KEY TO PRONUNCIATION

a as in fat, man, pang.
ā as in fate, mane, dale.
ä as in far, father, guard.
å as in fall, talk, naught.
ȧ as in ask, fast, ant
ą as in fare, hair, bear.

e as in met, pen, bless
ē as in mete, meet, meat.
ė as in her, fern, heard.

ı as in pin, it, biscuit.
ī as in pine, fight, file.

o as in not, on, frog.
ō as in note, poke, floor.
ö as in move, spoon, room.
ȯ as in nor, song, off

u as in tub, son, blood.
ū as in mute, acute, few (also new, tube, duty: see Preface, pp. ıx, x).
u̇ as in pull, book, could
ü German ü, French u.

oi as in oil, joint, boy
ou as in pound, proud, now.

A single dot under a vowel in an unaccented syllable indicates its abbreviation and lightening, without absolute loss of its distinctive quality. See Preface, p. xı. Thus·

ạ as in prelate, courage, captain.
ẹ as in ablegate, episcopal.
ọ as in abrogate, eulogy, democrat.
ụ as in singular, education

A double dot under a vowel in an unaccented syllable indicates that, even in the mouths of the best speakers, its sound is variable to, and in ordinary utterance actually becomes, the short *u*-sound (of but, pun, etc.). See Preface, p xi. Thus

a as in errant, republican.
e as in prudent, difference.
ı as in charity, density
ọ as in valor, actor, idiot.

ṗ as in Persia, peninsula.
ṣ as in *the* book.
u̇ as in nature, feature.

A mark (⌣) under the consonants *t, d, s, z* indicates that they in like manner are variable to *ch, j, sh, zh*. Thus.

t̰ as in nature, adventure.
d̰ as in arduous, education.
s̰ as in pressure.
z̰ as in seizure.

th as in thin.
ŦH as in then
ċh as in German ach, Scotch loch.
n French nasalizing n, as in ton, en.
ly (in French words) French liquid (mouillé) l.
ˊ denotes a primary, ˝ a secondary accent. (A secondary accent is not marked if at its regular interval of two syllables from the primary, or from another secondary)

SIGNS.

〈 read *from*, i. e., derived from.
〉 read *whence*, i e , from which is derived
\+ read *and*, i e , compounded with, *or* with suffix
= read *cognate with*, i. e., etymologically parallel with.

√ read *root*.
* read *theoretical* or *alleged*; i. e., theoretically assumed, or asserted but unverified, form.
† read *obsolete*.

SPECIAL EXPLANATIONS.

A superior figure placed after a title-word indicates that the word so marked is distinct etymologically from other words, following or preceding it, spelled in the same manner and marked with different numbers Thus

back[1] (bak), *n.* The posterior part, etc
back[1] (bak), *a.* Lying or being behind, etc.
back[1] (bak), *v.* To furnish with a back, etc
back[1] (bak), *adv.* Behind, etc.
back[2]† (bak), *n.* The earlier form of *bat*[2]
back[3] (bak), *n.* A large flat-bottomed boat, etc.

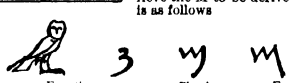
Various abbreviations have been used in the credits to the quotations, as "No." for *number*, "st" for *stanza*, "p" for *page*, "l" for *line*, ¶ for *paragraph*, "fol" for *folio*. The method used in indicating the subdivisions of books will be understood by reference to the following plan:

Section only	§ 5.
Chapter only	xiv
Canto only	xiv
Book only	iii.
Book and chapter	
Part and chapter	
Book and line	
Book and page	iii. 10
Act and scene	
Chapter and verse	
No and page	
Volume and page	II 34.
Volume and chapter	IV iv
Part, book, and chapter	II iv. 12.
Part, canto, and stanza	II iv. 12
Chapter and section or ¶	vii § or ¶ 3
Volume, part, and section or ¶	I i. § or ¶ 6.
Book, chapter, and section or ¶	I i. § or ¶ 6.

Different grammatical phases of the same word are grouped under one head, and distinguished by the Roman numerals I., II , III , etc. This applies to transitive and intransitive uses of the same verb, to adjectives used also as nouns, to nouns used also as adjectives, to adverbs used also as prepositions or conjunctions, etc.

The capitalizing and italicizing of certain or all of the words in a synonym-list indicates that the words so distinguished are discriminated in the text immediately following, or under the title referred to.

The figures by which the synonym-lists are sometimes divided indicate the senses or definitions with which they are connected.



The title-words begin with a small (lower-case) letter, or with a capital, according to usage. When usage differs, in this matter, with the different senses of a word, the abbreviations [*cap.*] for "capital" and [*l. c.*] for "lower-case" are used to indicate this variation

The difference observed in regard to the capitalizing of the second element in zoölogical and botanical terms is in accordance with the existing usage in the two sciences. Thus, in zoölogy, in a scientific name consisting of two words the second of which is derived from a proper name, only the first would be capitalized. But a name of similar derivation in botany would have the second element also capitalized

The names of zoölogical and botanical classes, orders, families, genera, etc., have been uniformly italicized, in accordance with the present usage of scientific writers.

1. The thirteenth letter and tenth consonant in the English alphabet It had a corresponding position in the Latin and Greek alphabets, and in their source, the Phœnician The conspectus of forms in these three alphabets, with the Egyptian characters from which many believe the M to be derived (see *A*), is as follows

Egyptian Hieroglyphic | Hieratic | Phœnician | Early Greek and Latin

M represents a labial nasal sound, the corresponding nasal to *b* and *p*, as *n* to *d* and *t*, and *ng* to *g* and *k* That is to say, in its production the lips are pressed together, or form a mute closure, as in *p* and *b*, and the vocal chords are set in sonant vibration, as in *b*, but the passage from the pharynx into the nose is open, so that the tone rings in the nasal as well as in the oral cavity, and this gives the peculiar quality which we term nasal (See *nasal*) Since the nose is incapable of complete closure (except by external means, as the fingers), the sound thus produced is resonant and continuable, and hence *m* and *n* are ordinarily reckoned as semivocal, or liquid, or the like But *m* does not win, like *n*, an actual vowel value in English syllabication, though in vulgar pronunciation words like *elm*, *spasm*, etc., are sometimes resolved into *el-um*, *spaz-um*, etc The sound *m*, especially as initial, is a very stable element in Indo European language history compare *mean*[1], *mind*, Latin *mens*, Greek μένος, Sanskrit √ *man*, or *mother*, oldest traceable form *mātar* (compared with the altered *father*, *brother*, oldest *pitar*, *bhrātar*) *M* has no varieties of pronunciation latin, and is silent only in a few foreign words, as *mnemonic*, It is doubled under the same circumstances as the consonants in general, as in *dimmer*, *dimming*, *dimmed*, etc , from *dim*

2 As a numeral, in the Roman system, M denotes 1,000 With a dash or stroke over it (M̄), it stands for a thousand times a thousand, or 1,000,000 —3 As a symbol (*a*) In the mnemonic words of logic (see *mood*[2]), *m* indicates a transposition (metathesis) of the premises in the reduction (*b*) Formerly, M was a brand impressed on one convicted of manslaughter and admitted to the benefit of clergy —4 As an abbreviation (*a*) In titles, M. stands for *Magister* or *Master*, as in A M ; for *Medicinæ* or *Medicine*, as in M D , or for *Member*, as in M C , member of Congress, and M P , member of Parliament (*b*) In *mech.*, *m* stands for *mass* (*c*) In dental formulæ, in *zool* , *m* stands for *molar*, and *dm* for *deciduous molar* (*d*) In *math.*, M or *μ* stands for *modulus*, in *higher geom* , *m* or *μ* for the degree of a curve (*e*) In *astron.* and *metrol* , *m.* stands for *minute* (of time), and for *meter*, *mm* for *millimeter*, and *μ* for *micron* or *micromillimeter* (*f*) In *musical notation*, M stands for *mano* (*main*), *mezzo*, *metronome*, and in organ-music for *manual* See *M. D.*, *M M* , *M. S.* (*g*) In a ship's log-book, *m.* is an abbreviation of *mist* —5 In *printing*, the square or quadrate of any body of type: more commonly spelled out, *em* (which see) — **To have an M under (or by) the girdle†**, to have the courtesy of addressing by the title Mr , Miss, Mrs , etc , show due respect by using the titles Mr , Mrs , etc. [Colloq]

Miss The devil take you, Neverout! besides all small curses

Lady A Marry, come up! What, plain Neverout! me thinks you might *have an M under your girdle*, miss

Swift, Polite Conversation, i

Maba (mā'bä), *n.* [NL. (J. R. Forster, 1776), the name of the plant in Tonga-Tabu] A genus of dicotyledonous gamopetalous plants belonging to the natural order *Ebenaceæ*, the ebony family, characterized by dœcious flowers, almost always three-parted, from three to an indefinite number of stamens, and three styles, sometimes united below. They are shrubs or trees, usually of very hard wood, with small entire leaves, and flowers either solitary or in cymes Fifty-nine species are known, natives of the warm regions of the globe The ebony-wood of Cochin China and Coromandel is believed to be the product of a tree of this genus *M geminata* and *M laurina*, called *Queensland ebony*, furnish, with other species of the region, desirable substitutes for ebony *M buxifolia* has been called *East Indian satinwood* The genus is found in a fossil state in many Tertiary deposits, the fruiting calyx on its peduncle being all that is usually preserved Eight species are thus known They have been described under the name *Macreightia*, now regarded as a section of *Maba* One of these fossil species occurs in Colorado

mabblet, *v t* A variant of *mobble*[2]

mabby (mab'i), *n.* [Formerly also *mobby*, Barbados] A spirituous liquor distilled from potatoes in Barbados

Mac. ⁂< Gael. *mac* = Ir *mac* = W *map*, *mab*, also *ap*, *ab*, a son, = Goth *magus*, a son see *may*[2] Cf *ap*] An element, usually a conjoined prefix, in many Scotch and Irish names of Celtic origin, cognate with the Welsh *Ap-*, signifying 'son,' and being thus equivalent to the Irish *O'*, the English *-son* or *-s*, and the Norman *Fitz-* The prefix is either written in full, *Mac*, or abbreviated to *Mc-* or *M'-*, which in works printed in the British Isles almost invariably appears as *M'* — the contracted form being followed by a capital letter, while *Mac* takes a capital after it but rarely Thus a name may be variously spelled as *Macdonald* (rarely *MacDonald*), *M'Donald*, or *McDonald*, so *Mackenzie*, *M'Kenzie*, or *McKenzie*, etc In catalogues, directories, etc , names with this prefix, whether written *Mac-*, *M'-*, or *Mc-*, are commonly entered in the alphabetical place of *Mac* Sometimes used separately for persons whose names begin with this prefix

The Fitzes sometimes permitted themselves to speak with scorn of the O's and *Macs*, and the O's and *Macs* sometimes repaid that scorn with aversion *Macaulay*

Macaberesque (ma-kā-bėr-esk'), *a* [< *Macaber* (see def.) + *-esque*. Cf. ML. *Machabæorum chora*, as if the 'dance of the Maccabees'] Pertaining to or of the character of the so-called "Dance of Death," a favorite subject in the literature, art, and pantomime of Europe in the middle ages and early Renaissance: apparently based on a series of dialogues of death attributed to Macaber, an old German poet of whom nothing is known. See *dance of death*, under *dance*

macaco[1] (ma-kā'kō), *n.* [Formerly also *maucauco*, *mocawk*; from a Malagasy name] 1. The ring-tailed lemur or cat-lemur, the species of *Lemur* earliest known, described under this name by Buffon; the *L. catta* of Linnæus.—2. The technical specific name of the ruffed lemur, *L. macaco*. Hence—3. Any lemur; a maki.—4 The so-called yellow lemur or kinkajou, *Cercoleptes caudivolvulus* a misnomer See cut under *kinkajou*

Macacus (ma-kā'kus), *n* [NL (F Cuvier) (*Macaca*, Lacépède, 1801), < F *macaque* (Buffon), from a native name, *macaco* see *macaco*[2]] A genus of Old World catarrhine monkeys of the family *Cercopithecidæ* or *Cynopithecidæ*, the macaques The genus formerly included monkeys between the douces (*Semnopithecinæ*) and the baboons or drills (*Cynocephalinæ*) It was next restricted to species inhabiting the East Indies, having cheek pouches, ischial callosities, and a fifth tubercle on the back molar, such as the wanderoo (*M silenus*), the bonnet-macaque (*M sinicus*), the rhesus monkey (*M rhesus*), the common toque (*M cynomolgus*), etc It is now restricted to species resembling the last-named The leading genera which have been dissociated from *Macacus* are *Cercocebus*, *Inuus*, *Theropithecus*, *Cynopithecus*, and *Cercopithecus*

macadam (mak-ad'am), *n* [Short for *Macadam pavement*. see *macadamize*] Macadamized pavement

There are many varieties of pavement in London, from primitive *macadam* to the noiseless asphalte

Contemporary Rev, LIV 432.

Macadamia (mak-a-dā'mi-ä), *n* [NL (F. von Müller, 1857), named after one *Mac Adam*] A genus of dicotyledonous apetalous plants belonging to the natural order *Proteaceæ* and the tribe *Grevilleæ*, characterized by having two pendulous ovules, seeds with unequal and fleshy cotyledons, anthers on short filaments inserted a little below the lamina, and a ring-like four-lobed or four-parted disk There are two species, found only in eastern Australia. They are tall shrubs or trees with whorled leaves, either entire or serrate, and flowers pedicellate in pairs, in terminal or axillary racemes, the pedicels not connate *M ternifolia* is the Queensland nut tree, a small tree with dense foliage, a firm, fine grained wood, and an edible nut with the taste of hazel, an inch or more in diameter

macadamization (mak-ad'am-i-zā'shon), *n* [< *macadamize* + *-ation*] The process of laying carriage-roads according to the system of John Loudon Macadam, a Scottish engineer (1756–1836), who carried it out very extensively in England In the common process, the top soil of the roadway is removed to the depth of 14 inches Coarse cracked stone is then laid in to a depth of 7 inches, and the interstices and surface-depressions are filled with fine cracked stones Over these as a bed is placed a layer 7 inches deep of road metal or broken stone, of which no piece is larger than 2½ inches in diameter This is rolled down with heavy steam- or horse rollers, and the top is finished with stone crushed to dust and rolled smooth. Also spelled *macadamisation*

macadamize (mak-ad'am-īz), *v t* ; pret and pp. *macadamized*, ppr. *macadamizing*. [< *Macadam*, the name of the inventor, + *-ize* The F. *macadamiser* is from E] To cover (a road or path) with a layer of broken road-metal See *macadamization*. Also spelled *macadamise*

macadamizer (mak-ad'am-ī-zėr), *n* One who lays macadamized roads. Also spelled *macadamiser*.

Macaja butter. See *Cocos.*

macaque (ma-kak'), *n* [< F. *macaque*, < *macaco*, *macaquo*, a native name. see *macaco*[2], *Macacus*] A monkey of the genus *Macacus*; one of the several kinds of monkeys coming between baboons and the African mangabeys. The term has undergone the same restriction of meaning as *Macacus*, and most of the macaques, in a former sense of the word, have received special names The Javan macaque, *M cynomolgus*, with beetling brows and tail about as long as the body, is a fair example of the arboreal forms. The munga, *M sinicus* of India, is known as the bonnet-macaque, from the top knot which parts in the middle. The bunder, or rhesus macaque, *M rhesus*, is a very common Indian species The bruh, or pig-tailed macaque, *M nemestrinus*, is a long limbed form inhabiting the Philippines, with the tail of moderate length In the Bornese black

2. In *mech*, in general, any instrument for the conversion of motion Thus, a machine may be designed to change rapid motion into slow motion, as a crow bar or it may be intended to convert a reciprocating rectilinear motion into a uniform circular motion etc The lever, the wedge, the wheel and axle, the pulley, the screw, and the inclined plane are termed the *simple machines* In practical mechanics the word has a restricted meaning a single device, as a hammer, chisel, crow bar, or saw or a very simple combination of moving parts, as tongs, shears, pincers, etc., for manual use, although comprised in the strict technical definition of *machine*, is always called a *tool* (which see), a device for applying or converting natural motor motion, like that of falling water, or of winds (as a water wheel or windmill), or for converting molecular motion into molar motion (as a steam engine, gas-engine, an engine, or electric engine), is more generally, though not uniformly, called a *motor* The distinction between the words *tool* and *machine* becomes quite indefinite with increased complication of parts. Such machines as are used in shaping materials in the construction of the parts of other machines, and many of those which perform work, such as sawing, boring, planing, riveting, etc., formerly done only by hand and still performed manually to a greater or less extent, are variously called *machines, machine tools, engine tools*, or simply *tools*, although their structure may involve much complexity; the terms *machine tool* and *engine-tool* are more frequently employed, the latter being preferable as being more in accord with best usage Machines receive general or special names from the work they perform or are designed to execute, either with reference to departments of the arts or of industry, as *agricultural machines, hydraulic machines, wood-working machines*, etc, or to their specific work, as *planing machines, sawing-machines, mowing-machines*, etc

8. A strict organization of the working members of a political party, which enables its managers, through the distribution of offices, careful local supervision, and systematic correspondence, to maintain control of conventions and elections, and to secure a predominating influence in the party for themselves and their associates for their own ends, also, the body of managers of such an organization. [U. S]—**Atwood's machine**, an apparatus for illustrating uniformly accelerated motion, consisting of a pulley wheel turning with very slight friction in a vertical plane and carrying a cord with equal weights suspended from its ends. In the common experiment there is an excess of weight at one end of the cord, due to a plate which rests on the weight and is caught when the latter passes through a fixed ring, the weight is set free from a state of rest at a measured position above this ring, so that the acceleration takes place through a known distance, and the velocity per second after the removal of the excess of weight is observed to be proportional to the square root of the distance through which the acceleration takes place The machine is named from its inventor, George Atwood (1746–1807), an English mathematician — **Bulldog machine**, a combined sounding- and dredging machine invented during the voyage of H M S. Bulldog in 1860, under the command of Sir Francis Leopold M'Clintock It is an adaptation of Sir John Ross's deep-sea clam, with the addition of Brooke's principle of the disengaging weight. machine-bolt (ma-shēn'bōlt), *n.* A bolt with a thread and a square or hexagonal head. *E H. Knight.*

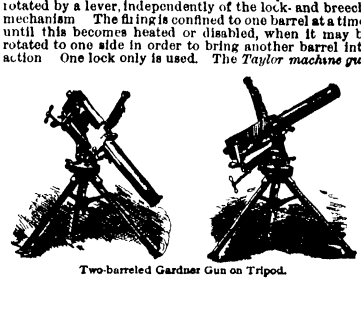
machine-boy (ma-shēn'boi), *n.* In English printing-offices, a boy who serves as helper to a machine-man. In the United States known as *feeder* or *press-boy*.



machineel (mach-i-nēl'), *n* Same as *manchineel*

machine-gun (ma-shēn'gun), *n.* A gun which, by means of a variously contrived mechanism, delivers a continuous fire of projectiles Such a gun may have a single barrel, or a series of barrels arranged horizontally or about a central axis Machine-guns may be divided into two classes those firing small arm ammunition (also called *mitrailleuses*), and those firing shot and shell (called *revolving cannon*) The rapidity of fire of the most rapid machine guns of the first class is about 1,000 shots a minute (See *Gatling gun*, under *gun*[1])

Maxim Field gun, with bullet proof shield

The *Maxim gun* is a single barreled machine-gun invented by Hiram Maxim, an American In it the force of recoil is utilized to load and prepare the next charge for firing, and a water-chamber surrounding the machinery keeps the parts cool It is a very ingenious and efficient invention. The *Lowell battery gun* has four barrels capable of being rotated by a lever, independently of the lock- and breech-mechanism The firing is confined to one barrel at a time, until this becomes heated or disabled, when it may be rotated to one side in order to bring another barrel into action One lock only is used. The *Taylor machine gun*

Two-barreled Gardner Gun on Tripod.

has five parallel barrels arranged horizontally The *Gardner machine-gun* has two to five barrels arranged horizontally Its mechanism is simple, strong, and effective, but it can fire only about 350 shots a minute The *Farwell machine gun* consists of a group of ten steel barrels of 0 45 inch bore, each barrel having its own magazine, containing 50 cartridges The operations of firing, extracting the empty shells, and reloading are accomplished by a single revolution of a crank The *Hotchkiss revolving cannon* is the type of the second class of machine guns It combines the advantages of long range shell-firing with rapidity of action. It has five barrels arranged around a central axis, and the breech is fixed and contains the loading-, firing, and extracting mechanism. The rotation is intermittent, and the loading, firing, and extraction of the empty shell are performed while the barrels are at rest This gun fires from 30 to 80 rounds of explosive shells in a minute, thus delivering from 750 to 2,000 fragments of shell with sufficient force to destroy life There are many forms of this gun, each designed for a special object One form, designed for flank defense of the ditches of fortifications, has every barrel rifled with a different twist, so arranged as to produce five different cones of dispersion, thus sweeping the ditch from end to end The *Nordenfelt machine gun* was designed as a defense against torpedo boats It is made with 2, 3, 4, 5, 7, 10, or 12 barrels, and it can fire either volleys or single barrels. In case a barrel becomes clogged or disabled, the supply of cartridges can be cut off from it and the firing continued with the other barrels The *Colt automatic machine gun* is a single barreled gun in which the pressure of the powder gases, escaping through a small vent, actuates a lever which automatically puts in operation mechanism that withdraws the cartridge case and reloads the gun The cartridges are stripped from feed belts

machine-head (ma-shēn'hed), *n* A rack and pinion sometimes used in stringed musical instruments, like the double-bass and the guitar, instead of the usual tuning-pegs.

machine-made (ma-shēn'mād), *a.* Made by a machine or by machinery.

machine-man (ma-shēn'man), *n* In English printing-offices, the workman who manages or controls the operations of a printing-machine In the United States known as the *pressman*

Mackinaw blanket [So called from *Mackinaw* an abbreviated form of *Michilli-mackinac*, the name of an island in the strait connecting Lakes Michigan and Huron, said to mean in Ojibwa 'turtle,' in allusion to its shape] A name given to the blankets distributed to the Indians of the Northwest by the United States government. The name is or was formerly current chiefly on the upper Great Lakes, and owes its origin to the fact that Fort Mackinaw was for many years the most remote post in the Northwest, so that from this point a large number of Indians received their supplies Mackinaw blankets were of various sizes, colors and qualities.

Mackinaw boat. A flat-bottomed, flat-sided boat with sharp prow and square stern, used on the upper Great Lakes and the rivers emptying into them The advantage of the Mackinaw boat over the birch canoe is that its beam stands rougher handling, and that it can be drawn up on the beach without being unloaded, the disadvantage is that it is too heavy to be carried over portages, as the birch canoe is carried The largest Mackinaw boats are rowed by four or more persons, and are often rigged with a sail.

Mackinaw trout. See *trout.*

mackinst, *n* See *mackin*

mackintosh (mak′in-tosh), *n* [Also *macintosh;* so named from Charles *Mackintosh*, the inventor] 1 A garment, particularly an overcoat or cloak, rendered water-proof by a solution of india-rubber, either applied on the surface as a coating or placed between two thicknesses of some cloth of suitable texture — 2 Rubber cloth of the kind used in making a mackintosh

The bed is covered with a *mackintosh* sheet.
Lancet, No 3426, p 880

mackish (mak′ish), *a.* [Origin uncertain, cf. *mackerly.*] Smart. *Halliwell* [Prov. Eng]

mackle (mak′l), *n* [Early mod. E *macull*, < F. *macle*, a spot: see *macle, macule.*] A spot, specifically, in *printing*, a blemish in press-work made by a double impression, or by slipping or scraping, or by a wrinkle in the paper Also *macle, macule*

mackle (mak′l), *v t.*; pret. and pp. *mackled*, ppr. *mackling* [< F *maculer* = Pr Sp Pg *maculer* = It. *maculare*, < L *maculare*, spot, stain see the noun] To spot, maculate, blur, especially, in *printing*, to make a slipped, blurred, or double impression of Also *macule*

macklint (mak′lin), *n* Short for *Macklin lace*

Macklin lace†. See *lace.*

mackninny† (mak′nin-i), *n.* [Origin not ascertained] A kind of puppet-show

He could represent emblematically the downfall of majesty as in his raree show and *mackninny*
Roger North, Examen, p 590 (*Davies*)

macle (mak′l), *n* [< OF *macle, masele*, F *macle* = Sp *macula* = Pg *macula* = It *macula, macola*, < L *macula*, a spot, stain Cf *macula, macule, maille, masele*[2], *mail*[1], from the same source] 1 Same as *mackle* — 2 In *mineral* (*a*) A kind of twin crystal See *twin* (*b*) Chiastolite, cross-stone, or hollow spar, a variety of andalusite, the crystals of which have the axis and angles colored differently from the remainder See *chiastolite* (*c*) A tessellated appearance in other crystals — 3 In *her*, same as *masele*[2], 3

Macleayan (mak-lā′an), *a* [< *Macleay* (see def.) + *-an*] Pertaining to the Scotch naturalist Macleay — **Macleayan system,** a system of classification proposed by Mr Macleay Also called the *quinarian system* See *quinarian*

macled (mak′ld), *a* [< *macle* + *-ed*[2]] 1 In *mineral*, twinned — 2 Spotted, more or less regularly marked, like a crystal of chiastolite

maclée, *a* [F., < *macle*, macle] Same as *masculed*

McLeod case. See *case*[1]

Maclura (mak-lū′ra), *n.* [NL (Nuttall, 1818), named after W. *Maclure* see *Maclurites*] 1. A genus of plants of the order *Urticaceæ*, the nettle family, the tribe *Moreæ*, and the subtribe *Broussonetieæ*, thus closely related to the mulberry It is characterized by the pistillate flowers having a four-parted perianth and growing in quite large heads, and the staminate flowers in short, loose racemes, the fruit is multiple, composed of many small achenia packed closely together upon a globose, rather fleshy receptacle, resembling a warty green orange There is but a single species, *M aurantiaca*, the Osage orange, a native of Arkansas and adjacent regions in the United States It is a spreading tree with handsome shining ovate leaves, from 30 to 60 feet in height and 2 feet or less in diameter Its wood is hard, strong, and flexible, of a satiny texture, the heartwood bright-orange turning brown, the sapwood lighter It was formerly used by the Indians for bows, hence called by the French settlers *bois d'arc* (bow wood), corrupted into *bowdark* or *bodark* It bears cutting back and has formidable thorns and hence is very extensively used in the United States for hedges See cut in next column 2 In *conch*, same as *Maclurites Ebenezer Emmons*, 1843.

maclureite (mak-lör′īt), *n* [< *Maclure* (see *Maclurites*) + *-ite*[2].] 1 A variety of aluminous pyroxene found at Wilmington, Delaware.—2. A synonym of *chondrodite.*—3. A fossil shell of the genus *Maclurites.* Also *maclurite.*

Maclurites (mak-lộ-rī′tēz), *n.* [NL (Menke, 1830) (F. *Maclurite*—Lesueur, 1818), so called from William *Maclure*, a noted geologist (1763-1840)] The typical genus of the family *Maclauritidæ.* Also *Maclurea, Maclurea, Macluria, Maclurita*

1 Branch of Osage Orange (*Maclura aurantiaca*) with male flowers. 2 Branch with the female inflorescence *a*, a male flower, *b*, a female flower half open, *c* a leaf, showing the nervation

Maclauritidæ (mak-lo-rit′i-dē), *n pl.* [NL, < *Maclurites* + *-idæ*] A family of extinct mollusks, of uncertain relationship, but generally referred to the *Rhipidoglossa* The shell is discoidal, paucispiral, and with the spire sunk in an umbilical cavity The operculum is subspiral and furnished with two internal projections, of which one, be neath the nucleus, is very thick and rugose By Woodward the constituent genus was referred to the heteropod family *Atlantida*, by Tryon as type of a family, to the scutibranchiate gastropods, between the *Bellerophontidæ* and *Haliotidæ*, by others to the family *Solaridæ*, etc Thirteen species have been recognized in the Paleozoic formations from the Lower Silurian to the Carboniferous Also *Maclurea dæ, Macluredæ, Maclauridæ*

Maclurites logani, showing only the shell

Operculum of *Maclurites logani* t t, tubercles

Macmillanite (mak-mil′an-īt), *n* [< *Macmillan* (see def) + *-ite*[2]] A member of the Scottish sect of Cameronians so called after the Rev. John Macmillan, their first ordained clergyman See *Cameronian*, 1

Macont, *n* A variant of *Mahound, Mahoun*

maconite (mā′kon-īt), *n* [< *Macon* (see def.) + *-ite*[2]] A kind of vermiculite found near Franklin in Macon county, North Carolina

maçonné (mas-o-nā′), *a* [F , pp of *maçonner*, mason: see *mason, v.*] In *her*, divided with lines representing the divisions between blocks of stone said especially of a house or castle used as a bearing Also *masoned*

macouba, *n* See *maccouba*

Macquartia (ma-kwär′ti-ä), *n* [NL. (Robineau-Desvoidy, 1830), named after P. J M. *Macquart* (1778–1855), a French entomologist] A genus of flies of the family *Tachinidæ*, or giving name to the family *Macquartidæ* They are of medium and large size, slender, thickly hairy, usually black, often metallic, and are found near streams on the under side of leaves.

Macquartiidæ (mak-wär-ti′i-dē), *n pl* [NL., < *Macquartia* + *-idæ*] A family of dipterous insects, typified by the genus *Macquartia.* Also *Macquartidæ*

macramé (mak-ra-mā′), *n* [It *macrame*, said to be of Ar origin] An ornamental trimming made by leaving a long fringe of thread and knotting the threads together so as to form geometrical patterns. Also called *knotted-bar work.*—**Macramé cord,** a kind of fine cord prepared for the manufacture of macramé lace, and also used for other work, such as netting of various kinds, and for hammocks —**Macramé lace,** a kind of knotted work in which elaborate fringes and the like are made in modern imitation of the old knotted point.

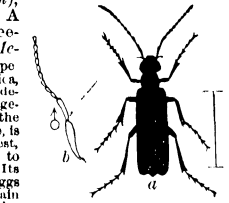
macrandrous (mak-ran′drus), *a.* [< Gr. μακρός, long (see *macron*), + ἀνήρ (ἀνδρ-), male (in bot a stamen)] Having elongated male plants, as certain algæ, particularly the *Œdogoniaceæ*

macrauchene (mak-rȧ′kēn), *n* [< *Macrauchenia.*] A member of the *Macrauchenidæ*

Macrauchenia (mak-rȧ-kē′ni-ȧ), *n.* [NL., < Gr. *μακραυχήν*, long-necked, < *μακρός*, long, + *αὐχήν*, neck] A genus of fossil perissodactyls founded by Owen in 1838 upon remains of camel-like quadrupeds found in the Tertiary of South America Two species are named *M. patachonica* and *M bolivensis* *Opisthorhinus* is synonymous

Macraucheniidæ (mak-rȧ-kē-nī′i-dē), *n pl.* [NL , < *Macrauchenia* + *-idæ*] A family of perissodactyl *Ungulata*, established upon the genus *Macrauchenia.* These great ungulates were long necked, like camels (whence the name), but were more nearly related to the rhinoceros The cervical vertebræ resemble those of camels in the disposition of the vertebrarterial foramina, but their centra are flat, not opisthocœlous The fibula articulates with the calcaneum, and each foot is 3-toed The dental formula is 3 incisors, 1 canine, 4 premolars, and 3 molars in each upper and lower half-jaw — in all, 44 teeth, in almost continuous series, the canines being small Two or three upper molars have each a shallow valley extending inward from the anterior part of the inner wall, and all the lower premolars and molars have two crescentic ridges, anterior and posterior The nearest relatives of the *Macrauchenidæ* are the *Palæotheriidæ* and *Rhinocerotidæ*

macraucheniiform (mak-rȧ-kē′ni-i-fôrm), *a.* [< NL. *Macrauchenia* + L. *forma*, form] Having the form or characters of a macrauchene



macrencephalic (mak″ren-se-fal′ik or -sef′a-lik), *a.* [As *macrencephal-ous* + *-ic*] Same as *macrencephalous.*

macrencephalous (mak-ren-sef′a-lus), *a* [< Gr. *μακρός*, long, + *ἐγκέφαλος*, the brain: see *encephalic.*] Having a long or large brain

macriot, *n.* [A corrupt form of F *maquereau* see *mackerel*[2].] Same as *mackerel*[2].

Pander, wittol, *macrio*, basest of knaves
Middleton, Anything for a Quiet Life, v 1

Macrobasis (mak-rob′a-sis), *n* [< Gr. *μακρός*, long (see *macron*), + *βάσις*, a base] A genus of blister-beetles of the family *Meloidæ.* There are 14 species in North America, several of which are destructive to garden vegetables *M cinerea*, the ash gray blister beetle, is a common garden pest, particularly injurious to potatoes and beets Its larvæ prey upon the eggs of the Rocky Mountain locust See cut under *blister beetle*

Black rat blister beetle (*Macrobasis murina*) *a* male beetle (line shows natural size), *b*, enlarged antenna of same

macrobiosis (mak″rō-bī-ō′sis), *n* [NL , < Gr. *μακροβιωσις*, long life, < *μακρόβιος*, having a long life: see *macrobiote*] Long life, longevity

macrobiote (mak-rō′bi-ōt), *n* [< Gr *μακροβίοτος*, also *μακρόβιος*, having a long life, < *μακρός*, long, + *βίος*, life] One who lives long, a long-lived person or animal.

The Thessalian mountaineers were the *macrobiotes*, the long livers par excellence, of the Roman Empire
F L Oswald, Pop Sci Mo , XXI 590

macrobiotic (mak″rō-bī-ot′ik), *a.* [< *macrobiote* + *-ic*] Long-lived, having a strong hold on life: specifically applied to the *Macrobiotidæ*

macrobiotics (mak″rō-bī-ot′iks), *n.* [Pl of *macrobiotic* see *-ics*] Knowledge relating to long life; the study of longevity.

Old age, such as [that of Isocrates], was a very rare thing in Greece — a fact which is evident from the Greek work surviving on the subject of *macrobiotics*
De Quincey, Style, note 9

Macrobiotidæ (mak″rō-bī-ot′i-dē), *n pl.* [NL., < *Macrobiotus* + *-idæ.*] A family of *Arctisca*, typified by the genus *Macrobiotus* They are minute vermiform arachnidans without respiratory organs, forming one group of a number of animalcules known as *sloth-* or *bear animalcules* or *water bears*, from their sluggish movements The form is usually a long oval, and there are four pairs of short clawed legs These animals are found in moss or fresh water, and resemble rotifers in their power of reviving after desiccation, whence their name

Macrobiotus (mak-rō-bī′ō-tus), *n* [NL , < Gr. *μακροβιοτος*, having a long life: see *macrobiote.*] The typical genus of *Macrobiotidæ* *M shultzei* is an example. See cut under *Arctisca*

Macrocameræ (mak-rō-kam′e-rē), *n. pl.* [NL. · see *macrocamerate*] 1. A subtribe of choristidan sponges having large chambers distinguished from *Microcameræ.* *Lendenfeld* — 2. A tribe of ceratose sponges with large saccate chambers and soft transparent ground-substance. *Lendenfeld.*

macrocamerate (mak-rō-kam′e-rāt), *a* [< Gr. *μακρός*, long, + *καμάρα*, a vaulted chamber: see *camera.*] Having large chambers, as a sponge; specifically, of or pertaining to either of the groups *Macrocameræ.*

macrocarpous (mak-rō-kär′pus), *a.* [< Gr. *μακρός*, long, + *καρπός*, fruit] Having large fruit

Macrocentri (mak-rō-sen′trī), *n pl* [NL , pl of *Macrocentrus*, q v.] One of two prime sections of the parasitic hymenopterous family *Chalcididæ.* It includes 13 subfamilies and the largest species in the family, having 5 jointed tarsi, usually many jointed antennæ, and anterior tibiæ armed with a large curved spur

Macrocentrus (mak-rō-sen′trus), *n.* [NL (Curtis, 1833), < Gr. *μακροκεντρος*, having a long sting, < *μακρός*, long, + *κεντρον*, a goad, sting see *center*[1].] A genus of ichneumon-flies, typical of the subfamily *Macrocentrinæ*, having the abdomen inserted above the hind coxæ North America and Europe have each about 6 species *M delicatus* is a common parasite of the codling moth in the United States

macrocephalic (mak″rō-se-fal′ik or -sef′a-lik), *a.* [As *macrocephal-ous* + *-ic*] **1.** Of or pertaining to a large head, associated with excessive size of the head as, *macrocephalic* idiocy.— **2.** In *anc. pros*, having one syllable too many at the beginning: an epithet of dactylic hexameters the first foot of which apparently has a syllable in excess Also *procephalic.* See *dolichuric*

macrocephalous (mak-rō-sef′a-lus), *a* [< Gr *μακροκέφαλος*, long-headed, < *μακρός*, long, + *κεφαλή*, head.] **1.** In *zool*, having a long or large head — **2** In *bot*, having the cotyledons of a dicotyledonous embryo consolidated, and forming a large mass compared with the rest of the body

Macrochelys (mak-rok′e-lis), *n.* [NL , < Gr *μακρός*, long, + *χέλυς*, a tortoise see *chelys*] A genus of snapping-turtles of the family *Chelydridæ* *M lacertina* is a large alligator-turtle inhabiting the southern United States.

macrochemical (mak-rō-kem′i-kal), *a* [< Gr *μακρός*, long, large, + E *chemical*] Of or pertaining to chemical tests which may be applied, or reactions which may be observed, with the naked eye: distinguished from *microchemical*

Macrochira (mak-rō-kī′ri-ȧ), *n* [NL , < Gr *μακρόχειρ*, long-handed (long-armed), < *μακρός*, long, + *χείρ*, the hand] **1** A genus of large maioid crabs, having enormously long legs and a comparatively small body The giant spider crab of Japanese waters, a species of this genus, has legs which span 18 feet or more, though the body is only a foot broad and 18 inches long

2. A genus of dipterous insects

macrochiran (mak-rō-kī′ran), *a.* and *n.* [As *macrochire* + *-an*] **I.** *a* Long-handed, having a long manus or pinion of the wing, as a swift or a humming-bird; specifically, of or pertaining to the *Macrochires*

II. *n* Any member of the *Macrochires*, a macrochire

macrochire (mak′rō-kīr), *n.* A bird of the group *Macrochires*

Macrochires (mak-rō-kī′rēz), *n. pl* [NL , < Gr *μακρόχειρ*, long-handed (long-armed) see *Macrochira*] A group of birds, so named from the length of the terminal as compared with the proximal portion of the wing As originally used by Nitzsch, 1829, it included the humming birds and swifts (*Trochili* and *Cypseli*), to which are now usually added the goatsuckers (*Caprimulgi*) nearly synonymous with *Cypseliformes*

macrochiropter (mak′rō-kī-rop′tėr), *n.* Same as *macrochiropteran.*

Macrochiroptera (mak′rō-kī-rop′te-rȧ), *n. pl* [NL., < Gr. *μακρός*, long, large, + NL. *Chiroptera*] A suborder of *Chiroptera*, comprising the largest species of the order. It consists of the fruit-bats, or *Frugivora*, as distinguished from the *Microchiroptera*, or ordinary bats. Usually *Megachiroptera*

macrochiropteran (mak′rō-kī-rop′te-ran), *a* and *n.* **I.** *a.* Of or pertaining to the *Macrochiroptera.*

II. *n.* One of the *Macrochiroptera*, a frugivorous bat, or fruit-bat. Also *macrochiropter.*

macrochoanite (mak-rō-kō′a-nīt), *a* and *n* [< NL. *Macrochoanites.*] **I.** *a.* Having long septal funnels, as a cephalopod, or of pertaining to the *Macrochoanites.*

II. *n.* One of the *Macrochoanites.*

Macrochoanites (mak-rō-kō-a-nī′tēz), *n. pl* [NL , < Gr. *μακρός*, long, + *χοάνη*, a funnel: see *choanite.*] A group of cephalopods, containing those nautiloids and ammonoids whose septal funnels are long *Hyatt*, Proc. Bost. Soc. Nat. Hist., 1883, p. 260.

Macrocnemum (mak-rok-nē′mum), *n.* [NL (P Browne, 1756), so called in allusion to the long flower-stalk; < Gr. *μακρός*, long, + *κνημη*, a leg. see *cnemis*] A genus of dicotyledonous gamopetalous plants of the natural order *Rubiaceæ*, the madder family, tribe *Cinchoneæ*, and subtribe *Eucinchoneæ* It is characterized by the placentæ being adnate to the middle partition, a capsule usually septicidal, corolla lobes with pubescent margins, and a style which is two cleft at the apex There are about 9 species, confined to tropical America and the West Indies They are trees or shrubs with opposite petiolate leaves, deciduous stipules between the petioles, and white or rose colored flowers in terminal or axillary panicles Several species are cultivated for ornament, among them *M Jamaicense*, with white flowers, called in Jamaica *whitethorn*

macrococcus (mak-rō-kok′us), *n* , pl *macrococci* (-sī) [NL , < Gr *μακρός*, long or large, + *κόκκος*, a berry see *coccus*] A somewhat general term applied to certain bacteria, having reference to the dimensions of the isolated individual cells

Cocci isolated cells which are isodiametric, or at least very slightly elongated in one direction These are distinguished when necessary, according to their dimensions, into micrococci, *macrococci*, and monad forms
De Bary, Fungi (trans.), p 458.

macroconidium (mak″rō-kō-nid′i-um), *n* ; pl. *macroconidia* (-ȧ) [NL , < Gr. *μακρός*, long, large, + NL. *conidium*, q.v] A conidium of large size. See *conidium*

macrocosm (mak′rō-kozm), *n.* [< Gr. *μακρός*, long, large, great, + *κόσμος*, world: see *cosmos*[1]. Cf *microcosm*] **1.** The great world; the universe, or the visible system of worlds opposed to *microcosm*, or the little world constituted by man The conception dates back to Democritus (born 460 B C) See *microcosm*

The first section shews the use that the Christian virtuoso may make of the contemplation of the *macrocosm*, and especially of the later discoveries made in the celestial part of it
Boyle, Christian Virtuoso, II

2 The entire mass of anything of which man forms a part; the whole of any division of nature or of knowledge

The *macrocosm* of society can be inferred from the microcosm of individual human nature
N A Rev, CXX 256.

According to Raymond, man is the microcosm from which the whole *macrocosm* of theology is evolved
J Owen, Evenings with Skeptics, II 445.

macrocosmic (mak-rō-koz′mik), *a* [< *macrocosm* + *-ic*] Of or pertaining to the macrocosm, of the nature of a macrocosm, comprehensive; immense

The world with which alone consciousness has to do is the world as it has been organised and registered in the brain by experience, and the journeys which it makes are no more than the microcosmic representatives of *macrocosmic* distances
Maudsley, Mind, XII 608.

macrocyst (mak′rō-sist), *n* [< Gr. *μακρός*, long or large, + E *cyst*] A cyst of large size: applied particularly to the cyst or spore-case of certain algæ, notably *Pyrocystis*

Macrocysteæ (mak-rō-sis′tē-ē), *n. pl.* [NL. (Kuetzing, 1849), < *Macrocystis* + *-eæ*] A division of marine algæ belonging to the *Laminariaceæ*, named from the genus *Macrocystis*, and containing also the genera *Lessonia*, *Nereocystis*, and *Pinnaria.*

Macrocystis (mak-rō-sis′tis), *n* [NL (Agardh, 1824), < Gr *μακρός*, long, + *κυστις*, a bladder, bag: see *cyst*] A monotypic genus of gigantic seaweeds belonging to the *Laminariaceæ* When fully grown the frond consists of a much branched root, from which arise many filiform simple or branched stems, naked below but furnished above with numerous unilateral lanceolate petiolate leaves, having thin petioles enlarged into pear shaped or oblong air-cells The lateral leaves have their edges directed toward the stem, and are so far

Macrocystis pyrifera

vertically disposed, and the stem itself when unbroken always terminates in an oblique leaf broader than the rest and having one or more slits in its base This terminal leaf is the growing apex, and from the development of the slits in the base new lateral leaves are gradually separated The spores form dense, cloud like, irregular patches on small radical leaves *M pyrifera*, the only species, grids the southern temperate zone in its distribution The stems, which are the longest known in the vegetable kingdom, vary from 5 feet to several hundred feet in length, and Hooker observed them near the Crozet Islands fully 700 feet long *Harvey*

macrodactyl, macrodactyle (mak-rō-dak′til), *a.* and *n.* [< NL *macrodactylus*, < Gr. *μακροδάκτυλος*, long-fingered (long-toed), < *μακρός*, long, + *δάκτυλος*, finger, toe] **I.** *a* Having long toes, specifically, of or pertaining to the *Macrodactyli* Also *macrodactylic, macrodactylous*

II. *n* One of the *Macrodactyli.*

Macrodactyla (mak-rō-dak'ti-lă), *n. pl* [NL., neut pl. of *macrodactylus* see *macrodactyl*] In Latreille's system, the second tribe of the second section of *Clavicornes*, having simple narrow tibiæ and long five jointed tarsi, the last joint of which is large, with two strong hooks Also *Macrodactyli*

Macrodactyli (mak-rō-dak'ti-lī), *n pl* [NL, pl of *macrodactylus* see *macrodactyl*] 1 Same as *Macrodactyla* —2 In Cuvier's system, a group of *Gralla* or wading birds, including the jacanas, horned screamers, and mound-birds, with the rails, crakes, coots and gallinules It is a heterogeneous group, no longer in use

macrodactylic (mak rō-dak-til'ik), *a* [As *macrodactyl* + *-ic*] Same as *macrodactyl*

Macrodactylidæ (mak'rō-dak-til'i-dē), *n pl* [NL, < *Macrodactylus* + *-idæ*] A family of *Coleoptera*, named in 1837 by Kirby from the genus *Macrodactylus* now generally merged in *Scarabæidæ*

macrodactylous (mak-rō-dak'ti-lus), *a* [< NL *macrodactylus*, long-toed see *macrodactyl*] Same as *macrodactyl*

Macrodactylus (mak-rō-dak'ti-lus), *n* [NL. (Latreille, 1825) see *macrodactyl*] A genus of lamellicorn beetles, the type of the family *Macrodactylidæ* It comprises rather small species, of graceful form and variable colors, with slender legs and the tarsal claws split at the tip Of its more than 30 species, 3 are North American of which *M spinosus*, erroneously called *rose bug*, is very destructive to roses and many fruits of the family *Rosaceæ* It is about one third of an inch long, of a yellowish color with long brown legs, and appears suddenly in June in immense numbers

macrodiagonal (mak'rō-di-ag'ō-nal), *a* and *n* [< Gr. *μακρός*, long, + *διαγωνιος*, diagonal see *diagonal*] **I.** *a* Constituting or being the longer diagonal of a rhombic prism, pertaining to the macrodiagonal —**Macrodiagonal axis**, in *crystal*, the longer lateral axis in an orthorhombic crystal —**Macrodiagonal section**, a plane passing through the macrodiagonal and vertical axes of a crystal

II. *n* The longer of the diagonals of a rhombic prism.

macrodomatic (mak'rō-dō-mat'ik), *a* [< *macrodome* + *-atic*[2]] Of or pertaining to a macrodome.

macrodome (mak'rō-dōm), *n* [< Gr. *μακρος*, long, + *δομος*, *δωμα*, a house, dome see *dome*[1]] In *crystal*, a dome parallel to the macrodiagonal axis of an orthorhombic crystal See *dome*[1], 5

macrodont (mak'rō-dont), *a* [< Gr *μακρος*, long, + *ὀδους* (*ὀδοντ-*) = E *tooth*] Having large teeth.

macrodontism (mak'rō-don-tizm), *n* [< *macrodont* + *-ism*] A form of dentition in which the teeth are large

Macroglossa (mak-rō-glos'ă), *n* [NL, < Gr. *μακρός*, long, + *γλῶσσα*, the tongue see *glossa*] 1. A genus of hawk-moths of the family *Sesiidæ*, having a short abdomen with a large bunch of hair at the tip, like a bird's tail The wings are short, often opaque, and sometimes glossy Nearly 100 species are known, they fly by day, and with great swiftness. *M stellatarum* is known as the *humming bird hawk-moth* (which see, under *hawk moth*).

2. Same as *Macroglossus*

macroglossate (mak-rō-glos'āt), *a* [As *Macroglossa* + *-ate*[1]] Having a long tongue

Macroglossi (mak-rō-glos'ī), *n pl* [NL, pl of *Macroglossus*, q. v] A division of *Pteropodidæ*, or fruit-bats, having an extremely long slender tongue It includes the genera *Notopteris*, *Eonycteris*, *Melonycteris*, and *Macroglossus*

macroglossia (mak-rō-glos'i-ă), *n.* [NL, < Gr *μακρός*, long, + *γλῶσσα*, the tongue. see *glossa*] In *pathol*, hypertrophy of the tongue

macroglossine (mak-rō-glos'in), *a.* [As *Macroglossa* + *-ine*[1]] Same as *macroglossate*

Macroglossus (mak-rō-glos'us), *n* [NL, < Gr *μακρός*, long, + *γλῶσσα*, the tongue see *glossa*] A genus of very small fruit-bats, with the dental formula as in *Eonycteris*, but the index-finger with a claw. *M. minimus* is a common Indian species, smaller than the serotine of Europe

macrognathic (mak-rog-nath'ik), *a.* [< Gr *μακρος*, long, + *γνάθος*, the jaw see *gnathic*] Having long jaws, prognathous. Applied by Huxley to human skulls of Neolithic age, of a broad or rounded form, with prominent probolic and angular or lozenge shaped facial region, and highly developed and procurrent jaws

macrognathous (mak-rog'nā-thus), *a* Same as *macrognathic*.

macrogonidium (mak'rō-gō-nid'i-um), *n*, pl *macrogonidia* (-ă) [NL, < Gr *μακρός*, long, large + NL *gonidium*, q v] In *bot*, a large gonidium as compared with others produced by the same species See *gonidium* and *microgonidium*.

macrolepidopter (mak-rō-lep-i-dop'tėr), *n* Any member of the group *Macrolepidoptera*

Macrolepidoptera (mak-rō-lep-i-dop'te-rā), *n. pl* [NL, < Gr *μακρος*, long, + NL *Lepidoptera*, q v.] Lepidopterous insects of considerable size, as collectively distinguished from the smaller forms, which are called *Microlepidoptera* The name includes all the butterflies or *Rhopalocera*, and the following six families of moths or *Heterocera Sphingidæ*, *Sesiidæ*, *Zygænidæ*, *Bombycidæ*, *Noctuidæ*, and *Geometridæ*

macrolepidopterist (mak-rō-lep-i-dop'te-rist), *n.* [< *Macrolepidoptera* + *-ist*] One who is versed in the natural history of the *Macrolepidoptera*

Macroleptes (mak-rō-lep'tēz), *n. pl* [NL (Swainson, 1839)] A tribe of acanthopterygian fishes distinguished by the development of conspicuous scales and large branchial apertures. It was intended to include the pereiform, chætodontoid, labroid, and similar fishes. [Rarely used]

macrology (mak-rol'ō-ji), *n* [< LL *macrologia*, < Gr *μακρολογια*, long speaking, < *μακρολογος*, speaking long, < *μακρος*, long, + *λέγειν*, speak see *-ology*] Long and tedious talk; prolonged discourse, with little or nothing to say, superfluity of words [Rare]

macromeral (mak'rō-mē-ral), *a* [< *macromere* + *-al*] Of or pertaining to a macromere as, *macromeral* blastomeres

macromere (mak'rō-mēr), *n* [< Gr. *μακρός*, long, + *μερος*, a part] In *embryol*, the larger one of two unequal masses into which the vitellus of a lamellibranch, as a fresh-water mussel, divides, the so-called vegetative cell of Rabl, which subdivides into blastomeres, partly by fission, partly by gemmation. See *micromere*.

macromeric (mak-rō-mer'ik), *a* [< *macromere* + *-ic*] Same as *macromeral* *Huxley*

macromeritic (mak'rō-mē-rit'ik), *a* [As *macromere* + *-itic*[2] + *-ic*] In *lithol*, an epithet introduced by Vogelsang to designate the granitoid structure of a rock when developed coarsely enough to be recognizable by the naked eye *Macromeritic* is opposed to *micromeritic*, the latter indicating a crystalline structure too fine to be visible without the aid of the microscope

macrometer (mak-rom'e-ter), *n* [< Gr *μακρός*, long, + *μετρον*, measure] A mathematical instrument for measuring inaccessible heights and objects by means of two reflectors on a common sextant

macromolecule (mak-rō-mol'e-kūl), *n* [< Gr *μακρός*, long, + E *molecule*] A molecule consisting of several molecules *G J Stoney*, 1885

macromyelon (mak-rō-mī'e-lon), *n* [NL, < Gr *μακρος*, long, + *μυελος*, marrow] Owen's name of the medulla oblongata same as the *myelencephalon* of Huxley and the *metencephalon* of Quain and most anatomists

macromyelonal (mak-rō-mi'e-lon-al), *a* [< *macromyelon* + *-al*] Pertaining to the macromyelon, metencephalic.

macron (mak'ron), *n.* [< Gr *μακρόν*, neut of *μακρός*, long, tall, deep, far, large, great, long in time, akin to *μῆκος*, Doric *μᾶκος*, length, and prob = L *macer* (*macr-*), lean, lank see *meager*.] In *gram*, a short horizontal line placed over a vowel to show that it is long in quantity, or, as in English, has a "long" sound: opposed to the *breve*, or mark of a short vowel. Thus, in Greek *ᾱ*, *ῑ*, and in Latin *ā*, *ē*, *ī*, *ō*, *ū*, the long vowels corresponding to the short vowels *ă*, *ĕ*, *ĭ*, *ŏ*, *ŭ*, etc , in English, *ā*, *ē*, *ī*, *ō*, *ū*, the conventional notations of the name sounds of these vowels In this dictionary, in the etymologies, the macron is used uniformly to indicate a vowel long in quantity, to the exclusion of the circumflex (except in Greek) and the acute, which are elsewhere often used for the same purpose Thus the Anglo Saxon and Icelandic long vowels often the Icelandic usually, denoted by the acute are uniformly marked with the macron (the acute, in Anglo Saxon, being retained only as a convenient indication of a diphthong, as in *eá*, *eó*, etc). Also called *macrotone*

Macronemeæ (mak-rō-nē'mē-ē), *n. pl.* [NL, < Gr. *μακρος*, long or large, + *νῆμα*, a thread, + *-eæ*] A name given by Saccardo to various subsections of the *Mucedineæ*, depending upon the size of the hyphæ.

macronucleus (mak-rō-nū'klē-us), *n* ; pl *macronuclei* (-ī). [NL, < Gr *μακρός*, long, large, + NL *nucleus*] A large nucleus which may subdivide into or be replaced by smaller nuclei.

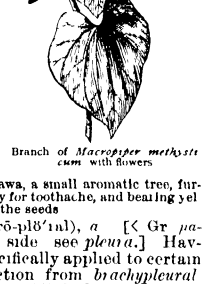
Macronyches (mak-ron'i-kēz), *n pl* [NL, < Gr *μακρός*, long, + *ὀνυξ* (*ὀνυχ-*), claw, talon see *onyx*.] In Sundevall's classification of birds, a cohort of *Gallinæ*, composed of the Australian mound-birds or *Megapodiæ*

Macronyx (mak'rō-niks), *n* [NL , < Gr *μακρός*, long, + *ὀνυξ* (*ὀνυχ-*), claw, talon see *onyx*] 1 In *ornith.*, a genus of African larks of the family *Alaudidæ*, named by Swainson in 1827 on account of the long hind claw. There are several species, as *M capensis*.—2 In *entom* . (*a*) A genus of exotic robber-flies of the family *Asilidæ* (*b*) A genus of noctuid moths *Felder*, 1874.

macropetalous (mak-rō-pet'a-lus), *a.* [< Gr *μακρος*, long, + *πέταλον*, a leaf (petal) see *petal*] In *bot*, having large petals.

macrophthalmous (mak-rof-thal'mus), *a.* [< Gr *μακρός*, long, large, + *ὀφθαλμος*, eye] In *zool.*, having large eyes

macrophylline (mak-rō-fil'in), *a* [NL , < Gr *μακρός*, long, large, + *φύλλον*, a leaf] In *bot*, consisting of elongated, extended leaflets or foliose expansions· opposed to *microphylline*



macrophyllous (mak-rō-fil'us), *a* [< Gr. *μακρόφυλλος*, long-leafed, < *μακρος*, long, + *φύλλον*, = L. *folium*, a leaf] In *bot*, having large leaves

Macropina (mak-rō-pī'nă), *n. pl* [NL., < *Macropus* + *-inæ*[2]] A division of marsupials, containing the kangaroos *J E Gray*, 1825

macropinacoid (mak-rō-pin'a-koid), *n* [< Gr *μακρός*, long, + *πιναξ* (*πινακ-*), a board, tablet, + *εἶδος*, form] In *crystal*, a plane parallel to the vertical and macrodiagonal axes of an orthorhombic crystal See *pinacoid*

macropinacoidal (mak-rō-pin-a-koi'dal), *a* [< *macropinacoid* + *-al*] Of or pertaining to a macropinacoid as, *macropinacoidal* planes

Macropiper (mak-rop'i-per), *n* [NL (F A. Miquel, 1840), < Gr *μακρος*, long, + *πιπερι*. > L *piper*, pepper see *pepper*] A genus of dicotyledonous apetalous plants belonging to the natural order *Piperaceæ* and the tribe *Pipereæ*, characterized by an ovary with one cell and one ovule, flowers imperfect, usually in dense axillary spikes, and the fruit sessile, the berries often having the fleshy bracts and rachis united with them to form a multiple fruit There are about 6 species, natives of the islands in the Pacific They are shrubs, with erect stems, and alternate leaves on petioles dilated at the base *M methysticum* is the Polynesian ava, cava, or kava, from whose root a stimulating beverage is made (See *kava*.) *M excelsum* is the native pepper of New Zealand, the kawa kawa, a small aromatic tree, furnishing a tea and a remedy for toothache, and bearing yellow berries edible except the seeds

Branch of *Macropiper methysticum* with flowers

macropleural (mak-rō-plū'ral), *a* [< Gr *μακρός*, long, + *πλευρά*, side see *pleura*.] Having long pleuræ specifically applied to certain trilobites, in distinction from *brachypleural* *Amer. Jour Sci*, 3d ser , XXXII. 475

macropod (mak'rō-pod), *a* and *n* [< Gr *μακρόπους* (*-ποδ-*), long-footed, < *μακρός*, long, + *πούς* (*ποδ-*) = E *foot*] **I.** *a* Having long or large feet or legs

II. *n.* A long-legged or long-footed animal

macropodal (mak-rop'ō-dal), *a* [As *macropod* + *-al*] Same as *macropod*.

macropodan (mak-rop'ō-dan), *a* and *n.* [As *macropod* + *-an*] Same as *macropod*

Macropodia (mak-rō-pō'di-ă), *n.* [NL., < Gr. *μακρόπους* (*-ποδ-*), long-footed· see *macropod.*] A genus of spider-crabs or sea-spiders founded by W E Leach in 1813 upon the common British species formerly known as *Cancer phalangium*, and made the type of a family *Macropodiadæ*. *Stenorhynchus* of Latreille is a synonym.

Macropodiadæ (mak'rō-pō-dī'a-dē), *n. pl.* [NL , < *Macropodia* + *-adæ*.] A family of enormously long-legged crabs, typified by the genus *Macropodia* *Leptopodiadæ* is a synonym. Also *Macropodidæ*

macropodian (mak-rō-pō'di-an), *a.* and *n.* [As *macropod* + *-an*] **I.** *a* Long-legged; macropod; specifically, of or pertaining to the *Macropodiadæ*

II. *n* A long-legged crab; a member of Leach's family *Macropodiadæ*.

Macropodidæ (mak-rō-pod'ı-dē), *n pl.* [< *Macropus* (*-pod-*) + *-idæ.*] 1. A family of marsupial mammals of the order *Didelphia* or *Marsupialia*, the kangaroos. The weight of the body is in the hind quarters, limbs, and tail, these parts being disproportionately enlarged The head is long with large ears and lashed eyelids, the physiognomy resembling that of some ruminants, the neck is slender, and the fore quarters are light, with small limbs ending in five-fingered hands The hind feet have no inner toe, the second and third toes being much reduced and inclosed in skin, the weight of the body is borne upon the enlarged fourth and fifth digits The stomach is sacculated and the diet strictly herbivorous. The dental formula is 3 incisors above and 1 below on each side, 1 canine, 1 premolar, and 4 molars in each upper, no canine, 1 premolar, and 4 molars in each lower half jaw — in all, 30 teeth, of which the upper canines may be absorbed, and 1 molar on each side above and below may be deciduous The leading genera are *Macropus, Halmaturus, Lagorchestes Petrogale, Dendrolagus,* and *Dorcopsis* See *kangaroo* 2. Same as *Macropodidæ*

Macropodinæ (mak″rō-pō-dī'nē), *n pl.* [NL, < *Macropus* (*-pod-*) + *-inæ*] The leading subfamily of *Macropodidæ*, the kangaroos proper When the kangaroo rats (*Hypsiprymnadæ*) were included in *Macropodidæ*, this family was divisible into *Macropodinæ* and *Hypsiprymninæ*

macropodous (mak-rop'ō-dus), *a* [As *macropod* + *-ous*] In *bot.*, long-footed, of a leaf, having a long footstalk, of a monocotyledonous embryo, having the radicle large in proportion to the cotyledon

Macropoma (mak-rō-pō'ma), *n* [NL., < Gr *μακρός*, long, + *πῶμα*, a cover, lid (operculum)] A genus of fossil cœlacanthoid ganoid fishes founded by Agassiz upon forms of Cretaceous age with homocercal tail and large operculum

macroprism (mak'rō-prizm), *n* [< Gr *μακρος*, long, + *πρισμα*, prism] A prism of an orthorhombic crystal lying between the unit prism and the macropinacoid

macropter (mak-rop'tėr), *n* [< Gr *μακρόπτερος*, long-winged see *macropterous*] An animal with long wings or fins

macropteran (mak-rop'te-ran), *a.* Same as *macropterous.*

macropterous (mak-rop'te-rus), *a* [< Gr. *μακρόπτερος*, long-winged, < *μακρός*, long, + *πτερόν*, wing, = E *feather*] Long-winged, macropteran, longipennine or longipennate, as a bird

Macropus (mak'rō-pus), *n* [NL., < Gr *μακρόπους*, long-footed see *macropod*] 1 The typical genus of *Macropodidæ*, established by Shaw in 1800 *M major* is the giant kangaroo, or forester. See *forester*, 4, and cut under *kangaroo* —2† A generic name which has been variously used for certain fishes, birds, insects, and crustaceans, but is no longer in use, being antedated by the same name in mammalogy

Macropygia (mak-rō-pij'ı-a), *n.* [NL (Swainson, 1837), < Gr *μακρος*, long, + *πυγή*, rump, tail] A genus of *Columbidæ*, including many species of the East Indies and Australia, of large size with long, broad tail, such as *M. tenuirostris*, the cuckoo-doves

macropyramid (mak-rō-pir'a-mid), *n* [< Gr *μακρός*, long, + *πυραμίς*, pyramid] A pyramid of an orthorhombic crystal lying between the zone of unit pyramid and the macrodomes

A new pyramid is produced, named a *macropyramid*
Encye Brit, XVI 360

Macrorhamphosidæ (mak″rō-ram-fos'ı-dē), *n. pl.* [NL, < *Macrorhamphosus* + *-idæ.*] A family of hemibranchiate fishes, typified by the genus *Macrorhamphosus.* They have the body compressed, armed with bony plates anteriorly and especially on the back, a long tubiform snout, abdominal ventral fins with a spine and 7 rays, and a distinct dorsal fin at or behind the middle of the length. The family consists of few species and two genera, the leading one of which is *Macrorhamphosus* or *Centriscus* *M* or *C scutatus* inhabits especially European seas, north to the southern coast of Great Britain, but has also been found on the Massachusetts coast These fishes are known as *trumpet-fish, bellows fish, snipefish, woodcock fish,* and *sea snipe* Also called *Centriscidæ*

macrorhamphosoid (mak″rō-ram-fō'soid), *a.* and *n* [< *Macrorhamphosus* + *-oid*] **I.** *a.* Pertaining to the *Macrorhamphosidæ*, or having their characters

II. *n.* One of the *Macrorhamphosidæ.*

Macrorhamphosus (mak″rō-ram-fō'sus), *n* [NL , < Gr. *μακρός*, long, + *ῥάμφος*, a bill, beak, + L. term. *-osus*, E. *-ose, -ous.*] The typical genus of *Macrorhamphosidæ*, established by Lacépède in 1802, commonly called *Centriscus*

Macrorhamphus (mak-rō-ram'fus), *n* [NL., < Gr. *μακρός*, long, + *ῥάμφος*, a bill, beak] A leading genus of *Scolopacidæ*, founded by Stephens in 1824, the robin-snipes or web-toed snipes. The bill is exactly as in the true snipes (*Gallinago*), but the feet are semipalmate, the wings are long and pointed, the tail is doubly emarginate and has only 12 rectrices, the tibiæ are naked below, and the tarsus is longer than the middle toe and claw In the pattern and changes of plumage the species resemble sandpipers *M griseus* is the common red breasted or gray backed snipe or dowitcher of North America. Also written *Macroramphus*

macrorhine (mak'rō-rin), *a.* [< Gr. *μακρόρρις* (*-ριν-*), long-nosed, < *μακρός*, long, + *ῥις, ῥιν* (*ῥιν-*), nose] Having a long nose or snout

Macrorhinus (mak-rō-rī'nus), *n* [NL , < Gr. *μακρόρρις*, long-nosed, < *μακρός*, long, + *ῥις* (*ῥιν-*), nose.] 1. A genus of *Phocidæ*, of the subfamily *Cystophorinæ*, characterized by the proboscis of the male; the elephant-seals or sea-elephants *M elephantinus* or *leoninus* is an enormous phocid found on the coasts and islands of southern South America. *M angustirostris* is named by Gill as a distinct species

2. A genus of coleopterous insects.

macroscelidan (mak-rō-sel'ı-dan), *a.* Having the characters of the *Macroscelididæ*

Macroscelides (mak-rō-sel'ı-dēz), *n* [NL (Sir A Smith, 1829), < Gr *μακροσκελίς*, long-legged, < *μακρός*, long, + *σκέλος*, leg] The typical genus of the family *Macroscelididæ* It contains the typical elephant shrews, such as *M proboscideus* Nine species have been described, all African Preferably *Macroscelis* See cut under *elephant shrew*

Macroscelididæ (mak″rō-se-lid'ı-dē), *n pl* [NL , < *Macroscelides* + *-idæ*] A family of small terrestrial salient insectivorous mammals, of mouse-like aspect, with soft pelage, and the hinder limbs fitted for leaping (as in the jerboas) by the elongation of the leg and metatarsus, the tibia and fibula being ankylosed below The species are African, and known as *elephant-shrews elephant mice* and *jumping shrews* There are two genera, *Macroscelides* and *Petrodromus* Also *Macroscelidæ*

Macroscepis (mak-ros'e-pis), *n* [NL (Humboldt, Bonpland, and Kunth, 1818), so called in allusion to the large scales of the crown, < Gr. *μακρος*, long, + *σκέπας*, covering] A small genus of asclepiadaceous plants of the tribe *Cynancheæ* The tube of the fleshy corolla is thick, and the five cleft limb is very spreading, a crown of five scales is inflexed in the throat The stigma is depressed The genus embraces 3 or 4 closely related species of twining, high climbing shrubby plants covered with bristly hairs, ranging from Peru to Central America. One or more of the species furnish the aromatic bitter drug cundurango.

macroscian (mak-ros'ı-an), *a.* and *n.* [< Gr *μακρόσκιος*, having a long shadow, < *μακρός* long, + *σκιά*, shadow] **I.** *a.* Casting a long shadow, as persons or objects in high latitudes

II. *n* One who casts a long shadow, specifically, an inhabitant of the arctic or the antarctic zone so called because objects near the poles intercept the sun's rays at a very low angle, and therefore cast very long shadows Compare *antiscian*

macroscopic (mak-rō-skop'ik), *a* [< Gr. *μακρός*, long, large, + *σκοπεῖν*, view] Same as *megascopic.*

macroscopical (mak-rō-skop'ı-kal), *a* [< *macroscopic* + *-al*] Same as *megascopic* *Quain*, Med Dict , p 802

macroscopically (mak-rō-skop'ı-kal-ı), *adv* By the naked eye; by superficial inspection, as distinguished from minute or microscopic inspection, without the use of magnifiers

macroseptum (mak-rō-sep'tum), *n* , pl *macrosepta* (*-tȧ*) [NL , < Gr *μακρός*, long, + L *septum*, a partition · see *septum.*] A large perfect septum or mesentery of an actinozoan, furnished with reproductive organs opposed to *microseptum.*

macrosiphon (mak-rō-sī'fon), *n* [NL., < Gr *μακρός*, long, + *σίφων*, siphon. see *siphon*] The large horny internal (endoceratitic) siphon or funnel of some cephalopods. See *macrosiphonula.*

macrosiphonula (mak″rō-sī-fon'ū-lȧ), *n* ; pl *macrosiphonulæ* (-lē). [NL , dim. of *macrosiphon*] The larval stage of certain cephalopods, as nautiloids, during which the large endoceratitic siphon makes its appearance. *Hyatt*, Proc. Bost. Soc. Nat. Hist , 1887.

macrosiphonular (mak″rō-sī-fon'ū-lär), *a.* [< *macrosiphonula* + *-ar*2.] Macrosiphonulate

macrosiphonulate (mak″rō-sī-fon'ū-lāt), *a* [< *macrosiphonula* + *-ate*1.] Pertaining to or of the nature of a macrosiphonula. *Amer Nat*, XXII 878.

macrosomite (mak-rō-sō'mit), *n* [< Gr *μακρός*, long, + *σῶμα*, body · see *somite.*] A large somite or primitive metamere; one of the larger primary segments or divisions of the embryo of some insects, preceding the formation of the definitive metameres, or microsomites *Amer Nat.*, XXII. 941

macrosomitic (mak″rō-sō-mit'ik), *a.* [< *macrosomite* + *-ic*] Of the nature of a macrosomite; pertaining to a macrosomite. *Amer. Nat*, XXII. 941.

macrosporange (mak-rō-spō'ranj), *n.* [< NL. *macrosporangium*, q.v] Same as *macrosporangium.*

macrosporangiophore (mak″rō-spō-ran'ji-ō-fōr), *n* [NL , < Gr *μακρος*, long, large, + *σπορά*, seed, + *ἀγγεῖον*, vessel, + *-φόρος*, < *φέρειν* = E *bear*1.] The envelop or foliage-leaf about or bearing the macrosporangium

The foliage leaves, the envelopes of the spore bearing leaves, the micro and *macrosporangiophores* had become permanently differentiated in ascending order
Geddes, Encyc Brit., XVI 846.

macrosporangium (mak″rō-spō-ran'ji-um), *n* ; pl *macrosporangia* (-a). [NL , < Gr. *μακρός*, long, + *σπορά*, seed, + *ἀγγεῖον*, vessel] A sporangium containing macrospores. It is homologous with the ovule of flowering plants. Also called *gonotheca*

The microspores, doubtless through the intervention of a spore eating insect, had come to germinate upon the *macrosporangium* instead of upon the ground
Geddes, Encyc Brit , XVI 846.

macrospore (mak'rō-spōr), *n* [< Gr *μακρός*, long, + *σπορά*, seed: see *spore*] 1. In *bot* , an asexually produced spore of large size as compared with others belonging to the same species. It is the female spore, and is homologous with the embryo sac of phanerogams See *heterosporous* and *microspore*, and cut under *Isoetes*

In some of the living club mosses there are two kinds of spores one being much larger than the other The larger are known as *macrospores*, whilst the smaller are called microspores *Huxley*, Physiography, p 241

2 In *zoöl.*, one of the spore-like elements, few in number, but of relatively large size, into which the bodies of many monads become subdivided. Also *megaspore*

Macrosporium (mak-rō-spō'rı-um), *n.* [NL , < Gr *μακρός*, long, + *σπορά*, seed] A genus of ascomycetous fungi with erect, basal, pediceliate, and at length septate spores.

macrosporoid (mak-rō-spō'roid), *a* [NL , < Gr *μακρός*, long, + *σπορα*, seed, + *εἶδος*, form] Resembling or related to the genus *Macrosporium*

macrosporophyl, macrosporophyll (mak-rō-spō'rō-fil), *n* [NL , < Gr *μακρός*, long, large, + *σπορα*, seed, + *φύλλον*, leaf] The leaf-bearing macrosporangium of the heterosporous *Pteridophyta*, the homologue of the carpel in the *Phanerogamia*

Macrostachya (mak-rō-stak'ı-á), *n.* [NL , < Gr *μακρός*, long, + *σταχυς*, stachys see *stachys*] A genus of fossil plants established by Schimper (1869), belonging to the *Calamariæ* or *Equisetaceæ*. They are arborescent plants, with appressed linear leaves, the leaf scars are marked upon the articulations by transversely oval rings, like the links of a chain the scars of the branches are verticillate, large, round, umbonate with a stigmarioid ventral mammilla, the spikes are very large, cylindrical, the bracts are lanceolate, costate in the middle, imbricate, scarcely longer than the internodes. Fourteen species are known, ranging from the Lower Carboniferous to the Permian, and occurring in Saxony, Prussia, Bohemia, Silesia, France, England, and Spain, as well as in Pennsylvania, West Virginia, Illinois, and Arkansas.

Macrostoma (mak-ros'tō-mȧ), *n pl* [< Gr *μακρός*, long, + *στόμα*, mouth.] A family of trachelipod gastropods with a very large mouth or aperture to the shell, such as those of the genera *Stomatia* and *Stomatella Lamarck*, 1812. Also *Macrostomata, Macrostomiana* (*Jay*, 1836), and *Macrostomidæ*

macrostome (mak'rō-stōm), *n* [< Gr *μακρός*, long, + *στόμα*, mouth] A gastropod whose shell has a very wide or patent aperture, as one of the *Haliotidæ.*

Macrostomidæ (mak-rō-stom'ı-dē), *n pl* [NL , < *Macrostoma* + *-idæ*] Same as *Macrostoma*

Macrostomum (mak-ros'tō-mum), *n* [NL., < Gr *μακρός*, long, + *στόμα*, aperture] A genus of rhabdocœlous turbellarians, among the simplest of the *Aprocta* It has no protrusile buccal proboscis The male and female organs are united in the same individual, but open by separate apertures

macrostyle (mak'rō-stīl), *a* [< Gr *μακρός*, long, + *στυλος*, pillar see *style*2] In *bot* , having an unusually long style.

macrostylospore (mak-rō-stī'lō-spōr), *n* [NL , < Gr *μακρός*, long, large, + *στυλος*, pillar, + *σπορά*, seed.] In *bot* , a stylospore of large size as compared with others of the same species See *stylospore*

Macrotarsi (mak-rō-tar'sī), *n pl* [NL , < Gr *μακρός*, long, + *ταρσός*, any broad, flat surface · see *tarsus*] In Illiger's classification (1811), a family of his *Pollicata*, including the tarsier and certain of the lemurs

macrotarsian (mak-rō-tär'sı-an), *a* and *n* [As *Macrotarsi* + *-an*] **I.** *a* Having long tarsi

II *n* An animal that has long tarsi.

Macrotarsius (mak-rō-tar'sī-us), *n.* [NL see *Macrotarsi*] Same as *Cursorius*

macrothere (mak'rō-thēr), *n* An animal of the genus *Macrotherium*

Macrotheriidæ (mak'rō-thē-rī'i-dē), *n pl* [NL, < *Macrotherium* + *-idæ*] A family of large fossil edentate mammals established for the reception of the genera *Macrotherium* and *Ancylotherium*, remains of which occur in the Miocene of France and Greece, and indicate a generalized type of edentates

macrotherioid (mak-rō-thē'ri-oid) *a* [< *Macrotherium* + *-oid*] Resembling or related to the macrotheres

Macrotherium (mak-rō-thē'ri-um), *n.* [NL, < Gr. *μακρος*, long, + *θηριον*, a wild beast] The typical genus of *Macrotheriidæ* It is supposed to represent the oldest type of edentates. It has rootless and enamelless teeth immense claws, and apparently no dermal armor Remains occur in the Miocene of France

macrotin (mak'rō-tin), *n* Same as *cimicifugin*

Macrotis (mak-rō'tis), *n.* [NL, < Gr *μακρός*, long, + *οὖς* (*ωτ-*) = E *ear*[1], see *Otus.*] **1.** A genus of bandicoots of the family *Peramelidæ*, having long pointed ears like those of a rabbit, proportionally longer hind limbs than the typical bandicoots, the hallux wanting, the tail long and hairy, and the pouch opening forward *M. lagotis* is called the *native rabbit* in Australia, from its size and general appearance —**2.** A genus of tenebrionine beetles *Dejean*, 1833.

macrotome (mak'rō-tōm), *n* [< Gr as if **μακροτόμος*, < *μακρότομος*, cut long (said of shoots so pruned), < *μακρός*, long, + *τεμνειν*, *ταμεῖν*, cut.] An apparatus by the aid of which gross sections may be made of a specimen for anatomical purposes

macrotone (mak'rō-tōn), *n.* [< Gr *μακρός*, long, + *τόνος*, tone Cf. Gr *μακρότονος*, stretched out, < *μακρός*, long, + *τεινειν*, stretch] Same as *macron*

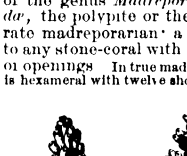
The roots are broken up by means of wooden stampers, which reduce the bark and splint bark to powder, leaving the hard inner part unbroken, but the whole root is sometimes pulverized The coloring principle of madder is termed *alizarin*. Madder contains also a red pigment, *purpurin* or *rubacin*, which is extracted in the form of orange-colored prismatic crystals, and yields a good dye, either alone or in combination with alizarin Through the peculiar chemical affinity of phosphate of lime for its coloring matter, madder is noted for its remarkable physiological effect of turning red the bones of animals to which it is fed as well as the claws and beaks of birds —**Brown madder**, a lake prepared from madder root, having a rich brown color of great depth —**Capucine madder**. See *capucine*-2 —**Flowers of madder**, the trade-name for a preparation made by steeping pulverized madder, causing the sugar it contains to ferment, then washing the residue, pressing out the water, drying, and pulverizing it again It is used for dyeing purposes in the same manner as ordinary madder Also called *refined madder* and *madder bloom* —**Indian madder** (*a*) *Rubia cordifolia* (*b*) *Oldenlandia umbellata* (*c*) Some species of the genus *Hedyotis* —**Madder-brown**. See *brown* —**Madder-carmine**, a pigment made by precipitating the coloring matter of the madder root upon a base of alumina. —**Madder color**, a pigment derived from madder or its compounds Madder colors range from brown, through yellow, rose, and red, to deep purple, and are much used in dyeing and the fine arts —**Madder lakes** (*pink madder, rose madder, madder lake, purple madder, brown madder, Rubens's madder, madder yellow, madder-orange*), lakes prepared from madder varying in shade from pink through red and yellow to purple and brown These are also known as *rubric lakes* —**Madder-red**. See def 2 —**Madder style**, a method of calico-printing in which the parts of the cloth which are to receive a madder color are printed with a mordant, washed and rinsed in a solution of alum and size and then drawn through a colored solution which becomes fixed where the mordant has been applied, after which the dye is washed off the unmordanted part of the cloth Also called *chintz style garancine style* —**Petty madder**, a plant of the genus *Crucianella*, of the Mediterranean region Also called *crosswort* —**Refined madder** Same as *flowers of madder* —**Wild madder**. madreperl (mad're-pėrl), *n* [< It. *madreperla*, < *madre*, mother, + *perla*, pearl.] Mother-of-pearl. *Longfellow.*

Madrepora (ma-drep'ō-ra), *n* [NL., < *madrepore*.] The typical genus of *Madreporidæ*, containing some of the commonest madrepores, of various branched shapes, among them some of the most extensive reef-building corals. *M. cervicornis* is a species so called from its branching like the antlers of deer.

Madrepora prolifera.

Madreporacea (mad'rē-pō-rā'shē-a), *n. pl.* [NL., < *Madrepora* + *-acea*.] A group of stone-corals, more or less exactly equivalent to *Madreporaria*.



madreporal (mad'rē-pō-ral), *a* [< *madrepore* + *-al*.] Of or pertaining to madrepores, consisting of madrepores.

Madreporaria (mad'rē-pō-rā'ri-ȧ), *n pl* [NL., < *Madrepora* + *-aria*.] A general name of the madrepores and related corals which are hexacoralline or hexactinoid and have a continuous hard calcareous skeleton. The term covers not only the *Madreporidæ* proper, but the *Fungidæ* or mushroom-corals, the *Astroidæ* or star corals, and related families. In a still wider sense, *Madreporaria* is an order of the class *Actinozoa*, including all the hard actinoid or actiniform corals or sclerodermatous zoantharians, whether hexameral or tetrameral and whether tabulate, tubulous, perforate, aporose, or rugose. It is then equivalent to *Lithocorallia* and *Sclerodermata*, or to the old *Lithophyta* minus the *Alcyonaria* and other sclerobasic zoantharians.

madreporarian (mad'rē-pō-rā'ri-an), *a* and *n* **I.** *a* Pertaining to the *Madreporaria*, or having their characters.

II. *n* A coral of the group *Madreporaria*.

madrepore (mad'rē-pōr), *n.* [< F *madrépore* = Sp. *madrépora* = Pg. *madrepora*, < It. *madrepora*, coral, appar. lit. 'mother-stone' (cf. *madreperla*, 'mother-pearl,' mother-of-pearl: see *madreperl*), < *madre*, < L. *mater*, = E. *mother*, + (appar.) Gr. *πώρος*, a light friable stone, a stalactite, or, as now understood, *πόρος* (> It. *poro*), pore: see *pore*[2].] An animal, or a coral, of the genus *Madrepora* or family *Madreporidæ*, the polypite or the polypidom of a perforate madreporarian: a name loosely extended to any stone-coral with madreporiform cavities or openings. In true madrepore the animal or polypite is hexameral with twelve short tentacles, and the polypidom is of branching form and stony hardness. Madrepore coral consists of carbonate of lime, with traces of animal matter, and is formed by gradual deposition in the tissues of the compound polyp, so that in course of time the whole presents the appearance of a number of polyps supported on an extraneous body. When the animal matter has been removed madrepore is of a white color, wrinkled on the surface, and full of little cavities, in each of which an individual polyp was lodged, the radiating septa of the cavities corresponding to the internal divisions of the animal. Madrepores raise up walls and reefs of coral rocks with considerable rapidity in tropical climates.—**Madrepore glass**. See *glass*.—**Madrepore marble**, madreporitic marble.

Madrepore Corals.

madreporic (mad-rē-por'ik), *a.* [< *madrepore* + *-ic*.] Of or pertaining to madrepore; of the character of the madrepore; pierced with minute holes like a madrepore. Also *madreporite*.—**Madreporic canals**, in echinoderms, tubular prolongations of the circular vessel of the ambulacral system, having perforated ends and terminating in a calcareous network, or other hard formation, known as the *madreporic body, madreporic tubercle*, or *madreporite*.—**Madreporic plate**, in echinoderms, a madreporite.—**Madreporic tubercle**, a tubercular madreporic body, or madreporite.

Madreporidæ (mad-rē-por'i-dē), *n pl* [NL., < *Madrepora* + *-idæ*.] The madrepore family, typified by the genus *Madrepora*. Its limits vary with different authors, but in the strictest use it consists of several different genera, agreeing in that the polypites and polyp stocks have porous cœnenchyma, perforated thecæ, little developed septa, and an open gastric cavity communicating with the canal in the axis of the branched polypidom.

madreporiform (mad're-pō-ri-fôrm), *a* [< NL. *Madrepora*, a madrepore, + L. *forma*, form.] Resembling a madrepore, characteristic of a madrepore; madreporic.

Madreporinæ (mad're-pō-rī'nē), *n pl* [NL., < *Madrepora* + *-inæ*.] A subfamily of *Madreporidæ*.

madreporite (mad're-pō-rīt), *n* and *a* [< *madrepore* + *-ite*[2].] **I.** *n* **1.** Fossil madrepore.—**2.** In echinoderms, the madreporic body or tubercle, the interradial aboral porous plate at the termination of the madreporic canals. *Huxley.*

II. *a* Same as *madreporic*.

madreporitic (mad're-pō-rit'ik), *a.* [< *madreporite* + *-ic*.] Pertaining to or consisting of madreporite, or made up of various corals more or less mixed with fragments of the shells of mollusks, all loosely classed together as madrepores: as, *madreporitic* rocks.

madrier (mad'ri-ėr), *n.* [F., earlier *madier*, a beam or stout plank, < Sp. *madero*, a beam, < *madera*, wood: see *matter*.] In *milt. engin.* (*a*) In the seventeenth century, a heavy timber forming the chief or central part of the carriage of a cannon or mortar, hence, the whole carriage or mounting of a piece of artillery. *Grose.* (*b*) A plank lined with tin and covered with earth for roofing over certain parts of military works, in order to afford protection in lodgments, etc. (*c*) A plank used to support the earth in a mine, or in a moat or ditch to support a wall.

madrigal (mad'ri-gal), *n* [< F *madrigal* = Sp. *madrigal*, OSp. *mandrial, mandrigal* = Pg. *madrigal* = G. *madrigal*, < It. *madrigale*, OIt. *madriale, mandriale*, also *mandriano*, a short poem, a pastoral ditty (> ML. *matriale*), < *mandra*, a herd, flock, < L. *mandra*, a stall, a herd, < Gr. *μάνδρα*, a fold, an inclosed space, the bed on which the stone of a ring is set, a monastery. Cf. *archimandrite, mandrel*, from the same Gr. source.] **1.** A medieval poem or song, amorous, pastoral, or descriptive. The distinguishing characteristics of the madrigal are now hard to determine.

By shallow rivers to whose falls
Melodious birds sing *madrigals*
Marlowe, Passionate Shepherd to his Love.

2. In *music*: (*a*) A musical setting of such a poem. Strict madrigal writing involves the use of a *canto fermo*, adherence to one of the ecclesiastical modes throughout, the abundant use of contrapuntal imitation in all its varieties, and the absence of instrumental accompaniment. This form of composition appeared in the Low Countries in the fifteenth century, and soon spread to Italy, Germany, France, and England. In Italy and England it attained a notable perfection and beauty, passing over in the latter country into the modern glee. Madrigals were written for from three to eight or more voices. The sentiments embodied varied from grave to gay, with a constant tendency to the latter. The choruses in the earlier operas and oratorios were madrigals. (*b*) A glee or part-song in general, irrespective of contrapuntal qualities.

madrigaler† (mad'ri-gal-ėr), *n* A writer or composer of madrigals.

Satyrists, panegyrists, *madrigallers*
Tom Brown, Works, II. 155. (*Davies.*)

Fernão de *Magalhães*) + *-ic.*] Pertaining to or named after the Portuguese navigator Magellan (Portuguese Fernão de Magalhães), died 1521.—**Magellanic clouds**, a name given to two cloud-like tracts or patches of nebulous stars in the southern heavens, nearly in the pole of the Milky Way. They are visible as far north as 18° north latitude. According

The Greater Magellanic Cloud. (From Gould.)

to Sir J. F. W. Herschel, "They are, generally speaking, round, and somewhat oval, and the larger, which deviates most from the circular form, exhibits the appearance of an axis of light, very ill-defined, and by no means strongly distinguished from the general mass. The greater nebula occupies an area of about 42 square degrees. The lesser covers about 10 square degrees. Their degree of brightness may be judged of by the effect of strong moonlight, which totally obliterates the lesser, but not quite the greater. Though they resemble parts of the Galaxy to the naked eye, their telescopic appearance is in marked contrast, owing to the great numbers of clusters and nebulæ which they contain.

magenta (mā-jen'tä), *n.* [< F. *magenta*, so called from *Magenta* in Italy, because this color was discovered in the year (1859) of the battle of Magenta.] 1. Thus, the noun is orig from the adj ; but in Eng it precedes it] **I.** *n* **1.** Any supposed supernatural art, especially, the pretended art of controlling the actions of spiritual or superhuman beings Belief in such an art exists among all primitive races, and was prevalent in medieval Europe The practice of magic has embraced, in a great variety of ways, the cure of disease, the forecasting of events, and the gratification of desires otherwise unattainable It has been everywhere, with the rise and earlier progress of literature, formulated into more or less elaborate systems All kinds of divination, judicial astrology, and to a large extent alchemy were outgrowths of it

> But thurgh his *magik* for a wyke or tweye,
> It semed that alle the rokkes were aweye
> *Chaucer*, Franklin's Tale, l 567
>
> If she in chains of *magic* were not bound
> *Shak*, Othello, I 2. 65

The word *magic* is still used, as in the ancient world, to include a confused mass of beliefs and practices, hardly agreeing except in being beyond those ordinary actions of cause and effect which men accustomed to their regularity have come to regard as merely natural

> *Encyc Brit*, XV 199

2. Power or influence similar to that of enchantment· as, the *magic* of love

> He [Arnold] has a power of vision as great as Tennyson's, though its *magic* depends less on the rich tints of association, and more on the liquid colours of pure natural beauty *Contemporary Rev*, XLIX 528.

3 Conjuring; tricks of legerdemain [Colloq] —**Black magic**, magic involving a criminal league with evil spirits, the black art.—**Natural magic** (*a*) Occult science, the art of working wonders by means of a superior knowledge of the powers of nature

> Much more is professed, but much lesse performed, then in former ages, especially in the mathematikes and in *natural magic* *G Harvey*, Four Letters.

(*b*) Control of natural forces through the knowledge of their laws.

> Was not Persian Magic a reduction or correspondence of the principles and architectures of nature to the rules and policy of governments? And here I will make a request that I may revise and reintegrate the misapplied and abused name of *Natural Magic*, which in the true sense is but Natural Wisdom or Natural Prudence, taken according to the ancient acception, purged from vanity and superstition. *Bacon*, Advancement of Learning

Superstitious or goetic magic consists in the invocation of devils or demons, and supposes some tacit or express covenant or agreement with them —**White magic**, practice of magic whether innocent or at least not involving a compact with the devil

II. *a.* **1.** Pertaining to or connected with the exercise of magic, having supposed supernatural qualities or powers, enchanting, bewitching as, *magic* arts or spells, a *magic* wand or circle; a *magic* touch; *magic* squares

> As in Agrippa's *magic* glass,
> The loved and lost arose to view
> *Whittier*, The Merrimack

2 Produced by or resulting from or as if from magic; exhibiting the effects of enchantment as, *magic* music; *magic* transformations [In this sense *magical* is more commonly used]

> Till all thy *magick* structures, rear'd so high,
> Were shatter'd into heaps o'er thy false head
> *Milton*, Comus, l 798

3 Operating as if by magic; causing illusion; producing wonderful results.

> For three or four days, under the *magic* influence of his wit and imagination, these gloomy old pictures were a perpetual source of amusement and fun
> *Lady Holland*, Sydney Smith, iv

Magic circle, a modification of the magic square as devised by Franklin, consisting of eight concentric circles equally divided by eight radii, in the sections of which all the numbers from 13 to 75 are so arranged that the sum of the numbers in each circle, together with 12 entered at the center, is equal to 360, and that the sum of the numbers in each radial column, together with the central 12, is also equal to 360 As reconstructed by Dr Barnard, the numbers from 1 to 64 are taken, and are so arranged that the constant sum of both concentric and radial ranks, added to 100 entered at the center, is 360 —**Magic cube**, an extension of the arrangement of an arithmetical series in a magic square or parallelepipedon to all sides of a hexagon, so that the sum of the numbers in each linear rank of numbers, parallel to the edges of the cube or the diagonals upon all faces, is constant. In a perfect magic cube every term enters into thirteen distinct equalities.—**Magic cylinder**, a modification of a perfect magic cube or parallelepipedon when one of its surfaces is transferred to a cylinder having a circumference equal to the edge of the cube, and the vertical squares are arranged in equidistant radii such a magic cylinder will have either no number at the axis, or the same number in the center of every one of the five parallel planes —**Magic lantern**. See *lantern*, and cut under *stereopticon* —**Magic music**. See *music* —**Magic sphere**, a modification of a magic cube or parallelepipedon when its surface is transferred to a sphere and the several vertical columns are arranged in equidistant radii.—**Magic square**, a square figure formed by a series of numbers in mathematical proportion, so disposed in parallel and equal ranks that the sum of each row or line taken perpendicularly, horizontally, or diagonally is constant Magic squares are also formed

2 In *alchemy*, a magisterium or magistral; in *chem.*, one of various extracts or preparations, especially magisterium bismuthi, a precipitate formed when water is added to a solution of bismuth in nitric acid See the quotations from Boyle and Boerhaave.

He that hath had Water turned to Ashes hath the *Magistery*, and the true Philosopher's Stone
Howell, Letters, I vi 41

Although *majestery* be a term variously enough employed by chemists, and particularly used by Paracelsus to signify very different things, yet the best notion I know of it is, that it is a preparation whereby there is not an analysis made of the body assigned, nor an extraction of this or that principle, but the whole or very near the whole body, by the help of some additament, greater or less, is turned into a body of another kind
Boyle, Works I 637

Magisteries seem to have been thus called by the antient chemists as denoting the capital production or masterpiece of their art They pretend that they are able to take any simple body, and without any change of its weight, or division of its parts, alter it into another exceedingly different from the former, and usually liquid for instance, to reduce an ounce of gold into a fluid of the same weight, by fire alone, without the addition of any other matter
Boerhaave, Chemistry (tr by Shaw, 2d ed , 1753), I 171

magnelt, *n* A Middle English variant of *mangonel*

magnesia (mag-nē'shiă), *n* [ME *magnesia* (def 1), < ML *magnesia*, a mineral said to be brought from Magnesia, fem of *Magnesius*, adj., pertaining to Magnesia, < *Magnesia*, Gr Μαγνησία, a district in Thessaly (also the name of two cities in Asia Minor) see *magnet* In def 2 = F *magnesie* = Sp Pg It *magnesia*, NL *magnesia*, magnesia (magnesium oxid), so called from a supposed relation to manganese (formerly called *magnesium*).] **1†.** A mineral said to be brought from Magnesia —**2** Magnesium oxid (MgO), a white tasteless substance having a feeble alkaline reaction Its specific gravity varies from 3.07 to 3.61 It is nearly insoluble in water, and scarcely fuses at the temperature of the oxyhydrogen flame It is prepared by the ignition of any magnesium salt of a volatile acid Magnesia is used in medicine as an antacid and mild cathartic, and in the arts for preparing magnesium salts *Magnesia alba*, the magnesia of the shops, is a hydrated magnesium carbonate *Calcined magnesia* is pure magnesia prepared by strongly heating the carbonate.—**Magnesia mica.** Same as *biotite*

Magnesian[1] (mag-nē'si-an), *a* [< L *Magnesia*, < Gr. Μαγνησία, Magnesia (see def), + *-an*] Of or pertaining to Magnesia, an ancient city of Asia Minor, near Miletus, or to a town of the same name in ancient Lydia, or to a district so called in Thessaly

magnesian[2] (mag-nē'ziăn), *a* [< *magnesia* + *-an.*] Pertaining to magnesia or having its qualities, containing or resembling magnesia —**Magnesian limestone** See *limestone*

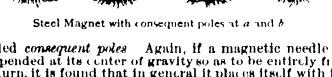
magnesic (mag-nē'sik), *a.* [< *magnesium* + *-ic*] Of or pertaining to magnesium

The tendency to fuse on the part of the mixture is due to the *magnesic* chloride *Ure*, Dict, IV 543

magnesioferrite (mag-nē'si-ō-fer'īt), *n* [< NL *magnesium* + L *ferrum*, iron] An oxid of magnesium and iron, belonging to the spinel group, which has been observed at Vesuvius Also *magnoferrite*

magnesite (mag'nē-sīt), *n* [< *magnesium* + *-ite*[2]] **1.** Native magnesium carbonate, a mineral occurring in white compact masses, less often in rhombohedral crystals It belongs to the calcite group —**2†** The hydrated magnesium silicate usually called *sepiolite* or *meerschaum*

magnesium (mag-nē'zium), *n* [NL., in def 1, < Gr. Μαγνησία, se λίθος, magnet; in def 2, < *magnesia*, 2.] **1†** Manganese —**2** Chemical symbol, Mg, atomic weight, 24 36 The metallic base of the widely distributed alkaline earth magnesia, which in various combinations, and especially in the form of the double carbonate of lime and magnesia, is one of the most abundant of the materials which make up the earth's crust It is a metal of a brilliant silver-white color, having a specific gravity of 1 75 It melts at a red heat, and boils at a temperature somewhat above that at which zinc volatilizes When held in the flame of a candle it burns with a dazzlingly white light, which has been seen at a distance of 28 miles. Magnesium was first prepared in a pure state by Bussy, that which had been previously obtained by Davy was impure and not a coherent metal It is now manufactured on a large scale at various places, especially near Manchester in England, and is pressed when in a semi-fluid state into wire, and then flattened into ribbon, in which form it is generally sold It is used in taking photographs in places into which the sunlight does not penetrate, in signaling for naval and military purposes, and in pyrotechny, as well as in some operations connected with chemical analysis The magnesian combinations are widely distributed in nature From 5 to 6 per cent. of the solid material held in solution by the water of the ocean is magnesium sulphate, and from 8 to 11 per cent magnesium chlorid Next to sodium, chlorin, and sulphuric acid, magnesium is the most abundant ingredient in solution in the ocean It is, with rare exceptions (as in the case of the genus *Serpula*), not taken from the ocean by animal life, differing greatly in this respect from lime Magnesium carbonate, in combination with calcium carbonate, forming dolomite occurs in enormous quantity among the stratified formations Beds made up of almost chemically pure dolomite hundreds of feet thick cover thousands of square miles in the valley of the upper Mississippi Magnesium carbonate also occurs in great abundance, mixed in varying proportions with the calcium carbonate, in much of the rock designated as *marble* and *limestone* which, when this fact becomes known by chemical analysis, are denominated *dolomite* Magnesia also plays the part of base in great numbers of silicates, especially in talc meerschaum, serpentine, olivine, and the pyroxenes and hornblendes Magnesian silicates form an important part of numerous meteorites The pure magnesium carbonate (magnesite) occurs in various localities, but is by no means an abundant mineral The non silicated soluble compounds of magnesia are also of rather rare occurrence in nature, but are found in considerable quantity in a few localities, among which that in the vicinity of Stassfurt in Prussia is economically of by far the greatest importance The combinations found there are kainite, carnallite and kieserite (See these words) Both magnesium sulphate and magnesium chlorid occur in the water of many mineral springs as well as in that of the ocean The bones of animals and the seeds of various cereals contain a small amount of magnesium phosphate, and the salt is also found in guano Magnesian salts are used to a limited extent in medicine, especially the sulphate (Epsom salts), they are also used in the dressing cotton goods and in dyeing, but, on the whole, the economical importance of the combinations of magnesium, considering their abundance and the cheapness with which they could be furnished in large quantity, is exceedingly small



magnesium-lamp (mag-nē'zium-lamp), *n* A lamp in which magnesium is burned for the purpose of illumination. Such lamps are of various types, being adapted for the combustion of the metal in the form of a wire or ribbon or in a pulverized state

magnes-stonet, *n* [Tr L *magnes lapis*, Gr Μαγνης λίθος: see *magnet*] A magnet

magnet (mag'net), *n.* [< ME *magnete* = D *magneet* = MHG *magnes*, *magnēte*, G *magnet* = Dan Sw *magnet* = OF *magnete*, *manete* (the mod F term is *aimant* see *adamant*, *aymant*) = Sp Pg It *magnete*, < L *magnes* (*magnet-*) (with or without *lapis*, stone), a magnet, < Gr μάγνης, also μάγνησσα, prop adj, Μάγνης, Μαγνῆτις, Μαγνησία, Μαγνησσα (sc. λίθος), a magnet, lit stone of Magnesia, < Μάγνης (Μαγνητ-), also Μαγνήτης, an inhabitant of Magnesia, < Μαγνησία, Magnesia, a district in Thessaly, where the magnet or magnetic iron ore appar first came to notice] A body which possesses the property of attracting fragments of iron or steel, and which, when freely suspended, tends, under the action of the earth, to take a certain definite position, pointing approximately north and south The lodestone, a variety of the mineral magnetite, or the native magnetic oxid of iron (Fe_3O_4), is a *natural magnet*, but the properties of the magnet are best shown by an *artificial magnet* (see below), which has commonly the form of a straight bar or that of a horseshoe When a bar magnet is dipped into iron filings it is found that they adhere most strongly at the extremities of the bar (which are called the *poles* of the magnet), and not at all along the line midway between them Strictly speaking, however, except in the case of a long thin magnet, the poles are not exactly at the ends The middle line is called the *neutral line* or *equator* of the magnet, the straight line joining the poles is the *axis* of the magnet, or *magnetic axis* A magnetic bar may abnormally have one or more intermediate points of maximum attraction, which are then

Steel Magnet with consequent poles at *a* and *b*

called *consequent poles* Again, if a magnetic needle is suspended at its center of gravity so as to be entirely free to turn, it is found that in general it places itself with its axis in a direction nearly north and south, and with one end inclining downward The pole which is directed toward the north is called the *north* or *north seeking pole*, also the *boreal positive*, or *red pole*, or *marked end* of the needle the other, the *south*, *south seeking*, *austral negative*, or *blue pole*, or *unmarked end* It is found, further, that the like poles of two magnets repel and unlike poles attract each other If a magnet is broken into halves, each half is found to be a complete magnet with a north and a south pole, and this is true no matter how often the process of division is repeated On this and other more fundamental grounds, it is concluded that the magnetic polarity belongs to each molecule throughout the bar, and the maximum attraction observed near the ends is only the resultant effect of all these individual forces (See *magnetism*) A *magnetic substance* is one which may be attracted by a magnet, but has not the property of attracting other magnetic substances, and therefore has no polarity Soft iron is a magnetic substance, as is also most magnetite, the lodestone variety being exceptional A *permanent magnet* is one which retains its magnetism after the magnetizing influences (see below) cease to act Steel and the lodestone have this property, on account of their high degree of coercive force (See *coercive*) Soft iron has very little coercive force, and accordingly its power of retaining magnetism is small An *artificial magnet* (as a compass needle) is made by contact with other magnets, and the methods employed are described as *single touch*, *double-touch*, and *separate-touch*, according to the way in which the substance to be magnetized is rubbed by the magnets Such a magnet may also be made by magnetic induction without actual contact (See *induction*, 6) Again, a magnet may be made by passing a current of electricity through a wire wound about the bar to be magnetized, this is called an *electromagnet* (which see) By this means magnets of very great strength may be made They have usually a horseshoe form, and the bar is of soft iron, so that it retains its magnetism only so long as the current is passing The earth may be considered as a huge magnet, whose poles are situated in the neighborhood of the geographical poles, though not coinciding with them, the north magnetic pole of the earth corresponds in polarity to the south seeking pole of a magnetic needle The action of the earth causes a freely suspended needle to set in a plane called the *magnetic meridian*, which in general makes an angle east or west of the geographical meridian (see *declination*), and with one pole (in the northern hemisphere, the north seeking pole) inclined downward (see *dip of the needle*, under *dip*) The earth's magnetic force also serves to induce magnetism in masses of iron lying in or near the magnetic meridian An iron ship is thus magnetized in the course of its construction Similarly, iron columns, etc , are often found to be feebly magnetic Magnetic properties belong also to some other compounds of iron besides the magnetic oxid, as pyrrhotite or magnetic pyrites (Fe_7S_8), and to some varieties of the native sesquioxid, hematite (Fe_2O_3), also to the magnetic metals nickel, cobalt, chromium, and manganese Some varieties of platinum are strongly magnetic, and occasionally masses have polarity also, but this may be due to the large percentage of iron present, although all so called iron platinum does not show this property Finally, it is found that a powerful electromagnet exerts an effect on all substances, in accordance with which they are divided into the two groups *paramagnetic* and *diamagnetic* (this is explained under *diamagnetism*) —**Compound magnet** Same as *magnetic battery* —**Deflecting-magnet,** a magnet used for deflecting a magnetic needle often attached to a galvanometer for the purpose of fixing the zero of the needle in a certain position, or for altering the sensitiveness of the needle by changing the magnetic field Also called *zero magnet*, *directing-magnet*, and *deflector* —**Horseshoe magnet,** a magnet having a form somewhat resembling a horseshoe (see figure), being bent so that the two poles are brought near together, and hence can act at the same time upon the keeper or armature A horseshoe electromagnet commonly consists of two bobbins side by side, whose cores are connected at one end by a piece of soft iron —

magneto-machine (mag′ne-tō-ma-shēn′), *n* Same as *magneto Ensslen*, Mod High Explosives, p. 177

magnetometer (mag-ne-tom′e-tėr), *n*. [< Gr μάγνης (μαγνητ-), a magnet, + μετρον, a measure] An instrument used to measure magnetic forces or the strength of a magnetic field, especially one used to measure the intensity of the earth's magnetic force at any place Magnetometers are arranged to measure the horizontal and vertical components of this force, from which its total intensity and direction are calculated —**Bifilar magnetometer** See *bifilar*

magnetometric (mag′ne-tō-met′rɪk), *a*. [< *magnetometr(y)* + *-ic*] Pertaining to or employed in the measurement of magnetic forces, obtained by means of a magnetometer as, *magnetometric* observations

magnetometry (mag-ne-tom′e-trɪ), *n* [< Gr μάγνης, a magnet, + *-μετρια*, < μετρον, a measure] The measurement of the strength of a magnet, or, more strictly, of a magnetic field, especially, the measurement of the earth's magnetic force; the use of a magnetometer

magnetomotive (mag′ne-to-mó′tɪv), *a*. Producing active magnetic effects **Magnetomotive force**, the magnetizing force or influence to which a magnetic substance is subjected in a magnetic field, the quantity which divided by the magnetic resistance gives the intensity of magnetization Analogous to *electromotive force*

magneto-optic (mag′ne-tō-op′tɪk), *a* Pertaining to magneto-optics

magneto-optics (mag′ne-tō-op′tɪks), *n* That branch of physics which considers the modifying action of a magnet upon light Its most important effect is the rotation of the plane of polarization of a light-ray on passing through a transparent body in a powerful magnetic field Since electromagnets are employed in these experiments, this subject is mainly included under the more general head of *electro-optics*

magnetophone (mag-net′ō-fōn), *n*. [< Gr. μάγνης (μαγνητ-), a magnet, + φωνή, sound, voice] An apparatus devised by H. S Carhart, consisting essentially of a horseshoe magnet, in front of which is a disk of sheet-iron pierced with a number of holes, and on the other side a small induction-coil in circuit with a telephone Upon rotating the disk, a clear musical note is heard in the telephone, the pitch rising as the rapidity of rotation is increased This is explained by the intermittent action of the magnet upon the core of the coil, caused by the presence of the rotating perforated disk

magneto-pointer (mag′ne-tō-poin′tėr), *n*. The index of a magneto-electric dial-telegraph

magneto-printer (mag′ne-tō-prin′tėr), *n*. A printing telegraph in which a magneto-electric machine is the working-power More fully called *magneto-printing telegraph*. *T. D. Lockwood*, Elect , Mag., and Teleg , p. 62

magnetoscope (mag-net′ō-skōp), *n*. [< Gr. μαγνης (μαγνητ-), a magnet, + σκοπειν, view.] 1 A person supposed to see, or a thing supposed to aid in seeing, by means of magnetism a clairvoyant, or a clairvoyant's device —2. In *physics*, a contrivance for indicating the presence of magnetic force, but without measuring its intensity.

magneto-telegraph (mag′ne-tō-tel′ē-gráf), *n* Same as *magneto-electric telegraph* (which see, under *magneto-electric*).

magneto-telephone (mag′ne-tō-tel′ē-fōn), *n* A telephone in which variations in the strength of a magnet produce, or are produced by, undulatory currents in a coil of wire surrounding either the whole or a part of the magnet and forming part of the telephone circuit. See *telephone*

magneto-transmitter (mag′ne-tō-tráns-mit′-ėr), *n* 1 In *telephony*, a magneto-telephone used to transmit speech or other sounds.—2 In *teleg* , a magneto-electric machine used to produce the telegraphic currents

magnifiable (mag′nɪ-fī-a-bl), *a* [< *magnify* + *-able*] 1. Capable of being magnified or enlarged.—2. Worthy to be magnified or extolled

Number, though wonderful in itself, and sufficiently *magnifiable* from its demonstrable affection, hath yet received adjections from the multiplying conceits of men
Sir T Browne, Vulg Err , iv 12.

magnific (mag-nif′ɪk), *a* [Formerly also *magnifique*, < F. *magnifique* = Sp. *magnifico* = Pg It *magnifico*, < L *magnificus*, great in deeds or sentiments, noble, high-minded, < *magnus*, great (see *main*², *magnitude*), + *facere*, do. see *fact*] Making great or illustrious; glorifying or glorious, splendid, magnificent. [Rare.]

O parent! these are thy *magnific* deeds.
Milton, P L , x 354

This King [Henry VIII] at Bologne was victorious, In peace and warre, *Magnifique*, Glorious, In his rage bounty he did oft expresse His Liberality to bee excesse
John Taylor, Memoriall of Monarchs

Then too the pillar'd dome *magnific* heav'd Its ample roof
Thomson, Autumn, l 135

magnifical (mag-nif′ɪ-kal), *a* [< *magnific* + *-al*] Like a magnifico: same as *magnific*

His port & state is in maner as *magnifical* as the other aforesaid ambassadors *Hakluyt's Voyages*, II 298

magnifically (mag-nif′ɪ-kal-ɪ), *adv*. In a magnifical manner; with pomp or splendor *Jer Taylor*, Holy Dying, iv 9

Magnificat (mag-nif′ɪ-kat), *n* [< L *magnificat* (3d pers sing pres ind act of *magnificare*, magnify. see *magnify*), as used in the Vulgate, Luke i 46 "*Magnificat* anima mea Dominum "] 1 The song or hymn of the Virgin Mary in Luke i 46–55, beginning "My soul doth magnify the Lord " It is very similar to the song of Hannah (1 Sam ii 1–10), which has accordingly been called the *Old Testament Magnificat* The Magnificat was in use in the hours of daily service of the Christian church as early as about A D 500 In the Greek Church it is the ninth ode (canticle) at Orthros (Lauds), and is called the *Ode of the Theotocos* It was at first omitted from the American Prayer book, but was restored in 1886

2 A musical setting of this hymn —**Magnificat at matins**†, something out of place (in allusion to the proper place of this canticle in the even song)

The note is here all out of place, and so their note comes in like *Magnificat at mattins*
Andrewes, Sermons, v 49 (*Davies*)

magnificate† (mag-nif′ɪ-kāt), *v t* [< L *magnificatus*, pp. of *magnificare*, magnify: see *magnify*] To magnify or extol.

That with oath
Magnificates his merit
B Jonson, Poetaster, v 1

magnification (mag′nɪ-fi-kā′shon), *n*. [= OF *magnification*, < LL *magnificatio(n-)*, < L. *magnificare*, magnify: see *magnify*] 1 The act of magnifying, or the state of being magnified or enlarged, as by a lens

Psychological *magnification* is not more absurd than physical although the processes in the two cases must be materially different, but of course in no case is *magnification* possible without limit
J Ward, Encyc Brit., XX 48.

2 In *micros* , specifically, increase of visual power in respect of penetration as well as superficial enlargement, thus contrasting with *amplification*

Little is gained by expanding the image of an object from the ten thousandth of an inch to an inch, if there be not an equivalent revelation of hidden details It is in this revealing quality, which I shall call *magnification*, that our recent lenses so brilliantly excel.
Dallinger, 1884 (*Nature*, XXX 62.)

3. The act of magnifying or extolling *Jer. Taylor*

magnificence (mag-nif′ɪ-sens), *n*. [< ME *magnificence*, < OF. and F *magnificence* = Sp Pg. *magnificencia* = It *magnificenza*, < L. *magnificentia*, greatness in action or sentiment, nobleness, splendor, < **magnificen(t-)s*, *magnificus*, magnificent: see *magnificent*.] 1 The state or condition of being magnificent; grandeur, as of appearance or of character; splendor; brilliancy: as, the *magnificence* of a palace or of a procession, the *magnificence* of Shakspere's genius.

The truly good government is not that which concentrates *magnificence* in a court, but that which diffuses happiness among a people.
Macaulay, Mirabeau.

2†. A high degree of generosity; munificence.

Thou holest laundes, goutes, and dropsyes,
By our lordes fauour, grace, and *magnyfycence*
Joseph of Arimathie (E E T S.), p 51

The magnificent man must be liberal also, for the liberal man, too, will spend the right amount in the right manner only, both the amount and the manner being right, *magnificence* is distinguished from liberality by greatness
Peters, tr of Aristotle's Nicomachean Ethics.

3. A title of courtesy belonging of right to several high officers of ancient Rome, and also to the rector (*rector magnificus*), prorector, and chancellor of a German university, and to some other German officials corresponding to *lordship*, *highness*, or *eminence* (with *his* or *your* prefixed).—**Syn. 1** Pomp, éclat. See *grand*

magnificency† (mag-nif′ɪ-sen-sɪ), *n*., pl *magnificencies* (-sɪz). 1. Magnificence; grandeur. —2. A magnificent thing, an instance or example of magnificence or grandeur [Rare]

This canopy or arch of water I thought one of the most surprising *magnificencies* I had ever seene
Evelyn, Diary, May 21, 1645.

magnificent (mag-nif′ɪ-sent), *a* [< L. as if **magnificen(t-)s* (occurring in the compar and superl. of *magnificus*, and its deriv *magnificentia* see *magnific* and *magnificence*), equiv. to *magnificus*, great in deeds or sentiment, noble, splendid, etc , < *magnus*, great, + *-ficen(t-)s*, an accom form of *-ficu-n(t-)s*, the reg form in comp of *facien(t-)s*, ppr. of *facere*, do see *fact*, *facient*.]

1† Great in deeds or action, especially, very liberal, munificent; generous, open-handed.

Know, you court leeches,
A prince is never so *magnificent*
As when he's sparing to enrich a few
With the injuries of many
Massinger, Emperor of the East, II 1

That little in reward of vertue was ever *magnificent*
Milton, Hist Eng , ii

2 Making a great show, possessing or pretending to greatness, stately, ostentatious.

A letter from the *magnificent* Armado
Shak, L L L , i 1 193

3 Grand in appearance or character, exhibiting greatness, splendid, brilliant, of extraordinary excellence as, a *magnificent* building or view, a *magnificent* victory or poem, *magnificent* conceptions.

This was thought and called a *magnificent* answer
Byron, Childe Harold, iv 41, note

4 Exhibiting greatness of size or extent as, the preparations were upon a *magnificent* scale; a city of *magnificent* distances

Far distant he descries,
Ascending by degrees *magnificent*
Up to the wall of heaven, a structure high
Milton, P L , iii 502

=**Syn** *Superb*, *Splendid*, etc (see *grand*), imposing, august, gorgeous

magnificently (mag-nif′ɪ-sent-lɪ), *adv*. In a magnificent manner, with magnificence, splendidly, brilliantly; gorgeously

Magnificet (mag-nif′ɪ-set), *n* [< L. *magnificet*, 3d pers. sing. pres. subj of *magnificare*, magnify see *magnify*] A name of Mid-Lent Thursday, taken from the first word of the collect *Hampson*, Medii Ævi Kalendarium, II 254

magnifico (mag-nif′ɪ-kō), *n* [It , < L *magnificus*, noble, great see *magnific*] 1 A title of courtesy formerly given to Venetian noblemen; hence, a grandee, a man of high rank or pretensions, a great man.

The duke himself, and the *magnifices*
Of greatest port, have all persuaded with him
Shak, M of V , iii 2 282.

2. A by-name for the rector of a German university, who is entitled to be addressed as *your Magnificence* See *magnificence*, 3

magnifier (mag′nɪ-fī-ėr), *n* 1. One who or that which magnifies or enlarges.

Mens hilaris, requies, moderata dicta is a great *magnifier* of honest mirth *Burton*, Anat of Mel , p. 298.

2 Specifically, an optical instrument that magnifies; a convex lens, a concave mirror, or a combination of lenses or mirrors, which increases the apparent magnitude of bodies.

magnifiquet, *a*. An obsolete form of *magnific*.

magnify (mag′nɪ-fī), *v. t* ; pret and pp *magnified*, ppr. *magnifying*. [< ME. *magnifien*, < OF. (also F.) *magnifier* = Sp Pg. *magnificar* = It. *magnificare*, < L. *magnificare*, make much of, esteem highly, praise highly, extol, magnify, < *magnus*, great, + *facere*, make. ' Cf. *magnific*.] 1. To make greater; increase the size, amount, or extent of; enlarge; augment. [Rare in this literal sense.]

The least error in a small quantity, as in a small circle, will, in a great one, as in the circles of the heavenly orbs, be proportionally *magnified*
N Grew, Cosmologia Sacra, ii. 5

Speak, e'er my Fancy *magnifie* my Fears.
Congreve, To Cynthia.

2. To cause to appear greater; increase the apparent dimensions of, enlarge or augment to the eye as, a convex lens *magnifies* the bulk of a body to the eye.

Since the shorter the focus of the lens the more closely may the object be approximated to the eye, the retinal picture is enlarged, causing the object to appear *magnified* in the same proportion *Encyc. Brit.*, XIV 259

3. To exalt the power, glory, or greatness of, sound the praises of, extol; glorify.

O, *magnify* the Lord with me, and let us exalt his name together Ps. xxxiv 3

Those highly *magnify* him whose judicious inquiry into his acts, and deliberate research into his creatures, return the duty of a devout and learned admiration
Sir T Browne, Religio Medici, i. 13

4. To represent as greater than the reality, exaggerate. as, to *magnify* a person's deeds, to *magnify* the evils of one's lot.

My wife used every art to *magnify* the merit of her daughter *Goldsmith*, Vicar, xvi

Magnifying power of a microscope, the ratio of the length upon the retina of any part of the image of the object looked at with the microscope to the length of the retinal image of the same object looked at without the microscope at a standard distance of 10 inches In regard to the magnifying power of eye glasses, complicated considerations have to be introduced — **Magnifying power of a telescope**, the ratio in which the angle subtended by any linear dimensions of the object looked at is increased by the telescope It is always equal to the focal length of the object-glass divided by that of the eyepiece For a distant object the focal length of the object-glass is that for parallel rays — that is, its principal focal length, for nearer objects the focal length is greater, and the magnifying power is correspondingly increased

magnifying-glass (mag'ni-fi-ing-glȧs), *n.* In *optics*, a convex lens: so called because objects seen through it have their apparent dimensions increased

magnifying-lens (mag'ni-fi-ing-lenz), *n.* See *lens*

magniloquence (mag-nil'ō-kwens), *n* [< L *magniloquentia*, a lofty style or strain of language, < **magniloquen(t-)s*, *magniloquus*, speaking in a lofty style: see *magniloquent*] The quality of being magniloquent, a lofty manner of speaking or writing; exaggerated eloquence, grandiloquence; bombast

All the sects ridiculed this *magniloquence* of Epicurus, as inconsistent with his whole system
Bentley, Remarks, § 44

There was something surprising and impressive in my friend's gushing *magniloquence*
H James, Jr, Pass Pilgrim, p 107

magniloquent (mag-nil'ō-kwent), *a* [< L. **magniloquen(t-)s*, equiv to *magniloquus*, speaking in a lofty style, < *magnus*, great, lofty, + *loquen(t-)s*, ppr of *loqui*, speak see *locution*] Speaking or writing in a lofty style, grandiloquent, bombastic.

magniloquently (mag-nil'ō-kwent-li), *adv* In a magniloquent manner; with loftiness or pomposity of language.

magniloquous† (mag-nil'ō-kwus), *a.* [< L. *magniloquus*, speaking in a lofty style, < *magnus*, great, lofty, + *loqui*, speak see *locution*] Magniloquent.

magniloquy (mag-nil'ō-kwi), *n.* [< LL. *magniloquium*, loftiness of speech, < L. *magniloquus*, speaking in a lofty style: see *magniloquous*.] Magniloquence, high-sounding pedantry [Rare.]

Of many anatomical terms the chief characteristics are antiquity, *magniloquy*, and unintelligibility
Buck's Handbook of Med Sciences, VIII 520

magnisonant (mag-nis'ō-nant), *a* [< L *magnus*, great, + *sonan(t-)s*, ppr. of *sonare*, sound.] High-sounding; bombastic. *Southey*, The Doctor. [Rare]

magnitude (mag'ni-tūd), *n.* [= F. *magnitude* = Sp. *magnitud* = Pg. *magnitude* = It *magnitudine*, < L. *magnitudo*, greatness, bulk, size, rank, dignity, < *magnus*, great, large, grand, noble, important, etc.; compar. *major* (see *major*), superl. *maximus* (see *maximum*); with formative *-n*, < **mag*, akin to Gr. *μέγας*, (*μεγαλ-*), great, large, = AS. *micel*, great, much, Skt √*mah*, orig. **magh*, be great. see *mickle*, *much*. Cf. *main*².] **1.** Greatness; vastness, whether in a physical or a moral sense; grandeur.

With plain heroick *magnitude* of mind.
Milton, S. A, 1 1279

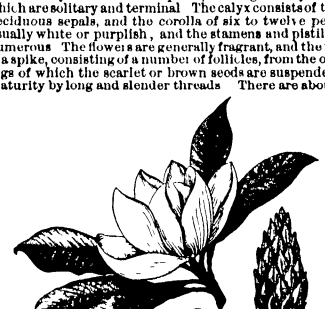
We commonly find in the ambitious man a superiority of parts, in some measure proportioned to the *magnitude* of his designs. *Horsley*, Works, I. iv.

2. Largeness of relation or significance; importance; consequence: as, in affairs of *magnitude* disdain not to take counsel. — **3.** Size, or the property of having size; the extended quantity of a line, surface, or solid, length, area, or volume.

And fast by, hanging in a golden chain,
This pendent world, in bigness as a star
Of smallest *magnitude* *Milton*, P L., ii. 1058

One may learn how the feeling of *magnitude* varies with changes in the absolute *magnitude* of the object, and so reach a more precise and scientific statement of this particular aspect of the coexistence between body and mind
J Sully, Sensation and Intuition, p 44

4. Any kind of continuous quantity which is comparable with extended quantity. In this sense we speak of the magnitude of a velocity, force, acceleration, or other vector quantity, but we do not properly speak of a magnitude of heat, energy, temperature, sound, etc The use of the word as a synonym of *quantity*, as in the following passage, is to be deprecated



By intensive *magnitude* is meant the strength of a sensation, by extensive *magnitude*, its volume, which roughly speaking corresponds to the area of the sentient surface and the number of nervous elements acted upon
J Sully, Sensation and Intuition, p 44

5. In *astron.*, the brightness of a star expressed according to the numerical system used by astronomers for that purpose In this sense *magnitude* translates Greek *μεγεθος*, used in the same sense in the Almagest, the expression being due to the fact that bright stars, by an effect of irradiation, look larger than faint ones The brightest stars are said to be of the first magnitude, while those of the sixth magnitude are hardly noticed by casual observers in ordinary states of the sky Since the brightness of stars has been measured photometrically, the interval between successive magnitudes has been defined by a constant ratio of brightness, which in the so-called absolute scale, now generally used, is $\sqrt[5]{100}$, or 2.51

6. In *anc. pros.*, the length of a syllable, foot, colon, or meter, expressed in terms of the metrical unit (primary time, semeion, or mora). as, a foot of trisemic *magnitude*, a colon of icosasemic *magnitude*. — **Absolute magnitude** See *absolute* — **Angular magnitude**, the quantity of an angle — **Apparent magnitude of an object**, that magnitude which is measured by the optic or visual angle intercepted between lines drawn from the extreme points of the object to the center of the pupil of the eye This angle may be considered to be inversely as the distance of the object [This phrase is used chiefly with reference to the heavenly bodies, but is employed also in many branches of optical science, with the same general meaning.] — **Center of magnitude** See *center*¹ = **Syn** *Bulk*, *Volume*, etc See *size*

species, indigenous to subtropical Asia and the eastern part of North America. They are almost all very ornamental, and are frequently cultivated. *M conspicua* is the yulan *M grandiflora* is the big laurel or bull-bay of the southern United States, a fine forest-tree, 60 or 80 feet high, evergreen, with fragrant flowers *M macrophylla* is the great-leafed cucumber, a less common tree of the same region *M Umbrella* is the umbrella-tree. *M acuminata*, the cucumber-tree or mountain-magnolia, extends north to New York and Ohio Another cucumber-tree is *M cordata*, growing in the Southern States. *M glauca*, a moderate sized tree, or northward a shrub, grows in swamps from Massachusetts to Florida and Texas It has globular fragrant flowers, 2 inches long, the leaves evergreen in the south It is variously named *small* or *laurel magnolia*, *sweet-bay* or *white-bay*, *white laurel* or *swamp laurel*, also *beaver tree* and *swamp sassafras* The genus appears very early and very abundantly in the fossil state, over 50 species having been described They range from the Middle Cretaceous to the Pliocene, being more numerous in the Cretaceous than in the Tertiary in both Europe and America, and also occurring in Greenland, in Australia, in Japan, and in Java.

2 [*l. c.*] A plant of this genus

Magnoliaceæ (mag-nō-li-ā'sē-ē), *n pl* [NL (A. P. de Candolle, 1818), < *Magnolia* + *-aceæ*] A natural order of dicotyledonous polypetalous trees or shrubs, belonging to the cohort *Ranales*, based on the genus *Magnolia* It is characterized by having the sepals and petals in from two to an indefinite number of rows or series, petals and stamens usually very numerous, the receptacle bearing extrorse carpels, and the seeds with a minute embryo and no albumen The order embraces 4 tribes, 15 genera, and about 85 species, growing in tropical Asia and North America (a few in tropical and South America), in Australia, and in New Zealand

magnoliaceous (mag-nō-li-ā'shius), *a* [< *magnolia* + *-aceous*.] Of or pertaining to plants of the natural order *Magnoliaceæ*, resembling the magnolia.

Magnolieæ (mag-nō-li'ē-ē), *n. pl* [NL (A. P. de Candolle, 1824), < *Magnolia* + *-eæ*] A tribe of trees and shrubs of the natural order *Magnoliaceæ*, characterized by perfect flowers, imbricate carpels growing in heads or spikes and arranged in an indefinite number of series, and stipules which are folded about the leaves in vernation

magnoperate† (mag-nop'e-rāt), *v t* [< L. *magnopere*, *magno opere*, greatly. *magno*, abl of *magnus*, great, *opere*, abl of *opus*, work, labor see *opus*, *operate*] To cause or effect a great increase of

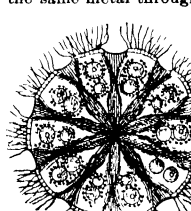
Hopton, Baculum Geodeticum (1614) (*Halliwell*)

magnosellarian (mag'nō-se-lā'ri-an), *a.* [As *Magnosellar(idæ)* + *-an*] Having large saddles, as a goniatite; of or pertaining to the *Magnosellaridæ* *Hyatt*

Magnosellaridæ (mag'nō-se-lar'i-dē), *n pl* [NL, < L *magnus*, great, + *sella*, a seat, saddle (> *sellaris*, of or belonging to a seat), + *-idæ*] A family of goniatites having smooth shells, sutures with undivided ventral lobes, and a very large pair of entire lateral saddles, whence the name *Hyatt*, Proc. Bost Soc Nat Hist, 1883, p 318 Preferably called *Magnasellidæ*.

magnum (mag'num), *n.* [< L. *magnum*, neut. of *magnus*, great see *magnitude*] **1** A large wine-bottle, usually twice the size of the ordinary bottle used for the same kind of wine — **2.** The quantity of wine contained in such a bottle: as, a *magnum* of port

The approbation of much more rational persons than the B club could have mustered even before the discussion of the first *magnum* *Scott*, Waverley, x.



3. Pl. *magna* (-nä). In *anat*, the largest bone of the human carpus, in the distal row, between the trapezoid and the uncriform, in special relation with the head of the middle metacarpal bone: more fully called *os magnum*. It is the third carpale of a typical carpus, and is also known as *capitatum*, or *os capitatum*, from its shape in man.

magnum-bonum (mag'num-bō'num), *n* [L., a great good *magnum*, neut of *magnus*, great; *bonum*, a good thing, neut of *bonus*, good see *bonus*.] A kind of large-sized barrel-pen. a trade-name

> *Sumner*, Orations, I. 106
>
> Girlish lightness passed away
> Into a sweet grave *majesty*,
> That scarce elsewhere the world might see
> *William Morris*, Earthly Paradise, III. 67

2. Royal state; royalty.

> Wipe off the dust that hides our sceptre's gilt,
> And make high *majesty* look like itself
> *Shak.*, Rich. II., ii. 1. 295

3. A title of address or dignity (commonly written with a capital) used in speaking to or of a ruling sovereign or his (or more rarely her) wedded consort: as, your *Majesty* or *Majesties*, their *majesties* the king and queen. By papal grant, the sovereigns of Spain bear the title of *Catholic Majesty*, those of Portugal, of *Most Faithful Majesty*, and the former kings of France had that of *Most Christian Majesty*.

> Before she arrived at London, Captaine Smith, to deserue her former courtesies, made her qualities knowne to the Queenes most excellent *Maiestie* and her Court.
> Quoted in *Capt. John Smith's* Works, II. 29
>
> Most royal *majesty*,
> I crave no more than hath your highness offer'd
> *Shak.*, Lear, i. 1. 196

4. [*cap.*] In *medieval art*, etc., a symbolic representation of the first person of the Trinity, seated on a throne. In the art of the Western Church this figure is usually robed in a cope and other vestments, wearing, as emblematic of sovereignty over the whole universe, a triple (sometimes a quadruple) crown similar to the papal tiara, and holding the mound or globe of kingly authority.

> The dome [of St. Sophia at Constantinople] was covered with mosaic of glass . . . the summit, as usual, representing a *Majesty*
> *Neale*, Eastern Church, I. 288

majoe-bitter (mā'jō-bit'ėr), *n.* A bitter shrub of the West Indies, *Picramnia Antidesma*, used medicinally.

majolica (ma-jol'i-ka, It. pron. mā-yō'li-ka), *n.* [< *Maiolica*, for *Majorica* (Sp. *Mallorca*), whence the first specimens came.] **1.** Decorative enameled pottery, especially that of Italy from the fifteenth to the seventeenth century. The name is applied particularly to the more richly adorned pieces, the colors of which have remarkable intensity. (See *mezza majolica*.) Modern writers on ceramics have attempted to limit it to lustered pottery, especially that of the middle ages and the sixteenth century, made in Majorca or in Spain, or more especially in Italy, in supposed imitation of ware from the two former countries.

Majolica Pesaro Ware of about A. D. 1510

2. As applied to modern pottery, a kind of ware which in effects of color partly imitates the pottery above defined, especially in large pieces used for architectural decoration, garden-seats, vases, etc. This ware is usually much harder and more perfectly manufactured than the ancient, but is inferior in decorative effect, being cast in molds and having a mechanical look. —**Fontana majolica**, a variety of the majolica of Urbino, the name *Fontana* having been adopted by certain of the leading decorators of that school. The painter known as Orazio Fontana is the most celebrated of these, his work takes rank among the finest productions of the sixteenth century.

major (mā'jor), *a.* and *n.* [I. *a.* = OF. *maior*, *mayor*, *mayour*, *mayeur*, F. *majeur* = Sp. *mayor* = Pg. *maior*, *mayor*, *major* = It. *maggiore*, < L. *major*, greater, compar. of *magnus*, great: see *magnitude* and *majesty*. II. *n.* = D. G. Dan. Sw. *major*, < F. *major* = Sp. *mayor* = Pg. *mayor* = It. *maggiore*, < L. *major*, an elder, adult (usually in pl.), ML. also chief officer, chief, mayor (cf. *mayor*, from the same source); from the adj.] **I.** *a* **1.** Greater; more important or effective; first in force or consideration; leading; principal: as, the *major* premise or term of a syllogism.

> My *major* vow lies here, this I'll obey
> *Shak.*, T. and C., v. 1. 49

2. Greater in quantity, number, or extent: as, the *major* part of the revenue, of an assembly, or of a territory.

> In any rank or profession whatever, the more general or *major* part of opinion goes with the face
> *B. Jonson*, Cynthia's Revels, ii. 1

> The first eight lines of this Italian sonnet are often called the *major* portion
> *Lanier*, Science of Eng. Verse, p. 241

3†. Of age; having attained to majority. *Godwin.* —**4.** In *music*: (*a*) Of intervals, standard or normal, literally "greater," as compared with minor intervals. The term is more often applied to seconds, thirds, sixths, sevenths, and ninths, designating an interval equivalent to the intervals between the key note of a standard or normal scale and its second, third, sixth, seventh, and ninth tone respectively. Thus, a *major second* is two semitones long, a *major third* four semitones, a *major sixth* nine semitones, and a *major seventh* eleven semitones. *Major* has also been applied of late to fourths, fifths and octaves, and is then equivalent to the older term *perfect*. Finally, it is used to distinguish the larger of two intervals that differ by a minute quantity: as, a *major* step or tone (⅛), which is a comma greater than a minor tone. Opposed to *minor*, and also often to *diminished* and *augmented*. See *interval*, 5. (*b*) Of tones, distant by a major interval from a given tone: as, A is the *major* third of F, etc. (*c*) Of tonalities and scales, standard or normal: characterized by a major third and also by a major sixth and seventh: opposed to *minor*. The *major tonality* or *scale* is the recognized standard of reference for all the modern musical systems. See *key*, *tonality*, and *scale*. (*d*) Of triads and chords, characterized by a major third between the root and the tone next above, and a perfect fifth between the root and the second tone above: opposed to *minor*, *diminished*, and *augmented*. The *major triad* is the usual standard of reference in classifying the chords of modern music. See *triad* and *chord*. (*e*) Of cadences, ending in a major triad. (*f*) Of modes in the modern sense, and thus of composition in general, characterized by the use of a major tonality and of major cadences: as, a piece is written throughout in the *major* mode. From an acoustical point of view, major intervals, chords, and scales are simpler and stronger in themselves and admit of better harmonic extension and combination than minor. The educated taste of modern times has tended to exalt the major over the minor, making the former the standard and normal of which the latter is the variation, while the medieval systems, being based upon a different conception of music at various points, tended the other way. The esthetic effect of the major in contrast with the minor is brighter, stronger, and more complete. It has recently been maintained that major and minor phenomena, in all their phases, are mutually reciprocal, the major triad, scale, etc., being measured upward in a certain way from a given tone, and the minor triad, scale, etc., being measured downward in the same way from the same tone. According to this view, the major triad of C is called the *over chord* of C, and the minor triad of *b* is called the *under chord* of C, etc.

5. In *logic*, wider, broader, more extensive, a predicate to more subjects. The *major extreme* or *major term* of a syllogism is that term which enters into the predicate of the conclusion, the *major premise* is that premise which contains the major term. These have always been the usual definitions, but they have been subject to dispute, owing to the fact that the real distinction between major and minor vanishes in certain cases. —**Bob major**. See *bob*, 7. —**Major axis**. Same as *transverse axis* (which see, under *axis*). —**Major function**. See *function*.

II. *n.* **1.** *Milt.*, an officer next in rank above a captain and below a lieutenant-colonel, the lowest field-officer. His chief duties consist in superintending the exercises of his regiment or battalion, and in putting in execution the commands of his superior officer. His ordinary position in the line is behind the left wing. Abbreviated *Maj.*

2. In *law*, a person who is old enough to manage his own concerns. See *age*, *n.*, 3. —**3.** In *music*, the major mode, or a major tonality or major chord, taken absolutely. —**4.** In *logic*: (*a*) The major premise of a syllogism, which in direct syllogisms states the rule from which the conclusion is drawn. (*b*) The major extreme of a syllogism. —**5†.** Same as *mayor*.

major-general (mā'jor-jen'e-ral), *n.* A military officer next in rank below a lieutenant-general. In the United States army the grade of major general has hitherto been the highest permanent one (see *general* and *lieutenant general*), and in active service a major general may be assigned to the command of a division, a corps, or an entire army. In the British and German armies major generals are the lowest permanent general officers (brigadiers in the former being temporarily appointed), and in action usually command brigades. Abbreviated *Maj. Gen.*

major-generalship (mā'jor-jen'e-ral-ship), *n.* [< *major-general* + *-ship*.] The office of a major-general.

Majorist (mā'jor-ist), *n* [< *Major* (see def.) + *-ist*.] A follower of Georg Major, a German Protestant theologian (1502–74), who maintained that good works are necessary for salvation.

Majoristic (mā-jo-ris'tik), *a* [< *Majorist* + *-ic*.] Of or pertaining to the Majorists or to their doctrines.—**Majoristic controversy**, a controversy which began in 1551, between Georg Major and Nikolaus von Amsdorf, in regard to the doctrine of justification by faith. Major maintained that good works are essential to salvation, and Amsdorf was accused of believing that they are hindrance to salvation. The controversy continued till the adoption of the Formula of Concord in 1577.

majority (mā-jor'i-ti), *n.*, pl. *majorities* (-tiz) [= F. *majorité* = Sp. *mayoridad* = Pg. *maioridade* = It. *maggiorità*, < ML. *majorita(t-)s*, < L. *major*, greater: see *major* and *-ity*.] **1†.** The state of being major or greater; superiority, preponderance.

malacopterygious (mal-a-kop-te-rij'i-us), *a* Same as *malacopterygian*

Malacoscolices (mal'a-kō-skol'i-sēz), *n pl* [NL., for **malacoscolecs*, ⟨ Gr. *μαλακός*, soft (with ref to mollusks), + *σκώληξ*, a worm] A superordinal division proposed by Huxley in 1877 to be established for the reception of the *Polyzoa* and *Brachiopoda* together, in order to indicate the relations of the group so constituted with the worms on the one side and with the mollusks on the other

malacoscolicine (mal'a-kō-skol'i-sin), *a* Pertaining to the *Malacoscolices*, or having their characters

malacosis (mal-a-kō'sis), *n* [NL., ⟨ Gr. *μαλακός*, soft, + *-osis*.] In *pathol* the morbid softening of tissues

Malacosteidæ (mal'a-kos-tē'i-dē), *n. pl* [NL., ⟨ *Malacosteus* + *-idæ*] A family of teleost fishes, typified by the genus *Malacosteus*

malacosteoid (mal-a-kos'tē-oid), *a* [⟨ *Malacosteus* + *-oid*] Resembling the genus *Malacosteus*, of or pertaining to the *Malacosteidæ*.

malacosteon (mal-a-kos'tē-on), *n* [NL., ⟨ Gr *μαλακός*, soft, + *ὀστέον*, bone] In *pathol*, osteomalacia

Malacosteus (mal-a-kos'tē-us), *n.* [NL., ⟨ Gr. *μαλακος*, soft, + *ὀστέον*, bone] A genus of fishes of peculiar aspect, distinguished among other characters, by the slight calcification of the skeleton, typical of the *Malacosteidæ* There are several species, all deep sea fishes, of which *M niger* is the best-known

malacostomous (mal-a-kos'tō-mus), *a* [⟨ Gr. *μαλακος*, soft, + *στόμα*, mouth] Leather-mouthed; having a soft mouth—that is, toothless jaws said of fishes.

Malacostraca (mal-a-kos'tra-kä), *n. pl.* [NL., ⟨ Gr. *μαλακόστρακος*, soft-shelled (neut. pl *μαλακόστρακα*, Aristotle's name for *Crustacea* such as crabs, lobsters, etc), ⟨ *μαλακός*, soft, + *ὄστρακον*, a shell. see *Ostracea*, *ostracize*, etc.] One of two main divisions of the *Crustacea* proper; the division which is contrasted with *Entomostraca*. By Latreille the group was divided into five orders, *Decapoda*, *Stomapoda*, *Læmodipoda*, *Amphipoda*, and *Inopoda* Zoologically speaking, its limits have fluctuated so far and so often with different writers that no comprehensive yet exclusive definition is practicable, and the general tendency is now to ignore the term, along with *Entomostraca* Huxley, however, retains both

malacostracan (mal-a-kos'tra-kan), *a.* and *n.* [⟨ *Malacostraca* + *-an.*] **I.** *a.* Of or pertaining to the *Malacostraca*. Also *malacostracous*

II. *n* A malacostracous crustacean.

malacostracological (mal-a-kos'tra-kō-loj'i-kal), *a.* [⟨ *malacostracology* + *-ic-al*] Of or pertaining to malacostracology

malacostracologist (mal-a-kos-tra-kol'ō-jist), *n* [⟨ *malacostracology* + *-ist*] A carcinologist or crustaceologist

malacostracology (mal-a-kos-tra-kol'ō-ji), *n* [⟨ NL *Malacostraca*, q v , + Gr *-λογια*, ⟨ *λεγειν*, speak see *-ology*] The science of crustaceans, crustaceology, carcinology

malacostracous (mal-a-kos'tra-kus), *a* [⟨ Gr *μαλακόστρακος*, soft-shelled see *Malacostraca*] Same as *malacostracan* as, "a *malacostracous* crustacean," *Huxley*, Anat. Invert , p 323.

malacotomic (mal'a-kō-tom'ik), *a* [⟨ *malacotom-y* + *-ic*] Of or pertaining to malacotomy

malacotomy (mal-a-kot'ō-mi), *n.* [⟨ Gr. *μαλακός*, soft, + *-τομια*, ⟨ *τέμνειν*, *ταμεῖν*, cut] The anatomy of *Mollusca*.

Malacozoa (mal'a-kō-zō'ä), *n pl* [NL., ⟨ Gr *μαλακός*, soft, + *ζῷον*, an animal] Soft-bodied animals, the *Mollusca* in a broad sense, including mollusks proper, brachiopods, and polyzoans

malacozoic (mal'a-kō-zō'ik), *a* [⟨ *Malacozoa* + *-ic*] Possessing the common features of molluscan life —**Malacozoic series**, a phrase proposed by Huxley in 1877 to include a gradation or series of forms represented by the *Malacoscolices* of the same author and the *Mollusca*, it includes animals graded from the lowest *Polyzoa* to the highest mollusks

maladaptation (mal'ad-ap-tā'shon), *n* [⟨ *mal-* + *adaptation*] Faulty adaptation, lack of adaptation *W K Clifford*, Lectures, II 273

malaria (mā-lā'ri-a), *n* [= F. *malaria*, < It *mal' aria*, bad air *mala*, fem of *malo*, < L *malus*, bad (see *mal-*, *male*³), *aria*, < L *aer*, air see *air*¹.] 1 Air contaminated with some pathogenic substance from the soil, specifically, air impregnated with the poison producing intermittent and remittent fever —2 The disease produced by the air thus poisoned In a strict sense the word is a generic term designating intermittent and remittent fever and other affections, such as malarial neuralgia, due to the same cause Malarial diseases in this sense prevail in all quarters of the globe except the coldest, and the infection of soil and air occurs in both uninhabited and populous regions The disease is contracted by presence in the locality, and not from the sick, nor do the latter seem to transplant the infection to new places to which they may go The disease may apparently be introduced into the body through water that is drunk as well as through the air The development of the poison is favored by heat and moisture Malarial diseases are apt to increase after the turning up of virgin soil The poison seems to lie low in the atmosphere, but may be blown to adjacent heights. Besides the well marked fevers, the malarial poison produces various and often ill marked perversions of the general health, such as neuralgia, neuritis, anemia, digestive disturbances, and albuminuria The anatomical effects of the malarial poison are enlargement of the spleen, sometimes excessive, darkening of the skin, and the presence of a dark pigment in the blood, in amorphous masses There is found, moreover, in malarial blood a variety of peculiar living bodies which are supposed to be the various stages in the life-history of a single organism This has been called the *Plasmodium malariæ* All these forms of malaria are, as a rule, affected favorably by quinine, and to a less degree by certain other drugs, notably arsenic

Oph. What means this, my lord?
Ham. Marry, this is miching *mallecho* [var. *malicho*, *mallico*], it means mischief. *Shak.* Hamlet, iii. 2. 146.

malleolus (ma-lē'ō-lus), *n.*, pl. *malleoli* (-i). [NL., < L. *malleus*, a hammer, + NL. (*stap*)*edius*.] A muscle of the tympanum attached to the malleus, the tensor tympani: correlated with *stapedius* and *incudius*. *Coues and Shute*, 1887.

mallee (mal'ē), *n* [Australian.] Two dwarf species of *Eucalyptus*, *E. dumosa* and *E. oleosa*, growing in Australia. They sometimes form immense tracts of brushwood, called *mallee-scrub*.

If you will get any bushman to tell you that land covered with Eucalyptus dumosus, vulgarly called *Mallee*, and exceedingly stunted specimens of that, will grow anything, I will tell him he knows nothing
H. Kingsley, Hillyars and Burtons, liv.

mallee-bird (mal'ē-berd), *n.* The *Leipoa ocellata*, a bird of the family *Megapodida* (see *Leipoa*). Also called *native pheasant* by the English in Australia. *A. Newton.*

mallei, *n.* Plural of *malleus*.

Malleidæ (ma-lē'i-dē), *n. pl.* [NL., < *Malleus* + *-idæ*.] A family of bivalves, typified by the genus *Malleus*, the hammer-oysters: same as *Aviculidæ* or *Pteridæ*.

malleifer (ma-lē'i-fėr), *n* [< NL. *malleifer*: see *malleiferous*.] A vertebrate of the superclass *Malleifera*.

Malleifera (mal-ē-if'e-ra), *n. pl.* [NL., neut. pl of *malleifer* see *malleiferous.*] A superclass of craniate *Vertebrata*, or skulled vertebrates, distinguished by the development of the malleus as a bone of the ear, and by the direct articulation of the lower jaw to the skull It corresponds to the class *Mammalia*, and contrasts with *Quadratifera* and *Lyrifera*.

malleiferous (mal-ē-if'e-rus), *a* [< NL. *malleifer*, < L *malleus*, a hammer, a mall, + *ferre*, = E *bear*[1]] Having a distinct malleus; of or pertaining to the *Malleifera*, mammalian.

malleiform (mal'ē-i-form), *a* [< L *malleus*, a hammer, a mall, + *forma*, form] In *zool*, hammer-shaped

In some species of Polynoe the parapodia give rise, at corresponding points, to large, richly cirrlated, *malleiform* tubercles *Huxley*, Anat Invert , p 210

mallemaroking (mal'ē-ma-rō'king), *n* [Verbal n of **mallemaroke*, an unrecorded verb, perhaps equiv. to **mallemoke*, lit act like the mallemoke or mallemuck, < *mallemoke*, *mallemuck*, the fulmar petrel see *mallemuck* Cf D *mallemolen*, carousal] *Naut* , the visiting and carousing of seamen in the Greenland ships. *Sailor's Word-book*

mallemuck (mal'ē-muk), *n* [Also *mallemock*, *mallemoke*, *mollymock*, *mollymauk*, *mallmock*, *mallduck*, *malmarsh*, etc , < G *mallemucke* = D *mallemugge*, a mallemuck, explained, from the D , as 'foolish fly' or 'fool flier,' as if < D *mallen*, fool, dally, + *mug*, MD *mugge*, a 'fly,' in allusion to its heedless habits, but the D word is not open to this explanation D *mug* means rather 'a gnat' (= E *midge*), and cannot refer to the 'flying' of a bird The name is prob of northern origin] The fulmar petrel, *Fulmarus glacialis*, also extended to some related birds, as albatrosses. See cut under *fulmar*[2] Also called *malmarsh*.

mallenders (mal'en-derz), *n pl* Same as *malanders*

malleolar (mal'ē-ō-lar), *a* [< *malleolus* + *-ar*[3]] 1. Having the character of a malleolus as, the *malleolar* process of the tibia — 2 Of or pertaining to either malleolus as, a *malleolar* artery

malleolus (ma-le'ō-lus), *n* , pl *malleoli* (-lī) [NL , < L. *malleolus*, a small hammer, dim of *malleus*, a hammer see *malleus*] 1 In *anat* , a bony protuberance on either side of the ankle The two together contribute to the stability of the ankle joint, by locking the astragalus so as to prevent lateral and rotatory movements In man the outer malleolus is formed by the fibula, the inner by the tibia and each forms a sort of pulley or trochlea around which wind the tendons of important extensor muscles of the foot The malleoli are little distinguished in most animals, owing to the different set of the foot upon the leg or the different configuration of the parts When as often occurs, the fibula does not reach the ankle, the outer malleolus is wanting unless formed by the tibia In birds the condyles of the tibia, constituted by ankylosis of proximal tarsal bones, take the name and place of malleoli

2 In *bot.*, a layer, a shoot bent into the ground and half divided at the bend, whence it emits roots. *Lindley* —3 [*cap.*] In *conch.*, a genus of bivalve shells *J E Gray*, 1847 — **Inner malleolus**, the malleolar process of the tibia, articulating with the inner side of the astragalus having behind it the tendons of the tibialis posticus and flexor longus digitorum — **Outer malleolus**, the enlarged lower end of the fibula, articulating with the outer side of the astragalus, having behind it the tendons of the peroneus longus and peroneus brevis

malleoramate (mal'ē-ō-rā'māt), *a* [< L *malleus*, a hammer, + *ramus*, a branch see *ramate.*] In rotifers, having mallei fastened by uncī to rami, as in the *Melicertida*, *Triarthrida*, *Pterodinida*, and *Pedalionida*

mallet (mal'et), *n* [< OF *mallet*, *maillet*, F *maillet* (= Pr *malhet* = It *maglietto*), a wooden hammer, mallet, dim of *mal*, *mail*, a hammer see *mall*[1].] 1 A small beetle or wooden hammer used by carpenters, stonecutters, printers, etc , chiefly for driving another tool, as a chisel, or the like It is wielded with one hand, while the heavier mall requires the use of both hands. —2 The wooden hammer used to strike the balls in the game of croquet —**Automatic mallet.** Same as *dental hammer* (which see, under *hammer*[1]) — **Dental mallet** (*a*) A light hammer of wood or metal used by dentists for striking the plugger in the operation of filling teeth It is now superseded in great part by various mechanical contrivances, such as the dental hammer or plugger and the electric plugger (*b*) A dental hammer or plugger See *hammer*[1]

mallet-flower (mal'et-flou'ėr), *n.* Any plant of the genus *Tupistra*

malleus (mal'ē-us), *n* , pl *mallei* (-ī) [NL , < L *malleus*, a hammer, a mall see *mall*[1]] 1. In *anat* , the proximal element of Meckel's cartilage, in any way distinguished from the rest of the mandibular arch In man and other mammals the malleus is separately ossified, and is the outer one of the three bonelets or ossicles of the ear lodged in the cavity of the tympanum, connected with the ear-drum or tympanic membrane, and movably articulated with the incus It is named from its hammer-like shape in man, having a head, neck, and handle or short process, together with a processus gracilis, which lies in the Glaserian fissure As one of the ossicula auditus, the malleus subserves the function of hearing in mammals In birds, and many other vertebrates below mammals, the malleus has a very different office, that of forming part of the suspensorium of the lower jaw, which is its true morphological character Its specialization in *Mammalia* is peculiar to that class See *Malleifera*, and cuts under *hyoid*, *ear*, and *tympanic*

2 In *ichth* , one of the Weberian ossicles which form a chain between the air-bladder and the auditory apparatus in the skull of plectospondylous and nematognathous fishes It is homologous with the hemapophysis of the third one of the coalesced anterior vertebræ.—3 In rotifers, one of the paired calcareous structures within the pharynx In the typical forms it is a hammer like body, consisting of an upper part or head, called the *vicus*, and a lower part or handle, named the *manubrium* but in other forms the distinction disappears

4 [*cap*] In *conch* , a genus of pearl-oysters of the family *Aviculidæ*, founded by Lamarck in 1799, the hammer-shells They have a long winged hinge at right angles with the length of the valve, giving a hammer like shape, whence the name Young shells are like those of *Avicula* or wing shells, and have a byssal notch the hammer shape is gradually acquired with age *M vulgaris*, the hammer oyster, inhabits Eastern seas See cut under *hammer shell*

5 Same as *war-hammer*

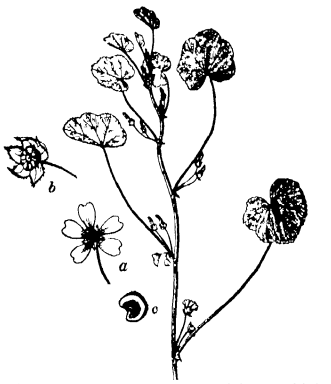
mallinders (mal'in-dėrz), *n pl* Same as *malanders*.

Mallophaga (ma-lof'a-gā), *n pl* [NL , neut pl. of *mallophagus* see *mallophagous*] A group of ametabolous apterous parasitic insects with mandibulate mouth-parts and coalesced mesometathorax, jointed antennæ and palpi, superior spiracles, and short stout legs ending in hooked claws They are known as *bird lice*, and are very numerous and diversiform By some they are regarded as *Hemiptera* degraded and distorted by parasitism, and placed with the true lice in a group *Parasita* or *Anoplura*, by others they are held to constitute a superfamily or suborder of *Pseudoneuroptera*, and by others again a suborder of *Corrodentia* See *louse*[1]

mallophagan (ma-lof'a-gan), *a* and *n* [< NL *Mallophaga* + *-an*] **I**, *a* Same as *mallophagous*

II *n* A louse of the group *Mallophaga*

Mallophagidæ (mal-ō-faj'i-dē), *n pl.* [NL , < *Mallophaga* + *-idæ*] The mallophagous insects regarded as a family of *Pseudoneuroptera*, and corresponding to the suborder *Mallophaga* They differ from true lice in having mandibulate instead of suctorial mouth parts, and in other respects Most of them live on the plumage of birds, whence the name *bird lice* for the whole of them, but some also infest the pelage of mammals Some are great pests of the poultry-yard and aviary The genera are numerous, including *Nirmus*, *Trichodectes*, and *Gonodes*



mallophagous (ma-lof'a-gus), *a* [< NL *mallophagus*, < Gr. *μαλλός*, a lock of wool, + *φαγεῖν*, eat] In *entom* (*a*) Devouring feathers or hairs and dried skins, as many coleopterous larvæ (*b*) Pertaining to the *Mallophaga* Also *mallophagan*

Mallorquin (ma-lôr'kin), *n* [< Sp *Mallorquin*, < *Mallorca*, Majorca see *Majorican*] Same as *Majorican*

Mallotus (ma-lō'tus), *n* [NL (Loureiro, 1790), < Gr. *μαλλωτός*, furnished with wool, fleecy, < (LGr) *μαλλοῦν*, clothe with wool, < *μαλλός*, wool] 1. A genus of plants of the natural order *Euphorbiaceæ*, tribe *Crotonea*, and subtribe *Acalypheæ*, characterized by the oblong parallel anther-cells and the numerous (rarely less than fifteen) stamens The flowers are apetalous, either dioecious or monœcious The plants are trees or shrubs with generally alternate leaves The male flowers are generally small, on short pedicels in heads along a rachis, the pistillate ones fewer, on long or short pedicels. There are about 70 species, numerous in eastern India, the Malay archipelago, and Australia, with a few in Africa. One species, *M Philippinensis*, yields the dyestuff known as *kamala*

2. In *ichth* (*Cuvier*, 1829), a genus of fishes of the family *Argentinidæ*, formerly placed in *Salmonidæ*, of which the male has a broad longitudinal villous or fleecy band of scales differentiated from the rest, the caplins The type is *Mallotus villosus*, the caplin See cut under *caplin*[2].

Malpighia (mal-pig'i-a), *n* [NL (Plumier, 1703), named after Marcello *Malpighi*] A genus of dicotyledonous polypetalous plants, type of the natural order *Malpighiaceæ* and the tribe *Malpighieæ*, characterized by having an entire 2- or 3-celled ovary, terminal free styles with obtuse stigmas, a calyx with from 6 to 10 glands, and a drupaceous fruit with 3 crested seeds. They are trees or shrubs with opposite leaves, sometimes covered with stinging hairs, and red, white, or rose colored flowers in axillary or terminal clusters There are about 20 species, all natives of tropical America. *M glabra* is the Surinam cherry, *M urens* the cow hage-cherry, and *M punicifolia* the Barbados cherry

Malpighiaceæ (mal-pig-i-ā'sē-ē), *n. pl.* [NL. (A L de Jussieu, 1811), ⟨ *Malpighia* + *-aceæ*] A natural order of dicotyledonous polypetalous plants belonging to the cohort *Geraniales*, typified by the genus *Malpighia*. It is characterized by a 5-parted calyx, some or all of the sepals usually with two glands, by having three carpels, which are either united or distinct, and by solitary ovules without albumen The order embraces 52 genera and about 600 species, most numerous in the tropics They are herbs or shrubs, often climbing, with leaves usually opposite and entire, and glandular on the stalk or under side, and yellow or red (rarely white or blue) flowers, commonly growing in terminal clusters

malpighiaceous (mal-pig-i-ā'shius), *a.* [⟨ *Malpighia* + *-aceous*] In *bot*, pertaining to or characteristic of plants of the order *Malpighiaceæ* specifically applied to hairs formed as in the genus *Malpighia*, which are attached by the middle, and lie parallel to the surface on which they grow.

Malpighian (mal-pig'i-an), *a.* [⟨ *Malpighi* (see def.) + *-an*] Of or pertaining to Marcello Malpighi (1628–94), an Italian anatomist and physiologist. applied in anatomy to several structures discovered or particularly investigated by him, as follows —**Malpighian body**, one of the glomeruli of the kidney surrounded by its capsule. These form the terminations of the branches of the uriniferous tubules, occur in the cortical substance of the kidney, and are about $\frac{1}{150}$ of an inch in diameter They are formed of the expanded end of the tube invaginated by the bunch of blood vessels constituting the glomerulus, which thus are embraced in a double epithelial sac, and the blood is separated from the lumen of the tubule by the vascular wall and the epithelium of the inner layer of the capsule There is reason to think that these bodies do most of the secretion of the water and less important salts of the urine, the remainder of the work of secreting the urine being done by the epithelial cells of the uriniferous tubules —**Malpighian cæca** or **filaments** Same as *Malpighian tubes* —**Malpighian capsule** See *Malpighian body* —**Malpighian corpuscle** (*a*) A Malpighian body of the kidney (*b*) A lymphoid corpuscle of the spleen See *corpuscle* —**Malpighian layer**, the rete mucosum, the lowermost layer of the epidermis, the stratum spinosum Also called *rete Malpighii* See *skin* —**Malpighian pyramids**, in *anat*, the pale reddish conical masses forming the medullary part of the kidney, whose apices project into the calyces of the pelvis of the kidney, and are called *papillæ* —**Malpighian tubes** or **vessels**, certain appendages of the alimentary canal of insects They are cæcal convoluted tubes, immediately behind the posterior aperture of the stomach, and are generally regarded as representing the liver See cut under *Blattidæ* —**Malpighian tuft**, the glomerulus, or vascular network or plexus, in a Malpighian body

Malpighian capsule *c* with its contained glomerulus *h*, and the beginning of the tubule, *b*, into which it opens *c, d*, epithelium in place, *e*, epithelium of the tubule detached, *f* termination of renal artery, *g* beginning of renal vein, *A* the kidney mass (Magnified about 300 diameters)

Malpighieæ (mal-pi-gī'ē-ē), *n pl.* [NL (A. P de Candolle, 1824), ⟨ *Malpighia* + *-eæ*] A tribe of plants belonging to the natural order *Malpighiaceæ*, of which *Malpighia* is the type. It is characterized by having ten stamens usually all perfect, and often with appendaged anthers, by three styles, which are almost always distinct and by having carpels inserted on the flat receptacle, distinct or united in the fruit, and forming fleshy or woody drupes with from one to three cells

malposition (mal-pō-zish'on), *n.* [⟨ *mal-* + *position*] A wrong position, a misplacement, as of a part of the body or of a fetus

Malpositions of the eye, such as squinting, are the result of too great contraction of one of the recti muscles, usually the internal *Le Conte* Sight, p 20.

malpractice (mal-prak'tis), *n* [⟨ *mal-* + *practice*] **1** Misbehavior, evil practice, practice contrary to established rules

Fanny was almost ready to tell fibs to screen her brother's *malpractices* from her mamma.
Thackeray, The Kickleburys on the Rhine

2 Specifically, bad professional treatment of disease, pregnancy, or bodily injury, from reprehensible ignorance or carelessness, or with criminal intent

Blown malt, malt dried in a kiln in which the heat is raised quickly to 100° F., and then lowered It is so called from its distended appearance *Encyc Brit* — **Malt-cleaning machine**, in a brewery, a form of grain cleaner for freeing barley, previous to malting, from all extraneous substances such as other grain seeds of grass and weeds, dust, and foul matters, a cleaning and sorting machine

II. *a* Pertaining to, containing, or made with malt — **Malt liquor**, a general term for an alcoholic beverage produced merely by the fermentation of malt, as opposed to those obtained by the distillation of malt or mash

malt[1] (mâlt), *v* [< *malt*[1], *n*] **I.** *trans* To convert (grain) into malt The steps in the process of malting are four First, steeping in water from twenty four to forty hours, by which the grain takes up from 10 to 30 per cent of water, swells, and begins to germinate Second, couching in which the steeped grain is piled in heaps on a floor, usually made of flagstones, and wherein the growth of the rootlets is aided by heat generated in the mass Third, flooring in which the germinating grain is spread upon a floor in charges called *floors*, and stirred to expose it to air, and in which the growth of the rootlets is checked and the germination of the acrospires is carried to the desired limit Fourth drying, in which the germination is completely arrested by heat in a malt kiln The maltster decides from the length and appearance of the acrospires as to when the conversion of the starch has been carried to the right limit The dried acrospires and the rootlets are broken off by handling in the kiln and are removed by sifting The chemical changes effected by the partial germination and subsequent treatment of the grain are chiefly the conversion of the azotized substances into diastase, the conversion of the starch into grape sugar by the action of the diastase, and the imparting of color and flavor to the malt in the kiln The malt is either pale or dark in color, according to the degree of heat and the length of time it is exposed to heat in the kiln, and a peculiar flavor is derived from empyreumatic oil generated in the husk

II. *intrans* **1** To become malt, be converted into malt

See *mama*] 1 Pl *mammæ* (-ē) The mammary gland and associated structures; the characteristic organ of the class *Mammalia*, which in the female secretes milk for the nourishment of the young, a breast or udder The mamma is essentially a conglomerate gland, consisting of lobes and lobules, secreting milk, which is conveyed from the ultimate ramifications of the organ by a system of converging lactiferous or galactophorous ducts, to be discharged through one or several main orifices at the summit of the gland, where is the nipple or mammilla The mammæ is subcutaneous, and may be regarded as a highly developed and specialized sebaceous follicle Mammæ vary much in number and position they may be 2, 4, 6, 8, to 12 or more, usually an even

number, being paired, and may be pectoral, axillary, ventral or abdominal, or inguinal They are sometimes quite high on the sides of the animal, but are never dorsal An appa ently single and median mamma, as the udder of the cow, results from the coalescence of as many mam mæ as there are teats In marsupials they are contained in the pouch, and may be circularly or irregularly disposed, or of odd number In monotremes they are devoid of a nipple, whence the name *Amasta* for these animals The mamma develops at puberty, and comes into functional activity during gestation The structure is common to both sexes, but as a rule remains rudimentary and functionless in the male

man (man), *n.*, pl. *men* (men) [Also dial. *mon*, < ME *man, mon*, pl. *men*, < AS *man, mon, mann, monn* (pl. *men, menn*), also rarely *manna, monna* (pl. *mannan, monnan*) = OS *man* = OFries. *man, mon* = D *man* = MLG. *man*, LG *mann* = OHG. MHG *man*, G *mann* = Icel. *maðr*, also rarely *manni* (in comp. *mann-*, nom. orig. **mannr*) = Sw. *man* = Dan. *mand* = Goth. *manna* (*mannan-, mannō-, manin-*), a man (L. *vir*), a human being, a person (L. *homo*), in the latter use becoming in AS. *man, mon*, ME *man, men, me* = D. *men* = OHG. MHG. G. *man* = Sw. Dan. *man* = Goth. *manna*, merely pronominal, 'one' (cf. F. *on*, 'one,' < L. *homo*, a man), esp. with a negative (Goth. *ni manna* = G. *niemand*, no one, G. *jemand*, any one); Teut. stem in three forms, *mann-, mannan-*, and *man-*, as shown in Goth. and Icel. (the third form *man-* existing in Goth. gen. sing. and nom. and acc. pl. *mans*, and prob. also in Icel. *man*, neut., a bondman, bondwoman, girl), the earliest *mann-* being for **manw-*, **manu-* (cf. *chin*, < AS. *cin*, **cinn* = Goth. *kinnus* = Gr. γένυς, *mn*[2], ult. < **minu-* = Gr. *μανός*) = Skt. *manu*, man (Manu, the mythical father of the human race (cf. Not found in Gr., nor in L., unless it be = L. *mas* (*mar-*), a male (if that stands for orig. **mans*), > ult. E. *male*[1], *masculine, marital, marry*[1], etc.: see these words The ult. origin of the Teut. and Skt. word is unknown It is usually explained as lit. 'the thinker,' < √ *man*, think (> ult. E. *mind*[1], *mean*[1], L. *men*(*t*-)*s*, mind, > E. *mental*, etc.); but that primitive men should think of themselves as 'thinkers' is quite incredible that is a comparatively modern conception Another derivation, referring to L. *manere*, remain, dwell, is also improbable It is not likely that any orig. significant term old enough to have become a general designation for 'man' before the Aryan dispersion would have retained its orig. significance The E. *man* retains the senses of L. *vir* and *homo*, in D. G. Dan. the word cognate with E. *man* means *vir*, while a derivative, D. G. *mensch*, Dan. *menneske*, etc., means *homo* see *meinie, mannish.* The irreg. pl. of *man* is due to original *a*-umlaut, the AS. pl. *men, menn*, being orig. **mannī*, changed to **menn* by umlaut, and then abbr. to *menn, men* by loss of the final vowel, the radical vowel, thus accidentally changed in the plural, coming to be significant of number A similar change appears in *feet, geese, mice*, etc., pl. of *foot, goose, mouse*, etc.] **1.** In *zoöl.*, a featherless plantigrade biped mammal of the genus *Homo* (which see), *H. sapiens*, a species of the family *Hominidæ* or *Anthropidæ*, order *Primates*, class *Mammalia*, of which there are several geographical races or varieties. Blumenbach divided mankind into five varieties (1) *Caucasian*, having a white skin, (2) *Mongolian*, having an olive skin, (3) *Ethiopian*, having a black skin and black eyes, (4) *American*, having a dark skin more or less of a red tint, (5) *Malay*, having a brown or tawny skin Professor Huxley has divided man into five groups — *Australioid, Negroid, Mongoloid Xanthochroic*, and *Melanochroic*, and there are many other divisions, on linguistic or physical grounds, or both, but none that has now general or wide acceptance

peculiar form of the root, and the suggestive form of the name *mandrake*, appar a compound of *man* + *drake*[2], with little meaning attached to the supposed second element, are due in large part the superstitions associated with the plant] 1 A plant of the genus *Mandragora*. The mandrake has poisonous properties, and acts as an emetic, purgative, and narcotic. It was in use in ancient times especially for its narcotic effects, and is said to have been employed as an anæsthetic. It has been regarded as an aphrodisiac, and used in amorous incantations, as a love-amulet etc According to an old fancy the mandrake shrieks when pulled from the ground The resemblance of its commonly forked root to the human body is probably the ground of this superstition, as well as of the repute of the plant as an aphrodisiac

man-eater (man'ē'ter), *n* 1 A cannibal — 2 In India, a tiger that has acquired a taste for human flesh, a tiger supposed or known to have a special propensity for killing and eating human beings The name is sometimes extended to the lion and the hyena, on the same supposition

The regular *man-eater* is generally an old tiger whose vigour is passed, and whose teeth are worn and defective, it takes up its abode in the neighbourhood of a village, the population of which it finds an easier prey than the larger or wilder animals *W H Flower* Encyc Brit XXIII 886

3 One of several kinds of large sharks supposed to be specially formidable to man, specifically, *Carcharodon rondeleti*, a very large shark of the family *Lamnidæ* This shark has straight narrow triangular teeth, very slightly serrated or crenulated, in both jaws The body is stout and fusiform, with a pointed snout there are two dorsal fins, one large, between the pectorals and the ventrals, the other small and posterior the anal fin is like the second dorsal the caudal fin is crescentiform, and there are five branchial apertures, all in front of the pectorals It has been found 40 feet long though it averages so much less that 19 feet is a good size It is a shark of the high seas, found in nearly all tropical waters frequently passing a considerable distance both northward and southward Teeth much like those of the living species have been found in the Pliocene and Miocene deposits as well as in the ooze of the Pacific ocean, indicating individuals that must have been about 80 feet long

maneless (mān'les), *a* [< *mane* + *-less*] Having no mane as the *maneless* lion of Guzerat, a recognized variety of *Felis leo*

man-engine (man'en'jin), *n* A form of elevator or power-ladder used in some deep mines for raising and lowering men In its usual form it is essentially a vertical rod extending from the surface to the bottom of the mine, and reciprocated upward and downward, like a pump rod, by means of a steam engine or a water wheel The length of stroke commonly adopted is 12 feet, and at intervals equal to the stroke platforms are fastened to the rod with corresponding platforms in the shaft, on either side of the rod, at points corresponding to the limits of the stroke, both up and down A man in descending steps on a platform on the rod just as the down stroke begins, and steps off on the platform in the shaft which he reaches at the end of the stroke, repeating the operation until he attains his destination A man in ascending steps on a platform on the rod as the upward stroke begins, and leaves it at the end of the stroke Ascent and descent thus proceed simultaneously without

interruption, the fixed platforms on one side of the shaft being reserved for men ascending, and those on the other side for men descending, each man stepping on his proper platform on the reciprocating rod as it is vacated, at the moment of rest between the strokes, by the man who is traveling in the opposite direction This is the form of man engine used in Cornwall That employed in the Harz mines (where the method originated) is the "double rod engine," with two rods moving up and down alternately in opposite directions This contrivance corresponds to a ladder with movable steps, the miner having nothing to do but to move slightly sidewise in order to place himself on the step which is about to go up or down, according as he wishes to ascend or descend In the United States cages, and in some mines man cars, are used instead of man engines See *man car*

manent (mā'nent) [L., 3d pers. pl pres ind of *manere*, remain: see *remain*.] They remain (on the stage) a stage direction Compare *manet*

manerial†(ma-nē'ri-al), *a* An obsolete variant of *manorial*

manerly†, *adv* An obsolete form of *mannerly*

manes (mā'nēz), *n. pl* [L., prob. < OL. *manis*, *manus*, good.] **1** In *Rom. antiq.*, the spirits of the dead considered as tutelary divinities of their families, the deified shades of the dead, according to the belief that the soul continued to exist and to have relations with earth after the body had perished Three times a year a pit called the *mundus* was officially opened in the comitium of the Roman Forum, to permit the manes to come forth The manes were also honored at certain festivals as the Parentalia and Feralia, oblations were made to them, and the flame maintained on the altar of the household was a homage to them [In this sense often written with a capital.]

The most special representatives of ancestor worship in Europe were perhaps the ancient Romans, whose word *manes* has become the recognized name for ancestral deities in modern civilized language they embodied them as images, set them up as household patrons gratified them with offerings and solemn homage, and, counting them as of among the infernal gods, inscribed on tombs D. M., "Dis Manibus."

E. B. Tylor, Prim. Culture, II. 109

Hence — **2** The spirit of a deceased person, or the shades of the dead, whether considered as the object of a cult or not

Some sages have thought it pious to preserve a certain reverence for the *manes* of their deceased friends
Steele, Tatler, No. 181

3. By metonymy — (*a*) The lower world or infernal regions, as the abode of the manes (*b*) The punishments imposed in the lower world

All have their *manes*, and those *manes* bear
Dryden, Æneid, vi. 743

mane-sheet (mān'shēt), *n* A covering for the neck and the top of the head of a horse

manful (man'ful), *a* [< ME. *manful*, < *man* + *-ful*.] Having or expressing the spirit of a man, manifesting the higher qualities of manhood, courageous, noble, high-minded

Ne grete emprises for to take on honde,
Shedyng of blode, ne *manful* hardinesse
Lydgate, Complaint of the Black Knight

Nor know I whether I be very base
Or very *manful*, whether very wise
Or very foolish *Tennyson*, Geraint

=Syn. *Manly*, etc. (see *masculine*), stout, strong, vigorous, undaunted, intrepid

manfully (man'ful-i), *adv.* In a manful manner; boldly, courageously

manfulness (man'ful-nes), *n* The quality of being manful, boldness; nobleness.

man-fungus (man'fung'gus), *n.* A plant of the genus *Geaster*.

mang[1] (mang), *n.* A dialectal variant of *mong*[1]

mang[2] (mang), *prep* A dialectal (Scotch) form of *mong*[3], *among*

Syne bad him slip frae 'mang the folk,

manga (mang'gä), *n.* [ML.] *Eccles.*, a cope or cover, especially, the case for a processional or other cross when not in use, often of rich stuff or embroidered

mangabey (mang'ga-bā), *n.* [A geographical name in Madagascar, by Buffon applied erroneously to a kind of monkey not found there.] A monkey of the genus *Cercocebus*, of which there are several species, inhabiting Africa They are of moderate size and slender form, have long limbs and tail, and are extremely agile The face is more produced than in the species of *Cercopithecus* (from which *Cercocebus* is detached), the eyebrows are prominent, and the eyelids are white The general color is dark or blackish The sooty mangabey is *C. fuliginosus*, the white eyed mangabey is *C. æthiops*, in which the crown is also white. *C. collaris* has a white collar In *C. albigena* the crown is crested Also written *mangaby*

mangal, mankal (mang'gal, -kal), *n.* [Turk. *mankāl*, *manqhāl*.] A brazier for a charcoal fire used in Turkey and throughout the Levant, usually of sheet-copper or sheet-brass worked into shape by the hammer, and frequently ornamented with designs in repoussé work

manganapatite (mang-ga-nap'a-tīt), *n.* [< *mangan(ese)* + *apatite*.] A variety of apatite, unusual in containing manganese. A dark bluish-green kind from Branchville in Connecticut afforded 10½ per cent. of manganese protoxid.

manganate (mang'ga-nāt), *n.* [< *mangan(ic)* + *-ate*[1].] A compound of manganic acid with a base Also *manganesate*

mangancolumbite (mang"gan-kō-lum'bīt), *n.* [< *mangan(ese)* + *columbite*.] A variety of columbite in which the iron is largely replaced by manganese.

manganeisen (mang'gan-ī-zn), *n* [Irreg. < *mangan(ese)* + G. *eisen* = E. *iron*.] Ferromanganese, a combination of the metals iron and manganese containing a large percentage (from 50 to 85 per cent.) of the latter It is manufactured for use in the Bessemer process and is an important adjunct to that operation The object of the addition of the manganese at the termination of the "blow" is the removal of the oxygen in the iron, without at the same time adding carbon and silicon This vitally important improvement of the Bessemer process is due to the Scotch metallurgist R. F. Mushet. See *steel* and *spiegel*

manganesate (mang-ga-nē'sāt), *n.* [< *manganese* + *-ate*[1].] Same as *manganate*

manganese (mang-ga-nēs' or -nēz'), *n.* [= F. *manganèse* (> Sp. Pg. *manganesa* = It. *manganese*), < NL. *manganesum*, an arbitrarily altered form of *magnesium*, a name first given to this metal, but now used for a different metal: see *magnesium*.] Chemical symbol, Mn; atomic weight, 55.02. A metal having a remarkable affinity for, and in some respects a close resemblance to, iron, of which it is an extremely frequent associate It differs from iron however, in that it is not used at all by itself in the arts, although of great interest and importance as connected with the manufacture of iron, and as modifying by its presence in small quantity the character of the product obtained The use of the black oxid of manganese for removing the coloring matters from glass was known to the ancients, and is mentioned by Pliny, but the nature of the material thus used was not understood until quite modern times This ignorance was shown in the confusion of the oxid of manganese with the magnetic oxid of iron, the lodestone (Latin *magnes* and *magnesia lapis*), and the former was called *magnesia* by chemists in the middle ages, apparently in conformity with Pliny's idea of a dual (masculine and feminine) nature in some metals, manganese not having the attractive power of the magnet, and being on that account considered feminine Other variants (in the fifteenth and sixteenth centuries) of the name of the ore used by glass makers were *magnosa*, *mangadesum*, and *manganensa* After what we now call *magnesia* had received the name of *magnesia alba*, apparently from the idea that this substance was in some way related to the oxid of manganese, the latter began to be called *magnesia nigra* From the middle of the eighteenth century the combinations of manganese were studied by various chemists, and finally, in 1774, the metal manganese was isolated by Gahn, but for years there was much confusion in regard to its specific name, and it was not until after the beginning of the present century that the name *manganese* (*manganan* in German) began to be generally adopted The Latin termination in *-um* (*manganesum*) is rarely used in modern technical works This metal has never been found native As eliminated from its ores by chemical processes, it is grayish white in color resembling cast iron but varying considerably in hardness and luster according to the nature of the methods by which it was obtained It is very hard and brittle, and has a specific gravity of about 8 It oxidizes rapidly on exposure to the air Manganese resembles iron in that its ores are widely diffused and differs from that metal remarkably in the fact that, on the whole, its ores are only rarely found in considerable quantity in any one locality, while those of iron exist in abundance in many regions The important ores of manganese are all oxids, and of these the protoxid (pyrolusite), called in commerce the *black oxid of manganese*, or simply *manganese*, is the most valuable and important. Other manganiferous minerals (all oxids) are braunite, hausmannite, psilomelane, and various earthy mixtures called *bog-manganese*, *wad*, *cupreous manganese*, etc Practically, the ore called *manganese* in commerce is a mixture of various oxids, different samples differing greatly in value, which value has to be determined by chemical analysis. The ores and salts of manganese are of very considerable importance in chemical manufactures, both as bleaching and oxidizing reagents. The nature and importance of this metal in the manufacture of iron and steel will be found indicated under *steel* and *spiegel*. — **Earthy manganese.** See *wad*. — **Gray manganese ore** Same as *manganite*. — **Manganese bronze**, an alloy said to be composed of ordinary bronze with the addition of manganese If has the color of gun metal, and its fracture resembles that of fine-grained steel It is said to equal or excel in tenacity bar iron of medium quality It has been manufactured in England, but has not come into general use. — **Manganese brown, green, violet**, etc See *brown*, etc. — **Manganese copper** Same as *manganese bronze*. — **Manganese epidote**, piedmontite: see *epidote* and *piedmontite*. — **Manganese garnet**, spessartite See *garnet*[1]. — **Manganese spar**, rhodonite. — **Red manganese**, a mineral usually of a rose-red color, rhodochrosite. — **Red oxid of manganese**, Mn_3O_4, a compound of manganese and oxygen which may be formed by exposing the peroxid to a very high heat. It occurs native as hausmannite. — **White manganese**, an ore of manganese, manganese carbonate.

manganese-glaze (mang-ga-nēs'glāz), *n.* A dark-gray or jet-black glaze, the color of which is given by manganese

manganesian (mang-ga-nē'si-an), *a* [< *manganese* + *-an*.] Pertaining to manganese, consisting of manganese, containing manganese, or characterized by its presence

manganesic (mang-ga-nē'sik), *a* [< *manganese* + *-ic*.] Same as *manganic*

manganesium (mang-ga-nē'si-um), *n.* [NL.: see *manganese*.] Same as *manganese* [Rare.]

manganetic (mang-ga-net'ik), *a* [< *mangan(ese)* + *-etic*, as in *magnetic*.] Same as *manganiferous*

manganhedenbergite (mang-gan-hed'en-bėr-gīt), *n.* [< *mangan(ese)* + *hedenbergite*.] A variety of hedenbergite containing a relatively large amount of manganese, found in Sweden

manganic (mang-gan'ik), *a* [< *mangan(ese)* + *-ic*.] Containing manganese in chemistry, specifically applied to compounds in which each manganese atom is regarded as quadrivalent Also *manganesic*. — **Manganic acid**, H_2MnO_4, an acid which is not known in the free state Manganates of the alkalis are formed when manganese dioxid is heated with an alkali carbonate or nitrate They have a green color and readily decompose forming permanganate and manganese dioxid The crude alkali manganate was formerly called *chameleon mineral* from the property which its solution has of passing rapidly through several shades of color, occasioned by changes in its state of oxidation Manganic oxid, Mn_2O_3, or manganese sesquioxid, is the mineral braunite

manganiferous (mang-ga-nif'e-rus), *a* [< NL. *manganum* + L. *ferre* = E. *bear*[1].] Containing or carrying manganese as, a *manganiferous* garnet Also *manganetic*

These higher *manganiferous* irons show little or no magnetic action *C. R. Alder Wright*, Encyc. Brit., XIII. 356

manganite (mang'ga-nīt), *n* [< *mangan(ese)* + *-ite*[2].] A hydrated oxid of manganese occurring in orthorhombic crystals of a steel-gray or iron-black color and brilliant luster, also in masses having a columnar structure It is often altered, by loss of water, to pyrolusite Also called *gray manganese ore*.

manganium (mang-gā'ni-um), *n* [NL., short for *manganesium*.] Same as *manganese*.

manganocalcite (mang"ga-nō-kal'sīt), *n* [< *mangan(ese)* + *calcite*.] A variety of calcite containing manganese carbonate

manganomagnetite (mang"ga-nō-mag'ne-tīt), *n.* [< *mangan(ese)* + *magnetite*.] A variety of magnetite containing considerable manganese

manganophyllite (mang"ga-nō-fil'īt), *n* [< *mangan(ese)* + Gr. *φύλλον*, leaf, + *-ite*[2].] A manganiferous mica occurring in thin reddish scales at several localities in Sweden

manganosiderite (mang"ga-nō-sid'e-rīt), *n* [< *mangan(ese)* + *siderite*.] A carbonate of manganese and iron, intermediate between rhodochrosite and siderite

manganosite (mang-ga-nō'sīt), *n* [< *mangan(ese)* + *-ose* (?) + *-ite*[2].] Manganese protoxid, a mineral occurring in regular octahedrons of an emerald-green color, found at several localities in Sweden

manganostibiite (mang"ga-nō-stib'i-īt), *n* [< *mangan(ese)* + *stibi(um)* + *-ite*[2].] An antimonate of manganese, occurring in black embedded grains at Nordmark in Sweden

manganotantalite (mang'ga-nō-tan'ta-līt), *n* [< *mangan(ese)* + *tantalite*.] A variety of tantalite in which the iron is largely replaced by manganese. The manganotantalite first known was from the Ural, and had the crystalline form of ordinary columbite A massive manganesian tantalite from Sweden is distinguished as *manganotantalite*

manganous (mang'ga-nus), *a.* [< *mangan(ese)* + *-ous*.] Containing manganese: in chemistry, specifically applied to compounds in which each manganese atom is regarded as having a

maximum quantivalence of two. Compare *manganic*.

By exposing the *manganous* oxide to a strong current of air, it takes up another atom of oxygen

Mangifera (man-jif'e-rā), *n.* [NL. (Linnæus), < *mango* + L. *ferre* = E. *bear*[1].] A genus of dicotyledonous polypetalous plants of the natural order *Anacardiaceæ*, the cashew family, and type of the tribe *Mangifereæ*, having the ovule ascending above the base of the cell, and the sepals and petals not increasing after the flower has expanded. They are tropical trees with simple, entire, coriaceous leaves, and polygamodioecious flowers, which are small, pinkish or yellowish, and grow in much branched panicles. The fruit is a fleshy drupe, fibrous within, and usually with more or less of a turpentine flavor There are about 30 species, natives of tropical Asia.

Flowering Branch of Mango-tree (*Mangifera Indica*)

manometer (mā-nom'e-tėr), *n* [= F *manomètre* = Sp *manometro*, < Gr *μανός*, rare, not dense, thin, loose, slack, few, scanty, + *μέτρον*, a measure] An instrument for determining and indicating the elastic pressure of gases or vapors It measures the weight of a column of liquid or the tension of a spring that exactly balances the elastic pressure of the gas on a unit of area, and, since the relative density of a gas is proportional to its elastic pressure, the measurement of the latter determines also the former Manometers which measure elastic gaseous pressure by the tension of a spring are used for steam gages. In some forms the pressure of the gas is on a piston or diaphragm connected with a counterbalancing spring In others the initial pressure is received on a small primary piston or diaphragm, and transmitted by a fluid mass acting upon a secondary and much larger piston or diaphragm upon which the pressure per unit of area is reduced inversely as the area of the smaller piston is to that of the larger Of this kind is Shaw's gage for measuring very high pressures. In the Bourdon steam gage a curved tubular spring is used having its interior connected by a tube with the interior of the tank, boiler, cylinder or gas holder containing the vapor or gas to be tested. In all of these forms the parts moved under varying pressure are connected with an indicator, and the pressure is read on a graduated dial plate In the *open air manometer* the elastic pressure of a gas is indicated by the height of a column of liquid, usually mercury or water, which it will support In its simplest form an S-shaped glass tube, open at the upper end, is employed, as shown in the cut. In the *compressed air manometer* the tube containing the liquid is closed at the top and hence the varying elastic pressure of the confined air is added to the weight of the liquid column in balancing the gaseous pressure to be measured. The *statical manometer* of Boyle has a thin glass bulb counterpoised on a pair of delicate scales, the specific gravity of the bulb and its confined air varying with both pressure and temperature of the surrounding air The manometer of Ramsden is essentially a compressed air manometer combined with a scale which indicates temperatures while determining atmospheric density The ordinary gas-gage is a simple open air manometer

The cursive characters are derived from the uncials, though they came to differ much from these in shape, and are used in manuscripts from the second century before Christ. The minuscule writing is that practised with few or no exceptions since the ninth century, the forms of the earliest printed Greek closely resemble it. Latin manuscripts are in capital, uncial, cursive, or minuscule characters The capitals are the earliest form, but their use was not entirely discontinued until the Carolingian epoch The uncials, of which the letters are characterized by their rounded shape, were developed very early, attained their highest perfection in the fourth century, and continued in use until the ninth century The cursive writing was developed from the uncial, it appears in the graffiti found scratched on the walls of Pompeii, Rome, etc., and is the parent of many old systems of writing, as the Lombard and Merovingian The minuscule style was developed in the eighth century, in the monastery of St. Martin at Tours, and reached its perfection in the twelfth century In this style are written the splendid manuscripts of the middle ages, produced for the most part in monasteries, and enriched with superbly illuminated initial letters and elaborately painted miniatures Upon the introduction of printing, the minuscule writing supplied models to the earliest type-makers *Palimpsest manuscripts* are manuscripts written in antiquity or in the early middle ages upon papyrus or vellum from which earlier writing had been erased Modern science has been successful in deciphering the imperfectly effaced characters of many such manuscripts, and has recovered in this way some of our most valuable remnants of classic literature The three most important Biblical manuscripts extant are the Alexandrian Codex, the Vatican Codex, and the Sinaitic Codex (See *codex*) These are of course all uncials. This is done either by contour-lines or hachures, or by simple shading By the latter method, as ordinarily practised, the indications of the relief of the surface are but rough in character With sufficiently accurate data and a careful and artistic treatment, a close approach may, however, in this way be made to the effect obtained by photographing a model of the surface in question in an oblique light From such a photograph the eye gets at once a very clear idea of the character of the surface.

Maranta (ma-ran′tä), *n.* [NL. (Plumier, 1703), named after B. *Maranta*, a Venetian physician and botanist of the 16th century.] 1. A genus of monocotyledonous plants of the natural order *Zingiberaceæ*, type of the tribe *Marantea*. It is distinguished by the one-celled ovary, the slender branched inflorescence, and the narrow involute bracts, closely surrounding the branches. They are herbaceous plants with fleshy tubers, sheathing leaves, and a few-flowered inflorescence, the flowers having a cylindrical corolla-tube and a petaloid filament bearing a one-celled anther. There are about 15 species, indigenous to tropical America, but several species are widely cultivated for their fleshy tubers. The pure kind of starch known as *arrow-root* is obtained from the tubers of *M. arundinacea* and of several other species, by maceration, washing, and drying. (See *arrow-root*.) Several species have highly ornamental foliage, as *M. (Calathea) zebrina*, the zebra plant, whose leaves are 2 feet long and 6 inches wide, of a deep rich green, purple shaded and with a velvety appearance. See also *starute iber*.

maraschino (mar-as-kē′nō), *n.* [Also *marasquino* (< Sp. Pg. *marasquino*) and *marasquin* (< F. *marasquin*), < It. *maraschino*, < *marasca*, a kind of cherry: see *marasca*.] A cordial originating in Dalmatia, where it is distilled from or flavored with the marasca cherry, peculiar to that region, hence, a similar cordial produced in other regions from other kinds of cherry. The finest bears the name of *maraschino of Zara*, in which town it is reputed to be manufactured.

marasmic (ma-raz′mik), *a.* [< *marasm(us)* + *-ic*.] Pertaining or relating to marasmus, affected with marasmus, as, a *marasmic* tendency, a *marasmic* patient.

Marasmius (ma-ras′mi-us), *n.* [NL. (Fries, 1836–8), < Gr. μαρασμός, a wasting, withering, from the fact that the species are not putrescent, but dry or wither up with drought.] A large genus of agaricinous fungi, having a tough leathery pileus, which dries up with drought and is revived again on the application of water. The spores are white, and subelliptical in shape. About 300 species are known, of which number many are edible. *M. oreades* is the English champignon or fairy-ring mushroom. See *champignon*.

marasmoid (ma-raz′moid), *a.* [< *marasm(us)* + *-oid*.] Resembling or affected with marasmus.

marasmus (ma-raz′mus), *n.* [= F. *marasme* = Sp. Pg. It. *marasmo*, < NL. *marasmus*, < Gr. μαράσσειν, a wasting, withering, decay, < μαραίνειν, put out, quench, weaken, cause to pine or waste away.] In *pathol.*, a wasting of the flesh. The term is usually restricted to cases in which the cause of the wasting is obscure.

Pining atrophy,
Marasmus, and wide wasting pestilence.
Milton, P. L., xi. 487.

Marasmus senilis, progressive atrophy of the aged.

marasquino, *n.* See *maraschino*.

marasset, *n.* An obsolete form of *marish*.

Marathi (ma-rä′thi), *n.* [Marathi *Marāthī*.] The language of the Mahrattas. Also written *Mahratti*. See *Mahratta*.

Marathonian (mar-a-thō'nī-an), *a* and *n*. [< L *Marathon*, < Gr Μαραθών, Marathon (see def.) (prob. so called from being overgrown with fennel, < μάραθον, μάραθος, μαράθρον, > L *marathrum*, fennel), + *-ian*.] **I.** *a*. Of or pertaining to Marathon in Attica, the site of the famous battle in which the Athenians and Plataeans overthrew the Persians in 490 B. C.: as, the *Marathonian* bull overcome by Theseus, the *Marathonian* mound or tumulus (the burial-place of the Greeks killed in the battle, still existing).

II. *n*. Same as *Macedonian*, 2.

Marattia (ma-rat'i-ä), *n*. [NL. (Swartz, 1806), named after J. F. *Maratti* of Vallombrosa in Tuscany, a writer on ferns.] A genus of ferns, typical of the order *Marattiaceæ*. They are coarse herbaceous plants, having large scaly rhizomes and ample twice- or thrice-pinnate fronds, with oblong pinnules, bearing the sori in lines near the margin. Many fossil ferns showing both fronds and fructification closely resembling those of this genus occur, chiefly in Triassic (Rhetic) strata, and were called *Marattiopsis* by Schimper, who united with that genus all the forms which had been called *Anomopteris*, *Danaeopteris*, and quite recently in the Potomac formation of Virginia.

Marattiaceæ (ma-rat-i-ā'sē-ē), *n. pl.* [NL. (Kaulfuss, 1824), < *Marattia* + *-aceæ*.] An order of eusporangiate ferns, typified by the genus *Marattia*. They are found in South America, the eastern Pacific islands, South Africa, and southern Asia. They differ from the true ferns on the one hand by the absence of the jointed ring of the spore-case, and from the *Ophioglossaceæ* on the other by the circinate vernation. By some authors they are regarded as a distinct class, of equal rank with the true *Filices* and *Ophioglossaceæ*. Called *Danaeaceæ* by Agardh.

maraud (ma-rad'), *v. i.* [< F. *marauder*, play the rogue, go about begging or pilfering, < *maraud*, a rogue, knave, scoundrel, origin uncertain, perhaps, with suffix *-aud*, *-old*, < OF *marir*, *marrir*, lose one's way, stray, etc., hinder, annoy: see *mar*[1], *v.*] To rove in quest of plunder, make an excursion for booty, go about for robbery: used especially of the despoiling action of soldiers in time of war, or of organized bands of robbers or pirates.

> But war 's the Borderers' game
> Their gain, their glory, their delight,

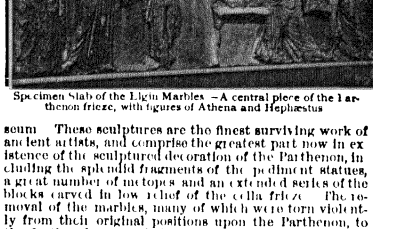
(sc. λίθος) marble, < μαρμαίρειν, sparkle, cf. μαῖρα, the dog-star, lit. 'sparkler.' Hence ult. *marver*, *marmoset*.] **I.** *n.* **1** Limestone in a more or less crystalline or crystalline-granular condition. Any limestone, however even if very compact or showing only traces of a crystalline structure, may be called *marble* if it is capable of taking a polish, or if it is suitable or desirable for ornamental and decorative purposes. The presence of magnesium carbonate associated with the calcium carbonate, forming dolomitic limestone or even pure dolomite, does not in any way influence the nomenclature of the rock, indeed, such presence cannot usually be known except from chemical analysis. Marble is a material of great importance in architecture, not only for exterior use, but for interior decoration in large, costly monumental structures. Thirty-three varieties of ornamental stone are used in the interior of the Grand Opera House in Paris and a large proportion of these may be classed as marbles. The value and beauty of marble depend largely on its coloration. Perfectly pure carbonate of lime, dolomitic limestone and dolomite are all colorless and white marbles — or at least such as are only slightly tinged with color — are very abundant. White marble such as is used for statuary (for which purpose it must be obtained in large blocks free from flaws or defects of any kind, and perfectly uniform in tint) is extremely rare. Among the finest statuary marbles are those used in the masterpieces of Greek sculpture of which that from the island of Paros is generally admitted to surpass all others, especially in the possession of a certain amount of translucence by which the artistic effect of the work is heightened. The Parian quarries seem, however, to have been practically exhausted. The Pentelican marble, obtained from quarries near Athens, stood next to the Parian in ancient times, and its quarries are still apparently inexhaustible. At the present time the artistic world is supplied with statuary marble from quarries in the Apennine mountains overlooking the Bay of Spezia, and in the vicinity of Carrara Massa, and Serravezza. From this marble were carved the finest works of Michelangelo. These quarries, which have been extensively worked for 2,000 years, furnish, in addition to the white, a large amount of variegated marble, especially of the variety known as *bardiglio*. The number and variety of colored and variegated marbles used for various artistic and architectural purposes is very great. Entirely black marble capable of taking a fine polish is rare, much more common are varieties irregularly shaded with gray, bluish gray, or dove-colored tints. Bright colors — red, yellow, green, and blue — are much rarer than the less brilliant shades, but they are seen in some marbles, and are occasionally so blended and interbanded as to produce extremely beautiful effects. These brilliant colorations are chiefly due to the presence of iron in various combinations, dark and grayish shades are generally caused by the presence of a greater or less amount of organic matter. In many varieties of marble the presence of organic remains embedded in the rock adds greatly to its attractiveness. Joints and stems of encrinites as well as many other kinds of fossils occur in this way, and by contrast of their color with that of the material in which they are inclosed, as well as by the gracefulness of their forms, produce a very fine effect. Fragments of shells embedded in calcareous rocks sometimes exhibit a brilliant display of iridescent coloration: such marbles are known as *luma chelles* or, sometimes, *fire marbles*. A beautiful effect is occasionally produced as the result of deposition of the calcareous material in stalagmitic form, so that when cut and polished the marble exhibits concentric zones of various tints, varieties having this structure are frequently called *onyx marble*. The vicinity of the Mediterranean is the classic region of marbles. Italy, France and Spain are rich in beautiful varieties, and these are seen in the greatest number and to the best advantage in the architectural works of ancient and modern Rome. For this reason many of the rarest and most attractive marbles are best known by Italian names, and these names are frequently applied to varieties occurring far away from the Mediterranean, from either real or fancied similarity to the Italian marbles. Some of the best known and most highly prized classic variegated marbles are the following: *Africano*, from the island of Chios, is a lumachelle, or shell-marble, exhibiting a great variety and brilliancy of coloration, reddish and purplish tints predominating. *Bardiglio* is common in the Apennine quarries of a grayish- or bluish-white color traversed by darker veins of the same. *Brocatel* and *brocatellone* are extremely variegated marbles, with numerous interlacing veins of yellow, violet, and crimson tints on a yellowish ground, marble bearing these designations has been and still is quarried in various places, and especially near Tortosa in Spain. *Capellano* is a marble with more or less of a concretionary structure, of many tints and much variety in their arrangement, with corresponding names such as *capellano verde*, *mandorlato* (having almond-shaped patches of color), *rosso*, etc., a fine example of this marble may be seen in the columns of the Braccio Nuovo of the Vatican. *Fior di persico* is an exquisitely beautiful marble with a reddish and crimson shading on a white base: called by the ancients *marmor Molossum*, because coming from the region inhabited by the Molossi in what is now Albania on the eastern coast of the Adriatic. *Giallo antico* or *Numidian marble* is an

Shell-marble.



extremely beautiful marble quarried in northern Africa, it was highly esteemed and extensively used by the Romans. The tints are variable, red and yellow predominating, the different varieties were designated by names indicating the prevailing tints. *Giallo di Siena* is a beautiful yellow marble of various depths of color, with darker veins, in which violet hues predominate: when these veins are very numerous the marble becomes a *brocatel*. *Pavonazzo* and *pavonazetto* are various red and purplish marbles and breccias, some of the latter being also true marbles, but having a more or less brecciated character. The most beautiful pavonazetto is that called by the Romans *marmor Synadicum* or *Phrygian marble*, from the locality where it was obtained. It is characterized by a very irregular venation of dark red with bluish and yellowish tints ramifying through a translucent alabaster-like base, which is sometimes almost opaline in its play of colors. *Rosso antico* is a marble of very deep red color, sometimes of various shades, occasionally streaked or clouded with dark purple or whitish tints. The original locality of the classic rosso antico has not been discovered, but some modern red marbles closely resemble this variety. Some of the most highly prized French colored marbles bear names peculiar to France (see *griotte*, *portor*, *sarrancolin*). The Devonian and Carboniferous of England and Ireland furnish a considerable number of ornamental marbles. Devonshire and Derbyshire are the counties in which the best known English varieties are obtained. The finest Irish variegated marbles are quarried near Armagh, and at various localities in county Cork, also at Killarney and on the islands of the Kenmare river, and marble called *Siena* is obtained from several places in King's county and near Shannon Harbor in Galway. The most important quarries of white and grayish marble in the United States are those in the Lower Silurian of Vermont and western Massachusetts. There are very extensive marble works at Rutland in Vermont, at Lee in Massachusetts, and at many other points in the same geological formation. Some of the variegated marbles found on the islands and near the shores of Lake Champlain are very handsome, but they are not extensively worked. The most popular colored marble in the United States at the present time is the Tennessee, a light grayish stone beautifully mottled with shades of pink and red. This marble has been extensively employed in the capitols at Washington and Albany.

There is a Vessel of *Marbre*, undre the Table, to reserve the Oyle. *Mandeville*, Travels, p. 124.

2. A piece of sculptured or inscribed marble, especially if having some interest as an object of study or curiosity, and more particularly if ancient, any work of art in marble: as, the Elgin *marbles*. —**3.** A little ball of marble or other stone, or of baked clay, porcelain, or glass, used by children in play, an alley. —**4.** In *glass-blowing*, a block or thick piece of wood in which are formed hemispherical concavities, used in the manufacture of flasks, etc., to shape the fused glass gathered upon the end of the glass-blower's pipe into an approximately spherical form by pressing and turning it over in the concavities preparatory to the blowing. See *marver*. [In this sense improperly spelled *marbel*.] —**5†.** Marble-silk.

Then cam the lord tresorer with a C. gret horsse and ther cotes of *marbill*.
H. Machyn, Diary, quoted in Rock's S. K. Textiles, p. 77.

6†. *pl.* A venereal disease, probably bubo. *R. Green*. —**Ægina marbles**, or **Æginetan marbles**. See *Æginetan*. —**Artificial marble**, a composition of alum, gypsum, isinglass, and coloring materials worked into a paste, molded into form, and allowed to harden. —**Arundel marbles**, or **Arundelian marbles**, also known as the *Oxford marbles*, a collection of ancient sculptures, inscriptions, and other antiquities, purchased by Sir William Petty at Smyrna in 1624 for the Earl of Arundel, whose grandson, at the instance of Evelyn, presented a portion of it to the University of Oxford. The most valuable object in this collection is the inscribed slab called the Parian Chronicle, from having been kept in the island of Paros. In its perfect state, the inscription contained a chronicle of the principal events in Grecian history from the time of the mythical Cecrops to the archonship of Diognetus (264 B. C.), but the part of it covering the last ninety years is now lost, and much of what remains is corroded and defaced. —**Elgin marbles**, a collection of ancient sculptures, for the most part of the school of Phidias and from the Parthenon at Athens, taken to England during the first years of the nineteenth century by the Earl of Elgin, and now preserved in the British Museum. These sculptures are the finest surviving work of ancient artists, and comprise the greatest part now in existence of the sculptured decoration of the Parthenon, including the splendid fragments of the pediment statues, a great number of metopes, and an extended series of the blocks carved in low relief of the cella frieze. The removal of the marbles, many of which were torn violently from their original positions upon the Parthenon, to the further damage of that monument, was in itself an act of vandalism, but their transportation to England at a time when Greece was accessible with difficulty opened the

eyes of the world to the preëminence of Greek work. It was one of the first steps toward securing an accurate knowledge of Hellenic ideals, and has thus influenced contemporary civilization. —**Entrochal marble**. See *entrochal*. —**Hymettian marble**. See *Hymettian*. —**Kilkenny marble**, a variety of fine black marble containing shells, much used for mantelpieces. —**Ligneous marble**. See *ligneous*. —**Madrepore marble**. See *madrepore*. —**Marezzo marble**, an imitation of marble and other fine veined stones in solid slabs, the base of which is cement. —**Pergamene marbles**, or **Pergamum marbles**, two series of sculptures in high relief and of an original type of Greek art, forming part of the decoration of the great altar of Zeus and Athena, erected at Pergamum by King Eumenes II (197–159 B. C.) in commemoration of splendid victories over the invading Gauls. Abundant remains of these sculptures have been unearthed since 1875 by Karl Humann, and are now in the Berlin Museum. See *Pergamene art*, under *Pergamene*. —**Petworth marble**, also called *Sussex marble* (both names arising from its being worked at Petworth in Sussex), a variously colored limestone occurring in the Weald clay, containing the remains of fresh water shells.

II. *a* **1.** Consisting of marble: as, a *marble* pillar. —**2.** Veined or stained like marble; variegated in color; marbled.

The appendix shall be printed by itself, stitched, and with a *marble* cover. *Swift*

3. Resembling or comparable to marble in some particular, hard and cold, crystalline, frigid, insensible, etc.

Nor hath the scalding noon-day sun the pow'r
To melt that *marble* ice. *Carew*, The Spring.

Winds with ease
Through the pure *marble* air his oblique way
Amongst innumerable stars. *Milton*, P. L., iii. 564.

marble (mar'bl), *v. t.*; pret. and pp. *marbled*, ppr. *marbling*. [< *marble*, *n.*] To give an appearance of marble to; stain or vein like variegated marble: as, to *marble* paper, a book with *marbled* edges. See *marbling*, 3. Specifically, in *bookbinding*, to marble is to apply to paper or book edges variegated colors in imitation of colored marble, or in any other irregular form.

Those fine covers of books that, for their resemblance to speckled marble, are wont to be called *marbled*. *Boyle*, Works, III. 448.

marble-breasted (mar'bl-bres"ted), *a.* Insensible; hard-hearted. [Poetical.]

Live you the *marble-breasted* tyrant still?
Shak., T. N., v. 1. 127.

marble-constant (mar'bl-kon"stant), *a.* Immovable as marble; firm; constant. [Poetical.]

Now from head to foot
I am *marble-constant*.
Shak., A. and C., v. 2. 240.

marble-cutter (mar'bl-kut"ėr), *n.* One who hews marble, a worker in marble, also, an instrument or a machine for cutting marble.

marbled (mar'bld), *a.* [< *marble* + *-ed*².] **1.** Having veins and cloudings like variegated marbles.

A fine *marbled* stone, white, blue, and ruddy.
R. F. Burton, To the Gold Coast for Gold, iii.

2. In *zool.*, variegated with different colors, like marble, dappled, clouded. **Marbled beauty**, a small whitish moth, *Bryophila perla*, dappled with bluish gray. —**Marbled glass**. See *glaze*. —**Marbled guillemot**, a murrelet, *Brachyrhamphus marmoratus* inhabiting the North Pacific ocean, in summer of a blackish color variegated with tawny and chestnut-brown. —**Marbled lizard**, the marblet. —**Marbled tiger-cat**, a large wild cat of Asia, *Felis marmorata*, about two feet long, and of variegated coloration.

marble-edged (mär'bl-ejd), *a.* Having edges, as a book, stained with variegated colors in imitation of marbled paper.

marble-handsaw (mar'bl-hand"sâ), *n.* A toothless blade fitted at the back with a block-handle, used with sand for cutting slabs of marble into pieces. *E. H. Knight.*

marblehead (mär'bl-hed), *n.* The fulmar petrel, *Fulmarus glacialis*. See cut under *fulmar*².

marbleheader (mär'bl-hed"ėr), *n.* Same as *marblehead*.

marble-hearted (mar'bl-här"ted), *a.* Having a heart like marble; hard-hearted; cruel, insensible; incapable of being moved by pity, love, or sympathy.

Ingratitude! thou *marble-hearted* fiend.
Shak., Lear, i. 4. 281.

marbleize (mär'bl-īz), *v. t.*; pret. and pp. *marbleized*, ppr. *marbleizing*. [< *marble* + *-ize*.] To give the appearance of marble, or a marbled appearance, to.

The *marbleized* iron shelf above the stove-pipe hole supported two glass vases. *Howells*, Annie Kilburn, xi.

Marbleized glass. See *glass*.

marble-paste (mär'bl-pāst), *n.* A white porcellaneous paste used for figures, busts, and the like, especially at the factory of Lunéville in the eighteenth century.

marble-polisher (mär'bl-pol"ish-ėr), *n.* **1.** (*a*) A block of sandstone used to rub a marble slab in the preliminary operation of polishing; also, a linen cushion with which the polishing is carried to completion by the agency of emery-dust or powder of calcined tin. (*b*) A marble-rubber. —**2.** A machine for polishing marble. Its chief element is a grinding-cylinder composed of several collars upon a mandrel. The slab of marble is placed on a table, and the cylinder, which is fed with the polishing powder, rotates above it, with a longitudinally reciprocating motion as well as one of simple revolution. For columns a large lathe is used, the stone shaft being revolved in contact with rubbers held in the tool-rest. See *marble rubber*.

marbler (mär'blėr), *n.* **1.** One who works in marble, a quarrier or a cutter of marble.

The charter . . . bears the date of 1551, though the *marblers* (of Purbeck in England) always persist that they possess an earlier one. *Harper's Mag.*, LXX. 244.

2. One who stains or otherwise marks in imitation of marble, especially, one who marbles paper.

marble-rubber (mar'bl-rub"ėr), *n.* A rubber for "surfacing," smoothing, and polishing flat marble slabs. It consists of a flat sole with a superimposed tray having holes through which water and sand are supplied to the sole as needed. It is used with a combined reciprocating and rotary motion.

marble-saw (mar'bl-sâ), *n.* A machine for cutting marble. It consists of a single thin iron blade, or of several blades arranged in a gang set in a frame and reciprocated by pitmans and eccentrics. The blades are constantly fed with sand and water. Such machines will cut a block of marble into several slabs simultaneously, or can be arranged to cut out pyramidal blocks, or to shape a cylinder or a frustum of a cone.

marble-scourer (mar'bl-skour"ėr), *n.* An implement for scouring marble floors, constructed and acting on the same principle as the marble-rubber, but having a handle by which the workman, in a standing position, can conveniently operate it.

marble-silk (mar'bl-silk), *n.* A silk having a weft of several colors, so woven that the whole web looks like marble, stained or veined irregularly. *D. Rock*, S. K. Textiles.

marblet (mar'blet), *n.* [< *marble* + *-et*.] An iguanian lizard of South America, *Polychrus marmoratus*.

marble-thrush (mar'bl-thrush), *n.* The mistle-thrush: so called from its marbled breast. *C. Swainson.* [North Hants, Eng.]

marblewood (mar'bl-wud), *n.* A large tree of the ebony family, *Diospyros Kurzii*, native in British Burma and the Andaman Islands. Its wood is grayish, interlaid with black, and is used for cabinet-work.

marble-worker (mar'bl-wer"kėr), *n.* One who works in marble; a workman who cuts, hews, or polishes marble; a marbler. —**Marble-workers' file**. See *file*¹.

marbling (mar'bling), *n.* [Verbal n. of *marble*, *v.*] **1.** The art or process of variegating in color, in imitation of marble, or with veins and cloudings of any sort. —**2.** Any marking resembling that of veined or variegated marble, hence, any mottling, veining, or clouding of a surface: as, the *marbling* of flesh-meat caused by alternations of fat and lean. —**3.** The art or practice of staining paper or the cut edges of a book with variegated colors, usually in some conventional imitation of marble. It is done in a trough of water covered by a layer of gum tragacanth mixed with a little ox-gall. The fluid colors are sprinkled or spattered over this layer with a brush, either in the arrangement intended for use or in a manner which will admit of producing the desired figuration by drawing a brass comb over the surface. The dampened paper held by the ends is lightly passed in a curve over this surface, taking up the colors, and finished by sizing and burnishing or calendering.

marbly (mar'bli), *a.* [< *marble* + *-y*¹.] Resembling marble in structure or appearance.

Great smooth *marbly* limbs.
Browning, The Bishop Orders his Tomb.

marbret, *n.* A Middle English form of *marble*.

Marbury's case. See *case*¹.

marc¹, *n.* See *mark*².

marc² (märk), *n.* [< F. *marc*, residuum, dregs, grounds, mash, etc., perhaps < L. *cmarcus* (or its Celtic original), a kind of wine of middling quality.] The refuse matter which remains after the pressing of fruit, as grapes or olives; as applied to apples, pomace.

To make this liquor [cider-kin] the *marc* is put into a large vat, with a proper quantity of boiled water which has just become cold, the whole is left to infuse for forty-eight hours, and then pressed.
Spons' Encyc. Manuf., I. 417.

marcando (mär-kan'dō), *a.* [It., ppr. of *marcare*, mark: see *mark*¹, *v.*] In *music*, distinct and decisive: applied to single notes and passages, and sometimes to a whole movement, to be so rendered. Also *marcato*.

marcantant, *n.* See *mercatante*.

marcasite (mär'ka-sit), *n.* [Formerly also *marcassite*, *marchasite*, *marchesite*, < F. *marcassite* = Sp. *marquesita* = It. *marcasita*, *marchesita*, with term. *-ite*²; said to be of Ar. origin (?).] **1.** As used by the early mineralogists, the crystallized forms of iron pyrites, including more particularly the isometric species now called *pyrite*. This mineral was frequently used for personal decoration in the eighteenth century. It takes a good polish, and is cut in facets like rose diamonds. It was made into pins, watch-cases, shoe- and knee-buckles, and other ornaments.

Also great pieces of chrystal, amethysts, gold in ye mine, and other mettals and *marcasites*.
Evelyn, Diary, June 21, 1650.

Half the ladies of our acquaintance carry their jewels to town, and bring nothing but paste and *marcasites* back. *Goldsmith*, She Stoops to Conquer, iii.

2. In recent use, the orthorhombic iron pyrites, or iron disulphid, FeS_2. It has a lower specific gravity than ordinary pyrite, and on an untarnished surface a somewhat paler color in consequence of which it is often called *white iron pyrites*. The crystallized varieties take various imitative forms called *cockscomb pyrites*, *spear pyrites*, etc., the massive kinds are often radiated, concretionary, etc. Marcasite is much more liable to alteration than ordinary pyrite, passing by oxidation into iron sulphate or copperas. The two kinds of iron pyrites often occur together, and the greater the proportion of marcasite the more the liability to alteration, thus has been shown (Dufrénoy) to be an important element in the durability of building-stones containing pyrites.

marcasitic (mar-ka-sit'ik), *a.* [< *marcasite* + *-ic*.] Pertaining to marcasite, of the nature of marcasite.

marcasitical (mar-ka-sit'i-kal), *a.* [Formerly also *marchasitical*, < *marcasitic* + *-al*.] Same as *marcasitic*.

The place that abounds with these *marchasitical* minerals. *Boyle*, Works, III. 333.

marcassin (mär'ka-sin), *n.* [< F. *marcassin*, a young wild boar, a grise.] In *her.*, the young wild boar, used as a bearing. This bearing is distinguished from the boar by having the tail hanging down and not curled round in a ring.

marcato (mar-ka'tō), *a.* [It., pp. of *marcare*, mark: see *marcando*.] Same as *marcando*.

marceline¹ (mar'se-lin), *n.* [< F. *marceline*; so called from St. *Marcel* in Piedmont, where the original specimen was found.] In *mineral.*, an altered form of rhodonite, or silicate of manganese, in which the manganese protoxid has been converted into sesquioxid.

marceline² (mar'se-lin), *n.* [Also *marcelline*, < F. *marceline* (a trade-name?).] A thin silk fabric used for linings, etc., in women's costume.

Marcellian (mar-sel'i-an), *a.* and *n.* [< *Marcellus* (see def.) + *-ian*.] **I.** *a.* Pertaining to Marcellus of Ancyra in Asia Minor, or to his doctrines.

II. *n.* One of the professed followers of Marcellus, Bishop of Ancyra in the fourth century. The Marcellians held the doctrine, nearly agreeing with that of the Sabellians, that the Holy Spirit and the Word, or Logos, are merely impersonal agencies and qualities of God, and that the incarnation of the Logos is temporary only. It has been doubted by some whether Marcellus held the views ascribed to him.

marcelline, *n.* See *marceline*².

Marcellinist (mar-se-lin'ist), *n.* [< *Marcellina* (see def.) + *-ist*.] An adherent of Marcellina, a female Gnostic of the second century, and a teacher of Gnosticism in Rome. Also *Marcellinian*.

It is exhausting to even the best troops, and as a rule should not exceed thirty miles a day; special care is supposed to be taken to avoid such exhaustion just before going into action. The troops are relieved by changing the gaits, alternating the double with the quick time, and in the cavalry the horses are relieved for fifteen minutes every hour by the dismounting and marching of the men. Any distance over twenty miles a day is reckoned a *forced march*. **March past**, the march of a body of soldiers in front of a reviewing officer or some high dignitary.

Between 2,000 and 3,000 troops mustered on the ground, and their *march past* was an event of the highest political significance. *Marvin*, Gates of Herat, iii.

Rich orient pearl,
More bright of hue than were the *margarites*
That Cæsar found in wealthy Albion
Greene, Orlando Furioso.

2 A mineral of micaceous structure, separable into thin laminæ which are rather brittle It has a grayish or reddish color and a pearly luster on the cleavage surface (hence called *pearl-mica*). In composition it is a silicate of aluminium and calcium It is a common associate of corundum It is one of the so-called *brittle micas*

3 In *lithol*, an arrangement of the devitrification products (globulites) of a glassy material into forms resembling strings of beads. a term introduced by Vogelsang.—4. Same as *margarita*, 1

margaritic (mar-ga-rit'ik), *a.* [< *margarite* + *-ic*] Pertaining to or resembling pearl or margarite; margaric —**Margaritic acid**, one of the fatty acids which result from the saponification of castor-oil

margaritiferous (mar'ga-ri-tif'e-rus), *a* [< L *margaritifer*, pearl-bearing, < *margarita*, a pearl (see *margarite*), + *ferre* = E. *bear*[1]] Pearl-bearing, producing pearls; margaritaceous

margaritite (mar'ga-ri-tīt), *n* [< NL *Margaritites*, a generic name of such shells, < L. *margarita*, a pearl see *margarite*] A fossil pearl-oyster or some similar margaritiferous shell

Margarodes (mar-ga-rō'dēz), *n* [NL, < Gr *μαργαρώδης*, pearl-like, < *μάργαρον*, a pearl (see *margarite*), + *εἶδος*, form] 1 A genus of scale-insects of the family *Coccidæ* *M formicarum* so named from its pearly appearance and from its living with ants, is known in the Bahamas as the *ground pearl* Its scaly covering has caused it to be mistaken for a mollusk These insects are sometimes strung like beads in necklaces. The genus is probably the same as *Porphyrophora* of Brandt (1833), it was named the same year by Guilding

2. A genus of pyralid moths, typical of the family *Margarodidæ*, erected by Guenée in 1854, having the wings immaculate, neither fasciate nor marginate, and the body stout They occur in most parts of the world, more abundantly in tropical countries *M quadristygmalis* of the United States feeds in the larval state on the privet.

Margarodidæ (mar-ga-rod'i-dē), *n pl* [NL, < *Margarodes* + *-idæ*] A family of pyralid moths named from the genus *Margarodes*, having ample, entire, silky, semi-hyaline, iridescent or pearly wings, often bordered and seldom marked The abdomen of the male has an apical tuft which is often bifid It is a large wide spread family of some 20 genera, as *Phacellura*, which contains the moths whose larvæ are known in the United States as *melon caterpillars* and *pickle-worms*

margarodite (mär'ga-rō-dīt), *n.* [< Gr. *μαργαρώδης*, pearl-like (see *Margarodes*), + *-ite*[2]] A variety of muscovite, or common potash-mica, affording, upon ignition, a small percentage of water.

margaron, margarone (mär'ga-ron, -rōn), *n* [= F *margarone*, as *margar(ic)* + *-on*, *-one*] A solid white fatty matter which crystallizes in pearly scales, and is obtained by distilling margaric acid with excess of lime.

margaryize (mär'gar-i-īz), *v t.*; pret and pp *margaryized*, ppr. *margaryizing*. [< *Margary* (see def.) + *-ize*] In the antiseptic treatment of timber, to impregnate (the wood) with a solution of sulphate of copper The word is derived from the name of the inventor of the process, J J Lloyd Margary

margate-fish (mär'gāt-fish), *n.* A fish, *Hæmulon gibbosum* or *album*, inhabiting the Caribbean Sea and Florida Keys Its color is pearly-white, somewhat olivaceous above, with obsolete spots on some of the scales, the mouth is orange within, and the lips and a faint blotch on each side of the snout are light yellow It reaches a length of 2 feet or more, and is one of the most important food fishes of Havana and Key West. Also called *market-fish*, *maggot fish*, *margaret-grunt*

Margaux (mär-gō'), *n* [F., see def] Claret produced in the commune of Margaux, in the department of the Gironde in France. Its better grades closely resemble the Château Margaux See *château*.

margay (mar'gā), *n* [= F. *margay*; < Braz. *margay*] A South American tiger-cat, *Felis tigrina*, or *F. margay*, also some related species They are small spotted and striped cats resembling the ocelot, ranging from Mexico to Paraguay The margay is about 2 feet long, the tail from 12 to 18 inches, it has been domesticated and made useful in destroying rats, like the common house-cat. Also *marjay*.

marge (märj), *n.* [< F. *marge* = Pr *marge* = D. *marge*, < L. *margo* (*margin-*), border, margin: see *margin*.] Same as *margin*. [Poetical.]

margin (mär'jin), *n* [Also *marge* (< F), formerly also *margyne* (and *margent*, q v); < ME *margin*, *margyne*, < OF *margine* (usually *marge*, F. *marge*) = Sp. *margen* = Pg. *margem* = It *margine*, a border, margin, = Serv. *margyn*, a hill (as a boundary, an ant-hill, mole-hill), < L *margo* (*margin-*), edge, brink, border, margin see *mark*[1]] 1. A bordering or bounding space; a border, a space between one edge or line and another, as that along a river between the edge of the water or of its bed and a real or imaginary outer line, or the like, or that between the edges of a leaf or sheet of paper and those of the printing or writing on it. In some plants the leaf (then called *marginate*) has a distinct margin or border of different formation or coloration from the main body In the case of a book, *margin* alone usually means the clear space between the print and the outer edge of the leaf, called distinctively the *front margin*, the *head* or *top margin* is at the top of the page, the *tail* or *bottom margin* at the foot, and the *back margin* on the inner side against the back Parts of these margins, especially at the sides, may be occupied by marginal notes, remarks, or the like An *opened margin* is one where the leaves have been opened or separated, as with a folder, but not trimmed, an *uncut margin* has not been cut anywhere, a *rough cut margin* has only the more protruding ragged edges cut off with scissors, in a *cropped margin* too much paper has been cut away, in a *bled margin* part of the print has been cut away

We came into the road, where I saw an antient way about eighteen feet broad, paved with large round stones, having a *margin* on each side, partly of hewn stone
Pococke, Description of the East, II 1 80

Thus on Mæander's flowery *margin* lies

Whittier, Mogg Megone, II

Specifically — (*a*) In an engraving, the paper left blank outside the plate mark (*b*) In *entom*, properly, the outer part of a surface or distinct portion of the integument, as distinguished from the central part or disk In this sense *margin* is not to be confounded with *edge*, which is used to denote the extreme boundary of a part but where distinction is unnecessary, the two terms are often used synonymously (*c*) In *conch*, the edge or entire outline of a bivalve shell (*d*) In *bot* (1) The edge (2) A distinct border, different from the body of the organ, as the membranous expansion surrounding some seeds or seed vessels, a narrow wing

2. In *joinery*, the flat part of the stiles and rails of framed work. Doors which are made in two widths

or leaves are called *double-margined*, in consequence of the stiles being repeated in the center, and so are also those doors which are made to imitate two leafed doors.

3. Latitude, scope, or range, freedom from narrow restriction or limitation; room or provision for enlarged or extended action.

Their *margin* of effective operation is strictly limited, still, such a *margin* exists, and they [trades unions] have turned it to account *Rae*, Contemporary Socialism, viii

4 Allowance made, security given, or scope afforded for contingencies, as profit or loss in trade, error of calculation, change of circumstances, diversity of judgment or opinion, etc

There is always *margin* enough in the statute for a liberal judge to read one way and a servile judge another *Emerson*, Fugitive Slave Law

5. In speculative dealings on the exchanges (*a*) The sum in money, or represented by securities, deposited by a speculator or trader with his broker as a provision against loss on transactions made on account. This margin is usually reckoned at 10 per cent of the par value of stocks or bonds, and 10 cents per bushel or barrel on grain or oil If the price rises or falls to a satisfactory extent, a sale or purchase is made, and the gain is the customer's profit, less the broker's charges, if the price falls below or rises above the margin furnished, and the purchase is to be protected in expectation of a future rise or fall, the customer is required to furnish ("put up") more margin to cover the difference

The banks refused to loan upon any except first-class collateral, and commission houses regarded the market as in a somewhat dangerous condition for speculators on *margin*. *Appleton's Ann Cyc*, 1886, p 342

(*b*) A deposit made by each of two brokers, parties to a contract, when one is "called up" (as it is termed) by the other. This mutual deposit (usually of 5 per cent) is made in some bank or trust company agreed upon, and remains subject only to a joint check or draft during the continuance of the contract upon which it has been called —**Cardinal, costal, dentate, dilated margin.** See the adjectives —**Dislocated margin.** See *dislocate* —**Double margin**, a margin in which there is a fine groove along the outer side, the margin being thus composed of two parallel edges or carinæ with the groove between them —**Eroded margin.** See *erode* **Filate, incrassate, inferior, inner,** etc, **margin** See the adjectives.—**Margin draft** See *margin-draft* —**Margin of a course**, in *arch*, that part of the upper side of a course of slates which is left uncovered by the next superior course —**To make margin**, in *printing*, to determine the proper amount of margin to be given to printed pages by the selection of blanks or of low furniture of suitable sizes. = **Syn. 1.** Confine, limit, skirt See *rim*

margin (mär'jin), *v t* [< F *marginer* = Sp. Pg *marginar* = It. *marginare*, < L *marginare*, furnish with a border, < *margo* (*margin-*), a border see *margin*, *n*] **1** To furnish with a margin; form or constitute a margin to, border

The ice-born rivers were *margined* occasionally with spires of discolored ice *Kane*, See Grinnell Exp, II 150

2. To enter in the margin, as a note in a book —**To margin up**, to put up margins, as a provision against loss by a broker who has purchased and holds stocks etc, on behalf of a customer, cover loss on account of depreciation of prices

The concern then had $42,500,000 locked up on the Bourse, having trebled its liabilities in the vain attempt to *margin up* after a fall begun in September, 1881 *Amer Economist*, III 176

3 A distinguishing physical peculiarity, a spot, mote, nævus, special formation, or other singularity; a natural sign. as, a birth-*mark*, the *marks* on sea-shells or wild animals. In farriery the mark is a deep median depression on the cutting surface of the incisor tooth of a horse, due to the infl ection of a vertical fold of the tooth It is seen of different characters according to the wear of the tooth, being thus to some extent an index of a horse's age It disappears after the tooth is worn down beyond the extent of the fold. The dark color is due simply to the accumulation in the fold of food or dirt. See the quotation under *mark-tooth*.

He that by good use and experience hath in his eye the right *mark* and very true lustre of the diamond rejecteth and will not look upon the counterfeit, be it ever so well handled, ever so craftily polished!

Dan *mark*, usually identified, in the orig. supposed sense a 'stamped coin,' with *mark*[1], a sign, stamp, but the sense of 'a particular weight' seems to be older.] 1. A unit of weight used in England before the Conquest, and in nearly all the countries of Europe down to the introduction of the metric system, especially for gold and silver. It was generally equal to 8 ounces In 1524 the Cologne mark was made the standard for gold and silver through out the German Roman empire, and copies were distributed to all the principal cities. But, owing to the carelessness with which these were made, preserved, and copied, the Cologne mark came to have different values in different places The following table shows the values of some of the principal marks in English troy grains, either directly as given, or reduced from French grains, doli, or milligrams The larger discrepancies are in most cases due to known changes of standards

A footsore ox in crowded ways
Stumbling across the *market* to his death.
Tennyson, Aylmer's Field.

3. The assemblage of people in a market as there was a large *market* to-day

What are known as the *markets* in the stock exchange are simply groups of jobbers distributed here and there on the floor of the house Habit or convenience seems to have determined the particular spots occupied, which are known as the consol market, the English railway market, the foreign stock market, and so on
Encyc Brit., XXII. 557.

4. A place of purchase and sale in general; a city, country, region, or locality where anything is or may be bought or sold as, the home or foreign *market* (the country in which goods are produced, or that to which they are transported or from which they are brought), the American or British *market*, the London *market*

There is a third thing to be considered — how a *market* can be obtained for produce, or how production can be limited to the capacities of the *market*. *J S Mill*

5. Traffic, trade, purchase or sale, or rate of purchase and sale, demand, hence, price; cost; worth, valuation as, to make *market*, a ready *market*, a dull *market*, the *market* is low, there is no *market* for such goods

2. The planet next outside the earth in the solar system Its diameter (about 4,200 miles) is only 0 54 that of the earth, its superficies 0.28, and its volume 0 147 Its mean density is 0 71 that of the earth, so that the density of its crust may very likely be about the same as the earth s, but the weight of a given mass at the surface of Mars is only three eighths of the weight of the same mass on the earth The strength of materials is therefore relatively much greater there, and mountains, animals, and buildings would naturally be much larger The mean distance from the sun is 141,500,000 miles. The eccentricity of its orbit is very much greater than that of the earth, being 0 093 in place of 0 017, the inclination of its equator to its orbit is about the same Its day is half an hour longer than ours Its year is 687 of our days The surface of Mars has been carefully mapped, and is characterized by the predominance of land and the great number of canals or straits Its color is strikingly red Its climate is, perhaps, not very different from that of the earth It has two moons, discovered by Professor Asaph Hall in Washington in 1877 conformably to the prediction of Kepler, and realizing the fancies of Swift and of Voltaire The inner of these, Phobos, revolves in less than 8 hours, so that to an observer on the planet it rises in the west and sets in the east, the outer, Deimos, revolves in 30 hours, so that it appears nearly stationary for a long time The symbol of Mars is ♂, which seems to show the shield and spear of the god A planetoid has recently been discovered whose orbit falls within that of Mars

They have discovered two lesser stars, or satellites, which revolve about *Mars*, whereof the innermost revolves in the space of ten hours, and the outermost in twenty one and a half *Swift*, Gulliver's Travels, III iii

Marsilea quadrifolia
a, the sporocarp or conceptacle, *b* a sporocarp with valves opened and emitting the mucilaginous cord, which bears the sori

cryptogamous plants, typical of the order *Marsileaceæ*. They have wide-creeping rootstocks, and leaves produced singly or in tufts from nodes of the rootstock, each consisting of a petiole and four sessile, equally spreading, deltoid cuneate or oblanceolate leaflets with flabellate anastomosing veins. The conceptacles or sporocarps are ovoid or bean-shaped and two valved, and emit a mucilaginous cord upon which are borne numerous oblong cylindrical sori, each sorus containing numerous microsporangia and few macrosporangia. The genus is widely distributed, and embraces 40 species, of which 4 are North American. *M Drummondii* is the Australian nardoo. Sometimes written *Marsilia*

Marsileaceæ (mär-sil-ē-ā′sē-ē), *n. pl.* [NL. (A. P. de Candolle, 1830), ⟨ *Marsilea* + *-aceæ*] An order of leptosporangiate heterosporous fern-like plants, in which the fructification consists of sporocarps either borne on pedunclés which rise from the rootstock near the leaf-stalk or consolidated with it, and contains both macrospores and microspores.

Marsiliæ (mar-si-li′ē-ē), *n. pl.* [NL (Baker, 1887), ⟨ *Marsilea* + *-eæ*] With some systematists, a suborder of plants of the order *Rhizocarpeæ*, or heterosporous *Filicinæ* virtually the same as the order *Marsileaceæ*.

Marsipobranchii (mar′si-pō-brang′ki-ī), *n. pl.* [NL., ⟨ Gr. μαρσιπος or μαρσυπος, a pouch, bag (see *marsupium*), + βραγχια, gills] A group of vertebrates, variously denominated by naturalists. In all systems of classification it consists of those *Vertebrata* which have the skull imperfectly developed, the notochord not continued beyond the pituitary body, the brain distinctly differentiated, the heart well developed, with an auricle and a ventricle, the gills forming fixed sacs within branchial apertures on each side six or more in number, the lower jaw defective, and the mouth round like a sucker, whence the alternative name *Cyclostoma*. In the earlier systems the *Marsipobranchii* were regarded as an order or a subclass of fishes, they are now designated as a class of *Vertebrata*, and divided into two primary groups, *Hyperoartia* and *Hyperotreta*, the former comprising the lampreys, the latter the hags. Both are known as *myzonts*. *Marsipobranchii* is a synonym of *Cyclostoma* and *Cyclostomata*, 2. See cut under *lamprey*

Marsupialia (mär-sū-pi-ā′li-ä), *n. pl.* [NL., neut pl of *marsupialis*: see *marsupial.*] An order of the class *Mammalia*, coextensive with the subclass *Didelphia*, containing implacental mammals usually provided with a marsupium or pouch for the reception and nourishment of the young; the marsupials or pouched animals. There being no developed placenta, the period of gestation is very brief, and the young are born extremely small, imperfect, and quite helpless In this state they are immediately transferred to the pouch on the belly of the mother, where are the teats, to which the little creatures adhere firmly for a while, completing their development by sucking milk As they grow larger and stronger, they are able to let go and take hold of the teat again, and even after leaving the pouch they may for a while retreat to it, or be carried about elsewhere on the mother's body (See cut under *marsupes*) The uterus is double, and the vagina also is more or less completely divided into two separate passages (whence the name *Didelphia*), the scrotum of the male is abdominal in position, and pendulous, in front of the penis The corpus callosum is rudimentary, but the cerebral hemispheres are connected by a well developed anterior commissure The angle of the mandible is normally inflected There is a wide range of adaptive modification in the structural details of the marsupials, the order in itself including representatives or analogues of nearly all the other orders of mammals, as the carnivorous, the insectivorous, the herbivorous, etc At the present time the marsupials are eminently characteristic of the Australian region, only the *Didelphyidæ* or opossums being found in America, but in former epochs the distribution of the marsupials was general, and some of the oldest known mammalian fossils of Mesozoic age are supposed to belong to this order It has been variously subdivided Owen in 1838 divided it into five tribes *Sarcophaga*, *Entomophaga*, *Carpophaga*, *Poephaga*, and *Rhizophaga* A main division, based on the dentition is into *Diprotodontia* and *Polyprotodontia* In 1872 Gill made the four suborders *Rhizophaga*, *Syndactyli*, *Dasyuromorpha*, and *Didelphiomorpha*, with nine families, *Phascolonyidæ*, *Macropodidæ*, *Tarsipedidæ*, *Phalangistidæ*, *Phascolarctidæ Peramelidæ*, *Dasyuridæ*, *Myrmecobiidæ* and *Didelphyidæ*, for the living forms, and four fossil families, *Diprotodontidæ*, *Thylacoleontidæ*, *Plagiaulacidæ*, and *Dromatheriidæ* Also called *Marsupiata*

The celebration of the Lord's Supper or eucharist

That Office which was called the *Mass* by the mediæval and the Latin Church, but which we now call the Lord's Supper and the Holy Communion
Procter, Hist Book of Com Prayer, p 305

The Supper of the Lord, and the Holy Communion, commonly called the *Mass* *Book of Common Prayer* (1549)

2 The office for the celebration of the eucharist, the liturgy. The component parts of the mass or liturgy are the *ordinary of the mass* (*ordo missæ*) and the *canon of the mass* (*canon missæ*), succeeded by the communion (sometimes counted part of the canon) and post communion Anciently and technically the part preceding the offertory is the *mass* or *liturgy of the catechumens* (*missa catechumenorum*), the remainder the *mass* or *liturgy of the faithful* (*missa fidelium*) In the Roman Catholic Church different classes of masses are *high mass*, *low mass*, *private mass*, *votive mass*, etc See the phrases below

It nedith not to speke of the *messe* ne the seruise that thei hadde that day, for it were but losse of tyme
Merlin (E E T S), II 375

Sir Cauline (Child's Ballads, III 175)

The time of the Communion shall be immediately after that the Priest himself hath received the Sacrament, without the varying of any other rite or ceremony in the *Mass*
Order of the Communion (1548)

The maiden buried, not as one unknown,
Nor meanly, but with gorgeous obsequies,
And *mass*, and rolling music, like a queen
Tennyson, Lancelot and Elaine

3 The sacrament of the eucharist or holy communion The word *mass* in this and the preceding senses is popularly used of the eucharist as celebrated in the Roman Catholic Church, or of the teachings of that church with regard to the sacrament, as involving not only the doctrines of the real presence and the eucharistic sacrifice, held in some other churches also, but the doctrine of transubstantiation as defined by the Council of Trent The use of the word *mass* (*missa*) in the Western Church is as old as the fourth century The Greek Church has no term precisely corresponding to *mass*, the sacrament being generally called the *eucharist* or *holy communion*, and the office the *liturgy* At the Reformation the first Prayer Book (1549) of the Church of England retained the name *mass*, which was omitted in the second book (1552) and fell into disuse being popularly regarded as involving a Roman Catholic view of the sacrament The use of the word has, however, been revived to some extent among Anglicans in the present century Swedish and Danish Protestants use the corresponding word for their own communion office

4 A musical setting of certain parts of the Roman Catholic liturgy, also of corresponding parts of the Anglican liturgy It consists usually of the following sections each of which is sometimes divided into separate movements Kyrie, Gloria (including the Gratias agimus, Qui tollis Quoniam, Cum Sancto Spiritu), Credo (including the Et Incarnatus, Crucifixus, Et Resurrexit), Sanctus (including the Hosanna), Benedictus (including a repetition of the Hosanna) and the Agnus Dei (including the Dona nobis) To these an Offertorium (after the Credo and before the Sanctus) is sometimes added The Requiem Mass differs largely from the regular mass, and includes settings of several of the stanzas of the hymn "Dies Iræ" The artistic form of musical masses varies widely, from unaccompanied plain song to the most elaborate polyphony with orchestral accompaniments Medieval masses were named usually from the melody which was taken as the subject for contrapuntal treatment, as Josquin's mass 'L'homme armé', modern masses are named from the key of the first movement, as Bach's "Mass in B minor"

5. A church festival or feast-day now only in composition as, *Candlemas*, *Childermas*, *Christmas*, *Lammas*, *Martinmas*, *Marymas*, *Michaelmas*, *Roodmas* (compare *kermess*) —**By the mass!**, an oath formerly in common use sometimes abbreviated to *mass*

Shak, Hamlet, iv 4 47

5 The quantity of any portion of matter as expressed in pounds or grams, and measured on an ordinary balance with the proper reduction for the buoyancy of the atmosphere, otherwise, the relative inertia, or power in reaction, of a body. For example, if two bodies at rest but free to move, as a gun suspended in vacuo and a bullet in it, are suddenly separated by a force acting between them, their respective velocities will be inversely as their *masses*, and this phenomenon best defines *mass* It is usually confounded with weight which is more properly the force with which a body is accelerated in the direction in which a plummet points, in consequence of the earth's attraction and rotation Thus, if a piece of lead which is found to weigh a pound at the base of the Washington monument is transported to the top, it will be found to weigh a pound there for its mass is unchanged But if only the piece of lead and the balance are carried to the top of the monument, while the weight against which it has been weighed is left at the base, and there attached to the balance at the top by means of a long string or wire (the weight of which is to be properly allowed for), the piece of lead would be found to have lost the weight of one third of a grain, the weight thus varying though the mass does not

The destructive effects of a cannon ball are due entirely to its *mass* and to the relative speed with which it impinges on the target, and would be exactly the same (for the same relative speed) in regions so far from the earth or other attracting body that the ball had practically no weight at all When we open a large iron gate properly hinged it is the *mass* with which we have to deal, if it were lying on the ground and we tried to lift it, we should have to deal mainly with its weight.

massage2 (ma-säzh'), *n.* [< F. *massage,* < *masser,* Gr. *μάσσειν,* knead: see *mass*2.] In *therap.*, the act or art of applying intermittent pressure and strain to the muscles and other accessible tissues of the patient. The means employed are rubbing, kneading, and light pounding, combined ordinarily with more or less additional stimulation of the skin, as by friction and slapping. This manipulation furthers the removal of lymph from the parts, which is especially needful when the lymphatic flow is sluggish through lack of muscular exercise, it apparently quickens the blood-circulation through the part, and furnishes gentle vasomotor exercise, it acts possibly as a direct trophic stimulus to muscular and sustentacular tissues, by stretching ligamentous structures it maintains or increases supplieness, in the abdomen it stimulates and aids peristalsis, and as a general stimulation of sensory nerves it may affect favorably the nutrition of the central nervous system. It is represented in the customs of many primitive peoples, and in a developed form constitutes a valuable resource of modern scientific therapeutics

massicot (mas'i-kot), *n.* [Incorrectly *mastecot,* < F. *massicot.*] Protoxid of lead, or yellow oxid of lead, PbO. Melted lead exposed to the air becomes covered with a yellowish gray dusky pellicle. This pellicle is carefully taken off, and is oxidized by exposure to air and a moderate heat to a greenish gray powder, inclining to yellow. This oxid, separated from the grains of lead by sifting, and exposed to a heat sufficient to make it red hot, but not to melt it, assumes a deep yellow color. In this state it is called *massicot,* but does not differ chemically from litharge, though different in color and mechanical condition. After melting it has a reddish tint, and is called *litharge.* Massicot, slowly heated by a moderate fire, is further oxidized to minium or red lead. It is sometimes used as a pigment, and as a drier in the composition of ointments and plasters. Also called *lead ocher*

massif (ma-sēf'), *n.* [F.: see *massive.*] A central mountain-mass, the dominant part of a range of mountains, a part of a range which appears, from the position of the depressions by which it is more or less isolated, to form an independent whole, also, an orographic block or fault-block (German *scholle*), a band or zone of rocks raised or depressed between two largely developed parallel faults. 6 In *philos*, consisting in or pertaining to matter in the Aristotelian sense, and not to form, arising from matter of positive fact, and not from logical implication; referring to the object as it exists, and not to distinctions originating in the mind; relating to a word as an object, and not to its meaning All these senses come down from the middle ages, and in them *material* is opposed to *formal* In Cartesian and later writings, *material* often means pertaining to the outward world, as opposed to *spiritual* In the Kantian terminology, *material* means pertaining to or derived from matter in the Kantian sense of that term, namely, that which is contributed to cognition by sense Examples of the many established phrases in which this word occurs are given below

7 In the *law of evidence*, of legal significance in the cause, having such a relation to the question in controversy that it may or ought to have some influence on the determination of the cause See *immaterial issue*, under *issue* — **Material acceptation** or **supposition**, the taking of a spoken or written word as an object of thought — **Material being** See *being* — **Material cause** See *cause*, 1 **Material cognition** See *cognition* — **Material consequence**, a consequence, or premise with conclusion, which is valid that is, of which the conclusion is true whenever the premise is true, but which is so by virtue of a matter of fact, and not by virtue of the logical forms of the premise and conclusion The use of this term originated with Scotus, who further distinguishes between a necessary and a contingent material consequence, according as the premise needed to be supplied to render the consequence a logical syllogism is a necessary or a contingent proposition **Material criterion of truth** See *criterion* — **Material descent**, the passage from a genus to a species which comes under it as a matter of fact, but not by logical necessity — **Material distinction**, the distinction between different individuals of the same species This is an example of a use of the word *material* common with Thomas Aquinas and his followers, which seems to imply that matter is the principle of individuation — **Material fallacy**, a fallacy in which the syllogism satisfies all the rules of formal logic, but where the deception belongs to a class of falsifications of premises Such, for example, are cases where "most" is exaggerated into "all," where we argue *post hoc ergo propter hoc*, etc **Material form**†, in *metaph*, a form depending upon matter, and having no independent existence, which is supposed to be true of every form except the human soul — **Material heresy** See *heresy*, 2 — **Material idea** See *idea* — **Material knowledge** Same as *material cognition* — **Material logic** See *logic* — **Material matter of a proposition**, the subject and predicate opposed to the *formal matter*, which is the fact signified by the proposition — **Material mode**, a mode which affects the matter of a proposition opposed to *formal mode*, which affects the form

The *material modes* affect the matter of the enunciation, viz either the subject or the predicate for example, in this enunciation, A good shepherd lays down his life for his sheep, the word bonus or good is the mode of the subject In this, A rhetorician speaks ornately and copiously, ornately and copiously are the modes of the predicate *Burgersdicius*, tr by a Gentleman

Material multitude†, the plurality of a number in which the distinctions which may separate the objects are left out of view It is a Thomist expression — **Material object of a science**, the things of which that science takes cognizance regardless of the point of view from which it considers them Thus, chemistry and mechanics have the same material object that is to say, the whole universe — **Material opposition**, the opposition between terms which are not opposed in form **Material perfection of cognition**, a perfect acquaintance with the facts, as opposed to a logically distinct apprehension of them — **Material principle**, the Aristotelian matter See *matter*, 2 (a) — **Material science**, a science which rests on outward observation, and not on introspection a Cartesian distinction **Material sign**†, a sign which indicates its object, and shows its real existence but does not represent it or exhibit its form a Thomist phrase — **Material substance**, matter in the ordinary sense — **Material supposition** Same as *material acceptation* — **Material truth**, the correspondence of our judgments with their objects opposed to *formal truth*, which is mere logical consistency — **Material unity**†, that which belongs to an individual as such a Thomist term — **Material virtue**†, a power residing in material things *Aquinas*

II. *n* **1** Component or contributory matter or substance, that of or with which any corporeal thing is or may be constituted, made, or done as, the *materials* of the soil or of disintegrated rocks, wool is the *material* of cloth; building- or writing-*materials*, war-*material*

The houses are all built, on the outside of no better a *material* than either Sun burnt Brick or Flemish Wall *Maundrell*, Aleppo to Jerusalem p 124

The scenery though for ever changing, changes like the pattern of a kaleidoscope, the same *materials* read justed in varying combinations *Froude* Sketches, p 64

2 A constituent principle or element, that which composes or makes a part of anything as, the *material* of one's thoughts, the *materials* of a drama

Concerning the *materials* of seditions
Bacon, Seditions and Troubles

Let none fear that this age, or any coming one, will extirpate the *material* of poetry
Gladstone, Might of Right, p 121

Raw material, unmanufactured material material for fabrication in its natural state, or, with reference to some processes of manufacture, in the partially manufactured state to which it must be brought prior to treatment by those processes Thus wool is the raw material of yarn, and yarn that of cloth iron ore is the raw material of pig iron, and pig iron that of cast iron

The currier and tanner find their whole occupation in converting *raw material* into what may be termed prepared material *J S Mill*

Strength of materials, that power by which any substance as a rod bar beam, chain, or rope, resists any effort to destroy the cohesion of its parts, whether by pulling or stretching, crushing lateral or longitudinal pressure

material† (mā-tē'rī-al), *v t* [< *material*, *n.*] To render material, materialize

I believe that the whole frame of a beast doth perish, and is left in the same state after death as before it was *materialed* unto life *Sir T Browne*, Religio Medici, § 37

materialisation, materialise. See *materialization*, *materialize*

materialism (mā-tē'rī-al-izm), *n* [First used in E , = F *matérialisme* = Sp Pg It. *materialismo*, as *material* + *-ism*] 1 The denial of the existence in man of an immaterial substance, which alone is conscious, distinct and separable from the body —2 The metaphysical doctrine that matter is the only substance, and that matter and its motions constitute the universe See *idealism*, 1

Philosophical *materialism* holds that matter and the motions of matter make up the sum total of existence, and that what we know as psychical phenomena in man and other animals are to be interpreted in an ultimate analysis as simply the peculiar aspect which is assumed by certain enormously complicated motions of matter *J Fiske*, Evolutionist, p 277

3 The doctrine that all phenomena are to be accounted for by the fortuitous concourse of atoms, in connection with certain laws or tendencies toward laws, in nature, Epicureanism —4 Any opinion or tendency that is based upon purely material interests, hence, any low view of life, devotion to material things or interests, neglect of spiritual for physical needs and considerations

Criticism is infested with a cant of *materialism*, which assumes that manual skill and activity is the first merit of all men, and disparages such as say and do not *Emerson*, The Poet

There is a Lower Life, of which the animating principle is secularity, or – in the popular sense of the word – *materialism*. *J R Seeley*, Nat Religion, p 225

materialist (mā-tē'rī-al-ist), *n* and *a* [= F *matérialiste* = Sp Pg It *materialista*, as *material* + *-ist*] **I.** *n* 1 One who holds or advocates any form of metaphysical materialism

He who denies spirit in man or in the universe is a perfect *materialist* *Fleming*, Vocab of Philos

2. One who is absorbed by material interests, one who takes a low, material view of life

Persons who worship nothing but worldly success, who care for nothing but wealth, or fashionable display, or personal celebrity or sensual gratification, are thus loosely called *materialists* *J Fiske*, Cosmic Philos , II 493

II. *a* Of or pertaining to materialism, materialistic

The *materialist* view is quite as imperfect as the spiritualist view *G H Lewes*, Hist Philos., II 753

materialistic (mā-tē'rī-a-lis'tik), *a* [< *materialist* + *-ic*] Pertaining to, of the nature of, or characterized by materialism, in any sense of that word

But to me his very spiritualism seemed more *material istic* than his physics *Kingsley*

materialistical (mā-tē'rī-a-lis'ti-kal), *a* [< *materialistic* + *-al*] Same as *materialistic*

materiality (mā-tē-ri-al'i-ti), *n* [= F *matérialité* = Sp *materialidad* = Pg *materialidade* = It. *materialità*, < NL **materialita(t-)s*, < LL *materialis*, material see *material*] 1 The state or condition of being material, physical constitution or organization, corporeity as, the old belief in the *materiality* of heat

Nor had compacted earth, nor rock, nor stone,
Nor gross *materiality* been known
Byrom, I pistle to a Gentleman in the Temple

There has arisen the conception of a deity who, at first human in all things, has been gradually losing human *materiality* *H Spencer*, Univ Prog , p 70

2 A material thing, material substance.

Sufficient is it to remember for the present that the soul is a subtler and more refined *materiality* which is thus endowed with more delicate and refined perceptions than the bodily organs. *W Wallace*, Epicureanism, p 102.

3. Material character, coarseness; grossness

In polygamous families the children cannot avoid suffering from the general debasement and *materiality* of life *S Bowles*, Our New West, p 248

4 The perception of material substance by the mind, that factor in cognition which is recognized as material

It is of more than psychological interest to remark how the primordial factor in *materiality* is thus due to the projection of a subjectively determined reaction to that action of a not self on which sense impressions depend — an action of the not self which, of course, is not known as such till this projection of the subjective reaction has taken place *J Ward*, Encyc Brit , XX 56.

5 The quality of being material, importance; essentiality as, the *materiality* of testimony

Now *materiality* is a relative term applied to the consequences of an act, it bore relation to pain and pleasure applied to the circumstances, it bears relation to the consequences

Bentham, Introd to Morals and Legislation vii 23

materialization (mā-tē'rī-al-ī-zā'shon), *n* [< *materialize* + *-ation*] The act of materializing or of investing with or assuming a material form, change from a spiritual, ideal, or imaginary state to a state of matter, specifically, among spiritualists, the alleged assumption by a spirit of a material or bodily form Also spelled *materialisation*

materialize (mā-tē'ri-al-īz), *v* , pret and pp *materialized*, ppr *materializing* [= F *materialiser* = It *materializzare*, as *material* + *-ize*] **I.** *trans* 1 To give a material form or bodily existence to; make physically perceptible, embody in any manner See II

By this means [letters] we *materialize* our ideas, and make them as lasting as the ink and paper, their vehicles *Guardian*, No 172

With wonderful art and beauty [Virgil has] *materialized* (if I may so call it) a scheme of abstracted notions, and clothed the most nice, refined conceptions of philosophy in sensible images and poetical representations *Tatler*, No 115

He regarded the suggestion that the letter he described as "*materialized*, or rebitegrated in the air" was an outcome of any concealed apparatus as "grotesquely absurd *R Hodgson*, Proc Soc Psych Research, III 262

2 To give the character of metaphysical materialism to, render materialistic

The *materializing* tendencies of the former system *Milman*, Hist Latin Christianity, viii 5

3 To reduce to a material basis or standard, treat as pertaining only to matter, give a material character to, make material, low, coarse, sensual, etc as, to *materialize* thought, morality, or mythology, to *materialize* one's ideas or enjoyments

II. *intrans* 1 To become material, assume a material form; in recent spiritualistic use, to assume, as a spirit or immaterial entity, a form which is perceptible by the senses, or one that is visible, tangible, and (in the case of supposed spirits) capable of physical exertion

But, setting aside all charlatanry, there is an overwhelming amount of evidence from people who are presumably truthful to the effect that they have actually seen persons and things *materialize*, as the phrase goes, out of nothing *N A Rev*, CXLVI 704

2 To take form or shape; come into perceptible existence, become real as, the project has not yet *materialized* [Colloq]

The ball of the intruders was regarded as a challenge by some fifteen or twenty hounds that suddenly *materialized* among the bee hives and the althea bushes *M N Murfree*, Prophet of the Great Smoky Mountains

Also spelled *materialise*

materially (mā-tē'ri-al-i), *adv* 1 With, in, by, or with reference to matter or material things, from a material point of view, physically as, to be well provided *materially*, the state of the country *materially* considered —2 As regards matter or substance, not formally, in itself considered

An ill intention is certainly sufficient to spoil and corrupt an act in itself *materially* good. *South.*

materiarian† (mā-tē-ri-ā'ri-an), *n* [< LL *materiarius*, believing in the eternity of matter, < L *materia*, matter· see *matter* and *-arian*] A materialist *Cudworth*

materiate† (mā-tē'ri-āt), *a* and *n.* [< L *materiatus*, taken, not as pp of *materiare*, build of wood, but as a mere adj , made of matter, < *materia*, matter· see *material*, *matter.*] **I.** *a.* 1. Consisting of matter; material.

Gold, the most ponderous and *materiate* amongst metalles *Bacon*, Nat Hist , § 326.

2 In *metaph* , united with matter; embodied in matter. said of an Aristotelian form.

II. *n.* A material substance; a thing formed of matter

materiation† (mā-tē-ri-ā'shon), *n* [Cf. L *materiatio(n-)*, woodwork, < *materiare*, build of wood, *materiari*, procure wood. see *materiate.*] 1 A selling of timber for building *Bailey*, 1731 —2. In *metaph* , a making real by embodying in matter or visible form

Creation that is, a production of all things out of nothing a formation not only of matter but of form, and a *materiation* even of matter itself *Sir T Browne*, Vulg Err , v 1

materiature (mā-tē'ri-ā-tūr), *n* [< *materiate* + *-ure*] Materialization, the production by the soul of the matter of the body *J H Stirling*

matériel (ma-tā-ri-el'), *n.* [F see *material*, *n*] The assemblage or totality of things used or needed in carrying on any complex business or operation, in distinction from the *personnel*, or body of persons, employed in the same applied more especially to military supplies and equipments, as arms, ammunition, baggage, provisions, horses, wagons, etc

materies (mā-tē'ri-ēz), *n* [L see *matter*] In some technical uses, material a material, a matter or substance composing or peculiar to anything, or considered as an operative or causative agency as, *materies* morbi (something regarded as the immediate cause of disease)

materiousness (mā-tē'ri-us), *a* [< LL. *materiosus*, full of matter (wood?), < L *materia*, matter, wood see *matter*] Same as *material Milton*

maternal (mā-ter'nal), *a* [= F *maternel* = Pr Sp Pg *maternal* = It *materale*, < L *maternus*, of a mother, < *mater*, mother see *mater*[2], *mother*[1]] 1 Pertaining to a mother or to motherhood, proper to a mother, motherly as, *maternal* love or authority, *maternal* pains or cares

Ah, that *maternal* smile!
Cowper, On the Receipt of my Mother's Picture

We smile to see our little ones at play
So grave, so thoughtful, with *maternal* care
Nursing the wisps of rags they call their babes
O W Holmes, Idols

2 Relating to or consisting of mothers; concerning the state of motherhood as, a *maternal* association, a *maternal* hospital —3 Coming from or through a mother, imparted by or connected with one's mother as, a *maternal* inheritance, a *maternal* uncle or cousin, *maternal* ancestry or lineage

That part alone of gross *maternal* frame
Fire shall devour *Gay*, Apotheosis of Hercules

Clive is driven over the downs to Brighton, to his *maternal* aunt there *Thackeray*, Newcomes, v

4 Of or pertaining to the country of one's birth; native, vernacular

English speaking missionaries have planted their *maternal* dialect at scores of important points *G P Marsh*, Lects on Eng Lang , i

To be *matriculate* with ladies of estate
Skelton, Garland of Laurell

II. *n* One who has been admitted to membership of a body, as a college or university, by enrolment in its register.

Suffer me in the name of the *matriculates* of that famous university to ask them some plain questions *Arbuthnot*

matriculation (mā-trik-ū-lā'shon), *n* [= Sp *matriculacion*, < ML **matriculatio(n-)*, < *matriculare*, register: see *matriculate*.] The act of matriculating, or of admitting to membership by enrolment; the state of being matriculated.

A scholar absent from the university for five years is struck out of the *matriculation* book *Ayliffe*, Parergon

matriculator (mā-trik'ū-lā-tor), *n.* [< ML **matriculator*, < *matriculare*, register: see *matriculate*.] One who matriculates

At Oxford the *matriculator* subscribed the Thirty-nine Articles, and also swore to observe three articles of the 36th Canon *Quarterly Rev*, CXLVI 209

matriheritage (mat-ri-her'i-tāj), *n.* [< L *mater* (*matr-*), mother, + E *heritage*.] Inheritance in the female line of descent

The two systems of *matriheritage* and polyandry
Pop Sci Mo, XXX 141

matriherital (mat-ri-her'i-tal), *a* [< L *mater* (*matr-*), mother, + *herit(age)* + *-al*.] Of or pertaining to matriheritage, or inheritance in the female line.

An excellent specimen of the matriarchal or *matriherital* system fully carried out under recognized and well defined law among a civilized people *Pop Sci Mo*, XXX 141

matrimoignet, *n* A Middle English form of *matrimony* *Chaucer*.

matrimonial (mat-ri-mō'ni-al), *a* [= F. *matrimonial* = Sp Pg *matrimonial* = It *matrimoniale*, < LL *matrimonialis*, pertaining to marriage, < L *matrimonium*, marriage: see *matrimony*.] 1 Of or pertaining to matrimony, connubial, nuptial as, *matrimonial* rights or duties.

Cherish thy hasten'd widowhood with the gold
Of *matrimonial* treason! *Milton*, S A, l 959

The main article in *matrimonial* alliances
Paley, Moral Philos, III 8.

2 Derived from marriage

If he [Henry VII] relied upon that title he could be but a king at courtesy, and have rather a *matrimonial* than a regal power *Bacon*, Hist Hen VII

Crown matrimonial, in *Scot law* the right to a share in the sovereignty conferred on the husband of a reigning queen the extent of this concession appears never to have been precisely defined, but the common belief is that it implied a complete partnership in the crown, with remainder to the survivor and his or her heirs It was granted, with important reservations, on the occasion of the first marriage of Mary Queen of Scots, and was explicitly refused to her second husband—**Matrimonial cause**, in *law*, a suit for the redress of injuries respecting the rights of marriage as an action for divorce or the like In England such causes were formerly a branch of the ecclesiastical jurisdiction—**Matrimonial Causes Acts**, a series of English statutes relating to causes arising from the matrimonial relation (*a*) A statute of 1857 (20 and 21 Vict., c 85) which established the Court for Divorce and Matrimonial Causes, having exclusive jurisdiction over divorce and matrimonial matters, and settled the law relating thereto (*b*) A statute of 1878 (41 and 42 Vict., c 19) relating to divorce and judicial separation (*c*) A statute of 1884 (47 and 48 Vict., c 68) which substitutes for the restitution of conjugal rights formerly enforced periodical payments of money by the husband authorizes the court to order a settlement of a wife's property for the benefit of the husband and children, and relates to desertion and custody of children—**Syn 1** *Matrimonial*, *Connubial*, *Nuptial*, *Conjugal*, *Hymeneal*, *Marital* *Matrimonial*, *connubial*, and *conjugal*, like *matrimony*, relate to the married state *Nuptial* and *hymeneal* are more suggestive of the act of marriage or that which is in close connection with it *Connubial* suggests the fact that marriage is the union of persons of opposite sexes *Conjugal* primarily means belonging to a spouse, and secondarily belonging to the state of spouses—that is matrimony as, *conjugal* felicity, responsibility, obligations, rights *Marital* means, specifically, belonging to a husband, but is also used with reference to the married state in general

matrimonially (mat-ri-mō'ni-al-i), *adv* As regards matrimony; in matrimony, according to the manner or laws of marriage

He is so *matrimonially* wedded unto his church that he cannot quit the same *Ayliffe*, Parergon

matrimoniousf (mat-ri-mō'ni-us), *a* [< *matrimony* + *-ous*.] Relating to matrimony, matrimonial

Foreseeing the miserable work that man's ignorance and pusillanimity would make in this *matrimonious* business
Milton, Tetrachordon

matrimony (mat'ri-mō-ni), *n* [< ME. *matrimonye*, also *matrimoyne*, *matrimoigne*, < OF *matrimonne*, *matrimoine* = Pr *matrimoni* = Sp Pg It. *matrimonio*, < L *matrimonium*, marriage, wedlock, in pl wives, < *mater* (*matri-*), mother (see *mater*², *mother*¹), + term *-monium* see *-mony*.] 1 The relation of husband and wife, with especial reference to what concerns the

matrimony-vine (mat'rĭ-mō-nĭ-vīn), *n* A garden-plant, *Lycum vulgare*, also, the closely allied *L. barbarum* The latter is said to be used in medicine in Japan

matrimoynet, *n* A Middle English form of *matrimony*

matrix (mā'trĭks or mat'rĭks), *n* ; pl *matrices* (mat'rĭ-sēz, L mā-trī'sēz) [< L *matrix* (*matric-*), a breeding animal, the parent stem (of plants), LL the womb, a source, origin, cause, a public register or roll, < *mater* (= Gr *μήτηρ*), mother see *mater*[2], *mother*[1.]] **1.** The womb, the uterus

All that openeth the *matrix* is mine Ex xxxiv 19

Hence—**2** That which encloses anything, or gives origin to anything, like a womb (*a*) A mold which gives form to material forced into it in a solid condition, or poured into it in a fluid state and allowed to harden before removal (*b*) In *engraving*, the intaglio formed in steel by engraving, or by driving into the metal a tool called a *hub*, upon which the design of the coin has been produced in relief The steel matrix is subsequently hardened and tempered From this matrix punches for making dies are obtained by driving into it pieces of soft steel, which, after taking form from the matrix, are in their turn hardened and tempered The finished punches used in coining thus alternately take the design in cameo and intaglio, and in order as follows (1) cameo, the hub, (2) intaglio, the matrix, (3) cameo, the punch (4) intaglio, the die Lastly the coin is struck in cameo by the die (*c*) The bottom die in any stamping or drop press (*d*) In *type-founding*, an attachment to the mold in which the face of a type is cast the mold proper making the body for that face Every letter or character has its special matrix but all the matrices of the same font are fitted to one mold The matrix is a small flat bar of copper that has received the deeply sunken impress of the punch, or model letter cut on a tool of steel As left by the punch it is known as a *drive*, or *strike* or *engraved matrix* When finished and fitted to the mold it is a *justified matrix* Matrices are also made by the electrotyping process (*e*) In *stereotyping*, the mold of plaster, papier mâché, or other composition which is taken from types as arranged in the form, and into which the melted alloy called *stereotypers metal* is poured in casting stereotype plates (*f*) In *mineral* and *geol*, the rock in which any accidental crystal, mineral, or fossil is embedded (*g*) In *mining*, same as *gangue*, 1 [Rare and incorrect] (*h*) In *odontog*, the formative part of a mammalian tooth, consisting of a pulp and capsule The former is converted into dentine, the latter into cement (*i*) In *anat*, the intercellular substance as, the *matrix* of cartilage, containing capsules the animal *matrix* of bone impregnated with mineral salts, etc (*j*) In *bot* (1) that upon which a plant is fixed or from which it grows as, lichens which grow upon a *matrix* of rock (2) Intercellular substance as, the filaments of nostoc lie in a gelatinous *matrix*

3. In *math*, a rectangular array of quantities, usually square so called because considered as a mold or set of compartments into which a certain number of quantities can be put, the leaving of one of the spaces unoccupied being in effect to put zero there The matrix is consequently a multiple quantity having as many dimensions as it has spaces The numbers in the spaces are called the *constituents of the matrix* The following definitions relate to square matrices The vertical lines of numbers are called the *columns* the horizontal ones the *rows* The diagonal running from the upper left hand to the lower right hand corner is called the *principal diagonal* Constituents symmetrically situated with reference to the principal diagonal are said to be *conjugate* A matrix in which every constituent is equal to its conjugate is said to be *symmetrical*, if all the constituents along each diagonal band transverse to the principal diagonal are equal, the matrix is said to be *persymmetrical* The addition of matrices is so understood that the sum of two like matrices is a matrix every constituent of which is equal to the sum of the corresponding constituents of the parts The multiplication of two like square matrices is so understood that the product is a matrix whose construction is of the kind shown in the following example

$$\begin{Vmatrix} a, & b \\ c, & d \end{Vmatrix} \times \begin{Vmatrix} A, & B \\ C, & D \end{Vmatrix} = \begin{Vmatrix} aA + bC, & aB + bD \\ cA + dC, & cB + dD \end{Vmatrix}$$

Inverse matrix to a given matrix, the matrix of transformation from the set of variables to which the direct matrix transforms to the set from which it transforms. Also called *reciprocal matrix* —**Invertebrate matrix,** a square matrix whose principal diagonal contains zeros — **Latent roots of a matrix.** See *latent* — **Matrix of the type $q \times p$,** a matrix with p columns and q rows The types of two matrices are said to be complementary when $p - p^1 = q + q^1$ — **Matrix-rolling machine,** in stereotyping by the paper process, a machine sometimes used, in place of the beating table and brush, to force the type into the prepared paper —**Nuclear matrix.** See *karyoplasm*.—**Reciprocal matrix.** See *inverse matrix*

matron (mā'tron or mat'ron), *n.* [< F. *matrone* = Sp Pg It. *matrona*, < L *matrona*, a married woman, wife, matron, < *mater*, mother. see *mater*[2], *mother*[1]] **1** A married woman, especially an elderly married woman, or a woman old enough to be the mother of a family, whether actually so or not; a woman possessing the gravity suitable to a mother

II. *n*, pl. *maxillaries* (-riz) A jaw-bone, a maxillary bone, or maxilla In vertebrates at least three maxillaries are commonly distinguished by qualifying terms These are (*a*) the superior maxillary, or supramaxillary (*b*) the premaxillary, or intermaxillary and (*c*) the inferior maxillary, or inframaxillary The last of these is the lower jaw bone, the other two belong to the upper jaw All these are paired but each may fuse with its fellow, and the two maxillaries of each half of the upper jaw often coalesce When used absolutely, the term means the supramaxillary

naxilliferous (mak-sa-lif'ō-rus), *a* [< L *maxilla*, jaw, + *ferre* = E *bear*[1]] Provided with maxillæ as, the *maxilliferous* mouth of a crustacean or beetle

naxilliform (mak-sil'i-fôrm), *a* [< L *maxilla*, jaw, + *forma*, form] Having the form or morphological character of a maxilla as, a *maxilliform* limb

naxilliped, maxillipede (mak-sil'i-ped, -pēd), *n* [< L *maxilla*, jaw, + *pes* (*ped-*) = E *foot*] In *Crustacea*, a foot-jaw or gnathopodite, one of the several limbs which are so modified as to partake of the characters of both jaw and foot, serving for the purpose of both mastication and locomotion They are the posterior three of the gnathites or appendages of the mouth the remainder being two pairs of maxillæ and one pair of mandibles See cuts under *Podophthalmia* and *Cryptophialus*

naxillipedary (mak-sil-i-ped'a-ri), *a* [< *maxilliped* + *-ary*] Of or pertaining to a maxilliped, having foot-jaws

Hence results a sudden widening of the second maxillary, as compared with the first *maxillipedary* somite
Huxley, Anat Invert, p 270

naxillojugal (mak-sil-ō-jō'gal), *a* [< *maxilla* + *jugum* + *-al*] Common to the superior maxillary and to the malar (or jugal) bone, malarimaxillary

naxillomandibular (mak-sil'ō-man-dib'ū-lär), *a* [< *maxilla* + *mandibula* + *-ar*[3]] Pertaining to both jaws — that is, to the maxilla and to the mandible

naxillopalatine (mak-sil-ō-pal'a-tin), *a*. and *n* [< *maxilla* + *palate* + *-ine*[1]] **I** *a* In *anat*, of or pertaining to the supramaxillary and palatine bones

II. *n* In *ornith*, a part of the superior maxillary bone which projects inward, forming a palatal process, which may or may not meet its fellow in the midline of the bony palate. Its character and connections are various, and much used in the classification of birds. See cuts under *ægithognathous*, *desmognathous*, and *dromæognathous*.

maxillopharyngeal (mak-sil'ō-fā-rin'jē-al), *a*. [< *maxilla* + *pharynx* (*pharyng-*) + *-e-al*] Pertaining to the lower jaw-bone or inframaxillary and to the pharynx.—**Maxillopharyngeal space,** in *surgical anat*, a triangular area between the side of the pharynx and the ramus of the lower jaw bone, containing important vessels and nerves, as the internal carotid artery, the internal jugular vein, and the glossopharyngeal, pneumogastric, spinal accessory, and hypoglossal nerves.

maxillopremaxillary (mak-sil'ō-prē-mak'si-lā-ri), *a* and *n* [< *maxilla* + *premaxilla* + *-ary*] **I.** *a* Common to the maxilla and to the premaxilla as, "the *maxillopremaxillary* part of the skull," *Huxley*

II. *n*. The supramaxillary and premaxillary bones taken together, when, as in many of the higher vertebrates, they fuse into a single bone

maxilloturbinal (mak-sil-ō-tėr'bi-nal), *a* and *n* [< *maxilla* + *turbine* + *-al*] **I.** *a* Whorled or scrolled, and articulated with the supramaxillary bone, as is the inferior turbinated bone

II. *n* The inferior turbinated bone In man it is a light spongy bone curved upon itself, articulating with the supramaxillary, palatal lacrymal, and ethmoid bones, and projecting into the nasal fossæ, serving to separate the middle from the lower of these fossæ The name is correlated with *ethmoturbinal* and *sphenoturbinal* See cuts under *nasal* and *craniofacial*

With what measure ye mete, it shall be *measured* to you again Mat vii 2.

Of Eight great Hours, Time *measures out* the Sands,
And Europe's Fate in doubtful Balance stands.
Prior, Letter to Boileau Despreaux, 1704

What thou seest is that portion of eternity called time, *measured out* by the sun *Addison*, Spectator, No 159

To measure one's length, to fall or be thrown down at full length, lie or be laid prostrate

If you will *measure your* lubber's *length* again, tarry but away! *Shak*, Lear, i 4 100

To measure strength, to ascertain by trial which of two parties is the stronger, specifically, to engage in a contest.—**To measure swords**, to fight with swords.

Miss Tattle, who was by, affirmed that Sir H Roquet and Tom Saunter were to *measure swords* on a similar provocation *Sheridan*, School for Scandal, i 1

II. *intrans.* **1.** To take a measurement or measurements.—**2** To be of a (specified) measure, give a specified result on being compared with a standard as, a board *measures* ten feet —**Measuring cast** See *cast*

measured (mezh′ūrd), *p. a* **1.** Definitely ascertained or determined by measurement or rule, set off or laid down by measurement, adjusted or proportioned by rule

A positive and *measured* truth
Bacon, Advancement of Learning, i.

The rest, no portion left
That may disgrace his art, or disappoint
Large expectation, he disposes neat
At *measured* distances *Cowper*, Task, iii. 24

2 Characterized by uniformity of movement or rhythm, rhythmical; stately, formal, deliberate as, to walk with *measured* tread

His voice was clear, but not agreeable, his enunciation *measured* and precise *Prescott*, Ferd and Isa., ii 25

3 Limited or restricted, within bounds, moderate as, to speak in no *measured* terms.—**Measured music.** See *mensurable*, 2.

measuredly (mezh′ūrd-li), *adv* Deliberately [Rare]

Measuredly came the words from her lips
R Broughton, Cometh up as a Flower, xii

measureless (mezh′ūr-les), *a* [< *measure* + *-less*] Without measure, unlimited; immeasurable

What, sir, not yet at rest? The king's a bed and shut up
In *measureless* content *Shak*, Macbeth, ii 1 17

measurelessness (mezh′ūr-les-nes), *n* The state or quality of being unmeasured, or incapable of being measured, immoderateness. *George Eliot*

measurely† (mezh′ūr-li), *adv* [< *measure* + *-ly*²] Moderately

Yet *measurely* feasting, with neighbours among,
Shall make thee beloved, and live the more long
Tusser, Good Husbandly Lessons, x.

measurement (mezh′ūr-ment), *n* [< *measure* + *-ment*.] **1.** The act of measuring, mensuration

The exact length of any aliquot part of it [the circle], such as 1°, is not beyond the limits of very exact *measurement* *Herschel*, Outlines of Astron (1858), § 209

All must determine the distance of the moon as well as that of the sun to be able to complete our map on a known scale of *measurement*
Newcomb and Holden, Astronomy, p 216.

2. A system of measuring or measures as, builders' *measurement* —**3** An ascertained dimension; the length, breadth, thickness, depth, extent, quantity, capacity, etc., of a thing as determined or determinable by measuring; size, bulk, area, or contents.—**Builders' measurement**, a method of computing the tonnage of merchant vessels in use among ship builders Its results are nearly double the legal or registered tonnage —**Measurement goods**, light goods which are charged for carriage by the bulk of the packages, as distinguished from heavy goods, which are charged by weight —**New measurement**, a more accurate method than that formerly in use of arriving at the cubical capacity of a ship available for stowing cargo The model of the ship affects the comparison of tonnage with the old measurement, it varying very largely The new measurement superseded the old by act of Congress about 1884 See *tonnage* —**Units of measurement** See *unit*

measure-moth (mezh′ūr-môth), *n* A geometrid or looper. See *looper*, 2

measurer (mezh′ūr-ėr), *n* One who or that which measures

The world's bright eye, Time's *measurer*, begun
Through watery Capricorn his course to run
Howell, Poem Royal to His Majesty, Jan, 1641

Specifically —(*a*) One whose occupation or duty it is to measure land commodities in market, etc (*b*) One who measures work on a building as a basis for contractors' prices (*c*) formerly, an officer in the city of London who measured woolen cloths, coals, etc Also called a *meter* See *alnager* (*d*) An instrument or apparatus used in measuring (*e*) In *entom.*, a measuring worm

measuring-chain (mezh′ūr-ing-chān), *n* The surveyors' chain, containing 100 links of 7.92 inches each (Gunter's chain), or 100 links of 1 foot each See *chain* and *link*

measuring-faucet (mezh′ūr-ing-fâ′set), *n.* A faucet, or a contrivance performing the func-

tions of a faucet, designed to measure the amount of a liquid passing through it Such faucets are used in delivering liquids in bulk, in putting them up in cans, etc

measuring-funnel (mezh'ūr-ing-fun″el), *n.* A funnel with a valve to close the nozle, fitted with a graduated scale indicating the quantity of liquid contained in it

measuring-glass (mezh'ūr-ing-glȧs), *n* A graduated glass vessel used by chemists, pharmacists, and others for measuring fluids

measuring-line (mezh'ūr-ing-līn), *n* A line used for measuring lengths

measuring-machine (mezh'ūr-ing-ma-shēn″), *n* A device for the exact determination of length or end-measurement Such instruments usually consist of a metallic bed piece with a head stock at each end, of sliding bars which in shape are true rectangular parallelopipeds, and of a combination of two or more accurate micrometer screws, attached to the head stocks, and driven by graduated wheels so as to advance or retract the bars, which slide in a groove between the head stocks.

measuring-pump (mezh'ūr-ing-pump), *n* A pump used for measuring liquids Each stroke delivers the same volume, and the strokes are counted, or the pump-rod is connected with registering mechanism adjusted to indicate the number of strokes or the total volume discharged

measuring-tape (mezh'ūr-ing-tāp), *n.* A tape-measure or tape-line

measuring-wheel (mezh'ūr-ing-hwēl), *n* A small wheel of known circumference, fitted by its axis to a handle, used to measure the circumference of round bodies, as that of a carriage-wheel when the tire is to be fitted, a circumferentor or tire-measurer

measuring-worm (mezh'ūr-ing-wėrm), *n* The larva of any geometrid moth, a looper, so called from its mode of progression same as *geometer*, 3 See cut under *Cidaria*

neat[1] (nēt), *n* [< ME *mete*, < AS *mete* = OS *meti*, *mat* = OFries *mete*, *meti*, *met* = MD *mete*, D *met* = MLG *met*, LG *met*, *mett* = OHG MHG *maz*, G. *mass*, in comp *massleid*, aversion to food, = Icel *matr*, also *mata* = Sw *mat* = Dan *mad* = Goth *mats*, food, root uncertain, perhaps orig 'a portion dealt out,' < AS *metan* (pret *mæt*), etc , measure see *mete*[1] Otherwise, perhaps cognate with L *mandere*, chew see *manducate*, *mange*[1]] 1 Food in general, nourishment of any kind [Obsolete, archaic, or local]

I. *a* **1** Same as *mechanical*· now used chiefly in the phrase *the mechanic arts*

> Thrust some *mechanic* cause into his [God's] place,
> Or bind in matter, or diffuse in space.
> *Pope*, Dunciad, iv 471.

But he (Pope) (his musical finesse was such,
So nice his ear, so delicate his touch)
Made poetry a mere *mechanic* art
Cowper, Table Talk, l. 654

Must sleepy bards the flattering dream prolong,
Mechanic echoes of the Mantuan song?
Crabbe, Works, I 4

2† Belonging to or characteristic of the class of mechanics, common, vulgar, mean

The poor *mechanic* porters crowding in
Their heavy burdens at his narrow gate
Shak, Hen. V, i. 2 200

3 Supporting the atomistic philosophy

These *mechanic* philosophers being no way able to give an account thereof [of the formation and organization of the bodies of animals] from the necessary motion of matter *Ray*, Works of Creation, i

II. *n* **1†.** Mechanic art, mechanics

Of hem that ben artificers,
Whiche vsen craftes and misters,
Whose arte is cleped *mechanike*
Gower, Conf Amant, vii

2† Mechanism; structure

The fault being in the very frame and *mechanic* of the part *Bacon*, Advancement of Learning, ii 194

3 A maker of machines or machinery, hence, any skilled worker with tools, one who has learned a trade, a workman whose occupation consists in the systematic manipulation and constructive shaping or application of materials, an artificer, artisan, or craftsman To many persons whose business is partly mechanical the term *mechanic* is inapplicable, as farmers, surgeons, and artists It implies special training, and is therefore inapplicable to unskilled laborers, though they may be engaged in constructive work

An art quite lost with our *mechanicks*, a work not to be made out, but like the walls of Thebes, and such an artificer as Amphion *Sir T Browne*, Vulg Err, vii 18

Some plain *mechanic*, who, without pretence
To birth or wit, nor gives nor takes offence
Cowper, Retirement, l 449

4 One who works mechanically, one who follows routine or rule in an occupation requiring careful thought or study used opprobriously as, a mere literary *mechanic*, the picture shows the artist to be only a *mechanic* — **Mechanics' institute**, an institution for the instruction and recreation of artisans and others of similar grade, by means of lectures, a library, museum, courses of lessons, etc — **Mechanic's lien** See *lien*²

mechanical (mē-kan'ı-kal), *a* and *n* [< *mechanic* + *-al*] **I.** *a* **1** Pertaining to or exhibiting constructive power, or pertaining to mechanism or machinery, also, dependent upon the use of mechanism, of the nature or character of a machine or machinery as, *mechanical* inventions or contrivances, to do something by *mechanical* means

Arts *mechanical* contract brotherhoods in commonalties *Bacon*, Advancement of Learning, ii 116

2 Machine-like, acting or actuated by or as if by machinery, or by fixed routine, lacking spontaneity, spirit, individuality, etc, as applied to actions, automatic, instinctive, unconscious, etc as, the *mechanical* action of the heart, a *mechanical* musician

Any man with eyes and hands may be taught to take a likeness The process, up to a certain point, is merely *mechanical* *Macaulay*, History

I call that part of mental and bodily life *mechanical* which is independent of our volition
O W Holmes, Old Vol of Life, p 261

Human action is either *mechanical* or intelligent, either conventional or rational
J R Seeley, Nat Religion, p 166

3 Having the characteristics of that which is produced by machinery or is artificially contrived, artificial; not spontaneous; not genuine or of natural growth; lacking life or spirit, humdrum

None of these men of *mechanical* courage have ever made any great figure in the profession of arms
Steele Spectator, No 152.

I always thought fit to keep up some *mechanical* forms of good breeding, without which freedom ever destroys friendship *Goldsmith*, Vicar, iv

It is the limitation to rigid instruments already prepared, and to an external connection between them, that gives *mechanical* work that uncanny appearance which causes us to feel most repugnance to a comparison of it with life *Lotze*, Microcosmus (trans), I 72

He would not tolerate a *mechanical* lesson, and took delight in puzzling his pupils and breaking up all routine business by startling and unexpected questions and assertions *H B Stowe*, Oldtown, p 425

4 Of or pertaining to the material forces of nature acting on inanimate bodies or masses; specifically, pertaining to the principles or laws of mechanics. as, the *mechanical* effects of frost; the *mechanical* powers

The tumult in the parts of solid bodies when they are compressed, which is the cause of all flight of bodies through the air, and of other *mechanical* motions, is not seen at all. *Bacon*, Nat Hist., § 98.

5 Effected by material force or forces; consisting in the play of material forces as, *mechanical* pressure.

I doubt, however, if a view which recognizes only a *mechanical* course of Nature can logically do anything with such ideas as those of reverence, and so forth, but reckon them among the morbid productions of imagination to which nothing real corresponds, and of which it has already learnt to reject so many
Lotze, Microcosmus (trans), II 109

6 Exalting the material forces of the universe above the spiritual, subordinating the spiritual to the material, materialistic. as, the *mechanical* philosophy (specifically, atomism), a *mechanical* view of life — **7** Belonging to or characteristic of mechanics or artisans, or their class; mechanic-like, having the character or status of an artisan; hence (chiefly in old writings), mean, low, or vulgar

Hang him, *mechanical* salt butter rogue
Shak, M W of W, ii 2. 290.

The lower part [containeth] the houses of artificers and *mechanical* men that keepe their shops there
Coryat, Crudities, I 217

8 Engaged in operating machines or machinery, or in superintending their operation as, a *mechanical* engineer — **9** Exhibiting or indicating skill in contrivance, invention, or the use of tools and machines as, a *mechanical* genius; a *mechanical* turn of mind — **10** Effected or controlled by physical forces that are not chemical as, a *mechanical* mixture (that is, one in which the several ingredients still retain their identity, and are held together by no special force whether of cohesion or chemical attraction), *mechanical* decomposition — **Mechanical construction of a curve**, a construction performed by means of a mechanical contrivance — **Mechanical curve** See *curve* — **Mechanical drawing** Same as *geometrical drawing* (which see, under *drawing*) — **Mechanical engineering, finger, firing** See the nouns — **Mechanical equivalent of heat** See *equivalent* — **Mechanical impermeator, involution, leech** See the nouns — **Mechanical lamp** Same as *carcel lamp* — **Mechanical line†** See *line*² — **Mechanical manœuvers** (*milit.*), the mounting, dismounting, and transportation of cannon and gun-carriages — **Mechanical mixture** See *chemical combination* under *chemical* — **Mechanical philosophy**, physics considered as affording a basis for philosophy or the explanation of the universe — **Mechanical pigeon** See *pigeon* — **Mechanical powers**, the simple machines See *machine*, 2 — **Mechanical solution of a problem**, a solution by any art or contrivance not strictly geometrical, as by means of the ruler and compasses or other instruments — **Mechanical stage**, in *micros* See *microscope* - **Mechanical telegraph**, an automatic telegraph in which a message represented by a series or succession of dots on a paper ribbon is passed under a key or stylus, the circuit being made or broken by the simple mechanical passing through of the ribbon — **Mechanical theory** in *med*, an ancient theory that all diseases were principally caused by lentor, or morbid viscidity of the blood — **Mechanical work**, work consisting in the moving of a body through space, generally in opposition to gravity — **Rocks of mechanical origin**, in *geol*, rocks composed of sand, pebbles, fragments, and the like a term used by some (not aptly) as the equivalent of *clastic* or *fragmental* = **Syn.** *Mechanical, Physical Chemical* These epithets are thus distinguished Those changes endured by bodies which concern their masses without altering their constitution — *i e* losing their identity — such as changes of place, of figure, etc, are *mechanical*, those which concern the position of the molecules — *i e* which change the molecular state of bodies, as when iron is melted — are *physical*, those which concern the number or arrangement of atoms within the molecule and cause a change of constitution are *chemical*, as when iron rusts — *i e* oxidizes — or gunpowder explodes

II.† *n* A mechanic

A crew of patches, rude *mechanicals*,
That work for bread upon Athenian stalls
Shak, M N D, III ii 9

mechanicalize (mē-kan'ı-kal-īz), *v t*; pret. and pp *mechanicalized*, ppr *mechanicalizing* [Formerly *mechanicallize*, < *mechanical* + *-ize*.] To render mechanical; reduce to a mechanical level or status *Cotgrave* [Rare.]

mechanically (mē-kan'ı-kal-ı), *adv* **1** In agreement with mechanical principles, according to the laws of mechanism or good workmanship as, the machine is *mechanically* perfect

The chick with all its parts is not a *mechanically* contrived engine *Boyle*, Works, III 68

2. By mechanical force or means, by physical power: as, water *mechanically* raised — **3** In a manner resembling a machine; without care or reflection; by the mere force of habit; automatically, not spontaneously. as, to play on an instrument *mechanically*

Guards, *mechanically* formed in ranks
Cowper, Table-Talk, l 136

4 Without loss of the constitution or identity of elements, in a manner involving change of place or figure without change of structure or constitution; without the aid of chemical attraction: as, elements *mechanically* united in air; a body *mechanically* decomposed.

mechanicalness (mē-kan'ı-kal-nes), *n*. The state of being mechanical, or governed by or as if by mechanism

mechanician (mek-a-nish'an), *n*. [= F *mécanicien*, as *mechanic* + *-ian*] **1** One who is skilled in mechanics or in machinery, one who is versed in the principles of machines or of mechanical construction

Even a *mechanician*, if he has never looked into a piano will, if shown a damper, be unable to conceive its function or relative value *H Spencer*, Data of Ethics, § 1

2 A mechanic, an artisan

A *mechanician* or mechanical workman is he whose skil is without knowledge of mathematicall demonstration *Dee*, Preface to Euclid (1570).

mechanicochemical (mē-kan'ı-kō-kem'ı-kal), *a* [< *mechanic* + *chemical*] Pertaining to or dependent on both mechanics and chemistry applied specifically to the sciences of galvanism, electricity, and magnetism, which exhibit phenomena that require for their explanation an application of the laws of mechanics and chemistry

mechanics (mē-kan'ıks), *n* [Pl of *mechanic* see *-ics*.] **1** The theory of machines This is the old meaning of the word, especially before the development of the modern doctrine of force

I do not here take the term *Mechanicks* in that stricter and more proper sense wherein it is wont to be taken when it is used only to signify the doctrine about the moving powers (as the beam, the levers, the screws, and the wedge), and of framing engines to multiply force, but I here understand the word *Mechanicks* in a larger sense, for those disciplines that consist of the applications of the pure mathematicks to produce or modify motion in inferior bodies *Boyle*, Works, III 4%.

2 The mathematical doctrine of the motions and tendencies to motion of particles and systems under the influence of forces and constraints, in a narrower sense, this doctrine as applied to systems of rigid bodies Mechanics is now commonly divided into *kinematics* and *dynamics* and the latter into *statics* and *kinetics* Mechanics treated by means of the infinitesimal calculus is called *analytical mechanics* The fundamental principles of mechanics are stated under *energy* and *force*, but the science is characterized by the great number of derived principles made use of See *principle*

Newton defined the laws, rules, or observed order of the phenomena of motion which come under our daily observation with greater precision than had been before attained and, by following out with marvellous power and subtlety the mathematical consequences of these rules, he almost created the modern science of pure *mechanics*.
Huxley, in Nineteenth Century, XXI 489

When pure, it forms small white crystals Its aqueous solution shows a deep-red color with the persalts of iron, which therefore are good tests for it It is a tribasic acid, but most of its salts contain but two equivalents of the base

meconidia, *n* Plural of *meconidium*.

meconidine (mē-kon'i-din), *n* [< *mecon(ic)* + *-id-* + *-ine*[2].] One of the alkaloids contained in opium

meconidium (mek-ō-nid'i-um), *n* , pl *meconidia* (-ä) [NL , < Gr. *μήκων*, part of the intestines of testaceous animals, also the ink-bag of a cuttlefish, lit poppy, poppy-seed (see *meconic*), + dim. *-ιδιον*] The fixed generative medusoid of some calyptoblastic hydroids, as of the genus *Gonothyræa*, in which the sexual elements are matured and from which the embryos are discharged in the form of ciliated planulas These generative buds or zooids develop upon the gonotheca, several in succession from above downward, retaining their direct communication with the blastostyle, when fully matured they are sacs hanging to the gonotheca by a narrow stalk or peduncle, having an opening or mouth at the far end surrounded by a circlet of tentacles, through which mouth the ova escape, the cavity of the hollow meconidium communicates with that of the blastostyle, and the medusoid after performing its function, decays upon its stem, never becoming detached as a free zooid

meconin (mek'ō-nin), *n* [< *mecon(ic)* + *-in*[2]] A neutral substance ($C_{10}H_{10}O_4$) existing in opium It is white, fusible, and crystalline

meconioid (mē-kō'ni-oid), *a.* [< *meconium* + *-oid*] Resembling meconium

meconiorrhœa (mē-kō'ni-ō-rē'ä), *n.* [NL , < Gr. *μηκώνιον*, poppy-juice, the first feces of infants, + *ῥοία*, a flow, < *ῥεῖν*, flow.] A morbidly increased discharge of meconium.

meconium (mē-kō'ni-um), *n.* [< L *meconium*, < Gr *μηκώνιον*, poppy-juice, the first feces of infants, < *μήκων*, the poppy see *meconic*] 1† Poppy-juice.—2. The feces of a new-born infant.—3. In *entom*, the feces of an adult insect just transformed from the pupa

meconology (mek-ō-nol'ō-ji), *n* [< Gr. *μήκων*, the poppy, opium, + *-λογία*, < *λέγειν*, speak see *-ology*] A treatise on the poppy, or on opium

meconophagism (mek-ō-nof'a-jizm), *n.* [As *meconophag-ist* + *-ism*] Opium-eating; the opium habit

The death of the patient being attributed to causes which are supposed to be disconnected from the *meconophagism*. *Alien. and Neurol*, VII 463

meconophagist (mek-ō-nof'a-jist), *n.* [< Gr *μήκων*, the poppy, opium, + *φαγεῖν*, eat, + *-ist*] An opium-eater, one who has contracted the opium or morphine habit

If they happen to find solace in opium readily, they become *meconophagists* *Alien. and Neurol*, VII 471

Meconopsis (mek-ō-nop'sis), *n.* [NL (Vigier, 1821), < Gr *μήκων*, the poppy, + *ὄψις*, appearance.] A genus of plants of the natural order *Papaveraceæ*, the poppy family, and the tribe *Eupapavereæ*, characterized by a capsule which splits open for a short distance, and by a club-shaped style bearing from four to six radiate-deflexed stigma-lobes They are herbs, having a yellow juice entire or lobed leaves, and showy yellow, purple, or blue flowers, which droop in the bud, and are borne on long peduncles. Nine species are known, natives of western Europe, the central part of Asia, and western North America *M cambrica*, the Welsh poppy, a plant of rocky and woody places in parts of western Europe, has bright-green hairy pinnate leaves, slender stems, and large terminal sulphur yellow flowers This and several other species are cultivated for ornament.

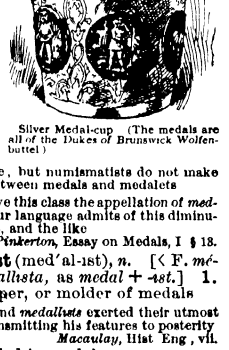
Mecoptera (mē-kop'te-rä), *n pl.* [NL , < Gr *μῆκος*, length, + *πτερόν*, a wing, = E *feather*] In some systems, an order of neuropterous insects corresponding to the *Panorpidæ* or scorpion-flies, proposed for uniformity of nomenclature instead of Brauer's term *Panorpatæ* Also, incorrectly, *Mecaptera*. *Packard*, 1888.

med. An abbreviation of *medicine*, *medical*

Meda (mē'dä), *n.* [NL. (Girard, 1856); a made word.] A genus of cyprinoid fishes, typical of the subfamily *Medinæ*, containing such as *M. fulgida* of the Gila river in Arizona.

medal (med'al), *n.* [< OF. *medaille*, F. *médaille* (> D. G. *medaille* = Dan. *medalje* = Sw. *medalj*) = Sp. *medalla* = Pg. *medalha* = It. *medaglia*, ML reflex *medallia*, *medalia*, *medalea*, *medalla*, *medale* (> OHG. *medilla*, *medila*, MHG. *medele*), a medal, < LL. as if **metallea*, < L *metallum*, metal: see *metal*.] A piece of metal, usually circular in form, bearing devices (types) and inscriptions, struck or cast to commemorate a person, an institution, or an event, and distinguished from a coin by not being intended to serve as a medium of exchange. The word is also sometimes used to designate coins, particularly ancient coins in the precious metals, or fine medieval or Renaissance coins, in collections. Some of the Greek and Roman coin-types are commemorative, and the Roman medallions were of a quasi medallic character Strictly speaking, however, the medal is a creation of modern times. The earliest, and in point of portraiture the finest, medals were produced in Italy about the middle of the fifteenth century by Vittore Pisano of Verona. Fine medals were also executed in Italy, Germany, and France during the sixteenth century English medals begin practically with the reign of Henry VIII The earliest specimens are cast, but in the reign of James I the process of striking began to be employed Thomas Rawlins, Thomas Simon, and Abraham Simon (seventeenth century) are the principal medalists who were natives of England, but some of the best English medals were the productions of foreign artists, as Trezzo (time of Philip and Mary), Simon Passe (James I), N Briot (Charles I), the Roettier family (Charles II), and J Croker (Anne)

An antique *medal*, half consumed with rust *Boyle*, Works, V 545



Italian and French writers of the fifteenth and sixteenth centuries use *medaglia* and *médailles* to signify coins which, being no longer in circulation, were preserved in the cabinets of collectors as curiosities Even in the last century our own word *medal* was so employed The *medals* of the Roman Emperors to which Gibbon often alludes in his notes to the "Decline and Fall" are, of course, what are now known as coins, and Addison's "Dialogue upon the Usefulness of *Medals*" is, for the most part, a treatise on Roman imperial coins *W Wroth*, in Coins and Medals (1885), p 236.

medal (med'al), *v. t* ; pret. and pp *medaled* or *medalled*, ppr *medaling* or *medalling* [< *medal*, *n*] To decorate with a medal; confer a medal upon; present with a medal as a mark of honor [Rare]

Irving went home, *medalled* by the king, diplomatized by the university, crowned, and honoured, and admired *Thackeray*, Roundabout Papers, Nil nisi Bonum

medal-cup (med'al-kup), *n.* A drinking-vessel of metal, usually silver, in which coins or medallions are incrusted and form a part of the decoration. Usually these coins are so inset that both sides can be seen, the interior of the cup as well as the exterior being in this way made ornamental In some cases a series of coins of a single sovereign or of a succession of sovereigns is used

Silver Medal-cup (The medals are all of the Dukes of Brunswick Wolfenbuttel)

medalet (med'al-et), *n* [< *medal* + *-et*] Any medal of small size. When not larger than, for example, the English florin or half-crown, or United States half dollar, medals are generally called by this name, but numismatists do not make any rigid distinction between medals and medalets

I shall beg leave to give this class the appellation of *medalets*, as the genius of our language admits of this diminutive in ringlet, bracelet, and the like *Pinkerton*, Essay on Medals, I § 18.

medalist, medallist (med'al-ist), *n.* [< F. *médalliste* = Sp. *medallista*, as *medal* + *-ist.*] 1. An engraver, stamper, or molder of medals

Sculptors, painters, and *medallists* exerted their utmost skill in the work of transmitting his features to posterity *Macaulay*, Hist Eng , vii.

2 One who is skilled in medals.

Nothing could be more Civil and Franc than this Gentleman, whom I believe to be the best *Medalist* in Europe *Luster*, Journey to Paris, p 98.

As a *medalist*, you are not to look upon a cabinet of medals as a treasure of money, but of knowledge *Addison*, Ancient Medals, i.

3. One who has gained a medal as a reward of merit.

I backed my man to be not only Senior Classic, but First Chancellor's *Medalist*, and to be a *Medalist* at all he must be a Senior Optime in Mathematics *C A Bristed*, English University, p 215.

medallic (mē-dal'ik), *a.* [< *medal* + *-ic.*] Pertaining to, of the character of, or represented on a medal or medals: as, the *medallic* art; a *medallic* coin or portrait.

I have lately seen, says Eugenius, a *medallic* history of the present King of France. *Addison*, Ancient Medals, iii

If it is possible to conceive literature destroyed, and modern cities and their monuments in ruin and decay, *medallic* coins would become the most durable memorials. *Jevons*, Money and Mech of Exchange, p 63.

Medallions [were], in respect of the other coins, the same as modern medals in respect of modern money They were exempted from all commerce, and had no other value but what was set upon them by the fancy of the owner They are supposed to have been struck by emperors for presents to their friends, foreign princes, or ambassadors *Addison*, Ancient Medals, iii

2. Anything resembling the classical medallion. (*a*) A circular or oval disk decorated with figures, as a portrait with legends, and cast in metal Medallions of this sort were common at the epoch of the Renaissance, and are among the most interesting specimens of the sculptures of that time (*b*) In *arch*, a tablet, circular, oval, square, or of any other form, bearing on it objects represented in relief, as figures, heads, animals, flowers, etc, and applied to an exterior or interior wall, a frieze, or other architectural member, a cartouche (*c*) A member in a decorative design resembling a panel, a space reserved for some special work of art, as a landscape, a portrait, etc or merely filled with ornamentation different from the surface around it as, a *medallion* in a carpet, on a painted vase, etc

medallion-carpet (mē-dal'yon-kär"pet), *n* A carpet woven in one piece, with a large central figure, surrounded by a plainer surface, and usually a border

medallioned (mē-dal'yond), *a* [< *medallion* + *-ed*²] Ornamented with a medallion or medallions

medallion-pattern (mē-dal'yon-pat"ėrn), *n* In *decorative art*, a design for the ornamentation of a surface of which a medallion or medallions form an important part

Hallam, Middle Ages

Medieval architecture, the most important branch of medieval art, including a great number of varied styles This architecture embodies a union of the Greek system

Medieval Architecture of the best period — West front of Amiens Cathedral, France, 13th century

of columnar construction with the Roman vaulting and arches, with the consequences flowing logically from the new combination It may be considered as originating

about A. D 300, in the palace of the Emperor Diocletian at Spalato, in which arcades were introduced supported on free standing shafts instead of the Roman piers with engaged columns, and in which the profile of the architrave was continued around the archivolt, which had usurped the architrave's function, and now sprang directly from the capital, abandoning the meaningless Roman interposition between archivolt and column of a small section of a mock entablature Despite local differences, medieval architecture represents a continuous development from the classical Roman to the modifications wrought by the Renaissance At its origin, copying Roman models, it was poor and rude, owing to the lack of skill and of resources in its builders Every succeeding generation sought to perfect the system of vaulted ceilings to which the characteristic forms of this architecture are due The application of the Roman groined vault was extended and brought into new combinations, the pointed arch and vault were evolved, as possessing more stability and elasticity than the old round arched forms, and finally the use of ribs to strengthen and support the vault was elaborated By about 1225 medieval architecture could solve with the utmost economy and artistic excellence any problem that could be presented to masonry construction From about 1250 architects, embarrassed no longer by inherent difficulties, began to lose the simple beauty of their style in unnecessary elaboration of details as in complicated window tracories and in distorted profiles of moldings, and architecture progressively declined, so that the simplification of external forms effected by the Renaissance was a gain But the sound and scientific medieval methods of construction remained in great part beneath the Renaissance exterior, and indeed are not yet wholly abandoned, especially in France Many fanciful theories have been formed as to the origin of medieval architecture, especially that deriving its groined vaulting from an imitation of the lines of interlacing branches in an avenue of trees It was, however, in fact a thoroughly logical growth from classical models, and the result of consistent efforts to adapt means to the ends sought Thus, the problem in a great church or hall was to cover in securely a large space with as few interruptions as possible to sight and sound, hence the tendency to widen the arches and to reduce the thickness of the pillars The great height of such buildings was not induced by a desire to "scour heavenward, but by the necessity to secure light for the nave by windows pierced above the roofs of the aisles The typical decoration of this architecture is of the highest beauty and fitness, ornamenting but not masking the construction and, while based chiefly on natural forms, it always, until the decline of the style, conventionalized these appropriately to their architectural function This architecture attained its best development in France See *Byzantine, Romanesque, Pointed*, etc —**Medieval art**, the art of the middle ages in Europe beginning in the gradual transformation of classical forms and ideals, and extending to the Renaissance, or, roughly, to the year 1400, though in Italy it actually became merged earlier in the new current of modern art, and in the north, as in England and Germany, it continued later It embraces a countless number of regional and local styles and schools, yet all animated by a kindred spirit It is second in importance in art history only to the art of Greece, and, while in many ways it fell far short of Greek art the course of its development from rude beginnings was very similar and, like the Greek presents a consistent and short cycle in which the part succeeding craftsmen and artists constantly to do better Its ideal of beauty was less high than that of the Greeks, it was more of a didactic art, seeking, in its illuminations and painting and sculpture, to illustrate and enforce the teachings of the Bible and the inherent imperfection of man Yet the general similarity of methods of observation and work was so close that in France especially, after the close of the archaic period in the thirteenth century, much figure sculpture was produced, as that in the portals of the cathedral of Rheims and on the north transept of that of Rouen, which is in spirit thoroughly Greek, and is equal to all but the best Greek draped work In decoration medieval art was preeminent Like Greek art, it was understood and appreciated not by a small cultivated class, but by the whole people It consistently sought to give to the commonest tools and utensils beautiful forms and characteristic ornament, while the architectural sculpture and decorative combinations of forms have never been surpassed in their variety, in their beauty of execution, and in their fitness to the ends which it was sought to attain To the general artistic sentiment, religious fervor, and emulative spirit of the period most of the great cathedrals, embodying, like a Greek temple, the best architecture and sculpture and the best decoration of the day, owe their origin —**Medieval In *anat.* and *zoöl.*, pertaining to marrow or medulla, or resembling it in form or position; myelonal: as, *medullary* substance, a *medullary* cavity, *medullary* cancer, a *medullary* foramen.—2. In *bot.*, composing or pertaining to the medulla or pith of plants. See phrases below.—**Medullary axis**, in *lichens*, same as *medullary layer*.—**Medullary cancer.** Same as *encephaloid cancer* (which see, under *encephaloid*).—**Medullary cavity**, in *embryol.* (*a*) The hollow of the primitively tubular spinal cord.

The primitive *medullary cavity*, which persists as the central canal, remains open in the lumbar swelling of birds
Gegenbaur, Comp. Anat., p. 512.

(*b*) The hollow of a bone which contains marrow.—**Medullary foramen.** See *foramen*.—**Medullary furrow or groove**, in *embryol.*, the primitive trace or furrow of a vertebrate embryo or a corresponding formation in an invertebrate: so called from being the site of a future medulla.

As the *medullary groove* deepens its edges become more sharply defined, and its inner border comes close down to the entoderm, thus forcing asunder the two halves of the mesoderm.
Buck's Handbook of Med. Sciences, III. 174.

Medullary layer, in *lichens*. See *medulla*, 2 (*b*).—**Medullary plate**, in *embryol.*, one of the lips of the medullary groove.—**Medullary rays**, the radiating vertical bands or plates of parenchymatous tissue in the stems of exogenous plants, popularly called the *silver grain*.

Medullary Rays.

1. Longitudinal radial section through the wood of a branch of maple one year old. *p*, pith; *b*, bark. 2. Longitudinal tangential section of the same wood, showing the ends of the medullary rays.

There are two kinds—the *primary*, which extend from the pith (medulla) to the cortex, and the *secondary*, which are shorter than the primary. The rays may be *simple*, consisting of a single cell or a single layer of superimposed cells as in many conifers; or *compound*, consisting of more than one layer of superimposed cells as in most dicotyledons.—**Medullary sheath**, in *bot.*, a narrow zone made up of the innermost layer of woody tissue immediately surrounding the pith in plants.—**Medullary tube**, the spinal cord in the primitive tubular stage.

medullated (med′u-lā-ted), *a.* [< L. *medulla*, marrow, + *-ate*[1] + *-ed*[2].] Having a medulla.

The [spinal] cord will be seen to be mainly made up of *medullated* nerve-fibres
Martin, Human Body, p. 177.

Megacephalon (meg-a-sef'a-lon), *n* [NL (C J Temminck, 1844), < Gr *μέγας*, great, large, + *κεφαλή*, head] A genus of mound-birds or brush-turkeys of Celebes, of the family *Megapodiidæ* and subfamily *Talegallinæ*, the maleos so called from the size of the head, which results from an expansion of the cranial walls into a kind of helmet *M maleo* is the only species

megacephalous (meg-a-sef'a-lus), *a* [< Gr *μέγας*, great, large, + *κεφαλή*, head] Large-headed, megacephalic in general Also *megalocephalous*

Megaceros (me-gas'e-ros), *n* [NL, < Gr *μέγας*, great, large, + *κέρας*, horn.] The genus of large extinct *cervida* of which the Irish elk is the type, having immense palmated antlers The animal formerly called *Cervus megaceros* or *C hibernicus* is now known as *Megaceros hibernicus* It is related to the elk of Europe and the moose of America, but is much larger Its remains abound in the peat-bogs of England and Scotland

megacerous (me-gas'e-rus), *a* [< Gr. *μέγας*, great, large, + *κέρας*, horn] Having very large horns, as the extinct Irish elk

Megachile (meg-a-kī'lē), *n* [NL , < Gr. *μέγας*, great, large, + *χειλος*, lip.] A genus of aculeate hymenopterous insects, or bees, of the family *Apidæ* and group *Dasypoda*, the leaf-cutters It is a large genus, of world-wide distribution, containing many species of varied habits all furnish their cells with bits of leaves cut from trees and plants which they stick together and roll into cases to form their larval cells in the trunks of dead trees and old rotting palings The nest of *M. muraria* is composed of grains of sand glued together with its viscid saliva, and is so hard as not to be easily penetrated by a knife About 50 European and as many North American species are known *M. centuncularis* is one of the common species of Europe and North America.

Megachilidæ (meg-a-kil'i-dē), *n pl* [NL , < *Megachile* + *-idæ*.] The leaf-cutting bees regarded as a family.

Megachiroptera (meg'a-kī-rop'te-rä), *n. pl.* [NL , neut pl of *megachiropterus* see *megachiropterous*.] Same as *Macrochiroptera*. *G. E. Dobson*

megachiropteran (meg'a-kī-rop'te-ran), *a* and *n* [< *Megachiroptera* + *-an*.] **I.** *a* Pertaining to the *Megachiroptera*, or having their characters; being a fruit-bat.

II. *n* A member of the *Megachiroptera*, a fruit-bat

megachiropterous (meg'a-kī-rop'te-rus), *a* [< NL. *megachiropterus*, < Gr. *μέγας*, great, large, + *χείρ*, hand, + *πτερόν*, a wing, = E *feather* see *chiropterous*.] Same as *megachiropteran*.

megacocci (meg-a-kok'sī), *n pl* [NL., < Gr *μέγας*, great, large, + *κοκκος*, a berry see *coccus*.] The largest kind of cocci distinguished from *micrococci*

megacosm (meg'a-kozm), *n* [< Gr *μέγας*, great, + *κόσμος*, world.] Same as *macrocosm*

I desire him to give me leave to set forth our microcosm, man, in some such deformed way as he doth the *megacosm*, or great world

By Croft, Animad on Burnet's Theory (1685), p 138 (*Latham*)

megaderm (meg'a-dėrm), *n* [< NL *Megaderma*.] A bat of the family *Megadermatidæ*

Megaderma (meg-a-der'ma), *n* [NL , < Gr. *μέγας*, great, large, + *δέρμα*, the skin see *derma*.] The typical genus of the family *Megadermatidæ* (or subfamily *Megadermatinæ* of *Nycteridæ*) *M. gigas* of Australia is the largest bat of the suborder *Microchiroptera*, the forearm measuring 4½ inches *M. lyra* is a smaller species, common in India There are several others

Megadermatidæ (meg'a-dėr-mat'i-dē), *n pl.* [NL , < *Megaderma*(*t*-) + *-idæ*.] The *Megadermatinæ* rated as a family

Megadermatinæ (meg-a-dėr-ma-tī'nē), *n pl* [NL , < *Megaderma*(*t*-) + *-inæ*.] A subfamily of bats of the family *Nycteridæ*, typified by the genus *Megaderma*, the megaderms

Megaderus (me-gad'e-rus), *n* [NL (Serville, 1834), < Gr *μέγας*, great, large, + *δέρη*, neck, throat.] A genus of longicorns or cerambycids having the three sternal sclerites continuous They exhale a strong, peculiar odor, though no odoriferous glands have been discovered They are mostly tropical American, but *M. bifasciatus* occurs in Texas

megadont (meg'a-dont), *a.* [Irreg < Gr *μέγας*, great, large, + *ὀδούς* (*ὀδοντ-*) = E *tooth*.] Having large teeth *W. H. Flower*

megadyne (meg'a-dīn), *n* [< Gr. *μέγας*, great (see *mega-*), + E *dyne*, q. v.] A unit equal to a million dynes

megaerg (meg'a-ėrg), *n* [< Gr *μέγας*, great (see *mega-*), + E *erg*, q. v.] A unit equal to a million ergs Also *megerg*, *megalerg*

megafarad (meg'a-far-ad), *n* [< Gr *μέγας*, great (see *mega-*), + E *farad*, q. v.] In *electrometry*, a unit equal to a million farads

Megalæma (meg-a-lē'ma), *n* [NL , < Gr *μέγας* (*μεγαλ-*), great, large, + *λαιμός*, throat (breast).] The typical genus of *Megalæmida* or scansorial barbets The species of *Megalæma* proper are Asiatic *M. hæmacephala*, the crimson breasted barbet, is a common Indian one, known as the *tambagut* or *coppersmith* Also *Megalaima*, as originally by G R. Gray in 1842

Megalæmidæ (meg-a-lē'mi-dē), *n. pl* [NL , < *Megalæma* + *-idæ*.] A family of chiefly Old World non-passerine picarian birds, formerly confused with the barbets proper or puff-birds (*Bucconida*) of America, scansorial barbets The technical characters are—the homalogonatous and antiopelmous musculation of the zygodactylous feet a single carotid no cæca, tufted cræodochon, acute mandibrium sterni, bifurcate vomer, and ten rectrices The term is synonymous with *Capitonidæ* The megalemes are nearly related to the toucans and woodpeckers They are of small to moderate size, of stout form, with large heads and heavy bills garnished with long bristles, in the latter respect resembling the barbets of the family *Bucconidæ* The coloration is highly variegated and often brilliant. Some 80 species are described, chiefly Asiatic and African, only a few occurring in South America The family is divided into *Pogonorhynchinæ*, *Megalæminæ*, and *Capitoninæ*.

megaleme (meg'a-lēm), *n* A scansorial barbet of the genus *Megalæma*, in a broad sense Also *megalæme*, *megalaime*

megalerg (meg'a-lėrg), *n.* [< Gr *μέγας* (*μεγαλ-*), great (see *mega-*), + E *erg*.] Same as *megaerg*

Megalesian, Megalensian (meg-a-lē'si-an, -len'si-au), *a.* [< L. *Megalesia*, prop *Megalensia* (< Gr. *Μεγαλήσια*, a festival in honor of the Magna Mater or Cybele), neut pl of *Megalensis*, pertaining to *Megale*, < Gr. *Μεγάλη*, 'the Great,' an epithet of the Magna Mater, fem of *μέγας* (*μεγαλ-*), great see *main*², *meckle*, *much*.] Of or belonging to Cybele, the Great Mother.—**Megalesian games**, in *Rom. antiq.*, a magnificent festival, with a stately procession, feasting, and scenic performances in the theaters, celebrated at Rome in the month of April, and lasting for six days, in honor of Cybele The image of this goddess was brought to Rome from Pessinus in Galatia, about 208 B. C., and the games were instituted then or shortly afterward, in consequence of a sibylline oracle promising continual victory to the Romans if due honors were paid to her

megalesthete (meg-a-les'thēt), *n* [< Gr *μέγας* (*μεγαλ-*), great, large, + *αἰσθητής*, one who perceives see *esthete*, *esthetic*.] A supposed tactile organ of the chitons. Also written *megalasthete* *H. N. Moseley*

Megalichthys (meg-a-lik'this), *n.* [NL., < Gr *μέγας* (*μεγαλ-*), great, large, + *ἰχθύς*, fish.] A genus of large fossil ganoid fishes of Carboniferous age, established by Agassiz Their remains occur in Devonian beds of Europe By Gunther the genus is referred to the family *Saurodipteridæ*, suborder *Polypteroidei*, by others to families called *Saurodipterini* or *Saurichthyidæ* It was characterized by large, smooth, but minutely punctured, enameled scales, some of which have been found 5 inches in diameter, indicating a fish of great size The jaws were furnished with immense lanitary teeth Several species have been described from the Carboniferous strata of Scotland and England

megalith (meg'a-lith), *n* [< Gr *μέγας*, great, + *λίθος*, stone.] A great stone, specifically, a stone of great size used in constructive work or as a monument, as in ancient Cyclopean and so-called Druidic or Celtic remains

Hundreds of our countrymen rush annually to the French *megaliths*

J. Fergusson, Rude Stone Monuments, p 181, note

megalithic (meg-a-lith'ik), *a* [< *megalith* + *-ic*.] Consisting of megaliths or very large stones as, *megalithic* monuments, the *megalithic* architecture of Egypt The word *megalithic*, however, as now almost exclusively used, has reference to a peculiar class of monuments or remains, of which the most essential feature is that the stones used in their construction in a vast majority of cases have nearly or quite their natural form Hence these remains, in so far as they consist of stone, have been designated as "rude stone monuments" The stones used in them are frequently, but not always, of very large size The menhir and dolmen are perhaps the most characteristic of the various forms of megalithic construction (see these words), but circles and avenues or alinements of standing stones as well as tumuli or barrows of earth, either covering or inclosing dolmens, and frequently surrounded by one or more rows or circles of upright stones, are almost equally common and characteristic The region especially notable for the number and variety of its megalithic remains extends from northern Africa through France and Great Britain to Scandinavia The most remarkable display of the various forms is in Algiers, in Brittany in Cornwall and various districts in southwestern England and Wales as well as in parts of Ireland and Scotland, also in northern Germany, Denmark, and southern Scandinavia There are also great numbers of dolmens and tumuli in India, especially in the hills of Khassia, where such monuments are still being erected

To the same primitive period [the Neolithic] of rude savage life must be assigned the rudiments of architectural skill pertaining to the *Megalithic* Age Everywhere we find traces, alike throughout the seats of oldest civilisation and in earliest written records, including the historical books of the Old Testament Scriptures of the erection of the simple monolith, or unhewn pillar of stone, as a record of events, a monumental memorial, or a landmark *Encyc. Brit.*, II 338

But it is in Egypt that *megalithic* architecture is seen in its most matured stage, with all the massiveness which so aptly symbolises barbarian power *Encyc. Brit.*, II 338

The *megalithic* structures, menhirs, cromlechs, dolmens, and the like have been kept up as matters of modern construction and recognized purpose among the rude indigenous tribes of India *E. B. Tylor*, Prim. Culture, I 55

megallantoid (meg-a-lan'toid), *a* [< Gr. *μέγας*, great, large, + NL. *allantois*, q. v.] Having a large allantois

Megalobatrachus (meg'a-lō-bat'rā-kus), *n* [NL (Tschudi), < Gr. *μέγας* (*μεγαλ-*), great, large, + *βατραχος*, a frog see *batrachian*.] An Asiatic genus of the family *Protonopsidæ* (or *Cryptobranchidæ*), having four small but well-formed feet, and no gill-slits; the giant salamanders *M. maximus* is the largest living amphibian, attaining a length of three feet or more It is found in Japan and some parts of continental Asia

megalocarpous (meg'a-lō-kär'pus), *a.* [< Gr. *μεγαλόκαρπος*, having large fruit, < *μέγας* (*μεγαλ-*), great, large, + *καρπός*, fruit.] Having large fruit

megalocephalous (meg'a-lō-sef'a-lus), *a.* Same as *megacephalic*.

What Thurnam calls medium brains range in weight between 40 and 52½ ounces for men and 35 and 47½ ounces for women All brains in size above this are called *megalocephalous*

Sci. Amer., N. S., LXI 289

megalocyte (meg'a-lō-sīt), *n.* [< Gr. *μέγας* (*μεγαλ-*), great, large, + *κύτος*, a cavity. see *cyte*.] A large blood-corpuscle, measuring from 12 to 15 micromillimeters in diameter, found in the human blood in cases of anemia, especially of pernicious anemia.

megalogonidium (meg'a-lō-gō-nid'i-um), *n* ; pl. *megalogonidia* (-ä). [NL., < Gr. *μέγας* (*μεγαλ-*), great, large, + NL *gonidium*.] Same as *macrogonidium*

megalograph (meg'a-lō-grāf), *n.* [< Gr. *μέγας* (*μεγαλ-*), great, large, + *γράφειν*, write.] A form of camera lucida used for microscopic drawing, or for industrial pattern-drawing, as from designs formed by the kaleidoscope It admits of drawing directly from the microscopic or kaleidoscopic image

megalography (meg-a-log'ra-fi), *n* [< Gr *μέγας* (*μεγαλ-*), great, large, + *-γραφια*, < *γράφειν*, write.] A drawing of pictures to a large scale *Bailey*, 1731

megalomania (meg'a-lō-mā'ni-à), *n* [NL , < Gr. *μεγας* (*μεγαλ-*), great, + *μανια*, madness see *mania*.] A form of insane delusion the subjects of which imagine themselves to be very great, exalted, or powerful personages, the delusion of grandeur

Megalonyx (meg-gal'ō-niks), *n* [NL (Thomas Jefferson, 1797), so called from the great size of its claw-bones; < Gr *μεγας* (*μεγαλ-*), great, large, + *ὄνυξ*, a claw.] **1** A genus of gigantic extinct Pleistocene edentate quadrupeds related to the sloths, belonging to the family *Mylodontidæ* (sometimes, however, referred to the *Megatheridæ*), having the foremost tooth in each jaw large and separated from the others by a wide diastema *M. cuvieri* is one of the best-known species.—**2** [*l. c.*] An individual or a species of this genus

megalopa (meg-a-lō'pa), *n* Same as *megalops*, 2

megalophonous (meg'a-lō-fō'nus), *a.* [< Gr. *μεγαλοφωνος*, having a loud voice, < *μέγας* (*μεγαλ-*), great, + *φωνή*, voice.] **1** Having a loud voice, vociferous, clamorous [Rare.]—**2** Of grand or imposing sound [Rare.]

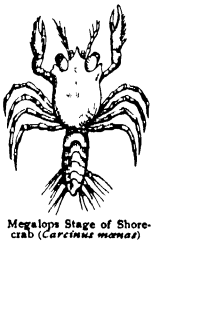
This is at once more descriptive and more *megalophonous*

Note on Shelley's Peter Bell the Third, Prol

Megalophonus (meg'a-lō-fō'nus), *n.* [NL , < Gr. *μεγαλόφωνος*, having a loud voice: see *megalophonous*.] A genus of larks, of the family *Alaudidæ*, founded by G. R. Gray in 1841 upon certain African species which have naked nostrils and are colored like quails, as *M. apiatus* (or *clamosa*) so called from being megalophonous Also called *Corypha*.

megalopic (meg-a-lop'ik), *a* [< Gr *μεγαλωπός*, large-eyed, < *μέγας* (*μεγαλ-*), great, large, + *ὤψ*, eye see *optic* Cf *Megalops*.] Having large eyes, specifically, of crustaceans, having the character of a megalops

Megalopinæ (meg'a-lō-pī'nē), *n. pl.* [NL., < *Megalops* (*Megalop-*) + *-inæ*.] A subfamily of elopine fishes without pseudobranchiæ, and with large scales and a long anal fin, represented by the genus *Megalops* They are known as *tarpons* (or *tarpums*) and *jew-fish*



megalopine (meg'a-lō-pin), *a.* and *n* **I.** *a* Of, pertaining to, or having the characters of the *Megalopinæ*

II. *n* A fish of the subfamily *Megalopinæ*

megalopolis† (meg-a-lop'ō-lis), *n* [< Gr *μεγαλόπολις*, a great city, metropolis (also the name of several cities), < *μέγας* (*μεγαλ-*), great, large, + *πόλις*, city see *police*.] A chief city, a metropolis.

Paul and his wife are back in the precincts of *megalopolis* *M. Collins*, The Ivory Gate, II 211 (*Encyc. Dict.*)

Megalops (meg'a-lops), *n.* [NL , < Gr. *μέγας* (*μεγαλ-*), great, large, + *ὤψ*, eye. see *megalopic*.] **1.** In *ichth.*, a genus of elopine fishes, representing the subfamily *Megalopinæ* of the family *Elopidæ*, founded by Lacépède in 1803. *M. atlanticus* is a large species, known as the *tarpon*.—**2.** [*l. c.*] A spurious genus of decapod crustaceans, representing a stage in the development of crabs in

Megalops Stage of Shore-crab (*Carcinus mœnas*)

which the eyes are enormous The term is retained as the designation of this condition, commonly known as the *megalops* or *megalops stage* First called *megalopa* (W. L. Leach, 1815)

In the higher Decapoda the zoea frequently gives rise to a *Megalops*, with very large stalked eyes, and the complete number of appendages, from which, by a series of moults, the adult form is produced *Stand. Nat. Hist.*, II. 11

3. A genus of rove-beetles or staphylinids, containing a few small species of America and Africa *Dejean*, 1833.—4. A genus of reptiles

megalopsia (meg-a-lop'si-a), *n.* [NL., < Gr. μεγας (μεγαλ-), great, large, + ὀψις, eye.] A pathological condition of the eyes in which objects appear enlarged.

megalopsychy (meg'a-lop-si'ki), *n.* [< Gr. μεγαλοψυχια, greatness of soul, < μεγαλοψυχος, great-souled, high-souled, < μεγας (μεγαλ-), great, + ψυχη, soul.] Magnanimity; greatness of soul. *Coles*, 1717. [Rare.]

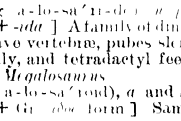
Megaloptera (meg-a-lop'te-ra), *n. pl.* [NL., < Gr. μεγας (μεγαλ-), great, large, + πτερον, wing, = E. *feather*.] A tribe of *Neuroptera*, containing the families *Myrmeleontidæ*, *Hemerobiidæ*, and *Mantispidæ*. *Latreille*, 1803.

Megalopteris (meg-a-lop'te-ris), *n.* [NL., < Gr. μεγας (μεγαλ-), great, + πτερις, a fern.] A genus of fossil ferns established by Dawson (1871), which is related to *Neuropteris* by its nervation, and to *Alethopteris* by the position of the leaflets. The fronds are very large and simply pinnate. This genus (according to Lesquereux not separable from *Danæopsis* except by the characters of the venation) is found in the Devonian of New Brunswick, in the Subcarboniferous of West Virginia, and also in the coal measures of Illinois and Ohio.

The fragments referred to *Megalopteris* pertain to a group of ferns which, at the beginning of the Carboniferous epoch represents this family by plants as remarkable by their magnitude as by the elegance and beauty of their forms. *Lesquereux*, Coal Flora of Pennsylvania, p. 152.

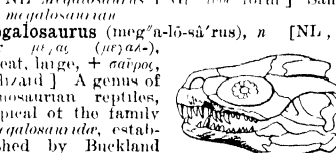
Megalornis (meg-a-lôr'nis), *n.* [NL., < Gr. μεγας (μεγαλ-), great, large, + ὀρνις, bird.] 1. Same as *Gryps*, 1. *G. R. Gray*, 1840.—2. A genus of huge fossil birds founded by Seeley upon a fragmentary tibia from the Eocene of Sheppey, England. It was the same specimen that had been referred to *Lithornis* by Bowerbank the true *Lithornis* of Owen, 1841, being regarded as different. A species has been called *M. cunicus* from its supposed relationship to the emu.

megalosaur (meg'a-lō-sâr), *n.* [< NL. *Megalosaurus*.] A dinosaur of the family *Megalosauridæ*.



megalosaurian (meg''a-lō-sâ'ri-an), *a.* and *n.* [< NL. *Megalosaurus* + *-ian*.] I. *a.* Having the characters of a megalosaur.

II. *n.* A megalosaur.



Megalosauridæ (meg''a-lo-sâ'ri-dē), *n. pl.* [NL., < *Megalosaurus* + *-idæ*.] A family of dinosaurians with biconcave vertebræ, pubes slender and united distally, and tetradactyl feet, typified by the genus *Megalosaurus*.

megalosauroid (meg''a-lo-sâ'roid), *a.* and *n.* [< NL. *Megalosaurus* + Gr. εἰδος form.] Same as *megalosaurian*.

Megalosaurus (meg''a-lō-sâ'rus), *n.* [NL., < Gr. μεγας (μεγαλ-), great, large, + σαῦρος, a lizard.] A genus of dinosaurian reptiles, typical of the family *Megalosauridæ*, established by Buckland upon remains indicating a gigantic terrestrial reptile of carnivorous habits. The size has been variously estimated at from 20 to 40 and even 50 feet in length. The femur and tibia were each about 3 feet long. The remains of megalosaurs have been found in abundance in the Oolite.

Skull of *Megalosaurus*.

1, *Megalosaurus* (restored); 2, tooth; 3, part of jaw.

megalosplenia (meg''a-lō-splē'ni-ă), *n.* [NL., < Gr. μεγας (μεγαλ-), great, large, + σπλην, the mult, spleen.] In *pathol.*, enlargement of the spleen.

Megalotinæ (meg''a-lō-tī'nē), *n. pl.* [NL., < *Megalotis* + *-inæ*.] A subfamily of *Canidæ*, represented by the genus *Megalotis*, having enormously large ears, three-lobed tubercular molars of upper jaw, and bent sectorial teeth of both jaws.

megalotine (meg-a-lō'tin), *a.* [< Gr. μεγας (μεγαλ-), great, large, + ους (ωτ-) = E. *ear*.] Having large ears, as a fox, specifically, of or pertaining to the *Megalotinæ*.

Megalotis (meg-a-lō'tis), *n.* [NL., < Gr. μεγας (μεγαλ-), great, + ους (ωτ-) = E. *ear*.] 1. The typical genus of *Megalotinæ*, founded by Illiger in 1811. *M. lalandi* is the large-eared fox of Africa. The genus is also named *Aquiotus* and *Otocyon*.—2. A genus of African and Indian larks of the family *Alaudidæ*, named by Swainson in 1827. See *Pyrrhulauda*.

Megamastictora (meg''a-mas-tik'tō-rä), *n. pl.* [NL., < Gr. μεγας, great, + μαστιξ, μαστιγ-, a scourge, < μαστιζειν, whip, flog, scourge, < μαστιξ (μαστιγ-), a whip, scourge.] In Sollas's classification of sponges, one of two main branches of the phylum *Parazoa* or *Spongiæ*, characterized by the comparatively large size of the choanocytes, which are 0.005 to 0.009 millimeter in diameter, the chalk-sponges contrasted with *Micromastictora*.

megamastictoral (meg''a-mas-tik'tō-ral), *a.* [< *Megamastictora* + *-al*.] Having large choanocytes, as a chalk-sponge; of or pertaining to the *Megamastictora*.

Megamys (meg'a-mis), *n.* [NL., < Gr. μεγας, great, large, + μυς, mouse.] A genus of fossil hystricomorphic rodents from the Eocene of South America, of the family *Octodontidæ* D'Orbigny.

megaphone (meg'a-fōn), *n.* [< Gr. μεγας, great, + φωνη, sound. Cf. *megalophonous*.] An instrument devised by Edison for assisting hearing, adapted for use by deaf persons or for the perception of ordinary sounds at great distances. It consists essentially of two large funnel-shaped receivers for collecting the sound waves which are conducted to the ear by flexible tubes.

Megaphyton (meg-af'i-ton), *n.* [NL. (Artis, 1825), < Gr. μεγας, great, large, + φυτον, plant.] A fossil fern-stem found in the coal-measures of Europe and America. This fossil belongs to the trunk of a tree fern, and is marked by large scars, which are sometimes nearly square in outline and sometimes transversely oval, and placed in opposite biserial rows. The internal disks of the scars often have horseshoe-shaped vascular impressions. This fern occasionally grew to a very considerable size, having scars three inches wide.

megapod (meg'a-pod), *a.* and *n.* [< Gr. μεγας, great, large, + πους (ποδ-) = E. *foot*. Cf. Gr. μεγαποδων, having large feet.] I. *a.* Having large feet specifically applied to the *Megapodiidæ*.

II. *n.* One of the *Megapodiidæ*.

megapodan (me-gap'o-dan), *a.* and *n.* Same as *megapod*.

megapode (meg'a-pōd), *n.* Same as *megapod*.

Megapodidæ (meg-a-pod'i-dē), *n. pl.* [NL., < *Megapodius* + *-idæ*.] Same as *Megapodiidæ*.

Megapodiidæ (meg''a-po-di'i-dē), *n. pl.* [NL., < *Megapodius* + *-idæ*.] A family of peristeropodous alectoromorphous birds of the order *Gallinæ*, typified by the genus *Megapodius*, the megapods or mound-birds, the jungle-fowls of Australia. They have relatively large feet, with four toes on a level, as in the American curassows or *Cracidæ*, which latter the megapods represent in the Australasian region. They are known as mound-birds from their singular and characteristic habit of scraping up heaps of soil and decaying vegetable substances, in which the eggs are buried and left to be hatched by the heat of the decomposing mass. The eggs are buried to the depth of several feet. The chicks hatch feathered and able to fly. The birds inhabit brush and scrub, usually by the seaside, and go sometimes in pairs, sometimes in large companies. They are about the size of common fowl, and are generally of somber color. The family is divided into *Megapodiinæ* and *Talegallinæ*. See these words, and *Megapodius*. Usually *Megapodidæ*.

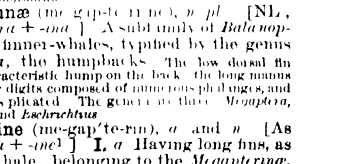
Mound-bird (*Megapodius tumulus*).

Megapodiinæ (meg-a-pō-di-ī'nē), *n. pl.* [NL., < *Megapodius* + *-inæ*.] A subfamily of *Megapodiidæ* contrasting with *Talegallinæ*, containing two genera, *Megapodius* and *Leipoa*, mound-birds or megapods proper.

Megapodius (meg-a-pō'di-us), *n.* [NL., < Gr. μεγας, great, large, + πους (ποδ-) = E. *foot*.] The typical and principal genus of *Megapodiidæ*, established by Quoy and Gaimard in 1824. It contains all the *Megapodinæ* excepting *Leipoa ocellata* in all upward of 20 species. The Australian *M. tumulus*, figured above, is a characteristic example.

megapolis† (me-gap'o-lis), *n.* [< Gr. μεγας, great, + πολις, city. Cf. *megalopolis*.] A metropolis.

Amadavad is at this present the *megapolis* of Cambaya. *Sir T. Herbert*, Travels in Africa, p. 64.



Megaptera (me-gap'te-ra), *n.* [NL., < Gr. μεγας, great, + πτερον, wing, = E. *feather*. Cf. *Megalopteral*.] A genus of furrowed whalebone-whales, the humpbacks, belonging to the family *Balænopteridæ*, and typical of the subfamily *Megapterinæ*, established by J. E. Gray in 1846. They have a low dorsal fin, folds of skin on the throat, free cervical vertebræ, short broad baleen plates, and very long narrow flippers with only four digits. Numerous species have been described, from all seas such as the long-finned whale *M. longimanus*.

Megapterinæ (me-gap-te-ri'nē), *n. pl.* [NL., < *Megaptera* + *-inæ*.] A subfamily of *Balænopteridæ* or finner-whales, typified by the genus *Megaptera*, the humpbacks. The low dorsal fin forms a characteristic hump on the back; the long manus has the four digits composed of numerous phalanges, and the throat is plicated. The genera are three: *Megaptera*, *Psewopsa* and *Eschrichtius*.

megapterine (me-gap'te-rin), *a.* and *n.* [As *Megaptera* + *-ine*.] I. *a.* Having long fins, as a finner-whale, belonging to the *Megapterinæ*.

II. *n.* A member of the *Megapterinæ*.

Megarhynchus (meg-a-ring'kus), *n.* [NL., < Gr. μεγας, great, large, + ῥυγχος, snout, bill.] A genus of American tyrant flycatchers, of

Megarhynchus pitangua, life-size.

the family *Tyrannidæ*, of which *M. pitangua* of Brazil is the type, characterized by an enormous bill. *M. mexicanus* of Mexico and Central America and *M. chrysomaster* of Ecuador are other species. The genus was named by Thunberg in 1824, and is also called *Scaphorhynchus*, *Platyrhynchus*, and *Megastoma*.

Megarian (me-gā'ri-an), *a.* [< L. *Megara*, < Gr. Μεγαρα, pl., Megara (appar. pl. of μεγαρον, hall, chamber in pl. palace, caves (cells or chapel) of Demeter: see *megaron*), + *-ian*.] Of or belonging to Megara, a city of ancient Greece, or to Megaris, a territory between Attica and Corinth, of which it was the capital. Megarian — **Megarian school**, a school of philosophy founded at Megara about 400 B. C. by Euclid, a native of that city, and a disciple of Socrates. The philosophers of this school taught that the only reality is the incorporeal essence that the material world has no real existence, that change is inconceivable, that only the actual is possible, that the good is the only real, and that virtue is the knowledge of the good. The school made much of sophisms, and cultivated a sort of logic of refutation, which gave it the name of the *eristic* or *dialectical school*.

Megaric (me-gar'ik), *a.* and *n.* [< L. *Megaricus*, < Gr. Μεγαρικος, of Megara, < Μεγαρα, Megara.] I. *a.* Same as *Megarian*.

II. *n.* A Megarian philosopher, or a follower of the Megarian school.

megaron (meg'a-ron), *n.*; pl. *megara* (-ra) [< Gr. μεγαρον, a large room, a large building, a palace, < μεγας, great, large, spacious.] In *Gr. archæol.*, specifically, the great central hall of the Homeric house or palace. In large houses of this early time there was a megaron for the men and for the entertainment of guests, and another, more secluded, for the women of the household. The plan and disposition of such megara, with the ceremonial family hearth in the middle, have been most clearly made out by the excavations of Schliemann and Dörpfeld at Tiryns in the Peloponnesus in 1884–5.

Megarrhiza (meg-a-rī'zä), *n.* [NL., < Gr. μεγας, great, + ῥιζα, root.] A former genus of plants now included under *Echinocystis*. The species so separated differ from the others in their large turgid seeds 15 to 30 millimeters long, and in the enormous development of their roots. See *Echinocystis*, *bitter-root*, *chilli coyote* (under *chilli*), and *man-root*.

megasclere (meg′a-sklēr), *n.* [< NL. *megasclerus*, < Gr *μέγας*, great, large, + *σκληρός*, hard.] A supporting spicule of a sponge, forming a part of the skeleton Megascleres are generally of large size, as indicated by the name, and usually contribute to the formation of a more or less consistent skeleton, while the microscleres or flesh spicules serve only for the support of single cells but the distinction is not possible in all cases

megasclerous (meg′a-sklē-rus), *a* [< *megasclere* + *-ous*] Of or pertaining to a megasclere; having the character of a megasclere

Megascolex (meg-a-skō′leks), *n* [NL (Templeton, 1845), < Gr *μέγα*, great, large, + *σκώληξ*, a worm] A genus of oligochætous annelids or worms of large size The Ceylonese *M cæruleus* is a yard long, and as thick as one's finger

megascope (meg′a-skōp), *n* [< Gr *μέγας*, great, + *σκοπεῖν*, view] 1 A modification of the solar microscope for the examination of bodies of considerable dimensions —2 In *photog*, an enlarging camera

megascopic (meg-a-skop′ik), *a* [As *megascope* + *-ic*] Perceptible through unaided vision, visible without the use of a powerful magnifying instrument, or with only the assistance of a pocket-lens used in contrast to *microscopic*, with reference to objects or investigations in regard to which the use of a microscope is not required as, the *megascopic* constituents of a rock, the *megascopic* structure of the brain, a *megascopic* examination of an object Also *macroscopic*, *macroscopical*

megascopical (meg-a-skop′i-kal), *a* [< *megascopic* + *-al*] Same as *megascopic*

megascopically (meg-a-skop′i-kal-i), *adv* By the naked eye, by superficial inspection as distinguished from minute or microscopic inspection, without the use of magnifiers Also *macroscopically*

Megascops (meg′a-skops), *n* [NL, < Gr *μέγας*, great, + *σκωψ*, a small kind of owl] A genus of horned owls of the family *Strigidæ*, established by J J Kaup in 1848 The name is now adopted for the group of American species of which the common red or mottled owl of North America, usually called *Scops asio*, is the type

megaseme (meg′a-sēm), *a* and *n* [< Gr *μέγας*, great, large, + *σῆμα*, sign] **I.** *a.* In *craniom*, having a large index, specifically, having an orbital index over 89, not mieroseme

If above 89, it [the orbital index] is *megaseme* *Quain*, Anat, I 83

II. *n* A skull having a large index

Megasoma (meg-a-sō′ma), *n* [NL, < Gr *μέγας*, great, large, + *σῶμα*, body] 1 A genus of large cetonian coleopters, typical of the subfamily *Megasomina*, having the prosternal process glabrous, Hercules-beetles or elephant-beetles *M elephas*, *M typhon*, *M actæon* and *M thersites* are American species of these huge beetles All these are South American except *M thersites*, which is Californian They are the largest coleopters known The genus was established by Kirby in 1825

2. A genus of lepidopterous insects *Boisduval*, 1836

Megasominæ (meg-a-sō-mī′nē), *n. pl* [NL, < *Megasoma* + *-inæ*] Swainson's name of the Hercules-beetles as a subfamily of *Cetoniidæ*

megasporange (meg′a-spō-ranj), *n.* [< Gr. *μέγας*, great, + *σπορά*, a spore or seed, + *ἄγγος*, a vessel] Same as *macrosporangium*

megaspore (meg′a-spōr), *n* [< Gr *μέγας*, great, large, + *σπορός*, seed] Same as *macrospore*

Some of the best seams of coal appear to have been chiefly formed by the accumulation of these *Megaspores* *W B Carpenter*, Micros, § 347

megass, megasse (me-gas′), *n* Same as *bagasse*

Megasthena (me-gas′the-na), *n pl* [NL, < Gr *μέγας*, great, large, + *σθένος*, strength] In Dana's classification of mammals, the second order of *Mammalia* Dana divided this class into four orders *Archontia*, man alone, *Megasthena*, the quadrumanous, carnivorous, herbivorous, and cetacean mammals, *Microsthena*, the chiropters, insectivores, rodents, and edentates, *Ootheoidea* the marsupials and monotremes The arrangement is the same as Owen's *Archencephala*, *Gyrencephala*, *Lissencephala*, and *Lyencephala* *Megasthena* corresponds to *Gyrencephala*, also to *Educabilia*, exclusive of man Also *Megasthenes*

megasthene (meg′a-sthēn), *n* One of the *Megasthena*, any quadrumanous, carnivorous, herbivorous, or cetacean mammal

There is a close parallelism with the Mutilates, the lowest of the *Megasthenes* *Amer Jour Sci*, Jan, 1863, p 71

megasthenic (meg-a-sthen′ik), *a* [< *megasthene* + *-ic*] Having great strength of structural character, strongly organized, specifically, having the nature of or pertaining to the *Megasthena*.

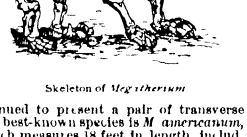
This is in contrast with the fact among Crustaceans, the *megasthenic* and microsthenic divisions of which stand widely apart *J D Dana*, On Cephalization, p 8

megasynthetic (meg′a-sin-thet′ik), *a* [< Gr. *μέγας*, great, + *συνθετικός*, putting together see *synthetic*] Same as *polysynthetic*. [Rare]

megathere (meg′a-thēr), *n.* [< NL. *megatherium*] A mammal of the family *Megatheridæ*

megatherian (meg-a-thē′ri-an), *a.* and *n.* [< NL *Megatherium* + *-an*] **I.** *a.* Of or pertaining to the genus *Megatherium*

II. *n* A megathere



Megatheridæ (meg-a-ther′i-dē), *n pl.* Same as *Megatheriidæ*.

Megatheriidæ (meg′a-thē-ri′i-dē), *n pl.* [NL, < *Megatherium* + *-idæ*] A family of extinct gigantic edentate animals of the order *Bruta*, related to the sloths and ant-eaters, the remains of which occur abundantly in Pleistocene deposits of North and South America, the ground-sloths The teeth are usually 10 in the upper jaw and 8 in the lower, as in the sloths — In one genus 8 in the upper jaw and 6 in the lower The typical and leading genera are *Megatherium* and *Colodon*, many others are sometimes referred to this family, sometimes to *Mylodontidæ*, etc

megatherioid (meg-a-thē′ri-oid), *a* and *n.* [< *Megatherium* + *-oid*] **I.** *a* Resembling or having the characters of a megathere, belonging to the *Megatheridæ*

II. *n* A megathere or some similar mammal Also *megatheroid*.

Megatherium (meg-a-thē′ri-um), *n* [NL, < Gr *μέγας*, great, large, + *θηρίον*, a wild beast] 1 The typical genus of the family *Megatheridæ*, containing huge extinct sloths larger than a rhinoceros They had 10 teeth in the upper jaw, and 8 in the lower deeply implanted, persistently growing, prismatic, and with such an arrangement of the vasodentine, dentine, and cement that as they wore away the triturating surfaces continued to present a pair of transverse ridges One of the best-known species is *M americanum*, the skeleton of which measures 18 feet in length, including the tail, which is 5 feet

Skeleton of *Megatherium*

2 [*l c*] An animal of this genus

megatherm (meg′a-thėrm), *n* [< Gr *μέγας*, great, + *θερμη*, heat] In *bot*, a term proposed by Alphonse de Candolle in 1874 to designate a plant of his first "physiological group," requiring great heat combined with much moisture The plants of this group (megatherms) occur either within the tropics or not beyond the thirtieth degree of latitude, in warm moist valleys where the mean temperature does not fall below 20° C See *hekistotherm*

megatype (meg′a-tīp), *n.* [< Gr *μέγας*, great, large, + *τύπος*, impression] In *photog*, an enlarged positive

megaulic (me-gâ′lik), *a* [< NL. *megaulicus*, < Gr *μέγας*, great, + NL *aula*, aula see *aula*, 2] Having the aula large, specifically, of or pertaining to the *Megaulica*

Megaulica (me-ga′li-ka), *n pl* [NL, neut pl of *megaulicus* see *megaulic*] Animals whose aula is large and whose cerebral hemispheres are extended horizontally or undifferentiated. They are the *Ichthyopsida* exclusive of amphibians, dipnoans, and *Branchiostoma* *Wilder*, Amer Nat, Oct, 1887, p 914

megavolt (meg′a-vōlt), *n* [< Gr *μέγας*, great (see *meg-*), + E *volt*] A unit equal to one million volts.

megaweber (meg′a-vā-bėr), *n* [< Gr *μέγας*, great (see *meg-*), + E *weber*] A unit equal to a million webers

megazoöspore (meg-a-zō′ō-spōr), *n.* [< Gr *μέγας*, great, + *ζῷον*, animal, + *σπόρος*, seed.] Same as *macrozoöspore*.

megerg (meg′ėrg), *n.* Same as *megaerg*

Megilla (mē-jil′ă), *n* [NL] 1. A genus of ladybirds, of the family *Coccinellidæ*, founded by Mulsant in 1851 The larva of *M maculata*, the spotted ladybird, is useful in devouring plant lice, chinch bugs and eggs of the Colorado potato beetle, the adult beetle feeds upon pollen See cut under *ladybird*

2 A genus of hymenopterous insects *Fabricius*, 1804

megilp (mē-gilp′), *n.* and *v* See *magilp*

Megistanes (mej-is-tā′nēz), *n. pl* [NL, < Gr *μεγιστᾶνες*, great men, grandees, < *μέγιστος*, superl of *μέγας*, great, large] A superfamily group, by Newton made an order, of extant ratite birds, containing the two families *Casuaridæ* and *Dromæidæ*, or the cassowaries and emus. Called *Casuarii* by some authors.

megohm (meg′ōm), *n.* [< Gr *μέγας*, great (see *meg-*), + *ohm*] A unit equal to one million ohms.

megrim (mē′grim), *n* [Early mod. E also *meagrim*, *meagrom*, < ME *migrim*, *migreyme*, *migrene*, *mygreyn*, a corruption of *migraine*, *migraine*, < OF *migraine*, F *migraine* (> G Dan *migrane* = Sw. *migran*) = Sp. *migraña* = It *magrana*, *emigrana*, < L. *hemicranium*, < Gr *ἡμικρανία*, a pain in one side of the head, < *ἡμι-*, half, + *κρανίον*, head, cranium see *hemicrania*.] **1.** A form of headache usually confined to or beginning or predominating on one side of the head. It may be ushered in by malaise, languor, chilliness, or ocular or other sensory symptoms The ocular symptoms are such as amblyopia, a glimmering appearance before the eyes, spectra of angular outline (fortification spectra), or hemianopsia The headache, often becoming overpowering in its character and intensity, lasts from several hours to two or three days At its height it is attended often with nausea and vomiting The attacks return with a certain periodicity Exhausting influences are apt to increase their frequency The liability to megrim lasts for years, and is apt to disappear in middle life or later Also called *migraine*, *hemicrania*, *nervous headache*, and *sick headache*

A fervent *megreyn* was in the ryȝt syde of hurr hedde. *Chron. Vilodun*, p 12 (*Halliwell*)

melanose (mel′a-nōs), *n* [NL, < Gr *μελάνωσις*, a becoming black see *melanosis*] A fungous disease of grape-vines, caused by *Septoria ampelina*. The leaves are the parts attacked, and are at first covered with brownish spots these soon spread over and discolor the entire surface of the leaf, which then drops off The fungus is probably a native of Europe, but also occurs in New York, along the lakes, in Kansas, and in Missouri See *Septoria*

melanosiderite (mel′a-nō-sid′e-rīt), *n* [< Gr. *μέλας* (*μελαν-*), black, + *σίδηρος*, of iron see *siderite*] A mineral occurring in black masses with a vitreous or resinous luster It consists of hydrated iron sesquioxid with 7 per cent. of silica It is found at Mineral Hill, Delaware county Pennsylvania.

melanosis (mel-a-nō′sis), *n* [NL, < Gr *μελάνωσις*, a becoming black, < **μελανοῦν*, blacken see *melanoma*] In *pathol* (*a*) An abnormal deposition of pigmentary matter in various organs or parts of the body, as the spleen, liver, or bone-marrow, associated with melanæmia, malarial poisoning, etc (*b*) The condition of the system associated with the presence of pigmented tumors Specifically this is an organic affection (due to the softening of the tissue of the part from a pigmentary deposit, especially tubercles) in which tissue is converted into a black hard, homogeneous substance, near which ulcers or cavities may form

melanosity (mel-a-nos′i-ti), *n* [< *melanous* (*-ose*) + *-ity*] Tendency toward blackness, darkness of color, as of the hair or eyes *Beddoe*, Science, VII 84

melanosperm (mel′a-nō-spėrm), *n* An alga belonging to the division *Melanospermeæ*.

Melanospermeæ (mel′a-nō-sper′mē-ē), *n pl*. [NL (Harvey, 1849), < Gr *μέλας* (*μελαν-*), black, + *σπέρμα*, seed, + *-eæ*] The olive-brown seaweeds, one of the three principal divisions into which the *Algæ* were divided by Harvey It included the *Fucaceæ*, *Laminariaceæ*, etc, but is now nearly obsolete

melanospermous (mel′a-nō-sper′mus) *a* [< Gr *μέλας* (*μελαν-*), black, + *σπέρμα*, seed, + *-ous*] Characterized by dark-colored seeds or spores, belonging to the *Melanospermeæ*

The group of *melanospermous* or olive green sea weeds
W. B. Carpenter, Micros, § 327

melanotekite (mel′a-nō-tē′kīt), *n* [Irreg < Gr. *μέλας* (*μελαν-*), black, + *τηκειν*, melt, + *-ite*²] A rare silicate of lead and iron from Långban, Sweden It occurs in black or blackish gray crystalline masses, with cleavage in two directions It fuses easily to a black glass whence the name

melanothallite (mel′a-nō-thal′īt), *n* [< Gr *μέλας* (*μελαν-*), black, + *θαλλός*, a branch, + *-ite*².] In *mineral*, a mineral occurring in black lamellæ, which upon exposure gradually change to a green color, and containing copper chlorid, copper oxid, and water It was found as a sublimation-product at Vesuvius

melanotic (mel-a-not′ik), *a* [< *melanosis* (*-ot-*) + *-ic*] 1. Properly, affected with melanosis, melane, melanod —2 In *zool*, same as *melanistic* **Melanotic cancer**, melanocarcinoma or melanosarcoma

Melanotus (mel-a-nō′tus), *n* [NL, < Gr *μέλας* (*μελαν-*), black, + *νῶτος*, the back] A genus of click-beetles of the family *Elateridæ*, founded by Eschscholtz in 1829 It is one of the largest and most important genera of *Elateridæ* and is distributed all over the world There are upward of 100 species, 44 of

which are North American These beetles give rise to some of the most destructive wire worms *M communis* is a common brown pilose species of the United States, half an inch long

melanotype (mel'a-nō-tīp), *n* [< Gr *μέλας* (*μελαν-*), black, + *τύπος*, type] In *photog*, a ferrotype [Rare or obsolete]

melanous (mel'a-nus), *a* [< Gr *μέλας* (*μελαν-*), black, + *-ous*] Dark-complexioned, brunette the opposite of *blond* or *xanthous* *Pritchard*

The *melanous*, with black hair and dark brown or black ish skins *Huxley*, Critiques and Addresses p 153

Melanoxylon (mel-a-nok'si-lon), *n* [NL (Schott, 1827), < Gr *μέλας* (*μελαν-*), black, + *ξύλον*, wood] A genus of leguminous plants of the suborder *Cæsalpineæ* and the tribe *Sclerolobieæ*, characterized by a compressed partially woody legume with samara-like seeds, the outer integument expanding into a wing at the apex There is but one species, *M Brauna* See *brauna*

melanterite (me-lan'te-rīt), *n* [< Gr *μελαντήρια*, compar of *μέλας* (*μελαν-*), black, + *-ite*²] The native hydrous sulphate of iron

Melanthium (me-lan'thi-um), *n* [NL (Linnæus, 1753), so called in allusion to the darker color which the persistent perianth assumes after blossoming, < Gr *μέλας*, black, + *ἄνθος*, a flower] A genus of liliaceous plants of the tribe *Veratreæ* They have flat broadly winged seeds, and the segments of the perianth have a distinct claw They are herbs having an erect leafy stem springing from a short rootstock, and an open pyramidal panicle of polygamous flowers, which are yellowish white or greenish There are 4 species all natives of North America and sometimes cultivated for ornament *M Virginicum* of the United States is called *bunch flower* (which see)

melanuria (mel-a-nu'ri-a), *n* [NL see *melanuria*] The presence of a dark pigment in the urine

melanuric (mel-a-nū'rik), *a* [As *melanuria* + *-ic*.] Pertaining to or characterized by the presence of very dark pigment in the urine — **Melanuric fever** See *fever*¹

melanurin (mel-a-nu'rin), *n* [< Gr *μέλας* (*μελαν-*), black, + *οὖρον*, urine] A dark pigment found in the urine

melaphyre (mel'a-fīr), *n* [< Gr *μέλας*, black, + (*πορ*)*φυρ*(*ίτης*), porphyry see *porphyry*] A fine-grained greenish- or brownish-black aggregate of plagioclase, augite, olivin, magnetite, or titaniferous iron and some chloritic mineral, usually delessite The term *melaphyre*, as it has been formerly used by lithologists, includes a considerable variety of rocks, but as now generally restricted it is properly applied to such basalts as have undergone considerable alteration Hence the melaphyres are, in point of fact, mostly of Paleozoic age, although some are Mesozoic, because the older a rock is other things being equal the more likely it is to have undergone chemical change

mela-rosa, mella-rosa (mel a-tō'za), *n* [< It *mela*, an apple, + *rosa*, a rose] The fruit of a tree of the genus *Citrus*, probably a variety of the lime, cultivated in Italy

melasma (me-las'mȧ), *n* [NL, < Gr *μέλασμα*, a black color, < *μέλαινειν*, blacken, < *μέλας*, black see *melas*] **1** An abnormal access of color of the skin, local or general, usually dependent upon constitutional disorder, local pigmentary stains of the skin The morbid process is called *melanopathia* Addison's disease is known as *suprarenal melasma* — **2** [*cap*] In *zool* (*a*) A genus of melanian mollusks *Adams*, 1858 (*b*) A genus of tenebrionine beetles, based on *M lineatum* of the Canaries *Wollaston*, 1864

melasmic (me-las'mik), *a* and *n* [< *melasma* + *-ic*] **I.** *a* Pertaining to melasma as, *melasmic* blotches

II. *n* Same as *melasma*, 1

melassest, *n* An obsolete form of *molasses*

melassic (me-las'ik), *a* [< F *melasse*, molasses, + *-ic*] Pertaining to or obtained from molasses as, *melassic* acid

Melastoma (me-las'tō-mȧ), *n* [NL (Burmann, 1737), so called because the fruit of some species, when eaten, stains the lips black, < Gr *μέλας* (*μελαν-*), black, + *στόμα*, mouth] An Old World genus of plants, type of the natural order *Melastomaceæ*, belonging to the tribe *Osbeckieæ* They have from 10 to 14 unequal anthers the connectives of the longer ones being produced anteriorly into two tubercles or spurs They are hairy shrubs, at most always erect with coriaceous entire leaves which are from 3 to 7 nerved and showy purple or rose colored flowers growing at the tips of the branches, either solitary or in clusters About 40 species are known, natives of tropical and western Asia Oceania and the Seychelles *M Malabathricum*, a shrub common in India, is there known as *Indian rhododendron* It is also called *Malabar laurel* or *gooseberry*

Melastomaceæ (me-las-tō-mā'sē-ē), *n pl* [NL (Brown, 1818), < *Melastoma* + *-aceæ*.] A natural order of dicotyledonous polypetalous plants of the cohort *Myrtales* The ovules are attached to the interior angle of the cells, or to basal placentæ, the anther usually opens at the top by two pores, the connective is thickened or variously appendaged, and the leaves have from 3 to 9 nerves The order embraces 133 genera and about 2 500 species, which are almost entirely confined to the tropics, and are most abundant in South America.

melastomaceous (me-las-tō-mā'shius), *a* Belonging or relating to the natural order *Melastomaceæ*

Melastomeæ (mel-a-stō'mē-ē), *n pl* [NL (Bentham and Hooker, 1867), < *Melastoma* + *-eæ*] A suborder of dicotyledonous polypetalous plants of the order *Melastomaceæ* The cells have rather prominent placentæ inserted in their internal angles, and many ovules the embryo is very small, and slightly rounded or subglobose The suborder embraces 9 tribes and 128 genera, of which *Melastoma* is the type They are trees, or rarely herbs, and are found in both the Old and New Worlds

Melchite (mel'kīt), *n* and *a* [< MGr *Μελχίτης*, < Syriac *malkāyē*, Ar *malekiya*, *milkiya*, lit. royal, < *melek*, king] **I.** *n* An orthodox Eastern Christian as distinguished from a Monophysite or Nestorian The name was originally given to the Orthodox as belonging to the imperial church, the title of *king* being that which was commonly given in Greek and in Oriental languages to the Roman and to the Byzantine emperor Although the term *Melchite* is older than the Council of Chalcedon (A D 451), its wider use dates from its adoption after that council by the Monophysites who rejected the decrees of the council, and employed this name to represent the Orthodox as receiving them merely in submission to the edict of the emperor Marcian The name *Melchite* is sometimes given also to members of communities of Christians in Syria and Egypt, formerly in communion with the Orthodox Greek Church, who have submitted to the Roman see

Those Syrian Christians who, though not Greeks, followed the doctrines of the Greek Church as declared at the Council of Chalcedon, were called by their opponents, by way of reproach, *Melchites*, "royalists" or "imperialists," because they submitted to the edict of Marcian in favour of the decrees of the Council of Chalcedon

china-tree, and *holy tree*, under *holy*.) Also called *bull margosa* The tree long known as *M. Azadirachta*, but now classed as *Azadirachta Indica*, is the margosa or nim-tree, common in India, often planted there and elsewhere (See *margosa*.) *M. Azedarach*, var *Australasica*, is an elegant tree of India, the Malayan archipelago, and Australia, called in the last-named country *white cedar*. *M. sempervirens*, now considered to be the same as *M. Azedarach*, has been called *hoop-tree* in the West Indies

Meliaceæ (mē-li-ā'sē-ē), *n. pl.* [NL (A. L. de Jussieu, 1817), < *Melia* + *-aceæ*.] A natural order of dicotyledonous polypetalous plants of the cohort *Geraniales*. The calyx is small, the stamens are almost always monadelphous, and the anthers are sessile on the tube or (usually) stalked. The order includes 37 genera and about 550 species, found throughout the warmer but rare in the temperate regions of the globe.

meliaceous (mē-li-ā'shius), *a.* Belonging to or resembling the *Meliaceæ*. Also *ceds elaceous*.

Meliad (mē'li-ad), *n.* [< Gr. *Μηλιάδες*, nymphs of fruit-trees (or of flocks), < *μῆλον*, an apple or any tree-fruit (or *μῆλον*, a sheep or goat).] In *Gr. myth.*, a nymph of fruit-trees or of flocks.

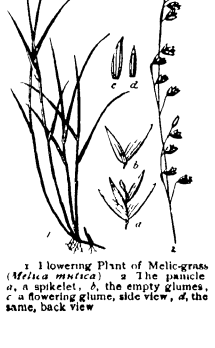
Melianthaceæ (mel-i-an-thā'sē-ē), *n. pl.* [NL. (Bentham and Hooker, 1888), < *Melanthus* + *-aceæ*.] A small order of dicotyledonous polypetalous plants of the cohort *Sapindales*, characterized by irregular polygamodiœcious flowers, stamens which are inserted at the base of the disk, albuminous seeds, and alternate stipulate leaves. *Melianthus* is the type genus.

Melianthus (mel-i-an'thus), *n.* [NL. (Tournefort, 1700), < Gr. *μέλι*, honey, + *ἄνθος*, a flower.] A genus of dicotyledonous polypetalous plants, type of the order *Melianthaceæ*, characterized by a calyx which is very oblique at the base, and by having from two to four ovules in each cell. They are shrubs with alternate odd pinnate leaves (the leaflets one-sided and decurrent on the stalk), and bear terminal or axillary racemes of curious irregular flowers, the lower ones sometimes imperfect. There are 5 species, natives of the Cape of Good Hope, one of which has been introduced into the Himalayas. The common name is (*Cape*) *honey flower*, or *honey plant*, the blossoms abounding in honey.



Melibean, Melibœan (mel-i-bē'an), *a.* [< L. *Melibœus*, name of a shepherd in Virgil's first eclogue (a dialogue), < Gr. *Μελίβοια*, ef fem. *Μελίβοια*, a personal name.] In *rhet.* and *poetry*, alternate, alternately responsive, alternating, amœbean.

melic (mel'ik), *a.* [< Gr. *μελικός*, pertaining to song, < *μέλος*, a song, strain, melody.] Pertaining to song, intended to be sung: applied especially to the more elaborate form of Greek lyric poetry, as distinguished from iambic and elegiac poetry.

Melica (mel'i-ka), *n.* [NL. (Linnæus, 1737), < It. *melica*, the great millet, < L. *mel*, honey.] A genus of grasses of the tribe *Festuceæ*, type of the subtribe *Melicæ*. The upper glumes are empty, and the spikelets are often quite large and erect in spreading. They are erect perennial plants, often tall, with usually slender panicles, and flat or convolute leaves. About 80 species are known, having a wide range over the globe, but mostly natives of temperate climates. They are handsome grasses, but of no great agricultural value, though some serve the purpose of pasturage. *Melic grass* is a general name for the species.

Meliceæ (mē-lis'ē-ē), *n. pl.* [NL. (Bentham and Hooker, 1883), < *Melica* + *-eæ*.] A subtribe of grasses of the tribe *Festuceæ*. It includes 4 genera, of which *Melica* is the type, and about 36 species.

1 Flowering Plant of Melic-grass (*Melica mutica*). 2 The panicle. *a*, a spikelet; *b*, the empty glumes; *c*, a flowering glume, side view; *d*, the same, back view.

meliceris (mel-i-sē'ris), *n.* [NL., < L. *melicerus*, < Gr. *μελικηρίς*, a tumor so called, < *μέλικηρον*, a honeycomb, < *μέλι*, honey, + *κηρός*, wax.] In *pathol.*, an encysted tumor containing matter like honey in color and consistence, usually a hygroma.

melicerous (mel-i-sē'rus), *a.* [< *meliceri(s)* + *-ous*.] Of the nature of meliceris, affected with meliceris, as a *melicerous* tumor.

melic-grass (mel'ik-gras), *n.* Any grass of the genus *Melica*.

Melicocca (mel-i-kok'ą), *n.* [NL. (Jacquin, 1763), < Gr. *μέλι*, honey, + *κόκκος*, a berry.] A genus of trees of the natural order *Sapindaceæ*, type of the tribe *Melicocceæ*. They are trees of considerable size, with alternate, abruptly pinnate leaves, and elongated, many-flowered racemes or panicles of small whitish flowers. See *honeyberry*.

Melicocceæ (mel-i-kok'sē-ē), *n. pl.* [NL. (Radlkofer, 1887), < *Melicocca* + *-eæ*.] A tribe of the natural order *Sapindaceæ*, the soapberry family. It embraces 9 genera, *Melicocca* being the type, and 48 species, found principally in the tropics.

melicotton†, *n.* Same as *melocoton*.

Melidæ (mel'i-dē), *n. pl.* [NL., < *Meles* + *-idæ*.] A family of arctoid carnivorous mammals, composed of the badgers, ratels, and skunks, corresponding to the three subfamilies *Melinæ*, *Mellivorinæ*, and *Mephitinæ* of the family *Mustelidæ*. See these words.

Melieæ (mē-lī'ē-ē), *n. pl.* [NL. (Adr. Jussieu, 1830), < *Melia* + *-eæ*.] A tribe of dicotyledonous polypetalous plants of the natural order *Meliaceæ*. The cells of the ovary contain two ovules, and the seeds have a fleshy albumen and plano-convex or foliaceous cotyledons. *Melia* is the type genus.

Melierax (me-lī'e-raks), *n.* [NL., < Gr. *μέλος*, a song, + *ἱέραξ*, a hawk.] A genus of African diurnal birds of prey of the family *Falconidæ*, founded by G. R. Gray in 1840; the chanting hawks. There are several species, the best known of which are *M. canorus*, *cantans*, or *musicus* of South Africa and *M. polyzonus*.

Chanting Hawk (*Melierax musicus*)

Melifera, meliferous. See *Mellifera*, *melliferous*.

Meligethes (mel-i-jē'thēz), *n.* [NL., < Gr. **μελιγήθης*, Doric *μελιγάθης*, honey-sweet, < *μέλι*, honey, + *γηθεῖν*, rejoice.] A genus of pentamerous beetles of the family *Nitidulidæ*. There are over 100 species, mostly of Europe, where they are sometimes called *glow-beetles*, they feed on various flowers, eating the pollen and fructifying organs. In this way *M. æneus* injures cruciferous vegetables.

melilite, mellilite (mel'i-līt), *n.* [Prop. *melilite*, < Gr. *μέλι*, honey, + *λίθος*, stone.] A mineral of a yellow or grayish yellow, found at Tivoli and Capo di Bove, near Rome. It occurs in very minute tetragonal crystals in the fissures and cavities of lava, also as an essential constituent of certain kinds of basalt; it is a silicate of aluminium, magnesium, and calcium.

melilot (mel'i-lot), *n.* [< OF. *melilot*, *mellilot*, *merilot*, F. *mélilot* = Sp. Pg. *meliloto* = It. *melilotto*, *melliloto*, < L. *melilotos*, < Gr. *μελίλωτον* or *μελίλωτος*, a kind of clover, < *μέλι*, honey, + *λωτός*, lotus: see *lotus*.] A plant of the genus *Melilotus*.

Melilotus (mel-i-lō'tus), *n.* [NL. (A. L. de Jussieu, 1789): see *melilot*.] A genus of plants of the natural order *Leguminosæ*, the pulse family, the suborder *Papilionaceæ*, and the tribe *Trifoleæ*, the clovers. It is distinguished by a small, fleshy, subglobous or obovoid legume, which is indehiscent or at length two-valved. The plants are herbs, with pinnately trifoliate leaves having adnate stipules and small white or yellow flowers, growing in loose racemes. About 10 species are known, which are found in the temperate and subtropical regions or the northern hemisphere. When dried, they have the peculiar fragrance of the Tonka bean or the vernal grass, owing to the presence of the principle called *coumarin* (which see). General names for the genus are *melilot* and *sweet clover*. *M. alba*, the white melilot or honey lotus, also called *Cabul clover*, is an excellent beeplant, but of little value as forage, and in some places a troublesome weed. *M. officinalis*, the common or yellow melilot, is, like the last, widely spread over Europe and Asia, and naturalized in America. It was formerly of medicinal repute, sold by the herbalists as *balsam-flowers*, but has disappeared from scientific medicine. See *hart's clover* and *king's-clover*.

Melinæ (mē-lī'nē), *n. pl.* [NL., < *Meles* + *-næ*.] A subfamily of *Mustelidæ*, typified by the genus *Meles*, the badgers. The form is stout and squat, the habits are terrestrial and fossorial. There are four leading forms of *Melinæ*: the European *Meles*, the Asiatic *Arctonyx* and *Mydaus*, and the American *Taxidea*. Also *Melina*.

meline (mē'lin), *a.* and *n.* [< L. *meles*, a badger (see *Meles*), + *-ine*[1].] **I.** *a.* Badger-like, of or pertaining to the *Melinæ*.

II. *n.* A badger of any kind, any member of the *Melinæ*.

[< LL. *melioratus*, pp. of *meliorare* (> It. *migliorare*, *migliorare* = Pg. *melhorar* = Sp. *mejorar* = OF. *meliorer*, *meillorer*), make better, < *melior*, better (compar. of *bonus*, good), = Gr. *βέλτιον*, adv., rather, compar. of *ἀγαθός*, adv., very much.] **I.** *trans.* To make better, improve, ameliorate.

> Grace does not give us new faculties and create another nature, but *meliorates* and improves our own.
> *Jer. Taylor*, Works (ed. 1835), II. 269.

> Tragedy was found the most plausing vehicle of conveying moral truths, of *meliorating* the heart, and extending the interests of humanity.
> *Goldsmith*, Origin of Poetry.

II. *intrans.* To grow better, be improved.

> Yesterday not a bud peeped the world was barren, peaked and pining to day 'tis inconceivably populous, creation swarms and *meliorates*.
> *Emerson*, Works and Days.

meliorater (mē'lyo-rā-tėr), *n.* Same as *meliorator*.

melioration (mē-lyo-rā'shon), *n.* [= OF. *meloration*, < LL. *melioratio(n-)*, bettering, < *meliorare*, make better: see *meliorate*.] 1. The act or process of making or becoming better; improvement, amelioration.

> Digging vastly about the roots of trees, which is a great means both to the acceleration and *meloration* of fruits, is practised in nothing but in vines.
> *Bacon*, Nat. Hist., § 433.

> By an insight into chymistry one may be enabled to make some *meliorations* (I speak not of transmutations) of mineral and metalline bodies.
> *Boyle*, Works, I. 354.

2. *pl.* In *Scots law*, improvements made by a tenant upon the property which he rents, and for which he is in certain cases entitled to compensation from the landlord.

meliorator (mē'lyo-rā-tor), *n.* One who or that which meliorates or makes better.

> The greatest *meliorator* of the world is selfish, huckstering trade.
> *Emerson*, Works and Days.

meliorism (mē'lyo-rizm), *n.* [< L. *melior*, better (see *meliorate*), + E. *-ism*.] 1. The improvement of society by regulated practical means: opposed to the passive principle of both pessimism and optimism.

> *Meliorism*, instead of an ethical is a dynamic principle. It implies the improvement of the social condition through cold calculation, through the adoption of indirect means. It is not content merely to alleviate present suffering, it aims to create conditions under which no suffering can exist.
> *L. F. Ward*, Dynam. Sociol., II. 408.

2. The doctrine that the world is neither the worst nor the best possible, but that it is capable of improvement: a mean between theoretical pessimism and optimism.

> It may be thought, however, that, if neither optimism nor pessimism is the conclusion to which we are led, the modified doctrine of what is called *Meliorism* may be accepted.
> *W. R. Sorley*, Ethics of Naturalism, p. 271.

> The only good reason for referring to the source of the word meliorist is] that you found it useful for the doctrine of *meliorism* to elicit one unfashionable confessor of it in the face of the fashionable extremes.
> *George Eliot*, Letter to James Sully, Jan. 19, 1877.

meliorist (mē'lyo-rist), *n.* and *a.* [< L. *melior*, better, + E. *-ist*.] **I.** *n.* One who accepts the practical or the theoretical doctrine of meliorism.

I am not, however, a pessimist — I am, I trust, a rational optimist, or at least a *meliorist*
Dr J Brown, Spare Hours, 3d ser , p 27

In her general attitude toward life, George Eliot was neither optimist nor pessimist She held to the middle term, which she invented for herself, of *meliorist* She was cheered by the hope and by the belief in gradual improvement of the mass
Cross, Life of George Eliot, III 309

I don't know that I ever heard anybody use the word *meliorist* except myself
George Eliot, Letter to James Sully, Jan 17, 1877

II. *a* Of or pertaining to meliorism or meliorists.

If we adopt either the optimist view or the *meliorist* view - if we say that life on the whole brings more pleasure than pain, or that it is on the way to become such that it will yield more pleasure than pain, then these actions by which life is maintained are justified, and there results a warrant for the freedom to perform them
H Spencer, Man vs State, p 96.

melioristic (mē-lyo-rĭs′tĭk), *a* [< *meliorist* + *-ic*] Of or pertaining to meliorism correlated with *optimistic* and *pessimistic*
