DELTA. Physical formation occurring at the mouth of certain rivers Most rivers are loaded with silt, some of which tends to be deposited whenever the current of the stream slackens. The deposit of silt at or near the mouth of a river may take the form of a bar, or may become a delta according as the sea or lake currents react with the moving water of the river When a slow moving, heavily loaded stream flows into comparatively still water, the load is deposited more or less evenly to form a flood plain of alluvium just below the level of the water, with a steep, abrupt slope at the seaward edge. In course of time the inevitable surface irregularities in this level of alluvium cause the river to flow more readily in certain channels, and the banks of these channels are built up and rise above water level In time the flood plain emerges permanently at its landward edge, and the river crosses it in a few channels, or distributaries, with banks slightly raised above the surrounding level

Not all rivers have deltas In some cases the sea or lake currents carry off the silt-laden water almost as rapidly as it reaches the mouth of the river, in others the land is sinking as rapidly as the silt is accumulating, yet again the rock formation at the mouth of the river prevents the sideways spread which precedes the formation of a delta, while in other cases, as in that of the Congo, the river is robbed of much of its load of alluvium before it reaches the sea The Po, Danube, Rhône, and Nile have deltaic mouths, the Vistula and Oder have not The Mississippi has a delta which, in reality, begins at the mouth of the Ohio and is much larger than the formation in the gulf of Mexico

The term delta originates from the shape of the Nile formation like the Greek letter Δ, but it now includes any formation where the river branches into distributaries The Mississippi delta advances a mile in 15 years, and its area is 12,000 sq m, while that of the Ganges Brahmaputra covers 50,000 sq m The Rhône delta in Lake Geneva is 20 m long, and has increased a mile in 1,900 years At Buttermere and Crummock Water in the English Lake district, and at Lakes Thun and Brienz in Switzerland, a delta has made two lakes where there was formerly but one

DESERT (Lat. desertum). Region in which few forms of life can exist owing to exceptional drought or exceptional cold Desert conditions obtain in most places where the mean annual rainfall is less than 10 ins, because, unless water is provided by other means, life cannot be supported. It is noteworthy that the great hot deserts of the world (Sahara, Kalahari, Colorado, Atacama, West Australian) are on the W of continents Others are situated either in the interior, e g the Gobi in Asia, or in Arctic and Antarctic latitudes, where the intense cold checks precipitation and makes life difficult All these regions are deserts, not because they never get any rain, but because the supply is deficient

It is incorrect to describe deserts as wildernesses of sand, or monotonous plains Many large areas in deserts are covered by drifting sand which is formed by the wind into an endless succession of dunes, but deserts are also often crossed by great mountain masses and have many bare, rocky tracts In hot deserts great diurnal changes of temperature are experienced, causing the surface layer of exposed rocks to expand in the heat of the sun and to contract when the sun sets This produces splitting, and fragments fall to the ground, the reduction to sand being accomplished by the agency of the wind Except where there are underground supplies of water, as in oases, there is little vegetation in deserts, and all desert plants, such as the cactus and thorny scrub, have to strike deeply to obtain moisture

Branches of the Pennine Chain, enclose fertile valleys in the W., whence the surface slopes to the E. The Wear, Donne, and Tees are the chief rivers of the county. Immense coal measures occupy its centre, and therein are many populous urban districts. In addition to coal, large quantities of ironstone, millstone, granite, lead, etc., are

obtained. Durham is noted for horses and shorthorn cattle, and sheep rearing is carried on. The L.N.E. Rly. serves the county. Durham is the county town, and besides the ports of Sunderland, Stockton-on-Tees, Jarrow, the Hartlepools, and S. Shields, the largest places are Gateshead and Darlington. Others are Bishop Auckland, and near here the bishop lives, Barnard Castle, and Houghton-le-Spring. In the county are the castles of Raby, Lambton, Lumley, and Ravensworth, and the upper valley of the Tees is a district of great beauty. Durham sends 11 members to parliament. For many years, owing to its position near the border, it was a county palatine, its bishop having exceptional powers and his own courts. These were not abolished until 1836. Pop. (1931) 1,485,978.

DURHAM. City and county town of co. Durham. It stands on the river Wear, 14½ m. S. of Newcastle-on-Tyne, on the L.N.E. Rly. The greatest glory of Durham is the cathedral. The present building, which replaced an older one, was begun in the 11th century, and much of it, including the nave and the restored chapter house, is Norman. The Galilee chapel is notable, as are the central tower and the chapel of the nine altars. The cloisters, rebuilt in the 15th cent., and other parts of the monastic buildings still exist. The first castle was built by William the Conqueror, but little remains. The present building, which is the headquarters of the university, has been restored. Interesting also, are some of the churches and the bridges across the Wear, especially Framwellgate of the 14th century. Elvet Bridge leads to the suburb of Elvet. The town hall dates from the 16th century. The grammar school is an old foundation; its present buildings at the top of South Street date from 1844. The university was founded in 1832. In 1908 it was divided into two parts, one at Durham, where there are several colleges, and the other at Newcastle. Market days, Mon., Sat., and last Thurs. Pop. (1931) 16,223.

EARTH PILLAR Pillar of clay capped by stones In an area consisting of clay or soft rock containing large stones the softer materials will be readily washed away by the rains, but the stones, acting like umbrellas, will protect the clay or soft rock immediately beneath them In this way pedestals capped by stones are formed

EARTHQUAKE Violent movement of the earth's crust The modern study of earthquakes, the science of seismology, dates from 1857 The crust of the earth, the outside layer of solid rock, is not always still, it is subject to strain and stress due to the cooling of the earth, to its revolution, and to the attractive force of the other heavenly bodies The crust not being homogeneous, these strains produce varied results in different areas Large sections of the crust have sunk below the general level of the neighbouring portions, thus, for example, the basin of the western Mediterranean is a depression caused by sinking of this nature during remote geological eras The edges of such depressions are lines of weakness in the crust, and are usually marked by the existence of extinct or active volcanoes In the western Mediterranean area are Stromboli, Etna, and Vesuvius as well as the extinct volcanoes of central France

These lines of structural weakness in the outer crust of the earth sometimes give opportunity for earthquakes, which occur when a hidden segment of the crust breaks away from its original location The shock produced by the sudden fracture sets up vibrations in the solid matter of the earth's crust, and these vibrations, waves or tremblings, travel long distances and produce movements in buildings, bridges, rly lines, etc Near the volcanoes in Italy there have been two great earthquakes in recent times. the Neapolitan earthquake of 1857, in which more than 12,000 lives were lost, and that of Messina in 1908, which cost 77,000 lives In Sept, 1920, earthquake shocks occurred in N and central Italy, causing hundreds of deaths and much damage Japan is preeminently the land of earthquakes, 8,000 shocks having been recorded between 1885 and 1892 Perhaps the most destructive of all was the one that almost destroyed Tokyo in 1923, while the one of 1933 did a good deal of damage In the United States the worst shocks of the 20th century were at San Francisco in April, 1906, and at Los Angeles in March, 1933

Earthquakes usually occur at no great depth below the land surface, and the stability of the "outer skin" of the earth depends partly upon its angle of slope Earthquakes are not to be expected where there are extensive plains, but wherever the slope of the land is very steep the rocks tend to slip and give rise to earthquake shocks The coast lands of the Pacific are usually tilted very sharply, deep water is close to the sea shore and high mts rise close to the coast; consequently, Japan is a land of earthquakes, which also occur in New Zealand, near Wellington, while San Francisco was devastated by the earthquake and subsequent fire of 1906 For a similar reason there have been severe shocks near the base of the Himalayas, e g, at Shillong, Assam, in 1897 The highest mountains of the world are located roughly along two lines—in America from N to S close to the Pacific shores, in the Old World in a west east direction from Italy to Burma. Count de Montessus de Ballore tabulated the records of over 170,000 earthquakes, and found that all but 5 p c occurred near these two mountainous axes

The seismograph, or earthquake recorder, is a solid pillar set up firmly in the ground at a distance from all chance causes of surface vibrations in the earth, and so arranged that every vibration

in the earth's crust is communicated through the pillar to a recording pen From the automatic records of three stations the seismologist determines the time, character, and place of origin of the earthquake.

In Britain occasional earthquakes cause little damage beyond the breakage of ornaments thrown from their shelves and of pictures detached from their hooks; but in areas liable to these disturbances the landscape may be permanently altered by the formation of scarps and landslips, rly. lines and fences may be broken and displaced sideways, buildings may become heaps of rubble. Great waves may also be generated in the ocean. In earthquake areas attention must be paid to the stability of buildings; they should be low, upon a broad foundation, so that the swaying roof does not move far beyond the outside limits of the foundations. It used to be thought that the typically light bamboo house of the Japanese was developed in consequence of the frequency of earthquakes, but the thick, heavy, solid roofs of these houses show that the lightness of the walls is not due to fear of earthquakes. If Japanese domestic architecture owes any of its characteristic features to earthwaves, it is in the shape and lowness of the buildings.

EGYPT. Country of N E Africa Bounded on the N by the Mediterranean, on the E by Palestine and the Red Sea, on the S by the Anglo-Egyptian Sudan and on the W by Libya, it covers a total area of 383,000 sq m This area includes the Sinai peninsula and the islands in the Red Sea and the gulf of Suez Although therefore, the actual size of the country is three times that of the British Isles, the habitable and cultivable area is about 13,000 sq m only The country is divided into two great districts—Wagh-el-Bahri or Lower Egypt and El-Said or Upper Egypt, the division being a line drawn just south of Cairo, but the Nile delta and the Sinai peninsula are excluded. The population is 14,217,864 Over 11,000,000 are Mahomedans, the remainder being Christians or Copts

Egypt Arms in Turkish period

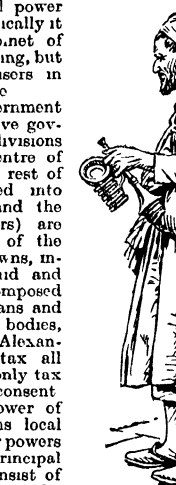
Racially there are four principal divisions (1) Fellahin, the indigenous people of the country, both peasantry and townsmen, (2) the Bedouins, or nomad Arabs living in the desert oases, or on the upper reaches of the river, (3) Nubians, chiefly found on the Nile, between Asuan and Dongola, and (4) foreigners, chiefly Greeks, British, Italian, and French, numbering over 150,000 and living in the towns on the Nile delta The capital of the country is Cairo Other principal towns are Alexandria, Port Said, Tanta, Mansura, Assiut, Damanhur, Assuan, and

Egypt. Map of the country from the Mediterranean Sea to the Second Cataract; inset, the Nile Delta

Minya, but very large numbers of the pop. live in the villages scattered along the banks of the Nile.

TOPOGRAPHY. The characteristics of the country are the desert and the Nile; but for the river it would be indistinguishable from other parts of the Sahara. The Nile cuts right through the E. territory, and at its annual overflow brings down a rich and fertile soil from the Abyssinian highlands, which it spreads throughout a strip of country from the Sudan to the Mediterranean. W. of the river valley, the desert stretches unbroken to the Sahara, save for one or two fertile oases. On the E. the Red Sea coast is everywhere mountainous, being a continuation of the Abyssinian plateau, and devoid of good harbours. Except round the Nile delta and the Suez canal, where there are several excellent ports, the Mediterranean coast consists of low-lying sand hills, providing no anchorage for shipping. In fact, Egypt is really very little more than the Nile valley and its delta.

The valley itself is a strip on the average 10 m. broad, from the Sudan to a point just below Cairo where the delta begins. This is a wide alluvial plain sloping gently towards the sea, in the form of a triangle, with its base, 155 m. long, resting on the Mediterranean, and measuring 100 m. from its apex at Cairo to the coast. This area is the most fertile in Egypt, for it is watered, not only by the Damietta and Rosetta branches of the Nile, but by countless canals. In all, the water surface of the river in its valley and delta covers over 2,800 sq. m., and in the richness of its colouring, with the perfect sunshine and blue skies of Egypt, presents many views of surpassing beauty. Part of Upper Egypt is in the tropics, but the greater part lies N. of the tropic of Cancer; yet, except for a narrow strip on the Mediterranean coast, the whole country lies in an almost rainless area. Temperature is high, the mean maximum at Assuan, for example, being 118 ° F.; it falls rapidly at night.



There are no forests and little natural vegetation in the country, the chief flora being hardy desert grasses and the date palm. But fruits of all sorts abound, particularly vines, figs, pomegranates, lemons, citrons, and apricots. Irrigation and scientific sowing of cotton have produced remarkable crops. Camels, asses, sheep, goats, and buffalo are all domesticated animals and are found in large numbers, but of these probably only asses and goats are indigenous, and it is uncertain when the camel was first introduced into the country. Wild animals are rare, the hyena, jackal, and gazelles being the most numerous. There is considerable mineral wealth, manganese, salt, sodium, petroleum, porphyry, granite, limestone, nitrates and phosphates, all being found and worked; but, apart from the emerald and turquoise which are still mined, the mining of precious stones and metals is now unproductive.

CONSTITUTION AND GOVERNMENT. Formerly part of the Turkish empire, Egypt became a British protectorate in 1914, but this ended in 1922, and since that date it has been an independent kingdom, under the rule of King Fuad I. Its constitution was promulgated in 1930 and provides for government by an hereditary monarch and his representatives. Legislative powers are exercised by the king and the senate and chamber of deputies, but the right to initiate financial legislation is reserved to the crown. Parliament, when it functions, consists of two houses: the senate, consisting of 100 members, 60 of whom are appointed by the king, the remaining 40 being elected for 10 years; and the chamber of deputies of 150 members, elected by indirect universal suffrage for five years. No measure

can become law unless and until voted by parliament and sanctioned by the king Taxes can only be imposed, reduced or abolished by law, and no public loan or treasury commitment is valid without the consent of parliament The constitution also provides that existing financial obligations and other international engagements cannot be modified Islam is the state religion and Arabic the official language.

The exact measure of Egypt's independence as a sovereign state must, however, remain obscure until agreement is reached on the points reserved in the unilateral declaration by which Britain recognised Egypt as an independent state. Confusion also exists as to the exact distribution of constitutional power within the country Theoretically it is carried out by a cabinet of ministers appointed by the king, but there are two British advisers in matters of finance and justice

For purposes of local government the country is divided into five governorships Further subdivisions make each chief town a centre of administration (moafza), the rest of the country being divided into provinces The governors and the heads of provinces (mudirs) are responsible to the ministry of the interior In 14 principal towns, including Alexandria, Port Said and Tanta, mixed commissions composed of equal numbers of Egyptians and Europeans are the governing bodies, and all these places, except Alexandria, have the power to tax all Egyptian residents, but can only tax non Egyptians by their own consent Alexandria has complete power of taxation In 56 other towns local commissions exist with similar powers of taxation to those of the principal cities The commissions consist of four members, two of whom may be foreigners nominated at the discretion of the central government The rest of the local government machinery consists of small village commissions composed of four elected native members

Egypt. Water seller, a popular figure in Cairo

Owing to Egypt's obscure political status and the existence of such a large and heterogeneous body of foreigners in the country, there are no less than four judicial systems in operation (1) Criminal jurisdiction over foreigners is exercised by consular courts of those powers which have the right by treaty, and according to the law of the country of the offender; (2) civil jurisdiction of disputes between foreigners or between Egyptians and foreigners is exercised by mixed tribunals, on the basis of a modified Code Napoléon, (3) native courts of the cadis, which are based on the laws of the Koran or according to other religious doctrine, determine civil questions of marriage and status, etc, and are administered by sheiks or priests, and (4) the indigenous judicial system, both criminal and civil and modified to accord with the French code Summary jurisdiction is administered locally, as are many of the other systems, but the high court and court of appeal are at Cairo The Egyptian army of about 12,500 men is completely under British control and independent of the constitution.

FINANCE AND INDUSTRY Egypt has now financial autonomy, but also a large foreign debt of almost £90,000,000. The natural wealth is, however, considerable, and its financial status is sound The main sources of revenue are direct taxation, customs and excise, and receipts from the railways The monetary unit is the Egyptian pound, divided into 100 piastres, and the currency in circulation is gold, silver, and nickel. Bank notes of various denominations are issued, are legal tender, and are inconvertible There is a national bank, a post office savings bank, and several other smaller concerns

Cotton cultivation is the staple industry of Egypt, and for this purpose extensive reservoir and irrigation works have been carried out, particularly the great dam at Assuan and barrages at Esna and elsewhere In 1929-30 there were nearly 2,000,000 acres of land under cotton Wheat, barley, and other cereals are also grown and much fruit is exported Minerals are worked, and there are also some productive petroleum wells The fishing industry is considerable The principal commercial port is Alexandria, and the existence of the Suez Canal, although it is not owned by Egypt, keeps the country in shipping communication with the trade of the whole world

HISTORY The history of Egypt as a sovereign state ended over 2,000 years ago and began again in 1922. During that interval she remained a country unknown and unimportant, a happy hunting ground for the greed of Rome, a prey to hordes of Bedouin barbarians, a corner of the Turkish empire, and finally a milch-cow for the great European powers But before she lost her independence she had recorded a history of pomp and grandeur, over a period of more than 5,000 years, that is still one of the wonders of the world The river Nile cradled civilisation, and in its fertile valleys is written—in the great ruined temples, the pyramids, and countless other monuments—the story of ages that probably surpassed in splendour anything the world has since known So carefully has her climate preserved the records of her history that to day we know more of her story, over a period extending from 6,000 years before the birth of Christ to the present day, than we know of the history of our own land less than 1,000 years ago

There were probably two civilisations in Egypt before 5600 B C, but the 1st dynasty of which there is definite record flourished from that date for the next 300 years Primitive art gave way to the sophistication of civilisation, and the political unity of a great state began to emerge But the IVth dynasty (4800-4500 B C) was to witness the highest artistic triumphs. The engineering skill which went to the building of the great pyramid of Khufu (Cheops) remains still the marvel of a wondering world But the immense wealth and energy spent on the erection of marvellous, but useless, monuments to her dead kings, weakened the country and was perpetually to prove her undoing Successive invasions of barbarians swept into power, beginning with the Syrian conquests of 3400 B C and culminating in the Hyksos conquests of 2600 B C Yet always it was the invaders who were absorbed and the civilisation of Egypt continued The infusion of new blood and primitive animism in politics and religion rapidly succumbed to the decadence of wealth and pomp. Time and again, under warlike princes such as Amenemhat III, the empire frontiers of Egypt were moved hundreds of miles south, east, and west Time and again they crumpled under the vigorous thrusting of a healthier but barbarous people Thus, for example, in 1530 B C, under Thothmes I, Egypt's empire included the Sudan,

Libya, and Syria, but 500 years later a succession of priest-kings were amicably dividing between them, the small territories of the lower Nile valley and delta which were all that remained to her.

About 950 B C Egypt's power revived in the XXII and XXIII dynasties, under the aegis of a Mesopotamian adventurer, Shishak, and his family, who settled at Bubastis But 200 years later the country was broken up by the Ethiopian invasion. After the Ethiopians came the Persians, and after them the golden age of Alexander and his heirs. Then came the Ptolemies For several hundred years Egypt enjoyed a peace and prosperity that she had not known for centuries and reached the hey-day of her glory. Her learning and her wealth were phenomenal; but, as ever, her culture was backward-looking and everything became stereotyped, her art, her science and her politics Of real progress there was none, and decadence and corruption slowly sapped her strength, until she fell a helpless victim to the might of Rome, about 30 B C From then until our own day, her independence was lost and she continued a tributary or a province of some other mighty empire Rome ruled until A D. 640, then withdrew her legions, to leave the country a helpless prey to the wild Arab horsemen. The Mameluke dynasties, which succeeded the Arabs for the next 800 years were a turmoil of bitter and ceaseless fighting, and the establishment of the Turkish rule in 1517 was a blessed relief For 360 years Egypt remained a tributary of the Turkish empire, her wealth drained by extortionate taxes, her liberty crippled by a ruthless tryanny.

The corruption in her treasury under the waning Turkish power eventually led in 1876 to her failure to meet her foreign obligations, and Great Britain and France seized upon her but Britain obtained sole control, and for 50 years gave Egypt a stable and prosperous government It is, perhaps, to Britain's credit that she withdrew voluntarily from Egypt in 1922, although the pressure of world opinion and the spirit of a revived and refreshed young Egypt were essential factors in that withdrawal Britain, although the last of her conquerors, is the first voluntarily to leave Egypt free to carve out for herself another and perhaps greater destiny

Its length is about 210 m, and its chief tributaries are the Aa, Haase, Hessel, and Leda It has been canalised as part of the system of German waterways

EMS. Town and watering place of Prussia. It stands on both sides of the Lahn, 11 m. from

Coblenz. The town is known for its waters and beautiful scenery. Silver and lead mining is carried on in the district. Pop. 7,000

EMSWORTH. Seaport of Hampshire. At the mouth of the Ems, it is 76 m from London and 9 m from Portsmouth, and has a station on the S. Rly. There is a harbour, and oysters are cultivated. Pop 2,200

ENARE. Lake of Finland It is fed by a number of rivers, and discharges its waters through the Pasvik into the Varanger Fiord in the Arctic Ocean Its area is 550 sq m

ENAREA. Plateau region of Abyssinia It lies S W. of Shoa, in the hill country 8,000 ft above sea level, upon the slopes of which coffee grows in abundance The people are an off-shoot of the Gallas, and the chief town is Saka.

ENCARNACION. Department of Paraguay Watered by the river Paraná and tributaries, it is one of the most important, fertile, and best cultivated districts of Paraguay, the chief products being fruit Pop 16,000

ENCARNACION. Town of Paraguay Situated on the river Paraná, 175 m by rail S E of Asuncion, its harbour is the port of several lines navigating the Paraná valley and is the terminus of the Paraguay Central Rly. The town is in a rich agricultural district and exports maté, tobacco, hides, and timber Pop 7,500

ENCOUNTER BAY. Inlet of the coast of S Australia Situated some 50 m S E of Adelaide, it lies between C Jarvis on the N and Jaffa Cape on the S and is 90 m across. Off the N W corner lies Kangaroo Island.

ENDERBURY. One of the eight small islands composing the Phoenix Group in the Pacific Ocean It lies almost 1,000 m N E of the Fiji Islands, and is under the jurisdiction of the British high commissioner of the western Pacific.

ENDERBY LAND. Tract of Antarctica It extends S. from the Antarctic circle, and was discovered in 1831 by John Biscoe, who named it after his employers, Enderby Brothers

ENDON. Village of Staffordshire It is 4½ m S W of Leek, and has a station (Endon and Stanley) on the L M.S Rly Pop 1,512

ENDUR. Village of Palestine It is 7 m. S E. of Nazareth, and is the ancient Endor, the home of the witch whom Saul consulted

ENFIELD. Urban district and market town of Middlesex It lies 10½ m N of London, on the L N E. Rly, and is traversed by the New river. The palace, built by Edward VI for his sister, Elizabeth, became a grammar school, then a post office, and then a club before being demolished The parish church of S Andrew has a beautiful 15th century brass The Ridgeway is a residential district Enfield is mentioned in Domesday Book Edward VI and Queen Elizabeth lived here, and the chase was a favourite hunting ground of James I. It has associations with Keats, Captain Marryat, and Charles Lamb, who lived at Chase Side. Market day, Sat Pop (1931) 67,869

ENFIELD LOCK. Lock on the river Lea, Enfield, Middlesex. The name is also applied to the district around it Here is the Government small-arms factory from which the Enfield rifle took its name

ENGADINE. Upper portion of the Inn valley, Switzerland In the canton of Grisons, it stretches 60 m between two chains of the Rhaetian Alps, is 1 m to 1½ m broad, and has an alt of 4,000 to 6,000 ft From Martinsbruck, on the border of Tirol, it runs S W. up to the Maloja Pass The Upper Engadine is more frequented than the Lower Engadine, which, however, has mineral springs at Schuls The strong, bracing air of the valley renders it a popular health resort. St. Moritz is the chief town.

ENGELBERG. Village of Switzerland. It stands at the N. foot of the Titlis, 14 m. by electric rly S of Lucerne, and is a favourite summer and winter tourist resort. The Benedictine abbey, founded 1120, was rebuilt in 1729, its farm is noted for cheeses Pop 2,500.

ENGLAND. Country of Europe It covers the larger and southern part of the island of Great Britain, excepting only the western part that is known as Wales Its area is 50,874 sq m. It measures 430 m in extreme length from the Lizard to Berwick-on-Tweed and 370 m. in extreme breadth from Land's End to Lowestoft.

TOPOGRAPHY The country is bounded by Scotland on the N. and Wales on part of the W; elsewhere its borders are the North Sea on the E, the English Channel on the S, and the Atlantic Ocean and the Irish Sea on the W In shape it is an irregular triangle The coast, especially on the W, is broken with numerous openings, making a total length of 1,800 m. The W. coast is high and rocky, bold cliffs and buttresses of hard rock standing out to sea On it are three large openings—Solway Firth, Morecambe Bay, and the Bristol Channel, as well as the mouths of the Ribble, the Mersey, and the Dee, which, however, is Welsh on one side Between England and Wales there is no natural boundary The chief headlands are St Bees Head, Hartland Point, and Land's End

The S coast is divided into two sections by the Isle of Wight East of it is a coastline with a low, clay shore, broken here and there by chalk cliffs, W of it the coast is high and bold Its chief openings are harbours, several of which are unusually good. They include Portsmouth Harbour, Southampton Water, Weymouth Bay, Tor Bay, Plymouth Sound, Falmouth Harbour, and Mount's Bay The chief headlands are the Lizard, Start Point, Portland Bill, St. Alban's Head, Selsey Bill, Beachy Head, Dungeness, and the S Foreland The E. coast is regular in outline, broken only by the estuaries of rivers In places it is high and rocky, but much of it is low and sandy, and along parts of it the sea is encroaching The principal river mouths are those of the Tyne, the Tees, the Humber, and the Thames; on it, too, is the Wash The chief headlands are Flamborough Head, Spurn Head, Lowestoft Ness, the Naze, and the North Foreland, The N boundary is formed by the course of the Tweed, the line of the Cheviots, and three streams —Kershope Burn, Liddel Water, and the Sark—falling into the Solway Its length is just under 100 m.

There are but few islands off the coast of England. The Isle of Man and the Isle of Wight are the largest, but the former is not, strictly speaking, part of England, having its own laws and government. Off Northumberland are the Farne Islands, Lindisfarne or Holy Island, and Coquet Island, but off the E coast there is nothing else until Foulness Island, off Essex, is reached, but this, like Thanet and Sheppey, in Kent, cannot properly be called an island Off the W coast are Walney Island, opposite Barrow, and Lundy Island in the Bristol Channel. Off Cornwall are the Scilly Islands.

Of the straits, the most important is the strait of Dover, 21 miles across at the narrowest part Spithead and the Solent, between the Isle of Wight and the mainland, lead to England's two finest harbours, Portsmouth and Southampton Roads—places where vessels can ride in safety—are the Downs, between the Goodwin Sands and Kent, and Yarmouth Roads

In England the mountainous areas are mainly in the west and the flatter ones in the east. The Pennine Range extends from the Peak in Derbyshire to the Cheviots. It is about 200 miles

long West of this range lies the Cumbrian group of mountains in the counties of Cumberland, Westmorland, and Lancashire This is the most rugged district of England and one of the most beautiful The mountains of this group are the highest in England The chief are Scafell, Helvellyn, and Skiddaw, and there are many between 2,000 and 3,000 ft high The high peaks of the Pennines include Whernside and Ingleborough in Yorkshire In the extreme south-west are the mountains of Devon and Cornwall, the highest peaks being Yes Tor and High Willhays on Dartmoor and Brown Willy on Bodmin Moor.

In the east and south are numerous ranges of hills, mostly, however, under 1,000 ft in height In Yorkshire are the Cleveland Hills and the moors in the north, in the south east of the county are the Wolds The midland and eastern counties have ranges of low hills, Gogmagog Chernwood Forest, Edge Hill, and Wolds in Nottinghamshire and Lincolnshire, while in Shropshire are the Wrekin, and the Clee Hills going up to nearly 2,000 ft In the south the hills are more pronounced Somerset has the Mendips and the Quantocks with points just over 1,000 ft in height Gloucestershire has the Cotswolds and Oxfordshire the Chilterns, while the Malverns are in Worcestershire and Gloucestershire South of the Thames are the North and the South Downs, the former culminating in Leith Hill (965 ft) Hampshire and Wiltshire have their Downs Inkpen Beacon is the only point in south-east England that is over 1,000 ft high. In the north are the Cheviots

The low-lying parts of England may be divided into three plains The eastern embraces the plain of York—re, the valley of the Yorkshire Ouse, the fen district, now drained, but at one time mainly marsh and bog, and the three counties of Norfolk, Suffolk, and Essex The central plain covers most of the counties of Leicester, Stafford, and Warwick, and parts of Derby and Nottingham, while the western plain runs through Lancashire and Cheshire to the basin of the Severn In addition there is the Weald in Kent and Sussex

In England the watershed is nearer the west than the east coast Of the eastern rivers the chief are the Thames, Trent, Yorkshire Ouse, Wear, and Tyne Smaller ones include the Tees, Great Ouse, Welland, Nen, Yare, Stour (in Essex), Orwell, Colne, Witham, and Stour (in Kent) The Trent and the Yorkshire Ouse unite to form the Humber The former rises in Staffordshire and crosses the north midland counties, receiving on the way the Derwent, Soar, Tame, Dove, and Sow The Yorkshire Ouse is formed by five streams which come down from the Pennines—they are the Swale, Ure, Nidd, Wharfe, and Aire (with the Calder) The Tyne is a union of two streams which join near Hexham

On the west is the Severn, the longest of English rivers, but it has not the commercial importance of either the Thames or the Trent Other western rivers are the Wye and the Bristol Avon, and in Lancashire the Lune and Ribble. In Cumberland are the Eden, Derwent, and other streams Between Wales and Lancashire are also the Dee and the short but important Mersey. The Thames flows almost across England to form an estuary just below London On its way from its source in Gloucestershire, it receives the Evenlode, Windrush, Thame, Cherwell, Kennet, Wey, Mole, Brent, Darent, Medway, and many other streams The southern rivers except the Thames are all quite short, the Exe (55 miles) being the longest. From east to west the others are Rother, Sussex Ouse, Adur, Arun, Itchin, Wiltshire Avon, Stour (in Dorset), Teign, Dart, and Tamar.

The lakes of England are concentrated in Cumberland and Westmorland Windermere is the largest, others are Ullswater, Derwentwater, Buttermere, Grasmere, Wastwater, and Crummock Water Sheets of water outside that area are Rudyard Lake, in Staffordshire, and Fleet Pond, in Hampshire In Norfolk and Suffolk are the Broads, and in Cheshire and Shropshire are the meres

There are but few forests left in England although the names of many remain The largest forested area is the New Forest Dartmoor and Exmoor, the largest moorlands, are no longer forested There are slight remains of Sherwood Forest, the Forest of Dean, Needwood, Epping, and other ancient forests Buckland in Norfolk is an area that has been afforested in the 20th century There are extensive moorland areas in Yorkshire and Derbyshire.

POPULATION The population of England, according to the census of 1931, was 37,789 738. The increases since the 1871 census, are

Greater London Of these, Dagenham consists almost wholly of one of the new London County Council housing estates reserved primarily for the relief of the overcrowded areas in the centre of the metropolis Hendon claims special mention in that the high rate of increase which places it second on the list follows the considerable growth of 44 per cent in the 1911–21 period Croydon and Ealing within, and Bournemouth, Doncaster, Coventry, Luton, and Southend-on-Sea outside Greater London, are also prominent in showing continuous and large increases over two consecutive decades Of the decreases shown, no fewer than nine are in respect of county boroughs in Lancashire, and in six of these the decline is in continuation of a loss in the preceding period. Eastbourne, Great Yarmouth, and Hastings owe their unexpected presence in the decrease category to the fact that their populations were swollen in 1921 by temporary summer visitors This is due to the fact, that in 1921 the census was taken in June, not, as is usual, in April.

Of the county areas, Middlesex stands highest on the list with an increase of 30 8 per cent and is immediately followed by Surrey (27 0), Hertfordshire (20 4), Essex (19 4), and Buckinghamshire (15 0), all of them closely associated with the metropolis In the county of London itself, a decrease of 2 0 per cent is recorded, while in Kent, the remaining metropolitan county, the recorded increase of 6 7 per cent which is but little above the average of the country at large understates the real growth which would have been more like 10 8 per cent. but for the temporary inflation by summer visitors at the census of 1921 Huntingdonshire, Northamptonshire, and Shropshire each show small increases in succession to decreases in the preceding period, but most of the other agricultural counties show decreases for the period

England Speaker's chair in the House of Commons

GOVERNMENT. England is the centre of a great empire, and its king and parliament have become responsible for a great portion of the earth's surface and inhabitants, although the equal status of the Dominions was formally recognized in the statute of Westminster of 1931

To the House of Commons, which represents the United Kingdom of Great Britain and Northern Ireland, England returns a clear majority of members Of a total of 615, no fewer than 492 are returned by English constituencies, 230 by counties, 255 by boroughs, and 7 by universities At the head of the executive is the prime minister, whose powers have increased enormously since about 1900. Acting with, or rather under him, are other ministers, the most important of whom form the Cabinet These Cabinet ministers are bound together by a common set of principles, this being especially so when they belong to a single political party, but it is also true of a coalition The modern tendency, however, is rather for the decisive bond to be the common enjoyment of the prime minister's confidence

The powers of the Cabinet can hardly be defined, so much depends upon the personality of its members, but they are considerable It has a marked influence on legislation because, without its support, a proposal for a new law has little chance of success. In practice the Cabinet initiates legislation It is the creature of the House of Commons, and is never unmindful of its creator's will if such is emphatically expressed, but in the dealings of the one with the other the Cabinet has the inestimable advantage of being a small body animated by a common purpose against a large one in which the common purpose is rarely present The ministers are in charge of the various departments of state, being responsible to Parliament for their working The outward sign of this responsibility is their presence in one or other of the Houses of Parliament in order to answer questions, or to defend, if need be, the actions of the departments over which they preside The departments are manned by civil servants

Apart from the executive, but equally under the control of parliament, is the judiciary At its head is the lord chancellor, who presides over the House of Lords, which is the supreme court of law, save for certain classes of cases in which the judicial committee of the privy council serves that purpose For England and Wales there is a supreme court of judicature, from which appeals lie to the House of Lords This consists of two branches, a court of appeal and a high court of justice The latter is further divided into chancery, king's bench, and probate, divorce and admiralty divisions, while special branches, e g , bankruptcy, have been established. The judges of the king's bench go round the country on circuit, there being for England and Wales eight circuits, and in each a number of assize towns. London is outside the circuit system, and for it there is a central criminal court Justice is administered locally by recorders and magistrates, who sit in quarter and petty sessions The magistrates deal with minor cases, sending those of a more serious character to the assizes County courts all over the country deal with civil cases involving less than a certain amount of money

Under the supreme control of parliament, the people of England enjoy a large measure of local government The electors of county, borough, district, and parish choose certain men and women to form a council which manages such matters as parliament has entrusted to it In many, but not all, of these councils, there is an element not directly elected, the aldermen

The main division, as far as local government areas are concerned is the venerable one between county and borough, although the demarcation is by no means complete The 40 counties of England have had some sort of local government for a thousand years, but the existing system only dates from the Local Government Act of 1888. The officials who until that time governed the counties, lord lieutenants, high sheriffs, and magistrates in quarter sessions, retain their positions, but not their powers, which passed in 1888 almost entirely to elected bodies called county councils The county councils set up in 1888 do not correspond altogether to the counties as they existed before that date For the 40 old or geographical counties, 50 county councils were set up and there are, consequently, 50 new or administrative counties The additional ten were found by making the three historic divisions of Yorkshire and the three parts of Lincolnshire into counties, each

with a council, by dividing the five counties of Cambridgeshire, Hampshire, Northamptonshire, Suffolk, and Sussex into two each, and by creating a new county of London from parts of Surrey, Middlesex, and Kent The county councils hold elections every third year, and their powers over education, police, public health, and other matters are laid down in the Acts of 1888 and following years Towards their expenses they receive large sums from the Government, but the balance they raise by a rate on all property within the county. There is no limit to the amount they can thus raise, but their accounts are supervised by the ministry of health. They can, under certain conditions, borrow money.

The Act of 1888 affected also the boroughs It created a class of boroughs called county boroughs, placing them entirely outside the authority of the county councils, and thus established a system by which every place is in a county, either county proper or county borough, and consequently every voter is represented in one or the other of the councils To be raised to the rank of a county borough a town must have a population of at least 75,000 In 1931 there were 81 of these county boroughs. They have exactly the same powers as the county councils received under the Act of 1888, together with any others they may possess under Acts regulating the affairs of the boroughs

We come now to areas and councils which are subordinate to the county councils Excluding the county boroughs, every part of England is either a borough, an urban, or a rural district, and every one of these is part of an administrative county and is represented in its county council. The borough is a place which has received a charter of incorporation, and, excluding the county boroughs, there are over 200 of them in England Their local government is regulated by the Municipal Corporation Act of 1835 and an amending Act of 1882 which made their constitutions uniform Each borough, and each county borough also, is governed by a mayor and council consisting of aldermen and councillors The councillors are elected for three years, one third of them retiring every year, and they choose the aldermen, who form one-third of their number

Since 1888 the affairs of the non county boroughs have been supervised to some extent by the county councils, to which they send representatives There is thus a division of authority In some the borough has its own police force, in others the county council provides this Education again is sometimes controlled by the one and sometimes by the other These boroughs levy their own rates and also raise something towards the expenses of the county council A special class of boroughs are the 28 into which the county of London is divided They are subordinate to the London County Council and their powers are somewhat different from those of the ordinary boroughs, but they are not county boroughs

The country outside London and outside the provincial boroughs is divided into urban and rural districts, called into existence by an Act of 1894 Urban districts are the thickly populated areas which have not yet become boroughs ; rural districts are the country areas The division is not absolutely rigid, and occasionally a rural district is found to be quite populous Each is governed by a council, elected for three years. The head is called chairman, not mayor, and there are no aldermen These councils work in general under the supervision of the county council. If their population exceeds 20,000 they manage their own education, but the chief duties of the bulk of them are connected with the public health.

INDUSTRY AND TRADE. Perhaps the most important developments of industry in England since the Great War have been the increasing use of electricity, the movement of manufacturing activities to London and the south-east, and the adoption of a policy of protection. A regional scheme for supplying the whole country with electric power has been put into operation, and this is one, though not the only, reason for the new industries, no longer dependent upon coal, choosing the London area as the sphere of their activities The third event, the introduction of a tariff, took place in 1931. There is a general tariff of 10 per cent. on most imports, except certain foodstuffs, and a higher one on various manufactured articles. England does not as yet make much use of her water power for industry About 200,000 h p have been developed. A scheme for increasing this by erecting a great barrage across the Severn has been put forward.

Agriculture is still England's premier industry. Probably it employs more capital and labour than any other , certainly it is more widespread. Farms exist in every county, although their products vary to some extent with local and other conditions. The 22,000,000 acres which constitute the land surface of the country are taken up principally with permanent pasture, whereon sheep and cattle are grazed, and arable ; the former covers 13,574,000 acres and the latter 8,954,000 Rough grazing land accounts for a further 3,595,000 acres Almost half the arable land is used for corn crops Clover and natural grasses cover more than 2,000,000 acres, and green crops only a little less. The remainder, apart from the bare fallow, consists of over 200,000 acres of orchard and a smaller amount under hops and small fruit. Of corn crops the chief are wheat, oats, and barley. Turnips and swedes are the most popular of the green crops ; after these come potatoes and mangolds Live-stock farming is another important branch of agriculture Sheep, cattle, and pigs are reared for the markets, and cows for milk and its products. The change in the country's tariff policy gave protection to some kinds of agricultural produce Wheat was helped by a quota scheme for imports and other branches, such as pig breeding and milk producing, by elaborate schemes of marketing, reorganization, and restriction of imports

The fisheries of England are fairly important. The chief fishing towns are on the east coast. The main catch in the North Sea is herring, which is brought chiefly into Yarmouth, Grimsby, and Lowestoft. In the English Channel the main catch is mackerel and pilchard St Ives and other ports in Cornwall are used for these fisheries, but there is a certain amount elsewhere

England's chief mineral is coal, on the mining of which something like 10 per cent of the population depend for a livelihood The coal mines extend from Northumberland right down the Midlands, with isolated fields in Gloucestershire, Somerset, and Kent Mines have been sunk in the neighbourhood of Doncaster and in Nottinghamshire, and workable seams have been found around Scunthorpe in Lincolnshire. A mine has been opened at Bindley, just outside Coventry, this being only 95 miles from London. Iron ore is found in the Cleveland and Furness districts and also around Scunthorpe and in Northamptonshire, but other minerals are not abundant A little tin is produced in Cornwall. Zinc, manganese, and tungsten are found in small quantities. Salt is mined in Cheshire

Of the country's manufacturing industries, the textile group is generally placed first The making of cotton goods employs about 500,000 workers in the district around Manchester The towns engaged therein include Oldham, Bolton, Bury, Rochdale, and others to the north and east of Manchester, Stockport and Hyde in Cheshire.

and Glossop in a Derbyshire valley Farther north are Preston, Blackburn, Accrington, and Burnley, all situated along the route of the railway from Preston to Skipton Wigan, though it is also a cotton manufacturing town, is notable chiefly as the principal centre of the Lancashire coal trade

Woollen worsted goods are made chiefly in the west riding of Yorkshire, with Bradford as the technical and Leeds as the marketing centre Bradford has also large velvet and plush mills Dewsbury and Batley manufacture heavier fabrics, including blankets and shoddy Rochdale has flannel mills, Bury, Ashton under-Lyne, and Glossop all manufacture woollens of one kind or another, Denton and Stockport have large factories for the manufacture of felt hats A district in the west of England retains its renown in connection with the manufacture of woollen goods, and especially for the making of broadcloth Leicester is the principal English seat of the woollen hosiery industry Kidderminster is famous for its carpets, which are also made at Halifax and Heckmondwike Silk fabrics are made at Macclesfield Coventry, and elsewhere The growing industry of artificial silk has got a foothold in many towns, of which Coventry may be mentioned as one of the most important

Equal in importance to the textile manufactures are those concerned with the working of metals Birmingham is famous for its output of machinery and hardware, and Sheffield for its steel and steel products In addition to Birmingham itself, the whole of the adjoining part of south Staffordshire is crowded with towns, large and small, in which the workers are mainly engaged in similar occupations These include the making of articles of all kinds in steel and iron, as well as other metal wares All varieties of domestic ironmongery are products of the district, needles, pins, and buttons are also made These towns include Wolverhampton, Walsall, Wednesbury, and West Bromwich in Staffordshire, and Dudley in a detached part of Worcestershire Bromsgrove, Redditch, and Stourbridge, also in Worcestershire, belong to the same group from the industrial point of view.

Smelting operations are generally carried out near the mines, and iron and steel works are found in such towns as Barrow-in Furness and Middlesbrough The chief shipbuilding areas extend along the Tyne and the Tees Coventry, Oxford, Wolverhampton, and Luton are known for their production of motor vehicles Iron wire is made at Warrington Many towns have engineering works Cotton machinery is made in Oldham, and woollen and other machinery in Keighley Lincoln and Ipswich have works for the manufacture of agricultural implements Railway stock is made in Crewe, Swindon, Derby, and elsewhere

In addition to cotton and woollen, other industries are localised Such are pottery-making in the towns of Staffordshire, which receive much of their raw material from the china clay works of Devon and Cornwall Northampton and Leicester are the main centres for the manufacture of boots and shoes Walsall specialises in harness and saddlery Chemicals and soap are made at Widnes and other towns in the Liverpool area, the reason probably being the proximity of the Cheshire salt for raw material, and the textile works for consuming part of the finished product, bleaching materials, for example Steam flour mills having largely superseded the old mill driven by wind and water, are situated in London, Hull and other seaports. The preparation of tobacco is a great industry in Bristol, and to a lesser extent in Nottingham. Glass is made at St. Helens, and wagons at Gloucester

The greatest manufacturing centre, however, is London. From Slough, with its multifarious workshops, in the west of the metropolis, away to Dagenham, where are the Ford motor works, in the east, there is an almost continuous line of factories, and the same may be said of the north south direction, St Albans to Croydon. Just outside this area are many thriving manufactures, motor cars in Luton, biscuits in Reading, motor vehicles in Guildford, sweetmeats in Maidstone, paper in Gravesend, and electrical apparatus in Chelmsford

The making of furniture is an old London industry, and the metropolis has long been a printing and bookbinding centre Newer industries are the making of electrical apparatus of all kinds, from cables to lamps, of gramophones and gramophone records, and of wireless apparatus The film industry is another newcomer, and there are large studios at Elstree, Shepherd's Bush, and elsewhere Patent foods and patent medicines are produced on a large scale as are sweetmeats of all kinds, soap, cosmetics, and toilet articles generally The making of sanitary ware is another modern industry In the area, too, are factories and works for making such varied necessities of modern life as linoleum, tiles, window frames artificial silk, scientific instruments, marmalade, and sporting accessories. Large engineering works exist in various parts

Equal in importance to the production of the goods is their sale and distribution England has an enormous export and import trade, which is carried through the ports Of these London has the greatest volume of trade, Liverpool and Southampton coming next in order. Other seaports with a considerable trade are Hull, Newcastle, Manchester, Plymouth, Bristol, Grimsby, and Middlesbrough *See* Borough, Canal, County, Railway, etc

An arid plateau, denuded of its forests, lacking water, and depopulated by emigration to America, it is largely a barren, heath covered waste of undulating pastureland, feeding huge droves of migratory sheep and pigs. Wine, oil, figs, and almonds are produced, but agriculture is hindered by the prevalence of drought and locusts. Pop. (1930) 1,185,416.

ESTUARY (Lat. aestus, tide). Arm of the sea into which a river flows. As a rule an estuary consists of the drowned lower portion of a valley. Where the land slopes gently down below sea level and the shores are wider apart nearer the open sea the estuary is a ria, or drowned river valley; the indentations of S.W. Ireland belong to this type. The indentations of the Norwegian coast, the fiords, are steep-sided, deep estuaries which are shallow near the entrance; they are due in part to glacier action. On some coasts, estuaries arise from the emergence above the water of sand banks, which transform a bay into a lagoon filled with river water. Such estuaries are the haffs of the S. shores of the Baltic. Estuaries tend to be filled up with alluvium, the Dee estuary being thus almost useless for navigation.

FELLAH (plural Fellahin or Fellaheen). Arabic word for peasant or ploughman Forming the bulk of the Egyptian native population, the fellahin descend in direct lineage from the ancient Egyptians. They dwell in villages, mainly of mud hovels, under a village chief, the sheikh-el-beled Some are Christian Copts, 9,000,000 are Moslems

Of medium height, black-eyed, thick-lipped, and straight-nosed, the Semitic and Nubian elements they have absorbed have but slightly affected their racial make-up as a Caucasian people of the Mediterranean type The progressive deepening of hue from N. to S marks the influence both of climate and of ethnic contact. The women, who wear head-veils, which expose their antimony-stained eyelashes and tattoed chins, are sometimes wed by the nomad Bedouins

Their food is largely vegetable, and they are mostly abstemious Many of their methods of cereal and pulse cultivation, and of irrigation with water-wheel, sakiya, and balanced bucket, shaduf, are of remote antiquity. The water-carrier, sakka, is often a member of a dervish sect, whose ritual demonstration, zikr, is the occasion of much festivity, wherein quarterstaff, nabut, is a favourite game. The veneration of trees and stones, and the universal employment of amulets, mark the persistence of the predynastic animism of the Nile valley. The sedentary peasantry of Palestine, also called fellahin, are largely descended from the primitive Canaanite stock, but except for a few colonies introduced under Mehemet Ali, they have no ethnic identity with their Egyptian namesakes.

The legislature consists of two houses, the Senate and the Chamber of Deputies, which together form the National Assembly that elects the president Senators are elected indirectly, most of them for nine years, but a certain number for life. Deputies are elected for four years by all adult males, and number 612. The country is divided into 90 departments and about 38,000 communes, each with its elected council The communes are grouped into cantons, and the cantons into arrondissements The majority of the people are Roman Catholics, but there is no state religion The Roman Catholic church is organized under 17 archbishops Monastic associations are strictly controlled There is an excellent system of education, schools being divided into three classes under the university of France France has a large army, recruited by compulsory service. The standing army is over 300,000 strong, and there are large reserves. A navy of considerable size and a powerful air force are maintained. The country is a member of the League of Nations, and has a permanent seat on its council

PRODUCTION AND TRADE. France is both an agricultural and a manufacturing country. The produce of the soil includes wheat, oats, barley, rye, and sugar beet, but it is more famous for its vines, the chief districts being Champagne, Burgundy, and the region round Bordeaux. Vast quantities of fruit are produced, including apples for cider, as well as vegetables and flowers The culture of the silkworm is important Horse breeding is a national industry There are valuable fisheries The greatest manufacturing areas are on the Belgian frontier, where there is a coalfield, in the district around Clermont-Ferrand and St Étienne in the south-east, and Paris and its environs France has an excellent system of railways There are many good roads, and over 6,000 miles of navigable waterways, including the canals in the coalfield of the north-east and the great Canal du Midi. Air services are highly developed, the chief airport being Le Bourget, near Paris. The unit of currency is the franc, which in 1928, after a serious fall in value, was stabilized on a gold basis. It is worth about 2¼d The money in circulation is chiefly paper. The metric system of weights and measures is used Much revenue comes from duties on imports and monopolies

HISTORY. Having been a kingdom from very early times, France became a republic in 1792, and a little later an empire under Napoleon. The kings were restored in 1814 and lasted until 1848, when the second republic was proclaimed. From 1852 to 1870 Napoleon III was emperor, but after his defeat by the Germans in 1870 the third and existing republic was inaugurated. The efforts of

France. Map showing the departments, and the eastern frontier as extended in 1919. Inset, the island of Corsica

its new rulers soon brought the country into a state of prosperity, in spite of the loss of Alsace-Lorraine and the payment of a considerable indemnity. The dominating principle of French foreign policy during the period that ended in 1914 was to strengthen the country against a possible German attack. This was done by enlarging the army and navy and reconditioning the border fortresses, but still more by a policy of alliances. A treaty was made with Russia, and early in the 20th century a better understanding with Great Britain was brought about.

As the ally of Russia, France entered the Great War, and for four years some of the richest parts of the land were occupied by the Germans, while the French armies suffered tremendous losses, nearly 1,400,000 men being killed. Her premier, Georges Clemenceau, presided over the peace conference in 1919-20, but, although he secured much for his country, he did not obtain the desired guarantee of security for the eastern frontier. The work of restoring the devastated regions made rapid progress and industrial activity was resumed. In 1923, as Germany had failed to meet her payments, French troops occupied the Ruhr district. In time, however, the acceptance of the Dawes plan brought about a better feeling; the Ruhr was evacuated and the pact of Locarno was signed in 1925, the moving spirit in the policy of conciliation being Aristide Briand. Before this the economic position had become very bad, and the franc had fallen to nearly nothing. In 1926, Raymond Poincaré, who had been premier in 1922-24, returned to that office, and in 1928 stabilised the franc and took other measures to restore prosperity. In the same year the Rhineland was evacuated by French troops. Like other countries, France felt the force of the financial and economic collapse that began in 1929, and her statesmen took a leading part in the international negotiations on tariffs, debts and disarmament, including the important conference that met in 1933.

GEOGRAPHICAL SOCIETY, ROYAL. Society for the promotion of exploration and discovery and the improvement of geographical teaching in universities and schools. Formed in 1830, it has a house at Lowther Lodge, Kensington Gore, S.W. The map room and museum at Lowther Lodge are open to the public. The Geographical Journal, the organ of the Society, is issued monthly.

GEOGRAPHY. Geographical study begins with topography, the accurate description of all parts of the earth, the people who live there, the lives they lead, the kinds of plants, animals, minerals found there; and early in the 19th century the number of topographical facts was so huge that geographers began to compare and classify them in order to reduce the content of geography to manageable dimensions. These processes have resulted in an assumption that the earth comprises a series of definite regions which are so much alike that a clear conception of one specimen of a region suffices for the understanding of the similar areas elsewhere.

The standard illustrative region is the area bordering the Mediterranean, which has warm, wet winters, and hot, dry summers, a characteristic natural vegetation, cultivated crops of a definite type. A knowledge of the shorelands of the Mediterranean Sea implies also a knowledge of California, parts of Chile, the Cape of Good Hope district, and the South of Australia, all of which are Mediterranean regions in this sense. The regional conception, however, is insufficient beyond a certain point, for it implies no relation between the configuration of the land, the occurrence of useful minerals, or, most important of all, the character and distribution of the population. Within limits, however, the regional conception simplifies the geographical story.

During the centuries of exploration geographers were also concerned with the earth as a whole, with the physical forces which influence men's lives, with the scientific classification of all forms of life, including man, and with the history of human development. They have always been interested in the physical sciences, astronomy, geology, meteorology, and biology, and in the human sciences, ethnology, sociology, economics. Since these sciences steadily developed their special knowledge of one aspect of the universe, geographers used their conclusions as a basis for the explanation of many of the observed facts of topography.

Modern geography therefore includes, primarily, a certain amount of gazetteer information, and secondarily, the application of certain scientific conclusions to human activities; it is the study of the earth as the home of man, of man's place in nature, and man and his work. But although the geographer is indebted to other scientific studies, he does not make scientific data a portion of the content of geography until he has applied them to the life of man. From astronomy he borrows facts about the earth as a planet to explain the consequences for man of the daily march of the sun in the sky and the rhythmic swing of the tides in the oceans. From geology he borrows facts about the continents which preceded those now in existence, in order to explain the existing land forms.

GEOK TEPE. Village of Russia (U.S.S.R.) In the Turcoman republic, it is 28 m. W. of Ashkhabad, on the Transcaspian Rly. It is noted for its fortress, an immensely strong building erected by the Turcomans, which in 1880 was stormed by the Russians.

GEORGE. Lake of Uganda, Central Africa. Lying N.E. of Lake Edward, with which it is connected by a narrow channel, it is the source of the Katonga river which empties into Lake Victoria.

GEORGE. Salt lake of New South Wales. It is 25 m. S.W. of Goulburn, and the same distance N.E. of Canberra. Although it usually measures 25 m. by 8 m., it is sometimes nearly dry, being an isolated basin with no outlet.

GEORGE. Lake of New York state, U.S.A. Situated in the E. part of the state, it stretches N.E. to S.W. for 35 m., and has a breadth varying from 1 m. to 3 m. Picturesquely located among the foothills of the Adirondacks, and dotted with charming islands, it is one of the most beautiful lakes of the U.S.A. The battle of Lake George (1755) is commemorated by the Fort George battle park, a state reservation.

GEORGE TOWN. Seaport of the Straits Settlements. The capital of Penang, it stands on the N.E. shore of the island, and has a fine harbour. The chief exports include rice, sugar, pepper, and tin. Pop. 101,182.

GEORGETOWN. Town of Ontario, Canada. On the C.N. Rlys., 29 m. W. of Toronto, it is a railway junction, and produces paper, boots and shoes, lumber, and gloves. Pop. (1931) 2,288.

GEORGETOWN. Seaport and capital of British Guiana. Near the mouth of the river Demerara, the city is sometimes called Demerara, but was formerly known as Stabroek. It lies below the level of high water, which is kept out by a sea-wall called the Ring. The buildings include the Anglican and Roman Catholic cathedrals, government buildings, several colleges and hospitals, botanical gardens, museum, library, and an asylum. The exports comprise coffee, sugar, cocoa, rum, gold, and balata. There is a wireless station, and the city is lit by electricity. Pop. (1930) 57,921.

GEORGETOWN. Part of the city of Washington, U.S.A. It stands on the Potomac river, at the head of navigation, and is about 2 m. N.W. of the Capitol. It is the seat of Georgetown University, and of several colleges. There are a number of industrial plants, including flour mills. Down to 1871 it was a separate city, but in that year it was incorporated in the district of Columbia becoming a part of the city of Washington seven years later.

GEORGETOWN. City and port of entry of S. Carolina, U.S.A. Situated on Winyah Bay, 60 m. by rail N.E. of Charlestown, it is the port for the farm products of the fertile district drained by the Peedee river and its tributaries. Lafayette landed here on his first visit to the States. There are machine shops, bottling and canning factories, and sawmills. It was chartered in 1892. Pop. (1930) 5,082.

GEORGIA, GULF OF. Inlet of the N. Pacific Ocean. It divides Vancouver Island from the mainland of British Columbia. Its N. extension, Queen Charlotte Sound, connects with the Pacific, while its S. continuation leads to Juan de Fuca Strait and Puget Sound. Its length is about 250 m., its breadth 29 m. It is comparatively deep, having soundings over 1,000 ft.

GEORGIA. Republic of the Caucasus (U.S.S.R.) Bounded N. by the Caucasus Mts., E. by the Dagestan and Azerbaijan republics, S. by the Armenian republic, and W. by the Black Sea, it includes the small republics of Abkhasia and Adjaristan and the autonomous region of S. Ossetia. Tiflis is the capital. Other important towns are Batum, Sukhum, Kutais, and Poti. The area is 26,381 sq.m.

Georgia comprises the rich and sheltered land along the rivers Rion and Kura and the highlands N. and S. that enclose the valley. Wheat, maize, barley, cotton, and tobacco are grown, and cattle are reared. The vine flourishes, fruit abounds, and silk is extensively produced. Valuable timber is grown in the forests. There are rich manganese and coal deposits and mineral springs. Oil is found. A railway runs from

Batum to Baku with branches to Poti and other centres. A line is also being constructed from Akhal-Senaki to Sukhum and Tuapse. Irrigation is practised, and the republic contains several large electrical stations.

After keeping its independence for 2,000 years the kingdom of Georgia was annexed by Russia in 1801. In 1918 it became an independent republic, but in 1921 a Soviet government was set up, and in the following year Georgia, together with Armenia and Azerbaijan was formed into the Trans-Caucasian socialist federated soviet republic. Pop. (1931) 2,883,200.

GEORGIA. State of the U.S.A. One of the South Atlantic group, it is bounded by Tennessee and N. Carolina on the N., by S. Carolina and the Atlantic on the E., by Flordia on the S., and by Alabama on the W. Its area is 59,265 sq. m., and it consists of three natural divisions, the N.W. mountainous district of Upper Georgia, a broad plateau, and the swampy region of Lower Georgia. The chief rivers are the Savannah, Oemulgee, Oconee, Flint, and Chattahoochee, navigable for a large part of their course, and there are numerous other smaller streams. Agriculture is very important, and until 1931 it was the second largest cotton-producing state. Corn, rice, tobacco, and sugar cane are widely grown, and lumber is cut for naval stores. There are important deposits of coal, iron, manganese, gold, and silver, not yet highly developed. There are over 7,000 m. of steam and electric railway. The capital and chief city is Atalanta, and Savannah is the principal port. Other large towns are Augusta, Columbus, and Macon.

One of the original 13 states of the American Union, Georgia was named after George II. It was founded in 1733 by General James Oglethorpe as an asylum for poor debtors from England and for Protestant refugees from Europe. It is governed by a Senate of 51 members and a House of Representatives of 207 members, and is represented in Congress by two Senators and 12 Representatives. Pop. (1930) 2,908,506 of whom 1,071,125 are negroes.

GEORGIAN BAY. Opening of Lake Huron. The N.E. arm of the lake, it is almost cut off from the main waters by a peninsula which is part of Ontario, and Grand Manitoulin Island, the opening between the two being about 30 m. wide. It is about 120 m. long and 50 m. broad. A canal has been suggested to join Georgian Bay with the St. Lawrence at Montreal. It will be 450 m. long, 200 ft. wide, and 22 ft. deep, with 23 locks to regulate the water, and will take vessels of from 8,000 to 10,000 tons. By using the Back River, an arm of the St. Lawrence, the Lake of the Two Mountains, the Ottawa River, Lake Nipissing, which will be its central point, and the French river, it will only be necessary to construct about 30 m. of actual canal, although parts of the existing waterways will need deepening. The canal, which will be wholly in British territory, will bring the Canadian Lake wheat ports 800 m. nearer to Liverpool.

GERA. Town of Germany. In Thuringia it stands on the White Elster, 35 m. S.W. of Leipzig. The chief buildings are the town hall, a restored 16th century building standing on the market place, a modern theatre, and a museum; S. John's is the chief of several churches. On the Hainberg, opposite the town, is a castle, the residence of the princes of Reuss. The town is an old one, but most of its buildings are modern. Textiles are manufactured. Pop. 81,402.

GERACE. City of Italy. It stands on the slope of a mountain, at an elevation of 1,570 ft., 4 m. from the sea, 58 m. by rail N.E. of Reggio.

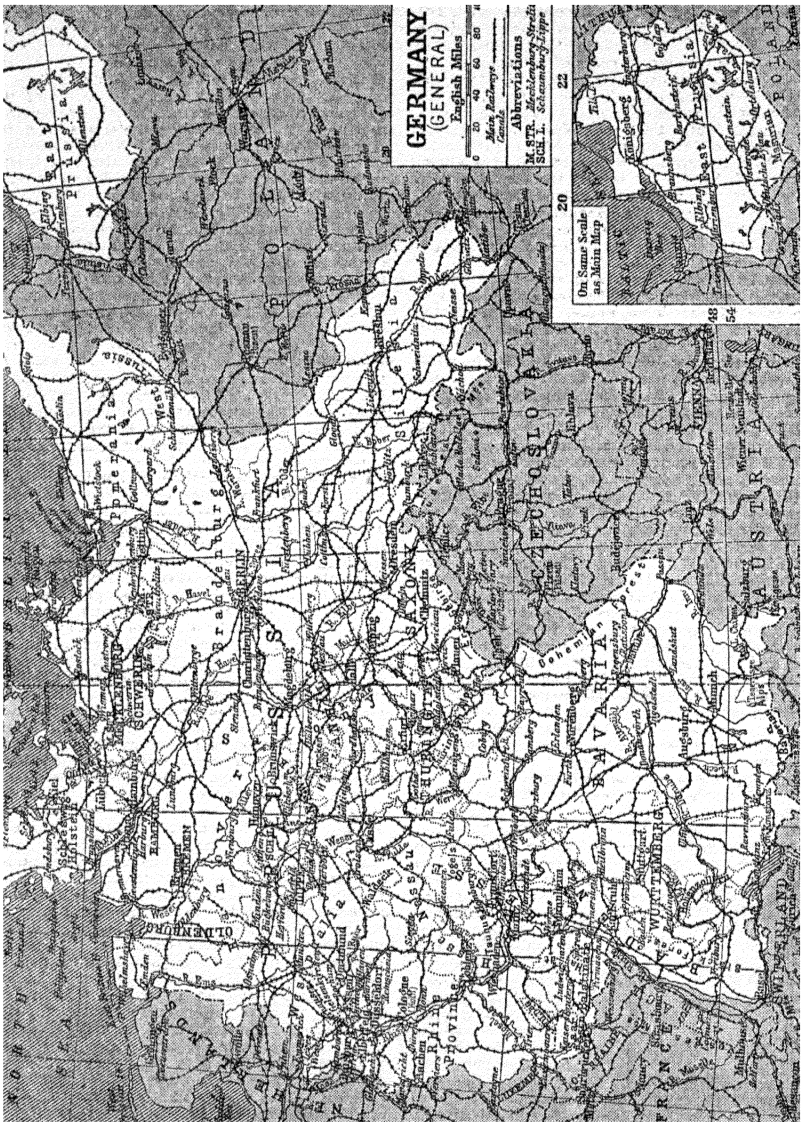
TOPOGRAPHY Germany's frontiers are mainly land ones, the longest being the one that divides it from Poland, it also borders on Denmark, Netherlands, Belgium, France, Switzerland, and Czechoslovakia Its sea frontier of 1,200 m is mainly on the Baltic, but it has a short coastline on the North Sea East Prussia is divided by Poland from the rest of the country. The greater part of Germany is flat, although in the centre and south there are several systems of hills The most northerly range is the Harz, consisting of pretty valleys and wooded heights, of much the same character are the Black Forest and the Bavarian highlands The Swabian and Franconian Jura are less attractive Other hilly regions are the one between the rivers Main and Neckar, the Spessart range N of the Main, which connects with the Vogelsberg and then with the Taunus, famous for its spas The Thuringian Alps extend for about 150 m and there are several hilly districts in Saxony, forming, on account of their beauty, the so-called Saxon Switzerland The highest points are in or near the Bavarian border, one reaching to 9,710 ft., and there are many between 4,000 and 8,000 ft.



The rivers in order of importance are the Rhine, Elbe, Weser, Vistula, and Oder, but there are many others including the Main Spree, Mulde, Aller, and Havel The Danube flows through the south of the country in which it has many tributaries, Inn, Lech, and others There are many lakes The largest is the lake of Constance (Bodensee) on which is Friedrichshafen. In Bavaria are the Tegernsee, Konigsee, Schleiersee and others, much visited by pleasure seekers.

GOVERNMENT. The federation consists of 17 states, each a republic in itself Much the largest is Prussia which covers more than half the land and has more than half its inhabitants Bavaria is the next largest The others in order of size are Wurttemberg, Baden, Saxony, Mecklenburg-Schwerin, Thuringia, Hesse, Oldenburg, Brunswick, Mecklenburg-Strelitz, Anhalt, Lippe, Schaumburg-Lippe, Hamburg, Lübeck, and Bremen. The Saar district, although part of the Reich, is governed for a term of years by an international commission under the League of Nations

At the head of the republic is a president elected by all citizens over 20 years old for a period of seven years There is a cabinet, the members of which are appointed by him and a legislature of two houses The upper house consists of 66 members who represent the several states. The lower house, called the Reichstag, is elected for four years, or until a dissolution, by all adults. The system of proportional representation is employed and there is roughly one deputy to every 60,000 voters The referendum is used

Germany has an army about 100,000 strong, and a navy. Enlistment is voluntary, compulsory service being forbidden by treaty Restrictions are also placed upon fortresses, battleships and aircraft About two-thirds of the people are Lutherans, but there is no state church and about 20,000,000 are Roman Catholics There is a uniform system of justice throughout the country. It culminates in the court of appeal at Leipzig, which has 96 judges; upon this tribunal falls the duty of interpreting the constitution, which was accepted by a national assembly that met at Weimar on July 31, 1919

TRADE AND FINANCE Germany produces a vast quantity of cereal crops—wheat, rye, barley, and oats—and a large number of horses, cattle, sheep, and pigs are reared. The vine is grown in the warmer regions Potatoes and beet for sugar occupy many acres Over one-quarter of the land is covered with forest, and the forest products are of considerable value The country is rich in minerals, especially coal, iron ore, potash, and copper. The fisheries are valuable The great manufacturing areas are Westphalia and Silesia, in both of which are large coalfields. There is also an industrial centre in Saxony, notable chiefly for its production of textiles; and others in the lower Rhineland, the Ruhr valley, and Berlin and its environs. Germany has an excellent system of railways, the property

of the state. A good deal of traffic is carried by canals, and there are many air routes.

In 1924, following a serious fall in the value of the mark, the currency was established on a gold basis, the unit being the Reichsmark. Its normal value is just under a shilling. There is a state bank, the Reichsbank, that issues notes. The metric system of weights and measures is employed throughout the country.

HISTORY. German nationhood began early in the 9th century with the downfall of the empire of Charlemagne, but the empire was restored by Otto the Great in 962, and Germany, under some 300 petty rulers, was its most important unit till its dissolution in 1806. Then, under French influence, was founded the Confederation of the Rhine, succeeded in 1815 by the N. German Confederation of 35 states, with a diet at Frankfort, and Prussia at its head. The struggle for power between Austria and Prussia ended in 1866 with Prussia's victory at Sadowa. In 1870–71 the Franco-Prussian war led to the constitution of the German empire with the king of Prussia as emperor. Under this commerce developed, colonies were acquired, and an alliance (the Triple Alliance) between Germany, Austria, and Italy

came into being, but this broke down just before the Great War in which Germany suffered enormous losses, and in the end sued for peace. By the treaty of 1919 she lost certain portions of the country and all her colonies and agreed to pay a huge sum as reparation for the damage done by her troops

The lands lost in 1919 were Alsace-Lorraine, returned to France, the greater part of West Prussia, Posen and parts of East Prussia and Upper Silesia went to Poland and another part of Silesia to Czechoslovakia Danzig was made a free city Part of Schleswig was returned to Denmark, and Eupen and Malmedy were given to Belgium. Altogether Germany lost 27,000 sq m. and about 6,500,000 people Outside Europe, Germany's lost colonies were German East Africa, now Tanganyika territory, German West Africa, consisting of Cameroons and Togoland, and German South-West Africa In the Pacific Ocean the losses were that part of New Guinea called Kaiser Wilhelm Land, the Bismarck archipelago, the Solomon, Caroline and Marshall Islands and other groups

The federal republic, created as a result of the Great War, was faced at once with serious difficulties. Risings broke out, the mark dropped in value to nothing, reparations payments were not maintained, and French troops occupied the Ruhr district. A better time began in 1923 when the Centre party, then led by Stresemann, formed a ministry in succession to the Socialists. They restored the currency, accepted the Dawes plan, signed the pact of Locarno and entered the League of Nations. Stresemann's policy was followed by his successors, especially Dr Bruning, who was chancellor 1930–32, but the economic crisis was too strong for them, and in 1932 there was again serious trouble. The party called Nazi, led by Adolf Hitler, had become very powerful, and polled a great number of votes at the presidential and general elections of 1932 In 1933 Hitler, after another general election, was appointed chancellor Having formed a cabinet he secured from the president power making him virtually a dictator A feature of the new regime was the repressive measures taken against Jews, socialists, and communists

GEYSER (Icelandic, geysir). Hot spring in which the water is forced into the air like a fountain. Geysers are characteristic of volcanic areas, and derive their heat from volcanic sources There are many in the Yellowstone National Park, Wyoming, U.S A One famous geyser is called Old Faithful, because of its regularity, shooting, every 63 minutes, a column of water to a height of nearly 150 ft. Another district famous for its geysers is North Island, New Zealand. After an eruption the water collects in the tube connecting the surface with the interior. The water in the narrow irregular tube is heated probably by contact with hot lava Steam is formed locally in the tube and lifts the water above it, more steam is then formed rapidly This reduces the pressure and the whole is shot into the air.

GEYSERLAND. Popular name for the country surrounding Lake Rotorua, in North Island, New Zealand It is famous for its many hundreds of geysers, its boiling springs, its mud volcanoes, and its fumaroles Although the natural fountains do not rival in height those of Wyoming, the best of them spout from 80 to 100 ft

GLACIER (Fr) Moving mass of ice The snow-line varies in elevation from sea level in Antarctica to 2,500 ft in Alaska, 8,500 ft on the Alps, and 16,000 ft on the S side of the Himalayas As the snow above the snow-line accumulates the lower portions slowly change into ice, and when the mass of ice and snow becomes sufficiently thick it begins to move downwards. When the moving mass follows a definite path

down a mountain valley it is a glacier. In its passage a glacier accumulates quantities of rocks. Some of these sink into the mass; others are moved to the margins.

Glaciers have been classified into four types: (1) valley glaciers, as in the Alps, Caucasus, Andes, Himalayas, and coast mts. of Alaska; (2) piedmont glaciers, when a valley glacier pushes out on to a nearly level area at the base of the mountains; (3) ice caps, as in Iceland, Greenland, and Antarctica; and (4) continental glaciers, as in Greenland, where the continental glacier is steadily pushing seawards. The glacial period is the earlier of the two subdivisions of quaternary time.

GREENLAND. Large island lying principally within the Arctic circle. With an area estimated at 826,000 sq. m., it is the largest island in the world after Australia. It is about 1,600 m. long and 700 m. at its broadest part. On the E. and N. it is washed by the Arctic Ocean, and on the W. is separated from N. America by Baffin Bay and Davis Strait. The peculiar feature of the island is the great mass of inland ice covering an area of 712,750 sq. m., which forms a perfect example of existing ice-age conditions. There is coal of a poor quality, iron of meteoric origin, graphite and copper. It is the only country yielding cryolite (used in the manufacture of soda, aluminium, etc.) in commercial quantities.

Greenland. The world's second largest island

The climate is very cold, the January mean at Ivigtut being 18° F. and the July mean 49° F. The W. and S.W. coast is warmer than the E. In the interior temperatures as low as —90° F. are reached. The flora, which includes 400 flowering plants and some hundreds of lichens, resembles that of Scandinavia. There are few trees over a height of 6 ft. The Danish settlers have successfully grown cabbages, potatoes, turnips, etc. The fauna is definitely Arctic. The musk-ox, reindeer, lemming, polar wolf, Arctic hare, fox, and stoat are found. The Eskimo dog is the beast of burden. The Wegener Expedition used ponies, and this was the first time they had been seen on the island. Sufficient grass was collected to provide hay for them. In the S. a few goats, sheep, and cattle have been introduced.

The island belongs to Denmark and its government is vested in a commission at Copenhagen. There are two inspectorates divided into twelve districts. The two capitals are Godhavn for the N. and Godthaab for the S. There is no police system, there being no serious crime, and the welfare of the natives is safeguarded by the annual fixing of prices and the activities of Danish missionaries and teachers. Local councils assist the district administrators. The trade is a state monopoly. The population (1930) of 16,630, consists of Eskimos with a mixture of European blood who live mainly in settlements along the W. coast. The E. coast is almost uninhabited. Although Christianity has been introduced, many native customs and superstitions still flourish.

The Scandinavian connexion with the island dates from Erik the Red, who about 984 gave it its name. He made the first settlement there, and in 1126 a bishopric was established. The colony at one time numbered 3,000 and until 1261 was a republic. It then joined Norway, but at the beginning of the 15th century communication ceased, and in 1585 John Davis found no sign of surviving colonists, when, like Hudson, Frobisher, and other seamen he explored the coasts. In 1721 the Danish missionary Hans Egede landed on the coast and in 1733 a Moravian settlement was made. Soon Denmark assumed the sovereignty, but this was only effective on the W. coast. In the latter part of the 19th and early part of the 20th century a good deal of exploring work was done, both on the coast and inland, by Peary, Nansen and others, and in 1905 surveys proved that Greenland was an island. After the Great War the E. coast, especially the land of Eric the Red, was claimed by and to some extent occupied by Norway. Denmark, however, objected and the case was submitted to the permanent court of international justice at The Hague, which in April, 1933, decided that the whole of Greenland belongs to Denmark.

The N. coast was explored by Peary at the beginning of the present century and since the Great War work in mapping the N.W. part has been done by the Danish explorer Koch with a view to the erection of wireless stations. Recent developments have been in connexion with the establishment of a Europe-America air route via Greenland. In 1930 the British Arctic air route expedition led by the late H. G. Watkins used aircraft with the late Sir Ernest Shackleton's Quest as a base-ship, and Mr. Augustine Courtauld spent the winter alone in the snow wastes of the interior. The Greenland air survey expedition of 1932 was undertaken to follow up and complete the work of Watkins.

The area is 82,698 sq. m. Marathwara, in the W., is an area of uncertain rainfall and considerable elevation. This produces a black soil particularly suited to the chief crops which are cotton and wheat. Telingana, on the E., which contains the capital city, has a better rainfall, and is the granary of the state. The principal products of the state are rice, millet, wheat, cotton, oil seeds, tobacco, lac, fruits, gums, and hides. Gold, diamonds, copper, iron and coal are found. There is a large cotton industry. The Mahbubnagar canal takes off from the Manjra river and irrigates a large area in the Medak district, N. of the capital. The territories of the nizam comprise the major portions of the valleys of the great Deccan rivers, Godavari and Kistna. Secunderabad is the chief railway centre.

The state dates from 1748, when Asaf Jah, the founder of the dynasty, died, leaving an independent kingdom with Hyderabad as the capital. His throne was immediately in dispute, the English and French supporting rival claimants. Under Dupleix the French had some initial success, but from 1766 onwards treaties made between the British East India Co. and the nizam preserved a loose alliance, which persisted even through the troubles of the Mutiny. The treaty of 1860 defines the existing state. The ruling family is Mahomedan. Pop. (1931) 14,436,148.

TRADE AND FINANCE. The principal occupations are sheep and cattle farming. The coastal fisheries, particularly cod, are important. There are some whaling stations. The minerals comprise lignite, sulphur, and Iceland spar. There is a good system of telegraphs and telephones, but no railways. External communications are direct with Norway, Denmark, Scotland, and the U.S.A. Exports are mainly fish, animals, butter and other dairy products, wool, and hides. The monetary unit is the Danish krone. The metric system of weights and measures is in force.

GOVERNMENT. Iceland is a constitutional monarchy and is united with Denmark only through having a common sovereign. The executive is vested in the king, acting on the advice of three responsible ministers. The legislative body is the Althing, composed of an upper house of 14 and a lower house of 28 members, who, like some of the members of the upper house, are elected by universal suffrage. The country is divided into 16 provinces. Lutheranism is the state religion. There is neither army nor navy.

HISTORY. A republic founded in 930 lasted till 1263, when Iceland acknowledged the rule of Norway, but retained its own form of government. Together with Norway, Iceland came under Danish rule in 1381, but when, by the treaty of Jan. 14, 1814, Norway was separated from Denmark, Iceland continued under the sovereignty of the king of Denmark. HISTORY. India was invaded by Aryans, who, between 1500 and 3000 B C, made themselves the dominant people and established the Hindu religion. About A D. 1000 the Mahomedan conquest began and in the 16th century the Mogul empire was founded. Gradually its rulers brought the whole country under their authority, but in the 18th century the empire, having begun to decay, was divided into great provinces that were virtually independent states Meanwhile, English and French traders had founded stations on the coast and formed companies which became very powerful These began to take sides in the rivalries of the Indian princes and one result of the war between the two countries that ended in 1763 was the almost entire elimination of French influence and authority. The British made other conquests towards the end of the 18th century, and began perforce to take upon themselves the responsibility of maintaining law and order, as one after another the princes, always fighting among themselves, appealed to them for protection. In that way, by the middle of the 19th century, nearly all the peninsula was controlled by Great Britain as represented by the powerful East India Co

In 1857 the mutiny broke out When it had been suppressed the East India Company was ended and the control of India transferred to the crown A secretary of state was appointed and in 1877 Victoria was proclaimed empress The two most important problems between 1858 and 1914 were the frontier policy, leading to war with Afghanistan in 1878 and to many punitive expeditions, and the gradual admission of natives to positions of importance in the public services In 1909 they secured a substantial representation on the provincial councils and other concessions followed. In the Great War Indian troops rendered splendid service, especially in the eastern theatres.

The new era began in 1917 with the declaration that the British government would "provide for the increasing association of Indians in every branch of the administration and the gradual development of self-governing institutions" In 1919 the existing system was established and in 1921 the new legislature met for the first time A party led by M K Gandhi agitated for complete freedom from British rule and there were serious outbreaks, as well as much unrest, broken partly in boycotts of British goods. In 1930 the royal commission, which under Sir John Simon had been appointed in 1927, made suggestions for the future government of India The ensuing three years were occupied with conferences and consultations as to the best means of setting up and working the proposed federal constitution

IRELAND. Island of the British Isles It lies to the W. of Great Britain, from which it is separated by the North Sea and St George's Channel Its area is 32,531 sq m. It consists of a central plain with mountain ranges near the seaboard, and on its somewhat irregular coastline are some of the finest harbours in the world, e g Cork and Waterford, as well as many bays and other openings, especially in the west, where the Atlantic meets the land. The chief mountain ranges are the Kerry group, which contain the highest peaks in the land, the Knockmealdown, Galtee and Comeragh ranges, all in the south There are hills in Wicklow and the Mourne Mountains further N. The W. coast is fringed with mountains, from the highlands of Donegal, through Mayo, Galway and Clare into Kerry.

Amid the mountains and also elsewhere are many lakes or loughs The largest is Lough Neagh in the north, and there are several along the course of the Shannon. The two loughs Erne may also be mentioned Ireland is well provided with rivers The longest is the Shannon ; others are the Slaney, Liffey, Boyne, Bann, Blackwater, Kenmare, Erne, Lee, Barrow and Nore. The few islands round the coast include the Aran group The combination of hill and water, coupled with the greenness of the vegetation, makes the scenery in parts of Ireland almost equal to anything in the world. In spite of the extreme moisture the soil of Ireland is by no means fertile. Large areas are bog and the mountainous regions cover many square miles. The most productive soil is in the vale of Limerick

derived chiefly from customs, excise duties and income tax. There is a public debt of about £30,000,000. The state has its own coinage.

HISTORY. When after the treaty of 1921 the British authorities ceased to function in Ireland, the affairs of the Free State were taken over by a provisional government in which the chief spirits were Arthur Griffith and Michael Collins. The republicans under De Valera took up arms, and for a time there was serious disorder almost all over the country, in the midst of which Griffith died and Collins was shot. W. T. Cosgrave was then elected president, but a year of warfare passed before peace was in sight. In Aug., 1923, the first election under the new constitution was held. Cosgrave's government obtained 63 seats and the republicans 44. The republican deputies did not sit in the Dail, as they refused to take the oath. However, with the revolution stamped out, the condition of the country improved and the government carried out reforms. An Act reformed the administration of poor relief and provided for new measures to safeguard and improve the public health. The courts of justice were remodelled, and the Irish language was encouraged. Certain taxes were reduced, other revenue being raised by tariffs, thus making the Free State a protectionist country.

In 1927 there were two general elections One held in June proved so unsatisfactory to the government that President Cosgrave had to choose between resignation and another appeal. In September the second election took place. Cosgrave's friends secured 61 seats, and the supporters of De Valera 57. As these latter now took the oath of allegiance, it was only by the aid of the independent members that Mr Cosgrave was able to secure a working majority. In 1928 James McNeill succeeded T M Healy as governor-general The most important piece of legislation was a measure altering the method of electing senators and abrogating the right to use the initiative and the referendum

In 1929 difficulty was caused by the reluctance of the Irish government to recognize the right of appeal to the judicial committee of the privy council. Cosgrave remained in power until 1932, when a general election gave a majority to the party led by De Valera The latter formed a ministry which took steps to abolish the oath of allegiance and refused to pay the interest on the money borrowed to purchase the land for the farmers. Great Britain therefore levied duties on Irish imports and refused to negotiate with the Free State at Ottawa The Free State retaliated, and in 1933, after another general election had resulted in favour of De Valera, a policy was framed to make the country a self-supporting state. Meanwhile Denis Buckley had succeeded McNeill as governor-general

IRRIGATION (Lat irrigare, to water) Method of supplying water to land in order to increase its productivity In India 35,000,000 acres of land, hitherto worthless, have been put to useful account by irrigation The irrigated area of the U S A is about 12,000,000 acres, while the prosperity of Egypt depends almost entirely upon irrigation Water for irrigation purposes is obtained either from rivers or wells As the normal level of a river is below that of the lands to be irrigated, it is usual to construct a barrage or weir across the bed and raise the level of the river sufficiently to direct part of its flow into canals having intakes above the weir

To make fuller use of a river which derives its water from the melting snow or rainfall of mountainous regions, the annual discharge must be regulated by a dam built in an appropriate location In the flood season immense quantities of water are impounded behind the dam for consumption during periods of smaller natural flow The most important irrigation schemes of the U S A, India, Egypt, and Australia are based upon the formation of huge artificial dam reservoirs In India 13,000,000 acres are irrigated from wells, from which water is laboriously raised by hand or crude mechanical appliances In America pumping windmills, the cheapest means of lifting water, are widely used

Among notable irrigation works in India are the Lloyd dam at Bhatgar, and the Wilson dam at Bhandardara Works in progress include the Sukkur barrage and canals in Sind, and the Sutlej valley canals in the Punjab The former commands an area of 7,500,000 acres The Sutlej scheme involves over 5,000,000 acres and comprises four weirs In Australia a great deal of land in the region of the Murray and Murrumbidgee rivers has been irrigated. ISLAND Piece of land entirely surrounded by water Islands are usually classified as continental or oceanic Continental islands consist of the same rocks as the neighbouring mainland, are usually surrounded by shallow seas, the floor of which forms a continental shelf, and have similar flora and fauna to the mainland Such islands belong to three groups islets composed of resistant rocks, such as the Bass Rock, the surrounding softer strata having been worn away, large islands, such as the British Isles and the islands of N Canada, separated from the continent by comparatively narrow, shallow channels; and the festoons of islands such as Japan, which are characteristic of the shorelands of the Pacific Ocean

Oceanic islands are usually far distant from the continental shores, surrounded by deep water, and are generally coralline or volcanic They occur most frequently in the Pacific Ocean, the largest of them are in the Hawaiian, Fiji, New Hebrides, and Samoan groups The coralline islands, in general, are based upon submerged mountain peaks or volcanoes Islands of this class are better called constructional, as they have been built up in the development of the earth's existing superficial conformation. This term includes, in addition to the oceanic islands, those islands which occur along continental coasts either as developments from shingle-bars and sand-banks or as temporary outlying portions of a growing delta.

ISOSTASY (Gr. isos, equal, stasis, standing still, stability) Term for the doctrine that explains the greater elevations and depressions of the earth's surface as due to the crust rising high where its material is light, and lying low where the material is heavy According to isostasy, blocks of the earth's crust of equal area are of equal weight independent of the height of the surface, and each such block is supported on a layer which behaves as a fluid and upholds the overlying crust to a superficial altitude dependent on the composition of the block Mountains were naturally at first regarded as extra masses piled upon the crust and upheld by its strength, as a lighthouse is supported by

the reef on which it stands; but, according to isostasy, mountains do not rest upon a rigid foundation, but float on a plastic substratum.

TOPOGRAPHY. The islands are mountainous, and only a comparatively small portion is fertile The only plain of any size is the one around Tokyo on the mainland. The coastline is much indented and there are many good harbours The mountains are chiefly volcanoes, and the country is much subject to earthquakes There are numerous lakes and rivers, the latter all

short but much used for developing electric power. Japan is famed for its wealth of flowers and flowering trees.

GOVERNMENT. The ruler of the empire is the emperor, or tenno. There is a parliament, or diet, of two houses, a house of peers and a house of representatives. The former consists of 404 men appointed or elected on various qualifications. The latter consists of men elected for four years by all adult males. There is a cabinet under a prime minister. The country has an elaborate system of local government. The people accept Buddhism or Shintoism, but there is no state religion. There is an army, a navy, and an air force all of considerable size and marked efficiency. Every male is liable to service.

TRADE AND FINANCE. The crops produced in Japan are mainly rice, wheat, barley, rye, cotton, tea, tobacco, and fruit. The silkworm is widely cultivated. The minerals include copper, coal, iron, antimony, zinc, and petroleum. There are large deposits of kaolin. The forests produce valuable timbers, and the fisheries are important. The making of cotton and silk fabrics are the chief manufacturing industries, but there are many more. The country has about 10,000 miles of railways and efficient air services. The revenue is obtained mainly from taxes on land, incomes, liquor, and sugar, and from duties on imports. The unit of currency is the yen which is nominally worth 2s. 0½d., and is divided into 100 sen. The money in circulation is paper issued by the banks of Japan, Chosen, and Taiwan.

HISTORY. The Japanese claim for their emperors an unbroken descent from Jimmu who became ruler in 660 B.C. Over two thousand years of complete isolation from the outer world were partially ended in the 16th century when there was a little foreign trade. This, however, was soon suppressed except with the Dutch. About 1859 a new era began. The country was then opened to foreigners and in 1871 the old feudal system was abolished. Japan modelled her national life on that of the nations of the western world and soon emerged as a great power. A war with China in 1894–95 was followed ten years later by the struggle with Russia, which secured for the Japanese a foothold on the mainland of Asia. In 1910 Korea or Chosen was annexed, and in 1914 Japan entered the Great War as Britain's ally.

After that event Japan took an increasing interest in the affairs of China, where life and property were threatened owing to the feebleness of the central government. To protect her interests which now included Shantung (until 1914 partly under German influence) Japanese troops advanced into Manchuria, and in 1932 this was declared an independent state. Representations by the League of Nations failed to secure any modification of this policy, and in 1933 Japanese troops advanced through Jehol to the Great Wall, and a state of war prevailed between their country and China. Japan took part in the world conferences that followed the Great War and signed the Washington and London agreements about the limitation of naval strength before the censure of her policy led to her withdrawal from the League in 1933.

Agricultural products include coffee, maize, wheat, sisal, rice, coconuts, cotton, sugar cane, and fruits. Carbonate of soda is obtained from Lake Magadi. Gold, graphite, marble, limestone, and manganese are among the minerals found. Trade is largely with Great Britain, but India, the U.S.A., Japan, and Germany are strong competitors. Almost the whole trade passes along the Kenya and Uganda Rly., which runs from Mombasa through Nairobi to Kisumu on Lake Victoria, and its branches. There are aerodromes at Kisumu, which is an air stage on the route to the Cape, and Nairobi, where is a short-wave wireless station.

In 1931 the discovery of extensive goldfields in the district of N. Kavirondo aroused a good deal of interest. Prospecting was begun and many claims were pegged out, but in March, 1932, much of the area was closed by the government pending an inquiry. The question was complicated by the fact that the land on which the gold exists is a native reservation, but a settlement was effected in 1933, part of it being opened to general prospecting. The gold found comes entirely from alluvial deposits, but reefs bearing gold are known to exist. In 1930 the British government suggested that Kenya, Tanganyika, and Uganda should be united under a high commissioner and form a dominion of E. Africa. Pop. 3,049,000 (including 16,800 Europeans).
