b Law The visible possibility of exercising over a thing such control as attaches to lawful ownership (but which may exist apart from lawful ownership), the detention or enjoyment of a thing by a person himself or by another in his name, the relation of a person to a thing over which he may at his pleasure exercise such rights as the character of the thing admits, to the exclusion of other persons, *esp.* the having of such exclusive control over land, in early instances sometimes used in the technical sense of Seisin

In the Roman Law possession is usually said to consist of the two elements—physical control and intention to possess but in English law the latter element does not assume the same prominence as in the hape of the *animus dominī* as has been thought to assume in Roman law The general rule of English law is that exclusive physical control gives legal possession unless the apparent possessor holds only as servant or bailiff on behalf f another (J M Lightwood in *Encycl Laws Engl* (1898) X 29). Primarily the term denotes a state of fact but this fact carries with it legal attributes, and so in the course of legal history the state of fact could always be ascertained with certainty and of it always produ ed the normal legal effects, the su ject of possession might become little diffi ult to find and it is very uncertain to whom the actual control of a th ng is to be attributed and when this question is settled the law may credit the advantages of possession to some person other than the apparent possessor Hence arises the distinction between *actual* and *legal* possession Actual possession denotes the existence of fact, but the person to whom are credited the advantages of possession has the legal possession whether he is the actual possessor or no Legal possession is usually accompanied by possession in fact known as 'possession in law' (*Ibid* 228-9) See this article also *inter alia Essay on Possession in the Common Law* by F Pollock and R S Wright 1888 *Treatise on Possession of Land* by John M Lightwood 1894

Potash (pɒ·tæʃ), *sb* [Early mod E. *pot ashes* pl., app. and Du *pot asschen* (1599 Kilian 'quod in oliis . . asseruntur, ne liquescentes effluant'), mod Du *potasch* = Ger *potasche*, Sweed *potaska*, Da. *potaske*, also F. *potasse* (1577 *potlas*, at Liege, Godef.), It., Pg., mod I *potassa*, Sp *potasa*]

The sense history of *potash* and its derivatives is involved in the advance of chemical knowledge The earliest term was *pot ashes* or *pot asshes* = Du. *pot asschen* = ashes of the crude products The essential substance of these, when purified from extraneous matters, was spoken of in the singular as *potash* or *potash* In 1736 this was proved by Dr Joseph Black of Edinburgh to be a compound sub stance, a carbonate, the removal fro m which of the carbonic acid left a residual 'alkali' or 'fixed' residue, hydroxide or caustic potash KHO), which chemists thereafter generally considered to be the true *potash* (in Fr *pot usse*) In 1807 this, in its turn, was shown by Sir H. Davy to be not a simple substance but to contain a new metal, of which he believed it to be the oxide. To the metal (K) he gave the name *potassium* (= the oxide to which the name *potash* was and *magnesium sodium* and *soda*, etc that of *potassa* Next year, Dakeel gave reasons for believing that the latter con tained also oxygen, which was subsequently shown to be so by hydroxide or hydrate (KHO), the simple oxide being the anhydrous form (K_2O) The salts of potassium in accord ance with the chemical theory of the time, were spoken of as compounds of the oxide and variously named *carbonate of potassa, of potass, of potash* (= potassium carbonate (K_2CO_3), *chlorate of potass, potasrs, or potash* (= potas sium chlorate, $KClO_3$) etc Commercially 'potash' is still often applied to the carbonate, by chemists usually to the hydroxide or hydrate caustic potash, KHO, but sometimes to the anhydrous oxide, K_2O and in names of compounds it is still often used instead of 'potassium as *chlorate of potash* = *potassium or potassic chlorate*

1) As the substance obtained originally by lixiviating or leaching the ashes of terrestrial vegetables and evaporating the solution in large iron pans or pots (whence the name) Chemically this is a crude form of potassium carbonate (more or less mixed with sulphate, chloride, and empy reumatic substances), but was long thought to be (when freed from impurities) a simple substance.

Sense 1 is the original, the plant to which it is applied was to Gerarde (1597, 1633) the 'Potatoes', the plant in sense 2, on account of its general likeness to the other as producing esculent tubers, he called from its alleged source 'Virginia Potatoes', and (in his *Catalogue* of 1599) 'Bastard Potatoes', but when this came to be an important object of cultivation as a food plant, it became 'the potato' par excellence, the exotic plant and tuber originally so named having relinquished it by some adjunct In 17th c instances of the word it is often difficult or impossible to determine which plant is meant

1 A plant, *Batatas edulis*, N O *Convolvulaceæ*, having tuberous roots, for which it is cultivated for food in most tropical and subtropical regions of the world , = Batata. Its native region is unknown, but it appears to have been known to the Spaniards first in the West Indies *c* 1500. Now distinguished as *Sweet* or *Spanish potato* (see 3 a).

Described in 1553, under the name *papas* in the *Cronica de Peru* of Piedro Cieza, cap xli, p 5 Introduced into Spain, it is said, from Quito, soon after 1580, and thence, c 1585, into Italy; in 1587 grown at Mons in Hainault, whence in 1588 two tubers were obtained and grown by the botanist Clusius, Keeper of the Imperial Garden to Maximilian II; described by him as *Papas Peruanum* Soon grown in other botanic gardens, as at Breslau in 1590 The plant may have been brought independently to England where Gerarde had it growing in 1596; but he was in error in his statement that he obtained it from Virginia (whence the erroneous name *Virginian Potatoes*, long kept up by English writers) for the plant is not a native of Virginia, and was not cultivated there in 16th c In 1693 its introduction into Ireland was attributed to Sir Walter Raleigh 'after his return from Virginia (where he never was), but no contemporary statement associating Raleigh's name with the potato has been found See Bruhfield *Raleghana* in *Ivane Dwonsh Assoc* 1898 XXX 158–197, B Daydon Jackson in *Gardeners' Chron* 1900, XXVII 161 178

5 *Physics* a. *Potential function* a mathematical function or quantity by the differentiation of which the force at any point in space arising from any system of bodies, etc can be expressed. In the case in which the system consists of separate masses, electrical charges, etc, this quantity is equal to the sum of these, each divided by its distance from the point

Introduced in 1828 by G Green, with special reference to electricity Now usually called simply *potential* (see B 4).

1828 G Green *Applic Math Anal to Electr & Magn* in *Math Papers* (1871) 9 Newton and Laplace, in the pulsive forces in nature are such that if we consider any material point *p* the effect in a given direction, of all the forces acting upon that point, arising from any system of bodies 3 under consideration will be expressed by a partial differential of a certain function of the co ordinates which serve to define the points position in space. This combina tion of this function is of great importance in many in quiries We shall often have occasion to speak of this function, and will therefore, for abridgement, call it the potential function arising from the system 3. 1882 Minchin *Unipl Kinemat* 135 The function *φ* is called the potential. The equation of the strain, and the curves obtained by varying the constant in the equation *φ* = *C* are called curves of equal potential

b *Potential energy* energy existing in a positional form, not as motion see Energy 6

Introduced by Rankine in 1853, *potential* being opposed to *actual*, as in sense 2 1 Thomson and Tait substituted *kinetic* for *actual*, making *potential energy* the opposite of *kinetic energy* The Latin expression *vis potentialis* had been used by the two Bernoullis and Euler *a* 1750

According to 18th c statements the test was at times abused by persons who installed such in anticipation of an election and of receiving money for their vote boiled a pot in the presence of witnesses on an improvised fireplace in the open air within the borough and thus passed as pot wallers.

2 *Coining* To test the weight of coins (or of the blanks to be minted) by weighing the number of these which ought to make a pound weight (or a certain number of pounds), and ascertaining how much they vary from the standard

From the earliest times, in the Indenture under which the Master of the Royal Mint produced coins for the King a limit was assigned within which the weight was to be maintained: and as it was impossible to make every coin of the exact weight, it was custom ry, before 1870, to fix the number of grains variation permissible in each pound weight, taken at random from the mass of coins, this variation being termed 'remedy for the Master Thus, for gold coins in which 20 troy pounds of standard gold make 934½ sovereigns the Indenture of 1817 allows a margin of twelve grains in the pound weight a d no more By the Coinage Act of 1870 the remedy in the gold coins is the same as I grain on each sovereign each of which is now separately tested by an automatic weighing apparatus of great delicacy
