
Wool and Woollens (Rs. 10,35 lakhs).—A 50 per cent. rise in imports of wool and woollens was witnessed in 1948-49 when their value was Rs. 10,35 lakhs against Rs. 668 lakhs in the preceding year and Rs. 767 lakhs in 1946-47. The major share was formed of woollen manufactures being Rs. 503 lakhs, Rs. 423 lakhs and Rs. 718 lakhs for the three consecutive years. Imports of yarn and knitting wool dropped from 4 1 million lbs. valued at Rs. 193 lakhs in 1946-47 to 1 3 million lbs. valued at Rs. 81 lakhs in the following year but recovered to 1 9 million lbs. valued at Rs. 152 lakhs in the year under review.

After an initial fall from 2.5 million lbs. valued at Rs 238 lakhs to 2 4 million lbs. valued at Rs. 259 lalkhs, woollen and worsted piecegoods rose during the year under review to 2 7 million lbs valued at Rs 309 lakhs Goods of wool mixed with other material showed a sustained improvement from 0 5 million lbs valued at Rs 37 lakhs in 1946-47 to 1 4 million lbs valued at Rs 80 lakhs in 1948-49 Receipts of carpets were higher , but those of hosiery were better than the preceding year though below the 1946-47 level

Chemicals (Rs. 20,55 lakhs).—Thanks to the liberal import policy, receipts of chemicals more than doubled from Rs 925 lakhs in 1947-48 to Rs 20,55 lakhs in the year under review, the figure for 1946-47 being Rs 746 lakhs. Caustic soda alone registered a spectacular rise from Rs 89 lakhs in 1946-47 to Rs. 112 lakhs in the following year and to Rs. 765 lakhs in the year under review, the quantities for the respective years being 597,815 cwts , 424,621 cwts. and 1,831,796 cwts The United Kingdom accounted for only one-seventh of the supply. Equally spectacular was the rise in respect of sodium carbonate whose imports were stepped up from 1,358,968 cwts valued at Rs. 133 lakhs in 1947-48 to 3,251,872 cwts. valued at Rs. 532 lakhs in the year under review. Half the supplies were received from the United Kingdom and Kenya Colony.

After an increase from 21,579 cwts. valued at Rs. 25 lakhs in 1946-47 to 67,193 cwts, valued at Rs 66 lakhs in the following year, imports of acids declined to 41,873 cwts. valued at Rs. 42 lakhs in the year under review. The cut was specially drastic in respect of acetic acid. Bleaching powder maintained a steady improvement both in quantity and value from 146,328 cwts, valued at Rs 17 lakhs in 1946-47 to 230,410 cwts valued at Rs. 39 lakhs in 1948-49 Calcium compounds, magnesium compounds, potassium compounds and sodium compounds showed a rise in imports, while disinfectants, lead compounds and sodium cyanide registered a fall. Imports of sulphur, which had fallen from 1,047,394 cwts valued at Rs 106 lakhs in 1946-47 to 597,022 cwts. valued at Rs 44 lakhs in the following year, staged a recovery to 766,637 cwts. valued at Rs 62 lakhs in the year under review.

Instruments, Apparatus and Appliances (Rs. 18,87 lakhs).—A small fall of Rs 152 lakhs under this group was noted as compared with 1947-48 Imports of electric fans were reduced sharply from Rs 26 lakhs to Rs 2 lakhs only ; but electric wires and cables registered a sharp increase from Rs 286 lakhs to Rs 424 lakhs and compared very favourably with Rs 162 lakhs for 1946-47 During the year under review, 2,268,803 electric glow lamps valued at Rs 27 lakhs were imported as against 1,584,387 valued at Rs. 20 lakhs in 1947-48 and 2,262,136 valued at Rs. 23 lakhs in 1946-47 Vacuum electric bulbs registered a fall in quantity and a rise in value and electric bulbs for torches rose sharply in quantity with the increase in value following rather haltingly.

Receipts of batteries and carbons doubled from Rs 8 lakhs to Rs 18 lakhs and from Rs 11 lakhs to Rs. 20 lakhs respectively , but accumulators, condensers and electric bell apparatus registered a set-back Imports from electrical instruments downtrended from Rs. 29 lakhs in 1946-47 to Rs. 26 lakhs in the following year and further to Rs. 22 lakhs in the year under review, while electro-medical apparatus maintained a steady tone with the value of imports for 1947-48 and 1948-49 at Rs. 31 lakhs each as against Rs. 14 lakhs in 1946-47. The

total of electrical goods under this head was valued at Rs. 596 lakhs, Rs 972 lakhs and Rs. 11,40 lakhs respectively for the three years

Imports of musical instruments showed a negligible fall; but those of optical instruments slipped back to the 1946-47 level at Rs 40 lakhs as against Rs. 66 lakhs in 1947-48. A drastic reduction was noted in respect of cinema talkie apparatus, but imports of films were slightly better. The imports of scientific instruments were up from Rs. 20 lakhs in 1947-48 to Rs 35 lakhs in the following year, but a small recession was noted in surgical instruments

The major decline was noticed in wireless apparatus from Rs 361 lakhs to Rs 137 lakhs owing mainly to the fall in imports of complete wireless sets from 192,172 valued at Rs 288 lakhs in 1947-48 to 42,202 valued at Rs 77 lakhs in the year under review. Imports of wireless valves improved slightly in quantity but showed a small loss in value.

Paper and Pasteboard (Rs. 13,97 lakhs):—The improved supply position abroad was reflected in larger imports of this material at 2,778,524 cwts valued at Rs 13,97 lakhs during the year under review as against 1,682,025 cwts valued at Rs 727 lakhs in 1946-47 and 2,255,313 cwts. valued at Rs, 10,70 lakhs in 1947-48 Pasteboard, millboard and cardboard accounted for imports of 90,783 cwts, 114,107 cwts. and 173,064 cwts in the three consecutive years, their respective values being Rs 41 lakhs, Rs 64 lakhs and Rs 83 lakhs A steep rise was noted in imports of paper from 1 6 million cwts valued at Rs 686 lakhs in 1946-47 to 2 1 million cwts. valued at Rs 10,06 lakhs in 1947-48 and to 2 6 million cwts valued at Rs 13,14 lakhs in 1948-49

The broad division of imports of paper is given below —

	1946–47	1947–48	1948–49

Cotton Manufactures (Rs. 17,06 lakhs):—Cotton manufactures benefited by the liberal import policy and their imports nearly doubled from Rs 951 lakhs in 1947-48 to Rs. 17,06 lakhs in the following year, the figure for 1946-47 being Rs 412 lakhs Nearly one-fourth of the imports in this group were in the form of cotton twist and yarn. Their receipts totalled 0 2 million lbs valued at Rs 9 lakhs in 1946-47, 8 8 million lbs. valued at Rs. 39 lakhs in 1947-48 and 11 1 million lbs valued at Rs 450 lakhs in 1948-49 More than half the supplies were received from the United Kingdom and the bulk of them was of unspecified description

The details of imports of the more important categories of woven goods are given below —

		1946–47	1947–48	1948–49
Lace and Net .. .	Yards	0 6 million	1 09 million	1 7 million
	Rs.	1·6 lakhs	11·1 lakhs	31 97 lakhs
Piecegoods: Grey	Yards	0 1 million	0·4 million	3 9 million
	Rs	1 3 lakhs	3 5 lakhs	29 3 lakhs
White Bleached	Yards	3·6 million	9 4 million	16 5 million
	Rs.	48 4 lakhs	147·6 lakhs	313 8 lakhs
Coloured, Printed or Dyed	Yards	12·5 million	17·9 million	27 million
	Rs.	190 lakhs	279 lakhs	585 lakhs
Total Piecegoods	Yards	16 2 million	27 7 million	47·4 million
	Rs.	240 lakhs	430 lakhs	928 lakhs
Thread	lbs.	1·7 million	1·8 million	2 1 million
	Rs.	125 lakhs	157 lakhs	199 lakhs

Dyeing and Tanning Substances (Rs. 13,41 lakhs):—Owing perhaps to larger imports valued at Rs. 16,19 lakhs in 1947-48, arrivals of dyeing and tanning substances in 1948-49 were lower at Rs 13,41 lakhs, though they compared favourably with Rs. 10,21 lakhs for 1946-47 The bulk of the imports was of coal tar dyes Receipts of alizarine dyes which had risen from 1,387,522 lbs valued at Rs 39 lakhs in 1946-47 to 2,504 152 lbs valued at Rs 72 lakhs in the following year, dropped to 632,448 lbs valued at Rs 19 lakhs in the year under review On the other hand imports of congo red continued upward both in quantity and value registering a rise of 50 per cent over 1947-48 Napthols imports were slightly lower, but bases of coupling dyes of the napthol group noted a sharp reduction Nearly three-fifths of the supplies of coal tar dyes were from the United States, while the United Kingdom accounted for another one-fifth

Provision and Oilman's Stores (Rs. 705 lakhs):—Imports of this item doubled during 1948-49 to Rs 705 lakhs from Rs 356 lakhs in 1946-47, the increase over 1947-48 being Rs 52 lakhs Australia supplied goods worth Rs 203 lakhs in the year under review with the United Kingdom ranking second Condensed and preserved milk accounted for a little over one-third of the imports Its total receipts increased progressively from 189,885 cwts valued at Rs 151 lakhs in 1946-47 to 272,859 cwts valued at Rs 203 lakhs in the following year and further to 346,098 cwts valued at Rs 282 lakhs A smart increase was noted in imports of biscuits and cakes from 7,410 cwts to 25,987 cwts and to 47,868 cwts., the respective values being Rs 6¾ lakhs, Rs 44 lakhs and Rs 74 lakhs On the other hand, there were lower imports of butter, canned and bottled provisions, cheese, pickles and vinegar, though these were partially offset by an increase in the arrivals of bacon and hams, cocoa and chocolates, farinaceous and patent foods and other items A substantial loss was noted in imports of jams and jellies

Drugs and Medicines (Rs. 793 lakhs):—This item did not benefit by the relaxation of import control in the year under review with the result that imports were reduced from Rs 953 lakhs in 1947-48 to Rs 793 lakhs in the following year, though the latter compared favourably with 1946-47 for which they totalled Rs 574 lakhs Imports of codliver oil dropped in value from Rs 8 lakhs in 1946-47 to Rs 6 lakhs in 1947-48 and to Rs 4 8 lakhs in the year under review, but rose in quantity to 384,556 lbs after dropping from 581,860 lbs to 263,216 lbs A decline was also noticed under camphor, morphia, and preparations of opium and morphia On the other hand, there was a 100 per cent rise in quantity and 200 per cent increase in price of quinine salts as compared with the preceding year

Fruits and Vegetables (Rs. 581 lakhs):—This item registered a little over 50 per cent advance over the previous year mainly because of the rise in import prices of the items covered by this group The bulk of the receipts were dried, salted or preserved whose value advanced from Rs 396 lakhs in 1946-47 and Rs 371 lakhs in 1947-48 to Rs 515 lakhs in the year under review, but their quantity dropped progressively from 102,482 tons to 98,610 tons and then to 96,817 tons. Imports of currants and raisins, almonds and cashewnuts registered a handsome rise both in quantity and value; but the gain was wiped out by a drop of 20,739 tons valued at Rs 59 lakhs in respect of dates.

Imports of fresh fruits and vegetables rose from Rs 19 lakhs in 1947-48 to Rs. 66 lakhs in the following year Potatoes alone accounted for Rs 55 lakhs against Rs 5 lakhs, the quantity advancing from 17,046 cwts to 305,882 cwts. Imports of coconuts remained practically unchanged in repect of quantity, but the value was nearly double

Manures (Rs. 493 lakhs):—Imports of manure were higher by Rs 19 lakhs and amounted to Rs 493 lakhs in 1948-49, but the quantity dropped from 189,982 tons to 178,364 tons The bulk was sulphate of ammonia whose imports dropped by 4,273 tons in volume but rose by Rs 49 lakhs in value and amounted to 133,183 tons valued at Rs 394 lakhs The next important item was nitrate of soda whose imports doubled in quantity to 21,831 tons valued at Rs 41 lakhs as against 10,361 tons valued at Rs 25 lakhs in 1947-48

Paints and Painters' Materials (Rs. 225 lakhs):—A steady improvement was noted during the past three years in almost all the categories covered by this group Imports of painters' materials rose from Rs 27 lakhs in 1946-47 to Rs 38 lakhs in 1947-48 and further to Rs 76 lakhs in 1948-49 and covered a wide variety of goods A similar trend was noticed in respect of paints and colours whose receipts improved from 144,041 cwts. valued at Rs 118 lakhs to 162,071 cwts valued at Rs 147 lakhs and further to 177,445 cwts. valued at Rs 148 lakhs The United Kingdom was the major supplier

Printing and Lithographic Machinery and Materials (Rs. 277 lakhs):—This group had registered a substantial advance in imports from Rs 84 lakhs in 1946-47 to Rs 237 lakhs in the following year, but receipts during the year under review were still higher at Rs 277 lakhs The upward trend was mainly due to the larger importation of printing and lithographic presses being valued at Rs 45 lakhs, Rs 156 lakhs and Rs 210 lakhs during the three consecutive years Printer's ink and lithographers' ink was received in smaller quantities.

Hardware (Rs. 594 lakhs):—After rising from Rs 374 lakhs in 1946-47 to Rs 630 lakhs in the following year, imports of hardware dropped slightly to Rs 594 lakhs in 1948-49 One-fourth of the receipts were in respect of implements and tools other than agricultural ones Builders' hardware accounted for Rs 43 lakhs and agricultural implements Rs 32 lakhs The most significant development was the continued downward trend of lamps, both metal and glass, following the expansion of the domestic industry Half the supplies were from the United Kingdom, while another one-fifth was received from the U S

Liquors (Rs. 211 lakhs):—Owing to the introduction of prohibition in the different States, imports of liquors declined sharply from 2,527,420 gallons in 1947-48 to 1,838,799 gallons in the following year, while their value dropped from Rs 373 lakhs to Rs 211 lakhs. Imports of ale, beer and porter dropped by about 10 per cent both in quantity and value and amounted to 1,404,603 gallons valued at Rs 72 lakhs in 1948-49 as against 1,555,079 gallons valued at Rs 81 lakhs in the preceding year.

A 50 per cent fall was noted under spirit whose imports dropped from 894,244 gallons valued at Rs 274 lakhs in 1947-48 to 405,428 gallons valued at Rs. 132 lakhs in the following year Receipts of wines were lower at 27,084 gallons valued at Rs. 7 lakhs in the year under review as against 61,328 gallons valued at Rs 17 lakhs in the preceding year.

Spices (Rs. 440 lakhs):—After an initial set-back, imports of spices showed a small improvement both in value and volume as will be seen from the following table —

	1946-47	1947-48	1948-49

Wood and Timber (Rs. 516 lakhs):—Imports rose by 50 per cent from Rs 330 lakhs in 1947-48 to Rs 516 lakhs in the following year, but amounted to Rs 27 lakhs only in 1946-47 A little over two-thirds of the supplies were from Burma which held the monopoly for teakwood Imports of teakwood advanced sharply from 1,487 tons valued at Rs 10 lakhs in 1946-47 to 37,007 tons valued at Rs 236 lakhs and further to 61,748 tons valued at Rs 386 lakhs in the year under review Other imports covered a wide variety ranging from firewood to sandalwood

Building and Engineering Materials (Rs. 280 lakhs):—The sharp increase in imports noted under this head was due to the receipt of 146,163 tons of cement valued at Rs. 159 lakhs in 1948-49 as against 3,118 tons valued at Rs 9 lakhs in 1946-47 and 4,999 tons valued at Rs 13 lakhs in 1947-48 The next important item was asphalt whose imports, after moving up from 23,469 tons valued at Rs 37 lakhs to 51,287 tons valued at Rs 82 lakhs, receded to 47,110 tons valued at Rs 77 lakhs in the year under review The major source of supply continued to be Iran Imports of tiles, however, continued to improve both in quantity and value

Belting for Machinery (Rs. 212 lakhs):—Imports of machinery, which had advanced from Rs 123 lakhs to Rs 290 lakhs, were reduced to Rs 212 lakhs in the year under review Barring cotton belting, whose imports maintained an upward trend from Rs 15 lakhs in 1946-47 to Rs 27 lakhs in the following year and to Rs 30 lakhs in the year under review, the decline was all round Imports of hair belting dropped from Rs 48 lakhs in 1947-48 to Rs 38 lakhs in the following year but were up by Rs 8 lakhs over those for 1946-47, leather imports, which had doubled to Rs 94 lakhs in 1947-48 as compared to the preceding year, had a set-back and were valued at Rs 78 lakhs only in the year under review, and receipts of other types of belting were reduced by half from Rs 121 lakhs in 1947-48 to Rs 66 lakhs in the following year but were double of those for 1946-47 The bulk of the supply came from the United Kingdom, but in the case of leather belting, the U S was an equally important supplier.

Silk, Raw and Manufactured (Rs. 225 lakhs):—Owing to restrictions on imports, receipts of silk, raw and manufactures, which had advanced from Rs 390 lakhs to Rs 435 lakhs, receded to Rs 225 lakhs in the year under review Out of this raw silk accounted for over two-thirds and amounted to 0.8 million lbs, 1 1 million lbs and 1 4 million lbs valued at Rs 217 lakhs, Rs 159 lakhs and Rs. 171 lakhs respectively The rest of the imports were distributed over a wide field ranging from silk yarn to thread for sewing and recorded a substantial fall

Artificial Silk (Rs. 13.92 lakhs):—A smart rise in imports of artificial silk yarn to feed the domestic weaving industry was accompanied by a substantial drop in arrivals of woven goods during 1948-49 when combined imports were valued at Rs 13,92 lakhs as against Rs 11,82 lakhs in 1946-47 and Rs 15,47 lakhs in 1947-48 The total overseas supply of artificial silk yarn during the year under review was nearly 40 million lbs valued at Rs 12,83 lakhs as compared with 8 million lbs valued at Rs 399 lakhs in 1946-47 and 9 8 million lbs valued at Rs 552 lakhs in 1947-48 Imports of hosiery and goods of artificial silk mixed with other materials were negligible having registered a sharp fall and those of piecegoods made entirely of artificial silk dropped from 27 9 million yards valued at Rs 759 lakhs in 1947-48 to 4 million yards valued at Rs. 104 lakhs in 1948-49

Tobacco (Rs. 362 lakhs):—The improvement in the domestic quality of tobacco, expansion of the Indian industry, import restriction and an increase in import duty were the factors which adversely affected the flow of imports of tobacco from Rs 458 lakhs in 1947-48 to Rs 362 lakhs in the following year, though they showed a gain of Rs 3 lakhs over 1946-47 Receipts of unmanufactured tobacco were lower at 11 5 million lbs valued at Rs 295 lakhs against 12 8 million lbs. valued at Rs 34 lakhs in 1947-48 Receipts of cigarettes also fell from 1 1 million lbs worth Rs 83 lakhs to 0 7 million lbs valued at Rs 64 lakhs.

Rubber, Raw and Manufactured (Rs. 124 lakhs)—Expansion of domestic rubber manufacturing industry during the post-war period had the inevitable effect of higher imports of raw rubber and lower receipts of rubber manufactures the combined value of which amounted to Rs 29 lakhs, Rs 66 lakhs and Rs 124 lakhs for the three consecutive years Imports of raw rubber rose sharply from 368,113 lbs valued at Rs 2¼ lakhs in 1946-47 to 15,188,017 lbs valued at Rs 99 lakhs in 1948-49 On the other hand, imports of rubber manufactures which covered a wide variety, declined to Rs 25 lakhs after rising from Rs 27 lakhs in 1946-47 to Rs 45 lakhs in 1947-48

Seeds (Rs. 120 lakhs):—Though the value of imports remained unchanged at the previous year's level, the quantity of seeds imported doubled from 18,843 tons to 38,508 tons Imports of essential oilseeds rose, after dropping from 1,509-tons valued at Rs 8 6 lakhs in 1946-47 to 661 tons valued at Rs 4¼ lakhs in 1947-48, to 3,272 tons valued at Rs 37 lakhs in the year under review Imports of copra, on the other hand, dropped from 14,628 tons in 1947-48 to 3,422 tons, their respective values being Rs 98 lakhs and Rs 31 lakhs.

Gums and Resins (Rs. 132 lakhs):—After dropping from 185 533 cwts valued at Rs 90 lakhs in 1946-47 to 87,571 cwts valued at Rs 44 lakhs in the following year, a smart rise in imports was noted during the year under review when the receipts totalled 309,122 cwts valued at Rs. 132 lakhs. Nearly half the imports, both in quantity and value, were from Arabia

Lac (Rs. 140 lakhs):—Most of the imports were of stick and seed. Their receipts declined by nearly half from 212,371 cwts to 118,327 cwts in quantity, but the fall in value was of the order of Rs 22 lakhs at Rs 104 lakhs Nevertheless, compared to 1946-47, imports were substantial since during that year they amounted to 34,296 cwts. valued at Rs. 15 lakhs only.

Leather (Rs. 84 lakhs):—Thanks to the wartime development of the indigenous tanning industry, imports of leather amounted to Rs. 84 lakhs as against Rs 77 lakhs in 1946-47, though the figure for 1947-48 was abnormally high at Rs 118 lakhs A little more than one-third was on account of picking bands and straps, while leather cloth and pickets stood at Rs 12 lakhs each. Roller skin was another important item whose imports amounted to Rs. 19 lakhs in the year under review.

Precious Stones and Pearls Unset (Rs. 78 lakhs)—Owing to stoppage of trade with South Africa and the reluctance of British diamond merchants to ship diamonds, especially uncut, imports dropped sharply from Rs 498 lakhs in 1947-48 to Rs 78 lakhs in 1948-49 and showed a fall of Rs. 290 lakhs over 1946 47. Receipts of diamonds, which had advanced from Rs 245 lakhs in 1946-47 to Rs 314 lakhs in the following year, fell to Rs 25 lakhs in the year under review, while the value of pearls was valued at Rs 76 lakhs, Rs 127 lakhs and Rs 37 lakhs respectively mainly due to reduced shipments from Bahrein Islands which were the principal source.

Cutlery (Rs. 43 lakhs):—Imports of cutlery after registering an advance from Rs 83 lakhs to Rs 113 lakhs, had a sharp set-back and amounted to Rs 43 lakhs only in 1948-49. The fall was attributable to the drastic decline in receipts of blades from 935,395 valued at Rs 43 lakhs in 1946-47 to 282,164 valued at Rs 33 lakhs in 1948-49, the figure for 1947-48 being at a high level, 1,723,879 valued at Rs 94 lakhs.

Earthenware and Porcelain (Rs. 27 lakhs):—Imports registered a sharp recession from Rs 70 lakhs in 1947-48 owing mainly to the glut of stocks in the domestic market following higher imports in the preceding two years Imports of pipes of earthenware dropped from Rs 17,996 in 1947-48 to Rs 200 only, while sanitary-ware, whose receipts had doubled from Rs 11 lakhs in 1946-47 to Rs 22 lakhs in the following year, accounted for imports of Rs 17 lakhs Imports of porcelain dropped to Rs 2½ lakhs, after improving from Rs 5 lakhs to Rs 7½ lakhs

Glass and Glassware (Rs. 165 lakhs):—The gain noted in 1947-48 was practically wiped out in the following year mainly because of glut of imported stocks in the domestic market. Out of a cut of Rs 202 lakhs from Rs. 367 lakhs to Rs 165 lakhs, tableware alone accounted for Rs 118 lakhs, its imports having dropped from Rs 120 lakhs to Rs 2 lakhs only Imports of beads and false pearls dropped from 7,339 cwts valued at Rs 31 lakhs to 674 cwts valued at Rs 4½ lakhs, while those of bottles and phials fell to a little over one-eighth in quantity and one-third in value to 37,019 cwts, valued at Rs 6 lakhs Receipts of funnels were steady, but scientific glassware showed a small improvement Sheet and plate glass showed a more substantial rise in volume than in value and amounted to 357,604 cwts valued at Rs 101 lakhs in 1948-49 as against 279,409 cwts valued at Rs. 97 lakhs in the preceding year and 154,181 cwts valued at Rs 39 lakhs in 1946-47

EXPORTS OF MERCHANDISE

The upward trend of exports of Indian merchandise witnessed since the end of the war continued during 1948-49 despite the handicaps imposed by the partition of the country and stood at two and a half times that of pre-war average for the two years 1937-38 and 1938-39. The main factor was the rising trend of prices of exported articles since the general level of the quantity of exports averaged over the four post-war years stood at a little over two-thirds of the pre-war average.

In the pre-war years, 46 per cent. of exports was accounted for by the three commodities jute manufactures, raw cotton and tea. Oil seeds, raw jute, grain, pulse and flour, cotton

manufactures and processed hides and skins between them accounted for the next 30 per cent. Eleven more commodities absorbed the next 15 per cent. leaving nine per cent to miscellaneous articles. Barring commodities in the Food, Drink and Tobacco group and cotton manufactures, all the other commodities exported by India were of the nature of intermediate goods This meant that the demand for exports from this country depended on the tempo of industrial activity in the rest of the world The war wiped out many substantial markets, but to a certain extent the adverse effects were nullified by the growing domestic demand for those goods

During the first three post-war years, the proportion of food, drink and tobacco to the total value of exports remained more or less the same as in pre-war years, while raw materials and manufactured articles just interchanged their position. Again exports were concentrated on a fewer commodities and in 1948-49, nearly 75 per cent. of the export trade was accounted for by five commodities Oilseeds and raw hides and skins now occupy a considerably lower position; raw cotton has been relegated to the background, grain, pulses and flour, pig iron and raw wool have virtually disappeared from the export list and minor commodities like lac, spices, vegetable oils and cotton manufactures have gained in importance Again the tendency of exports is one of diversion from the hard currency area to the soft currency countries.

During 1948-49 for which exports of Indian merchandise were valued at Rs 415 crores, the single largest item of export was jute manufactures which formed 35.6 per cent. of the total. Next was tea accounting for 15 per cent. Third in order of importance was cotton manufactures the exports of which were valued at Rs. 36.24 crores or 8 6 per cent of the total. From the destinational point, 51 1 per cent. of the exports went to the Commonwealth countries. The United Kingdom was the best customer accounting for 23 7 per cent of the total, while the United States stood second with 17 per cent. Pakistan, Australia, Argentina, Ceylon, Burma, Canada, Holland, Egypt and Italy followed in that order.

The following details of India's export trade, exclusive of re-exports, are in thousands of rupees.—

(In thousands of Rs)

	1946-47	1947-48	1948-49	Percentage of Total
Jute Manufactures	69,88,42	1,27,82,10	1,46,31,45	35 21
Tea	34,56,21	54,90,15	63,68,71	15 33

Building and Engineering Materials	65,01	54,75	77,70	0 18
Others	18,68,76	21,58,33	20,63,23	4·96
Total	2,97,67,09	3,95,30,77	4,15,53,19	100·00

Jute Manufactures (Rs. 146,31 lakhs).—The production of jute manufactures continued to be below the pre-war level for one reason or another and was about 15 per cent less between 1945-46 and 1947-48 In the year under review, the mills did not show any significant increase in output and though the world demand continued to be on the high side despite the reduction in American offtake, export trade in jute manufactures, which represented about one-third of the total, could not be stepped up appreciably Destinational quotas were fixed by the Government of India primarily with the object of earning as much hard currency as possible and also to secure the supply of jute goods to countries which had undertaken the responsibility of feeding India.

The following are the details of shipments of jute goods during the three years 1946-49 —

	1946-47	1947-48	1948-49
Sacking Gunny Bags			
Tons	324,286	387,273	427,857
Rs in lakhs	23,83	41,37	56,18
Hessian Gunny Bags			
Tons	28,710	35,596	29,544
Rs. in lakhs	300	577	523
Sacking Gunny Cloth			
Tons	12,725	11,295	14,028
Rs in lakhs	105	113	193
Hessian Gunny Cloth			
Tons	331,695	405,942	418 525
Rs in lakhs	38,74	76,00	78,59

Egypt, Belgian Congo, Mauritius and Argentina recorded substantial increases in their offtake of gunny bags with the result that their overall exports were higher than in the preceding year despite the drastic reduction in American purchases In the case of gunny cloth the United Kingdom continued to be the best buyer, next to the U S and Argentina, but the American buying appeared to be downward

Tea (Rs. 63,69 lakhs).—A record crop of 551 3 million lbs in 1948 was followed by a strong export demand for Indian tea which accounted for 8 per cent of the earnings of foreign exchange during 1948-49 The overseas demand was particularly good for liquoring and tea with tips and Assam plantations were specially favoured by the overseas buyer The importance of the commodity in the international trade grew to such a point that the Government of India substituted the Tea Market Expansion Board by a Tea Committee with enlarged functions and took up the question of raising Calcutta as a world tea centre.

Exports of tea rose in volume from 327.4 million lbs to 384 million lbs and further to 405 9 million lbs with the value rising from Rs 34,56 lakhs to Rs 54,90 lakhs and then to Rs 63,69 lakhs in the year under review The bulk of the shipments were of black tea and 281 3 million lbs valued at Rs 41,22 lakhs were shipped to the United Kingdom under the bulk purchase agreement The commodity also figured in trade pacts with several other countries The United States bought 23 2 million lbs of tea worth Rs 375 lakhs and Soviet Russia which ranked as India s third customer imported 14 8 million lbs valued at Rs 297 lakhs Other markets were distributed over a very wide field from Pakistan to Chile

Cotton Manufactures (Rs. 39,85 lakhs).—In the first two years of the post-war period, the exports of cotton manufactures were on a scale considerably higher than in the pre-war years. Owing however, to reduced supplies at home, exports of cloth were restricted by an overall quota of 400 million yards in 1946, 380 million yards in 1947 and 350 million yards in 1948 to countries other than Pakistan. By 1948, Indian cloth exports began to feel the competition from overseas manufacturers and the

Government of India changed the export duty from as. 4 a yard to 10 per cent. *ad valorem* in November 1948. The advantage was, however, nullified within two months when an excise duty on superfine cloth was imposed.

Exports of cotton piecegoods, which had dropped from 318 million yards valued at Rs. 24,96 lakhs in 1946-47 to 192 million yards valued at Rs. 18,03 lakhs in the following year, recovered to 340 9 million yards valued at Rs. 36,24 lakhs during the year under review Of this, Pakistan took 156 million yards valued at Rs 15,85 lakhs Ceylon was the next important customer, though its purchases showed a downward trend in the post-war period. A similar tendency was displayed by Australia and several other countries, but the loss was offset by the gain in respect of shipments to Tanganyika and Kenya Colony.

Quality-wise, the distribution of exports was as under during the three years 1946-49 —

	1946–47	1947–48	1948–49
Grey Unbleached			
million yards	132 9	68 3	91·9
Rs in lakhs	747	450	697
White Bleached			
million yards	41 6	30 8	66 4
Rs in lakhs	310	267	639
Coloured, etc			
million yards	143·9	93 3	182 6
Rs. in lakhs	14,40	10,85	22,88

Shipments of cotton twist and yarn were of the order of 7·4 million lbs valued at Rs. 129 lakhs in 1948-49 as against 3 8 million lbs. valued at Rs 44 lakhs in 1946-47 and only 0·41 million lbs. valued at a little less than half a lakh in 1947-48 The bulk of the shipments were of grey, singles.

Jute, Raw (Rs. 23,89 lakhs).—After partition in 1947, India retained an area under jute capable of producing between one-fifth and one-fourth of the production of undivided India. A major portion of the crop of the Indian Union used to be for export, Indian mills using East Bengal growths But the post-partition developments necessitated India to sacrifice the export market in raw jute The overall export quota of 2 6 million bales fixed in 1947-48 was reduced to 0 9 million bales in the following year and of this again, only 0 25 million bales were allowed in the first half of the season July-December Later in October some relaxation was allowed in the case of exports to the United Kingdom, Bizonia and Australia. Owing to shortage of supplies, export quotas were allowed by Government to countries against scarce goods only.

The total quantity shipped dropped progressively from 306,246 bales tons to 265,017 tons and further to 212,700 tons, their respective value being Rs. 19,12 lakhs, Rs. 25,83 lakhs and Rs 23,89 lakhs One-fourth of the exports went to the United Kingdom, while the United States ranked second with 31,755 tons valued at Rs. 387 lakhs Brazil and Russia stood third and fourth with respective shipments amounting to 20,145 tons valued at Rs 242 lakhs and 15,762 tons valued at Rs 173 in 1948-49

Cotton, Raw and Waste (Rs. 19,15 lakhs).—Following the partition of the country, the Indian Union became a net importer of this commodity with the result that exports had to be restricted to short stapled varieties not needed by the domestic cotton textile industry and consequently registered a sizeable fall. Exports of raw cotton, which had risen in the preceding year from 907,928 bales valued at Rs 22,56 lakhs to 1,172,115 bales valued at Rs 34,75 lakhs, dropped in 1948-49 to 426,051 bales valued at Rs 14 crores only, while those of cotton waste dropped progressively from 1·3 million cwts. valued at Rs 541 lakhs in 1946-47 to 1 0 million cwts valued at Rs. 515 lakhs in 1948-49.

Owing to food shortage, India had cut down her output of short staple cotton to about one-third of the pre-war average by the end of the war. On the other hand, the increase in long staple was mainly achieved in areas now under Pakistan. Consequently Indian export surplus in short staple was reduced from 2·2 million bales in the pre-war year to hardly half a million bales. At the time of the partition, the volume of exports of raw cotton was between one-third and one-half the pre-war, but it was thereafter reduced to only one-fifth and the export of long and medium staple had to be curtailed still further during 1948-49 owing to (1) the acute position of stocks of these varieties with the mills caused by poor receipts of foreign cotton and (2) the leakage in India's hard currency earnings

Leather and Leather Manufactures (Rs. 12,69 lakhs).—These exports were affected partly by increased consumption at home and partly by shortage of raw materials despite the liberalisation of export control and amounted to Rs. 12,69 lakhs in 1948-49 as against Rs. 18,86 lakhs in 1946-47 and Rs 14,48 lakhs in 1947-48. Of these, hides and skins, tanned or dressed, accounted for Rs 12,17 lakhs as against Rs 17,97 lakhs in 1946-47 and Rs 13,75 lakhs in 1947-48 The details are given below —

	1946-47	1947-48	1948-49
Buffalo Hides, Tanned			
Tons	1,472	1,023	1,178
Rs in lakhs	77	40	41
Cow Hides, Tanned			
Tons	14,670	11,715	7,509
Rs in lakhs	701	562	410
Calf Hides, Dressed			
Tons	1,231	1,479	661
Rs in lakhs	81	109	44
Other Hides			
Tons	24		13
Rs in lakhs	4		1
Total Hides, Tanned or Dressed			
Tons	17,397	14,217	9,361
Rs in lakhs	863	711	496
Goat Skins, Dressed

Rs in lakhs	513	306	374
Sheep Skins, Dressed			
Tons	1,888	2,004	1,929
Rs in lakhs	268	300	312
Other Skins, Dressed.			
Tons	279	111	69
Rs in lakhs	153	58	35
Total Skins, Tanned or Dressed			
Tons	7,114	4,798	5,190
Rs in lakhs	934	664	721
Hides and Skins, Unwrought.			
Tons	4,973	4,791	3,511
Rs in lakhs	38	61	39

Oils (Rs. 11,34 lakhs).—After a smart rise from 5 8 million gallons valued at Rs 386 lakhs in 1946-47 to 16 9 million gallons valued at Rs 12,30 lakhs, exports of oils steadied at 15 5 million gallons valued at Rs. 11,34 lakhs during the year under review Vegetable oils alone accounted for exports of 5 4 million gallons, 16·7 million gallons and 15 5 million gallons valued respectively at Rs. 237 lakhs, Rs. 11,50 lakhs and Rs. 10,85 lakhs.

Exports of essential oils dropped from 151,044 gallons valued at Rs. 146 lakhs to 104,880 gallons valued at Rs 79 lakhs and then recovered in volume to 111,653 gallons valued at Rs. 47 lakhs only. Nearly one-fourth of the shipments were of sandalwood oil and half were of lemon grass oil. Exports of mineral oils were negligible being 80,478 gallons valued at Rs. 2 lakhs.

The details of export trade in vegetable oils are summed up in the following table :—

	1946–47	1947–48	1948–49
Castor Oil			
Million gallons	0 3	5 6	3·0
Rs in lakhs	17	398	218
Coconut Oil.			
Million gallons	0·1	0 01	0·16
Rs in lakhs	5	0·07	11
Groundnut Oil.			
Million gallons	4 3	7 3	8 9
Rs in lakhs	184	463	646
Linseed Oil			
Million gallons	0 3	3 3	2·3
Rs. in lakhs	18	271	147
Mustard Oil			
Million gallons	1,789	28,651	0 2
Rs in lakhs	0 09	1	18

The fall in the exports of castor oil could be traced to growing competition from Brazil with the result that the United Kingdom reduced its purchases by one-third to 2 million gallons valued at Rs 147 lakhs. In the case of groundnut oil, the quantity exported showed a handsome gain, but the value declined owing to a fall in prices Linseed oil exports also showed losses owing to keen competition from Argentina.

Lac (Rs. 868 lakhs).—A downward trend was visible in the case of export trade in lac, despite the liberal export control owing partly to the deterioration in quality and partly to the competition from Thailand. Exports of lac dropped from 678,540 cwts. valued at Rs. 11,19 lakhs in 1946-47 to 542,172 cwts. valued at Rs 911 lakhs in 1947-48 and further to 490,623 cwts. valued at Rs 868 lakhs in the year under review The decline was shared by all categories of lac; but it was more pronounced in respect of shell.

Shipments of lac button dropped from 19,123 cwts. valued at Rs 37 lakhs in 1946-47 to 14,074 cwts. valued at Rs. 29 lakhs in the year under review The fall was more gradual in the case of seed lac whose exports receded from 191,442 cwts valued at Rs 285 lakhs in 1946-47 to 169,070 cwts. valued at Rs 277 lakhs in 1948-49 Exports of shell lac declined in volume from 415,210 cwts. to 266,093 cwts. and in value from Rs. 757 lakhs to Rs 519 lakhs.

Seeds (Rs. 705 lakhs).—The growing domestic demand, partly to offset the food shortage, had the inevitable effect of reducing exports of seeds from 157,321 tons valued at Rs 971 lakhs, to which they had been doubled from the preceding year to 104,394 tons valued at Rs. 705 lakhs during the year under review. Exports of seeds, other than oilseeds, were insignificant and even among the latter, those of essential oilseeds amounted to only 9,227 tons valued at Rs 56 lakhs.

The table below gives the details of the export of vegetable oilseeds :—

	1946–47	1947–48	1948–49
Castor			
Tons	5,791	4,951	.
Rs. in lakhs	26	28	..
Copra.			
Tons	..	85	101
Rs. in lakhs	..	0 6	0 97
Groundnuts.			
Tons	.	55,363	38,272
Rs. in lakhs	..	374	313
Linseed.			
Tons	52,122	66,861	25,024
Rs. in lakhs	255	381	139
Sesamum.			
Tons	2,404	886	33
Rs. in lakhs	17	9	0·25

The major buyer was the United Kingdom despite the drastic reduction in her purchases during the year under review owing to high prices. The price factor completely eliminated

exports of castorseed and reduced exports of linseed to nearly one-third. Next to the United Kingdom, Canada was an important buyer of groundnuts, while Australia was the main customer for linseed.

Although domestic output of other oilseeds showed some reduction in the post-war years, the production of groundnut, which is by far the most important oilseed, was about 10 per cent higher throughout except for 1948-49. Owing, however, to the development of the *Vanaspati* industry during the war, as also to expansion of the soap and paints and dyes industries, industrial consumption of oilseeds in India increased absorbing about 25 per cent. of the country's output of oilseeds. Again, in the post-war period, the demand was more for vegetable oils owing to the bad state of the European crushers with the result that exports of oilseeds were severely curtailed.

During 1948, the quotas for castorseed and oil were removed but quotas for groundnut and linseed continued In addition, an export duty of Rs 80 per ton on seed and Rs 200 per ton on oil was imposed in February 1948 Later, the duty on oil was reduced to Rs 160 per ton and removed in February 1949 On an average, the exports of oilseeds during 1946-1949 were about 10 per cent of pre-war and were destined mainly to soft currency markets although at one time Canada took as much as 7 per cent of the total exports of vegetable oil

The year was notable for the evaporation of the sellers' market Leading producers, namely, the U S and Argentina, reported a substantial surplus and supplies of copra, palm oil, etc. from the Netherland East Indies were better The total world output of fats and oils during 1948 was only four per cent below the pre-war level but substantially higher than in 1947 with the result that prices broke in the American market in February 1948 and in November the I E F C. discontinued the system of making allocations

Hides and Skins, Raw (Rs. 559 lakhs):—A drastic fall was noted in this group mainly because of the reduction in the exportable surplus following the partition of the country. Exports dropped from 25,301 tons valued at Rs. 849 lakhs in 1946-47 to 23,272 tons valued at Rs 747 lakhs in 1947-48 and further to 15,940 tons valued at Rs 559 lakhs in the year under review The following are the details of the trade —

	1946-47	1947-48	1948-49
Cow Hides			
Tons	3,758	4,299	1,841
Rs in lakhs	84	106	44
Calf Skins			
Tons	317	215	114
Rs in lakhs	6	7	3
Hides, Raw			
Tons	6,527	5,074	2,039
Rs in lakhs	145	125	49
Goat Skins			
Tons	11,613	13,843	9,940
Rs in lakhs	407	564	473
Sheep Skins			
Tons	3,682	590	201
Rs in lakhs	230	37	15
Other Skins			
Tons	427	91	84
Rs in lakhs	62	12	10
Skins, Raw			
Tons	15,722	14,524	10,225
Rs in lakhs	699	612	498
Cuttings of Hides and Skins, Raw			
Tons	3,052	3,674	3,677
Rs in lakhs	5	10	12

Following the partition of the country Government had to reverse their policy which had been one of progressive liberalisation of export control. During the year, the export of certain varieties of raw hides was banned except to hard currency areas.

Spices (Rs. 546 lakhs):—Export trade in spices, which had improved from 565,103 cwts. valued at Rs. 449 lakhs in 1946-47 to 657,844 cwts. valued at Rs. 638 lakhs in the following year, received a set-back during the year under review and amounted to only 458,009 cwts valued at Rs. 546 lakhs owing to a variety of factors led by a rise in prices and deterioration in quality.

The world demand for pepper was placed around 56,000 tons, while the visible supplies were not more than 35,000 tons With Indonesia and Indo-China, two pre-war important producers, out of the market, Indian pepper attracted considerable attention in the world market and its price began to rise rapidly from Rs 690 per candy to Rs 1,150 There was also considerable diversion of exports to the hard currency countries from the non-dollar area To avoid this, the Government decided to allow free exports to hard currency countries and reserved the right of permitting despatches to soft currency area on the merits of each application As a result, exports dropped from 332,341 cwts valued at Rs 372 lakhs in 1947-48 to 131,036 cwts valued at Rs. 267 lakhs in the following year, while they amounted to 220,032 cwts valued at Rs 206 lakhs in 1946-47 For the first time, it became clear that the United States was an important buyer

Owing to the price factor, exports of cardamoms dropped in quantity from 20,800 cwts in 1947-48 to 17,506 cwts in the following year but showed a small loss of Rs 2 lakhs at Rs 73 lakhs in value as against 13,217 cwts valued at Rs 42 lakhs in 1946-47 Arabia and Pakistan accounted for half the shipments, while exports to Sweden, the United Kingdom and the United States were meant mainly for flavouring drinks and manufacturing tincture cardamom.

Bad quality adversely affected the trade in chillies whose exports downtrended from 189,702 cwts to 178,652 cwts and further to 100,226 cwts in the year under review, their respective values being Rs 130 lakhs, Rs 124 lakhs and Rs 86 lakhs Nearly 90 per cent of the shipments were for Ceylon

The gains in export of ginger noted in 1947-48 when 53,671 cwts. valued at Rs 25 lakhs were shipped as against 43,063 cwts. valued at Rs 24 lakhs in the preceding year, were wiped out in 1948-49 during which shipments totalled 41,218 cwts. with the value remaining higher at Rs. 26 lakhs

The demand for turmeric broadened considerably, mainly from Pakistan exports, which had dropped from 83,283 cwts to 61,037 cwts with the value remaining unchanged at Rs 32 lakhs, were pushed up to 151,036 cwts valued at Rs 84 lakhs in the year under review One-third of the quantity was shipped to Pakistan and the balance to a number of countries including Arabia and the United States.

Growing domestic consumption, the levy of an excise duty and the rise in prices adversely affected the trade in betelnuts which continued downward from 13,358 cwts valued at Rs 13 lakhs in 1946-47 to 6,082 cwts valued at Rs 6 lakhs in the year under review

Metals, Ores and Minerals (Rs. 442 lakhs):—A fall in volume, accompanied by a rise in value, was noted in exports of metals, ores and minerals during 1948-49 during which exports totalled 407,428 tons valued at Rs 442 lakhs as compared with 553,260 tons valued at Rs. 291 lakhs in 1946-47 and 585,205 tons valued at Rs 376 lakhs in 1947-48. Exports of iron amounted to 46,610 tons valued at Rs 68 lakhs as against 8,036 tons valued at Rs. 5 lakhs in 1946-47 and only 603 tons valued at Rs 1 4 lakhs in 1947-48. The bulk of the shipments were of pig iron. Exports of sheets and plates and other steel material improved from 3,401 tons valued at Rs 13 lakhs to 12,054 tons valued at Rs. 54 lakhs. Shipments of lead were nominal.

Nearly three-fourths of the quantity shipped under the group comprised manganese ore; but the year under review registered a fall in its export of 111,895 tons valued at Rs. 68 lakhs and amounted to 308,895 tons valued at Rs. 181 lakhs Half the shipments were for the United States.

Mica (Rs. 592 lakhs):—The overseas demand for mica was better in 1948-49 during which exports totalled 339,975 cwts valued at Rs. 592 lakhs as against 185,278 cwts valued at Rs. 300 lakhs in 1946-47 and 255,259 cwts. valued at Rs 565 lakhs in 1947-48 The bulk of the shipments was in respect of splittings and the United States alone purchased 208,516 cwts. of mica valued at Rs 389 lakhs in 1948-49 following the removal of export control as far as the hard currency area was concerned

Wool and Woollens (Rs. 413 lakhs):—This was yet another commodity whose exportable surplus was drastically cut down by partition. Total exports fell from Rs 918 lakhs to Rs 603 lakhs and further to Rs 413 lakhs. Of these woollen manufactures alone accounted for Rs 524 lakhs, Rs 344 lakhs and Rs. 304 lakhs for the respective years The bulk of the shipments were of carpets and rugs which recorded a substantial fall from 15 5 million lbs valued at Rs 475 lakhs in 1946-47 to 10 million lbs valued at Rs 322 lakhs in the following year and to 8 3 million lbs valued at Rs 261 lakhs in 1948-49 Exports of raw wool dropped precipitately from 43 5 million lbs valued at Rs 395 lakhs in 1946-47 to 8 6 million lbs valued at Rs 109 lakhs in the year under review

Coal and Coke (Rs. 384 lakhs):—Export trade in coal and coke broadened during the past three years mainly because of the treatment of Pakistan as a foreign territory The total exports amounted to 1,132,101 tons valued at Rs. 384 lakhs in the year under review as against 485,090 tons valued at Rs 159 lakhs in 1947-48 and 544,582 tons valued at Rs. 99 lakhs in 1946-47 Western Pakistan took 463,176 tons valued at Rs 96 lakhs, while Ceylon absorbed 272,602 tons valued at Rs 126 lakhs

Coir, Manufactured (Rs. 447 lakhs):—A downward trend was noticeable during the past three years during which exports totalled one million cwts 0 97 million cwts and 0 87 million cwts valued at Rs 578 lakhs, Rs. 526 lakhs and Rs 447 lakhs respectively for the three consecutive years Shipments of coir yarn fluctuated within a narrow range and amounted to 0 59 million cwts valued at Rs. 224 lakhs in 1946-47, 0 75 million cwts valued at Rs 323 lakhs in 1947-48 and 0 70 million cwts valued at Rs 298 lakhs in 1948-49. Nearly one-fifth of them were sent to the United Kingdom On the other hand, exports of coir mats and mattings dropped sharply from 436,706 cwts valued at Rs 324 lakhs to 194,040 cwts. valued at Rs 173 lakhs and further to 159,804 cwts valued at Rs 134 lakhs More than two-thirds of the supply went to the United Kingdom.

Fish (Rs. 147 lakhs):—Exports of fish showed losses from 0·6 million cwts valued at Rs 324 lakhs in 1946-47 to 0 4 million cwts valued at Rs 169 lakhs in 1947-48 and further to 0 2 million cwts valued at Rs 147 lakhs The bulk of the shipments was of dry but unsalted fish and half the exports were meant for Ceylon

Fruits and Vegetables (Rs. 610 lakhs):—After dropping from Rs 701 lakhs to Rs 544 lakhs, exports of fruits and vegetables made a feeble recovery to Rs 610 lakhs during the year under review mainly due to larger shipments of cashew kernels whose exports rose progressively to 18,285 tons valued at Rs 493 lakhs The United States alone took 16,455 tons of them valued at Rs 451 lakhs Another important item was onions, but its exports showed a downward trend both in quantity and value.

Tobacco (Rs. 826 lakhs):—The rise in the price was reflected in a sharper advance in the value of exports of tobacco from Rs 641 lakhs

in 1947-48 to Rs. 826 lakhs in the following year, though the gain in the quantity was of 3 2 million lbs at 55 8 million lbs. On the other hand, exports in 1946-47 totalled 75 4 million lbs. valued at Rs. 718 lakhs only Over three-fifths of the shipments were of unmanufactured tobacco, their quantity being 72 million lbs, 50 million lbs and 51 million lbs for the three consecutive years valued at Rs 593 lakhs, 503 lakhs and Rs 578 lakhs respectively A little less than half the quantity was shipped to the United Kingdom where special efforts were made to develop the market

After an initial fall from 3 2 million lbs to 2·7 million lbs in volume, exports of manufactured tobacco rose to 5 million lbs ; but the value remained upward moving from Rs 126 lakhs in 1946-47 to Rs 138 lakhs in 1947-48 and Rs 249 lakhs in 1948-49 The increase in the year under review was mainly due to shipments of 1 8 million lbs valued at Rs 184 lakhs to Pakistan The bulk of the shipments were in the form of cigarettes which showed a 600 per cent. rise.

Building and Engineering Materials (Rs. 77 lakhs) :—Exports rose sharply from Rs 55 lakhs in 1947-48 to Rs. 77 lakhs in the following year mainly on account of the larger demand for tiles, the shipments of which mounted up from 20 8 millions valued at Rs 35 lakhs to 29 1 millions valued at Rs 56 lakhs Other exports covered bricks, chalk and lime and magnesite

Drugs and Medicines (Rs. 81 lakhs) :—The traditional exports of nux vomica and senna showed a downward trend, while manufactured drugs maintained an upward trend. Total shipments showed a rise of Rs 15 lakhs to Rs 81 lakhs in 1947-48 as against Rs 93 lakhs in 1946-47 Out of this, nux vomica accounted for 8,989 cwts valued at Rs 1 lakh in 1948-49 as against 30,575 cwts valued at Rs 5 lakhs in the preceding year and 42,471 cwts valued at Rs 7 lakhs in 1946-47 Exports of senna dropped from 47,962 cwts. valued at Rs. 20 lakhs in 1946-47 to 24,657 cwts. valued at Rs. 6 lakhs in the year under review.

Dyeing and Tanning Substances (Rs. 81 lakhs) :—After an initial improvement from 683,919 cwts to 750,437 cwts., with the value remaining unchanged at Rs. 70 lakhs, exports of dyeing and tanning substances dropped in volume to 609,712 cwts but rose in value to Rs. 81 lakhs Myrobalans alone accounted for shipments of 611,940 cwts. valued at Rs 55 lakhs as against 638,493 cwts. valued at Rs 46 lakhs in the preceding year Nearly half the exports were to the United Kingdom. Other items included barks for tanning, cutch and gambier, indigo and myrobalan extracts

Rubber (Rs. 161 lakhs) :—Export trade in rubber suffered a setback from Rs 280 lakhs to Rs 222 lakhs in 1947-48 and to Rs 161 lakhs in 1948-49 Nearly 99 per cent. of the shipments were of rubber manufactures, with Pakistan and Ceylon buying more than half the quantity exported.

HYDRO-ELECTRIC DEVELOPMENT

CHEAP motive power is one of the secrets of successful industrial development and the favourable initial conditions caused by the war, the enthusiasm for industrial development which has seized nearly all classes of educated Indians, and the special attention which the circumstances of the war have compelled Government to direct towards the scientific utilisation of Indian natural resources all point to a rapid growth of industrial enterprise in all parts of the country within the next few years Indeed, the process, for which sound foundations had been laid before the war, is now rapidly under way. India is severely handicapped compared with other lands as regards the generation of power by the consumption of fuel, coal or oil. These commodities are all difficult to obtain, and costly except in a few favoured areas. Coal supplies for example are chiefly centred in West Bengal and Chota Nagpur and the cost of transport is heavy. Water power and its transmission by electricity offer, on the other hand, good possibilities, both as regards the quantity available and the cheapness at which the power can be supplied, in certain parts of the country

Water power schemes, pure and simple, are generally difficult because the power needs to be continuous, while the rainfall is only during a small portion of the year. Perennial rivers with sufficient water throughout the year are practically non-existent Water, therefore must be stored for use during the dry season. Favourable sites for this exist in many parts in the mountainous and hilly regions where the heaviest rainfalls occur and the progress already made in utilising such opportunities by the electrical transmission of power affords encouragement for the future Further, hydro-electric schemes can sometimes be associated with important irrigation projects, the water being used for both electricity generation and irrigation

An industrial commission emphasized the necessity for a hydrographic survey of the country. On this recommendation the Government of India in 1918 appointed Mr. G. T. Barlow, C I E., then Chief Engineer, Irrigation Branch, Uttar Pradesh, to undertake the work, associating with him Mr J. W. Meares, M.I.C E., then Electrical Adviser to the Government of India. Mr. Barlow died before completing the work; but Mr. Meares issued a preliminary Report in 1919, and a triennial Report in 1921, indicating that a minimum continuous water power of nearly 6 million kilowatts with a maximum of 13 million kilowatts could be developed in India. This excluded practically all the great rivers, which were then uninvestigated.

The Government of India has since formed a Central Technical Power Board for developing hydro-electric resources and for carrying out a systematic hydro-electric survey. The present stage of progress and some of the plans under consideration for the development of hydro-electric power in the post-war period are indicated in the following paragraphs.

Largely, at the initiative of the Government of Bombay, the Government of India introduced in the Central Legislature a Bill entitled "Electricity (Supply) Bill, 1946" during the Budget Session of 1946 This measure was passed and became an Act in 1948. One of the provisions of this Act is that the State Governments have to set up State Electricity Boards within two years They will be charged with the work of rationalisation and development of electric supply in the State

BOMBAY HYDRO-ELECTRIC WORKS

The greatest hydro-electric undertakings in the country are the three schemes developed and brought into operation by Tata Sons, Ltd., and continued under their management until 1929, when they were transferred to the management of the Tata Hydro-Electric Agencies, Ltd., in which Messrs. Tata Sons retained a substantial interest. These undertakings are :—

(a) The Tata Hydro-Electric Power Supply Company, Ltd. Supply started in 1915
(b) The Andhra Valley Power Supply Company, Ltd. Supply started in 1922
(c) The Tata Power Company, Ltd. Supply started in 1927.

These three Hydro-Electric stations together with the Chola Steam Station of the G I P. Railway supply a demand of nearly 250,000 kW in and around Bombay up to as far south as Poona

The favourable position of the Western Ghats which rise to a height of more than 2,000 feet above sea-level within a few miles of Bombay City, with their heavy rainfalls was taken full advantage of for providing Bombay City and vicinity with an adequate and economical power supply.

Khopoli.—The hydraulic works of the Tata Hydro-Electric Power Supply Company are situated near Lonavla at the top of the Bhor Ghat. The monsoon rainfall is stored in three lakes, namely Lonavla, Walwan and Shirawta, from which it is conveyed in open masonry canals to the Forebay at Khandala and thence through steel pipes to the Power House at Khopoli at the foot of the Ghats, where the head at turbine nozzles is 1,725 feet or approximately 750 lbs. per sq inch The capacity of the Power Station at Khopoli is 65,600 kW. This scheme was formally opened by the Governor of Bombay on the 8th of February 1915.

Bhivpuri.—Investigations in 1917-18 led to the discovery of a site on the Andhra River just to the north of the Tata Hydro-Electric Supply Company's lakes, where additional power could be developed These investigations resulted in the formation of the Andhra Valley Power Supply Co and the construction of the schemes, the principal features of which consist of a reservoir formed by a dam about 190 feet high, across the Andhra River and a tunnel 8,700 feet long driven through solid trap rock to the scarp of the Ghats, from which the water is taken in steel pipes 4,600 feet long to the turbines in the generating station at Bhivpuri The head of water at turbine nozzles is 1,740 feet or approximately 750 lbs. per sq inch The electrical energy is transmitted to Bombay over a transmission line 56 miles long for augmenting the supply from Khopoli The present maximum capacity of this station is 72,000 kW.

Bhira.—The Tata Power Company's scheme on the Nila-Mula River to the south-east of Bombay was investigated and developed along lines similar to the Andhra Valley scheme and has an installed capacity of 110,000 kW. The power is transmitted to Bombay over a transmission line 76 miles long and is used to augment the supply of the two earlier companies to mills, factories and railways

The Tata Hydro-Electric System, comprising the Tata Hydro-Electric Power Supply Company, the Andhra Valley Power Supply Company and the Tata Power Company, is operated as an integrated electric power system serving an area in the State of Bombay of more than 1,000 square miles. It is the largest power system in the country having a fixed capital expenditure in excess of Rs. 16 crores and an annual output representing more than one-third of the total electricity production.

Electric service is rendered to the textile mills and other industries of Bombay and the suburban areas, to the railways for electric traction, to local authorities, and, in bulk for retail distribution, to the electrical undertakings supplying Bombay City and suburban districts, Poona and ten other localities within the area.

During the year 1948-49, the three hydro stations and the railway thermal power station, which is connected to the system, together generated 1,310 million units of electric energy.

The Hydro system operated a total of 776 circuit-miles of high voltage electric lines and underground cables, including 458 circuit-miles of transmission lines of 100,000 volt capacity.

The rate for energy delivered to the Mills, Factories and Railways has, for several years, shown a steady decrease and now averages 0·32 of an anna per unit, which compared favourably with that in any large commercial centre in the world This power supply greatly enhances the natural advantages Bombay has as a great manufacturing, trading and shipping centre.

GRID SCHEMES

For the development of industries and agriculture in the northern portion of Bombay State the Bombay Government has embarked on the provision of an electrical grid scheme somewhat on the lines of the British Grid It is at present proposed to develop Grid schemes area wise in the different parts of the State which may be interconnected at a later stage

In the State of Bombay, there are at present 108 licensees in operation. In the case of three of these, the licensees have hydro-electric stations, their installed plant capacity being 236,000 kW These three licensees serve by bulk supply Bombay City, the Bombay Suburban District, Poona and six other townships. Almost all the remaining licensees generate their own electric energy. Of these, one has an installed capacity of 67,500 kW, another 5,476 kW, the remaining have relatively small power houses. Most of the licensees operate in urban areas Besides, there are 20 power stations owned and operated by the Bombay Government including those of the merged States.

The objects with which the Government of Bombay have set up the Electric Grid Department are: (1) to rationalise the generation of electricity by generating it at a few selected stations having natural advantages, (2) to make available progressively larger amounts of electricity at low rates, and (3) to bring the energy within reach of a progressively increasing number of the urban and rural population.

The objects are to be achieved by the establishment of an Electric Grid System in regions which lend themselves to such development economically under quasi-state control New power stations—both hydro-electric and thermal—will be established. These and the existing efficient generating stations of licensees, wherever practicable, will be inter-connected by the Grid lines. Inefficient generating stations will be closed down and the licensees concerned supplied bulk power Wherever possible, rural areas within the Grid regions will be supplied electricity from the system.

It is also intended to establish small Diesel Stations in isolated townships, which have some cottage industries and which cannot, within reasonable time, be served from the Grid

To promote rapid development of the use of electricity by agriculturists and cottage and small scale industrialists specially in rural areas, it is proposed to assist them financially in acquiring electrical machinery and equipment on hire purchase terms.

A Special Grid Department has been organised under the Electrical Commissioner with the Government of Bombay The development programme under execution at present consists of (1) North Gujarat Grid Scheme, (2) South Gujarat Grid Scheme, (3) Rural electrification and small town schemes based on small diesel stations or distribution of power purchased from the existing licensees Besides this, the Department is entrusted with the work of operation and maintenance of power houses in merged States which were owned and operated by the various former Indian States.

GUJARAT AREA

This scheme contemplates taking power in bulk from the power station of the Ahmedabad Electricity Company at Sabarmati and distributing it to centres of load in North Gujarat Area. The works comprise construction of about 70 miles of 66/110 kV line, 14 miles of 33,000 and 50 miles of 11,000 volt transmission lines and about 480 miles of distribution lines.

The Ahmedabad Electricity Company have constructed a new power station known as "B" station initially consisting of two 15,000 kW steam turbo sets negotiated by the Government with the Company in the year 1944-45 Two more 15,000 kW sets are under erection in this new station to meet the increased demands for power In order to meet the ever growing requirements of power, Government have negotiated with the Company the establishment of a further new power station known as "C" station, initially consisting of three 15,000 kW sets The ultimate capacity of this "C" station is estimated to be 120,000 kW

The construction of 66/110 kV line from Ahmedabad to Baroda is completed An order for 33 and 11 kV lines has been placed The required power transformers and sub-station control gear which were ordered out, are being received from the manufacturers and will be shortly installed and put into service.

The original programme of completion of works has had to be drastically revised in the light of the delivery dates for sub-station control gear and other equipment, now reported by manufacturers in the U K. According to present indications, it would appear that distribution of electricity in this region can be commenced by about the middle of 1950

This scheme provides for the installation of a steam power station initially comprising two turbo alternator sets of 7,500 kW each near Surat for supply of power in areas from Surat to Bulsar, and construction of an E H T transmission line over a distance of about 33 miles from Surat to Billimora

The construction of the power house and other auxiliary buildings has made considerable progress at the site selected for the power station at Utran near Surat The construction of the railway siding from Utran railway station to the power house was completed in March 1940 Orders for power transformers and sub-station equipment have been placed and those for transmission line materials will be placed shortly

Out of the two turbo sets, one is received while almost all the boiler house equipment has arrived Civil and structural works for the boiler house are also in progress Switchgear and other equipment for the power house have been partly shipped

Owing to the delays in delivery of plant and machinery and other equipments by the manufacturers, the original programme of completion of works has had to be revised According to present indications the supply from the steam station should commence early 1951.

The former Government of Baroda was persuaded to abandon the scheme of establishment of steam station and to take power in bulk at Baroda, Petlad, Kalol, Navsari and Billimora from the Grid schemes for distribution within the State territory Negotiations were conducted with the B B & C I Railway for the use of a common power system on a co-operative basis by the Railway for meeting its power requirements for traction purposes between Ahmedabad and Bombay and by the Bombay Government for supplying electric service to urban and rural population residing within the economic distance of the various sub-stations *en route* When the Railway electrification scheme is decided on, it will be necessary further to develop the power station at Ahmedabad and Utran and also the transmission system

Negotiations were also conducted with the G I P Railway for the use of a common power system in the Nasik and Khandesh areas but no definite decision has been arrived at.

RURAL SCHEMES

The schemes so far sanctioned for execution by Government consist of, (1) Electrification of the towns of Ratnagiri, Malvan, Vengurla, Chiplun, Islampur and Peth, (2) Electrification of 21 villages in the Satara taluka based upon power being taken from the existing power house of the Satara Electricity Co., (3) Electrification of ten villages in the Bulsar taluka, based on bulk electricity being taken from the existing power house of the Bulsar Electricity Co Later on, when power becomes available from the Government's own station in Surat, power will be supplied from that Station, (4) Electrification of rural areas between Lonavla and Talegaon with power, purchased from Tatas Supply of power at Vengurla and Ratnagiri has already commenced, while supply to the villages of Satara and Bulsar talukas was expected to start in the second half of 1950.

None of the first three schemes mentioned above can at present supply any large industrial load, but when item (3) is linked up with the new Surat Steam Station it will be posible to supply power for industrial use.

In addition to those mentioned above, small Diesel stations may be established during the next five years in about 20 townships containing about 2,000 dwelling houses or more and having village industries, the production of which can be appreciably increased by the use of electric power A list of the towns provisionally selected is given hereunder

Division	District	Town
Northern	Ahmedabad	Dholka
,,	,,	Dhanduka
Central	East Khandesh	Erandol
,,	,,	Parola
,,	,,	Dharangaon
,,	Sholapur	Akluj
Southern	Belgaum	Chikodi
,,	,,	Gokak
,,	,,	Hukeri
,,	,,	Konnur
,,	,,	Sankeshwar
,,	,,	Bailhongal
,,	Bijapur	Guledgud
,,	,,	Kamatgi.
,,	,,	Ilkal
,,	,,	Sulebhavi
,,	,,	Amingad
,,	,,	Hungund
,,	,,	Gudur
,,	Dharwar	Gajendragad

The above schemes have been administratively approved by Government The execution of the schemes for Dholka and Dhanduka has at present been postponed due to financial stringency

Jog Power.—In consideration of the consent given by the Government of Bombay to the Government of Mysore for the electric development of the waterfall at Jog under certain conditions, the latter has agreed to supply the Bombay Government, electric power upto 11,500 kW at Jog The scheme for distribution of Jog power in the Dandeli, Dharwar, Hubli and Gadag areas as well as in Byadgi, Ranibennur and Haveri areas has been approved by Government Load surveys have been carried out and contract for transmission line survey has been placed. Order for sub-station equipment was expected to be placed at any time

Salient features of the hydro projects which are likely to be undertaken within the next few years are given hereunder

Koyana Project —This scheme when fully developed is capable of meeting a demand of the order of 280,000 kW continuous after reserving part of the storage for irrigation. When finally developed, this would be one of the larger power stations in the country This power will be available to Bombay and to the districts of Poona, Satara, Bijapur, Sholapur, Ratnagiri and Thana Initially, a large block of power, *viz*, about 150,000 kW, will be supplied to Bombay to meet the power requirements in this area Electro-chemical industries and other similar loads could be established near the power station site with advantage and the plant progressively increased.

Kalinadi Project.—Preliminary survey work connected with the scheme was sanctioned by the Government of Bombay in January, 1947. The work has been entrusted to Messrs. Associated Consulting Engineers (India), Bombay. The final report indicates that 325,000 kW continuous is available in the Kalinadi Basin, distributed in four power stations Initially the development of one power station at Supa, capable of supplying about 50,000 kW to the districts of Dharwar, Kanara, Belgaum and Bijapur is being examined.

Bhatgar Hydro-Electric Project.—A demand of about 10,000 kW can be met from this source, provided the power station is linked up either with Koyana when and if developed or Tata system at Poona. Consideration of this scheme will be taken up after 2 seasons' work has been put in on the proposed new irrigation dam at Vir, which will provide a balancing and supplementary reservoir.

Bhandardara-Randha Electric Scheme.—A demand of 16,800 kW can be met from this source. In addition to this, a further 7,500 kW can be obtained during the monsoon. This power can be firmed up by the establishment of a steam station of the installed capacity of 15,000 kW in this area The scheme was sanctioned by the Government of Bombay in 1945 but its execution had to be postponed as under the present conditions, development of this source of power cannot be undertaken economically. The question of its execution will be reviewed in due course.

Narbada River Project.—The Central Water Power, Irrigation and Navigation Commission are investigating the possibilities of power development by impounding the waters of the Narbada River in Gujerat It is reported that at one of the Dam sites at Limbdi, 200,000 kW continuous power can be generated This power when available will be utilised in Gujerat in place of the present thermal power

Tapti River Project.—Under this project, which was initially intended to be an irrigation scheme only, it is now proposed to also develop hydel power with an installed capacity of about 216,000 kW Power when developed, will be supplied to the area at present proposed to be served under the South Gujerat Grid Scheme and also, in the North, to Baroda, Anand and Nadiad, and, in the South, possibly to Bombay.

Power Shortage in Bombay.—The load development in the area served by the Tata Hydro-Electric System has exceeded the available capacity. The available power is distributed to the existing consumers by staggering of working hours or days of the various industries Although additional hydro capacity of approximately 21,000 kW, now on order by Tatas, is expected to be in service by the middle of 1951 and another 24,000 kW thermal plant, ordered by the G I P Railway for their Chola power station, is expected to be in service by about March 1952, further generating capacity is required in the System to serve the large industrial loads and also domestic loads which are awaiting power supply. For this purpose, the Government of Bombay has decided to instal 45,000 kW of thermal plant consisting of three 15,000 kW sets in the Chola power station of the G I P Railway which will be suitably extended for this purpose

Radhanagari.—The former Kolhapur Government started work on the generation of electric power from the water stored in the Radhanagari dam which has been raised to the height of 82 feet It will be further raised by 44 ft. for which construction is now in progress. The power house will be situated at the foot of the dam and the installation will comprise four 1,200 kW Kaplan sets operating on 65/116 feet head. The power will be transmitted by means of 32 miles of 33 kV lines to Kolhapur city for augmenting the water supply to the city, supply of energy to industrial concerns and take over the load from the existing oil engine station. The Radhanagari station will be supplemented by another thermal 1,300 kW station at Kolhapur which is already in service and is supplying power for emergency irrigation. Both the stations will run in parallel. The scheme is also intended to provide an assured water supply for existing irrigation and new areas that will be put under cultivation by the installation of about 175 electric pump sets in the area served by the transmission lines. Two units will be installed by December 1950 and with the partial storage available, power will be generated and utilised for works and thus form a nursery scheme to build up the electric load later on As now programmed, the work will be completed in all respects by the end of 1952

MYSORE

The first Hydro-Electric scheme of any magnitude undertaken in the country or indeed in the East, was that on the Cauvery River in Mysore State, which with its generating station, transmission line and distributing system was inaugurated in 1902.

The Cauvery River rises in the district of Coorg in the Western Ghats and flows across Mysore State The principal object of this scheme was the supply of power to the mining companies on the Kolar Gold Fields about 92 miles from Sivasamudram, the site of the generating station This transmission line was for a number of years the longest line in Asia. Since 1902 the supply of electrical energy from Sivasamudram has been provided for Bangalore and Mysore Cities and 226 other towns and villages in the State

The initial undertaking has constantly been expanded and its total normal capacity now stands at 60,000 H P With the addition of the Shimshapura station coming into existence in 1940, an additional 23,000 H P installed capacity has been added.

The number of the consumers of all classes continues to increase rapidly every year with greatly increased power demands. The Government of Mysore have encouraged the use of electrical energy and have made a survey of hydro power resources of the State and prepared plans for the construction of a number of generating stations at the most economic sites in future

Demands for large additional blocks of power made it necessary for Government in continuing its policies for the industrial development of the State, to sanction the construction of Jog Falls Power Station at Jog for the production at the first instance of about 48,000 kW without in any way interfering with the beauty of the Jog Falls on the Sharavati River which have been famous for their scenic beauty and grandeur.

The first stage of the Project with an installed capacity of 48,000 kW was put into service with four units of 12,000 kW each on February 21, 1948 The work on the second stage is in progress now With the completion of the second stage at Jog, the total capacity of the station would be 120,000 kW It would be of interest to note that power at Jog is generated, transmitted and distributed at a frequency of 50 cycles, whereas the other two stations generate and transmit at 25 cycles of which a part of the lighting loads in the cities of Bangalore and Mysore is converted to 60 cycles and distributed. After very careful consideration, Government decided that the standard frequency of 50 cycles should be introduced in the State in conformity with the prevalent practice in the neighbouring regions and also to enable to Mysore systems to be put on the South Indian Grid which is bound to come some time or other if the resources of the country are to be fully and economically utilised. It was for this reason that the Mahatma Gandhi Hydro-Electric Works at Jog was designed to generate power at 50 cycles.

The number of lighting and power consumers of all classes in the cities of Bangalore and Mysore and other towns and villages in the State has increased to more than 70,000.

The transmission system consists of over 900 route-miles of 78,000 and 37,500 volt lines with a total of 1,350 miles of circuits. The transmission system is extended to supply hydro-electric power to the four corners of State. With the construction of the new transmission lines and on the generation of power at Jog, over 600 miles of 110 kV transmission lines will be in service.

The use of electricity for improving the transports facilities in the State forms an important item under the "Post-War Development Schemes" and it is expected that in the next five years, introduction of electric trolley buses in Bangalore and electrification of railways between Mysore and Bangalore will be an accomplished fact.

TRAVANCORE-COCHIN

The first electrical undertaking to operate in Travancore was the Hydro-Electric Station established in the High Ranges by the Kanan Devan Hills Produce Co, Ltd, in 1905 which was intended to meet the power requirements of the Company for lighting and factory drive. It was towards the close of 1927 that Government initiated a programme of electrical development in the State A start in this direction was made by the establishment of a thermal station at Trivandrum, the capital of the State, in March 1929 The rapid expansion of the Trivandrum Electric Supply served as an incentive to private enterprise to come into the field A thermal station was started at Kottayam in 1932 for the supply of power to that town, under a license. Another private agency took up the supply of power at Nagercoil in 1934.

A scheme for the supply of power to Quilon was inaugurated by the Government towards the middle of 1934

A license for the supply of power to the Taluks of Shencottah and Pathanapuram was granted to a private Agency in 1940 and the supply was inaugurated in 1941.

Pallivasal.—In view of the very large demand for electric supply being extended to several areas, the Government decided to initiate a large hydro-electric system to meet the growing demand for power As a first step towards this objective, the Pallivasal Hydro-Electric Scheme was sanctioned by the Government in 1931 and the work was taken up immediately afterwards The first stage of development was completed by the beginning of 1940 and the supply was commenced in March 1940. The scheme utilises the water of the Mudirapuzha River diverted at Munnar through a tunnel 9 ft by 8 in and 10,200 ft in length. Two parallel steel penstock lines each 7,800 ft in length take the water to the generating station. The generating plant consists of three 5,000 kVA Alternators generating at 11,000 volts directly coupled to Pelton wheels operating at 1,980 ft. head Two of the machines are in normal service while the third serves as a stand-by The normal generating capacity of the station is 9,000 kW, but during peak hours, the third unit is also commissioned to take up loads upto 1,500 kW, thereby raising the effective capacity of the station to 10,500 kW. The capacity of the station has now been increased by the installation of a fourth generating set. Power is stepped up to 66,000 volts for transmission to the plains. The transmission system as now brought under use consists of 420 circuit miles of 66 kV lines on lattice steel towers, 42 circuit miles of 66 kV lines on teak wood and concrete poles, taking power to 5 major 66 kV sub-stations and 26 miles of 33 kV lines, 350 miles of 11 kV. single circuit lines and 10.5 miles of double circuit lines connecting all the important centres in North and Central Travancore.

The availability of hydro-electric power in most of the important commercial and agricultural centres coupled with the impetus given to industrial and agricultural operations consequent on the situation created by the Second World War, has resulted in a steadily growing demand for power. The connected load is over 25,000 kW with a maximum peak load of

13,300 kW The total generation during 1946 was 75 42 million units About 72.5 per cent of the power generated is used for industrial purposes and the rest for agricultural and domestic needs Electrolitic production of aluminium, tea factories, fertilisers and chemicals, ceramics, textiles, paper, ply-wood, oil mills, saw mills, tile factories, mineral factories, engineering workshops, etc., constitute the main industrial load.

Expansion.—L. T. distribution is standardised at 400/230 volts. Ascu treated teakwood poles supplied by the State Forest Department and wooden cross-arms, have been standardised for all 11 kV lines and a major part of the network.

The demand for power has been so pressing that action for augmenting the power supply was taken as early as 1941 Although the necessary orders for the plant were placed in 1941, the demands of the late War, which had necessarily to be given the highest priority, necessitated the execution of the orders being held in abeyance till 1944 The work on the installation of 3 more generating sets each of 7,500 kW capacity in the Pallivasal Station is now in progress. One of these units, the fourth set, has been taken into service Two more pipe lines to supply water to these three generating sets are also being laid. The erection of the third pipe line, 30-in. dia , is already completed and that of the fourth is in progress The additional power generated is used mainly for aluminium production and for the manufacture of Ammonium Sulphate

To ensure a perennial supply of water for power development at Pallivasal and Sengulam, the construction of dams for storage of monsoon rain water has been taken up. One of these reservoirs, with a capacity of 270 million cubic feet, is located at Sethuparvathypuram, about 16 miles east of Munnar in the high ranges, The other dam at Madupatty, about seven miles from Munnar has been designed to impound 2,000 million cubic feet of water. It is now under construction.

Owing to the delay in augmenting the generating capacity of the Pallivasal Station, it was found necessary to resort to other arrangements for making available additional power to meet the demands arising out of commitments already made As a result of the negotiations with the Government of Madras, it has been possible to get a block of 3,000 kW of power from the Papanasam System A 66 kV single-circuit line connecting Kundara to Shencottah has been constructed and the supply from Papanasam has been inaugurated from the beginning of September 1946

The demand for power as foreseen now is so heavy that it has become an urgent necessity to explore the possibilities for further hydro-electric developments Two more schemes are already under investigation The first of these, the Sengulam Scheme is proposed to be located 4½ miles lower down the present generating station. With the tail water of the main station, it is expected that the station could generate about 48,000 kW.

The other station is proposed to be located further lower down the same river. The tail water of the second station together with the discharge of two other tributaries of the Mudirapuzha River will supply the water for this scheme and the output of this station is estimated to be 40,000 kW. With the construction of suitable reservoirs for the collection of water, it is expected that the generating capacity of this station can be further augmented.

Power development from the Pampa River in Central Travancore is also under investigation Preliminary forecasts show that it will be possible to develop about 100,000 H P. from this Scheme

The situation created by the Second World War has given a strong impetus to industries in general and in the wake of it, a growing demand for power. During war-time, one of the major industrial concerns supplied with power from the Government System was the Indian Aluminium Co. Power was also being supplied to several industries engaged in war work Special mention may be made in this connection regarding the role of electricity in food production activities both during and after the war as with the scarcity of fuel oil and oil engines, it has been necessary to resort to electric drive for de-watering operations in rice fields in the back-water areas and also for lift irrigation Several thousands of acres of land both in Central and North Travancore have been put under cultivation with the aid of electric drive and as experience has shown that this is both economical and convenient, it is proposed to adopt this as a permanent arrangement

There are four sites on the Chalakudy river in Cochin suitable for hydro-electric development These sites are proposed to be developed progressively in five stages When completed, the project will provide 100,000 kW of continuous power or 200,000 kW at 50 per cent load factor The first stage now under execution, consists of the construction of a dam across the river above the Poringalkuthu falls The reservoir will have a storage capacity of 28,700 acre feet The total cost of all stages is estimated at 20 crores of rupees The development of the scheme will also enable some 6,000 acres of waste land to be brought under paddy cultivation.

MADRAS

Hydro-electric development in Madras until 1927 was confined to a few tiny plants in tea estates and to the small installation at Kateri in the Nilgiris for making cordite In recent years there has been significant progress and Madras now ranks next to Bombay in its hydro-electric power output. Three hydro-electric stations are now in operation Besides extensions to the existing plants, two more stations are under construction

The water power sites in the state are mostly in the Western Ghats especially in the region of the Nilgiris and the Palnis Sites in the Eastern Ghats are few and some of them are on border streams A close estimate of the available power has not yet been made. The continuous power output from the sites which are definitely known to be worth development is over 220,000 kW. It is likely that further survey and investigation would locate more sites *While it is unsafe at this stage to give an estimate* of the maximum water power available in the State it may be assumed to be around 500,000 kW continuous This does not, however, include power that can be developed from future large irrigation dams like those projected at Polavaram on the Godavari.

To develop the available power resources in an orderly and rational way and make it available over the whole State cheaply and in abundance, an 'Electric Power Grid' was conceived by the Madras Government over 15 years ago It is a scheme of interconnected power houses, both hydro and thermal, feeding a network of transmission and distribution lines serving towns and villages. Part of it is already in existence and the rest is to be built in appropriate stages corresponding to the industrial and social advance of the country.

The grid in the south where it is well formed consists at present of three Hydro-Electric power stations, *viz* , those at Pykara, Mettur and Papanasam. A good portion of 13 districts from Chittoor to Tinnevelly and Chingleput to Malabar is covered. In the central and northern regions of the State the grid is yet to take shape At present, in the central area there is the Basin Bridge thermal station supplying Madras City and its suburbs In the north there are thermal stations at Vishakapatnam, Cocanada and Bezwada each serving the local area but not interconnected. The Ceded Districts area is fed from the Jog supply from Mysore and thermal stations at Kurnool and Cuddapah

When the Mettur-Madras Interconnection Scheme, now in progress, is completed Madras will be connected to the Hydro-Electric Grid in the south. With the completion of Machkund Hydro-Electric project on the Vishakapatnam (Orissa border) and the Tungabhadra Hydro-Electric scheme in the Ceded Districts, the separate areas of the Grid will get extended and interlinked until eventually a single grid covers the whole of the Madras State.

The installed generating capacity under the Madras Grid totals 164,000 kW. It has over 3,900 miles of high tension line, operating at voltages from 11,000 to 110,000, and 2,700 miles of low tension distribution lines. There are 27 extras high tension sub-stations of 110 kV and 66 kV, and 32 Nos of 33 and 22 kV sub-stations with transformer capacity totalling 176,600 kVA and 1,206 distribution transformer stations with an aggregate capacity of 67,250 kVA The total connected load to the Grid is 343,000 kW. 66 Municipal towns and 1,360 villages are receiving supply from the Grid. Among the important industries which are served are textile mills, cement factories, electro-chemical works, steel rolling mills, railway workshops and shipbuilding.

There are over 207,000 consumers of all classes : 67,700 served directly the department and 139,300 by licensees distributing Government power The total power generated in 1948-49 amounted to 569 Million units representing 99 per cent of the total power output in the State The capital investment made upto April 1949 is nearly Rs 12 7 crores and the revenue in 1948-49 was Rs 2 68 crores

Rural Electrification.—Madras leads all other States in India in rural electrification with 1,371 villages electrified of which 1,360 received supply from the Grid, the rest from self generating licensees Over 11,000 pumps for lift irrigation and 1,350 rural industries are run on electricity with a connected load of 70,000 kW Rural industries include ginning cotton, hulling rice, pressing oil, shelling nuts, crushing cane and milling flour

Pykara Scheme.—The scheme utilises the waters of the Pykara river which drains from the Nilgiri plateau having a catchment area of nearly 38 square miles and a fall of about 3,100 ft. The flow though perennial is very irregular and often drops to values around 20 cusecs during the dry season The topography however embraces a number of feasible storage sites which could be developed according to the growth of power demand The estimated potential capacity of the full development is around 40,000 kW continuous

The first stage of development was commenced at the end of 1929 and was completed at the end of 1932 This stage utilised the regulated flow of the river with small storages of 58 million cubic feet in the forebay and 28 million cubic feet in the Glenmorgan Reservoir. The rapid growth of load necessitated the early construction of the Dam at Mukurti to store 1,400 m.c. ft with open spillways The work was commenced in January 1935 and completed in June 1938. By installing automatic gates over the spillways the storage capacity has been raised to 1,800 m c. ft in April 1946. The final stage now sanctioned will provide a further increase of 2,000 m c ft storage by the construction of a second dam across Pykara river.

Water from the intake of the river is led by a flume to the forebay from whence it is led through a single 78″ diameter steel pipe 1,000 ft. long to a surge tank at the head of the penstocks. In the first stage two pipes each in 3 sections of diameter 27″, 24″, 21″ with a total length of about 9,300 ft. were laid In the second stage a third penstock of 42″, 39″, 37½″ diameter was added.

The initially installed plant comprises three 7,810 kVA, 3 phase, 600 r p m alternators coupled to 10,900 H P pelton wheels. Power is generated at 11,000 volts, 50 cycles and stepped upto 110,000 volts by means of three 7,810 kVA, 3 phase, 11 kV 66-110 kV transformers.

In 1939 two 12,500 kVA, generating units and two 12,500 kVA. transformers were added. The Pykara-Coimbatore transmission line was

changed from 66 kV to 110 kV operation to suit the increased load demand. In 1947 two 5,000 kVA, 11/66 kV transformers were added to feed the 66 kV line to the West Coast.

Power is transmitted to Coimbatore, which is the main receiving station and also the chief load centre by means of a 50 mile double circuit 110 kV line. The line is extended therefrom at 66 kV to Tiruppur, Erode, Udumalpet, Sembatti and Madura. At Erode and Madura tie is established with the Mettur and Papanasam Systems respectively. Power is now supplied from Pykara to Calicut and Cannanore through 66kV lines.

This system has 1,477 miles of transmission lines of voltage ranging from 11,000 to 110,000 in service. There are seven extra high tension sub-stations with transforming capacity of 81,750 kVA and 540 distribution transformer stations with an aggregate capacity of 29,000 kVA.

The final stage of the Pykara project consisting of a second dam across the Pykara river to provide a storage of 2,000 m c ft a new penstock, and two generating sets of 13,500 kW each at Pykara station is under execution This will not only meet the power deficiencies of Mettur and Papanasam stations during periods of unfavourable water conditions but will also meet the demands arising out of the large scale industrial and agricultural developments in the southern districts in the near future.

To supplement the output in the Hydro-Grid during water scarcity, a thermal auxiliary station at Madura with an initial capacity of 4,000 kW is under erection.

To handle the additional power that will be generated, additional transmission lines for reinforcing the Grid are under construction.

Mettur Scheme—The engineering features of the Mettur Hydro-Electric Scheme provide an interesting contrast to the Pykara Hydro-Electric Scheme. The Mettur Dam, one of the largest structures of its kind in the world is 176 ft. high and can impound a total of 93,500 m.c. ft. of water. This storage is primarily for irrigation purposes but part of the water let down for irrigation is utilised to the best advantage for the generation of hydro-electric power.

During the construction of the dam 4 cast iron pipes 8'-6" in diameter had been built into the structure and equipped with the necessary valves, gates, screens and other fittings. Each pipe is designed to discharge a maximum of 1,250 cusecs for power purposes.

Work on the initial installation with 3 units of 10,000 kW each was commenced in the latter part of 1935 and the station started operation in June 1937.

The operating head varies from 160 ft. at full reservoir level to a minimum of 60 ft. The average head is 135 ft.

The Power house is situated immediately below the Mettur Dam. The units are 12,500 kVA 250 r.p.m. generators coupled to overhung type twin horizontal Francis turbines one on each side. The turbines operate under a variable head from 60 to 160 ft. developing a maximum of 16,000 H.P. each. Power is generated at 11,000 volts, 50 cycles, 3 phase and stepped upto 66,000 volts (110,000 volts later) for transmission to various load centres.

The fourth generating unit recently added was commissioned into service in October 1946.

Power is transmitted to Singarapet in the north and Erode in the south by means of two 66/110 kV trunk lines (a total mileage of 100 miles) taking off from the Power Station. At Erode the Mettur System is linked with Pykara network. 66 kV lines have been extended in the north to Vellore, Tiruvannamalai and Villupuram and in the south to Trichinopoly, Tanjore and Negapatam. To ensure proper voltage regulation two 2,500 kVA synchronous condensers are installed at Trichinopoly.

Considerable lengths of 11,22 and 33 kV lines have been constructed for extending power to various places. 1,489 miles of high tension lines of all voltages are now in service. There are 25 E.H.T. and H T. sub-stations with an aggregate transformer capacity of 57,000 kVA. The number of distribution transaformer stations are 341 and have a total capacity of 18,723 kVA.

The Mettur Station has been linked with Madras thermal station by a 110 kV line between Singarapet and Madras. This inter-connection will enable diversion of the surplus seasonal power at Mettur to Madras thereby saving coal. During dry months Madras will assist Mettur to enable larger firm demand being met in the Mettur System than is possible at present.

Papanasam Scheme.—This is the third hydro-electric scheme to be undertaken by the Madras Government. The first stage of the scheme was started in 1938 and the station commenced operation in July 1944.

The Tambraparni river drops about 800 ft. over the picturesque Papanasam falls at the foot of the Western Ghats in Tinnevelly District. The power development consists in regulating the river flow and harnessing the energy that was wasted over the falls. The catchment is benefited by both south-west and north-east monsoons, the latter generally preponderating.

Six miles above the falls a reservoir of 5,500 m c ft. is formed by constructing a masonry dam 170 ft. above river bed and 800 ft. long. About ½ mile above the falls the water is diverted from the river course by a weir 1,350 ft. long and 35 ft. high giving a pondage of 28 m c.ft. for daily regulation. Water is conducted by two 9 ft. low pressure steel pipes from the diversion weir to the surge tank at the edge of the cliff and from thence through four 66" penstock pipes 520 ft. long down the hill slope to the power house which is located near the Agastya temple at the foot of the Papanasam Falls. (One low pressure pipe and 3 penstocks only were installed in the first stage). The gross head developed is 330 ft.

The generating plant consists of three vertical alternators of capacity 7,250 kVA, 600 r p m. coupled each to a Francis reaction turbine of 9,850 B.H.P.

The generation is at 11 kV, 3 phase, 50 cycle and power is stepped upto 66 kV by means of three 7,250 kVA, 1,166 kV transformers.

To utilize fully the water that will be available in good rainfall years the fourth generator along with the second low pressure pipe line and penstock pipe are being installed now. They form the second stage of development at this site.

The transmission system extends to Tuticorin, Kollpatti and Madura, and is linked with the Pykara Hydro-Electric System at Madura. For purposes of voltage regulation two 2,500 kVA synchronous condensers are installed at Madura.

The system has 442 miles of high tension transmission lines, nine E.H.T and H T. substations with transformer capacities totalling 25,850 kVA, and 126 distribution transformer stations with an aggregate capacity of 6,318 kVA

Bulk power to the extent of 3,000 kW is being delivered to the Travancore Government at the State borders near Shencottah.

Five-year Programme.—During the war years no progress could be made and there was almost complete stoppage of all new schemes and extensions. The only work done was to complete with great difficulty the few schemes already started. The Madras Government have sanctioned a five-year programme of construction of the following new schemes and extensions.

1. Machkund Hydro-Electric Scheme including extensions to the Vizagapatam and Berwada Thermal auxiliary plants.
2. Nellore Thermal Scheme.
3. Madras Thermal Extension Scheme and inter-connection with Mettur Hydro.
4. Ceded Districts Scheme.
5. Moyar Scheme.
6. Pykara Hydro-Electric Scheme Extensions.
7. Madura Thermal Scheme.

All these schemes which are all now under construction cover a major part of the State and will result in doubling the existing generating capacity and add nearly 2,000 miles of H T. lines. They are scheduled to be completed before 1953 and will cost Rs. 30 crores.

BIHAR

The most important scheme in Bihar is the Kosi Project now under investigation with the Central Waterpower, Irrigation and Navigation Commission. It will be a multi-purpose project for irrigation, drainage, reclamation of water-logged areas, malaria control, fish culture and recreation facilities The project comprises a dam, 750 feet high across the Chatra Gorge in Nepal just above the temple of Baraha Kshetra, to store about 11 million acre feet of water, power plant at the dam site capable of generating upto 1 8 million kW of power at 50 per cent load factor, a barrage in Nepal across the Kosi to control and stabilise the river channel, and to divert its supplies into two canals, one on either bank, for irrigating about a million acres in Nepal territory, and a second barrage near the Nepal-Bihar border with two canals on the left and one on the right bank, for irrigating over two million acres of land in Bihar. The project is estimated to cost rupees 90 crores. The execution of the scheme is expected to take about ten years.

ORISSA

The unified development of Mahanadi Valley has been decided upon by the State of Orissa and is being executed through the Central Waterpower, Irrigation and Navigation Commission, Government of India. It comprises three units namely the Hirakud Dam Project, the Tikarpara Dam Project and the Naraj Dam Project, each with its own canal system and hydro-electric power installations The three units are capable of independent development and also of forming an integrated part of the basin wide plan. It has been decided to make a start with the Hirakud Dam Project.

The Hirakud Dam Project comprises the construction of a dam—150 feet high and gross storage capacity of the reservoir 5.3 million acre feet—across the Mahanadi about nine miles upstream of the town of Sambalpur, gravity and lift canals on either side and two hydro-electric installations. The project will provide irrigation to 1,094,953 acres of land, generate 350,000 kW and will also provide navigation facilities. The whole scheme is estimated to cost rupees 47.81 crores and will earn an annual return of 4 29 per cent on the sum-at-charge.

ASSAM

Assam possesses large potentials of hydro-power It has roughly been estimated that it should be possible to generate upto four million kilowatts of continuous power in that State by developing eleven sites on different rivers. These projects would involve storage by construction of high dams involving a total reservoir capacity, during monsoon, of 68 million acre feet. Most of these projects can be designed as multi-purpose schemes for power generation, perennial irrigation, extension and improvement of navigation and flood control.

KASHMIR

A scheme of much importance from its size, but more interesting because of the developments that may be expected from it than for the part which its current supply already plays in the life of the countryside, is one installed forty years ago by the Kashmir Durbar, utilising the river Jhelum, near Buniyar about twenty miles from Baramulla.

The headworks of the Jhelum power installation is situated six and a half miles from the power house, at Mohora and the main connection

between the two is a timber flume. These works and the forebay at the delivery end of the flume have a capacity for carrying water sufficient for the ultimate generation of 20,000 electrical horse-power. Four pipes 792 feet long lead from the forebay to the power house and from forebay to water wheels there is an effective head of 399 feet. There are four horizontal water-wheels, each coupled on the same shaft to a 1,000 kVA, 3-phase, 2,300 volt, 25 cycle generator running at 500 r.p.m. The power house is of sufficient capacity to allow of 15,000 kW generating plant being installed within it. Two transmission lines run side by side as far as Baramulla, 21 miles from Mohora at which point one terminates The other continues to Srinagar, further 34 miles. The installation at Baramulla was originally utilised for three floating dredgers and two floating derricks, for dredging the river and draining the swampy countryside and rendering it suitable for cultivation

The lighting of Baramulla has been taken in hand with satisfactory results and the power load is building up. At Srinagar, the line terminates at the State silk factory, where current is supplied not only for driving machinery and for lighting, but also for heating. The whole of Srinagar City is now electrically lighted and there are a number of power loads.

New Sources.—Besides the Jhelum power installation, there are two other schemes, the Muzaffarabad hydro-electric installation utilising a tributary of the river Kishen Ganga and the Jammu hydro-electric installation The Muzaffarabad power house has one 130 B H P pelton wheel directly coupled to a 110 kVA, 3,300 volt, 50 cycle alternator This serves Muzaffarabad town and Domel on J V. Road. The Jammu power house employs five generating sets Of these, one 265 kW set is driven by a Diesel oil engine and the remaining four, generating among themselves 1,226 5 kW, are driven by water turbines.

In addition to the above schemes, new sources of power capable of feeding large-scale manufacture are being explored in view of the beginning of large-scale industries in Jammu and Kashmir State. The State has already provided funds from capital expenditure not charged to revenue for the improvement of the State's electrical system The necessity for augmenting the power supply in the Jammu area being urgent, a steam turbine driven generating plant of 1,500 kW capacity has been installed at Miran Sahib and connected with Jammu by a 6,600 volt line This will enable necessary supply of power being made available for Jammu, Jammu Cantonment and Miran Sahib industrialisation. The cost of the scheme is Rs. eleven lakhs.

A hydro-electric scheme with an ultimate capacity for generating 15,000 kW by harnessing the Sind River near Ganderbal is also under survey and a smaller scheme for supply of power at Pahalgam is now in progress, while other smaller schemes for Anantnag and Udhampur are under investigation The utilisation of the Chenab River for developing a hydro-electric scheme on a large scale is also under consideration

Jammu Province is also being supplied with electric power from Jogindernagar, Punjab, shortly. Negotiations in this respect are in progress.

UTTAR PRADESH

The Ganga Canal Hydro-Electric Grid supplies power at attractive rates for domestic, industrial and agricultural purposes to 14 districts in the west of the State and to Shahdara in Delhi. Seven of the ten falls available for electrification have been developed and stand-by steam power stations at Chandausi and Harduaganj with installed capacity of 19,000 kW have been constructed. The Grid thus has no less than 38,000 kW of installed capacity. A new hydro-electric station at Mohammadpur with an installed capacity of 10,500 kW is under construction. At Harduaganj steam station additional power plant is under erection which will raise the installed capacity of the station from 10,000 kW to 20,000 kW. Besides supplying some 93 towns with current for light and fans and minor industries, the Grid provides energy for irrigation pumping from tube wells and open wells.

The Ganga Valley State Tube-Well Scheme comprises about 2,300 tube-wells, covering the districts of Moradabad, Bijnor, Budaun, Muzaffarnagar, Saharanpur, Meerut, Bulandshahr, Aligarh and Etah, introducing irrigation on the volumetric system over approximately one million acres hitherto without any source of irrigation This supply of cheap power from some 2,300 sub-stations is already having an important bearing on the economic disposal of crops and the development of minor industries in the urban centres and rural areas.

Investigations into the electrical and financial possibilities of a number of hydro-electric power generating stations have been completed and the work has already commenced on the following (*a*) Sarda Canal Hydro-Electric Scheme with an installed capacity of 41,400 kW This station will be ultimately linked up with the large steam station at Kanpur and the Ganga Canal Hydro-Electric Grid. (*b*) Pathri Power station, with an installed capacity of 20,400 kW, will be located on power channel opposite Mile 7/4 of the Ganga Canal and connected to the Ganga Hydro-Electric Grid.

There are several other schemes under consideration, the more important of them being the Pipri Dam and Power Station Project estimated to cost over 29 crores of rupees — Rs. 19 25 crores for dams and Rs 10 crores for transmission lines—the Yamuna Hydro-Electric Project estimated to cost rupees 21 crores, the Nayar Dam Project estimated to cost rupees 21 crores and the Ramganga Project at a cost of some 22 crores of rupees.

PUNJAB

Situated on a spur of the Dauladhar Range at elevations ranging between 6,000 and 4,000 feet above sea-level, and connected by means of a tunnel over 15,000 ft long, are the works of what is known as the Uhl River Hydro-Electric or Mandi Scheme which is now operated by the Punjab P W D Electricity Branch.

This project owes its origin to the need which began to be felt in the old undivided Punjab during the War of 1914-18 for making energy available for industrial and agricultural purposes at rates cheaper than were then prevailing

The site was discovered in the year 1922 A detailed project was prepared by 1923 Work on the construction of the first stage of the scheme was started in 1926 The total capital outlay on the scheme to the end of the year 1944-45 was Rs. 730 6 lacs.

Due to the extensive nature of the construction works, it was found necessary to build two small temporary hydro-electric power stations one at Dhelu near Shanan and the other at Thuji near the headworks at Brot which were linked together to constitute a combined installed capacity of 1,440 kW.

Water is withdrawn from the Uhl and the Lamba Dug Rivers at Brot and conveyed by a 9 25 ft internal diameter concrete lined circular pressure tunnel which is one of the longest tunnels in the country and is the first steel mantle tunnel to be built in Asia. The tunnel is about 3 miles long and is designed for a normal full discharge of 600 cusecs (but it can carry up to 800 cusecs if required). The tunnel feeds steel penstocks which run down the slope to the Shanan Power Station near Jogindarnagar (Mandi State) so as to utilise 1,800 ft of the total fall thus converting the snow fed waters of the Uhl and its tributary into electrical energy.

Transmission System.—The initial installed capacity of Shanan Power Station is 48,000 kW. The plant consists of four 17,000 B H P. Pelton wheels, running at 428 5 r.p.m each driven by a single jet of water and connected to a 12,000 kW, 11,000 volt, 3 phase, 50 cycle alternator.

From the Shanan Power Station energy generated at 11,000 volts is stepped up to 132,000 volts which is the highest voltage adopted for this purpose in the country. The transmission system comprises a double circuit 132 kV trunk transmission line supported on steel towers 80 ft. high normally set 1,000 ft apart but with spans extending even upto 3,360 ft in the hills. This line supplies sub-stations at Kangra, Pathankhot, Dhariwal and Amritsar

A single circuit 132 kV line also runs from Amritsar to Jullundur and is continued at 33 kV to serve Goraya and Ludhiana sub-stations.

From these various sub-stations lines radiate to supply between them the Amritsar Municipality and the Jullundur Electric Supply Co. and also to Kapurthala at two points

The old undivided Punjab Government had accorded administrative approval to what is known as the Nangal Power Project.

This project provides for a diversion weir across the Sutlej at Nangal, eight miles downstream of the proposed Bhakra Dam, above which a lined canal of 10,000 cusecs capacity will be taken off for two power houses situated at 12 and 18 miles downstream of the weir. Each power house will be operated by a fall of about 98 feet and will have an installed capacity of 48,000 kW in the pre-Bhakra stage. The installation at each power house will be augmented by 24,000 kW in the post-Bhakra stage. The firm power available will be 80,000 kW and 140,000 kW in the pre-Bhakra and post-Bhakra stages respectively. The pre-Bhakra stage of the project including transmission and distribution is estimated to cost Rs 22 crores.

The project provides for: (i) A double circuit 132 kV trunk line—on 220 kV towers—from Nangal to Ambala and single circuit onward up to Delhi *via* Panipat. The towers between Ambala and Delhi, will be designed for 220 kV and stringing of a second circuit in future, if necessary, (ii) A double circuit 132 kV line—on 220 kV towers—between Nangal and Jullundur, (iii) A single circuit 132 kV line, on double circuit towers, between Jullundur, Ferozepur, Fazilka and Pakpattan, (iv) 66 kV and 33 kV branch lines connecting the 132 kV trunk line grid sub-stations with Karnal, Abdullahpur, Patiala, Nabha, Bilaspur, Naraingarh (Sirmoor State), Khanna, Jagraon, Moga, Kot-Kapura, Bhatinda, Muktsar and Abohar towns, (v) 11 kV lines and local distribution network for supplying the irrigation tube-wells and towns covered by the scheme.

The Nangal Power Project has been rendered urgently necessary to provide power for the construction of the Bhakra Dam, the industrial and economic development of the area and for tube-well pumping to increase the irrigation supplies on the Sutlej Valley, Sirhind and Western Jumna Canal Systems as early as possible

The subsidiary advantages of the Project are that (i) It will obviate material interference with Rupar Head Works and the Sirhind Canal. Apart from the political difficulties thus escaped, there will be a saving of Rs 165 lakhs. (ii) It will provide a balancing reservoir for the Bhakra Dam releases and, by stabilising diurnal variations, will enable the full development of Bhakra power.

Mangla Scheme.—This project provides for the generation of 10,000 kW of hydro-electric power at Mangla near the Irrigation Branch Head Works on the Upper Jhelum Canal from a head of 30 ft and minimum flow of approx. 5,000 cusecs in the head reach of the canal. It also provides for the linking of this power station by a double circuit 132 kV line with the 132 kV Grid sub-station at Jhelum which would be constructed under the Rasul Hydel Scheme.

Addition of a pipe line and two 12,000 kW pelton wheel generating sets at Jogindarnagar is an extension of the existing hydro-electric works of the Uhl River Scheme at Jogindarnagar and is meant for developing additional power which, in cold weather periods during shortage of water at the headworks at Brot, will be supplied by means of the Mangla Hydro-Electric Scheme but, when there is a shut down of that generating plant during summer, it will be supplied by these additional sets at Jogindarnagar power station which has an ample supply of water in summer to run five machines.

These two schemes are therefore primarily meant to supplement each other during the low water periods at the respective power stations, thus ensuring a constant supply of additional power all throughout the year The schemes are estimated to cost Rs 99.52 lakhs and scheduled to be completed in 1951

Bhakra Project.—This is the major post-war hydro-electric project in the Punjab and has been considered in many shapes and forms since it was first submitted about 30 years ago. The work of designing the Dam has finally been entrusted to a firm of American Consulting Engineers headed by Mr Savage, who is generally considered the best living authority on high dams and has been responsible for the design of such marvels of modern engineering as the Boulder Dam and Grand Coulie Dam in the U S. A.

The scheme involves the construction of a 480 ft. high dam across the Sutlej at Bhakra in the Punjab and the creation of a reservoir for canal irrigation and development of hydro-electric power.

The Bhakra storage is estimated to have a live storage of approx 3.5 million acre feet capable of discharging during the 270 days, when natural river supplies are non-existent, a mean discharge of about 6,600 cusecs It will irrigate the dry famine stricken tracts of Hissar, Rohtak and the adjacent areas where no canal irrigation is available at present It will also generate about 160,000 kW of power

The construction of so stupendous a scheme is naturally a slow job, if full measures of safety and a reasonable economy are to be provided The construction work has already been started but the scheme is not expected to be completed before 1956.

HYDERABAD

The Hyderabad State has decided to proceed with the Nizamsagar Hydro-Electric Project as an immediate post-war measure for bringing hydro-electric power to Hyderabad City The scheme is intended to utilise the water stored in the Nizamsagar dam and it is expected that electric power varying from about 1,500 kW as the minimum to about 11,500 kW as maximum could be generated It is proposed to install two 4 000 kW hydro-electric generating sets and to construct 80 miles of 66 kW transmission lines for supply to Hyderabad City.

There is another scheme known as the Godavari Valley Authority, which is modelled on T V A. It is a combined hydro-electric power-cum-irrigation project under which it is proposed to generate 55,000 kW continuous and to bring under cultivation an additional acreage of 1 25 millions The scheme also contemplates the creation of a model industrial town with a number of important industries located in its vicinity.

Tungabhadra Project.—An agreement has been reached on the apportionment of the waters of the Tungabhadra river between the Governments of Madras, Mysore and Hyderabad For the share of the waters, it will be possible for Hyderabad State to utilise three drops in the irrigation canal for generation of hydro-electric power, giving an initial output of about 15—25,000 kW.

There are a number of hydro-electric power sites on the Manjeera, Kaddam and Purna tributaries of the Godavari and on river Dindi, a branch of Kistna river as well as on the upper and lower reaches of the Kistna The actual power potentialities of these sites need detailed investigation.

These irrigation cum-hydro-electric schemes are making a fairly good progress so far as is permissible under existing limitations.

WEST BENGAL

The Damodar Valley Project which is the most important scheme in the State will provide perennial irrigation to three quarters of a million acres and generate 300,000 kW of electric power. The irrigation to be provided by this project is anticipated to give the cultivators an additional income of rupees six crores every year. The project comprises a number of dams. The additional advantage of the scheme will be the reduction in yearly flood damage from the Damodar The scheme is expected to cost rupees 55 crores. A semi-autonomous Damodar Valley Corporation has been set up.

BHOPAL

To generate electric power badly needed to help industries develop in Bhopal the Government of Bhopal have prepared for the sanction of the Government of India the Kolar Nadi Hydro-Electric-cum-Irrigation Project, estimated to cost rupees four crores. A storage reservoir to be constructed across the Kolar Nadi, a tributary of the Narbada, will have a storage capacity of about 390,000 acre feet. The water stored during rains will be utilised, at first, for generating 16,500 kW of electric power The tail water will be picked up lower down and utilised for irrigating 96,000 acres of land.

RAJASTHAN

The Jawai River Irrigation-cum-Hydro-Electric Project, in Jodhpur Division was taken in hand as early as in 1946. Work is in full swing and is expected to be completed by the end of the financial year 1951-52 The reservoir across the river Jawai has a capacity of 0·17 million acre feet and besides irrigating some 110,000 acres, will supply water for two generating stations, 1,570-kW maximum output at the canal head and 2,530-kW maximum output at the canal tail where a drop of 92 feet occurs. The cost of the scheme is estimated at 3·24 crores of rupees.

The Chambal Hydro-Electric scheme is the first of a series of reservoirs in the contemplated multi-purpose regional development of the Chambal Valley It comprises the construction of a dam about 200 feet high across the river Chambal near Chaurasigarh. The reservoir will have a storage capacity of 6 89 million acres feet Power produced will be 28,000 kW continuous.

Two pick-up weirs proposed downstream are located one each in Mewar and Kotah territories It is expected that power stations to be constructed at these weirs will generate 68,000 kW and 56,000 kW respectively at 50 per cent load factor.

The total cost of the whole scheme is estimated at rupees 22.5 crores.

IRRIGATION

THE area under irrigation in India exceeds 50 million acres and is the largest irrigated area in any country of the world Although on the partition of the country some of the most magnificent irrigation works in the north of the sub-continent went to Pakistan, still the irrigated area left in India is more than twice of that irrigated in the United States of America or in Pakistan. The total capacity of India's canals is over 60,000 miles, and the total capital outlay on irrigation works is over rupees 125 crores

The geographical situation of India and the rainfall conditions are such that for successful cultivation, irrigation in one form or other is necessary in all parts of the country, where the mean annual rainfall is less than 50 inches

The chief characteristics of the rainfall in the sub-continent are its unequal distribution over the country, its irregular distribution throughout the seasons and its liability to failure or serious deficiency The normal annual rainfall varies from 460 inches at Cherrapunji in the Assam hills to less than three inches in parts of Rajasthan

The second important characteristic of the rainfall is its unequal distribution throughout the seasons. Except in the south-east of the Peninsula, where the heaviest precipitation is received from October to December, by far the greater portion of the rain falls during the south-west monsoon, between June and October During the winter months the rainfall is comparatively small, the normal amount varying from half an inch to two inches, while the hot weather, from March to May or June, is practically rainless. Consequently it happens that in one season of the year the greater part of the country is deluged with rain and is the scene of the most wonderful and rapid growth of vegetation, in another period the same tract becomes a dreary, sun-burnt waste.

From the agricultural point of view however, the most unsatisfactory feature of the rainfall is its liability to failure or serious deficiency. The average annual rainfall over the whole country is about 45 inches and there is but little variation from this average from year to year, the greatest recorded being only about seven inches But if separate tracts are considered, extraordinary variations are found At many stations annual rainfalls of less than half the average are not uncommon, while at some less than a quarter of the normal amount has been recorded in a year of extreme drought.

Classing a year in which the deficiency is 25 per cent. as a dry year and one in which it is 40 per cent. as a year of severe drought the examination of past statistics shows that, over the precarious area, one year in five may be expected to be a dry year and one in ten a year of severe drought. It is largely in order to remove the menace of these years that the great irrigation systems in parts of the country have been constructed In the arid tracts where the annual rainfall is less than 15", no cultivation is normally possible without irrigation.

SOURCES OF SUPPLY

The two sources of water for irrigation are surface flow in rivers and streams and subterranian waters The development of these supplies may be divided into three classes, *viz.*, canals, storage reservoirs and wells. Under canals are classified all works of any considerable size for diverting the waters of streams or rivers and carrying them on to the land, under storage reservoirs all works for storage of water and carrying them on to the land and all natural depressions of which the water is used for irrigation, and under wells all kind of works giving access to the subterranean supply, or to the waters of rivers which, running deep below the general level of the ground, have to be lifted vertically before they can be made to flow on to the fields Canals are of perennial, non-perennial or inundation type according as they draw their supplies from the rivers in all seasons of the year, during specified seasons and only when it is in flood respectively

The supplies for irrigation are obtained, in the great plains of Northern India and the deltaic areas of Madras, by diversion barrages and in the hills of Madhya Pradesh and Southern India by storages. In Northern India also with the almost full utilisation of available perennial supplies, several multipurpose storage projects are now contemplated and some of them are actually under construction. Throughout India irrigation from wells is practised on a large scale. In the Uttar Pradesh a system of state-managed tube-wells has been introduced in the Ganga Canal Area, worked by power generated at falls in this canal This type of irrigation is receiving great impetus in the short term plans which aim at making India self-sufficient in food within the shortest possible time.

GROWTH OF IRRIGATION

Irrigation in India has been practised from ancient times but it is mainly during the past 100 years that extensive state-controlled works have been constructed extending benefits of irrigation to vast areas.

A start was made early in the nineteenth century when three important indigenous irrigation works, *viz*, two canals from river Yumuna, and the Cauvery Delta System (Madras) were remodelled and irrigation facilities extended over large areas. The success obtained on these systems led to the construction, one after another, of the many big projects of diversion of river flow for irrigation purposes and of some storage works also In India today we have a vast net work of canals in the Uttar Pradesh, the Punjab, deltaic areas of Madras and some parts of Bihar There are about 116 high dams distributed mainly in Bombay, Madhya Bharat and Southern India It is interesting to note that the number of all storage works—big or small exceeds 35,000 in Madras and 25,000 in Mysore State

There has during the last sixty years, been a steady growth in the area irrigated. The area irrigated in 1945-46 from all sources was 48 4 million acres (excluding some states for which figures are not available), which is 20 per cent of the net area sown

The area irrigated in 1945-46 by Government works was the largest in Madras where it was 6·37 million acres The Uttar Pradesh came next, with an area of 5 95 million acres, followed by the Punjab with an area of 3 67 million acres

FINANCES

Irrigation works are divided into three classes, *viz*, productive, unproductive and minor works.

Productive.—A productive work is one, the net revenue of which within ten years from the date of its completion is sufficient to cover its working expenses and the interest charges on its capital cost The rate of interest on the capital outlay of works constructed during the different periods have been varying For works sanctioned before 1st April 1919, the rate is 4 per cent, for works sanctioned between the 1st April 1919 and 1st August 1921 it is 5 per cent, and for works sanctioned between 1st August 1921 and 31st March 1937 it is 6 per cent. For works sanctioned after 1st April 1937, *i e* after the introduction of the Government of India Act, 1935, different percentages have been adopted in different parts of India. In most of the States, the rate is now 4 per cent but there has been a strong feeling that this percentage should be reduced further even below the present rate of interest to take into account the indirect benefits which irrigation projects bring to the community and the Government Productive works are financed either from the general revenue or more often from funds raised on Government security Such loans stand as public debt against the administration concerned till cleared from surpluses of revenue in accordance with the rules in force. Most of the largest irrigation works in India belong to this class.

Unproductive works are those which yield a net revenue which is less than the percentage fixed for productive works. They are constructed primarily with a view to protection of precarious tracts and to guard against the necessity for periodical expenditure on relief of the population in times of famine They are financed from the current revenues, generally from the annual grants for famine relief and insurance

Minor.—These are small works for which detailed capital or revenue accounts are not maintained. Such works may be productive or unproductive.

Table IV shows the financial results of productive and unproductive works upto the end of the year 1945-46 in some States.

* Total sum at charge

In addition capital outlay in the former Indian States exceeds rupees 30 crores for which details are not available.

The sum of rupees 87 crores is not however, a correct estimate of the present value of irrigation works in India. If these works were to be constructed today they would cost about three or four times as much.

CHARGES FOR WATER

Charges for water supplied for irrigation from Government canals, etc, are levied at different rates and in different ways in the various administrations. In most areas water rate is paid separately from land rent according to the area actually irrigated and matured, the rate varying with the crop sown. In some, notably areas in Hyderabad, on minor works in Bombay and wet lands in Madras and Southern Orissa, assessment for irrigated crops includes both land rent and water rate. Other methods of assessment based mostly on the quantity of water supplied, have been tried but the average cultivator in the country fully understands the principle of "No crop, no charge" and has little confidence in any system in which the liability of water charges is independent of the area and the quality of the crop sown.

A different system of assessment is in force in parts of West Bengal, Madhya Pradesh and for long leases and Kharif season leases in Bihar, where a cultivator pays a small rent for a term of years whether he takes water or not. In these areas the normal rainfall is high and irrigation is required only occasionally, when the rains fail or are delayed. Here the cultivator really pays a small annual premium to ensure that he can get water whenever he requires it.

Perennial block system is in force on major irrigation works in the Deccan. There are six-year sugarcane blocks which are demarcated into suitable plots in which the irrigator is allowed to have sugarcane to the extent of one-third of the area of the block and the rest of the area can be put under any seasonal crop in the monsoon and rabi seasons. There are also two seasonal blocks, which run for six-years at a time and in which the irrigator is entitled to grow seasonal crop in the monsoon and rabi season. In addition there are six-year garden blocks and 30 years' agreements with sugar factories to give them water for specified areas of sugarcane with specified inch-depth. All these

constitute fixed commitment on Deccan Canals for which water has to be earmarked for each season. Any additional supplies during monsoon or rabi can be sanctioned for additional monsoon and kharif crops on application. Water rates are assessed on a seasonal basis for various types of crops.

By far over the greater part of the country water is paid for separately, the area actually irrigated is measured and a rate is charged per acre according to the crop grown. Lower rates are often levied in case where irrigation is by "lift", that is to say where the land is too high for the water to flow on to it by gravity and consequently the cultivator has to lift it on to his field.

The rates charged are different in each administrative unit and often vary considerably from canal to canal in a single unit. Water rates on some important crops as assessed in some States are as given under :—

Name of State.	Name of Crop.					
	Sugarcane	Rice	Cotton	Wheat.	Maize	Pulses and Millets
	Rs a p	Rs a p	Rs. a p	Rs a p	Rs a p	Rs. a. p.
Punjab	9 0 0 to 11 1 6	6 8 0 to 6 8 10	3 8 0 to 5 4 0	4 4 0 to 4 4 7	3 12 6 to 4 4 0	2 8 0 to 3 4 5
Madras	7 8 0 to 12 0 0	6 4 0 to 10 0 0	3 2 0 to 10 0 0	...	3 2 0 to 10 0 0	3 2 0 to 10 0 0
Uttar Pradesh	5 0 0 to 12 0 0	4 0 0 to 7 8 0	2 8 0 to 5 8 0	3 0 0 to 5 0 0	3 0 0 to 5 0 0	2 8 0 to 3 4 0
Hyderabad	27 0 0 to 33 0 0	One crop 11 0 0 to 13 8 0 Two crops 17 0 0 to 18 0 0				...

Taken as a whole, irrigation is offered on extremely easy terms, and the water rates represent only a very small proportion of the extra profit which the cultivator secures from the water he receives.

IRRIGATION RESEARCH

Contributions from India to Irrigation Science are not inconsiderable. There are at present, (including Ceylon), nine research organisations which carry out research and model experiments on problems confronting engineers in the field of irrigation, canal and river engineering.

Experimental research in India, in connection with irrigation, is of recent origin and the first in the field was Bombay, where a Hydrodynamic Research Station was opened on a small distributory near Poona in 1920. As the supply of water available for experiments was limited at this place, the station was shifted in 1934 to Lake Fife at Khadakvasla The station was taken over by the Government of India in 1937, to assist irrigation and river training research problems from all parts of India and was renamed as the Central Waterpower Irrigation and Navigation Research Station early in 1948. In order to meet the increased demand for research facilities from the Central, and State Governments, the station is now under expansion When reorganised, the station will comprise nine sections, *viz* (1) River and Canal Hydraulics, (2) Navigation, (3) Soils and Soil Mechanics, (4) Concrete and Materials of Construction, (5) Mathematics, (6) Statistics, (7) Physics, (8) Chemistry and (9) Hydraulic—Machine Testing. The Bombay Government however, continues to maintain a separate research station where *inter alia* the problem of the disposal of untreated sewage of Poona by irrigation methods continues to be examined and developed.

The Research Organisation in the Punjab was opened in 1925, in U.P. in 1930, in Mysore and Bengal in 1944, Madras in 1944 and Hyderabad in 1945.

The research work done at all these stations is co-ordinated by the Central Board of Irrigation.

Some of the outstanding achievements in Research include (1) Design of earthen channels so that they may neither silt nor scour, (2) Devices of silt exclusion, (3) Theory of sub-soil flow for the safe construction of hydraulic structures on permeable foundations, (4) Methods dealing with scour caused by falling water, (5) Siphons for the automatic release of flood surplus water from storage reservoirs, and (6) what is perhaps the most important, the automatic and equitable distribution of water on a scale not known elsewhere in the world.

IRRIGATION ORGANISATIONS

Besides the Irrigation Departments of various States, there are three Central bodies dealing with Irrigation matters, *viz*, the Central Waterpower Irrigation and Navigation Commission, the Central Board of Irrigation and the Central Groundwater Organisation.

The Central Waterpower, Irrigation and Navigation Commission was set up by the Government of India in 1945 with the object of initiating, co-ordinating and furthering, in consultation with the State Governments concerned, schemes for the control, conservation and utilisation of water resources throughout the country, for purposes of waterpower generation, irrigation, navigation and flood control, and if so required, the construction of new schemes The Commission is a strong technical organisation and consists of one Chairman, two full time members, a Chief Designing Engineer and other technical and administrative staff They have at present the Hirakud Dam Project under construction and many others like Kosi Dam under investigation.

The Central Board of Irrigation which was set up in 1931, is a central organisation which has as its members all Irrigation and Hydro-electric Chief Engineers of all administrations in India It is the function of this Board to co-ordinate research on irrigation and allied subjects conducted at all the irrigation research stations in India and Ceylon. Meetings of the Board and its Research Committee are held annually The Research work carried out during each year and other technical papers and problems are discussed and published in the Annual Reports (Technical). In addition the Board also publishes a Quarterly Journal, Monthly Abstracts of the literature received in the Library, Popular Series Leaflets and Books on various technical subjects. The Board maintains one of the finest libraries on Irrigation, Hydro-electric and Allied subjects where enquiries from engineers in India and abroad are dealt with.

The Board is also the National Committee in India for the International Commission on Large Dams and also the liaison body for the International Association of Hydraulic Structures Research. It deals with all research work on irrigation, soil mechanics and allied subjects and keeps reciprocal contacts with foreign bodies dealing with such problems.

The Central Groundwater Organisation established in 1946 is under the administrative control of the Ministry of Agriculture, Government of India It was established in connection with the drive for "Grow More Food Campaign" and its objectives include. (*a*) assisting the States in securing materials for executing tubewell projects and training their personnel in the use of equipment, (*b*) assisting where required in actual construction of tubewell projects, and (*c*) collecting and co-ordinating information available about sub-soil supplies and carrying out research in developing improved methods for exploiting ground water supplies.

INDIA'S POTENTIAL RESOURCES

India is fortunate in her immense water resources and in her widespread waterways. On a rough calculation it has been estimated that out of the total quantity of water available in the rivers of the country and the sub-soil, only 6 to 7 per cent has so far been utilised, the rest running to waste and in its progress to the sea doing incalculable damage to life and property through uncontrolled floods. Large areas in various parts of the country are lying as culturable waste while existing cultivation in many areas produces only poor crops, for want of irrigation facilities There is thus immense scope for the utilisation of the unused water resources of the country for the benefit of her people Possibilities of development are immense and the future has a great promise in store for the people of India. It is an advantage that investigations to develop and utilize the entire water resources of the country are now the concern of a central body *viz*., Central Waterpower, Irrigation and Navigation Commission which has already done commendable work in this direction.

NEW WORKS

The nature of irrigation projects that have been constructed in the past, whether canals, tanks or wells is familiar to all, but the nature of new projects which are now being taken up is different. Many of them are being designed on an extended and ambitious plan As little water has been left unused from the perennial flow in streams, more and more schemes are being based on storage of water available during the rainy season. Multi-purpose plans are being prepared to provide for irrigation, hydro-electric power, flood control, navigation, recreation facilities and fish culture The most important of these include :

Bhakra-Nangal Project (Punjab).— The principal feature of the project is the construction of a dam about 670 feet high on the river Sutlej near the village of Bhakra about 50 miles upstream of Rupar Town. The

total storage capacity of the reservoir is estimated to be 7·20 million acre feet, of which 5·4 million acre feet will be available for use. When completed the project will irrigate an additional area of 3 5 million acres a year and will generate 250,000 kW of firm power at 100 per cent load factor.

About eight miles downstream of Bhakra Dam site, Nangal Dam is under construction on the river Sutlej. This dam will serve firstly to divert the requisite supplies from the river for the Nangal Hydel Canal, secondly to provide storage to smoothen the fluctuations in supplies due to load variations in Bhakra Power Plant, and thirdly to pass the balance supply for use in Sirhind Canal or disposal of surplus in the pre-Bhakra stage On the lined canal of 12,500 cusecs will be located three power houses at miles 12, 18 5 and the tail of the canal respectively The firm power available from these power houses in pre-Bhakra and post-Bhakra stage will be 80,000 kW and 140,000 kW respectively. The work on this project is well advanced.

The total estimated cost of Bhakra-Nangal Project is Rs. 130 crores.

Damodar Valley Project (Bihar and West Bengal).—This project which is a joint effort of the Governments of Bihar and West Bengal comprises 8 dams and one barrage across the river Damodar and its tributaries The project will provide perennial irrigation to 760,000 acres of land and will generate 300,000 kW of power The additional advantage of the scheme will be the reduction in yearly flood damage from the Damodar The scheme is expected to cost Rs 55 crores The Government of India with the concurrence of the State Governments of Bihar and West Bengal have set up, through enactment, the Damodar Valley Corporation on the lines of Tennessee Valley Authority in the United States of America Preliminary work on some dams has started and designs of some others have also been worked out.

Kosi Project (Bihar and Nepal).—The most important of the projects in Bihar is the Kosi Project under investigation with the Central Waterpower, Irrigation and Navigation Commission It will be a multi-purpose project for irrigation, power, navigation, flood control, silt control, soil conservation, drainage, reclamation of water-logged areas, malaria control, fish culture and recreation facilities The project will comprise a dam about 750 feet high across the Chatra Gorge in Nepal just above the sacred temple of Baraha Kshetra to store about 11 million acre feet of water, power plant at the dam site capable of generating upto 2 million kW of cheap power, a barrage in Nepal across the Kosi to divert its supplies into two canals, one on either bank, for irrigating about 2 to 3 million acres in Nepal and Bihar. The project is roughly estimated to cost Rs 100 crores After the necessary investigations are complete, the execution of the whole project may take about ten years

The unified development of Mahanadi Valley, as designed by the Central Waterpower, Irrigation and Navigation Commission comprises three units namely the Hirakud Dam Project, the Tikarpara Dam Project and Naraj Dam Project, each with its own canal system and hydro-electric power installations. The three units are capable of independent development and also of forming an integrated part of the basin wide plan. It has been decided to make a start with the Hirakud Dam Project.

Hirakud Dam Project (Orissa).—Comprises a dam across the river Mahanadi, about 9 miles north of Sambalpur town, gravity and lift canals on either side and two hydro-electric installations. The dam will be 15,517 feet in length of which 4,875 feet will be the concrete section in two portions and the remaining earthen. In addition, there will be 16 miles of dykes on both the flanks The maximum height of the dam above the deepest river bed will be 150 feet. The reservoir formed by the dam will have a gross storage capacity of 5 98 million acre feet of which 2·25 million acre feet will be dead storage. The project provides for the irrigation of 1,094,953 acres of land out of which 619,035 will be by flow and the balance by lift, and the generation of 218,000 kWs of hydro-electric power, besides providing facilities for navigation and protection against flood damage.

The project is estimated to cost Rs 47 81 crores Construction work has been started. Temporary quarters for staff are being built. Work on the railway siding and improvement of the existing roads, etc is in progress Drilling and exploratory work is nearing completion. The work on the rail-cum-road bridge across Mahanadi, which will facilitate work on the both banks, and also provide a connecting link for the Calcutta-Bombay National Highway is briskly progressing An agreement with a firm for setting up a cement factory has been finalised Tenders for obtaining earth moving and power house machinery are being called.

Ramapadasagar Project (Madras).—Is by far the most important multi-purpose scheme projected in Madras The reservoir on the Godavari will be one of the biggest in the world A dam 428 feet high with the lowest foundation level 190 feet below the river bed and one and a half mile long, will be built to store 15 6 million acre feet of water Three canals which will take off the reservoir, one on the left and two on the right will provide irrigation facilities to an undeveloped area of 2 35 million acres (all paddy) and will improve the existing supply to another 2 1 million acres of land The project will develop 100,000 kW of firm electric power and about 20,000 kW of secondary power and provide, in addition, navigation facilities in the Godavari all through the year The project is estimated to cost Rs. 86 crores and will take about 12 years for completion The project when completed, will provide one million tons of rice per year, which according to the present price means an annual food production of rupees 24 crores

Narbada-Tapti Project (Madhya Pradesh, Bombay).—Investigations on the River Narbada and Tapti in the Madhya Pradesh and Bombay, under the Central Waterpower, Irrigation and Navigation Commission are in progress Eight sites for construction of dams have been selected. The whole scheme when completed will provide irrigation to one million acres in the Madhya Pradesh and 110,000 acres in the Bombay State and will generate about 1 million kW of electric power The scheme is estimated to cost Rs 200 crores and will take 15 years to complete

Rihand Dam Scheme (Uttar Pradesh)—This is one of the most important schemes sanctioned by the Government of the Uttar Pradesh for the generation of electrical energy. It comprises the construction of masonry dam 300 feet high across the river Rihand, a tributary of the Sone. The cost of the dam is estimated to be 16 25 crores and that of transmission lines and transformation Rs 10 crores. The installed capacity will be 187,500 kW. The power will be used in developing important industries like Steel, Paper, Cement in some districts of the province. The preliminary work on the project is in progress.

Tungabhadra Project (Hyderabad, Madras).—The work on this is taken up jointly by Madras and Hyderabad. The main feature of the project is a concrete dam 8,200 feet long and 160 feet high across the Tungabhadra a major tributary of the Kistna. The project was inaugurated in 1945 On the Madras side the project will provide an irrigation of 300,000 acres About 7,000 kW of firm power will also be developed. In Hyderabad about 419,000 acres will be irrigated and 150,000 kW hydro-electric power generated It is expected that the project will be completed in 1952-53.

Koyna Hydro-Electric Scheme (Bombay).—The scheme envisages the construction of a dam about 300 feet high across the Koyna river about 1 mile north of Helwak, to store about 3 57 million acre feet of water for power and irrigation The scheme when fully developed is capable of meeting a demand of the order of 280,000 kW (continuous) after reserving about one million acre feet of storage for irrigation In the ultimate stage when all the water is available for power generation the station will be capable of developing 400,000 kW (continuous) Preliminary investigations have advanced to the stage of preparing detailed designs and estimates.

The project will take about 7 years to complete

Gandak Valley Project (Bihar, U.P., Nepal).—This will consist of a barrage across the Gandak river at Tribeni Ghat just below the off-take of the Tribeni Canal and the taking off of the two new canals on both banks of the river.

The Western canal is expected to bring under irrigation the whole of Saran District and a portion of Gorakhpur district of the U.P. and some portion of Nepal Territory.

The Eastern canal will irrigate parts of Champaran, Muzaffarpur and Darbhanga districts between the main Gandak and the Buri Gandak

The project is likely to bring under irrigation an area of over 35 lakhs of acres in Bihar alone, besides its capacity to irrigate some area of Nepal and a portion of the Gorakhpur district of the U.P.

In addition to the construction of these two canals, it is proposed to convert the Tribeni Canal into a perennial canal and also to extend it by another 40 miles to cover an additional area of 1¼ lakhs of acres between the irrigation boundaries of the existing Tribeni and Dhaka Canals

The works have been roughly estimated to cost about 20 crores.

The Government of Nepal and the U P have already permitted necessary surveys in their territories and further data is being collected for preparation of detailed Plans and Estimates.

The irrigation on the project will fully develop by 1958

In addition there are large numbers of big, medium and small size projects under investigation or construction in various states.

It is however useful to remember that all these projects when completed will add over 27 million acres of irrigation to India's existing 50 million acres

Jawai River Project (Rajasthan).—The Jodhpur Jawai River Irrigation-cum-Hydro-electric development project scheduled to be completed by the end of 1952 was sponsored by engineers including Mr Mannersmith, Member of the Indian River Commission, Sir William Stampe and Dewan Bahadur Iyyanger, former Chief Engineer, Madras State. Mr Fergusson undertook a survey and submitted his report in 1944 Recently Mr M B Patel Industrial Adviser to the former State Government suggested various improvements.

The project envisages the construction of a reservoir calculated to impound 7,000 million cubic feet of water and to store the flow during monsoon and to serve as a balancing reservoir for a future generating system from a catchment area of 305 sq miles to irrigate 115,000 acres of barani land The land is expected to produce wheat, sugarcane, cotton, fruit, green manure and to generate about 5,000 kW of hydro-electric power for domestic and Industrial purposes.

The Dam is being constructed near the Erinpura Railway Station on the B B. & C.I. Rly. 15 miles from the source of the Jawai River in the Aravalli Hills forming a natural water shed as well as the border between Mewar and Marwar. The area is inhabited by Bhils and Gerasis. An outlet tower over 100 ft. high combining a small hydro-electric plant of some 150 H.P. will be located at the south end of the large granite bollard at which the river divides into two branches. Some of the structures like spillway tunnels would have to stand a water velocity of the order of 100 ft. per second and for this purpose special processing of concrete would have to be done.

AGRICULTURE

THE agriculture of the sub-continent with its wide range of physical and climatological conditions, varies considerably in character and scope. There is scarcely any cultivated crop of the temperate, sub-temperate or tropical zone which cannot be grown in some part of this vast region from the warm humid coastlands to the perennially temperate altitudes of its mountain ranges.

The total area of cultivable land in the sub-continent is about 854 million acres, which is exclusive of a forest area of approximately 68 million acres. The total gross cropped area sown annually is roughly 217 million acres Of this vast area, 198 million acres are under cereal and pulse crops of all kinds which supply food and fodder for a human population of 400 million and an animal population of 380 million head of cattle, sheep and goats

In the sub-continent's agriculture, the dominant climatological factor is the monsoon and, in most parts of the country, the total annual rainfall is precipitated between the months of June and October The winter and early summer months are generally dry and high temperatures prevail in the months of March to June, prior to the break of the monsoon rains Thus the agricultural season is naturally divided into two main sub-divisions the Kharif season of the monsoon and the Rabi season of the cold weather. Each of these seasons has its own distinctive crops. The greater part of the Indo-Gangetic plain and the northern tracts of the Peninsula are served by the main monsoon which falls between June and October During these months the average rainfall for the whole of the sub-continent is about 47 inches, varying from 15 (or less) to 50 inches in the main cultivated tracts. Rainfall in the cold weather season between December and March is generally not more than 2 to 4 inches The bulk of the rainfall in the south of India, including most of the Madras State and a large part of the territories of the States of Hyderabad and Mysore, is received from the north-east monsoon and falls during the period October to February

SOILS

Four main soil groups can be recognised in the sub-continent viz, (1) the red soil derived from rocks of the Archæan system which characterizes Madras Mysore and the south-east of Bombay and extend through the east of Hyderabad and Madhya Pradesh to Orissa, Chota Nagpur and the south of W Bengal, (2) the black cotton or *regur* soils which overlie the Deccan tract and cover the greater part of Bombay, Berar and the western parts of Madhya Pradesh and Hyderabad with extensions into Central India and Bundelkand the Madras *regur* soils though less typical are also important, (3) the great alluvial plains, agriculturally the most important tract in the country as well as the most extensive mainly the Indo-Gangetic plain embracing Northern Rajasthan, most of the Punjab area, the plains of Uttar Pradesh most of Bihar and the Bengal area and half of Assam and (4) the laterite soils which form a belt round the Peninsula and extend through West Bengal into Assam and Burma.

The increasing demands on the land from a constantly rising population have called forth greater attention to the question of more effective land utilisation A considerable amount of scientific work is thus being done on all these groups to a greater or lesser extent throughout the sub-continent, both as regards their classification and their crop-producing power Soil studies have been given a new orientation and have received fresh stimulus due to the concept of the "soil-profile" or entire vertical cut of the soil being taken as the unit of study instead of the superficial layer supporting vegetation.

Survey.—A notable instance of such work is the recent classification of the black cotton soils of the Bombay Canals and the investigations regarding their suitability for sugar-cane crop. The importance of soil survey and soil-mapping by Genetic Methods is being gradually recognised in different parts of the country In Bombay State such survey and mapping has been in progress in several sugar factory estates of the Bombay-Deccan since 1940 on a contract basis The surveys of the estates of 8 sugar factories and 2 gur factories, comprising an area of over 60,000 acres, have been carried out, of which varietal, manurial and irrigational technique for maximising sugar production on economic limits are being worked out A scheme for land utilisation survey for crop-planning of the State as a part of Soil Conservation Research has been proposed for the maximum exploitation of the country's resources for making the State self-supporting in respect of food, fodder and clothing.

At the Indian Agricultural Institute, Delhi, the collection of data on soil survey available in the various States has now been completed after three years of work and will be shortly published The important question of soil conservation and development is receiving greater attention and considerable work on both the aspects has been taken in hand, particularly in the Punjab area and in Bombay The erosion survey carried over 50,000 acres in the scarcity areas of Bombay State has revealed that nearly 70 per cent of the land has already been eroded

Desert Soils —In addition to the four main groups of Indian soils mentioned above, the desert soils of the sub-continent occupy a large tract in Pakistan extending over the whole length of Sind, along the edge of the Indus alluvium, Rajputana and the south Punjab area of which the Thar—Rajputana desert—alone occupies an area of 40,000 square miles. Alkali soils also form an important group of Indian soils which are known as *reh* or *usar* in Uttar Pradesh, *kalar* in Sind, *rakkar* and *thur* in the Punjab and *chopan* or *kari* in Bombay State Such soils are characterized by a high degree of impermeability and "stickiness" together with high alkalinity and frequent presence of large excess of free salts They are usually poor in nitrogen and humus and unsuitable for crop growing without previous reclamation A considerable amount of working the reclamation of these soils has already been done in the Punjab area, Sind and Bombay which shows the possibility of bringing these unproductive lands back to cultivation Forest soils occupy a large part of the sub-continent. Investigations on the nature of soil profiles of the Chaubatia Hill in U P and of the Kulu Forest in the Punjab area indicate that these soils belong to the Brown-Earth and Podsol groups

AGRICULTURAL EQUIPMENT

In the sub-continent farming is carried on with the minimum of capital and there is practically no outlay on buildings, fencing and agricultural machinery. The cultivators are for the most part illiterate and agricultural indebtedness is high and rates of interest on loans charged by money-lenders are heavy During the past twenty years, much progress has been made by the co-operative credit movement in many States In recent years, it was found necessary to supplement co-operative credit by the development of non-credit activities through multi-purpose societies, Taluka, District and State Purchase and Sale organizations and the establishment of regulated markets with a view to creating an effective link between credit and marketing. For increasing production, co-operative farming, crop protection and irrigation societies are also being organised on a large scale with financial and other assistance from Government Such societies have proved of great value to the cultivators and in combination with measures for debt redemption, regulation of money-lending business, prescription of minimum rates of interest, provision of agricultural finance through co-operative societies, central banks and land mortgage banks, liberalisation of tagavi loans, initiation of *Sarvodaya* development schemes, etc, will contribute largely to improvement in the economic condition of the agriculturists (*See article on 'The Co-operative Movement.'*)

To implement the "Grow More Food Campaign" co-operative societies are being encouraged to undertake the work of distribution of seed and manure among agriculturists. Financial assistance in the form of loan at concessional rate of interest is also granted to certain types of societies by Government for the use of cultivators with a view to economise cultivation expenses and to ease the bullock power shortage.

Implements —In general, cultivating implements are few and simple and remarkably well suited for the tillage operations for which they have been evolved. The ploughs are usually of wood, tipped with an iron or steel point, and stir rather than invert the soil. Iron ploughs are also extensively used in some districts. A heavy wooden beam is commonly employed to serve the combined purposes of roller, clod-crusher and soil-compactor. In the black cotton soil areas, the *bakhar*, a simple type of broad-bladed harrow, is in general use. In many States, seed drills or seed tubes are utilised for drilling the crops in rows to facilitate inter-cultivation In less advanced tracts, the seed is merely broadcast and ploughed into the soil Practically no harvesting machinery is in use, the crops being cut or gathered by hand and threshed—in the case of grain crops—under the feet of bullocks. Cereal crops are winnowed by the agency of the wind although cheap mechanical winnowing machines, designed by agricultural engineers, are receiving attention from the more advanced cultivators.

With reference to the introduction of improved agricultural implements, this work is now being largely done by private business and agencies which are extending rapidly in the rural areas Work on mechanical cultivation is still largely in an experimental stage though tractor ploughing has proved very effective in the eradication of deep-rooted weeds in Uttar Pradesh, Bombay and other States. One notable development of recent years in connection with agricultural implements is the large extent to which improved types are now being manufactured and sold by village craftsmen.

Land Development —Considerable attention is paid in many areas of the country notably in Bombay and the Punjab area to land development measures designed to check erosion from torrential and excessive rainfall and to the preservation of soil and moisture, which are essential for the successful growing of crops In Bombay a Land Development Section of the Agricultural Department was formed in the year 1943-44 and this has now been renamed as Soil Conservation Section This section is undertaking large scale projects of Land Improvements which include bunding or terracing of the cultivated lands and trenching and afforestation of uncultivable lands lying in the upper catchments or water-sheds—all on contour alignments This provides labour for the scarcity or famine areas and will help to protect them from famine or scarcity in the future. The total acreage so far improved and protected in the State is over six (6) lakhs of acres. The Section now carries out bunding and land improvement works in light and medium soils and attends to the maintenance of bunds, etc Investigations are in progress with a view to evolving a technique for carrying out bunding in deep black soil areas

The original Bombay Land Improvement Schemes Act has now been considerably amended in the light of experience gained and is applied to several water-sheds.

CULTIVATION AND TILLAGE

The improvement of the ordinary cultivation and tillage methods in common use in the sub-continent offers a vast field for increasing the yields of field crops and, consequently, the profits of the agriculturists. In many parts cultivation is good but, particularly in the non-irrigated tracts and in areas liable to failure of rainfall, there is much room for improvement. The research work done on dry farming methods conducted under the auspices of the Indian Council of Agricultural Research points to the great benefits accruing from thorough cultivation including occasional ploughing and manuring, repeated harrowings and inter-culturings, wider spacing and lower seed rates.

The main object of tillage methods for *rabi*, *i.e.*, for cold weather crops, is the conservation of soil moisture and the preparation of a good seed-bed to ensure germination of seeds To achieve these objects, repeated harrowings are given which produce good surface mulch over a moist sub-soil The practice of drilling the crops with wider spacings permits inter-cultivation of the crops by bullock-implements and the use of low seed rates reduces the competition for moisture For *kharif*, *i e*, monsoon crops, the preliminary cultivation of the fields is less intensive. Dry farming researches so far done in the sub-continent deal mostly with cereal crops which are mostly erosion-permitting, and erosion-resisting crops like legumes have not been tried Recently, these legumes, such as, groundnut, Matki (Phaseolus aconitifolius) and Hulga (Dolichos biflorus), have been found to be very successful in controlling erosion and run-off and in increasing crop yields when grown in strips on contours below the erosion-permitting crops. This technique, known as contour strip cropping, has now been taken up for detailed study in Bombay State.

Two economic factors which tend to keep down the standard of cultivation in many States are the fragmentation and sub-division of holdings, resulting from Indian laws of inheritance, and certain systems of land tenure whereby the cultivator, as a tenant, has no interest in permanent improvement of his holding In addition, the agriculturists rarely live on their lands but congregate in villages for mutual protection Efforts are now being made in many States to eliminate these factors, which contribute to a low standard of cultivation.

IRRIGATION

The chief characteristics of Indian rainfall are its unequal distribution throughout the country, seasonal irregularity of precipitation and liability to failure or partial deficiency in many tracts. The average annual rainfall for the whole country is about 45 inches and there is little variation from this average from year to year But, within individual tracts, remarkably wide variations in total annual rainfall are found At many recording stations, annual rainfall of less than half the average precipitation are not uncommon, and in cases of extreme drought, less than one-quarter of average rainfall has been recorded in precarious tracts Such tracts include Uttar Pradesh except the submontane regions, a large portion of Bihar, most of the Madras and Bombay States omitting the coastal belts, and portions of Madhya Pradesh, The canal system of the sub-continent is by far the largest in the world. Of the total cultivated area of 217 (1945-46) million acres, about 59 million acres are irrigated annually from one source or another. Of this huge area, 30 million acres are irrigated by canals, 14 million acres by wells and 13 million acres from tanks and other sources. Protective irrigation works have made agriculture stable instead of precarious in many districts (*For details see article on Irrigation*).

About one-quarter of the total irrigation of the country is got from lifting water from wells ranging in depth from a few feet to over fifty feet. Their numbers have greatly increased in recent years largely through Government advances for their construction. The recurring cost of this form of irrigation has, however, greatly increased owing to the high price of draught cattle and the increasing cost of their maintenance.

All agricultural departments are now giving increased attention to the better utilisation of underground water-supplies, existing wells being improved by boring and tube wells of large capacity installed and equipped with pumping machinery In scarcity areas the large scale bunding operations undertaken by the Bombay Department of Agriculture will lead to the increase in the water-supply of wells. Efficient types of water lifts are rapidly replacing the old-fashioned *mhotsa*

Tank irrigation is common in Central and Southern India. Large quantities of rain water are stored in lakes (or tanks) during the rainy seasons and distributed during the drier seasons of the year. Often the indirect effect of the tank in maintaining the sub-soil water level is as important as the direct irrigation

Construction of temporary Bandharas across streams and small rivers after heavy monsoon period is over is also common in parts of Bombay and Madras States for irrigation during the drier *rabi* period The Government of Bombay has recently opened a separate Department for increasing such minor irrigation works throughout the State This Department will also be responsible for lift irrigation works at suitable sites along perennial rivers

Manures and Manuring—The great bulk of Indian soils are deficient in organic matter In the other agricultural countries of the world, this want is usually met by the return of farmyard manure to the land or by the use of compost made from crop residues and similar waste organic materials In India however, cattle dung is largely utilised for village fuel but the practice of composting is now being rapidly developed in many areas The cultivation of green manure crops is making headway, especially in the irrigated tracts, and many State Governments allow concessions to encourage their extension The use of certain oil-cakes, especially groundnut and castor cake, is on the increase and this method of manuring is now common with many irrigated crops With regard to artificial fertilisers, nitrogenous organic manures, *e g*, ammonium sulphate and nitrate of soda, are being extended in use through the efforts of departmental and private agencies and the question of the manufacture of such manures is now receiving close attention of the Government of India and State administrations A factory for the manufacture of ammonium sulphate in India has been established at Sindhri in Bihar.

RICE

Rice is the most extensively grown crop in India, and on an average, occupies about 28 per cent of the total cultivated area of the sub-continent. It preponderates in the wetter parts of the country *viz*, West Bengal, Bihar and Orissa, and Madras The area fluctuates slightly around 72 million acres in the sub-continent and the yield is about 27 million tons In 1945-46, total area under rice in the Indian Dominion and States was 58,112,000 acres with a total yield of approximately 18,463,000 tons. The crop requires for its proper maturing a moist climate with well assured rainfall The cultivated varieties are numerous differing greatly in quality and in suitability for various conditions of soil and climate.

Rice is either broadcast, drilled or transplanted Broadcast rice is grown generally on high lands of the paddy areas where moisture is less, and the crop is sown in the beginning of the monsoon with the help of the rain-water. Sprouted seed is also sown broadcast in standing water after the onset of the monsoons, particularly in the salt-land paddy areas.

For transplanted rice the seedlings are raised in the nursery generally located in a high lying portion of the field and the nursery is rubbed or burnt over with cowdung or brush wood and grass. The seedlings get ready for transplanting within 4-5 weeks after sowing The soil is generally prepared after the arrival of the monsoon and is worked into a puddle before the seedlings are transplanted. The seedlings are planted either singly or in small bunches containing from 4 to 6 plants each and are simply pushed into the mud at distances of 6 to 9 inches apart. The rice-fields are kept more or less under water until the crop shows signs of ripening The area under improved varieties of rice distributed by the agricultural departments is now over 4 million acres As a result of various schemes for the intensification of research on rice in all the principal rice-growing States financed by the Indian Council of Agricultural Research improved varieties to suit different areas have been evolved and are being distributed now.

The sub-continent consumes more rice than it produces, the balance in the past having been provided almost entirely by Burma. Imports in 1941-42 were 986,000 tons, mainly from Burma, Siam and French Indo-China.

WHEAT

Wheat is grown widely throughout the north as a winter crop, Uttar Pradesh and the Punjab supplying about two-thirds of the total area, and nearly three-quarters of the total outturn in the country This crop occupies, on an average, about 10 per cent. of the total cultivated area The majority of the varieties grown belong to the species *Triticum vulgare*. Bombay mostly grows durum wheats in which a number of improved strains are evolved and are spreading rapidly. A new improved wheat, called Niphad-4, having the blood to durum, unglare and dicoceum wheat species has been recently evolved with exceedingly good baking quality. Indian wheats are generally white, red and amber coloured and are mostly classed as soft from a commercial point of view. Most of the Indian wheats are soft weak wheats but there are some well-known Maccaroni wheats amongst them. The largest wheat acreage of recent years was that of 1938-34, namely, 36 million acres but the yield did not come up to the record harvest of 1939-40 which exceeded 10¼ million tons Recent crops have averaged about 9 million tons per annum which is only slightly, if anything, above internal requirements In 1945-46 the total area under wheat in the Indian Union including States was 24,546,000 acres with a yield of 5,912,000 tons With the development of irrigation in the newer Punjab Canal Colonies a further increase in wheat production is certain The crop is generally grown after a summer fallow and except in irrigated tracts, depends largely on the conservation of the soil moisture from the previous monsoon. On irrigated land 2 to 4 waterings are generally given. The crop is generally harvested in February to April and the threshing and winnowing go on up till the end of May. The total area under improved varieties of wheat is now over 8 million acres. The Indian Council of Agricultural Research has appointed two Standing Committees to advise on problems connected with rice and wheat. The rust epidemic causes great damage to the wheat crop and a comprehensive scheme to check this menace is being financed by the Government of India.

MILLETS AND PULSES

These constitute one of the most important groups of crops in the country, supplying food for the poorer classes and fodder for the cattle. The varieties vary greatly in quality, height and suitability to various climatic and soil conditions. Perhaps the two best known varieties are Jowar (*Sorghum vulgare*) the *great* millet, and Bajra the Bulrush millet (*Pennisetum typhoideum*) which, between them, occupy about 50 million acres in the sub-continent.

In 1945-46, the total area under jowar and bajra in the Indian Dominion including States was 61,750,000 acres excluding the former States Generally speaking the jowars require better land than the bajras and the distribution of the two crops follows the quality of the soil Both the crops are generally sown in the beginning of the monsoon and so they require to be thoroughly weeded. It is often grown mixed with the several pulses especially *Arhar* (*Cajanus cajon*—pigeon pea) and other crops, and is commonly rotated with cotton The subsidiary crops are harvested as they ripen either before the millet is harvested or afterwards In some States like Bombay *rabi* juar is also an important crop

Pulses are commonly grown throughout the sub-continent in great variety and form the backbone of agriculture, since even the present moderate degree of soil fertility could not be maintained without leguminous rotations They are a primary necessity in the food of a vegetarian population The yields on the whole are fairly good, mixed cropping is common The principal pulses are *Arhar* (*Cajanus cajon*), gram (*Cicer arietinum*), various species of *Phaseolus* and *Pisum*. The Indian Council of Agricultural Research is financing co-ordinated schemes with the object of evolving high-yielding disease-free and draught-resistant strains of millet and pulses These schemes are in operation in various States

COTTON

Cotton is one of the most important commercial crops in the Indian Union The average area under cotton in the triennium ending 1938-39 was 21 0 million acres and the average yield 4 2 million bales of 392 lbs. net each During the three-year period ending 1947-48 the average annual acreage and yield in the Indian Union decreased to about 11 2 million acres and 2,2 million bales, respectively In 1948-49, the estimated area and yield were 11 1 million acres and 1 9 million bales, respectively. The area under improved varieties of cotton in 1948-49 is estimated at about 5 0 million acres. The consumption of Indian cotton in mills in the Indian Union amounted to 312,000 bales in 1948-49 Ordinarily the principal exports are of medium and short staple cotton below 7/8" in staple Exports are now restricted to Bengal Deshi, Mathia, Assam and Comilla varieties and are allowed under certain conditions There is no Indian cotton belt ; Bombay State, the Punjab, Madhya Pradesh, Madras State and Uttar Pradesh and the State of Hyderabad, all have important cotton tracts producing distinct types. Sowing and harvesting seasons are equally diverse, the former extending from May to December in different parts of the country and the latter from October to May and June Yields vary greatly , in the best irrigated tracts the normal yield is about 200 lbs of ginned cotton per acre and yields much above this have been recorded, whilst in the poorest unirrigated tracts 60 lbs. per acre is a good crop Of recent years, as the result of the work of the Agricultural Departments and the Indian Central Cotton Committee, the quality and yield of staple cottons have improved and also the yield and cleanliness of the produce from the short staple tracts

The Cotton Transport Act, the Cotton Ginning and Pressing Factories Act, the Bombay Cotton Markets Act (now the Bombay Agricultural Produce Markets Act), the Central Provinces Cotton Markets Act, the Madras (Commercial Crops) Markets Act and the Punjab Agricultural Produce Markets Act have all been passed at the instance of the Committee and are doing much to check adulteration and promote better marketing In certain States, legislation has been enacted, or is under consideration, with the aim of preventing the growing of very inferior varieties and of stopping certain malpractices which affect the quality and reputation of Indian cotton. Agricultural Departments have continued their campaign of cotton improvement apart from improvements in methods of cultivation.

SUGARCANE AND SUGAR

The Indian Union after the partition, owns as much as 90-95 per cent. of the total cane acreage and sugar production of the undivided sub-continent. The Sugar Industry is the second biggest National Industry in the Union of India and the sugarcane crop plays a very important part in the rural economy of the country. U P. and Bihar together produce more than 7 5 lakh tons of sugar During the year 1948-49, the area under cane was 3,645,000 acres, the estimated total production of cane expressed in terms of *gur* 4,984,000 tons, the quantity of cane crushed in sugar mills estimated at 10,039,000 tons, sugar produced by factories 1,001,000 tons, production of *khandsari* sugar 1,00,000 tons and sugar refined from *gur* 3,000 tons The total production of sugar was thus 1,104,000 tons

The history of the modern Sugar Industry in India virtually began in 1932, when the Government of India adopted a policy of discriminating protection which stimulated vigorous activity so that the number of factories increased from 32 to 164 The gain to the country is that from the year 1942-43 onwards almost no sugar has been imported to meet the demand in the country. Today, the number of people engaged in the cultivation of sugarcane, sugar factories, research stations, sugar trade, is well over 2 millions, and the Sugar Industry has grown into one of the largest industries in India and is second in importance only to cotton textiles

The cultivation of improved varieties of cane has been steadily expanding , old and indigenous varieties have been replaced to the extent of 90 per cent by canes of high quality, mainly bred at the Sugarcane Breeding Station, Coimbatore A net of sugarcane research stations has been spread in all sugarcane growing tracts of India for testing out the Coimbatore canes under different sets of soil and climatic conditions

The minimum quantity of sugar per diem per adult, required in a well-balanced diet is said to be 2 oz , the target of sugar production for the Indian Sugar Industry falls very much short of this requirement and consequently it will have to be very nearly doubled in the near future in order to meet the increasing demand of sugar and *Gur* It is estimated that the target of sugar production should be about 16 lakh tons per annum

The Indian Central Sugarcane Committee was constituted in November, 1944, and is responsible for the improvement and development of the industry connected with sugarcane and its products, marketing and manufacture of sugar and to initiate agricultural, technological and economic research on sugarcane production, distribution, and testing of improved varieties of cane, Gur, sugar, and their by-products, the improvement of crop forecasts and statistics, as well as the adoption of improved cultural and manurial practices There are still the problems of banking and transport of cane and sugar to be studied

Besides financing the sugarcane research schemes at the Centre and in various States, the Indian Central Sugarcane Committee is also financing five-year schemes for the development of the Sugarcane Industry for which it has set apart a sum of Rs 75 lakhs Work on these schemes started during 1948-49 and is progressing satisfactorily. The Committee also plans to establish, at an early date, at Lucknow, a new Institute of Sugar Technology and Sugarcane Research of its own, which is expected to be the largest of its kind in Asia. A model sugar factory will also be erected there to provide opportunities of applying results of research on a factory scale and to impart the much-needed technological training on a scientific basis to the post-graduate students for fitting them for future absorption into the Industry This Institute is also expected to provide greater integration and fuller co-ordination in investigations on Sugar Technological and Sugar problems which have been lacking to a great extent up to the present moment

OILSEEDS

India is one of the principal oil-seeds producing countries of the world. Oilseeds crops also find a prominent place in India occupying about 23 million acres or about 8 per cent of the total cultivated area

The Indian Central Oilseeds Committee, set up by the Government of India, under the Indian Oilseeds Committee Act IX of 1946, for the improvement and development of the cultivation and marketing of oilseeds and of the production, manufacture and marketing of oilseeds products, is taking all possible steps to stimulate the production of oilseeds without encroaching upon the acreage under food crops. Several schemes to increase the production of oilseeds by multiplication and distribution of improved strains, by adopting better methods of cultivation and by controlling pests and diseases are being worked in States financed jointly by the Indian Oilseeds Committee and the State Governments concerned

The following are the major oilseeds grown in India —

Groundnut :— India has the largest area under groundnuts in the world She accounted for 61 5 per cent of the groundnut production in the world during 1949 In this country, groundnuts accounted for about 41 per cent and 61 per cent of the total area and production, respectively, under oilseeds crops during the same year Madras ranks first, claiming 44 per cent and 53 per cent of the acreage and production, respectively, under groundnut in India and is followed by Bombay and Hyderabad The area under this crop in India in 1948-49 was 9,078,000 acres and the production was 3,073,000 tons.

Rape & Mustard :—The rape and mustard form an important group of crops in the northern parts of the country where they grow freely and attain a fair state of development The oil obtained from the seeds is extensively used for domestic consumption. The chief producing areas are Uttar Pradesh, Bihar, Punjab and Assam The area and production of rape and mustard seeds in India during 1948-49 was 4,453,000 acres and 726,000 tons, respectively.

Linseed :—The linseed crop is cultivated in India for its seeds which yields the linseed oil of commerce extensively used in the varnish and paint industries and to a limited extent for edible purposes The crop grows well under a variety of soil conditions and is raised extensively in India except in the south of the peninsula Madhya Pradesh, Uttar Pradesh, Bihar and Hyderabad are the chief seed producing areas, accounting for about 90 per cent. of the total area in India The area and production of linseed in India during 1948-49 were 3,877,000 acres and 439,000 tons, respectively.

Sesamum :—Sesamum (Gingelly) or *til* is grown extensively almost throughout India from the foot of the Himalayas down to the extreme south in Travancore The crop is however, intensively cultivated in Peninsular India in more than one season in the year The area and production of sesamum in India during 1948-49 were 3,567,000 acres and 295,000 tons, respectively.

Castor :—The castor plant grows well under varied conditions of soil and climate It is seen to grow almost throughout the length and breadth of India and up to an elevation of 8,000 ft Both perennial and annual types are recognised The plant is grown mostly for the seed which yields the castor oil of commerce. India comes next to Brazil only in world production and trade of castor seed The area and production of castor seed in India during 1948-49 were 1,406,000 acres and 109,000 tons, respectively The statistics of area and production of this crop are, however, considered as under-estimates, as no regular reporting is done for the areas sown under mixed crops.

India also produces considerable quantities of coconut, cottonseed, niger, safflower and mohwa seed besides a variety of other vegetable

oils, both essential and non-essential, which are produced in small quantities, but for which she holds almost a world monopoly

JUTE

Jute is one of the most important cash crops The fibre is obtained from the bark of two cultivated species of annual plants called *Corchorus capsularis* and *Corchorus olitorius*.

Jute is grown in the alluvial soils of West Bengal, Bihar, Assam, Orissa, the States of Cooch Behar, Tripura and in parts of U P. In 1949-50, the acreage in India was 1 6 million acres, the output being 31 2 lakhs bales (one bale = 400 lbs) It is a Kharif crop and is sown broadcast during February to May on well prepared seed beds. Two to three inches of rainfall during sowing and alternate periods of sunshine and moderate rainfall (about one or two inches every week) thereafter, seems ideal for a good growth of the crop It responds well to weeding and thinning operations which are usually given 2 or 3 times during the growing season.

The plants often grow to a height of 12 feet or more Four to five months after sowing when they are in flower the plants are cut close to the ground. Cut plants are tied up into bundles and steeped under water for retting In 12 to 25 days, the retting is complete , the fibre is then carefully separated out from the stalks, washed and dried It is then ready for various commercial uses The outturn of dry fibre of jute generally varies from 12 to 25 mds. with an average of 15 md per acre, depending upon soil fertility and other factors

Quality in jute is judged by its strength, fineness, colour, lustre, length and uniformity. The types of goods ordinarily manufactured from jute fibre in India are hessians, sackings, canvas and tarpaulins , certain 'specialties' for example, rugs and carpets, linoleum hessians, jute blankets, etc , are also made on a small scale. During the Second World War, jute was put to many new lines of manufacture such as sandbags, union fabrics (jute-cotton), tents, hood-cloth, netting, cords, etc., which were used for war purposes.

Compulsory restriction of jute acreage which came into force in pre-partition Bengal in 1941 is completely removed in West Bengal Total areas under the crop in India and Pakistan together during the years 1944, 1945, and 1946 were 2,103,955, 2,421,670 and 1,911,000, respectively, and the corresponding yields were 6,203,205, 7,991,070 and 5,648,000 bales respectively The total areas put under this crop in India in 1947, 1948 and 1949 were 6,52,000, 8,34,000 and 11,58.000 acres respectively and the yields were 16,96,000, 20,56,000 and 31,17,000.

The annual world consumption of jute during the period from 1938-39 to 1947-48 varied from 77 to 113 lakhs of bales a year, the consumption in 1947-48 being 100 lakhs of bales.

During 1949-50, the jute trade was confronted with raw jute supply problem and transport difficulties consequent upon the devaluation of the Indian rupee. Prices of jute were not, however, allowed to rise by the statutory fixation of maximum prices by the Government

TOBACCO

The tobacco acreage in India is not uniformly distributed but is concentrated in certain areas which form distinct tobacco growing centres of considerable commercial importance There are 5 zones of concentrated production, *viz.*.—

(1) *North Bengal Area.* A major portion of this area has gone to Pakistan It now consists of the districts of Jalpaiguri, Malda, Barhampore, and W Dinajpur of West Bengal and Cooch Behar State

(2) *The Charotar* (*Gujarat*) area comprises the talukas of Anand, Nadiad, Borsad, Petlad and Bhadran of Bombay State.

(3) *Nipani Area* includes Belgaum, Satara, Kolhapur, Sangli and Miraj in Bombay State.

(4) *Guntur area* This is the most important Cigarette Leaf (Virginia Tobacco) producing area which runs along the eastern coast with concentrations in the Guntur District of Madras. In the course of a few years the acreage under tobacco in this area has exceeded one lakh.

(5) *North Bihar area* comprises the districts of Muzaffarpur, Purnea and Darbhanga

Tobacco seed is first grown on raised seed beds for providing good drainage and for preventing stagnation of water Seedlings are ready for planting in about 6-8 weeks By then they would have grown to a height of about 4 to 5 inches with 6 to 8 leaves The seedlings are transplanted in lines, the distance varying from 15"-21" in rows and about 2' to 3' between rows

Topping is done in the production of Desi or Poorbi Tobaccos grown in North Bihar and U P and the Calcutta variety grown in U P , Punjab and Delhi It is useful for increasing the strength of tobacco used in hookah and chillum, etc

The harvesting season varies from place to place depending upon the different climatic conditions and the types of tobacco grown However, the leaves are cut when fully matured and at this stage they assume a yellowish green colour in the case of *Virginia Tobacco*, brownish yellow in the case of *Cigar & Cheroot Tobacco*, yellow with reddish brown spots in *Bidi Tobacco*, and yellow with brown flecks in the case of *Hookah, Chewing and Snuff Tobaccos*

The cut leaf is then dried and cured

The total area under tobacco in the Indian Union in 1947-48 was 784,196 acres

The total yield of dried leaf was 423,535,000 lbs

This excludes the quantity retained for personal consumption by the growers which is estimated at 14,582,000 lbs

LIVESTOCK CENSUS

It is estimated that there are about 136 372 million cattle in India, and 40 618 million buffaloes

For draught purposes mainly cattle are used everywhere though male buffaloes are important as draught animals in the rice tracts and damper parts of the country. For dairy purposes, the buffalo is important, the milk yield being high and the percentage of butter fat considerably above that in cow's milk. The best known breeds are the Murrah buffaloes of the Punjab area, the Jafferabadi buffaloes of Saurashtra, Mehasana of Gujarat and the Surti and Pandharpuri buffaloes of Bombay State The cattle and buffalo population in the subcontinent is abnormally high amounting to over 60 per cent of the human population The spread of cultivation has diminished the grazing grounds, insufficient fodder crops are raised and many of the cattle are small, ill-fed and inefficient Nevertheless the best Indian breeds have many merits Of the draught types, the best known breeds are the Hissar (Punjab), Hansi (Punjab), Nellore (Madras), Amrit Mahal (Mysore), Kankrej (Gujarat), Kangayam (Madras), Kherigarh (U P), Malvi (C I), Khillar (Deccan), Nimar (East Khandesh), and Dangi (Konkan) The Dangi and Nimar breeds of Bombay State have the potentialities to be developed into dual purpose breeds. The Government of Bombay have established a Dangi Cattle Breeding Farm at Igatpuri (district Nasik) for improving the breed in that direction Amongst the best milking breeds are: the Sahiwal (Punjab), and the Gir (Saurashtra) Of the dual-purpose (*i.e.* draught and milk combined) the best known breeds are the Harlana (Punjab), Kankrej (Gujarat), and the Gir (Saurashtra).

On the Government cattle-breeding farms pedigree herds are being reared and from these selected bulls are issued, preferences being given to special breeding areas, to villages which undertake to exclude 'scrub' bulls and where serious efforts to maintain a good strain of cow are made. Once established such breeding areas rapidly produce a supply of superior bulls for general distribution and in this way valuable bulls from Government herds are used to advantage The premium bull system is also working well in some tracts

IMPROVING QUALITY

The sub-continent possesses some very fine breeds of cattle, each breed being peculiarly suited to the area to which it is indigenous To mention some, there is the heavy fast Kankrej breed in Gujarat, admirably suited to the sandy deep rutted roads found in this part. Then we have the Dangi born and bred in the hilly, heavy rainfall area of the Western Ghats. Rain and water logged conditions do not affect this breed, indeed, the more the rain, the better it thrives. On the plateau of the Central Deccan we have the Khillar, a light fast draught animal which thrives on very meagre pastures and is essentially suited to the hard stony country in which it is reared

A good deal has been done for the improvement of cattle. The various States have farms on which pedigree bulls are bred and reared. These are placed out in suitable villages on a premium system In the State of Bombay, Herd Registers are maintained for 8 of the breeds of the State, shows are held annually so that progress is noticed in those areas in which such work has been undertaken In addition, the Bombay Live-stock Improvement Act of 1933, known as the "Castration Act" which is intended to prevent promiscuous breeding by undesirable male stock in the villages has now been applied to 216 villages in the State

It has been estimated that the number of sheep in the sub-continent is in the neighbourhood of 4 crores and that the total quantity of wool produced is 8¼ crores pounds annually The production of wool per sheep varies greatly in different parts of the sub-continent In the North-West Frontier Province, Baluchistan, Sind, and Punjab Provinces of Pakistan, and Punjab, Uttar Pradesh, Rajasthan and Saurashtra States of India, the annual production per sheep is estimated at between 3 1 lbs. and 4 lbs , while in the rest of the States it does not exceed 1 lb The average for the whole of the sub-continent is in neighbourhood of 1 9 lb per sheep per year This would indicate the vast scope for increasing wool production

The improvement of finer qualities of wool has been engaging the attention of the Indian Council of Agricultural Research since 1933, and a systematic breeding of the five principal Indian breeds of sheep was undertaken in the Punjab area (Hissar), Madras (Hosur) and Bombay (Poona), and promising results achieved.

The breeding programme of the Research Stations is based on the evaluation of wool quality as assessed by factors such as the staple length, fibre, diameter, fleece density, differentiation of fibre types and the studies of the succession of fibres in the lamb coat A wool Analysis Laboratory has been established at Poona to study the variability of the different attributes of wool fibres and to select stock on the basis of the quality of fleeces of individual sheep Schemes for supplying pedigreed and tested rams to the cultivators and shepherds are also working in the rural areas under the Post-War Reconstruction Programme of the different States.

DAIRYING

India is still far behind other countries in the matter of dairy industry, although many of the State Governments have now been taking keen interest in its development The main difficulty is the low milk produtcivity of the Indian dairy animal, which has to be improved by systematic and scientific methods of breeding, feeding and management. Factors such as the

climatic conditions and the vastness of the country have, no doubt, been obstacles but, unless the individual dairy animal is improved and arrangements made to dispose of the milk economically, it would not be possible to put the dairy industry on sound footing.

Most of the States have now appointed special Dairy Development Officers for dealing with the problems effectively and, in the State of Bombay, Government have been considering plans to improve dairying on co-operative lines as well as through private enterprise For this the State has been divided into zones such as (i) the city areas, that is the areas within 30 to 40 miles radius of each town where milk will be produced on co-operative lines and supplied to cities, (ii) concentrated cattle breeding and milk producing areas where there are natural facilities for raising the dairy stock economically and where milk produced can be converted into products through co-operative creameries, and (iii) the remaining areas where demands of milk would be met by producing milk locally.

If this is done it would be possible to breed more and better dairy animals in the villages and to supply milk to towns more efficiently and at cheaper rates.

In order to relieve the congestion of dairy cattle in Bombay City, Government of Bombay have also established a very large milk colony at AREY near Bombay where about 10,000 animals would be housed under the most modern conditions and milk supplied to Bombay City after pasteurization, etc Bombay Government have also sanctioned a scheme administered by the Dairy Development Officer to establish large dairies in the other cities of the State through private agencies by providing loans of Rs. 50,000 in each case.

The different Agricultural Colleges have been imparting instruction in Dairy Husbandry They have been in many instances carrying out research in Dairy Science, although much of this work is being done at the Indian Dairy Research Institute at Bangalore This Institute, in addition to research work, also trains students for Indian Dairy Diploma Course and a post-graduate course in Animal Husbandry and Dairying.

There is not a big market in India for western dairy products, such as cream, butter, cheese, etc, although their demand is constantly growing. In the absence of more milk, however, and the small units of dairy farming, the Indian peasant manufactures small lots of 'Desi' butter, Dehi, Ghee, etc, purely as a cottage industry.

ANIMAL DISEASES

Details of the steps taken and progress made in the control of disease and improvement of stock are given in a biennial review of animal husbandry in India.

The control of contagious diseases of live-stock is carried out by the Civil Veterinary Departments in the States The staffs of these departments are, for the most part, recruited from among the graduates of the Veterinary Colleges of which there are six in India, one each at Patna, Calcutta, Bombay, Muther (U P), Hyderabad (Deccan), and Madras One more college is proposed to be opened at Jubbulpore in the Madhya Pradesh in India Many of the colleges which have now been affiliated to Universities impart training up to the graduate standard, as against licentiate training which they have imparted till recently The chief research centre is the Indian Veterinary Research Institute at Mukteswar in Uttar Pradesh and its branch at Izatnagar, near Bareilly. This institute is maintained by the Government of India and has recently been considerably expanded, the latest additions being a poultry research station and a nutrition institute and genetics section A certain amount of research is also conducted at the State Colleges

In addition to research, the Indian Veterinary Research Institute also manufactures large quantities of sera and vaccines for the use of the State Departments in their fight against disease and until recently was the only manufacturing centre for these products Serum institutes have, however, been opened in recent years at Madras and Bangalore, mainly for the manufacture of biological products for the use of the Madras and Mysore Civil Veterinary Departments respectively. Many States are now opening their own vaccine and serum centres In Bombay State a Serum Institute is in the course of being set up

The chief diseases that the Civil Veterinary Departments have to deal with are glanders and surra in equines, and rinderpest, foot and mouth disease, hæmorrhagic septicæmia, black quarter and anthrax in ruminants while tuberculosis, Johne's disease and contagious abortion are assuming greater importance than in the past. Glanders and surra are both scheduled diseases under the Glanders and Fracy Act Glanders is incurable but surra can now be successfully treated with Antrypal This disease (surra) also affects camels, cattle and dogs and in recent years its importance as a bovine disease has been more widely recognised

Of the diseases of ruminants mentioned, all, with the exception of foot and mouth disease, can now be controlled either by the inoculation of protective sera or by vaccination

The successful manufacture of anthrax "spore" vaccine at Mukteswar is another advance of great importance in the fight against live-stock disease

Indian poultry are also subject to several contagious diseases. The dreaded "Ranikhet" disease is fairly wide-spread and its ravages have seriously interfered with the poultry industry. A chick-passaged vaccine has now been developed at the Indian Veterinary Research Institute and trials conducted in the field have been very encouraging Fowl pox and fowl cholera vaccines are available for the protection of poultry against those diseases.

India is protected from foreign infection by the application of the Live-stock Importation Act at all ports at which the landing of animals is permitted

In addition to their duties in connection with disease control, the Civil Veterinary Departments also conduct the treatment of animals in hospitals and dispensaries The institutions are for the most part maintained by Local Boards with financial assistance from Government, the professional staff usually being provided by Government In most State the Veterinary Dispensaries are now being taken over by Government

The statistics given in the following statements are the latest available.

AREA CULTIVATED AND UNCULTIVATED IN EACH STATE.

(Thousand Acres)

States	NET AREA (According to village papers)		
	1944-45	1945-46	1946-47
Ajmer-Merwara	1,561	1,561	1,561
Assam	33,462*	33,462*	33,462*

IMPROVEMENT OF AGRICULTURAL MARKETING

IN view of the importance of agricultural marketing as an aid to the general economic recovery of the country, the Government of India decided to give effect to the recommendations made by the Royal Commission on Agriculture and generally endorsed by the Central Banking Enquiry Committee regarding marketing surveys After consultation with State Governments, it was decided that the first step should be the appointment of a highly qualified and experienced marketing expert with practical knowledge of agricultural marketing in other countries

Directorate—In accordance with this decision, the office of the Agricultural Marketing Adviser to the Government of India (since designated as Directorate of Marketing and Inspection) was constituted with effect from 1st January, 1935, at Delhi, with Mr A M Livingstone as the first Agricultural Marketing Adviser After more than six years of useful activity in India, he reverted in 1941 to the Ministry of Agriculture of the United Kingdom Government The present incumbent of the post is Dr T G Shirname, B Ag , Ph D (Wales), F S S (Lond), F R E. Econ S

The Agricultural Marketing Adviser to the Government of India is assisted by a Deputy and this post is at present held by Dr B C Sen, D Sc The technical gazetted staff consists of an Agricultural Marketing Adviser, a Deputy Agricultural Marketing Adviser, 3 Senior Marketing Officers, 3 Marketing Officers, 1 Supervising Officer (Grading Stations) and 15 Assistant Marketing Officers In addition, the Agricultural Marketing Adviser is assisted, in quality control and inspection work for internal and for export trade under the Agricultural Produce (Grading and Marking) Act, 1937, by 2 Chief Inspectors, 1 Senior Inspector, 27 Inspectors, and 1 Chief Chemist

With the help of suitable subsidies from the Indian Council of Agricultural Research, the State Governments established similar organisations in their respective areas and have, in some cases, further added to their staffs to meet the growing demand for developmental work of a practical nature

The subsidies have however been progressively reduced in recent years and entirely suspended from 1949 , but realising the advantages that have accrued to the State economy as a result of having adequate marketing organisations, some States like West Bengal, Bombay, Madras, Punjab, Bihar, Hyderabad and Mysore have already made these organisations permanent With the setting up of marketing organisations at the Centre and in the provinces in 1935, certain leading Indian States also co-operated by appointing full-time officers in their States and over 200 States nominated officers to deal with marketing questions In Provinces and States which had no Senior Marketing Officers, the Director of Agriculture supervised the work of the marketing section

The Central Marketing Staff also undertook survey work in a large number of States which did not have staffs of their own They also advised and continued to advise and assist the local marketing staffs in carrying out their work

On account of the recent political changes in India, nearly all the former smaller States have either merged themselves with the neighbouring province or formed into Unions In the case of provinces, *e.g* Orissa, where the area thus merged is quite appreciable, additional marketing staff has been provided The Governments of the various Unions have also either already appointed or are considering the question of appointing suitable marketing staff

MARKETING SURVEYS

During the existence of this Directorate for over 15 years, marketing surveys have been carried out on an All-India basis and 59 reports on various commodities and subjects have so far been published The more important of these are on wheat, rice, potatoes, gram, barley, grapes, bananas, citrus fruits, linseed, groundnuts, cashewnuts, lac, sugar, coconuts, tobacco, milk, fish, cattle, hides, skins, wool and hair, sheep and goats, eggs, coffee, castor seed, co-operative marketing, fairs, markets and produce exchanges ghee and other milk products, arecanuts, stone and small fruit and cardamom "A Handbook on the quality of Indian Wool" which is intended to serve as a guide to wool trade and persons interested in Wool, a "Preliminary Guide to Indian Fish; Fisheries and Methods of Fishing and Curing" and a supplement to the wheat report have also been published The reports on rapeseed mustard, and sann hemp have also been printed and are (at the time of writing) awaiting release for sale Revised editions of fish, milk and castorseed and the Preliminary Fish Guide are in advanced stages of printing The reports on some other commodities like maize, millets, sesamum and nigerseed, meat, poultry, mangoes, pulses, fibres and chillies, and a bulletin on agricultural produce exchanges are in different stages of preparation The Marketing Officers Conference held in 1948 recommended that having regard to the necessity of devoting more time and energy for undertaking and executing actual marketing improvement work, the preparation of marketing survey reports should be slowed down No fresh marketing surveys are to be undertaken at present and attention is to be given only to those reports which are under preparation and the work on which has remained in abeyance

During the year 1943, at the instance of the Government of India, rapid marketing surveys were also conducted in respect of (i) certain English vegetables (peas, beans, cabbage, cauliflower, tomatoes and carrots) and certain important pulses , (ii) bones and bonemeals , and (iii) India's requirements of agricultural implements and machinery and relevant reports were submitted to Government In 1944, the Directorate similarly carried out a rapid survey of milk production and distribution in Delhi Province in connection with a scheme for the supply of milk to Government servants in Delhi and New Delhi and submitted the report to Government

Hitherto, the All-India marketing survey reports have dealt with the problem as it related to the entire undivided India In fact, the earlier reports had included Burma as well With the partition of the country all these reports have to be revised and brought up-to-date for the Indian Union To begin with, the revision of the reports on rice and groundnuts is in progress and material therefor is being collected The reports on milk and fish have already been revised and are in the press It is also proposed to revise the report on hides and cattle

The marketing survey reports so far published and those which are in the press are very exhaustive and detailed For the convenience of the general public and administrators, therefore arrangements have been made to prepare small and handy brochures summarising the principal features of marketing of the various commodities Two such brochures on fish, and wool were published in 1948 and another two on milk and isubgol in March 1949 Similar brochures on agricultural produce exchanges and kapok ghee sugar lac, hides, skins, are under preparation

The main survey reports are quite bulky and would not interest a layman In order therefore to make the survey reports intelligible to the public at large, abridged editions in English of a number of reports have been issued Translations of these editions in various Indian languages have also been published in the case of certain reports like wheat, linseed and eggs The translation of the abridged reports on co-operative marketing, potatoes, rice, groundnuts, and bananas has been completed but the reports have not yet been published An abridged edition of the milk report in Hindi was in the press, and that on rapeseed and mustard was under preparation.

Storage and Transport—A report on cold storage and transport of perishable produce in Delhi Province was published in 1937 With a view to studying the commercial possibilities of cold storage transport of perishable products like fruits, etc , certain refrigerated transport trials were conducted during 1940-41 on two N W R cold storage wagons All-India survey work on cold storage was also carried out in part during that period In view, however, of the recent transport difficulties and the consequent shortage of wagons, the experiment and survey on cold storage has had to be postponed for the present A separate Directorate of Storage and Plant Protection has been set up by the Ministry of Agriculture to take up immediately on more intensive scale work on ordinary and cold storage construction and refrigerated transport.

GRADING AND MARKING

In discussing steps which might be taken to improve the general level of quality, the Royal Commission thought that organised trade associations in India could give great assistance in applying effective pressure to secure improved quality from the producers This view was fully borne out by the preliminary marketing surveys and two general lines of action were decided upon first, the physical grading and packing of commodities such as fruit, eggs, etc , on the basis of statutory standards and, secondly, the standardisation of contract terms for staples such as cereals and oilseeds The former involved legislation and the Agricultural Produce (Grading and Marking) Act, 1937, was passed in February 1937, for defining standards of quality and methods of marking in respect of prescribed grade designations applied to schedule products

As a result of consultation with State governments and representative trade and manufacturing interests, further commodities were added to the schedule to the Act, which now includes fruit, vegetables, eggs, dairy produce, tobacco, coffee, hides and skins, fruit products, *atta*, oilseeds, vegetable oils (including hydrogenated oils and vegetable fats), cotton, rice, lac, wheat, sann hemp, sugar-cane gur (jaggery), myrobalans, *bura*, wool and goat hair The grading and marking rules in respect of most of these commodities have been duly prepared and notified Tentative grade specifications and rules for several varieties of rice, fruit, cotton, etc have also been drawn Several States where this Act was *not* automatically applicable have adopted similar legislation and are applying the AGMARK to the commodities graded in their areas Arrangements are in hand for the preparation of grade specifications for ginger, curry powder and honey The Castor Oil Grading and Marking Rules and the Citruss Fruits Grading and Marking Rules were finally published in 1949 The latter replaced the Oranges Grading and Marking Rules, 1937. A schedule containing the specifications for coconut oil is being added to the Edible Oils Grading and Marking Rules, and it has been notified for eliciting the opinion of the trade.

The development of trading on the basis of the standard methods of grading is definitely "catching on" In the early stages experimental grading stations are operated on the basis of provisional standards , subsequently the process of grading and marking is done commercially on a voluntary basis by packers holding a Certificate of Authorisation issued by the Agricultural Marketing Adviser The authorised packer may be the primary producer or co operative society or an association of primary producers, village collectors and processors or the individual larger packer or manufacturer holding a key position in the process of distribution

It is hoped that this scheme will not only lead to the expansion of India's external trade in tobacco, but also enhance the reputation of the country for delivering goods in the international markets exactly in accordance with standards of grades On account of its success the scheme has been extended for a further period of five years from 1st April 1948

INSPECTION OF PRODUCE

In order to ensure adequate control of quality and proper grading, several persons in the States have been authorised by the Agricultural Marketing Adviser to inspect graded product and grading centres The co-operation of agricultural, veterinary and allied departments in all States was sought for in this connection and several of their officers were provided with the necessary authority to inspect grading stations and graded produce Arrangements have also been made for controlling the quality of graded produce by systematically analysing samples collected by the inspecting staff both from the packers' premises as well as from the markets Nearly 6,000 samples of ghee and quite a large number of edible oil samples were analysed at the Central Control Laboratory Kanpur during the calendar year 1949 Samples of graded butter and gur are also periodically analysed there by two assistant chemists appointed for the purpose

In the earlier stages, the analysis of atta samples was done by the Cerealist, Agricultural College, Lyallpur and to a limited extent by the Agricultural Chemist to the Government of Madhya Pradesh In 1943 an Atta Analyst was appointed to assist the Cerealist at Lyallpur in this work A Rice Analyst was also added to the headquarter staff and the entire analytical work on rice samples was made over to him Since, however, these two commodities are now rationed and are not graded, no work in this connection is being done For the purpose of keeping a vigilant watch on the quality of Agmark eggs put on the Delhi market, an Egg Grading Demonstrator was appointed as a result of which the quality standards further improved But on account of scarcity of eggs and the imposition of controls by the local administration, grading of eggs could not be continued in Delhi and this useful activity had to be suspended After a lapse of two years, however, the grading of eggs was revived in 1948

The exercise of quality control by examination of samples at these laboratories naturally involves a certain amount of unavoidable expenditure This is partly offset by the sale of Agmark labels to authorised packers. It was, however, observed that the Agricultural Produce (Grading and Marking) Act, 1937, under which such recoveries were being made, did not permit the levy of any further charges than what the labels, etc , were costing to the Government In order, therefore, that a portion, if not the whole, of the inspection cost could be recovered from the packers who were the chief beneficiaries from the grading scheme, the Act was amended about the middle of 1943 so as to permit recoveries on labels for this purpose as well as for arranging any special publicity with regard to particular commodities In the early stages, before the grading of a particular commodity has passed the experimental stage and proved its merit, it has not always been found possible to get the packers to agree to contribute in this way Steps are being taken, however, to make quality control as far as possible self-supporting, particularly with regard to commodities mainly produced for export, *e g* , sann hemp, or commodities like *ghee*, the grading of which has now become definitely established With the same view the Edible Oils Grading and Marking Rules were amended in October 1947 so as to provide for an enhanced rate of charges on Agmark labels and to provide for the application of these labels to bigger containers like drums and railway tank wagons

Expansion in the grading of ghee and the increasing general demand for graded ghee has also committed the Government to ensure that proper arrangements are instituted or existing ones stiffened in order to provide for an adequate check on the quality of the graded products Certain new measures have accordingly been instituted Firstly, vigorous tests have been introduced for examining the purity of ghee and ensuring its freedom from adulteration To detect unmistakably the commonest adulterant—vegetable fat - the Central Control Laboratory, Kanpur, where samples of ghee are analysed, has been equipped with Phytosteryl Acetate test apparatus and arrangements are under way to install this apparatus at the laboratories of the authorised packers It has been possible to introduce the test only at 3 laboratories so far on account of the difficulties in the procurement of necessary apparatus and chemicals required for the purpose of this test, but towards the end of 1949 most of the packers' laboratories had been equipped with the necessary apparatus Another test known as Baudouin test was introduced at the laboratories of the packers in 1947, according to which all raw ghee before being purchased for grading purposes is subjected to this test to ensure that it is free from vegetable products (Vanaspati) This test became possible because of the Government of India's decision to mix at least 5 per cent sesame oil in all hydrogenated vegetable fats The policy of appointing Government Chemists at the laboratories of authorised packers so as to ensure freedom from possible influences, initiated in 1945 has been working satisfactorily in Uttar Pradesh and Bihar, and it has been extended to Madhya Pradesh recently At a conference of ghee packers held on the 21st April, 1945 these measures were generally agreed to and the conference further agreed to a proportionate increase in the charges levied on the graded ghee so as to make the scheme self-supporting The work done under the Agmark Ghee Grading Scheme was reviewed at another Ghee Conference in 1948 which was unanimously of the opinion that the scheme deserved all possible encouragement as it symbolised an attempt to provide pure and superior quality of ghee to the public The Conference also emphasised the need for a more rigid enforcement of the grading laws so as to ensure the purity of Agmark ghee In order to recover the increased cost of more effective quality control measures in the case of ghee, the Conference further recommended the raising of charges for Agmark labels from 4 to 10 annas per maund This was done on 14th January 1949 A committee has also been appointed to examine the All-India and regional specifications prescribed for Agmark ghee

As a further measure of improving the existing quality control arrangements, it was also decided to divide the areas in which the ghee grading centres are located into zones, each zone being placed under the charge of an Inspector For this purpose four posts of Inspectors have been sanctioned The Inspectors exercise vigilant control on the quality of ghee in their respective areas by visiting the grading stations frequently and by collecting check samples of graded ghee from the premises of the packers and from the market, for examination The number of samples so collected has increased to such a point that a large percentage of the melts processed by the authorized packers is now being checksampled As a result of the various quality control measures the reputation of the purity of Agmark ghee is on the increase

Owing to the fact that Saurashtra contributed a large proportion to the ghee graded in the country it was found necessary to establish a Subsidiary Control Laboratory in Saurashtra for doing the immediate work connected with the analysis of samples The increasing popularity of Agmark products has brought to light ingenious efforts on the part of unscrupulous persons at illegally imitating and counterfeiting the Agmark labels and manipulating and adulterating the contents of graded products This in its turn, has demonstrated the need for strengthening the quality control measures still further In order to safeguard against the misuse of Agmark, proposals are under consideration for the enhancement of penalties provided for the violation of rules made under the Agricultural Produce (Grading and Marking)Act, 1937

STANDARD CONTRACT TERMS

The Standard Contract terms for wheat and linseed, were finally agreed to by the Grain and Oilseeds Conference, 1938, and similar terms for groundnuts were settled at an informal Conference held at Bombay in January 1939 A fairly satisfactory measure of agreement has been obtained regarding the adoption of the terms and while certain trading associations have started trading on this basis, unanimous support was not forthcoming, owing partly to the existence of an excessive number of small "futures" trading associations scattered all over the country and partly to the opposition of one or two important trading institutions and certain influential exporting and importing interests

With a view to bringing about uniformity in the different contract terms for wheat and linseed (including the Standard Contract) adopted by the trade, an informal Conference of the representatives of 3 important trade associations of Bombay was convened in February 1941 Besides suggesting certain changes in the tolerances and limits of rejection for damaged, slightly damaged and shrivelled grains, the Conference made 2 important recommendations, viz , that (1) 25 tons should be adopted as an alternative to 500 maunds as the minimum unit of transaction, and (2) that the Cwt should be adopted as an alternative to the maund as the unit of quotation In the case of linseed, the Conference further suggested that the cleaning charge under "Refraction" should be lowered These latter suggestions were circulated to the trade interests concerned and they have been accepted

In the case of wheat, it has been decided to amend the Standard Contract for wheat as finally agreed to in 1938 and thereby implement the abovementioned recommendations

The Standard Groundnut Contract was examined at the Bombay Conference, 1941, and several minor changes were suggested These were afterwards circulated to the trade interests concerned As regards Hand Picked Selected Groundnuts (kernels and nuts in shell), the Contract terms agreed to at a Conference held in 1940, were further revised and accepted by 2 leading trade associations of Bombay Three leading exporters of groundnuts in Madras adopted the Standard Groundnut Contract from the beginning of 1942 and they have reported that the Contract terms have been readily accepted both by the sellers and purchasing agents and that they worked very well during the period of adoption. The question of enforcing the standard contract terms for groundnuts by legislation was examined at a conference of groundnut interests convened at Bombay in August 1944 under the joint auspices of the Directorate of Marketing and Inspection and the Indian Council of Agricultural Research The conference agreed upon the various terms except in regard to driage and methods for estimating it, and recommended that the point be examined by the Oilseeds Committee of the Indian Council of Agricultural Research and till then the driage clause may be omitted It was also felt that the trade should adopt the standard contract terms voluntarily, compulsion being introduced only if the trade fail to do so The question of framing legislation to make the adoption of standard contract terms compulsory was referred to Provincial Governments The action taken by the provincial governments in this connection including consultations with the interests seems to have convinced the trade that the Government are determined to enforce the standard contracts on a compulsory basis, and this has brought a good deal of change in their attitude An informal Conference of the leading trade associations held in Bombay in July 1948 suggested that another Conference of an All-India character should be called to consider the possibilities of a general adoption of standard contracts by the trade associations on a voluntary basis. The matter is under further examination Steps have been taken to draw up standard contract terms for vegetable oils, in order to meet the wishes of the trade Standard contracts were

also prepared in respect of three vegetable oils *viz* groundnut oil, linseed oil and castor oil, and of milling copra The latter were considered by the Indian Central Coconut Committee and approved for adoption

Standard Containers—For most commodities the containers used in the sub-continent are very variable in size Owing to their fragile nature the contents are subject to appreciable damage which also varies in extent To overcome these difficulties, trials on a commercial scale were carried out in Madras, Travancore, old undivided Bengal, old undivided Punjab, the North-West Frontier Province, Assam, Rampur State, United Provinces, etc, with boxes of standard patterns for use in transit of eggs and fruit. Careful records were kept of the results for comparing the standard and the ordinary containers

In the Travancore experiment conducted during 1939 and 1940 covering about 300,000 eggs, the loss by damaged and broken eggs in the standard boxes was only 0 52 per cent as compared with damage and loss through pilferage of 1 77 per cent in the ordinary baskets As a result of the experiments almost the entire exports of eggs from Travancore to other markets like Madras were packed in the improved containers in 1941 This was facilitated by the grant of suitable concessions in freight rates by the railway companies In the Bengal trials the total wastage in the standard boxes was 0 5 per cent as compared with 2 5 per cent in the case of baskets The experiments conducted in Rampur revealed that in 3 out of 4 containers of eggs consigned to Nainital in August 1941, the contents were absolutely undamaged, while in the case of the fourth, the damage was only about 1 per cent Such reductions in the physical loss of produce are of small magnitude, but even a saving of 1 per cent on this score alone would represent an economy of something like Rs 5½ lakhs in the cost of distribution of the eggs put on the market These experiments, however, received a set-back during 1942 owing to transport difficulties created by the War

Regulation of Markets—The draft model bill for the regulation of markets circulated by the Agricultural Marketing Adviser in the year 1938 formed the basis for necessary legislation in Provinces and States Agricultural Produce Markets Acts are now in force in Punjab, Madras, Bombay, Madhya Pradesh, Mysore Hydrabad, and certain Districts of Madhya Bharat and Patiala And steps to introduce similar legislation are also being taken in other States where no legislation already exists

The Regulated Markets are, however, mostly in respect of particular commodities which are of local importance For instance, in Amraoti, in Madhya Pradesh the number of regulated markets for cotton was 39 in 1948, and the number of other agricultural markets was only 9 It is proposed to regulate within five years the remaining 37 important markets in the State In Madras, the Madras Commercial Crops Markets Act, 1933 is in operation, and is applicable to cotton markets in Tirupur, Adoni and Nandyal, to groundnuts at Cuddalore, and to tobacco markets in Guntur district The most rapid expansion in the organisation of regulated markets has been in Bombay (53) and Hyderabad In the Punjab practically all important markets numbering 59 have been regulated Hyderabad had 43 regulated markets in 1948 and some more though sanctioned had not started working Gwalior District has 36 In Mysore, a regulated market has been established at Tiptur at a cost of about Rs 28 lakhs for coconut, copra, oilseeds and jaggery This began functioning in October 1949 Another scheme costing Rs 4 lakhs was sanctioned for the establishment of a regulated market at Davangere It is further proposed to establish regulated markets for arecanuts, cotton, groundnuts, pulses and cardamoms A proposal to extend the Bombay Agricultural Produce Markets Act to Ajmer was under consideration In West Bengal, a bill on the subject has been prepared It is however, observed that due to abnormal conditions of reimposition of food control legislation relating to regulated markets is not making the desirable progress It is however gratifying to note that the necessity for organising regulated markets has been stressed by the Central Food Advisory Council and the attention of the States has been drawn to this important activity

Weights and Measures—The attempts at regulating the markets were fittingly strengthened and supplemented by the passage on the 28th March 1939, by the Central Government of the Standards of Weight Act, 1939 The Act came into force with effect from the 1st July 1942 and the Standards of Weights Rules were promulgated in 1942, and sets of standard weights were prepared by the Mint Master, Bombay and distributed to all provincial Governments

The need for the standardisation of weights and measures is recognised by all concerned and in several States, including Bombay, Bihar, Madhya Pradesh, Coorg, Orissa, Punjab, U P as also Hyderabad, Mysore and Patiala Union, necessary legislation has been passed for enforcing the use of standard weights and measures Subject to certain modifications the Orissa Weights and Measures Act 1943 was extended to Delhi State in 1949

As far as the actual use of standard weights and measures is concerned, a good deal remains to be done even in areas where the necessary legislation is in force The Marketing Officers Conference held in 1948 have however proposed that the question should be prosecuted with vigour and the State Marketing staff should be more intimately associated with the administration and enforcement of standard weights and measures The Indian Standard Institution has proposed the introduction of the metric system of weights and measures in the country

CO-OPERATIVE MARKETING

With a view to ensuring to the cultivator, a fair price for his produce, the necessity of developing the marketing of agricultural produce on co-operative lines has been stressed time and again in the survey reports published by this Directorate A separate survey on the subject has also been published but the actual progress made in the States in this direction is not very satisfactory It is proposed to take up with the State Governments the question of making special efforts for organising co-operative sale of agricultural produce In the meantime, an actual scheme of practical utility was prepared for organising the co-operative sale of vegetables in Delhi State and it is now under the consideration of the local administration

Warehouses—The establishment of licensed warehouses for agricultural produce in India is yet another direction in which the cultivator can be helped and the wastage of food on account of bad storage saved, but very little work on the subject has been done Only the States of Bombay, Madhya Pradesh, Travancore Cochin have passed the Warehouses Acts and a draft bill has been prepared in Madras

Futures Trading in Agricultural Produce—Futures exchanges, as organised in India, aim at providing facilities for hedging But there is a good deal of unnecessary speculation and many mal-practices In some markets there are two, three or more exchanges operating in the same commodity The financial position of many of the exchanges is not sound and a large number of operators on them have no genuine interest in the trade It is also known that the contracts and units of transactions prescribed by different associations vary widely and there is no co-ordination Since the operations of futures exchanges are not generally confined to any one particular State, the need for central legislation has been felt Under the new Constitution the regulation of markets is a Central subject

Broadcasting Market Quotations—The dissemination of reliable up to date and accurate market intelligence is an essential function of the marketing department The solution of the problems of food administration and price control would have been facilitated if a properly co ordinated All-India Market News Service had been in existence from the beginning Unfortunately, due mainly to lack of funds, the Central Agricultural Marketing Department had to rest content with a skeleton service of limited value Similarly, except in the case of a few States, *eg*, East Punjab, Madras, Bihar, and Mysore, where a fairly good market intelligence is run, the other States have either no arrangements or have inadequate arrangements

The Directorate of Marketing and Inspection had arranged for the broadcast of (1) the daily market rates of a number of commodities at Hapur market, (2) a weekly market report dealing with the fluctuations in important commodities like wheat, rice, oilseeds, pulses and several graded articles at various centres in India During the year 1943, at the instance of the Food Ministry arrangements were made to broadcast daily the market rates for coarse grains at a number of selected centres all over India, but this broadcast was discontinued after a short time The Directorate also issued a monthly review of prices and stocks relating to various commodities Consequent on the establishment of the Directorate of Economics and Statistics the market news service at the centre is now being attended to by that Directorate

Publicity for Agmark The necessity for publicity for any scheme of agricultural improvement should be obvious Efforts are accordingly being made to keep the public informed of the activities of the Directorate through the media of newspapers, exhibitions of special posters at railway stations and other suitable public places, and by putting up demonstration stalls at the various agricultural and industrial exhibitions in the States In these exhibitions, public demonstrations are given of the technique of grading by exhibiting illustrative maps, diagrams and charts relating to the production, supplies and prices and by sale of the actual graded commodities A brief pamphlet on the "Story of Agmark" has also been prepared for distribution to the public In the recent period, publicity of the above sort has however been modest as it was not considered desirable to increase the demand for Agmark products when it might not be possible to meet it due to scarcity conditions At the same time it was found necessary to arrange for special publicity if any section of the trade in a particular commodity wanted it and was prepared to contribute towards the cost The Agricultural Produce (Grading and Marking) Act, 1937, has therefore been suitably amended to recover such cost In this connection the Directorate's reorganised control, arrangements for graded ghee in Uttar Pradesh were extensively advertised in the more important newspapers in Uttar Pradesh, West Bengal and Delhi State A proposal for the preparation of an Agmark Ghee film was considered but could not be fulfilled on account of financial difficulties

The question of setting up departmental Agmark stalls was examined recently and it was considered necessary that their establishment and efficient running would be best facilitated only if the Agricultural Produce (Grading and Marking) Act, 1937, was suitably amended. Proposals for amending the Act to provide for this and also to provide for more stringent measures for quality control of graded produce are under consideration

QUALITY CONTROL OF EXPORTS

The Royal Commission on Agriculture and more recently the Indian Government Trade Commissioners abroad have pointed out repeatedly that the main obstacle in the way of attempts at pushing Indian agricultural products abroad was lack of standardisation in the quality and have stressed the need for an organised attempt to improve the quality of exported goods The Directorate of Marketing and Inspection has from the beginning paid close attention to this problem A scheme for the grading and marking of seedlac exported out of India was initiated in 1941 and during the period from July 1941 to January 1942, 2 consignments of graded seedlac weighing about 2,194 maunds were sent to the United States of America Though the report

on the first consignment was favourable, the experiment had to be abandoned due to the abnormal conditions consequent on the War

Complaints about uncertainties of quality of lac have been increasing and there has been since recently a tendency on the part of foreign users to go in for substitutes Proposals for regulating the quality of exports on the basis of standard Agmark grades are therefore under consideration A scheme for the standardizing of quality and regulating the marketing of lac in India was approved by the Indian Lac Cess Committee in July, 1949 The question of introducing the scheme is being considered In the meantime the question of revising the Lac Grading and Marking Rules was considered and general approval of the trade was secured for revising the grade specifications for seedlac and shellac The revised Rules have been notified for eliciting public opinion

In a country like India where the units of production are small and dispersed over a wide area, quality control on exports is the only method by which advantages of standardisation could be progressively filtered down right to the small producer. This question has therefore assumed importance An Inter-Ministerial meeting was held in the Ministry of Commerce in February 1949 which considered that priority should be given to the standardisation of several commodities, *e g*, wool, vegetable oils, lac, shellac, etc. The need for controlling the quality of export goods was also stressed by the Hon'ble Minister for Industry and Supply, and accordingly the question was examined in detail by a Special Committee of the Indian Standards Institution which was presided over by the Agricultural Marketing Adviser to the Government of India The Committee recommended that exports of important commodities should be checked and inspected by qualified inspectors for quality and machinery for doing so should be set up

Goat Hair, Wool—Sometime during 1943, contact was made with the Australian importers of goat skins and information was obtained with regard to their requirements of quality in Indian goat skins Similar enquiries were also addressed to the Trade Commissioners at New York and London Samples of goat hair collected from different parts of the country were sent to the Indian Government Trade Commissioner in Australia for being shown to buyers in that country It was found that while the Australian merchants were generally satisfied with Indian goat hair, they would require it in a specially dressed form if they were to take Indian goat hair on any large scale for commercial use A specimen of this dressed hair as used in Australia was obtained and shown to the trade interests in India in order to find out whether such dressing could be done as a matter of course before exporting hair from India The trade in India felt that such dressing was not possible in the absence of the necessary mechanical means and technical knowledge With great difficulty some more information was secured on the point and a consignment of samples of dressed hair was sent to Australia for evaluation The samples were greatly appreciated by the trade in that country As a result of this, tentative grade specifications for goat hair have been drawn up These have been generally approved by importers in foreign countries and the question of finalising them now in consultation with the trade in India is under consideration

During 1944 ten bales of cleaned and washed wool were collected by the Directorate from Ajmer and Jodhpur and sent to the Indian Government Trade Commissioner, New York, for purposes of evaluation by the Incorporated Carpet Manufacturers' Association, New York The quality of this wool sent was highly appreciated by the Association In view of this success a scheme for the grading of wool under the Agmark with a view to developing foreign markets and bringing about improvement in the local quality and for the appointment of the necessary Inspectorate staff is under consideration In order to ascertain the views of the trade in the matter a conference of the important wool traders in the country was convened in January, 1946, and as recommended by the Conference, an *ad hoc* wool committee was constituted by the Government of India in order to examine the question This Committee could not make much progress in the matter, as opinion on the question of grading was not unanimous

At the instance of this Directorate, wool and goat hair were included in the Schedule to the Agricultural Produce (Grading & Marking) Act, 1937, in August 1948 Tentative specifications for wool had been prepared a long time back These were referred to buyers abroad and approved by them The question of notifying them is under examination Steps have been taken to induce a few prominent exporters of wool for grading it before export The possibilities of establishing an auction market for wool at a convenient centre in India was examined with a view to establishing direct contact between exporters in India and foreign buyers Representative samples of wool were collected for the purpose of classifying the different types of wool produced in India and preparing Agmark specifications for each class A draft scheme for regulating the quality of exports of Indian wool was prepared This and the question of establishing an auction market were discussed at a meeting of wool merchants in October 1949 The trade opposed the introduction of grading of wool on a compulsory basis but agreed to undertake it voluntarily An *ad hoc* survey on the trade in pig bristles was completed.

Edible Nuts—Some time in 1942 the Directorate collected certain samples of edible nuts, such as groundnuts in shell, cashewnuts, almonds and apricot stones, and sent them to the Indian Government Trade Commissioner in Canada in order to find out whether there would be any possibility of their utilisation in Canada for the preparation of chocolates, etc The nuts were shown to the importers and were approved A consignment of similar samples of wool, seedlac, shellac, cashewnuts, peanuts, almonds and walnuts has been sent to the Indian Trade Commissioner in Canada with a view to exploring possibilities of development of trade in those commodities The samples were received with approval and satisfaction, but the practices of Indian exporters were unfavourably criticised, the more important of which are the lack of uniform standards and quality, continuity of supply and lack of proper inspection of produce before export The question of the development of the export trade in hand-picked selected groundnuts used for confectionery purposes was examined and steps are being taken to arrange exports on the basis of Agmark grades, especially to Canada where this is in special demand

Samples of different commodities were sent to the Imperial Institute, London, for exhibition purposes A few samples of Indian wool were also sent to the Indian Government Trade Commissioner in Australia and New Zealand in May, 1947 for exhibition at the Sydney Show. The samples were considered as 'wonderful collection of Indian wool varieties' and were retained by Sydney Technical College as a permanent collection

As a result of complaints received from the Indian High Commissioner in London regarding the quality of Indian curry powder and ginger exported to United Kingdom, the desirability of imposing some control on the quality of exports was considered With a view to including these commodities in the schedule to the Agricultural Produce (Grading and Marking) Act, 1937, and to draw up suitable grade specifications, representative samples were collected and analysed A survey on the marketing of this commodity is also in progress and as soon as the results thereof are known, the question of laying down standard grades and specifications will be taken up

Vegetable Oils—The Indian Oilseeds Committee resolved at its meeting in 1948 that all vegetable oils crushed in power mills should be compulsorily graded As a preliminary step, a scheme for drawing up Agmark specifications for vegetable oils was prepared A technical officer was appointed to examine and report on the facilities existing at present and prepare a scheme for setting up Government laboratories at port towns The report he submitted is under consideration

Agmark specifications for castor oil were drawn up and approved at an informal conference of the trade interests concerned in July 1948 They were subsequently notified in the Gazette A draft coconut oil Grading and Marking Rules have also been notified for eliciting public opinion

In order to safeguard the reputation in foreign markets of all kinds of agricultural produce exported out of the country, a comprehensive Bill styled the Agricultural Produce Exports (Quality Control) Bill to provide for legislation for the compulsory grading of all such produce was prepared by the Directorate of Marketing and Inspection and considered by the Government of India The question of its enactment has however been postponed for sometime, though arrangements for analysis of samples of vegetable oils, oil seeds, wool, skins, bristles, lac, shellac and kapok have been made before finalizing their grade specifications

The Government of India have appointed a Cotton Marketing Committee under the Chairmanship of Dr Punjabrao Deshmukh, M P. and with a senior officer of the Directorate as its secretary, to suggest ways and means of improving the marketing of cotton The Committee has started working

Close liaison is maintained by this Directorate with the Indian Standards Institution in the matter of standardisation of agricultural products. Under the Rules and Regulations of the Institution, the standards laid down for agricultural products under the Agmark and the machinery for the quality control of those standards are to be recognised by the Institution The Agricultural Marketing Adviser is a member of the General Council and he and other officers of this Directorate are members of various committees of the Institution

Apart from the activities detailed above, the Central Marketing Staff has to deal with numerous enquiries of a general nature The marketing staffs in several provinces are also closely connected with price control activities and are required to supply useful information regarding the availability of several agricultural commodities in India for the use of the Defence Services The Central Marketing Staff are frequently called upon to supply information of various commodities to the Ministries of Food and Industry and Supply of the Government of India The Directorate also offered material assistance to the Defence Services by arranging supplies of various foodstuffs to the military For instance several thousand maunds of Agmark ghee and butter were purchased by the Ministry of Industry and Supply for the Defence Services during the last few years Graded eggs in large numbers were supplied to the Army, Internment camps, hospitals, etc

The above is only a brief sketch of the activities of the marketing staff The detailed accounts, given in the published annual reports of the Agricultural Marketing Adviser, show that the scheme has recorded steady progress in spite of several difficulties such as lack of adequate funds and personnel and reluctance and hesitation on the part of the trade to follow new methods

Early in 1945 the Government of India set up a Marketing Sub-Committee of the Policy Committee No 5 on Agriculture, Forestry and Fisheries to examine the entire question of the improvement of agricultural marketing in India, the maintenance of standards of purity and quality, the establishment of warehouses and the organisation and functions of the Central and Provincial Marketing Departments The Sub-Committee have submitted their Report to the Government of India which is at present under their consideration The future policy with regard to agricultural marketing will largely depend on the decisions taken by the Government of India on the various recommendations contained therein.

INDIAN COUNCIL OF AGRICULTURAL RESEARCH

IN Chapter III of their Report, the Royal Commission on Agriculture in India held that agricultural research in India was still in its infancy, that however efficient the organisation built up for demonstration and propaganda it could not achieve a full measure of success unless it was based on research, that lack of co-ordination in agricultural research had prejudicially affected progress, that there was a wide field open for the co-operation of the Central Government and of State Governments in regard to agricultural research, and that it was the duty of the Government of Indian in the discharge of the ultimate responsibility for the welfare of the vast agricultural population of the country, to advance research in every way possible without encroaching upon the functions of State Governments in that sphere

The Royal Commission, after discussing the possible methods by which closer contact might be established between scientific investigators working in the Institutions under the Central Government and investigators employed under the State Governments, recommended the establishment of an Imperial Council of Agricultural Research to which the Imperial Agricultural Research Institutions and the State Agricultural Research Institutions would stand in exactly the same relation

In the now defunct Department of Education, Health and Lands Resolution No 826-Agr, dated 23rd May, 1929, the Government of India decided that the Imperial Council of Agricultural Research should be registered under the Registration of Societies Act, XXI of 1860, and the Council was accordingly registered as a Society under the provisions of that Act The name of the Council has since been changed to " Indian Council of Agricultural Research ".

The Royal Commission on Agriculture envisaged that the primary function of the Council should be to promote, guide and co-ordinate agricultural, including veterinary research in the country and to link it with agricultural research in other parts of the commonwealth and in foreign countries It should make arrangements for the training of research workers, should act as a clearing house of information in regard not only to research but also to agricultural and veterinary matters generally and should take over the publication work which was being carried out by the then Imperial Agricultural Department In the light of the experience gained it was subsequently decided that the Council's functions should be enlarged to include work connected with the application of the results of research to field practice and the Council's function is now to undertake, aid, promote and co-ordinate agricultural and animal husbandry education, research and its application in practice, development and marketing in India by all means calculated to increase the scientific knowledge of the subjects and to secure its adoption in everyday practice.

The Commission recommended that the Council should be entrusted with the administration of a non-lapsing fund of Rs 50 lakhs to which additions should be made from time to time as financial conditions permitted The Government of India decided that an initial lump grant supplemented by a fixed minimum grant annually should be made to the Council They decided that the initial grant should be Rs 25 lakhs of which Rs 15 lakhs would be provided in the budget for 1929 30 and from the next financial year onward the annual recurring grant would be fixed at Rs 7 25 lakhs per annum of which Rs 5 lakhs would be devoted to the furtherance of the scientific objects of the Council and the remaining Rs 2 25 lakhs to the cost of its staff and Secretariat. In 1940 the Agricultural Produce Cess Act was passed under which a cess of ½ per cent *ad valorem* on certain commodities was levied for the purpose of providing funds for carrying out the general research programme of the Council The proceeds of the cess were expected to yield in a normal year about Rs. 14 lakhs

As regards the constitution of the Council, the Government of India decided that the Council should be divided into two parts, a Governing Body which would have the management of all the affairs and funds of the Council subject to certain limitations and an Advisory Board the functions of which would be to examine all proposals in connection with the scientific objects of the Council which might be submitted to the Governing Body

The Governing Body of the Council now consists of the Hon'ble Minister in-charge of the portfolio of Agriculture in the Government of India who is ex-officio Chairman, the Vice-Chairman, the Hon'ble Ministers in-charge of Agriculture in the States (excluding the Chief Commissioners' States) three representatives by the Parliament of the Indian Union two representatives of the business community in India, two members of the Advisory Board of the Council, the Secretary to the Government of India in the Ministry of Agriculture and such other persons as the Hon'ble Minister for Agriculture, Government of India may from time to time appoint

The Advisory Board consists of the Vice-Chairman of the Society the Agricultural and Animal Husbandry Commissioners with the Union Government the Directors of the I A R I and I V R I and the Indian Institute of Science, Bangalore, the Director of Agriculture and the Director of Veterinary Services of the States (excluding the Chief Commissioners' States), a representative of the Chief Commissioners' States, a representative of the Forest Research Institute, a representative of the Co-operative movement, a representative of the Indian Research Fund Association, four representatives of Indian Universities, a representative of the Indian Tea Association and the United Planters' Association of Southern India, a representative each of All-India Commodity Committees, persons not exceeding five in number nominated as members on the ground of scientific knowledge or other special qualifications and such other persons as the Hon'ble Minister for Agriculture, Government of India, may from time to time appoint

Vice-Chairman Sardar Bahadur Datar Singh

Indian Institute of Sugar Technology, Kanpur

The Indian Sugar Committee of 1920 recommended *inter alia* the establishment of a central research institute as necessary for the proper development of the sugar industry

The recommendation of the Sugar Committee was accepted and the Imperial Institute of Sugar Technology as it was then called was started at Kanpur by the Government of India on 1st October, 1936, to carry out research in different branches of sugar technology and to help the Indian sugar industry in various ways by rendering technical assistance to sugar factories, by training students in all branches of sugar technology, by providing short term courses to technical men already engaged in the industry, etc On the 1st March, 1945, the control of the Institute passed to the Indian Central Sugarcane Committee, formed by a resolution of the Governor General in Council and registered under the Registration of Societies Act XXI of 1860. The Committee is constituted by members from every section of the Industry, *viz*, cane growers, sugar manufacturers, sugar merchants and sugar technologists.

The Institute is financed by grants from the Sugar Excise Fund.

The work of the Institute is organised under two broad heads, (*a*) office work including general administration and (*b*) research and teaching The former includes the technical, the statistical and general sections, the latter consists of three main sections—Sugar Technology, Sugar Engineering and Sugar Chemistry, the last comprising Sugar Chemistry, Organic Chemistry, Physical Chemistry and Bio-Chemistry The laboratories are well equipped with instruments required for research on sugar and allied products Attached to the Institute are the Experimental Sugar Factory, Workshop, Sugar Engineering and Chemical Engineering Laboratories, Sugar Research and Testing Station, (Bihar) Bureau of Sugar Standards and the research scheme for the manufacture of sugar candy in India

The functions of the Research and Testing Station at Bihar are (i) testing of existing plants and processes in use in the open pan industry for the manufacture of gur and Khandsari sugar, (ii) undertaking research work for introducing improvements in the plants and processes, (iii) giving demonstration of new machines and improved processes In this connection it may be mentioned that the Indian Central Sugarcane Committee have since 1945 constituted a gur and khandsari sub-committee for advising them on the lines of work to be carried out at the Research Station

The functions of the Sugar Candy Research Scheme at Ravalgaon are (i) testing the indigenous methods of candy manufacture, (ii) collecting technical data, (iii) initiating researches for introducing new and improved plants and processes for the manufacture of sugar candy with a view to developing it as a subsidiary industry to the modern vacuum pan industry thereby increasing consumption of sugar in India and (iv) giving demonstration of new machines and improved processes Facilities also exist at the centre for imparting training in the manufacture of candy by the improved process Besides the above the Indian Central Sugarcane Committee have initiated two new schemes which are functioning at the Institute (I) Scheme for the survey of excessive fuel consumption in Indian sugar factories (II) Scheme for extension lectures The object of the former scheme is to carry out a survey of the causes of excessive fuel consumption in sugar factories and to make them self-sufficient on bagasse fuel only, while under the latter scheme, eminent persons are invited each year for delivering a series of two to four lectures on subjects relating to sugar and allied industries

TECHNICAL ASSISTANCE

Apart from the technical work under the Sugar Production Rules (1935) technical assistance and advice on various aspects of the sugar industry are given by the Institute to sugar factories, private parties and Governments State The Institute endeavours to meet all technical requirements of factories so far as its staff and equipment permit The more important types of work which the Institute undertakes for rendering technical assistance to sugar factories are (*a*) advice to promoters of new factories, (*b*) advice relating to extensions and alterations of existing factories, (*c*) advice relating to improvements in working of plant, (*d*) advice relating to improvements in curing process (*e*) technical control of manufacturing operations, (*f*) advice regarding working expenses and cost of production, (*g*) investigations into special problems and (*h*) analytical work

The Indian Sugar Trade Information Service run by the Director issues a daily and a weekly sugar market Bulletin, which contains useful

information regarding Sugar, Gur, and Khandsari market rates wholesale and retail—and stocks and despatches—for principal sugar markets in the Indian Union Indian and foreign sugar news Official notifications are also given therein The annual subscription for these services are Rs 180/- for daily and Rs 75/- for weekly Bulletins

The scope of the work of the Institute was brought to the notice of all persons interested in the sugar industry through a booklet entitled *Functions and Activities* In order to establish and maintain contact with the sugar factories and enable them to keep in touch with research work carried out at the Institute and developments elsewhere, arrangements have been made for issuing brief summaries on matters of technical interest under the title of *Sugar . Notes* Description and results of various experimental and research work carried out in the Institute are being published annually in the publication entitled *Annual Report of the Indian Institute of Sugar Technology*

The Institute trains a limited number of men every year and gives them a thorough and up-to-date training For most courses, a period of factory training is an essential condition for the grant of diploma or certificate There are six regular courses of training for students desiring to qualify for technical posts in sugar factories, viz , Fellowship and Associateship courses in Sugar Technology and in Sugar Engineering, the Sugar Engineering Certificate Course, and the Sugar Boilers Certificate Course Since the year 1948 the Institute has been recognized by the Agra University for purposes of research work for the Ph D Degree of the University in Chemistry Facilities are also provided for men already engaged in the industry to have the necessary technical training during the off-season provided they have the requisite educational qualifications. The off-season courses are (*a*) Chemical Control, (*b*) Bacteriology, (*c*) Pan Boiling, (*d*) Fuel and Boiler Control, (*e*) Statistical Methods (for research students), (*f*) Statistics (for sugar students), (*g*) Milling Plant Operation and Control

In order to afford adequate facilities to the sugar factories in India for selecting properly qualified staff and at the same time to reduce unemployment among the educated technical workers in the sugar industry, the Institute maintains an Employment Bureau which collects authentic information about the qualifications and experience of persons seeking employment in the sugar industry and makes it available free of charge to factories on receipt of enquiries.

FOOD AND FAMINE

INDIA entered in 1950 the first of the two years at the end of which food imports are to cease but the beginning of the self-sufficiency era has been marked with great confusion It was decided to slash imports from the peak figure of 3 7 million tons in 1949 to 1 5 million tons and allocations to the deficit areas were accordingly severely reduced But no sooner did the State Ministers return from the allocation conference to their capitals than they issued statements disclaiming the cuts and making gloomy forebodings about the food situation if the quotas were not increased Neediest among the States was Madras for which 1949-50 was a particularly bad crop year with a severe cyclone sweeping the Andhra districts and drought in Tamilnad The Centre first made light of the demands of the deficit areas for more grain and then gradually statements were put out that the position would be re-examined and the needs of the States met

It was decided to increase the imports from 1.5 million tons to 2 million tons, partly to meet the States' demands and partly to meet the needs of a new wave of refugees which came from East Pakistan Fears were entertained whether in the end the 1950 imports would not approximate in quantity to the previous year's figure.

The confusion was worse in regard to the production of the different crops A new official policy was adumbrated of self-sufficiency not only in food but also in cotton and jute. The different State Governments planned to divert acreage from food to the two fibrous crops and the Centre promised them cereals to the extent of the loss involved in the diversion The Centre could meet the new demands only by importing more grain and the question arose as to what would happen to the no-food-imports-after-1951 policy

As for food crops, soon after the Prime Minister's self-sufficiency announcement early in 1949, a Food Commissioner was appointed at the Centre and corresponding offices were created in the States No new drive, however, became apparent, the schemes remained the same as before -reclamation, compost, irrigation and improved seeds Their working, too, showed no new effectiveness and on the whole the country stood where it was

Estimates of the country's food deficit vary from 7 per cent to 20 per cent. According to nutritional standards the deficit would appear to be about 35 per cent A population of 35 crores would, at 1 lb of cereals per head per day, need about 57 million tons per year To that should be added requirements of seed, allowance for wastage and insurance against failure of crops in the following year which would mean hat the total of cereals produced should be between 60 and 65 million tons But the average annual production in the last few years has been only about 40 million tons At present a rationed population of millions live only on 12 oz per adult per day and it is indeed a subject for investigation as to how many of the landless labourers and marginal farmers get even that much throughout the year

The history of India's "managed" food supply began during 1943 when Bombay pioneered food rationing

From Bombay managed distribution and procurement of food spread to other areas but gradually and in an irritatingly halting manner Food shortage must necessarily be tackled as a national problem with equal sharing of the available supplies but depressingly enough the picture is one of gross inequality Outside Bombay State there is no levy or monopoly system of procurement nor is there statutory rationing except in some big cities The result is that while the deficit areas have to subsist on a meagre ration of 12 oz per adult per day, surplus areas can consume without limit and even waste their food A Committee was appointed to report on the varying procurement and distribution systems in the States but it is doubtful whether the Centre will enforce a uniform plan even if such a one is recommended by the Committee.

Meanwhile propaganda for decontrol was let loose and that in spite of the memory of the disastrous experiment of 1948 being still fresh in the public mind Towards the end of 1947 food was decontrolled and the result was a precipitous rise in food prices Circumstances forced Government to re-impose controls in September, 1948

The surplus States are Madhya Pradesh, Orissa and Assam , those that can be considered self-sufficient are U P and Punjab the deficit States are Bombay, Madras, Mysore, Travancore-Cochin, Saurashtra and West Bengal.

FAMINE

Food production in the sub-continent has through the ages periodically failed to meet the needs of the people. The sub-continent's history has consequently been punctuated by disastrous famines, the worst of which have killed millions of people and left wide tracts of country desolate Famines may be said to arise when large groups of people fail to produce enough food for their own needs and lack the means of obtaining it from other sources. Such conditions may be precipitated either by successive failures of the monsoon, on which four-fifths of the country's agriculture depends even today; by natural disasters such as floods or earthquakes or by human agencies such as war and grain market speculation

References to famine are found early in the sub-continent's history Little is known of these early disasters , details are based on tradition and until late in the eighteenth century such visitations were regarded as natural calamities which man was powerless to prevent. The first definite outbreak known to historians was in 650 A D when famine raged throughout the country There was another series of famine in 941, 1022, and 1033, when whole provinces were depopulated and men were driven to cannibalism, according to tradition The years 1148-1159 saw almost continuous famine. In 1344 famine was rampant in Upper India The Emperor Muhammad Tughlak was unable to obtain necessaries for his own household and ordered the evacuation of Delhi's population to Deogiri (modern Daulatabad) in the Deccan From 1396-1407 the Durga Devi famine devastated the Deccan and so reduced the population that land went out of cultivation for years. The years 1595-98 saw famine in the north.

The Gujarat famine, one of the first about which precise details have survived, broke out in 1630 Towns and districts were stripped of inhabitants In 1631 a Dutch merchant reported that only 11 of the 260 families at Swally had survived

Between 1660 and 1750 there were 14 major famines about which little is known

The causes of these famines were those already stated Practically the whole of the food production was dependent on the vagaries of the monsoon Internal wars were common and often coupled with them were widespread pillage, trade dislocation and general devastation The fast communications of the nineteenth and twentieth centuries were not available for relief to be brought from outside the famine area Between 1838 and 1899 there were eight major disasters

THE FAMINE CODES

The first great Famine Commission which sat under the presidency of Sir Richard Strachey, elaborated the Famine Codes, which, amended to meet later experience, form the basis of the famine relief system today. They recommended (1) that employment should be given on the relief works to the able-bodied at a wage sufficient for support, on the condition of performing a suitable task , and (2) that gratuitous relief should be given in their villages or in poor houses to those who are unable to work They recommended that the food supply should be left to private agency, except where that was unequal to the demands upon it. They advised that the land-owning classes should be assisted by loans, and by general suspensions of revenue in proportion to the crop failure.

Provincial codes were drawn up, and were tested by the famine of 1896-97 The experiences of this famine were examined by a Commission under Sir James Lyall, which reported that the success attained in saving life and the relief of distress was greater than had ever been recorded in famines, comparable with it in severity, and that the expense was moderate But before the Local Governments had been given time to digest the proposals of this Commission, or the people to recover from the shock, the great famine of 1899-1900 began

This famine affected 475,000 square miles with a population of 59,500,000.

1943 BENGAL FAMINE

Localised famine conditions have recurred fairly frequently since 1901, but until 1943 it seemed that the procedure laid down by the Famine Codes was capable of dealing with all eventualities Unfortunately, conditions in which the difficulty of obtaining relief supplies would be so great that the Codes' provisions could not be filled, were not envisaged This state of affairs, however, arose in Bengal early in 1943 The province was estimated to be 83 per cent. self-sufficient for food and before 1942 imported most of the balance of its needs from Burma The cutting off of this supply was followed by a series of natural disasters, including the Midnapore hurricane which late in 1942 devastated a wide area and was estimated to have destroyed 1,500,000 tons of rice During the monsoon of 1943, when famine was already present in Bengal, floods in the Damodar river held up relief supplies from U P and Punjab at a critical period Public nervousness over the fall of Burma, the denial policy, by which boats and the larger stocks of rice were removed from East Bengal to prevent their use by the Japanese, and the general shortage of food in most consuming centres in the country were all contributory causes of the famine When shortages became apparent in Bengal their effect was intensified by speculation on a most outrageous scale A few areas such as Midnapore, were short of food from natural causes Most of the other famine-stricken districts suffered because rice prices were far beyond the reach of the people, because speculators had drained the area of stocks, or because the available grain was hoarded by its owners

According to the Famine Codes, assistance should have been provided from outside In 1943 the problem was two-fold Very large supplies were not readily available elsewhere owing to the general dislocation of Indian grain markets, the movement of supplies into Bengal was difficult owing to the congested state of the railways A fairly steady stream of grain did, however, reach Calcutta from July onwards but the Bengal Government did not evolve a satisfactory plan of distribution Many famine areas in the province were virtually without relief until the army assisted the civil authority to organise food distribution and medical relief in November, 1943 This relief, coupled with a record rice crop, which became available in January-February, 1944, overcame the immediate crisis

Famine conditions were accompanied by epidemics of cholera, malaria, smallpox and dysentery which probably caused as many deaths as starvation itself

More recently a most disturbing circumstance has been the recurring failure of the monsoon in the south in the past four years This has affected not only production of crops on dry land but also of irrigated crops because of the low level of water in the reservoirs The year witnessed an unprecedented drying up of the Krishnarajasagar reservoir in Mysore This has an optimum level of 124 feet and it went down to less than 7 feet The consequences to irrigation were grave.

Soil erosion, too, continues unabated Thousands of acres pass every year from fertile into marginal land and from marginal into waste. Deforestation is unchecked and it has been observed that as a result of large quantities of silt being washed down the eroded hill sides, the beds of some of the irrigation reservoirs have been rising with a consequent lowering of their capacity New dams are being built but the increase in irrigation facilities will have little effect so long as the basic problems of deforestation and soil erosion are not adequately managed.

FISHERIES

THE fisheries of India potentially rich as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing population of the great cities within reach of the seaboard.

The caste system, however, exerts a blighting influence on progress Fishing and fish trade are universally relegated to 'low' caste men who alike from their want of education, the isolation caused by their work and caste and their extreme conservatism, are among the most ignorant, suspicious and prejudiced of the population extremely averse to changing the methods of their forefathers and almost universally without the financial resources necessary for the adoption of new methods, even when convinced of their value 'Higher' caste capitalists have hitherto fought shy of associating with the 'low' caste fishermen, and except in large operations on new lines, the capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

BOMBAY

The fisheries of Bombay are almost entirely concerned with the exploitation of the wealth of the sea Bombay is favoured with a coast line abounding in excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister States

The more important sea-fish in Bombay are pomfrets, sole and sea-perches, among which are included the valuable Jew-fishes (*Sciæna* spp) often attaining a very large size and notable as the chief source of "fish-maws" or "sounds," largely exported for eventual manufacture into isinglass

FISHING BOATS

The finest of the Bombay fishing boats are from the coast between Bassein and Surat These boats are beautifully constructed, attain a considerable size, and are capable of keeping in the sea for weeks together In the season the men fish principally off the Kutch and Saurashtra coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are let down for several hours and hauled at the turn of the tide The chief catches are bombil (Bombay duck), pomfrets and Jew-fishes The first named are dried in the sun after strung through the mouth upon lines stretched between upright posts

South of Bombay the fishermen of Ratnagiri and Rajapur make use of another and lighter class of fishing boat specially designed for use in drift-net fishing Fine hauls of bonito seer (a large form of mackerel) and allied fishes are often made during the season from September to January Later sharks and rays predominate For the latter specially large and powerful nets are employed For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how big their size is.

FRESHWATER FISHERIES

With a view to developing the freshwater fisheries of the State a survey of different sheets of water and their fish fauna was undertaken which revealed that although there were extensive irrigation reservoirs and tanks for commercial fish culture, there was hardly any indigenous fish suitable for the purpose.

Experiments on growing both indigenous and exotic varieties of fish in natural tanks and a study of their rate of growth, feeding and breeding habits, have revealed that selected varieties of carps occurring in the rivers of northern India fatten satisfactorily under local conditions and are most suitable for stocking ponds, lakes, etc. The experiments have shown that a suitable tank of about four acres in area can grow about 2,000 lb of fish and that the financial returns are most encouraging

The main difficulty, however, in undertaking stocking operations on a large scale is that fry and fingerlings of suitable carps have to be imported from such distant places as Patna, Calcutta, etc and consequently there is great uncertainty about the supplies The future of the freshwater fisheries in this state therefore, depends on whether a reliable source of supply can be established at hand In order to obviate the difficulty of importing fry and fingerlings from outside the state perennial sheets of water are being annually stocked These waters include the Ulhas River, Visapur Reservoir, Tata Lakes and Powai Lake

SORLEY'S REPORT

A special department exists in Bombay for the development of the fisheries of the state and their organisation on progressive lines The department which is in the charge of the Director of Fisheries was specially constituted with effect as from the financial year beginning April 1, 1945

No survey of the fishing industry can be complete without a reference to the so-called Sorley's Report (published in 1933) which is a store-house of information and also the starting-point of all subsequent measures for the improvement of the industry Among its more important recommendations were 1 the establishment of a marine acquarium, 2 the opening of a bureau of fisheries information, 3 the encouragement of marine biological research and 4 the employment of motor launches for the transport of fish to consuming centres

The experiment in mechanical transport was first conducted at Danda in co-operation with the head of the local fishing community. A launch obtained on loan from the R I N was used with suitable modifications The experiment was such a great success, the fishermen were so highly impressed with the speed with which fish could be transported that today there are no less than 43 vessels engaged in the carrying trade The launches operate between Bombay and the fishing fields both in the north and south of it, and the total quantity of fish brought into the city during 1948-49 was 63,16,828 lbs

DEEP-SEA FISHING

Something even more important, however, is a scheme financed on a 50 50 basis by the Governments of India and Bombay for deep sea fishing For this purpose a vessel *Tapse* has been put into operation, manned entirely by the members of the fishing community The vessel is also being entrusted to private parties in accordance with the approved policy of Government that private parties should be encouraged in the operation of such vessels

The steam trawler *Meena* introduced by the Government of India has been put out of commission Instead, Government of India have brought out two new cutters and reckie boats from Holland which are now being operated from the deep sea fishing station at Bombay

Certain private concerns are also conducting experiments, of whom two may be mentioned. Messrs India Fisheries Ltd. with a capital of over Rs 20,00,000 are operating a purse-seine fishing vessel bought in America and manned by an American Master Fisherman and a crew of four And second, Messrs. Western Fisheries Company who are using a 71 footer motor fishing vessel purchased from the Navy for trawler experiments conducted with the help of three Italian experts Yet another private trawler *Tonqkol* which came to Bombay from Karachi made five voyages during the monsoon and landed about 23 tons of fish during 1947-48 The vessel continued its fishing voyages till June 1948 when the proprietors suspended operations as uneconomic and opened negotiations for a drifter-cum-trawler vessel fitted with winch and other up-to-date tackle for fishing with drift nets and other trawl.

The Fisheries Department have designs for vessels with a much wider cruising range than was possible before In accordance with the wishes of the fishermen these vessels will be deckless but will have arrangements for the installation of engines and the storage of fish. Two of such 45 vessels which are now ready have been allotted to the fishermen's co-operative societies on a subsidy-cum-loan basis If the vessels prove popular it is proposed to build 30 more at a cost of Rs 8,00,000 in the next five years and make them available to as many fishing centres as possible

It is clear that any experiment with the trawlers will be worthless if they have to be operated by technicians who do not belong to the fishing community So part of the whole scheme is to train youths of the fishing community to run and maintain motor launches so that the whole trade can be confined to the community itself Schools have been started for this purpose and an apprentice gets as much as Rs 30 a month as stipend.

REFRIGERATING FACILITIES

Larger supplies of fish made available by the launches have induced the flow of private capital into channels intimately bound up with the fishing trade Ice factories and cold storage plants have been put up at Malvan and Ratnagiri on the Ratnagiri coast and at Chendia and Ankola on the Karwar coast In Poona two cold storage plants of 200 and 100 tons have been put up for storing fish At Satpati (District Thana) Government have decided to put up an ice and cold storage plant at a cost of rupees 1,17,000 The plant will be entrusted for operation to the local fishermen's society on loan-cum subsidy basis A scheme to put up similar plant at Karwar (District North Kanara) is under Government's consideration In Bombay, a quick-freezing plant employing the Z-process has been installed by a Russian technician at the Kermani market at Delisle Road and an ice factory and a cold storage plant have also been set up on the east side of Crawford Market (Bombay) A feature of the plant mentioned last is that it has a number of small chambers which are hired out at small fees either to one individual or to several collectively This plant also provides for the quick-freezing of fish.

As a result of the erection of new ice factories, the output of ice has increased vastly in the past few years, being about 700 tons per day, today compared with 300 tons during the war The production of ice can still be increased In addition to the existing cold storage plant with a capacity of 54 tons, the Bombay Municipality is putting up a new plant with additional 13 tons capacity. The Government of India have also plans ready for a cold storage plant of 600 tons capacity at Sassoon Dock, Bombay. Ice making plants are also being erected at Santa Cruz, Lalbaug, Kurla and Worli

FISH CURING

The control of the fish curing yards was transferred to the Department of Industries on July 1, 1936, prior to which they were administered by the Salt Department of the Government of India There are 36 such yards in Bombay, 21 in the Ratnagiri District and 15 in the Kanara District At these yards duty-free salt is stored in salt kothars from where it is issued to fish curers to cure fish The total quantity of fish cured and the salt issued at the fish curing yards in 1948-49 was 3,00,337 Mds and 1,09,446 Mds respectively.

Government have sanctioned a scheme for the improvement of curing facilities at the fish curing yards in the Ratnagiri and Kanara Districts, which provides for the construction of cement concrete platforms, permanent fish curing sheds over the platforms, compound walls and sinking of new wells for adequate water supply The total non-recurring outlay on the project will be Rs 8,45,950 Part of the expenditure on these works will be subsidized by the Government of India under the 'Grow More Food Scheme' The scheme is already put in operation and the works are in progress at several yards The provision of these facilities should greatly benefit the fish curers and the fish curing industry as experience has shown that about 20% economy can be effected in the quantity of salt used under the present insanitary method of curing This is also bound to improve the quality of the cured product

Smoking of fish is another method of preserving fish which has recently been introduced

CO-OPERATIVE SOCIETIES

The value of co-operative societies cannot be gainsaid. And as a result of vigorous propaganda several co-operative societies of fishermen have come into existence at Bhiga, Ankola, Nandangad and Kodibag in the Kanara District, Bagmundla, Vengurla, Jaitapur, Vijaydurga and Shiroda in the Ratnagiri District, Satpati, Murbe, Kharekuran, Shirgaon and Uttan in the Thana District, Danda in Bombay Suburban, Lower Colaba in Bombay City, Majali, Harwada, Keni, Honaver and Gangavali (District Kanara), Karla, Mithbao, Malvan (District Ratnagiri), Dativre, Kharekuran (Thana District), Bhadeli, Kolak and Bulsar (District Surat) and two at Versova in the B. S D In addition, a Provincial Co-operative Association has also been formed with its headquarters in Bombay The societies will market the fish caught by its members in the mofussil, and the profits which hitherto went to middlemen, will now accrue to the fishermen These Societies will receive Government help for the acquisition of motor launches, trucks, ice plant and also financial help in the form of loan or subsidy

The education of fisher-children has been kept in the forefront among the activities of the Department of Fisheries Accordingly, fisheries schools have been established in the State three in the Kanara District, four in the Ratnagiri District, one in the Thana District and two in the Surat District. Proposals for the establishment of four more schools are under consideration

Five other items which need to be mentioned are the fisheries information bureau, the marine acquarium, the fish farm, the marine biological station and technological laboratory at Sassoon Dock and the exploitation of the by-products of the fishing industry The last item will be dealt with at some length, while the others will be dealt with briefly.

A fisheries information bureau has been set up. The function of this bureau is to collate and supply information connected with the local and other fisheries. The information collected by the bureau is useful to the fishing industry, as it furnishes information not available to them before

The establishment of marine acquarium has been made possible by a munificent donation of Rs 2 lakhs by Mr and Mrs Vicajl D B Taraporwala The Government has accepted the donation and allotted a commanding plot of land for it along the Marine Drive A feature of the acquarium will be that the exhibits will include both fresh water and marine forms found along the coast of the State In addition, the acquarium will have facilities for marine biological research and investigations

A scheme for setting up of a fish farm to remedy the lack of precise scientific data regarding the breeding habits of various indigenous and exotic food fishes, their rate of growth, food requirements, etc, has been sanctioned by the Government The farm which will be established at Khopoli on the Tata tail race is expected to come into existence early next year A scheme to establish a marine biological research station at Ratnagiri has been sanctioned This is a part of a five-year plan of post-war development programme involving a capital expenditure of Rs 2,30,000 and an average annual expenditure of Rs 73,500

FISH OILS

A Fisheries Technological Laboratory has been established at Sassoon Docks for conducting research on problems relating to ancillary industries like shark-liver oil, gelatin, glue fish meal, etc To ensure quick and clean extraction of oil a sharple's super centrifuge, a fish liver boiler, and a steam boiler have been imported A deodorizer will also be installed to eliminate the disagreeable fishy odour of the oil One piece of work which the Laboratory does is to test samples of shark-liver oil from the public for their vitamin A content, the number of samples so tested average over 300 a year

The Second World War led to an investigation of the possibilities of the manufacture of oil from shark-livers to replace the dearth of supplies occasioned by the stoppage of imports of cod-liver oil from Norway

A simple process of oil extraction, not involving the use of any complicated machinery, was devised and demonstrated by the Department to the local fishermen and to the fishermen of Ratnagiri, Jaitapur, Malwan and Shiroda The demonstrations were largely attended and the fishermen were greatly impressed by the fact that a new occupation and fresh source of income had been opened out to them As a result of the demonstrations the fishermen earnestly took up the work of oil extraction and have regularly been sending to the Fisheries Department oil extracted by them This is refined by the Department and later sold to chemists in Bombay

During 1948-49 the output of neat shark-liver oil delivered to the Department was 4,000 gallons with an average vitamin A potency of 15,000 International Units per gramme The oil when processed was capable of yielding 533,340 lb of Oleum vitaminatum of B P standard Besides this there is the oil disposed of by the fishermen directly which will be about 2,000 gallons

The characteristic odour of fish liver oil is an obstacle to its popularity with the consuming public To overcome this drawback and encourage the use of the vital health giving commodity, the department has put on the market 3 minim pearls containing 3,000 international units of vitamin 'A' and 300 International units of vitamin 'D' A pearl per day supplies the minimum daily requirements of an average individual

The encapsulating unit ordered out from the U S A has arrived and it will soon be installed at the Laboratory which will economise the cost on the production of Elasmin Pearls

The superiority of Bombay's shark-liver oil over other varieties is unquestioned Oils from *Carcharieas melanopterus* and *Prisis perrotteti*, for instance, yielded a vitamin A potency of 140,000 and 40,000 International units per gramme respectively This is many times more potent than cod-liver oil which, according to the British Pharmacopoeia standard, is between 500 and 1,500 international units per gramme

The manufacture of adhesives is a valuable industry from the by-products of the fishing industry and the department has recently taken to its manufacture on a commercial scale The product is sold under the trade name Adhesive' in tubes, 1 lb bottles and one gallon tins The experiments conducted at the departmental laboratory on the manufacture of glue suitable for photoprocessing work have also met with a good measure of success and the work is being finalised with a view to achieve perfection.

Another important by-product of fisheries is fish meal The production of fish meal has been undertaken at the departmental laboratory on a semi-commercial scale

The Fisheries Technological Laboratory is also conducting research on problems related to the fishing industry and trade such as the preservatives for nets and the drying of Bombay Ducks by a special process, which will eliminate the risk of deterioration during shipment The experiments are in progress.

HYDERABAD

The Hyderabad Fisheries Department was established in 1941. Since then investigations and preliminary surveys of many tanks and reservoirs have been carried out and about 100 varieties of fishes have been collected.

The chief sources of fish are the perennial rivers Godavari, Krishna and Manjera, but their tributaries are not so useful as most of them dry up during the summer There are also many big reservoirs and more than 35,000 big tanks besides thousands of small ones, in which fishing is done

Murrel is the most common and popular fish and it is obtained in large numbers during the hot season But there is always a scarcity during the other parts of the year

Breeding and culture of fishes is the most important part of the work, which is done by the Fisheries Department Fish-farms where besides indigenous fishes, other fishes like Gourami, Etroplus and Mullets are kept for breeding, are being established in certain parts of the State. Hosainsagar fish-farm, for instance, is already functioning, and three others in Nizamabad, Medek and Atraf-e-Balda are under way. In the near future, fish-farms will be opened in other Districts too The stocking of tanks has also started and a large number of them have already been stocked with fingerlings of fishes to increase production

Besides breeding and culture the Department is concerned with improving the technique of fishing Deep-water netting, for instance, has been introduced in one of the reservoirs as an experimental measure and if successful it will be extended to other reservoirs in the near future. An item in the post-war programme is the preservation of fish through refrigeration.

Incidentally the Fisheries Department is helping the Health Department to fight malaria with larvicidal fishes as at Trimalapur in the Nizamabad District

The Fisheries Department is active not only on the production side but also on the marketing side It supplies the Hyderabad city markets with fish in conjunction with the Hyderabad Co-operative Central Trading Society, Ltd. The needs of the District, however, are not overlooked for it is only the fish which are in excess of the needs of the District that are being sent to the City The money for the purchase of the fish is provided by the Department but part of the idea is to encourage the growth of co-operative enterprise The ultimate object is to entrust the whole work of supply as well as of sale to the Co-operative Society With this end in view Societies are being formed in the Districts, and tanks instead of being given to individuals are now being leased out to these Societies on nominal payments

In the near future when the Hyderabad Government receives its shares of Tungabhadra waters on a 50 50 basis with Madras Government a Biological Station will be established in the vicinity of its own territorial waters The Biochemical Laboratory of the State has already succeeded in preparing peptone, glue and gelatine on a large scale.

Recently the Hyderabad Government sanctioned a three year scheme amounting to Rs. 2½ lakhs, for development purposes Already 2,000 tanks have been acquired by the Fisheries Department and all the fallow waters are being brought under fish culture An experiment is under way for deep water fishing in the state In 1949 the amount of fish supplied to the market rose to 11 lakhs The target for 1951 is fixed at 33 lakhs.

New varieties like Mirror carps, leather carps, Katla, etc, are being introduced all as a part of the "GROW MORE FOOD" campaign The new research programme which is being prepared is more comprehensive and includes transport of live and dead fish and their care and preservation etc.

MADRAS

The Madras coastline of 1,750 miles is margined by a shallow-water area within the 100 fathom line of 40,000 square miles, outside of the mere fringe inshore, this vast expanse of fishable water lies idle and unproductive The surf-swept east coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatam, the unsinkable catamaran, composed of logs tied side by side is the only possible easy-going fishing-craft Its limitations circumscribe the fishing power of its owners and consequently those men are poor and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible At present better and larger boats are being made available and several Motor Fishing Vessels of this department are also engaged in fishing and towing canoes

The west coast is more favoured and contributes to more than three-fourths of the total landings of sea fish in the Province From September till April weather conditions are good enough to permit even dugout canoes to fish daily No difficulty is found in beaching canoes and boats throughout this season

The fishing population is a large one According to a census taken in 1946-47 the total number of fisher population on the west coast was 1,98,924

During 1948-49 about 27 lakhs of maunds of fish were landed on the west coast of which the important varieties were as follows —

	Mds.
Mackerel	8,13,265
Silver Bellies	2,16,678
Soles	3,54,607
Prawns	2,43,984
Cat Fish	92,618
Sharks	24,395

On the east coast (north and south) about 7 lakhs of maunds of fish were landed of which the important varieties were as follows —

	Mds
White Bait	47,378
Ribbon Fish	54,581
Jew Fish	49,157
Prawns	21,457
Cat Fish	31,422
Pomfret	17,054
Seer	10,224

Fishing on both coasts is mainly by seine nets, drift nets and wall nets and also by hooks and lines. The most common craft used are the dugout canoe on the west coast and the Catamaran and masula boat on the east coast. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Ratnagiri) which are engaged in drift netting for bonito, seer and other medium-sized fishes These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres. the material is largely cured for export.

The Department.—As Government attention has been given in Madras over a longer period to the improvement of fisheries, and a larger staff concentrated upon the problems involved than elsewhere, this State is now in the proud position of knowing that her fisheries and collateral industries are better organised and more progressive than those in other provinces It was as early as 1907 that a fisheries bureau was created Later it developed into a separate Department of Government In 1940 Fisheries were amalgamated with the Department of Industries and Commerce In 1949 the Department was separated from the Industries Department and constituted into a separate Department

The activities of the Department are so varied that it is difficult even to enumerate them in the space available, much less to give details.

Madras practically led the way in developing the shark-liver oil industry in the country Oil from a South Indian shark-liver is ascertained to be about thirty-five times richer in Vitamin A than an average sample of medicinal cod-liver oil When cod-liver oil could not be imported in any quantity during the war, an opportunity was provided for developing an indigenous industry for the production of fish liver oil rich in Vitamin A, and also for manufacturing malt extracts and emulsions and various preparations of this kind The manufacture of shark-liver oil is undertaken at the fish curing yards and oil extraction centres In 1948-49, 33,046 lbs of crude oil were manufactured and sent to the Government Oil Factory, Kozhikkode for purification and blending The quantity of refined oil manufactured was 1,02,873 lbs The product both in the blended and standardised bulk form and in the vitamin concentrated form of 'Adamin' has stood its test well and is now finding new channels of utilisation like 'Veterinary Oil' for administering to livestock In addition the question of producing capsules of shark-liver oil is being taken up

Fish Curing—Fish curing is practised extensively everywhere on the Madras coasts its present success began some eighty years ago with Dr Francis Day who, after an investigation during 1860-71 of the fisheries of the whole of the sub-continent, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bounded enclosures were opened at which powdered salt was issued as and when necessary to the curers

There were 114 fish curing yards on the east and west coasts at the beginning of April 1948 During the course of 1949, 25 yards were closed on the east coast due to poor transactions 13,67,614 maunds of fresh fish were brought to these yards for curing and 2,18,544 maunds of salt were issued for the purpose

Besides salt curing, the Department started, in 1944, the smoking of fish, mainly for supplying the Army During the year 1944-45, 124,320 lbs of smoked mackerel, pomfret and seer were supplied to the Army and 5,382 lbs to the civilian population, from the seven centres of production The supply to the Army was stopped sometime back and at present smoking of fish is done on a small scale at the Fisheries Technological Station, Calicut, where researches on the efficient and economic methods of preserving and transporting fish are being carried out

Two fish factories for processing prawns are subsidised by the Indian Council of Agricultural Research, they manufacture semi-dried prawns from inland lakes.

Pearl Fisheries—Off the coasts of Tirunelveli and Ramnad Districts of the State lie the valuable pearl oyster beds which, owing to a complex of causes yield at long intervals, an irregular supply of the oysters With a view to elucidating and controlling the fluctuations to the best advantage, the life history of the oyster with correlation to oceanographic factors is studied by the Marine Biological Section of the Department The rearing of pearl oysters in captivity, started in 1933 at the Krusadai Biological Station, Pamban has been very successful and a highly promising technique of pearl production by artificial inducement is being developed here. During 1946-47 the stock of oysters at Krusadai were replenished with 1,000 oysters from the Tuticorin banks.

Allied to the Pearl fisheries are the Chank fisheries of the maritime districts, both being Government monopolies Besides the precious sacred chanks, the ablution chanks and Pooja conches, lakhs of chank shells feeding the flourishing chank ornament industry in the north come mostly from the seas of this State A total of 7,40,162 chanks were fished during the year 1948-49. Experiments in marking chanks started in 1931 to study the rate of growth and migration of the chank in its natural haunt is continuing and up to 30th June 1946, 5,374 chanks have been marked and liberated.

The Marine Aquarium—Perhaps a word is necessary about the Marine Aquarium in Madras. Ever since its opening, being the first institution of its kind in Asia, it was immensely popular with the public On account of war emergency, the Marine Aquarium was closed on 8th March 1942 The opening of a larger Aquarium on more up-to-date lines is now under active consideration

Deep Sea Fishing—It is well known that Indian fishing requires improvement so as to cover more of ground as well as of catch. The survey of deep sea fisheries by the trawler "Lady Goschen," though brief, disclosed the existence of important off-shore fisheries unsuspected before. The wealth of fish off Negapatam reported by the trawler was of sufficient importance to attract the notice of Japanese fishermen thousands of miles away Even then it was realised that if Madras was to benefit by the survey, the allied duty of enabling the local fishermen to exploit the off-shore fishing grounds by suitable craft and tackle must be shouldered by the Department.

In 1944, the Department initiated deep sea fishing operations in different centres in the State, mainly to augment the output of sharks to feed the growing shark-liver oil industry and also to demonstrate off-shore fishing The operations resulted in a catch of over 300 tons of fish in 1947-48 Meanwhile in December 1945, a new fishing method was attempted, viz, schooner fishing The Pearl Fishery Inspection Vessel, "Lady Nicholson" was engaged in off-shore fishing with handlines and longlines and took four local fishing boats on tow. The catches made during the 4 months of the trial were 29,549 lbs of fish Further experiments are under way. The Department has acquired 8 motor fishing vessels from the Navy and they are now operating at Vizagapatam, Kakinada, Madras, Adirampatnam, Pamban, Tuticorin, Kozikode and Mangalore Recently the fishing fleet operated on the Wadge Bank off Cape Comorin and 20 tons of fish were caught by 12 days' fishing The quantity of fish caught in 1948-49 was 5,34,960 lbs

A special craft and tackle section has been established to devise, demonstrate and popularise improved fishing methods for different types of water, including inland waters This section has opened boat-building and net-making yards for departmentally manufacturing boats and nets of improved design. Recently a mechanised in shore fishing boat was constructed by this section at a cost of Rs. 5,000.

The Inland Fisheries.—The fisheries of the numerous, extensive backwaters along the coastal belt of the Peninsula, the various rivers and the innumerable irrigation tanks, wells, canals, artificial reservoirs, natural lakes and domestic ponds distributed all over the land are of considerable magnitude, though in several cases the non-perennial nature of the water causes their fisheries to be ignored except during the summer drought when the streams shrink to pools and the tanks to puddles and the owners or the lessees of the fishing rights turn out to catch fish. The major waters are, however, provincialised, and their fisheries systematically developed and exploited directly or through a lease system With a view to conserving fish seed, great congregations of breeder carps and

their young below the Mettur Dam and the Hogalnakal falls on the Cauvery, of spawning Hilsa below the anicuts in the Godavari, the Krishna, the Cauvery and the Coleroon rivers and of immature mullets in the coastal backwaters, are protected by legislation against their indiscriminate capture Destructive methods of fishing such as poisoning, dynamiting, etc, are also penalised

The chief freshwater fishes of economical importance are, the ubiquitous Murre (*Ophicephalus striatus, O marulius*, etc) notable for its ability to live for a considerable period out of water, the various carps (*Catla catla Cirrhina cirrhosa, C. reba, Labeo calbasu, L fimbriatus, L kontius, Barbus dubius B carnaticus* and the well known favourite of sportsmen in India, the Mahseers), the catfishes (*Wallagonia attu, Mystus seengala, M aor, M punctatus, Pangasius pangasius, Clarias magur, Saccobranchus fossilis, Silonia silundia*) the eel (*Anguilla*) the spiny eels (*Mastacembelus Spp*), *Notopterus notopterus*, the climbing perch (*Anabas scandens*) and the Hilsa (*Hilsa ilisha*) To these have been added a number of valuable exotic fish which have been successfully acclimatised to the waters of the State Thus the giant Gourami, acclaimed as the best freshwater table fish in the world has been introduced from Java and successfully reared and bred in the Departmental farms from where it has been distributed to Bombay, W Bengal, Punjab and other places In the Nilgiris the English Carp, the Tench and the Rainbow Trout have been acclimatised and thrive well The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche where quantities of trout fry are hatched and reared for replenishment of the streams of the plateau The Mirror Carp which was introduced from Newara Eliya, Ceylon, in 1939, is thriving well in the Nilgiris and is now extensively used for stocking other upland waters of the Presidency From Madras it has now been distributed to Bangalore, Bombay and the Kumaon Hills in Uttar Pradesh Semi-exotic forms like the Rohu (*Labeo rohita*) have been recently introduced from the delta of the Ganga The attempts of the Department to introduce Catla, the quick growing carp, into the Cauvery river were successful and this fish which was unknown to the south of the Kistna is now established in the Cauvery System

Methodical attempts to augment the stock by local fingerling collection and distribution, acclimatisation of salt water forms like the mullets (*Mugil spp*), the Pearlspot (*Etroplus suratensis*), the milkfish (*Chanos chanos*), the cock-up (*Lates*), etc, and hatchery operations for Hilsa, carps and the Trout have all been very successful in the building up of the inland fisheries of the State.

In addition to the existing departmental fish farms, a scheme of District Rural Fishery Demonstration has been put in operation in all the districts for a systematic survey and utilisation of every piece of cultivable water for aquiculture and, through Demonstration Fish Farms to educate the ryots and make them interested in fish farming as well as to maintain and distribute fish seed

For the biological control of "water-borne" diseases like malaria, filariasis and guinea worm, small mosquito-cidal and cyclopscidal fishes are collected, reared and distributed in thousands to municipalities and other local authorities at a nominal price for introduction into mosquito-haunted sheets of water these anti-malarial operations have proved successful in places where the local authorities have given proper attention to the directions issued A special Public Health Fish Unit is attending to this item of work.

Research.—Marine Biological Research with special reference to applied fisheries Science is being carried at the three Research Stations, one on the west coast at West Hill and the other two on the east coast at Tuticorin and Krusadai Krusadai is a small coral islet situated near the Island of Rameswaram and has been popularly called the "Biologist's Paradise" Every year biology students from various institutions in India visit this station for field studies Investigations on the occurrence, migrations, feeding and spawning habits and development of the various food fishes as also the physico-chemical factors which influence their life are being carried out at all the three stations Research on the life history of the Pearl Oyster and Chank is an important item of work at Krusadai and Tuticorin Experiments are also being conducted at the Krusadai biological station in the culture of pearls under controlled conditions

An estuarine research station has been set up at Ennore, near Madras to study important fishes like Mullets, Bekti and Threadfins which generally frequent the estuaries

After an experimental stage in Rural Pisciculture a regular Freshwater Biological Research Station, perhaps the first of its kind in India, has been functioning in Madras since 1942, with a subsidy from the Indian Council of Agricultural Research The work of the station is directed towards the investigation of the bionomics, feeding and breeding habits and biometry of the important food fishes of the Province and the varied aspects of Ecology and Hydrology with a view to determine and promote the optimum conditions for maximum fish production Two special wings, one Hydrological and the other Phytological have been added to the Research station for special attention to physico-chemico and floral studies towards the increase of aquatic productivity and the solution of pollution problems The foundation stone of the new Hydrobiological Laboratories proposed for the Station was laid by Dr Rajendra Prasad

A Hill Fishery Research Station has been established at Ootacamund on the Nilgiris to study the problems relating to the improvement of the trout and carp fisheries of the plateau A research station for the investigation of the valuable Hilsa fisheries and a Hilsa hatchery are located on the Godavari river near Rajahmundry A study of the fisheries of the Tungabhadra river with a view to assess the probable effects of the dam on fishery has been started at the dam-site near Hospet Research on fish passes in collaboration with the Irrigation Research Station at Poondi has been planned

Welfare Work—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk The Department has always recognised the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the west coast The number of fishermen's co-operative societies in 1948-49 on the west coast was 74 and on the east coast 21

The Committee on Fisheries recommended that all co-operative work among fishermen both on the west and east coasts in the Presidency should be done by the Fisheries Department and that, on the analogy of the system in vogue in the Labour Department, the Inspectors of Co-operative Societies should work under the Fisheries Department, the Co-operative Department supplying trained Inspectors and auditing the books of the societies The Government partially accepted the recommendations and sanctioned the deputation of a Sub-registrar of Co-operative Societies and 3 Inspectors for exclusive work among fishermen under the department Recently three more Inspectors have been sanctioned for similar work among fishermen on the east coast There are more than 100 Co-operative Societies of Fishermen working at present

To promote the education of fisherfolk, the Department runs a number of schools for fisher children where free education and midday meals are given There are at present 57 Fishery schools with a strength of over 10,000 pupils. A unique feature of this movement is a Fisheries Technical High School, which is perhaps the only one of its kind in India

While these service institutions of the department have been catering to the needs mainly of marine fishermen, the diffused distribution of the inland fishermen has been one of the difficulties in the way of equally rapid progress in their rehabilitation work Preparatory statistics of inland fisherfolk are however, being collected

The educational work of the Department is becoming one of its most important branches in training men in the technology of curing, oil manufacture, etc, in co-operative propaganda and in general fisheries Science In the past Fisheries Officers of most States have received training in the Madras Fisheries. Till recently the Fisheries Training Institution in Madras, under the subsidy of the Government of India, trained batches of graduates and post-graduates in an half-yearly course of general fishery work, while a Popular Short Term Course trained interested persons in the art of fish farming, to enable them to run private farms on efficient lines. Arrangements are made for the training of skilled workers at the Marine Fisheries Technological Institute, Tuticorin, while Fisheries Technology has been included in the subjects taught in the Polytechnic recently opened at Kakinada and Madras The Fisheries Station at Lunar supplies zoological specimens for the use of college classes and museums throughout India and even abroad and is contributing materially to the advancement of the study of Zoology throughout India.

A Fisheries Information Bureau has recently been set up by the Department to disseminate information on all fishery matters, to answer enquiries and for popularising scientific methods of fish farming, production, exploitation and utilization Besides, the Bureau maintains a Central Fisheries Museum and a well equipped Library A Fishery Marketing Unit has been opened recently with a view to effecting a speedy survey of the existing marketing conditions of fish and fishery products, to draw up a working plan for the rational utilisation and equitable distribution of the produce assuring a fair return to the producer and to arrange necessary transport facilities, by road, rail and water

MYSORE

The Fisheries Section in Mysore is an adjunct to the Department of Veterinary and Animal Husbandry Services and was started in 1940 A survey of the fisheries of the State was first of all undertaken with a view to studying the existing condition of the fisheries, *viz*, the extent of fishing done at present, and the scope for the improvement of the fishing industry.

Fisheries development work, namely the adoption of conservation measures, the establishment of fish-sanctuaries and the stocking of tanks and river with good species of food fishes has been organised in three suitable areas of the State They are Shimoga, Krishnarajasagar and Kolar Fishery Divisions The results achieved have been sufficiently striking to justify expansion of the scope of the work to the whole State

Three Fish Farms have been established one at Markonahalli, one at Hesserghatta and a third at Markandeya where fishery investigations are being carried out Three varieties, viz, Catla, Pearlspot and Gowrami were first introduced into the nursery ponds of these farms and after sufficient rearing disseminated into selected fisheries of the State Fingerlings of the Mirror Carp (Cyprinus Carpio) imported from the Nilgiris are being cultured in State waters

Mysore State is also noted for its game fishing resources. The famous large carp "Masheer" is the main game variety Measures are being devised to conserve and develop game fisheries in the State.

The Fisheries Department today has two objects in view one is to effect proper conservation on scientific lines, so as to increase the production of food fishes and the other is to ameliorate the economic condition of the fishermen of the State.

ORISSA

The fishery wealth of Orissa is enormous The east coast the Chilka lake and large areas of inland waters yield all the 3 types of fish, *i e.* (i) marine, (ii) estuarine, (iii) inland.

(i) *Marine* —Due to lack of communication facilities, the fishing is scattered along the sea coast, the most important fishing centres being Chandbali, Chandipur, Talpada, Puri, Aryipalli, Gopalpur, Markandi and Sonapur Fish is consumed locally, the surplus being simply sun-dried or salted Whitebait, sardine, mackerel, seer, hilsa and pomfrets, are the principal varieties Fish curing yards have been replaced by Fishermen's Co-operative Stores administered by a Central Union. Fishermen get their daily requirements of salt, etc , from these stores.

Catamarans are used throughout the year, the sea being too rough for larger boats Podows, *i e*, country boats are used in winter for the shore-seine net Fishing gear consist of hooks and lines, drift nets, drag nets and seines of crude types These are made locally Middlemen control the fishery but are being eliminated by co-operative societies who are taking up joint marketing of produce.

Lack of harbour and cold storage facilities and capital to introduce better fishing methods make improvement of marine fisheries a very difficult problem The standard of living of the sea-fishermen is extremely low and calls for improvement In some fishing centres the fishermen live on fish alone for days together Improvement of the financial position of the co-operative societies, legislation limiting the middle men's activities, establishment of fishery schools are some of the measures which Government has to take At the moment Government are considering the introduction of pilot scheme for deep-sea fishing There are for instance, about 90 miles of coast line where no fishing is done Government are attempting to settle displaced fishermen in suitable places and a colony has already been established at Sandhakud.

(ii) *Estuarine* —The Chilka lake forms a compact fishing area and yields extremely tasteful fish and prawns The lake is leased out by zamindars to merchants who have built up a well organised industry The export averages 50,000 mds per annum and consists of mullets, bhekti, pomfrets, mackerel, Indian salmon, etc. The fish is packed in ice and exported mainly to Calcutta Other estuarine fishing centres are Kirtaniakhati, Kujang, Chowmuhan and Sonapur Within the last 3 years 14 Co-operative Societies have entered the trade and in 1948 bid business worth Rs 18,00,000 making a profit of Rs 1,40,000 A biological and technological station is set up at Balugaon to work on life histories of fish and utilise the resources of chilka Government transport has been provided from Kujang (Mahanadi estuary) to Cuttack to market the catches

(iii) *Inland* —The rivers and tanks form a great potential source of fishing though hilsa in Orissa is not as tasteful as that in the Ganges. Rohee, catla and mrigala are the economic species These breed only in rivers and in large bunds which resemble rivers during rains as in the Sambalpur District Collection of fry is carried on every year in Balasore, Cuttack and Sambalpur An organised fry trade exists in Lakhannath in the Balasore District Government have nurseries in 56 fry distribution centres and supply 20,00,000 fingerlings annually.

The fisheries are owned mostly by private individuals Government fisheries are controlled by the Revenue Department Although people realise that pisciculture is profitable, the multiple owners of water areas prevent active development The activities of the Fisheries Department have been confined to propaganda which, without executive authority, has not led to appreciable results The prohibition of killing of fry in canals, paddy fields, etc , by legislation and of letting of sewage into inland waters, the construction of dams with fish ladders and the placing of Government fisheries under the control of the Fisheries Department are all under contemplation. The post-war inland fisheries development scheme now in operation envisages rapid cleaning and stocking of tanks by forming co-operative fish farms. 20 such farms are now in operation on the results of which would depend the large scale establishment of collective fish farms.

As part of the 'Grow More Food' drive large swamps hitherto unproductive are being cleaned out and converted into fish farms as the farms established in 1945 have been found to be profitable Large-scale reclamation work is also going on at Puri, Angul, Sambalpur, Sonepur, Band and other places

THE PUNJAB

The permanent staff consists of a Warden of Fisheries, Deputy Wardens of Fisheries, 4 Fisheries Research Assistant, Assistant Wardens of Fisheries, a Laboratory Attendant, peons and watchers.

The changes which resulted due to the vivisection of the State, have had their effect on the working of the Department No office records were available after the partition. All the laboratory apparatus, equipment and other valuable collections, etc , went to the Punjab (Pakistan) Government The 'Thuma' truck, which belonged to the Government of India and was used for stocking operations, also remained at Lahore.

Mass migration of the fishing population from the Punjab (India) to Pakistan, was another draw-back which put a heavy strain on the working of the Fisheries Department Except Kangra and certain portions of Gurdaspur, Hoshiarpur and Ambala districts, where Hindu fishermen were found in considerable numbers, nearly 99 per cent of the fishing population in the plains, along the rivers Beas, Sutlej, Ghaggar, Jamuna and their tributaries, consisted of Muslim fishermen, who migrated to Pakistan The few Hindu fishermen who came in to fill their place from Pakistan had lost their fishing implements What is worse these fishermen were reluctant to settle along these rivers and to take to fishing as a whole-time profession as the Ravi and the Sutlej were on the border. Hence, the old traditional system of issuing individual fishing licenses had to be given up, and the fisheries of the State had to be exploited under the direct supervision and guidance of the Fisheries Department.

The activities of the Punjab Fisheries Department are directed to —

1. *Conservation*—comprising conservation by legislation, providing fish-ladders at the canal head-works, creating fish-sanctuaries, and the eradication of fish-enemies
2. *Culture and Propagation*—comprising culture of exotic species, *e g*, Trout, etc , and culture of Carp, etc
3. *Catching and Marketing fish.*
4. *Research.*

CONSERVATION

During the year 1948-49 the number of fishing licenses issued was 5,912, and the receipts from license-fee amounted to Rs. 28,745-10-0 The issuing of individual licenses, except for rod and line, was dispensed with in the Hissar, Karnal, Ambala and Gurgaon Districts of the Ambala Division.

In 1948 further amendments to the rules framed under the Punjab Fisheries Act, II of 1914, were made, under which the issuing of individual fishing licenses, except for rod and line, was dispensed with in the districts of Hissar, Karnal, Ambala and Gurgaon Draft amendments to the fishing rules of Rohtak District, dispensing with the issuing of individual licenses, except for rod and line, were sent to Government for publication in the Government Gazette, for inviting objections, if any. Draft amendments to the fishing rules of the Shamsher Khan's Tank at Batala, were also published in the Government Gazette and objections entertained

The decrease in the number of licensees, as compared with the previous years, was thus caused first by the mass-migration of fishermen and second because of the fact that the issuing of individual fishing licenses, except for rod and line, was dispensed with in a great number of Districts

During 1948-49 the total number of fishing offences was 584 and the receipts as compensations amounted to Rs 2,606-8-0.

No violation of the rules in the sanctuaries was reported either in 1948 or 1949 The existing sanctuaries for 'Mahseer' in Kangra district proved of great help in the conservation of fish, but the two sanctuaries at Andreta and Bheral were silted up

The fish-ladder at the Madhopur Head-works was completely washed away by the floods which came in September 1947 The Executive Engineer, Project Division, Ambala, agreed to include a fish-ladder in the dam to be built across the Eastern Bein, near Malsian Shahkot, in Jullundur district After the plan was prepared by the Executive Engineer, Upper Bari Doab Canal, Gurdaspur Division, Gurdaspur, the site was inspected and the plan discussed and approved It is hoped that the new fish-ladder will soon be constructed and that it will be more beneficial for the free movement of fish, than the old one

CULTURE AND PROPAGATION

The heavy floods of 1947 in the river Beas changed its course and washed away everything at the hatchery, including the stock of breeders

In spite of the heavy damage done to the hatchery and mass mortality of the breeding stock, the stripping operations were carried out Sixty-five Brown Trout (*Salmo fario*) hens were stripped, and 36,976 eyed ova were obtained. But all the ova and the fry got from some of them were washed away during the floods which came six months later in March, 1948.

The stripping was also continued during 1948-49 Eighty-two Brown Trout (*Salmo fario*) hens were stripped and 58,078 ova were obtained Fry numbering 19,378 were planted in the natural fry rearing pond at Bahang Bihal Fry numbering 13,469 were also planted in the Sanctuary in the Katrain Bihal

The scheme of "stocking with fish a large number of impounded waters in the Punjab" terminated with the partition of the province A fresh scheme for "stocking with fish a large number of impounded waters in the East Punjab" was submitted to the Government and put into operation on December 1, 1948 The scheme is of three years' duration and is jointly financed by the Punjab Government and the Central Government on a 50 50 basis The following staff was sanctioned—one Deputy Warden of Fisheries (Stocking), five Assistant Wardens of Fisheries, ten Fishery Muqaddams, forty Fieldmen, six peons, one Mechanic Driver and one Cleaner. It is proposed to stock 400-500 acres of impounded waters in the Punjab, under this scheme, in order to meet the heavy demand of fish and to augment the fish-resources of the State.

A survey of the suitable impounded waters in the Punjab has been carried out These impounded waters will be stocked with fish when the vehicle is received

CATCHING AND MARKETING FISH

In order to make fish more easily available to the public in the absence of professional fishermen, catching and marketing of fish in the six Districts of the Jullundur Division was brought under the control and supervision of the Punjab Fisheries Department. Under this scheme, fishing parties were organized by the Assistant Wardens of Fisheries, and the

fish was caught on a share-basis Government fish shops were opened at Amritsar, Jullundur, Ludhiana and Ferozepore A Government Fish stall was also opened at Simla Commission Agents, mostly belonging to the fishermen class were appointed.

In spite of the fact that the work was started when more than half the fishing season had already passed and that there were very heavy floods, fish weighing 34,604 lbs was caught and marketed under this scheme A sum of Rs 10,307-7-3 was credited into the treasury as Government share in the sale of fish, and an equal amount went to the fishermen.

The scheme was later extended to Hissar, Karnal, Ambala and Gurgaon Districts, as well Government fish shops were opened at Ambala, Karnal, Panipat, etc. In the Districts in which the scheme was in progress new fishing parties were organised 'Rai-Sikhs' in Amritsar and Ferozepore Districts were reclaimed and parties of them were initiated into the fishing trade

During 1948-49 fish weighing 298,605 lbs was caught and marketed under this scheme, in addition to the fish caught by license-holders Out of this amount Rs 62,254-6-11 on account of Government share in the sale of fish, was credited into Government treasury.

The rules framed under the Punjab Fisheries Act, II of 1914, were amended to suit the changed conditions in the districts of the State, in which the scheme of catching and marketing fish was introduced Draft amendments to the fishing rules of Rohtak District were sent to Government, for publication in the Government Gazette, and for inviting objections, if any

RESEARCH

After the partition the Punjab (India) was left without any laboratory or equipment A miniature laboratory was however fitted up at Batala, and research in various branches of fisheries carried out Observations on the spawning of Carp under controlled conditions were made at the Government Fish Farm, Batala during 1947-48 Another scheme which is of All-India importance, one on the "Investigation of the factors influencing the spawning of the Indian Carp" was submitted to the Indian Council of Agricultural Research with a view to obtaining sanction and financial aid.

UTTAR PRADESH

Fisheries Investigations in Uttar Pradesh date back to the sixties when Dr Day, as Inspector-General of Fisheries made a survey of the inland fisheries of India His report on the freshwater fisheries of India (1876) includes replies to his questionnaire to District and Taluq officers in Uttar Pradesh which contain valuable information, most of which still holds good One of the results of Day's investigation was the enactment of the Government of India Fisheries Act of 1897.

The possibilities of developing fisheries in this State however was for the first time considered by the Government in 1920 in connection with a reference from the Punjab Government about the regulation of fishing in the Jumna The Government decided to institute an investigation into the possibility of establishing a Fisheries Industry in the State

An inquiry was conducted by Mr. Edye whose report was published in 1923 Despite the general impression that Mr Edye dealt mainly with sporting fish and not with fish as food for the general public, his investigations were comprehensive and his recommendations sound Due to this general misunderstanding resulting from Edye's own imperfect summary of his recommendations in the report and his unrealised hope that extensive imports of sea fish were about to commence which might render the development of inland fisheries unnecessary, no serious attention was paid to his report.

In 1943 as part of the programme for post-war reconstruction and more immediately to provide against the prevailing shortage of food caused by the War, the development of fisheries received consideration It was, however, felt that the exploitation of fisheries to increase the supply of fish to towns and the Army was the immediate need and should take precedence of fisheries survey and fisheries research The Government therefore decided to take immediate steps to provide a regular, abundant and cheap supply of reasonably good quality fish in the market in Lucknow and other important cities Energetic action was taken by the Government through the Co-operative Department and the War Supply staff —

To improve the existing sources of supply by encouraging market contractors to increase supplies and where this was not possible by directly recruiting fishermen, supplying them with boats and nets and intensively fishing rivers, tanks and jhils, to seek and develop new sources of supply hitherto unexploited,

To improve transport by the provision of ice and refrigeration vans,

To improve the marketing of fish by direct sale to the public and the Army at equitable rates far below the ruling market prices

The scheme which was put through at Lucknow, Allahabad, Benares and Naini Tal was extended to other large consuming centres in 18 districts

In March 1944 the need for a technical expert was felt and a Fisheries Development Officer was appointed in the Department of Animal Husbandry to help immediately in the proper expansion of the supply scheme which had been launched and ultimately to plan a Scientific Department of Fisheries for the State

A comprehensive five years' plan of post-war development was drawn up by the Fisheries Development Officer and was approved by the Government

In response to the general demand to grow more food a scheme for stocking as many suitable tanks as possible in 6 districts was sanctioned jointly by the Government of India and the Government early in 1945 The extension of the scheme to 6 more districts in 1946-47 and again to 6 more districts in 1947-48 was sanctioned

As the D I R had lapsed it was decided to release private tanks and confine attention to Government tanks Accordingly 1,124 Government and such private tanks as had been offered to the Department were selected in 32 districts The 573 tanks stocked before 1947 were also fished and this yielded over 24 mds per acre instead of the 10 seers of poor fish of different sizes and kinds previously produced

Rivers being the primary source of supply of food fish it was realized that side by side with intensive culture and exploitation the conservation and control of river fisheries should receive attention A staff of 6 wardens, 15 assistant wardens and 21 watchers is being recruited to patrol the rivers A fisheries research laboratory at Lucknow has been established for continuous study of conditions obtaining in the rivers and tanks and to initiate suitable measures of fish conservation and culture which will keep pace with intensified exploitation A suitable site at the Tanda Falls (Mirzapur) has been selected for a research fish farm As waters above 3000 ft are devoid of food fish the well-known mirror carp of Europe which has done remarkably well in Ceylon and on the Nilgiris has been brought to Kumaon for stocking rivers As an initial measure to develop the fisheries of the Kumaon lakes, Government sanctioned in 1948-49, a scheme for one of the best known lakes in the area, "Naukuchia Tal" A training centre for fisher youths and departmental recruits has also been established there

A comprehensive Fisheries Act to control and develop the fisheries of the State was passed in 1949 For the socio-economic uplift of the fishermen war time controls were utilized to benefit both the producer and the consumer. A voluntary Fishermen Association on a new model has been formed at Allahabad for a stretch of 80 miles along the Ganges The members have contributed nearly 5,000 Rupees towards a benevolent fund for providing credit and amenities to themselves

The Fisheries Department which was separated from the old Animal Husbandry Department in 1947-48 has been made permanent this year (1950).

WEST BENGAL

Before the year 1920, there was one Fisheries Department to serve the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in 1920 after which fisheries in Bengal were administered by the Director of Agriculture Three years later in 1923 the Bengal Fisheries Department was abolished under retrenchment measures

During the 14 years after the closure of the Fisheries Department, the price of fish in Calcutta soared consequent on the rapidly increasing demand and the unhealthy monopoly exercised by a small group of vested interests The economic condition of the fishermen gradually became worse due to exploitation, and the fisheries in general were getting depleted owing to various causes As a result the public began to demand the re-establishment of the Fisheries Department to protect the fisheries interests and to organize and develop the fishing industry on modern lines The Bengal Government therefore appointed a Fisheries Expert to survey the existing condition of the fishing industry in the State and to suggest schemes for development with a view to augmenting the fish supply, to examine ways and means to bring down the existing price of fish, to stimulate commercial enterprise in speedier transport and better marketing, and to establish cold storage plants for short-term preservation and factories for the utilization of fish by-products On the basis of the survey report submitted by the expert, the Fisheries Department of the then united Bengal was re-established in May 1942, with a view to organize the fish trade under war emergency conditions and to conserve the existing supplies

The Province of Bengal was partitioned in August 1947 into East Bengal and West Bengal; the former came under the Pakistan Dominion and the latter under India The technical personnel were also divided After the partition of the Province, the Fisheries Department of the West Bengal State was reorganized under the administrative control of the Director of Agriculture, Animal Husbandry and Fisheries, the technical control being vested in the Technical Assistant Director in charge of the Department.

On the basis of present population figures, which have been estimated at about 25 millions, West Bengal needs about 32,000 maunds of fish per day, calculating on the basis of 2 ounces per adult per day, as against an estimated production of 2,000 maunds and an uncertain import varying from 1,000 to 2,500 maunds per day according to season

As a result of the partition of the Province, most of the potential fisheries—fresh water, riverine, estuarine and coastal—have fallen to East Bengal, leaving to this State only about 12 lakh acres of upland water area excluding the few big rivers, creeks and canals, and a limited coast line of about 25 miles where foreshore fishing is in existence, though not on an extensive scale

Of the 12 lakh acres of upland water area for fresh water fish cultivation over two-thirds remain practically dry during several months of the year They will have to be improved by de silting, re-excavation, etc, before they can be utilized for fish production The remaining areas consisting mostly of large tanks and beels are also found in a large majority of cases to be filled up with submerged and floating vegetation including water-hyacinth, necessitating a long-term programme of development

Most of the small rivers of West Bengal are in a dying condition and the scope for the development of riverine fisheries, consequently, is very poor.

Due to the partition of the Province, the scope for the development of foreshore fisheries is also very limited as the major portion of the coastal areas are now within East Bengal, leaving to this State the Moore, Frazerganj and Saugar Islands near the mouth of the Hooghly River and the coastal area of Contai sub-division in the district of Midnapore where about 1,000 fishermen usually catch fish during the cold weather months (November to February)

The only areas within this State where fishing may be undertaken, more or less on an extensive scale by helping the fishermen with nets and boats, and by organizing quick transport system under refrigerated condition, is the rivers, creeks and canals of Sunderban estuaries in the district of 24-Parganas

LACK OF GEAR, MEN

Statistics indicate that fish production in West Bengal has been steadily falling since 1942-43 due to the following reasons :—

(*a*) Death of a large number of fishermen in the famine of 1943 and subsequent epidemics. Departmental survey made in the year 1945 indicated that the number of fishermen actually engaged in fishing was about 108,000 in West Bengal. About 10,000 fishermen have so far migrated to West Bengal from East Bengal as refugees Assuming that the average per capita catch of fish per day is 3 seers, the total output of fish per day would be about 8,750 maunds as against the need of about 32,000 maunds for the whole of the State.

(*b*) Destruction of a large number of fishing boats owned by fishermen due to the Denial Policy adopted by the Government towards the end of the war and subsequent diversion of an appreciable percentage of fishermen to non-fishing occupation.

(*c*) Serious scarcity and abnormal rise in the prices of yarn for nets, timber for boats, and other capital goods, the essential pre-requisites for fishing, have compelled the fishermen to have recourse to fishery owners and fish merchants with consequent danger of exploitation Thus the profession is losing some of its old attraction.

A scheme has been undertaken which aims at developing some of the vast water areas locally known as beels with financial and technical help to owners from Government, the financial help being in the form of loan The estimated capital expenditure of the scheme is about Rs 11,79,000 as against the expected production of 94,000 maunds of fish within a period of 5 years

Another project aimed at the opening up of nursery units in the rural areas of the State for nursing of carp spawn and subsequent distribution to pond culturists at cost price has been put into operation at an estimated cost of Rs 3,10,700 It is expected that about 21,500 maunds of extra fish would be available within a period of 5 years

Side by side with the above schemes, two more schemes have been undertaken—one for stocking the culturable tanks in different places with carp fry at Government cost at the start, the cost being recoverable from the tank owners with interest, and the other for the improvement of the partially derelict tanks in the dry districts of the State by de-silting and re-excavation at Government cost and subsequent leasing out for fish cultivation to fish culturists on rental basis The cost of the first scheme has been estimated at Rs 8,70,000 against an estimated production of 27,000 maunds of extra fish and the second at Rs 28,50,000 as against an estimated production of 450,000 maunds of fish.

To help in the exploitation of the estuarine areas of the State on an extensive scale, a refrigerated power-craft carrier scheme has been undertaken at an estimated cost of about Rs 12,00,000 as against an estimated extra production of 250,000 maunds of fish

A foreshore and off-shore scheme aims at the extensive exploitation of forshore and off shore fisheries of the Bay by organizing fishermen groups on share catch basis, the nets, boats and other requisite accessories being supplied by Government free The estimated cost of the scheme is about Rs 4,00,000, and the expected outturn of fish about 36,000 maunds

A project aimed at the production of shark liver oil, fish meal processed fish, etc , has been put into operation by using the existing Government Fish Curing Yard at Jounput (Contai) as a shark catching base and the field station for processing of the by-products The Departmental Technological Laboratory in Calcutta is being used for final refining and standardization of the produce The total cost of the scheme has been estimated at about Rs 4,00,000.

In addition to the aforesaid development schemes, another project has been undertaken for distributing nets and boats to the needy fishermen of the State at subsidised rates, at a total cost of Rs 13,25,000 The extra production is estimated at about 125,000 maunds.

PUBLIC HEALTH

THE history of the public health administration in the country may be traced back to the appointment of the Royal Commission in 1859, which recommended measures for the amelioration of the health of the army and the civil population In accordance with its suggestions "Commissions of Public Health" were established in the States of Madras, Bombay and Bengal in 1864 This led to the appointment of Sanitary Commissioners In 1888 the Government of India issued a resolution "drawing the attention of local bodies and village unions to their duties in the matter of sanitation"

The success achieved by such efforts was negligible except in the larger cities. Owing to the vast number of the sick the main emphasis was laid on curative medicine; preventive medicine did not receive proper attention The outbreak of plague in 1896 had a great effect on the people and the Government, awakening them to the need of overhauling the public health machinery in the country

The report of the Plague Commission in 1904 was a landmark in the history of public health administration It recommended the strengthening of public health services and the establishment of laboratories for research and the preparation of vaccines and sera, but the total effect of the measures adopted in pursuance thereof was small Attention was directed mainly to urban centres while about 90 per cent of the population lived in villages

Under the Government of India Act, 1919 the health administration was transferred to State Governments making it a subject directly under Ministers responsible to the Legislatures This position continued under the Government of India Act, 1935 and still continues under the new constitution and the State Governments are unfettered in the development of health and sanitation in areas under their jurisdiction The effect of this transfer is summarised by the Health Survey and Development Committee in its report as follows —

"Ministers were anxious to promote the growth of education, medical relief and preventive health measures as far as funds permitted Indeed, there has been, since the Reforms, far greater public health activity in the States than ever before"

Another important landmark in the history of public health in the country was the setting up by the Government of India, of a small Committee known as Environmental Hygiene Committee This Committee was designed to cover a long range of public health activities such as Town and Village planning, housing, rural and urban water supply, sanitation, river and waterpollution, control of insect vectors and diseases, and regulation of certain offensive trades

The recommendations made by this Committee are now under the consideration of the Government of India

VITAL STATISTICS

India's population growth is characterised by high levels of fertility and mortality Interconnected with this feature is the high infantile mortality. Thus, her birth rate, death rate and infantile mortality rate are much higher than those of Western countries

An idea of the levels of birth rate, death rate and infant mortality rate and their trends is given in the following paragraphs but attention may particularly be drawn to the violent upheaval in many States due to the movement of displaced persons following the partition of the country in 1947 It has not been possible to assess the effect of these movements on the structure of population and the recording of vital events It is not unlikely that some of the variations in the rates observed in 1947, may be due to this unknown abnormal factor

The rates given below relate to India excluding N-W F P and Sind but including the whole of the now partitioned provinces of Punjab, Bengal and Assam The rates for 1947 and 1948 refer to Indian Union States only and are based on population data of 1941 Census.

Birth Rates.—The five yearly averages for the pre-war period 1937-41 was 33 6 and for the war years 1941-45 was 28.5 This noticeable fall in the birth rate was shared by almost all the individual States *There was a sharp fall* in the birth rate during the famine years of 1943 and 1944 when the figure came down to 26 per mille but in 1945 and 1946 there was a substantial increase In 1947, the rate again came down to 26 6 per mille as against the corresponding figure of 29 2 per mille in 1946 for areas now in partitioned India The recorded birth rate for 1948 was 25 4 per mille which compared to 1947 shows a further fall The States which showed a substantial fall were Punjab, U P, Madras, Madhya Pradesh and Ajmer West Bengal was the only State to show a rise of 1 per mille

Death Rates.—The five yearly averages of 22 6 in 1937-41 and of 22 9 in 1941-45 show that disparity in the death rates was not so marked as in the case of birth rates, the only instance of an increase of over 2 0 per mille being Bengal which went through the great famine of 1943 It seems therefore reasonable to hold that, in spite of the stress and strain which war conditions brought to bear on community life, the rise in mortality over India as a whole was not appreciable The death rate in 1946 was 18 7 per mille being the lowest on record The rate in 1947 increased to 19 7 per mille but was still on the low side The recorded death rate for 1948 was 17 1 per mille each of the States except West Bengal and Assam recorded a fall by well over 2 per mille The fall in the case of Punjab Orissa, Delhi, Madhya Pradesh, Bombay and Ajmer was more pronounced

Infantile Mortality Rates.—The five yearly averages for 1937-41 was 161 per 1,000 live births and there was little change in the average for 1941-45 Here again, the war years did not produce a rise in the country as a whole, while some of the individual States recorded varying reductions in the infantile mortality rate in comparison with the five year period before the war The infantile mortality rate was 136 in 1946 which is the lowest on record In 1947 it increased to 146 but was still on the low side. The infant mortality rate in 1948 was 131 per 1,000 live births Compared to 1947 each of the States excepting Assam showed a decline The fall in the cases of Madhya Pradesh, Madras, Bombay, Punjab, Orissa, Delhi and Coorg was over 15 per 1,000 live births.

The birth rate during the last decade has shown unmistakable signs of decline The indication of a reduction in Indian birth rate and its real significance as to how far it is, if at all, due to a real change in the country's potential and how far it is so due to temporary factors like war time and food scarcity conditions or increased omissions in registeration is a matter of vital importance The Government of India have undertaken to institute jointly with the U N O *an enquiry into the birth rate in India* It is hoped it will throw useful light on the current trends However, there is one significant study based on Census data by Kingsley Davis His estimates of birth rate and death rate are as follows —

Decade	Birth rate per 1,000	Death rate per 1,000
1881-1891	49	41
1891-1901	46	44
1901-1911	49	43
1911-1921	48	47
1921-1931	46	36
1931-1941	45	31

In the period 1921-41, the birth rate failed to increase though famine and epidemics were absent, in fact, it declined from 49 per 1,000 in 1881-91 to 46 per 1,000 in 1921-31 and 45 per 1,000 in 1931-41 It is not unlikely that war time factors like urbanisation may have accelerated the process of decline in birth rate.

The estimates of Davis indicate another important feature The unprecedentedly high rates of natural increase in the last two decades ending 1941 were mainly due to the greater reduction in death rates The concerted effort of the Government to improve public health and sanitation and control epidemics and to maintain undisturbed civil order may further augment this tendency Infant mortality rate is a sensitive index of health conditions and being a ratio of infant deaths to live births is not likely to be materially affected by the greater number of omissions in registration This rate actually shows a declining trend Upto 1919 the lowest level was 200 per 1,000 live births, from 1919 to 1939 the lowest level dropped to 160 per 1,000 live births In recent years the birth rate has shown a further decline which may be taken to indicate an improvement in the health of the general population This is actually reflected in the declining trend in the observed death rates There does not appear to be much reason to believe that the increased omissions under the stress of war conditions will affect birth and death registration differently *Prima facie* a decline in birth rate also appears to be indicated.

In conclusion it may be said that an improvement in the mortality rate seems to be fairly well indicated and this would appear to point more forcibly to the need for strengthening forces which go to reduce birth rate, if the country is to avoid an undesirable increase in population

EPIDEMICS

Activities of the public health departments have been successful in considerably reducing suffering and loss of life from cholera, smallpox and plague but it cannot be claimed that these epidemic diseases have been brought under control completely It is not uncommon for these diseases to break out every year in an epidemic form in one or the other part of a State and thus the prevalence of these diseases in a State considered as a whole turns out to be at a fairly high level However, when the epidemic becomes more widespread than it usually does the State figure of incidence shows an abnormal rise and the States may then be said to be severely affected Considered in this light the incidence of cholera in 1948 was rather heavier than usual Madras and Madhya Pradesh experienced a severe outbreak of the epidemic There was a short lived heavy incidence of the disease in U P, Bihar, Bombay and West Bengal The incidence of smallpox was slightly above the usual level West Bengal, Bihar and Madhya Pradesh specially experienced abnormal incidence Unlike cholera and smallpox which affect all the States plague prevails mainly in the States of U P, Bihar, Madhya Pradesh, Bombay and Madras Plague was not particularly heavy this year Madhya Pradesh had an unusually high incidence as the case last year The incidence in Bihar was much lower than what it was in the preceeding two years but it was still above the normal level. In U P the disease was slightly more active than usual

Statistics of case incidence are collected in the Indian States in respect of the five conventional diseases only Happily typhus is rare and yellow fever unknown in India. As the symptoms of the remaining three, *viz.*, cholera, smallpox and plague are known to the layman who reports the occurrence of cases of these diseases, a fair idea of the trend of their incidence in the general population can be formed from the published figures, though they are generally incomplete Figures of deaths recorded under these diseases present a more reliable picture.

Information on the incidence of other diseases is lacking Some idea of the relative importance of these may be formed from the statistics of patients treated for these other diseases in the Hospitals and Dispensaries, which in so far as they relate to Government institutions and the Army are published annually Statistics of army recruits rejected for various defects may often furnish useful information in this connection

Natality and mortality statistics are in a somewhat better position These are collected in several details, *e g*, by age, sex and community Statistics of deaths by causes are recorded under several headings but their usefulness is limited by the fact that the information is supplied by laymen This difficulty is really responsible for the large variation in the list of causes of death under which deaths are published by the States Several States do not separately show deaths from important diseases like malaria and tuberculosis in the rural areas In view of the general unreliability of the recorded cause of death, all India mortality statistics are shown under seven groups *viz* cholera, smallpox, plague, dysentery and diarrhœa, fever, respiratory diseases and all others The three epidemic diseases generally do not account for more than 5 per cent of total mortality in any State By far the largest proportion of total deaths is recorded under the group 'Fever' This group includes a variety of heterogenous diseases and a large number of unclassified conditions which for want of proper facilities for diagnosis are catalogued here by the informants In most of the States 50 to 75 per cent of mortality is shown under this group, but this merely reflects the peculiar idiosyncrasy of the reporting agency and not the relative importance of the disease included in the group The information available from the published data is insufficient for the purpose of assessing the extent and the precise nature of the problems in health administration

LEPROSY

Leprosy has been prevalent in the country for many centuries, being recognised and described by ancient Hindu Physicians The *Susharate, Samhita* written 2,500 years ago describes the different forms of leprosy, and its treatment with chaulmoogra oil, the mainstay in its present-day treatment

The 1931 census report recorded 150,000 persons suffering from leprosy Investigations carried out by expert leprosy workers indicate that at a conservative estimate the number of cases is about one million About three-fourth of these cases are of the mild type and are not infective The disease is found throughout the country, but is most prevalent in parts of Assam, West Bengal, Bihar Orissa, Madhya Pradesh, Madras, Hyderabad and Travancore.

Leprosy relief work has been going on for a long time Apart from the Central and State Governments, and some local organisations, the Mission to Lepers and the Indian Council of the British Empire Leprosy Relief Association (now redesignated as Hind Kushta Nivaran Sangh) have played an important role in this field

Founded by Wellesley Bailey, the first asylum was built at Chamba, Punjab, in 1875 The Mission now runs about 30 leper homes with about 10,000 inmates It has done very noble work and has given a lead in various ways The State Governments assist the Mission by making grants on a *Per capita* basis

Leprosy Relief Association —The introduction of new methods of treatment of leprosy led to the foundation in the year 1924 of the British Empire Leprosy Relief Association in London followed by the foundation of the Indian Council of the Association in 1925, later, branches were formed in most of the States of India At the inauguration of the Indian Council, Lord Reading, the then Viceroy and Governor-General of India, issued an appeal on behalf of the Association, and collected a sum of over Rs 20 lakhs, which forms the Capital Fund of the Indian Council.

The work of the Association has greatly stimulated interest in leprosy in the country, resulting in knowledge of the disease, of its prevalence, clinical forms, prognosis, spread and the factors influencing its spread The medical profession as a whole is now taking a keen interest in the leprosy problem The President of the Indian Republic is the President of the Indian Council and the Director-General of Health Services, the Chairman of the Governing body, Mr Brij Narayan and Sardar Balwant Singh Puri, the Honorary Treasurer and Secretary respectively Dr Dharmendra, an officer of the Medical Research Department, Government of India, is at present the Research Worker of the Association

The research work of the Association is carried out at, or directed from, the School of Tropical Medicine, Calcutta, and is done in collaboration with the Endowment Fund of the School and the Indian Research Fund Association The main activities of the Association are —

(i) *Research* —This includes clinical, histological, bacteriological therapeutic, epidermiological and immunological studies Recent studies of the only immunological test the "lepromin test" or the "Mitsuda Reaction" by Dr Dharmendra at the School of Tropical Medicine, Calcutta, have resulted in a great improvement in the test, and have thrown considerable light on the mechanism of the reaction

(ii) *Post-graduate Training in Leprosy* — Special post-graduate training classes for training doctors in the diagnosis and treatment of leprosy are arranged annually at the School and over 1,000 doctors from the country and not a few from abroad, have attended these special courses In addition, lecture-demonstrations in leprosy are given to the I T M and D T M. classes at the School.

(iii) *Leprosy Surveys* —In the early years, a survey party carried out rough sample surveys in different parts of the country in order to get an idea of the incidence and distribution of the disease More recently, intensive surveys of small selected areas have been carried out in different parts of the country in order to collect information about the factors that favour the spread of the disease and in order to study the possibility of evolving suitable methods of isolation of infective cases for the control of the disease.

(iv) *Publication and Propaganda* —"Leprosy in India," a quarterly journal published by the Association, is a record of the study of leprosy and of anti-leprosy work in this country and other places Recently a new propaganda book entitled "Popular Lectures on Leprosy" by Dr Dharmendra has been published, which gives the main facts about leprosy in simple and non-technical language

The Treatment of Leprosy.—The mainstay in the treatment of leprosy has been injections of chaulmoorga (hydnocarpus) oil or its preparations. Recently encouraging results have been reported by the use of certain sulphone drugs such as "Promine" and "Diasone" It is yet too early to assess the value of this group of drugs in the treatment of leprosy. The treatment with chaulmoorga oil is of value in individual cases It cannot be expected to control the spread of leprosy with curative treatment alone.

Control of Leprosy.—Leprosy can be controlled by raising the general economic and social conditions of the population and, by preventing contact of infective patients with healthy people, specially children The only sure method of preventing contact with infective cases is the isolation of these cases in leprosy hospitals, sanatoria, or colonies, etc Great difficulty is experienced in providing institutional accommodation for all infective cases in the country The total accommodation in all the institutions at present is for about 15,000 patients whereas a rough estimate of infective cases places the figure at 2½ lakhs. So some other methods of isolation are urgently needed to supplement the institutional isolation.

The two alternatives are the isolation of the patient in his home, and the isolation of all the patients of a village or a group of villages in huts made in the outskirts of the village. Home isolation is practicable only in families with sufficient financial resources. Village isolation appears to be specially suited to India with its big leprosy problem and limited resources. It is desirable that methods of village isolation should be developed in suitable areas and then widely applied.

Under Dr. Cochrane, now Director of the Leprosy Campaign of Madras State, rural preventive units were established in 1939, the object of which was to deal with the problem of leprosy in rural areas Each unit consists of an administrative block, including treatment centres and staff quarters, and a segregation area where patients sleep at night and where evening meals are provided All infective cases of leprosy in villages served by the preventive unit are required to sleep in the segregation area, thus preventing contact with their families during night In the villages where such control methods have been adopted, there has been a marked decrease in the gross incidence of leprosy over the period 1939 to 1945, whereas in villages where such control had not been established, the incidence of leprosy had increased, in one case to more than twice the 1939 figures The decrease was particularly marked among infective cases and children

With the advance in knowledge of infectiousness of leprosy there has been some change in the existing restrictions on patients suffering from leprosy, and the leprosy Section of the Madras Public Health Act (1939) has been considerably modified, the amended act of 1944 allowing considerable liberty to patients suffering from leprosy while at the same time ensuring adequate protection for the public.

Leprosy Conferences held at Wardha and Calcutta —Two conferences on leprosy have recently been held One conference was held at Wardha in October, 1947 and its Report has already been published by the British Empire Leprosy Relief Association (Indian Council). The second conference was held at Calcutta in December, 1948, copies of the resolution passed at this Conference were forwarded to all State Governments for suitable action

Central Leprosy Teaching and Research Institute Committee —On the recommendations of the Health Survey and Development Committee that a Central Leprosy Teaching and Research Institute should be established, the Government of India, Ministry of Health, appointed a Committee in November, 1948 to consider the steps to be taken in implementing the following recommendations of the Health Survey and Development Committee.—

"Our proposals for the organisation, maintenance and control of this and of similar institutions for certain other diseases have been set out in the section dealing with post-graduate medical education Its function will include the training of Leprosy workers, the active promotion of research in this subject and the development of an information service providing the latest information regarding the treatment of the disease and anti-leprosy work in general for the benefit of the Government and organisations interested in leprosy in India. It should assist State Governments in the development of their campaign against the disease, if so desired It should be located in an area which provides suitable clinical material in abundance and should have attached to it, a large leprosy hospital together with its out-patient department and a group isolation colony. The development of clinical research and field investigations, as distinct from Laboratory studies, should be an essential part of its duties."

The report of the committee which was submitted in 1949 is under the active consideration of the Government

MALARIA

Malaria is by far the most important disease in India, both from the point of view of sickness and of mortality. It has been estimated that in the sub-continent at least 100 million persons suffer from this disease annually, and that out of 8 million deaths from all causes every year, it is responsible for at least 2 million deaths due to its direct and indirect effects. In addition, 25 to 75 million cases, primarily debilitated from attacks of malaria are finally reported under other diseases. The loss in man-hours of these millions employed in all types of labour in industry and agriculture runs into colossal figures resulting in much avoidable wastage of potential wealth.

Malaria is primarily a disease of the rural areas, as the mosquitoes that transmit it, breed in fresh water collections more often associated with rural rather than urban conditions Ninety per cent of the population living under rural conditions following agricultural pursuits, are exposed to the risk of suffering from this disease While malaria has been successfully controlled in some urban and industrial areas like the coal-fields, railway colonies and tea estates, where the population lives in compact colonies and is subject to some degree of discipline, in rural areas, with a sparse and scattered population, the *per capita* cost of its control has so far been considerably high A proper exploitation of the special feature of residual action of the new synthetic insecticides which enables the operations to be carried out at extended intervals has simplified procedure to the extent that the control of malaria in vast rural areas has now become economically and technically feasible, as borne out by experiments carried out in recent years in Delhi, Bombay and other areas The new anti-malaria drugs such as paludrine and chloroquine also provide efficient weapons for combating this disease.

Malaria control in the States is carried out by their respective anti-malaria organizations

The officers employed in the anti-malaria organisations have been recruited from among those trained at the Malaria Institute of India, Delhi, a Central Government organization The Institute which has been recently expanded, also functions as the Central headquarters of malaria research, is devoted to the promotion of uniform standards and serves as a bureau of information on all malaria problems It also directs and supervises malaria control organisations in Centrally Administered Areas and coal-fields in India which are meant to serve as models to the rest of the country

The special importance of malaria lies in the fact that it hampers the full exploitation of natural resources and in fact, the development of large tracts of land is held up owing chiefly to the prevalence of this disease The Malaria Institute of India functions as an instrument of international co-operation in Malaria work in the South East Asia region and is collaborating with the World Health Organisation and the United Nations International Children's Emergency Fund for the operation in India of 4 malaria control demonstration schemes in Tural (U P), Jeypore Hill Tracts (Orissa), Malnad (Mysore) and Ernad (Madras) The cost of each scheme is shared by the Central Government, the State Government concerned, the WHO and the UNICEF.

PLAGUE

Plague in India first appeared in Bombay in 1896 and within a short time the disease spread widely throughout the country. Its incidence reached the maximum in 1904 with a total mortality of 9,64,577 in the sub-continent excluding Burma Since then there has been a gradual decline and now the incidence of the disease has been reduced very considerably In 1940, the total deaths recorded in the sub-continent were 19,799 which figure came down to 11,984 in 1941 and 10,577 in 1942 In 1943 the figure went up to 13,578 and since then there has been a steady rise in the recorded mortality with 21,525, 29,751, 32,977 and 75,274 deaths respectively in 1944, 1945, 1946 and 1947. After the partition there were 21,174 deaths in 1948 The States which may be considered to have serious plague problem are U P, Bihar, Madhya Pradesh, Bombay and Madras Of these, Uttar Pradesh recorded the highest number of deaths and had epidemic outbreaks in 1940, 1944, 1945, 1946 and 1947 with 11,725, 15,454, 14,024, 18,206 and 51,456 deaths respectively The incidence in Bihar and Madhya Pradesh was not of special significance except for the sudden epidemic outbreak in Bihar in 1946 and 1947 with 8,689 and 13,204 deaths respectively as compared with 1,523 deaths in 1945 Bombay had epidemics in 1940 and 1941 and again in 1944, in the last quarter, the total deaths in these years being 5,573, 5,311 and 2,514 respectively The disease prevailed in severe form in several districts in 1945 resulting in 11 779 deaths In 1946 and 1947 the mortality came down to 3,405 and 3,081 respectively which was slightly above the normal incidence In 1948 there were only 1,305 deaths Madras had a severe epidemic in 1943 with 4,885 deaths The incidence in 1945 was about the normal level with 1,644 deaths, while in 1946 and 1947 slightly higher incidence was recorded with 2,254 and 2,718 deaths respectively In 1948 there were only 916 deaths Of late, Punjab is showing heavy infection in Ambala and Karnal districts In 1947, the number of deaths from plague was 1,905 but in 1948 there were only 211 deaths Bengal has been free from plague for the last 30 years but since 1948 there have been a few indigenous cases in Calcutta and the surrounding areas It is difficult to specify the reasons for the appearance of plague in West Bengal, and the Government is watching the situation There are certain endemic centres situated in the cool and moderately damp areas running from the Himalayas in the north through central and east India to the Deccan and the State of Madras

However, the history of plague through the centuries serves as a warning against taking a complacent view of the reduced prevalence of the disease in the country It is known that the disease can smoulder in its endemic homes for long periods and that on certain occasions, it acquires an increased striking power and spreads far and wide in epidemic waves into distant lands, to retreat again after a while to those areas where it permanently resides While, therefore, it is gratifying that plague as a public health problem has been of decreasing importance within the past decade, the fact that endemic foci exist makes it imperative that no slackening of effort for its complete eradication should be permitted

BLINDNESS

In olden days, the blind people were considered as useless members of the society and the treatment they used to get from their sighted counterparts was inhuman With the popularization of religious principles, the blind began to get more generous treatment The development of modern welfare services dates back to only about 150 years

The total number of the blind in this sub-continent is not accurately known, but the roughest available estimate places it at about 2,000,000 The chief causes of blindness are ophthalmia Neonatorum, keratomalacia, small pox, acute conjunctivitis, myopia, venereal diseases, malnutrition, cataract, etc

The treatment of eye diseases has and is, being carried out in the eye wards of Government Hospitals, and Hospitals under the control of Local Authorities in the Provinces and local centres, mission hospitals, a few travelling eye dispensaries, camp eye hospitals and eye fairs, and in small local dispensaries to the limit of their resources.

There are at present 38 Institutions for the Blind in India Most of the Institutions were organised by the philanthropic public and missionary organisations The purpose and activities of these Institutions are to educate and train the blind through the medium of Braille and other apparatus and appliances used in the education of the blind Most of these institutions are under the management of committees consisting of public men, philanthropists and educationists of the country. Most of the Institutions receive grants-in-aid from their respective State Governments, Municipalities and subscriptions from the philanthropic public The total number of the blind receiving education and training in the existing Institutions of the country is about 1,200

In April, 1947 a special unit was established in the Ministry of Education, Government of India to promote the cause of the education of the blind A common Braille Code for major Indian languages, known as Uniform Indian Braille has been devised by an Expert Committee, consisting of Linguists and Braillists appointed by the Central Advisory Board of Education The Uniform Indian Braille has finally been accepted by the Government of India With the introduction of the Uniform Indian Braille, a long standing obstacle in the way of the education of the blind will be removed To produce literature in Uniform Indian Braille, the setting up of a Braille Printing Press is being undertaken The establishment of a National Centre for the Blind is also under the contemplation of the Government of India

A periodical entitled "*Deepanah*" devoted to the education and welfare of the blind is being published in Braille as well as in ink-print

Report on Blindness —The Report of the Joint Committee of the Central Advisory Boards of Education and Health to enquire into the cause and extent of blindness, to recommend measures for the prevention of blindness and welfare of the blind has been released to the public In accordance with one of its recommendations States have been requested to form Councils on Blindness which will be responsible for the prevention of blindness and welfare of the blind within their respective jurisdiction The Government of India will co-ordinate the activities of the Provincial and State Councils on Blindness.

The education of the handicapped comprises a number of specialised fields of education—the education of the blind, the deaf, the crippled, the mentally retarded and so on Methods of education differ according to the nature of the handicap of a person It is difficult to estimate accurately the number of handicapped persons in the country, but the Census Report of 1931 puts the number of blind persons at approximately 6,00,000 and the number of the deaf and the hard-of-hearing at approximately 2,00,000 Since no Census of handicapped persons was taken in 1941, the figures of the 1931 census remain the latest statistics available on the subject But experts generally believe that the number of handicapped persons is actually about two or three times as given in the 1931 Census Report

A few decades ago handicapped persons were generally regarded as helpless creatures and were the objects of wanton pity The outlook is gradually changing for the better but the education of the handicapped is still in the initial stages of development in this country Luckily, there is a growing consciousness among the public of the need to educate the handicapped and to train them to a life of interest to themselves and of usefulness to the community

As mentioned above Government have instituted a special unit under the Ministry of Education to deal with the education and welfare of the physically and mentally handicapped This Unit has several plans in hand for promoting the education and welfare of the handicapped Some of these plans have already been implemented

With effect from the 1st January, 1950 the Government of India have established a Training Centre for the Adult Blind at Dehra Dun The primary objects of this Centre is to impart vocational training to both the war-blinded and civilian blind adult from all parts of the country with a view to helping them to regain total or partial economic independence

The Unit for the Handicapped has undertaken the publication of *Deepavali* (see above) devoted to the education and welfare of the blind With a subsidy from the Government of India the Convention of the Teachers of the Deaf in India has launched a publication entitled *The Deaf in India*, a periodical devoted to the education of the Deaf

In order to provide educational and training facilities for deaf and dumb children in Delhi and the adjoining States the Government of India have provincialized the Lady Noice School for the Deaf and Dumb, New Delhi

TUBERCULOSIS

The vastness of tuberculosis problem is being increasingly recognised by the public, the Governments in India, and also by the international organisations interested in health matters such as the World Health Organisation and the United Nations International Children's Emergency Fund

Mortality figures for cities show a tuberculosis death-rate of from 200 to 450 per 100,000 as far as can be ascertained Little information is available from rural areas but certain investigations have shown that in small up-country towns the infection rate is nearly as high as in the larger cities, and that in the villages it is lower though considerable It can be safely estimated that there are at least 500,000 deaths from tuberculosis annually If about 5 cases of active tuberculosis to one tuberculosis death is accepted, there will be at least 2,500,000 active cases of tuberculosis in India

Lankester, in his comprehensive survey of tuberculosis in the country in 1920, estimated that approximately 1 out of every 7 or 8 deaths was due to tuberculosis, and 1 out of every 3 of adults in cities As far as can be estimated the position is little different today This means that tuberculosis is one of the most frequent causes of death Further, the problem is specially serious as tuberculosis is found chiefly among young adults whose lives are economically and socially of most value to the community The Government of India is at present actively engaged in the following —

1. Advisory Functions.—The Government of India has an Adviser in Tuberculosis in its Directorate of Health Services He advises the Central Government and the various State Governments on tuberculosis policy and helps in co-ordinating the various tuberculosis schemes in different parts of the country He is also Technical Adviser to the Tuberculosis Association of India

2. Preventive Measures and B.C.G. Vaccination.—The Government of India in co-operation with the World Health Organisation and the United Nations International Children's Emergency Fund has taken up a programme of immunization of young people by B C G Vaccination A Laboratory was set up at Guindy, Madras in 1948 for the preparation and supply of B C G Vaccine for the whole of India Six foreign teams under the auspices of the Joint Enterprise (U.N.I C E.F and voluntary organisation of Scandinavian countries) were sent to India to help in the B C G Vaccination programme These teams have worked in India for twelve months, training Indian doctors and others in the technique of tuberculin testing and B C G Vaccination

B C G Vaccination was first introduced in India in August, 1948 at Madanapalle and was then extended to Delhi, Madras, Punjab, Uttar Pradesh, Bihar, West Bengal, Assam, Bombay, Patiala, Hyderabad, Baroda, Ahmedabad, Rajkot and Travancore-Cochin There are about 25 B C G Vaccination centres and it is expected to increase this number as the number of trained personnel increases Over 500,000 persons have been tuberculin tested and nearly 200,000 B.C G vaccinated This programme will be extended further during 1950-51 and also 1951-52 An attempt will be made to vaccinate if possible all tuberculin negative individuals in the course of the next two or three years in certain selected areas

3. Development of Demonstration, Training and Research Centres.—(*a*) The Central Government is taking active steps towards the establishment and development of a few anti-tuberculosis demonstration and teaching centres in different parts of the country. Three such centres will be started in 1950-51 at New Delhi, Patna and Trivandrum U.N C I E F. and W H.O. will help this schemes by supplying a few expert personnel for short periods and also the equipment needed such as miniature X-ray units, laboratory equipment It is hoped that more such centres will be developed in the coming years The State Governments will supply the building and the staff as well as the running expenses of these centres The U N C I E F will also provide scholarships for study in Western Countries for a number of Indian staff of these centres

(*b*) A Research Centre for assessing the value of B C G Vaccination and other tuberculosis control measures under Indian conditions is being developed at Madanapalle in co-operation with Union Mission Tuberculosis Sanatorium and W H O Tuberculosis Research Office

4 Owing to partition, the Government of India had to face a very serious problem in the prevalence of tuberculosis among the displaced persons from Pakistan The Government has, during the current financial year spent a sum of Rs 5 lakhs for providing help to individual displaced patients and for reserving and maintaining a number of beds in a few tuberculosis institutions in India

CENTRAL ADVISORY BOARD OF HEALTH

In April, 1937, the Government of India acting under Section 135 of the Government of India Act constituted a Central Advisory Board of Health The aim of the Board is to ensure co-operation between the Centre and the States and between State and State in matters related to health which are of common concern Work is done through standing or *ad hoc* committees which permits the Board to act as a central information bureau It advises on all matters referred to by the Central or State Governments and makes suggestions to the Central Government on any matter affecting public health to which it considers Government's attention should be drawn.

The Public Health Commissioner with the Government of India was Secretary to the Board

The first meeting was held in 1937 when *ad hoc* committees were appointed—

(1) to report on the maternity and child welfare work in the sub-continent including the training of maternity and child welfare workers and the organisation of schemes in urban and rural areas, and

(2) to examine the question of food adulteration with reference to legislative measures then in force in different States and such additions and amendments to these as may be considered advisable.

The Maternity and Child Welfare Committee met in Simla in October, 1938 and its report was widely circulated The Food Adulteration Committee produced two reports one on the technical aspect dealing with standards for purity in regard to different foods and the standardisation of the technique to be employed in food analysis, while the other dealt with the legislative aspects of the problem including an examination of the various Acts and Regulations with suggestions for their improvement

The second meeting of the Central Advisory Board of Health was held in Madras in 1939 and recommended the appointment of a sub-committee to examine the possibility of introducing a system of compulsory inoculation of pilgrims against cholera It also appointed an *ad hoc* committee to prepare a report on leprosy and its control in the sub-continent. The first of these committees met and reported in June, 1939 and the second in October, 1941.

The third meeting of the Board was held in Poona in July, 1940. The meeting recommended the appointment of a special committee to report on the questions of teaching of hygiene in schools and of the Medical inspection of school children This special committee met in December, 1941 and reported.

The fourth and the fifth meetings of the Board were held in January, 1942 and October, 1943. An important outcome of the fifth meeting of the Board was the appointment of a joint committee of the Central Advisory Boards of Education and Health to examine the problem of blindness in the sub-continent A report on this subject was published in 1944 which deals with the two main aspects of blindness, *viz*, its prevention and cure and the education, employment and general welfare of the blind.

As a result of the recommendations of the Health Survey and Development Committee (see below), the Medical and Public Health Departments were amalgamated on the 15th August, 1947 and consequently the post of the Public Health Commissioner with the Government of India merged with that of the Director-General of Health Services. That Committee has further recommended the establishment of a Central Board of Health which, if and when established, will take the place of the existing Central Advisory Board of Health.

BHORE COMMITTEE'S PLAN

A Health Survey and Development Committee was appointed by the Government of India in October, 1943 under the chairmanship of Sir Joseph Bhore, K C S I, K C I E, O B E, to make a survey of existing health conditions in the sub-continent and to formulate plans for future health development The Committee was quite representative in its composition and consisted of 9 officials and 16 non-officials. The Committee, had, further, the advantage of discussing its problems with certain distinguished workers in the field of health from the United Kingdom, the United States of America, the U S S R. and Australia, who came to India for this purpose on the invitation of the Government of India.

The Committee's Recommendations.—In putting forward its recommendations the Committee kept in view certain objectives. They are —

(1) the scheme, when fully developed, should provide each individual in the country with adequate medical care, curative and preventive, irrespective of his ability to pay for such services;

(2) the medical aid made available to the rural areas is much less than that provided in urban areas, this must be righted,

(3) the active co-operation of the people should be secured in the development of the health programme.

Taking these objectives into consideration the Committee drew up a long-term programme which would provide the country with a modern health service based on the newer and expanding conceptions of modern health practice.

The district health organisation will have as its smallest unit of administration a primary unit which will normally serve a population of 10,000 to 20,000. About 15 to 20 such primary units will together constitute a secondary unit and a varying number of the latter (3 to 5) will form the district health unit, the designation suggested by the Committee for the district health organisation. At each of the headquarters of the district, secondary and primary health units will be established a Health Centre from which will radiate the different forms of health activity into the territory covered by each type of unit. The provision made for medical relief and preventive health work at each of these Health Centres will increase in scope and efficiency from the primary unit to the district health unit.

The District Health Centre will possess general and special hospitals with a total bed strength of about 2,500 and all the consultant and laboratory services required for the diagnosis and treatment of disease on up-to-date lines. The Secondary Health Centre will have a hospital with 650 beds and the primary unit headquarters a 75-bed hospital. A system of ambulances and telephone connections between these three types of hospitals will help to promote the fullest utilisation of the higher types of service available at the larger institutions by the people living in the remoter parts of the district.

Health Environment.—These hospitals will also take an active part in the preventive health campaign. They will be linked with the field health organisations in respect of such services as those for tuberculosis, for mothers and children or for venereal diseases in order to ensure that the remedial and preventive health work carried out in the homes of the people receive the full benefit of the treatment and diagnostic facilities available at the hospitals.

The Committee stressed that preventive and curative health work should be dovetailed into each other in order to produce maximum results. It therefore, suggested extensive changes in the existing training programme for doctors and laid emphasis on equipping him for preventive health work. It also made elaborate proposals for a considerable expansion of training facilities for the different types of other health personnel required for meeting the country's needs.

The Committee made it plain that no health development plan could produce adequate results unless sufficient measures were taken for the provision of a healthy environment for community life, such as safe water-supply, hygienic houses, a satisfactory system of conservancy and proper supervision over the production, distribution and sale of food intended for public consumption Specific recommendations were put forward in respect of these

In order to secure the active support of the people, the establishment of a Health Committee in every village was recommended Such Committees were intended to stimulate local effort for the improvement of environmental sanitation, control of infectious disease and the steady development of a programme of health education

Government of India accepted in principle all the recommendations of the Bhore Committee, and have been carrying out the recommendations in regard to the items given below —

1. *Scholarship Scheme* —A medical scholarship scheme was initiated in 1945 Under this scheme a limited number of medical and dental graduates and nutrition workers are selected annually for post-graduate training abroad at Government expense in medical and allied subjects, dentistry and nutrition The scheme has further been revised in 1948 and a certain number of travel fellowships of shorter duration are being granted to selected officials holding responsible posts in Medical Colleges, Hospitals, Teaching and Research Institutions holding key posts in the Administrative Medical Service. This scheme has undergone further revision during 1949 and as a result of the recommendations made by the Overseas Scholarship Committee appointed by the Government of India, Ministry of Education, it has ceased to function as a separate scheme and has merged into the main scheme for advanced studies overseas administered by the Ministry of Education It has further been decided that as a measure of economy it would not be possible for the Centre to assist the States by way of grants for financing training schemes and that the entire expenditure on the training of candidates nominated by the States Governments under the various schemes for higher training abroad in medical and allied subjects including nursing and dentistry will from 1950-51 be borne by the States Governments concerned

2. *All-India Medical Institute Advisory Committee.*—The Committee met in January, 1947 with Sir A. L Mudaliar, Vice-Chancellor, University of Madras, as Chairman to advise on the establishment of an All-India Medical Institute, which will be a multi-purpose medical training centre. This Committee *inter alia* emphasised the need of the urgent development of training and research facilities in particular subjects at suitable medical colleges all over India and suggested the appointment of an Up-grading Committee in this connection.

The Up-grading Committee was accordingly appointed in May, 1948 and has submitted its report to Government. It has recommended, and the recommendations have been accepted by the Government, that the following Departments may be considered for up-grading —

1. Physiology Department, Prince of Wales Medical College, Patna
2. Tata Memorial Hospital and G S Medical College, Bombay
3. Obstetrics and Gynæcology, Government Maternity Hospital, Egmore, Madras
4. Tuberculosis Department, Delhi University
5. Industrial Hygiene Department All-India Institute of Hygiene and Public Health, of Industrial Health
6. Anatomy Department, Madras Medical College
7. Mental Hospital, Bangalore
8. Venereal Diseases Department, Madras Medical College
9. Pediatric Department, Grant Medical College, Bombay.
10. Mental Hospital, Ranchi
11. Department of Thoracis Surgery & T D D Course—Christian Medical College, Vellore, in collaboration with the Tuberculosis Sanatorium, Madanappalle
12. Social Medicine Department—All India Institute of Hygiene & Public Health and the Calcutta Medical College to work in collaboration with each other
13. Mycrobiology Section R G , Kar Medical College, Calcutta

3. *State Governments' 5 year plans* —The State Governments' 5 year medical and public health development schemes are being examined in the light of the recommendations of the Bhore Committee and approved for the grant of the Central Government contribution in respect of the approved schemes The State Governments submit periodical progress reports regarding the execution of these development schemes The Government of India have since reviewed their budgetary position and have come to the conclusion that it would not be possible for them to assist the States by way of grants in 1950-51 for financing development schemes except grow more food projects

4 *Committee on Indigenous system of Medicine.*—A Committee under the chairmanship of Sir R N. Chopra, met in January, 1947 to enquire and report on the ways to improve the facilities for research and training on indigenous systems of medicine The Committee was also entrusted with the task of considering the means of effecting a synthesis of indigenous and Western medicines The Committee has submitted its report to the Government Prior to the formulation of an all-India policy for the control and development of the indigenous systems of medicine the Government of India have appointed another Committee under the chairmanship of Dr C G Pandit, Secretary of the I R F A to work out and submit to Government a detailed scheme for the development of a centre of research in Ayurvedic & Unani systems of medicine. The report of the Committee is awaited.

THE MATERNITY AND CHILD WELFARE MOVEMENT

Among the most pressing problems of health is that presented by the appalling maternal and infant mortality. The figures for maternal mortality are not accurately known, but the investigations into the causes of maternal deaths carried out in certain areas indicate that over 20 mothers lose their lives each year for every thousand babies that are born as a result of pregnancy and child birth. The number of mothers who suffer from ill health and are disabled temporarily or permanently as a result of the normal physiological function of child bearing is at least 20 times the annual maternal deaths. Every year approximately one-fourth of the children die before the age of 5 years, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy and childhood.

The maternity and child welfare movement which aims to promote maternal and child health and to reduce deaths, owes much to the All-India Maternity and Child Welfare League initiated by Lady Chelmsford in 1918 and also since 1920 to the Indian Red Cross Society. The amalgamation of these two bodies in 1931 forming the Maternity and Child Welfare Bureau, Indian Red Cross Society, has undoubtedly increased and developed the work.

The Maternity and Child Welfare Bureau, Indian Red Cross Society, is the only body at present working on an all-India basis. The Bureau is managed by a technical committee representing the medical and public health services, the nursing profession and voluntary organisations and individuals working in fields allied to maternity and child welfare. The Director of the Maternity and Child Welfare Bureau, Indian Red Cross Society, an officer of the Women's Medical Service, acts as Secretary. The Bureau administers the Victoria Memorial Scholarships fund for the improvement of midwifery services in rural areas and, the Lady Chelmsford League fund for maternity and child welfare The Director of the Bureau is also the Secretary of the Lady Reading Health School Committee and operates on its funds

The income from the funds is expended on (1) the maintenance of a central Bureau of information on all aspects of maternal and child health, (2) on training schemes for workers in the maternity and child welfare field, doctors, health visitors, midwives, nursery school teachers and nursery nurses, (3) on propaganda, literature and publicity and (4) on grants-in-aid of experimental schemes Since there is an acute shortage of teachers and supervisors, the Bureau has lately concentrated on the training of such personnel both in India and abroad

Army Child Welfare was formerly an activity of the Maternity and Child Welfare Bureau under the Lady Birdwood Fund, but due to rapid expansion of welfare activities for the Indian Troops, a special committee, "The Indian Fighting Forces Maternity Child Welfare" took over the management of Indian Army Centres in the year 1942 The Secretary of the Indian Red Cross Society and the Director of the Bureau are members of this Committee A remarkable feature of the whole movement is the keenness of the men themselves to aid it, realising as they do the benefits to their own women and children. There are very few cantonments where some work of this kind is not going on.

In all the States welfare activities for the care of mother and child now exist, the activities differ in the nature of the work undertaken, and the amount of organisation displayed. The Health Survey and Development Committee appointed by the Government of India in 1942 have studied the existing Maternal and Child Health services and have made their recommendations for its future developments The Committee have emphasised the need for organising the services as an integral part of the medical and public health services of the State and much emphasis has been laid on the preparation of workers Much excellent work is still being done by voluntary organisations such as Branches of the Indian Red Cross Society in Assam, West Bengal, Madras, Orissa, Punjab, Madhya Pradesh and Uttar Pradesh In Bihar the work is undertaken by the Bihar Maternity and Child Welfare Society and in Bombay the Bombay Mothers and Children's Welfare Society The pace of the transition from voluntary to official direction has been accelerated in recent years and posts of maternity and child welfare officers exist in Madras, West Bengal, Orissa, Assam, Delhi, U P and Punjab, and in some of the other recently formed States These developments are noteworthy since the work is best co-ordinated and most energetically carried on where such appointments have been made. The Government of India have recently sanctioned a post of Advisor, Maternity and Child Welfare in the Directorate-General of Health Services and Dr. S. Pandit, Director, Maternity and Child Welfare Bureau, Indian Red Cross Society, has been appointed to that post. Her honorary services have been made

available to the Maternity and Child Welfare Bureau, Indian Red Cross Society, and thus the services under the official and voluntary organisations will be co-ordinated at the headquarters as well as in the States.

A demonstration centre is being set up in the rural areas of Delhi State at Najafgarh to provide model health services with special emphasis on the promotion of health of mothers and children The centre so organized will serve as a training field for the various institutions in Delhi The World Health Organisation have closely collaborated with the Government of India in setting up the model centre and have assigned a Maternal and Child Health Team consisting of a Paediatrician and a Public Health Nurse, which arrived in India in November, 1949 This is the first attempt to implement the recommendations of the Health Survey and Development Committee in Delhi Some of the other States are also developing the services on these lines but in a modified form.

WELFARE WORK IN INDUSTRY

The industrial concerns of recent years have realised the importance of providing special facilities for the employees and an increasing number of industries are now maintaining comprehensive welfare schemes for women and children The Government of India have instructed authorities in the coal mines to establish creches and provide such minimum requirements regarding building staff and equipment as are detailed in their circular. The Employees' State Insurance Act, 1948, which applies to all factories would further improve social conditions so far as medical care is concerned and the insured person will be entitled to certain benefits, one of them being the maternity benefit which is a special central legislative measure for the protection of mothers and entitles an insured woman to claim maternity benefit for confinement.

So far the schemes have devoted their attention to educating women in the elements of mothercraft and attempting to preserve infant lives and improve child health. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in this country also develop innumerable fresh roots such as medical supervision, dental clinics, better housing, open air playgrounds, etc.

VICTORIA MEMORIAL SCHOLARSHIPS

The Victoria Memorial Scholarships Fund was founded in 1903 by Lady Curzon, with the object of securing better standards of midwifery practice A sum of about Rs. 6½ lakhs was secured by public subscription in 1903.

The Fund is now administered by the Maternity and Child Welfare Bureau, Indian Red Cross Society and the income is expended as grants-in-aid of training schemes for rural midwives maintained by voluntary organisations, generally branches of the Indian Red Cross Societies in the States. The Director of Maternity and Child Welfare, I.R.C. Society, is Secretary of the Fund

In spite of continuous efforts since the beginning of the present century, no appreciable improvement has yet been made in the midwifery services in the rural areas It is, therefore, necessary to extend the training to rural areas taking care that only the required number are trained and allowed to work under supervision until such time as they can be replaced by properly trained midwives.

INSANITY AND MENTAL HOSPITALS

In India there are thirty mental hospitals for the care and treatment of mental patients providing a total accommodation for about 10,330 patients. In addition to these there is also one mental hospital in Madras reserved for criminal lunatics only Of all the institutions the Mysore Government Mental Hospital at Bangalore and the Inter-State Mental Hospital at Ranchi are the ones which are best equipped. They provide all the facilities of modern treatment including electric shock, insulin, cardiozal treatment, psycho-analysis, with or without sodium penthal and relevant brain surgery like prefrontal leucotomy and in epileptics ventricular puncture and exploration of the brain. Both these centres are to be upgraded as post-graduate teaching and research centres

In India facilities for the care and treatment of persons suffering from mental disorders are very inadequate. To serve a population of over three hundred million, there are about 30 institutions with accommodation for about 10,330 patients. While accurate figures are lacking regarding the actual number of mental patients, even at a conservative estimate of two per thousand of the population, as against 8.5 in England, and 5 in America, the figures run into nearly one million This does not take into account the mental defectives, who are not less than one and a half millions and the psycho-neurotics, who are about twice this number, needing intensive treatment

In general the types of insanity occurring in India at present are very much in the same proportion as in other parts of the world, the majority of serious and intractable cases being schizophrenic in nature. Other less prevalent types are Acute Mania and Maniac-depressive psychosis The major probable causes are hereditary predisposition, mental strain, critical periods of life (*e g*, puberty) cannabis indica, probably in the form of ganja or some other preparation, privation and diseases consequent on malnutrition, epilepsy and syphilis.

There is overcrowding in most of the hospitals. The State Governments have taken up the matter and have plans to increase accommodation for the mental patients in their State Hospitals.

The Bhore Committee has recommended amongst other measures, the starting of new and well-equipped mental hospitals, and these are likely to be given effect to by the State Governments concerned, in the near future

RAILWAYS

THE total route mileage of all the railways in India is about 34,000 (33,860 85) The total electrified route mileage is 236·00 The total capital at charge is Rs 7,01,89,18,000

There are three kinds of gauges, broad (5-ft 6 in), metre (3 ft 3⅜ in) and narrow (2 ft 6 in) There is also a light gauge usually laid on the mountains (2 ft) Examples of this last are the Matheran (Hill) Light Railway, and the Darjeeling-Himalayan The longest line in this class is the Scindia State, 294 miles.

The chief railway administrations in India are the Assam Railway, the Bengal Nagpur Railway, the Bombay Baroda & Central India Railway, the East Indian Railway, the Punjab Railway, the Great Indian Peninsula Railway, the Madras & Southern Mahratha Railway, the Mysore State Railway, the H E H Nizam's State Railway, the Oudh Tirhut Railway, the South Indian Railway and the Saurashtra Railway. There are also twenty-five other smaller units

With the exception of a few minor branch lines all the railways mentioned above are owned and worked by the Indian Union Government. Some smaller lines are owned and worked by private companies like the Barsi Light Railway H.E.H Nizam's State Railway is worked by Hyderabad State and owned by the Government of India

The total route mileage open on March 3, 1949 is as follows —

Broad gauge	15,694 32
Metre	14,767 61
Narrow and Light . ..	3,398 92
New Lines opened to traffic during the year . .	157 82
Nine new lines under construction total	532 14
No of Locos	7,672
No. of Passenger Carriages.	13,247
No. of Goods Vehicles ..	1,95,182
**No. of Passengers carried Aug.* 1947 *to Mar.* 1948 .	98,23,48,000
**No. of Passengers carried April to Dec* 1948 ..	105,64,26,700

The Indian railways are divided into 3 classes Class I, Class II and Class III Class I are those with gross earnings of not less than Rs 50 lakhs a year, Class II with gross earnings of less than 50 lakhs and more than 10, and Class III with gross earnings of less than 10 lakhs All the railway administrations mentioned above are in Class I The total route mileage divided according to class is as follows —

Class I	30,125 49
Class II	2,653·29
Class III	1,082 07

The fares are as follows :

Air Conditioned Class	30 pies per mile
Class I	24 ,, ,, ,,
Class II	14 ,, ,, ,,
Inter Class ..	9 ,, ,, (mail).
,, .. .	7½ ,, (ordinary).
Class III . .	5 pies per mile (mail).
,, ...	4 ,, ,, (ordinary).

The highest administrative authority for the railways is the Railway Board The majority of the railways are still organized on a Departmental basis, though the general drift is towards the Divisional organization There are a number of Committees which are associated with the Railway Administration Standing Finance Committee, Central Advisory Council, Railway Rates Tribunal, Indian Railway Fuel Committee. There are also a number of standardization Committees such as for bridge, structure, track, signalling and inter-locking, building, locomotive, carriage and wagon, electrical, specifications. There are four Railway Service Commissions at Madras, Calcutta, Bombay and Lucknow respectively, mainly engaged in recruiting Class III staff It may be mentioned here that the Kunzru Committee has recommended the abolition of the Commission at Lucknow and a reduction in the strength of the others.

PARTITION

The partition of India into India and Pakistan affected only three railway systems : the North

* Excluding the Punjab, Assam and N G. of E. I. Railways.

Western, the Bengal-Assam and the Jodhpur Railways. The North Western had a mileage of 6,881¼ before partition. Of this 1,855¼ miles fell within India and 5,026 miles in Pakistan. The part of Railway that remained in India was reconstituted and re-named as East Punjab (now just Punjab) Railway with the headquarters in Delhi. Of the 3,555 miles of the Bengal Assam Railway, 352 broad-gauge, 17 narrow gauge and 1,573 metre-gauge became India's share, and the rest 1,613 miles Pakistan's Part of the system that remained in India was amalgamated with the East Indian Railway, part with the Oudh Tirhut Railway and the rest was constituted into what is now called the Assam Railway. Finally, of the Jodhpur-Hyderabad Railway 1,126 miles long, the Sind section a length of 319 miles went to Pakistan, and the rest 807 miles remained in India later to become part of the Rajasthan railways system Through traffic on the Jodhpur-Hyderabad line suddenly stopped on July 27, 1948.

The question of the division of rolling stock, stores, etc, was settled in accordance with the Radcliffe Award by the Railways Stores Sub-Committee Details were worked out by Balancing Committees After the partition about 60,000 employees opted for service with India, and these had to be found comparable postings on the Indian railways The transfers could not be carried out in an orderly manner because of the disturbances that followed on the wake of the partition Relief was afforded by sanctioning an advance pay of two months Later a second re-habilitation advance was sanctioned equal to three months' pay and returnable in 36 instalments The question of finding suitable jobs on the Indian railways raised a host of difficult points such as grading Other particulars like provident fund were settled on *ad hoc* formula A great number of service records were obtained though till March 1949 about 14,000 were not received Eventually, some 59,900 out of the 60,000 employees were found comparable posts, mainly on the Punjab, East Indian and Assam Railways

One important result of the partition was that the northern districts of West Bengal and the whole State of Assam were cut off by road and railway from the rest of the Union. Actually Indian Union territory here between Nepal in the north and East Pakistan in the south is about 12 miles broad. It is through this narrow neck of land that the railway link between Assam and the rest of the Union was finally driven The whole length of the newly constructed railways (metre-gauge) is 142½ miles and is divided into three separate sections. The first section between Kishenganj and Siliguri, 66 miles, directly connects Assam with the rest of the Union The other two sections give access to different parts of the northern districts of West Bengal and of Assam Construction on the Assam rail link project, as it is called, started on 27th January 1948 Through rail link for goods traffic was established on 9th December 1948, and through link for passenger traffic on 26th January 1950 to coincide with the inauguration of the Indian Republic. Construction was difficult as there were over a hundred bridges in one section alone. The estimated cost was Rs. 8,89,71,204.

MADRAS AND SOUTHERN MAHRATTA RAILWAY (M. & S. M.) 1948-49

The former Madras Guaranteed Railway Company's contract having expired on the 31st December 1907, the lines owned by that Company were purchased by the Secretary of State for India, and on the 1st January 1908 the then existing Madras Railway (with the exception of the Jalarpet-Mangalore section), together with the 3' 3½" gauge sections of the South Indian Railway from Katpadi to Gudur and Pakala to Dharmavaram, was made over to the Southern Mahratta Railway Company for working, the enlarged Company being styled the Madras and Southern Mahratta Railway Company.

In addition to the lines now comprised in the system, the company up to 30th September 1919, worked the lines, Birur to Shimoga, Mysore to Nanjangud and Mysore to Bangalore all of which were handed over to the Mysore Durbar on the 1st October 1919.

The Bangalore-Harihar and Hindupur-Yeswantpur Railways worked by the Company were transferred to the Mysore State Railway with effect from 1st January 1938

The Bezwada-Masulipatam Branch line which was the property of the District Board of Krishna was purchased by the Government on the 4th February 1938, and is worked as an integral part of the M & S M. Railway (Metre Gauge).

The Railway was taken over by the State on 1st April 1944.

The M & S M Railway serves the area approximately covered by the northern half of Madras State, southern portions of Bombay State, the Portuguese territory of Goa and small tracts of Mysore and Hyderabad States.

The Broad Gauge system of the Railway has three principal lines radiating from Madras, in the north-easterly, north-westerly and south-westerly directions The first of these runs along the Coromandel Coast for a distance of 485 miles up to Waltair where it connects with the Bengal-Nagpur Railway's main line to Calcutta The north-west line runs for a distance of 350 miles to Raichur where it joins the Great Indian Peninsula Railway's main line to Bombay. The south-west line connects Madras with the City of Bangalore, which is the junction of the Mysore State Railway From Jalarpet junction situated at a distance of 133 miles on the Madras-Bangalore line, the South Indian Railway's broad-guage system takes off, connecting the western ports of Cochin and Mangalore on the Malabar Coast.

The Metre Gauge system consists mainly of the line which crosses the peninsula from Masulipatam on the Coromandel Coast to Mormugao on the Konkan Coast; and the line which connects Bangalore with Poona *via* Hubli and Miraj Besides these there are a number of branch lines, the longest one being the Gadag-Sholapur branch

The main termini are Madras (B G), Bangalore (B G), Cocanada (B G), Masulipatam (M G), Mormugao (M G) and Poona (M. G.). Bezwada, Waltair, Raichur and Jalarpet are the principal junctions with the adjoining railways

These are the lines that make up the system

Broad Gauge—Madras-Bangalore, Arkonam-Raichur, Madras-Waltair, Walajah Road-Ranipet, Bowringpet-Marikuppam, Repalle-Guntur, Nidadavolu-Narsapur, Samalkot-Cocanada.

Metre Gauge—Mormugao-Londa, Londa-Hubli, Hubli-Guntakal, Guntakal-Bezwada Bezwada-Masulipatam, Poona-Londa, Hubli-Harihar, Alnavar-Dandeli, Guntakal-Himayatnagar, Sangli-Miraj-Kolhapur, Gadag-Sholapur, Hospet-Kottur-Samehalli, Bellary-Rayadrug, Guntur-Macherla, Gudivada-Bhimavaram, Dharmavaram-Pakala, Katpadi-Gudur

THE SOUTH INDIAN RAILWAY (S.I.R.) 1948-49

The South Indian Railway is situated in Madras State and serves the areas south of Madras, including the west Coast up to Mangalore.

The Main Terminii are (1) Broad Gauge Trichinopoly Junction, Cochin Harbour Terminus and Mangalore, (2) Metre Gauge Madras Egmore, Dhanushkodi, Tuticorin and Trivendrum Central

The various lines which make up the system are 1) Jalarpet to Mangalore (with running powers between Madras and Jalarpet), 2) Madras Egmore to Trivandrum (*via* Main line and both chords), 3) Trichinopoly to Dhanushkodi *via* Chord line, and a number of branch lines

	Main line	Sidings
Broad-Gauge	632 64 Miles	170 8 Miles
Metre-Gauge	1716 62 Miles	416 3 Miles
Total Mileage	2349 26 (excluding 587 1 miles of siding)	

There were no new constructions in hand during 1949-50 The preliminary Engineering Survey of the Chamrajnagar Satyamangalam-Mettupalaiyam Railway with the alternative alignment to Coimbatore was however completed in October 1949

Capital at Charge	47,99 82	(Rs in lakhs)
Gross Earnings	15,73 98	,,
Net Earnings	3,78 32	,,
Earnings per cent (Percentage of Net earnings of capital outlay)	7 88	

	Broad-gauge	Metre-gauge
*Locomotive**	187	367
*Coaching vehicles**	850	2334
*Goods wagons**	2942	7594

Number of passengers carried in the year 144,117 (thousands)

The first railway line in South India was opened between Vyasarpadi and Walaja Road on 1st July, 1856, but it was not until 1861 that the Great South Indian Railway completed their first line between Tiruvarur and Negapatam

In the meantime a line was being constructed between Madras and the west coast, and by 1862 this line passing through Erode had extended to Kadalundi To link up with this Railway the Great South Indian Railway, which had by this time completed their line to Trichinopoly, constructed a further extension up to Erode in 1868

In 1874, the Great South Indian Railway was amalgamated with the Carnatic Railway Company operating from Madras to form the South Indian Railway Company, and by 1895 the mileage had been extended to 654 miles including the main line up to Tuticorin The Broad-Gauge section from Jalarpet to Mangalore was taken over from the Madras Railway Company in 1908

After the completion of the Pamban viaduct in 1913, the Indo-Ceylon Ferry Service between Dhanushkodi and Talaimannar was opened in 1914 In the next few years up to 1919 the South Indian Railway Company constructed branch lines to Pollachi, Mannargudi, Trivandrum and Agastiyampalli

From 1925 to 1932 there was an increase in construction and many new lines were opened, including the important chord lines from Trichinopoly to Villupuram and Manamadural in 1929 and 1930 The cross country line from Salem to Cuddalore, the Virudhunagar-Tenkasi chord line, the branch lines to Tranquebar, Metur Dam, Nilambur and later Palghat and Dindigul were also completed during this period.

During the early years of World War II, the narrow-gauge lines between Morappur and Hosur and Tirupattur and Krishnagiri, the metre-gauge line between Madura and Bhodinayakkanur and the broad-gauge line between Shoranur and Nilambur were dismantled and have not been restored yet

This Railway system was taken over from the South Indian Railway Company Limited by the Government on 1st April, 1944

RAILWAY BUDGET 1950-51

	Revenue	all in crores Expenditure	Surplus
	Rs	Rs	Rs
1948-49 (actuals) ..	213 10	193 12	19 98
1949-50 (revised)	225 15	214 13	11 02
1950-51 (budget)	232 50	218 49	14 01

The main points of the budget are a surplus of 14 crores, no change in fares or freight, great recovery in operative efficiency, more amenities for passenger and higher benefits to labour

Reviewing the year 1949-50, the Minister in charge of Railways said that the difference between the revised and estimated revenue was due to improvement in goods earning as a result of better wagon turn-round and improved loadings The working expenses were reduced from 159 03 crores to 158 crores by exercising stricter control over expenditure An adjustment of Rs 15 crores was made from Capital and Depreciation Reserve to Revenue Out of the surplus a sum of Rs 7 crores would be contributed to General Revenues The balance of 4 02 would be added to the Depreciation Reserve Fund

There is no bottle-neck in transport as a contributory factor to whatever economic malaise prevails in the country The punctuality of passenger service has gone up The wagon turn-round has improved The Priority Organization has ceased to exist Rationing is also replaced by free and equal opportunity for all Work has commenced on the new factory for the manufacture of locomotives in India The arrangements for establishing a factory for the manufacture of all-steel welded passenger coaches are going forward The relations between management and labour has become more cordial The revised convention governing relations between general and railway finances (the payment of a sum equivalent to 4 per cent. on the capital-at-charge) came into effect in April 1950 This is a factor that will help Government to take up development projects As from April 1, 1950, 10 State lines covering a route mileage of over 6,500 have also come under the control of the Centre Seventeen crores by way of revenue and Rs 10 58 crores by way of expenditure are on account of the State Railway Lines Out of the sum paid to the general revenues in accordance with the new convention 2 57 crores are from the State lines

Some important allotments are given below

Rolling Stock, Machinery Programme, Open Line Works	55 60	crores
Passenger Amenities	1 75	,,
Capital Programme	39·75	,,
Works from Development Fund (Kandla-Deesa Link, Manihari-Sakrigali Ghats ferry)	6 00	,,
Completion of Assam Rail Link	1 5	crores
Chittaranjan Loco Works	4 23	,,
Railway Development Fund.	10 00	,,
Railway Reserve Fund	2 01	,,
Depreciation Reserve Fund	2 00	,,
General Revenues	31 00	,,

It is anticipated that the Depreciation Reserve Fund will close with a balance of Rs 104·77 crores and the Railway Reserve Fund which will be re-named the Revenue Reserve Fund will have a closing balance of Rs 10·41 crores on March 31, 1951 The Betterment Fund will be merged with the new Development Fund constituted as a result of the revised Separation

* As on 1st March, 1950.

Convention to be used for financing expenditure on passenger amenities, labour welfare and on projects which although un-remunerative are necessary The closing balance of this fund at the end of the budget year will be Rs 19 03 crores.

ROLLING STOCK POSITION

The Railway Minister stated that the power position had improved very considerably and 447 broad-gauge and 51 metre-gauge locomotives had been received during the period between Partition and January 31, 1950 Delivery of another 209 broad-gauge, 156 metre-gauge and 20 narrow-gauge locomotives was expected to be completed in the course of 1949-50

Special steps have also been taken to secure the spares necessary to keep existing locomotives in efficient operation and thus avoid the adverse effects of the suspension of the normal replacement programme in the coming year.

A technical aid agreement has been entered into with the Locomotive Manufacturing Company of Great Britain for the manufacture of locomotives at Chittaranjan Under this agreement, the Company will make available advice, technicians and skilled supervisory staff for service at Chittaranjan and will also provide facilities for the training of the required number of Indian technicians in the U K

The target of production at Chittaranjan which has been agreed on will be 3 locomotives in the calendar year 1950, 33 in 1951, 45 in 1952, 66 in 1953 and 90 in 1954 At the end of five years, the country would be turning out locomotives entirely of Indian manufacture and the annual production will be of the order of 120 locomotives

The wagon position on the broad-gauge is a great deal easier, but that on the metre-gauge is not so satisfactory In view of the financial stringency, the purchase of only about 1,000 metre-gauge wagons has been provided for in the budget.

As regards coaching stock, with a view to relieving over-crowding in passenger trains, 350 coaches are now on order out of which 50 have been delivered 407 coaches have been provided for in the budget year out of which 50 will be from Messrs Schlieren of Switzerland, to a design which provides wider seats, more leg-room, better lighting, wash basins, mirrors and insulation against heat The remaining coaches will be obtained partly from Messrs Hindustan Aircraft Ltd. and partly from the railway workshop

TRAFFIC

The passenger miles are up by 2 73 per cent on the broad-gauge and by 1 39 per cent on the metre-gauge as compared with the corresponding figures for 1948-49 Four per cent more train miles have been run on the broad-gauge and metre-gauge passenger services There has been a considerable improvement in the punctuality of trains As regards over-crowding in passenger trains, the Minister said that there was obviously a considerable leeway yet to be made up and it would be some time before the position improved substantially Some improvement, however, had been made by the introduction of 127 new trains and the extension of 88 existing trains Express trains for Class III passengers only, called "Janata Expresses" have been introduced on the E I, E P, G I P, B.B. & C I, S I, and O.T. Railways between important places

A 5-year plan for more passenger amenities with a minimum provision of Rs. 3 crores a year will commence working from the year 1950-51 and the Railway administrations have been asked to make forward planning in order that the amount allotted may be fully utilised.

The Railways' increased capacity to handle traffic is proved by the fact that the net ton miles carried during 1949 are 19 6 per cent. and 16·4 per cent. more than in 1948 on the broad-gauge and metre-gauge systems respectively.

Goods train miles run are 19 per cent. more on the broad-gauge and 9 per cent. more on the metre-gauge as compared with 1948-49. The freight awaiting despatch on the broad-gauge in November, 1949, was less than half-a-day's loading against two-days' loading in November, 1948.

The turn-round of wagons had improved to 10 87 days in November, 1949, against 12 97 days in the corresponding month of the previous year. The tonnage lifted in the first 9 months of 1950 was 15 5 per cent more than what was moved in the corresponding period of 1949.

The conditions of employment have been further improved, *viz*, the leave rules have been liberalised and the Provident Fund scheme has been extended to lower categories of railway employees, whether permanent or temporary

Daily-rated employees in railway workshops have now been brought on to the monthly rates of pay on the scales recommended by the Central Pay Commission

The productivity of railway labour has, however, fallen from 100 in 1938-39 to 69 38 in 1948-49 There were plans for the greater association of labour wherever possible in the administration of this nationalised undertaking

Regarding the re-grouping of railways, the preliminary investigations for this purpose have been completed and a plan is in the making It envisages the welding of the different systems into one railway undertaking, divided into as small a number of major zonal administrative units as possible

The set-up of the Central Railway Executive would also require to be reoriented as a part of the new plan

The Pakistan Government decided to stop all through booking of passenger and luggage to and from the E B Railway and cross-traffic over that railway from the midnight of January 19-20, 1950

The Government of India then stopped Pakistan's cross-traffic over the E I Railway with effect from January 22, 1950

The Government of India were also compelled to take over the Haldibari-Siliguri section (which, in terms of the Agreement entered into with Pakistan at the time of Partition was being worked by E B Railway) as the line was not being worked satisfactorily by Pakistan and they were levying a surcharge on all traffic including paid traffic and had also hoisted their flag on Indian territory, on installations belonging to India

The Pakistan Government have similarly assumed control of sections which were under the management of Indian Railways

KUNZRU REPORT

The Kunzru Report was released on 19th March 1950 along with the Government of India's comments The report was thorough and painstaking and touched every aspect of the situation. The Government accepted most of the recommendations concerning technical and reorganizational points but rejected two of the main recommendations first to close down the grain shops and second to postpone reorganization of Indian railways for five years

The report was concerned in all with 155 items of which 58 concerned individual railway administrations, while the rest, 97, involved the initiation of action by the Railway Board The recommendations of the Committee applied among others to the following questions

Rationalization of administration, improvement of operational and technical efficiency, research, promotion of cordial relations between management and employees, and the administration and the public, abolition of the railway grain shops organization, postponement of reorganization of railways for five years, shortage of passenger coaches, experiments on the behaviour of all-steel coaches, central workshops for the production of all-steel coaches, the high percentage of wagons immobilized for repairs, policy in respect of replacement of locomotives, modification of the Pacific type of locomotive, elimination of wagon delay, job analysis of workshops to find the extent of surplus staff, the speed with which grievances are dealt with, personal contact between men and officers, delay in the issue of passes, sanction of leave, spreading of literacy among railway workers, electrification of railways and the introduction of electrification into the Calcutta suburban railway, punctuality and speed of passenger trains, enhancement of fares on the suburban trains, co-ordination of rail-road and rail-water transport and the development of inland waterways

A REVIEW OF 1948-49

There was a general increase over last year in the traffic handled, both passenger and goods. As there was also a rise in rates and fares this resulted in enhanced earnings A shift towards the pre-war peacetime pattern was also discernible in the distribution of passenger traffic between upper and lower class passengers. For instance, the trend towards increasing upper class travel was reversed, but overcrowding persisted though in a less acute form

The contract of the Pachora-Jamner Railway was terminated on 31st March 1949, the Matheran Hill Railway and the Darjeeling Himalayan Railway were taken over on 1st April 1948 and 20th October 1948 respectively The Mayurbhanj Railway was bought on 1st April 1950.

An independent Railway Rates Tribunal with mandatory powers was set up on 4th April 1949 The Tribunal has the power to entertain complaints in respect of undue discrimination, quotation of unreasonable rates, classification of a commodity in a lower or higher class

The total value of the stores purchased by the Indian Government Railways amounted to Rs 100 44 crores, the value of the indigenous material purchased being Rs 86 crores or 85 6 per cent of the total Out of the material of foreign manufacture the value of the stores directly imported amounted to Rs 2 7 crores, and the value of the stores purchased in India amounted to Rs 11 7 crores

To remove inconvenience to long distance passengers, the Railways introduced a number of measures These measures included opening of additional booking office windows for long distance passengers and the setting apart for them complete III class bogies, and the appointment of travelling ticket inspectors to see that these regulations were observed Advance booking for III class passengers was also introduced on certain Railways

The Janata Express between Patna and Delhi was the first train of its kind providing fast service intended exclusively for third class passengers This service was started on 1st October 1948

The four class system First, Second, Intermediate and Third, was at first given up on 1st January 1949 and in its place a three-fold classification was introduced Class I, Class II and Class III A reduction in fares was also made for the upper class This was done with the hope that if Class I fare was fixed as low as 24 pies per mile about half the number of former 2nd class passengers would travel by Class I Actually it was proved that for the bulk of the middle class the new Class I fares were too high with the result that revenue from upper class fell in spite of a surcharge levied for sleeping accommodation in Class II Neither was the change well received by the public The public grievance was first met by the introduction of an intermediate class between Class II and Class I called Class II Special' which provided sleeping accommodation. Eventually the Railways went back to the old four-fold classification.

Employees : The total number of employees on all Indian Railways (excluding staff employed on construction) was 912,724. This was an increase of 13,381 over the figure for last year The number of staff employed on construction

also increased by 2,789 The total cost of the staff was Rs 15,32,42,308, the increase in the cost over the figure for 1947-48 being due to re-classification of workers, revised scales of payment to running staff, the new organizations set up to carry out the Rajadhyaksha Award, increase in the rate of dearness allowance, authorization of cash payments in the place of grainshop concessions and the creation of new posts

A total of approximately 32,315 ex-Servicemen were recruited after the War in accordance with the provision that 70 per cent of the vacancies, which occurred during the period 1st June 1942 to 31st December 1945 were to be reserved for ex-Servicemen.

As regards relations between the administration and the staff, three important factors were first, the appointment of a tribunal to classify artisans and evolve a uniform designation for staff doing the same kind of work, second, the allotment of prescribed scales of pay thereby bringing the bulk of the staff into a single pay structure in accordance with the Pay Commissions recommendations, and third, progress in the conversion of temporary staff into permanent ones Except for a single strike of the Loco staff on the South Indian Railway, Indian Government Railways were practically free from labour troubles The total number of man-days lost as a result of strikes was approximately 0 2 per cent of the total number of man-days worked The number of man-days worked totalled 121,789,498 and the man-days lost owing to strikes amounted to 220,103

Two Acts concerning railway servants were passed during the year, the Factories Act 1948 and the Employees State Insurance Act 1948 The first excluded running sheds and workshops staff from certain of its provisions on grounds of administrative convenience without depriving them of any substantial privileges The provisions of the Insurance Act such as payment of sickness, maternity and sick leave benefits were taken up for consideration

The Rajadhyaksha Award wa published in May 1947. The Government after consideration accepted the award in respect of hours of work, periodic rest and leave reserves, and passed orders in June 1948 that the recommendations were to be implemented in phases varying from two to five for different classes of workers The number of additional staff required is estimated at 100,000 involving a recurring cost of more than Rs 10 crores and non-recurring Rs. 40 crores for staff quarters, additional terminal facilities, etc.

With further progress in carrying out the recommendations of the Central Pay Commission, most posts on the Indian Railways have been brought into a single pay structure Some ticklish points which arose such as classification of artisans were satisfactorily settled on the recommendations of a tribunal appointed for the purposes About 80 points raised by the Unions involving anomalies and hardships were dealt with after discussion with Union officials Later the Railwaymen's Federation raised a further batch of 20 points arising out of the Pay Commission's report which the Minister for Railways discussed with the President of the Federation. At the close of the year these questions were still under examination. The points touched upon concerned among others, scales for the pre-1931 entrants, constitution of an Anomalies Committee to consider cases of anomalies and hardships, confirmation of temporary staff, scales of pay for school staff, payment of casual labour, improvement of conditions of service of temporary staff

As regards anti-corruption measures 297 cases were taken up by the Special Police. Of these, 37 were sent up for trial in courts or tribunals, and the conviction of 31 persons was secured This brings the total number of cases taken up till then to 918 As a result of all this action, three employees were discharged In order to keep the public fully informed press notes were issued from time to time stating the number of convictions obtained and emphasizing the fact that both the acceptor and tenderer of bribes are liable to punishments

A note may also be added on the locomotive manufacturing workshop located at Mihijam near Asansol in West Bengal The site which is 4000 acres, is now called Chittaranjan in memory of Deshabandhu Chittaranjan Das The workshop will consist of seven shops involving the use of 12,000 tons of steel work Work is also proceeding on a township providing accommodation for 6,000 employees The production of component parts of locomotives was to start in 1950, when 3 locomotives were expected to be produced.

Accidents: Five major accidents occurred during the year. On April 30 1948, a goods train and a workmen's train collided head-on on the Sahibganj Loop Line of the E.I.R. Eight persons were killed and 70 injured. The cost of the damage to rolling stock was Rs 60,000. On 15 May 1948 the Dehra Dun Express was derailed between Chhota Ambona and Pradhankanta on the Grand Chord section of the E I R. Thirty-three persons were killed and 96 injured The approximate cost of the damage to rolling-stock was Rs. 53,800. The accident was caused by the track having been tampered with by unknown persons On 14th Sep. 1948, the Nainital Express and No 49 Up Passengers collided head-on between Puranpur and Shahgarh stations on the Lucknow-Bareilly sections of the O T R Twenty-six persons were killed and 35 injured The approximate cost of damage to the rolling stock and the permanent way was Rs. 87,300 On November 1948 a passenger train running between Furkating and Kamarbandha All stations on the main line of the Assam Railway was derailed Seventeen persons were killed, and 40 injured The approximate cost of the damage to rolling-stock and the permanent way was Rs 41,000

The total number of persons killed during the year was 4,660 Of these 3,683 or 79 per cent were other than passengers or railway servants. Of this number again 2,970 were trespassers and 367 suicides Furthermore 57 persons were killed on railway premises other than during the movement of trains etc There has been an all-round increase in accidents caused otherwise than by railway accidents The number of passengers, railway servants and persons other than passengers or railway servants injured has all increased.

The total number of accidents shows an increase of 2,011 or 8 2 per cent as compared with the previous year against an increase in the total train miles of 6 4 per cent

Derailments not involving passenger trains still account for the largest number of accidents, 33 per cent of the total

Accidents in railway workshops accounted for the death of 9 and injuries to 17,331 railway servants, or a decrease of 7 in the former and an increase of 2,714 in the latter as compared with the previous year.

NEW LINES UNDER CONSTRUCTION.

	Name of line	Operating regime	Length in miles	Gauge.	Purpose.
1	Barwadih-Sarnadih	E I Railway	40	5′-6″	This forms part of the 153 miles Barwadih-Bijuri project and is intended to open up new coalfields
2	Kandla-Deesa	B B. & C I Railway	170	3′-3¾″	This is to provide rail connection to Kandla on the stretch of coast between Cutch and Kathiawar, where a new Major Port is being developed
3.	Mukerian-Pathankot	E P Railway	27	5′-6″	This has been necessitated due to partition of the country and will improve the transport facilities in the area
4.	Phagi-Sawai Mangarh Section of the Sanganer-Sawai Mangarh line	Jaipur State Railway	54	3′-3¾″	Earthwork for this line was carried out in 1938 as a famine relief measure The line is required for developing the country
5.	Dhanora-Adilabad Section of the Mudkhed-Adilabad line.	Nizam's State Railway.	47	3′-3¾″	The object of this line is to develop the extensive mineral, forest and agricultural resources of this region in the interior of the State and to connect up the important town of Adilabad
6	Kanalus-Gop	Saurashtra Railway	21	3′-3¾″	In addition to the ordinary traffic, the line will carry raw material for a cement factory which is being erected at the new sea port of Sika
7.	Khirsadoh-Rawamwara	B N Railway	5	2′-6″	This branch will serve the coalfields

HISTORY

Indian railways were an out-come of British initiative Thus railway enterprise in India did not start until experience in England proved that they were a definite national asset Even so a further test had to be made to find if they would suit Indian conditions Accordingly three experimental lines were sanctioned in 1845 These were from Calcutta to Raniganj (120 miles), the East Indian Railway, Bombay to Kalyan (32 miles), Great Indian Peninsula Railway, and Madras to Arkonam (39 miles), Madras Railway.

Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853, wherein, after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the 1857 flare-up the barriers imposed on free communication were severely felt by the authorities As there was no private capital in the sub-continent readily available for railway contruction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose

By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions These companies were (1) the East Indian; (2) the Great Indian Peninsula; (3) the Madras; (4) the Bombay, Baroda and Central India; (5) the Eastern Bengal; (6) the Indian Branch, later the Oudh and Rohilkund State Railway and later part of the East Indian Railway; (7) the Sind, Punjab and Delhi, later merged in the North-Western Railway; and (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the whole railway system of the sub-continent as it exists today

EARLY DISAPPOINTMENTS

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was a five per cent. return coupled with the free grant of all the land required; in return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met: the interest charges were calculated at 22d. to the rupee; the Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working

The early results were disappointing While the Railways greatly increased the efficiency of the civil administration, the mobility of the troops, the trade of the country, and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the unnecessarily high standard of construction adopted, and to the engineers' ignorance of local conditions The result was that by 1869 the deficit on the Railway budget was Rs. 166¾ lakhs. Seeking for some more economical method of construction, the Government secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre-gauge being adopted for cheapness

Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1882-85), since absorbed by the Great Indian Peninsula, the Bengal-Nagpur (1883-87), the Southern Mahratta (1882); and the Assam-Bengal (1891) were constructed under guarantees, but on easier terms than those offered to the first group of companies. Their total length was over 4,000 miles.

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise Four companies were promoted:—the Nilgiri, the Delhi-Ambala-Kalka, the Bengal Central, and the Bengal and North-Western. The first became bankrupt, the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth.

A step of even greater importance was taken when the former Indian States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad This was the first of the large system of Indian State Railways. In the first period up to 1870, 4,255 miles were opened, of which all save 45 were on the broad-gauge; during the next ten years there were opened 4,239, making the total 8,494 (on the broad-gauge 6,562, the metre 1,865, and narrow 67).

Then ensued a period of financial ease which was broken by the fall in exchange and the costly lines built on the Frontier The Penjdeh incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of British outposts at Quetta and Chaman with the main trunk lines The sections through the desolate Harnai and Bolan Passes were enormously costly, it is said that they might have been ballasted with rupees, the long tunnel under the Khojak Pass added largely to this necessary, but unprofitable, outlay.

REBATE TERMS ESTABLISHED

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line, so that the dividend might rise to four per cent. but the rebate was limited to 20 per cent. of the gross earnings. Under these conditions, there were promoted the Ahmedabad-Prantej, the South Bihar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to.

The Barsi Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge The rebate terms being found unattractive in view of the competition of 4 per cent trustee stocks they were revised in 1896 to provide for an absolute guarantee of 3 per cent with a share of surplus profits, or rebate up to the full extent of the main line's net earnings in supplement of their own net earnings, the total being limited to 3½ per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to 3½ per cent and of rebate from 3½ to 5 per cent. with equal division of surplus profits over 5 per cent in both cases. At last, the requirements of the market were met, and there was for a time a mild boom in feeder railway construction and the stock of all the sound companies promoted stood at a substantial premium.

Conditions changed after the First World War and the Acworth Committee so far from approving of this system, considered

that the aim of the Government should be to reduce by amalgamation the number of existing companies and that only in cases where the State could not or would not provide adequate funds should private enterprise in this direction should be encouraged.

The Branch Line Companies had ceased for some time to raise additional capital for capital requirements. They had either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent.) or in several cases asked for money to be advanced to them by the Railway Board. So far, therefore, from reducing the amount that the Government of India had to raise in the open market, they were increasing the amount. For the above reasons, the Government of India abolished this system and prepared themselves to find the capital required for the construction of extensions or branches to existing main line systems. They also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas.

This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which might be required for purely local reasons and which, while not likely to prove remunerative on purely railway earnings, were likely to give such benefits to Local Governments and local bodies as would more than repay the amounts paid under the guarantee. Some such arrangements were made with Local Governments in Madras, the Punjab area, Assam and Bombay.

RAILWAYS BEGIN TO PAY

Meantime a much more important change was in progress. The gradual economic development of the sub-continent vastly increased the traffic, both passenger and goods. The development of irrigation in the Punjab area and Sind transformed the North-Western Railway Owing to the burden of maintaining the unprofitable Frontier lines this was the Cinderella of the Railways in the sub-continent—it had become the chief target of the critics who protested against the unwisdom of constructing railways from borrowed capital But with the completion of the Chenab and Jhelum Canals, the North-Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £ 2 millions a year.

In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis, led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year again there was a reversion to a profit, and the net railway earnings continued to increase steadily till they reached a figure of over £10 millions in 1918-19. This era of profits ended with the close of the year 1920-21 and in 1921-22 there was a loss of over £6 millions.

These changes in the fortunes of the railways affected the budget of the Central Government rather seriously and in 1924-25 the Railway finances were separated from the General Budget.

CONTRACTS REVISED

One factor which helped to improve the financial position was the revision of the original contracts under which the guaranteed lines were constructed. The five per cent. dividend guaranteed at 22*d.* per rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract to fall in was the East Indian, the great line connecting Calcutta with Delhi and U.P. and Bihar. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuities, derived from revenue, carrying with them a sinking fund for the redemption of capital. The railway thus became a State line; but it was re-leased to the Company which actually worked it.

Under these new conditions the East Indian Railway Company brought to the State in the ten years ended 1909 after meeting all charges, including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest of all capital outlay subsequent to the date on purchase, a clear profit of about ten millions. No other railway shows results quite equal to the East Indian, because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal.

But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State It is difficult to estimate the amount which must be added to the capital debt of the sub-continent's railways in order to counter-balance the loss during the period when the revenue did not meet the interest charges. Whatever the figure Government have a magnificent asset in their railway property.

These changes induced a corresponding change in railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagda-Muttra line, providing an alternative broad-gauge route from Bombay to Delhi through eastern Rajasthan, the trunk system was virtually complete.

The next step was to bring the open lines up to their traffic requirements and providing them with feeders. The sudden increase in the trade of the sub-continent, however, found the main lines totally unprepared. Costly works were necessary to double the lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the Chairmanship of Lord Inchcape, to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum could not always be provided.

RAILWAY BOARD

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counter-checks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As traffic developed, the railways outgrew this dry nursing, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary.

Accordingly in 1901-02 an official was deputed by the Secretary of State to examine the whole question of the organization and working of the Indian Railways. The official recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a secretary. A Board was accordingly constituted in March 1905. The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared the railway programme of expenditure and considered the greater questions of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company lines.

Certain minor changes have taken place from time to time since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a secretary to Government with the right of independent access to the Viceroy; he usually sat in the central Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by Lord Inchcape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organization was further fully examined by the Acworth Committee in 1921 and a revised organization which is described later was introduced on 1st April 1924.

Some Difficulties.—Some of the difficulties involved in the constitution of a controlling authority for the railways may be realized from a study of the "Notes on the Relation of the Government to Railways in India" which was printed as appendix 'B' to Volume I of the Annual Report by the Railway Board on Indian Railways upto the Report for the year 1938-39. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

(*a*) the directly controlling authority of the State-worked systems aggregating (at the time) 21,356 miles as on the 31st March 1943,

(*b*) the representative of the predominant owning partner in systems aggregating 19,169 miles,

(*c*) the guarantor of many of the smaller companies and

(*d*) the statutory authority over all railways in the country.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments were concerned, the Railway Department was called upon to watch the interests of the Central Government and was frequently asked to advise the Local Governments.

Its duties did not end there. The future development of railways depended largely on the Government of India and the Railway

Department was therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction.

CHIEF COMMISSIONER

The evolution of a satisfactory authority for the administration of these varied functions proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who recommended the early appointment of a Chief Commissioner of Railways whose first duty was to prepare a definite scheme for the reorganization of the Railway Department. C. D. M. Hindley, previously an Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922.

The principal constitutional change involved in this appointment was that the Chief Commissioner who took the place of the President of the Railway Board was solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and was not, as was the President, liable to be out-voted and overruled by his colleagues on the Board. The detailed reorganization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1st April 1923.

The Railway Board as then reconstituted consisted of the Chief Commissioner, the Financial Commissioner and two members The proposal of the Acworth Committee that the Indian Railways should be sub-divided into 3 territorial divisions with a Commissioner in charge of each was not accepted and the work of the Members of the Board was divided on the basis of subjects.

The reorganization carried out in 1924 had for one of its principal objects the relief to the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by touring to a greater extent than they had been able to do in the past.

This object was effected by a series of new posts which in some cases supplemented the existing ones and in other cases replaced them —Directors of Civil Engineering, Mechanical Engineering, Traffic, Establishment and Finance and 11 Deputy Directors and 2 Assistant Directors

SUBSIDIARY BODIES

The necessity of some central organisation to co-ordinate the publicity carried out on railways and to undertake work on the many forms of railway publicity which could be best organised by one central body led to the inauguration of the Central Publicity Bureau under a Chief Publicity Officer in 1927. The Bureau was a great success and the organisation was made permanent from January 1st, 1929. In the slump which came in the thirties however, it was found difficult to maintain the organisation The war of 1939 also presented its own problems. The Central Publicity Bureau was ultimately shifted to Calcutta on 1st July, 1940, and amalgamated with the Publicity Offices of the East Indian and Eastern Bengal (now the B. & A.) Railways.

The growing importance of Labour questions necessitated the organisation of a new branch in the Railway Board's office and to the appointment in 1929 of a third member whose main duties were connected with the satisfactory solution of labour problems and the improvement of the conditions of service of the staff generally and of the lower paid employees in particular.

During the economic depression of the thirties it was decided to hold in abeyance many superior posts including those of Member, Traffic; Member, Engineering; Director, Civil Engineering and Director, Mechanical Engineering Some of these posts have since been revived and on the recommendations of the Indian Railway Enquiry Committee—presided over by Sir Ralph Wedgewood—the Central Accounts organisation of railways was taken over by the Railway Board The present superior staff in the Railway Board, therefore, consists of the Chief Commissioner, the Financial Commissioner, 3 Members, 12 Directors (including Joint Directors), a Secretary and 26 Deputy Directors and assistants.

Under the Railway Board's policy of progressive standardisation, a Central Standardisation Office (now called Central Standards Office) was established in 1930 under a Chief Controller of Standardisation to provide the means whereby such standardisation would be progressively effected in accordance with changing conditions and as the result of practical experience The technical Officer under the Railway Board was transferred to this office as a Deputy Controller This office was made permanent in 1935.

ACCOUNTS

The transfer of the supervision of railway accounts of State Railways from the Finance Department to the Railway Board began in accordance with a resolution adopted by the Legislative Assembly in September 1925 with the transfer of the supervision of railway accounts on the East Indian Railway At the same time a separate Audit Staff was appointed reporting directly to the Auditor-General As it was found that the separation of Audit from Accounts led to greater efficiency, a similar organisation was introduced on other State-managed railways during 1929 The supervision of Accounts Officers was placed under a Controller of Railway Accounts reporting to the Financial Commissioner of Railways and that of Audit Officers under a Director of Railway Audit reporting to the Auditor-General. These two duties were previously combined under the Accountant-General, Railways, reporting to the Auditor-General The Chief Accounts Officers on railways are now under the General Managers and the Controller of Railway Accounts has been made a Director under the Railway Board

There are two important systems of administration organisation, on the Railways—the Divisional system and the Departmental system. In the divisional system the railway is divided into divisions, each under a Divisional Superintendent, who in turn has officers of all departments like Civil Engineering, Transportation, Commercial, Accounts, Stores, the running and operation portion of Mechanical Engineering and on some railways even the Medical, working under him in his division. In the departmental system the railway is divided into smaller portions called districts by each department (and districts of the various departments need not be co-terminus) and each of these districts is under a District Officer reporting direct to the head of his department in the Headquarters Office.

A Clearing Accounts Office, with a Statutory Audit Office attached thereto, was opened in December 1926 to take over work relating to the check and apportionment of traffic interchanged between State-managed Railways The work of the different railways was gradually transferred to this office, the North-Western Railway being taken over first on the 1st January 1927, the East Indian Railway following on the 1st April, the Eastern Bengal Railway on the 1st January 1928, and the Great Indian Peninsula and B. B & C I. Railway later.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted as early as 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways, it elects a President from among the members, and has generally done much useful work.

THE GAUGES

The standard gauge is five feet six inches When construction was started the broad-gauge school was strong, and it was thought advisable to have a broad-gauge in order to resist the influence of cyclones But in 1870, when the State system was adopted it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile After much deliberation, the metre-gauge of 3 feet 3⅜ inches was adopted because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional, they were to be converted into broad-gauge as soon as the traffic justified it, consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad-gauge So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre-gauge lines were improved and they became a permanent feature of the railway system.

Now there is a great metre-gauge system north of the Ganges connecting Assam with Rajasthan lines and Saurashtra and another system in Southern India serving large tracts of the Bombay, Madras, Hyderabad, Mysore and Travancore-Cochin States These two systems are not yet connected, but the necessary link from Khandwa by way of the Nizam's State Railway, cannot be long delayed.

Certain feeder and hill railways have been constructed on the 2'-6" and 2'-0" gauges and since the opening of the Barsi Light Railway which showed the possible capacity of the 2'-6" gauge, there has been a tendency to construct feeder lines on this rather than on the metre-gauge.

RAILWAY MANAGEMENT

The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the great bulk of the railway mileage in the sub-continent were the subject of discussion in official circles and the public press for many years Here the question was complicated by the fact that the more important companies had not been the owners of the railways which they managed and the headquarters of their Boards were in London

The subject was perhaps the most important of the terms of reference of the Acworth Railway Committee That Committee was unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were, however, unanimous in recommending that the system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation met with general public acceptance During the year 1922-23, the question was again referred to certain Local Governments and public bodies and opinions collected and discussed.

The subject was also discussed on many occasions in the Central Legislature The old undivided Government of India, however, followed a uniform policy of increasing the scope of direct State-management The East Indian Railway was taken over for State-management on 1st January, 1925, and from then on the policy continued, the latest additions to State-management being the Bengal and North-Western and Rohilkund and Kumaon Railway which were taken over on the 1st January 1943 From the same date the two were amalgamated and the combined system named as the Oudh and Tirhut Railway.

At the end of 1929-30 the Nizam's Guaranteed State Railways system which was the property of a Company, was acquired and its management taken over by the Nizam's Government and is now known as His Exalted Highness the Nizam's State Railway

SEPARATE FINANCES

The question of the separation of the railway from the general finances had been under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921, the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923, that the railways should be so worked as to yield an average return of at least 5½ per cent on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out A resolution was accordingly introduced in the Assembly in March 1924, recommending to the Governor-General in Council —that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways —

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings.

(2) The contribution shall be a sum equal to five-sixths of 1 per cent on the capital at charge of the railways (excluding capital contributed by Companies and Indian State and Capital expenditure on strategic Railways) at the end of the penultimate financial year *plus* one-fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent on the capital at charges surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest or capital expenditure on strategic lines

(3) Any surplus profits that exist after payment of these charges shall be available of the Railway administration to be utilised in—

(*a*) forming reserves for,

(*i*) equalising dividends, that is to say, of securing the payment of the percentage contribution to the general revenue in lean years,

(*ii*) depreciation,

(*iii*) writing down and writing off capital,

(*b*) the improvement of services rendered to the public,

(*c*) the reduction of rates.

(4) The railway administration shall be entitled, subject to such conditions as may be prescribed by the Government of India, to borrow temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years.

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement The proposed expenditure will, as at present, be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not ensure to general revenues, *i e*, will not have the effect of increasing the fixed contribution for the year

(6) The Railway Department will place the estimate of railway expenditure before the Standing Finance Committee for Railways on some date prior to the date for the discussion of the demand for grants for railways

STANDING FINANCE COMMITTEE

This resolution was examined by the Committee appointed by the Legislative Assembly in March 1924 to examine the proposals for the separation of railway from general finances The final resolution agreed to by the Assembly in September 1924, and accepted by Government differed from the original resolution in that the yearly contribution was placed at 1 per cent instead of 5/6th per cent on the capital at charge and if the surplus remaining after this payment to General Revenues should exceed 3 crores, only ; of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining ⅓rd was to accrue to General Revenues.

At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body This would be in addition to the Central Advisory Council which would include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State

These arrangements were to be subject to periodic revision but to be provisionally tried for at least 3 years They would, however, only hold good as long as the E I Railway and the G I P Railway and existing State Managed Railways remained under State-management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indianised and that the stores for the State Managed Railways should be purchased through the organisation of the Indian Stores Department

The principal allocation of surplus laid down in the above resolution was later amended by a subsequent resolution passed by the Legislative Assembly in March 1943 which provided, *inter alia* that from 1st April 1943 so much of the convention as provided for the contribution and allocation of surplus to general revenues ceased to be in force and until a new Convention was adopted by the Assembly, the allocation of the surplus on commercial lines between the railway reserve and general revenues should be decided each year on consideration of the needs of the railways and general revenues, the loss, if any, on strategic lines being recovered from general revenues

THE POPE COMMITTEE

The growing complexity of railway administration and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations The general direction in which this reorganisation is being considered is that of consolidation into one department of the operating or transportation work of the railways, including the provision of power This system is invariably in existence on those railways which have adopted the Divisional organisation. It is also being adopted by some railways where the general organisation is still on the Departmental basis.

When the railway finances were in a bad way, a Committee under the Chairmanship of F A Pope, General Executive Assistant to the President of the L M S Railway, was formed to investigate and inaugurate a detailed analysis of every important achievement of railway operation The Committee started work during 1932-33 and among other things, perfected a system of detailed investigation into individual items of railway working which came to be known as 'Job Analysis'

Mr Pope returned to India in 1933-34 and prepared a second report based upon the progress of the work and on further possibilities of economy

The most important recommendations of the second report related to —

1. Intensive use of locomotives 2 Intensive use of coaching stock 3 Intensive use of machinery and plant 4 Disposal of uneconomical wagons 5 Combining resources between railways 6 Handling and transport of small traffic and of traffic to be transhipped at break of gauge stations 7 Ticketless travel. 8 Methods of increasing earnings.

As a result of the 1st report of the Pope Committee, special 'Job Analysis' Organisations were set up on most of the important Railways Their main purpose was to investigate in detail by special methods individual aspects of railway working and suggest means whereby economies might be achieved or the efficiency of operation increased.

When the methods of working on the railways were overhauled these organisations were abolished

POSTS AND TELEGRAPHS

THE control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs whose office is attached to the Ministry of Communications of the Government of India. For financial and budget matters there is a Joint Secretary, Ministry of Finance (Communications) The superior staff of the Directorate in addition to the Director-General himself, consists on the postal side of one Senior Deputy Director-General, one Deputy Director-General, staff and establishment, one Deputy Director-General (Inspection), 4 Directors, 4 Assistant Directors-General and 4 Assistant Deputy Directors-General.

For postal purposes, India is divided into ten circles, namely, West Bengal, Bihar Bombay, Central, Madras, Punjab, Uttar Pradesh, Delhi, Assam and Orissa Each of the first eight is in charge of a Postmaster-General and the Assam and Orissa Circles are controlled by a Director, Posts and Telegraphs The Central Circle comprises roughly the Madhya Pradesh, the Rajasthan, Madhya Bharat and Vindhya Pradesh Unions

The Heads of Circles are responsible to the Director-General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of mails by railways, inland steamers, and air services All the Postmasters-General are provided with Directors of Postal Services, Assistant Postmasters-General and Assistant Directors while in the Assam Circle the Director is assisted by a Deputy Director and an Assistant Director. The Postal Circles are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors

Generally there is a head post office at the headquarters of each revenue district and other post offices in the same district are usually subordinate to the head office for purposes of accounts. The State Postmasters of the Calcutta, Bombay and Madras General Post Offices, are directly under Directors of Postal Services When the duties of the Postmaster of a head office become so onerous that he is unable to perform them fully himself, a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed.

The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school masters, shop-keepers, land-holders or cultivators who perform their postal duties in return for a small remuneration

The audit and accounts work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Indian Audit Department and is not subordinate to the Director-General The Accountant-General is assisted by Deputy Accountant-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit and accounts work of a certain number of postal circles

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known as combined offices The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph branches of sub-post offices.

INLAND TARIFF

Inland Tariff is applicable to Aden, Pakistan, Nepal, Ceylon and Portuguese India except as indicated below and is as follows :—

	When the postage is prepaid	When the postage is wholly unpaid	When the postage is insufficiently prepaid
Letters	Annas Pies		
Not exceeding one tola	2 0		
And every additional tola	1 0		
Book and pattern packets			
For the first five tolas or fraction thereof	0 9	Double the prepaid rate (chargeable on delivery)	Double the deficiency (chargeable on delivery)
For every additional two and a half tolas, or fraction thereof, in excess of five tolas	0 3		

Postcards

Single .. .. .. 9 pies
Reply .. .. .. 1½ annas

(The postage on cards of private manufacture must be prepaid in full. Reply postcards cannot be sent to Nepal)

Local : letters . . 1 anna
post cards .. 6 pies

Parcels (prepayment compulsory)

Parcels not exceeding 12½ seers (1,000 tolas) in weight :—

	Rs.	a.
Not exceeding 40 tolas	0	6
For every additional 40 tolas or part of that weight	0	6

Registration is compulsory in the case of parcels weighing over 440 tolas.

All parcels to Aden and Pakistan should be registered There is no parcel service to Nepal These rates are not applicable to parcels for Ceylon and Portuguese India.

Registration fee	Rs.	a.
For each letter, postcard, book or pattern packet, or parcel to be registered	0	4

Ordinary Money Order fees

For every sum of Rs 10 or fraction thereof 0 2

In the case of money orders for Ceylon and Portuguese India, the rates prescribed for foreign rupee money orders are applicable There is no money order service to Nepal

Telegraphic Money Order fees —The same as the fees for ordinary money orders *plus* a telegraph charge calculated at the rates for inland (the cost of the telegraphic advice to Aden and Ceylon in respect of those countries) telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message. In addition to the above a supplementary fee of two annas is levied on each telegraphic money order.

There is no telegraphic money order service to Nepal or Portuguese India In the case of Ceylon the telegraph charge is calculated at the rates shown below —

Express—Rs 2-8-0 for the first 12 words and 3 annas for each additional word.

Ordinary.—Re. 1-4-0 for the first 12 words and 2 annas for each additional word

Value-payable fees.—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

Insurance fees	Rs.	a.
Where the value insured does not exceed Rs. 100	0	4
Where the value insured exceeds Rs. 100 but does not exceed Rs. 200	0	5½
Where the value insured exceeds Rs. 200 but does not exceed Rs. 300	0	8
For every additional Rs 100 or fraction thereof over Rs 300 and upto Rs 1,000	0	2
For every additional Rs. 100 or fraction thereof over Rs 1,000	0	1

As regards Aden, Ceylon and Portuguese India see Foreign Tariff

Acknowledgment fee —For each registered article 1 anna.

FOREIGN TARIFF

Foreign Tariff is not applicable to Aden, to Ceylon, to Nepal to Pakistan or to Portuguese India except as indicated below and is as follows —

Letters —To Aden Pakistan, Ceylon, Nepal and Portuguese India—Indian inland rates.

To all other countries. — 3½ annas for the first ounce and 2 annas for each additional ounce or part of that weight.

Postcards, Single .. .. .. 2 annas.
,, Reply . .. .. 4 annas.

Printed Papers —¾ anna for every 2 ounces or part of that weight

Business Papers —For a packet not exceeding 10 ounces in weight . . 3½ annas
For every additional 2½ ounces or part of that weight .. .. .. ¾ anna

Samples —1½ annas for first 4 ounces and ¾ anna per 2 ounces thereafter.

Parcels

Parcel postage varies for different countries as shown in the Foreign Post Directory included in the Post and Telegraph Guide Information relating to the rates of postage on parcels for Great Britain and Northern Ireland is given below —

(i) Parcels not exceeding 22 lbs in weight and addressed to Great Britain and Northern Ireland are forwarded as mails to the British Post Office, the rates of postage applicable to such parcels being as follows :—

For parcel	*Via* Gibraltar Rs	a.	p
Not over 3 lbs	1	11	0
Over 3 lbs but not over 7 lbs. ..	3	5	0
,, 7 ,, ,, ,, 11 ,, ..	5	2	0
,, 11 ,, ,, ,, 22 ,, .	8	5	0

These parcels are delivered by the post office and the postage paid carries them to destination.

Limits of weight

Letters.—4 lbs. 6 oz.

Printed Papers and Business Papers.—To Great Britain and Northern Ireland, and Ireland, British Australasian Colonies, Togo (British), the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—5 lbs

To Aden or Ceylon—No limit

To all other destinations—6½ lbs

Samples—To Great Britain and Northern Ireland, and Ireland, Togo (British), the Union of South Africa, Rhodesia, and Bechuanaland Protectorate—5 lbs

To Aden or Ceylon—200 tolas

To all other destinations—1 lb 2 oz

Parcels—11 lbs 20 lbs or 22 lbs

Limits of Size

Letters—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Printed Papers and Business Papers—To Aden and Ceylon—2 feet in length by 1 foot in width or depth If in form of roll, dimensions are 30 inches in length and 4 inches in diameter

To all other destinations—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Note—Printed papers sent open, *i e*, without a cover or wrapper in the form of cards, whether folded or not should not measure less than 4 inches in length and 2½ inches in width.

Samples—To Great Britain and Northern Ireland, and Ireland, Togo (British), the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions in all cases are 39 inches in length *plus* twice the diameter and 31 inches in any one direction.

To all other destinations—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction If in form of roll, dimensions in all cases are 39 inches in length plus twice the diameter and 31 inches in any one direction.

To Aden or Ceylon—2 ft in length by one foot in width and depth

Money Orders

To countries on which money orders have to be drawn in rupee currency, the rates of commission are as follows —

	Rs	a
On any sum not exceeding Rs 10 .	0	3
On any sum exceeding Rs 10 but not exceeding Rs 25	0	6
On any sum exceeding Rs 25 ..	0	6

for each complete sum of Rs 25 and 6 annas for the remainder, provided that, if the remainder does not exceed Rs 10, the charge for it shall be only 3 annas

To countries on which money orders have to be drawn in sterling, the rates are as follows :—

	Rs	a
On any sum not exceeding £1	0	4
,, ,, exceeding £1 but not exceeding £2	0	7
,, ,, ,, £2 ,, ,, £3	0	10
,, ,, ,, £3 ,, ,, £4	0	13
,, ,, ,, £4 ,, ,, £5	1	0
,, ,, ,, £5 . .	1	0

for each complete sum of £5 and 1 rupee for the remainder, provided that if the remainder does not exceed £1, the charge for it shall be 4 annas, if it does not exceed £2, the charge shall be 7 annas; if it does not exceed £3, the charge shall be 10 annas; and if it does not exceed £4, the charge shall be 13 annas.

Registration fee

For each letter, postcard and packet of printed or business papers and samples .. 4 annas.

Insurance fees (for registered letters and parcels only).

For insurance of letters and parcels to Aden and Ceylon and of letters to Portuguese India—Insurance fees mentioned under "Inland Tariff."

For insurance of letters and parcels to Burma, British Somaliland, Mauritius, Seychelles, and parcels to Portuguese India.

Where the value insured does not exceed Rs. 300	Annas 8
For every additional Rs 300 or fraction thereof	8

Note—Insurance service to Burma and British Somaliland has been temporarily suspended.

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and foreign countries (other than those mentioned above) to which insurance is available.

Where the value insured does not exceed £20	Annas 8
For every additional £20 or fraction thereof	8

Acknowledgment fee.—3 annas for each registered article. 1 anna in the case of registered article addressed to Aden, Ceylon or Portuguese India

AIR MAILS

Letters and postcards are as a general rule, sent by air as far as possible in the inland post without payment of any air surcharge Packets can be sent by air in the inland post and letters, postcards and packets can be sent by air to certain foreign countries on payment of special Air Mail fee Such letters can be registered Insured articles cannot be sent by Air Mail except to Burma and Ceylon The Inland air fee for packets is one anna for each tola or part in addition to ordinary postage.

For Air fees to Foreign countries see the Post and Telegraphic Guide

Registered and unregistered parcels can also be sent by Air Mail in the inland service The charges are one rupee for the first 40 tolas and 8 annas for every additional 20 tolas or part thereof, in addition to ordinary postage and registration fee where applicable

Air Letter Service—A light weight "Air Letter" service is available for writing to most of the commonwealth countries and U S A The postage rate is 6 annas per air letter, except for U S A, Canada and Newfoundland for which the rate is 8 annas

A special air letter form is available from post offices at a cost of 6 annas per form Similar forms of private manufacture, bearing an indication that they have been approved by the Head of a Circle, can also be used, but they should be prepaid with the prescribed charge

Air letters cannot be registered or insured, nor are any enclosures permitted No other facility, such as express delivery, is available.

AMOUNT OF BUSINESS

At the close of 1948-49, there were 121,018 permanent and 47,545 temporary officials in the department, 26,760 post offices and 138,924 miles of mail lines During the year 2264 million articles including 72 2 million registered articles were posted, stamps worth Rs 15 4 crores (excluding service postage stamps worth Rs 2 5 crores) were sold, about 44 9 millions of money Orders of the total value of Rs 150 crores were issued, about 1 3 million Indian Postal Orders to the value of Rs 52 lakhs were sold, a sum of over Rs 34 crores was collected for trademen on V P articles, about 3 6 millions insured articles valued at Rs 146 crores were handled Customs duty aggregating to about Rs 147 lakhs was realised on parcels and letters from abroad; pensions amounting to over Rs 2 7 crores were paid to Indian military pensioners and about 4,300 pounds of quinine and 1,366,000 tablets of substitutes for quinine (*e g* Mepacrine) were sold to the public On 31st March 1949 there were over 3,426,000 Savings Bank accounts with a total balance of Rs 148 crores and 92,620 postal life insurance policies with an aggregate sum issued of Rs. 19 crores.

TELEGRAPHS

Up to 1912 the telegraph system in the sub-continent was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Burma and Central Circles on the 1st July 1912 The fundamental principles of this scheme were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

Amalgamation—In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced on 1st April The superior staff of the Direction, in addition to the Director-General himself now consists on the engineering (including wireless) side of a Chief Engineer, Posts and Telegraphs, with two Deputy Chief Engineers and four Asstt Chief Engineers. For Engineering Construction work, there is one Addl Chief Engineer with two Directors of Telegraphs, and some Divisional Engineers, Telegraphs. For traffic work there is a Deputy Director-General with one Controller of Telegraph Traffic and one Assistant Deputy Director-General To assist in Telephone work there is one Director (Telephones) and two Assistant Deputy Directors-General, Telephones, and in Wireless matters there is one Assistant Dy. Director-General (Wireless) There are also one Assistant Deputy Director-General (Maintenance) and two Dy Asstt Engineers, Telegraphs under the Deputy Chief Engineer (Maintenance)

In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above For telegraph engineering purposes the sub-continent was formerly divided up into five Circles, each in charge of a Director These five Circles were divided into eighteen Divisions each in charge of a Divisional Engineer On the 31st March 1924 there were 7 Circles and 20 Divisions With a view to complete fusion of the three branches of work, the engineering work of the Bombay and Central Circles was brought under the control of the respective Postmaster-General in 1925 and this unification was gradually extended to other Circles The fusion was completed in March 1930 In 1946 the Bengal and Assam Circle was divided into two Circles, namely Bengal Circle and Assam Circle, in charge of a Postmaster-General, and a Director, with headquarters at Calcutta and Shillong respectively. The telegraph traffic and the engineering branches in the Circle are controlled by the Postmaster-General, Calcutta and the Director of Posts and Telegraphs, Shillong the former officer now having under his control the West Bengal P & T Circle, which lies within the Indian Republic There is also one Deputy Director of Telegraph Traffic each at Calcutta, Bombay and Madras to look after the speedy disposal of traffic There are now 18 Engineering Divisions. With effect from 1-7-1939, the Superior Telegraph Engineering and Wireless Branches have been amalgamated into a Single Service, *viz.*—Telegraph Engineering Service—Class I.

There has been much expansion on the Telephones side of the Department consequent on the acquisition of the telephone systems at Bombay, Calcutta, Madras, and Ahmedabad by Government Separate Telephone Districts which are quite independent of the respective Postmasters-General were created at Bombay, Calcutta and Madras with effect from

1st April 1943. The Ahmedabad Telephone system has been placed under the administrative charge of the Bombay District. The Chief Officers of the Bombay and Calcutta Districts are designated General Managers, Telephones and that of Madras District as District Manager, Telephones Recently a new Telephone District has also been formed at Delhi where there has been considerable telephone expansion during the war.

The audit and accounts work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

INLAND TARIFF

Telegrams sent to or received from places in India, Burma, Ceylon or Pakistan are classed as Inland telegrams. The tariff for Inland telegrams is as follows :

	For delivery in India	
	Private and State	
	Express	Ordinary
	Rs a	Rs a
Minimum charge	1 8	0 12
Each additional word over 8 ..	0 2	0 1

	For delivery in Burma & Pakistan	
	Private and State	
	Express	Ordinary
	Rs a	Rs. a.
Minimum charge . ..	2 12	1 6
Each additional word over 8	0 4	0 2

Note —Ordinary telegrams for Burma are accepted *via O C S* at foreign rates *viz* 13 as. per word.

	For delivery in Lhasa (Tibet). *Private and State.*		For delivery in Ceylon. *Private and State*	
	Express.	Ordinary.	Express.	Ordinary.
	Rs a	Rs. a.	Rs a.	Rs a
Minimum charge	2 0	1 0	2 8	1 4
Each additional word over 12 ..	0 2	0 1	0 3	0 2

The address is charged for.

Note '—Ordinary Press Telegrams for Burma are not accepted at present.

GREETINGS TELEGRAMS

Greeting telegrams at specially reduced rates may be sent on the following festive occasions from or to any Telegraph Office in India and Jammu & Kashmir State but not Licensed (Railway and Canal) and Portuguese Government Telegraph offices —

(1) New Year
(2) Christmas
(3) Diwali
(4) Birthday
(5) Id
(6) Conferment of title
(7) Marriage
(8) Examination
(9) Bijoya
(10) Journeys
(11) Elections
(12) Acknowledgment for greetings
(13) Miscellaneous

These greetings telegrams are sent out for delivery in specially printed pictorial forms and envelopes If tendered on Sundays and Telegraph holidays and during the period when the booking of ordinary telegrams is suspended, they are accepted at Express rates and on payment of Late fees, when due

The sender of a greeting telegram selects a suitable phrase from the list of stock phrases and writes it on an inland telegram from either in full or the corresponding number in words (not in numerals) and tenders the same to the telegraph office The number denoted by the sender is signalled and at the office of destination the corresponding phrase is reproduced on the special form and delivered to the addressee

The sender of a greeting telegram should write the words " Greetings telegram " in some conspicuous place on the telegram form.

A multiple greeting telegram is accepted at the specified above *plus* a copying fee of 4 annas for each address after the first.

Greetings telegrams are accepted by telephone for onward transmission but will not be delivered by telephone. If the address contains a telephone number, the telegram is delivered according to the address given against the number in the Telephone Directory

Greetings telegram forms and envelopes are also available for sale in all Government Telegraph Offices at a cost of annas two a form and an envelope for transmission through the post as letters or as book packets if the conditions laid down in Clause 57(a) of the Post Telegraph Guide, including the restriction about five words in manuscript, are fulfilled.

Number of words	Rate	
	Express	Ordinary
	Rs a p	Rs a. p.
(*a*) Name of the addressee and address . . 4 words		
(*b*) Greeting indicated by a number 1 word		
(*c*) Name of sender . . . . 1 word		
Total . . . ., . .. 6 words	1 0 0	0 8 0
EXTRA		
Each additional word over 4 words in item (*a*) or over one word in (*c*) or each additional word indicating number in item (*b*) above	0 2 0	0 1 0

A list of phrases which have been adopted with corresponding numbers for the use of the sender in the text of the telegram will be found below

STOCK PHRASES FOR GREETINGS TELEGRAMS

Number	*Phrases*
	Diwali
One	.. My heartiest Diwali greetings to you
	Id
Two	. Id Mubarak.
	Bijoya
Three	.. Heartiest Bijoya greetings
	New Year

Urgent Telegrams—

Rate double of ordinary rate.

Notes.—

1. Ordinary Telegrams are subject to a minimum charge of 5 words.
2. Urgent Telegrams are charged at double the ordinary rates
3. Letter Telegrams (LT) are charged for at half the ordinary rates, minimum for 22 words
4. GLT (Greetings Letter Telegrams) are subject to a minimum charge of Rs 3-12-0 for 10 words

Telegrams are accepted at all Government Telegraph Offices

Usual rules apply regarding Registration of abbreviated addresses, Reply Paid, etc

Full lists published in Post and Telegraph Guide.

Radio Telegrams

For radio-telegrams addressed to ships at sea from offices in India and transmitted *via* the coast stations at Bombay, Calcutta or Madras the charge is thirteen annas per word (ordinary) or eight annas per word (code) in nearly all cases.

The following are the charges (excluding supplementary charges) for radio-telegrams from offices in India transmitted to ships at sea through the coast stations mentioned in the preceding paragraph.—

	Total charge per word Ordinary. Rs. a.	Code Rs. a.
(1) All Government or Private Radio-telegrams, excepting those mentioned in (2) and (3) below ..	0 13	0 8
(2) Radio-telegrams to British Ships of War or Ships of the Indian Navy	0 8	0 5
(3) Radio-telegrams to Spanish or Swedish ships ..	0 12	0 7½

The sender of a radio-telegram may prepay a reply. He must insert before the address, the instruction "R.P." followed by mention in Rupees and annas of the amount prepaid, *e.g.*, R.P. 7-8. This expression counts as one word.

Daily Letter-Telegrams

Daily Letter-Telegrams in plain language, which are dealt with telegraphically throughout are accepted for non-Empire countries and Australasia on any day of the week, and are ordinarily delivered to the addressee on the morning of the second day following the day of booking

The charge for a Daily Letter-Telegram is ordinarily one-third of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 25 words at such reduced rate including the indication DLT

The late fee system does not apply to Daily Letter-Telegrams and such telegrams are not accepted during the closed hours of an office

On Indian lines Daily Letter-Telegrams are transmitted after Deferred Foreign telegrams.

The only special services admitted in Daily Letter-Telegrams are Reply paid, Poste Restante, Telegraph restante, Multiple addresses, de Luxe and telegraph redirection under orders of the addressee

The class prefix for Daily Letter-Telegrams will be DLT

Night Letter-Telegrams

Night Letter-Telegrams (NLT) are accepted for all Empire countries, except Australasia, with which the Daily Letter-Telegram Service (DLT) remains in force, at the same rates and under the same conditions as prescribed for Daily Letter-Telegrams, except as follows —

(i) They will be delivered on the morning of the day following the day of booking

(ii) The special instruction and the class prefix for Night Letter-Telegrams will be NLT

Empire Social Telegrams

Empire Social Telegrams (GLT) conveying solely greetings, family news or non-commercial personal affairs can be availed of throughout the year at special reduced rates, for all Empire countries except Sudan.

Empire Social Telegrams (GLT) for the purpose of transmission and delivery to a territory or place to which NLT service is available is deferred until the morning of the day following the day of acceptance, where there is no NLT service but a DLT service is available, an Empire Social Telegram is deferred and delivered on the second day following the day of acceptance or as soon as possible thereafter Minimum charge for an Empire Social Telegram is Rs. 3-6-0 for the first 12 words (excluding the Special Instruction-GLT-which will not be charged) and 4½ annas for every additional word

The only Special Services admitted in Empire Social Telegrams are "Reply Paid" and "De Luxe."

De Luxe Telegrams

Telegrams relating to happy events or greetings may be sent to certain foreign countries for delivery on an artistic form in an envelope of the same character. A supplementary charge of four annas per telegram in addition to the charge at the appropriate rate according to the class (i e, Urgent, Ordinary, Code, Deferred, DLT., etc), is charged for such telegrams

Phototelegrams

Since May 1948 Phototelegrams are accepted at all large telegraph offices in India for Great Britain, U S A (New York), San Francisco, Australia, Egypt, Montreal (Canada) and Union of South Africa in rectangular shape bearing an address written on ordinary foreign telegram form or on the phototelegram forming part of the phototelegram to be transmitted. Phototelegrams are charged according to chargeable number of square centimetres shown below :—

Area in sq centimetre.	From India to Great Britain. Press	Private	Government	From India to U.S.A. All classes
	Rs a	Rs a	Rs a	Rs a
0—150 ..	40 8	67 8	33 12	67 8

The following special services are admitted in phototelegrams —

X address	TMx
X copies in addition to the first to be delivered to the addressee	Kx

GROWTH OF TELEGRAPHS

At the end of 1897-98 there were 50,306 miles of line and 155,088 miles of wire and cable. Compared to this, there were about 97,600 miles of line including cable and over 1,235,000 miles of wire including conductors on the 31st March 1949 The numbers of departmental telegraph offices were 257 and 77 respectively, while the number of combined Post and Telegraph offices rose from 1,034 to 3,284 in 1949 The decrease in the number of departmental Telegraph offices is due to the conversion of Departmental Telegraph office into combined Posts and Telegraph offices.

The increase in the number of paid telegrams dealt with is shown by the following figures.—

		1897-98	1948-49.
Inland ..	Private .	4,107,270	18,868,067
	State .	860,382	2,027,299
	Press ..	35,910	226,826
Foreign ..	Private ..	735,679	5,259,337
	State ..	9,896	112,743
	Press ..	5,278	79,810
		5,754,415	27,174,082

The outturn of the workshops during 1948-49 represented a total value of Rs. 1,86,62,000.

The number of messages handled during the year 1948-49 by departmental wireless stations in India was nearly 520,000 This shows an increase of about 53,000 over the previous year

With effect from 1st April 1943 the Licensed Telephone Systems at Calcutta, Bombay and Madras and with effect from September 1, 1943, the Licensed Telephone Systems at Ahmedabad and Karachi were acquired by Government. On the 31st March 1949, there were 2,755 exchanges and 119,776 Telephones operated by the department and licensed systems. About 4 4 million trunk telephone calls were handled during the year 1948-49.

The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year 1948-49 was Rs 38,59,68,000. The receipts for the year ended 31st March 1949 amounted to Rs. 29,47,67,000 and charge (including interest on capital outlay) to Rs. 26,88,91,000, the result being a net gain of Rs. 2,58,76,000.

BROADCASTING

FOR several years limited broadcasting services were maintained by radio clubs in Calcutta, Bombay and Madras. Although the transmitting sets employed by them were of very low power, the broadcasts were popular. The clubs were assisted financially by a government contribution based upon the revenue from licence fees, but this did not suffice to cover the cost of the transmissions, and great credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes.

After negotiations extending over several years, an Indian Broadcasting Company was granted a licence to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected at Bombay and Calcutta, the service from the former being inaugurated by the Viceroy in July 1927 and the latter by the then Governor of Bengal a month later These stations had each an aerial input of one and a half kilowatts, the same as that of the 2LO station in London, of which they were practically duplicates The programmes were so arranged that both Indian and European music were broadcast daily and the news bulletins and market and weather reports were read in two languages.

Owing to financial difficulties the Indian Broadcasting Company went into liquidation with effect from March 1, 1930 Since then the Government of India have been controlling broadcasting in this country Government for this purpose formed an Indian State Broadcasting Service, now called All-India Radio, and instituted a Central Broadcasting Advisory Committee.

In 1934, Government felt justified in embarking on a policy of development and, as a first step, a sum of Rs. 2,50,000 was granted for a 20-kW mediumwave station to be established at Delhi. This station was actually opened on January 1, 1936

In the year 1936 a special fund of Rs 40,00,000 was created for the development of Broadcasting in India

Orders for extensive new equipment for implementing the scheme of expansion were placed in January 1937. It included 8 transmitters which were put into operation as follows :—

Delhi 10-kW shortwave: December 16, 1937, Bombay 10-kW shortwave February 4, 1938; Lucknow 5-kW mediumwave, April 2, 1938, Delhi 5-kW shortwave: June 1, 1938, Madras 10-kW shortwave June 16, 1938, Madras 0 2-kW mediumwave: June 16, 1938, Calcutta 10-kW shortwave: August 16, 1938; Tiruchirapalli 5-kW mediumwave, May 16, 1939.

In the year 1942, the Government of India decided to install a high power shortwave transmitter which would be capable of providing broadcasting service to foreign countries.

A 100-kW transmitter was opened on May 1, 1944 forming an important landmark in A.I R's. development programme.

Later at the request of the Government of the U K. five shortwave transmitters including one 100-kW shortwave transmitter were installed as an urgent war measure These were subsequently taken over by A.I.R.

All-India Radio —All-India Radio is an "attached" office of the Department of Information and Boadcasting, of the Government of India. Its head is the Director-General, All-India Radio, whose office is located in Broadcasting House, Parliament Street, New Delhi. Other officers at headquarters are: Chief Engineer, four Deputy Directors-General, two Deputy Chief Engineers Director of Programmes, Director of Programme Planning, Director of Public Relations, Director of Staff Training School, Director of Listener Research and two Assistant Directors of Administration.

Air Stations.—The broadcasting stations are situated at Delhi, Lucknow, Patna, Calcutta, Cuttack, Madras, Tiruchirapalli, Bombay, Shillong-Gauhati, Nagpur, Vijayawada, Baroda, Allahabad, Jullundur, Ahmedabad, Dharwar, Mysore, Calicut, Trivandrum, Hyderabad and Aurangabad Each regional centre consists of studios and office buildings, transmitter installations and receiving centre installations. The technical facilities at the studios provide for simultaneous programme transmissions, channels for rehearsals and tests, listening rooms, recording facilities, etc The studios at Delhi, Bombay, Madras and Calcutta are air-conditioned All the centres are equipped with mediumwave transmitters which furnish a first-grade service in their vicinity and second-grade service in the State in which they are At Delhi, Bombay, Madras and Calcutta, shortwave transmitters have also been provided for serving areas within a radius of about 500 miles from the centres The receiving centre at each station is the link between the News Service Division at Delhi and the station itself, and is used for relaying news bulletins and important broadcasts from Delhi

The stations transmit for about seven to eleven hours a day. This is generally split up into three transmissions, morning, afternoon and evening Programmes are planned by Station Directors with the assistance of the Programme Executives and Programme of Assistants Details are worked out well in advance of their schedule dates and are published in the fortnightly journals of All India Radio. Programmes are broadcast in 14 Indian languages and in English The general programme consists of music, talks, plays, feature programmes and programmes for women and children. Rural programmes are broadcast from all stations with the exception of Calcutta which broadcasts a special programme for industrial areas. Educational broadcasts are radiated from Bombay, Calcutta, Tiruchirapalli and Delhi

Broadcasting House. — Probably the largest centre of broadcasting activity in the East Broadcasting House was completed in 1943. Architecturally, it is one of Delhi's newest and most striking sights It represents from the point of view of equipment, the latest practice in radio engineering With its air-conditioned studios, each with an individual acoustic pattern to suit every variety of sound reproduction, its control room—a model of scientific efficiency—its dramatic control panels and effects and echo rooms it constitutes a landmark in every sense of the word in the history of Indian broadcasting

News Services Division.—This occupies a wing of Broadcasting House in Delhi and provides a total of 22,980 news bulletins for (*a*) Home Service (in English and fourteen Indian languages) and (*b*) external programmes (in English, three Indian languages and eight foreign languages). All the news bulletins are prepared in the News Service Division and broadcast from the transmitters at Delhi set apart for news Each station relays the bulletins suitable for its listening areas A few minutes are set apart at each station for local news This period accommodates news of purely local interest.

The News Service Division has a Monitoring Service situated in Simla It monitors news, commentaries and selected talks broadcast from the main broadcasting stations of the world Twelve foreign languages from nearly 30 countries involving 80 to 100 transmissions are daily covered by this service

CENTRAL HOME NEWS SERVICES

Research and Maintenance Departments.—These two departments are located in New Delhi The Research Department deals with all technical problems, concerning reception and transmission Special studies are undertaken on ionospheric data and forecasting transmission conditions, field strengths of short and medium wave stations, atmospheric noise levels prevalent in various parts of India, studio and recording characteristics and development of cheap receivers The Department also maintains a field station at Todapur near Delhi where the frequencies of All-India Radio Stations are constantly checked The Maintenance Department handles problems which arise in the upkeep and day-to-day operation of the engineering equipment used by All-India Radio in addition to maintaining Central Stores Depot

Radio Journals—A I R publishes programme journals in English (Indian Listener), Urdu (Awaz), Hindi (Sarang), Bengali (Betar Jagat), Tamil (Vanoli), Gujarati (Nabhovani) and Vani (Telugu). Their total circulation is about 80,000 copies per issue.

Monitoring Office.—The Monitoring Service keeps a round-the-clock watch on transmissions from all the main broadcasting systems of the world, monitors news commentaries and selected talks transmitted from those stations in English, in Indian languages and in some foreign languages, totalling 12 different languages from as many as 30 different countries.

Public Relations.—For establishing and maintaining contact between All-India Radio and its listeners there is a Director of Public Relations at Headquarters and a Public Relations Officer attached to each Station

Listener Research.—The primary purpose of Listener Research is to determine the listening habits and programme preferences of radio listeners by ascertaining from time to time their reactions to programmes broadcast This information is necessary for planning programmes calculated to have the maximum listening appeal Collection of authentic information on this subject is the task which the Listener Research Department of AIR has to fulfil Although Listener Research in this country is still in its infancy, a good deal of information on the listening audience and on trends of listening has already been collected and more light is constantly being shed on this absorbing subject For this purpose, contact with listeners is maintained through listeners' letters, press reactions and questionnaire studies of listeners' preferences and reactions to programme broadcast By utilising all recognised methods of assessing listener reactions, AIR is trying its best to provide programmes suited to the needs of its listening audience There is one Director and one Assistant Director of Listener Research at Headquarters and one Listener Research Officer at each station in charge of this work.

Advisory Committees, established at the broadcasting centres in consultation with the State Governments, keep the Director General, All-India Radio, in touch with local public opinion in the matter of programme construction and advise him on such matters For advising the Director-General, All India Radio, on the choice of a generally acceptable vocabulary for Hindustani, a Hindi-Urdu Standing Advisory Committee was formed in 1946 The first meeting of the Committee was held in May and June of the same year.

Post-War Development.—Towards the end of the war, the development of broadcasting in India was actively considered and a plan of development over a period of eight years was evolved The plan has as its aim the provision of a broadcasting service throughout the country which would, in due course, enable any listener in any part of the country to receive a programme on a cheap receiver.

The Government of India have formulated an eight-year plan which has been taken up for immediate implementation.

Installation of three 20 kW medium wave transmitters for rural programmes, one each at Bombay, Calcutta and Madras :

Installation of two high-power and one 2 kW medium wave transmitters at Allahabad

Installation of 20 kW medium wave transmitters one each at Nagpur, Vijayawada, Ahmedabad, Cuttack, Dharwar, Gauhati (Shillong), the Capital of Punjab and Calicut.

Installation of eight high-power medium-wave transmitters for urban programmes, two each at Delhi, Bombay, Madras and Calcutta

Construction of studio buildings at Madras and Calcutta.

Provision of additional studio facilities at the existing broadcasting centres.

In their choice of new centres, the Government of India have been guided by the following factors

(i) Demands of the linguistic areas hitherto unprovided with a service and the importance of the language from the literary point of view and from the size of population speaking the language.

(ii) Demands of the various States

(iii) Density of urban and rural population within the service area of the broadcasting centre and its potentialities in bringing in increased revenue

(iv) Importance as an educational and cultural centre, and availability of programme talent at the centre or within easy reach.

(v) Density of rural population and distribution of villages and hamlets within the service area, which will determine the centre's usefulness as a rural centre.

Because of the various factors involved in the opening of new stations, such as, acquisition of sites, construction of new buildings, etc., a certain amount of delay is inevitable. In order to provide an interim service until the complete plans for each centre are carried out, the Government of India have undertaken the construction of "pilot" stations These pilot stations are to form the nucleus of the future services and, in addition to the meeting of the immediate needs of the areas concerned, they would help to cultivate the potential talent at the centre and also make the people more radio-minded. Such a pilot station has already been opened at Cuttack, Shillong-Gauhati, Nagpur, Vijayawada, Ahmedabad and Jullundur

Licences.—Broadcast receiver licences are issued at all head and sub-post offices at a fee of fifteen rupees per year, and cover the use of receiving sets throughout India Licences for fixed stations for transmitting and experimental purposes are much sought after, though there is careful scrutiny of the applications, a considerable number are issued The number of traders in wireless apparatus who are required to take out special import licences has increased considerably during recent years

Broadcast Receiver Licences are issued to Municipalities or other public bodies for the reproduction of broadcast programmes in public places by the Postmaster-General of the State A licence issued for this purpose covers the use of one wireless receiver and any number of loudspeakers at one place only but does not cover any external wiring erected outside the premises of the licensee.

A commercial Proadcast Receiver Licence is, however, necessary in the case of clubs, institutions, messes, etc , for reproducing broadcast programmes at subscriptions, dances, concerts, bazaars, etc , to which the public are admitted This licence is also issued by the Postmaster-General at a fee of Rs. 50 and is valid for one year. The number of wireless receiver Licensees in India has increased, the total for India, upto end of 1949, being about 3,25,000

The growth of broadcast receiver licences at the end of each year beginning with 1937 is given below :

Year	Licences	Year	Licences	Year	Licences
1937	50,680	1941	1,47,121	1945	2,02,829
1938	64,480	1942	1,65,675	1946	2,32,368
1939	92,772	1943	1,76,061	1947	2,38,274
1940	1,19,417	1944	1,93,585	1948	2,81,998
				1949	3,25,000

It would be seen from the above that the 12 years between 1937 and 1948 saw an increase in the lincence figures from 50 680 to 2,81,998. The rate of increase might have been even higher but for the limited supplies during the war and production bottlenecks and import restrictions in the post-war years.

Radio Imports —The imports of wireless receivers into India have increased rapidly in recent years, though lately there has been some decline

British Broadcasting Corporation

THE British Broadcasting Corporation maintains a small office in New Delhi, to act as a liaison point between its broadcasting headquarters in London and the broadcasting organisations of India, Pakistan and Ceylon, as well as to maintain contact with listeners in these countries to the B B C 's Overseas Programmes.

Its function is purely one of liaison No transmitting of programmes takes place outside London.

The office in New Delhi was first established in 1942 with the then primary object of conducting listener research for the B B C 's Overseas Programmes broadcast from London, in both English and in five Eastern languages

Early in 1943, the scope of the office was slightly expanded with the appointment of a senior B B.C Representative from London, to handle all matters of co-operation, interchange of ideas and material and public relations, between the B B C and its sister broadcasting organisations in India.

Pakistan and Ceylon have since been added to the scope of its contacts, but the general shape of the office remains the same, with, as its two main strands of work, Listener Research and Public Relations.

With Listener Research, the office helps to form a liaison between listeners to the B.B C Programmes in these countries and the broadcasting planners and artists working in London. It aims to ensure that the B.B.C 's Eastern Service—which is broadcast especially for the two Dominions and the Indian Republic and which can be heard daily between 7 p.m. and 9 p m.—satisfies the needs of its audience, keeps up-to-date with changing opinions and requirements It aims to keep listeners in touch with news and trends of thought in the Western countries and by reporting back to London the views of listeners, helps to introduce new features and programmes which meet with the interests and needs of the listeners in these communities

It aims too to maintain a similar contact between the planning departments in London and the listeners in these countries to the B B C 's General Overseas Service broadcast in English over the twenty-four hours daily and which is directed specially to India, Pakistan and Ceylon every day from 6-30 a m to 10-30 p m.

In carrying out this work, the B B.C. Listener Research Officer has toured most areas in the three countries enquiring at first hand into the reception of the programmes and assessing from suggestions, appreciations and frank criticisms, how far they are fulfilling the listeners' needs

EXCHANGE OF IDEAS

One method of promoting cordial relations is by a constant interchange of ideas, scripts and through reciprocal arrangements for the rebroadcasting of news, cultural items and great public occasions In two very conspicious ways among others, the B B C Office in Delhi has been able to promote good relations The first was in arranging for the Indian National Anthem Jana Gana Mana, to be orchestrated by a British Composer—Herbert Murrill—who has now become Head of the B B C 's Music Department in London. The second was in the arrangement of the series of Two-Way Discussion Programmes between Delhi and London which took place in 1949 winter In these programmes men and women of the standing of Sir C P Rama Swamy Aiyar, Dr Brailsford, Rajkumari Amrit Kaur, Lady Violet Bonham Carter, Dr Bhaba and Professor Oliphant had free discussions with each other over the air on subjects like politics, the status of women and the future of science

Also, by means of recordings made by the B B C Transcription Service, of programmes broadcast in London on any of the Home or Overseas Services, the B B C can offer broadcasting concerns all over the world, records of outstanding items such as concerts of Western music, or talks given by authorities on matters of general cultural and educational interest Being in recorded form, other broadcasting concerns can use them in their programmes at times best suited to the habits of their audiences

So a link can be formed between the East and the West especially in the spheres of thought and culture.

Similarly through the co-operation of such broadcasting organisations as All India Radio the B B C. Office can also send recordings of the Indian Scene back to London for broadcast to the English people and so foster and maintain an exchange of ideas between the Commonwealth Countries and Great Britain.

The B B C also maintains a News Correspondent in New Delhi whose work is to report to London for inclusion in B B.C. News Bulletins, news items from the three countries. The present holder of this post is Douglas Stuart The present B B C. Representative is B. W. Cave-Browne-Cave

The address of the B B.C. Office is . Post Box 109, New Delhi.

		Bombay-Nagpur-Calcutta	Daily.
10	KALINGA AIRLINES, CALCUTTA	Calcutta-Agartala (Freight Service)	24 Weekly.

* Flights on Sunday in either direction operate as Express Services omitting Basra and Geneva.

A radical improvement in carriage of mails by air was made with effect from the 30th January 1949 when scheduled night air mail services commenced operation on the routes Bombay—Nagpur—Calcutta and Madras—Nagpur—Delhi Shortly afterwards the "All Up Airmail Scheme" was introduced which aimed at carriage of all mails, as far as possible, by scheduled air services The operation of night air mail services was temporarily suspended during the monsoon period (from 9th June 1949 to 14th October 1949) These services have been resumed with effect from the 15th October 1949 and are now uplifting passengers as well as mail and freight Night services have proved to be very popular with the public and their operation has been fully justified from the economic point of view Along with other progressive measures taken during the year 1949 to help in the development of air transport in India, Government decided to give financial assistance at annas nine per gallon of petrol uplifted by Indian aircraft in India

TRAFFIC STATISTICS

Some interesting statistics of the traffic carried by Indian air services, scheduled and non-scheduled, during 1948 and 1949 are given below —

Particulars	1948.	1949.
(A) SCHEDULED SERVICES		
Miles flown	12,648,765	15,098,354
Number of passengers carried	348,840	357,415
Mail carried in lbs	1,582,645	5,031,959
Freight carried in lbs	12,452,711	22,499,679
Capacity Ton-Miles operated	26,320,058	36,581,891
Load Factor	75 3%	63 5%
Regularity (percentage of the number of services operated to number of services scheduled)	99 15%	97 2%
(B) NON-SCHEDULED FLIGHTS		
Miles flown	4,479,235	4,100,343

EXTERNAL AIR SERVICES

The first concrete step was taken about the end of 1947, when the Government approved a scheme for the establishment of an Indian air service between India and the United Kingdom A new company was formed for this purpose under the name of Air-India International Ltd The Government of India hold 49 per cent. of the share capital with an option to increase this to 51 per cent at any time On the Board of Directors of this company, Government have their own nominee as a "Special Director" who has certain over-riding powers During an initial period of five years any losses incurred by this company will be made good by Government but any payment so made shall have to be repaid out of subsequent profits made by the company The India-United Kingdom service, equipped with the most modern type of Lockheed Constellation 40-seater aircraft, commenced operation on June 8, 1948 on the route Bombay-Cairo-Geneva-London when the 'Malabar Princess' took off from the Santa Cruz airport with 35 passengers, and 164 bags containing about 1,700 lbs. of letter mail.

This service now operates thrice weekly between Bombay and London

Having established external air services to the West the question of operation of air services to the East was taken up during the year 1949 and on the 28th May 1949 Bharat Airways Ltd commenced operation of an air service on the route Calcutta-Bangkok-Hongkong with the Skymaster type of aircraft Subsequently, operation on the Bangkok-Hongkong sector was suspended and the service is now restricted to the Calcutta-Bangkok sector with a once weekly frequency

Air India International Ltd have also increased the scope of their operations by introducing a scheduled service to East Africa on the route Bombay-Aden-Nairobi with effect from the 21st January 1950 The service is being operated with Constellations and the present frequency is once a fortnight.

As a result of air transport agreements with the various countries, foreign services passing through India have largely increased in number. At present, services to and across India are operated by the following Airlines —Air Ceylon, Air France, British Overseas Airways Corporation, Ethiopian Air Lines, Inc, Iranian Airways Co, Pan American World Airways System, Philippine Air Lines, Inc, Qantas Empire Airways Ltd, Siamese Airways Co, Transcontinental and Western Air Inc, Orient Airways Ltd, K L M Royal Dutch Airlines, Braathens South American and Far East Air Transport A. S, Scandinavian Airlines System

AERODROMES

During the war, the Defence Department took over the control of all civil aerodromes and the services of all Air Traffic Control Officers were loaned to the Air Forces The Air Forces continued to exercise control over these aerodromes till 1945 when, due to improvement in the war situation, gradual transfer of the aerodromes to civil aviation commenced During the war, the development of aerodromes was rapid, with the result that at the end of the war India had several hundreds of aerodromes, many with 2,000 yard paved runways.

Under the post-war plan of the Government of India, framed before the partition, it was proposed to develop 4 International 10 Major, 32 Intermediate and 57 Minor aerodromes in India Because of the partition in August 1947, these plans had to be modified and under the revised scheme it was proposed to have 3 International, 7 Major, 13 Intermediate and 22 Minor aerodromes in the Republic of India At present all these aerodromes except 14, mostly Minor, are well enough equipped to deal with aircraft operations. In addition, there are 20 aerodromes in the former States area

Since partition, Bombay Airport (Santa Cruz) has become the first port of entry from the West for the Indian Republic and is provided with customs, immigration and health facilities Extensive development works are in progress at Bombay Airport to cope with the anticipated increase in air traffic. To meet the demands of the increasing international air traffic through the Calcutta (Dum Dum) Airport, India's gateway to the East, considerable expansion of the airport is planned

Thirty-one aerodromes are at present equipped for night flying operations The equipment in use at some of the stations at present is of emergency type consisting of paraffin flares and lanterns Temporary electric flare paths are provided at twelve stations and it is proposed to acquire more of these sets to be installed at other stations Besides this nine aerodromes are provided with flashing location beacons. Schemes are in hand to provide permanent electric runway lighting, taxiway lighting and approach lighting, etc, at all the major and international airports

At the close of the war, the Civil Aviation Department took over by stages operational control of a number of aerodromes including those originally belonging to it before the war The technique of Air Traffic Control during the war was developed to a very high standard to ensure safety of aircraft operations. Air Traffic Control was brought under three heads namely, Area Control, Approach Control and Airfield or Local Control Of these, with a view to minimising the staff, Approach and Local Controls have, for the present, been combined together Area Control Centres have been established at Delhi, Calcutta, Bombay and Madras.

AERONAUTICAL COMMUNICATION SERVICES

Forty-three Aeronautical Communications Stations—36 of which are operated by the Director-General of Civil Aviation, 3 by the Airline Operating Companies and 4 by former States—have been established by the Government of India

On an average, there are at present seven Navigational Aids and seven Air/Ground Communication Channels available at the International airports in conformity with the pattern laid down by International Civil Aviation Organisation Provision has been made, in the future plan, for further augmentation of navigational aids by the installation of up-to-date methods of Instrument Landing System, Ground Control Approach System, Air/Ground Control Radar at all International airports Long-range navigational aids have also been planned for Bombay, Calcutta and Madras to give coverage to an aircraft flying over the sea At the other airfields, almost all the navigational aids and aircraft communication channels recommended by the International Civil Aviation Organisation have been provided In addition, facilities exist for point to point communication on both radio telegraphy and telephony between the adjacent airfields and also between the International airfields These point to point links will be further expanded to improve communication between the stations in India as well as between the International airports in India with those in the adjacent countries It has been planned to provide aerodrome services in the nature of Inter-communicating Tele-Talk System, Public Address System and Speech Recording Apparatus at Control Towers for recording the telephonic communication with aircraft

There are three important ancillary units within the Communication organisation of the Civil Aviation Department These Units are known as Radio Construction Unit, Radio Stores Depot, and Radio Development Unit. The new installations and major repairs are carried out by the Construction Unit Radio Stores Depot is the central stores organisation responsible for distribution of all equipment to the stations Radio Development Unit, which came into existence in January, 1948, is engaged in carrying out research and development work on problems pertaining to the Aeronautical Communication Service

During the year 1947, a handbook entitled 'AERADIO' giving details of radio facilities and other useful information was compiled The first edition of this handbook was published in July, 1947.

In order to facilitate exchange of ideas and co-ordinate the requirements of Airline Operating Companies with regard to Navigational Aids and Communication facilities in Civil Aviation, a body known as Communication Consultative Committee was formed at the end of 1946 The Civil Aviation Department and Airline Operating Companies are represented in this Committee The meetings of this Committee are held every year and it has already proved its usefulness in co-ordinating the requirements of Navigational Aids and Communication facilities in the country.

AIR TRAINING

Facilities are available in the aeronautical communications service for the training of operators and service personnel at the Civil Aviation Training Centre at Saharanpur Upto the end of 1948, this Centre trained nearly 712 trainees It is considered to be the best equipped establishment of its kind in South-East Asia Various instructional courses are provided and these cater for persons with varying attainments and experience

In order to meet the shortage of pilots in the country the Government of India sanctioned in 1948 a scheme for training about 300 pilots in a period of 3 years Preliminary training upto 100 hours experience is provided at the Flying Clubs and completion of the training provided at the C A T C, Allahabad The Centre will also provide for training of Air Traffic Control Officers and other similar personnel principally for employment in the Civil Aviation Department The entire scheme is estimated to cost Rs 74 lakhs on capital account and Rs 25 lakhs as recurring expenditure

The flying school at Allahabad started operations on the 23rd September 1948 Eighteen Assistant Pilot Instructors have so far been trained and are now employed at various flying clubs Under the Civil Aviation Training Scheme selected candidates are sent for initial training to subsidised flying clubs On completing the "Pre-entry" stage they are sent to Allahabad for training for the Commercial Pilot's Licence The first batch of pre-entry candidates was selected in May 1949 Pending the completion of their courses at flying clubs, a special course for 15 candidates selected from trainees with 100 hours flying experience at flying clubs was started in July 1949 with a view to training these candidates for Commercial Pilot's licences including twin-engined flying This course is nearing completion In addition 12 pilots from various flying clubs have been given ground training at the Centre and a further batch of 18 is under training at present

Flying Clubs—Flying Clubs provide facilities for ordinary citizens to learn to fly at concessional rates To a limited extent they also give flying training for commercial aviation and are now integrated in the new Flying Training Scheme There are, at present 9 subsidised Flying Clubs in India with Headquarters at Delhi, Bombay, Madras, Barrackpore, Patna, Bhubaneswar, Lucknow, Jullundur Cantt and Nagpur and three non-subsidised Flying Clubs, viz, the State Aviation, Jodhpur, Hyderabad State Aero Club, Hyderabad and Govt Flying Training School, Bangalore The proposal to subsidise flying clubs in Assam was dropped by the Assam Government. It is proposed to subsidise 2 more flying clubs namely—the Hyderabad State Aero Club, Hyderabad and the Mysore Government Flying Training School, Bangalore with effect from the 1st March 1950 It is further proposed to form and subsidise one more flying club in Rajasthan during 1950-51 During the year 1949, the subsidised clubs carried out 32,668 hours flying against 24,096 hours in 1948

Some progress has been made in organising gliding activities. The Indian Gliding Association at Poona was subsidised with effect from December 1, 1948 A capital grant of Rs 60,000 has been given to the Association in addition to a recurring grant of Rs 20,000 per annum and a bonus of Rs. 250 for each pilot trained.

The Association has further been given a grant of Rs 32,000 as a capital grant for a hangar and workshop and a recurring grant of Rs. 30,000 for 1949-50 The Association has imported some gliders from abroad and their Chief Instructor has since returned after a study tour in the U K and Continental countries Active operations were expected to begin in March 1950.

Details for the establishment of an Indian Aeronautical Society for the advancement of aeronautical science and engineering were finalised and the Society was inaugurated by the Prime Minister, the Hon'ble Pandit Jawaharlal Nehru at Bangalore on 27th December, 1948 The Headquarters of the Society is at New Delhi It is hoped that the Society would play a vital part in the expansion and development of aeronautical science

The Society's progress during the brief space of time has been noteworthy Two branches—one at Bangalore and the other at Calcutta—have already been formed The Council of the Society has resolved to institute examinations and issue appropriate certificates *viz* the All-India Certificate in Aeronautics and the All-India Higher Certificate in Aeronautics It is intended to keep the standard of knowledge for these examinations pretty high so that the certificates from the Society can in course of time be considered as the hall mark of knowledge of Aeronautics

Aeronautical Maps—The preparations of a series of aeronautical maps on the scale of 1/1,000,000 has been undertaken by the Survey of India Hitherto, there have been two series of general maps in this scale, namely the "Carte Internationale" Series and the "India and Adjacent Countries" Series In order to facilitate the work of keeping the maps up-to-date, it was decided to concentrate on "Carte Internationale" Series only The Government have also undertaken to print aeronautical maps covering Indian territory conforming to the I C A O recommendations The 4th Session of Map Division Meeting of I C A O was held at Brussels in March 1948 in which India participated The recommendations made therein are awaiting approval of the I C A O Council

India is a member of the International Civil Aviation Organisation and has been elected to its Council Mr K M Raha was the first Representative of India on the Council of I C A O followed by Mr B M Gupta, Mr D Chakravarti and Mr M G Pradhan India took part in all the Assembly meetings and was represented in important Committee and Division meetings

At the invitation of the Government of India, the ICAO South East Asia Regional Air Navigation meeting was held in New Delhi during November/December, 1948 Over two hundred delegates from 14 States and two International Organisations, viz the International Meteorological Organisation and International Air Transport Association, attended

The Government of India have concluded bilateral air transport agreements with U S A, Netherlands, France, Sweden, Pakistan Ceylon Australia and Philippines Bilateral agreements are also under negotiation with other countries including U K, Switzerland, Norway and Egypt

MANUFACTURE

There were no aircraft manufacturing activities in India before the last World War and engineering activities were limited to the overhaul and repair of aircraft and engines by various Companies such as Tata Airlines, Bombay, now Air-India Limited, Indian National Airways Ltd, Delhi, Air Services of India Ltd, Bombay, Indian Air Survey and Transport Co Ltd, Calcutta

An Aircraft Factory for the manufacture of aircraft became a strategic necessity after the outbreak of War The Hindustan Aircraft Company was started in the year 1940 as a commercial venture, by Mr. Walchand Hirachand in association with the Government of Mysore, initially for the assembly and ultimately for the manufacture of aircraft. In 1941 the Government of India decided that they should themselves take a more active part in the Company's affairs and equal shares were held by the Government of India and Government of Mysore and Messrs. Walchand Hirachand.

On the conclusion of the war with Japan in 1945, the Factory was re-organised by the Government of India under the Department of Industries and Supply for the conversion and overhaul of Army Dakotas for the use of Civil Airlines. It is now engaged on the conversion and overhaul work both for Civil Aviation and the Air Forces It has also a programme of assembling and manufacturing of Trainer aircraft for the Air Forces It is the policy of the Government of India to develop this Factory into a manufacturing concern

The following aero-material and aero-parts are now being manufactured by the undermentioned Companies in India They are approved for this purpose by the Director General of Civil Aviation in India The inspection of the manufacture is carried out in accordance with standard aeronautical practice in U K. and U S A.

Aero-Aluminium Sheets—The Aluminium Production Company of India Ltd., P B 361, 5 Council House Street, Calcutta is approved for the manufacturing, storing and distribution of Aircraft Aluminium Sheets to British Standard Specifications 2L4, 2L16, and 2L17.

Aero-Tyres and Tubes—The Dunlop Rubber Company (Ltd), Sahaguni, Hoogly District, is approved for the manufacture, repairing and remoulding of aircraft tyres and tubes.

The Firestone Tyre and Rubber Company of India Ltd, Hay-Bunder Road, Sewree, P O. Box No 197, Bombay, is approved for the manufacture of Aircraft Tyres and Tubes

Aircraft Solders—The Eyre-Smelting Co, Ltd, Hide Road, Kidderpore, P O Box No. 10602, Calcutta, is approved for the manufacture, storing and distribution of Aircraft Solders

Wooden Airscrews—The Forest Research Institute, Debra Dun, is approved for the manufacture and repair of Wooden Airscrews

Aircraft Gaskets—Messrs Hardcastle, Waud & Co, Ltd, Alice Buildings, Hornby Road, Bombay, is approved for the manufacture of Gaskets

Plywood—Plywood-Products, Sitapore, is approved for the manufacture of aircraft Plywood to Aeronautical Specification D T D 427

Aeroplane Cotton Fabric—To specification D T D 407 will be undertaken by Messrs Buckingham & Carnatic Co, Ltd, and Binny & Co, Madras Ltd as soon as the new machinery which has been received by them has been installed.

RESEARCH AND DEVELOPMENT

Research and development work in Aeronautics is still in its infancy in India The pressing need for it had not been felt so far since aircraft operations in this country in the past have been of limited scope and the aircraft industry remained in an undeveloped state The position has changed today and aircraft design and manufacturing activities have been started in Hindustan Aircraft Limited and elsewhere As a consequence, the necessity has arisen for initiating research on advanced problems of aircraft design, for developing materials of indigenous origin and for the introduction of advanced aeronautical engineering training in universities and technical institutions Recent advances in civil air transport design and practice have also brought in their wake complicated problems relating to airworthiness and safety in operations In view of these developments a small but independent Research and Development Branch, proposed in the post-war plan of the Civil Aviation Department in 1945, was created in April 1946

The proposal for establishing a Research and Development Laboratory has now materialised and a small but self-contained unit has been built near the Safdarjung Aerodrome in New Delhi Its work at present will be strictly confined to investigations relating to matters pertaining to Civil Aviation.

An aeroplane load adjuster intended for ensuring safe loading of aircraft in scheduled operations has been developed in the Laboratory The collection of statistical data on flight loads using V-g Recorders which was initiated last year is proceeding An experimental study of aeroplane type loads on runway pavements has been completed. A simplified analysis of the take-off ground run of aircraft has also been carried out Technical reports on these investigations are under preparation Work on the standardization of indigenous materials of aircraft construction is also in hand and tentative specifications have been prepared for several aircraft materials developed in India. Close liaison with the Indian Standards Institution is also maintained in this work There are several other problems of tropical operations such as temperature accountability, effect of slippery runways, development of special safety devices preventing or minimising the effects of inadvertant stalls, fire hazards, bird-strikes, etc which will be investigated both in the laboratory and in the field

Another activity of the laboratory is concerned with the design approval of 'prototype' aircraft for Type Certification Progress in original aircraft design work is being maintained at Hindustan Aircraft Ltd, Bangalore and at present a tandem-seat acrobatic trainer somewhat similar to the De Havilland Chipmunk is in an advanced stage of design and construction Another advanced trainer known as the HT-10 is also being designed at Hindustan Aircraft Ltd Work relating to type certification of the HT-2 trainer is in hand and is expected to be completed in the course of this year

A post-graduate course in aeronautical engineering was introduced in the Indian Institute of Science, Bangalore, in December 1942, and since then the Institute has been training aeronautical design engineers for the industry The Department of Aeronautics of the Institute is equipped with a 5′ × 7′ Wind Tunnel and also with apparatus for carrying out research on aircraft structures Wind Tunnel research is supported by an annual grant from the Government of India

CIVIL AVIATION DEPARTMENT

In view of the anti-inflation policy of the Government the development programme has had to be slowed down this year, and the provision for next year also is on a considerably restricted scale.

The budget estimates for the year 1949-50 under the two demands, Revenue and Capital, pertaining to Civil Aviation, as compared with the budget estimates and the revised estimates for the current year are as follows —

	R E. for 1948-49	B E. for 1949-50.	B E for 1950-51
	Rs	Rs	Rs.
Aviation	2,53,00,000	3,20,03,000	1,93,00,000
Capital Outlay on Civil Aviation .. .	2,92,00,000	1,49,98,000	3,00,00,000

The following table shows at a glance the budget estimates for 1950-51, compared with the budget estimates for 1948-49 and 1949-50

Sub-heads.	R.E for 1948-49	B E. for 1949-50	B E. for 1950-51.
	Rs.	Rs	Rs
A. Direction and Inspection	25,39,800	29,85,600	26,34,500
B. Aerodromes and Air Route Service ..	27,64,200	42,77,400	46,13,800
C. Aeronautical Communication Service.	44,55,000	57,85,800	53,97,600
D. Grants for Aviation purposes	6,25,000	3,00,000	55,00,000
E. Works	59,76,000	51,11,200	76,41,400
F. Aeronautical Training and Education..	26,80,000	55,95,000	37,20,600
G. Air Transport Development	10,00,000 (B E)	10,00,000	21,00,000
H. Special Services and Miscellaneous Expenditure	22,000	30,000	2,200
I. Deduct lump cut for economy ..	....	.. .	
J. Charges in England	2,38,000	2,15,000	1,90,000
Total Rs. ..	1,93,00,000	2,53,00,000	3,20,03,000

A DIRECTION AND INSPECTION :

B.E. for 1948-49 27,12,400 { Increase Rs. 2,73,200
B E for 1949-50 29,85,600.

The provision under this head is intended to meet the pay and allowances of the officers of the Headquarters Organisation and the Inspection Organisation. The Headquarters Organisation co-ordinates the activities of the various services of the Civil Aviation Department whereas the Inspection Organisation carries out the important responsibility of assuring the airworthiness of aircraft, which entails the supervision of materials from their origin to their incorporation in the aircraft and the daily maintenance of aircraft and the licensing and supervision of the personnel and organisation engaged in the work The increased provision for the next year is partly due to the strengthening of the Headquarters Organization necessitated by the all round increase in the activities of the Civil Aviation Department, and partly by the increase in the salary of the existing officers consequent on the drawal of yearly increments, etc.

B AERODROME AND AIR ROUTE SERVICE.

B.E. for 1948-49 20,67,000 { Increase Rs. 16,10,400
B.E. for 1949-50 42,77,400

The Aerodrome and Air Route Service deals with (i) Aerodrome Operations, (ii) Estate and Equipment and (iii) Aerodrome Planning. With the growth of air transport in India, the responsibilities of this Organisation have considerably increased There are at present 48 civil aerodromes in India maintained by the Director-General of Civil Aviation, besides a number of aerodromes in the former States which are maintained by the State authorities. A few additional aerodromes, the exact location and number depending on the development of air transport, will have to be opened next year for which additional staff will have to be sanctioned. Besides, the Aerodrome Organisation is at present without adequate transport facilities. As there are a number of installations at an aerodrome which, for technical reasons are situated far away from the main aerodromes and also from each other, it is necessary that adequate transport facilities should be provided at each aerodrome for the conveyance of staff and stores from one place to another. The increased provision for the next year is partly due to the provision of these facilities and partly to the provision of additional staff for the existing aerodromes and a few new aerodromes which are proposed to be opened during the course of the next year.

C AERONAUTICAL COMMUNICATION SERVICE.

B E for 1948-49 53,20,000 { Increase Rs. 4,65,800
B E for 1949-50 57,85,800

As a result of revolutionary developments in the technique of radio for aviation, it became necessary to organise a service in 1946 exclusively for providing radio communication facilities to aircraft in flight. The organisation is still being built up, and the expenditure on this organisation will naturally continue to be comparatively high for some years to come. There are at present 43 Communication Stations controlled by the Director-General of Civil Aviation in India throughout India including certain States In order to ensure the maintenance of a uniform and efficient service, the communication stations on the important aerodromes situated in States are also maintained and controlled by the Director-General of Civil Aviation in India.

D. GRANTS FOR AVIATION PURPOSES :

B E. for 1948-49 Rs. 3,00,200 { Decrease Rs. 200
B E. for 1949-50 Rs. 3,00,000

The provision under this head is only an appropriation for the Civil Aviation Fund. It does not in fact constitute an item of expenditure but is only a transfer to a fund.

E WORKS.

B E. for 1948-49 Rs. 54,24,500 { Decrease Rs 3,13,300.
B E. for 1949-50 Rs 51,11,200.

The provision under this head is intended to meet the expenditure on (i) minor works, and (ii) maintenance and repairs, etc, of Aerodromes, buildings, landing grounds and roads A reduced provision has been made in the estimates for the next year as only those works will be undertaken which are absolutely essential and cannot be postponed.

F. AERONAUTICAL TRAINING AND EDUCATION

B E. for 1948-49 Rs 46,29,600 { Increase Rs. 9,65,400
B E. for 1949-50 Rs 55,95,000

The amount shown above includes a provision of Rs. 15 25 lakhs for the payment of subsidies to Flying and Gliding clubs which also assist in the training of civil aviation personnel.

For 1949-50, the provision of Rs 15·25 lakhs is expected to just cover ten clubs and the Aero Club of India Funds permitting, it is also proposed to grant subsidies to some flying clubs in the former States and to other flying centres which are growing in some of these areas as satellites of the existing clubs. Subsidy was

also granted to the Indian Gliding Association, Bombay, from the 1st December 1948, to enable it to revive its activities and organise gliding clubs in India. For schemes devised to foster airmindedness among the younger generation, a provision of Rs. 36,000 was made during 1948-49. A sum of Rs 50,000 was provided in the estimates for 1949-50 Steps are being taken to start Model Aeroplane Clubs in Universities and Colleges. An aeronautical society has been formed for promoting the advancement of the profession of Aeronautics in India. The society includes among its members scientists, engineers and technical personnel of the Civil Aviation Department.

G. AIR TRANSPORT DEVELOPMENT

B.E. for 1948-49 Rs. 10,00,000

B.E for 1949-50 Rs. 10,00,000

During last year, the number of passengers travelling on Indian air services increased from 2·6 lakhs in the previous year to 3 42 lakhs and the mileage flown by scheduled services increased from 9¼ millions to 13¼ millions The provision of Rs. 10 lakhs shown above is intended for subsidising Air India International if this becomes necessary.

H. SPECIAL SERVICES AND MISCELLANEOUS EXPENDITURE.

B E. for 1948-49 Rs. 22,300 {Increase Rs. 7,700

B.E for 1949-50 Rs. 30,000.

The provision under this head is for meeting the expenditure incurred on flights undertaken by aerodrome officers in the performance of their duties and special training of these officers. The increase in the provision is due to more flights necessitated by the increasing activities of the Civil Aviation Department.

J CHARGES IN ENGLAND:

B.E for 1948-49 Rs 1,22,000 {Increase Rs. 93,000

B E. for 1949-50 Rs 2,15,000

The increase under this head is on account of increased requirements of leave and deputation salaries and sterling overseas pay to be paid to certain officers.

CAPITAL OUTLAY ON CIVIL AVIATION.

The table below shows the provision made in 1949-50 budget as compared with the provisions made in the Budget Estimate for 1948-49 :—

	B E for 1948-49.	R E for 1948-49.	B E for 1949-50.
	Rs.	Rs.	Rs.
Aviation Works	3,49,19,400	2,25,00,000	2,14,48,700
Meteorological Works	30,600	30,600	47,500
Equipment	59,34,000	74,69,400	77,03,800
Total Rs. ..	4,08,84,000	3,00,00,000	2,92,00,000

A. AVIATION WORKS:

B.E. for 1948-49 Rs. 3,49,19,400 {Decrease Rs. 1,34,70,700

B.E. for 1949-50 Rs. 2,14,48,700

India being a member of the International Civil Aviation Organisation, has to develop her aerodromes to conform to the standards laid down by them. This involves a huge programme of construction which will take a number of years to complete In view of the anti-inflation policy, it is proposed to slow down the programme for the present, and the provision for the next year therefore has been considerably reduced The programme for the next year includes the construction of terminal buildings, residential buildings, W/T and Receiving Stations, Hangars, etc. at the three international airports and also other aerodromes, *e g*, Madras, Allahabad, Ahmedabad, Lucknow, Nagpur, Gaya, Jhursuguda, Banaras, Patna, Bagdogra, Gauhati, Amritsar, Bhubaneswar, Mangalore, Tiruchirapalli, Coimbatore, Jubbulpore, Ajmer, Bezwada, Belgaum, etc.

B. METEOROLOGICAL WORKS.

B E for 1948-49 Rs. 30,600 {Increase Rs. 16,900

B E. for 1949-50 Rs. 47,500

The provision under this head is required for buildings, etc for the Meteorological services. The increase in the provision is due to slight anticipated increase in the number of such works.

C. EQUIPMENT:

B E. for 1948-49 Rs 59,34,000 {Increase Rs 17,69,800

B E. for 1949-50 Rs. 77,03,800

The provision under this head is made up of equipment required for (*a*) The Training School, (*b*) Air Routes and Aerodromes and (*c*) Communications Service. Most of the equipment require replacement. For effecting this, such equipment as is available from the Disposals Directorate is being taken over. It is also proposed to buy from abroad certain important items which are not available with the Disposals Directorate.

ROADS

THE country's road system may be briefly described as follows.

There exist four great trunk roads, stretching diagonally across the country which form the framework with which most of the important subsidiary roads are linked These trunk roads have been in existence for a very long period and are rich in historical association The most famous is the ancient marching route—known as the Grand Trunk Road—which stretches right across the northern part of the country from Delhi to Calcutta, the other three connect Calcutta with Madras, Madras with Bombay and Bombay with Delhi, and the four of them together account for about 5,000 out of the 105,000 miles of metalled roads in the country.

None of these roads however can be considered safe "all weather" trunk roads according to modern standards. The Madras-Calcutta Road in particular is far from being bridged throughout its entire length The other three roads also require a great deal of improvement, and on all of them there are places where floods are liable to cause serious interruption to traffic

As regards the subsidiary roads, the best and most numerous are to be found in South India As one would expect, the worst served regions are Rajasthan and parts of the Punjab on the one hand, and Orissa and West Bengal on the other, the former owing to its aridity and sparse population, and the latter because of the numerous unbridged and mostly unbridgeable waterways which dissect it In addition there are numerous other parts of the country, such as the lower Himalayas, which suffer from a dearth of communications owing to the difficult terrain. Besides surfaced roads, there is a very large mileage of "kutcha" roads amounting to approximately 212,000 miles, some of which are good for motor traffic during the dry weather.

DEVELOPMENT COMMITTEE

On the whole it is reasonable to say that the country's road system, even before the advent of motor transport was altogether insufficient for its needs and it is the increasing realisation of this fact that led to the appointment of the special Road Development Committee in 1927 whose functions were to examine the question of the development of road communications in view of the increasing use of motor transport and suggest ways and means of financing it.

The recommendations put forward by the Committee were carefully considered by the Government of India, whose conclusions upon them were embodied in a resolution and provided that the increase from four to six annas per gallon in the import and excise duties on motor spirit, which had been effected in March 1929, should be maintained for a period of five years in the first instance, and that the additional duty should be allotted as a block grant for expenditure on road development, and credited to a separate Road Development Account, whose unexpended balances should not lapse at the end of the financial year.

Allocation to States.—The original resolution dealing with the disposal of the Road Development Account has since been amended from time to time the resolution at present in force in India having been passed by the Dominion Legislature in November 1947. Its main features may be described as follows: The special tax on petrol introduced in 1929 shall continue to be levied for road development, the proceeds of which, after retaining a reserve of 15 per cent for administration, research and special grants-in-aid, shall be allocated for expenditure in the different States in the ratio of the petrol consumption in the various areas. These sums may be spent on the construction, reconstruction or substantial improvement of roads and bridges including the cost of preparation of road schemes—but not for ordinary road upkeep or maintenance—on interest and amortization charges on road loans sanctioned hitherto by the Government of India and also on administration of State Boards of Communications and establishment connected with the control of motor transport.

With the levy of a surcharge on petrol, the share of the petrol duty available for the Road Fund was increased from 2 annas to 2¼ annas per gallon with effect from October 1, 1931. Upto the end of March 1947, the Fund had received

Rs. 27.03 crores, and after transferring Rs. 5.09 crores to the Reserve, the sum available for distribution to Provinces, Minor Administrations and States was Rs. 21 94 crores or Rs. 21 14 crores excluding Burma's share prior to separation. Of this, the actual distribution upto 31st March 1947 to the Provinces was Rs. 18 5 crores and the Minor Administrations and States Rs 2.6 crores

Feeder Roads.—Upto the introduction of the Road Fund in 1929, all State Roads were financed exclusively from the general revenues of the States and local roads from local revenues supplemented by State grants The object of creating the Road Fund in 1929 was to supplement and not to replace the normal expenditure from State and local revenues, but unfortunately the ten years following the introduction of the Fund were marked by acute financial stringency, with the result that State Governments and local bodies had to make drastic curtailments in the allotments made for roads from their revenue

The effect of these curtailments was to starve the construction and development of feeder roads, as the Road Fund was originally being used exclusively for roads of inter-State and inter-district importance The Government of India, however, subsequently laid down that at least 25 per cent of the State shares in the Road Fund should be used on Feeder Roads and that not more than 25 per cent can be used on roads which compete with the Railways.

WAR IMPROVEMENT

The Second World War invested roads with a new importance Some works of road improvement were taken in hand to facilitate the operation of motor transport during the war years and are being continued Road expenditure has continued to increase but a substantial part of such increase has to be set off against the rise in the cost of works because of the general increase in the cost of materials and labour Owing to petrol rationing, the revenue from road transport did not register any appreciable increase till 1944 but since then it has rapidly resumed its upward trend.

In the year ending 31st March 1947, the total revenue from motor transport was over Rs 20 crores (including duty on aviation spirit) and the total road expenditure was less than Rs 13 crores, as per particulars below —

ROAD TRANSPORT REVENUE, 1946-47
(In lakhs of rupees)

Central Government —	
Duties on motor spirit*	9,35
Import duty on motor vehicles & parts	3,11
Excise duty on tyres	0,75
	13,21
Provincial Governments —	
Provincial taxes and fees on motor vehicles	3,39
Petrol Sales Taxes	3,50
	20,10

ROAD EXPENDITURE

On P W D. Road from Provincial Revenues .—	
Road Improvement	1,52

ROAD MILEAGE

On the administrative side roads except for the small mileage of National Highways described later are a State subject and may be divided into two main classes, State Roads under the Public Works Department and Local Roads in charge of local bodies The extent to which the administration of roads has been delegated to local bodies varies considerably from State to State but in the country as a whole about 80 per cent of the extra-municipal mileage is under the charge of District Boards or District Councils, including a certain mileage, mainly in Madhya Pradesh which is termed "Provincial" but maintained under their agency Within Municipal areas, all roads, other than sections of main roads passing through the towns, are controlled by the respective Municipalities

The grand total of the mileage of extra-Municipal roads maintained by public authorities in the sub-continent including the States was 317,793 on March 31, 1946, of this the total mileage for Governors' Provinces amounted to 231,278, for Centrally administered areas 5,257 and for the States 81,258.

The total mileage of roads with modern surface, either bituminous or cement roads, was 25,854 and the total mileage of waterbound macadam roads was 79,516, making a total mileage of roads which were either modern surfaced or waterbound macadam of 105,370.

The total mileage of lower types of roads was 212,423 These roads are of three types firstly, roads with artificially admixed granular material, gravel, moorum, etc, on natural soil, secondly, roads of natural soil which are motorable in fair weather, and thirdly, roads of natural soil which are unmotorable

The total mileage of roads that are motorable was thus 221,690, out of which 126,374 miles were motorable throughout the year, and the remaining 95,316 miles motorable in fair weather

Out of the 236,535 miles of roads in what was formerly called British India, no less than 186,980 miles of roads were maintained by local bodies, while the P W D and M E S maintained 49,555 miles

The State with the greatest road mileage was Madras with 37,603, out of which, however, only 423 was modern surfaced, while the State with the greatest mileage of modern roads was the N -W F Province with 11,193 miles, out of a total provincial mileage of 14,012

There were, in addition, the roads maintained by Municipalities, the length of which was approximately 18,433 miles, made up of 10,840 miles of metalled roads and 7,593 miles of unmetalled roads.

Considerable interest began to be taken before the end of the war in the need for an extensive programme of road development both for the purpose of assisting the transition from war to peace and for fostering the economic advancement of the country In December 1943 the Chief Engineers of the various States met in Conference at Nagpur and recommended that the country should be ready for a programme involving the improvement of the entire road system and designed to increase the road mileage to 400,000 This was estimated to cost Rs 460 crores If this scheme, known as the Nagpur Plan, is carried through, the sub-continent's total road mileage, on completion of the plan, would be as under : National Highways 18,000, State Highways 72,000, Major District Roads 60,000, Other District Roads 100,000 and village roads 150,000.

FIVE-YEAR PROGRAMME

While the Government of India as well as the State Governments endorsed these recommendations in general terms, there was no general acceptance of a time-limit for the accomplishment of the plan. However five-year programmes for commencement from April 1947 and representing varying proportions of the Nagpur scheme were prepared by the States for their respective areas in 1945-46. These Programmes, exclusive of National Highways (*i e*, main arterial roads of national importance) were estimated to cost Rs 146 89 crores over the five-year period, the following being the allotments (in crores of rupees) proposed by the individual States U P 30 72, (old undivided) Bengal 23 34, Bombay 20 80, Madras 20.77; Bihar 13 60, (old undivided) Punjab 12 49, Madhya Pradesh 7 00, Assam (before detachment of part of Sylhet) 5 32 and Orissa 4 00 The Programmes embraced the construction or improvement of 80,000 miles of roads as under

State & District Roads

Mileage improvement	33,393
Mileage, new construction	17,509

Village Roads.

New construction & Improvement .	30,093

Some of the States, particularly Bombay and Madras, have since revised and reduced their 5-year programmes In Madras, the target now for the 5-year period is an expenditure of Rs 8½ crores and in Bombay Rs 5½ crores

The progress of the development programme has been very slow and has lagged behind schedule owing to various causes such as delay in acquisition of lands, inadequate supplies of road machinery, steel and cement, shortage of technical personnel, railway bottleneck in transport of road materials, etc Although three years of the 5-year period elapsed at the end of March 1950, little visible progress is noticeable except in parts of Uttar Pradesh and in some border areas of Assam and West Bengal

NATIONAL HIGHWAYS

The Central Government, as part of their contribution towards post-war development in the State field and as part of a concerted plan for the co-ordinated development of land transport as a whole, accepted liability for the construction and maintenance of the National Highways outside the States with effect from 1st April 1947 Of the 18,000 miles of National Highways originally delineated in pre-partition India, 10,000 miles are now being maintained by the Central Government in the Indian Union.

The five-year plan for the development of National Highways was estimated to cost Rs 36 crores but owing to subsequent curtailments no more than 50 per cent of it may be actually spent Although financed by the Centre, the actual execution of the work would be carried out through the State P W D's It was expected that as a result of this expenditure, about 5,421 miles of National Highways would be improved and 787 miles of new National Highways constructed in the former Governors' Provinces

The largest new construction of National Highways was to be undertaken in Bihar, the Punjab area and the Bengal area—260 miles, 110 miles and 100 miles respectively. In the former States area it was planned to construct, during the next 15 years, 264 miles of new National Highways and to improve 2,654 miles, but the allocation of the cost between the Central Government and the States had not been settled At the same time, Rs 2 crores had been provisionally earmarked for expenditure by the Central Government on National Highways in the States for the following 5 years

Vehicles :—Civilian motor vehicles on the country's roads in March 1948 numbered 277,733 made up of 24,738 motor cycles, 133,668 cars, 12,316 taxis, 33 689 passenger buses, 65,442 goods lorries and 7,880 miscellaneous vehicles as shown in the statement attached below. There are also 8,500,000 bullock carts in use.

MOTOR VEHICLES IN INDIA, MARCH 1948

In March 1948, India had 235,030 civilian vehicles on the roads, representing an increase of 66,662 vehicles on the 1947 figure, as per details given below.

State	Motor Cycles	Private Cars	Public Service Vehicles				Goods Vehicles		Miscellaneous		Total all Vehicles		Total number of Motor Vehicles

INLAND WATER-WAYS

IN pre-railway days inland navigation was highly developed in the sub-continent But unfortunately it has not progressed in parallel with rail and road development as it has done in other countries like France or Germany or the U S A There are several reasons for this but the most important single reason is the lack of a co-ordinating authority to maintain the water-ways and provide the appropriate navigation facilities There is no question that the provision of navigable conditions on the water-ways is essential if we want to induce industrial and agricultural traffic to use the quickest and cheapest form of transport for heavy goods and bulk cargoes from the interior to the ports, both for internal distribution and export to world markets

If we consider conditions in the old days on the main water-ways of India we find that the Indus was navigable from the sea to Attock, a distance of about 1,000 miles, the Chenab as far as Wazirabad, 800 miles, and the Sutlej as far as Ludhiana, 800 miles. The Ganges was navigable up to Kanpur as late as 50 years ago, and only a hundred years ago the Jumna was navigable as far as Agra All these rivers are unnavigable today Navigation on the Indus and other Punjab rivers is restricted to short distances up and down stream of the Sukkur Barrage and steamers seldom ply on the Ganges up-stream of Patna

There are, of course, parts of the sub-continent where canal navigation is still active In the Madras State for instance, the Godavari Canals, including the Dummagudan Canal, the Kistna Canals, the Buckingham Canal, the Kurnool-Cudappah Canal, the West-Coast Canals and the Vedaranniyam Canals are important high-ways for water-borne traffic The Godavari and Kistna Deltas are indeed the chief means of transport in that region and afford a cheap and ready mode of access to all markets The Buckingham Canal has played an important part in the trade of the country traversed by it, and in particular during the last war when the traffic was heavy it afforded considerable relief to railways On the West Coast the water-ways form the chief means of communication and transport in the interior of the country In Orissa, too, there are some 250 miles of navigable canal in constant use

Then there are the important water-ways of W Bengal. The records of imports and exports into and from Calcutta show the extent to which the largest seaport in India depends upon its water-way communications Dealing first with imports about 25 per cent of the merchandise which flows into Calcutta from the rest of India is water-borne of which no less than 63 per cent comes from Assam As regards exports from Calcutta about 32 per cent is carried by water and of this 72 per cent goes to Assam The total inland water-borne traffic of Calcutta amounts to approximately 45,00,000 tons of which 34 per cent is carried by inland steamers and 66 per cent. by country boats. In 1945, 10,400,000 passengers were carried by steamer service in West Bengal.

Altogether it has been estimated that the amount of boat traffic over Government maintained channels is in the neighbourhood of 250 mln ton-miles per annum. But this figure works out to little more than one per cent of the pre-war goods traffic by railway It is therefore obvious that as matters stand to day inland water transport forms an insignificant proportion of the nation's transport services This becomes doubly clear when we consider the tremendous scope for expansion which still exists for the water-borne traffic of the country The total length of water-ways in India and Pakistan which afford perennial flow amounts to about 25,000 miles, comprising 10,000 miles of rivers and 15,000 miles of canals Of the former, as many as 6,000 miles are navigable to a minimum of about three feet draught and of these again about 5,000 miles are in the north-east of India comprising the States of old Bengal and Assam The canals are mostly for irrigation but is estimated that about 4,000 miles would be suitable for power-driven craft, and the remaining 11,000 could be utilized for boat traffic

THE FUTURE

The question of improving India's natural water-ways is receiving close attention of the local Governments, and the Central Water-ways Irrigation and Navigation Commission is endeavouring to co-ordinate these efforts on a country-wide as well as multi-purpose basis It is deplorable that in some areas navigation has been completely neglected for the overruling benefits of irrigation Possible extension of navigation can only obtain fruition by consideration of the multi-purpose use of our water wealth on a regional basis irrespective of political boundaries

Conservation of water resources on a multi-purpose basis offers the following potential new navigable water-ways, or the resuscitation of old ones —

i West Bengal

a A new canal to connect the coal-fields of Bengal and Bihar with the port of Calcutta

b Resuscitation of the Bhagirathi route to the Ganges

c Resuscitation of the inner boat route connecting Calcutta to East Bengal to shorten the existing route by 50 per cent

d Resuscitation of the river routes to North Bengal as visualized in the Tista Valley Project

ii Assam

Resuscitation of the Dihing, Dihu, Dhansiri and Kalung Rivers in Upper Assam

iii Bihar

a Resuscitation of the Gandak and Kosi series of rivers

b. Extension of navigation on the Sone River for about 150 miles as visualized in the Sone Valley Project.

iv. Uttar Pradesh and Central India

a. Resuscitation of the Gogra River which would afford navigation facilities up to Faizabad as in former days

b. Flood control on the Betwa and Chambal rivers holds promise of ample discharge in the dry season to permit navigation on the Jumna from Etawa to Allahabad, and on to Calcutta *via* the Ganges.

v. Madhya Pradesh

The Narbada and Tapti pass through Madhya Pradesh before they join the Arabian Sea in the Bombay State. Investigations are in progress to assess the value of these rivers for multi purpose development including navigation

vi. Madras

Possible development of the Godavari, Pranhita, Wardha, and Wainganga rivers suggest other main lines of communication and taking into consideration the possible development of the Tapti river it may be found practicable to obtain a transcontinental line by connecting the Wardha and Tapti rivers

vii Orissa

a. The Orissa coastal canal between the Hooghly and Dhamra rivers, together with an extension of the Mahanadi delta system to link with the Madras Canal system would afford inland navigation from Assam to Madras

b. The Mahanadi Project visualizes the provision of navigational facility on the Mahanadi river to Sambalpur about 300 miles from the sea

Mr Otto Popper, ECAFE expert on inland navigation and former member of the Danube Navigation Commission, at the instance of the Government of India, started investigation early this year Mr Popper is to investigate the possibilities of developing traffic on water-ways in the following order of priority The Ganges from Buxar to Allahabad, the Gogra up to Bhuramghat, the Tapti up to Gorakhpur; the Bhadravathi, the Mahanadi and the Orissa coast canal, the Buckingham canal, the Tapti up to Kakrapar and 50 miles above, and prepare comprehensive plans, each plan to indicate the minimum volume of traffic necessary to make it economical He is also to examine the possibilities of improving the capacity of traffic of the existing inland navigation routes with particular reference to efficient methods of operation, suitable types of craft, shore installations and other matters.

PORTS

BOMBAY

THE Port of Bombay is over 75 square miles in extent and is a comparatively modern creation The decision of Government to constitute a Trust to administer the affairs of the Port originated in the apprehension of Government that the interests of trade were being seriously endangered by the monopoly of landing and shipping facilities being acquired by private companies holding large tracts of foreshore land, most notably the Elphinstone Land and Press Company, which was accordingly purchased by Government in the year 1869 and placed in the hands of a public trust.

During the first few years of its existence, however, the Board was faced with increasing deficits owing to competition from private wharf-owners holding the remainder of the foreshore land The rights of these private wharf-owners were also, therefore, acquired by Government and vested in the Board in 1879, since when the Port of Bombay has been progressively developed and expanded

The Board consists of a whole-time Chairman appointed by Government, and twenty-four members, of whom two are elected by the Bombay Chamber of Commerce, eight by the Indian Merchants' Chamber, two by the Bombay Municipality, one by the Millowners' Association, one by the Maharashtra Chamber of Commerce and the remaining ten, which include two representatives of labour, are nominated by Government.

The entire administration of harbour conservancy and lighting, pilotage, docks, bunders, railway and land estates is vested in this Board and is subject to the provisions of the Bombay Port Trust Act, 1879

Harbour.—Bounded on the north and east by the mainland of India and on the west by a narrow peninsula which forms a natural breakwater, the harbour is naturally protected from the violence of the south-west monsoon and provides secure and ample shelter for shipping at all seasons of the year It is about 12 miles long, 4 to 6 miles wide with a minimum of 32 feet at low water in the entrance fairway. Spring rise above datum is 14 feet 1 inch and the range between mean low and mean high water spring tides is 11 feet 6 inches so that the Port is well-endowed by Nature to accommodate deep-draft shipping

The Port and its approaches are well-lighted, being served by the Prongs, Kennery and

Sunk Rock Light Houses, an unattended Floating Light Vessel, the South Entrance and Prongs Reef Light Buoys, and other subsidiary lights, the more important of which are the Dolphin Rock and Tucker Beacon Lights. The first two light-houses are directly connected by wireless with the Pilot Vessels and the Port Signal Station on the tower of Ballard Pier, while the Wireless Beacon installed on Kennery Island enables ships fitted with direction-finding gear to take bearings from its signals when approaching Bombay.

Passenger Facilities.—Trans-oceanic passenger traffic is mostly dealt with at the Ballard Pier Station, Coastal and Harbour Passenger traffic is dealt with at the New Ferry Wharf

The total number of overseas passengers embarking and disembarking at Bombay in 1948-49 exceeded 1,85,000 while the number of passengers carried by the coastal and ferry services was about 2,000,000

Wet Docks.—There are three wet docks, the main features of which are as follows —

Name and date of completion	Width of entrance	Maximum available depth on sill at M H W.N	Water area	Lineal feet quayage	Number of Berths
Prince's Dock (1880) ..	66'-0"	24'-9"	30 acres	6,910	9
Victoria Dock (1888) .	80'-0"	26'-9"	25 ,,	7,805	13
Alexandra Dock (1914) ..	100'-0"	33'-9"	49¼ ,,	13,125*	20 (plus 6 berths for ferry steamers)

* Does not include Ballard Pier.

Movement into and from Alexandra Dock is not restricted, ships being able to pass through an entrance lock 750'-0" by 100'-0" at all states of the tide

The Victoria and Prince's Docks are connected by a communication passage These Docks which were affected by the fires and explosions of April 1944 are in the course of reconstruction and are being provided with modern transit sheds.

The three Docks together have a water area of 104¼ acres and about 6 miles of quayage, extensive open storage and shed and warehouse accommodation for the reception and storage of goods, exists

Dry Docks.—The main features of the two Dry Docks are as follows —

Name of Dry Dock and date of completion	Length	Width	Depth on sill at mean high water neaps	Remarks
Hughes Dry Dock (1914).	1000'-0"	100'-0"	32'-9"	Divisible into two compartments so that 2 ships can be accommodated at a time.
Merewether Dry Dock (1891)	525'-0"	65'-6"	24'-9"	...

Bunders and Timber Ponds—Beyond the Docks are the "bunders" or open wharves and basins, where coasting and country craft traffic and overside cargo from the Docks and stream are handled These bunders have an aggregate quayage of nearly 5 miles and are equipped with cranes, sheds and other facilities for loading, unloading and storing cargo, but the labour for handling cargo at the bunders is not provided by the Port Trust and so the wharfage charges are much lower than in the Docks

The bunder traffic is an important item in the trade of the Port, over 13¼ lakhs tons or roughly one-fifth of the total tonnage of the Port being handled annually over the bunder wharves

Adjoining the bunders are the Timber Ponds covering an area of over 60 acres, where every facility for storage and handling of timber is provided.

Bulk Oil Depots.—There are three groups of bulk oil installations, one each for liquid fuel and lubricating oil, kerosene oil, and petrol, all on land, aggregating 83 acres in extent, leased by the Port Trust.

Ample storage space is available within the Port area for grain (80 acres), cotton (127 acres, 1,000,000 bales), and manganese ore (30 acres, 300,000 tons) Large areas have also been reserved for the landing and storage of other commodities such as Coal, Bricks and Tiles, Building Stones and Iron

PORT TRUST RAILWAY

The Port maintains its own railway system which handles nearly 50 per cent of the railborne goods traffic of Bombay Its yearly traffic to and from the trunk Railways amounts to over 2,000,000 tons, and its local station-to-station traffic is approximately the same in volume. The principal commodities carried are cotton, grain and seeds, oil cake, manganese ore, sugar, kerosene and other bulk oils, coal, charcoal and china clay.

Though only 7¼ miles in actual length, it comprises over 130 miles of main lines and sidings all directly linked with the inter-railway exchange yard at Wadala, the various storage depots and the Docks and Wharves.

REVENUE AND EXPENDITURE FOR THE YEAR 1948-49

Deputy Chief Engineer, P E Golvala.

Docks Manager, F Seymour-Williams

Deputy Docks Managers, G K Dukes, V Vaz, Shaik A. K. M. Jafar, V. A Kashikar, M H. Sayani

Railway Manager, H A Gaydon

Deputy Manager, Operation, P M Boyce

Deputy Manager, Commercial, M E A Kizilbash

Deputy Conservator, R C Vint

Harbour Master, H. W L T. Davies

Manager, Land and Bunders Department, H. G Doshi

Deputy Manager, E M. Bhacka

Controller of Stores, R C Master

Deputy Controller of Stores, P V Thadani

Chief Medical Officer, Dr N V Nene

Health Officer, Dr A J. Mhatre.

Chief Labour Officer, Batuk H Mehta.

Legal Adviser, S D Nariman

CALCUTTA

The Port of Calcutta is situated on the left bank of the River Hooghly which is formed by the uniting of the three offtakes from the parent River Ganges The port is about 80 miles from the mouth of the river and 126 miles from the Western Channel Light Vessel at Sandheads The Port is administered by a Port Commission with jurisdiction under the Calcutta Port Act from Budge Budge to Konnagar and under the Indian Ports Act from Sandheads to Kalna, about 56 miles above Calcutta

Calcutta is both a receiving and distributing centre for Assam and the northern and central parts of India It is fed by products brought by a network of railways as well as by the water-borne traffic of the River Ganges. The chief exports are Coal, Tea, Jute, Gunnies, Shellac, Linseed, Manganese Ore, Pig Iron, Hides and Mica The principal imports are Salt, food grains, machinery, provisions, hardware, spirits and petroleum.

The total tonnage of sea-borne traffic passing through the port during the year 1948-49 was 8,163,067 tons as compared with 6,949,528 tons

during 1947-48 The total tonnage of exports during 1948-49 was 4,898,746 tons and the total tonnage of imports during the same year was 3,264,321 tons. The income of the Port during the financial year 1948-49 was Rs 7,57,66,985

The River Hooghly is subject to strong tides and sudden alterations in the depths on the bars and pilotage is compulsory Pilots board vessels at the Sandheads from the Pilot Brigs which are fitted with W/T and D F Gear The largest vessel to enter the Port was 16,736 tons gross tonnage but speaking generally the ideal ship for the Port is a ship of under 550 feet in length, broad in beam and loading to a maximum of about 26 feet

The Commissioners maintain a permanent River Survey Service and in addition to the daily publication of charts, maintain Tidal Semaphores an Track Boards to indicate the latest depths available The bars are sounded to the nearest 3 inches Local rules governing pilotage of the river are subject to change to meet alterations in the channel and to avoid interruption in the work of the Dredgers

Navigation for small craft is not difficult as the Channel is well marked but ignorance of the local rules may cause grave danger to sea-going vessels using the Channel Arrangements have been made by which small naval craft navigate from Sandheads to Diamond Harbour without a Pilot but above that point all ships over 100 tons must have pilots Certain shallow draft craft are piloted by Inland Masters who have certificates for the River Hooghly

The maximum and minimum depths available on the principal bars below datum during 1949 were —

Eden Channel	16′-0″	13′-0″
Auckland	18′-6″	16′-6″
Balari	14′-6″	12′-0″
Eastern Gut	24′-6″	0′-3″
Royapur	17′-0″	13′-3″
Moyapur	16′-0″	12′-3″
Poojali	24′-3″	19′-9″
Pir Serang	27′-0″	15′-0″
Munikhali	32′-0″	16′-0″
Sankrail	31′-0″	16′-3″
Panchpara	23′-6″	18′-3″

Berths and Anchorages.—Anchorages are available at Saugor Roads, Haldia, Kalpi, Diamond Harbour, Ulubaria and Garden Reach of which Haldia, Ulubaria and Garden Reach are available only for ships on passage to and from the Port or in emergency

In the port ships lie to moorings when in the stream or alongside jetties with cables forward and aft The largest man-of-war so far accepted in the Port has been 10,000 tons cruiser class and one berth is available for this class of ship.

Accommodation.—KIDDERPORE DOCKS. These consist of Nos 1 and 2 Docks and Turning Basin There is a lock entrance 580 feet long by 80 feet wide from the river which gives access to the Dock system. Dock No 1 is 2,700 feet in length by 600 feet wide, with a depth of 30 feet of water and has eleven berths serving single-storey cargo sheds. Dock No. 2 has a length of 4,500 feet by 400 feet and also provides a depth of 30 feet of water. It has eight general berths serving single and double storeyed sheds and six coal berths including two mechanical loading berths. Another of the coal berths is now being fitted with a mechanical coal loading plant

KING GEORGE'S DOCK This Dock comprises a lock entrance 700 feet long by 90 feet wide, five import berths, one export berth and a berth for the discharge of non-dangerous petroleum in bulk which can also be used as a laying up berth. Three of the import berths are served by three storeyed sheds, one by a two-storeyed shed and the fifth by a single-storeyed shed The export berth is served by a single-storeyed shed Each berth is 600 feet long and can accommodate vessels drawing up to 33 feet of water One laying up berth 500 feet long with a depth of water of 17 feet is provided. Three lighter berths, total length 900 feet with a depth of water of 8 feet, are situated on the south bank and these berths are complete and in use. One heavy lift berth for Lighters, 400 feet long with a depth of water of 7 feet is close by.

Dry Docks.—Five dry docks, owned by the Port Commissioners, are available for the use of shipping, three in Kidderpore Docks and two in King George's Dock. In the Kidderpore Dry Docks, one 4-ton crane is located between Nos 1 and 2 Dry Docks Breakdown cranes of 15 tons capacity can be brought close to No 2 Dry Dock In the King George's Dry Docks four 3-ton cranes are available two on each side of the dry docks

DIMENSIONS OF DRY DOCKS

	Width of entrance at coping	Width at sill level	Width across blocks	Length overall	Length on blocks	Depth over blocks at 21 feet in Dock
K P Docks						
Dry Dock No I	69′-8″	66′-11″	67′ 0″	547′ 0′	507′-0″	23′-0″
Dry Dock No II	69′ 8″	67′– 6″	66′–2″	497′–6′	463′–0″	24′-0″
Dry Dock No III	60′–0″	57′– 3″	50′–2″	350′–0′	321′–0″	20′–6
K G Dock						
*Dry Dock No I	87′–9″	80′– 0″	90′–9″	581′–3′	500′–0″	32′–0″
*Dry Dock No II	87′–9″	80′– 0″	90′–9″	596′–1″	500′–0″	32′–0″

*These docks are arranged in tandem and can be used as one dock

Jetties—The Garden Reach Jetties consist of a coaling jetty for ships up to 460 feet in length and four jetties for ships up to 600 feet, the transit sheds are double storey Calcutta Jetties are situated on the riverside below Howrah Bridge There are nine jetties with a total length of 4,735 feet, but only five of them are available for ocean-going steamers Three, of the berths have two-storeyed transit sheds and the remaining two single-storeyed transit sheds

Wharves.—Petroleum Wharves at Budge are situated some 14 miles below the entrances to the docks There are seven pontoon jetties for ocean-going vessels and one for flats and barges at which non-dangerous petroleum and its products are discharged Of the seven pontoon jetties, one is reserved for the discharge of dangerous petroleum

The storage installations which have a total capacity of over 50,000,000 gallons are owned by various companies who rent sites on land owned by the Port Commissioners

Warehouses.—The Commissioners provide extensive warehouse accommodation consisting of two Tea Warehouses having a storage area of 304,000 sq ft, a grain and seeds depot at Kantapukar comprising 37 sheds with a storage area of about 1,053,168 sq ft, A and B Sheds at Kidderpore, and the Fairlie, Clive, Canning and Strand Warehouses situated close to the Calcutta Jetties with a total floor area of about 292,200 sq ft

Coal.—There are at present six coaling berths at Kidderpore Dock No 2 and one at Garden Reach Jetty Two of the Dock berths are fitted with mechanical coal loading gear, a third berth is now being so fitted

Capacity of Coal Dumps in the Port is as follows —

Kidderpore Docks . .	20,000 tons
Garden Reach Jetty . .	30,000 tons
Sonai Depot .. .	100,000 tons
Total .	150,000 tons

Water Supply.—At Kidderpore Docks there is a hydraulic system encircling Nos 1 and 2 Main Docks, all Dry Docks, the 60 ft Lock repairing basin and the Tidal Basin The pressure is 750 lbs per sq inch. Between Nos 1 and 2 Dry Docks there is a supply of dock water for cooling and testing at about 15 tons per hour.

A supply of water for fire fighting is available to all 3 dry docks at a rate of 85 tons per hour at a pressure of 100 lbs per sq inch Unfiltered water for cooling at Nos 1 and 2 Dry Docks at the rate of 100 tons per hour to each dock is available.

At King George's Dock a hydraulic main at 800 lbs per sq inch is available at all berths and alongside the downstream side of both dry docks An additional supply is also available of 100 tons per hour at each dry dock.

Drinking water is supplied in the stream and in Kidderpore Docks, King George's Dock and at the Jetties in the river The responsibility of supplying filtered water rests with the Calcutta Corporation under the Municipal Act Direct supplies from quays and jetties where hydrants are available are controlled by the Port Commissioners on behalf of the Calcutta Corporation. These supplies are obtained partly from Corporation mains and partly from tube wells in the Dock Area and operated by the Commissioners

Overall Capacity of Port.—Calcutta with the existing facilities has handled a sea-borne traffic of nearly 11 million tons a year without congestion or delay

The total number of cargo boats licensed in the Port is 6 968 of which about 2,106 are steel lighters with a carrying capacity of about 130,825 tons

The Port Trust Railway.—Communication between the various points in the Docks and Jetties including all the Commissioners' warehouses is maintained by the Commissioners' Railway which has 191 77 miles of permanent way and connects with the two main railway systems serving Calcutta Goods can therefore be railed from any point on the Commissioners' premises to any part of India

Post-War Development Schemes.—The Port Commissioners have extensive post-war development schemes many of which have already made satisfactory progress The following are the more important schemes —

1 Improvement to port approaches — Research work is being carried out at the Indian Waterways Research Station, Poona and a model has been constructed there with a view to finding out whether it is possible to deepen the navigable channel by river training works. In case of this not proving feasible, the Commissioners have an alternate plan of cutting a ship canal from Diamond Harbour to the head of the Dock system which will short-circuit the use of the river itself 2 Extension of King George's Dock 3 Electrification of Quay cranes in Kidderpore Docks 4 Construction of new marshalling yards 5 Construction of new roads and land reclamation in Docks estate. 6. Construction of modern grain warehouses 7 Provision of a mechanical coal loading plant 8 Installation of a heavy lift crane capable of lifting upto 200 tons. 9 Purchase of new dredgers and other craft and locomotives 10 Housing for staff.

Commissioners for the Port of Calcutta.—N. M. Ayyar, *Chairman*; S L. Dass, *Deputy Chairman*, A C Banerjee, B sc (Econ), Lond, P Mukherjee, K K Birla; A L. Cameron, S C Dutta; Comdr. (E) T. B Bose, RIN; K D Jalan, P G Knott; J. K. Mitter, P C Bahl, S. K. Mukherjee, B L. (Attorney-at-Law), W. A Bell, Dr (Mrs.) Maitreyee Bose, MB, MD (Munich); Brig. P H. Denyer, OBE, MM; Dr. S. B Dutt, MA Ph D. (Econ), London, Bar-at-Law,

K, P. Goenka ; A D Khan, ICS , Dr N N Law, MA., BL, PRS, PhD ; N Roy, R. K. Vaish, MA., M L Shah, B. B. Varma.

Principal Officers.—*Secretary* —P. C. Mitter, *Traffic Manager* —K Mitter (on deputation), J. M Majumdar (offg), *Chief Accountant* — A J Rose, ACRA , *Chief Engineer* —R M H Garvie, MICE ; *Controller of Stores* —N R Iyer, GDA (offg), *Chief Mechanical Engineer* — N. M Irvine, B.SC , M Mech E, *Deputy Conservator* —Lt E L Pawsey, Comdr (RN Retd); *Deputy Conservator* —Comdr B S Davies, RN (Retd), *Harbour Master* —W C Houston, *Port Pilotage Officer* —G B Hedley, *Medical Officer* —Dr K Bhaduri, MB , *Consulting Engineers and London Agents* — Messrs. Rendel Palmer & Tritton

COCHIN

The Port of Cochin, one of the five major ports in India is a natural harbour lying on the direct route to Australia and the Far East from Europe It is open for deep water traffic in the worst monsoons and provides a splendid anchorage at all times of the year Any ship passing through the Suez Canal can enter the port even in the roughest weather It has a strategic importance in South-East Asia It serves a vast hinterland of industrial planting areas comprising the United State of Travancore and Cochin and the southern districts of the Madras State Foreign and coastal steamer lines touch the Port regularly and Cochin is the passenger port for the United Kingdom, etc , in South India

The Port consists of an extensive area of sheltered backwaters behind an opening, 400 yards wide Its location is lat 9° 58″ and long 76° 14″ E

A broad gauge railway connects the Port through the United State of Travancore and Cochin and S I Rlys to all the main cities in India Willingdon Island aerodrome situated in the port area is a place of halt for Air India Service between Madras and Trivandrum

The development of the harbour involved the cutting of a passage through the bar which blocked the entrance from the sea to an extensive backwater The first cut through the bar of a wide and deep channel was made in 1928. The entrance channel is 450 ft wide and about 3 miles long, buoyed on both sides according to regulations The activities of the port are mainly centred in Willingdon Island which has been reclaimed from the back-waters by dredged soil from the inner channels. Since 1930 the harbour has been in regular use A powerful tug has been provided for the convenience of shipping A well equipped hotel run by Spencer & Co has been constructed by the Port to provide accommodation for passengers and other visitors to the Port.

Inside the harbour there are fourteen fore and aft berths, one swinging berth, one passenger berth and four wharf berths 12 electric level luffing travelling cranes have been provided at the wharf berths, capable of lifting weights upto 3 and 10 tons A floating crane for lifts upto 30 tons is also available Sailing craft are moored with their own gear in a separate anchorage One ware-house and eight sheds in Willingdon Island are available for storage of goods There are three sheds at the main wharf for the handling of goods in transit Vessels are brought into or taken out of harbour at practically any state of tide, day or night There is a boat wharf with one 5-ton and three 2-ton hand cranes There is a dry dock 240 ft long and 44 ft wide, suitable for vessels of less than 14½ ft draft but this is mainly intended for docking craft belonging to the Harbour Authority and a fitting out wharf 300 ft long with 11 ft deep, close to Dry Dock Bunker coal, diesel and fuel oil are available Fresh water from tank barge is supplied at the rate of Rs 2 per ton during day, night or holiday, with a minimum of Rs 40 per vessel, per day, delivered on board.

The principal imports are foodgrains, mineral oils, coal, piece goods, hardware, metals and provisions.

The principal exports are coir and coir products, tea, rubber, cashew kernels, ginger, pepper and spices.

STATISTICS SHOWING THE GROWTH OF THE PORT FROM 1944-45 TO 1948-49.

Year	Imports	Exports	Total
	Tons	Tons	Tons
1944–45	226,118	71,257	297,375
1945–46	380,564	111,991	492,555
1946-47	970,312 (Dead weight)	296,026 (Dead weight)	1,266,338 (Dead weight)
1947-48	850,995	316,315	1,167,310
1948–49	991,353	250,932	1,242,285

The affairs of the Port are under the administrative control of the Ministry of Transport of the Government of India and under the immediate control of the Administrative Officer who is appointed by the Government of India He is assisted by an Advisory Committee consisting of the representatives of the Government of India, the Government of the United State of Travancore and Cochin, the South Indian Railway and the local Chambers of Commerce and Municipalities

Administrative Officer —G Venkateswara Ayyar, ICS , *Chief Engineer* —V Srinivasan, *Port Officer* —H G Fletcher, JP , *Harbour Master* —B Brook , *Traffic Manager* —Topen Bhose, BA , *Chief Accountant* —A N Ayyaswami, MA , *Port Health Officer* —Dr A N Sinha, MBBS, DPH , *Mechanical Superintendent* —R Bazely , *Secretary and Statistical Officer* —J Cyril Raj, MA

MADRAS

The Madras Harbour is an artificial one formed by two arms projecting from a low, sandy coast There is a lighter fleet consisting of 55 crafts which include licensed and unlicensed crafts owned by firms and others Two tugs are available for assisting vessels and one for towing the lighter fleet Loading and discharging by means of lighters are effected on a frontage of about 5/8 of a mile partly ferro concrete wharves and partly at the west quay equipped with steam, electric and hydraulic cranes There are about 8 2 acres of transit shedding alongside the quays for the accommodation of all types of cargo and also 10 64 acres of warehouses for lease to exporters or importers There is a slipway for the repairs of small craft up to 965 tons Ships get their water alongside the quays or from water boats Large passenger vessels habitually use the quays which have direct railway connection with the neighbouring railways Coal for bunkers and oil fuel are always available.

The affairs of the Port are administered by a Board of Trustees which function under the Madras Port Trust Act

The Port is about 3/5 mile square (excluding boat basin, etc.) with an area of approximately 200 acres

There is accommodation for 18 vessels inside the harbour, 9 at Moorings and 9 at Quays The depth at moorings ranges from 28 ft to 31 ft 6″ and at quays from 26 ft to 30 ft Pilotage is compulsory There are no navigational difficulties and the Port is approached direct from the open sea

The Income and Expenditure for the year 1948-49 were Rs 113,05,609 and Rs 75,88,121 respectively.

The chief imports are coal and coke, food grains, mineral oils, railway materials, metals, timber, building materials, cement, etc , motor cars, provisions, cycles and parts and accessories of cars and trucks, beer and wines, paper and stationery, tanning substances, including wattle bark, glass and glass ware, hardware and chemical manures. Seeds and nuts, hides and skins, vegetables and provisions, cotton, oil cake, bone meal, piece goods, turmeric, ores and tobacco are the principal exports.

STATISTICS SHOWING THE GROWTH OF THE PORT FROM 1939-40 TO 1948-49

Years	Imports	Exports	Total
	Tons	Tons	Tons
1939–40	895,651	391,955	1,287,606
1940–41	625,109	289,126	914,235
1941–42	573,296	297,372	870,668
1942–43	337,188	158,591	495,779
1943–44	696,007	374,079	1,070,086
1944–45	2,053,006	511,461	2,564,467
1945–46	1,833,496	658,332	2,491,828
1946–47	1,400,229	336,674	1,736,903
1947–48	1,382,795	278,369	1,661,164
1948–49	1,664,881	240,011	1,904,892

Trustees of The Port : *Appointed by Government* —G P Alexander, CIE, MInst CE, *Chairman.*—W G. W Reid, General Manager. M & S M Railway, K R Ramanujam, General Manager, S I Railway, E S Krishnamoorthy, Collector of Customs, M T Raju, ICS, Director of Industries and Commerce, C Narasimham, MA, BL, Commissioner, Corporation of Madras, P N Rabady, Principal Officer, Mercantile Marine Department, Madras, Brigadier Gurbachan Singh, Sub-Area Commander, Madras, S Guruswami and G Rajamannar Chetti, MLA, Representatives of Labour

Elected by Commercial Bodies —(Representing the Corporation of Madras) N Jeevarathnam, (Representing Madras Chamber of Commerce, Madras) J R Galloway, T G Armstrong, (Representing Southern India Chamber of Commerce) P Maruthai, T S Kachapikesa Mudaliar, BA, R K Murthi, K S G Haja Shareeff, T S Sundaram, M A Chidambaram Chettiar, (Representing the Andhra Chamber of Commerce) T V Ethirajulu Chetty, BA, Maddi Sundarsanam, MLC

VIZAGAPATAM

Vizagapatam Harbour was created in order to supply an outlet for a large area of fertile country adjacent to the east coast of India, with considerable mineral resources and no alternative access to the outside world The scheme was first formulated many years ago in the days of the East India Company, but was not actually taken up before 1925 In 1933, the harbour was first opened for sea-going vessels, and it now, provides the following facilities —

An Entrance Channel, sheltered by hills, with a minimum depth sufficient to admit vessels drawing 28½ feet of water on any day of the year, gives access to a completely sheltered inside harbour, provided with three quay berths, each 500 feet long, and equipped with fully portal electric cranes, transit sheds, and railway lines, both behind and on the quay-side of the transit sheds Two of these berths are specially equipped for the rapid shipment of manganese ore in bulk, one of them is also equipped as an auxiliary coal bunkering berth In addition, a special coal bunkering jetty berth is provided, at which coal is carried on board ships direct over adjustable gangways The construction of permanent berths for coal is in hand Four mooring berths are also provided, at which vessels are served by a fleet of lighters operated by the port A timber jetty berth for bunkering fuel oil has been provided. Behind this, oil storage tanks are installed.

Storage Sheds, for lease to import and export merchants, are provided with water frontage and rail service in the rear. From these sheds, export cargo can be carried directly alongside vessels by means of lighters.

The hauling equipment of the Harbour consists of four tugs of 1,000, 600, 450 and 400 H.P.

A graving dock with an entrance 60 feet 6 inches wide is provided, but in view of the fact that its length is at present limited to 366 feet, it is used principally for docking the craft of the Port, although it is also used by a certain number of small size vessels of other ownerships. The construction of another Dry Dock to take ships upto 600 ft. in length is being contemplated The port has a floating crane and can deal with lifts upto 50 ton capacity.

There is a special railway connection, linking it with Madhya Pradesh Additional railway lines for development of the hinterland are being surveyed.

INCOME AND EXPENDITURE OF THE PORT FOR THE YEAR 1948-49

	Receipts Rs	Expenditure Rs
Port Fund	41,13,128-4- 7	41,68,047-2-9
Pilotage Fund	1,16,767-1-10	70,939-6-1

STATISTICS SHOWING THE GROWTH OF THE PORT FROM 1945-46 TO 1948-49

Year	Imports	Exports	Total
	Tons	Tons	Tons
1945–46	57,987	410,842	468,829
1946–47	99,909	538,675	638,584
1947–48	170 447	545,994	716,441
1948–49	140,463	546,859	687,322

The Port is administered by the Government of India, Railway Department (Railway Board), through the Bengal Nagpur Railway

Principal Officers.—*Port Conservator*—P C Bahl, General Manager, B N. Railway, Calcutta, *Port Administrative Officer & Port Engineer*—S Nanjundiah, Vizagapatam, *Deputy Port Conservator*—E H Glassup, Vizagapatam, *Superintendent, Traffic.*—J K Ghose, Vizagapatam, *Chief Accountant.*—P. T Mathew, Vizagapatam

Other Ports

ALLEPPEY

Alleppey, the second port and commercial centre in the Union of Travancore and Cochin, is situated about 50 miles north of Quilon, and 35 miles south of Cochin Alleppey is an open port There forms a mud bank occasionally off and near the pier which affords smooth water for shipping operations A canal connects the port with the interior backwaters. Its warehouses are a convenient depot for the storage and disposal of all fresh produce, and it possesses a roadstead affording safe anchorage during the greater part of the year.

Port dues are 9 pies per registered ton.

The chief exports are copra, cocoanuts, coir fibre and matting, cardamoms, ginger and pepper.

Principal Port Officer.—M Raja Raja Varma, B A.

BALASORE

Balasore, situated on the right bank of the Burabalang river and headquarters of the district of that name, was the only port of which Orissa could boast until the opening up of the country after the great famine of 1866. It was frequented at that time by vessels with cargoes of rice from Madras and with cowries, then largely used for currency, from the Laccadives and Maldives. The port is of historical interest as being one of the earliest European Settlements in India, factories having been established here in the 17th century by English, Dutch, French, Danish and Portuguese Merchants.

Balasore as a port is practically defunct. Foreign ships have ceased to visit since 1904 and coastal ships since 1910. An occasional country craft of negligible tonnage enters during the cold weather season for paddy, but beyond that there is no sea-borne trade either import or export.

BHAVNAGAR

Bhavnagar city, the administrative headquarters of Gohilwad division of the Union of Saurashtra, lies near the head of the Gulf of Cambay in Lat 21° 47′ N, Long. 72° 08′E

The port facilities comprise a deep water anchorage at Ghogo, a concrete jetty capable of berthing two ocean-going vessels and complete with modern crane and rail facilities five miles north-west of the anchorage, and a fully equipped steel jetty for small coasting vessels 8 miles further up the Bhavnagar creek from concrete jetty

There is ample warehouse accommodation and direct rail connection between the jetties and the metre gauge system of India

BIMLIPATAM

Bimlipatam is 22 miles north-west of Waltair It is connected by good roads with Vizianagram and Vizagapatam The harbour is an open roadstead and ships lie about a mile off the shore and loading and unloading is effected by lighters There are considerable exports from here of jute, hemp, myrobalans, niger seeds, gingelly seeds and groundnut kernels to foreign ports

Coastwise imports and exports are of little importance except import of jute from Chittagong

Foreign and coasting steamers call at this port since December 1947 Vessels anchor from 6 to 8 fathoms abreast the river Gousthani during the south-west monsoon, and a little further to north in the north-east monsoon (Bearings are different) Bottom is sandy and rocky

Dues are to be paid according to schedule, overtime fees, ground rent, and boat license fees are also charged.

CALICUT

Calicut, the capital of the Malabar District, is some 42 miles south of Tellicherry and about 90 miles north of Cochin It is 413 miles by rail from Madras The port is practically closed during the south-west monsoon from the end of May until the latter half of August. The sea is very shallow and steamers anchor about three miles from the shore, connection being maintained by lighters and small boats. Sailing vessels of 150 tons and below lie about 800 yards off the shore

Beypore, seven miles to the south of the mouth of the river of that name, is regarded as a wharf of Calicut Port It has a number of wharves along the river bank and native craft of 150 tons burthen are able to anchor half a mile from the mouth.

The principal exports are coir, coir fibre, copra, coffee, tea, pepper, ginger, rubber, groundnut, raw cotton and fish-manure The foreign import trade, consists chiefly of general merchandise.

CHANDBALI

Chandbali situated on the left bank of the Baitarani River, is a port of some importance on the Orissa Coast It has a flourishing coasting trade with Calcutta but there is no direct foreign trade as in former days. The exports consist mainly of rice and the imports are cotton twist, piecegoods, kerosene oil, salt and gunny bags.

CUDDALORE

Cuddalore is situated about 15 miles south of Pondicherry Steamers anchor about a mile off-shore, and the harbour wharves are situated on the western bank of the Uppanar Backwater and have been provided with a quay wall to facilitate the loading and unloading of cargo boats therefrom It is connected to the main line by railway

The export trade consists principally of groundnut kernels, oils and coloured piecegoods in small quantities The coastal trade consists mainly of grain, pulse and coal. The foreign import trade is chiefly in boiled betelnuts from the Malay Straits

CUTCH MANDVI

The harbour situated in the Gulf of Kutch, is protected against westerly winds by the Albert Edward Breakwater, 1,850 feet long, and craft of from 9 to 10 feet draught can enter the harbour at High Water Neaps. There is also a pier and pitched slope where country craft can secure alongside and work cargo

The Port is unfortunately exposed to the full blast of the south-west monsoon gales, and is closed for maritime traffic from about the end of April until the month of September.

During the fairweather season, coastal steamers of the B I S N Coy and the B S N. Co call regularly and anchor about 1½ miles south of the port, passengers and cargo being discharged into small craft for conveyance between steamers and shore

Cutch Mandvi Lighthouse A light is exhibited at an elevation of 115 feet from a white masonry tower 56 feet in height situated on the south-west bastion of Mandvi Fort A light is also exhibited at an elevation of 39 feet from the end of the breakwater

The trade of the Port amounts to Rs. 135 Lakhs annually Recent commercial undertakings include a Match Factory, Oil Mills and Metal Works.

CUTTACK

Cuttack, is situated 253 miles from Calcutta at the apex of a triangle formed by the Mahanadi and Katjuri rivers It is on the main line of railway running between Madras and Calcutta and is connected by canal with Chandbali between which a small inland steamer trade exists and which links Cuttack with Calcutta. A short distance up the coast from Cuttack lies the port of False Point which has been closed since 1924, as the seaborne trade had entirely disappeared

The decline of the small ports is said to be due to a variety of reasons and usually the chief reason quoted is that the ports have silted up but this is not actually the case. The ports have declined for two main reasons namely the coastal railway has automatically cut out the sea trade since it cannot assist it and secondly that larger deep draft steamers have taken the place of the smaller coasting steamers and sailing ships of 30 years ago The long and deeper draft steamers cannot enter such small ports as Balasore, Chandbali and False Point and hence the trade which at one time found its way by sea has now been caught by the railway and carried to the larger ports like Calcutta from where it is distributed elsewhere.

DHANUSHKODI

Dhanushkodi is the terminus of the South Indian Railway on the south east extremity of the Island of Rameswaram at the junction of Palk Strait with the Gulf of Mannar and connected with Talaimannar in Ceylon 21 miles distant by steamer service, the journey being made in about two hours. The port is equipped with a pier belonging to the S I. Rly. Cargo is loaded direct from the railway trucks on the pier into steamer hatches.

The Port is an open roadstead. The ferry steamers of the S I Rly. are moored at their own pier No other steamers call here

There are no channels or anchorages at the Port

Port dues are collected on the net tonnage of vessels calling under the Indian Ports Act XV of 1908

Average annual receipts of the Port are Rs 1,200 and charges Rs 3,000

The chief exports are fish (dry and salted), cotton piecegoods, Chillies, Onions and Turmeric and imports—arecanuts, and hides and skins.

IMPORTS & EXPORTS DURING 1948-49

	Tons
Imports	6,421
Export	19,514

The Port Conservator, Dhanushkodi, is the principal Officer of administration of the Port.

DWARKA

Just below Port Okha is Dwarka, a famous place of pilgrimage After the development of Port Okha, Dwarka has lost its importance as a port. Consequently the ocean-going steamers between Bombay and Karachi at present generally do not touch at Dwarka but at Port Okha. Steamers lie off at some distance from the shore and the traffic is chiefly local.

GOPALPUR

Gopalpur in the Ganjam District is situated ten miles from Berhampur on the B N Rly It lies between Lat 19°13'N Long 84°52'E ; R of T. Sp. 6½ ft., Neap 4½ ft

At present there is no shipping and trade at the Port. But usually the chief imports are provisions, grain, tobacco, corriander seeds, soap nuts, empty bottles, potatoes, ginger, matches, cocoanut oil, and the exports are paddy, pigs, rice, gingelly seeds, dry leaves, horse grain, prawns, skins, and chuva oil There is passenger trade with Burma

The port is an open roadstead Cargoes are landed and shipped on beach Anchorage in 6 to 7 fathoms, sand and mud

Port dues: Foreign vessels 3 annas per ton per voyage , coasting vessels, 1 anna per ton once in 30 days.

Port Conservator . A. D Bhavanasi.

KAKINADA

Kakinada, is situated on the Kakinada Bay, just north of the Godavari River, about 80 miles south of Vizagapatam and 270 miles north of Madras In spite of several disabilities, it ranks fifth in importance among the ports of the Madras State Large steamers anchor about 6 to 7 miles from the shore and service is maintained with lighters which land cargo at the numerous small wharves and jetties constructed on the banks of the Kakinada Canal

The trade of the port like other open roadstead ports was affected by the war Foreign export trade of tobacco and palmyra fibre has resumed, likewise coastal trade comprising of turmeric, pulses, castor and groundnut oil

Import trade at present is confined to occasional consignments of Burma Teak

KANDLA

Kandla Creek forms a natural harbour with good anchorage and sufficient depth of water for large ocean-going cargo steamers The Port was opened for traffic in 1931 and has been recognised in Admiralty Chart No. 43 in the Gulf of Kutch.

The port area consists of 13,70,000 square feet of reclaimed land and has immense space for extension of reclamation

The port has 6 miles of anchorage with depth of water at L W M O S T of over 36 feet and with ample swinging space. The reinforced concrete pier can berth 2 ships at a time Steamers over 300 feet in length are moored along the outside of the pier There is also a timber jetty which can accommodate vessels upto 800 tons This jetty is also used for embarkation and disembarkation of passengers at any state of tide.

All over the Kutch coast there are well equipped lighthouses which are efficiently maintained The Channel leading from the Gulf of Kutch into the Port is well defined by Buoys and Beacons erected in the foreshore Pilots meet steamers at the outer Tuna Buoy There are sufficient facilities for warehousing and more are being provided The Port is connected by telephone and telegraph and rail with the *hinterland* There is a dispensary and a dharamsala

The Port is to be taken over by the Government of India, Ministry of Transport on the 1st April 1950 Port charges, port dues and bye-laws are being revised The Government of India are at present pursuing the scheme for the development of the Kandla Port, and its hinterland At present surveys and investigations are in progress as also the work of connecting Kandla with Deesa by a M G Railway line.

The figures of imports and exports from the Kandla Port during recent years have been as follows :—

Year	Imports in tons.	Exports in tons.
1947–48	33,498	51,262
1948–49 ..	39,162	65,857
1949–Nov '49 ..	37,204	60,497

The income and expenditure of the Kandla Port has been as follows —

Year	Income Rs	Expenditure Rs
1947–48 .	61,576	3,93,416
1948–49 .	1,54,832	7,34,279
1949–to Jan 1950	1,88,352	1,52,682

MANGALORE

To the south of Goa lies the Madras district of South Kanara whose district headquarters is Mangalore, open to the coasting trade of Karwar, Honavar and Bhatkal Mangalore is situated at the junction of the Gorpur & Netravati Rivers, about 170 miles south of Mormugao It is a tidal port served chiefly by backwater communication with the hinterland It is the north-western terminus of the South Indian Railway.

It is an open roadstead, steamers anchor about 2 miles off the shore in 5 to 6 fathoms of water. Native craft of small draft enter the backwater at all states of the tides and anchor in the inner anchorage. Vessels of low tonnage berth at the wharves Vessels above 60 tons anchor in backwater, and the cargo is conveyed by lighters from the anchorage to the wharves. The length of the landing and shipping wharves at present is 3,156 ft and an extension of 880 ft opposite the Railway Goods shed is under construction to facilitate rail-cum-sea traffic There are three hand cranes at this Port One of 5 tons within Customs enclosures and the other two 1½ tons at North and South reclamation respectively. For the use of 5 tons crane a fee of 12 annas per ton lift, is charged by this department.

Motor Launch 'Mangalore' and Steam Tug 'Charles Henderson' are available for towing lighters and vessels from backwater to sea and *vice versa* and conveying passengers and ship's papers to and from the steamers at the outer anchorage In addition there are also 3 private launches available at the Port for hire.

The chief exports to Europe are pepper, tea and cashew kernels (exported also to the United States) from neighbouring areas, coffee and sandalwood from Mysore, rubber to Ceylon and tiles, rice, salt fish, dried fruits and fish manures to Ceylon, Goa and the Persian Gulf. The foreign import trade is steadily increasing.

Mangalore is the favourite port on the coast for the Laccadive and Amindivi Islanders, who bring their coir and other cocoanut produce there for sale.

The income and expenditure for the Minor Ports Fund for 1946-47 were Rs. 27,800 and Rs. 34,000 respectively

MASULIPATAM

Masulipatam is the principal port in the delta of the Kistna River It is an open roadstead A flashing light is exhibited There is a conical buoy 4 miles eastward of the Lighthouse marking the position for boats to wait outside the bar In order to communicate with vessels approaching the Port The roadstead is capacious and holding ground good A convenient anchorage is in depths of 5½ fathoms, about 5½ miles east-south-eastward of the Lighthouse

Port dues are at Rs 0-4-0 per ton Landing or shipping fees are charged at Re. 0-12-0 per ton of cargo.

Normal annual income is about Rs. 25,000 and expenditure is Rs 20,000

The chief export commodity is groundnuts to foreign countries and ordinarily averages about 130,000 tons a year. Imports are very small.

Port Conservator —A. Kothandarama Naidu.

NAVLAKHI

Navlakhi is one of the chief ports of the Union of Saurashtra and has a fine situation on the coast of Saurashtra Ships anchor from about 1 to 3 miles from pier Navlakhi is the terminus on the metre-gauge line of the Morvi section, Saurashtra Railway, and is thus directly connected with Delhi, Rajasthan and Gujarat. The port is open throughout the year and has been greatly developed in the last decade It has ample godown space for storage purposes

NAGAPATTINAM

Nagapattinam, the Chief Port in the Tanjore District is about 13 miles South of Karikal. The harbour is equipped with wharves and other facilities for the landing and shipment of goods and the considerable foreshore to the north is utilized for the storage of timber Nagore is the eastern terminus of a branch of the South Indian Railway and a siding runs into the harbour premises at the Nagapattinam Beach Station. The port is further connected by river and canal with the tobacco growing areas to the south. The harbour is situated at the junction of the Kaduvaiyar River with the sea. Nagore, 5 miles to the north, a great place of pilgrimage for Muhammadans, is a wharf of Nagapattinam Steamers anchor in the roads about a mile off from the shore and cargo is transported between ship and shore by country crafts of which abundant supply is available locally The depth on the bar varies from 1½ feet to 3½ feet L W O S.T. according to season.

Port dues two to six annas per ton Landing and shipping dues 7½ to 15 annas per ton.

The principal exports from Nagapattinam are groundnuts for Europe and coloured cotton piecegoods, tobacco and fresh vegetables for Penang, Singapore and Colombo, the port being the chief provisioning centre for the coolies who are constantly leaving by this route to work on rubber and tea estates in Ceylon and the Federated Malaya States

The principal imports are betelnuts and lunamedella logs.

Port Officer.—M. L. Advani.

OKHA

Port Okha is situated at the extreme point of Saurashtra Peninsula The port is under the authority of Bombay Government

It lies in a strategic position readily accessible to all steamers trading along that coast.

Accommodation.—The port is approached by the channel which is buoyed to the east of Samiyani Island D at pier 19 ft L W O S T. Pier of reinforced concrete 400 ft Steamers can be berthed at pier and two steamers at moorings in the harbour, working into lighters D at pier 29 ft Depth at moorings 20 ft at L W Ships with deeper drafts are worked in roadstead, depending on weather conditions and port's convenience There are two steam cranes of 2 tons each Eighteen steel barges, each with a capacity of 60 tons and three barges each with a capacity of 300 tons are available. The total capacity is about 2,000 tons A twin-screw steam tug 850 I H P fitted with fire extinguishing and salvage apparatus is also available The port has a railway connection with Delhi and Central India The port is served with bunker coal and oil Fresh water can be obtained from pipeline on the pier

Imports include manufactured iron, hardware, machinery, wines and spirits, sugar, soap, perfumes, medicines, dates, coal, glassware, petroleum, fuel oil, kerosene, mill stores, general goods and food grains Exports are salt, magnesium chloride, cement, seeds and food grains.

Port dues are Rs. 0–1–6 per N R T and half rates are charged for vessels working less than 200 tons The other charges are Pier dues Rs 50 , Mooring buoy, Rs 25, per day ; Pilotage Rs. 100 per service , and Tug services Rs 150 per movement Net Tonnage and drafts as for entering and leaving this port are about 15,000 tons (Gross) and draft about 28'–0".

PORBANDAR

Porbandar is situated half way between the ports of Bombay and Karachi. Ocean-going steamers anchor at about 1 2 mile from the shore Port of Porbandar is an important regular Port of call for the B I.S.N.Co. Ltd's steamers to embark and disembark passengers to and from Africa. It has been so for the last 25 years The cargo is discharged into lighters at the open roadstead which are towed to the creek by Port tugs The length of the quay wall, which runs throughout the length of the creek, is about 1,000 yards. The wharf area is more than one square mile. There is a metre-gauge railway line running right along the quay wall, which connects port of Porbandar with various important business centres in the interior of India, such as Delhi, Ahmedabad, Bombay The port being an open roadstead is closed for steamship traffic between 15th May and 15th September being the period of high seas and monsoon on this coast

The principal imports at this port are wet and dry dates, timber, coal, sugar, machinery, petrol, kerosene, cocoanuts, jaggery, etc The exports are salt, cement, ghee, white clay powder and stone

During the war the trade of Porbandar was chiefly coastwise

Port Officer —D V Bara , *Dy Supdt of Customs*, B C Sutariya

QUILON

Quilon, the "Coilum" of Marco Polo, has been a trading centre from very early times It is connected with Alleppey by backwater, and is on the Shencottah-Quilon-Trivandrum branch of the South Indian Railway Vessels anchor about ½ mile from the shore and a railway siding runs up to the landing place

The chief exports are coconut oil, coir mats, timber, fish, ilmenite and cashew kernel The export of cashew kernel in steamers bound for U.S A ports is carried on during the seasonal months—August to May—by means of floating docks. Raw cashew nuts from Portuguese East Africa is the chief item of import from foreign countries through this port During seasonal months, food grains and sundry cargo are also imported Since steamers can anchor in deep waters (7 to 8 fathoms) quite close to the shore the port has got facilities for improving the trade

SURAT

Surat is situated 14 miles from the sea with which it is connected by a river negotiable only by small country craft. Surat was one of the earliest and most important of the East India Company's factories, and its trade was very considerable in agricultural produce and cotton, the value of which was estimated in 1801 at over £1,000,000 A hundred years later this total had contracted to £200,000 and in the last fifteen years the decrease has been even more marked, most of the trade being now transferred to Bombay owing to the linking up of the two ports by the Bombay, Baroda and Central India Railway.

TELLICHERRY

Tellicherry is situated on the Madras-Mangalore line of the South Indian Railway and is about 94 miles south of Mangalore and 14 miles south of Cannanore a town of about the same size with much smaller foreign trade

Steamers which anchor about two miles off the shore can work at Tellicherry even during the monsoon when all the other Ports on the coast are closed, owing to the natural backwater provided by the rocky approaches to the Port. Facilities for landing and shipping of cargo are provided. There is a pier with 4 one-ton cranes and one five-ton crane, wharf wall extending to nearly 600 feet on either side of the pier Port dues leviable on steamers vary from 4 annas to 6 annas a ton according to the character of the voyage of the steamer

The principal exports are coffee and pepper brought down from interior areas by road, also copra, cocoanuts, sandalwood, tea, ginger, timber, rosewood, and the chief imports are grains and pulses, salt, kerosene oil, piecegoods, metals and glassware

TUTICORIN

Tuticorin, an important port of southern India, is situated near the southern edge of the Coromandel Coast It has the largest trade in South India next to Madras and Cochin. The port is open all through the year and ships have to anchor in open roadstead 5 to 6 miles off the shore. Hare Island upon which one lighthouse is situated affords considerable protection to lighters and other craft used for landing and shipping and the work is seldom interrupted by bad weather. The port commands a very large import and export trade and is a direct link to Colombo, other coastal ports in India and foreign ports.

The chief articles of export are cotton, senna leaves, onions, chillies and livestock. The South Indian Railway runs alongside the landing and shipping wharves from which goods can be transhipped to launches and lighters.

The port has an area of 15 7 acres.

Vessels anchor in open roadstead 5 or 6 miles from shore There is a boat channel 400′ wide from shore to deep water with depth of 11′-0″ L W O S T For handling the cargo from cargo boats, there are six piers of lengths 315′, 478,′ 138′, 288′, 328′, and 255′. Cargoes up to 5 tons can be handled by cranes

The port is safe for ships all through the year. There are two lighthouses one at Hare Island and the other at Devil's point The light at Hare Island is an Aga white light 1 second, eclipse 9 seconds, visibility 14 miles and candle power 1,000 British candles The light at Devil's point is a flash light giving 30 flashes per minute, visibility 11 miles and candle power 207 British candles

Landing and shipping dues of Rs 0-14-0 per ton are charged generally Foreign steamers—3 annas per ton , coasting steamers—2 annas per ton , sailing vessels—1 anna per ton.

The income and expenditure as per the Administration Report for 1948-49 were Rs. 5,01,055 and Rs 3,89,738 respectively.

The Port stands second in rank among minor ports and third in the State.

A total 285,287 tons of goods were imported in 1948-49, the chief imports being grains, coal, cotton, machinery, scrap iron, cocoanuts, firewood, palmyrah, Eakel baskets 83,859 tons of goods were exported in 1948-49, the principal exports being onions, chillies, cotton, yarn, fibre, senna, salt, sheep, dry fish, cotton piecegoods and cotton waste

The Port is administered by a Board of thirteen trustees

Chairman, Port Trust —G Chendamaraikannan , *Port Officer, Secretary and Traffic Manager, Port Trust* —A Mudie

OVERSEAS COMMUNICATIONS SERVICE

OVERSEAS Communications Service is a recently acquired State activity working directly under the Ministry of Communications on commercial lines, with Head Office at Bombay Its functions are provision, operation and development of all facilities for communication between India and the outside world

Just as speedy transport commenced only after the discovery of steam power, so had long distance communications to await the discovery and applications of electricity Till early this century the electric telegraph and its counterpart the submarine cable remained the only means of national and international contacts Electric power in the shape of radio did not much come into civilian use till after the first war

As for India, submarine cables owned and operated by the Eastern Telegraph Co , Ltd , London, remained the country's only means of foreign communications till 1927 when the late Indian Radio Telegraph Co , Ltd , of Bombay, started a radio telegraph service with the U K under an agreement with Government of India The service was based on the short wave "Beam" principle enabling radiated power to be confined to a narrow cone or "Beam", sharply directed towards the destination, in this case the U K

The Beam could handle messages at over 150 words per minute and meant great economy in power Consequently, "Beam" telegraphy proved cheaper and more expeditious So wherever the beam services started, such as U K /Canada, U K /South Africa and U K / Australia, they meant severe competition to the existing submarine cables It must be mentioned that by the time the Beams came into service, there had already come into being a large network of submarine cables with millions of pounds of both private and Government capital invested in them Hence unbridled competition between the radio beam and the cable, would have resulted in chaos and ruin in international communications Besides, defence services long accustomed only to the cable, saw safety and secrecy in it and would not allow the cable to go under For these and other reasons, a merger of cable and radio interests took place all over the Commonwealth In India the merger became effective in 1932 , the I R T , while still operating the radio beam, became Indian Radio & Cable Communications Co Ltd , by acquiring the operating rights on the cables landed at Bombay and Madras As stated earlier the Company continued responsible for the entire foreign communications of India until the Government of India acquired them as on 1st January, 1947

On the eve of nationalisation the I R C C Co owned and operated the Indian ends of the following services —Two direct radio-telegraph services to the U K one each to China, Australia and the U S A and one radio-telephone service to the U K From Bombay one cable-cham circuit to the West, *viz* , Bombay-Aden-Port Said-Alexandria up to London Also from Bombay a second cham circuit, Bombay-Aden-Mombasa-Zanzibar-Sychelles From Madras two cable cham-circuits, *viz* , Madras-Penang -Singapore Only the radio stations in India were the property of I R C C Co the cables and relative operating gear remained the property of Cable and Wireless with a *modus operandi* with the I R C C

The radio telephone service was primarily to the U K , calls could be extended to other countries and some ocean liners but only *via* London Similarly the Chinese, Australian and the U S A direct radio services carry only terminal traffic, *i e* , messages confined to these countries and their possessions , it is not permissible for them to handle messages in "transit" destined to places outside their territorial jurisdiction

All the European States, most of Africa and the Middle East are reached only *via* London, through the circuits of Messrs Cable and Wireless Ltd , London, acting as the clearing house for most of India's foreign traffic This arrangement has its own advantages and limitations

The requirements of the last war, with India as a forward base of operations in the East, demanded additional circuits Such as Delhi/ London, circuits to China, Australia and U S A

POST-NATIONALISATION

In 1947 the service suffered the loss of some very senior members of the staff Conferences were also held on the development of Commonwealth communications

In 1948, O C S inaugurated from Bombay radio-photo services between India/U K and India/U S A Radio-telephony was extended to embrace the more important cities of the world, of course, *via* London Thereafter upto the end of 1949, attention was concentrated towards expediting foreign communications by providing a radio link between Delhi and Bombay, teleprinter working Bombay/Calcutta

A service of very considerable importance operating since September, 1948, is the transmission by slow W/Telegraphy of Government communiques, explanations on political, financial and trade policies and such other matter issuing from Government quarters This service is for the benefit of India's representatives abroad who are thus supplied with the latest happenings in India and their significance

Early in January a direct radio telegraph service with the neighbouring country of Afghanistan was inaugurated from Bombay

Successful radio tests have been completed with Siam, Iran, and many other countries

A comprehensive plan of developing India's foreign communications is being examined with a view to implementations wherever justifiable financially or otherwise

As a result of an approach to S C A P , the re-opening of the India/Japan radio circuit closed during the war, is expected very shortly A second radio channel to the United States of America is likely to open shortly

The future requirements of India in the field of foreign communication facilities are indeed incredibly vast The submarine cable as a medium of long distance communications has shown limitations both on grounds of prime cost and technical aspects Despite continuous loading under-sea repeaters and similar efforts at improving performance it may be unable to help where man wants photographs to illustrate the news from the other continents and where he wants not only to talk but also to see the person at the other end

If the cable were the only means of intercontinental communication a ship out of sight would have remained as good as a ship lost until she made the next port, the mobility of modern warfare would be impossible and aviation would have remained the adventure of a few with chance at the helm, instead of becoming a means of scheduled daily transport The future in these fields of communication must lie with Radio

The communication requirements of a country which is seventh in world trade, shelters 1/6 of the world's population is undergoing rapid industrialisation, will be very vast indeed. During the last 22 years only the fringe of the problem has been touched India must expect an expansion in this field commensurate with her status in world affairs

REVIEW OF THE YEAR (1949 May-1950 April)

THIS was a memorable year for India both at home and abroad With the inauguration of the new constitution on 26th January 1950 the process of political consolidation in which the country was engaged from August 1947 may be said to be finally achieved The difference between what used to be called 'Indian India' and 'British India' has disappeared, and the relationship between the centre and the various units is now uniform The old Indian States are all either merged or have coalesced together to form larger administrative units A minor aspect of this assimilation was an exchange of enclaves, that is to say bits of territory belonging to one State lying within the administrative boundaries of another The political consolidation of the country was indeed the greatest single achievement of the Government since the advent of independence, and no student of Indian affairs with any awareness of the strength of the centrifugal forces in the country would wish to withhold his meed of praise for the courage and tenacity with which the whole process was carried through.

It is precisely because the country has always shown a tendency to fall apart that the Government was so very cautious in its attitude towards the movement for redrawing State boundaries based on linguistic distribution—a movement that kept up a continuous flood of agitation all through the year The Government of India took official notice of the demand of only one group—the Andhras in Madras, and agreed that there was a *prima facie* case for immediate consideration But even here the Government insisted that the whole scheme should be worked out to the last detail before they could authorise the formation of a new State separate from Madras. And when in the wake of this concession to one group of people a demand arose from another group that there should also be a separate State for Kannada-speaking peoples which would include Mysore it was bluntly refused The Karnatak Provincial Congress Committee then made a public protest against the refusal and asked all Karnatak members to resign their seats in the State legislatures Accordingly the Karnatak members applied for permission to the Congress Working Committee to do so But the permission was not granted on the ground that it was not at the moment a strong enough reason for resigning Eventually the members from Karnatak decided to postpone the whole issue till the next general election If the Congress declined to make linguistic States part of its programme they would get together to devise the necessary sanctions There the matter rested.

In a sense the Government's whole attitude to the Hindu Mahasabha during the year also flowed from the same basic need to protect the political integrity of the State as a whole The behaviour of any purely communal body was bound to have a disintegrating effect at any moment of crisis Thus when the Bengal disorders threatened to spread across the boundaries of West Bengal the Government took immediate action against the Mahasabha leaders some of whom it put into protective custody Similar precautions were also taken during the talks between the Prime Ministers of India and Pakistan in Delhi in order that nothing should happen to mar the success of the talks

What was called the 'Communist menace' also fell into the same class. Certain areas of Telingana on either side of the Madras-Hyderabad border were in a state of perpetual unrest Cases were reported from time to time of murder, arson and looting It was clear that the machinery of Government could not function in a normal way and something like an atmosphere of terror overhung the country-side But to what extent it was a political-economic manifestation, however misguided, and to what extent it was pure banditry it was hard to say. Government took the same view as in the case of the Hindu Mahasabha. Whatever the aims of a group might be, the means it uses to achieve its aims must not be such as to disrupt the unity of an infant State living, so to speak, on the margin of security Accordingly the forces of law and order struck hard at the trouble-makers in Telingana with what results it is too early to say

As last year the working of parliamentary democracy was considerably hampered by personal and group jealousies in many States in the Indian Union Trouble was endemic in the Punjab, while a Ministerial crisis was never far off from the politics of West Bengal. The commonest charges made were nepotism, corruption particularly in the matter of the issue of licenses, and general mal-administration The trouble reached its climax in Madras and Uttar Pradesh where the opposition group within the ministerial party asked that they should have separate seats in the Legislature It is possible there was a difference in outlook between the Ministerialists and the dissidents in Uttar Pradesh The dissidents were probably a little further to the Left and a little freer from communal inhibitions But in the Congress Party in Madras no difference in policy was at all discernible between the two rival groups. Every time an appeal was made the Congress Working Committee upheld the group in power against the rebels.

All the same there was no slackening of legislative activity in the country Two of the measures which were passed by Parliament were concerned, the first with a better control of insurance, and the second with the appointment of appellate tribunals for labour disputes Two major labour bills were referred to Select Committee—the Labour Relations Bill and the Trade Union Bill The Hindu Code Bill which affected the very structure of Hindu society—it made bigamy an offence, provided for divorce, and gave the daughter an equal right with the son to the father's property—came up against a good deal of opposition from orthodox public opinion. The zamindari abolition bills were also very much to the fore Nearly every State had a Zamindari Abolition Bill in force by the end of the year The provisions of the Bills varied with the nature and dimensions of the problem Madras, for instance, provided for cash payments Uttar Pradesh started a zamindari abolition fund the money for which was to come from the tenants themselves. Although some zamindars acquiesced many more fought the abolition bills tooth and nail The question was at last raised in the Constituent Assembly itself In the discussions that followed it was made quite clear that the fact of abolition must be accepted by all Neither could the method of compensation be made the subject of action in a court of law The furthest the Government could go was to insert a clause in the Constitution Act which made it obligatory for a zamindari abolition bill to define the method of compensation in the bill itself Most State Governments were in financial difficulty, and the question of payment by bonds, whether negotiable or not, was mixed up with the larger question of maintaining the country's credit structure.

ECONOMIC SITUATION

It is hard to say whether the economic situation improved or deteriorated during the year as it was full of contradictory trends For instance, industrial and agricultural production went up, the exports as well as the imports also increased, but the total volume of currency in circulation fell all round. The cost of living figures dropped by a small margin. But there was no improvement in the standard of living as many articles which had become a necessity and did not enter into the cost of living calculations continued to go up in price. The labour situation also revealed the same contradictions There were fewer strikes during the year and a fall in the number of man-days lost But the rate of absenteeism increased, there was a greater tendency to indiscipline and, in general, a fall in the efficiency of labour. The increase in the total volume of production did not carry with it an all-round increase While the output of coal, steel, cement and paper went up, the output of textiles, jute goods and sugar went down The general pessimism with which the investor and the enterpreneur regarded the whole situation was strikingly demonstrated by the partial failure of one Government loan and the total failure of two more

The saddest aspect of the situation was the setback in regard to food India imported nearly 3 7 million tons of food at a cost of about 180 crores of rupees. It became known that the 'Grow More Food' campaign was more a failure than a success as the area covered by the campaign did not amount to more than one-sixteenth of the area of cultivated land Meanwhile India had decided to become self-sufficient in jute as well as long-staple cotton, a fact that increased the pressure on the land devoted to growing food Incidentally, the food imports necessitated heavy withdrawal from the sterling balances in London, which exceeded the amount originally agreed upon A new agreement was quickly made between the Governments of India and the United Kingdom to regularize the excess in withdrawals Devaluation of the currency which happened sometime in September and the refusal of Pakistan to keep the exchange value of the two rupees at par made a difficult situation more difficult still There was general agreement that India had no choice except to devalue her currency, it was the extent of the devaluation which became the main point of criticism.

As before, the Central Government played an active part in the economic reconstruction of the country For instance, it put the banking structure on a sounder basis through an Act which gave the Reserve Bank wide supervisory powers over the operations of commercial banks An industries bil brought more industries within the purview of the Government in accordance with the policy announced the year before A number of expert bodies were set up to make recommendations on the various aspects of the economic situation For instance, The Fiscal Commission was to review tariff policy in general. The Committee on State Trading Corporation was to report on the need for State monopoly of foreign trade Two other committees set up were the Export Promotion Committee and the Rural Banking Enquiry Committee. The latter had just started its investigation, while the former had already made its report before the financial year ended in March 1950. Targets were fixed for various industries, and working parties were to advise how to reduce costs and raise efficiency

To encourage investment the Government lightened the tax burden on industry. The Finance Member also held out a promise that direct taxes would be reduced As regards foreign capital, it was made clear that there would be no discrimination against it, on the contrary it would be most welcome The response to this invitation particularly from Americans, on whom hopes were mainly centred, was disappointing in the extreme An unofficial gathering of representative Americans which met in Delhi broke up without any result as the Government of India would not agree to the conditions on which alone Americans were prepared to invest capital in India

Government also announced a plan to fight inflation The prices of food and cloth were to be reduced, the first by 3 to 15 per cent and the second by 10 The Government also economized in expenditure For instance, the Ministers' salaries were cut, so were the salaries of Secretaries and Joint Secretaries of Government Departments A scheme of compulsory saving in the form of provident fund was put through for the entire staff drawing a salary of Rs 250 and above Finally, heavy cuts were made in capital expenditure programmes.

INDIA AND THE WORLD

In the course of the year India established diplomatic relations with the Netherlands, Austria, Denmark, Finland, Norway, Ireland, Argentina, Chile, Ethiopia, Philippines and Portugal Treaties of friendship were signed with Afghanistan and Bhutan, while negotiations for treaties of friendship were in progress with Egypt, Yemen, Iran, Switzerland, Siam, U S A. and Nepal India signed a trade pact with Switzerland and another pact with Argentina for the exchange of jute for wheat She also became a party to an agreement between Japan and the sterling area by which she was due to get Japanese plant and machinery She then went on to make a private arrangement of her own with Japan for the purpose of developing the cottage industry with the aid of Japanese technicians Negotiations for a trade treaty were also in progress with Turkey, Yemen, Iran, Afghanistan, America and Siam

In regard to the States on the north-east border, India continued the traditional policy of safeguarding their role as buffer regions For instance, a new treaty was signed with Bhutan, by which that country agreed to Indian guidance in its external relations Arrangements were made for good government in Sikkim which had for all practical purposes become a part of the Indian Union. Care was taken to maintain cordial relations with Nepal, another border State, and the details of a treaty of friendship were worked out Tibet presented some difficulty India recognized Chinese suzerainty over Tibet on condition that the Chinese Government respected the right of the Tibetan people to self-government In China when the Chinese People's Government gained effective authority India took the lead in granting *de jure* recognition to the new Government The problem of foreign enclaves in India in the possession of France and Portugal took a step nearer solution when the voters at Chandernagore declared in favour of union with India by an overwhelming majority. On 2nd May 1950 the Government of India took over *de facto* possession of Chandernagore but the formal transfer of this territory is awaiting the signing of a treaty between India and France The question of a referendum in the other French possessions was yet to be settled, the Indian stand-point being that conditions must be created such as to ensure a free and fair referendum The attitude of Portugal, the other foreign Power with possessions in India, has not been as helpful as that of France Negotiations are undoubtedly being conducted with the Portuguese Government in Lisbon, but there is no evidence that any concrete results have yet been obtained

The relations with South Africa were far from happy The position of Indians in that country deteriorated There was talk of tightening up of some of the provisions of the Asiatic Land Tenure Act, while social restrictions and humiliations based on colour went on increasing On 14th May 1949, the United Nations General Assembly passed a resolution recommending the holding of a Round Table Conference between India, Pakistan and South Africa As a first step towards a Round Table Conference, the three Governments held preliminary talks to find a mutually acceptable basis for discussion. After the talks were over, the delegates announced that such a basis for a Conference had been found and that the dates and the venue for the Conference would be fixed later.

The relations with Pakistan, which greatly worsened during the disorders in Bengal improved with the signing of a minorities agreement so much so indeed that it became possible to try to restart trade between the two countries which had come to a dead stop consequent on devaluation The disorders in Bengal which were both serious and widespread created a sense of fear and insecurity in the minds of the minority communities, and combined with rumours of impending war, led to communal migrations on a large scale Local authority broke down here and there, but though there was much mutual recrimination, the Central Governments kept their heads and retained a firm grip on the situation The danger was rather that disorders might spread and spread until a helpless Government was swept into a kind of unofficial undeclared guerilla war of peoples rather than Governments Evidently it was a major crisis in the relations between the two countries, and unless a speedy settlement of the minority problem was secured, the consequences might be disastrous The two Prime Ministers thus met together in a tense atmosphere fully determined to restore shaken confidence and put the whole relations between India and Pakistan on a normal healthy basis The effort succeeded The more concrete proposals which were embodied in a Minorities Pact included the appointment of minority Ministers in the Cabinets of East Bengal, West Bengal and Assam, the setting up of an elected Minorities Commission to watch the interests of the minority community, the stationing of a Central Government Minister in East and West Bengal to ensure that the provisions of the Pact were fully observed and the appointment of commissions to enquire into the disorders People who wished to leave either country were to be helped rather than hindered, and steps were to be taken to make sure that there would be no harassment either on the way or at the border The two Governments then pledged themselves anew to the protection of all citizens living in their territory and ended with an appeal to the minority communities not to leave their original homes Every one was to help, particularly the press, the radio and the politician in the creation of a friendly atmosphere

It would seem that the Pact was on the whole better received in Pakistan than in India, where it led to the resignation of two Ministers from the Central Government Indian opinion was more sceptical, but there was no dissent from the view that agreements once arrived at must be faithfully kept In any case advantage was taken of the goodwill created by the meeting of the two Prime Ministers to reopen negotiations on trade and allied questions Kashmir too helped in the creation of a better atmosphere The Security Council of the United Nations had appointed an Australian jurist by name Sir Owen Dixon with the approval of India and Pakistan to supervise the truce and prepare the ground for a plebiscite. Two old questions, canal water supply and evacuee property still awaited solution. A temporary trade agreement however, was eventually signed in Karachi.

U.N.O. In the wider field of international affairs, the most notable event from the Indian point of view was the election of India to the Security Council of the United Nations which took place on 1st January 1950. India was also elected a member of the Special Committee appointed to examine information on non-self-governing territories for three years. Yet another major body on which India found a place was the Economic and Social Council, whose elected Vice-President for the year was one of her representatives, Sir A. Ramaswamy Mudaliar India also continued to be a member of seven out of nine functional commissions of the Economic and Social Council Three questions which came up for discussion at the U N O. in which India was directly interested were Kashmir, the treatment of Indians in South Africa and the economic development of underdeveloped countries India took the initiative in placing the question of Indonesia on the agenda of the U N O , no discussion of any substance however took place, as agreement was reached soon after between Indonesia and the Netherlands India's permanent representative on the United Nations, Sir B N Rau was active all through the session and made notable contribution to the Assembly's deliberations on such questions as trusteeship, the non-self-governing territories, the disposal of former Italian colonies, the control of atomic energy, and the credentials of national delegations Most of his suggestions about the disposal of Italian Colonies were accepted, and the draft constitution proposed by him formed part of the resolution finally adopted by the Assembly.

The major objects of foreign policy were in fact the same as before—the end of colonial rule everywhere, the achievement of race equality and the preservation of world peace It is in pursuance of the third of these objects that the country reaffirmed its neutrality in the present international set-up So strong indeed was the Prime Minister's conviction that that was the right policy for India that he refused to indentify himself with the American point of view of international developments even while engaged in seeking American goodwill during a tour of the United States Pandit Nehru insisted gently but firmly on India's right to keep an open mind and judge every question on its merits regardless of any effect on the fortunes of what the Americans call 'the cold war' Thus India did not follow Britain in giving *de jure* recognition to the Bao Dai administration in Indo China, but agreed to join Britain in granting a loan to the Burma Government Similarly, India declared that she was willing to play a full part in any scheme for the economic development of South and South-East Asia, but would not join any political or military alliance of Asian Powers similar to the North Atlantic Treaty As the foreign policy debates in Parliament showed, the Prime Minister's policy had the all but unanimous support of public opinion in the country

SOME NOTABLE DATES (April 1949-March 1950)

April 1949

April 2 Chandernagore Assembly votes in favour of merger with India
April 5 Central Assembly passes three Bills on marriage reform
April 11 U. N. Commission talks on Kashmir end in failure
April 15 U N. Commission submits fresh proposals on Kashmir to India and Pakistan
April 21 Commonwealth Prime Ministers meet in London
April 27 Commonwealth Prime Ministers' Conference concludes with agreed formula to keep Republican India in Commonwealth
April 28 U N Commission on Kashmir submits 'final' truce terms to India and Pakistan.

May 1949

May 1 : Baroda State merges with Bombay
May 5 Pandit Nehru returns to India from the Commonwealth Prime Ministers' Conference
May 9 South Africa-India question debated in the U N Political Committee
May 10 Mrs Vijayalaxmi, the Indian Ambassador to the U S A arrives in Washington
May 15 U N Assembly passes resolution recommending holding of Round Table Conference to solve the India-South African dispute
May 17 Government of India takes over the administration of Rampur State
May 21 A I C C meets at Dehra Dun
May 26 Provision made for representation of Jammu and Kashmir State in Constituent Assembly
May 27 Maharaja of Travancore signs Covenant for formation of Travancore and Cochin Union
May 28 Maharaja of Cochin also agrees

June 1949

June 1 Government of India takes over Bhopal State
June 3 India protests to France for asking International Court of Justice to nominate observers for French India plebiscites without previous consultation with India
June 4 French Government announces procedure for Chandernagore plebiscite
June 6 India and Pakistan reject U N Kashmir Commission's 'final' truce proposals
June 7 Government of India takes over administration of Sikkim
June 9 France announces new plans for nominating observers for referendum in French India
June 14 Sarat Chandra Bose elected to West Bengal Assembly in bitterly fought election
June 16 Kashmir representatives four in number, take their seats in Constituent Assembly
June 17 N R Sarkar appointed to act as Prime Minister of West Bengal during absence of Dr B C Roy in Switzerland
June 18 Heavy voting in favour of merger with India at Chandernagore plebiscite
June 19 B N Rao Committee report on constitution of former Indian States published
June 21 Appeal in Mahatma Gandhi murder case fails
June 23 Government of India places ban on shutting down of major industries
June 24 Government of India protests to Ceylon against decision to repatriate Indian nationals
June 26 Talks between India and Pakistan on evacuee property end in deadlock at Karachi
June 27 Maharaja of Mysore signs revised Instrument of Accession by which State has same relation with Government of India as Province

July 1949

July 1 Travancore-Cochin Union comes into being
July 4 India takes over British Destroyer '*Redoubt*'.
July 5 U N. Kashmir Commission invites India and Pakistan for joint military talks
July 11 Appointment is announced of Dr S. Radhakrishnan as Indian Ambassador to Russia.
July 12. Official ban on R S S is lifted Golwalkar R S S leader is released.
K L M plane carrying U S journalists from Indonesia crashes in Bombay killing 45 passengers
July 18 Joint military talks on Kashmir under auspices of U N Commission start in Karachi
July 22 Military talks on Kashmir adjourn inconclusively
July 27 India and Pakistan agree on cease-fire line in Kashmir
July 30 Cease-fire line in Kashmir is formally ratified by Indian and Pakistan Governments

August 1949

August 1 Uttar Pradesh takes over Tehri Garhwal
August 4 U K Government decides to release 81 million sterling for use by India
August 13 India and Pakistan agree to U N request for joint talks on Kashmir
August 14 Government of India assumes *de facto* power over Chandernagore
August 15 India celebrates Independence Day Poets-Laureate are formally appointed in Madras
August 16 Prosecution opens case against Kasim Razvi for murder of Shoebullah Khan in Hyderabad State
August 18 U N Commission calls off talks on Kashmir
World Bank grants 34 million dollar loan to India
August 24 Government of India protests to Pakistan against latter's order to freeze Non-Muslim funds
August 26 Report of Commission on Indian Universities is published
August 27 U N Commission on Kashmir frames fresh proposals for truce
August 30 Pandit Nehru's investigations into West Bengal affairs published
August 31 President of the United States and Prime Minister of England send appeal to Prime Ministers of India and Pakistan to accept U N Commission's truce proposals on Kashmir

September 1949

September 1 Admiral Nimitz suggests arbitration to solve Kashmir dispute
September 2 Central Government advises State Governments to cut expenditure
September 4 Government issues order to freeze sugar stocks
September 7 Madras Government takes possession of 33 Zamins
U N Commission releases correspondence with India and Pakistan for publication
September 8 India rejects arbitration proposal to solve Kashmir dispute
September 12 Government of India takes over administration of Cooch-Behar
September 14 Constituent Assembly decides language issue
September 19 Devaluation crisis Banks and Exchanges closed for three days
September 25 U N Commission on Kashmir explains recommendations concerning Kashmir dispute
September 26 Madras Government declares Communist Party illegal
September 30 Kashmir Government charges member of U N Commission (General Delvoie) with breach of privilege for transporting jewels out of State to Pakistan without Government's knowledge

October 1949

October 2 Separation of judiciary from executive takes effect in Madras
October 4 Report of Export Committee published
October 5 Finance Minister puts forward eight-point plan to fight effects of devaluation and general inflation
October 7 Pandit Nehru leaves India for good-will tour of U S A
October 9 Indian Territorial Army inaugurated by Governor-General
October 11 Pandit Nehru in Washington
October 14 Pandit Nehru addresses U S Congress
October 15 State of Benares is merged with Uttar Pradesh
October 20 Announcement of India's decision to sign World Tariff Agreement
India elected member of U N Security Council

November 1949

November 11 Andhra Provincial Congress Committee accepts three-man committee report on linguistic provinces
November 15 Godse and Apte executed at Ambala
November 16 Congress Working Committee proposes immediate formation of Andhra State
November 19 General Delvoie, Military Adviser to United Nations Commission on Kashmir resigns
November 24 Nizam signs the Instrument of Accession of his State to Indian Union
November 26 Third reading of Constitution Bill completed

December 1949

December 4 Karnatak Provincial Congress Committee passes resolution calling on Karnatak members of Central and Provincial Legislatures to resign A dozen members submit resignations to K P C C President
December 7 Bombay Minister and Four Parliamentary Secretaries seek permission of Central Parliamentary Board to resign
December 9 Mysore Government notify acceptance of the principle of separate Karnatak Province
December 12 U N Kashmir Commission recommends to Security Council appointment of mediator in Kashmir dispute
December 19 Parliament concludes discussion on first reading of Hindu Code Bill, agreeing to refer it to 'informal discussion'
December 21 Congress Working Committee adopts resolution that formation of Karnatak Province 'at this stage' not feasible, and refuses permission to Karnatak members to resign
December 23 India suspends delivery of coal to Pakistan
December 30 India recognizes new Government of China

January 1950

January 3 Pandit Nehru opens National Laboratory in Poona
January 4 India signs five-year treaty of friendship with Afghanistan
January 14 Commonwealth Conference concludes after voting aid to Burma
January 19 Rail traffic between India and Pakistan suspended
January 21 Opening of National Physical Laboratory in Delhi
January 23 Government of India suggests postponement of establishment of Andhra State
January 24 Babu Rajendra Prasad elected President of Indian Republic
January 26 Indian Republic officially proclaimed
January 28 Supreme Court formally opened

February 1950

February 6 Preliminary talks between India, Pakistan and South Africa open in Cape Town
February 9 Disturbances in Calcutta, curfew imposed
February 11 Cape Town talks end after deciding basis for Round Table Conference
February 20 Sarat Chandra Bose dies
February 23 Pandit Nehru makes detailed statement on East Bengal situation in Parliament

March 1950

March 6 Hyderabad authorities discover escape of Mir Laik Ali, former Prime Minister of Hyderabad
March 8 India agrees to mediation by single individual in Kashmir dispute
March 17 Prime Minister declares in Parliament that India is gravely concerned about plight of Hindus in East Pakistan
March 27 Martial law proclaimed in Howrah area

GOVERNMENT OF INDIA

INDIA, that is Bharat, is a sovereign democratic Republic. It is a union of 28 States These States are Assam, Bihar, Bombay, Madhya Pradesh, Madras, Orissa, Punjab, Uttar Pradesh, West Bengal, Hyderabad, Jammu and Kashmir, Madhya Bharat, Mysore, Patiala and East Punjab States Union, Rajasthan, Saurashtra, Travancore-Cochin, Vindhya Pradesh, Ajmer, Bhopal, Bilaspur, Coorg, Delhi, Himmachal Pradesh, Kutch, Manipur, Tripura, Andaman and Nicobar Islands The number of these administrative units is liable to change as smaller units are sometimes absorbed by larger ones

The distribution of powers between the centre and the local administrations follows the accepted principle that subjects which for convenience and efficiency ought to be administered on an all-India basis are vested in the Union Government, while others (of the nation-building sort) which can be conveniently administered on a local basis are vested in the State Governments Thus, defence, foreign affairs, transport and communications, currency and coinage, banking, customs and export duties, and the administration of justice at the higher level are all central subjects, while State powers include those over police, public health, education, agriculture, forests and so on There is a third group of subjects that fall betwixt and between such as economic and social planning, social security and insurance, labour welfare, price control, newspapers and vital statistics On these subjects both the Centre and the State can freely legislate, it being understood that whenever there is conflict between Union and State legislation the Union laws prevail Three detailed lists of subjects are drawn up, the Union List, the State List and the Concurrent List, and the residuary power rests with the Union That is to say, if at any time, a subject which does not figure in any of the three lists, comes up for consideration the power of dealing with it lies with the Union Government Thus the constitution of India is a federation in which the Centre is the dominating partner It may be pointed out here that while the relations between the Centre and each of the States are substantially the same, the Centre has a higher responsibility in the affairs of some States than in others Thus while in regard to a State like Bombay the Centre can intervene only in case of grave emergency in regard to a State like Madhya Bharat the Centre has the right to issue directives even on questions of day to day administration

The new constitution outlined in detail below created certain new bodies which did not exist at the time it was inaugurated Thus there was no Council of States at the Centre Neither was there a Vice-President Consequently provision was made in the Constitution Act itself to endow old bodies and functionaries with new powers Until elections take place on a new electoral basis administration has to be carried on with the old machinery

*Thus the body which was functioning as the Constituent Assembly of India at the commencement of the new constitution has become the provisional Parliament exercising all the powers and performing all the duties conferred upon it by the Constitution Act

Similarly in regard to the States, the House or Houses of Legislature functioning immediately before the commencement of the new constitution have become the House or Houses of Legislature of the particular State under the new Constitution.

As there is no Vice-President, the office of the President in case of vacancy will be filled by a person elected by Parliament in a fresh election And until a new President is so elected the Chief Justice of India will act as President

Here is a list of some of the bodies and functionaries provided for by the new Constitution which have not, at the time of writing (March, 1950), materialized 1. Vice-President of India, 2 The House of the People, 3 The Council of States, 4 Chairman, Council of States, 5 Deputy Chairman, Council of States 6 Mysore Legislative Council, 7 Punjab Legislative Council, 8 West Bengal Legislative Council, 9 Patiala and East Punjab States Legislative Assembly, 10 Rajasthan Legislative Assembly, 11 Vindhya Pradesh Legislative Assembly, 12 Jammu and Kashmir Legislative Assembly, 13 Hyderabad Legislative Assembly, 14 Finance Commission, 15 Election Commission, 16 Special Officer for Scheduled Castes and Scheduled Tribes

In the Indian Union the rights of Indian citizenship are given to 1 One who is born in India, 2 Either of whose parents was born in India, and 3 Who has been a resident of India for five years Provision is also made for persons who are affected by the partition of the sub-continent Certain fundamental rights are guaranteed to every citizen for the first time in India All citizens are equal before the law and no discrimination is made on grounds of religion, sex, caste, etc All citizens have equal opportunities Untouchability is abolished Freedom of speech and expression, is guaranteed, and the rights to hold meetings (without arms), to form unions and associations, to move freely in India and to reside in any part, to acquire property and to practise any profession are also assured under the Constitution, the legislature can pass only reasonable legislation with respect to these rights Life and personal liberty are protected under the law, and there will not be punishment for the same offence more than once Preventive detention is also forbidden except in certain cases Children under the age of 14 will not be allowed to be employed in factories and forced labour like *beggar* is prohibited India is a secular State and as such there is freedom of conscience Citizens are allowed to profess, practise and propagate any religion, and the State will not ordinarily interfere in religious institutions The minorities are assured of cultural and educational rights The State can acquire compulsorily property for public purposes, but compensation must be paid to the owner of the property concerned All titles, except military or academic are also abolished.

These fundamental rights can be enforced by the Supreme Court which has the authority to issue prerogative writs such as *habeas corpus, certiorari, prohibition*, etc Parliament has power to legislate with respect to these fundamental rights in their application to the Armed Forces It must be pointed out that all these fundamental rights can be suspended in case of emergency, and the remedies available for their enforcement may also be suspended by an order of the President

The State has to direct its policy in accordance with certain principles called 'Directive Principles' These principles are of a recommendatory character and cannot be enforced in a court of law However the State is expected to look upon them as a kind of touch-stone for its policy and action The principles include organization of village panchayats, provision for just and humane conditions of work, maternity relief, a uniform civil code for the citizens, provision for compulsory and free education of children and separation of judiciary from executive

THE UNION EXECUTIVE

The executive head of the Indian Union is the President He is elected by the members of the Houses of Parliament and the Legislative Assemblies of all the States His term of office is five years, and he is eligible for re-election Only a person who is a citizen of India and has completed the age of thirty-five years is qualified to contest the election The President is entitled to the use of an official residence without payment of rent, and a salary of Rs. 10,000 per month and allowances The President has to take an oath to preserve, protect and defend the Constitution of the Union The President has power to grant pardons or remissions of punishment or commute the sentence of any person convicted of any offence The supreme command of the Defence Forces of the Union is also vested in the President The President has the power of summoning, proroging and dissolving Parliament At the commencement of each session he addresses both Houses of Parliament assembled together He has the right of sending messages to Parliament and sending back a Bill presented to him for his consent This power however can be used by him only once

The President has legislative powers under certain circumstances When neither of the Houses of Parliament is in session and the President is satisfied that circumstances exist which make immediate action necessary he may promulgate an ordinance Such ordinance must be put before both the Houses of Parliament and will cease to operate at the expiration of six weeks from the reassembly of Parliament The President can also declare emergency if he is satisfied that the security of India or any part thereof is threatened either by war or internal disturbances when the legislature is in session Such a proclamation would give additional powers to the Union executive and the Legislature

The judges of the Supreme Court and the High Courts, the Attorney-General of India and the Comptroller and Auditor-General of India are all appointed by the President The heads of the various States, i.e., Governors and Rajpramukhs are also appointed by the President He has the power of appointing ambassadors abroad and receiving diplomatic representatives of foreign States

The President places a number of annual reports before Parliament the Annual Financial Statement, the report of the Auditor-General of India relating to the accounts of the Government of India, the recommendations of the Finance Commission, the annual report of the Union Public Services Commission and the report of the special officer for minorities

In exercise of his functions, the President has the aid and advice of a Council of Ministers, with the Prime Minister at the head of it The President appoints the Prime Minister and other Ministers are appointed on the advice of the Prime Minister The Council of Ministers is collectively responsible to the House of the People Every Minister must be a member of either House of Parliament, and he is required to take an oath of office and secrecy The salaries and allowances of Ministers are determined by Parliament

Provision is made for the impeachment of the President, by the Parliament, for violation of the Constitution If a resolution to that effect is passed by a majority of not less than two-thirds of the total membership, such a resolution has the effect of removing the President from office

There is to be a Vice-President of India, who is ex-officio chairman of the Council of States The Vice-President is to act as President during casual vacancy in the office of the President. He is to be elected by the members of both Houses of Parliament and his term of office is five years. (There will be no Vice-President until the Council of States is elected).

All executive action of the Government of India is taken in the name of the President and it is the duty of the Prime Minister to communicate to the President all decisions of the Council of Ministers.

UNION PARLIAMENT

The Parliament is to consist of the President and two Houses to be known as the Council of States and the House of the People. It must meet at least twice a year. (There will be no Council of States until fresh elections are held). The maximum strength of the two Houses is

to be 250 and 500 respectively. In the Council of States 12 members are to be nominated by the President, from among persons who are known for their eminence in literature, science or art, or for their record of social service. The Council of States is to be a permanent body with one-third of its members renewed on the expiration of every second year The Council of States is to be elected by the members of the Legislative Assemblies of the States, while those of the House of the People will be elected by the voters in the States The elections are to be based on adult suffrage and joint electorates There is to be no reservation of seats for any group except Scheduled castes and Scheduled tribes The House of the People continues for five years, ordinarily There is a Speaker and a Deputy Speaker of the House both of whom are elected by its members The Chairman of the Council of States is the Vice-President of the Union All these posts carry a salary and allowances Under certain circumstances, the members can be disqualified and their seats declared vacant Money Bills can be introduced only in the House of the People Bills passed by the Parliament will be submitted to the President for his assent Only on such assent being given does the Bill become law The language used in Parliament is either Hindi or English

THE UNION JUDICIARY

The Supreme Court of India consists of a Chief Justice of India and not more than seven other Judges The appointments are made by the President The salary of the Chief Justice is Rs 5,000 per month and of the other Judges Rs 4,500 per month Qualifications for appointment are (*a*) Judge of a High Court for at least five years, (*b*) Advocate of any High Court of ten years standing, (*c*) Jurist of distinction Retired Judges are not allowed to practise in any court in India, and they may be required to attend the Court if the Chief Justice of India makes a request to that effect The Supreme Court sits in Delhi It is also a Court of Record and has the power of issuing writs, in addition to the original, appellate and advisory jurisdiction Law declared by the Supreme Court is binding on all courts in the Indian Union

An Attorney-General for legal advice and a Comptroller and Auditor-General of India for audit and accounts are appointed by the President The Attorney-General has the right to appear in all courts in India

THE STATES

There are four types of States (1) Nine States, that have a Governor as the executive head They are Assam, Bihar, Bombay, Madhya Pradesh, Madras, Orissa, Punjab, Uttar Pradesh and West Bengal (2) Seven having a Rajpramukh at the head They are Hyderabad, Jammu and Kashmir, Madhya Bharat, Patiala and East Punjab States Union, Rajasthan, Saurashtra and Travancore-Cochin. (3) Ten States (the number and identity are liable to change) having a Chief Commissioner or a Lieutenant Governor at the head and controlled by the Union Government They are, Ajmer, Bhopal, Bilaspur, Coorg, Delhi, Himachal Pradesh, Kutch, Manipur, Tripura, and Vindhya Pradesh (4) The Andaman and Nicobar Islands

The Governor of a State is appointed by the President And a Rajpramukh is appointed or recognized by the President Executive power is vested in the Governor who is appointed for a term of five years, ordinarily Only a citizen of India and one who has completed 35 years of age, is eligible for such an appointment. The Governor, like the President has power to grant pardon, etc He will have a Council of Ministers to aid and advise him The Governor also appoints an Advocate-General for the State Seven States (Bihar, Bombay, Madras, Mysore, Punjab, Uttar Pradesh, West Bengal) have two Houses of Legislatures, the others, only one. The two Houses are called the Legislative Assembly and the Legislative Council. The former has a duration of five years, while the latter is a permanent body with one-third of the members retiring every second year. The minimum strength of the Council is 40, and the maximum one-fourth of the State Assembly The Legislature must meet at least twice a year While the Assembly consists of members who are directly elected from territorial constituencies, the Council consists of members nominated by the Governor, elected by the Assembly and of representatives of local bodies and special interests

The right of summoning, proroguing and dissolving the Legislature is vested in the Governor, who addresses the legislature at the commencement of each session Like the Parliament there is a Speaker, a Deputy Speaker, a Chairman and a Deputy Chairman for the Legislative Assembly and the Legislative Council respectively These officers of the legislatures are entitled to salary and allowances Members of the legislature are required to take an oath and they can be disqualified The language in the legislature can be either Hindi or English or any other language allowed by the Speaker The State Legislatures cannot discuss the conduct of any judge of the Supreme Court or of a High Court in the discharge of his duties

As the Governor is a part of the legislature, he has certain legislative powers He can promulgate ordinances during the recess of the legislature, such ordinances must be placed before the legislature and cease to operate at the expiration of six weeks from the re-assembly of the legislature The salary of the Governor is Rs 5,500 per month and he is also entitled to certain allowances

As the Constitution has a federal structure, the Union Parliament can legislate on items included in the Union list (97 in all) the concurrent list (47 in all) and on the residue It can also legislate on items included in State list under certain circumstances The State legislature however has power to legislate only on the items included in the State list (66 in all) and in the concurrent list

If the Government of the State cannot be carried on in accordance with the provisions of the Constitution, and the Governor or the Rajpramukh makes a report to that effect to the President, the President may by proclamation assume to himself all or any of the functions of the Government of the State He may also declare that the powers of the State legislatures shall be exercised by the Parliament, and may suspend any provision of the constitution relating to the State However, he cannot assume to himself, or suspend any of the provisions of the Constitution relating to High Courts

There is a High Court for each State The Chief Justice gets 4,000 Rs per month, while the other judges 3,500 Rs The High Court is also a court of record and has power to punish for contempt of itself Judges of the High Court are appointed by the President after consultation with the Chief Justice of India, the Governor of the State and the Chief Justice of the High Court concerned A retired High Court Judge is not allowed to plead or act in any court or before any authority within the territory of India. A Judge from one High Court can be transferred to another High Court by the President, after consultation with the Chief Justice of India The Chief Justice of any High Court may, with the previous consent of the President, request any retired High Court Judge to sit and act as a judge of the High Court

The administration of the States in group two *e.g.* Hyderabad, is carried out in accordance with the provisions laid down with reference to the States in group one Instead of a Governor, these States have a Rajpramukh The States in group three have either a lieutenant-Governor or a Chief Commissioner through whom the President administers the State Provision for setting up legislatures and High Courts in such States may be made by Parliament As regards Andaman and Nicobar Islands, the President makes rules and regulation for the peace and good government of the State, and may appoint a Chief Commissioner for administration. The President has the power of making regulations which have the effect of amending or repealing an Act of Parliament

The Indian Constitution is not completely federal The Union Government controls the State governments in certain cases The Union has also the power to confer additional powers on the States. Provision is made for removing differences between the various States by empowering the President to establish an Inter-State Council

FINANCE

The financial relations between the Union and the States are as follows —There is a Consolidated Fund of India and a Consolidated Fund of each State, and all money received is credited to the public account of India or the public account of the State as the case may be. Provision is also made for the establishment of a 'Contingency Fund of India' and a 'Contingency Fund of the State' Certain duties and taxes are levied and collected by the Government of India, such as duties in respect of succession to property, terminal taxes taxes on railway fares and freights, etc But the net proceeds are assigned to the States, in accordance with such principles of distribution as formulated by the Parliament Certain other taxes, like income-tax are levied and collected by the Government of India, but are distributed between the Union and the States Surcharges, however go into the Union exchequer Parliament may fix for the year grants-in-aid to the States, that need help No moneys can be appropriated out of the Consolidated Fund of India or of a State except in accordance with an Appropriation Act by the appropriate legislature Provision is made for the setting up of a Finance Commission The Commission is to make recommendations to the President as to the distribution of net proceeds of taxes between the Union and the States, and the allocation among the States of the proceeds of the tax It is also to make recommendations as regards the principles that should govern the grants-in-aid out of the Consolidated Fund of India The property of the Union is exempt from the taxes imposed by a State, and the property and income of state are exempt from Union taxation The privy purse sums of the Rulers are a charge on the Consolidated Fund of India, and these sums are to be exempt from taxes on income

SERVICES

The legislatures are empowered to regulate the recruitment and conditions of service of persons appointed to public service Members of civil and defence services hold office during the pleasure of the President Reasonable opportunity is given to persons in the service to defend themselves, in case they are to be removed or dismissed Generally speaking, there is a Public Service Commission for the Union and also for each State Two or more States may agree to have only one Commission for the group Appointment of members of the Commission are made by the President or the Governor or Rajpramukh as the case may be The Commission conducts examinations for appointments to the services of the Union or the State The Union Commission submits an annual report to the President

ELECTIONS

Provision is made for the appointment of an Election Commission It is to consist of a Chief Election Commissioner and other members. All elections are to be directed and controlled by this Commission Elections to the House of the People and the Legislative Assemblies of the States are to be on the basis of adult suffrage. Seats are reserved in the House of the People for the scheduled castes and the scheduled tribes. The President may nominate not more than two members of the Anglo-Indian community to the House of the People if he thinks that the community is not adequately represented. Similar power is given to the Governor or the

Rajpramukh of a State. The claims of the scheduled castes and the scheduled tribes are to be considered in making appointments to services, and for two years after the commencement of the Constitution the Anglo-Indians are to have the same proportion in the services as they had immediately before 15th August 1947 This reservation is to be progressively reduced by 10 per cent every two years in such a way that it is to cease completely ten years after the commencement of the Constitution In fact all reservations including reservation of seats for scheduled and tribal classes are to cease ten years after the commencement of the Constitution

A special officer for the scheduled castes and the schedule tribes is to be appointed

OFFICIAL LANGUAGE

Hindi in the Devanagari script is the official language of the Union and the form of numerals is the international form of the Indian numerals The English language, however will continue to be the official language for a period of not more than fifteen years from the commencement of the Constitution The States have been given the liberty of adopting any one or more languages used in their territory or Hindi as the official language of the State The official language of the Union, *i e*, English will be used for communication between the Union and a State or between one State and another However if two States agree Hindi may be used instead of English between them A commission is to be appointed by the President, at the expiration of five years from the commencement of the Constitution, to make recommendations to him, as regards the progressive use of the Hindi language for official purposes of the Union, and other allied matters All proceedings in the Supreme Court and High Courts, the texts of Bills and Acts passed by the legislatures and ordinances promulgated by the appropriate authorities are to be in the English language, until Parliament by law provides otherwise By previous consent of the President proceedings in a High Court may be conducted in Hindi or any recognised State language but judgments, decrees or orders passed by the court must be in English

It is the duty of the Union Government to promote and spread the Hindi language The vocabulary for the development of the language is to be drawn primarily from Sanskrit The following languages are recognised by the Constitution (1) Assamese, (2) Bengali, (3) Gujarati, (4) Hindi, (5) Kannada, (6) Kashmiri, (7) Malayalam, (8) Marathi, (9) Oriya, (10) Punjabi, (11) Sanskrit, (12) Tamil, (13) Telugu, (14) Urdu.

EMERGENCY PROVISIONS

If the President is satisfied that a grave emergency exists, and the security of India or any part thereof is threatened either by war or internal disturbance, he may make a declaration to that effect Such proclamation must be approved by both the Houses of Parliament, before the expiration of two months, otherwise it ceases to operate at the end of that period As a result of this proclamation the Parliament will be authorised to legislate on items included in the State list and the President, to issue directions either to the Governor or the Rajpramukh as the case may be A request may also come from a State authority And if on the receipt of a report from a Governor or a Rajpramukh the President is satisfied that a situation has arisen in which the Government of the State cannot be carried on in accordance with the provisions of the Constitution, he may by proclamation assume to himself all or any of the functions of the Government of the State. This however would not be applicable to the functions of the High Courts Somewhat similar provisions is also made for financial emergency The proclamation of the President must be approved by Parliament, otherwise after two months it will cease to operate. Parliament can also validate a proclamation for a period of three years which is the maximum.

AMENDMENT OF THE CONSTITUTION

For the purposes of amendment the items are divided into two classes with a different procedure for each class For amendment of the provisions with respect to the Supreme Court and the High Courts, the distribution of legislative powers between the Centre and the States, the representation of the States in Parliament, etc, the amendment must be passed by both the Houses of Parliament by a majority of the total membership of the House and by a majority of two-thirds of the members present and voting, and must further be ratified by the legislatures of not less than one-half of the States In other cases no reference to the State legislatures is necessary Parliament by itself can amend the Constitution in the manner mentioned above

HISTORICAL SURVEY

The impulse which drove the British to the sub-continent was not conquest but trade. The Government of India represents the slow evolution from conditions established to meet trading requirements On September 24, 1599, a few years before the deaths of Queen Elizabeth and Akbar, the merchants of London formed an association for the purpose of establishing direct trade with the East and were granted a charter of incorporation. The government of this Company in England was vested in a Governor with a General Court of Proprietors and a Court of Directors. The factories and affairs of the Company on the east and west coasts of the sub-continent, and in the Bengal area, were administered at each of the principal settlements of Madras (Fort St George), Bombay and Calcutta (Fort William), by a President or Governor and a Council consisting of the senior servants of the Company. The three "Presidencies" were independent of each other and subordinate only to the Directors in England.

The collapse of government in the sub-continent consequent on the decay of Moghul power and the presence of the French on the east coast forced the officers of the Company to assume territorial responsibility in spite of their own desires and the insistent orders of the Directors. Step by step the Company became first the dominant, then the paramount power.

In these changed circumstances the system of Government by mutually independent and unwieldy councils of the merchants at the Presidency towns gave rise to grave abuses. Parliament intervened, and under the Regulating Act of 1773, a Governor-General and four councillors were appointed to administer the Presidency of Fort William (Bengal), and the supremacy of that Presidency over Madras and Bombay was for the first time established. The subordinate Presidencies were forbidden to wage war or make treaties without the previous consent of the Governor-General of Bengal in Council, except in cases of imminent necessity.

Pitt's Act of 1784, which established the Board of Control in England, vested the administration of each of the three Presidencies in a Governor and three councillors, including the Commander-in-Chief of the Presidency Army. The control of the Governor-General-in-Council was somewhat extended again by the Charter Act of 1793.

Under the Charter Act of 1833 the Company was compelled to close its commercial business and it became a political and administrative body holding its territories in trust for the Crown. The same Act vested the direction of the entire civil and military administration and sole power of legislation in the Governor-General-in-Council, and defined more clearly the nature and extent of the control to be extended over the subordinate governments.

After the outbreak of 1857, there was passed, in 1858, an Act transferring the Government of India from the Company to the Crown. This Act made no important change in the administration in the sub-continent, but the Governor-General, as representing the Crown, became known as the Viceroy. The Governor-General was the sole representative of the Crown; he was assisted by a Council, composed of high officials, each of whom was responsible for a special department of the administration.

The distribution of these great functions between the Central Government and the provincial administrations fluctuated from time to time It was definitely regulated by the Reform Act of 1919, and the democratic principle then widely implanted was further developed in the constitutions for the Provinces and the Centre enacted by the British Parliament in 1935

Great changes were made in the system of government in British India by the Government of India Act, 1919, which, together with the rules framed under it—almost as important in their provisions as the Act itself—came into general operation in January 1921, having received the Royal Assent on 23rd December 1919. (For detailed treatment see *The Indian Year Book*, 1936-37 and preceding years).

Still vaster changes in the direction of Indian self-government and of Dominion Status were brought about by the Government of India Act, 1935, which received the Royal Assent on 2nd August 1935. The new Act embodied two main principles—(1) Provincial Autonomy, with a Government responsible to an elected Legislature in every Province, and (2) at the centre a dyarchic form of Government, based on a federation of British Indian Provinces and Indian States Detailed provisions for the whole scheme were made in the Act of 1935, which included 321 sections and 10 schedules and was the largest and most complex legislative enactment of the kind ever negotiated on to a statute book till that time

Formally inaugurated in April 1937, the provincial part of the new constitution of 1935 functioned for about two and a half years with a fair amount of smoothness, but at the end of that period it broke down in seven out of the eleven provinces because of the resignation of their office by the Congress Ministries on the war issue Thereupon the Governors of those provinces assumed sole charge of the Administration aided by Advisers responsible to them The constitution remained virtually suspended in those provinces

At the end of the war Congress Ministries were re-established in eight provinces and in another (the Punjab) the Congress participated in a coalition

The federal part of the constitution could not be inaugurated according to plan owing to diverse factors—the difficulties experienced by the Princes in acceding to Federation except on the fulfilment of certain conditions, the internal, political and communal differences in British India and, above all, by the declaration of war which militated against any major changes in the governmental machinery at the Centre

The Viceroy offered to increase the size of the Executive Council, in August 1940, with a view to including additional popular representatives But it was not accepted by the major political parties However the Executive Council was reorganised in July 1941 As a result of this, the official majority disappeared and the principle of joint responsibility for all the business that came before it was introduced.

CABINET MISSION PLAN

Soon after the Labour Government took office in 1945 it initiated measures to end the political deadlock They first sent out a Parliamentary Delegation consisting of eight members to ascertain the views of Indian leaders and convey to them the broad general attitude of the political parties in Britain Later the British Government sent out a Cabinet Mission consisting of Lord Pethwick-Lawrence, Sir Stafford Cripps and A. V. Alexander who were authorised by the Cabinet to negotiate and settle within the broad framework of the British Government's policy the constitutional and political problems of India in association with the Viceroy.

After prolonged consultations which showed that there was no agreement among the two major political parties on such fundamental issues as one State or two, the Cabinet Mission formulated its own proposals for the setting up of a machinery to draw a constitution for the sub-continent.

At the outset the mission flatly declared that they were against the division of the sub-continent into two independent States but at the same time recognized the need for meeting the point of view of the Muslim League.

Inevitably the proposals took the form of a compromise both as regards the nature of the final constitution as well as of the machinery for drafting it. Broadly speaking, the Mission suggested what has been called a three-tier constitution consisting of a Union centre, the Provinces, and an intermediate authority formed by grouping contiguous Provinces according to a certain pattern.

The procedure for drafting such a constitution was also outlined

INTERIM GOVERNMENT

India also needed a new Government having popular support to carry through some of the heavy tasks with which the Administration was faced So the Cabinet Mission also proposed that while the Constitution-making proceeded, an interim Government consisting of leaders drawn from the major political parties was to be immediately formed.

Such, in outline were the main recommendation of the Cabinet Mission to help solve the political problem Neither the Congress nor the League gave these recommendations wholehearted acceptance After prolonged negotiations conducted by the Viceroy however the Congress agreed to accept office and an Interim Government was formed on Sept 2 (1946) But the League continued to stand out and violent demonstrations occurred all over the country The Viceroy followed up with further negotiations and, at last the League too agreed to join the Government (October 15), but refused to co-operate with the work of the Constituent Assembly on the ground that the Congress had not really accepted the Mission proposals in regard to certain points in the procedure.

One way of trying to make the two sides agree was for Britain to declare that she would leave India by a certain fixed time regardless of whether the two sides had come to an agreement or not by then This Britain at last did through an announcement made by the Prime Minister in Parliament The date fixed by the British Government for withdrawal was June, 1948.

PARTITION

This declaration did not by any means put an end to conflict For though the British offered to withdraw they did not say to whom power was to be transferred in any particular area in case no agreement had meanwhile been reached among the major parties in the country Worse still, there followed a mad struggle for power through mass movement in such of those Provinces as had a Muslim majority and a non-Muslim League Government A mass movement in Assam too appeared to be imminent Matters had undoubtedly come to a head and if an explosion was to be avoided yet another attempt had to be made to bring the two parties together and agree on a common solution The instrument through which a common solution was at last reached was the person of Lord Mountbatten who had meanwhile taken the place of Lord Wavell as Viceroy and Governor-General (March 24, 1947) As soon as he assumed office Lord Mountbatten opened fresh negotiations with the Congress and the League and after prolonged talks with both sides succeeded in bringing about an agreement based on the division of India, the partition of the Punjab, Bengal and Assam, and the early transfer of complete power on the basis of Dominion Status. The procedure to be followed for dividing the country was simultaneously announced in London and in India on June 3.

CONSTITUENT ASSEMBLY

The terms relating to independence announced by Lord Mountbatten were embodied in an Act called the Indian Independence Act which was introduced into Parliament on July 5, passed on July 15 and became law at 10 45 A M. on July 18.

The Act established two independent Dominions, called India and Pakistan as from August 15, 1947 and transferred all power and authority in the respective areas to the Constituent Assembly of India which was already in existence and the Constituent Assembly of Pakistan which was yet to be formed.

The Constituent Assembly of India was to exercise the powers of the Legislature of the Dominion, in addition to the work of constitution-making The Government of India Act, 1935 was to be amended either by the Governor-General by order or by the Constituent Assembly which became a sovereign body on August 15, 1947 The administration was to be carried on in accordance with the provisions of this amended Act Paramountcy lapsed and the Princes were free, either to accede to one of the two Dominions or to remain independent The parliamentary system of Government was introduced in the provinces and at the Centre The Governor-General and the Governors became constitutional heads and the cabinet became responsible to the Legislature.

During all this period the Constituent Assembly, which had first met on December 9, 1946 (and later joined by representatives from States), was busy framing a constitution for India. A Draft containing 243 Articles and 13 Schedules was prepared by the Constitutional Adviser, Sir B N Rau However, subsequently a Drafting Committee was appointed by the Constituent Assembly with Dr B R Ambedkar as Chairman Besides the Chairman the Committee consisted of the following Mr N Gopalaswamy Ayyangar, Mr K M Munshi, Saiyid Mohamad Saadula, Mr N Madhava Rao and D P Khaitan The Committee was asked to submit a draft, consistent with the resolutions passed and recommendation made by the Constituent Assembly This the Committee did on February 21, 1948 The Assembly then under the Presidentship of Dr. Rajendra Prasad went into the draft constitution clause by clause There were in all eleven sessions of the Assembly, which sat for 165 days It took 2 years, 11 months and 18 days to complete the work The Draft Constitution had contained 315 Articles and 8 Schedules, and as many as 2,473 amendments were moved before the Constitution was finally adopted on 26th November 1949 The new Constitution contains 395 Articles and 8 Schedules It was inaugurated on January 26, 1950

The full text of the new constitution Act is given overleaf.

THE CONSTITUTION OF INDIA

[The following is the full text of the Constitution of the Indian Union as passed by the Indian Constituent Assembly on November 26, 1949.

The number at the head of a paragraph is the number of the article as it appears in the Constitution]

PREAMBLE

WE, THE PEOPLE OF INDIA, having solemnly resolved to constitute India into a SOVEREIGN DEMOCRATIC REPUBLIC and to secure to all its citizens

JUSTICE, social, economic and political,

LIBERTY of thought, expression, belief, faith and worship,

EQUALITY of status and of opportunity,

and to promote among them all

FRATERNITY assuring the dignity of the individual and the unity of the Nation

IN OUR CONSTITUENT ASSEMBLY this twenty-sixth day of November, 1949, DO HEREBY ADOPT, ENACT AND GIVE TO OURSELVES THIS CONSTITUTION.

PART I.

THE UNION AND ITS TERRITORY

1. (1) India, that is Bharat, shall be a Union of States

(2) The States and the territories thereof shall be the States and their territories specified in Parts A, B and C of the First Schedule

(3) The territory of India shall comprise—

(*a*) the territories of the States,

(*b*) the territories specified in Part D of the First Schedule, and

(*c*) such other territories as may be acquired

2. Parliament may by law admit into the Union, or establish, new States on such terms and conditions as it thinks fit

3. Parliament may by law—

(*a*) form a new State by separation of territory from any State or by uniting two or more States or parts of States or by uniting any territory to a part of any State;

(*b*) increase the area of any State,

(*c*) diminish the area of any State,

(*d*) alter the boundaries of any State,

(*e*) alter the name of any State:

Provided that no Bill for the purpose shall be introduced in either House of Parliament except on the recommendation of the President and unless, where the proposal contained in the Bill affects the boundaries of any State or States specified in Part A or Part B of the First Schedule or the name or names of any such State or States, the views of the Legislature of the State or, as the case may be, of each of the States both with respect to the proposal to introduce the Bill and with respect to the provisions thereof have been ascertained by the President

4. (1) Any law referred to in article 2 or article 3 shall contain such provisions for the amendment of the First Schedule and the Fourth Schedule as may be necessary to give effect to the provisions of the law and may also contain such supplemental, incidental and consequential provisions (including provisions as to representation in Parliament and in the Legislature or Legislatures of the State or States affected by such law) as Parliament may deem necessary.

(2) No such law as aforesaid shall be deemed to be an amendment of this Constitution for the purposes of article 368.

PART II.

CITIZENSHIP

5. At the commencement of this Constitution, every person who has his domicile in the territory of India and—

(*a*) who was born in the territory of India; or

(*b*) either of whose parents was born in the territory of India; or

(*c*) who has been ordinarily resident in the territory of India for not less than five years immediately preceding such commencement,

shall be a citizen of India.

6. Notwithstanding anything in article 5, a person who has migrated to the territory of India from the territory now included in Pakistan shall be deemed to be a citizen of India at the commencement of this Constitution if—

(*a*) he or either of his parents or any of his grand-parents was born in India as defined in the Government of India Act, 1935 (as originally enacted), and

(*b*) (*i*) in the case where such person has so migrated before the nineteenth day of July, 1948, he has been ordinarily resident in the territory of India since the date of his migration, or

(*ii*) in the case where such person has so migrated on or after the nineteenth day of July, 1948, he has been registered as a citizen of India by an officer appointed in that behalf by the Government of the Dominion of India on an application made by him therefor to such officer before the commencement of this Constitution in the form and manner prescribed by that Government

Provided that no person shall be so registered unless he has been resident in the territory of India for at least six months immediately preceding the date of his application

7. Notwithstanding anything in articles 5 and 6, a person who has after the first day of March, 1947, migrated from the territory of India to the territory now included in Pakistan shall not be deemed to be a citizen of India

Provided that nothing in this article shall apply to a person who, after having so migrated to the territory now included in Pakistan, has returned to the territory of India under a permit for resettlement or permanent return issued by or under the authority of any law and every such person shall for the purposes of clause (*b*) of article 6 be deemed to have migrated to the territory of India after the nineteenth day of July, 1948

8. Notwithstanding anything in article 5, any person who or either of whose parents or any of whose grand-parents was born in India as defined in the Government of India Act, 1935 (as originally enacted), and who is ordinarily residing in any country outside India as so defined shall be deemed to be a citizen of India if he has been registered as a citizen of India by the diplomatic or consular representative of India in the country where he is for the time being residing on an application made by him therefor to such diplomatic or consular representative, whether before or after the commencement of this Constitution, in the form and manner prescribed by the Government of the Dominion of India or the Government of India

9. No person shall be a citizen of India by virtue of article 5, or be deemed to be a citizen of India by virtue of article 6 or article 8, if he has voluntarily acquired the citizenship of any foreign State.

10. Every person who is or is deemed to be a citizen of India under any of the foregoing provisions of this Part shall, subject to the provisions of any law that may be made by Parliament, continue to be such citizen.

11. Nothing in the foregoing provisions of this Part shall derogate from the power of Parliament to make any provision with respect to the acquisition and termination of citizenship and all other matters relating to citizenship.

PART III.

FUNDAMENTAL RIGHTS

GENERAL

12. In this Part, unless the context otherwise requires, "the State" includes the Government and Parliament of India and the Government and the Legislature of each of the States and all local or other authorities within the territory of India or under the control of the Government of India.

13. (1) All laws in force in the territory of India immediately before the commencement of this Constitution, in so far as they are inconsistent with the provisions of this Part, shall, to the extent of such inconsistency, be void.

(2) The State shall not make any law which takes away or abridges the rights conferred by this Part and any law made in contravention of this clause shall, to the extent of the contravention, be void

(3) In this article, unless the context otherwise requires—

(*a*) "law" includes any Ordinance, order, bye-law, rule, regulation, notification, custom or usage having in the territory of India the force of law,

(*b*) "laws in force" includes laws passed or made by a Legislature or other competent authority in the territory of India before the commencement of this Constitution and not previously repealed, notwithstanding that any such law or any part thereof may not be then in operation either at all or in particular areas

RIGHT TO EQUALITY

14. The State shall not deny to any person equality before the law or the equal protection of the laws within the territory of India.

15. (1) The State shall not discriminate against any citizen on grounds only of religion, race, caste, sex, place of birth or any of them.

(2) No citizen shall, on grounds only of religion, race, caste, sex, place of birth or any of them, be subject to any disability, liability, restriction or condition with regard to—

(*a*) access to shops, public restaurants, hotels and places of public entertainment, or

(*b*) the use of wells, tanks, bathing ghats, roads and places of public resort maintained wholly or partly out of State funds or dedicated to the use of the general public

(3) Nothing in this article shall prevent the State from making any special provision for women and children.

16. (1) There shall be equality of opportunity for all citizens in matters relating to employment or appointment to any office under the State

(2) No citizen shall, on grounds only of religion, race, caste, sex, descent, place of birth, residence or any of them, be ineligible for, or discriminated against in respect of, any employment or office under the State.

(3) Nothing in this article shall prevent Parliament from making any law prescribing, in regard to a class or classes of employment or appointment to an office under any State specified in the First Schedule or any local or other authority within its territory, any requirement as to residence within that State prior to such employment or appointment.

(4) Nothing in this article shall prevent the State from making any provision for the reservation of appointments or posts in favour of any backward class of citizens which, in the opinion of the State, is not adequately represented in the services under the State.

(5) Nothing in this article shall affect the operation of any law which provides that the incumbent of an office in connection with the affairs of any religious or denominational institution or any member of the governing body thereof shall be a person professing a particular religion or belonging to a particular denomination.

17. "Untouchability" is abolished and its practice in any form is forbidden The enforcement of any disability arising out of "Untouchability" shall be an offence punishable in accordance with law.

18. (1) No title, not being a military or academic distinction, shall be conferred by the State

(2) No citizen of India shall accept any title from any foreign State.

(3) No person who is not a citizen of India shall, while he holds any office of profit or trust under the State, accept without the consent of the President any title from any foreign State.

(4) No person, holding any office of profit or trust under the State shall, without the consent of the President, accept any present, emolument, or office of any kind from or under any foreign State.

RIGHT TO FREEDOM

19. (1) All citizens shall have the right—

(*a*) to freedom of speech and expression,

(*b*) to assemble peaceably and without arms,

(*c*) to form associations or unions,

(*d*) to move freely throughout the territory of India,

(*e*) to reside and settle in any part of the territory of India,

(*f*) to acquire, hold and dispose of property, and

(*g*) to practise any profession, or to carry on any occupation, trade or business.

(2) Nothing in sub-clause (*a*) of clause (1) shall affect the operation of any existing law in so far as it relates to, or prevent the State from making any law relating to, libel, slander, defamation, contempt of court or any matter which offends against decency or morality or which undermines the security of, or tends to overthrow, the State.

(3) Nothing in sub-clause (*b*) of the said clause shall affect the operation of any existing law in so far as it imposes, or prevent the State from making any law imposing, in the interests of public order, reasonable restrictions on the exercise of the right conferred by the said sub-clause.

(4) Nothing in sub-clause (*c*) of the said clause shall affect the operation of any existing law in so far as it imposes, or prevent the State from making any law imposing, in the interests of public order or morality, reasonable restrictions on the exercise of the right conferred by the said sub-clause.

(5) Nothing in sub-clauses (*d*), (*e*) and (*f*) of the said clause shall affect the operation of any existing law in so far as it imposes, or prevent the State from making any law imposing, reasonable restrictions on the exercise of any of the rights conferred by the said sub-clauses either in the interests of the general public or for the protection of the interests of any Scheduled Tribe.

(6) Nothing in sub-clause (*g*) of the said clause shall affect the operation of any existing law in so far as it imposes, or prevent the State from making any law imposing, in the interests of the general public, reasonable restrictions on the exercise of the right conferred by the said sub-clause, and, in particular, nothing in the said sub-clause shall affect the operation of any existing law in so far as it prescribes or empowers any authority to prescribe, or prevent the State from making any law prescribing or empowering any authority to prescribe, the professional or technical qualifications necessary for practising any profession or carrying on any occupation, trade or business.

20. (1) No person shall be convicted of any offence except for violation of a law in force at the time of the commission of the act charged as an offence, nor be subjected to a penalty greater than that which might have been inflicted under the law in force at the time of the commission of the offence.

(2) No person shall be prosecuted and punished for the same offence more than once.

(3) No person accused of any offence shall be compelled to be a witness against himself

21. No person shall be deprived of his life or personal liberty except according to procedure established by law.

22. (1) No person who is arrested shall be detained in custody without being informed, as soon as may be, of the grounds for such arrest nor shall he be denied the right to consult, and to be defended by, a legal practitioner of his choice

(2) Every person who is arrested and detained in custody shall be produced before the nearest magistrate within a period of twenty-four hours of such arrest excluding the time necessary for the journey from the place of arrest to the court of the magistrate and no such person shall be detained in custody beyond the said period without the authority of a magistrate

(3) Nothing in clauses (1) and (2) shall apply—

(*a*) to any person who for the time being is an enemy alien, or

(*b*) to any person who is arrested or detained under any law providing for preventive detention.

(4) No law providing for preventive detention shall authorise the detention of a person for a longer period than three months unless—

(*a*) an Advisory Board consisting of persons who are, or have been, or are qualified to be appointed as, Judges of a High Court has reported before the expiration of the said period of three months that there is in its opinion sufficient cause for such detention

Provided that nothing in this sub-clause shall authorise the detention of any person beyond the maximum period prescribed by any law made by Parliament under sub-clause (*b*) of clause (7), or

(*b*) such person is detained in accordance with the provisions of any law made by Parliament under sub-clauses (*a*) and (*b*) of clause (7)

(5) When any person is detained in pursuance of an order made under any law providing for preventive detention, the authority making the order shall, as soon as may be, communicate to such person the grounds on which the order has been made and shall afford him the earliest opportunity of making a representation against the order

(6) Nothing in clause (5) shall require the authority making any such order as is referred to in that clause to disclose facts which such authority considers to be against the public interest to disclose.

(7) Parliament may by law prescribe—

(*a*) the circumstances under which, and the class or classes of cases in which, a person may be detained for a period longer than three months under any law providing for preventive detention without obtaining the opinion of an Advisory Board in accordance with the provisions of sub-clause (*a*) of clause (4),

(*b*) the maximum period for which any person may in any class or classes of cases be detained under any law providing for preventive detention, and

(*c*) the procedure to be followed by an Advisory Board in an inquiry under sub-clause (*a*) of clause (4)

RIGHT AGAINST EXPLOITATION

23. (1) Traffic in human beings and *begar* and other similar forms of forced labour are prohibited and any contravention of this provision shall be an offence punishable in accordance with law

(2) Nothing in this article shall prevent the State from imposing compulsory service for public purposes, and in imposing such service the State shall not make any discrimination on grounds only of religion, race, caste or class or any of them.

24. No child below the age of fourteen years shall be employed to work in any factory or mine or engaged in any other hazardous employment.

RIGHT TO FREEDOM OF RELIGION

25. (1) Subject to public order, morality and health and to the other provisions of this Part, all persons are equally entitled to freedom of conscience and the right freely to profess, practise and propagate religion

(2) Nothing in this article shall affect the operation of any existing law or prevent the State from making any law—

(*a*) regulating or restricting any economic, financial, political or other secular activity which may be associated with religious practice,

(*b*) providing for social welfare and reform or the throwing open of Hindu religious institutions of a public character to all classes and sections of Hindus

Explanation I—The wearing and carrying of *kirpans* shall be deemed to be included in the profession of the Sikh religion.

Explanation II—In sub-clause (*b*) of clause (2), the reference to Hindus shall be construed as including a reference to persons professing the Sikh, Jaina or Buddhist religion, and the reference to Hindu religious institutions shall be construed accordingly.

26. Subject to public order, morality and health, every religious denomination or any section thereof shall have the right—

(*a*) to establish and maintain institutions for religious and charitable purposes;

(*b*) to manage its own affairs in matters of religion;

(*c*) to own and acquire movable and immovable property; and

(*d*) to administer such property in accordance with law.

27. No person shall be compelled to pay any taxes, the proceeds of which are specifically appropriated in payment of expenses for the promotion or maintenance of any particular religion or religious denomination.

28. (1) No religious instruction shall be provided in any educational institution wholly maintained out of State funds.

(2) Nothing in clause (1) shall apply to an educational institution which is administered by the State but has been established under any endowment or trust which requires that religious instruction shall be imparted in such institution.

(3) No person attending any educational institution recognised by the State or receiving aid out of State funds shall be required to take part in any religious instruction that may be imparted in such institution or to attend any religious worship that may be conducted in such institution or in any premises attached thereto unless such person or, if such person is a minor, his guardian has given his consent thereto.

CULTURAL AND EDUCATIONAL RIGHTS

29. (1) Any section of the citizens residing in the territory of India or any part thereof having a distinct language, script or culture of its own shall have the right to conserve the same

(2) No citizen shall be denied admission into any educational institution maintained by the State or receiving aid out of State funds on grounds only of religion, race, caste, language or any of them.

30. (1) All minorities, whether based on religion or language, shall have the right to establish and administer educational institutions of their choice.

(2) The State shall not, in granting aid to educational institutions, discriminate against any educational institution on the ground that it is under the management of a minority, whether based on religion or language.

RIGHT TO PROPERTY

31. (1) No person shall be deprived of his property save by authority of law

(2) No property, movable or immovable, including any interest in, or in any company owning, any commercial or industrial undertaking, shall be taken possession of or acquired for public purposes under any law authorising the taking of such possession or such acquisition, unless the law provides for compensation for the property taken possession of or acquired and either fixes the amount of the compensation, or specifies the principles on which, and the manner in which, the compensation is to be determined and given

(3) No such law as is referred to in clause (2) made by the Legislature of a State shall have effect unless such law, having been reserved for the consideration of the President, has received his assent.

(4) If any Bill pending at the commencement of this Constitution in the Legislature of a State has, after it has been passed by such Legislature, been reserved for the consideration of the President and has received his assent, then, notwithstanding anything in this Constitution, the law so assented to shall not be called in question in any court on the ground that it contravenes the provisions of clause (2)

(5) Nothing in clause (2) shall affect—

(*a*) the provision of any existing law other than a law to which the provisions of clause (6) apply, or

(*b*) the provisions of any law which the State may hereafter make—

(*i*) for the purpose of imposing or levying any tax or penalty, or

(*ii*) for the promotion of public health or the prevention of danger to life or property, or

(*iii*) in pursuance of any agreement entered into between the Government of the Dominion of India or the Government of India and the Government of any other country, or otherwise, with respect to property declared by law to be evacuee property

(6) Any law of the State enacted not more than eighteen months before the commencement of this Constitution may within three months from such commencement be submitted to the President for his certification, and thereupon, if the President by public notification so certifies, it shall not be called in question in any court on the ground that it contravenes the provisions of clause (2) of this article or has contravened the provisions of sub-section (2) of section 299 of the Government of India Act, 1935

RIGHT TO CONSTITUTIONAL REMEDIES

32. (1) The right to move the Supreme Court by appropriate proceedings for the enforcement of the rights conferred by this Part is guaranteed

(2) The Supreme Court shall have power to issue directions or orders or writs, including writs in the nature of *habeas corpus*, *mandamus*, prohibition, *quo warranto* and *certiorari*, whichever may be appropriate, for the enforcement of any of the rights conferred by this Part

(3) Without prejudice to the powers conferred on the Supreme Court by clauses (1) and (2), Parliament may by law empower any other court to exercise within the local limits of its jurisdiction all or any of the powers exercisable by the Supreme Court under clause (2).

(4) The right guaranteed by this article shall not be suspended except as otherwise provided for by this Constitution

33. Parliament may by law determine to what extent any of the rights conferred by this Part shall, in their application to the members of the Armed Forces or the Forces charged with the maintenance of public order, be restricted or abrogated so as to ensure the proper discharge of their duties and the maintenance of discipline among them

34. Notwithstanding anything in the foregoing provisions of this Part, Parliament may by law indemnify any person in the service of the Union or of a State or any other person in respect of any act done by him in connection with the maintenance or restoration of order in any area within the territory of India where martial law was in force or validate any sentence passed, punishment inflicted, forfeiture ordered or other act done under martial law in such area

35. Notwithstanding anything in this Constitution—

(*a*) Parliament shall have, and the Legislature of a State shall not have, power to make laws—

(*i*) with respect to any of the matters which under clause (3) of article 16, clause (3) of article 32, article 33 and article 34 may be provided for by law made by Parliament, and

(*ii*) for prescribing punishment for those acts which are declared to be offences under this Part,

and Parliament shall, as soon as may be after the commencement of this Constitution, make laws for prescribing punishment for the acts referred to in sub-clause (*ii*),

(*b*) any law in force immediately before the commencement of this Constitution in the territory of India with respect to any of the matters referred to in sub-clause (*i*) of clause (*a*) or providing for punishment for any act referred to in sub-clause (*ii*) of that clause shall, subject to the terms thereof and to any adaptations and modifications that may be made therein under article 372, continue in force until altered or repealed or amended by Parliament

Explanation—In this article, the expression "law in force" has the same meaning as in article 372

PART IV

DIRECTIVE PRINCIPLES OF STATE POLICY

36. In this Part, unless the context otherwise requires, "the State" has the same meaning as in Part III.

37. The provisions contained in this Part shall not be enforceable by any court, but the principles therein laid down are nevertheless fundamental in the governance of the country and it shall be the duty of the State to apply these principles in making laws.

38. The State shall strive to promote the welfare of the people by securing and protecting as effectively as it may a social order in which justice, social, economic and political, shall inform all the institutions of the national life

39. The State shall, in particular, direct its policy towards securing—

(*a*) that the citizens, men and women equally, have the right to an adequate means of livelihood

(*b*) that the ownership and control of the material resources of the community are so distributed as best to subserve the common good;

(*c*) that the operation of the economic system does not result in the concentration of wealth and means of production to the common detriment,

(*d*) that there is equal pay for equal work for both men and women,

(*e*) that the health and strength of workers, men and women, and the tender age of children are not abused and that citizens are not forced by economic necessity to enter avocations unsuited to their age or strength,

(*f*) that childhood and youth are protected against exploitation and against moral and material abandonment

40. The State shall take steps to organise village panchayats and endow them with such powers and authority as may be necessary to enable them to function as units of self-government.

41. The State shall, within the limits of its economic capacity and development, make effective provision for securing the right to work, to education and to public assistance in cases of unemployment, old age, sickness and disablement, and in other cases of undeserved want.

42. The State shall make provision for securing just and humane conditions of work and for maternity relief.

43. The State shall endeavour to secure, by suitable legislation or economic organisation or in any other way, to all workers, agricultural, industrial or otherwise, work, a living wage, conditions of work ensuring a decent standard of life and full enjoyment of leisure and social and cultural opportunities and, in particular, the State shall endeavour to promote cottage industries on an individual or co-operative basis in rural areas

44. The State shall endeavour to secure for the citizens a uniform civil code throughout the territory of India

45. The State shall endeavour to provide, with a period of ten years from the commencement of this Constitution, for free and compulsory education for all children until they complete the age of fourteen years.

46. The State shall promote with special care the educational and economic interests of the weaker sections of the people, and, in particular, of the Scheduled Castes and the Scheduled Tribes, and shall protect them from social injustice and all forms of exploitation

47. The State shall regard the raising of the level of nutrition and the standard of living of its people and the improvement of public health as among its primary duties and, in particular, the State shall endeavour to bring about prohibition of the consumption except for medicinal purposes of intoxicating drinks and of drugs which are injurious to health

48. The State shall endeavour to organise agriculture and animal husbandry on modern and scientific lines and shall, in particular, take steps for preserving and improving the breeds, and prohibiting the slaughter, of cows and calves and other milch and draught cattle.

49. It shall be the obligation of the State to protect every monument or place or object of artistic or historic interest, declared by Parliament by law to be of national importance, from spoliation, disfigurement, destruction, removal, disposal or export, as the case may be.

50. The State shall take steps to separate the judiciary from the executive in the public services of the State.

51. The State shall endeavour to—

(*a*) promote international peace and security

(*b*) maintain just and honourable relations between nations,

(*c*) foster respect for international law and treaty obligations in the dealings of organised peoples with one another, and

(*d*) encourage settlement of international disputes by arbitration

PART V—THE UNION

CHAPTER I—THE EXECUTIVE

THE PRESIDENT

52. There shall be a President of India.

53. (1) The executive power of the Union shall be vested in the President and shall be exercised by him either directly or through officers subordinate to him in accordance with this Constitution

(2) Without prejudice to the generality of the foregoing provision, the supreme command of the Defence Forces of the Union shall be vested in the President and the exercise thereof shall be regulated by law

(3) Nothing in this article shall—

(*a*) be deemed to transfer to the President any functions conferred by any existing law on the Government of any State or other authority, or

(*b*) prevent Parliament from conferring by law functions on authorities other than the President

54. The President shall be elected by the members of an electoral college consisting of—

(*a*) the elected members of both Houses of Parliament, and

(*b*) the elected members of the Legislative Assemblies of the States

55. (1) As far as practicable, there shall be uniformity in the scale of representation of the different States at the election of the President

(2) For the purpose of securing such uniformity among the States *inter se* as well as parity between the States as a whole and the Union, the number of votes which each elected member of Parliament and of the Legislative Assembly of each State is entitled to cast at such election shall be determined in the following manner —

(*a*) every elected member of the Legislative Assembly of a State shall have as many votes as there are multiples of one thousand in the quotient obtained by dividing the population of the State by the total number of the elected members of the Assembly;

(*b*) if, after taking the said multiples of one thousand, the remainder is not less than five hundred, then the vote of each member referred to in sub-clause (*a*) shall be further increased by one,

(*c*) each elected member of either House of Parliament shall have such number of votes as may be obtained by dividing the total number of votes assigned to the members of the Legislative Assemblies of the States under sub-clauses (*a*) and (*b*) by the total number of the elected members of both Houses of Parliament, fractions exceeding one-half being counted as one and other fractions being disregarded

(3) The election of the President shall be held in accordance with the system of proportional representation by means of the single transferable vote and the voting at such election shall be by secret ballot

Explanation.—In this article, the expression "population" means the population as ascertained at the last preceding census of which the relevant figures have been published.

56. (1) The President shall hold office for a term of five years from the date on which he enters upon his office.

Provided that—

(*a*) the President may, by writing under his hand addressed to the Vice-President, resign his office,

(*b*) the President may, for violation of the Constitution, be removed from office by impeachment in the manner provided in article 61,

(*c*) the President shall, notwithstanding the expiration of his term, continue to hold office until his successor enters upon his office

(2) Any resignation addressed to the Vice-President under clause (*a*) of the proviso to clause (1) shall forthwith be communicated by him to the Speaker of the House of the People

57. A person who holds, or who has held, office as President shall, subject to the other provisions of this Constitution, be eligible for re-election to that office

58. (1) No person shall be eligible for election as President unless he—

(*a*) is a citizen of India,

(*b*) has completed the age of thirty-five years, and

(*c*) is qualified for election as a member of the House of the People

(2) A person shall not be eligible for election as President if he holds any office of profit under the Government of India or the Government of any State or under any local or other authority subject to the control of any of the said Governments

Explanation —For the purposes of this article, a person shall not be deemed to hold any office of profit by reason only that he is the President or Vice-President of the Union or the Governor or Rajpramukh or Uparajpramukh of any State or is a Minister either for the Union or for any State

59. (1) The President shall not be a member of either House of Parliament or of a House of the Legislature of any State, and if a member of either House of Parliament or of a House of the Legislature of any State be elected President, he shall be deemed to have vacated his seat in that House on the date on which he enters upon his office as President

(2) The President shall not hold any other office of profit

(3) The President shall be entitled without payment of rent to the use of his official residences and shall be also entitled to such emoluments, allowances and privileges as may be determined by Parliament by law and, until provision in that behalf is so made, such emoluments, allowances and privileges as are specified in the Second Schedule.

(4) The emoluments and allowances of the President shall not be diminished during his term of office

60. Every President and every person acting as President or discharging the functions of the President shall, before entering upon his office, make and subscribe in the presence of the Chief Justice of India or, in his absence, the seniormost Judge of the Supreme Court available, an oath or affirmation in the following form, that is to say—

"I, A B, do $\frac{\text{swear in the name of God}}{\text{solemnly affirm}}$ that I will faithfully execute the office of President (or discharge the functions of the President) of India and will to the best of my ability preserve, protect and defend the Constitution and the law and that I will devote myself to the service and well-being of the people of India."

61. (1) When a President is to be impeached for violation of the Constitution, the charge shall be preferred by either House of Parliament.

(2) No such charge shall be preferred unless—

(*a*) the proposal to prefer such charge is contained in a resolution which has been moved after at least fourteen days' notice in writing signed by not less than one-fourth of the total number of members of the House has been given of their intention to move the resolution, and

(*b*) such resolution has been passed by a majority of not less than two-thirds of the total membership of the House.

(3) When a charge has been so preferred by either House of Parliament, the other House shall investigate the charge or cause the charge to be investigated and the President shall have the right to appear and to be represented at such investigation

(4) If as a result of the investigation a resolution is passed by a majority of not less than two-thirds of the total membership of the House by which the charge was investigated or caused to be investigated, declaring that the charge preferred against the President has been sustained, such resolution shall have the effect of removing the President from his office as from the date on which the resolution is so passed

62. (1) An election to fill a vacancy caused by the expiration of the term of office of President shall be completed before the expiration of the term.

(2) An election to fill a vacancy in the office of President occurring by reason of his death, resignation or removal or otherwise shall be held as soon as possible after, and in no case later than six months from, the date of occurrence of the vacancy, and the person elected to fill the vacancy shall, subject to the provisions of article 56, be entitled to hold office for the full term of five years from the date on which he enters upon his office.

VICE-PRESIDENT

63. There shall be a Vice-President of India.

64. The Vice-President shall be *ex-officio* Chairman of the Council of States and shall not hold any other office of profit

Provided that during any period when the Vice-President acts as President or discharges the functions of the President under article 65, he shall not perform the duties of the office of Chairman of the Council of States and shall not be entitled to any salary or allowance payable to the Chairman of the Council of States under article 97

65. (1) In the event of the occurrence of any vacancy in the office of the President by reason of his death, resignation or removal, or otherwise, the Vice-President shall act as President until the date on which a new President elected in accordance with the provisions of this Chapter to fill such vacancy enters upon his office

(2) When the President is unable to discharge his functions owing to absence, illness or any other cause, the Vice-President shall discharge his functions until the date on which the President resumes his duties.

(3) The Vice-President shall, during, and in respect of, the period while he is so acting as, or discharging the functions of, President, have all the powers and immunities of the President and be entitled to such emoluments, allowances and privileges as may be determined by Parliament by law and, until provision in that behalf is so made, such emoluments, allowances and privileges as are specified in the Second Schedule.

66. (1) The Vice-President shall be elected by the members of both Houses of Parliament assembled at a joint meeting in accordance with the system of proportional representation by means of the single transferable vote and the voting at such election shall be by secret ballot.

(2) The Vice-President shall not be a member of either House of Parliament or of a House of the Legislature of any State, and if a member of either House of Parliament or of a House of the

Legislature of any State be elected Vice-President, he shall be deemed to have vacated his seat in that House on the date on which he enters upon his office as Vice-President

(3) No person shall be eligible for election as Vice-President unless he—

(*a*) is a citizen of India;

(*b*) has completed the age of thirty-five years, and

(*c*) is qualified for election as a member of the Council of States

(4) A person shall not be eligible for election as Vice-President if he holds any office of profit under the Government of India or the Government of any State or under any local or other authority subject to the control of any of the said Governments

Explanation.—For the purposes of this article, a person shall not be deemed to hold any office of profit by reason only that he is the President or Vice-President of the Union or the Governor or Rajpramukh or Uparajpramukh of any State or is a Minister either for the Union or for any State

67. The Vice-President shall hold office for a term of five years from the date on which he enters upon his office

Provided that—

(*a*) a Vice-President may, by writing under his hand addressed to the President, resign his office,

(*b*) a Vice-President may be removed from his office by a resolution of the Council of States passed by a majority of all the then members of the Council and agreed to by the House of the People, but no resolution for the purpose of this clause shall be moved unless at least fourteen days' notice has been given of the intention to move the resolution;

(*c*) a Vice-President shall, notwithstanding the expiration of his term, continue to hold office until his successor enters upon his office.

68. (1) An election to fill a vacancy caused by the expiration of the term of office of Vice-President shall be completed before the expiration of the term

(2) An election to fill a vacancy in the office of Vice-President occurring by reason of his death, resignation or removal, or otherwise shall be held as soon as possible after the occurrence of the vacancy, and the person elected to fill the vacancy shall, subject to the provisions of article 67, be entitled to hold office for the full term of five years from the date on which he enters upon his office.

69. Every Vice-President shall, before entering upon his office, make and subscribe before the President, or some person appointed in that behalf by him, an oath or affirmation in the following form, that is to say—

"I, A B, do—
swear in the name of God
solemnly affirm
that I will bear true faith and allegiance to the Constitution of India as by law established and that I will faithfully discharge the duty upon which I am about to enter."

70. Parliament may make such provision as it thinks fit for the discharge of the functions of the President in any contingency not provided for in this Chapter.

DOUBTS, DISPUTES

71. (1) All doubts and disputes arising out of or in connection with the election of a President or Vice-President shall be inquired into and decided by the Supreme Court whose decision shall be final.

(2) If the election of a person as President or Vice-President is declared void by the Supreme Court, acts done by him in the exercise and performance of the powers and duties of the office of President or Vice-President, as the case may be, on or before the date of the decision of the Supreme Court shall not be invalidated by reason of that declaration.

(3) Subject to the provisions of this Constitution, Parliament may by law regulate any matter relating to or connected with the election of a President or Vice-President

72. (1) The President shall have the power to grant pardons, reprieves, respites or remissions of punishment or to suspend, remit or commute the sentence of any person convicted of any offence—

(*a*) in all cases where the punishment or sentence is by a Court Martial,

(*b*) in all cases where the punishment or sentence is for an offence against any law relating to a matter to which the executive power of the Union extends,

(*c*) in all cases where the sentence is a sentence of death

(2) Nothing in sub-clause (*a*) of clause (1) shall affect the power conferred by law on any officer of the Armed Forces of the Union to suspend, remit or commute a sentence passed by a Court Martial

(3) Nothing in sub-clause (*c*) of clause (1) shall affect the power to suspend, remit or commute a sentence of death exercisable by the Governor or Rajpramukh of a State under any law for the time being in force

73. (1) Subject to the provisions of this Constitution, the executive power of the Union shall extend—

(*a*) to the matters with respect to which Parliament has power to make laws, and

(*b*) to the exercise of such rights, authority and jurisdiction as are exercisable by the Government of India by virtue of any treaty or agreement

Provided that the executive power referred to in sub-clause (*a*) shall not, save as expressly provided in this Constitution or in any law made by Parliament, extend in any State specified in Part A or Part B of the First Schedule to matters with respect to which the Legislature of the State has also power to make laws.

(2) Until otherwise provided by Parliament, a State and any officer or authority of a State may, notwithstanding anything in this article, continue to exercise in matters with respect to which Parliament has power to make laws for that State such executive power or functions as the State or officer or authority thereof could exercise immediately before the commencement of this Constitution

COUNCIL OF MINISTERS

74. (1) There shall be a Council of Ministers with the Prime Minister at the head to aid and advise the President in the exercise of his functions

(2) The question whether any, and if so what, advice was tendered by Ministers to the President shall not be inquired into in any court.

75. (1) The Prime Minister shall be appointed by the President and the other Ministers shall be appointed by the President on the advice of the Prime Minister.

(2) The Ministers shall hold office during the pleasure of the President

(3) The Council of Ministers shall be collectively responsible to the House of the People.

(4) Before a Minister enters upon his office, the President shall administer to him the oaths of office and of secrecy according to the forms set out for the purpose in the Third Schedule

(5) A Minister who for any period of six consecutive months is not a member of either House of Parliament shall at the expiration of that period cease to be a Minister.

(6) The salaries and allowances of Ministers shall be such as Parliament may from time to time by law determine and, until Parliament so determines, shall be as specified in the Second Schedule.

THE ATTORNEY-GENERAL FOR INDIA

76. (1) The President shall appoint a person who is qualified to be appointed a Judge of the Supreme Court to be Attorney-General for India.

(2) It shall be the duty of the Attorney-General to give advice to the Government of India upon such legal matters, and to perform such other duties of a legal character, as may from time to time be referred or assigned to him by the President, and to discharge the functions conferred on him by or under this Constitution or any other law for the time being in force

(3) In the performance of his duties the Attorney-General shall have right of audience in all courts in the territory of India.

(4) The Attorney-General shall hold office during the pleasure of the President, and shall receive such remuneration as the President may determine

CONDUCT OF GOVERNMENT BUSINESS

77. (1) All executive action of the Government of India shall be expressed to be taken in the name of the President.

(2) Orders and other instruments made and executed in the name of the President shall be authenticated in such manner as may be specified in rules to be made by the President, and the validity of an order or instrument which is so authenticated shall not be called in question on the ground that it is not an order or instrument made or executed by the President

(3) The President shall make rules for the more convenient transaction of the business of the Government of India, and for the allocation among Ministers of the said business.

78. It shall be the duty of the Prime Minister—

(*a*) to communicate to the President all decisions of the Council of Ministers relating to the administration of the affairs of the Union and proposals for legislation,

(*b*) to furnish such information relating to the administration of the affairs of the Union and proposals for legislation as the President may call for; and

(*c*) if the President so requires, to submit for the consideration of the Council of Ministers any matter on which a decision has been taken by a Minister but which has not been considered by the Council

CHAPTER II—PARLIAMENT

GENERAL

79. There shall be a Parliament for the Union which shall consist of the President and two Houses to be known respectively as the Council of States and the House of the People.

80. (1) The Council of States shall consist of—

(*a*) twelve members to be nominated by the President in accordance with the provisions of clause (3), and

(*b*) not more than two hundred and thirty-eight representatives of the States.

(2) The allocation of seats in the Council of States to be filled by representatives of the States shall be in accordance with the provisions in that behalf contained in the Fourth Schedule.

(3) The members to be nominated by the President under sub-clause (*a*) of clause (1) shall consist of persons having special knowledge or practical experience in respect of such matters as the following, namely.—

Literature, science, art and social service.

(4) The representatives of each State specified in Part A or Part B of the First Schedule in the Council of States shall be elected by the elected

members of the Legislative Assembly of the State in accordance with the system of proportional representation by means of the single transferable vote.

(5) The representatives of the States specified in Part C of the First Schedule in the Council of States shall be chosen in such manner as Parliament may by law prescribe.

81. (1) (*a*) Subject to the provisions of clause (2) and of articles 82 and 331, the House of the People shall consist of not more than five hundred members directly elected by the voters in the States

(*b*) For the purpose of sub-clause (*a*), the States shall be divided, grouped or formed into territorial constituencies and the number of members to be allotted to each such constituency shall be so determined as to ensure that there shall be not less than one member for every 750,000 of the population and not more than one member for every 500,000 of the population

(*c*) The ratio between the number of members allotted to each territorial constituency and the population of that constituency as ascertained at the last preceding census of which the relevant figures have been published shall, so far as practicable, be the same throughout the territory of India

(2) The representation in the House of the People of the territories comprised within the territory of India but not included within any State shall be such as Parliament may by law provide

(3) Upon the completion of each census, the representation of the several territorial constituencies in the House of the People shall be readjusted by such authority, in such manner and with effect from such date as Parliament may by law determine

Provided that such readjustment shall not affect representation in the House of the People until the dissolution of the then existing House

82. Notwithstanding anything in clause (1) of article 81, Parliament may by law provide for the representation in the House of the People of any State specified in Part C of the First Schedule or of any territories comprised within the territory of India but not included within any State on a basis or in a manner other than that provided in that clause

83. (1) The Council of States shall not be subject to dissolution, but as nearly as possible one-third of the members thereof shall retire as soon as may be on the expiration of every second year in accordance with the provisions made in that behalf by Parliament by law

(2) The House of the People, unless sooner dissolved, shall continue for five years from the date appointed for its first meeting and no longer and the expiration of the said period of five years shall operate as a dissolution of the House

Provided that the said period may, while a Proclamation of Emergency is in operation, be extended by Parliament by law for a period not exceeding one year at a time and not extending in any case beyond a period of six months after the Proclamation has ceased to operate

84. A person shall not be qualified to be chosen to fill a seat in Parliament unless he—

(*a*) is a citizen of India,

(*b*) is, in the case of a seat in the Council of States, not less than thirty years of age and, in the case of a seat in the House of the People, not less than twenty-five years of age, and

(*c*) possesses such other qualifications as may be prescribed in that behalf by or under any law made by Parliament.

85. (1) The Houses of Parliament shall be summoned to meet twice at least in every year, and six months shall not intervene between their last sitting in one session and the date appointed for their first sitting in the next session.

(2) Subject to the provisions of clause (1), the President may from time to time—

(*a*) summon the Houses or either House to meet at such time and place as he thinks fit,

(*b*) prorogue the Houses,

(*c*) dissolve the House of the People.

86. (1) The President may address either House of Parliament or both Houses assembled together, and for that purpose require the attendance of members.

(2) The President may send messages to either House of Parliament, whether with respect to a Bill then pending in Parliament or otherwise, and a House to which any message is so sent shall with all convenient despatch consider any matter required by the message to be taken into consideration

87. (1) At the commencement of every session the President shall address both Houses of Parliament assembled together and inform Parliament of the causes of its summons

(2) Provision shall be made by the rules regulating the procedure of either House for the allotment of time for discussion of the matters referred to in such address and for the precedence of such discussion over other business of the House.

88. Every Minister and the Attorney-General of India shall have the right to speak in, and otherwise to take part in the proceedings of, either House, any joint sitting of the Houses, and any committee of Parliament of which he may be named a member, but shall not by virtue of this article be entitled to vote.

OFFICERS OF PARLIAMENT

89. (1) The Vice-President of India shall be *ex-officio* Chairman of the Council of States

(2) The Council of States shall, as soon as may be, choose a member of the Council to be Deputy Chairman thereof and, so often as the office of Deputy Chairman becomes vacant, the Council shall choose another member to be Deputy Chairman thereof

90. A member holding office as Deputy Chairman of the Council of States—

(*a*) shall vacate his office if he ceases to be a member of the Council,

(*b*) may at any time, by writing under his hand addressed to the Chairman, resign his office, and

(*c*) may be removed from his office by a resolution of the Council passed by a majority of all the then members of the Council

Provided that no resolution for the purpose of clause (*c*) shall be moved unless at least fourteen days' notice has been given of the intention to move the resolution

91. (1) While the office of Chairman is vacant, or during any period when the Vice-President is acting as, or discharging the functions of, President, the duties of the office shall be performed by the Deputy Chairman, or, if the office of Deputy Chairman is also vacant by such member of the Council of States as the President may appoint for the purpose

(2) During the absence of the Chairman from any sitting of the Council of States the Deputy Chairman, or, if he is also absent, such person as may be determined by the rules of procedure of the Council, or, if no such person is present, such other person as may be determined by the Council, shall act as Chairman

92. (1) At any sitting of the Council of States, while any resolution for the removal of the Vice-President from his office is under consideration, the Chairman, or while any resolution for the removal of the Deputy Chairman from his office is under consideration, the Deputy Chairman, shall not, though he is present, preside, and the provisions of clause (2) of article 91 shall apply in relation to every such sitting as they apply in relation to a sitting from which the Chairman, or, as the case may be, the Deputy Chairman, is absent

(2) The Chairman shall have the right to speak in, and otherwise to take part in the proceedings of, the Council of States while any resolution for the removal of the Vice-President from his office is under consideration in the Council, but, notwithstanding anything in article 100, shall not be entitled to vote at all on such resolution or on any other matter during such proceedings

SPEAKER, DEPUTY SPEAKER

93. The House of the People shall, as soon as may be, choose two members of the House to be respectively Speaker and Deputy Speaker thereof and, so often as the office of Speaker or Deputy Speaker becomes vacant, the House shall choose another member to be Speaker or Deputy Speaker, as the case may be

94. A member holding office as Speaker or Deputy Speaker of the House of the People—

(*a*) shall vacate his office if he ceases to be a member of the House of the People,

(*b*) may at any time, by writing under his hand addressed, if such member is the Speaker, to the Deputy Speaker, and if such member is the Deputy Speaker, to the Speaker, resign his office, and

(*c*) may be removed from his office by a resolution of the House of the People passed by a majority of all the then members of the House

Provided that no resolution for the purpose of clause (*c*) shall be moved unless at least fourteen days' notice has been given of the intention to move the resolution

Provided further that, whenever the House of the People is dissolved, the Speaker shall not vacate his office until immediately before the first meeting of the House of the People after the dissolution

95. (1) While the office of Speaker is vacant, the duties of the office shall be performed by the Deputy Speaker or, if the office of Deputy Speaker is also vacant, by such member of the House of the People as the President may appoint for the purpose

(2) During the absence of the Speaker from any sitting of the House of the People the Deputy Speaker or, if he is also absent, such person as may be determined by the rules of procedure of the House, or, if no such person is present, such other person as may be determined by the House, shall act as Speaker

96. (1) At any sitting of the House of the People, while any resolution for the removal of the Speaker from his office is under consideration, the Speaker, or while any resolution for the removal of the Deputy Speaker from his office is under consideration, the Deputy Speaker, shall not, though he is present, preside, and the provisions of clause (2) of article 95 shall apply in relation to every such sitting as they apply in relation to a sitting from which the Speaker, or, as the case may be, the Deputy Speaker, is absent

(2) The Speaker shall have the right to speak in, and otherwise to take part in the proceedings of, the House of the People while any resolution for his removal from office is under consideration in the House and shall, notwithstanding anything in article 100, be entitled to vote only in the first instance on such resolution or on any other matter during such proceedings but not in the case of an equality of votes

97. There shall be paid to the Chairman and the Deputy Chairman of the Council of States, and to the Speaker and the Deputy Speaker of the House of the People, such salaries and allowances as may be respectively fixed by Parliament by law and, until provision in that behalf is so made, such salaries and allowances as are specified in the Second Schedule.

98. (1) Each House of Parliament shall have a separate secretarial staff.

Provided that nothing in this clause shall be construed as preventing the creation of posts common to both Houses of Parliament

(2) Parliament may by law regulate the recruitment and the conditions of service of persons appointed, to the secretarial staff of either House of Parliament

(3) Until provision is made by Parliament under clause (2), the President may, after consultation with the Speaker of the House of the People or the Chairman of the Council of States, as the case may be, make rules regulating the recruitment, and the conditions of service of persons appointed, to the secretarial staff of the House of the People or the Council of States, and any rules so made shall have effect subject to the provisions of any law made under the said clause

CONDUCT OF BUSINESS

99. Every member of either House of Parliament shall, before taking his seat, make and subscribe before the President, or some person appointed in that behalf by him, an oath or affirmation according to the form set out for the purpose in the Third Schedule

100. (1) Save as otherwise provided in this Constitution, all questions at any sitting of either House or joint sitting of the Houses shall be determined by a majority of votes of the members present and voting, other than the Speaker or person acting as Chairman or Speaker

The Chairman or Speaker, or person acting as such, shall not vote in the first instance, but shall have and exercise a casting vote in the case of an equality of votes

(2) Either House of Parliament shall have power to act notwithstanding any vacancy in the membership thereof, and any proceedings in Parliament shall be valid notwithstanding that it is discovered subsequently that some person who was not entitled so to do sat or voted or otherwise took part in the proceedings.

(3) Until Parliament by law otherwise provides, the quorum to constitute a meeting of either House of Parliament shall be one-tenth of the total number of members of the House

(4) If at any time during a meeting of a House there is no quorum, it shall be the duty of the Chairman or Speaker, or person acting as such, either to adjourn the House or to suspend the meeting until there is a quorum

DISQUALIFICATIONS OF MEMBERS

101. (1) No person shall be a member of both Houses of Parliament and provision shall be made by Parliament by law for the vacation by a person who is chosen a member of both Houses of his seat in one House or the other

(2) No person shall be a member both of Parliament and of a House of the Legislature of a State specified in Part A or Part B of the First Schedule, and if a person is chosen a member both of Parliament and of a House of the Legislature of such a State, then, at the expiration of such period as may be specified in rules made by the President, that person's seat in Parliament shall become vacant, unless he has previously resigned his seat in the Legislature of the State

(3) If a member of either House of Parliament—

(*a*) becomes subject to any of the disqualifications mentioned in clause (1) of article 102, or

(*b*) resigns his seat by writing under his hand addressed to the Chairman or the Speaker, as the case may be,

his seat shall thereupon become vacant.

(4) If for a period of sixty days a member of either House of Parliament is without permission of the House absent from all meetings thereof, the House may declare his seat vacant.

Provided that in computing the said period of sixty days no account shall be taken of any period during which the House is prorogued or is adjourned for more than four consecutive days

102. (1) A person shall be disqualified for being chosen as, and for being, a member of either House of Parliament—

(*a*) if he holds any office of profit under the Government of India or the Government of any State, other than an office declared by Parliament by law not to disqualify its holder,

(*b*) if he is of unsound mind and stands so declared by a competent court,

(*c*) if he is an undischarged insolvent;

(*d*) if he is not a citizen of India, or has voluntarily acquired the citizenship of a foreign State, or is under any acknowledgment of allegiance or adherence to a foreign State,

(*e*) if he is so disqualified by or under any law made by Parliament

(2) For the purposes of this article a person shall not be deemed to hold an office of profit under the Government of India or the Government of any State by reason only that he is a minister either for the Union or for such State

103. (1) If any question arises as to whether a member of either House of Parliament has become subject to any of the disqualifications mentioned in clause (1) of article 102, the question shall be referred for the decision of the President and his decision shall be final

(2) Before giving any decision on any such question, the President shall obtain the opinion of the Election Commission and shall act according to such opinion

104. If a person sits or votes as a member of either House of Parliament before he has complied with the requirements of article 99, or when he knows that he is not qualified or that he is disqualified for membership thereof, or that he is prohibited from so doing by the provisions of any law made by Parliament, he shall be liable in respect of each day on which he so sits or votes to a penalty of five hundred rupees to be recovered as a debt due to the Union

POWERS, ETC. OF PARLIAMENT, MEMBERS

105. (1) Subject to the provisions of this Constitution and to the rules and standing orders regulating the procedure of Parliament, there shall be freedom of speech in Parliament.

(2) No member of Parliament shall be liable to any proceedings in any court in respect of anything said or any vote given by him in Parliament or any committee thereof, and no person shall be so liable in respect of the publication by or under the authority of either House of Parliament of any report, paper, votes or proceedings

(3) In other respects, the powers, privileges and immunities of each House of Parliament, and of the members and the committees of each House, shall be such as may from time to time be defined by Parliament by law, and, until so defined, shall be those of the House of Commons of the Parliament of the United Kingdom, and of its members and committees, at the commencement of this Constitution

(4) The provisions of clauses (1), (2) and (3) shall apply in relation to persons who by virtue of this Constitution have the right to speak in, and otherwise to take parts in the proceedings of, a House of Parliament or any committee thereof as they apply in relation to members of Parliament

106. Members of either House of Parliament shall be entitled to receive such salaries and allowances as may from time to time be determined by Parliament by law and, until provision in that respect is so made, allowances at such rates and upon such conditions as were immediately before the commencement of this Constitution applicable in the case of members of the Constituent Assembly of the Dominion of India

LEGISLATIVE PROCEDURE

107. (1) Subject to the provisions of articles 109 and 117 with respect to Money Bills and other financial Bills, a Bill may originate in either House of Parliament.

(2) Subject to the provisions of articles 108 and 109, a Bill shall not be deemed to have been passed by the Houses of Parliament unless it has been agreed to by both Houses, either without amendment or with such amendments only as are agreed to by both Houses

(3) A Bill pending in Parliament shall not lapse by reason of the prorogation of the Houses.

(4) A Bill pending in the Council of States which has not been passed by the House of the People shall not lapse on a dissolution of the House of the People

(5) A Bill which is pending in the House of the People, or which having been passed by the House of the People is pending in the Council of States, shall, subject to the provisions of article 108, lapse on a dissolution of the House of the People

108. (1) If after a Bill has been passed by one House and transmitted to the other House—

(*a*) the Bill is rejected by the other House, or

(*b*) the Houses have finally disagreed as to the amendments to be made in the Bill, or

(*c*) more than six months elapse from the date of the reception of the Bill by the other House without the Bill being passed by it,

the President may, unless the Bill has lapsed by reason of a dissolution of the House of the People, notify to the Houses by message if they are sitting or by public notification if they are not sitting, his intention to summon them to meet in a joint sitting for the purpose of deliberating and voting on the Bill

Provided that nothing in this clause shall apply to a Money Bill

(2) In reckoning any such period of six months as is referred to in clause (1), no account shall be taken of any period during which the House referred to in sub-clause (*c*) of that clause is prorogued or adjourned for more than four consecutive days

(3) Where the President has under clause (1) notified his intention of summoning the Houses to meet in a joint sitting, neither House shall proceed further with the Bill, but the President may at any time after the date of his notification summon the Houses to meet in a joint sitting for the purpose specified in the notification and, if he does so, the Houses shall meet accordingly

(4) If at the joint sitting of the two Houses the Bill, with such amendments, if any, as are agreed to in joint sitting, is passed by a majority of the total number of members of both Houses present and voting, it shall be deemed for the purposes of this Constitution to have been passed by both Houses:

Provided that at a joint sitting—

(*a*) if the Bill, having been passed by one House, has not been passed by the other House with amendments and returned to the House in which it originated, no amendment shall be proposed to the Bill other than such amendments (if any) as are made necessary by the delay in the passage of the Bill,

(*b*) if the Bill has been so passed and returned, only such amendments as aforesaid shall be proposed to the Bill and such other amendments as are relevant to the matters with respect to which the Houses have not agreed,

and the decision of the person presiding as to the amendments which are admissible under this clause shall be final

(5) A joint sitting may be held under this article and a Bill passed thereat, notwithstanding that a dissolution of the House of the People has intervened since the President notified his intention to summon the Houses to meet therein.

MONEY BILLS

109. (1) A Money Bill shall not be introduced in the Council of States

(2) After a Money Bill has been passed by the House of the People it shall be transmitted to the Council of States for its recommendations and the Council of States shall within a period of fourteen days from the date of its receipt of the Bill return the Bill to the House of the People with its recommendations and the House of the People may thereupon either accept or reject all or any of the recommendations of the Council of States

(3) If the House of the People accepts any of the recommendations of the Council of States, the Money Bill shall be deemed to have been passed by both Houses with the amendments recommended by the Council of States and accepted by the House of the People.

(4) If the House of the People does not accept any of the recommendations of the Council of States, the Money Bill shall be deemed to have been passed by both Houses in the form in which it was passed by the House of the People without any of the amendments recommended by the Council of States

(5) If a Money Bill passed by the House of the People and transmitted to the Council of States for its recommendations is not returned to the House of the People within the said period of fourteen days, it shall be deemed to have been passed by both Houses at the expiration of the said period in the form in which it was passed by the House of the People.

110. (1) For the purposes of this Chapter, a Bill shall be deemed to be a Money Bill if it contains only provisions dealing with all or any of the following matters, namely—

(*a*) the imposition, abolition, remission, alteration or regulation of any tax ,

(*b*) the regulation of the borrowing of money or the giving of any guarantee by the Government of India, or the amendment of the law with respect to any financial obligations undertaken or to be undertaken by the Government of India ,

(*c*) the custody of the Consolidated Fund or the Contingency Fund of India, the payment of moneys into or the withdrawal of moneys from any such Fund ,

(*d*) the appropriation of moneys out of the Consolidated Fund of India ,

(*e*) the declaring of any expenditure to be expenditure charged on the Consolidated Fund of India or the increasing of the amount of any such expenditure ,

(*f*) the receipt of money on account of the Consolidated Fund of India or the public account of India or the custody or issue of such money or the audit of the accounts of the Union or of a State , or

(*g*) any matter incidental to any of the matters specified in sub-clauses (*a*) to (*f*).

(2) A Bill shall not be deemed to be a Money Bill by reason only that it provides for the imposition of fines or other pecuniary penalties, or for the demand or payment of fees for licences or fees for services rendered, or by reason that it provides for the imposition, abolition, remission, alteration or regulation of any tax by any local authority or body for local purposes

(3) If any question arises whether a Bill is a Money Bill or not, the decision of the Speaker of the House of the People thereon shall be final

(4) There shall be endorsed on every Money Bill when it is transmitted to the Council of States under article 109, and when it is presented to the President for assent under article III, the certificate of the Speaker of the House of the People signed by him that it is a Money Bill.

111. When a Bill has been passed by the Houses of Parliament, it shall be presented to the President, and the President shall declare either that he assents to the Bill, or that he withholds assent therefrom .

Provided that the President may, as soon as possible after the presentation to him of a Bill for assent, return the Bill if it is not a Money Bill to the Houses with a message requesting that they will reconsider the Bill or any specified provisions thereof and, in particular, will consider the desirability of introducing any such amendments as he may recommend in his message, and when a Bill is so returned, the Houses shall reconsider the Bill accordingly, and if the Bill is passed again by the Houses with or without amendment and presented to the President for assent, the President shall not withhold assent therefrom.

PROCEDURE

112. (1) The President shall in respect of every financial year cause to be laid before both the Houses of Parliament a statement of the estimated receipts and expenditure of the Government of India for that year, in this Part referred to as the "annual financial statement"

(2) The estimates of expenditure embodied in the annual financial statement shall show separately—

(*a*) the sums required to meet expenditure described by this Constitution as expenditure charged upon the Consolidated Fund of India , and

(*b*) the sums required to meet other expenditure proposed to be made from the Consolidated Fund of India,

and shall distinguish expenditure on revenue account from other expenditure

(3) The following expenditure shall be expenditure charged on the Consolidated Fund of India—

(*a*) the emoluments and allowances of the President and other expenditure relating to his office ,

(*b*) the salaries and allowances of the Chairman and the Deputy Chairman of the Council of States and the Speaker and the Deputy Speaker of the House of the People ,

(*c*) debt charges for which the Government of India is liable including interest, sinking fund charges and redemption charges, and other expenditure relating to the raising of loans and the service and redemption of debt ;

(*d*) (*i*) the salaries, allowances and pensions payable to or in respect of Judges of the Supreme Court ,

(*ii*) the pensions payable to or in respect of Judges of the Federal Court,

(*iii*) the pensions payable to or in respect of Judges of any High Court which exercises jurisdiction in relation to any area included in the territory of India or which at any time before the commencement of this Constitution exercised jurisdiction in relation to any area included in a Province corresponding to a State specified in Part A of the First Schedule ,

(*e*) the salary, allowances and pension payable to or in respect of the Comptroller and Auditor-General of India ;

(*f*) any sums required to satisfy any judgment, decree or award of any court or arbitral tribunal ,

(*g*) any other expenditure declared by this Constitution or by Parliament by law to be so charged.

113. (1) So much of the estimates as relates to expenditure charged upon the Consolidated Fund of India shall not be submitted to the vote of Parliament, but nothing in this clause shall be construed as preventing the discussion in either House of Parliament of any of those estimates

(2) So much of the said estimates as relates to other expenditure shall be submitted in the form of demands for grants to the House of the People, and the House of the People shall have power to assent, or to refuse to assent, to any demand, or to assent to any demand subject to a reduction of the amount specified therein

(3) No demand for a grant shall be made except on the recommendation of the President.

APPROPRIATION BILLS

114. (1) As soon as may be after the grants under article 113 have been made by the House of the People, there shall be introduced a Bill to provide for the appropriation out of the Consolidated Fund of India of all moneys required to meet—

(*a*) the grants so made by the House of the People , and

(*b*) the expenditure charged on the Consolidated Fund of India but not exceeding in any case the amount shown in the statement previously laid before Parliament.

(2) No amendment shall be proposed to any such Bill in either House of Parliament which will have the effect of varying the amount or altering the destination of any grant so made or of varying the amount of any expenditure charged on the Consolidated Fund of India, and the decision of the person presiding as to whether an amendment is inadmissible under this clause shall be final

(3) Subject to the provisions of articles 115 and 116, no money shall be withdrawn from the Consolidated Fund of India except under appropriation made by law passed in accordance with the provisions of this article.

115. (1) The President shall—

(*a*) if the amount authorised by any law made in accordance with the provisions of article 114 to be expended for a particular service for the current financial year is found to be insufficient for the purposes of that year or when a need has arisen during the current financial year for supplementary or additional expenditure upon some new service not contemplated in the annual financial statement for that year, or

(*b*) if any money has been spent on any service during a financial year in excess of the amount granted for that service and for that year,

cause to be laid before both the Houses of Parliament another statement showing the estimated amount of that expenditure or cause to be presented to the House of the People a demand for such excess, as the case may be

(2) The provisions of articles 112, 113 and 114 shall have effect in relation to any such statement and expenditure or demand and also to any law to be made authorising the appropriation of moneys out of the Consolidated Fund of India to meet such expenditure or the grant in respect of such demand as they have effect in relation to the annual financial statement and the expenditure mentioned therein or to a demand for a grant and the law to be made for the authorisation of appropriation of moneys out of the Consolidated Fund of India to meet such expenditure or grant.

VOTING OF GRANTS

116. (1) Notwithstanding anything in the foregoing provisions of this Chapter, the House of the People shall have power—

(*a*) to make any grant in advance in respect of the estimated expenditure for a part of any financial year pending the completion of the procedure prescribed in article 113 for the voting of such grant and the passing of the law in accordance with the provisions of article 114 in relation to that expenditure

(*b*) to make a grant for meeting an unexpected demand upon the resources of India when on account of the magnitude or the indefinite character of the service the demand cannot be stated with the details ordinarily given in an annual financial statement;

(*c*) to make an exceptional grant which forms no part of the current service of any financial year,

and Parliament shall have power to authorise by law the withdrawal of moneys from the Consolidated Fund of India for the purposes for which the said grants are made

(2) The provisions of articles 113 and 114 shall have effect in relation to the making of any grant under clause (1) and to any law to be made under that clause as they have effect in relation to the making of a grant with regard to any expenditure mentioned in the annual financial statement and the law to be made for the authorisation of appropriation of moneys out of the Consolidated Fund of India to meet such expenditure.

117. (1) A Bill or amendment making provision for any of the matters specified in sub-clauses (*a*) to (*f*) of clause (1) of article 110 shall not be introduced or moved except on the recommendation of the President and a Bill making such provision shall not be introduced in the Council of States

Provided that no recommendation shall be required under this clause for the moving of an amendment making provision for the reduction or abolition of any tax

(2) A Bill or amendment shall not be deemed to make provision for any of the matters aforesaid by reason only that it provides for the imposition of fines or other pecuniary penalties, or for the demand or payment of fees for licences or fees for services rendered, or by reason that it provides for the imposition, abolition, remission, alteration or regulation of any tax by any local authority or body for local purposes

(3) A Bill which, if enacted and brought into operation, would involve expenditure from the Consolidated Fund of India shall not be passed by either House of Parliament unless the President has recommended to that House the consideration of the Bill

RULES OF PROCEDURE

118. (1) Each House of Parliament may make rules for regulating, subject to the provisions of this Constitution, its procedure and the conduct of its business

(2) Until rules are made under clause (1), the rules of procedure and standing orders in force immediately before the commencement of this Constitution with respect to the Legislature of the Dominion of India shall have effect in relation to Parliament subject to such modifications and adaptations as may be made therein by the Chairman of the Council of States or the Speaker of the House of the People, as the case may be

(3) The President, after consultation with the Chairman of the Council of States and the Speaker of the House of the People, may make rules as to the procedure with respect to joint sittings of, and communications between, the two Houses

(4) At a joint sitting of the two Houses the Speaker of the House of the People, or in his absence such person as may be determined by rules of procedure made under clause (3), shall preside

119. Parliament may, for the purpose of the timely completion of financial business, regulate by law the procedure of, and the conduct of business in, each House of Parliament in relation to any financial matter or to any Bill for the appropriation of moneys out of the Consolidated Fund of India, and, if and so far as any provision of any law so made is inconsistent with any rule made by a House of Parliament under clause (1) of article 118 or with any rule or standing order having effect in relation to Parliament under clause (2) of that article, such provision shall prevail

120. (1) Notwithstanding anything in Part XVII, but subject to the provisions of article 348, business in Parliament shall be transacted in Hindi or in English

Provided that the Chairman of the Council of States or Speaker of the House of the People, or person acting as such, as the case may be, may permit any member who cannot adequately express himself in Hindi or in English to address the House in his mother tongue

(2) Unless Parliament by law otherwise provides, this article shall, after the expiration of a period of fifteen years from the commencement of this Constitution, have effect as if the words " or in English " were omitted therefrom

121. No discussion shall take place in Parliament with respect to the conduct of any Judge of the Supreme Court or of a High Court in the discharge of his duties except upon a motion for presenting an address to the President praying for the removal of the Judge as hereinafter provided

122. (1) The validity of any proceedings in Parliament shall not be called in question on the ground of any alleged irregularity of procedure

(2) No officer or member of Parliament in whom powers are vested by or under this Constitution for regulating procedure or the conduct of business, or for maintaining order, in Parliament shall be subject to the jurisdiction of any court in respect of the exercise by him of those powers.

CHAPTER III—LEGISLATIVE POWERS OF THE PRESIDENT

123. (1) If at any time, except when both Houses of Parliament are in session, the President is satisfied that circumstances exist which render it necessary for him to take immediate action, he may promulgate such Ordinances as the circumstances appear to him to require

(2) An Ordinance promulgated under this article shall have the same force and effect as an Act of Parliament, but every such Ordinance—

(*a*) shall be laid before both Houses of Parliament and shall cease to operate at the expiration of six weeks from the reassembly of Parliament, or, if before the expiration of that period resolutions disapproving it are passed by both Houses, upon the passing of the second of those resolutions, and

(*b*) may be withdrawn at any time by the President

Explanation —Where the Houses of Parliament are summoned to reassemble on different dates, the period of six weeks shall be reckoned from the later of those dates for the purposes of this clause.

(3) If and so far as an Ordinance under this article makes any provision which Parliament would not under this Constitution be competent to enact, it shall be void

CHAPTER IV—THE UNION JUDICIARY

124. (1) There shall be a Supreme Court of India consisting of a Chief Justice of India and, until Parliament by law prescribes a larger number, of not more than seven other Judges

(2) Every Judge of the Supreme Court shall be appointed by the President by warrant under his hand and seal after consultation with such of the Judges of the Supreme Court and of the High Courts in the States as the President may deem necessary for the purpose and shall hold office until he attains the age of sixty-five years.

Provided that in the case of appointment of a Judge other than the Chief Justice, the Chief Justice of India shall always be consulted:

Provided further that—

(*a*) a Judge may, by writing under his hand addressed to the President, resign his office,

(*b*) a Judge may be removed from his office in the manner provided in clause (4)

(3) A person shall not be qualified for appointment as a Judge of the Supreme Court unless he is a citizen of India and—

(*a*) has been for at least five years a Judge of a High Court or of two or more such Courts in succession, or

(*b*) has been for at least ten years an advocate of a High Court or of two or more such Courts in succession; or

(*c*) is, in the opinion of the President, a distinguished jurist

Explanation I —In this clause " High Court " means a High Court which exercises or which at any time before the commencement of this Constitution exercised, jurisdiction in any part of the territory of India

Explanation II —In computing for the purpose of this clause the period during which a person has been an advocate, any period during which a person has held judicial office not inferior to that of a district judge after he became an advocate shall be included

(4) A Judge of the Supreme Court shall not be removed from his office except by an order of the President passed after an address by each House of Parliament supported by a majority of the total membership of that House and by a majority of not less than two-thirds of the members of that House present and voting has been presented to the President in the same session for such removal on the ground of proved misbehaviour or incapacity

(5) Parliament may by law regulate the procedure for the presentation of an address and for the investigation and proof of the misbehaviour or incapacity of a Judge under clause (4)

(6) Every person appointed to be a Judge of the Supreme Court shall, before he enters upon his office, make and subscribe before the President, or some person appointed in that behalf by him, an oath or affirmation according to the form set out for the purpose in the Third Schedule

(7) No person who has held office as a Judge of the Supreme Court shall plead or act in any court or before any authority within the territory of India

SALARIES, ETC.

125. (1) There shall be paid to the Judges of the Supreme Court such salaries as are specified in the Second Schedule

(2) Every Judge shall be entitled to such privileges and allowances and to such rights in respect of leave of absence and pension as may from time to time be determined by or under law made by Parliament and, until so determined, to such privileges, allowances and rights as are specified in the Second Schedule.

Provided that neither the privileges nor the allowances of a Judge nor his rights in respect of leave of absence or pension shall be varied to his disadvantage after his appointment.

126. When the office of Chief Justice of India is vacant or when the Chief Justice is, by reason of absence or otherwise, unable to perform the duties of his office, the duties of the office shall be performed by such one of the other Judges of the Court as the President may appoint for the purpose.

127. (1) If at any time there should not be a quorum of the Judges of the Supreme Court available to hold or continue any session of the Court, the Chief Justice of India may, with the previous consent of the President and after

consultation with the Chief Justice of the High Court concerned, request in writing the attendance at the sittings of the Court, as an *ad hoc* Judge, for such period as may be necessary, of a Judge of a High Court duly qualified for appointment as a Judge of the Supreme Court to be designated by the Chief Justice of India

(2) It shall be the duty of the Judge who has been so designated, in priority to other duties of his office, to attend the sittings of the Supreme Court at the time and for the period for which his attendance is required, and while so attending he shall have all the jurisdiction, powers and privileges, and shall discharge the duties, of a Judge of the Supreme Court.

128. Notwithstanding anything in this Chapter, the Chief Justice of India may at any time, with the previous consent of the President, request any person who has held the office of a Judge of the Supreme Court or of the Federal Court to sit and act as a Judge of the Supreme Court, and every such person so requested shall, while so sitting and acting, be entitled to such allowances as the President may by order determine and have all the jurisdiction, powers and privileges of, but shall not otherwise be deemed to be, a Judge of that Court

Provided that nothing in this article shall be deemed to require any such person as aforesaid to sit and act as a Judge of that Court unless he consents so to do

129. The Supreme Court shall be a court of record and shall have all the powers of such a court including the power to punish for contempt of itself.

130. The Supreme Court shall sit in Delhi or in such other place or places, as the Chief Justice of India may, with the approval of the President, from time to time, appoint

ORIGINAL JURISDICTION

131. Subject to the provisions of this Constitution, the Supreme Court shall, to the exclusion of any other court, have original jurisdiction in any dispute—

(*a*) between the Government of India and one or more States, or

(*b*) between the Government of India and any State or States on one side and one or more other States on the other, or

(*c*) between two or more States,

if and in so far as the dispute involves any question (whether of law or fact) on which the existence or extent of a legal right depends

Provided that the said jurisdiction shall not extend to—

(*i*) a dispute to which a State specified in Part B of the First Schedule is a party, if the dispute arises out of any provision of a treaty, agreement, covenant, engagement, *sanad* or other similar instrument which was entered into or executed before the commencement of this Constitution and has, or has been, continued in operation after such commencement,

(*ii*) a dispute to which any State is a party, if the dispute arises out of any provision of a treaty, agreement, covenant, engagement, *sanad* or other similar instrument which provides that the said jurisdiction shall not extend to such a dispute

APPELLATE JURISDICTION

132. (1) An appeal shall lie to the Supreme Court from any judgment, decree or final order of a High Court in the territory of India, whether in a civil, criminal or other proceeding, if the High Court certifies that the case involves a substantial question of law as to the interpretation of this Constitution

(2) Where the High Court has refused to give such a certificate, the Supreme Court may, if it is satisfied that the case involves a substantial question of law as to the interpretation of this Constitution, grant special leave to appeal from such judgment, decree or final order.

(3) Where such a certificate is given or such leave is granted, any party in the case may appeal to the Supreme Court on the ground that any such question as aforesaid has been wrongly decided and, with the leave of the Supreme Court, on any other ground

Explanation.—For the purposes of this article, the expression "final order" includes an order deciding an issue which, if decided in favour of the appellant, would be sufficient for the final disposal of the case.

133. (1) An appeal shall lie to the Supreme Court from any judgment, decree or final order in a civil proceeding of a High Court in the territory of India if the High Court certifies—

(*a*) that the amount or value of the subject-matter of the dispute in the court of first instance and still in dispute on appeal was and is not less than twenty thousand rupees or such other sum as may be specified in that behalf by Parliament by law, or

(*b*) that the judgment, decree or final order involves directly or indirectly some claim or question respecting property of the like amount or value, or

(*c*) that the case is a fit one for appeal to the Supreme Court,

and, where the judgment, decree or final order appealed from affirms the decision of the court immediately below in any case other than a case referred to in sub-clause (*c*), if the High Court further certifies that the appeal involves some substantial question of law.

(2) Notwithstanding anything in article 132, any party appealing to the Supreme Court under clause (1) may urge as one of the grounds in such appeal that a substantial question of law as to the interpretation of this Constitution has been wrongly decided

(3) Notwithstanding anything in this article, no appeal shall, unless Parliament by law otherwise provides, lie to the Supreme Court from the judgment, decree or final order of one Judge of a High Court

134. (1) An appeal shall lie to the Supreme Court from any judgment, final order or sentence in a criminal proceeding of a High Court in the territory of India if the High Court—

(*a*) has on appeal reversed an order of acquittal of an accused person and sentenced him to death, or

(*b*) has withdrawn for trial before itself any case from any court subordinate to its authority and has in such trial convicted the accused person and sentenced him to death, or

(*c*) certifies that the case is a fit one for appeal to the Supreme Court

Provided that an appeal under sub-clause (*c*) shall lie subject to such provisions as may be made in that behalf under clause (1) of article 145 and to such conditions as the High Court may establish or require

(2) Parliament may by law confer on the Supreme Court any further powers to entertain and hear appeals from any judgment, final order or sentence in a criminal proceeding of a High Court in the territory of India subject to such conditions and limitations as may be specified in such law

OTHER FUNCTIONS

135. Until Parliament by law otherwise provides, the Supreme Court shall also have jurisdiction and powers with respect to any matter to which the provisions of article 133 or article 134 do not apply if jurisdiction and powers in relation to that matter were exercisable by the Federal Court immediately before the commencement of this Constitution under any existing law.

136. (1) Notwithstanding anything in this Chapter, the Supreme Court may, in its discretion, grant special leave to appeal from any judgment, decree, determination, sentence or order in any cause or matter passed or made by any court or tribunal in the territory of India.

(2) Nothing in clause (1) shall apply to any judgment, determination, sentence or order passed or made by any court or tribunal constituted by or under any law relating to the Armed Forces

137. Subject to the provisions of any law made by Parliament or any rules made under article 145, the Supreme Court shall have power to review any judgment pronounced or order made by it

138. (1) The Supreme Court shall have such further jurisdiction and powers with respect to any of the matters in the Union List as Parliament may by law confer

(2) The Supreme Court shall have such further jurisdiction and powers with respect to any matter as the Government of India and the Government of any State may by special agreement confer, if Parliament by law provides for the exercise of such jurisdiction and powers by the Supreme Court

139. Parliament may by law confer on the Supreme Court power to issue directions, orders or writs, including writs in the nature of *habeas corpus*, *mandamus*, prohibition, *quo warranto* and *certiorari*, or any of them, for any purposes other than those mentioned in clause (2) of article 32

140. Parliament may by law make provision for conferring upon the Supreme Court such supplemental powers not inconsistent with any of the provisions of this Constitution as may appear to be necessary or desirable for the purpose of enabling the Court more effectively to exercise the jurisdiction conferred upon it by or under this Constitution

141. The law declared by the Supreme Court shall be binding on all courts within the territory of India

ENFORCEMENT OF DECREES

142. (1) The Supreme Court in the exercise of its jurisdiction may pass such decree or make such order as is necessary for doing complete justice in any cause or matter pending before it, and any decree so passed or order so made shall be enforceable throughout the territory of India in such manner as may be prescribed by or under any law made by Parliament and, until provision in that behalf is so made, in such manner as the President may by order prescribe

(2) Subject to the provisions of any law made in this behalf by Parliament, the Supreme Court shall, as respects the whole of the territory of India, have all and every power to make any order for the purpose of securing the attendance of any person, the discovery or production of any documents, or the investigation or punishment of any contempt of itself

143. (1) If at any time it appears to the President that a question of law or fact has arisen, or is likely to arise, which is of such a nature and of such public importance that it is expedient to obtain the opinion of the Supreme Court upon it, he may refer the question to that Court for consideration and the Court may, after such hearing as it thinks fit, report to the President its opinion thereon

(2) The President may, notwithstanding anything in clause (*i*) of the proviso to article 131, refer a dispute of the kind mentioned in the said clause to the Supreme Court for opinion and the Supreme Court shall, after such hearing as it thinks fit, report to the President its opinion thereon

144. All authorities, civil and judicial, in the territory of India shall act in aid of the Supreme Court.

RULES OF COURT

145. (1) Subject to the provisions of any law made by Parliament, the Supreme Court may from time to time, with the approval of the President, make rules for regulating generally the practice and procedure of the Court including—

(*a*) rules as to the persons practising before the Court,

(*b*) rules as to the procedure for hearing appeals and other matters pertaining to appeals including the time within which appeals to the Court are to be entered,

(*c*) rules as to the proceedings in the Court for the enforcement of any of the rights conferred by Part III,

(*d*) rules as to the entertainment of appeals under sub-clause (*c*) of clause (1) of article 134,

(*e*) rules as to the conditions subject to which any judgment pronounced or order made by the Court may be reviewed and the procedure for such review including the time within which applications to the Court for such review are to be entered,

(*f*) rules as to the costs of and incidental to any proceedings in the Court and as to the fees to be charged in respect of proceedings therein,

(*g*) rules as to the granting of bail,

(*h*) rules as to stay of proceedings,

(*i*) rules providing for the summary determination of any appeal which appears to the Court to be frivolous or vexatious or brought for the purpose of delay,

(*j*) rules as to the procedure for inquiries referred to in clause (1) of article 317

(2) Subject to the provisions of clause (3), rules made under this article may fix the minimum number of Judges who are to sit for any purpose, and may provide for the powers of single Judges and Division Courts

(3) The minimum number of Judges who are to sit for the purpose of deciding any case involving a substantial question of law as to the interpretation of this Constitution or for the purpose of hearing any reference under article 143 shall be five

Provided that, where the Court hearing an appeal under any of the provisions of this Chapter other than article 132 consists of less than five Judges and in the course of the hearing of the appeal the Court is satisfied that the appeal involves a substantial question of law as to the interpretation of this Constitution the determination of which is necessary for the disposal of the appeal, such Court shall refer the question for opinion to a Court constituted as required by this clause for the purpose of deciding any case involving such a question and shall on receipt of the opinion dispose of the appeal in conformity with such opinion

(4) No judgment shall be delivered by the Supreme Court save in open Court, and no report shall be made under article 143 save in accordance with an opinion also delivered in open Court

(5) No judgment and no such opinion shall be delivered by the Supreme Court save with the concurrence of a majority of the Judges present at the hearing of the case, but nothing in this clause shall be deemed to prevent a Judge who does not concur from delivering a dissenting judgment or opinion

OFFICERS OF COURT

146. (1) Appointments of officers and servants of the Supreme Court shall be made by the Chief Justice of India or such other Judge or officer of the Court as he may direct

Provided that the President may by rule require that in such cases as may be specified in the rule, no person not already attached to the Court shall be appointed to any office connected with the Court, save after consultation with the Union Public Service Commission

(2) Subject to the provisions of any law made by Parliament, the conditions of service of officers and servants of the Supreme Court shall be such as may be prescribed by rules made by the Chief Justice of India or by some other Judge or officer of the Court authorised by the Chief Justice of India to make rules for the purpose

Provided that the rules made under this clause shall, so far as they relate to salaries, allowances, leave or pensions, require the approval of the President

(3) The administrative expenses of the Supreme Court, including all salaries, allowances and pensions payable to or in respect of the officers and servants of the Court, shall be charged upon the Consolidated Fund of India, and any fees or other moneys taken by the Court shall form part of that Fund

147. In this Chapter and in Chapter V of Part VI, references to any substantial question of law as to the interpretation of this Constitution shall be construed as including references to any substantial question of law as to the interpretation of the Government of India Act, 1935 (including any enactment amending or supplementing that Act), or of any Order in Council or order made thereunder, or of the Indian Independence Act, 1947, or of any order made thereunder

COMPTROLLER AND AUDITOR-GENERAL OF INDIA

148. (1) There shall be a Comptroller and Auditor-General of India who shall be appointed by the President by warrant under his hand and seal and shall only be removed from office in like manner and on the like grounds as a Judge of the Supreme Court

(2) Every person appointed to be the Comptroller and Auditor-General of India shall, before he enters upon his office, make and subscribe before the President, or some person appointed in that behalf by him, an oath or affirmation according to the form set out for the purpose in the Third Schedule

(3) The salary and other conditions of service of the Comptroller and Auditor-General shall be such as may be determined by Parliament by law and, until they are so determined, shall be as specified in the Second Schedule

Provided that neither the salary of a Comptroller and Auditor-General nor his rights in respect of leave of absence, pension or age of retirement shall be varied to his disadvantage after his appointment

(4) The Comptroller and Auditor-General shall not be eligible for further office either under the Government of India or under the Government of any State after he has ceased to hold his office

(5) Subject to the provisions of this Constitution and of any law made by Parliament, the conditions of service of persons serving in the Indian Audit and Accounts Department and the administrative powers of the Comptroller and Auditor-General shall be such as may be prescribed by rules made by the President after consultation with the Comptroller and Auditor-General.

(6) The administrative expenses of the office of the Comptroller and Auditor-General, including all salaries, allowances and pensions payable to or in respect of persons serving in that office, shall be charged upon the Consolidated Fund of India.

DUTIES AND POWERS

149. The Comptroller and Auditor-General shall perform such duties and exercise such powers in relation to the accounts of the Union and of the States and of any other authority or body as may be prescribed by or under any law made by Parliament and, until provision in that behalf is so made, shall perform such duties and exercise such powers in relation to the accounts of the Union and of the States as were conferred on or exercisable by the Auditor-General of India immediately before the commencement of this Constitution in relation to the accounts of the Dominion of India and of the Provinces respectively.

150. The accounts of the Union and of the States shall be kept in such form as the Comptroller and Auditor-General of India may, with the approval of the President, prescribe.

151. (1) The reports of the Comptroller and Auditor-General of India relating to the accounts of the Union shall be submitted to the President, who shall cause them to be laid before each House of Parliament

(2) The reports of the Comptroller and Auditor-General of India relating to the accounts of a State shall be submitted to the Governor or Rajpramukh of the State, who shall cause them to be laid before the Legislature of the State

PART VI—THE STATES IN PART A OF THE FIRST SCHEDULE

CHAPTER I—GENERAL

152. In this Part, unless the context otherwise requires, the expression "State" means a State specified in Part A of the First Schedule.

CHAPTER II—THE EXECUTIVE

THE GOVERNOR

153. There shall be a Governor for each State.

154. (1) The executive power of the State shall be vested in the Governor and shall be exercised by him either directly or through officers subordinate to him in accordance with this Constitution

(2) Nothing in this article shall—

(*a*) be deemed to transfer to the Governor any functions conferred by any existing law on any other authority, or

(*b*) prevent Parliament or the Legislature of the State from conferring by law functions on any authority subordinate to the Governor

155. The Governor of a State shall be appointed by the President by warrant under his hand and seal.

156. (1) The Governor shall hold office during the pleasure of the President

(2) The Governor may, by writing under his hand addressed to the President, resign his office

(3) Subject to the foregoing provisions of this article, a Governor shall hold office for a term of five years from the date on which he enters upon his office

Provided that a Governor shall, notwithstanding the expiration of his term, continue to hold office until his successor enters upon his office.

157. No person shall be eligible for appointment as Governor unless he is a citizen of India and has completed the age of thirty-five years

158. (1) The Governor shall not be a member of either House of Parliament or of a House of the Legislature of any State specified in the First Schedule, and if a member of either House of Parliament or of a House of the Legislature of any such State be appointed Governor, he shall be deemed to have vacated his seat in that House on the date on which he enters upon his office as Governor

(2) The Governor shall not hold any other office of profit.

(3) The Governor shall be entitled without payment of rent the use of his official residences and shall be also entitled to such emoluments

allowances and privileges as may be determined by Parliament by law and, until provision in that behalf is so made, such emoluments, allowances and privileges as are specified in the Second Schedule.

(4) The emoluments and allowances of the Governor shall not be diminished during his term of office

159. Every Governor and every person discharging the functions of the Governor shall, before entering upon his office, make and subscribe in the presence of the Chief Justice of the High Court exercising jurisdiction in relation to the State, or, in his absence, the seniormost Judge of that Court available, an oath or affirmation in the following form, that is to say—

"I, A B, do swear in the name of God / solemnly affirm

that I will faithfully execute the office of Governor (or discharge the functions of the Governor) of———(*name of the State*) and will to the best of my ability preserve, protect and defend the Constitution and the law and that I will devote myself to the service and well-being of the people of———(*name of the State*)"

160. The President may make such provision as he thinks fit for the discharge of the functions of the Governor of a State in any contingency not provided for in this Chapter

161. The Governor of a State shall have the power to grant pardons, reprieves, respites or remissions of punishment or to suspend, remit or commute the sentence of any person convicted of any offence against any law relating to a matter to which the executive power of the State extends

162. Subject to the provisions of this Constitution, the executive power of a State shall extend to the matters with respect to which the Legislature of the State has power to make laws

Provided that in any matter with respect to which the Legislature of a State and Parliament have power to make laws, the executive power of the State shall be subject to, and limited by, the executive power expressly conferred by this Constitution or by any law made by Parliament upon the Union or authorities thereof.

COUNCIL OF MINISTERS

163. (1) There shall be a Council of Ministers with the Chief Minister at the head to aid and advise the Governor in the exercise of his functions, except in so far as he is by or under this Constitution required to exercise his functions or any of them in his discretion

(2) If any question arises whether any matter is or is not a matter as respects which the Governor is by or under this Constitution required to act in his discretion, the decision of the Governor in his discretion shall be final, and the validity of anything done by the Governor shall not be called in question on the ground that he ought or ought not to have acted in his discretion

(3) The question whether any, and if so what, advice was tendered by Ministers to the Governor shall not be inquired into in any court.

164. (1) The Chief Minister shall be appointed by the Governor and the other Ministers shall be appointed by the Governor on the advice of the Chief Minister, and the Ministers shall hold office during the pleasure of the Governor

Provided that in the States of Bihar, Madhya Pradesh and Orissa, there shall be a Minister in charge of tribal welfare who may in addition be in charge of the welfare of the Scheduled Castes and backward classes or any other work

(2) The Council of Ministers shall be collectively responsible to the Legislative Assembly of the State.

(3) Before a Minister enters upon his office, the Governor shall administer to him the oaths of office and of secrecy according to the forms set out for the purpose in the Third Schedule

(4) A Minister who for any period of six consecutive months is not a member of the Legislature of the State shall at the expiration of that period cease to be a Minister.

(5) The salaries and allowances of Ministers shall be such as the Legislature of the State may from time to time by law determine and, until the Legislature of the State so determines, shall be as specified in the Second Schedule

ADVOCATE-GENERAL

165. (1) The Governor of each State shall appoint a person who is qualified to be appointed a Judge of a High Court to be Advocate-General for the State

(2) It shall be the duty of the Advocate-General to give advice to the Government of the State upon such legal matters, and to perform such other duties of a legal character, as may from time to time be referred or assigned to him by the Governor, and to discharge the functions conferred on him by or under this Constitution or any other law for the time being in force

(3) The Advocate-General shall hold office during the pleasure of the Governor, and shall receive such remuneration as the Governor may determine

CONDUCT OF GOVERNMENT BUSINESS

166. (1) All executive action of the Government of a State shall be expressed to be taken in the name of the Governor

(2) Orders and other instruments made and executed in the name of the Governor shall be authenticated in such manner as may be specified in rules to be made by the Governor, and the validity of an order or instrument which is so authenticated shall not be called in question on the ground that it is not an order or instrument made or executed by the Governor

(3) The Governor shall make rules for the more convenient transaction of the business of the Government of the State, and for the allocation among Ministers of the said business in so far as it is not business with respect to which the Governor is by or under this Constitution required to act in his discretion

167. It shall be the duty of the Chief Minister of each State—

(*a*) to communicate to the Governor of the State all decisions of the Council of Ministers relating to the administration of the affairs of the State and proposals for legislation,

(*b*) to furnish such information relating to the administration of the affairs of the State and proposals for legislation as the Governor may call for, and

(*c*) if the Governor so requires, to submit for the consideration of the Council of Ministers any matter on which a decision has been taken by a Minister but which has not been considered by the Council

CHAPTER III—LEGISLATURE

168. (1) For every State there shall be a Legislature which shall consist of the Governor, and

(*a*) in the States of Bihar, Bombay, Madras, Punjab, the United Provinces and West Bengal, two Houses,

(*b*) in other States, one House

(2) Where there are two Houses of the Legislature of a State, one shall be known as the Legislative Council and the other as the Legislative Assembly, and where there is only one House, it shall be known as the Legislative Assembly.

169. (1) Notwithstanding anything in article 168, Parliament may by law provide for the abolition of the Legislative Council of a State having such a Council or for the creation of such a Council in a State having no such Council, if the Legislative Assembly of the State passes a resolution to that effect by a majority of the total membership of the Assembly and by a majority of not less than two-thirds of the members of the Assembly present and voting.

(2) Any law referred to in clause (1) shall contain such provisions for the amendment of this Constitution as may be necessary to give effect to the provisions of the law and may also contain such supplemental, incidental and consequential provisions as Parliament may deem necessary

(3) No such law as aforesaid shall be deemed to be an amendment of this Constitution for the purposes of article 368

170. (1) Subject to the provisions of article 333, the Legislative Assembly of each State shall be composed of members chosen by direct election

(2) The representation of each territorial constituency in the Legislative Assembly of a State shall be on the basis of the population of that constituency as ascertained at the last preceding census of which the relevant figures have been published and shall, save in the case of the autonomous districts of Assam and the constituency comprising the cantonment and municipality of Shillong, be on a scale of not more than one member for every seventy-five thousand of the population.

Provided that the total number of members in the Legislative Assembly of a State shall in no case be more than five hundred or less than sixty

(3) The ratio between the number of members to be allotted to each territorial constituency in a State and the population of that constituency as ascertained at the last preceding census of which the relevant figures have been published shall, so far as practicable, be the same throughout the State

(4) Upon the completion of each census, the representation of the several territorial constituencies in the Legislative Assembly of each State shall be readjusted by such authority, in such manner and with effect from such date as Parliament may by law determine

Provided that such readjustment shall not affect representation in the Legislative Assembly until the dissolution of the then existing Assembly

COMPOSITION

171. (1) The total number of members in the Legislative Council of a State having such a Council shall not exceed one-fourth of the total number of members in the Legislative Assembly of that State

Provided that the total number of members in the Legislative Council of a State shall in no case be less than forty.

(2) Until Parliament by law otherwise provides, the composition of the Legislative Council of a State shall be as provided in clause (3)

(3) Of the total number of members of the Legislative Council of a State—

(*a*) as nearly as may be, one-third shall be elected by electorates consisting of members of municipalities, district boards and such other local authorities in the State as Parliament may by law specify,

(*b*) as nearly as may be, one-twelfth shall be elected by electorates consisting of persons residing in the State who have been for at least three years graduates of any university in the territory of India or have been for at least three years in possession of qualifications prescribed by or under any law made by Parliament as equivalent to that of a graduate of any such university,

(c) as nearly as may be, one-twelfth shall be elected by electorates consisting of persons who have been for at least three years engaged in teaching in such educational institutions within the State, not lower in standard than that of a secondary school, as may be prescribed by or under any law made by Parliament,

(d) as nearly as may be, one-third shall be elected by the members of the Legislative Assembly of the State from amongst persons who are not members of the Assembly,

(e) the remainder shall be nominated by the Governor in accordance with the provisions of clause (5).

(4) The members to be elected under sub-clauses (a), (b) and (c) of clause (3) shall be chosen in such territorial constituencies as may be prescribed by or under any law made by Parliament, and the elections under the said sub-clauses and under sub-clause (d) of the said clause shall be held in accordance with the system of proportional representation by means of the single transferable vote

(5) The members to be nominated by the Governor under sub-clause (e) of clause (3) shall consist of persons having special knowledge or practical experience in respect of such matters as the following, namely —

Literature, science, art, co-operative movement and social service.

172. (1) Every Legislative Assembly of every State, unless sooner dissolved, shall continue for five years from the date appointed for its first meeting and no longer and the expiration of the said period of five years shall operate as a dissolution of the Assembly ·

Provided that the said period may, while a Proclamation of Emergency is in operation, be extended by Parliament by law for a period not exceeding one year at a time and not extending in any case beyond a period of six months after the Proclamation has ceased to operate

(2) The Legislative Council of a State shall not be subject to dissolution, but as nearly as possible one-third of the members thereof shall retire as soon as may be on the expiration of every second year in accordance with the provisions made in that behalf by Parliament by law

173. A person shall not be qualified to be chosen to fill a seat in the Legislature of a State unless he—

(a) is a citizen of India,

(b) is, in the case of a seat in the Legislative Assembly, not less than twenty-five years of age and, in the case of a seat in the Legislative Council, not less than thirty years of age; and

(c) possesses such other qualifications as may be prescribed in that behalf by or under any law made by Parliament

SESSIONS

174. (1) The House or Houses of the Legislature of the State shall be summoned to meet twice at least in every year, and six months shall not intervene between their last sitting in one session and the date appointed for their first sitting in the next session

(2) Subject to the provisions of clause (1), the Governor may from time to time—

(a) summon the House or either House to meet at such time and place as he thinks fit,

(b) prorogue the House or Houses,

(c) dissolve the Legislative Assembly

175. (1) The Governor may address the Legislative Assembly or, in the case of a State having a Legislative Council, either House of the Legislature of the State, or both Houses assembled together, and may for that purpose require the attendance of members.

(2) The Governor may send messages to the House or Houses of the Legislature of the State, whether with respect to a Bill then pending in the Legislature or otherwise, and a House to which any message is so sent shall with all convenient despatch consider any matter required by the message to be taken into consideration

176. (1) At the commencement of every session, the Governor shall address the Legislative Assembly or, in the case of a State having a Legislative Council, both Houses assembled together and inform the Legislature of the causes of its summons

(2) Provision shall be made by the rules regulating the procedure of the House or either House for the allotment of time for discussion of the matters referred to in such address and for the precedence of such discussion over other business of the House

177. Every Minister and the Advocate-General for a State shall have the right to speak in, and otherwise to take part in the proceedings of, the Legislative Assembly of the State or, in the case of a State having a Legislative Council, both Houses, and to speak in, and otherwise to take part in the proceedings of, any committee of the Legislature of which he may be named a member, but shall not, by virtue of this article, be entitled to vote.

SPEAKER, DEPUTY SPEAKER

178. Every Legislative Assembly of a State shall, as soon as may be, choose two members of the Assembly to be respectively Speaker and Deputy Speaker thereof and, so often as the office of Speaker or Deputy Speaker becomes vacant, the Assembly shall choose another member to be Speaker or Deputy Speaker, as the case may be

179. A member holding office as Speaker or Deputy Speaker of an Assembly—

(a) Shall vacate his office if he ceases to be a member of the Assembly,

(b) may at any time by writing under his hand addressed, if such member is the Speaker, to the Deputy Speaker, and if such member is the Deputy Speaker, to the Speaker, resign his office, and

(c) may be removed from his office by a resolution of the Assembly passed by a majority of all the then members of the Assembly

Provided that no resolution for the purpose of clause (c) shall be moved unless at least fourteen days' notice has been given of the intention to move the resolution

Provided further that, whenever the Assembly is dissolved, the Speaker shall not vacate his office until immediately before the first meeting of the Assembly after the dissolution

180. (1) While the office of Speaker is vacant, the duties of the office shall be performed by the Deputy Speaker or, if the office of Deputy Speaker is also vacant, by such member of the Assembly as the Governor may appoint for the purpose

(2) During the absence of the Speaker from any sitting of the Assembly the Deputy Speaker or, if he is also absent, such person as may be determined by the rules of procedure of the Assembly, or, if no such person is present, such other person as may be determined by the Assembly, shall act as Speaker

181. (1) At any sitting of the Legislative Assembly, while any resolution for the removal of the Speaker from his office is under consideration, the Speaker, or while any resolution for the removal of the Deputy Speaker from his office is under consideration, the Deputy Speaker, shall not, though he is present, preside, and the provisions of clause (2) of article 180 shall apply in relation to every such sitting as they apply in relation to a sitting from which the Speaker or, as the case may be the Deputy Speaker is absent.

(2) The Speaker shall have the right to speak in, and otherwise to take part in the proceedings of, the Legislative Assembly while any resolution for his removal from office is under consideration in the Assembly and shall, notwithstanding anything in article 189, be entitled to vote only in the first instance on such resolution or on any other matter during such proceedings but not in the case of an equality of votes.

CHAIRMAN, DEPUTY CHAIRMAN

182. The Legislative Council of every State having such Council shall, as soon as may be, choose two members of the Council to be respectively Chairman and Deputy Chairman thereof and, so often as the office of Chairman or Deputy Chairman becomes vacant, the Council shall choose another member to be Chairman or Deputy Chairman, as the case may be.

183. A member holding office as Chairman or Deputy Chairman of a Legislative Council—

(a) shall vacate his office if he ceases to be a member of the Council,

(b) may at any time by writing under his hand addressed, if such member is the Chairman, to the Deputy Chairman, and if such member is the Deputy Chairman, to the Chairman, resign his office, and

(c) may be removed from his office by a resolution of the Council passed by a majority of all the then members of the Council

Provided that no resolution for the purpose of clause (c) shall be moved unless at least fourteen days' notice has been given of the intention to move the resolution

184. (1) While the office of Chairman is vacant, the duties of the office shall be performed by the Deputy Chairman or, if the office of Deputy Chairman is also vacant, by such member of the Council as the Governor may appoint for the purpose

(2) During the absence of the Chairman from any sitting of the Council the Deputy Chairman or, if he is also absent, such person as may be determined by the rules of procedure of the Council, or, if no such person is present, such other person as may be determined by the Council, shall act as Chairman

185. (1) At any sitting of the Legislative Council, while any resolution for the removal of the Chairman from his office is under consideration, the Chairman, or while any resolution for the removal of the Deputy Chairman from his office is under consideration, the Deputy Chairman, shall not, though he is present, preside, and the provisions of clause (2) of article 184 shall apply in relation to every such sitting as they apply in relation to a sitting from which the Chairman or, as the case may be, the Deputy Chairman is absent

(2) The Chairman shall have the right to speak in, and otherwise to take part in the proceedings of, the Legislative Council while any resolution for his removal from office is under consideration in the Council and shall, notwithstanding anything in article 189, be entitled to vote only in the first instance on such resolution or on any other matter during such proceedings but not in the case of an equality of votes

SALARIES, ETC.

186. There shall be paid to the Speaker and the Deputy Speaker of the Legislative Assembly, and to the Chairman and the Deputy Chairman of the Legislative Council, such salaries and allowances as may be respectively fixed by the Legislature of the State by law and, until provision in that behalf is so made, such salaries and allowances as are specified in the Second Schedule

187. (1) The House or each House of the Legislature of a State shall have a separate secretarial staff.

Provided that nothing in this clause shall, in the case of the Legislature of a State having

a Legislative Council, be construed as preventing the creation of posts common to both Houses of such Legislature.

(2) The Legislature of a State may by law regulate the recruitment, and the conditions of service of persons appointed, to the secretarial staff of the House or Houses of the Legislature of the State

(3) Until provision is made by the Legislature of the State under clause (2), the Governor may, after consultation with the Speaker of the Legislative Assembly or the Chairman of the Legislative Council, as the case may be, make rules regulating the recruitment, and the conditions of service of persons appointed, to the secretarial staff of the Assembly or the Council, and any rules so made shall have effect subject to the provisions of any law made under the said clause

CONDUCT OF BUSINESS

188. Every member of the Legislative Assembly or the Legislative Council of a State shall, before taking his seat, make and subscribe before the Governor, or some person appointed in that behalf by him, an oath or affirmation according to the form set out for the purpose in the Third Schedule

189. (1) Save as otherwise provided in this Constitution, all questions at any sitting of a House of the Legislature of a State shall be determined by a majority of votes of the members present and voting, other than the Speaker or Chairman, or person acting as such.

The Speaker or Chairman, or person acting as such, shall not vote in the first instance, but shall have and exercise a casting vote in the case of an equality of votes.

(2) A House of the Legislature of a State shall have power to act notwithstanding any vacancy in the membership thereof, and any proceedings in the Legislature of a State shall be valid notwithstanding that it is discovered subsequently that some person who was not entitled so to do sat or voted or otherwise took part in the proceedings

(3) Until the Legislature of the State by law otherwise provides, the quorum to constitute a meeting of a House of the Legislature of a State shall be ten members or one-tenth of the total number of members of the House, whichever is greater

(4) If at any time during a meeting of the Legislative Assembly or the Legislative Council of a State there is no quorum, it shall be the duty of the Speaker or Chairman, or person acting as such, either to adjourn the House or to suspend the meeting until there is a quorum

DISQUALIFICATIONS OF MEMBERS

190. (1) No person shall be a member of both Houses of the Legislature of a State and provision shall be made by the Legislature of the State by law for the vacation by a person who is chosen a member of both Houses of his seat in one House or the other.

(2) No person shall be a member of the Legislatures of two or more States specified in the First Schedule and if a person is chosen a member of the Legislatures of two or more such States, then, at the expiration of such period as may be specified in rules made by the President, that person's seat in the Legislatures of all such States shall become vacant, unless he has previously resigned his seat in the Legislatures of all but one of the States

(3) If a member of a House of the Legislature of a State—

(*a*) becomes subject to any of the disqualifications mentioned in clause (1) of article 191, or

(*b*) resigns his seat by writing under his hand addressed to the Speaker or the Chairman as the case may be,

his seat shall thereupon become vacant.

(4) If for a period of sixty days a member of a House of the Legislature of a State is without permission of the House absent from all meetings thereof, the House may declare his seat vacant

Provided that in computing the said period of sixty days no account shall be taken of any period during which the House is prorogued or is adjourned for more than four consecutive days

191. (1) A person shall be disqualified for being chosen as, and for being, a member of the Legislative Assembly or Legislative Council of a State—

(*a*) if he holds any office of profit under the Government of India or the Government of any State specified in the First Schedule, other than an office declared by the Legislature of the State by law not to disqualify its holder,

(*b*) if he is of unsound mind and stands so declared by a competent court,

(*c*) if he is an undischarged insolvent;

(*d*) if he is not a citizen of India, or has voluntarily acquired the citizenship of a foreign State, or is under any acknowledgment of allegiance or adherence to a foreign State,

(*e*) if he is so disqualified by or under any law made by Parliament

(2) For the purposes of this article, a person shall not be deemed to hold an office of profit under the Government of India or the Government of any State specified in the First Schedule by reason only that he is a Minister either for the Union or for such State

DISPUTES

192. (1) If any question arises as to whether a member of a House of the Legislature of a State has become subject to any of the disqualifications mentioned in clause (1) of article 191, the question shall be referred for the decision of the Governor and his decision shall be final

(2) Before giving any decision on any such question, the Governor shall obtain the opinion of the Election Commission and shall act according to such opinion

193. If a person sits or votes as a member of the Legislative Assembly or the Legislative Council of a State before he has complied with the requirements of article 188, or when he knows that he is not qualified or that he is disqualified for membership thereof, or that he is prohibited from so doing by the provisions of any law made by Parliament or the Legislature of the State, he shall be liable in respect of each day on which he so sits or votes to a penalty of five hundred rupees to be recovered as a debt due to the State

POWERS, ETC. OF MEMBERS

194. (1) Subject to the provisions of this Constitution and to the rules and standing orders regulating the procedure of the Legislature, there shall be freedom of speech in the Legislature of every State

(2) No member of the Legislature of a State shall be liable to any proceedings in any court in respect of anything said or any vote given by him in the Legislature or any committee thereof, and no person shall be so liable in respect of the publication by or under the authority of a House of such a Legislature of any report, paper, votes or proceedings.

(3) In other respects, the powers, privileges and immunities of a House of the Legislature of a State, and of the members and the committees of a House of such Legislature, shall be such as may from time to time be defined by the Legislature by law, and, until so defined, shall be those of the House of Commons of the Parliament of the United Kingdom, and of its members and committees, at the commencement of this Constitution

(4) The provisions of clauses (1), (2) and (3) shall apply in relation to persons who by virtue of this Constitution have the right to speak in and otherwise to take part in the proceedings of, a House of the Legislature of a State or any committee thereof as they apply in relation to members of that Legislature

195. Members of the Legislative Assembly and the Legislative Council of a State shall be entitled to receive such salaries and allowances as may from time to time be determined by the Legislature of the State by law and, until provision in that respect is so made, salaries and allowances at such rates and upon such conditions as were immediately before the commencement of this Constitution applicable in the case of members of the Legislative Assembly of the corresponding Province

LEGISLATIVE PROCEDURE

196. (1) Subject to the provisions of articles 198 and 207 with respect to Money Bills and other financial Bills, a Bill may originate in either House of the Legislature of a State which has a Legislative Council

(2) Subject to the provisions of articles 197 and 198, a Bill shall not be deemed to have been passed by the Houses of the Legislature of a State having a Legislative Council unless it has been agreed to by both Houses, either without amendment or with such amendments only as are agreed to by both Houses

(3) A Bill pending in the Legislature of a State shall not lapse by reason of the prorogation of the House or Houses thereof

(4) A Bill pending in the Legislative Council of a State which has not been passed by the Legislative Assembly shall not lapse on a dissolution of the Assembly

(5) A Bill which is pending in the Legislative Assembly of a State, or which having been passed by the Legislative Assembly is pending in the Legislative Council, shall lapse on a dissolution of the Assembly

197. (1) If after a Bill has been passed by the Legislative Assembly of a State having a Legislative Council and transmitted to the Legislative Council—

(*a*) the Bill is rejected by the Council; or

(*b*) more than three months elapse from the date on which the Bill is laid before the Council without the Bill being passed by it, or

(*c*) the Bill is passed by the Council with amendments to which the Legislative Assembly does not agree,

the Legislative Assembly may, subject to the rules regulating its procedure, pass the Bill again in the same or in any subsequent session with or without such amendments, if any, as have been made, suggested or agreed to by the Legislative Council and then transmit the Bill as so passed to the Legislative Council.

(2) If after a Bill has been so passed for the second time by the Legislative Assembly and transmitted to the Legislative Council—

(*a*) the Bill is rejected by the Council, or

(*b*) more than one month elapses from the date on which the Bill is laid before the Council without the Bill being passed by it, or

(*c*) the Bill is passed by the Council with amendments to which the Legislative Assembly does not agree,

the Bill shall be deemed to have been passed by the Houses of the Legislature of the State in the form in which it was passed by the Legislative Assembly for the second time with such amendments, if any, as have been made or suggested by the Legislative Council and agreed to by the Legislative Assembly

(3) Nothing in this article shall apply to a Money Bill.

MONEY BILLS

198. (1) A Money Bill shall not be introduced in a Legislative Council.

(2) After a Money Bill has been passed by the Legislative Assembly of a State having a

Legislative Council, it shall be transmitted to the Legislative Council for its recommendations, and the Legislative Council shall within a period of fourteen days from the date of its receipt of the Bill return the Bill to the Legislative Assembly with its recommendations, and the Legislative Assembly may thereupon either accept or reject all or any of the recommendations of the Legislative Council

(3) If the Legislative Assembly accepts any of the recommendations of the Legislative Council, the Money Bill shall be deemed to have been passed by both Houses with the amendments recommended by the Legislative Council and accepted by the Legislative Assembly

(4) If the Legislative Assembly does not accept any of the recommendations of the Legislative Council, the Money Bill shall be deemed to have been passed by both Houses in the form in which it was passed by the Legislative Assembly without any of the amendments recommended by the Legislative Council

(5) If a Money Bill passed by the Legislative Assembly and transmitted to the Legislative Council for its recommendations is not returned to the Legislative Assembly within the said period of fourteen days, it shall be deemed to have been passed by both Houses at the expiration of the said period in the form in which it was passed by the Legislative Assembly

DEFINITION

199. (1) For the purposes of this Chapter, a Bill shall be deemed to be a Money Bill if it contains only provisions dealing with all or any of the following matters, namely—

(*a*) the imposition, abolition, remission, alteration or regulation of any tax,

(*b*) the regulation of the borrowing of money or the giving of any guarantee by the State, or the amendment of the law with respect to any financial obligations undertaken or to be undertaken by the State,

(*c*) the custody of the Consolidated Fund or the Contingency Fund of the State, the payment of moneys into or the withdrawal of moneys from any such Fund,

(*d*) the appropriation of moneys out of the Consolidated Fund of the State,

(*e*) the declaring of any expenditure to be expenditure charged on the Consolidated Fund of the State, or the increasing of the amount of any such expenditure,

(*f*) the receipt of money on account of the Consolidated Fund of the State or the public account of the State or the custody or issue of such money, or

(*g*) any matter incidental to any of the matters specified in sub-clauses (*a*) to (*f*)

(2) A Bill shall not be deemed to be a Money Bill by reason only that it provides for the imposition of fines or other pecuniary penalties, or for the demand or payment of fees for licences or fees for services rendered, or by reason that it provides for the imposition, abolition, remission, alteration or regulation of any tax by any local authority or body for local purposes

(3) If any question arises whether a Bill introduced in the Legislature of a State which has a Legislative Council is a Money Bill or not, the decision of the Speaker of the Legislative Assembly of such State thereon shall be final

(4) There shall be endorsed on every Money Bill when it is transmitted to the Legislative Council under article 198, and when it is presented to the Governor for assent under article 200, the certificate of the Speaker of the Legislative Assembly signed by him that it is a Money Bill.

ASSENT TO BILLS

200. When a Bill has been passed by the Legislative Assembly of a State or, in the case of a State having a Legislative Council, has been passed by both Houses of the Legislature of the State, it shall be presented to the Governor and the Governor shall declare either that he assents to the Bill or that he withholds assent therefrom or that he reserves the Bill for the consideration of the President.

Provided that the Governor may, as soon as possible after the presentation to him of the Bill for assent, return the Bill if it is not a Money Bill together with a message requesting that the House or Houses will reconsider the Bill or any specified provisions thereof and, in particular, will consider the desirability of introducing any such amendments as he may recommend in his message and, when a Bill is so returned, the House or Houses shall reconsider the Bill accordingly, and if the Bill is passed again by the House or Houses with or without amendment and presented to the Governor for assent, the Governor shall not withhold assent therefrom:

Provided further that the Governor shall not assent to, but shall reserve for the consideration of the President, any Bill which in the opinion of the Governor would, if it became law, so derogate from the powers of the High Court as to endanger the position which that Court is by this Constitution designed to fill

201. When a Bill is reserved by a Governor for the consideration of the President, the President shall declare either that he assents to the Bill or that he withholds assent therefrom

Provided that, where the Bill is not a Money Bill, the President may direct the Governor to return the Bill to the House or, as the case may be, the Houses of the Legislature of the State together with such a message as is mentioned in the first proviso to article 200 and, when a Bill is so returned, the House or Houses shall reconsider it accordingly within a period of six months from the date of receipt of such message and, if it is again passed by the House or Houses with or without amendment, it shall be presented again to the President for his consideration

ANNUAL FINANCIAL STATEMENT

202. (1) The Governor shall in respect of every financial year cause to be laid before the House or Houses of the Legislature of the State a statement of the estimated receipts and expenditure of the State for that year, in this Part referred to as the "annual financial statement"

(2) The estimates of expenditure embodied in the annual financial statement shall show separately—

(*a*) the sums required to meet expenditure described by this Constitution as expenditure charged upon the Consolidated Fund of the State, and

(*b*) the sums required to meet other expenditure proposed to be made from the Consolidated Fund of the State,

and shall distinguish expenditure on revenue account from other expenditure

(3) The following expenditure shall be expenditure charged on the Consolidated Fund of each State—

(*a*) the emoluments and allowances of the Governor and other expenditure relating to his office,

(*b*) the salaries and allowances of the Speaker and the Deputy Speaker of the Legislative Assembly and, in the case of a State having a Legislative Council, also of the Chairman and the Deputy Chairman of the Legislative Council,

(*c*) debt charges for which the State is liable including interest, sinking fund charges and redemption charges, and other expenditure relating to the raising of loans and the service and redemption of debt,

(*d*) expenditure in respect of the salaries and allowances of Judges of any High Court,

(*e*) any sums required to satisfy any judgment, decree or award of any court or arbitral tribunal,

(*f*) any other expenditure declared by this Constitution, or by the Legislature of the State by law, to be so charged.

PROCEDURE

203. (1) So much of the estimates as relates to expenditure charged upon the Consolidated Fund of a State shall not be submitted to the vote of the Legislative Assembly, but nothing in this clause shall be construed as preventing the discussion in the Legislature of any of those estimates

(2) So much of the said estimates as relates to other expenditure shall be submitted in the form of demands for grants to the Legislative Assembly, and the Legislative Assembly shall have power to assent, or to refuse to assent, to any demand, or to assent to any demand subject to a reduction of the amount specified therein.

(3) No demand for a grant shall be made except on the recommendation of the Governor.

204. (1) As soon as may be after the grants under article 203 have been made by the Assembly, there shall be introduced a Bill to provide for the appropriation out of the Consolidated Fund of the State of all moneys required to meet—

(*a*) the grants so made by the Assembly, and

(*b*) the expenditure charged on the Consolidated Fund of the State but not exceeding in any case the amount shown in the statement previously laid before the House or Houses

(2) No amendment shall be proposed to any such Bill in the House or either House of the Legislature of the State which will have the effect of varying the amount or altering the destination of any grant so made or of varying the amount of any expenditure charged on the Consolidated Fund of the State, and the decision of the person presiding as to whether an amendment is inadmissible under this clause shall be final

(3) Subject to the provisions of articles 205 and 206, no money shall be withdrawn from the Consolidated Fund of the State except under appropriation made by law passed in accordance with the provisions of this article

EXCESS GRANTS

205. (1) The Governor shall—

(*a*) if the amount authorised by any law made in accordance with the provisions of article 204 to be expended for a particular service for the current financial year is found to be insufficient for the purposes of that year or when a need has arisen during the current financial year for supplementary or additional expenditure upon some new service not contemplated in the annual financial statement for that year, or

(*b*) if any money has been spent on any service during a financial year in excess of the amount granted for that service and for that year,

cause to be laid before the House or the Houses of the Legislature of the State another statement showing the estimated amount of that expenditure or cause to be presented to the Legislative Assembly of the State a demand for such excess, as the case may be.

(2) The provisions of articles 202, 203 and 204 shall have effect in relation to any such statement and expenditure or demand and also to any law to be made authorising the appropriation of moneys out of the Consolidated Fund of the State to meet such expenditure or the grant in respect of such demand as they have effect in relation to the annual financial statement and the expenditure mentioned therein or to a demand for a grant and the law to be made for the authorisation of appropriation of moneys out of the Consolidated Fund of the State to meet such expenditure or grant.

EXCEPTIONAL GRANTS

206. (1) Notwithstanding anything in the foregoing provisions of this Chapter, the Legislative Assembly of a State shall have power—

(*a*) to make any grant in advance in respect of the estimated expenditure for a part of any financial year pending the completion of the procedure prescribed in article 203 for the voting of such grant and the passing of the law in accordance with the provisions of article 204 in relation to that expenditure ,

(*b*) to make a grant for meeting an unexpected demand upon the resources of the State when on account of the magnitude or the indefinite character of the service the demand cannot be stated with the details ordinarily given in an annual financial statement ,

(*c*) to make an exceptional grant which forms no part of the current service of any financial year ,

and the Legislature of the State shall have power to authorise by law the withdrawal of moneys from the Consolidated Fund of the State for the purposes for which the said grants are made

(2) The provisions of articles 203 and 204 shall have effect in relation to the making of any grant under clause (1) and to any law to be made under that clause as they have effect in relation to the making of a grant with regard to any expenditure mentioned in the annual financial statement and the law to be made for the authorisation of appropriation of moneys out of the Consolidated Fund of the State to meet such expenditure.

207. (1) A Bill or amendment making provision for any of the matters specified in sub-clauses (*a*) to (*f*) of clause (1) of article 199 shall not be introduced or moved except on the recommendation of the Governor, and a Bill making such provision shall not be introduced in a Legislative Council .

Provided that no recommendation shall be required under this clause for the moving of an amendment making provision for the reduction or abolition of any tax

(2) A Bill or amendment shall not be deemed to make provision for any of the matters aforesaid by reason only that it provides for the imposition of fines or other pecuniary penalties, or for the demand or payment of fees for licences or fees for services rendered, or by reason that it provides for the imposition, abolition, remission, alteration or regulation of any tax by any local authority or body for local purposes

(3) A Bill which, if enacted and brought into operation, would involve expenditure from the Consolidated Fund of a State shall not be passed by a House of the Legislature of the State unless the Governor has recommended to that House the consideration of the Bill

RULES OF PROCEDURE

208. (1) A House of the Legislature of a State may make rules for regulating, subject to the provisions of this Constitution, its procedure and the conduct of its business

(2) Until rules are made under clause (1), the rules of procedure and standing orders in force immediately before the commencement of this Constitution with respect to the Legislature for the corresponding Province shall have effect in relation to the Legislature of the State subject to such modifications and adaptations as may be made therein by the Speaker of the Legislative Assembly, or the Chairman of the Legislative Council, as the case may be.

(3) In a State having a Legislative Council the Governor, after consultation with the Speaker of the Legislative Assembly and the Chairman of the Legislative Council, may make rules as to the procedure with respect to communications between the two Houses.

209. The Legislature of a State may, for the purpose of the timely completion of financial business, regulate by law the procedure of, and the conduct of business in, the House or Houses of the Legislature of the State in relation to any financial matter or to any Bill for the appropriation of moneys out of the Consolidated Fund of the State, and, if and so far as any provision of any law so made is inconsistent with any rule made by the House or other House of the Legislature of the State under clause (1) of article 208 or with any rule or standing order having effect in relation to the Legislature of the State under clause (2) of that article, such provision shall prevail

LANGUAGE

210. (1) Notwithstanding anything in Part XVII, but subject to the provisions of article 348, business in the Legislature of a State shall be transacted in the official language or languages of the State or in Hindi or in English

Provided that the Speaker of the Legislative Assembly or Chairman of the Legislative Council, or person acting as such, as the case may be, may permit any member who cannot adequately express himself in any of the languages aforesaid to address the House in his mother-tongue

(2) Unless the Legislature of the State by law otherwise provides, this article shall, after the expiration of a period of fifteen years from the commencement of this Constitution, have effect as if the words "or in English" were omitted therefrom

211. No discussion shall take place in the Legislature of a State with respect to the conduct of any Judge of the Supreme Court or of a High Court in the discharge of his duties

212. (1) The validity of any proceedings in the Legislature of a State shall not be called in question on the ground of any alleged irregularity of procedure

(2) No officer or member of the Legislature of a State in whom powers are vested by or under this Constitution for regulating procedure or the conduct of business, or for maintaining order, in the Legislature shall be subject to the jurisdiction of any court in respect of the exercise by him of those powers

CHAPTER IV—LEGISLATIVE POWER OF THE GOVERNOR

213. (1) If at any time, except when the Legislative Assembly of a State is in session, or where there is a Legislative Council in a State except when both Houses of the Legislature are in session, the Governor is satisfied that circumstances exist which render it necessary for him to take immediate action, he may promulgate such Ordinances as the circumstances appear to him to require

Provided that the Governor shall not, without instructions from the President, promulgate any such Ordinance if—

(*a*) a Bill containing the same provisions would under this Constitution have required the previous sanction of the President for the introduction thereof into the Legislature , or

(*b*) he would have deemed it necessary to reserve a Bill containing the same provisions for the consideration of the President , or

(*c*) an Act of the Legislature of the State containing the same provisions would under this Constitution have been invalid unless, having been reserved for the consideration of the President, it had received the assent of the President.

(2) An Ordinance promulgated under this article shall have the same force and effect as an Act of the Legislature of the State assented to by the Governor, but every such Ordinance—

(*a*) shall be laid before the Legislative Assembly of the State, or where there is a Legislative Council in the State, before both the Houses, and shall cease to operate at the expiration of six weeks from the reassembly of the Legislature, or if before the expiration of that period a resolution disapproving it is passed by the Legislative Assembly and agreed to by the Legislative Council if any, upon the passing of the resolution or, as the case may be, on the resolution being agreed to by the Council , and

(*b*) may be withdrawn at any time by the Governor

Explanation —Where the Houses of the Legislature of a State having a Legislative Council are summoned to reassemble on different dates, the period of six weeks shall be reckoned from the later of those dates for the purposes of this clause

(3) If and so far as an Ordinance under this article makes any provision which would not be valid if enacted in an Act of the Legislature of the State assented to by the Governor, it shall be void

Provided that, for the purposes of the provisions of this Constitution relating to the effect of an Act of the Legislature of a State which is repugnant to an Act of Parliament or an existing law with respect to a matter enumerated in the Concurrent List, an Ordinance promulgated under this article in pursuance of instructions from the President shall be deemed to be an Act of the Legislature of the State which has been reserved for the consideration of the President and assented to by him

CHAPTER V—THE HIGH COURTS IN THE STATES

214. (1) There shall be a High Court for each State

(2) For the purposes of this Constitution the High Court exercising jurisdiction in relation to any Province immediately before the commencement of this Constitution shall be deemed to be the High Court for the corresponding State.

(3) The provisions of this Chapter shall apply to every High Court referred to in this article.

215. Every High Court shall be a court of record and shall have all the powers of such a court including the power to punish for contempt of itself

216. Every High Court shall consist of a Chief Justice and such other Judges as the President may from time to time deem it necessary to appoint

Provided that the Judges so appointed shall at no time exceed in number such maximum number as the President may, from time to time, by order fix in relation to that Court

APPOINTMENT, CONDITIONS

217. (1) Every Judge of a High Court shall be appointed by the President by warrant under his hand and seal after consultation with the Chief Justice of India, the Governor of the State, and, in the case of appointment of a Judge other than the Chief Justice, the Chief Justice of the High Court, and shall hold office until he attains the age of sixty years

Provided that—

(*a*) a Judge may, by writing under his hand addressed to the President, resign his office ,

(*b*) a Judge may be removed from his office by the President in the manner provided in clause (4) of article 124 for the removal of a Judge of the Supreme Court ,

(*c*) the office of a Judge shall be vacated by his being appointed by the President to be a Judge of the Supreme Court or by his being transferred by the President to any other High Court within the territory of India

(2) A person shall not be qualified for appointment as a Judge of a High Court unless he is a citizen of India and—

(*a*) has for at least ten years held a judicial office in the territory of India, or

(*b*) has for at least ten years been an advocate of a High Court in any State specified in the First Schedule or of two or more such Courts in succession

Explanation.—For the purposes of this clause—

(*a*) in computing the period during which a person has been an advocate of a High Court, there shall be included any period during which the person has held judicial office after he became an advocate,

(*b*) in computing the period during which a person has held judicial office in the territory of India or been an advocate of a High Court, there shall be included any period before the commencement of this Constitution during which he has held judicial office in any area which was comprised before the fifteenth day of August, 1947, within India as defined by the Government of India Act, 1935, or has been an advocate of any High Court in any such area, as the case may be

218. The provisions of clauses (4) and (5) of article 124 shall apply in relation to a High Court as they apply in relation to the Supreme Court with the substitution of references to the High Court for references to the Supreme Court

219. Every person appointed to be a Judge of a High Court in a State shall, before he enters upon his office, make and subscribe before the Governor of the State, or some person appointed in that behalf by him, an oath or affirmation according to the form set out for the purpose in the Third Schedule

220. No person who has held office as a Judge of a High Court after the commencement of this Constitution shall plead or act in any court or before any authority within the territory of India

SALARIES, ETC.

221. (1) There shall be paid to the Judges of each High Court such salaries as are specified in the Second Schedule

(2) Every Judge shall be entitled to such allowances and to such rights in respect of leave of absence and pension as may from time to time be determined by or under law made by Parliament and, until so determined, to such allowances and rights as are specified in the Second Schedule

Provided that neither the allowances of a Judge nor his rights in respect of leave of absence or pension shall be varied to his disadvantage after his appointment

222. (1) The President may, after consultation with the Chief Justice of India, transfer a Judge from one High Court to any other High Court within the territory of India

(2) When a Judge is so transferred, he shall, during the period he serves as a Judge of the other Court, be entitled to receive in addition to his salary such compensatory allowance as may be determined by Parliament by law and, until so determined, such compensatory allowance as the President may by order fix.

223. When the office of Chief Justice of a High Court is vacant or when any such Chief Justice is, by reason of absence or otherwise, unable to perform the duties of his office, the duties of the office shall be performed by such one of the other Judges of the Court as the President may appoint for the purpose

224. Notwithstanding anything in this Chapter, the Chief Justice of a High Court for any State may at any time, with the previous consent of the President, request any person who has held the office of a Judge of that Court or of any other High Court to sit and act as a Judge of the High Court for that State, and every such person so requested shall, while so sitting and acting, be entitled to such allowances as the President may by order determine and have all the jurisdiction, powers and privileges of, but shall not otherwise be deemed to be, a Judge of that High Court

Provided that nothing in this article shall be deemed to require any such person as aforesaid to sit and act as a Judge of that High Court unless he consents so to do.

JURISDICTION

225. Subject to the provisions of this Constitution and to the provisions of any law of the appropriate Legislature made by virtue of powers conferred on that Legislature by this Constitution, the jurisdiction of, and the law administered in, any existing High Court, and the respective powers of the Judges thereof in relation to the administration of justice in the Court, including any power to make rules of Court and to regulate the sittings of the Court and of members thereof sitting alone or in Division Courts, shall be the same as immediately before the commencement of this Constitution

Provided that any restriction to which the exercise of original jurisdiction by any of the High Courts with respect to any matter concerning the revenue or concerning any act ordered or done in the collection thereof was subject immediately before the commencement of this Constitution shall no longer apply to the exercise of such jurisdiction

226. (1) Notwithstanding anything in article 32, every High Court shall have power, throughout the territories in relation to which it exercises jurisdiction, to issue to any person or authority, including in appropriate cases any Government, within those territories directions, orders or writs, including writs in the nature of *habeas corpus*, *mandamus*, prohibition, *quo warranto* and *certiorari*, or any of them, for the enforcement of any of the rights conferred by Part III and for any other purpose

(2) The power conferred on a High Court by clause (1) shall not be in derogation of the power conferred on the Supreme Court by clause (2) of article 32

SUPERINTENDENCE

227. (1) Every High Court shall have superintendence over all courts and tribunals throughout the territories in relation to which exercises jurisdiction

(2) Without prejudice to the generality of the foregoing provision, the High Court may—

(*a*) call for returns from such courts,

(*b*) make and issue general rules and prescribe forms for regulating the practice and proceedings of such courts; and

(*c*) prescribe forms in which books, entries and accounts shall be kept by the officers of any such courts

(3) The High Court may also settle tables of fees to be allowed to the sheriff and all clerks and officers of such courts and to attorneys, advocates and pleaders practising therein

Provided that any rules made, forms prescribed or tables settled under clause (2) or clause (3) shall not be inconsistent with the provision of any law for the time being in force, and shall require the previous approval of the Governor.

(4) Nothing in this article shall be deemed to confer on a High Court powers of superintendence over any court or tribunal constituted by or under any law relating to the Armed Forces

228. If the High Court is satisfied that a case pending in a court subordinate to it involves a substantial question of law as to the interpretation of this Constitution the determination of which is necessary for the disposal of the case, it shall withdraw the case and may—

(*a*) either dispose of the case itself, or

(*b*) determine the said question of law and return the case to the court from which the case has been so withdrawn together with a copy of its judgment on such question, and the said court shall on receipt thereof proceed to dispose of the case in conformity with such judgment.

229. (1) Appointments of officers and servants of a High Court shall be made by the Chief Justice of the Court or such other Judge or officer of the Court as he may direct.

Provided that the Governor of the State in which the High Court has its principal seat may by rule require that in such cases as may be specified in the rule no person not already attached to the Court shall be appointed to any office connected with the Court save after consultation with the State Public Service Commission

(2) Subject to the provisions of any law made by the Legislature of the State, the conditions of service of officers and servants of a High Court shall be such as may be prescribed by rules made by the Chief Justice of the Court or by some other Judge or officer of the Court authorised by the Chief Justice to make rules for the purpose

Provided that the rules made under this clause shall, so far as they relate to salaries, allowances, leave or pensions, require the approval of the Governor of the State in which the High Court has its principal seat

(3) The administrative expenses of a High Court, including all salaries, allowances and pensions payable to or in respect of the officers and servants of the Court, shall be charged upon the Consolidated Fund of the State, and any fees or other moneys taken by the Court shall form part of that Fund

EXTENSION, RESTRICTION OF POWER

230. Parliament may by law—

(*a*) extend the jurisdiction of a High Court to, or

(*b*) exclude the jurisdiction of a High Court from,

any State specified in the First Schedule other than, or any area not within, the State in which the High Court has its principal seat

231. Where a High Court exercises jurisdiction in relation to any area outside the State in which it has its principal seat, nothing in this Constitution shall be construed—

(*a*) as empowering the Legislature of the State in which the Court has its principal seat to increase, restrict or abolish that jurisdiction,

(*b*) as empowering the Legislature of a State specified in Part A or Part B of the First Schedule in which any such area is situate, to abolish that jurisdiction, or

(*c*) as preventing the Legislature having power to make laws in that behalf for any such area, from passing, subject to the provisions of clause (*b*), such laws with respect to the jurisdiction of the Court in relation to that area as it would be competent to pass if the principal seat of the Court were in that area

232. Where a High Court exercises jurisdiction in relation to more than one State specified in the First Schedule or in relation to a State and an area not forming part of the State—

(*a*) references in this Chapter to the Governor in relation to the Judges of a High Court shall be construed as references to the Governor of the State in which the Court has its principal seat,

(*b*) the reference to the approval by the Governor of rules, forms and tables for subordinate courts shall be construed as a reference to the approval thereof by the Governor or the Rajpramukh of the State in which the subordinate court is situate, or if it is situate in an area not forming part of any State specified in Part A or Part B of the First Schedule by the President, and

(c) references to the Consolidated Fund of the State shall be construed as references to the Consolidated Fund of the State in which the Court has its principal seat

CHAPTER VI—SUBORDINATE COURTS

233. (1) Appointments of persons to be, and the posting and promotion of, district judges in any State shall be made by the Governor of the State in consultation with the High Court exercising jurisdiction in relation to such State

(2) A person not already in the service of the Union or of the State shall only be eligible to be appointed a district judge if he has been for not less than seven years an advocate or a pleader and is recommended by the High Court for appointment

234. Appointments of persons other than district judges to the judicial service of a State shall be made by the Governor of the State in accordance with rules made by him in that behalf after consultation with the State Public Service Commission and with the High Court exercising jurisdiction in relation to such State

235. The control over district courts and courts subordinate thereto including the posting and promotion of, and the grant of leave to, persons belonging to the judicial service of a State and holding any post inferior to the post of district judge shall be vested in the High Court, but nothing in this article shall be construed as taking away from any such person any right of appeal which he may have under the law regulating the conditions of his service or as authorising the High Court to deal with him otherwise than in accordance with the conditions of his service prescribed under such law

236. In this Chapter—

(a) the expression "district judge" includes judge of a city civil court, additional district judge, joint district judge, assistant district judge, chief judge of a small cause court, chief presidency magistrate, additional chief presidency magistrate, sessions judge, additional sessions judge and assistant sessions judge,

(b) the expression "judicial service" means a service consisting exclusively of persons intended to fill the post of district judge and other civil judicial posts inferior to the post of district judge

237. The Governor may by public notification direct that the foregoing provisions of this Chapter and any rules made thereunder shall with effect from such date as may be fixed by him in that behalf apply in relation to any class or classes of magistrates in the State as they apply in relation to persons appointed to the judicial service of the State subject to such exceptions and modifications as may be specified in the notification

PART VII

STATES IN PART B OF FIRST SCHEDULE

238. The provisions of Part VI shall apply in relation to the States specified in Part B of the First Schedule as they apply in relation to the States specified in Part A of that Schedule subject to the following modifications and omissions, namely —

(1) For the word "Governor" wherever it occurs in the said Part VI, except where it occurs for the second time in clause (b) of article 232, the word "Rajpramukh" shall be substituted

(2) In article 152, for the word and letter "Part A" the word and letter "Part B" shall be substituted.

(3) Articles 155, 156 and 157 shall be omitted.

(4) In article 158,—

(i) in clause (1), for the words "be appointed" the word "becomes" shall be substituted,

(ii) for clause (3), the following clause shall be substituted, namely —

"(3) The Rajpramukh shall, unless he has his own residence in the principal seat of Government of the State, be entitled without payment of rent to the use of an official residence and shall be also entitled to such allowances and privileges as the President may, by general or special order, determine,"

(iii) in clause (4), the words "emoluments and" shall be omitted

(5) In article 159, after the words "senior-most Judge of that Court available" the words "or in such other manner as may be prescribed in that behalf by the President" shall be inserted

(6) In article 164, for the proviso to clause (1) the following proviso shall be substituted, namely —

"Provided that in the State of Madhya Bharat there shall be a Minister in charge of tribal welfare who may in addition be in charge of the welfare of the Scheduled Castes and backward classes or any other work"

(7) In article 168, for clause (1) the following clause shall be substituted, namely —

"(1) For every State there shall be a Legislature which shall consist of the Rajpramukh and—

(a) in the State of Mysore, two Houses,

(b) in other States, one House"

(8) In article 186, for the words "as are specified in the Second Schedule" the words "as the Rajpramukh may determine" shall be substituted

(9) In article 195, for the words "as were immediately before the commencement of this Constitution applicable in the case of members of the Legislative Assembly of the corresponding Province" the words "as the Rajpramukh may determine" shall be substituted

(10) In clause (3) of article 202—

(i) for sub-clause (a), the following sub-clause shall be substituted, namely

"(a) the allowances of the Rajpramukh and other expenditure relating to his office as determined by the President by general or special order,"

(ii) for sub-clause (f) the following sub-clauses shall be substituted, namely:

"(f) in the case of the State of Travancore-Cochin, a sum of fifty-one lakhs of rupees required to be paid annually to the Devaswom fund under the covenant entered into before the commencement of this Constitution by the Rulers of the Indian States of Travancore and Cochin for the formation of the United State of Travancore and Cochin,

(g) any other expenditure declared by this Constitution, or by the Legislature of the State by law, to be so charged"

(11) In article 208, for clause (2), the following clause shall be substituted, namely —

"(2) Until rules are made under clause (1), the rules of procedure and standing orders in force immediately before the commencement of this Constitution with respect to the Legislature for the State or, where no House of the Legislature for the State existed, the rules of procedure and standing orders in force immediately before such commencement with respect to the Legislative Assembly of such Province as may be specified in that behalf by the Rajpramukh of the State, shall have effect in relation to the Legislature of the State subject to such modifications and adaptations as may be made therein by the Speaker of the Legislative Assembly or the Chairman of the Legislative Council as the case may be."

(12) In clause (2) of article 214, for the word "Province" the words "Indian State" shall be substituted

(13) For article 221, the following article shall be substituted, namely —

221 (1) There shall be paid to the Judges of each High Court such salaries as may be determined by the President after consultation with the Rajpramukh

(2) Every Judge shall be entitled to such allowances and to such rights in respect of leave of absence and pension as may from time to time be determined by or under law made by Parliament and, until so determined, to such allowances and rights as may be determined by the President after consultation with the Rajpramukh

Provided that neither the allowances of a Judge nor his rights in respect of leave of absence or pension shall be varied to his disadvantage after his appointment"

PART VIII

STATES IN PART C OF FIRST SCHEDULE

239. (1) Subject to the other provisions of this Part, a State specified in Part C of the First Schedule shall be administered by the President acting, to such extent as he thinks fit, through a Chief Commissioner or a Lieutenant-Governor to be appointed by him or through the Government of a neighbouring State

Provided that the President shall not act through the Government of a neighbouring State save after—

(a) consulting the Government concerned; and

(b) ascertaining in such manner as the President considers most appropriate the views of the people of the State to be so administered.

(2) In this article, references to a State shall include references to a part of a State

240. (1) Parliament may by law create or continue for any State specified in Part C of the First Schedule and administered through a Chief Commissioner or Lieutenant-Governor—

(a) a body, whether nominated, elected or partly nominated and partly elected, to function as a Legislature for the State, or

(b) a Council of Advisers or Ministers,

or both with such constitution, powers and functions, in each case, as may be specified in the law

(2) Any such law as is referred to in clause (1) shall not be deemed to be an amendment of this Constitution for the purposes of article 368 notwithstanding that it contains any provision which amends or has the effect of amending the Constitution.

241. (1) Parliament may by law constitute a High Court for a State specified in Part C of

the First Schedule or declare any court in any such State to be a High Court for all or any of the purposes of this Constitution.

(2) The provisions of Chapter V of Part VI shall apply in relation to every High Court referred to in clause (1) as they apply in relation to a High Court referred to in article 214 subject to such modifications or exceptions as Parliament may by law provide

(3) Subject to the provisions of this Constitution and to the provisions of any law of the appropriate Legislature made by virtue of powers conferred on that Legislature by or under this Constitution, every High Court exercising jurisdiction immediately before the commencement of this Constitution in relation to any State specified in Part C of the First Schedule or any area included therein shall continue to exercise such jurisdiction in relation to that State or area after such commencement

(4) Nothing in this article derogates from the power of Parliament to extend or exclude the jurisdiction of a High Court in any State specified in Part A or Part B of the First Schedule to, or from, any State specified in Part C of that Schedule or any area included within that State.

242. (1) Until Parliament by law otherwise provides, the constitution, powers and functions of the Coorg Legislative Council shall be the same as they were immediately before the commencement of this Constitution

(2) The arrangements with respect to revenues collected in Coorg and expenses in respect of Coorg shall, until other provision is made in that behalf by the President by order, continue unchanged

PART IX

TERRITORIES IN PART D OF FIRST SCHEDULE AND OTHER TERRITORIES NOT SPECIFIED IN THAT SCHEDULE

243. (1) Any territory specified in Part D of the First Schedule and any other territory comprised within the territory of India but not specified in that Schedule shall be administered by the President acting, to such extent as he thinks fit, through a Chief Commissioner or other authority to be appointed by him

(2) The President may make regulations for the peace and good government of any such territory and any regulation so made may repeal or amend any law made by Parliament or any existing law which is for the time being applicable to such territory and, when promulgated by the President, shall have the same force and effect as an Act of Parliament which applies to such territory.

PART X

SCHEDULED AND TRIBAL AREAS

244. (1) The provisions of the Fifth Schedule shall apply to the administration and control of the Scheduled Areas and Scheduled Tribes in any State specified in Part A or Part B of the First Schedule other than the State of Assam

(2) The provisions of the Sixth Schedule shall apply to the administration of the tribal areas in the State of Assam

PART XI

RELATIONS BETWEEN UNION AND STATES

CHAPTER I—LEGISLATIVE RELATIONS

DISTRIBUTION OF LEGISLATIVE POWERS

245. (1) Subject to the provisions of this Constitution, Parliament may make laws for the whole or any part of the territory of India, and the Legislature of a State may make laws for the whole or any part of the State.

(2) No law made by Parliament shall be deemed to be invalid on the ground that it would have extra-territorial operation

246. (1) Notwithstanding anything in clauses (2) and (3), Parliament has exclusive power to make laws with respect to any of the matters enumerated in List I in the Seventh Schedule (in this Constitution referred to as the "Union List").

(2) Notwithstanding anything in clause (3), Parliament, and, subject to clause (1), the Legislature of any State specified in Part A or Part B of the First Schedule also, have power to make laws with respect to any of the matters enumerated in List III in the Seventh Schedule (in this Constitution referred to as the "Concurrent List").

(3) Subject to clauses (1) and (2), the Legislature of any State specified in Part A or Part B of the First Schedule has exclusive power to make laws for such State or any part thereof with respect to any of the matters enumerated in List II in the Seventh Schedule (in this Constitution referred to as the "State List")

(4) Parliament has power to make laws with respect to any matter for any part of the territory of India not included in Part A or Part B of the First Schedule notwithstanding that such matter is a matter enumerated in the State List

247. Notwithstanding anything in this Chapter, Parliament may by law provide for the establishment of any additional courts for the better administration of laws made by Parliament or of any existing law with respect to a matter enumerated in the Union List

248. (1) Parliament has exclusive power to make any law with respect to any matter not enumerated in the Concurrent List or State List

(2) Such power shall include the power of making any law imposing a tax not mentioned in either of those Lists

CENTRE AND STATE LIST

249. (1) Notwithstanding anything in the foregoing provisions of this Chapter, if the Council of States has declared by resolution supported by not less than two-thirds of the members present and voting that it is necessary or expedient in the national interest that Parliament should make laws with respect to any matter enumerated in the State List specified in the resolution, it shall be lawful for Parliament to make laws for the whole or any part of the territory of India with respect to that matter while the resolution remains in force

(2) A resolution passed under clause (1) shall remain in force for such period not exceeding one year as may be specified therein

Provided that, if and so often as a resolution approving the continuance in force of any such resolution is passed in the manner provided in clause (1), such resolution shall continue in force for a further period of one year from the date on which under this clause it would otherwise have ceased to be in force.

(3) A law made by Parliament which Parliament would not but for the passing of a resolution under clause (1) have been competent to make shall, to the extent of the incompetency, cease to have effect on the expiration of a period of six months after the resolution has ceased to be in force, except as respects things done or omitted to be done before the expiration of the said period

250. (1) Notwithstanding anything in this Chapter, Parliament shall, while a Proclamation of Emergency is in operation, have power to make laws for the whole or any part of the territory of India with respect to any of the matters enumerated in the State List.

(2) A law made by Parliament which Parliament would not but for the issue of a Proclamation of Emergency have been competent to make shall, to the extent of the incompetency, cease to have effect on the expiration of a period of six months after the Proclamation has ceased to operate, except as respects things done or omitted to be done before the expiration of the said period.

INCONSISTENCIES

251. Nothing in articles 249 and 250 shall restrict the power of the Legislature of a State to make any law which under this Constitution it has power to make, but if any provision of a law made by the Legislature of a State is repugnant to any provision of a law made by Parliament which Parliament has under either of the said articles power to make, the law made by Parliament, whether passed before or after the law made by the Legislature of the State, shall prevail, and the law made by the Legislature of the State shall to the extent of the repugnancy, but so long only as the law made by Parliament continues to have effect be inoperative.

252. (1) If it appears to the Legislatures of two or more States to be desirable that any of the matters with respect to which Parliament has no power to make laws for the States except as provided in articles 249 and 250 should be regulated in such States by Parliament by law, and if resolutions to that effect are passed by all the Houses of the Legislatures of those States, it shall be lawful for Parliament to pass an Act for regulating that matter accordingly, and any Act so passed shall apply to such States and to any other State by which it is adopted afterwards by resolution passed in that behalf by the House or, where there are two Houses, by each of the Houses of the Legislature of that State.

(2) Any Act so passed by Parliament may be amended or repealed by an Act of Parliament passed or adopted in like manner but shall not, as respects any State to which it applies, be amended or repealed by an Act of the Legislature of that State.

253. Notwithstanding anything in the foregoing provisions of this Chapter, Parliament has power to make any law for the whole or any part of the territory of India for implementing any treaty, agreement or convention with any other country or countries or any decision made at any international conference, association or other body.

254. (1) If any provision of a law made by the Legislature of a State repugnant to any provision of a law made by Parliament which Parliament is competent to enact, or to any provision of an existing law with respect to one of the matters enumerated in the Concurrent List, then, subject to the provisions of clause (2), the law made by Parliament, whether passed before or after the law made by the Legislature of such State, or, as the case may be, the existing law, shall prevail and the law made by the Legislature of the State shall, to the extent of the repugnancy, be void

(2) Where a law made by the Legislature of a State specified in Part A or Part B of the First Schedule with respect to one of the matters enumerated in the Concurrent List contains any provision repugnant to the provisions of an earlier law made by Parliament or an existing law with respect to that matter, then, the law so made by the Legislature of such State shall, if it has been reserved for the consideration of the President and has received his assent, prevail in that State.

Provided that nothing in this clause shall prevent Parliament from enacting at any time any law with respect to the same matter including a law adding to, amending, varying or repealing the law so made by the Legislature of the State

255. No Act of Parliament or of the Legislature of a State specified in Part A or Part B of the First Schedule, and no provision in any such Act, shall be invalid by reason only that some recommendation or previous sanction required

by this Constitution was not given, if assent to that Act was given—

(*a*) where the recommendation required was that of the Governor, either by the Governor or by the President,

(*b*) where the recommendation required was that of the Rajpramukh, either by the Rajpramukh or by the President;

(*c*) where the recommendation or previous sanction required was that of the President, by the President.

CHAPTER II.—ADMINISTRATIVE RELATIONS

RIGHT TO ISSUE DIRECTIONS

256. The executive power of every State shall be so exercised as to ensure compliance with the laws made by Parliament and any existing laws which apply in that State, and the executive power of the Union shall extend to the giving of such directions to a State as may appear to the Government of India to be necessary for that purpose

257. (1) The executive power of every State shall be so exercised as not to impede or prejudice the exercise of the executive power of the Union, and the executive power of the Union shall extend to the giving of such directions to a State as may appear to the Government of India to be necessary for that purpose.

(2) The executive power of the Union shall also extend to the giving of directions to a State as to the construction and maintenance of means of communication declared in the direction to be of national or military importance.

Provided that nothing in this clause shall be taken as restricting the power of Parliament to declare highways or waterways to be national highways or national waterways or the power of the Union with respect to the highways or waterways so declared or the power of the Union to construct and maintain means of communication as part of its functions with respect to naval, military and air force works.

(3) The executive power of the Union shall also extend to the giving of directions to a State as to the measures to be taken for the protection of the railways within the State.

(4) Where in carrying out any direction given to a State under clause (2) as to the construction or maintenance of any means of communication or under clause (3) as to the measures to be taken for the protection of any railway, costs have been incurred in excess of those which would have been incurred in the discharge of the normal duties of the State if such direction had not been given, there shall be paid by the Government of India to the State such sum as may be agreed, or, in default of agreement, as may be determined by an arbitrator appointed by the Chief Justice of India, in respect of the extra costs so incurred by the State

CONFERRING POWER ON STATE

258. (1) Notwithstanding anything in this Constitution, the President may, with the consent of the Government of a State, entrust either conditionally or unconditionally to that Government or to its officers functions in relation to any matter to which the executive power of the Union extends

(2) A law made by Parliament which applies in any State may, notwithstanding that it relates to a matter with respect to which the Legislature of the State has no power to make laws, confer powers and impose duties, or authorise the conferring of powers and the imposition of duties, upon the State or officers and authorities thereof.

(3) Where by virtue of this article powers and duties have been conferred or imposed upon a State or officers or authorities thereof, there shall be paid by the Government of India to the State such sum as may be agreed, or, in default of agreement, as may be determined by an arbitrator appointed by the Chief Justice of India, in respect of any extra costs of administration incurred by the State in connection with the exercise of those powers and duties

259. (1) Notwithstanding anything in this Constitution, a State specified in Part B of the First Schedule having any Armed Forces immediately before the commencement of this Constitution may, until Parliament by law otherwise provides, continue to maintain the said Forces after such commencement subject to such general or special orders as the President may from time to time issue in that behalf

(2) Any such Armed Forces as are referred to in clause (1) shall form part of the Armed Forces of the Union.

EXTRA-TERRITORIAL JURISDICTION

260. The Government of India may by agreement with the Government of any territory not being part of the territory of India undertake any executive, legislative or judicial functions vested in the Government of such territory, but every such agreement shall be subject to, and governed by, any law relating to the exercise of foreign jurisdiction for the time being in force

261. (1) Full faith and credit shall be given throughout the territory of India to public acts, records and judicial proceedings of the Union and of every State

(2) The manner in which and the conditions under which the acts, records and proceedings referred to in clause (1) shall be proved and the effect thereof determined shall be as provided by law made by Parliament

(3) Final judgments or orders delivered or passed by civil courts in any part of the territory of India shall be capable of execution anywhere within that territory according to law

262. (1) Parliament may by law provide for the adjudication of any dispute or complaint with respect to the use, distribution or control of the waters of, or in, any inter-State river or river valley

(2) Notwithstanding anything in this Constitution, Parliament may by law provide that neither the Supreme Court nor any other court shall exercise jurisdiction in respect of any such dispute or complaint as is referred to in clause (1)

CO-ORDINATION BETWEEN STATES

263. If at any time it appears to the President that the public interests would be served by the establishment of a Council charged with the duty of—

(*a*) inquiring into and advising upon disputes which may have arisen between States,

(*b*) investigating and discussing subjects in which some or all of the States, or the Union and one or more of the States, have a common interest, or

(*c*) making recommendations upon any such subject and, in particular, recommendations for the better co-ordination of policy and action with respect to that subject,

it shall be lawful for the President by order to establish such a Council, and to define the nature of the duties to be performed by it and its organisation and procedure

PART XII.—FINANCE, PROPERTY, CONTRACTS, SUITS

CHAPTER I—FINANCE

264. In this Part, unless the context otherwise requires,—

(*a*) "Finance Commission" means a Finance Commission constituted under article 280,

(*b*) "State" does not include a State specified in Part C of the First Schedule;

(*c*) references to States specified in Part C of the First Schedule shall include references to any territory specified in Part D of the First Schedule and any other territory comprised within the territory of India but not specified in that Schedule.

265. No tax shall be levied or collected except by authority of law.

CONSOLIDATED FUNDS

266. (1) Subject to the provisions of article 267 and to the provisions of this Chapter with respect to the assignment of the whole or part of the net proceeds of certain taxes and duties to States, all revenues received by the Government of India, all loans raised by that Government by the issue of treasury bills, loans or ways and means advances and all moneys received by that Government in repayment of loans shall form one consolidated fund to be entitled "the Consolidated Fund of India", and all revenues received by the Government of a State, all loans raised by that Government by the issue of treasury bills, loans or ways and means advances and all moneys received by that Government in repayment of loans shall form one consolidated fund to be entitled "the Consolidated Fund of the State"

(2) All other public moneys received by or on behalf of the Government of India or the Government of a State shall be credited to the public account of India or the public account of the State, as the case may be.

(3) No moneys out of the Consolidated Fund of India or the Consolidated Fund of a State shall be appropriated except in accordance with law and for the purposes and in the manner provided in this Constitution

CONTINGENCY FUNDS

267. (1) Parliament may by law establish a Contingency Fund in the nature of an imprest to be entitled "the Contingency Fund of India" into which shall be paid from time to time such sums as may be determined by such law, and the said Fund shall be placed at the disposal of the President to enable advances to be made by him out of such Fund for the purposes of meeting unforeseen expenditure pending authorisation of such expenditure by Parliament by law under article 115 or article 116

(2) The Legislature of a State may by law establish a Contingency Fund in the nature of an imprest to be entitled "the Contingency Fund of the State" into which shall be paid from time to time such sums as may be determined by such law, and the said Fund shall be placed at the disposal of the Governor or Rajpramukh of the State to enable advances to be made by him out of such Fund for the purposes of meeting unforeseen expenditure pending authorisation of such expenditure by the Legislature of the State by law under article 205 or article 206

DISTRIBUTION OF REVENUES

268. (1) Such stamp duties and such duties of excise on medicinal and toilet preparations as are mentioned in the Union List shall be levied by the Government of India but shall be collected—

(*a*) in the case where such duties are leviable within any State specified in Part C of the First Schedule, by the Government of India, and

(*b*) in other cases, by the States within which such duties are respectively leviable.

(2) The proceeds in any financial year of any such duty leviable within any State shall not form part of the Consolidated Fund of India, but shall be assigned to that State.

UNION TAXES ASSIGNED TO STATES

269. (1) The following duties and taxes shall be levied and collected by the Government of

India but shall be assigned to the States in the manner provided in clause (2), namely :—

(*a*) duties in respect of succession to property other than agricultural land ,

(*b*) estate duty in respect of property other than agricultural land ,

(*c*) terminal taxes on goods or passengers carried by railway, sea or air ,

(*d*) taxes on railway fares and freights ,

(*e*) taxes other than stamp duties on transactions in stock-exchanges and futures markets ;

(*f*) taxes on the sale or purchase of newspapers and on advertisements published therein

(2) The net proceeds in any financial year of any such duty or tax, except in so far as those proceeds represent proceeds attributable to States specified in Part C of the First Schedule, shall not form part of the Consolidated Fund of India, but shall be assigned to the States within which that duty or tax is leviable in that year, and shall be distributed among those States in accordance with such principles of distribution as may be formulated by Parliament by law

UNION TAXES DISTRIBUTED

270. (1) Taxes on income other than agricultural income shall be levied and collected by the Government of India and distributed between the Union and the States in the manner provided in clause (2)

(2) Such percentage, as may be prescribed, of the net proceeds in any financial year of any such tax, except in so far as those proceeds represent proceeds attributable to States specified in Part C of the First Schedule or to taxes payable in respect of Union emoluments, shall not form part of the Consolidated Fund of India, but shall be assigned to the States within which that tax is leviable in that year, and shall be distributed among those States in such manner and from such time as may be prescribed

(3) For the purposes of clause (2), in each financial year such percentage as may be prescribed of so much of the net proceeds of taxes on income as does not represent the net proceeds of taxes payable in respect of Union emoluments shall be deemed to represent proceeds attributable to States specified in Part C of the First Schedule.

(4) In this article—

(*a*) " taxes on income " does not include a corporation tax ,

(*b*) " prescribed " means—

(*i*) until a Finance Commission has been constituted, prescribed by the President by order, and

(*ii*) after a Finance Commission has been constituted, prescribed by the President by order after considering the recommendations of the Finance Commission ;

(*c*) " Union emoluments " includes all emoluments and pensions payable out of the Consolidated Fund of India in respect of which income-tax is chargeable.

271. Notwithstanding anything in articles 269 and 270, Parliament may at any time increase any of the duties or taxes referred to in those articles by a surcharge for purposes of the Union and the whole proceeds of any such surcharge shall form part of the Consolidated Fund of India.

272. Union duties of excise other than such duties of excise on medicinal and toilet preparations as are mentioned in the Union List shall be levied and collected by the Government of India, but, if Parliament by law so provides, there shall be paid out of the Consolidated Fund of India to the States to which the law imposing the duty extends sums equivalent to the whole or any part of the net proceeds of that duty, and those sums shall be distributed among those States in accordance with such principles of distribution as may be formulated by such law.

GRANTS FROM EXPORT DUTY

273. (1) There shall be charged on the Consolidated Fund of India in each year as grants-in-aid of the revenues of the States of Assam, Bihar, Orissa and West Bengal, in lieu of assignment of any share of the net proceeds in each year of export duty on jute and jute products to those States, such sums as may be prescribed

(2) The sums so prescribed shall continue to be charged on the Consolidated Fund of India so long as any export duty on jute or jute products continues to be levied by the Government of India or until the expiration of ten years from the commencement of this Constitution, whichever is earlier

(3) In this article, the expression " prescribed " has the same meaning as in article 270

PRIOR RECOMMENDATION OF PRESIDENT

274. (1) No Bill or amendment which imposes or varies any tax or duty in which States are interested, or which varies the meaning of the expression " agricultural income " as defined for the purposes of the enactments relating to Indian income-tax, or which affects the principles on which under any of the foregoing provisions of this Chapter moneys are or may be distributable to States, or which imposes any such surcharge for the purposes of the Union as is mentioned in the foregoing provisions of this Chapter, shall be introduced or moved in either House of Parliament except on the recommendation of the President.

(2) In this article, the expression " tax or duty in which States are interested " means—

(*a*) a tax or duty the whole or part of the net proceeds whereof are assigned to any State , or

(*b*) a tax or duty by reference to the net proceeds whereof sums are for the time being payable out of the Consolidated Fund of India to any State

GRANTS TO STATES

275. (1) Such sums as Parliament may by law provide shall be charged on the Consolidated Fund of India in each year as grants-in-aid of the revenues of such States as Parliament may determine to be in need of assistance, and different sums may be fixed for different States

Provided that there shall be paid out of the Consolidated Fund of India as grants-in-aid of the revenues of a State such capital and recurring sums as may be necessary to enable that State to meet the costs of such schemes of development as may be undertaken by the State with the approval of the Government of India for the purpose of promoting the welfare of the Scheduled Tribes in that State or raising the level of administration of the Scheduled Areas therein to that of the administration of the rest of the areas of that State

Provided further that there shall be paid out of the Consolidated Fund of India as grants-in-aid of the revenues of the State of Assam sums, capital and recurring, equivalent to—

(*a*) the average excess of expenditure over the revenues during the two years immediately preceding the commencement of this Constitution in respect of the administration of the tribal areas specified in Part A of the table appended to paragraph 20 of the Sixth Schedule , and

(*b*) the costs of such schemes of development as may be undertaken by that State with the approval of the Government of India for the purpose of raising the level of administration of the said areas to that of the administration of the rest of the areas of that State

(2) Until provision is made by Parliament under clause (1), the powers conferred on Parliament under that clause shall be exercisable by the President by order and any order made by the President under this clause shall have effect subject to any provision so made by Parliament :

Provided that after a Finance Commission has been constituted no order shall be made under this clause by the President except after considering the recommendations of the Finance Commission

TAXES ON PROFESSIONS, ETC.

276. (1) Notwithstanding anything in article 246, no law of the Legislature of a State relating to taxes for the benefit of the State or of a municipality, district board, local board or other local authority therein in respect of professions, trades, callings or employments shall be invalid on the ground that it relates to a tax on income.

(2) The total amount payable in respect of any one person to the State or to any one municipality, district board, local board or other local authority in the State by way of taxes on professions, trades, callings and employments shall not exceed two hundred and fifty rupees per annum :

Provided that if in the financial year immediately preceding the commencement of this Constitution there was in force in the case of any State or any such municipality, board or authority a tax on professions, trades, callings or employments the rate, or the maximum rate, of which exceeded two hundred and fifty rupees per annum, such tax may continue to be levied until provision to the contrary is made by Parliament by law, and any law so made by Parliament may be made either generally or in relation to any specified States, municipalities, boards or authorities

(3) The power of the Legislature of a State to make laws as aforesaid with respect to taxes on professions, trades, callings and employments shall not be construed as limiting in any way the power of Parliament to make laws with respect to taxes on income accruing from or arising out of professions, trades, callings and employments

277. Any taxes, duties, cesses or fees which, immediately before the commencement of this Constitution, were being lawfully levied by the Government of any State or by any municipality or other local authority or body for the purposes of the State, municipality, district or other local area may, notwithstanding that those taxes, duties, cesses or fees are mentioned in the Union List, continue to be levied and to be applied to the same purposes until provision to the contrary is made by Parliament by law.

SPECIAL AGREEMENTS

278. (1) Notwithstanding anything in this Constitution, the Government of India may, subject to the provisions of clause (2), enter into an agreement with the Government of a State specified in Part B of the First Schedule with respect to—

(*a*) the levy and collection of any tax or duty leviable by the Government of India in such State and for the distribution of the proceeds thereof otherwise than in accordance with the provisions of this Chapter ,

(*b*) the grant of any financial assistance by the Government of India to such State in consequence of the loss of any revenue which that State used to derive from any tax or duty leviable under this Constitution by the Government of India or from any other sources ;

(*c*) the contribution by such State in respect of any payment made by the Government of India under clause (1) of article 291,

and, when an agreement is so entered into, the provisions of this Chapter shall in relation to such State have effect subject to the terms of such agreement.

(2) An agreement entered into under clause (1) shall continue in force for a period not exceeding ten years from the commencement of this Constitution :

Provided that the President may at any time after the expiration of five years from such commencement terminate or modify any such

agreement if after consideration of the report of the Finance Commission he thinks it necessary to do so.

MEANING OF 'NET PROCEEDS'

279. (1) In the foregoing provisions of this Chapter, "net proceeds" means in relation to any tax or duty the proceeds thereof reduced by the cost of collection, and for the purposes of those provisions the net proceeds of any tax or duty, or of any part of any tax or duty, in or attributable to any area shall be ascertained and certified by the Comptroller and Auditor-General of India, whose certificate shall be final

(2) Subject as aforesaid, and to any other express provision of this Chapter, a law made by Parliament or an order of the President may, in any case where under this Part the proceeds of any duty or tax are, or may be, assigned to any State, provide for the manner in which the proceeds are to be calculated, for the time from or at which and the manner in which any payments are to be made, for the making of adjustments between one financial year and another, and for any other incidental or ancillary matters

FINANCE COMMISSION

280. (1) The President shall, within two years from the commencement of this Constitution and thereafter at the expiration of every fifth year or at such earlier time as the President considers necessary, by order constitute a Finance Commission which shall consist of a Chairman and four other members to be appointed by the President

(2) Parliament may by law determine the qualifications which shall be requisite for appointment as members of the Commission and the manner in which they shall be selected.

(3) It shall be the duty of the Commission to make recommendations to the President as to—

(*a*) the distribution between the Union and the States of the net proceeds of taxes which are to be, or may be, divided between them under this Chapter and the allocation between the States of the respective shares of such proceeds,

(*b*) the principles which should govern the grants-in-aid of the revenues of the States out of the Consolidated Fund of India,

(*c*) the continuance or modification of the terms of any agreement entered into by the Government of India with the Government of any State specified in Part B of the First Schedule under clause (1) of article 278 or under article 306, and

(*d*) any other matter referred to the Commission by the President in the interests of sound finance

(4) The Commission shall determine their procedure and shall have such powers in the performance of their functions as Parliament may by law confer on them.

281. The President shall cause every recommendation made by the Finance Commission under the provisions of this Constitution together with an explanatory memorandum as to the action taken thereon to be laid before each House of Parliament.

282. The Union or a State may make any grants for any public purpose, notwithstanding that the purpose is not one with respect to which Parliament or the Legislature of the State, as the case may be, may make laws.

CUSTODY OF FUNDS

283. (1) The custody of the Consolidated Fund of India and the Contingency Fund of India, the payment of moneys into such Funds, the withdrawal of moneys therefrom, the custody of public moneys other than those credited to such Funds received by or on behalf of the Government of India, their payment into the public account of India and the withdrawal of moneys from such account and all other matters connected with or ancillary to matters aforesaid shall be regulated by law made by Parliament, and, until provision in that behalf is so made, shall be regulated by rules made by the President.

(2) The custody of the Consolidated Fund of a State and the Contingency Fund of a State, the payment of moneys into such Funds, the withdrawal of moneys therefrom, the custody of public moneys other than those credited to such Funds received by or on behalf of the Government of the State, their payment into the public account of the State and the withdrawal of moneys from such account and all other matters connected with or ancillary to matters aforesaid shall be regulated by law made by the Legislature of the State, and, until provision in that behalf is so made, shall be regulated by rules made by the Governor or Rajpramukh of the State.

284. All moneys received by or deposited with—

(*a*) any officer employed in connection with the affairs of the Union or of a State in his capacity as such, other than revenues or public moneys raised or received by the Government of India or the Government of the State, as the case may be, or

(*b*) any court within the territory of India to the credit of any cause, matter, account or persons,

shall be paid into the public account of India or the public account of the State, as the case may be.

285. (1) The property of the Union shall, save in so far as Parliament may by law otherwise provide, be exempt from all taxes imposed by a State or by any authority within a State.

(2) Nothing in clause (1) shall, until Parliament by law otherwise provides, prevent any authority within a State from levying any tax on any property of the Union to which such property was immediately before the commencement of this Constitution liable or treated as liable, so long as that tax continues to be levied in that State.

RESTRICTIONS ON SALES, ETC., TAXES

286. (1) No law of a State shall impose, or authorise the imposition of a tax on the sale or purchase of goods where such sale or purchase takes place—

(*a*) outside the State, or

(*b*) in the course of the import of the goods into, or export of the goods out of, the territory of India.

Explanation.—For the purposes of sub-clause (*a*), a sale or purchase shall be deemed to have taken place in the State in which the goods have actually been delivered as a direct result of such sale or purchase for the purpose of consumption in that State, notwithstanding the fact that under the general law relating to sale of goods the property in the goods has by reason of such sale or purchase passed in another State

(2) Except in so far as Parliament may by law otherwise provide, no law of a State shall impose, or authorise the imposition of, a tax on the sale or purchase of any goods where such sale or purchase takes place in the course of inter-State trade or commerce

Provided that the President may by order direct that any tax on the sale or purchase of goods which was being lawfully levied by the Government of any State immediately before the commencement of this Constitution shall, notwithstanding that the imposition of such tax is contrary to the provisions of this clause, continue to be levied until the thirty-first day of March, 1951

(3) No law made by the Legislature of a State imposing, or authorising the imposition of, a tax on the sale or purchase of any such goods as have been declared by Parliament by law to be essential for the life of the community shall have effect unless it has been reserved for the consideration of the President and has received his assent

EXEMPTION FROM TAXES

287. Save in so far as Parliament may by law otherwise provide, no law of a State shall impose, or authorise the imposition of, a tax on the consumption or sale of electricity (whether produced by a Government or other persons) which is—

(*a*) consumed by the Government of India, or sold to the Government of India for consumption by that Government, or

(*b*) consumed in the construction, maintenance or operation of any railway by the Government of India or a railway company operating that railway, or sold to that Government or any such railway company for consumption in the construction, maintenance or operation of any railway,

and any such law imposing, or authorising the imposition of, a tax on the sale of electricity shall secure that the price of electricity sold to the Government of India for consumption by that Government, or to any such railway company as aforesaid for consumption in the construction, maintenance or operation of any railway, shall be less by the amount of the tax than the price charged to other consumers of a substantial quantity of electricity.

288. (1) Save in so far as the President may by order otherwise provide, no law of a State in force immediately before the commencement of this Constitution shall impose, or authorise the imposition of, a tax in respect of any water or electricity stored, generated, consumed, distributed or sold by any authority established by any existing law or any law made by Parliament for regulating or developing any inter-State river or river-valley

Explanation.—The expression "law of a State in force" in this clause shall include a law of a State passed or made before the commencement of this Constitution and not previously repealed, notwithstanding that it or parts of it may not be then in operation either at all or in particular areas.

(2) The Legislature of a State may by law impose, or authorise the imposition of, any such tax as is mentioned in clause (1), but no such law shall have any effect unless it has, after having been reserved for the consideration of the President, received his assent; and if any such law provides for the fixation of the rates and other incidents of such tax by means of rules or orders to be made under the law by any authority, the law shall provide for the previous consent of the President being obtained to the making of any such rule or order.

289. (1) The property and income of a State shall be exempt from Union taxation.

(2) Nothing in clause (1) shall prevent the Union from imposing, or authorising the imposition of, any tax to such extent, if any, as Parliament may by law provide in respect of a trade or business of any kind carried on by, or on behalf of, the Government of a State or any operations connected therewith, or any property used or occupied for the purposes of such trade or business, or any income accruing or arising in connection therewith

(3) Nothing in clause (2) shall apply to any trade or business, or to any class of trade or business, which Parliament may by law declare to be incidental to the ordinary functions of government

ADJUSTMENT OF EXPENSES, ETC.

290. Where under the provisions of this Constitution the expenses of any court or Commission, or the pension payable to or in respect of a person who has served before the commencement of this Constitution under the Crown in India or after such commencement in connection with the affairs of the Union or of a State, are

charged on the Consolidated Fund of India or the Consolidated Fund of a State, then, if—

(*a*) in the case of a charge on the Consolidated Fund of India, the court or Commission serves any of the separate needs of a State, or the person has served wholly or in part in connection with the affairs of a State; or

(*b*) in the case of a charge on the Consolidated Fund of a State, the court or Commission serves any of the separate needs of the Union or another State, or the person has served wholly or in part in connection with the affairs of the Union or another State,

there shall be charged on and paid out of the Consolidated Fund of the State or, as the case may be, the Consolidated Fund of India or the Consolidated Fund of the other State, such contribution in respect of the expenses or pension as may be agreed, or as may in default of agreement be determined by an arbitrator to be appointed by the Chief Justice of India.

RULERS' PRIVY PURSES

291. (1) Where under any covenant or agreement entered into by the Ruler of any Indian State before the commencement of this Constitution, the payment of any sums, free of tax, has been guaranteed or assured by the Government of the Dominion of India to any Ruler of such State as privy purse—

(*a*) such sums shall be charged on, and paid out of, the Consolidated Fund of India, and

(*b*) the sums so paid to any Ruler shall be exempt from all taxes on income

(2) Where the territories of any such Indian State as aforesaid are comprised within a State specified in Part A or Part B of the First Schedule, there shall be charged on, and paid out of, the Consolidated Fund of that State such contribution, if any, in respect of the payments made by the Government of India under clause (1) and for such period as may, subject to any agreement entered into in that behalf under clause (1) of article 278, be determined by order of the President.

CHAPTER II—BORROWING

292. The executive power of the Union extends to borrowing upon the security of the Consolidated Fund of India within such limits, if any, as may from time to time be fixed by Parliament by law and to the giving of guarantees within such limits, if any, as may be so fixed

293. (1) Subject to the provisions of this article, the executive power of a State extends to borrowing within the territory of India upon the security of the Consolidated Fund of the State within such limits, if any, as may from time to time be fixed by the Legislature of such State by law and to the giving of guarantees within such limits, if any, as may be so fixed

(2) The Government of India may, subject to such conditions as may be laid down by or under any law made by Parliament, make loans to any State or, so long as any limits fixed under article 292 are not exceeded, give guarantees in respect of loans raised by any State, and any sums required for the purpose of making such loans shall be charged on the Consolidated Fund of India.

(3) A State may not without the consent of the Government of India raise any loan if there is still outstanding any part of a loan which has been made to the State by the Government of India or by its predecessor Government, or in respect of which a guarantee has been given by the Government of India or by its predecessor Government

(4) A consent under clause (3) may be granted subject to such conditions, if any, as the Government of India may think fit to impose.

CHAPTER III—PROPERTY, CONTRACTS, RIGHTS, ETC.

294. As from the commencement of this Constitution—

(*a*) all property and assets which immediately before such commencement were vested in His Majesty for the purposes of the Government of the Dominion of India and all property and assets which immediately before such commencement were vested in His Majesty for the purposes of the Government of each Governor's Province shall vest respectively in the Union and the corresponding State, and

(*b*) all rights, liabilities and obligations of the Government of the Dominion of India and of the Government of each Governor's Province, whether arising out of any contract or otherwise, shall be the rights, liabilities and obligations respectively of the Government of India and the Government of each corresponding State,

subject to any adjustment made or to be made by reason of the creation before the commencement of this Constitution of the Dominion of Pakistan or of the Provinces of West Bengal, East Bengal, West Punjab and East Punjab

SUCCESSION TO PROPERTY, ETC.

295. (1) As from the commencement of this Constitution—

(*a*) all property and assets which immediately before such commencement were vested in any Indian State corresponding to a State specified in Part B of the First Schedule shall vest in the Union, if the purposes for which such property and assets were held immediately before such commencement will thereafter be purposes of the Union relating to any of the matters enumerated in the Union List, and

(*b*) all rights, liabilities and obligations of the Government of any Indian State corresponding to a State specified in Part B of the First Schedule, whether arising out of any contract or otherwise, shall be the rights, liabilities and obligations of the Government of India, if the purposes for which such rights were acquired or liabilities or obligations were incurred before such commencement will thereafter be purposes of the Government of India relating to any of the matters enumerated in the Union List,

subject to any agreement entered into in that behalf by the Government of India with the Government of that State

(2) Subject as aforesaid, the Government of each State specified in Part B of the First Schedule shall, as from the commencement of this Constitution, be the successor of the Government of the corresponding Indian State as regards all property and assets and all rights, liabilities and obligations, whether arising out of any contract or otherwise, other than those referred to in clause (1)

ACCRUAL OF PROPERTY

296. Subject as hereinafter provided, any property in the territory of India which, if this Constitution had not come into operation, would have accrued to His Majesty or, as the case may be, to the Ruler of an Indian State by escheat or lapse, or as *bona vacantia* for want of a rightful owner, shall, if it is property situate in a State, vest in such State, and shall, in any other case, vest in the Union:

Provided that any property which at the date when it would have so accrued to His Majesty or to the Ruler of an Indian State was in the possession or under the control of the Government of India or the Government of a State shall, according as the purposes for which it was then used or held were purposes of the Union or of a State, vest in the Union or in that State.

Explanation.—In this article, the expressions "Ruler" and "Indian State" have the same meanings as in article 363

297. All lands, minerals and other things of value underlying the ocean within the territorial waters of India shall vest in the Union and be held for the purposes of the Union.

298. (1) The executive power of the Union and of each State shall extend, subject to any law made by the appropriate Legislature, to the grant, sale, disposition or mortgage of any property held for the purposes of the Union or of such State, as the case may be, and to the purchase or acquisition of property for those purposes respectively, and to the making of contracts.

(2) All property acquired for the purposes of the Union or of a State shall vest in the Union or in such State, as the case may be.

CONTRACTS, SUITS

299. (1) All contracts made in the exercise of the executive power of the Union or of a State shall be expressed to be made by the President, or by the Governor or the Rajpramukh of the State, as the case may be, and all such contracts and all assurances of property made in the exercise of that power shall be executed on behalf of the President or the Governor or the Rajpramukh by such persons and in such manner as he may direct or authorise.

(2) Neither the President nor the Governor nor the Rajpramukh shall be personally liable in respect of any contract or assurance made or executed for the purposes of this Constitution, or for the purposes of any enactment relating to the government of India heretofore in force, nor shall any person making or executing any such contract or assurance on behalf of any of them be personally liable in respect thereof

300. (1) The Government of India may sue or be sued by the name of the Union of India and the Government of a State may sue or be sued by the name of the State and may, subject to any provisions which may be made by Act of Parliament or of the Legislature of such State enacted by virtue of powers conferred by this Constitution, sue or be sued in relation to their respective affairs in the like cases as the Dominion of India and the corresponding Provinces or the corresponding Indian States might have sued or been sued if this Constitution had not been enacted

(2) If at the commencement of this Constitution—

(*a*) any legal proceedings are pending to which the Dominion of India is a party, the Union of India shall be deemed to be substituted for the Dominion in those proceedings, and

(*b*) any legal proceedings are pending to which a Province or an Indian State is a Party, the corresponding State shall be deemed to be substituted for the Province or the Indian State in those proceedings.

PART XIII
TRADE, COMMERCE

301. Subject to the other provisions of this Part, trade, commerce and intercourse throughout the territory of India shall be free.

302. Parliament may by law impose such restrictions on the freedom of trade, commerce or intercourse between one State and another or within any part of the territory of India as may be required in the public interest.

303. (1) Notwithstanding anything in article 302, neither Parliament nor the Legislature of a State shall have power to make any law giving, or authorising the giving of, any preference to one State over another, or making, or authorising the making of, any discrimination between one State and another, by virtue of any entry relating to trade and commerce in any of the Lists in the Seventh Schedule.

(2) Nothing in clause (1) shall prevent Parliament from making any law giving, or authorising the giving of, any preference or making, or authorising the making of, any discrimination if it is declared by such law that it is necessary to do so for the purpose of dealing with a situation arising from scarcity of goods in any part of the territory of India.

RESTRICTIONS ON TRADE, ETC.

304. Notwithstanding anything in article 301 or article 303, the Legislature of a State may by law—

(*a*) impose on goods imported from other States any tax to which similar goods manufactured or produced in that State are subject, so, however, as not to discriminate between goods so imported and goods so manufactured or produced, and

(*b*) impose such reasonable restrictions on the freedom of trade, commerce or intercourse with or within that State as may be required in the public interest

Provided that no Bill or amendment for the purposes of clause (*b*) shall be introduced or moved in the Legislature of a State without the previous sanction of the President

305. Nothing in articles 301 and 303 shall affect the provisions of any existing law except in so far as the President may by order otherwise provide

306. Notwithstanding anything in the foregoing provisions of this Part or in any other provisions of this Constitution, any State specified in Part B of the First Schedule which before the commencement of this Constitution was levying any tax or duty on the import of goods into the State from other States or on the export of goods from the State to other States may, if an agreement in that behalf has been entered into between the Government of India and the Government of that State, continue to levy and collect such tax or duty subject to the terms of such agreement and for such period not exceeding ten years from the commencement of this Constitution as may be specified in the agreement

Provided that the President may at any time after the expiration of five years from such commencement terminate or modify any such agreement if, after consideration of the report of the Finance Commission constituted under article 280, he thinks it necessary to do so

307. Parliament may by law appoint such authority as it considers appropriate for carrying out the purposes of articles 301, 302, 303 and 304, and confer on the authority so appointed such powers and such duties as it thinks necessary.

PART XIV
THE SERVICES
CHAPTER I

308. In this Part, unless the context otherwise requires, the expression "State" means a State specified in Part A or Part B of the First Schedule.

309. Subject to the provisions of this Constitution, Acts of the appropriate Legislature may regulate the recruitment, and conditions of service of persons appointed, to public services and posts in connection with the affairs of the Union or of any State.

Provided that it shall be competent for the President or such person as he may direct in the case of services and posts in connection with the affairs of the Union, and for the Governor or Rajpramukh of a State or such person as he may direct in the case of services and posts in connection with the affairs of the State, to make rules regulating the recruitment, and the conditions of service of persons appointed, to such services and posts until provision in that behalf is made by or under an Act of the appropriate Legislature under this article, and any rules so made shall have effect subject to the provisions of any such Act.

TENURE

310. (1) Except as expressly provided by this Constitution, every person who is a member of a defence service or of a civil service of the Union or of an all-India service or holds any post connected with defence or any civil post under the Union holds office during the pleasure of the President, and every person who is a member of a civil service of a State or holds any civil post under a State holds office during the pleasure of the Governor or, as the case may be, the Rajpramukh of the State

(2) Notwithstanding that a person holding a civil post under the Union or a State holds office during the pleasure of the President or, as the case may be, of the Governor or Rajpramukh of the State, any contract under which a person, not being a member of a defence service or of an all-India service or of a civil service of the Union or a State, is appointed under this Constitution to hold such a post may, if the President or the Governor or the Rajpramukh, as the case may be, deems it necessary in order to secure the services of a person having special qualifications, provide for the payment to him of compensation, if before the expiration of an agreed period that post is abolished or he is, for reasons not connected with any misconduct on his part, required to vacate that post

DISMISSAL, REMOVAL, ETC.

311. (1) No person who is a member of a civil service of the Union or an all-India service or a civil service of a State or holds a civil post under the Union or a State shall be dismissed or removed by an authority subordinate to that by which he was appointed

(2) No such person as aforesaid shall be dismissed or removed or reduced in rank until he has been given a reasonable opportunity of showing cause against the action proposed to be taken in regard to him

Provided that this clause shall not apply—

(*a*) where a person is dismissed or removed or reduced in rank on the ground of conduct which has led to his conviction on a criminal charge,

(*b*) where an authority empowered to dismiss or remove a person or to reduce him in rank is satisfied that for some reason, to be recorded by that authority in writing, it is not reasonably practicable to give to that person an opportunity of showing cause, or

(*c*) where the President or Governor or Rajpramukh, as the case may be, is satisfied that in the interest of the security of the State it is not expedient to give to that person such an opportunity

(3) If any question arises whether it is reasonably practicable to give to any person an opportunity of showing cause under clause (2), the decision thereon of the authority empowered to dismiss or remove such person or to reduce him in rank, as the case may be, shall be final

ALL-INDIA SERVICES

312. (1) Notwithstanding anything in Part XI, if the Council of States has declared by resolution supported by not less than two-thirds of the members present and voting that it is necessary or expedient in the national interest so to do, Parliament may by law provide for the creation of one or more all-India services common to the Union and the States, and, subject to the other provisions of this Chapter, regulate the recruitment, and the conditions of service of persons appointed, to any such service.

(2) The services known at the commencement of this Constitution as the Indian Administrative Service and the Indian Police Service shall be deemed to be services created by Parliament under this article

313. Until other provision is made in this behalf under this Constitution, all the laws in force immediately before the commencement of this Constitution and applicable to any public service or any post which continues to exist after the commencement of this Constitution, as an all-India service or as service or post under the Union or a State shall continue in force so far as consistent with the provisions of this Constitution.

314. Except as otherwise expressly provided by this Constitution, every person who having been appointed by the Secretary of State or Secretary of State in Council to a civil service of the Crown in India continues on and after the commencement of this Constitution to serve under the Government of India or of a State shall be entitled to receive from the Government of India and the Government of the State, which he is from time to time serving, the same conditions of service as respects remuneration, leave and pension, and the same rights as respects disciplinary matters or rights as similar thereto as changed circumstances may permit as that person was entitled to immediately before such commencement.

CHAPTER II—PUBLIC SERVICE COMMISSIONS

315. (1) Subject to the provisions of this article, there shall be a Public Service Commission for the Union and a Public Service Commission for each State.

(2) Two or more States may agree that there shall be one Public Service Commission for that group of States, and if a resolution to that effect is passed by the House or, where there are two Houses, by each House of the Legislature of each of those States, Parliament may by law provide for the appointment of a Joint State Public Service Commission (referred to in this Chapter as Joint Commission) to serve the needs of those States

(3) Any such law as aforesaid may contain such incidental and consequential provisions as may be necessary or desirable for giving effect to the purposes of the law

(4) The Public Service Commission for the Union, if requested so to do by the Governor or Rajpramukh of a State, may, with the approval of the President, agree to serve all or any of the needs of the State

(5) References in this Constitution to the Union Public Service Commission or a State Public Service Commission shall, unless the context otherwise requires, be construed as references to the Commission serving the needs of the Union or, as the case may be, the State as respects the particular matter in question

APPOINTMENT, TERM

316. (1) The Chairman and other members of a Public Service Commission shall be appointed, in the case of the Union Commission or a Joint Commission, by the President, and in the case of a State Commission, by the Governor or Rajpramukh of the State:

Provided that as nearly as may be one-half of the members of every Public Service Commission shall be persons who at the dates of their respective appointments have held office for at least ten years either under the Government of India or under the Government of a State, and in computing the said period of ten years any period before the commencement of this Constitution during which a person has held office under the Crown in India or under the Government of an Indian State shall be included.

(2) A member of a Public Service Commission shall hold office for a term of six years from the date on which he enters upon his office or until he attains, in the case of the Union Commission, the age of sixty-five years, and in the case of a State Commission or a Joint Commission, the age of sixty years, whichever is earlier:

Provided that—

(a) a member of a Public Service Commission may, by writing under his hand addressed, in the case of the Union Commission or a Joint Commission, to the President, and in the case of a State Commission, to the Governor or Rajpramukh of the State, resign his office,

(b) a member of a Public Service Commission may be removed from his office in the manner provided in clause (1) or clause (3) of article 317.

(3) A person who holds office as a member of a Public Service Commission shall, on the expiration of his term of office, be ineligible for re-appointment to that office.

REMOVAL, SUSPENSION

317. (1) Subject to the provisions of clause (3), the Chairman or any other member of a Public Service Commission shall only be removed from his office by order of the President on the ground of misbehaviour after the Supreme Court, on reference being made to it by the President, has, on inquiry held in accordance with the procedure prescribed in that behalf under article 145, reported that the Chairman or such other member, as the case may be, ought on any such ground to be removed

(2) The President, in the case of the Union Commission or a Joint Commission, and the Governor or Rajpramukh, in the case of a State Commission, may suspend from office the Chairman or any other member of the Commission in respect of whom a reference has been made to the Supreme Court under clause (1) until the President has passed orders on receipt of the report of the Supreme Court on such reference

(3) Notwithstanding anything in clause (1), the President may by order remove from office the Chairman or any other member of a Public Service Commission if the Chairman or such other member, as the case may be—

(a) is adjudged an insolvent, or

(b) engages during his term of office in any paid employment outside the duties of his office, or

(c) is, in the opinion of the President, unfit to continue in office by reason of infirmity of mind or body

(4) If the Chairman or any other member of a Public Service Commission is or becomes in any way concerned or interested in any contract or agreement made by or on behalf of the Government of India or the Government of a State or participates in any way in the profit thereof or in any benefit or emolument arising therefrom otherwise than as a member and in common with the other members of an incorporated company, he shall, for the purposes of clause (1), be deemed to be guilty of misbehaviour

318. In the case of the Union Commission or a Joint Commission, the President and, in the case of a State Commission, the Governor or Rajpramukh of the State may by regulations—

(a) determine the number of members of the Commission and their conditions of service, and

(b) make provision with respect to the number of members of the staff of the Commission and their conditions of service.

Provided that the conditions of service of a member of a Public Service Commission shall not be varied to his disadvantage after his appointment.

HOLDING FUTURE OFFICE

319. On ceasing to hold office—

(a) the Chairman of the Union Public Service Commission shall be ineligible for further employment either under the Government of India or under the Government of a State;

(b) the Chairman of a State Public Service Commission shall be eligible for appointment as the Chairman or any other member of the Union Public Service Commission or as the Chairman of any other State Public Service Commission, but not for any other employment either under the Government of India or under the Government of a State,

(c) a member other than the Chairman of the Union Public Service Commission shall be eligible for appointment as the Chairman of the Union Public Service Commission or as the Chairman of a State Public Service Commission, but not for any other employment either under the Government of India or under the Government of a State,

(d) a member other than the Chairman of a State Public Service Commission shall be eligible for appointment as the Chairman or any other member of the Union Public Service Commission or as the Chairman of that or any other State Public Service Commission, but not for any other employment either under the Government of India or under the Government of a State.

FUNCTIONS

320. (1) It shall be the duty of the Union and the State Public Service Commissions to conduct examinations for appointments to the services of the Union and the services of the State respectively

(2) It shall also be the duty of the Union Public Service Commission, if requested by any two or more States so to do, to assist those States in framing and operating schemes of joint recruitment for any services for which candidates possessing special qualifications are required.

(3) The Union Public Service Commission or the State Public Service Commission, as the case may be, shall be consulted—

(a) on all matters relating to methods of recruitment to civil services and for civil posts;

(b) on the principles to be followed in making appointments to civil services and posts and in making promotions and transfers from one service to another and on the suitability of candidates for such appointments, promotions or transfers,

(c) on all disciplinary matters affecting a person serving under the Government of India or the Government of a State in a civil capacity, including memorials or petitions relating to such matters,

(d) on any claim by or in respect of a person who is serving or has served under the Government of India or the Government of a State or under the Crown in India or under the Government of an Indian State, in a civil capacity, that any costs incurred by him in defending legal proceedings instituted against him in respect of acts done or purporting to be done in the execution of his duty should be paid out of the Consolidated Fund of India, or, as the case may be, out of the Consolidated Fund of the State;

(e) on any claim for the award of a pension in respect of injuries sustained by a person while serving under the Government of India or the Government of a State or under the Crown in India or under the Government of an Indian State, in a civil capacity, and any question as to the amount of any such award,

and it shall be the duty of a Public Service Commission to advise on any matter so referred to them and on any other matter which the President, or, as the case may be, the Governor or Rajpramukh of the State, may refer to them

Provided that the President as respects the all-India services and also as respects other services and posts in connection with the affairs of the Union, and the Governor or Rajpramukh, as the case may be, as respects other services and posts in connection with the affairs of a State, may make regulations specifying the matters in which either generally, or in any particular class of case or in any particular circumstances, it shall not be necessary for a Public Service Commission to be consulted.

(4) Nothing in clause (3) shall require a Public Service Commission to be consulted as respects the manner in which any provision referred to in clause (4) of article 16 may be made or as respects the manner in which effect may be given to the provisions of article 335.

(5) All regulations made under the proviso to clause (3) by the President or the Governor or Rajpramukh of a State shall be laid for not less than fourteen days before each House of Parliament or the House or each House of the Legislature of the State, as the case may be, as soon as possible after they are made, and shall be subject to such modifications, whether by way of repeal or amendment, as both Houses of Parliament or the House or both Houses of the Legislature of the State may make during the session in which they are so laid.

321. An Act made by Parliament or, as the case may be, the Legislature of a State may provide for the exercise of additional functions by the Union Public Service Commission or the State Public Service Commission as respects the services of the Union or the State and also as respects the services of any local authority or other body corporate constituted by law or of any public institution.

EXPENSES, REPORTS

322. The expenses of the Union or a State Public Service Commission, including any salaries, allowances and pensions payable to or in respect of the members or staff of the Commission, shall be charged on the Consolidated Fund of India or, as the case may be, the Consolidated Fund of the State

323. (1) It shall be the duty of the Union Commission to present annually to the President a report as to the work done by the Commission and on receipt of such report the President shall cause a copy thereof together with a memorandum explaining, as respects the cases, if any, where the advice of the Commission was not accepted, the reasons for such non-acceptance to be laid before each House of Parliament.

(2) It shall be the duty of a State Commission to present annually to the Governor or Rajpramukh of the State a report as to the work done by the Commission, and it shall be the duty of a Joint Commission to present annually to the Governor or Rajpramukh of each of the States the needs of which are served by the Joint Commission a report as to the work done by the Commission in relation to that State, and in either case the Governor or Rajpramukh, as the case may be, shall, on receipt of such report, cause a copy thereof together with a memorandum explaining, as respects the cases, if any, where the advice of the Commission was not accepted, the reasons for such non-acceptance to be laid before the Legislature of the State.

PART XV

ELECTIONS

324. (1) The superintendence, direction and control of the preparation of the electoral rolls for, and the conduct, of, all elections to Parliament and to the Legislature of every State and of elections to the offices of President and Vice-President held under this Constitution, including the appointment of election tribunals for the decision of doubts and disputes arising out of or in connection with elections to Parliament and to the Legislatures of States shall be vested in a Commission (referred to in this Constitution as the Election Commission)

(2) The Election Commission shall consist of the Chief Election Commissioner and such number of other Election Commissioners, if any, as the President may from time to time fix and the appointment of the Chief Election Commissioner and other Election Commissioners

shall, subject to the provisions of any law made in that behalf by Parliament, be made by the President.

(3) When any other Election Commissioner is so appointed the Chief Election Commissioner shall act as the Chairman of the Election Commission.

(4) Before each general election to the House of the People and to the Legislative Assembly of each State, and before the first general election and thereafter before each biennial election to the Legislative Council of each State having such Council, the President may also appoint after consultation with the Election Commission such Regional Commissioners as he may consider necessary to assist the Election Commission in the performance of the functions conferred on the Commission by clause (1).

(5) Subject to the provisions of any law made by Parliament, the conditions of service and tenure of office of the Election Commissioners and the Regional Commissioners shall be such as the President may by rule determine

Provided that the Chief Election Commissioner shall not be removed from his office except in like manner and on the like grounds as a Judge of the Supreme Court and the conditions of service of the Chief Election Commissioner shall not be varied tohis disadvantage after his appointment

Provided further that any other Election Commissioner or a Regional Commissioner shall not be removed from office except on the recommendation of the Chief Election Commissioner.

(6) The President, or the Governor or Rajpramukh of a State, shall, when so requested by the Election Commission, make available to the Election Commission or to a Regional Commissioner such staff as may be necessary for the discharge of the functions conferred on the Election Commission by clause (1)

SINGLE ELECTORAL ROLL

325. There shall be one general electoral roll for every territorial constituency for election to either House of Parliament or to the House or either House of the Legislature of a State and no person shall be ineligible for inclusion in any such roll or claim to be included in any special electoral roll for any such constituency on grounds only of religion, race, caste, sex or any of them.

326. The elections to the House of the People and to the Legislative Assembly of every State shall be on the basis of adult suffrage, that is to say, every person who is a citizen of India and who is not less than twenty-one years of age on such date as may be fixed in that behalf by or under any law made by the appropriate Legislature and is not otherwise disqualified under this Constitution or any law made by the appropriate Legislature on the ground of non-residence, unsoundness of mind, crime or corrupt or illegal practice, shall be entitled to be registered as a voter at any such election

327. Subject to the provisions of this Constitution, Parliament may from time to time by law make provision with respect to all matters relating to, or in connection with, elections to either House of Parliament or to the House or either House of the Legislature of a State including the preparation of electoral rolls, the delimitation of constituencies and all other matters necessary for securing the due constitution of such House or Houses

328. Subject to the provisions of this Constitution and in so far as provision in that behalf is not made by Parliament, the Legislature of a State may from time to time by law make provision with respect to all matters relating to, or in connection with, the elections to the House or either House of the Legislature of the State including the preparation of electoral rolls and all other matters necessary for securing the due constitution of such House or Houses

329. Notwithstanding anything in this Constitution—

(*a*) the validity of any law relating to the delimitation of constituencies or the allotment of seats to such constituencies, made or purporting to be made under article 327 or article 328, shall not be called in question in any court,

(*b*) no election to either House of Parliament or to the House or either House of the Legislature of a State shall be called in question except by an election petition presented to such authority and in such manner as may be provided for by or under any law made by the appropriate Legislature.

PART XVI

SPECIAL PROVISIONS FOR CERTAIN CLASSES

330. (1) Seats shall be reserved in the House of the People for—

(*a*) the Scheduled Castes,

(*b*) the Scheduled Tribes except the Scheduled Tribes in the tribal areas of Assam, and

(*c*) the Scheduled Tribes in the autonomous districts of Assam

(2) The number of seats reserved in any State for the Scheduled Castes or the Scheduled Tribes under clause (1) shall bear, as nearly as may be, the same proportion to the total number of seats allotted to that State in the House of the People as the population of the Scheduled Castes in the State or of the Scheduled Tribes in the State or part of the State, as the case may be, in respect of which seats are so reserved, bears to the total population of the State

331. Notwithstanding anything in article 81, the President may, if he is of opinion that the Anglo-Indian community is not adequately represented in the House of the People, nominate not more than two members of that community to the House of the People

SCHEDULED CASTES, TRIBES

332. (1) Seats shall be reserved for the Scheduled Castes and the Scheduled Tribes, except the Scheduled Tribes in the tribal areas of Assam, in the Legislative Assembly of every State specified in Part A or Part B of the First Schedule

(2) Seats shall be reserved also for the autonomous districts in the Legislative Assembly of the State of Assam

(3) The number of seats reserved for the Scheduled Castes or the Scheduled Tribes in the Legislative Assembly of any State under clause (1) shall bear, as nearly as may be, the same proportion to the total number of seats in the Assembly as the population of the Scheduled Castes in the State or of the Scheduled Tribes in the State or part of the State, as the case may be, in respect of which seats are so reserved, bears to the total population of the State.

(4) The number of seats reserved for an autonomous district in the Legislative Assembly of the State of Assam shall bear to the total number of seats in that Assembly a proportion not less than the population of the district bears to the total population of the State.

(5) The constituencies for the seats reserved for any autonomous district of Assam shall not comprise any area outside that district except in the case of the constituency comprising the cantonment and municipality of Shillong

(6) No person who is not a member of a Scheduled Tribe of any autonomous district of the State of Assam shall be eligible for election to the Legislative Assembly of the State from any constituency of that district except from the constituency comprising the cantonment and municipality of Shillong

333. Notwithstanding anything in article 170, the Governor or Rajpramukh of a State may, if he is of opinion that the Anglo-Indian community needs representation in the Legislative Assembly of the State and is not adequately represented therein, nominate such number of members of the community to the Assembly as he considers appropriate

TEN YEAR PERIOD

334. Notwithstanding anything in the foregoing provisions of this Part, the provisions of this Constitution relating to—

(*a*) the reservation of seats for the Scheduled Castes and the Scheduled Tribes in the House of the People and in the Legislative Assemblies of the States, and

(*b*) the representation of the Anglo-Indian community in the House of the People and in the Legislative Assemblies of the States by nomination,

shall cease to have effect on the expiration of a period of ten years from the commencement of this Constitution

Provided that nothing in this article shall affect any representation in the House of the People or in the Legislative Assembly of a State until the dissolution of the then existing House or Assembly, as the case may be

SPECIAL CLAIMS IN SERVICES

335. The claims of the members of the Scheduled Castes and the Scheduled Tribes shall be taken into consideration, consistently with the maintenance of efficiency of administration, in the making of appointments to services and posts in connection with the affairs of the Union or of a State

336. (1) During the first two years after the commencement of this Constitution, appointments of members of the Anglo-Indian community to posts in the railway, customs, postal and telegraph services of the Union shall be made on the same basis as immediately before the fifteenth day of August, 1947.

During every succeeding period of two years, the number of posts reserved for the members of the said community in the said services shall as nearly as possible, be less by ten per cent than the numbers so reserved during the immediately preceding period of two years

Provided that at the end of ten years from the commencement of this Constitution all such reservations shall cease

(2) Nothing in clause (1) shall bar the appointment of members of the Anglo-Indian community to posts other than, or in addition to, those reserved for the community under that clause if such members are found qualified for appointment on merit as compared with the members of other communities

ANGLO-INDIAN EDUCATION

337. During the first three financial years after the commencement of this Constitution, the same grants, if any, shall be made by the Union and by each State specified in Part A or Part B of the First Schedule for the benefit of the Anglo-Indian community in respect of education as were made in the financial year ending on the thirty-first day of March, 1948

During every succeeding period of three years the grants may be less by ten per cent than those for the immediately preceding period of three years.

Provided that at the end of ten years from the commencement of this Constitution such grants, to the extent to which they are a special concession to the Anglo-Indian community, shall cease

Provided further that no educational institution shall be entitled to receive any grant under this article unless at least forty per cent of the annual admissions therein are made available to members of communities other than the Anglo-Indian community

SPECIAL OFFICER

338. (1) There shall be a Special Officer for the Scheduled Castes and Scheduled Tribes to be appointed by the President.

(2) It shall be the duty of the Special Officer to investigate all matters relating to the safeguards provided for the Scheduled Castes and Scheduled Tribes under this Constitution and report to the President upon the working of those safeguards at such intervals as the President may direct, and the President shall cause all such reports to be laid before each House of Parliament.

(3) In this article, references to the Scheduled Castes and Scheduled Tribes shall be construed as including references to such other backward classes as the President may, on receipt of the report of a Commission appointed under clause (1) of article 340, by order specify and also to the Anglo-Indian community.

UNION CONTROL OVER SCHEDULED AREAS.

339. (1) The President may at any time and shall, at the expiration of ten years from the commencement of this Constitution by order appoint a Commission to report on the administration of the Scheduled Areas and the welfare of the Scheduled Tribes in the States specified in Part A and Part B of the First Schedule

The order may define the composition, powers and procedure of the Commission and may contain such incidental or ancillary provisions as the President may consider necessary or desirable

(2) The executive power of the Union shall extend to the giving of directions to any such State as to the drawing up and execution of schemes specified in the direction to be essential for the welfare of the Scheduled Tribes in the State.

340. (1) The President may by order appoint a Commission consisting of such persons as he thinks fit to investigate the conditions of socially and educationally backward classes within the territory of India and the difficulties under which they labour and to make recommendations as to the steps that should be taken by the Union or any State to remove such difficulties and to improve their condition and as to the grants that should be made for the purpose by the Union or any State and the conditions subject to which such grants should be made, and the order appointing such Commission shall define the procedure to be followed by the Commission

(2) A Commission so appointed shall investigate the matters referred to them and present to the President a report setting out the facts as found by them and making such recommendations as they think proper

(3) The President shall cause a copy of the report so presented together with a memorandum explaining the action taken thereon to be laid before each House of Parliament

SPECIFYING SCHEDULED CASTE, TRIBE

341. (1) The President may, after consultation with the Governor or Rajpramukh of a State, by public notification, specify the castes, races or tribes or parts of or groups within castes, races or tribes which shall for the purposes of this Constitution be deemed to be Scheduled Castes in relation to that State

(2) Parliament may by law include in or exclude from the list of Scheduled Castes specified in a notification issued under clause (1) any caste, race or tribe or part of or group within any caste, race or tribe, but save as aforesaid a notification issued under the said clause shall not be varied by any subsequent notification.

342. (1) The President may, after consultation with the Governor or Rajpramukh of a State, by public notification, specify the tribes or tribal communities or parts of or groups within tribes or tribal communities which shall for the purposes of this Constitution be deemed to be Scheduled Tribes in relation to that State.

(2) Parliament may by law include in or exclude from the list of Scheduled Tribes specified in a notification issued under clause (1) any tribe or tribal community or part of or group within any tribe or tribal community, but save as aforesaid a notification issued under the said clause shall not be varied by any subsequent notification.

PART XVII—OFFICIAL LANGUAGE

CHAPTER I—LANGUAGE OF THE UNION

343. (1) The official language of the Union shall be Hindi in Devanagari script

The form of numerals to be used for the official purposes of the Union shall be the international form of Indian numerals.

(2) Notwithstanding anything in clause (1), for a period of fifteen years from the commencement of this Constitution, the English language shall continue to be used for all the official purposes of the Union for which it was being used immediately before such commencement:

Provided that the President may, during the said period, by order authorise the use of the Hindi language in addition to the English language and of the Devanagari form of numerals in addition to the international form of Indian numerals for any of the official purposes of the Union

(3) Notwithstanding anything in this article, Parliament may by law provide for the use, after the said period of fifteen years, of—

(*a*) the English language, or

(*b*) the Devanagari form of numerals,

for such purposes as may be specified in the law

COMMISSION

344. (1) The President shall, at the expiration of five years from the commencement of this Constitution and thereafter at the expiration of ten years from such commencement, by order constitute a Commission which shall consist of a Chairman and such other members representing the different languages specified in the Eighth Schedule as the President may appoint, and the order shall define the procedure to be followed by the Commission

(2) It shall be the duty of the Commission to make recommendations to the President as to—

(*a*) the progressive use of the Hindi language for the official purposes of the Union,

(*b*) restrictions on the use of the English language for all or any of the official purposes of the Union,

(*c*) the language to be used for all or any of the purposes mentioned in article 348,

(*d*) the form of numerals to be used for any one or more specified purposes of the Union;

(*e*) any other matter referred to the Commission by the President as regards the official language of the Union and the language for communication between the Union and a State or between one State and another and their use.

(3) In making their recommendations under clause (2), the Commission shall have due regard to the industrial, cultural and scientific advancement of India, and the just claims and the interests of persons belonging to the non-Hindi speaking areas in regard to the public services.

(4) There shall be constituted a Committee consisting of thirty members, of whom twenty shall be members of the House of the People and ten shall be members of the Council of States to be elected respectively by the members of the House of the People and the members of the Council of States in accordance with the system of proportional representation by means of the single transferable vote.

(5) It shall be the duty of the Committee to examine the recommendations of the Commission constituted under clause (1) and to report to the President their opinion thereon.

(6) Notwithstanding anything in article 343, the President may, after consideration of the report referred to in clause (5), issue directions in accordance with the whole or any part of that report.

CHAPTER II—REGIONAL LANGUAGES

345. Subject to the provisions of articles 346 and 347, the Legislature of a State may by law adopt any one or more of the languages in use in the State or Hindi as the language or languages to be used for all or any of the official purposes of that State:

Provided that, until the Legislature of the State otherwise provides by law, the English language shall continue to be used for those official purposes within the State for which it was being used immediately before the commencement of this Constitution

346. The language for the time being authorised for use in the Union for official purposes shall be the official language for communication between one State and another State and between a State and the Union:

Provided that if two or more States agree that the Hindi language should be the official language for communication between such States, that language may be used for such communication

347. On a demand being made in that behalf, the President may, if he is satisfied that a substantial proportion of the population of a State desire the use of any language spoken by them to be recognised by that State, direct that such language shall also be officially recognised throughout that State or any part thereof for such purpose as he may specify

CHAPTER III—LANGUAGE OF THE SUPREME COURT, HIGH COURTS, ETC.

348. (1) Notwithstanding anything in the foregoing provisions of this Part, until Parliament by law otherwise provides—

(*a*) all proceedings in the Supreme Court and in every High Court,

(*b*) the authoritative texts—

(i) of all Bills to be introduced or amendments thereto to be moved in either House of Parliament or in the House or either House of the Legislature of a State,

(ii) of all Acts passed by Parliament or the Legislature of a State and of all Ordinances promulgated by the President or the Governor or Rajpramukh of a State, and

(iii) of all orders, rules, regulations and bye-laws issued under this Constitution or under any law made by Parliament or the Legislature of a State,

shall be in the English language.

(2) Notwithstanding anything in sub-clause (*a*) of clause (1), the Governor or Rajpramukh of a State may, with the previous consent of the President, authorise the use of the Hindi language, or any other language used for any official purposes of the State, in proceedings in the High Court having its principal seat in that State:

Provided that nothing in this clause shall apply to any judgment, decree or order passed or made by such High Court.

(3) Notwithstanding anything in sub-clause (*b*) of clause (1), where the Legislature of a State has prescribed any language other than the English language for use in Bills introduced in, or Acts passed by, the Legislature of the State or

in Ordinances promulgated by the Governor or Rajpramukh of the State or in any order, rule, regulation or bye-law referred to in paragraph (*iii*) of that sub-clause, a translation of the same in the English language published under the authority of the Governor or Rajpramukh of the State in the Official Gazette of that State shall be deemed to be the authoritative text thereof in the English language under this article.

PROVISION FOR CHANGE

349. During the period of fifteen years from the commencement of this Constitution, no Bill or amendment making provision for the language to be used for any of the purposes mentioned in clause (1) of article 348 shall be introduced or moved in either House of Parliament without the previous sanction of the President, and the President shall not give his sanction to the introduction of any such Bill or the moving of any such amendment except after he has taken into consideration the recommendations of the Commission constituted under clause (1) of article 344 and the report of the Committee constituted under clause (4) of that article

CHAPTER IV
SPECIAL DIRECTIVES

350. Every person shall be entitled to submit a representation for the redress of any grievance to any officer or authority of the Union or a State in any of the languages used in the Union or in the State, as the case may be

351. It shall be the duty of the Union to promote the spread of the Hindi language, to develop it so that it may serve as a medium of expression for all the elements of the composite culture of India and to secure its enrichment by assimilating without interfering with its genius, the forms, style and expressions used in Hindustani and in the other languages of India specified in the Eighth Schedule, and by drawing, wherever necessary or desirable, for its vocabulary, primarily on Sanskrit and secondarily on other languages.

PART XVIII
EMERGENCY PROVISIONS

352. (1) If the President is satisfied that a grave emergency exists whereby the security of India or of any part of the territory thereof is threatened, whether by war or external aggression or internal disturbance, he may, by Proclamation, make a declaration to that effect.

(2) A Proclamation issued under clause (1)—

(*a*) may be revoked by a subsequent Proclamation,

(*b*) shall be laid before each House of Parliament,

(*c*) shall cease to operate at the expiration of two months unless before the expiration of that period it has been approved by resolutions of both Houses of Parliament

Provided that if any such Proclamation is issued at a time when the House of the People has been dissolved or the dissolution of the House of the People takes place during the period of two months referred to in sub-clause (*c*), and if a resolution approving the Proclamation has been passed by the Council of States, but no resolution with respect to such Proclamation has been passed by the House of the People before the expiration of that period, the Proclamation shall cease to operate at the expiration of thirty days from the date on which the House of the People first sits after its reconstitution unless before the expiration of the said period of thirty days a resolution approving the Proclamation has been also passed by the House of the People.

(3) A Proclamation of Emergency declaring that the security of India or of any part of the territory thereof is threatened by war or by external aggression or by internal disturbance may be made before the actual occurrence of war or of any such aggression or disturbance if the President is satisfied that there is imminent danger thereof.

EFFECTS OF PROCLAMATION

353. While a Proclamation of Emergency is in operation, then—

(*a*) notwithstanding anything in this Constitution, the executive power of the Union shall extend to the giving of directions to any State as to the manner in which the executive power thereof is to be exercised,

(*b*) the power of Parliament to make laws with respect to any matter shall include power to make laws conferring powers and imposing duties, or authorising the conferring of powers and the imposition of duties, upon the Union or officers and authorities of the Union as respects that matter, notwithstanding that it is one which is not enumerated in the Union List

354. (1) The President may, while a Proclamation of Emergency is in operation, by order direct that all or any of the provisions of articles 268 to 279 shall for such period, not extending in any case beyond the expiration of the financial year in which such Proclamation ceases to operate, as may be specified in the order, have effect subject to such exceptions or modifications as he thinks fit

(2) Every order made under clause (1) shall, as soon as may be after it is made, be laid before each House of Parliament

355. It shall be the duty of the Union to protect every State against external aggression and internal disturbance and to ensure that the government of every State is carried on in accordance with the provisions of this Constitution.

BREAKDOWN IN STATES

356. (1) If the President, on receipt of a report from the Governor or Rajpramukh of a State or otherwise, is satisfied that a situation has arisen in which the government of the State cannot be carried on in accordance with the provisions of this Constitution, the President may by Proclamation—

(*a*) assume to himself all or any of the functions of the Government of the State and all or any of the powers vested in or exercisable by the Governor or Rajpramukh, as the case may be, or any body or authority in the State other than the Legislature of the State,

(*b*) declare that the powers of the Legislature of the State shall be exercisable by or under the authority of Parliament;

(*c*) make such incidental and consequential provisions as appear to the President to be necessary or desirable for giving effect to the objects of the Proclamation, including provisions for suspending in whole or in part the operation of any provisions of this Constitution relating to any body or authority in the State.

Provided that nothing in this clause shall authorise the President to assume to himself any of the powers vested in or exercisable by a High Court, or to suspend in whole or in part the operation of any provision of this Constitution relating to High Courts.

(2) Any such Proclamation may be revoked or varied by a subsequent Proclamation

(3) Every Proclamation under this article shall be laid before each House of Parliament and shall, except where it is a Proclamation revoking a previous Proclamation, cease to operate at the expiration of two months unless before the expiration of that period it has been approved by resolutions of both Houses of Parliament:

Provided that if any such Proclamation (not being a Proclamation revoking a previous Proclamation) is issued at a time when the House of the People is dissolved or the dissolution of the House of the People takes place during the period of two months referred to in this clause, and if a resolution approving the Proclamation has been passed by the Council of States, but no resolution with respect to such Proclamation has been passed by the House of the People before the expiration of that period, the Proclamation shall cease to operate at the expiration of thirty days from the date on which the House of the People first sits after its reconstitution unless before the expiration of the said period of thirty days a resolution approving the Proclamation has been also passed by the House of the People

(4) A Proclamation so approved shall, unless revoked, cease to operate on the expiration of a period of six months from the date of the passing of the second of the resolutions approving the Proclamation under clause (3)

Provided that if and so often as a resolution approving the continuance in force of such a Proclamation is passed by both Houses of Parliament, the Proclamation shall, unless revoked, continue in force for a further period of six months from the date on which under this clause it would otherwise have ceased to operate, but no such Proclamation shall in any case remain in force for more than three years

Provided further that if the dissolution of the House of the People takes place during any such period of six months and a resolution approving the continuance in force of such Proclamation has been passed by the Council of States, but no resolution with respect to the continuance in force of such Proclamation has been passed by the House of the People during the said period, the Proclamation shall cease to operate at the expiration of thirty days from the date on which the House of the People first sits after its reconstitution unless before the expiration of the said period of thirty days a resolution approving the continuance in force of the Proclamation has been also passed by the House of the People.

POWERS OF PARLIAMENT

357. (1) Where by a Proclamation issued under clause (1) of article 356, it has been declared that the powers of the Legislature of the State shall be exercisable by or under the authority of Parliament, it shall be competent—

(*a*) for Parliament to confer on the President the power of the Legislature of the State to make laws, and to authorise the President to delegate, subject to such conditions as he may think fit to impose, the power so conferred to any other authority to be specified by him in that behalf;

(*b*) for Parliament, or for the President or other authority in whom such power to make laws is vested under sub-clause (*a*), to make laws conferring powers and imposing duties, or authorising the conferring of powers and the imposition of duties, upon the Union or officers and authorities thereof,

(*c*) for the President to authorise when the House of the People is not in session expenditure from the Consolidated Fund of the State pending the sanction of such expenditure by Parliament

(2) Any law made in exercise of the power of the Legislature of the State by Parliament or the President or other authority referred to in sub-clause (*a*) of clause (1) which Parliament or the President or such other authority would not, but for the issue of a Proclamation under article 356, have been competent to make shall, to the extent of the incompetency, cease to have effect on the expiration of a period of one year after the Proclamation has ceased to operate except as respects things done or omitted to be done before the expiration of the said period, unless the provisions which shall so cease to have effect are sooner repealed or re-enacted with or without modification by Act of the appropriate Legislature

358. While a Proclamation of Emergency is in operation, nothing in article 19 shall restrict the power of the State as defined in Part III to make any law or to take any executive action which the State would but for the provisions contained in that Part be competent to make or to take, but any law so made shall, to the extent of the incompetency, cease to have effect as soon as the Proclamation ceases to operate, except as respects things done or omitted to be done before the law so ceases to have effect

359. (1) Where a Proclamation of Emergency is in operation, the President may by order declare that the right to move any court for the enforcement of such of the rights conferred by Part III as may be mentioned in the order and all proceedings pending in any court for the enforcement of the rights so mentioned shall remain suspended for the period during which the Proclamation is in force or for such shorter period as may be specified in the order

(2) An order made as aforesaid may extend to the whole or any part of the territory of India

(3) Every order made under clause (1) shall, as soon as may be after it is made, be laid before each House of Parliament.

THREAT TO FINANCIAL STABILITY

360. (1) If the President is satisfied that a situation has arisen whereby the financial stability or credit of India or of any part of the territory thereof is threatened, he may by a Proclamation make a declaration to that effect

(2) The provisions of clause (2) of article 352 shall apply in relation to a Proclamation issued under this article as they apply in relation to a Proclamation of Emergency issued under article 352

(3) During the period any such Proclamation as is mentioned in clause (1) is in operation, the executive authority of the Union shall extend to the giving of directions to any State to observe such canons of financial propriety as may be specified in the directions, and to the giving of such other directions as the President may deem necessary and adequate for the purpose

(4) Notwithstanding anything in this Constitution—

(*a*) any such direction may include—

(i) a provision requiring the reduction of salaries and allowances of all or any class of persons serving in connection with the affairs of a State,

(ii) a provision requiring all Money Bills or other Bills to which the provisions of article 207 apply to be reserved for the consideration of the President after they are passed by the Legislature of a State,

(*b*) it shall be competent for the President during the period any Proclamation issued under this article is in operation to issue directions for the reduction of salaries and allowances of all or any class of persons serving in connection with the affairs of the Union including the Judges of the Supreme Court and the High Courts

PART XIX

MISCELLANEOUS

PROTECTION OF PRESIDENT, ETC.

361. (1) The President, or the Governor or Rajpramukh of a State, shall not be answerable to any court for the exercise and performance of the powers and duties of his office or for any act done or purporting to be done by him in the exercise and performance of those powers and duties

Provided that the conduct of the President may be brought under review by any court, tribunal or body appointed or designated by either House of Parliament for the investigation of a charge under article 61 :

Provided further that nothing in this clause shall be construed as restricting the right of any person to bring appropriate proceedings against the Government of India or the Government of a State.

(2) No criminal proceedings whatsoever shall be instituted or continued against the President, or the Governor or Rajpramukh of a State, in any court during his term of office

(3) No process for the arrest or imprisonment of the President, or the Governor or Rajpramukh of a State, shall issue from any court during his term of office

(4) No civil proceedings in which relief is claimed against the President, or the Governor or Rajpramukh of a State, shall be instituted during his term of office in any court in respect of any act done or purporting to be done by him in his personal capacity, whether before or after he entered upon his office as President, or as Governor or Rajpramukh of such State, until the expiration of two months next after notice in writing has been delivered to the President or the Governor or the Rajpramukh as the case may be, or left at his office stating the nature of the proceedings, the cause of action therefor, the name, description and place of residence of the party by whom such proceedings are to be instituted and the relief which he claims.

RIGHTS, ETC. OF RULERS

362. In the exercise of the power of Parliament or of the Legislature of a State to make laws or in the exercise of the executive power of the Union or of a State, due regard shall be had to the guarantee or assurance given under any such covenant or agreement as is referred to in clause (1) of article 291 with respect to the personal rights, privileges and dignities of the Ruler of an Indian State.

363. (1) Notwithstanding anything in this Constitution but subject to the provisions of article 143, neither the Supreme Court nor any other court shall have jurisdiction in any dispute arising out of any provision of a treaty, agreement, covenant, engagement, *sanad* or other similar instrument which was entered into or executed before the commencement of this Constitution by any Ruler of an Indian State and to which the Government of the Dominion of India or any of its predecessor Governments was a party and which has or has been continued in operation after such commencement or in any dispute in respect of any right accruing under or any liability or obligation arising out of any of the provisions of this Constitution relating to any such treaty, agreement, covenant, engagement, *sanad* or other similar instrument

(2) In this article—

(*a*) "Indian State" means any territory recognised before the commencement of this Constitution by His Majesty or the Government of the Dominion of India as being such a State, and

(*b*) "Ruler" includes the Prince, Chief or other person recognised before such commencement by His Majesty or the Government of the Dominion of India as the Ruler of any Indian State

MAJOR PORTS, AERODROMES

364. (1) Notwithstanding anything in this Constitution, the President may by public notification direct that as from such date as may be specified in the notification—

(*a*) any law made by Parliament or by the Legislature of a State shall not apply to any major port or aerodrome or shall apply thereto subject to such exceptions or modifications as may be specified in the notification, or

(*b*) any existing law shall cease to have effect in any major port or aerodrome except as respects things done or omitted to be done before the said date, or shall in its application to such port or aerodrome have effect subject to such exceptions or modifications as may be specified in the notification.

(2) In this article—

(*a*) "major port" means a port declared to be a major port by or under any law made by Parliament or any existing law and includes all areas for the time being included within the limits of such port;

(*b*) "aerodrome" means aerodrome as defined for the purposes of the enactments relating to airways, aircraft and air navigation.

365. Where any State has failed to comply with, or to give effect to, any directions given in the exercise of the executive power of the Union under any of the provisions of this Constitution, it shall be lawful for the President to hold that a situation has arisen in which the government of the State cannot be carried on in accordance with the provisions of this Constitution.

DEFINITIONS

366. In this Constitution, unless the context otherwise requires, the following expressions have the meanings hereby respectively assigned to them, that is to say—

(1) *agricultural income* means agricultural income as defined for the purposes of the enactments relating to Indian income-tax,

(2) *an Anglo-Indian* means a person whose father or any of whose other male progenitors in the male line is or was of European descent but who is domiciled within the territory of India and is or was born within such territory of parents habitually resident therein and not established there for temporary purposes only,

(3) *article* means an article of this Constitution,

(4) *borrow* includes the raising of money by the grant of annuities, and "loan" shall be construed accordingly,

(5) *clause* means a clause of the article in which the expression occurs,

(6) *corporation tax* means any tax on income, so far as that tax is payable by companies and is a tax in the case of which the following conditions are fulfilled —

(*a*) that it is not chargeable in respect of agricultural income,

(*b*) that no deduction in respect of the tax paid by companies is, by any enactments which may apply to the tax, authorised to be made from dividends payable by the companies to individuals;

(*c*) that no provision exists for taking the tax so paid into account in computing for the purposes of Indian income-tax the total income of individuals receiving such dividends, or in computing the Indian income-tax payable by, or refundable to, such individuals,

(7) *corresponding Province, corresponding Indian State* or *corresponding State* means in cases of doubt such Province, Indian State or State as may be determined by the President to be the corresponding Province, the corresponding Indian State or the corresponding State, as the case may be, for the particular purpose in question,

(8) *debt* includes any liability in respect of any obligation to repay capital sums by way of annuities and any liability under any guarantee, and "debt charges" shall be construed accordingly;

(9) *estate duty* means a duty to be assessed on or by reference to the principal value, ascertained in accordance with such rules as may be prescribed by or under laws made by Parliament or the Legislature of a State relating to the duty, of all property passing upon death or deemed, under the provisions of the said laws, so to pass,

(10) *existing law* means any law, Ordinance, order, bye-law, rule or regulation passed or made before the commencement of this Constitution by any Legislature, authority or person having power to make such a law, Ordinance, order, bye-law, rule or regulation,

(11) *Federal Court* means the Federal Court constituted under the Government of India Act, 1935;

(12) *goods* includes all materials, commodities, and articles,

(13) *guarantee* includes any obligation undertaken before the commencement of this Constitution to make payments in the event of the profits of an undertaking falling short of a specified amount,

(14) *High Court* means any court which is deemed for the purposes of this Constitution to be a High Court for any State and includes—

(a) any Court in the territory of India constituted or reconstituted under this Constitution as a High Court, and

(b) any other Court in the territory of India which may be declared by Parliament by law to be a High Court for all or any of the purposes of this Constitution,

(15) *Indian State* means any territory which the Government of the Dominion of India recognised as such a State,

(16) *Part* means a Part of this Constitution,

(17) *pension* means a pension, whether contributory or not, of any kind whatsoever payable to or in respect of any person, and includes retired pay so payable, a gratuity so payable and any sum or sums so payable by way of the return, with or without interest thereon or any other addition thereto, of subscriptions to a provident fund,

(18) *Proclamation of Emergency* means a Proclamation issued under clause (1) of article 352,

(19) *public notification* means a notification in the Gazette of India, or, as the case may be, the Official Gazette of a State,

(20) *railway* does not include—

(a) a tramway wholly within a municipal area, or

(b) any other line of communication wholly situate in one State and declared by Parliament by law not to be a railway,

(21) *Rajpramukh* means—

(a) in relation to the State of Hyderabad the person who for the time being is recognised by the President as the Nizam of Hyderabad,

(b) in relation to the State of Jammu and Kashmir or the State of Mysore, the person who for the time being is recognised by the President as the Maharaja of that State, and

(c) in relation to any other State specified in Part B of the First Schedule, the person who for the time being is recognised by the President as the Rajpramukh of that State,

and includes in relation to any of the said States any person for the time being recognised by the President as competent to exercise the powers of the Rajpramukh in relation to that State;

(22) *Ruler* in relation to an Indian State means the Prince, Chief or other person by whom any such covenant or agreement as is referred to in clause (1) of article 291 was entered into and who for the time being is recognised by the President as the Ruler of the State, and includes any person who for the time being is recognised by the President as the successor of such Ruler,

(23) *Schedule* means a Schedule to this Constitution,

(24) *Scheduled Castes* means such castes, races or tribes or parts of or groups within such castes, races or tribes as are deemed under article 341 to be Scheduled Castes for the purposes of this Constitution,

(25) *Scheduled Tribes* means such tribes or tribal communities or parts of or groups within such tribes or tribal communities as are deemed under article 342 to be Scheduled Tribes for the purposes of this Constitution,

(26) *securities* includes stock;

(27) *sub-clause* means a sub-clause of the clause in which the expression occurs,

(28) *taxation* includes the imposition of any tax or impost, whether general or local or special, and "tax" shall be construed accordingly,

(29) *tax on income* includes a tax in the nature of an excess profits tax,

(30) *Uparajpramukh* in relation to any State specified in Part B of the First Schedule means the person who for the time being is recognised by the President as the Uparajpramukh of that State

INTERPRETATION

367. (1) Unless the context otherwise requires, the General Clauses Act, 1897, shall subject to any adaptations and modifications that may be made therein under article 372, apply for the interpretation of this Constitution as it applies for the interpretation of an Act of the Legislature of the Dominion of India

(2) Any reference in this Constitution to Acts or laws of, or made by, Parliament, or to Acts or laws of, or made by, the Legislature of a State specified in Part A or Part B of the First Schedule, shall be construed as including a reference to an Ordinance made by the President or, to an Ordinance made by a Governor or Rajpramukh, as the case may be

(3) For the purposes of this Constitution "foreign State" means any State other than India:

Provided that, subject to the provisions of any law made by Parliament, the President may by order declare any State not to be a foreign State for such purposes as may be specified in the order.

PART XX

AMENDMENT OF THE CONSTITUTION

368. An amendment of this Constitution may be initiated only by the introduction of a Bill for the purpose in either House of Parliament and when the Bill is passed in each House by a majority of the total membership of that House and by a majority of not less than two-thirds of the members of that House present and voting, it shall be presented to the President for his assent and upon such assent being given to the Bill, the Constitution shall stand amended in accordance with the terms of the Bill

Provided that if such amendment seeks to make any change in—

(a) article 54, article 55, article 73, article 162 or article 241, or

(b) Chapter IV of Part V, Chapter V of Part VI, or Chapter I of Part XI, or

(c) any of the Lists in the Seventh Schedule, or

(d) the representation of States in Parliament, or

(e) the provisions of this article,

the amendment shall also require to be ratified by the Legislatures of not less than one-half of the States specified in Parts A and B of the First Schedule by resolutions to that effect passed by those Legislatures before the Bill making provision for such amendment is presented to the President for assent.

PART XXI

TEMPORARY AND TRANSITIONAL PROVISIONS

369. Notwithstanding anything in this Constitution, Parliament shall, during a period of five years from the commencement of this Constitution, have power to make laws with respect to the following matters as if they were enumerated in the Concurrent List, namely:—

(a) trade and commerce within a State in, and the production, supply and distribution of, cotton and woollen textiles, raw cotton (including ginned cotton and unginned cotton or *kapas*), cotton seed, paper (including newsprint), foodstuffs (including edible oilseeds and oil), cattle fodder (including oil-cakes and other concentrates), coal (including coke and derivatives of coal), iron, steel and mica,

(b) offences against laws with respect to any of the matters mentioned in clause (a), jurisdiction and powers of all courts except the Supreme Court with respect to any of those matters, and fees in respect of any of those matters but not including fees taken in any court;

but any law made by Parliament, which Parliament would not but for the provisions of this article have been competent to make, shall, to the extent of the incompetency, cease to have effect on the expiration of the said period, except as respects things done or omitted to be done before the expiration thereof

JAMMU AND KASHMIR STATE

370. (1) Notwithstanding anything in this Constitution,—

(a) the provisions of article 238 shall not apply in relation to the State of Jammu and Kashmir,

(b) the power of Parliament to make laws for the said State shall be limited to—

(i) those matters in the Union List and the Concurrent List which, in consultation with the Government of the State, are declared by the President to correspond to matters specified in the Instrument of Accession governing the accession of the State to the Dominion of India as the matters with respect to which the Dominion Legislature may make laws for that State, and

(ii) such other matters in the said Lists as, with the concurrence of the Government of the State, the President may by order specify

Explanation—For the purposes of this article the Government of the State means the person for the time being recognised by the President as the Maharaja of Jammu and Kashmir acting on the advice of the Council of Ministers for the time being in office under the Maharaja's Proclamation dated the fifth day of March, 1948,

(c) the provisions of article 1 and of this article shall apply in relation to that State,

(d) such of the other provisions of this Constitution shall apply in relation to that State subject to such exceptions and modifications as the President may by order specify

Provided that no such order which relates to the matters specified in the Instrument of Accession of the State referred to in paragraph (i) of sub-clause (b) shall be issued except in consultation with the Government of the State

Provided further that no such order which relates to matters other than those referred to in the last preceding proviso shall be issued except with the concurrence of that Government.

(2) If the concurrence of the Government of the State referred to in paragraph (ii) of sub-clause (b) of clause (1) or in the second

proviso to sub-clause (*d*) of that clause be given before the Constituent Assembly for the purpose of framing the Constitution of the State is convened, it shall be placed before such Assembly for such decision as it may take thereon

(3) Notwithstanding anything in the foregoing provisions of this article, the President may by public notification, declare that this article shall cease to be operative or shall be operative only with such exceptions and modifications and from such date as he may specify.

Provided that the recommendation of the Constituent Assembly of the State referred to in clause (2) shall be necessary before the President issues such a notification

371. Notwithstanding anything in this Constitution, during a period of ten years from the commencement thereof, or during such longer or shorter period as Parliament may by law provide in respect of any State, the Government of every State specified in Part B of the First Schedule shall be under the general control of, and comply with such particular directions, if any, as may from time to time be given by, the President

Provided that the President may by order direct that the provisions of this article shall not apply to any State specified in the order.

EXISTING LAWS

372. (1) Notwithstanding the repeal by this Constitution of the enactments referred to in article 395 but subject to the other provisions of this Constitution, all the law in force in the territory of India immediately before the commencement of this Constitution shall continue in force therein until altered or repealed or amended by a competent Legislature or other competent authority.

(2) For the purpose of bringing the provisions of any law in force in the territory of India into accord with the provisions of this Constitution, the President may by order make such adaptations and modifications of such law, whether by way of repeal or amendment, as may be necessary or expedient, and provide that the law shall, as from such date as may be specified in the order, have effect subject to the adaptations and modifications so made, and any such adaptation or modification shall not be questioned in any court of law.

(3) Nothing in clause (2) shall be deemed—

(*a*) to empower the President to make any adaptation or modification of any law after the expiration of two years from the commencement of this Constitution, or

(*b*) to prevent any competent Legislature or other competent authority from repealing or amending any law adapted or modified by the President under the said clause

Explanation I—The expression "law in force" in this article shall include a law passed or made by a Legislature or other competent authority in the territory of India before the commencement of this Constitution and not previously repealed, notwithstanding that it or parts of it may not be then in operation either at all or in particular areas

Explanation II—Any law passed or made by a Legislature or other competent authority in the territory of India which immediately before the commencement of this Constitution had extra-territorial effect as well as effect in the territory of India shall, subject to any such adaptations and modifications as aforesaid, continue to have such extra-territorial effect

Explanation III.—Nothing in this article shall be construed as continuing any temporary law in force beyond the date fixed for its expiration or the date on which it would have expired if this Constitution had not come into force.

Explanation IV—An Ordinance promulgated by the Governor of a Province under section 88 of the Government of India Act, 1935, and in force immediately before the commencement of this Constitution shall, unless withdrawn by the Governor of the corresponding State earlier, cease to operate at the expiration of six weeks from the first meeting after such commencement of the Legislative Assembly of that State functioning under clause (1) of article 382, and nothing in this article shall be construed as continuing any such Ordinance in force beyond the said period

373. Until provision is made by Parliament under clause (7) of article 22, or until the expiration of one year from the commencement of this Constitution, whichever is earlier, the said article shall have effect as if for any reference to Parliament in clauses (4) and (7) thereof there were substituted a reference to the President and for any reference to any law made by Parliament in those clauses there were substituted a reference to an order made by the President.

PRIVY COUNCIL APPEALS

374. (1) The Judges of the Federal Court holding office immediately before the commencement of this Constitution shall, unless they have elected otherwise, become on such commencement the Judges of the Supreme Court and shall thereupon be entitled to such salaries and allowances and to such rights in respect of leave of absence and pension as are provided for under article 125 in respect of the Judges of the Supreme Court

(2) All suits, appeals and proceedings, civil or criminal, pending in the Federal Court at the commencement of this Constitution shall stand removed to the Supreme Court, and the Supreme Court shall have jurisdiction to hear and determine the same, and the judgments and orders of the Federal Court delivered or made before the commencement of this Constitution shall have the same force and effect as if they had been delivered or made by the Supreme Court

(3) Nothing in this Constitution shall operate to invalidate the exercise of jurisdiction by His Majesty in Council to dispose of appeals and petitions from, or in respect of, any judgment, decree or order of any court within the territory of India in so far as the exercise of such jurisdiction is authorised by law, and any order of His Majesty in Council made on any such appeal or petition after the commencement of this Constitution shall for all purposes have effect as if it were an order or decree made by the Supreme Court in the exercise of the jurisdiction conferred on such Court by this Constitution

(4) On and from the commencement of this Constitution the jurisdiction of the authority functioning as the Privy Council in a State specified in Part B of the First Schedule to entertain and dispose of appeals and petitions from or in respect of any judgment, decree or order of any court within that State shall cease, and all appeals and other proceedings pending before the said authority at such commencement shall be transferred to, and disposed of by, the Supreme Court.

(5) Further provision may be made by Parliament by law to give effect to the provisions of this article.

LAW COURTS

375. All courts of civil, criminal and revenue jurisdiction, all authorities and all officers, judicial, executive and ministerial, throughout the territory of India, shall continue to exercise their respective functions subject to the provisions of this Constitution.

376. (1) Notwithstanding anything in clause (2) of article 217, the Judges of a High Court in any Province holding office immediately before the commencement of this Constitution shall, unless they have elected otherwise, become on such commencement the Judges of the High Court in the corresponding State, and shall thereupon be entitled to such salaries and allowances and to such rights in respect of leave of absence and pension as are provided for under article 221 in respect of the Judges of such High Court.

(2) The Judges of a High Court in any Indian State corresponding to any State specified in Part B of the First Schedule holding office immediately before the commencement of this Constitution shall, unless they have elected otherwise, become on such commencement the Judges of the High Court in the State so specified and shall, notwithstanding anything in clauses (1) and (2) of article 217 but subject to the proviso to clause (1) of that article, continue to hold office until the expiration of such period as the President may by order determine.

(3) In this article, the expression "Judge" does not include an acting Judge or an additional Judge.

AUDITOR-GENERAL

377. The Auditor-General of India holding office immediately before the commencement of this Constitution shall, unless he has elected otherwise, become on such commencement the Comptroller and Auditor-General of India and shall thereupon be entitled to such salaries and to such rights in respect of leave of absence and pension as are provided for under clause (3) of article 148 in respect of the Comptroller and Auditor-General of India and be entitled to continue to hold office until the expiration of his term of office as determined under the provisions which were applicable to him immediately before such commencement.

PUBLIC SERVICE COMMISSION

378. (1) The members of the Public Service Commission for the Dominion of India holding office immediately before the commencement of this Constitution shall, unless they have elected otherwise, become on such commencement the members of the Public Service Commission for the Union and shall, notwithstanding anything in clauses (1) and (2) of article 316 but subject to the proviso to clause (2) of that article, continue to hold office until the expiration of their term of office as determined under the rules which were applicable immediately before such commencement to such members

(2) The members of a Public Service Commission of a Province or of a Public Service Commission serving the needs of a group of Provinces holding office immediately before the commencement of this Constitution shall, unless they have elected otherwise, become on such commencement the members of the Public Service Commission for the corresponding State or the members of the Joint State Public Service Commission serving the needs of the corresponding States, as the case may be, and shall, notwithstanding anything in clauses (1) and (2) of article 316 but subject to the proviso to clause (2) of that article, continue to hold office until the expiration of their term of office as determined under the rules which were applicable immediately before such commencement to such members

PARLIAMENT, SPEAKER

379. (1) Until both Houses of Parliament have been duly constituted and summoned to meet for the first session under the provisions of this Constitution, the body functioning as the Constituent Assembly of the Dominion of India immediately before the commencement of this Constitution shall be the provisional Parliament and shall exercise all the powers and perform all the duties conferred by the provisions of this Constitution on Parliament.

Explanation—For the purposes of this clause, the Constituent Assembly of the Dominion of India includes—

(*i*) the members chosen to represent any State or other territory for which representation is provided under clause (2), and

(*ii*) the members chosen to fill casual vacancies in the said Assembly.

(2) The President may by rules provide for—

(*a*) the representation in the provisional Parliament functioning under clause (1) of any State or other territory which was not represented in the Constituent Assembly of the Dominion of India immediately before the commencement of this Constitution,

(*b*) the manner in which the representatives of such States or other territories in the provisional Parliament shall be chosen, and

(*c*) the qualifications to be possessed by such representatives

(3) If a member of the Constituent Assembly of the Dominion of India was, on the sixth day of October, 1949, or thereafter at any time before the commencement of this Constitution, a member of a House of the Legislature of a Governor's Province or of an Indian State corresponding to any State specified in part B of the First Schedule or a Minister for any such State, then, as from the commencement of this Constitution the seat of such member in the Constituent Assembly shall, unless he has ceased to be a member of that Assembly earlier, become vacant and every such vacancy shall be deemed to be a casual vacancy

(4) Notwithstanding that any such vacancy in the Constituent Assembly of the Dominion of India as is mentioned in clause (3) has not occurred under that clause, steps may be taken before the commencement of this Constitution for the filling of such vacancy, but any person chosen before such commencement to fill the vacancy shall not be entitled to take his seat in the said Assembly until after the vacancy has so occurred.

(5) Any person holding office immediately before the commencement of this Constitution as Speaker or Deputy Speaker of the Constituent Assembly when functioning as the Dominion Legislative under the Government of India Act, 1935, shall on such commencement be the Speaker or, as the case may be, the Deputy Speaker of the provisional Parliament functioning under clause (1)

PRESIDENT, MINISTERS

380. (1) Such person as the Constituent Assembly of the Dominion of India shall have elected in that behalf shall be the President of India until a President has been elected in accordance with the provisions contained in Chapter I of Part V and has entered upon his office

(2) In the event of the occurrence of any vacancy in the office of the President so elected by the Constituent Assembly of the Dominion of India by reason of his death, resignation, or removal, or otherwise, it shall be filled by a person elected in that behalf by the provisional Parliament functioning under article 379, and until a person is so elected, the Chief Justice of India shall act as President

381. Such persons as the President may appoint in that behalf shall become members of the Council of Ministers of the President under this Constitution, and, until appointments are so made, all persons holding office as Ministers for the Dominion of India immediately before the commencement of this Constitution shall on such commencement become, and shall continue to hold office as, members of the Council of Ministers of the President under this Constitution

LEGISLATURES OF STATES

382. (1) Until the House or Houses of the Legislature of each State specified in Part A of the First Schedule has or have been duly constituted and summoned to meet for the first session under the provisions of this Constitution, the House or Houses of the Legislature of the corresponding Province functioning immediately before the commencement of this Constitution shall exercise the powers and perform the duties conferred by the provisions of this Constitution on the House or Houses of the Legislature of such State.

(2) Notwithstanding anything in clause (1), where a general election to reconstitute the Legislative Assembly of a Province has been ordered before the commencement of this Constitution, the election may be completed after such commencement as if this Constitution had not come into operation, and the Assembly so reconstituted shall be deemed to be the Legislative Assembly of that Province for the purpose of that clause.

(3) Any person holding office immediately before the commencement of this Constitution as Speaker or Deputy Speaker of the Legislative Assembly or President or Deputy President of the Legislative Council of a Province shall on such commencement be the Speaker or Deputy Speaker of the Legislative Assembly or the Chairman or Deputy Chairman of the Legislative Council, as the case may be, of the corresponding State specified in Part A of the First Schedule while such Assembly or Council functions under clause (1)

Provided that where a general election has been ordered for the reconstitution of the Legislative Assembly of a Province before the commencement of this Constitution and the first meeting of the Assembly as so reconstituted is held after such commencement, the provisions of this clause shall not apply and the Assembly as reconstituted shall elect two members of the Assembly to be respectively the Speaker and Deputy Speaker thereof.

GOVERNORS, MINISTERS

383. Any person holding office as Governor in any Province immediately before the commencement of this Constitution shall on such commencement be the Governor of the corresponding State specified in Part A of the First Schedule until a new Governor has been appointed in accordance with the provisions of Chapter II of Part VI and has entered upon his office.

384. Such persons as the Governor of a State may appoint in that behalf shall become members of the Council of Ministers of the Governor under this Constitution, and, until appointments are so made, all persons holding office as Ministers for the corresponding Province immediately before the commencement of this Constitution shall on such commencement become, and shall continue to hold office as, members of the Council of Ministers of the Governor of the State under this Constitution

INDIAN STATES LEGISLATURES

385. Until the House or Houses of the Legislature of a State specified in Part B of the First Schedule has or have been duly constituted and summoned to meet for the first session under the provisions of this Constitution, the body or authority functioning immediately before the commencement of this Constitution as the Legislature of the corresponding Indian State shall exercise the powers and perform the duties conferred by the provisions of this Constitution on the House or Houses of the Legislature of the State so specified

386. Such persons as the Rajpramukh of a State specified in Part B of the First Schedule may appoint in that behalf shall become members of the Council of Ministers of such Rajpramukh under this Constitution, and, until appointments are so made, all persons holding office as Ministers for the corresponding Indian State immediately before the commencement of this Constitution shall on such commencement become, and shall continue to hold office as, members of the Council of Ministers of such Rajpramukh under this Constitution

387. For the purposes of elections held under any of the provisions of this Constitution during a period of three years from the commencement of this Constitution, the population of India or of any part thereof may, notwithstanding anything in this Constitution be determined in such manner as the President may by order direct, and different provisions may be made for different States and for different purposes by such order

VACANCIES IN LEGISLATURES

388. (1) Casual vacancies in the seats of members of the provisional Parliament functioning under clause (1) of article 379, including vacancies referred to in clauses (3) and (4) of that article, shall be filled, and all matters in connection with the filling of such vacancies (including the decision of doubts and disputes arising out of, or in connection with, elections to fill such vacancies) shall be regulated—

(*a*) in accordance with such rules as may be made in that behalf by the President, and

(*b*) until rules are so made, in accordance with the rules relating to the filling of casual vacancies in the Constituent Assembly of the Dominion of India and matters connected therewith in force at the time of the filling of such vacancies or immediately before the commencement of this Constitution, as the case may be, subject to such exceptions and modifications as may be made therein before such commencement by the President of that Assembly and thereafter by the President of India

Provided that where any such seat as is mentioned in this clause was, immediately before it became vacant, held by a person belonging to the Scheduled Castes or to the Muslim or the Sikh community and representing a Province or, as the case may be, a State specified in Part A of the First Schedule, the person to fill such seat shall, unless the President of the Constituent Assembly or the President of India, as the case may be, considers it necessary or expedient to provide otherwise, be of the same community

Provided further that at an election to fill any such vacancy in the seat of a member representing a Province or a State specified in Part A of the First Schedule, every member of the Legislative Assembly of that Province or of the corresponding State or of that State, as the case may be, shall be entitled to participate and vote

Explanation.—For the purposes of this clause—

(*a*) all such castes, races or tribes or parts of or groups within castes, races or tribes as are specified in the Government of India (Scheduled Castes) Order, 1936, to be Scheduled Castes in relation to any Province shall be deemed to be Scheduled Castes in relation to that Province or the corresponding State until a notification has been issued by the President under clause (1) of article 341 specifying the Scheduled Castes in relation to that corresponding State,

(*b*) all the Scheduled Castes in any Province or State shall be deemed to be a single community

(2) Casual vacancies in the seats of members of a House of the Legislature of a State functioning under article 382 or article 385 shall be filled, and all matters in connection with the filling of such vacancies (including the decision of doubts and disputes arising out of, or in connection with, elections to fill such vacancies) shall be regulated in accordance with such provisions governing the filling of such vacancies and regulating such matters as were in force immediately before the commencement of this Constitution subject to such exceptions and modifications as the President may by order direct

BILLS, MONEYS

389. A Bill which immediately before the commencement of this Constitution was pending in the Legislature of the Dominion of India or in the Legislature of any Province or Indian State may, subject to any provision to the contrary which may be included in rules made

by Parliament or the Legislature of the corresponding State under this Constitution, be continued in Parliament or the Legislature of the corresponding State, as the case may be, as if the proceedings taken with reference to the Bill in the Legislature of the Dominion of India or in the Legislature of the Province or Indian State had been taken in Parliament or in the Legislature of the corresponding State

390. The provisions of this Constitution relating to the Consolidated Fund of India or the Consolidated Fund of any State and the appropriation of moneys out of either of such Funds shall not apply in relation to moneys received or raised or expenditure incurred by the Government of India or the Government of any State between the commencement of this Constitution and the thirty-first day of March, 1950, both days inclusive, and any expenditure incurred during that period shall be deemed to be duly authorised if the expenditure was specified in a schedule of authorised expenditure authenticated in accordance with the provisions of the Government of India Act, 1935, by the Governor-General of the Dominion of India or the Governor of the corresponding Province or is authorised by the Rajpramukh of the State in accordance with such rules as were applicable to the authorisation of expenditure from the revenues of the corresponding Indian State immediately before such commencement

FIRST AND FOURTH SCHEDULES

391. (1) If at any time between the passing of this Constitution and its commencement any action is taken under the provisions of the Government of India Act, 1935, which in the opinion of the President requires any amendment in the First Schedule and the Fourth Schedule, the President may, notwithstanding anything in this Constitution, by order, make such amendments in the said Schedules as may be necessary to give effect to the action so taken, and any such order may contain such supplemental, incidental and consequential provisions as the President may deem necessary

(2) When the First Schedule or the Fourth Schedule is so amended, any reference to that Schedule in this Constitution shall be construed as a reference to such Schedule as so amended

392. (1) The President may, for the purpose of removing any difficulties, particularly in relation to the transition from the provisions of the Government of India Act, 1935, to the provisions of this Constitution, by order direct that this Constitution shall, during such period as may be specified in the order, have effect subject to such adaptations, whether by way of modification, addition or omission, as he may deem to be necessary or expedient

Provided that no such order shall be made after the first meeting of Parliament duly constituted under Chapter II of Part V.

(2) Every order made under clause (1) shall be laid before Parliament.

(3) The powers conferred on the President by this article, by article 324, by clause (3) of article 367 and by article 391 shall, before the commencement of this Constitution, be exercisable by the Governor-General of the Dominion of India.

PART XXII
REPEALS

393. This Constitution may be called the Constitution of India.

394. This article and articles 5, 6, 7, 8, 9, 60, 324, 366, 367, 379, 380, 388, 391, 392 and 393 shall come into force at once, and the remaining provisions of this Constitution shall come into force on the twenty-sixth day of January, 1950, which day is referred to in this Constitution as the commencement of this Constitution.

395. The Indian Independence Act, 1947 and the Government of India Act, 1935, together with all enactments amending or supplementing the latter Act, but not including the Abolition of Privy Council Jurisdiction Act, 1949, are hereby repealed

FIRST SCHEDULE
(ARTICLES 1, 4 AND 391)
STATES AND TERRITORIES

PART A

	Names of States	*Names of corresponding Provinces*
1	Assam	Assam
2	Bihar	Bihar
3	Bombay	Bombay
4	Madhya Pradesh	The Central Provinces and Berar
5	Madras	Madras
6	Orissa	Orissa
7.	Punjab	East Punjab
8	The United Provinces*	The United Provinces
9	West Bengal	West Bengal

TERRITORIES OF STATES

The territory of the State of Assam shall comprise the territories which immediately before the commencement of this Constitution were comprised in the Province of Assam, the Khasi States and the Assam Tribal Areas

The territory of the State of West Bengal shall comprise the territory which immediately before the commencement of this Constitution was comprised in the Province of West Bengal

The territory of each of the other States in this Part shall comprise the territories which immediately before the commencement of this Constitution were comprised in the corresponding Province and the territories which, by virtue of an order made under section 290A of the Government of India Act, 1935, were immediately before such commencement being administered as if they formed part of that Province.

PART B

Names of States.

1. Hyderabad
2 Jammu and Kashmir
3. Madhya Bharat
4 Mysore
5. Patiala and East Punjab States Union
6. Rajasthan
7 Saurashtra
8 Travancore-Cochin
9 Vindhya Pradesh

TERRITORIES OF STATE

The territory of each of the States in this Part shall comprise the territory which immediately before the commencement of this Constitution was comprised in the corresponding Indian State, and—

(*a*) in the case of each of the States of Rajasthan and Saurashtra, shall also comprise the territories which immediately before such commencement were being administered by the Government of the corresponding Indian State, whether under the provisions of the Extra-Provincial Jurisdiction Act, 1947, or otherwise; and

(*b*) in the case of the State of Madhya Bharat, shall also comprise the territory which immediately before such commencement was comprised in the Chief Commissioner's Province of Panth Piploda.

PART C

Names of States.

1. Ajmer
2 Bhopal
3 Bilaspur
4 Cooch-Behar†
5 Coorg
6 Delhi
7. Himachal Pradesh
8 Kutch
9 Manipur
10 Tripura

TERRITORIES OF STATES

The territory of each of the States of Ajmer, Coorg and Delhi shall comprise the territory which immediately before the commencement of this Constitution was comprised in the Chief Commissioners' Provinces of Ajmer-Merwara, Coorg and Delhi, respectively

The territory of each of the other States in this Part shall comprise the territories which, by virtue of an order made under section 290A of the Government of India Act, 1935, were immediately before the commencement of this Constitution being administered as if they were a Chief Commissioner's Province of the same name

PART D

The Andaman and Nicobar Islands.

SECOND SCHEDULE
[ARTICLES 59(3), 65(3), 75(6), 97, 125, 148(3), 158(3), 164(5), 186 AND 221]

PART A

Provisions as to President, Governors of States specified in Part A of First Schedule

1 There shall be paid to the President and to the Governors of the States specified in Part A of the First Schedule the following emoluments per mensem, that is to say —

The President	10,000 rupees
The Governor of a State	5,500 rupees

2. There shall also be paid to the President and to the Governors of the States so specified such allowances as were payable respectively to the Governor-General of the Dominion of India and to the Governors of the corresponding Provinces immediately before the commencement of this Constitution

3 The President and the Governors of such States throughout their respective terms of office shall be entitled to the same privileges to which the Governor-General and the Governors of the corresponding Provinces were respectively entitled immediately before the commencement of this Constitution.

4 While the Vice-President or any other person is discharging the functions of, or is acting as, President, or any person is discharging the functions of the Governor, he shall be entitled to the same emoluments, allowances and privileges as the President or the Governor whose functions he discharges or for whom he acts, as the case may be.

PART B

Provisions as to the Ministers for Union and States in Part A and Part B of First Schedule.

5. There shall be paid to the Prime Minister and to each of the other Ministers for the Union such salaries and allowances as were payable respectively to the Prime Minister and to each of the other Ministers for the Dominion of India immediately before the commencement of this Constitution.

* Later changed to Uttar Pradesh.—*Editor.*

† Later merged with West Bengal.—*Editor.*

6. There shall be paid to the Ministers for any State specified in Part A or Part B of the First Schedule such salaries and allowances as were payable to such Ministers for the corresponding Province or the corresponding Indian State, as the case may be, immediately before the commencement of this Constitution

PART C

Provisions as to Speaker, Deputy Speaker of House of People, Chairman, Deputy Chairman of Council of States, Speaker, Deputy Speaker of Legislative Assembly of State in Part A of First Schedule, Chairman, Deputy Chairman of Legislative Council of any such State.

7. There shall be paid to the Speaker of the the House of the People and the Chairman of the Council of States such salaries and allowances as were payable to the Speaker of the Constituent Assembly of the Dominion of India immediately before the commencement of this Constitution, and there shall be paid to the Deputy Speaker of the House of the People and to the Deputy Chairman of the Council of States such salaries and allowances as were payable to the Deputy Speaker of the Constituent Assembly of the Dominion of India immediately before such commencement.

8 There shall be paid to the Speaker and the Deputy Speaker of the Legislative Assembly of a State specified in Part A of the First Schedule and to the Chairman and the Deputy Chairman of the Legislative Council of such State such salaries and allowances as were payable respectively to the Speaker and the Deputy Speaker of the Legislative Assembly and the President and the Deputy President of the Legislative Council of the corresponding Province immediately before the commencement of this Constitution and, where the corresponding Province had no Legislative Council immediately before such commencement, there shall be paid to the Chairman and the Deputy Chairman of the Legislative Council of the State such salaries and allowances as the Governor of the State may determine.

PART D

Provisions as to Judges of Supreme Court, High Courts in States in Part A of First Schedule

9 (1) There shall be paid to the Judges of the Supreme Court, in respect of time spent on actual service, salary at the following rates per mensem, that is to say —

The Chief Justice	.. ..	5,000 rupees
Any other Judge	.. ..	4,000 rupees

Provided that if a Judge of the Supreme Court at the time of his appointment is in receipt of a pension (other than a disability or wound pension) in respect of any previous service under the Government of India or any of its predecessor Governments or under the Government of a State or any of its predecessor Governments, his salary in respect of service in the Supreme Court shall be reduced by the amount of that pension

(2) Every Judge of the Supreme Court shall be entitled without payment of rent to the use of an official residence.

(3) Nothing in sub-paragraph (2) of this paragraph shall apply to a Judge who, immediately before the commencement of this Constitution,—

(*a*) was holding office as the Chief Justice of the Federal Court and has become on such commencement the Chief Justice of the Supreme Court under clause (1) of article 374, or

(*b*) was holding office as any other Judge of the Federal Court and has on such commencement become a Judge (other than the Chief Justice) of the Supreme Court under the said clause,

during the period he holds office as such Chief Justice or other Judge, and every Judge who so becomes the Chief Justice or other Judge of the Supreme Court shall, in respect of time spent on actual service as such Chief Justice or other Judge, as the case may be, be entitled to receive in addition to the salary specified in sub-paragraph (1) of this paragraph as special pay an amount equivalent to the difference between the salary so specified and the salary which he was drawing immediately before such commencement.

(4) Every Judge of the Supreme Court shall receive such reasonable allowances to reimburse him for expenses incurred in travelling on duty within the territory of India and shall be afforded such reasonable facilities in connection with travelling as the President may from time to time prescribe

(5) The rights in respect of leave of absence (including leave allowances) and pension of the Judges of the Supreme Court shall be governed by the provisions which, immediately before the commencement of this Constitution, were applicable to the Judges of the Federal Court.

10 (1) There shall be paid to the Judges of the High Court of each State specified in Part A of the First Schedule, in respect of time spent on actual service, salary at the following rates per mensem, that is to say :—

The Chief Justice	.. ..	4,000 rupees
Any other Judge	.. ..	3,500 rupees

(2) Every person who immediately before the commencement of this Constitution—

(*a*) was holding office as the Chief Justice of a High Court in any Province and has on such commencement become the Chief Justice of the High Court in the corresponding State under clause (1) of article 376, or

(*b*) was holding office as any other Judge of a High Court in any Province and has on such commencement become a Judge (other than the Chief Justice) of the High Court in the corresponding State under the said clause,

shall, if he was immediately before such commencement drawing a salary at a rate higher than that specified in sub-paragraph (1) of this paragraph, be entitled to receive in respect of time spent on actual service as such Chief Justice or other Judge, as the case may be, in addition to the salary specified in the said sub-paragraph as special pay an amount equivalent to the difference between the salary so specified and the salary which he was drawing immediately before such commencement.

(3) Every Judge of a High Court shall receive such reasonable allowances to reimburse him for expenses incurred in travelling on duty within the territory of India and shall be afforded such reasonable facilities in connection with travelling as the President may from time to time prescribe

(4) The rights in respect of leave of absence (including leave allowances) and pension of the Judges of the High Court of any State shall be governed by the provisions which, immediately before the commencement of this Constitution, were applicable to the Judges of the High Court in the corresponding Province

11 In this Part, unless the context otherwise requires,—

(*a*) the expression "Chief Justice" includes an acting Chief Justice, and a "Judge" includes an *ad hoc* Judge,

(*b*) "actual service" includes—

(i) time spent by a Judge on duty as a Judge or in the performance of such other functions as he may at the request of the President undertake to discharge;

(ii) vacations, excluding any time during which the Judge is absent on leave, and

(iii) joining time on transfer from a High Court to the Supreme Court or from one High Court to another

PART E

Provisions as to Comptroller and Auditor-General of India.

12. (1) There shall be paid to the Comptroller and Auditor-General of India a salary at the rate of four thousand rupees per mensem.

(2) The person who was holding office immediately before the commencement of this Constitution as Auditor-General of India and has become on such commencement the Comptroller and Auditor-General of India under article 377 shall in addition to the salary specified in sub-paragraph (1) of this paragraph be entitled to receive as special pay an amount equivalent to the difference between the salary so specified and the salary which he was drawing as Auditor-General of India immediately before such commencement.

(3) The rights in respect of leave of absence and pension and the other conditions of service of the Comptroller and Auditor-General of India shall be governed or shall continue to be governed, as the case may be, by the provisions which were applicable to the Auditor-General of India immediately before the commencement of this Constitution and all references in those provisions to the Governor-General shall be construed as references to the President.

THIRD SCHEDULE

[ARTICLES 75(4), 99, 124(6), 148(2), 164(3), 188 AND 219]

Forms of Oaths or Affirmations

TOTAL OF ALL SEATS 205

FIFTH SCHEDULE

[ARTICLE 244 (1)]

Scheduled Areas and Tribes

PART A

1 *Interpretation* —In this Schedule, unless the context otherwise requires, the expression "State" means a State specified in Part A or Part B of the First Schedule but does not include the State of Assam.

2 *Executive power of a State in Scheduled Areas* —Subject to the provisions of this Schedule the executive power of a State extends to the Scheduled Areas therein.

3 *Report by the Governor or Rajpramukh to the President regarding the administration of Scheduled Areas* —The Governor or Rajpramukh of each State having Scheduled Areas therein shall annually, or whenever so required by the President, make a report to the President regarding the administration of the Scheduled Areas in that State and the executive power of the Union shall extend to the giving of directions to the State as to the administration of the said areas.

PART B

4 *Tribes Advisory Council* —(1) There shall be established in each State having Scheduled Areas therein and, if the President so directs, also in any State having Scheduled Tribes but not Scheduled Areas therein, a Tribes Advisory Council consisting of not more than twenty members of whom, as nearly as may be, three-fourths shall be the representatives of the Scheduled Tribes in the Legislative Assembly of the State.

Provided that if the number of representatives of the Scheduled Tribes in the Legislative Assembly of the State is less than the number of seats in the Tribes Advisory Council to be filled by such representatives, the remaining seats shall be filled by other members of those tribes.

(2) It shall be the duty of the Tribes Advisory Council to advise on such matters pertaining to the welfare and advancement of the Scheduled Tribes in the State as may be referred to them by the Governor or Rajpramukh, as the case may be.

(3) The Governor or Rajpramukh may make rules prescribing or regulating, as the case may be,—

(*a*) the number of members of the Council, the mode of their appointment and the appointment of the Chairman of the Council and of the officers and servants thereof;

(*b*) the conduct of its meetings and its procedure in general, and

(*c*) all other incidental matters.

5 *Law applicable to Scheduled Areas* —(1) Notwithstanding anything in this Constitution, the Governor or Rajpramukh, as the case may be, may by public notification direct that any particular Act of Parliament or of the Legislature of the State shall not apply to a Scheduled Area or any part thereof in the State or shall apply to a Scheduled Area or any part thereof in the State subject to such exceptions and modifications as he may specify in the notification and any direction given under this sub-paragraph may be given so as to have retrospective effect

(2) The Governor or Rajpramukh, as the case may be, may make regulations for the peace and good government of any area in a State which is for the time being a Scheduled Area.

In particular and without prejudice to the generality of the foregoing power, such regulations may—

(*a*) prohibit or restrict the transfer of land by or among members of the Scheduled Tribes in such area,

(*b*) regulate the allotment of land to members of the Scheduled Tribes in such area,

(*c*) regulate the carrying on of business as money-lender by persons who lend money to members of the Scheduled Tribes in such area

(3) In making any such regulation as is referred to in sub-paragraph (2) of this paragraph, the Governor or Rajpramukh may repeal or amend any Act of Parliament or of the Legislature of the State or any existing law which is for the time being applicable to the area in question

(4) All regulations made under this paragraph shall be submitted forthwith to the President and, until assented to by him, shall have no effect

(5) No regulation shall be made under this paragraph unless the Governor or the Rajpramukh making the regulation has, in the case where there is a Tribes Advisory Council for the State, consulted such Council.

PART C

6 *Scheduled Areas* —(1) In this Constitution, the expression "Scheduled Areas" means such areas as the President may by order declare to be Scheduled Areas

(2) The President may at any time by order—

(*a*) direct that the whole or any specified part of a Scheduled Area shall cease to be a Scheduled Area or a part of such an area,

(*b*) alter, but only by way of rectification of boundaries, any Scheduled Area,

(*c*) on any alteration of the boundaries of a State or on the admission into the Union or the establishment of a new State, declare any territory not previously included in any State to be, or to form part of, a Scheduled Area,

and any such order may contain such incidental and consequential provisions as appear to the President to be necessary and proper, but save as aforesaid, the order made under sub-paragraph (1) of this paragraph shall not be varied by any subsequent order.

PART D

7. *Amendment of the Schedule* —(1) Parliament may from time to time by law amend by way of addition, variation or repeal any of the provisions of this Schedule and, when the Schedule is so amended, any reference to this Schedule in this Constitution shall be construed as a reference to such Schedule as so amended

(2) No such law as is mentioned in sub-paragraph (1) of this paragraph shall be deemed to be an amendment of this Constitution for the purposes of article 368

SIXTH SCHEDULE
[ARTICLES 244 (2) AND 275 (1)]
TRIBAL AREAS IN ASSAM

1. *Autonomous districts and autonomous regions* —(1) Subject to the provisions of this paragraph, the tribal areas in each item of Part A of the table appended to paragraph 20 of this Schedule shall be an autonomous district

(2) If there are different Schedules Tribes in an autonomous district, the Governor may, by public notification, divide the area or areas inhabited by them into autonomous regions

(3) The Governor may, by public notification,—

(*a*) include any area in Part A of the said table,

(*b*) exclude any area from Part A of the said table,

(*c*) create a new autonomous district,

(*d*) increase the area of any autonomous district,

(*e*) diminish the area of any autonomous district,

(*f*) unite two or more autonomous districts or parts thereof so as to form one autonomous district,

(*g*) define the boundaries of any autonomous district

Provided that no order shall be made by the Governor under clauses (*c*), (*d*), (*e*) and (*f*) of this sub-paragraph except after consideration of the report of a Commission appointed under sub-paragraph (1) of paragraph 14 of this Schedule

CONSTITUTION OF COUNCILS

2 *Constitution of District Councils and Regional Councils* —(1) There shall be a District Council for each autonomous district consisting of not more than twenty-four members, of whom not less than three-fourths shall be elected on the basis of adult sufferage

(2) There shall be a separate Regional Council for each area constituted an autonomous region under sub-paragraph (2) of paragraph 1 of this Schedule

(3) Each District Council and each Regional Council shall be a body corporate by the name respectively of "the District Council of (*name of district*)" and "the Regional Council of (*name of region*)", shall have perpetual succession and a common seal and shall by the said name sue and be sued.

(4) Subject to the provisions of this Schedule, the administration of an autonomous district shall, in so far as it is not vested under this Schedule in any Regional Council within such district, be vested in the District Council for such district and the administration of an autonomous region shall be vested in the Regional Council for such region

(5) In an autonomous district with Regional Councils, the District Council shall have only such powers with respect to the areas under the authority of the Regional Council as may be delegated to it by the Regional Council in addition to the powers conferred on it by this Schedule with respect to such areas.

(6) The Governor shall make rules for the first constitution of District Councils and Regional Councils in consultation with the existing tribal Councils or other representative tribal organisations within the autonomous districts or regions concerned, and such rules shall provide for—

(*a*) the composition of the District Councils and Regional Councils and the allocation of seats therein,

(*b*) the delimitation of territorial constituencies for the purpose of elections to those Councils,

(*c*) the qualifications for voting at such elections and the preparation of electoral rolls therefor,

(*d*) the qualifications for being elected at such elections as members of such Councils,

(*e*) the term of office of members of such Councils,

(*f*) any other matter relating to or connected with elections or nominations to such Councils,

(*g*) the procedure and the conduct of business in the District and Regional Councils,

(*h*) the appointment of officers and staff of the District and Regional Councils

(7) The District or the Regional Council may after its first constitution make rules with regard to the matters specified in sub-paragraph (6) of this paragraph and may also make rules regulating—

(*a*) the formation of subordinate local Councils or Boards and their procedure and the conduct of their business, and

(*b*) generally all matters relating to the transaction of business pertaining to the administration of the district or region, as the case may be

Provided that until rules are made by the District or the Regional Council under this sub-paragraph the rules made by the Governor under sub-paragraph (6) of this paragraph shall have effect in respect of elections to the officers and staff of, and the procedure and the conduct of business in each such Council

Provided further that the Deputy Commissioner or the Sub-Divisional Officer, as the case may be, of the North Cachar and Mikir Hills shall be the Chairman *ex-officio* of the District Council in respect of the territories included in items 5 and 6 respectively of Part A of the table appended to paragraph 20 of this Schedule and shall have power for a period of six years after the first constitution of the District Council, subject to the control of the Governor, to annul or modify any resolution or decision of the District Council or to issue such instructions to the District Council, as he may consider appropriate, and the District Council shall comply with every such instruction issued

POWERS OF COUNCILS

3 *Powers of the District Councils and Regional Councils to make laws* —(1) The Regional Council for an autonomous region in respect of all areas within such region and the District Council for an autonomous district in respect of all areas within the district except those which are under the authority of Regional Councils, if any, within the district shall have power to make laws with respect to—

(*a*) the allotment, occupation or use, or the setting apart, of land, other than any land which is a reserved forest for the purposes of agriculture or grazing or for residential or other non-agricultural purposes or for any other purpose likely to promote the interests of the inhabitants of any village or town

Provided that nothing in such laws shall prevent the compulsory acquisition of any land, whether occupied or unoccupied, for public purposes by the Government of Assam in accordance with the law for the time being in force authorising such acquisition;

(*b*) the management of any forest not being a reserved forest;

(*c*) the use of any canal or water-course for the purpose of agriculture,

(*d*) the regulation of the practice of *jhum* or other forms of shifting cultivation,

(*e*) the establishment of village or town committees or councils and their powers,

(*f*) any other matter relating to village or town administration, including village or town police and public health and sanitation,

(*g*) the appointment or succession of Chiefs or Headmen,

(*h*) the inheritance of property,

(*i*) marriage;

(*j*) social customs

(2) In this paragraph, a "reserved forest" means any area which is a reserved forest under the Assam Forest Regulation, 1891, or under any other law for the time being in force in the area in question

(3) All laws made under this paragraph shall be submitted forthwith to the Governor and, until assented to by him, shall have no effect.

ADMINISTRATION OF JUSTICE

4 *Administration of justice in autonomous districts and autonomous regions* —(1) The Regional Council for an autonomous region in respect of areas within such region and the District Council for an autonomous district in respect of areas within the district other than those which are under the authority of the Regional Councils, if any, within the district may constitute village councils or courts for the trial of suits and cases between the parties all of whom belong to Scheduled Tribes within such areas, other than suits and cases to which the provisions of sub-paragraph (1) of paragraph 5 of this Schedule apply, to the exclusion of any court in the State, and may appoint suitable persons to be members of such village Councils or presiding officers of such courts, and may also appoint such officers as may be necessary for the administration of the laws made under paragraph 3 of this Schedule.

(2) Notwithstanding anything in this Constitution, the Regional Council for an autonomous region or any court constituted in that behalf by the Regional Council or, if in respect of any area within an autonomous district there is no Regional Council, the District Council for such district, or any court constituted in that behalf by the District Council, shall exercise the powers of a court of appeal in respect of all suits and cases triable by a village council or court constituted under sub-paragraph (1) of this paragraph within such region or area, as the case may be, other than those to which the provisions of sub-paragraph (1) of paragraph 5 of this Schedule apply, and no other court except the High Court and the Supreme Court shall have jurisdiction over such suits or cases.

(3) The High Court of Assam shall have and exercise such jurisdiction over the suits and cases to which the provisions of sub-paragraph (2) of this paragraph apply as the Governor may from time to time by order specify

(4) A Regional Council or District Council, as the case may be, may with the previous approval of the Governor make rules regulating—

(*a*) the constitution of village councils and courts and the powers to be exercised by them under this paragraph,

(*b*) the procedure to be followed by village councils or courts in the trial of suits and cases under sub-paragraph (1) of this paragraph,

(*c*) the procedure to be followed by the Regional or District Council or any court constituted by such Council in appeals and other proceedings under sub-paragraph (2) of this paragraph,

(*d*) the enforcement of decisions and orders of such Councils and courts;

(*e*) all other ancillary matters for the carrying out of the provisions of sub-paragraphs (1) and (2) of this paragraph.

CONFERMENT OF POWERS

5 *Conferment of powers under the Code of Civil Procedure* 1908, *and the Code of Criminal Procedure*, 1898, *on the Regional and District Councils and on certain courts and officers for the trial of certain suits, cases and offences* —(1) The Governor may, for the trial of suits or cases arising out of any law in force in any autonomous district or region being a law specified in that behalf by the Governor, or for the trial of offences punishable with death, transportation for life, or imprisonment for a term of not less than five years under the Indian Penal Code or under any other law for the time being applicable to such district or region, confer on the District Council or the Regional Council having authority over such district or region or on courts constituted by such District Council or on any officer appointed in that behalf by the Governor, such powers under the Code of Civil Procedure, 1908, or, as the case may be the Code of Criminal Procedure, 1898, as he deems appropriate, and thereupon the said Council, court or officer shall try the suits, cases or offences in exercise of the powers so conferred.

(2) The Governor may withdraw or modify any of the powers conferred on a District Council, Regional Council, court or officer under sub-paragraph (1) of this paragraph.

(3) Save as expressly provided in this paragraph, the Code of Civil Procedure, 1908, and the Code of Criminal Procedure, 1898, shall not apply to the trial of any suits, cases or offences in an autonomous district or in any autonomous region to which the provisions of this paragraph apply.

PRIMARY SCHOOLS

6. *Powers of the District Council to establish primary schools, etc* —The District Council for an autonomous district may establish, construct, or manage primary schools, dispensaries, markets, cattle pounds, ferries, fisheries, roads and waterways in the district and, in particular, may prescribe the language and the manner in which primary education shall be imparted in the primary schools in the district

FUNDS

7. *District and Regional Funds* —(1) There shall be constituted for each autonomous district, a District Fund and for each autonomous region, a Regional Fund to which shall be credited all moneys received respectively by the District Council for that district and the Regional Council for that region in the course of the administration of such district or region, as the case may be, in accordance with the provisions of this Constitution

(2) Subject to the approval of the Governor, rules may be made by the District Council and by the Regional Council for the management of the District Fund or, as the case may be, the Regional Fund, and the rules so made may prescribe the procedure to be followed in respect of payment of money into the said Fund, the withdrawal of moneys therefrom, the custody of moneys therein and any other matter connected with or ancillary to the matters aforesaid

LAND REVENUE, TAXES

8 *Powers to assess and collect Land revenue and to impose taxes* —(1) The Regional Council for an autonomous region in respect of all lands within such region and the District Council for an autonomous district in respect of all lands within the district except those which are in the areas under the authority of Regional Councils, if any, within the district, shall have the power to assess and collect revenue in respect of such lands in accordance with the principles for the time being followed by the Government of Assam in assessing lands for the purpose of land revenue in the State of Assam generally

(2) The Regional Council for an autonomous region in respect of areas within such region and the District Council for an autonomous district in respect of all areas in the district except those which are under the authority of Regional Councils, if any, within the district, shall have power to levy and collect taxes on lands and buildings, and tolls on persons resident within such areas

(3) The District Council for an autonomous district shall have the power to levy and collect all or any of the following taxes within such district, that is to say—

(*a*) taxes on professions, trades, callings and employments ,

(*b*) taxes on animals, vehicles and boats ;

(*c*) taxes on the entry of goods into a market for sale therein, and tolls on passengers and goods carried in ferries , and

(*d*) taxes for the maintenance of schools, dispensaries or roads

(4) A Regional Council or District Council, as the case may be, may make regulations to provide for the levy and collection of any of the taxes specified in sub-paragraphs (2) and (3) of this paragraph.

EXTRACTION OF MINERALS

9 *Licences or leases for the purpose of prospecting for, or extraction of, minerals* —(1) Such share of the royalties accruing each year from licences or leases for the purpose of prospecting, for, or the extraction of, minerals granted by the Government of Assam in respect of any area within an autonomous district as may be agreed upon between the Government of Assam and the District Council of such district shall be made over to that District Council.

(2) If any dispute arises as to the share of such royalties to be made over to a District Council, it shall be referred to the Governor for determination and the amount determined by the Governor in his discretion shall be deemed to be the amount payable under sub-paragraph (1) of this paragraph to the District Council and the decision of the Governor shall be final

TRADING BY NON-TRIBALS

10 *Power of District Council to make regulations for the control of money-lending and trading by non-tribals* —(1) The District Council of an autonomous district may make regulations for the regulation and control of money-lending or trading within the district by persons other than Scheduled Tribes resident in the district

(2) In particular and without prejudice to the generality of the foregoing power, such regulations may—

(*a*) prescribe that no one except the holder of a licence issued in that behalf shall carry on the business of money-lending ,

(*b*) prescribe the maximum rate of interest which may be charged or be recovered by a money-lender ,

(*c*) provide for the maintenance of accounts by money-lenders and for the inspection of such accounts by officers appointed in that behalf by the District Council ;

(*d*) prescribe that no person who is not a member of the Scheduled Tribes resident in the district shall carry on wholesale or retail business in any commodity except under a licence issued in that behalf by the District Council :

Provided that no regulations may be made under this paragraph unless they are passed by a majority of not less than three-fourths of the total membership of the District Council

Provided further that it shall not be competent under any such regulations to refuse the grant of a licence to a money-lender or a trader who has been carrying on business within the district since before the time of the making of such regulations.

(3) All regulations made under this paragraph shall be submitted forthwith to the Governor and, until assented to by him, shall have no effect

11. *Publication of laws, rules and regulations made under the Schedule* —All laws, rules and regulations made under this Schedule by a District Council or a Regional Council shall be published forthwith in the Official Gazette of the State and shall on such publication have the force of law

APPLICATION OF ACTS

12. *Application of Acts of Parliament and of the Legislature of the State to autonomous districts and autonomous regions.*—(1) Notwithstanding anything in this Constitution—

(*a*) no Act of the Legislature of the State in respect of any of the matters specified in paragraph 3 of this Schedule as matters with respect to which a District Council or a Regional Council may make laws, and no Act of the Legislature of the State prohibiting or restricting the consumption of any non-distilled alcoholic liquor shall apply to any autonomous district or autonomous region unless in either case the District Council for such district or having jurisdiction over such region by public notification so directs, and the District Council in giving such direction with respect to any Act may direct that the Act shall in its application to such district or region or any part thereof have effect subject to such exceptions or modifications as it thinks fit ,

(*b*) the Governor may, by public notification, direct that any Act of Parliament or of the Legislature of the State to which the provisions of clause (*a*) of this sub-paragraph do not apply shall not apply to an autonomous district or an autonomous region, or shall apply to such district or region or any part thereof subject to such exceptions or modifications as he may specify in the notification

(2) Any direction given under sub-paragraph (1) of this paragraph may be given so as to have retrospective effect.

FINANCIAL STATEMENT

13 *Estimated receipts and expenditure pertaining to autonomous districts to be shown separately in the annual financial statement* —The estimated receipts and expenditure pertaining to an autonomous district which are to be credited to, or is to be made from, the Consolidated Fund of the State of Assam shall be first placed before the District Council for discussion and then after such discussion be shown separately in the annual financial statement of the State to be laid before the Legislature of the State under article 202

14 *Appointment of Commission to inquire into and report on the administration of autonomous districts and autonomous regions* —(1) The Governor may at any time appoint a Commission to examine and report on any matter specified by him relating to the administration of the autonomous districts and autonomous regions in the State, including matters specified in clauses (*c*), (*d*), (*e*) and (*f*) of sub-paragraph (3) of paragraph 1 of his Schedule, or may appoint a Commission to inquire into and report from time to time on the administration of autonomous districts and autonomous regions in the State generally and in particular on—

(*a*) the provision of educational and medical facilities and communications in such districts and regions ;

(*b*) the need for any new or special legislation in respect of such districts and regions , and

(*c*) the administration of the laws, rules and regulations made by the District and Regional Councils ;

and define the procedure to be followed by such Commission.

(2) The report of every such Commission with the recommendations of the Governor with respect thereto shall be laid before the Legislature of the State by the Minister concerned

together with an explanatory memorandum regarding the action proposed to be taken thereon by the Government of Assam.

(3) In allocating the business of the Government of the State among his Ministers the Governor may place one of his Ministers specially in charge of the welfare of the autonomous districts and autonomous regions in the State

ANNULMENT, ETC. OF REGIONAL ACTS

15. *Annulment or suspension of acts and resolutions of District and Regional Councils* — (1) If at any time the Governor is satisfied that an act or resolution of a District or a Regional Council is likely to endanger the safety of India, he may annul or suspend such act or resolution and take such steps as he may consider necessary (including the suspension of the Council and the assumption to himself of all or any of the powers vested in or exercisable by the Council) to prevent the commission or continuance of such act, or the giving of effect to such resolution

(2) Any order made by the Governor under sub-paragraph (1) of this paragraph together with the reasons therefor shall be laid before the Legislature of the State as soon as possible and the order shall, unless revoked by the Legislature of the State, continue in force for a period of twelve months from the date on which it was so made

Provided that if and so often as a resolution approving the continuance in force of such order is passed by the Legislature of the State, the order shall unless cancelled by the Governor continue in force for a further period of twelve months from the date on which under this paragraph it would otherwise have ceased to operate.

DISSOLUTION OF COUNCIL

16 *Dissolution of a District or a Regional Council* —The Governor may on the recommendation of a Commission appointed under paragraph 14 of this Schedule by public notification order the dissolution of a District or a Regional Council and—

(*a*) direct that a fresh general election shall be held immediately for the reconstitution of the Council, or

(*b*) subject to the previous approval of the Legislature of the State assume the administration of the area under the authority of such Council himself or place the administration of such area under the Commission appointed under the said paragraph or any other body considered suitable by him for a period not exceeding twelve months

Provided that when an order under clause (*a*) of this paragraph has been made, the Governor may take the action referred to in clause (*b*) of this paragraph with regard to the administration of the area in question pending the reconstitution of the Council on fresh general election

Provided further that no action shall be taken under clause (*b*) of this paragraph without giving the District or the Regional Council, as the case may be, an opportunity of placing its views before the Legislature of the State

17. *Exclusion of areas from autonomous districts in forming constituencies in such districts* —For the purposes of elections to the Legislative Assembly of Assam, the Governor may by order declare that any area within an autonomous district shall not form part of any constituency to fill a seat or seats in the Assembly reserved for any such district but shall form part of a constituency to fill a seat or seats in the Assembly not so reserved to be specified in the order.

18. *Application of the provisions of this Schedule to areas specified in Part B of the table appended to paragraph* 20 —(1) The Governor may—

(*a*) subject to the previous approval of the President, by public notification, apply all or any of the foregoing provisions of this Schedule to any tribal area specified in Part B of the table appended to paragraph 20 of this Schedule or any part of such area and thereupon such area or part shall be administered in accordance with such provisions, and

(*b*) with like approval, by public notification, exclude from the said table any tribal area specified in Part B of that table or any part of such area.

(2) Until a notification is issued under sub-paragraph (1) of this paragraph in respect of any tribal area specified in Part B of the said table or any part of such area, the administration of such area or part thereof, as the case may be, shall be carried on by the President through the Governor of Assam as his agent and the provisions of Part IX shall apply thereto as if such area or part thereof were a territory specified in Part D of the First Schedule.

(3) In the discharge of his functions under sub-paragraph (2) of this paragraph as the agent of the President the Governor shall act in his discretion

TRANSITIONAL PROVISIONS

19 (1) As soon as possible after the commencement of this Constitution the Governor shall take steps for the constitution of a District Council for each autonomous district in the State under this Schedule and, until a District Council is so constituted for an autonomous district, the administration of such district shall be vested in the Governor and the following provisions shall apply to the administration of the areas within such district instead of the foregoing provisions of this Schedule, namely :—

(*a*) no Act of Parliament or of the Legislature of the State shall apply to any such area unless the Governor by public notification so directs, and the Governor in giving such a direction with respect to any act may direct that the Act shall, in its application to the area or to any specified part thereof, have effect subject to such exceptions or modifications as he thinks fit;

(*b*) the Governor may make regulations for the peace and good government of any such area and any regulations so made may repeal or amend any Act of Parliament or of the Legislature of the State or any existing law which is for the time being applicable to such area

(2) Any direction given by the Governor under clause (*a*) of sub-paragraph (1) of this paragraph may be given so as to have retrospective effect

(3) All regulations made under clause (*b*) of sub-paragraph (1) of this paragraph shall be submitted forthwith to the President and, until assented to by him, shall have no effect

TRIBAL AREAS

20 (1) The areas specified in Parts A and B of the table below shall be the tribal areas within the State of Assam

(2) The United Khasi-Jaintia Hills District shall comprise the territories which before the commencement of this Constitution were known as the Khasi States and the Khasi and Jaintia Hills District, excluding any areas for the time being comprised within the cantonment and municipality of Shillong, but including so much of the area comprised within the municipality of Shillong as formed part of the Khasi State of Mylliem

Provided that for the purposes of clauses (*e*) and (*f*) of sub-paragraph (1) of paragraph 3, paragraph 4, paragraph 5, paragraph 6, sub-paragraph (2), clauses (*a*), (*b*) and (*d*) of sub-paragraph (3) and sub-paragraph (4) of paragraph 8, and clause (*d*) of sub-paragraph (2) of paragraph 10 of this Schedule, no part of the area comprised within the municipality of Shillong shall be deemed to be within the District

(3) Any reference in the table below to any district (other than the United Khasi-Jaintia Hills District) or administrative area shall be construed as a reference to that district or area at the commencement of this Constitution :

Provided that the tribal areas specified in Part B of the table below shall not include any such areas in the plains as may, with the previous approval of the President, be notified by the Governor of Assam in that behalf.

TABLE

Part A

1 The United Khasi-Jaintia Hills District.
2 The Garo Hills District
3 The Lushai Hills District.
4 The Naga Hills District
5 The North Cachar Hills
6 The Mikir Hills

Part B

1 North East Frontier Tract including Balipara Frontier Tract, Tirap Frontier Tract, Abor Hills District and Misimi Hills District.

2 The Naga Tribal Area

AMENDMENT OF SCHEDULE

21 (1) Parliament may from time to time by law amend by way of addition, variation or repeal any of the provisions of this Schedule and, when the Schedule is so amended, any reference to this Schedule in this Constitution shall be construed as a reference to such Schedule as so amended

(2) No such law as is mentioned in sub-paragraph (1) of this paragraph shall be deemed to be an amendment of this Constitution for the purposes of article 368.

SEVENTH SCHEDULE

[ARTICLE 246]

LIST I—UNION LIST

1 Defence of India and every part thereof including preparation for defence and all such acts as may be conducive in times of war to its prosecution and after its termination to effective demobilisation

2 Naval, military and air forces, any other armed forces of the Union

[NOTE: There has been regrouping of States but this does not affect representation from the area in question.

ASSAM STATE

THE State of Assam is composed of eleven districts—Sibsagar, Lakhimpur, Nowgong, Darrang, Kamrup, Goalpara, K. & J. Hills, Naga Hills, Cachar, Lushai Hills and Garo Hills

Population—The total population of the State in 1941 was 10,204,733, of which nearly 4½ millions were Hindus, over 3½ millions Muslims, 2½ millions belonged to tribal groups

With the partition, the whole of the District of Sylhet except four thanas became part of East Bengal. Hence the area as well as the population have been correspondingly reduced The following is a rough estimate of the present position area in square miles 49,599 29, total population 7,404,094 out of which 3,923,750 are males and 3,480,344 are females The number of Hindus is 2,947,989, of Muslims 1,710,423, of Sikhs 3,742, of Christians 35,724 The density of the population is 149.53

40 per cent of the population are recorded as speaking Assamese and about 24 per cent Bengali Other languages spoken in the State are Hindi, Uriya, Mundari, Nepali and a great variety of languages classified under the general heading of the Tibeto-Burman languages.

Agricultural Products—The river basins are naturally fertile and present in the main few difficulties to the cultivator Rice is the staple food crop, nearly 4,003,543 acres in 1947-48 being devoted to this crop Rainfall being high, the problem in general is to dispose of the surplus water and to control the action of floods rather than irrigation in the usual sense Tea and jute are the most important crops grown for export The area under tea and jute in 1947-48 was 437,380 and 209,730 acres respectively About 60,042 acres are devoted to sugar-cane Besides, Potatoes are also cultivated in Assam The area under this crop was in the neighbourhood of 57,528 acres during 1947-48. A good deal of short staple cotton is grown in the hills

Meteorological Conditions—Rainfall is everywhere abundant, and ranges from 50 to 258 inches a year leaving aside the highest recorded rainfall in this part of India with the maximum reached at Cherrapunji in the Khasi Hills (569 50) this is one of the wettest places in the world Temperatures are moderate Earthquakes of considerable severity have taken place, by far the worst being that which occurred in 1950 August.

Accounts of the occurrence of petroleum in Assam have been published in the memoirs of the Geological Survey of India The petroleum localities in this State are confined to a curved belt of country along the basins of the Brahmaputra and the Surma This belt is traceable over a distance of some 800 miles from N. E Assam through Cachar and Chittagong to the Arakan coast, where it has a S S E trend

Mines and Minerals—The only minerals in Assam worked on a commercial scale are coal, limestone and petroleum oil Petroleum output during 1946-47 was 6,48,77,535 gallons; coal output 3,22,942 tons, and limestone output 9,84,677 tons. The most extensive coal measures hitherto worked are in the Naga Hills and the Lakhimpur district. Important deposits also exist in the Garo Hills. Limestone is quarried in the Khasi and Jaintia Hills Petroleum is worked only in Lakhimpur and Cachar, and refined only in Lakhimpur

MANUFACTURES AND TRADE

Silk is manufactured in the Assam valley, also cotton weaving prevails as a cottage industry, women playing a predominant part In this valley there are no caste weavers In the Surma Valley weavers carry on a brisk manufacture on a commercial scale. These handloom products find a ready market on account of the great scarcity of mill made goods Tea is of course the main industry, but there is a large petroleum mining concern and also some coal mines There is a big match manufacturing concern at Dhubri Boat-building, brass and metal and earthenwares, and limestone burning, cane and bamboo work, furniture making, sola hat, smithy, brick making, mustard oil pressing, rice and saw mills are other industries but agriculture employs about 80 per cent of the population Assam carries on a considerable trade with the adjoining hill tribes and countries

Communications—Much of the trade of Assam is carried by river The extensive system of river communications makes the province less dependent upon roads than other parts of India but there has been much advance in recent years in road communication A fleet of steamers maintained by the India General Navigation Company and the Rivers Steam Navigation Company plies on the rivers in both Valleys There is a day service of passenger-boats between Tezpur and Neamati

The open mileage of railway has also shown a steady improvement and several branch lines to the Assam Railways system have been added in recent years including the new Railway joining Assam directly with the rest of India A branch of the line runs from Badarpur to Silchar at the eastern end of the Surma Valley and another runs west down the Assam Valley from Lumding to Pandu where it effects a junction

Since August 15, 1947 the Bengal Assam Railway has been divided into two separate sections The section within Assam has been called Assam Railway with headquarters at Pandu.

The first direct link by air between Calcutta and Gauhati was established on December 14, 1947 This air service was originally on a non-scheduled basis but very soon it became a daily service which has since been extended to Dibrugarh on a frequency of three days a week.

The Assam Government have undertaken an experiment in transport organization with the nationalisation of motor transport on a 75-mile long road connecting Gauhati and Nowgong.

ROAD IMPROVEMENT

Post-war road improvement programme envisages an expenditure of Rs 5 crores over a period of 5 years. It covers not only construction of new roads but also includes improvement of existing roads to a better standard The scheme also embraces a large bridging programme

Approximately 919 miles of roads classified as village roads and 210 miles of District roads were taken up for improvement upto 1948-49. A stretch of 230 miles of road classified as strategic, connecting Shillong with Silchar without touching the Pakistan territory has been taken up and is already jeepable in most sections It was expected to be jeepable throughout the entire length sometime in 1949 Another motorable road from Medhipara to Phulbari and Phulbari to Tura has been constructed to connect them to the headquarter station of the Garo Hills, and the road is now motorable A motorable road is also being constructed from Silchar to Aijal in the Lushai Hills In the beginning of 1948 the construction of a new road from Assam boundary to Agartala (Tripura State) was also undertaken at the instance of the Government of India The total length of this road is about 125 miles It was expected to be jeepable by the end of 1949 thus giving direct access to Agartala from Assam Yet another achievement of the Government of Assam is the construction of a most important road connecting Assam with the rest of India through Cooch Behar, without going through Pakistan.

The road programme has its special significance in that it is being designed with a view to making Assam self-sufficient in the matter of having its export and import to and from other parts of the Indian Republic transported quickly without having to pass through the Pakistan Dominion At the same time communications within the State have also been improved by provision of necessary feeder roads from and to the arterial road system of the State with a view to securing good market for the surplus produce of certain localities

ADMINISTRATION

The State of Assam was originally formed in 1874 in order to relieve the Lieutenant-Governor of Bengal of part of the administration of the huge territory then under him. In 1905, as the result of further deliberations, it was decided to add to the small Province of Assam the eastern portion of its unwieldy neighbour and to consolidate those territories under a Lieutenant-Governor The Province of Eastern Bengal and Assam as then constituted was again broken up on the 1st of April, 1912, the Eastern Bengal Districts were united with the Bengal Commissionerships of Burdwan and the Presidency to form the Presidency of Bengal under a Governor-in-Council, Bihar, Chota-Nagpur and Orissa were formed into a separate province, while the old Province of Assam was reconstituted under a Chief Commissioner

Under the Indian Reforms Act of 1919 the State was raised in status to that of administration by a Governor-in-Council and was thereby ranked with the older major States of India.

After Independence the State was administered according to the Government of India Act of 1935 as modified by subsequent Governors' ordinances under the Indian Independence Act; and now under the Constitution of India.

The capital of Assam is Shillong, which has for a number of years been growing rapidly and is now in parts overcrowded The town has grown up on somewhat rustic lines in very beautiful country, on the slopes of the Shillong Range which rises to a height of 6,450 feet above the sea. It was destroyed in the earthquake of 1897 and was rebuilt with methods of construction more fitted to withstand the shocks of earthquake.

THE BUDGET OF ASSAM

The financial position for 1950-51 is set out in the following table —

Heads of Revenue.	Budget Estimates for 1950-51.	Heads of Expenditure	Budget Estimates for 1950-51.
	(*In thousands of Rupees*)		(*In thousands of Rupees.*)
A—Principal heads of Revenue—		A—Direct Demands on Revenue—

(*Goalpara Tribal Plains*).

BIHAR STATE

BIHAR lies between 20°-30′ and 27°-30′ N. latitude and between 82°-31′ and 88° 26′ E longitude and includes the former States of Bihar and Chota Nagpur. It is bounded on the north by Nepal and the Darjeeling district of West Bengal; on the east by West Bengal, on the South by the State of Orissa, and on the West by Uttar Pradesh and Madhya Pradesh.

The area of the territories which constitute the Governorship of Bihar is 69,348 square miles The State comprises the valley of the Ganges from the spot where it issues from the territories of the Governor of Uttar Pradesh till it enters West Bengal near Rajmahal South of Bihar lies Chota Nagpur Following the main geographical lines there are four Civil Divisions with headquarters at Patna, Muzaffarpur (for Tirhut), Bhagalpur and Ranchi (for Chota Nagpur) The headquarters of Government are at Patna The new capital which lies between the Military Cantonment of Dinapore and the old civil station of Bankipore is known as "Patna," the old town being called "Patna City"

The States of Seraikela and Kharswan have been incorporated into Bihar.

THE PEOPLE

The State has a population of 36,340,151 persons. Even so with 521 persons per square mile, Bihar is more thickly populated than Germany. There are only four towns, which can be classed as cities, namely, Patna, Gaya, Jamshedpur and Bhagalpur. During the last ten years the population of Patna has been steadily increasing Hindus form an overwhelming majority of the population Though Muslims form about one-tenth of the total population they constitute more than one-fifth of urban population of the State Animists account for 5·7 per cent. These are inhabitants of the Chota Nagpur plateau and the Santal Parganas, the latter district being a continuation of the plateau in a north-easterly direction

AGRICULTURE

Although there is a great deal of mineral wealth in Chota Nagpur and important industries are developing in connection with it, still for the bulk of the population of the State agriculture continues to be the basic occupation Over 80 per cent of the population depends wholly on agriculture, while only 7 8 depends on industries

The soil throughout the whole of that portion of the Indo-Gangetic plain lying within the State boundaries is extremely fertile, particularly in North Bihar, in parts of which the density of the population is more than 900 people to the square mile The State occupies a transitional position between Ganges delta with its damp climate so suitable for the paddy crop and the provinces to the north and west where large irrigation schemes have had to be provided to enable the soil to produce its bounty As in the delta of the Ganges, rice is by far the most important crop as it occupies normally an area of approximately 12 million acres or about 52 per cent of the net cropped area of the State As canal irrigation is available only in the Sone valley and to a moderate extent in Champaran district, the importance of the south-west monsoon to the State of Bihar cannot be over-estimated.

In addition to the rice crop, however, other grain crops are grown on a tolerably large scale Of the monsoon cereals, maize is grown in a normal area of about 16 lakhs of acres while in the cold weather wheat and barley are extensively grown and occupy approximately 13 lakhs of acres The cultivation of oilseeds like castor, mustard and linseed forms a large and important part of the agriculture of Bihar, the normal area under spring oilseeds being estimated at more than 17 lakhs of acres The areas under maize, wheat, barley and spring oilseeds are about 1,513,100 acres, 1,220,800 acres, 1,279,100 acres and 1,504,300 acres respectively

After Uttar Pradesh, Bihar is the most important white sugar area in India, some 26 per cent of the total production of white sugar in the country being turned out in Bihar factories The number of factories in the State has risen from 12 in 1931-32 to 31 at the present time

Jute is also an important crop and is confined almost entirely to the Purnea district on the West Bengal border where about 95 per cent of the total crop in the State is produced The total area under jute crop is about 202,200 acres but little of the produce is manufactured within the State

Tobacco is a crop of increasing importance in the State and one which is likely to expand in importance The area under the crop is about 110,000 acres There are two factories at present in the State

MANUFACTURES

At Monghyr the Peninsular Tobacco Company have erected one of the largest cigarette factories in the world and as a result tobacco is being grown much more extensively The Tata Iron and Steel Works at Jamshedpur in Singhbhum district are also one of the largest in the world and numerous subsidiary industries are springing up in their vicinity. The population of Jamshedpur has passed the 100,000 limit, and it consumes 1½ million tons of coal annually. This part of the State has also some of the richest and most extensive iron mines in the world and supplies the iron and steel works in both West Bengal and Bihar with raw materials, but the raising of coal is still the most important of the mineral industries in the province The coalfields in the Manbhum District have undergone an extraordinary development in the past twenty years, while valuable new fields are being developed at Ramgarh, Rokaro and Karanpura in Hazaribagh This same district is the most important mica mining centre in the world both on account of the quality as well as the size of its output. Manbhum, Palamau, Ranchi, the Santal Parganas and Gaya are also the chief centres for the production of lac and the manufacture of shellac, the latter of which is exported from India to the value of ten crores annually Cement is the other important industry of the State which is produced from the limestones available in Palamau and Shahabad

ADMINISTRATION

The State on first constitution was administered by a Lieutenant-Governor-in Council, thus being unique in India as the only Lieutenant Governorship with a Council. It was raised to the status of a Governorship, with an Executive Council and Ministers under the Reform Act of 1919. Further constitutional progress was marked by the enforcement in 1937 of the Govt of India Act, 1935, and the Constitution of India which commenced on the 26th January, 1950, has given birth to the 'State' of Bihar under the Union of Sovereign Democratic Republic of India. The principles of the State administration are fully explained elsewhere.

PUBLIC WORKS

The Public Works Department and Irrigation Department are now separate Departments of Government. There are four Chief Engineers, *viz.* Chief Engineer (Roads & Buildings), Chief Engineer (Irrigation), Chief Engineer (Public Health Engineering Department) and Chief Electrical Engineer & Chief Electric Inspector, Bihar.

Chief Engineer (Buildings & Roads), is in charge of the Buildings and Roads including Aviation and Railways; Chief Engineer (Irrigation), is in charge of the Irrigation and Lift Irrigation, Chief Engineer (Public Health Engineering Department) is in charge of the Public Health Engineering Department This post has recently been created on a temporary basis for 3 years from the 1st February, 1949. A new post of Chief Electrical Engineer and Chief Electric Inspector, Bihar, has also been created recently and the Chief Electrical Engineer is in charge of the Electrical Department In addition to the Chief Engineers who are now heads of Departments, the following officers are attached to the offices of the Chief Engineers, (Irrigation) and (Buildings and Roads):—

Irrigation Section—Deputy Chief Engineer (Irrigation), Special Officer (Irrigation)

Roads and Buildings—Special Officer (Communications), Special Officer of Materials & Plant, Bridge Designing Officer, Government Architect & Town Planner

A personal Assistant to each of the Chief Engineers (Buildings and Roads) and Chief Engineer (Irrigation) of Executive Engineer's rank has also been sanctioned

The whole organisation of the Public Works Department and Irrigation Department is now under a non-technical Secretary to Government who is assisted by a Deputy Secretary (Non-technical), Under-Secretary (Technical) and Additional Under-Secretary (Non-technical) in his Secretariat work.

JUSTICE

The administration of justice is controlled by the High Court of Judicature at Patna In the administration of civil justice below the High Court are the District Judges as Courts of Appeal, the Subordinate Judges and the Munsiffs. The jurisdiction of a District Judge or Subordinate Judge extends to all original suits cognizable by the Civil Courts. It does not, however, include the powers of a Small Cause Court, unless these be specially conferred The ordinary jurisdiction of a Munsiff extends to all suits in which the amount or value of the subject matter in dispute does not exceed Rs. 1,000 though the limit may be extended to Rs 4,000. On the criminal side the Sessions Judge hears appeals from Magistrates exercising first class powers while the District Magistrate is the appellate authority for Magistrates exercising second and third class powers The District Magistrate can also be, though in point of fact he very rarely is, a court of first instance. It is usual in most districts for a Joint Magistrate or a Deputy Magistrate to receive complaints and police reports, more important or complicated cases being referred to the District Magistrate who is responsible for the peace of the district. In the Santal Parganas and in the Chota Nagpur Division the Deputy Commissioners and their subordinates hear rent suits In the Santal Parganas the Deputy Commissioner and his subordinates also exercise civil powers. During 1950, an experiment towards separation of executive and judiciary is being tried in the Patna, Gaya and Shahabad districts and a review of the experiment will be made at the end of the year with a view to extending the experiment to other districts also

LAND TENURE

The Bihar Abolition of Zamindaris Bill 1948 which was passed by both Houses of the Provincial Legislature subsequently received the assent of the Governor-General in 1949 and was published as an Act. It was however later on

decided to replace this Act by more comprehensive legislation embodying certain principles of land reform. This Act has accordingly been repealed and a new Bill called the Bihar Land Reforms Bill 1949 is now under the consideration of the State Legislature. This legislation not only lays down the procedure for abolition of zamindaris and assessment of compensation but also contains provisions for collection of rent and management of forests, waste lands, etc, through the agency of village panchayats, and the appointment of a Land Commission for advising Government on the land revenue policy The Bill when enacted will also enable Government to make payment of compensation to landlords in the shape of bonds. The whole of the land tenure system will be completely changed by this enactment The Bill seeks to provide for the transference to the crown of interests of proprietors and tenure holders in land including their interests in trees, forests, fisheries, 'Jalkars', ferries, 'hats' and 'Bazars' It is expected that the Bill will be passed by the Legislature and placed on the statute book in the near future.

Meanwhile with a view to establish direct relationship between the State and cultivators, another legislation called the Bihar State Management of Estates and Tenures Act 1949 has been enacted under which Government can take over the management of certain estates and tenures Under the provisions of this Act, 113 estates and tenures have been notified for being taken over under Government management

At present almost the whole of the State of Bihar is covered by the Permanent Settlement of 1793 A number of estates are held direct by Government, having come into the direct management of Government in various ways Other estates are managed temporarily by the Board of Revenue under the Court of Wards Act, while in Chota Nagpur a number of estates are managed by Managers appointed under the Chota Nagpur Encumbered Estates Act There are two Tenancy Acts in force in the State In Bihar the Bihar Tenancy Act is in force This is the same as the Bengal Tenancy Act, 1885, with a number of important differences consequent on recent amendments of the Act In Chota Nagpur, which is largely inhabitated by aboriginal peoples, the Chota Nagpur Tenancy Act, 1908, an Act specially adopted to their requirements, is in force It has also recently undergone several important amendments beneficial to the people of Chota Nagpur There is a third tenancy system in the Santal Parganas where the tenancy law is contained in Regulation III of 1872 and II of 1886 and the record of-rights prepared in the settlement Finally in a small part of South Bihar where there is a large aboriginal population a special chapter of the Bihar Tenancy Act designed to prevent alienation of land by aborigines is in force.

Throughout the State a system of periodic settlements is in vogue In these settlements the maps and cadastral ledgers are revised and fair rents settled In many districts the settlement records are now out of date and in one or two it is nearly 40 years since the last settlement was undertaken

In the greater part of the Santal Parganas and in many parts of Chota Nagpur the headmen system prevails. The usual practice is that the headmen are responsible for the collection of the rents and their payment to landlords after deduction of a percentage as their remuneration. Special steps have been taken in the settlements to record the rights and duties of the headmen, and the special rights and privileges of certain privileged classes of tenants among the aboriginals.

POLICE

The Departments of Police, Prisons and Registration are each under the general direction of Government, supervised and inspected by an Inspector-General with a staff of assistants. The Commissioner of Excise and Salt is also Inspector-General of Registration.

Under the Inspector-General of Police are seven Deputy Inspectors-General and 29 Superintendents There are also 15 Assistant Superintendents of Police and 50 Deputy Superintendents The force is divided into the District Police, the Railway Police and the Military Police. There is a college for the training of officers and two schools for the training of recruit constables Both the institutions have selected police officers on their staff. A Criminal Investigation Department has also been formed for the collection and distribution of information relating to professional criminals and criminal tribes whose operations extend beyond a single district and to control, advise, and assist in investigations of crime of this class and other serious action when its assistance may be invoked Under this department three Bureaus are working, *i e*, Finger Print Bureau, Photo Bureau and the Handwriting Bureau There are 7 battalions of Unmounted Military Police and seven troops of Mounted Military Police which are maintained as reserves to deal with serious and organised disturbances and perform no ordinary civil duties The battalions of Unmounted Military Police are under the charge of commandants and officers of S P 's rank.

EDUCATION

Government have launched a comprehensive programme for the expansion of Basic Education and have sanctioned expenditure of Rs 20 lakhs recurring and Rs 68 lakhs non-recurring on this item during the year 1949-50 and Rs 34 lakhs recurring and Rs 5 lakhs non-recurring in the year 1950-51 Government have also sanctioned an entirely new Social (Adult) Education scheme at a cost of Rs 10 lakhs during the current year, thus endeavouring to tackle the other no less important aspect of fundamental education Considerable progress has also been made in the provincialisation of Girls' middle and high schools in different parts of the State Government are subsidising all educational institutions from primary to secondary to enable them to pay their teachers the revised scales of salary The cost on this accounts in 1949-50 was of the order of 1 36 crores 19 lakhs have been sanctioned for improvement of building of primary and middle schools in the State

During the year 1949, 838 new primary schools were opened at Government cost in the backward districts of the State Besides this 135 new basic schools are also being opened 14 high schools in the backward districts of the State have been subsidised Opening of 13 post-basic High Schools has been sanctioned Science and Agriculture teaching has been started in 24 aided schools of the State

In the sphere of higher education, besides increasing the number of seats and introducing teaching of new subjects, Government have sanctioned substantial grants to several colleges and the University for starting science classes and opening new departments Government have accepted the policy of introducing Post Graduate teaching in the divisional headquarters with a view to ultimately have universities at those places The plan for a teaching University at Patna has made considerable headway and the Bill is likely to be introduced during the current session of the Legislative Assembly.

MEDICAL

The Medical Department is under the control of the Inspector-General of Civil Hospitals Under him there are 16 Civil Surgeons and one Senior Executive Medical officer of the rank of Civil Surgeon at Saharsa Sub-District who are responsible for the medical work of the districts at the headquarters of which they are stationed. Sixty-one hospitals and Dispensaries are maintained by Government in addition to 693 hospitals, and Dispensaries maintained by Local Bodies, Railways, private persons, etc About 55,00,000 patients including 1,15,000 in-patients are treated in all the dispensaries every year. The total expenditure on the dispensaries maintained by Government and Local Bodies including that of the private aided institutions amounts to about Rs. 47,13,000 a year.

There is a large mental hospital named Inter-Provincial Mental Hospital, formerly known as European Mental Hospital, for Europeans and Indians at Ranchi receiving patients from Assam, Bihar, W. Bengal, Madhya Pradesh, the Orissa, Punjab, Uttar Pradesh, and some parts of East and West Pakistan and another similar institution for Indians for the treatment of mental patients from Bihar, Orissa and W. and E Bengal A sanatorium has been established at Itki in the district of Ranchi for the treatment of tuberculosis The question of the transfer of patients belonging to Pakistan undergoing treatment at the Inter-Provincial Mental Hospital is under the consideration of the Government of India There is a Medical College at Patna with a large and well equipped hospital attached to it including an institute for Radium treatment There is a Medical College at Darbhanga which also has a large hospital attached to it Centres for anti-rabic treatment have been opened at Patna and other suitable places in the State Admission to the Medical School at Darbhanga has been stopped since 1946 and a new Medical College for M B., B S, students has been started at Darbhanga from 1946 onwards

The State has a laboratory for the preparation of cholera-phage and bacterio-phage which are supplied to other State Governments for use in the prevention of epidemics

PUBLIC HEALTH

The Public Health Department aims at the promotion of the well being and the health of the people by the prevention of epidemic diseases, improvement in sanitation, and nutritional state of the people All factors that have bearing on health come within the purview of this department The department is under the control of the Director of Public Health, Bihar. For purposes of efficient public health administration the State has been divided into three circles, known as North Bihar, South Bihar and Chota Nagpur Circle with their headquarters at Muzaffarpur, Patna and Ranchi The Assistant Directors of Public Health act as reporting and inspecting officers of Government on matters pertaining to the health and sanitation of their respective circles They also inspect and supervise the working of the public health administration under the local bodies

There are sixteen districts in the State, each one of them is provided with a Health Officer, who is in direct charge of the Health Administration of the district Local bodies are responsible for health administration in their own areas Out of fifty-four Municipalities, eight are provided with Health Officers

A senior officer of this department known as Senior Executive Medical Officer is placed in charge of the flood affected areas of the Kosi where a special scheme of medical and Public Health relief has been introduced

The other public health services, maintained by the department are the offices of the Chemical Analyst, Nutrition Department, Bacterio-phage and that of Excise Chemist, which are all located in the Public Health Laboratory

All supplies of vaccine lymph are manufactured at the Vaccine Institute, Namkum The department hitherto maintained two depots, main one at Patna and the sub-depot at Ranchi where anti-malarial drugs, vaccines, disinfectants and equipment were stocked for supply to local bodies in the State Government now have abolished the sub-depot at Ranchi with effect from March 1, 1950 The department takes special measures for control of epidemics and malaria and kala-azar

For the medical inspection of schools, four School Medical Officers, one in charge of each of the four divisions of the State are maintained. A lady school Medical Officer for the inspection of girls schools is also employed.

The Department carry out Public Health Propaganda by means of leaflets, pamphlets, posters, health exhibitions, slides and films

The budget of the Public Health Department is about Rs 40 lakhs every year

FINANCE

The total revenue of the State is Rs. 27·42 crores (Revised 1949-50) and Rs 25 90 crores (Budget 1950-51) and the total expenditure on the revenue account is Rs 26 53 crores (Revised 1949-50) and Rs. 26 27 crores (Budget 1950-51).

I. The main heads of revenue are as follows —

		(Revised 1949-50) (In thousands of rupees)
(i)	Taxes on Income other than Corporation ..	6,12,25
(ii)	Land Revenue . ..	1,37,64
(iii)	Provincial Excise .. .	4,90,00
(iv)	Stamps .. .	2,41,51
(v)	Other Taxes and Duties	4,40,99
(vi)	Extraordinary Receipts	3,59,04

II. The main heads of expenditure on beneficial Departments —

		(Revised 1949-50) (In thousands of rupees)
(i)	Education ..	3,66,45
(ii)	Medical .. .	84,36
(iii)	Public Health .	88,86
(iv)	Agriculture .. .	1,24,10
(v)	Veterinary .	15,64
(vi)	Co-operative .	15,26
(vii)	Industries .	34,60

1950-51 Budget

Revenue	25 9	crores
Expenditure	26	,,
Net Deficit	3 10	,,

One measure which the budget contains is a tax on passengers and goods carried by taxi-cabs, public buses and public carriers in the shape of a small surcharge of two annas per rupee on the actual fare and freight The major part of the Rs 80 lakhs which the tax is estimated to yield is to be distributed among local bodies to improve their financial condition

ADMINISTRATION

GOVERNOR

His Excellency Sri Madhao Shrihari Aney.

PERSONAL STAFF.

Secretary to Governor, P N Majumdar

Military Secretary to Governor, Major R D. Chandavarkar

Aide-de-Camp, Captain N G Kulkarni

Honorary A D. Cs, Risaldar Major and Hony Capt. Abdul Latif, Khan Bahadur, O.B.I., I.D.S.M., late 2nd Royal Lancers (Gardener's Horse).

CABINET MINISTERS.

Chief Minister, Home Affairs, The Hon'ble Dr. Sri Krishna Sinha.

Minister of Finance, Labour and Supply and Price Control, The Hon'ble Dr Anugrah Narayan Sinha

Minister for Development and Transport, The Hon'ble Dr Saiyid Mahmud

Minister for Public Health and Harijan Welfare, The Hon'ble Mr. Jagjal Chaudhury.

Minister for Irrigation, Public Health (Engineering), Electrification and Legislative, The Hon'ble Mr. Ramcharitar Singh.

Minister of Education and Information, The Hon'ble Mr Badri Nath Verma.

Minister for Revenue, Forest, Excise, and Welfare, The Hon'ble Mr. Krishna Ballabh Sahay.

Minister of L S. G and Medical, The Hon'ble Mr Binodanand Jha.

Minister for P W D. (Roads and Buildings), Cottage Industries and Rehabilitation, The Hon'ble Mr. Abdul Qaiyum Ansari.

SECRETARIAT.

Chief Secretary to Government, Political and Appointment Departments, L. P Singh, I.C.S.

Secretary to Government, Finance Department, B. D. Pande, I.C.S.

Secretary to Government, Supply & Price Control Dept, S. K. Aikat

Secy. to Govt, Rev, Dept. Sarat Chander Mukherji

Secretary to Government, Judicial Department, T. G N. Ayyar, I.C S

Secretary to Govt P W D., S. V. Sohoni, I C.S.

Secretary to Government, Labour Department, R S Pande

Secretary to Government, Education Department, J C. Mathur, I C S.

Secretary to Government, Local Self-Government Department, Mangalanand Pandey.

Secretary to Government, Legislative Department, Khalilur Rahman.

Secy to Govt, Development Dept, Qamrul Huda.

Secy to Govt., Welfare Dept, Pushkar Thakur.

Secy to Govt, Relief & Rehabilitation Dept, S N Roy.

Administrative Re-organisation Officer, N Baksi, I C S

Member, Board of Revenue, M M Philip, I C S

Food Production and Development Commissioner, C K Raman, I C S

PUBLIC SERVICE COMMISSION (FOR BIHAR)

Chairman, Rajandhari Singh, C.I E.

Members, Bihundeo Narayan Singh, Anant Narayan Prasad

Secretary, R K. Chaudhuri.

GOVERNORS OF BIHAR

Lord Sinha of Raipur, P C., K.C. ..	1920
Sir Henry Wheeler, K C.S.I., K C.I.E., I.C.S.	1921
Sir Hugh Lansdown Stephenson, K.C S.I., K C.I.E	1927
Sir James David Sifton, K C.S.I., K.C.I.E., I.C.S	1932
Sir Maurice Garnier Hallett, G C I E, K C S I, I C S	1937
Sir Thomas Alexander Stewart, K C I E, K C S I, I C S	1939
Sir Thomas George Rutherford, K C S I, K C I E, I C S.	1943
Sir Robert Francis Mudie, K C I E, C S I, C I E, O B E, I C S	1943
Sir Thomas George Rutherford, K C S I, K C I E, I C S.	1944
Sir Hugh Dow, K C S I, C.I.E., I C S. ..	1946
Sri Jairamdas Daulatram .. .	1947
Sri M S Aney	1948

BIHAR LEGISLATIVE COUNCIL

Chairman —The Hon'ble Shyama Prasad Sinha

Deputy Chairman .—Shah Md Ozair Munemi.

Secretary :—Raghu Nath Prashad, M A., B.L.

Deputy Secretary .—Chand Lall, B A (Cal), B.A. Hons (Lond.), Dip -in-Edn. (Lond.), Bar-at-Law

Assistant Secretary :—Bisheswar Prasad.

Budhan Rai Verma (*North Patna Division General*), Sooraj Narain Sinha (*Gaya General*), Jayadeva Narain Sinha (*Saran cum Champaran General*); Maheshwar Prasad Narayan Singh (*Muzaffarpur General*), Ganga Nand Singh (*Darbhanga General*); Ramjiwan Himat Singka (*Monghyr cum Santal Parganas General*), Raghubans Pd. Singh (*Bhagalpur cum Purnea General*); Satis Chandra Sinha (*Hazaribagh cum Manbhum General*); Nalini Kumar Sen (*Ranchi and Palamau cum Singhbhum General*), Muhammad Mahmood (*Patna cum Shahabad Muhammadan*); Saiyid Muhammadad Mehdi (*Gaya cum Chota Nagpur Division Muhammadan*); Saiyid Mobarak Ali (*Tirhut Division Muhammadan*); M. Nurullah (*Bhagalpur Division Muhammadan*); Rai Brijraj Krishna (*Elected by the Bihar Legislative Assembly*); The Hon'ble Shyama Prasad Sinha (*Elected by the Bihar Legislative Assembly*), Gajendra Narain Singh (*Elected by the Bihar Legislative Assembly*); Puneydeo Sharma (*Elected by the Bihar Legislative Assembly*); Shah Muhammad Umair (*Elected by the Bihar Legislative Assembly*); Radha Govind Prashad (*Elected by the Bihar Legislative Assembly*); Devendra Nath Samanta (*Elected by the Bihar Legislative Assembly*); Boniface Lakra (*Elected by the Bihar Legislative Assembly*), Shah Muhammad Ozair Munemi (*Elected by the Bihar Legislative Assembly*) Abdul Malik (*Elected by the Legislative Assembly*); H. B. Chandra (*Elected by the Legislative Assembly*), Srimati Saraswati Devi (*Elected by the Legislative Assembly*); Shrimati Sushila Samanta (*Nominated*), Mrs Nayama Khatoon Haider (*Nominated*); Chandrika Ram (*Nominated*), Jaideva Prasad (*Nominated*).

BIHAR LEGISLATIVE ASSEMBLY

Speaker —The Hon'ble Shri Vindhyeshwari Prasad Varma, B.A, B L.

Deputy Speaker —Deva Saran Singh.

Secretary —Raghu Nath Prashad, M.A., B.L.

Asstt. Secretary —Bisheswar Prasad.

Sarangdhar Sinha (*Patna City General Urban*); Jagat Narain Lal (*Patna Division General Urban*), Murli Manohar Prasad (*Tirhut Division General Urban*), Gauri Shankar Dalmia (*Bhagalpur Division General Urban*), Amiyo Kumar Ghosh (*Chota Nagpur Division General Urban*), Deva Saran Singh (*Central Patna General Rural*), Lalit Mohan Singh (*Dinapur General Rural*); Jagadish Narain Sinha (*Bihar General Rural*); Shyam Narain Singh (*East Bihar General Rural*), Mahabir Prasad (*East Bihar General Rural, Reserved*), Birendra Bahadur Sinha (*South Gaya General Rural*), Sakti Kumar (*South Gaya General Rural Reserved*), The Hon'ble Dr Anugrah Narayan Sinha (*Aurangabad General Rural*), Jamuna Prashad Singh (*Nawada General Rural*), Chetu Ram (*Nawada General Rural, Reserved*), Mosaheb Sinha (*North Gaya General Rural*), Hargobind Misra (*Buxar General Rural*), Guptanath Singh (*Bhabhua General Rural*), Sardar Harihar Singh (*North-East Shahabad General Rural*), Deo Narayan Singh (*East Central Shahabad General Rural*); The Hon'ble Shri Jagjal Chowdhury (*East Central Shahabad General Rural, Reserved*), Jagannath Singh (*Sasaram General Rural*), Pandit Girish Tewari (*West Saran Sadr General Rural*), Ram Binod Sinha (*Saran Sadr General Rural*); Jhulan Sinha (*North-East Siwan General Rural*); Shaker Nath (*South-West Siwan General Rural*); Prabhunath Sinha (*East Gopalganj cum Mashrak and Marhowrah General Rural*); Nand Kishore Narain Lal (*West Gopalganj General Rural*); Ram Basawan Ram (*West Gopalganj General Rural, Reserved*); Ganesh Prasad Sah (*North-West Champaran Sadr. BOMBAY STATE

BOMBAY State stretches along the west coast of India, from Gujarat in the north to Kanara in the south It has an area of 108,142 square miles and a population of 29 506, 078. These figures are inclusive of the area and population of the former Deccan States, the Gujarat States and Kolhapur and Baroda which have all merged with Bombay State.

The State embraces a wide diversity of soil, climate and people. In the State there are the rich plains of Gujarat, watered by the Narbada and the Tapti, whose fertility is so marked that it has long been known as the Garden of India. South of Bombay City the State is divided into two sections by the Western Ghats, a range of hills running parallel to the coast Beyond the Ghats are the Deccan Districts; south of these come the Karnatak districts. On the sea side of the Ghats is the Konkan, a rice growing tract, intercepted by creeks which make communication difficult.

The rainfall of the State is derived chiefly from the south west monsoon between June and October. The amount of rainfall varies widely in different areas from 30" to about 150"

THE PEOPLE

The population varies as markedly as soil and climate The people of Gujarat although softened by prosperity, are among the keenest trading races in the world The Deccan peasant has been seasoned by adversity, the saying goes that the Deccan expects a famine one year in every three, and gets it The population of the Deccan is much more homogeneous than that of Gujarat thirty per cent being Mahrattas The Karnatak is the land of the Lingayets, a Hindu reforming sect of the twelfth century, and in the Konkan there is a large proportion of Christians Three main languages are spoken Gujarati, Mahrathi and Kannada with Hindi a rough *lingua franca*. Hindi in the Devanagari script is recognized by the Government as one of the regional languages of the State

The following figures give the distribution of population according to communities (These figures are not inclusive of the former States which have merged with Bombay State)·

Scheduled Castes	1,855,148
Other Hindus	14,700,242
Sikhs	8,011
Jains	266,231
Buddhists	1,433
Muslims	1,920,368
Christians	375,486
Zoroastrians	86,270
Jews	14,471
Tribals	1,614,298
Others	7,882

AGRICULTURE

The principal occupation is agriculture, which supports sixty-four per cent. of the population In Gujarat the soils are of two classes, the black cotton soil, which yields the famous Broach cottons, the finest in India, and alluvial, which under careful cultivation in Ahmedabad and Kaira makes, splendid garden land. The dominant soil characteristic of the Deccan is black soil, which produces cotton, wheat, gram and millet, and in certain tracts rich crops of sugar-cane. The Konkan is a rice land, where the crop is grown under the abundant rains of the submontane regions, and in the south the Dharwar cotton vies with Broach as the best in India. There are no great perennial rivers suitable for irrigation, and the harvest is largely dependent upon the seasonal rainfall, supplemented by well irrigation. A chain of irrigation works, consisting of canals fed from great reservoirs in the region of unfailing rainfall in the Ghats, is gradually nearing completion, and this will ultimately make the Deccan immune to serious drought.

More than any other part of India Bombay State is scourged by famine. The evils have not been unmixed, for tribulation has made the people more self reliant, and the rise in the values of all produce, synchronising with a certain development of industry, has induced a considerable rise in the standard of living. The land is held on what is known as the ryotwari tenure, that is to say, each cultivator holds his land direct from the Government under a moderate assessment, and as long as he pays this assessment he cannot be dispossessed

The area actually under cultivation is about 30 million acres of which 1 million acres bear more than one crop

Details of the acreage under different crops for the total cropped area for 1947-48 are as shown below —

Food Crops.	*Acreage* (Figures in thousands)
Jowari	8,533
Bajri	4,263
Rice	2,031
Wheat	1,581
Gram	1,050
Ragi	434
Maize	201
Other food-grains including pulses	3,095
Fruits and vegetables	238
Sugar-cane and other sugars	165
Miscellaneous	not available

Non-Food Crops.	*Acreage* (Figures in thousands)
Cotton	393
Groundnut	1,705
Condiments and Spices	272
Tobacco	148
Sesame	148
Linseed	66
Cocoanut	not available
Castor seed	51
Rape and Mustard	not available
Other oilseeds	593
Fibres other than cotton	1,478
Drugs and Narcotics, other than tobacco	27
Miscellaneous (including food crops)	2,703
Fodder	not available

FISHING

Fishing in the Bombay State is almost entirely confined to an area in the immediate proximity to the coastline. This is due to the frail, dockless fishing craft and the small-sized fishing gear used The coastline is mostly frequented by small varieties of fishes and those in immature stage of development.

Pomfrets, mackerel and Bombay ducks provide the greatest and most remunerative turnover to the fishermen of this State.

(For more details see under 'Fisheries').

LIVESTOCK

Information as available with regard to the number and classification of livestock in Bombay State for 1947-48 is as under .—

Bulls and Bullocks	3,385,225
Cows	2,249,405
Calves (young stock)	2,057,191
Male buffaloes	245,229
Cow buffaloes	1,378,931
Buffalo calves (young stock)	957,041
Sheep	1,950,735
Goats	2,645,129
Horses and Ponies	not available
Mules, Donkeys, Camels, etc.	do

Per head of bulls and bullocks in the State there are 8 6 acres of net cultivated land and per head of cow buffaloes and cows in the State there are 5 4 persons

The main burden of milk supplies falls on the buffalo

Bombay is now an important forest State being next only to Madhya Pradesh and Madras. The total area under forest is 12,870 sq miles or about 8 3 million acres

INDUSTRY

The State of Bombay is not only the leading State in commerce and trade but is industrially perhaps the most advanced State in India Bombay State claims 16 per cent of the total factories in the Indian Union, the premier position being held by cotton textiles. This industry accounts for 48 per cent of the total number of textile establishments in the country Then comes aluminium, brass and copper industry with 37 9 per cent of the total factories in the Union located in the State. This is closely followed by paper and paperboard industry with nearly 29 1 per cent of factories, chemicals with 26 17 per cent, biscuit making 25 per cent, vegetable oils and paints 23 1 per cent each and general engineering and electrical engineering with 22 per cent of total factories in the Union

It is one of the most important textile centres of the world and in India the most important textile centre Out of the 416 textile mills in India, 209 mills are located in Bombay

Large scale industry is concentrated in large cities such as Bombay, Ahmedabad, Sholapur, Poona and Satara Several important industries are carried on, on a cottage scale, all over the State Chief among them are (1) Cotton, silk and woollen and handloom industry, (2) Industries connected with processing of hides and skins and manufacture of leather goods, (3) Industry connected with brass and copper and other metal ware, (4) Bamboo rope and cordage, and (5) Artistic Products, etc

The total number of factories under Section 2 (*f*) and 2 (*m*) (*ii*) of the Factories Act, 1948, is 7,600 approximately.

The major items are textiles, soap, toilet and dress, wood, building, ceramics, metals, chemical products, food industries, hides and skins, furniture industries, edible oils, glass and glassware, leather goods, heavy and light engineering, industries connected with building materials, production and transmission of mechanical force, and construction of means of transport

The State is also richly supplied with resources of hydro-electric power. Though not all of these are developed there is still considerable production of electric energy in the State.

Besides electricity, gas, steam and oil are also used for power purposes. The use of gas is

confined to Bombay City In the mofussil, oil and steam engines play an important part.

With the exception of building stones, salt, china clay and manganese ore, this State does not possess any minerals of commercial importance There are three mines of bauxite which is important in the manufacture of aluminium

The major port is Bombay; other ports of major and minor importance are Marmugoa (Portuguese territory), Broach, Surat, Bulsar on the Gujarat coast and Ratnagiri, Dabhol, Malwan, Vengurla and Honavar on the Konkan coast.

The following form the important items of export through and import to, the Bombay port —

Export.

Cotton
Hides and Skins.
Twist and Yarn
Oils, seeds
Myrabolums.

Import.

Chemicals and Chemical preparations
Drugs and Medicines
Aniline
Glass and Glassware
Instruments—Apparatus, etc
Spirits
Iron and Steel (including ore).
Kerosene
Cotton raw
Motor Cars, motor cycles and motor wagons
Hardware
Machinery

The total mileage of railway in the State is 2,519 miles, which is a little less than 6 per cent of the total mileage in India. The railway lines are the G I P, B B & C I. and M. & S M.

All over the State motor transport has made very rapid progress According to a Bulletin issued by the Indian Roads and Transport Development Association, the total number of motor vehicles in operation in the State in 1948 March was over 38 800 which included 19,246 private cars, 1,626 taxies, 243 diesel engined and 2,975 petrol run buses, 11,338 lorries and 3.408 motor cycles

TEXTILE INDUSTRY

The size and extent of the industry is indicated by the figures for 1949 given in the following table :—

	No of Mills	No of spindles installed	No of looms installed	Average No of hands employed (one shift)	Approx quantity of cotton consumed (Cwts)	Approx yarn production (million lbs)	Approx. cloth production (Million yards)
Bombay State including merged former Indian States	209	6,083,416	134,321	64,581	2,311,526	658 4	2433 7
Rest of India .. .	207	4,450,383	63,486	398,494	2,013,912	700 7	1470 5
Total for India .	416	10,533,799	197,807	463,075	4,325,438	1359 1	3904 2

HANDLOOMS

The most important of all cottage industries in the State are the handloom and powerloom weaving industries Out of the 2 million handlooms in the whole of India Bombay State has 94,690 handlooms employing about 420,000 members of the weaving community Out of a total production of about 1,500 million yards in the whole of India the production for Bombay is about 134 million yards

Handlooms in the Bombay State consume about 43 million lbs of mill yarn and 3 06 million lbs of handspun yarn

In addition to the above number of handlooms, there are about 14,000 powerlooms working in cottage and small factories

There are 34 artificial silk mills in the State using silk and artificial silk for the manufacture of cloth The quantity of artificial silk required for handlooms and powerlooms is about 600,000 lbs per month

The number of woollen mills, production etc in the State and in India according to the latest available figures are given in the following table —

	No of Mills	No of spindles	No of looms in Mills	No of handlooms	No of Powerlooms	Production of yarn (lbs)	Production of cloth (lbs)
Bombay State .	5	28,124	440	5,600	440	2,574,144	4,707,499
Rest of India	15	59,376	2,362	99,202	1,860	—	—

The woollen mills in Bombay State generally produce woollen and worsted piece goods, woollen and worsted yarn, knitting yarn and hosiery. The handlooms in the State generally produce coarse blankets (Kamblies) of 50"×108" to the extent of 2 6 million yards valued at Rs. 30.2 lakhs

MACHINES

The total number of manufacturers of upgraded machines in pre-partitioned India was 22 in 1947 Out of this five firms were from Bombay whose combined production capacity was 873 graded machine tools per annum against the then total indigenous capacity of 7,903 per year

In 1946-47 the indigenous dry battery industry produced approximately 88 millions cells against a total annual capacity of 132 million cells Out of the three factories representing this industry, one was from Bombay City having a capacity of 30 million cells per annum and its output during the year 1946-47 was 16 2 million cells.

Towards the beginning of 1950 a new factory for the manufacture of dry cells and layer built batteries was set up in Bombay. The machinery and equipment installed in it has a production capacity of 1,00,000 cells per day. The factory was expected to commence production by June 1950.

CHEMICAL INDUSTRIES

The Chemical Industries are fairly well developed in this State, there being a variety in production from commercial chemicals to fine chemicals. In fact so far as commercial chemicals are concerned Bombay State is perhaps the only State engaged in their manufacture This is so possibly because the consuming industries mainly the Textile Industry which requires a variety of chemicals for dyeing, bleaching and printing is located in this State.

Bombay has an up-to-date plant for producing sulphuric acid, a heavy chemical most essential for the manufacture of various other commercial chemicals The production is of the order of ten to twelve thousand tons per year

Bombay and Ahmedabad being the main industrial centres for the textile industry a number of chemical concerns are concentrated at these places. In other places too the industry has been developed on a modern scale mainly for supplying the local requirements.

Fine Chemicals such as are required in industries are made only on a moderate scale mainly at Bombay, Baroda and Barajadi near Ahmedabad

Manufacture of salt from sea water by solar evaporation is another industry which exists at a number of centres in this State

Industries depending upon the use of salt such as caustic soda, chlorine, soda ash, etc , have also been established

The glass industry has made considerable progress in this State during the last five or six years. Most of the requirements of other industries for glass containers have been met from local sources. In fact during the war some of the factories were engaged in supplying the requirements of the Defence Department, Railways, etc They have supplied glass bottles in thousands to the pharmaceutical industry which is localized to a significant degree in Bombay State

The production capacity of the hollow-ware is very large and the State may be in a position to export bottles, and other hollow-ware.

There are a few firms of repute which have been manufacturing toilet and washing soaps the quality of which compares well with soap of foreign origin

From the inedible oils paints have been manufactured in large quantities in the Bombay factories The Industry has grown quickly during war-time and has supplied the requirements of P W D and the Railways Good quality varnishes have also been manufactured in fairly large quantities by utilising mainly the linseed oil available in the State.

During war-time owing to the shortage of supply of pharmaceutical preparations a number of concerns undertook to produce a variety of medical preparations including vaccines, sulpha drugs, liver extracts, injections, etc.

It may also be mentioned that an ammunition factory engaged in the manufacture of war chemicals is located in this State

There are 11 large bakeries in this State registered under Section 2(*m*) (i) and Section 2 (*m*) (ii) of Indian Factories Act, 1948, and between 60 and 65 bakeries of small capacity scattered all over the State

As a result of the partition and the influx of displaced persons, a number of co-operative societies as well as production centres for displaced persons have come into being This has

also helped to increase the total output of the footware industry from one million pairs to 1·5 million pairs of western style and 5 million pairs to 7 5 million pairs of indigenous type in 1949. Efforts are made for self-sufficiency through co-operatives and cottage industries.

The number of registered biscuit factories in the State is 9 with a total output of 1,400 tons per annum.

There are 3 well established concerns with up-to-date machinery and efficient methods of production for the manufacture of sugar confectionery.

Bombay is a surplus State in respect of 'Vanaspati' production There are 12 factories manufacturing 'Vanaspati'—8 in Bombay, 2 in Baroda, 1 in Pachora (E K), 1 in Amalner (E K.). The total output was 68,125 tons in 1949 This is a very important industry in the State and caters to all India and foreign demands.

The number of sugar factories in the Bombay State is 14— 6 in Ahmednagar, 2 in Sholapur, one in Poona, one in Satara, one in Nasik, one in Kolhapur, and 2 in Belgaum

The daily crushing capacity of each of these factories varies from 250 tons to 1,000 tons The total daily capacity of these factories is 8,450 tons The annual output for the year 1949 was 29,000 tons approximately

There are 9 paper mills operating in the State, and 5 mills manufacturing boards The total output of paper and boards was 7,633 tons in 1947

There are 10 match factories in the State with a total production in gross boxes of 4,517,650 in 1949

TANNING AND LEATHER

There are 26 licensed tanneries in the City of Bombay mostly located at Dharavi and about 30 large-scale tanneries in the mofussil areas The production is mostly half-tanned leather from goat and sheep skins and cow hides Except 8 large tanneries where the chrome tanning process is used, the other tanneries adopt the vegetable tanning method The items of manufacture are box and willow sides, picking bands, belting, laces (chrome as well as bark-tanned), case hides, etc Two or three tanneries have been slowly taking up the production of roller-skins used in textile mills The rest are mostly producing half-tanned leather, either for export or local consumption, from goat and sheep skins and cow hides.

The tanning and leather working industries are mostly carried on a cottage scale in the State and production of hides is not sufficient to meet the demands of the tanners and cottage workers Therefore, hides have to be imported from other States.

The quality of hides and skins tanned by village tanners is fast improving A good number of Co-operative Tanners' Societies, organised and managed by village tanners have been started and the number is slowly increasing This will ultimately increase the production and improve the quality of leather produced The important tanning centres in this State are Bombay City, Ahmedabad, Godhra, Sholapur, Ahmednagar and Hubli

The following types of leather goods are manufactured —Footwear, Travelling requisites and fancy leather goods; Leather goods requirements for Services, *viz*, Posts, Police, Railway and Defence, and Industrial leather goods for textile mills There are no large-scale factories for the manufacture of footwear and other goods but the industry is carried on everywhere in the State on a cottage scale There are also about 32 factories in the cities of Bombay and Ahmedabad manufacturing industrial leather goods such as pickers for textile and jute mills and buffers, leather belting, picking bands, washers, leather gloves for industrial purposes and various other mill and gin store items

COTTAGE INDUSTRIES

A new post called Joint Registrar of Industrial Co-operatives and Village Industries has been created to deal with the whole subject of cottage industries

The important cottage industries which are carried on in practically every District of the State are, cotton textiles, tanning and leather work, mechanical and metal, carpentry, woodwork, bamboo and cane work, vegetable oils and pottery etc.

The production of cocoons have been started on a cottage scale in the Belgaum-Dharwar area and a filature unit is being established There is scope for the expansion of silk industry in the near future.

Twenty-three cotton weaving peripatetic schools are maintained by the Department for the development of the handloom industry

Five institutions *viz* one wool weaving institute and 6 wool weaving schools are maintained for the development of the cottage wool industry Four of these are of a peripatetic nature

At the end of June 1949, there were 268 weavers' societies including societies of wool weavers with a membership of 42,691 The working capital of these societies amounted to a little over Rs 82¼ lakhs The total number of handlooms in the State is reported to be 1,61,255

Seven peripatetic dyeing and printing schools are conducted by the Department to impart training in methods of dyeing and printing of yarn, silk and cloth

A proposal for the establishment of a dyeing and printing laboratory at Poona has recently been sanctioned by Government

The number of co-operative societies so far organised for dyeing and printing is 5 Several weavers' societies and district industrial co-operative associations have also established their own dye houses

Next in importance to weaving industry is the tanning and leather working industry in this State.

14 tanning peripatetic schools and 7 leather working peripatetic schools are maintained by the Department

The number of tanners and leather workers' societies at the end of the 1949 was 105 Their membership was 2,862 and their working capital Rs 7,64,113

A training class in improved ghani covering a period one month is conducted at the Village Industries Experimental Workshop in Poona

The number of oilmen's societies was 26 at the end of 1949 The number of members of these societies was 1,261 and their working capital was Rs 2,68,410 The societies supplied their members with oil seeds valued at over Rs 6 lakhs during the year and assisted them in the sale of oil The value of oil sold by the societies during the year was a little over Rs 4¼ lakhs

As a result of research, an improved type of ghani called Nutan ghani has been designed The cost of this ghani is only 2/3rds of that of the Haskell ghani while its performance is nearly as good

The coir industry is carried on an unorganised basis in the Konkan As a very small percentage of coconut husk is being utilised, there is considerable scope for the expansion of the industry.

Efforts are being made to organise workers in cottage industries such as bee-keeping, cane and bamboo work, carpentry and smithy, metal work, pottery, sandalwood carving, etc on co-operative lines. The total number of industrial co-operatives other than weavers' societies at the end of 1949 was 375 with a total membership of 28,425 The working capital of these societies was about Rs 48 lakhs and their turnover during 1949 over a crore of rupees.

Industrial primaries have affiliated themselves with district industrial associations which supply them with raw materials, tools, etc and which help them in the marketing of their finished products. District Industrial Co-operative Associations in their turn joined the Provincial Industrial Co-operative Association which is the apex organisation of industrial co-operatives in the State

At the end of 1949 there were 29 forest labourers' societies with a total membership of 2,421 Thirty forest coupes were allotted to these societies, the upset price of the coupes being Rs 3,82,100 The labour and transport charges paid by the societies during 1949 were Rs 2,95,869 and Rs 2,46,641 respectively Most of these societies have Adibasis as their members The societies are sponsored by social service organisations in the State

Government has sanctioned the organisations of 23 production centres other than rehabilitation production centres with a view to giving employment to persons in rural areas

Government of Bombay has appointed a Village Industries Committee a non-official body which prepares and executes schemes pertaining to cottage industries in the State The schemes prepared and executed by the Committee aim at making the village people self-sufficient in regard to their needs for food and clothing The food schemes include bee-keeping, palm gur making, oil pressing, manufacture of salt etc, while the schemes for clothing consist of khandi self-sufficiency work, carding, spinning and weaving of wool, etc

ADMINISTRATION

The State is divided into three Divisions (each comprising a group of Districts), *viz*, the Northern, Central and the Southern each in charge of a Commissioner The way the Districts are grouped into Divisions is shown below

Northern Division —Ahmedabad; Kaira; Punch Mahals, Broach, Surat, Thana; Bombay Suburban District; Banas Kantha, Sabar Kantha, Dangs, Baroda, Mehsana; Amreli

Central Division —East Khandesh; West Khandesh; Nasik; Ahmednagar, Poona, Satara North, Sholapur, Kolaba

Southern Division :—Belgaum, Bijapur; Dharwar, Kanara, Ratnagiri, Kolhapur, Satara South.

With the introduction of the new constitution, the administration of the State is governed by Articles in Part VI of the constitution There is now a Governor and a cabinet of eleven Ministers to aid and advise him in all matters. The executive power of the State extends to all matters on which it may legislate.

In the legislative sphere Bombay has a bicameral legislature One house is known as the Bombay Legislative Assembly and the other as the Bombay Legislative Council The Council is a permanent body. About one-third of the members retire every second year

The senior of the Civilian Secretaries is entitled Chief Secretary.

The headquarters of the Government are at Bombay. However, the Ministers with a skeleton staff move to Poona for the Poona session of the Legislature The Secretariat always remains in Bombay

Each District is under a Collector who has under him one or more Assistant Collectors, and or Deputy Collectors A collectorate contains on an average from ten to twelve talukas, each consisting of from one to two hundred villages whose revenue belongs to the State The village officers are the patil, who is the head of the village; the talati or kulkarni, clerk and accountant, the messenger and the watchman. Over each taluka or group of villages is the mamlatdar, who is also a subordinate magistrate. The charge for

the Assistant or Deputy Collector contains three or four talukas. The Collector and Magistrate has jurisdiction over the whole District.

JUSTICE

The administration of justice is entrusted to the High Court sitting in Bombay, and comprising a Chief Justice, who is a barrister, and puisne judges, either Civilians, Barristers, or lawyers. Of the lower civil courts, the court of the first instance is that of the Civil Judge recruited from the ranks of local lawyers The Court of first appeal is that of the District or Assistant Judge, or of a civil judge (Senior Division) with special powers. District and Assistant Judges are Indian Civilians or members of the State Service or the Bar In cases exceeding Rs 5,000 in value an appeal from the decision of the Civil or Assistant Judge and from the decision of the District Judge in all original suits lies to the High Court. District and Assistant Judges exercise criminal jurisdiction throughout the State but original criminal work is chiefly disposed of by the Executive District Officers and Resident and City Magistrates Capital sentences are subject to confirmation by the High Court.

In some of the principal cities a group of 22 Special Magistrates exercise summary jurisdiction (Bombay has 23 Presidency Magistrates) and a Court of Small Causes.

In the Greater Bombay area two new courts have been established from 16th August 1948, *viz.* the Bombay City Civil Court and the Sessions Court for Greater Bombay The City Civil Court tries civil suits from the Greater Bombay area of value not exceeding Rs 10,000 while the Sessions Court for Greater Bombay area cases arising from that area which were formerly tried by the High Court Appeals from the decisions of those courts lie to the Bombay High Court.

LOCAL SELF-GOVERNMENT

Local control over certain branches of the administration is secured by the constitution of local boards and municipalities, the former exercising authority over a district and the latter over a city or town. These bodies are composed of members elected by the people, who are empowered to expend the funds at their disposal on education, sanitation, the construction of roads and tanks, and general improvement Their funds are derived from cesses on the land revenue, the toll, ferry funds, local taxes and Government grants Larger and larger grants are made from the general revenues for water-supply and drainage

The Bombay Municipal Boroughs Act of 1925 made a great advance in the matter of local Self-Government in the State. The larger municipalities are now styled as Municipal Boroughs The executives of these Borough Municipalities are invested with larger powers than before. Another important change introduced by the Act was the extension of municipal franchise to occupiers of dwellings or buildings with an annual rental values of Rs 12 or with capital value of not less than Rs. 200.

Mention must be made here of the amendment of the Bombay Village Panchayat Act, 1933 by which each village panchayat is now entitled to a grant equal to 15 per cent of the land revenue, or 25 per cent. of the local Fund cess whichever is greater provided the panchayat levies one or other of a list of special taxes. The power of the Nyaya Panchayats which dispense justice to villages have also recently been widened It is hoped that in the next few years 5,000 self-sufficient and self-reliant village panchayats would come into being to play their proper role in the life of the nation.

A shift in the control of primary education which vitally affected the powers of local authority has also to be noted. This came about through some of the provisions of the Primary Education Act which was passed by the Assembly at its Poona session in 1947. The new legislation divests district local boards of responsibility for administering primary education in the rural areas because competent authorities hold these local bodies to be incapable of bearing the financial burden and would in any case be inefficient in the administration of education. Although there was a strong case for Government taking complete control of primary education a compromise was agreed to by which local bodies were asked to elect school boards the chairman of which would be associated with the administration of primary education.

Legislation to establish Municipal Corporations in the more important cities of the State was passed by the Legislature at its session held in September-October 1949 in Poona The Poona City Municipality and the Poona Suburban Municipality have been amalgamated into a Municipal Corporation for the City of Poona from 15th February 1950 A corporation for the City of Ahmedabad will also be established in due course

Legislation to extend the limits of the Bombay Municipal Corporation to the Greater Bombay Area was passed by the Legislature in the budget session of 1950 and the limits of the Corporation were extended from 15th April 1950.

POLICE

The Police Force is divided into 3 categories, *viz.*, District Police, Railway Police and the Bombay City Police. The District and Railway Police in the State proper are for the purpose of control under the Inspector-General of Police who is assisted by three Deputy Inspectors-General, of whom two are in charge of Ranges and the third is in charge of the Criminal Investigation Department and the Finger Print Bureau. The executive management of the Police in each district and on Railways in the State proper is vested in a Superintendent of Police under the general direction of the Magistrate of the District concerned except in the case of the Railway Police.

For purposes of effective supervision over the investigation and prevention of crime, some of the larger districts are divided into one or more sub-divisions each under a Sub-Divisional Officer who is either an Assistant Superintendent of Police, or an Inspector of Police, or a Deputy Superintendent of Police. Sub-Inspectors are the officers in charge of Police Stations and are primarily responsible under the law, for the investigation of offences reported at the Police Stations. Officers appointed directly to the posts of Assistant Superintendents of Police, Deputy Superintendents of Police, Inspectors and Sub-Inspectors undergo a course of training at the Central Police Training School at Nasik before being posted to Districts for executive duty. The Bombay City Police is a separate force under the Commissioner of Police who is administratively under the control of the Inspector-General of Police

HOME GUARDS

A sort of voluntary auxiliary police force to help in the maintenance of law and order during difficult times has been formed in several places in Bombay State, particularly in the City of Bombay and in Ahmedabad. This force is popularly known as Home Guards. During the communal disturbances towards the end of 1946 and the early months of 1947 it was found that the normal strength of the police was not sufficient to cope with the situation, and to permanently enlarge the force would mean placing a heavy burden on the revenues of the province. The answer to the situation appeared to be the formation of a voluntary body who can be called upon to help the police in moments of grave disorder. Thus the Home or Civic Guards organization was formally constituted in November 1947 in Bombay with headquarters at Churchgate Reclamation, 'E' Road.

The Home Guards Ordinance was later on replaced by the Bombay Home Guards Act, 1947. The organisation was next extended to all the Districts of the State The strength of the Home Guards in Greater Bombay is about 2,500.

The organisation consists of a Commandant-General in charge of the whole force in the State, a commandant, for each district and such other staff officers as the Commandant-General may consider necessary. The appointment of the Commandants is made by Government from among suitable public men and the posts are purely honorary carrying no remuneration. The Home Guards is a non-political and non-communal organisation All members have, on enrolment, to sign a pledge to the effect that 'they will, well and truly, serve the Government without favour or affection, malice or ill-will or communal or political bias, and will assist to the best of their abilities in the maintenance of peace and prevention of crime against persons and property.'

Any person who is between the ages of 20 and 50 and who has studied upto the IV Standard in any of the regional languages is eligible for recruitment to the organisation.

Home Guards are trained in squad drill, lathi drill, use of arms, control of traffic, elementary law, mob fighting, unarmed combat and guard and escort drill In addition to these, Home Guards are also trained in First Aid and Fire Fighting The Guards are encouraged to take up social work and lectures are arranged for those who show an aptitude for such type of work

The Home Guards when called out on duty under Section 4 of the Bombay Home Guards Act, have the same powers, privileges and protection as an officer of police appointed under any Act for the time being in force. The functions of Home Guards mainly consist of guarding public buildings, patrolling for the prevention of crime and assisting the Police in their ordinary duties Home Guards are issued with uniforms consisting of two khaki shirts, two trousers, two caps, one pair of shorts, ankle boots, anklets, etc A women's section of Home Guards has been formed in various parts of the State, and a different type of uniform is prescribed for Women Home Guards.

Although the Home Guards Organisation is a purely voluntary body the members of it are paid a duty allowance of Rs 2-8-0 per diem whenever they are called on duty under Section 4 of the Act They are also given a conveyance allowance upto Rs 5 p m for attending parades, etc. in big cities like Bombay, Ahmedabad and Poona, and return bus and rail fare in other places Arrangements are made for washing of uniforms at Government cost.

The present strength of Home Guards in the State is about 16,000. Half of these have received training in foot and arms drill and in the use of all kinds of weapons such as rifles, sten guns, etc. More attention is paid to the quality of the men recruited and to thorough and efficient training than to the numerical strength of the organisation. A large number of men have been trained in the regulation of traffic, First Aid and Fire Fighting.

The Home Guards were called out to assist the police on several occasions in the past. They were called out for the first time during the communal trouble of April 1947. They were then posted in the worst affected areas of Bombay and carried out their duties satisfactorily. They were again called out on the occasion of the Anti-Pakistan Day disturbances, during the disturbances following the assassination of Mahatma Gandhi in January-February 1948, and the Hyderabad emergency The last time they were called out was during the communal disturbances of March 1950.

The work hitherto done by the Prohibition Guards is now transferred to the Home Guards.

EDUCATION

Education is imparted partly through direct Government agency, and partly through the medium of grants-in-aid Government maintain Arts Colleges at Bombay, Andheri, Ahmedabad, Kolhapur and Dharwar. Other Colleges maintained by Government are the Grant Medical College, Bombay, the Medical Colleges at Poona and Ahmedabad, the Poona and Ahmedabad Colleges of Engineering, the Agriculture Colleges at Poona and Dharwar, Veterinary College, School of Arts, Law College and the Sydenham

College of Commerce all in Bombay. Most of the secondary schools are in private hands The primary schools are maintained by Local Authorities, with a grant-in-aid. The Bombay Municipality is responsible for primary education in Bombay City.

The total number of institutions at the end of the year 1946-47 was 23,991. The total number of pupils in recognised institutions was 2,091,145 The recognised institutions consisted of 37 Arts and Science Colleges including the University School of Economics and Sociology, 31 Professional Colleges, 1,181 Secondary Schools and 18,992 Primary Schools and 3,475 special Schools.

There are 21,657 towns and villages in this State of which 13,433 possessed schools. The area served by a town or village with school was 5.7 square miles

Altogether there were 2,114,905 pupils under instruction at the end of the year 1946-47 The percentage of pupils in recognised institutions to the total population of the State was 10.03 as against 9 44 in the preceding year.

The total expenditure on public instruction was Rs. 960 1 lakhs Out of this amount 46 per cent. was met from State Revenues, 14·8 per cent. from Local Funds, 28 8 per cent. from fees and 10 9 per cent from other sources.

The Educationa. Department is administered by a Director, with an Inspector in each Division and a Deputy or Assistant Inspector in each district Technical education is administered by a Joint Director with Inspectors to assist him.

***Higher education* in the State is controlled by the Bombay University which was established in 1857. The constitution of the** University underwent considerable changes in virtue of the Bombay University Act of 1928 This Act altered the whole constitution of the University so as to make it adequately representative with a view to bringing it into closer association with the public, and the industrial, and commercial and civic life of the people of the State, to enable it to provide greater facilities for higher education in all branches of learning including technology and to undertake on a larger scale than before post-graduate teaching and research, while continuing to exercise dual control over the teaching given by colleges affiliated to it from time to time

The new University Department of Chemical Technology was started in 1933 The authorities of the University, as now constituted, are chiefly the Chancellor, the Vice-Chancellor, the Syndicate, the Academic Council and the Senate. The Senate consisting of fellows is the supreme governing body of the University. The number of fellows is 144 of whom 40 are nominated by the Chancellor and 11 are ex-officio. The Academic Council consisting of educational experts deals with all purely academical questions. This body works in collaboration with the Syndicate which is the principal executive of the University.

With a view to decentralizing higher education Government has accepted in principle the establishment of regional Universities. The Poona and Karnatak Universities have since begun to function and the University of Gujarat and S.N.D T. Women's University will be established in course of time.

MEDICAL

The Surgeon-General is the head of the Medical organisation which is essentially a hospital organisation designed to render medical relief to the general population with ancillary specialist sections providing for medical relief, medical education, laboratory assistance and research. The medical organization which is the framework of the scheme, is based on the district, as the primary unit excluding Bombay City and Suburbs There is at every district headquarters a hospital styled the 'Civil Hospital' which is owned, staffed, financed and controlled by Government. The Civil Hospital is in charge of a Civil Surgeon and is the centre of the official organisation of medical relief and caters to the needs of the population of the whole district. Subsidiary to it, are some Government cottage hospitals and State-aided dispensaries which are scattered throughout the districts. The total number of hospitals and dispensaries in Bombay State is 449 rural and 316 urban.

Government is particularly anxious to promote medical relief in rural areas In all 333 centres of Subsidised Medical Practitioners have been opened and more and more centres are started as and when the requisite medical personnel becomes available.

Government has opened a T B Hospital at Aundh which is provided with about 125 beds as a beginning

Formerly there was only one Government Medical College in this State. With the up-grading of the two Government Medical Schools at Ahmedabad and Poona which formerly prepared students for a Licentiate Diploma into full-fledged colleges, preparing students for the M B B S. and post-graduate medical degrees of the University, and the merger of the Baroda State and the addition of the Medical College at Baroda, there are now four such Government colleges—admitting ordinarily in all 260 students every year. Government has also decided to start a Medical College in Karnatak.

Provision also exists for the training of nurses and Government maintains two Colleges of Nursing for preliminary training of nurses and will open a third one as soon as accommodation is found for it There are also Schools for the training of nurses at most of the Government Hospitals.

Under the Medical Department is also the Haffkine Institute which is the main centre for medical research and of essential biological products in this State. The Institute has very well equipped departments for anti-toxins, sera and chemotherapy and also well-organised sections for the manufacture of vitamin tablets and solutions for intravenous use, such as Protein Hydrolysate and glucose saline. It also provides for anti rabic treatment, and clinical pathological service, and serves as the principal laboratory for testing drugs.

PUBLIC HEALTH, WORKS

The Public Health Department is under the Director of Public Health For purposes of administration, the State is divided into 8 Registration Districts, comprised of 6 to 7 revenue districts Each Registration District is under the charge of an Assistant Director of Public Health. In addition to the three regional Assistant Directors of Public Health, there are four functional Assistant Directors of Public Health, *viz*, one each for Malariology, Plague, Public Health, Laboratory and Vaccine Institute. There are District Health Officers and subordinate staff under them for most of the revenue districts now.

The Public Health Department is mainly concerned with taking adequate measures for safeguarding the health of the people of this State To achieve this object, Subsidised Medical Practitioners are trained in sanitary and public health work; facilities have been provided for training more Sanitary Inspectors; comprehensive schemes for malaria control with D D T. are under operation in some parts of the State. Mobile Hospital Units and Hygiene Units are maintained for facilitating measures needed to fight epidemics like Cholera, Plague, Smallpox, etc.; combined Medical and Public Health Units have been opened in several districts to serve the needs of rural areas for providing maternity services at home and hospitalisation of maternity cases, besides arrangements for general medical treatment and training of the rural population in matters affecting health and hygiene generally. Extensive rural Public Health Propaganda is also carried by the P H.D. staff through the medium of silent and talkie films, publicity vans, etc.

The P.W.D is under the control of an I.C S. Secretary to Government who is assisted by a Chief Engineer. Under them there are Superintending Engineers in charge of Circles and Executive Engineers, in charge of Divisions. The Secretary to Government and the Chief Engineer have also under them the Electrical Commissioner with the Government, the Electrical Engineer to Government, the Public Health Engineer to Government and the Architect to Government.

There is a chain of protective irrigation works originating in reservoirs in the Ghat regions. The principal works are the Nira Canals fed by Lake Whiting impounded by the Lloyd Dam at Bhatgar, the Pravara Canals fed by Lake Arthur Hill, impounded by Wilson Dam at Bhandardara, the Mutha canals fed by Lake Fife at Khadakvasla, the Godavari Canals fed by Lake Beale at Nandur, Madhmeshwar, the Girna Canal fed by Chankapur and the Gokak Canal.

The Mutha Canals and the Gokak Canal were completed in 1896-97, the Nira Left Bank Canal in 1905-06, the Godavari Canals in 1915-16, and the Pravara Canals in 1926-27. The Nira Right Bank Canal was completed in 1937-38 and the Girna Canal in 1909-10. The Wilson Dam at Bhandardara, the second highest yet constructed by engineers the world over, was opened in 1926. The Lloyd Dam at Bhatgar which is 5,333 feet in length, 190 feet in height and 124 feet in width was opened in 1928. It cost Rs. 172 lakhs. It is remarkable as being the largest Dam in volume hitherto constructed and contains 21¼ million cubic feet of masonry. The Assuan Dam in Egypt is popularly supposed to be the largest Dam in existence but it contains only 19 million cubic feet It cost also nearly 50 per cent. more than the Lloyd Dam An idea of the magnitude of the Lloyd Dam can be gathered from the fact that if a wall 6 feet high and 15 inches thick were constructed from the masonry in the Dam it would stretch to a distance of 520 miles, say from Bombay to Nagpur These projects irrigate certain tracts most liable to famine.

A number of major irrigation projects included in the Post War Reconstruction programme are at different stages of investigation and preparation Some of them have actually been taken up for execution and the more important of them are mentioned below —

The Meshwa Canal Project estimated to cost Rs 40 lakhs and irrigate 10,000 acres in Kaira Districts is nearing completion The Gangapur Storage Project, estimated to cost Rs 334 lakhs, will irrigate 37,500 acres in Nasik and Ahmednagar Districts The Ghataprabha L B Canal scheme estimated to cost Rs 540 lakhs and irrigate 1,25,000 acres in Belgaum and Bijapur Districts is under construction The construction work on the Mahi Canal Project, Stage I, estimated to cost Rs 425 lakhs and irrigate 1,05,000 acres in Kaira District including parts of former Baroda and Cambay States was expected to begin at any time, as preliminary work such as acquisition of land and plant and machinery and construction of buildings and approach roads has already started. The most important work is the Tapti Valley Project Stage I (Kakrafar scheme) which is being carried out by the Government of India on behalf of the Bombay Government. It is estimated to cost Rs. 1,216 lakhs and irrigate 5,90,000 acres in Surat District.

SELF-SUFFICIENCY IN FOOD

The Bombay State has an obligation assigned to it by the Government of India in the matter of making the country self-sufficient in food by the end of 1951-52 crop year. The Central plan of achieving self-sufficiency in food did not envisage the making of each individual State self-sufficient, but it allocated the overall deficit between the various States and the share allocated to Bombay was 3 lakh tons. The attempt to fulfil this obligation may be summarised as follows: the additional production in 1947-48 was one lakh tons. It rose to 1,25,000 tons in 1948-49. Though results for 1949-50 had not yet been assessed, it is estimated that the 1,75,000 ton mark would be reached. The target for 1950-51 is 2,60,000 tons and for 1951-52 3,00,000.

A large number of schemes have been put into opefation under the Grow More Food campaign. They could be classified roughly into four groups. The first group consists of schemes for increasing the area under cultivation, improving natural fertility and moisture-conserving capacity of the soil by soil conservation measures, and eradication of deep-rooted weeds, which reduce productivity by deep ploughing with tractors The total result of the implementation of the schemes in this group could be estimated at 40,000 tons of additional foodgrains

In the second group fall the various schemes for increasing the area under irrigation The irrigation schemes would add another 40,000 tons to the food production by 1951-52

The third group consists of schemes designed to increase the use of manures The estimates for extra food obtainable in this way are 80,000 Last and the most important group consists of schemes for the multiplication and distribution of seeds of improved varieties of crops Improved seed gives, on an average, 10 per cent more yield and the net result of the implementation of these schemes would be about 1,40,000 tons of additional foodgrains by 1951-52

To turn to actual achievement so far over 1,50,000 acres of such land have been cultivated In some areas, the cultivable waste land is covered with jungles and is not habited Such areas have to be colonised The Government has undertaken such colonisation schemes in Kanara, Ratnagiri, Banas Kantha, and Baroda districts covering a total area of 18,000 acres

Soil conservation measures consist of bunding, trenching, gully plugging, strip cropping, etc So far, over six lakh acres have been usefully bunded by the Department of Agriculture Four lakh acres have been surveyed for undertaking bunding works

At present, the Government has 240 tractors as ancillary equipment In 1947-48, 3,55,000 acres were ploughed with tractors, in 1948-49 1,40,000 acres, and in 1949-50 up to the end of March, over two lakh acres. The Government also proposes to buy another 80 heavy tractors and also set up some workshops for their speedy repair After these 80 tractors are put into commission, the State would be able to get rid of Hariali, which is the chief obstacle, within a few years.

In regard to irrigation so far about 10,000 wells have been newly constructed and 5,000 wells have been repaired These 15,000 wells are estimated to have brought at least 60,000 acres under irrigation

At present about 2,000 katcha bandharas are built every year irrigating about 15,000 acres of land During the last three years, 42 pacca bandharas and tanks have been undertaken at a cost of about rupees one crore , they are nearly complete and will bring under irrigation about 44,000 acres A loan of a crore of rupees has been taken from the Government of India for repairing and constructing minor irrigation works during the next two years In addition to this, the Government has undertaken the construction of 16 pumping stations on rivers. Half of these works have been completed and the rest are expected to be completed shortly. About 14,000 acres have already been brought under command. The Government is operating 54 boring machines in the State During the last three years, they have bored 700 wells To sum up, about 1,30,000 acres have already been newly brought under irrigation

In the field of manures the digging of compost pits is encouraged. So far, cultivators have dug about 3,50,000 pits with the aid of Government subsidy. 1,27,000 tons of groundnut cake have been distributed at a subsidised price and 56,000 tons of mixed manure In 1950-51 over 68,000 tons of sulphate of ammonia was on its way to the cultivators

As regards improved seeds, in 1949-50 five lakh Bengal maunds of seed were distributed to cover an area of about 40 lakh acres

In 1948, the State started observing the Tree Planting Days and Weeks. In that year eight lakh trees were planted. In 1949 eighteen lakh trees were planted.

MADHYA PRADESH

THE Madhya Pradesh composes a great triangle of country midway between Bombay and Bengal. Its area is 131,686 sq. miles, of which 80,766 are Madhya Pradesh proper, 17,808 (*viz.* Berar) held on perpetual lease from H.E.H. the Nizam and the remainder 33,112 belonged to former Chiefs The total population is 16,813,584.

With the taking over of the Makrai State (Hoshangabad) and the 14 Chhatisgarh States the area of the State has increased by 33,112 sq. miles, the population by about 4 million and the revenue by about 1½ crores.

THE COUNTRY

The State may roughly be divided into three tracts of upland, with two intervening ones of plain country. In the northwest, the Vindhya plateau is a broken country, covered with poor and stunted forest. Below its precipitous southern slopes stretches the rich wheat growing country of the Nerbudda valley. Then comes the high Satpura plateau, characterised by forest-covered hills and deep water-cut ravines. Its hills decline into the Nagpur plain, whose broad stretches of "deep" black cotton soil make it one of the most important cotton tracts of India and the wealthiest part of the State proper. The Eastern half of the plain lies in the valley of the Wainganga and is mainly a rice growing country. Its numerous irrigation tanks have given it the name of the "lake country" of Nagpur. Farther east is the far-reaching rice country of Chhatisgarh, in the Mahanadi basin. The southeast of the State is again mountainous, containing 24,000 square miles of forest and precipitous ravines, and mostly inhabited by jungle tribes. Berar lies south-west of the State and its chief characteristic is its rich black cotton-soil plains.

THE PEOPLE

The population of the State is a comparatively new community. Before the advent of the Aryans, the whole of it was peopled by Gonds and other primitive tribes and these aboriginal inhabitants fared better from the Aryans than their like in most parts of India because of the rugged nature of their home. But successive waves of immigration flowed into the State from all sides. The early inhabitants were driven into the inaccessible forests and hills, where they form nearly a quarter of the whole population of Madhya Pradesh being found in large numbers in all parts of the State particularly in the south-east. The main divisions of the new-comers are indicated by the language divisions of the State Hindi brought in by the Hindustani-speaking peoples of the North, prevails in the North and East, Marathi in Berar and the West and centre of Madhya Pradesh. Hindi is spoken by 56 per cent. of the population and is the *lingua franca*. Marathi by 31 per cent and Gondi 7 per cent.

The effects of invasion are curiously illustrated in Berar, where numbers of Muslims have Hindu names, being descendants of former Hindu officials who on the Muslim invasion adopted Islam rather than lose their positions. The last census shows that a gradual Brahmanising of the aboriginal tribes is going on. The tribes are not regarded as impure by the Hindus and the process of absorption is more or less civilising.

INDUSTRIES

When Sir Richard Temple became first Chief Commissioner of the C. P., the only road was that leading in from Jabalpur to Nagpur The British administration constructed roads in all directions. The two trunk railways between Bombay and Calcutta run across the State, and in the last few years a great impetus has been given to the construction of subsidiary lines. These developments have caused a steady growth of trade and have led to vigorous progress in every department of life.

The prime industry is, of course, agriculture, which is assisted by an agricultural department which is now receiving additional strength by a phenomenal growth in the co-operative credit movement. The land tenure is chiefly on the malguzari, or landlord system, ranging with numerous variations, from the great feudatory chiefships, which are on this basis to holdings of small dimensions. A system of land legislation has gradually been built up to protect the individual cultivator. Berar is settled on the Bombay ryotwari system. Some statistics for 1947-48, the latest available are given below.

27,579 square miles of the Madhya Pradesh is Government Reserved forest; in Berar the forest area is about 3,339 square miles, the total forest area being four-seventeenth of the whole State. The rugged nature of the greater part of the country makes forest conservation difficult and costly. Excluding forest and waste, 67·7 per cent. of the total land is under cultivation; for the two most advanced districts in the Madhya Pradesh the proportion averages 81·6 per cent., while the average figure for the Berar Districts is 78·4 per cent. The cultivated area has extended almost continuously except for the temporary checks caused by bad seasons. Rice is the most extensive single crop of the Madhya Pradesh, covering nearly 34·6 per cent. of the cropped area. Juar comes next with about 10·4 per cent. and then wheat with over 6·3 per cent. Pulses and other cereals used for food and oil-seeds cover nearly 42·1 per cent. and cotton nearly 2·8 per cent. In Berar cotton is 33·6 per cent. and juar 37·1 per cent, respectively. And then come pulses and other cereals and oil-seeds of the cropped area. More than half the working population engaged in agriculture is female.

COMMERCE AND MANUFACTURES

Industrial life is only in its earliest development except in one or two centres, where the introduction of modern enterprise also on the railway routes has laid the foundations for great future developments of the natural wealth of the State Nagpur is the chief centre of a busy cotton spinning and weaving industry. The Empress Mills, managed by Messrs. Tata Sons Ltd., were opened there in 1877 and the general prosperity of the cotton trade has led to the addition of many mills here and in other parts of the State.

The largest numbers engaged in any of the modern industrial concerns are employed in the textile industry which in 1948 employed 32,633 persons. Then follows the cotton ginning and pressing industry which employed 22,612 persons in 1948. Among the mining industries coal mining comes first which in 1947 employed 19,663 persons and raised 1,489,762 tons. Then comes manganese mining with an output of 274,432 tons and 13,795 persons employed, the Jabalpur marble quarries and allied works, the lime stone quarries and the mines for pottery clay, soap stones, etc.

The total number of factories of all kinds legally so described was 1,261 and 1,313 in 1947 and 1948 respectively, the latest period for which returns are available and the number of people employed in them 97,219 and 101,646 respectively The same economic influences which are operative in every progressive country during its transition stage are at work in the Madhya Pradesh, gradually sapping the strength of the old village industries; as communications improve, village industries fade away, and a large development of trade takes place.

ADMINISTRATION

The administration of Madhya Pradesh is conducted by a Governor who is appointed by the President of India. He is assisted by 18 Secretaries (including Deputy Secretaries) and 16 Under-Secretaries. Under the provisions of the Constitution of India, the administration is conducted by the Governor with a council of ministers, chosen and summoned by him and sworn as members of the council.

This State, which has a unicameral Legislature, consists of 128 members distributed as follows :—

Class of constituency or constituencies—

General Urban	10	No. seats. 84
General Rural	74	
Muhammadan Urban	2	
Muhammadan Rural	12	
Women	3	
Anglo-Indian	1	
Backward areas & Tribes.. ..	1	
Commerce	2	
Landholders	3	
Labour	2	
University	1	
Chhatisgarh States . ..	17	

Of the 84 General seats 20 seats are reserved for members of the Scheduled castes.

Till the 15th of August 1947 the Legislative Assembly of the State consisted of 112 elected members but from the 15th of August the strength was reduced to 111 members, the European constituency having been abolished as a result of constitutional changes With the complete merger of the Chhatisgarh and Makrai States the number of members has risen to 128

The Madhya Pradesh is divided for administrative purposes into twenty-two districts, each of which is controlled by a Deputy Commissioner. The principal heads of State departments are the Commissioner of Settlements and Director of Land Records, the Chief Conservator of Forests, the Director of Health Services, the Inspector-General of Police, the Inspector-General of Prisons, the Director of Public Instruction, the Excise Commissioner and Superintendent of Stamps and Inspector-General of Registration and Registrar-General of Births, Deaths and Marriages, the Director of Agriculture, the Registrar of Co-operative Societies, the Director of Industries, the Director of Veterinary Services and a Chief Engineer, Public Works Department, Buildings and Roads and Irrigation Branches, Director of Food and Civil Supplies.

The Deputy Commissioners of districts are the chief revenue authorities and District Magistrates and they exercise the usual powers and functions of a district officer. The district forests are managed by a forest officer, over whom the Deputy Commissioner has certain powers of supervision, particularly in matters affecting the welfare of the people. Each district has a Civil Surgeon (except Mandla, and Balaghat where there are Assistant Surgeons), who is generally also Superintendent of the District Jail except at Central Jails at Nagpur and Jabalpur and District Jails at Raipur, Narsimhapur and Akola where there are whole time Superintendents and whose work is also in various respects supervised by the Deputy Commissioner. The Deputy Commissioner is also the Marriage Registrar provided he is of the Christian faith and manages the estates of his district which are under the Court of Wards. In his revenue and criminal work the Deputy Commissioner is assisted by (*a*) one or more Assistant Commissioners, or members of the Indian Administrative Service ; (*b*) one or more Extra Assistant Commissioners, or members of the State Civil Service and (*c*) by Tahsildars and Naib Tahsildars, or members of the Subordinate service.

The district is divided for administrative purposes into tahsils, the average area of which is 1,500 square miles. In each village a lambardar or representative of the proprietary body is executive headman.

The High Court of Judicature at Nagpur, which was established in January 1936, is the highest court of appeal in civil cases, and also the highest court of criminal appeal and revision for Madhya Pradesh including proceedings against European British subjects and persons jointly charged with European British subjects.

Subordinate to the High Court are the District and Sessions Judges (11 in number) each of whom exercises civil and criminal jurisdiction in a Civil and Sessions district comprising one or more Revenue districts. The civil staff below the District and Sessions Judge consists of civil Judges of the first and second class.

LOCAL SELF-GOVERNMENT

Municipal Administration was first introduced under the Punjab Municipal Act and the Municipality of Nagpur dates from 1864. Several revising Acts extended its scope and the C. P. Municipalities Act passed towards the end of the year 1922 considerably increased the powers of the Municipal Committees. The C. P. Municipalities Act was also extended to Berar. Viewed generally, municipal self-government is considered to have taken root successfully. The larger towns have municipalities, there being 107 such bodies in the State including 9 Municipal Committees in the merged States A corporation has been established at Jabalpur from 1st June 1950 and the one at Nagpur will commence to function shortly.

The Central Provinces and Berar Village Panchayats Act, 1920 has now been repealed and its place is taken by the Central Provinces and Berar Panchayats Act, 1946 (I of 1947). Under this Act the Village Panchayat is designed to be made a centre of all social, economic and development activities. 5,188 Gram Panchayats and 1,223 Nyaya Panchayats have been established in the State In the place of Village Panchayat Officer the Director of Panchayats, Madhya Pradesh has been appointed with effect from the 10th October 1947.

Under the Central Provinces and Berar Local Self-Government Act of 1920 the units of Local Self-Government administration in the rural areas were District Councils; generally one District Council for one district and a local Board for each tahsil. With the passing of the Central Provinces and Berar Local Government Act of 1948 in the middle of 1948 the District Councils and Local Boards have been abolished and they have been replaced by Janapada Sabhas—one Janapada Sabha for each tahsil or taluq which is now the administrative unit called Janapada under the new Janapada scheme of local Self Government. 14 Janapada Sabhas under the new Act were constituted in the integrated Madhya Pradesh States from 1st July 1948 and 82 in the remaining State areas from the 15th August 1948.

A brief description of the constitution and functions of Janapada Sabhas is given below :—

The jurisdiction of a Janapada Sabha will be confined to a tahsil or taluq—roughly an area of 1,500 to 2,000 square miles and a population of about 2 to 3 lakhs. Big tahsils may be divided into smaller units A Janapada Sabha will consist of 20 to 40 councillors roughly on the basis of one councillor for 10,000 people. The councillors will be elected both from rural and urban areas of the Janapada on the basis of adult franchise. The Act also provides for securing representation for Harijans, women and aboriginals. The first constituted Janapada Sabhas are however nominated bodies. The Sabha will be only a deliberative body and concern itself with important matters. There will be six small Standing committees formed out of the councillors of the Sabha. These committees will deal with administrative matters. There will be a Chief Executive Officer for each Sabha through whom the actual execution of the Janapada work or measures will be carried on. He will be a Government servant and will be paid by Government. He will be the Chief Revenue Officer and Chief Magistrate of the Janapada area. He will have under him a Deputy Chief Executive Officer in the person of the local Tahsildar—also a Government servant paid by Government. The Chief Executive Officer will have the advice and assistance of other Government officers under various departments of Government serving in the Janapada area as far as possible.

The former District Councils had certain compulsory and optional functions to perform. These functions have been considerably enlarged in the new Janapada set up. In addition the State Government would gradually entrust to the Sabhas most of the varied governmental functions pertaining to the local area except matters of law and order, police and revenues of Government In respect of entrusted Governmental subjects the Sabhas will act as the agents of Government and will be bound to carry out Government policy and instructions.

Janapada Sabhas will have close association with other local authorities in the Janapada area namely the Panchayats, Municipal Committees, regulated Market Committees. These will work independently in their own spheres but the Sabhas will have certain supervisory functions in relation to these The village Panchayats are actually an integral part of the Janapada scheme and the Sabha will have general powers of inspection, supervision and control over them.

PUBLIC WORKS

The Public Works Department, which comprises Buildings and Roads and Irrigation Branches, is under the control of the Chief Engineer. There are three permanent and two temporary Superintending Engineers who between them supervise the work of both branches. The State is fairly well served by a network of roads, but in a number of cases they are not fully bridged and are therefore impassable to traffic at times during the rains.

State irrigation was introduced early in the present century mainly as a result of the recommendations of the Irrigation Commission (1901-03). During the last forty-five years a sum of Rs 7.25 crores has been expended on the construction of irrigation works, of which the more important are the Wainganga, Tandula, Mahanadi, Kharung and Maniari canals and also Murram Nalla tank, Aree and Chinchbund projects. The last two are under construction.

Three works, *viz* , the Mahanadi and Wainganga Canals and the Asola Mendha tank, were sanctioned originally as productive works and the remainders were all sanctioned as unproductive works. The three works sanctioned as productive all failed to justify their classification in that category and were transferred to the unproductive list. The conditions in the State are such that irrigation works cannot be expected to be productive and their construction is justified only on account of their value as a protection against famine. The normal area of annual irrigation is at present about 793,265 acres, mainly rice and the income from these works covers more than the expenditure incurred on their maintenance and management.

POLICE

The police force was constituted on its present basis on the formation of the State, the whole of which including the Cantonments and the Municipalities, is under one force. The strength is equal to one man per 5 3 square miles of area. The superior officers comprise an Inspector-General, four Deputy Inspectors-General, for assistance in the administrative control and supervision of the Police force, including the Criminal Investigation Department, and the usual cadre of District Superintendents of Police, Assistant and Deputy Superintendent and subordinate officers.

On railways, special Railway Police are employed under the control of two Superintendents of Railway Police with headquarters at Raipur and Hoshangabad. There is a Police College under the control of a Superintendent of Police at Sagar and Constables' Schools under the control of Deputy Superintendents at Nagpur and Jabalpur. A special Armed Force of 3,595 men is distributed over the headquarters of eight districts, for use in dealing with armed disturbers of the peace in whatever quarter they may appear. There is a small force of Mounted Police consisting of 1 Head Constable and 7 Constables for the escort of His Excellency the Governor.

Madhya Pradesh has no rural police as the term is understood in other parts of India. The village watchman is the subordinate of the village headman and not a police official and it is considered very desirable to maintain his position in this respect.

During the war there was an expansion of the District Police and the special Armed Force and the formation of a battalion of special armed constabulary.

EDUCATION

The Education Department of the Madhya Pradesh is administered by a Director of Public Instruction assisted at headquarters by 4 Deputy Directors of Public Instruction, an Accounts officer, a personal Assistant, a Radio Engineer, an Inspector of Technical Education, an Educational Publicity officer, 4 Field Workers, and 2 Artists.

In the Divisions, he is assisted by 8 Divisional Superintendents of Education, 3 Inspectresses of Schools, 22 District Inspectors, 22 Additional District Inspectors of Schools, 7 District Inspectresses of Schools and 190 Assistant District Inspectors of Schools, and 22 Assistant District Inspectresses of Schools.

The Secretary to Government and the Under-Secretary to Government in the Education Department are officers of the Madhya Pradesh Educational Service.

Schools.—The main division of schools for general education is into Primary and Secondary. In the Primary Schools teaching is conducted wholly in recognised Indian languages of the State. The Secondary Schools are divided into Middle and High Schools. The former may be either Middle Schools in which instruction is given (*a*) mainly in a recognised Indian language or (*b*) mainly in a recognised Indian language with the option of English as an additional language, or Indian English Middle Schools in which instruction is given in a recognised Indian language but English is a compulsory subject. In the High School classes instruction has been and is being given through the recognised Indian languages since 1922 but for the convenience of pupils whose mother tongue is not the regional language as also for those who otherwise desire to learn through English, a few English medium sections are still maintained in non-Government High Schools

Primary Education is mostly under the control of Janapadas, Municipal Committees and Notified Area Committees. The Primary Education Act empowers local authorities to introduce compulsion and this is in force in several areas.

Secondary Education is under the control of the Board of High School Education, on which the University is represented. The High School Certificate awarded by the Board qualifies for entrance to the University.

Technical Education.—Among the schools for Technical education are the Government Engineering School, Nagpur, Kalaniketan, Jabalpur, and five Government Schools of Handicraft and eight aided Industrial Schools and one Reformatory School. The Engineering School teaches upto the diploma standard in Civil, Automobile and Mechanical Engineering, Electrical Engineering, Art and Architecture and is affiliated to the Nagpur University. The Schools of Handicrafts, Industrial Schools, teach carpentry, blacksmithy, tailoring, shoe-making, cotton-weaving, carpet and durrie making, toy making and lacquer work, cane and basket manufacturing All these institutions (except the Government Engineering School, Nagpur) are under the administrative control of the Director of Public Instruction, who is assisted by a Deputy Director of Public Instruction (Technical). There is also a Government Engineering College at Jabalpur which is under the direct administrative control of the Secretary to Government, Madhya Pradesh Education Department.

The Kala Niketan Technical High School was started in July 1947 at Jabalpur The present enrolment in the school is 303 A three storeyed building at a cost of Rs 6 8 lakhs is under construction for the purpose of housing the school.

Higher Education is under the control of the Nagpur University, Nagpur, and the University of Sagar, Sagar The following are the constituent colleges of the Nagpur University —at Nagpur Morris College, National College, College of Science, Hislop College, Laxmi Narayan Technological Institute, S B City College, University College of Law, Central College for Women and University Training College (for teachers), G. S College of Economics and Commerce, Shikshan Prasarak Mandal College of Science, Agriculture College; Medical College, King Edward College, now known as Vidarbha Mahavidyalaya, Amravati, Shri Shivaji Arts College, Amravati; Rajasthan Aryan College, Washim, Sitabai Arts College, Akola; G S. College of Science, Khamgaon, G S College of Commerce, Wardha, S E Law College, Amravati, S. S Commerce College, Amravati

The following Colleges are affiliated to the Sagar University · Robertson College now known as Mahakoshal Mahavidyalaya, Jabalpur; Hitkarini City College, Jabalpur, Hitkarini Law College, Jabalpur, Shri Nilkantheshwar Arts College, Khandwa, S. B R. Arts College, Bilaspur, Law College, Bilaspur, Govt. College of Science, Raipur, The Chhattisgarh College, Raipur, Law College, Raipur, Spence Training College now known as Prantiya Shikshan Mahavidyalaya, Jabalpur, Training Institute for Women, Jabalpur, Veterinary College, Jabalpur, G. S. Economics and Commerce College, Jabalpur, Government Engineering College, Jabalpur.

Three courses in social education known as Summer course at Camps, Monsoon course and Winter course are run each year in which the full syllabus is taught to adults. For the last six courses 903,009 adults were enrolled and 401,042 succeeded in passing the examination prescribed at the end of the first five courses. To prevent the relapse of the adults who had taken the course into illiteracy and ignorance and to further educate them, each of these courses is followed up by various reconstruction activities.

MEDICAL

The Medical and Public Health Services which were previously controlled by the Inspector-General of Civil Hospitals and Director of Public Health are now combined into one post designated 'Director of Health Services' A medical college was opened at Nagpur from July 1947, the 1st year and 2nd year students of the Robertson Medical School, Nagpur have been admitted to the Medical College. The 4th year course in the Robertson Medical School will be abolished after the year 1950. In order to provide medical relief in rural areas, a three years' Medical Course has been started from November, 1948 in the Robertson Medical School for Matriculates. The principal medical institutions are the Mayo Hospital at Nagpur (opened in 1874) with accommodation for 222 in-patients, of these 126 beds have been transferred to the Medical College (100 for surgical and 26 for midwifery) for teaching purposes; the Victoria Hospital at Jabalpur (opened in 1886) with accommodation for 177 in-patients; the Daga Memorial (Dufferin) Hospital and the Mure Memorial Hospital at Nagpur and the Lady Elgin Hospital and the Crump Children's Hospital at Jabalpur, these last four are for women and children and can together accommodate 341 in-patients. In addition to these, hospitals for women exist at Chhindwara, Gondia, Sagar, Khandwa, Amraoti, Murtizapur, Shegaon and Khamgaon and at all district headquarters where no separate women's hospitals exist, sections have been opened at the main hospitals for the treatment of women by women doctors.

The women medical officers attached to six Dufferin Fund Hospitals at Nagpur, Jabalpur, Chhindwara, Akola, Amraoti and Khamgaon have been taken on the State cadre

The Medical College Hospital with accommodation for 250 temporary beds was opened on 2nd October 1949.

The Mayo Hospital at Nagpur was provincialised in 1923, the Irwin Hospital at Amraoti in 1925, the Victoria Hospital at Jabalpur in 1926 and the Silver Jubilee Hospital at Raipur in 1928. In accordance with recent policy 182 out of 255 local fund dispensaries have been transferred to the administrative and executive control of local bodies or Janapada Sabhas concerned. With the object of bringing medical relief within easy reach of the rural population, Government have sanctioned (i) subsidising 22 medical practitioners (allopathic) one in each district (4); (ii) subsidising 83 vaidyas and hakims, one in each tahsil (14), (iii) establishment of 83 Ayurvedic and Unani dispensaries in each tahsil (62). (The figures in brackets indicate the number in actual operation at present) In addition to the above Government have sanctioned four mobile dispensaries for the newly integrated State districts The State has one Mental Hospital at Nagpur. Four tuberculosis clinics at Nagpur, Jabalpur, Raipur and Amraoti exist and 40 beds have been reserved at the Pendra Road Sanatorium for the treatment of patients sent by Government.

There is a great deal of eye diseases in the State and the problem is receiving special attention. An eye mobile dispensary has been started in Nagpur. The Madhya Pradesh Blind Relief Association is doing propaganda work and helping the blind. So far, 25 Assistant Medical Officers have been given training in eye work for six months at the Mayo Hospital, Nagpur. These specially trained officers are posted to eye centres in the State. Anti-rabic treatment is now available at 14 centres in the State, viz. Nagpur, Jabalpur, Raipur, Akola, Wardha, Hoshangabad, Sagar, Chanda, Chhindwara, Khandwa, Yeotmal, Amraoti, Mungeli, Bilaspur. Nurses training schools exist in all hospitals in the State and these will be enlarged and improved when staff increases.

An ayurvedic school is proposed to be started at Raipur in 1950.

PUBLIC HEALTH

The Public Health services of the State are controlled by the Director of Public Health. In 1939, a separate cadre of Sub-Assistant Health Officers was sanctioned by the Government. An appreciable advance has been made in rural sanitation. The principal institutions working under the Department are :—

1. The Central Provinces Vaccine Institute which was founded in the year 1913. Here, small-pox vaccine lymph is manufactured for the whole province and the neighbouring integrated States. Vaccinators are also trained at the Institute.

2. Public Health Institute established in the year 1928 undertakes the examination both chemical and bacteriological, of samples of water and food stuffs under the Food Adulteration Act. Facilities also exist for the examination of pathological specimens and clinical material of indigent cases of infectious diseases free of charge.

3. There is a Health School at Nagpur, where Health Visitors are trained.

4. The problem of leprosy is being energetically tackled in the State and the department has a leprosy specialist who is in charge of treatment, propaganda and survey work. There are 27 leprosy Assistant Health Officers who are running 56 leprosy centres Of these, 6 centres are run by the British Empire Leprosy , Relief Association (State Branch). The State Government has taken over the Leprosy Home and Hospital at Raipur formerly run by the Raipur Mission to Lepers

5. There are 116 Assistant Health Officers in charge of epidemic dispensaries (One in each Tahsil).

6. One mechanised travelling dispensary in charge of an Assistant Health Officer with a trained compounder is working under the department This dispensary visits roadside villages and renders medical aid to the aboriginals

7. A scheme for eradicating the disease of Yaws is in operation in Chanda and Bilaspur districts where the incidence of Yaws is high. The results are satisfactory.

8. A Nutrition Officer has been appointed. The first task of this Officer is to carry out diet surveys on standard lines, gauge the extent of mal-nutrition and to tackle other problems concerning Nutrition. In addition he has been appointed temporarily as medical supervisor to carry out industrial surveys with a view to improving the health of the industrial concerns in the State.

9. The following sections have been opened as post-war measures .—

   (i) Maternity and Child Welfare Section under Assistant Director of Public Health (M. & C.W) to reduce infant and maternal mortality in the State.

   (ii) Malaria Section under A.D.P.H. (Malaria) to reduce the incidence of Malaria in the State by carrying out malaria surveys and control measures. Five anti-malaria units are now operating in highly malarious parts in the State and four new units are being formed for the integrated States.

   (iii) Public Health Engineer Section to assist municipalities in preparing water drainage, town planning and housing schemes and the Janapada Sabhas with regard to the provision of adequate water supply in rural areas

Training classes for Stockmen-cum-Health Assistants have been opened at Wardha with a view to enabling the trained personnel to render both veterinary and medical first aid in rural areas. In addition they will be carrying certain Public Health Duties like vaccination, inoculation, disinfection of water supply and collection of vital statistics.

Vaccination is compulsory in 114 towns and 27,750 villages out of a total of 119 towns and 38,985 villages respectively

BUDGET 1950-51

The revenue is estimated at Rs 17,57 63 lakhs which includes Rs 52 46 lakhs transferred from the Post-War Reconstruction and Development Fund specially earmarked for schemes of expenditure in the merged Chhatisgarh and Makrai states , Rs 31 21 lakhs on account of grant expected from the Government of India for Grow More Food Schemes and Rs 12 lakhs representing recovery of expenditure on displaced persons from the Government of India. The expenditure is estimated at Rs 16,16 95 lakhs which includes Rs 3,74 65 lakhs on Development and Grow More Food Schemes and Rs. 12 80 lakhs on relief of displaced persons The year is expected to close with a surplus of Rs 1,40 68 lakhs.

The guiding factor for 1950-51 has been that the budget should be balanced both in the revenue as well as in the capital section as necessary for a successful fight against inflation and for stabilising prices. The Government of India have also withdrawn their grants for financing development schemes not excepting those already in progress, and have held out little promise of loans for meeting capital expenditure. The Government of Madhya Pradesh have practically exhausted almost all available sources of revenue and no measures for raising revenue by additional taxation are contemplated for the year 1950-51 The key-note of the budget for 1950-51 has, therefore, been economy in expenditure and all possible steps have been taken in this direction. Where possible, expenditure has been stopped on development schemes which had not been started in the current year, expenditure on schemes in progress has been limited to the narrowest possible compass and new schemes have been limited to really productive or unavoidable ones In addition, lump cuts have been made in the budgets for enforcing further economies.

Under capital outlay on agricultural improvement, the estimate represents the carry over of the balance of the current year's provision for investment in the shares of the Agricultural Marketing Society Under Industrial Development, provision has been made for further investment in the shares of the Gondwana Paints and Minerals, Ltd., in accordance with the undertaking by Government , for opening up of the Korba coal-field , for the purchase of plant for the geraniol industry , for the Central Workshop and Stores, and for the completion of the buildings of the weaving shed and Textile Institute. Under Civil Works, the provision is for further expenditure on the construction of the Medical College and for the completion of quarters for ministerial services. The provision made for the electricity projects has been restricted to a minimum The transactions relating to the procurement and sale of food-grains are expected to result in a net credit of Rs 88 35 lakhs.

New expenditure included in the budget amounts to Rs. 2,01 47 lakhs in the revenue section and Rs. 19 34 lakhs in the capital section, total Rs 2,20 81 lakhs. Of Rs. 2,01 47 lakhs in the revenue section Rs. 1,04 98 lakhs relate to the development and Grow More Food Schemes ; and the capital expenditure is for Grow More Food schemes only

1950-51 Budget

	Estimated Revenue for 1950-51.
Principal Heads of Revenue.	Rs.
Taxes on Income other than Corporation Tax	2,81,16,000
Land Revenue	3,71,79,000

MADRAS STATE

THE Madras State occupies the whole southern portion of the Peninsula, and with the merger of Banganapalle and Pudukottai, and Sandur has an area of 127,768 square miles It has on the east, on the Bay of Bengal, a coast line of about 1,250 miles , on the south, on the Arabian Sea, a coast line of about 450 miles. In all this extent of coast, however, there is not a single natural harbour of any importance , the ports, with the exception of Madras, and perhaps of Cochin and Vizagapatam are merely open roadsteads. A plateau, varying in height above sea-level from about 1,000 to about 3,000 feet and stretching northwards from the Nilgiri Hills, occupies the central area of the State , on either side are the Eastern and the Western Ghats, which meet in the Nilgiris The height of the western mountain-chain has an important effect on the rainfall. Where the chain is high, the intercepted rain-clouds give a heavy fall, which may amount to 150 inches on the seaward side, but comparatively little rain falls on the landward side of the range Where the chain is low, rainclouds are not checked in their westward course In the central tableland on the east coast the rainfall is small and the heat in summer excessive The rivers, which flow from west to east, in their earlier course drain rather than irrigate the country, but the deltas of the Godavari, Krishna and Cavery are productive of fair crops even in time of drought and are the only portions of the east coast where agriculture is not dependent on a rainfall rarely exceeding 40 inches and apt to be untimely.

POPULATION

Madras State had a population of 49 84 millions according to the census of 1941 With the merger of the States of Pudukottai, Banganapalle and Sandur the population has risen to 50·34 millions The estimated mid-year population in 1947, before the merger of the three former Indian States, was 52·37 millions Of this the urban population was estimated at 8 53 millions and the rural at 43 84 millions On the 1941 census basis the Hindus accounted for 86·77 per cent of the population, Muslims 7 88 per cent, Christians 4 15 per cent and others 1 20 per cent The vast majority of the people is of the Dravidian race, and the population on the linguistic basis is Tamil 19 96 millions, Telugu 18 78 millions, Malayalam 3 94 millions, Kanarese 1·78 millions and others 5 39 millions Tamil and Telugu are spoken by 40 and 37 68 per cent respectively of the population

The annual revenue of the State has risen from Rs 16 13 crores in the pre-war year of 1938-39 to Rs 56·91 crores in 1949-50 The annual expenditure for the same years were Rs. 16 09 crores and Rs 56 38 crores respectively.

There are 24 districts in the State excluding Madras City For purposes of revenue each district is generally divided into three or more divisions ; each division into one or more taluks There is a Board of Revenue which is a statutory body normally consisting of three members, designated the Commissioner of Land Revenue, Commissioner of Excise, Separate Revenue and Commercial Taxes and Commissioner of Land Revenue and Irrigation The posts have usually been held by members of the Indian Civil Service.

Under the new Constitution the administration of Madras State is vested in the Governor assisted by a Council of Ministers with the Chief Minister at the head The two Houses of the Legislature have been elected on the basis of the Government of India Act, 1935. In December 1949 the Legislative Council had a membership of 55 and the Legislative Assembly 214.

LAND

The net area sown and its percentage to the total area are 31,035,475 acres and 38 8 per cent respectively ; Fallow 9,498,721 acres and 11 9 per cent ; Other uncultivated lands 11,848,904 acres and 14 8 per cent , Land not available for cultivation being roads, rivers, etc 14,054,038 and 17·6 per cent The forests constitute 13,496,668 acres or 16 9 per cent of the total area of the land

The distribution of agricultural population according to different categories is as follows :—

	Population	Percentage to total Population
Estimated agricultural population cultivating their own lands	20,601,120	57
Estimated agricultural population which has leased out lands	5,059,928	14
Estimated population of tenants who having no lands of their own cultivate lands of others	5,059,926	14
Estimated agricultural population of small holders who cultivate lands of others	5,121,349	15
Total estimated agricultural population of Madras State	36,142,332	100

The figures, which are from *Wealth and Welfare in Madras*, issued by Dr. B Natarajan, Economic Adviser to the Madras Government, are based on the results of a survey of about 20 villages in each taluk

The livestock census of December 1944 revealed the following position —

Cattle 16,354,914 , buffaloes 6,289,325 , sheep 10,569,189 , goats 6,087,650 , horses and ponies 50,016 , mules 259

FOOD POSITION

The main food of the population is rice and millets Madras has been a deficit state in regard to food for over 150 years The loss of rice imports from Burma, Siam, and the Far East during the second world war seriously affected the food position of the State The urban population was put on statutory ration which was gradually reduced from 16 ounces in 1943-44 to 10 ounces in 1948 By the middle of 1946, the entire population was brought under rationing in one form or other because of the deteriorating food situation The quantum of ration in March 1950 for rice-eaters was 8 oz of rice, 2 oz of semolina and 2 oz of wheat making up 12 oz of food For mixed diet eaters it was 4 oz. of rice, 2 oz. of semolina and 6 oz. of wheat

In 1948, out of 278,066 tons of rice allotted to Madras by the Centre 269,522 tons were received Of this 89,431 tons were from within India and 180,091 tons from overseas Other food imports were Maize, Milo and Millets 203,497 tons, wheat 46,183 tons and Maida 6,265 tons The quantities procured within the State were rice 988,017 tons and Millets 11,556 tons

The following statement shows the area under certain food crops and the yield in 1947-48 — Rice 10,434,149 acres, 4,329,640 tons , Millets 10,325,258 acres, 2,153,100 tons , Pulses 2,775,623 acres, 243,950 tons , Sugarcane 272,680 acres, 753,500 tons in terms of gur , Potatoes 15,516 acres, 46,530 tons , Sweet potatoes 33,660 acres, 136,800 tons and Tapioca 32,954 acres, 94,410 tons.

The principal commercial crops of the State, in order of the acreage under cultivation in 1947-48, were as follows

	Area in acres	Yield in tons
Groundnut	4,066,830	1,600,070
Cotton ..	1,297,647	266,093 (in bales of 400-lb lint)
Gingelly (til)	638,367	72,050
Cocoanut ..	615,983	154,000
Tobacco ..	293,759	107,230
Sugarcane ..	272,780	753,500
Pepper ..	97,755	8,070
Coffee ..	85,644	9,670

Bananas, mangoes and citrus are the most important fruits of the State. The average area for the three years ended 1947-48 under bananas was 162,873 acres with an yield of 1,161,486 tons , under mangoes 240,593 acres yielding 556,183 tons , under citrus fruits 72,310 acres yielding 96,140 tons The normal production of vegetables may be taken at 612,584 tons being the average for the years 1939-40 and 1940-41

PUBLIC HEALTH

The Medical and Public Health departments have been allotted Rs 283·57 lakhs and Rs 97 67 lakhs respectively for the year 1950-51. Medical relief, medical education and research are dealt with by the Medical Department In regard to medical relief the department's responsibility is limited to the maintenance of the important hospitals in Madras City and at the headquarters of the districts, and special institutions such as mental hospitals, institutions in divisional centres, etc Medical relief in the mofussil not covered by the above-mentioned institutions devolves on local bodies which are aided by Government Rural medical practitioners are given a subsidy Government maintain five medical colleges, two at Madras and three at Vizagapatam, Guntur and Madura respectively Financial aid is given to the Christian Medical College for Women at Vellore.

A school of Indian Medicine, opened in Madras City in 1925 with a hospital attached to it, has been expanded into a college Its strength in 1948 was 454

There were 1,211 medical relief institutions of all classes in 1947—923 in rural and 288 in urban areas Of these State (Public) institutions numbered 192, State (special) institutions 24, local fund institutions 489, private aided 62, private non-aided 88, maintained by railways 57 and subsidised rural dispensaries 299 They employed 1,876 doctors, 1,536 nurses, 1,099 midwives and 1,353 compounders The total number of beds for both sexes was 16,208. The total numbers of in-patients and out-patients treated were 498,131 and 17,360,024 respectively The number of labour cases conducted in all hospitals was 147,710

Two well-known scourges are Tuberculosis and Leprosy There were six hospitals and sanatoria, both Government-owned and private, for the treatment of tuberculosis at the beginning of 1947 (Four new institutions were opened during 1949) The total number of beds available was 1,361 The total number of patients treated in hospitals and sanatoria was 61,611 and of those treated for other forms of tuberculosis numbered 27,086 The Government Tuberculosis Institute at Madras which is well-equipped with X-ray and laboratory facilities, examines about 12,000 patients annually. The death rate from the disease was 1·40 per mille.

The entire work regarding the control of leprosy is entrusted to the Madras Branch of the British Empire Leprosy Association, which gets an annual grant of Rs 21,000 The biggest institution for the treatment of leprosy, the Lady Willingdon Leprosy Sanatorium at Tirumani, Chingleput district, which was, managed by the Church of Scotland Mission

has been taken over by Government. On the whole in 1947 there were 24 homes or hospitals for the treatment of leprosy, the total number of beds available being 2,262 The number of patients treated was 74,045 men, 30,578 women and 14,624 children. There are three mental hospitals at Madras, Waltair, and Calicut, the total number of patients being 3,368

The mortality figures for 1947 for various diseases were cholera 12,743, small-pox 2,650, plague 2,718 fevers 258,207, dysentery and diarrhœa 75,719, respiratory diseases 99,428, child-birth 14,469 and other causes 584,786 The total number of deaths from diseases was 1,050,720 The number of births and birth-rates in urban areas were 309,031 and 36 23 per thousand respectively The respective figures for rural areas were 1,404,371 and 32 03 Deaths and death-rates for urban areas were 184,341 and 21·61 per thousand respectively The respective figures for rural areas were 866,379 and 19·76 per thousand. The infant mortality rate was 146 76 per 1,000 live births.

EDUCATION

The estimated expenditure on education (excluding that on buildings and specialised institutions under the control of departments other than education) for the 1950-51 budget is Rs 996 75 lakhs. (Inclusive of expenditure on buildings, etc the estimate is Rs 11,50 lakhs). Of this primary education is allotted Rs 610·69 lakhs, secondary education Rs 120 97 lakhs, university Rs 106 94 lakhs and special institutions like teachers' training, deaf and dumb, and lepers' institutions Rs. 73 98 lakhs The allotment for scholarships was Rs 3 96 lakhs, direction Rs 4·60 lakhs and inspection Rs. 37 27 lakhs.

The following figures for 1948 give the number of institutions under the various categories

	Number of Institutions		Total
	For Men	For Women	
Arts colleges (including Science and Oriental colleges)	71	10	81
Professional colleges	21	5	26
High schools	637	165	802
Middle schools	179	56	235
Primary schools	32,400	4,187	36,587
Special schools	473	151	624
Unrecognised schools	189		189
Total	33,970	4,574	38,544

The expenditure on education from various sources in 1947-48 was as follows

(In thousands of rupees).

Source	Expenditure on Men	Expenditure on Women	Total	Percentage to total
	Rs	Rs	Rs	
Government Funds	6,13,51	1,15,56	7,29,07	50 43
District Board	1,55,10	29,73	1,84,83	12 79
Municipal Funds	27,86	17,51	45,37	3 14
Fees	2,30,36	35,16	2,65,52	18 36
Endowments, etc	1,67,08	53,83	2,20,91	15 28
Total	11,93,91	2,51,79	14,45,70	100 00

The number of pupils and students in the various educational institutions in 1947 were

Institutions	Men	Women	Total
Annamalai University (for men and women)	1,278		1,278
Arts colleges	32,015	1,806	33,821
Professional colleges	5,622	333	5,955
High schools	3,86,827	56,100	4,42,927
Middle schools	37,823	9,570	47,393
Primary schools	31,28,142	5,23,704	36,51,846
Special schools	33,977	9,865	43,842
Unrecognised institutions	7,917		7,917
Total	36,33,601	6,01,378	42,34,979

In 1949-50 there were 250 basic elementary schools, 36 basic training schools and about 400 adult literacy schools There were rural colleges for imparting higher education to those in rural areas who were already literate The opening of a Central College of Carnatic Music in Madras City was a notable event in 1949. There are three universities, Madras, Andhra and Annamalai, the last being residential

LAW AND ORDER

An important change in the administration of justice was introduced in 1949-50 when the Judiciary was separated from the Executive in a few selected districts by a scheme based on executive instructions only Under the scheme, for discharging purely judicial work there is a separate hierarchy of magistrates, all qualified in law and under the administrative control of the High Court The Collector of the district and his executive subordinates will have magisterial functions to the limited extent of the preservation of public order and the prevention of crime

The superior court for civil and criminal judicial work is the High Court at Madras, which consists of a Chief Justice and 15 Puisne Judges For the administration of criminal justice there are 31 sessions judges in the mofussil (including six for Agency Tracts), additional and assistant sessions judges being provided to assist courts in which there is heavy work The administration of civil justice is carried on by 26 district judges, 39 subordinate judges and 141 district munsiffs In Madras City there is a City Civil Court consisting of two judges and a Small Cause Court consisting of a Chief Judge and two other judges

Madras is a litigious State, and the records for 1948 show one suit for every 208 persons

The Police Department is under an Inspector-General who has six deputies, four in charge of ranges of the State, one in charge of the Railway Police and the Criminal Investigation Department and one in charge of the Madras City Police as Commissioner of Police A Superintendent is stationed at each district The sanctioned strength of the permanent police force is 36,102 excluding the Malabar Special Police and the special armed police units.

CO-OPERATION

The number of all co-operative societies increased from 18,933 to 20,796, their membership from 25 38 lakhs to 28 81 lakhs, the working capital from Rs 5,660 33 lakhs to Rs 7,103·55 lakhs, and the divisible profits from Rs 38 88 lakhs to Rs 168 31 lakhs The collections by Central Banks were satisfactory, though the percentage of overdues was 5 27 as against 5 05 in 1947-48 There was an increase in the loan business of Land Mortgage Banks and agricultural credit societies

The activities of the Co-operative Stores continued to expand The sales turnover of both the primaries and the wholesales amounted to Rs 48 2 crores There were 1,764 primary stores with 1,426 branches or depots Their purchases and sales amounted to Rs 2,198 70 lakhs and Rs 2,307·37 lakhs as against Rs 1,863 36 lakhs and Rs 2,353·76 lakhs, respectively in the previous year The trade of the wholesale stores recorded an increase, the purchases and sales amounting to Rs. 2,528 90 lakhs and Rs. 2,513 23 lakhs against Rs. 1,391 22 and Rs. 1,627 59 lakhs respectively in 1947-48. Some of the important features of the working of the stores were their participation in schemes of statutory rationing and procurement, their sales to non-members, formation of stores societies for the benefit of industrial labourers and extension of the consumers movement in rural areas.

The total deposits and borrowings of the Madras Provincial Co-op Bank increased from Rs 560 54 lakhs to Rs 736 32 lakhs in common with all other banks in the country. There was an increase in its loan business (from Rs. 435 54 lakhs to Rs. 784 34 lakhs). By virtue of its position as the apex bank, the Provincial Bank continued to guide, supervise and control the financial policy of central banks The working capital of central banks increased from Rs 1,406 96 lakhs to Rs. 1,744.56 lakhs. Their total profits increased from Rs 11 81 lakhs to Rs. 16 70 lakhs The Madras Co-op. Central Land Mortgage Bank Ltd made a rapid recovery in its loan business which increased from Rs. 61 55 lakhs in 1947-48 to Rs. 77 73 lakhs in 1948-49 The maximum amount for which the Government have guaranteed the debentures of the Bank is Rs 550 lakhs. The value of debentures in circulation at the end of 1948-49 was Rs. 421 31 lakhs. A new series of debentures for 90 lakhs was issued by the Bank during the year. Government continued to give short-term advances to the Bank, whenever required.

Co-operation played an increasingly useful part in the equal distribution of controlled commodities, in raising food production and the manufacture of handloom goods and cottage industrial products Co-operative milk supply received an impetus where prohibition was introduced as a means of relieving unemployment among ex-toddy tappers. At the close of 1947-48 there were 23 milk supply unions and 354 milk supply societies The unions had 245 societies and 2,618 individuals as members with a paid-up share capital of Rs. 1 90 lakhs. The milk supply societies had a membership of 29,519 individuals and a paid-up capital of Rs. 4 lakhs The societies sold milk to the value of Rs. 59·48 lakhs The total value of milk and milk products that reached the consumer

through milk co-operatives amounted to Rs. 82 41 lakhs. The quantity of fluid milk supplied to consumers rose to 30·85 million pounds

IRRIGATION, ELECTRIC POWER

In 1949, out of 31·035 million acres of cultivated land 9 862 million acres were under irrigation, the main sources being Government canals, private channels, tanks, wells, and spring channels The irrigated area, which is widely distributed over the entire State, forms 31 82 per cent of the total cultivated area The State has inherited from very ancient times about 35,000 irrigation tanks some of which were constructed nearly two thousand years ago by the Tamil kings, Chera, Chola and Pandya which was followed up by the Pallavas, Chalukyas and others The P W D of the Madras Government lays much store by these ancient tanks which by gradual silting through the ages have lost much of their original capacity Under the Grow-More-Food drive it is proposed to renovate them Twenty-one middle-sized irrigation schemes that would be completed by 1956 at an estimated cost of Rs 2,739 lakhs are expected to bring under irrigation 488,000 acres. Besides, Government have a major irrigation programme consisting of four schemes These are the Tungabhadra, Lower Bhavani, Krishna-Pennar and Rampadasagar The first two are well under way and their completion is expected in 1952. The other two are under investigation

The Madras Government are by far the largest operators in the field of electricity distribution, controlling about 60 to 70 per cent of distribution The Government electricity system consists of the three hydro-electric plants of Pykara, Mettur and Papanasam and the six thermal plants of Madras, Kakinada, Vijayawada, Vishakapatnam, Cuddapah and Kurnool with a total installed capacity of 194,909 K V A. Besides there are 15 licensees with generating plants with a total installed capacity of 4,385 K V A. In mileage the transmission lines aggregate more than 6,700 miles. And in 1948-49, 576 million units of energy were generated and distributed to 218,000 consumers

In November 1949 the legislature enacted a measure providing for Government acquisition of all undertakings supplying electricity It has been decided to take over the concerns in five batches, the less efficient ones taking precedence The net revenue to Government from the electricity system has been steadily rising. For 1950-51 it is estimated at Rs 158 lakhs The budget allotment for 1950-51 for electricity is Rs 201 lakhs on revenue account and Rs 566 lakhs for capital outlay Among the major projects which have made progress is the Machkund hydro-electric scheme.

INDUSTRIES, MINERALS

The State has a variety of mineral deposits and makes a good contribution to India's export trade in minerals The mineral output is distributed as follows :—Mica 1,654 tons, limestone 356,258 tons, barytes 5,137 tons, China clay 4,424 tons, gypsum 23,251 tons; magnesite 51,673 tons and bauxite 1,368 tons.

Textiles, engineering, sugar, tobacco, matches, oil milling, bricks and tile manufacture are the chief industries Fifty-eight cotton spinning mills were at work in 1948 with 1,585,650 spindles, 22 cotton weaving mills with 7,099 power looms and 45 cotton and power loom factories with 1,521 power looms In one centre alone Coimbatore there are 32 cotton mills. The other textile centres are Mathurai with 14 mills, Ramnad 6 mills and Tirunelveli 5 mills. The only mill in Madras City is one of the biggest in the country employing 14,893 workers The textile industry is still the largest employer of labour in the State with 102,025 people working in it. The number of jute mills at work in 1948 was four In 1947-48 jute manufactures to the value of Rs 9·15 lakhs and raw jute to the value of Rs. 26·41 lakhs were exported to foreign countries. There are a number of match factories run on a cottage industry basis in the districts of Ramnad and Tirunelveli. Madras together with these two districts employs about 5,600 workers There are 212 tanneries employing 8,000 workers, the annual value of the exports of tanned hides and skins to overseas markets being about Rs 11 crores. Five cement factories in the State have a total output of 460,000 tons per year. Two new factories have been sanctioned by the Government of India with a capacity of 200,000 tons There are four perennial and seven seasonal sugar factories employing 4,000 workers

At the end of 1948 there were 647 trade unions One hundred and forty-six strikes took place in 1948 of which 66 related to the textile industry Forty disputes were referred to industrial tribunals for adjudication

COMMUNICATIONS

There are five classes of roads in the State totalling 36,669 miles Of this national highways total 2,784 miles, provincial highways 1,825 miles, major district roads 14,700 miles, other district and village roads 17,360 miles The State has 4,626 miles of railways

The bus transport in Madras City is Government-owned The transfer to public ownership was carried out in stages starting in October 1947 and ending in June 1948 The net revenue to Government from the city bus service up to the end of March 1949 was Rs. 14 59 lakhs. Under private ownership there were only 17 bus routes, but by April 1950 Government were running buses on 45 routes with a daily mileage of 32,000 Government also own and operate eight suburban services and four moffusil services from Madras to Nellore and Tirupati.

The main ports in the State are Madras, Vishakapatnam, Cochin and Tuticorin, the first three being under the administrative control of the Government of India. The aggregate value of the seaborne trade of the State in 1947-48 amounted to Rs 200 25 crores against the previous year's Rs. 170 65 crores Of this imports accounted for Rs. 71 33 crores, exports Rs 64 51 and coastal trade Rs 64 41 crores The value of foreign imports on private account was as follows —

	Rs in lakhs.
Grains, pulses and flour	2,039 59
Machinery and mill work	850·35
Cotton—raw	316 25
Mineral oils	697 72
Drugs and medicines	106 68
Instruments, apparatus, etc	273·69
Manures	200·39
Provisions and oilmanstores	203 94
Spices	68 56
Tobacco	92 13
Dyeing and Tanning substances	74 42
Paper and pasteboard	172 51

The value of private merchandise exported was as follows

	Rs in lakhs.
Tea (black)	717 29
Groundnuts	179 69
Pepper	292 06
Cotton—raw	113 09
Groundnut oil	287 78
Leather	1,258·22
Coir, mats and mattings	171 01
Cashewnut kernels	406 93
Fish	132 30
Tobacco—raw	455 27

BUDGET FOR 1950-51

It was estimated that the year 1949-50 would close with a surplus of Rs 53 13 lakhs In 1950-51 there will be a deficit of Rs 35 98 lakhs, which is about the same as the estimated excess of expenditure over revenue in respect of the merged areas of Pudukkottai, Banganapalle and Sandur If any compensation is received from the Government of India in respect of these areas the deficit will be practically wiped out The deficit has, therefore, been left uncovered by resort to new taxation

Total prohibition has been in full force in the State since October 2, 1948 involving a loss of excise revenue of Rs 16 5 crores

A provision of Rs. 107 lakhs has been made in the 1950-51 budget for the payment of advance compensation to zamindars whose estates were taken over on September 7, 1949 under the Zamindari Abolition Act 1948 The estates are being taken over in batches

Government have decided to replace the present pension system for government servants by a new scheme of combined pension, provident fund and insurance. The aim is to provide for benefits to be paid to the family of an employee who dies while in service

The following table shows the budget position at a glance

(*Figures in thousands of rupees*)

A. REVENUE AND EXPENDITURE ON REVENUE ACCOUNT.

ORISSA STATE

ORISSA was constituted a separate State on April 1, 1936, by the Government of India (Constitution of Orissa) Order, 1936 The new State of Orissa is the result of partial amalgamation of various Oriya-speaking peoples who had till then belonged to three separate States, *viz*, Madras, Bihar and Orissa and Madhya Pradesh

The area of the State with the integrated former States is 59,839 sq miles with a total population of 1,37,67,988 according to the latest available reports The figures of the classification of the population by community are Hindus (excluding Scheduled Castes) 81,99,328, Scheduled Castes 18,57,016, Muslims 1,61,228, Christians (including Anglo-Indians and Europeans) 37,469, Buddhists 1,889, Sikhs 461, Jains 765, Parsees 24, Jews 5 and tribes (including aboriginals) 35,09,458 and others 345

The State of Orissa consists of 13 districts namely Cuttack, Puri, Balasore, Ganjam, Koraput, Mayurbhanj, Phulbani, Dhenkanal, Sundargarh, Sambalpur, Kalahandi, Keonjhar and Bolangirpatna

The Rulers of 24 States handed over their powers, jurisdiction and authority over their respective areas to the Government of India who in turn delegated the powers to administer these States to the State Government on 1st January, 1948 Later the States of Seraikella and Kharswan which were originally integrated with Orissa were transferred to Bihar Before the integration of these States, Orissa was a small unit with scattered areas and limited resources Now 6 more districts with 41 subdivisions have been added and the scattered bits of the State consolidated

On the 1st August 1949 the ex-States areas were completely merged with the old districts thus becoming regular parts of Orissa A new district, Kalahandi was created

The State is divided into two Commissioners' divisions The Commissioners have been given the status of final revenue tribunals in their respective jurisdictions

There are five different categories of officers, in Orissa members of the Indian Civil Service, Indian Administrative Service, Orissa Administrative Service, Subordinate Administrative Service and Stipendiary Magistrates As a result of Constitutional changes which took place in 1947 most of the Indian Civil Service Officers belonging to the Joint Cadre of Bihar and Orissa retired prematurely or opted for Pakistan There are at present only six I C S officers in the state The cadre strength of I A S for this State is fixed at 96 The cadre of the Orissa Administrative Service and subordinate administrative service has been fixed at 227 and 287 respectively Some of the Stipendiary Magistrates have been promoted to Orissa Administrative Service

Consequent on the decision of the Government of India not to include Judicial Posts in the Indian Administrative Service cadre, Government have created a "Superior Judicial Service" to fill up posts of District and Sessions Judges and other similar superior Judicial posts The total strength of The Superior Judicial Service has been fixed at 12 and the members of this service draw the same scales of pay as senior I A S officers Recruitment to this service is made directly from the bar and by promotion of officers of the Orissa Judicial Service.

The Orissa High Court was inaugurated on 26th July 1948 It consist of 3 Puisne Judges besides a Chief Justice

On the 1st April 1949 a separate Public Service Commission for Orissa with two members and a Chairman was also established

To give women a proper place in the public life of the state, Government have now thrown open to women almost all Public Services including the Judicial Service.

The inauguration of the New Constitution has, among other things, brought to the forefront the problem of scheduled tribes and scheduled castes in Orissa The districts of Mayurbhanj, Sundargarh, Koraput and the Ganjam Agencies including Khondmals but excluding the Chokpad Khandam and the Pandakhol Mutha of Surada Mailahs have been declared by an order of the President of the Indian Union to be Scheduled Areas The District of Sambalpur and Angul which were previously described as partially excluded areas under the 1935 Act are under the New Constitution being administered like other areas of the State A Tribes Advisory Council consisting of the majority of the representatives of scheduled tribes is under formation The duty of this council is to advise Government on matters relating to the welfare and advancement of the scheduled tribes

Besides scheduled tribes and scheduled castes there are other backward classes whose numbers have increased with the merger of the Orissa States Lists of backward classes who do not come under the definition of scheduled castes or scheduled tribes has been prepared

POLICE

The police force has steadily grown from year to year over the last four years The Force which consisted of 3,942 officers and men on the 1st January 1946 was increased by 1 275 officers and men and in the reorganisation scheme a permanent Armed Unit called the Orissa Military Police was established On the Intelligence side District Intelligence Bureaus were established in every District An efficient transport service was provided and a central repair workshop established in Cuttack In addition to the Wireless Grid, a Carrier Pigeon Service was organised in each district The serious disorders which overtook many parts of India during the year 1947 necessitated a further expansion of the police force in Orissa Two companies of Railway Protection Police were raised One company was added to the Orissa Military Police, and the armed police in all districts was expanded More officers were also appointed to the District Intelligence Bureau The merger of the States with Orissa in 1948 necessitated still further reorganisation, for there was no uniform system of police administration in the Indian States Thus in 1948 the police force was further increased by 1,486 officers and men as a result of the expansion of the C I D, the Orissa Military Police (1st Battalion), the Wireless Transport Grid, the formation of the Orissa Military Police (2nd Battalion) and the reorganisation of the Police Driving Staff By the end of the year 1949, 3,046 posts of officers and men which were originally sanctioned on a temporary basis were made permanent, bringing the total force to 10,274 Then to implement the scheme drawn up by the Government for the enforcement of Control Orders and general anti-corruption measures a staff of one Inspector and 3 Sub-Inspectors was created under the C I D as early as 1946

EDUCATION

The percentage of literacy in the State of Orissa as per census figures of 1941 is 9.6.

The number of colleges increased from 16 in 1947-48 to 19, in 1948-49 of which 14 were arts colleges, 3 oriental colleges and 2 professional colleges (medical and education) Of the 14 arts colleges 10 are first grade colleges and the remaining four second grade Government maintain 9 Arts Colleges, 2 professional colleges and 2 Oriental colleges The remaining colleges are maintained by private agencies The total number of students in all the colleges on 31st March 1949 was 5,216 including 301 women students.

There were altogether 10,357 recognised schools in the State including ex-States areas on the 31st March 1949 Of them 9,805 were for general education and the rest were special schools The schools for general education include 139 high schools (132 for boys and 7 for girls), 448 Middle Schools (413 for boys and 35 for girls) and 9,218 Primary Schools (8,974 for boys and 244 for girls)

The schools for special education included 30 Training schools, 1 Engineering school, 30 Technical and Industrial schools, 3 Commercial schools, 1 Reformatory school, 1 Deaf and Dumb school, 328 schools for adults and 4 Madrassas, 131 Tols, 1 Gymnasium and 22 Ashram schools. The total number of pupils in all the schools for general education was 4,93,284 including 1,01,461 girls and in special schools 14,911 including 970 girls on the 31st March 1949 The number of unrecognised schools was 1,452 including 4 girls' schools with a total number of 35,803 pupils including 2,364 girls

PUBLIC HEALTH

The Health organisation under local bodies has been provincialised temporarily and its permanent retention with expansion of staff is under consideration of Government Since the integration of the Orissa States which had an area of 27,248 square miles and a population of 49,94,570 an Assistant Director of Public Health has been appointed exclusively to be in charge of Public Health administration of States area Besides this there is one more Assistant Director of Public Health All are attached to the office of the Director of Health and Inspector General of Prisons, Orissa

The State malaria unit with its all-round expansion is continuing in the Public Health Directorate Four new Malaria control units one for each of the Districts of Puri, Balasore, and Ganjam which were functioning during 1948 were abolished Anti mosquito and anti-larval measures are taken effectively and extensively. Steps are also taken for distribution of Anti-Malaria drugs to the rural people The towns of Cuttack, Jajpur and Kendrapara were sprayed with D D T and the results were very encouraging

In order to take timely measures to deal with any epidemic and to reduce the loss of human life to a reducible minimum Government have established Mobile Field Hygiene Units in each District for operation in rural areas Additional temporary health staff are also engaged to control the epidemic as and when situation warrants. A Health Inspectors' Training Class and a Refresher course for Health Inspectors are held to train candidates as Health Inspectors and to keep the Health Inspectors abreast of the up-to-date method of preventive measures respectively. Two qualified Health Inspectors have been appointed to carry out survey and resurvey work on human Nutrition under the direct supervision of an Assistant Director of Public Health

Sufficient quantity of milk powder and Multi-Vitamin tablets are distributed among expectant and nursing mothers through the Maternity Centres and among deserving patients through Hospitals and Public Health Staff in the State

The leprosy staff of the State Leprosy Relief Association has been provincialised from 1st March, 1948 on a permanent basis

Under the auspices of the World Health Organisation an anti-malaria demonstration team is working in Jeypore hill tracts covering an area of 500 square miles with an estimated population of 50,000 A parallel team has been established by the State Government and financial assistance to the extent of one lakh rupees has been given

Under the auspices of the Indian Research Fund Association a research unit has been

established at Cuttack for conducting field trials to ascertain, the efficacy of Hetrazan in the treatment of filariasis

It is proposed to carry out mass B C G Vaccination against tuberculosis under the International Children's Emergency Fund particularly among school children in the first instance in the towns of Cuttack, Sambalpur and Berhampur Necessary personnel for the purpose have been trained.

Sriram Chandra Bhanj Medical College—There was a Medical School at Cuttack started in 1885 which was preparing students for the L.M P Diploma In 1944 the Medical School was converted into a Medical College with a 5 years degree (M B B S) course The College is affiliated to the Utkal University Recently a condensed M B B S course was introduced in the college for affording facilities to the licentiates to qualify themselves for the M B B S degree, so far 36 licentiates have taken the Degree.

A Midwifery Training School at Berhampur has been established. It is now proposed to expand it. The question of establishing a Health School is also under consideration Four students are undergoing Senior Midwifery course at the Dufferin Hospital, Kanpur with a view to their being subsequently trained in the Health Visitors' Course at Delhi Two more students are undergoing health visitors' course at the same hospital

The training of technicians and laboratory assistants has been suspended and instead compoundership and dresserships training has been resumed at the Sriram Chandra Bhanj Medical College Training of *dais* under the auspices of the Victoria Memorial Scholarship Fund has also been started Two new centres have been opened in the added areas at Sundargarh, Bolangir A refresher course has also been organised for practising *dais*.

Government have detailed a number of their officers for advance training in various branches of Medicine to foreign countries, and also to various places in India

An Ayurvedic Institute has been opened at Puri with 30 students on the roll The institute began functioning from July 1949 Necessary staff and equipment for the purpose have been provided

Medical Relief Centres.—There are maternity and child-welfare centres at Cuttack, Berhampur, Bargarh and Russelkonda managed by local committees with Government aid The centre at Sambalpur and Puri have been provincialised Two health visitors were posted to the centres at Puri and Berhampur A nurse midwife was appointed to work as Health visitor at the Maternity and child welfare centre at Cuttack.

All the District Headquarters Hospitals of the State have been taken over by Government Steps have been taken to provide them with efficient and adequate staff, adequate accommodation, X-ray, ambulance and laboratory facilities, air-conditioned operation theatre, properly organised outdoor department, clinics for tuberculosis, venereal diseases, leprosy and properly equipped maternity sections

An infectious diseases Hospital was established at Puri.

A tuberculosis hospital with 25 beds has been opened at Uditnarayanpur in the district of Kalahandi, with the ultimate object of increasing the bed strength to 150 or 200

Orissa has no separate mental hospital of its own but shares the one at Kanke with Bihar and W. Bengal Government have since agreed to the reservation of a set of four beds in the Inter-Provincial Mental Hospital for the better class of patient.

Under the Drugs Act and the rules framed thereunder a Drugs Inspector was appointed in April, 1949

In order to provide integrated health service to industrial workers under the auspices of Social Employees State Insurance Act passed by the Central Government, a survey was undertaken to find what facilities were available for workers. The survey report is under the consideration of the Government.

A number of improvements were effected on the Sriram Chandra Bhanj Medical College and Hospital by way of addition to the staff, buildings and equipment The Provincialisation of District Headquarters Hospitals and Sub-divisional Hospitals was completed The question of Provincialisation of some of the outlying hospitals in the State was taken under consideration Fifteen new allopathic dispensaries and 20 Ayurvedic dispensaries were opened during the year and the Ayurvedic Pharmacy at Bolangir was brought under the control of Government

Substantial grants were made available for the control of leprosy, venereal disease, yaws, etc Two mobile units were established at Sundargarh and Keonjhar in order to tackle the problem of yaws in the merged areas and three anti-yaws centres were opened

The staff of the Medical Directorate was increased by the appointment of two more Personal Assistants, a Special Officer for Ayurveda and a Drugs Inspector Consequent on the integration of Mayurbhanj State, and general expansion of medical relief, the number of medical institutions in the State rose to 407 of which 58 were Ayurvedic

The various provisions of the Dentist Pharmacy Acts were put into force and the registration of practitioners was taken up

LOCAL SELF-GOVERNMENT

There are six District Boards and eight Municipalities in the old Districts of the State Except Baripada and Bolangir Municipalities there are no local self-government institutions in the Ex-State areas

Local self-government in the State has not yet a uniform pattern everywhere, three northern coastal districts for instance follow the Bihar and Orissa laws In south Orissa districts the Madras Laws, and in the western district of Sambalpur, the Sambalpur L S G Act, 1939 and Bihar and Orissa Municipal Act, 1922 are in force This lack of uniformity has resulted in a great deal of confusion in the sphere of local self-government Plans are however included in the post-war five-year programme to remodel and improve the general condition of the local bodies and unify the L S G. Laws.

The Orissa Gram Panchayat Act has been passed A unified and consolidated local Government Bill for the whole State was introduced recently in the Legislative Assembly A public Health Act, unified Municipal Act, Town Improvement Act for Orissa are under consideration It is also proposed to control the practice of Homeopathic and Ayurvedic system of treatment by legislation.

IRRIGATION AND PUBLIC WORKS

More than half of the Orissa coastal plains is formed by the combined deltas of the rivers Mahanadi, Brahmini and Baitarani, with their numerous branches and this area is partly exposed to damage through floods which are frequent. A flood protection policy has been carefully worked out by Government and is being gradually implemented. Orissa inherited a canal system, constructed in the latter half of the nineteenth century by a private company for combined navigation and irrigation purposes. The demand for water for cultivation is not so great as was anticipated at the time and the canal system has a very slight margin of profit now that the capital debt has been taken over by the Government of India From the point of view of national food resources and famine insurance, however, it is most important.

Under the Grow More Food scheme many small irrigation projects have been put through in the State with partial financial assistance from the Centre.

In the post-war five-year plan an ambitious scheme has been prepared for a multi-purpose reservoir on the Mahanadi river at Hirakud near Sambalpur. This reservoir will control excess flooding in the Mahanadi delta, provide electric power and also be used for the irrigation of a considerable area. Further projects on the control and utilization of the Mahanadi river on the model of the Tennessee Valley Authority are the two multi-purpose reservoirs further downstream

Hirakud Dam near Sambalpur is expected to cost about Rs 47·81 crores, work has been started and will be carried out by C.W.I.N.C (on behalf of Orissa Government).

The new capital of Orissa is being constructed near the historic town of Bhubaneswar at an estimated cost of Rs 5.4 crores Dr C H Koenigsberger, a well known architect and town-planner, has prepared a master plan and the erection of buildings, the construction of roads, etc , is well in hand The Public Works Department (Buildings & Roads), Secretariat moved to the new capital in June 1949 and it is expected that more offices would move during 1950

The new Capital will be connected to Cuttack by means of bridges over Kathjuri and Kuakhai rivers These bridges are already under construction

AGRICULTURE

Agriculture is the main occupation of the people The Director of Agriculture and Food Production is the head of the Department He is assisted on the Food Production side by three Agricultural Engineers including one Drilling Engineer, one Biochemist, an Assistant Director of Agriculture for multiplication of improved seeds, a Fruit Development Officer, and a Fruit Technologist attached to the Headquarters office and District Food Production officers in the Districts. These officers attend to the subsidised distribution of seeds and manure, including hiring out of improved agricultural machines and implements to cultivators and sinking of tube-wells and also to general propaganda work. A staff of one Overseer or Sub-overseer and two fieldmen is maintained at every Police Station.

To attain self-sufficiency in food by the end of 1951 a food sub-committee of the Cabinet has been set up with the Minister for Development as chairman, and the Chief Minister, the Minister for Revenue and the Minister for Works as members The Food Commissioner is ex-officio Member and Secretary, Development Department, is Secretary Government have drawn up an intensive Cultivation Scheme on war emergency footing to achieve the target The Food Commissioner is vested with full powers to control and co-ordinate the activities of the Collectors who are in direct charge of the execution of the scheme, as well as the activities of all Heads of Departments such as the Director of Agriculture and Food Production, the Director of Animal Husbandry and Veterinary Services, the Director of Fisheries, the Chief Engineer, in charge of Irrigation and the Director of Public Relations in so far as their activities relate to food production To start with an area of 5 lakh acres of land of compact blocks in 66 thanas and 25 sub-divisions has been selected. All measures of agricultural improvements are for the present concentrated in these intensive cultivation blocks

Provision has been made in the current budget for starting major and minor irrigation works throughout the State The execution of minor irrigation schemes normally costing less than Rs 25,000 have been entrusted to the Revenue Commissioner and the Commissioner, Northern Division, within their respective jurisdictions. The execution of major irrigation schemes has been entrusted to the Chief Engineer (Irrigation). For educating and instructing the cultivators in the most up-to-date and scientific methods of

agriculture and for ensuring the co-operation of the cultivators in the execution of the various food production schemes, provision has been made for the setting up of an Agriculture Extension Service This new branch is designed to organize the farmers so that they will work in close collaboration with the departmental agencies.

The following measures have also been taken to promote food production Reclamation of waste lands through Government agency at Sukinda by tractors, Grant of bonus to cultivators for the reclamation of their fallow lands, Hiring out of tractors to private parties, Extension of double and tripple cropped areas by means of lift irrigation, Dramage of lands, Mechanised cultivation of reclaimed lands, Use of improved seeds, Supply of sufficient manures, Maintenances of improved agricultural implements by Government, for supply to cultivators on sale and hire, Protection of crops and grains, Control of pests and diseases, Extermination of monkeys

With a view to improving the economic condition of the agricultural tribes in the Agencies 2 model agricultural farms have been started, and a vegetable seed farm is being maintained To associate the tillers of the soil with the official organisation of the Department, Krushi Samities have been started in the areas selected for intensive cultivation.

INDUSTRIES

The State Government aim at the development of large scale industries by the promotion of Joint Stock Companies, and the development of small scale cottage industries through encouragement of co-operative societies

Out of the four textile mills allotted to Orissa only one has just gone into production while the rest are still under construction Another unit which was allotted to Mayurbhanj has purchased some machinery and part of the factory building has been constructed

Only one vegetable oil plant unit has been allotted to Orissa and it has already started production Steps are being taken to instal a cement factory, which is likely to go into production in 1951 Another plant which is being set up is for the manufacture of refrigerators A Cold Storage Plant has been installed at Cuttack which started working from the middle of March 1950.

The Textile Marketing Organisation which aims at the development of handloom industries in Orissa continues to work satisfactorily The *Khadi* scheme is making good progress, and production is on the increase.

Since the scheme for the development of handspinning and weaving of Khadi was put into effect in 1948, a total quantity of 1,052 maunds of yarn and 771 maunds of Khadi were produced up to 1949 December both at the departmental centres and the subsidised co-operative societies

Goods including yarn, cloth and spinning implements amounting in value to Rs 2,60,000 have been sold to the public during the period mentioned above.

Hides are being collected through departmental agencies in Boudh, Sonepur, Bolangir, Kalahandi and Angul to give the maximum benefit to producers by eliminating middlemen And to improve their quality better methods of preservation are adopted. A demonstration tannery is run at Boudh to train the people in bark-tanning Manufacture of bonemeal, meatmeal, tallow and glue, etc, on a small scale is also carried on by the Department.

Manufacture of utility articles, wooden and cane furniture, mats and baskets, clay-made toys, stone carving filigree work, horn work, upholstery, needle work, etc., are being organised through private agencies and technical and financial help is being given where necessary

The total mileage of roads in the State maintained by the Public Works Department is 3383-5-67 of which 2200-0-411 are metalled and 1183-4-316 unmetalled The open mileage of Railway in the State is 818 24 miles of which 714 25 miles are broad gauge and 103.99 miles are narrow.

Almost all the electrical projects are being financed from loan money The main Hirakud Project is financed by means of a loan from the Government of India The State Budget provides for a sum of Rs 3¼ crores for this project and the Government of India will sanction a corresponding sum as loan to the State Government in 1951 This project does not provide for distribution and transmission by 33 K V and 11 K V lines It has been found necessary to construct a new project for distribution lines at 11 K V and 33 K V sub-stations which would provide power to various industries licensees, rural areas and for domestic purposes also For this again a provision of Rs 5,00,000 has been made in the 1951 budget, and this sum will also be met from loan money.

1950-51 BUDGET

To eliminate unnecessary and wasteful expenditure and to cut down as far as possible expenditure likely to add to inflation Government undertook an economy drive in October 1949 All Government expenditure such as expenditure on staff, travelling allowances, contingencies, etc, are now more strictly controlled It is estimated economy measures may produce a saving of Rs 7,52,151 during 1949-50 and Rs 24,51,667 during 1950-51

During recent years Government have undertaken various Commercial and quasi-Commercial undertakings which require a trained body of financial advisers and Audit and Accounts Officers for their successful working All these considerations have led Government to create a separate State and subordinate services, namely the Orissa Financial Service and the Subordinate Finance Service

The main sources of Revenue in the State and integrated areas are —

(Figures in Lakhs of Rupees)

Taxes on income other than Corporation Tax	1,55 48
Land Revenue	1,13 66
Excise	1,69 25
Stamps	45 76
Forest	89 36
Other Taxes and Duties	87 06
Miscellaneous Departments	20 96
Civil Works	52 51
Subvention from the Centre	40 00
Extraordinary Receipts	2,21 38

The revenue of the State shown under "Extraordinary Receipts" includes a grant of Rs 60,14 lakhs from the Government of India in connection with the Intensive Cultivation Schemes and further grant of Rs 25,90 lakhs anticipated for Rural Welfare Schemes, Rs 1,35,00 lakhs represent the assets of the merged States taken over

Receipts other than Revenue Receipts of the State are estimated to be Rs 30,44,01 lakhs including a loan of Rs 5,36,35 lakhs from the Central Government for Hirakud Dam and general development projects This together with the opening balance of Rs 88,25 lakhs makes up a total of Rs 41,98,05 lakhs for budget purpose.

The total expenditure charged to revenue is estimated at Rs. 11,42 lakhs. The main items of expenditure are as follows .—

(Figures in Lakhs of Rupees)

Land Revenue	19 93
Excise	18.30
Forest	34.22
Appropriation for reduction or avoidance of debt	10 32
General Administration	1,09 11
Justice	21.21
Jails	18 93
Police	1,35 61
Education	1,51 75
Medical	51 01
Public Health	17.04
Agriculture	79 45
Veterinary	20 68
Industries	31 31
Miscellaneous Departments	34 57
Civil Works	2,04 70
Territorial and political pension	23.27
Pensions	18 80

The total expenditure not charged to Revenue is estimated at Rs 30,20 lakhs

The Budget estimate for 1950-51 reveals a revenue deficit of Rs 75 95 lakhs

ADMINISTRATION

Governor —His Excellency M Asaf Ali, Barrister-at-Law

Secretary to His Excellency the Governor — Bhabagrahi Misra

Aide-de-Camp —Captain N Mahanti, B A.

Chief Minister and Minister for Finance, Agriculture, Forestry, Local Self-Government, Co-operation, Excise and Relief and Rehabilitation —Hon'ble Sri Nabakrishna Chaudhury.

Minister for Law, Home Affairs, Industries, River Valley Development and Planning.— Hon'ble Sri Nityananda Kanungo

Minister for Education and Health.—Hon'ble Sri Lingaraj Misra

Minister for Tribal and Rural Welfare —Hon'ble Sri Lall Ranjit Singh Barlah

Minister for Revenue, Supply and Transport — Hon'ble Sri Sadasiva Tripathi

Minister for Roads and Buildings, Irrigation, Drainage and Electricity —Hon'ble Sri Rajkrishna Bose

Minister for Commerce, Labour and Public Relations —Pabitra Mohan Pradhan

Adviser for Orissa States —D V Rege, Bar-at-Law, I C S

SECRETARIES.

Chief Secretary (Home and Finance) —B. Mukherji, I C S

PUNJAB STATE

THE Punjab is situated in the north-west of the Indian Union It is in fact the Union's frontier State Created in the middle of August 1947 it came into being as a result of the partition of the Punjab The old Punjab was the land of the five rivers Punjab (India) is the land of the two rivers, Sutlej and Beas

BOUNDARIES

On the north, the boundary starts at the point where the west branch of the Ujh river enters the Punjab State from the State of Kashmir The boundary follows the line of that river down the western boundary of Pathankot tehsil to the point where the Pathankot, Shakargarh and Gurdaspur tehsils meet. From this junction of the three tehsils, the boundary follows the line of the Ujh river to its junction with the river Ravi and therefore in line of the river Ravi along the boundary between the tehsils of Batala and Shakargarh, the boundary between the tehsils of Batala and Narowal, the boundary between the tehsils of Ajnala and Narowal and boundary between the tehsils of Ajnala and Shahdara to the point on the river Ravi, where the district of Amritsar is divided from Lahore

From this point the boundary turns southwards following the boundary between the tehsils of Ajnala and Lahore and then the tehsils of Tarn Taran and Lahore to the point where the tehsils of Kasur, Lahore and Tarn Taran meet. The line then turn south-westward along with the boundary between the tehsils of Lahore and Kasur to the point where that boundary meets the north-east corner of village Theh Jharolian. It then runs along the eastern boundary of that village to its junction with village Chatianwala, turns along the northern boundary of that village and then runs down its eastern boundary to its junction with village Waigal It then runs along the eastern boundary of village Waigal to its junction with village Kalia and then along the southern boundary of village Waigal to its junction with village Panhuwan The boundary then runs down the eastern boundary of village Panhuwan to its junction with a village Gaddoke The line then runs down the eastern border of villages Gaddoke, Katluni Kalan, to its junction with villages Kals and Mastgarh

It then runs along the southern boundary of Katuli Kalan and then western boundary of village Kals to its junction with village Khem Karan The line then runs along the western and southern boundaries of village Khem Karan to its junction with village Maewala It then runs down the western and southern boundaries of village Mahewala proceeding eastward along the boundaries between village Mahaidpur on the north and villages Sheikhupura Kuhua, Kamalpuran, Fatehwala and Mahewala. The line then turns northward along the western boundary of village Sajhra to its junction with villages Mahaidpur and Machhike. It then turns north-westward along the boundaries between villages Machhike and Sajhra and then proceeds along the boundary between villages Ratoke and Sajhra to the junction between villages Ratoke, Sajhra and Mabbuke. The line then runs north-east between the villages Ratoke and Mabbuke to the junction of villages Ratoke, Mabbuke and Gajjal. From that point the line runs along the boundary between villages

Mabbuke and Gajjal, and then turns south along the eastern boundary of village Mabbuke to its junction with villages Nagar Aimanpur It then turns along the north-eastern boundary of village Nagar Aimanpur and runs along its eastern boundary to its junction with village Masteke From there it runs along the eastern boundary of village Masteke where it meets the boundary between the tehsil of Kasur and Ferozepore.

The line then runs in a south-westerly direction down the Sutlej river on the boundary between the districts of Lahore and Ferozepore to the point where the districts of Ferozepore, Lahore and Montgomery meet It continues along the boundary between the districts of Ferozepore and Montgomery to the point where this boundary meets the border of Bahawalpur State. The district boundaries and not the actual course of the Sutlej river in each case constitutes the boundary between the two Punjabs

The Punjab State is bounded on the north by the State of Kashmir In the east it extends as far as the river Jamna In the south it is bounded by Rajasthan.

Punjab now includes Jullundur and Ambala Divisions and the Amritsar District of Lahore Division and part of Gurdaspur and Lahore Districts Altogether it contains 13 districts as compared with 29 in the old undivided Punjab The names of the Districts are (in the Ambala Division) as follows · Hissar, Rohtak, Gurgaon, Karnal, Ambala and Simla, and in the Jullundur Division, Kangra, Hoshiarpur, Jullundur, Ludhiana, Ferozepur, Amritsar, Gurdaspur (excluding Shakargarh Tehsil) and certain portions of Kasur Tehsil have also been allotted to Punjab

The territory is not homogeneous In the north-east lie the hill ranges of Shivalak and the Kangra Valley The Jullundur division contains rich alluvial soil while parts of Ambala Division or Hariana Prant are dry and waterless tracts Linguistically too the State is not homogeneous Punjabi, Western Hindi, Pahari and Rajasthani are all spoken in the different parts of the State

The total area of Punjab is about 36,020 sq miles and the total population according to the 1941 census figures is 12,409,924 These figures do not, of course, take into account the recent migrations between the two Punjabs Broadly speaking, however, as many Muslims have left Punjab (India) as non-Muslims have come in, so that on balance the relative population remains unchanged

The main languages of the State are, as already mentioned, Punjabi and Western Hindi, that is to say, Hindustani with an accent Punjabi is spoken in the whole of the Jullundur Division and part of Ambala District while Western Hindi is the chief language in the Ambala Division Two minor languages are 'Eastern Pahari' spoken in the hill tracts of Gurdaspur, Kangra and Simla and Rajasthani spoken in the western parts of Hissar District bordering on Rajputana All States in Punjab (India) have acceded to the Indian Union, and have merged together to form the Patiala and East Punjab States Union Some States have merged into the Punjab State.

The thirteen districts of Punjab offer tremendous possibilities of development. It has been estimated that in the field of agriculture the famine-stricken areas of Rohtak, Hissar and Gurgaon will be turned into thriving and flourishing canal colonies with the construction of the Bhakra Dam at Bhakra on the Sutlej in Bilaspur (now a Chief Commissioner's State) In addition to irrigation, the project will also generate electric power. The Bhakra and Nangal schemes will open up the south-east parts of the State and provide scope for new industries.

A word about the capital of the new State will not be out of place here The provisional capital is, of course, Jullundur The permanent capital, however, it has been decided, will be located in the sub-mountainous area between Rupar and Chandigarh

The selected site is about 20 miles from Ambala Cantonment on the south of the road which connects Panchkoola with Kharar a tehsil headquarters

The nearest railway station is Chandigarh, at a distance of three miles on the Ambala-Kalka section of the East Punjab railway.

According to an expert engineer, the completion of the capital will take about three years.

The climate of Punjab is one of extremes The rainfall in most districts ranges from 15 inches to 25 inches and it is usually sufficient for cultivation without recourse to artificial irrigation But in the greater part of Ambala Division the margin is so small that except where artificial means exist any material reduction in rainfall means famine.

AGRICULTURE

With the exchange of population, it is not possible to state what percentage of the population depends on Agriculture Similarly the position regarding the ownership, etc, of the land cannot be indicated unless definite decision is arrived at about the lands vacated by Muslims The area preserved as forest land in the hills and elsewhere has been reduced to a large extent, being about 7 5 lakh acres

Despite many changes due to partition, agriculture continues to be the staple industry of the State, affording the main means of subsistance to a large proportion of the population Of the crops grown, wheat is the most important so far as production is concerned Next in importance to wheat in the matter of total yield is gram

According to village papers, the total area in the Punjab in the year 1947-48 was 22,963,800 acres, and its classification under various heads was as follows —

	Acres
Forests	769,400
Not available for cultivation	6,166,400
Other uncultivated lands excluding current fallows	2,424,000
Current fallows	1,782,700
Net area sown during the year	11,910,000

The total area of crop sown in the State was 13,740,200 acres (irrigated 4,310,100 and unirrigated 9,429,800) acres The area and outturn of principal crops was as shown below —

	Area in acres	Outturn in tons.
Rice	377,600	152,700
Wheat	2,506,100	816,200
Barley	396,500	110,500
Jowar	453,300	54,300
Bajra	1,683,700	196,700
Maize	802,100	258,000
Gram	3,416,100	818,400
Rabi Oil Seeds	429,700	56,000
Sugarcane	389,200	410,400
Cotton Cleaned—		
Desi	243,900	50,600 (in bales)
American	39,800	7,700 (in bales)

The area irrigated by various sources was as follows —

Government canals 2,369,100, private canals 836,400, tanks 5,000, wells 1,561,000 and other sources 16,400 acres

The development of irrigation on the completion of Bhakhra Dam is expected to lead to a great expansion of the area under wheat Other important crops are bajra, maize, barley, rice, jowar, oil-seeds (sarson, taramira, toria, groundnut and sesamum) cotton and sugarcane The short staple indigenous varieties predominate in the State the American cotton covering only about 1/3rd of the total area under cotton

LAND TENURE

The great mass of the landed property in the Punjab is held by small proprietors, who cultivate their own land in whole or part The chief characteristic of the tenure generally is, that these proprietors are associated together in village communities, having, to a greater or lesser extent, joint interest, and under the present system of cash payments, limited so as to secure a certain profit to the proprietors, jointly responsible for the payment of the revenue assessed upon the village lands It is almost an invariable incident of the tenure, that if any of the proprietors wishes to sell his rights, or is obliged to part with them in order to satisfy demands upon him, the other members of the same community have a preferential right to purchase them at the same price as could be obtained from outsiders

2 In those communities with partial or entire separation of proprietary title, the measure of the rights and liabilities of the proprietors vary very much It sometimes depends solely upon original acquisition and the operation of the laws of inheritance, in other cases definite shares in the land of a village or sub-division, different from these which would result from the law of inheritance, have been established by custom, in yet other cases, reference is made not to shares in lands, but to shares in a well or other source of irrigation, and there are also many cases in which no specified shares are acknowledged but the area in the separate possession of each proprietor is the sole measure of his interest.

3 In the Simla hills and in the more mountainous portions of Kangra district the present village communities consist of numerous small hamlets, each with its own group of fields and separate lands, and which had no bond of union until they were united for administrative purposes at the time of the Land Revenue Settlement

4 In some cases the village communities, while holding and managing the land as proprietors, are bound to pay a quit rent to superior proprietors under whom they hold The Settlement is made according to circumstances, either with the superior proprietor, who collects the Government revenue as well as his quit rent from the communities, or with the communities in actual possession of the land, who pay the land revenue to Government and the quit rent to the superior proprietor In either case the amount which the superior proprietor is entitled to collect is determined at Settlement as well as the amount of land Revenue demand

5 There are sometimes also proprietors holding lands within the estates of village communities, but who are not members of the communities, and are not entitled to share in the common profit nor liable for anything more than the revenue of their own lands They are called "Malikan Qabza" They pay village charges as well as quit rent if any to the proprietary body of the village The most common examples of this class are the holders of plots at present or formerly revenue free, in which the assignees were allowed to get proprietary possession in consequence of having planted gardens or made other improvements or because they had other claims to consideration in the part of the village community.

The official classification of village tenure is as below :—

(1) Zamindari	(*a*)	Landlord (Khalis or Wahid).
	(*b*)	Communal (Mushtarka)
(2) Pattidari	(*a*)	Perfect (Mukamil).
	(*b*)	Imperfect (Ghair Mukamil).
(3) Bhaichara	(*a*)	Perfect (Mukamil)
	(*b*)	Imperfect (Na-Mukamil)

The State being preponderantly agricultural, a considerable proportion of the wealth of the people lies in livestock Large profits are derived from the cattle and dairy trades and wool is a staple product in Kangra district and throughout the plains generally Though the trade in hides and skins has a bright future, for the State as a whole the industry is not likely to flourish in the new set-up

INDUSTRY

The industrial economy of the Punjab is well on its way to recovery after the collapse suffered due to partition There is a steady improvement in the production of the old concerns and appreciable progress is also being made in the establishment of new factories in the new industrial areas which are springing up at Faridabad, Bahadurgarh, Sonepat, Panipat, Rohtak, Jagadhari, Khanna, Ludhiana Money conditions continue to be difficult but the position in respect of transport and labour has somewhat eased The number of registered factories went up to 715 in 1948, though the number of workers fell from 37,486 in 1947 to 36,625 in 1948 The decrease was due to the shifting of the Government Ordnance Factory out of the Punjab. Over 50 per cent of the registered factories and 60 per cent of their workers are concentrated in the border districts of Amritsar, Gurdaspur and Ferozepore

There is a relatively small number of large scale factories in the State But the New Egerton Woollen Mill, Dhariwal, the Shri Gopal Paper Mills, Abdullapur and the Saraswati Sugar Mills, Jagadhari take rank among the country's outstanding units. The Batala Engineering Co , which is one of the best equipped concerns in India for the manufacture of machine tools, agricultural implements and certain precision instruments is closed owing to disorganisation resulting from the partition. Other industrial concerns of note in the State are cotton, woollen and silk textile mills, embroidery mills, absorbent cotton and antiseptic dressing factories, glass and carpet factories and chemical factories at Amritsar, metal and foundries at Batala and Jullundur, a starch factory at Abdullapur, factories manufacturing nuts and bolts at Jullundur and Ludhiana, steel rolling mills at Amritsar, Khanna, Ludhiana and Karnal, tanneries and engineering workshops at Jullundur, fruit preservation factories at Pathankot and factories for the manufacture of scientific apparatus at Ambala and Amritsar.

Ludhiana which is the centre of hosiery industry in the Punjab occupies a premier position in this industry in the whole of India The sports goods industry at Sialkot (now in Pakistan) which has won world wide fame is being re-established at Jullundur.

The small scale and cottage industries in the State are quite numerous and varied Handloom weaving ranks foremost in importance among these industries but lately a depression has set in this industry. The most notable among the other cottage industries are the manufacture of blankets and rugs at Panipat, utensil making at Rewari and Jagadhari, hosiery and cycle parts industries at Ludhiana and tanning and wood working in Jullundur and Hoshiarpur. The sericulture industry is expanding gradually and a large number of agriculturists in the submontane districts are increasingly taking to it. The artistic products of the Punjab, *e g*, the ivory work of Amritsar and lacquer work of Hoshiarpur is marked by the distinctive genius of the State in craftsmanship and skill Gold and silver workers are found all over the State

HEALTH SERVICES

The Medical and the Public Health Department in the Punjab have been amalgamated into one integrated unit which is now termed as the "Punjab Health Department". It is under the unified control of the Director, Health Services, who is assisted by two Deputies *viz*., one for the Health side and the other for the Medical side In the Head Office, an Assistant Director (Planning) and a non-technical Personal Assistant are employed in addition.

The Health personnel responsible for the prevention of disease and for the carrying out of measures designed to improve the health of the people in each district, one District Medical Officer of Health with 4 Sanitary Inspectors, 1 Superintendent Vaccination and 16 Vaccinators beside whole-time Municipal Medical Officers of Health employed by Municipal Committees at 8 towns The District Medical Officers of Health are also responsible for seeing that the rules laid down for the health of factory workers are observed The staff under the District Medical Officer of Health is reinforced as required to meet emergencies from Public Health Corps which are concerned primarily with the control of epidemic diseases and sanitation of villages In addition to the above there exists for each of the 12 Districts excluding Simla an Anti-Malaria Organization, under the supervision of Malariologist-cum-Entomologist to Government

The problems of nutrition, hookworm disease, goitre, leprosy, tuberculosis and venereal diseases are also effectively tackled.

Suitable measures are undertaken to enforce the Punjab Pure Food Act for which purpose Government Food Inspectors are appointed in addition to those employed by Local Bodies There exist about 65 Maternity and Child Welfare Centres throughout the State under the charge of fully trained Lady Health Visitors who attend to anti-natal and post-natal cases and train indigenous dais and supervise their work These centres are controlled by an Inspectress, Health Centres

For curative measures about 470 Hospitals and dispensaries are provided in the State including Maternity Hospitals, Tuberculosis Hospitals and Sanatoriums and various hospitals and Sections under the charge of women doctors Some of these hospitals provide all modern facilities for diagnosis and treatment according to the latest methods, *e g*, X-Ray, laboratory, radium treatment, etc Hospitals at District and Tehsil Headquarters are being provincialised and modernised in order to bring them up to the standard obtaining in progressive countries by increasing hospital accommodation, augmenting staff and supplying additional equipment and modern facilities Dental clinics for the treatment of persons suffering from dental diseases are also provided at selected District Headquarter Hospitals In addition to the above there exists a Mental Hospital at Amritsar for the treatment of patients suffering from mental diseases.

There are one Medical College and two Medical Schools in this State for the training of both men and women students for the M B B S. degree of the Punjab University which is recognized by the Medical Council of India and L.M.S , and L S.M F. diplomas of the Punjab State Medical Faculty, with up-to-date hospitals attached which form practical training ground for students. Facilities are also provided for post-graduate training at the Medical College, Amritsar, for diploma in tubercular diseases, and diploma in ophthalmology. The classes for B Pharmacy Degree of the Punjab University and for dispenser-dressers diploma are also held at the Medical College, Amritsar Arrangements for research also exist at the Medical College, Amritsar and a well-equipped bacteriological laboratory is provided for the examination of pathological and bacteriological specimens and preparation of vaccines. A chemical laboratory exists at Kasauli for the examination of medico-legal exhibits, samples of water, articles of food, etc , besides a food and drugs laboratory at Ambala which examine samples of foods seized by food inspectors and of drugs by drug inspectors under the Punjab Pure Food Act and the Drugs Act, 1940

Arrangements are in progress for the establishment of a vaccine institute to manufacture vaccine lymph.

EDUCATION

As a result of partition education in this State received a severe set-back , but now all the institutions are functioning normally Some of the disrupted institutions have re-established themselves and quite a number of new institutions have been opened

University classes in the Honours Schools in Physics and Chemistry as also M A in English have been started in the Government College, Hoshiarpur and additional facilities for the teaching of Science have been provided in some of the other colleges

The majority of educational institutions are still under private control

Government maintains 7 Arts colleges including 2 for women, 2 Training Colleges, one for men and the other for women, 2 Normal Schools for men and 4 for women, 73 Secondary Schools for boys and girls and many centres for vocational training There is one first grade Medical College and in addition there are 33 technical and Industrial schools for boys and girls

The Department of Education is under the charge of the Hon'ble Minister of Education, who is assisted in the work of administration by the Director of Public Instruction who is also Secretary to Government, Education Department

POLICE

The Police force is divided into District Police Railway Police, Criminal Investigation Department and Provincial Armed Police. The combined force is under the control of the Inspector-General, who is a member of the gazetted force has under him two Deputy Inspectors-General in charge of ranges comprising several districts The Criminal Investigation Department is controlled by the Deputy Inspector-General, who is also in charge of the Finger Print Bureau at Phillaur There is a Police Training School at Phillaur in charge of a Principal of the rank of Superintendent of Police The Railway Police is under an Assistant Inspector-General The Provincial Armed Police is controlled by a Commandant The District Police are controlled by Superintendents each of whom is in charge of a district and has under him one or more Assistant Superintendents or Deputy Superintendents

As a security measure a Punjab Volunteer Corps has also been created It is under the control of a Provincial Commandant

JUSTICE

The administration of Justice is entrusted to a High Court, which is the highest court in the Punjab and Delhi in civil cases, final appellate authority in criminal cases and orginal civil jurisdiction in special cases.

The Court sits at Simla and is composed of a Chief Justice, six Puisne Judges (either Civilians or Barristers or Advocates). Subordinate to the High Court are the District and Sessions Judges (10 in number) each of whom exercises civil and criminal jurisdiction in a civil and session division comprising one or more districts.

GOVERNMENT

Prior to the amendment of the Government of India Act in 1919 the head of the administration then covering both the Punjabs, was a Lieutenant-Governor, drawn from the ranks of the Indian Civil Service Under the Act of 1919 the province was raised to the status of a Governorship, with an Executive Council and Ministers, the Governor-in-Council being in charge of the Reserved Subjects and the Governor with his Ministers of the Transferred Subjects. With the introduction of part III of the Government of India Act, 1935, this Executive Council was substituted by a Council of Ministers and the Legislative Council by an enlarged Legislative Assembly with wide powers of legislation and control With the passing of the Indian Independence Act of 1947, the Province was partitioned and thus th new State of Punjab (India) came into existence

The business of Government as before is carried on through the usual Secretariat which consists of five Secretaries, designated (1) Chief, (2) Home, (3) Finance, (4) Medical and Local Government and Industries and (5) Civil Supply Department, four Under-Secretaries, and Assistant Secretaries. In the Public Works Department, there are five Chief Engineers two in the Buildings and Roads Branch, one in the Electricity Branch and two in the Irrigation Branch while the Legal Remembrancer is also the Secretary to Government in the Legislative Department The head of the Police Department is Joint Secretary and of the Education Department a Secretary to Government Under the Governor the province is administered by two Commissioners for Jullundur and Ambala divisions, who exercise general control over the 13 Deputy Commissioners in districts.

The principal heads of Department in the State are given below.

ADMINISTRATION

GOVERNOR, H E SIR CHANDULAL MADHAVLAL TRIVEDI, KCSI, CIE, OBE, ICS

PERSONAL STAFF

Private Secretary, S. Jaswant Singh Banu, IAS

Military Secretary, Major P S Mehta

Aide-de-Camp, Captain Laxman Sharma

COUNCIL OF MINISTERS

Chief Minister, General Administration (including Publicity), Law and Order (including Jails and Justice), Finance and Irrigation—The Hon'ble Dr Gopi Chand Bhargava

Local Self Government, Labour (including Stationery and Printing), Excise and Taxation—The Hon'ble Shri Prithvi Singh Azad

Development (Forests, Agriculture, Veterinary and Co-operative Societies), Civil Supplies and Industries—The Hon'ble Sardar Isher Singh Majhail

Rehabilitation, Medical and Public Health—The Hon'ble Dr Lehna Singh Sethi

Land Revenue (including Consolidation of Holdings), Education and Transport—The Hon'ble Giani Kartar Singh.

Public Works Department (Buildings and Roads and Public Health Engineering) and Electricity—The Hon'ble Captain Ranjit Singh

CIVIL SECRETARIAT

Chief Secretary—M. R Sachdev, ICS.

Secretary, Health and Local Government Departments—P M Ismail, ICS

Secretary, Civil Supplies Department—M R Sachdev, I.C.S.

Secretary, Finance Department—K S Malhotra, IA & AS

Home Secretary– Vishan Bhagwan.

Additional Secretary, Civil Supplies Department—Sant Ram Verma, IAS

Financial Commissioner, Revenue and Development Departments—P K Kaul, ICS

Financial Commissioner, Refugees & Rehabilitation Departments—P. N Thapa, CIE, ICS

PUBLIC WORKS DEPARTMENT

Irrigation Branch

Secretary- -(*Canals*), R B Shri Gita Ram Garg

Secretary—(*Projects*), S B Sarder Sarup Singh.

Buildings and Roads Branch

Secretary—(1) R B Brij Mohan Lal, ISE.

Secretary—(2) P L Varma, ISE

MISCELLANEOUS DEPARTMENTS

Director of Agriculture—S B S Lal Singh

Director of Land Records—Pandit Lakshmi Chander Vashishta, PCS

Director of Public Instruction—Dr K C. Khanna, PTS (I)

Inspector-General of Police—S Sant Parkash Singh, IP.

Chief Conservator of Forests—J Singh, MBE., IFS

Director of Health Services—Lt -Col P C Dutta

Inspector-General of Prisons—R B. B P. Katoch

Accountant-General—R C Khanna.

Post Master-General—Lt.-Col G G E. Combes

PUBLIC SERVICES COMMISSION

Chairman—Ram Chandra, I.C.S.

Members—S. S. Sant Singh, P.C.S., Ch. Bharat Singh, B.A., LL.B.

GOVERNORS OF THE PUNJAB

Sir Edward Maclagan, K.C.I.E., C.S.I. ..	1920
Sir Malcolm Hailey, K.C.S.I., C.I.E. ..	1924
Sir Geoffrey de Montmorency, G.C.I.E., K.C.S.I., K.C.V.O., C.B.E.	1928
Sir Herbert William Emerson, G.C.I.E., K.C.S.I., C.I.E., C.B.E., I.C.S.	1933
Sir Henry Duffield Craik, Bart., G.C.I.E., K.C.S.I., I.C.S.	1938
Sir Bertand James Glancy, G.C.I.E., K.C.S.I., K.C.I.E.	1941
Sir Evan Meredith Jenkins, K.C.S.I., K.C.I.E., I.C.S.	1946
Sir Chandulal Madhavlal Trivedi, K.C.S.I., C.I.E., I.C.S. (Punjab (India))	1947

PUNJAB LEGISLATIVE ASSEMBLY

Speaker —Sardar Kapoor Singh, B.A., LL.B.

Deputy Speaker —Hon'ble Sardar Narotam Singh

Secretary —Sardar Abnasha Singh, Bar-at-Law

Officer, Special Duty —Dr Kuldip Chand Bedi, M.A., Ph.D., Bar-at-Law

P. A. to Hon'ble Speaker, Sardar Narinder Singh Malhotra

Hon'ble Dr Gopi Chand Bhargava (*University*), Sardar Swaran Singh, B.A., LL.B (*Jullundur West, Sikh Rural*), Sardar Partap Singh, M.A (*Amritsar South, Sikh Rural*), Captain Ranjit Singh (*Hissar South, General Rural*), Hon'ble Shri Prithvi Singh Azad (*Ambala and Simla, Reserved Seat*), Sardar Kartar Singh (*Ex-member, West Punjab Assembly, representing North-Eastern Towns, General Urban*), Chaudhri Kartar Singh (*Representative, Hoshiarpur West, General Rural*), Chaudhri Krishna Gopal Dutt (*Ex-member, West Punjab Assembly, representing North-Eastern Towns, General Urban*), Sardar Bachan Singh (*Ludhiana Central, Sikh Rural*); Badlu Ram Chaudhri (*Rohtak Central, General Rural*), Thakur Beli Ram, B.A., LL.B (*Kangra East, General Rural*), Lala Bhagat Ram Chodhe (*Jullundur, General Rural*), Pandit Bhagat Ram Sharma, B.A., LL.B (*Kangra West, General Rural*), Lala Bhagwan Dass (*East Punjab, Commerce and Industry*), Dalip Singh Thakur (*Kangra South, General Rural*), Pandit Durga Chand, Kaushish (*Ambala Division, Landholders*), Seth Ganga Saran (*Trade Union, Labour*), Sardar Gurbachan Singh (*Ferozepur West, Sikh Rural*), Master Gurbanta Singh (*Jullundur, General Rural, Reserved Seat*), Sardar Inder Singh (*Eastern Towns, Sikh Urban*), Sardar Isher Singh Mujhail (*Amritsar North, Sikh Rural*), Chaudhri Jagdish Chander (*Karnal North, General Rural*), Sardar Jagjit Singh Mann (*Jullundur Division, Landholders*), Pandit Jiwan Lall (*South-East Gurgaon, General Rural*), Sardar Kabul Singh (*Jullundur East, Sikh Rural*), Sardar Kehar Singh (*Jagraon, Sikh Rural*), Lala Kedar Nath Sehgal (*Amritsar, General Rural*), Chaudhri Lahri Singh, B.A., LL.B (*Rohtak North, General Rural*), Chaudhri Maturam (*Ludhiana and Ferozepur, General, Reserved Seat*), Chaudhri Mehr Chand (*Hoshiarpur West, Central*), Pandit Mohan Lal (*Una, General Rural*), Mohar Singh Rao (*North-West Gurgaon, General Rural*), Pancham Chand Thakur, B.A., LL.B (*Kangra North, General Rural*), Dr Shrimati Parkash Kaur (*Amritsar, Sikh Women*), Sardar Piara Singh (*Hoshiarpur South, Sikh Rural*), Prabodh Chandra (*Gurdaspur, General Rural*), Chaudhri Prem Singh (*South-East Gurgaon, General Rural, Reserved Seat*), Mehta Ranbir Singh (*Ludhiana and Ferozepur, General Rural*), Rattan Singh Tabib (*Ambala and Simla, General Rural*), Chaudhri Sahib Ram (*Hissar North, General Rural*), Sardar Sajjan Singh (*Patti, Sikh Rural*), Chaudhri Samar Singh (*Karnal South, General Rural*), Dr Sant Ram Seth (*Amritsar City, General Urban*), Sardar Sarmukh Singh (*Ambala North, Sikh Rural*), Shrimati Shanno Devi Shegal (*South-Eastern Towns, General Urban*), Chaudhri Sher Singh (*Jhajjar, General Rural*), Sardar Shiv Singh (*Gurdaspur North, Sikh Rural*), Sardar Shiv Saran Singh (*Kangra and Northern Hoshiarpur, Sikh Rural*), Pandit Sri Ram Sharma (*Southern Towns, General Urban*), Sudarshan Seth (*Eastern Towns, General Urban*), Chaudhri Sundar Lal (*Karnal North, General Rural, Reserved Seat*), Chaudhri Suraj Mal, B.A., LL.B. (*Hansi, General Rural*), Sardar Sahib Tara Singh (*Ferozepur South, Sikh Rural*); Sardar Udham Singh (*Amritsar Central, Sikh Rural*), Sardar Waryam Singh (*Batala, Sikh Rural*), Sardar Ajit Singh (*Ex-member, South-West Punjab, Sikh Rural*), Lala Behari Lal Chanana (*Ex-member, West Punjab Assembly representing South-East Multan Division, General Rural*), Sachar Bhim Sen, B.A., LL.B (*Ex-member, West Punjab Assembly representing Lahore City, General Urban*), Sardar Dalip Singh Kang (*Ex-member, West Punjab Assembly representing Lyallpur East, Sikh Rural*), Shri Dev Raj Sethi (*Ex-member, West Punjab Assembly representing Lyallpur and Jhang, General Rural*); Pandit Faqir Chand (*Ex-member, West Punjab Assembly representing West Lahore Division, General Rural*), Hon'ble Sardar Gurbachan Singh Bajwa (*Ex-member, West Punjab Assembly representing Sialkot, Sikh Rural*), Chaudhri Harbhaj Ram (*Ex-member, West Punjab Assembly representing Lyallpur and Jhang, General Rural, Reserved Seat*), Sardar Jaswant Singh Dugal (*Ex-member, West Punjab Assembly representing North-West Punjab, Sikh Rural*), Sardar Joginder Singh Mann (*Ex-member, West Punjab Assembly representing Gujranwala and Shahdara, Sikh Rural*) Hon'ble Dr Lehna Singh Sethi (*Ex-member, West Punjab Assembly representing North-Western Towns, General Urban*), Sardar Man Singh Jathedar (*Ex-member, West Punjab Assembly representing Sheikhupura West, Sikh Rural*), Sant Narider Singh (*Ex-member, West Punjab Assembly representing Montgomery East, Sikh Rural*), Mahant Prem Singh (*Ex-member, West Punjab Assembly representing Gujrat and Shahpur, Sikh Rural*), Sardar Sardul Singh (*Ex-member, West Punjab Assembly representing Lahore West, Sikh Rural*), Shrimati Sita Devi (*Ex-member, West Punjab Assembly representing Lahore City, General Women Urban*), Chaudhri Sunder Singh (*Ex-member, West Punjab Assembly representing Amritsar and Sialkot, General Rural, Reserved Seat*), Sardar Ujjal Singh (*Ex-member, West Punjab Assembly Representing Western Towns, Sikh Rural*), Shri Virendra (*Ex-member, West Punjab Assembly representing West Division, Multan, General Rural*), Pandit Amar Nath Vidalankar (*Non-Union, Labour*), Buja Ram Bhagat (*Representing Loharu, Dujana and Pataudi States*)

UTTAR PRADESH

UTTAR Pradesh lies in practically the centre of the sub-continent in the north It is bounded on the north by Tibet, on the north-east by Nepal, on the east and south-east by Bihar, on the south by Madhya Pradesh, and on the west by the Unions of Rajasthan and Madhya Bharat and the States of Delhi and Punjab Its total area amounts to 106,247 square miles, which includes the area of the three former Indian States of Rampur, Tehri-Garhwal and Banaras with a total area of 6,276 square miles The total population according to the 1941 census is 56,346,456

The State, originally termed the North-Western Provinces and so amalgamated in 1877, was named the United Provinces of Agra and Oudh in 1902 which was changed to United Provinces on April 1, 1937, and received its present designation on January 24, 1950 It includes four distinct tracts of country, portions of the Himalayas, including the Kumaon division which consists of three hill districts, two of which are entirely in the hills and one partly in the submontane belt, the sub-Himalayan tract, the great Gangetic plain, and portions of the hill systems of Central India including Bundelkhand. The Gangetic plain is protected by an extensive canal system, which though somewhat liable to run short of water in extremely dry years, is of great benefit in all ordinary years and years of limited drought.

The first two of these tracts are infertile and support a very sparse population and the Central Indian plateau is almost equally infertile, though more thickly populated The soil of the Gangetic plain, however, possesses extreme fertility and here the density of population varies from 542 persons per square mile in the west to 555 in the centre and 753 in the east, which gives the State as a whole a greater population pressure on the soil than any other part of India save Delhi and the Bengal area In the south there are low rocky hills, broken spurs of the Vindhya mountains, covered with stunted trees and jungle, and in the north the lower slopes of the Himalayas, clothed with dense forest, affording excellent big and small game shooting, and rising beyond in a tangled mass of ridges, ever higher and higher, until it reaches the line of the eternal snows, but the greater part of the province consists of level plain, teeming with highly-cultivated fields and watered by three rivers—the Ganga, Jumna and Gogra.

ADMINISTRATION

The State was until the close of 1920 administered by a Lieutenant-Governor chosen from the ranks of the Indian Civil Service Under the Reforms scheme the State was raised to the status of a Governor's province, the Governor being assisted by two members of the Executive Council in charge of the Reserved subjects and two Ministers in charge of the Transferred Subjects. With effect from April 1, 1937, provincial autonomy was inaugurated in this State and a Cabinet of 6 Ministers to assist the Governor was formed, under the G I Act of 1935. This Ministry remained in office from July 17, 1937 to November 3, 1939 But after the outbreak of the European War it resigned and the powers of administration were assumed by the Governor under section 93 of the G. I. Act of 1935. He appointed 3 Advisors on November 4, 1939, and a fourth one on September 14, 1943 to assist him in the administration of the State.

The constitution was restored on April 1, 1946 and a popular Ministry began to function. The Legislature consists of two Chambers, *viz*, Legislative Assembly which has a Speaker and a Deputy Speaker and the Legislative Council which has a Chairman and a Deputy Chairman.

The medium for the transaction of public business is the Secretariat, the staff of which consists of Secretaries (including Chief Secretary), Joint Secretaries and Assistant Secretaries There are also Under-Secretaries and Officers on Special Duty

The Board of Revenue is the highest court of appeal in revenue and rent cases, being the chief revenue authority in the State There are 51 Districts in U P and 10 Divisions Nine of these are under Commissioners The Kumaon Division is under the Deputy Commissioner of Naini Tal Here is a list of the Districts and the Divisions into which they are grouped

MEERUT DIVISION

Dehra Dun, Saharanpur, Muzaffarnagar, Meerut, Bulandshahr.

AGRA DIVISION

Aligarh, Mathura, Agra, Mainpuri, Etah

ROHILKHAND DIVISION

Bareilly, Bijnor, Budaun, Moradabad, Rampur, Shahjahanpur, Pilibhit

ALLAHABAD DIVISION

Farrukhabad, Etawah, Kanpur, Fatehpur, Allahabad

JHANSI DIVISION

Banda, Hamirpur, Jhansi, Jalaun

BANARAS DIVISION

Banaras, Mirzapur, Jaunpur, Ghazipur, Ballia

GORAKHPUR DIVISION

Gorakhpur, Basti, Azamgarh, Deoria

KUMAON DIVISION

Naini Tal, Almora, Garhwal, Tehri-Garhwal.

LUCKNOW DIVISION

Lucknow, Unnao, Rae Bareli, Sitapur, Hardoi, Kheri

FAIZABAD DIVISION

Faizabad, Gonda, Bahraich, Sultanpur, Partapgarh, Bara Banki

Each district is in charge of a District Officer, termed Magistrate and Collector in Agra, and Deputy Commissioner in Avadh (Oudh) and Kumaon

The average area of each District is 2,213 square miles and the average population about a million

Each Division has an average area of nearly 10,600 square miles and an average population of nearly 5 millions

The districts are sub-divided into *Tahsils*, with an average area of 518 square miles and an average population of 236,000 Each *Tahsil* is in charge of a *Tahsildar*, who is responsible for the collection of revenue, and also exercises judicial powers *Tahsils* are divided into *parganas* which are units of some importance in the settlement of land revenue. Subordinate to the *Tahsildars* are *naib tahsildars* and *kanungos*. Ordinarily there are three *kanungos* and one *naib tahsildar* to a *tahsil*. The *Kanungos* supervise the work of the *patwaris*, or village accountants, check their papers and make such inquiries as may be entrusted to them by superior officers

For judical purposes (revenue and criminal), the District Officer assigns a sub-division, consisting of one or more *tahsils*, as the case may be to each of his subordinates, who may be covenanted civilians (Joint and Assistant Magistrates and Assistant Collectors) or members of the Indian Administrative Service or State Service (Deputy Collectors and Magistrates).

MANUFACTURES

The State is not rich in minerals. Iron and copper ore are found in the Himalayan districts There were mines of importance, but owing to high cost of production and inaccessibility, most of them have been closed. Coal-fields exist in the district of Mirzapur in Tehsil Sanghrauli Gold is found in minute quantities by washing the sands in some of the rivers in the hills Limestone is found in the Himalayas and in the districts of Etawah and Banda, and stone is largely quarried in the Mirzapur district. Other kinds of stone quarried, though in small quantities, are kankar and slates

Cottage and artistic industries, however, abound in U P The total number of cottage workers is about 50 lakhs They produce goods worth 170 crores a year The most important of these industries are handloom and cloth-weaving, leather tanning and shoe-making, oil seed crushing, glass and bangle making and brassware Cotton is ginned and spun throughout the Western districts of the State as a home industry, and weaving by means of handlooms is carried on in most districts Chief handloom weaving centres are Tanda (Faizabad), Banaras, Mau (Azamgarh), Mubarakpur (Azamgarh), Mau Aima (Allahabad), Gorakhpur, Maghar (Basti), Khalilabad (Basti), Bara Banki, Sandila (Hardoi), Etawah, Amroha, Bhojepur Pipalsana (Moradabad), Meerut, Sikandrabad (Bulandshahr), Deoband (Saharanpur), Sikandrarao (Aligarh), and Dhampur (Bijnor) Kanpur is the chief centre for cotton spinning and weaving mills According to the latest figures available, 3,000 persons are employed in cotton ginning, cleaning and pressing factories and 72,000 in spinning and weaving mills The number of actual handloom weavers is about 3,000,000 Natural and artificial silk weaving used to be confined to Banaras (where the famous 'Kimkhab' brocades is made), Sandila, Mau (Azamgarh) and Bisalpur (Pilibhit) Embroidery work is done at Lucknow, where the noted 'Chikan' work of cotton on muslins is produced, and in Banaras where gold and silver work is done on silk, velvet, crepe and georgette Banaras uses local gold thread for embroidery work and 'Kimkhab' weaving Gorakhpur has lately specialised in the manufacture of crepe and turkish towels Mirzapur specializes in pile carpets Farrukhabad, Lucknow, Mathura Tanda and Pilkhawa are noted for their print, on cotton cloth

Agra, the principal centre of shoemaking, is rightly called the Northampton of India and produces shoes worth crores of rupees a year. Kanpur is next to it in importance

Glass Industry.—The glass industry is important at Bahjoi, Balawali, Sasni, Harangau, Shikohabad, Naini (Allahabad), Ghaziabad and Banaras Firozabad is the chief centre for manufacturing glass bangles in India

There are in all about forty-one hollow-ware factories, and eighty glass bangle factories in the State Out of the forty-one hollow-ware factories nine are large-scale factories and the others are comparatively small The total amount of the goods produced in these hollow-ware factories is estimated at 25,000 tons per year valued at 4·5 crores of Rupees per year. The bangle factories at Firozabad produce about 10,000 tons of bangles per year, valued at Rs 6 crores per year

Besides, a cottage phial industry exists in the District of Bijnor and in the Aligarh district. There are about 120 cottage workshops having a total production amounting to rupees 20 lakhs per year In the past the glass bead industry was developed in the State owing to the efforts of the Glass Technology Section, Department of Industries, U.P, and at present about 100 cottage workshops are engaged in this

trade producing goods to the total value of 5 lakhs per year. The total labour engaged in the large-scale and cottage industry is estimated between 55,000 to 60,000.

Moradabad is noted for its lacquered brass work, Banaras for brassware engraving and repousse, Farrukhabad, Pilkhawa (in Meerut district) and Muttra for their calico prints and Agra for its durries and marble and alabaster articles, porcelain wares are now made at Kurja and glazed pottery at Chunar and Meerut, Clay figures of men and fruits at Lucknow, woollen carpets at Mirzapur and Bhadohi (Banaras) and cotton carpets at Shahjahanpur and Agra.

The making of brass utensils at Mirzapur, Farrukhabad, Hathras, Moradabad, Shamli (Muzaffarnagar), Banaras, Bahraich and Oel (District Kheri), the carving and inlay work of Nagina and Saharanpur, the art silk industry of Tanda (Faizabad), the lock and brass fittings industry at Aligarh, Cutlery at Kamganj and Hathras, the copper utensil industry of Almora, the durries of Khairabad (Sitapur), Agra and Bareilly, the pottery at Nizamabad (District Azamgarh) and the ivory work of Lucknow and manufacture of scissors at Meerut also deserve mention

As a result of World War II blanket making has developed on a large scale in the districts of Muzaffarnagar, Meerut, Najibabad (Bijnor), and the manufacture of locks, safety and split pins and other miscellaneous iron articles at Aligarh The weaving of tweeds has developed as a new industry in Almora district

Trade Centres — Important trade centres are Kanpur, Allahabad, Mirzapur, Banaras, Lucknow Meerut Aligarh, Hathras, Mathura Agra, Farrukhabad, Moradabad, Chandausi, Bareilly, Saharanpur, Muzaffarnagar Ghaziabad, Khurja, Gorakhpur, Ghazipur, Pilibhit, Shahjahanpur, Pilkhawa and Hapur The last named is important for handloom cloth Kanpur is the chief industrial centre There are now 66 Sugar Factories in the State producing sugar by vacuum process They are situated in Gorakhpur, Meerut, Lucknow, Faizabad, Banaras, in the Agra and Allahabad divisions A certain amount of sugar is also made by the open pan process and a large quantity of gur is made in the villages Excellent furniture is made at Bareilly and Saharanpur mostly on cottage lines

Sodium Silicate is manufactured at Firozabad, Kanpur, Banaras and Allahabad Electroplating is carried on at Moradabad, Aligarh and Kanpur Anodisation is done at Banaras Hydrogen peroxide is manufactured at Kanpur Superphosphate is made at Aligarh, glue at Kanpur and Hapur, and refined glue and gelatine at Kanpur. Casein is made at Aligarh, Dayalbagh and Firozabad. Starch is made at Kanpur, Rampur and Nawabganj Methylated and rectified and potable spirits are made at Kanpur, Unao, Rosa, Lucknow, Saharanpur, Meerut, Mansurpur, Nawabganj (Gonda), Daurala and Rampur.

There is a paper factory, a strawboard factory and a cigarette factory at Saharanpur *Attars* and perfumes are made at Lucknow, Kanauj, Jaunpur and Naini. Dayalbagh (Agra) has a tannery, a leather goods factory, a textile factory, a hosiery factory, a dairy, a chemical and soap factory and a factory for manufacturing doors, bolts, lanterns, electrical goods, fountain-pens, chemical balances, etc Fountain-pens are made in Kanpur, Lucknow and Agra Shoe laces and elastics are made in Kanpur Scientific balances and instruments are made at Banaras and Dayalbagh (Agra).

There is a plywood factory at Sitapur, a strawboard factory at Meerut, bonemeal at Magarwara (Unao) and at Hapur (Meerut), a turpentine and rosin factory, a match factory, a catechu factory and a bobbin factory at Clutterbuckganj (Bareilly); brushes are manufactured in Kanpur, Agra and Meerut, cardboard boxes at Kanpur and Lucknow Acids are manufactured at Agra, Ghaziabad and Kanpur Modinagar in Meerut district has recently developed as an industrial town having a group of mills comprising sugar, oils, vegetables, hydrogenated oil, soaps, confectionery and textile mills There are chemical and pharmaceutical works at Kanpur, Amausi (Lucknow) and Banaras Vegetable ghee is manufactured at Kanpur, Modinagar and Ghaziabad (District Meerut).

A sports goods industry has recently been developed and established at Agra and Meerut by the refugees from Western Pakistan, and is still in its infancy

Khadi weaving is done in the eastern districts notably in the Gandhi Ashrams at Azamgarh, Gorakhpur, Sevapuri, Faizabad, and also in the western districts of Meerut and Khurja

Lime burning is carried on largely at Dehra Dun where limestone is dug or collected locally Coal is imported from Bengal Firewood is obtained from the forests. The annual outturn is valued at Rs 4,40,000. There are 60 kilns of varying capacity in working order.

Silk rearing is done at Doiwala in the Saharanpur district Carbon is manufactured for refining Gur at Etawah

Oils.—There are four factories manufacturing vegetable ghee with a capacity of about 150 tons per day The oil crushing industry is well developed in the State since U P produces 2¼ crore maunds of oil seeds There are over 146 big oil mills registered under Factories Acts and over 250 small oil mills working with power About half a dozen oil mills are equipped with refining plant Oil crushing by bullock driven wooden ghanis is also well developed in the villages Attempt is being made to replace the old type of ghany with the new Wardha type There are about 25 big soap factories besides a large number of small manufacturers producing in all about 3 lakh maunds of toilet and washing soap annually Paints and varnishes industry is being developed with the coming into existence of 6 paints and varnishes factories producing 3,500 tons of paints and 150,000 gallons of enamel and varnish annually Boiled oil is already being manufactured by some firms producing about 450,000 gallons annually Allied industries like textile auxiliaries and toilets are being manufactured at some places Tin canisters are made at Agra, Hathras, Etawah, Mainpuri and Ghaziabad

AGRICULTURE

The chief industry is agriculture, which is the principal source of livelihood of a little over 70 per cent of the population and a subsidiary source of income to a further 8 per cent The soils of the State fall into three groups, the valley soils of the Himalayas, the main alluvium and the Central Indian alluvium. The chief characteristic soil of the Central Indian alluvium is the black soil, with a lighter variant though here also there are light loams and gravel The Himalayan soils are of local origin and vary with the nature of the rock from which they have been formed, whilst the main alluvium soils are sand, clay and loam, the loam being naturally the most productive The soil generally yields excellent crops of rice, millet maize, linseed, mustard, cotton, wheat, barley, gram, sugarcane, pulses and potatoes, rice being grown mostly in low-lying heavy clays, and potatoes on the higher valleys

The greater part of the State is highly cultivated. The rainfall varies from 50 to 70 inches in the hills, 40 to 50 inches in the Banaras and Gorakhpur Divisions, while the Agra Division receives only about 25 to 30 inches annually. Drought seriously affected Bundelkhand and the Agra Divisions in the past better drainage and irrigation facilities have effected considerable improvement In the latter area, however, shortage of water in the canals and the general lowering of the water level still continue to react against full agricultural returns. Steps are being taken to increase the amount of water passing down the canals.

There was some increase in the area under wheat as compared with the corresponding figures for the preceding year, but a considerable decrease in the total out-turn and consequently also the average out-turn There was a slight increase in the area under rice and a marked rise in the total out-turn There was a marked decrease both in the area and total out-turn of cotton As regards sugarcane there was an increase in the area and total out-turn and also an increase in the average out-turn

Land is held on Zamindari tenure in Agra and Taluqdari tenure in Oudh The principal land owners in Oudh are the Taluqdars some of whom own very large estates The area held in Taluqdari tenure amounts to 54 per cent of the total area in Oudh.

The State Legislative Assembly passed on August 8, 1946 a resolution accepting the principle of abolition of Zamindari system in the State and a Bill is now under discussion in the State legislature

THE PEOPLE

The population is mainly Hindu The 1941 census has disclosed slight variations in the communal percentages The Hindus were 83 27 per cent as against 84 4 per cent in 1931, the Muslims numbering 15 28 per cent as against 15 per cent at the previous census The total of all other communities was 1 44 per cent comprising Indian Christians, Anglo-Indians, other Christians, Sikhs, Jains, Parsees, Buddhists, Jews, Tribes other than scheduled castes and of persons who declared themselves as belonging to no caste or religion Among the Hindus are included scheduled castes, caste Hindus and Arya Samajists

The three main physical types are Dravidian, Aryan and Mongoloid, the latter being confined to the Himalayan and sub-Himalayan districts and the former to South Mirzapur and Bundelkhand, whilst the high caste Aryans are frequent in the western districts of the State Most of the people, however, show a mixed Aryan-Dravidian origin

The spoken language of the State is Hindustani, written in Nagri and Persian characters There are distinct literatures in Hindi and Urdu languages respectively But Hindi is the language of the vast majority of the people and Government have made Hindi written in the Devanagari script the State language of Uttar Pradesh

LOCAL SELF-GOVERNMENT

The main units of local self-government are the district and municipal boards They are elected bodies headed by non-officials known as Presidents in the case of District Boards and Chairmen in the case of Municipal Boards After the next general election the Chairmen of municipal boards will also be called Presidents Most of the municipal boards having an annual income of Rs 50,000 or over have executive officers to whom certain administrative powers are reserved. The principal official functionary is the Secretary to whom also certain powers are reserved The administrative functions of the municipal and district boards are performed by the President and Executive Officer or the Secretary, but the boards themselves are directly responsible for most of the administration. In the case of the District Boards the powers, etc are shared to a larger extent by their executive committees installed after the general election of 1948 The constitution of Municipal and District Boards is now being liberalised, with direct election of chairman, widened franchise and joint electorate with reservation of seats for minorities as the main features of the reform.

The general Board elections were held on this basis in 1948 while elections for Municipal Boards were expected to be held in 1950

The District Boards obtain 56.09 per cent of their income from Government grants. The other chief sources of income are the local rate levied on land owners and the tax on property The latter tax is levied so far by only 27 boards out of a total of 49. The chief sources of municipal income are the octrol or terminal tax, toll and house-tax

JUSTICE

The present High Court of Judicature at Allahabad exercises jurisdiction over the whole of the State as one single unit. For the convenience of the public of Oudh and to avoid sudden dislocation, a Bench of this High Court works at Lucknow throughout the year The amalgamated High Court consists of 20 permanent Judges including Chief Justice It has the same extra-ordinary original Jurisdiction as the former Allahabad High Court

The U P Higher Judicial Service has been brought into existence with effect from August 15, 1947 by the State Government on the winding up of the former Secretary of State's Service The cadre strength of this service at present is 30 The U P Judicial Service Rules have also been amended so that women are eligible for recruitment to the service and candidates are required to possess a thorough knowledge of Hindi written in the Devanagri script

A scheme for the separation of judicial and executive functions was introduced in the State in 8 districts Under this scheme the judicial side of the revenue work in the district is done by Revenue Officers and criminal cases, which used to be tried by ordinary magistrates, are now tried by Judicial Magistrates Revenue Officers and Judicial Magistrates are purely judicial officers and have no concern with the executive work of the Government Appeals from the orders of all Magistrates now lie only to Sessions Judges

112 Judicial Magistrates and 92 Revenue Officers continued to work during the year

There are 30 posts of District and Sessions Judges of which 8 posts are at present held by officers belonging to the Indian Civil Service, sixteen posts by U P Higher Judicial Service officers and the rest by officers of the Provincial Service Usually the judges do the sessions work and exercise appellate jurisdiction in civil and criminal cases and in certain cases under the U P Tenancy Act

District Officers and their assistants including tahsildars, preside in criminal courts as magistrates and as collectors and assistant collectors, in rent and revenue courts and dispose of a good deal of the work. Honorary magistrates who function in almost all the districts deal with criminal cases. Stipendiary Revenue officers have been appointed temporarily all over the State to assist in the disposal of rent and revenue case work, and judicial officers have been similarly appointed temporarily to assist in the disposal of criminal cases Kumaon was brought under the civil jurisdiction of the High Court in 1926 The deputy and assistant commissioners exercise inferior civil powers in this division which has no separate civil courts. The recently formed State of Tehri-Garhwal also forms part of the Kumaon Judgeship and the same pattern of administration of justice has been introduced in that District A Civil and Sessions Judge has been posted in Tehri-Garhwal The Judicial officers in Kumaon have powers to deal with civil suits upto a valuation of Rs 5,000. They do purely Judicial (Criminal and Civil) work and take no part in the executive administration In the rest of the State there are civil judges, Judges of small cause courts and Munsiffs who dispose of civil suits The jurisdiction of a civil judge extends to all original suits without pecuniary limit and a Munsiff can hear cases ordinarily of a value not exceeding Rs. 2,000 and if specially empowered up to Rs. 5,000.

Some civil judges in the State have been invested with powers of Assistant Sessions Judges to try Sessions cases of lesser importance and some munsiffs have been invested with magisterial powers for trying criminal cases

Appeals from munsiffs always lie to the district judge while those from the civil judges go to the High Court except in cases of a value of Rs 5,000 or less which are heard by the district judge Small cause court judges ordinarily try suits to the value of Rs 500 but judges presiding over Small Cause courts are empowered to try suits of which the value does not exceed Rs 1,000 There are also honorary munsiffs whose jurisdiction is limited to Rs 200

The remuneration of Official Receivers was increased from 7 per cent to 9 per cent by the State Government

Consequent on the merger of the old States of Tehri-Garhwal, Banaras and Rampur with Uttar Pradesh the courts existing there were abolished and the jurisdiction of the Allahabad High Court was extended Rampur was made a separate judgeship and a District Judge, a Civil and Sessions Judge and a Munsiff were posted in that district Banaras State was made a part of Banaras Judgeship and a Civil and Sessions Judge and a Munsiff were posted at Gyanpur which was a district of Banaras State

The total estimated cost of administration of justice for 1950-51 stands at Rs 1,82,98,800 as against Rs 1,24,00,000 in 1949-50

PUBLIC WORKS DEPARTMENT

The Public Works Department (Buildings, Roads and Irrigation Branches), is under the Hon'ble Minister for Communications and the post of Secretary to Government is held by a member of the Indian Civil Service

The Buildings and Roads Branch is administered by one Chief Engineer, assisted by one Additional Chief Engineer The State is divided into 6 circles and 21 divisions Each circle is in the charge of a Superintending Engineer and each division is under an Executive Engineer This Branch of P W D is entrusted with the maintenance of all provincial metalled and unmetalled roads and the construction of all departmental buildings (except those of the Irrigation Branch) each costing more than Rs 7,500

The Buildings and Roads Branch has increased to more than thrice its size since the outbreak of the war and has now undertaken an extensive programme of Road and Building construction.

COMMUNICATIONS

The road construction scheme is proposed to be spread over 10 years in two phases of 3 and 7 years respectively and would cost nearly 69 crores On the completion of the first phase of the programme which is estimated to cost 15 5 crores the province will have 9,631 miles of metalled roads, 5,611 miles of unmetalled roads and 508 miles of cement concrete tracks On completion of the second phase of the programme the State will have 15,160 miles of metalled roads, 19,000 miles of unmetalled roads and 3,000 miles of cement concrete tracks

The phase I post war roads programme, the revised cost of which is about 21 crores and which was started in 1947 continued during the year under review The original target for completing phase I work by 1949 could not be adhered to owing to shortage of materials and transport facilities Further work had to be curtailed during the year 1949-50 due to financial stringency as the funds have had to be diverted for the implementation of short term grow more food campaign

The programme achieved till the end of March 1950 is given as follows

	Proposed mileages	*Completed mileages*
(1) Reconstruction		
(a) local D B Roads	2,419	1,895
(b) Provincial Roads	45	7
(2) New Construction		
(a) Metalled Roads		
P H's	910	
M D Rs	732	
	1,642	303
(b) Unmetalled Roads		
O D Rs	3,708	
V Rs	1,947	4,572 earth work only completed
	5,655	1,775
(c) C C Tracks	501	3

Further work is being withheld on account of lack of funds but will be resumed as the financial position improves

About 1,500 miles of National Highways including lengths in Municipal areas which are trunk road passing through many States are being maintained by this State on behalf of the Government of India and an approximate sum of Rs 40,00,000 was utilized for maintenance and Rs 19,73,000 was spent on the improvement of certain miles in the State The main work of improvement consists in providing modernised wearing surface either of cement concrete or black top.

BUILDINGS

Buildings costing about 2 37-39 lakhs were contemplated for construction during the year 1949-50 The construction of some of these buildings costing Rs 65 02 lakhs had to be postponed due to financial stringency. The important buildings which have been under construction since the year 1949-50 are as follows —Residences for members of Legislatures at Lucknow, Expansion of Gandhi Memorial College and Associated Hospitals at Lucknow in phase I Scheme, Establishment of 103 additional dispensaries in rural areas, Setting up an up-to-date Modern Printing Press at Alshbagh, Lucknow, Construction of Buildings for Office of the Director of Cottage Industries, Labour Commissioner and Assistant Excise Commissioner, Kanpur, Construction of Buildings in connection with the Government Occupational Institute, Lucknow, Construction of Government Instrument and Precision Factory in the Premises of the Occupational Institute at Lucknow, Construction of a New Veterinary College at Mathura, Establishment of a Central School of the Preliminary Training of Nurses at Kanpur, Construction of quarters for 180 Nursing Orderlies at Branch Dispensaries, Construction of 20 Basic seed stores, Construction of a Research Station at Lucknow in connection with Soil Stabilization Scheme, Construction of buildings for Government Leather Working School and Hostel at Kanpur, Construction of buildings in connection with Ganga Khadir Colonization Scheme at Mowana

IRRIGATION

The Irrigation Branch in the Uttar Pradesh is divided into Circles and Divisions, covering the various canal irrigation works in the State as well as the tubewell schemes. The Ganga, the Eastern Yamuna, and the Agra Canals,

the Sarda Canal, the Bundelkhand Canals and the Tubewells are administered by the Chief Engineer, Irrigation Branch assisted by an additional Chief Engineer.

The Canals and Tubewells, administered by the Irrigation Branch in Uttar Pradesh irrigate over 59 lakhs acres annually.

The Sarda Canal, was opened in 1928 for introducing irrigation into Oudh In November 1941 an extension, which includes 350 miles of new irrigating channels, was formally opened, making the total length of the main canal and branches, including distributaries, drainage cuts and escapes on the system, 7,667 miles The area irrigated is over 12 lakhs of acres annually including over 2 lakhs acres of sugar-cane.

The Ganga Canal—Upper and Lower The head works of the former are situated at Hardwar in the Saharanpur district and of the latter at Narora in the Bulandshahr district The Upper Ganga Canal came into operation in the year 1855-56, and its total mileage of channels is 5,969 miles. The area irrigated annually is about 15 lakhs of acres The Lower Ganga Canal was opened in 1879-80 and the total mileage of its channels is 5,180 miles This system irrigates nearly 12 lakhs of acres

About 2,130 State tubewells are running in the districts of Meerut, Muzaffarnagar, Saharanpur, Bulandshahr, Aligarh, Etah, Bijnor, Bareilly, Moradabad and Badaun and irrigate about 7 6 lakhs acres annually

A project for 250 new State tubewells in the western districts has been worked out and the work is in progress Another project for 440 State tubewells in the districts of Saharanpur, Shahjahanpur, Sitapur, Kheri, Faizabad and Gonda has also been prepared and the scheme is to be taken in hand shortly

Besides, a number of channels have been remodelled and improved with a view to increasing their water supply thereby enabling them to irrigate larger areas Projects for the construction of about 800 miles of new channels on the Sarda Canal and 400 miles on the Upper Ganga, Eastern Yamuna, Betwa, Dhasan and Gogra Canals have been prepared Of these new channels approximately half have been completed and opened for irrigation The additional yield of foodgrains on this account will be 75,000 tons per annum

In connection with the Grow More Food Campaign a post of Chief Engineer, Food Production, has been created under the administrative control of the Food Production Department of the Government He is in charge of three Circles The following works are expected to be brought into commission by the end of 1951-52 under the Chief Engineer, Food Production —

Masonry Wells Construction of about 20,000 new wells and repairs to about 10,000 derelict wells is expected to be completed by the end of 1950-51.

Then there is a programme of Dams and Canals in Bundelkhand .

(*a*) *Lalitpur Dam* This dam is situated near Lalitpur town and will be completed by March 1951 Three hundred miles of channels will also have been constructed on the Betwa Canal system to utilize the water of this dam and the rabi irrigation on the Betwa system and other channels is expected to increase by 60,000 acres

(*b*) *Nagwa Dam* This dam is situated in Mirzapur district and has been completed It will provide irrigation facilities to about 60,000 acres

(*c*) *Saprar Dam* This dam is situated in Jhansi district and will provide irrigation to about 40,000 acres of additional area. Along with the dam will be constructed 100 miles of channels The earthwork of the dam is expected to be completed by June 1951

(*d*) *Rangawan Dam.* The dam is situated 9 miles away from the existing Gangroo dam on a tributary of the river Ken and will irrigate 90,000 acres in Banda District Work has been started and is expected to be completed by June 1951.

(*e*) *Belan Canals.* A pick up weir on the river Belan near the Rewa-Mirzapur Road crossing and the necessary length of channels will be constructed to start with A dam on the river Bhaker a tributary of Belan will be constructed later The Belan Canals will irrigate about 40,000 acres in Allahabad district and Rewa State

Hydro-electric schemes, namely, the Rihand Dam Construction Circle, the Yamuna Hydro-electric Construction Circle and the Sarda Power House Construction Circle are under the administration of the Chief Engineer, Development

In order to improve irrigation facilities in Gorakhpur, Deoria and Basti districts, 39 miles of irrigating channels have also been constructed under the Chief Engineer (Development). One hundred tubewells in the Gorakhpur area are under construction. These channels and tubewells will serve an area of about 50,000 acres to produce 10,000 tons of foodgrains annually The Ramgarh Pumped Canal 8 5 miles long is also being constructed in Gorakhpur district under the Chief Engineer, (Development) to irrigate an area of 2,575 acres to produce 420 tons of additional foodgrains

ELECTRIC POWER

The Ganga Canal—Hydro-Electric Grid supplies power for domestic, industrial and agricultural purposes to 14 districts in the west of the State, and to Shahdara in Delhi State Seven of the ten available falls have been harnessed for generating electric energy and a stand-by steam power station has been constructed at Chandausi and Harduaganj of 9,000 and 8,000 kW's capacity, respectively, making a total of 35,900 kW's available on the Grid Besides supplying energy for lights and fans and minor industries to about 93 towns, the Grid provides power for irrigation pumping from rivers, tubewells and open wells. Another Hydro-power station at Mohammadpur designed to generate about 9,300 kW's has been recently constructed The erection of power plant is in progress One of the three generating sets is expected to be on bars shortly while the other two will also be completed by the end of 1950 Additional boilers for Harduaganj steam station have been obtained which, when installed, will raise the generating capacity of the Station to 15,000 kW's

A large project of another Hydro-power Station at Pathri on the Ganga Canal having an installed capacity of 19,500 kW's which would give an additional output of 10,000 kW's (firm power) to the Ganga Grid is under construction

A large project for the extension of the transmission system of the Grid, which will enable the power generated at Mohammadpur powerstation to be utilised is under construction. The supply of cheap power from over 2,000 sub-stations in the Grid is already having an important bearing on the economic disposal of crops and the development of industries in the urban and rural areas of the Grid zone.

The steam power station at Sohawal has a capacity of 1,250 Kilowatts. It supplies energy to the towns of Fyzabad and Ayodhya and for pumping 180 cusecs of water from the Gogra at Raunahi into a canal system 129 miles long, designed to irrigate 43,000 acres. To increase the generating capacity at Sohawal, two 1,000 kW's generating sets were ordered from the U S A These have arrived and were expected to be installed by the end of 1950.

Uttar Pradesh Government have various irrigation and power projects under consideration for the post-war period. Brief details of these projects which are under execution are given below .—

Sarda Canal Hydro-Electric Scheme: It is proposed to reconstruct 12½ miles of the Sarda Main Canal to combine the present falls on the existing channels into one drop of 59 ft. for generating 23,000 kW s minimum at one power station with an installed capacity of 41,400 kW's. The station would, in the first instance, be linked with the Ganga Canal Hydro-thermal system in which it will inject 10,000 kW's. Transmission lines will also be run into Pilibhit, Bareilly, Naini Tal, Shahjahanpur, Kheri, Sitapur, Lucknow, Barabanki, Unnao and Rai Bareli Districts where energy will be made available for domestic, agricultural and industrial purposes. Investigations with regard to this scheme have been completed and construction taken in hand

Concreting of the foundation raft of the main Power House building which was to be laid about 100 ft below ground level of which 65 feet is below Spring level is in progress Construction of the Power Channel, Feeder channels and bridges etc is also going on side by side. It is expected that power from this power station will be available for consumption by the end of 1952-53 The total cost of the generation part of the scheme will be Rs 721 00 lakhs and that of the transmission system Rs 408 00 lakhs. Hundreds of miles of transmission route have been surveyed Fabricated steel towers for 66 K V lines have been designed and tested departmentally Their manufacture is in progress at the Government Workshop, Roorkee and at Baraithwate's Workshop at Calcutta.

Rihand Dam Project It is proposed to impound 9 million acre feet of water in the Rihand basin in Singhrauli Pargana, Mirzapur district by a 280 feet high, 3,000 feet long dam across a gorge near Pipri village Power will be generated by the artificial head created by the storage dam at the power station situated immediately below it. The power of the installed plant is expected to be 240,000 kW's A large block of this power will be utilized in electro-chemical, metallurgical and other basic industries near the site of the dam, raw materials for which exist in abundance within a close range The rest of the power will be utilized for industrial, agricultural and domestic purposes in the districts of Mirzapur, Ballia, Ghazipur, Banaras, Azamgarh, Jaunpur, Allahabad, Fatehpur, Kanpur, Partabgarh, Gonda, Bahraich, Faizabad, Basti, Gorakhpur, Banda, Hamirpur and Jalaun This scheme will make the river Sone navigable at its confluence with the Rihand river and the Rihand River upto the dam site The dam will control floods in the Rihand and Sone rivers, and provide a huge lake for breeding fish for food The total cost of the scheme including transmission and transformation is estimated to be Rs. 31 25 crores

The drilling of foundation rocks and other preliminary investigations of the scheme have been completed Some permanent buildings have also been constructed while the road from Chopan to Dam site is nearing completion. Designs and specifications for a concrete straight gravity type dam and appurtenant works, which were entrusted to an American Engineering firm, have been received. Alternative designs for a multiple Arch Dam have also been prepared by a French Engineering firm Comparative study of these designs is in hand. However, due to financial stringency, work on this scheme has been considerably slowed down.

Yamuna Hydro-Electric Scheme: This scheme will utilize for the generation of power, the total drop of approximately 750 ft. available in Rivers Tons and Yamuna, from the site of the proposed Kishan Dam about 14 miles upstream of the confluence of River Tons and Yamuna, to Paonta on the river Yamuna in the District of Dehra Dun

Work on the first Stage involving the construction of a Barrage and a 8·7 miles long concrete lined power channel providing two drops of 50 and 100 feet each, was started in October 1948 but it has been slowed down considerably since October 1949 under orders of Government so that materials and construction machinery etc collected for it might be diverted towards other short term schemes This stage will have an installed capacity of 51,000 kW's at an estimated cost of about 6 49 crores of rupees and will take about 4½ years to complete

The second Stage, which will be taken up after completion of the first Stage, will have an installed capacity of 1,50,000 kW's at an estimated cost of Rs. 8 84 crores Both the stages combined will make available 980 million units (KWH) annually

The following schemes have also been investigated by the Development administration —

Nayar Dam Project: It is proposed to impound 1.06 million acre feet of water in the valley of the Nayar, a tributary of the Ganga 50 miles above Hardwar, by building a dam 600 ft. high across the gorge in the river near village Marora in Garhwal district. This Dam will be almost equal in size and height to the Boulder Dam in the U S.A. one of the highest Dams in the world. Another small Dam 190 ft. high will also be constructed at Byasghat where the Nayar meets the river Ganga. The stored flood waters will irrigate a new area of 238,000 acres and will improve irrigation service to 1,068,000 acres of land, at present irrigated by Upper Ganga Canal System. The gross storage capacity of the lake, which will be formed by this Dam, will be 45,000 million cubic feet. It is estimated that approximately 23,200 additional maunds of food grains, 150,000 additional maunds of sugai and 60,000 additional maunds of cotton will be produced Hydro-electric plant proposed to be installed on the project will have a capacity of 200,000 kW's at Marora Dam and 32,000 kW's at Byasghat The scheme will generate 908,700,000 K W.H annually at a cost of less than 2 08 pies per unit allowing for 3 per cent on the capital outlay Extensive exploration of the Dam foundations are now complete and the project is ready The scheme is estimated to cost Rs 27 03 crores out of which Rs 18 66 crores will be debited to power generation and Rs 8 37 crores to irrigation The project will take some seven years to complete.

Ramganga Dam Scheme : It is proposed to store 78,000 million cubic feet of the flood waters in the valley of the Ramganga by building an earth and rock fill Dam about 340 feet high above the river bed across a gorge about 2 miles upstream from the Kalagarh Forest Rest House in the Garhwal district. The Dam will be one of the highest structures of its kind in the world

During the dry weather the water stored in the lake formed by the Dam will be released to flow down the river to Bijnor District 15 miles downstream. Here it will be diverted by a river into 50 miles long feeder across the Doab into the Ganga River near Garmukhteshwar This water will provide irrigation for 408,000 acres of new area and improve irrigation facilities to 778,000 acres at present inadequately served by the Lower Ganga Canal System.

65,000 kW's of seasonal power will also be available from the scheme during the irrigation period. The scheme is expected to cost Rs 14 0 crores New irrigation canals and extensions of existing channels will cost a further Rs 8 0 crores The project is under preparation.

Kothri Dun Dam · This will impound 7,800 million cubic feet of water and out of this 4,000 million cubic feet will be available for irrigation It is a dual purpose scheme and will generate 4,000 kW's peak power as well. The cost is estimated to be approximately Rs. 3 0 crores. The project is under preparation.

Pindar Hydro-Electric Development: The possibility of developing hydro-electric power from Pindar River, a tributary of the Ganga, which it meets at Karanprayag, 170 miles upstream from Hardwar has been investigated. There is little scope of storage on this River but there are two good dam sites on it where by the construction of concrete dams, a total drop of 870 feet can be utilised in two stages for power generation for development of Upper Garhwal and interior of Kumaon Hills.

Stage I of the project will generate 12,150 kW's of firm power throughout the year and 9,050 kW's of seasonal power from 20th May to 31st October The corresponding figures for the second Stage are 35,200 kW's and 29,600 kW's respectively The cost of Stage I is estimated to be Rs 349·5 lakhs while that of Stage II Rs 1,384 3 lakhs

Preliminary surveys of the project were completed and report submitted to Government who have decided to defer the scheme for the present

Khoh River Project This is essentially a hydro-electric power development scheme from the waters of the Khoh River in Lower Garhwal in two stages but it has been proposed to construct it in three stages, costing ultimately Rs 385 49 lakhs and generating 11,270 kW's of firm power The first stage will comprise the installation of four Diesel operated generating sets of 175 kW's each at Kotdwara to act as a pilot plant

The second stage will comprise a diversion weir across the river Khoh a little downstream of Dogadda to divert the supplies into a steel pipe line and a power station near Kotdwara with an installed capacity of 1,500 kW's The third stage of the project involving the construction of a 265 feet high dam across the Khoh River one mile upstream of Dogadda to store 32,700 cubic feet of water will have two power stations, one with an installed capacity of 3,600 kW's and the other with a capacity of 9,600 kW's

Government have ordered that the construction of this Project might be stayed for some time.

Malin River Project It is proposed to construct a 211 feet high cement concrete dam across the Malin River, 4 miles upstream of Kalaghatti to store 9,344 acres feet of water which, when released, will irrigate 1,500 acres of new area along with 3,000 acres of the area at present precariously irrigated by the existing Malin Canals It will also provide 500 kW's of firm power for utilization in Lower Garhwal The cost of the scheme works out to Rs 130 0 lakhs Preliminary surveys have been completed and the project report submitted to Government

Power Potentialities on Bhagirathi River Reconnaissance of the Bhagirathi River from Deoprayag to Bhaldyani in Tehri Garhwal and its tributaries in this reach carried out during the working season of 1949-50 has shown that it is possible to generate 312,000 kW's of firm power from its waters by developing the scheme in three stages at a total cost of approximately Rs 3,700 lakhs

A preliminary report on the scheme has been submitted to Government for consideration

POLICE

The Police Force is administered by an Inspector-General, assisted by eight Deputy Inspectors-General, including one Deputy Inspector-General, Headquarters and Railways, one Deputy Inspector-General, Criminal Investigation Department, one Deputy Inspector-General of State Armed Constabulary and Training and five Deputy Inspectors-General of Police for Ranges, an Assistant Inspector-General of Police, Railways, one Assistant to I. G of Police, one Superintendent of Police Headquarters, 53 Superintendents including Assistant Superintendents and 241 (permanent and temporary) Deputy Superintendents. There is a Police Training College at Moradabad under one Superintendent of Police as Principal and two Deputy Superintendents of Police, one of whom is designated as Adjutant and the other as Assistant Principal. There is also a Police Training School at Sitapur under a Commandant. There is a Criminal Investigation Department with a Deputy Inspector-General in charge and 4 Superintendents of Police and 28 Deputy Superintendents of Police There is a State Armed Constabulary with 10 Battalions comprising 78 Companies under the command of the Deputy Inspector-General of State Armed Constabulary and Training. In this force there are 10 Commandants of the rank of Superintendent of Police and 20 Assistant Commandants and 2 Staff Officers and 10 Adjutants of the tank of Deputy Superintendent of Police (all temporary)

The Anti-Corruption Department now forms a part of the Investigation Branch of the Criminal Investigation Department. The administration of the Jail Department is in charge of an Inspector-General of Prisons, who is a retired member of the Indian Medical Service

EDUCATION

Education is maintained partly by the State and partly by means of grants-in-aid There are five Universities, the four residential Universities of Allahabad, Lucknow, Aligarh (Muslim) and Benares (Hindu) and the affiliating University of Agra

Agra University has so far affiliated 40 Colleges These colleges are the Agra College, Agra , St John's College, Agra , Meerut College, Meerut , S D College, Kanpur , Bareilly College, Bareilly , D A V College, Dehra Dun , S M. College, Chandausi , Women's Training College, Agra , St Andrew's College, Gorakhpur , Agricultural College, Kanpur , Medical College, Agra , Radhaswami Educational Institute, Dayalbagh, Agra , Barahseni College, Aligarh ; Ahir Kshattriya College, Shikohabad ; Dharam Samaj College, Aligarh Kishori Raman College, Mathura , Gandhi Faizam College, Shahjahanpur , Satish Chandra College, Ballia ; College of Veterinary Science and Animal Husbandry, Mathura K J K College, Moradabad , Tilakdhari Singh Kshattriya College, Jaunpur , Raghunath Girls' College, Meerut Subhas National College, Baraut , Mahanand Mission Harijan Vidyalaya College, Ghaziabad , Digambar Jain College, Baraut , Jat Vedic College, Baraut , Raza College, Rampur ,Yuvraj Dutta College, Kheri Hindu College, Moradabad , S D College, Muzaffarnagar , Mahadevi Kanya Pathshala, Dehra Dun , Champa Agarwa College, Mathura , M P College, Gorakhpur Almora College, Almora , D. A V College Kanpur , Christ Church College, Kanpur , Balwant Rajput College, Agra , K E M U Jat College, Lakhauti , N R. E C College, Khurja , and Shibli National College, Azamgarh

There are 800 Higher Secondary Schools which prepare boys and girls for the High Schools and Intermediate Examinations conducted by the Board of High School and Intermediate Education, Uttar Pradesh which prescribes Courses and controls examinations.

There are 62 Government Higher Secondary Schools and 45 Junior High Schools for boys and 28 Government Higher Secondary Schools and 62 Junior High Schools for girls The new set-up removes all distinction between the Hindustani and Anglo-Hindustani Education and there is now one unified ladder from the beginning of the education of a child upto the higher secondary (pre-university) stage The Isabella Thoburn College and Mahila Vidyalaya Colleges at Lucknow and the Women's Degree College at Aligarh impart university education to girls.

The St Joseph College, Naini Tal, St George Intermediate College, Mussoorie, Sherwood Inter College, Naini Tal and La Martinier College, Lucknow are among the best known " European schools ", in the State which teach upto the Intermediate stage All Saints Diocesan College, Naini Tal has a teacher's training department for women teachers and also a Cambridge Higher Certificate Class Besides these, there are many other " European " educational institutions both in the hills and plains, which are attended by students from all over India.

Government maintain training colleges for male teachers in Lucknow, Allahabad, Agra and Banaras and a Training Department is attached to the Lucknow Christian College, Lucknow There are training departments attached to the Aligarh Muslim University and the Banaras Hindu University Government also maintain a Central Pedagogical Research Institute at Allahabad. Besides a number of aided institutions run L T. Classes Government also maintain Training Colleges for women —C.T. at Lucknow and Banaras and L T. at Allahabad. The Lucknow University also runs training classes for women at the I.T College.

The Allahabad University has started a course leading to M.Ed. degree but this is confined to those who have obtained the diploma of L.T or B.T. elsewhere.

Technical Education.—There is a Department of Mining and Metallurgy in the Banaras Hindu University where four years' courses of training are provided, leading to degrees in the two subjects. This is the only University in India where training in these two industrial subjects is available. There is a Technical Institute known as the Harcourt Butler Technological Institute and a Central Technical Institute at Kanpur, a school of Arts and Crafts at Lucknow; three Government Technical Institutes at Lucknow, Gorakhpur and Jhansi respectively; one Polytechnic Institute at Srinagar (Garhwal), five carpentry schools, one known as Central Wood Working Institute, Bareilly, others at Faizabad, Naini Tal and Dehra Dun, six weaving schools, one known as Central Weaving Institute at Banaras, others at Mau Azamgarh), Kairabad (Sitapur), Amroha (Moradabad), Muzzaffarnagar, and Bulandshahr and one Metal Working School at Aligarh; two Leather Working Schools at Kanpur and Meerut, one Tanning School at Fatehpur; and one Brassware School at Banaras known as Batuk Prasad Khatri Industrial Institute. There is also a Technical College and Leather Working School at Dayalbagh, Agra.

There has been a Government Engineering College at Roorkee known as the Thompson College, which has been converted into an Engineering University with effect from November 25, 1949 known as the Roorkee University. There is a school of Arts and Crafts and two Civil Engineering Schools at Lucknow. At the Banaras Hindu University there is a five years' course in Mechanical and Electrical Engineering. There is a *Government Agriculture College* at Kanpur and 5 Government Agriculture schools at Gorakhpur, Bulandshahr, Ghazipur, Chiraon (Dist Jhansi) and Havalbagh (Dist. Almora). In addition, there are non-Government Agricultural institutions, namely Agricultural Institute, Allahabad, Balwant Rajput College, Agra, K E M U. Jat College, Lakhauti Dist. Bulandshahr) and Jat Vedic Agricultural College, Baraut (Dist Meerut), teaching upto degree standard and several other non-Government Agricultural institutions which impart instruction in Agriculture upto High School and Intermediate standard.

Law, Medical.—Education in Law is given at four residential Universities and at the Agra and Meerut Colleges and at the Dayanand Anglo-Vedic and Sanatan Dharma Colleges at Kanpur, and at the Bareilly College Instruction in Commerce for the B Com. degree of the Agra University is given in the Sanatan Dharma and the D.A.V. Colleges at Kanpur and in the St. John's College at Agra, Bareilly College, Bareilly, and Balwant Rajput College, Agra A Commerce Department for the B Com. degree is also attached to Allahabad, Banaras and Lucknow Universities.

The Gandhi Memorial Medical College, Lucknow, which is managed by the Lucknow University prepares candidates for the M B B S. and higher degrees of the Lucknow University. There is also a Government Medical College at Agra which is affiliated to the Agra University. This College is known as the Sarojini Naidu Medical College, Agra. The Lucknow University have recently started an Ayurvedic College under a new faculty and have framed a six years' course of study leading to the degree of B.I.M.S. There is a college of Ayurveda attached to the Banaras Hindu University and a college of Unani Tib attached to the Muslim University, Aligarh. The Board of Indian Medicine, U.P., established by Government in 1926, prescribes courses and holds examinations for Ayurvedic and Unani Colleges affiliated to it. The Takmil-ut-Tib College and the State aided Unani Medical College at Lucknow, the Unani Medical College at Allahabad, the Rishikul Ayurvedic College, Hardwar, the Bundelkhand Ayurvedic College, Jhansi, the Kanya Kubja Ayurvedic College, Banaras, the Lalit Hari Ayurvedic College, Pilibhit, the Lakhraj Ayurvedic College, Darull, district Meerut, the Tibbi College Saharanpur, the Arjun Ayurveda Vidyalaya, Banaras, the Ayurveda Vidyalaya, Pachpukhra, district Farrukhabad, the Ayurvedic College, Dehra Dun, the Baldeo Ayurveda Vidyalaya, Baragaon, district Banaras and the Ayurvedic College Uttarkhand Vidyapith, Garhwal are affiliated to it.

MEDICAL AND HEALTH

The Medical and Health Departments were amalgamated in March 1948 and placed under one head, designated the Director of Medical and Health Services He has four Deputy Directors (including one specially for Women's side, and one for Ayurvedic side) a Superintendent for Nursing Services, four regional Assistant Directors and four Assistant Directors for Epidemiology, Malariology, Public Health Education and Health publicity There is a Public Analyst for doing analysis of samples of food drugs In each district there is a Civil Surgeon to look after the Medical Work At Rani-Khet the Military Medical Officer holds the Collateral charge of Civil Surgeoncy For health work there is a District Medical Officer of Health in each District Under the Civil Surgeon and the District Medical Officer of Health in each district are posted an adequate number of Medical Officers, Nurses, Health Officers and sanitary Inspectors, etc for Medical and Health work The State Medical Service consists of Civil Surgeons, State Medical Service Officers, Grade I (Men's and Women's Branches), P M S Grade II Officers (Men's and Women's branches) and P S M S (Men's and Women's Branches) The State Public Health Service includes Assistant Directors of Public Health, State Public Health Service Officers, and Subordinate Public Health Staff

All Hospitals (Men's and Women's) at District Headquarters have been provincialised Formerly they were under District Boards or Independent committees Hospitals at important places of pilgrimage like Vrindaban, Ayodhya and Hardwar have also been provincialised Many hospital buildings have been extended and improved A few new hospital buildings at Rae Bareli, Khuja and Firozabad are under construction. Others will be undertaken as finances permit. The best equipped hospitals are the Gandhi Memorial and Associated Hospitals, Lucknow, and the attached Kasturba T B Clinic (formerly known as King George's and Associated Hospitals, Lucknow), the Sarojini Naidu Hospital, Agra (formerly known as the Thomason Hospital, Agra), the Lajpat Rai Hospital, Kanpur (formerly known as Hallett Hospital, Kanpur), the Kamla Nehru Memorial Hospital, Allahabad, the Ramsay Hospital at Naini Tal and the Balrampur Hospital, Lucknow. The two Medical Colleges, the Gandhi Memorial Medical College, Lucknow and the Sarojini Naidu Medical College, Agra now admit every year 125 and 50 new students respectively 20 seats are reserved for girl students at each College, and scholarships are given to encourage girls to take medical education. Sixty licentiates are admitted each year to undergo a 2 years' condensed M B B S. Course 50 at Lucknow and 10 at Agra. At the Lucknow Medical College a Dentistry Course for 4 years has been started for 20 students, as also Post-Graduate Course in Optholmology, Ear, Nose, Throat and T.B. At the S N Hospital, Agra a Radium Institute has been started.

The King Edward VII Sanatorium, Bhowali is now under the direct management of Government. It has 181 beds and is being extended. There are also five more Sanatoria or T.B. Hospitals in the State namely, the Kasturba T.B. Hospital, Lucknow (24 beds), Hill Crest Sanatorium, Gethia district, Naini Tal (43 beds), Shri Mangla Prasad Sanatorium, Banaras (12 beds), Karelabagh Sanatorium, Allahabad (20 beds) and Mission Sanatorium Almora (36 beds) and a number of T B. Clinics run by the U.P. T.B. Association It is proposed to start a new T.B. Sanatorium of 100 beds very shortly

The Eye Hospitals at Sitapur and Aligarh are run by Public Trusts. The Manohar Das Eye Hospital, Allahabad, is a Government institution An annual grant of Rs 30,000 is sanctioned to the different hospitals for eye relief work in rural areas.

Rural Medical relief continues to receive full attention. At present 500 dispensaries exist in villages. In the next 4 years 400 more will be opened so that no villager will have to travel more than five miles to reach a dispensary. There are 90 subsidized dispensaries and nearly 30 subsidized practitioners.

For the last two years a provision of Rs. 16,00,000 has been made in each year to provide essential Hospital Equipment Most of the important hospitals have been provided with X-rays, ambulances, refrigerators and other essential articles. Special allotment is being made for costly drugs like streptomycin and penicillin The allotment for medicines and diet at Hospitals has been raised by 100 per cent to cope with the rise in the prices.

The Blood Bank Scheme started during the War is continuing There are three mental hospitals at Agra (620 beds), Bareilly (362 beds) and Banaras (373 beds).

Nurses are trained at six centres. Every year a number of doctors are being sent to foreign countries for obtaining up-to-date knowledge of advances in medicine and Public Health. A few nurses have also been sent to United Kingdom for training in Nursing.

To control epidemics, travelling dispensaries with a truck and a trailer each have been sanctioned for each district but only a few of them are functioning Infectious Diseases Hospitals at four important pilgrim centres, *viz.* Vrindaban, Ayodhya, Hardwar and Mirzapur (Vindhyachal) have been provincialised. Vigorous Anti-malaria operations have been undertaken. In intensely malarial districts like Pilibhit and Jhansi, special staff has been appointed to control it Travelling dispensaries for anti-Kala Azar work continued to operate in eastern districts of the State. The Maternity and Child Welfare organization has been taken over from Red Cross, and Government now run directly under their control, 200 rural maternity centres which do the usual maternity work and also train the village dais.

Government are doing their best to encourage Ayurvedic and Unani Systems 372 State Indigenous Dispensaries are working in rural areas and 70 more are being added. They are under the charge of qualified Vaids and Hakims. There are 13 inspectors under the Deputy Director of Ayurved to inspect the work of these dispensaries The Board of Indian Medicine, U P. conducts Ayurvedic and Unani Examinations of students studying at its affiliated colleges, distributes grants to Ayurvedic and Unani Dispensaries and generally advises Government on Ayurvedic and Unani schemes. A State Pharmacy of Ayurved has started functioning. The Pharmacy will supply genuine drugs at reasonable rates to the Indigenous Dispensaries. The Lucknow University have started an Ayurvedic College. An academy of Ayurved has been started to translate Ayurvedic Sanskrit books into Hindi and Unani Persian books into Urdu.

The U.P Objectionable Advertisement Act has been passed. Its object is to check the increasing number of objectionable advertisements regarding venereal diseases, sexual stimulants, etc.

1950-51 BUDGET AT A GLANCE

	(In lakhs)
Revenue Receipts	5226
Revenue Expenditure	5221
Surplus	5

No additional taxation.

No extension of prohibition.

Top priority to Grow More Food schemes.

First place to education in State budget estimates.

Economy measures, but nation-building activities unaffected.

Extension of Military Education to three more districts.

Scheme of separation of executive and judicial functions to be extended to 10 or 12 Districts

In introducing the budget the Finance Minister made the following points among others.

Expenditure on development stood higher to-day than almost at any other time in the past as was evident from the fact that in 1936-37 the expenditure on Education, Medical, Public Health, Agriculture, Rural Development, Irrigation, Co-operative, Industries and Veterinary Departments, taken together, amounted to a little over Rs. 3 crores, in 1945-46 it was Rs 6·77 crores and in the present year (1950-51) the corresponding figure was Rs. 16 98 crores.

While the law and order position continued to give cause for anxiety, the economic situation also persisted in being difficult Prices continued to rise and the money markets remained tight and quite impervious to inducements to invest As remedial measures, Government stepped up strongly their efforts to increase food production and rendered every possible aid in reducing labour trouble and discontentment. To prevent further inflationary movements, full rationing was re-imposed throughout the State. That, coupled with the vigorous drive to collect money for the Zamindari Abolition Fund, had a stabilizing effect on agricultural prices in spite of the devaluation of the rupee

Any resort to additional taxation being not practicable, at present, Government had turned to the alternative course of effecting economies in expenditure in order to balance the budget Expenditure in every department had been pruned and the resultant savings diverted to nation-building activities. Strict instructions were issued to all spending authorities to reduce expenditure on travelling allowance and contingencies, allotments for which had been drastically reduced. Reductions had been ordered in a number of temporary establishments also. Further a Commissioner of Finance and Reorganization had been recently appointed and entrusted with the task of devising ways and means to avoid waste in public expenditure, of introducing methods of efficient audit and reorganising the administrative machinery so as to make it cheaper and more efficient.

Economies, no matter how effective they were, could not take the place of revenue and capital receipts With the reduction of Central subvention to 50 per cent on approved unproductive development expenditure subject to an over-all limit of 357 lakhs, Government had no other way but to find the remainder of the development expenditure from their own resources. Similarly, money market being unresponsive, no loans could be floated this year for financing capital schemes and Government had had to rely on the reserves for meeting the major part of their capital expenditure.

The Deshmukh Award reduced the Government's share in the divisible pool of income-tax from 19 to 18 per cent.

Besides the three great measures of social reform to which Government was pledged, namely (1) Zamindari Abolition, (2) Prohibition and (3) Education of the masses in the democratic way of life through the Panchayat Raj, Government's first anxiety of the moment was to make the State fully self-sufficient in the matter of food. The chief feature of the revised estimate of the current year and of the budget estimates of next year was, therefore, a general concentration on Grow More Food schemes, the total expenditure on which would be of the order of 8¼ crores in the budget year.

In the year 1948-49, the revenue amounted to 4,920 lakhs and the expenditure to 4,918 lakhs, leaving a small surplus of 2 lakhs. The real surplus, however, amounted to 291 lakhs of which 189 lakhs were transferred to the Revenue Reserve Fund and one crore to the Zamindari Abolition Fund.

As for the revised estimates for the current year it would be necessary to draw upon the Revenue Reserve fund to the extent of 260 lakhs The net result at the end of the year would be a small surplus of 3 lakhs Capital expenditure also showed a drop of 708 lakhs owing to the slowing down of certain hydel works and a credit of 3 crores from the Supply Schemes Stabilization Fund in reduction of the capital expenditure on Food Production Schemes.

In regard to the budget estimates for 1950-51 the revenue receipts and expenditure were expected to balance each other at 52 crores The anticipated fall in revenue as mentioned above was due mainly to the stoppage of the grant for development schemes while the drop under revenue expenditure was explained principally by the slowing down of certain hydel, building and road works and partly by smaller expenditure on Gaon Sabhas and Panchayats.

Zamindari Abolition:—The collection to the Zamindari Abolition Fund so far amounted to a little over Rs. 15 crores and it was anticipated that they would stand on a substantially much higher figure before the close of the sugar-crushing season The Rabi crop, which promised to be very satisfactory on the whole, might also contribute in increasing the collection figures All the money collected so far had been invested in Central Government securities and treasury deposit receipts in the Zamindari Abolition Fund Investment Account and was available for payment of compensation whenever needed.

Food and Civil Supplies:—Expenditure on the supply and rationing of foodgrains again went up this year and caused a heavy strain on State finances. Full rationing had to be re-introduced in the beginning of the current financial year after a brief attempt at de-control, which did not prove successful It would not be practicable to remove all controls in the immediate future The Government of India had decided to give no import quota of foodgrains to the State this year. For the last several years it had an import quota varying between two and three lakh tons a year. The stoppage of this quota was likely to create supply problems for the State and might even necessitate a revision of rationing commitments

Education:—Education still occupied the first place in the State's budget estimates. The Education budget stood at 7 37 crores Government had prepared a scheme for the opening of 22,000 primary schools in rural areas, that by the beginning of the current financial year 6,922 schools had been opened and that, since then, 4,218 more schools had been opened. Thus, there were, at present, 11,140 schools in the State providing education for over 6 lakh children For reasons of economy Government would be able to open only 550 new schools next year. Another important scheme in hand was of compulsory primary education for boys living in urban areas. The number of schools under this scheme was 21,608 in the current year, the total enrolment of students having risen to over three lakhs. Military education was being extended to three more districts in the budget year, additional grants would be given to the Universities of Allahabad and Lucknow for increasing the number of seats in the B Sc classes and for providing them with better equipment for scientific research. Similar provision was being made for degree colleges affiliated to the Agra University.

Medical and Public Health:—Lack of finances prevented Government from providing medical and health facilities on a thoroughly adequate scale Nevertheless, satisfactory progress had been made in this direction during the current financial year In addition to the 500 allopathic dispensaries in rural areas, about 50 more had been started this year Eighteen women's and 4 other hospitals had been provincialised and 35 rural indigenous dispensaries had been started A State pharmacy of Ayurved had been established for manufacturing Ayurvedic medicines A school of dental surgery had been started at the Lucknow Medical College and the new Ayurvedic College at the Lucknow University Mass inoculations were made in some of the bigger towns under the scheme of B C.G vaccination against T B. A special anti-malaria campaign was being conducted in the Tarai Bhabar tract. In the budget year it was proposed to start 20 Ayurvedic and 10 other indigenous dispensaries. A new T B sanatorium, having at least a hundred beds would be established either at Jahangirabad in the Barabanki district or at Rampur A scheme of Employees' Insurance would come into force at Kanpur from July 1, 1950

Industrial Development:—Government had planned the setting up of a Precision Instrument Factory, which would go into production within the next month or so The proposed cement factory was expected to start functioning in 1951-52, the land for it having been acquired and orders for necessary machinery having been placed

Labour Problems:—There was no major industrial trouble in the State A special feature of the year was the introduction of a scheme for the pooling of retrenched labour in Kanpur so that well-ordered re-absorption of such labour into industry might be facilitated.

Agriculture:—Since 1946, 70,000 acres of land had been reclaimed A provision of 101 86 lakhs for land reclamation and 416.22 lakhs for irrigation schemes had been made in the budget for reclaiming 1,25,000 acres of land, sinking 26,500 masonry wells and 115 tube-wells, improving 5,100 masonry wells and distributing 17,600 Persian Wheels. The Agriculture Department had also sunk already about 6,500 masonry wells and 140 tube-wells and since 1945-46 had improved about 7,000 masonry wells by boring and distributed over 5,300 Persian Wheels A provision of two lakhs had also been made for the extension of jute cultivation which was of considerable importance Government had already been able to put 15,000 acres of land under jute this year It was hoped that by the end of the next year the acreage would have increased to 60,000, thereby making the State self-sufficient in the matter of jute

Irrigation:—As out of about 480 lakh acres of cultivable land in the State, irrigation facilities existed in only less than half of the area, an increase of the irrigated area by the extension of State canals and construction of more tube-wells was a very important part of the Government Development programme. The Sarda Canal was being extended by 1,062 miles, 400 miles of new channels having been dug under the scheme in the current year. The Lalitpur Dam, which was expected to irrigate 30,000 acres of land annually, had been completed and the Nagwa Dam in the Mirzapur district, which would irrigate 15,000 acres was nearly

nplete Six hundred tube-wells relating a project undertaken in 1943-44, had been npleted and would be in operation in the rse of 1950-51. Work on 250 additional be-wells would also be completed. An portant scheme in hand was to provide gation facilities, although on a small scale, the hilly region of Kumaun.

Road Programme:—Out of the programme wn up in 1946 for developing means of nmunications in the State, Government had far constructed about 1,000 miles of new talled roads, 4,500 miles of new unmetalled ds and earth work and completed construcn of 130 miles of cement concrete track r lack of funds this programme would have be temporarily slowed down.

Transport:—In accordance with the road licy of Government to nationalise road transrt Government set up a regional organization 1946 to run State-owned bus and lorry services routes extending all over the State One busand two hundred and thirty-eight Governnt buses were now operating about 220 vices, while over 550 Government owned ods carriers were also plying for hire City s service had been started at Lucknow and lahabad.

Prohibition:—Total prohibition was ginally introduced in seven districts in 1947 the subsequent year it was extended to Kanpur d Unnao and this year to two more districts, nging into existence a large prohibition bloc eleven districts It had also been enforced the religious centres of Hardwar, Rishikesh d Vrindaban.

Justice:—A scheme for the separation of ecutive and judicial functions was introduced May, 1949, in the districts of Bulandshahar, athura, Shahjehanpur, Farrukhabad, Jhansi, nao, Bahraich and Sitapur The results the scheme showed that it was a distinct provement over the old procedure The number of pending appeals in all the districts, where it had been introduced, had gone down appreciably and there were fewer adjournments in the hearing of suits and criminal cases. It had been decided to extend the scheme to 10 or 12 districts in the budget year.

Law and Order:—The law and order situation continued to tax the energies and sources of Government. In spite of this the police expenditure had been reduced in certain directions, by cutting down, for instance, the number of companies of the Provincial Armed Constabulary from 84 to 78 The Police Department had also made considerable reduction in the budget and diverted money for introducing improvements such as setting up special investigation squads, reorganising the Prosecution branch, increasing the strength of Armed Security Service, etc , without allowing the overall expenditure on the police force to rise.

ADMINISTRATION

Governor—His Excellency Sir Hormasji Peroshaw Mody

STAFF OF HIS EXCELLENCY THE GOVERNOR

Secretary to the Governor.—Major C. S. Bhatnagar.

Assistant Secretary, Office of the Secretary to the Governor.—Prem Ballabh Pande.

Personal Assistant to H E. the Governor.—K R. Nagappa, B A

Superintendent, Office of the Secretary to the Governor.—Govind Ballabh Pant.

WEST BENGAL STATE

IN accordance with the provisions of the Radcliffe Award, West Bengal consists of the whole of the Burdwan Division and part of the Presidency Division of old undivided Bengal. District-wise, the whole of Burdwan, Birbhum, Bankura, Hooghly, Howrah, Midnapore, Calcutta, 24-Parganas, Murshidabad, and Darjeeling Districts and parts of Nadia, Malda, Jalpaiguri and Dinajpur Districts are in West Bengal. The 24-Parganas District includes the two P. S. of Jessore, Bongaon and Gaighata, that is 10.94 per cent of the area and 7.28 per cent of the population of Jessore. Of Nadia District 47.75 per cent of the population and 52 34 per cent of the area, of Malda 68.50 per cent of the population and 69 41 per cent of the area, of Jalpaiguri 77.62 per cent of the population and 81.57 per cent of the area, and of Dinajpur 30 28 per cent of the population and 35 14 per cent of the area are in West Bengal

Besides these there is the State of Cooch Behar

The total population and the relative figures of Hindus, Muslims and others are given below —

	Area in Sq miles	Population				Percentage		
		Total	Hindus	Muslims	Others	Hindus	Muslims	Others
West Bengal (Excluding Cooch Behar)	28,215	21,196,453	14,330,928	5,301,696	1,563,829	67 61	25 01	7 38
Cooch Behar . .	1,318	640,842	394,948	242,684	3,210	61 63	37 87	0 50
New West Bengal State .	29,533	21,837,295	14,725,876	5,544,380	1,567,039	67 43	25 39	7 18

According to the Census figures of 1931, Bengali is spoken by about 83 per cent of the population and Hindi and Urdu by about 8.3 per cent excluding Cooch Behar.

AGRICULTURE

During 1946-47 the area under paddy in West Bengal (excluding Cooch Behar) was 9,959 9 thousand acres and total cropped area was 12,700 8 thousand acres i e the area under paddy was approximately 78 4 per cent of the total cropped area In 1947-48 and 1948-49, area under paddy in West Bengal (excluding Cooch Behar) was as follows —

	1947-48 (in thousand acres)	1948-49 (in thousand acres)
Aman	8,038 5	7,866 3
Aus .	1,281 4	1,243 6
Boro	25 3	25 3 (estimated)
Total	9,345 2	9 135 2

The area under Jute is given below —

	1948 (in thousand acres)	1949 (in thousand acres)
West Bengal (Excluding Cooch Behar)	314 9	346 8 (Preliminary)
Cooch Behar	35 0	36 8
Total	349 9	383 6

INDUSTRY

Agriculture is the principal industry of West Bengal In addition to this there are the jute mill industry, the tea industry (confined to the districts of Jalpaiguri including the Dooars and Darjeeling), the coal mining industry and the sugar industry. The jute mills in and around Calcutta and in the riparian tracts of the districts of Howrah and Hooghly constitute the principal manufacturing industry of the State

The following table gives the number of factories in the State —

	Number of factories		Average daily number of workers employed	
	1946	1947	1946	1947
Jute Mills	86	88	292,779	298,457
Other factories .	1,810	1,880	371,972	369,169
Total Factories .	1,896	1,968	664,751	667,626

TEA INDUSTRY

	1947	1948
Area under Tea (acres)	194,312	194,564
Number of factories	275	.
Average daily number of workers employed	23,646	
Number of gardens	296	296
Number of Picked workers attended	230,000	230,000

The following are the approximate Trade Figures for value of Import and Export of Calcutta Port for the last 5 years

Value in lakhs of rupees

Year	Import	Export
1942-43	2,550	7,328
1943-44	2,768	9,848
1944-45	7,459	11,065
1945-46	10,285	12,215
1946-47 .	7,418	14,438

EDUCATION

Educational institutions in West Bengal are controlled by the Department of Education, the University of Calcutta, district boards, municipalities, district school boards and a number of religious and philanthropic societies. The control of general education as also of engineering education is ultimately vested in the Minister of Education, whereas medical education is controlled by the Department of Local Self-Government, and agricultural, technical and industrial education by the Department of Agriculture and Industries

The Director of Public Instruction is the executive head of the Department assisted by Assistant Director, Special Officers for Primary, Scheduled Caste and Secondary Education Each division is in charge of a Divisional Inspector assisted by a certain number of Additional or Second Inspectors according to the requirements of the several divisions Similarly the administrative charge of the primary education of each district is in the hands of a District Inspector assisted by Sub-Divisional Inspectors and Sub-Inspectors of Schools, the latter class of officers being in some instances helped by officers of humbler status called Assistant Sub-Inspectors and Inspecting Pandits and Maulvis.

The University of Calcutta established in 1857 is administered by the Chancellor (the Governor of W. Bengal), the Vice-Chancellor (appointed by Government) and a number of ex-officio, elected and nominated fellows. The University of Calcutta maintains a Law College, called University Law College, Calcutta Calcutta University is mainly an examining body, but has now made itself responsible for advanced teaching for which purpose it employs an agency which is mainly distinct from the staffs of the affiliated Colleges.

The following tables give some relevant statistics in regard to education —

(1) NUMBER OF EDUCATIONAL INSTITUTIONS IN WEST BENGAL —(Excluding Cooch Behar)—1947-48

	Male	Female
A. RECOGNISED		
1 University	1

	1,371,050	299,830
B. UNRECOGNISED	9,051	2,133
Total scholars ..	1,380,101	301,963

JUSTICE

The administration of justice is entrusted to the High Court of Calcutta. Below the High Court are the District and Additional Judges, the Small Causes Court and Subordinate Judges and Munsiffs. Of these officers, the District and Additional Judges and a certain number of Subordinate Judges are also endowed with the powers of a Criminal Court while the remainder have jurisdiction in Civil matters only.

Criminal Justice is administered by the High Court, the Courts of Session and the Courts of the various classes of Magistrates. On its appellate side, the High Court disposes of appeals from the order of a Court of Session, and it also confirms, modifies or annuls sentences of death passed by Sessions Courts. One of the Presidency Magistrates in Calcutta is in charge of the Children's Court and is helped by Hony. Women Magistrates The city has also two Municipal Magistrates and it possesses a Court of Small Causes with Judges who dispose of cases of the class that are usually heard in County Courts in England.

In addition a number of Union Benches and Courts have been established in selected rural areas for the disposal by honorary agency of petty criminal cases and civil disputes.

LOCAL SELF-GOVERNMENT

By Bengal Act III of 1884, and its subsequent amendments, which hitherto regulated municipal bodies in the interior, the powers of Commissioners of municipalities were increased and the elective franchise was extended. Bengal Act III of 1884 was repealed by Act XV of 1932 by which material changes have been introduced, *e.g.*, the franchise of the electors has been further widened, women have been enfranchised, the proportion of elected commissioners has been increased and the term of office of the Commissioners has been extended from three to four years. Municipal expenditure now comprises a large number of objects, including water-supply, public works, maintenance of hospitals, dispensaries and educational institutions, veterinary institutions, employment of health officers, vaccinators and sanitary inspectors, the training and employment of female medical practitioners, the provision of model dwelling houses for the working classes, the holding of industrial, sanitary and health exhibitions and the improvement of breed of cattle. The Commissioners also have large powers in regard to the water-supply and the regulation of buildings.

The Municipal Government of Calcutta is governed by Act III of 1923. This Act, which replaces Act III of 1899, makes the Corporation paramount in matters relating to municipal administration. The Act provides for the appointment of a Mayor, who replaces the Chairman of the old Act, a Deputy Mayor, an Executive Officer, and two Deputy Executive Officers, all elected by the Corporation The appointments of the Chief Executive Officer and the six other principal officers of the Corporation are subject to the approval of Government. In order to improve the insanitary and congested areas of the city, the Calcutta Improvement Trust has been created with extensive powers.

In the *mofussil*, district and local boards exercise considerable powers, with regard to public works, education and medical relief.

Bengal Act V of 1919 introduces the new system of self-government by the creation of village authorities vested with the powers and duties necessary for the management of village affairs and entrusted with powers of self-taxation. The new village authority, called the union board, which will replace gradually the old chaukidari panchayats and the union committees deals with the village police, village roads, water-supply, sanitation, primary schools and dispensaries. The Act also empowers Government to create out of the members of the union boards, village benches and courts for the trial of petty criminal and civil cases arising within the union The Act has been extended to all districts in the State.

PUBLIC WORKS

The Public Works Department consists of Public Works and Railway Departments and is under the charge of the Secretary to Government in the Department of Communications and Works and Buildings.

The Public Works Department deals with questions regarding the construction and maintenance of public buildings and also regarding roads, bridges, etc

The Railway Department deals with questions regarding acquisition of lands required by the several Railways, the alignment of new lines of Railways, and with Tramway projects.

There is a Chief Engineer who is the principal technical adviser to Government.

MARINE

The Marine Department deals with questions connected with the administration of the port of Calcutta and inland navigation, including the control and administration of Government launches except the police launches.

IRRIGATION

The Irrigation Department deals with irrigation, navigation, flood protection by means of embankments and drainage, the latter including relief from congestion of drainage by regulating the available supplies of water to suit the requirements of agriculture combined with the supply of water for irrigation in cases in which a supply is available.

POLICE

The West Bengal Police force comprises the Military Police, the District Police and the Railway Police. The West Bengal Police are under the control of the Inspector-General of Police, the present Inspector-General being a member of the Indian Police Service. Under him are Deputy Inspectors-General for the Presidency range and the Burdwan range and also one Deputy Inspector-General in Charge of the C I D. and the Intelligence Branch.

Each district is in charge of a Superintendent, and some of the more important districts have one or more Additional Superintendents The Railway Police is divided into three distinct charges, each under a Superindentent The cadre comprises Assistant Superintendents, Deputy Superintendents, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, Head Constables and Constables. There is also a Village Police, composed of daffadars and chowkidars, who receive a monthly salary which is collected from the villages or unions by the Panchayat or Union Board. The Calcutta City Police is a separate force maintained by Government under a Commissioner who is responsible direct to Government. The Commissioner has under him Deputy Commissioners, Assistant Commissioners, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, Head Constables and Constables. A school for the training of recruits for the Calcutta Police force has been established at Calcutta. The annual cost of the Police is about 4 crores.

PUBLIC HEALTH

The head of the Medical Directorate is the Director of Health Services. In the districts the Civil Surgeons are responsible for medical work. According to the latest statistics available there are 105 hospitals and dispensaries in Calcutta, 11 of which are supported by the Government and 26 private hospitals and dispensaries partly supported by the Calcutta Corporation; also there are 6,691 beds available of which 506 are at the hospitals and dispensaries mentioned above. The Government of West Bengal has sanctioned an expenditure of 77,85,000 for Public Health in the 1950-51 Budget.

1950-51 BUDGET

The Budget of the State of West Bengal for 1950-51 shows a revenue deficit of Rs. 1 crore and 33 lakhs and a deficit of 4 crores and 28 lakhs outside revenue account The revenue receipts are estimated at Rs. 33 crores and 90 lakhs and the revenue expenditure at Rs. 35 crores and 23 lakhs

As a measure of economy, a scheme of compulsory cut in pay in the case of the highest paid Government servants and a compulsory saving by contribution to the Provident Fund in the case of Government servants of certain other categories, has been introduced.

The main features of the Budget are —

(*a*) There is no proposal for fresh taxation;

(*b*) Customs—Under the Deshmukh Award, the State of West Bengal will receive a fixed grant of Rs 105 lakhs annually in lieu of a share in the net proceeds of the export duty on jute and jute goods

(*c*) Income-tax—50 per cent of the net proceeds of Central taxes on income are distributed to different States in fixed proportion and West Bengal's share is 13¼ per cent of the State pool

(*d*) A total provision of Rs 3 crores and 74 lakhs has been made for expenditure on unproductive development scheme, against which no grant will be received from the Government of India and the entire burden will be thrown on State resources

A total provision of Rs 10 crores and 71 lakhs has been made under heads of "Capital Outlay" for development schemes to be financed from loans. The provisions include—(*i*) Rs 4 crores and 61 lakhs on account of West Bengal's share of the cost of Damodar Valley Project for the year 1950-51, (*ii*) Rs 2 crores for the Mayurakshi Project, (*iii*) Rs. 2 crores and 54 lakhs for the development of Provincial roads, (*iv*) Rs 47 lakhs for housing schemes, and (*v*) Rs 75 lakhs for the Road Transport scheme;

(*e*) A provision of Rs 1 crore and 75 lakhs has been made for expenditure on "Grow More Food" schemes. The expenditure will be partly covered by receipts from sale of seeds, manures etc A contribution of Rs 26¼ lakhs will be received from the Government of India towards this expenditure

(*f*) A provision of Rs 88 lakhs has been made for expenditure on "Procurement Bonus Schemes", which will be entirely financed from the bonus payable by the Government of India on internal procurement of food grains.

(*g*) With the merger of Cooch Behar with West Bengal with effect from the 1st January 1950, the provisions for Cooch Behar for 1950-51 form an integral part of the provisions under the appropriate heads of the West Bengal Budget. The revenue receipts for Cooch Behar are estimated at Rs 44 lakhs and the revenue expenditure at Rs. 60¼ lakhs.

(*h*) A provision of Rs. 1 crore and 67 lakhs has been made for expenditure on relief and rehabilitation of refugees against which a recovery of Rs 1 crore and 27 lakhs will be made from the Government of India. Besides a provision of Rs. 4 crores and 59 lakhs has been made for the purpose of building houses for the refugees and for distribution of loans and advances to them.

In point of proportion of the cost of each service to the total revenue expenditure, "Police" occupies the first place and then come "Food and Supply", "Education" and "Medical".

ESTIMATED REVENUE FOR 1950-51.

(The figures are in thousands of rupees.)

ADMINISTRATION

The present form of administration in West Bengal dates from the 26th January, 1950 when India emerged as a Sovereign Democratic Republic

With the enforcement of the Government of India Act of 1935 on April 1, 1937, complete provincial autonomy came into being. The entire administration vested in the Governor assisted by a Council of Ministers holding office during his pleasure but answerable to a wholly elective legislature comprising two houses Except in regard to his special responsibilities, the Governor corresponded to a constitutional head The services no longer found a place in the legislature and were subordinate to the Ministers Dyarchy disappeared and there was a substantial measure of responsible Government

As from 15th Aug 1947 two independent Dominions known as India and Pakistan were set up in India under the provisions of the Indian Independence Act, 1947.

The Province of Bengal, as constituted under the Government of India Act, 1935, ceased to exist from that day and in lieu thereof two new Provinces, East Bengal and West Bengal were constituted of which only the latter came under the Dominion of India. Pending the framing of the new constitution of India by its Constituent Assembly, the Legislature of the new Province of West Bengal was made unicameral by an order of the Governor-General issued under the provisions of the Indian Independence Act, 1947 The administration of the Province was carried on under the Government of India Act, 1935 as adapted by orders of the Governor-General issued from time to time under the provisions of the said Independence Act. Under the adapted Government of India Act, the special responsibilities of the Governor as well as his individual judgement and discretionary powers ceased to exist.

This state of affairs continued until the 26th January, 1950 with effect from which date the new constitution of India came into force Under the present Constitution the State of West Bengal will have a bicameral legislature It has been laid down in the Constitution of India that until the West Bengal Legislative Assembly and the Legislative Council have been duly constituted and summoned to meet for the first session under the provisions of the constitution, the former West Bengal Legislative Assembly functioning immediately before the commencement of the Constitution shall exercise the powers and perform the duties conferred by the provisions of the Constitution on the Houses of the Legislature of the State of West Bengal The executive authority of the State continues to vest in the Governor but he has now to act strictly according to the advice of his Council of Ministers in all matters Ministers, on the other hand, are responsible to the Legislative Assembly of the State

The unit of administration is the District Magistrate and Collector. As Collector he supervises the gathering of the revenue and is the head of all the Departments connected with it, in the District while as District Magistrate he is responsible for the administration of criminal justice in the district. The immediate superior of the District Magistrate is the Divisional Commissioner. Commissioners are the channels of communication between the district officers and the Government. In certain revenue matters they are, in their turn, subject to the Board of Revenue in Calcutta ; in other matters they are under the direct control of Government.

PERSONNEL

GOVERNOR.

His Excellency Kailashnath Katju

MINISTRY.

Chief Minister (incharge of Home, Medical, Public Health and Refugee Rehabilitation Departments), The Hon'ble Dr. Bidan Chandra Roy

Finance, Commerce & Industries, The Hon'ble Nalini Ranjan Sarkar

Civil Supplies, The Hon'ble Nikunja Behary Maitry

FORMER PRINCELY STATES

THE integration of what used to be called Princely India with the larger India is now complete The present position of the former 552 Princely States may be described as follows 216 states with an area of 108,739 sq miles and a population of 1,91,58,000 are merged with the Governors' States 61 States with an area of 63,704 sq miles and a population of 69,25,000 are converted into centrally administered Chief Commissioners' States And 275 States with an area of 215,450 sq miles and a population of 3,46,99,000 are merged into States Unions under Rajpramukhs. The number of centrally administered units formed out of the old Princely States is 7 Himachal Pradesh, Kutch, Bilaspur, Bhopal, Tripura, Manipur, and Vindhya Pradesh The number of states Unions formed out of the old Princely States is 5 Saurashtra, Rajasthan, Madhya Bharat, Patiala and East Punjab States Union, and Travancore-Cochin The total area affected in all is 387,893 sq miles and the population 6,07,83,000 There are only three former States which retain their old frontiers in the modern set-up Hyderabad, Jammu and Kashmir and Mysore

During 1949 and the first three months of 1950 Mayurbhanj, Kolhapur, Baroda, Sandur, Tehri Garhwal, Banares, Rampur and Cooch-Behar were merged. Bhopal, Tripura, Manipur and Vindhya Pradesh were taken over by the Centre Jodhpur, Jaipur, Jaisalmer, Bikaner, Bharatpur, Dholpur, Alwar and Karauli joined the Rajasthan Union The Union of Travancore-Cochin came into being An agreement was signed with Sikkim And a constitutional relationship was established between the centre and Hyderabad

The process of welding over 500 diverse States into viable units is now carried to its final conclusion The present constitution of India specifies only 8 such units in part B of the First Schedule of the Constitution Act

Under the new constitution the former States are all full-fledged constituent units of the Indian Union Thus a States Union like Madhya Bharat has exactly the same constitution as that of Madras or Bombay and also the same kind of relations with centre, except that the head of a States Union is called Rajpramukh and the head of Madras or Bombay State is called Governor Also the centre has the the right for a period of ten years to exercise supervision over a Rajpramukh State through the issuing of directives, a right that it does not normally possess in the case of a Governor's State.

It is useful to review the stages through which the States passed before they reached the present position of complete integrity with the Union In July 1947 after the Indian Independence Act was passed the States acceded to the Dominion transferring to the Dominion Government power over defence, foreign affairs and communications. Later when Unions of Princely States were formed it was decided that the Unions ought to concede to the centre wider powers than before, powers in regard to the same subjects as the Governors' Provinces did This covered all the federal and concurrent subjects except financial and taxation items

Finance and taxation became the subject of a special enquiry by the Indian States Finance Enquiry Committee which submitted a report in July 1949 The committee came to three general conclusions. First, the Union must have authority in States over the same range of subjects as the Provinces. Second, the Union must exercise its powers through the same agency as in the Provinces Third, the State must contribute to the finances of the centre on the same basis as the Provinces do. And receive grants and financial aid from the centre, also on the same basis. The committee produced its reports at intervals from 1st June 1949 to 31st July 1949. Integration, in fact, involved very difficult administrative and financial problems, such as bringing about merger of functions, resources and personnel, allocation of liabilities, and arranging the transfer of power in such a way as to avoid any sudden financial dislocation in the unions. The whole process of transfer was to be spread over a certain number of years, 3, 5 or 10 as the case required.

Simultaneously, in the political sphere a change was taking place in the general attitude to constitutional reform in the Princely States When the States Unions were set up it was thought that the constitutions of the Unions would be framed by the Unions' Constituent Assemblies themselves within the frame-work of the covenants and the Constitution of India Later it was realised that this might result in lack of uniformity leading in its turn to further complications A committee was therefore set up under the chairmanship of Sir B. N Rao to frame a constitution similar to that of the Provinces on which the States Unions' constituent assemblies could model their own constitution Later still with closer contact between the Central Government and the States Unions it became clear that even this was not a satisfactory arrangement as the whole procedure smacked of an evil past when the Princes were considered independent So a conference was called in 1949 May and it was decided with the concurrence of the Unions and States' Chief Ministers that the Indian Constituent Assembly should frame the Constitutions for the States Unions as part of the constitution of India. A committee was then set up under the chairmanship of Mr M K Vellodi to examine the draft constitution of India and propose amendments to bring the States Unions into line with the Provinces The amendments so proposed were referred to States Unions' constituent assemblies wherever they existed (Saurashtra, Travancore-Cochin, Mysore) The Saurashtra Assembly adopted the draft constitution in its entirety The other two proposed a few changes some of which were accepted and others rejected The acceptance of the constitution by each of the States Unions was proclaimed by the Rajpramukh on the basis of a resolution adopted by the constituent Assembly in Saurashtra, Travancore-Cochin and Mysore Elsewhere the proclamation was made by the Ruler as in Hyderabad The acceptance of the new constitution by the people of the Princely States was implicit in the fact that the people had their representatives in the Central Constituent Assembly where the constitution was drawn up after prolonged deliberations.

The instruments of merger and the covenants establishing the various Unions are in the nature of over-all settlements While providing for the integration of States and for the transfer of power from the Rulers they also guarantee the Rulers privy purses, succession to *gadi* rights and privileges, full ownership use and enjoyment of all private property belonging to them as distinct from State property

UNIFICATION

The unification of India is no doubt an achievement of which the Ministry of States is justly proud But a number of baffling problems still remained to be solved Unification implies that the different administrative Units have the same kind of internal structure and that they all stand in the same relation to the Central Government For instance, the administrative machinery of a Union must be similar to that of a Province A Union like a Province must also have an elected legislature and a ministry responsible to the legislature In other words, the process of unification must be followed by a process of modernization and democratization Besides most of the States are badly equipped for the administrative tasks which they are called upon to discharge. Hence the Government of India which was chiefly responsible for the formation of Unions and the merger of States into Provinces has a duty to perform to the people who belong to the merged or integrated States. The Government of India has therefore legally acquired certain over-riding authority over the Governments of the States Unions. It has the right to give directions to the Raj Pramukh and his Government about the way in which they are to discharge their duties.

PRIVY PURSE

It is worthwhile enlarging some of these items.

In the past there was hardly any distinction between the Rulers' personal expenses and State expenditure, and even in those States where such a thing as privy purse did exist no effective steps were taken to see that personal and State expenditure were in practice separately accounted for. Large amounts were thus spent on Rulers, the members of their families and on State ceremonies and functions Today every Convenant contains a clause fixing the Rulers' privy purse which is calculated to cover the expenses of the Rulers and their families including such expenses as those on residence, marriage, ceremonies, etc The privy purse is guaranteed by Article 291 of the Constitution The money being a charge on the consolidated Fund of India, subsequently to be recovered wholly or partly from the States Governments

The basis of calculation is the revenue of the State For the first lakh the Ruler is allowed 15 per cent, for the next four he is allowed 10 per cent, above 5 lakhs 7½ per cent, the maximum being 10 lakhs This maximum is exceeded only in the case of the Rulers of some of the major States recognized as viable, and even here it is agreed that the amount is to be paid only during the life-time of the present Ruler.

The total annual privy purse commitments amount to 5 8 crores at the present time When the amounts guaranteed to certain rulers during their life-time are refixed the total annual expenditure on this account would be reduced to 4 crores Then there are the savings resulting from fixing the privy purses which will, it is calculated, amount to about two crores exclusive of the savings in Vindhya Pradesh, Patiala and East Punjab States Union, Baroda and Kolhapur,

Here, for instance, is a list of the annual pensions which are to be paid to some of the Rulers of the former States during their life-time only Jaipur, Rs 18,00,000, Jodhpur, Rs 17,50,000; Bikaner, 17,00,000, Patiala 17,00,000, Baroda 26,50,000, Travancore 25,00,000, Indore 15,00,000, Hyderabad 50,00,000, Mysore 26,00,000

PRIVATE PROPERTY

The question of private property was settled by the States Ministry on an *ad hoc* basis, mainly through discussion between the representatives of the Ministry, the Rulers concerned, and the representatives of the Governments of the States or Provinces No uniform system was followed in settling the question The criterion applied was that if a building, for instance, was used exclusively by the Ruler or his family, it was considered to be his private property and if it was used for public purposes, it automatically became the property of the State

The main features of the settlement are: The Ruler is entitled to retain the palace in which he lives He can also have one more residential building only, either at a sea-side resort or at a hill station. All buildings in excess of these are to be made over to the State

In no case is the Ruler allowed to retain any land except where there is positive proof that the land is his ancestral property. Even here, he is subject to the tenancy laws of his State and has to pay taxes like any other landowner. Generally no forest areas have been given to Rulers, though limited rights of grazing and obtaining fuel have been recognized in some cases. Shooting rights are conceded in well defined areas subject to the laws in force in the place. The principle involved in agricultural land

is that the Ruler is not entitled to any income besides the privy purse. In fact, wherever proprietary rights over land is recognized it is done mainly on the ground that many of them have the time and the resources to undertake modern and mechanical methods of farming The States Ministry has however restored to the States administrations thousands of acres of such land and in the case of one Ruler, 154 big villages have been taken away and handed over to the State

The States Ministry declined to recognize the grant of lands made by Rulers to their relatives or others on the eve of integration or merger of their States In cases where such assignments were made long before the integration, the property becomes subject to land assessment and tenancy laws of the Union or of the province.

Several Rulers are stated to have parted with their money and investments without demur. For example, the Maharaja of Gwalior made over to his Government Bombay Improvement Trust scrips bearing an annual interest of about Rs 50 lakhs. Similarly, the Gangajali (reserve fund) of Rs 1,62,37,000 was also given to the State The Maharaja of Baroda agreed to creat a trust with a corpus of Rs 2 crores the income from which was to be available for works of public utility in the territory of the former Baroda State, and the advancement of education

Jewellery—priceless sapphires, emeralds, diamonds and pearls were all divided into two categories. Those actually used by the Ruler himself and those used as regalia at State functions A list was then made of the jewels falling into the latter category, and though the Ruler could keep this jewellery in his custody the Union Government or the Provincial Government, as the case may be, were given the right of inspection and check up.

The Rulers had a civil list reserve funds intended to relieve the State of the expenditure in connection with marriages, etc This was allowed to be retained by the Rulers

Temples and properties attached to them are constituted into trusts Temples situated within the palaces were classed as personal property.

Half the number of cars of Rulers, some of whom maintained fleets of 50 and more, were assigned to the State and are now being used by Ministers and other State officials

Some Rulers were generous enough to make over to the State larger slices of property than they were obliged to do under the terms of the agreement. The Maharaja of Travancore for instance granted to the State property to the extent of as much as 20,000 acres

There are some 35 palaces and houses belonging to Rulers in Old and New Delhi about which no decision was taken Some of the States administrations claim them as State property while the Rulers challenge the claim

The States Ministry arranged for the payment of pensions "in deserving cases," which include the aged mothers of certain Rulers, widowed sisters and other near relatives having no personal property.

The final result of the award is that most of the Rulers have been left with one-fourth of what they considered as their private property, the rest going to their Government.

When the administration was taken over the new Governments inherited cash balances and investments of the value of nearly Rs 70 crores During the settlement of the private properties the Rulers gave up their claims to approximately another 4 5 crores Other property given up includes palaces, buildings, stables, garages, shops and aeroplanes.

There is a clause in every Agreement which says that all the rights and dignities (enjoyed till then by the Princes) would continue under the new constitution These Agreements are excluded from the jurisdiction of law courts by Article 363, while Article 362 requires every legislative or executive authority to give due regard to the clauses of the Agreement in the exercise of its functions. Some of these rights have already been outlined. Others may be mentioned here. The Princes are guaranteed succession according to law and custom Then there are minor rights and dignities which vary from State to State and are exercisable both inside and outside the State. No exhaustive list has ever been drawn up of such privileges and dignities, though some like the use of red plates on cars, immunity from civil and criminal jurisdiction and exemption from customs duties are well known.

The merged States are represented in the Provincial Legislatures by members nominated by the Governor-General through an order passed by him on 27th July, 1949 The number nominated for each Provincial Legislature is as follows Madras Assembly, 2 , Bombay Assembly, 40 , Bombay Council, 21 , Bihar Assembly, 1 , Madhya Pradesh Assembly, 17 , Punjab Legislative Assembly, 1 , Orissa Legislative Assembly, 31 , U P Legislative Assembly, 6 , West Bengal Assembly, 2

The final step in integration was the absorption by one State of enclaves belonging to another State lying within its administrative boundaries The States which exchanged enclaves were Madhya Pradesh and Vindhya Pradesh, Punjab and Himachal Pradesh, U P and Himachal Pradesh, U P and Vindhya Pradesh, Bombay and Rajasthan, Bombay and Saurasthtra, Madhya Pradesh and Madhya Bharat, Punjab and PEPSU, Punjab and Rajasthan, Madras and Mysore, Madras and Travancore-Cochin, U P and Madhya Bharat, U P and Rajasthan, Bhopal and Madhya Bharat, Himachal Pradesh and PEPSU.

PROBLEMS FACING UNIONS

We may next pass in review some of the problems which the new Unions have to face These problems are mainly two, unification of administration and democratization Both these problems present enormous difficulty Let us take unification of administration first Often the various states forming part of a Union have different types of administration In some all authority is concentrated in a few hands Such a thing as Department hardly exists Neither does such a convenient unit of administration as 'District' A District Officer as a person who is responsible for co-ordination in a particular area is also unknown Thus whatever new administrative units are set up they will have to acquire the requisite cohesion and the necessary local tradition before the state machinery can begin to function smoothly In some States modern organization of a sort does exist but it is not well enough developed—certainly not to the same degree as in a Governor's State In many States the traditional form of rule flourishes with a peculiar strength In some Unions large tracts of land are held under a system called the Jagirdar system with the holders performing a variety of administrative functions There are also any number of systems of land tenure. Large parts indeed remain under feudal conditions , and anything like a modern system of revenue administration which includes settlement, record of rights, trained revenue staff is unknown over vast areas

It is thus clear that the administrative personnel inherited by the Union is unequal to the tasks which the new Government have to face In a great many States rules of recruitment, training, promotion do not exist The principle of selection through a competitive examination is recognized only in a few States and even here to a very limited extent Traditions of common service are hardly developed anywhere. In some areas the predominance of certain classes in the public services particularly the army and the police is a hindrance.

With the promulgation of the new constitution the administrative machinery has become identical in theory at any rate with that of the Governor's State. But it will be some time before it can become the same in practice.

The manner in which the States Unions are participating in the recruitment to the All-India Services may be described here. This was decided after a conference of Chief Secretaries in July 1949. For emergency recruitment to I A S five independent cadres have been set up for Hyderabad, Rajasthan, Madhya Bharat, Mysore and Travancore-Cochin. Then there are joint cadres for Vindhya Pradesh and Madhya Pradesh, Bombay and Saurashtra, and for Punjab and the Patiala and East Punjab States Union A similar scheme is ready for the Indian Police Service and is awaiting the approval of the various Governments The Scheme envisages the absorption of suitable officials already holding posts in the administrative services.

So much for administrative problems. When we pass to political problems we find the position is just as difficult Not many States have legislatures functioning in them Even in the local sphere the number of representative institutions such as panchayats, district committees, municipal committees is very limited Political parties with a well knit organisation and a well defined programme of action do not exist whatever differences there are between parties are of a local or factional character Thus the whole background from which a democratic and representative government arises is completely lacking Respect for individual rights, the habit of arriving at decisions through discussion and compromise, loyalty to decisions already arrived at which are the quaintessence of democracy are yet to develop in all the State Unions

It is with such poor equipment that the Unions have to set about their work of building a new State. The States are starting as if from scratch and there is much to do by way of reconstruction Land systems have to be changed, vast irrigation works have to be established, mineral and industrial sources have to be developed Then there are welfare activities like public health and education which have to be organized In such of the Unions as lie on strategic border areas security measures have to be put through All these are problems which are difficult enough to try the skill and experience of long established administrations

It is precisely because the Central Government is fully conscious that the Union Governments are unequal to the tasks which they have to fulfil that it has acquired the power of control and supervision over the Union Governments. In many different ways the Central Government is helping the Union Governments to organize and re-equip the administrative machinery. For instance, it has made available to Unions the services of experienced officials as Advisers and have also deputed senior officials of All-India Services to fill certain key posts such as those of Chief Secretary, Finance Secretary and Inspector-General of Police A senior official of the Indian Civil Service Mr M. J Desai was placed on deputation from July to September in 1948 to visit the various Unions, investigate their problems and make suggestions about how the Government of India could help the Unions in building up an efficient administrative service Today the higher posts in certain key services are filled by men recruited by the Central Government on an all India basis, just as in the Governors' States, as is already mentioned

FINANCIAL INTEGRATION

Officials of the Indian Union Government took over the administration of customs, excise and income-tax in the former States on 1st April, 1950 except in Kashmir The Union Government thus formally assumed the powers and functions assigned to it under the new constitution Income-tax and customs and excise circles have been defined Rajasthan and Madhya Bharat will come under the Income-tax commissioner of Delhi The Income-tax Commissioner of the Punjab will have jurisdiction over Himachal Pradesh, PEPSU and Bilaspur, while Vindhya Pradesh is joined to Uttar Pradesh For purposes of general excise and customs PEPSU is integrated with Delhi, the Travancore-Cochin Union is attached to Madras. Rajasthan and Madhya Bharat are constituted

into a single unit with headquarters at Ajmer for purposes of Customs on the Indo-Pakistan border Similarly Hyderabad and Mysore form is single unit with headquarters at Hyderabad

Wherever the existing rates of income-tax are lower than the Central Government rates as in Saurashtra, Rajasthan, Madhya Bharat, Mysore, Hyderabad, the existing rates will prevail They will, however, be brought up to the central level in a period ranging between two and five years Elsewhere, in PEPSU and Travancore-Cochin, where the existing rates are practically the same as the central rates the central rates will come into force immediately

This extension of the Central Government's jurisdiction will bring the Central Government a revenue of 9 crores as against an expenditure of 36 lakhs

STATES FORCES

The Union Government assumed full financial responsibility for States forces on April 1, 1950 Till then financial responsibility had vested in the individual State These forces have always been an integral part of the Indian Army in the sense that they had a definite part to play in any scheme of national defence There was also an obligation to maintain their personal and technical efficiency at a certain minimum level, an obligation which carried with it the need for periodical inspection by the Centre.

Before August 15, 1947 there were 44 States which maintained troops Of these the I S F units of the States which merged with Governors' Provinces such as those of Kutch, Kolhapur, Baroda, the Gujarat States and of the Simla Hill States (Himachal Pradesh) are integrated with the Indian Army In case of others this absorption is well under way. So far as the Forces of the State of Kashmir and Jammu are concerned, full control was assumed on September 1, 1949 Obviously the future of these Forces are bound up with the future of the State of which they are a part

On April 1, 1950 the Government of India assumed full control, both administrative and operational over the forces of Travancore-Cochin, Mysore and Hyderabad.

In regard to the Forces of Rajasthan, Madhya Bharat, Saurashtra and PEPSU operational control rests with the Central Government, while the Rajpramukhs retain administrative control subject to any directions or instructions which may be issued from time to time by the Government of India. These Forces which will be commanded by officers from the Indian Army will immediately come under the operational command of the Indian Army commands in whose area the commands are located. The strength and constitution of these Forces will be determined by the Government of India. The future recruitment of officers as well as of men will also be the responsibility of the Government of India.

MERGERS, INTEGRATIONS

We may next pass in review some of the mergers and integrations that took place in 1949 and early 1950

1. **Kolhapur**—The Government of India had to intervene into the affairs of Kolhapur because of the serious disturbances which took place in that State after the assassination of Mahatma Gandhi As a result of the discussions which the Secretary of the States Ministry had with the Maharaja of Kolhapur an Administrator was appointed by the Government of India. An enquiry was also made into the disturbances by a commission. Later when it became known that the finances of the State were unsatisfactory the Government of India advanced a loan. Finally a merger agreement was negotiated with the Maharaja and on March 1, 1949 the Government of India made over the administration of the State to the Government of Bombay with which State it is now merged.

2. **Baroda**—Considerations of a different sort led to the merger of Baroda with Bombay State. Though Baroda was financially sound and had a very efficient and up-to-date administration it lacked geographical unity Its territory was interspersed with that of Bombay and Saurashtra in many different places The administrative inconvenience so caused was thrown into striking relief by the experience during the famine in Baroda State in February 1949 It was found that foodstuffs could not be despatched to Baroda owing to regulations restricting movement of food from one administrative area to another Consequently the Maharaja of Baroda was advised by the States Ministry to merge Baroda with Bombay When the Maharaja found that his Ministers also agreed with the advice given by the States Ministry he consented to merge his State The merger took place on May 1, 1949

3 **The United State of Rajasthan** formed in 1948 was obviously an incomplete State Three major States Jalpur, Jodhpur, Bikaner and one minor State Jaisalmer remained outside the Union Though considered viable all these States were from every point of view historical, cultural, economic an integral part of Rajasthan Thus an expansion of the United State of Rajasthan embracing the four States mentioned above could not be delayed very long This larger union materialized on March 30, 1949 Later on May 15, 1949 the United State of Matsya merged with this larger Union to form one consolidated Union of Rajasthan which thus became the biggest of the States Unions

Alwar and Karauli of the Matsya Union were in favour of merging with Rajasthan, while in Dholpur and Bharatpur opinion was divided between merger with Rajasthan and merger with U P Some kind of enquiry was conducted into the state of public feeling in Dholpur and Bharatpur and eventually it was decided to merge them along with the other two Matsya States into Rajasthan

4. **Bhopal**—There was prolonged agitation in Bhopal for merger with an adjoining Governor's State or States Union There were also serious differences of opinion in the Council of Ministers of the Bhopal State on the need for merger An attempt was made by the Ministry to suppress the agitation in the State for merger Eventually the Nawab of Bhopal after prolonged consultations with the States Ministry agreed to make over the administration to the Government of India. The Government of India took charge on June 1, 1949

5. **The Travancore-Cochin Union** is generally expected to be the last of its kind. Public opinion was strongly in favour of such a Union Among the benefits which it was believed would flow from the integration are large-scale social and economic development of the whole area It was hoped the merger would also help to unify the Hindu community which is broken up into innumerable fragments, and facilitate the attainment of equality by the Harijans who are estimated to form about half the population of the Union The Union came into being on July 1, 1949

6 **Mysore**—As regards Mysore the Maharaja signed the revised Instrument of Accession surrendering to the Centre legislative authority in respect of the federal and concurrent legislative lists enumerated in List I and List III of the Seventh Schedule of the Government of India Act on June 27, 1949 Mysore was the last big State to do so.

7. **Junagadh**—The events in Junagadh which culminated in the Central Government's taking charge of the administration are recorded in the *Year Book* for 1948. Later there was a referendum in Junagadh and the adjoining States which resulted in an overwhelming vote in favour of accession to India. After that Junagadh was administered by an official appointed by the Government of India who was assisted in his duty by three representatives of the people. In 1948 December the representatives of Junagadh and the adjoining States of Mangrol, Manavadar, Sardargarh and Babariawad passed a resolution to the effect that the administrations of these States should be transferred to the Government of Saurashtra and also that the representatives of these States should take part in the framing of the constitution of the Union which was in progress at the moment Accordingly a supplementary covenant was executed by the Rulers of Saurashtra giving effect to these resolutions. On January 20, 1949, Junagadh was integrated with Saurashtra, the other States were integrated a short time before

8 **Sirohi**—There was a difference of opinion whether the State should merge with Bombay or be integrated with Rajasthan It was therefore decided that till the future was finally determined the Government of Bombay should administer the State on behalf of the Government of India After the review that followed it was decided to break up the State, Abu Road tehsil and a part of Dilwara tehsil were to be joined to Bombay and the rest to Rajasthan.

9 **Tehri-Garhwal**—This Himalayan State with an area of 4,516 sq miles, a population of 397,000 and a revenue of Rs 37,00,000 had no future except merger with U P Consequently the Ruler with the approval of the Ministry signed the merger agreement on May 18, 1949, and the administration was taken over by U P. Government on August 1, 1949

10 **Benares**—This enclave in U P had an area of 866 sq miles, a population of 450,000 and a revenue of Rs 35,00,000 The Ruler signed the merger agreement subject to safeguard of rights at certain religious ceremonies at Kashi on Sept 5, 1949 and U P took over on Oct 15, 1949

11 **Rampur**—This State in U P had an area of 894 sq miles, a population of 477,000 and a revenue of Rs 10,00,000. It was first taken over by the Central Government partly because of the wishes of the Ruler and partly because of the special set-up of the State This was done on July 1, 1949. The administration was carried on in the closest co-operation with U P Government But for obvious reasons the State could not remain indefinitely under Central administration. So the State was made over to U P with the concurrence of the Ruler on December 1, 1949

12 **Cooch Behar**—The State which is situated in the north-east of India lies between West Bengal, East Pakistan and Assam It has an area of 1,321 sq. miles, a population of about 641,000 and a revenue of about Rs. 1 crore The merger agreement was signed by the Ruler on August 30, 1949 and the Government of India took it over on September 12, 1949 Later the Government of India came to the conclusion that it would be best to merge the State with West Bengal. This was done on January 1, 1950

13. **Tripura**—This is another north-east border State which has great strategic importance. It has an area of 4,049 sq miles and a population of over 5 lakhs. When the Regent Maharani signed the merger agreement the State was taken over by a Chief Commissioner on behalf of the Government of India on October 15, 1949

14. **Manipur**—This State on the far east has great strategic importance It is surrounded for the most part by tribal hill areas in Assam. The Government of India decided to assume control chiefly for security reasons The instrument of merger was signed by the Ruler on September 21, 1949 and the Chief Commissioner took charge on October 15.

15 **Khasi Hill States**—These States were not affected by the process of assimilation till the new constitution came into force. Before the advent of independence they were administered by the Crown Representative through the Governor of Assam. After August 15, 1947 the States formed a sort of union and acceded to the Dominion of India individually and jointly. The agreement empowered the Dominion Parliament to make laws on any subject. The Khasi Hill States were thus in the position of a Chief Commissioner's Province. In the new constitution the Khasi Hill States are included in the Sixth Schedule along with Assam hill tribes. The two areas together form a new district in Assam called 'United

Khasi-Jaintia Hill District' with autonomous powers conceded to the Sixth Schedule areas.

16 **Vindhya Pradesh**—This is really a union of two groups of States known as Bundelkhand and Baghelkand States. It was difficult to persuade them to unite to form one administrative unit, and jealousy and distrust were so deep-rooted that for some time after the formation of the Union there were two Governments functioning simultaneously, one in Rewa and the other in Bundelkhand It was not till July 1948 that a single Government was formed But this did not put an end to group dissentions so that the Ministry was compelled to resign on April 14, 1949 when an official administration was set up. Ultimately the Rulers got together and decided to ask the Central Government to take over by an agreement made in December 1949 On January 1, 1950 the Central Government took charge through a Chief Commissioner. This was probably the best solution as the State is rich in natural resources and very backward It also occupies a strategic position as it lies in the very heart of the country

17 **Hyderabad**—The circumstances under which the Union Government took action against the old regime in Hyderabad are fully explained in the Year Book for 1949 The military Government headed by General J N Chaudhury formally terminated in 1949 December when General Chaudhury handed over to Mr K M. Vellodi, the present Chief Minister of Hyderabad With the Nizam's proclamation of November 23, 1949 Hyderabad became a constituent unit of the Indian Union with the constitution as framed by the Constituent Assembly of the Indian Dominion The proclamation accepting the new constitution makes it clear that the Nizam's decision is subject to the confirmation of the people, whose will as expressed through a Constituent Assembly of the State must finally determine the nature of the State's relationship with the Centre as also the constitution of the State itself Arrangements are now being made to constitute such an assembly on the basis of adult franchise

18 **Kashmir**—The position in regard to the State of Jammu and Kashmir as a subject of conflict between India and Pakistan is fully set out in the Year Book for 1949 Here we are concerned with Kashmir as a part of the Indian Union, which legally it is The State is thus included in Part B States. But in view of the special problems involved and of the fact that the Government of India have given an assurance to the people that they would finally determine the future certain special provisions have been made in the constitution The effect of these provisions is that the Union Parliament has jurisdiction to make laws for the State only on matters either specified in the Instrument of Accession or specified hereafter through later addition with the concurrence of the Government of the State. An order has already been declared enumerating the matters on which the Union Parliament can legislate, and the provisions of the Indian Constitution Act which apply to the State The whole position will be reviewed by a Constituent Assembly when it is set up On the recommendations of this Assembly the President of the Union will take the appropriate action as directed.

19 **Sikkim**—A treaty was signed between India and Sikkim by which India was to assume control of the States' defence and foreign relations, leaving the State with full autonomous powers in internal matters

STATEMENT SHOWING AREA AND POPULATION OF STATES THAT HAVE MERGED WITH PROVINCES OF INDIA

Date of merger	Names of States	No of States	Province with which merged	Area in sq miles	Population in lakhs	Revenue in lakhs
Jan 1, 1948 .	Athgarh, Athmallik, Bamra, Baramba, Baudh, Bonai, Daspalla, Dhenkanal, Gangpur, Hindol, Kalahandi, Keonjhar, Khandpara, Narsingpur, Nayagarh, Nilgiri, Pal Lahara, Patna, Rairakhol, Rampur, Sonepur, Talchar, Tigiria	23	Orissa .	23,637	40 48	98 74

* The original Rajasthan State was formed on April 18, 1948; Jodhpur, Jaipur, Bikaner and Jaisalmer joined it, on April 7, 1949; the Matsya States of Alwar, Bharatpur, Dholpur and Karauli were integrated with it on May 15, 1949.

HYDERABAD STATE

THE Hyderabad State forms the eastern portion of the Deccan. The State lies between 15°10′ and 20°40′ N, and 70°40 and 81°35′ E, covering an area of 82,698 square miles. The population according to the 1941 census is 16,338,534. The languages spoken are,Telugu, Marathi, Kanarese and Urdu.

The State may be divided into two fairly definite regions, the western, generally called Marathwada and the eastern called Telingana, although the State contains some Kanarese-speaking population as well. If a line were drawn from the confluence of the Tungabhadra and the Krishna in the south to the confluence of the Manjera and the Godavery in the north, and extended right up to the Hyderabad-Berar boundary, this would serve as a good demarcation of the two tracts. These regions differ not only linguistically but also in their physical formation; for the Marathwada is covered by trappean rock, while the Telingana has granitic and calcareous formation. The western trap or black cotton soil region (which is continued northward in Berar) is the land of wheat and cotton, while the granitic Telingana is the land of rice and jowar Moreover, the former is covered with luxuriant vegetation, cliffs, crags and undulating hills, while in the granite and limestone region the hills are bare of vegetation and the land is covered with huge fantastic rocks and boulders. Also in the east as the soil is sandy, the rivers dry up in hot weather, necessitating the storage of water in tanks and artificial lakes for purposes of irrigation.

COMMUNICATIONS AND TRANSPORT

The City of Hyderabad is the railway communications centre. From here lines radiate east, south, west and north The line which goes east passes through Warangal and joins the Madras-Calcutta line at Bezwada The line which goes south connects with the Madras-Bombay line at Guntakal. The western line links up with the Madras-Bombay line at Wadi. The northern line goes north-west rather than north and joins the main Bombay-Bhusaval line at Manmad

The Nizam's State Railway operates a Road Transport Service which covers 4,597 miles (1947-48) This includes suburban and district services A large fleet of buses is maintained for this purpose The State has 6,879 miles of road (1947-48) of which 4,560 miles are metalled.

There is also air service provided by a Company named the Deccan Airways Limited with an air mileage of 1,824 Hyderabad City is connected by air with Bombay, Nagpur, Madras and Bangalore There are 10 aerodromes in the State, the chief of which are the Begumpet and Hakimpet aerodromes.

MINERAL RESOURCES

The mineral wealth of the State is its greatest asset, and the Hyderabad State has long been noted for its coal, gold and diamonds Coal is now being mined at Tandur, Yellandu, Sasti and Kothagudam. The old Singareni coal field has been re-opened and renamed Yellandu after the village near which it is situated. Production from this area started in January 1948 The gold mining activities which were kept under suspension, were restarted after the termination of the war. The conduct of the mining operation was entrusted to Messrs. John Taylor & Sons (London) After a careful investigation they came to the conclusion that the Hutti area holds out a good prospect of profitable revival of gold mining under modern conditions They reported that "hitherto unknown extension of the Hutti lodes were discovered. Intensive surface prospecting revealed that reasonably continuous ancient workings for gold on various lines of reef extended over a total length of 11,000 feet of which only 3,100 feet had been explored underground by the former Hutti Company" Extensive underground development proved successful inasmuch as, not only was the lode previously explored by the old Hutti Company found to be lucrative, but at least two lodes of payable ore were discovered.

Crushing was commenced at Hutti on 20th September 1948. Up to the end of the year 1948 a total of 384 19 fine ounces of gold were produced of the value of Rs. 1,36,327.

Diamond was not worked, as Messrs. Javeri & Co , could not carry out any prospecting work for want of specialist help and their license expired in January 1947.

The State possesses 9,455 square miles of forest. The forests in the east are extensive, while in the west they are as good as non-existent.

AGRICULTURE

Agricultural conditions differ considerably in the three main regions of the State. In the Telingana tract, which is generally full of hills and valleys, wet cultivation is carried on on a large scale, the water being supplied by tanks and irrigation reservoirs The number of major tanks is 8,000 and of minor 25,000. Conditions in the Marathwada country are quite different as the rainfall is less and the soil so rich that the ryots are never anxious to grow wet crops. In some places advantage has been taken of the water obtainable from rivers and wells, and garden crops which are more profitable than dry crops, are extensively grown. Conditions in the Karnatak tract are much the same as in the Marathwada, and the ryots are not anxious to grow rice. This is the reason why the Telingana people generally use rice and the Marathwada and Karnatak people use wheat or jowar for their food

There are usually four crops in the year in the Telingana, namely, *kharif*, *rabi*, *abi* and *tabi*, but in the Marathwada, where irrigation sources are very limited, only two crops are raised, namely, *kharif* and *rabi*. These are known as 'dry crops' because they are cultivated without the help of artificial irrigation and depend on the monsoon rains The principal *kharif* crops are yellow jowar, bajra, makai, cotton, tuar, lachna, sanwa, kodru, til, and pulses, such as moong, urad and kulthi The principal *rabi* crops are cotton, white jowar, chenna (Bengal gram), jow or barley, karad, alsi or linseed, tobacco, lak and peas According to the latest statistics available, a total of 25 million acres are under cultivation in the State, of which 1,305,267 acres are under paddy, 202,577 acres under wheat, 6,244,768 acres under jowar, 2,032,690 under groundnut and 1,906,560 under cotton Land under irrigation in the whole State is in the neighbourhood of 1,617,000 acres.

INDUSTRIES AND TRADE

There are within the State 638 large-scale industrial organisations employing nearly 59,183 persons The State has 6 cotton mills producing annually 173 lakhs pounds of cotton and 19,699,377 lbs. of yarn. The State Collieries produce 11,63,077 tons of coal annually The sugar factory at Bodhan in the Nizamsagar area produces annually 19,243 tons of sugar and the Sirpur Paper Mills produce 3,625 tons of paper The production of cement amounts to 155,017 tons, of power alcohol 4,80,741 gallons, of glass 14,221 tons, and of cigarettes 3,844,000. The mica mines in the State produce 5,125 lbs of finished mica per year and the graphite mines produce 35 tons of crude graphite annually Electric power produced in the State amounts to 40,345,958 units Ten cities and towns are supplied with electric power and the number of consumers of power and lighting is 22,118. There are 200 registered joint-stock companies with a total authorised capital of O S Rs 401 million, issued capital of O S 149 million and paid up capital of O.S. Rs. 104 million.

Small-scale and cottage industries consist of yarn spinning, cloth weaving, Paithan industry of gold embroidery, Aurangabad *Himru*, Mashru and Kamkhab; blanket making, cloth dyeing and printing, silk weaving, wool carpet and durry making, Bidriware, silver filigree work, Nirmal toy works, hand-made paper, metal industry, tanning, button industry, soap manufacture, cane work, brush work, mat making, tusser work, clay work, brass industry, brick and tile making, carpentry, smithy, rattan work, biscuit making, fruit and vegetable processing, bangle manufacture, perfumery and hosiery.

Hand-loom weaving is the most important cottage industry in the State. Next in importance and usefulness only to agriculture as a national occupation, this industry which is pursued by 3 per cent of the total population consumes imported yarn of the approximate value of Rs 1,22,53,000 annually and clothes nearly half the population of the State.

The principal imports are piece-goods, yarn, salt, sugar and jaggery, fruits and vegetables, gold, silver, livestock, betelnut, silk, timber, copper, brass sheets and utensils, cinema films, mineral oils, motor cars and other vehicles. The principal exports are cotton, groundnuts, foodgrains, castor seed, linseed, sesamum, livestock, leather, oils and oil-cakes, coal and building material.

POLITICAL DEVELOPMENTS

The Military Government, which came into existence soon after the police action established law and order in the State and paved the way for land and other reforms In December 1949 Mr M. K. Vellodi took charge as Hyderabad's Chief Minister While the "Communist" activities in the "disturbed" districts of Nalgonda and Warangal continued to engage the attention of the Government the pace of land and social reform was hastened up A two-pronged drive—intensification of security measures and land reforms was launched to counteract the "Communists" A senior officer of the Government of India was appointed with wide powers to deal with the "Communists" in Nalgonda, Warangal and other districts.

Government was well aware that one of the root causes of the "Communist" activities lies in the poverty of the masses which was a result of the operation of an age-old feudal system in the State Soon after the merger of Sarf-e-Khas (Nizam's Crown lands) the Jagirs comprising of an area of 24,401 square miles were taken On June 10, 1950, the Hyderabad Tenancy and Agricultural Lands Act, was promulgated Under it all tenants actually cultivating agricultural lands became "protected tenants" The maximum holding was fixed at ten times the economic holding, which has been defined as land yielding an income of Rs 150 per month The chargeable rent was fixed, and all disputes between landlord and tenants were to be decided by tribunals. Absentee landlordism would finally come to an end on June 10, 1953.

The Government appointed a Labour (Factory) Investigation Committee in June 1949, to investigate labour conditions in the State. The report of the Committee was accepted by the Government with some modifications, and the minimum earning of the lowest paid employee in Government concerns was raised from Rs 43 to Rs. 52 The Trade Disputes Order and the Maternity Benefit Act were amended.

Four Congress representatives, *viz.*, Mr. B Ramakrishna Rao, Mr. Vinayakrao Koratkar Vidyalankar, Mr Vallur Basava Raju and Mr Phoolchand Ramchand Gandhi, were taken into the Cabinet on June 12, 1950, as a first step towards full democratization of the Government.

Hyderabad acceded to the Indian Union on January 26, 1950, and the Indian Constitution came into existence making it redundant to convene a Constituent Assembly as was originally decided. In May 1950, the Rajpramukh in consultation with his Council of Ministers nominated sixteen persons to represent Hyderabad in the Indian Parliament.

COUNCIL OF MINISTERS

Chief Minister, General Administration and Army, The Hon'ble Shri M K Vellodi

Public Works, The Hon'ble Nawab Zain Yar Jung Bahadur

Home, Law and Election to Legislature, The Hon'ble Shri M Seshadri

Finance, Commerce and Industries, The Hon'ble Shri C. V S Rao.

Revenue, Education, and Excise, The Hon'ble Shri B Ramakrishana Rao.

Supply, Agriculture, Veterinary, and Co-operation, The Hon'ble Shri Vinayak Rao Vidyalankar
Labour, Forests, Customs and Cottage Industries, The Hon'ble Shri V B Raju
Medical, Public Health and Local Self-Govt, The Hon'ble Shri Phool Chand Gandhi.

Secretaries to Government

Chief Secretary, L C Jain, I C S
Secretary, Revenue, Nagendar Bahadur, H C S
Secretary, Rural Reconstruction, Mohd Abdullah, H C S

THE STATE OF MADHYA BHARAT

THE constitution of the United State of Gwalior, Indore & Malwa (Madhya Bharat) after the attainment of freedom by India was one of the notable events in the integration of Indian States into the body politic of India Till the formation of Greater Rajasthan, Madhya Bharat was the biggest of the Unions Madhya Bharat is also notable in that for the first time two viable units (Gwalior and Indore) merged their identity along with 23 other States

The following are the 20 States that signed the Covenant which created the United State of Madhya Bharat —Alirajpur, Barwani, Dewas (Senior), Dewas (Junior), Dhar, Gwalior Indore, Jaora, Jhabua, Khilchipur, Narsingarh, Rajgarh, Ratlam, Sailana, Sitamau, Jobat, Kathiwara, Kurwai, Mathwar and Piploda Besides these States the Rulers of Mohammadgarh and Pathari as also the Bhumats of Jamnia, Nimkheda and Rajgarh agreed to merge their territories in Madhya Bharat

The Hon'ble Pandit Jawaharlal Nehru, the Prime Minister of India, formally inaugurated the new Union at Gwalior on May 28, 1949 On June 16, the administrations of Gwalior and Indore, and on June 29 and 30 the administrations of the remaining States were taken over by the Raj Pramukh. Jaora came in after the dispute to its Gaddi was settled by the States Ministry in August 1948 On July 17, 1948 the Raj Pramukh executed the revised Instrument of Accession

On November 25, 1949 H H the Rajpramukh made a proclamation before a special session of the Legislature that the constitution of India adopted by the Constituent Assembly would be made applicable to Madhya Bharat from the same date

The area of Madhya Bharat is about 47,000 sq. miles and its population according to the 1941 census is about 7 2 million. The density of population per square mile is 154 By way of comparison the density in Patiala and East Punjab States Union 338 Hindus constitute 82 21per cent of the population, Muslims 5 95 per cent, aboriginals 10·65 per cent and others 1·19 per cent

The capital of Madhya Bharat is Gwalior for seven months, and Indore for the five summer months

NATURAL REGIONS

The State is situated between 20°-20′ and 26°-50′ latitude and 74°-10′ and 78°-40′ longitude The Chambal river in the north and north-east separates it from Rajasthan, and the Agra and Etawah districts of Uttar Pradesh To the east are Jhansi and Jalaun Districts of Uttar Pradesh and the Sagar District of the Madhya Pradesh To the south are Bhopal, the Nimar District of Madhya Pradesh and East Khandesh To the west are the Panchmahal District and other portions of Gujarat

Aravali, Vindhyachal and Satpura, the last two mainly are the chief mountain ranges in Madhya Bharat Vindhyachal range lies to the north and the Satpura range lies to the south of the Narmada river The Vindhyachal range passes through Bhilsa, Chanderi, Shivpuri, Gwalior, Kolaras, Guna, Sardarpur, Neemuch, Agar and Shajapur Among the more important rivers in the Union are the Narmada, Kshipra, Chambal, Betwa and Kalisindh.

There is a varying amount of rainfall in different regions of the Union, ranging from 15 to 50 inches In the southern region of Madhya Bharat, known as Malwa, rainfall ranges from 30 to 50 inches in the northern region it is higher Malwa has black cotton soil and owing to enough rainfall, wheat and cotton are produced in abundance in this region

From the climatic point of view, there is a great difference between the northern and southern regions In the southern region, that is, Malwa the climate is temperate while most of Nimad which lies in the extreme south is hot in the summar but comparatively mild in the winter The northern region has an extreme climate. Indore and Gwalior are 1,738 and 697 ft respectively above sea-level, and their maximum temperature during the summer rises to 112° F and 118° F

AGRICULTURE

The mainstay of the people is agriculture in which 75 per cent of the population is engaged Wheat, cotton, jawar, gram, bajra, rice, oil-seeds, ground-nut, sugarcane, pulses and opium are among the important products of the land.

The acreage under wheat, gram, jawar, bajra, maize and rice in the year 1948 was 6,707,523 and under oil-seeds 500,000 acres Mangoes, guavas, melons and lemons are among the important fruits of this region The total land area is divided as under —

		Acres
1	Cultivated land	90,76,000
2	Current fallows	20,13,868
3	Other uncultivated land excluding current fallows .	41,18 699

Heavy tractors supplied by the Government of India are being used for eradication of the weed kans and reclamation of land A pilot operation in the last season reclaim d about 5,000 acres of kans infected land

In common with other parts of India, Madhya Bharat has organized vigorous efforts for additional food production so as to reach self-sufficiency by the end of 1951 Over 1,25,000 acres of new land has already been allotted in this season A special Department under a Colonization Officer is dealing with new settlers in selected blocks

LAND TENURE AND ADMINISTRATION

The land tenure in Madhya Bharat is partly Ryotwari and partly Zamindari and there are over 1,300 Jagirs For Ryotwari areas of different Integrating States a uniform revenue law is being enforced In order to abolish the prevailing disparities in the systems of land tenure and to eliminate all intermediaries between the tillers of the soil and itself, the Government has introduced legislation for the abolition of both Zamindari and Jagirdari on payment of compensation on a sliding scale to Zamindars and rehabilitation assistance to Jagirdars and other holders of ex-gratia land and cash grants

The State is divided for administrative purposes into 3 Commissioners' Divisions and 16 Districts, which are again sub-divided into 80 Tehsils and 25 Tappas Tappas are sub-divisions of Tehsils

At the head of the revenue organisation of Government is a Board of Revenue consisting of a Senior Member who is in charge of administrative work and two other members who sit as a Bench constituting the highest court of revenue appeal

FORESTS

The total forest area is 12,000 sq miles forming about 25 per cent of the total area of the Union. The annual revenue from forests is about

Rs. 44,81,000. The forest area is divided into two main regions, northern and southern. In the northern region, there are 7 Divisions and 19 Ranges while in the southern region there are 5 Divisions and 19 Ranges The forests of the northern circle are not very valuable whereas in the southern circles, forests of the Vindhyachal and Satpura ranges are comparatively dense and productive

In 1949 when the neighbouring provinces were threatened with fodder famine, 20 million pounds of fodder were exported to Saurashtra, Baroda, Kutch and Ajmer-Merwara from the Madhya Bharat forests.

MINERAL RESOURCES

Manganese, asbestos, clay for ceramics as well as bricks and tiles, soap stone, lime stone, crystallines, slate, shales and ochres are the main minerals available in Madhya Bharat Others that are being developed are lime stone, quartzite for glass manufacture, bauxite for aluminium industry and Galena

Government's industrial policy is to encourage private enterprise to the utmost so that the country's production might be stepped up. Facilities are provided for making available raw material with as little expense as possible and liberal concessions are allowed in matters of import and export tariffs and in other essential respects—at least in the initial stages of a new industry With regard to nationalization, the policy declared by the Central Government is generally being followed

COMMERCE AND MANUFACTURES

Textile, oil, sugar, cement, metal and engineering works are among the more important industries of this state There are in all about 600 factories including 17 textile mills, 5 sugar mills, 100 oil mills, 1 woollen mill, 1 cement factory, 2 glass factories, 10 general engineering works, 10 pharmaceutical and chemical works, besides starch, match, paints and varnishes, ginning and pressing factories, plastics Some engineering works, potteries and leather works are State-owned

Cotton is grown on nearly eleven lakh acres of land and nearly two and a quarter lakh bales of cotton are produced annually About 50,000 labourers are employed in the cotton mills of Madhya Bharat, and 300 million yards of cloth are manufactured annually, a figure which works out at 6 per cent of the all-India production of cloth

Chanderi and Maheshwar are famous for the fine texture of their handloom cloth Chanderi sarees interwoven with golden threads particularly are famous throughout India for their beauty and style The Maheshwar handloom industry was established and promoted during the reign of the famous Devi Ahilyabai Holkar who had a Government shop established to import silk from China directly and sell it at cost to weavers There are also two blanket-producing factories at Manasa and Mandsaur

The number of sugar mills situated in Madhya Bharat is the largest among the Unions of Indian States with a crushing capacity of 2,400 tons of sugarcane daily.

Oil-seeds are grown on 525,300 acres of land and the annual produce is 30,000,000 mds There are in all about 100 oil mills at present

LABOUR

A minimum wage of Rs 26 a month has been fixed and the standardisation of wages in certain occupations and increase in basic wages in the textile industry have been effected Similar steps are contemplated for medium-scale industries. To achieve uniformity with the rest of India in respect of labour standards, all progressive labour laws have been adopted Two labour housing schemes are being put into operation at Indore An Industrial Court of Arbitration has been set up and the appointment of two Judges has been made

COMMUNICATIONS AND TRANSPORT

In Madhya Bharat there are 3,770 miles of roads on the maintenance of which Government spends 30 lakhs

The motor service run by the Government traverse a large portion of the State

It operates daily both ways, the two longest passenger bus services in India *viz*, Gwalior-Indore (308 miles) and Gwalior-Ujjain (295 miles) As a preliminary step towards the nationalization of motor transport, a transport Nationalization Committee is set up

There are 1,100 miles of railway lines in the State

An Air Service connecting Bombay, Indore, Gwalior and Delhi operates three times a week

INTEGRATION

An agreement was signed by the representatives of the Government of India and the Government of Madhya Bharat on September 27, 1949, relating to the federal financial integration of the State with the Central Government According to the recommendations of the Indian States Federal Financial Enquiry Committee, the transfer of Federal revenues and Federal expenditure to the Centre would result in a net gain of Rs. 45 lakhs to the Madhya Bharat Government and a corresponding net loss to the Centre This is based on the estimates of the current year and not on actual income or expenditure The Madhya Bharat Government suggested among other things certain modifications to the recommendations of the Committee It was pointed out that the complete abolition of customs duties within one year would result in the dislocation of the finances of the State to a considerable extent, particularly when there was no likelihood of compensating the loss by the collection of sales tax within one year It was also suggested that the abolition of customs duties should be spread over 3 to 5 years, and that the capital assets should be treated as interest bearing debt till such period as the Central Government were in a position to liquidate it

In view of the political nature of the Privy Purses to Rulers, payments under this head, it was suggested, should be taken over by the Central Government without any condition or repayment by the State The Madhya Bharat Government also did not agree that any surplus or liquid assets over liquid liabilities should be divided between the two Governments The agreement lays down a gradual abolition of internal land customs duties to be extended over 3 years but not in any case beyond 5 years or the year in which the yield from sales tax came to Rs 2 crores, whichever was earlier Expenditure on Privy Purses according to the agreement was to be treated as Federal expenditure passing to the Centre The Central Government was also, to take over, if feasible, the expenditure of Non-I S F Military Units The Central Government would make in each of the 10 years following the federal financial integration a contribution equal to 7½% of the total amount of civil pensions payable on 31st March 1950 Particulars of the budget are given below

BUDGET 1950-51

The Budget of Madhya Bharat for 1950-51, was presented to the Legislative Assembly on March 11, 1950 The estimates of revenue and expenditure are Rs 10,76,37,850 and Rs 10,87,67,200 respectively, showing a deficit of Rs 11,29,350 Estimates for the main items in thousands of rupees are Land Revenue 26940, State Excise Duties 14023, Customs 10000, Madhya Bharat's share of Income Tax 3500, Forests 4823, other taxes and duties including Sales Tax, Entertainment Tax and arrears of Excise Duty on cotton cloth 13231, Stamps 2144, extraordinary receipts 5324, electric schemes 3307, Miscellaneous Departments (mainly the Madhya Bharat Roadways) 6490, Industries 1803 Irrigation 1679, Education 1364 The items of expenditure in thousands of rupees are . Police 15113, Education 12637, Medical 6691, Public Health 3145, Electricity Schemes 2681, Civil Works 7107, General Administration 8632, Administration of Justice 3287, Agriculture 3230, Food Production Drive 2041, territorial and political pensions 7465, Superannuation allowances and pensions 2706, Defence Services effective and non-effective Non-I S F 2553

The budget makes adequate provision for a number of schemes like the establishment of a University for Madhya Bharat and a Board of Secondary Education, introduction of compulsory primary education, establishment of a Board of Ayurvedic medicine, taking over of Mahatma Gandhi Memorial Medical College, Improvement and renovation of Tighra Dam and Canal system, construction of a submersible bridge at Nisarpur, construction of tanks for Gwalior Water Works, Shivpuri and Morena electric schemes, Survey for the Chambal Canal System and construction of Auda canal, construction of new roads, training of Madhya Bharat Administrative Service officers, opening of Gram Sewak Vidyalayas and new veterinary dispensaries, standardization of weights and measures starting of a sericulture scheme, handloom centres, Police Transport and Home Guards Provision has also been made for construction of various buildings for educational institutions, hospitals, the Agricultural College the Bhilsa, Barnagar, Khachrod, Shajapur and Mandsaur Water Works, the Shivpuri, Bhind and Bhilsa Drainage Works, the Indore Drainage Scheme, the Gwalior Sewage Scheme, the Housing and Development Scheme Indore

The main item for which provision has been made under capital outlay is direct procurement of food grains to the extent of Rs 4 crores, while a sum of Rs 71 Lakhs will be spent on the procurement and rationing staff, godowns and various other sundry items, against which a recovery of Rs 5 crores is expected Agricultural and Land Reclamation Schemes connected with 'Grow-More-Food' scheme will cost Rs 111 65 Lakhs, Construction of Roads Rs 15 Lakhs and electric schemes including Chambal Hydro-Electric Scheme Rs 137 78 Lakhs

To give effect to the appropriate articles of the new Constitution and to fulfil the terms of the Federal Financial integration regarding gradual abolition of inland customs, the Government are introducing during this Session a Sales Tax Bill and to make a corresponding reduction of customs duties from the date the former becomes effective It is estimated that income from customs would be reduced from Rs 160 lakhs to Rs 11 lakhs whereas the Sales Tax would give an income of Rs 100 lakhs The Government will also get a probable share of Rs 35 lakhs out of the proceeds of taxes on income collected by the Government of India The financial adjustment between the Government of India and the Government of Madhya Bharat will be finalised when actuals for the current year are known

Actuals for the 9 months of the year ending December 31, 1949, which are now available and on the basis of which revised estimates for the current year ending 31st March 1950 have been recast show that the revenue will go up to Rs 1015 38 lakhs as against the estimated revised expenditure of Rs 1011 76 lakhs The estimated (after 25 per cent economy cut) deficit by Rs 45 38 lakhs is expected to be turned into a surplus of Rs 3 62 lakhs It is possible that the pace of expenditure may be quickened during the 3 months ending March 1950 and the actual expenditure of the year may be more than what is at present expected

The Madhya Bharat Forces are under the Indian Army for operational purposes while for administrative purposes they are under His Highness the Rajpramukh

The present strength of the Madhya Bharat Forces is 9,769 both regular and irregular The Headquarters of the Forces are located at Gwalior There is a Sub-Area with Headquarters at Indore with jurisdiction over the former States of Ratlam, Dhar and Dewas

RELIEF AND REHABILITATION

It is estimated that there are 60,000 refugees in Madhya Bharat Provision has been made in the budget for loans, educational scholarships, camps, industrial houses, erection of smallshops, etc for refugees An industrial workshop at Indore was started in May 1948 to give a training in basic occupations like moulding, fitting and welding Thirty of the trainees at the centre get stipends at the rate of Rs 30 per month During the year 1949 orders to the extent of Rs 40,000 from Government departments were secured for this workshop Hand loom centres on cottage industry basis with 10 looms, have been started in Indore, Ujjain and Gwalior, each with 20 trainees who are given stipends Leather stitching centres producing chappals and toys have also been opened along with centres for labouring and spinning The Government of India have recently sanctioned the grant of a housing loan of Rs 10 lakhs and a rehabilitation loan of Rs 20 lakhs to the Government for financing their housing schemes and for granting rehabilitation loans to displaced persons in Madhya Bharat Over 250 refugees have been absorbed in Government services Out of 700 agriculturist families in Madhya Bharat 230 families have already been absorbed in agriculture In all the Government has given 4,585 acres of land with 16,500 rupees for rehabilitation of refugees in agriculture Deserving refugee students of high school classes are exempted from paying fees and a sum of Rs 75 is given to each of them for books and other equipment Refugees who take to farming are given taccavi loans for purchasing seed bullocks and implements for the first harvest To the businessmen among refugees a sum of over 20 lakhs of rupees was advanced as loan up to the end of September 1949 A sum of Rs 2 2 lakhs was also given to municipalities for building mobile shops for refugees

P. W. D. AND IRRIGATION

This department is in charge of a Chief Engineer with two Superintending Engineers for Northern and Southern Divisions under him for roads and buildings, and one Superintending Engineer for irrigation for the whole of Madhya Bharat.

There are 10 Government owned power houses at Indore, Gwalior, Ujjain, Shivpuri, Dhar, Dewas, Rajgarh, Narsingarh, Barwani, Kurwai, respectively For the improvement of the Indore Central Power house, a plant estimated to cost Rs. 1,20,00,000 and for Gwalior, Shivpuri and Ujjain another one costing Rs 99 lakhs, have been ordered There are 13 private power houses The total Government capital invested in Government owned power houses is about 60 crores

Canals cover a length of 1,000 miles There are also more than 1,000 major and minor tanks. By bringing about an improvement in irrigation works, the total irrigated area has been increased by about 25 per cent A sum of Rs 24 lakhs was sanctioned for irrigation works in 1949

DEVELOPMENT DEPARTMENT

This department combines all the activities connected with rural uplift including co-operation and village Panchayats but excluding the technical work of the Veterinary and Agriculture Departments.

Three new Central Banks have been formed during 1949 and 201 new societies registered. A Co-operative Institute on the lines of Provincial Co-operative Institutes has also been organised

A new Panchayat Act with Panchayats at Gram (Village), Kendra (Central) and Mandal (District) levels has been placed on the statute Book. Elections will be held on adult franchise basis, using the electoral rolls prepared for the general elections. Special training camps for training over a thousand workers for Panchayat and food production work were organised in the year.

Rural uplift activities include provision for drinking water wells, village approach roads, libraries and reading rooms Adult education classes are encouraged, organised and subsidised by the department by grant of subsidy to the extent of 50 per cent of the expenditure, the other half being met by local contributions either in cash or kind the latter of which may include labour.

Harijans and Adivasis who together comprise very nearly one-third of the population of Madhya Bharat receive special facilities for their educational, social and economic uplift Exemption from all tuition fees, grant of scholarships and books, special help to scholars sent outside the State, legal assistance through a Removal of Disabilities Bill, starting of industrial centres *e g*, handloom centres, tanneries, leather stitching centres etc, grants to institutions working in this cause are some of the means by which the Department gives help

EDUCATION

Most of the expenditure incurred on education in Madhya Bharat is on Government account. There are at present in Madhya Bharat 4 degree Colleges (one exclusively for girls), 2 Sanskrit Colleges, 1 Music College, 6 Intermediate Colleges, 40 High Schools, including 7 girls' High Schools, 234 boys' middle schools, 3,589 boys' primary schools, 52 girls' middle schools and 202 girls' primary schools

Sixty schools are being specially run by the Government for the education of the children of scheduled castes and aboriginals. Government have exempted Harijans and Adivasis from tuition fees for a period of five years.

There exist a number of Montessori Schools in Gwalior and Indore and in order to still further popularise the system twelve more schools were opened at district head-quarters in 1949 while grant-in-aid was given to four private schools

A drive on constructive lines in the sphere of social education was started Each district has a district committee for the smooth working of the social education scheme One hundred and sixty centres were started this year at the rate of ten for each district, usually in places where there are Middle Schools About 4,000 adults of various ages have been attending these classes The special feature at the social centre is to increase social code acts, so that besides making the adult read and write, he would be able to know how he should lead a healthy, satisfying life

The National Cadet Corps Scheme, introduced by the Government of India, has been adopted, one Senior Division and three Junior Divisions are in operation The compulsory Primary Education Bill has received the assent of the Rajpramukh.

MEDICAL AND PUBLIC HEALTH

The Department is in charge of a Director of Health Services assisted by a Deputy Director There are 533 hospitals and dispensaries in Madhya Bharat including two big hospitals at Gwalior and Indore, and 14 District hospitals There are 55 Maternity Homes and 212 Ayurvedic and Unani dispensaries A T B Sanatorium is located at Rau near Indore There are two Mental Hospitals and three Leper Asylums in the Union. There are touring vaidyas who visit patients every day within a radius of five miles from their place of work

Staff doctors are undergoing training at Indore in B C G vaccination work for prevention of tuberculosis. There is one Lymph Depot at Manpur.

A Public Health section is exclusively concerned with measures for the control of malaria, epidemics, maternity and child welfare, health propaganda, sanitation

A Public Health Laboratory situated at Gwalior examines foodstuffs and water specimens.

A drug analysis laboratory has been started at Indore.

VETERINARY DEPARTMENT

The total cattle population of Madhya Bharat according to the 1940 cattle census is over 80 lakhs At present, there are 13 A class, 18 B class and 104 C class hospitals and dispensaries in the State The Veterinary Department has been integrated and has prepared a plan for creating one dispensary for every twenty-five thousand of the cattle population in accordance with the recommendations of the Royal Commission 20 new dispensaries will be started every year so that in about 10 years' time the Union will have the requisite number of dispensaries Twenty dispensaries were started in 1949 A programme for training Veterinary Assistants to be posted at the dispensaries has also been formulated A Veterinary Training School has been opened The Vaccine Institute of the Union has also been extended so as to produce goat-tissue vaccine, to meet all local requirements.

An Animal Husbandry section has also been created as part of the Veterinary Department. There are, at present, 2 bull-breeding farms for Malwi and Nimadi cattle A Live-stock Development Officer and Gaushala Development Officer have also been appointed. A mobile unit has been organised for prevention of epidemics amongst the cattle.

ARCHÆOLOGY DEPARTMENT

Government took prompt measures in conserving and maintaining archæological monuments since the formation of the State The most important monuments where conservation works were carried out are the Ater fort in Bhind District, the Tomb of Mohammad Ghaus at Gwalior, the Jain temple at Badoh in Bhilsa District, the Koshak Mahal and the Rajput monuments at Chanderi, District Guna, and Jahaz Mahal at Mandu In the field of upkeep and maintenance also considerable progress was made so that the Department has also taken over monuments at Pathari, Bihar Kotra and other places for purposes of regular maintenance.

Progress is being made in the field of exploration and survey as a result of which ancient places such as Sarangpur and Nagda in Dewas District, Bihar Kotra in Rajgarh, and Dharampuri, Kesur, Makai and Badnawar in Dhar were systematically surveyed and photographs and descriptive records prepared by the Department.

POLITICAL SET-UP

The Raj Pramukh is the constitutional head of the State and a popular ministry responsible to a Legislature is in charge of the administration The Madhya Bharat Government has secured the services of senior and experienced officers from outside as Chief Secretary, Finance Secretary and Inspector-General of Police The first task before the United State was to establish an integrated administration in respect of each Department throughout Madhya Bharat abolishing the independent administrations of 25 States. A central secretariat was established by August 1948, though the task of allocating work among the various Departments is not complete yet The State has agreed to the constitution of the Indian Administrative and Police Services Rules relating to discipline, conduct, absorption, retrenchment, promotion, punishment are already framed, while on the Report of the Mohan Rau Committee, Government have also passed orders regarding uniform pay scales for the Union But employees can opt for the old pay scales as on April 15, 1948 Rules determining relative seniority as between officers of different States have also been framed

In the matter of uniformity of laws 68 Acts were put into force after they had passed through the usual legislative processes Since the formation of the State 62 Ordinances were issued by H H. the Rajpramukh, out of which as many as 50 were later replaced by Acts.

A High Court with two Benches at Gwalior and Indore was established immediately after the formation of the United State with a retired High Court judge from Lahore as the Chief Justice. The Judiciary has been separated from

the executive, a reform long advocated by progressive opinion in India It is only in matters pertaining to the maintenance of law and order, or more precisely, for the purposes of Chapters VIII, IX and XI of the Criminal Procedure Code that the Subas (corresponding to Collectors in Provinces) are directed to exercise the powers of District Magistrates.

For judicial purposes, the State has been divided into 14 districts. A District and Sessions Judge is appointed for each District, with Civil Judges, Additional District Magistrates, and Munsiffs

Separate Small Cause Courts have been established at Gwalior, Indore and Ujjain.

The Government has appointed one Advocate General, one Government Advocate and Deputy Government Advocate for each branch of the High Court at Gwalior and Indore.

Hindi with Devnagri script has already been adopted as the official language of Madhya Bharat The special feature of Madhya Bharat State is that all laws are enacted in Hindi and their English translations are given alongside

The new State has been divided into 16 districts breaking down old boundaries in several cases though this involved the difficult task of overcoming old attachments and loyalties Here is a list of the 16 districts —Gird ; Bhind , Morena ; Shivpuri ; Guna ; Bhilsa , Rajgarh , Shajapur ; Dewas , Indore , Mandsaur , Ratlam , Ujjain ; Dhar ; Nimar ; Jhabua.

At the head of the district is the Suba, a member of the Madhya Bharat Administrative Service, who is not only the head of the district for revenue matters but also for general administration including the maintenance of law and order. There are 5 sub-divisions in charge of Naib-Subas. In addition to this every Suba is assisted by a Naib-Suba in his district The Naib-Subas are also members of the Madhya Bharat Administrative Service.

As for local self-government in rural areas there are in all 127 municipalities in Madhya Bharat.

POLICE

The police forces of the different covenanting States have been integrated into one police force for the whole State working under the control of an Inspector-General of Police Three Ranges have been created with Deputy Inspectors-General at their head and Superintendents, Deputy Superintendents and subordinate officers in the districts under them There is an independent Intelligence Branch under a D I.G.

The Jagir Police has been incorporated into state police.

Every district is being equipped with wireless sets, police motor transport and up-to-date arms, and ammunitions A finger print bureau is also being organised An Anti-corruption Ordinance was promulgated by the Government a few months back and an Anti-Corruption Department has also been established recently.

DEFENCE

Under the Covenant Defence is a subject vested in H H. the Rajpramukh who deals with it in consultation with the Government of India.

The total strength of the Madhya Bharat armed forces is 16,255. The headquarters of the Madhya Bharat forces are located at Gwalior with sub-stations at Rajgarh, Khilchipur and Kurwai under the direct control of headquarters There is a sub-area command located at Indore for the supervision and control of the military forces at Indore, Dewas, Dhar, Ratlam and Sailana.

After the formation of the Union the 3rd Gwalior Infantry, the Gwalior Mountain Battery, Scindia's Field Battery, the 1st Indore Infantry, Toops Pack of the Gwalior Transport Corps, the 4th Gwalior Infantry and the 1st Gwalior Lancers were all sent out to serve with the Indian Army Units.

MYSORE STATE

MYSORE STATE is surrounded on all sides by the Madras State except on the north and the north-west where it is bounded by the districts of Dharwar and North Canara respectively and towards the south-west by Coorg The capital of the State is Mysore, which is also the residence of the Maharaja, and the headquarters of the Mysore University The administrative headquarters are at Bangalore.

The area of the State is 29,474 82 square miles, the population 73,29,140 and annual revenue Rs 11,84,40,000 For administrative purposes the State is divided into nine Districts

The constitution of Mysore is as framed for States in Part B of the First Schedule in the Indian constitution

The chief agricultural products are rice, ragi, sugar-cane, coffee, cocoanut, areca, cotton and mulberry

Industries manufacturing iron and steel, cement, paper, sugar, cotton and silk, soaps, chemicals and fertilisers, sandalwood oil, etc, thrive in the State The only aircraft factory in India is situated in Bangalore Mysore is the principal gold producing centre in India.

Plans for starting a fertiliser factory at Bhadravati and a Raw Films factory near Mysore are well on the road to accomplishment, and recently Government have sanctioned the expansion of the Government Electric Factory and the revival of the Drugget industry Government have also ordered working out of details for the establishment of a rayon factory in the State Other schemes under implementation are the setting up of a production-cum-training centre for the manufacture of glass bangles, the establishment of a coir industry centre, the manufacture of writing chalk on a cottage industry basis and the organisation of the oil ghana industry along the lines adopted at the oil ghana centre at Wardha

Communications by road as well as by railway are well maintained throughout the State There are 6,273 miles of road of which 5,051 miles are metalled The State railway comprises 609 miles of metre gauge line and 102 miles narrow gauge line. Bangalore is also rapidly developing into an important air port

The State is devoting special attention to post-war planning for which many schemes have been formulated So far Government have sanctioned 80 schemes relating to agriculture, veterinary and animal husbandry, electrical, railways and medical and public health.

ADMINISTRATION

The administration is carried on by the Maharaja as Raj Pramukh, and a Council of Ministers, which functions on the basis of joint responsibility The Council consists of a Chief Minister and six other Ministers The Constituent Assembly which was set up in the year 1948 to frame the new Constitution, composed of 76 elected members of whom five are Muslims and nine Depressed Classes, has been converted into the Legislative Assembly

THE PATIALA AND EAST PUNJAB STATES UNION

THE Patiala and East Punjab States Union comprising Patiala, Kapurthala, Nabha, Jind, Faridkot, Malerkotla, Nalagarh and Kalsia States lies within the boundaries of the Punjab It was inaugurated at Patiala by India's Deputy Prime Minister, Sardar Vallabhbhai Patel on 15th July, 1948.

Three of these seven, Patiala, Nabha and Jind make up the Phulkian group, the rulers of which trace their descent from the same progenitor from whom the name Phulkian is derived The Raja of Faridkot who is descended from an ancestor of Chaudhry Phul also belongs to the same family group, as do the Houses of Nalagarh and Kalsia Malerkotla is a Muslim State But the fact that it survived the tumultuous period of the eighteenth century is enough testimony to the friendship which the neighbouring Phulkian States bear to it Thus the Rulers and the States are bound together by blood, ties of friendship and by historical antecedents.

The Union covers an area of 10,120 square miles, three-fifths of which form Patiala territory. The Union has a population of about 35 lakhs according to the 1941 census of which Patiala State alone accounts for about 20 lakhs The population of the Union is homogenous All the people speak the same language, namely Punjabi, and have the same kind of customs, etc , factors which make for political unity and solidarity The Jats who form a major part of the population are among the finest peasantry in India They are not only good cultivators but are also first class soldiers The average annual revenue of the State is about Rs 5 crores

AGRICULTURE

The Patiala and East Punjab States Union like the rest of the country is essentially an agricultural area The former Patiala State had a separate Agriculture Department for the purpose of educating the farmers in the art of modern cultivation and the use of improved varieties of seeds and modern implements. There was also a central farm about six miles from the capital Similar farms exist at Nabha, Faridkot and Kapurthala

The main crops of the Union are wheat, gram, sugar-cane and cotton in the plains and potatoes in the hills In addition barley, oats, bajra, maize and other minor crops are also grown

Out of a total area of about 900,000 acres of culturable waste a little over 200,000 acres can be easily brought under cultivation. Reclamation operations have started and about 500 acres are being reclaimed every month The rate is expected to be doubled soon When the whole of the reclamation is over which will be five years it is estimated that the total annual income of the peasants will rise by about Rs 2 crores

The Agriculture Department has a separate marketing section which looks to the proper marketing of agricultural produce and the introduction of standard weights and measures in the mandies. Grading stations for wheat, atta and eggs were established in the Patiala area and there is a ghee grading laboratory at Narnaul with an output of about 10,000 maunds of ghee per annum The following Acts are in force in the Union —1. The Agricultural Produce Markets Act ; 2. Standards of Weights Act , and 3 The Agricultural Produce (Grading and Marketing) Act

Veterinary hospitals exist practically in all important centres in the Union. The Patiala and East Punjab States Union has been an important centre for the famous breed of Hariana cattle and Murrah buffaloes and the services of the Veterinary Department have been in great demand. It is, therefore, proposed to open twenty-five hospitals every year and to start bull breeding farms for improving the indigenous breed of cattle and buffaloes

Regular cattle fairs are held in important rural centres to encourage cattle breeding and facilitate the sale and purchase of cattle The Agriculture Department provides various facilities which ensure that the fairs are widely patronized. Special shows are sometimes arranged for the entertainment of the visitors Educational films are included in the show

The Cattle Development Scheme jointly financed by the Indian Council of Agricultural Research and the Union Government for the purpose of improving the milk supply and encourage the cultivators to start mixed farming has recently begun functioning

A comprehensive scheme envisaging an expenditure of Rs 1 6 crores spread over a period of five years has been finally adopted This scheme includes land reclamation, sinking of surface percolation wells, installing pumping sets and tube wells, compost and green manuring, opening of seed distribution centres, tractors for cultivation, starting of veterinary hospitals and supply of modern implements

HORTICULTURE

There is an up-to-date Horticulture Department whose experiments conducted in the hill territory over a decade are being made available to the general public There are three separate zones according to elevation —1 Pinjore—Representing about 2,000 ft , conducts experiments on mangoes, litchies, spotas, papayas and pine-apples , 2 Kandaghat—Representing elevation ranging between 4,000 and 5,000 ft above sea level, conducts experiments on peaches, apricots, plums, prepes, brambles and persimmons ; and 3 Shellon—Ranging in elevation between 5,000 and 9,000 ft is for apples, pears, cherries and chestnuts.

INDUSTRIES

Although agriculture is the main occupation of the people in the Union, the development of industries has not been lost sight of

Two large-scale cement factories are functioning in the Union, one at Surajpur near Kalka and the other at Dadri The former has a capacity of six hundred tons of cement per day

An up-to-date biscuit factory, one of the biggest of its kind in India is functioning at Rajpura where there are also factories for the manufacture of starch and chemicals.

A large sugar factory exists at Phagwara and another at Hamira A distillery for the distillation of fine quality liquor is also functioning at Hamira.

A number of big and small iron and steel works, with foundries are situated at Kapurthala and Patiala and at other important towns in the Union There are also two big roller flour mills at Patiala and Bhatinda.

Cotton ginning and pressing factories and oil mills are other industries found at a number of places

EDUCATION

There are in all 10 colleges, one upto M A and others upto the degree and intermediate classes, and 51 High Schools in the Union Besides, there are 74 middle schools, 91 lower-middle schools and 812 primary schools as well as two industrial schools and one normal school The State Government is seriously contemplating starting a University of its own and a sum of Rs 5 lakhs to serve as a nucleus for the University fund has already been provided in the current year's budget The proposed university will be a residential and a teaching university and wholly secular in nature A Committee of experts has already been set up to prepare the plans The percentage of literacy is 5 21

In addition to a Girls' College co-education facilities have been provided at the primary and university stages.

To encourage primary and women's education in the Union primary education for boys upto the 4th class and for girls upto the 10th is made free in all schools in Patiala Harijans and members of other backward classes are also given a free education upto the matriculation standard

The PEPSU Government has succeeded in amicably settling the question of medium of instruction in the schools For purposes of teaching, the State has been divided into two zones, the Hindi-speaking zone and the Punjabi-speaking zone In the Hindi speaking areas, Hindi would be the medium of instruction but Punjabi being the regional language would be a compulsory subject from the 4th primary class upward. Similarly in the Punjabi-speaking areas Punjabi would be the medium of instruction and Hindi being the federal language would be a compulsory subject from the 4th primary class upward

The budget provision for Education for the year 1950-51 stands at Rs 66 66 lakhs

PUBLIC HEALTH

An up-to-date and independent medical department exists in the Union with its headquarters at Patiala and all the different medical and health departments have been integrated into one and placed under the Director of Health and Medical Services

For purposes of administration two districts have been combined to form a civil surgeoncy making four civil surgeons in all Similarly there are four District Health Officers All the hospitals are located in the urban areas, while the dispensaries serve the small towns and rural population

The Rajindra and Lady Dufferin Hospitals are the main Hospitals of the Union which are managed by highly qualified doctors and specialists

There are two health centres one at Patiala and the other at Kapurthala The Union has maternity wards attached to Lady Dufferin Hospital, Patiala, Civil Hospital, Nabha and R J Hospital, Kapurthala

There are three touring dispensaries which cover the entire rural area and bring medical aid to the very doors of the villagers X-ray and laboratory facilities are available at Patiala, Nabha, Sangrur, Faridkot Kapurthala and Dharampur Arrangements for segregation of infectious disease cases exist in the hospitals at the District Headquarters

There is a T B Hospital at Dharampur and a T B Clinic at Patiala

The total number of patients both indoor and outdoor treated in all the hospitals and dispensaries of the Union was 3,225,501 in 1948-49. The Union budget for Public Health & Medical Services at present stands at Rs 47 lakhs At present the Union Government maintains 121 hospitals and dispensaries

RELIEF AND REHABILITATION

The Muslim migrants from PEPSU abandoned an area of 774,000 ordinary acres of land in the Patiala Union and this was temporarily allotted to the displaced persons who had taken shelter in the Union territory to provide them with immediate relief Joint quasi-permanent allotment operations were started for alloting lands to the displaced persons both in the Punjab and the PEPSU at Jullundur The allotment has since been completed Nearly one lakh of displaced persons have been allotted 383,665 standard acres of land The allotments made were generally at a flat rate of 20 bighas per adult member of a family of the displaced person. Provision for financial assistance to the tune of rupees fifty lakhs for granting loans both to rural and urban displaced persons has also been made for the current year A further sum of Rs 1,00 000 has been allotted for grant of loans to displaced students As regards urban rehabilitation 145,678 displaced persons including

25,000 non-Punjabi refugees have been rehabilitated and more than 24,000 houses and 1,400 shops belonging to evacuees have been allotted As regards industrial rehabilitation, a sum of Rs 8 lakhs has been included in the next year's budget In order to enable the bigger industrialists to secure finance from the Rehabilitation Finance Administration of the Government of India, the Rehabilitation Finance Administration Ordinance was enacted during the year.

LOCAL SELF-GOVERNMENT

Each of the covenanting States had its own form of Local Self-Government, hence there was no homogeneity The whole system of Local Self-Government is now being reorganized with a view to achieving uniformity throughout the Union, and the Local Self-Government Laws are also unified Elections to various local bodies under the new system are now being held

The greater part of the Union situated between the Jamna and the Beas has alluvial soil Canal irrigation is resorted to in the southern part of the plains where rainfall is scarce The major part of the Union is fed by water from the Sirhind canal with its arterial branches

The PEPSU Government has put into operation a comprehensive plan spread over a period of five years to bring the irrigation system to a satisfactory level The whole scheme will cost about rupees 15 lakhs The State Government at present maintains 222 miles of new channels taken over from the Punjab

The construction of new arterial roads connecting the rural area with important mandies and business centres has already been taken in hand A 19-mile long metalled road connecting Rajpura with Kalka was constructed in the record time of three months Two roads connecting Bhatinda with Ferozepore and another connecting Dam Dama Sahib religious centre, with the main centres of trade and industry, are being built and will be ready about the end of 1950 A sum of Rs 50 lakhs has been provided in 1950-51 budget for the construction of new roads and the repairing of existing ones

BUDGET FOR 1950-51

The estimates for the year 1950-51 show a surplus of Rs 2,49,600 The total revenue for the year 1950-51 is estimated at Rs 5,01,70,700 and the expenditure at Rs 4,99,21,100.

Prior to the inauguration of the Union the individual States had their own separate administration The ruler was the source of all power and had absolute jurisdiction over his territory

After the formation of the Union strong efforts were made both by His Highness the Rajpramukh and Sardar Vallabhbhai Patel to bring the three political parties of the States Union namely the Union Congress, the Shiromani Riyasti Akali Dal and the Lok Sewak Sabha together but the efforts failed Sardar Patel in his inaugural address declared that no popular interim Government could be formed as the parties had failed to agree On the day on which His Highness the Rajpramukh was to take charge of the covenanting States—August 20, 1948—the States Ministry constituted a Caretaker Government comprising S Gian Singh Rarewala as Prime Minister, Sir Jai Lal as Adviser, S Inderjit Singh as Finance Secretary and Shri B R. Patel as Chief Secretary This was only a temporary arrangement: the Government was to keep the administration going till an interim popular ministry was formed It took about five months before an interim popular ministry could be formed This Ministry which took office on January 13, 1949 was however dissolved on 19th November, 1949, and a Caretaker Government with Sardar Gian Singh Rarewala as Chief Minister and Shri M R Bhide as Minister took over the administration of the Union The foremost task before the present Caretaker Government is to hold elections as early as possible, and efforts are being made to get this work expedited

ADMINISTRATION

Rajpramukh, His Highness the Maharajadhiraj of Patiala

Secretary to His Highness the Rajpramukh, S Gobinder Singh

Chief Minister and Minister for Finance, The Hon'ble S. Gian Singh Rarewala.

Home Minister, The Hon'ble M R Bhide, I C S

Chief Secretary, V Isvaran, I C S

Finance Secretary, G K S Sarma

Commsnr, S B Sardar Pritam Singh Sidhu, B A, LL B

Revenue Secretary, S Dhanna Singh

Food Commsnr, S Jaidev Singh, Bar-at-Law

RAJASTHAN STATE

THE Union of Rajasthan is comprised of the following former States Banswara, Bundi, Dungarpur, Jhalawar, Kishengarh, Kotah, Partapgarh, Shahpura, Tonk, Udaipur, Bikaner, Jaipur, Jodhpur, Jaisalmer, Alwar, Karauli, Dolpur, Bharatpur and part of Sirohi. It is the biggest of the States Union, with an area of about 130,366, sq miles, a population of 13,278,300 and a revenue of about 18 crores It has a common frontier of 730 miles with Pakistan

When it was first formed on March 25, 1948 it comprised only Banswara, Bundi, Dungarpur, Jhalawar, Kishengarh, Kotah, Partapgarh, Shahpura and Tonk On April 18, 1948 it was reconstituted to include Udaipur with the capital at Udaipur On March 30, 1949 four other States Bikaner, Jaipur, Jodhpur and Jaisalmer joined it It acquired its present size and composition when the four States of the Matsya Union Alwar, Karauli, Dholpur and Bharatpur were merged into it on May 15, 1949 Later still on January 15, 1950 part of Sirohi was joined to it.

The capital of the Union is Jaipur. Rajasthani in its various dialects is spoken all over the State. The common language is Hindi Among castes and tribes the most numerous are the Brahmins, Jats, Mahajans, Chamars, Rajputs, Minas, Gujars, Bhils, Malis and Balais

The State lies roughly between North Latitude 23°3′ and 30°12′ and East Longitude 69°30′ and 78°17′ It is bounded on the north by Delhi, Punjab, the Patiala and East Punjab States Union and the West Punjab Province of Pakistan; on the east by U P and Madhya Bharat, on the south by Madhya Bharat and Bombay State, and on the west by the Pakistan Provinces of Sind and West Punjab. Enclosed in the Rajasthan Union is the Chief Commissioner's State of Ajmer-Merwara.

NATURAL REGIONS

It may be useful to give a rough idea of the geographical position of the several States which merged to form the Union Jaisalmer, Jodhpur and Bikaner form a homogeneous group in the north and west, while a part of Jaipur and the whole of Alwar lie in the north-east Jaipur, Bharatpur, Dholpur, Karauli, Bundi, Kotah and Jhalawar may be grouped together as the eastern and south-eastern States Those in the south are Partapgarh, Banswara, Dungarpur and Udaipur with Sirohi in the south-west In the centre lie Kishengarh State and parts of Tonk

The Aravalli mountains intersect the country from end to end by a line running north-east and south-west The heights of Mount Abu are close to the south-western extremity of the range, while its north-eastern end may be said to terminate near Khetri almost on the borders of Delhi

There are two main regions, one to the north-west of the hills and the other to the south-east. On the whole the north-west region is sandy, ill-watered and unproductive, it improves gradually as we move from west to east In the extreme west it is mere desert, while towards the east it is comparatively fertile and habitable The only river of any consequence here is the Luni The great desert forming the whole of the frontier between Rajasthan and Sind is covered by sand-hills on which grows a kind of coarse grass in the dry season and in the rains slightly richer vegetation The cultivation is everywhere poor and precarious Along the base of the Aravalli range the land is well cultivated.

The region south-west of the Aravallis is higher, more fertile, and very diversified in character. It contains extensive hill ranges, long stretches of rocky wold and woodland. The region is traversed by many rivers and in some parts there are wide valleys, fertile table-lands and great stretches of excellent soil The chief rivers are Banas and Chambal

There are no natural fresh-water lakes in Rajasthan, the only considerable basin being the well-known salt lake at Sambhar There are, however, numerous artificial sheets of water in the eastern half of the State The oldest and the most famous are in Mewar, the Dhebar Lake, the Raj Samand and the Pichola Lake at Udaipur city.

AGRICULTURE

The most prominent constituent of the vegetation of Rajasthan is the scrub jungle, trees form quite a secondary feature Among fruit trees are figs, mulberry, tamarind, mango, pomegranate, peach, custard apple and guava

Rainfall is very unequally distributed throughout Rajasthan The summers are very hot, hot winds and dust storms are common The winters are very cold The change of temperature between day and night is sudden, excessive and very trying

The principal crops are bajra and jawar. Bajra is the chief crop in the western and northern parts, while jawar is commoner in Bundi, Jhalawar, Kotah, Tonk and parts of Partapgarh and Udaipur Other Kharif crops are maize, moth, mung, cotton and a coarse kind of rice The principal rabi crops are wheat, barley, gram, sugar-cane, poppy, tobacco, san and indigo. Oilseeds consists of til, mustard, rape, linseed and castor Among cultivated fruit are apricot, custard apple, guava, mango, mulberry, orange, peach, plantain, plum, pomegranate, pummelo, tamarind, lime, melon and several varieties of fig Many kinds of vegetables are grown such as beet, cabbage, carrot, cauliflower, egg-plant, onion, parsnip, potato, radish, spinach, tomato, turnip, yam and several of the gourd and cucumber family.

The main wealth of the desert lands of the west and north consist in the vast herds of camels, horned cattle, and sheep The horses of Marwar are renowned for their hardiness and ease of pace.

There are no large timber forests in Rajasthan, but the woodlands are quite extensive upon the south-western Aravallis. The southernmost parts comprising the former States of Banswara, Dungarpur and Partapgarh are in proportion to their size the best wooded of any in Rajasthan Here teak and other valuable timber trees can thrive well Small bamboos are very common Minor forest produce consists of grass, fire-wood, bamboos, fruit, honey, lac and gum.

MINERALS, MANUFACTURES

The most important mineral in Rajasthan is coal, but it is of inferior quality It is generally mixed with the Bengal variety before use Other ores are copper, iron, cobalt but all are present in small quantity The rocks of Rajasthan are rich in building material Limestone is abundant One variety is a fine-grained crystalline marble ; another variety, the Jaisalmer marble as it is sometimes called is well adapted for fine carving Sandstone is plentiful almost everywhere, varying greatly in texture and colour Fuller's earth occurs in parts of Bikaner and gypsum in Jodhpur. Rajasthan has vast salt resources.

The more important industries are the weaving of muslin, dyeing and printing of cotton cloths, manufacture of carpets, rugs and other woollen fabrics, enamelling, pottery, and work in ivory, lac, brass, steel, stone, etc. Jaipur is pre-eminent for enamelling on gold The best pottery is also produced in Jaipur Brass and copper utensils of daily use are manufactured everywhere Sword blades, daggers, knives are manufactured in Jhalawar

Among the chief exports are salt, wool, woollen fabrics, raw cotton, oilseeds, opium, ghee, marble and sandstone, hides, printed cloths, camels, cattle, sheep and goats The main imports include food grains, cotton goods, sugar, tobacco, metals, timber and kerosene oil. The principal trade centres are the capitals of the former States

RECONSTRUCTION

The work of integrating various units into one administrative unit is almost complete. The following steps taken in this direction are noteworthy (1) Establishment of Secretariat, one High Court, Public Service Commission and Board of Revenue for the entire State (2) Integration of various executive, administrative, Police and Revenue Departments and Judicial courts existing in various covenanting States on all union basis (3) Consolidation and amalgamation of various State treasuries (4) Re-organisation of accounts system on the basis of provincial system (5) Verification and equalisation of the rates of customs duties prevailing in various covenanting States (6) Abolition of inter-State customs barriers which stood in the way of trade and commerce, and (7) Pushing ahead of survey and settlement operations and examination of land tenure laws.

In spite of their pre-occupation with the integration work, Government have found time to plan for the future all round development of the State There is a short term one year development plan for the entire State according to which the State has been divided into 500 units, and at least one item on the reconstruction programme will be completed in each unit within a year. Work in all these units has already commenced. The plan is expected to cost the Government one crore of rupees

A separate plan is under way for developing the water resources of the State with the twin purpose of ameliorating the condition of the Kisans who for centuries have lived in fear of famine in dry years, and keeping pace with the country-wide move to attain self-sufficiency by 1951. The plan is expected to cost over Rs 400 lakhs out of which 115 lakhs have already been spent The food production is likely to go up by one lakh tons starting with 60,000 tons in 1951-52 Rabi.

Progress achieved in other directions includes the abolition of judicial and administrative powers of Jagirdars, application of Central Government labour laws to Rajasthan, abolition of unlawful cesses, passing of anti-ejectment laws for agriculturists etc.

The appointment of 10 non-official Boards to deal with the development of all aspects of the life of the State, industrial, agricultural, social and educational, has added a new chapter to the administrative history of Rajasthan. These bodies, which include Boards for the welfare of Kisans, Harijans, Adivasis, Labourers and Refugees and the advancement of cottage industries, education, Ayurvedic system of medicine, the Sanskrit language, Local Self-Government etc are non-official agencies for constructive service to the people and are presided over by the various Ministers of the Government A sum of Rs 30 lakhs has been placed at the disposal of the Boards for the current year.

The re-organisation of the educational system from July, 1950, crowns the efforts of the Government towards nation-building The new curriculum emphasises the principle of learning by doing and is closely related to the life of the pupils Teaching of at least two handi-crafts has been made compulsory which will enable the students to take to careers other than Government service and thus reduce the incidence of unemployment Two subjects 'General Science' and 'Social Science' have been newly introduced so as to acquaint students with their environment and create among them interest in men and matters around them

Eight training camps at a cost of 1¼ lakhs have been opened during the current summer vacations to equip about 2,000 teachers to discharge the new responsibility which the curriculum places on them

English will no more be compulsory at the primary stage, and has been made optional for the middle classes Five hundred new primary schools will be opened in July, 1950, as part of the expansion plan for education

REFUGEE REHABILITATION

Since partition about 4 lakh displaced persons have come to Rajasthan from West Pakistan as detailed below —1 According to All India Refugee Census report, 2,60,594 persons ; 2 Displaced agriculturists, coming from other States, 5,000 families , Unsponsored refugees, 12,000 persons , Others, 13,000 families

The refugees were lodged in camps at various centres, where medical and sanitary arrangements were made Free warm clothes were supplied and arrangements were made for the education of refugee children Subsequently lands and Taccavi loans were granted to the agriculturist families in rural areas and industrial loans were given to others engaging in trade or business individually or collectively.

Approximately 35,939 families were settled on 4,79 650 acres of land throughout Rajasthan 1,26,882 acres of land was restored to the Meos in Matsya.

Agricultural loans amounting to Rs 1,06,00 000 were granted to refugees, besides another 8 lakhs advanced to Meos to start life afresh Loans to the tune of 42 lakhs were granted for business and industrial enterprises to individuals, groups of displaced persons, or to co-operative societies.

Various schemes to employ displaced persons in trade by opening dairies, poultries, sericulture, silk weaving, metal rolling, carpentry, smithy, wool and mining industries have been sanctioned and are being given effect to. Electrical and mechanical training is also being imparted to refugees

Housing colonies are being constructed at several places by co-operative societies who will be granted loans 7,640 houses will be constructed at a cost of 21 lakhs, besides the construction of townships and houses at various places About 600 stalls have been constructed and allotted to refugee traders of various categories

Special attention is paid to destitute and unattached women and children Narishalas and Homes are opened at Divisional towns and each person is paid a sum of Rs 15 per head for his maintenance

ADMINISTRATION

The State has been divided into five administrative Divisions, namely, Jaipur, Jodhpur, Bikaner, Udaipur and Kotah with a Commissioner for each Division

A striking point in the covenant is that it gives the Government of India general controlling and directing power in the administration of the State The Government of India appoints Advisers to the Government For some of the more important posts in the State the service of Central Government officers have been borrowed

The federal financial integration of the State was completed on April 1st, 1950 Certain items of expenditure have been transferred to the Centre If federal financial integration had not taken place the estimated receipts and expenditure for 1950-51 would have stood at Rs 19,24,00,000 and Rs 18,22,00,000 respectively leaving a surplus of Rs 1,02,00,000. This was however reduced to Rs 16,09,00,000 and Rs 15,59,00,000 respectively with a balance of Rs 50,00,000

ADMINISTRATIVE PERSONNEL

Maharajpramukh, The Maharana of Udaipur.

Rajpramukh, The Maharaja of Jaipur.

Uprajpramukh, Maharao of Kotah

Chief Minister, Hiralal Shastri.

Minister for Home, Education, Pandit Premnarain Mathur.

Minister for Industries, Commerce, Siddaraj Dadda

Minister for Transport, Public Works, Bhurelal Bhaya

Minister for Revenue, Shobha Ram

Minister for Food, Agriculture, Forest, Civil Supplies, Raghubhardayal Goyal

Minister for Local Self-Government, Phoolchand Bapna

Minister for Law, Refugee Relief, Rehabilitation, Vedpal Tyagi

Minister for Medical and Public Health, Rao Raja Hanut Singh.

Minister for Labour, Co-operation, Rural Reconstruction, Narsingh Kachhawa

Chief Justice, Nawal Kishore (acting)

Regional Commissioner-cum-Adviser to Rajpramukh, C S Venkatachari, I C S

Adviser to Rajasthan Government, K Radhakrishnan, I C S.

Chief Secretary to Government, V Narayanan

THE STATE OF SAURASHTRA

THE scheme for the formation of the United State of Saurashtra was finalised in the last week of January 1948 A Covenant for the formation of the United State of Saurashtra was signed by the Rulers of the Covenanting States on 21st January 1948, and the new State came into existence on 15th April 1948 The inauguration ceremony was performed by the Hon'ble Sardar Vallabhbhai Patel, the Deputy Prime Minister of India The total number of States comprising the United State of Saurashtra is 221. This includes the following 30 Jurisdictional States Nawanagar, Bhavnagar, Porbandar, Dhrangadhra, Morvi, Gondal, Jafrabad, Wankaner, Paltana, Dhrol, Limbdi, Rajkot, Wadhwan, Lakhtar, Sayla, Chuda, Vala, Jasdan, Amarnagar (Thana-Devli), Vadia, Lathi, Mull, Bajana, Virpur, Maliya, Kotda-Sangani, Jetpur, Bilkha, Patdi, Khirasra

Before the formation of the United State of Saurashtra Kathiawar as the area was formerly called was divided into about 860 different administrative units With the merging of the former Junagadh State into the United State of Saurashtra, by a supplementary Covenant, the State becomes a well-knit unit extending to the whole of Kathiawar

The State of Saurashtra lies on the west coast of India between 20° 40′ and 23° 25′ North Latitude and 69° 5′ and 70° 20′ East Longitude The State is bounded on the south and south-west by the Arabian Sea, on the north-west by the Gulf of Kutch and on the east by the Gulf of Cambay and the mainland of India Further north is the little Rann of Kutch

PHYSICAL FEATURES

Standing boldly out into the Arabian Sea between Kutch and the Gujarat coast, Saurashtra's physical features suggest that it may once have been an island or a group of islands of volcanic origin The surface of Saurashtra is for the most part undulating with low ranges of hills running in very irregular directions. With the exception of the Thanga and Mandav hills, in the west of Jhalawar, and some unimportant hills in Halar the northern portion of the country is flat. But in the south from the neighbourhood of Gogha, the Gir range runs nearly parallel with the coast and at a distance of about 20 miles from it, along the north of Babariawad and Sorath to the neighbourhood of Girnar The principal river is the Bhadar which rises in the Mandav hills and, flowing south-west, falls into the sea at Navibandar after a course of about 110 miles, everywhere marked by highly cultivated lands bordering its course. Other rivers in the Union are Mauj, Machhu, Ozat and Shetrunji, the last remarkable for wild and romantic scenery There are a number of salt-water creeks The State has a 600-mile coast line and a number of ports Bedi Bunder, Navlakhi, Bhavnagar, Porbandar and Sica. Of these the first and chief port in the matter of import traffic from Europe is Navlakhi

The State of Saurashtra has an area of about 37,283 sq miles and a population of about 4,014,000 It has a revenue of about Rs 8 crores per year.

AGRICULTURE, INDUSTRY

Saurashtra is essentially an agricultural Province. The main source of income of the State is land revenue. Agricultural produce of the State is made up of wheat, bajri, jawar, ground-nuts, cotton, and mace

Industrial development is making rapid progress under the new regime Saurashtra has at present 9 textile mills and 10 weaving factories producing in all about 5,000 bales of cloth and 15,000 bales of yarn per annum Textiles is the most important industry of the State Next in importance are the 13 salt works dotted all over the coast line including the salt works at Kuda situated inland. There are 14 state-owned and 44 private-owned ginning and pressing factories, 6 pottery works, 1 glass works, 9 match factories, 2 bone mills, 2 cement works (one of which is in territory belonging to Bombay State), 10 silicate factories, 2 chemical works manufacturing soda ash, 74 oil mills, 3 vegetable oil factories, 1 sugar mill, 1 magnesia works at Dharangadhra Over and above this, there are a good number of small scale factories

The main items in the export trade are cotton, ground-nuts, ground-nut oil, salt, soda ash, potteries, ghee, and wool.

Saurashtra is served by a net-work of railway lines with a total length of over 2,000 miles

ADMINISTRATION

Raj Pramukh, His Highness Lieut.-General Maharaja Shri Sir Digvijaysinhji, GCSI, GCIE, ADC, Maharaja Jam Saheb of Nawanagar

Uprajpramukh, Major His Highness Jhaladhip Maharajadhiraj Maharana Shri Raj Mayurdhwaj Sinhji Jhala-Makhwana, the Maharaja Raj Saheb of Halvad-Dhrangadhra

Members of the Presidium, H H The Jam Saheb of Nawanagar (*President*), H H The Maharaja of Dhrangadhra (*Vice-President*), H H The Maharaja of Bhavnagar, H H The Maharaja of Paltana, H H The Maharaja of Kotda-Sangani

MINISTRY

Chief Minister (Services, Political, Revenue, Registration and Stamps, Excise, Integration of States), Uchharangrai N Dhebar

Deputy Chief Minister, Minister for Railway, Ports, Education Assembly and Constitution, Co-operation, Backward Classes, Posts, Telegraphs & Telephone, Air Lines, Sea Customs, Internal Customs, Local Self-Government, Archæology, Balwantray G Mehta

Minister for Public Works, Refugees, Law, Medical, Public Health, Dayashanker Dave

Minister for Home, Printing Press, Information, Road Transport, Rasiklal U Parikh

Minister for Finance, Girdharbhai Kotak

Minister for Industries, Commerce, Electricity, Civil Supplies, Agriculture, Veterinary, Food, Labour, Manubhai Shah

JUDICIARY

Chief Justice, Sir H P. Divetia

Puisne Judge, M M Zala

PUBLIC SERVICE COMMISSION

Chairman, Dr J M Mehta.

Member, S C Mody.

IMPORTANT OFFICIALS

Chief Secretary, V Ishvaran, ICS

Finance Secretary, B Raghavendra Rao

SAURASHTRA LEGISLATIVE ASSEMBLY

President, Dayashanker Dave

The Saurashtra Constituent Assembly, inaugurated by Sardar Vallabhbhai Patel, the Deputy Prime Minister, Government of India, on January 24th, 1949 was converted into a Legislative Assembly on January 26th, 1950, the members being the same

Speaker, J K Modi

Dy Speaker, Jethalal Harikrishna Joshi

(A)—GOHILWAD DIVISION—(10)

Jagjiwan Shivlal Parekh (*Bhavnagar City*); Vrajlal Gokaldas Vora (*Dascora-Sihor*), Chhaganbhai Lalji Gopani (*Songadh-Vala-Lilya Lathi*), Balwantray Gopalji Mehta (*Botad-Gadhda*), Laxmidas Valabhdas Dani, Premchand Maganlal Shah, Meghji Ramji Patel (*Kundla-Rajula*), Vajubhai Manilal Shah (*Jairabad*), Jorsingh Kasalsinh Kavi (*Palitana*)

(B)—ZALAWAD DIVISION—(5)

Harshadrai Vithalraibhai (*Dhrangadhra*), Manharlal Mansukhlal (*Wadhwan*), Rasiklal Umedchand (*Limbdi*), Darbarshree Chandrasinhji Kalubha Bhadwa Talukdar (*Sayla*), Ghanshyamlal Chhotalal (*Lakhtar-Patdi*)

(C)—MADHYA SAURASHTRA DIVISION—(12)

Balkrishna Dinmanishanker Shukla (*Rajkot No II*), Akbarali Amiji Jasdanwalla, Virchand Panachand (*Jasdan-Atkot*); Namdar Yuvraj Shree Vikramsinhji Bhojrajji (*Gondal*), Bhimji Ruda Patel, Jayantilal Mohanlal (*Dhoraji-Kandorna*), Gajanan Bhawanishanker Joshi, Markandrai Kanaiyalal Desai (*Jetpur-Kunkavav*), Maharaj Kumar Shri Pratap Sinhji Amarsinhji (*Wankaner*), Jayantilal Narbheram (*Morvi No I*), Amritlal Jadavji Mehta (*Morvi No. II*).

(D)—HALAR DIVISION—(8)

Uchharangrai Navalshanker Dhebar (*Jamnagar City*), Girdharlal Bhavanbhai Kotak (*Panchkoshi-Jodiya*); Maganlal Bhagwanji (*Khambhalia-Kalyanpur*), Keshavji Arjan (*Bhanvad-Jam-Jodhpur-Dhrafa*), Jadvaji Nathalal (*Kalavad-Lalpur-Jalia*); Mathuradas Gordhandas (*Porbandhar No I*), Maldev Rana (*Porbandar No II*), Chandra Sinhji Dip Sinhji (H H. The Thakor Saheb of Dhrol) (*Dhrol*).

(E)—ADMINISTERED AREAS (3)

Jayaben Vajubhai Shah (*Mangrol*), Suragbhai Kalubhai (*Babariawad*); Kantilal Lalshanker Hathi (*Manavadar-Sardargadh-Bantwa*).

(F)—JUNAGADH—(7)

Samaldas Gandhi (*Junagadh*); Ratilal A. Dani (*Vanthali-Kutiyana*), Narubha Amarsinh Raijada (*Keshod-Shil*); Narayan Damji (*Veraval-Maliya*), Hamir Sharman Patel (*Patan-Talala*), Pushpaben Mehta (*Una*); Dayashanker Trikamji Dave (*Vishavadar-Bheshan*).

TRAVANCORE-COCHIN UNION

THE Union of Travancore & Cochin subsequently called the Travancore-Cochin State, was inaugurated on July 1, 1949 the Maharaja of Travancore is the Rajpramukh

The total area of the Union is 9,154 sq miles, total population 7,492,893 and the total annual revenue nearly Rs 14 crores

The climate of the whole region is generally temperate and the rainfall heavy. The staple food of the people is rice, fish and tapioca Agriculture forms the main occupation of the people Among the important agricultural products grown in the State are rice, tapioca, yams, beans, gram, pepper, rubber, ginger, turmeric, tea and cardamom There are also to be found in the State dense coconut plantations, together with fruit trees, such as arecajack, tamarind, cashew and mango The forests are well-wooded with teak, ebony, black-wood, rose-wood, jack and anjili The fauna consists of the elephant, leopard, bison, bear, the sambur and a variety of small game

Industrially the State is comparatively well-advanced There are many big and small industries to be found throughout the State In the Travancore area alone there are a ceramic factory for the manufacture of porcelain goods, electric goods, crockery, fancy articles and sanitary equipment like drainage pipes, sugar and chemicals for the manufacture of sugar and 260 varieties of pharmaceutical products, a rubber factory, an aluminium smelting factory, a glass factory and a plywood factory All these factories were and are driven by cheap power obtained from the Pallivasal Hydro-electric Works The State also produces refined salt on a commercial scale, and is able to export salt after meeting its own requirements at home The area covered by the former State of Cochin is also well-advanced industrially, there are about 110 different kinds of factories to be found there Besides, Cochin has a magnificent harbour which is expected to develop into one of the major ports of India

Similarly the means of communication and transport are also highly developed throughout the State

The State occupies a front rank among Indian States in the matter of education The literacy figures of this region are the highest in India, both among males as well as females There are 4,219 educational institutions throughout the State, imparting education to more than 9,30,000 students, of whom girls form more than 40 per cent

THE COVENANT

With the inauguration of the new Constitution for India the State has the same kind of constitution as other States

A provision in the old covenant and now a part of the constitution relates to the administration of Devaswom (Maintenance of Temples) It is an obligation on the part of the covenanting State of Travancore to contribute annually from its general revenue a sum of Rs 50 lakhs towards the Devaswom Fund Out of this fund Rs 5 lakhs are to be contributed towards the expenditure of Sree Padmanabhaswami Temple at Trivandrum (the deity of the ruling dynasty in Travancore) The administration of the Devaswom is in the hands of a specially constituted board consisting of 3 Hindu members, one of whom is to be nominated by H H the Maharaja of Travancore, one by the Hindu Ministers of the cabinet, and the third by the Hindu members of the Legislature But the administration of the Padmanabha temple remains in the hands of the Maharaja of Travancore

Similarly, the Cochin Dewaswom Board (also provided for in the covenant) administers the Devaswom and the Devaswom estates and property in Cochin.

The members of the Representative Body of Travancore and the Legislative Assembly of Cochin form the Legislative Assembly of the State. The Legislature has full powers to make laws for the United State, within the framework of the constitution of India The Rajpramukh has the power to promulgate ordinances for the maintenance of peace and order He and the Council of Ministers will in the exercise of these functions, comply with the directions that may be given from time to time by the Government of India.

The continuance in service of the permanent members of the public services in both the States are guaranteed on conditions that are not less advantageous to them Similarly pensions, etc sanctioned by competent authorities are also guaranteed by the Covenant.

Unless sanction to that effect is previously obtained from the Rajpramukh, no proceedings, civil or criminal, can be instituted against any servant of the State in respect of any act done in the execution of his duty

Though with the inauguration of the Indian Republic, the State is primarily governed by the new Constitution of India, the provisions of the Covenant are still operative in so far as they are not repugnant with the provisions of the Constitution

COUNCIL OF MINISTERS

Chief Minister, The Hon'ble T K Narayana Pillai

Minister for Finance and Revenue, The Hon'ble A J John

Minister for Education, Labour and Civil Supplies, The Hon'ble Panampilli Govinda Menon

CHIEF COMMISSIONERS' STATES

AJMER

AJMER enclosed by Rajasthan lies between North Latitude 25°36′ and 26°54′ and East Longitude 74° and 75°22′ It is bounded on the north by Jodhpur and Kishengarh, on the east by Kishengarh and Jaipur, on the south by Mewar and on the west by Jodhpur. The area of the State is 2,400 sq miles and the population 583,693

The estimated Expenditure and Receipts for 1950-51 are Rs 61,86,700 and 33,98,600 respectively.

The distinguishing feature of the country is the Aravali range, the barrier which divides the plains of Marwar from the high tableland of Mewar. It is not one range but a series of parallel ranges About ten miles from Ajmer the hills disappear but in the vicinity of Beawar they form a compact double range which finally meet at Kukra from which village a confused mass of hills and narrow valleys extend to the farthest extremity of the district Ajmer Tahsil consists mostly of plain country while Beawar Tahsil is more hilly The district may, generally be divided into seven main tracts separated by hills.

On the whole rainfall is very precarious and very large areas are under dry cultivation which is of the Catch Crop order The main crops are maize, millet, barley, cotton, oilseeds, wheat, bajra, jeera, chillies and onions

There are four cotton textile mills and one hosiery factory and many ginning and pressing factories Mills turn out coarse cloth There is also some quarrying work in mica at some places in the district

The main transport is by railway and road The meter gauge line of B B & C I Railway passes through the district Ajmer City forms a nucleus of roads which radiate from here in all directions.

Beawar and Kekri Towns are big trading centres. The district is a deficit area in the matter of food grains and therefore there is not much export trade The chief imports are wheat, rice, pulses, cotton and woollen piece goods, kerosene oil, salt, utensils, spices, sugar and medicines

With a view to intensifying the 'Grow More Food' campaign the following schemes were launched during the year 1948-49 to step up the production of food crop in the State Scheme for the sinking of new wells and deepening the old ones, Control of Phadka grass hopper, Distribution and multiplication of improved wheat seed, Distribution of oilcakes and chemical fertilisers, Composting town refuse into manure according to the Bangalore process, Protection of seeds and crops from plant diseases, Encouragement of fruit and vegetable cultivation, Poultry, Gaushala Development and fisheries

ANDAMAN AND NICOBAR ISLANDS

The Andamans are a group of islands of various sizes large and small lying in the Bay of Bengal about 780 and 740 miles from Calcutta and Madras respectively. The main part of the group is composed of five large islands, *viz*, North Andamans, Middle Andamans, South Andamans, Baratang and Rutland Islands generally known as the Great Andamans. Included in the Great Andaman group are also 204 islets, the two principal groups being the Ritchie Archipelago and the Labyrinth Islands To the south of the Great Andamans is the island of Little Andaman The extreme length of the Great Andaman Islands is 219 miles and the extreme breadth 32 miles, the total land area being approximately 2,508 sq miles These Islands have several very good harbours—Port Blair, Port Cornwallis, Port Bonnington and Elphinstone Harbour The headquarters are at Port Blair.

The Nicobar Islands, are situated to the south of Andamans 75 miles from Little Andaman There are 19 islands, 7 of which are uninhabited. The total area is about 635 sq miles The islands are usually divided into three groups (Southern, Central and Northern) the chief island in each being Great Nicobar, Camotra with Nancowrie and Car Nicobar There is a fine land locked harbour at Nancowrie between the islands of Camotra and Katchal.

POPULATION

Some of the islands are not populated at all, some only sparsely while Car Nicobar is densely populated The total population of the islands of the Andaman Group excluding the aborigines is about 16,500 (11,450 males and 4,550 females).

The population of the Nicobar group is about 12,000 of which about 10,000 live at Car Nicobar The original inhabitants of the islands are of a small Negrito type who live in the forests by hunting and fishing They have no fixed habitation, and do no cultivation, their civilization is about that of the Stone Age Their numbers are not known as they prefer to avoid all contact with civilization

The climate can be said to be temperate as the heat during the dry months is bearable because of the cool breeze from the sea The temperature generally varies from 65° to 95° The average rainfall is about 130 inches, and rain falls from six to eight months in the year. The Islands have no such season as winter. The one great disadvantage is the humidity which varies from 79 per cent to 87 per cent and has an enervating effect

HISTORY

Very little is known about these Islands earlier than the year 1789 when the first attempt to colonise these islands was made by Captain Archibald Blair, R N. and a colony was established at Port Blair This colony was later moved to what is now known as Port Cornwallis in North Andamans and after a chequered career covering only 7 years the colony was closed in 1796 due mostly to sickness and trouble from the native inhabitants. The present colony was actually opened in the year 1858 for the accommodation of a large number of prisoners following the uprising in India used to be called the "Great Mutiny"

From 1858 to 1942 the islands were used by the Government of India as a penal settlement for convicts serving life sentences and long terms

The islands were occupied by the Japanese in July 1942 and re-occupied by the Government of India in October 1945 The Japanese built a small jetty at Malacca and roads in Car Nicobar which they developed as a supply base

With the re-occupation of these Islands the penal settlement was abolished.

AGRICULTURE, INDUSTRY

In the year 1948-49 31,000 tons of timber and timber products were shipped to India, and the revenue from the sale of these amounted to approximately Rs. 50,00,000 Coconut, coffee and rubber are other sources of income.

The islands are slowly being made self-sufficient in paddy and rice, and now grow approximately half their annual requirements. No proper survey of the mineral resources of these islands has yet been undertaken.

Coconuts are next to timber the most important among the produce of the Islands and a major item in the diet of the inhabitants In the Andamans coconuts are mostly confined to the South Andamans Exports which go to Calcutta and Madras generally are in the form of nuts and copra

There is plenty of scope for fruit growing Such fruit as Papaya, Pineapple, Citrus, Bananas, Mangoes, etc can be easily grown The question of starting a canning industry has at times been discussed.

The Andaman Islands contain some of the biggest forest estates in the world and therefore as already mentioned the main industry of these Islands is the production of timber The forests contain many valuable species whose commercial possibilities have yet to be thoroughly investigated The better known species are Padauk, Andaman red wood and Gurjan Gurjan is in great demand for the manufacture of plywood Large quantities of soft wood are supplied to match factories

ADMINISTRATION

There is a High School at the Headquarters and several primary classes at outlying villages

There is a well-equipped hospital at the Headquarters with a separate branch for women and children There are smaller hospitals and dispensaries at the outlying places The incidence of malaria is moderate in areas under control and in other areas the disease is kept in check with regular administration of paludrines Plague, cholera and small-pox are almost unknown

The Andaman Islands are administered by the President acting through a Chief Commissioner and an Advisory Council of 5 Members The seat of administration is at Port Blair, which is connected with Calcutta and Madras by a mail steamer which calls approximately once every 3 or 4 weeks at Port Blair The Islands are connected to India by wireless telegraphy An Assistant Commissioner is stationed at Car Nicobar

Chief Commissioner, A K. Ghosh, I C S

BHOPAL

Bhopal (now a Chief Commissioner's State) has an area of 7,000 sq miles, a population of 800,000 and an annual revenue of Rs 1,36,00,000 It was formally proclaimed a Chief Commissioner's Province of the Indian Union on June 1, 1949, when Mr. N B Bonerjee, the first Chief Commissioner, announced the taking over on behalf of the Government of India Before the charge was handed over an announcement was made on behalf of the Nawab of Bhopal, declaring a remission of all loans advanced to lower grade State employees.

Bhopal is in Central India It is bounded on the north and west by Madhya Bharat, on the south by the Narbada river, and on the east by the Sagar District of Madhya Pradesh Most of the State is situated on the Malwa plateau to the north of the Vindhyas The climate of the region is generally speaking, temperate, and the average rainfall varies between 30 inches and 50 inches

The State contains many remains of great archæological interest, including the famous Sanchi Topes, which date from the second century B C , and which were later restored under the direction of Sir John Marshall Adjoining the topes is the Sanchi station on the G.I.P. main line from Bombay to Delhi.

AGRICULTURE AND INDUSTRY

More than two-thirds of the State is arable and the soil is generally very fertile. The principal agricultural product is wheat and the main cash crops are tobacco and sugarcane. The forests are very extensive and valuable The land system in force is ryotwari by which the cultivator holds the land direct from the Government. There is absolute permanency of tenure so long as the assessment is regularly paid. The Grow More Food campaign has recently been intensified with the introduction of the Tractorization Scheme by the Government of India.

With a view to acquainting the people with improved methods of agriculture, the Agricultural Department gives necessary advice and instruction so as to enable the agriculturists to produce good crops in plenty

Industrially, too, the Province is not badly off Among the more important manufacturing concerns in the Province are The Bhopal Textile Mills, the Strawboard Factory, the Sehore Sugar Factory, the Nerbudda Refrigerated Products Co , the Central India Chemicals Ltd , the Hamidia Match Factory, a tent factory, an oil mill and several ginning and pressing factories Bhopal is also rich in deposits such as iron, bauxite, mica and other valuable minerals In general it is believed that the State is potentially very rich

Bhopal is on the G I P Railway main line between Bombay and Delhi The chief means of communication within the State itself are the roads, of which a great many are new.

Both in education and public health facilities are provided by the authorities There are travelling dispensaries in the country-side and a new hospital staffed and equipped on modern lines in Bhopal City.

According to a notification issued by the States Ministry, Government of India, all laws in force in Bhopal before June 1 when the administration of the State was taken over by the Centre, will continue in force until repealed or amended by a competent legislature or authority Many new laws have now been put into force with a view to uniformity with other Chief Commissioners' States

Hitherto only Urdu was the official language in the State But now Hindi has been put on an equal footing with Urdu and both are recognised as court languages.

Chief Commissioner, V Vishwanathan, I C S

COORG

A State in South India under the administrative control of a Chief Commissioner and the Government of India with a Legislature of its own, and bounded along its entire western frontier by the mountain chain of the Western Ghats which separates it from the Madras Districts of Malabar and South Kanara The Western Ghats curve somewhat inland and thus also serve to some extent as the northern and southern boundaries. In the north Coorg is partially separate from the forest highlands of Mysore State by the rivers of Kumaradwara and Hemavathi, and on the east the State merges into the general tableland of Mysore State, the boundaries being marked by the river Cavery which is known as the Ganges of South India and a famous place of pilgrimage. Coorg is a hilly country with a rainfall of on an average from 80 to 120 inches with evergreen, deciduous and semi-deciduous forests.

The State forms a single district covering an area of 1,593 square miles and has a population according to the 1941 census of 168,726 The population is made up of Coorgs, Gowdugals, Brahmins, Muslims, Christians and Harijans

Budget estimate of revenue for 1949-50 was Rs 62,98,000, expenditure for 1949-50 Rs. 87,69,000 and the closing balance on March 31, 1949, Rs. 72,65,259.

Paddy, coffee, orange, pepper and cardamom cultivation are the chief agricultural produce There is no large scale industry, but a paper mill is being started. Transport consists mainly of buses, lorries and bullock carts. And the chief items of trade are coffee, orange, pepper, cardamom and rice.

No schemes under Post-war Reconstruction have yet been started except a college which was opened on the 30th June 1949.

ADMINISTRATIVE PERSONNEL

Chief Commissioner, Lt.-Col Kanwar Daya Singh Bedi.

Personal Assistant to the Chief Commissioner, K P. Kuttappa, B A

Assistant Commissioner and District Magistrate, N C Subbayya, B A

Treasury Officer, K B Ponnappa, L Ag

The Province has a Legislative Council consisting of 18 members with the Chief Commissioner as its President Out of this 4 are official members, 13 elected members and 1 nominated member

DELHI

The transfer of the capital of India from Calcutta to Delhi was announced at the Delhi Durbar on December 12, 1911. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India were located in one Province, and in the capital of that Province—the seat of the pre-partition Bengal Government—for several months in every year It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province To achieve these two objects the removal of the capital from Calcutta was essential its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change,

Various places had been discussed as possible capitals, but Delhi was by common consent the best of them all Its central position and situation as a railway junction, added to its historical associations, told in its favour; and, as Lord Crewe said in his despatch on the subject, " to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country "

The foundation stone of the new capital was laid by the King Emperor on December 15, 1911, the finally selected site being on the eastern slopes of the hills to the south of Delhi on the fringe of the tract occupied by the Delhi of the past. The land chosen is free from liability to flood, has a natural drainage, and is not man worn It is not cumbered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi. A Committee consisting of Surgn.-General Sir C. P. Lukis, Mr. H. T Keeling, C S I., A.M I.C E., and Major J C.

Robertson, I.M.S. was appointed to consider the comparative healthiness of the site, and of an alternative one to the north of the existing city. Their report, dated 4th March 1913, stated that "the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

Town Plan and Architecture.—A Town-Planning Committee, appointed to advise Government, submitted its report in March, 1913, with a plan of the lay-out and work was begun in accordance with that Report The central point of interest in the lay-out, which gives the motif of the whole, is the President s House and two large blocks of Secretariats This Government centre was given a position at Raisina hill near the centre of the new city. Sir Edwin Lutyens was the architect for the President's House and Sir Edward Baker for the Secretariats The former building was estimated to cost approximately Rs. 140 lakhs and the latter groups were originally estimated at some Rs 124 lakhs

To the east of the forum, and below it, is a spacious forecourt defined by an ornamental wall and linked on to the great main avenue or parkway which leads to Indraprast Across this main axis runs an avenue to the shopping centre Other roads run in different directions from the entrance to the forum The axis running north-east towards the Juma Masjid forms the principal approach to the Houses of Parliament They were then described as the Council House and the road was named Parliament Street The railway station for the new city finds its place about half way between the old and new cities off the road through Paharganj, which lies to the west of Old Delhi in the direction of The Ridge.

The main roads or avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

In October, 1912, by proclamation, there was constituted an administrative enclave of Delhi under a Chief Commissioner This enclave was entirely taken from the Delhi district of the Punjab and its total area is 573 square miles.

The population of the Delhi State on the basis of the Census of 1941 is 917,939 The estimated population is one and a half millions

The plans of the New Capital allowed for a population within it of 70,000 Sites were allotted for forty Ruling Princes and Chiefs to build houses for their own occupation during their visits to the Capital and several of these habitations were erected

There was, as regards architecture, a prolonged "battle of the styles" over Delhi Finally, to use the language of the architect, it has been the aim "to express within the limit of the medium and of the powers of its users, the ideal and the fact of British rule in India, of which the New Delhi must ever be the monument" The inspiration of the designs was manifestly Western, as was that of British rule, but they combine with it distinctive Indian features without abandoning the architect's aim to avoid doing violence to the principles of structural fitness and artistic unity.

Cost of Scheme.—It was at first tentatively estimated that the cost of the new capital would be four million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors afterwards increased the amount, the chief of these being the immense rise in prices after the war, and the Legislative Assembly were informed by Government on 23rd March 1921, that the revised estimates then amounted to 1,307 lakhs of rupees. This amount included allowances for building Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates.

The New Capital Enquiry Committee, in its report published in January, 1923, estimated the total expenditure at Rs 1,292 lakhs including Rs. 42 lakhs for loss by Exchange.

The Project Estimate contained certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes would in addition to meeting current expenditure, partially at any rate cover the interest on the capital outlay, whilst there were other items on which some return on account of the sale of leases, general taxes and indirect receipts was secured

The project, after being completed and closed, was re-opened in 1933-34. This became necessary owing to the need to increase residential accommodation for officers and staff and was facilitated by a period of cheap money Government utilised the occasion for extending the residential accommodation for visiting members of the Indian Legislature The expenditure on the construction of New Delhi is Rs 21,91,15,501 upto the end of 1945-46 The population of the new City is 93,733 according to the 1941 Census

Progress of Work.—The construction of New Delhi was made at satisfactory speed, having regard to the curtailment of the Budget allotment in consequence of the First World War and the absence of officers and other establishments at the war The Secretariats were so far advanced that they were transferred to them from Calcutta in October, 1924, the offices of the Accountant-General, Central Revenues, and the headquarters of the Royal Air Force in India were also housed in them in the winters of 1924-25 and 1925-26. The original programme of residential buildings for Government officers and staff of various grades were then nearly completed The whole of the civil side of Government moved from Old Delhi into their quarters in the new Secretariats on coming down from Simla in November, 1926 The Viceroy took up his residence in the new Government House on December 23, 1929. The Viceroy until then had resided during the Delhi season at Viceregal Lodge in Old Delhi The Government of India in 1927 devoted special consideration to the question whether their ordinary annual 5 months residence in Delhi should be extended each year to 7 months and early in 1928 decided in consultation with the India Office to endeavour to stay in Delhi for half of each year, the new order being introduced for trial in 1928 by keeping the Secretariat in New Delhi till mid-April and bringing it down from Simla again in mid-October. The experiment was not very successful and was not repeated till 1932-33, when Retrenchment Committees had strongly recommended a longer stay in Delhi in order to extract rent for a longer period from the seasonal official occupants of its residential buildings, the rents in Delhi being higher than those for residences in Simla. An early descent from Simla was postponed in the autumn of 1934 on account of a report by the Public Health Commissioner on the general unhealthiness of the Winter Capital in October

Anti-Malaria Measures.—There was about ten years ago an increase in malaria bearing mosquitoes and consequential fever in New Delhi. This led to a special inquiry in 1936. The inquiry showed that both Old and New Delhi were ringed about with prolific mosquito breeding places, one of the worst being the area utilized for sewage outfall. The water borne sewage of both Old and New cities is dealt with in a farm which, when the new city was built, was placed immediately outside its southern boundary. The Government of India after the 1926 inquiry were forced to adopt a new scheme for the removal of the farm to a more distant site and chose one some four miles further away from the city. Anti-malaria operations on a large scale, scientifically directed, were simultaneously undertaken, the estimate of their cost being Rs. 14 lakhs. Improvements in the water-supply of the new Capital with a view to a larger population being retained in it during the summer was also effected.

When the residential buildings in New Delhi were, in the course of the original construction of the new city, about to be designed, the Government of India issued orders that they were to be "for cold weather occupation only." This rule was followed. The general principle embodied in the design of the houses was that of planning them to capture as much warmth from the sun as possible. Secretariat, residential bungalows and staff quarters are largely inappropriate for hot weather occupation.

Art Decorations.—The Government of India in 1927 approved a scheme for the encouragement of Indian artists by providing facilities for the decoration of certain buildings in New Delhi. The outlines of the scheme are briefly as follows. A certain number of domes and ceilings in the New Secretariat Buildings at Delhi suitable for decoration were selected. The various schools of art in India, as well as individual artists, were invited through local Governments, to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Committee both as regards the design and colour the pictures were to be drawn out and painted to full size on canvas, and, if finally approved by the Committee, fixed according to the marouflage process *in situ*. Other techniques, such as fresco or tempera, were optional Artists or schools of art, who sent in small scale drawings, had to bear the initial expense of preparing them When these were approved by the Committee, the out-of-pocket expenses paid in addition to a suitable honorarium Government undertook to pay for the finished pictures done from approved sketches but gave no guarantee that the finished paintings would permanently be preserved Government intimated that historical or allegorical subjects would be given preference over religious ones and English artists living in India were barred from competition, the work being strictly reserved to Indian artists Numerous artists submitted designs, especially those of Western India, and with such satisfactory results that the specially appointed Expert Committee approved of nearly all A great deal of painting was completed and the work was continually progressing until the depression in the thirties dried up funds

All-India War Memorial.—H. R. H. the Duke of Connaught on 10th February, 1921, laid the foundation stone of an All-India War Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes' Park and the construction of the building was for economy's sake proceeded with slowly. The memorial was formally inaugurated by Lord Irwin in February, 1931, in the presence of representatives of every unit of the army in India, of the Royal Air Force and of a large concourse of official and other spectators

It was decided in 1936 to erect a memorial statue to the King-Emperor George V, in Princes' place, the large park-like area lying between the All-India War Memorial and the Purana Qila. The origin of this proposal was a movement started among the Ruling Princes, some time previously, to erect a white memorial statue to the King in the new city and this scheme had made considerable progress when he died. The matter was then considered in a broader light and in consultation between the Princes and the Earl of Willingdon, the Princes agreed to merge their scheme in a larger one for an All-India memorial to the King. The Viceroy issued an appeal for subscriptions to the major scheme and he and the Countess of Willingdon opened the general subscription list with a donation of Rs. 5,000. Sir Edwin Lutyens was invited to submit a design for a memorial and the statue was eventually unveiled by the then Viceroy, Lord Linlithgow, on November 14, 1939.

Public Institutions.—The Government of India further in 1922 introduced and carried a Bill for the establishment of a unitary, teaching and residential University in Delhi, the buildings for which would be erected in the new capital The plan was to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. The provision of funds for the complete realisation of the university being a matter of time it was decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation The general question of the finances of the University was in 1927 the subject of inquiry by a special committee appointed by Government For the time being the University was housed in the temporary buildings in old Delhi occupied by the Civil Secretariat until 1929 and in 1931 the old Viceregal Lodge was allocated to it for its future home The Government of India have also allotted free land to various colleges in Old Delhi

H H the Maharaja of Bhavnagar having offered Rs 5,00,000 for the provision of some amenity in the new city, the Government of India decided to utilize the sum for the provision of a Stadium. The ground which they took for this was a large area lying immediately below the western walls of the Purana Qila, *i e*, between them and Princes place. This area was originally marked by Sir Edward Lutyens, in his plan, to be an ornamental lake Practical consideration led to its abandonment for that purpose and the area was laid out as a park. A large proportion of the Maharaja's Rs 5,00,000 was utilized for the provision of a huge brick grandstand overlooking the central portion of the park taken for the Stadium.

Inaugural Ceremony.—The New City was the scene of notable and elaborate inauguration ceremonies in February, 1931. The first of these was the unveiling of four **"Dominion Columns"** suitably placed about the great place between the two Secretariat blocks The columns are of red stone, surmounted each by a gilded merchantman of the old style in full sail The columns are designed to resemble the historic ones erected in various parts of the land by Asoka and were presented by Canada, Australia, New Zealand and South Africa The first two and fourth of these Dominions sent their own representatives to perform the ceremony of unveiling New Zealand nominated a Member of the Government of India to act in her behalf for the same purpose.

City Extension —The main direction for the future extension of the new city is southward, where for some three miles beyond the limits of present development, Government have land in their possession and have placed it at the disposal of the City administration. The New Delhi Civil Aerodrome lies immediately southward of the existing new City boundary on the southern side and the Earl of Willingdon in February 1936, opened alongside the high road there a fine new Willingdon Air Station, which is furnished with the most modern equipment for day and night flying. Building has already taken place in the same neighbourhood.

A New Delhi Municipal Committee with its own permanent official Chairman and Secretariat was established in 1932.

The Improvement Trust was instituted in 1937, its duties being to provide for the expansion of the new capital, including both old and new cities and urgently to deal with the insanitary overcrowding of the old city, a problem arising from the rapid increase of population and influx of refugees.

ADMINISTRATIVE PERSONNEL

Chief Commissioner, Shankar Prasad, I.C S.

Deputy Secretary, Ministry of Finance, Delhi Province, P. K. Basu.

Registrar to the Chief Commissioner, P. H. B. Wilkins.

Deputy Commissioner, Rameshwar Dayal, P C S.

HIMACHAL PRADESH

The new State of Himachal Pradesh, administered by the Central Government comprises 21 former Punjab Hill States and their 9 tributaries The 21 States are Baghal, Baghat, Balsan, Bashahr, Bhajji, Bija, Chamba, Darkoti, Dhami, Jubbal Keonthal, Kumarsain, Kumhar, Kuthar, Mahlog, Mandi, Mangal, Sangri, Sirmur, Suket and Tharoch

The 9 tributaries are Delath, Dhadi, Ghund, Khaneti, Koti, Madhan, Ratesh, Rawingarh and Theog

The State came into being on April 15, 1948, the consolidation has been achieved with the full agreement and support of the Rulers and the people.

Himachal Pradesh lies between North Latitude 30°30′ and 33°10′ and East Longitude 75°55′ and 79°50′. It is bounded on the north by the Jammu and Kashmir State, on the south by Tehri-Garhwal and Dehra Dun Districts of Uttar Pradesh and the Ambala District of Punjab, on the west by Ambala, Hoshiarpur and Kangra On the east the boundaries are undefined

The area of the State is 10,600 miles, the population 950,000 and the revenue about Rs. 1,32,07,870

The State is divided into four administrative districts, Mahasu, Sirmur, Mandi and Chamba.

Mahasu District has a population of 306,783 and is divided into two sub-divisions, Rampur and Jubbal. The Rampur sub-division contains

the Tehsils of Rampur, Rohru, Chini, and the Jubbal sub-division contains the Tehsils of Jubbal, Chaupal, Theog, Junga, Arki and Solan and the sub-Tehsils of Kumarsain, Kasumpti and Sunni

Sirmur District has a population of 156,026 and is divided into four Tehsils, Nahan, Pachhad, Rainka and Paonta.

Mandi District has a population of 303,685 and contains the Tehsils of Sardar (Mandi), Karsog, Sundernagar, Jogindernagar, Sarkaghat, Chachiot and the sub-Tehsil of Dehar The Tehsils of Sundernagar and Karsog and the sub-Tehsil of Dehar form the Suket subdivision of the District

Chamba District has a population of 168,908 and is divided into the Tehsils of Chamba, Chura and Bhattiyat

ECONOMY

The main agricultural wealth of the State consists in potatoes and fruits such as apple, peach, almond, nuts, pomegranate Salt is another important item, while forests yield timber, fire-wood and charcoal. Handicrafts which include Pashmina shawls, wool of fine quality, resin, herbs, musk and skins are a third source of income

Himachal Pradesh forests supply the largest quantities of coniferous timber in Northern India. They are the main source of revenue in the State, the estimated annual revenue being Rs 55,00,000 The forests are also useful in ensuring the safety of the catchment areas of the Jumna, Sutlej, Beas, Ravi and Chenab Rivers. On the protection of these catchment areas depends the steady and equable flow of water in these rivers, and the success of irrigation and engineering works in the plains. For purposes of forests utilization the State has been divided into twelve territorial forest divisions, *viz.*, Chamba, Churaha, Mandi, Nauchan, Suket, Jubbal, Simla, Solan, Nahan, Rajgarh, Upper and Lower Bushahr

Potato is the chief cash crop The State has established itself as a vital source of potatoes, especially seed potatoes, for the plains of India It exports nearly 5½ lakh maunds of potatoes annually out of which over 3½ lakh maunds are directly utilised as seed potatoes.

GOVERNMENT

An Advisory Council of 9 members has been constituted to advise the Chief Commissioner in the discharge of his functions. Of these 9 members, 3 are the representatives of the Rulers of the former States which have been integrated in the Himachal Pradesh and 6 are popular representatives.

ADVISORY COUNCIL

H H Raja Sir Joginder Sen, K C S I of Mandi.
Maj. H. H. Lakshman Singh, Raja of Chamba.
Durga Singh, C I E , Raja of Baghat.
Shrimati Lila Wati (*Mandi*).
Dr. Y. S. Parmar (*Simla*)
Mehta Avtar Chand (*Chamba*).
Swami Purna Nand (*Mandi*).
Padam Dev (*Bushahr*).
L. Shiv Charan Dass.

ADMINISTRATION

Chief Commissioner, E. P. Moon.
Judicial Commissioner, Dr. J. N. Bannerji.
Chief Conservator of Forests, N. P Mohan.
Director of Health Services, Gwash Lal
Director of Education, Dr. Gokal Chand.
Director of Agriculture, A. S. Ghani.
Principal Engineering Officer, Devi Dayal.
Asstt. Director of Health Services, Dr. (Mrs) A C. Parmar.
Director of Land Records, Ram Nath.
Secretary, Finance and Development, R. G. Abbhi.
Director of Civil Supplies, Capt. Indar Sen.
Deputy Commissioner, Mahasu, Mehta Ram Rattan
Deputy Commissioner, Mandi, L. Wazir Chand.
Deputy Commissioner, Sirmur, Kanwar Shiv Paul
Deputy Commissioner, Chamba, G. N. Raina
Registrar of Co-operative Societies, Mohan Singh.

KUTCH

Kutch was integrated with the Indian Republic as a Chief Commissioner's State on 1st June 1948

The State has an area of 17,225 sq miles including the two Ranns (which have an area of about 9,000 sq. miles). The population is about 500,800

The State is bounded on the north and the north-west by Pakistan, on the east by north Gujarat, on the south by Saurashtra, and on the west and south-west by the Indian Ocean.

The capital of the State is Bhuj, founded in 1549.

There is a fair proportion of good cultivable land in Kutch, the principal crops being bajra, wheat, barley and cotton Irrigation is also well developed with 27 reservoirs Twelve more reservoirs are under construction

The State is rich in gypsum, clays and limestone and has fairly large deposits of iron and lignite.

The main occupation of the people apart from agriculture and mining are embroidery and silver work, which are well-known for their beauty

The State has fine cows of the Thari and Red Sindhi breeds which are used for a dual purpose, *i e* for milking and draughting

The currency of the State which in the past was reckoned in Kories was demonetised on 26th April 1949 when Indian currency was introduced.

FAMINE RELIEF

The Government of India have sanctioned a large sum of money to fight famine and the State will have 150 miles of new roads and 10 new irrigation reservoirs constructed. A separate famine establishment to work under a Famine Commissioner has also been sanctioned.

Efforts are being made for the expansion of education in the State There are about 630 schools with about 28,000 students on the rolls. Primary and secondary education is free.

Free medical relief is available in Kutch There are 6 Government hospitals and 14 Government dispensaries.

The chief means of communication is by sea. Goods are carried by country craft, the chief import and export centres being Mandvi and Tuna The State has a modern port in Kandla with a natural harbour, which the Government of India are developing into a major port.

ADMINISTRATION

The administration is carried on by a Chief Commissioner. Steps are being taken to bring the administration of the State into line with that of other States, some departments have already been reorganised.

Chief Commissioner, C. K. Desai, I.C S.
Judicial Commissioner, R. S. Trivedi, I.C.S.

MANIPUR

Manipur bounded on the east and south by Burma and on the north and west by the Naga Hills and Cachar Districts of Assam, is a highly strategic state on the eastern frontier of India Two land routes from Burma pass through its territory It was formally proclaimed a Chief Commissioner's province of the Indian Union on the 15th of October, 1949, when Major-General Rawal Amar Singh, late Dewan of the State, took over charge as the Acting Chief Commissioner He was succeeded on the 19th November, 1949 by the present Chief Commissioner Himmat Singh K Maheshwari

The State has a population of 512,127 (1941 census) and an area of 8,638 square miles. 700 square miles of this area form a central valley, 2,600 feet above sea-level, which is shut in on all sides by extensive hill tracts covering the rest of the State with hill stations as high as 6,000 feet above sea-level The climate varies from temperate in the valley to cold in the high stations in the hills The rainfall on the average is 65 inches in the year

The main population is "Meitheis" inhabiting the valley with some 40 tribes and sub-tribes known by the generic name of Nagas and Kukis. Though a number of different dialects are spoken in the State, Manipuri and English are the official languages The people are carefree and healthy, with a passion for religious-festivals involving community dances in which both sexes join

The soil in the valley is fertile Rice is the principal crop of which Manipur exports a fair quantity An effort is being made to popularize large-scale cultivation of wheat for which the soil of the valley seems eminently suited Handloom weaving is a popular industry throughout the State and Manipuri cloth of various picturesque and indigenous designs, is in demand throughout India and even outside Efforts are in progress to revitalize this cottage industry. Action has also been taken to explore the geological possibilities of the vast hill tracts

The administrative machinery under the State Government is archaic and ineffective and is therefore being reorganised

The Budget figures for Income and Expenditure for 1949-50 are Rs 35,67,000 and Rs 36,89,000 respectively

ADMINISTRATIVE PERSONNEL

Chief Commissioner, Himmat Singh K. Maheswari
Personal Asstt to Chief Commissioner, Kashinath Bhan
Secy to the Government, Revenue and Finance Departments, P C Deb
Judicial Commissioner, Thakur Laxminarian
District and Sessions Judge, L Ibungohal Singh.
Deputy Commissioner and District Magistrate, M. N Phukan
Supdt of Police, S. Palit
Chief Medical Officer, A C Kapur
Registrar of Co-operative Societies and Director of Industries, M. C Hazarika
Principal, Dhanamanjuri College, S N Chatterji.

TRIPURA

Tripura is one of the oldest Hindu States in India It is bounded on the north by the Sylhet and Cachar Districts, on the west by Sylhet, Tipperah and Noakhali Districts, on the south by the Chittagong and Noakhali Districts and on the east by Lushai and Chittagong Hill tracts. The major portion of the State is hilly and full of jungles.

The area of the State is 4,116 sq. miles, and the population according to preliminary census 587,388.

The agricultural wealth of the State consists of paddy, jute, cotton, tea and fruit such as pineapple, jackfruit etc ; while forests yield timber, firewood and charcoal. Paddy is the main source of revenue.

The State is divided into eight administrative Divisions—Sadar, Khowai, Kailashahar, Dharmanagar, Sonamura, Udaipur, Belonia, Sabroom and two Sub-Divisions—Kamalpur and Amarpur.

Sadar Division has a population of 1,86,889 and is divided into ten Tahsils—Sadar, Puranagartala, Bamutia, Mohanpur, Simna, Ishenchandranagar, Kamalasagar, Takarjala, Bishalgar, Charilam.

Khowai Division has a population of 66,354 and is divided into three Tahsils—Khowai, Kalyanpur and Asharambari.

Kailashahar Division has a population of 72,995 and is divided in three Tahsils—Kailashahar, Fatickroy and Kanchanpur

Dharmanagar Division has a population of 58,770 and is divided into four Tahsils—Dharmanagar, Brojendranagar, Kurti and Longai

Sonamura Division has a population of 36,811 and is divided into five Tahsils—Sonamura, Kathalia, Bakshanagar, Dhanpur and Mantinagar

Udaipur Division has a population of 50,431 and is divided into two Tahsils—Radhakishorepore and Salgarah

Belonia Division has a population of 33,866 and is divided into seven Tahsils—Belonia, Rajnagar, Radhanagar, Puranrajbari, Sidhinagar, Hrishyamukh and Muhuripur

Sabroom Division has a population of 20,999 and is divided into five Tahsils—Sabroom, Manu, Amlighat, Samarendraganj and Gorakapa

Kamalpur Sub-Division has a population of 32,381 and is divided into two Tahsils—Kamalpur and Kulai

Amarpur Sub-Division has a population of 27,842 and is divided into three Tahsils—Birganj, Omphi and Dumboornagar.

The Chief Commissioner is assisted by a Deputy Chief Commissioner and there are three Secretaries, each in charge of several Departments

ADMINISTRATION

Chief Commissioner, R K Ray, I C S

Deputy Chief Commissioner, Major A. B Chatterji.

Judicial Commissioner, N. N Sengupta, M Sc, B L.

Secretaries, R K Dev Barma (*Home, Education*), N L Dev Barma (*Works and Buildings, Relief and Rehabilitation*), S C Ghose (*Finance, Health and L S G*)

Director of Land Records, C K Guhathakurtha.

Director of Health Services, H Banerjee.

Director of Agriculture, U C. Sarkar.

VINDHYA PRADESH

The United State of Vindhya Pradesh lies between 22° 30′ and 26° 15′ N. latitude and 78° 15′ and 82° 50′ E longitude and includes 26 Baghelkhand and Bundelkhand States of which Rewa is the biggest The States are besides Rewa Ajaigarh, Baraundha, Bijawar, Chhatarpur, Charkhari, Datia, Maihar, Nagod, Orchha, Panna (Salute States) and Alipura, Bhaisunda, Garrauli, Gaurihar, Jaso, Kamta Rajaula, Khaniadhana, Kothi, Lugasi, Naigawan, Rebai, Pahra, Paldeo, Sohawal, Taraon (Non-salute States).

Originally Vindhya Pradesh was composed of 36 States of which the following 10 were transferred to Uttar Pradesh on 25th January 1950: Samthar, Sarila, Jigni, Bihat, Banka Pahari, Baoni, Beri, Dhurwai, Tori Fatehpur and Bijna.

Vindhya Pradesh lies between Uttar Pradesh in the north and east and Madhya Pradesh in the south. On the west lies Madhya Bharat

The population of the Union is about 33 lakhs, and the area 22,860 square miles. Hindus form an overwhelming majority of the population The prevailing languages are Hindi and dialects called Baghelkhandi and Bundelkhandi The main occupation of the people is agriculture. The capital of the State is Rewa.

There are 8 districts sub-divided into 31 Tehsils Rewa, Satna, Shahdol and Sidhi districts form Baghelkhand Division, while Bundelkhand Division comprises the Districts of Datia, Tikamgarh, Chhatarpur and Panna, each Division being under a Commissioner.

The soil is poor and yields normal production Wheat, Gram, Barley, Linseed, etc, are grown in the spring and Rice, Maize, Saman, Kodon, Cotton, Bajra, etc., in the autumn Irrigation is mainly by Bandhs and wells

MINERALS

Vindhya Pradesh has large mineral resources The State is richly endowed with coal and building stone, especially limestone The diamonds of Panna are well known Other minerals and rocks of economic importance, so far known to exist in this area, are iron ore, copper ore, lead ore, yellow ochre, felspar, fireclay, and bauxite.

Geologists believe that fresh minerals may be found in the Union as many minerals not yet found here are known to occur in other parts of India in similar formation There are good prospects for the manufacture of cement, glass, paper, aluminium, heavy chemicals and synthetic petrol.

FORESTS

There are extensive forests which produce excellent timber. Enough bamboos and bagal grass are also available for making paper pulp Tender leaves used for making bidis are also found in abundance. There is a shellac factory at Umaria

The jungles in the south-east are famous for their big game Tigers are met with in considerable numbers, as also bears, panthers and wild buffaloes while Sambhar, Chikara and Roj abound

COMMUNICATIONS

The Union is not well served by railways and communication is mostly by road Satna (32 miles) is the railway station for Rewa, the capital of the Union, and is situated on the Great Indian Peninsula Railway. Another section of the G I P connects some places in the Bundelkhand Division with one another The Katni-Bilaspur section of the Bengal-Nagpur Railway passes through the southern parts of the Union for a distance of 138 miles.

There are not many metalled roads, and parts in the interior are sometimes cut off from one another during the monsoon All the district towns are connected by road.

ARCHÆOLOGY

There are a number of places of archæological interest in the Union, chief among them being Khajraho and Orchha temples, Bandhogarh Fort, Chandreha and Manda, Bir Singh Palace, Datia, Jahangir Mahal with a flower garden at Orchha, the source of the Narbada River at Amarkantak, and the Jain temples at Sonagir. There are numerous waterfalls the most picturesque among them being the Chachai and Keoti in the old Rewa State.

EDUCATION

The percentage of literates to the total population is only 6 because of vast unopened tracts and the aboriginals like Gonds The number of educational institutions is increasing every year. A feature of the education of Vindhya Pradesh is that not only primary education, but education upto and including the high school sections is free throughout

There is one Post-Graduate College which also conducts Law Classes at Rewa, one Degree College at Chhatarpur, one Intermediate College at Tikamgarh, 14 High Schools, 31 A V M Schools, 160 Hindi Middle Schools, about 1,450 Primary Schools, 2 Teachers Training Schools and 1 Technical Institute In addition there are 12 Night Schools and some special schools.

The demand for grants placed before Parliament by the Central Government on account of Vindhya Pradesh was Rs 1,77,75,000

POLITICAL SET-UP

Vindhya Pradesh became a Centrally administered area under a Chief Commissioner on 1st January, 1950 though it is listed among the Part B States of Schedule I of the Constitution.

ADMINISTRATIVE PERSONNEL

Chief Commissioner, V K B Pillai, I.C S

Chief Secretary, D A White, I C S.

Judicial Commissioner, Pancholy Chater Singh, B A., LL B

Additional Judicial Commissioner, Durga Prasad, B A, LL.B

Inspector-General of Police, K J Nanavatty, I P.

Finance Secretary and Secretary, Commerce and Industries, A P. Watal, B Sc, I S E (*Retired*).

Judicial Secretary, Pandit Visheshwar Prasad, M A, LL B

Secretary, Education, A K Tankha, B Sc.

Revenue Secretary, N V Joshi, B A.

Secretary, Relief and Rehabilitation, Narendra Nath Chatervedi, B.A, LL B (*Offg.*)

Director of Food and Civil Supplies and Ex-officio Secretary to Chief Commissioner in Food and Civil Supplies Department, Ganga Prasad Jain, M A, LL B.

Commissioner, Baghelkhand, Kanhaiya Lal Pancholi, B A, LL B

Commissioner, Bundelkhand, M K Kher, I A.S.

Commissioner, Sales Tax and Excise, Pandit N. K. Dube, M A.

Director of Medical and Health Services, Lt -Col. L Oswald, M B.B.S.

Chief Engineer, T C Gue, B Sc, B E

Director of Industries and Mining Advisor, V. K. Chopra, M.A, Ph D (London)

Chief Conservator of Forests, G G Takle, I.F.S.

Director of Education, Dr Hari Ram Mishra, M A, LL B, B T, D Litt, etc

Principal, Durbar College, Dr A. P. Mathur, B.Sc.

JAMMU AND KASHMIR STATE

THE Jammu and Kashmir State constituting the extreme western section of the Himalayas, lies between 32°17′ and 36°58′ north latitude, and 73°26′ and 80°30′ east longitude. The total area of the State is 84,471 sq miles—1,773 sq. miles more than the area of Hyderabad, and the population 4,021,616, with an average density of 48 per sq mile. For administrative purposes, the State is divided into three provinces Kashmir, Jammu and the Frontier.

Non-Muslims form about 23 per cent of the total population—a percentage slightly higher than the one which Muslims formed in India before the partition Culturally both Muslims and Hindus belong to the same group Consequently, they speak the same language and have common customs and conventions, and sometimes even places of common worship

About 10·3 per cent of the total population is urban There are 2 cities, 37 towns and 8,740 villages in the whole State

In recent years, the State has made all round progress. To give a fillip to State Trade, a network of Kashmir Arts & Crafts Emporia has been established in important cities in India These account for Kashmir goods worth 12 to 15 lakhs annually The State owns a transport fleet of nearly 400 vehicles. Distribution of essential commodities within the State is made through multi-purpose co-operative societies This has resulted in all areas of the State being fully served with essential supplies and elimination of the black market The State runs two Radio Stations in Srinagar and Jammu From the point of literacy, the State is well ahead of many former States in India, with a University of its own established during the war years Twenty-one per cent of the State's revenue is spent on Irrigation and Electricity today

The State occupies an important position in the political geography of India as it has common frontiers with China, the U S S R , Pakistan and Afghanistan.

EARLY HISTORY

About the beginning of the 14th century Rentchen Shah, a Buddhist fugitive from Tibet happened to capture power and occupy the throne of Kashmir He then wanted to change his religion and adopt Hinduism. The Brahmins of the State refused to accede to his request. He therefore embraced Islam, and started a regular campaign to kill the Brahmins

After Rentchen Shah came a long succession of sultans who, for more than two centuries, ruled Kashmir with an iron hand They were followed by the Mughals Then the Afghans captured power in 1750. In 1819 the Afghans were ousted by the Sikhs.

Gulab Singh, the great grandfather of the present ruler, Hari Singh, ascended the throne in 1846. Gulab Singh was one of the most important generals in Maharaja Ranjit Singh's army, and after Ranjit Singh's death, became the Prime Minister of the Sikh dominion At the time he had absolute control over Jammu, Ladakh and other adjoining territories and had spread his conquests to Kashmir to the extent that by 1846 he was the virtual ruler of that land That year, in return for his neutrality during the Sikh wars and also for the payment of a small sum of Rs 7,500,000, the British signed a treaty with him whereby they recognized his sovereignty over Kashmir. This treaty is called the Treaty of Amritsar It is against this treaty which is described as a sale deed that sentiment in Kashmir is very strong and that the present Prime Minister of Kashmir Sheikh Mohammad Abdulla led an agitation.

AGRICULTURE

Kashmir State has a delightful climate, though winter months are very cold. The maximum recorded temperature of the Kashmir Valley is 99 3 degrees and the minimum 11. In Jammu the temperature in summer goes upto 115°, or sometimes even higher, but comes down to 30° and even to 20° during winter The average rainfall for the whole of the State is 28 45″

Forests hold an important place in the economy of the State They yield fine wood of many varieties, medicinal herbs and also provide game and fodder for the cattle. The forest operations do not extend to the Frontier Province which forms three-fourths of the total area of the State In the two remaining provinces, 10,865 sq miles or about 50 per cent of their total areas constitute forest land.

Agriculture is the main occupation of the people But the soil is not very fertile. Only 5 6 per cent of the total area is cultivable, and the remaining portion is full of mountains and deserts The total amount of land actually under cultivation in the State is about 2,300,000 acres The main crops grown are rice and maize, and in Jammu wheat and maize The State on the whole is deficit with regard to food supply to the extent of about 31,000 tons annually A vigorous 'Grow More Food' campaign is launched which is expected to bring down this deficit substantially

INDUSTRY, MINERALS

Woollen textile manufacturing is the biggest single industry in the State It gives employment to about 300,000 people, including both part-time and whole time workers. Kashmir woollens, such as shawls, carpets, namdas and gabhas have a world-wide popularity During the 18th and 19th centuries especially Kashmir shawls had a wide demand in England, and, as it was expressed at the time, 'adorned the proudest beauties in Europe and the rest of the world'

Next in importance comes the silk industry. Kashmir filatures are the largest in the world for a single unit of production, and produce one of the finest quality silks

Papier-mache, silver-ware, and wood-carving are among the other minor industries of the State.

Woollen manufactures, silks, forest products such as timber, herbs, some chemicals, furs and skins, and fruit and vegetables are the main items of export, whereas foodstuffs, textiles, sugar and tea, spices and hardware form the main imports into the State.

The following is a list of the minerals found in the State: Coal, Lignite (possibilities of petroleum), Bauxite, Iron ore, Copper ore, Lead, Zinc, Nickel ore, Manganese, Gold, Arsenic, Chromite, Cohre, Gypsum, Graphite, Kaoline, Bentonite, Fuller's Earth, Marble, Slate, Steatite, Serpentine, Baryles, Corrundum (Sapphire and Ruby), Beryl and Aquamarine and Tour-mallin There are other minerals too, suitable for glass manufacture But it is not known, whether the exploitation of all these minerals is an economic proposition Coal, Lignite and Iron ore and some other minerals are supposed to be in existence in fairly large quantities

Tourist traffic is one of the main sources of income both to the State and the people. It is estimated that before the trouble started in Kashmir, about 40,000 people used to visit that place annually, spending about Rs 1,50,00,000 during their stay of a few months in the Valley. Great efforts are now being made by the State to develop this traffic to the maximum possible extent.

TRANSPORT

The total mileage of roads maintained by the P W.D. is about 2,650, out of which 562 miles are metalled, 620 unmetalled and the remaining mileage bridle paths. Jammu is connected with Srinagar by a fine motorable road of 203 miles Being navigable, the rivers in Kashmir Valley play a great part as means of transport

The Pathankot-Jammu road, 65 miles long, built in three months at a cost of about Rs. 3,00,00,000, was opened for traffic by the Prime Minister of India, on July 7, 1948 Considering the sort of country in which it was built the road is regarded as a very remarkable feat of engineering Three important bridges on the road, 2,800 ft , 2,000 ft , and 1,000 ft long were also declared open on July 7, 1948.

The pre-war state budget used to vary generally between 2 crores and 3 crores During the war the budget touched the peak of Rs 7 crores The average over the whole period however, comes to about Rs 5 crores

The main sources of income are customs, land revenue, forests, profits of silk reeling (which is a State monopoly), courts, etc , and the main items of expenditure are military, salaries, public utility works, education, sanitation, irrigation, electricity, etc

ADMINISTRATION

Kashmir acceded to India on October 26, 1947. Simultaneously, to fulfil one of the conditions of the acceptance of accession by the Government of India, the Maharaja invited Sheikh Mohammad Abdulla, President of the All Jammu and Kashmir National Conference, to form an interim Government, and to carry on the administration of the State. The interim Government later changed into a full-fledged Cabinet, with Sheikh Abdulla as the first popular Prime Minister

The Maharaja has temporarily withdrawn from the State and has handed over power to his 21 year old son who is to act during his absence as a constitutional ruler The latter, Yuvraj Karan Singh, formally took over from his father on June 20, 1949

COUNCIL OF MINISTERS

Prime Minister, Sheikh Mohammad Abdulla; *Deputy Prime Minister*, Ghulam Mohammad Bakshi, *Revenue Minister*, Mirza Mohammad Afzal Beg; *Development Minister*, Ghulam Mohammad Sadiq, *Information and Broadcasting Minister*, Sardar Budh Singh, *Health and Local Self-Government*, Pandit Shamlal Saraf, *Finance Minister*, Girdhari Lal Dogra, *Education Minister*, Col Peer Mohammad Khan.

INDIAN REPRESENTATIVES ABROAD

Ambassador in China, Peking, His Excellency Sardar K. M. Panikkar.

Ambassador in U.S.S.R., Moscow, His Excellency Dr S Radhakrishnan.

Ambassador in Iran, Tehran, His Excellency Mr. Ali Zaheer (also accredited to Iraq)

Ambassador in Nepal, Kathmandu, His Excellency Chandreshawa Prasad Narain Singh

Ambassador in Burma, Rangoon, His Excellency Dr. M. A Rauf.

Ambassador in Afghanistan, Kabul, His Excellency Wing Commander Rup Chand

Charge d'Affaires in Turkey, C S Jha, I C S

Ambassador in the United States of America, Washington, D C, Her Excellency Shreemati Vijayalakshmi

Ambassador in France, Paris, His Excellency Wing Commander Sardar H S Malik, I C S (also Minister to Norway)

Charge d'Affaires in Belgium, Brussels, B F H B Tyabji, I C S (also accredited to Luxemburg)

Envoy Extraordinary and Minister Plenipotentiary in Thailand, Bangkok, Bhagwat Dayal

Envoy Extraordinary and Minister Plenipotentiary, Berne (Switzerland), D B Desai (also Minister to Austria and Holy See)

Charge d'Affaires in Brazil, Rio de Janeiro, Aftab Rai

Ambassador in Indonesia, Djakarta, His Excellency Dr P Subbarayan

Consul-General in Shanghai, Vacant

Consul-General in the French Establishments in India, Pondicherry, S K Banerjee

Ambassador in Holland, His Excellency Dr Mohan Sinha Mehta

Ambassador in Czechoslovakia, Prague, His Excellency N Raghavan,

Ambassador in Italy, Rome, His Excellency B R Sen, I C S (also Ambassador to Yugoslavia)

Consul-General in the Portuguese Possessions in India, Nova Goa, Major Ashoka N. Mehta

Ambassador to Egypt, Cairo, His Excellency A A A Fyzee (also Minister to Hashamite Kingdom of Jordan and Lebanon)

Envoy Extraordinary & Minister Plenipotentiary in Sweden, Stockholm, R. K Nehru, I C S (also accredited to Finland and Denmark)

Ambassador to Argentine, Buenos Aires, His Excellency Jamshed Vesugar (also Minister to Chile)

Head of the Indian Liaison Mission, Tokyo, K K Chettur

Head of the Indian Military Mission, Berlin, Maj.-Gen Prem Kishen (also accredited to Bonn)

Consul-General, Kashgar, Capt R D Sathe

Political Officer, Sikkim, H. Dayal, I C S

Consul-General in New York, R. R Saksena

Permanent Representative of the Government of India with the United Nations, India Delegation Office, New York, B. Narsing Rau

High Commissioner in Canada, Ottawa, His Excellency S K Kripalani

High Commissioner in Ceylon, Colombo, His Excellency V. V. Giri

Agent to the Government of India in Ceylon, Kandy, I P M. Menon

High Commissioner in the United Kingdom, London, His Excellency V K Krishna Menon (also Ambassador to Ireland)

High Commissioner in Pakistan, Karachi, His Excellency Dr. Sita Ram

Deputy High Commissioner in Pakistan, Lahore, Y K Puri, I C S.

Deputy High Commissioner for India in Pakistan, Dacca, S K Basu.

High Commissioner in Australia, Canberra, His Excellency Daleep Singhji

Secretary, High Commissioner's Office, Cape Town, R T Chari, I C S

Representative of the Government of India in Malaya, Singapore, J A Thivy

Agent of the Government of India in Malaya, Kuala Lumpur, S G Ramchandran

Commissioner for the Govt of India in East Africa, Appa B Pant.

Consul-General of India, San Francisco, Shri A K Dar (Consul)

Consul of India in Saudi Arabia, Jedda, Mantri Abdul Majid Al-hariri

Vice-Consul of India, Medan, Sangat Singh

Vice-Consul of India, Zahidan, D Murugesan

Vice-Consul for India in Kandahar, Ram Chand Kalra

Vice-Consul for India in Jalalabad, Narindar Nath

Envoy Extraordinary and Minister Plenipotentiary, Ethopia, Sardar Sant Singh

Consul-General of India, Philippines, Dr T G. Menon

Consular Agent, Hanoi, M Kutly

Commissioner for the Govt of India in British West Indies, Port of Spain (Trinidad), Satya Charan

Commissioner for the Govt of India, Mauritius, Port Louis, Dharam Yash Dev

Commissioner for the Govt of India in Fiji, Suva, S A Waiz

Consul-General in Indo-China, Saigon, F M de Mello Kamath

Envoy Extraordinary to Portugal, P A. Menon, I.C.S.

Indian Embassy in Pakistan

After the division of the sub-continent and the establishment of Pakistan, the Government of India nominated on August 11 Mr. Sri Prakasa, a well known Congress leader from Uttar Pradesh, as their High Commissioner in the new Dominion Soon afterwards Sardar Sampuran Singh was appointed as Deputy High Commissioner at Lahore. Mr V. Viswanathan, I C S, one of Indian civilians with a long diplomatic experience was sent to the Pakistan capital as the Deputy High Commissioner to organise the Indian High Commissioner's office At about the same time, Mr. K. L Punjabi, I C S, was named as the Deputy High Commissioner at Peshawar but subsequently, he was transferred to Lahore his place being taken by Major B K Kapur as Liaison Officer at Peshawar

The offices at Lahore and Peshawar were mainly engaged in tackling problems arising out of the mass exchange of population between East and West Punjab and N.-W Frontier Province The actual work of evacuation was carried out in that region by the Military Evacuation Organisation. These two offices were also concerned with the difficult problem of settling claims of evacuees' abandoned property in the two countries

The High Commissioner's office in Karachi was intended to be India's Embassy in Pakistan and from the very beginning concerned itself with work of a purely diplomatic nature Owing to acute housing scarcity in the Pakistan capital, both the High Commissioner and his deputy were forced to carry on their work in their rooms in a private hotel, but subsequently, they moved to Damodar Mahal, a palatial building, situated in the new Bunder Road extension of Karachi

The first problem that this office had to tackle was the evacuation of 15,000 Central Government personnel scattered in Sind, Baluchistan, North-West Frontier and Bahawalpur A transfer bureau was set up and evacuation of all personnel was completed on November 1, 1947 Although there was no rioting on the Punjab scale in these areas there were widespread outbreaks of violence in Quetta, Bahawalpur and Hyderabad (Sind) which led to a large exodus of Hindus and Sikhs from Sind beginning with August 15, 1947 The migration slackened about the beginning of December, but subsequent disorders at Hyderabad (Sind) on December 17 and much more widespread disturbances in the Pakistan capital itself on January 6, 1948, led to a second wave of migration With no military organisation to assist them, the energies of the officers of the Indian Embassy were taxed to the full as a lakh of Hindus and Sikhs had to be moved from Sind to India every month by train and sea and even by air.
