the town in Djazīra while the others (Ibn Hawkal, p 246) regard it as belonging to Armenia According to these authors, Maiyāfarikin was a little fortified town having an unhealthy climate on account of the stagnant water but not without its amenities (Istakhrī, p 76ᵏ, Ibn Hawḳal, p 131, 151, 153, Mukaddasī, p 54) The region (*diyāʿ wa-kulaʿ*) of Maiyafārikin and Arzan in the time of Ibn Hawkal was however entirely depopulated

The Hamdānids and the Būyids Maiyāfārikīn formed part of the territory of the Hamdānids [q v] (317—394) They built a castle (*ḳaṣr*) there near the gate Bāb al-Faiah wa 'l-Ghamm (Yākūt), its ruins are apparently mentioned by Ewliyā (1655), iv 71—4 under the name *Saif al-Dawla Sarāyī* The Bāb al-Maidān gate also dates from Saif al-Dawla (333—356) This prince was buried at Maiyāfārikin, cf *Dhikrān numā*, p 437 In 352, Nadja, a client of the Hamdanids, rebelled in Maiyāfārikīn In 362 (July 4, 973) Hibat Allāh b Nāsir al-Dawla defeated the Byzantines in the vicinity of the town

In 367 (978) the Būyid ʿAdud al-Dawla dispossessed the Hamdānids who had supported his cousin Bakhtiyār and in 368 Abu 'l-Wafā, a general of ʿAdud al-Dawla, took Maiyāfārikīn (Ibn Miskawaih, ed Amedroz, ii 199, 266, 312, 384)

The Marwānid dynasty After the death of ʿAdud al-Dawla (374), Maiyāfārikīn and the rest of Diyārbakr fell into the power of the Kurd Bādh [cf KURDS and MARWĀNIDS] who had the Dailamī garrison of Maiyāfārikīn massacred and was able to defend what he held against the Būyid Ṣamsām al Dawla and the sons of Nāsir al-Dawla, who had meanwhile returned to Mawsil After the death of Bādh, his nephew, Abū ʿAlī Hasan b Marwān, established himself in Maiyāfārikīn and for a century this town remained the capital of the Marwanid dynasty (380—479 and again in 486) In 384 the governor Mammā, appointed by Abū ʿAlī, succeeded in checking the turbulence of the inhabitants who had been incited by Hamdānid intrigues There is an inscription of Mumahhid

al-Dawla dated 391 (1000) on the wall of the town In 392 an ʿAlid pretender again stirred up trouble in Maiyāfārikīn In 401 after the assassination of Mumahhid al-Dawla, his murderer Sharwa, son of Mammā, with the help of his Georgian guards seized Maiyāfārikīn but Saʿīd Abū Nasr came from Arzan and began his long and brilliant reign (401—453)

A fine castle decorated with gilding was built in 403 on the little hill on which stood the convent and the Church of the Virgin This Christian sanctuary (the connection of which with the al-ʿAdhrā church is not quite clear, cf above) was transferred to the Melkite church Later were built a hospital, a mosque with a clock (*bankūm* < Pers *pingān*) and baths Water was led to all the town from the spring of Ra's al-ʿAin A palace was built on the banks of the Sātīdamā (Batmān-su) and the water was raised to it from the river by a noria A bridge spanned the river Haww (Harrō ?) A *wakf* bequeathed by Shaikh Abū Nasr al-Manāzī endowed the mosque(?) of Maiyāfārikin with a library A fort was built to protect the town against the Sanāsina (people of al Sāsūn)

This list from Ibn al-Azrak is supplemented by the statements of Nāsir-i Khusraw, who visited the town under Abū Nasr on the 6th Djumādā I 438 The Persian traveller speaks of its walls, built of huge blocks of white stone (Ibn Miskawaih, ii 384 "strong walls of black stone", Lehmann-Haupt "gelblichweisser Kalkstein"), the western gate all of iron, the Friday mosque, the water-channels passing before each house (one uncovered with drinking water and the other covered serving as a sewer) Outside the town were the caravanserais, the hot baths, and a second Friday mosque To the north of the town was the suburb of Muhdatha, also with a Friday mosque and baths At a distance of 4 farsakhs from the town (on the bank of the Sātīdamā ?) was a new little town called Nasrīya built by the emīr then reigning

After the death of Abū Nasr, who was buried in the town, the Saldjūks began to interfere in the affairs of Maiyāfārikīn In 458 Sallār Khorāsānī sent by Tughrīl arrived before the town with 5,000 horsemen In 463 it was visited by the celebrated Nizām al-Mulk In 478 by orders of Malik Shāh the former vizier of the Marwānids, Ibn Djahir, besieged the capital of his masters, which surrendered in Djumādā I 478 The treasures of the Marwānids valued at 1,000,000 dīnārs were carried off by Ibn Djahīr In 482, ʿAmīd al-Dawla, son of Ibn Djahīr, was appointed governor of Maiyāfārikīn After the death of Malik-shāh (485), the Marwānid Nāsir al Dawla succeeded in re-entering Maiyāfārikīn but the Saldjūk Tutush of Syria took the town in Rabīʿ I 486, cf Ibn Azrak in Amedroz, *J R A S*, 1903 In 532 (Ibn al-Athīr, xi 43) the last representatives of the Marwānid family disappeared from the neighbourhood of Maiyāfārikīn

The Ortukids and Ayyūbids In 575 (1121) the Saldjūk Sultān Mahmūd added to the possessions of Il-Ghāzī, founder of the line of Ortukids of Mārdin, the fief of Maiyāfārikīn, to which Il-Ghāzī appointed his son Sulaimān (516—518), cf Abu'l Faradj, ed Pocock, p 249 and Kātib Fardī, *Mārdīn Mūlūk-i Ortukiya* (*Artūkiya* ?) *Taʾrīkhī* (written in 944=1537), ed ʿAlī Emīrī Efendi (Constantinople 1331, p 20) Six successive Ortukids ruled Maiyāfārikīn till 580 (1184) In 587 (1191) the last Ortukid Yuluk Arslān again seized the town and held it for a time

In 581 the Ayyūbids had become masters of Maiyāfārikīn and held it till 658 (1260) Salāh al-Dīn built a mosque there for which the columns of the Byzantine basilica were used (Gertrude L Bell, *op cit*, Pl xi) Maiyāfārikīn had a mint under the Atābegs the coins which they struck (dated 591, 599, 600, 612, 618) bear curious human figures which are portraits or symbolical personages (Ghālib Edhem, *Catalogue des monnaies turcomanes* etc, Constantinople 1894, p 149—67, S Lane-Poole, *Catalogue of Oriental Coins in the British Museum*, vol iv, p 255, see vol iii, p 24 for a Marwanid coin of this mint) On the walls of the town are inscriptions of the following Ayyūbids Awhad Nadjm al-Dīn Ayyūb (of 600 A D ?), Malik Ashraf Mūsā (607—617), Malik Muzaffar Ghāzī (623), Malik Kāmil Muhammad (654) A complete list of rulers at Maiyāfārikīn from 515 to 658 prepared by van Berchem is given in the appendix to Lehmann-Haupt, *Materialien*, p 134

The Mongols In 639 (1241) the Ayyūbid Shihāb al Dīn Ghāzi had received the summons from the Mongol Khakān to submit and raze the walls of the town but gave an evasive answer In 650 (1252) the Mongols pillaged the country round Maiyāfārikin During Hūlāgū's expedition to Syria in 658 (1260) the army of the prince Yashmut besieged Maiyafārikīn which was defended with great bravery by Malik al-Kamil The blockade produced a terrible famine in the town which was forced to surrender Only 70 of the defenders survived Kāmil was put to death in cruel fashion and his head carried on the point of a lance through the streets of Damascus (Rashīd al Dīn ed Quatremère, p 330—331, 350—375, d'Ohsson, *Histoire des Mongols*, iii 354) Before his death, in 662 (1264), Hūlāgū gave the district of Diyārbakr to his general Tūdān [cf SULDUZ] Three years later, Abaka allotted Maiyāfārikīn to his father's widow, Kutuy-Khātūn Maiyāfārikīn later lost its independence and henceforth shared the lot of Diyārbakr [q v]

In 796 during Timūr's stay at Mārdin, a number of Malīks including those of Arzīn (*sic*) and Batmān came to pay him homage but the *Zafar-nāma* (i 665) does not mention the lord of Maiyāfārikīn After the conquest of Diyārbakr, Timūr on his way to Mūsh took the road via Maiyāfārikīn (*ibid*, i 685) and Sēwāsar (the name of a summit in al-Sāsūn east of al-Antok) This march is the only example of a considerable force following the direct road Maiyāfārikīn-Mūsh

The Safawids and the Ottomans Our information about the rule of the Turkoman dynasties (Kara-Koyunlu and Ak-Koyunlu) in the region of Diyārbakr is still very deficient In pursuit of his campaign against the last Ak-Koyunlu Murād, Shāh Ismāʿīl I Safawī in 913 occupied all the region of Diyārbakr, the government of which was entrusted to Khān Muhammad Ustadjlu (*Sharaf-nāma*, i 408, *ʿĀlam-ārā*, p 23—25) The defeat at Čaldīrān produced risings against the Persians throughout Kurdistān The Kurd chief Sayid Ahmad Beg Rūzakī seized Maiyāfārikīn and ʿAtak (Hattākh, cf the *Κάστρον Ἀτταχᾶς* of Georgius Cyprius) Maiyāfārikīn passed definitely under Ottoman rule after the battle (921) of Koč-Hisār (south of Mārdīn) in which the Persian general Kara-Khān was defeated (von Hammer, *G O R*², i 731—741)

In 1529 Maiyāfāriḳīn was visited by the Portuguese Jesuit Lenreiro, who found there "many monuments with inscriptions and Greek characters On the walls were images of the apostles and other saints painted in gold and in brilliant colours The town was almost deserted"

The Sulaimānī Kurds While the events above described affecting a wider area were going on, the power of the local Kurd chiefs was gradually growing At the end of the xvth century we find the whole valley of the Batman su reunited under the rule of the Sulaimānī chiefs, one branch of whom was established at Maiyāfārikīn and the other at Kulp (*Sharaf-nāma*, i 261—271, cf bove ii, p 1144 *sq*) In 1838 von Moltke found the town full of ruins, evidence of the recent conquest of this part of Kurdistān by the Turks The Kurds however kept the de facto power down to the beginning of the xxth century (cf Lehmann-Haupt, *Armenien*, i 394, 419) The name Silwān which in the local administrative language finally eclipsed the old Maiyāfārikīn, can only be a kind of development of the name Sulaimānī > Silīwānī (in Turkish Silwānī), cf Pers *mihmān* (from *mēhmān*) > Kurd *mewān*

In 1891 (Cuinet) there were in the kadā of Silwān 363 villages with 25,217 inhabitants of whom 18,500 were Muslims and 6,717 Christians (Armenian and Jacobites) The town had 1,450 houses with 7,000 inhabitants (half Muslims and half Christians)

Bibliography On the question of Tigranocerta, cf especially H Kiepert, *Über die Lage d arm Hauptstadt Tigranokerta*, *Monatsberichte Pr Ak W Berlin*, 1873, p 164–210, Mommsen and Kiepert, *Die Lage v Tigranokerta*, *Hermes*, ix, 1875, p 129—149, Sachau, *Über die Lage v Tigranokerta*, *Abh Pr Ak W*, 1881, p 1, Henderson, *Controversies in Armenian topography*, i, *The site of Tigranocerta*, *Journ of Philology*, xxviii, 1903, p 19—121, Hubschmann, *Die altarm Ortsnamen*, *Indogerm Forsch*, xvi, 1904, p 473—475, Lehmann Haupt, *Armenien einst und jetzt*, i, Berlin 1910, 380—429 (general description and history of Maiyafarikin to 1258), 500—523, 419—420 (Kurd castle of Boshṭ with a Sāsānian bas relief of Ardashīr I᾽), 500—523 (Tigranocerta), 537—540 (bibliography and complete list of earlier publications by W Belck and C F Lehmann-Haupt), ii, Berlin 1926, p 396—421, *9—10 (polemic with Marquart), Marquart, *Mīpherqēt und Tigranokerta*, *Handes Amsorya* (organ of the Mekhitarists of Vienna), 1916, columns 68—135, cf also Marquart, *Ērānšahr*, p 161, 306 (in Νικηφόριος the author was at first inclined to see a local name or an Iranian name *Nēvak farr graecised) and Marquart, *Sudarmenien und die Tigrisquellen*, *Handes Amsorya*, 1915, col 116 (Sātidamā)

For the Byzantine period the works quoted by Marquart and Lehmann-Haupt, Chapot, *La frontière de l'Euphrate de Pompée a la conquête arabe*, Paris 1907, p 359—360, Adontz, *Armenia v epokhu Iustiniana*, St Petersburg 1908, index (complete geographical and political study of Armenia in the ivth century), Miss G L Bell, *Churches and monasteries of the Tur ʿAbdīn and neighbouring districts*, *Zeitschr f Gesch d Architectur*, Beiheft 9, Heidelberg 1913, p 86—92, plates xi (mosque of Saladin), xii–xiv (basilica), xv–xix and xxviii 1 (al-ʿAdhrā)

For the Muslim period the general sources quoted in the text and Le Strange, *The Lands of the Eastern Caliphate*, p 111—112 The special history of the town is *Taʾrīkh Maiyāfārikin* written in Arabic in 572 by Ahmad b Yūsuf b ʿAlī Ibn al-Azrak al-Fārikī, unique MS Brit Mus, Or 5803 (fragment of an older version in Or 6310) The history of Ibn al-Azrak is quoted and completed in vol ii of *al-Aʿlāḳ al-khaṭīra fī Dhikr Umarāʾ al-Shaʾm wa ʾl-Djazīra* (Bodleiana Marsh 333, Catalogue i, N⁰ 945) by ʿIzz al Dīn b Shaddād al-Halabī The publication of the histories of Ibn al-Azrak and Ibn Shaddād is proposed by the *G M S* The data in Ibn al Azrak (and in part of Ibn Shaddād) have been excellently summarised by Amedroz in the articles *Three Arabic MSS on the History of the city of Mayyafariqin*, in *J R A S*, 1902, p 784—812, *Marwanid dynasty at Mayyafariqin*, *J R A S*, 1903, p 123—154, *Notes on two articles on Mayyafariqin* (remarks by Marquart), *J R A S*, 1909, 170—176 The epigraphical materials of the German expedition of 1898–1899 have been studied by M van Berchem, *Arabische Inschriften aus Armenien u Diyarbekr*, in Lehmann-Haupt, *Materialien z alteren Geschichte Armeniens und Mesopotamiens*, *Abh G W Gott*, N F, ix, N⁰ 3, p 125—142, Nāsir-i Khusraw, *Safar-nāma*, ed Schefer, p 7–8, transl, p 24–25, Rashīd al-Dīn, *Djāmiʿ al-Tawārīkh*, ed Quatremère, p 330—331 (Āmid) and 360—375 with an excellent study by the editor on Maiyāfārikīn), Ḥādjdjī Khalīfa, *Djihān-nūmā*, p 437, Ewliyā Čelebi, *Siyāhetnāme*, iv 71—74 (interesting details), A Lenreiro, 1529, *Itinerario da India*, Coimbra 1560 (second edition 1762) Bitlīs-Hazō–"Monfarquim", Moltke, *Briefe uber Zustande in d Turkei*, ed Kiepert, Berlin 1841, p 287 The river ("ein reicher Fluss [der] in schonen Windungen durch die Ebene dem Tigris zuzieht") of which Moltke speaks seems to correspond to the Batmān su, as Ritter, *Erdkunde*, x 79, 87—95 takes it to be, Taylor, *Travels in Kurdistan*, *J R G S*, 1865, p 21—58 (this article is still very important), Cuinet, *La Turquie d' Asie*, Paris 1891, ii 470—472 (kadā of Silwān) Lehmann-Haupt, *Armenien*, cf above, Flury, *Islam Schriftbanden*, Paris 1921, p 44–48 (inscription of Saladin at Maiyāfārikīn) with two plates (V Minorsky)

MAḲALLA [See Mukalla]

MAḲĀM (A), place, place where *ṣalāt* is performed As to *Makām Ibrāhim*, see kaʿba i

MAKĀMA (A), a variety of Arabic prose of a highly elaborate and artificial nature

Makama in the old language was the name for the assembly of the tribe, synonymous with *nadī* (e g Lebīd, *Dīwān*, N⁰ 46, 10, Salāma b Djandal, *Dīwān*, i 4 = *Mufaddaliyāt*, ed Thorbecke, N⁰ 20, 50, ed Lyall, N⁰ 122, 4, *Ḥamāsa*, p 95, v 1 etc , so also Ḥamadhānī, *Makāma* 16, 5 [Stamb = 44 u Bair]), hence the word was next applied to gatherings at which the Omaiyad and early ʿAbbāsid caliphs received pious men in order to hear edifying discourses from them, as Hishām for example did with Khālid b Safwān (*Kitāb al-Aghānī*, ii ¹ 35, ² 33, ¹⁷ *sqq*), Ibn Kutaiba gives an account of it in the chapter *Makāmāt* (the Sing appears as *Makām* in the separate headings) *al-Zuhhād ʿinda ʾl-Khulafāʾ wa ʾl-Mulūk* in the *K al-Zuhd*, 6 of the *K ʿUyūn al-Akhbār* (cod

Kopr 1344, fol 212v—215v), upon which Ibn ʿAbd Rabbihi in *ʿIḳd al-Farīd* (Cairo 1305), i 286 *sqq* and al-Tortūshī, *Sirādj al-Mulūk* (Būlāḳ 1289), p 32 *sqq* have again drawn The word then came to have the more general meaning of lecture, e g in Masʿūdī, *Murūdj al Dhahab* (ed Paris), v 421, 8 and perhaps also Djāhiz, *K. al-Bukhalā'*, p 218, 13, where it appears along with poetry, proverbs and tales of battles as an essential element in Arab education In the third century A H, however, the word began to sink from this higher sphere, it became the name for a beggar's appeal, which had to be framed in carefully chosen language, the more the literary training of the *adīb*, once a privilege of court circles, became disseminated among the people, an example of these appeals is preserved by Djāhiz in Baihakī, *K. al-Maḥāsin wa 'l-Masāwī* (ed Schwally), p 623 *sqq* The appeals of beggars seem to have paved the way for the literary genre proper (cf A Mez, *Abu 'l-Kāsim*, p xxiii/xxiv) This owes its existence to Hamadhānī [q v] He created a typical representative of this literary Bohemianism to which he himself belonged, which entered upon the inheritance of the *hidjā* poets of the early days of Islām, like al-Hutai'a The frequently very witty execution of the constantly changing part of his hero Abu 'l-Fath al Iskandarī and from the point of view of form the adoption for his tales of rhymed prose, which was already beginning to dominate the finer style of letter-writing, are the two special characteristics of Hamadhānī's work To the hero himself he gives a foil in the person of a narrator, ʿIsā b Hishām, who sometimes appears instead in the role of a trickster, as in makāma 12 In the 7th also — one of the poorest by the way —, in which a certain ʿIsma b Badr al-Fazārī records a meeting with Farazdak not very creditable to Dhu 'l-Rumma, the principal hero takes no part Six of these stories are only intended to glorify his patron, Khalaf b Ahmad ruler of Sidjistān, to whom as Margoliouth supposes (cf HAMADHĀNĪ) the whole collection was dedicated Sometimes he only uses the makāma form to give expression to his own views on literary questions as, for example, in the first on ancient and modern poets, in the fourteenth on the masters of prose, al Djāhiz and Ibn al-Mukaffaʿ, in the 25th makāma, another in which al-Iskandarī does not appear, he puts his polemic against the Muʿtazilīs in the mouth of a madman He does not always make al-Iskandarī appear as a rogue but in the 42nd makāma he displays a knowledge of the world which is quite innocent of guile N° 26 (Syrian, lacking in the Beirūt edition) and 31 (the Rusāfī, incomplete in the Beirūt edition) contains specimens of erotic jargon and cant language, of purely lexicographical interest is makāma 30, edited and elucidated by Ahlwardt in *Chalef al-Ahmar*, p 250 *sqq*, which deals with a competition instituted by Saif al Dawla for the best description of a horse The last (N° 52 in the Beirūt edition) is of quite another character and has only the rhymed prose in common with the makāma proper, it is on this account classed with nine other anecdotes as mulah in the Stambul edition and put in an appendix

How far al-Husrī's statement quoted above, s v HAMADHĀNĪ, that al-Hamadhānī got the idea from Ibn Duraid's *Arbaʿīn* is true cannot be ascertained as this work has not survived In any case he is entitled to the credit of having created a new literary form, which might have proved very fertile in Arabic literature which is not exactly rich in forms It is perhaps impossible to appreciate his talent fully if we may believe the tradition that the 51 specimens that have survived to us and which were apparently all that were known to al-Harīrī represent only about an eighth of his whole output His contemporaries and immediate successors were however not able to follow him on the path he had indicated One only of his contemporaries, the court poet of Saif al-Dawla Abū Nasr ʿAbd al-ʿAzīz b ʿOmar al Saʿdī († 405 = 939), has left us a makāma (Ahlwardt, *Verz der arab Handschr Berlin*, in N° 8536) Not till a century later do Ibn Nākiyā and al-Harīrī again take up the form created by him The former (Abu 'l-Kāsim ʿAbd Allah or ʿAbd al-Bākī Muhammad b Husain, b 15th Dhu 'l-Kaʿda 410 [March 14, 1020] in Baghdād, d 4 Muharram 485 [Febr 15, 1092]), of whose other poetical and philological work nothing has come down to us, does not keep strictly to the model created by al-Hamadhānī in the nine makāmas preserved in a Stambul MS (Fātih 4097, *MO*, vii 112) in as much as he does not have one hero all through and also introduces various persons as narrators, but the main point is the polished form, in which he tells his otherwise not remarkable stories (cf Cl Huart, *Les seances d'Ibn Naqiya*, *J A*, ser 10, vol xii, 1908, p 435—454, and the edition by O Rescher, in *Beitrage zur Maqāmen Literatur*, Heft 4, Stambul 1914, S 123—153) It is not till Harīrī [q v] that the makāma receives its classical form, but the latter at the same time considerably limited its subject matter in as much as he makes the anecdotes recorded by al-Hārith b Hammām centre round a hero, Abū Zaid of Sarūdj, and relates the adventures of this Bohemian, whose wit is never at a loss and who is able to meet all difficulties, in a style sparkling with wit and full of all the tricks of language That he owed the stimulus to his work to an encounter with an actual vagabond may be legend, al-Subkī, *Tabakāt al-Shāfiʿiya*, iv 296, 10 and Ibn Taghribirdī, iii 23, 7 *sqq* say he was a Basrian al-Mutahhar (Ibn Taghribirdī says al Muzaffar) b Sallār (cf C Dumas, *Le heros des maqāmāt de Hariri, Abou Zeid de Serudj*, Algiers 1917) The story at least may be quite true that the *Makāma al-Haramīya* said to be inspired by this meeting was the first from his pen In any case Harīrī's tricks of rhetoric (cf the analysis in Crussard, *Etudes sur les seances de H*, Paris 1923) so overshadowed his subject matter in the eyes of later generations that henceforth the form became the essential characteristic of the literary genre, and it could be used to clothe very varied subject matter Al-Ghazzālī (d 505 = 1111) and ʿAbd al-Karīm al-Samʿānī (d 562 = 1167) in their *Makāmāt al-ʿUlamā' baina yadai al Khulafā' wa 'l-Umarā'* (Ahlwardt, *Verz der Hss Berlin*, N° 8537, 1) and *Makāmāt al-ʿUlamā' baina yadai al-Umarā'* (Hādjdjī Khalīfa, N° 12702) attempt to go back to the older form But the Spaniard Abu 'l-Tāhir Muhammad b Yūsuf al Ashtarkūnī (d 538 = 1143 in Cordova) seems to have come nearer to Harīrī in his *al-Makāmāt al-Sarakostīya* (in Stambul, Lālelī, N° 1928, 1933) He also set himself the classical number of 50 Al-Zamakhsharī (d 538 = 1143) on the other hand disclaims any

such affinity, his makāmas are simply moral admonitions and like their counterparts, the *Nawābigh al-Kalim* and the *Aṭwāk al-Dhahab*, are intended to be appreciated mainly as tours-de force of rhetoric (cf the editions, printed Cairo 1313, 1325, and the translation by Rescher, in *Beitrage zur Maqāmenliteratur*, Heft 6, Greifswald 1913) Whether the *Makāmāt al-Sūfiya* of Shihāb al Dīn al-Suhrawardī (d 587 = 1191), which deal with mystic terminology (s *Cat of MSS Brit Mus*, N° 1349, 23), belong to this class at all is doubtful On the other hand the *Makāmāt al-Djawziya fi 'l Maʿānī al waʿziya* (Leyden, N° 426, Cambridge, N° 1098, Escurial, Dérenbourg, N° 542), which the author Ibn al-Djawzī (d 597 = 1200) himself provided with a lexicographical commentary, are certainly modelled on those of Harīrī The *al Makāmāt al-Masihiya* of the Christian physician Abu 'l-ʿAbbās Yahyā b Saʿid b Mārī (d 589 = 1193, see Ibn al-Kiftī, p 361, 4) definitely profess to be a single imitation of the latter They have a hero and a narrator but the subject matter is varied, usually of a learned and technical nature (cf Flügel, *Verz der Hss Wien*, N° 384) To the end of the sixth century A H seems to belong Abu 'l ʿAlāʾ Ahmad b Abī Bakr b Ahmad al-Rāzī al-Hanafī who dedicated 30 makāmas to the chief kādī Muhyī al-Dīn Abū Hāmid Muhammad b Muhammad b al-Kāsim al Shahrazūrī (not the same as mentioned in Ibn Khallikān, Būlāk 1299, 1 597) The only indication of his date is the mention of the Khākān of Shirwān (51, 7), this title was first borne by Manočahr II, about 550 A H (cf IV, p 384) His aim is to imitate Hamadhānī and Harīrī but to use simpler language Like them he introduces his hero and a narrator and is fond of elaborate descriptions, frequently dropping into the obscene, a number of the makāmas go together in pairs, the one being complementary to the other (cf the edition in O Rescher, *Beitrage zur Maqāmenlitteratur*, Heft 4, p 1—115) Of the VIIth century A H we only need mention an imitation of Harīrī's makāmas, 50 in number, dedicated to the family of Djuwainī (cf his *Taʾrīkh-i Djahāngushā*, ed Mīrzā Muhammad, *G M S*, XVI/1, p lii, note 2) by Shams al-Dīn Maʿadd (Muhammad) b Nasr Allāh b al-Saikal in 672 (1273) (s Hādjdjī Khalīfa, N° 12709) entitled *al-Makāmāt al Zainabiya* (s Brit Mus, N° 669, 1403, Stambul, Nūr-i ʿOthmāniya, N° 4273) The Syrian Egyptian poet Muhammad b ʿAfīf al-Dīn al-Tilimsānī al-Shābb al-Zarīf († 688 = 1289) applied the form in the field of love poetry, sometimes with lascivious subjects (*Makāmāt al-ʿUshshāk*, Paris, N° 3947, *Fasāhat al-Masbūk fi Malāhat al-Maʿshūk* and *al-Makāma al Hītiya wa 'l Shirāziya*, Ahlwardt, *Verz Hss Berlin*, N° 8594, 4, 5) These imitations become more numerous in the VIIIth century In 730 (1329) Ahmad b Muhammad b al-Muʿazzam al-Rāzī composed *al Makāmāt al-ithnā ʿashara* (pr Tunis 1303, *Les douze seances du Cheikh A b M al-Moûddhem*, publ by M Soliman al Haraïri, Paris 1282 [1855]) The form was occasionable used for religious subjects, e g by Abu 'l Fath Muhammad b Saiyid al-Nās († 734 = 1334) in praise of the Prophet and his companions in *al-Makāmāt al-ʿaliya fi 'l-Karāmāt al-djalīya* (s Rosen, *Notices sommaires des mss ar du Musee Asiatique*, St Petersburg 1881, N° 146, 10), for mysticism by Shams al-Dīn Muhammad b Ibrāhim al-Dimashkī († 727 = 1327) in *al-Makāmāt al-falsafiya wa 'l-Tardjamāt al-sūfiya*, in number 50 (Cambridge 1102), and again for the paraenesis in 749 (1349) by Zain al-Dīn ʿOmar b al-Wardī in the makāma on the plague of which he died in the same year entitled *al-Nabaʾ ʿani 'l-Waba'* (Ahlwardt, Berlin, N° 8550, 3, probably identical with the makāma which Suyūtī put in his work on the plague) The makāma was adopted for the panegyric by the Meccan ʿAlī b Nāsir al Hidjāzī in his *al Makāma al-Ghawriya wa 'l-Tuhfa al-Makkiya* in honour of the Mamlūk Sultān Kānsūh al Ghawrī (906–922 = 1500–1516, s Pertsch, *Verz der Hss Gotha*, N° 2773) The great encyclopaedist of the ninth century, al Suyūtī, naturally did not omit this form of composition, which he used with complete contempt for its traditional use to treat of subjects from the most varied branches of knowledge, religious as well as profane, e g the question of the fate of Muhammad's parents in the other world, the merits of different perfumes, flowers and fruits, nor did he hesitate to use it for obscene subjects (cf the article SUYŪTĪ where the printed editions are given) His contemporary, the South Arabian Zaidī Ibrāhim b Muhammad al-Hādawī b al Wazīr (d 914 = 1508), used the makāma for theological instruction in *al Makāma al-nazariya wa 'l-Fākiha al khabariya* (Leyden, No 438, Brill Houtsma, N° 67), as did Suyūtī's rival Ahmad b Muhammad al Kastallānī (d 923 = 1517) in the *Makāmāt al-ʿĀrifin* (Stambul, Koprulu, N° 784) Even in the centuries when literature was at a low level, the XIth and XIIth, the makāma was still used for the most varied purposes In 1078 (1667) Djamāl al-Dīn Abu 'l Fath b ʿAlawān al-Kabbānī composed a makāma on the war then being waged by the lords of Basra Husain Pasha and ʿAlī Pasha Afrāsiyāb on a Turkish army under Ibrāhīm Pasha, which he elucidates in the commentary *Zād al-Musāfir* (Brit Mus, N° 1405—6, Baghdād 1924, used by R Mignon in his *History of modern Bassorah*, p 269—286, s St H Longrigg, *Four Centuries of modern Iraq*, Oxford 1925, p 328) His compatriot ʿAbd Allāh b al Husain b Māīī al-Baghdādī al-Suwaidī (d 1174 = 1760) and his son Abu 'l-Khair ʿAbd al-Rahmān (d 1200 = 1786) used the form to string together a series of old and new proverbs in a witty context (*Makāmāt al-Amthāl al-sāʾira*, Cairo 1324 and the son's *al-Makāma djāmiʿat al-Amthāl ʿazizat al-Amthāl*, Berlin, N° 8582—83) An imitation of Harīrī in 50 adventures, the scene of which is laid in India, of an Abu 'l Zafar al-Hindī al-Saiyāh, which al-Nāsir b Fattāh narrates was finished in 1128 (1715) by Abū Bakr b Muhsin Bṭʿbūd al-ʿAlawī (lith at the Matbaʿ al ʿUlūm Press 1264 entitled *al-Makāmāt al-Hindiya*, s M Hidayat Husain, *Catalogue raisonne of the Buhār Library*, II 459)

Harīrī himself had already allowed his art to degenerate to mere juggling with words, when he used in the *Rasāʾil al-Sīniya wa 'l Shīnīya*, not included among the makāmas, in the one only words with *sīn* and in the other only those with *shin* (just as a contemporary of Simonides had written a Greek hymn without a sigma in it, cf V Wilamowitz, *Kultur d Gegenwart*, I, III 49), also al-Hanafī's makāmas contain such jugglings with words, ʿAbd Allāh b ʿAbd Allāh al-Idkāwī (d 1184 = 1770) wrote *al-Makāma al-Iskandarīya wa 'l-Tashīfiya* in which the words are arranged in pairs only distinguishable by their diacritical points

(cf Ahlwardt, *Verz Hss Berlin*, N° 8581, 2) An ostentatious display of learning marks *al Makāma al-Duḳḳaṭīya wa 'l-Makāla al-ʿUmaṭīya* of ʿOthmān b ʿAlī al-ʿUmarī al-Mawṣilī (d 1184 = 1770), the subject of which is a list and brief characterisation of the Muslim sects (ed Rescher, in *Beitrage zur Maqāmenlit*, iv 191—285, where other later examples of this art are given)

The subject, popular in Arabic literature from early times, of the dispute for precedence, *munāzara* (s Steinschneider, *Rangstreitliteratur*, *S B Ak Wien*, clv 4, 1908, Brockelmann, in *Melanges Derenbourg*, p 231, *Asia Major*, i 32), is clothed in this form in the *Makāmat al-Muḥākama bain al-Mudām al-Zuhūr* (Ahlwardt, *Verz Berlin*, N° 8580) of Yūsuf b Sālim al-Hifnī (d 1178 = 1764), who in his *al-Makāma al-Hifnīya* (Brit Mus, N° 1052, 1) also used the makāma for the panegyric A Turk, the Cretan Ahmad b Ibrāhīm al-Rasmī (d 1179 = 1783), also essayed this genre, his *al-Makāma al zulālīya al-bi<u>sh</u>ārīya* is given by al-Murādī, *Silk al-Durar*, i 74 *sqq*

Finally it may be mentioned that the endeavour to revive this form has been made by writers of the xixth century The Beirūt Christian Nāṣīf al-Yāzidjī (d 1871) gave a very successful imitation of Harīrī in his *Madjmaʿ al-Baḥrain* in 60 makāmas on which he also wrote a commentary (printed Beirūt, 1856, 1872, 1880, 1924) Less successful were the makāmas composed in 1237 (1822) and published in 1270 (1853) by Shihāb al-Dīn Mahmūd al-Ālūsī (d 1270 = 1853), lith Baghdād 1273 In the collected works of the Egyptian ʿAbd Allāh Pasha al-Fikrī (d 1307 = 1890), *al-Āṯār al-Fikrīya* (Būlāk 1315), there are several makāmas, one of which, *al-Makāma al Fikrīya fī 'l-Mamlaka al-bāṭinīya*, has appeared separately (Cairo 1289)

This form of composition so popular in Arabic was also imitated in the literatures of other languages Among the Persians the makāmas of Kādī Hamīd al-Dīn Abū Bakr b ʿOmar b Mahmūd al Balkhī (d 559 = 1164), which he wrote in 551 (1156) (Ḥādjdjī Khalīfa, No 12716), are particularly esteemed, ʿArūḍī in the *Cahār Makāla* (ed Mīrzā Muhammad, p 13, 11, transl Browne, p 25) compares them to those of Hamaḏhānī and Harīrī They consist of a number of *munāzarāt*, e g between youth and age, between a Sunnī and a Shīʿī, between a physician and an astronomer, also descriptions of spring and autumn, love and frenzy, and lastly discussions of legal and mystical problems, but here again the matter is quite secondary to the form The arrangement and titles of the 23 or 24 makāmas in the British Museum MS (Rieu, *Cat Pers MSS*, No 747) differ considerably from the Teheran and Cawnpore lithographed editions (see Browne, *A Lit Hist of Persia*, ii 347) Hamīd al-Dīn's example does not seem to have been much followed, but the journalist Adibu 'l-Mamālik (d Feb 15, 1917), according to a MS in Browne's possession (see *Lit Hist*, iv 349), composed a collection of makāmas

In Spain the Jew Rabbi Jehūda ben Shelōmō Harīzī, who flourished at the beginning of the xiiith century translated the *Makāmāt* of Harīrī into Hebrew and he composed 50 similar modelled on them which he called *Sefer Taḥkemōnī*, in them he imitated Harīrī's style, very skilfully working in quotations from the Bible (s *Iudae Harizi Macamae*, ed P de Lagarde, Gottingen 1881, repr Hanover 1924)

Finally the metropolitan of Nisibi ʿAbdīshōʿ (Ebedyeshūʿ) who died in 1318, composed in 1290—91 on Harīrī's model 50 Syriac poems, religious and edifying in their subject matter in two parts, called after Enoch and Elias, the artificial language of which he himself elucidated in a commentary in 1316 (the first half *Pardaisa dha Edhen seu Paradisus Eden Carmina auctore Mar Ebediso Sobensi*, ed Gabriel Cardahi, Beirūt 1889)

Bibliography given in the article

(C BROCKELMANN)

MĀKĀN B KĀKĪ, ABŪ MANṢŪR, like his father was a captain in the army of the ʿAlid rulers of Ṭabaristān Sayyid Abu 'l-Ḳāsim Djaʿfar b Sayyid Nāṣir, son-in-law of Mākān, who came to the throne after the flight of Sayyid Abū Muhammad Hasan b Ḳāsim, known as the Dāʿī ("the summoner unto the truth"), appointed Mākān to the governorship of Djurdjān Sayyid Abu 'l-Ḳāsim died in 312 (924) and was succeeded by Sayyid Abū ʿAlī Muhammad b Abu 'l-Husain Ahmad Mākān deposed him, sent him as a prisoner to ʿAlī b Husain b Kākī, his nephew, for safe custody, and placed his own grandson Sayyid Ismāʿīl b Abu 'l-Ḳāsim on the throne Shortly after this, Sayyid Abū ʿAlī Muhammad effected his escape and was joined by Asfār b Shīrawaihi [q v] who had rebelled against Mākān and made himself master of Djurdjān Mākān took the field against them but was beaten and forced to take refuge in the hills in the neighbourhood of Sārī

Sayyid Abū ʿAlī Muhammad died in 315 (927), and was succeeded by his brother, Sayyid Abū Djaʿfar Husain Mākān now issued from his mountain retreat, overthrew Asfār, who was the commander of the army of Sayyid Abū Djaʿfar, forced him to fly to Khurāsān, and declared the Dāʿī ruler of Tabaristān In 316 (928) Muhammad b Saʿlūk, the Sāmānid governor of Rayy, invited the Dāʿī and Mākān to Rayy, delivered the province to them and retired to Khurāsān During the absence of the Dāʿī and Mākān, Asfār returned from Khurāsān, conquered Djurdjān, defeated and killed the Dāʿī, and became the ruler of Tabaristān He then marched to Rayy, defeated Mākān and put him to flight But soon after this Asfār came to terms with Mākān and delivered Āmul to him Mākān now gradually extended his sway to Djurdjān and even conquered Nishāpūr in 318 (930) About this time Mardāwidj revolted against Asfār, and forced him to take refuge in Ṭabas in Kuhistān, but Mākān fell upon him from Nishāpūr and sent him flying back to Rayy

In 319 (931) Mākān evacuated Khurāsān at the request of Amīr Naṣr b Aḥmad and returned to Tabaristān, but he was soon turned out of it by Mardāwidj who had become master of Rayy after the death of Asfār Mākān tried to recapture Tabaristān with the help of Abu 'l-Faḍl of Djīlān and later of Aḥmad b Muhammad b Muhtādj, the commander of the army of Khurāsān, but Mardāwidj proved too strong for him and he was forced to fly for refuge to Khurāsān Amīr Naṣr b Aḥmad now bestowed on him the government of the province of Kirmān He proceeded thither, defeated the former governor and took possession of the province But when he heard the news of the murder of Mardāwidj in 323, he returned from Kirmān, procured the grant of the province of Djurdjān from Amīr Naṣr b Aḥmad,

and asked Washmgīr, the brother and successor of Mardāwīdj, to surrender the province to him which he did Henceforth very friendly relations were established between them on the strength of which Mākān threw off the yoke of Bukhārā When Amīr Nasr b Ahmad learnt this, he despatched Ahmad, the commander of the army of Khurāsān, against Mākān who was defeated after a desperate struggle of 7 months and forced to flee to Washmgīr at Rayy Ahmad followed him thither, and defeated the combined forces of Mākān and Washmgīr at Ishākābād (near Rayy) on 21st Rabīʿ I, 329 (December 25, 940 A D) Mākān was shot in the head by an arrow and fell dead His head was cut off and sent to Bukhārā

MAKARI [See Mahari]

MAKDISHŪ, a town in East Africa on the shore of the Indian Ocean, capital of Italian Somaliland Population 21,000 Setting aside the question of some ruins perhaps South-Arabic, Makdishū arose in the xth century A D as an Arabian colony The immigrations of the Arabs reached Makdishū in different times successively, and from different regions of the Arabian peninsula, the most remarkable one came from al Ahsa on the Persian Gulf, probably during the struggles of the Caliphate with the Karmatians

Perhaps at the same time also Persian groups emigrated to Makdishū, and even to day some inscriptions which have been found in the town demonstrate that Persians from Shīrāz and Naisābūr were dwelling there during the Middle Ages These foreign merchants were, however, obliged to unite themselves politically against the nomadic (Sōmālī) tribes that surrounded Makdishū on every side, and eventually against other invaders from the sea Therefore a federation was concluded in the same xth century A D and composed of thirty nine clans 12 from the Mukri tribe, 12 from the Didʿatī tribe, six from the ʿAkabī, six from the Ismaʿīlī and three from the ʿAfīfī tribe The trade was even more developed under such conditions of internal peace, then in the town the Mukrī clans acquired a religious supremacy and, having adopted the *nisba* "al Kahtānī", formed a kind of dynasty of *ʿulamā* and obtained from the other tribes the privilege that the kādi of the federation should be elected only from among themselves

But, in the second half of the xiiith century, Abū Bakr b Fakhr al-Dīn established in Makdishū a hereditary Sultānate with the aid of the Mukrī clans whom the new Sultān recognised again the privilege of giving the kādi to the town During the reign of Shaikh Abū Bakr b ʿUmar, in the year 1331 A D, Makdishū was visited by Ibn Battūta, who described very carefully its conditions in his *Rihla* Shaikh Abū Bakr b ʿUmar was probably a Sultān from the family of Abū Bakr b Fakhr al-Dīn, and under this dynasty Makdishū reached in the xivth and xvth century A D the highest degree of prosperity Its name is quoted even in the "*Mashafa Milād*", a book by the king of Abyssinia Zareʾa Yāʿkob, with reference to the battle fought by the same king against the Mussulmen at Gomut, December 25th, 1445 A D

In the xvith century A D the dynasty of the Muzaffar succeeded to the dynasty of Fakhr al-Dīn However, in the region of the Wēbi Shabēlla, viz the true commercial hinterland of Makdishū, the Adjurān (Sōmālī), who had constituted there another Sultanate friendly and allied with Makdishū, were defeated by the nomadic Hawīya (Sōmālī) who conquered that territory Thus Makdishū was cut away by the Bedouins from the interior of the land and began to decline from its prosperity The colonial enterprises of the Portuguese and the British in the Indian Ocean hastened even more this decadence Vasco da Gama, when he was coming back from India in 1499 A D, as sailed unsuccessfully Makdishū with his squadron, and even Da Cunha in 1507 A D did not succeed in occupying the town In 1532 A D Makdishū was visited by Dom Estevam da Gama, son of Vasco, who came there to buy a ship In December 5, 1700 A D a British squadron of men-of-war stopped threateningly before Makdishū but they did not land any force and after some days went away probably to India During the wars between the Portuguese and the *Imām* of ʿOmān, Makdishū and other towns on the Sōmālī coast were occupied by the soldiers of *Imām* Sūf b Sultān (died 1116 = 1704), but after a little while the *Imām* ordered his troops to come back to ʿOmān

In the meantime the Sultānate of Makdishū was practically finished, and the town divided in two quarters (Hamar-Wēn and Shangāni) was wasted by civil wars The Sōmālī had so penetrated, little by little, into the ancient Arabian town that the clans of Makdishū changed their Arabic names with new Sōmālī appellatives the "ʿAkabī" clan became the "rēr Shēkh, the "Didʿatī" were called "Shanshiya", the ʿAfīfī took the name of „Gudmana", and even the Mukri (Kahtāni) changed their name for the Sōmālī "rēr Fakih" But in the xviiith century A D, the Bedouins (Sōmālī) Darandolla, excited by exaggerated traditions of the wealth of Makdishū, assailed and conquered the town The chief of the Darandolla, who had the title of *imām*, established himself in the Shangānī quarter, and the privilege of the Kahtāni about the election of the *kādi* was again recognised by the new masters of the town In the first half of the xixth century A D, Sultān Barghash b Saʿīd of Zandjibār occupied Makdishū and ruled the town by means of a *wālī* In 1889 the Sultān of Zandjibār leased the town to Italy, who afterwards in 1906 bought all the settlements of Zandjibār on the Sōmālī coast

Makhdūm al-Mulk, whose real name is Mawlānā ʿAbd Allāh, was the son of Shaikh Shams al Dīn of Sultānpūr His forefathers immigrated from Multān and settled at Sultānpūr near Lāhore He was the pupil of Mawlānā ʿAbd al-Kādir Sarhindī and became one of the most distinguished scholars and saints of India He was a bigoted *Sunnī* and looked upon Abu 'l Fadl (d 1011 = 1602) from the beginning as a dangerous man Contemporary monarchs had a great regard and respect for him Emperor Humāyūn (937–963 = 1530–1556) conferred on him the title of *Shaikh al-Islām* When the empire of India came into the possession of Shēr Shāh (946—952 = 1539—1545) he also honoured him with the title of *Sadr al-Islām* He was also a man of great importance during the time of Emperor Akbar (963—1014 = 1556—1605) Bairam Khān khānān (d 968 = 1560) exalted his position very much by giving him the sub division of Thānkawāla which yielded an income of one *lac* of rupees, while Akbar gave him the title of *Makhdūm al-Mulk* by which designation he has become known to posterity When Akbar introduced his religious innovations and converted people to his "Divine Faith", Makhdūm al-Mulk opposed the Emperor who became very angry with him and ordered him to go on a pilgrimage to Mekka He therefore started in 987 (1579)

He died or was poisoned in 990 (1582) in Ahmadābād after his return from Mekka

He is the author of the following books

1) *ʿIsmat al-Anbiyāʾ*, a work on the chastity of prophets (cf Badāʾūnī, iii 70), 2) *Minhādj al-Dīn*, the life of the prophet (cf *Maʾāthir al-Umarāʾ*, iii 252), 3) *Hāshiya Sharh Mullah*, a supercommentary to Djamī's commentary on Ibn al-Hādjib's *Kāfiya* (cf *Maʾāthir al-Umarāʾ*, iii 252), 4) *Sharh Shamāʾil al-Tirmidhī*, a commentary on Tirmidhī's *Shamāʾil al-Nabi* (cf Badāʾūnī, iii 70)

Bibliography ʿAbd al-Kādir Badāʾūnī, *Muntakhab al-Tawārikh*, iii 70, Shāhnawaz Khān Awrangabādī, *Maʾāthir al-Umarāʾ*, iii 252, *Khazīnat al-Asfiyāʾ*, p 443, 464, *Āʾin-i Akbarī*, transl by Blochman, p 172 and 544

Makhdūm-i Djahāniyān [See Djalāl Bukhārī]

Makhlad (Banū), a family of famous Cordovan jurists who, from father to son, during ten generations, distinguished themselves in the study of Fiḳh The eponymous ancestor of the family was Makhlad b Yazīd, who was ḳādī of the province of Reiyoh (the *kūra* in the south-west of Spain, the capital of which was Malaga), in the reign of the Emīr ʿAbd al Rahmān II, in the first half of the third century A H His son, Abū ʿAbd al-Rahmān Bakī b Makhlad, was a great jurist and traditionist He was born in Ramadān 201 (April 817) and after being in Spain the pupil of Mālik b Anas and of Yahyā b Yahyā al-Laithī, he made a long journey to the East where he perfected himself in the sciences of Law and Tradition On his return to Cordova his indisputable mastery earned him the hatred and envy of the chief Spanish jurists, especially of Abū Muhammad ʿAbd Allāh Ibn Martanīl (cf Ibn al-Faradī, N° 245, al-Dabbī, N° 572) who tried to get him sentenced to death by accusing him of impiety and heresy Bakī b Makhlad only owed his safety to the intervention of the secretary to the court of Hāshim b ʿAbd al-ʿAzīz and was able to end his life under the protection of the Umaiyad government, respected by the people of Cordova, where he died in 276 (889) Bakī b Makhlad who, it is believed, was one of the first to introduce the Zāhirī movement into al-Andalus [see the article Zāhirīs], wrote two celebrated books a *Tafsīr al Kurʾān* and a *Musnad* of Muhammadan traditions, the loss of which is greatly to be regretted if we may believe the laudatory judgment passed on them by Ibn Hazm in his *Risāla* repeated by al Makkarī (*Analectes*, ii 115) On Bakī b Makhlad, cf Ibn al-Faradī, *Taʾrīkh ʿUlamāʾ al-Andalus* (*B A H*, vii—viii), N° 281, Ibn Bashkuwāl, *Sila* (*B A H*, i—ii), N° 277, al Dabbī, *Bughyat al-multamis* (*B A H*, iii), N° 584, Ibn ʿAbd Rabbihi, *al-ʿIkd*, ii 366, al-Khushanī, *Kitāb al-Kudāt bi-Kurtuba*, ed and transl J Ribera, Madrid 1914, index, Ibn ʿIdhārī, *al-Bayān al-mughrib*, ed Dozy, ii 112—113, transl Fagnan, ii 179—181, al-Makkarī, *Nafh al Tib*, *Analectes*, i 812, ii 115 and 120 and index, Dozy, in *Z D M G*, xx 598, Goldziher, *Die Zahiriten*, Leipzig 1884, p 115, Brockelmann, *G A L*, i 164

The direct descendants of Bakī b Makhlad devoted their scientific activity mainly to commenting on the masterpieces of their celebrated ancestor A list of these scholars, with bibliographical references, is supplied in a little monograph devoted to the family of the Banū Makhlad by Rafael of Ureña y Smenjaud, *Familias de juristas consultos Los Benimaylad de Cordoba*, *Homenaje a D Francisco Codera*, Zaragoza 1904, p 251–258

(E Lévi Provençal)

Makhzen (a), from *khazana*, "to shut up, to preserve, to hoard" The word is believed to have been first used in North Africa as an official term in the second century A H applied to an iron chest in which Ibrāhīm b al-Aghlab, emīr of Ifrikiya, kept the sums of money raised by taxation and intended for the ʿAbbāsid caliph of Baghdad At first this term, which in Morocco is now synonymous with the government, was applied more particularly to the financial department, the Treasury

It may be said that the term *makhzen* meaning the Moroccan government and everything more or less connected with it at first meant simply the place where the sums raised by taxation were kept, intended to be paid into the treasury of the Muslim community, the *bīt al māl* Later, when the sums thus raised were kept for use in the countries in which they were collected and were no longer paid into the treasury of the Muslim community, and they became as it were, the private treasuries of the communities in which they were collected, the word *makhzen* was used to mean the separate local treasuries and a certain amount of confusion arose between the *makhzen* and the *bīt al-māl*

We do find in Spain the expression *ʿabīd al-makhzen* but it still means slave, of the treasury

rather than slave of the government, and it seems that it was only later in Morocco that in proportion as the state became separated from the whole Muslim community after being successively under the Omaiyads of Damascus, the ʿAbbāsids of Baghdād, the Omaiyads of Spain and the Fātimids of Egypt that the word *makhzen* came to be used for the government itself

To sum up, the word *makhzen*, after being used for the place where the sums intended for the *bīt al-māl* of the Muslim community were kept was used for the local treasury of the Muslim community of Morocco, when it became separate under the great Berber dynasties later with the Sharīfī dynasties the word was applied not only to the treasury but to the whole organisation more or less administrative which lives on the treasury, that it is to say the whole government of Morocco In tracing through history the changes of meaning of the word *makhzen*, one comes to the conclusion that not only is the institution to which it is applied not religious in character but on the contrary it represents the combined usurpations of powers, originally religious, by laymen, at the expense of which it has grown up through several centuries The result of these successive usurpations is that the *makhzen* which originally was only a chest in the treasury came to mean first the treasury itself, and the government and to represent to the Moroccan the sole principle of authority

We know that the fundamental principle of Muslim society is that of the community the head of this community is simply an administrator who has to exercise his functions, said the caliph ʿOmar, like an honest teacher solely concerned with the interests of his pupils Of this ideal the only part remaining in practice is that the members of the community are effectively in tutelage In rapidly surveying the history of the Makhzen, we can see how this arbitrary government became gradually established while using the prescriptions of Islām, and how it succeeded in forming in face of the native Berber element which surrounded it a kind of Arab façade, behind which the Berbers in spite of the slowness of their gradual islāmisation, have preserved their institutions, superstitions and their independence In this connection it cannot be too strongly emphasised that, in spite of their perhaps disputable orthodoxy, the Berbers are Muslims and consider that they belong to the Muslim community No doubt they do not practise it very frequently but they have the pride of Islām and its intolerance, they have taken Muslim ostracism into the service of their native savagery and it would be a dangerous error to think that they could be open to anti-Muslim sentiments and particularly to imagine that their religious lukewarmness ought to make them favourable to us

No organisation was made at the first conquest by ʿOkba b Nāfiʿ in 63 (682 A D) All the representatives of Arab culture had to do was to levy heavy tributes in money and slaves to satisfy their own greed and to enable them to send valuable gifts to the caliph of Damascus

It was the same in 90 (708) with Mūsā b Nusair but the conquest of Spain brought over to Islām a large number of Berber tribes by promising them a share in plundering the wealth of the Visigoths On the other hand the exactions of the Arabs and the desire to escape the demands of the caliphs facilitated the spread of Khāridjī doctrines, the many schools of which made any unity of power impossible and on the contrary increased decentralisation

The Idrīsid dynasty, which its Shaiīfī origin gives a claim to be the first Muslim dynasty of Morocco and which completed the conversion of the country to Islām only exercised its power over a small part of Morocco Alongside of it the Barghawāta [*q v*] heretics and numerous Khāridjī emirs continued to exist The Zenāta Miknāsa, Maghrāwa and Banū Ifren at a later period were no more able to effect a centralisation of power It was not till the fifth century A H (XIth A D) under the Sanhādjī dynasty of the Almoravids that in the reign of Yaʿkūb b Tāshfīn we can see the beginnings of a makhzen which only becomes clearly recognisable under the Almohad dynasty

It was under the latter that religious unity was first attained in Morocco The heresy of the Barghawāta and all other schisms were destroyed and a single Muslim community, that of the Almohads, replaced the numerous more or less heterodox sects which had been sharing the country and its revenues It may be said that the organisation of the makhzen which we found in Morocco is fundamentally based on this unification and the measures which resulted from it The Almohads regarded theirs as the only true Muslim community All who did not belong to it were infidels whom it was lawful to fight, to kill, to reduce their women and children to slavery and to seize their goods and lands for the benefit of the Almohads, the only orthodox community The Almohads were thus able to apply to all the territory of their empire the ideal Muslim principle for dealing with land, i e that all the lands conquered by them from non Almohads and even from Almohads whose faith was regarded as suspect were classed as lands taken from infidels and became *hubūs* of the Muslim i e Almohad community These *hubūs* districts are those whose occupants have to pay the tax called *kharādj* In order to levy this the Sultān ʿAbd al-Muʾmin had all his African empire surveyed from Gabes to the Wādī Nūn

A few years later Yaʿkūb al-Mansūr brought to Morocco the Djusham and Banū Hilāl Arabs and settled them on lands belonging to the Muslim community, which had been uninhabited since the destruction of the Barghawāta, the wars of the Almohads with the last Almoravids and large despatches of troops to Spain

These Arab tribes who formed the *djaish* (pronounced *gīsh* in Morocco) of the Almohads did not pay the *kharādj* for the lands of the Muslim community which they occupied They were Makhzen tribes who rendered military service in place of *kharādj* We shall find later the remains of this organisation with the *gīsh* tribes and the tribes of *nāʾiba* The efforts of the Marīnids to reconstitute a *gīsh* with their own tribes did not succeed and they had to return to the makhzen of Arab tribes brought to Morocco by Yaʿkūb al-Mansūr and even added to it contingents of the Maʿkil Arabs of Sūs

Under the Banū Wattās this movement became more marked and Spanish influences became more and more felt in the more complicated organisation of the central Makhzen and by the creation of new offices at the court and in the palace

The conquests by the Christians by causing the development of the *zawiyas* and the fall of the Banū Wattās brought about the rise of the Saʿdians [q v] of Wādī Daraʿa The latter with their primitive manners as Saharan tribes and under the religious influence of the shaikhs of the brotherhoods began to try to bring back the exercise of power to the patriarchal simplicity with which it was wielded in the early days of Islām The necessities of the government, the intrigues of the tribes and the wars of members of the ruling family against one another soon made necessary the constitution of a proper makhzen with its military tribes, ministers, its crown officials of high and low degree, its governors to whom were soon added the innumerable groups of palace officials which will be mentioned below

The frequent intercourse between the Saʿdians and the Turks, who had come to settle in Algeria at the beginning of the XVIth century brought to the court of Morocco a certain amount of eastern ceremonial, a certain amount of luxury and even a certain degree of pomp in the life of the sovereign and in that of his entourage and of all the individuals employed in the Makhzen

It is from this time that really dates the existence of this entity, which is really foreign to the country itself, which lived by exploiting rather than governing it and is known as the Makhzen

The increasing official relations of Morocco with European powers, the exchange of ambassadors, the commercial agreements, the ransoming of Christian slaves, largely contributed to give this Makhzen more and more the appearance of a regular government The jealousies of the powers, their desire to maintain the *status quo* in Morocco and the need to have a regular government to deal with them further strengthened the Makhzen both at home and abroad and enabled the Sultān Mawlāy al-Hasan to conduct for nearly twenty years this policy of equilibrium between the powers on one side, and the tribes on the other, who kept till his death the empire of Morocco in existence, built up of very diverse elements, of which the Makhzen formed the façade

The very humble, almost humiliating, attitude imposed on the European ambassadors at official receptions increased the prestige of the Sultān and the Makhzen in the eyes of the tribes The envoy of the Christian power, surrounded by the presents which he brought, appeared on foot in a court of the palace and seemed to have come to pay tribute to the emīr of the Muslims, who was on horseback All the theatrical side was developed to strike the imagination of the Makhzen with much care and succeeded in creating an illusion of the real efficiency of this organisation in the eyes of both tribes and powers

Under the Berber dynasties, the Almohads, the Marīnids and the Banū Wattās, the military tribes, the *djaish*, were almost all Arab, under the Saʿdians they were entirely Arab, to the Djusham and Banū Hilāl Arabs were added the Maʿkil Arabs of Sūs On the other hand the Saʿdians had removed from the registers of the *djaish* a certain number of the Arab tribes who then paid in money the *kharādj* for the *hubūs* lands of the Muslim community which they occupied These tribes, in contrast to the *djaish*, were called tribes of the *nāʾiba*, that is to say, according to the etymology proposed for the word, they were under the tutelage of the makhzen (from *nāʾib* "tutor" or "substitute" for a father) or perhaps that they paid the tribes of the *djaish* a sum for replacing them (from *nāba*, to substitute)

From this time on, Morocco assumed the appearance which it had when France established her protectorate there The frontier, settled with the Turks in the east, had hardly been altered by the occupation of Algeria by France and the territory of Morocco was, as it still is to-day, divided into two parts 1 *bilād al-makhzen* or conquered territory, 2 *bilād al sibāʾ* or land of schism, the latter was almost exclusively occupied by the Berbers

The *bilād al-makhzen*, which represents official Morocco, was formed of territories belonging to the *hubūs* of the Muslim community and liable to the *kharādj*

This land was occupied by Arab tribes, some *gīsh*, others *nāʾiba* Morocco consisted of an Arab government (makhzen) which administered the regions liable to *kharādj*, and occupied by Arab tribes, the status of which varied according as they were *gīsh* or *nāʾiba*

The Berber tribes of the *bilād al-sibāʾ* not only refused to allow the authority of the makhzen to penetrate among them, but even had a tendency to go back to the plains from which they had gradually been pushed into the mountains One of the main endeavours of the present dynasty, the ʿAlawī Shorfā of Tāfilālt, which succeeded the Saʿdians in the seventeenth century has been to oppose this movement of expansion of the Berber tribes This is why Mawlāy Ismāʿīl the most illustrious Sultān of this dynasty, built 70 *kasba*'s on the frontier of the *bilād al-makhzen* to keep down the Berbers Hence we have this policy of equilibrium and intrigues which has just been mentioned and which up till quite recent years was the work of the Makhzen

As we have already said, it was not a question of organising the country nor even of governing it, but simply of holding their own by keeping rebellion within bounds with the help of the tribes of the *gīsh* by extracting from the ports and from the tribes of the *nāʾiba* all that could be extorted by every means From time to time expeditions led by the Sultān himself against the unsubjected tribes asserted his power and increased his prestige

The Makhzen, gradually formed in course of centuries by the possibilities and exigencies of domestic policy as well as by the demands of foreign policy seems to have attained its most complete development in the reign of Mawlāy al-Hasan, the last great independent Sultān of Morocco (1873—1894) The government of Mawlāy al-Hasan consisted in the first place of the Sultān himself, at once hereditary and also, if not exactly elected, at least nominated by the *ʿulamāʾ* and notables of each town and tribes from among the sons, brothers, nephews and even the cousins of the late ruler This proclamation is called *baiʿa* It is in general he who takes control of the Treasury and of the troops when the moment comes to assume the right of succession It sometimes happens that the late sovereign has nominated his successors, but this does not constitute an obligation on the electors to obey it There is then no rule of succession to the throne

Formerly there was only one vizier, the grand vizier the grand vizierate, a kind of Home

Ministry, was divided into three sections, each managed by a secretary (*kātib*)

1 From the Strait of Gibraltar to the Wād Bū Regreg

2 From Bū Regreg to the Sahara

3 Tāfilālt

In the reign of Sidi Muhammed (1859—1873), the more frequent and intimate relations with Europe and more particularly the working of the protectorate made it necessary to found a special office for foreign relations, and a *wazīr al bahr*, literally Minister of the Sea, was appointed This does not mean minister for the Navy, but for all that came by sea, i e Europeans This minister had a representative in Tangier, the *nā'ib al-sultān*, who was the intermediary between European representatives and the Central Makhzen His task was to deal with European complaints and claims from perpetual settlements and to play off against one another the protégés of the European powers, who were certainly increasing in numbers and frequently formed an obstacle to the traditional arbitrary rule of the Makhzen The régime of the consular protectorate, settled and regulated in 1880 by the Convention of Madrid, had also resulted in discouraging the Makhzen from extending its authority over new territory

The exercise of this authority was in fact automatically followed by the exercise of the right of protection and from the point of view of resistance to European penetration, the Makhzen had every thing to gain by keeping in an apparent political independence the greater part of the territory which thus escaped the influence which threatened in time to turn Morocco into a regular international protectorate

By a conciliatory native policy and cautious dealing with the local chiefs, the shaikhs of the *zāwiyas* and the Shurfa families, the Makhzen was able to exert even in the remotest districts a real influence and never ceased to carry on perpetual intrigues in order to divide the tribes against one another

It maintained its religious prestige by the hope of preparation for the holy war which was one day to drive out the infidels and sought to penetrate by spreading the Arabic language and the teaching of the Kur'ān and gradually substituting the principles of Muhammadan law of the *shra'* for Berber customs In a word, it continued the conquest of the country by trying to complete its islāmisation and making Islām permeate its customs

In the reign of Mawlāy al Hasan, the Makhzen consisted of the grand vizier, the *wazīr al-bahr*, minister of foreign affairs, the *'allāf* — afterwards called minister of war —, the *amīn al-umanā'*, — afterwards minister of finance —, the *kātib al-shikāyāt*, secretary for complaints, who became minister of justice by combining his duties with that of the *kādi 'l-kudāt*, Kādi of Kādīs These high officials had the offices (*banīka*, pl *banā'ik*) in the *mashwar* at the Palace

The offices were under the galleries which were built round a large courtyard At the top of the *mashwar* was the office of the grand vizier, beside which was that of the *kā'id al mashwar*, a kind of captain of the guard, who also made presentations to the sultān The *ka'id al-mashwar* was in command of the police of the *mashwar* and he had under his command the troops of the *gīsh*, *mashwarīya*, *masakhrīya* (*hanātī* — sg *hanṭa*) etc , as well as all the bodies of servants outside the palace, the *mawlā al-ruwā*, grand-master of the stables, the *frā'igīya*, who had charge of the sultān's encampments

In addition to these *banīkas* of the *mashwar*, mention must be made of an individual, who as was shown in recent times could play a more considerable part in the government than his actual office would lead one to expect This is the *hādjib* [*q v*], literally the "curtain", i e an official placed between the Sultān and his subjects like a curtain His *banika* was situated between the *mashwar* and the palace proper and he had charge of the interior arrangements of the Sultān's household Under his orders were the various groups of domestic servants (*hanātī al-dākhlīyin*), *mwālin al-udū'*, who looked after the washing arrangements, *mwālin al frash* who attended to the beds, etc , etc , he also commanded the eunuchs and even was responsible for the discipline of the women of the Sultān, through the *'arīfas* or mistresses of the palace The *hādjib* is often called grand chamberlain, although he does not exactly correspond to this office

Around these officers gravitated a world of secretaries of different ranks, of officers of the *gish*, then the *kā'id al rahā*, who was in theory in command of 500 horsemen, the *kā'id al ma'a*, who commanded 100 down to a simple *mukaddam* All this horde of officials, badly paid when paid at all, lived on the country as it could trafficking shamelessly in the influence which it had or was thought to have and in the prestige it gained from belonging to the court, whether closely or remotely The influence of these court officials spread throughout the regions controlled by the organisation of Makhzen officialdom, which contributed to the centralisation of authority and its profits

In this organisation it may be noticed that the authority of the Makhzen properly so-called, i e of a lay power, continually increased at the expense of the religious power by a series of changes No doubt the basis continued to be religious, but the application of power became less and less so and the civil jurisdiction of the *kā'ids* and of the Makhzen more and more took the place of the administration of the *shra'* by the kādis, which finally became restricted to questions of personal law and landed property

The authority of the sultān was represented in the towns and in the tribes by the *kā'ids*, appointed by the grand vizier and by the *muhtasib*'s, whose office owed its origin to the religious law of the *shra'* The *muhtasib* supervised and controlled the gilds, fixed the price of articles of food and inspected weights and measures and coins

The tax of the *nā'iba*, which represented the old *kharādj*, was levied on the non-*gish* tribes by the *kā'ids* of these tribes It was one of the principal causes of abuses, the amount of this tax was never fixed and the sums which came from it were in reality divided among the *kā'ids*, the secretaries of the Makhzen and the vizier without the sultān or the public treasury getting any benefit from them

The grand vizier also appointed the *nādir* officers, who from the reign of Mawlāy 'Abd al-Rahmān had been attached to the local *nādirs* of the *hubūs* of the mosques and sanctuaries The ḳādis were appointed by the *kādi 'l-kudāt*, at the present day they are appointed by the minister of justice

They propose the *ʿudūl* but do not actually appoint them The financial staff, *umanāʾ*, who control the customs, the possessions of the Makhzen (*al-amlāk*), the *mustafādāt* (market-dues and tolls etc called *maks*), the controller of the *bīt al-māl* (popularly *abu ʾl mawārīth*) i e the official who intervened to collect the share of the Muslim community from estates of deceased persons and who also acted as curator of intestate estates (*wakīl al-ghuyyāb*) All these officers were appointed by the *amīn al-umanāʾ* who was later known as the minister of finance

This organisation was completely centralised i e its only object was to bring all the resources of the country into the coffers of the State and of its agents, but there was no provision for utilising these resources in the public interest No budget was drawn up, no public works, no railways, no navy, no commerce, no port, nothing at all was provided for Military expenses were confined to the maintenance of a regiment commanded by an English officer, of a French mission of military instruction, of a factory of arms at Fās directed by Italian officers and of the building at Rabāt of a fort by a German engineer These were really rather diplomatic concessions to the powers interested than a regular military organisation In the spirit of the Makhzen the defence of the territory was to be the task of the Berber tribes, carefully maintained out of all contact with Europeans behind the elaborate display maintained by the court

In the event of war, the Makhzen, faithful to its system of equal favour, purchased arms and munitions from the different powers and kept them in the *makīna* of Fās to be able when necessity arose to distribute them to the tribes when proclaiming a holy war

The expenses of the education service were limited to the very modest allowances granted to the *ʿulamāʾ* of al-Karawīyīn at Fās These allowances were levied from the *hubūs* and augmented by gifts made by the Sultān on the occasion of feasts (*sila*)

Nothing was done for public health and one could not give the name of hospitals to the few *māristān* to be found in certain towns, where a few miserable creatures lived in filth, receiving from the *hubūs* and the charity of the public barely enough to prevent them dying of hunger and of course without receiving any medical assistance

On the repeated representations of the Powers the Makhzen had ultimately delegated its powers to the members of the diplomatic corps in Tangier, which had been able to form a public health committee in order to be able to refuse admission to infected vessels if necessary In spite of its defects, the Makhzen constituted a real force, it formed a solid *bloc* in the centre of surrounding anarchy which it was interested in maintaining, to be able to exploit it more easily on the one hand and on the other to prevent the preservation in the country of any united order which might become a danger to it

In brief we may say that the Makhzen in Morocco was an instrument of arbitrary government, which worked quite well in the social disorder of the country and thanks to this disorder, we may add, it worked for its own profit and was in a way like a foreign element in a conquered country It was and still is a regular caste with its own traditions, way of living, of dressing, of furnishing, of feeding, with its own language, *al-lughat al-makhzanīya*, which is a correct Arabic intermediate between the literary and the spoken Arabic, composed of official formulae, regular clichés, courteous, concise and binding to nothing

This Makhzen which was sufficient in the old order of things which it had itself contributed to create and maintain, was forced, if it was not to disappear at once, to undergo fundamental modifications from the moment this state of things had rendered necessary the establishment of a protectorate

Various changes have always been made in the old regime, which has been a matter of regret to many as reducing sources of profit The vizierate of foreign affairs and that of war have been handed over to the Resident-General, that of finance to the Director General of finance who administers the revenue of the empire alike to those of a regularly organised state

The director-generalships of agriculture and education, which are regular ministries are held by French officials as are the management of the postal service, telegraph and telephone and the board of health

Two new vizierates had been created, that of the legal domains (*al-amlāk*) and that of the *hubūs* The vizierate *al-amlāk* has just been suppressed and the domains are administered by a branch of the finance department The vizierate of the *hubūs* is under that of the Sharīfan affairs This organisation represents the principle of protectorate in the Moroccan government itself and in order to realise "the organisation of a reformed Sharīfan Makhzen" in keeping with the treaty (Ed Michaux-Bellaire)

MAKHZŪM (Banū) along with the Omaiyads, the aristocratic clan of Mecca This assertion is contrary to the theory popularised by the *Sīra* in virtue of which the ancestor of the aristocratic families was Kusaiy [q v] About the middle of the vith century A D we find that among the clans of Kuraish [q v] that held in most consideration was the Banū Makhzūm, which traced its descent through Yakaza b Murra to the legendary Fihr (Kuraish) without going through Kusaiy At this period the Makhzūm controlled everything at Mecca except the sanctuary They alone were able to counterbalance the growing influence of the Omaiyads It is at this time that their name becomes occasionally synonymous with Kuraishī (Ibn Duraid, *Kitāb al-Ishtikāk*, ed Wustenfeld, p 94, 12)

The Makhzūm seem to have owed their primacy to Mughira b ʿAbd Allāh, a contemporary of ʿAbd al-Muttalib and grandson of the eponymous ancestor of the clan The adjective Mughīrī thus comes to be used for Makhzūmī His son, Hishām b al-Mughīra, is even said to have had the title "lord (*rabb*) of Mecca" (Ibn Duraid, *Ishtikāk*, p 93, 1 *sq*) The Kuraish are said to have dated one of their eras from the death of this individual, if the reference is not to Walīd b al-Mughīra Tradition hesitates between these two Makhzūmīs The influence of the Makhzūm was preponderant in the *mala*', or council of notables which decided affairs at Mecca It is frequently a Makhzūmī who speaks in name of the *mala*', as for example in the discussion with Muhammad, at the beginning of the preaching of Islām They are believed to have opened up to Meccan commerce the principal routes to foreign markets For their intelligence, their activity — they were said to be "ardent as

fire" (*Aghānī*, Būlāḳ, xv 8 *infra*) — their patrician pride and particularly their wealth they were envied by the other Meccan clans In a word they threw into the shade the descendants of Kusaiy like the Banū Hāshim, for whose benefit the traditional theory seems to have been put into circulation They lost a large number of members at the battle of Badr, after this disaster from which they never recovered, they had to yield the first place to the Omaiyads

What injured their reputation in Muslim tradition was their opposition to the rise of Islām Tradition has chosen from them in the person of Abū Djahl [q v] the type of the intractable opponent of Islām In Mecca the Makhzūmī Walīd b al-Mughīra was numbered among the "mockers" of the Prophet Several verses of the Meccan sūras are said to be directed against him (Ibn Duraid, *Ishtikāk*, p 60–61) Before becoming the "sword of Allāh" Khālid b al-Walīd [q v] fought with the majority of his people against Muhammad at Badr, Ohod, Khandak etc This persistent opposition explains why they and the Omaiyads are called *al-Afdjarān min Kuraish* "the two wicked clans of Kuraish" (Ṭabarī, *Tafsīr al-Kur'ān*, xiii 130)

After the *Fath* (conquest of Mecca) they adopted the new religion without enthusiasm, many went and settled in Madīna, which now became the capital of Islam, so as to get in touch with the governing circles The Prophet was able to use the military talents of Khālid but had to shut his eyes to his disobedience Neither he nor the other Makhzūmīs showed themselves more manageable by the Caliphs, as they refused to come to terms with the Omaiyads and to respond to the advance of Abū Sufyān (Ibn Hishām, *Sīra*, ed Wustenfeld, p 203, 273–5) When the father of Abū Bakr heard that his son had been elected Caliph, the old man's first question is said to have been "Did the 'Abd Manāf and Makhzūm give their assent"? (Ibn al-Athīr, *Usd al-Ghāba*, iii 222) The author of the *Tuhfa dhawi 'l-'Arab* (ed Mann, p 170, 16) expresses surprise at his discovering in the pre-Hidjra genealogies of the Makhzūmīs, names like *'ābid* and *'ā'idh*, showing pre occupation with religion

Abū Bakr only had peace with Khālid by sending him to wage war in remote lands and giving him carte blanche With the second caliph there was open conflict 'Omar, although he is said to have been the son of a Makhzūmī mother, had to suppress the turbulent general, more used to conquer than to obey The Makhzūmīs came into conflict with 'Othmān over 'Ammār b Yāsir [q v], a client of their family (Mas'ūdī, *Murūdj al Dhahab*, ed Paris, iv 121, 266, 279, 360) They declared against 'Alī in a body 'Abd al-Rahmān b Khālid b al-Walīd [q v] who at first supported Mu'āwiya in the end by his independence aroused the misgivings of the Omaiyad caliph The Makhzūmīs accused Mu'āwiya of having had their relative poisoned and assuming the right to wreak vengeance, they gave a new proof of their independent spirit From this time they were on bad terms with the Omaiyad caliphs, as they had been with earlier rulers, being naturally inclined to resist authority and to offer a useless opposition When 'Abd Allāh b al-Zubair [q v] rebelled against Yazīd I, they adhered almost without exception to his cause In return the Meccan anti-caliph appointed one of them his representative in Basra

The Marwānids after their triumph agreed to bear no grudge against the Makhzūmīs They even chose members of the clan for the office of governor of Madīna, hitherto reserved for an Omaiyad After, as before, the Hidjra, the Makhzūmīs continued to be reckoned among the richest capitalists in Mecca They had about 5,000 mithkāl of gold laid out in the caravan which was the cause of the battle of Badr It was to them that Muhammad applied on the eve of Hunain for a loan of 40,000 dirhams Their systematic opposition to authority put them completely out of the running for any of the great administrative offices in which the members of the Kuraish clans enriched themselves Their aristocratic pride did not prevent them however from seeking profit in commerce and even in industry We know this from the story of 'Omar b 'Alī Rabī'a [q v], the most famous of the Kuraish poets 'Omar kept 70 of his slaves employed in the weaving-mills established in Mecca (*Aghānī*, i 37, 5) Another Makhzūmī, a contemporary of 'Omar, was known as "the monk (*rāhib*) of Kuraish" on account of his merit and his assiduity in prayer (Ibn Sa'd, *Tabakāt*, ed Sachau, v 153, 19) Much better known than this ascetic and continually quoted on questions of *Fikh* and *Hadīth* is the Makhzūmī Sa'īd b al-Musaiyib [q v], one of the most famous *tābi'ūn* of the first century A H

With the coming of the 'Abbāsids, influence passed over to the Iranians Gradually the Makhzūm, like other Kuraish clans, fell into obscurity At the present day there are still families bearing the name Makhzūmī It remains to be seen to what extent they are justified in claiming descent from the Makhzūmī, if it is not in the female line as in the case of Sirādj al-Dīn al-Makhzūmī al-Himsī (cf Brockelmann, *G I L*, ii 98) Kalkashandī (*Subh al A'shā*', Cairo, i 213) justly remarks that the tribe of the Banū Khālid which led a nomadic life around Hims has only the name in common with the great Makhzūmī captain The male line from Khālid b al-Walīd is said to have become extinct very early (cf Ibn al-Athīr, *Usd al Ghāba*, v 249, *infra*), a statement disputed by the Sirādj al-Dīn mentioned above

(H LAMMENS)

AL **MAKĪN** B AL-'AMĪD, DJIRDJĪS ('ABD ALLĀH) B ABI 'L-YĀSIR B ABI 'L-MAKĀRIM, the Christian author of a world-chronicle in Arabic His life has been several times treated by western authors in encyclopaedias and other works of reference, but nothing can be learned of their sources from their articles Even Brockelmann (i 348) has to be content with giving the traditional biography and relies upon his European predecessors To avoid repetition

here, we only give the dates of his birth and death, 602 (1205) and 672 (1273) The latter date is given by Ḥādjdjī Khalīfa, II 104, N° 2103 His grandfather, according to J H Hottinger, *Promptuarium*, p 75 *sqq*, died in 606 and his father in 636

Al-Makīn's world chronicle consists of two parts, the first of which deals with the pre Islāmic world from the Creation onwards and the second with Muslim history down to 658 (1260) The work is so planned that the whole history of the world is given in the form of successively numbered biographies of its most important men Near the beginning the discussion of several cosmological questions and the several climes is inserted Down to 586 B C it is based on Biblical history, the numeration of the biographies begins with Adam as N° 1 For the period after the destruction of Solomon's temple there come on the usual scheme the dynasties of Eastern Asia, which in turn are succeeded by Alexander, the Romans and the Byzantines In this and in the second part, as the author himself tells us, he is following the model of al-Ṭabarī's chronicle

The work which is entitled *al-Madjmūʿ al-mubārak* exists in numerous manuscripts The first part is regularly quoted with a Latin translation by Hottinger, *Smegma Orientale* (1658) in the chapter *De usu linguarum orientalium in theologia historica* on various facts of history The chapter on Alexander the Great has been edited in Ethiopic and translated into English by E A W Budge, *The Life and Exploits of Alexander the Great* (1896) The second part was edited and translated by Th Erpenius under the title *Historia Saracenica a Georgio Elmacino*, 1625, English and French translations appeared soon after Many emendations were given by Kohler in Fichhorn's *Repertorium*, VII—IX, XI, XIV, XVII A critical edition of the whole work is an urgent desideratum How important it is for Oriental church history has been shown by A v Gutschmid, *Verzeichnis der Patriarchen von Alexandrien = Kl Schr*, II, 1890, p 395—525 This is sufficient to show how necessary would be a comprehensive investigation of al Makīn's place in historical tradition, which could only be undertaken on the basis of a certain text Besides it is evident that al-Makīn used old sources independently which are not known to his immediate predecessors like Eutychius [q v] and his contemporary, much quoted by him, Ibn al-Rāhib (Brockelmann, *G A L*, I 349 where of course it should be 669 = 1270) with whom he agrees in the numbering of the biographies which are also used by al-Ṭabarī In the chapter on Alexander the Great, the Ethiopic translation of which edited by Budge agrees very closely with the Arabic original, are found long word for word extracts from the very old Hermetic work in Arabic entitled *al-Istamākhis* (cf Steinschneider, *Zur pseudepigr Lit*, 1862, p 37, *Die arab Übers a d Griech*, *Centralbl f Bibliothekswesen*, chap XII, 1893, p 88), which had been previously copied in the *Ghāyat al Ḥakīm* of Ps-Madjrīṭī (Brockelmann, *G A L*, I 243, cf Ritter, *Picatrix, ein arab Handbuch hellenist Magie*, *Vortrage d Bibl Warburg*, I 94 *sqq*, ed by Ritter and transl by Ritter and Plessner in preparation for *Studien d Bibl Warburg*) In Budge's work is also given the Ethiopic translation of Ibn al-Rāhib's account of Alexander which in contrast to the Arabic text in Cheikho's edition (*C S C O Arab*, III/1, 1903) is here not simply a brief list of events but is a very full account Only general statements are given from the above mentioned Hermetic work and do not compel the belief that it was used independently so that in spite of all agreements between him and Ibn al Rāhib, al Makīn must really have worked independently of him That the reverse might be the case and Ibn al-Rāhib be dependent on al-Makīn is impossible because al-Makīn expressly quotes Ibn al-Rāhib (cf Budge, II 380, note 7) Since Cheikho only published the Ibn al-Rāhib text of Abrahamus Ecchellensis, which is perhaps an abbreviation of the basic text while the Ethiopic translation perhaps reproduces the original form, the question of the relations between the two ecclesiastical writers cannot yet be definitely settled, but even the Alexander chapter shows that it is of the utmost importance to settle the problem

On the continuation of the Chronicle by Mufaddal b Abī 'l-Faḍā'il, see Brockelmann, *op cit*

AL-**MAKKARĪ**, ABU 'L-ʿABBĀS AḤMAD B MUḤAMMAD B AḤMAD B YAḤYĀ AL-TILIMSĀNĪ AL-MĀLIKĪ SHIHĀB AL-DĪN, a Maghribī man of letters and biographer, born at Tilimsān (Tlemcen, q v) c 1000 (1591—92) d at Cairo in Djumādā II 1041 (Jan 1632) He belonged to a family of scholars, natives of Makkara (about 12 miles S E of Msila, in the present province of Constantine in Algeria) One of his paternal ancestors, Muḥammad b Muḥammad al-Makkarī, had been chief kādi of Fās and one of the teachers of the famous Lisān al-Dīn Ibn al-Khaṭīb of Granada He himself received a wide education from his early youth, his principal teacher was his paternal uncle Abū ʿUthmān Saʿīd (d at Tlemcen in 1030 [1620—21], on him cf Ben Cheneb, *Idjāza*, § 103) He then left his native town and went to Marrākush and Fās where he became *Imām* and *Mufti* of the great mosque of al Karawīyīn from 1022 (1613) to 1027 (1617) He then set out for the East in order to make the pilgrimage to the Holy Places, after doing so he came to Cairo in 1028 (1618) where he stayed for some months and married In the next year he made a journey to Jerusalem then returned to Cairo In 1037 (1627) he again made the pilgrimage which he was to repeat several times later At Mecca as well as at Medina on these occasions

he taught *hadīṯ* in a way that attracted much attention He again made stays at Jerusalem and Damascus where he was received at the Madrasa Djakmakīya by the learned Ahmad b Shihīn In this city also his lectures on Muslim Tradition were largely attended He then returned to Cairo and while he was preparing to return to Damascus to settle there permanently, he fell ill and died

In spite of his long stay in the East, it was in Morocco that al-Maḳḳarī collected the essential materials for his work as the historian and biographer of Muslim Spain, especially at Marrākush in the library of the Saʿdian Sultāns (now in part in the Escorial, this is how al-Makkarī consulted among other works the unique copy of the *Musnad* of Ibn Marzūk cf *Hesperis*, v 8 *sq*) Indeed his masterpiece, written in the East at the suggestion of Ibn Shāhīn from materials collected by him in the Maghrib, is a long monograph on Muslim Spain and on the famous encyclopaedist of Granada, Lisān al-Dīn Ibn al-Khatīb, *Nafh al-Ṭīb min Ghusn al-Andalus al-Raṭīb wa-Dhikr Wazīrihā Lisān al-Dīn Ibn al-Khaṭīb*, an immense compilation of historical and literary information, poems, letters and quotations very often taken from works now lost It is this that gives the *Nafh al-Ṭīb* an inestimable value and puts it in the first rank for our sources of Muslim Spain from the conquest to the last days of the "Reconquista" Even for the later period it is the only Arabic source that we still possess

The *Nafh al-Ṭīb* consists of two quite distinct parts, a monograph on the history and literature of Muslim Spain and the monograph on Ibn al-Khatīb The first part is divided as follows 1 physical geography of al-Andalus 2 Conquest of al-Andalus by the Arabs, period of the governors 3 History of the Omaiyad Caliphs and of the petty dynasts (*Mulūk al ṭawāʾif*) 4 Description of Cordova, its history and its monuments 5 Spanish Arabs who have made the journey to the East 6 Orientals who have made the journey to Spain 7 Sketches of literary history, the intellectual and moral qualities of the Spanish Arabs 8 The "reconquista" of Spain and the expulsion of the Muslims The second part contains 1 Origin and biography of the ancestors of Ibn al-Khatīb, 2 biography of Ibn al Khatib 3 biographies of his teachers 4 letters in rhymed prose of the chancelleries of Granada and of Fās, sent or received by Ibn al-Khatib (*mukhātabāt*) 5 a selection of his works in prose and verse 6 analytical list of his works

The *Nafh al-Ṭīb* was printed in full at Būlāk in 1279 and at Cairo in 1302 and 1304 (4 vols) The first part was published at Leyden from 1855 to 1861 under the title of *Analectes sur l'histoire et la litterature des Arabes d'Espagne*, by R Dozy, G Dugat, L Krehl and W Wright In 1840, D Pascual de Gayangos had published in English, at London, under the title *The History of the Muhammadan Dynasties in Spain*, a version adapted from the part of the first half which deals with the history of Muslim Spain A critical translation of this monumental work in its entirety remains to be done

Al-Maḳḳarī also wrote other important works, among which special mention must be made of a lengthy monograph on the famous kādī ʿIyād [q v] *Azhār al-Riyād fī Akhbār al-Kādī ʿIyād* publ at Tunis in 1322 in 2 vols A list with reference to known MSS will be found in Brockelmann and Ben Cheneb

MAKRĀN, the coastal region of Balūčistān, extending from about 59° to 65° 35′ E and inland from the coast to the Siyahan Range, a little beyond 27° north This tract was known to the Greeks as Gedrosia, and was inhabited by the Ichthyophagi, or fish-eaters, the Persian translation (*Māhī-Khurān*) of whose name supplies a fanciful derivation for its present name, which is traced, with more probability, to a Dravidian source

In Persian legend Kaikhusraw of Īrān captured the country from Afrasiyāb of Tūrān, and both Cyrus and Semiramis marched through it In 325 B C it was traversed by Alexander in his retreat from India, and fell, later, under the dominion of the Sāsānians, but was occasionally absorbed into the Hindu kingdom of Sind It was annexed by the Arabs in the course of the rapid expansion of the empire of Islām in the early days of the caliphate, and it was through Makrān that Muhammad b Kāsim invaded Sind in 711 A D, and established the first Muslim settlement to the east of the Indus Marco Polo mentions it in 1290 as the most westerly part of India, under an independent chief, probably a Muslim, who found it unnecessary to make any pretence of submission either to Persia or to India Indigenous tribes ruled the country until they were ousted by the Gičkīs from India, but the Persian monarchs reckoned Makrān as part of Balūčistān, which was included in the great province of Kirmān In the middle of the eighteenth century the Ahmadzai Khāns of Kalāt established their suzerainty over the country, and in 1879 Colonel Goldsmid demarcated the frontier between Persian Makrān and eastern Makrān, which remains subject to

the Khān of Kalāt, though British intervention has frequently been necessary to compose the disputes between him and the dominant tribes of the province, Gičkīs, Nūshīrawānīs, Bīzandjans and Mīwāīs Cultivators of the soil are Balūčīs, and tribes of inferior social status and the fishermen form a class apart

The climate of the country varies with the altitude Near the coast it is uniformly hot, but not unpleasant, in Keč or Kedj, from which eastern Makrān is known as Kedj Makran, the winter is dry and cool, the summer intensely hot, and higher still Pandjgūr is bitterly cold in winter and moderately hot in summer

AL-MAKRĪZĪ ABU 'L-ʿABBĀS AHMAD B ʿALĪ B ʿABD AL KĀDIR ʾAL-HUSAINĪ TAKĪ AL-DĪN, Arabic historian, b 766 (1364) at Cairo, grandson of the Hanafī Ibn al-Ṣāʾigh who educated him according to his school, but on attaining his majority he went over to the Shāfiʿīs, attacked the Hanafīs and even showed Ẓāhirī tendencies He began his career as deputy kādī in Cairo and rose to be head of the al-Hākimīya mosque and teacher of tradition at the al-Muʾaiyadīya madrasa In 811 (1408) he was transferred as administrator of the *wakf* at the Kalānisīya and at the Nūrī hospital and also as teacher at the al-Ashrafīya and al-Ikbālīya madrasas to Damascus About ten years later he returned to Cairo as a private individual to devote himself entirely to literary work He spent five years in Mecca after his pilgrimage in 834 (1430) He died in Cairo after a long illness on Thursday the 27th Ramadān 845 (Feb 9, 1442)

His literary activity began with his local history of Egypt dealing mainly with topography He then extended his interest to neighbouring lands as far as Abyssinia and dealt also with questions of social history such as weights and measures and coinage His principal work, the *Khiṭaṭ*, seems however to be based to a large extent on that of a predecessor, al-Awhadī, which he simply appropriated without acknowledgement according to al-Sakhāwī's well-founded charge After a very long full historical and geographical introduction he begins his description of the country with Alexandria and goes with particular thoroughness into the topography of Fustāt and Cairo On the sources of the work see Rhuvon Guest, *J R A S*, 1902, p 103 *sqq* It is entitled *al-Mawāʿiẓ wa 'l-Iʿtibār fī Dhikr al Khiṭaṭ wa 'l-Āthār*, Būlāk 1270, 2 vols fol, Cairo 1308, 1324—1326, 4 vols, ed G Wiet (*M I F A O*, I—V, 1911—1927) transl Makrīzī, *Histoire de l'Egypte, trad de l'arabe et accompagnee de notes hist et geogr* by E Blochet, Paris 1908, *Description topographique et historique de l'Egypte* by M, transl by U Bouriant and P Casanova (*M I F A O*), I—VI, 1893—1920, cf Takī al-Dīn Ahmad al Makrīzī, *Narratio de expeditionibus adversus Dimyatham*, ed H A Hamaker, Amsterdam 1824, Makrīzī's *Geschichte der Copten* of F Wustenfeld, Gottingen 1845, P Ravaisse, *Essai sur l'histoire et la topographie du Caire d'apres M*, Paris 1890, P Casanova, *Histoire et description de la citadelle du Caire d'apres M*, ib 1894—1897 Synopses of the *Khiṭaṭ* were made by Ahmad al-Hanafī under the title *al-Rawda al bahīya* (s Pertsch, *Kat Ar Hss Gotha*, N° 1683) and Abu 'l Surūr Muhammad al-Bakrī al Ṣiddīkī in the year 1054 (1644) under the title *Kaṭf al-Azhār min al-Khiṭaṭ wa 'l-Āthār* (Leyden, N° 974, Paris, N° 1765—1766, St Petersburg, As Mus, N° 237, Ahmad Taimūr Pāshā in *La revue de l'ac ar*, III 334, cf Vollers, *Note sur un ms ar abrevie de M* in *Bull de la soc khediv geogr*, 3 series, N° 2, p 131—139) As a supplement to his main work he then wrote a history of the Fātimids (*Ittiʿāẓ al-Hunafāʾ bi-Akhbār al-Aʾimma wa 'l-Khulafāʾ*, first publ from the unique Gotha autograph by H Bunz, Tubingen 1908) and of the Ayyūbids and Mamlūks 577—840 (1181—1436) (*al-Sulūk li-Maʿrifat Duwal al-Mulūk*, MSS s *G A L* II 39, *Histoire des sultans Mamlouks*, transl by Quatremère, 2 vols, Paris 1837—1844), which was continued by al-Sakhāwī (Muhammad b ʿAbd al-Rahmān, 902 = 1497) under the title *al-Tibr al-masbūk fī Dhail al-Sulūk* (*Continuation de l'histoire des Mamlouks de M par El Sakhaoui, texte ar d'après le ms unique conserve à la bibl khed* rev and corr by A Zeki Bey, *Rev d'Ég*, II, III, Būlāk 1896—1897, ed E Gaillardot, Cairo 1897) and by Ibn Taghrībirdī (s *E I*, I 103) As a further supplement to the *Khiṭaṭ*, Makrīzī planned two large biographical works but they remained unfinished on account of the enormous scale on which they were planned He intended to write the lives of all the rulers and famous men who had lived in Egypt in 80 volumes entitled *al Mukaffā* but was only able to complete 16 of them of which 3 are preserved in autograph in Leyden (*Cat codd ar*, N° 1032, perhaps also 1103) and one in Paris (N° 2144), see Dozy, *Notice sur quelques mss arabes*, Leyden 1847, p 8—16, a portion in van Vloten, *Z D M G*, III 224 His collection of biographies of contemporaries entitled *Durar al-ʿUkūd al-farida fī Tarājim al-Aʿyān al-mufida* intended to be arranged in alphabetical order also remained a torso (a portion of the autograph of vol I, *Alif* and a part of *ʿAin*, Gotha, N° 1771) He also dealt with a number of historical questions in separate essays, some of which are preserved in two collected volumes, Paris, N° 4657 and Leyden, No 2408 (the latter in part written by the author himself, and in part revised by him, see Dozy, *Notices*, p 17) The most important of these deal with the history of the Umaiyads and ʿAbbāsids (*al-Nizāʿ wa 'l-Takhāsum fi-mā baina Banī Umaiya wa-Banī Hāshim*, ed G Vos, Leyden 1888, and *Dhikr mā warada fī Bani Umaiya wa Bani 'l-ʿAbbās*, Vienna N° 1887, *al-Durar al mudīʾa fī Taʾrikh al-Dawla al-islāmiya*, Cambridge, Preston, p 2), the Arab tribes who migrated into Egypt (*al-Bayān wa 'l Iʿrāb ʿammā bi-Arḍ Miṣr min al-Aʿrāb*, ed Wustenfeld, Gottingen 1847), the geography of Hadramawt based on enquiries made of pilgrims from there whom he met in Mecca (*al-Ṭurfa al-gharība min Akhbār Wādī Hadramawt al-ʿadjība*, ed P Noskowyj, Bonn 1866), the Muslim princes in Abyssinia (*al-Ilmām bi-Akhbār man bi-Arḍ al-Habasha min Mulūk al-Islām*, Cairo 1895, ed Fr Th Rink, Leyden 1790, cf I Guidi, *Sul testo del Ilmām d'al M* in *Centenario della nascita di Mich Amari*, Palermo 1910, II 387—394), on the Ziyānids in Tlemcen (*Tarājim Mulūk al-Gharb*, Leyden, *op cit*, according to Dozy's hypothesis, originally a portion of the *Durar al-ʿUkūd*), Islāmic coins and

measures (*Nubdhat al-ʿUkūd fī Umūr al-Nukūd*, Cairo 1298, ed O G Tychsen, Rostock 1797, *Traite des monnaies musulmanes*, transl by S de Sacy in *Mag encl* by Millin, II/IV, 1797, p 472, III/1, p 38 *sqq*, revised reprint, Paris 1797, an edition revised by the author *Shudhūr al-ʿUkūd fī Dhikr al-Nukūd*, printed under the title *al-Nuḳūd al-kadīma wa 'l-islāmīya*, Stambul 1298 in a collected volume, *Risālat al-Makāyīl wa 'l Mawāzīn al-sharʿiya*, ed O G Tychsen, Rostock 1800) He also wrote a general geography under the title *Djanī al-Azhār min al-Rawd al-miʿtār* (Berlin, N⁰ 6049, Cairo, v 40) what work he drew upon for this is still uncertain, in Paris, N⁰ 5919, al Idrīsī's *Nuzhat al Mushtāk fi 'khtirāk al-Āfāḳ* is said to be the basis, Lévi Provençal, *Les Historiens des Chorfa*, p 361 identifies it with the *al-Rawd al-miʿtār fī Khabar al Aktār* mentioned by Hādjdjī Khalīfa, III, N⁰ 6598 of Abū ʿAbd Allāh Muhammad b ʿAbd al-Munʿim al-Himyarī, which is said still to exist in the Karawīyīn mosque of Fez In some of these shorter essays he touches on theology, a subject he does not elsewhere deal with, dogmatics in the essay composed in 813 (1410) entitled *al-Bayān al-mufīd fī 'l-Fark bain al Tawhīd wa 'l Talhīd* the autograph of which is in Leyden, Amin, N⁰ 188 (cf also Cairo, VII 565), *Tadjrīd al-Tawhīd* (in Paris) and tradition in lectures on the family and domestic arrangements of the Prophet, which he delivered in Mecca (*Imtāʿ al Asmāʿ fī-mā li 'l Nabī min al-Hafada wa 'l-Matāʿ*, in 6 vols, Gotha 1830, Stambul, Koprulu, N⁰ 1004) To supplement this work, towards the end of his life, he planned a work which beginning, with the Creation, was to be also a general geography to give the genealogies of the Arab tribes and the history of the Persians down to the Sāsānians under the title *al-Khabar ʿan 'l-Bashar*, at which he was still working in 844 (1441) (parts in the autograph Stambul Aya Sophia, N⁰ 3362 and Fātih, N⁰ 4338—4341, others in the copy Aya Sophia, N⁰ 3363—3366, Strassburg, s Noldeke, *Z D M G*, XL 306, cf T Tauer in *Islamica*, I 357—364) Even later than this work which he quotes in it was the essay *Daw' al-Sārī fī Maʿrifat Akhbār Tamīm al-Dārī* (in the Leyden collected volume and also in Leyden, N⁰ 1080, Brit Mus, p 669)

Bibliography Suyūtī, *Husn al-Muhādara*, I 321, de Sacy, *Chrest arabe*², I 112, Hamaker, *Spec cat*, p 207, Wüstenfeld, *Geschichtschreiber*, p 482, Goldziher, *Zāhiriten*, p 196—202 *G A L*, II 38 (C BROCKELMANN)

MAKRŪH [See SHARĪʿA]

MAKS, toll, customs duty, is a loanword in Arabic and goes back to the Aramaic *maksā*, cf Hebrew *mekes* and Assyr *miksu*, from it is formed a verb *m-k-s* I, II, III and *makkās*, the collector of customs According to the Arabic tradition preserved in Ibn Sīda even in the Djāhilīya there were market-dues called *maks* so that the word must have entered Arabic very early It is found in Arabic papyri towards the end of the first century A H

Becker has dealt with the history of the *maks*, especially in Egypt, and we follow him here The old law books use *maks* in the sense of *ʿushr*, the tenth levied by the merchants, more properly the equivalent of an excise duty than of a custom They still show some opposition to the *maks*, then give it due legal force, but the word continued to have unpleasant associations, cf the hadīth *inna sāhiba 'l-maksi fi 'l-nār* "the tax-collector will go to hell" Goldziher has suggested that the Jewish view of the publican may have had some influence here

The institution of the customs duty was adopted by Islām about the beginning of the Omaiyad period or shortly before it While theological theory demanded a single customs area in Islām, the old frontiers remained in existence by land and water, and Egypt, Syria and Mesopotamia were separate customs areas The amount of the duty in the canon law was settled not so much by the value of the goods as by the person, i e the religion of the individual paying it, but in practice, attention was paid to the article and there were preferential duties and no attention was paid to the position of the owner in regard to Islām The laws of taxation were very complicated and graduated, the duties rose in course of time from the tenth (*ʿushr*) to the fifth (*khums*)

The Egyptian *maks* was levied on the frontier at al-ʿArish and in the ports (*sawāhil*) ʿAidhāb, al-Kusair, al-Tūr and al Suwais but there was also an octroi to be paid in al Fustāt at a place called Maks This name is said to have replaced an old Umm Dunain and then became identified with the Maks = custom-house of Cairo All grain had to pass through here before it could be sold and two dirhams per *artaba* and a few minor charges had to be paid on it Further details of the administration of the *maks* in the earliest period are not known but there are references towards the end of the first century A H to a *sāhib maks Misr* in papyri and in literature also

The conception of the *maks* was extended in the Fātimid period when all kinds of small dues and taxes became known as *mukūs*, especially — emphasising the already mentioned unpleasant associations of the word — the unpopular ones which the people regarded as unjust Such occasional taxes had been levied from time to time in the early centuries of Islām The first to make them systematic was the dreaded financial secretary and noted opponent of Ahmad b Tūlūn, Ahmad b al-Mudabbir The latter introduced not only an increase in the ground-tax and the three great monopolies of osiers, fisheries and soda (in connection with which it is interesting to note a reversion was made to old Roman taxes), but also a large number of smaller taxes which were called *maʿāwin* and *marāfik* and included among the *hilālī*, the taxes to be paid according to lunar years Such artifices (known as *mukūs* from the Fātimid period and later as *mazālim*, *himāyāt*, *rimāyāt* or *mustaʾdjarāt*) were destined to develop in time into the main form of oppressing the people and to become one of the principal causes of the economic decline of Egypt, until under the Mamlūks a limit was reached where hardly any thing was left untaxed and *mukūs* were even granted as fiefs and "misfortune became general" (*waʿammat al-balwā*) These small taxes however (but not the monopolies) were repeatedly abolished by reforming rulers, indeed *ibṭāl al-mukūs* (other terms are *radd*, *musāmahat*, *iskāt*, *wadʿ*, *rafʿ al mukūs*) even formed part of the style and title of such rulers Thus it is recorded of Ahmad b Tūlūn that he abolished some duties, and later of Saladin, Baibars, Kalāʾūn and his sons Khalīl and Nāsir Muhammad, of Ashraf Shaʿbān, Barkūḳ and Djak-

mak Makrīzī gives a long list of *mukūs* abolished by Saladin and Kalkashandī gives copies of the texts of *musāmahāt*, which are decrees of the Mamlūk Sultāns abolishing taxes or granting exemption from dues which were sent to the governors and read from the minbars and sometimes contain very full details, while shorter decrees were probably carved on stone and are given among the fragments published by van Berchem It would of course be wrong to deduce from such abolitions of taxes that the government was a particularly good one, while on the other hand the continually recurring extortion of the same taxes shows that the abuses had been restored in the interval Makrīzī, i 111 concludes with the well known jibe at the Copts "even now there are *mukūs*, which are in the control of the vizier, but bring nothing to the state but only to the Copts, who do exactly as they like with them to their great advantage"

Among the great variety of dues which were of course not all levied at the same place and at the same time were the following *hilālī* taxes on houses, baths, ovens, walls and gardens, harbour-dues in Gizeh, in Cairo at "the corn-quay" (*sāhil al-ghalla*) and at the arsenal (*sinā'a*), also levied separately on each passenger, market-dues for goods and caravans (*badā'i' wa-kawāfil*) especially for horses, camels, mules, cattle, sheep, poultry and slaves, meat, fish, salt, sugar, pepper, oil, vinegar, turnips, wool, silk, linen and cotton, wood, earthenware, coal, halfa grass, straw and henna, wine and oil presses, tanned goods, brokerage (*samsara*) charges on the sale of sheep, dates and linen Taxes on markets, drinking-houses and brothels which were euphemistically called *rusūm al-wilāya* Warders deprive prisoners of everything they have, indeed this right is sold to the highest bidder, officers consume the fiefs of their soldiers, peasants pay their lords forced labour and give them presents (*barātil*, *hadāyā*) and many officials (*shādd*, *muhtasib*, *mubāshirūn* and *wulāt*) also accept them, when a campaign is begun the merchants pay a special war-tax and a third of inheritances falls to the state, when news of victories is received and when the Nile rises, levies are made, the dhimmīs, in addition to paying the poll-tax, have to contribute to the maintenance of the army, pilgrims to the Holy Sepulchre pay a tax in Jerusalem, separate special taxes are levied to maintain the embankments, the Nilometer etc

Outside of Egypt we occasionally hear of the *maks* as toll or market-due, e g in Djidda, in North Africa (cf Dozy, *Suppl*, ii 606) Ibn al-Hādjdj, iii 67 mentions a *musāmahat mazālim*, but does not use the word *mukūs* in this sense

MAḲSŪRA [See Masdjid]

MAKTAB (a), literally a "school in which writing is taught" in practice means a Kur'ānic school, the Muslims believing that the first thing that should be taught an infant is the Kur'ān

The word *maktab*, plur *makātib* belongs to the classical language It is hardly ever found in the spoken dialects in this form These prefer the word *kuttāb*, especially in Cairo and Tunis *Kuttāb* is found in the middle ages used by Ibn al-Hādjdj al-'Abdarī, a Moroccan author (see *Bibliography*), but it is not now used any longer in Algeria or Morocco

The Kur'ānic school has also other names *msīd* in Algiers, Tlemcen, and in certain districts of the Algerian Tell, at Fez, Rabat and Sale, *djāma'* at Tangier, Larache, Constantine, in Orania and some districts of Morocco and the Algerian Tell, *shi'a* among the nomads of Algeria, *m'immra* among the Moroccans of the Djabāla, *thima'mert* among the Kabyls of the Djurdjura, *mahdār* at Safi, Spain had *mahadra*, now found in Senegal

The position of the Kur'ānic school varies in different countries Among the African nomads it is a tent placed in the centre of the douar which is also used as a mosque In most towns it is a room on the ground floor, very often dark, damp and badly ventilated In Cairo, the Kur'ānic school is placed on the first story of some public building, usually a fountain In Fez, a number of *msīd* are also on a higher level than the street The schools of Fez and those of Cairo show architectural features which deserve special study The façades, doors, windows, usually large, are adorned with carved woodwork

Inside, the Kur'ānic school is as a rule bare of all ornament, mats of *alfa* grass or of rushes are stretched on the floor, the walls are also hung with mats of the same kind from the ground up to a height of 4 to 6 feet A wooden or stone bench serves as a chair for the teacher In one corner is a vessel of water (*mhi*) in which the slates of the pupils are washed

The Kur'ānic schools are distributed through the different quarters of the town There are none in the immediate vicinity of the mosques, the Prophet having recommended that children and lunatics should be kept away from mosques (cf *Madkhal*) On the other hand, it is not unusual to find Kur'ānic schools in sanctuaries built to the memory of some saint or in the zawiyas, the places of assembly of the religious brotherhoods According to the *Madkhal*, it is recommended to place schools in the most frequented streets and not to place them in isolated places or by-streets Although the author of this book gives pedagogic reasons for this recommendation, it is quite clear at the present day that it is due to the desire to let as many passers-by as possible hear the divine word In the village, the Kur'ānic school is held in one of the rooms of the building which is used as a mosque The sites of Kur'ānic schools are *habūs* or *wakf* properties Rich individuals sometimes install Kur'ānic schools at the entrance to their houses fronting the street for the use of their children and of those of their servants and neighbours and friends

The head of the Kur'ānic school is called *fkīh* or *fki* (classical *fakīh*) in the towns of Morocco, *tāleb* in the country districts of North Africa, sometimes *shīkh*, *muddeb* at Tunis and in the Tunisian

Sāhel, at Tlemcen, we find the the word *derʿār* which again crops up in the Algerian towns

The master in the Kur'ānic school has as his only intellectual equipment as a rule a perfect knowledge of the text of the Kur'ān He cannot understand or expound it, he hardly knows any grammar or any of the branches of religious knowledge The most learned masters are those who have devoted themselves to learning a certain number of the seven ways of reciting the Kur ānic text according to the principles laid down by the seven *shaikh al-riwāya*

In some towns there are Kur'ānic schools for girls but this is exceptional The mistress is known as *fakīha* or *fkīra* (Morocco)

The pupils are called *tilmīdh* in the towns, *gendūz* in the country districts and *mhādrī* in the towns of Morocco Their ages run from six to eighteen Where there are schools for girls, little boys are sent there also up to the age of six

In Kur'ānic schools nothing is studied but the Kur'ān and without any explanation The task of the pupils is to learn the sacred text by heart Ibn Khaldūn in his *Mukaddima* says that in his time the schools of Spain and Tunisia taught children reading and writing and the Arabic language before putting them to study the Kur'an, which they then learned without much difficulty while in the rest of the Maghrib they were only taught to recite the Kur'ān and from the beginning of their studies It is this latter that is still the usual fashion in North Africa of our day

The Kur'ān is not studied to know and understand it It is learned by heart for the reward promised in the next world to those who know it and to benefit by the virtue or *baraka* of the divine word This latter point of view is very much in keeping with the mentality of Muhammadan peoples with a strong belief in magic

When the boy begins his studies he is taught to smear a wooden slate with a fine white clay called *ṣanṣal* steeped in water When the slate is made dry, either by being exposed to the sun or held to a fire, the master traces on it the letters of the alphabet with the point of a *kalam* (or reed sharpened for writing) without any ink He cuts into the clay by forming the letters on the slate and the pupil is then asked to go over them with the *kalam* dipped in ink (which is made from burned wool) At the same time the child learns by heart the names of the letters and their descriptions without the master however thinking it worth while to point out to him on the slate that a certain character corresponds to a certain name of a letter It is therefore not surprising that with such a method a pupil has to devote two or three years to learning to read and to write

When the child can write to dictation, the master dictates verses from the Kur'ān The child writes them one by one As soon as he has finished writing one he says *nʿam yā sīdī* on reaching the last word he has to write The master then dictates the next verse and so on till the slate is completely covered with writing Then the pupil goes to the bottom of the class and begins to learn by heart what has been dictated to him aloud When he knows the text by heart, he recites it to the master If the latter is satisfied he orders the child to clean his slate For this purpose the boy washes it in the *mhī*, the vessel of water in the corner of the school, then he covers his slate with clay again and begins all over again

If we reflect that the master has 30 or 40 pupils in front of him each of whom is at a different place in the Kur'ān and that his method of instruction is individual, we can see that to learn the whole of the Kur'ān, even the most intelligent pupil requires several years if he is not discouraged before reaching the last sūra

The study of the Kur'ān begins with the first chapter, the *fātiha* After this sūra the last and then the second last, then the ante-penultimate is learned and so on back to the second sūra, that of the Cow The Kur'ān is thus learned in reversed order This method is explained by the fact that the sūras have been classed, except for the *fātiha*, in order of length, the shortest being at the end Since at the time of prayer, the believer repeats a sūra, usually one of the last, there is some point in the study of the Kur'ān beginning with the sūras at the end of the book When the pupil has learned the sacred text in the reverse order, he repeats it in the proper order

For study and recitation the Kur'ān is divided into sixty parts called *ḥizb*, each *ḥizb* is divided in its turn into four *rubaʿ* or quarters, each quarter into two *thumn* or eighths, and each eighth into two *kharrūba* or sixteenths

The time-table of the Kur'ānic school is as follows the master and pupils arrive at dawn, at least in theory They study without a stop till lunch-time Some go home to eat and return as soon as possible, others are given their lunch in school and eat either in the class, which is not encouraged, or outside near at hand If the master goes out, his place is taken by an older pupil They continue reciting the Kur ān till sunset when everyone goes home to dinner, they frequently return to the school till the hour of the *ṣalāt al ʿishā'* No recreation is provided for The only relaxation is the recitation by the pupils in a body of panegyrics of the Prophet In the Maghrib there is no school from Wednesday at midday till Friday after the noon *ṣalāt* Tradition has it that the Caliph ʿUmar (who founded the first Kur'ānic schools) prescribed the Thursday rest It is said in explanation that the triumphal return of the Muslim troops after the conquest of Palestine took place on a Thursday, the pupils having had a holiday to take part in the festivities the Caliph ʿUmar decided that hence forth Thursday should be a holiday in the schools In the Ḥiḏjāz the holiday is Tuesday (cf W Marçais, *Textes Arabes de Tanger*, p 184, note 2)

The schools are also closed on the occasion of the religious feasts and the fast of Ramadān for one week or two, each country having its own special habit in this respect (cf especially Michaux-Bellaire in *Archives Marocaines*, xvii 77 *sqq*)

When a child knows by heart a fixed portion of the Kur'ān, the first sūra, the first quarter of the book, the half, the whole, his parents give a feast in which all the pupils share, the master and frequently all the other masters of the quarter, needy men who take advantage of every occasion when good cheer is going These feasts are called *khātma* or *sulka* or *takhrīdja*, sometimes *hādka*, according to the country, some of these titles are used on the occasion of its partial recitation of the Kur'ān and others of a complete recitation For the feast the master decorates the boy's slate

with different colours It is to be noted that the mixture used for this purpose always includes eggs Some verses are written on the slate A procession is formed to go to the house of the child, who is the hero of the occasion, a part of the Kur'ān is recited and a copious repast eaten A collection made after the feast and also at the houses of the relatives and friends of the family procures the teacher a supplement to his salary which he much appreciates

Discipline is maintained in the Kur'ānic school by corporal punishment The master keeps in his hand a long stick with which he strikes more or less cruelly inattentive children on the head To punish serious faults he inflicts a certain number of blows on the soles of the delinquent's feet The boy is laid on his back, with his legs in the air and laid together, one of the older pupils holds his feet up to the master who beats them rhythmically with a rod of the wild quince tree If the pupil is too strong for his comrades to be easily able to keep him in the desired position, his feet are fastened to a wooden bench (*falaka*) which two of his comrades hold up These corporal punishments have been frequently condemned (cf especially *Madkhal*) but they continue to be applied with the unanimous consent of the parents Indeed the parents very often commission the master to punish children for faults committed out of school

The master's duty is to give the children a good education, that is to say an education that is entirely religious He generally does his duty very badly, at least from the European point of view

The results obtained in the traditional Kur'ānic teaching are generally bad After long and monotonous years spent in school, the child only knows a few sections of the Kur'ān and like his master is unable to write a letter correctly or read a book Wherever general education has made some progress we find the Kur'ānic schools losing their importance in spite of the piety of the people The child is often taken there to learn a few sūras after which he is taken away and put at the primary school Very often the child goes to the Kur'ānic school outside of the hours of the primary school and only for a year or two On the other hand in cases where the people are at all backward but ardent in their faith, the Kur'ānic schools are numerous and largely attended

The children at the Kur'ānic schools play a certain part in social ceremonies on account of the doubly magic character which their youth and knowledge of the divine word gives them On Thursdays they go in a body under the conduct of the master to recite the Kur'ān over the graves of persons recently buried, when a woman's accouchement is difficult and threatens to be dangerous, the children from the neighbouring school go round the town chanting litanies behind a piece of cloth held by four of them, in the centre of the cloth is an egg, the passers by throw coppers into the cloth and utter good wishes for the sick woman The school children, slate in hand are also sent to seek mercy from a conqueror for a conquered town or tribe, to appeal for rain in time of drought, the Kur'ānic schools are also called upon to take part in processions

The organisation of Kur'ānic teaching is rudimentary In the towns, it is the kādī who in theory supervises the schools, in reality he only interferes in cases where complaints are made against the teacher In the tribes it is the *kā'id* who takes the place of the kādī in this connection

The teacher is very often a stranger to the country, more often from the country than the town, which is to some extent explained by the magic character common to the state of being a foreigner and to Kur'anic study

In the towns he receives a very small sum monthly from the parents of his pupils, on the Wednesday, the children pay him a few coins on leaving school, on the occasion of school-feasts and holidays he receives a few more gifts He also makes amulets which he sells In the country the *tāleb* is paid in kind The relatives of his pupils feed him in turn, giving him, eggs, butter, cereals and lambs, sometimes the village or donor shares the labour of working a plot of ground and gathering its yield for him Payment in kind of the services of the teacher is the subject of a regular contract between the representative of the village or of the douar and the *tāleb* The latter is then called *tāleb mushārit* The teacher is also the imām of the village, he washes the dead and prepares them for burial, he is also occasionally tailor and public letterwriter In brief although he enjoys the respect of those around him he lives very poorly

The choice of a teacher is often decided by the reputation which he enjoys The consent of the parents in the towns, of the *djamā'a* in the country gives him the right to exercise his functions Tunisia however has endeavoured since the French occupation to regulate more carefully Kur'ānic instruction and to demand a certain standard of knowledge and morality in the teacher Kur'ānic instruction by its very nature seems to have remained unchanged from the early days of Islām

MĀKŪ, a khānate in the Persian province of Ādharbāidjān

Mākū occupies the N W extremity of Persia and forms an enclave between Turkey (the old sandjak of Bāyazīd) and Transcaucasia In the west the frontier with Turkey follows the heights which continue the line of Zagros in the direction of Ararat The frontier then crosses a plain stretching to the south of this mountain (valley of the Sarī-su) and runs over the saddle between Great and Little Ararat Down to 1920 Great Ararat formed the frontier between Russia and Turkey while Little Ararat was divided between Russia and Persia Since 1920 Great Ararat has been completely surrounded by Turkish territory, while Little Ararat is divided between Turkey and Persia The Turco Persian frontier at the present day comes down to the Araxes The Lower Kara-su and the Araxes (to its confluence with its right bank tributary Kotur čai) form the frontier between Mākū and the autonomous territory of Nakhčuwān which forms part of the Armenian Soviet republic The third side of the triangle i e the inner boundary between the khānate and the Persian province of Khoi is somewhat vague When the prestige of its khāns was at its greatest, their lands stretched to the districts of Čai-pāra, Čaldīrān (Kara-ʿAinī) and Alānd The little khānate of Awadjīk (30 villages belonging to the Anumlu Khāns) on the Bāyazīd–Čaldīrān–Khoi road forms a little enclave close to the Turco-Persian frontier

The khānate consists of a series of heights and fertile valleys In the centre between the valley of the Zāngimār and that of the Akh čai rises the isolated mass of Sokkar At the foot of the Little Ararat along the frontier chain and on the slopes of Sokkar there are excellent pastures

The lands of Mākū are very well watered The streams that flow into the Araxes on the right bank are as follows 1 in the northwest the lower Kara-su which runs almost parallel to the Araxes and receives on the right bank the waters from Dambat (a high plateau to the S E of Little Ararat where in 1905 Minorsky discovered the ruins of the ancient town which local Armenian tradition identifies with Arshakawan, cf Moses of Chorene, III 27 and ibid, I 30), 2 the mountain torrents Yflandūrasi and Sarī čai, 3 the river Zāngimar (Zāngibār, Mākū-čai) which consists of three main branches, one coming from the khanate of Awadjīk, the other, the Tīghnīt, from the S E corner of the plain of Čaldīrān from the vicinity of the village of Tīghnīt (Armenian *tłmut* = muddy), the third from the central canton of Bābādjik The combined waters run through the defile in which lies the town of Mākū and water the rich district of Zangibasar ("watered by the Zāngimār") Here the Zāngimār receives on its right bank the waters from the central massif of Sokkar (this tributary seems to have been once known as the Kaban), and on the left bank the Sarī-su (different from the above mentioned Sarī su) which rises on Turkish territory in the north of Bāyazīd and flows a considerable distance parallel to the central course of the Zangimār 4 The Akh-čai, the sources of which are on the eastern face of the chain which separates Turkey from Persia and on the southern face of the transverse chain (Alagān) which separates Akh čai from Tīghnīt The waters of the Akh-čai and its tributary irrigate the canton of Sogman āwī, flow into the fertile plain of Čaipāra and flow into the Kotur čai which waters the plain of Khoi Below this confluence the Akh-čai receives on its right bank the waters of the district of Alānd which rise near the Turco Persian frontier to the south of the sources of the Akh čai and the north of those of the Kotur-čai

The town The site of the town of Mākū is very striking It lies in the short gorge through which the Zāngimār here runs The cliffs rise perpendicularly on the right bank The cliffs on the left bank rise to a height of 600 feet above the river The little town lies in an amphitheatre on the slope Above the town at the foot of the rocks, are the ruins of ancient fortifications and a spring Then the mountain wall rises almost perpendicularly and at a height of 180 to 200 feet leans forward There is therefore an incredible mass of rock suspended over the town (According to Monteith's estimate the dimensions of the cavern thus formed are height 600 feet, depth of the cavern 800 feet(?), breadth 1200, thickness at the top of the arch 200 feet) It is only for a brief period daily that the sun penetrates into this gigantic cave Just above is a cave which used to be entered by a perilous scaffolding At a later date when the cave was used as a prison, the prisoners were hoisted up by a rope (The only European who has been inside it is A Iwanowski)

The population The population of Mākū consists of Turks and Kurds The former, who are in the majority, occupy villages along the rivers of the khānate They are the remains of the Turkoman tribes of Bayat, Pornak etc The canton at the foot of the Sokkar is called Karakoyunlu The people (about 900 houses grouped into 26 villages) belong to the Ahl i Hakk faith (*R M M*, xl, p 66) which is indirect but interesting evidence of the character of the heresy of which the Turkoman dynasty of the Kara koyunlu was accused (Munedjdjim bashī, III, p 153) The old enmity between the Turkoman tribes survives in the general name applied by the Kara-koyunlu to their Shīʿa "Twelver" neighbours they call them Ak-koyunlu (Gordlevsky, p 9)

The Kurds of the khānate are semi-nomads The Djalālī (cf on their supposed ancestors, *ʿĀlam-ārāʾ*, p 539 under the years 1017—1018) occupy the slopes of Ararat and in summer betake themselves to the pasturages along the Turco-Persian frontier Many sections of them lead a troglodyte life in the caves of the Dambat region

The Milan live between the Araxes and the massif of Sokkar where they pass the summer At Kara ʿaini (in Kurdish Kałeni) there are Haidarānlu

Before the war there were only 1,200 Armenians left in Mākū It is remarkable that the confidential servants in the houses of the khāns are of this nationality The celebrated and imposing monastery of St Thaddeus (Thadevos Arakel = Kara Kilisa among the Muslims) rebuilt in 1247 (St Martin, *Memoires sur l'Armenie*, II 463) is in the central canton of Bābādjik It is regarded with a certain respect even by Muslims who kiss the Gospels on entering it A long inscription recording the *firmān* of protection given it by Shāh ʿAbbās adorns the doorway At one time the villages at Mākū and

at Khoi belonged to the monastery and paid their rents to it Another Armenian monastery (Sup-Stephanos, Dānīyāl-Peighambar among the Muslims) lies below the mouth of the Kotur čai on the borders of Mākū The little village of Djabbārlu is inhabited by Yazīdīs

Ancient history The oldest monuments of Mākū go back to the period of the Khald (Vannic) kingdom The chamber carved in the rock near Sangar (on the Mākū–Bāzirgān–Bāyazīd road) is one of a number of similar constructions in Bāyazīd and in the country west of Urmia (Minorsky, *Kela-shin*, *Zap*, xxiv, p 171) A Khaldic inscription known as that of "Makū" seems to come from Bastām on the Akh-čai (district of Cai pāra) It is of king Rusa II, son of Argishti (c 680—645 B C, cf Sayce, *A new Vannic Inscription*, *J R A S*, 1912, p 107—113, N Y Marr, *Nadpis Rusî II iz Mākū*, *Zap*, xxv, 1921, p 1—54) The inscription is important as showing that the power of the kings of Wān extended to the region of Khoi

Mākū later formed part of Armenia It corresponds to the canton of Artaz of the province of Vaspurakan (Armenian seventh century *Geography*) According to Moses of Chorene, the district was at first known as Shawarshan but was given the name of Artaz in memory of the old home of the Alān whom Artashēs transplanted hither (cf Ardoz in Ossetia) The name Shawarshakan may be explained from the rule of the Artsruni kings among whom the name Shawarsh (Ἀσσαγίσαν = Ξέρξης = Mod Pers Siyāwush) was frequent (cf Marquart, *Ērānsahr*, p 4, 177) The suggestion of this scholar that Artaz is connected with the older Ἀζαρα etc, Strabo, xi 14, 3, is untenable because Azara is above Artaxata which again is above the land of Artaz = Mākū The Amatuni kings who later established themselves north of the Araxes must also have ruled in Artaz for the diocese of Mākū is called Amatuneac' tan (Adontz)

The names Mākū and Hac'iun (= Hasun) north of Mākū are mentioned in the *History* of Thomas Artsruni written in the tenth century, in the passage (II § 3) describing the frontier of the lands ceded by the Sāsānian Khusraw to the emperor Maurice in 591 (Brosset, *Coll d'Hist Arm*, St Petersburg 1874, I, p 78) On the many Armenian monuments in the land of Mākū cf the work of Minorsky on the antiquities of the khānate, cf also Hubschmann, *Die altarm Ortsnamen*, 1904, p 344 and Adontz, *Armenia v epokhu Justiniana*, St Petersburg 1908, index

According to a legend recorded by Moses of Chorene (I 30, II 49), Tigranes, having defeated the Mede (in Arm *Mar*) Aždahak settled his descendants all around Masis (Ararat) Neither the Arab historians (Tabarī, Ibn al-Athīr) nor geographers know this corner of Armenia although the name looks very old It would be tempting to explain Mākū as Māh + Kūh = Mountain of the Medes (Pers *māh* and Arm *mār* go back to the old Iranian Māda) The form Mākūya (*Mākōya) which is found in Hamdullāh Mustawfī however presupposes a different final element

History under Islām Hamdullāh Mustawfī (*Nuzhat al Kulūb*, ed Le Strange, p 89) is the first writer (740 = 1340) to mention Makū among the cantons of the *tuman* of Nakhčuwān It is a castle in the cleft of a rock and at the foot lies a village which stands in the shade till midday In this place lives the Christian chief priest (*kashish*) whom they call Mar-Hāsiyā (this reading is preferable to *Mardjanīthā* of Le Strange, cf Aram *Mar-Khasīā* "the Lord Bishop")

The Spanish Ambassador Clavijo who visited Mākū on June 1, 1404 still found it inhabited by Armenian Catholics ruled by their prince Noradin, who enjoyed practical independence Timūr did not succeed in taking Mākū but by a treaty Noradin agreed to supply him with 20 horsemen when required The eldest son of Noradin was taken to the court of 'Omar Mīrzā and converted to Islām when he was given the name of Sorgatmix (Suyurghatmish), as to another son, Noradin intended to send him to Europe to be consecrated a bishop Clavijo mentions a monastery of Dominicans at Mākū, "en el dicho lugar" (Fiayles de Sancto Domingo, *Vida y hazañas*, ed Sreznewski, St Petersburg 1881, p 158–162 and 376, transl Le Strange, London 1928, p 144–145) Clavijo gives an accurate description of the town (a castle in the valley, on the slope, the town surrounded by walls, higher, a second wall, which was reached by steps cut in the rock)

On the death of Timūr, Kara-Yūsuf the Kara-Koyunlu reappeared on the scene and Mākū was one of the first places he conquered in 809 (1406) (*Sharaf nāma*, I 376) Henceforth the country must have become rapidly Turkicised According to the *Sharaf nāma* (I 295, 308), in 982 (1574) the Ottoman government ordered the Kurd 'Iwad Beg of the Mahmūdi tribe (cf above II, p 1145b) to take Mākū (one of the cantons of Nakhcuwān) from the Persians and to restore the fortress 'Iwad was given Mākū as *odjaklîk* After his death in 1002, Sultān Muhammad II gave the fortress to Mustafā Beg, son of 'Iwad

When in the summer of 1014 (1605) Shāh 'Abbās was in the vicinity of Khoi the Mahmūdi Kurds of the district of Mākū and Pasak (a village on the Aland čai to the west of Khoi) did not come to pay homage to the Shāh 'Abbās I transferred the clan of Mansūr-beg to the 'Irak (Persian) and took the field in person against Mustafā, beg of Mākū The historian Iskandar-munshī mentions two forts at Mākū, one at the foot of the mountain (*pāy-i kūh*) and the other on its side (*miyān-kūh*) The former was soon taken by the Shāh's troops but the capture of the other was "not so easy" Orders were given to plunder the Mahmūdi tribe which was done The women and children were carried off and the Mahmūdi men executed The booty was so great that cows were sold at 2 dirhams = 200 (Persian) dīnārs a head The royal camp remained for 10 days at Mākū but the upper fortress "in spite of the constrictedness of the place and the lack of water" held out and the Shāh left for Nakhčuwān without having obtained its surrender ('*Ālam ārā*, p 479)

The Turks and Persians attached great importance to the position of Mākū Murād IV in the campaign of 1045 himself realised the importance of Kotur and Mākū and in the instructions given in 1048 to Kara Mustafā Pasha ordered him to demand that the Persians should destroy the two fortresses Indeed by the treaty of 1049 (1639) the Persians decided to raze Kotur Mākūr, (read Mākū) and Maghazberd (*Tārīkh-i Na'imā*, I 686) However Murād IV died and in the reign of Sultān Ibrāhīm the Persians reoccupied Kotur and Mākū (Ewliyā Čelebi, IV, p 279)

The next stage is recorded in the Persian inscription engraved on the rock above the fortress (Minorsky, *Drevnosti*, p 23) It tells us that Shāh ʿAbbās II ordered the destruction of the fortiess because it sheltered the unsubdued (*mufsidān*) The fortress is compared to a Kalʿa yi Kābān, the executor of the Shāh's order was a certain Akbai and the date is 1052 = 1641—1642 (Chronogram *gh-n-b*) The history of ʿAbbās II (*Kiṣas al-Khakānī*, Bibl Nat Paris, Suppl Pers, N⁰ 227) throws no light on the incident but as (fol 74b) an Ottoman embassy to the court of the young Shāh in 1052 is mentioned, it is probable that it was not without influence on the destruction of the fortiess, on the preservation of which Persia had formerly laid stress

Contrary to the tenor of the inscription, Ewliyā Čelebi II, 337—339 claims that it was the Ottomans who, after the peace of 1049, destroyed Makū and at the same time recalled the Mahmūdī Beg who was their representative there In 1057 (1647) the Kurd Beg of Shūshīk (a stronghold on the borders of Persia) rebelled against the Turks The Persians, while protesting against his raids, seized the occasion to introduce to Makū 2,000 riflemen from Māzandarān The Ottomans sent an army of 72,000 men against Shūshīk Mustafā Beg of Shūshīk was defeated and sought refuge in Mākū Ewliyā accompanied the Pasha and the detachment that went to Mākū to demand the extradition of the rebel Satisfaction was given them and the wālī of Erzerūm Mehmed Pasha treated the Persian envoys in a very friendly fashion He told them however that if the Persians did not withdraw their troops from Mākū and destroy the fortress, he would attack Erīwān and Nakhčuwan The result is not known but Persia's possession of Mākū recognised in 1639 does not seem to have again been seriously disputed by Turkey

The family which ruled Makū from 1747 to 1923 belonged to the Bayat tribe, the clan settled around the Sokkar (on the Bayat cf Koprulu zade Mehmed Fūʾād, *Oghuz Etnolojisine dāyir Tārihī Notalar*, *Turkiyāt Medjmūʿasi*, Stambul 1925, p 16—23) According to oral tradition Ahmad Sultān Bayat was in Khorāsān in the service of Nādir Shāh After the latter's assassination, he seized one of his wives and a part of his treasure and returned to Makū Very little is known about him or his son Husain Khān (Monteith's host?) who died in 1835 It is possible that under the Zand dynasty and at the beginning of the Kādjārs the real authority in the region N W of Ādharbāidjān belonged to the family of Dumbulī Khāns [cf KURDS], whose headquarters was at Khoi (cf TABRĪZ, the special history of the Dumbulī is not accessible in Europe) The disappearance of the Dumbulī must have opened the way to the Bayat ʿAlī Khān (1775—1865), son of Husain Khān, is often mentioned by travellers (Fraser, Abich, Flandin, Čirikow, Likhutin) as an influential chief jealous of his prerogatives We know that the Bāb was entrusted to the guardianship of ʿAlī Khān from June to December 1847 and that the latter treated him very kindly The Bāb in his esoteric language calls Mākū *djabal-i bāsit* in contrast to *djabal-i shadīd* (= Čahrīk, cf SALMĀS) where his imprisonment was more rigorous (cf Browne, *A Traveller's Narrative*, 1891, ii, p 16, 271—277, Jānī-Kāshānī, *Nuqtat al-qāf*, *G M S*, xv, 1910, p 131—132) During the war of 1853—1856 ʿAlī Khān derived great material advantage from the neutrality of his territory which lay between Russia and Turkey His son Tīmūr Pasha Khān (1820—1895?) profited by a similar situation during the Russo-Turkish war of 1877—1878 In 1881, his appearance at the head of the Mākū horsemen in the district of Salmās accelerated the collapse of the invasion of Kurds under Shaikh ʿUbaidallāh [q v] Timūr Pasha Khān was hailed as the saviour of Ādharbāidjān and the people even called him *Māku Pādshāhī*

His son and successor Murtadā Kuli Khān Ikbal al-Saltana (1863—1923) at first continued the policy of isolation and aggrandisement of the khānate but his activity aroused suspicion on all sides At the beginning of the war of 1914 Russian distrust earned him a forced stay in Tiflis In time Mākū became part of the theatre of war The Russian troops built a light railway from Shāh-takhtī (on the Araxes) to Bāyazid and the station of Mākū became a busy centre In 1917 the Sardār returned home and held his position till the coming of Ridā Shāh Pahlawī, when, accused of intrigues, he was arrested on 25th Mihr 1302 (Oct 17, 1923) and transported to the prison of Tabrīz where he died suddenly A Persian officer was appointed governor of Mākū (Nawbakht, *Shāhinshāh-i Pahlawī*, Tihrān 1342, p 112)

MĀL (A), means in the old language possession, property, referring among the Bedouins particularly to camels, but also to estates and money, in any case to concrete things The word is formed from *mā* and *l* and means properly anything that belongs to any one As a noun it is of course treated as a med *w* stem from which a

verb is then formed In the meaning "money" the word is used in the expression *māl sāmit* "dumb property" in contrast to *māl nātik* "speaking property", applied to slaves and cattle There is a full definition of the conception in the introduction to the *Ishāra ilā Mahāsin al-Tidjāra* of Abu 'l-Fadl Djafar b ʿAlī al-Dimashkī (Cairo 1318, p 2 *sq*) studied and for the most part translated by H Ritter, *Isl*, vii (1916), 1—91 There and in the *Mafātīh al-ʿUlūm* (see *Bibl*), p 59, the different classes of property are enumerated As *māl* includes property in its different aspects the word can also mean "taxes"

The attitude of the Muslim religion to money and property and its acquisition was of course a subject of discussion from the beginning of the literature The authoritative religious and ethical point of view is that of al-Ghazzālī (so to be written, cf Moh ben Cheneb, *R A A*, vii, 1927, p 224 *sqq*) in the second decade of the *Ihyāʾ*, especially book 13 (Ritter, *op cit*, gives an analysis) and 14 (transl by H Bauer, *Erlaubtes und verbotenes Gut = Islamische Ethik*, iii, 1922, cf R Hartmann in *Isl*, xiv)

The acquisition, guarding and disposal of property is one of the four main sections of economics (*Tadbīr al-Manzil*), the second part of practical philosophy, which is divided into ethics, economics and politics, just as it entered Islām with the rest of Hellenistic sciences As the *Politics* of Aristotle, the first book of which deals with economics was not translated into Arabic, the Muslims had to be content with the only translated work on economics, composed by the Neo-Pythagorean Ps-Bryson which has had a deciding influence on the whole economic literature of Islām The text, the Greek original of which is lost, was first edited by I Cheikho in *Machriq*, xix (1921) and has been recently published with the Hebrew and Latin versions and a German translation by M Plessner (cf *Bibl*) The interesting chapter on *māl* in it was further expanded by Muslim authors of the school of Ps-Bryson, particularly from religious literature A standard work is the *Akhlāk-i Nāṣirī* of al-Tūsī [q v] of which the economic section has been analysed and translated by Plessner The view of the origin of money which Aristotle holds in the *Nic Ethics* reached Islām direct, besides coming through Ps-Bryson, it is first found in the *Tahdhīb al-Akhlāk* of Miskawaih (this is his correct name and not Ibn Miskawaih [q v]) e g Cairo 1322, p 38 [cf also NĀMŪS and DHAHAB]

The word *māl* very early became a technical term in arithmetic It is first found in exercises in dividing inheritances applied to the property of the testator which is to be divided We later find the word used regularly for the unknown quantity in an equation, in this meaning it was afterwards replaced by *shaʾ* [q v] Used for the unknown in quadratic equations it became the word for the square of a number The fourth power is called *māl al-māl*, the fifth *mālu kaʿbin*, the square of the cube The history of this change of meaning has been elucidated by J Ruska, *Zur ältesten arabischen Algebra und Rechenkunst* (*S B Ak Heid*, Phil-hist Kl, 1917, N⁰ 2, esp chap vi, cf also index, s v Māl)

Bibliography Brockelmann, *Grundriss*, i, H Ritter, *Ein arabisches Handbuch der Handelswissenschaft*, *Isl*, vii 1—91 (cf esp the passages quoted on p 45 note 3 from the Arab *Lexicographers*, the *Lisān al-ʿArab* and Dozy, s v), M Plessner, *Der oikonomikós des Neupythagoreers 'Bryson' und sein Einfluss auf die islamische Wissenschaft*, 1928, Merx, *Die Einführung der aristotelischen Ethik in die arabische Philosophie* (*Verhandlungen des XIII Intern Orientalistenkongresses*, p 290 *sqq*), on the meaning in algebra cf the references given in Ruska, *op cit*, al-Khwārizmī, *Mafātīh al-ʿUlūm*, ed van Vloten, 1895, p 59, 198 *sq* (the latter passage transl by Wiedemann, *Beiträge zur Geschichte der Naturwissenschaften*, xiv = *S B P M S Erlg*, xl, 1908)

(M PLESSNER)

MĀL AMĪR, more accurately Māl-i Amīr, a ruined site in Lūristān It lies in the centre of a flat plain about 3,100 feet above sea-level, in 49° 45′ East Long and 31° 50′ N Lat, 3–4 days' journey east of Shūstar [q v] and marks the site of a mediaeval town for which during the caliphate the name Idhadj (sometimes vocalised Aidhadj) was exclusively used The modern name Māl-i Amīr seems to be first used in the Mongol period, at least the first known occurrence is in the first half of the xivth century in Ibn Battūta (ii 29) in the Arabic form Māl al-Amir = "estate of the prince" Idhadj under the ʿAbbāsids was the capital of a district of the province, and was also described more precisely as Idhadj al-Ahwāz i e "Idhadj of al-Ahwāz" (Khūzistān), sometimes called after Rām(a)hurmuz to distinguish it from a place of the same or similar name in the region of Samarkand (cf Yākūt, i 416, 417 Idhūdj, ii 496)

Even under the Sāsānians the somewhat inaccessible district of Idhadj seems to have enjoyed a certain independence When the Arabs for the first time invaded Khūzistān in 17 (638) they came to a friendly arrangement with the lord of Idhadj by which the latter was guaranteed the possession of his power (Tabarī, i 2553) Eleven years later (29 = 649) however, the governor of Basra, ʿAbd Allāh b ʿAmir [q v], was forced by a rising in the newly won province to undertake a military expedition which took him incidentally to Idhadj, see Balādhurī (ed de Goeje), p 382 and above, ii p

Under the caliphate Idhadj played no prominent part During the troubles in the last decade of Omayyad rule Abū Djaʿfar al-Mansūr afterwards Caliph (cf v Vloten, in *Z D M G*, lii 214) administered the district of Idhadj for the ʿAlid pretender ʿAbd Allāh b Muʿāwiya [q v] A son, afterwards the caliph al-Mahdī, was born to him here, apparently by a woman of Idhadj (see Tabarī, iii 527) The family of the latter apparently kept up its connection with Idhadj for Yākūt (i 416) speaks of descendants of al-Mahdī who bore the family name of Idhadjī The name Māl al Amīr, "prince's estate", might date from the time of al-Mahdī when the ʿAbbāsids seem to have had lands in Idhadj But this name of Idhadj, as already mentioned, does not occur in an Arabic source till 500 years later, so it may be assumed with greater probability that it arose in the time of the Atābegs of Lūristān Buzurg [q v = Great Lūr] under whom Idhadj attained its greatest prosperity This ruling family, which traced its origin to a Kurd chieftain of Syria, is also called the Fadlawī dynasty after an ancestor or the Hazāraspid after the proper founder of their power, Malik Hazārasp Their rule over East and South Lū-

rıstān dated from about 550 (1155) The capital was Īdhadj At times the power of these princes stretched eastwards as far as the vicinity of Isfahān and southwards to Basra and to the Persian Gulf They owned the suzerainty of the caliphs or of the Mongol Khāns who replaced the ʿAbbāsids, in practice they were fairly independent Among the Atābegs of this dynasty mention may be made of Ahmad Nusrat al-Dīn (696—730 or 733 = 1226—1329 or 1332) According to Ibn Battūta, he built 160 madrasas in his kingdom, of which 44 were in Īdhadj He also improved caravan traffic by hewing roads through the rocks Under his successor Afrāsiyāb II, Ibn Battūta spent some time in Īdhadj and gives an interesting description of life at the court in this town The Tīmūrids in 827 (1424) put an end to the rule of the Fadlawī dynasty On this dynasty cf above II, p 48 *sqq* and the genealogical tables in Justi, *Iranisches Namenbuch*, Marburg 1895, p 460 and E von Zambaur, *Manuel de Geneal et de Chronol pour l'Histoire de l'Islam*, Hanover 1927, p 234

On the later history of Īdhadj nothing is known The town probably became gradually deserted after the fall of the Fadlawīs Its ruins are now represented by a large mound of earth, about 35 feet high, of irregular shape with smaller mounds of rubble around it Cf Layard in *JGRS*, XVI, 1846, p 74 and Layard, *Early Adventures in Persia, Susiana and Babylonia*, London 1887, I 403, and Jéquier, *op cit* (s *Bibl*), p 134

It may be mentioned that the Būyid Sultāns struck coins in Īdhadj, cf Lindberg, *Les Monnaies Coufiques des Buyides = Mem de la Societe des Antiquaires du Nord*, Paris 1840—1844, II 269 and see above III, p 44[b] On coins of the Atābegs minted in Īdhadj cf above III, p 48[a]

The perfectly flat plain of Māl-Amīr out of which rises the mound of ruins of the Sāsānian and Muslim town of Īdhadj is about 4 miles broad and about 7 long according to Jéquier (see *Bibl*) who has given a plan of it (*op cit*, p 133) It runs from N W to S E c 3100 feet above sea-level and is surrounded on all sides by steep, barren but not high hills The most important of these border ranges is in the S E and is linked up to the Mungasht hills farther south (cf Rawlinson in *JRGS*, IX 80—81, de Bode, *op cit*, XIII, 100, Layard, *op cit*, XVI 74 and de Bode, *Travels*, II 30) within which stood the fortress of the same name, which played an important part in the middle ages (Mungasht, Mankhisht, Māndjasht, cf also above III, p 46[b], 47[a]) The ridge which shuts in the plain of Māl Amīr in the east or N E is called Kūh Geshmet According to Jéquier, there is a large artificial lake in the north (northeastern) part of the plain, which finally disappears in the swamp According to de Bode (*JRGS*, XIII 104), there were in his time two small lakes there, the so-called Shatt bend's, which dried up in summer like the marshes and the small streams which run through the plain The water of the latter came in the main from the lake of Deriādje i Bandān, south of the plain of Māl-Amīr, behind which Houtum-Schindler (see *Bibl*) ascended the steep wall of the Tanawsh range The lake called Fam al Bawwāb described by Yākūt may be identical with this stretch of water, cf Le Strange, *op cit*, p 245, Schwarz, *op cit*, p 337

Among the numerous ravines which are to be found among the hills that border the Māl-Amīr plain on the N E the most interesting from the archaeological point of view is that of Kūl-i Fārā (see the plan in Jéquier, *op cit*, p 135) *Kūl*, according to O Mann means in Lūrī "little ravine", cf above III, p 41[b] Dieulafoy and Schindler have erroneously reproduced this to them unintelligible word by Kalʿa or Kūt = fortress see Weissbach, *op cit*, p 743, note, whose suggestion about the meaning of Kūl is now ruled out For Fārā, H Schindler gives the form Ferra and Ferendj (Franks, Europeans), the latter apparently based on a Lūrī interpretation of the male costume in the reliefs there Earlier travellers (Layard, de Bode) write Kūl i Firʿawn, apparently because their Lūrī authorities identified the name Fārā with Firʿawn (Pharaoh) whom they knew from the Kurʾān

The majority of the sculptures of pre-Īrānian (Elamite) origin in the region of Māl Amīr are to be found in Kūl-i Fārā Quite close to the entrance to the ravine is a large stele with a large human figure in high relief, a row of smaller figures with a well preserved 24 line cuneiform inscription and 10 smaller inscriptions (the latter giving the names of the individuals represented) According to the large inscription it is a monument erected by a certain Hanni, son of Tahhihi Opposite, on the other side of the ravine at intervals on blocks of stone and on the wall are five tablets with other reliefs of rude execution Special mention must be made of a great procession with 67 figures The total number of figures in Kūl-i Fāra is according to Layard 341

Opposite the ravine of Kūl-i Fārā, in the hills which bound the S W side of the plain of Māl Amīr is the cave with many corridors of Shikefte i Salmān, "the cave of Salmān" According to the Bakhtiyārīs who hold this place in great honour, the name is derived from that of Salmān al-Fārisi [q v], the first Persian to adopt Islām, who is buried there, contrary to the modern Sunni and Shīʿī tradition which locates the tomb of this companion of the Prophet in al-Madāʾin (Salmān Pāk, cf III, p 79) In Shikefte-i Salmān have survived four primitive bas reliefs of the Elamite period of which two are outside and two inside the cave Among them is a figure, over life size with a 36 line cuneiform inscription which also dates from the Hanni above mentioned On a little esplanade to the south of the cave are the ruins of a little Muslim sanctuary, probably erected on the site of an older sanctuary In the corner of the cave is a spring in which rises one of the little streams that water Māl Amir

Apart from the monuments of Kūl-i Fārā and Shikefte i Salmān there are a series of other monuments and remains of the ancient and mediaeval periods in the plains of Shikefte-i Salmān For example, in the southwest part of the plain near a ruined *imāmzāde* (saint's tomb) which the Lūrs call Shāh-Suwār (the king on horseback) on a slope of the hill is a small stele, obviously also of the Elamite period, with 6 figures and an inscription which has been destroyed According to Layard, there are many popular traditions about this place A little north of Shāh-Suwār at a place called Kūh Wā are the ruins of a palace In the opposite direction in the N E section of the plain rises a round palace on the summit of a rock, called Kalʿa Gʾshdum (= Scorpion Hill) by the natives A ravine near by is called Hong, in it

may be seen a much weathered Sāsānian rock-sculpture of great dimensions, probably of the earlier period (c Shāpūr I)

That the plain of Māl-Amīr enjoyed comparative prosperity in the Sāsānian period is evident from the remains of canals of this date

In the S W of the plain a narrow road runs to the village of Hallādjān (de Bode Halegun) Near it are old ruins of the period of the Atābeg dynasty There is an Atābeg citadel, an Atābeg bridge and well The numerous traces of buildings probably date from a mediaeval town Of recent date is the ruin (mentioned by de Bode) of a palace of Hasan Khān, a chief of the Bakhtiyārī tribe of Čahār Lang who lived here about 1821 Here is another little river called Hallādjān or Shāh Rūben which is probably connected with the lake at Deriādje-i Bandān already mentioned (cf Layard, *J R G S*, xvi 74 and *Early Adventures*, i 403, de Bode, *J R G S*, xiii 100 and *Travels* etc, i 404

In the N E of Māl-Amīr runs an old road paved with huge blocks of stone, which is now called Rāh-i Sultān (the Sultān's path) or Djāddet-i Atābeg (= Atābeg road) to the Sar-i Rāk (Radj) some 3,500 feet high, the highest point, and thence to Isfāhān after several days' journey It has already been mentioned above that the Atābegs did a great deal for road making in their lands But the original planning of the road probably goes back to a great antiquity, cf thereon de Bode, *J R G S*, xiii 102—104, and *Travels* etc, ii 6—8, 35—46 Perhaps, he suggests, the "ladder-road" (*κλίμακος κοίλη*) over which Eumenes passed, as mentioned by Diodoros xix 21, may be identical with the Atābeg road Remains of old roads paved or hewn out of the rock are also found in other places in the neighbourhood of Māl-Amīr, cf iii 51b The natives ascribe them at once to the Atābegs, as they do the ruined caravanserais found everywhere Near the Sar i Rāk pass about 12 miles east of Mal-Amīr is a place called Kal'a i Medjese, where chiefs of the Bakhtiyāris meet every year There are the ruins of two Sāsānian buildings, cf Unvala, in *Revue d'Assyriologie*, xxv, 1928, p 86—88, who gives a detailed description of them Schwarz, (*op cit*, p 340) thinks that this Kal'a i Medrese — in spite of the discrepancy in the distances given — corresponds with the place Hallāfihān mentioned by Ibn Battūtā (ii 41) A ruined site of the same name, also with two Sāsānian buildings is according to Unvala 24 miles S E of Masdjid-i Sulaimān [cf SŪSAN], 4–5 hours N E of Māl-Amir are the ruins of Sūsan [q v]

The Arab geographers of the middle ages reckoned the celebrated stone bridge (*kantara*) of Īdhadj crossing the Dudjail (Kārūn) among the wonders of the world It was also called Kantara Khuriazād from the alleged (otherwise unknown) name of the mother of Ardashir I, who is said to have built this bridge and another in the town of Ahwaz (see Schwarz, *op cit*, p 321) Otherwise we only know the masculine form of the Īrānian name Khurzād (cf Schwarz, *op cit*, p 338 note 4 and Justi, *Iranisches Namenbuch*, Marburg 1895, p 180b) In the ivth (xth) century this bridge of Īdhadj was restored by the vizier of the Būyid Rukn al-Dawla after two years of work De Bode identifies it with the "Atābeg" bridge at Hallādjān, probably however we should, with Rawlinson, *op cit*, p 83 and Schwarz, *op cit*, p 339, identify it with the "Old Bridge" crossing a small tributary of the Kārūn N E of Kal'a-i Medrese For further information on the Bridge of Īdhadj cf Yākūt, i 416, iv 189 and Schwarz, *op cit*, p 338—339

The rulers who had the sculptures and rock inscriptions of Kūl-i Fārā and Shikefte-i Salmān made, belong to the period of the later Elamite kingdom, to the period between Nebucchadnezar I (1146—1123) and the rise of Assyria in the first half of the ixth century i e about 1000 B C It cannot be decided whether king Hanni, son of Tahhihi, from whom the monuments and inscriptions date, and the Shutur Nakhkhunte, son of Indada mentioned by him, ruled the whole of Elam or whether they are to be regarded as members of a local dynasty ruling perhaps the district of Mal-Amīr The inscriptions are in the Elamite language but contracts written in the Babylonian language have also been found in Māl Amir, cf the *Bibliography*

Here it may be mentioned that following de Bode the town of the Uxians which Alexander the Great passed on his way from Susa to Persepolis after passing the "Susan Gates" has often been sought in the region of Māl-Amir, s de Bode, *Travels* etc, ii 47 *sq*, Spiegel, *Eranische Alterthumskunde*, i, Leipzig 1870, p 409 and Kaerst in Pauly-Wissowa, *Realenzykl d klass Alterthumswiss*, i 1424

Since the late middle ages (beginning of the vii/xiiith century) the Bakhtiyāri Lūrs have settled in the district of Māl Amīr (cf above iii, p 42a, 45b) They spend the winter there on account of the fine green pastures On the Bakhtiyāris see BAKHTIYĀRĪS and iii, p 42b, 45b, 46a, 50a

MALABAR, a district of the Madras Presidency in British India, situated on the west coast of the peninsula, between 10° 15′ and 12° 18′ N latitude and 75° 14′ and 76° 15′ E longitude, and extending for 150 miles along the shores of the Arabian Sea, on the E the district is bounded by the Western Ghats, the hills of which attain an average elevation of 5,000 feet, but occasionally rise to 8,000 feet Out of a total population of 2,039,333 (according to the Census of 1921) there are 1,004,327 Muslims, of whom 93,60 per cent are Sunnīs, the greater part of them are Mappillas [q v.], the Labbais [q v] form the next largest group, and there are a few Pathans, and in the larger coast towns a few Arabs

Trade with Arabia appears to have led to the introduction of Islām into the Malabar coast at an early period, the exact date of which is uncertain Hindu rādjās encouraged the Arab traders and the commerce of the western coast had passed almost entirely into their hands by the end of the xv^th^ century when the Portuguese arrived to dispute it with them The Arabs did not give way without a struggle, but by the middle of the xvi^th^ century only the petty coasting trade was left in Arab hands, and when the power of the Portuguese declined in the xvii^th^ century their place was taken by English and Dutch traders In 1766 Haidar ʿAlī [q v] added Malabar to his dominions, but found it a turbulent possession, and his son Tīpū Sultān [q v] in 1792 had to abandon this territory to the British

MALACCA (from the Sanskrit *amlaka* through the Malay *mĕlaka*, Phyllanthus pectinatus Hook fil, Euphorbiaceae) is the name of a town situated on the west coast of the Malay Peninsula in 2° 11′ 30″ N, 102° 15′ E (Gr), of a river which enters the sea at that spot, and of a territory of about 720 English square miles adjacent to and administered from the town Formerly the name was often extended to the Malay Peninsula as a whole, but this usage is obsolete in English though still sometimes found in Continental works

The earliest date in the history of Malacca occurs in Book 325 of the History of the Ming dynasty of China (1368—1643), which relates the sending of a Chinese mission to it in the year 1403, in consequence of which the local chief was shortly afterwards recognized as king by the Chinese Emperor Previous to this time Siam had apparently claimed some kind of suzerainty over the country Two alleged earlier references are very doubtful, one in chapter ix of the Javanese history *Pararaton*, and the other in the Siamese *Kot Monthierabān* (*Mandirapāla*) The latter work certainly mentions Malacca as a vassal of Siam, but in its introduction it speaks of a Siamese king (Paramatrailokanātha) whose reign began about 1435 The oldest strictly contemporary notice of the place occurs in the *Ying-yai Shing-lan* of Ma Huan, which records a Chinese mission to it in 1409 and states that at that time the king and people of Malacca carefully observed the tenets of Islām As Malay traditional history connects the rise of Malacca with the fall of Singapore (probably *circa* 1377), it seems likely that the establishment of Islām as the official religion in Malacca may have occured between these dates

Owing to its position on the trade route from India and Western Asia to the Malay Archipelago, China, and Japan, Malacca became in the xv^th^ century the most important of the Malay states, it was visited by traders from various countries, many of them being Muslims from Northern and Southern India, the Persian Gulf and the Red Sea, and it became the centre of a Muslim propaganda of which the earliest successes in this part of the world had already been registered by Marco Polo in North-Eastern Sumatra before the close of the

xiiith century After the middle of the xvth century Malacca territory was increased by the conquest of Pahang (on the East coast of the Peninsula), and for a time the kingdom included all the coasts of the centre and South of the Peninsula to about 4° N together with a suzerainty over the parts of Sumatra lying opposite to it Siam made several unsuccessful attacks on Malacca during this period

The growth of this incipient empire, which however already showed signs of decay in the form of internal divisions and bad administration, was cut short by the Portuguese conquest in 1511, whereby the town and its immediately adjoining territory, together with the command of the sea, fell into European hands Though often challenged by the attacks of their Muslim neighbours (especially the new state of Acheh [Achin] in Northern Sumatra), the Portuguese maintained their hold on Malacca till 1641, when after a prolonged siege it was taken by the Dutch In 1795 it was occupied by the British, in the name of the Prince of Orange, and held until 1818, when it was returned to the Netherlands under the provisions of the treaty of Vienna In 1824 it finally became British and in 1826 it was incorporated in one government with Penang and Singapore and made subject to the East India Company

During the Dutch period the importance of Malacca as a trading centre declined, it was never allowed to compete seriously with Batavia, and in the end it was quite overshadowed by Penang (founded in 1786) and Singapore (founded in 1819) In recent times it has shared in the general economic development of the Peninsula, but it only ranks as the fifth town in British Malaya, with a population (in 1921) of 30,671 (of whom about one fifth were Muslims) in an area of 3 5 English square miles In the whole settlement or territory of Malacca, including the town itself, the population was 153,522, of whom 83,635 were Malays proper (including a considerable number of Minangkabau descent), 2,777 other Muslims (such as Javanese, Banjarese, etc) of similar Indonesian stock, 1,146 Muslim Indians, 257 Muslim Chinese, and 56 Arabs, making an approximate total Muslim population of 87,871, almost all of whom were Sunnis of the school of Shāfi'ī Of the rest of the Asiatic population about four-fifths were Chinese and one-fifth Hindus

MALAGA, Arabic *Mālaka* (ethnic *Mālakī*), a large town in Spain on the Mediterranean and capital of the same name, has at the present day 133,000 inhabitants It is built at the centre of a bay commanded by the hill of Gibralfaro (the Djabal Fāroh of Idrīsī) The town is traversed from north to south by the "rambla" (i e the bed, usually dry [Arabic *ramla*]) of the Guadalmedina (*wādī 'l-madīna*) which, while very often dried up, sometimes overflows in the rainy season To the west of the town lies the Vega or Hoya of Malaga where the vegetation is exotic and extremely luxurious

Malaga, the ancient *Malaca*, was founded by the Phoenicians and retained for long under Roman rule traces of a deep Punic influence, its port under the Empire was one of the most important in the Iberian peninsula At a later date it was the see of a bishop It was taken from the Byzantines in 571 by the Visigothic king Leowigild In 711 it was taken by a Muslim force sent from Ecija by Tārik It soon became an important Muslim town and in time supplanted Arshidhōna (Archidona, q v) as capital of the province of Reiyo (Latin *regio*) where in the time of the governor Abu 'l-Khattār al-Husām b Dirār al-Kalbī the Arab *djund* of Jordan (al-Urdunn) was settled in 125 (742) Malaga welcomed the founder of the Omaiyad dynasty of Spain, 'Abd al-Rahmān I al Dākhil, after his landing at Almuñecar and his triumphal progress through the district of Elvira But, in the second half of the third (ninth) century, the province of Reiyo including Malaga became closely involved in the troubles stirred up by the nationalist 'Umar b Hafsūn In the reign of the Emīr Muhammad b 'Abd al-Rahmān b Hakam, according to the historian Ibn Haiyān, the province supplied for a summer expedition (*sā'ifa*) against Galicia an imposing number of horsemen 2,600 Later, when the rebel was causing anxiety to the Emir 'Abd Allāh an expedition on a large scale had to be undertaken against the province of Reiyo An army under the command of prince Abān son of 'Abd Allah took the field in 291 (904) and inflicted a severe defeat on the troops of Ibn Hafsūn Three years later, the same general had to besiege Malaga which was held by the rebel Musāwir b 'Abd al-Rahmān Another expedition was again led against Malaga in the reign of 'Abd Allāh in 297 (909)

The great caliph 'Abd al Rahmān III, on ascending the throne had no peace until he succeeded in putting down the rebellion of Ibn Hafsūn In the early years of his reign several expeditions were again sent against the rebels in the province of Reiyo of which Malaga was the port but not yet the capital Once order was completely restored by the sovereign, Malaga entered on a long period of prosperity which continued till the end of the Umaiyad caliphate

From being capital of a province, Malaga became the capital of an independent kingdom in the period of the *mulūk al-tawā'if* The Hammūdids after having had to renounce their claims to the caliphate of all Muslim Spain were able to hold out in a little principality in the S E of Spain with Malaga as capital At the same time another branch of the same family founded a little kingdom around the town of Algeciras The Hammūdid dynasty of Malaga survived till 449 (1057) [on it cf the article HAMMŪDIDS] The king of Granada, the Zīrid Bādīs b Habbūs, had hitherto been nominally their vassal He decided to cast off their suzerainty and seize their principality He did this with ease and exiled the last Hammūdids to Africa, his son al-Mu'izz was appointed ruler of Malaga On the death of Bādīs in 466 (1073) his kingdom was divided between his two grandsons 'Abd Allāh and Tamīm and Malaga

fell to the latter The town very soon passed to the Almoravids and then to the Almohads When in 629 (1232) Muhammad I Ibn al-Ahmar founded the Nasrid kingdom of Granada, Malaga and its province formed part of his lands and remained in the power of the dynasty till the period of the Catholic Kings Ferdinand and Isabella took Malaga from the Muslims on Aug 18, 1487 after a close blockade

The Arab geographers of Muslim Spain almost all give enthusiastic descriptions of Malaga Idrīsī (xith century) mentions two of its suburbs, praises the sweetness of its waters and the flavour of its fruits Ibn Battūta in the second half of the xivth century says much the same and adds that a fine gilt porcelain was made at Malaga which was exported to the whole Muslim world Finally Ibn al-Khatīb frequently speaks of Malaga in his description of the kingdom of Granada, one of his minor works is devoted to a comparison of Malaga with Sale, the *Mufākhara Mālaka wa-Salā* (the Arabic text has been published from two MSS of the Escurial by M J Müller, *Wettstreit zwischen Malaga und Sale*, in *Beitrage zur Geschichte der westlichen Araber*, p 1—13)

Very few monuments of the Muslim period survive in Malaga, which have not been very much altered The old chief mosque has become the cathedral According to the author of *al-Rawd al mi*^{c}*tār*, this *djāmi*^{c} had five naves and five doors, two on the side facing the sea, one on the east front (*Bāb al-Wādī*) and one on the north side (*Bāb al-Khawkha*) Another mosque of Malaga built in the *Kasba* is said to have been founded by the traditionist Mu^{c}āwiya b Ṣālih of Emesa (d 158 = 775) The old Muslim citadel is still called Alcazaba There are very few relics of Islām in it, a vaulted gateway (Arco de Christo) and a tower (Torre de la Vela) This citadel was joined to another fortress by a double rampart built on the hill of Gibralfaro, it was restored at the end of the xiiith century by the Nasrid rulers of Granada

Malaga in the Muslim period remained an important sea port and an active centre of shipbuilding, less important however than its neighbour Almeria This *Dār al-Ṣinā*^{c}*a*, the name of which has survived in the form *Atarazana*, occupied the actual site of a market and one of the gates with the motto of the Nasrids (*lā ghālība illa'llāh*, "There is no victor but Allāh") is still standing

(E Lévi-Provençal)

MALAHIM (a, sing *malhama*) came, after a long and obscure development, to mean "destinies", either simply *al malāhim*, or *kutub al malāhim* or in the singular The word was already quite adequately explained by De Sacy in his *Chrestomathie arabe*^{2}, ii 298—302, on the basis of several passages in Ibn Khaldūn's *Mukaddima* There Ibn Khaldūn defines *al-malāhim* as "numerous books on dynastic changes and events (*hadīthān al duwal*), written in verse and prose and *radjaz*, many of which are spread abroad amongst the people, some dealing with the changes in the Muslim people (*al-milla*) as a whole, and others with particular dynasties, but all ascribed to well known individuals", although, in Ibn Khaldūn's opinion, it would be difficult to prove the correctness of any of these ascriptions (Quatremère's text, ii 192 foot, De Slane's transl, ii 226) The most famous case of these is the book called *al-Djafr* (q v and the references there) Such predictions as to public affairs have close connection with, and were probably developed from the Jewish and Christian apocalypses As there are many stories, both in sober historians and in popular tales, describing these books as secretly preserved and consulted by dynastic leaders for their own guidance, they have also contacts with the Roman Sibylline books The popular doctrine of the Mahdī [q v] and of the Last Day (*al Kiyāma* [q v]) became inextricably confused with this branch of Muslim literature

The derivation of *malhama* and the development of its meanings are very obscure The word does not occur in the Kur'ān which has the root only in *lahm* and *luhūm* with the concrete meaning, "flesh" Yet the root *l h m*, like the cognate Hebrew root, had apparently two very separate but old meanings, "food" and "fighting" Further, the fact that the Hebrew food word, *lehem*, means "bread", while its exact equivalent in Arabic means "flesh" would suggest a separation very far back rather than a borrowing (cf the comparative treatment and references in Browne Driver Briggs, *Hebrew Lexicon*, p 535 *sqq*) In old Arabic the meaning of decisive fighting, leading to defeat, pursuit and slaughter, seems to be certain (cf the treatment in the *Lisān*, xxii 9—11, and add to the quotations there *Hamāsa*, ed Freytag, p 124, 728, *Diwān* of Tufail b ^{c}Awf, ed Krenkow, p [illegible], l 29, with translation and note on p 15) The *Lisān* endeavours to connect the meanings (flesh, warp and woof in weaving, close, entangled fighting) under the general idea "being intricate, mixed" (*ishtibāk*, *ikhtilāt*) or with the picture of the flesh of the slain on the battle field But, in view of the Hebrew usage, it is better to be satisfied with the meaning of *malhama* as "a stricken field", the *Lisān* (p 10) reiterates the idea of war and fighting with much slaughter and especially "in the Fitna" (*bi'l-fitna*), its only allusion to the prophetic and eschatological usage An epithet of Muhammad is "the prophet of the *malhama*" and of that the *Lisān* gives two explanations (i) "the prophet who was sent with the sword" (as in another tradition, *bu*^{c}*ithtu bi'l-saif*), (ii) "the prophet of union and good order" (*ta'līf*, *salāh*)

There is very little general prophecy in the Kur'ān as to future historical events in this world, but in Tradition there is a great deal Even the two *Sahīh*'s have sections on such future *fitan* —

apparently the oldest word for them and frequent in the Kur'ān — especially those leading up to the Last Day In Bukhārī (Būlak 1315, IX 46–61, Book 92 in Wensinck, *Handbook*) the Prophet is quite explicit in foretelling such woes and trials to come and in warning how they must be met In Muslim (Constantinople 1329—1333, VIII 165–210, Book 52 in Wensinck, *Handbook*) there is a similar series of hortatory predictions, but, also, an explicit statement (p 172 *sq*) that the Prophet foretold everything which would happen to his People until the Last Day By Ibn Khaldūn (*Mukaddima*, ed Quatremère, II 182 *sqq*, transl De Slane, II 212 *sqq*) this tradition is cited and others, by later and less weighty authorities, which make the Prophet give a dynastic history for future Islām, with the names, fathers' names and tribes of all leaders of revolts until the end

The use of the term *malāhim* in connection with those prophecies appears first among the ʿAlids in their doctrine of the Djafr The *Fihrist* gives two occurrences ʿAlī b Yaktin (d A H 182, p 224, l 22) had a *Kitāb min umūr al-Malāhim* and Ismāʿīl b Mihrān (p 223, l 20) had a *Kitāb al-Malāhim* But the use must have spread very rapidly In the *Maṣābīh* of al-Baghawī (Cairo 1318, II 128 *sqq*) those traditions are classified and one section is *Bāb al-Malāhim* (p 130—33) All the traditions bear on the wars of the Last Days but the word *malhama* itself occurs only in the early part of the *Ḥisān* section (p 132 middle) in such phrases as "the Malhama", "the great Malhama", connected with the capture of Constantinople and the appearance of al-Dadjdjāl In the *Miṣhkāt al-Masābīh* (Dihlī 1327, p 396 *sqq*) the text is practically the same, only adding the names of the collections from which the traditions are taken, Abū Dāwūd and al-Tirmidhī Abū Dāwūd has a separate section on *malāhim* (N° 36 in Wensinck) In such a book of edification as the *Tadhkira* of al-Kurtubī (d 671 = 1272), in the *Mukhtasar* of al-Shaʿrānī (Cairo 1324) the sections on the *Malāhim* have swallowed up the whole doctrine and history of the Mahdī (p 113—21), to the aid of whom there is sent an angel called Damīra (?), *ṣāhib al-malāhim*

Ibn Khaldūn has recorded the final form which these prophecies took Traditions put in the mouth of the Prophet were supplemented and largely displaced by calculations of astrologers and by the speculations of pantheistic Ṣūfīs using the science of *Sīmiyā'* [q v] in the interests of the ʿAlids We have thus to distinguish sharply between (1) the *malāhim*-predictions registered in the canonical books of traditions and in the literature of edification based upon these and (11) the *malāhim* books based upon secret tradition and on astrology which went back to the ʿAlids and are represented best by the Djafī For, besides the Djafr ascribed to Djaʿfar al-Ṣādik, there was also an astrological Djafr, ascribed to Ibn Ishak al-Kindī, dealing with the dynastic destinies of the ʿAbbāsids An asserted fragment of this, called the Little Djafr, was in circulation in the Maghrib in Ibn Khaldūn's time, but had apparently been composed in the interests of the Muwaḥḥids Further Ibn Khaldūn had known as in circulation in the Maghrib several poems of this class in the interests of different western dynasties In the Orient he had heard of several such *malāhim* ascribed to Ibn Sīnā and he had actually had knowledge of one such ascribed to Ibn al-ʿArabī In Cairo he had found another, also ascribed to Ibn al-ʿArabī, giving a horoscope for that town In the Orient, too, he had seen a *malhama*-poem by a certain Ṣūfī, Muhammad al Bādjirīki, of the Karandalī Fraternity of darwīshes, who left behind him a heretical sect, al-Bādjirīkīya, and who died 724 (1324) Ibn Khaldūn gives a mass of details on this *malhama* and on its author, who called it a Djafr It dealt with the dynasties of the Mamlūks and Ibn Khaldūn knew it in two recensions from which he quotes For still more details on this genre of literature, based on Ibn Khaldūn's personal knowledge, see Quatremère, text, II 193—201 (the Būlāk texts are not complete) and De Slane's translation, II 226—237 In stories, there are frequent references to the science of *malāhim* as one of the esoteric sciences along with astrology and *darb al-ramal* Thus, in Habicht's text of *The 1001 Nights* (ed Breslau, III 218) in the Story of Kamar al-Zamān and Budūr, a form closely akin to the version of Galland and different from that in the second Calcutta and the Būlak editions, Marzawān, the foster-brother of Budūr, is described as learned in the sciences of astronomy and the sphere and reckoning and algebra and *ramal* and *malāhim*

Bibliography is given in the course of the article (D B MACDONALD)

MAL'AK [See MALĀ'IKA]

MALĀ'IKA, angels, is the Arabic broken plural of an early Semitic (Canaanite ?) word *mal'ak*, meaning "messenger" The evidence would suggest that it is a loan word, coming into Arabic from Hebrew there is no trace of a verb in Hebrew (nor in Phoenician, where the noun occurs in later inscriptions), and in Arabic the root, even, is in the greatest uncertainty, being referred to a dubious *'-l-k* (Lane, p 81, *b*, *c*, *Lisān*, XII 272 *sqq*, Ṭabarī, *Tafsīr*, I 150) and to a still more dubious *l-'-k* (*Lisān*, XII 370) The singular in Arabic is normally *malak* without *hamza*, and so always in the Kur'ān, although the *Lisān* in two places (XII 274, 8, 371, 5) quotes the same verse as a proof that *mal'ak* does occur, but as an exceptional form (*shādhdh*) Both singular and plural in Arabic are used only in the sense "angel" In the Kur'ān it occurs twice in the dual (*malakain*, II 96, VII 19), of the two angels Hārūt and Mārūt (q v and under SIHR), and of Adam and Eve being tempted in the Garden to believe that they may become angels The plural occurs very often in the Kur'ān (in Flugel's *Concordance* under *'-k*, p 171) but the singular only 12 times (Flugel under *m l k*, p 183) These are of the people demanding revelation by an angel rather than a human being (*bashar*, VI 8, 9, 50, XI 15, 33, XVII 97, XXV 8), women think Joseph an angel for his beauty rather than a human being (*bashar*, XII 31), an angel's intercession (*shafāʿa*, LIII 26) does not avail, twice as collective for angels, beside the *ʿarsh* (LXIX 17), and in rows and rows (LXXXIX 23)

In XXXII 11 "the angel of death" (*malak al-mawt*) occurs but not by name, see article ʿIZRĀ'ĪL, and references in tradition in Wensinck, *Handbook*, p 22*b* Djibrīl, the angel of revelation, is named three times (II 91, 92, LXVI 4), cf traditions on him in Muslim, I 109—111 of ed Constantinople 1333, and other references in Wensinck, p 59 In Kur'ān XXVI 193—195, Djibrīl, unnamed, is called

"the Faithful Spirit" (*al-rūḥ al-amīn*), he brings down the revelation to the *kalb* of Muhammad in a clear Arabic tongue There are other descriptions of him, still unnamed, in Kurʾān liii 5—18 and lxxxi 19—25, as appearing plainly to Muhammad in revelation He, as "our Spirit" (*rūḥanā*), was sent to Maryam (xix 17) He is called "the Holy Spirit" (*rūḥ al-kudus*) in xvi 104 and Allāh aided ʿIsā with the same (ii 84, 254, v 109) Mīkāʾīl (variant Mikāl) is named (ii 92) as an angel of the same rank as Djibrīl, see a long and apparently true story of how his naming came about in Baiḍāwī (Fleischer's ed , i 74, 18 *sqq*), in traditions he, with Djibrīl, appears to Muhammad and instructs him, he does not laugh (Wensinck, p 152b), Muhammad called the two his wazīr's of the angels To Isrāfīl [q v], the angel with the trumpet of resurrection, there is no reference either in the Kurʾān or in canonical traditions but very much in eschatological legend In Kurʾān xliii 47, the tortured in hell call to the keeper of hell, "O Mālik !" and in xcvi 18, the guards of hell are called al-Zabāniya, an otherwise unused word, meaning apparently, "violent thrusters" (*Lisān*, xvii 55), the number of these, Kurʾān lxxix 30, is nineteen and they are asserted specifically to be angels, apparently to guard against the idea that they are devils, they are called "rough, violent" (*ghilāẓ, shidād*) Another class of angels are those "Brought Near" (to Allāh), *al-mukarrabūn* (iv 170), these praise Allāh day and night without ceasing (xxi 20), Baiḍāwī calls them also *al-ʿalawiyūn* (on Kurʾān ii 28, Fleischer's ed , i 47, 23), and *al-karrūbiyūn* (כרובים) on Kurʾān iv 170 (Fleischer's ed , i 243, 25) as those that are around the *ʿarsh* The same term, *mukarrab*, is used of ʿIsā (Kurʾān, iii 40) as he is in the company of the angels nearest Allāh, cf article ʿĪsā, above, for his semi-angelic character At the beginning of the Sūra of the Angels (Kurʾān xxxv) there is a significant description "making the angels messengers (*rusulan*), with wings two and three and four, He increases in the creation what He wills", this has had much effect on later descriptions and pictures They are guardians (*ḥāfiẓīn*) over mankind, cognizant of what man does and writing it down (*kātibīn*, Kurʾān lxxxii 10—12) In xxi 94 the writing down is ascribed to Allāh himself In lxx 4, lxxviii 38, xcvii 4, there occurs the very puzzling phrase "the angels and *al-rūḥ*" Baiḍāwī on the first two passages shows how perplexing the distinction was found (Fleischer's ed , ii 356, 5, p 383, 4) "the *rūḥ* is an angel set over the spirits (*al-arwāḥ*), or he is the whole genus of spirits, or Djibrīl, or a creation (*khalk*) mightier than the angels", cf , too, Kazwīnī's *ʿAdjāʾib*, ed Wustenfeld, p 56 For spirits and the conception "spirit" in Islām see article RŪḤ In the Kurʾān there is no reference to the two angels, Munkar and Nakīr, who visit the dead man in his grave, on the night after his burial, and catechize him as to his Faith Thereafter, if he is an unbeliever, his grave becomes a preliminary hell, and if he is a believer, it becomes a preliminary purgatory from which he may pass at the Last Day into paradise, it may even, if he is a saint, be a preliminary paradise This is called technically the Questioning (*suʾāl*) of Munkar and Nakīr and, also, the Punishment of the grave (*ʿadhāb al-kabr*) This doctrine, similar to the Lesser Judgement of Christian theology, is one of the *samʿiyāt* (to be believed on oral testimony) and is based on the implicit meaning of Kurʾānic passages (xiv 32, xl 11, 49, lxxi 25) and upon explicit traditions (Taftāzānī's commentary on Nasafī's *ʿAḳāʾid*, ed Cairo 1321, p 109, *Mawāḳif* of al-Īdjī with commentary of al Djurdjānī, ed Būlāk 1266, p 590 *sqq*) There is a still fuller account and discussion by the Hanbalite theologian Ibn Ḳayyim al-Djawzīya (Brockelmann, *G A L* , ii 106, N° 23) in his *Ḳitāb al-Rūḥ*, ed Haidarābād 1324, p 62—144, §§ vi—xiv

The angels are, also, called the heavenly host, or multitude (*al malaʾ al aʿlā*, xxxvii 8, xxxviii 69) and guard the walls of heaven against the "listening" of the *djinn* and *shaiṭān*'s See further on this under SIḤR, iii , p 410a

The Kurʾān lays stress on the absolute submission and obedience of the angels to Allāh "To Him belong those who are in the heavens and in the earth and those who are with Him (*ʿindahu*) are not too proud for His service (*ʿibāda*) and they do not become tired They praise, night and day, without intermission" (xxi 19, 20) "They do not anticipate Him in speech and they labour in His command" (xxi 27) At the creation of Adam they are distinguished in this respect from him and his future race "while we praise Thee and sanctify Thee" (ii 28) Over the Fire there are set certain terrible and powerful angels, "they do not rebel against Allāh as to what He commands them and they do what they are commanded" (lxvi 6) But does this absolute obedience extend to impeccability (*ʿiṣma*, q v)? The Kurʾān is emphatic as to their obedience, but is in contradiction as to their created nature and as to their relationship in that respect to the *djinn* and to the *shaiṭān*'s Thus, in several passages in the Kurʾān, the story is told of the creation of man out of clay and that the angels were bidden by Allāh to prostrate themselves to him This they all did "except Iblīs" (*illā Iblīs*, Kurʾān ii 32, vii 10, xv 31, xviii 48, xxxviii 74) Iblīs, therefore, must have been an angel, as Baiḍāwī says, "If not, the command to them did not apply to him and his being excepted from them was illegitimate" (Fleischer's ed , i 51, 21) This would mean that the angels were not impeccable But, again, in Kurʾān xviii 48 the statement is expanded, "except Iblīs, he was of the *djinn*, so he departed from the command of his Lord" (*fasaḳa ʿan amri rabbihi*) Further, in Kurʾān vii 11, xxxviii 77, Iblīs pleads in justification that man was created of clay (*ṭīn*) but he of fire (*nār*), and the *djinn* are acceptedly created of fire, "fire of the *samūm*" in Kurʾān xv 27, "of a *māridj* of fire" in Kurʾān lv 14 The meaning of *māridj* is unknown, the *Lisān* (iii 189, 13—19) gives a number of contradictory explanations, but it is probably an unidentified loan-word Iblīs and the *djinn*, then, were created of fire, but there is no statement in the Kurʾān as to the material out of which the angels were formed A tradition traced back to ʿĀʾisha is the foundation of the accepted position that the angels were formed of light "The Prophet said, 'The angels were formed of light (*khulikat min nūr*) and the *djānn* were formed of a *māridj* of fire and Adam of that which was described to you' " (Muslim, vii 226 of ed Constantinople 1333, Baiḍāwī, i 52, 4) Another difficulty in the doctrine of the impeccability of the angels is the Kurʾānic statement as to Hārūt and Mārūt referred

to above These two angels are supposed to have yielded to sexual temptation, to be confined in a pit near Bābil and there to teach magic to men But, it is answered, the Kur'ān says nothing of their fall, (ii) teaching magic is not practising magic, (iii) they always first warn those who come to them, "We are only a temptation (*fitna*) so do not disbelieve" (Kur'ān ii 96), cf, further, Taftāzānī on the *ʿAkā'id* of Nasafī, ed Cairo 1321, p 133

In Baidāwī on Kur'ān ii 32, there is a long discussion of the angelic nature (ed Fleischer, i 51, 20 to p 52, 8) which, however, runs out in the despairing statement that knowledge on the point is with Allāh alone (*al-ʿilm ʿinda-'llāh*) Perhaps Iblīs was of the *djinn* as to his actions (*fiʿlan*) but of the angels as to species (*nawʿ*) Also, Ibn ʿAbbās has a tradition that there was a variety (*darb*) of the angels who propagated their kind (this has always been regarded as an essential characteristic of the *djinn* and of the *shaitān*'s as opposed to the angels) and who were called *al-djinn*, and Iblīs was of these Or, that he was a *djinni* brought up among the angels and identified with them Or, that the *djinn* were among those commanded to prostrate themselves to Adam Or, that some of the angels were not impeccable, although that was their characteristic in general, just as some men, e g the prophets, are guarded against sin but most are not Further, perhaps a variety of the angels are not essentially different from the *shaitān*'s but differ only in accidents and qualities as men are virtuous or evil, while the *djinn* unite both, and Iblīs was of this variety The tradition from ʿĀ'isha is no answer to this explanation, for light and fire in it are not to be taken too precisely, they are used as in a proverb, and light is of the nature of fire and fire of light, they pass into another, fire can be purified into light and light obscured to fire So al-Baidāwī

With this should be compared the scholastic discussion in the *Mawāḳif* of al-Īdjī, with the commentary of al-Djurdjānī (ed Būlāḳ 1266, p 576) In it the objector to the *ʿisma* of the angels has two grounds (i) their urging upon Allāh that he should not create Adam showed defects (slander, pride, malice, finding fault with Allāh) in their moral character, (ii) that Iblīs was rebellious, as above These grounds are then answered scholastically Then various Kur'ānic texts, as above, on the submission and obedience of the angels are quoted But it is pointed out that these texts cannot prove that all of them, at all times, are kept free from all sins The point, therefore, cannot be absolutely decided Individual exceptions under varying circumstances may have occurred, just as, while the *shaitān*'s as a class were created for evil (*khuliḳū li 'l-sharr*), there is a definite tradition (*Sharh* by al-Māturidī on *al-Fikh al-akbar* ascribed to Abū Hanīfa, ed Haidarābād 1321, p 25) of one Muslim *shaitān*, a great-grandson of Iblīs, who appeared to Muhammad and was taught by him certain sūras of the Kur'ān

The story of Hārūt and Mārūt suggests that the angels possess sex, although they may not propagate their kind But "they are not to be described with either masculinity or femininity" (*ʿAkā'id* of Nasafī, ed Cairo 1321, p 133) Taftāzānī and the other commentators in this edition explain that there is no authority (*nakl*) on this point and no proof by reason (*ʿakl*), it should, therefore, be left unconsidered and that, apparently, was the course followed by al-Īdjī and al-Djurdjānī They may have sex and not use it In that respect man who has in him the possibility of sin and must himself rule his appetites of lust (*shahwa*) and of anger (*ghadab*) has a higher potentiality of excellency than the angels (Baidāwī on Kur'ān ii 28, ed Fleischer, i 48, 28 *sqq*)

This leads to the second question as to the angels which scholastic theology has considered, the relative excellency of angels and men, and, especially, of angels and prophets This is stated shortly by Nasafī (p 147 of ed cited above) (i) "The Messengers (*rusul*) of mankind (*al-bashar*) are more excellent than the Messengers of the angels and (ii) the Messengers of the angels are more excellent than the generality of mankind and (iii) the generality of mankind are more excellent than the generality of the angels" Taftāzānī develops that there is general and indeed necessary agreement on the excellency of the messengers of the angels over mankind in general, but that the other two statements (i and iii) will bear argument He urges (i) the prostrating of the angels to Adam, (ii) that Adam was taught all the names of things (Kur'ān ii 29), (iii) that Allāh "chose" (*iṣṭafā*) Adam and Nūh and the family of Ibrāhīm and the family of ʿImrān over all created things (*ʿala 'l-ʿālamīn*, Kur'ān iii 30), (iv) that mankind achieves excellencies and perfections of knowledge and action in spite of the hindrances of lust and anger But the Muʿtazilites and the "philosophers" (*al-falāsifa*) and some Ashʿarites held the superior excellence of the angels They urged (i) that they were spirits, stripped of materiality (*arwāḥ mudjarrada*), complete actually, free of even the beginnings of evils and defects, like lust and anger, and from the obscurities of form and matter (*zulumāt al hāyūlā wa 'l ṣūra*), capable of doing wonderful things, knowing events (*kawā'in*), past and to come, without error The answer is that this description is based on philosophical and not Muslim principles (ii) That the prophets learn from the angels, as in Kur'ān xxvi 193, liii 5 The answer is that the prophets learn from Allāh and that the angels are only intermediaries (iii) That there are multiplied cases both in Kur'an and in tradition where mention of the angels precedes that of the prophets The answer is that precedence is because of their precedence in existence or because their existence is more concealed (*akhfā*) and, therefore, faith in them must be emphasized (iv) In Kur'an iv 170, "*al masih* does not disdain to be an *ʿabd* to Allāh nor do the angels" must mean, because of linguistic usage, that the angels are more excellent than ʿĪsā The answer is that the point is not simple excellency but to combat the Christian position that ʿĪsā is not an *ʿabd* but a son to Allāh In the *Mawākif* (p 572—578) there is a similar but much fuller discussion which involves a philosophical consideration of the endowment — mental, physical, spiritual — of all living creatures from immaterial spirits to the lower animals (*al-bahima*)

In the *ʿAdjā'ib al-Makhlūḳāt* of al-Kazwīnī (ed Wüstenfeld, p 55—63) there is an objective description of the angels in all their classes, in which the statements of Kur'ān and Sunna are adjusted to the Aristotelian-Neoplatonic universe

with its spheres (*al aflāk*), in accordance with al-Kazwīnī's general aim to give a picture of the created universe in its details and wonders Yet, apparently, while the angels possess the quality "life" (*hayā*) and are the inhabitants of the heavens and of the heavenly spheres (*sukkān al-samawāt*) they are not to be reckoned among the animals (*al-hayawān*) Al-Damīrī includes mankind and the *djinn*, even the diabolic (*mutashaitana*) *djinn*, such as the *ghūl*, in his *Hayāt al-Hayawān* but not the angels Equally acute and scholastic with the discussion in the *Mawākif*, and more spiritual than that by Kazwīnī, is al-Ghazzālī's treatment of the mystery of the angelic nature in some of his specialistic smaller treatises For him it is part of the general question of the nature of spirit to which his smaller *Madnūn* is devoted See, too, the larger *Madnūn* (ed Cairo 1303) in *Rukn*, II, p 23 *sqq*, and the translation by W H T Gairdner of his *Mishkāt al-Anwār* (London, *Royal Asiatic Society*, 1924), *passim*

The above is a statement of Muslim ideas as to the angels But Muslim literature also takes account of non-Muslim ideas on them, as those of "philosophers", Christians, dualists, idolaters These will be found given shortly by Baidāwī on Kur'ān II 28 (ed Fleischer, I 47, 18 *sqq*) and in more detail in *Dict of techn terms*, p 1337 *sqq*

Bibliography Besides the references above, Walter Eickmann, *Angelologie u Damonologie des Korans*, New York and Leipzig 1908, a number of books and articles by Josef Horovitz, *Koranische Untersuchungen*, Berlin 1926, *Jewish proper names in the Koran*, in *Hebrew Union College Annual*, vol 2, *Muhammeds Himmelfahrt*, *Isl*, IX 159 *sqq*, E W Lane, *Thousand and One Nights*, notes 1 and 21 to Introduction, note 15 to chap 1 (D B MACDONALD)

MALAṬYA, an old city, not far from the upper Euphrates It lies at the junction of important roads (in antiquity the Persian royal road and the Euphrates route, in modern times Samsūn–Sīwās–Malatya–Diyārbakr and Kaisarīya–Albistān–Malatya–Kharpūt) in a plain, the fertility and richness of which in all kinds of vegetables and fruits was celebrated by the Arab geographers, as in modern times by von Moltke and others, at the northern foot of the Taurus not very far south of Tokhma-sū (Arab Nahr al Kubākib) which is there crossed by the old bridge of Kīrkgoz The town was supplied with drinking-water by the springs of 'Uyūn Dāwūdiya and by the Euphrates Weaving used to be a flourishing industry there, according to Ibn al-Shihna there were once 12,000 looms for spinning wool in Malatya but they no longer existed in his time

The town appears as Melidda in Assyrian cuneiform inscriptions and two "Hittite" stelae have been found there (to be more accurate at Arslān Tepe, a little south of Malatya Messerschmidt, *Corpus Inscr Hettitic* in *M V A G*, 1900, part IV, p 13, 1906, part V, p 7) It is probably also to be identified with the district called *M-l-z* (last letter uncertain) in the inscription of king *Z-k-r* of Hamāt, (c 800 B C) which Pognon found in 'Afis near Aleppo Pliny (*Nat Hist*, VI 8) calls the town *Melita a Samiramide condita*, the name of the legendary foundress has perhaps survived in that of the fortress of Shamrīn which Michael Syrus (*Chronicle*, transl, Chabot III, 272) mentions in the XIIth century in the land of Sawād in the region of Malatya To its position on the Oriental *limes* Malatya owed its great prosperity in the Roman period From the time of Titus it was the headquarters of the *Legio XII Fulminata*, it was much extended by Trajan and under Justinian raised to be the capital of the province of Armenia III Anastasius and Justinian refortified and beautified it After his severe defeat at Malatya in the autumn of 575 Khosraw I burned the town (John of Ephesus, VI 9, E Stein, *Studien zur Gesch d Byzant Reiches*, Stuttgart 1919, p 66—8, 83 note 9, 200 Habīb b Maslama al-Fihrī was sent by 'Iyad b Ghānim from Armenia VI (Shimshāt) against Malatya and took the town, but it was later retaken from the Muslims When Mu'āwiya became *wālī* of Syria and al-Djazīra, he again sent Habīb b Maslama against the town He stormed it in 36, left a troop of cavalry in it to guard the frontier and placed a governor in it Mu'āwiya himself visited Malatya on his campaign against Asia Minor and left a large garrison in the town which henceforth became one of the headquarters for the summer campaigns into Bilād al-Rūm When the people abandoned the town in the time of the caliphs 'Abd al-Malik and 'Abd Allāh b al-Zubair, it was taken and sacked by the Byzantines, on their withdrawal, it and the whole of Armenia IV was settled by the Armenians and and Nabataeans, that is Aramaic speaking peasants, driven out of his kingdom by the emperor Philippicus (Noldeke, *Z D M G*, XXV 125, al-Balādhurī, ed de Goeje, p 185, Michael Syrus, transl Chabot II, 482, according to Theophanes the Armenians were settled in Malatya by Philippicus in 712 A D They increased very much and were valuable allies of the Arabs in the wars against the Byzantines (Michael Syrus, *loc cit*) The caliph Omar settled the fugitive inhabitants of Turanda (now Derende) in Malatya and made al-Djarrāh b al-Harīth of the tribe of the Banī 'Āmir b Sa'sa'a governor In 123 (740—741) a Greek army of 20,000 men under Ashkivash, the general of the Thema Armeniakon, advanced against Malatya and plundered the country round it The inhabitants closed the gates and sent a messenger to Hishām in al-Rusāfa, but the latter soon heard that the Greeks had withdrawn and sent the messenger back with a body of cavalry Later, when he himself took the field against the Byzantines, he camped before Malatya until the rebuilding of the town which the enemy had destroyed was completed (Balādhurī, *loc cit*, Michael Syrus, II 506, Theophanes, ed de Boor, year 743, Ps Dionys, ed Chabot, year 1051) The Emperor Constantine VI Copronymos in 133 (750) advanced on Kamakh and Malatya, whose inhabitants looked in vain for help to Mesopotamia, as a civil war was raging there As the emperor knew this he demanded that the inhabitants should abandon the town After at first refusing they finally agreed, being exhausted by the siege, left the town with all their goods and chattels and went to al Djazīra whereupon Constantine levelled Malatya to the ground, nothing but a half ruined granary remained standing Hisn Kalawdhiya was also destroyed and its inhabitants, like those of the other villages in Armenia IV, carried off into captivity (Balādhurī, *loc cit*, Michael Syrus, II 518, Baethgen, *Abh f d K d Morgenl*, VIII 3, p 54, 127, Weil, *Gesch d Chalifen*, II 15) Six years afterwards (139 A H) al-Mansūr wrote to Sālih b 'Alī b 'Abd Allāh who had in the

previous year defeated an army of 100,000 men under Constantine and retaken Malatya (G W Freytag, *Selecta ex histor Halebi*, Paris 1819, p 62, note 58) ordering him to rebuild and fortify the town He then appointed his nephew, the Imām ʿAbd al-Wahhāb b Ibrāhīm, governor of al-Djazīra and its marches (*al-Thughūr*) He arrived there in 140 with al Hasan b Kahṭaba and Khurāsān troops, who were reinforced by Syrian and Mesopotamian troops to the number of 70,000 They camped at the ruined city and collected builders and workmen of all kinds from everywhere and rebuilt Malatya with its mosque and large barracks for the frontier troops, the work was finished in six months Hisn Kalawdhiya was also rebuilt (Balādhurī, *loc cit*, Michael Syrus, II 522, Ps Dionys, ed Chabot, p 67, Yākūt, *Muʿdjam*, IV 633, Weil, *Gesch d Chalifen*, II 35), a frontier fort was built 30 *mil* from the town and another on the Nahr Kubākib (Tokhma-sū) Al Mansūr settled 4,000 Mesopotamian soldiers in Malatya to whom he gave increased pay and allotted lands as fiefs

In the next year (141) Muhammad b Ibrāhīm was sent to Malatya with a Khurāsān army to protect the town from the enemy The former inhabitants, at least those who were still alive, thereupon returned to Malatya An expedition sent by the Byzantines against Malatya was defeated by Hārūn al Rashīd (Balādhurī, *loc cit*) In the reign of al-Maʾmūn, his son, al-ʿAbbās, who was governor of al-Djazīra conducted a campaign against the Byzantines (Weil, *op cit*, II 239) from Malatya In the summer of 222 (837) the emperor Theophilus went into Armenia via Zibatra, which he sacked and burned, and on his way back passed through the country of Malatya which was also laid waste and its inhabitants carried off prisoners into Byzantium (Michael Syrus, III 89, Masʿūdī, *Murūdj*, VIII 133 *sqq* Ṭabarī, Yaʿkūbī and other Arabs wrongly date this campaign in 223 [838], cf for the contrary view Weil, *op cit*, II 310, note 1 and Bury, *Hist of the East Roman Empire*, 1912, p 260, 1, Markwart, *Handes Amsorya*, XXVIII, 1914, p 44, 1) The town itself, which was handed over to him by the Roman prisoners there, he spared out of fear of an approaching army of the enemy Towards the end of the following year al-Muʿtasim sent the Syrian amīr Abū Saʿīd Muhammad b Yūsuf against the Byzantines but he only met with moderate success, the people of Malatya under Afshīn and the amīr ʿOmar b ʿAbd Allāh b Marwān al-Aktaʿ of Malatya in alliance with the Armenians and 10,000 Turks then defeated the emperor Theophilus near the fortress of Dazimon (al Masʿūdī, *B G A*, VIII 169, Muralt, *Chronogr Byz*, p 418, 729, Weil, *op cit*, II 312) In 841, however, the Byzantines conquered al-Hadath, Marʿash and the land of Malatya When in the middle of the IXth century the Paulicians (Arab al-Baylikānī, al-Bayālika) some of whom lived in the country west and north of Malatya (Karapet Tēr Mkrtčean, *Die Paulikianer*, Leipzig 1893, p 116 *sqq*) rebelled against Byzantium, the amīr of Malatya, ʿOmar b ʿAbd Allāh al-Aktaʿ (Ἄμερ, Ὄμβρος), protected them from their persecutors, their leader Karbeas built in this region the fortresses of Ἀργαοῦν (Argawān), Tephrikē (Diwrighī) and Amara (Emerlī, near Yarpuz) Fighting went on for some years with varying results (Weil, *op cit*, II 362—365), finally ʿOmar al Aḳtaʿ was completely defeated on a campaign in Asia Minor in Radjab 249 (863) by the valiant Petronas (al-Batrunās), Michael III's general, with his whole army on the Mardj al-Uskuf (Weil, *op cit*, II 380, Tomaschek, *Sasun u d Quellengebiet des Tigris*, *S B Ak Wien*, CXXXIII, vol IV, 1895, p 23, on the site of the "Bishop's Meadow" Le Strange, *Eastern Caliph*, p 138) The Emperor Basil I in 871 went against Tephrikē and Taranton (Derende), he plundered Zibatra and Sumaisāt and then encamped πρὸς τῷ Ζαρνοὺχ ποταμῷ (Nahr al Zarnūḳ, now Čirmiklī-Su), ἔνθα τὸ Κεραμίσιόν ἐστι (Theophan continuat, ed Bonn, p 268, Kastrā Karāmīs in Barhebraeus, *Chron eccl*, ed Abbeloos Lamy, I 460, now Čirmiklī, cf Tomaschek, *Beitr z alten Gesch u Geogr*, *Festschr f H Kiepert*, Berlin 1898, p 141) But he was not able to take Malatya which was fortified (Hergenröther, *Photius*, II 242, Weil, *op cit*, II 471) His army suffered heavy losses during the siege and the emperor himself was nearly captured Whether he undertook a second campaign against Malatya is doubtful (Weil, *op cit*, II 475)

The Arab general Mūnis in 304 (916—917) devastated Cappadocia from Malatya (Weil, *op cit*, II 635), similar invasions took place in 310 and the following years It was not till 314 (926–927) that the Byzantines were able to exact their revenge Under the brave Domestikos Joannes Kurkuas (Ibn al-Athīr, ed Tornberg, VIII 221 *al dumustik Kurkāsh*, Michael Syrus, III 122 *sq*, 158 Kyriakos), they entered the district and advanced up to the suburbs of Malatya, laying waste the country and going as far as Shimshāt (Arsamosata) (in 315 according to Hamza al-Isfahānī, *Taʾrīkh*, ed Gottwaldt, p 205, transl p 158, wrongly "*in fines Samosatenos invasere*") Kurkuas forced the amīr of the town to send his son, Abū Hafs (Ἀπόχαψ), and the general Abu 'l-Ashʿash (Ἀπολασάθ) to him and to acknowledge the suzerainty of the emperor (Symeon Magister, Bonn, p 741 *sq*, Georg Monach, ed Muralt, p 834, while the Bonn edition p 908 and Theophanes contin, ed Bonn, p 416 and Georg Kedren, II 310 *sq* wrongly write Ἀποσαλάθ) Kurkuas, himself an Armenian by birth, seems to have granted the lands of Malatya and Sumaisāt to the Armenian prince Mleh (Arab Malīh, Greek Μελίας) who was however again driven out of Malatya and Sumaisāt in 320 by Saʿīd al-Dawla, uncle of the Hamdānid Nāsir al Dawla of Mawsil (Weil, *op cit*, II 639, *Zapiski Imp Akad Nauk*, XLIV 102 *sq* following Djamāl al Dīn b Zāfir) But in 934, after the death of the two friends of the Byzantines, Abū Hafs and Abu 'l-Ashʿath, Kurkuas and Mleh again appeared before the town, which at that time was protected by a double wall and a ditch full of water The inhabitants found themselves forced by starvation to negotiate about the surrender of the town During the negotiations the Greeks succeeded by a stratagem in forcing an entrance through the north gate of the town and taking it on May 19, 934 The inhabitants, in keeping with the promise that had been given them, were allowed to leave the town The walls were razed so that the town was henceforth open to all attacks (Michael Syrus, III 122 *sq*, Ibn al-Athīr, VIII 221, Rambaud, *L'Empire Grec au Xème siècle*, Paris 1870, p 423, 1, Rosen, *op cit*, p 89 *sq*, 106, 108) In the next decade Saif al-Dawla repeatedly raided the territory of Malatya

His mamlūk Naḏjā' in his campaign to Hanzit in 350 (961—962) encountered ʿAbd Allāh of Malatya and put him and his friends to flight (Freytag, *Z D M G*, xi 197, Rosen, *op cit*, p 88) Two years later he again ravaged the land of Malatya for 18 days with fire and sword (Freytag, p 204, 206)

When the emperor Nicephoros conquered Syria, he wished to repopulate Malatya, which was defenceless and deserted But the Greeks refused to live there for fear of Arab razzias His advisers therefore recommended him to invite Syrian Jacobites to the country He did this and promised the Patriarch Mār Yōhannan Sarīgtā, that if he repopulated Malatya, Hanzit and the passes (*κλεισοῦραι*), he would no longer persecute the Jacobites (Michael Syrus, iii 130 *sq* , Barhebraeus, *Chron eccl*, ed Abbeloos-Lamy, i 411 *sqq* , Markwart, *Handês Amsôrya*, xxx, 1916, p 121 note) People now flocked to Malatya from all parts (c 969 A D) Monasteries were built About 1100 there were said to be in Malatya and district 53 churches and 60,000 Christians capable of bearing arms, including many Melkites (Michael of Tinnis in Renaudot, *Hist Patr Alexandr* , Paris 1713, p 403, Barhebraeus, *op cit*, i 424, note 1) The emperor did not, however, keep his promise, persecutions again became of everyday occurrence and drove the Jacobites more and more into the arms of the Arabs (Michael Syrus, iii 131, 136, 147)

According to Ibn al-Aṯīr (*al-Kāmil*, iii 65), Malatya at this time was placed in the *Θέμα Ἀρμενιάκων* (*Arminjākus*) which he says stretched to the Bosphorus (*Khalidj al-Kustantinīya*)

The Emperor John Tzimisces (Shimshkik) in Dhu 'l Hidjdja 361 (972) on his campaign to Nisibīn crossed the Euphrates at Malatya (Yahyā al-Antākī in Rosen, *op cit*, p 183 note, Schlumberger, *L'epopee byzantine*, i, Paris 1896, p 255) The rebel Bardas Scleros in 366 (976–977) seized the town of Malatya, imprisoned the strategos who was governing it for the Emperor and had himself proclaimed *basileus* When Scleros was fighting against the imperial general Michael Burtzes (al-Burdjī) there was with him a Shaikh who had been converted to Christianity, the patrician ʿUbaid Allāh al-Mutanassir of Malatya, who is perhaps identical with the ʿAbd Allāh mentioned in 350 Scleros made him *magistros* and sent him with one of his slaves, the eunuch Kantatish (ὁ Ἄνθης ὁ Καλυάτης) whom he raised to the rank of *basilikos* ("Count"), to Antākiya against the *patrikios* Kulaib, the imperial governor of this town Kulaib surrendered to them Antākiya, the Thughūr and the whole of the "Orient", he and the most prominent citizens of Antioch were then sent as prisoners to al Kabādhuk (Cappadocia) (Rosen, *op cit*, p 2 *sq* , and note, p 81–90 *sq* , Schlumberger, *L'epopee byzantine*, i 359, 362, 376 *sq*) Scleros however at once sent the Antioch notables back to their homes and made Kulaib *basilikos* of Malatya (Rosen, *op cit* , Schlumberger, i 386) while on the other hand ʿUbaid Allāh soon went over to the emperor Basil (977—978) When after a seven years' internment on the Tigris island of Madīda near Baghdād, Bardas Scleros succeeded in gaining his freedom, he escaped to Malatya with the help of Bedums, where he at once (in Shawwāl 376 = March 987) seized the *basilikos* Kulaib who had gone over to the emperor, and himself again proclaimed *basileus* (Yahyā, transl Rosen, p 22, Schlumberger, i 678) Bardas Phocas, who took Bardas Scleros prisoner by treachery and then claimed the imperial title for himself, passed through Malatya on Sept 14, 987 on his way westwards straight through Asia Minor (Schlumberger, i 695) In 399 (1008) the Ḥamdānid Abu 'l Haidjā' fled to Malatya before the Mirdāsid Mansūr b Lū'lū', where the emperor appointed him *magistros* (Rosen, *op cit*, p 51, Schlumberger, ii 442)

The most important event during the Byzantine occupation of Malatya was the invasion of the Turks Their first inroad into the area of the town was in 1058, the inhabitants fled before them mainly into the adjoining mountains where they perished of hunger and cold The Turkish force 3,000 strong under the amīr Abū Dīnār remained 10 days pillaging Malatya and laid the country waste for a day's journey round On their retreat the Turks were surprised by the people of the Armenian district of Sanasun (Arab al-Sanāsana, now Sāsūn) and all slain, with the assistance of the prisoners and fugitives from Malatya (Michael Syrus, iii 158 *sq* , according to whose erroneous chronology these incidents took place in the 9th or in the last year of Constantine IX [i e 1050—1051 or 1054—1055], Matthias of Edessa, transl Dulaurier, p 107—109, Aristakēs Lastiveici, in Tomaschek, *Sasun u das Quellengebiet des Tigris*, *S B Ak Wien*, cxxxiii , vol iv , 1895, p 29 *sq*) One of the prisoners who survived, the Syrian monk Joseph, wrote three *mēmrē* on these events, the patriarch Yōhannan X bar Shūshān also composed 4 *mēmrē* on the devastation of Malatya (Baumstark, *Gesch d syr Lit* , p 291 *sq*) By the time of the Emperor Isaac I (1057—1059) we again find the Turks raiding the country of Malatya and carrying off prisoners from it His successor Constantine X Ducas (1059—1067) restored the two walls and the ditch at Malatya (probably in 1060—1061) When the imperial decree regarding this was published, a number of citizens of Malatya, who were in Constantinople returned home and arranged for a large number of workmen and builders to be brought from Asia Minor and Antakiya, in a very short time owing to the continual threat to the town, the fortifications were rebuilt on the old foundations (Michael Syrus, iii 165 *sq*) The Byzantine *κατεπάνω* Krinotes was afterwards killed with his wife and children and the town "henceforth knew no peace" (Michael Syrus, *loc cit*)

These constant invasions of the Turks, which specially affected the region of Malatya (Skylitzes in the ed of Kedrenos, Bonn, ii 660 *sq*) met with very little opposition Then the legions quartered around Malatya, whose pay and provisions had been withheld, refused to cross the Euphrates to meet the enemy along with the local volunteers The Turks did not besiege the town but went on to attack Kaisārīya, which they stormed (Skylitzes, *loc cit*) When Romanus IV Diogenes attacked the Turks in 1068 he sent a general from Goksun, perhaps, as Gfrorer suggests (*Byz Gesch* iii 720), the Bulgar Aluisianos, to Malatya to guard the frontier against the raids of the Turk Afshīn (Ἀψινάλιος) The general however did not leave Malatya so that Afshīn was able to advance against the emperor undisturbed (Skylitzes in Kedrenos, ed Bonn, ii 671, Weil, *op cit*, iii 112, note 2)

In the same year the emperor appointed the

κουροπαλάτης Φιλάρετος Βραχάμιος (Skylitzes, *op cit*, p 681, Anna Komn, ed Reifferscheid, i 205 *sq*, Zonaras, ed Dindorf, iv 209, Arab Filardūs al-Rūmī) to be μέγας δομέστικος (Tomaschek, *Sasun*, p 30) He won for himself with his Armenian hordes an ephemeral kingdom on the Syrian frontier and installed the Armenian Thoros (Theodoros) son of Hētom as governor in Malatya Thoros was succeeded as ἡγεμόνες of the town by the Armenian Hareb, then by Balatianos (Valentianus?) and finally by the defeated Greek Gabriel (Michael Syrus, iii 173 *sqq*, in Matthias of Edessa, ed Dulaurier, p 211 *sqq* with mod Greek pronunciation *Khawril*) When the latter recognised that the Byzantines could not permanently hold out against the Turks he got the Caliph to confirm him in his rule over Malatya He was at first able to keep the Turkish hordes from Malatya by various devices But when they besieged Malatya, Gumūshtagīn b Dānishmand of Siwās made peace between them and Gabriel (Michael Syrus, iii 179) Kīlīdj Arslān I besieged Malatya for the first time in 1100 A D, but retired when Gabriel, whose daughter Morfia had been given in marriage to Baldwin of Edessa, summoned the Franks to his assistance (Michael Syrus, iii 187, 192, Will of Tyre, xii 4) When Gumushtagīn besieged the town and laid waste the country around, Boemund came from Antākiya with his relative Riccardo del Principato and a troop of cavalry, but he was ambushed at Marʿash and sent a prisoner to Nīksār (or Siwās) in June 1100 From there he appealed for help to Baldwin of Edessa who relieved Malatya and pursued Gumushtagin for 3 days without overtaking him He then returned to Edessa via Malatya which Gabriel surrendered to him and left 50 horsemen for its protection Gumushtagīn appeared before Malatya again in 1100, where Gabriel had in the meanwhile made himself so detested by the inhabitants that they handed him over to Gumushtagīn, who thereupon entered Malatya on Sept 18, 1101 (Michael Syrus, iii 188, *Recueil Hist Or Croix*, i 5, 203, iii 522, 526, Matthias of Edessa, transl Dulaurier, p 230) The dynasty of the Dānishmandids [q v] thus came to rule there (on them cf also van Berchem-Kh Edhem, *C I A*, iii, p 2, note 3, p 3, note 1, Zambaur, *Manuel d Geneal et de Chronol*, Hanover 1927, p 146 *sq*) At the suggestion of the Emperor Alexios, Gumūshtagīn in the summer of 1103 released Boemund, who had been brought to Malatya, on payment of 100,000 dināis (Michael Syrus, iii 189, Rohricht, *Gesch d Königr Jerusal*, p 45) According to Michael Syrus (iii 192), Tanushman i e Gumushtagīn b Dānishmand died within two years of the taking of Malatya (i e 1103—1104), he was succeeded by his son Aghusian (Yāghibasan?) Kīlīdj Arslān again began the siege of Malatya on June 28 and directed siege artillery against the round N E tower of the town, which had to surrender after several onslaughts had been made on it Kīlīdj Arslān I began his rule there on Sept 2, 1106, when he fell the very next year in the battle on the Khābūr, he was succeeded in Malatya by his youngest son Tughrīl Arslān, in whose reign much evil fell upon the town as a result of the murder of the governor Pizmish (Michael Syrus, iii 194) During the fighting among the other sons of Kīlīdj Arslān, of whom Masʿūd sought refuge in Malatya about 1107 (*Rec Hist Or Croix*, iii 534) Boemund succeeded in conquering Abulustain, the district on the Djaihān and the whole country round Malatya (Michael Syrus, iii 195) The Atābeg of the Sultān of Malatya (probably Bālak), in 1111 again deprived him of his lands on the Djaihān Kīlīdj Arslān's widow left Malatya to marry the doughty amīr Bālak (Michael Syrus, iii 200) A Turkish cavalry leader offered to sell Tughrīl Arslān the fortress of Ziyād, when the young sultān of Malatya wanted to take possession of it, however, it was taken from him by the son of the sultān of Khurāsān without a blow being struck On the 11th March 1118 the amīr Mangudjag of Kamakh pillaged the country round Malatya, the Khātūn of Malatya thereupon turned to Joscelin of Edessa for help (Michael Syrus, iii 204) In the following year the Sultān of Malatya conquered Abulustain and the lands on the Djaihān, the region of Katiʿā passed as a gift to Malatya (Michael Syrus, iii 205) Tughrīl Arslān owed his success to the governor Bālak, who advanced as far as Kamakh, defeated the Greeks with the help of al Ghāzī b Dānishmand, again took Hisn Ziyād and defeated the Armenians of Gargar on the Euphrates (Michael Syrus, *loc cit*) When, after further considerable successes, Bālak fell fighting the Franks before Manbidj his kingdom was divided, the Sultān of Malatya received Masarā and Gargar with the result that there was soon fighting with Sulaimān of Hisn Ziyād On this occasion al-Ghāzī of Siwās and his son in law Masʿūd attacked Malatya and besieged it from June 13 to Dec 10, 1124 The town suffered exceedingly from famine and the Khātūn's reign of terror and the inhabitants breathed more freely when the ruler left the town with her son and all her followers and al Ghazī entered it (Michael Syrus, iii 219 *sq*, Matthias of Edessa, p 315) Under him Malatya enjoyed continued peace His son Malik Muhammad who succeeded him in 1135 left Malatya soon afterwards when the news of the approach of the Byzantine Emperor reached him (Michael Syrus, iii 237) When John II Comnenos invaded Syria, Masʿūd invaded Cilicia from Kōniya and carried the inhabitants of Adhana prisoners to Malatya (Michael Syrus, iii 245) Malik Muhammad in 1139 also invaded Cilicia and took from the Greeks the fortresses of Bahgāy and Gabnūpert (Βακᾶ, Καπνίοπερτι, Armen Vagha, Gaban, Michael Syrus, iii 248, Rohricht, *Gesch d Kgr Jerus*, p 211, note 2) Two years later he was fighting with the Franks who had advanced as far as Zibatra, ʿArḳa and Abulustain and encamped at Niksār opposite the emperor John, who had again taken the field against the Turks, for six months without fighting (Michael Syrus, iii 249) After his death (Dec 6, 1143) Dhu 'l-Nūn succeeded him in Malatya (Syr Dānūn in Michael Syrus, iii 253 und Suppl, p lvii, Byz Δαδούνης) When however his brother ʿAin al-Dawla (Michael Syrus only "Dawla") advanced against him, the Turkish garrison of Malatya broke through the Buraidīya gate and surrendered the town to him (Michael Syrus, iii 253) Sultān Masʿūd of Kōniya besieged Malatya, when ʿAin al Dawla would not submit to him of his own accord, first from June 17 to Sept 14, 1143 and again in 1144 without success (Michael Syrus, iii 254, 258 *sqq*, Rohricht, *op cit*, p 226, note 5) After ʿAin al-Dawla's death (June 12, 1152) his minor son Dhu 'l-Karnain succeeded him, for whom his mother first acted as regent but she was soon banished as she

plotted against his life (Michael Syrus, III 305 *sq*) Masʿūd again (July 24, 1152) tried without success to take the town Dhu 'l-Karnain was succeeded in October 1162 by his minor son Nāṣir al-Dīn Muhammad (Mahmūd) who made himself so detested by his excesses that he had to leave Malatya (1170) His place was taken by his brother Abu 'l Kāsim (Fakhr al-Dīn Kāsim, Michael Syrus, III 336 *sq*) In May 1172 when 15, he married the daughter of the lord of Hisn Ziyād During the wedding festivities he fell from his horse while jousting and died of his injuries (Michael Syrus, III 343) He was succeeded by his younger brother Ferīdūn (Afridūn) who had to marry the princess intended for the brother On the news of these happenings, Kilidj Arslān II attacked Malatya, where however preparations were rapidly made for the defence under the direction of the eunuch Saʿd al Dīn Kilidj Arslān had to withdraw but carried off with him 30,000 prisoners from the country round (Michael Syrus, III 346) On Feb 15, 1175, Ferīdūn was murdered by his brother Muhammad, who after many adventures had returned in disguise to Malatya by a secret agreement with the princess of Ziyād who had left her husband (Michael Syrus, III 362—364) When Kilidj Arslān II thereupon again besieged Malatya, the discontent with Muhammad was so great that he no longer felt safe in the town but withdrew to Hisn Ziyād Kilidj Arslān after a four months' siege entered Malatya on Oct 25, 1178 (Michael Syrus, III 373) He repaired the two walls of the town (Michael Syrus, III 388) The Turkomans, who since 1185 had been ravaging wide tracts of Asia Minor also invaded and plundered the district of Malatya (Michael Syrus, III 402) In 1189 (Michael Syrus, 1191 according to Arabic sources) Kilidj Arslan gave the town of Malatya to his son Muʿizz al-Dīn Kaisar Shāh (Michael Syrus, III 407, *Rec Hist Or Crois*, II 56, III 269) Kilidj Arslān later found himself forced to hand Malatya over to his other son Kutb al-Dīn Malik Shāh, but Muʿizz al-Dīn went to Salāh al-Dīn (580 = 1191—1192) and regained his position with his help (*Rec Hist Or Crois*, I 57, 68 *sq*, III 269, V 44)

To strengthen the alliance he married the daughter of Malik al-ʿĀdil and accompanied Salāh al-Dīn's army to Tibnīn (*Rec hist or crois*, V 117) In June 1200 Rukn al-Dīn Sulaimān of Dūkāt (Tokāt) deprived his brother Muʿizz al Dīn of Malatya, the latter fled to his father-in law Malik al-ʿĀdil (Barhebraeus, *Chron Syriac*, ed Bedjan, p 406, *Rec hist or crois*, II 71) Saladin's son, al Malik al-Zāhir, who had only Sumaisāt left of his inheritance, submitted in 1207 to Rukn al-Dīn of Malatya and Kōniya (Barhebraeus, *Chron Syr*, p 408) In the next year Rukn al-Dīn took Angora, a few days later he died (Barhebraeus, p 418 *sq*) He was succeeded by his young son Kilidj Arslān III, who was however soon thrown into prison by Ghiyāth al-Dīn Kai Khusraw I (Barhebraeus, p 419) After the latter (d 1205) came his son ʿIzz al-Dīn Kai-Kāʾūs, who while on a campaign against Malik al-Ashraf in Malatya developed consumption from which he died on his return (Barhebraeus, p 437, *Rec hist or crois*, II 150 *sq*) In the reign of his successor ʿAlāʾ al-Dīn Kai-Kubād, the Tatars in 1231 penetrated to Hisn Ziyād and to the Euphrates near Malatya (Barhebraeus, p 463) ʿAlāʾ al-Dīn took Khilāt from Malik al-Ashraf in 1232 When in the next year the latter along with his brother Malik al Kamil of Egypt occupied Hisn Mansūr, ʿAlāʾ al Dīn collected an army of over 100,000 men, took Hisn Ziyād (Barhebraeus, p 467) and besieged al Ruhā in the following year, the inhabitants of Harrān fearing an attack on Malatya sent him the keys of their town (Barhebraeus, p 468, Kamāl al-Dīn, transl Blochet, *R O L*, V 88) His successor Kai-Khusraw II (1237—1245) at the beginning of his reign drove the Khwārizmians out of his kingdom, on their retreat they defeated the commander (Shūbāshi) of Malatya Saif al Dawla and crossed the Euphrates at Masarā (var Mukra) (Barhebraeus, p 471) In 1241, the amir of Malatya again suffered an annihilating defeat from fanatical Turkoman hordes under the prophet Pāpā (Bāba) (Barhebraeus, p 474) When the news of the victory of the Tatars at Kozā-Dāgh (1243, Barhebraeus, p 475) reached Malatya, the Shūbāshi Rashīd al-Dīn and the other court officials broke into the royal treasury, shared the treasure among themselves, and fled to Halab Many prominent citizens followed them, but they were surprised by the Tatars on the hill of Bēth Gōzē, a day's journey from Malatya and some slain, some taken prisoners The inhabitants of the town, Muslims and Christians, asked the Metropolitan Mār Dionysios ʿAngūr to direct the defence of the town After two months during which Malatya was watchfully defended, the Tatars withdrew In 1244 the Tatar chief Isāwūr (var Nasāwūi) Nuyin besieged Malatya and ravaged the country round until Rashīd al-Dīn caused him to retreat by rich presents (Barhebraeus, p 477—479) After the division of the Saldjūk empire by Hūlāgū, there ruled at first ʿIzz al-Dīn at Malatya, then, after his dethronement, his brother Rukn al-Dīn (Barhebraeus, p 482) At the end of 649 (1251—1252) and in July 650 (1252—1253), the Tatars again besieged the town under Isāwūi and wasted its surroundings (Barhebraeus, p 491) When in 1257 ʿIzz al-Dīn sent al Lughi Hāfā into the district of Malatya to seek recruits and the latter allotted the town to the Kurd chief Sharaf al Dīn Ahmad b Bilās, the inhabitants would not have him as they had sworn fealty to Rukn al-Dīn and feared his Tatar patron Baidjū It was not till ʿIzz al Dīn had sent a second envoy, Bihādur, that they admitted him into the town, but the latter soon fled again before Baidjū and only returned when he had gone, but again found the gates closed against him and was only admitted after famine had broken out in Malatya as a result of his siege (Barhebraeus, p 498—500) In 1260 Hūlāgū built bridges over the Euphrates for his vast host at Malatya, Kalʿat al Rūm al Bira and Karkisīya (Barhebraeus, p 509) The Egyptian governor of al-Bira Hidar (Khidr?) in 1282 laid waste the country round Malatya (Barhebraeus, p 546)

The Mongol Khān Abaka (1265—1282) again divided the kingdom of Rūm between two Saldjūk cousins of whom Masʿūd received Arzindjān, Siwās and Malatya

In the XIIth and XIIIth century lived the two great Syriac historians, both born in Malatya, to whose chronicles we mainly owe our knowledge of the history of the town the patriarch Michael I (1126—99), son of the priest Eliyā, who belonged to the family of Kindasī in Malatya and the Mafrʿyān Gregor Abu 'l-Faradj called Barhebraeus (1226—86, q v), whose father, the baptised

Jewish physician Ahrōn had restrained his fellow citizens in Malatya from stupidly flying before the Tatars (Baumstark, *Gesch d syr Lit*, p 298—300, 312—20) Michael's principal authority, Ignatios (d 1104), was also metropolitan of Malatya (Baumstark, *op cit*, p 291)

The increasing weakness of the Saldjūḳs about 1300 favoured the formation of local Turkoman and Armenian petty states, especially in the east of Asia Minor According to Abu 'l Fidā', Christians and Muslims in Malatya in those days lived on the best of terms with one another, the town took the side of the Tatars and informed them of everything that went on in the country During his war against the Tatars, Sultān al Malik al-Nāṣir in 715 (1315) decided to send a large army under the nā'ib of Damascus, Saif al-Dīn Tunguz who was joined by his vassal Abu 'l-Fidā' of Hamāh, against Malatya The army went by Halab, ʿAintāb, Ḥiṣn Manṣūr and Zibatra to Malatya and encamped before the town on April 28 The inhabitants sent their ḥākim Djamāl al-Dīn al-Khiḍr, whose father and grandfather had filled the same office in their time, through the south gate, Bāb al-Kādī, to Tunguz, who was willing to afford them protection and security, if they surrendered the town But he was unable to fulfil his pledge for the soldiers could not be restrained from plundering and ravaging in the town Among the prisoners was the Tatar Ibn Kerboghā' and the ṣāḥib of Ḥiṣn Arkanā', Shaikh Mindū The greater part of the town was finally burned down (Abu 'l-Fidā', *Annales Muslem*, ed Reiske, v 286—92, ed Stambul 1286, iv 77 *sq*, transl also in *Rec hist or crois*, i 180, Weil, *Gesch d Chalif*, iv 310 *sq*) The Sultān made the territory of Malatya a separate frontier province, which included seven districts (Khalil al-Ẓāhirī, *Zubda*, ed Ravaisse, p 52) There were seven citadels around the town Mūshār or Minshār, Kūmī, Karahiṣār, Kadarbirt, Kal'at Akdja, Kal'at Nawhamām (?) and Kal'at al-Akrād (Khalil, *op cit*, Gaudefroy Demombynes, *La Syrie a l'epoque des Mamelouks*, p 97, 1, 105)

Malatya for the next few decades belonged to the Mamlūk Sultāns As their remotest province, it was with Halab in 791 (1389) the scene of a great rebellion led by the governors Mintāsh and Yelboghā against Barkūk [q v] About this time the Turkish family of the Dhu 'l Kadroghlu [q v] began to rise to power in the region of Malatya and Albistān where they ruled till 1515 under Egyptian suzerainty About 794 (1391/2) Bāyazīd I conquered the town and in 1400/1 Timūr By the battle of Kōč Ḥiṣār (1516) it fell into the hands of Selim I [q v] who destroyed the Dhu 'l Kadroghlu This was the cause of his war against Egypt, which was rapidly decided on the field of Marḏj Dābik At a later date the eyālet to which the Sandjak of Malatya belonged was still called Dhu 'l-Kadrīya, Malatya now forms a sandjak of the wilāyet of Ma'mūret al-'Azīz (Khaipūt)

The town in 1838 was the headquarters of the Ser-'asker Hafiz Pasha, with whom Moltke was attaché It is said to have suffered much at the hands of the troops quartered there for months before the battle of Nizib After the earthquake of 1893 Malatya was rebuilt on the site of the suburb of Asbusu S W of the older site now called Eski-Shehr, but the old town continued to be inhabited It has now about 30,000 inhabitants, including many Armenians, Kurds and Kizilbash

MALAY PENINSULA is a name sometimes rather loosely applied to the whole tract of land South of the Isthmus of Kra (Lat 10° N), but so far as the Northern part of this tract is concerned the name is a misnomer, the bulk of the population there being Siamese and Chinese, not Malay Excluding from the total Malay population of Siam [q v] as a whole some 50,000 Malays scattered in Ayuthia, Bangkok, Chantabun and the rest of the Eastern shore of the Gulf of Siam, the remaining 350,000 are in Southern Siam and mainly in the parts South of Kra But it is not till about Lat 7° N that one meets with districts where the majority of the inhabitants is Malay, viz on the West coast Palean and Sětul and on the East coast the province of Patani (formerly an important Malay state, finally conquered by Siam in 1832) Of the approximate total population of 370,000 in these three districts the greater part consists of Malays The Southern boundary of Siam, running irregularly between 6° 45′ and 5° 45′ N, separates them from the rest of the Peninsula, which is attached to the British Empire and with which we are here concerned The area of this latter portion is about 52,500 English square miles

The geological structure of the Peninsula includes calcareous rocks and limestone, cherts, shales, quartzite, volcanic rocks granite, alluvial deposits, and the ferrugineous substance known as laterite The most important minerals are tin and tungsten The former has been exported for more

than a thousand years and is still a very important product

Until about fifty years ago the rivers, though mostly small and only navigable for small craft, were the chief and almost the sole means of access to the interior, which was then an almost trackless forest of luxuriant vegetation, traversed by a number of mountain ranges, some running roughly north and south, others transversely or irregularly A few of the highest points exceed 7,000 feet (roughly 2,100 metres) At sea-level the average temperature is about 82 F (about 27 C) with a daily and annual variation of not more than about 10 F (about 4 5 C) in each direction, the annual rainfall varies locally from about 60 inches (about 150 cm) to four times that amount The N E and S W monsoons prevail, but are subject to periods of slight or variable wind The climatic conditions are therefore very favourable to the main staples of native agriculture, viz rice, cocoanuts and miscellaneous local fruits, to these, foreigners have added the cultivation of other products, such as tapioca and coffee (now almost abandoned) and especially Para rubber, in the cultivation of which the Peninsula has led the way The economic development of the Peninsula may be said to date from the institution of the Residential system in three of the Western states in 1874, which led progressively to the making of a network of excellent roads and a State railway system now comprising a trunk line from Singapore to the western part of the boundary with Siam, where it links with the Siamese system, and a number of branches, one of which turning northward through the centre of the Peninsula is destined to join the Siamese railway at a point near the eastern end of the frontier

From the administrative point of view, the British portion of the Peninsula falls into 1 the British colony styled the Straits Settlements (which is an abbreviation of "British Settlements in the Straits of Malacca"), comprising the three "settlements" or divisions of Singapore, Penang and Malacca, 2 the Federated Malay States, viz Perak, Sĕlangor, Nĕgĕri Sĕmbilan, on the West coast and Pahang on the East coast, which are united in an administrative union under a Chief Secretary to Government at Kuala Lumpur (in Sĕlangor) and 3 the Unfederated Malay States, viz in the extreme North and on the West coast, Pĕrlis and Kĕdah, and on the East coast, Kĕlantan and Trĕngganu, and in the extreme South, Johor Administratively the Island of Labuan off the coast of North Borneo, and the Cocos-Keeling Islands and Christmas Island to the South-West of Java form part of the "settlement" of Singapore, and the State of Brunei (Bĕrunai) in Borneo is an unfederated Malay State ranking with those of the Peninsula

The Colony has the usual administrative machinery, consisting of a Governor (who is also the High Commissioner for the Malay States), together with executive and legislative councils, and a Supreme Court Each of the Malay States has a Malay ruler, who usually bears the title of Sultan, and also a British official, styled in the Federated Malay States the British Resident and in the unfederated ones British Advisor or General Advisor, and a State Council For the Federated States there is in addition a Federal Council and a Judicial Commission In these States the chief administrative departments are federalized under federal heads, and in one or two cases (such as Education) are linked up with the corresponding department in the Colony Both the Colony and the States are divided into administrative districts, and the officials in charge of such districts in the Colony and Federated States are mainly Europeans The same applies to the heads of the principal departments of Government Many of their assistants are also European In the unfederated States the administrative machinery is not so elaborately organized and the proportion of Europeans is smaller Government schools have been established in the principal villages and give elementary instruction exclusively through the medium of Malay In towns there are also higher schools, supported but not founded or managed, by Government, which give instruction through the medium of English The college at Kuala Kangsar, which is bilingual, is mainly for the sons of Malay rajas and chiefs though others are admitted Female education has developed more slowly but is gaining ground

The ancient history of the Peninsula is obscure Palaeolithic and neolithic implements have been found in various places The so called aborigines, amounting in 1921 to about one per cent of the total population, comprise in the extreme North a few thousand woolly-haired Negritos, generally termed Sĕmang, in the centre a much larger number of wavy haired light brown people known as Sakai, and in the South mostly straight haired people of the Indonesian type, often referred to as Jakun The first two groups and a portion of the third speak languages containing a strong Mon Khmer element, the remaining Jakun speak Malay dialects with some alien admixture From about the vth century A D Sanskrit inscriptions on stone found in Kĕdah and Province Wellesley (opposite Penang) attest the presence of Buddhists using a South Indian script An inscription of 775 originally set up at Ligor (Nakhon Sri Dhammarāj) about Lat 8° N indicates that before that date certain points on the isthmus were held by the Sailendra kings of Srī Vijaya (Palembang in Southern Sumatra) who controlled the trade route through the Straits and across the isthmus probably till near the end of the xiith century It would appear from a notice in the History of the Liang dynasty of China (502–556 A D), Book 54, that this isthmus had formerly been controlled by the state of Funan, which centred round the mouths and lower course of the Mekong river An inscription found at Chaiya (Jaiya, near Lat 10° N) and probably dated 1183 gives the king who presumably set it up a princely title which points to the Malayu region of Southern Sumatra, adjoining Srī Vijaya to the North West Another inscription of Chaiya dated 1230 was set up by the local king Candrabhānu who according to the Mahavamsa and other sources raided Ceylon on two occasions (probably about 1236 and 1256) with his "Jāvaka" (i e Malay) forces

It is plain, therefore, that between the viiith and the xiiith centuries the settlement of the Peninsula by Malays from Sumatra had been going on A few years later, but before 1280, the Siamese from Sukhohai (Sukhodhaya) put an end to Malay rule in Ligor, thus beginning the extension of Siamese influence to the southward In the Javanese poem Nāgarakrĕtāgama (1365) a

number of places on both coasts, from Kědah and Sai (in the old Patani state) in the North to Singapore [q v] in the South are claimed as vassals of the Javanese empire of Madjapahit In the same century, but at a date which cannot be precisely fixed owing to the fragmentary condition of the record, the earliest Malay inscription in the Arabic character as yet discovered makes it plain that Islām had recently become the state religion of Trĕngganu In the xvth century Islām was being spread in the Peninsula under the influence of the then most important state, Malacca [q v], and after its fall in 1511 at the hands of the Portuguese its dynasty continued to rule in the extreme South (Johor) and neighbouring islands, while another branch held Pahang, and Perak eventually came into the hands of a family claiming to descend from the senior line of the same stock In or before the xvith century an immigration of Minangkabau settlers from Sumatra founded a number of small states inland of Malacca, which all eventually admitted the suzerainty of Johor, save the southernmost, Naning, which was in theory at any rate a subordinate ally of the Portuguese In the early part of the xviith century the Achinese raided Kědah, Perak, Johor, etc, and for a number of years exercized some sort of suzerainty over Perak Meanwhile the Northern states came intermittently under Siamese influence, which varied with the strength of that power but retained the character of an external suzerainty till Kědah in 1821 and Patani in 1832 (this last finally) were conquered by Siam

The Dutch tenure of Malacca (1641—1795), while it controlled to some extent the external trade of the Malay states, did not interfere with their internal affairs In the eighteenth century Bugis adventurers settled in the Riau-Lingga Archipelago and made their influence felt on the mainland, ultimately establishing the new state of Sĕlangor under a still ruling Bugis dynasty British influence dates from the founding of Penang (1786), which was followed by a temporary occupation of Malacca (1795—1818), its final cession in 1824, the founding of Singapore (1819), and the incorporation of all three settlements in one government (1826), which in 1867 was transferred from the control of India to that of the Colonial Office The policy of non-interference with the Malay states was maintained until long continued disturbances in Perak, Sĕlangor, and Sungei Ujong (part of Nĕgĕri Sĕmbilan), due to Malay dynastic quarrels and civil war between unruly gangs of Chinese tin miners, coupled with an increase of piracy in the Straits, led in 1874 to the inauguration of the Residential system This ultimately developed into the present system whereby since 1895 Perak, Sĕlangor, Nĕgĕri Sĕmbilan and Pahang form a federation administered under the direction of British officials Pĕrlis, Kědah, Kĕlantan and Trĕngganu were ceded by Siam in 1909 in return for certain concessions, one of which was the abolition of the extra-territorial privileges of British subjects

The population in 1921 of the part of the Peninsula and adjacent islands under British administration or protection was about 3,325,000, nearly half being immigrants, mainly Chinese, and to a less extent Indians, among whom males predominated very considerably The great bulk of the native-born population consisted of Malays, and the total number of Malays, properly so-called (including, however, something like 100,000 persons of Minangkabau descent in Nĕgĕri Sĕmbilan and Malacca) numbered 1,418,198 The other Muslim Indonesians amounted to 171,315 (including 112,775 Javanese, 37,848 Banjarese, 9,772 Boyanese, 8,388 Bugis, 727 Achinese, 859 Korinchi, and 946 Mendeling) The 47,465 non-Indonesian Muslims comprised 41,337 Indians, 4,315 Arabs, 1,800 Chinese, and a few Persians and Turks, the total Muslim population was 1,636,978, the great majority being Sunnīs of the school of Shāfi'ī Of the non Muslim population roughly three quarters were Chinese and about one-quarter Indians but there were also 32,448 so called aborigines of the Peninsula (a few of whom may, however, have been converts to Islām), 18,178 Siamese, 14,833 Europeans (mostly British, but including Continental Europeans and Americans of European descent), 12,629 Eurasians, 6,989 Japanese, and 2,215 Sinhalese, besides several smaller communities

MALAYS People In this article only the Islāmic features of the Malay nation will be dealt with, so neither ethnographical nor anthropological questions will be discussed It may be sufficient to say that the Malays originally — we do not venture to say as autochthons — were established in the middle part of Sumatra, especially in Palembang, and spread over the eastern and northern parts of that huge island, and settled in the Straits, mainly in Malacca [see MALAY PENINSULA], and founded colonies in Borneo, along the great rivers, and elsewhere eastward They belong to the widely dispersed Polynesian (or Indonesian) race, whose languages extend from Madagascar to the Philippines and from the peninsula of the utmost S E point of Asia to the remoter islands of Micronesia and Melanesia in the Pacific The Malay chronicles, for the greater part mythical, and a few epigraphical data, make it clear that there was a highly cultivated Hinduised Malay kingdom in Palembang, the seafaring people of which went over to several adjacent and more distant countries, it was along the ways of commerce that they carried the Malay language to sundry ports and lands It is not exactly known in what century Islām swept away Hinduism, but it is a fact that the new religion on its arrival in the Straits found Malay people settled in the Peninsula and the Malay language introduced there as the generally adopted speech of commerce and political intercourse

Language It is due to Islām that Malay, being already a language enriched with many Sanskrit words, became an idiom of very mixed lexicographical character The Islāmic current brought words of Tamil origin, innumerable Arabic words, some of them in Dekhanised or Persian like garb, many Persian words, some of them with Indian characteristics, and a small quantity of Hindustani vocables In that heterogeneous form Malay became the vehicular language of the new religion Undoubtedly it had found its way already to the most visited ports in the Archipelago in a simplified form fit for intercourse with all kinds of natives and foreign merchants, later also with European, namely Portuguese and Dutch captains and ambassadors It was Islām that gave Malay a literary character, and when it had established itself as a medium into which innumerable Arabic books were translated, its form became crystallised and its orthography was fixed systematically That uniformity made it the appropriate language for literary and liturgical purposes and also a *κοινή* for dogmatics and mysticism, as well as romantic and historical literature It has to be borne in mind that there is a great difference between the patois or *linguaccio* heard in most of the sea-ports, and the cultivated literary language, which became highly developed in Malacca, once the seat of a Muhammadan court and a royal library When Arabic and Indian learned men came to Acheh, they discussed theological questions in Malay and even wrote books in that language The literary form is sustained uniformly to the present day, literary products being written in archaistic formulae, and the colloquial style being used in different parts of the Archipelago, the purest in Johore and Malaya in general and the East-coast-districts of Sumatra, the least pure in Java and more eastern islands In the Moluccas, especially in Ambon (Amboyna), the preaching of Christianity availed itself of Malay, in those islands this language has therefore assumed an individual character As to its linguistic character, it may suffice to notice that Malay, like all Polynesian languages, belongs to the agglutinative type, declension not existing, conjugation being limited within narrow bounds, and amplification of the mainly dissyllabic stems with a quantity of prefixes, infixes and suffixes giving opportunity of forming words for almost all grammatical and logical relations There are some traces of the influence of Arabic grammar on Malay syntax, but on the whole the Muhammadan current has not essentially altered the character of the language, it has only enriched it with an enormous number of words, and given to its written literature an individual Islāmic character

Literature Of pre-Islāmic literature nothing is known As far as may be concluded from a few old inscriptions in Hindu script, it seems that Malay was written in Kawi-like characters, but literature, in its earliest known form, is written in Arabic letters only The oldest manuscripts are preserved in the Cambridge and Oxford libraries, they date from the last years of the xvith and the first decade of the xviith century The only literary-historical evidence of the existence of written literature in the xvith century is the mention, in a xviiith century chronicle, of the use made of a royal library at Malacca at the time when the Portuguese endeavoured to capture that town (1511)

Malay literature, as it presents itself now, is only for a very small part original Hardly any of the chronicles, tales and poems are derived from Arabic sources directly, most of the religious and semi-historical romances having been translated from Persian, but all these literary products are imbued with the Muslim atmosphere, being full of Arabic words and phrases, and laden with Islāmic theory There are, it is true, some indigenous farcical tales, and some fables, especially the sometime highly appreciated mouse-deer-tales, moreover some original romances with Hinduistic influences, and several adapted old Javanese tales, that do not betray real Islāmic influence, but the very fact that all these books are written in Arabic characters makes them overflow with Arabic words, and in that way shows that they belong to Islāmic mentality In this short account there will be no mention of literary products going back to the great Sanskrit epic poems, nor of the tales that do not show traces of Muslim influence, only in so far as Malay literature has Islāmic features, will it be treated here The originally genuine Indonesian deer-fable has undergone an Islāmic correction The historical writings, more or less mythical and semi-romantic, are almost absolutely Islāmised To that class of works the chronicle *Sejarah Mĕlayu*, and other ones, as the chronicles of Kutawaringin, Kutai, Acheh and Pasai are to be reckoned A partly historical, but for the greater part fictitious, romance is the *Hikayat Hang Tuah* A host of romances, dealing with foreign princes and princesses and their endless adventures, has been spread over a great part of the Malay-reading East Indian World, the titles of all those popular, but for European readers less attractive, books, may be found in the catalogues of Malay manuscripts at Leyden, Batavia and London Some books of fiction have been translated from Persian, Arabic or Hindustani A group of them is to be traced to the *Hitopadeça* collection, another one to the *Tuti-nāma* series, a third one to the Bakhtiyar cycle By way of exception foreign authors have written in Malay, e g the Radjput Nūr al Dīn al-Rānīrī [q v], who wrote a great encyclopaedic chronicle at the instigation of an Achehnese queen A very great number of texts deals with the old prophets, the Prophet Muhammad, his family and friends Those works, like e g the romances of Amīr Hamza and Muhammad b al-Hanafiya, have Persian originals The purely religious books cannot be regarded as Malay literature

Poetical literature has a different character The real Malay kind of poetry, though not devoid of Persian influences, is the *pantun*, i e popular quatrains, whose first two lines deal with a natural fact, or a well known event, and are intended to prelude, phonetically, the 3rd and 4th lines, that contain the real meaning of the usually erotic poem The other "genre" is the *shaʿir* Its form is the stanza of four rhyming lines Some of these very extensive overloaded poems are from the Javanese, some others are versified versions of prose romances, moreover historical events, love-scenes, religious matters, mystical speculations etc are dealt with in innumerable *shaʿirs*, the titles of which may be seen in the following catalogues Leyden Univ Library, by H H Juynboll, Supplement thereto by Ph S van Ronkel, Batavia, the Hague and Brussels by the same, London (R A S) and ibidem E I H (India Office Library) by H N van der Tuuk

Special literary questions have been dealt with by Ph S van Ronkel The papers on Malay Subjects and some numbers of the Malay Literature Series contain some valuable contributions A fuller account is given in the Dutch *Encycl van Nederl-Indie*, s v Literatuur (Maleische)

(PH S VAN RONKEL)

MALĀZGERD, district (*Kadā*) and town in Armenia, to the North of the lake of Wan Of the name, there occur, in old-Armenian, the forms Manavazakert, Manavazkert and Manazkert The middle-Armenian and Byzantine forms, Mandzgerd and Μαντζικίερτ resp as well as the Arabian form Manāzdjird, point to old Armenian Manazkert being the original form, Manavaz(a)kert representing a popular etymological formation, from the name of the noble family of the Manavazean's, which, in olden times, resided in the district For it is phonetically impossible, that an old-Armenian form Manavaz(a)kert should regularly becomes Manazkert This is the theory of Hubschmann, who admits however the possibility, that an earlier Manavaz(a)kert may have been arbitrarily shortened in pronunciation, so as to become Manazkert, the word being otherwise too long W Belck has conjectured, that in the first part of the word, there may be hidden the name of the Urartaeic (pre Armenian) king Menuas of Wan This conjecture is based on the fact, that from an inscription of Menuas it appears, that this king founded a city, which was called Menuahina (= Menuas town), thus it would, according to Belck, be very probable, that Malāzgerd, in whose environs there have been found many inscriptions of Menuas, was this very town, named after him If such be the case, then the old-Armenian form *Manavazkert* must have originated from a later, popular etymology From the fact, that names of towns formed with *kert* (= *-*karta*) seem to have originated not before the Parthian epoch, as Hubschmann observes, it would follow, that the memory of the old king Menuas was still alive in the relatively late Parthian time This difficulty, however is not insoluble, for it seems, that the name of another Urartaeic king of Wan also may survive in classical Armenian quasi-historical tradition as Aram

The oldest and best Arabic spelling of the name of the town is *Manāzdjird*, with *n*, the forms with *l* are later, and on them is based the modern name (*Malāzgerd*) The spelling with *n* we find e g in al-Istakhrī, Yākūt, the author edited by Houtsma in *Rec des textes rel a l'hist des Seldjoucides*, II, al-Nasawī (ed Houdas), in a varia lectio of the text of the *Rāhat al-Ṣudūr* (*G M S*, New Series, II 119), and in the text quoted *J R A S*, 1902, p 797 The spelling with *l*, common in later texts, occurs, among older authors, in al-Mukaddasī, Ibn al-Athīr, the *Rāhat al-Ṣudūr* (the reading adopted by the editor), Djuwainī, and the *Nuzhat al-Kulūb* The terminations *djird* and *-kird* also alternate in the spelling this variation is already noted by Yākūt (*Mu'djam*, IV 648) As regards the form Manazav, cited by Marquardt (*Ērānsahr*, p 162) from Thomas Arturi, cf Hübschmann, *Die alt-armenischen Ortsnamen* (in *Idg Forschungen*, XVI), p 450

For the year 1898 the number of inhabitants of the district Malāzgerd is given as 21,000, viz 12,000 Kurds, and the rest Armenians The district belonged to the *wilāyat* Bitlīs, *sandjak* Mūsh In this hilly country, the highest elevation is the Sipān-Dagh (3,000 m), perhaps the same mount as the *Sang-i Safid*, which is, according to Yākūt (*Mu'djam*, III 168), a mountain in these regions The soil of the district is fertile, its main products are wheat, barley, millet, lentils and peas, which are also exported, as are also sheep and horses, e g to Diyārbekr The region of Malāzgerd produces also salt and mineral stone, which becomes hard when brought to the day light Its wild animals are the wolf, the fox and the stone-marten, which is hunted for its fur Textiles are manufactured in and exported from the district

The town of Malāzgerd is situated on a tributary of the Murād Su, called the Tuzla Su, Hādjdjī Khalīfa (*Djihān-numā*, p 426) reckons 2 *marhala* between Malāzgerd and Erzerum The town lies, moreover, on the way from Sīwās to Ardjīsh, and also at the crossing of the two different ways, which connect Mūsh and Bāyazīd The city is surrounded by a high wall and towers, at the East of the town there is the citadel, built from black volcanic stone In the Vth (XIth) century, Malāzgerd had a triple wall, and it was well furnished with drinking water from within (Cedrenus, ed Bonn, II 590) More than one fruitless siege of this place is recorded in its history

Belck supposes, that the well-known battle between the Assyrian king Tiglathpilesar I against the allied Naïri-kings took place in the plain of Malāzgerd (*Z D M G*, li 560) If, at that remote time, the town of Malāzgerd existed already, is not certain That it existed in the time of the Urartaeic king Menuas, who, as Belck thinks, gave his name to the town, is made probable by an inscription of that prince, from which it would appear, that he rebuilt an older citadel and an older palace on that place The environs of the modern city of Malāzgerd are remarkably rich in cuneiform inscriptions, which were discovered by Lehmann and Belck during their stay there They found an Assyrian inscription of Tiglathpilesar I and several Urartaeic inscriptions, among others, of Menuas (± 800 B C) and Argistis II (714—ca 690 B C) It appears from these documents, that Menuas devoted great attention to the irrigation of the land, by constructing several canals

In the early Middle ages, the town of Malāzgerd (Manazkert), lying on the confines of the cantons Haikh and Apahunikh, was sometimes assigned to the former, sometimes to the latter That in old-Armenian times here resided the family of the Manavazean's, has already been remarked For these matters, and also for the quotations from Byzantine and Armenian authorities regarding them, cf Hubschmann, *Die altarmenischen Ortsnamen*, p 328, 330, 449 *sq*

Malāzgerd belonged, since the beginning of their dynasty, to the realm of the Bagratides of Armenia, who allowed it to be ruled, as well as Akhlāt, Ardjīs and "Perkri" (= Bergiri?), by a family of their vassals This family, whose members bear Arabic names, became in course of time independent of the Armenian kings, but, on the other hand, was obliged to pay tribute to the emperor of Byzantium (Constantinus Porphyrogenetus, *De admin imp*, ed Bonn, p 192 *sq*)

Yākūt says, that the inhabitants of Malāzgerd are Armenians and Byzantines (*Rūmī*), a native of this town was Abū Nasr al-Manāzī (this, therefore, is the *nisba* of the name), who was wazīr to one of the Marwānid princes of Diyārbekr This Abū

Nasr died 437 (1045—1046) and, according to our authority, was a good poet Yākūt cites two fragments from his poems (*Muʿdjam*, iv 648 *sq*) Regarding another al-Manāzī, cf *J R A S*, 1902, p 788, note 1

Among political events connected with the town of Malāzgerd, it may be noted that, on the occasion of the campaign, which the great Hamdānid Saif al Dawla undertook into Armenia (328 = 940), there is mentioned one ʿAbd al Hamīd, prince (*sāhib*) of Malāzgerd and Sibalwark (Sewerek) (*J R A S*, 1902, p 797) the name Ἀβελχαμίτ occurs among the names of the dynasty of Malāzgerd, recorded by Constantinus Porphyrogenetus, and this contemporary of Saif al-Dawla doubtless belonged to that family But he cannot be the Ἀβελχαμίτ of the Greek text, who, from a chronological point of view, must have lived two generations earlier (cf the genealogical table of these dynasts of Malāzgerd in Bandurius *Animadversiones in Const Porph Lib de Administ Imp*, in the Bonn edition of Constantinus, iii 372) In 353 (964) a certain Nadjā, a *ghulām* of Saif al-Dawla, revolted against his master, after taking possession of that part of Armenia, which was ruled by one Abu 'l-Ward The latter was slain, and, among the places conquered by Nadjā, Malāzgerd also is cited (Ibn al Athīr, ed Tornberg, viii 408), in the year 359 (969—970) Malāzgerd was taken by the Byzantines (*ibid*, viii 445), they must have lost it again before 382 (992—993), for in that year they besieged not only Akhlāt and Ardjīsh, but also Malāzgerd, but this time they could not take it, but returned home after concluding a treaty for ten years with Abū ʿAlī al Hasan b Marwān (*ibid*, ix 67) In 440 (1048—1049) it must have belonged to the Byzantines, for the *ghazwa*, which Ibrahim, Toghrīl Beg's brother, undertook into the Byzantine empire, affected also the territory of Malāzgerd (*ibid*, ix 372) And it is explicitly stated by Ibn al-Athīr (ix 411), under the year 446 (1054—1055), that Malāzgerd was in possession of the Byzantines, for there he relates, that this strong city resisted a siege by Toghrīl Beg himself (cf also Cedrenus, ed Bonn, ii 590 etc) The most important historical event, with which the name of the town is connected, is the battle of Malazgerd (463 = 1071) between Alp Arslān and the Byzantine emperor Romanus Diogenes, in consequence of which the eastern part of Asia Minor, viz Armenia and Cappadocia, was lost for ever to the Greek empire [Ibn al Athīr, x 44, *Rec des textes rel a l'hist des Seldjoucides*, ed Houtsma, ii 38 etc, *Rāhat al Sudūr* (*G M S*, New Series, ii), p 119, Zonaras, ed Dindorf, iv 213 etc, cf also H Gelzer in K Krumbacher's *Geschichte der byzantinischen Litteratur*², p 1010] After this event, therefore, Malāzgerd passed into the possession of the Saldjūks In 531 (1137) it was given by king Malikshāh, along with Erzerum and part of the territory of Akhlāt, to his brother Saldjūk, as a *kitʿ* (*Rec de textes*, ed Houtsma, ii 185)

In course of time, the city was besieged in vain (587 = 1191) by Takī al-Dīn ʿUmar b Ayyūb In 601 (1204—1205) its environs suffered from the inroads of nomads from the direction of Ādharbāidjān (Ibn al-Athīr, xii 41, 134) During the disturbances, of which Armenia was the scene in the beginning of the viiith—xiiith century, mention is several times made of Malāzgird In 603 (1206—1207), a former *mamlūk* of the Shāh Arman took possession of Malāzgerd, and, after that, also of Akhlāt He had, in addition, control of Ardjīsh and other places This man, whose name was Balbān (the vocalisation of the first syllable is uncertain), was assisted by the prince of Erzerum, Mughīth al-Dīn Toghrīl Shāh b Kilidj Arslān, against al Malik al-Awhad, son of al Malik al-ʿĀdil of Egypt Later on, Balban was murdered by his ally of Erzerum, who tried to enter Akhlāt and Malāzgerd, but in vain, so that he was obliged to return to his own states (Ibn al Athīr, xii 168 *sq*, 180 *sq*) In 623 (1226), Djalāl al-Dīn b Khwārizmshāh ʿAlā al-Dīn Muhammad occupied Malāzgerd, as he intended to attack Husām al-Dīn ʿAlī, the *nawwāb* of al-Malik al Ashraf, in Akhlat But, since his attempt on this town did not succeed, and as the winter also set in (he had entered Malāzgerd on Dhu 'l-Kaʿda 13, November 5, 623), and the Turkomans invaded his own realm, he was obliged to retire (Ibn al-Athīr, xii 301) In 626 (1229) however he succeeded in taking Akhlāt, after which he besieged Malāzgerd, first in person, afterwards leaving one of his generals in charge of the siege, but on this occasion without success (al-Nasawī, ed O Houdas, text, p 205, 208, translation, p 342, 344, 347)

MALDIVE ISLANDS, a group of coral islets in the Indian Ocean, lying between 7° 6′ N and 0° 42′ S lat, and 72° and 74° E long, and consisting of seventeen atolls with a great number of islands, of which about 300 are inhabited, the population being estimated at 70,000 The Moorish traveller, Ibn Battūta, lived for more

than a year (1343—1344) in the islands, but the first Europeans to visit them were the Portuguese, who established a factory in them in 1518 The Maldives were much harassed by Māppilla (Moplah) pirates from the Malabar Coast and in 1645 the king, who is entitled "Sultān of the Twelve Thousand Isles", placed himself under the protection of the Dutch in Ceylon, with which island the Maldives have, since that time, been politically connected The natives are Muslims and fall into three ethnographical divisions, (1) the northern, with a strong admixture of Dravidian blood from India, (2) the central, under the immediate rule of the Sultān, who resides in Male, which has acquired from Arab traders and settlers a strain of Semitic blood, and (3) the natives of the southern clusters, who have had little communication with the central group and preserve more of the primitive type, resembling the Sinhalese villagers of Ceylon All are peaceful, intelligent and industrious, growing their own crops and weaving their own cloth and mats The chief exports are copra, coir, and dried fish products The language is a dialect of the Sinhalese, somewhat Muhammadanized, but many read Arabic more or less fluently

MALHAMA [See Maiāhim]

MALI, a town, which no longer exists, the old capital of the Mandingo empire, in the western Sūdān, also called Mali, Milli, Melli, Melle, Mani or Manc All these names are dialectic or local variants of the same word which is the name of the country of origin of a people whom the French call Malinké, following the Pul and Tuculors, and the English "Mandingo", following the form used by one section of this people on the Lower Gambia

The name found in the Arab authors for this town was not the one used by the inhabitants themselves and the latter is not given us by the geographer Idrīsī, nor the historian Ibn Khaldūn, nor the traveller Ibn Battūta, nor Leo Africanus It was only in 1913 that the translation of an Arabic manuscript not long before discovered in the Sūdān, the *Ta'rīkh al Fattāh*, enabled us to learn that in reality there were two successive capitals of the Mandingo empire or of Mali the older was called Djaliba or Djéliba and there was later another called Niani

Recent researches in the valley of the Niger have enabled the sites of these two towns to be discovered The first was situated at the junction of the Niger and the Sankarani, and at the place called Mani or Mali Tombo, i e ruins of Mali There are still traces of a very ancient and important town, which the natives regard, according to their traditions, as the ancient residence of their former sovereigns and the place where the latter are buried

As to the second town, a copyist's error in the text of Ibn Khaldūn concealed the true name till the publication of the *Ta'rīkh al-Fattāh* in 1913 It was recently recognised that the capital in question should be located on the left bank of the Sankarani, and at the level of Siguiri, not far from the place where there is still a town of the same name, Niani

Djeriba was no doubt the cradle of the Mandingo dynasty of the Keita of the xiith—xiiith century We have no information about it We are more accurately informed about Niani It is supposed to have been founded in 1238 after Sundjata Keita, ruler of the Mandingo, had defeated in 1235 at Kirina the emperor of Sōsō, Sumangurur Kante, his rival and enemy Gongo Mūsā, often wrongly called Kankan Mūsā, was ruling there a century later, when on his return from a pilgrimage to Mecca, he attracted to his court an Arab poet named al Sahili who belonged to a Granada family By orders of Gongo Mūsā, this foreigner built in Gao a mosque with battlemented terrace and pyramidal minaret According to tradition, this was the first building of the type, now so widely spread in the western Sūdān, the origin of which is North African

In 1352—53 in the reign of Sulaimān Keita, brother of Gongo Mūsa, the Arab traveller Ibn Battūta visited the town It was then a completely Muslim metropolis, in which lived Egyptian and Moroccan legal authorities, students of Islām, readers of the Kur'ān in the mosques, and merchants No description of the different quarters of the town has come down to us but we have a fairly detailed account of the sovereign's palace The ruler gave his audiences in a room looking out on a courtyard, with six windows of wood, three of which were covered with plates of silver and above these three covered with plates of gold These windows were hidden by curtains, which were lifted to show that the hour of audience had come

The empire of Mali retained its power down to the beginning of the xvth century when its decline began According to Leo Africanus who visited the Sūdān in the first half of the xvith century, the capital Mali or better Niani was inhabited by about 6,000 families who included many artisans and traders Islām was flourishing, the town had still a number of mosques and prosperous schools but it had lost its former glory

In 1545, Dā'ūd, brother of the *askiya* of Gao, marched to Niani, the ruler of the Mandingo having succeeded in escaping, Dā'ūd occupied the town which he plundered for a week before withdrawing, ordering his soldiers to defile the palace of the king with ordure

In the xviith century the growth of the Bambara kingdoms of Segu and Kaarta contributed to overthrow what was left of the old Mandingo power, the last chiefs of which, leaving Niani, took refuge in Kangaba

There is no doubt that Niani was visited on several occasions by the Portuguese We know nothing of the expeditions which set out from their factories in Lower Gambia to the interior, on the other hand, we have notes about the Mandingo capital on the journey made in 1483 of an embassy from Elmina (now the Gold Coast Colony) João de Barros describes it in his Book III of his *Asia* "By the route of the fortress of Minas (Elmina) he (John II) also sent an embassy to Mahmūd b Manzugul, grandson of Mūsā, king of Songo This city is one of the most populous of this great country which we usually call the

ınd of the Mandıngoes" Another author, Barth, laims to ıdentıfy the Songo of the Portuguese ıstorıan wıth the land of the Songhoy on the ıger Thıs ıs clearly wrong But ıs Songo a name pplıcable to the Mandıngo capıtal? M Delafosse oes not thınk so, he calls attentıon to the fact hat the country of the Mandıngoes ıs stıll known mong the coast peoples of the Gulf of Guınea nd ın all the Fantı and Ashantı country under he name of Songo, so that among those wıth whom the Portuguese of Elmına mıxed, the word was sımply a synonym of Mandıngo or Malı

Bıblıography Ibn Battūta, *Voyage dans le Soudan*, transl de Slane, Paris 1843, Ibn Khaldūn, *Hıstoire des Berbères*, transl de Slane, Algıers 1852—6, Leo Africanus, *Descrıptıon de l'Afrıque tierce partıe du Monde*, mise en françois par Jean Temporal, nouvelle edition annotée par Schefer, Paris 1896—8, ʿAbd al-Rahmān al-Saʿdī and Tombouktī, *Taʾrıkh al-Sūdān*, transl Haudas, Paris 1900, M Delafosse, *Haut-Senegal-Nıger*, Paris 1912, Marquart, *Die Benınsammlung des Reıchsmuseums fur Volkerkunde ın Leıden*, ındex s v Mallı, Ibn Fadl Allāh al-ʿUmarī, transl Gaudefroy-Demombynes, p 52 *sqq* (Hᴇnrı Lᴀbouret)

MALIK (A), Kıng In the Kurʾān the word, ın addıtıon to beıng used of the kings of thıs world, ıs also applıed to Allāh, e g xx 113 So ıs Allāh exalted, the Kıng, the Truth" In ıı 25, Allāh ıs the *mālık al mulk*, the possessor f royal power, whıch he gıves to and takes from whom He wıll, ın the *Fātıha* many Kurʾān readers ead *malık* (for *mālık*) *yawm al dīn*, God's kıngdom s also descrıbed as *mulk* and *malakūt* [cf ALLĀH]

Muslım rulers do not generally call themselves ıngs, as ın the Kurʾān, the use of the word was onfined to the rulers of foreıgn peoples ın so ar as ıt had an earthly sıgnıficance The applı ation of the word to Muslım potentates was garded not so much as blasphemy but rather as nplyıng a form of rule whıch was contradıctory o Muslım polıtıcal theory It was consıdered very ıuch to Muʿāwıya's dıscredıt that he descrıbed ımself as the first kıng ın Islām, and as a ıngdom, whıch ıs contrasted wıth the ımāmate, he dignıty alone worthy of the Muslım rulers, he rule of the Omaıyads was attacked and des- ısed by the pıous old fashıoned party

Whıle religious constıtutıonal lıteıature does not ecognıse the word *malık* as a term for Muslım onditions, ıt plays a very much greater part ın he lıterature of mırrors for prınces whıch ıs ın- ıfferent to religıon, but, only when ıt ıs a ques ıon of a ruler ın general and not of specıfically ſuslım rulers Al Djāhız gıves hıs *Aʿ al-Tāǧ* the ubtıtle *Fī Akhlāk al-Mulūk* and al-Fārābī deals ery fully wıth the duties of a kıng In the ethical ncyclopaedıas whıch deal wıth all three moral ciences, ethıcs, economıcs and polıtıcs [cf MĀL], ke the *Sulūk al-Mālık fī Tadbır al-Mamālık* of bn Abı ʾl-Rabıʿ, the kıng appears as the subject f specıal chapters ın the scheme of dıvısıon of ıts kınd of lıterature

Wıth the spread of Islām and the Arabıc language ato Asıa, *malık* became used as the equıvalent f the Persıan *shāh* and as a royal tıtle was ıarticularly favoured by medıaeval dynastıes of ʾurkısh orıgın We find the tıtle *malık* as early s the Sāmānıds and ın the next century the Būyıd Bahāʾ al-Dawla calls hımself *Malık al-Mulūk*, a tıtle modelled on the ancıent Iranıan tıtle of "Kıng of Kıngs" Among the Saldjūks, Atabegs and Urtukıds, ıt ıs the regular tıtle of sovereıgnty, usually combıned wıth an honorıfic epıthet It ıs not so generally used by the Aıyūbıds and Mamlūks In the femınıne ıt ıs the royal tıtle of the Mamlūk queen Shadjaı al-Durr, who calls herself "queen of the Muslıms" (*Malıka al-Muslımīn*) One of the rare occurrences ın Indıa of the tıtle ıs also ın the femınıne *Malıka*, whıch queen Razıya of Dehlī uses ın place of the *Sultān* of the other members of the dynasty After beıng practıcally extınct for several centurıes ın the Muslım world *malık* has quıte recently been adopted as the royal tıtle ın the new kıngdoms of Egypt, ʿIrāk, the Hıdjāz and Afghānıstān so that ıt has suddenly, ıf somewhat artıfıcally under the ınfluence of the western con ceptıon of kıng, come to be the royal tıtle *par excellence* ın the Muslım world

Bıblıography *Lısān al-ʿArab*, s v, Hughes, *Dıctionary*, s v "Kıng", Kremer, *Gesch d herrsch Ideen*, p 323, Goldzıher, *Muh St*, ıı 31 *sqq* (M Pᴇssnᴇr)

MALIK ʿAMBAR HABASHĪ, an Abyssınıan slave, who rose to great power and ınfluence ın the Deccan When Ahmadnagar was conquered by prınce Danıyāl ın 1009 (1600), Malık ʿAmbar and Rādjā Mınnān, a Deccan chıef, dıvıded the remaınıng terrıtorıes between them About thıs perıod owıng to the rebellıon of Sultān Salım, the death of Akbar, and the revolt of Sultān Khusrū, ʿAmbar found tıme to regulate hıs country and raısed large armıes, and even dared to seıze several of the ımperıal dıstrıcts He ıntroduced a new revenue system ınto the Deccan, perhaps ın ımıtatıon of Todar Mall When the authorıty of the emperor Djahāngīr was establıshed, he sent several expedıtıons to the Deccan, but ʿAmbar could not be subdued At last he restored the places taken from the Mughals to Shāh Djahān, to whom he became attached and remaıned loyal to hım untıl hıs death, which occurred ın 1035 (1626), ın the 80th year of hıs age He was buried ın Dawlatābād [q v]

AL-MALIK AL-KĀMIL I, Nāsır al-Dīn Abu ʾl-Maʿālī Muhammad b al-Malık al-ʿĀdıl, an Aıyūbıd, was born ın Rabıʿ I 576 (Aug 1180) and knıghted wıth full ceremony on Palm Sunday (May 29) 1192 ın ʿAkkā by Rıchard Cœur de-Lıon who was on frıendly terms wıth hıs father A few years later hıs name begıns to appear ın the hıstory of the Aıyūbıd wars When hıs father, who was besıegıng Mārıdīn [q v] wıth hıs army, left ıt after the death of al-ʿAzız, Saladın's brother, on 27th Muharram 595 (Nov 29, 1198) to seize the capıtal, Damascus, for hımself, he entrusted the conduct of the sıege of Mārıdīn to hıs son Kāmıl The governor of the town had begun to negotıate wıth hım for surrender, when reınforce ments arrıved and after a fight whıch went badly for al Kāmıl, the latter was forced to wıthdraw and joın hıs father ın Damascus Al-ʿĀdıl's death (7th Djumādā II, 615 = Aug 31, 1218) left hım the dıfficult task of clearıng Egypt of the Crusaders, who had landed near Damıetta ın the begınnıng of summer and had begun to besıege the town.

On the news of their landing, al ʿĀdil [q v], who was then in Syria, sent troops to Egypt and al-Kāmil endeavoured to defend the land as best he could The Christians gained the upper hand at first and by the end of Shaʿban 616 (beg Nov 1219), Damietta had fallen into their hands It took nearly two years for al Kāmil, who had had homage paid to himself as sultān of Egypt and Syria after the death of his father, to retake the town with the help of the other Ayyūbids, particularly his brother al-Malik al-Muʿazzam, the Christians by this time were tired of fighting and in Radjab 618 (the end of August 1221) they offered to abandon the town if given a free passage Al Kāmil, who feared not without reason that they would soon receive reinforcements from Europe, gladly accepted their terms whereupon the Franks left Egypt But then troubles broke out within the Ayyūbid ranks When al Muʿazzam died (end of Dhu 'l-Kaʿda 624 = Nov 1227) al Kāmil and his brother al Malik al Ashraf attacked his son and successor al-Malik al-Nasir Dāwūd and finally took Damascus from him (Shaʿbān 626 = June/July 1229), al-Kāmil next occupied southern Syria and Palestine and al-Ashraf was recognised as ruler of Damascus under the suzerainty of al Kāmil, while their nephew Dāwūd received al-Karak, al Shawbak and some other remote fortresses as compensation Al Kāmil had previously entered into negotiations with the Emperor Frederick II and concluded a treaty with him by which he ceded Jerusalem to him with a corridor to Jaffa and the Emperor in return promised to help him against all his enemies After some time the Ayyūbids came into conflict with the Saldjūks Kai-Kāʾūs I [q v] had previously quarrelled with al-Ashraf and sought to bring against him a confederacy of petty Mesopotamian dynasties and under his brother and successor Kai-Kobād I [q v] it came to open fighting The successes won by al Kāmil in this war, however, aroused the jealousy of his relatives and they formed a coalition against him [cf AYYŪBIDS] Al Kāmil then set out for Egypt and advanced victoriously as far as Damascus He succeeded in taking this city also but died very soon afterwards (in Radjab 635 = March 1238) As a ruler he was undoubtedly one of the most distinguished of the Ayyūbids He was a brave soldier and a skilful diplomat and rendered lasting services to the development of his country He devoted special attention to irrigation and in his reign the defences of the citadel of Cairo were completed He also took a lively interest in the cause of learning

AL-MALIK AL-KĀMIL II [See SHAʿBĀN]

MALIK SARWAR, KHWĀDJA-I DJAHĀN was a eunuch given by Sālār Radjab to his grandson Muhammad, son of Fīrūz Shāh Tughlak in whose service he rose to be chief eunuch and controller of the elephant stables He was faithful to his master in all his troubles, and in 1389 received the title of Khwādja-i Djahān and was made *wazir* Muhammad's son, Mahmūd Shāh, sent him in March, 1394, to govern the eastern provinces, with his headquarters at Djawnpūr, and conferred on him the title of Malik al-Shark, or lord of the east He took thither with him Karanful, a slave and water-bearer of Fīrūz Tughlak, whom he had adopted, and his brothers His administration was most successful and his adopted son Karanful served him loyally On the disruption of the kingdom of the Tughlak dynasty after Timūr's invasion, Malik Sarwar assumed the title of Sultān al Shark and established his independence in Djawnpūr Karanful received the title of Malik al Shark, and his brother Ibrāhīm was made commander of the fort and city

Malik Sarwar died in 1400 and was succeeded by Karanful, who ascended the throne of Djawnpūr under the title of Mubārak Shāh

MĀLIK B ANAS, a Muslim jurist, the imām of the *madhhab* of the Mālikīs, which is named after him, and frequently called briefly the Imām of Medina

I The sources for Mālik's biography

The oldest authority of any length for Mālik, Ibn Saʿd's account (d 230) based on al-Wākidī (d 207) in the sixth class of the Medīna "successors", is lost as there is a hiatus in the manuscript of the work, but it is possible to reconstruct the bulk of it from the quotations preserved, mainly in Tabarī (iii 2519 *sq*), in the *Kitāb al-ʿUyūn* (*Iraqm hist arab*, i 297 *sq*), in Ibn Khallikān and al Suyūtī (p 7, 6 *sq*, 12 *sq*, 41, 46) From this it is evident that the brief biographical notes in Ibn Kutaiba (d 276) and the somewhat more full ones in the *Fihrist* (compiled in 377) are based on Ibn Saʿd The article on Mālik in Tabarī's (d 310) *Dhail al-Mudhayal* is essentially dependent on the same source, while a few other short references there and in his history are based on other authorities Al-Samʿānī (c 550) with the minimum of bare facts gives only the legendary version of an otherwise quite well established incident, while in Ibn Khallikān (d 672) and particularly in al-Nawawī (d 676) the legendary features are more pronounced although isolated facts of importance are also preserved by them Al-Suyūtī (d 911) gives a detailed compilation from Ibn Saʿd and other works, most of which are now no longer accessible but are for the most part of later date and unreliable, like the *Musnad Hadīth al-Muwaṭṭaʾ* of al-Kāfikī, the *Hilya* of Abū Nuʿaim, the *Kitāb al-Muttafak wa 'l-Muthtalaf* of al-Khatīb al Baghdādī, the *Kitāb Tartīb al-Madārik* of al-Kādī ʿIyād, the *Fadāʾil Mālik* of Abu 'l Hasan Fihr The bulk of the later *Manākib*, for example that of al-Zawāwī, is of no independent value

II Mālik's Life

Mālik's full name was Abū ʿAbd Allāh Mālik b Anas b Mālik b Abī ʿĀmir b ʿAmr b al-

Hārith b Ghaimān b Khuthail b ʿAmi b al-Hārith al-Aṣbahī, he belonged to the Humair, who are included in the Banū Taim b Murra (Taim Kuraish)

The date of his birth is not known, the dates given, varying between 90 and 97 are hypotheses, which are presumably approximately correct As early as Ibn Saʿd we find the statement that he spent three years in his mother's womb (over two according to Ibn Kutaiba, p 290), a legend, the origin of which in a wrong interpretation of an alleged statement by Mālik on the possible duration of pregnancy is still evident in the text of Ibn Saʿd According to a tradition preserved by al Tirmidhī, Muhammad himself is said to have foretold his coming as well as that of Abū Hanīfa and al-Shāfiʿī His grandfather and his uncle on the father's side are mentioned by al-Samʿānī as traditionists, so that there is nothing remarkable in his also being a student According to the *Kitāb al-Aghānī*, he is said to have first wanted to become a singer, and only exchanged his career for the study of Fikh on his mother's advice on account of his ugliness (cf Goldziher, *Muh Stu dien*, II 79, note 2), but such anecdotes are little more than evidence that some one did not particularly admire him Very little reliable is known about his studies, but the story that he studied Fikh with the celebrated Rabiʿa b Farrūkh (d 132 or 133 or 143) who cultivated *raʾy* in Medina, whence he is called Rabīʿat al-Raʾy can hardly be an invention, although it is only found in somewhat late sources (cf Goldziher, *op cit*, p 80) Later legends increase the number of his teachers to incredible figures 900, including 300 tābiʿūn are mentioned He is said to have learned *kirāʾa* from Nāfiʿ b Abī Nuʿaim He transmitted traditions from al-Zuhrī, Nāfiʿ, the Mawlā of Ibn ʿUmar, Abu 'l-Zinād, Hāshim b ʿUrwa, Yahyā b Saʿid, ʿAbd Allāh b Dinar, Muhammad b al-Munkadir, Abu 'l-Zubair and others, but the isnāds of course are not sufficient evidence that he studied with the authorities in question, a list of 95 shuyūkh is given by al Suyūṭī, p 48 *sqq*

A fixed chronological point in his life, most of which he spent in Medīna, is his being involved in the rising of the ʿAlid pretender Muhammad b ʿAbd Allāh in 145 (on the other hand the story of Mālik's alleged dealings with Ibn Hurmuz in the same year gives the impression of being quite apocryphal) As early as 144 the caliph al-Mansūr sent to the Hasanids of Mecca through him a demand that the two brothers Muhammad and Ibrāhīm b ʿAbd Allāh suspected of being pretenders should be handed over to him, this shows that he must have already attained a position of general esteem and one at least not openly hostile to the government, he was even rewarded out of the proceeds of the confiscated property of the captured ʿAbd Allāh, father of the two brothers above named This mission met with no success When Muhammad in 145 by a coup made himself master of Medīna, Mālik declared in a *fatwā* that the homage paid to al-Mansūr was not binding, because it was given under compulsion, whereupon many who would otherwise have held back joined Muhammad Mālik took no active part in the rising but stayed at home On the failure of the rebellion (147) he was punished by flogging by Djaʿfar b Sulaimān, the governor of Medīna, when he suffered a dislocation of the shoulder, but this is said to have still further increased his prestige and there is no reason to doubt that the stories of Abū Hanīfa's ill treatment in prison are based on this episode in the life of Mālik He must have later made his peace with the government in 160 the caliph al-Mahdī consulted him on structural alterations in the Meccan sanctuary, and in the year of his death 179 the caliph al Rashīd visited him on the occasion of his pilgrimage While this fact may be considered certain, the details in the *Kitāb al-ʿUyūn* are already somewhat legendary and in Suyūṭī, following Abū Nuʿaim, quite fantastic The story of al Mansūr found as early as Ibn Saʿd, in a parallel *riwāya* in al Tabarī of al-Mahdī, is quite fictitious and is given again with fantastic detail in al-Suyūṭī (from Abū Nuʿaim) of al-Rashīd, that the caliph wanted to make the *Muwatta'* canonical and only abandoned his intention on the representations of Mālik

Mālik died, at the age of about 85 after a short illness, in the year 179 in Medina and was buried in al-Bakīʿ ʿAbd Allāh b Zainab, the governor there, conducted his funeral service An elegy on him by Djaʿfar b Ahmad al-Sarrādj is given in Ibn Khallikān Pictures of the *kubba* over his grave are given in al-Batanūnī, *al-Rihla al-Hidjāzīya*[2], opposite p 256 and in Ibrāhim Rifʿat Pasha, *Mirʾāt al Haramain*, vol I, opposite p 426

As early as Ibn Saʿd (certainly going back to al Wākidī) we have a fairly full description of Mālik's personal appearance, his habits and manner of life, which however cannot claim to be authentic, nor can the sayings attributed to him which became more and more numerous as time went on The few certain facts about him have been buried under a mass of legends the most important facts have already been noted and the others will be found in al-Suyūṭī and al Zawāwī

On the transmitters of his *Muwatta'* and the earliest members of his madhhab see Sect III and V, here we will only mention the most important scholars who handed on traditions from him These were ʿAbd Allāh b al Mubārak, al-Awzāʿī, Ibn Djuraidj, Hammād b Zaid, al-Laith b Saʿd, Ibn Salama, al Shāfiʿī, Shuʿba, al-Thawrī, Ibn ʿUlaiya, Ibn ʿUyaina, Yazīd b ʿAbd Allāh and his shaikhs al-Zuhrī and Yahyā b Saʿid, al Suyūṭī, p 18 *sqq* gives a long list of transmitters but most of them are not corroborated We may just mention the apocryphal story of Mālik's meeting with the young al Shafiʿī (*Iraqm hist ar*, I 359, Wüstenfeld, *Gott Abh*, 1890, p 34 and 1891, p I *sqq*), which is simply an expression of the view that was held of the relation between the two Imāms

III Mālik's Writings

Further sources for his teachings

I Mālik's great work is the *Kitāb al-Muwatta'*, which, if we except the *Corpus Juris* of Zaid b ʿAlī, is the earliest surviving Muslim law book Its object is to give a survey of law and justice, ritual and practice of religion according to the *idjmāʿ* of Islām in Medina, according to the *sunna* usual in Medina and to create a theoretical standard for matters which were not settled from the point of view of *idjmāʿ* and *sunna* In a period of recognition and appreciation of the canon law under the early ʿAbbāsids, there was a practical interest in pointing out a "smoothed path" (this

is practically what *al-muwaṭṭaʾ* means) through the far reaching differences of opinion even on the most elementary questions Mālik wished to help this interest on the basis of the practice in the Ḥiḏjāz and to codify and systematise the customary law of Medina Tradition, which he interprets from the point of view of practice, is with him not an end but a means, the older jurists are therefore hardly ever quoted except as authorities for Mālik himself As he was only concerned with the documentation of the *sunna* and not with criticism of its form, he is exceedingly careless as far as order is concerned in his treatment of traditions The *Muwaṭṭaʾ* thus represents the transition from the simple Fikh of the earliest period to the pure science of Ḥadīth of the later period

Mālik was not alone among his contemporaries in the composition of the *Muwaṭṭaʾ*, al Mādjashūn (d 164) is said to have dealt with the consensus of the scholars of Medina without quoting the pertinent traditions, and works quite in the style of the *Muwaṭṭaʾ* are recorded by several Medina scholars of the same time (cf Goldziher, *op cit*, p 219 *sq*) but nothing of them has survived to us The success of the *Muwaṭṭaʾ* is due to the fact that it always takes an average view on disputed points

In transmitting the *Muwaṭṭaʾ*, Mālik did not make a definitive text, either oral or by *munāwala*, to be disseminated, on the contrary, the different *riwāya*'s (recensions) of his work in places differ very much (cf Goldziher, *op cit*, p 222) The reason for this, besides the fact that in those days very little stress was laid on accurate literal repetition of such texts and great liberty was taken by the transmitters (cf Goldziher, *op cit*, p 221), lies probably in the fact that Mālik did not always give exactly the same form to the same lectures in different "classes" But the name *Muwaṭṭaʾ*, which certainly goes back to Mālik himself, and is found in all recensions is a guarantee that Mālik wanted to create a "work" in the later sense of the term, although of course the stories which make Mālik talk of his writings reflect the conditions of a later period In later times the *Muwaṭṭaʾ* was regarded by many as canonical (cf Goldziher, *op cit*, p 213, 265 *sq*, al-Suyūṭī, p 47) and numerous legends deal with its origin (al-Suyūṭī, p 42 *sqq*)

Fifteen recensions in all of the *Muwaṭṭaʾ* are known, only two of which still survive in their entirety, while some five were studied in the IIIth/IXth centuries A H in Spain (Goldziher, *op cit*, p 222, note 2 and 4) and twelve were still available to al-Rudānī (d 1094) (Heffening, *Islamendrecht*, p 144, note 1)

a the vulgate of the work transmitted by Yaḥyā b Yaḥyā al Masmūdī (d 234), often printed, e g Delhi 1216, 1296 (without isnāds, with Hindustānī translation and commentary), 1307, 1308, Cairo 1279—1280 (with the commentary of Muḥammad b ʿAbd al-Bakī al-Zurkānī, d 1122), Lahore 1889, Tunis 1280, numerous commentaries, editions and synopses, cf Brockelmann, *GAL*, I 176, Ahlwardt, *Katalog Berlin*, 1145, Muḥammad ʿAbd al-Ḥaiy al-Lakhnawī (Introduction to the edition of the recension *b*), Lucknow 1297, p 21 *sqq*, al-Suyūṭī, p 3 and passim (work of al Fāsī), p 57 (on Ibn ʿAbd al-Barr) and p 58 (chief passage), Goldziher, *op cit*, p 230, note 2, Schacht, *Abh Preuss Ak*, 1928, N⁰ 2 *c*, and al-Suyūṭī, *Iʿtāf al-Mubaṭṭaʾ bi-Riḏjāl al Muwaṭṭaʾ*, Delhi 1320 and Muḥammad b Ṭāhir al-Patnī, *Madjmaʿ Biḥār al-Anwār*, Lucknow 1283,

b the recension of Muḥammad b al Ḥasan al-Shaibānī (d 189) which is also an edition and critical development of Mālik's work, as al-Shaibānī at the end of most chapters gives his own views and that of Abū Ḥanīfa on the questions discussed, sometimes with very full reasonings, often printed e g Lahore 1211—1213 (with Hindustānī translation and notes), Ludhiana 1291, 1292, 1293, Lucknow 1297 (with introduction and commentary by Muḥammad ʿAbd al-Ḥaiy al Lakhnawī), Kasan 1910 (do), several commentaries, cf Brockelmann, *op cit*, Schacht, *op cit*, N⁰ 2, 2*a*, 2*b*, and the works quoted under *a*

On the relation of these *riwāyas* to one another cf Goldziher, *op cit*, p 223 *sqq*

c The quotations from the recension of ʿAbd Allāh b Wahb (d 197) which are preserved in the two fragments of al-Ṭabarī's *Kitāb Iḫtilāf al-Fukahāʾ* (ed Kern, Cairo 1902, and Schacht, *op cit*, N⁰ 22) are fairly comprehensive, this *riwāya* follows that of Yaḥyā b Yaḥyā quite closely

The other recensions of the *Muwaṭṭaʾ* are given by al Lakhnawī, *op cit*, p 18 *sqq*, further lists of transmitters of the *Muwaṭṭaʾ* are given in al-Suyūṭī, p 48, 51 and in al-Nawawī

2 Whether Mālik composed other works besides the *Muwaṭṭaʾ* is doubtful (the statements in the *Fihrist*, p 199, 9 *sq*, which speak of a number of writings by Mālik are quite vague and uncertain) The books ascribed to him fall into two groups legal and otherwise Among the legal we read of a *Kitāb al-Sunan* or *al Sunna* (*Fihrist*, p 199, 9, 16) transmitted by Ibn Wahb or by ʿAbd Allāh b ʿAbd al Ḥakam al-Miṣrī, a *Kitāb al-Manāsik* (al-Suyūṭī, p 40), a *Kitāb al Muḏākalasāt*, transmitted by Ibn Wahb (*ibid*) a *Risāla fi 'l-Akḍiya*, transmitted by ʿAbd Allāh b ʿAbd al-Djalīl (*ibid*, p 41) and a *Risāla fi 'l Fatwā*, transmitted by Khālid b Nazzār and Muḥammad b Mutarrif (*ibid*) The genuineness of all these is, however, uncertain and even if they go back to Mālik's immediate pupils (sometimes they are actually attributed to the latter, cf al-Lakhnawī, *op cit*, p 19) Mālik's own share in them would be still uncertain A book (Gotha 1143) said to have been transmitted by ʿAbd Allāh b ʿAbd al-Ḥakam al-Miṣrī and heard by him along with Ibn Wahb and Ibn al Kāsim is certainly apocryphal and besides does not pretend to give any utterances of Mālik himself

Of other titles are mentioned a *Tafsīr*, a *Risāla fi 'l Kadar wa 'l-Radd ʿala 'l Kadarīya*, a *Kitāb al-Nuḏjūm* and a *Kitāb al Sirr* (al Suyūṭī, p 40 *sq*) which are in the usual style of the apocryphal literature The suspicion of falsity is also strong in the case of the *Risāla* containing advice to the caliph al-Rashīd, mentioned as early as the *Fihrist* alongside of the *Muwaṭṭaʾ* (printed Būlāk 1311, cf Brockelmann, *op cit*) which look like a Mālikī counterpart of the *Kitāb al-Kharādj* of Abū Yūsuf even al Suyūṭī doubted its genuineness, although for reasons which are not convincing to us

3 There are two other main sources for Mālik's teaching (setting aside the later accounts of the doctrine of the Mālikī madhhab)

The more important is the *al-Mudawwana al-Kubrā* of Sahnūn (d 240) which contains replies by Ibn Kāsim (d 191) according to the school of Mālik or according to his own *raʾy* to questions of Sahnūn as well as traditions and opinions of

Ibn Wahb (d 197) (cf Brockelmann, *op cit*, p 177, Heffening, *op cit*, p 144, Krenkow, in the article SAHNŪN)

Al-Tabarī who in his *Kitāb Ikhtilāf al-Fukahā'* has preserved fragments of the *Muwatta'*-recension of Ibn Wahb (cf above), also quotes frequently traditions and opinions of Mālik in his commentary on the Kur'ān on the "legal" verses

IV Mālik's position in the history of Fiḳh

Mālik represents, in time, a stage in the development of Fikh in which the reasoning is not yet thorough and fundamental but only occasional and for a special purpose, in which the legal thought of Islām has not yet become jurisprudence and, in place, Medīna where the decisive foundations of Muslim law were laid down One of the main objects in the juristic thought that appears in the *Muwaṭṭa'* is the permeation of the whole legal life by religious and moral ideas This characteristic of the formation of legal ideas in early Islām is very clear, not only in the method of putting questions but in the structure of the legal material itself The legal material, having in itself no connection with religion, that has to be permeated by religious and moral points of view, is the customary law of Medīna, by no means primitive but adapted to the demands of a highly developed trading community, which for us is the principal representative of old Arabian customary law it appears in Mālik sometimes as *sunna* "use and wont", sometimes it is concealed under the Medīna *iḏmā'* which he ascertains with great care, broadly speaking this only means that objections on religious grounds have not been raised by anyone against a principle etc of customary law The older jurisprudence had another main object the formation of a system which sets out from principles of a more general character, which aim at the formation of legal conceptions in contrast to the prevailing casuistry and is to some extent rounded off in a codification, if still a loose one, of the whole legal material

While the islamisation of the law had been already concluded in its essential principles before Mālik, many generations had still to work at its systematisation, therefore Mālik's own legal achievement can only have consisted in the development of the formation of a system How great his share in it was cannot be ascertained with certainty from the lack of material for comparison The surprising success achieved by the *Muwaṭṭa'* of Mālik out of a number of similar works, would in any case be completely explained by the fact that it recorded the usual consensus of opinion in Medīna without any considerable work of the author's own and came to be regarded as authoritative as the expression of compromise (just as the works on Tradition came to be regarded as canonical) The *Muwaṭṭa'* would in this case have to be regarded less as evidence of Mālik's individual activity than as evidence of the stage reached in the general development of law in his time It may be said that this average character was just what Mālik aimed at (cf Sect III 1)

The high estimation in which Mālik is held in the older sources is justified by his strict criticism of Hadīth and not by his activity in the interest of Fiḳh (al-Tabarī, III 2484, 2492, al Samʿānī, al-Nawawī, Goldziher, *op cit*, p 147, 168, do, *Zâhiriten*, p 230), even this only means that with his hadiths he kept within the later consensus That al-Shāfiʿī devoted special attention to him out of all the Medīna scholars (cf his *Kitāb Ikhtilāf Mālik wa 'l-Shāfiʿī*) is explained by the fact that he was a disciple of his

As to the style of legal reasoning found in the *Muwaṭṭa'*, Hadith is not by any means the highest or only court of appeal for Mālik, on the one hand he gives the *ʿamal*, the actual undoubted practice in Medīna, the preference over traditions, when these differ (cf al-Tabarī, III 2505 *sq*) and on the other hand in cases where neither Medīna tradition nor Medina *iḏmāʿ* existed, he laid down the law independently, in other words he exercises *raʾy*, and to such an extent that he is occasionally reproached with *taʿarruk*, agreement with the ʿIrākis (cf Goldziher, *Muh Studien*, II 217, do, *Zâhiriten*, p 4 *sq*, 20, note 1) According to a later anti *raʾy* legend, he is said to have repented of it on his deathbed (Ibn Khallikān) It is scarcely to be supposed that he had diverged seriously from his Medina contemporaries in the results of his *raʾy*

V Mālik's Pupils

The Mālikī Madhhab

In the strict sense Mālik no more formed a school than did Abū Hanīfa, evidence of this is found in the oldest names *Ahl al-Ḥiḏjāz* and *Ahl al-ʿIrāḳ* resp, compared for example with *Aṣḥāb al-Shāfiʿī* These names at once indicate the probable origin of the Mālikī madhhab, after a regular Shāfiʿī school had been formed, which in view of al-Shāfiʿī's personal achievement, is quite intelligible in the development of Fikh (cf Bergsträsser, *op cit*, p 76, 80 *sq*), it became necessary for the two older great schools of Fikh, whose difference was probably originally the result of geographical conditions in the main, also to combine to form a regular school, when a typical representative of the average views like Mālik or Abū Hanīfa was regarded as head In the case of Malik the high personal esteem, which he must have enjoyed even in his life time (cf Sect II) no doubt contributed to this also But it is to his pupils that his elevation to the head of a school is mainly due Traces of this process are still to be found in the varying classification of old jurists as of the Ḥiḏjāz school or as independent mudjtahids (cf also *Fihrist*, p 199, 22)

Among Mālik's pupils and companions who soon became known as Mālikīs may be mentioned al-Laith b Saʿd (d 161 or 165 or 175), ʿAbd al-Rahmān b al-Kāsim (d 191), ʿAbd Allāh b Wahb (d 197), Maʿn b ʿĪsā (d 198), Ashhab b ʿAbd al-ʿAzīz (d 204), ʿAbd al-Malik b ʿAbd al-ʿAzīz (d 212), ʿAbd Allāh b ʿAbd al Hakam (d 214), ʿAbd Allāh al-Kaʿnabī (d 221), Ismāʿīl b Uwais (d 226) and his brother Abū Bakr, Sahnūn (d 240) Sahnūn was too late to hear Mālik himself, with him the formation of the Mālikī madhhab is already concluded

Of the later Mālikī Fikh literature two short compendia attained special fame as text-books the *Risāla* of ʿAbd Allāh b Abī Zaid al-Kairawānī (d 386) whom the author of the *Fihrist* mentions as an important contemporary (p 201, 12) and the *Mukhtasar* of Khalil b Ishāk (d 767), numerous commentaries on and editions of both exist and they have also been discussed in Euro-

pean languages (cf *Bibl*) Their importance has sometimes been exaggerated in Europe, development did not stop with them (cf Probstei, *Zeitschr f vergl Rechtswiss*, xlii 422 *sqq*, Probster deals with an important later jurist in *Islamica*, ii 430 *sqq*) His immediate pupils are not to be regarded as opponents of *raʾy* any more than Mālik, and the Mālikī madhhab is not at all more conservative or traditionalist than the Hanafī for example (B Ducati in *Islamica*, iii 214 *sqq*, even endeavours to show that it is the most juridical of the Muslim schools of law)

The Mālikī madhhab spread mainly in the west of the Muslim world, after it had succeeded in driving out the madhhab of al Awzāʿī and the Zāhiri school, it prevailed not only in the Maghrib (Tunis, Algeria, Morocco, including Muslim Spain) but in all the rest of Africa, so far as it has adopted Islām The Mālikī school has many followers in Egypt in Upper Egypt it occupies about the same position as the Shāfiʿī in Lower Egypt This geographical distribution seems to go back to corresponding conditions existing before the formation of the madhhabs Particularly ardent or successful disseminators of Mālik's teaching were ʿAbd al-Malik b Habīb al-Sulamī (d 238 or 239) and Ismāʿīl b Ishāk (d 282, *Fihrist*, p 200, 3) but there must also have been earlier scholars for whose time the existence of a regular school is doubtful

(J SCHACHT)

MĀLIK B ʿAWF, a contemporary of Muhammad, called al-Nasrī, to distinguish him from several men of the same circle in his time, and also because he traced his descent through Nasr b Muʿāwiya to the eponymous ancestor of the powerful Kaisī tribe of the Banū Hawāzin We know very little about his history previous to the day of Hunain [q v] to which he owes his dubious fame We may assume that he early found opportunities to display his personal bravery He was still *amrad*, "beardless" (*Aghānī*, xix 81) — that is, barely out of his first years of adolescence — when he commanded a detachment of the Hawāzin in the Fidjār [q v] war

This distinction he perhaps also owed to the consideration which his clan, the Banū Nasr b Muʿāwiya, enjoyed among the Banū Hawāzin Allies of the tribe of Thakif (*Aghāni*, xii 46), the Banū Nasr found themselves in the same position with regard to the latter and the town of Tāʾif as the *Ahābish* with respect to the Kuraish and Mecca They supplied mercenaries to Tāʾif and were given the task of defending the town and protecting against the depredations of marauders the fine gardens that covered the Thakafi territory Their relations were, as a rule, peaceful and friendly, but occasionally it happened that the anarchical instincts of the Beduins gaining the upper hand drove them to encroach on the domain of their allies, the citizens of Tāʾif This situation enables us to understand how in the struggle that was about to develop against Islām, the Tāʾifīs were ready to march under the banner of a Beduin generalissimo

In the year 8, Muhammad at the head of a strong force was preparing to attack Mecca This news disturbed the people who lived on the hills of the Sarāt They asked themselves, if, once master of Mecca, the Prophet would not be tempted to invade their country It was then that Mālik b ʿAwf succeeded in combining for their joint defence the majority of the Kaisi tribes, settled in the frontiers of Nadjd and of the Hidjāz The Thakafīs joined their forces to those of their Hawāzinī allies The only result was the defeat at Hunain The commander-in chief Mālik had had the unfortunate idea of bringing the women, children and flocks along with the actual combatants The whole of this enormous booty fell into the hands of the Muslims

The defeated side did not distinguish themselves by bravery on the battlefield, the tradition of the Banū Hawāzin attempts the impossible when it endeavours to hide this failure and save Mālik's reputation After the debacle, he is said to have bravely sacrificed himself to cover the retreat of his comrades-in arms This same tradition attributes

to him a series of poetical improvisations on this occasion, in which, after the fashion of the old Bedouin paladins he explains and excuses his flight

The defeated leader tried to make a stand at Liya, a few hours south of Ṭāʾif where he had a *ḥuṣn* What was a *ḥusn*? In Medīna at the time of the Hidjra the name was given to an enclosure commanded by an *utum* or tower Mālik's had probably only brick walls like the little strong holds in Yemen described by the geographer Makdisī (*Ahsan al-Takāsīm*, ed de Goeje, p 84) A century ago, the traveller Maurice Tamisier (*Voyage en Arabie*, Paris 1840, ii 5) passing through Liya saw there "une forteresse flanquée de tours" intended, as in the days of Mālik, to guard the road In any case, whatever the strength of the little building, Muhammad easily destroyed it When Mālik learned of the approach of the Muslims, he thought it prudent to seek refuge behind the ramparts of Ṭāʾif

In the interval all the booty taken by the Muslims at Hunain had been collected in the camp at Diʿrāna including Mālik's family and flocks To the Hawāzin deputies sent to negotiate the ransom of the prisoners, Muhammad said "If Mālik comes to embrace Islam, I shall return him his family and property with the addition of a gift of a hundred camels" Whatever the decision adopted by Mālik, this declaration could not fail to compromise him with the Thakafis He rightly recognised that his position in Ṭāʾif had become untenable He succeeded in escaping from the town and presented his submission to Muhammad who fulfilled his promise to the letter Mālik then pronounced the Muhammadan confession of faith and, to use the traditional formula, "his Islām was of good quality"

The new proselyte had extensive connections and was remarkably well acquainted with the Thaḳafī region The Prophet was glad to use him against Ṭāʾif which he had been unable to take by force He put Mālik at the head of the Kaisī tribes who had adopted Islam Mālik therefore organised a guerilla war against his old allies in Thakīf No caravan could leave Ṭāʾif without being intercepted by Mālik's men Exhausted by this unceasing struggle, the Thakafis decided to sue for terms Mālik then became the representative of the Prophet among the Banū Hawāzin, and the caliph, Abū Bakr, later confirmed him in the office He took part in the wars of conquest, and was at the taking of Damascus and the victory of Kādisīya in the ʿIrāk

(H LAMMENS)

MĀLIK B NUWAIRA, chief of the Banū Yarbūʿ, a considerable clan of the Banū Hanzala, who were in turn a branch of the confederation of the Banū Tamīm [q v] His liberality, magnanimity and especially his courage had earned him a great reputation before the Hidjra His contemporaries said that in the last respect he was without a peer There was a proverbial saying *fatā wa-lā ka mālik*, "a hero no doubt, but not comparable to Mālik" His fame, however, came principally from the impression made by his tragic death and from the collection of elegies, which his brother Mutammim [q v] devoted to him

Along with several other Tamīmī notables he embraced Islām in the lifetime of Muhammad In return the latter appointed him to collect the canonical taxes, *sadaḳāt*, from among of his fellow-tribesmen By giving him an appointment like this the Prophet hoped to bring him definitely to his side The death of the Prophet and the incident of the *ridda* [q v] served to show the foolishness of this hope Like most of the nomads, Mālik had joined Islām as a political organisation, having clearly made up his mind that he would not be absorbed by it to the extent of sacrificing the independence of his tribe and his own prerogatives

When the Muslims, or more accurately the Kuraish, of Medina gave their votes for Abū Bakr, Mālik refused to recognize the validity of this election which had been carried through without his participation in it He argued for the strictly personal character of the *baiʿa*, as the Bedouins interpreted it He explained himself in verse, for he was also a poet — "If the thing turns out badly, we shall bring a remedy, crying — long live the faith of Muhammad!" He did not stop at this but passing from words to deeds, he divided among the Tamīmīs the taxes which had been collected An even graver step, he next plundered a caravan which was taking to Medīna the contributions of those nomads who had remained loyal Then — an eminently Bedouin trait — he celebrated in verse this strange exploit, which was equivalent to a declaration of war He finally compromised himself completely by joining his cause with that of the prophetess Sadjāh [q v]

In Medina, Abū Bakr had at first to shut his eyes to these things But as soon as he felt himself master of the situation, he decided to act vigorously Khālid b al-Walid was sent against the secessionists His orders were to spare only those who declared themselves Muslims The individualism of the Bedouins singularly facilitated the task He attacked separately the tribes, who were divided or hesitating, and succeeded without difficulty in defeating the rebels in small sections Thus he came to the Banū Tamīm The chiefs were suspicious of one another and declined to combine for joint action Surprised by Khālid and finding himself almost alone, Mālik had to refrain from fighting forces so markedly superior to his He surrendered on an assurance that his life would be spared and finally declared himself a Muslim

The prisoners including Mālik were, nevertheless, executed with refinements of cruelty It was said there had been some misunderstanding of Khālid's orders for which dialectic differences were to blame, so say those authors who feel the need of exculpating Khālid It was by no means the first action of the kind of the impetuous Makhzūmī Did he want to get rid of a rival or deal the last blow to a rebellion by sacrificing, even against the laws of nations and his own orders, a person so highly esteemed as the chief of the Yarbūʿ? As he had been anxious to marry Lailā, the vivacious wife of Mālik, he was credited with the first aim ʿOmar demanded that the

ruthless leader should be dismissed and brought to judgment, but Abū Bakr refused "Never", he replied, "shall I put back in the scabbard a sword which Allāh has brought out of it" The elegies on Mālik by Mutammim remained celebrated in literary tradition "No dead man", said the Arabs, was ever lamented as Malik was by Mutammim"

(H LAMMENS)

MĀLIK AL ṬA'Ī, Abū Walīd Mālik b Abi l-Samh, was one of the great singers and composers of the Umaiyad and early ʿAbbāsid period He was born during the reign of Muʿāwiya I 40—60 = 660—680) in the land of the Tai', his father belonging to the Banū Thuʿl, a branch of the Tai', whilst his mother came from the Banū Makhzūm In this way Mālik could claim to be one of the aristocracy of Islām, and as a child he was adopted by ʿAbdallāh b Djaʿfar, the famous art patron of Madīna, and was given a good education In the year 64 (684), he became enamoured with the singing of the celebrated Maʿbad [q v] whom he heard at the house of Hamza b ʿAbdallāh b al-Zubair, and the event changed his whole career Taking lessons from Maʿbad and Djamila [q v] in singing, he soon astonished everyone by his abilities, and he became very popular with the aristocracy He thus came to be recognised as a professional musician, for indeed his protector, ʿAbdallāh b Djaʿfar, had made his house a veritable conservatory of music (al Masʿudī, *Murūdj*, v 385, text) On the death of ʿAbdallāh b Djaʿfar, Mālik attached himself to Sulaimān b ʿAlī the Hashimite In spite of this however (cf *J A*, Nov—Dec, 1873, p 499), Mālik was favoured by the Umaiyads Yazīd b Abd al Malik and al-Walīd b Yazīd On the accession of the ʿAbbāsids (132 = 750) Sulaimān was appointed governor of the Lower Tigris, and Mālik accompanied him to his seat at Basra After a short stay in this city, Mālik returned to Madīna, where he died over eighty years of age about the year 137 (754)

Mālik was certainly a fine singer In one place in the *Aghānī* at least (i 98, cf ii 127), he is mentioned as one of the "four great singers", by no less an authority than Ishāk al-Mawsilī, although the latter in another place ranks him after Ibn Suraidj, Ibn Muhriz, Maʿbad, and al-Gharīd *Aghānī*, ii 151) He was apparently not an original composer but a good adapter it would seem *Aghānī*, i 173, xiii 64) Certainly, he was at a disadvantage in not being a performer on the ute (ʿūd), and Maʿbad had to correct his compositions for him

(H G FARMER)

MALIKSHĀH B ALP ARSLĀN ABU 'L-FATH, Saldjūk Sultān (465—485 = 1072—92), born on the 9th or 19th Djumādā I, 447 (Rāwandī and *Lubb al-Tawārīkh* wrongly 445) = Aug 6th or 16th, 1055 He accompanied his father on his last campaign into Transoxania and homage was at once paid to him as Sultān by the vizier Nizām al-Mulk and the Turkish amīrs on Alp Arslān's death His uncle Kāwurd [q v], the ruler of Kirmān, was not satisfied with this, however, because he thought that, as the oldest member of the family, he had the best claim to the throne and set out with his troops for Hamadhān When attacked by Malikshāh they made but feeble resistance Kāwurd himself was captured and later strangled (April 1078) Malikshāh then returned to Transoxania by forced marches for the Khakān of Samarkand, Shams al-Mulk, on hearing of the death of Alp Arslān, had seized the opportunity to occupy Tirmidh and even Balkh had opened its gates to him The Saldjūk governor Ayāz, a brother of Alp Arslān, happened to be away at the time and when he hurried back, he suffered a terrible defeat and died soon afterwards Shams al-Mulk, however, did not dare to risk another breach with Malikshāh, so the latter re occupied Tirmidh and proceeded to Samarkand The Khakān thereupon submitted, Balkh and Tokhāristān were granted to Malikshāh's brother Takash These campaigns prevented the Sultān from going at once to Baghdād to receive the homage of the Caliph in person, and an ambassador was sent to carry through the ceremony The Caliph was quite ready to do so, and gave the Sultān the honorific titles of Djalāl al-Dawla, Muʿizz al Dīn, Kāsim Amīr al-Muʾminīn Our sources are silent about the happenings of the next few years, it is not till 472 that we hear of a campaign against Kirmān, which, however, came to a peaceful termination for Sultānshāh, Kāwurd's son, submitted to the Sultān and was confirmed by him in the hereditary possession of this province In Ibn al Kalānisī (ed Amedroz, p 115), we are told that in 475 Malikshāh came to Halab, but Ibn al-Athīr and the other sources accessible to me make no reference to this At this time the Sultān made the mistake of discharging 7,000 of his soldiers, although the vizier advised him against it, pointing out that if these men were deprived of their livelihood, they would in desperation become robbers or rebels and a public danger This is what actually happened The men went to Takash and he thought that with their help he was strong enough to rebel against his brother He took several towns and was preparing to occupy all Khorāsān so that Malikshāh was forced to take the field against him Takash then retired to Tirmidh, and submitted when besieged there, on this occasion he was pardoned, but when he again rebelled without success a few years later (477 = 1084), he was blinded and thrown into prison in Takrit In 479 (1086) Malikshāh left Isfahan which he had made his capital and went via al Mawsil, Harrān, al-Ruhā and Kalʿat Djaʿbar to Halab His object was to establish and re organise Saldjūk rule securely in these places, but one great inducement for this campaign was that the commander of Halab had appealed to Malikshāh because he was threatened by the latter's brother Tutush [q v] The latter had conquered the Saldjūk ruler of Asia Minor, Sulaimān b Kutulmish [q v], and was trying to

bring Halab under his rule also, but retired when he heard of the approach of Malikshāh The town was granted to Aksonkor, father of Zangī, another general Burān received al-Ruhā and Yaghisiyān, Antākiya which had just been retaken from Sulaimān while Sulaimān's son Kilidj Arslān [q v] who was still a youth was taken back by the Sultān to the ʿIrāk There was no further campaign in Asia Minor, Malikshāh left the war against the Byzantines to be conducted by the above mentioned amirs, to whom should be added Buisuk, although the author of the *Zubdat al-Tawārikh* makes him besiege Constantinople in person The fiction narrated in the *Taʾrikh i Guzida* and in Mirkhwānd is well known, according to which Malikshāh was taken prisoner by the Byzantines without their recognizing him, and only regained his liberty by the stratagem of the vizier, Nizām al Mulk The story in al bondārī is more credible that the Byzantines had to pay the Sultān an annual tribute of 300,000 dīnārs plus a lump sum of 30,000 dīnārs On his return from Halab, Malikshāh visited Baghdād for the first time and he was received in ceremonial audience by the Caliph al-Muktadī bi Amr Allāh The latter had previously in 474 sought a daughter of the Sultān in marriage but as she had been then still a child, the opportunity was now taken to conclude the matrimonial alliance The wedding took place next year with great splendour and amid the jubilation of the people of Baghdād The chroniclers give a full account of it and give no hint that this marriage was soon to be a source of trouble to the Caliph as well as to the Sultān Before we deal with that, it must be mentioned that in 482 (1089) Malikshāh undertook a second campaign against Bukhāra, Samarkand and Kashghar as a result of the tyrannical conduct of the young prince Ahmad, a nephew of Shams al Mulk who was now dead He gained great successes, took Ahmad back a prisoner to the ʿIrāk and then forced the ruler of Kashghar to recognize Saldjuk suzerainty Later however, he allowed Ahmad to return to his kingdom and resume his rule, probably at the intercession of his wife Tarkān Khatun (so to be read, not Turkan Khatun) who was Ahmad's aunt On these incidents, cf Barthold *Turkestan down to the Mongol Invasion*, p 316 *sqq* Towards the end of the reign of Malikshāh the Saldjūk empire thus reached its greatest extent, especially when in 485 some Turkish amirs were sent even so far as Yaman, who subdued the land for the Sultān, temporarily only, it is true

As regards the internal administration of the country, the Sultān left this in the hands of his vizier, Nizām al-Mulk, who was given unlimited power by him at the very beginning of his reign, which he wielded till his death, although as a result of his great age his prestige began to decline towards the end of the reign of Malikshāh and to be threatened by intrigues in the palace His services will be appreciated in the article NIZĀM AL-MULK, here it is sufficient to characterize his policy briefly, which was to restore the dominion of orthodox Islām under its supreme head, the Caliph, with the help of the sword of the Saldjūks He had, therefore, to do all he could to maintain harmony between the Sultān and the Caliph, but the course of events led to a breach between the two Malikshāh had several sons by his wife Zubaida Khatun, and the eldest, Ahmad, had been designated successor to the throne but died in 481 (1088) The obvious thing was for Prince Barkiyaruk to take his place as was desired by Nizām al Mulk and the Turkish amīrs but Malikshāh had in the meanwhile married another wife, the Princess Turkan Khatun, who made every effort to secure the throne for her son Mahmūd born in 480 Malikshāh, however, was more anxious about his daughter who had married the Caliph, for she was unhappy in Baghdād and complained of being neglected by her husband, so that finally the Sultan demanded that she should be sent home with the little son whom she had borne to the Caliph She, therefore, returned to her father but died soon afterwards in 482, her son Djaʿfar however, became his grandfather's pet and he gave him the name of "Little Commander of the Faithful" in the hope that he would one day bear this title in reality At the same time he decided to make Baghdād his winter capital and had extensive building operations carried out in the N E of the town when he was there in the winter of 1091/92, including a great mosque, the Djāmiʿ al Sultān, he also ordered Nizām al Mulk and his amirs to build residences for themselves there During this period the great amirs from the west, Aksonkor, Tutush etc, had come to Baghdād, great hunts and other pleasure parties were held, but the Caliph was completely ignored When in the autumn of 1092 he was on his way from Isfahān to Baghdad for the third time, the aged vizier Nizām al Mulk was stabbed by a *fidāʾī* at Sahna It was now for the first time apparent how much the existence of the Saldjūk empire depended on this one man, for when the Sultān and his wife were no longer guided by his advice, they committed the gravest errors, which were very soon to plunge themselves and their empire into destruction Scarcely had the Sultān arrived in Baghdād than, with the intention of making his grandson Caliph, — which was contrary to Muhammadan law as he was a minor — he announced to Muktadī that he must at once abdicate and leave the town With difficulty the Caliph obtained a few days respite which he was spending in prayer and fasting, when suddenly the news came that the Sultān was dead The exact date is not certain but it was about the middle of Shawwal 485 (middle of November 1092) He was said to have caught a severe fever while out hunting, which they attempted to cure without success by bleeding, and he died soon afterwards But it can hardly be doubted that he was poisoned, as some writers expressly state (cf Houtsma, in *Journal of Indian History*, Sept 1924, p 147 *sqq*) The usual funeral ceremonies were not held, the body was sent to Isfahān and buried there The Caliph had no difficulty in coming to terms with Tārkān Khatun, he offered to recognize her young son Mahmūd as Sultān, if she would hand over to him his own son, the Sultān's grandson This was done The little "Commander of the Faithful" died the very next year, when the course of events took a disastrous turn for the Caliph and Tārkan Khatun with the rise of Barkiyāruk The tragic deaths of the Sultān and his vizier were celebrated in verse by Muʿizzī, cf Schefer, *Siassetnameh*, suppl, p 62 *sq*

Malikshāh's was a highly honourable character, he was loyal to his relatives and to his servants, brave, just and gentle His rule is, therefore, much praised by Christian as well as Muslim

authors, but he was uncultured and owed to his vizier the reputation of a patron of learning, whose name is associated with a reform of the calendar [cf the article DJALĀLĪ], and with certain new legislation, cf *al-Masāʾil al-Malikshāhiya*, in *ʿUrāda fī Ḥikāyat al-Saldjūkiya*, ed Sussheim, p 69 *sq* His connection with the *Risāla i Malikshāhiya*, a geographical work used by Hamd Allah Mustawfī, is unknown but it was certainly not written by the Sultān himself, as Ḥādjdjī Khalīfa says (s v)

The name Malikshāh was further borne by 1 Malikshāh, the infant son of Barkiyāruk, who after the death of his father in 1104 held the title of Sultān for a short time, but had soon to give way to his uncle Muḥammad 2 Malikshāh b Maḥmūd who, after the death of his uncle Masʿūd in 1152 became Sultān, but after a few months was thrown into prison as he was quite an incapable ruler, escaped from confinement, spent some time in Khorāsān and died in 1160 We also find individuals of this name among the Saldjūks of Rūm and Syria and among the Khwārizmshāh's

Bibliography cf the article SALDJŪKS The best sketch of the character and reign of Malikshah is in the article on him by Ibn Khallikan, who had taken many of his facts from a history by al-Ḥamdhānī (MS of vol i till the year 367 in Paris, *Bibl Nat*, No 1469)

(M TH HOUTSMA)

MALTA, the chief island of the Maltese archipelago (Malta, Gozo, Comino, Cominotto, Filfola and minor rocks), inhabited in ancient times by a Mediterranean race, whose megalithic monuments are preserved at Hagiar Kim ("standing stones"), Hal Tarxen and Hal Saflieni It was colonized very early, certainly before the xth century B C, by the Phoenicians, and formed a base for their trading ships

It is not certain that the name of Malta is derived from the Phoenician, while the Phoenician origin of Gaulos (Gozo), meaning "a merchant boat of round shape", seems certain

The Carthaginians became masters of the island in the viith—vith century B C, and kept it four or five centuries The Romans conquered it in 218 B C, and for the next ten centuries Malta remained under Roman and Greek influence, being situated near Eastern Sicily Gozo had only Greek coins, and Greek and Roman coins in great number were minted in Malta Very early, with St Paul in the first century, the island was converted to Christianity, during the Western Empire's decay the Byzantines established themselves in it, after their conquest of Northern Africa the possession of Malta became indispensable to them

The Muslim conquest of Malta is usually ascribed to the year 256 (869—870), in reality it was occupied long before Ibn al Athīr informs us that in 221 (835—836), the Aghlabid Ibrāhīm "despatched a fleet against the islands", we have every reason for believing that he refers to the islands between Africa and Sicily, comprising the Maltese islands Further when Ibn al-Athīr speaks of an army sent to Malta from Sicily in 256, he adds that at that moment "the Christians raised the siege" If Malta was besieged, undoubtedly by the Greeks of Byzantium, it may be concluded that it had already been occupied by the Muslims, who probably, having landed in 824 at Mazara, in Sicily, had occupied the Maltese islands beforehand

The raids against Sicily and Malta began in the viiith century A D, and it is not rash to believe that Malta fell before 800 A D under Muslim influence This is also de Goeje's opinion (*Z D M G*, lviii 905, note 2)

In Malta the Muslim occupation was certainly more permanent and strongly established than in Sicily, the narrow island was completely subjugated by the conquerors, and this helps us to understand how the Arab-Berber Muslims of Africa succeeded in forcing upon Malta the Arabic language, from which the modern Maltese dialect is derived

The question of the origin of the Maltese dialect has occasioned many discussions between those who sustained its Phoenician origin (Vassalli, Bres, Bellermann, Cumbo, L Caruana, Preca) and those who derived it from Arabic (Gesenius, de Sacy, L Bonelli, Stumme, Noldeke) The conclusion must be accepted that Maltese is an Arabic dialect, which in some ways shows resemblances to the Eastern Arabic dialects, in many others recalls the Arabic dialects of the Maghrib Peculiarities of Maltese phonetics are the *imāla* of *ā*, which tends to become *ī* and *ie* (*je* at the beginning of words, as *jenā* for *ānā*), the pronunciation of ء as *hamza*, the existence of *p* and *c* sounds in neo latin and arabic words, in morphology the use of ي as prefix of the 1st person singular forms the main affinity with the Maghrib dialects The accent tends to fall towards the beginning of words In Malta itself are to be found dialectal varieties between town and country, in the country and in Gozo the dialect is nearer the original Arabic, sounds like *ḳh* and *ġ*, not heard in Valletta, are noticeable in the Gozo vernacular

A study of the Maltese lexicon, to show how affinities with Arabic dialects, Eastern and Western, may be explained, and how word-fossils have been preserved in Maltese, is still to be undertaken The prevalence of the Latin Italian race and the flourishing of Italian civilization and culture in the island have influenced its dialect, both as to syntax and as to phonetics The percentage of Latin, or rather Italian, words in spoken Maltese varies according to the degree of individual culture

The Maltese, up to a few centuries ago, had not chosen any particular alphabet for their dialect, as they did not use it as a written language In the xviiith century Agius de Soldanis, a Maltese, turned his attention to the dialect and began to study it, since his time several attempts have been made to systematize the writing of Maltese, it was also proposed to use the Arabic alphabet, and a diacritical transliteration, precise and scientific, was tried In practice the use of the common Latin alphabet, with the modification of some few letters, was continued The last attempt of this kind, which has not met with public favour nor with the approval of the vernacular press, was that of the *Ghaqda tal kittieba tal malti* "Association of the writers of Maltese", which has published a small grammar, particularly concerned with the spelling, called *Tagħrif fuq il kitba maltija*, Malta 1924, the preface mentions the precedent systems of writing Maltese The same *Ghaqda*, in 1925, began to publish a quarterly review called *Il-Malti*, it is mostly concerned with grammatical questions, and has promoted a movement in favour of pure Maltese (*malti safi*)

Since about 1850 the question of the Maltese dialect has also acquired a political character the English rulers favoured the development of the dialect at the expense of the Italian language (which remains the language of culture, of the Church and of the Bar) Bibliographical information on Maltese literature to about 1900 is to be found in the works of L Bonelli and H Stumme

Besides the Arabic dialect and place-names, the Muslims have left in Malta a few coins and a considerable number of inscriptions on tombstones, one of them, the celebrated inscription called of Maimūna, dated 1173 A D, was published more than a century ago, and repeatedly studied by orientalists (Italinski, Lanci, Amari, Nallino etc), another one, found in Gozo, is to be seen in the Malta Museum, about twenty more have been found in the excavations made in 1922—1925 at Rābato (near the city Notabile), they are preserved in the Museum of the Villa Romana, near the place of excavation

The Muslims lost Malta in 1090, when the Normans conquered it, they were however allowed to live on the island under the Norman government until 1249 From 1530 to 1798 Malta was the seat of the Order of St John of Jerusalem, which the Turks had expelled from Rhodes in 1522 The Order organized there an important war navy The island was in constant relations with the East and with Barbary, thousands of Muslim slaves were taken to Malta, the Maltese ships had repeated encounters with those of the Porte and of the Levantine and Barbary pirates The Turks attempted to occupy Malta in 1565, with their well known expedition which ended in disaster, and again in 1614, more than once they threatened to invade it under Sultan Muhammad IV

Considering the Order's relations with the Muslim East and the fact that an important portion of the registers of Rhodes was saved, the importance of the Order's archives for the history of the Mediterranean Levant and of North Africa in the xivth–xviiith centuries is easily understood

A few Arabic MSS and nautical charts, of no great value, are preserved in the Public Library of Malta and in its Museum

MALTHAI, or properly MAʿALTHĀYĀ, the Arabic name of two villages in the kadā of Duhūk in the old wilāyet of Mawsil They are about 40 miles N N W of Mawsil at the point where the river of Duhūk (left bank tributary of the Tigris) enters the plain, whence the Aramaic name Maʿallthā > Malthai, "entrance"

The pass of Maʿalthāyā giving access to the country to the south of Lake Van must have played an important part in ancient times Its importance is indicated by the famous bas reliefs carved on the rock half an hour's walk to the south of Maʿalthāyā They reproduce the same scene four times a king standing in an attitude of adoration before a procession of seven gods, six of whom are standing, each on a mythological animal, and the seventh is seated on a throne placed on the back of a lion There are no inscriptions accompanying them Since, however, they are evidently connected with the similar bas-reliefs at Bāwiyān (30 miles N E of Mawsil on the Khazir, a right bank tributary of the great Zāb) and these belong to the kings Salmanassar II (860—825 B C) and Sennacherib (689—681), it is supposed that the bas-reliefs of Maʿalthāyā were also executed in the time of Salmanassar II The figures of the gods are especially interesting as forming a link between Assyrian and Hittite art

Among the Nestorian Christians Maʿallethā gave its name to a diocese (also called Bēth-Nuhādhrē) A Nestorian bishop of Maʿallethā is mentioned as early as the fourth century (Hoffmann, *op cit*, p 52, 210), there are other references to the years 497, 544, 554, 576, 585, 605, 962, 1063, 1074, 1092, 1265 (Chabot, *Synodicon Orientale*, Paris 1902, Index, and Hoffmann, *o c*) In the seventh century the Metropolitan of the Jacobites, Mārūtha, still numbered among his subordinates a bishop of Maʿallethā (Labourt, *Le Christianisme dans l'empire grec*, 1904, p 240) At the present day Maʿalthāyā is still inhabited by Nestorians (in part in union with the Catholic Church)

Balādhurī, p 331, mentions al Maʿalla (*sic*) among the places in Mawsil conquered by ʿUtba b Farkad in 20 (641) Mukaddasi, p 139, 145—146, talks highly of the wealth of the vicinity of Maʿalthāyā in coal, fruits, salt, meat and camphor He locates the little town on the road from Mawsil to al-Hasanīya (= Zakhō on the little Khabur, cf M Hartmann and G Bell) The importance of this route for communication with the lands of the Kurds is evident from Ibn al-Athīr (viii 521) Yakūt, iv 578, knows Maʿalthāyā as a little town (*bulaid*) the name of which is occasionally mentioned in the history of the later period

Bibliography Layard, *Nineveh and its remains*, 1849, i 231, Badger, *The Nestorians*, London 1852, i 174, V Place, *Ninive et l'Assyrie*, 1867, pl 45, Hoffmann, *Auszuge aus syrischen Akten pers Martyrer*, 1880, p 208 and Index, Perrot and Chipiez, *Histoire de l'art dans l'antiquite*, 1884—1890, ii 642, Luscha, *Ausgrabungen von Sendjirli*, i (1893), p 23, G I Bell, *Amurath*, London 1911, p 284, Lehmann-Haupt, *Armenien*, II/1, 1926, p 369–375, Thureau Dangin, *Les sculptures rupestres de Maltai*, *Revue d'Assyriologie*, xxi, 1924, p 185—197, new photographs taken at Maltai have led the author to identify the gods and the beasts which carry them in the following order Assur (a dragon and a horned lion),

Ninlil, wife of Assur (a lion), Enlil (a horned lion), Sin (a dragon), Shamash (a harnessed horse), Adad (a horned lion and a bull), Ishtar (a lion) According to Thureau-Dangin the bas reliefs should be attributed to Sennacherib, as to the motif of the mounted gods, usually explained as showing Hittite influence, examples are found in Sumero-Accadian art Cf also Bachmann, *Felsreliefs in Assyrien (Bawian, Malthai und Gunduk)*, publ by the *Deutsche Orient Gesell*, Berlin 1927 (V Minorsky)

MAʿLŪLĀ, a town in Central Syria north-east of Damascus It is mentioned as early as Georgios Kyprios (ed Gelzer, p 188, N⁰ 993) as Μαγλούλων (MSS μαγλούδων, μαγαιγλούδων) κλίμα in Phoinike Libanesia Yākūt also calls Maʿlūlā in *iklīm* (κλίμα) near Dimashk with many villages The modern Maʿlūla, a village of Christians, is picturesquely situated at the west end of a deep ravine of the Antilebanon, which splits into a western and southern arm "At the entrance to the northern lies the monastery of Mār Yaklā built half into the rocks The two ravines form the way to the other monastery of Mār Serkis, which stands on a rocky plateau above the village" Numerous caves, mostly ancient dwelling places, have been found on the west and southern corner of the rock on the eastern slopes of which the modern village is built in the form of an amphitheatre Some Greek inscriptions have been found in the caves (Waddington, *Inscriptions*, N⁰ 2563—2565, Moritz, p 145—147, N⁰ 3–8, including one dated 107 and 167 A D) Maʿlūlā and the adjoining villages of Bakhʿa and Djubb ʿAdin are noted for the fact that the Western Aramaic dialect still spoken there represents the last remnants on Syrian soil of the Syriac spoken throughout Palestine and Syria in the time of Christ

(E Honigmann)

MĀLWĀ proper is an inland district of India bordered on the south by the Vindhyas, and lying between 23° 30′ and 24° 30′ N and 74° 30′ To this tract, known in the age of the *Mahābhārata* as Nishadha, and later as Avanti, from the name of its capital, now Udjdjain, was afterwards added Akara, or Eastern Mālwā, with its capital, Bhilsā, and the country lying between the Vindhyas and the Sātpūras The province formed part of the dominions of the Mauryas, the Western Satraps, the Guptas of Magadha, the White Huns, and the Kingdom of Kanawdj, and then passed to the Malawās, from whom it has its name These, when Hinduized formed the Paramāra (Pawar) tribe of Rādjputs, which bore sway in Mālwā from 800 to 1200, and was overpowered in 1053 by a confederacy of the Čalukyas of Anhilvāda and the Kalacuris of Tripurī In 1235 Shams al-Dīn Iltutmish of Dihlī captured Udjdjain, demolished the temple of Mahākāl, and sacked Bhilsā Mālwā became a province of Dihlī, and, with interludes of Hindū revolt, remained so until, in 1392, on the dissolution of the kingdom of Dihlī after Timūr's invasion, the Afghan governor, Dilāwar Khān Ghūrī, made it an independent kingdom He was murdered in 1405 by his son Alp Khān, who ascended the throne under the title of Hūshang Shāh He transferred the capital from Dhar to Māndū [q v] and founded Hūshangābād On his death in 1435 he was succeeded by his son Ghaznī Khan, who, after a reign of a few months, was succeeded by his infant son Masʿūd Khān The child was removed by his cousin and guardian, Mahmūd Khaldjī, who in 1436 ascended the throne as Mahmūd I, and whose reign of thirty three years was the most glorious in the annals of Mālwā He waged war successfully against the kings of Gudjarat, the Dakhan, and Djawnpūr, the small state of Kalpi, and Rānā Kumbha of Čitor, he retired, but without disgrace, before the superior power of Dihlī, and he extended the frontiers of his kingdom on the north, the east, and the south On his death in 1469 his third son, ʿAbd al Kādir Ghiyath al Dīn, who succeeded him, surfeited with public business during his father's strenuous reign, retired into his harem and left the administration of the kingdom to his son, Nāsir al-Dīn, who in 1500 poisoned his father and ascended the throne Nasir al-Dīn met his death in 1510 by falling, in a fit of drunkenness, into a tank or cistern, where his attendants, thankful to be rid of the monster, let him lie He was succeeded by his son Mahmūd II, who was as unfortunate in war as the first of that name had been fortunate With the help of Muzaffar II of Gudjarāt he rid himself of his powerful Rādjpūt minister, Medni Rāi, but in doing so embroiled himself with Sangrama Rānā of Čitor, who defeated him in the field and took him prisoner, but generously released him He then, with inconceivable folly and ingratitude, bitterly offended Bahādur Shāh of Gudjarāt, who invaded Mālwā and, after giving Mahmūd every opportunity of atoning for his error, carried Mandū by assault on March 21, 1531 Mahmūd and his sons were sent in custody towards Čāmpāner, but the officer in charge of them, apprehending a rescue, put them to death

Mālwā now became a province of Gudjarāt, and in 1535 the emperor Humāyūn, invading that kingdom, defeated Bahādur Shāh at Mandasor and captured Māndū, but was recalled to Hindūstān in the following year by the menacing attitude of Shir Khān in Bengal, and Mallū Khan, an officer of Mahmūd II, established himself in Mālwā and assumed the title of Kādir Shāh Shudjāʿat Khān and Hādjdjī Khān, two officers of Shīr Shāh, drove him from Mālwā and assumed the government of the province Shudjāʿat Khān died

in 1554, and was succeeded by his son Malik Bāyazīd, known as Bāz Bahādur, who, during the decline of the power of the Sūr emperors, became independent A severe defeat at the hands of the queen of the Gond kingdom of Garha Mandla engendered in him a distaste for warlike enterprise and he devoted himself to music and to the embraces of the beautiful Rūpmatī In 1561 Akbar's army under Adham Khān surprised the voluptuary at Sārangpur, defeated his troops, put him to flight, and captured his mistress, who took poison rather than become the conqueror's paramour Bāz Bahādur fled into Khāndesh and Pīr Muhammad Khān, second-in command of Akbar's army, who followed him thither, was defeated by Mubārak Khān of Khāndesh and drowned in the Narbadā Bāz Bahādur returned and again reigned in Māndū, but in 1562 another army under ʿAbd Allāh Khān the Uzbak invaded Mālwā and compelled him to flee to Čitor He remained a fugitive until 1570, when he submitted to Akbar and entered his service

Mālwā was now a province of the empire, and remained so until, in 1743, the Marāthās extended their rule over it, and the Peshwā was made deputy-governor

It was afterwards divided between the great Maratha generals whose descendants, Sindhya of Gwalior, Holkar of Indor, and the Ponwārs of Dhār and Dewas still hold most of it

From 1780 until 1818, when British supremacy was firmly established, the province was one of the principal arenas in which Muslim, Marāthā, and European contended for empire Since then its history has been uneventful, but sporadic risings took place at six military stations during the mutiny of 1857

MAʿMAR B AL-**MUTHANNĀ** [See ABŪ ʿUBAIDA]

MAMLŪK (A , plural *mamlūkūn* and *mamālīk*), participle passive I of *malaka* "to possess", denotes the slave as his master's possession The term owes its origin probably to the current phrase of the Kurʾān *mā malakat aimānukum* "what your right hands possess", a general designation of slaves without specialisation of gender Mamlūk occurs once only in the Kurʾān (sūra xvi 77), in the expression *ʿabd mamlūk* "a slave in the possession of his master", mamlūk alone not yet being a technical term for slave, to all appearance In *hadīth*, *ʿabd mamlūk* occurs likewise (Dārimī, *Siyar*, b 34), but throughout the literature of *hadīth* mamlūk alone is already a technical term synonymous with *ʿabd* — The distinction between a slave born and a slave born from free parents, must be made by the addition of a genitive to *ʿabd*, in the former case *kinn* (*ʿabdu kinnin*), in the latter *mamlaka* (*ʿabdu mamlakatin*)

It may be remarked that neither in *hadīth*, nor, to all probability, in Arabic literature, has the term mamlūk ever received the religious meaning of devotee, as is the case with *ʿabd*

The Kurʾān enjoins the master to be humane towards "what his right hands possess" (sūra iv 40) *Hadīth* is copious on this point It assures us that Muhammad on his death-bed did not cease repeating "(I recommend to you) *salāt* and what your hands possess" (Ahmad b Hanbal, *Musnad*, iii 117, cf i 78) "Whosoever does not treat his mamlūk as he ought to do, shall not enter Paradise" (Ahmad b Hanbal, i 12) "When the mamlūk performs *salāt*, he is thy brother" (Ibn Mādja, *Adab*, b 10) "The mamlūk may claim his food and raiment" (Muslim, *Aimān*, trad 41) "The Apostle of Allāh used and to protect the mamlūk who appealed to his help" (Ibn Mādja, *Zuhd*, b 16) "The mamlūk who acquits himself of his obligations towards Allāh and towards his master, will receive double wages" (Bukhārī, *ʿIlm*, b 31) and "one is bound to pardon his mamlūk even unto seventy times a day" (Ahmad b Hanbal, ii 111)

For the legal position of slaves see ʿABD

For the Egyptian dynasties called the Mamlūks, see the following article — It may be finally remarked that in certain circles mamlūk had the special meaning of white slave See Fagnan, *Addition aux lexiques arabes*, s v

(A J Wensinck)

MAMLŪKS, a dynasty of rulers of Egypt and Syria

A Period from 1250 to 1517 The history of this dynasty is dealt with under the separate rulers, the general questions of art, religion and economics of their time are also dealt with in these articles and notably in Becker's article EGYPT [q v] and Hartmann's article DAMASCUS [q v] Only a brief survey of the whole period is given here

They were, as their name shows [cf MAMLŪK], former slaves from the bodyguards of the sultāns and amirs who had distinguished themselves by ability and been given their freedom by their masters A somewhat arbitrary distinction is made between two dynasties, the Bahrī [q v] from 648—792 = 1250—1390 and the Burdjī from 784—922 = 1382—1517 The name Bahrī Mamlūks was given to the guards of Sultān Nadjm al Dīn Aiyūb (637—47 = 1340—49), whose barracks were upon the island of Rōda [q v] in the Nile (Bahr) Except for the first three the Bahrī Sultāns were chosen by the Mamlūks from among the descendants of the Sultān Thus after Baibars [q v] there ruled two of his sons, after Kalāʾūn [q v] two sons, a series of grandsons and a great grandson It was different with the Burdjī Mamlūks, a bodyguard founded by Kalāʾūn, who were quartered in the towers of the citadel of Cairo The first Burdjī, Barkūk, [q v], was able to secure the succession of his son and even a second son succeeded for a brief period to the throne, but after this the Mamlūk guards never tolerated hereditary succession again, no Sultān's son, who was proclaimed heir-apparent, ever succeeded in keeping the throne (the only exception is al Nāsir Muhammad II who occupied the throne for nearly three years) The Mamlūks did not always choose the ablest, but more often the oldest, a kind of system of seniority developed The first Mamlūk on the throne was ʿIzz al-Dīn Aibak (648—55 = 1250—57), the husband of Shadjar al Durr [q v] a slave whom Aiyūb had married

In the period of its greatest extension under the Mamlūks, the frontiers of Egypt were in the west the Lybian desert as far as Barka, in the

south Nubia as far as Massawʿa, in the north the Mediterranean Sea The frontiers of Syria in the east stretched to the Euphrates to Dēr al-Zōr through Rakka, in the south to the Arabian deserts and in the north to the Taurus The two countries met in Sinai and were separated by the Red Sea The sultāns usually exercised suzerainty over the holy places in Mecca and Medīna, Sultān Kānsūh Ghūri [q v] even maintained garrisons in South Arabia for a time

The first task of the Mamlūk sultāns was to consolidate the kingdom Their most dangerous enemy, the Tatars under Hūlāgū, was defeated in Syria in 658 (1260) at ʿAin Djālūt [q v], the Crusaders were destroyed by Sultāns Baibars, Kalāʾūn and Khalil, the remnants of the ʿAlids and Assassins [q v] rendered harmless by Baibars Their power was finally consolidated and justified to the Aiyūbids by the petty kingdoms left to them, by Baibars welcoming in Cairo the Caliph who had been driven from Baghdad by the Mongols, restoring the caliphate here in 659 (1261) and then having himself appointed by the Caliph participator in power (*Kasim al Dawla*) and having the power ceremoniously transferred to him This remained the position till the end of Mamlūk rule The Caliph paid homage to the Sultān on his accession and ceded all his rights to him He thus lost all authority and became the shadow of a ruler without power, without money and without influence, only now and then an Indian Sultān sought a diploma of investiture from the Caliph

The rule of the Sultān was absolute He was assisted by a council in which the chief commanders of the Mamlūks sat to the left and right of the ruler according to their rank (this sitting in order of rank dated from the early Mamlūk period) the representative of the Sultān (*nāʾib kāfil*, later only appointed in case of absence of the ruler), the commander in-chief (*amīr kabīr*), later combined with the office of Atābeg, the commander of the guards (*rās nawbat al nuwwāb*, see AL-AMĪR AL-KABĪR) the War Minister (*amīr silah*, ibid), the president of the council who was the chief civil official (*amir madjlis*), later the minister of the Interior (*dawādār kabir* [q v]) and the ministers of the palace and domains (*ustādār*) gained more influence and became numbered among the highest officials, as did the chief military judge (*hādjib al-hudjdjāb* [q v], properly high chamberlain) and at times the chief marshall (*amīr akhūr* q v) The officers and their relative rank (cf e g under AMĪR AL-KABĪR for the composition and order of precedence in later times) changed These members of the council were military officers, the so called lords of the sword (*ashāb al-suyūf*), they belonged to the class of amīrs of 1,000 (*mukaddim al ulūf*) From this class were chosen the governors of the Syrian provinces (Damascus, Aleppo, Tripolis, Hamā, Safad) and frequently also the governors of the citadels of Damascus and Aleppo who were appointed by the Sultān himself The next class was formed by the *Ṭablakhānā*, amirs of 40 Mamlūks, who had the right to be accompanied by a band They were followed by the amīrs of 10 and those of 5 Mamlūks All the amīrs of 1,000 were appointed by the Sultān himself, the other amīrs in the provinces sometimes by the sultān and sometimes by the governor The administrative system at the Sultān's court was reproduced on a small scale in the provinces Every governor was a little Sultān who had to some extent the same retinue as the Sultān in Cairo The Syrian governors were in general independent of one another (very few like the Amir Tengiz [see DAMASCUS, i, p 908] had other governors subordinated to them) In the beginning the Mamlūks, perhaps influenced by the Mongols, had the tendency to make all offices secular and fill them with Mamlūks who, as lords of the sword (*ashāb al-suyūf*), belonged to the military caste They kept this up in the highest offices throughout the dynasty, but they had to create the important offices of private secretary (*kātib al sirr*) and head of the chancellory (*sāhib Diwān al inshāʾ*) and fill them with civilians and even admit Christians, Jews, and especially converts to Islām to them, because the Turkish ruling caste was not fitted for them The above mentioned chief offices on the military and administrative side remained however reserved for the constantly increasing oligarchy, into which neither Arabs, nor the sons of Mamlūks were admitted It hardly ever happened (I only know of 3 cases of Arabs) that Arabs or sons of Mamlūks became amirs of 1,000, or rose to the highest posts in the legal and scholastic world and in the other branches of the civil service

The Mamlūks were purchased on behalf of the government by a high officer, the purchaser of Mamlūks (*tādjir al-mamālik*), educated in the first place in the Mamlūk School in Cairo, then distributed in the different branches of the corps of pages to act as armour-bearers, cup-bearers, carvers, polo-grooms, club-bearers etc, for further training and then placed in the service of the amirs or of the Sultān as vacancies occurred The Sultān's lifeguards were called *khāṣski* and the amirs had also similar bodyguards The army consisted of *a*) the bodyguard of the Sultān, *b*) the *djund al khalka*, enlisted troops, who were paid in money and with the yield of the crown estates, *c*) the guards of the great amirs and former Sultāns In later times there was a body of reserves, *awlād al-nās*, who were only called up for service in times of war but also received pay in times of peace Military expeditions were usually decided upon by the council of state, the amīrs were given money to equip and maintain their troops, to be able to lead them into the enemy's country

In addition to the military officers there were civil officials, *aṣhāb al-kalam* (lords of the pen) *a*) the religious officials (*al ainīya*), who filled posts in the legal and scholastic worlds and a series of other offices, *b*) the regular administrative officials (*al-diwāniya*) for the rest of the civil service

The Sultān's revenue was made up of the ground, poll and poor-tax, from the yield of the fiefs (on the Egyptian system of appanages cf ii, p 9b) out of which he gave the necessary funds for the army and officials, the customs, the state factories and extraordinary taxes on goods and markets, which, not being laid down in the Kurʾān, were considered illegal and resisted He also sometimes made money by forced purchases and sales The government bought up goods at a fixed price and forced purchasers to take them at a definite price Finally there were monopolies out of which the Sultān made profits Another favourite means of raising money was for the Sultān to visit some great man from whom he extorted large sums while a guest (especially Kāʾitbāʾī [q v]) Things

seem to have been similar in Syria but we know very little about the division of the fiefs there

The importance of the Mamlūks in history lay in the fact that, protected by the deserts and their armies they stemmed the flood of Asiatic conquerors, they conquered Čingiz Khān's Mongols and later the hords of Tīmūr Lenk, who had conquered Syria for a short time, and other conquerors After the defeat of the Tatars and the retreat of Timūr, the Sultāns were forced to concentrate on the struggle with the gradually increasing power of the Ottomans The struggle was long avoided by the formation of buffer states on both sides, among these the most notable were the dynasties of Dhu 'l-Ghadir and of the White and Black Sheep (so-called from their standards) The success of Kā'itbā'ī's policy postponed the end but the rulers who followed him were weak The rule of the Mamlūks lost its vigour They were weakened in long wars, their finances became quite hopeless as a result of their immoderate expenditure, not commensurate with their means and a defective system of taxation, which in the later period enabled the owners of large estates to escape the taxes They therefore could not permanently resist the Ottomans, especially as the lack of discipline among the Mamlūk leaders and the weakness of their field artillery made the army useless The well equipped fortresses were not defended against the Ottomans, they fell through treachery The himself able Sultān Kānsūh Ghūrī was defeated and slain in 922 (1516) at Marǧ Dābik (in the province of Aleppo) The way to Egypt was thus opened to Sultān Selim, after six months' resistance the last Sultān Tumanbā'ī had to surrender He was hanged from the Bāb Zuwaila in Cairo A number of the great amīrs and the Caliph were taken to Constantinople The caliphate ceased as no new Caliph was appointed, the Sultān of Constantinople became the first ruler in Islām The protection of the holy places also passed automatically to him

The period of the Mamlūks was marked by great activity in building (ii 23[a]) Of secular buildings, few palaces have survived, on the other hand fortresses (Cairo, Aleppo, Damascus and Birediǧik) which were entirely rebuilt in the Mamlūk period, as well as a large number of fine tombs, hospitals, baths, fountains and aqueducts still exist Of religious buildings splendid mosques with schools attached to them were built While even under the Ayyūbids there had been only one "great mosque" in each town or independent suburb, where the Friday service was held, it became the custom under the Mamlūks that many Sultāns and governors and occasionally even one of the guilds built "great mosques" for the Friday service in the large towns Mention may be made of the mosques of Baibars, Kalā'ūn, Muhammad al Nāsir, Sultān Hasan, Barkūk, Mu'ayyad, Kā'itbā'ī in Cairo, as well as the mosques in the provincial capitals Aleppo, Damascus and Tripolis While agriculture, industry and art showed great prosperity, trade suffered very much under the later Mamlūk Sultāns through the extortionate taxes of the government The trade through Egypt, based on treaties with Frankish and Oriental rulers, yielded huge sums The customs and the treatment of merchants by the Sultāns finally became so intolerable that the European powers did everything possible to secure the sea-route to India in order to avoid the transit through Egypt with its enormous expense and the roguery to which it was exposed

The object of the last wars of Sultān Kānsūh Ghūrī was to gain a footing in South Arabia and nearer India to secure the Egyptian share in Indian trade

Bibliography Only the most important of the rich literature on the Mamlūks is cited below (s especially in van Berchem's index to *Matériaux pour un Corpus Inscriptionum Arabicarum*, i, *Égypte*, Paris 1903, the full list)

(M Sobernheim)

B Period from 1517 to 1798 It is a significant fact, that even this period of nearly three centuries, during which Egypt belonged to the Ottoman Empire, may still be designated as a third Mamlūk period The change brought about by the conquest of Sultan Selim in 1517 was, after all, not a radical one, from the point of view of government Egypt and its inhabitants remained under the rule of a powerful minority of foreign race The antagonism that existed in the beginning between Ottoman Turks and Mamlūks and which had led at first to much bloodshed (execution of 800 mamlūks by Selim I in Cairo) did not last very long after the troubles of the occupation were over The Turkish soldiers and officials who entered Egypt during Ottoman rule soon became mixed up to a large extent with the numerically more powerful class of the Mamlūks, whose aid was, moreover, indispensable, for the government of the country Besides, the number of Mamlūks (*al-Sharāhisa*) continued to receive additions by purchase of slaves from the Caucasus An author of the xviith century (Vansleb, p 13) says that Egypt, in his day, was inhabited by Copts, Moors (by whom he means the islāmised population), Arabs, Turks, Greeks, Jews and Franks The "Turks" were the governing class and composed of Mamlūks and Ottomans, between whom no distinction is made We may even speak of a mamlūkisation of the Ottoman element, the real ottomanisation of the country belongs to the xixth century In accordance with what is said, the history of those centuries never shows, among the parties and factions into which the Mamlūks were divided, a pro- or anti-Ottoman party, those quarrels were only of local and personal character Even the first governor of Egypt, Khāʾir-bek, was a Mamlūk, although, after him, the Pashas were sent, without exception, from Constantinople

During the first 100 years, it is true, the authority of the Pashas sent from Constantinople to govern the country was undisputed The Pasha could rely on seven contingents of troops (*odjak*) six of which were instituted by Selim I, while a seventh contingent was added under Sulaimān I, composed of Mamlūks Their nominal strength was 20,000 men in all They were not commanded by the Pasha, but by their own commander, who belonged to the *odjak* of the Janissaries and resided in the citadel of Cairo Afterwards these troops behaved more and more independently and were even able to depose Pashas whom they did not like, until, in the xviiith century, this military force became the instrument of some all-influential Mamlūk beys Important matters of administration were treated by a great *Dīwān* or State Council, which only met in extraordinary cases and in which the high functionaries were represented, as well as the military chiefs and the high religious dignitaries Local and special government functions were exercised by twelve Sandjak Beys, these represented at the same time the feudal aristocracy, from the beginning however, the ties that linked them to particular provinces seem to have been rather loose, for among them are mentioned the *Kʿāya* of the

Pasha, the *Daftardār*, the *Amīr al-Ḥadjdj* and the *Amīr al-Khazna*, the three first of whom were also members of the great *Dīwān* The other Beys were commanders at Suez, Damietta and Alexandria, and governors of the five big provinces in the Nile delta Besides these twelve Beys there were twelve other Beys with similar functions The real provincial administration was exercised by a class of functionaries called *Kāshif* Their chief task was the collection of the revenues They may be considered as a kind of governor, some of the great Beys themselves were also *Kāshif* in their districts or had different *Kāshifs* under them Vansleb mentions 36 *kāshifliks* As to the revenues, they were collected in various ways, the local customs in different parts of Lower Egypt and Upper Egypt varying considerably The most common form was the farming out of revenues (*iltizām*), the *multazims* had different kinds of right of possession on the lands, which were hereditary They collected the revenue, in taxes or in kind, from the fellāhs, generally through the village notables called *Shaikh al-Balad* In the tax-collecting there were further employed, a host of subordinate technical and financial functionaries, many of whom were Copts Some *Kāshifs* were at the same time *multazims* This system of administration showed the close relation between administration and landowning, which has always been characteristic of Egyptian conditions [cf EGYPT] It was the continuation of the system which had prevailed under the Mamlūk Sultāns (regulation by Ḳā'it Bay) and was regulated again in the *Kānūn-nāme-i Misr* of Sulaimān I (cf J von Hammer, *Des osmanischen Reiches Staatsverfassung und Staatsverwaltung*, Vienna 1815, i 101—142), here a special stress is laid on the rights and obligations of the *Kāshifs*

In Cairo a large chancery, the chief of which was the *Rūznāmedjī*, had to collect these taxes and to keep the registers, the revenues collected were reserved partly for the pay of the troops and works of public utility such as irrigation, building of bridges and dikes, etc and partly for the yearly tribute to the Sultan, which was in the beginning 800,000 ducats and afterwards lowered to 600,000 and later to 400,000 ducats In the xviiith century the paying of tribute practically fell into disuse

Besides the land-tax, there existed a great number of other taxes, under different denominations, they were collected more or less arbitrarily, and, as in course of time, the anarchy in the government assumed greater proportions, they pressed ever heavier on the population The rural population had as much to suffer from the exactions of their Mamlūk administrators and proprietors as from the raids of Arab tribes, which the government was unable to control

The history of Egypt during this period is a not very interesting succession of domestic intrigues, struggles and revolts Until the beginning of the xviiith century the Pashas could more or less maintain their authority, but they were replaced too often to have a lasting influence No less than 117 Pashas governed Egypt until the arrival of the French (a complete list of them is given in Thureiyā, *Sidjill i ʿOthmānī*, iv 835 *sqq*) Many of them tried to make their short stay as profitable for themselves as possible, and several of them had to pay their cupidity with their lives after their return to Constantinople. In the xviiith century the real power in the country was exercised by the great Beys in Cairo, who had the troops in their hand and tolerated only those Pashas who did not interfere with their affairs By this time the two most powerful positions in the country were those of the commander of Cairo, called the *Shaikh al Balad* and of the *Amir al Ḥadjdj* Some of the *Shaikh al-Balads* are reputed as good rulers, especially Ismāʿīl Bey, who held that office from 1707 to 1724 But the changes of power were always of a violent kind and prevented the forming of a dynasty, Ismaʿīl's *shaikh al balad*ship itself had been preceded by a curious struggle between the two rival parties of the Dhu 'l-Fikārīya and the Kāsimīya, which had lasted for three months outside Cairo In 1747 the Porte tried for the first time to reestablish its authority by ordering the governor Raghib Pasha to exterminate the Mamlūk Beys, this attempt failed, however, completely and the disorders continued until the appearance of the young Mamlūk ʿAlī Bey [q v] who made himself for a short time independent *Shaikh al-Balad* and ruler of Egypt, for the years 1770—1771 By this time the Porte began to take more serious measures to retain its hold on Egypt, but the regime of the Mamlūk Beys did not end until a foreign power, France, temporarily occupied Egypt [cf KHEDIVE]

Under such a regime the conditions of living of the population could not be flourishing It was not so much the position of Egypt as an Ottoman province that caused the suffering of the population, as the lack of a strong central power European travellers like Vansleb and Lucas point to the fact that Egypt was, in the xviiith century a rich country and that by the practical stopping of the payment of tribute, all the money remained in the country itself But the riches remained only in the possession of the ruling minority, while the rural population was oppressed very hardly The bad organisation caused, moreover, from time to time terrible famines, while, about the middle of the xviiith century, began a series of ravaging epidemics of plague Since the last period of the Mamlūk Sultans the country had lost, moreover, a rich source of revenue by the change of the trade route to India The transit trade was now restricted to inner African products and coffee and aromatics from Arabia, while the exportation of Egyptian products such as corn, cotton and sugar was limited The timber that the country needed had to be imported from Turkey Moreover, the trade with Christian countries often experienced serious hindrances from the arbitrary measures of the local authorities At the same time the local industries declined rapidly, one of the causes may have been the transportation of a large number of skilled craftsmen to Constantinople by Salīm I, the once flourishing guild organisation was paralysed by this measure (cf Thorning, *Beitrage zur Kenntnis des islamischen Vereinswesens*, Berlin 1913, p 81 and al-Djabartī, i 20)

The decline of Egypt's economic strength, on the other hand, made Egypt a relatively quiet possession for the Porte Only in the very beginning of Ottoman rule, in 1524, a Turkish governor, Ahmad Pasha, tried to take the title of sultan of Egypt, but afterwards no attempts to recover independence were made until the time of ʿAlī Bey Then, however, the political needs of the European colonial powers

made Egypt appear again as an important stage on the way to India and opened new possibilities of a more independent development, which were to be realised in the XIXth century In the meantime the possession of Egypt had been useful to Turkey in many respects, the Porte could always count on an Egyptian contingent of troops in its wars and the country itself was a base of action for the military operations in Syria, the Ḥidjāz and Yaman The reconquest of Yaman under Selim II was carefully prepared in Cairo As soon as the tendency to independence appeared, however, as under ʿAlī Bey, the Turkish hold on Syria and Arabia was immediately endangered seriously

The predominant position of Egypt in Islām was not seriously affected by the Ottoman occupation Al-Azhar [q v] remained one of the most important centres of Islamic learning, the Turkish Pashas and other dignitaries showed their acknowledgement of this fact by gifts and by the execution of restorations to the building, as they did occasionally for other religious institutions in the country Though Islāmic science continued to flourish, Egypt did not produce many prominent figures in this period In the domain of *fikh* the most important figure was al-Ramlī (q v , d 1596), the commentator of al Nawawī, further the mystic al-al-Shaʿrānī (q v , d 1565), and, as representative of Arabic philology, ʿAbd al Kādir al-Baghdādī (q v , d 1682) In popular mysticism the veneration of Aḥmad al-Badawī [q v] by the Aḥmadīya held a large place

The period of Ottoman domination in Egypt is not wholly without interest from the point of view of architecture and art Several governors, beginning with Khāʾirbek have constructed mosques, these mosques show a kind of transition from the Mamlūk to the Ottoman architectural style There are also in Cairo several mosques founded by the Mamlūk Beys, like the mosque of Abū Dhahab, the traitor of ʿAlī Bey, constructed in 1773 Some beautiful palaces have likewise been built by the Mamlūks, but only few of them are still extant (cf on this subject Mme R I Devonshire, *L'Egypte musulmane et les fondateurs de ses monuments*, Paris 1926, p 115 *sqq*)

Bibliography The sources for the history of Egypt under Ottoman rule have not been much studied Of the many Arabic works have to be mentioned (cf Brockelmann, *G A L* , II 289 *sqq*) Ibn Iyās, *Badāʾiʿ al Zuhūr fī Wakāʾi al-Duhūr*, III, Būlāk 1312, p 101 *sqq* (until 1522), al-Minhādjī, *al-Budūr al-sāfira fī man waliya 'l Kāhira*, MS Vienna, N⁰ 9152 (until 1549), al-Burdjī, *al Riyād al-zāhira fī Akhbār Miṣr wa 'l Kāhira*, MS Algiers, N⁰ 1605, Ibn Zunbul, *Ḥath Miṣr*, many MSS (1517—1519), al Ishakī (cf Babinger, *G O W*, p 160 *sqq*), *Dawḥat al Azhār fī man waliya 'l-Diyār al Miṣrīya* also called *Laṭāʾif Akhbār al-Uwal fī man tasarrafa bi-Miṣr min Arbāb al-Duwal*, several times printed in Cairo 1276, 1296, 1300, 1304 (until 1623), do, *al-Rawd al-bāsim fī Akhbār man madā min al-ʿAwālim*, MSS Paris, N⁰ 1562 and Brit Mus , N⁰ 1251 (until 1623), al-Ghumrī, *Dhakhīrat al-iʿlām bi-Taʾrīkh Umarāʾ 'l-Miṣr fī 'l-Islām*, only in MSS (poem, until 1630), Muhammad b Muhammad b Abi 'l-Surūr, *al-Tuḥfa al Bahīya fī Tamalluk Āl ʿUthmān al-Diyār al-Miṣrīya*, several MSS (until 1634), do., *al Rawda al-Zahīya fī Wulāt Miṣr al-Kāhira al-Muʿizzīya*, several MSS (until 1651), do , *al-Kawākib al Sāʾira fī Akhbār Miṣr wa 'l-Kāhira*, several MSS (until 1645), al-ʿAwfī, *Tarādjim al Sawāʾik fī Wākiʿat al-Sanādjik* several MSS (treats of some events in the years 1658 and 1661), ʿAbd al-Kādir, *Taʾrīkh*, MS Berlin (*G A L* , II 299, the years 1603—1643), Ibrāhim al Khattāb, *Mabdaʾ al ʿAdjāʾib bi-mā djaʾa fī Miṣr min al Masāʾib*, MS at Cairo (*G A L* , II 299, written about 1721), al Damirdashī, *al Durra al-Marsāna fī Walāʾiʿ al-Kināna*, several MSS (*G A L* , II 300, the years 1688—1755), Mustafā b Ibrāhim, *Taʾrīkh Miṣr*, MS Copenhagen, N⁰ 159 (the years 1686—1739), al-Djabartī, *ʿAdjāʾib al-Āthār fī 'l-Tarādjim wa 'l-Akhbār*, Cairo 1236, vol I and II (from 1694 up to the French occupation)

Among the Turkish sources all the great historical works of the Ottoman Empire since the time of Selīm I should be mentioned, to begin with the different *Salim nāmes*, on the conquest of Egypt Haidar Čelebi, *Tagebuch des agyptischen Feldzuges Sultan Selims*, transl by Khalil Edhem, Weimar 1916 (*Deutsche Orient bucherei*, vol xx) The following deal specially with Egypt ʿAbd al-Samad, *Nawādir al Akhtār*, several MSS (*G O W*, p 58 *sqq* , Turkish translation and continuation of an older Arabic work, up till 1540), Sālih b Djalāl, *Taʾrīkh-i Miṣr-i Djedid*, several MSS (*G O W*, p 100 *sqq* , written in 1546), Yūsuf b Niʿmet-Allah, *Taʾrikh-i Miṣr*, MS Turin (*G O W*, p 121, Turkish translation of an older Arabic work and continuation up till 1592), ʿĀlī, *Hālāt al-Kāhira min al-Ādāt al-Zāhira*, several MSS (*G O W*, p 133, written in 1599), Mahmūd b ʿAbd Allāh, *Taʾrikh-i Miṣr*, several MSS (*G O W*, p 243 *sqq* , up till 1679)

(J H KRAMERS)

AL-MA'MŪN, ʿABU 'L ABBĀS ʿABD ALLĀH [B HĀRŪN], ʿAbbāsid caliph, born in Rabīʿ I 170 (Sept 786), son of Hārūn al-Rashīd and a Persian slave named Marādjil After a desperate struggle, which ended in the assassination of the Caliph al Amin [q v] in Muharram 198 (Sept 813), the latter's brother al-Maʾmūn ascended the throne, it was six years, however, before he could make his entry into Baghdād On account of his sympathy for things Persian, which was stimulated by the vizier al-Fadl b Sahl [q v] the Caliph was not

at all popular with the Arabs An ʿAlid Muhammad b Ibrāhīm, usually called Ibn Tabātabā, therefore set up as a pretender to the throne in Kūfa in Djumādā II 199 (Jan.-Feb 815) and was supported by a former adherent of al Ma'mūn, Abu 'l-Sarāyā The rebels had some success at first but Ibn Tabātabā died suddenly and when the general Harthama b Aʿyan [q v] advanced against him, Abu 'l Sarāyā had to take to flight Soon afterwards he was taken prisoner and put to death (Rabīʿ 200 = Oct 815) In the meanwhile the movement had spread, but the ʿAlids made themselves so hated that Harthama's troops were able to restore order everywhere without difficulty The victorious Harthama, however, was shamefully rewarded for his services After he had occupied Merw, the suspicious Caliph had him thrown into prison where he soon died (Dhu 'l-Kaʿda 200 = June 816) This increased the general discontent While al-Ma'mūn remained for the time in Merw, the people of Baghdād rebelled and placed al-Mansūr, a son of the Caliph al Mahdī, at the head of the movement When in Ramadān 201 (March 817) al-Ma'mūn designated an ʿAlid, ʿAlī al-Ridā [q v], as heir apparent and assumed the green of the ʿAlids instead of the black of the ʿAbbāsids, the people of the capital elected Ibrāhīm, another son of al-Mahdī, Caliph (Dhu 'l-Hidjdja 201 = July 817) Then there were troubles in Egypt and in Ādharbāidjān, the people were stirred up by the Khurrami Bābak [q v] who terrorised the northern provinces for nearly 20 years In these circumstances al Ma'mūn had finally to leave Merw and go to the ʿIrāk (202 = 817) But when the Arabs murdered the vizier al-Fadl who was particularly hostile to them, and ʿAlī al-Ridā died suddenly, and in addition, the governor of Wāsit, al-Hasan b Sahl, the vizier's brother went mad, or at least was treated as such, the people of Baghdād had really no longer reason to support Ibrāhīm and in Safar 204 (Aug 819) al-Ma'mūn entered the capital and the ʿAlid colours were exchanged for the ʿAbbāsid Al Hasan b Sahl was then restored to his governorship, and a few years later the Caliph married his daughter Būran [q v] As soon as the Caliph had left Khurāsān a rebellion broke out there among the Harūris At the end of 205 (June of 820) or beginning of 206, Tāhir b al-Husain [q v] was appointed governor of Khurāsān He proved in every way fitted for his difficult post but carried his independence so far that in 207 (822) he renounced his fealty to the Caliph Although he died the following day, the Caliph did not dare to deprive his sons of Tāhir's governorship, and in this way the dynasty of the Tāhirids was founded in Khurāsān In 210 (825–826) ʿAbd Allāh b Tāhir [q v] after defeating Nasr b Shabath went by the Caliph's orders to Egypt Here the Yamanīs, who were loyal to al-Ma'mūn, had begun to fight with the Kaisīs who sided with al-Amīn, and the struggle lasted till the latter's death A more peaceful period ensued, but soon new troubles broke out, and with the arrival of the Spanish Muslims banished by the Caliph al-Hakam I [q v] the situation became still more complicated The latter seized the town of al-Iskandariya, but when ʿAbd Allāh b Tāhir arrived in Egypt the native rebels had to submit, and the Spanish intruders retired to Crete When ʿAbd Allāh was appointed governor of Khurāsān, the Caliph made his brother, afterwards the Caliph al-Muʿtasim, governor of Egypt But in 214 (829) the Egyptians rose again against his deputy so that al-Muʿtasim had to go himself to Egypt to bring the rebels to terms Two years afterwards the people of Lower Egypt again rebelled against al-Muʿtasim's officers The Copts defended themselves with desperate vigour until the Caliph himself arrived with fresh troops and ruthlessly put down all resistance Towards the end of the reign of al Ma'mūn, the old struggle with the Byzantines broke out again The cause is unknown but probably Babak was being supported by the Emperor Theophilos In any case the Caliph in Muharram 215 (March 830) took the field against the Byzantines accompanied by his son al-ʿAbbās [q v] In the next two years campaigns were conducted by al-Ma'mūn in person, as usual the fortune of war varied, but the Muslims succeeded in taking the fortress of Lu'lu'a after a long siege, whereupon Theophilos wanted to make peace But his offer was refused by al-Ma'mūn and in 218 (833) he again invaded Byzantine territory but died in Radjab (August) of the same year in Budendūn not far from Tarsus, after having had al-Muʿtasim proclaimed as his successor

In spite of all political troubles al Ma'mūn found time to devote his attention to religious problems and to the cause of learning His rationalistic tendencies made him join the Muʿtazilīs, whose most prominent representative then was the Kādi Ahmad b Abū Du'ād [q v] Urged on by him, the Caliph went so far as in Rabiʿ I 212 (June 827) to publicly proclaim the dogma of the creation of the Kur'ān and therefore to raise the Muʿtazila to be the State religion While he persecuted the orthodox and catechised them severely about the soundness of their belief in the Muʿtazila, he treated the ʿAlids with the greatest consideration In his reign poetry and learning reached their golden age It was then that lived men like Abū 'l-ʿAmmām and al-Buhturī, each of whom collected a *Hamāsa*, the historian al-Wākidī, the traditionist al-Bukhārī and the jurist Ahmad b Hanbal The Caliph also took a special interest in philosophy and the exact sciences In Baghdād he built an astronomical observatory with a fine library, and the medical school in Djundai Sābūr [q v] was an object of his special care Scientific works by Greek physicians and natural philosophers had previously been translated into Arabic through the Syriac, but under al-Ma'mūn there was a great revival of activity in this branch of learning

AL-**MA'MŪN**, honorific *lakab* of the principal sovereign of the dynasty of Berber origin of the Banū Dhi 'l-Nūn, who founded a kingdom with Toledo as its capital on the fall of the Umayyad caliphate of Cordova in the first quarter of the eleventh century [cf the article DHU 'L-NŪN]

Al Ma'mūn, whose full name was Yahyā b Ismā'īl b 'Abd al Rahmān b 'Āmir b Mutarrif b Dhi 'l-Nūn, succeeded his father, Ismā'īl al Ẓāfir, on the latter's death in 429 (1037) and spent his long reign in incessant warfare with all his Muslim neighbours, the dynasties of Saragossa, Valencia, Badajoz, Seville and Cordova

The beginning of his reign was mainly occupied by a struggle with the powerful king of Saragossa, Sulaimān b Hūd al-Musta'īn, who disputed the possession of Guadalajara (Wādi 'l Ḥidjāra) with him and took this town Al-Ma'mūn set out against him but was defeated and had to retire to Talavera in which he was besieged He was then reduced to seek an alliance with and to own the suzerainty of the king of Leon and Castile, Ferdinand I In spite of the help of the Christian king he could not bring his enemy Ibn Hūd to terms Al Ma'mūn then turned for help to the king of Seville al-Mu'tadid b 'Abbād and to obtain it had to declare himself the vassal of the pseudo caliph Hishām II Ibn 'Abbād then fighting the Aftasids of Badajoz [q v] did not give al-Ma'mūn the help for which he hoped and Ibn Hūd becoming bolder, laid waste the country of Toledo and forced its inhabitants to submit to him He would undoubtedly have deprived al Ma'mūn of his kingdom if he had not died in 438 (1046)

The rest of al-Ma'mūn's reign was spent in a struggle with the Aftasid prince of Badajoz, Muhammad b 'Abd Allāh al Muzaffar, and hostilities between the two dynasties continued for several years with varying success In 457 (1065) al Ma'mūn seized Valencia The king of Valencia, al Mansūr 'Abd al 'Aziz b Abi 'Āmir, had died at the end of 452 (1060—1061) and his young son 'Abd al-Malik al-Muzaffar had succeeded him but his lands aroused the cupidity of Ferdinand I who besieged him Under the pretext of assisting him, al-Ma'mūn came to 'Abd al-Malik in Valencia and soon deprived him of his throne

A few years before his death, al-Ma'mūn was asked by the Berber lord of Carmona, al-'Izz b Ishāk al-Burzālī, to come to his assistance against the attacks of the 'Abbādid king of Seville al-Mu'tadid on his little kingdom Al Ma'mūn occupied Carmona and as a result of negotiations with al-Mu'tadid, he abandoned this town to him in return for a promise of his assistance in taking Cordova, then ruled by a prince of the family of the Djahwarids Once more the 'Abbādid failed him at the last moment On his death his son and successor al-Mu'tamid [q v] took up al-Ma'mūn's plan on his own account, seized Cordova in 461 (1068) and left his son 'Abbād there as governor But a few years later in 467 (1075), al Ma'mūn with the help of a Cordovan of low birth, Ibn 'Ukāsha, was able to hatch a plot which made him master of Cordova Six months later, al Ma'mūn was poisoned on the 11th Dhu 'l-Ka'da 467 (June 28, 1075) either at the instigation of al-Mu'tamid, king of Seville, or of Ibn 'Ukāsha His son Yahyā al-Kādir succeeded him A few years later, Alfonso VI took Toledo

The long reign of al-Ma'mūn is quite characteristic of the period of the *mulūk al-ṭawā'if* of the Iberian Peninsula He certainly increased his dominions but his conquests were ephemeral and he was one of the first to have no scruples about an alliance with the Christian princes of Castile and Leon in order to fight other Muslim rulers of al-Andalus He even afforded hospitality at his court for nine months to Alfonso VI when the latter was deposed by his brother Sancho of Castile

AL-**MA'MŪN**, Abu 'l-'Alā' Idrīs b Ya'kūb al-Mansūr b Yūsuf b 'Abd al-Mu'min b 'Alī, ninth sovereign of the Almohad dynasty, born in 581 (1185—1186) in Malaga, of the marriage of his father with the Spanish princess Safiya, daughter of the amir Abū 'Abd Allāh b Mardanish (Martinez) The Arab historians pay high tributes to the good qualities of this prince who was very well read, equally well versed in profane and religious learning At a time when the Almohad dynasty was much troubled by the strife stirred up by pretenders, he was able by his energy to postpone for several years its final collapse

At first al Ma'mūn served in Spain as the lieutenant of his brother Abū Muhammad 'Abd Allāh al-'Ādil then on the throne The latter had soon to leave the Peninsula and return to Morocco without having been able to subdue the rebel leader Abū Muhammad al Bayyāsī supported by Ferdinand III of Castile, but he was soon betrayed by his own men in his own land and assassinated in 624 (1127) His murder was followed by the almost simultaneous proclamations of al-Ma'mūn and another Almohad pretender, nephew of the preceding, Yahyā b al-Nāṣir b al-Mansūr, who took the honorific *lakab* of al-Mu'tasim bi'llāh On his accession and without leaving Spain, al-Ma'mūn was soon able to make himself recognised in the greater part of his empire and to get rid of the rebel al-Bayyāsī But almost immediately a rebellion broke out in the east of al-Andalus, in which Muhammad b Yūsuf of the powerful family of the Banū Hūd was proclaimed caliph in the town of Murcia At the same time the prestige of Yahyā al-Mu'tasim increased in Morocco and his partisans became more and more numerous Feeling himself powerless in Spain and forced to turn his eyes towards Africa al-Ma'mūn was forced to seek an alliance with the king of Castile The latter agreed to support al-Ma'mūn under very harsh terms, including the surrender of ten Muslim strongholds of the *frontera* and the building of a church and the granting of freedom of worship in Marrākush In return, al-Ma'mūn received a body of 12,000 Christian mercenaries with whom he at once went to the Maghrib He was soon able to enter Marrākush in triumph, after having

defeated the army of al-Mu'tasim in 627 (1230)

Enraged at the defection of the Almohad Makhzen so devoted to his predecessors, al-Ma'mūn took a decision at Marrākush, that was quite unprecedented in the annals of the dynasty He stigmatised the memory of the Mahdī Ibn Tūmart, denied him "impeccability" ('iṣma) and had a large number of Almohad shaikhs executed whom he suspected of having betrayed him The rest of the reign of al-Ma'mūn was spent in trying to put down several rebellions in the Maghrib, but he did not succeed in bringing his rival to terms for the latter was able to take and plunder Marrākush On hearing this, al-Ma'mūn, then busy with the siege of Ceuta, hurried off to the capital at once but fell ill and died on the way in the valley of the Wādī 'l-'Abīd at the end of Dhu 'l-Hidjdja 629 (Oct 1232)

MA'MŪNĪS, name of a dynasty

In the ivth (xth) century Djurdjānīya, to the north of modern Khīwa, was a dependency of Bukhārā and was ruled by a line of princes called the Ma'mūnis Nothing is mentioned about them by the Oriental historians till 382 (992) when Ma'mūn b Muhammad b 'Alī, ruler of Djurdjānīya, is said to have assisted Amir Nūh b Mansūr the Sāmānid in his exile during the temporary occupation of Bukhārā by Bughrā khān, ruler of Kāshghar In 385 (995) Ma'mūn attacked Abū 'Abd Allāh, ruler of Khwārizm, in order to punish him for his treachery to Abū 'Alī Simdjūrī, took him prisoner and annexed Khwārizm Ma'mūn was assassinated in 387 (997) His son Abu 'l-Hasan 'Alī succeeded to the throne, and married a sister of Sultān Mahmūd of Ghazna Abu 'l Hasan died about 399 (1008—1009) and was succeeded by his brother Abu 'l-'Abbās Ma'mūn Abu 'l-Abbās married his brother's widow, the sister of Sultān Mahmūd Shortly after this he gave offence to his army by doing homage to Sultan Mahmūd The commanders of the army organised a rebellion against him, put him to death on Shawwāl 15, 407 (March 16, 1017) and raised one of his sons to the throne On hearing this, Sultān Mahmūd marched to Khwārizm to avenge the death of his brother-in-law, defeated the rebels at Hazārasp on Safar 5, 408 (July 3, 1017), and executed the leaders of the insurrection All the scions of the royal house were taken prisoners and sent to Khurāsān The kingdom of Khwārizm was annexed and placed under the command of Altūntāsh with the title of Khwārizmshāh But after the return of Sultān Mahmūd to Ghazna, Abū Ishāk, father-in-law of Abu 'l-'Abbās Ma'mūn, tried to establish himself in Khwārizm but he was defeated by Altūntāsh

The rulers of this dynasty were famous patrons of learning, and it was at the court of Abu 'l-'Abbās Ma'mūn that Abū Raihān al-Bīrūnī, the astronomer, Abū 'Alī b Sīnā and Abu 'l-Khair b Khammār, the physicians, and Abū Nasr b 'Arrāk, the mathematician, flourished

This dynasty has been confused by the *Ta'rīkh-i Gu.īda* and *Ta'rīkh i Djahān Ārā* of Kādī Ahmad Ghaffārī, with the Farighūnis who were the rulers of Djūzdjānān

Bibliography al-'Utbī, *Kitāb al-Yamīnī*, ed Lahore, p 77 *sq*, 94—96, 106, 300—303, Abu 'l Fadl Baihakī, *Ta'rīkh-i Mas'ūdī*, ed Morley, p 834—853, Nizāmī Samarkandī, *Cahār Makāla*, *G M S*, p 76—80, 241—244, Ibn al-Athīr, *Kāmil*, ed Tornberg, ix 93 *sq*, 184 *sq*, E de Zambaur, *Manuel de genealogie et de chronologie*, p 205 (MUHAMMAD NAZIM)

MA'MŪRET AL-'AZĪZ, the name given to the new town of Mezre, built beside Kharpūt [q v] in honour of Sultān 'Abd al-'Azīz In time the name became applied to the new wilāyet formed in 1879 around Kharpūt Mezre, this consisted of three sandjaks al-'Azīz, Khozāt and Malatiya As a result of the administrative reforms of 1340 (1921) each of these sandjaks became an independent wilāyet but later modifications were made

According to the official annual of 1925—1926, the wilāyet of Ma'mūret al-'Azīz has an area of 11,299 sq km or 12,428,900 *donums*, of which 3,124,596 are arable It contains 6 kādās the central kādā, Pālū, Kharpūt, Kebān, 'Arabkir, Kemāliye (this new name replaces the historical one of Egin)

The annual of 1926—1927 records an even more radical reorganisation The area of the wilāyet of al-'Azīz is given as 17,268 sq km with 1,562,296 *donums* of arable land The wilāyet which lost the western kādās ('Arabkīr and Egīn) has been extended on N and E It has 11 kādās subdivided into 32 *nāhiyas* with names little known and difficult to transliterate

1 the kādā al 'Azīz, with the *nāhiye* Khankendi, Mullī kendi, Icme, Khuhafliya (?), Frenlei (Āyuwus), Bālī-Bey, Kharpūt, Conguch, Sarnī (Dishidi)

2 Kebān, with only one *nāhiye* Tahir

3 Bāskil Mushār Huyuk, Izoli (Komur khān), Karabekān (Meriwān), Seywān

4 Pālū Gok-dere (and Bulanik) Okhi (and Lower Bulanik), Kara-cor

5 Khozat (Dersim) Balikan (Elghāzī), Kermili, Amutka, Sin, Dere Aghzunik

6 Cemish-gezek Waskowān, Bash-Wartenik, Kermili, Waskerū (Pāshāweng), Cārsandjak, Shawak (Albishker = Awi-shekei ?)

7 Māzgerd Pakh, Ieieshmek, Mukhandī (Mučundī ?)

8 Čabakčur Perkhenguk (Kamrān)

The kādās without *nāhiye* are

9 Owadjik

10 Gendj-merkez (Dārhīni)

11 Ma'den

Number of the kādā	Number of villages	Number of inhabitants
1	241	52,700
2	78	22,494
3	?	16,117
4	333	17,496
5	127	12,000
6	?	?
7	180	13,000
8	104	12,000
9	87	6,180
10	?	5,649
11	?	11,476

The wilāyet (without Cemish gezek) has therefore 171,631 inhabitants The events of the war and the suppression of the Kurd rising in 1925 must have had far reaching effects on the ethnical aspect of this territory Before the war the population was mixed Kurd, Armenian and "Zaza" (a people speaking an Iranian dialect, q v)

Bibliography cf the fundamental article KHARPŪT, *Turkiye Djemhuriyeti Dewlet Sālnāmesi*, 1925—1926, p 836—841, do, 1926—1927, p 694 (V MINORSKY)

MAʿN B AWS, an early Muhammadan poet of the tribe of the Banū Muzaina His period can be established with some accuracy From the *Kitāb al-Aghānī* we know that he composed a panegyric on ʿOmar I and a lampoon on ʿAbd Allāh b al Zubair for his lack of hospitality, the latter is preserved in the *Aghānī* as is the beginning of the former The panegyric survives also in the *Dīwān*, where it is dedicated to ʿOmar's son ʿĀsim The *Aghānī* further records that Maʿn lived to the beginning of the *fitna* between ʿAbd Allāh and Marwān b al-Hakam, i e to 64 (684) The poet must therefore have been born about the beginning of the Muslim era The *Aghānī* further gives details of his private life and the *Dīwān* also gives similar information He had an estate in Arabia and made journeys to Syria and the ʿIrāk One of his wives came from Syria He also took part in the wars of his tribes In his old age he became blind

Up till recently all that we knew of Maʿn's poems were the fragments preserved in the *Aghānī* and elsewhere P Schwarz however discovered in the Escorial an incomplete manuscript of the *Dīwān* with a commentary, the work of al-Kālī [q v] which he published in 1903 with a short introduction and translation of the notices in the *Aghānī* H Reckendorf supplemented this In 1927 Kamāl Mustafā published an edition in Cairo It lacks some poems given by Schwarz, on the other hand it has two fragments not given by him The introduction is in part a literal translation of Schwarz, who is mentioned by name It is not clear from it on what the edition is based It seems however to be based simply on Schwarz's edition without new manuscripts and, compared with it, only shows corruptions of the text, omissions and additions from other sources

Bibliography *Kitāb al-Aghānī*, x 164—168, P Schwarz, *Gedichte des Maʿn Ibn Aus*, Leipzig 1903 (cf Noldeke, in *Z A*, 1903, p 274 *sqq* and Reckendorf, *O L Z*, 1904, p 138—140), where further sources are given, *Maʿn Ibn Aws*, *Hayātuhu*, *Shiʿruhu*, *Akhbāruhu*, *djamaʿahu* Kamāl Mustafā, Cairo 1927 (M PLESSNER)

MAʿN B MUHAMMAD B AHMAD B SŪMĀDIH AL-TUDJIBĪ ABU 'L-AHWAS or ABŪ YAHYĀ, founder of a dynasty in the little principality of Almeria, in Eastern Spain in the middle of the xiᵗʰ century A D The principality had been founded in 1025 by the two ʿĀmirid "Slavs" Khairān and Zuhair On the latter's death in 1037, their overlord ʿAbd al-ʿAzīz b Abī ʿĀmir, king of Valencia, declared it his property and in 1041 placed his brother-in-law Maʿn b Ṣūmādiḥ as governor there The latter belonged to a noble family of Arab origin, his father had been one of the generals of the celebrated Hādjib al-Mansūr [q v] and was governor of the town of Huesca Maʿn remained loyal to the king of Valencia for nearly four years, then cast off his allegiance and declared himself independent He reigned at Almeria for a few years longer and died in Ramadān 443 (Jan 1052)

Bibliography Ibn ʿIdhārī, *al-Bayān al-mughrib*, vol iii (ed E Lévi-Provençal, in the press), p 167, R Dozy, *Recherches sur l'histoire et la litterature de l'Espagne pendant le Moyen-âge*, Leyden 1881, vol i, p 241 and appendices xix and xx, A Prieto Vives, *Los Reyes de taifas*, Madrid 1926, p 40, 44, 61 (E LÉVI-PROVENÇAL)

MAʿN B ZĀʾIDA, ABU 'L WALĪD AL-SHAIBĀNĪ, a Muslim general and governor In the Omaiyad period Maʿn was in the service of the governor of the ʿIrak, Yazid b ʿOmar b Hubaira, and took part in the fighting against the ʿAlid rebel ʿAbd Allāh b Muʿāwiya and the general of the ʿAbbāsids Kahtaba b Shabīb as well as against his son al Hasan He thus gained the enmity of al-Mansūr and after the murder of Ibn Hubaira had to go into hiding to escape the vengeance of the ʿAbbāsids But when the Rawandīs [q v] went to al-Hāshimīya (probably in 141 = 758—759) and tried to storm the palace of the caliph, because he had had their ringleaders arrested, Maʿn came out of his retirement, drove back the rebels with his men and rescued al Mansūr, who at once pardoned him and gave him the governorship of the Yaman Here he favoured his fellow tribesmen, the Banū Rabīʿa, while the Yamanīs were treated with the greatest severity He was transferred to Sidjistān, according to the usual date, in 151 (768—769) and his son Zāʾida followed him as governor of the Yaman Soon afterwards, probably the next year, Maʿn was murdered in Bust by some Khāridjis, who had gained an entrance to his house by pretending they were workmen doing repairs 151 and 158 are given for the year of his death, in addition to 152

MAʿN (BANŪ), Emirs of the Lebanon Their political history begins with the Turkish conquest of Syria We do not know if they were of Arab origin like the Banū Bohtor, or Kurds like the Djunblāt, or Maghribī like the ʿAbd al Samad, the Talhūk etc, who came to the Lebanon in the retinue of the Fātimids When, in the xviiᵗʰ century, the biographer Muhibbī (*Khulāsat al-Athar fī Aʿyān al-Karn al-hādī ʿashar*, iii 266) was collecting the records of the family of the Banū Maʿn, he found they were not agreed about the genealogy of their ancestors But he is certain that they had long been in possession of the emirate of Shūf (Southern Lebanon) He is certain that they did not belong to the princely family of the Lebanon Tanūkh It is none the less surprising that in the monograph, which he devotes to the latter family (*Taʾrīkh Bairūt*, ed Cheikho) Sālih b Yahyā deliberately passes over the Banū Maʿn

The Maʿn seem to have early adopted the teaching of the Druses This step secured them the sympathies of the Druses of the Lebanon and

of the Wādi 'l-Taim at the foot of Hermon In the latter district they were allied with the Shihāb emīrs Enfeebled by the struggles with the ʿAlam al Dīn — their relations and also their secular rivals — the Banū Tanūkh, themselves divided into Kaisīs and Yamanīs, underwent the fate of such exhausted organisms and ended by breaking up The Maʿnids were only waiting the opportunity to seize their political heritage This was given by the Ottoman conquest of Syria

On the eve of the battle of Dābik (1516) between the Turks and the Mamlūks of Egypt they divined in time to which side victory would incline and wiser than the Tanūkh declared for the Turks Their chief at that time was the emīr Fakhr al Dīn I He was one of the first of the Syrian chiefs to hasten to Damascus to congratulate Selīm I on his victory Favourably impressed by his protestations of devotion, the Sultān sent him back to the Lebanon with enhanced prestige and authority at the expense of the Tanūkh In this accession of power, the Maʿnid emīr was much assisted by Ghazālī, a traitor to the Mamlūk cause, to whose fortunes he had decided to link that of his family We do not know how he escaped the catastrophe that overwhelmed (Jan 1521) his protector Ghazālī, who in the end played traitor to the Turks also

In 1544 the emīr Kurkmās succeeded his father Fakhr al Dīn and in 1585 there took place at Djūn ʿAkkār the plundering of the caravan which was taking to Constantinople the taxes collected in Egypt and Syria The Ottomans accused the Maʿn of complicity and of having sheltered the criminals Their troops invaded the Lebanon The emīr Kurkmās shut himself up in the inaccessible rock of Shakīf Tīrūn near Djizzīn (Southern Lebanon) and died there of chagrin or poison (1585)

The most remarkable of the Maʿnids was undoubtedly the son and successor of Kurkmās, called Fakhr al-Dīn (1585—1635), like his grandfather The partisans of the cause of independence in the Lebanon regarded him as a precursor and have never ceased to invoke the example of his efforts for his country For an account of his career see the article on him (II, p 45) The conquests beyond the Lebanon and his relations with European powers brought down upon him the vengeance of the Porte He had to go into exile in Italy and leave to ʿAlī, the eldest and most gifted of his sons along with his own brother Yūnus, the administration of the Lebanon (1613) On a promise to dismantle the chief fortresses of the Lebanon the Porte recognised ʿAlī and even, after five years of exile, allowed his father Fakhr al-Dīn to return to the Lebanon His son ʿAlī displayed no enthusiasm at his return (1618) The new conquests of his father soon began to disturb the Porte, who resolved to make an end of the troublesome Maʿnid vassal Surprised by superior forces in the Wādi 'l-Taim his son ʿAlī fell fighting bravely and Fakhr al Dīn was taken to Constantinople and put to death (1635)

The Central and Southern Lebanon, "the Mountain of the Druses" as it was officially called, was then handed to the family of the ʿAlam al Dīn, whose ambitions had never ceased from the beginning of the rise of the Banū Tanūkh, to thwart the efforts of all the rulers of the Lebanon One of their first acts was to exterminate the last scions of the Tanūkh This crime facilitated the rise to power of the Shihāb Their excesses and the regret for the Maʿnids soon made the ʿAlam al-Dīn unpopular After their expulsion from the Lebanon the Maʿnid emīr Mulhim followed, his son Ahmad succeeded in regaining a precarious authority under the jealous supervision of the Turkish Pashas The more distinguished of the two emīrs was Mulhim, son of the emir Yūnus and nephew of the great Fakhr al-Dīn He ruled for about 20 years Both continued the liberal traditions of their illustrious ancestor Like him they protected the colonies of Christian agriculturists whom he had invited from northern Lebanon and for whom he had built churches and monasteries

Ahmad, grand nephew of Fakhr al-Dīn II, died in 1697 without leaving male heirs and the family of the Maʿnids thus became extinct Turkey could no longer have any illusions about the rebellious nature of the Lebanese and their impatience under a foreign yoke To assume the direct government of the Lebanon was not attractive to the Porte and would have forced it to undertake its conquest The grave political crisis through which Turkey was then passing prevented a new expedition being undertaken, the risks of which were very well known On the other hand the rule of the ʿAlam al Dīn with official support had not given satisfactory results On promise of the payment of an annual tribute, the notables of the Lebanon were authorised to form a general assembly at Sumkānīya (province of Shūf) to elect a governor to inherit the legacy of the Banū Maʿn Their choice fell upon the Shihāb emīrs, allies and relatives of the old emīrs

Bibliography see that of the article FAKHR AL-DĪN and the notices of XVIIth century individuals scattered through Muhibbī's biographical work quoted above, among them I 381—387, III 266 *sqq*, 299—303, IV 396, 409, 426—427, Haidar Shihāb, *Taʾrīkh*, Cairo 1900, p 709—717, 722—725, 731—741, Iannūs Shidyak, *Taʾrikh al Aʿyān fi Djabal Lubnān*, Beirūt 1859, p 247—345, Ristelhueber, *Les traditions françaises au Liban*, Paris 1918, p 18—21, H Lammens, *La Syrie, précis historique*, Beirūt 1921, II 57, 66—94 (H LAMMENS)

MAʿNĀ (A) means in the old language sense, significance and is so used as a grammatical term In philosophical language the use of the word varies from the most general to the most particular so that it is impossible to give a general translation for it It occurs in quite untechnical connections as "thought", "what is meant" or simply "thing" etc but also has the special meaning of "conception" or as the *Dictionary of Technical Terms*, ed by Sprenger, has it "an image of the intelligence (*ṣūra dhihnīya*) in so far as a word corresponds to it, i e in so far as

it is meant by a word" Horten has investigated the special meaning of the word in metaphysics (*Was bedeutet* معنى *als philosophischer Terminus?*, in *Z D M G*, lxiv 391 *sqq*) According to him, *ma'nā* is an "incorporeal reality" not merely a subjective conception In this use it is regularly contrasted to *ṣifa*

The plural *ma'ānī* is the name of a branch of study, namely, rhetorical style

Bibliography in the article, cf also the dictionaries and Ṭāshkopruzāde, *Miftāh al-Sa'āda* s v *'Ilm al-Ma'ānī* (M PLESSNER)

MANĀF is the name of an early-Arabian idol which was venerated by Kuraish and Hudhail, as may be concluded from the fact that among these clans the name 'Abd Manāf "servant of Manāf" occurred It is said that one of Muhammad's ancestors — the pedigree being Muhammad b 'Abd Allāh b 'Abd al-Muttalib b Hāshim b 'Abd Manāf — received this name, because his mother consecrated him to Manāf, who was then the chief deity of Makka

Whether this last statement be true or not, it does not restore to life a deity whose individuality remains to us as dim as that of all its companions Ibn al-Kalbī knows nothing of its whereabouts, except that menstruating women were bound to keep themselves at a distance from it

The name does not occur either in the Kur'ān or in classical *hadīth* It derives from a root *n-w-f*, which in several Semitic languages conveys the meaning of "being elevated"

Bibliography al-Ṭabarī, ed de Goeje, i 1091 *sq*, Wellhausen, *Reste arabischen Heidentums*, 2nd ed, p 56 *sq* (A J WENSINCK)

MANĀKIB (A), plural of *mankaba*, means the merits and doings of a miraculous nature of celebrated holy persons of Islām, heads of schools, saints and founders of *ṭarīka* Other terms like *karamāt*, *faḍā'il* are used with the same meaning but less frequently We have the titles or manuscripts of several works on eastern *manākib* Ḥādjdjī Khalīfa gives a long list of them Among the most notable may be mentioned the *manākib* of 'Umar b al-Khaṭṭāb, of Aḥmad b Ḥanbal, of al Shāfi'ī and of Abū Ḥanīfa

The literature of the *manākib* assumed a special development in Morocco from the end of the middle ages The majority of the shaikhs who played a part in the great renaissance of Islām in this country at that time had one or more monographs devoted to their *manākib* after their deaths

For a more detailed study of the place occupied by the genre of *manākib* in the Arabic literature of Morocco cf my *Historiens des Chorfa*, *Essai sur la litterature historique et biographique au Maroc du XVIeme au XXème siècle*, Paris 1922, p 44—54 and 220 *sqq* (E LÉVI-PROVENÇAL)

MANĀRA, tower, minaret

Material, structure and adornment The use of brick or stone for manāras depended on the material generally used for building in the country in question The manāras in Spain were therefore of stone so far as one can judge from those still extant, in the African Maghrib mainly of brick, in Cairo of stone, in Arabia, Syria, Anatolia, Armenia and Mesopotamia of both, in the 'Irāḳ, Persia and Afghānistān of brick and in India of both In Persia there are isolated exceptions, like the manāra in Kerāt, a structure of stone and lime with an outer covering of tiles, indeed stone and lime were very often used for the foundations and bases without affecting the character of the edifices themselves in brick Of considerable importance from the artistic point of view is the outer covering of a layer of tiles in Persia and the 'Irāḳ, from the variations and patterns of which the manāras receive their decorative exteriors, by alternating horizontal and vertical layers (*hazārbāf*, bonding), by alternating reliefs and depressions, ornamental areas are formed from which strips of ornament or script arise formed of tiles specially prepared for the purpose The Turkestān and Timūrid manāras are decorated with coloured glaze In the post-Timūrid period also the glaze continually appears, especially in the pair of minarets which now commonly flank the entrance to a mosque (Tabrīz, Mashhad, etc) It is in the Guldests, the balconies round the top, that the art of working decoratively in brick reaches its height Here the necessary basis for the balcony was formed by brackets arranged in layers or rows of cells (stalactite-like cornices, *mukarnas*)

Object and Significance The term *manāra* or *minār* is applied to all Muslim towers They were used not only for religious purposes as places from which to call to prayer and to mark mosques but also, as before the Muslim conquest, for profane purposes as watch- and signal-towers The tower on the top of a hill at Kerāt in Khorāsān (cf below) is from its isolated commanding position intended as a signal-tower or column of victory and it shows that these towers were built in the Muslim period exactly like the manāras of mosques In form and style these erections, serving different purposes, form one category, into which they also fall objectively from having the same name There are a number of early references to such manāras, which were intended to be indicators for caravans and watch-towers (cf Diez, *Persien*, *Islam Bk in Khurâsân*, p 59) Such towers were however found all over the Asiatic plains and through China to the Pacific Ocean Of course very few of them were works of art There are a number of exceptions in the contemporary names for such towers, like that of Mahmūd of Ghazna which is called an *āmah* in an inscription (see below) One of the minarets of the musallā in Herāt is called simply *'imarat* in the inscription (cf Niedermayer-Diez, *Afghanistan*, p 59) The *stambhas* or *lāts* erected by king Asoka in India between 250—232 B C may be claimed as precursors of the minarets of eastern Islām, although actually pillars of much smaller size than a minara, many of them already show the same division into a polygonal and a cylindrical section Their object was also half religious and half monumental in character They in turn came from the Indo Aryan columns of wood which were put up from the earliest times as symbols of the deity The Indo-Buddhist stambha of brick in Kabul of uncertain date is a connecting link between these and the earliest Muslim memorial towers in Ghazna (see below)

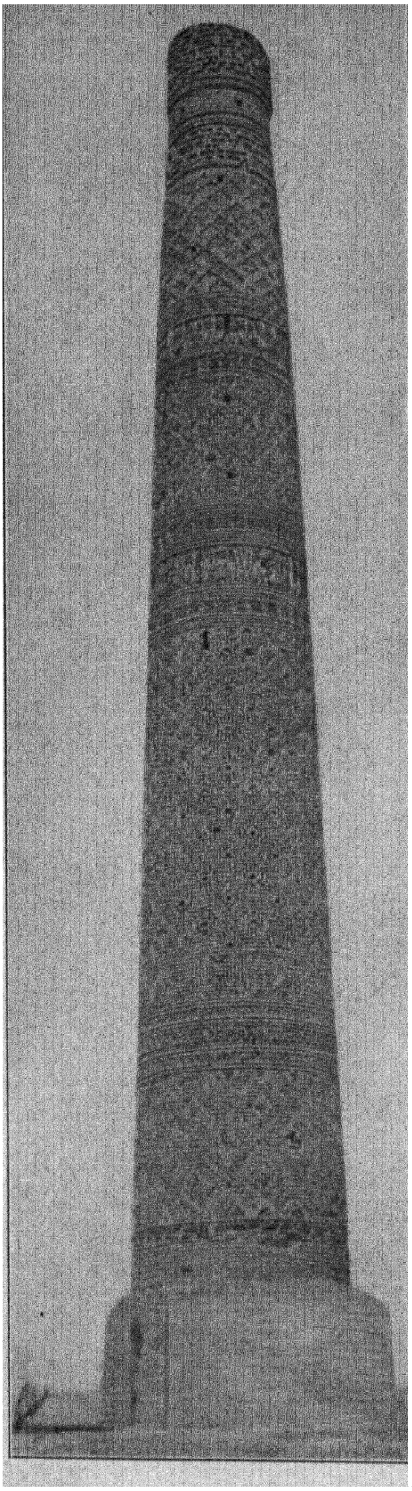
Shape From this similarity just mentioned, it is evident that the manāras follow the traditional shape of the towers of the country in question In the Mediterranean lands, as H Thiersch has shown, it was the lighthouses and in Syria the watch-towers, dwelling and church-towers that

were the predecessors in form of the manāras The malwīya's of Sāmarrā and the manāra of Ibn Ṭūlūn in Cairo again go back to old Oriental models In Persia and Sidjistān also, Nestorian church towers may have given the early manāras their square and polygonal shape (cf Diez, *Persien*, *Isl Bk in Khurâsân*, p 75), but in the rivalry of shapes in the eastern empire the slender cylindrical manāra, which is often also called *mīl*, won. It was the victory of the monumental building without windows over the western dwelling-tower with windows Their earliest precursors were, as already mentioned, the Indian lāts The observatory towers built by Sulṭāns Mahmūd and Mas'ūd III in Ghazna were built as memorials of victories like the Indian *Djayastambhas* Their shape was suggested by India but remodelled by the spirit of Muslim Persia and given a character of their own (cf Diez, *op cit*, p 76 and 151 *sqq*) The best monumental evidence of Indian inspiration is the Kutb Mināŕ [q v] in Dehlī (beg of viiith = xiiith century, cf M v Berchem, in Diez, *Churasanische Baudenkm*, p 109 *sqq*) The fact that the Persians called them *mīl* points to their ancestry, the primitive poles and pillars used as indicators To such poles, which can still be found at the present day at saints' tombs, revered by the common people in the country districts of Persia, may perhaps be traced the square and octagonal decorative shafts of the city and mosque Iwāns, found in pairs in Persian towns with Turkish inhabitants and in Asia Minor Although they are frequently in the shape of minarets and have a gallery, their object is as a rule merely decorative Both groups of manāras, the square and the round, are hollow towers with a staircase winding up inside opening out on the gallery In the old Persian minarets of brick, these galleries or *guldest*s have been completely destroyed as they were made of wood We must imagine them to have stood on cornices of cells with carved wooden railings, rafters and roofs such as may be seen everywhere in the surviving mināras at popular places of pilgrimage like Karbalā', Kum and Mashhad A comparison with the galleries in the towers of the wooden churches of Eastern Europe (e g in Transylvania) points to the descent of the minaret galleries from wooden buildings of an everyday character

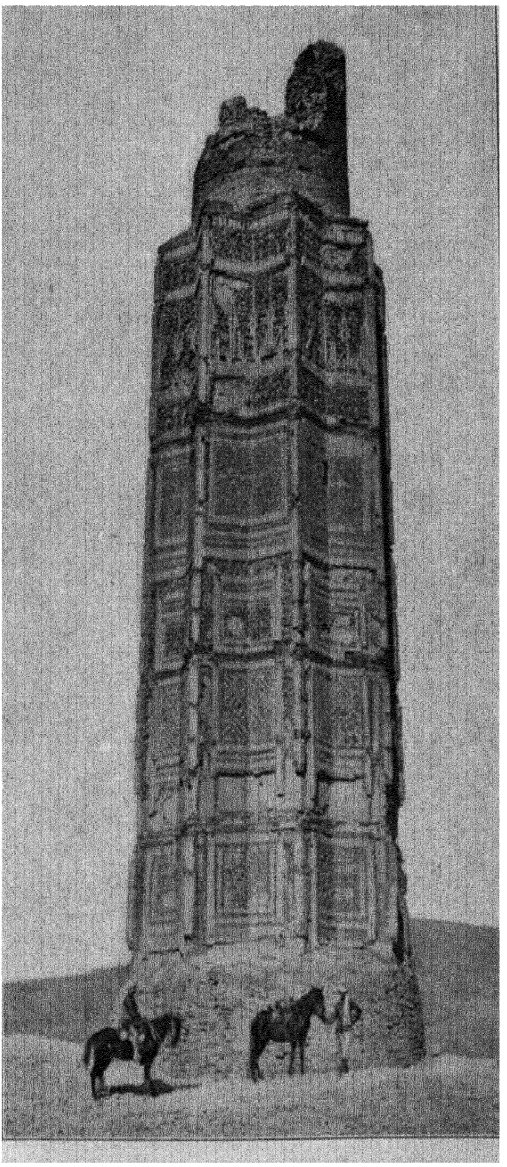
Form and Significance of the manāras In spite of the similarity of purpose there is a marked difference, indeed contrast, between the minarets of eastern and western Islām The square and polygonal minarets of the Maghrib, Egypt and Syria are still essentially buildings for habitation, the cylindrical manāras of the eastern lands are on the other hand distinctly monumental buildings, pillars symbolic of the deity The angular minarets of the west are divided into stories by mouldings and have windows for communication with the outer world, they are usually heavy on a broad base, while in contrast the cylindrical minarets of the east incorporate the symbol of the absolute which has this form, the unique, the abstract, the irresistible ascension to the deity without transitions or stopping places The minarets of the west remain individual towers, of which hardly two are alike, in the east of the vith (xiith) century the cylindrical form was already established as the absolute and only one, never to be altered nor made capable of ascension, as the only possible form of manāra The minarets of the west thus remain ex-watch-, church- or lighthouse-towers without bells or lights, decorative survivals of a culture foreign to their nature, those of the east on the other hand were etherealised and became spiritual manāras The Cairo minarets were an interesting sport in their shape, the Persian and Turkish on the other hand a confession of faith in monumental form They soar up to the heavens with unimpeded vigour The silhouette of their tiled decoration rises upwards on close inspection till finally the eye of the beholder is held by the marked effects of light and shade on the guldest The form of the guldest however is chosen with an idea of magical effect The spire rests on a gallery of cells, the secret of the construction of which the spectator cannot easily grasp and the decorative gallery of wooden rafters and railings glitters with bright colours above it A coat of glaze and the gilt top reflect far and wide a magic reflection like the glazed domes

Shape and development of the manāra in different countries —Syria is the original home of the square manāra, which there took over the old native form for watch towers, dwelling-towers or grave-towers and the church-tower which succeeded them Islām at first used the existing pre Islāmic towers as minarets, on to which mosques were frequently built, when old churches which already had towers were not taken over and adapted (cf Brünnow in Thiersch, *Pharos*, p 101) The oldest minarets of this kind are in Hawrān, the land of stone building κατ' ἐξοχήν, which contained many old undecaying stone-towers (Bosra, manāra of the mosque of 'Omar b al Khattāb, inscription of the time of the Caliph 'Omar, Dār al-Muslim etc) In Damascus the two southern minarets of the Omaiyad mosque begun by Walīd in 86 (705 [?]) belonged to the old church of St John, while the northern minaret was a completely new building of Walīd's This is therefore the oldest independent Muslim manāra The manāras of the Omaiyad mosque became models not only for Syria but through the Omaiyad migration to Spain (Cordova) for the Maghrib also Wherever we later find in Syria the Egyptian tower-form, there is always definite Egyptian influence present and as a rule they are Mamlūk foundations It is still hardly possible to compile a chronological list of Syrian manāras (cf Thiersch, *op cit*, p 99—110 and the illustrations)

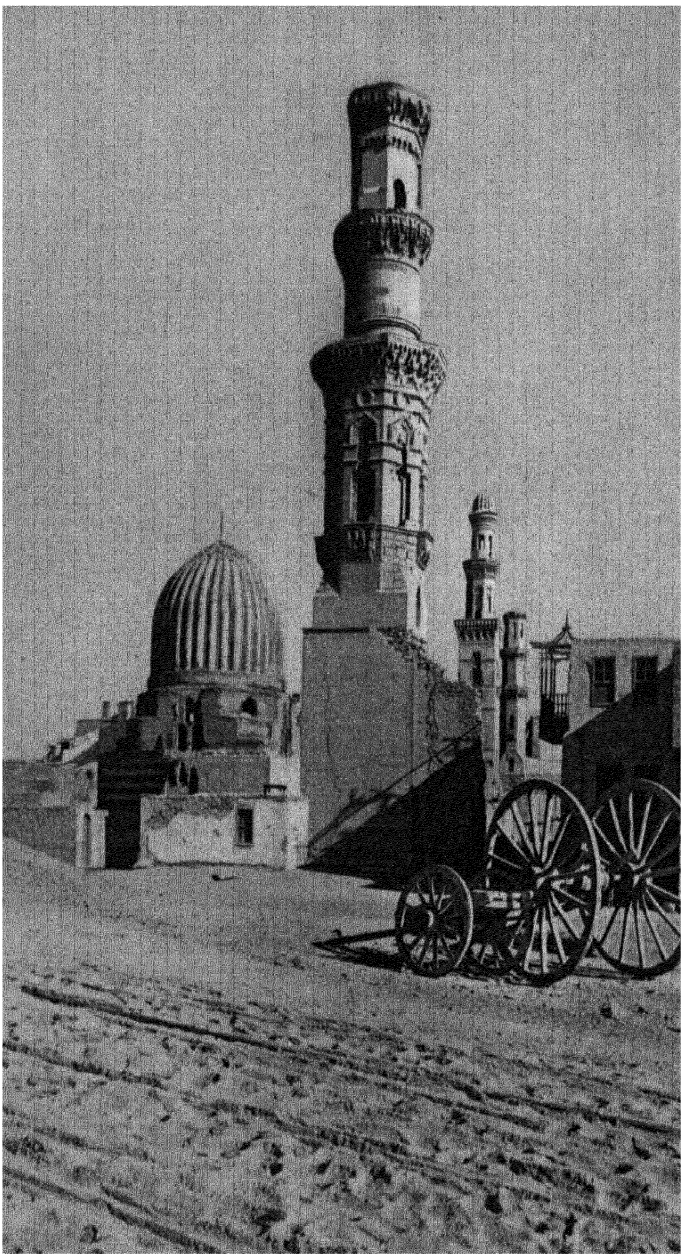
Palestine In this country on the borders of Egypt, the influence of the latter country made itself felt The octagonal manāra on a square base predominates The manāra of the chief mosque in Ghazza shows an octagon diminishing in width by successive stages, while the minaret of the mosque of al-Hāshim there has the same diameter throughout and is only divided into four stories with windows by large mouldings The smaller mosques have short squat octagonal towers The manāra of 'Alī Bakka in Hebron is half rectangular and half octagonal with a high mihrāb-like niche in the lower story The octagonal tower is found as far as Jerusalem, where it meets with the northern Syrian square towers The latter is again found at Harām al-Sharīf and in the mosque of Sīdna 'Omar beside the Church of the Holy Sepulchre and along the coast in Jaffa, Haifā, Sidon, Tyre and Bairūt, and in the interior in Tiberias, Safed, Nāblus, etc On the other hand



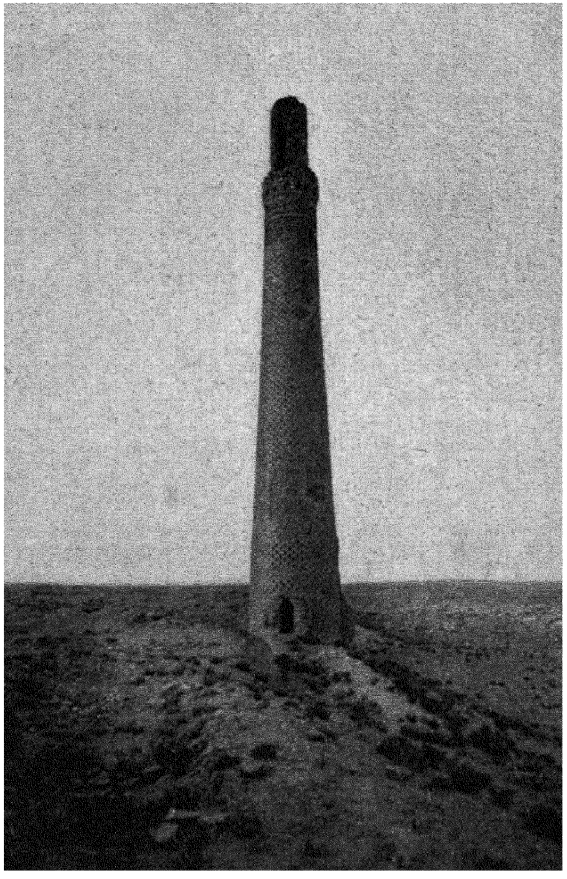
Khusrawgird near Sabzawar in Khorāsān: Manāra of 505 (1111)



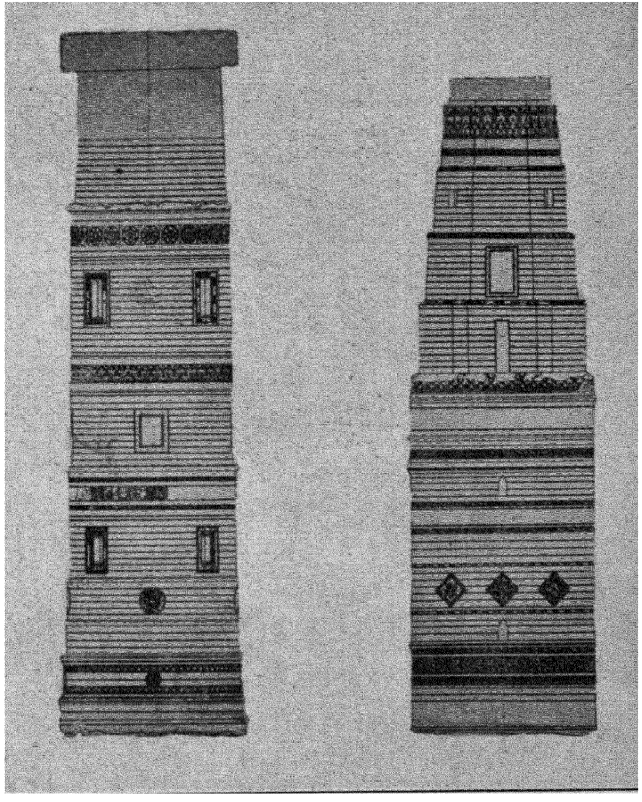
Ghazna: Manāra of Masʿūd of 495 (1101—1102



Cairo: Manaras of the Mamluk period



Sangbast near Mashhad in Khorāsān: Manāra of a *Ribāṭ*, vith (xiith) cent.



Cairo: sketches of the two Manāras with outer covering of the Mosque of Ḥākim

the manāra in Ramla of the viiith (xiiith) century is unique with its buttresses and pointed arched niches and dwarf pillars and columns Thiersch takes it to be a copy of the most celebrated Christian tower of the country, the bell tower of the Holy Sepulchre built in 1160—1180 in Jerusalem, of which only the base is still standing, (cf Thiersch, *op cit*, p 119 *sqq* and the pictures there)

Egypt The oldest manāra in Egypt is the tower of the Djāmi^{c} b Tūlūn Like the Malwīyas of Sāmarrā, this minaret stands outside the mosque and resembles them in form also, although it differs in its material which is limestone The first storey is a square tower with a window with horseshoe arches, the second is cylindrical and an outer staircase leads up around them The two upper octagonal stories are later in date, having been erected by the Mamlūk Sultān Lādjin Nothing final can be said about this manāra, apparently erected by a foreign architect and combining a number of foreign influences The manāras next to it in time are the five towers of hewn stone of the mosque of Hākim with their covering of tiles of a later date, they must be contemporary with the mosque, which was built in 393—404 (1002—1013), and were covered by Baibars II and given new spires (703 = 1303—1304) They are of different shapes The northern tower is cylindrical on a square base, the southern has a square lower half and four octagonal upper stories, each narrower than the one below it, the first of which has four semi-cylindrical cornices in the corners The decoration in relief on the stone has analogies in the gateway of the same date (pictures in Diez, *K d isl Volk* [1], p 58, [2], p 54) Of these two towers the southern one may be considered the ancestor of the minarets of Cairo Its square-octagonal form, usually crowned by a cylindrical storey, survives The further development is limited to the proportions, which aim at greater elegance and slenderness, and the breaking up of the surface with niches and muḳarnat cornices Towards the end of the second Mamlūk period, say under Kā'it Bey, it reached its culmination The minaret of the mosque at his tomb was never to be surpassed in grace and wealth of ornament A list of the most important minarets of Cairo between 1000—1356 A D is given by Thiersch with many illustrations

Arabia As in Palestine, in Arabia there was no native type of manāra and indeed Arabia never developed any sacral architecture with a character of its own The minaret of the mosque of Walīd in Medīna may have been Syrian in form The manāras at present standing in Medīna belong to the sixth restoration of the mosque by Kā'it Bey in 888 (1483) They are slender minarets of the Mamlūk type with octagonal and cylindrical stories. The seven manāras in Mecca, the sanctuary of which was ten times restored, only show modern forms of tower, frequently influenced by the slender Turkish form (cf Thiersch, *op cit*, p 123) Two slender round minarets of the ixth (xvth) century still flank the ruined mosque on the island of Bahrain (cf Diez, *Jahrb d as Kunst*, 1925, II 2)

Maghrib. The oldest *ṣawma^{c}a*, as the manāras of the Maghrib are called, in Africa is in Kairawān, the massive three storied tower of the mosque of Sīdī ^{c}Ḳba of 105 (724) The two upper receding stories with blind niches are probably of later date than the unadorned upper storey with loop holes on three sides and three windows only on the side that looks on the court The cistern in the basement and the measurements of this tower which are exactly half those of the Pharos, suggested to Thiersch that it was an imitation of the Pharos Another *ṣawma^{c}a*, also of the IInd (viiith) century was the minaret of the Djāmi^{c} al-Zītūna in Tunis before its restoration in the xixth century Old pictures of it show a plain square lower storey with a narrower octagonal upper storey and the platform on top enclosed by a breast-high parapet with a pillared gallery Of this probably only the lower part is old, while the second storey and the parapet date from the restoration of 1653 (pictures in *K d O*, ix, Kuhnel, *Maurische Kunst*, vi) Egyptian influence, in so far as such existed, extended to Tunis West of Tunis begins the Spanish sphere of influence, the model for which was the *ṣawma^{c}a* in Cordova built by ^{c}Abd al-Rahmān III in 339—340 (951) and destroyed in 1593 A description of it is given by Idrīsī (c 548 = 1154). According to him, the minaret of Cordová was a high quadrangular tower, square in plan, the sides of which were richly adorned with inscriptions in relief The upper section terminated in two rows of blind arcades probably like those still to be seen in the mosque of Cordova and on other minarets of the Maghrib On the platform was a second, probably also square, storey with four doors and upon the dome which crowned it shone three balls of gold and two of silver and lily leaves (cf Thiersch, *op cit*, p 127) This minaret however had a predecessor in a more modest tower built by ^{c}Abd al-Rahmān I, the model of which according to Marçais (*Rev Afr*, 1906) was Walīd's minarets in Damascus The second, imposing and splendid, minaret at Cordova seems to have served as a model for the *ṣawma^{c}as* of Seville and Morocco At the same time we must consider the claims of the minaret of the Kal^{c}a Banī Hammād built in 393 (1001), the only tower that survives of the Fātimid period, which was half destroyed by the Almohads in 1152 (cf Saladin, *Bull arch*, 1904, p 243 *sqq*) It is a high square tower of hewn stone, smooth on three sides and embellished on the courtyard side only with shallow blind niches and balcony doors in three layers above one another (pictures in Thiersch, *op cit*, p 130, Kühnel, *op cit*, xviii, Saladin, *Manuel*, p 217, Marçais, *Manuel* and *op cit*) This tower already shows the scheme of decoration of the Giralda and allied towers, namely the vertical combination of two windows or doors of the middle axis above one another by flanking double high shallow niches The almost contemporary Giralda in Seville of about 1190 A D, the so-called Tower of Hasan in Rabat and the Kutubīya in Marrākush are allied to it, the two latter of the end of the vith (xiith) century (pictures in Thiersch, Kuhnel, Marçais), all square with narrower square top stories, of which only that of the Kutubīya still survives These towers already show the system of decorating the surface now becoming typical in the later Maghribī manāras, the network of geometrical patterns in high relief and the beautiful windows with horseshoe and toothed arches and muḳarnat niches In the other towers of Morocco, in Fez, Tetuan, Tangier, etc, are more modern minarets The characteristic type of Algeria is best seen in the numerous minarets in Tlemcen, mainly of the xiiith—xivth

century They continue the form, characterized above, only the geometrical decoration in relief gains the upper hand and the windows disappear, their appearance is not quite so solid On the other hand, the huge minaret of the great mosque of Mansūra is highly thought of in Morocco for its size as well as its decoration, because it was built by a Moroccan Marinid (701–702 = 1302) The square tower therefore dominates the whole of the west It is only later in the xvith century that we find the octagonal tower appearing in Tunis, which Saladin attributes to Hanafī influence

The ʿIrāḳ and Djazīra give a picture of development similar to that of Persia and the lands east of Persia The oldest manāras still standing, the two malwiyas in Sāmarrā of the iiith (ixth) century, have remained the only examples of spiral towers but they are significant monuments of the early Muslim Arab variation of Babylonian architecture (the spiral as motif[1]) These genuinely Arab buildings were followed by a reaction towards the Mediterranean style with square and octagonal towers and with the coming of the Turkish peoples and Saldjūk rule the cylindrical minaret, usually on a polygonal base The following list is given by Herzfeld (*Arch Reise*, ii 229) Rakka, mosque extra muros, rectangular tower of the ivth (xth) or vth (xith) century, Rakka, intra muros, a round tower, Nūr al-Dīn 561 (1166), Abū Hurairа, round, Bālis, octagonal, 589 (1193) to 615 (1218), Irbil, round on octagonal base 586—630 (1190—1232), Sindjār, round on polygonal base 598 (1201), Baghdād, Sūk al-Ghazl, round on a base (?) (630 = 1232), Mōsul, minaret of the great mosque, round on a cubical base, Mōsul, minaret of the Kalʿa, round on a cubical base, Mōsul, Manāra al-Maksūra, Taʿūk, round shaft on a polygonal base In addition there is the unique octagonal minaret built of small broken stones with a covering of plaster, on the island of ʿAna in the Euphrates of the vth (xith) century (Herzfeld, *op cit*, ii 319, and Pl 137) and the bulk of the later minarets from the viiith (xivth) century onwards, which repeat this type

Persia The oldest manāras of Īrān and the countries adjoining on east and north, Afghānistān, Sidjistān and Turkestān seem to have been usually octagonal, as the ruin of the manāra, possibly of the iiith (ixth) century in Zarandj, Nād ʿAlī, Sidjistān (now 25—30 feet, originally twice as high, cf G P Tate, *Seistan*, Calcutta 1910, p 202 and Plate) shows The models for these earliest manāras may have been the watch-towers found all over the Asiatic steppes, hence the blind window and the great diameter Octagonal manāras still exist in Amiān, Sidjistān (vth—viith century ?), octagonal with cylindrical upper storey are the two observatory towers of Ghazna of about 410 (1019—1020) and 495 (1101—1102) (the original height was estimated at about 140 feet, the inscriptions on the two towers only say that their erection was ordered by Mahmūd and Masʿūd respectively, both with full titles, cf Diez, *Chur Bdkm*, p 162 *sqq*) Counterparts to these towers in two parts are the manāras in Sirwān, east of Herāt (c 100 feet high) and Kerāt in eastern Khurāsān (c 80 feet high), with octagonal bases and cylindrical shaft, both of the vth (xith)—vith (xiith) centuries Cylindrical manāras of the vth—vith (xith–xiith) centuries still survive in Persia and the lands east of it in Sangbast, Fīrūzābād, Kāsimābād (Sidjistān), Khosrugird (Sabzawar) of the year 505 (1111), Damghān, (2) Bastām, Sawa, Semnān, Tabas, Kunya Urgendj (old Khīwa), Termes on the Amū Daryā, Bukharā, Manār-i Kalyān 542 (1147—1148), Kāshān, Mestoryān (Turkoman steppes north of the Atrek, 2 towers) and Isfahān (4) (cf the list in Diez, *Persien*, *Isl Bk in Churâsân*, b 168—169) In the Timūrid period with the general flourishing of architecture the manāras are given a further last increase in their embellishment, a few examples of which are still to be seen in the Timūrid ruins in Herāt Here we still have the ruins of nine polygonal-cylindrical manāras the socles of which are usually of slabs of white marble with inscriptions in relief, the shafts to the top covered with glazed mosaics of fabulous beauty which in their delicacy recall the work of the carver in ivory (cf Niedermayer-Diez, *Afghanistan*, p 58 *sqq* and illustrations, p 157 *sqq*) To this Timūrid group also belong the manāras in Samarkand mostly in ruins and the minarets of the Masdjid-i Shāh in Mashhad built by the amir Malik Shāh and the two minarets now destroyed of the Blue Mosque in Tabriz, built in the time of Djahān Shāh (841—872 = 1437—1467) The last mentioned minarets belong to the group of double towers found all over Persia and Turkestān which either flank the doors or stand at the corners of the wall of a mosque or are built on the top of the doors These double towers which become more and more common after the Saldjūk and Mongol invasions never of course attained the height of the single manāras just described and their importance lies mainly in their decoration

Asia Minor and Turkey Among the Saldjūks and Ottomans the manāra lost the character and individuality which it revealed among most other peoples, at least in the early period Apart from isolated exceptions like the very interesting fluted minaret at Adalia (pictures in Lanckoronski, and Thiersch, *op cit*, p 149), the minarets are henceforth subordinated in the general architectonic scheme to the main building, either placed as a pair at the gate or as a single tower built into the wall of the mosque It is true that these arrangements are found also in Persia, which was filled with Turkish tribes, but there was constant change there, while in Asia Minor a certain style soon became predominant which culminated in the absolute uniformity of the Ottoman minarets The early minarets of Asia Minor of the xiiith century usually have their surfaces broken up into round and smooth areas which give them a certain charm, especially when this plastic ornamentation is combined with the painting of frescoes and with relief (Laranda Masdjid and Indje Minareli, Konia, Giok Medrese, Sīwās, etc) The Ottomans heightened the minaret which they had taken over from the Saldjūks, made it still more slender and gave it a long conical spire which has become typical According to the importance of the mosque, it was given one tower on the front or flanked with two or even 4 or six minarets (the Mosque of Sultān Ahmad, Constantinople) and these were given one, two or three galleries

India In India there is only a single old manāra of importance the Kuṭb Minār (q v and the illustrations) in Old Delhi built by order of Aibek Kutb al Dīn and completed by Iltutmish (diameter 45 feet and height 240 feet) The three lower stories of this, the highest and finest ma

nāra in the Muslim world, are built of red sandstone, the two upper, which have been restored, of white marble with layers of sandstone The pavilion which once crowned the top fell down in 1803 during an earthquake and was put up again on the ground The exterior is of angular and round flutings and ornamented with inscriptions from the Kur'ān There is no reason to doubt that the numerous mosques of the Pathan dynasties also had minarets but most of them seem to be destroyed and so far as I am aware no one has yet studied the subject Isolated surviving manāras like the detached slender round minaret of the Lat-ki-Masdjid in Hisār show however that they were usual (cf *Arch Surv India*, *Annual Report*, Pt I, 1913—1914, Pl I) But their occurrence in India was confined to particular areas The mosques of Djawnpur, Sikej, Manda, Kulbargah and other places usually of the xiv^th—xv^th century have no minarets On the other hand they are characteristic of the xv^th—xvi^th century mosques in Ahmadābād, built in pairs flanking the doors or at the corners of the surrounding wall, as in the Mongol mosques of Persia In shape, the towers of Ahmadābād are quite Indian with well marked outlines, many mouldings outside and three to six galleries In the Moghul empire again the smooth round or facetted minaret of Persian origin again became predominant but was hinduised by the pavilion placed on the top and by other alterations

Bibliography The fundamental monograph on the manāra is Herman Thiersch, *Pharos in Antike, Islam und Occident* (B G Teubner, Leipzig and Berlin 1909), where references are given to the detailed literature Further general works F Diez, *Die Kunst der islamischen Volker* (Supplement to *Hdbch d Kunstwissenschaft*, Wildpark Postdam,[1] 1915, [2] 1927), Saladin, *Manuel d'art musulman*, Paris 1907, new ed by G Marçais, 1926, cf also M v Berchem's article ARCHITECTURE in this encyclopaedia — For the separate countries

MANĀT, an old Arabian goddess Her character can only be deduced from her name, which may safely be connected as a plural (for *manawāt*) with the Aramaic *menātā*, plur *menāwātā*, portion, lot, Hebrew *mānā*, plur *mānōt* and also with the god of fate *meni*, Is LXV 11 (cf LXX) In Arabic we have corresponding to it, *manīya*, plur *manāya*, "the allotted, fate, especially of death" She was therefore a goddess of fate, especially of death Her main sanctuary was a black stone among the Hudhailis in Kudaid, not far from Mecca on the road to Medīna near a hill called Mushallal She was however worshipped by many Arab tribes, primarily by the Aws and Khazradj in Yathrib In Mecca she was very popular along with the goddess al Lāt and al-'Uzzā [q v], the three (according to the Kur'ān) were regarded as Allāh's daughters, and in a weak moment Muhammad declared their worship permitted (cf Sūra LIII 19 *sqq*) The obscure expression "Manāt, the third, the other" is probably due simply to the rhyme According to Ibn al-Kalbī, she was the oldest deity, whose worship gave rise to that of the others, because names compounded with Manāt occur earlier than other theophoric names Another view is found in the poem of Ibn Hishām, p 145, where "the two daughters of 'Uzzā" are Manāt and al-Lāt As an independent deity we find her in the Nabataean inscriptions of al-Hidjr, where מנותו (the Aramaic plural form, cf above) is often found along with Dushāra and others Manāt is connected in a peculiar way by some writers with the great *hadjdj* [q v], for we are told that several tribes including the Aws and Khazradj assumed the *ihrām* at the sanctuary of Manāt and on the conclusion of the rites cut their hair there and dropped the *ihrām* [q v] Wellhausen sees in this an erroneous confusion of an independent pilgrimage to Manāt with the great *hadjdj*, as later writers acknowledge none but the latter, it is however possible that some such confusion may really have taken place in pagan times

That Manāt was also a domestic deity is evident from the story in Ibn Hishām, p 350 (cf Wāḳidī, ed Wellhausen, p 350) The destruction of the

great sanctuary in Kudaid after the capture of Mecca is attributed by some to ʿAlī, according to Wākidī, *op cit*, Ibn Saʿd, III/II 15, 25, to the Awsī Saʿd b Zaid

MANĀZGERD [See MALĀZGERD]

AL **MANĀZIL** (A), pl of *al-manzil*, more fully *manāzil al-kamar*, the stations of the moon Just as for the sun the zodiacal circle is divided into 12 stations each of 30°, which it traverses in the course of a year, so the course of the moon is connected with 28 groups of stars, each of which corresponds to one day of its course, so that on an average each is an arc of 13° apart The settings of the sun at these stations, Arabic *naw*², pl *anwā*², are of decisive importance for the beginning and forecasting of the phenomena of the weather and the fertility or otherwise of a year which depends on them, i e for the peasant's calendar As regards the testimony of the Arab poets, the reader may be referred to the verses given by al-Kazwīnī M Steinschneider in particular has published very thorough investigations of the importance of the stations of the moon among the Hindus and Arabs from Arabic, Hebrew and late Latin sources The Arabic names of the stations and the constellations belonging to them are as follows

1 *al-Sharatān*, "the two signs", also *al-Ashrāt*, the Horns of the Ram (β γ Arietis)

2 *al-Butain*, "the little paunch", the paunch of the Ram (ε δ ρ Arietis)

3 *al Thurayyā*, "the Pleiades" [q v]

4 *al-Dabarān*, "the Aldebaran" (α Tauri) with the Hyades

5 *al Hakʿa*, three small stars on the head of Orion

6 *al-Hanʿa*, the stars *al-Zirr* and *al Maisān* (γ ξ Geminorum)

7 *al Dhirāʿ*, "the Lion's Paw", Castor and Pollux (α β Geminorum)

8 *al-Nathra*, "the nostril" of the Lion or fence with asses (in Cancer)

9 *al-Tarf*, i e *Tarf al-Asad*, "the eye" of the Lion (ξ Cancri λ Leonis)

10 *al-Djabha*, i e *Djabhat al-Asad*, "the forehead" of the Lion (ζ γ η α Leonis)

11 *al-Zubra*, i e *Zubrat al Asad*, "the mane" of the Lion (δ θ Leonis)

12 *al-Sarfa*, "the weathercock" (β Leonis)

13 *al-Sawwāʾ*, "the barkers" or Dogs (β η γ δ ε Virg)

14 *al-Simāk*, "the prominent", more accurately *al Simāk al-aʿzal*, the unarmed S (α Virg = Spica, cf *E I*, III 456)

15 *al-Ghafr*, "the cover" (φ ι κ Virginis)

16 *al-Zubāna*, i e *Zubānat al ʿAkrab*, "the pincers" of the Scorpion (α β Librae)

17 *al-Iklil*, "the crown", i e the head of the Scorpion, the three stars (β δ π Librae)

18 *al-Kalb*, "the heart" of the Scorpion, the Antares (α Scorp)

19 *al-Shawla*, "the tail" or sting of the Scorpion (λ υ Scorp)

20 *al Naʿāʾim*, "the ostriches", 8 stars in Sagittarius (γ δ ε η σ φ τ ζ Sagitt)

21 *al-Balda*, "the town", an area in Sag without stars

22 *Saʿd al-Dhābih*, "the luck of the slayer" or sacrificers (α β Capric)

23 *Saʿd Bulaʿ*, "the luck of the devourer" (μ ν Aquar)

24 *Saʿd al-Suʿūd*, "the greatest luck" (β ξ Aquar)

25 *Saʿd al-Akhbiya*, "the luck of the tents" (γ ζ π η Aquar)

26 *al-Fargh al-awwal*, "the fore socket" on the pail (α β Pegasi)

27 *al-Fargh al thānī*, "the hinder socket" on the pail (γ Peg α Androm)

28 *Batn al Hūt*, "the fish-belly", a number of stars in the form of a fish (β Androm the brightest)

Bibliography W Jones, *On the Antiquity of the Indian Zodiac*, in *As Researches*, vol II 99, L Ideler, *Untersuchungen uber den Ursprung und die Bedeutung der Sternnamen*, p 120, 148, esp p 287 *sq*, al-Kazwīnī, *ʿAdjāʾib al-Makhlūkāt*, ed Wüstenfeld, I 41—52, transl Ethé, *Kosmographie*, p 87—106, M Steinschneider, *Uber die Mondstationen* (*Naxatra*) *und das Buch Arcandam*, in *Z D M G*, XVIII, 1864, p 118—120, do, *Zur Geschichte der Übersetzungen aus dem Indischen ins Arabische*, in *Z D M G*, XXIV, 1870, p 359, H Suter, *Das Mathematiker-Verzeichnis im Fihrist*, p 77, Ferrand, *Geogr*, I (J RUSKA)

MANBIDJ (Bambyke, Hierapolis), an ancient city in northern Syria, two days' journey or 10 farsakh N E of Halab, about 3 farsakhs from the Euphrates It lay in a fertile plain, and had a double wall built by the Greeks According to Ibn Khurdādhbih, there was a very fine church there, built of wood (*B G A*, VI 161 *sq*) Ps Dionysios (ed Chabot, p 47, 68) mentions a church of the Virgin and another of St Thomas in Manbidj There were no buildings in the neighbourhood of the town (Nāsir-i Khusraw, ed Schefer, p 31), Abu 'l Fidāʾ mentions the many canals, fruit- and particularly mulberry-trees there, the latter for the silkworm culture As K Ritter (*Erdkunde*, X 1057 *sqq*) has shown, the name Βόμβυξ for the silkworm can hardly be connected with "Bambyke", the old name of Manbidj, on the other hand, the Levantine trade-name *bombassino*, *bombagio*, common in the middle ages for raw cotton, seems to be derived from Manbidj, it is perhaps also concealed in the name of the ancient Phrygian Hierapolis, Pambuk-Kalʿesī (as early as Michael Syrus, ed Chabot, I 148 Mabbug in Phrygia) The Arabs called the robes made in Manbidj, *manbidjānīya* (Lammens, *Fātima*, Rome 1912, p 71)

Kamāl al-Dīn b al-ʿAdīm gives the following account of its origin Khusraw [I] built it, when he conquered Syria (in reality the town in 540 A D ransomed itself from a threatened siege by paying tribute), built a fire-temple there and made a certain Yazdānyār of the family of Ardashīr b Bābak its governor According to other authorities, Manbih was the name of the fire-temple, from which the town took its name (Ibn al-Shihna, *al Durr al-muntakhab fī Taʾrīkh Halab*, ed Sarkīs, Bairūt 1909, p 227) Mahbūb (Agapios) b Kustantīn of Manbidj says in his history of the world written

in the tenth century, at the end of the history of the patriarchs (ed Vasiliev, *Patrol Orient*, v [1910], p 664) "in the year 31 after the birth of Levi, the son of Jacob, queen Samrīn built a great sanctuary for the worship of the idol *K-y-w-s* in a town on the banks of the Euphrates (?), installed 70 priests and called the town Hieropolis (Mahbūb اپروپولس, Ibn al-Shihna, p 227 اپروپولس, var اپروفوس), i e the City of the Priests, this was the town *Manbidj al-ʿAtika*" For *K-y-w-s Kawān* should be read, on the coins of Hieropolis this deity seems also to be depicted (Wroth, *Catalogue of the Greek coins of Galatia, Cappadoc and Syria* [Brit Mus], 1899, p liii), and the Armenian Epiphanios (ed Finck, p 12) says "Hrapōlis consists of 3 towns it is called Mnpēčn, in it is the idol *Kaynana*", with Preuschen (*Gotting Gel Anz*, clxvii [1905], ii, p 837, note 3) we should here also read *Kaywan*

In reality Manbidj seems to have already been known to the Assyrians (as Nappigi or Nampigi in Salmanassar, *Kar kh-Monolith*, iev 35, Johns, *Assyr Bibl*, xvii 11, 82, cf also Bambuki on the cuneiform tablet *Brit Mus K 180*, in Johns, *Assyr Deeds and Documents*, N° 773, Cheyne's *Encycl Bibl*, s v *Carchemish*) If the name is of Semitic origin, it perhaps goes back to a Syriac word *mambog*, "spring" (Noldeke, *Nachr G G W*, 1876, p 5—8) The Greeks knew as the name of the town besides Hierapolis (on coins always Hieropolis) also the native form of Βαμβύκη (rarely Βανβύκη *Papyr Oxyrh*, xi [1915], p 197, col v, l 100), in the common proper name Μαμβογαῖος etc, Nabataean Mambogītā, the name of the town is concealed (for references see Pauly-Wissowa, *Realenz*, suppl vol, iv, p 733) The town which at first was included in Kyrrhestikē and afterwards was made, probably by Constantius, the capital of the Syrian Euphratesia, played an important part in ancient times as the centre of the worship of Atargatis Bardaisān was brought up here by a heathen priest Anūdūzbar and his son Kuduz After the triumph of Christianity, the pagan cult was supplanted by the worship of holy relics, which also brought numbers of the faithful to Bambyke (Procopius of Gaza, *Panegyr*, ch 18, in Migne, *Patr Grace*, lxxxvii, iii, col 2817) From the third century onwards the town is frequently mentioned as a place for the concentration of troops for campaigns against the east or for the defence of Syria In the Byzantine period it was a great centre of the Monophysites, according to whose tradition Justinian married Theodora in Hierapolis, she is said to have belonged to the neighbourhood of the town (Michael Syrus, ii 189) After the end of the Byzantine period, it was for a considerable period a stronghold of the Maronites (Michael Syrus, ii 412, 511)

In the year 16 Abū ʿUbaida went to Halab al-Sādjūr and sent ʿIyād b Ghānim on to Manbidj The inhabitants capitulated under the same conditions as the people of Antioch, when Abū ʿUbaida reached the town, the agreement was ratified (al-Balādhurī, ed de Goeje, p 150, al-Yaʿkūbī, ed Houtsma, ii 161, Ibn al-Shihna, ed Bairūt, p 228, Caetani, *Annali dell' Islām*, iii, p 792, § 281, p 794, § 284, p 797, § 290, p 816, § 325) Manbidj seems to have enjoyed a certain degree of independence down to the time of Yazīd I, the inhabitants of the town, for example, asked ʿUmar for permission to trade within the caliphate (Lammens, *M F O B*, vi 437, note 1) The vicinity of the town was settled by Yamanī tribes (Michael Syrus, iii 47), notably the Banī Taghlib (Lammens, *op cit*, p 445, note 1) Yazīd, when he created the *djund* of Kinnasrīn threw Manbidj into this military province (al-Balādhurī, p 132, Lammens, p 437 *sqq*) Hārūn al-Rashīd separated it again, made it the capital of the frontier district of the ʿAwāsim [q v] in 786 and appointed ʿAbd al-Malik b Sālih b ʿAlī as wālī there in 173, to whom the town owed many buildings (al-Balādhurī, *loc cit*) In 131 (748) it was severely damaged by an earthquake, in which the church of the Jacobites collapsed during mass and buried many of the worshippers in its ruins (Pseudo-Dionysios, transl Chabot, p 42, Michael Syrus, ii 510, Beathgen, *Abh f d Kunde d Morgenl*, viii/iii, 1884, p 126) The brother of the caliph al-Muʿtasim, al-ʿAbbās, who had taken part in the mutiny led by the general ʿUdjaif b ʿAnbasa, was tortured to death by Haidar b Kāwus, the Afshin of Usrūshana, at Manbidj in 223 (838) (Tabarī, iii 1265, Ibn al-Athīr, ed Tornberg, vi 349, Michael Syrus, iii 101, Weil, *Gesch d Chalif*, ii 320) The conquest of Syria by Ahmad b Tūlūn in 264 (877—878) brought Manbidj also under Egyptian suzerainty (Ibn al-Shihna, p 228) In the account of the εἰκὼν ἀχειροποίητος of Edessa, said to have been compiled by the Emperor Constantine Porphyrogenetos, a miracle is mentioned that took place in the time of Christ at the κάστρον Ιεραπόλεως, ὁ τῇ μὲν Σαρακηνῶν φωνῇ Μεμβιχ λεγεται, τῇ δὲ τῶν Σύρων Μαβούκ (*De imag Edess*, in Migne, *Patr Gr*, cxiii, col 432, better in von Dobschutz, *Christusbilder*, in *Texte u Unters z altchristl Lit*, xviii, 51**) Abgar's envoy, who was spending the night in a brickworks near Manbidj on his way back from Jerusalem hid there among the bricks the sacred handkerchief with the portrait of Christ Terrified by the bright light like that of fire, the heathen inhabitants of the neighbourhood hurried next morning to the brickworks and found there a brick with a miraculous copy of the portrait, which they carefully preserved in their city

The Hamdānid Saif al-Dawla, soon after the capture of Manbidj in 947, made his cousin, the poet Abū Firās, governor of Manbidj (Dvořák, *Abū Firās*, p 75) When the Domestikos Nicephoros Phocas invaded Syria in 962, Abū Firās, who happened to be hunting outside the town, was taken prisoner by the strategos Būdrus (Theodoros ?, Petros ?), a nephew of the emperor, and taken first to Khaishana and then to Constantinople (Dvořák, 98 *sq*, Weil, iii 17) where he wrote poems full of longing for Manbidj and his mother there (Dvořák, p 300, 302, 323 *sq*) In 966 when emperor, Nicephoros encamped before Manbidj and made the people of the town produce the sacred brick (*al-Kirmida*, i e κεραμίδιον) but did them no other injury (Yahyā al-Antākī, *Cod Parisin Bibl Nat, anc fond ar No 131 A*, fol 96a, the translation by Freytag, *Z D M G* xi 212, has been corrected by Rosen, *Zapiski Imp Akad Nauk*, xliv, 1883, p 97—98, note d) The Byzantine writers who apparently did not know that Μέμπεττζε was the Arabic name of Hierapolis and sought to locate it in Palestine or near Hims, wrongly make Nicephoros take Manbidj in 968 and carry off the brick and some hairs from the head of John the Baptist (which was only done

by his successor) (Leo Diaconos, Bonn, iv 10, p 71, John Skylitzes, ii 364, Zonaras, xvi 25, p 503, Glykas, Bonn, p 569 etc) but this statement cannot be reconciled either with the route given for his campaign of 968 (cf v Dobschutz, *op cit*, p 172, note 1, Schlumberger, *Nicéph Phocas*, p 704—706, note 5), nor with the bounds of his conquests given by Kamāl al-Dīn (in Freytag, *Z D M G*, xi 232) It was his successor John Tzimisces, who first took the fortress (*φρούριον*) of Manbidj in 974, and found there Christ's sandals and some still bloody hairs of John the Baptist, which he brought as relics to Byzantium (Leo Diaconos, x 4, p 165)

In the year 1025 the Mirdāsid Sālih took the town (J J Müller, *Historia Merdasidarum ex Halebensibus Cemaleddini annalibus excerpta*, Bonn 1819, Rosen, *op cit*, p 68) By the treaties between Mahmūd and ʿAtīya [cf HALAB, ii, p 345a] Manbidj passed in 456–457 to ʿAtīya (Muller, *op cit*, p 56 *sq*) In 472 (1079—1080) Tādj al-Dawla Tutush occupied the town (Muller, p 88) The emperor Romanus IV Diogenes took it on his Syrian campaign in 1068 and strengthened the defences of the citadel (John Skylitzes, Bonn, ii 673, 675, 685, Michael Attaliates, Bonn, p 108 *sq*, 111, 116, Zonaras, xviii 11, 26, Bonn, iii 691, Michael Syrus, iii 168, Matthēos of Urhay, transl Dulaurier, p 162, Weil, iii 112, Kamāl al Dīn, transl Muller, *op cit*, p 63 *sq*, where it is wrongly stated that Manbidj remained Greek for 70 years) It was not till 479 (1086) that Malik-shāh deprived the Greeks of Manbidj and al-Ruhā', and gave the rule over Halab, Hamā, Manbidj and al-Lādhikīya to Ak Sonkor (Ibn al-Athīr, x 98, Weil, iii 131)

In 504 (1110—1111) the Franks conquered Manbidj, occupied and plundered the town and advanced as far as Bālis which they burned (Rohricht, *Gesch d Kgr Jerusalem*, p 88, Weil, iii 193, according to Michael Syrus, iii 215, probably wrongly, in the year 502) But they lost Manbidj again in the same year (504) (Abu 'l-Fidā', *Annal Muslem*, ed Reiske, iii 370) Baldwin II in 513 (1119) invaded the lands east of Halab as far as Manbidj and al-Nukra, and Joscelin, in the following year, on the pretext that one of his followers had been imprisoned in Manbidj and that no compensation had been given to him for it, plundered the lands of al-Nukra and al-Ahass (*Recueil hist or crois*, iii 623, 625) When Nūr al-Dawla Balag enticed the amīr of Manbidj, Hassān al-Baʿalbakkī, within his power and then imprisoned him in Pālū, Hassān's brother ʿĪsā seized the citadel of Manbidj, which Balag then attacked with siege artillery (1124) ʿĪsā then appealed for help to Joscelin and had him proclaimed lord of Manbidj, but Joscelin suffered a severe defeat before the walls of the town On the next day, however, Balag was mortally wounded by an arrow shot by an unknown hand (according to Kamāl al-Dīn, by ʿĪsā himself, according to Matthēos of Edessa, by a sun-worshipper) In 518 (1124) Hassān was liberated and returned to Manbidj (Ibn al-Athīr, x 436, Michael Syrus, iii 211, Matthēos of Edessa, transl Dulaurier, p 311 *sq*, Rohricht, *op cit*, p 161 *sq*) The Crusaders never again took the town after the brief occupation in 504 Although we know of Frankish archbishops of the town (cf William of Tyre, xiii 11, xv 14, xvii 17) one of whom, Franco, took part in the Council of Antioch of Nov 30, 1139 (Rohricht, *op cit*, p 223), we also know that they did not reside in Manbidj itself but in Dulūk (Doliche) (Michael Syrus, iii 191) In the old French text of William of Tyre, the archbishopric is called *Geraple* (ed Paris, i 489, ii 68, 167), a name which has often been identified with the modern Djerābulus (*Djerabīs*) (Rey, *Les colonies franques de Syrie*, Paris 1883, p 315, cf also Bischof, in *Ausland*, 1873, p 136) This equation must however be rejected on phonetic grounds (Hogarth, *Annals of Archaeol and Anthrop*, Liverpool, ii [1909], p 166, note) as well as historical (*Djerābulus* = Syr *Agropos*, *Εὔρωπος*)

The Atābeg ʿImād al Dīn Zangī in 521 (1127–1128) seized the towns of Manbidj and Hisn Bizāʿa and entered Halab on the 17th Djumādā II, 522 (*Recueil hist or crois*, i 17, 380, ii/ii 69) The emperor John II Comnenos on his campaign against Zangī (1142) only captured Bizāʿa (*Πιζά*), while he passed by Manbidj (*το Βέμβετζ*) because, as Niketas (Bonn, p 37) disparagingly remarks, it was considered easy to take and lay in the hollow of a valley (*ὡς εὐκαταγώνιστον κριθὲν κ'ἀπι πεδίου κείμενον υπτιάζοντος*), a statement, which in view of the luck of success at the sieges of Halab and Shaizar hardly seems credible Anna Comnena mentions (Bonn, i 331) a certain *Βεμβετζιώτης* (i e al Manbidji), *τὴν ἐπωνυμίαν ἀπὸ τῆς ἐνεγκαμένης λαχών*, as in the Byzantine service, but the Byzantines never occupied the town itself after the eleventh century

An amīr Hassān of Manbidj, probably a descendant of the same name of the Hassān already mentioned, distinguished himself frequently in the fighting against the Crusaders, especially by the capture of Tell Bāshir on July 8, 1151 (Kamāl al-Dīn, transl Blochet, *R O L*, iii 526 *sq*, Rohricht, *Gesch d Kgr Jerus*, p 197, 268, note 3, 281) He was succeeded by his son Ghāzī (Kamāl al Dīn, *op cit*, p 543) He rebelled against Nūr al Dīn from whom he had received Manbidj as a fief Nūr al Dīn sent troops to Manbidj, deposed Ghāzī and made his brother Kutb al Dīn Īnāl (in Kamāl al Dīn Niyāl) his successor (*R O L*, iii 543, *Recueil hist or crois*, ii/ii 241) After ruling for eleven years, this well beloved amīr, who had built a Hanafī school in Manbidj (*R O L*, iii 544), was deposed in 572 (1176—1177) by Saladin (*Recueil*, i 46 *sq*, ii/ii 241, iv 132, Michael Syrus, iii 366) According to a note in Kamāl al-Dīn (*R O L*, iv 147), in the same year (572) Ghars al-Dīn Kilidj set out with his followers to Manbidj against al-Duwaik to whom Malik al-Nāsir had granted the town as a fief, but this al-Duwaik is otherwise quite unknown Takī al-Dīn ʿUmar of Hamā, a nephew of Malik al-Nāsir who was in Manbidj in 577, wished to bar ʿIzz al-Dīn's way to Halab, when he failed in this, he retired to Hamā, but was not allowed to enter it by the inhabitants (*R O L*, iv 156) ʿImād al Dīn attacked Manbidj in 578 (1182—1183) and laid waste the country round it (*R O L*, iv 162) Saladin made his brother Malik al ʿĀdil governor of Manbidj and he went there in Ramadān 579 (1183—1184) (*Rec or hist crois*, iv 249) He seems to have spent most of his time in camp, for in 582 (1186—1187) the sultān gave Manbidj to Takī al-Dīn along with other towns (Abu 'l-Fidā', *Annal Musl*, iv 72) Among the leaders, whom Saladin sent in 1190 against the Germans who after Frederick's death were trying to reach ʿAkkā', was Nāsir al-Dīn b Takī al Dīn of Manbidj (*Recueil*

hist or crois, III 165) Saladin's third son Malik al Zāhir Ghāzī in 589 (1193) was allotted Hārim, Tell Bāshir, Manbidj, Aʿzāz and other fortresses (*Recueil*, II/1 76, Rohricht, *Gesch d Kgr Jerus*, p 658) In 591 (1195) the latter set out from Kinnasrin to Karā Hisār in order to besiege Manbidj which then belonged to al-Malik al-Mansūr of Hamā but on receiving disquieting news hastened to Damascus (*R O L*, IV 209) Saif al-Dīn Tughril al-Zāhiri defeated a division of the army from Hamā, which attacked Manbidj in 595 (1199), took many prisoners and brought them to Malik al-Zāhir, who however released them again (*R O L*, IV 218) The lord of Hamā in 596 (1200), at the request of al Malik al-ʿĀdil, gave ʿIzz al Dīn Ibrāhim al Mukaddam the towns of Manbidj, Fāmiya and Kafartab in compensation for Bārin (Weil, III 434, note 4) When the latter died in Famiya, Manbidj was to go to his brother Shams al-Din ʿAbd al Malik whom however Malik al Zāhir in 597 deprived of his rule over Manbidj and Kalʿat Nadjm and carried off a prisoner with him, he offered the two towns to al-Malik al-Mansūr of Hamā, who once previously in 588 (1192—1193) had refused Manbidj (*Rec hist or crois*, III 298), if he would assist him against Malik al ʿĀdil, which however he declined to do (Rohricht, *op cit*, p 685) Al-Zāhir thereupon destroyed the citadel of Manbidj lest it should fall into an enemy's hands and gave the town, now deprived of its defences, in 597 (1201) to al-Hadjdjāf as a fief (*R O L*, IV 222) and in the following year to ʿImād al Din b Saif al-Dīn ʿAli b Ahmad al-Mashtūb (Abu 'l Fidā', *op cit*, IV 195) But very soon afterwards, al Zahir had again to send the amir of Halab, Mubāriz al Dīn Akdjā, to the siege of Manbidj the latter however with drew on the approach of Malik al Fā'iz, son of Malik al ʿĀdil Malik al-Fā'iz entered Manbidj, rebuilt the citadel and fortified it He then re turned to his father al-ʿĀdil in Nābulus, while the Halab troops avoided an encounter (*R O L*, IV 223) Soon afterwards the Halab army again marched on Manbidj but was recalled by Malik al Zāhir, who was besieging Damascus A little later, al-Zahir himself set out against Manbidj to avenge himself on the inhabitants who had taken the side of al Fā'iz, but he was appeased by his amirs, pardoned the town which submitted to him and gave it as a fief in 598 (1202) to Ibn al Mashtūb (*R O L*, IV 224) The Saldjūk Kai kā'ūs in 615 (1218—1219) went to Manbidj, which opened its gates to him, placed one of his officers, Sārim al Dīn al-Manbidjī, as governor there and repaired the walls of the town, but when al-Malik al Ashraf approached, he left the town again and suffered heavy losses in his retreat (*Re cueil hist or crois*, II/1 146, Kamāl al Dīn, in *R O L*, VI 57, Abu 'l Fidā', *Ann Musl*, IV 266) When the Sultān of Halab, al Malik al Nāsir, concluded an alliance with the Sultān of Rūm for their mutual defence against the raids of the Tur komans, he sent the kādī of Manbidj Awhad al Dīn, as a confidential envoy to him (*R O L*, V 94) Al Malik al Mughīth of Harrān fled in 635 (1237–1238) before the Khwārizmians to Manbidj to seek protection with his aunt (*R O L*, V 103) When the Khwārizmians three years later invaded Syria, a Halab army met them but suffered an annihilating defeat on the Nahr al Dhahab (*R O L*, VI 3) Thereupon the Khwārizmians advanced on Manbidj, the inhabitants of which retired be hind its walls and barricaded the place where the walls were no longer standing The town was stormed on the 21st Rabīʿ II 638, numerous inha bitants put to death, the houses destroyed and rich booty taken, the enemy even entered the mosque where many women had taken refuge and violated them (*R O L*, VI 6) After the Khwārizmians had been driven back, al-Malik al Mansūr re-entered Manbidj (*R O L*, VI 17) In the treaty between Sultān Kala'ūn and Leo of Armenia of the 1st Rabiʿ II 684 (June 6, 1285), Manbidj is mentioned among the Egyptian towns (Makrīzī, ed Quatre mere, *Hist des Sultans Mamlouks*, II/1 168, transl, p 205)

According to Ibn al-Shihna (Bairūt 1909, p 228), Manbidj which previously, excluding its 8 suburbs, had paid annually 510,000 dirhams to the Sultan's Dīwān, was destroyed by the Tatars (who invaded Syria several times between the end of 699 [1299] and 702 [1302]), perhaps there is here a confusion with the Khwārizmians According to Abu 'l Fidā', the fortifications and the town were for the most part in ruins in his time, Khalīl al-Zāhiri does not mention it at all

After the Russo-Turkish War (1879) Circassians were settled in Manbidj since that date the few remains of antiquity noticed by earlier travellers have almost completely disappeared

The ruins of *Bumbudj*, as the name of the place is now pronounced by the natives with a marked echo of the ancient Bambyke (Euting in M Hartmann, *Zeitschr d Gesellsch f Erdk*, Berlin, XXIX 525, Littmann, *Americ Archaeol Exped to Syria*, III 171, note 3), have been visited by Maundrell (1699), Pococke (1737), Drummond (1747), Sachau (1879), Cumont (1907) and Hogarth (1908) The old town walls, surrounded by a broad ditch which were several times restored in the middle ages, still survive almost in their entirety (Ainsworth, *A personal narrative of the Euphrates Expedition*, I, 1888, p 238)

MAND (?), a people whom the Arabs found in Sind Only the outline of the name is certain ﻣﻨﺪ = *MYD (Mīd, Maid), *MND (Mand, Mund) In the reign of Muʿāwiya (41–60), Rashid b ʿAmr lost his life on an expedition against the Mand (Balādhurī, p 433) During the governorship of al-Hadjdjādj, some Mand from Daibul [q v] seized on the high seas the Muslim women who were being repatriated by the king of the Rubis islands (Djazīrat al Yāḳūt), this act of piracy served the Arabs as a pretext to send an expedition against Daibul (*ibid*, p 435) After 95 (714) Muhammad b Kāsim concluded a treaty of peace with the people of Surast (?) who were "Mand, pirates of the sea" (*yaktaʿūna fi 'l-bahr*), *ibid*, p 440, the name of this place recalls Surāshtra = Kāthiāwār In the reign of al Muʿtasim (218–227), ʿAmrān b Mūsā attacked the Mand, of whom he slew 3,000 and built a dyke (canal ?) of the Mand (*sakr al-Mand*) probably to disturb their irrigation Then with the Zutt whom he had conquered ʿAmrān resumed the campaign against the Mand, a canal (*nahr*) was dug from the sea and the lagoon (*batiha*) of the Mand inundated with salt-water (*ibid*, p 445) In the same period Muhammad b Fadl, commander of the fort of Sandān (Damān to the south of Sūrat ?, cf Elliot, I 402), undertook a naval expedition against the Mand with a fleet of 70 ships (*ibid*, p 446)

Of the geographers, Ibn Khurdādhbih (p 56, 62) is the first to mention the Maid (?) who were four days' journey from the Indus (to the east) and who were robbers Masʿūdi (*Murūdj*, I 378), who visited India after the year 300 says that the country of Mansūra is continually at war with the Mand of Sind and other peoples, cf also Masʿūdī, *Tanbīh*, p 55 Istakhrī, p 176 (= Ibn Hawḳal, p 231) mentions the Budha and the Mand among the infidel peoples of Sind The latter lived on the banks of the Indus (*shuṭūt al-Mihrān*) from Multān to the sea, and occupied pasturages in the desert which stretched between the Indus and Kāmuhul According to Idrīsī (548 = 1154), transl Jaubert, I 163, the Mand dwelt on the borders of the desert of Sind They pastured their flocks up to the borders of Māmahal (Kāmuhul ?) They were numerous and owned many horses and camels, their raids extended as far as Dūr (read Rōr, cf LŪLĪ) and sometimes even to Makrān This last detail is curious for it indicates an extension of the Mand towards Persia, but the text is not certain perhaps we should read Multān After this the name Mand disappears from Muslim literature

The town of "Kāmuhul", the site of which is important to fix the limit of the habitations of the Mand, is sometimes located in Hind (Istakhrī, p 176), sometimes between Sind and Hind (Idrīsī) The form of the name is uncertain (Fāmhal, Māmhal, Amhal) Elliot, I 363, identified it with Anhalwāra, cf al-Birūnī, p 100 This last town (Anhilwāra, Nahrwāra, founded in 746 A D) is identical with the modern Pātan (on the Saraswatī in northern Baroda, cf *Imp Gazett of India*, 1908, vol XX, Cunningham *op cit*, p 290, places "Māmhal" at Umarkot) In any case Kāmuhul must mark the limit of the pasturages of the Mand to the S E of al Mansūra (= Haidarābād, on the Indus, cf Elliot, I 370)

Among the Muslim sources a special place is occupied by the *Mudjmil al-Tawārikh*, written in Persian in 520 (1126) This work gives extracts from a book which was composed first in an Indian language, then translated into Arabic by Abū Ṣālih b Shuʿaib b Djāmī (in 417 = 1028) and finally translated from Arabic into Persian by Abu 'l Hasan ʿAlī b Muhammad al-Halabī, librarian in Djurdjān This source which is a very inaccurate resumé of the *Māhabhārata*, begins with a chapter on the *Maid and the Zutt, two peoples in the land of Sind, descendants of Cham (Hām), son of Noah The Maid had conquered the Zutt, who withdrew to the banks of the river Pahn (or Bahr ?) and from there attacked the Maid by water Finally tired of fighting, the two peoples agreed to approach king Dahūshān b Dahrān (Duryodhana, son of Dhrtarashtra) to ask him to appoint a king over them Dahūshān sent them his sister Dusal (Duççalā), married to Bdjndrt (Jayadratha) who became a powerful king At the request of Dusal, Dahūshān sent 30,000 Brahmans to people Sind One part of the country was given to the Zutt, who were given as a ruler Djūdrt (Yudhishthira, eldest son of Dhrtarāshtra) The Maid (Maidiyān) also were given a special area, cf Reinaud, *Fragments arabes et persanes relatifs a l'Inde*, 1845, p 2—3, 25—27

Here we have an attempt to connect the history of the Maid and Zutt with Indian tradition by quoting a passage in the *Māhabhārata* which says that Duççalā was given in marriage to Jayadratha, "king of the lands watered by the Indus" (transl Fauche, Paris 1863, I 290, çloka 2742) Indian tradition however contains nothing definite of value about the Mand In the *Brhat-Samhita*, transl Kern, *JRAS*, 1871, p 81—86 which is one of the sources for the enumeration of the peoples of India in al-Bīrūnī (ed Sachau, p 150—157, transl I 299—303), we find a Māndavya people (located in the centre, north or northwest of India) The derivation of the Arabic Mand from some such name may be suspected (cf the name of the

modern town on the coast of Kāthiāwār Māndvi) On the other hand in Central India alongside of the Māṇḍavya the Medha are mentioned (al-Bīrūnī Maidha, the final *a* being only indicated by means of a *fatha*)

The question of the Maid/Mand has been discussed by Elliot and A Cunningham, the former (*Hist of India* [1867], i 519—531) says that the Meds still exist on the borders of Sind and Jodhpūr, as well as to the west in the little harbours of Makrān (the clans of Gazbur, Hormārī, Djallar-zā'ī, Čelmar-zā'ī) The name *Med has even undergone a phonetic change to Mer (which we find in the mountains of Ārāwālī and in Kāthiāwār) Elliot also thinks it possible that the Meds or one of their branches bore the name Mand of which traces can be found in place names (Mand-ar, Mand hro, etc) Cunningham in his *Report 1863—1864* connected the Zutt and the "Mayd or Mand" with the Iatii and Mandrueni whom Pliny (*Nat Hist*, vi, ch xviii) mentions near the Oxus and calls the "Med or Mer" the first Indo-Scythic invaders of the Pandjāb In *The Ancient Geography of India*, 1871, p 290—294, Cunningham finds a variant of the name Mand in the name of the town Μινναγάρα of the *Periplus mar Erythr* (cf Ptolemy, vii/1, § 63 Μιναγάρα to the east of Indo Scythia), which would be "the town of the Scythians, Min" = Manhābarī (Mandjābarī) of the Arabs = Thatha, etc

The question of the Mand evidently deserves a new special study Was there only one, or two peoples *Maid and *Mand? The statements of the Muslim authors seem to refer to a single people The toponymy of the land south of the Indus reveals the presence of an old element *Mand*, cf Ptolemy, vii/1, § 7 Mandagara When its origins have been studied, it will be interesting to compare its possible connection with the oldest name of the Aryans, *Manda*, found in the cuneiform inscriptions of the third millenium B C according to E Forrer, *Die Inschriften und Sprachen des Hatti Reiches*, *Z D M G*, lxxvi, 1922, p 247 According to E Meyer, *Die Volksstamme Kleinasiens*, *Sitzb A W Berlin*, 1925, p 244—261 (cf do, *Gesch d Altertums*[2], vol ii, sect 1, p 35, note 3), the name "Manda" meant the Scythians who in the seventh century B C had invaded nearer Asia and was sometimes transferred to the Medes along side of whom the Scythians were settled A diame trically opposite process would be to compare *MND with the name of the Mundā language (of the Mon Khmer family), cf in this connection Przyluski, *Un ancien peuple du Penjab*, *Les Udumbara*, *J A*, 1920, N° 1, p 53, where a theory is advanced according to which, before the arrival of the Indo Aryans the valley of the Indus was peopled by "Austro Asiatics" from the Himalayan zone to the sea The influence of the Austro-Asiatic substratum, i e languages of the Mundā type, would also explain the preservation in Sanskrit of the aspirated sonants (V Minorsky)

MĀND (Mūnd, Mund), the longest river in Fārs (*Nuzhat al-Kulūb* 50 farsakhs, E C Ross over 300 miles in length)

The name As a rule in Persia, sections of a river are called after the districts through which they flow Mānd is the name of the last stretch near its mouth The name seems to appear for the first time in the *Fārs-nāma* (before 510 = 1116) but only in the composite Māndistān (cf below)

The old name of the river is usually transcribed in Arabic characters Sakkān (Istakhrī, p 120, Ibn Hawkal, p 191, Idrīsī, tr Jaubert, i 401) but the orthography varies Thakān, *Fārs nāma*, *G M S*, p 152, *Nuzhat al-Kulūb*, p 134, Zakkān or Žakkan, *Nuzhat al-Kulūb*, p 217, Sitāragān, *Djihān-numā*, p 247, cf also Saihkān in Hasan Fasā'ī

The identification of the Sakkān with the Σιτακός mentioned in the *Periplus* of Nearchus (Arrian, *Indica*, xxxviii 8) is generally recognised The identity of Sitakos with the Sitioganus (Sitiogagus) mentioned by Pliny, *Nat Hist*, vi 26 is also usually admitted (Weissbach 1927), but Herzfeld (1907) relying on the existence of another river, the Shādhkān (= Sitioganus?), has suggested doubts about the identification of the Sitakos with the Sitioganus Now, according to Istakhrī, p 119, the Shādhkān flows into the Persian Gulf at Dasht al-Dastakān (north of Būshir?) This Shādhkān must be identified with the river Shāpūr The *Fārs nāma*, ed Le Strange, p 163, mentions Rūdbāl-i Sittadjān ("the banks of the S") as a station on the road from Shīrāz to Tawwadj From this fact and especially from the name, Sittadjān seems to be applied to the left bank tributary of the Shāpūr Pliny, who follows Onesicritos, adds that by the Sitioganus one reaches Pasargades in 7 days (*quo Pasargadus septimo die navigatur*) Whatever be the identity of the Sitioganus, the exaggeration in this statement is evident (especially in the direction of the sea to Pasargades) and the waters of Pasargades (Mashad-i Murghāb) do not flow into the Persian Gulf But there is nothing to prove the absolute impossibility of using the Sakkān as a subsidiary means of transport in the season of floods (the winter) According to Arrian, Nearchus found at the mouth of the Sitakos large quantities of corn which Alexander had brought there for the army Istakhrī, p 99 places the Sakkān among the rivers of Fārs which are navigable at need (*al-anhār al-kibār allati tahmilu al sufuna idhā udjriyat fī hā*)

Another question is the phonetical identity of the names Sitakos (Sitioganus?) and Sakkān According to C F Andreas, Σιτακός is a nominative restored from a supposed genitive *Σιτακῶν (Sitakān), Sitiogan-us is a mistake for Sittagan-us, lastly the peculiarity of the Arabic script could explain the change of Sittakān to Sakkān Here we may add that Hasan Fasā'ī gives one of the stretches of the river the strangely written form Saihkān (< *Stkān?) Istakhrī however derives the name of the river from that of the village of Sakk (*Nuzhat al-Kulūb* Zakān) in the district of Karzīn considerably below the Saihkān stretch of the river

To sum up the identification of the Sitakos with the Sitioganus does not seem sufficiently established

The course of the river The Sakkān (Mānd) describes a great curve At first it runs in the direction N W -S E, to the northern base of the Kūh i Marra-yi Shikaft, which separates it from the valley of the river Shāpūr It follows this direction (c 100 miles) to the end of Āsmān-gird mountains around which it makes a bend and turns south (70 miles) It then meets the parallel ranges which run along the Persian Gulf and continues its winding course to the sea in a westerly direction (140 miles)

The Sakkān (Mānd) and its tributaries drain and irrigate a considerable area. Istakhrī says that

its waters contribute the largest share to the fertility of Fārs (*aktharu ʿimārat^in*)

The sources of the river (Kān-i Zaid, Čihil-čashma and Surkh-rag) rise in the mountains of Kūh-i Nār and Kūh-i Mairayi-Shikaft in the N W and W of Shīraz These streams unite before Khān i Zinyān in the district of Māsarm on the great Shīrāz-Kāzrūn-Būshīr road Istakhrī, p 120, places the sources of the Sakkān near the village of Shādhfarī (?) in the district of Ruwaidjān (?) In the same author, p 130, Khān al-Asad on the Sakkān corresponds to the modern Khān i Zinyān The *Fārs-nāma* (and the *Nuzhat al Kulūb*) places the sources of the Sakkān near the village of Čatrūya (?) Under the Turkish name of Karaaghač, i e "[the river of] the elm", the combined streams flow through the districts of Māsarm (= Kūh-i Marra-yi Shikaft), Siyākh (Istakhrī, p 120 Siyāh) and Kawār In this last district, Rivadaneyra, iii 81, going from Shīrāz to Fīrūzābād crossed the river by a "substantial bridge" It is in the district of Kawar that Hasan Fasā'ī gives the river the name of Saihkān In Kawār (Hasan Fasā'ī) there used to be the barrage of Band i Bahman, where by a subterranean channel (*kanāt*) part of the water was led into reservoirs (*čāh*) and then to the fields In the bulūk of Khafr (Istakhrī, p 105 Khabr), which must be distinguished from the district of the same name in the kūra of Istakhr, the river turns south Aucher-Eloy, who crossed the river on the road from Fīrūzābād to Djarrūn (Djahrum) calls it "Tengui Tachka" (= Tang-i Kashkar?) and speaks of its "beautiful valley" Rivadaneyra continuing his journey from Fīrūzābād to Dārāb crossed the river by a ford between the villages of Tadwān and "Assun-Dscherd" (Āsmangird ?) He also admires the pleasant and flourishing aspect of Khafr Below the latter, the river enters the bulūk of Simkān where, near the village of Sarkal, it receives on its left bank, the brackish (*shūr*) river of Djahrum, and then flows through the ravine of Kārzīn, and waters the bulūk of Kir-wa-Kārzīn Abbott coming from Fasā crossed the river by a ford between ʿAlī-ābād and Lifardjān (cf the name of the ramm of Kurds in Fārs al-Liwāldjān, Istakhrī, p 113), where it was 100 yards wide and the water rose up to the horse's belly Farther down below the ford, Stack, going from Kir to Kāriyān crossed the river, here 60 yards broad, by the bridge of ʿArūs, built in a zig-zag and in two stories ("the queerest structure in the way of a bridge") Near the village of Nim dih, the river enters the bulūk of Afzar After having wound round the fort of Kalʿa yi Shahriyār the river receives (near the place called Čam-i Kabkāb) the name of Bāz and then irrigates the bulūk of Khundj (cf Ibn Battūta, ii 241 Khundjbāl = Khundj + Bāl) In the district of Diz gāh of the bulūk of Galla dār the river has two tributaries near the village of Gabrī, the Dār al-Mizān, and two farsakhs lower, that of Dihram The Dār al-Mizān comes from the left (east) side of the bulūk of Asīr The Dihram much more important comes from the right side after watering the historic district of Fīrūzābād (the ancient Gūr, capital of Ardashīr-Khurra, cf the details in Le Strange, p 256) Istakhrī, p 121 makes this tributary come from Dārdjān (of Siyāh) and water first Khunaifghān and then Gūr [in place of the name of the river Tīrza, Istakhrī, p 99, 121, one should probably read Burāza, cf the *Fārs-nāma*, p 151, *Nuzhat al-Kulūb*, p 117—118 Hakīm Burāza was the sage who dried up the Lake of Gūr]

After Diz-gāh, the river enters the district of Sanā-wa-Shumba of the bulūk of Dashtī and near the village of Bāghān receives on the right bank the river Čanīz which comes from the district of Tasūdj i Dashtī Finally near the village of Dūmānlū the river enters the coast district of Māndistān and receives the name of Mānd It flows into the sea near the village of Ziyārat, halfway between the old harbours of Nadjiram (to the north) and Siāf (to the south)

Māndistān The district forms part of the bulūk of Dashtī (which is to be distinguished from Dashtistān to the north of Dashtī up to Būshīr) Dashtī (36 × 18 farsakhs) is composed of 4 districts 1 Bardistān, the part of the coast in which is the port of Daiyir 2 Māndistān on the coast to the north of Bardistān and the two banks of the river Mand 3 Sanā and Shumba on the river above Māndistān 4 Tasūdj-i Dashtī, a very narrow valley (11 × 1/2 farsakhs), watered by the Čanīz and separating Sanā and Shumba from the bulūk Arbaʿa (on the lower course of the river of Fīrūzābād)

The whole of the bulūk belongs to the torrid zone (*garmasīr*) of Fārs Māndistān (12 × 5 farsakhs) includes lands so flat that the current of the river is imperceptible and the water cannot be used for irrigation Agriculture (wheat, barley, palm-trees) is dependent on the winter floods The district has 40 villages The capital of the district and of the bulūk is Kākī There used to be two rival families in Māndistān the Shaikhiyān and the Hadjdjiyān During the disturbances under Afghān rule (1722—1729) the Hadjdji Raʾis Djamāl exterminated the Shaikhiyān and founded a little dynasty of hereditary governors who were able to annex the district of Bardistān through matrimonial alliances One of his descendants, Muhammad Khān (d at Būshīr in 1299 = 1881), was noted as a poet under the pen name of Dashtī

Hasan Fasā'ī explains the name Māndistān by a popular etymology "the place where the water flows slowly (*wāmānda*)" Names in *-stān* are common in Fārs (Lāristān, Bardistān) but even if such a formation was possible in a river name, the element Mand would still be a puzzle It is curious that Hasan Fasā'ī sometimes writes it Mānd (read *Mūnd*) and sometimes Mund (read *Mönd*) It might be suggested as a pure hypothesis that there is a connection with the people M N D (cf MAND), of which there might have been a colony in Māndistān

(V MINORSKY)

MANDINGO, a people of the Western Sūdān whose country of origin was on the Upper Niger stretching from Bamako to Siguiri inclusive This region includes the gold-bearing district of Bouie, Bute, or Bito as well as the provinces of Lower Faleme and of Bambuk which also produce gold At the present time the Mandingoes have spread into the mountainous country in which the two branches of the Senegal arise, they occupy Sangaran, Gangaran, Bambuk, and the valley of the Gambia to the South while to the North they extend as far as the Western Sahara In the xith century, they colonised a part of the modern Mauretania and, according to the Arab authors of this period, who mention them under the name of *Gangara* (sing *Gangari*) or *Wangara* — a word which seems to be a corruption of the name of their country of origin Gangaran, Gwangaran or Gbangaran — they were to be met with in Hodh In our time the first of these names has been kept by the Moors and the Sarakole, the second by the Songhoy, the Pul of Massina and the Hausa

The country of these natives is called according to the different dialects Manding, Mandi, Mani, Mandeng, Maneng, Mande, Mane The inhabitants are called by the names of Mandinka, Maninka, Maninga, Mandenka, Manenka or Manenga in the dialects of the Centre and of the East and Mandinko or Mandingo, in those of the North, South and West This last form in use in the British possessions of Gambia and Sierra Leone has been adopted by the English while the French keep the form Manding or Mandingue

The name of the country corrupted by the Pul has become in the language of these natives Māli, Mālli, Malli, Melli, and that of the inhabitants has become Mallinke or Malinke This last word has now come to stand for the South-Western portion of this people or for their dialect

Ethnography The Mandingo group constitutes a well marked ethnological group, but it does not form an organised people under one rule Three chief divisions can be distinguished, and these can again be subdivided into many sections They are the Malinke, the Bambara, or Banmana, and the Diula or Giula

A Sudanese historian of the xvith century, Mahmūd Kōti, who wrote the *Ta'rīkh al-Fattāh* in Arabic, distinguished in his time between the Malinke and the Wangara, regarding the former as warriors and the latter as merchants and traders The Malinke are the least advanced of the Mandingoes from the social point of view, many of them remaining faithful to the matriarchal system and are still cultivators of the soil, hunters and gold diggers

An attempt has been made to derive their name from that of the hippopotamus *mali* or *meri*, and thus "malinka" would signify the "people of the hippopotamus!" This explanation is erroneous, the suffix "*ka*", signifying the nationality, can only be joined to the name of a country or of a tribe and never to that of an animal It is possible however, that the name of the country which was the cradle of their race, could come from *ma*, mother, and *deng* or *ding*, child, this word then would signify "child of the mother", in allusion to the descent by the female line which is custom ary amongst them

The Bambara inhabit the valleys of the Niger and of the Bani as far as Lake Debo, they are numerous in the Sahel They are more advanced agriculturists than the Malinke and they recognize descent by the male line An attempt has been wrongly made to derive their name from that of the crocodile *bamba* or *bama* Some authors, on the other hand, have held that their name signifies "refusal to obey a master" (*ban* refusal, *ma* master, *na* towards) This explanation, although it could be accepted linguistically, must, according to M Delafosse, be rejected He prefers that of "renunciation of the mother" (*ban* refusal or renunciation, *ba* or *ma* mother, *na* or *ra* to)

The Diula or Giula inhabiting some fairly important centres are chiefly merchants and traders They are met with in small colonies, settled amongst the indigenous peoples to the East of Bani as far as the Upper Volta and the Gold Coast Having been converted at an early date to Muhammadanism, they have remained fervent Muslims and there are amongst them quite a large number of learned men

Their name is said to signify "from the foundation, from the stock" (*diu*) According to their own account, it was given to them because their ancestors belonged to families of noble birth

At the basis of Mandingo society is an extended family (*gba* or *gwa*) comprising all the living descendants of an ancestor, sufficiently near in place and in time for all the ties of relationship not to have been forgotten In general this extended family covers four generations the patriarch, his brothers and cousins, their children, the children and grand-children of the latter, and an equal number of generations of slaves Persons of the same generation placed on the same level are called by the same name father, brother, son, without distinguishing the fathers from the uncles, the brothers from the cousins, the sons from the nephews, all are collectively sharers in the family property, which they have helped to acquire and to augment by their labours This family property consists of crops, of animals, arms, surplus utensils and clothing, as well as treasure in gold, silver or cowries gathered together by the founder of the family It is administered by the patriarch who cannot dispose of it without the consent of the majority of the other members Each of those, man or woman, possesses in addition a private store of which he has the free use

The chief exercises a political, domestic and religious authority In this capacity he is charged with making sacrifices and offerings to their ancestors and to the patron deities of the family A number of families observing the same religious prohibitions and bearing the same name (*diamu*) form a clan, the members, who form a clan are of the same origin, but so far removed by birth

that it is impossible to trace their descent back to a common origin

The chief Mandingo clans are those of Keyta, Kante, Taraore, the Dembele, the Konate, the Kulubali, the Kuruma, the Diara, the Samake, the Mareko, the Kamara, the Bakayoko etc None of them is either organised or under a single ruler

There exists between persons of different clans a particular tie called *senakuya*, without doubt the remains of an ancient phratry which obliges them to assist one another and to exchange presents on certain occasions, the same persons can also quarrel among themselves or fight with one another without involving any serious consequences

The organisation which is lacking in the clan and in the tribe shows itself on the contrary in each inhabited centre in the form of the hierarchical brotherhoods, which combine all the young people and the men of the same age who have together submitted to circumcision and to the tests of successive initiation The first is that of *ntomo*, grouping together the boys from the ages of 7 to 14 years, then there come the so-called secret societies, such as those of the *komo* or of the *nama* which consist of politico religious groups within the village

The village or *dugu* is the administrative unit, the union of a number of villages and the lands which surround it forming a district or *kafo*, a number of districts constitute a province or a kingdom, *diamana*, at the head of which there was in former times the *Mansa* or *Massa* The latter was surrounded by different ministers and assisted by a treasurer

Although Muhammadanism has long penetrated amongst the noble families of the Mandingo, the greater portion of the population has remained faithful to the worship of natural forces and of protecting deities, *dugu la siri*, *gnena* and *boli* The great religious festivals are the agrarian feasts and the most important correspond to the periods of seed time and harvest

The Language The Mandingoes properly speaking are in number about 2,800,000 of whom 77,000 are in Senegal, 1,000,000 in French Sūdān, 200,000 in the Upper Volta, 2,500 in Nigeria, 290,000 on the Ivory Coast, 550,000 in Fench Guinea, more than 680,000 live in Gambia, Sierra Leone, Portuguese Guinea and the Republic of Liberia In addition to these natives, whose mother tongue is Mandingo, more than 2,000,000 other people speak this idiom, for this reason it is often spoken of as a language that is still spreading

The Mandingo belongs to the African Negro language and more especially to the group which M Delafosse calles Nigero-Senegalese, D Westermann Mandingo, and A Drexel Nko-Nke, it is closely allied to Susu Foreign idioms seem to have had little influence, although it has borrowed certain abstract and religious terms from the Arabic, from Phoenician or Punic it has borrowed expressions relative to horsemanship and cotton, from Berber about a dozen words, and finally during the space of the last fifty years it has further borrowed from several European languages

The roots are monosyllabic or dissyllabic and many of them can be traced to an ancient African Negro origin For example *fara*, the action of killing or being dead, seems to come from a root *far* or *fag*, cf in Susu *faxa*, Hausa *fawa*, Mossi *fare*, Fang *war*, Pul *war* (*de*), Musgu *fada*, Congo *fwa*, Swahili *fa* and *wa*, Ancient Egyptian *fex* The nominal class does not exist in this language

Mandingo uses derivative suffixes which are used to form distinct substantives used as substantives only, for example *ka*, *nka*, or *nga*, the suffix for nationality *Mandenka*, *la* or *ra*, the instrumental suffix *tege*, to cut, *tege-la*, the instrument for cutting, axe It employs also adjective suffixes, for example *ma* or *mã* indicating the possession of the thing mentioned *gyi*, water, *gyi-ma*, "full of water", *tã* indicating on the contrary the lack of the thing expressed *gyi n-tã*, "without water" Certain suffixes, joined to a simple or derived root, indicate the possession of a quality or of a state, for example *ya suru*, "short, little", *suru ya*, "shortness" and also "to shorten or to approach" Suffixes also exist, indicating determination or relationship

The Mandingo conjugation employs prefixes denoting the perfect, the aorist, the injunctive Certain auxiliary prefixes serve to indicate time It has a considerable number of verbal forms, affirmative as well as negative

This language does not possess any trace of a system of syntax of agreement, the relations between one element of a sentence and another are entirely determined by the respective position of the two elements and their grammatical function is often determined only by the place which they occupy in the sentence

In the syntax of this language, the complement of a noun, pronoun or verb always precedes the noun, pronoun or verb in question, the adjective qualifying or determining a noun always follows this noun, the noun of number always the noun of the thing numbered, an adverb modifying a word follows it The order of the words in the sentence is subject, prefix or auxiliary of conjugation, direct complement of the verb, verb root or derivative, indirect complement of the verb, adverb modifying the statement

Mandingo is divided into a fairly large number of dialects revealing differences more or less marked We distinguish the Bambara or Bamana dialects, the Diula dialects and lastly the Malinke dialects, which are themselves divided into the Malinke of the East, of the North (sometimes Khassonke), of the West and of the South

History The wide diffusion of this language is due to certain historical circumstances, and to the rise of the Mandingo hegemony which extended over almost all the Western Sūdān from the year 1250 to 1500

According to local tradition, the Mandingo sovereigns bore the title of Mansa or Massa, they belonged to the Keyta and married into that of the Konde or Kone In the beginning, they owed their influence to their knowledge of sorcery and magical practices and little by little they emerged from obscurity Ibn Khaldūn has transmitted to us the name of the first of them, Baramendana, who about the year 1050, was converted to Islām, in order to obtain, according to al-Bakrī, the end of a drought, which was cruelly trying the country of Mande, thereafter he made the pilgrimage to Mecca Native tradition has kept the name of two of the descendants of this prince, Hamana and Dyigui-Bilali The son of the latter, Mūsā, called Allakoy, reigned from the year 1200 to 1218 Four times he made a pilgrimage to Mecca,

and he extended the power of his dynasty On the other hand, his son Nare Famaga (1218–1230) suffered a great reverse and was defeated by his neighbour, the king of Sōsō, Sumanguru Kante, who annexed Mandingo in 1224 and put to death eleven out of the twelve sons of the conquered monarch The last son, Sūn Diata or Mari Diata (1230–1255), who was weak and delicate suddenly recovered his health and strength after touching his father's sceptre Little by little he got together a powerful army, with the help of which he conquered a part of Futa Djalon, the country situated between the Niger and Bani, in the region of Kita and that of Beledugu In 1235 he attacked his enemy Sumanguru Kante and defeated him at Kirina, not far from the Niger After having subdued shortly afterwards the whole of the Sōsō, he advanced in 1240 as far as the celebrated city of Ghāna which he plundered During the following years, Sun Diata took possession of Gangaran and of the gold bearing district of Bambuk, without neglecting the good administration of his lands in which he encouraged agriculture and extended the cultivation of the cotton plant Towards the year 1240 he abandoned the ancient capital of the Mandingoes, Djeriba, and transferred it to Niani, wrongly called Mali or Melli by the Arab historians He died in 1255 in the vicinity of this town One of his sons succeeded Sun Diata, whose name only is handed down to us, namely Mansa Ule or the Red King (1255—1270) After him reigned the princes Wali, Khalifa and Abu Bakari between the years 1270 and 1285 about whom we possess no information After the death of the latter, the power passed into the hands of a slave of the Keyta called Sakura or Sabakura, who kept it from the year 1285 to 1300 Then the Keyta regained the throne and under Gan, Mamadu, and Abu Bakari they held it from 1300 to 1307 At the end of this undistinguished period, Kankan Mussa, also called Gongo Mūsā (1307—1332), the son of the last of these sovereigns, seems to have raised to its zenith the power of his dynasty We owe to Ibn Khaldūn some details about his person and the events of his reign He was an ascetic prince and full of piety, and he made a pilgrimage to Mecca in 1325 and on his return he brought back with him to the Sūdān, al-Mamer, a descendant of the founder of the dynasty of the Almohads, as well as the Arab poet al-Sāhilī When he was still in the Sahara, Kankan Mussa learnt that his troops had seized Gao, Tumbuktu, Walata and the kingdom of Songhoy He decided to visit the first two of these towns, and on the advice of the strangers who accompanied him, he built in each of them a mosque and a palace, thus introducing Arab architecture into the country When he died in 1322, his authority extended from the valley of the Bani to that of the Faleme, and from the Sahara as far as the thick forest, and he had entered into relations with the Sultān of Fez

His son and successor Maghan (1332—1336) was not able to keep intact the kingdom bequeathed to him by his father During the reign of this prince the Mossi pillaged Tumbuktu, and Songhoy cast off the Mandingo yoke

On his death, Sulaimān (1336—1359), the brother of Kankan Mussa, ascended the throne According to Ibn Khaldūn, the first care of the new sovereign was to assert his authority in his possessions in the North He was not successful in regaining Songhoy, but he established peace and security in his kingdom, which he reorganised The traveller Ibn Battūta, who passed through Mandingo in the year 1351—1352 furnishes us with valuable information on the country, the administration, justice and the court

Kamba, the son of Sulaimān, succeeded his father but was deposed at the end of a few months by Mari-Diata, the son of Maghan who kept his power until 1374 He died of sleeping sickness and is remembered as a cruel, debauched and extravagant prince

His successors Mūsā II (1374—1387), Maghan II, Sandigui Maghan III, Mūsā III and Mūsā Ule II reigned until the beginning of the xvth century From this time onwards exact information ceases, as our authority, the historian Ibn Khaldūn, died in the year 1406

The decline of the Mandingo empire was hastened during the xvth century by the attacks of the Tuareg, the Songhoy, the Mossi and the king of Tekrur In the year 1481 Mansa Mamadu feeling himself to be in danger, approached the Turks who were established on the coast of Africa and sought their protection This move and others similar which followed it influenced the kings John II and John III in sending to the court of the king of the Mandingoes two ambassadors, the one in 1483, the other in 1534, but without lending any military aid

In the year 1545 the Askia Dā'ūd of Gao came and plundered the Mandingo capital The Moroccans who had come from Tumbuktu some months before, joined in the year 1591 the enemies who surrounded the kingdom The period from 1600–1670 marks the last stage of Mandingo power But two new principalities were formed on its ruins at Segu and in Kaarta

According to the legend, the Bambara under the guidance of two brothers, Baramangolo and Niangolo, were flying before their enemies They were on the point of perishing under the blows of their enemies, since a river barred their route when they were saved by a miraculous fish which carried them to the opposite bank After this miracle they took the name of "Kulu bali", that is to say the men "without boats"

In the middle of the xviiith century the descendants of Baramangolo had spread into the valley of the Niger and of the Bani but they paid tribute to the inhabitants of Djenne and to the Moroccans of Tumbuktu, their capital was Segu Biton Kulubali (16601—710) liberated them from this tutelage Having collected a powerful army and fortified Segu, he made war first against the sovereign of the Mandingoes, then seized the right bank of the Niger and finally Massina and even Tumbuktu He died of tetanus after organising his kingdom and dividing it into sixty districts

His son Denkoro (1711—1736), a cruel and debauched prince, was assassinated, ʿAlī, the brother of Denkoro, only reigned a few days and was deposed by the army of the Fondion or government troops The period 1736—1750 was troubled by internal disorders, and in the year 1750 the power passed to the family of the Diara, who kept it until 1861 At this time the conquering al-Hādjdjī ʿOmar seized Segu and put ʿAlī, the last king of the dynasty, to death

The descendants of Niangolo Kulubali are cal-

led "Massasi", that is to say "royal race" At the end of the xviiith century they occupied all the province of Kaarta itself and they were the rivals of the Bambara of Segu In the middle of the xviiith century, Massa Bakari succeeded in bringing under his authority Kaarta, Kingui, Bakunu, Gui diume and Diafunu One of his successors, Bessekoro, received the explorer Mungo Park at Guemu in the year 1796 In the year 1854 the last sovereign of the line of the Massasi, called Kandian, was reigning at Nioro when al Hādjdjī ʿOmar seized the village and executed all members of the royal family

After these events the Mandingoes remained divided and until the year 1860 only played a modest part in history In this year, there arose in the vicinity of Kankan, in the district of Wassulu, Samori Ture, at first the leader of a band and then the sovereign of the province of Bissandugu This new conqueror, although he was quite illiterate, seized in a short time the whole of Wassulu and took the title of "Almami" Crossing the Niger he extended his warlike expeditions into Sankaran and advanced within 80 miles of Kita, a post recently founded by the French The latter fought against Samori first from the years 1881 to 1886 and in the next year imposed upon him the treaty of Bissandugu, which he respected for only a few months From 1888 to 1891 Almami attacked Tieba, the king of Sikasso, without any success, thereafter he resumed hostilities against the French, who at the end of the year 1893 occupied Wassulu Samori then fled into the Upper Ivory Coast, which he ravaged from the year 1894 to 1897, and he destroyed Kong, Bonduku and Buna In front of this town, a detachment commanded by Captain Braulot was exterminated in the year 1897 by the warriors of Sarantie Mori, his son and his lieutenant France thereupon determined to settle with Almami against whom a combined force was sent It resulted in the capture of Samori and of his army on 29th Sept 1898 at Guelemu on the Upper Ivory Coast Samori was deported with his family to Gabon where he died in 1900, he was about 65 years old Since the disarmament of his warriors, no event of importance has disturbed the peace of Mandingo

MĀNDŪ, a fortress now in ruins, was formerly the capital of Mālwā [q v], and stands in 22° 21′ N and 75° 26′ E It has probably been a stronghold from time immemorial, but little is known of its history until the fortifications were erected in their present form by Dilāvar Khān Ghūrī (1392—1405), the first independent Muslim king of Mālwa, and his successors His son, Hūshang Shāh, made it his capital, and it remained the capital of the kingdom and province of Malwa throughout the period of Muslim rule, and has stood many sieges Its streets ran with the blood of 19,000 Rādjpūts, slain by Mahmūd II of Mālwā when he recovered his capital from his rebellious troops

Of the ten gates of the fortress (two on the south, two on the west, one on the east, and five on the north), the Tārapūr Gate was built by Dilāvar Khān, the Djahāngīrpūra Gate by the emperor Djahangīr, and the ʿĀlamgīr Gate by an officer of the emperor Awrangzib in A D 1668 The Bhagwānia Gate was built in 1517 in the reign of Mahmūd Khaldjī II, and the Songarh Gate is an old gate rebuilt early in the nineteenth century by Maina Bai, the great Rānī of Dhār The Lawānī, Rāmpol, Dihlī, and Bhangī Gates are old, but bear no inscriptions The last has

its name from the legend that a sweeper was buried alive on the completion of the gateway The Gārī or Carriage Gate bears no inscription and its age is unknown

The principal buildings in the fortress are the mosques of Dilāvar Khān (1405), Malik Mughīth (1432), and Hūshang (1454), the last being one of the finest specimens of Pathān architecture in India, the Hindola Mahall with the Nahār Djharokha, the Taweli and Djahāz Mahalls, the palaces of Nāsir al-Dīn (1509) and Čishti Khan, the Campa Bāoli or Well, Rūpmatī's pavilion, the tombs of Hūshang Shāh and Daryā Khān, the Hāthī-khāna (actually a tomb), and the Tower of Victory of Mahmūd Khaldjī I These buildings are now carefully conserved by the Archaeological Department of the Government of India

MANDŪB. [See Sharī'a]

MANF, or, according to Abu 'l-Fidā (p 116), Minf, the ancient Egyptian capital Memphis, on the left bank of the Nile, not far from Cairo, is well known in Arabic literature as a very old town The geographers cite, among the *kūra*'s of Egypt, that of Manf and Wasim (cf e g Ibn Khordadhbih, p 81), but the town was already ruined in Muhammadan times (al-Ya'kūbī, *Kit al Buldān*, p 331) — by 'Amr b al-'Ās, according to Abu 'l Fida' (*loc cit*) — and was no more than a village in the time of Ibn Hawkal (p 106)

Most Arab writers speak of the ancient traditions connected with Manf, often together with 'Ain Shams [q v] It is said to have been the first town inhabited in Egypt after the Flood, founded by Baisar b Hām b Nūh (Ibn 'Abd al-Hakam, *Futūh Miṣr*, ed Torrey, p 9) or Misrāyim b Baisar (al-Makrīzī, ed Wiet, i 73), the name is said to mean thirty (*māfa*, sc the Coptic *maab*), because the first inhabitants were thirty in number Further it is said to have been the town, where the Kur'ānic stories of Mūsā and Yūsuf took place (Yākūt, iv 667), namely the Madīnat Fir'awn, which possessed 70 gates and from which flowed the four great rivers of the earth (Ibn Khordādhbih, p 81) The temple (*barbī*) of Manf was built under the queen Dalūkā herself or by the sorceress called *al-'adjūza*, and had magical properties Manf had also a tradition as a Christian town, the ruins of the monastery Dair Hirmis are still to be seen, and the Arab authors know of some churches in the place (e g Kanīsat al-Uskuf, cf Yākūt, *loc cit*), which reminded them of the ancient enormous prosperity of the town

MĀNGIR, the general name for copper coin under the early Ottomans, corresponding to *altun* (gold) and *akče* (silver) As a particular denomination it was a copper coin struck in the reign of Sulaiman II during a period of financial stress In 1099 (1687) it was resolved to issue temporarily a token coinage in copper to be withdrawn from currency when the finances of the state improved 800 māngirs were struck to the oke of copper and put into currency as half aspers When the situation did not improve, the value was raised to one asper, the remedy proved worse than the disease for very soon the country was flooded with copper coins and gold and silver driven out of circulation

Māngir is also the name given to imitations of sequins in brass or other cheap metal worn as ornaments

(J Allan)

MANGĪSHLAK, a mountainous peninsula on the eastern shores of the Caspian Sea, first mentioned under the Persian name Siyāh-Kōh ("Black Mountain", cf *B G A*, i 218), the same name was given to the hills west of the Sea of Aral (*op cit*, vii 92, see Āmū-daryā) According to Istakhrī (*op cit*, i 219), the peninsula used to be uninhabited, it was only shortly before his time (or that of his predecessor al-Balkhī) that Turks, who had quarrelled with the Ghuzz [q v], i e with their own kin, had come there and found springs and pastures for their flocks Ships which were wrecked on the cliffs of the peninsula used to be plundered by these Turks Mukaddasī (or Makdisī) mentions the mountain of Binkishlah as marking the frontier between the land of the Khazars and Djurdjān [q v] (cf *B G A*, iii 355)

In the form Mankīshlāgh (vocalised Mankashlāgh by Yākūt) the name first appears in documents of the vith (xiith) century (W Barthold, *Turkestan*, i 34, 44 and 79) and in Yākūt (iv 670) According to Yākūt, this name was borne by a strong fortress near the sea between Khwārizm [q v], Saksīn [q v] and the land of the Rūs The peninsula was evidently no longer, as it had once been, a place held in terror not only for its natural conditions but also for its inhabitants, via Mangīshlak there ran, as later almost into modern times, an important trade route from the Volga territory to Khwārizm, goods were unloaded in the bay near Cape Tub Karagan and taken to Khwārizm by caravans Before its conquest between 1127—1128 and 1138 by the Khwārizmshāh Atsīz [q v], Mangīshlak was a separate and practically independent principality on the frontiers of the Muslim world (it was of course regarded as within the empire of the Saldjūks, q v) As the verse quoted shows, the conquest resulted in the destruction of the town No permanent settlement is again mentioned on the peninsula until its occupation by the Russians, in spite of its importance for commerce

For the last few centuries (perhaps even earlier) the peninsula has been inhabited by Turkomans Towards the beginning of the xth (xvith) century these were the Salur [q v], on the coast lived the "inner Salur" (*iči Salur*), on the road from Khwārizm to the coast (about 500 miles, it took 20 days to traverse) lived "the outer (*tashkī*) Salur" (*Zap*, xv 208) Abu 'l-Ghāzī (ed Desmaisons, p 267) gives the Eisari for the Salur, towards the end of this century, this tribe was almost completely driven out by the Mangīt [q v] i e by the Nogai, later we find the Kalmucks [q v]

conquering here On their rule in Mangïshlak, cf Abu 'l Ghāzī, p 316, the name of the peninsula is written by Abu 'l-Ghāzī (see Index), Mānkïshlāk, Mankïshlāk and Mankïshlāk In addition to the regular traffic by sea with Astrakhan [q v], frequently mentioned in Russian sources, there was also a connection with Shīrwān mentioned by Abu'l-Ghāzī (p 257 and 273) and other sources Three Turkoman tribes, the Čawdur, the Igdïr and the Somadjï, were deported by the Kalmucks under Ayuka (1670—1724), according to others as early as the reign of Puntsuk-Mončak (1667—70) from Mangïshlak to the nothern part of the Caucasus, but a section of the Čawdur continued to dwell in Mangïshlak When, under Russian rule, the land of the Turkomans was organised as the "Trans-Caspian territory" (*Zakaspiyskaya oblast'*), the "district of Mangïshlak" was included in it, the capital was the little settlement founded in 1839 as "Novo-Petrovskoye ukrepleniye" and known from 1859 as "Fort Aleksandrowsk" (now Fort Uritckogo) In the XIXth century the Turkomans were gradually driven out of Mangïshlak by the Kazak [cf KIRGIZ], therefore after the Revolution the district of Mangïshlak was separated from the land of the Turkomans and now belongs to the republic of Kazakistān

After the western shore of the Caspian Sea had passed under Russian rule, it was recognised that the Gulf of Balkhān [q v] formed a better gateway to Central Asia than Mangïshlak In 1819 the ambassador Murawyew proposed to the Khān of Khiwa, Muhammad Rahīm, that the caravan route from the Caspian Sea to Khīwa should no longer start from Mangïshlak but from the port of Krasnowodsk on the Gulf of Balkhān The Khān replied "It is true, the road via Mangïshlak is much longer than the road via Krasnowodsk but the people in Mangïshlak are my subjects, whereas the Yomut as far as Astarābād belong for the most part to the Kādjār" [q v] (N Murayew, *Puteshestviye v Turkmeniyu i Khivu*, Moscow 1822, p 134) It was only after Russian rule was firmly established in Central Asia that this question could be settled in favour of the Gulf of Balkhān Since Krasnowodsk became the starting point for the Central Asiatic railway, Mangïshlak has lost any importance it had in favour of the Gulf of Balkhān According to the census of 1897, the population of Krasnowodsk was 6,322 and of Fort Aleksandrowsk only 895

Bibliography given in the article Descriptions of the district of Mangïshlak will be found in all works on Turkestan, e g V Masal'skiy, *Turkestanskiy Kray*, St Petersburg 1913, p 621 *sq* (W BARTHOLD)

MANGĪT, the name of a tribe and a people In the time of Čingiz-Khān [q v] the word Mangït appears as the name of a Mongol people in Rashīd al-Dīn (*Trudï Vost Otd Arkh Obshč*, VII 205 *sq* Mangkūt) From the Mongol period onwards the name Mangït (written Mangkït, Manghūt, Mānghīt, Mankït, Manghït and Manghït) like many other Mongol names (Naiman, Kungrat etc) appears as the tribal name of Turkish or Turkicised peoples According to the *Zafar-nāma* (Ind ed, I 277) the Mangït were a tribe (*ūtmāk*) of the Golden Horde, which produced the celebrated Emīr Idegu (in Russian sources Yedigei), the contemporary and opponent of Timūr and Tokhtamïsh The people called Nogai in Russian sources is always called Mangït by Abu 'l-Ghāzī (see Index) and other Oriental sources of the same period Now Nogai alone is used as the name of the people The statement that the Mangït tribe makes up about 90% of them wants more careful investigation (M Tïnïshpaev, *Materialï k istorii Kirgiz-Kasakskogo naroda*, Tashkent 1925, p 28), the name Mangït is said to be also found as the name of a family among the Yakuts In the *Bahr al-Asrār* of Mahmūd b Walī (MS Ind Off, N° 575, f 35^{a}) the tribe (*ulūs*) of the Mangït and the tribe (*il*) of the Kungrat are mentioned as the two most important branches of the Ozbegs The Mangït tribe was of some political importance for the political life of Bukhārā and Khwārizm In the fighting with other tribes the Mangïts of Bukhārā were supported by their brethren in Khiva and vice versa but it was only in Bukhārā that they became supreme On the dynasty of the Mangït see the article BUKHĀRĀ (there written Mankit), the dynasty was overthrown in the revolution of 1920 In Khiva the Mangïts combined with the Nukūz to form a double tribe (the other double tribes were the Uigur-Naiman, Kitai Kïpčak and Kïyat Kungrat)

The place called Mangït on modern maps was only founded in Radjab 1215 (Nov–Dec 1800) by members of the tribe who had been driven by the Turkoman Yomut to the east (History of Khiva MS of the Asiatic Museum, p 590 *supra*, f 75^{b})

At the present day the Mangïts number 99,200 in Bukhārā (of whom 44,000 are in Bukhārā itself and 31,000 in Karshi, q v) and only 10 300 in Khiva

MANGU [See MÖNGKE]

MANGŪ-TIMUR, so on his coins, Mongo Möngke-Timur, as in the article BERKE, [q v written Mūngkā (e g Rashīd al-Dīn, ed Blochet p 109), in the Russian annals Mengutimer and Mengutemer, Khān of the Golden Horde (1266—1280), grandson of the Khan Bātū [q v son of Tūkūkān According to Egyptian sources the death of his predecessor Berke took place in 665 (Oct 1266–Sept 1267), in Safar 666 (Oct Nov 1267) an embassy left Cairo which was to bring the new Khān an expression of sympathy and congratulations from Sultān Baibars I [q v In 667 (Sept 1268–Aug 1269) an embassy from the Khān arrived in Egypt The exchange of embassies was maintained throughout the whole of the Khān's reign When in 670 (1271—1272 an embassy on the way to Egypt was captured by a Frankish ship from Marseilles, the ambassadors and all their goods had to be released on the Sultān's demand When in 680 (April 1281–1282) an Egyptian embassy left for the Golden Horde nothing was yet known of the death of the Khān Only later did they learn that he was no more, having died in Rabī^{c} I 679 in the district of Aklūkiyā (apparently nowhere else mentioned)

his death is said to have been caused by the unskilful removal of a boil on the neck In Rashīd al-Dīn (ed Blochet, p 142) the date of Mangū Timur's death is given as 681 (Apr 1282–March 1283), there are coins of his brother and successor Tūdā-Mangū struck in this year

The Egyptian government tried to induce the Khān to resume the war on the Persian Mongols begun by his predecessor Berke, but soon after his accession Mangū-Timur concluded peace with Abākā and never again attacked Persia Rashīd al-Dīn by an oversight attributes to Mangū-Timur the campaign against Arghūn of the year 689 = 1290 (in Blochet's edition in p 140, we have *sabʿ* for *tisʿ*), d'Ohsson (*Hist des Mongols*, iv 42) and Barthold (article ARGHŪN) have been misled by this

On Mangū-Timur's participation in events in Central Asia down to the Kuriltāi of 667 (1269) (sending an army of 50,000 men under Berkedjār, a brother of Bātū and Berke) see the article BURĀK KHĀN Accounts of this are found in the still unprinted parts of the *Djāmiʿ al-Tawārīkh* of Rashīd al-Dīn (reign of Abākā, cf d'Ohsson, *op cit*, iii 428) The alliance between Mangū-Timur and Kaidū, whom he was then supporting, is also mentioned later, when in 1277 two sons of the emperor Kubilai Khān were taken prisoners in the war with Kaidū, the latter had the princes sent to the court of Mangū-Timur, from which they were later sent back to their father (Rashīd al-Dīn, ed Blochet, p 8, d'Ohsson, *op cit*, ii 452 *sq*)

Russian rulers appealed to Mangū-Timur for support as they had done to his predecessors and successors Lev of Galicz received assistance from him against the Lithuanians but the Tatar auxiliaries proved a great burden not only to his enemies but also to their proteges In 1277, a Russian army was fighting in the Caucasus against the Alans under the Khān's orders From Mangū Timur dates the earliest extant edict of a Khān of the Golden Horde on the privileges of the Greek orthodox clergy, it is dated in the year of the Hare (probably 1267) The bishop of Sarāi, Theognostes, was sent by Mangū-Timur as an ambassador to Constantinople

In contrast to the last two decades of the xiiith century the Golden Horde under Mangū-Timur was a great power, free from internal troubles Coins were still struck only in the old commercial city of Bulghārī [q v] but, unlike those of his predecessors, in his own name not in that of the Great Khān On his coins, the seal of the Golden Horde appears for the first time

MĀNĪ [See ZINDIK]

MANI is the name given in Ottoman Turkish to popular songs in quatrains The name is a corruption of the Arabic word *maʿnā*, meaning "thought, idea", and is by no means found throughout the whole area where Ottoman Turkish is spoken In many districts isolated quatrains, like songs of several verses, are simply called *turku* Songs in quatrains are known among almost all Turkish peoples they must therefore be considered to have been known to the original Turkish stock

The rhythm of the mani is, as in Turkish popular poetry generally, sometimes purely syllabic (a definite number of syllables without a fixed caesura), and sometimes depends on the accented syllables (with a fixed caesura and therefore with the order of weak and strong syllables to some degree fixed) The lines show as a rule 7 syllables (4–3, 3–4, rarely 2–3–2) Quatrains with all four lines alike are rare, the third line usually differs from the others (3–4, 3–4, 4–3, 3–4, or 4–3, 4–3, 3–4, 4–3 and so on) The original arrangement of the rhyme in Turkish quatrains is *a b c b* (two lines rhyming) which clearly shows the quatrain was originally a distich In the Ottoman mani we have a development of this form also, with three rhyming lines (*a a b a*) The rhyme however which connects the second and fourth lines is often fuller and more distinct than that which connects the first and second lines Alliteration, which is highly developed among many Turks, especially in the north, is only found sporadically in the mani, it is found both as line alliteration (similarity in the initial letters of the words of a line, e g *kara koyun kawurmasī, betime benzime bak*, etc) and as verse alliteration (similarity of the initial letters of the lines in a verse, e g *sarī gulum yerinde, senin insaf nerende, suc bende yok sewdiyim, sana gonul werende*)

As regards matter, the majority of the mani fall into two distinct parts, an introduction dealing with nature, and a concluding part of a personal character Originally the two parts must have been very closely connected It would however be a mistake to find such a connection in all the manis, because the singers very often only improvise new conclusions to ready made introductions taken from older poems, without troubling in the least about the train of thought The great majority of mani are tinged with eroticism, but we also find satirical ones, also soldiers' and robbers' songs in the form of quatrains The quatrains composed on the Anatolian brigand Čakydjy have been much admired by European scholars Isolated, originally independent mani are now often strung together to form ballads of some length It would therefore be wrong to regard mani and *turku* as two fundamentally different classes of songs

The number of mani current among the people is enormous They are sung at all kinds of festivals and ceremonies, and by people over their work in the house in the long winter nights On *Hedrelez*, St George's Day (April 23), they are used as oracles by young girls

Very popular also among the Ottoman Turks are the so-called *djinasli mani* punning mani These are quatrains, the rhymes of which are identical syllables but have each a different meaning

AL-**MĀNI'**, one of Allāh's names [See ALI ĀH]

MANISA, Machnisa (> Mā'nisa), in Arabic Maghnīsiya, capital of the district of Sārūkhān in western Anatolia

Maghnisa is two hours' journey distant on the south from the river Gediz or Gedus (the ancient Hermon, on its course, cf Ichihatchef, *Asie Mineure*, ii [1866], p 232) on the northern slope of Mount Maghnisa daghï or Yamanlar (the ancient Sipylos) which separates it from Smyrna (the distance between the two towns by the Sabunči beli pass is only 20 miles, by railway 40 miles)

In ancient times the town ("Magnesia ad Sipylum") was mainly noted for the victory won in its vicinity by the two Scipios over Antiochus the Great of Syria (190 B C) The town was then incorporated in the Roman empire It flourished until the fifth century as its coins show Magnesia is also often mentioned in Byzantine history after the taking of Constantinople by the Crusaders in 1204 John Ducas retired to Magnesia where he held out till 1255

The Turkoman chief Sārū-Khān [q v] who had formed a principality for himself on the ruins of the Saldjūk kingdom of Konya, took Magnesia in 1313 and the town was the capital of his dynasty for 78 years It was in the reign of Sārū Khān that Ibn Battūta (ii 312) visited the town where he stayed in a *zāwiya* of the brotherhood of the *fityān* The town was large and beautiful, rich in gardens and with a plentiful supply of water On the buildings erected by the Sārū Khān dynasty see the article on them

After the battle of Angora (805 A H) Timūr ordered his grandson Sultān Muhammad to lay waste (*tākhtan*) the district between Brussa and Magnesia and to take up his winter quarters in the latter town The author of the *Zafar nāma*, ii 466–467, 480, calls it "Maghnī-siyāh in the Sarhān eli" [cf Urudj-beg, p 32 Sār-khān] and comments on the excellence and abundance of its water-supply and the pleasantness of its climate According to Turkish sources (cf Urudj, *Tawārikh-i Āl-i 'Othmān*, ed Babinger, p 34–35, 'Āshik pāshā, p 70, Munedjdjim bashï, iii 33), Timūr restored the fiefs of Anatolia to their old holders (*beyli-beyine*) but by 813 (1410) Sultān Muhammad I had retaken the region of Sārū khān [q v]

Maghnisa became the residence (*Dïkhān-numā*, p 635 *dār al-amān*) of the Ottoman princes but for a time (1405—1425) its district was within the sphere of influence of the rebel Djüneid (son of the Ottoman governor of al Aydïn, von Hammer, *op cit*, p 271—327) Murād II having abdicated the throne in 1444 chose Maghnisa as his place of retirement The Hungarian offensive drew him out of it but after the victory of Warna (Nov 10, 1444) he returned to Magnesia (v Hammer, *G O R* ², i 351, 357) where the remains of his palace and gardens can still be seen Murād III (1574—1595) and his wife also contributed to beautifying the town, cf *Dïkhān numā*, p 635 Chandler, *Travels in Asia Minor*, Oxford 1775, p 207—209 and 266—268 speaks of the palace and pretty mausoleum of Murad (III ?) and of his foundations (*tekye* = college of dervishes, lunatic asylums etc)

In 1633 in the reign of Murād IV, the governor of Karasi [q v] Ilyās Pāshā rebelled and laid siege to Magnesia which was taken and plundered for three days Ilyās was taken prisoner and the Sultān in ordering him to be beheaded reproached him with having devastated "the residence of his ancestors" (*l c*, iii 113—114)

In the xviiith century Magnesia became the capital of the powerful family of the Kara 'Othmān-Oghlu whose authority extended from the Maeander to the Propontid It was not till 1814 that these hereditary chiefs, whose administration is praised by Keppel, *Narrative of a Journey across the Balcans*, London 1831, ii 294—301, were replaced by a regular Turkish governor

With the introduction of the system of wilâyets, Maghnisa became the capital of the sandjak of Sarukhān in the wilayet of Aydïn (Smyrna) Sāmï-bey, *Kāmūs al A'lām*, Constantinople 1898, vi 4348 estimated the population of the town at 36,252 of whom 21,000 were Muslims, 10,400 Greeks, 2000 Armenians etc Maghnisa which is divided up by streams into 3 quarters had 25 *djāmi'*, 38 mosques, 25 *medreses*, 18 *tekiye* etc The kadā of Maghnisa had 4 nāhiye Amlāk, Yont-daghï Palamut and Belek Cumet, *La Turquie d'Asie*, iii , 1894, p 523—534 gives the following as the nāhiye of the sandjak Maghnisa, Soma, Kïrk-Aghac, Ak-Hisār, Kasaba, Gurdus, Demirdji, Sālihlï, Kule, Ala-shehir, Eshme After the reform of 1921 Saru khān became a wilâyet with 11 kadās (the old nāhiyes) The population of the new wilâyet is 302,752 souls and of the kadā Maghnisa, 75,021 souls, cf the *Turkiya Djemhuriyetinin Sāl-nāmesi*, 1926—1927, p 926—933 In view of the movements of the population the ethnical composition of the sandjak must have undergone profound modifications

(V Minorsky)

MANSHŪR (A) means literally "spread out" (as in the Kur'ān xvii 14 and lii 3, opposite *matwī* "folded"), or not sealed (opposite *makhtūm*) hence means a certificate, an edict, a diploma of appointment, and particularly a patent granting an appanage

In Egypt in the early Arab period *manshūr* seems to be a name for the passes which the government compelled the *fellāhīn* to have in order to check the flight of colonists from the land, which threatened to become overwhelming (*Dïāhya*, cf above, ii , p 14ª and 994ª) In any case in the *Führer durch die Ausstellung* (*Papyrus Erzherzog Rainer*), N° 631 (cf also N° 601—602) such a certificate of the year 180 (796) is called a *manshūr* and in Makrīzī, *Khitat*, ii 493, we are told

of the period of the financial controller Usāma b Zaid al-Tanūkhī (104 = 722—723) that Christians who were found without identification papers (*manshūr*) had to pay 10 dīnārs fine (cf Becker, *Beitrage zur Gesch Ägyptens*, p 104) In the texts of such passports themselves (cf Becker, *Papyr Schott Reinhardt*, I 40, 1) however, we have, so far as I can see, not the word manshūr but only *kitāb*

Manshūr seems also to have a quite general meaning of pass, when we are told in Kalkashandī, *Subh al-Aʿshā*, XIII 142, that it was written on an ʿAbbāsid grant of a fief dating from the year 373 (983—984) that no one could demand for the holder that he should show a *hudjdja* or a *tawkīʿ* or a manshūr

The Egyptian Fāṭimids usually called all state documents, appointments, etc by the general term *sidjill*, but they had also special terms for particular diplomas of appointment, including manshūr

Thus among the examples of Fāṭimid documents given by Kalkashandī, X 452—466 there are several which in their texts are described as manshūrs Among these are for example, appointments to the supervision of inheritances (*mushārafat al-mawārīth al-hashrīya*), of the poll-tax (*mushārafat al-djawālī*), to a professorship (*tadrīs*) etc A grant of an appanage could also be called manshūr at this time, so Kalkashandī, XIII 131 *sq* from the lost Fāṭimid *Mawādd al-Bayān* of ʿAlī b Khalaf and the regulation that the manāshīr must not have an address (*ʿunwān*) and that in place of this the head of the Dīwān must write the date with his own hand seems to be first found in Ibn al Ṣairafī, *Kānūn Dīwān al-Rasāʾil*, p 113 *sq* = Kalkashandī, VI 198

Under the Ayyūbids also, manshūr had quite a general meaning Thus in Kalkashandī, XI 49 *sq* a "noble marshall" (*nakīb al ashrāf*) is appointed by a manshūr and in 51 *sqq* governors (*wulāt*) of different provinces In the text of it the name manshūr is given to the edict on the equation of taxation and lunar years (*tahwīl al-sinīn*) which is quoted from the *Mutadjaddidāt* of the Kādī al-Fādil for the year 567 (1171—1172) in Makrīzī, I 281, ed Wiet, IV 292 (cf also Kalkashandī, XIII 71 *sqq*), and according to a further quotation, for the year 584 (Makrīzī, I 269 = Wiet, IV 248) the so-called "lord of the new year" (*amīr al-nawrūz*) issued his manāshīr

The term manshūr became limited and specialised in the Mamlūk period, for which we have very full sources The increasingly complicated system of the administration brought about a minute distinction between and special names for the various diplomas of appointment, edicts, etc and the term manshūr was henceforth used exclusively of the grants of appanages These manāshīr were always written in Cairo in the chancellory (*dīwān al-inshāʾ*) in the name of the sultān, only in exceptional cases they might be in in the name of the *nāʾib kāfil* (see Kalkashandī, IV 16, XIII 157) According to the very full description in Kalkashandī, XIII 153 *sqq* and Makrīzī, II 211, the procedure in granting a fief was as follows if a fief became vacant (*mahlūl*) in a provincial town, e g in Damascus, the governor there (*nāʾib*) proposed a new holder and had a document (*ṭukʿa*, also called *mithāl* or *murabbaʿa*) drawn up about his proposal by the inspector of the army (*nāzir al-djaish*, cf Kalkashandī, IV 190, XII 97) in the military Dīwān (*dīwān al-djaish*) of his town This document was then sent by courier (*barīdī*) or pigeon post (*ʿalā adjnihat al-hamām*) to Cairo to the government (*al-abwāb al-sharīfa*) Here it was received by the postmaster (*dawādār*), later by the private secretary (*kātib al-sirr* = *ṣāhib dīwān al-inshāʾ*), who placed it before the sultān in audience (*djulūs fī dār al-ʿadl*) for approval, to receive the sultāns signature (*khatt sharīf*) and the note *yuktab* ("let it be written out", see Kalkashandī, IV 51) The document then went to the Military Dīwān in Cairo (*dīwān al-djaish*, occasionally also called *dīwān al iktāʿ*), where it was filed, after what was called the *murabbaʿa* had been made out The latter was sent to the *dīwān al-inshāʾ* and the private secretary, the head of this Dīwān, wrote his requisition (*taʿyīn*) for the *inshāʾ* writer concerned and now finally the patent of the appanage (manshūr) proper could be made out in the *dīwān al inshāʾ* in Cairo, while the *murabbaʿa* of the army Dīwān remained filed in the *dīwān al inshāʾ* as *shāhid* (proof) (cf Kalkashandī, VI 201)

Full particulars are given of the formulae used in these manāshīr and of their outer form in Shihāb al Dīn b Fadl Allāh, *al Taʿrīf bi 'l Mustalah al-Sharīf*, p 88 *sq*, Kalkashandī, XIII 153 *sqq* and Quatremere, *Histoire des Sultans Mamlouks de l'Egypte*, I/I 200 *sq*, note 82 There are many variants of format (*kaṭʿ*, q v) and script according to the military rank of the recipient Thus manāshīr for the *Mukaddamu 'l-Ulūf* were written on *kaṭʿ al-thulthain*, for the *Umarāʾ al-Tablkhānā* on *kaṭʿ al nisf*, for the *Umarāʾ al-Aʿsharāt* on *kaṭʿ al thulth* and for the *Mamālik al sultānīya* and *Mukaddamu 'l-Halka* on *kaṭʿ al ʿāda* Many rules were laid down for the wording to be used, the text is to be shorter and less florid than in the other appointments and there are none of the usual rules about service (*wasāyā*), an original "virgin" (*mubtakarat al-inshāʾ*) is recommended as the finest form of a manshūr Special formulae are further required for grants of appanages which were concerned with renewal (*tadjdīdāt*), addition (*ziyādāt*) or substitution (*taʿwidāt*) A regular signature of the sultān, such as is usual on appointments as confirmation (*mustanad*), is not found on the manāshīr, instead of this the sultān writes formulae like God is my hope (*Allāhu Amalī*), God is my Protector (*Allāhu Walīyī*), God is sufficient for me (*Allāhu Hasbī*), To God belongs the rule (*al-Mulku li 'llāh*), or God alone has grace (*al Minna li 'llāhi wahdahu*)

Occasionally the manāshīr for the highest ranks (*Mukaddamu 'l-Ulūf* and *Mukaddamu 'l-Tablkhānā*) had a *tughrā* [q v] at the top The tughrās were prepared by a special official beforehand and gummed on to the finished diplomas In Kalkashandī, VIII 165 *sq* the tughrās of Nāṣir Muḥammad b Kalāʾūn (693—741 with interruptions) and Ashraf Shaʿbān b Husain (764—778) are reproduced and described, they differ considerably from the better known form of the tughrā of the Ottoman Sultāns After Ashraf Shaʿbān tughrās were no longer used on the manāshīr, these were only used for purposes of display on letters to infidel rulers

The completed manshūr was then again taken back by a courier from Cairo to the town concerned, e g Damascus and handed over to the tenant of the appanage The inspector of the army there (*nāzir al djaish*) however first entered it in his register for he had to keep a roll of the holders of fiefs in his province Kalkashandī, XIII 167—199 gives as examples of manāshīr no fewer

than 26 texts, beginning with one drawn up by Muhyī 'l-Dīn b ʿAbd al-Zāhir in the reign of Kalāʾūn for the latter's son Nāsir Muhammad, which for its remarkable beauty he calls a regular sultān al-manāshīr The other texts are for the above mentioned military ranks, as well as for sons of emīrs (*awlād al-umarāʾ*) and for emīrs of the Arabs, Turkomans and Kurds

The term manshūr was also used for patents of appointment in the Ottoman empire, but it does not seem to have been used so definitely or exclusively in this sense, there are however manāshīr for viziers, generals, and governors (*wezāret menshūru, mushīrīyet menshūru, eyālet menshūru*), and in the treaties of peace made after the Balkan War in 1913, it is still provided that the chief muftis to be appointed in Bulgaria and Greece are to receive their menshūr from the Shaikh al-Islām in Stambul and they have also to put forward for approval the manshūr of the ordinary muftīs subordinate to them (cf e g Karl Stiupp, *Ausgewahlte diplomatische Aktenstucke zur orientalischen Frage*, Gotha 1916, p 295, 308)

The name manshūr was also applied to the pastoral letters and epistles of the Christian patriarchs and bishops In conclusion it may be mentioned that manshūr in mathematical language means "prism" (varieties e g *M māʾil* oblique prism, *M kāʾim* straight prism, *M mutawāzī 'l-adlāʿ* parallel prism, *M muntazam* regular prism, *M muthallathī* triangular prism, *M nākis* truncated prism), and that in the language of the Persian poets the nightingales are called "the menshūr-writers of the garden" (*menshūr-newīsān-i bāgh*)

MANSŪKH [See NĀSIKH]

AL-MANSŪR, ABŪ DJAʿFAR ʿABD ALLĀH B MUHAMMAD, the second ʿAbbāsid caliph His mother was a Berber slave girl called Sallāma, his brother the caliph Abu 'l-ʿAbbās al-Saffāh [q v] In the fighting against the Omayyads he distinguished himself and took part in the siege of Wāsit, which had been fortified by Ibn Hubaira [q v], the last important supporter of Marwān The treacherous murder of Ibn Hubaira, to whom the two ʿAbbāsids had expressly promised a pardon, is however not out of keeping with Abū Djaʿfar's character His brother gave him the governorship of Armenia, Ādharbāidjān and Mesopotamia, which he administered till his accession On the way back from the pilgrimage, he learned that Abu 'l-ʿAbbās had died in Dhu 'l-Hidjdja 136 (June 754) and that he himself had been proclaimed caliph His uncle ʿAbd Allāh b ʿAlī [q v] wished to dispute the succession but was defeated by Abū Muslim [q v] Soon afterwards the Caliph had the latter put out of the way, which led to a rising in Khorāsān The leader of this was a Persian named Sunbādh, he advanced far into Media but was defeated between Hamadhān and al Raiy by the caliph's troops led by Djahwar b Marrār and soon afterwards slain When Djahwar also cast off his allegiance to the caliph, the latter sent an army under Muhammad b al-Ashʿath against him (138 = 755—756) Djahwar was defeated and fled to Ādharbāidjān, where he was put to death About the same time the Khāridjīs rebelled in Mesopotamia under Mulabbad b Harmala al-Shaibānī who inflicted severe reverses on al Mansūr's armies, until the rebellion was finally suppressed by Khāzim b Khuzaima in 138 and Mulabbad slain, in al-Hāshimīya also there was a rising (probably in 141 = 758—759) A body of the so called Rāwandī [q v] who identified the caliph with God himself, went to the capital and when al Mansūr had some of them arrested, they were forcibly rescued by their friends But for the valiant Maʿn b Zāʾida [q v] it would hardly have been possible for the caliph to dispose of these mad fanatics A few years later, the ʿAlids also rebelled under their leader ʿAbd Allāh b al-Hasan [q v] In the autumn of 145 (762), a rebellion broke out in al-Medīna, and Muhammad son of ʿAbd Allāh was proclaimed caliph there, but in Ramadān of the same year (Dec 762) defeated by the Caliph's nephew ʿĪsā b Mūsā ʿĪsā then attacked Muhammad's brother Ibrāhim, who had risen in Basra and severely defeated him at Bākhamrā [q v] where the latter was slain (Dhu 'l-Kaʿda 145 = Febr 763) In Spain the Omayyad ʿAbd al-Rahmān b Muʿāwiya had founded an independent kingdom in 138 (756) and in Africa there was fighting for several years with the Berbers and Khāridjīs It was only after the Abādī Abū Hātim [q v] had been defeated by the Caliph's troops under Yazīd b Hātim in Rabīʿ I, 155 (March 772) and killed that order was restored there Yazīd remained in Kairawān as governor till his death in 170 (786—787) In Khorāsān a new rebellion broke out in 149 (766–767) or 150 The leader Ustādhasīs declared himself a prophet and gathered numerous followers around him but was defeated by Khāzim b Khuzaima, who wrought a fearful massacre among the rebels

The frontiers also resounded with the noise of battle The war against the Byzantines was continued under al-Mansūr, but was confined mainly to raids or the destruction of individual strongholds Al-Mansūr devoted special attention to protecting the frontier by building fortresses, and the two towns of Malatya (Melitene) and al-Massīsa (Mopsuestia) were rebuilt in his reign Several expeditions were sent against Dailam and Tabaristan in the early years of al-Mansūr's reign and after the extinction of the old line of Ispahbads of the Banū Dābūya [q v] in Tabaristān, this province too received Arab governors In 147 (764—765) the Khazars invaded Armenia, seized the town of Tiflīs and defeated the caliph's troops but retired again There were also encounters with the people beyond the Oxus and in India, but these were of minor importance At first al-Mansūr lived at al-Hāshimīya near Kūfa, as did his predecessor, he later decided to build a new capital and in 145 (762) the foundation stone of Baghdād [q v] was laid Khālid b Barmak is said to have been his adviser in this matter, he played an important part in other respects in al-Mansūr's reign [cf BARMECIDES] Al-Mansūr devoted himself with the greatest energy to his duties as a ruler but troubled little about the means he used and never hesitated to act in the most faithless manner if he could only attain his aim He was always kept very well informed of everything that went on in the different parts of his wide empire, and devoted special attention to the improvement of the finances of the State in

order to leave his successor a full treasury He took an active interest in literature and was a brilliant speaker, on the other hand he did not tolerate music and song at his court and in general led a very simple life His nephew ʿĪsā b Mūsā [q v] had been destined by al-Saffāḥ to succeed al-Manṣūr but was induced by the latter to withdraw his claims on condition that he should succeed after al-Mahdī [q v] Al-Manṣūr died in Dhu 'l Ḥidjdja 158 (Oct 775) in Bi'r Maimūn, when on the pilgrimage to Mecca and was buried near the holy city [cf the article AL MŪRIYĀNĪ]

AL **MANṢŪR** BI 'LLĀH AL KĀSIM, the name of two Zaidī imāms of the Yemen

I AL-KĀSIM B ʿALĪ AL-ʿAIYĀNĪ (? according to others al-Ilyānī) His genealogy goes back through a certain ʿAbd Allāh and a Muhammad to al Kāsim b Ibrāhim Tabātabā (d 246 = 860), the spiritual founder of Zaidism in the Yemen, he is however not a descendant of the latter's grandson, al-Hādī Yaḥyā b al-Husain, the creator of the secular power of the Zaidis in the Yemen The latter was succeeded in the imāmate by his two sons the weak Muhammad al-Murtadā and the more capable Ahmad al Nāṣir With his death in the year 322 (934) the imāmate came to an end for a time Although in 345 (956) al Kāsim al Mukhtār, a son of al Nāṣir, seized the capital Ṣanʿā', he was soon defeated by al-Dahhāk, the chief of the tribe of Hamdān, who put Ṣanʿā' under the suzerainty of the Ziyādids of Zabīd, the hostile tribe of Khawlān however played it (352 = 963) into the hands of the Yaʿfurid ʿAbd Allāh b Kahtān In the midst of this civil strife, a nephew of the defeated Mukhtār, Yūsuf b Yaḥyā b al Nāṣir succeeded for a short time in gaining power and being recognised by the Zaidis at least as a *dāʿī* Driven out by the Yaʿfurids, his power became limited to the old Zaidī stronghold of Saʿda in the north Al-Kasim b ʿAlī, with the support of the Banū Hamdān, rose against him, claiming the imāmate with the title al Kāsim b Mansūr bi 'llāh in 389 (999), he occupied Saʿda, forced his way through the Wādī Shuwāba and al Bawn southwards to the highlands in the N W of Sanʿā' and from there forced the capital to recognise him His career however was brief and his power unenduring for when in 393 (1003) he died, his governor in Sanʿa' had already gone over to Yūsuf al-Dāʿī He was however the first since al-Nāṣir Ahmad, and the fourth in all to be entered — although not by everyone — in the lists as Imām of Yemen (but cf on the above claimants Munadjdjimbashī, in Sachau, *Ein Verzeichnis muhammedanischer Dynastien*, in *Abh Pr Ak W*, *Phil hist Kl*, 1923, i 22)

Only for an equally short time from 401–404 (1010–1013) his son al-Husain al-Mahdī was able to regain his father's office His early death in battle is noteworthy because it produced a quite un-Zaidī belief in his return and for a period founded a special sect, the "Husainīya" in the name of this concealed imām Some years later another son of al-Kāsim, Djaʿfar, began a struggle full of vicissitudes with the other ʿAlid claimants to the imāmate, which was complicated by a party grouping of the tribes of the country, about 453 (1061) Ṣanʿā' fell to the Ismaʿīlī Sulaihids and then to Hamdān chiefs Only in 545 (1150) Ahmad b Sulaimān al-Mutawakkil, whose genealogy also goes back to al Nāṣir Ahmad b al-Hādī but neither through al Kāsim al-Mukhtār nor Yūsuf al Dāʿī, succeeded in restoring the imāmate for a long and brilliant period For the history of the following centuries, which were full of incidents and individual imāms of importance cf the article AL-MAHDĪ LI DĪN ALLĀH *a* and *b* The family of Yūsuf al-Dāʿī remained victorious in the end His descendant in the twelfth(? 14th) generation

II AL MANṢŪR AL-KĀSIM B MUHAMMAD (cf *supra*, p 119a), was the founder of the modern Yemen dynasty At the end of 1005 (1597) he appeared in the field and held his own against five Turkish governors Not only did he find opponents and people he could not trust among his own Zaidis, who went over to the Turks but among the latter the change of governor frequently led to trouble and even to mutiny the tribes were an incalculable element, the Turks were often able to call to their help the Ismāʿilis (Karmatians), always hostile to the Zaidis The lack of equipment was a great hardship to the Imām, for example in one battle he is said to have mustered only 20 rifles against the Turks' 2,400 It is very difficult to get a clear idea of this minor war but the following are the main facts that emerge After the proclamation of the holy war at Djadīd al-Kāra in the northern district of Shām al-Shark at the end of Muharram 1006 (Sept 1597), al-Kāsim conquered the highlands of Ahnūm and Shahāra, the latter with the fortress of the same name, which had been a bulwark of the Zaidis for 300 years with occasional interruptions, turning to the southeast he established himself in the mountains of Hadūr al-Shaikh (also called Hadūr Banū Azd, cf the article HADŪR) in the important Thulā [see ḤHILĀ] in the N W of Sanʿā', his followers rose throughout the land and for a time even cut off the Turkish communications with the sea But after two years, the collapse began before General Sinān by the end of 1010 or beginning of 1011 (1602) he had to flee from Shahāra But in 1014 (1605) again he rebelled against Sinān in the district of Shahāra who had been appointed governor this time from Wādiʿa, he also took Saʿda After Sinān Pasha was recalled, al Kāsim was able to induce his successor Djaʿfar Pasha to make a truce, which

was observed for about ten years with a few interruptions especially on the arrival of new governors in 1022 and 1025 After renewed fighting a formal peace in 1028 left the imām in possession of the four separate areas around Shahāra, around Khashab in the east, around Ṣa'da in the north, and lastly in the S W of San'ā' around Haima [q v], the inhabitants were however for the most part not Zaidīs but Shāfi'īs Al-Kāsim died in Rabi' I 1029 (Feb 1620) In the middle of 1038 (beg of 1629) Haidar Pasha had to evacuate San'ā' before his son and successor al-Mu'aiyad Muhammad

Al-Kāsim b Muhammad was a conscientious Zaidī, as a youth when a fugitive before the Turks he had studied with many spiritual authorities, he composed numerous appeals for the rebellions, works of a legal and dogmatic nature by him still exist

(R STROTHMANN)

AL-**MANṢŪR**, the sixth ruler of the Hammādid dynasty, succeeded his father al-Nāsir in the year 481 (1088) The latter had witnessed the rise to the height of its power of the dynasty of somewhat artificial development of Kal'a Banī Hammād [q v], a result of the destruction of Kairawān by the Arabs Two years after the accession of al-Mansūr, the Arabs, who had advanced towards the west and who had spread over all the region adjoining the Kal'a, began to make existence there difficult The prince moved his capital from Kal'a to Bougie which he considered less accessible to the nomads, it should be mentioned that his father al Nāsir had already made preparations for the exodus by transforming a little fishing port into a regular town, which he called al-Nāsirīya and which was to become Bougie, while on the other hand, the Kal'a was not completely abandoned by al-Mansūr and he even embellished it with a number of palaces The Hammādid kingdom had therefore at this time two capitals joined by a royal road

After taking up his quarters at Bougie, al-Mansūr had in the first place to quell the revolt of one of his uncles, Belbar, the governor of Constantine He sent against the rebel another Hammādid Emīr, Abū Yaknī The latter after his victory was given the governorship of Constantine but shortly after he in his turn as well as his brother, who had been given the governorship of Bone, rebelled These risings over which al-Mansūr, thanks to his energy, was triumphant, brought to the side of the rebels of the Hammādid family the Zirids of al-Mahdīya, who wished to get back some power in Barbary, the Almoravids of the Maghrib, who wished to extend towards the East and the Arabs who were always ready to join in the feuds of their powerful neighbours

Al-Mansūr was, on the other hand, led to oppose the advance of the Almoravids who were curiously allied with the traditional opposition of the Zenāta [q v] With the probable object of disarming the opposition al Nāsir and al-Mansūr had married two sisters of Mākhūkh, the chief of the Banū Wamānū, at that time the most powerful of the Zenāta group This alliance did not hinder the time honoured feud from breaking out again It became more acute when al Mansūr murdered his wife, the sister of his enemy The latter then asked for support from the Almoravids

From Tlemcen, where they had been installed for more than twenty years, the Almoravids had after many attempts, endeavoured to expand towards the East at the expense of their brethren of the same race, the Ṣanhādja b Hammād Al Mansūr had twice reduced them to impotence It was at this time that the murder of the sister of Mākhūkh by al-Mansūr drove the Wamānū chief into an alliance with the Almoravids of Tlemcen The alliance formed in this way was a great blow to the Hammādid kingdom Algiers was besieged for two days, Ashir was taken

The fall of the latter fortress, the oldest stronghold of the family, was bitterly resented by al-Mansūr He got together an army of 20,000 men, composed of the Ṣanhādja, the Arabs and even the Zenāta, he marched against Tlemcen, met the governor Tāshfīn b Tīn'amer to the North-East of the town and put him to flight Tlemcen was not spared even at the supplication of Tāshfīn's wife, who invoked the ties of relationship uniting them with the Ṣanhādja (496 = 1102)

After the defeat of the Almoravids, al Mansūr severely punished the Zenāta and the rebel tribes of the Bougie district, whom he forced to flee into the mountains of Kabylia

Thus al-Mansūr seems on the eve of his death (498 = 1104) to have thoroughly re-established the power of the Hammādids According to a tradition, which is not above suspicion, recorded by Ibn Khaldūn, the two capitals owed very important buildings to him Bougie, the Palace of the Star and the Palace of Salvation, the Kal'a, the government palace and the Kasr al-Manār the beautiful donjon of which is still in part extant

(GEORGES MARÇAIS)

AL-**MANṢŪR**, AHMAD B MUHAMMAD, born in 1549, seventh ruler of the Sa'dian dynasty of Morocco, son of Sultān Muhammad al-Mahdī and Sahāba al-Rahmānīya His victories and his wealth earned him the epithets al-Mansūr and al-Dhahabī

He was still a child when on the accession of his eldest brother ʿAbd Allāh (1557) he accompanied into exile his other brothers ʿAbd al-Malik and ʿAbd al-Muʾmin, who went for safety from Sidjilmāsa to Tlemcen The fugitives were potential claimants to the throne of the Sharīfians, by virtue of an agreement concluded in the life-time of their father by which the one to inherit the power was not the Sultān's heir but the eldest of the family ʿAbd al Muʾmin was assassinated at the instigation of his nephew Muhammad b ʿAbd Allāh called al-Mutawakkil and Ahmad retired to Algiers to join ʿAbd al-Malik who was already there He was henceforth always a loyal lieutenant of his brother whose ability he fully realised The death of ʿAbd Allāh in 1574 gave the exiles the opportunity to assert their rights Pretenders and rebels could always rely on the support of the natural enemies of every reigning sharīf Spain and Turkey Philip II had remained deaf to the repeated appeals of ʿAbd al Malik, who appealed to the Grand Turk and in 1574 went to Constantinople where his marriage with the daughter of the renegade al Hādjdj Morato assured him of patrons In Algiers Ahmad conducted successful negotiations with certain Moroccan notables, mainly in Fās It was perhaps he who gave the signal when an expedition appeared to have some chances of success He was at his brother's side when the latter entered Morocco in 1576 with a Turkish army led by Ramadān Pasha and helped him to raise troops in the region of Tlemcen We do not know exactly what part he played in the battles of al Rukn and al-Shaʿīrāt which gave Morocco to ʿAbd al-Malik but we know that he was given the task of pursuing the dethroned sultān on his flight to Marrākush

One of ʿAbd al Malik's first acts was to recognise his brother as his heir It seems, however, that he did not show the latter as much esteem as affection and he had left in Constantinople, with his wife, his son Ismāʿīl But he was bound by his policy In these circumstances Ahmad naturally had the vice-royalty of Fās

He did not stay there long, for he was recalled to save Marrākush from a return of al Mutawakkil Taking command of one of the three armies charged with pursuing the vanquished sultān in al Sūs and the Atlas, he does not seem to have found an opportunity for a decisive military success, he returned to his governorship while Muhammad was driven to seek refuge behind the walls of Ceuta

In June 1578, ʿAbd al-Malik summoned him with all his forces to Kasr al-Kabīr (Alcazarquivir, q v) to stop the advance of the King of Portugal's army The latter had foolishly sought to realise the dream of conquering Morocco cherished by John III When Muhammad b ʿAbd Allāh after vainly appealing for help to Philip II, turned to Sebastian, he at once received a favourable reply A large army with about 20,000 effective fighters left Portugal in June, landed at Tangier, then went to Arzila, which ʿAbd al Karīm b Tuda had just relieved, and proceeded by land towards Larache The Moroccan forces coming from Marrākush and Fās met them at al-Kasr Ahmad found his brother seriously ill, poisoned by the kāʾids of his staff, it is said The battle was fought a few miles from al-Kasr on Aug 4 Sebastian's men, absurdly led, having exhausted all their provisions, fought with their backs to the river of the Wādī ʾl-Makhāzin The sharīf arranged his army in a crescent In about 5 hours the Christians were annihilated by the Moorish cavalry ʿAbd al Malik died in his litter during the battle, Sebastian was killed or committed suicide and al-Mutawakkil was drowned That evening, Ahmad henceforth known as Ahmad al-Mansūr was proclaimed emperor

Elegant, cultivated, very learned in religious matters, more a man of the council-chamber than of the camp, he was succeeding a popular and fearless ruler, of exceptional energy, who having acquired a taste for innovations in Turkey had begun to introduce them, perhaps too eagerly, into Morocco Designated as his successor by ʿAbd al-Malik, and benefitting by the great reputation left by his father, Ahmad al-Mansūr was rapidly able to overcome the difficulties which awaited him, as they did every sovereign of Morocco on his accession mutinies of the troops, demands from allied tribes and the ʿĀwiyas, and agitations among the Berbers While in Spain it was feared that the Christian garrison would be attacked and swept away, al-Mansūr had to hurry to Fās to make himself recognised as ruler there, to put down unrest and behead a few notables He edified the people by displaying the skin of Muhammad al Maslūkh stuffed with straw in the regions of al Sūs and the Atlas, where the influence of the former sultān had survived for a brief space his tenure of the throne

Ahmad al Mansūr very soon sought means of enriching himself The booty taken in the field of al-Kasr, the work done by the prisoners reduced to slavery, the ransoms extorted from the gentlemen gave the sharīf and his people enormous sums The Sultān kept the nobles for himself, 80 were soon brought to him and he set about bargaining about them In a little time, less than a year, the ransoms had been arranged

The haste displayed by foreign courts to congratulate the Moor on his triumph was remarkable Ambassadors thronged to Marrākush, those of Spain and Portugal bringing magnificent gifts Ahmad al Mansūr had the sense to understand that these presents were the most he was likely to get from European action For its neighbours, Morocco was a weak and troublesome state The cupidity of its neighbours was its best protection Many reasons urged the Turks to obtain a footing there the cupidity of the beglerbegs of Algiers ambitious of extending their powers to the west, the naval basis of Mazagan of al Maʿmūra and of Larache, the formal promises that had been given by ʿAbd al-Malik, when he was begging assistance, and there was always the troublesome question of spiritual supremacy, as the Turkish Sultān did not admit that the Moroccan sharīf had an authority in religious matters as great as his To extricate himself, al-Mansūr played the usual game, following the example of his brother, who had made advances to the kings of Spain, Portugal and France, to the Queen of England and to the Grand Duke of Tuscan, he turned without ceremony from the Grand Turk and threw himself into the arms of Philip II, overwhelming the Catholic King with demonstrations of friendship, of which the most significant was the return without ransom of the body of Sebastian, he was even promised Larache The quarrel with Turkey was soon to come to a head ʿAlī, Beglerbeg of Algiers, exerted all his influence to get war declared Ahmad al-Mansūr

as a last resort had to send in 1581 an embassy laden with presents to Constantinople where the enemies of ʿEuldj ʿAlī were conducting an effective campaign against the Begleibeg The relations between the two Muslims resumed the appearance of cordiality which they usually had In 1587, the death of ʿEuldj ʿAlī, the end of the régime of the Beglerbeys and the weakening of Turkish power in Algiers freed Morocco from a threat, which had long weighed heavy upon it There were still periods of tension when al Mansūr ceased to send what he considered gracious gifts and what the Grand Turk received as tribute, when the conquest of the Sūdān seemed to be about to threaten Ottoman interests, spiritual and material, and lastly in the periods of friendship with Spain But there was never again a real crisis, even in spite of the efforts of Hassān who had married ʿAbd al-Malik's widow, the Turk did nothing really serious to sustain the claim of Ismāʿīl

When al-Mansūr had peace on the Turkish side he showed Philip what negotiation meant yielding nothing, breaking off nothing, playing enemies off one against the other It was no longer a question of handing over Larache but of an exchange and the pourparlers dragged along for four years with a decreasing seriousness of purpose The Duke of Medina Sidonia, supported by Philip II, to deal with Moroccan affairs was played with by the Moor who was able to reap considerable advantage from his hesitation on several occasions The Sharīf seems to have summed up very skilfully the character of the Catholic king and the needs of his policy Spain, faced with a crisis at home and abroad, could not think of risking anything important in Africa It was her interest that Morocco should remain weak, that is to say Moroccan, and especially that it should not fall under the influence of the Turks or of the English Corsairs sheltered in the Atlantic ports, on the route to India The garrisons, weak and badly provisioned, were periodically blockaded sometimes threatened, by the natural movements of tribes around them rather than by deliberate hostilities on the part of the Sharīf The policy of the two Philips, one of distrust and fear, tried to limit the evil and to obtain by subtle means a neutrality as little malevolent as possible, by awaiting the favourable moment of the anarchy, which history showed to recur in Morocco with an inexorable regularity The Spanish court did not attempt to make capital out of the presence in Spain of two pretenders, al-Nāṣir and al-Shaikh, the brother and the son of al-Mutawakkil which disturbed al-Mansūr, in 1589, Arzila was evacuated without a quid pro quo The fear of seeing Moors and Morescoes draw closer to one another kept Spain from unfolding a liberal economic policy, the only one capable of affecting the Sharīf in a sensitive part

The latter by nature very cautious and far-seeing was not inclined to take risks He had also to reckon with a public opinion, already irritated by the influence wielded by Jews and renegades, anti-foreign feeling definitely increased in the course of the reign, the fact that he had compromised himself with the Christians weakened the prestige of the Sultān, while the wealth and power of the Marabouts and brotherhoods increased to a dangerous decree The splendour loving ruler of a covetous people, al-Mansūr did not think of concealing the sympathy he had for traders With the Grand Duke, who freely received Moors in Tuscany and did all he could to develop commerce between the two countries, with Elizabeth, with the English, French and Dutch traders, relations were close Sugar was exported from the South and Morocco also supplied corn in good years, gold from the Sūdān, saltpetre, copper and hides It imported principally cloth and for al-Mansūr himself, the materials for his buildings From the Sharifian court there went undefinable envoys, at once ambassadors, spies, procurers of jewels and of women But contraband especially interested the Sharīf, contraband of war and the sale, advantageous for every one, of the cargoes and slaves brought in by the corsairs The English were the most punctilious contrabandists and the trade with Morocco developed so well that in 1585 the Barbary Company was founded with a monopoly and a regular constitution But Ahmad al-Mansūr was not too fond of regular traders The many Christians settled in Morocco must be considered to have been adventurers Quasi prisoners of the Sharīf and his people, they were able to realise precarious fortunes, always liable to extortion In 1585 bankruptcies were numerous in Morocco and the loyal company could not survive The caprices of the sovereign drove off many other foreign traders

These economic relations gradually developed into political ones It was to exercise pressure on Spain that Ahmad al-Mansūr pretended to submit to the wishes of a combination of Dutch and English After the destruction of the Armada in 1588, he entered without hesitation into the English camp, he received at his court Don Christoph, son of the Portuguese pretender Don Antonio, and agreed to a loan to Elizabeth Then he drew back again The taking of Cadiz in 1596 again influenced his feelings, he spoke of an alliance and made definite offers Nothing resulted from these demonstrations, except a painful impression left after deception So long as Elizabeth was alive, relations were friendly, for the two rulers had kindly feelings for one another, but James I, on his accession, at once showed a much less benevolent attitude towards the Sharifian court

It was in the direction of the Sūdān that Ahmad al Mansūr gave reign to his desire for glory and conquest His troops had had some experience in the Sahara In 1581, the oases of Tuāt and Tigūrārin, which had long been free from the Sharifian yoke had been conquered brilliantly In 1584 an unsuccessful expedition had ended in the disappearance in the desert of a large army which had not even reached Teghāza In 1590, having sought a quarrel with the *askia* Ishak over the ownership of the salt mines of Teghāza, al-Mansūr persuaded his Council to go to war, a little army under the Pasha Djawdhar crossed the desert and destroyed the Sūdānese empire The occupation of the conquered country was nothing but systematic plunder and massacre The Sharīf collected great wealth there, he received the congratulations of the Powers and gained a prestige which still survives, his lieutenants also enriched themselves With remarkable regularity, almost every year, reinforcements set out for Gago and very often reached it, caravans brought gold, wealth and slaves back to Marrākush The most famous of the prisoners was the legist Ahmad Bābā [q v] for whom Marrākush was a gilded prison where he taught quite freely The

Sūdān was drained dry In 1600 al-Mansūr saw the necessity of reorganising trade there but does not seem to have succeeded

Morocco was, on the whole, prosperous during his reign The first Sa'dians had done much for the development of commerce and agriculture Sugar factories were built up and down the country which were the Sultān's private property but were farmed out by him to Jews and Christians Trade was active at the ports The profits from the sale of captives or their labour contributed to make the notables wealthy and through this to the peace of the country Besides the industrial monopolies, the normal revenue came from the customs dues and the taxes established by Muhammad al-Mahdī, which al Mansūr heavily increased The collection of these taxes provoked murmurs of discontent and served as an excuse for military demonstrations which maintained good order in the country Al Mansūr had also a considerable army (he never formed a fleet) composed of excellent troops, Moors from Spain and particularly renegades, a nursery for *kā'ids* and officers of ability and energy He was rich enough to pay them well All this contributed to make rebellions few and they were always quickly and harshly suppressed by the Sharīf's lieutenants the rising of the people of Saksāwa, stirred up by Mawlāi Dāwūd, son of 'Abd al Mu'min in 1581 and the rebellion of the Berbers of Amizmīz in 1597 The throne itself was never seriously threatened except in 1595—1596 when al-Nāsir came from Spain and landed at Melilla Starting without resources, for Philip II would do nothing for him, al-Nāsir nevertheless proved a redoubtable enemy for he gathered round him all those who were dissatisfied with the rule of al Mansūr and raised troops from the Barānis (Branes), always ready to rebel and who had until lately been vassals of the Turks He took Tāzā and tried to raise the Rif and the country around Fās Defeated at al Rukn on Aug 3, 1595, he held out till May 1596 Decisively defeated at Taghāt, he was put to death

Al-Mansūr had rarely need to leave Marrakush and he did not like to do so His mother had acquired a great reputation for her pious foundations He himself, six months after his accession, began the building of the palace of al Badi' which was finished in 1602 Marble for it came from Italy and artists from Spain, and Marrākush became one great workshop A splendid palace arose, sumptuous pavilions surrounded by beautiful gardens in which stood numerous fountains Foreigners were fêted there and the Sharīf displayed his generosity Especially on the occasion of religious festivals he displayed great pomp and ceremony His wealth earned him great fame abroad and it was no doubt to it that he owed most of his glory At his court the principal posts were held by renegades Jews who had charge of his finances, Christians who conducted his private trading for him, and the agents of foreign courts Al-Mansūr was one of the richest and most courted rulers of his time Spain kept a regular ambassador or a representative permanently at Marrākush, France had a consul there, there was a constant passage of embassies between the Sharīf and the Sublime Porte

The palace of al-Badi' was destroyed by Mawlāy Ismā'īl The mausoleum in it still remains, a very fine specimen of the art of a decadent period Towards the end of his life al-Mansūr was thinking of creating a new Marrākush on the model of Fās

Ahmad al-Mansūr at first ruled as an autocrat His orders were clear, his decisions rapid and sometimes, as might be expected, drastic to cruelty His intimates, the *kā'ids* Ruthe, a Jew, whom we only know from European sources and 'Azzūz, seem to have been his secretaries, like al-Fishtālī, his biographer and poet laureate whose works have not survived The Pasha Ridwān, very powerful at the beginning of the reign, acquired such influence that the Sharīf had him beheaded in 1581 In time the notables acquired a great deal of independence and the Sultān hardly dared check their abuse of their power, two factors caused him much anxiety, the anti-foreign and audacious 'Abd al-Karim b 'Ida and his own son Abū Fāris

By a concubine, al-Khaizurān, al-Mansūr had two sons, al Shaikh and Abū Fāris, and by his wife Lalla 'Ā'isha al Shabbāniya, Zaidān His favourite son Abu 'l Hasan was killed in 1594 In 1579 he had designated as his heir al-Shaikh, called al-Ma'mūn who held the vice-royalty of Fās The remainder of Morocco was divided into governorships under other princes These were several times rearranged, Abū Fāris, having considered everything, remained at Marrākush near his father to be ready in case of his death In Fās, al-Ma'mūn, supported by his favourite Mustafa, conducted himself like an independent ruler He had displayed his gifts of energy, leadership and bravery on the occasion of al-Nāsir's escapade in 1595, living in great pomp, beloved by his troops, he was undoubtedly a cause of anxiety His father allowed himself to be led by Abū Fāris The conflict broke out in 1598 Forced to sacrifice his favourite, thrown into prison and then half pardoned, al-Ma'mūn had to renounce all hope of winning in the struggle against Zaidān who was supported by Abū Fāris After 1600 he sought support from Spain and Algiers

Under Ahmad al Mansūr, the dynasty attained its zenith But it is hardly correct to say that the decline of the Sa'dians only dates from the death of the great Sultān After the conquest of the Sūdān, the anarchy reigning in Algiers, the weakness of Spain in Europe, the death of al-Nāsir, the conversion to Christianity of another pretender, al-Shaikh, Morocco was rich, seemed powerful and the Shaīfian throne stable Ahmad al-Mansūr, by not being able to arrange for his own successor, nor even to keep his son in obedience, gave his country the chance to destroy itself This process began under his own eyes He had gone to Fās to try to reconcile his children and put through the appointment of Abū Fāris as heir apparent when the plague carried him off in 1603 Civil war broke out over his dead body He had passed the last few years of his life wandering about living in a tent, shifting his camp every ten days, driven from Marrākush by the plague, which had begun to rage in Morocco in 1598

(C FUNCK-BRENTANO)

AL-MANṢŪR IBN ABĪ ʿĀMIR, a famous ḥādjib of al-Andalus in the tenth century A H, the Almanzor of the Christian chroniclers of mediaeval Spain, his full name was Abū ʿĀmir Muhammad b ʿAbd Allāh b Muhammad Ibn Abī Amir He belonged to an Arab family which had settled in the Iberian peninsula at an early date one of his ancestors, ʿAbd al Malik al-Maʿāfirī, had landed there with Tārik [q v] and settled at Torrox in the province of Algeciras where he had founded a family Al-Mansūr's father, Abū Hafs ʿAbd Allāh, was a jurist noted for his knowledge and piety who died on his way back from the pilgrimage at Tripoli in Barbary at the end of the reign of the Caliph ʿAbd al-Raḥmān III al-Nāsir (cf Ibn al-ʿAbbās, *Takmilat al Ṣila*, *B A H*, v —vi, N° 1251, p 437—438, al-Makkarī, *Analectes*, i 904)

While still quite a young man, Muhammad Ibn Abī ʿĀmir conceived great political ambitions they were to dominate his whole career After studying in Cordova and holding a minor office with the kādī of the capital, Muhammad b al-Salim, he entered the service of the Omaiyad court in 356 (967) as superintendent of the estates of a princess of Basque origin, Subh, the wife of the Caliph al-Hakam II and her son ʿAbd al-Rahmān, who had just been born Ibn Abī ʿĀmir was not long, thanks to his tact and courtesy and ability, in making himself persona grata with this princess and it was without doubt on the intervention of the latter that the young superintendent found himself within two years the holder of the new offices of superintendent of the mint, treasurer and administrator of intestate estates A few years later in 358 (969), he was appointed kādī of the district of Seville and Niebla In 361 (972) the Caliph al-Hakam II gave him command of a section of his police corps (*shurṭa*)

All these offices, combined in the person of Ibn Abī ʿĀmir assured him a considerable income and soon enabled him to lead a very luxurious life in Cordova He built himself a palace in the aristocratic quarter of Rusāfa and his generosity, courtly disposition and his splendour soon placed him in the forefront of the dignitaries of the Omaiyad court In a few years he had filled the first part of his programme to become popular and indispensable, to make numerous friends, ready to support him on the day on which he would begin his attempt on the throne of the caliph

Ibn Abī ʿĀmir very soon realised that it was not sufficient to be popular in Cordova but that he had also to create reliable friends among the generals of the Caliph's armies The circumstances of the time were peculiarly in his favour Al-Hakam II, following the example of his predecessor ʿAbd al-Rahmān III, had his North African policy and his armies were busy suppressing a Maghribī revolt which had broken out as a result of an expedition of reprisal sent against the petty Idrīsid dynast of Tangier, Hasan b Gannūn The Omaiyad troops, under the orders of the general Ghālib, were sent to dethrone all the petty Idrīsid rulers of Morocco who were more or less vassals of the Fātimids This expedition was crowned with success and Hasan b Gannūn was obliged to take refuge in a fortress of the Rif, Hadjrat al Nasr, in which Ghālib besieged him But the Spanish army in Africa was a heavy burden on the treasury of the Caliph Ghālib had distributed money recklessly among the chiefs of the Berber tribes of the North of Morocco in order to buy them over Al Hakam II decided to send over a controller-general of finance and he chose Ibn Abī ʿĀmir who set off with the title of chief kādī (*kādī 'l kudāt*) and exact instructions He carried out his very delicate task with unusual tact He returned to Cordova at the same time as the army When al Hakam II died, leaving the throne to his young son Hishām in 366 (976), the new Caliph at the same time as he appointed *ḥādjib* the favourite vizier of his father, Abu 'l-Hasan Djaʿfar b ʿOthmān al-Mushafī, appointed Ibn Abī ʿĀmir as the latter's vizier The ambitious minister now worked unceasingly to get rid of his chief, al Mushafī In the first place he was able to reduce to nothing the considerable power which the Slavs (*Sakāliba*, q v) had in the Caliph's entourage In Cordova they formed a body of mercenaries who guarded the royal palace, and at this time their leaders were two of their number, Fāʾik al-Nizāmī, grand master of the wardrobe, and Djawdhar, grand goldsmith and chief falconer On the death of al Hakam they had attempted to oppose the proclamation of Hishām who was still a child and to put on the throne of Cordova his uncle al Mughīra The latter was slain at the instigation of al-Mushafī and it seems likely that Ibn Abī ʿĀmir played an active part in the plot which ended in this murder In any case very soon after the accession of Hishām II as a result of the rigorous measures taken against them, the Slavs lost all influence at the Omaiyad court to the great satisfaction of the people of Cordova who had long suffered from their abuses Ibn Abī ʿĀmir also gained in popularity, still further increased when he displayed for the first time the possession of military talents which had not been suspected

A little later he succeeded in getting the command of an expedition against the Christians of the North who had taken up arms against Islām as soon as al-Hakam II had fallen ill Setting out from Cordova in Radjab 366 (Feb 977) he laid siege to the fortress of los Baños in Galicia and returned to the capital with considerable spoil He then cultivated the friendship of the aged and

distinguished general Ghālib, governor of Madīnat Sālim (Medinaceli, q v), and obtained his help to bring about the fall of the *ḥādjib* al Mushafī Ghālib on the intervention of Ibn ʿĀmir received the much coveted title of *dhu 'l-wizārataīn* and the command of the forces on the frontier in the expeditions against the Christians This friendship was strengthened in a new campaign in which Ibn Abī ʿĀmir commanded the troops from the capital alongside of Ghālib This expedition was again crowned with success and earned Ibn Abī ʿĀmir a new and honourable office, that of commandant of Cordova in place of the son of al-Mushafī who was dismissed Al-Mushafī, conscious of the danger which threatened him, then tried to play off Ghālib against Ibn Abī ʿĀmir but this was labour lost The young minister even became son-in-law of Ghālib who gave him the hand of his daughter Asmāʾ A few months later, al-Mushafī and the members of his family, who still held offices at the court, were dismissed and their property confiscated On the same day Ibn Abī ʿĀmir was appointed *ḥādjib* With his father-in-law, Ghālib, he was at the head of the administration of the empire

It was not only the plots he had woven with success nor his personal ability that had enabled Ibn Abī ʿĀmir to advance so rapidly in his career It seems very probable that the princess Subh, widow of al Hakam II and mother of the reigning Caliph, was the mistress of the former superintendent of her son's estates This liaison was not unknown to the Cordovans and produced bitter criticisms of the princess and her lover Public opinion, which had at first been so favourable to the *ḥādjib*, began to be hostile to him A plot to overthrow Hishām II and put in his place another grandson of ʿAbd al-Rahmān III was prepared but nipped in the bud The Cordovan jurists then spread the rumour that Ibn Abī ʿĀmir was devoted to philosophy and that his orthodoxy therefore was quite nominal He proved them wrong Ibn Abī ʿĀmir did not hesitate to burn from the splendid library formed by the cultured al-Hakam II all the books dealing with branches of knowledge prohibited by the *ʿUlamāʾ* He conciliated them by this act of vandalism the gravity of which can hardly have escaped him But with his unparalleled ambition nothing which might prevent him attaining his object was allowed to deter him

But the young Caliph Hishām II was now growing up He had to be prevented from taking an active part in the conduct of affairs Business was then conducted in the Caliph's palace in Cordova In order to set aside the ruler finally, Ibn Abī ʿĀmir in 368 (978) decided to build near the capital a regular town for administrative purposes This was al-Madīnat al-Zāhira [q v] which in a few years became an important city at the very gates of Cordova As to Hishām, he then began the life of a recluse, either at Cordova or at Madīnat al-Zahrāʾ, which was to last throughout his reign At the same time as he settled the problem of the possible intervention of the ruling prince in the affairs of state in a manner as energetic as it was unscrupulous, Ibn Abī ʿĀmir was reorganising the army and inaugurating a new policy in the country The Omaiyad army, in the form in which it was then constituted, was recruited in the country itself and the permanent bodies of mercenaries were not large Ibn Abī ʿĀmir required new ones this is why from now on till the end of his life, he appealed for Berber volunteers from the north of Morocco and Ifrikiya At the same time he realised that the occupation of certain parts of the Maghrib by the Omaiyads was only a source of expense to the Caliph's treasury and that any plan of territorial expansion in that direction would be disastrous to the ruler of Cordova He therefore abandoned all these possessions, retaining in Africa only one of the keys of the Strait of Gibraltar, the citadel of Ceuta The administration of the rest of the country he handed over to petty local dynasties under the nominal suzerainty of Cordova Along with the Berber troops in his pay, Ibn Abī ʿĀmir formed other corps by recruiting Christian mercenaries from the north of Spain, from Leon, Castille and Navarre He was able by his generosity and attentions to secure the complete devotion of his new soldiers

Having thus a strong and veteran army at his disposal, Ibn Abī ʿĀmir renewed with ardour the old feud against the Christians on the frontiers of the empire He first of all got rid of his father-in-law Ghālib, whom he had displeased by the manner in which he had upset the old military organisation of the country, then he undertook in 371 (981) an expedition on a grand scale against the kingdom of Leon He took and plundered Zamora, where he took 4,000 prisoners The King of Leon, Ramiro III, then made an alliance with Garcia Fernandez, Count of Castile, and the King of Navarre But all three were defeated by the Muslim general at Rueda to the south-west of Simancas and this town itself was taken by him Ibn Abī ʿĀmir continued his advance on the town of Leon and inflicted another defeat on Ramiro III The return of the Hadjib to Cordova was a regular triumph and it was on this occasion that he took the honorific *lakab* of al-Mansūr bi'llāh, "the victorious in God"

All powerful at Cordova and a successful general, al-Mansūr Ibn Abī ʿĀmir was to devote the rest of his life to an unceasing war on the Christian frontiers and to increasing considerably the territory ruled by the Muslims in the Peninsula After his defeat, the nobles of Leon had deposed Ramiro III and proclaimed in his place Bermuda II The latter finally found himself forced to seek al-Mansūr's help and to recognise him as suzerain Al Mansūr then decided to make an expedition into Catalonia in 374 (985) he defeated Count Borrel and stormed Barcelona, which he sacked According to Ibn al-ʿAbbār, it was the ʿĀmirid's twenty-third campaign

Ibn Gannūn, the petty Idrīsid dynast in the north of Morocco having again rebelled against Cordova, al Mansūr sent his cousin Ibn ʿAskalādja to subdue him Ibn Gannūn surrendered on being promised his life But al-Mansūr had him executed along with Ibn ʿAskaladja whom he accused of having plotted against him This breach of faith and brutal execution having produced a reaction of feeling in the capital, al-Mansūr to rehabilitate himself undertook a pious work in 377 (987) he extended the cathedral mosque of Cordova which had become too small Eight new naves were built on the east and the western wall of the hall of prayer and of the *ṣahn* was moved out 150 feet The Arab historians say that al-Mansūr made gangs of Christian prisoners do this work, for the greater glory of Islām

In the same year the war against the kingdom of Leon was resumed The Muslim troops, that al-Mansūr had sent there, had oppressed the country and Bermuda II had finally driven them out Al-Mansūr punished his boldness with the greatest rigour In two campaigns several months apart, he took Coimbra, which he laid waste, I eon which he left completely in ruins, and Zamora The Counts of Leon had then to lay down their arms and submit to al-Mansūr and Bermuda II was only left possessions very much reduced in extent

The campaigns that followed were again directed against the N -W of the Peninsula The best known is that of St Jago de Compostella in 387 (997) His famous sanctuary of western Christianity [cf the article SHANT YĀKŪB] was taken by the Muslim troops on the 2nd Sha'bān (10th August) and only the tomb of the apostle was spared, by orders of al-Mansūr

The last expedition against the Christians dates from the year 1002 Its objective was Castile Al-Mansūr took Canales and destroyed the convent of San Millán de la Cogolla But on his return from the expedition, he fell ill and died at Medinaceli on the 27th Ramadān 392 (Aug 10, 1002) He was buried in this town

The last years of the life of al-Mansūr in spite of his successful career and victorious expeditions had been marked by events which might have been fatal to him if he had not once again displayed an iron will and extreme violence in the suppression of plots hatched against him The few attempts made on behalf of Hishām II to regain for him the power, which had been seized by his first minister were in vain In 381 (991) al Mansūr gave up his title of Hādjib in favour of his son 'Abd al-Malik Five years later he assumed with an audacity worthy of him the princely title of *malik karīm* "noble King" and reserved for himself the title *sayyid* "lord" The only thing that he did not dare to do or could not do was to announce the overthrow of the Omayyad caliphate and the constitution of an 'Āmirid caliphate in its stead He arranged however for the power to pass to his heirs after him, and it was his son 'Abd al-Malik al-Muzaffar, who succeeded him on his death to control for a few more years the destinies of the Muslim empire in Spain

Various judgments have been passed on al Mansūr His lack of scruples has been emphasised and the often criminal means which he used to attain his ends His career is nevertheless an extraordinary one This dictator was undoubtedly one of the greatest men of affairs that Islām has ever produced and under his "reign" Muslim Spain remained the great nation, which in the caliphate of 'Abd al Rahmān III had shown itself one of the most remarkable centres of culture and civilisation in the mediaeval west

MANṢŪR B NŪH, the name of two Sāmānid rulers

1 MANṢŪR B NŪH I (Abū Sālih), ruler of Khorāsān and Transoxania (350—365 = 961—976), succeeded his brother 'Abd al-Malik b Nūh I [q v] Ibn Hawkal is able to describe the internal conditions of the Sāmānid kingdom under Mansūr as an eye witness, cf especially *B G A*, ii 341 *fi waktinā hādhā*, p 344 *sq* on the character of Mansūr "the justest king among our contemporaries, in spite of his physical weakness and the slightness of his frame" On the vizier Bal'amī, see BAI 'AMĪ where also information is given about the Persian version of Tabarī's history composed in 352 (963) by or by orders of this vizier On the rebellion of the commander of the Sāmanid bodyguard, Alp-Tegin, and the independent kingdom founded by him in Ghazna and on the establishment of Sāmānid rule there in the reign of Mansūr and the son and successor of Alp-Tegīn, Ishāk (or Abū Ishak Ibrāhīm) see ALP TEGĪN and GHAZNA, in Barthold, *Turkestan*, *G M S*, New Series v , p 251, note 4, Abū Ishāk Ibrāhīm should be read for Ishāk b Ibrāhīm (this passage is misunderstood in the Russian original) In other directions also in this reign the Sāmānid kingdom prospered in its foreign affairs, the fighting with the Būyids [q v] and Ziyārids was as a rule victorious

2 MANṢŪR B NŪH II (Abu 'l Hārith), ruler of Transoxania (387—389 = 997—999) His father Nūh b Mansūr, to whom out of all the Sāmānid empire only a portion of Transoxania was left, died on Friday 14th Radjab 387 (July 23, 997) but it was not till Dhu 'l-Ka'da (November) that homage was paid to Mansūr as his successor Baihakī (ed Morley, p 803) talks highly of his courage and eloquence, on the other hand he is said to have been feared by every one for his extraordinary severity During his brief and impotent reign he was hardly able to instil terror into any one The last Sāmānids were quite helpless against the kings and generals who were quarrelling over the inheritance of the dying dynasty One of these generals, Fā'ik, succeeded even in taking Bukhārā at the head of only 3,000 horsemen, Mansūr had to fly to Āmul [q v] but was called back by Fā'ik The last months of his reign were devoted to fruitless efforts to settle peacefully the question of the governorship of Khorāsān, which

was claimed by various parties, but before the problem had been settled by force of arms, Mansūr was dethroned on Wednesday, 12th Ṣafar 389 (Feb 1, 999) by his generals Fā'ik and Begtūzūn, blinded a week later and sent to Bukhārā

(W BARTHOLD)

AL-**MANSŪR ISMĀ'ĪL**, ABŪ ṬĀHIR OF ABU 'L 'ABBĀS, third Fāṭimid caliph, was 32 when he succeeded his father Abu 'l Ḳāsim al Kā'im in Shawwal 334 (May 946) under particularly difficult conditions Abū Yazīd, the Khāridjī agitator supported by many Berber tribes and by the people of Kairawān had failed before al Mahdiya but was still besieging Sūs Al-Mansūr concealed his father's death and did not alter the formulae of the *Khuṭba*, of the coin legends or of the standards lest Abū Yazid should profit by the weakening of authority which was a regular feature of change of ruler Sūs was relieved by the efforts of the reinforcements sent by al-Mansūr by sea Abū Yazīd had to beat a hurried retreat Al-Mansūr, however, having returned to Kairawān and pardoned the inhabitants who had supported the agitator, had to prepare to meet a new attack Abū Yazīd was not long in reappearing, repulsed he came again to the attack Al-Mansūr tried to make terms with him and gave him back his women captured in Kairawān but Abū Yazid, in spite of his promise, attacked him again and was completely defeated in a pitched battle (Aug 946) He was then pursued to the west After a delay caused by the illness of al-Mansūr, Abū Yazīd mortally wounded was taken prisoner at Djebel Kiyāna, north of Msila, in Muharram 336 (Aug 947)

This success established al-Mansūr securely A section of the tribes of the Central Maghrib who had embraced the cause of Abū Yazid made their submission, like the Maghrāwa under Muhammad b al-Khayr Taking advantage of the difficulties of the Fāṭimids, the Omayyads of Spain had entrenched themselves more securely in western Barbary A former Fāṭimid officer, Hāmid b Yesel, was ruling the Maghrib in the name of the caliphs of Cordova and laid siege to Tāhert Al-Mansūr relieved the town and appointed the Ifranid Ya'lā b Muhammad to rule it He invested with considerable authority the chief of the Ṣanhādja Zīrī b Manād, who had proved a loyal auxiliary during his days of trial

Returning to Kairawān, al Mansūr had again to take the field against the son of Abū Yazīd who was trying to stir up a rebellion again Besides taking these vigorous steps in Barbary to put an end to the Khāridjī movement, al-Mansūr developed the naval power of Ifrikiya His freedman Fatah, supported by the governor of Sicily, won a striking victory over the Greeks in the south of Italy and came home laden with booty (340 = 951)

Lastly al-Mansūr holds a high place among the Fāṭimids of Ifrīḳiya for his buildings The capital was no longer al Mahdiya nor was it Kairawān whose recent treachery made it suspect From 947 Sabra, also called al-Mansūrīya from its founder, was the capital The town built at the gates of Kairawān was beautified by the palaces which he built and grew rich on the bazaars which he removed from the old city

Al-Mansūr was 39 and had ruled 7 years, when he died suddenly on a journey from a chill caught by taking a bath in cold weather (Shawwāl 29, 341 = March 953)

(M HIDAYET HOSAIN)

AL-**MANSŪRA**, large town in Lower Egypt, on the right bank of the Damietta branch of the Nile, capital of the province al Dakahliya Another canal or branch of the Nile went from here to Ashmūm in a north eastern direction It was originally a camping place for the army, founded in 616 (1219) by al-Malik al-Kāmil, when he tried to recapture Dimyāt, then occupied by the Crusaders In 1249 the Crusaders were defeated in the neighbourhood of al-Mansūra by al-Sultān al Mu'aẓẓam Tūrānshāh, on which occasion Lewis IX of France was taken prisoner The town is now an important emporium for the cotton trade, in 1917 there were 49,238 inhabitants (Baedeker) It possesses no remarkable buildings, a railway bridge crosses the Nile at this place

There are still various other places in Egypt, called al-Mansūra

(J H KRAMERS)

AL-**MANṢŪRA**, the name of a town now in ruins built by the Sultāns of Fās about 5 miles to the west of Tlemcen The very precise account given by Ibn Khaldūn enables us to reconstruct with exactitude the history of this typical town camp In the year 698 (1299) the Marinid Abū Ya'kūb Yūsuf, who had come to lay siege to the capital of the Banū 'Abd al-Wād,

which he had closely surrounded with entrenchments, set up his camp on the plain which stretches to the west As it was a long drawn out blockade he built a few dwellings for himself and the leaders of his army and laid the foundation of a mosque In the year 702 (1302) the "Victorious Camp", *al-Mahalla al-Mansūra*, was given the form of a regular town by the construction of a rampart Besides the mosque, the dwellings of the chiefs, the store houses for munitions and the shelters for the army, there were baths and caravanserais As Tlemcen was inaccessible to caravans, al-Mansūra or New Tlemcen, as it was called, naturally attracted to itself the business of the invested town After a siege of eight years and three months the Marinids withdrew from Tlemcen, and al-Mansūra was methodically evacuated under the direction of Ibrāhīm b ʿAbd al Djalil, the vizier of the Sultān Abū Thābit The people of Tlemcen were compelled, by the terms of the treaty made with the Marīnids to respect the rival town for some time Some time after, when the entente between the two empires had been broken, they demolished its buildings and rendered uninhabitable the entrenchments left at their gate by their hereditary enemy

Thirty years later, in the year 735 (1335), the Moroccan army under Sultān Abu 'l Hasan was once more at the gates of Tlemcen On this occasion the ʿAbd al-Wādī capital was forced to surrender (27th Ramadān 737 = 1st May 1337) Al Mansūra was rebuilt It became the official capital of the Marīnids during their occupation of the central Maghrib It was in fact, during this time that the great mosque was built and that the "Palace of Victory" was erected (745)

After the retreat of the Marīnids, al-Mansūra, once more abandoned, fell little by little into ruins At the present day the rampart of terre pisée flanked by square towers is still comparatively intact, but the interior is land under cultivation and contains a French village There still exists there, however, the ruins of a palace no longer distinct, a section of a paved street, and probably the surrounding wall in terre pisée of the Mosque with half of the great minaret in stone, which arose above the principal entrance Although the inlaid ceramic work has almost entirely disappeared, the facade of the square tower, which is 120 feet high, is one of the most perfect pieces of the Maghribī art of the XIVth century that survives The columns and the capitals in marble of the mosque are preserved in the Museums of Tlemcen and Algiers

(Georges Marçais)

MANṬIK (A), Logic The logic of the Arab philosophers is that of Aristotle, here and there modified by the Stoic and Neo-Platonist tendencies of the Greek commentators The Arab philosophers did not develop this logic but they gave résumés of it, reproduced it and wrote commentaries on it, often with success, they understood it very well and it is in logic that they came nearest to the authentic Aristotelianism As to the matter, it was easier for them to grasp the exact sense of the logical writings of Aristotle than of his other works since the translation of the Logic had been made and remade with great care (cf e g the two versions of the beginning of the *Interpretation* in J Pollak, *Die Hermeneutik des Aristoteles in d arab Übers d Ishāk b Hunain*, Leipzig 1913) while the translation of the *Metaphysics* for example was very defective and incomplete The remark of the Ikhwān al Safā' — who evidently did not care much for the subject of logic — at the beginning of their little treatise on logic "the ancient sages have dealt with these subjects and their works are in the hands of the reader, but they are very diffuse, for the translators did not understand the exact meaning" is then not justified

To the six works of Aristotle, the Categories, Hermeneutics, the Prior Analytics and Posterior Analytics, the Topics, and the Sophistics, the Arabs — like the latest Greek commentators — added the *Rhetoric* and the *Politics* (as to the Rhetoric, Aristotle himself had regarded it [*Rhet*, I 2, 1356 a 25] as a lateral branch of the *Dialectics* and *Politics*) They explained the order of these works in the manner of the later Greek commentators (cf Elias in *Aristotelis Categor Comment*, ed Busse, p 116 29 *sqq*) The most important of these treatises was the fourth, the *Posterior Analytics*, to which the three preceding are only the preparation and introduction, in the *Posterior Analytics* Aristotle was thought to have treated of the absolutely true, in the Poetics of the absolutely false and in the intermediate treatises, according as they approach the Poetics, the element of improbability begins to preponderate Then, still in the manner of the Greeks, they placed in front of these works the *Isagoge* of Porphyry which as its name, Εἰσαγωγὴ εἰς τὰς Ἀριστοτέλους κατηγορίας, *Kitāb Furfūryūs al-Maʿrūf bi 'l-Mudkhal*, shows, is an introduction to the logic of Aristotle

Among the Greeks there were two further kinds of introduction to philosophy or — since the study of philosophy began with logic — to the logic of Aristotle In the one which preceded the categories, Προλεγόμενα τῶν κατηγοριῶν, ten questions were put (among them Whence came the names of the different "philosophical schools"? What is the division of the works of Aristotle?) to which a brief reply was given Among the Arabs, we still find an introduction of this kind in a little work by al-Fārābi, *Risāla fī-mā yanbaghī an yukaddam kabl Taʿallum al-Falsafa* (ed Schmoelders in his *Docum philos arab*) The other kind of introduction, the prototype Προλεγόμενα τῆς φιλοσοφίας of which is given by the pupil of Proclus, Ammonius Hermiae, was introductory to the *Isagoge* In the first part definitions were dealt with, in the second divisions of philosophy The Arabic treatises on the division of the sciences go back to this kind of introduction which they further developed We still possess from the pens of the two of the greatest Arab philosophers, al Fārābī and Avicenna, such treatises on the divisions of the sciences Avicenna's entitled *Makāla fī Takāsīm al-Ḥikma wa 'l-ʿUlūm* was printed at Constantinople

among the *Tis' Rasā'il fi 'l-Hikma wa 'l-Tanbī'iyāt* For the manuscripts, the publication — in a little review, *al-'Irfān*, in 1921 at Saida (Syria) — and the emendation of the text of al-Fārābī, *Kitāb Ihsā' al-'Ulūm*, cf the excellent study by M Bouyges S J in the *Melanges de l'Universite St Joseph*, vol ix, fasc 2, Bairūt 1922 These two treatises were translated into Latin and that of al-Fārabī in particular, with the Latin title of *De Scientiis* since it was incorporated almost completely into the *De divisione philosophiae* of Gundissalinus, had a great influence on the European scholars of the middle ages

There were three opinions among the Greek logicians as to the relationship of logic to the system of philosophy 1 To the Peripatetics, logic was simply a methodology, an introduction to philosophy, 2 except for its integral realism the structure of reality is in conformity with the structure of the mind, the rules of logic therefore deal with realities themselves and logic would then be a true part of philosophy this was the opinion of the Stoics and especially of Plotinus, *Enn*, i 5, 3, 3 the combination of these two views in several Neo-Platonists logic was at the same time an introduction to and a part of philosophy Among the Arabs these three points of view were also represented (cf Khwārizmī, *Kitāb Mafātih al-'Ulūm*, ed van Vloten, p 132) but the Peripatetic view was in the majority The third view is found, for example, in Avicenna (cf *Logica*, f 2*a*, Venice 1508)

Logic, according to the Arab logicians, leads to a knowledge of the unknown from the known (cf Aristotle, *Post Anal*, at the beginning) but its supreme object, according to them and the later Greek commentators, is that, by making us distinguish good from evil, it can guide us to the greatest perfection of soul and the greatest happiness

Although, on certain points in logic, there were differences among the Arab Aristotelians, they agree on the main lines and even Averroes, who frequently attacks his predecessors with vigour, in other passages of his works often expresses his support of their views that have been disputed, further, the solutions of problems in the Aristotelians and perhaps in other philosophers also sometimes consist of formulae, the meaning of which on examination is not always quite clear I may here note some general points which are connected with the great problems of Metaphysics

As for Aristotle, knowledge for the Arab logicians is a representation, an image of reality, there are in the soul resemblances of things (ὁμοιώματα, *amthila*), concepts, which in judgment are put together According to this conception — a contradictory conception since it at the same time affirms and denies the knowledge of reality — thought would never be in contact with reality Naturally implicit or explicit, this contact is often affirmed by Aristotle A curious example of the conception of knowledge as an image, but in which at the same time the contact with reality is openly affirmed, is found in the theory of the duality of existence, a theory which the Arabs took over from the Greek commentators The ten categories have a double existence, according as they are found in the outer world or as images in the soul and the word existence has therefore two meanings 1 reality or objective existence and 2 subjective existence of the soul The intelligence may direct itself in an *intentio prima* (πρωτη θέσις) towards the exterior world of which the highest kinds are the ten categories, but it can turn inwards upon itself in an *intentio secunda* (δευτέρα θέσις), upon its concepts, of which the highest kinds are the five "voces" of Porphyry Everything has an existence, if not in the exterior world, at least in the soul This theory gives rise to difficulties in the first place the term "existence" becomes ambiguous, secondly, since the negation of each thing exists in the soul, "what is not in the soul" must exist in the soul It is particularly in the Kalām [q v] notably among the Ash'arīs and probably under the influence of Stoic discussions on the existence or non-existence of the "not things" (οὔτινα) that the existence of concepts like the impossible and the negative has been discussed The Arab Aristotelians were very often content to admit a concept "thing" (*shai'*, the τί of the Stoics) more general than being, without paying too much attention to the fact that by this they were contradicting the thesis that everything is For the rest, in the Aristotelian philosophy the concept of existence or of being gives rise to grave difficulties, it was much discussed in Islām, not only among the philosophers but also for the metaphysical questions connected with it among the theologians and the mystics Aristotle had already affirmed (e g 1040, b 18) that existence or being is neither kind nor substance and the Arab philosophers al-Fārābī, Avicenna, Ghazālī and Averroes supported this view with the stereotyped reasoning that existence cannot express the essence of things, since being man implies being animal, being a living body, being a body etc, but it does not at all imply that man is being On the other hand being (τὸ ὄν) and substance (ἡ οὐσία) are synonyms in Aristotelian philosophy How are these two views to be reconciled? Avicenna says, as the theologians had already done before him, that only in God substance (being) and existence coincide, for the other substances, existence must be added to them as an accident For Averroes on the other hand, as before him for the Ash'arīs, being is always substance and never accident and he says that in judgments, in which being is predicated and thus apparently an accident, as when one says "substance is", "is" is an intentio secunda

As to the theory of ideas, the Arab logicians deny, with Aristotle and using his own arguments, the separate existence of the universals, but admit with Plato their supra-sensible existence This is the theory very prevalent in the last period of philosophy (in the Middle Platonism, Neo Pythagoreanism and Neo-Platonism) according to which ideas or universal forms exist from eternity in God The intelligibility of things comes from this, that their cause is an intelligence, as the idea of the statue in the soul of the sculptor is the cause of the existence and intelligibility of the statue, so the intelligence of the creator of the world is the cause of the intelligibility of natural things Avicenna expressed this theory by the formula that the Universe is ante multitudinem in multiplicitate (in things) and post multitudinem (in our soul) It is the second element in this formula "in multiplicitate" that offers a difficulty (a difficulty already found in Aristotle) how to conceive of the existence of universals in things which are themselves individuals? Often a conceptualist or nomi-

nalist tendency is seen in the Arab Aristotelians, it is explicitly stated that the universal is only found in the mind and following Aphrodisias the forms in matter, the *ἔνυλα εἴδη*, are regarded as individuals But since in the system of Aristotle, forms are universals by definition, contradiction cannot be avoided, and the theories of the universals among the Arab philosophers are often very complicated and very obscure Another nominalist or subjectivist tendency is found in their conception of the relation, which they call — with the Stoics — "what the mind puts into things" But it is the theologians who under the influence of materialist, nominalist and sensualist Stoicism have developed a nominalist system which only admits atomic and individual facts without a connection, in which all relation is regarded as subjective or even non-existent

The ambiguous manner in which he deals with the concepts "possible", "impossible" and "necessary" gives rise in Aristotle as well as in the Arab logicians, who follow their master faithfully, to grave difficulties Aristotle (*Prior Analyt*, 32*a*, 18—25) — like the Arab logicians (cf Avicenna, *Ishārāt*, ed Forget, p 34) — distinguishes two aspects of the concept of the possible, the possible is the negation at once of the impossible and of the necessary, but he does not always observe these two aspects and thus the necessary and the actual are considered as possible since what happens is not impossible On the other hand, the actual is considered as the necessary, since what happens, happens necessarily, and although the definition of the possible is "what may or may not happen", for Aristotle "possible" is also "what will happen" since what never happens is not possible These contradictions are occasioned by the fact that the problem which is at the basis of all this, that is to say, the objectivity or subjectivity of the possible and of the necessary, is differently treated by Aristotle Aristotle hesitates between determinism and indeterminism Of two future events, he says in the *Hermeneutics* that one of two will be true, but which is not determined in advance He says that necessity does not govern the celestial world and that the sublunar world is the reign of contingency, he also says that God alone is absolutely necessary, that all the rest is hypothetically necessary, that is to say, contains an element of contingency On the other hand, everything is caused, and goes back necessarily to a first cause All these contradictions are found among the Arab Aristotelians The Mutakallimūn, who, like the Stoics, wish to exclude the possible from reality (but they sometimes regard, like certain Stoics, the "possible" and "necessary" as both subjective, thus affirming that everything is possible) have with justice declared that if there is a necessary cause, the effect of it must also be necessary and that there is therefore no contingency in the world Averroes in his polemic against Ghazālī seems to admit the justice of this argument but elsewhere he repeats all the theories of his master

Although Ghazālī confesses that theology, while opposed to the metaphysics of the philosophers cannot however deny the evidence of their logical technique, certain arguments of Greek scepticism against logic are sometimes repeated by the Mutakallimūn Definition is, they say, not possible, because by the particular one cannot reach the universal, and the syllogism is a *petitio principii* since the conclusion is already contained in the major premiss These arguments are justified against Aristotelianism, regarded as an empirical theory which sets out from the particular fact There is however a rationalist tendency in Aristotle and the Arab logicians, they admit that the intelligence can at once know first principles and that without induction from particular facts it can grasp relations between universals But when the Mutakallimūn say that knowledge and the Universal cannot give the truth, since according to the definition of truth, agreement must exist between true knowledge and reality, and knowledge is universal and reality individual, they reveal by this argument one of the greatest contradictions in Aristotelianism Averroes tried in vain to refute it

Bibliography The bibliography is given in Fr Ueberweg, *Grundriss d Gesch d Philosophie*, II, eleventh ed, Berlin 1928, p 291—293 and 715—723, also C Prantl, *Geschichte der Logik im Abendlande*, II, Leipzig 1861, p 297—396, Abusalt de Denia, *Rectificacion de la mente, tratado de logica, texto arabe, traduccion y estudio previo* by C Angel Gonzalez Palencia, Madrid 1915, Abderrahman el Akhdhari (ʿAbd al Rahmān al-Akhḍarī), *Le Soullam, Traite de logique*, transl from the Arabic by J D Luciani, Algiers 1921 (S VAN DEN BERG)

MANŪF, name of two towns, in the region between the two main Nile arms called al-Djazīra, generally distinguished as Manūf al-ʿUlya and Manūf al-Suflā The latter was situated on the right bank of the western Nile arm, while the former lay more to the east on a smaller canal Both are described by the geographers as large towns, surrounded by fertile districts and inhabited by wealthy people, especially Manūf al-ʿUlyā, where, according to Ibn Hawkal (p 92), there resided a governor The *kūra* of Manūf al-ʿUlyā is often called the *kūra* of Damsis and Manūf, while the *kūra* of Manūf al Suflā is designated as Nawwa and Manūf (cf e g al-Makrizi, ed Wiet, I 307) Both the ancient towns have decayed since the tenth century, Yākūt only knows a village of that name The name has survived, however, until our day, in the name of the province al Manūfīya, the capital of the *mudiriya* of his name is now Shibīn al-Kawm, and the modern Manūf is a provincial town, situated to its southwest

Manūf al-ʿUlyā is known in Greek sources as *Ὀνοῦφις ἡ κάτω*, the Coptic name being Panouf Rīs, the other Manūf is not mentioned in Greek documents and is called in Coptic Panouf Djit

Bibliography Maspero and Wiet, *Materiaux pour servir à la geographie de l'Egypte*, Cairo 1909, p 200 *sqq* (where the Arabic geographical authors are quoted), Ibn ʿAbd al-Hakam, *Futūh Miṣr*, ed Torrey, New Haven 1922, p 141, 142, ʿAlī Pasha Mubārak, *al-Khitat al-Djaduda*, XVI 47 *sqq*, Baedeker, *Ägypten*, Leipzig 1928, p 32 (J H KRAMERS)

MĀPPILLAS (Moplahs), a group of Muhammadans, of mixed Arab and Hindu descent, on the west coast of Southern India, numbering 1,099,453 according to the Census of 1921 Their name is said to be derived from the Malayalam *mā* ("great") and *pilla* ("child"), an honorary title originally bestowed upon all foreigners and

first applied to Christians, Jews and Muslims, but now confined to the last, this derivation, however, is disputed (Thornton, p 460—461) They owe their origin to Arab merchants, who were attracted to this coast by the trade in spices, ivory, etc , settling in various commercial centres, they intermarried with the natives of the country and added to their numbers by proselytising, but fresh accessions of the Arab element having ceased long ago, the Māppillas now approximate to the aboriginal type and exhibit no signs of any admixture of foreign blood The earliest date of their settlements is uncertain, and the legendary accounts given by the Māppillas themselves are of no historic value (Zain al Dīn, p 21—25) The foreign traders appear to have been encouraged by the Hindu rādjās, who made use of them to man their fleets, and by the beginning of the xvith century the Māppillas were estimated to have formed one fifth of the population of Malabar (Barbosa, p 310), but the arrival of the Portuguese in this part of India checked the growth of Muslim power and ruined the Arab trade The Māppillas are still successful traders, especially on the coast, inland, many of them are agriculturists There are both Sunnīs and Shīʿīs among them, the former belong to the Shāfiʿī school Their religious leaders are called Tangal (an honorific plural of the personal pronoun, commonly used in addressing superiors) and are treated with profound respect, many of them receive their training in a college attached to the Djamīʿat mosque in Ponnānī, the chief centre of their religious organisation, the Tangal of Ponnānī is an Arab who claims descent from the Prophet, in accordance with local custom he inherits his sacred office in the female line i e his nephew and not his son succeeds him

The history of the Māppillas is full of incidents of fanaticism and turbulence In 1524 they attacked the Jews in Cranganur and massacred them without mercy, so that in 1565 the remnant of them fled into Cochin, where they founded the Jewish settlement that survives to the present day (Zain al-Dīn, p 50—51, Francis Day, p 351—352) The Māppillas also persuaded the Zamorin of Calicut to expel the Syrian Christians from his dominions (Francis Day, p 367) Even their co-religionists found them to be turbulent subjects they joined the Hindus in fighting Haidar ʿAlī [q v] after he had extended his power over the Malabar coast, and they rose in rebellion against Tīpū Sultān [q v] in 1785, and frequently plundered his territories (Francis Day, p 368) During the last hundred years as many as 51 fanatical outbreaks have taken place among them, especially in the Ernad sub-division of the district of Malabar Some Māppillas generally begin by murdering a Hindu landlord and then seek martyrdom by slaying kāfirs, others join them, after divorcing their wives, and clad in the white robes of the martyr (*shahīd*, q v) go out to die fighting against the infidel, with a complete contempt for death They desecrate and burn Hindu temples, and forcibly circumcise such Hindus as they do not murder Some of these outbreaks appear to have been stimulated by agrarian discontent at the oppressive action of Hindu landlords, but the last (in 1921) was entirely political in character and was excited by the Khilāfat movement, it differed from all preceding ones in its wide extent and clear evidence of systematic preparation and organisation, the outrages committed upon Hindus were of a specially revolting character

The Māppillas of South Malabar generally observe Muhammadan law, those of North Malabar follow the local Marumakkattāyam system of inheritance, according to which the sons of a man's sister inherit his property, and his wife is not regarded as a member of the husband's family but resides in her mother's home and only receives periodical visits from her husband On the other hand, a man's self acquisitions usually descend to his wife and family in accordance with Muhammadan law

The Māppillas speak the Malayalam language, but use a modified form of the Arabian script in writing it The majority of them are illiterate, and few only can read and write Their literature is mainly composed of songs descriptive of religious war, and they are fond of singing them in order to stir up fanatical zeal Their mosques are quite unlike those of other Muhammadans, having no minarets and often consisting of several stories, with two or more roofs, they often resemble Hindu temples in style, and in fact many Māppillas mosques were once Hindu temples

Māppillas are also found in the Laccadive Islands, Ceylon, the Straits Settlements and Burma

MARĀBUT [See Murābiṭ]

MARĀGHA, the old capital of Ādharbāidjān

Position The town lies at a height of 5,500 feet above sea-level on the southern slope of Mount Sahand (11,800 feet high) which separates it from Tabrīz [q v] This explains the very considerable difference in climate between the two towns which are only 50 miles apart as the crow flies (by the high road 80 miles) The climate of Marāgha is mild and rather moist (Hamd Allāh and Mecquenem, 1904) The plentiful water supply makes the vegetation rich The fruit of Marāgha is celebrated in Persia and a good deal of it is exported to Russia via Ardabīl The district is watered by the stream which comes down from the Sahand and then

turns west to Lake Urmiya which is 20 miles from Marāgha The town is built on the left bank of the river Sāfī (Sofi)-čai which then waters Bināb A little distance to the east runs the parallel river Murdi-čai which waters the district to which Mecquenem gives the name Pahindur (Bayandur?), on the left bank rise the heights of Mandilsar (= with head bound) The next stream is the Leilān which flows into the Djaghatu [cf SAWDJ-BULĀK] The rivers farther east (Karanghu and its sources which water the Hashtarūd district) belong to the system of the Safīd-rūd [q v], i e the basin of the Caspian Sea

From the geographical point of view, Marāgha is quite independent of Tabrīz It lies a little off the great road from Tabriz to Kirmānshāh which runs nearer Lake Urmiya (via Bināb) The direct bridle-path Tabrīz—Marāgha by the passes of the Sahand is only practicable in summer There is also a direct route along the Sahand on the south and southeast side, joining Marāgha to Ardabil and Zandjān This road has always been of importance whenever Marāgha was the capital of Ādharbāidjān The important place on the route was Kūlsara (cf below)

At the beginning of the xixth century, Marāgha had 6,000 families (*Bustān al-Siyāhat*), in 1298 (1880) it had 13,259 inhabitants of whom 6,865 were men and 6,394 women (H Schindler) Mecquenem (1904) gives Marāgha 15—20,000 inhabitants

At the present day the inhabitants speak Ādhārī Turkish but in the xivth century they still spoke "arabicised Pahlawi" (*Nuzhat al Kulūb pahlawī-yi muʿarrab*) which means an Iranian dialect of the northwestern group

The walls of the town are in ruins Its gates have the following names Ahmadī, Kūia-Khāna, Akdash, Pul-i Bināb (or Gilaslik) and Hādjdjmīrzā The quarters are Agha-beg, Meidān, Darwāza, Sālār-Khāna

Prehistory The valley of the Murdi čai is famous for its deposits of fossil vertebrates discovered by Khanykov in 1852 Excavations have been conducted by Goebel (Russia), Straus, Rodler, Pohlig (Austria), Gunther (England) and Mecquenem (France) On the Murdi-čai have been found remains of the hipparion, of the rhinoceros etc dating from the period before the eruption of the volcano of Sahand Cf J F Brandt, *Ueber die von A Goebel bei der Stadt Maragha gefundenen Saugethierreste*, *Denkschr d Naturforscher-Vereins zu Riga*, 1870, and the bibliography in Mecquenem, *Contribution a l'etude du gisement des vertebres de Maragha*, Paris 1908, cf another article of the same author and title in *Annales de paleontologie*, 1924, p 133—160

The name According to Balādhurī, the town was at first called Akrā-rūdh (Ibn al-Fakih, p 284 Afrah-rūdh, Yākūt, iv 476 Afrazah rūdh) This name which means in Persian the "river of Afrāh" recalls very much the name of the town τὰ Φράατα which Mark Antony besieged in this region on his campaign against the Parthians in 36 B C (Plutarch, *Vita Antonii*, ch xxxviii, Paris 1864, p 1113 and Pseud Appian, *Parthica*, ed Sweighäuser, Leipzig 1785, iii 77, 99) It has long been supposed that the names Οὔερα in Strabo xi, ch xiii and Index, p 935, Φαράσπα, Ptolemy, vi, ch ii, τοῖς Πραάσποις, Dio Cass, xlix 25 are variants of the same name which was probably that of the ancient capital of Atropatene, cf Ritter, *Erdkunde*, ix, p 770 If the identification of Γάζακα (summer capital, Strabo) with Takht-i Sulaimān suggested by Rawlinson has been accepted (cf Hoffmann, *Auszuge aus syrischen Akten*, p 252, Marquart, *Eransahr*, p 108, William Jackson, *Persia, Past and Present*, p 136), the identification of Φράατα is still uncertain On general principles it is improbable that a town like Marāgha so advantageously situated by nature was not in existence in Roman times as the ancient name of Maiāgha increases the probability of the identification Φράατα = Marāgha (of course with a reservation as to the exact site of the ancient town)

A place-name Maiāgha is mentioned in Arabia (Yākūt) and a little town of the same name is in Egypt near Tantā The etymology "place where an animal rolls" (from *m-r-gh*) proposed itself to the Arabs here, but in Ādharbāidjān (cf also the village of Maiāgha near Abarkuh, *Nuzhat al Kulūb*, p 122) the name is rather a popular Arab etymology of some local name It is to be observed that Ptolemy, vi, ch 2, calls Lake Urmiya Margiane (μέχρι τῆς Μαργιανῆς λίμνης) and gives the same name to the country along the coast of Assyria Lastly Marquart in *Eranšahr*, p 143, 221, 313 retains the variant Μαρτιανή but Μαργιανή seems also to be based on a good tradition (cf Ptolemy, ed Wilberg, 1838, p 391)

The Arabs Marāgha must have been among the towns of Ādharbāidjān conquered by Mughira b Shuʿba al-Thakafī in the year 22 (Balādhurī, p 325, Yaʿkūbi, *Kitāb al-Buldān*, p 271) Marwān b Muhammad returning from his expedition to Mūkān and Gilān in 123 (740) (cf Yaʿkūbi, *Historiae*, ii 365) stopped here As the place was full of dung (*sirdjīn* < Pers *sirgīn*) the old village (*karya*) was given the name of Maiāgha (cf above) Marwān did some building there The town later passed to the daughters of Hārūn al-Rashīd On the rebellion of Wadjna b Rawwād, lord of Tabrīz [q v], Khuzaima b Khāzim who was appointed governor of Ādharbāidjān and Armenia (probably in 187, cf Vasmer, *Khronologia namestnikov Armenii*, *Zap Kolleg vostokovedov*, 1925, i 397), built walls round Marāgha and put a garrison in it When Bābak rebelled in 201 the people sought refuge in Maiāgha Maʾmūn sent men to restore the walls and the suburb (*rabad*) became inhabited again (Balādhurī, *l c*) In 221 Marāgha is mentioned as the winter-quarters of Afshin in his campaign against Bābak (Tabari, iii 1186)

In 280 (893) the Sādjid Muhammad Afshīn b Dīwdād seized Maiāgha from a certain ʿAbd Allāh b Husain, who was killed (Tabari, iii 2137, Masʿūdī, *Murūdj*, viii 143) In 296 (908) the caliph confirmed Yūsuf b Diwdād in possession of Maragha and the whole of Ādharbāidjān A dirham is known of this year struck by Yūsuf at Marāgha (Vasmer, *O monetakh Sadjidov*, Bākū 1927, p 14) According to Ibn Hawkal, p 238, there was at Marāgha a military camp (*muʿaskar*), a governor's palace (*dār al-imāra*), a treasury (*khizāna*) and government offices (*dawāwin al-nāhiya*) but Yūsuf razed the walls of Marāgha and transferred the capital to Ardabīl (cf Istakhri, p 181) Marāgha is only mentioned as the place where the last Sādjid Abu 'l-Masāfir al-Fath was killed in 317 (929) (ʿArīb, *Tabarī continuatus*, ed de Goeje, p 145)

The Dailamīs In 332 (943) (during the rule

of the Daılamī Musāfarıds) the Russıans (*Rūs*) had taken Baıdha'a [q v] Ibn Mıskawaıh (*G M S*, vı 100) speaks of the dıseases which decımated them because they ate too much fruit ın Marāgha Thıs reference to Marāgha ıs quite unexpected ın the text and Margolıouth has rıghtly proposed to read مراغه ın place of مراعه A coın struck at Marāgha ın 337 by Muhammad b 'Abd al Razzāḳ ıs a record of the brıef conquest of Ādharbāıdjān by the general of the Būyıd Rukn al-Dawla (Vasmer, *Zur Chronologıe d Ġastāniden*, *Islamıca*, ıı/2, 1927, p 170) Of 347 we also have dırhams of Marāgha ın the names of the two sons of the Daılamī Marzubān, Ibrahīm and Djastān (*ıbıd*, p 172)

The Rawwādı and the Salḏjūks After the dısappearance of the Daılamīs we find ın Tabrīz the famıly of Rawwādī Kurds who seem to have been related wıth the Musāfarıds by marrıage only On the other hand, ıt ıs very lıkely that the Rawwādī are the descendants of the Arab Rawwād al-Azdī, lord of Ādharbāıdjān (Balādhurī, p 331) who became assımılated by theır neıghbours ın Ādharbāıdjān The best known of these Rawwādı ıs Wahsūdān b Mamlān (= Muhammad, the change of *d* to *l* ın Kurdısh ıs common) who ıs mentıoned between 420 and 446 (Ibn al Athīr, ıx 279, 351, 410) and who ın addıtıon to Tabrīz possessed other strongholds ın the mountaıns (Sahand) When ın 420 the Ghuzz reached Maıāgha and executed there a great number of Hadhbānī Kurds, the latter unıted under Wahsūdān and drove out the Ghuzz (Ibn al-Athīr, ıx 270—272) Thıs ıncıdent shows that the dıstrıct of Marāgha was wıthın the sphere of ınfluence of Wahsūdān In 446 Wahsūdān became a vassal of the Salḏjūks, but Ibn al Athıı, *ıbıd*, p 410 says nothıng about the extent of hıs possessıons around Sahand

In 497 the peace between the sons of Malık-Shāh, Barkıyaruk and Muhammad was sıgned near Marāgha and ın 498, Muhammad vısıted Marāgha

The Ahmadılı In 505 we have for the fırst tıme mentıon of the Amır Ahmadıl b Ibrāhım b Wahsūdān al-Rawwādī al-Kurdı, lord of Maıāgha and Kūtab (Kūlsarı?) (Ibn al-Athīr, x 361) He was the founder of a lıttle local dynasty, whıch lasted tıll about 624 We know very lıttle of the hıstory of the Ahmadılı whıch has never been closely studıed

Ahmadıl was certaınly the grandson of Wahsūdān b Mamlān of Tabrız (cf above) and thıs explaıns the ınsıstence wıth whıch the atābegs of Marāgha trıed to retake Tabrīz Only ımprescrıptıble hereditary rıghts can explaın the strange fact of the presence of a Kurd among the amırs of the Salḏjūks The name Ahmadıl ıs a peculıar formatıon, the name of Mahmadīl, a vıllage to the south of Marāgha, belongs to the same category of dımınutıves The Ahmadılī however very soon adopted Turkısh names

Ahmadıl wıth a large army took part ın the Antı-Crusade of 505 Durıng the sıege of Tell Bāshı, Joscelın came to terms wıth hım (*tatārʿaha*) and he wıthdrew from the town (Kamāl al-Dīn, *Ta'rīḫ Halab*, *Rec des hıst des croısades*, ıı 599) Ahmadīl soon abandoned Syrıa entırely, for he coveted the lands of Sukmān Shāh-ı Arman who had just dıed We know that Sukmān had extended hıs sway over Tabrīz [q v] and the reference ıs probably to thıs town Accordıng to Sıbt b al-Djawzī, *ıbıd*, p 556, Ahmadıl had 5,000 horsemen and the revenues from hıs fıefs amounted to 400,000 dınārs a year In 510 (or 508) Ahmadıl was stabbed ın Baghdād by the Ismā'ılıs to whom he had done much ınjury (*ıbıd*, p 556, Ibn al Athıı, x 361)

Ak-Sunkur I In 514 Malık Mas'ūd, governor of Mawsıl and Ādharbaıdjān, rebelled agaınst hıs brother Mahmūd and gave Marāgha to hıs atābeg Kasīm al Dawla al Bursukī but the rebellıon collapsed and ın 516 Ak Sunkur al Ahmadılı (client of Ahmadıl ?), lord of Marāgha, who was ın Baghdād, was authorısed by Sultān Mahmūd to return to hıs fıef As the amır Kun-toghdı, atābeg of Malık Tughrīl (lord of Arrān, Ibn al-Athır, x 399), had dıed ın 515, Ak-Sunkur expected to get hıs place wıth Tughrīl The latter ordered Ak Sunkur to raıse 10,000 men ın Maıāgha and set out wıth hım to conquer Ardabīl ın whıch they faıled In the meanwhıle Maragha was occupıed by Djuyūsh Beg, sent by Sultān Mahmūd The Georgıan Chronıcle (Brosset, ı 368) mentıons under 516 (1123) the defeat of Ak-Sunkur (whom he calls "Aghsunthul, Atābeg of Ran" = Arrān) durıng a demonstratıon agaınst the Georgıans carrıed out by Tughrīl from Shırwān In 532 Ak-Sunkur took a part but not a very actıve one ın the suppressıon of the ıntrıgues of the Mazyādıd Dubaıs In 524 he was one of the promoters of the electıon of Sultān Dāwūd, whose atābeg he was In 526 Tughrīl, uncle of Dāwūd, defeated the latter and occupıed Maragha and Tabrīz (al Bundārı, ed Houtsma, p 161) Dāwūd along wıth hıs uncle Mas'ūd and Ak-Sunkur sought refuge ın Baghdād Wıth the support of the Calıph and the assıstance of Ak-Sunkur, Mas'ūd reoccupıed Ādharbāıdjān After the capture of Hamadān, Ak Sunkur was kılled there by the Ismā'ılıs (527) ınstıgated by Tughrīl's vızıer (al-Bundārī, p 169)

Ak-Sunkur II The name of Ak Sunkur's son ıs transmıtted ın dıfferent forms Ibn al Athır, xı 166 and 177, calls hım Ak Sunkur (II), cf also *Ta'rıḫ ı Guzīda*, p 472 Al Bundārı, p 231, calls hım al-Amır al-Kabır Nusrat al-Dın Khāsbek and, p 243, Nusrat al Dīn Arslān Abā (cf al-Kāshgharī, *Dıwān Lughat al-Turk*, ı 80) The *Rāḥat al Sudūr*, p 241, 244, 262 gıves hım the name of Atābeg Arslān Abā Al-Bundārī treats hım as an equal of the great amır Ildıguz [q v] whose famıly fınally trıumphed over the lords of Marāgha Ak-Sunkur II's adversary was the amır Khāsbek b Bulung-erı (?) who was the favourıte of Sultān Mas'ūd and sought to establısh hımself ın Arrān and Ādharbāıdjan Thıs Khāsbek had besıeged Marāgha ın 541 (al-Bundārī, p 217) In 545 Sultān Mas'ūd took Maıāgha and destroyed ıts walls (*bāra*) but a reconcılıatıon later took place between Khāsbek and Ak-Sunkur II under the walls of Rūyīn dız (cf below) The executıon of Khāsbek ın 547 (1153) by Sultān Muhammad alıenated Ildıguz and Ak-Sunkur II and they ınstalled Sulaımān on the throne of Hamadān Muhammad on hıs return to power sent an embassy to restore good relatıons wıth the two lords of Ādharbāıdjān (*sāhıbaı ān*) Peace was concluded ın 549 and the two great amırs shared Ādharbāıdjān between them (al-Bundarı, p 243) On hıs deathbed (554) Muhammad entrusted hıs young son (Malık Dāwūd, cf the genealogıcal tree ın the *Rāḥat al-Suaūr*) to Ak-Sunkur As Ildıguz was furthering the ınterests

of his ward Sultān Arslān, Pahlawān b Ildiguz advanced against Ak-Sunḳur II but the latter with the help of Shāh-i Arman defeated him on the Safid-rūd In 556 Ak-Sunkur sent 5,000 men to the help of the governor of Rayy, Īnandj, who was fighting Ildiguz The latter gained the upper hand and in 557 Ak-Sunkur II took part in the expedition of Ildiguz against the Georgians (Ibn al-Athir, xi 189) In 563 however, Ak Sunkur II obtained recognition for his ward from Baghdād Pahlawān b Ildiguz at once besieged Ak-Sunkur in Marāgha (*ibid*, p 218) but a peace put an end to hostilities

In 564 the amīr of Rayy, Īnandj, was killed (Ibn al-Athir, xi 230) The *Ta'rīkh i Guzīda*, p 72, seems to suggest that the rebellion in Marāgha of Kutlugh (?), brother of Ak Sunkur (II ?), was due to Īnandj's influence He was punished by the Atābeg Pahlawān b Ildiguz and Marāgha was given to his brothers ʿAlā' al-Dīn and Rukn al-Dīn

Under 570 Ibn al-Athir (xi 280) mentions at Marāgha Falak al Dīn, son of Ibn Ak-Sunkur (i e son of Ak-Sunkur II), to whom his father had bequeathed his estates Pahlawān besieged the fortress of Rūyīn-diz and Marāgha On this occasion peace was concluded on the cession of Tabriz to the family of Ildiguz This important detail shows that down to 570 the fief of the Ahmadili comprised all the country round mount Sahand including Tabriz [q v]

In 602 the lord of Marāgha ʿAlā' al Dīn came to an agreement with the Atābeg of Arbil Muzaffar al-Dīn Gok buri to deprive the Ildiguzid Abū Bakr of Ādharbāidjān on the pretext that he was incapable of ruling From Marāgha they marched on Tabrīz but Abū Bakr called to his aid the former slave of his family Ay-doghmish (cf Defremery, *Recherches sur 4 princes d'Hamadan*, *JA*, 1847, i 160) Gok buri returned to his own lands and Abū Bakr with Ay-doghmish came to Marāgha ʿĀlā' al-Dīn had to surrender the fortress which was the bone of contention but was given in compensation of the towns of Urmiya and Ushnū In 604, ʿAlā' al Dīn whom Ibn al Athīr, xii 157, 182, here calls Kara-Sunkur died and left one son, a minor A brave servant of ʿAlā' al-Dīn assumed the guardianship of the child but the latter died in 605 Abū Bakr then took possession of all the lands of the Ahmadili except Rūyīn-diz where the servant already mentioned had entrenched himself with his late master's treasures

It is not clear if ʿAlā' al Dīn Kara Sunkur is identical with the brother of Ak Sunkur II mentioned in 564 For the date of his accession and his importance we have a hint According to the preface of the *Haft paikar* of Nizāmī [q v], this poem (finished in 593) was composed at the request of ʿAlā' al-Dīn Kib (?) Arslān (the Rūm and the Rūs paid him tribute [*kharādj*], the Georgians suffered reverses at his hands) This *mamdūh* was definitely identified by Rieu, *Catalogue*, ii 567 and Supplement, 1895, p 154 with ʿAlā' al Dīn of Marāgha Nizāmī mentions two sons of ʿAlā' al Dīn, Nusrat al Dīn Muhammad and Ahmad, but to reconcile this with Ibn al-Athīr we should have to suppose that both died before their father

The family of the Ahmadili was continued for some time in the female line In 618 the Mongols arrived before Marāgha and the town was stormed on the 4th Safar The Mongols sacked and burned the town and massacred the inhabitants (*ibid*, xii 246, 263) but the lady of Marāgha (daughter of ʿAlā' al-Dīn ?), who lived in Rūyīn-diz escaped the catastrophe

Djalāl al-Dīn In 622, the Khwārizmshāh Djalāl al Dīn came to Marāgha via Dakūkā He entered it without difficulty for the inhabitants were complaining of all kinds of oppressions and raids by the Georgians (Nasawī, *Sirat Djalāl al-Dīn*, ed Houdas, p 110) Djalāl al Dīn tried to restore the prosperity of Marāgha, cf Ibn al Athīr, xii 280, 282

In 624 (1227) while Djalāl al-Dīn was in the Persian ʿIrāk, his vizier Sharaf al Mulk was forced to reconquer Ādharbāidjān In the course of his campaign he besieged Rūyīn diz, the lady of which was a grand-daughter (*min hafadat*) of the Atābeg ʿAlā' al-Dīn Karaba (?) (Nasawī, p 129) This princess was married to the deaf mute Khamūsh, only son of the Eldiguzid Ozbek The Atābeg Nusrat al Dīn, son of Khamūsh, mentioned incidentally by Djuwainī, *GMS*, ii 242, must have been his son As a way out, she offered her hand to Sharaf al-Mulk Djalāl al-Dīn suddenly arrived from the ʿIrāk and married the princess himself Rūyīn diz was given to a certain Sa'd al Dīn The citadel contained some thousands of houses (*ulūf min dūr*) occupied by the former inhabitants of the town (*kudamā'*) Sa'd al Dīn decided to evacuate them but as a result of his tactlessness the fortress closed its gates again (to Sa'd ?) (Nasawī, p 129, 157) Ibn al-Athīr, xii 322 seems to deal with the course of these events Under 627 he says that the troops of Djalāl al Dīn besieged Rūyīn-diz for some time The fortress was about to capitulate when some malcontents summoned the assistance of a Turkoman amir Sewindj (Swndj) of the tribe of Kush yalwa The domination of this chief and his relatives who succeeded him only lasted two years

Rūyīn-diz This fortress lay "near Marāgha" (Ibn al Athīr, xii 322) According to Zakariya Kazwīnī who gives a very accurate description of Rūyīn diz, it was 3 farsakhs from Marāgha Its proverbially impregnable position (*duriba bi-hisānatiha al mathal*) suggests that it was built on the side of Sahand The Russian map marks on the Sofi-čai 10 miles (c 3 farsakhs) above Marāgha a place called Yay shahār (in Turkish = "summer town") besides which two streams flow into the Sofi čai (on the left bank) and between them is written the corrupted name "Res or Eris" It is very probable that this is the site of the famous fortress on either side of which there was a stream (*nahr*), for *Res* one should read *Diz* i e Rūyīn diz The date of the final destruction of Rūyīn-diz is unknown As late as 751 the Čobanid Ashraf imprisoned his vizier there (v Hammer, *Gesch d Ilchane*, ii 337) but the *Nuzhat al-Kulūb*, in 740 (1340) only knows the other Rūyīn-diz, that of Sawalān (there is still a Rūyin dizak 4 farsakhs N E of Ardabil)

Kūlsara Ibn al-Athir, x 340, calls Ahmadīl "lord of Marāgha and of Kūtab" This last name (كوتب) seems to be a corruption of Kūlsara (كولسرد) or Kūrsara, a little town well known to the Arab geographers on the Marāgha-Ardabīl road (10–12 farsakhs from Marāgha and 20–27 from Ardabil), cf Ibn Khurdādhbih, p 120, Ku-

dāma, p 213, Istakhrī, p 194, Ibn Hawḳal, p 252, in particular from his own experience talks of the importance of Kūlsara and its flourishing commerce This place may correspond to the village of Kül tapä "hill of cinders" (popular Turkish etymology) which lies on the Karanghu about 35 miles (c 10 farsakhs) east of Marāgha The fort of Kal'a yi Zohāk notable ruins of which were discovered by Monteith c 15 miles below Kul tāpä (cf Morier, *op cit*, p 296), must have been a bulwark for Kūlsara and Marāgha against invasion from the northeast Rawlinson, *JRGS*, 1841, p 120 sees a Sāsānian fortress in Kal'a yi-Zohāk

The Mongols Marāgha was definitely taken by the Mongols in 628 (Ibn al-Athīr, xii 324) After the taking of Baghdād in 656 (1258) Hülāgū took up his quarters in Marāgha and ordered an observatory to be built there from the plans of Nasīr al Dīn Tūsī (who had as advisers four astronomers one of whom, Fakhr al-Dīn, was a native of Maragha) (Rashīd al-Dīn, ed Quatremère, p 324) The observatory was built on a fortified hill to the west of the town where only traces of foundations of the walls are still to be seen According to Schindler's plan (1883), the levelled area on the hill measures 137 × 347 metres On the observatory cf Jourdain, *Memoire sur les instruments employes a l'observatoire de Maragah*, in the *Magasin encyclop redige par A L Millin*, Paris 1809, vol vi, p 43–101 (transl of an Arabic *risāla* belonging to the Bibl Nationale and attributed to Nāsir al Dīn's colleague Mu'ayyid al Dīn al-'Ardī) and Ritter, *Erdkunde*, ix, p 839–843 To contain his treasures Hülāgū built a castle on the island of Shāhī 1—2 days distant from the capital Here he was buried On the fortifications of Shāhī cf Tabarī, iii 1171 The handsome sepulchral towers of which there are four at Marāghā (Mecquenem 1908) date from Hülāgū or his immediate successors 1 the one at the entrance to the bridge of Safī can is built of red brick on a square foundation and has a vaulted cellar (*Gunbad-Kizmiz*), 2 similar, situated in the gardens to the south of the town on the road from Khungī, 3 and 4 near the old cemetery in the interior of the town, the octagonal tower N° 3 is of red brick overlaid with blue enamelled faience (*Gunbad i Lābūd*) and N° 4 is round, covered with plaster which is decorated with arabesques (*Kot-burdj* "Tower of the Ram") There is a photograph of N° 1 in de Morgan (1894), p 337 and Sarre, *op cit*, text, p 15—16, of N° 3 in Sarre, *ibid* and of 4 in de Morgan, *ibid*, p 340 H Schindler claimed to have read on the Gunbad-i Ghaffir (N° 2?) the name of Abū Bakr i Sa'd-i Zangī (atabeg of Fārs, 623—658?) According to Sarre, N° 4 is later than 1350 The monuments require to be again studied on the spot Lehmann-Haupt says that inscriptions can still be seen in their interiors

The early Mongol Īlkhans led a semi nomadic life which explains the absence from Marāgha of any other kind of memorial It was only with Ghazān that a regular capital was built at Tabrīz [q v] Marāgha continued to be of some importance on account of its pasturages and was a station on the road between Ādharbāidjān and Mesopotamia Its name continually appears in the history of the Īlkhāns In 703 (1304) Üldjaitü received at Marāgha the ambassadors from the Kā'ān of China and installed at the observatory the son of Nāsir al-Dīn Tūsī

In 712 (1312) Kara Sunkur, *amīr al-umarā'* of Aleppo, fearing the wrath of the Sultān of Egypt, Nāsir, sought an asylum in Persia with Üldjaitü who gave him Marāgha Ibn Battūta who tells this (i 179) adds that this town was known as "Little Damascus" (*Dimishk al saghīra*) Kara-Sunkur died in 728 (1328) (d'Ohsson, *Hist des Mongols*, iv 699)

The Geographers of the Mongol period Zakarīyā Kazwīnī (1275) seems to be personally acquainted with the town According to him there were in the town memorials of the pre-Islāmic period He describes the mineral springs (near the village of Kiyamat-ābād) and a cave which must correspond to the Čai bāghī visited by Morier, Lehmann-Haupt, Minorsky etc Kazwīnī also mentions the mountain of Zandjakān with a calcareous spring, the village of Djubdk (Gunbadak) with a bottomless well (p 350) and gives a description of Rūyīn-diz (p 358)

The *Nuzhat al-Kulūb* (written in 1340), *GMS*, p 27 estimates the revenues of Marāgha paid to the treasury at 70,000 dīnārs (Ardabīl paid 85,000) and those of its wilāyat at 185,000 dīnārs The *tuman* of Marāgha comprised all the southern part of Ādharbāidjān, in the north it was bounded by the *tuman* of Tabrīz, in the west by that of Khoi (Urmiya), in the south by the lands of Kurdistān (Dinawar) and in the east by 'Irāk-i 'Adjam (Zandjan, Sudjās) All the lands now under the modern Sawdj bulāk [q v] were then ruled from Marāgha As dependencies of Marāgha, Hamd Allāh gives the towns of Dih-i Khwārakān (in popular Turkish Tukhorghan) to the south of Tabrīz, Tailam on the right bank tributary of the Djaghatu (cf Rawlinson, 1841, p 39 the ruins of Kal'a-yi Bākhtā) and Paswē in Ushnudjān, in the valley of the Tigris [cf SAWDJ BULĀK] The *tuman* comprised six cantons (the names are much mutilated) Sarādjūn (?), Miyādjun (?), Dūzakhrūd (? cf the mountain Dūzakh on the middle course of the Djaghatu), Gāwdūk (at the confluence of the river of Tailān with the Djaghatu [the name is also read Gāwdūl, Gāwdawīn It is remarkable that Firdawsī (ed Mohl, vii 141, 151) mentions in these regions a Dashti Dūk and Kūh-i Dūk where Bahrām Čūbīn was defeated by Khusraw]), Bihistān (probably the district of Bāhī on the Tatawu), Hashtrūd (to the east of Sahand on the Karanghu) The district of Angūrān on the Kizil uzan was also a dependency of Marāgha

Christianity at Marāgha In the Mongol period, Marāgha had become an important centre of Christianity The celebrated Mār Bar Hebraeus (Jacobite *Maphrian*) lectured in 1268 on Euclid and in 1272 on Ptolemy in the "new monastery" of Maragha, there he wrote the *Kitab al Duwal* When he died on July 30, 1286, as a sign of mourning the Greeks, Armenians and Nestorians closed their shops in the market place (Assemani, *Bibl Orientalis*, ii 266, Wright, *A short History of Syriac Literature*, 1894, p 267, 271, 276, 279 The history of Mar Yahbalāhā III (patriarch of the Nestorians [1281—1317], transl Chabot, Paris 1895) contains valuable notes on Marāgha Yahbalāhā rebuilt the already existing church of Mār Shalitā and built a house beside it In 1289 Arghūn had his son baptised in Marāgha In 1294 the patriarch laid the foundations of the monastery

of John the Baptist 2/3 of a farsakh north of Marāgha After the accession of Ghāzān (1295) the persecution of the Christians began, instigated by the amīr Nawrūz The mob plundered the residence of the patriarch and the church of St George built by the monk Rabban Ṣawmā (it had been furnished with articles from the portable church of Arghūn's camp) The patriarch sought refuge in the suite of the Armenian king Haiton On his return to Marāgha, Ghazān punished the fomenters of the troubles In 1298 Yahbalāhā was confirmed in his rights In Sept 1301 he finished the monastery of St John His biographer and contemporary gives an account of the beautiful buildings, the numerous relics and riches of the monastery (Chabot, *op cit*, p 133) The village of Dahlī (?) to the east of Marāghā was purchased to serve as a *wakf* of the monastery (to the N E of the town there is still a village of Kilisa kändi "village of the church") Ghāzān and his successor Ūldjaitū visited the monastery Yahbalāhā died and was buried there in 1317

On the south side of the hill of the observatory there are chambers carved out of the rock (3 rooms 12 feet high communicating with one another, and a corridor) Inside there are niches in the shape of altars Local tradition sees a church in these (perhaps of the Sāsānian period), cf Macdonald, Kinneir, H Schindler, Lehmann Haupt and Minorsky, *Zap*, xxiv, 1917, p 167

After the Mongols In 737 (1337) the Djalayirid Shaikh Hasan inflicted a defeat on Tughā-Timūr [q v] near Marāgha (or at Hashtarūd) The pretender Muhammad was buried at Marāgha in 738 (*Shadjarat al-Atrāk*, p 315) Later the political struggles of the Turkomans had their principal arena in the northern part of Ādharbāidjān In the same period the Kurdish elements of the districts south of Lake Urmiya became consolidated and received reinforcements from the districts of Mawsil (*Sharaf-nāma*, i 288) The Mukrī Kurd amīrs extended their influence over Marāgha and even as far as Dih-Khwārakān The Turks during their rule over Ādharbaidjān included Marāgha with Tabrīz and levied 15 kharwārs of gold per annum on it which caused its inhabitants to go away (*ibid*, p 294) In 1002 (1593) the name of the fortress of Saru-kurghan (demolished in 795 by Timūr, cf *Zafar-nāma*, i 628 and rebuilt by the Mukrī) in the region of Marāgha often occurs in the *Sharaf nāma*, p 294—296, this name recalls that of the Sarūk, the right bank tributary of the Djaghatu

During the second Ottoman occupation (1725) Marāgha was governed by ʿAbd al ʿAzīz Pasha, this administrative unit consisted of 5 sandjaks, of which 2 were hereditary and 3 granted by the government (v Hammer, iv 228, according to Čelebi zāde) In 1142 (1729) Nadir defeated the Ottomans at Miyānduāb on the Djaghatu and occupied Dimdim, Sawdj-bulāk, Marāgha and Dih Khwārakān (Mahdī-Khān, *Taʾrīkh-i Nādirī*, Tabrīz 1284, p 66, transl Jones, i 104) According to the recently discovered history of Nādir, the monarch transplanted 3,000 inhabitants from Marāgha to Kalāt (Barthold, in *Zap*, xxv, p 88)

The Mukaddam As early as the time of Nādir the Turkish tribe of Mukaddam is mentioned as settled in the region of Marāgha (Macdonald, Kinneir 15,000 men) Ahmad Khān Mukaddam played a considerable part in the affairs of Ādharbāidjān Jaubert, *Voyage*, p 160 knew him in 1805 as *beglerbegi* of Ādharbāidjān under prince ʿAbbās Mīrzā In 1810 he exterminated the Bilbās chiefs whom he had invited to Marāgha [cf SAWDJ-BULĀK] According to Morier, *Second Journey*, p 293, this patriarch was aged 90 in 1815 (cf Brydges, *Dynasty of the Kajars*, p 90) The governor of Marāgha Ṣamad-Khān, a partisan of Muhammad ʿAlī Shāh who besieged Tabrīz in 1909, was of the family of Ahmad Khān At the present day the Mukaddam are concentrated round Miyānduāb

In 1828 Maiāgha was occupied by Russian troops In 1881, the Kurd invasion by Shaikh ʿUbaidallāh reached the gates of Marāgha The town was not taken but the whole country round was in ruins when H Schindler visited it in 1882 During the war of 1914—1918, Marāgha was within the zone of the Russo Turkish operations [cf TABRĪZ]

Bibliography In addition to the native sources quoted in the text Samʿānī, *Kitāb al-Ansāb*, *G M S*, xx, fol 519r (he also derives the *nisba* Murāghī from the clan al-Marāgh of the tribe of al-Azd), Hādjdjī Khalīfa, *Dhail-numā*, p 389, Ewliyā Čelebi, *Siyāhat nāma*, iv 333 (confused and of doubtful value), Zain al-ʿĀbidīn, *Bustān al-Siyāha*, p 555

The European descriptions of Marāgha (only since the xixth century) are not very numerous and do not exhaust the subject Macdonald Kinneir, *Geogr Memoir*, London 1813, p 155—156, Morier, *A Second Journey*, London 1818, p 281—297 (Tabrīz–Marāgha–Gultapa [Kul-tapa?] –Sarāskand), Ker Porter, *Travels*, 1822, ii 493, Monteith, *Journal of a Tour*, *J R G S*, 1833, p 4 (Sahand–Sārāskand–Kalʿa-yi Zohāk), Rawlinson, *A march from Tabriz*, *J R G S*, 1841, p 39 (Miyān du āb), Ritter, *Erdkunde*, ix, p 828—852, Hoffmann, *Auszuge aus syrischen Akten*, Leipzig 1880, p 248 etc (important historical and geographical notes), Houtum-Schindler, *Reisen im n-w Persien*, *Zeitschr d Gesell d Erdkunde*, Berlin 1883, p 334 (cf the article Marāgha in the *Encycl Britannica*, 11th ed, 1911), De Morgan, *Mission scientifique*, *Études geographiques*, i, Paris 1894, p 337—340 (several views), Zugmayer, *Eine Reise d Vorderasien*, Berlin 1905, p 123—128, S G Wilson, *Persian Life*, London 1890, p 71—80, Le Strange, *The Lands of the East Caliphate*, p 164—165, de Mecquenem, *Le lac d'Ourmiah*, *Annales de Geogr*, 1908, p 128—144, Lehmann-Haupt, *Armenien*, i, 1910, p 208—216, de Mecquenem, *Contribution a l'etude du gisement des vertebres de Maragha*, in *Ministere Instr Publique*, *Delegation en Perse*, *Annales d'Histoire naturelle*, 1/2, 1908, p 1—79 (with a geographical introduction)

(V MINORSKY)

MARAND (1), a town in the Persian province of Ādharbāidjān

Position The town lies about 40 miles N of Tabrīz, halfway between it and the Araxes (it is 42 miles from Marand to Djulfā) The road

from Tabrīz to Khoi also branches off at Marand A shorter road from Tabrīz to Khoi follows the north bank of Lake Urmia and crosses the Mishow-dagh range by the pass between Tasūdj [q v] and Diyā al-Dīn Marand, which is surrounded by many gardens, occupies the eastern corner of a rather beautiful plain, about ten miles broad and sloping slightly to the west To the south the Mishow range (western continuation of the Sawalān) separates it from the plain of Tabrīz and from Lake Urmia The pass to the south of Marand often mentioned by historians is called Yam (Mongol = post station) The pass between the plain of Maiand and Tasūdj [q v] takes its name from the village of Waldiyān To the east of Marand lies the wild and mountainous region of Karadja-dagh (capital Ahar) To the north, the plain of Marand is separated from the Araxes by a range, a continuation of the central heights of the Karadja dagh which is crossed by the defile of the Darā-diz The plain of Marand is watered by the river of Zunūz, the southern arm of which called Zilbīr runs quite near Marand The combined waters of Zunūz and Zilbīr flow into the Kotur čai (an important right bank tributary of the Araxes) about 20 miles N F of Khoi The length of the Zunūr is about 40 miles (Hamd Allāh Mustawfī 8 farsakhs)

History A lofty *tell* which rises beside the town is evidence of the great antiquity of this as an inhabited site, it must have existed in the time of the Vannic (Khald) and Assyrian kings Its Greek name Μορούνδα is perhaps connected with the people Μαρούνδαι who, according to Ptolemy VI, 2, occupied the lands as far as Lake Urmia A legend of Armenian origin based on the popular etymology *mair and* "mater ibi" locates in Marand the tomb of Noah's wife (Hubschmann, *Die altarmenischen Ortsnamen*, 1904, p 346 and 451, Ker Porter, *Travels*, i 217) Moses of Chorene places Maiand in the district of Bakurakert There was another Marand mentioned by the Armenian historian Orbelian (c 1300) in the province of Siunikh (north of the Araxes) and a village of Marand still exists east of Tīghnīt in the khānate of Mākū [q v]

Ibn Ba'ith After the Arab conquest a certain Halbas of the tribe of Rabī'a took Marand His son Ba'ith, a soldier of fortune (*su'lūk*) in the service of Ibn al-Rawwād, fortified Marand Muhammad b Ba'īth erected castles there (*kusūr*) (Balādhurī, p 330) This chief had acquired considerable notoriety In 200 (815) he had taken from the family of Rawwād, the strongholds of Shahī and Tabriz (Tabarī, iii 1171) (In another passage, Tabarī, iii 1379, mentions Yakdur [?] in place of Tabrīz) Ibn Ba'ith lived at Shāhī which stood in the centre of Lake Urmia (the peninsula of Shāhi, where at a later date Hūlāgū Khān kept his treasure and where he was buried) Ibn Ba'ith was at first on good terms with the Khurramī Bābak, whose authority must have prevailed in the Karadja-dagh in particular, in the north-eastern corner of which was his residence al Badhdh Ibn Ba'ith suddenly changed his tactics and seized by a ruse 'Isma, one of Babāk's generals whom he sent to the caliph al-Mu'tasim In 221 Ibn Ba'ith accompanied Bughā on his expedition against al-Badhdh (Tabarī, iii 1190, 1193) Under the caliphate of Mutawakkil, Ibn Ba'ith committed some crime (*khalafa*) and was imprisoned in Surra-man-ra'a On the intercession of Bughā al-Sharābī, 30 people of repute became guarantors of Ibn al-Ba'ith's good behaviour and he must have been allowed considerable liberty, for in 234 (848) he escaped to Marand Ibn Khurdādhbih, who wrote in 234, mentions Marand as being Ibn Ba'ith's fief Tabarī, iii 1379—1389, gives a very graphic account of the expedition sent against this town The wall which enclosed Marand and its gardens was 2 farsakhs in circumference There were springs within it The dense forest outside was a further protection to the town Ibn Ba'ith collected 2,200 adventurers who were reinforced by a number of non-Arabs (*'ulūdj*) armed with slings He had ballistas constructed to repel the assailants During the 8 months that the siege lasted, 100 individuals of note (*awliyā al-sultān*) were killed and 400 wounded When Bughā al-Sharābī (Balādhurī, p 330 Bughā al-Saghīr) arrived he succeeded in detaching the men of the Rabī'a tribe from Ibn Ba'ith Ibn Ba'ith and his relatives were seized and his house and those of his partisans plundered In Shawwāl of 235 Bughā arrived with 180 prisoners at the caliph's court Mutawakkil ordered Ibn Ba'ith to be beheaded but the latter recited verses in Arabic and the caliph was astonished by his poetic gifts (*inna ma'ahu la-adaban*) and gave him his life Ibn Ba'ith died in prison and his sons entered the corps of mercenaries (*al-shākirīya*) According to one of Tabarī's authorities (iii 1388), the shaikhs of Marāgha who praised the bravery and literary ability (*adab*) of Ibn Ba'ith also quoted his Persian verses (*bi 'l-fārsīya*) This important passage already quoted by Barthold, *Bull School of Oriental Studies*, vol ii, Pt iv, 1923, p 836—838, is evidence of the existence of the cultivation of poetry in Persian in the N W of Īrān at the beginning of the ninth century Ibn Ba'ith must have been iranicised to a considerable extent, and, as has been mentioned, he relied for support on the non-Arab element in his rustāks (*'ulūdj rasātīkihi*)

Later History The Arab geographers of the tenth century (Istakhrī, p 182, Ibn Hawkal, p 239) mention Marand among the little towns of Ādharbāidjān where the material called *tikak* was manufactured Mukaddasī, p 51, 374, 377, puts Marand under Dabil and notes its gardens, its flourishing suburb and a cathedral mosque in the centre of the market The same author, p 382, mentions a direct road from Marand to Marāgha (via Nūrīn [?], somewhere west of Tabrīz [?]) Later, Marand must have shared the fate of Tabrīz [q v] According to Yākūt, iv 503, the town had begun to decline after it was plundered by the Georgians (Kurdj) who carried off its inhabitants This is valuable confirmation of the Georgian expedition to Persia, a detailed account of which is given in the Georgian Chronicle for 1208—1210 (605—607) [cf TABRĪZ and ILLIS]

Among the theologians, born in Maiand, Yākūt mentions one who died in 216 and another who had studied in Damascus in 433 In 624 (1226) Marand which had not sufficient defences, was occupied by the hādjib 'Alī al-Ashrafī of Akhlāt Sharaf al-Mulk, governor for the Khwārizmshāh, retook the town and wrought great slaughter in it (Nasawī, ed Houdas, p 166)

The only historical monument in Marand is the old mosque now in ruins with a *mihrāb* in stucco bearing the date of rebuilding 731 (1331) (reign of the Ilkhān Abū Sa'īd) Cf Sarre, *Denkmaler pers Baukunst*, Berlin 1910, p 24—25 and pl xvii,

and the observations by Herzfeld, *Die Gumbadh-i ʿAlawiyyan*, in the *Volume presented to E G Browne*, 1922, p 194—195 In the same period (1340) Hamd Allāh Mustawfī, *Nuzhat al-Kulūb*, *G M S*, xxiii, p 88, counted 60 villages in the district of Maiand The walls (*bārū*) of the town were 8,000 paces (*gām*) around but the town only occupied half the area

Marand is several times mentioned in connection with the Turco-Persian wars According to Ewliyā Čelebi (in 1647), *Siyāhat nāma*, ii 242, Marand was a hunting resort of the Timurid Shāhrukh In spite of the damage done by the invasion of Sultān Murād, the town looked prosperous and had 3,000 houses Ewliyā enumerates a number of celebrated theologians buried north of Maiand

In the autumn of 1724 ʿAbd Allāh Pasha Koprulu sent the Kurd Khān of Bitlīs Muhammad ʿĀbid to occupy Marand the inhabitants of which had fled Resistance centred round the town of Zunūz (10 miles N of Marand) which had 7,000 (?) houses and a castle called Diza by the Persians To dispose of the threat to their flank, the Janissaries before advancing on Tabrīz, fought a battle here in May 1725 with the Persians of whom a large number were slain Diza was taken and dismantled (cf von Hammer, *G O R* ², iv, p 226, following Čelebi zāde)

Marand has often been mentioned by European travellers since Chardin (1811 edition, i, p 318), cf the notices by Ker Porter, Jaubert, Morier, Ouseley and Monteith of which a résumé is given in Ritter, *Erdkunde*, ix, p 907 Marand has recently gained in importance since it lies on the modern high road from Tabriz to Djulfā built by the Russians in 1906 and replaced by a railway in 1915

(2) A town in the district of Khuttāl, to the north of the Oxus, cf Mukaddasī, p 49, 290–291 (V Minorsky)

MARʿASH, a town in Syria near the Asia Minor frontier (*al Thughūr al-Shaʾmiyya*) It lies about 2,000 feet above sea-level on the northern edge of the hollow (ʿAmk of Marʿash, now Čakal Owa and south of it Sheker Owa or Marʿash Owasī) which lies east of the Djihān and is watered by its tributary, the Nahr Hūrith (Ak-Sū) As a result of its situation at the intersection of the roads which run to Antākiya, to ʿAin Zarba and al-Massīsa, to Albistān (Abulustain) and Yarpūz, via Goksun (Kokussos) to Kaisārīya, via Behesnī (Bahasnā) to Sumaisāt and via al Hadath and Zibatra to Malatya, Marʿash was from the earliest times one of the most important centres of traffic in the Syrian frontier region It is repeatedly mentioned as early as Assyrian texts as Markasi, capital of the kingdom of Gurgum [cf the article DJARĀDJIMA], and several Hittite monuments have been found there (cf Ungei, *Marqasi*, in Ebert's *Reallexik d Vorgesch*, viii, 1927, p 48)

In the Roman imperial period it was called Germanikeia in honour of Caligula (on the coins Caesarea Germanikē, cf Gregoire, *Rev de l instr publ en Belg*, li, 1908, p 217 *sqq*) The identity of Germanikeia and Marʿash is certain from numerous literary, especially Syriac, references The Armenians probably knew, but probably from learned tradition only, the name *Germanik* (Kermanig in Vahram, cf Matth of Edessa, ed Dulaurier, p 487 infra, St Martin, *Mem sur l'Arm*, i 200) The statement in a description of the district of Halab (Paris MS Arab, N° 1683, fol 72a) that the Armenian name of the town was *Nākinūk* (Blochet, *R O L*, iii, p 525 *sq*, note 6) is wrong, this is a mistake for *Goinuk*, a name later given to the neighbouring al Hadath [q v] The Emperor Heraclius passed the town in 626 (Theoph, *Chron*, ed de Boor, p 313 Ramsay, *Class Review*, x 140, Gerland, *Byz Zeitschrift*, iii, 1894, p 362) The Emperor Leo III came from Marʿash (Germanikeia), later authors (like Theoph, *op cit*, p 391) wrongly called him the "Isaurian" (a confusion with Germanikopolis, cf K Schenk, *Byz Zeitschr*, v, 1896, p 296—298)

In the year 16 Abū ʿUbaida sent Khālid b al-Walīd from Manbidj against Marʿash and the Greek garrison surrendered the fortress on being granted permission to withdraw unmolested, Khālid then destroyed it (Caetani, *Annali dell' Islām*, iii, 1910, p 794, 806) Sufyān b ʿAwf al Ghāmidī in 30 (650—651) set out from Marʿash against the Byzantines Muʿāwiya rebuilt Marʿash and settled soldiers in this "Arab Cayenne" (as Lammens, *M F O B*, vi, 1913, p 437 calls it) After Yazīd I's death the attacks of the Greeks on the town became so severe that the inhabitants abandoned it

After Muhammad b Marwān in 74 (693—694) had broken the truce concluded by ʿAbd al Malik with the Greeks, in Djumādā I of the following year the Greeks set out from Marʿash against al-Aʿmāk (= ʿAmk of Antākiya, cf Le Strange, *Palestine* etc p 391) but were again driven back in the ʿAmk of Marʿash Marʿash was restored by al-ʿAbbās, son of al Walid I, and fortified and repopulated, a large mosque was also built there The people of Kinnasrin (i e probably of the *djund* of Kinnasrīn) had to send troops every year to Marʿash During Marwān II's fighting against Hims, the Emperor Constantine again besieged Marʿash, which had finally to capitulate (746) and was destroyed (al Balādhuri, ed de Goeje, p 189, Theophanes, *Chron*, ed de Boor, p 422, Georg Kedrenos, ed Bonn, ii 7) The inhabitants emigrated to Mesopotamia and the Djund of Kinnasrīn After the capture of Hims, Marwān sent troops to Marʿash, who rebuilt the town in 130 (747), the castle in the centre of the town was henceforth called al-Marwāni after him (Yākūt, ed Wustenfeld, iv 498 *sq*) But by 137 (754) the Greeks again sacked the town Al Mansūr then had it rebuilt by Sālih b ʿAli (d 150 = 767) and gave it a garrison which al-Mahdī strengthened and supplied with ample munitions (al-Balādhuri, *op cit*, p 189, Theoph, *op cit*, p 445 ὁ Σάλεχ μετεποιήσῃ Ἑρμανικείαν εἰς Παλαιστίνην) The Arabs in 769 (1080 Sel) entered the ʿAmk of Marʿash and deported the inhabitants of the region who were accused of espionage on behalf of the Byzantines, to al-Ramla (Michael Syrus, *Chron*, ed Chabot, ii 526) According to the Syriac inscription of ʿEnesh on the Euphrates, in 776—777 A D (1088 Sel) the people of the hollow (*ʿumkā*) of Marʿash invaded Asia Minor (Bēth Rhōmāyā) to plunder (Chabot, *J A*, ser ix, xvi, 1900, p 286 *sq*, Pognon, *Inscr semit de la Syrie et de la Mesop*, p 148—150, N° 84) A Greek army of 100,000 men in 161—162 (778—779) under Michael Lachanodrakon besieged Marʿash which was defended by ʿIsā b ʿAli (Ἰσβαλί in Theoph, *op cit*, p 451), grand-uncle of the Caliph al-Mahdī, destroyed al-Hadath and laid waste the Syrian frontier (Weil, *Gesch d*

Chalif, II 98) In 183 (799) Hārūn al-Rashīd built the town of al Hārūniya near Marʿash (al Balādhurī, *op cit*, p 171, Yākūt, IV 498, wrongly calls it a suburb of Marʿash), he also raised the prosperity of Marʿash and al-Massisa (al-Masʿūdī, *Murūdj al-Dhahab*, ed Barbier de Meynard, VIII, 295) The amīr Abū Saʿīd Muhammad b Yūsuf in 841 invaded Asia Minor, the Greeks drove him back however and took al-Hadath, Marʿash and the district of Malatya (Michael Syrus, III 102, Weil, *Gesch d Chalif*, II, p 315 *sq*, note 1, considers this story unhistorical) The emperor Basil I in 877 passed via Κουκουσός (Goksun) and the Taurus passes (*στενα τοῦ Ταύρου*) against Marʿash (Γερμανίκεια) but could not take it and had to be content with burning and plundering the suburbs, the same thing happened at al-Hadath (Ἄδατα, Georg Kedrenos [Bonn], II 214, Theophan continuat, ed Bonn, p 280) According to the *περὶ παραδρομῆς πολέμου* (*de velitatione bellica*, Migne, *Patrol Graec*, CXVII 1000) shortly before the attack on Germanikeia he crossed the Παράδεισος ποταμός (cf Pliny, *Nat Hist*, V 93 one of the *'intus flumina'* of Cilicia, probably the Ak-Sū, Arabic Nahr Djūrīth or Hūrīth, the location by Tomaschek, *S B Ak Wien*, CXXIV, 1891, Abh VIII 66, is therefore presumably wrong) The Byzantine Andronicus in 292 (904—905) invaded the region of Marʿash, defeated the garrisons of Tarsūs and Massisa and destroyed Kūrus (Ibn al-Athīr, ed Tornberg, VII 378, al-Tabarī, III 2298, Weil, *op cit*, II 533, Vasilev, *Vizantiya i Arabī*, I, 1902, p 154) The Armenian Mleh (Arab Malih) plundered Marʿash in 916, 50,000 prisoners were carried off from it and Tarsūs (Weil, *op cit*, II 634, Vasilev, *op cit*, p 203 *sq*) In the fighting against Saif al Dawla, the Greeks under John Kurkuas took Marʿash in the spring of 337 (949) (Kamāl al Dīn in Freytag, *Z D M G*, XI 187, Weil, *op cit*, III 14, note 1, Vasilev, *op cit*, p 268) In 341 (952) the Hamdānid defeated the Domestikos at Marʿash and in June rebuilt the defences of the town (Freytag, *op cit*, p 191, Vasilev, *op cit*, p 291) When the Hamdānid Abu 'l-ʿAshāʾir in 956 was taken a prisoner by the Byzantines, his father-in law Abū Firas followed as far as Marʿash in the attempt to rescue him but could not overtake his captors (Dvořak, *Abu Firas*, Leyden 1895, p 31, Vasilev, *op cit*, p 297) Nicephoros Phocas in Rabīʿ I 351 (Aug 962) occupied Marʿash, Dulūk and Raʿbān (Freytag, *op cit*, p 199, Rosen, *Zapiski Imp Akad Nauk*, XLIV 152, note 100) Bandjūtakīn in 382 (992) carried out a raid on Marʿash and came back with prisoners and great booty (Freytag, p 248, Rosen, p 250, 263) The Armenian Philaretos Brachamios (Filardūs al Rūmī) who in the second half of the XIth century, as leader of a robber band and ally of the Byzantine emperor, conquered a little kingdom for himself on the Syrian frontier, belonged to the village of Shirbaz in the district of Marʿash (Michael Syrus, III 173, 174 note *)

After the Franks under Godfrey de Bouillon had taken Marʿash in 490 (1097), they installed a bishop there (Michael Syrus, III 191) Bohemund of Antioch was taken prisoner in June 1100 in the *ʿamk* of Marʿash in the village of Gafinā (Michael Syrus, III 188) on his campaign against Malatya by Gumushtegīn b Dānishmand (*Recueil des hist or des crois*, III 589, Rohricht, *Gesch des Konigr Jerus*, p 9, Weil, *op cit*, III 179) The emperor Alexius later sent the general Butumites against Marʿash (*τὸ Μάρασιν*) who took the town, fortified the surrounding small towns and villages and gave them garrisons and left Monastras there as *ἡγεμών* (Anna Comnena, *Ἀλεξιάς* ed Reifferscheid, II 132, 11 *sqq*, F Chalandon, *Les Comnene*, I, Paris 1900, p 234) The town of Marʿash was placed under the Armenian prince Thathul, who had distinguished himself in its defence against Bohemund (Matthēos Urhayecʿi, ed Dulaurier, ch CLXVI, p 229 *sq*, Chalandon, *Les Comnene*, I 104 *sq*) But by 1104 he had to abandon it and surrender it to Joscelin de Courtenay, lord of Tell Bāshir (Matthēos, *op cit*, p 257, ch CLXXXVI, Raoul of Caens, ch 148, Rohricht, *op cit*, p 49, note 8, p 52, note 4) This Thathul is perhaps the same Armenian as had given his daughter in marriage to Godfrey's brother Baldwin (in William of Tyre, X 1, he is called *Tafroc*, in Albert of Aix, III 31, V 18 *Taphnuz*, cf Chalandon, *op cit*, p 103) By 1105 Tancred of Antioch seems to have been in possession of Marʿash (Rohricht, p 56) to whom it was allotted in the treaty of Sept 1108 (*ἡ Γερμανίκεια καὶ τὰ ὑπὸ ταύτην πολίχνια* Anna Comnena, ed Reifferscheid, II 217, Rohricht, p 66) In 1114 the widow of the recently deceased Armenian prince Kogh Vasil (= "Basil the thief") of Marʿash submitted to Ak Sonkor of Mawsil (Weil, *op cit*, III 199), on the 28th Djumādā (Nov 27) of the same year, Marʿash was devastated by a disastrous earthquake in which 40,000 lost their lives (Michael Syrus, transl Chabot, III 200, *Recueil hist or crois*, III 607, Matthēos Urhayecʿi, p 289, ch CCXVII) King Baldwin granted a monk named Godfrey (*Goisfridus Monachus*) a fief consisting of Marʿash, Kaisūm and Raʿbān (Michael Syrus, III 211, Rohricht, *op cit*, p 161), in 1124 Godfrey was killed at the siege of Manbidj in the train of Joscelin of Edessa The Dānishmandid Muhammad b Amir Ghāzi in 1136–1137 laid waste the villages and monasteries near Marʿash and Kaisūm (Matthēos, p 320, ch CCLIII) The Saldjūk sultān Masʿūd in 1138 advanced as far as Marʿash, plundering the country as he went (Michael Syrus, III 246) as did Malik Muhammad of Malatya in 1141 (Michael Syrus, III 249) and Kilidj Arslān II in 1147 (Michael Syrus, III 275) The town then belonged to Raynald, son in law of Joscelin II of Edessa, who fell in 1149 at Innib (Rohricht, *op cit*, p 260) On Sept 11, 1149, Kilidj Arslān and his father Masʿūd set out from Albistān against Marʿash, plundered the country around and besieged the town The Frankish garrison capitulated on being promised a safe retreat to Antākiya, but the sultān sent a body of Turks after them, who fell upon them on the road and slew them On this occasion all the treasure of the churches of Marʿash was lost, which the priests who had rebelled against the bishop had appropriated (Michael Syrus, III 290, Matthēos Urhayecʿi, p 330, ch CCLIX, Chalandon, *op cit*, p 421, Rohricht, *op cit*, p 263) After the capture of Joscelin, Nūr al-Dīn of Halab in 546 (1151—1152) took a large part of the country of Edessa including the town of Marʿash, Tell Bāshir, ʿAintāb, Dulūk, Kūrus etc (*Recueil hist or crois*, I 29, 481, II 54, Weil, *op cit*, III 296, Rohricht, *op cit*, p 265, note 5) The district was then divided the Sultān received Marʿash, Barzamān, Raʿbān, Kaisūm and Bahasnā, the Urtukid Kara Arslān of Hisn Ziyād got Bābūlā, Gargar, Kūkhta

and Ḥiṣn Manṣūr, Nūr al-Dīn kept the rest (Michael Syrus, III 297, Will of Tyre, XVII 16) When Masʿūd's son Kïlïdj Arslān, lord of Maraʿash (Michael Syrus, III 318), attacked an Armenian village, the Armenians under Stephan, brother of the prince Thoros, in 1156 revenged themselves by setting Marʿash on fire and carried off the whole population into captivity, during the absence of the Sultān and his Turks (Michael Syrus, III 314 [expanded from Barhebraeus, *Chron syr*], differently in Abū Shāma, *Rec hist or crois*, IV 92, F Chalandon, *Les Comnene*, II [1912], p 434) Among those carried off was the bishop Dionysios bar Ṣalībī, who escaped to the monastery of Kālsïūr (according to Chabot, *loc cit*, the κάστρον Καλτζιέριν of Anna Comnena, ed Reifferscheid, II 219) and wrote three *mēmrē* about the devastation of his former diocese of Marʿash (Michael Syrus, *loc cit*, Baumstark, *Gesch d syr Litt*, p 298) Thoros of Little Armenia in 1165 plundered Marʿash (Barhebraeus, *Chron syr*, ed Bedjan, p 331, Rohricht, *op cit*, p 319, note 8, Chalandon, *op cit*, II 531, note 1) Nūr al-Dīn again took Marʿash from Kïlïdj Arslān II when he was on a campaign against the Dānishmandid Dhu 'l-Nūn (Michael Syrus, III 350) in the beginning of Dhu 'l-Kaʿda 568 (June 14, 1173) and Bahasnā in Dhu 'l-Ḥidjdja (*Rec hist or crois*, I 43, 592, IV 158, Matthēos Uṙhayecʿi, ed Dulaurier, p 360, Abu 'l-Fidā', *Annal Musl*, ed Reiske, IV 4, Rohricht, *op cit*, p 303, who is followed by Chalandon, *Les Comnene*, II 463, wrongly puts these events as early as 1159)

Nūr al-Dīn perhaps handed Marʿash over to his ally Mleh of Little Armenia When the dynast of Marʿash raided the district of Raʿbān, al Malik al-Ẓāhir in 592 (1195–1196) took the field against him, whereupon the lord of Marʿash sought forgiveness and recognised his suzerainty (Kamāl al Dīn, transl Blochet, *R O L*, IV 212) The Armenian ruler Rupen III took Bohemund III of Antākiya prisoner in 1185 and forced him to cede the territory from the Djaihān up to Kastūn (Michael Syrus, III 396 *sq*, Rohricht, *op cit*, p 403, note 7, 661) Ghiyāth al Dīn Kaikhusraw, son of Kïlïdj Arslān II, in 605 (1208), when on a campaign against Little Armenia took Marʿash (Abu 'l-Fidā', *Annal Musl*, ed Reiske, IV 232) and made Husām al Dīn Hasan governor of the town He was succeeded in this office by his son Ibrāhim, who in turn was succeeded by his son Nusrat al-Dīn, who ruled Marʿash for 50 years The long reign of his son Muzaffar al-Dīn was followed by that of his brother ʿImād al-Dīn who however in 656 (1258) abandoned the town which was much harassed by the Armenians and Georgians, after failing to find support either from ʿIzz al-Dīn Kai-Kā'ūs of Rūm or al-Malik al-Sālih of Egypt The town then surrendered to the Armenians (Ibn al Shihna, Bairūt 1909, p 192)

Marʿash did not escape during the great Mongol invasion of Asia Minor Baibars I of Egypt in his campaign against them in 670 (1271) sent from Halab a division under Taibars al-Wazīrī and ʿIsā b Muhīn to Marʿash, who drove all the Tatars from there and slew them (*Rec hist or crois*, II 246, Makrīzī, ed Quatremère, *Hist de Sult Maml*, I/II 101) In the wars with the rulers of Little Armenia troops from Halab went as far as Marʿash in 673 and destroyed the gates of the outer town (Weil, *Gesch d Chal*, IV 77) In the next few years Baibars negotiated with envoys from Sis, from whom he demanded the surrender of Marʿash and Bahasna, but he was satisfied instead with a considerable sum of money (Makrīzī, ed Quatremère, *op cit*, I/II 123 [year 673 = 1274], II/I 104 [688 = 1289]) It was not till 692 (1292) that sultān Khalil by a treaty received Bahasnā, Marʿash and Tell Ḥamdūn (Mufaddal b Abi-'l Fadā'il, *Hist des Sultans Mamlouks*, ed Blochet, in *Patrol Orient*, XIV 557, Weil, *op cit*, IV 186, S Lane-Poole, *Hist of Egypt in the Middle Ages*, London 1901, p 287) But the Armenians must have retaken the two last named towns not long afterwards (Weil, IV 213, note 1), for in 697 (1297) Marʿash was again taken by the emīr Bilbān Tabakhī, Nā'ib of Halab, for Lādjīn A treaty was then concluded with the ruler of Little Armenia by which the Djaihān was to be the frontier between the two countries, Hamūs, Tell Ḥamdūn, Kūbarā, al-Nukair (on its position cf L Alishan, *Sissouan*, p 493—496), Ḥadjar Shughlān, Sïfan dakar and Marʿash thus passed to Egypt (Makrīzī, *op cit*, II/II, 63, Abu 'l-Fidā', *Ann Musl*, V 140)

In the second half of the VIIIth (XIVth) century Zain al-Dīn Karadja and his son Khalil, the founders of the house of the Dhu 'l-Kadr-oghlu conquered the lands along the Egyptian Asia Minor frontier with Malatya, Albistān, Marʿash, Bahasnā and Kharpūt [cf DHU 'L-KADR] In the mosque of Marʿash one of his successors, Malik Arslān, was murdered in 870 (1465—1466), his portrait with the inscription "Sultān Arslān" and that of his sister Sitti Khātūn with the legend ἡ μεγάλη Χάτω are painted in the Codex Venetus 516 of the *Geography* of Ptolemy, which he apparently intended to dedicate to his father in-law Mehemmed II (Olshausen, in *Hermes*, XV, 1880, p 417—424)

Conquered by Selīm I, Marʿash became Ottoman, on his campaign against the Dhu 'l-Kadrīya in 1515 he encamped on his way back before Marʿash and then returned via Kars Marʿash (now Kars Bāzār or Kais Dhu 'l-Kadrīya) and Goksun to Kaisarīya (cf Taeschner, *Turk Bibl*, XXIII, p 36, note 4)

From 1832 belonging to Egypt, Marʿash passed finally in 1840 back to the Turks The town was occupied by the French from 1918—1920, after its evacuation it was the scene of massacres of Armenians (F Tournebize, in *Dict d'hist et de geogr eccles*, IV, Paris 1925, col 360—362)

Marʿash is now the capital of a wilāyet which in 1928 had about 185,000 inhabitants, the town itself has about 50,000 inhabitants

The extent of the territory belonging to Marʿash was liable to vary considerably with the vicissitudes of the town in the middle ages The following places are mentioned as belonging to the territory of the town

Garbadisō (= *Gerbedisso*, *Itin Anton*, ed Parthey, p 85, Kleyn, *Jacobus Baradaeus*, p 191, corrupted in Michael Syrus, II 256 to ʿArbadīs, in Barhebraeus, *Chron Syr*, p 370 to Gerbīd), 28 Roman miles from Nicopolis (Islāhīya) and 15 from Doliche (Tell Dulūk near ʿAintāb)

ʿUfray (Michael Syrus, II 447), cf Ouplı, Uplie near Alishan, *Sissouan*, p 238? This place perhaps lay on the Nahr ʿAfrīn (Assyr Aprê) which Barhebraeus (*Chron Eccl*, ed Abbeloos-Lamy, I 399 *sq*) calls Nahrā ʿUfrēn

Behedīn "which is now destroyed" was the

birthplace of Nestorios near Marʿash (*Patr. ol Orient*, VIII 162 *sq*)

Shīrbaz, the birthplace of Philaretos (see above)

The monastery of Mār Shēnā (Michael Syrus, III 148)

Khaisina, probably the Khaishena of the Syriac writers, is described by Matthēos Urhayecʿi (transl Dulaurier, p 259) as adjoining the territory of Marʿash Dulaurier (*op cit*, p 445) locates it not far from the Euphrates, but in the *Marāṣid al-Ittilāʿ*, ed Juynboll, III 347, the reference is rather to Χαρσιανόν and in Barhebraeus (*Chron Syr*, ed Bedjan, p 319, cf Michael Syrus, III 307), the correct reading is "Torshenā" We should rather identify it with Chabot (Michael Syrus, index, p 43*) with Kersen on the Nahr ʿAfrīn (cf M Hartmann, *Zeitschr Gesellsch f Erdk Berlin*, XXIX, 1894, p 522, N° 47, Lammens, *M F O Beyrouth*, II, p 383, note 2, in the *Sāl-nāme* of Halab of 1286 [1869—1870] Kersentāsh)

The modern wilāyet (formerly sandjak) of Marʿash consists of four kazās

Zaitūn, north of Marʿash, scene of the Armenian rising against Turkey in 1894—1895, noted for its rich iron mines (Aghassi, *Zeitoun*, Paris 1897, Anatolio Latino, *Gli Armeni e Zeitun*, Florence 1897)

Albistān [q v], also north of Marʿash,

Andarīn, west of the town and the Djaihān (not to be confused with Anderīn in the Syrian steppes), the capital of the kazā is Keban (Arm Ghaban), the capital of Ieo of Little Armenia

Pāzārdjīk, between Marʿash and ʿAintāb, the capital is Baghdīn

(HONIGMANN)

AI **MARʿASHĪ** [See SHUSHTARĪ]

MARĀṬHĀ, commonly mis-spelt in Hindī and in Indian Persian Marhatta, is the name of a people of Western India inhabiting Mahārāshtra, the country lying to the east of the Western Ghāts between the seventeenth and the twenty-first parallels of north latitude and extending at one point as far east as the seventy-ninth degree of east longitude The Marāthā *caste* is an agricultural caste, of common origin and nearly identical with the great Kunbi caste, but sometimes claiming a Kshatriya descent The Marāthās served in the armies of the Muslim Kingdoms of Southern India, and there gained military experience, but their opportunity came with the decline of the power of the Mughal Empire in the seventeenth century, when their national hero, Shiwadjī Bhonsla, converted the peasant population of Mahārāshtra into a military nation Shiwadjī was born at Shiwner, near Djunnār, in 1627 and while his father was conquering a great part of the Carnatic for Bidjāpūr obtained possession of many hill forts in the Western Ghāts The Sultān of Bidjāpūr was unable to subdue him, and in 1659 he slew Afdal Khān, commander of the army of Bidjāpūr, at a friendly conference In 1664 he sacked the city of Sūrat, and was obliged to contend with an imperial army sent by Awrangzīb to punish him In 1666 he was induced to pay homage to the emperor at Dihlī, but was so disgusted by his reception that he escaped, and, returning to the Deccan, extended his authority there until, in 1674, he assumed the title of Rādjā, and was enthroned at Raygarh He gained possession of the giants of lands in the Carnatic which his father had received from Bidjāpūr, and died in 1680 His eldest son and successor, Sambhādjī, fell into the hands of Awrangzīb, who put him to death, but preserved his infant son Shāhū, whom he retained at his court, and Rādjā Rām, Shiwadjī's younger son, became the ruler of the Marāthās, now a nation On the death of Awrangzīb in 1707 Shāhū was liberated, and mounted the throne of his grandfather, but was never more than a puppet-king, and left all business of state to his Brāhman minister, or Pishwā, Bāladjī Wishwanāth, who reduced his sovereign to the condition of a state prisoner and founded the dynasty of the Pishwās He led an army to Dihlī and extorted from an effete government recognition of the Marāthā state and the right to levy *chauth*, or one quarter of the revenue, throughout the Deccan In the time of his two successors, Bādjī Rāo I (1720—1740), and Balādjī Rāo (1740–1761), the Marāthās conquered Gudjarāt, Mālwa, Berār, Gondwāna, and Orīsa, and raided the Carnatic, Bengal, and the Pandjāb They seemed to be on the point of superseding the Mughal power in India when Ahmad Shāh Abdālī or Durrānī [q v] crushed them at the battle of Pānīpat in 1761 The Marāthā power survived, however, in the hands of the Pīshwā's generals, Sindhya in Gwāliyār, Bhonsla in Nāgpūr, Holkar in Indūr, and Gaekwār in Gudjarāt The dynasty of the Pishwās survived at Pūna, and a disputed succession in 1775 tempted the Bombay Government to intervene In 1778 the Marāthās surrounded the Bombay army near Pūna and compelled its leader to sign a humiliating convention, but an army sent from Bengal by Warren Hastings humbled Gāekwār and the Pīshwā, and another force defeated Sindhya and captured Gwāliyār Peace was restored on terms favourable to the Marāthās, but their confederacy was much weakened In 1802 Bādjī Rāo II, who had fled from Pūna, took refuge with the Government of Bombay and entered into a subsidiary alliance with the Government of India He was reinstated in Pūna by

Major General Arthur Wellesley, but Sindhya, Bhonsla and Holkar, resenting the Pīshwā's subservience to the British, took up arms, and the third Marāthā War began In the Deccan Arthur Wellesley captured Ahmadnagar, won the decisive victories of Assaye and Argāon, and stormed the strong fortress of Gāwīl In Hindūstān General Lake defeated Sindhya's army at Laswārī, and occupied Dihlī Bhonsla lost Urisa and Berār, Sindhya his possessions in the Dūāb and his guardianship of the emperor, and Holkar was humbled, but after the peace the freebooters known as the Pindārīs, whom the Marāthās had employed, continued to ravage states under British protection, and even British territory, and when in 1817, the Marquess of Hastings concentrated troops to deal with these marauders, the Pishwā, Bhonsla, and Holkar rose against the British Residents at their courts The first was defeated at Khirkī, and the second at Sitabaldī, and the army of the third was destroyed at Mahidpūr The dominions of the Pīshwā were forfeited and annexed to the Bombay Presidency, and Holkar and Bhonsla lost much territory Bhonsla died in 1853, and his dominions lapsed, in default of male issue, to the British Government The dethroned Pīshwā also lived until 1853, and his adopted son, Dhondū Pant, was the Nānā Sāhib of the Indian Mutiny Three great Marāthā states remain to this day those of Sindhya in Gwāliyār, Holkar in Indūr, and Gāekwār in Gudjarāt, but not one of them is in Mahārāshtra

MARDAITES These are the Djarādjima [q v] singular Djurdjumānī, of the Arabs they are sometimes confused with the *Djarāmika*, singular Djarmakānī, so called from the name of their town Djurdjūma They occupied the rugged regions of the Amanus and of the Taurus, separating Syria from Cilicia, as well as the marshy districts of Antiochene [see BŪKA] They enjoyed a semi-independence nominally under the Byzantines to whom they furnished recruits and irregular troops When the Arabs seized Antioch the Mardaites agreed to serve them as auxiliaries and scouts and in this capacity to watch the passes, the "Pulai" of the Amanus In the small forts built on the heights beside the defiles, commanding, the entrance to or the exit from Syria, they, in conjunction with the Arabs, supplied the garrisons Exempt from the poll tax, they obtained the right to spoil on the field of battle They were in every sense of the word irregulars, living by war and by raids and asking only to fight for whoever paid for their services, half-nomads, they came and went again like a flash Very lukewarm Christian Monothelites or Monophysites — we do not know exactly — their loyalty either to the Byzantines or to the Muslims was quite intermittent "Sometimes", says Balādhurī, "they obeyed our officials, at other times they betrayed us for the benefit of the Greeks" The precarious nature of the Arab conquest in the North of Syria — a varying frontier region continually devastated by the Muslims and by the Byzantines — and the difficulty of gaining access to the land of the Mardaites, made it impossible to chastise such fickle allies

Towards the year 46 (666) the Greek Emperor succeeded in sending them against Syria This was not a raid of the type usual to the mountaineers of the Amanus, but a regular invasion supported by a few squadrons of cavalry and led by officers of the Imperial army, their bands penetrated into the heart of the Lebanon and occupied its chief strategical points as far as Palestine The natives, discontented with Arab rule and also the thousands of slaves whom the Muslim conquests on land and on sea had collected in Syria, hastened in a body to take refuge with the invaders The highlanders of this country, who had kept their independence, also threw in their lot with the Mardaites At all costs the Omayyad government had to put an end to this dangerous movement, limit the extent of the invasion and to make sure at once of the neutrality of Byzantium who had let loose this hurricane Not for a moment did Muʿāwiya hesitate to subscribe to the onerous terms of the Emperor — an annual tribute of 3,000 pieces of gold, the liberation of 8,000 prisoners, the delivery of 50 thorough-bred horses In return the Emperor agreed to withdraw from the Mardaites his support in men, arms and money There is, however, no evidence that these adventurers definitely evacuated from that time their strong positions in the heart of the Syrian mountains The neutrality of the Empire, the partial checks sustained by them and finally the establishment on the border of the Mardaite territory of a strong colony of Zutt [q v] reduced for the moment to inaction the Djarādjima, abandoned by the Byzantines

A quarter of a century later, they once more attracted attention This was under ʿAbd al Malik, who was engaged in an interminable war with the anti Caliph Ibn al Zubair and was taken by surprise by the sudden rising of the Omayyad ʿAmr al Ashdak [q v] in the year 69—70 A H (688—689) The Emperor Justinian II took advantage of these difficulties to let the Mardaites once more loose against Syria The result was a repetition of the movement in the reign of Muʿāwiya I Byzantium furnished them with subsidies and with arms At the same time he sent the army of Anatolia to advance and support the irregulars In the same manner as in the first invasion their ranks were swollen by the accession of thousands of slaves, fugitives and malcontents, amongst whom one could probably reckon the Maronites [cf LEBANON] Taken unawares, ʿAbd al-Malik at once followed the policy of Muʿāwiya The Emperor increased his demands In addition to the conditions previously agreed to by the Sufyānid Caliph, the Arabs were forced to abandon to the Byzantines half the tribute of Cyprus, of Armenia and of Iberia In return for this, Justinian agreed to withdraw the Mardaites The majority of the invaders agreed to evacuate Syria One of their chiefs, who persisted in continuing the war on his own account in the mountainous massif in the districts of Homs and of Damascus, perished treacherously assassinated by a partisan of the Caliph A few Mardaite bands remained in the country, where we find them again still feared

and handled carefully in the caliphate of Walīd I

Entrenched in the Amanus, protected by the great marshes and the lake region of ʿUmk in Antiochene, the Djarādjima lived in practical independence of the Empire and of the Caliphate They chose their masters and their rulers at their own convenience At the same time some of them were quite ready to put their swords at the service of the Arabs Amongst these must be named a leader of a band called Maiūma or Maimūn He with his contingent (about a thousand men, probably all Mardaites like himself) perished at the siege of Tyane His compatriots in the Amanus seem to have wished to profit by the death of ʿAbd al-Malik to renew their raids upon the Syrian provinces Maslama, the son of the Caliph, resolved to put an end to these rebels He penetrated into their country, laid siege to their capital Djurdjūma, and forced it to capitulate Thousands of Mardaites perished in this campaign To the remainder he granted the right to retain their Christian faith, to serve in the Muslim armies, in fact he gave them the same terms as were obtained by their ancestors at the beginning of the Arab conquest After this severe lesson the Mardaite peril, which had been the cause of incessant trouble during the reign of the preceding caliphs, was practically at an end The people of Antiochene saw emigration begin to thin their ranks, many of them having decided to emigrate to Anatolia or to enter the service of the Emperor This resolution, however, did not prevent the Mardaites, who remained in Syria, from fighting under the flag of the Caliph We still find them in the reign of Yazīd II when they co-operated with the Syrian army in the suppression of the troubles in the ʿIrāk

MARDĀWIDJ b Ziyār, Abu 'l Hadjdjādj, the founder of the Ziyārid dynasty, was descended on his father's side from the rulers of Gīlān and on his mother's side from the Ispahbads of Rūyān He had taken service under the ʿAlid rulers of Ṭabaristān and was a captain in the army under Asfār b Shīrawaihi In 316 (928) Mardāwidj slew Saiyid Abū Muhammad Hasan al-Dāʿī, and shortly after that rebelled against Asfār, made himself independent at Zandjān which he held in *djāgīr* and captured Kazwīn He then defeated Asfār, forced him to fly to Ṭabas in Kuhistān and put him to death in 319 when he was attempting to reach the castle of Alamūt [q v]

Mardāwidj thus became master of Raiy and Tabaristān He then defeated Mākān [q v] and annexed Tabaristān Mākān attempted twice to capture Ṭabaristān, with the help of powerful allies, but Mardāwidj defeated him on each occasion and forced him to take refuge in Khurāsān At this time (319 = 931) ʿAlī, Hasan and Ahmad, the three sons of Buwaih, who were commanders of the army of Mākān, deserted to Mardāwidj who conferred on ʿAlī the eldest the governorship of the province of Karadj

Having consolidated his power over Ṭabaristān and Gurgān, Mardāwidj next turned his attention to Djibāl, defeated Hārūn b Gharīb the governor, in the neighbourhood of Hamadān in 319 (931) and conquered the whole of Djibāl up to the confines of Hulwān In the following year Muktadir, the Caliph, formally recognised him as ruler of the provinces which he had conquered on condition that he evacuated Isfahān, but as Muktadir was assassinated shortly after this Mardāwidj evaded compliance About this time ʿAlī b Buwaih, the governor of Karadj, rebelled and took possession of Isfahān Mardāwidj sent his brother Washmgīr against ʿAlī who abandoned Isfahān and retired to Arradjān To deal more efficiently with ʿAlī, Mardāwidj made an alliance of friendship with Yāḳūt, governor of Shīrāz, marched to Isfahān and threatened to take the field against ʿAlī ʿAlī now offered submission and, as a guarantee of good faith, sent his brother Hasan as a hostage to Mardāwidj

In 322 (934) the Caliph Kāhir confirmed Mardāwidj in his government on the condition of his evacuating Isfahān Mardāwidj obeyed and sent instructions to his brother Washmgīr, the governor of Isfahān, to deliver the province to the Caliph's agent, Muzaffar b Yākūt, but as Kāhir was deposed shortly after this in Djumādā I of the same year (April–May 934 A D) Mardāwidj again evaded compliance

In Ṣafar 323 (Jan 935) Mardāwidj was assassinated by his Turkish slaves at Isfahān He was loved by his soldiers, who, it is stated, carried his coffin on their shoulders all the way to Raiy for burial Mardāwidj was a man of high ambition and had drawn up a plan for the conquest of Baghdād and the restoration of the Persian Empire in his own person, but he was murdered before he could carry out this scheme

MĀRDĪN (written Māridīn in Arabic, in Syriac Marde), a town in upper Mesopotamia (Diyār Rabiʿa)

Position In Upper Mesopotamia, the watershed between the Tigris and Euphrates is formed by the heights which culminate in Karadja dagh (5,000 feet) S W of Diyār-bakr This basalt massif is continued eastwards in the direction of Djazīrat Ibn ʿOmar by the limestone chain known in ancient times as Masius and later as Izala (Ἰζαλᾶς) The eastern part of this ridge forms the district of Djabal-Tūr or Tūr ʿAbdīn [q v] the capital of which is Midyāt From the southern slopes of the Masius descend numerous watercourses, the majority of which join one another before flowing between the mountains of ʿAbd al-ʿAzīz (in the west) and Tell-Kawkab and Sindjār (in the east), their combined waters form the river Khābūr [q v]

Māidīn lies near the point where there is an easy pass through the Masius from the lands south of the Tigris [the rivers Gok su and Shaikhān] to the lands round the sources of the Khābūr [the stream called Zuwārak which rises north of Mārdīn], in other words Mārdīn commands the Diyār bakr–Nisībīn road (which then turns towards Djazīra b ʿOmar and Mawsil) On the other side towards the west several (Ritter, xi 356, gives three) direct roads connect Mārdīn via Urfa with Bīredjik (on the Euphrates), to the S W a road runs from Māidīn to Raʾs al-ʿAin (there is now a railway) and to Harrān The direct distances are as follows Mārdīn–Diyāi-bakr 55 miles, Mārdīn–Nisībīn 30 miles, Mārdīn–Sawur–Midyāt 75 miles, Mārdīn–Bīredjik 160 miles, Māidīn–Adana (by rail) 450 miles

The advantages of this position at the intersection of important roads are enhanced by the very strong natural situation of the town, built at a height of 4,000 feet on an isolated eminence on the top of which is a fort 300 feet above the town (cf the sketch in Černik, pl ii, N⁰ 17) Buckingham compares its position with that of Quito in South America All travellers (cf Ibn Hawkal, p 152) have been struck by the unique spectacle of the vast Mesopotamian plain which from the height of the town is seen to stretch southwards as far as the eye can see Only a hundred years ago Mārdīn was still considered impregnable, but the difficulty of access sensibly affected its commerce According to Černik loaded camels could not ascend right up to the town A branch line 15 miles in length now connects Mārdīn with the station of Darbaziya on the "Baghdād" railway, but the station for Mārdīn is five miles from the town

Ancient History It is noteworthy that in spite of its remarkable situation Mārdīn does not seem to be mentioned in the cuneiform sources Ammianus Marcellinus (xix 9, 4) is the first to mention two fortresses „Marde and Lorne" between which the road passed from Āmid (Diyār-bakr) to Nisibīn Theophanes Simokatta (ii 2, 19) mentions τοῦ Μάρδιος φρουρά and (v 3, 17) το Μάρδες 3 parasangs from Dārā Procopius, *De Aedificiis*, (ii 4) mentions Σμάργδις (or Σμάρδις) and Λούρνης and Georgius Cyprius, ed Gelzer, 1820, p 46 Μάρδης Λόρνης

The name Μάρδη in Ptolemy, vi 1, however refers to another place in Assyria to the east of the Tigris

Muslim Conquest The Muslims under ʿIyād b Ghanm occupied the fortress of Mārdīn along with Tūr ʿAbdīn and Dārā in 19 (640) (Balādhurī, p 176) In 133 Māidīn is mentioned in connection with a rebellion in Upper Mesopotamia The town formed part of the possessions of Buraika chief of the Rabīʿa who was defeated by the ʿAbbāsid Abū Dja'far (Tabarī, iii 53) In 279, Ahmad b ʿIsā took Mārdīn from Muhammad b Ishāk b Kandādj (*ibid*, iii 2134) Hamdān b Hamdūn after his accession in 260 (873) seized Mārdīn In 281 the caliph Muʿtadid marched on the town Hamdān fled and left Mārdīn to his son The latter surrendered the fortress which was dismantled (*ibid*, iii 2142) The "grey fortress" (*al-būr al-ashhab*) was later restored, for Ibn Hawkal (in 366) attributes its erection to the Hamdān b al-Hasan Nāsir al Dawla b ʿAbd Allāh b Hamdān On the death of his father in 358, Hamdān was dispossessed by his brother Fadl Allāh Abū Taghlib By the peace of 363, concluded between the Būyid Bakhtiyār and Abū Taghlib, Hamdān recovered his possessions with the exception of Mārdīn (Ibn Miskawaih, ed Amedroz, ii 254 and 319)

The Arab geographers give few details about Mārdīn but they emphasise its importance According to Ibn al-Fakih, p 132, 136, the *kharādj* of Mārdīn was equal to that of Maiyafarikīn (865,000 dirhams) Istakhrī, p 76k, says that it is a large town on the summit of a peak the ascent of which is a farsakh in length, Dunaisar [q v] was one of its dependencies Ibn Hawkal, p 143, gives the ascent at two farsakhs The quarter of Mārdīn itself was flourishing, thickly populated with large markets The water supply was brought by subterranean canals from the springs to the town The rain-water was also collected in cisterns (*ṣahārīdj wa-birak*) Yākūt, iv 390 (cf al-Kazwīnī, p 172), speaks of the splendour of the quarters outside Māidīn (i e below the town itself) and its many *madrasas*, *khānakāhs* etc , as to the *kaʿla* there was nowhere in the world so strong a defence, its dwelling-houses rose in terraces one above the other

The Marwānids and the Saldjuks It is probable that Mārdīn was within the sphere of influence of the Marwānids, for according to their historian (cf Amedroz, *J R A S*, 1904), their ancestor Bādh (d 380 = 990) had extended his power over Diyār Rabiʿa (Nisībīn, Tūr ʿAbdīn) The Saldjuks ruled there next After the death of Malikshāh, Tutush b Alp Arslān seized for a time all the lands as far as Nisibīn Under Barkiyaruk Mārdīn was given to his old baid (*mughanni*)

The Ortokids At this time arose the dynasty whose fortunes are especially associated with Mārdīn The son (or grandson?) of Ortok called Yākūti took by stratagem the fortress in which he had been imprisoned but it was taken from him by his brother Sukmān b Ortok who died in 498 In 502 we find at Mārdīn Il ghāzī b Ortok (Ibn al Athīr, x 269, 321) whose line ruled there till 811 (1408) [cf the art ORTOKIDS] (On their coins struck at Mārdīn in 599, 600, 634, 637, 648, 655, 656 etc, cf Ghālib Edhem, *Catalogue des monnaies turcomanes*, Constantinople 1894 and S I ane Poole, *Catalogue of Oriental Coins in the British Museum*, vol iii and x [Index, s v Maridin])

In 579 (1183) Saladin came to Harzam (6 miles S W of Mārdīn) but was unable to take the town In 594 Malik ʿĀdil b Aiyūb seized the outer suburb which was pillaged but the siege of the town itself was abandoned in the following year In 599, ʿĀdil sent against Mārdīn his son al-Ashraf who appointed governors (*shahna*) in its dependencies The Aiyūbid of Aleppo al-Zāhir b Salah al-Dīn offered his good offices and ʿĀdil was content with an indemnity of 150,000 dinars and the acknowledgment of his suzerainty by the Ortokid of Mārdīn (cf Abu 'l Faradj, ed Pococke, p 412, 425, 427)

The Mongols In 657 the Mongol Hūlāgū Khān demanded the homage of the prince of Mārdīn, Nadjm al-Dīn Ghāzī Saʿid, who sent his son Muzaffar to him but maintained a neutral attitude In 658 the town was besieged for 8 months by the troops of Yashmut, son of Hūlāgū Famine and an epidemic raged in the town Ac-

cording to Rashīd al-Dīn (ed Quatremère, p 375), Muzaffar killed his father in order to put an end to the sufferings of the inhabitants (Abu 'l-Faradj and Wassāf give different versions, cf d'Ohsson, iii 308, 358) Muzaffar was confirmed as lord of Mārdīn, his descendants also received from the Mongols the insignia of royalty (crown and parasol) In the reign of Ṣālih b Mansūr (769 = 1367) whose sister Dunyā Khātūn was the wife of the Ilkhān Khudābanda, Ibn Battūta (ii 142–145) visited Mārdīn

Tīmūr The Ortokid Sultān ʿĪsā (778—809) was king of Mardīn at the invasion of Tīmūr in 796 Sultān ʿĪsā came to pay his homage to the conqueror but the citizens attacked those of Tīmūr's men who ventured into the town Malik ʿĪsā was put in chains and taken to Sultānīya (*Zafar-nāma*, i 663, 671—672) In April 1404, Tīmūr returned to the attack and the town was taken by storm Then the siege of the upper fortress (*al kalʿat al-shahbā*) was begun but it was never taken Tīmūr was content with presents and promises of *kharādj* and returned to the plain (*ibid*, i 676—679) The people of Mārdīn obtained an amnesty on the birth of Ulūgh-beg Sultān Ṣālih was appointed at Mārdīn in place of his brother, Sultān ʿĪsā (*ibid*, i 676—681), but three years afterwards the latter was pardoned and restored to his fief (*ibid*, i 787) When in 803 Tīmūr reappeared in Mesopotamia, Sultān ʿĪsā shut himself up in Mārdīn As the siege would have taken some time and supplies were short, Tīmūr did not stop before the town but ordered Kara ʿOthmān Ak-Koyunlu to besiege Mārdīn (*ibid*, ii 354)

The Ak Koyunlu This was the beginning of Aḳ-Koyunlu interference in Mārdīn but Kara ʿOthmān's forces were not yet equal to this task In 805, Sultān ʿĪsā came of his own accord to Tīmūr and was pardoned (*ibid*, ii 512)

For a brief period the Kara-Koyunlu tried to resist the extension of the power of the Ak-Koyunlu to Mārdīn When, after the death of Tīmūr, Kara Yūsuf left Egypt to re-enter into possession of his territory he joined Sultān ʿĪsā and advanced against Kara ʿOthmān The battle lasted 20 days and was settled by agreement As soon as Kara Yūsuf had left for Ādharbāidjān, Kara ʿOthmān returned to the attack, defeated Sultān ʿĪsā near Djawsak (there is a Djawsat 10 miles W of Mārdīn on the road from Derek) and besieged Mārdīn, but once more without success (Munedjdjim-bashī, ii 685) It is not clear what connection these hostilities have with an expedition against Diyāi-bakr conducted by Djakīm or Djakūm (governor of Aleppo, a former Mamlūk of Barkuk's) in which Malik ʿĪsā took part In the battle which Muhammad (?) son of Kara-ilik [= Kara ʿOthmān] fought against the allies on the 15th Dhu 'l Kaʿda 809, Sultān ʿĪsā was slain (cf the Egyptian sources consulted by Rieu for Howorth, iii 685) Sultān Ṣālih succeeded a second time to Sultān ʿĪsā, but the Aḳ-Koyunlu continued to harass him and finally in 811 he ceded Mārdīn to the Kara-Koyunlu who gave him Mawṣil in exchange

We do not know the exact course of subsequent events but according to Munedjdjim-bashī, Kara ʿOthmān's successor ʿAlī Beg (832—842, cf Ahmed Tewhid, *Musée Imp Ottoman, Monn musulm*, part iv, Constantinople 1903) gave his brother Ḥamza the task of establishing the Turkomans in the vicinity of Mārdīn Djihāngīr (848—857), son of ʿAlī, was already master of the town In the reign of Uzun Hasan, Josaphat Barbaro visited Mārdīn and was lodged in the hostel (ospedale) built by Djihāngīr Beg (Ziangir) We have coins struck at Mārdīn by Uzun Hasan (875) and by his son Yaʿkūb After the death of Yaʿkūb ʿAlāʾ al Dawla, prince of the Dhu 'l-Kadar Turkomans, seized the land of Diyārbakr but, as the anonymous Venetian merchant shows, the Aḳ-Koyunlu retained Mārdīn In 903 (1498) Abu 'l-Muzaffar Kāsim b Djihāngīr dated his firman in the name of the prince of Egil from his capital (*dār al-saltāna*) Mārdīn, cf Bašagic, *Der älteste Firman der Cengic begs, Wissensch Mitt aus Bosnien*, vi, Vienna 1899, p 497 The coins of Kāsim come down to 908 The *takiya* of Kāsim padshāh which Niebuhr mentions must date from the same ruler

Persian Conquest In 913 (1507) all the lands as far as Malatya were conquered by Shāh Ismāʿil who appointed his general Ustadjlu Muhammad to it According to the Venetian merchant who travelled there in 1507 (*op cit*, p 149), Mārdīn was occupied without bloodshed The same traveller mentions the fine palaces and mosques of the town, there were more Armenians and Jews in Mārdīn than Muslims The battle of Čaldiran (914) shook the power of the Persians In place of Ustadjlu Muhammad killed at Čaldiran, his brother Kara-Khān was appointed and established his headquarters at Mārdīn Soon the Ottomans occupied Diyārbakr and then the town of Mārdīn, but the Persians who never lost the fortress restored the status quo

Ottoman conquest Finally in 922 (1516) Kara-Khān was defeated and slain in battle at Karghan dede near the old town of Koč-hisār, 10 miles S W of Mārdīn Persian domination in Upper Mesopotamia thus collapsed, but the fortress of Mārdīn still remained in the hands of Sulaimān Khān, brother of Kara-Khān The siege lasted a year and not till Bīyīklī Muhammad Pāshā arrived from Syria with reinforcements was it stormed and its valiant defenders put to the sword (*ʿĀlam ārā*, p 24, 32, this Persian source mentions Ölàng-i Fūrāk [?] in place of Koč hisār) (v Hammer, *G O R* 2, i 7367—40, quoting Abu 'l-Fadl, son of Hakīm Idrīs and continuer of his *Hasht-bihisht*).

In the Baghdād campaign of 941, Mārdīn was created a sandjak and included in the *eyālet* of Diyārbakr Ewliyā Čelebi, iv 59 gives Mārdīn 36 *ziʿāmet* and 465 timāriotes, Mārdīn could put in the field 1,060 armed men (*djebeli*) In the xviiith century Mārdīn became a dependency of the Pāshās of Baghdād, Otter (1737) found at Mārdīn a *voivoda* appointed by Ahmad Pāshā As late as the time of Kinneir (1810), Mārdīn was the frontier town of the pāshālīk of Baghdād and was governed by a *mutesallim* sent from Baghdād

The reforms of Mahmūd were badly received in Upper Mesopotamia In 1832 (Ainsworth) Mārdīn rebelled Power in Mārdīn had passed to the Kurd beys Southgate (1836) speaks of a hereditary (?) family who ruled in Mārdīn The two brothers of the "ruling bey" seized the power and refused to recognise the authority of the Porte (It may be asked if these beys were not of the Millī tribe, on their chiefs cf Buckingham, *op cit*, p 156) Rashīd Pāshā, the pacifier of Kurdistān, besieged the town and blew up the great mosque

(Ainsworth) Order was temporarily restored Considerable works were undertaken to improve the road giving access to the town Rashīd Pāshā died in January 1837 (Poujoulat) When the Egyptians invaded Syria, their partisan Timawī b Aiyūb of the Millī tribe seized Mārdīn (Sir Mark Sykes, *The Caliph's Last Heritage*, London 1915, p 320) but was killed The defeat of the Ottomans at Nizīb (June 1839) brought matters to a head The Porte entrusted Māidīn to Sa^{c}d Allāh Pāshā of Diyārbakr but the inhabitants preferred to submit to Ibrāhīm Pāshā of Mawsil who was opposed to the *tanzīmāt* This Pāshā appointed a governor to Mārdīn but the rebels still held the citadel (Ainswoith 1840) and the governor soon perished in a rising

By the "wilāyet law" of 1287 (1870) Mārdin became a sandjak of the wilāyet of Diyāibakr It had 5 kadās Māidīn, Nisībīn, Djazīra, Midiyāt and Āvine The area of the sandjak was 7,750 square miles and the number of towns and villages 1,062 The sandjak was mainly agricultural The town of Māidīn produced a small quantity of silk, wool and cotton, leather, shawls etc , but in spite of the excellence of the work these articles were mainly used for local consumption (Cuinet) By the reforms of 1921 Mārdin formed a wilāyet with 6 kadās, 1,018 towns and villages, and 125,809 inhabitants (*Turkiya Djemhuriyeti 1925—1926 Sāl nāmesi*) The *Sāl-nāme* of 1926—1927 made a number of changes There are now 8 kadās The area is 6,000 square miles with 6^{1}/$_{2}$ million *donum* of arable land

Kadā	Number of towns and villages	Corresponding Nāhiyas
Central	147	Koč hisār
Sawur (^{c}Awniya)	113	^{c}Ómerkān
Nisībīn	114	Hubāb Ālīyān (Dirūn)
Midiyāt	134	Kerbūrān Djezbīnī Bā djurīn Hasan keif
Ra's al-^{c}Ain	9	
Dīrek	138	Mahall i Matīnān (Shamrakh)
Djezre	211	Slūbī
Ker-djōs	98	
	922	

The wilāyet now marches with the zone of the French mandate

Population Niebuhr (1766) counted 3,000 houses in Mārdīn (of which 1,000 were Christian) with 60,000 inhabitants Dupré (1808) estimated the population at 27,000 of whom 20,000 were Turks (i e Muslims), 3,200 Jacobites, 2,000 Armenians and 800 Shamsīya The statements of other travellers are as follows Kinneir (1814) 11,000 of whom 1,500 were Armenians, Southgate (1837) 3,000 of whom 1,700 were Muslims, 500 Armenian Catholics, 400 Jacobites, 250 Syrian Catholics, 100 Chaldaeans, Muhlbach (1838) 12—15,000 inhabitants, Sachau (1879) 20,000, Cuinet (1891) 25,000 of whom 15,700 are Muslims

According to Southgate, Arabic and Kurdish are the predominating languages in the town The rural population of Tūr ^{c}Abdīn speaks the "Tōrānī" dialect of Aramaic, cf Prym and Socin, *Der neuaramaische Dialect des Tūr ^{c}Abdīn*, Gottingen 1881, on the Kurd dialect cf Makas, *Kurdische Texte aus der Gegend Mardin*, Leningrad 1924

Among the religion sects of Mārdin the Shamsīya would merit a special study In the time of Niebuhr (1766) there were about a hundred families in the town, and Buckingham (*op cit*, p 192) and Southgate (1837) also mention them The Shamsīya probably represent the last survivors of a local pagan cult Towards the middle of the xviiith century they were led to declare themselves Jacobite Christians but only formally (cf Ritter, xi, p 303—305)

Christianity at Mārdīn The district of Mārdīn has played an exceptionally important part in the development of Eastern christianity A brilliant period of the Nestorian church which begins in 755 is closely associated with Mārdīn Towards the end of the eighth century numerous monasteries were established round the town by the bishop John of Māidin In 1171 the Jacobite patriarchate was transferred from Diyāibakr (Āmid) to Mārdīn In 1207 it was moved to Deir Za^{c}farān, an hour's journey from Māidīn, to return to Mārdīn in 1555 (Assemani, *Bibl Orient*, ii 110, 221, 470, Wright, *A short Hist of Syriac Literature*, 1891 [Index] On the position of the Christians before 1914 cf the works of Southgate, Parry, Cuinet etc)

Antiquities According to Niebuhr, there are many Arabic inscriptions at Mārdīn Those of the Ortokids have been studied by ^{c}Alī Emirī Efendī who also examined the *wakf* documents relating to the principal buildings of this dynasty at Māidīn (cf Kātib Ferdī [944], *Mārdin Mulūk i Urtukiye Tarikhī*, ed and annot by ^{c}Alī Emīrī, Stambul 1331) For the list of buildings cf the article ORTOKIDS The monuments of Mārdīn which must be of considerable artistic interest have never been described in detail Buckingham (p 191) gives a few details about the minaret of the "great mosque" (a cylinder decorated with carved arches, on a square base, etc , a stone gallery with a pointed roof on the top) i e the Mosque of Nadjm al-Dīn Alpī built in 568—572, but the buildings have never been studied We do not know if the *madrasa* of Kāsim Pādshāh Ak-Koyunlu (Niebuhr) is still in existence The domes of the mosques of Mārdin are "ribbed and guttered", their vertical ribs radiating from the summit

MARDJ DĀBIK, a battlefield near Dābik [q v] on the Nahr al Kuwaik in northern Syria On the history of the town of Dabik, which was known to the Assyrians as *Dabigu* (Sachau, *Z A*, XII 47) and is called Δάβεκον by Theophanes (*Chron*, ed de Boor, p 431, 451 *sq*) cf above vol I, DĀBIK

For convenience in his campaigns against the Byzantines, Sulaimān b ʿAbd al-Malik moved the headquarters of the Syrian troops from Djābiya to Dābik (Lammens, supra I, DJĀBIYA) In 717 with an army under ʿUbaida he set out from Mardj Dābik for Asia Minor and on his return died there in Safar of the same year (al Masʿūdī, *Murūdj al-Dhahab*, ed Paris, V 397, *Chronica Minora*, ed Guidi, in *C S C O*, *Scr Syri*, ser III, vol IV, text, p 234, transl, p 177) Hārūn al Rashid also encamped in 807 A D there (Syr *Margā Dābek*) and composed the differences between the Syrian bishops (Michael Syrus, *Chron*, ed Chabot, III 19, Barhebraeus, *Chron Eccles*, ed Abbeloos-Lamy, I 339) The Mirdāsid Mahmūd in Radjab 457 (1064—1065) defeated his uncle ʿAtīya on the field of Dābik and then took Halab (Kamāl al-Dīn, *Zubda*, transl J J Muller, *Historia Meidasidar*, Bonn 1829, p 59)

When in 491 (1098) the Franks conquered Antākiya, Kerbōgha of Mawsil assembled a large army on Mardj Dābik, with which he laid siege to Antākiya (Ibn al-Athīr, ed Tornberg, X 188, Abu 'l-Fidā', Kamāl al Dīn etc, in *Rec hist or crois*, I 3, 194, III 580) In the spring of 513 (1119) Ilghāzī on his campaign against the Franks crossed the Euphrates at Baddayā (now Beddāi on Sachau's map) and Sandja and advanced via Tell Bāshir [q v], Tell Khālid, Mardj Dābik and Muslimiya against Kinnasrīn (Kamāl al-Dīn, in *Rec hist or crois*, III 616) In the beginning of September 1124 Dubais b Sadaka was defeated by Husām al-Dīn Timūrtāsh on the field of Dābik *Rec hist or crois*, V 645) On his campaign against Leo II of Little Armenia, al-Malik al-Zāhir encamped in 602 (1305—1306) on Mardj Dabik (*Rec hist or crois*, V 155) On Saif al Dīn Tunguz's campaign against the Tatars to Malatya [q v] in which Abu 'l-Fidā' of Hamā took part, a halt was made on the way back on the field of Dābik from the 3rd Safar to the 2nd Rabīʿ II 715 (May 9—July 6, 1315) (Abu 'l Fidā', *Rec hist or crois*, I 3)

On the 25th Radjab 922 (Aug 24, 1516) was fought at Mardj Dābik the battle which gave Selim I a decisive victory by which Syria passed for the next four centuries under Ottoman rule (H Jansky, *Mitteil z osman Geschichte*, II, 1923—1926, p 214—224)

MARDJ RĀHIT, the name of a plain near Damascus On leaving Damascus in the direction of Homs, just before crossing the pass of the Eagle, *al-ʿUkāb*, one reaches the village of Maidj ʿAdhrā To the east of this place stretches the plain, Mardj Rāhit, which extends as far as the desert It was here and not in the "Hochebene von Qutaife" (B Moritz) that the fate of the Omaiyads after the death of Muʿāwiya II was settled This decisive battle since it was fought in the neighbourhood of Mardj ʿAdhrā was named by the poet al-Rāʿī after this place With greater exactitude the contemporary poet al-Akhtal, who was more cognisant with Omaiyad history, places this battle "between the ʿUkāb and Rāhit" namely in "the vast plain of Mardj" mentioned by the poets (*Aghānī*, XVII 112)

During the discussions of the congress of Djābiya [q v] the concentration of the Kaisī forces was taking place under the command of Dahhāk b Kais [q v] supported by the Yemen contingent and the Kudāʿī malcontents to the south-east of Damascus Their total — which has probably been exaggerated — has been placed at 30,000 Marwān b al-Hakam had at his command eight or ten thousand combatants, the majority of whom were Kalbī The Kaisīs seem to have taken up their position first at Mardj al-Suffar [q v] to the north of Djābiya After an engagement in this place had ended to their disadvantage, they were forced to double back to the north In the meantime a sudden attack launched against Damascus which was depleted of troops, had delivered into the hands of the Omaiyad supporters the treasury and the arsenals of this town The Kaisis in order to avoid being caught between the capital and the Kalbi army advancing from Djābiya retreated, while harassed at close quarters by their adversaries These engagements occupied nearly twenty days On arriving on the heights of Mardj Rahit, trapped between the defiles of ʿUkāb and the desert, they accepted battle One must ask how the Kalbīs succeeded in making up for their glaring inferiority in numbers Masʿūdī, without explaining further, speaks of a stratagem devised by Marwān This stratagem, which is mentioned by the author of

the *Ikd al farīd*, should be described not as a ruse of war but as a crime After the advantage gained at Mardj al-Suffar, the Omaiyads had had the time, and without doubt made use of it, to detach from the Kaisīs their temporary allies, the Yemenīs and the Kudāʿīs The treasure of the state seized at Damascus and the large amount of wealth brought from the ʿIrāk by the family of Ziyād b Abīhi may have been of assistance in doing this The Syrian Arabs, not at their ease in the camp of Dahhāk, no doubt understood how much the triumph of Ibn al Zubair would be prejudicial to their hitherto privileged position and to the hegemony wielded since the days of the Sufyānids by the Syrian tribes Their defection must, we think, have determined the issue of the engagement at Mardj Rāhit and hastened the triumph of the Omaiyad arms Whatever was the cause this victory was decisive (the middle of July 684) 3,000 Kaisīs are said to have been killed The death of Dahhāk seems to have been the signal of defeat, which became a regular disaster, in which the principal chiefs of Kais perished Flight alone saved the most prominent among them, Zufar b al Hariṯh [q v]

The memory of Mardj Rāhit was deeply impressed upon the Kaisīs It detached them *en bloc* from the Omaiyad cause Under the first two Marwānid caliphs, their battle-cry became "Vengeance for the victims of Rāhit" From this time a smile is said never to have appeared on the countenances of the surviving chiefs Between them and their ancient rivals of Kalb the split became much deeper The latter's songs of victory answered the cries of rage of the Kaisis In celebrating the battle of Rāhit the Kalbī poets give more emphasis to their triumph than to that of the Omaiyads Their compositions complacently develop this theme without regard to the Marwānids, their debtors rather than their sovereigns This great victory afforded the aged Marwān the opportunity of proclaiming himself as Caliph of Damascus before beginning the conquest of the old Sufyānid lands now under the authority of Ibn al-Zubair In the bosom of the Caliphate, it nourished the most dangerous rebellion, it inaugurated a savage war of extermination between Kalb and Kais The tribes of Kudāʿa first, then the Yemenis and lastly the Taghlib saw themselves in turn fatally involved These internal feuds in which the members of the Marwānid family had the imprudence to take part, to the satisfaction of their maternal connections, precipitated the fall of the Omaiyad dynasty by destroying the agreement and the unity amongst the Arab tribes, which had been but imperfectly realized by the Sufyānid Caliphs

Bibliography Yākūt, *Muʿdjam*, ed Wustenfeld, ii 743, iii 400, 625, al-Akhtal, *Diwān*, ed Salhani, p 23, 217, 224, Ibn Saʿd, *Tabakāt*, ed Sachau, v 29, Yaʿkūbī, ed Houtsma, ii 305, Masʿūdī, *Murūdj*, Paris, v 201, Ibn ʿAbdrabbihi, *al-ʿIkd al farīd*, ii 320—321, *Aghānī*, xvii 111, xx 124, 126, Abū Tammām, *Hamāsa*, ed Freytag, p 658, Buhturī, *Hamāsa*, ed Cheikho, Nrs 375, 376, 377, al Kutāmī, *Diwān*, ed J Barth, *Introduction*, p x—xi, Tabarī, ed de Goeje, ii 472—474, 477, 480, 482, 483, 485, 486, 643, Wellhausen, *Das arab Reich*, p 113—114, Noldeke, in *Z D M G*, 1901, p 687, Lammens, *L'avènement des Marwānides et le califat de Marwān Ier*, Bairūt 1927, p 57—75 (H LAMMENS)

MARDJ AL-ṢUFFAR, a plain situated 20 miles south of Damascus near the modern Tell Shaḳhab, a stream called the "Wādī ʿAirām" runs through it The place plays a part in the military history of the first century A H, first in the accounts of the Arab conquest of Syria, and later at the beginning of the Marwānid dynasty The name has been sometimes confused with that of Mardj Rahit [q v] For the history of Syria in the first century A H we are exclusively dependent upon the ʿIrāḳ annalists Forgetting that the name "Mardj" abounds in the topography of the Damascus region, writers have confused two distinct battles and made them one and referred them to Mardj Rāhit, a name which occurs frequently in the poets of the Marwānid period

At the close of the year 13 A H the Arabs, victorious at Fihl, endeavoured to reach Damascus by cutting across the Djawlān One of their bands, under the command of the Omaiyad Khālid b Saʿīd, encamped at Mardj al Suffar and allowed themselves to be taken by surprise by the Byzantine troops The Arab leader was killed and his contingent decimated But the arrival of Muslim reinforcements enabled them to regain the advantage The Greeks then proceeded to shut themselves in Damascus to which the Arabs at once laid siege

In the month of May 684 (64), supporters of the Omaiyads joined with Djabiya [q v] in order to elect a successor to Muʿāwiya II Dahhāk b Kais [q v], the leader of the rival section of the Zubairīs and the governor of Damascus, was invited to the conference He promised to come to the conclave and marched out of Damascus at the head of imposing forces But, having gone about half way on the road to Djābiya, on the heights of Mardj al Suffar, he determined to await events there The presence of water and of forage made it suitable for the encampment of an army An excellent point of observation, the site not only commanded the congress of Djābiya, but also commanded the road leading to Damascus Dahhāk brought about at this point the concentration of the Kaisīs of Syria, who were in revolt against the Omaiyads At Djābiya after 40 days' deliberation, the Kalbis and the Omaiyad partisans elected Marwān b al-Hakam [q v] to be Caliph Then in their advance upon Damascus, they attacked Dahhāk and the Kaisis encamped at Mardj al Suffar and succeeded in defeating them

Of this campaign the ʿIrāk annalists and their copyists have only recorded and have only desired to record the decisive battle, namely that of Mardj Rāhit, to the north of Damascus For a quarter of a century no mention is made of any battle between the Kaisīs and the Kalbis but Mardj Rāhit The extraordinary prominence given to this latter battle by the poets of both sides helped to throw into oblivion the preceding engagements commencing with that of Mardj al-Suffar Certain texts have however preserved its memory Yākūt (*Muʿdjam*, iii 400) locates in this place "a battle celebrated in the history and poetry of the Marwānid period" Otherwise there is no reference to Mardj al-Suffar in the military history of the younger branch of the Omaiyads As regards poetry it has kept for us the testimony of the Taghlibī poet, al Akhtal (*Diwān*, ed Salhani, p 224, v 1) This contemporary poet, who was a habitué of the Omaiyad court while praising the glorious deeds of his

tribe, claims for it "many victories even before Mardj al-Suffar" As we know that the Taghlibis fought in the ranks of the Omaiyads, for whom they showed themselves at all times strong partisans, the reference must be to this battle Moreover the manner in which al-Akhṭal praises this victory suggests that he was not dealing with a small skirmish

In the meanwhile an Omaiyad partisan residing at Damascus had seized the capital The position became untenable at Mardj al Suffar for the Kaisīs It was to avoid being caught between Damascus and the victorious Kalbīs that Dahhāk fell back precipitously to Mardj Rāhiṭ where he was defeated and killed On the 22nd June 684, the election of Marwān b al-Hakam was proclaimed at Djābiya It is probable then that the battle of Mardj al-Ṣuffar must be located in the early days of July

MAREA [See MARYĀ]

MARGHELAN, originally MARGHĪNĀN, a town in Farghāna [q v, where also the minor importance of the town in the IVth (Xth) century (*B G A*, III 272, 12 *saghīra*) and its rise in the centuries following are discussed (Samʿānī, *K al-Ansāb*, *G M S*, XX, f 522ᵛ *min mashāhir al-bilād*, Yākūt, IV 500, 8 *min ashhar al-bilād*)] The town does not seem to have been of political importance during this period, although coins were occasionally struck here under the dynasty of the Ilek-Khāns [q v] (A Markow, *Inventar'nïy Katalog musul manskikh monet Imp Ermitaza*, p 260, 265 and 272) Bābur (facs ed Beveridge, f 3ᵃ *sq*) gives a brief description of the town, the population at that time consisted of Sarts [q v] i e, according to the linguistic usage of the time, of Tādjik [q v], since then the Tādjik have been driven by the Özbegs here as everywhere out of the plain The more recent, probably Özbeg form Maghilān is found for example in ʿAbd al Karīm Bukhārī (ed Schefer, p 94) whence the Russian Margelan, the river on which the town stands is called Margelan Sai In literature the old form Marghīnān or Marghinān is still frequently used e g in the *Ta'rīkh Shāhrukhī*, ed Pantusow, p 195

Marghelan was occupied without resistance by the Russians on the 8/20th Sept 1875, New Margelan founded as the capital of Farghāna in 1877 by the Russians about 7 miles from Marghelan was called Skobelew from 1907 (since the Revolution Fergana) The original Marghelan was mainly noted for its silk industry, according to the census of 1897, the population was 36,490, in 1911 46,780 of whom only 144 were Russians A building which is certainly not ancient is called Iskandar Pasha and said to be the tomb of Alexander the Great (W Masal'skiy, *Turkestanskiy Krai*, Petersburg 1913, p 705 *sq*)

Bibliography given in the text (W BARTHOLD)

AL **MARGHĪNĀNĪ,** the name of two families of Hanafī lawyers, *nisba* from their native town and the scene of their activities Marghīnān in Farghana

1 The most important was BURHĀN AL DĪN ABU 'L HASAN ʿALĪ B ABĪ BAKR B ʿABD AL-DJALĪL AL FARGHĀNĪ AL MARGHĪNĀNI, the author of the celebrated *Hidāya* He acquired his knowledge on his travels, then still the usual way of studying in Islām His principal teachers were Nadjm al Dīn Abū Hafs ʿUmar b Muhammad b Ahmad al Nasafī († 537 = 1142—1143), al-Sadr al Shahīd Husām al-Dīn ʿOmar b ʿAbd al-ʿAzīz b ʿOmar b Māzah († 536 = 1141—1142) and Abū ʿAmr ʿOthmān b ʿAlī al Baikandī († 552 = 1157), a pupil of al-Sarakhsī He studied Tirmidhī's work on Tradition under Diyā' al-Dīn Abū Muhammad Sā'id b As'ad with the *isnād* given in Kurashī, I 259, N° 679 and also with al-Hasan b ʿAlī al-Marghinanī (Kurashī, I 198, N° 487) He himself as was often done at this time, wrote a record of his studies but it does not appear to have survived He far surpassed his teachers and won recognition in his native town also where he died in 593 (1197) Of his works the following are known, some surviving in manuscript and others only known from literary references 1 *Nashr al Madhhab* (Kut, Lak, in Hādjdjī Khalīfa, N° 13790 probably wrongly *al Madhāhib*), 2 *K Manāsik al Hadjdj* (Kut, Lak, H Kh, N° 12943), 3 *K fi 'l-Farā'id* (Kur, Lak), also called *Farā'id al-ʿOthmānī* (H Kh, N° 8989), 4 two collections of fetwas *K al-Tadjnīs wa 'l-Mazīd* (Kutl, Lak, H Kh, N° 2467, MSS in Brockelmann) and 5 *Mukhtārāt al Nawāzil* (Lak, in Kutl called *K Mukhtār Madjmūʿ al-Nawāzil* and in H Kh, N° 11586 called *Muḥtār al-Fatāwā*, MSS in Brockelmann), 6 *Mazīd fi Furūʿ al-Hanafiya* (H Kh, N° 11838, identical with N° 4 ?), 7 a commentary on al Shaibānī's *al-Djāmiʿ al Kabir* (H Kh, II 567), 8 his principal work is the legal compendium *K Bidāyat al-Mubtadī* (MSS in Brockelmann), based on Kudūrī's *Mukhtasar* and Shaibānī's *al-Djāmiʿ al-Saghīr* On this work he himself wrote a large commentary in 8 volumes the *Kifāyat al-Muntahā* But before he had completed it, he thought it was much too diffuse and decided to write a second commentary, the celebrated *Hidāya* which later writers repeatedly edited and annotated The most important commentaries and synopses are given in the table on p 280

For the manscripts and printed texts of these commentaries and synopses and many supercommentaries and glosses see Brockelmann, *G A L*, I 376, a printed edition of the *Hidāya* recently appeared in 4 vols, Cairo 1326

Bibliography al-Kurashī, *al Djawāhir al Mudī'a*, Haidarābād 1332, I 383, N° 1058, ʿAbd al-Hayy al-Laknawī, *al Fawā'id al-Bahiya*, Cairo 1324, p 141 *sqq* (synopsis of the *Tabakāt* of Kafawī), Ibn Kutlūbughā, *Tādj al-Tarādjim*, ed Flugel, Leipzig 1862, N° 124, Brockelmann, *G A L*, I 376 and the literature there given His sons and pupils were

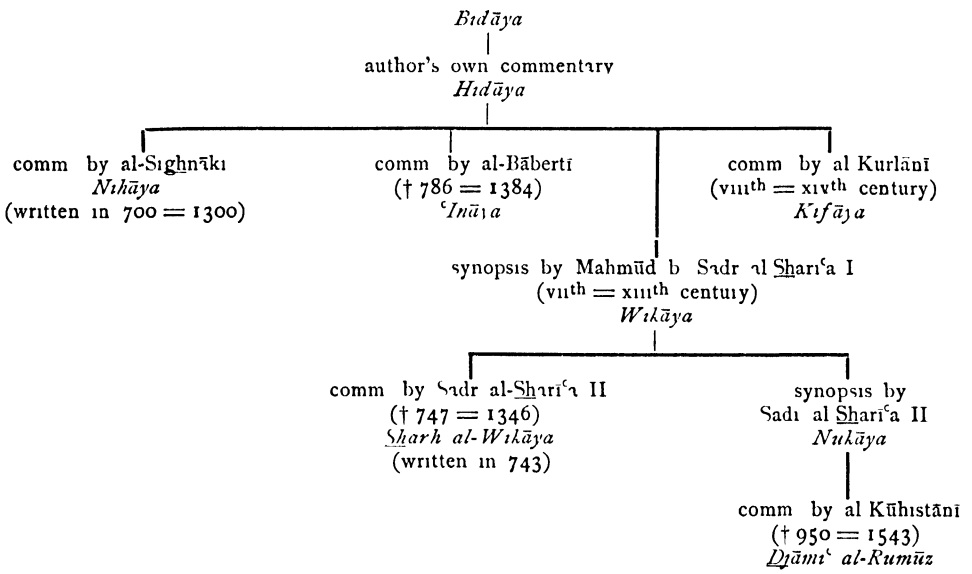
2 ʿIMĀD AL-DĪN AL FARGHĀNĪ, cf Laknawī, p 146

3 ʿOMAR NIZĀM AL-DĪN AL-FARGHĀNĪ Two works by him are recorded 1 *Fawāʾid* (II Kh, N° 9305), 2 *Djawāhir al-Fikh*, which he compiled from the *Mukhtasar* of Ṭaḥāwī and other works (H Kh, N° 4291, MSS in Brockelmann, *G A L*, I 376, note 2, where the mark of interrogation should be deleted, cf Kuṭubī, I 394, Laknawī, p 149)

4 MUḤAMMAD ABU 'L-FATḤ DJALĀL AL-DĪN AL-FARGHĀNĪ, cf Kutl, p 137 and Laknawi, p 182, in Kurashī, II 99 apparently identical with N° 2

5 A son of 2 and grandson of 1 ABU 'L-FATḤ ZAIN AL-DĪN ʿABD AL-RAḤĪM B ABĪ BAKR ʿIMĀD AL-DĪN B ʿALĪ BURHĀN AL-DĪN B ABĪ BAKR B ʿABD AL-DJALĪL AL-FARGHĀNĪ AL-MARGHĪNĀNĪ He wrote the work on legal procedure in civil cases entitled *al-Fusūl al-ʿImādīya*, which he completed in Shaʿbān 651 (Oct 1253) in Samarkand Cf H Kh, N° 9094, Lak, p 93, Brockelmann, *G A L*, I 382, where the MSS are given

Th J Arnaud (1843), J Halévy (1869) and E Glaser (1888), is situated in the plateau of Sabā, 3,900 feet above sea level, which runs east of the Balak range and is traversed by the Wādī Dhenne (Adhana) which in the course of millennia has deposited a thick layer of silt and thus made a luxuriant vegetation possible The modern village of the same name stands on a large mound of ancient rubble within the old city walls and is situated about exactly in 15° 26′ N I at and 45° 16′ East Long, about 10 days' journey from the Red Sea and the same from the Gulf of ʿAden This favourable situation predestined Mārib to be the centre of the Sabaean kingdom, the heart of which was the southwestern corner of the Arabian Peninsula and which at times also included the eastern hinterland of the Gulf of ʿAden including Ḥadramōt and Mahra (E Glaser, *Reise nach Marib*, p 18, 185) Marib also lay on the important caravan-route which connects the lands which produced frankincense with the



II Another family of Ḥanafī lawyers goes back to ʿABD AL-ʿAZĪZ B ʿABD AL-RAZZĀK B NAṢR B DJAʿFAR B SULAIMĀN AL-MARGHĪNĀNĪ, who died in 477 (1084—1085) in Marghinān at the age of 68 Of his six sons who attained fame as muftīs we may mention ABU 'L-ḤASAN ẒAHĪR AL-DĪN ʿALĪ († 506 = 1112—1113) His son and pupil was ZAHĪR AL-DĪN AL-ḤASAN B ʿALĪ ABU 'L-MAḤĀSIN Four works by him are recorded *Akdiya*, *Fatāwā*, *Fawāʾid* and *Shurūt*, only the last of which survives in manuscript He was the teacher of the famous Fakhr al-Dīn Kādīkhān († 592 = 1196) and of Burhān al-Dīn al-Marghinānī [q v]

MAʾRIB (MĀRIB), a town in the southwest of Arabia, formerly the capital of the Sabaeans and now the capital of the amīrate of the same name

The ancient town of Mārib, which so far has only been visited by three European travellers, Mediterranean (Gaza-Ghazze) and which ran from Shabwat-Sabota via Thomna-Tumnaʿ near Darb Kohlān in the Wādī Baiḥān, through Wādī Harib via Mārib into the Minaean Djawf, to Nadjrān and from there via Thirmāḥ, Abā al Khadar, Ilāhila, al Djifāʾ, Djebel Siru, Bedr, Wādī 'l Ilāzib, Wādī 'l Zibeirī, Wādī 'l-Faid, Haradje, Kotba, Banāt Harb, Djurash, Tebala, Karn al Manāzil, Mekka, Yathrib (al Medīna), Fadak, Khaibar, al ʿŌlāʾ, Taimā, Akraʿ, Tabūk, al Ḥidjr, Maḳnā, Madyan, al Ḥakl, Aʾām, Adhruh to Petra and thence to Gaza while Māʾib was also connected with al Yemāma, the coast of the Persian Gulf and Babylonia, via Nedjrān by the route which followed the Wādī 'l Dawāsir (cf A Grohmann, *Historisch-geographische Bemerkungen zu Gl 418, 419, 1000 A B*, p 116 *sq*) It still forms an important junction and has good connections with Ḥadramōt, Redāʿ, Yerīm, Sanʿāʾ, al Djawf, Saʿda, Nedjrān and the Wādī 'l Dawāsir (E Glaser, *Reise nach Mârib*, p 20)

The ancient city wall, 3 feet thick, enables us still to recognise with more or less certainty 8 gates — not only 2, as Ih Arnaud (*Plan de la digue et de la ville de Mareb*, in *J A*, sei vii,

vol III [1874], p 12) thought — distinct gatelike breaks in the stone wall They are now called Bāb al-ʿĀḳir (W), Bāb al-Hadd (S W), then along the south wall to the east and from here to the north, Bāb al-Nasr, Bāb Aba 'l Kār, Bāb al-Mah ram, Bāb al Daib, Bāb al Kibla, Bāb al Madjenna The names Bāb al Nasr, Bāb al Darb and Bāb al-Hadd are still borne by the gates of the mod ern village of Mārib but the modern Bāb al-Nasr corresponds to the Bāb al-ʿĀkir of the ancient town, since from the latter by traversing the whole of the old town the village is reached through the Bāb al-Nasr

The old town forms at the present day a considerable mound or rather a number of mounds of ruins, out of which project remains of walls and portions of columns Excavations conducted here would, as Glaser pointed out, bring to light most unexpected things Four distinct areas may be distinguished in the site 1 The mound on which stands the modern village which stands in the eastern part, almost in the S E corner, of the old town and seems to consist entirely of refuse and rubble, beneath which at a considerable depth one comes upon old buildings Glaser believed that these old buildings represent the oldest part of the town upon which in the later centuries of the Sabaean period rubbish was shot It is also possible that the town of Mārib or at least many of its buildings have been several times destroyed The topmost stratum is of course of comparatively recent date if we exclude the many old stones with Sabaean inscriptions The village, which, according to Glaser, can hardly have more than 600 inhabitants, consists of about 80 houses, usually in several stories on a rectangular plan narrowing a little as they ascend Only the lower parts are of stone, the rest is of clay Only the two fort like houses of the amīr are built entirely of hewn stone The outer wall of the village consists simply of the walls of the outermost houses, which are built on to one another or linked up by connecting walls The village has two gates of some size, one facing west and the other south, and several small doors There is an old well outside the village between this and the eastern gate of the old town, and also the chief mosque (Masdjid Sulaimān) 2 The Maidān Umm al-Kīs identified by Glaser in his *Karstenbuch*, p 8 with Umm Bilḳīs, in the S E corner with great mounds of ruins, which perhaps come from castles 3 The S W area which apparently contained temples and castles 4 A large round open space (Maidān) in the N W and western part of the town which does not seem to have been built on in ancient times either It stretches almost to the modern village and particularly on the south side is surrounded by portions of columns and other ruins (E Glaser, *Reise nach Mârib*, p 48 *sq*, 73) These facetted columns which still protrude 3—4 feet out of the ruins, one of which lying on the ground measured 12—15 feet, are also mentioned by Arnaud (p 12) The place is probably identical with the "Champs de Mars" mentioned by the French traveller in his report to Fresnel (*J A*, ser IV, vol V [1845], p 325) The place in any case was at one time surrounded by large buildings which are now in ruins and form great mounds, which are also dotted with fragments of columns and Glaser leaves the question open whether there were here the palaces of the kings and notables or the temples of the ancient Sabaeans To the south of the Maidān in particular may still be seen the foundations of a colossal building which Glaser wanted to identify with the famous royal citadel of Salhīn celebrated by later tradition

The old town which occupied an area of about 1,000 yards square, a calculation by E Glaser, which agrees with Th Arnaud's plan of the town (*J A*, ser VII, vol III [1874], p 11) [Glaser gives the distance between the two opposite gates as $^1/_4$ hour], is built entirely on the left bank of the Wādi Dhenne It seems, to conclude from the remains of the 3 feet thick wall around it, which has only survived in places, to have practically formed an oblique angled parallelogram the longer sides of which follow the line of the Wādī Dhenne while the eastern and western sides (breadth) run practically due north and south The southern wall which runs parallel to the river bank turns from north to east at an angle of 60° and runs almost E N E This fact is clear not only from E Glaser's description of his *Reise nach Marib* (p 36 *sq*, 48) and the Mārib *Tagebuch* but also from Glaser's *Skizzen* (N⁰ 51) upon which is based the appended plan of Marib and vicinity It is a striking contrast to Th J Arnaud's description and map (*J A*, ser VII, vol III [1874], p 11) which makes the wall around Mārib describe a circle and also to Glaser's earlier sketches in his large *Kartenbuch*, p 8 *sq* and the map drawn up after investigations in the year 1888, which forms fol 4 of E Glaser's collection I The foundation of the wall consists of cement blocks 5 feet long, 15 inches high and 2 feet thick On the top of 8—10 layers of these blocks are placed regularly hewn blocks of marble of the same size The wall which unfortunately is almost completely destroyed does not run in a straight line but at regular intervals there are rectangular projections, as is clearly shown in E Glaser's already mentioned sketch N⁰ 51 and in that of his *Tagebuch*, XI, p 125, which moreover gives the plan of the town as a rectangle — Glaser notes here "the city wall was apparently built as a quadrilateral" —, while N⁰ 51 shows rather a trapezium the base of which lies away from the river while the shorter side parallel runs along the river The rectangular projections found at regular intervals were probably towers, which strengthened the defences and stood out at regular intervals in the style we know from Assyrian fortifications (cf the similar quadrangular plan of a fortress with gates near the corner and towers covered by steplike battlements in B Meissner, *Babylonien und Assyrien*, I, *Kulturgesch Bibliothek*, I 3, Heidelberg 1920) That the city walls of Mārib had towers is also evident from the great inscription (Glaser 418—419) which is older than the great Sirwāh inscription Gl 1000 In this we are told in line 4 that the unknown ruler built "the two gates of Mārib (מריב) and built towers for Mārib of Balak stone" (cf N Rhodokanakis, *Altsabaische Texte*, I 6 *sq*)

Rhodokanakis suggests, presumably rightly, that this king was continuing the work of the unnamed son of the Sabaean mukarrib Sumuhu-ʿalaya Yanāf (ינף | בי סמהעלי) who, according to the inscriptions Glaser 412 = Arnaud 41, 413 = Arnaud 42, 414, 427, 445, 500, 510, 537, 589, 600, 634 and perhaps also 751, "built a wall around Mārib

(מריב) by command of and with the help of ʿAthtar" Whether the son of Sumuhu-ʿalaya Yanāf was the builder of Mārib seems uncertain, in any case he is the oldest builder of the town whom we know from the inscriptions

Nor is it known who founded Mārib That it was Saba', son of Yashdjub, as the Arab genealogists think, is of course quite an unfounded supposition (cf Yākūt, *Mushtarik*, p 239, Abu 'l-Fidā', *Historia anteislamica*, p 114 *sq*, A v Kremer, *Über die sudarabische Sage*, p 26 *sq*, E Osiander, *Z D M G*, x 68)

That the city wall was frequently restored is evident from the fact that inscribed blocks of the earliest period of Sabaean history were used as building material in any order without heeding the context of the inscription (cf Glaser, *Reise nach Mârib*, p 48 *sq*, 51, 74) which is the case e g in the texts Glaser 699—707, and as there were no inscriptions of a later period in the lower strata the renovation must have begun after the reigns of the three Sabaean mukarribs Yidʿī 'ilu-Bayin, Sumuhu-ʿalaya Yanāf and Yithʿī 'amara Watar To the same period as these inscriptions must belong the old Sabaean boustrophedon text, Glaser 926 = 1350 + 1351 = 1736, which comes from al-Meshdjah, not far east of Sirwāh, in the second line of which there is mentioned the building of a road up to the gate of Mārib (מריב) (cf E Glaser, *Altjemenische Nachrichten*, I, Munich 1908, p 98 *sq* and N Rhodokanakis, *Katabanische Texte zur Bodenwirtschaft*, II 49, and note 3, 54—56) Of the three Sabaean mukarribs mentioned here Yithʿī-'amara, Yidʿī-'ilu and Sumuhu-ʿalaya, the first, as N Rhodokanakis has pointed out, is identical with Vithʿ-'amara Watar, Yidʿī-'ilu with Yidʿī-'ilu Bayin, the conqueror of Nashk, while Sumuhu-ʿalaya is perhaps the same as Sumuhu-ʿalaya Yanāf, in whose reign the inscription Glaser 926 was set up Glaser must also be right in assuming (*Skizze*, I 68) that the town of Mārib is considerably older than the wall and a number of decades must have passed away before the town attained the extent indicated by the oldest remains of walls This is also evident from the mention of independent kings of Mārib in the inscription Glaser 302 which is older than Glaser 418—419 A memory of this earliest period in Sabaean history seems to be preserved by the poet ʿAlḳama Dhū Djadan, who mentions kings of Mārib along with kings of Sirwāh (cf D H Müller, *Sabäische Denkmaler*, p 99)

According to al-Hamdānī (*Iklīl*, VIII, in D H Müller, *Burgen u Schlosser*, II 959 *sq*, 1038 *sq*), there were in Mārib the three citadels Salhīn, al-Kashīb and al-Hadjar For the former which is expressly stated to have been the royal capital and palace of Bilḳīs, cf the article SALHĪN The question where this castle is to be located in Mārib has been very variously answered D H Müller, *Burgen u Schlosser*, II 968 thinks that Salhīn was on the site of the modern village of Mārib, which, as Arnaud had already suggested, had been occupied by an old citadel (*J A*, ser VII, vol III [1874], p 12) Glaser (*Reise nach Mârib*, p 73) on the other hand identifies Salhīn with the colossal building the foundations of which lie south of the Maidān In connection with Salhīn, al Hamdānī also mentions the lower pillars of the throne (of Bilḳīs) — so D H Müller translates *ʿarsh* — which became celebrated in the Muslim world through Kur'ān XXVII 23 and were still standing in his time and so firmly rooted in the ground that they could not be overthrown Glaser, *Reise nach Mârib*, p 139 however assumes that the reference here is to the Haram of Bilḳīs with its pillars but admits the possibility that a citadel of the town proper is being described, since Salhīn is talked of immediately afterwards Djurdjī Zaidān, *Kitāb al ʿArab kabl al-Islām*, p 143 also assumes that the palace of Salhīn is referred to Sprenger, *Post- u Reiserouten*, p 140 also tells of this throne of Bilḳīs that it stood on stone pillars 29 ells high which were still intact and the foundations were as deep as its height (this statement is erroneously attributed by Sprenger to Bakrī but presumably comes from Ibn al Mudjāwir) The *Djihān-numā* also (cf Jomard in F Mengin, *Histoire de l'Égypte*, p 344) says that the throne of Bilḳīs was built on columns 28 ells high in Saba' (= Mārib) This sounds very improbable if we should really understand by *ʿarsh* a throne, which according to Nashwān al-Himyarī, p 50, stood in the palace of Bilḳīs in Mārib When however we are told by Nashwān, p 70, that *ʿarsh* is a castle which was built on columns of stone and the verse of Asʿad Tubbaʿ quoted gives the name *ʿarsh* to the palace of Bilḳīs, we may then in the above passages take it to mean a citadel rather than a throne and with Glaser, *Reise nach Mârib*, p 73, look for it in the S E corner of the old town Legend has associated the name ʿArsh Bilḳīs with other localities also According to Abu 'l-Rabīʿ Sulaimān b al Raihān in Yākūt, *Muʿdjam*, III 640, it is the name of a place a day's journey from Dhamār on which stand six great marble columns and the principal group of pillars of the old ruins of Sirwāh still bears this name (J Halévy, *Rapport*, *J A*, ser VI, XIX [1872], p 67 *sq*, Glaser, *Reise nach Mârib*, p 179) On the other hand, it is an open question where the two other citadels al Kashīb and al-Hadjar mentioned by al-Hamdānī and Bakrī (*Muʿdjam*, II 502) are to be located According to Yākūt, *Muʿdjam*, IV 104, al-Kashīb was built by order of king Sharahbīl b Yahsub, who put up on it a copper plate inscribed "They who built this castle are Thawbal and Sahar, its building was entrusted to them by Sharahbīl b Yahsub, the king of Saba' and of the Tihāma and its Arabs" D H Müller in *Burgen u Schlosser*, II 1039, note 1 has already identified Sharahbīl b Yahsib with king 'Ilīsharah Yahdib of the Sabaean inscriptions (Glaser, N⁰ 424, 220, *Bibl Nat*, N⁰ 2) and for Thawbal compared the Sabaean Thwb'il and for Sahar (so to be read, not) the similar Sabaean name If the inscription given by Yākūt really goes back to a genuine *musnad* inscription, Kashīb must have been built about the first century A D If the Sabaean king here mentioned whose epithet in the Himyar *kaṣida* (verse 109) publ by A v Kremer is to be read Yahdib, in the Sabaean inscription *Bibl Nat*, N⁰ 2 [cf article SALHĪN] speaks expressly of Salhīn, Ghundān and Sirwāh only and does not mention al Kashīb, this is not itself proof that Yākūt's foundation inscription is not genuine The building might easily be later than the inscription *Bibl Nat*, N⁰ 2 A difficulty however is raised by the fact that al Hamdānī (in Müller, *Burgen und Schlosser*, II 1039) and Nashwān al-

Himyarī (quoted *ibid*, note 1) give al Kashīb b Dhī Hazfar as the builder Glaser, *Reise nach Mârib*, p 139, goes so far to say that the name Kashīb is derived from the verb *kshb* or *hkshb*, which frequently occurs in dedicatory inscriptions, and the form of the king's titles points to the last period of Himyar rule and the king is to be identified with Sharahbīl Ya'fur, indeed it must be conceded that the style and titles is quite unusual for a king of Saba' and Dhū Raidān and for this reason the *musnad* inscription must be regarded as a forgery This does not mean that al-Hamdānī's note is to be rejected as worthless F Hommel (*Ethnologie u Geographie d alten Orients*, p 666 and note 2) has shown the possibility that the castle of Hadjar (the name means "the town") was perhaps the principal castle, on the ruins of which the modern village of Mārib was planted and the older and more celebrated Salhin was a smaller castle If we remember the meaning "new" given in Yākūt, iv 104 and Nashwān, p 86 s v *kashīb*, al-Kashīb might also be an epithet of the citadel as "the new" which came to be erroneously differentiated from al-Hadjar as the name of a third castle Al-Bakrī, *Mu'djam*, ii 502, 754 explains the difficulty by saying that al-Kashīb was the last of the castles to be built in Mārib and therefore called the "new"

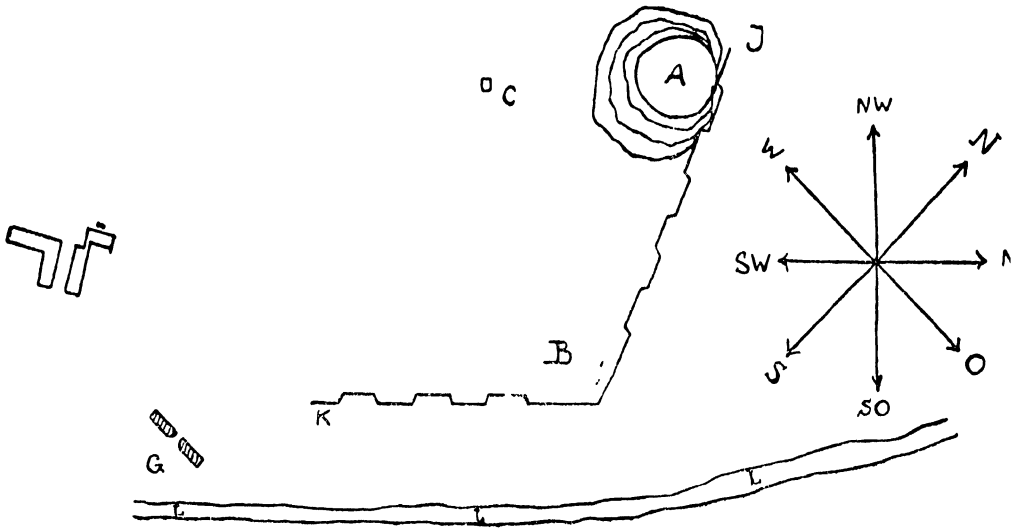
The Masdjid Sulaimān lies to the west, just below the village which is built on a great mound of rubble This Masdjid Sulaimān b Dāwūd, now the principal mosque of Mārib, according to Arnaud (*J A*, ser vii, vol iii [1874], p 13) an obviously modern building, square with a flat roof and built of hewn stones, is of interest because, according to E Glaser (*Reise nach Mârib*, p 41, 73 *sq*), its north side is built against 7 or 8 colossal columns (monoliths) which correspond exactly to those of the Haram Bilkīs and the 'Amā'id to be discussed below Glaser suggests that there was once a temple here similar to the Haram Bilkīs F Hommel, *Ethnologie u Geographie d alten Orients*, p 664, 666 thinks the Masdjid Sulaimān was the temple of the chief deity This principal temple in his opinion formed a group with the second temple, which lay on the south side of the Maidān — according to Arnaud (plan of Mārib) local tradition thinks this was the site of an ancient temple The length (2,000 yards), suggested by F Hommel (*op cit*, p 666) for the distance of this second temple from the Masdjid Sulaimān, is however too high, as both Glaser and Arnaud put the distance between the two opposite city walls at only 1,000 yards J Halévy's figure (*Rapport*, *J A*, ser vi, xix [1872], p 96) which puts the diameter of the Mārib ruins at about 500 yards would give a much shorter distance but the estimate is certainly a very casual one and hardly to be taken seriously

In the south and west outside the old town walls lies an old cemetery with a number of tombs, some vertical and some horizontal, the latter of which have a small opening at the top It is now called Medjennat (or Djubat) Gharia It is probably from here that have come a number of old Sabaean tombstones (Glaser, N° 436, 574, 575, 581, 582, 605, 662, 663, 665, 667, 683—685, 748, 769, 773, 792) with rectangular niches sometimes rounded below or peaked at the top, in which is placed the bust of the deceased with an inscription below On two of those tombstones (Glaser N° 684, 745), Glaser found the bust let into the stone still in its place (cf *Reise nach Mârib*, p 75, 92, *Tagebuch*, xi 59) We may probably find the models for these tombstones in the steles of Assur Stone sarcophagi are also sometimes found One is still in use before the great well of Mārib as a drinking-trough for animals (*Reise nach Mârib*, p 74)

In the southwest of the old town outside the city walls, Glaser found a remarkable building still partly preserved (*G* on the plan of the immediate vicinity of the old town of Maryab) which was probably used for distributing the water and has on its north side the inscription Glaser 474 = 1671 It consists of two huge stretches of wall running due east and west in one line with a gap in the centre The two corners of the northern entrance of this passage are angular while at the south side the two are rounded The inscription, which is placed on the north side of the eastern wall states that Dimri 'alaya Watar, Mukarrib of Saba', son of Kariba'ilu, built a פיש (*fish*) opposite (or in front of) the sanctuary of 'Athtar Glaser actually found some 300 paces N W or W N W of this building, also outside of the old city walls but quite close to them, a ruin unfortunately reduced to a heap of rubble, which from its plan suggests a sanctuary, since on the N E side (the right stretch of wall) the niches for an idol can still be seen (*Reise nach Marib*, p 40, *Tagebuch*, xi 47, *H* on the plan of the immediate vicinity of the old town of Maryab)

S S E of the modern village of Mārib (*A*) at a distance of about 3 miles between the Wādī Dhenne and Wādi 'l Feledj is the Haram Bilkis (*D*) which was visited by Th J Arnaud on July 20, 1843 and by E Glaser on March 25, 1888 (cf *J A*, ser vii, vol iii [1874], p 14 *sq*, Glaser, *Reise nach Marib*, p 41, 44 *sq*, 73, 137, 141), the latter corrects Arnaud on a number of essential points The Haram is a large building, elliptical in form, the longer axis of which 300 feet long runs from N W to S E The shorter axis runs N E to S W and is 250 feet in length It is built of regularly hewn square blocks which are placed one above the other in 31 layers up to the frieze so that the height of the wall is 31 feet This wall is finished off with a double cornice at the top which consists of two rows of blocks which follow one another at short intervals and look like dice on the top of the wall, the result being a mural crown-like frieze which recalls the relief found by Th Bent in Jehā in Abyssinia (cf Th Bent, *The Sacred City of the Ethiopians*, London 1893, p 141) and the top of the Sabaean relief in D Nielsen, *Handbuch der altarabischen Altertumskunde* (p 157, fig 44) The row of blocks below the lower cornice form a simple and effective decoration by placing the blocks four to six inches apart so as to leave little gaps A similar kind of mural decoration is known from the Sabaean temple of Jehā (cf *Deutsche Aksum-Expedition*, ii 80, fig 165) The frieze is still quite intact in places, especially on the east side There is no trace of a roof But it cannot be asserted definitely that there never was one, as Glaser assumes, the windowless building could have been lit by sky lights There are two doors in the wall, the larger (*a*) at the northeast end of the shorter axis and the smaller (*b*) at the N W end of the building at the end of the larger axis

Exactly N E of the centre of the building there are four other monolithic pillars in the wall itself Originally there were a larger number here so that the main gateway (*a*) had a pillared way leading to it N E of these at a distance of 32 paces are 8 columns which are also erected in a line running from S E to N W (*E*) They are rectangular prisms, smooth, 15 feet high without capitals and terminate in dice-shaped tops 4 inches long on which stood the architrave On the S S E side of the Haram just outside the inside He expressly states however that he could discover no chambers in the walls as he had expected On the other hand, the fine inscriptions on the outside of the walls give us information as to the purpose of the building — it is a temple of the Sabaean moon-god Almakah — as well as the history of its erection Arnaud was only able to copy 3 of these inscriptions, two others whose existence he established were covered by sand, which has since made further progress, so that he could not copy them The oldest in-



Plan of the immediate vicinity of the ol town of Maryab

A the modern village of Mārib, *B* Umm al *C* Masdjid Sulaimān, *D* Haram Bilḳis, *E* 'An *F* Pillars E S F of al-Merwath, *G* old Bui not given a definite name, *H* Temple, *I*—*K* city wall of Maryab, *L* Wādī Dhenne

wall, four small pillars form a little square the sides of which lie W to E and S to N (*c*) Perhaps we have here the pillars for the canopy of a throne which was probably similar in appearance to the Aksumite king's throne illustrated in *Deutsche Aksum-Expedition*, II 63, fig 139 The floor of the building never seems to have been levelled, as a natural rock rises almost in the middle Unfortunately in the interior the walls are nowhere clear, so that Glaser could form no deductions as to what it must have looked like

scription Glaser 184 is on the 28th layer from above on the east side It records that Yid'i 'ilu Dharih, son of Sumuhu 'alaya, mukarrib of Saba', built the wall of the temple of Almakah *'Awm* (cf the latest definitive edition of the text in N Rhodokanakis, *Studien*, II 7 *sq*) Since the brilliant E Osiander had previously recognised (*Z D M G*, x 70) that the Haram Bilkīs was a temple of Almaḳah, Glaser (*Skizze*, I 68) was able to deduce rightly from this inscription that the sanctuary *'Awm* frequently mentioned here

and in other Sabaean inscriptions was this very temple From it the god Almakah is called "lord of 'Awm" (בעל | אום) The completion of this temple which was begun by Yid'i-'ilu Dharih, by 'Ilishariha, son of Sumuhu-'alaya Dharih, king of Saba', is recorded in the inscription Glaser, 485 = Arnaud 55, which is on the west side of the Haram on the 14th layer of stones (cf N Rhodokanakis, *Studien*, II 12 *sqq*) Glaser 481 = Arnaud 56, which is on the 13th and 14th layer on the north side records the completion of the wall from the inscription to the top by Tuba'kariba a prominent official and general of three Sabaean kings (N Rhodokanakis, *Studien*, II 15 *sqq*) Connected with this are two inscriptions of similar content, Glaser 482 = Arnaud 54 on the south side of the 13th layer and Glaser 483 = Arnaud 54 on the east side at the same height They record the restoration of a ruined part of the wall (presumably of the part of the temple) under King Karib'ilu Watar Yuhan'im of Saba' and Dhū Raidān, the son of Dhimrī-'alaya Bayin, and his son Hālik-'amaia Whether this concludes the history of the building of the Haram seems doubtful since, according to Glaser, *Reise nach Mârib*, p 46, inscriptions may still be concealed under the sand on the north and west sides also

The orientation of the building is of interest The little door of the Haram (*b*) faces that temple of the old town of Mārib on the site of which now stands the Masdjid Sulaimān On the prolongation of the shorter axis to the N E lies the ruin called al Mikrāb, and Glaser has, perhaps rightly, suggested from this arrangement of the two buildings that there was some connection between their purposes Both buildings are moreover oriented by the course of the Wādī Dhenne On the south side of the old city wall may still be seen the remains of a bridge which was built almost exactly in the direction of the Haram and, according to the local tradition, once reached to it Even if this is an exaggeration it is nevertheless probable that a bridge was built over the river Dhenne, as in the rainy season the water must certainly have inundated the fields, the continuation of this bridge to the Haram was probably only a dam of which no trace now remains

However unusual the elliptical form for the plan of a temple may appear, this is certainly not an isolated example in Southern Arabia F Fresnel (*J A*, ser IV, vol VI, p 223) mentions the great ruins of Khariba (Sirwāh) which cover an even greater area than those of the Haram Bilkīs and include a semi-ellipse and long rows of pillars still in position According to Arnaud, this elliptical plan has also been found by Halevy (*J A*, ser VI, vol XIX, p 67 *sq*, cf also Glaser, *Reise nach Mârib*, p 110, 137, *Skizze*, I 67 *sq*) According to the inscription Glaser, N° 901–903, its builder was the Sabaean mukarrib Yid'i-'ilu Dharih, who also built the temple of 'Awm and the round temple of al-Masādjid

F Hommel (*Ethnologie*, p 664 *sq*) has endeavoured to show how this temple came to have its modern name of Haram Bilkīs In analogy to the Assyrian and Babylonian temples extra muros which were always dedicated to the wife of the chief deity and in which in the month of the new year his wedding ceremony took place, Hommel sees in the Haram Bilḳīs the wedding house of Almaḳah, the sanctuary of his wife Harimat and seems to assume that the name is also connected with this D H Müller (*Burgen und Schlosser*, II 972 *sq*) has shown how the Arab archaeologists transformed the god Almakah into Yalmakah and then gave this name to the legendary Bilkīs and also made a *haram* (women's apartments) out of the *mahram* (sanctuary) of the god F Fresnel's reasoning moves on similar lines (*J A*, ser IV, vol VI, p 226 *sq*, 234 *sqq*) He assumed that Bilkīs was not the correct name of the queen of Saba' but rather Balkamah (so Ibn 'Abd Rabbihi, in the *'Ikd al-Farīd* and Ibn al-Djawzī in the *Mir'āt al Zamān*) which was formed from Almakah The queen of Saba' was in this way deified by the Sabaeans and became the Isis of the Arabs

In the S S E of Mārib and according to Arnaud 1/4 hour E S E of the Haram Bilkīs — while the latter, according to Glaser, *Reise nach Mârib*, p 41 lies almost due east barely 1/4 hour from the five pillars — there stand on the opposite bank of the Wādi Dhenne, 1/2 hour or 1 1/2 miles (according to Glaser, *Skizze*, N° 51) from the town, the pillars called 'Amā'id Five are still upright, these are 25—30 feet high, 32 inches broad and 24 deep, prismatic, rectangular monoliths which were erected perpendicular to the direction of the Wādī Dhenne Two which have been overthrown lie beside them on the ground The pillars had no capitals and were just like the other pillars (at the Haram Bilkīs and other ruins outside the town) On the fragments of the two fallen pillars Glaser discovered inscriptions on each (Glaser 479 and 480 = Arnaud 53) from which it appears that a sanctuary Bar'ān (מדרמן | בראן) dedicated to the god Almakah or some such sanctuary stood here This name occurs not only in this inscription but is mentioned in Ottom Mus, N° 17 (*Z D M G*, XXXIII 486, N° 1, 3) where J H Mordtmann reads [אלמקה | ב]ית | בבראן and the name of this place is also found in Halévy, N° 43, 2, 48, 4 (דבראן) and 534, 4 ([ב]בראן)) To the west just beside the pillars lies a mound of ruins, which perhaps represents the remains of this sanctuary Arnaud (*J A*, ser VII, III [1874], p 15) describes these pillars as pilasters of the Haram Bilkīs and puts their height at 28 spans In contradiction to Glaser, Arnaud says they have square capitals His illustration under the plan of the Haram Bilkis shows a pillar with a stepped capital like those from Aksūm and Kohaito in Abyssinia (*Deutsche Aksum-Expedition*, II, ed by D Krencker, Berlin 1913, p 102, fig 224 and p 155, fig 319b) Which of the two explorers is right, it is difficult to say as Glaser is usually very accurate in his observations On the other hand, Arnaud cannot possibly have invented this rather unusual but nevertheless typical form for ancient South Arabia and made his drawing accordingly The only way out of the difficulty is to suppose that in Glaser's time the capitals — of which Arnaud says he cannot say definitely that they belonged to the pillars — had been broken off According to Arnaud, the pillars stand close together at intervals corresponding to their thickness That the pieces of stone on the ground near the row of pillars once belonged to the pillars was not noticed by Arnaud (p 16) although he copied one of the inscriptions on them (Arnaud 53 = Glaser, N° 480) (cf E Glaser, *Reise im Mârib*, p 401, 141)

The numerous separate finds made by Glaser in the neighbourhood of Mārib, sacrificial altars, masons' workshops etc cannot be discussed here On the other hand, there is one erection which demands a rather thorough discussion as it surpasses all these already mentioned in magnitude and preserved the fame of Mārib down to the late Islāmic period, namely the dam and works connected with it, known in Muslim tradition as *Sudd Mārib* or *Sudd al-ʿArim*

The Wādī Dhenne in the course of time had cut a way through the Balak hills here and divided the rocks into two parts Balak al-Kiblī and Balak al-Awsat The Sabaeans had built a dam of earth across the gap some 770 paces long behind which the water was collected The dam, which Glaser (*Reise nach Mârib*, p 58 *sqq*, 173 *sq*) describes minutely, rises some 20—25 feet above the present level of the Wādī and is simply a mound of earth the section of which is an isosceles triangle the angle at the top of which is quite sharp The angle of inclination of the two surfaces to the base is about 45° and the breadth of the base about 50 feet The proper base and the height of the dam cannot be accurately ascertained as the mud has accumulated to the depth of many feet But it can be assumed, that the dam rested on a foundation of rock as the narrow passage between the two Balak hills has a rocky foundation which comes up very nearly to the surface But for this firm foundation of rock it would have been impossible to build the dam at all The side of the dam which met the water (the western) is covered with small sharp unhewn stones, held together so strongly by mortar that it is impossible to detach one of them The dam, which is $1^1/_2$ hours from Mārib, is flanked in the north and south by two great sluices, the southern one of which is known as Marbat al-Dimm Here on the site of the the dam a great rock (*A*) 95 paces long and 15 in width, at the narrow places only 8—10 has become detached from the Djebel Balak al-Awsat, it runs to the N E with a slight tendency to E N E The main body of the rock, the northern wall of which runs eastwards forms with this isolated rock a pair of lines converging towards the S.W end of the latter The two rocky walls do not meet here but are separated by a gap spanned by a wall six paces long and 12 feet high (*C*) In the opening of the angle but within the eastern ends of the two walls is another detached block of rock (*B*) the north side of which runs parallel to the first mentioned detached rock and the south side parallel to the main rock (*C*) but quite close to the latter All three rocks, particularly the main body (*C*) and the loose block (*B*), have steep sides, not however over 12 feet high On the north side the great isolated rock (*A*) is very irregular in shape It almost looks as if we had an artificial cleavage here, but Glaser does not think this possible because an earthquake is quite sufficient to account for the remarkable cleavage of the rocks In any case it looks as if human hands had worked a good deal on the natural lines of fracture The great block of rock (*A*) rises 20—25 feet above the present level of the river bed and has two inscriptions engraved on its south side (Glaser, N° 513, 523)

On all three rocks there are or were great buildings of hewn stone The large block of rock (*A*) seems to have supported the main building Its masonry consisting entirely of finely hewn blocks of stone, arranged in pairs one above the other and held together by melted lead poured into corresponding cavities, it follows closely, especially on the south side, the rock which forms the foundation so that it does not form a straight line, as Arnaud (*J A*, ser VII, vol III, in p 64, *Digue de Mareb*) has represented it The whole length of this wall is about 200 feet, its average breadth 15 feet, the height at the S W end about 12 feet, rather more at the N E end, as the rock is not high enough here In general the top is horizontal but with slight differences of level where it rises and falls The S W corner of the masonry consists of round towers (*a*) facing S W which stands about 3 feet above the level of the rest of the walls The whole building and the tower have perpendicular sides and do not slope at all The dam which runs N N W seems to have joined the wall 25 feet from the towers on the N W On the side facing the Wādī at the N E end of the rock, steps have been hewn out of the rock which led from the bottom of the river bed (in S S W direction) to the walls Almost exactly south of the already mentioned tower which has also very steep steps cut in a perpendicular passage hewn out of the rock, there stands on the main mass of rock (*C*) a second tower (*d*) of the same height, round on the west but flat on the other sides Between the two towers, is the already mentioned wall linking up the two rocks As already mentioned, the top of this wall is 20—25 feet above the level of the river so that the towers are 35 to 40 feet above it The dam seems to have been not much higher than the connecting wall The out-flow of the water must have taken place over the connecting wall as well as through openings under the wall, probably now filled up with rubble, into the Habābid canal, and under or rather through the rock on which this great piece of masonry stands, into the Rahāb canal Indeed one can still see quite clearly that the great isolated rock is connected deep down by a ridge of rock (*e*), only the rounded top of which is visible, with the smaller block, so that the two channels were separated from one another It is also possible that in ancient times the outflow went below and only later, when the water-level was raised by silting, over the wall Grooves for boards are still recognisable The smaller block of rock, steep and high on the western side, slopes to the east down to the level and has steplike cavities in it everywhere with stones still perpendicular on it, as if it had had a balustrade, especially above the steep wall in the west At its eastern end where it joins the level ground, it shows regularly hewn cavities of prismatic shape, which look like watering-troughs for the cattle or like stone graves The main rock shows the same features The step-like cavities were perhaps not only used for climbing, but also to measure the level of the water to regulate the outflow

Both towers and the other buildings in connection with the sluices, except such walls or railings as may have existed of the smaller block, are preserved intact The hewn stones are so arranged that long stones are every now and then laid crosswise which give the otherwise parallel layers great cohesion This is particularly the case with the inner filling of the wall, as can be observed in all very large buildings a section of

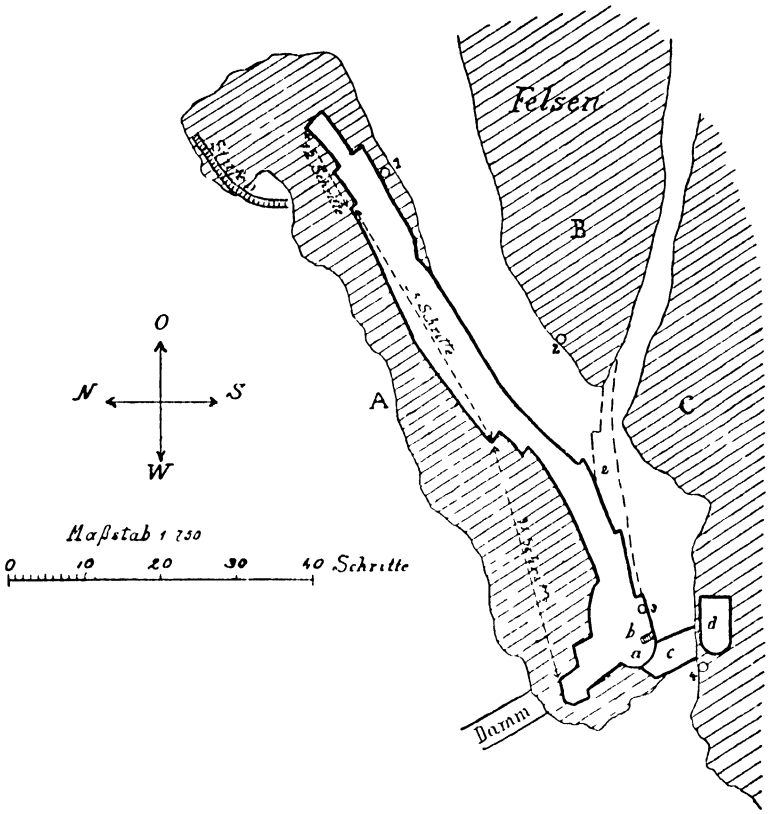
which comes to be exposed The square blocks in the dam are also held together by little blocks of lead about 10 cm high and about 10 cm² in the section These little rods of lead were placed in holes specially made for them about 4–5 cm deep and the next block above was placed over with the corresponding cavity filled with the top half of the little rod The Sabaeans only used mortar in the stone work of the dam as a top covering to prevent damage being done by the rain-water

The northern system of sluices consists of three walls of which the northern and largest a kind of railing of masonry The whole wall is coped with excellent cement

Almost exactly S E about 11 paces from the S W end of the part, 114 paces long already described (*b*) runs to the S E a wall 38 paces long and 21 broad at its N W end, the S E end of which is narrow and rounded This wall is exactly the height of the long wall At the present there is on it a modern *huṣn* (stone-house) built by the amir ʿAbd al-Rahmān which probably existed in Arnaud's time and certainly in Halévy's

Between the two walls, four paces from either,

Marbaṭ el-Dimm



- O Places where inscriptions are engraved on the rocks 1 Gl 513, 2 Gl 514, 3 Gl 523, 4 Gl 525
- *a* Tower with staircase, of the same height as *d* and the highest part of the whole building
- *b* Staircase
- *c* Barrier between the tower and southwestern rocks
- *d* Tower exactly similar to *a*

(*a*, *b*) with one end built against the rocks of Balak al-Kibli runs northeast, a little towards E N E This wall, which is in all 184 paces long and 15 thick at the broadest point, although the average is about 11 and 15—20 feet high consists of two parts The southwestern part 70 paces long (*a*) is somewhat lower (quite low beside the Balak rocks, about 16 feet high at the point where it joins the N E part) and quite flat on the top The N E part (*b*) 114 paces long and somewhat damaged towards its west end is not quite flat on the top and towards the south side the top shows stands a north wall only 18 paces long, 3 broad and of the same height as the others, the base of which forms a perfect rectangle This wall somewhat damaged on the north side and now joined to the S E wall by two modern slight walls, which the Beduins use as a stable, stands back a little at its S W end as compared with the two neighbouring walls and like the S E wall shows a prism-shaped cutting about a yard from the west end, now filled in about 2 feet broad and deep which was intended to take the boards On the northern side this groove is no longer to be seen The three

walls thus formed, like the three rocks on the south form two channels of exit, both of which however, it is worth noting, flow into one and the same main channel, which runs almost exactly east for about 1,000 yards to a large building for distributing water This canal ran between two parallel dams of the same style and construction as the dam proper but the bed, which is paved with cemented stones, runs above the plain, especially on the south side some 20—25 feet The dam proper, barely higher than the two walls of this canal, joins the east side of the most southern wall, 38 paces long

Similar distributing works existed throughout the whole plain of Mārib Glaser saw traces of aqueducts (with double dams) at different places In the bed of the Dhenne not far below the dam he saw a remarkable erection of stone not unlike a weir Unfortunately the inscription on it which might have given us definite information had been removed some years before Canals seem to have led the water from the great distributing centres to the smaller ones (*manāṣih*) from which it was taken direct to the palm gardens and fields The most of the *manāṣih* are in the form of cubes or shallow prisms and are rarely more than 6 feet

O Places with inscriptions

a a little lower than *b*

The canal, which led the water to the lower *ḥuṣn*, about 1,000 yards away, comes up to *b* and *c*

d a large intervening wall standing by itself

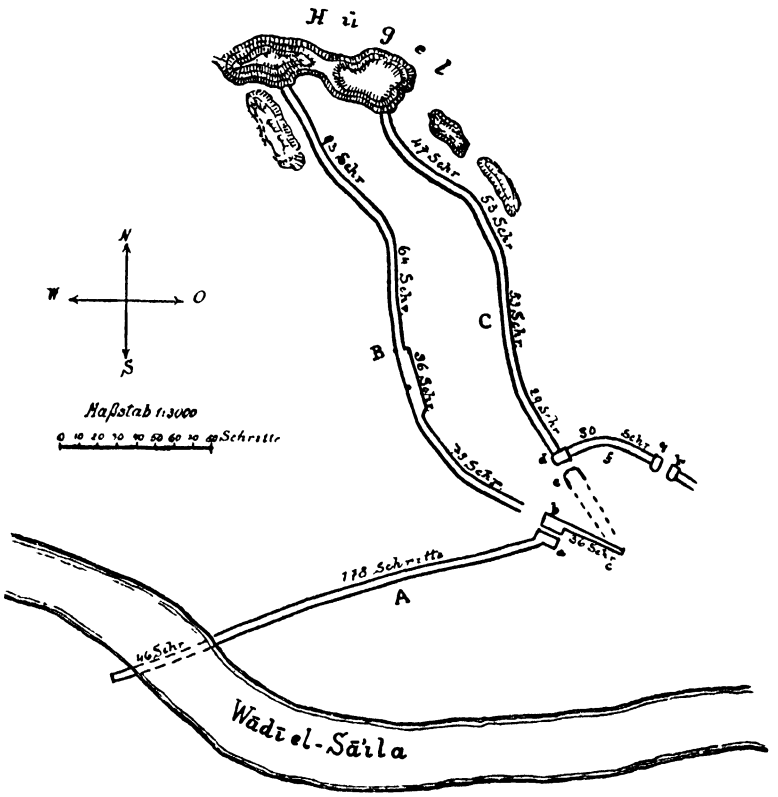
S S W of Mabnā al-Ḥashradj (see below) lies Ḥusn al-Asfal, a later building erected on the remains of old water-works, which formed the end of the main channel, already mentioned in connection with the northern sluices It lies at about exactly the same level as the dam and several yards above the surrounding country It consists of several walls, some of hewn stone and some of ordinary stones and cement, which sent the water out in eight different directions The aqueduct runs practically westwards up to the northern sluices of the dam Although perfectly preserved the bed of the canal has been in many places filled up with blown sand

high and 12 to 15 feet long As a rule a canal leads out of them from the centre, usually walled on one side Nothing is left of the canals which connected the *manāṣih* with the larger distributing centres and on the other side with the fields Deep furrows torn out of the ground by the periodic deluges of rain and, like the greater part of the plain, becoming gradually filled with desert sand are now the characteristic feature of the once flourishing plain of Saba'

The great barrier of the dam between the two Balak mountains seems however not to have sufficed for the strain upon it A second dam called Mabnā al-Hashradj was therefore built N N E

of the dam and west of Mārib which seems to have been intended to regulate the water of the Wādi 'l-Sā'ila (cf Glaser, *Reise nach Mârib*, p 49 *sq*), which carried the waters of the north Balak hill, the Djabal Hailān and the Khashab hills into the plain of Mārib and joined the Wādi Dhenne below the village of Mārib This barrage consists of three walls of black porous stones, running very irregularly which are held together by mortar and arranged in 3 strata which perhaps point to 3 periods of building The first of these walls (*A*) which dammed the river-bed begins just on the right bank of the Sā'ila and runs 240 paces E N E where it joins a prism shaped erection (*a*) 7 paces broad, 12 long and about 15 feet high, which lies N W to S E 7 feet N E stands a second similar building (*b*) parallel to the first and continued to the S E in a narrower wall (*c*) 36 paces in length The space between these two buildings must have been an outlet With a very small space between, the second mortared wall (*B*) runs N W from the second building (*b*) and with many windings turns N and N W where it joins the rocks Its length is 268 paces, the space between it and the second building 10 paces (*b*) 21 paces N E of the second building are two others (*d*, *e*) which give an outlet to the N E The southern of the two is only partly preserved It points to the S E end of the 36 paces long wall (*c*), perhaps the two were once connected or there was a sluice between From the building (*d*) which forms the northern boundary of the second outlet two walls run the one (third) wall (*C*) runs with many windings almost parallel to the second great wall (*B*) and like it runs up to the northern hills, it is 182 paces long The other building (*f*) runs in a curve to the north, 50 paces in length, to a third outlet exactly opposite the second, which however consists of buildings (*g*, *h*) 8 paces from each other, with the ground between them covered by a layer of stone masonry The outlet is to the N E On the S E is a wall 12 feet long now partly collapsed Glaser copied 10 Sabaean texts at al-Hashradj which came from other ruins and show that these works belong to a later period, like the late tombstone built into the wall here (Glaser, N° 509)

Mebnā el Ḥashradj



The various constructions date, as we learn from the inscriptions, from different periods The southern system of sluices was erected as early as the Mukarrib period Sumuhu-ʿalaya Yanāf, son of Dhimri ʿalaya, Mukarrib of Saba', according to the inscription Glaser, N° 513–514, made here an outlet in the barrage at Rahāb, which was extended two generations later by the unknown author of the inscription Glaser, N° 418–419 (cf N Rhodokanakis, *Altsabaische Texte*, i 7, *Studien*, ii 97, 99 *sq*, Glaser, *Skizze*, i 70 *sq*, *Reise nach Mârib*, p 59 *sq*, Hommel, *Ethnologie*, p 666) Where the barrage at Rahāb was is not certain Perhaps we should assume with Rhodokanakis, *Studien*, ii 100 *sq* that it was built on the rib of rock (*e*) between *A* and *B* About a generation later than the Rahāb barrage is the similar con-

struction at Habābid, which was probably built at the junction (*c*) of the Marbat al-Dimm The Mukarrib Yith'ī-amaia Bayin, son of Sumuhu-'alaya Yanāf, built a water-course for it, as his father had done for the Rahāb (according to Glaser, N⁰ 523, 525 = Arnaud, N⁰ 12, 13 = Halévy, N⁰ 678, cf Rhodokanakis, *Studien*, II 102 *sq*, Glaser, *op cit*) The northern sluice-works are much later, according to Glaser (*Reise nach Mârib*, p 66–68), they did not get their present form till the time of king Shammar Yuhar'ish (c 300 A D) and may perhaps even be not older than the fifth century A D The oldest parts of the works are put by Glaser (p 68) to the period 1000–700 B C which is probably rather too early

The great system of dams did not long exist in this form This we know from two great prismatic monoliths, which are inscribed on all four sides and tell us of the later history of the dam The one with the inscription Glaser, N⁰ 554 is 7 feet long, 30 inches broad, and a foot thick, the second, even larger, bears the inscription Glaser, N⁰ 618 Both lay close beside the junction of the northern wall of the northern sluice with the rocks of the Djebel Balak According to Glaser, N⁰ 554, king Sharahbil Ya'fur in 449 A D had a thorough renovation of the works carried out But these lasted barely a year, for in 450 A D the waters broke through the dam so that the works had again to be completely restored But the collapse of the great system was not to be prevented From Glaser, N⁰ 618 we learn that under the rule of the Abyssinian viceroy Abraha (542 A D) another breach occurred in the dam Once more restoration work on a large scale averted the threatened disaster, but the final catastrophe must have occurred not long afterwards, which transformed the fertile plain of Saba' into a barren desert, alluded to in the Kur'ān (Sūra XXXIV 14 *sq*, cf Glaser, *Zwei Inschriften uber den Dammbruch von Mârib*, p 13 *sqq*, *Reise nach Mârib*, p 16, 64, 144 *sqq*)

Its cause is seen by Glaser in the action of wind and rain which gradually wore down and weakened the east side Another main cause of destruction must have been the silt which so filled the reservoir in course of decades that the water flowed over the dam A mention of the bursting of the dam in the Kur'ān (*sail al-'arim*) and the importance of this event for the town of Mārib and the country round it has resulted in Muslim tradition devoting attention to this catastrophe and its consequences, so that all sorts of scraps of information about the dam were collected Nevertheless it is remarkable how little even authorities on South Arabia like al-Hamdānī (*Sifa*, p 80 and *Iklil*, VIII, in D H Muller, *Burgen und Schlosser*, II 958 *sq*, 1036, 1038, cf N Rhodokanakis, *Studien*, II 105 *sq*, al-Bakrī, *Mu'djam*, II 502) really know about the dam Al-Hamdānī only says that the dam was built against a wall which was built on to the side walls of the reservoirs, of great blocks of stone linked together with iron The arrangement for distributing the water from the farms were still there as if their builder had only finished yesterday Al-Hamdānī saw the building which had survived on one of the two sides (i e on one bank) namely the one which rose out of the water intact (i e the sluices) The breach had only affected the barrage but even of this a portion remained intact which was adjoined by the gardens on the left and was 15 ells in breadth at the base

How we are to interpret these statements of al Hamdānī, we learn from the description of the reservoir of Kohaito in Abyssinia (*Deutsche Aksum Expedition*, II 150 and pl 23) There a central wall is flanked by two side walls, one of which is at right angles to a third That the stones were bound together by iron is evident from Glaser's description When Yākūt (*Mu'djam*, IV 383), who pays very little attention to the dam itself, tells us that it lies among three hills, the reference is probably to the massif of the Djebel Balak split into the three hills of the Wādīs Adhana and Masila He also mentions that the blocks are bound together with lead and says that the water accumulated behind the dam is led as required to the fields by strong sluices and cunningly contrived arrangements According to al-Ma'sūdī (*Murūdj al Dhahab*, III 368 *sq*), the barrage was one parasang in length and breadth and contained 30 round openings, each of 1 ell in diameter through which the water was led to the fields

Like many buildings in Arabia, the dam of Mārib is dated by later tradition to remote antiquity and attributed to Lukmān b 'Ād (al Bakrī, *Mu'djam*, II 502, Yākūt, *Mu'djam*, IV 383, al Mas'ūdī, *Murūdj al-Dhahab*, III 366, cf A v Kremer, *Sage*, p 19 *sq*, Djirdjī Zaidān, p 151) or Saba' b Yashdjub b Ya'rub (Yākūt, IV 382, cf E Osiander, *Z D M G*, x 68, E Pococke, *Specimen hist Arabum*, p 498) Al-Hamdānī (*Iklil*, VIII) mentions, besides Lukmān, also the Himyar and al-Azd b al Ghawth as builders of the dam Al Mas'ūdī, *Murūdj al-Dhahab*, p 369 *sq*, says that the dam was built by a wise king on the advice of learned men

The importance of the dam for the prosperity of the country is evident from the descriptions of the Arab historians and geographers, who in this connection usually quote the reference in the Kur'ān to the two gardens of the Sabaeans, while, according to al Hamdānī, this irrigated area included not only the plain of Saba' but stretched to the borders of the desert of Saihad, Glaser (*Reise nach Mârib*, p 52) held the view that the water accumulated by the dam would suffice to irrigate amply all the land on the borders of the desert as far as Hadramōt, and transform it into a vast garden It is therefore perhaps not to be regarded as an exaggeration when al-Mas'ūdī (*Murūdj al-Dhahab*, p 366 *sq*) describes the land of Saba' with its wealth of gardens and fields, broad meadows and extensive irrigation system as the most fertile part of Yemen, the beauty of which had become proverbial throughout the world According to him, a man on horseback would take more than a month to cross the rich cultivated country and any one travelling on foot or on horse need not fear the sun from one end of the land to the other, as he could always travel in the shade, so rich was the vegetation (cf A v Kremer, *Sage*, p 10, note 1) According to Ibn Rosta, p 114, who also waxes eloquent over the fertility of the land of Saba', a basket on the head of a man walking between the fruit trees would very soon have filled itself with fruit without one pulling or gathering them

Under such circumstances it was natural that the catastrophe of the bursting of the dam, known as *sail al-'arim* throughout the Muslim world, should have the most far-reaching effects The migration of Himyar tribes to the north is con-

nected with the catastrophe and the Banū Ghassān took this event as the starting point of an era of their own (*ʿām al-saʾil*, al Masʿūdī, *Kitāb al-Tanbīh*, p 202) There is hardly any historical event of pre-Islāmic history, that has become embellished with so much that is fanciful and related in so many different versions, as the history of the bursting of the dam Al Masʿūdī alone (*Murūdj al Dhahab*, III 370 *sq*) dared attribute it to natural causes, he thought that the water had worn away the foundations of the dam and in time undermined them without its being noticed When the masonry of the dam and the barrage had become so weakened that they could no longer resist the force of the water, the waters when unusually big broke through and flooded the plain But even al Masʿūdī sees in the catastrophe a punishment for the arrogance of the Sabaeans and gives a good deal of space in his history to the legendary version of this event (*op cit*, p 373 *sqq*), which in the main agrees with that of Yāḳūt, *Muʿdjam*, IV 483—485 Ibn al Mudjāwir alone (according to Sprenger, *Post- und Reiserouten*, p 153 *sq*) tells the history of the destruction of the dam in quite a different way from the older historians According to al-Masʿūdī the story is briefly as follows the king ʿAmr b ʿĀmir who lived in Mārib was warned of the imminent catastrophe by his brother ʿImrān, who was a soothsayer and by his wife Zarīfat al Khair, also skilled in prophecy ʿImrān foresaw that his people would be scattered in different directions and told this to his brother Zarīfa on the other hand dreamed of a great cloud which covered her country and sent forth thunder and lightning It burst and burned up everything upon which it fell All this pointed to a terrible inundation and Zarīfa was confirmed in her idea by other signs that the catastrophe was imminent She warned ʿAmr and urged him to see to the dam If he saw a mouse there tearing out holes with its forepaws and throwing out big stones with his hind feet, the misfortune was inevitable and imminent ʿAmr went to the dam and actually saw a mouse which turned over with its feet a stone which 50 men could not have moved from the position ʿAmr himself then dreamed of an inundation by the dam and now decided to realise his possessions and leave the country with his family which he was able to do surreptitiously without arousing suspicions Soon afterwards the collapse came, which destroyed the whole country, even high lying fields and places a considerable distance off

While there are considerable differences in detail in the different versions of the story — the collapse took place for example, according to Yāḳūt not under ʿAmr but under his brother ʿImrān —, there is still greater disagreement about the date Hamza al-Isfahānī, for example, puts it 400 years before Islām, i e in the third century A D According to Ibn Khaldūn, the catastrophe took place under Hassān b Tibbān Asʿad, who (with A v Kremer, *Sage*, p 120 *sq* and note 4) is to be identified with Abū Karib Asʿad and according to Glaser (*Skizze*, II 542) reigned from 385–420 Among European scholars Gosselin goes farthest back in putting the date at 374 B C while Reiske thinks it took place 30—40 B C and Schultens puts it at 30—40 A D, Perron 553 years before Muḥammad and Silvestre de Sacy 210 or 170 A D Yāḳūt, IV 383 comes nearest the truth, he says it took place in the period of Abyssinian rule As the terminus post quem is 542 A D, according to the inscription Glaser, N⁰ 618, we may put the last disastrous breach in the dam as occurring between 542 and 570 A D An exact date unfortunately cannot be obtained as the necessary data are lacking Besides, the stories of the bursting of the dam in Masʿūdī, p 393 *sqq* and Ibn Rosta, p 114 *sq* which speak of the land being twice devastated by the waters of the dam, may contain a memory of the actual course of events, and the final collapse of the dam may have taken place after the catastrophe of 542 A D when the dam was carried away for the first time

The various attempts to explain the etymology of Mārib are not satisfactory When, for example, Yāḳūt, *Muʿdjam*, IV 382 sees in Mārib, a placename from *Arabun* = *Hāḍjatun* or from *arība* or *aruba*, this clearly shows what difficulties the explanation of this name gave the philologists His further statement however that Mārib was the name of the Sabaean kings is worthy of note (cf H Fleischer, *Abulfedae hist anteislamica*, p 114), especially as in Nashwān al Himyarī, a gloss is preserved according to which *Mārī* in Himyarite means "lord" (cf Blau in *Z D M G*, XXV 591, note 7) Djirdjī Zaidān, *Kitāb al-ʿArab kabl al-Islām*, p 142 explains Marib as a loanword from the Aramaic, a compound of *mā*ʾ and *rāb* E Osiander, *Z D M G*, XIX 162 takes Mārib to be connected with the root of the Sabaean proper name ריבם to which Riyāb and Riʾāb correspond in Arabic J H Mordtmann, who deals in *Z D M G*, XXX 322 *sq* at length with the etymology of Mariaba, points to the ראבם and ראבאל of the inscriptions which he connects with the Arabic *raʾbun*, "dominus crassus, magnus gentis" D H Muller does not accept this derivation (*Burgen und Schlosser*, II 968 *sq*) Al-Bakrī, *Muʿdjam*, II 502 says, following al-Hamdānī, that Mārib was the name of a tribe of the ʿAd after whom the town is called and in fact al-Hamdānī in *Iklil*, VIII (Muller, *Burgen und Schlosser*, II 960, 1040) says that Mārib and Marib are the names of two Arab tribes In the older Sabaean inscriptions the town is called מריב to which the Greeks added an *α* to give it a Greek form Eratosthenes and Artemidoros (Strabo, XVI 768, 778) call the town Μαρίαβα The later inscriptions mention it under the name מרב in which we have, with Rhodokanakis, to see a later contracted form, from which comes the Mārib of Muslim tradition The Sabaean capital is however known to the classical authors and Arab geographers by another name, viz Σάβαι (Agatharchides, p 100 in *Geogr Gr min*, I 188 and in Steph Byz s Λάβαι and Τάβαι, cf Tkač in the Art Sabaʾ, N⁰ I, *R E*, II, *A*, col 1516), and Sabaʾ Tkač (col 1391 *sq*) sees in contrast to J H Mordtmann (*Sabaische Denkmaler*, p 3, note 1), E Glaser (*Skizze*, II 15, *Sudarabische Streitfragen*, p 10) and A Sprenger (*Die alte Geographie Arabiens*, p 159, 162) in this double name of the Sabaean capital not an error but believes that Sabai, while not the usual, was not a wrong name for the capital

Against this Glaser, *Skizze*, II 15, rightly emphasised that the capital of the Sabaean kingdom Maryab or Mārib was never known as Sabaʾ Sabaʾ was — so far as the inscriptions are con

cerned — never anything but the name of the land or kingdom and of the tribe which had the hegemony in this land, to which the name Saba' has remained attached to the present day This is quite clear from the inscriptions Thus, in the first lines of the old Sabaean inscriptions Glaser, N⁰ 418—419, 1000 *A* and 1000 *B* (cf N Rhodokanakis, *Altsabaische Texte*, 1 20 *sq*, 79), Almakah (the principal deity of Saba') and Saba' is the formula by which the Sabaean, first a theocratic and then monarchic, state is known That the predominant tribe Saba' is however never described as a tribe in the older period is clear evidence of its hegemony as Rhodokanakis points out (*Handbuch der altarabischen Altertumskunde*, 1 121) It was different in the later period, for example, in the inscription Glaser, N⁰ 542, 2 set up by king Shammar Yuhar'ish, king of Saba' and Dhū Raidān, of the tribe of Saba', the reference is always to the "lords of the town of Mārib and its valleys" | שעבן | סבא | אבעל | הגרן | מרב | ואסרדהו (cf N Rhodokanakis, *Katabanische Texte zur Bodenwirtschaft*, II 14), as a definite sphere of influence had been allotted to them in the government of Mārib and the administration of its territories Deliberately contrasted with them as citizens of the town and the highly cultivated area round it are the "Beduins of Marib" (אעׄרב מרב) in *C I H*, 353, 10 (cf E Glaser, *Die Abessinier in Arabien und Africa*, p 128 *sqq*), who probably lived around the town (for references as regards Saba', cf M Hartmann, *Die arabische Frage*, p 385—389) The idea that Saba' was a town, which we find in the classical authors, which was criticised as early as C Niebuhr, *Beschreibung von Arabien*, p 279, is therefore to be put down to a misunderstanding rather than to be taken seriously This is also true of the identification of Mārib with Saba' among the Arab geographers (cf the references collected by Jomard in Mengin, *Histoire sommaire de l'Egypte*, p 341–344) Yākūt for example (*Mushtarik*, p 239) identifies Mārib with Saba' as does Abu 'l-Fidā' (*Geographie*, p 130 and *Historia anteislamica*, p 114), but the latter expressly points out that Mārib was known as the town of Saba' and it was also said that Mārib was the name of the king's palace while the town was called Saba' It is in keeping with this that we find al-Suhailī in Yākūt, *Mu'djam*, IV 382 referring to Mārib as the name of a castle of the Azd In al-Kazwīnī and in the *Djihān-numā* the town is called Saba' Ibn Rosta, who includes Mārib in Hadramōt and mentions it under the name Madīnat Saba' or Saba', mentions the ruins of a second large town with wonderful buildings, which was close to Saba' and which the people of Saba' considered to have been the town of Saba' Saba', they said, was two towns, which lay opposite one another and were a days' journey in length As there are a number of buildings which belonged to Mārib on the right bank of the Wādī Dhenne, it is intelligible why the mistake should have been made of imagining two towns running parallel to one another, especially as there are still considerable ruins adjoining the Haram Bilkīs, the 'Amā'id and the "pillars of Bilkis" as we have seen The alleged length of a day's journey is of course much exaggerated and indeed the description in Ibn Rosta generally shows how little was known in later times of the ancient Mārib The association of the origin of the town of Mārib with Saba' b Yashdjub probably led to the name of this legendary ruler being transferred to the town or Saba' as a tribe being identified with Mārib, as Agatharchides had already done The varying form in which the name is handed down, sometimes town of Saba' and sometimes Saba' alone, makes this development very probable Besides al-Hamdānī (*Ṣifa*, p 7, 5) identifies the Saba' of Ptolemy with Mārib and always calls the town Mā'rib

The earliest history of the town is unfortunately wrapped in obscurity The mention of kings of Mārib in the comparatively late inscription, Glaser, N⁰ 302, 7, shows, it is true, that the town was still independent in the time of the older Sabaean Mukarribs — for these "kings of Mārib" are their contemporaries — but gives no clue to the date of its foundation It probably arose about the same time as the old royal city of Sirwāh The great inscription Glaser, N⁰ 418—419, shows Mārib already in possession of the Sabaean Mukarribs and not long afterwards it became their capital, this at least seems evident from the inscription Glaser, N⁰ 481, 2 where we are told that the founder of the inscription "brought as far as Maryab the peace between Saba' and Katabān" This we can only interpret with Rhodokanakis (*Studien*, II 24) as meaning that the general (he is called Tuba' karība, son of Dhamaryeda' of the clan of Madhmarum) returned to the capital of Saba' after the conclusion of peace Not long after the foundation of the great Sabaean kingdom, of which the inscription Glaser, N⁰ 1000 *A B* relates, it must have replaced Sirwāh, the oldest capital of the Sabaean kingdom, indeed there seems to be evidence that this had already taken place in the reign of the king who set up the two great Sirwāh inscriptions Glaser, N⁰ 1000 *A B*, Karība-ilu Watar, founder of the great Sabaean kingdom For when we are told in Glaser, N⁰ 1000 *B*, l 5 (N Rhodokanakis, *Altsabaische Texte*, 1 82) that he had built the upper part of his palace Slhm (סלהם) which is probably identical with the famous citadel Salhin at Mārib, it may be assumed that this Mukarrib resided here The great barrage which went back to the older generation of Sabaean Mukarribs, must have then transformed Mārib and the country round it into the flourishing oasis which made the town the centre of a great kingdom The Mukarribs Sumuhu-'alaya Yanāf and his father Yid'ī ilu Dharih as well as Yith'ī amara Bayin also did much for the development of the town and the country around it

We do not know exactly when Mārib ceased to be the capital of the Sabaean kingdom Glaser (*Zwei Inschriften uber den Dammbruch von Mârib*, p 29) supposes that the capital was removed to Zafār (near Yarīm) at latest towards the end of the third century A D, but probably as early as the first century A D, since the *Periplus maris Erythraei*, § 23 already knows Zafār as the capital

Indeed the evidence of the *Periplus* which is supplemented by Pliny, *Nat Hist*, VI 104, who knows Sapphar as a royal residence, can hardly be interpreted otherwise than meaning that Zafār was already the residence of the Sabaean kings about 60 A D With the transfer of the capital to Zafār, the cause of which Glaser finds in the attacks of the Axumites on the independence of the Sabaean kingdom, while M Hartmann (*Die arabische Frage*,

p 469) supposes the reason to have been the victory of the Hamdānids over Himyar (cf *C I H*, 347 and M Hartmann, *op cit*, p 146 *sq*), Mārib's glory had passed away, the decline probably did not set in at once but Glaser must be right in assuming that Mārib was now neglected and this is how the dam so important for the cultivation of the land, fell into disrepair Isolated references in Muslim sources show that the town had however not yet lost all its importance Al-Bakrī, *Mu'djam*, i 308 (cf A v Kremer, *Sage*, p 138) knows Mārib as one of the treasuries of the Himyars, and according to the Himyar ḳasīda, verse 56 (A v Kremer, *Sage*, p xii, note 1 and p 69), Shammar Yur'ish (c 281 A D) kept his prisoners in Mārib The two breaches in the dam which took place in 450 A D and under Abyssinian rule in 542 A D, must have done grave injury to the prosperity of the town In this last period of its brilliant history Mārib was for a short time (certainly in 542 A D) the capital of the governor of the Ethiopian king Ramhis Zuhaimān, Abraha, and even had a Christian church (cf Glaser, *Zwei Inschriften uber den Dambruch von Mârib*, p 47) The final catastrophe sealed the fate of the town Its inhabitants left the sore tried town and migrated to the Hidjāz

Mārib was resettled in the Muslim period The favourable situation of the place and perhaps the rich deposits of salt in the neighbourhood (3 days' journey east of Mārib at Ṣāfir, mentioned in the time of the Prophet, who appointed Abū Mūsā al-Ash'arī governor of Mārib, E Glaser, *Reise nach Mârib*, p 26, al Bakrī, *Mu'djam*, ii 502, al-Hamdānī, *Ṣifa*, p 87, 102, 155, 201, A Sprenger, *Post- und Reiserouten*, p 139) also kept the place from being quite forgotten Ibn Khurdādhbih (*B G A*, vi 138) and al-Mukaddasī (*B G A*, iii 89) mention the village of Mārib, al Hamdānī, *Ṣifa*, p 199 says the sesame of Mārib is a speciality of the Yemen Al-Idrīsī, *Geographie*, p 149 calls Mārib a *burdj*, according to Ibn al Mudjāwir (in A Sprenger, *Post- und Reiserouten*, p 140), Mārib (c 630 A H) had a market and a mosque and was of some importance as a resting-place for the night and fruit could be obtained there at any time of the year Since Yaḳūt, *Mu'djam*, iv 436, also says, the district of Mārib is rich in palms, it seems to have in part at least regained its old fertility

The present little kingdom of Mārib owes its foundation to the shaïf Husain from al-Zahir in al-Djawf, who took a vigorous part in the expulsion of the Turks from the Yemen in 1640 He was the first to assume the title of emir His dominion extended over the whole land from Raghwān in the southern Djawf to Baihān, which he divided among his four sons Only one of these, Khālid, to whom Mārib fell, could exert effective authority, the others never gained possession of their inheritances although their descendants still play a certain part in Baihān al-Kasāb, Harib and Raghwān

AL **MĀRIDĪNĪ**, the *nisba* of three mathematicians and astronomers, of whose lives very little is so far known

1 ʿABD ALLĀH B KHALĪL B YŪSUF was mu'adhdhin in the mosque of the Omaiyads in Damascus and died in the first decade of the ixth (xvth) century As a result of careless transmission, his works are often mixed up with those of his grandson Sibt al-Māridīnī (3) Lists of his works are given in Brockelmann, *G A L*, ii 169 and in Suter, *Die Mathematiker und Astronomen der Araber und ihre Werke*, 1900, N° 421

2 ISMAʿĪL B IBRĀHĪM B GHĀZĪ, known as Ibn Fallūs, lived in the first half of the viiith (xiiith) century and composed works on arithmetic which are listed in Brockelmann, i 472 and in Suter, N° 359

3 MUHAMMAD B MUHAMMAD B AHMAD SIBT AL-MĀRIDĪNĪ is the best known of the three and more of his works have survived than of those of the others He was the grandson of N° 1 and mu'adhdhin at the Azhar mosque in Cairo The date of his birth is 826 (1423) He died about the end of the ninth century

His works cover most branches of mathematics, algebra and astronomy, especially instruments for use in the latter and other technical matters Lists of them are given in Brockelmann, ii 167 and Suter, N° 445 (M PIESSNER)

MĀRIYA, a Copt maiden, according to one statement, daughter of a man named Shamʿūn, who was sent with her sister Sirin by Mukawkis [q v] in the year 7 A H to Muhammad as a gift of honour (according to another authority there were four of them) The Prophet made her his concubine, while he gave Sirin to Hassān b Thābit He was very devoted to her and gave her a house in the upper town of Madīna, where he is said to have visited her by day and night, this house was called after her the *mashraba* of the mother of Ibrāhīm To the great joy of the Prophet, she bore him a son whom he called Ibrāhīm, but he died in infancy According to tradition, an eclipse of the sun took place on the day of his death, an interesting statement by which we can get the date exactly — if the story is true — the 27th Jan 632, that is only a few months before Muhammad's death Māriya's beauty and Muhammad's passionate love for her excited such jealousy among his other wives that, to pacify them, he promised to have nothing more to do with the Copt girl, a promise which he afterwards withdrew Abū Bakr and ʿOmar honoured her and gave her a pension which she enjoyed till her death in Muharram 16 A H There is no reason to doubt the essential correctness of this story, as there is no particular bias in it and it contains all sorts of details which do not look the least like inventions, so that it is exaggerated scepticism when Lammens supposes that the "mother of Ibrāhīm", after whom the *mashraba* was called, was some Jewess On the other hand, in view of the fact that all the marriages of Muhammad after the Hidjra were childless, it would have been surprising if evil-minded people had not cast suspicions on the paternity of Ibrāhīm, and that this actually happened is evident from some traditions the object of which is to defend Māriya from this suspicion

On the other hand, it is not so easy to justify the part which Kur'ānic exegesis makes Māriya play in the exposition of Sūra lxvi In this Sūra, the Prophet speaks in a very indignant tone against one of his wives, because she has betrayed a secret to another, which he had imparted to her under a promise of the strictest secrecy At the same time Allāh blames him, because in order to please his wives, he has bound himself by oath to refrain from something which is not definitely stated and because he does not use the right granted him by Allāh to release himself from his oath In addition, there is a word of warning to the two women who had disobeyed him and a threat to all his wives that he might divorce them in order to marry more pious ones (cf xxxiii 28 *sq*) According to the usual explanation, the two wives are Hafsa and ʿĀ'isha and the revelation is said to have been provoked by the fact that Hafsa, on returning unexpectedly to her house, found Māriya and the Prophet in an intimate tête-a-tête and that on a day which by rotation belonged to her (or ʿĀ'isha) In his embarrassment he pledged himself by oath to have no more intercourse with the Copt girl But after Hafsa's breach of faith, Allāh tells him to release himself from his oath This explanation fits very well in some respects and that the promise of continence is connected with marital complications is illuminating That there are hadīths, which explain his quarrel with his wives quite differently, does not mean very much, for they are no doubt invented to drive out of currency the popular, less edifying version But, on closer examination, there is one flaw which makes the latter uncertain, for it does not answer the question how Muhammad could call the situation in which Hafsa caught him and Māriya a secret that he trusted to her

AL **MARḲAB** (the MARGAT, MERGHATUM of the Crusaders), a fortress near Bāniyās on the coast of Syria According to the chronicle of Abū Ghālib Humam b al-Fadl al-Muhadhdhab al-Maʿarrī (quoted in Yākūt, *Muʿdjam*, ed Wüstenfeld, iv 500) and the *Taʾrīkh al-Kulāʿ wa 'l-Husūn* of Usāma b Munkidh (in Abu 'l-Fidā', ed Reinaud and de Slane, p 255), it was built by the Muslims in 454 (1062) Al Dimashkī (ed Mehren, p 208) wrongly attributes its foundation to Hārūn al

Rashīd (van Berchem, *Voyage*, p 304, note 7 where the reference to Rashīd [rather Rāshid] al Dīn in Le Strange, *Palestine* is shown to be wrong), his statement seems to be correct, however, that the citadel was built out of material from ancient ruins The Byzantines occupied al-Markab and other fortresses in the vicinity under the general Kantakuzenos in 1104 (Anna Comnena, Ἀλεξιάς, ed Reifferscheid, ii 138 τὸ τε Ἀργυρόκαστρον [= Sāfīthā] τὸ καλούμενον Μαρχάπιν [= al Markab], τὰ Γάβαλα [Djabala] καὶ ἄλλα τινά) When in 511 (1117—1118) the Crusaders approached the fortress, its lord Ibn Muhriz surrendered it on condition that he and his family were allowed to remain in it, but after a few days the Franks expelled him and allotted al-Manīka to him in exchange for al-Markab, Franks and Armenians were settled in the latter The first recorded lord of the fortress was Rainald Mansuer, the constable of the prince of Antioch After the earthquake of 1170, from which the fortress must have suffered damage, Bertrand of al-Markab, perhaps out of fear of Saladin's threats, handed it over on Feb 1, 1186 to the Knights of St John In July 1186 Saladin passed below the watch tower (now Burdj al Sabī), which from ancient times had commanded the road along the coast (cf Dussaud, *Topogr*, p 127, note 5) below the fortress and was connected with it by a wall which protected a subterranean passage, but did not dare to attack Markab any more than Tartūs [q v] Prince Isaac of Cyprus, a descendant of the Comneni (not the Emperor Isaac Comnenos as van Berchem, *op cit*, p 298 *sq*, note 5 says), was taken prisoner by Richard Coeur de-Lion on May 31, 1191, and imprisoned in Markab till his death (Neophytos, in *Recueil hist crois*, *hist grecs*, i/ii 562 with note, ii 489 ἐν κατέλλῳ καλουμένῳ Μαρκάπτῳ) Sultān al Malik al-Zāhir Ghāzī of Halab whose lands adjoined those of the Knights of St John sent in 601 (1204—1205) troops against the fortress, who are said to have just succeeded in destroying the towers of the walls when their leader fell and they again retired without accomplishing their object In 628 (1231) and 638 (1240—1241) the Knights were again at war with Yūsuf, Sultān of Halab From this period (1212) dates the very full description of the strong fortress by Wilbrand of Oldenburg Built on a high hill and surrounded by a double wall and many towers, it was regarded in the period when the power of the Crusaders was beginning to decline, as *maximum totius terrae illae solacium*, the bishop of Valenia (Bāniyās) had moved into the fortress by 1212 out of fear of the Muslims King Andreas of Hungary in 1217—1218 gave funds for the maintenance of the fortress which had given him an honourable reception (Rohricht, *Regesta Hierosolym*, p 243, N° 908) The straits to which the humiliating treaties with Baibars had reduced the Knightly Orders is lamented by the Grand Master Hugo Revel in 1268 in a letter in which he says that the possession of its last two fortresses, *Cratum* and *Margatum* (= Hisn al-Akrād and al-Markab), was only granted the Order on payment of oppressive taxes (Rohricht, *Regesta Hieros*, *Additamentum*, Oeniponti 1924, p 91, N° 1358*a*) After the loss of Hisn al-Aknād, the Templars and the Knights of St John in 669 (1271) by a treaty which they concluded in ʿArka with Saif al-Dīn Balabān al-Dawādār ("the secretary") al-Rūmī, the Sultān's plenipotentiary, had to cede half of the coastland (*sāhil*) of Antarsūs, al-Markab and Bāniyās and bind themselves not to build any new defences (Mufaddal b Abi 'l-Fadā'il, *Gesch d Mamlūkensultane*, ed Blochet, in *Patrol Orient*, xii 536) After a raid by the Franks (Oct 1279) the Emīr Saif al-Dīn Balabān al Tabbākhī, the governor of Hisn al-Akrād for Kalā'ūn, in the beginning of 1281 sent troops against al-Markab, but they were driven back with heavy losses (Mufaddal, *op cit*, xiv 484, and the sources quoted in van Berchem, *Voyage*, p 301, note 5) In the treaty between Kalā'ūn and the Templars of 681 (1282) al-Markab is mentioned among the districts half of which were to be ceded (Mufaddal, *op cit*, xiv 445, van Berchem, *op cit*, p 302, note 2) The pilgrim Burchardus de Monte Sion in 1283 mentions the "*Castrum Margath fratrum hospitalis sancti Johannis*", it was still at this date the see of the bishop of Valenia (*Peregrinatores*, ed Laurent, p 30, 170)

On 10th Safar 684 (April 17, 1285) Kalā'ūn appeared before al-Markab and began the attack as soon as the siege artillery arrived On the 19th Rabīʿ I (May 25) the Emir Fakhr al Dīn Mukrī received the surrender of the fortress On account of its strategic value for defence against possible attacks from the sea, it was not destroyed but included in the "royal province of the fortunate conquests", the capital of which till 688, when Tarābulus was taken, was the Castle of the Kurds, still governed by Saif al Dīn Balaban al-Tabbākhī al-Mansūrī Kalā'ūn in 684 ordered him to repair the defences of the citadel as an inscription found *in situ* shows (van Berchem, *Inscriptions de Syrie*, p 71 *sq*) Among those present at the capture of the fortress were the 12 years old Abu 'l-Fidā', who was then on his first campaign with his father, and the historian Ibn ʿAbd al-Rahīm, the continuer of Ibn Wāsil's chronicle The best account of the taking of al Markab is in Kala'ūn's biography entitled *Tashrīf al-Ayyām wa 'l-ʿUsūr bi-Sirat al-Sultān al Malik al Mansūr* (Paris, MS ar, N° 1704, fol 149 *sqq*, ed and transl in van Berchem, *Voyage*, p 310—320)

In the viiith (xivth) century al Markab belonged to the province of Tarābulus (ʿUmarī, *Taʿrīf*, transl by R Hartmann, *Z D M G*, lxx [1916], 36, Khalil al-Zāhirī, *Zubdat Kashf al-Mamālik*, ed Ravaisse, p 48, Kalkashandī, *Subh al Aʿshā*, ed Cairo, iv 145 *sq*), at this time it was used as a state prison (van Berchem, p 305, note 2) Its harbour is mentioned in documents of 1193 and 1299 (van Berchem, p 309, note 3), it was presumably at the mouth of the Wādī ʿAin al-Khraibe (in Walpole *al-Mīna*) As al-Markab lies on the outer spurs of the Ansariye range it has often wrongly been included among the fortresses of the Ismāʿilis (*Kilāʿ al-Daʿwa*) (so ʿUmarī, *op cit*, in the Berlin and Gotha MS but not in the others, Hartmann, *Z D M G*, lxx, 36, note 7) So far as we can judge from the brief notes by visitors, it was not till about the middle of the xixth century that it began to fall into ruins About 1885 at the request of the kā'immakām of the kadā of al-Markab the seat of the government was transferred from the ruined Kalʿat al-Markab to Bāniyās (M Hartmann, *Z D P V*, xxii, p 163, N° 27)

MARRAKESH (Ar Marrākush, popular pronunciation *Merrākesh*), a town in Morocco, and one of the residences of the Sultān

The form Marrakech, adopted by the administration of the protectorate, is of recent origin in French Down to about 1890 the town was always known as Maroc (Morocco) in French The kingdom of Morocco, distinct in origin from those of Fās and Sūs, finally gave its name to the whole empire At one time it only consisted of the country south of the wādī Umm Rabī' as far as the range of the Great Atlas

Marrakesh is situated in 31° 37′ 35″ N Lat and 7° 59′ 42″ East Long (Greenw) Its mean height above sea-level is about 1,510 feet The town is 150 miles south of Casablanca It is through the latter that almost all the traffic with the coast passes at the present day It used to go via Safi which is the nearest port (100 miles) Sīdi Muhammad b 'Abd Allāh in 1765 tried to supplant it by Mogador (115 miles), where he built a town and harbour through which at the end of the XVIIIth century most of the trade between Marrakesh and Europe passed

Although Marrakesh is only 235 miles from Fās as the crow flies, it is over 330 by Casablanca-Rabat-Meknes which is the only road that has been used for over a century, the direct road by the Tādlā having been rendered impracticable by the traditional insecurity of the country

The temperature which is very mild in winter is very hot in summer The average maxima of 39° 6 in the month of August 1927 have nothing unusual and imply extreme temperatures reaching or passing 50° on certain days Rainfall is low (284 5 mm in 1927, against 706 5 in Rabat and 1,007 3 in Tangier) But water fed by the snows of the Atlas is found at no great depth It is collected by a system of long subterranean galleries (*khaṭṭāra*, plur *khaṭātīr*) which bring it to the surface by taking advantage of the very slight slope of the surface This method of obtaining water, which is described in the XIIth century by Idrīsī, has enabled the vast gardens which surround the town to be created The Almohads and the dynasties which succeeded them also built aqueducts and reservoirs to supply the town with water from the springs and streams of the mountains

Contrary to what was until quite recently believed, Marrakesh is by far the most thickly populated town of the empire The census of March 7, 1926 gives 149,263 as the total population, 3,652 Europeans, 132,893 Muslims, 12,718 Jews The probable growth of the population is not sufficient to explain the difference between the present day figures and the old estimates, almost all far below the truth and varying greatly among themselves from 20,000 (given by Diego de Torres in 1585 and Host in 1768), 25,000 (Saint Olon, 1693), 30,000 (Ali Bey el-Abbassi, 1804), 40 to 50,000 (Gatell, 1864 and Eug Aubin, 1902), 50,000 (Lambert, 1868), 60,000 (Beaumier, 1868), 80 to 100,000 (Washington, 1830) up to the obviously exaggerated figure of 270,000 given by Jackson in 1811

About 40 miles N of the Atlas, the vast silhouette of which, covered by snow for eight months of the year fills the background, Marrakesh is built in a vast plain called the Hawz which slopes very gently towards the wādī Tānsift, which runs 3 miles north of the town The extreme uniformity of the plain is broken only in the N W by two rocky hills called Gilliz (1,700 feet) and Kudyat al 'Abīd In 1912 at the time of the French occupation, there was built a fort which commands Marrakesh The modern European town called the Gueliz lies between this hill and the walls of the old town

The wādī Issīl, a left bank tributary of the Tānsift, a stream often dried up but transformed into a raging torrent after storms, runs along the walls of the town on the east To the north of Marrakesh as far as the Tānsift and to the east stretches a great forest of palm trees, the only one in Morocco north of the Atlas It covers an area of 13,000 hectares and possesses over 100,000 palm-trees but the dates there only ripen very imperfectly

The town is very large The walls which run all round it measure at least 7 miles in length The town in the strict sense does not occupy the whole of this vast area The part built upon forms a long strip which starting from the zāwiya of Sīdī bel 'Abbās in the north runs towards the kasba which stands at the southern end of the town On the two sides lie great gardens and estates among which we find in the neighbourhood of the chief gates inside the walls, isolated quarters grouped like so many villages around their sūk and their mosque

The town consists mainly of little low houses of reddish clay, often in ruins, among which are scattered huge and magnificent dwellings without particularly imposing exteriors built either by the viziers of the old makhzen (e g the Bāhīya, now

the Résidence Générale, the old palace of the Bā Hmād, vizier of Mawlāi al-Hasan) or by the great kā'ids, chiefs of the tribes of the country round The narrow and overhung streets in the central area broaden towards the outskirts into sunny and dusty squares and crossroads The colour, the picturesque architecture, the palm-trees, the branches of which appear over the walls of the gardens, the presence of a large negro population, all combine to give the town the appearance of a Saharan *ksar* of vast dimensions

The centre of the life of the city is the Djāmaᶜ al-Fnā, a vast, irregular, ill defined open space, surrounded until quite recently by wretched buildings and reed huts, overshadowed by the high minaret of the Kutubīya Mosque Its name comes, according to the author of the *Taʾrīkh al Sūdān*, from the ruins of a mosque which Ahmad al-Mansūr had undertaken to build there "As he had planned it on a wonderful scale, it had been given the name of mosque of prosperity (*al hanā*), but his plans being upset by a series of unfortunate events, the prince was unable to finish the building before his death and it was therefore given the name of mosque of the ruin (*djāmaᶜ al-fanā*)" This origin having been forgotten, an attempt was later made to explain the name of the square from the fact that the heads of rebels used to be exposed there (mosque or place of assembly of ruin, of death) It was there also that executions took place Lying on the western edge of the principal agglomeration of buildings at its most thickly populated part, close to the sūk, connected with the principal gates by direct and comparatively quiet roads, Djāmaᶜ al-Fnā is the point of convergence of the roads At all hours swarming with people, it is occupied in the morning with a market of small traders barbers, cobblers, vendors of fruit and vegetables, of medicines, of fried grasshoppers, of tea and of soup (*harīra*), in the evening, it is filled with acrobats and jugglers (Awlād Sidi Ahmad ū Mūsā of Tazerwālt), sorcerers, story tellers, fire eaters, snake charmers and *shluh* dancers The audience consists mainly of people from the country who have come into town on business and want to enjoy the distractions of the town for a few hours before going home These visitors are always very numerous in Marrakesh Besides the regular inhabitants there is a floating population the number of which has been put at 20,000 to 25,000 For Marrakesh is the great market for supplying not only the Hawz but also the mountain country, the Sūs and especially the extreme south, Dādes, Darᶜa (Draᶜ) and the Anti-Atlas A portion of this traffic will probably be diverted via Agadir when this port is opened to trade Marrakesh used to be the starting-point for caravans going through the Sahara to trade with Timbuktu They brought back chiefly Sudanese slaves for whom Marrakesh was an important market The conquest of the Sudan by France has put an end to this traffic

To the north of the Djāmaᶜ al-Fnā begin the sūks which are very large As in Fās and in the other large towns, the traders and artisans are grouped by trades under the authority of the *muhtasib*, a kind of provost of the merchants The most important sūks are those of the cloth merchants (*kīsārīya*), of the sellers of slippers, of pottery, of basket work, of the embroiderers of harness, of the dyers and of the smiths An important Thursday sūk (*al khamīs*) is held outside and inside the walls around the old gate of Fās which has taken the name of the market (Bāb al Khamīs) This sūk was already in existence in the xvith century

There is no industry to speak of in Marrakesh The most important is the making of leather (tanning) The manufacture of slippers occupies 1,500 workmen who produce over 2,000 pairs each working day There are the only articles manufactured in the town that are exported They are sold as far away as Egypt and West Africa The war interrupted communications and did great damage to this industry For the rest, Marrakesh is mainly an agricultural market The whole town is a vast *fondak* in which are warehoused the products of the country, almonds, carraway seeds, goat skins, oils, barley, wool, to be exchanged either for imported goods (sugar, tea, cloth) or for other agricultural produce (wheat, oil, which the tribes of the mountains and of the extreme south for example do not have)

The town is divided into 32 quarters Zāwiya ᶜAbbāsīya, Sidī Ben Slimān, Aswal, Riyād al-ᶜArūs, Sidī Abi ᶜAmr, Bāb Dukkāla (divided into two quarters), Sidī ᶜAbd al-ᶜAzīz, Rahbat Āzbast, Dabāshī, Kannārīya, Riyād al-Zītūn al djadīd, Djnān ben Shogra, Ksūr, Mwāsīn, Riyād al-Zitūn al-kadīm, ᶜArsa Mawlāi Mūsā Kbīra, ᶜArsa Mawlāi Mūsā Sghira, Bāb Hailāna, Sīdī Mīmūn, Ben Sālah, Sidī Aiyūb, Bū Zakrī, Kāᶜat ben Modar, Bāb al-Dabbāgh, Hārat al-Sūra, Mawkif, Arbatin, the *kasba* containing the royal palaces (again subdivided into several sections al-Badiᶜ, Kasbat al nūhās), Berrīma, Bāb Ahmār, Maskīnat Sīdī ᶜAmāra and the *mellāh* or Jewish quarter We may further mention outside the walls near the Bāb Dukkāla, a quarter called al-Hāra where the lepers live Until recent years the gates of the town were closed during the night The superintendents of the quarters (*mukaddamīn*) have watchmen (ᶜ*assāsa*) under their orders The old custom still survives of firing a salvo at midnight on the Djāmaᶜ al-Fnā as a curfew

Marrakesh being an imperial town, the sultān who only stays there at long intervals is represented in his absence by a *khalīfa*, a prince of the imperial family (usually the son or brother of the sovereign) The role of this khalīfa is purely representative His main duty is to preside at the ceremonies during the ritual celebrations The governor of the town is a *pasha*, assisted by a delegate (*nāʾib*) and several khalīfas One of the latter supervises the prisons and the administration of justice Another has the title of pasha of the kasba He governs the southern part of the town which includes the imperial palace and the Jewish quarter Formerly the pasha of the kasba was independent of the pasha of the town and served to counterbalance the power of the latter He commanded the *gish*, an armed contingent furnished by the warlike tribes (Ūdāya, Ait Immūr etc) settled in the vicinity of the town by the sultāns on the domain lands At the present day the gīsh is under the control of the pasha of the town and the pasha of the kasba only retains of his former powers certain rights of precedence and honorary privileges

Muslim law is administered in Marrakesh by three kādīs one is established at the mosque of Ibn Yūsuf, the other at the mosque of al-Mwāsīn and the third at the mosque of the kasba The latter's competence does not extend beyond the limits of

his quarter That of the others extends over the whole town and even over the tribes of the area governed from it who have no local kādī

Marrakesh is not numbered like Rabat and Tetuan among the *hadarīya* towns, i e it has not, like them, an old established citizen population, not of rural origin, with a bourgeoisie whose tone is given by the descendants of the Moors driven from Spain In the xvith century however, Marrakesh did receive a colony of Morescoes large enough to give one quarter the name of Orgiba, a town of Andalusia from which they came The foundation of the population consists of people of the tribes for the most part Berber or Arabs strongly mixed with Berber blood Shluh is much spoken in Marrakesh although the language of the tribes around the town (Rhāmna, Ūdāya) is Arabic The movements of the tribes, the coming and going of caravans, the importation of slaves from the Sudan have resulted in a constant process of mixing in the population and the old Masmūdian race which must with Almoravids have been the primitive population of Marrakesh is only found in combination with amounts difficult to measure of Arab, Saharan and negro blood Even to day this process is going on the newcomers come less from the valleys of the Atlas than from the Sūs, the Dra^{c} and the Anti Atlas, from the extreme south which is poor and overpopulated The greater number of these immigrants soon become merged in the population of the town, but the *Enquête sur les corporations musulmanes*, conducted by L Massignon in 1923—1924 (Paris 1925) yielded some very curious information about the survival in Marrakesh of vigorous groups of provincials, specialising in particular trades the makers of silver jewellery (at least those who are not Jews) owe their name of *tāgmūtiyīn* to the fact that they originally came from Tāgmūt in Sūs, the Mesfīwa are charcoal-burners and greengrocers, the Ghighāya, salters, the people of the Todgha, gatherers of dates and *khatātīrīya*, i e diggers of wells, who specialise in water-channels (*khaṭātīr*), those of Tāfīlālt, porters and paviors, those of War/āzāt, water-carriers and of Tatta^{c} (Anti-Atlas), restaurateurs, of the Dra^{c}, water-carriers and *khatātīrīya*, etc

This division is not the result of specialisation in their original home nor of privileges granted by the civic authorities but arises from the fact that artisans once settled in Marrakesh have sent for their compatriots when they required assistance Thus groups grew up, sometimes quite considerable The list of the corporations of Marrakesh gives a total of about 10,000 artisans These corporations have lost much of their power under the pressure of the Makhzen Some of them however still retain a certain social importance in the first place that of the shoemakers which is the largest (1,500 members), then come the tanners (430), the cloth (237) and silk (100) merchants, the *fāsīs* wholesalers, then some groups of skilled artisans, highly esteemed but of less influence, embroiderers of saddles, makers of mosaics, carpenters, sculptors of plaster etc

Religious and intellectual life Mosques are numerous in Marrakesh Some of them will be the subjects of brief archaeological studies Those which play the most important part in the religious life of the city are the mosque of al Mwāsīn, the mosque of ^{c}Alī b Yūsuf, both close to the sūks, that of Sīdī bel ^{c}Abbās and that of the ḳasba. Then come the Kutubīya, the mosque of the Bāb Dukkāla, of the Bāb Ailān, of Berrīma, and the Djāma^{c} Ibn Sālah There are also many little mosques in the various faubourgs But although it can claim illustrious men of learning, Marrakesh is not like Fās, a centre of learning and of teaching The Almohads built schools and libraries there, brought the most illustrious scholars, philosophers and physicians from Spain, like Ibn Tufail, Abū Marwān Ibn Zuhr (Avenzoar) and Abu 'l Walīd Ibn Rushd (Averioes) who died at Marrakesh in 595 (1198) These great traditions did not survive the dynasty In the beginning of the xvith century, in the time of Leo Africanus, the library of the Almohad palace was used as a poultry house and the madrasa built by the Marīnids was in ruins At the present day in the town of the Kutubīya there is not a single bookseller A certain number of *ṭolbā* still live in the madrasas (Ibn Yūsuf, Ibn Sālah, Sīdī bel ^{c}Abbās, Berrīma, Kasba) but the teaching in Marrakesh has neither the prestige nor the traditions which still give some lustre to the teaching at al-Karawīyīn in Fās, much decayed as it is Although they attempt to imitate the customs of Fās (they celebrate notably the "festival of the sultān of the *ṭolbā*" [cf FĀS] every spring) the students are far from holding in Marrakesh the position their comrades enjoy in Fās

The devotion of the people of Marrakesh expends itself particularly on the cult of saints, not at all orthodox but dear to the Berbers Their town has always been famous for the great number of *wālī* who are buried in its cemeteries and who justify the saying "Marrakesh, tomb of the saints" But in the time of Mawlāi Ismā^{c}īl, the Shaikh Abū ^{c}Alī al Hasan al-Yūsī, by order of the prince organised, in imitation of the old established cult of the Sab^{c}atu Ridjāl (the seven saints of the Ragrāga, around the Djabal al-Hadīd, among the Shyādma) a pilgrimage to the Sab^{c}atu Ridjāl of Marrakesh including visits to seven sanctuaries and various demonstrations of piety The following are the names of the seven saints in the order in which they ought to be visited 1) Sīdī Yūsuf b ^{c}Alī al-Ṣanhādjī, a leper, d 593 (1196–1197), buried outside the Bāb Aghmāt on the spot where he had lived, 2) the kādī ^{c}Iyād, 476—544 (1083—1149), kādī of Ceuta, then of Granada, a learned theologian, author of the *Shifā*, a celebrated collection of traditions, buried beside the Bāb Ailān, 3) Sīdī bel ^{c}Abbās al-Sabtī, patron saint of Marrakesh and the most venerated of the saints of the region 524—601 (1130—1204) He came to Marrakesh when the town was being besieged by the Almohads and settled there, at first in a hermitage on the Djabal Gillīz where a *kubba* dedicated to him can still be seen But the principal pilgrimage is to his tomb at the northern end of the town over which Abū Fāris b Ahmad al-Mansūr built a zāwiya and an important mosque at the beginning of the xviith century, 4) Sīdī Muhammad b Slīman al-Djazūlī, d in 870 (1465) at Afughal among the Shyādma, a celebrated Sūfī, founder of the Djazūlī brotherhood His body was brought to Marrakesh in 930 (1523) by Ahmad al A^{c}radj the Sa^{c}dian, 5) Sīdī ^{c}Abd al-^{c}Azīz al-Tabbā^{c}, a pupil of al Djazūlī, d in 914 (1508), 6) Sīdī ^{c}Abd Allāh al-Ghazwānī, popularly called Mawla 'l-Ksūr, d in 935 (1528) 7) Sīdī ^{c}Abd al-Rahmān al Suhailī, called the Imām al Suhailī, a native of the district of Malaga, d 581 (1185) and buried outside the Bāb al-Rabb

It is quite an arbitrary choice that these seven individuals have been chosen as the Sabʿatu Riḏjāl Others could equally well have been chosen, as the town of Marrakesh and the cemeteries which stretch before it, contain a very large number of other venerated tombs The principal are mentioned in the article by H de Castries, *Les Sept Patrons de Merrakech* (*Hespéris*, 1924) Legend of course plays a great part in the cults of the various saints We may mention for example the sayings and songs which perpetuate the memory of Lalla ʿŪda, mother of the Sultān Ahmad al-Mansūr, a real personage much transformed by the popular imagination The various trade corporations have chosen patron saints Thus Sīdī Yaʿḳūb is the patron of the tanners, Sīdī bel ʿAbbās of the soap-makers and lacemakers, Sīdī Masʿūd "slave" of Sīdī Muhammad b Slīmān is the patron of the masons, Sīdī ʿAbd al-ʿAzīz al Tabbāʿ of the dyers, etc The majority of the artisans are also affiliated to the religious brotherhoods In Massignon's investi gation will be found details of the attraction which some of the latter have for certain trades

The Jews At the foundation of Marrakesh, the Jews had no permission to settle in the town They came there to trade from Aghmāt Aïlān where they lived Al Idrīsī relates that under ʿAlī b Yūsuf they had not even the right to spend the night in Marrakesh and that those, who were caught within the walls after sunset, were in great danger of losing their lives and property They settled there at a later date At the beginning of the xvith century there was, according to Marmol, in Marrakesh a ghetto of over 3,000 houses It lay near the sūk on the site now occupied by the mosque of al Mwāsīn When this mosque was built by Sultān ʿAbd Allāh al Ghālib, the more scrupulous refused to pray there for some time on the pretext that it occupied the site of a Jewish cemetery It was ʿAbd Allāh al-Ghālib who, about 1560, settled the Jews on the site they still oc-cupy, along the wall of the kasba to the east, where the stables of the palace had been In the beginning of the xviith century, there was here, according to the French traveller Mocquet, "like a separate town, surrounded by a good wall and having only one gate guarded by the Moors, here live the Jews who are over 4,000 in number and pay tribute" A century later, there were about 6,000 Jews and many synagogues The Jewish quarter, called *mellāh* after the example of the Jewish quarter of Fās (the name *mellāh* is attested for Marrakesh as early as the end of the xvith century), has 12,000 inhabitants at the present day As regards policing, it is under the authority of the pasha of the kasba but otherwise is administered by an elected Jewish committee Questions of personal law are judged by a rabbinical tribunal of three members nominated and paid by the Makhzen The Jews of Marrakesh are beginning to leave the bounds of the *mellāh* For the most part they wear the ritual costume gaberdine, skull cap and black slippers, but the younger generation shows a tendency to emancipate itself from this dress They have little influence on the corporations of Marrakesh and are not allowed to settle in the sūks They are limited to certain trades (jewellers, tinsmiths and embroiderers of slippers) and share with the people of Fās the wholesale trade They trade particularly with the Shluh of the mountains

History The Roman occupation never extended so far as the region of Marrakesh It is quite without probability that some writers, following the Spanish historian Marmol, have sought at Aghmāt or at Marrakesh the site of *Bocanum Emporium* (Βόκκανον Ἡμεροσκοπεῖον of Ptolemy), a town of Tingitana, the site of which is now unknown The earliest historians agree that the place where Marrakesh was built by the Almohads was a bare marshy plain where only a few bushes grew The name Marrakesh gives no clue to the origin of the town The etymologies given by the Arab authors are quite fanciful according to al-Marrā-kushī, it was the name of a negro slave who escaped and set up as a brigand there Another writer explains it by a punning interpretation "the meaning of the name in the language of the Masmūda is "go away quickly"! The place was actually a place of ambuscade for brigands" It was, it appears, in 449 (1057—1058) that the Almohads advanced from Sūs north of the Atlas and took Aghmāt Warika It was there that they settled at first But after the campaign of 452 (1060) in the course of which they conquered the country of Fazāz, Meknes and of the Lawāta near Fās, they wanted to make their position more permanent and independent by creating a kind of camp, which could be used as a base for their further campaigns and would threaten the Masmūda of the mountains and could be used as a connecting link between the south from which they came and the kingdom of Fās Yūsuf b Tāshfīn there-fore purchased from its owner an estate on the frontier between two Masmūda tribes, the Hailāna and the Hazmīra, and pitched his camp there So far was he from thinking of founding a great capital, a thing for which this Saharan nomad felt no need, that at first he lived in a tent here, beside which he built a mosque to pray in and a little kasba in which to keep his treasures and his wea-pons, but he did not build a surrounding wall The native Masmūdis built themselves dwellings sur-rounded by palisades of branches beside the Almo-ravid camp The town grew rapidly to a considerable size, if it is true, that in the reign of ʿAlī b Yūsuf it had at least 100,000 hearths, but it did not lose its rural character until Ibn Tūmart appeared and the threat of the Almohad movement revived by him forced ʿAlī b Yūsuf to defend his town and surround it by a rampart which was built in eight months, probably in 520 (1126) Some historians give the date 526 (1132) but it is certain that the walls were already built in 524 (1130) when the Almohads attacked Marrakesh for the first time Mar-rakesh, the creation and capital of the Almoravids, was to be the last of their strongholds to yield When Ibn Tūmart had established his power over the tribes of the mountains he tried to attack Marra-kesh, he then sent an Almohad army under the command of Shaikh al-Bashīr, who, after defeating the Almoravids in the vicinity of Aghmāt, pursued them to the gates of Marrakesh The Almohads could not enter the town but established themselves before its walls After 40 days' siege, ʿAlī b Yūsuf received reinforcements and made a success ful sortie which forced the attackers to retreat This was the battle of al-Buhaira (524 = May 1130) from the name of a large garden, *Buhairat al-Rakāʾik*, near which it was fought It lay to the east of the town before the Bāb Dabbāgh and the Bāb Aïlān Al-Bashīr was slain and Marrakesh re-spited for 17 years Ibn Tūmart died a few months

later It is hardly likely that ʿAbd al-Muʾmin should have made soon after his accession, as the *Kirṭās* says, a new attempt to take Marrakesh The memoirs of al-Baidhak which give such full details of all the events of this period make no mention of it They show on the contrary the Almohad armies busied at first in conquering the country before occupying the capital, taking Tadla, Sale, Taza, Oran, Tlemcen and Fās and only returning to lay siege to Marrakesh after the whole country had been occupied and the capital alone held out as the last stronghold of the doomed dynasty It was in the summer of 1146 that ʿAbd al-Muʾmin laid siege to Marrakesh He made his headquarters at Gillīz and, seeing that the siege would be a long one, at once had houses built in which to instal himself and his army The siege lasted eleven months An unsuccessful sortie by the Almoravids seems to have hastened the fall of the town Disgusted by lack of success and by famine, a number of chiefs of the besieged went over to the enemy ʿAbd al-Muʾmin had scaling ladders made and distributed them among the tribes The assault was made and, according to Ibn al-Athīr, the defection of the Christian soldiery facilitated its success The Almoravid Sultān, Ishāk, a young boy who had sought refuge in the fortress, was slain, along with a large number of the Almoravids This event took place in 541 in the month of Shawwāl (March 6—April 3, 1147), according to the majority of the historians

The Almohad dynasty which came from the south naturally took Marrakesh as its capital It was here that ʿAbd al-Muʾmin and his successors usually resided when they were not in the country The town prospered exceedingly under their rule They gave it many important public buildings the kasba, mosques, schools, a hospital, aqueducts and magnificent gardens During this period of prosperity, there were very few events of particular interest in the history of Marrakesh In 547 (1152—1153) according to Ibn Khaldūn, in 549 (1154–1156) according to al-Baidhak and the *Kirṭās*, the Banū Amghār, brothers of the Mahdī Ibn Tūmart, entered the town and tried to raise the inhabitants against ʿAbd al-Muʾmin who was away at Sale The rising was speedily put down and ended in the massacre of the rebels and their accomplices But on the decline of the dynasty, i e after the battle of Las Navas de Tolosa (1212) and the death of al-Nāsir, son of al-Mansūr, Marrakesh became the scene of the struggle between the royal family descended from ʿAbd al Muʾmin and the Almohad shaikhs descended from the companions of Ibn Tūmart who, quoting traditions of the latter, claimed the right to grant investiture to the sultāns and to keep them in tutelage Abū Muhammad ʿAbd al-Wāhid, brother of al Mansūr, was strangled in Sept 621 (1224) His successor al-ʿĀdil was drowned in a bath in the palace (Oct 624 = 1227) and the Almohad shaikhs appointed as his successor the young Yahyā b al-Nāsir, while Abu ʾl-ʿUlā Idrīs al-Maʾmūn, brother of al-ʿĀdil, was proclaimed in Spain The whole country was soon in the throes of revolution Yahyā, fearing the defection of the fickle Almohads, fled to Tinmal (April—May 626 = 1228) Disorder reigned in Marrakesh, where a governor named al-Maʾmūn was finally appointed But four months later, Yahyā returned to Marrakesh with fresh troops, put al-Maʾmūn's governor to death and after staying seven days in the town was forced to go to Gillīz to fight a battle (Feb 1230), for al-Maʾmūn had arrived from Spain to take possession of his kingdom Ferdinand III, king of Castile, had given in return for various concessions, a body of 12,000 Christian horsemen with whose assistance al-Maʾmūn defeated Yahyā and his followers, entered Marrakesh and installed an anti-Almohad regime there, marked not only by a terrible massacre of the shaikhs and their families but by a new orientation in religious matters quite opposed to that of the preceding reigns On his arrival in Marrakesh, al Maʾmūn mounted the pulpit of the mosque of the kasba, recited the *khuṭba*, solemnly cursed the memory of Ibn Tūmart and announced a whole series of measures, some of which are given by the *Kirṭās* and Ibn Khaldūn and which show he intended to do everything on opposite lines to his predecessors His innovations revived the discontent so that two years later (1232) while al-Maʾmūn and his militia were besieging Ceuta, Yahyā again occupied Marrakesh and plundered it Al-Maʾmūn at once turned back to the rescue of his capital but died on the way (Oct 17, 1232 = 629 A H) His widow, al-Habāb, succeeded in getting her son al-Rashīd, aged 14, proclaimed by the leaders of the army, including the commander of the Christian mercenaries In return she gave them Marrakesh to plunder if they could reconquer it But the people of the town, learning of this clause in the bargain, made their own terms before opening their gates to the new sultan The latter had to grant them the *amān* and pay the Christian general and his companions the sum they might have expected from the plunder of the capital — according to the *Kirṭās*, 500,000 dīnārs

In 633 (1235—1236) a rebellion of the Khlot drove al-Rashīd out of Marrakesh and he took refuge in Sidjilmāsa while Yahyā recaptured Marrakesh Al Rashīd however succeeded in retaking it and Yahyā finally was assassinated It was in the reign of the Almohad al-Saʿīd (1242—1248) that the Marīnids who had arrived in the east of the country in 1216, seized the greater part of the kingdom of Fās His successor ʿUmar al-Murtadā, proclaimed in 646 (1248), found himself in 658 (1260) reduced to the solitary kingdom of Marrakesh, to the south of the Umm Rabīʿ In 660 (1261—1262) the Marīnid Abū Yūsuf Yaʿkūb b ʿAbd al-Hakk came to attack Marrakesh He encamped on mount Gillīz whence he threatened the town Al Murtadā sent his cousin, the *sayyid* Abu ʾl ʿUlā Idris, surnamed Abū Dabbūs, to fight him The emir ʿAbd Allāh b Abū Yūsuf was slain in the battle and his father lost heart, abandoned his plans on Marrakesh and returned to Fās at the end of Radjab 661 (beg June 1262)

From this time one feels that the dynasty is lost although peace was made, which moreover showed the humiliation of the Almohads who consented to pay tribute but they were to destroy themselves Falling into disfavour with his cousin al Murtadā, Abū Dabbūs, this great-grandson of ʿAbd al-Muʾmin, who in the preceding year had defended Marrakesh against the Marīnid sultān, sought refuge with the latter and obtained from him the assistance necessary to overthrow al-Murtadā, on condition that he shared the spoils Victorious and proclaimed sulṭān in October 1266, Abū Dabbūs forgot his promises Abū Yūsuf Yaʿḳūb came in person to remind him of them He laid siege to Marrakesh in 1267 but Abū Dabbūs had a stroke of good fortune for

the Marīnid had to raise the siege to go and defend the kingdom of Fās against an attack by the sulṭān of Tlemcen, Yaghmurāsan The campaign being over, Abū Yūsuf Yaʿkūb returned to Marrakesh He entered it in Muharram 668 (Sept 1269) The *Kirtās* tells us that he gave the *amān* to the inhabitants and to the surrounding tribes, whom he overwhelmed with benefits and ruled with justice and remained seven months to pacify and organise the country By accepting Marīnid rule, however, Marrakesh lost for two and a half centuries its position as a capital The new dynasty made Fās its capital

Its sultāns however, did not neglect Marrakesh especially during this period (end of the xiiith and first half of the xivth century) The chronicles record many sojourns made by them there but its great days were over The town began to lose its inhabitants Abu 'l Hasan ʿAlī was the only Marinid to undertake buildings of any importance at Marrakesh (a mosque and a madrasa) In the absence of the sovereign, the government of the town and district was entrusted to powerful governors as befitted a large town remote from the central authority For nearly 20 years, from 668 to 687 (1269–1288), this office was held by Muhammad b ʿAlī b Muhallī, a chief greatly devoted to the Marīnids, says Ibn Khaldūn, and allied by marriage to the family of their ruler But in February 1288, fearing treachery from Muhammad b ʿAlī, Abū Yaʿkūb Yūsuf threw him into prison and gave his office to Muhammad b ʿAttū al Djānātī, a client and confidant of the royal family, to whom the sultān further entrusted his son Abū ʿĀmir Abū Yaʿkūb had not left Marrakesh six months when the young prince Abū ʿĀmir rebelled there and proclaimed himself sovereign at the instigation of the governor Ibn ʿAttū (Nov 1228) Abū Yaʿkub hastened to Marrakesh which he took after several days siege The young Abū ʿĀmir had time to escape and seek refuge in the mountains among the Masmūdī tribes, after plundering the treasury

The custom of giving the governorship of Marrakesh to a prince of the ruling family was kept up Towards the end of May 1307, under the walls of Tlemcen, sultān Abū Ḥabīt gave his cousin Yūsuf, son of Muhammad b Abī ʿIyād b b ʿAbd al-Hakk, the governorship of Marrakesh and the provinces depending on it By the end of the year, Yūsuf rebelled and proclaimed himself independent at Marrakesh after putting to death the governor of the town, al-Hādjdj Masʿūd Defeated by the imperial troops on the banks of the Umm Rabīʿ, the rebel fled to the mountains, plundering Marrakesh on his way (Jan 1308) The punishment inflicted on the rebels was severe Yūsuf b Abī ʿIyād, handed over by a shaikh with whom he had taken refuge, was put to death and the heads of 600 of his followers went to adorn the battlements of the town Abū Saʿīd ʿUthmān stayed at Marrakesh on several occasions He did much rebuilding in 720 (1320) Peace and comparative prosperity seem to have reigned there under the rule of Abu 'l-Hasan until this prince, as a result of reverses suffered in his struggle with the Hafsids, found his own son, the ambitious Abū ʿInān, rebelling against him During the troubles which now broke out, Ibn Khaldūn tells us, the town was seriously threatened with being sacked by the Masmūda of the mountains led by ʿAbd Allāh al-Saksīwī Abū ʿInān was able to consolidate his power and avert this danger The struggle between father and son ended in the region of Marrakesh Abu 'l-Hasan, defeated at the end of Safar 757 (May 1350) near the town, sought refuge in the mountains with the emīrs of the Hintāta and died there just after becoming reconciled to his son and designating him his successor (June 1352)

During the course of the xivth century, the emīrs of the Hintāta played a very important part in the country The position of the tribe on an almost inaccessible mountain, from which it commanded Marrakesh, gave its chiefs comparative independence and predominating influence among the other Masmūda Abū ʿInān took no steps against the emir ʿAbd al-ʿAzīz who had given asylum to the fugitive Abu 'l-Hasan He retained him in the command of his tribe, which he gave a few years later to his brother ʿĀmir In 1353 the latter, becoming chief of all the Masmūda tribes and sufficiently powerful to keep under his thumb the governor of Marrakesh al Muʿtamid, son of Abū ʿInān, very soon succeeded in making himself completely independent He received and for a time held as hostages two rebel Marīnid princes Abu 'l-Fadl, son of the Sultān Abū Sālim, and ʿAbd al-Rahmān, son of Sultān Abū ʿAlī Quarrelling with his protégé Abu 'l-Fadl whom he had made governor of Marrakesh, he retired into his mountains and for several years defied the armies of the sultān He was in the end captured and put to death in 1370

After the death of Sultān ʿAbd al-ʿAzīz, the pretender Abu 'l-ʿAbbās, son of Abū Sālim, had himself proclaimed in Fās with the help of his cousin ʿAbd al-Rahman b Abi Ifellūsen, himself a pretender to the throne The latter as a reward for his services was given the independent governorship of Marrakesh and the country round it (June 1374) The empire was thus completely broken up The two rulers soon began to quarrel but then signed a treaty of peace in 1378 There was a new rupture and a new truce two years later after Marrakesh had been besieged for two months without result Abu 'l-Abbas in the end took Marrakesh in Djumādā 784 (July–Aug 1382), and ʿAbd al-Rahmān was slain Abu 'l-ʿAbbās, dispossessed in 1384 and exiled to Granada, succeeded in reconquering his kingdom in 1387 and sent to Marrakesh as governor his son al Muntasir This event is the last recorded by Ibn Khaldūn From the time his record ceases and throughout the xvth century we are incredibly poor in information about the history of Marrakesh The south appears to have continued to form a large governorship in the hands of princes of the royal family The only information at all definite that we have comes from a Portuguese historian who records that during the three years which followed the capture of Ceuta by the Portuguese (1415—1418), Morocco was a prey to the struggles among the pretenders While Abū Saʿīd ʿUthmān was ruling in Fās, Mawlāy Bū ʿAlī, king of Marrakesh, was fighting against another Marīnid prince called Fāris The "kingdom" or governorship of Marrakesh does not seem to have completely broken the links which bound it to the kingdom of Fās for the governors of Marrakesh supplied contingents to the army which tried to retake Ceuta But they very soon ceased to take part in the holy war in the north of Morocco and their name is not found among the opponents of the Portuguese

Marrakesh by 1430 seems to have become *de facto* if not *de jure* independent but we do not know within fifty years at what date the Hintāta emīrs established their power, they were descended from a brother of ʿÂmir b Muhammad They were "kings" of Marrakesh when in 1508 the Portuguese established themselves at Safi, taking advantage of the anarchy prevailing, for the power of the Hintāta emīrs hardly extended beyond the environs of their capital and they could not effectively protect their tribes against the attacks of the Christians By 1512 the Portuguese governors of Safi had succeeded in extending their power over the tribes near Marrakesh (Awlād Mtāʿ) and the town lived in fear of the bold raids which on several occasions brought the Portuguese cavalry and their Arab allies into the district The king of Marrakesh, overawed, entered into negotations in 1514 but the terms were nothing less than his paying tribute as vassal and the building of a Portuguese fortress at Marrakesh Agreement could not be reached The occupation of Marrakesh remained the dream of the Portuguese soldiers An attack on the town led by the governors of Safi and Azemmūr failed (April 23, 1515) This was the period when in reaction against the anarchy and foreign invasions the Saʿdian sharīfs began to come to the front in Sūs Ahmad al-Aʿradj, who appeared in 1513 to the north of the Atlas, had himself recognised as leader of the holy war and accepted as such by the local chiefs, even by al-Nāsir, king of Marrakesh In the month of April 1514, it is recorded that he was in Marrakesh with the king At the end of 1521, al-Aʿradj established himself peacefully in Marrakesh which he found partly depopulated by famine and married the daughter of the king Muhammad b Nāsir called Bū Shentūf The latter in 1524 having tried to kick against the tutelage of his too powerful son-in-law, al-Aʿradj and his brother Muhammad al Shaikh, seized the kasba, which seems till then to have been held by Bū Shentūf They disposed of the latter by having him assassinated in the following year (1525) Marrakesh became the Saʿdian capital The king of Fās, Ahmad al-Wattāsi, tried unsuccessfully to take it in June 1527 It remained in the hands of al-Aʿradj till 1554, when it was seized by his brother Muhammad al Shaikh, up till then king of Sūs After the assassination of Muhammad al Shaikh in 1557, al-Aʿradj was put to death at Marrakesh with seven of his sons and grandsons, so as to secure the crown for Mawlāy ʿAbd Allāh al-Ghālib The whole of the latter part of the century was for Marrakesh a period of great prosperity ʿAbd Allāh al-Ghālib built a series of important public works rearrangement of the palace and of the provision storehouses in the kasba, in the town, the madrasa Ibn Yūsuf and the al-Mwāsin mosque etc Ahmad al-Mansūr finished his brother's work by building in the kasba from 1578 to 1594 the famous al Badiʿ palace The sultān, enriched by several years of peace and good government, and by the gold brought from the conquest of the Sūdān (1591—1592), lived almost continually in Marrakesh, to which he restored a splendour and a prosperity that it had not enjoyed since the end of the xiith century But the death of al-Mansūr opened a period of trouble and civil war "sufficient to turn white the hair of an infant at the breast" to use the expression of the historian al-Ifrānī While Abū Fāris, son of al-Mansūr, was proclaimed at Marrakesh, another son, Zīdān, was chosen sultān at Fās A third brother, al Shaikh, came and took Fās, then sent against Marrakesh an army led by his son ʿAbd Allāh, who seized the town in Dec 22, 1606 But Zīdān, who sought refuge first in Tlemcen, then made his way to Sūs, via Tāfilālt and coming suddenly to Marrakesh, had himself proclaimed there while ʿAbd Allāh b al Shaikh while escaping with his troops was attacked in the midst of the gardens (*djnān Bekkāʾ*) and completely defeated (Feb 25, 1607) In October of the same year, ʿAbd Allāh returned after defeating Zīdān's troops on the Wādi Tifālfalt (Oct 2, 1607), fought a second battle with them at Rās al-ʿAin (a spring in Iānsift), regained possession of the town and revenged himself in a series of massacres and punishments so terrible that a portion of the population having sought refuge in the Gillīz, proclaimed as sultān, Muhammad, great-grandson of Ahmad al-Aʿradj ʿAbd Allāh was forced to fly (Jan 25, 1608) Zīdān, recalled by a section of the populace, regained possession of his capital in a few days The struggle between Zīdan and his brother al-Shaikh, in the year following, centred round the possession of Fās Zīdān failed in his plans to retake it and henceforth Fās, given over completely to anarchy, remained separate from the kingdom of Marrakesh On these happenings, a marabout from Tāfilālt, named Abū Mahāllī, attempted to intervene (1611) to put an end to the fighting among the pretenders, which was inflicting great suffering on the people His intervention only made matters worse He took Marrakesh on May 20, 1612 Zīdān took refuge in Safi and succeeded in again gaining possession of his capital with the help of an influential marabout in Sūs, called Yahya b ʿAbd Allāh After a battle near Gillīz, Zīdān withdrew into Marrakesh on Nov 30, 1613 But Yahyā, succumbing to ambition, rebelled himself at the end of 1618, against the ruler whose cause he had once so well sustained Zīdān had again to take refuge in Safi He was soon able to return to Marrakesh, taking advantage of the discord that had broken out in the enemy ranks ʿAbd al-Malik (1627—1631), son and successor of Zīdān, has left only the memory of his cruelty and debauchery He was murdered in May 1631 The renegades, who killed him, also disposed of his brother and successor al-Walid in 1636 A third brother, Muhammad al-Shaikh al-Asghar, succeeded him but had only a semblance of power He managed however to reign till 1655, but his son Ahmad al-ʿAbbās was completely in the hands of the Shabbāna, an Arab tribe who assassinated him and gave the throne to ʿAbd al-Karīm, called Karrūm al Hādjdj, in 1659 "The latter", says al-Ifrānī, "united under his sway all the kingdom of Marrakesh and conducted himself in an admirable fashion with regard to his subjects" His son Abū Bakr succeeded him in 1668 but only reigned two months until the coming of the Filālī Sultān al-Rashīd, already lord of Fās, who took Marrakesh on July 31, 1668 Called to Marrakesh by the rebellion of his nephew Ahmad b Muhrīz, al-Rashīd met his death there in the garden of al-Agdāl, his head having been injured by a branch of an orange tree against which his horse threw him when it stumbled

Mawlāy Ismāʿīl had some difficulty in getting himself proclaimed at Marrakesh, which preferred

his nephew, Ahmad b Muhrīz Ismāʿīl forced his way in on the 9th Safar 1083 (June 4, 1672) In the following year, Marrakesh again welcomed Ahmad b Muhrīz After a siege of two years (March 1675—June 1677), Ismāʿīl reoccupied Marrakesh and plundered it He passed through it again in 1094 (1683) on his way to Sūs to fight Ahmad b Muhrīz who was still in rebellion Marrakesh was no longer the capital Mawlāy Ismāʿīl took an interest in it and destroyed the palaces of the ḳasba to use the materials for his works in Meknes In 1114 (Feb 1703), a son of Mawlāy Ismāʿīl, Muhammad al ʿĀlim, rebelled against his father, seized Marrakesh and plundered it Zīdān, brother of the rebel, was given the task of suppressing the rising, which he did, plundering the town once more

Anarchy again broke out after the death of Ismāʿīl Its centre was Meknes Mawlāy al-Mustadī, proclaimed by the ʿAbīd in 1738, was disowned by them in 1740 and replaced by his brother ʿAbd Allāh He sought refuge in Marrakesh His brother al-Nasir remained his *ḵhalīfa* in Marrakesh till 1745, while al Mustadī tried in vain to reconquer his kingdom Marrakesh finally submitted in 1746 to Mawlāy ʿAbd Allāh who sent his son Sīdī Muhammad there as *ḵhalīfa* The governorship and then the reign of the latter (1757—1790) formed one of the happiest periods in the history of Marrakesh Sidī Muhammad completely restored the town, made it his usual residence, received many European embassies there, including a French one led by the Comte de Breugnon in 1767, and developed its trade Peace was not disturbed during his long reign except for a riot raised by a marabout pretender named ʿUmar, who at the head of a few malcontents tried to attack the palace in order to plunder the public treasury He was at once seized and put to death (between 1766 and 1772, according to the sources) On the death of Sīdī Muhammad b ʿAbd Allāh, the situation remained very unsettled for several years After taking the oath of allegiance to Mawlāy Yazīd (May 3, 1790) the people of Marrakesh took in his brother Mawlāy Hishām and proclaimed him On hearing this, Yazīd abandoned the siege of Ceuta, returned to Marrakesh, plundered it and committed all kinds of atrocities (1792) Hishām, supported by the ʿAbda and the Dukkāla, marched on Marrakesh Yazīd, wounded in the battle, died a few days later in the palace (Feb 1792) Marrakesh remained faithful to the party of Mawlay Hishām, but very soon the Rhāmna abandoned him to proclaim Mawlāy Husain, brother of Hishām He established himself in the kasba (1209 = 1794—1795) While the partisans of the two princes were exhausting themselves in fighting, Mawlāy Slīman, sultān of Fās, avoided taking sides in the struggle The plague rid him at one blow of both his rivals (July 1799) who had in any case to submit some time before The last years of the reign of Mawlāy Slīmān were overcast by troubles in all parts of the empire Defeated at the very gates of Marrakesh, he was taken prisoner by the rebel Shrārda He died at Marrakesh on Nov 28, 1822 Mawlāy ʿAbd al-Rahmān (1824—1859) did much for the afforestation of Agdāl and restored the religious buildings His son Muhammad completed his work by repairing tanks and aque ducts These two reigns were a period of tranquillity of Marrakesh In 1862 however, while Sīdī Muhammad b ʿAbd al-Rahmān was fighting the Spaniards at Tetwan the Rḥāmna rebelled, plundered the Sūḳ al-Khamīs and closely blockaded the town, cutting off communications and supplies, until the Sultān, having made peace with Spain, came to relieve the town (June 1862) Mawlāy al Hasan hardly ever lived in Marrakesh but he stopped there on several occasions, notably in October 1875, to punish the Rhāmna and the Bū 'l sbaʿ, who had rebelled, and in 1880 and 1885, to prepare his expeditions into Sūs

During the last years of the reign of Mawlāy ʿAbd al-ʿAzīz (1894—1908), it was at Marrakesh that the opposition to the European tastes and experiments of the Sultān made itself most strongly felt The xenophobia culminated in the murder of a French doctor named Mauchamp (March 19, 1907), and the spirit of separatism in the proclamation as sultān of Mawlāy ʿAbd al-Hafiz, brother of ʿAbd al ʿAzīz and governor of the provinces of the south (Aug 24, 1907) But ʿAbd al-Hafiz becoming ruler of the whole empire (Aug 24, 1907) and having signed the treaty of March 24, 1912 establishing the protectorate of France and of Spain over Morocco, the anti foreign movement broke out again in the south The Mauritanian marabout al-Hiba had himself proclaimed and established himself in Marrakesh He only held out there for a brief period His troops having been defeated at Sīdī Bū ʿUthmān on Sept 6, 1912, the French troops occupied Marrakesh the next day

Relations with Europe Five minor friars sent by St Francis were put to death at Marrakesh on Jan 16, 1220, for having attempted to convert Muslims and having insulted the Prophet Muhammad in their discourses Their martyrdom attracted the attention of the Holy See to Marrakesh A mission and a bishopric were established by Honorius III in 1225 to give the consolations of religion to the Christians domiciled in Morocco merchants, slaves and mercenaries in the sultān's army In the Almoravid period, the sultāns had Christian mercenaries recruited from prisoners reduced to slavery or from the Mozarab population of Spain whom they had from time to time deported to Morocco by entire villages In 1227, Abu 'l-ʿUla Idrīs al Maʾmūn having won his kingdom with the help of Christian troops lent by the king of Castile found himself bound to take up quite a new attitude to the Christians He granted them various privileges, including permission to build a church in Marrakesh and worship openly there This was called Notre Dame and stood in the kasba, probably opposite the mosque of al Mansūr it was destroyed during a rising in 1232 But the Christian soldiery continued to enjoy the right to worship, at least privately, and the bishopric of Marrakesh filled by an episcopal board at Seville, existed so long as there was an organised Christian soldiery in Morocco, i e to the end of the xivth century The title of Bishop of Marrakesh was borne till the end of the xvith century by the suffragans of Seville (cf Father A Lopez, *Los obispos de Marruecos desde el siglo XIII*, in *Archivo Ibero-Americano*, N° xlii, 1920) A Spanish Franciscan, the prior Juan de Prado, who came to re establish the mission, was put to death in 1631 at Marrakesh A few years later (1637), a monastery was re-established beside the prison for slaves in the kasba It was destroyed in 1659 or 1660 after the death of the last Saʿdian Henceforth the Franciscans were obliged to live in the *mellāh*

where they had down to the end of the xviiith century a little chapel and a monastery As to the Christian merchants, they had not much reason to go to Marrakesh in the middle ages Trade with Europe was conducted at Ceuta from which the Muslim merchants carried European goods into the interior of the country In the xvith century, ʿAbd Allāh al-Ghālib had a *fondak* or "bonded warehouse" built in the *sūk* where the Christian merchants were allowed to live, but the majority of those who came to Marrakesh preferred to settle in the Jewish quarter It was here also that foreign ambassadors usually lodged, at least when they were not made to encamp in one of the gardens of the palace

Monuments The present enceinte of Marrakesh is a wall of clay about 20 feet high, flanked with rectangular bastions at intervals of 250 to 300 feet Bāb Aghmāt, Bāb Ailān, Bāb Dabbāgh which still exist more or less rebuilt, are mentioned in the account of the attack on Marrakesh by the Almohads in 524 (1130) Bāb Yintān, Bāb al-Makhzen, mentioned at the same time, have disappeared Bāb al-Sālīha (no longer in existence it stood on the site of the *mellāh*) and Bāb Dukkāla (still in existence) figure in the story of the capture of the town by the Almohads (1147) The plan of the wall has therefore never changed It has been rebuilt in places from time to time, as the clay crumbled away, but it may be assumed that a number of pieces of the wall, especially on the west and south-west, are original, as well as at least three gates all now built up, to which they owe their survival, but have lost their name According to Abu 'l-Fidāʾ (xivth century), there were in Marrakesh seventeen gates, twenty-four at the beginning of the xvith century according to Leo Africanus It would be very difficult to draw up an accurate list, for some have been removed, others opened, since these dates or the names have been altered Ibn Fadl Allāh al-ʿUmarī (beginning of the xivth century) adds to the names already mentioned those of Bāb Nfis, Bāb Muhrik, Bāb Messūfa, Bāb al-Rahā all four of which have disappeared, Bāb Taghzūt, Bāb Fās (now Bāb al-Khamīs), Bāb al-Rabb which still exist The only important changes, which have been made in the walls of Marrakesh since they were built, have been the building of the kasba in the south and in the north the creation of the quarter of Sidī bel ʿAbbās The zāwiya, which as late as the xvith century stood outside the walls beyond the Bāb Taghzūt, was taken into the town with all its dependencies

The Kasba The little kasba and the palace of Dār al-ʿUmma built by Yūsuf b Tashfīn, lay north of the present „Mosque of the Booksellers" or Kutubīya ʿAlī b Yūsuf added in the same quarter other palaces called Sūr al-Hadjar, or Kasr al-Hadjar because they were built with stones from the Gillīz, while all the other buildings in the town were of brick or clay It was here that the first Almohads took up their quarters According to a somewhat obscure passage of the *Istibsār*, Abū Yaʿkūb Yūsuf seems to have begun the building of a "fort" in the south of the town but it was Yaʿkūb al-Mansūr who built the new kasba (1189—97), that is to say he joined to the south wall of the town a new walled area within which he built palaces, a mosque, and a regular town Nothing remains of the Almohad palaces, but one can from pieces of wall and other vestiges follow the old wall, at least on the north and the east side There also the line of the wall has hardly changed The magnificent gateway of carved stone by which the kasba is now entered, must be one of al-Mansūr's building Its modern name of Bāb Agnāū (the Negro's Gate) is not found in any old text It probably corresponds to Bāb al-Kuhl (Gate of the Negroes), often mentioned by the historians

Ibn Fadl Allāh al ʿUmarī, in the xivth century, Leo Africanus and Marmol in the xvith, have left us fairly detailed descriptions of the kasba, in spite of a few obscure passages In the Almohad period, the kasba was divided into three quite distinct parts One wall in the northwest, around the mosque of al Mansūr which still exists, contained the police offices, the headquarters of the Almohad tribes and the barracks of the Christian soldiery From this one entered through the Bāb al-Tubūl, a second enclosure in which around a huge open space, the "Cereque" of Marmol (*asārāg*), were grouped the guardhouses, the offices of the minister of the army, a guest-house, a madrasa with its library and a large building called *al sakāʾif* (the porticoes), the "Acequife" of Marmol, occupied by the principal members of the Almohad organisation, the "Ten", the "Fifty" and the *tolbā*, the pages (*ahl al-dār*) The royal palace, sometimes called the Alhambra of Marrakesh, in imitation of that of Granada, was entered from the Asārāg and occupied the whole area east of the kasba The palaces of al-Mansūr were still in existence at the beginning of the xvith century when the Saʿdians took possession ʿAbd Allāh al-Ghālib incorporated them in the new palaces which he was building Ahmad al-Mansūr added, in the gardens to the north, the famous al-Badīʿ palace celebrated for its size and splendour Only a few almost shapeless ruins remain of it, but its plan is perfectly clear Mawlāy Ismāʿīl had it destroyed in order to use its materials The kasba remained so completely in ruins that Sidi Muhammad b ʿAbd Allah when he became governor of Marrakesh in 1746, was obliged to live in a tent until his new buildings were finished It is to him that we owe an important part of the present palace with its inner garden, ʿArsat al Nil Other works were later undertaken by Mawlāy Slīmān and his successors Some large unfinished buildings date only from Mawlāy ʿAbd al-Hafīz A number of gates, in addition to the Bāb Agnāū give admittance to the kasba these are Bab Berrima and Bāb al-Ahmar in the east, Bāb Ighlī and Bāb Ksiba in the west The palace has vast gardens belonging to it Djnān al-ʿĀfiya, Agdāl, Djnān Ridwān, Maʾmūnīya, Manāra The latter, two miles west of the town, contained in the xvith century a pleasure house of the sultāns The palace of Dār al-Baidāʾ, situated in the Agdāl, took the place of a Saʿdian palace It was rebuilt by Sīdī Muhammad b ʿAbd Allāh and has since been restored As to the gardens of the Agdāl, they seem to have been created in the xiith century by ʿAbd al-Muʾmin

Mosques Nothing remains of the early Almoravid mosques, in the building of one of which Yūsuf b Tāshfīn himself worked along with the masons as a sign of humility But the cathedral mosque of ʿAlī b Yūsuf, where Ibn Tūmart had an interview with the sultān, although several times rebuilt, still retains its name The Almohads, on taking possession of Marrakesh, destroyed all the mosques on the pretext that they were wrongly

oriented The mosque of ʿAlī b Yūsuf was only partly destroyed and was rebuilt ʿAbd Allāh al-Ghālib restored it in the middle of the xvith century The present buildings and the minaret date from Mawlāy Slīmān (1792—1822)

Kutubiya When the Almohads entered Marrakesh, Abd al-Muʾmin built the first Kutubīya of which some traces still remain and it has been possible to reconstruct its plan As it was wrongly oriented he built a new mosque, the present Kutubīya, in prolongation of the first but with a slightly different orientation It takes its name from the 100 booksellers' shops which used to be around its entrance It is a very large building with seventeen naves, which with its decoration in carved plaster, its stalactite cupolas, the moulding of its timbeiwork, its capitals and magnificent pulpit (*minbar*) of inlaid work, is the most important and the most perfectly preserved work of Almohad art The minaret, begun by ʿAbd al-Muʾmin, was only finished in the reign of his grandson al-Mansūr (1195) It is 230 feet high and its powerful silhouette dominates the whole town and the palm-groves It is the prototype of the Giralda of Seville and of the tower of Hassān at Rabat It is decorated with arcatures the effects of which were formerly heightened by paintings still visible in places, with a band of ceramic work around the top

The mosque of the kasba or mosque of al-Mansūr is the work of Yaʿkūb al Mansūr It was begun in 1189—95 and built in great splendour It has been profoundly altered, first by ʿAbd Allāh al-Ghālib the Saʿdian, then in the middle of the xviiith century by Muhammad b ʿAbd Allāh, then more recently by Mawlāy ʿAbd al-Rahmān (1822–1859) The minaret of brick is intact and magnificently ornamented with green ceramics The lamp-holder supports a *ḏjāmūr* of three bowls of gilt copper, which occupy a considerable place in the legends of Marrakesh They are said to be of pure gold and to be enchanted so that no one could take them away without bringing on himself the most terrible misfortunes This legend is often wrongly connected with the *ḏjāmūr* of the Kutubīya

Among the religious monuments of Marrakesh of archaeological interest, may also be mentioned the minarets of the mosque of Ibn Sālah (dated 731 = 1331) and of the sanctuary of Mawla 'l-Ksūr, built in the Marīnid period in the Almohad tradition, and two Saʿdian mosques the mosque of al-Mwāsin or mosque of the Sharifs, which owes its origin to ʿAbd Allāh al Ghālib, and that of Bāb Dukkāla, built in 965 (1557—1558) by Lālla Masʿūda, the mother of the Sultān Ahmad al-Mansūr

Madrasas An Almohad madrasa, built "to teach the children of the king and others of his family in it", formed part of the buildings of Yaʿkūb al-Mansūr This royal school was presumably different from what later were the Marīnid madrasas It stood on the great square in front of the palace and was still in existence in the time of Leo Africanus The Marīnid Abu 'l-Hasan in 1347 built another madrasa, also described by Leo It lay north of the mosque of the kasba, where traces of it can still be seen The madrasa of Ibn Yūsuf is not, as is usually said, a restoration of the Marīnid madrasa It was a new building by ʿAbd Allāh al-Ghālib, dated by an inscription of 972 (1564—1565), the only surviving example of a Saʿdian madrasa

Saʿdian tombs The two first founders of the dynasty rest beside the tomb of Sīdī Muhammad b Slīmān al-Djazūlī in the Ryād al-ʿArūs quarter Their successors from 1557 were buried to the south of the mosque of the kasba There was a cemetery there, probably as early as the Almohad period, which still has tombs of the xivth century The magnificent kubbas which cover the tombs of the Saʿdian dynasty must have been built at two different periods The one on the east under which is the tomb of Muhammad al-Shaikh seems to have been built by ʿAbd Allāh al Ghālib The other, with three chambers, seems to have been erected by Ahmad al-Mansūr (d 1603) to hold his tomb

AL-MARRĀKUSHĪ. [See ʿABD AL-WĀKID]

MARṢAD (A), from *rasada*, "to wait on the road, to watch, to lie in wait", originally any place where a watch was kept, for example, a custom-house, then (with or without *al-kawākib*) an observatory *Al-raṣad* is also used in the latter sense "To consult the stars for any one" is *rasada li-fulān*in, to take astronomical measurements with instruments is *kāsa* (cf *kiyās* = ascertaining latitude and longitude and *mikyās* = gnomon)

The Arab observatories had their models and predecessors in the Persian, Indian, Greek and Babylonian observatories Very little is known about the construction of the oldest observatories It is obvious however that when the advance was made from the observation and recording of isolated phenomena in the heavens, which were regarded as omens of good or ill fortune, to the exact following of the movements of heavenly bodies, simple instruments to calculate time and measure areas and angles in the heavens would become necessary Such must have existed in the towers of Babylonian temples which were used as observatories, in the form of sundials, sand- and water-clocks measuring rods, and graduated circles In the time of Ptolemy sundials and water-clocks were certainly in use, a circle divided parallel to the equator of the heavens which was used to calculate the equinox and length of the year, a meridian circle, the armillary sphere and the astrolabe or plani-sphere The Arab astronomers, however, received their knowledge from the Hindus and Persians, among whom astrology and practical astronomy had reached a high level When the first astronomical observations were made under the ʿAbbāsids at Djundī Sābūr and the first astronomical works were translated out of the Sanskrit and Pahlawī, there is no doubt that the observatories erected in Baghdād were also modelled on Indian and Persian prototypes In his astronomical work, al-Battānī describes the construction of the sundial (*al-rukhāma*), a globe of the heavens (*al-baida*), a wall-quadrant (*al-rubʿ* or *al-libna*) and a triquetrum (*al-ʿidāda al-tawila* or *dhāt al-shuʿbatain*) The instrument most used in the Arab period however was the astrolabe which was portable (cf above 1, p 501) The number of makers of astrolabes, observers and compilers of astronomial tables from the beginning of the ʿAbbāsid period is immense and the rivalry of princes to obtain more and more accuracy in the astronomical foundations of astrology also led to the improvement of instruments and the arrangements in observatories generally It is sufficient to mention out of the many observatories that of Cairo where Ibn Yūnus (d 400—401 = 1009) completed the Hākimī tables, the observatory of Nīshāpūr where al-Khāzinī (d beginning of the vith = xiith century) took observations, that of Marāgha which Nasīr al-Dīn al-Tūsī erected with many new instruments for the Mongol Khān Hūlāgū (1259) and the observatory of Samarḳand, where Ulūgh Beg employed the astronomers of his time Following him in many points but also stimulated by European astronomy Djai Singh in India built the great observatories, the remains of which still arouse admiration in Delhi, Djaipūr, Udjain, Benares and Mathura

MARTHIYA (A, plur *marāthi*), translated variously by elegy or dirge, is a poem in Arabic (and other languages following Arabic tradition) in memory of a deceased person The word elegy is hardly applicable in most cases as such poems differ somewhat from the style of Greek and Latin poems bearing this name, some notable exceptions exist and the finest example of a real elegy is perhaps the poem of a woman named Barra al Kinānīya preserved in the *Kitāb al-Ikhtiyārain*, and still unpublished It was the custom of the ancient Arabs after the usual *nawh* or lamentation of women [q v] that a member of the family, gifted as a poet, should commemorate the noble qualities and deeds of the departed in a poem by enumerating them These poems as a rule do not contain the *tashbib* or amatory introduction like ordinary *kaṣidas* and in many cases have a peculiarity in their diction, the introduction of a kind of internal rhyme resembling *sadj*ʿ, called *tarsi*ʿ This has been fully discussed by Rhodokanakis in his analysis of the poetry of al-Khansāʾ, but is found in many other marthiyas Many poets, remembering the widespread, nay universal, belief of the ancient Arabs in fatalism, embellish their poems with descriptions to show that nothing can escape inevitable fate A typical example is the long poem by Abū Dhuʾaib (*Dīwān*, N° 1, *Mufaddaliyāt*, N° 126) in which three vivid pictures are drawn of the impossibility of escaping death, both for man and beast This tradition has been followed by Arabic poets from the times of paganism to the present date and the quantity of poems produced for example upon the death of the Egyptian statesman Zaghlūl Pāshā proves that the taste for them has not abated The collected poems of al-Zahāwī, the most prominent living poet of

the ʿIrāk, contain several pages mourning Zaghlūl As regards the earlier period, poems have been preserved in considerable numbers and from the *Ḥamāsa* of Abū Tammām downwards nearly every anthology has a special chapter devoted to marāthī Several early scholars in addition made special collections of this class of literature and one such collection has come down to us, made by the Kūfī grammarian Ibn al Aʿrābī, and published from an incomplete manuscript by W Wright The poet *par excellence* in this class of poetry however was a woman, al-Khansāʾ [q v]

Bibliography W Wright, *Opuscula Arabica*, Leyden 1859, p 97—136, Rhodokanakis, *al-Ḥansāʾ und ihre Trauerlieder*, Vienna 1904, Ibn Rashīk, *ʿUmda*, Cairo, II 117—126, chapters on marāthī in the *Ḥamāsa* of Abū Tammām, al-Buhturī and Ibn al-Shadjarī

(F KRENKOW)

MARTOLOSEN Lexicons explain *martolos* and *martoloz* as "Christian soldiers, volunteers in the Ottoman army" The word apparently is not to be found in Turkish authors, but is often met with in Western books and documents

Leunclavius (*Annales*, p 142) says that *martelos* means "robber", Ricaut (Italian translation by C Belli, *Istoria dello stato presente dell' Impero ottomano*) relates that Buda was garrisoned by 300 *martoloi* "who are like infantry", M Sanudo (*Diarii*, xxxvi 271) mentions one Sbolo vach "a very brave man and great *martelosso*", who served the Turks and was killed in action near Zara in Dalmatia According to Lazaro Soranzo (*L'Ottomanno*, 4th ed, Naples 1600, p 110—111), *martelos* means spy and thief

Sathas (*Monum Historiae Hellenicae*, IV, lvi, N° 4) derives the word (*martolosi*, *maṛtalosi*, *martelosi*, *martelossi*, *armatoli*) from ἀρματολός and says that they were soldiers of fortune serving the Turks, often opposed the "Stradioti", who fought for the Venetians

Von Hammer (*G O R*, IV 211—212) observes that the *martolosi* were bands of brigands, armed by the Turks on the frontiers towards the Venetians and Dalmatians, while, quoting Pouqeville, who favours the etymology ἀρματολός, he inclines to an etymology from the Hungarian

Pouqeville's and Sathas' explanations seem to us the most probable The appellation was not limited to brigands on the western frontiers of the Ottoman empire, but was also given to armed bands of volunteers (XVIth–XVIIth centuries) in the Danube region (Jorga, *Geschichte des osm Reiches*, III 419, Hurmuzaki, *Documente* etc, XII, p 130) (ETTORE ROSSI)

MAʿRŪF AL-KARKHĪ, ABŪ MAHFŪẒ B FIRŪZ or FIRŪZĀN, who died in 200 (815—816), was a celebrated ascetic and mystic of the Baghdād school The *nisba* al-Karkhī probably refers to Karkh Bādjaddā, a township in eastern ʿIrāḳ (Samʿānī, *Ansāb*, p 478b, l 10, cf Yākūt, *Muʿdjam*, ed Wüstenfeld, p 369, l 8 *sqq*), though some authorities connect him with the Karkh quarter of Baghdād His parents are generally said to have been Christians, according to Ibn Taghrībirdī (ed Juynboll and Matthes, I 575), they were Sābiʾans belonging to the district of Wāsiṭ Bakr b Khunais al-Kūfī and Farkad al-Sabakhī, also of Kūfa, are named as his teachers in Sūfism (Abū Ṭālib al-Makkī, *Ḳūt al-Ḳulūb*, I 9, *Fihrist*, p 183) Of those whom he taught or influenced the most famous was Sarī al-Saḳaṭī [q v], who in his turn became the master of Djunaid The story that Maʿrūf was a client of the Shīʿī *Imām*, ʿAlī b Mūsā al-Riḍā, before whom he made profession of Islām and induced his parents to do the same, deserves no credence Among the sayings attributed to him are the following "Love is not to be learned from men, it is a gift of God and comes of His grace" "The saints are known by three signs their cares are for God, their business is in God, and their flight is unto God" "Sūfism consists in grasping the realities (*ḥaḳāʾiḳ*) and renouncing that which is in the hands of created beings" Maʿrūf was venerated as a saint, and his tomb at Baghdād on the west bank of the Tigris is still a great resort for pilgrims Kushairī relates that the people used to go there in order to pray for rain, saying "The tomb of Maʿrūf is an approved remedy (*tiryāk mudjarrab*)"

Bibliography Kushairī, *Risāla*, Cairo 1318, p 11, Hudjwīrī, *Kashf al-Maḥdjūb*, ed Schukovski, Leningrad 1926, p 141 = p 113 in Nicholson's translation, ʿAttār, *Tadhkirat al-Awliyāʾ*, ed Nicholson, I 269 *sqq*, Ibn Khallikan, *Wafayāt al-Aʿyān*, N° 371, transl de Slane, *Biographical Dictionary*, II 88, Djāmī, *Nafaḥāt al-Uns*, ed Lees, p 42, Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*, p 207, Nicholson, *The origin and development of Sūfism*, *J R A S*, 1906, p 306 (R A NICHOLSON)

MAʿRŪF RUṢĀFĪ, one of the best of contemporary Arab poets, born in Baghdād of a Kurd father and a Beduin mother in 1292 (1875) His *ḳaṣīdas* have been collected into a *Dīwān* and edited by Muhyī al-Dīn al-Khaiyāt, Bairūt 1910, following quite an original classification I *Kawniyāt*, 2 *Idjtimāʿiyāt*, 3 *Taʾrīkhiyāt*, 4 *Wasfiyāt* Rufaʿyil Buttī has devoted an excellent study to him (in *al-Adab al-Aṣrī fi ʾl ʿIrāk al-ʿArabī*, Cairo, Salafiya 1922, p 67—96)

MĀRŪT [See HĀRŪT and MĀRŪT]

MARW. [See MERW]

AL-MARWA. [See AL SAFĀ]

MARWĀN B AL-ḤAKAM, the father of the Marwānid Caliphs, was born at Mecca or at Ṭāʾif, probably several years before the Hidjra Tradition, by placing his birth 2, 4, or 5 years later than the beginning of this era, aims at depriving him of a right to the title of "Companion" by showing that he could not have effectively accompanied the Prophet, as he must have followed his father who was exiled to Ṭāʾif Further, it endeavours in its hostility to give him the epithet of *ṭarīd ibn al-ṭarīd*, "the banished son of the banished man" After becoming Caliph, his grand-uncle ʿUthmān adopted him as his secretary and under this title he is said to have governed in his name Seriously wounded on the "day of al-Dār", at the siege of the palace of ʿUthmān, he took part later in the battle of the Camel in which he received fresh wounds All his life his health suffered from these terrible shocks Muʿāwiya I used him alternately with Saʿīd b al-ʿĀs [q v], his cousin, to govern Medina and the Hidjāz He showed in this function a capacity and vigour, far above the ordinary

Finally dismissed from office, he passed into obscurity during the latter years of Muʿāwiya who dreaded his ambition When Husain b ʿAlī refused

to recognize the Caliph Yazīd, Marwān advised Walīd b ʿUtba, his successor at Medīna, to employ force against the rebel The revolt of the people of Medina caused him to be expelled with all his followers from this town He returned to it in the train of Muslim b ʿUkba [q v] whose military operations he was supporting Put to flight once more after the death of Yazīd I, he took up his residence in Syria and attended the court of the Caliph Muʿāwiya II After the disappearance of this prince, Marwān, despairing of the fortunes of the Omaiyads, was disposed to recognize Ibn al-Zubair, when ʿUbaidallāh b Ziyād persuaded him to set up himself as candidate Acclaimed at the assembly of Djābiya, he defeated the Kaisīs under Dahhāk b Kais [q v] at Marḏj Rāhit [q v] The submission of the whole of Syria was the first result of this victory

The reign of Marwān may be epitomized as an uninterrupted series of battles Immediately after his official installation at Damascus he was forced to take up the gauntlet He laid it down only to die in his capital His chief task was the conquest of Egypt A rapid campaign gave him possession of it, while his lieutenant repelled a raid into Palestine by Ibn al Zubair At Djābiya he was compelled to recognize as his eventual successors, Khālid the son of Yazid I and the Omaiyad ʿAmr al-Ashdak [q v] After laborious negotiations, he was able to end them to the advantage of his own sons ʿAbd al-Malik and ʿAbd al-ʿAzīz, the latter being nominated by him governor of Egypt This was the last success of his adventurous career Worn out, the septuagenarian caliph died at Damascus on the 27th Ramadān 65 (7th May 685) He is said to have been murdered by the wife of Yazīd I, the mother of the Sufyānid Khālid, whom he had married after Marḏj Rāhit

The estimates of the length of his reign vary between 8 and 11 months, according as they count the first recognition of him at Djābiya or the second — the exact date is not known — more ceremonious one at Damascus We do not know his exact age any more definitely The two extremes 61 and 81 years reveal the inconsistency of tradition The 63 years sometimes given to Marwān are merely a lucky number which has been much abused to give the ages of the older caliphs It has the advantage that it takes us back to the year 2, often said to be the year of his birth Our texts describe him as an old man, *shaikh kabīr*, when he ascended the throne and contrast him with the *kahl*, middle-aged man, i e Ibn al-Zubair who, however, was nearly sixty There must therefore have been an appreciable difference of age between the two competitors Marwān, therefore, seems to us to have been over seventy The last five years of his life, filled with rebellions, his two exiles, his share in the campaign against Medīna, and in those of Syria and Egypt to reconquer these provinces of his empire finally wore out the constitution of this vigorous old man, who had never been completely cured of the effects of his terrible wounds he received in his youth This long lean wizened old man — these physical characteristics earned him the nickname *khaiṭ bāṭil* — was destined to fall a victim to the great epidemic that swept over the East In 65 H the plague reached Syria from the ʿIrāḳ, it had begun by carrying off Muʿāwiya II, the decrepit predecessor of Marwān, as well as Walīd b ʿUtba, a relative of both, it ended by laying low the first of the Marwānid caliphs

Marwān showed himself a statesman worthy of the highest rank A contemporary of the great Muʿāwiya, he had under the Sufyānids to accept — without ever resigning himself to it — the part of a brilliant second He attained the caliphate, ever the object of his wishes, at the moment he had ceased to care about it He allowed himself to be raised to the throne, rather than mounted it himself But once at the top he regained that power of lucid decision and spirit of initiative which had earned Muʿāwiya's appreciation, though he feared his ambition The new ruler remained on the throne just long enough to save the Omaiyad fortunes from an imminent collapse and to save the future of the younger branch of this dynasty which bears his name The work was continued by his favourite son ʿAbd al-Malik He early recognised the merits of this, the elder, man, and with a brutality and absence of scruple which was thoroughly Arab, he put him in the place of the young Khālid b Yazīd I, who was less well fitted for the difficulties of the restoration This is sufficient to characterize his place among the Syrian caliphs It will explain the hatred of ʿAbbāsid and ʿAlid historians, a hatred adopted by Muslim tradition In energy and knowledge of the art of government, Marwān, recalled his illustrious relative Muʿāwiya He would have equalled him, if to these eminent qualities he had been able to add that variety of political knowledge, a mixture of cunning and bonhomie, so appreciated by the Arabs, which they call *ḥilm* He became Caliph in most critical circumstances and had to display firmness above all things, to put down rebellions, and to defend himself against the ambition and resentment of his relatives, frustrated in their attempts on the throne, or spoiled by him of their rights to it If it had been given to him to live longer, we may well believe that he would have rivalled the first of the Omaiyad Caliphs in nobility of soul

MARWĀN II B MUḤAMMAD, the last of the Omaiyad caliphs in Damascus He was the grandson of the caliph Marwān b al-Hakam As governor of Mesopotamia and Armenia his

father Muhammad for several years directed the campaigns against the Byzantines His mother was a Kurdish slave-girl Maslama b ʿAbd al Malik [q v] was one of those who followed Muhammad b Marwān to war, it is not till 115 (733—734) that we find Marwān coming to the front as governor of Armenia and Ādharbāidjān In this position, which he held for 12 years, he fought with success against the peoples of the Caucasus and thus acquired military experience which enabled him to reorganise the Muslim army In place of divisions consisting of the different tribes he created regular, paid troops under professional commanders, the men levied for military service were divided up into smaller divisions (*kurādis*) which possessed much greater mobility and strength than the long Arab battle lines After the death in 126 (744) of Yazīd III the succession passed to his brother Ibrāhīm b al-Walīd, the latter however was only recognised in the southern part of Syria Under the pretext of protecting the interests of the sons of the murdered Walid II, Marwan crossed the Euphrates into Syria where the Kaisīs at once joined him At ʿAin al Djarr between Lebanon and Anti Lebanon he encountered the Kalbis under Sulaimān, a son of the caliph Hishām In spite of his years of experience in war with the Byzantines the latter was no match for Marwān He was defeated and fled to Damascus, where he put to death the two sons of Walid II He then went with his father, the nominal caliph Ibrahim to Palmyra, the capital of the Kalbīs, whereupon Marwān entered Damascus and received the homage of the people (Ṣafar 26, 127 = Dec 7, 744) After arranging matters in the capital he made his headquarters in Harrān, where he could rely upon the support of the Kaisis who were devoted to him The result was a rising of the Kalbis in Syria Marwān soon succeeded in restoring order but when in the following year he was preparing a campaign against the ʿIrāk not yet subject to him, he made the mistake of levying Syrian troops also who were to join the rest of the army on the march On reaching al-Rusāfa where Sulaimān b Hishām lived, the Syrians deserted from Marwān and proclaimed Sulaimān commander of the faithful When Sulaimān occupied Kinnasrīn, Marwān had to come back A battle took place near the town, Sulaimān was defeated and fled first to Hims and then to al-Kūfa After a siege of several months Hims was forced to surrender, Marwan razed its walls to the ground and also those of Baʿalbek, Damascus, Jerusalem and other large towns of Syria In the summer of 128 (746) peace was finally restored in Syria

In the eastern provinces however complete anarchy reigned The governorship of the ʿIrāk had been given by Yazīd III to a son of the caliph ʿOmar b ʿAbd al ʿAzīz, named ʿAbd Allāh [q v] The latter of course did not recognise the claims of Marwān to the caliphate and the ʿAlid ʿAbd Allāh b Muʿāwiya [q v] also rebelled in al Kūfa Marwān appointed a new governor Nadr b Saʿīd al-Harashī to restore peace and security, the latter however soon fell in battle with ʿAbd Allāh b ʿOmar and only the approach of a danger that threatened both sides, the Khāridjī movement brought the two opponents to terms The Khāridjīs a little later seized the town of al-Mawsil ʿAbd Allāh, the son of the caliph, was defeated and had to retreat In the late summer of 28 (746) however the Khāridjī leader al-Dahhāk b Kais al Shaibānī [q v] fell in battle with Marwān himself and in the following year the power of these dangerous rebels was finally broken after one of Marwān's generals Yazid b ʿOmar b Hubaira had taken the ʿIrāk from them

Soon afterwards however a cloud that boded evil appeared in another direction Naṣr b Saiyār al-Laithī, governor of Khorāsān, had long before warned the caliph of the seditious activities of the ʿAbbāsids and urgently appealed for assistance to render their cunning agitators harmless Marwān however had his hands full and could devote no attention to the distant east In Ramadān 129 (June 747) the long prepared rebellion broke out in Khorāsān Apart from a few isolated successes, the government troops were defeated by the rebels and after the fall of al-Kūfa, Abu 'l ʿAbbās who with his brother Abū Djaʿfar had taken command of the ʿAbbāsid party had himself proclaimed caliph on the 12th Rabīʿ II, 132 (Nov 28, 749) In Djumādā II of the same year (Jan 750) Marwān was defeated on the upper Zāb He then fled from one place to another till he was overtaken at Būsir in the district of Ushmūnain in Upper Egypt Here the last Damascus caliph of the Omaiyad dynasty fell fighting bravely (end of 132 = Aug 750)
