quin'oform. Chinoform, a compound of quinine or cinchotannin and formaldehyde.

quinoidine (kwin-oy'dēn). 1. Chinoidin, amorphous quinine, a resinous substance consisting of the uncrystallizable cinchona alkaloids; tonic and antiperiodic in doses of gr. 5–30 (0.3–2.0). Various salts of quinoidine, borate, citrate, and tannate, are employed for the same purposes and in the same doses. 2. One of a group of ring-compounds in which one H is replaced by ketone oxygen; one of these is an active cathartic formed from phenolphthalein by the action of the alkaline contents of the bowel.

quinol (kwin'ol, kin'ol). Hydroquinone.

quinoline (kwin'o-lēn, kin'o-lēn). Chinoline, leucoline, C_9H_7N, a volatile alkaloid obtained from coal-tar, from the cinchona alkaloids, or made synthetically from aniline; occurs as a colorless or yellowish liquid, of a cool taste and a faint odor resembling that of bitter almond; antipyretic in doses of ♏10–20 (0.6–1.3), but seldom employed internally; used chiefly in 0.5 per cent. solution as a preservative fluid for anatomical and pathological specimens. **q.-bis'muth sulphocy'anate,** crurin, a reddish yellow granular powder, insoluble in water; applied as an antiseptic dressing to syphilitic ulcers, and by injection in gonorrhea **q. carboxyl'ic acid,** cinchonic acid, C_9H_6N-(COOH). **q. sal'icylate,** a white crystalline powder; used as an antipyretic in doses of gr. 5–15 (0.3–1.0). **q. tar'trate,** colorless needle-shaped crystals, soluble in 80 parts of water; antipyretic in doses of gr. 5–15 (0.3–1.0).

quinol'ogy [*quina* + G. *-logia*.] The botany, chemistry, pharmacology, and therapeutics, of cinchona and its alkaloids.

quin'one. One of a group of ring-compounds in which two opposite hydrogen atoms are replaced by oxygen; an anthraquinone* is the cathartic principle in aloes, cascara, frangula, and senna, stimulating peristalsis and increasing the secretion of the wall of the gut.

quinophan (kwin'o-fan). Cinchophenum.

quinotoxin (kwin-o-tok'sin). A poisonous isomer of quinine.

quinopyrine (kwin-o-pi'rēn) Chinopyrine, antipyrine-quinine, a white powder, a compound of quinine hydrochloride and antipyrine; employed

subcutaneously in the treatment of malaria in doses of gr. 5–15 (0.3–1.0).

quin'osol. Chinosol, potassium oxyquinoline-sulphonate, a yellow crystalline powder, soluble in water; antiseptic in surgery, and used to preserve anatomical preparations in 5 per cent. solution.

quinotropine (kwin-o-tro'pēn). Trade name of a compound of quinine and urotropine, a so-called uric acid solvent.

quin'ovin. A glucoside obtained from cinchona bark.

quinoxyl (kwin-ok'sil). Trade name of a mixture of iodohydroxyquinoline-sulphonic acid, 80 per cent., and sodium bicarbonate, 20 per cent. recommended in the treatment of amebic dysentery.

Quinquaud's disease' (kaṅ-ko') [Charles Émil *Quinquaud*, French physician, 1841–1894.] Suppurative inflammation of the hair-follicles of the scalp, causing a patchy baldness. **Q.'s sign,** the person to be tested rests the tips of the extended fingers lightly against the palm of the examiner; if the subject is an alcoholic the examiner will presently feel a number of light taps or a grating sensation transmitted through the finger tips.

quinquetubercular (kwin-kwe-tu-bur'ku-lar) L. [*quinque*, five, + *tuberculum*, tubercle.] Having five tubercles or cusps, as certain molar teeth.

quinquevalent (kwin-kwev'a-lent) [L. *quinque*, five, + *valere*, to have power.] Having a combining power equal to five atoms of hydrogen.

quinqui'na. Quinaquina.

quinquiv'alent. Quinquevalent.

quinsy (kwin'ze) [a corruption of *cynanche*] Circumtonsillar abscess; acute suppurative inflammation of the faucial tonsil and surrrounding tissues. **lin'gual q.,** phlegmonous inflammation of the lingual tonsil and neighboring structures

quin'tan. Recurring every fifth day, *i.e.* after a free interval of three days.

quintess'ence [L. *quintus*, fifth, + *essentia*, essence] A concentrated extract.

quintipara (kwin-tip'ah-rah) [L. *quintus*, fifth, + *parere*, to bear.] A woman who has given birth to five children, or who is giving birth to her fifth child.

quintisternal (kwin-tĭ-stur'nal) [L. *quintus*, fifth, + *sternum*.] The fifth sternal segment from the top, corresponding to the fifth intercostal space next above the xiphoid appendix.

Quintin treat'ment (kaṅ-taṅ') [René *Quintin*, French physician, contemporary] Sea-water treatment, see *marine serum* *

quin'tuplet [L. *quintuplex*, fivefold] One of five children born at one birth.

quionine (kwi'o-nēn, ke'o-nēn). Trade name of a mixture of cinchona alkaloids, less bitter than quinine.

quiten'idine. An alkaloid obtained by oxidation from quinidine.

quitt'er, quitt'or. A fistula of the coronet of a horse, accompanied by swelling and pain.

quiz [L. *quæsitio*, inquisition (?).] 1. To prepare a student for examination by means of systematically arranged questions covering the entire subject of study. 2. A course of quizzing to prepare a student for examination. 3. A class being prepared for examination by quizzing.

quiz-master. One who conducts a quiz.

quizz'er. Quiz-master.

quotidian (kwo-tid'ĭ-an) [L. *quotidianus*.] Daily, occurring every day. **q. fever,** a malarial fever, the paroxysms of which occur daily; it is usually a double tertian, in which there is an infection by two distinct groups of parasites sporulating alternately every forty-eight hours, but may, it is supposed, also be an infection by a form of pernicious malarial parasite.

quotient (kwo'shent) [L. *quoties*, how often.] The number of times one amount is contained in another. **blood q.,** color index, a figure obtained by dividing the hemoglobin percentage in a specimen of blood by the number of erythrocytes, expressed as a percentage of the normal number, in the same specimen; it indicates the percentage amount of hemoglobin in the red corpuscles. **D q.,** the ratio of glucose to nitrogen in the urine. **growth q.,** the fractional part or percentage of the entire food energy which is utilized for growth in the young animal; for most mammals it is 34 per cent., for man only 5 per cent. **pro'tein q.,** a figure obtained by dividing the amount of the globulin by that of the albumin in a specimen of blood-plasma. **respi'ratory q.,** the figure obtained by dividing the amount of carbon dioxide in the expired air by that of the oxygen inhaled; it is normally about 0.9.

q.v. 1. Abbreviation of L. *quantum vis*, as much as you wish. 2 Abbreviation of L. *quod vide*, which see.

R

R. Abbreviation for *Réaumur*, indicating a thermometer scale; for L. *recipe*, take, being the superscription of a prescription, usually indicated by the symbol ℞; for L. *remotum*, far point of vision, for *respiration*, for *right*, and for *Rickettsia*. Symbol for ohm, unit of electrical *resistance*.

R. [L. *residuum*, residue.] v. Behring's term for the mass of tubercle bacilli employed in the preparation of tuberculase. RI, the mass of moist bacilli previous to any treatment; RII, the mass after the extraction of the substances soluble in alcohol (TZ); RIII, the mass remaining after the removal of the constituents of RII soluble in pure water (TV); RIV, the *restbacillus*, the residue after the extraction of the constituents of RIII soluble in 10 per cent. salt solution (TGI); this RIV contains TC.

Ra. Chemical symbol of *radium*.

Raabe's test (rah'beh) [Gustav *Raabe*, German physician, *1875.] For albumin in the urine, which is indicated by a white ring formed round a crystal of trichloracetic acid dropped into the filtered urine in a test-tube.

rabb'eting [Fr. *raboter*, to plane] Impaction of the ragged ends of a broken bone, like the rabbeting of two planks.

rab'ic. Rabid.

rab'id. Relating to or suffering from rabies.

rabies (ra'bĭ-ēz) [L. rage, fury.] Lyssa; hydrophobia (the usual term for the disease in man), an acute infectious disease of dogs, wolves, and other animals, characterized by spasm of the muscles of respiration and deglutition, madness, and other symptoms of profound disturbance of the central nervous system. The lesions (congestion, perivascular exudation of leucocytes, and minute hemorrhages) are found exclusively in the brain, medulla, spinal cord, and ganglia. The specific organism is believed by most observers to be a protozoon, the so-called Negri* body, present in the substance of the nerve-cells and their processes. It occurs usually in two stages, the spasmodic and the paralytic. **dumb r.**, sullen r. **fu'rious r.**, the form or stage of r. in which the animal is wildly excited, running aimlessly about and snapping at objects, whether living or not, in his way. **paralyt'ic r.**, a form or stage marked by an ascending paralysis, dumb r. **spasmod'ic r.**, furious r. **sullen r.**, the paralytic stage of rabies, dumb-madness, drop-jaw. **therapeutic methods for r.**, see Babes, Fermi, Hogyes, Pasteur, Remlinger, Semple.

$RaBr_2$. Radium bromide.

race. 1. A division of mankind, by some regarded as a species, such as the Caucasian, Mongolian, and Negro. 2. A tribal division. 3. An artificial division of animals kept distinct only by careful selection in breeding. **r. cul'ture**, eugenics. **r. su'icide**, artificial prevention of conception.

raceme (ra-sēm') [L. *racemus*, a bunch of grapes.] An indefinite inflorescence in which the flowers are borne on stalks arising from a long central axis.

racemose (ras'e-mōs) [L. *racemus*, a bunch of grapes.] Branching, with nodular terminations, resembling a bunch of grapes. **r. adeno'ma**, a tumor preserving the racemose glandular form. **r. an'eurysm**, active dilatation-aneurysm. **r. gland**, any gland, like the parotid, which has numerous branching ducts terminating in acini.

rachi-. For words, other than the following, so beginning, see *rhachi-*.

rachitic (ră-kit'ic) Relating to, or suffering from, rickets, rickety. **r. ro'sary**, a row of beading at the junction of the ribs with their cartilages, often seen in rachitic children.

rachitis (ră-ki'(ke')tĭs) [a Greek-like form of the E *rickets*.] Rickets; written also *rhachitis*. **r. feta'lis annula'ris**, a congenital enlargement of the epiphyses of the long bones. **r. feta'lis micromel'ica**, a congenital condition in which the bones are abnormally short. **r. intrauteri'na**, **r. uteri'na**, r. fetalis.

rachitism (rak'ĭ-tizm). A rachitic state or tendency.

ra'cial. Relating to or characteristic of a race.

raclage (ră-klazh') [Fr.] Curettage, scraping.

rad. Abbreviation for L. *radix*, root.

radectomy (ră-dek'to-mĭ) [L. *radix*, root, + G. *ektomē*, excision.] Amputation (2), removal of a part or the whole of the root of a tooth.

Rademacher's system (rah'da-mah-khehr) [Johann Gottfried *Rademacher*, German physician, 1772–1850.] The search for a specific remedy for every disease.

radesyge (rah-da-sü'geh) [Nor.] A chronic ulcerative disease of uncertain nature, probably either syphilis or leprosy, which prevailed in Norway and Sweden in the 18th century

radiability (ra-dĭ-ă-bil'ĭ-tĭ). The property of being radiable.

radiable (ra'dĭ-a-bl). Capable of being penetrated or examined by rays, especially the *x*-rays.

ra'diad. In a direction toward the radial side.

ra'dial [L. *radialis*.] 1. Relating to the radius (bone of the forearm) or to any structures named from it, or to any radius. 2. Radiating; diverging in all directions from any given center.

radialis (ra-dĭ-a'lis). See under *arteria* and *nervus*.

ra'dian. An angle whose arc is equal to the length of the radius.

radiant (ra'dĭ-ant) [L. *radiare*, to shine, to radiate.] 1. Radiating, giving out rays. 2. A point from which light radiates to the eye. **r. matter**, matter (gas) in a state of extreme tenuity, as in a Crookes tube, the particles of which stream forth with great force and rapidity under the influence of a discharge of electricity of high potential.

radiate (ra'dĭ-āt). 1. To spread out in all directions from a center. 2. Radial (2). 3. Noting the surface of a bacterial culture having diverging ridges or furrows. **r. lig'ament**, stellate ligament, ligamentum* radiatum.

radiatio (ra-dĭ-a'shĭ-o) [L.] Radiation. **r. cor'poris callo'si** [BNA], radiation of the corpus callosum, the spreading out of the fibers of the corpus callosum in the centrum semiovale of each cerebral hemisphere. **r. cor'poris stria'ti** [BNA], radiation of the corpus striatum, fibers passing from the thalamus and hypothalamus to the caudate and lenticular nuclei and thence to the cortex. **r. occipitothalam'ica** [BNA], occipitothalamic radiation, optic radiation, a longitudi-

nal band of fibers in the medullary portion of the occipital lobe of the cerebrum, lying between the tapetum and the fasciculus longitudinalis inferior; the fibers pass from the thalamus, the lateral geniculate body, and the superior quadrigeminal body to the cortex of the occipital lobe. **r. op'tica,** optic radiation, r. occipitothalamica [BNA]. **r. pyramida'lis,** pyramidal radiation, white fibers passing to the cortex from the pyramidal tract. **r. tegmenta'lis,** fibers from the thalamus, partly from the red nucleus of the tegmentum, passing some through the internal capsule and some through the lenticular nucleus, and terminating in the cortex of the parietal lobe. **r. thalam'ica,** thalamic radiation, the fibers passing out from the surface of the thalamus and running through the internal capsule to reach the cerebral cortex, called also thalamocortical tract and thalamic peduncles.

radiation (ra-dĭ-a'shun). 1. The act or condition of diverging in all directions from a center. 2. The sending forth of light or any other rays. 3. A cerebral tract or diverging bundle of white fibers in the brain, see *radiatio*. 4. A ray. **mitogenetic r.,** the production of force by rays emanating from a cell during its mitosis.

radical (rad'ĭ-kl) [L. *radix*, root.] 1. In chemistry a group of elements or atoms passing intact from one compound to another and thus acting as a single element, but incapable of existing in a free state; in chemical formulæ a radical is distinguished by being enclosed in parentheses or brackets. 2. The haptophore group of an antibody. 3. Relating to the root or cause, thorough; as a *radical operation*, one which removes every trace of possibly diseased tissue, or makes recurrence impossible.

radicle (rad'ĭ-kl) [L. *radicula*, dim. of *radix*, root] 1. A rootlet or structure resembling one, as the *radicle of a vein*, a minute veinlet joining with others to form a vein; or the *radicle of a nerve*, a nerve fiber which joins others to form a nerve 2. Radical (1 and 2)

radicotomy (rad-ĭ-kot'o-mĭ) [L *radix* (*radic-*) root, + G. *tomē*, section.] Rhizotomy.

radic'ula [L. dim of *radix*, root] 1. Radicle (1) 2. A spinal nerve root, radix.

radiculalgia (ră-dik"u-lal'jĭ-ah) [L. *radicula*, radicle + G. *algos*, pain.] Neuralgia due to lesion of the sensory root of a spinal nerve.

radic'ular. Relating to a radicle. **r. syn'drome,** a group of symptoms resulting from any interference with the intradural portion of one or more spinal nerve roots; the chief symptoms are pain, paresthesia, hypesthesia, or hyperesthesia, motor, trophic, and reflex disturbances—one or more.

radiculec'tomy [L. *radicula*, radicle, + G. *ektomē*, excision.] Excision of the posterior root of a spinal nerve.

radiculitis (ră-dik-u-lī'(le')tis) [L. *radicula*, radicle + G. *-itis*.] Inflammation of the intradural portion of a spinal nerve root prior to its entrance into the intervertebral foramen or of the portion between that foramen and the nerve plexus.

radioactinium (ra"dĭ-o-ak-tin'ĭ-um). A disintegration product of actinium, giving off alpha and beta rays; its disintegration product is actinium X.

radioactive (ra"dĭ-o-ak'tiv) [L. *radius*, ray, + *activus; agere*, to act.] Possessing radioactivity. **r. con'stant,** the fraction of the whole amount of radioactive substance disintegrating in a given unit of time; **symbol λ.**

radioactivity (ra"dĭ-o-ak-tiv'i-tĭ) The property of emitting rays or particles of matter, which can pass through various substances opaque to light rays and which produce certain chemical and electrical effects; this property is possessed in an eminent degree by radium and less markedly by uranium, polonium, actinium, and thorium. **induced r.,** r. occurring temporarily in an ordinary substance which has been for a while within the sphere of influence of a radioactive substance.

ra'diobe [L. *radius*, ray, + G. *bios*, life.] A peculiar formation, possibly a crystal, formed in gelatin submitted to the action of radium, thought by J. B. Burke to be a transition form between a crystal and a living microbe.

radiobicipital (ra"dĭ-o-bi-sip'i-tal). Relating to the radius and the biceps muscle.

radiocar'pal. 1. Relating to the radius and the bones of the carpus. 2. On the radial or outer side of the carpus.

radiochemistry (ra-dĭ-o-kem'is-trĭ). The chemistry of radioactive substances.

radiocinematography (ra"dĭ-o-si-ne-mă-tog'ră-fĭ) [L. *radius*, ray, + G. *kinēma*, motion, + *graphē*, drawing, writing.] A moving picture of the movements of organs as revealed by an *x*-ray examination.

radiode (ra'dĭ-ōd) [*radium* + G. *odos*, way.] A metal container for radium.

radiodermatitis (ra"dĭ-o-der-mă-ti'(te')tis) [L. *radius*, ray, + G. *derma*, skin, + *-itis*.] Actinodermatitis.

radiodiagnosis (ra"dĭ-o-di-ag-no'sis). Diagnosis by means of the *x*-rays.

radiodigital (ra"dĭ-o-dij'ĭ-tal). Relating to the fingers on the radial or outer side of the hand.

radiodontia (ra-dĭ-o-don'shyah) [L. *radius*, ray, + G. *odous*(*odont-*), tooth.] Radioscopic examination of the alveoli and roots of the teeth.

radioelement (ra"dĭ-o-el'e-ment). Any one of the elements possessing radioactivity, *i.e.* which spontaneously emit primary radiations; there are over 30 or these thus far discovered.

radiogen (ra'dĭ-o-jen). A radioactive substance.

radiogenol (ra'dĭ-o-jen-ol). An emulsion of radioactive substances with bismuth subnitrate in mineral oil.

ra'diogram [L. *radius*, a ray, + G *gramma*, a writing.] Actinogram.

ra'diograph [L. *radius*, ray, + *graphē*, a writing.] Actinograph.

radiog'raphy. Actinography.

radiohu'meral. Relating to the radius and the humerus, noting the articulation between them.

Radiola'ria [L. *radius*, ray.] A subclass of *Actinopoda*, in which there is a chitinous capsule between the endoplasm and the ectoplasm; exclusively salt-water protozoan forms.

radiolead (ra"dĭ-o-led'). Radium D.

radiol'ogist. One skilled in the diagnostic and therapeutic use of the *x*-rays and other forms of radiant energy.

radiol'ogy [L. *radius*, ray, + G. *-logia*.] Actinology.

radiolucency (ra-dĭ-o-lu'sen-sĭ). State of being only moderately pervious or impervious to the *x*-ray.

radiolucent (ra-dĭ-o-lu'sent). Neither wholly penetrable nor wholly impenetrable by the *x*-ray or other forms of radiation.

radi'olus [L. dim. of *radius*, spoke.] A probe or sound.

radiom'eter [L. *radius*, ray, + G. *metron*, measure.] A device for determining the penetrative power of *x*-rays.

radiomus'cular. Relating to the radius and the neighboring muscles, noting certain nerves and muscular branches of the radial artery.

ra'dion [L. *radius*, ray, + G. *ōn*, being.] One of the particles constituting the alpha or beta rays or the cathode rays.

radioneuritis (ra″dĭ-o-nu-ri′(re′)tis). Actinoneuritis.

radiopacity (ra-dĭ-o-pas′ĭ-ti). State of being radiopaque.

radiopaque (ra-dĭ-o-pāk′). Exhibiting opacity to or impenetrability by the *x*-ray or any other form of radiation.

radiopal'mar. Relating to the radial or outer side of the palm.

radioparency (ra-dĭ-o-par′en-sĭ). State of being radioparent.

radioparent (ra-dĭ-o-par′ent). Transparent to or penetrable by the *x*-ray or other forms of radiation.

radioprax'is [L. *radius*, ray, + G. *praxis*, a doing.] Actinopraxis.

radios'copy [L. *radius*, ray, + *skopeō*, I examine.] Actinoscopy, skiascopy (2).

radiostereoscopy (ra″dĭ-o-ster-e-os′ko-pĭ) [L. *radius*, ray, + G. *stereos*, solid, + *skopeō*, I examine]. Actinoscopy.

ra'diostol. Irradiated ergosterol, claimed to be rich in the antirachitic vitamin D.

radiotellurium (ra″dĭ-o-tel-lu′rĭ-um). A disintegration product of radium emanation, polonium.*

radiother'apy. Actinotherapy.

radiothermy (ra″dĭ-o-thur′mĭ) [G. *thermē*, heat.] Diathermy effected by heat from radiant sources.

radiothorium (ra-dĭ-o-tho′rĭ-um). A radioactive substance, one of the disintegration products of thorium, transformed from the inactive mesothorium; it is said to emit the same rays as radium and to be weight for weight more powerful than that; its life, however, is only about seven years; it was discovered by Ramsay and Hahn in 1904; its disintegration product is thorium X.

radiotoxemia (ra-dĭ-o-toks-e′mĭ-ŭ) [L. *radius*, a ray, + *toxemia*.] Actinotoxemia.

radioulnar (ra″dĭ-o-ul′nar). Relating to both radius and ulna.

ra'dium. A metallic element, symbol Ra, atomic weight 226.4, extracted in very minute quantities from pitchblende; it is nonexistent, so far as known, in a free state. Radium possesses the property of radioactivity to a degree greater than that of any other known substance, 100,000 times more than uranium; it is fluorescent and imparts this quality to other substances, causes gases to become conductors of electricity, discharges electrified bodies, and affects a photographic plate through opaque substances. It gives forth three kinds of rays, known as alpha (α), beta (β), and gamma (γ) (see under *ray*), and also a radioactive gas or emanation (radon, niton*). Its therapeutic action is similar to that of the *x*-rays. It causes extensive "burns" of the skin when applied too long and without a proper shield. It is applied in the form of one of its salts, the bromide, carbonate, chloride, and sulphate being those in common use; these are all mixtures of a radium and a barium salt, but are standardized on the basis of the U. S. Bureau of Standards measurement. **r. emana'tion,** radon, niton, see under *emanation*. The many known disintegration products of radium emanation are called respectively radium A, B, C^1, C^2, D (radiolead), E^1, E^2, and F (polonium, or radiotellurium).

radiumization (ra-dĭ-um-i-za′shun). Exposure of a part to radium rays; external radium therapy.

ra'dius, gen. and pl. *ra'dii* [L. spoke of a wheel rod, ray.] 1. A straight line passing from the center to the periphery of a circle. 2. The outer and shorter of the two bones of the forearm. **r. curvus,** Madelung's deformity, an inferior radioulnar subluxation due to a curvature of the lower extremity of the radius with concavity anterior. **r. fixus,** a line passing from the hormion to the inion.

ra'dix, gen. *radi'cis*, pl. *radi'ces* [L.] 1. The root of a plant. 2. The primary or beginning portion of any part, as of a nerve at its origin from the brain or spinal cord. **r. ante'rior** [BNA], the anterior, ventral, or motor root of a spinal nerve. **r. arcus ver'tebræ** [BNA], root of the vertebral arch, pedicle. **r. bre'vis gan'glii cilia'ris** [BNA], motor root of the ciliary ganglion, short root of the ciliary ganglion, a branch of the oculomotor nerve given off in the superior orbital fissure. **r. den'tis** [BNA], root of a tooth, that part below the neck, covered by cementum instead of enamel, which is fixed in the alveolus. **r. dorsa'lis,** r. posterior [BNA]. **r. latera'lis trac'tus op'tici** [BNA], lateral root of the optic tract, one of the two roots of origin of the optic tract which comes from the lateral geniculate body and the pulvinar of the thalamus. **r. lin'guæ** [BNA], root of the tongue, the posterior attached portion of the tongue. **r. lon'ga gan'glii cilia'ris** [BNA], sensory root of the ciliary ganglion, a slender, sometimes double, branch of the nasociliary nerve, arising from the first part of the nerve where it crosses the optic nerve. **r. media'lis trac'tus op'tici** [BNA], medial root of the optic tract, one of the two roots of origin of the optic tract which comes from the medial geniculate body. **r. mesenter'ii** [BNA], the origin of the mesentery of the small intestine from the posterior parietal peritoneum. **r. moll'is gan'glii cilia'ris** [BNA], soft root of the ciliary ganglion, sympathetic nerve fibers from the internal carotid plexus which enter the posterior border of the ciliary ganglion. **r. na'si** [BNA], root of the nose, the upper extremity of the nose situated between the two orbits. **r. ner'vi facia'lis** [BNA], root of the facial nerve, fibers running from the nucleus of the facial upward to the colliculus facialis where they curve around the abducens nucleus and then pass outward, between the superior olive and sensory nucleus of the trigeminal, to the ventral surface of the lower part of the pons. **r. pe'nis** [BNA], root of the penis, the proximal extremity of the penis attached to the two pubic bones. **r. pi'li** [BNA], hair-root, the part of a hair which is embedded in the hair-follicle; its lower succulent extremity, capping the papilla of the follicle, is called the bulb. **r. poste'rior** [BNA], the posterior, dorsal, or sensory root of a spinal nerve. **r. pulmo'nis** [BNA], root of the lung, all the structures entering or leaving the lung at the hilus, forming a pedicle invested with the pleura. **r. un'guis** [BNA], root of the nail, the proximal end of the nail, concealed under a fold of skin. **r. ventra'lis,** r. anterior [BNA].

ra'don. Niton, radium emanation.*

raf'finose [Fr. *raffiner*, to refine.] Melitose, melitriose, a dextrorotatory trisaccharide occurring in cotton seed and in the molasses of beet-root.

rag'-sorters' disease'. Anthrax, malignant pustule

Raillietina (ri-lĭ-ĕ-te′nah). A genus, or subgenus, of the family, *Davaineidæ*, of tapeworms,

three species of which, *R. madagascariensis*, or *demerariensis* (*Davainea madagascariensis*), *R. asiatica*, and *R. formosana*, have been found (the latter only once) in man.

rail'way-spine. Erichsen's disease, a form of traumatic neurasthenia following concussion of the spine produced in a railway accident; the symptoms are ill-defined and the pathology is obscure.

Rai'ney's cap'sules, cor'puscles, or **tubes** [George *Rainey*, English anatomist, 1801–1884.] Miescher's* tubes.

raised (rāzd). Noting a bacterial culture with thick surface growth, flat with abrupt edges.

raisin tea (ra'zin te). A ptisan made by adding a quarter of a pound of washed seedless raisins to one pint of boiling water, stirring until cool, and then straining.

râle (rahl) [Fr. rattle.] Rhonchus, an adventitious sound, of varied character, heard on auscultation of the chest in many cases of disease of the lungs or bronchi. **cav'ernous r.,** see under *cavernous*. **con'sonating r.,** a resonant r. produced in a bronchial tube and heard through consolidated lung tissue. **crep'itant r.,** a fine bubbling or crackling sound produced by the presence of a very thin secretion in the smaller bronchial tubes. **dry r.,** a sound produced by a constriction in a bronchial tube or the presence of a viscid secretion narrowing the lumen. **metall'ic r.,** one of metallic quality caused by resonance in a large cavity. **moist r.,** one of a bubbling character caused by the pressure of a fluid secretion in the bronchial tubes or a cavity. **pleural r.,** a friction sound produced by the rubbing together of roughened pleural surfaces. **r. in'dux,** the crepitant r. heard in pneumonia in the stage of beginning consolidation. **r. re'dux,** (1) a fine crepitation heard at the beginning of resolution in pneumonia; (2) a friction sound heard as the fluid effusion disappears after a pleurisy. **sib'ilant r.,** a whistling sound caused by the presence of a viscid secretion narrowing the lumen of a bronchus **sono'rous r.,** a cooing or snoring sound often produced by the vibration of a projecting mass of viscid secretion in a large bronchus. **subcrep'itant r.,** a very fine crepitant r. **vesic'ular r.,** crepitant r **whist'ling r.,** sibilant r.

Ralfe's test [Charles Henry *Ralfe*, English physician, 1842–1896.] 1 For acetone: iodoform is produced at the plane of contact on pouring urine containing acetone over a boiled solution of potassium iodide and caustic potassa. 2 For peptone in the urine, a pink color is produced at the plane of contact when urine containing peptones is poured carefully over a layer of Fehling's solution.

ra'mal. Relating to a ramus

R.A.M.C Abbreviation for Royal Army Medical Corps.

Ramdohr's method [C. A von *Ramdohr*, New York surgeon, 1855–1912.] End-to-end intestinal anastomosis by invagination of the upper end into the lower and retention by sutures.

ra'mex [L.] Hernia, varicocele, or any scrotal tumor.

ramifica'tion [see *ramify*.] A branching.

ram'ify [L *ramus*, branch, + *facere*, to make] To branch.

ramisection (ram-ĭ-sek'shun) [L. *ramus*, branch, + *sectio*, cutting.) Section of certain of the nerve fibrils connecting the sympathetic and spinal systems.

Ramstedt operation (rahm'stet op-ur-a'shun). Fredet-Ramstedt operation (*q.v.*).

ramollissement (ră-mŏ-lēs-moṅ') [Fr.] Softening.

Ramón y Cajal (rah-mōn' e kah-hahl') See *Cajal*.

ra'mose, ra'mous. Branching; resembling a branch.

ram'part. See under *maxillary*.

Rams'den's oc'ular [Jesse *Ramsden*, English optician, born in Nova Scotia, 1735–1800.] An eyepiece of a microscope, consisting of two planoconvex lenses with convexities turned to each other.

ram'ulus [L. dim. of *ramus*, a branch.] A small branch or twig; one of the terminal divisions of a ramus.

ra'mus, pl. *ra'mi* [L.] 1. A branch 2 One of the primary divisions of a nerve or blood-vessel. 3. A part of an irregularly shaped bone (less slender than a "process") which forms an angle with the main body. 4. One of the primary divisions of a cerebral sulcus. **r. anastomot'icus,** anastomotic branch, a bundle of fibers passing from one nerve to another, often conveying sensory fibers to a motor nerve or motor fibers to a sensory nerve **r. anastomot'icus peronæ'us** [BNA], peroneal anastomotic ramus, nervus communicans fibularis or peronæus, arises from the peronæus communis in the popliteal space and passes over the outer head of the gastrocnemius to the middle third of the leg where it unites with the n cutaneus suræ medialis to form the sural nerve **r. auricula'ris vagi** [BNA], auricularramus of the vagus, Arnold's nerve, a branch of the jugular ganglion of the vagus, supplying the back of the pinna and the external auditory meatus **r. commu'nicans,** communicating branch, a small bundle of nerve-fibers connecting a cerebrospinal nerve with a sympathetic ganglion; the fibers passing from the ganglion to the cerebrospinal nerve are nonmedullated and are called *gray* rami communicantes, those passing in the reverse direction are medullated and are called *white* rami communicantes; see also *systema nervorum sympathicum*. **r. interfunicula'ris,** one of the fibers connecting the two cords or chains of the sympathetic nervous system. **r. internodia'lis,** one of the fibers connecting the ganglia of the sympathetic nervous system, the aggregation of which makes up the two sympathetic cords. **r. mandib'ulæ,** ramus of the lower jaw; the upturned perpendicular extremity of the mandible or lower maxilla on either side; it gives attachment on its external surface to the masseter muscle. **r. meninge'us va'gi** [BNA], meningeal ramus of the vagus, recurrent branch of the vagus, a branch from the jugular ganglion of the vagus to supply the dura mater of the posterior cranial fossa. **r. os'sis is'chii** [NK], ramus of the ischium, one of the two bars forming the greater portion of the ischium and constituting the inferior and posterior boundaries of the obturator foramen; the superior ramus passes downward and backward from the acetabulum; the inferior or ascending ramus extends forward, forming an acute angle with this, and joins the inferior or descending ramus of the pubis. **r. os'sis pu'bis,** [NK], ramus of the pubis, one of the two portions of the pubis forming the margin of the obturator foramen; the superior or ascending ramus passes upward and outward from the junction with the inferior ramus to the acetabulum; the inferior or descending ramus passes downward and outward from the angle to join the inferior ramus of the ischium.

ran'cid [L. *rancidus; rancere*, to stink] Having a sharp disagreeable odor and taste, characterizing an oil or other fat which is decomposing.

ran'dia. The root of *Randia dumetorum*, a tree of India, antispasmodic and emetic. The fruit of this and other species of R. is astringent and nauseant.

Ran'dolph's test [Nathaniel Archer *Randolph*, American physician, 1858–1887.] For peptone in the urine: a yellow precipitate is produced by the addition of 3 drops of Millon's reagent and 2 drops of a saturated solution of potassium iodide to 10 c.c. of urine containing peptones.

ranine (ra'nīn) [L. *rana*, a frog.] Relating to the under surface of the tongue. **r. ar'tery,** the terminal portion of the lingual artery **r. tumor,** ranula.

Ran'ke's ang'le [Hans Rudolph *Ranke*, Dutch anatomist, 1849–1887.] The angle formed by the horizontal plane of the head and a line passing from the center of the maxillary alveolus, below the nasal spine, to the center of the frontonasal suture.

Ran'ke's for'mula [Karl Ernst *v. Ranke*, German chemist, 1861–1927.] A = grams of albumin per liter of a serous fluid: then, A =(sp. gr. −1000) ×0.52 − 5.406.

Ranke's stages of tuberculosis: 1. Primary infection occurring almost always in early youth. 2. Secondary generalized infection involving the joints, glands, or skin, and sometimes acute miliary tuberculosis. 3. Chronic tuberculosis affecting the lungs chiefly.

Ran'sohoff's opera'tion [Joseph *Ransohoff*, American surgeon, 1853–1921.] The making of numerous cross incisions through the pulmonary pleura for the relief of empyema.

ran'ula [L. dim. of *rana*, a frog.] Hypoglossis, hypoglottis, a cystic tumor of the floor of the mouth, due to obstruction of the duct of the sublingual glands or of the glandula incisiva; any cystic tumor of the under surface of the tongue or floor of the mouth. **r. pancreat'ica,** a cystic tumor caused by obstruction of the pancreatic duct.

ran'ular. Relating to a ranula.

Ranvier's base'ment mem'brane (roń-ve-a') [Louis Antoine *Ranvier*, French histologist, 1835–1922.] Renaut's* layer. **R.'s crosses,** black or brown figures in the shape of a cross, marking R.'s nodes in the longitudinal section of a nerve stained with silver nitrate. **R.'s discs,** tactile nerve endings, of cupped disc-like form, in the skin. **R.'s membrane,** Renaut's* layer. **R.'s motor points** or **spots,** minute terminal swellings of the axis-cylinders of nerve-fibers in the interior of a muscle-fiber near the nucleus. **R.'s nodes,** constrictions occurring at more or less regular intervals in the medullary substance of a nerve-fiber., **R.'s segments,** internodes, segments of the medullary substance of a nerve-fiber between R.'s nodes. **R.'s plexus,** sub-basal stroma plexus* of the cornea.

rape [L. *rapere*, to seize, to drag away.] 1. To ravish, to commit rape upon. 2. The violation of a woman without her consent. 3. [L. *rapa*, turnip.] Rape-seed, the seed of *Brassica campestris*, from which a fixed oil is obtained.

rapha'nia. Rhaphania.

raphe (raf'e) [G. *rhaphē*, a seam.] The line of union of two contiguous and similar structures. **r. anococcyge'a,** an aponeurotic membrane stretching from the anus to the coccyx. **r. cor'poris callo'si,** a slight anteroposterior furrow on the median line of the upper surface of the corpus callosum. **r. lin'guæ,** sulcus medianus linguæ [BNA]. **r. medull'æ oblonga'tæ** [BNA], a plane separating the lateral halves of the medulla oblongata, seen on cross-section, in which is a decussation of fibers from the two sides. **r. pala'ti** [BNA], the median ridge on the hard palate. **r. palpebra'lis latera'lis** [BNA], lateral palpebral raphe, external tarsal ligament, a narrow fibrous band attached to the malar bone and to the margins of the upper and lower tarsi. **r. perine'i,** the central anteroposterior line of the perineum, most marked in the male being continuous with the raphe of the scrotum. **r. pharyn'gis** [BNA], the central line of the pharynx posteriorly where the muscular fibers meet and partly interlace. **r. pterygomandibula'ris** [BNA], pterygomandibular ligament, a tendinous thickening of the buccopharyngeal fascia, separating the buccinator muscle from the superior constrictor of the pharynx. **r. scro'ti** [BNA], a central line, like a cord, running over the scrotum from the anus to the root of the penis; it marks the position of the septum scroti.

raphid'iospore. Rhaphidiospore.

raptus melancholicus (rap'tus mel-an-kol'ĭ-kus) [L. *raptus*, a seizure.] An attack of extreme agitation or frenzy occurring in the course of melancholia.

rarefac'tion [see *rarefy*.] Expansion; the process of becoming light or less dense; the condition of being light; opposed to condensation

rar'efy [L. *rarus*, thin, + *facere*, to make] To become light or less dense. **rar'efying ostei'tis,** see *osteitis*

rasce'ta. The transverse wrinkling on the volar surface of the wrist.

Rasch's sign [Hermann *Rasch* German obstetrician, *1873] Fluctuation in the lower segment of the uterus when the organ is pressed down against the examining fingers in the vagina; a sign of pregnancy in the early months.

rash [L. *rasus; radere*, to scrape] An eruption on the skin, more or less extensive and usually temporary in character. **antitox'in r.,** a serum r sometimes following an injection of diphtheria antitoxin. **canker r.,** scarlatina **drug r.,** dermatitis medicamentosa. **en'ema r.,** a generalized erythema, with pruritus, sometimes occurring after the administration of a soap-suds enema. **gum r.,** strophulus. **heat r.,** miliaria rubra. **nettle r.,** urticaria. **rose r.,** roseola. **serum r.,** an uperthion sometimes following the injection of any serum, such as an antitoxin. **lily r.,** see *lily-rash*. **tonsillot'omy r.,** an erythematous, roseolar, or papular eruption on the neck and trunk following an operation on hypertrophied tonsils. **tooth r.,** strophulus. **wildfire r.,** strophulus volaticus.

rasion (ra'zhun) [L. *radere*, to scrape.] The subdivision of a crude drug by a rasp to prepare it for extraction.

ras'mocine. A resinoid from the root of *Cimicifuga racemosa*, antirheumatic, antispasmodic, and tonic in doses of gr. 1–5 (0.06–0.3).

Ras'mussen's an'eurysm [Fritz Waldemar *Rasmussen*, Danish physician, 1834–1881.] Aneurysmal dilatations of branches of the pulmonary arteries, the rupture of which in tuberculous cavities is the cause of hemoptysis.

ras'patory. An instrument used for scraping a bone.

raspberry (raz'ber-ĭ). Rubus.

rat'any [native Brazilian name.] Krameria.

rat-bite fever. Sokosho, sodoku, a disease marked by febrile attacks, preceded by a chill and occurring at irregular intervals, following the bite of a rat; the pathogenic organism is a spirochete, *Spirochæta morsus muris*, or *Spirillum minus*.

RASPATORY.

Rathke's col'umns (raht'keh) [Martin Heinrich *Rathke*, German anatomist, 1793–1860.] Two elongated cartilages at the anterior extremity of the chorda dorsalis. **R.'s divertic'ulum, pock'et,** or **pouch,** an ectodermic pouch in the buccopharyngeal membrane of the embryo, extending upward between the forebrain and the hindbrain; from it is developed the anterior lobe of the hypophysis cerebri, or pituitary body. **R.'s folds,** two folds of the mesoderm which unite to complete the rectum.

rat'in. A culture of the Gartner bacillus used as a rat poison.

ratio (ra'shyo) [L.] Proportion; quotient. **ketogen'ic-an'tiketo-gen''ik r.,** the proportion between substances that form glucose in the body and those that form fatty acids.

ration (ra'shun). An allowance of food and drink sufficient for a definite period.

rational (rash'un-al) [L. *ratio*, reason.] 1. Reasonable. 2. Having the reasoning faculties; not delirious or comatose.

rationalization (rā''shun-al-i-za'shun) [L. *ratio*, reason.] The necessity felt for finding a reason or explanation for every phenomenon; the alleging of a commendable reason for some act really performed for an unworthy reason.

rats'bane. Arsenic, arseni trioxidum.

rat-tails. Lichen on the leg of a horse, especially over the flexor tendons, the papillæ of the hairs being swollen and prominent.

ratt'lesnake. Crotalus.

Rau's proc'ess (row) [Johann J. *Rau*, Dutch anatomist, 1668–1719.] Processus gracilis (anterior [BNA]) of the malleus, Folian process.

Rauber's layer (row'ber) [August *Rauber*, German anatomist, *1845.] The layer of the trophoblast, in the blastocyst, covering the formative cellmass.

Rauchfuss' tri'angle (rowkh'foos) [Karl Andreyevich *Rauchfuss*, Russian physician, 1835–1915.] Grocco's* triangle.

rauschbrand (rowsh'brahnt) [Ger.] Symptomatic anthrax.

Ra'vius's proc'ess [*Ravius*, Latinized form of *Rau*.] Rau's* process.

ray [L. *radius*.] A line of light, heat, or other form of radioactivity. The rays from radium and other radioactive substances are produced by a spontaneous disintegration of the atom; thev are material particles, electrically charged, or ethereal waves of the nature of those of sunlight. **actin'ic r.,** a light ray toward and beyond the violet end of the spectrum which acts upon a photograph plate and produces other chemical effects. **alpha-rays,** *α*-**rays,** minute particles of matter or ions, highly charged with positive electricity, emitted from radioactive bodies with enormous velocity; they have less penetrative power than beta-rays, and like them are deflected by a magnet. **Becquerel' rays,** the invisible radiation of uranium, radium, and other radioactive substances, which is capable of passing through opaque bodies, acting on photographic plates, and discharging electrified bodies **beta-rays,** *β*-**rays,** minute particles of matter, or electrons or corpuscles, charged with negative electricity, emitted with great velocity from radioactive bodies; they have properties similar to the cathode rays emitted from a Crookes' tube; they have greater penetrative power than the alpha-rays, and like them are deflected by a magnet. **Blondlot rays,** n-rays, see *Blondlot*. **bor'derline rays,** grenz rays, very soft *x*-rays, closely allied to the ultraviolet rays in their wavelength and in their biological action upon tissues; they are produced by an especially built vacuum tube with a hot cathode operating from a transformer delivering not more than 8 KW. **canal' rays,** rays observed back of the cathode in a Crookes tube; they are analogous to the alpha rays but of much lower velocity. **cath'ode rays,** a stream of negatively electrified corpuscles, or electrons, emitted from the negative electrode (cathode) in a Crookes' tube; their bombardment of the glass wall of the tube or of the anode gives rise to the *x*-rays or Roentgen rays. chem'ical r., actinic r. **del'ta-rays,** *δ*-**rays,** etheric waves, waves of motion of high penetration, given off by radioactive substances. **direct' rays,** primary rays (2). **gamma-rays,** *γ*-**rays,** waves of motion emitted from radioactive substances; they are not electrically charged particles, like the alpha or beta rays, but waves of motion analogous to, if not identical with, the *x*-rays; they have great penetrative power, but comparatively slight energy, and are not deflected by a magnet. **grenz-ray,** borderline r. **hard rays,** rays of short wave length and great penetrability. **Hertz'ian rays,** see *Hertzian*. **indirect' rays,** *x*-rays generated at the surface of the glass of the tube. **ion'ic rays,** alpha-rays. **Lenard' rays,** see *Lenard*. **Lyman rays,** *see Lyman*. **Millikan rays,** see *Millikan*. **Minin** rays, see *Minin* lamp*. **mitogen'ic rays,** rays said to be given off from certain cells in the developing ovum, under the influence of the ultraviolet part of the spectrum, which stimulate division (mitosis) in other cells. **n-rays,** Blondlot rays. **Niewenglow'ski rays,** ethereal radiations, capable of affecting a photographic plate, given off by phosphorescent bodies after exposure to sunlight. **pri'mary rays,** (1) alpha, beta, and gamma rays; (2) *x*-rays generated at the focal point of the tube. **r. fun'gus,** *Actinomyces*. **r. therapeu'tics,** radiotherapy, actinotherapy.* **Roent'gen rays,** *x*-rays. **Sagnac' rays,** secondary rays; see *Sagnac*. **Schu'mann rays,** see *Schumann*. **sec'ondary rays,** rays generated when primary rays impinge upon matter. **soft rays,** rays of long wave length and slight penetrability. **ultravi'olet rays,** see *ultraviolet*. **x-rays,** the ethereal waves or pulsations emitted from a Crookes or Coolidge tube, excited by the bombardment of the anode target with the cathode rays; they pass through solid bodies, cause destructive changes in living tissue, and affect a photographic plate.

rayage (ra'ej). The dosage in radiotherapeutics.

Rayer's disease' (ra-yār') [Pierre François *Rayer*, French physician, 1793–1867.] Xanthoma.

Ray'gat's test. If the lungs of a dead infant float in water it is a sign that the child was born alive; called also the hydrostatic test.

Ray'mond type of ap'oplexy [Fulgence *Raymond*, French neurologist, *1844.] A form of ingravescent apoplexy in which there is paresthesia of the hand on the side to become paralyzed.

Raynaud's disease' (ra-no') [Maurice *Raynaud*. Paris physician, 1834–1881.] 1. Symmetrical asphyxia, symmetrical gangrene of the extremities; a disease affecting chiefly the hands which become white and cold, then congested, and finally, in some cases, gangrenous; these changes are accompanied by neuralgic pains, tingling, burning, and other paresthesias. The affection is regarded as a vasomotor disturbance, probably of central origin. 2. Angina vasomotoria.

Rb. Chemical symbol of *rubidium*.

R.C.P. Abbreviation of Royal College of Physicians.

R.C.S. Abbreviation of Royal College of Surgeons.

R.D.A. Abbreviation of right dorsoanterior, noting a presentation of the fetus with its back toward the right acetabulum of the mother.

R.D.P. Abbreviation for right dorsoposterior, noting a presentation of the fetus with its back toward the right sacroiliac articulation of the mother.

R.E. Abbreviation for right eye.

reactance (re-ak'tans). Inductive resistance, the weakening of an alternating electric current by passage through a coil of wire or a condenser; symbol X.

reaction (re-ak'shun) [L. *re-*, again, + *agere*, to act.] The response of a muscle or other living tissue to a stimulus. 2. The color change affected in litmus and certain other organic pigments by contact with various substances (acids or alkalies); also the property which such substances possess of producing this change 3. In chemistry the intermolecular action of two or more substances upon each other, whereby these substances are caused to disappear, new ones being formed in their place. **acetonitrile r.**, the blood of a subject of hyperthyroidism, when injected into a mouse, increases the animal's resistance to poisoning by acetonitrile; Reid Hunt's reaction. **acid r.**, the change of blue litmus paper to red, indicating that the liquid or gas with which it is brought in contact is acid; the sign used to denote this is +; for example, + 15 means that the reaction of a given solution is acid, and that one liter of the solution requires 15 c.c. of a normal alkali solution to neutralize it. **al'kaline r.**, the change of red litmus paper to blue, indicating that the liquid or gas with which the paper is brought in contact is alkaline; its sign is −; see *acid r.* **aller'gic r.**, a local or general reaction of the organism to contact, internal or external, with certain substances in respect of which the victim has an idiosyncrasy; see *asthma, hay-fever, urticaria, allergy, anaphylaxis, cutireaction.* **amphoter'ic r.**, a reaction observed in certain substances, such as freshly drawn milk, which turns blue litmus paper red and red litmus paper blue. **chol'era-red r.**, see *cholera-red:* **anamnes'tic r.**, a decrease in the bactericidal power of the blood, followed by an increase and then a return to normal, caused by the injection of a non-specific stimulus. See *therapia sterilisans divergens.* **cockade' r.**, see Roemer's* test. **conjunc'tival r.**, see under *conjunctival.* **cuta'neous r.**, cutireaction. **de'pot r.**, reddening of the skin at the point where the needle entered, in the subcutaneous tuberculin test. **fo'cal r.**, the reaction at the local seat or focus of a disease to an inoculated vaccine or toxin carried there by the blood stream. **hemiop'ic r.**, Wernicke's* r. **hemoclastic r.**, hemolysis as shown by the laking of the blood. **intracuta'neous r.**, Mantoux's* r. **myasthen'ic r.**, on electric stimulation of a muscle, the contractions grow progressively weaker and finally cease, but return after a rest. **pain r.**, dilatation of the pupil in response to a stimulus causing sharp pain anywhere. **percuta'neous r.**, Moro's* test. **r. of degenera'tion**, see under *degeneration.* **r. time**, the interval between the application of a stimulus and the reaction. **sedimenta'tion r.**, sedimentation rate.* **se'rum r.** seroreaction. **skin r.**, cutireaction. **thermoprecipitin r.**, the throwing down of a precipitate on the application of heat, as in the case of albuminous urine.

reactivate (re-ak'-tĭ-vāt). To render active again, said of an inactivated immune serum to which normal serum is added.

reactivation (re-ak-tĭ-va'shun). The restoration of the lytic activity of an inactivated serum by the addition of complement.

reactivity (re-ak-tiv'ĭ-tĭ). 1. The property of reacting, chemically or in any other sense. 2. The process of reacting.

Reading bacillus. *Bacterium reading.*

reagent (re-a'jent) [L. *re-*, again, + *agere*, to act.] Something added to a complex solution to determine, by the chemical action if any resulting, the presence or absence of a certain substance.

re'agin. 1. Wolff-Eisner's term for antibody. 2. Neisser's term for a substance elaborated by the spirochetes of syphilis and yaws, having the property of uniting with lipoids, and of fixing complement. **atop'ic r.**, an antibody in the serum of a naturally hypersensitive person through the agency of which specific hypersensitiveness is supposed to be passively conferred upon a normal person.

real [L. *res*, a thing.] Actual, not imaginary or merely apparent.

realgar (re-al'gar) [Ar. *rahj al-ghar*, powder of the urine.] Arsenic disulphide, As_2S_2.

reamer (re'mur) [A. S. *ryman*, to widen.] An instrument for enlarging a hole.

reasoning (re'zun-ing). The association and comparison of ideas and concepts whereby a definite conclusion or judgment is formed.

Réaumur's thermom'eter (ra-o-mür') [René Antoine Ferschault de *Réaumur*, French physicist, 1683–1757.] A thermometer the zero point of which is the temperature of melting ice, the boiling point of water at sea-level being 80°. One degree R. = 1.25° C. = 2.65° F. See the Appendix.

recalcification (re-kal-sĭ-fi-ka'shun) [L. *re*, again, + *calx*, lime, + *facere*, to make.] The restoration to the tissues of lost lime salts, Ferrier's* method.

Récamier's opera'tion (ra-kă-me-a') [Joseph Claude Anselme *Récamier*, French gynecologist, 1774–1852.] Curettage of the uterus.

recep'tacle [L. *receptaculum*, a storage place.] 1. In botany, the tip of a floral axis from which the different parts of a flower spring, torus. 2. In botany, the placenta.

receptac'ulum [L. *recipere* to receive.] A receptacle **r. chyli**, cisterna chyli [BNA]. **r. gan'glii petro'si**, fossula petrosa [BNA]. **r. Pecquet'i**, r. chyli.

recep'tor [L. receiver; *recipio*, I receive.] 1. In Ehrlich's theory of immunity, one of the side chains* of the cell which combine with foreign substances; this foreign substance may be something needed for the nutrition of the cell or it may be a destructive toxin. When some or all the receptors of a cell are bound by toxin, the remaining receptors of that cell, or the receptors of

uninjured cells, are stimulated to overproduction (see *Weigert's* law*); those in excess of the needs of the cell are thrown off and circulate in the blood; there they seize upon any toxin present and bind it so that it is unable to attack the cell; these free receptors in the blood-plasma constitute the antitoxin. 2. Sherrington's term for one of the nerve-endings in the skin and organs of sense. **r. of the first order,** a r. which possesses only a haptophore group and can therefore merely bind the toxin or a food molecule, but provides no ferment for the digestion of the latter; antitoxin is a receptor of the first order. **r. of the second order,** a r. which has two groups, a haptophore group for the anchoring of the foreign molecule and a zymophore group for its digestion; precipitins and agglutinins are receptors of the second order. **r. of the third order,** a r. which has two combining groups, a haptophore group for the anchoring of the foreign molecule and a complementophile group which binds the complement that carries the zymotoxic principle; these receptors differ from those of the second order in that the digesting principle is not a component part of the receptor but comes to it in the complement; the cytolysins (hemolysins, bacteriolysins) are cast-off receptors of the third order. **ses'sile r.,** in Ehrlich's side-chain theory, a r. of peculiar construction which cannot be cast off to form an antibody.

RECEPTORS OF THE 1ST, 2D, AND 3D ORDERS, AS NUMBERED.

1. *a*, the receptor; *b*, the combined toxin molecule with haptophore (*c*) and toxophore (*d*) groups. 2. *e*, haptophore, and *d*, zymophore groups; *f*, combined food molecule. 3. *e*, haptophore (cytophile), and *g*, complementophile group; *k*, complement with *h*, haptophore, and *s*, zymotoxic groups; *f*, combined food molecule (after Ehrlich).

recess' [L. *recessus*.] A small hollow or indentation; see *recessus*. **cerebel'lopontile r.,** the angle formed where the cerebellum and the pons meet. **pontocerebel'lar r.,** cerebellopontile r.

recession (re-sesh'un) [L. *recedere*, pp. *recessus*, to draw back, to recede.] Retraction, the act of drawing away or retiring. **r. of the gums,** the shrinking of the gums away from the necks of the teeth.

recessive (re-ses'siv) [L. *recedo*, I withdraw.] The characteristic of one or the other parent which appears in the minority of the descendants; see *Mendel's* law*.

reces'sus (re-ses'sus) [L.] A recess or small hollow. **r. ante'rior** [BNA], a circumscribed deepening of the interpeduncular fossa in the direction of the corpora mamillaria. **r. cochlea'ris** [BNA], cochlear recess, a depression on the inner wall of the vestibule of the labyrinth, between the two limbs into which the crista vestibuli divides posteriorly; it is perforated by foramina giving passage to nerves supplying the posterior portion of the ductus cochlearis. **r. duod'enojejuna'lis** [BNA], a pocket between the duodenojejunal and the duodenomesocolic folds to the left of the spinal column. **r. ellip'ticus** [BNA], **r. pro utric'ulo** [NK], elliptical recess, fovea hemielliptica, an oval depression in the roof and inner wall of the vestibule of the labyrinth, lodging the utriculus. **r. epitympan'icus** [BNA], epitympanic recess, tympanic attic; the upper portion of the tympanic cavity above the membrana tympani; it contains the head of the malleus and the body of the incus. **r. ethmolacrima'lis,** a cavity between the anterior portion of the ethmoid bone and the orbit. **r. ileocæca'lis infe'rior** [BNA], a deep fossa sometimes found between the ileocecal fold, the appendical mesenteriolum, and the cecum. **r. ileocæca'lis supe'rior** [BNA], a shallow pouch occasionally existing between the ileum, the cecum, and the ileocolic artery when the latter is present. **r. infe'rior omenta'lis** [BNA], a process of the omental bursa extending into the great omentum in the embryo. **r. infundib'uli** [BNA], recess of the infundibulum, a funnel-shaped diverticulum leading down from the anterior portion of the third ventricle of the brain through the tuber cinereum into the infundibulum of the hypophysis (pituitary body). **r. infundibulifor'mis,** r. pharynegus [BNA]. **r. intersigmoid'eus** [BNA], a shallow funnel-shaped pocket extending downward and to the left at the root of the sigmoid mesocolon. **r. membra'næ tym'pani ante'rior** [BNA], **r. m. t. oralis** [NK], a slit-like space on the tympanic wall between the anterior malleolar fold and the drum membrane. **r. membra'næ tym'pani poste'rior** [BNA], **r. m. t. aboralis** [NK], a narrow pocket in the wall of the tympanum between the posterior malleolar fold and the drum membrane. **r. membra'næ tym'pani supe'rior** [BNA], **r. m. t. tegmentalis** [NK], a space in the mucous membrane on the inner surface of the drum membrane between the membrana flaccida and the neck of the malleus. **r. op'ticus** [BNA], optic recess, a pit or diverticulum extending forward from the anterior part of the third ventricle of the brain above the optic chiasm. **r. paracol'icus** [BNA], one of several pockets occasionally present at the left margin of the descending mesocolon. **r. parotide'us,** a deep hollow on the side of the head below and in front of the mastoid; it lodges the parotid gland. **r. pharynge'us** [BNA], r. infundibuliformis, Rosenmuller's recess or fossa, a slit-like depression in the pharyngeal wall behind the opening of the Eustachian tube. **r. pinea'lis** [BNA], pineal recess, a diverticulum from the posterior part of the third ventricle of the brain passing back above the posterior commissure into the habenula, or peduncle of the pineal body. **r. pirifor'mis** [BNA], sinus piriformis, one of two deep lateral depressions in the wall of the laryngeal portion of the pharynx on either side, corresponding to the space between the cricoid and arytenoid cartilages internally and the thyroid cartilage externally. **r. poste'rior** [BNA], a deepening of the interpeduncular fossa toward the pons. **r. retrocæca'lis** [BNA], one of several small pockets sometimes found extending alongside the right margin of the ascending colon near the cecum. **r. sacciform'is** [BNA], (1) a protrusion of the capsule of the elbow-joint at the neck of the radius; (2) a prolongation upward of the capsule of the distal radioulnar articulation between the two bones. **r. sphæ'ricus** [BNA], **r. pro sac'culo** [NK], spherical recess, fovea hemisphærica, a rounded depression on the inner wall of the vestibule of the labyrinth, lodging the sacculus. **r. sphenoethmoida'lis** [BNA], a small cleft-like pocket in the superior meatus of the nasal fossa above the superior turbinated bone. **r. supe'rior omenta'lis**

[BNA], a portion of the vestibule of the bursa omentalis which extends upward beneath the coronary ligament of the liver. **r. suprapinea'lis** [BNA], supra-pineal recess, a diverticulum from the posterior portion of the third ventricle of the brain, running backward some distance above and beyond the r. pinealis. **r. triangula'ris** [BNA], triangular recess, an occasional evagination of the anterior wall of the third ventricle of the brain between the anterior commissure and the diverging pillars of the fornix.

recidivation (re-sid-i-va'shun) [L. *recidivare; re-*, back, + *cadere*, to fall.] Relapse of a disease or a symptom.

recipe (res'ĭ-pe) [L.] 1. Take, the superscription of a prescription, usually indicated by the sign ℞. 2. A prescription or formula.

recipiomotor (re-sip″ĭ-o-mo'tor). Relating to the reception of motor stimuli.

Reck'linghausen's canals' [Friedrich Daniel von *Recklinghausen*, German histologist, 1833–1910.] Minute spaces in connective tissue, the rootlets of the lymphatics. **R.'s disease',** (1) a disease marked by pigmentation of the skin, the occurrence of multiple small fibrous tumors on the skin and along the course of the nerves, pain in the joints, tenderness of the skin, and more or less marked sluggishness; multiple neurofibromatosis; (2) *osteitis fibrosa cystica*. **R.'s tu'mor,** an adenoliomyofibroma in the wall of the Fallopian tube or the posterior uterine wall.

reclination (re-kli-na'shun) [L. *reclinare*, to bend back.] Turning the cataractous lens over into the vitreous to remove it from the line of vision; distinguished from *couching*, in which the lens is simply depressed into the vitreous.

Reclus's disease' (rĕ-klü') [Paul *Reclus*, Parisian surgeon, 1847–1914.] 1. Multiple benign cystic growths in the mammary gland. 2. Ligneous phlegmon, a peculiar indurative change in the subcutaneous connective tissue of the neck, of chronic progressive course, with little fever or pain, and with little tendency to suppuration. **R.'s meth'od,** production of local anesthesia by cocaine. **R.'s opera'tion,** formation of an artificial anus in the iliac region in cases of cancer of the rectum

recoil-atom (re-koyl' at'om). The remainder of an atom from which an alpha particle has shot off with high velocity; this remainder recoils with a velocity inversely proportional to its mass; called also *rest-atom*.

recoil'-wave. Dicrotic* wave.

recollec'tion [L. *recollectum*, something gathered up again.] The act of recalling or reviving an idea or impression formerly consciously present in the mind.

rec'rement [L. *recrementum; re*, back, + *cernere*, to separate.] A secretion, like the saliva and in part the bile, which is reabsorbed after having performed its function.

recrementitious (rĕ″kre-men-tish'us). Of the nature of a recrement.

recrudescence (re-kru-des'ens) [L. *re-*, again, + *crudescere*, to become bad.] A lighting up again of a morbid process or its symptoms after a period of improvement.

recrudescent (re-kru-des'ent). Becoming active again, relating to a recrudescence.

rec'tal. Relating to the rectum

rectal'gia [L. *rectum* + G. *algos*, pain.] Proctalgia.

rectec'tomy [L. *rectum* + G. *ektomē*, excision.] Proctectomy

rectification (rek-tĭ-fi-ka'shun). 1. The refining or purification of a substance, such as the low wine in the manufacture of whiskey, by fractional or repeated distillation. 2. The act of straightening.

rec'tify [L. *rectus*, straight, + *facere*, to make.] 1 To purify or refine. 2. To make straight.

rectitis (rek-ti'(te')tis) [L. *rectum* + G. *-itis*.] Proctitis.

rectoabdominal (rek″to-ab-dom'ĭ-nal). Relating to the rectum and the abdomen, noting a bimanual method of examination with one hand on the abdominal wall and a finger of the other hand, or on occasion the whole hand, in the rectum.

rectocele (rek'to-sēl) [L. *rectum* + G. *kēlē*, tumor, hernia.] Proctocele.

rectococcygeal (rek-to-kok-sij'e-al) Relating to the rectum and the coccyx; see under *raphe*.

rectococ'cypexy. Proctococcypexy.

rectocolitis (rek-to-ko-li'(le')tis) [L. *rectum* + G. *kōlon*, colon, + *-itis*.] Proctocolitis

rectocystot'omy. Proctocystotomy.

rec'topexy. Proctopexy.

rectopho'bia. Proctophobia.

rec'toplasty. Proctoplasty.

rectoroman'oscope [L. *rectum* + *S romanum*, sigmoid colon, + G. *skopeō*, I view.] A form of speculum or endoscope for aid in examining the rectum and sigmoid colon.

rec'toscope. Proctoscope.

rectos'copy. Proctoscopy.

rectosteno'sis. Proctostenosis.

rectos'tomy. Proctostomy.

rectot'omy. Proctotomy.

rectourethral (rek-to-u-re'thral). Relating to the rectum and the urethra.

rectouterine (rek-to-u'ter-in) Relating to the rectum and the uterus.

rectovaginal (rek-to-vaj'ĭ-nal). Relating to the rectum and the vagina.

rectoves'ical. Relating to the rectum and the bladder

rec'tum [L. *rectus*, straight.] Intestinum rectum [BNA], the terminal portion of the digestive tube, extending from the pelvic colon to the anus.

artificial opening into, proctostomy. **bleeding,** archorrhagia, proctorrhagia. **dilatation,** proctectasia. **discharge from,** archorrhea, proctorrhea. **disease of,** proctopathy. **examination of,** proctoscopy, rectoscopy. **excision,** proctectomy. **fixation of a prolapsed,** proctopexia, rectopexia; proctococcypexy, rectococcypexy (to the coccyx). **hernia,** archocele. **incision into bladder through,** proctocystotomy, rectocystotomy. **incision into,** proctotomy, rectotomy. **inflammation,** proctitis, architis, rectitis. **injection into,** enema, clyster. **pain,** proctagra, proctalgia, proctodynia, rectalgia. **paralysis,** proctoparalysis, proctoplegia. **plastic surgery of,** proctoplasty. **prolapse,** proctocele, rectocele, archocele, archoptosia, proctoptosia, exania, procidentia ani, prolapsus ani. **science relating to,** proctology. **stricture,** archostenosis, proctostenosis, rectostenosis, proctenclisis. **suture of,** proctorrhaphy. **tumor,** proctoncus, proctopolypus, proctoscirrhus. **ulceration of,** proctocace. **vicarious menstruation from,** proctomenia.

rec'tus [L. straight.] See under *musculus*.

recum'bent [L. *recumbere; re-*, back, + *cubare*, to lie.] 1. Lying down. 2. Leaning against another part

recu'perate [L. *recuperare*.] To recover, to regain health and strength.

recuperation (re-ku-per-a'shun). Recovery, restoration to the normal state.

recur'rence [L. *re*, back, + *currere*, to run.] 1. A return of the symptoms, occurring as a phenomenon in the natural history of the disease, as seen in yellow fever and in recurrent fever 2.

Relapse, a return of the symptoms after convalescence had begun.

recurr'ent. Returned, noting symptoms or lesions reappearing after an intermission or remission **Af'rican r. fe'ver,** African relapsing* fever. **r. fe'ver,** relapsing* fever.

recurva'tion. A backward bending or flexure.

red [A.S. *rēad.*] One of the primary colors, occupying the lower extremity of the spectrum at the other end from violet. **chol'era r.,** see *cholera-red reaction.* **Bie'brich r.,** scarlet r. **r. bark,** the dried bark of *Cinchona succirubra* or *C. robusta.* **r. ce'rate,** unguentum hydrargyri oxidi rubri. **R. Cross Soci'ety,** see *Red Cross.* **r.-green blind'ness,** xanthocyanopia. **r. gum,** (1) strophulus; (2) eucalyptus. **r. lo'tion,** lotio rubra. **r. nu'cleus,** nucleus ruber. **r. precip'itate,** red oxide of mercury. **r. soft'ening,** hemorrhagic softening, an area of central softening in which punctate hemorrhages have occurred. **r. streak,** a prolonged reflex diastole,* lasting more than 14 seconds; regarded as a sign of disease. **r. wash,** lotio rubra. **r. wa'ter fe'ver,** Texas fever. **scar'let r.,** see *scarlet* red.* **try'pan r.,** see *trypan-red.* **vi'tal r.,** a dye injected into the blood stream in order to determine the volume of the latter by the change in tint of the dye.

Red Cross. A red Geneva cross on a white background, a sign of neutrality for the protection of the sick and wounded and the physicians and nurses caring for them in time of war. **R. C. Society,** an international society established for the purpose of caring for the sick and wounded in war and for giving aid in times of famine, earthquake, fire, and other public calamities; it was founded by Henri Dunant, a Swiss philanthropist [1828–1910] to carry out the recommendations of the Geneva* convention held in August, 1864.

red-gum. 1. Strophulus. 2. Eucalyptus. **r.-g. loz'enges,** trochisci eucalypti gummi.

re'dia [Francesco *Redi*, Italian naturalist, 1626–1698.] The intermediate (asexual) generation of certain trematode worms, by some regarded as the larval stage preceding that of cercaria; it is produced within the sporocyst and itself contains the germs of the cercariæ; it is provided with an intestine which disappears in the cercaria.

re"dintegra'tion [L. *redintegrare*, to renew.] 1. The restoration of lost or injured parts. 2. Restoration to health. 3. Mental association, the recall of one idea by the presentation of another idea formerly associated with the first.

red'intol. Trade name of a paraffin preparation of the ambrine class employed as an occlusive dressing in the treatment of burns.

redressement (rĕ-dres-mań') [Fr.] Redressment. **r. forcé** (for-sa'), the straightening by force of a deformed part, as of a knock-knee.

redress'ment. 1. Correction of a deformity, putting a part straight 2 A renewed dressing of a wound.

reduce (re-dūs') [L. *re-*, back, + *ducere*, to lead.] 1. To replace, as the bowel in a hernia, the ends of a fractured bone, or a dislocation. 2. In chemistry to deoxidize, to restore an oxide to its metallic form. 3. To weaken. **reduced iron,** ferrum reductum. **reducing agent,** any substance which, like hydrogen, has the power of removing oxygen from its compounds.

reducible (re-du'sĭ-bl). Capable of being reduced, noting a hernia or a dislocation.

reduc'tase. A reducing enzyme.*

reduc'tion. 1. The act of reducing or the condition of being reduced. 2. Replacement of a displaced part in the case of a dislocation, fracture, hernia, etc. 3. The bringing of a compound to the metallic state or to a lower valence, as by the removal of oxygen or subjection to the action of hydrogen, or the addition of one or more electrons (electronization). **r. of the chro'mosomes,** union of the chromosomes in pairs, whereby their number is halved, in the fertilized cell.

reduction-division (re-duk'shun dĭ-vizh'un). Reduction of the chromosomes; the stage in maturation in which the number of chromosomes is reduced one-half.

reduc'tion-phase. Meiotic phase.

redun'dant [L. *redundare*, to overflow.] Exuberant more than normal or necessary.

reduplica'tion [L. *re-*, again, + *duplicare*, to double.] 1. A doubling, as of the sounds of the heart in certain morbid states. 2. A fold or duplicature.

red'water fe'ver. Texas* cattle fever.

red'water tree bark. Erythrophleum.

Reed's bacill'us [Charles Alfred Lee *Reed*, Cincinnati gynecologist, 1856–1928.] *Bacillus epilepticus.* **R.'s opera'tion,** ligature in sections of the plexus of veins in tubo-ovarian varicocele.

reenforcement (re-en-fors'ment). Reinforcement.

Rees's test [George Owen *Rees*, English physician, 1813–1889.] For albumin in the urine: an alcoholic solution of tannin will precipitate albumin.

reference (ref'ur-ens) [L. *referre*, to bear back.] The act of mentioning or of relating to a person or object. **idea of r.,** a morbid impression that the conversation, smiling, or other actions of persons present have reference to oneself.

refine (re-fīn') [L. *re-*, again, + *finire*, to finish.] To free from impurities.

reflect' [L. *re-*, back + *flectere*, to bend.] 1. To bend back. 2. To throw back, as the rays of light from a mirror. 3. To meditate, to think over a matter. 4. To send back a motor impulse in response to a sensory stimulus, referring to the nervous centers. **reflect'ed ray,** a ray of light or other form of radiant energy which is thrown back from a non-permeable or non-absorbing surface; the ray which strikes the surface before reflection is the *incident ray.*

reflection, reflexion (re-flek'shun) 1. A bending back. 2. The throwing back of a ray of light or other form of radiant energy from a surface. 3. Meditation.

reflec'tor. Any surface which reflects the waves of light, heat, or sound.

re'flex [L. *re-*, back, + *flectere*, to bend.] Reflecting, reflected. **r. action,** the performance of any function or an involuntary muscular movement under the control of an impulse transmitted from a nerve-center in response to a stimulus sent from the periphery to that center; a reflex. **r. arc,** the path travelled by the nervous influence causing a r. action; it includes the afferent nerve, the nerve-center, and the efferent nerve to the acting muscle, gland, or organ. **r. center,** the nerve-center included in the r. arc. **r. movement,** an involuntary muscular contraction of reflex nature; see *r. action.*

re'flex [L. *re-*, back-, + *flectere*, to bend.] 1. A reaction, an involuntary movement or exercise of function in a part, excited in response to a stimulus applied to the periphery and transmitted to the nervous centers in the brain or spinal cord; see also *phenomenon.* [For the eponymic terms

(*Abrams reflex, Babinski reflex*, etc.) under this title, see the proper names.] 2. A reflection.

abdom'inal r., a contraction of the rectus abdominis muscle following scratching of the skin on its outer border.

abdom'inocar'diac r., Livierato's sign; mechanical irritation of the abdominal nerves causes dilatation of the heart which subsides after moderate gymnastic exercise.

accommoda'tion r., ciliary r.

Achill'es r., a contraction of the calf muscles when the tendo calcaneus is sharply struck, ankle r.

acro'mial r., flexion and pronation of the forearm when the tip of the shoulder is smartly struck.

a'nal r., contraction of the internal sphincter gripping the finger passed into the rectum.

ank'le r., ankle-jerk, a sudden contraction of the calf muscles, extending the foot, when the Achilles tendon is tapped, the subject kneeling on a chair with the foot hanging loosely.

beha'vior r., conditioned r.

bi'ceps r., contraction of the biceps muscle when its tendon is struck.

bone r., a r. excited by a stimulus applied to a bone.

bulbocav'ernous r., virile r.

bul'bo-mim'ic r., facial r., Mondonesi's r.; in a case of coma from severe apoplexy, pressure on the eyeballs causes contraction of the facial muscles of expression on the side opposite to the lesion; in coma due to diabetes, uremia, or other toxic cause the reflex is present on both sides.

chem'ical r., a vital process resulting from the action of a hormone in the blood.

chin r., contraction of the masseter muscles when the chin is tapped.

cil'iary r., accommodation r., contraction of the pupil when the gaze is turned from a distant to a near object.

ciliospi'nal r., pupillary-skin r.

cochleo-orbic'ular or **cochleopal'pebral r.**, a contraction, sometimes very slight, of the orbicularis palpebrarum muscle when a sudden noise, such as a pistol-shot, is made close to the ear; it is absent in labyrinthine disease with total deafness.

condi'tioned r., trained r., one which is gradually developed in the body by training and association through the frequent repetition of a definite stimulus; these reflexes, according to the behavioristic theory, are the sole causes of all the doings and sayings of men and animals.

consen'sual r., contraction of the pupil of one eye when a light stimulus is applied to the other eye.

controlat'eral r., when one lower extremity is passively flexed a similar movement occurs on the other side, or if this side is already flexed an extension may occur; noted by Brudzinski in meningitis in children.

cor'neal r., (1) a contraction of the eyelids when the cornea is lightly touched with a camel's-hair pencil; (2) reflection of lines, as the bars of a window or the circles of a keratoscope, from the surface of the cornea.

cremaster'ic r., a drawing up of the scrotum and testicle of the same side when the skin over Scarpa's triangle or on the inner side of the thigh is scratched.

crossed r., a stimulus applied to one side of the body causes a reflex movement on the opposite side.

cry r., a sudden unconscious cry during sleep in a child with hip disease.

cuta'neous pu'pil r., pinching the skin of the neck or cheek causes dilatation of the pupils.

deep r., tendon r., an involuntary muscular contraction following percussion of a tendon or bone.

defense' r., withdrawal of the foot by flexion of the knee, and sometimes of the thigh, following irritation of the leg or sole of the foot; this may occur when there is complete paralysis as regards voluntary movement.

dig'ital r., Hoffman's* sign.

direct' r., a reflex movement occurring on the same side of the body as that to which the stimulus is applied.

dor'sal r., contraction of the spinal muscles when the skin of the region is irritated.

el'bow r., triceps r.

epigas'tric r., a contraction of the upper portion of the rectus abdominis muscle when the skin of the epigastrium above is scratched

erec'tor-spi'nal r., a contraction of part of the erector spinæ muscle following scratching of the skin on its outer border.

fa'cial r., bulbo-mimic r.

fau'cial r., vomiting from tickling of the fauces.

front-tap r., contraction of the gastrocnemius muscle when the shin is struck.

gas"trocol'ic r., a strong peristaltic wave in the colon assumed to be a reflex excited by the entry of food into the empty stomach.

gas"troil'eac r., relaxation of the ileocecal valve occurring in response to the stimulus excited by the presence of food in the stomach.

great-toe r., see Babinski, Chaddock, Crofts, Gordon, and Oppenheim.

glu'teal r., contraction of the gluteal muscles following irritation of the skin of the buttocks.

heart r., reduction of the cardiac area when the skin of the precordial region is irritated.

hu'moral r., chemical r.

invert'ed ra'dial r., flexion of the fingers without flexion of the forearm, on tapping the lower end of the radius; regarded as indicating a lesion of the fifth cervical segment of the spinal cord.

jaw r., a sudden contraction of the elevator muscles of the jaw, caused by a smart tap on a flat ruler laid across the teeth while the jaw hangs loosely open; jaw-jerk.

knee r., patellar r.

laryngeal n., cough excited by irritation of the fauces.

laughter r., the uncontrollable laughter excited by tickling.

lid r., corneal r. (1).

light r., pupillary r.

lung r., increase in the pulmonary area following irritation of the skin of the thorax or upper abdomen.

mandib'ular r., jaw r.

mass r., in cases of gross injury to the spinal cord, as the stage of reflex activity follows the primary flaccidity of the shock, a condition arises in which a strong stimulus to any part of one of the paralyzed limbs will be followed by contraction of the hip, knee, and ankle of the same side and often, when the stimulus is applied to the middle line of the body, of both sides, as well as of the abdominal wall, and even evacuation of the bladder and sweating over an area corresponding to the level of the lesion.

mus'cular r., tendon r.

myenter'ic r., contraction above and relaxation below a stimulated point in the intestine

na'sal r., sneezing caused by irritation of the nasal mucous membrane.

nasomen'tal r., contraction of the mentalis muscle following a tap on the side of the nose.

nos'tril r., in pulmonary affections the nostril opening is reduced in size in proportion to the diminished alveolar air capacity on the corresponding side.

oc"ulocar'diac r., a change in the pulse-rate, usually a slowing, following compression of the eyeball.

pal'atine r., touching the mucous membrane of the roof of the mouth causes an elevation of the velum pendulum palati.

pal'mar r., flexion of the fingers following tickling of the palm

paradox'ical exten'sor r., Babinski* r.

paradox'ical flex'or r., Gordon's* r.

paradox'ical patell'ar r., (1) a tap on the patellar tendon causes contraction of the adductor, (2) sudden passive extension of the leg causes a contraction of the extensor muscles of the leg.

paradox'ical pu'pillary r., dilatation of the pupil under the stimulus of light.

patell'ar or **patell'ar-ten'don r.**, knee-jerk, a sudden contraction of the anterior muscles of the thigh, caused by a smart tap on the patellar-tendon while the leg hangs loosely at a right angle with the thigh.

perios'teal r., (1) front-tap r.; (2) a muscular contraction in the arm following a tap on the radius or ulna.

pharyn'geal r., a stimulus to the mucous membrane of the pharynx causes swallowing movements

pilomotor r., horripilation caused by fright or in some cases by simple stroking of the skin.

plan'tar r., a flexion of the toes following scratching or tickling the sole of the foot; sometimes dorsal flexion of the foot is produced.

pu'pillary r., contraction of the pupil under the stimulus of light.

pu'pillary-skin r., dilatation of the pupil following scratching of the skin of the cheek or chin.

ra'dial r., on tapping the lower end of the radius flexion of the forearm occurs, and sometimes, on strong percussion, flexion of the fingers; see inverted radial r.

rec'tal r., the entrance of fecal matter into the rectum from the sigmoid colon causes an impulse to defecate.

scap'ular r., contraction of any of the scapular muscles following scratching or otherwise irritating the skin covering them.

se'nile r., a grayish r. from the pupil of the aged due to the normal senile hardening of the lens.

shot-silk r., an incandescence like that of shot-silk sometimes seen in the retina in childhood.

skin r., superficial r.

skin-pu'pillary r., pupillary-skin r.

sole r., plantar r.

spi'nal r., a r. the center of the arc of which lies in the spinal cord.

step'ping r., if the plantar surface of a hind foot of a dog be gently pressed a movement of extension of the limb will follow accompanied sometimes by flexion of the opposite hind limb.

superfic'ial r., skin r., an involuntary muscular contraction following irritation of the skin in the neighborhood.

supraor'bital r., McCarthy's r., tapping the supraorbital nerve causes a contraction of the orbicularis oculi muscle.

tarsophalan'geal r., flexion (instead of the normal extension) of the 2d and 3d (sometimes 2d to 5th) toes when the dorsum of the foot is lightly tapped; it has the same significance as the Babinski sign, indicating an organic lesion of the motor nerve-centers.

tendo Achill'is r., Achilles r.

ten'don r., deep r.

toe r., (1) strong passive flexion of the great toe excites contraction of the flexor muscles in the leg; (2) sudden passive extension causes rhythmical contraction of the great toe, toe-clonus; (3) Babinski's phenomenon; see Babinski, Chaddock, Crafts, Gordon, and Oppenheim.

ton'ic r., the occurrence of an appreciable interval after the production of a reflex before relaxation; see *Gordon's* symptom*.

trained r., conditioned r.

tri'ceps r., elbow-jerk, a sudden contraction of the triceps muscle caused by a smart tap on its tendon when the forearm hangs loosely at a right angle with the arm.

vir'ile r., a movement of contraction of the bulbous portion of the urethra caused by tapping the under surface or side of the penis close to the scrotum.

viscerogen'ic r., any of a number of reflexes, such as headache, cough, disturbed pulse, etc., caused by disordered conditions of any of the viscera.

visceromo'tor r., contraction of the muscles of the thorax or abdomen in response to a stimulus from one of the contained viscera.

viscerosen'sory r., an area of pain or sensitiveness to pressure in the external body-wall due to disease of one of the viscera; see *Head's* zones*.

visceротroph'ic r., a degenerative change in the skeletal soft tissues consequent upon a chronic inflammatory condition of any of the thoracic or abdominal viscera.

reflex'a. Decidua* reflexa.

reflexogenic (re-flex-o-jen'ik) [G. *gennaō*, I produce.] Causing a reflex.

reflexom'eter [G. *metron*, measure.] An instrument for measuring the force of the tap necessary to excite a reflex

reflexophile (re-fleks'o-fil) [G. *phileō*, I love.] Having exaggerated reflexes.

reflexotherapy. Treatment by manipulating, cauterizing, or anesthetizing a more or less distant area of body, zone therapy, Abram's therapy, spondylotherapy.

reflux (re'fluks) [L. *refluxus; refluere*, to flow back.] A backward flow; regurgitation.

refract' [L. *refractus; refringere*, to break back.] 1. To deflect a ray of light. 2. To detect an error of refraction in the media of the eye and to correct it by means of glasses.

refrac'ta do'si [L. in broken dose.] In divided doses, noting a definite quantity of a drug taken within a certain time in a number of equal fractional parts.

refrac'tion. 1. The deflection of a ray of light when it passes from one medium into another of different density; in passing from a denser into a rarer medium it is deflected away from a line perpendicular to the surface of the refracting medium, in passing from a rarer to a denser medium it is bent toward this perpendicular line. 2. The act of determining the nature and degree of the refractive errors in the eye and correction of the same by glasses.

refrac'tionist. One skilled in the art of measuring the degree of refraction in the eye; one who scientifically determines visual defects and corrects them by means of lenses.

refrac'tive. Relating to refraction.

refractom'eter [G. *metron*, measure.] An instrument for measuring the degree of refraction in various translucent substances, especially the eye media.

refrac'tory [L. *refractarius*.] Obstinate, not yielding readily to treatment. **r. pe'riod**, the period of contraction of the heart during which it fails to respond to stimuli.

refrac'ture. The breaking again of a bone which has united, after a previous fracture, in a bad position.

refrangible (re-fran'jĭ-bl) [L. *refrangere*, to break back, + *habilis*, apt.] Capable of being refracted.

refresh' [L. *re-*, again, + *frescus*, fresh.] 1. To renew, to cause to recuperate. 2. To freshen, to pare or scrape two opposing surfaces of an old wound so that they may unite.

refrigerant (re-frij'er-ant) [L. *refrigerare*.] 1. Cooling, reducing slight fever. 2. An agent which gives a sensation of coolness or relieves feverishness.

refrigera'tion. The act of cooling or reducing fever

refrin'gent. Refractive.

refu'sion [L. *refundere*, to pour back.] The return to the circulation of blood which has been temporarily cut off by ligature of a limb.

regard' [Fr. *regarder*, to look at.] Look, attention, gaze. **plane of r.**, an imaginary plane through which the point of regard moves as the eyes are turned from side to side. **point of r.**, the fixation point, the point toward which the eye is directed when vision is most distinct.

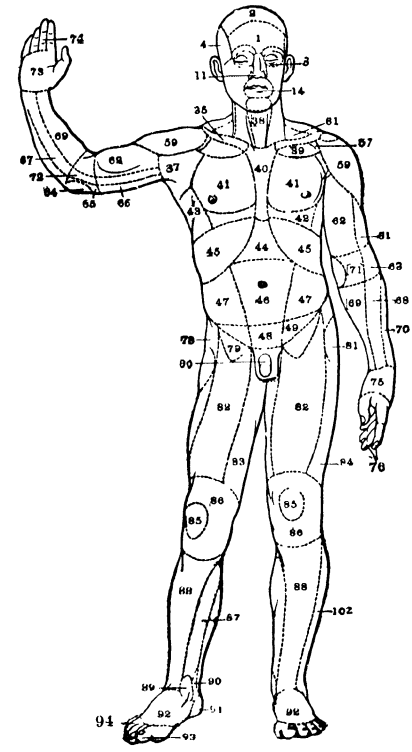
regenerate (re-jen'er-āt) [L. *re-*, again, + *generare*, to produce.] To renew, to reproduce.

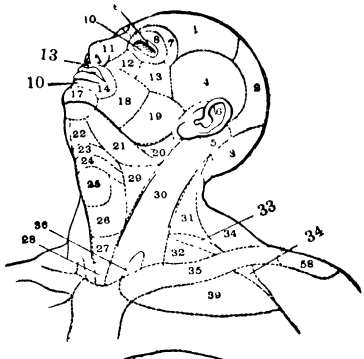
regenera'tion. Reproduction or repair of lost or injured parts.

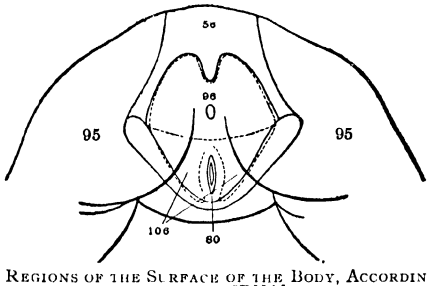
regimen (rej'ĭ-men) [L. direction, rule.] 1. A regulation of the mode of living, diet, sleep, exercise, etc., for a hygienic or therapeutic purpose. 2. Diet. 3. Hygiene.

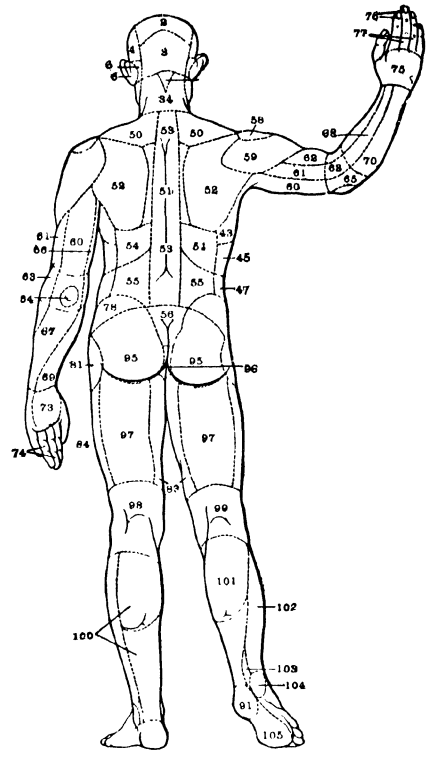
re'gio, gen. *regio'nis*, pl. *regio'nes* [L.] A region or territory; area.

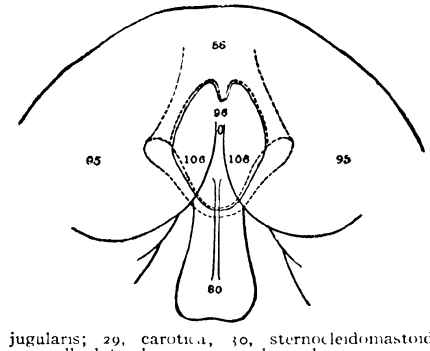
region (re'jun) [L. *regio*.] Area, territory. 1. A more or less arbitrarily limited portion of the surface of the body. 2. A portion of the body











REGIONS OF THE SURFACE OF THE BODY, ACCORDING TO THE [BNA].

1, Regio frontalis; 2, parietalis; 3, occipitalis, 4, temporalis; 5, mastoidea; 6, auricularis; 7, supraorbitalis; 8, orbitalis; 9, palpebralis superior, 10, palpebralis inferior; 11, nasalis; 12, infraorbitalis; 13, zygomatica; 14, oralis; 15, labialis superior; 16, labialis inferior; 17, mentalis; 18, buccalis; 19, parotideomasseterica; 20, retromandibularis; 21, submaxillaris, 22, submentalis; 23, hyoidea; 24, subhyoidea; 25, laryngea; 26, thyreoidea; 27, suprasternalis; 28, jugularis; 29, carotica, 30, sternocleidomastoidea; 31, colli lateralis, 32, omoclavicularis, 33, supra, clavicularis major, 34, nuchæ, 35, clavicularis; 36, supraclavicularis minor, 37, axillaris 38, colli anterior, 39, infraclavicularis; 40, sternalis, 41, mammalis; 42, inframammalis, 43, pectoris lateralis, 44, epigastrica, 45, hypochondriaca; 46, mesogastrica, 47, abdominis lateralis; 48, hypogastrica; 49, inguinalis, 50, suprascapularis, 51, interscapularis; 52, scapularis; 53, mediana; 54, infrascapularis; 55, lumbalis; 56, sacralis; 57, deltoideopectoralis; 58, acromialis; 59, deltoidea; 60, brachii posterior, 61, brachii lateralis; 62, brachii anterior, 63, cubiti lateralis, 64, olecrani, 65, cubiti posterior; 66, brachii medialis; 67, antibrachii ulnaris; 68, antibrachii radialis, 69, antibrachii volaris; 70, antibrachii dorsalis, 71, cubiti anterior; 72, cubiti medialis, 73, volaris manus; 74, volaris digiti, 75, dorsalis manus, 76, unguicularis; 77, dorsalis digiti, 78, coxæ, 79, subinguinalis, 80, pudendalis, 81, trochanterica, 82, femoris anterior; 83, femoris medialis; 84, femoris lateralis; 85, patellaris, 86, genu anterior, 87, cruris medialis, 88, cruris anterior; 89, malleolaris medialis; 90, retromalleolaris medialis; 91, calcanea; 92, dorsalis pedis, 93, unguicularis, 94, dorsalis digiti pedis; 95, glutæa; 96, analis; 97, femoris posterior; 98, genu posterior; 99, poplitea, 100, cruris posterior; 101, suralis; 102, cruris lateralis; 103, retromalleolaris lateralis; 104, malleolaris lateralis; 105, plantaris; 106, urogenitalis.

having a special nervous or vascular supply. 3. A part of an organ having a special function as the motor region of the brain.

regional (re'jun-al). Relating to a region.

registrant (rej'is-trant). A nurse who is entered on the books of the registry as ready to take charge of a case.

registrar (rej'is-trar). The proprietor or head of a registry office, or the clerk who attends to the calls and assigns the registrants to fill them.

registry (rej'is-trĭ). An office where a register is kept of nurses available for the care of the sick.

regression (re-gresh'un) [*regredi*, to go back.] 1. Recession, a subsidence of symptoms. 2. A return of symptoms, relapse. 3. Any retrograde movement or action.

regress'ive. Relating to or characterized by regression.

reg'ular [L. *regula*, a rule.] 1. According to rule, typical, normal. **r. practi'tioner,** a physician who does not proclaim himself as the adherent of any school or sect in medicine or who does not follow exclusively any special system of therapeutics, a non-sectarian; sometimes called erroneously an allopathic practitioner.

reg'ulin. Trade name of a preparation, said to be a mixture of cascara sagrada and agar-agar, a brown scaly powder, forming a jelly with water; employed in the treatment of habitual constipation in doses of ʒi–2 (4.0–8.0).

regur'gitant. Regurgitating, flowing backward.

regurgitate (re-gur'ji-tāt) [L. *re-*, back, + *gurgitare*, to flow.] 1. To flow backward. 2. To expel the contents of the stomach in small amounts, short of vomiting.

regurgita'tion. 1. A backward flow, as of blood through an incompetent valve of the heart. 2. The return of gas or small amounts of food from the stomach.

Rehfuss meth'od (ra'foos). [Martin E. *Rehfuss*, American physician, *1887.] Fractional method of test-meal examination; a fine tube with fenestrated metal tip is left in the stomach after an Ewald test-meal, and small quantities (6 or 8 c.c.) of the stomach contents are removed at fifteen-minute intervals and examined.

Reichel's duct (ri'khel) [Friedrich Paul *Reichel*, German obstetrician, *1858.] Cloacal duct, a fissure between the cloaca and Douglas's septum in the embryo.

Reichert's car'tilage (ri'khert) [Karl Boguslaw *Reichert*, Berlin anatomist, 1811–1884.] A cartilage in the mesenchyme on the outer side of the primitive tympanum in the embryo, from which are developed the styloid processes, the stylohyoid ligaments, and the lesser cornua of the hyoid bone. **R.'s coch'lear re'cess,** a small area at the posterior portion of the pyramis vestibuli, perforated to give passage to fibers which the cochlear branch of the auditory nerve sends to the posterior extremity of the cochlear canal. **R.'s innom'inate sub'stance,** the posterior part of the anterior perforated space. **R.'s scar,** a small area on the impregnated ovum, where decidual tissue is absent, its place being taken by a fibrinous membrane formed from a blood-clot at its point of entrance into the mucous membrane.

Reichmann's disease' (rīkh'mahn) [N. *Reichmann*, Warsaw physician, 1851–1918.] Excessive secretion of gastric juice continuing without any intermission; gastrosuccorhea, gastrochronorrhea.

Reid's base-line [Robert William *Reid*, Scotch anatomist, *1851.] A line drawn from the lower margin of the orbit to the auricular point (center of the aperture of the external auditory canal) and extending backward to the center of the occipital bone.

Reid Hunt's reaction (rēd hunt) [Reid *Hunt*, American pharmacologist.] Acetonitrile reaction.*

Reil's an'sa (rīl) [Johann Christian *Reil*, German anatomist, born in Holland, 1759–1813.] Ansa peduncularis. **R.'s band** (1) moderator band, one of the trabeculæ carneæ in the right ventricle of the heart, attached on one side to the septum and on the other to the sternocostal wall of the cavity. (2) **R.'s** ribbon, lemnis'cus medialis [BNA]. **R.'s cir'cular** or **lim'iting sul'cus,** sulcus circularis. **R.'s is'land,** insula. **R.'s rib'bon,** lemniscus medialis. **R.'s sul'cus,** sulcus circularis. **R.'s tri'angle,** trigonum lemnisci.

re"implanta'tion. The return of a part to the place whence it was taken, as an extracted tooth to its socket; replantation.

re"infec'tion. A second infection by the same microorganism, after recovery from or during the course of a primary infection.

reinforcement (re-in-fors'ment). 1. An increase of force or strength, noting specifically the increased sharpness of the patellar reflex when the patient at the same time closes the fist tightly or pulls against the flexed fingers or contracts some other set of muscles. 2. In dentistry, strengthening a plate by the addition of a piece of metal.

re"inocula'tion. A reinfection by means of inoculation.

Reinsch's test. A strip of copper is placed in the suspected fluid which is then acidulated with hydrochloric acid and boiled; if arsenic is present a gray deposit occurs on the copper, and this deposit on heating is sublimated and deposited as a crystalline layer on a piece of glass held above the copper strip.

re"insu'rance. Insurance by one company in another of all or part of a risk already assumed by the first company.

re"inver'sion. The correction, spontaneous or operative, of an inversion, as of the uterus.

Reisseissen's muscles (rīs'is-en) [François Daniel *Reisseissen*, Berlin anatomist, 1773–1828.] Microscopic smooth muscle fibers in the smallest bronchial tubes.

Reissner's mem'brane (rīs'ner) [Ernst *Reissner* Berlin anatomist, 1824–1878.] Membrana vestibularis Reissneri.

Reiter's disease (ri'terz diz-ēz') [Hans *Reiter*, German physician, *1881.] Spirochetosis arthritica, a fever of a more or less remittent type, lasting about seventeen days, accompanied with pains in the joints, conjunctivitis, urethritis, and enlargement of the spleen; its causation is thought to be possibly infection by *Spirochæta forans*.

rejuvenescence (re-ju-ven-es'ens) [L. *re-*, again, + *juvenescere*, to grow young.] 1. A renewal of youth; the return of a cell or tissue to a state in which it was in an earlier stage of existence. 2. In botany, the escape of the protoplasm of a cell and its conversion into a cell of a different character, as occurs in certain algæ.

relapse' [L *re-*, back, + *lapsus*, a sliding.] The return of a disease after it has once spent its course.

relaps'ing. Recurring, said of a disease which returns in a new attack after convalescence has begun. **r. fe'ver,** European or cosmopolitan r.f., recurrent fever, an acute infectious disease caused by *Treponema obermeieri* or *recurrentis*

Borrelia recurrentis.[0] It is marked by a number of febrile attacks lasting about six days and separated from each other by apyretic intervals of about the same length; the microorganism is found in the blood during the febrile periods but not in the intervals; the intermediate host is believed to be the bedbug, *Cimex lectularius*, or the louse, *Phthirius vestimenti*, or both. There are several other forms of r.f., confined for the most part to special localities, differing slightly in their symptoms, but caused, each by its own species of *Borrelia* with a special insect transmitter. The N. American variety (now quite rare) is caused by *B. novyi*, the louse being the vector. The Central American variety including also Mexico, Colombia, and Venezuela, is caused by *B. venezuelensis*, transmitted by ticks, *Ornithodorus venezuelensis* and *O. talajê*. In Panama there is a form thought by some observers to be caused by a distinct species, *B. neotropicalis*, transmitted by *O. talajê*. The cause of the Central African variety is *B. duttoni*, the vector of which is *O. moubata;* that of East Africa is *B. kochii* the vector being *O. savignii;* of Northern Africa, *B. berbera*, transmitted by lice; of Spain, *B. hispanica*, the vector being *O. marocanus;* in Persia and N. W. India the causal germ is *B. persica*, transmitted by *O. tholozani* or *O. lahorensis;* the r.f. of India is caused by *B. carteri*, transmitted by the bedbug, *Cimex rotundatus*.

rel'ative [L. *relatus; referre*, to refer.] Referring or having relation to another object or subject; not existing independently. **r. field,** that portion of the cerebral cortex, a lesion of which may or may not produce spasm or paralysis.

relax' [L. *re-*, back, + *laxare*, to loosen.] 1. To loosen, to slacken. 2. To cause a movement of the bowels.

relax'ant. 1. Laxative. 2. Relieving strain or tension.

relief'. The removal of pain or distress, physical or mental.

relieve (re-lēv') [L. *re-*, again, + *levare*, to lift,] To free wholly or partly from pain or discomfort, either physical or mental.

religiosus (re-lij″ĭ-o'sus) [L. religious.] The superior rectus muscle of the eye which rolls the eyeball upward, as in the act of prayer.

Remak's band (ra'mahk) [Robert *Remak*, German anatomist, 1815–1865.] Axis-cylinder. **R.'s fi'bers,** non-medullated nerve-fibers. **R.'s gang'lia,** groups of nerve-cells in the wall of the venous sinus where it joins the right atrium of the heart. **R.'s nu'clear divis'ion,** amitosis. **R.'s plex'us,** Meissner's plexus, plexus* submucosus.

Remak's re'flex (ra'mahk) [Ernst Julius *Remak*, German neurologist, son of Robert R., 1849–1911.] Stroking of the upper anterior surface of the thigh causes plantar flexion of the first three toes and sometimes of the foot, with extension of the knee; it occurs when the conducting paths in the cord are interrupted. **R.'s sign,** the dissociation of the sensations of touch and of pain in tabes dorsalis and polyneuritis. **R.'s type,** antebrachial type, paralysis localized in the extensor muscles of the fingers and wrist.

remediable (rĕ-me'dĭ-a-bl) [L. *remediare*, to cure, + *habilis*, apt.] Curable.

reme'dial [L. *remedialis; remediare*, to cure.] Curative.

rem'edy [L. *remedium; re-*, again, + *mederi*, to cure.] An agent which cures disease or alleviates its symptoms. **concor'dant rem'edies,** in homeopathy, remedies of dissimilar origin whose actions are similar, and which may therefore be given in succession. **inim'ical rem'edies,** in homeopathy, remedies whose actions are dissimilar or antagonistic and which therefore may not be given in succession. **tissue r.,** see under *tissue*.

Remij'ia [*Remijo*, a Columbian physician, 19th century.] A genus of small trees or shrubs, natives of South America, the bark of several species of which (*cuprea bark*) is similar to cinchona bark.

remineraliza'tion. The return to the body of necessary mineral constituents lost through disease or dietary errors.

remission (re-mish'un) [L. *remissus; re-*, back, + *mittere*, to send.] A lessening in severity; a temporary abatement of the symptoms of a disease.

remit' [L. *remittere*, to slacken.] To become less marked for a time without absolutely ceasing.

remitt'ence. A temporary amelioration, without actual cessation, of symptoms.

remitt'ent. Characterized by temporary remissions or periods of abatement of the symptoms. **r. fever,** a severe form of malarial fever in which the temperature falls periodically, nearly but not quite to the normal, the new paroxysm occurring before the symptoms of the former have entirely disappeared.

Remlinger's treatment of rabies. Injection of virus killed with ether.

ren, gen. *re'nis*, pl. *re'nes* [L.] Kidney. **r. mo'bilis,** movable kidney.

ren'aden [L. *ren*, kidney, + G. *adēn*, gland.] Trade name of an extract of lambs' or calves' kidneys, recommended in the treatment of certain renal affections.

renaglandin (ren-ă-glan'din). Trade name of a preparation of the suprarenal gland recommended in hemophilia and menorrhagia.

re'nal. Relating to a kidney or the kidneys.

Renaut's lay'er (rĕ-no') [Joseph Louis *Renant*, French physician, 1844–1917.] Ranvier's basement membrane, a thin hyaline layer separating the dermis or corium from the epidermis.

ren'culus. Reniculus.

Rendu's meth'od (roń-du') [Henri Jules Louis Marie *Rendu*, French physician, 1844–1902.] Smearing the peritoneum with camphor naphthol, after laparotomy and lavage, in the treatment of tuberculous peritonitis. **R.'s tremor,** an intention tremor of hysterical origin.

renestypticin (ren-e-stip'tĭ-sin). Trade name of a suprarenal preparation.

renicap'sule [L. *ren*, kidney, + *capsula*, capsule.] The capsule of the kidney.

renicar'diac [L. *ren*, kidney, + G. *kardia*, heart. Nephrocardiac.

renic'ulus, pl. *reniculi* [L. dim. of *ren*, kidney.] Lobus renalis [BNA], one of the lobules, corresponding to a pyramid and its surrounding cortical substance, of which the kidney is originally composed.

ren'iform [L. *ren*, kidney, + *forma*, form.] Kidney-shaped.

ren'in. 1. Trade name of an extract of lambs' or calves' kidneys, recommended in the treatment of certain renal diseases. 2. Rennin(2).

reniportal (ren″ĭ-por'tal) [L. *ren*, kidney, + *porta*, gate.] 1. Relating to the hilus of the kidney. 2. Relating to the portal, or venous capillary circulation in the kidney.

renipuncture (ren″ĭ-punk'tūr) [L. *ren*, kidney, + *punctura*, puncture.] Incision of the capsule of the

kidney followed by multiple puncture of the substance of the organ, performed for the relief ot tension and the cure of albuminuria.

ren'net. 1. A preparation of the fourth stomach or abomasum, of the calf, used in curdling milk. 2. Rennin (1).

ren'nin. 1. Rennet, chymosin, an enzyme, present as such (or as a zymogen) in the chief cells of the gastric tubules. 2. A name proposed by Tigerstedt and Bergmann for a supposed internal secretion of the kidney which acts as a vasoconstrictor; properly renin.

rennin'ogen. Rennogen, prorennin, prochymosin, pexinogen, the zymogen of rennin.

renni'num (N.F.). Rennin, rennet.

ren'nogen. Renninogen.

renocutaneous (ren"o-ku-ta'ne-us) [L. *ren*, kidney, + *cutis*, skin.] Relating to the kidneys and the skin.

renogas'tric [L. *ren*, kidney, + G. *gastēr*, stomach.] Relating to the kidneys and the stomach.

renointestinal (ren"o-in-tes'tĭ-nal). Relating to the kidneys and the intestine.

renopulmonary (ren"o-pul'mun-a-rĭ). Relating to the kidneys and the lungs.

renun'culus [dim. of *ren.*] Reniculus.

repand' [L. *repandus*, bent or turned back.] Noting a leaf or a bacterial colony with edges marked by a series of slightly concave segments with angular projections at their points of union; see cut under *colony*, 3, c.

repell'ent [L. *repellere*, to drive back.] 1. Reducing swelling. 2. An astringent or other agent which reduces swelling.

repeller (re-pel'er). An instrument used, in abnormal labor in mares and cows, for pushing back a part presenting badly.

repercolation (re-pur-ko-la'shun). Repeated percolation; the passage of the percolating fluid through the same substance a second time, or through a fresh quantity of the same sort.

repercussion (re-pur-kush'un) [L. *repercutere*, to drive back.] The driving away of a swelling.

repercuss'ive. Driving in or away, repellent.

rep'ertory [L. *reperto'rium*, list, inventory.] In homeopathic practice an index of symptoms, or of the symptoms peculiar to a special disease, with the name of the remedy or remedies having the same symptom, *i.e.* producing the same symptom when given in a proving.

replanta'tion [G. *re-*, again, + *plantare*, to plant.] Noting the experiment of removing an organ or other part of the body, replacing it, and reestablishing its circulation by vascular anastomosis; reimplantation. 2. In dentistry, specifically, the replacing of a tooth into the socket from which it has been extracted.

reple'tion [L. *repletio*, *replere*, to fill up] Plethora.

replication (re-pli-ka'shun) [L. *replicatio*, a reply.] Repetition of an experiment under similar conditions to reduce the probability of errors due to the personal equation or other uncontrolled factors.

reposition (re-po-zish'un) [L. *repositus; reponere*, to lay up.] The return of a part to its normal place; reduction.

repos'itor. An instrument used to replace a dislocated part, especially a prolapsed uterus.

repression (re-presh'un) [L. *reprimere*, to repress.] In psychology, the thrusting back of a conscious thought into the unconscious sphere.

reproduc'tion [L. *re-*, again, + *producere*, to produce.] 1. The restoration of lost parts, regeneration. 2. The recall and presentation in the mind of the steps of a former impression. 3. Procreation; the production of a new generation of living beings.

reproduc'tive. Relating to reproduction.

repullulation (re-pul-u-la'shun) [L. *re-*, again, + *pullulare*, to sprout.] Renewed germination; the return of a morbid process or growth.

repul'sion [L. *repulsus; repellere*, to drive back.] 1. The act of repelling or driving apart; opposed to attraction. 2. Aversion.

resal'dol. An acetyl derivative of a condensation product of chlormethylsalicylic aldehyde and resorcin, a yellow powder insoluble in water; employed in tuberculous and catarrhal ulceration of the intestine in doses of gr. 10–30 (0.6–2.0).

resal'gin. Resorcylalgin.

re-Schick. A second Schick test made after an immunizing injection of diphtheria toxin (or toxoid)-antitoxin.

resect' [L *resectus; resecare*, to cut off] 1. To cut off, especially to cut off the articular ends of one or both bones forming a joint. 2. To cut out a segment of a part, as of the intestine

resection (re-sek'shun). Removal of the articular ends of one or both bones forming a joint, or of a segment of any part, such as the intestine.

reserve (re-zurv') [L. *re-*, back, *servare*, to keep.] In life insurance, the funds devoted to the payment of death claims, being the receipts from the net premiums with the interest earned thereon. **al'kali r.,** the total amount of alkaline salts in the plasma and corpuscles utilizable in maintaining the normal alkalinity of the blood. **ini'tial r.,** the r. at the beginning of a policy year, being the terminal r. of the previous year plus the net premium for the new year. **term'inal r.,** the balance of the insurance fund, or reserve, at the end of the policy year after deducting the amount paid in death claims.

reservoir (rez'ur-vwor) [Fr.] A storage place for liquids; receptaculum *

residual (re-zid'u-al) [L *residuum*, residue] Relating to or of the nature of a residue; left behind **r. abscess,** an abscess, partly absorbed, remaining after the inflammatory process causing it has disappeared **r. air.,** see *air.*

residue (rez'ĭ-du) [L. *residuum.*] Remainder, rest; specifically, the non-toxic portion of protein split-products. **ty'phoid r.,** see under *typhoid.*

resid'uum [L] Residue. **r. ru'brum,** trade name of a desiccated ox-blood, recommended in anemia in doses of gr. 5 (0.3)

resilience (re-zil'ĭ-ens) [L. *resilire*, to jump back.] Elasticity.

res'in. 1. An amorphous brittle substance consisting of the hardened secretion of a number of plants, probably derived from a volatile oil and similar to a stearoptene. 2. Rosin, the special resin of the pharmacopeia, resina. 3. A precipitate formed by the addition of water to certain tinctures. **ac'aroid r.,** acaroid gum, a resinous exudate from certain species of *Xanthorrhœa*, a genus of Australian trees. **gum r.,** see *gum-resin.*

resi'na [L.] 1. Resin. 2. (U.S., Br.) Rosin, colophony, the residue after distillation of the volatile oil from turpentine; a brittle, easily powdered, translucent, resinous mass, of an amber to reddish brown color, soluble in ether and chloroform, but insoluble in water; employed in plasters to render them adhesive and also in ointments to render them locally stimulating. **r. co'pal,** copal. **r. draco'nis,** dragon's blood, a resin obtained from the fruit of *Calamus draco*, an East Indian palm; formerly an ingredient of plasters but now seldom used. **r. ipomœ'æ** (U.S.), resin of

ipomea,* extracted from the dried root of *Ipomœa orisabensis*, occurring in translucent masses or fragments of a brown color and a characteristic odor; cathartic in doses of gr. 2–4 (0.13–0.26). **r. jala'pæ** (U.S.), resin of jalap, in yellowish brown masses, soluble in alcohol; purgative in doses of gr. 2–5 (0.13–0.3). **r. podophy'lli** (U.S.), podophylli resina (Br.), resin of podophyllum, podophyllin, a grayish to greenish yellow powder, soluble in alcohol; laxative in doses of gr. $\frac{1}{20}$–$\frac{1}{10}$ (0.003–0.006). **r. podophyl'li in'dici** (B.A.), resin of Indian podophyllum, from *P. emodi;* cathartic and cholagogue in doses of gr. ¼–1 (0.015–0.06). **r. scammo'niæ, scammo'nii r.** (Br.), resin of scammony, occurs in dark yellow resinous masses or a light yellow powder of little odor or taste; dose, gr. 5–10 (0.3–0.6).

res'inoid [L. *resina*, rosin, + G. *eidos*, resemblance.] 1. Resembling rosin. 2. An extract obtained by evaporating a tincture. 3. A substance containing a resin or resembling one.

res'inol. Trade name of an antiseptic preparation used in the form of an ointment in the treatment of various skin diseases.

res'inous. Relating to or derived from a resin.

resis'tance. 1. A passive force exerted in opposition to another and active force. 2. The opposition in a conductor to the passage of a current of electricity, whereby there is a loss of energy and a production of heat. 3. The power residing in the red blood cells to resist hemolysis and to preserve their shape under varying degrees of osmotic pressure in the liquor sanguinis. **r. coil,** rheostat. **r. form,** in dentistry the shape given to the contour of a cavity so that the filling may withstand great stress without moving.

resolu'tion [L. *resolutus; resolvere*, to resolve.] The arrest of an inflammatory process without suppuration; the absorption or breaking down and removal of the products of inflammation, as in pneumonia, or of a new growth.

resolve (re-zolv') [L. *re-*, again, + *solvere*, to loosen.] To return or cause to return to the normal without suppuration, said of a phlegmon or other form of inflammation. **resolv'ing power,** definition (of a lens).

resol'vent. 1. Discutient, causing resolution. 2. An agent which arrests an inflammatory process or causes the absorption of a neoplasm.

res'onance [L. *resonare*, to resound, to echo.] 1. The sound obtained on percussing a part which can vibrate freely. 2. The intensification and hollow character of the voice sound obtained on auscultating over a cavity. **amphor'ic r.,** a percussion sound like that produced by blowing across the neck of an empty bottle, obtained by percussing over a pulmonary cavity, the patient's mouth being open. **bandbox r.,** vesiculotympanitic r. **bell'metal r.,** a clear metallic sound obtained by striking a coin, held against the chest, by another coin, in cases of a large pulmonary cavity or of pneumothorax; Gairdner's test, coin test. **cracked-pot r.,** a peculiar sound, resembling that heard on striking a cracked pot, elicited on percussing over a pulmonary cavity which communicates with a bronchial tube, the patient having the mouth open. **hydat'id r.,** a peculiar vibratile r. heard on auscultatory percussion over an hydatid cyst. **Skoda'ic r.,** see *Skodaic*. **tympanit'ic r.,** a drum-like r. obtained by percussion over a large space filled with air, as the stomach or intestine, or a large pulmonary cavity. **vesic'ular r.,** the sound obtained on percussing over the normal lungs. **vesic"ulotympanit'ic r.,** a peculiar partly tympanitic partly vesicular sound, obtained on percussion in cases of pulmonary emphysema. **vocal r.,** the voice sounds as heard on auscultation of the chest. **wooden r.,** vesiculotympanitic r.

res'onant. Resounding, having the quality of resonance.

resonator (res'o-na-tor). A device for employing inductance to create an electrical current of very high potential and small volume.

resorb' [L. *re-*, again, + *sorbere*, to suck up.] To reabsorb, to absorb what has been excreted, as an exudate or pus.

resor'bin. An unguent made of a thick emulsion of expressed oil of almond, white or yellow wax, gelatin, soap, water, and lanolin; used as a vehicle for remedies to be exhibited by inunction, as it is said to be very readily absorbed through the skin.

resorcin (re-zor'sin). Resorcinol.

resorcinol (re-zor'sĭ-nol) [*resin* + *orcin* + L. *oleum*, oil.] 1. (U.S., Br.) Resorcin, metadihydroxybenzene, $C_6H_6O_2$; a diatomic phenol obtained from sodium benzenemetadisulphonic acid by heating with sodium hydroxide; a white crystalline powder soluble in water; employed internally for the relief of nausea, asthma, whooping cough, and diarrhea in doses of gr. 5–10 (0.3–0.6), but chiefly as an external antiseptic in psoriasis, eczema, seborrhea, and ringworm. Pyrocatechin and hydroquinone are isomers of resorcinol. 2. A compound of equal parts of resorcinol (1) and iodoform, a brown powder; employed as an antiseptic dusting powder for wounds, ulcers, etc., and in 5 to 15 per cent. ointment in psoriasis and other skin diseases. **hex'yl r.,** caprokol, see *hexylresorcinol*. **r. eucalpy'tol,** a white powder, antiseptic; employed externally in ointment or solution in the treatment of skin diseases, and in aqueous solution by inhalation in pulmonary tuberculosis. **r. monac'etate,** euresol, employed externally in the treatment of acne and sycosis in 5 to 20 per cent. ointment; employed also in the treatment of seborrhea and alopecia. **r. phthal'ein anhy'dride,** fluorescein. **r. salol,** employed as an intestinal antiseptic in doses of gr. 3–8 (0.2–0.5).

resorci'num. (U.S. 1890.) Resorcinol.

resorcylal'gin. A compound of antipyrine and betaresorcylic acid; antipyretic and analgesic.

resorption (re-sorp'shun). 1. The act of resorbing; the removal of an exudate, a blood-clot, pus, etc., by absorption. 2. A loss of substance by lysis, of the roots of the deciduous teeth, for example.

resorpyrine (re-zor-pi'rēn). A reaction product of resorcinol and antipyrine, a white powder; analgesic and antipyretic in doses of gr. 5–10 (0.3–0.6).

respi'rable [L. *respirare*, to breathe, + *habilis*, apt, fit.] Fit for respiration.

respira'tion [L. *respirare*, to breathe.] 1. A function common to all living plants or animals, consisting in the taking in of oxygen and the throwing off the products of oxidation in the tissues, mainly carbon dioxide and water. 2. The sound of the air moving in the bronchi and lungs heard on auscultation. **abdom'inal r.,** r. effected mainly by the action of the diaphragm, the movement being chiefly of the abdominal walls. **amphor'ic r.,** a sound like that made by blowing across the mouth of a bottle, heard on auscultation in some cases in which a large pulmonary cavity exists, or

occasionally in pneumothorax. **artific'ial r.,** the maintenance of respiratory movements by artificial means in cases of suspended animation. The various methods are the Marshall Hall, by rolling and pressure on the thorax with the patient prone; the Silvester, by alternately raising the arms above the head and lowering them, making pressure on the chest with the patient supine; the Howard, by intermittent pressure on the chest with the patient supine; the Schaefer, by intermittent pressure on the chest, the patient being prone; the Laborde, by rhythmical tongue traction; and the Fell-O'Dwyer, by insufflation through an O'Dwyer tube; in the case of a stillborn infant the Prochownik, Schultze, and Buist methods are used; see these names. **bron'chial r.,** a tubular blowing sound caused by the passage of air through a bronchus in an area of consolidated lung tissue. **bronchocav'ernous r.,** combined bronchial and cavernous r. **bronchovesic'ular r.,** combined bronchial and vesicular r. **cav'ernous r.,** a hollow reverberating sound heard on auscultation over a cavity in the lung. **cogwheel r.,** jerky or interrupted r., the inspiratory sound being broken into two or three by silent intervals. **costal r.,** thoracic r. **diaphragmat'ic r.,** abdominal r. **divi'ded r.,** the occurrence of a distinct pause, noted on auscultation, between the inspiratory and expiratory sounds; observed in cases of advanced emphysema. **inter'nal r.,** tissue r. **interrup'ted r.,** cogwheel r. **jerky r.,** cogwheel r. **metamorphos'ing r.,** bronchocavernous r., the first part of inspiration being bronchial the last part cavernous. **physiolog'ical r.,** metabolism, the giving off of waste material and the formation of new by the cellular protoplasm. **pu'erile r.,** an exaggeration of the normal respiratory sound, heard in children and in adults after exertion. **rude r.,** bronchovesicular r. **supplemen'tary r.,** puerile r. **thorac'ic r.,** r. effected chiefly by the action of the intercostal and other muscles which raise the ribs, causing expansion of the chest. **tis'sue r.,** the interchange of gases between the blood and the tissues. **tu'bular r.,** bronchial r. **vesic'ular r.,** the respiratory murmur heard on auscultating over the normal lung. **vesiculocav'ernous r.,** cavernous r., due to the presence of a cavity, mingled with the vesicular murmur of the surrounding normal lung tissue. **wavy r.,** cogwheel r.

res'pirator. An appliance fitting over the mouth and nose, used for the purpose of excluding dust, smoke, etc., or of warming the air before it enters the respiratory passages.

respi'ratory. Relating to respiration. **r. bundle,** funiculus solitarius. **r. coeffic'ient,** r. quotient. **r. murmur,** vesicular respiration.* **r. pulse,** a venous pulse synchronous with the respiratory movements. **r. quo'tient,** the figure obtained by dividing the volume of carbon dioxide in the expired air by that of oxygen in the inspired air; it is normally less than unity—about 0.9. **r. tract,** the air passages from the nostrils to the air-sacs in the lungs.

respire' [L. *respirare.*] To breathe.

respirom'eter [L. *respirare,* to breathe, + G. *metron,* measure.] An instrument for measuring the extent of the respiratory movements.

response (re-spons') [L. *responsus; respondere,* to answer.] The reaction of a muscle or other part to any stimulus.

rest. 1. [A.S. *ræst.*] Quiet, repose. 2. [A.S. *ræstan.*] To repose, to cease from work. 3. [L. *restare,* to remain.] A group of cells or a portion of fetal tissue which has become displaced and lies embedded in tissue of another character; it is believed by many that under certain conditions this embryonic structure may take on renewed growth and give rise to a tumor; called also *embryonal r.,* or *epithelial r.*

rest-atom. Recoil* atom.

rest-bacil'lus. v. Behring's term for the tubercle bacillus after the removal of the constituents soluble respectively in pure water, in a 10 per cent. salt solution, and in alcohol and ether. It is from this that TC, or tuberculase, is prepared. See *R.*

rest-body. A small mass of cytoplasm remaining after the nucleus and cytoplasm of the schizont have divided into asexual spores or merozoites.

rest-cure, rest-treat'ment. A method of treatment of nervous diseases, developed by S. Weir Mitchell, consisting essentially of isolation, prolonged confinement to the bed, a diet chiefly of milk, cocoa, and beef-juice, Swedish movements, massage, electricity, and hydrotherapy.

rest'-harrow [*arrest harrow,* the roots of the plant catching the prongs of the harrow.] Ononis.

restibrachium (res-tĭ-bra'kĭ-um) [L. *restis,* rope, + *brachium,* arm.] Corpus restiforme.

res'tiform [L. *restis,* rope, + *forma,* form] Rope-like, rope-shaped. **r. body,** corpus restiforme.

rest'ing stage. The quiescent stage of a cell or its nucleus in which no caryocinetic changes are taking place; vegetative stage.

res'tis [L. rope.] Corpus restiforme.

restitutio (res-tĭ-tu'shĭ-o) [L. *re-,* again, + *statuere,* to set up.] Restitution. **r. ad in'tegrum,** return to health, complete recovery.

restitu'tion. In obstetrics the return of the rotated head of the fetus to its natural relation with the shoulders after its emergence from the vulva.

restora'tion [L. *restaurare,* to restore, to repair] 1. Replacement. 2. Recovery.

restor'ative. 1. Renewing health and strength. 2. An agent which promotes a renewal of health or strength.

restraint (re-strānt'). A measure in the treatment of the violently insane whereby the patient is prevented (by the strait-jacket, narcotic drugs, etc.) from doing injury to himself or others.

resupina'tion. Supination; lying or turning over, on the back.

resu'pinate. 1. To supinate, to turn on the back. 2. Supinated; lying on the back, supine.

resuscitate (re-sus'i-tāt) [L. *re-,* again, + *suscitare,* to raise up.] To revive, to restore to life after apparent death.

resuscita'tion. Restoration to life after apparent death.

retain'er [L. *re-,* back, + *tenere,* to hold.] An appliance for holding a loose tooth in position until it has become firm.

ret'amine. An alkaloid from *Spartium junceum,* or *Genista hispanica,* Spanish broom, resembling in its action sparteine.

retch [A.S. *hræcan,* to hawk.] To make an involuntary effort to vomit.

retch'ing. Making movements of vomiting without effect, vomiturition.

rete, pl. *e'tia* (re'te) [L. a mesh.] 1. A network of nerve-fibers or small vessels. 2. A structure composed of a fibrous network or mesh.

r. acromia'le, a vascular network between the acromion and the skin of the shoulder, formed by anastomoses of the acromial branch of the transversa

scapulæ with the acromial branch of the thoracoacromialis.

r. articula're, a r. vasculosum in the neighborhood of a joint, where such arrangements are common.

r. articula're cu'biti [BNA], vascular networks over the epicondyles of the humerus and the olecranon and between the triceps tendon and joint capsule, composed of anastomoses between branches of the radial and middle collateral, superior and inferior ulnar collateral, radial recurrent, interosseous recurrent, and recurrent ulnar.

r. articula're ge'nu [BNA], an articular network over the front and sides of the knee, formed by branches of the genu suprema, of the five genual (articular) arteries from the poplitea, of the recurrens tibialis anterior and posterior, and of the tibialis posterior.

r. calca'neum [BNA], a superficial network over the posterior tibial calcaneus, formed by branches of the peroneal and posterior tibial arteries and twigs from the malleolar retia.

r. cana'lis hypoglos'si [BNA], a small venous network around the hypoglossal nerve, connected with the occipital sinus, inferior petrosal sinus, and internal jugular vein.

r. carpi ante'rius, r. carpi volare [BNA].

r. carpi dorsa'le [BNA], r. carpi posterius, a vascular network over the dorsal surface of the carpal joints, formed by anastomoses of branches of the dorsal and volar interosseous, and dorsal carpal branches of the radial and ulnar arteries.

r. carpi poste'rius, r. carpi dorsale [BNA].

r. carpi vola're [BNA], r. carpi anterius, a small vascular network deeply situated over the volar surface of the carpal joints, formed of branches from the volar interosseous and volar carpal branches of the radial and ulnar arteries.

r. dorsa'le pe'dis [BNA], a network on the dorsal surfaces of the second row of tarsal bones, formed by anastomoses between the plantaris lateralis and arcuata arteries.

r. foram'inis ova'lis [BNA], a venous network around the mandibular nerve, connecting with the cavernous sinus and the pterygoid plexus.

r. Hall'eri, r. testis.

r. malleola're latera'le [BNA], a network over the outer malleolus formed by branches of the malleolaris posterior lateralis and anterior lateralis, peronæa, tarsea lateralis, and dorsalis pedis arteries.

r. malleola're media'le [BNA], a network over the inner malleolus formed by branches from the malleolaris, anterior medialis, posterior medialis, and tarseæ mediales.

r. Malpi'ghii, r. mucosum, stratum germinativum BNA].

r. mirab'ile [wonderful network], a vascular network interrupting the continuity of an artery or vein, such as occurs in the glomeruli of the kidney.

r. muco'sum, stratum germinativum [BNA].

p. patel'læ [BNA], the superficial portion of the r. articulare genu.

r. tes'tis [BNA], r. Halleri, the network of canals at the termination of the straight tubules in the mediastinum testis.

r. vasculo'sum [BNA], a vascular network formed by anastomoses between minute arteries just before they become capillaries.

r. vasculo'sum Hall'eri, r. testis.

re'tia veno'sa vertebra'rum [BNA], circular venous plexuses within the dura of the spinal cord formed by communications between the individual vertebral plexuses and the longitudinal vertebral sinuses.

r. veno'sum dorsa'le ma'nus [BNA], a network of veins on the dorsum of the hand emptying into the radial and the ulnar veins.

r. veno'sum dorsa'le pe'dis [BNA], dorsal venous network of the foot, a superficial network of fine veins on the dorsum of the foot.

r. veno'sum planta're [BNA], plantar venous network, a fine superficial venous network in the sole of the foot.

retention (re-ten'shun) [L. *re-*, back, + *tenere*, to hold.] 1. The keeping in the body of what normally belongs there, especially the retaining of food and drink in the stomach. 2. The keeping in the body of what normally should be discharged, as urine or feces. 3. Keeping in mind memory. **r. form,** in dentistry the shape given to the inside of a cavity so that the filling may withstand great force without displacement.

retial (re'shyal). Relating to a rete.

retic'ula. 1. Plural of L. *reticulum*. 2. Formatio reticularis (2).

retic'ular [L. *reticularis; reticulum*, a little net.] Relating to a reticulum; net-like; cellular, cancellar, areolar. **r. car'tilage,** yellow elastic cartilage. **r. forma'tion,** formatio reticularis. **r. layer,** pars reticularis, the inner layer of the corium, composed of connective-tissue bundles.

retic'ulated. Reticular.

reticulation (re-tik-u-la'shun). The presence or formation of a reticulum or network, such as is seen in the red cells during active blood regeneration.

retic'ulin, retic'uline. An albuminoid or scleroprotein present in the connective-tissue framework of the lymphatic tissues.

reticulocyte (re-tik'u-lo-sīt) [L. *reticulum*, network, + G. *kytos*, cell.] A reticular red blood cell occurring during the process of active blood regeneration; see *reticulation*.

reticulocytosis (rĕ-tik''u-lo-si-to'sis). The presence of reticulocytes in numbers during active blood regeneration; reticulosis.

retic'ulo-endothe'lial sys'tem. Reticulo-endothelium.

reticuloendothelioma (re-tik'u-lo-en-do-the-lĭ-o'mă). A localized reticuloendotheliosis, or reticuloendothelial tumor.

reticuloendotheliosis (re-tik'u-lo-en-do-the-lĭ-o'sis). Hyperplasia of the reticuloendothelium in any of the organs or tissues.

reticuloendothelium (re-tik'u-lo-en-do-the'lĭ-um). Reticulo-endothelial system, one of a group of morphologically distinct mesenchymal cell types, but all with endothelial and reticular attributes; they are scattered about in various organs and tissues—spleen, liver, bone-marrow, etc.—and are seemingly concerned chiefly in phagocytosis and in the production of immune-bodies.

reticuloperithelium (re-tik''u-lo-per-ĭ-the'lĭ-um) [L. *reticulum*, a fine net, + *perithelium*.] Retoperithelium, the layer of covering cells of a reticular framework.

reticulothelium (re-tik''u-lo-the'lĭ-um). Retothelium, the cellular layer covering a reticular tissue.

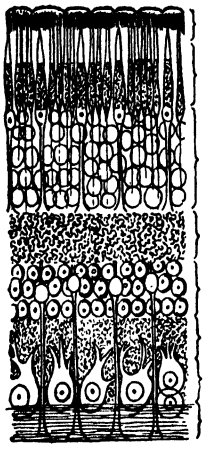
reticulosis (re-tik-u-lo'sis). The phase of active blood regeneration in which many reticular blood cells are present; see *reticulation*.

retic'ulum [L. dim. of *rete*, a net.] 1. A fine network, especially of nerve-fibers or protoplasmic processes. 2. Neuroglia. 3. The second stomach of a ruminant, between the rumen and omasum.

ret'iform [L. *rete*, network, + *forma*, form.] Resembling a net or network.

ret'ina, gen. and pl. *ret'inæ* [L. *rete*, a net.] Optomeninx, the inner, nervous, tunic of the eyeball, consisting of an outer pigment layer attached to the inner surface of the chorioid, ciliary body, and iris, and an inner layer formed by the expansion of the optic nerve. It comprises an *optic* or *physiological portion* which receives the visual rays, and a non-percipient *ciliary portion*, or *pars*

cæca retinæ, the two being separated by the ora serrata. The optic portion consists of eight layers, as follows (the numbers referring to the layers as shown in the cut): 1, pigment layer, stratum pigmenti; 2, layer of rods and cones, bacillary layer; 3, outer nuclear layer; 4, outer molecular layer; 5, inner nuclear layer; 6, inner molecular layer; 7, ganglionic layer; 8, nerve-fiber layer, stratum opticum; between the layer of rods and cones and the outer nuclear layer is the outer limiting membrane, and covering the stratum opticum is the inner limiting membrane. **at'rophy of the r.**, neuroderatrophia. **coarc'tate r.**, a ring-like effusion of fluid between the chorioid and retina, giving the latter a funnel shape. **detach'ment of the r.**, ablatio retinæ, separation of more or less of the retina from the chorioid. **inflamma'tion of the r.**, retinitis, dictyitis. **leop'ard r.**, tigroid r. **pain in the r.**, neurodealgia. **shot-silk r.**, the appearance of numerous wavelike glistening reflexes, like the shimmer of silk, observed sometimes in the retina of a young person. **ti'groid r.**, the striped or spotted appearance of the retina in retinitis pigmentosa.



THE HUMAN RETINA (diagrammatic).

retinac'ulum, gen. *retinac'uli*, pl. *retinac'ula* [L. a halter.] A frenum, or a retaining band or ligament. **r. cap'sulæ articula'ris coxæ**, one of several longitudinal folds of the cervical reflection of the capsular ligament of the hip-joint. **r. cu'tis**, (1) one of the folds of the skin about the joints; (2) one of the connective-tissue bands attaching the subcutaneous tissue to the corium. **r. patell'æ**, one of several fibers of insertion of the vastus lateralis (*r. patellæ laterale*) or of the vastus medialis (*r. patellæ mediale*) which run past the patella on either side to be inserted into the condyle of the tibia. **r. ten'dinum**, the annular ligament of the ankle or wrist.

ret'inal. Relating to the retina.

retinitis (ret-ĭ-ni'(ne')tis) [L. *retina*, + G. *-itis*.] Inflammation of the retina. **albuminu'ric r.**, a form of r. occurring in Bright's disease, marked by the presence of white spots arranged in stellate forms at the macula and surrounding the optic disc. **cir'cinate r.**, a form in which white patches form an annular or crescentic figure surrounding the macula. **diabet'ic r.**, retinal inflammation occurring in diabetes, marked by the presence of irregularly grouped white spots on the retina. **gravid'ic r.**, a temporary r. associated with the albuminuria of pregnancy. **hemorrhag'ic r.**, a form marked by frequently recurring hemorrhages, both superficial and deep, into the retina. **leuce'mic r.**, splenic r. **metastat'ic r.**, purulent r. resulting from the arrest of septic emboli in the retinal vessels. **prolif'erating r.**, a form in which connective-tissue new formations project into the vitreous. **punc'tate r.**, a form in which the retina is dotted with numerous small yellowish white points. **r. pigmento'sa**, a chronic progressive inflammation of the retina with atrophy and pigmentary infiltration of the inner layers, tigroid retina. **serous r.**, simple r., edema of the retina; a mild inflammation of the superficial layers of the retina. **splenic r.**, a form occurring sometimes in leucemia, in which the retina is paler than normal and the seat of numerous small hemorrhages. **stri'ated r.**, a form marked by yellowish gray streaks radiating from the optic disc.

retinochorioiditis, retinochoroiditis (ret-ĭ-no-ko-ri-oy-di'(de')tis, ret-ĭ-no-ko-roy-di'(de')tis). Chorioretinitis.

ret'inol. Resinol, rosin oil, codol; a thick, yellow, viscid, oily liquid, obtained by distillation from Burgundy pitch and rosin; has been given in gonorrhea in doses of ♏5–8 (0.3–0.5), applied externally in various skin diseases, and employed as a solvent of phosphorus and a number of other drugs.

retinopapillitis (ret-ĭ-no-păp-il-i'(e')tis). Papilloretinitis.

ret'inoid [G. *rētinē*, resin, + *eidos*, resemblance] 1. Resembling a resin, resinous. 2. [L. *retina*.] Resembling the retina.

retinoscopy (ret-in-os'ko-pĭ) [*retina* + G. *skopeō*, I examine.] Shadow test, skiascopy; a method of detecting errors of refraction by illuminating the retina and noting the light and shadow and the direction of movement of the light when the mirror is rotated.

retort' [L. *retorta; retorquere*, to twist back.] A flask-like vessel with a long neck passing outward, used in distilling.

retothelioma (re''to-the-lĭ-o'mă). A tumor of the retothelium.

retothelium (re''to-the'lĭum) [L. *rete*, a net, + G. *thēlē*, nipple, papilla.] The layer of cells covering a reticular tissue, reticulothelium.

retract' [L. *re-*, back, + *trahere*, to draw.] 1. To shrink. 2. To draw back.

retrac'tile. Retractable, capable of being drawn back.

retrac'tion. 1. A shrinking. 2. A drawing back. 3. The state of being drawn back.

retrac'tor. An instrument for drawing aside the lips of a wound.

re'trad [L. *retro*, backward, + *ad*, to.] Backward, toward the back part, caudad.

retrahens aurem, retrahens auriculam (re'trahenz aw'rem, aw-rik'u-lam) [L. drawing back the ear, or auricle.] Musculus auricularis posterior.

retrench'ment [F. *re-*, back, + *trancher*, to cut.] The cutting away of superfluous tissue.

retro- [L. back, backward.] A prefix in words formed from Latin roots, denoting backward or behind.

retroauricu'lar (re-tro-aw-rik'u-lar) [L. *retro*, behind.] Behind the auricle.

retrobuccal (re-tro-buk'kal) [L. *retro*, behind, + *bucca*, mouth.] Relating to the back part of, or behind, the mouth.

retrobul'bar [L. *retro*, behind, + *bulbus*, bulb.] 1. Behind the eyeball. 2. Posterior to the medulla oblongata.

retroce'dent [L. *retro*, backward, + *cedere*, to go.] Going back. **r. gout**, an attack of gout in which the articular symptoms subside with involvement of some internal organ, such as the stomach.

retrocervical (re-tro-sur'vĭ-kal) [L. *retro*, behind, + *cervix*, neck.] Behind the cervix uteri.

retrocession (re-tro-sesh'un). 1. A going back, a relapse. 2. The cessation of the external symptoms of a disease followed by signs of involvement of some internal organ or part. 3. Noting a

position of the uterus or other organ further back than is normal.

retrocliu'sion [L. *retro*, backward, + *claudere*, to close.] A form of acupressure for the arrest of bleeding; the needle is passed through the tissues over the cut end of the artery, is turned around and then passed backward beneath the vessel.

retrocol'ic. Behind the colon.

retrocoll'ic [L. *retro*, behind, + *collum*, neck.] Relating to the back of the neck; drawing back the head. **r. spasm,** retrocollis, torticollis in which the spasm affects the posterior neck muscles.

retrocoll'is. Retrocollic* spasm.

retrodevia'tion. A backward bending or inclining, retrodisplacement.

retrodisplace'ment. Any backward displacement, such as retroversion or retroflexion of the uterus.

retroesophageal (re-tro-e-so-faj'e-al) Behind the esophagus.

retroflec'ted [L. *retro*, backward, + *flectere*, to bend.] Retroflexed.

retroflec'tion. Retroflexion.

retroflexed (re-tro-flekst') [L. *retro*, backward, + *flexus*, bent.] Bent backward.

retroflex'ion. Retroflection, backward bending, as of the uterus when the body is bent back, forming an angle with the cervix.

ret'rograde [L. *retro*, backward, + *gradi*, to go.] 1. Moving backward. 2. Degenerating, reversing the normal order of growth and development **r. cancer,** a shrunken and quiescent malignant growth. **r. metamorpho'sis,** catabolism.

retrog'raphy [L. *retro*, backward, + G. *graphō*, I write.] Mirror-writing.

retrogression (re-tro-gresh'un) [L. *retrogressus; retro*, backward, + *gradi*, to go.] 1. Involution, catabolism, a reversal of the metabolic processes. 2. Degeneration.

retroinfection (re-tro-in-fek'shun). Infection of the mother by the fetus.

retroin'sular. Behind the insula.

retroirid'ian. Behind the iris.

retrojec'tion [L. *retro*, backward, + *jacere*, to throw.] The washing out of a cavity by the backward flow of an injected fluid.

retrojec'tor. A form of syringe with long tubular attachment to the nozzle, used in retrojection.

retrolingual (re-tro-ling'gwal) [L. *retro*, behind, + *lingua*, tongue.] Relating to the back part of the tongue; behind the tongue.

retromamm'ary [L. *retro*, behind, + *mamma*, breast.] Behind the mamma.

retromandibular (re-tro-man-dib'u-lar) [L *retro*, behind, + *mandibula*, lower jaw.] Behind the lower jaw, noting especially a point in front of the mastoid process, tenderness of which to pressure constitutes Signorelli's* sign.

retromas'toid. Posterior to the mastoid process; relating to the posterior mastoid cells.

retrona'sal. Posterior nasal, relating to the posterior nares.

retroocular (re-tro-ok'u-lar). Retrobulbar (1).

retroperitoneal (re"tro-per-ĭ-to-ne'al). Behind the peritoneum.

retroperitonitis (re-tro-per-ĭ-tō-ni'(ne')tis). Inflammation of the cellular tissue behind the peritoneum.

retropharyn'geal. Behind the pharynx.

retrophar'ynx. The posterior part of the pharynx.

retroplacen'tal. Behind the placenta.

retroplasia (re-tro-pla'zĭ-ah) [L. *retro*, backward, + G. *plasis*, a moulding.] A form of degeneration, in which a cell or tissue is converted into one further back along the line of development.

retroposed (re-tro-pōzd') [L. *retro*, backward, + *positus; ponere*, to place.] Displaced backward, but not inclined or bent, neither retroverted nor retroflexed.

retroposition (re-tro-po-zish'un). Simple backward displacement of a structure or organ, as the uterus, without retroversion or retroflexion.

retropul'sion [L. *retro*, back, + *pulsio*, a pushing.] An involuntary backward walking or running, occurring in certain nervous affections. 2. A pushing back of any part.

retrostal'sis [L. *retro*, backward, + *stalsis*, constriction.] Antiperistalsis.

retroster'nal. Behind the sternum.

retrotar'sal. Behind the tarsus, or edge of the eyelid. **r. fold,** fornix conjunctivæ.

retrouterine (re"tro-u'ter-in). Behind the uterus.

retrovaccina'tion. 1. The vaccination of a cow with humanized virus. 2. The vaccination of a human with virus from a retrovaccinated cow.

retroversioflexion (re-tro-vur"sho-flek'shun). Combined retroversion and retroflexion of the uterus.

retroversion (re"tro-vur-zhun) [L. *retro*, backward, + *vertere*, to turn.] A turning backward, as of the uterus, without flexion or bending of the organ.

retrovert'ed. Turned or inclined backward, without being bent.

retrusion (re-tru'zhun) [L. *re-*, backward, + *trudere*, to thrust.] Location of one or more of the teeth behind the normal line of occlusion.

Ret'zius's cav'ity [Anders Adolf *Retzius*, Swedish anatomist, 1796–1860.] R.'s space. **R.'s fi'bers,** stiff fibers in Deiters' cells. **R.'s gyrus,** the gyrus intralimbicus in the cortical portion of the rhinencephalon. **R.'s lig'ament,** ligamentum fundiforme pedis. **R.'s space,** preperitoneal space, cavum Retzii, a space between the peritoneum and the anterior abdominal wall, filled with loose connective tissue, into which the bladder pushes when distended. **R.'s veins,** veins arising in the walls of the intestine and passing to the branches of the vena cava instead of to those of the portal vein.

Ret'zius's foram'ina [Magnus Gustaf *Retzius* Swedish histologist, son of the above, 1842–1919.] Key*-Retzius foramina. **R.'s lines,** calcification lines, accretion* lines. **R.'s stri'æ,** striæ parallelæ, brown striæ, dark concentric lines crossing the enamel prisms of the teeth, seen on cross section of the enamel.

reu'nient [L. *re-*, again, + *unire*, to unite.] Connecting, noting the ductus reuniens.

Reuss's col'or ta'bles (roys). Charts in which colored letters are printed on colored backgrounds in such combination that some of them are invisible to a color-blind person. **R.'s for'mula,** A = grams of albumin per liter of serous fluid; then A = (sp. gr. −1000) × $\frac{1}{3}$ −2.8. **R.'s test,** for atropine: the addition of oxidizing agents and sulphuric acid to a liquid containing atropine produces an odor of orange-flowers and roses.

revaccina'tion. Vaccination of a person previously successfully vaccinated.

revell'ent [L. *re-*, back, + *vellere*, to draw.] Revulsive.

Reverdin's meth'od (rĕ-ver-dań') [Jacques L. *Reverdin*, Swiss surgeon, 1842–1908.] Epidermic grafting, the placing of small bits of epidermis on a granulating surface to promote healing.

reversal (re-vur'sal) [L. *re-*, again + *vertere*, to turn.] 1. The changing of a dark line or a bright one of the spectrum into its opposite. 2. Noting a person who has difficulty in distinguishing the lower case printed or written letter *p* from *q* or *g*, *b* from *d*, or *s* from *z*.

reversion (re-vur'zhun). The cropping out in an individual of certain characters peculiar to a remote ancestor, which characters have been in abeyance during one or more of the intermediate generations.

Revilliod's sign (re-ve-yo') [Henri *Revilliod*, Swiss physician, contemporary.] Inability, in facial hemiplegia of cerebral origin, to close the eye on the affected side without closing the other at the same time.

revivescence (re-vi-ves'ens). Revivification (1).

revivification (re-viv"ĭ-fi-ka'shun) [L. *re-*, again, + *vivere*, to live, + *facere*, to make.] 1. Revivescence, renewal of life and strength. 2. Paring or scraping the edges of an old wound to promote union, refreshing.

revolute (rev'o-lūt) [L. *revolutus* from *revolvere*, to revolve.] Curled back, like the tips of the fronds of a fern.

revul'sent. 1. Revulsive, derivative, revellent. 2. A counterirritant.

revul'sion [L. *revulsus; revellere*, to pull back.] Counterirritation, derivation.

revul'sive. 1. Causing revulsion. 2. A revulsent or counterirritant.

Reynals factor (ra'nalz) [F. Duran-*Reynals*, American pathologist.] The property possessed by testicular extract of enhancing the infectivity of microorganisms and filterable viruses.

Rey'nold's test. For acetone: corrosive sublimate is added to the suspected fluid and then solution of caustic potassa until the reaction is alkaline; the addition of ammonium sulphate to the clear filtrate will throw down a precipitate of black sulphate of mercury if acetone is present.

R.F.A. Abbreviation for right frontoanterior, noting a fetal presentation with the forehead of the child directed toward the right acetabulum of the mother.

R.F.P. Abbreviation for right frontoposterior, noting a presentation of the fetus with the forehead directed toward the right sacroiliac articulation of the mother.

Rh. Chemical symbol of *rhodium*.

Rhabditis (rab-di'tis) [G. *rhabdos*, a rod.] A genus of small nematode worms, some free living, others parasitic on plants and animals. **R. genita'lis,** *R. pellio*. **R. niell'yi,** a species observed by Nielly of Brest in a case of vesicopapular eruption on the skin. **R. pell'io,** a species found in the vagina in one instance.

rhab'doid [G. *rhabdos*, a rod, + *eidos*, resemblacne.] Rod-shaped. **r. suture,** sagittal suture.

Rhabdomonas[0] (rab-dom'o-nas) [G. *rhabdos*, a rod, + *monas*, single (a unicellular organism).] A genus of water organisms of the family *Rhodobacteriaceæ*, consisting of rose-colored fusiform or cylindrical cells.

rhabdomyoma (rab-do-mi-o'mah) [G. *rhabdos*, a stripe, + *mys*, muscle, + *-ōma*.] A tumor composed chiefly of striated muscular tissue. **r. sarcomato'sum,** rhabdomyosarcoma.

rhabdomyosarcoma (rab"do-mi"o-sar-ko'mah). A mixed rhabdomyoma and sarcoma; a tumor of striated muscle-fibers containing numerous imperfectly differentiated, vegetative or embryonic cells; rhabdomyoma sarcomatosum.

Rhabdone'ma [G. *rhabdos*, rod, + *nēma*, thread.] A genus of minute nematode worms resembling and sometimes confused with *Rhabditis;* some of the species are parasitic in aniamls.

rhabdophobia (rab-do-fo'bĭ-ah) [G. *rhabdos*, rod, + *phobos*, fear.] A morbid fear excited by the sight of a stick; morbid fear of a beating.

rhachial (rak'ĭ-al). Rhachidial, rhachidian.

rhachialbuminimeter (rak"ĭ-al-bu"min-im'e-tur) [G. *rhachis*, spine, + *albumin* + G. *metron*, measure.] A graduated test tube used to determine the amount of albumin or globulin (precipitated by means of heat and acid) in a specimen of cerebrospinal fluid.

rhachialbuminimetry (rak"ĭ-al-bu"min-im'ĭ-trĭ)[G. *rhachis*, spine, + *albumin* + G. *metron*, measure.] Determination of the albumin (globulin) content of the spinal fluid.

rhachialgia (rak-ĭ-al'jĭ-ah) [G. *rhachis*, back, + *algos*, pain.] Pain of a neuralgic character in the back· notalgia.

rhachianalgesia (rak-ĭ-an-al-je'sĭ-ah). Spinal anesthesia* (2).

rhachianesthesia, rhachianæsthesia (rak-ĭ-an-es-the'zĭ-ah) [G. *rhachis*, spine, + *anesthesia*.] Spinal anesthesia.

rhachicentesis (rak-ĭ-sen-te'sis). Rhachiocentesis.

rhachidial (rā-kid'ĭ-al) [G. *rhachis*, spine.] Spinal

rhachidian (rā-kid'i-an). Rhachidial, spinal.

rhachilysis (rā-kil'i-sis) [G. *rhachis*, spine, + *lysis*, a loosening.] Forcible correction of lateral curvature by lateral pressure against the convexity of the curve.

rhachiocampsis (rak-ĭ-o-kamp'sis) [G. *rhachis*, spine, + *kampsis*. a befiding.] Spinal curvature.

rhachiocente'sis (rak-ĭ-o-sen-te'sis) [G. *rhachis*, spine, + *kentēsis*, puncture.] Spinal puncture, lumbar puncture.

rhachiochysis (rak-ĭ-ok'i-sis) [G. *rhachis*, spine, + *chysis*, a pouring out.] A subarachnoid effusion of fluid in the spinal canal.

rhachiococainization (rak-ĭ-o-ko"kah-ēn-i-za'shon). Spinal anesthesia by the subarachnoid injection of a weak solution of cocaine.

rhachiodynia (rak-e-o-din'ĭ-ah) [G. *rhachis*, back, + *odynē*, pain.] Rheumatism of the muscles of the upper part of the back.

rhachiometer (rak-ĭ-om'e-ter) [G. *rhachis*, spine, + *metron*, measure.] An instrument for measuring the curvature, natural or pathological, of the spinal column.

rhachiomyelitis (rak-ĭ-o-mi-ĕ-li'(le')tis) [G. *rhachis* spine, + *myelon*, marrow, + *-itis*.] Inflammation of the spinal cord, myelitis.

rhachiopathy (rā-kĭ-op'ă-thĭ) [G. *rhachis*, spine, + *pathos*, suffering.] Spondylopathy, any disease of the spinal column.

rhachioplegia (rak-ĭ-o-ple'jĭ-ah) [G. *rhachis*, spine, + *plēgē*, stroke.] Spinal paralysis.

rhachioscoliosis (rak-ĭ-o-sko-lĭ-o'sis) [G. *rhachis*. spine, + *skoliōsis*, a bending.] Lateral spinal curvature, scoliosis.

rhachiotome (rak'ĭ-o-tōm) [G. *rhachis*, spine, + *tomos*, cutting.] A specially devised instrument for dividing the laminæ of the vertebræ.

rhachiotomy (rak-ĭ-ot'o-mĭ) [G. *rhachis*, spine, + *tomē*, incision.] 1. Division of the laminæ of the vertebra in order to expose the spinal cord, laminectomy. 2. Division of the spinal column in embryotomy.

rhachipagus (rā-kip'a-gus) [G. *rhachis*, spine, + *pagos*, consolidated.] A twin monster joined along the spine.

rhachis (rak'is) [G.] The spinal column.

rhachischisis (rā-kis'kĭ-sis) [G. *rhachis*, spine, + *schisis*, division.] A congenital fissure of the spinal column. **r. partia'lis,** mesorrhachischisis. **r. poste'rior,** spina bifida. **r. tota'lis,** holorrhachischisis.

rhachistovainization (rak-ĭ-sto″vah-ēn-i-za'shon). Regional anesthesia produced by an intraspinal lumbar injection of a solution of stovaine.

rhachitic (rā-kit'ik). Rachitic, rickety.

rhachitis (rā-ki'(ke')tis). Rickets, rachitis.

rhachitome (rak'ĭ-tōm). Rhachiotome.

rhachitomy (rā-kit'o-mĭ). Rhachiotomy.

rhaco'ma [G. *rhakōma; rhakoō*, I tear in strips.] An excoriation.

rhaco'mata [pl. of *rhacoma*.] Rhagades.

rhæbocra'nia. Rhebocrania.

rhæbosce'lia. Rheboscelia.

rhæbo'sis. Rhebosis.

rhagades (rag'ă-dēz) [G. *rhagas*, pl. *rhagades*, a crack.] Chaps, cracks or fissures in the skin; linear excoriations, rhacomata.

rhagadiformis (rā-gad-ĭ-for'mis) [G. *rhagas* (*rhagad-*), crack, + L. *forma*, shape.] Fissured.

-rhagia [G. *rhēgnymi*, I break forth or burst.] A suffix denoting a discharge from a bursted vessel; usually denoting bleeding from a part.

rhagiocrin (raj'ĭ-o-krin). A clasmatocyte, a wandering cell in a state of temporary rest.

rham'nin. Trade name of a fluidextract of frangula; aperient.

rhamnose (ram'nōz). A dextrorotatory sugar occasionally excreted in the urine.

rhamnoxanthin (ram″no-zan'thin). Frangulin.

Rham'nus [G. *rhamnos*, buckthorn.] A genus of shrubs and trees of the order *Rhamnaceæ*. **R. califor'nica,** California buckthorn or coffee-tree, the bark of which is employed in eclectic practice in the treatment of inflammatory rheumatism and of all forms of rheumatic pain, acute or chronic, in doses of 15 to 60 drops of the specific medicine in water every two or three hours in acute cases and four or five times a day in chronic rheumatism. **R. carolinia'na,** a species with edible fruit. **R. cathar'tica,** purging buckthorn, a shrub of southern Europe the bark and berries of which are cathartic; the latter, baccæ spinæ cervinæ, buckthorn berries, are official in the N.F. under the title rhamnus cathartica; dose gr. 10–20 (0.6–1.2). **R. cro'ceus,** a species with edible fruit. **R. fran'gula,** frangula. **R. pur hia'na,** cascara sagrada (U.S. and Br.).

rhapha'nia. Raphania, a spasmodic disease supposed to be due to poisoning by the seeds of *Rhaphanus rhaphanistrum*, or wild radish.

Rhaph'anus [G. *raphanos*, cabbage.] Raphanus, a genus of plants including the radish, *R. sati'vus*

rha'phe. Raphe.

rhaphidiospore (rā-fid'ĭ-o-spōr) [G. *rhaphis* (*rhaphid-*), a needle, + *sporos*, seed.] Sporozoite.

rhapon'tic [G. *rha*, rhubarb, + *pontikos*, relating to the Black Sea.] Relating to rhubarb. **r. root,** rhubarb.

rhat'any. Ratany, krameria (N.F.). **Brazil'ian r.,** the dried root of *Krameria argentea*. **Para' r.,** Brazilian r. **Peru'vian r.,** the dried root of *Krameria triandra*. **Savanill'a r.,** the dried root of *Krameria ixina*.

rhebocra'nia, rhæbocra'nia [G. *rhaibos*, crooked, + *kranion*, skull.] Torticollis.

rheboscelia, rhæboscelia (re-bo-se'lĭ-ah) [G. *rhaibos*, bent, + *skelos*, leg.] Any deformity of the legs, knock-knee, bow-legs, etc.

rhebo'sis, rhæbo'sis [G. *rhaibos*, crooked, bent.] Rheboscelia.

rhegma (reg'mah) [G.] A fracture; a rent, a fissure.

rhe'ic. Relating to rheum, or rhubarb. **r. acid,** chrysophanic acid.

rhe'in. A crystalline substance of little or no activity, obtained from rhubarb.

rhembasmus (rem-baz'mus) [G. *rhembasmos*, mental indecision.] Indecision, mental uncertainty.

rheobasic (re-o-ba'sic) [G. *rheos*, stream, current, + *basis*, base, foundation.] Noting an electric current of just sufficient intensity to cause muscular contraction or some other form of reaction.

rheochord (re'o-kord) [G. *rheos*, a stream, + *chordē*, cord.] A form of rheostat, consisting of a wire interposed in the circuit, used for measuring the resistance or reducing the strength of the electric current.

rheometer (re-om'e-ter) [G. *rheos*, a stream, + *metron*, measure.] 1. A device for measuring the rapidity of the blood-current. 2. A galvanometer

rhe'ophore [G. *rheos*, stream, + *phoros*, bearer.] The cord conducting an electric current.

rhe'oscope [G. *rheos*, stream, + *skopeō*, I view.] Electroscope, galvanoscope

rhe'ostat [G. *rheos*, stream, + *statos*, placed.] A resistance coil; an instrument used to regulate the degree of resistance in an electric current.

rheosto'sis (re-os-to'sis) [G. *rhoia*, stream, + *ostosis*.] Streak hyperostosis, an hypertrophying and condensing osteitis involving more or less all the bones in a longitudinal zone of the body.

rheotachygraphy (re-o-tă-kig'ră-fĭ) [G. *rheos*, a stream, + *tachys*, swift, + *graphē*, a record.] Recording graphically the variations of electromotive force in a muscle.

rheotann'ic acid. A glucoside, $C_{26}H_{26}O_{14}$, the form of tannin occurring in rhubarb

rheotax'is [G. *rheō*, I flow, + *taxis*, orderly arrangement.] A form of positive barotaxis, in which a body is impelled to move contrary to the direction of the current in a fluid in which it is

rheotome (re'o-tōm) [G. *rheos*, stream, + *tomos*, cutting,] An interrupter, an instrument for periodically breaking an electric current.

rheotrope (re'o-trōp) [G. *rheos*, stream, + *tropos*, a turning.] An instrument for automatically reversing an electric current.

rheot'ropism [G. *rheō*, I flow, + *tropē*, a turning.] Rheotaxis.

rhestocythemia, rhæstocythæmia (res″to-si-the'mĭ-ah) [G. *rhaistos*, destroyed, + *kytos*, cell, + *haima*, blood.] The presence of broken down red blood-cells in the peripheral circulation.

rheum (room) [G. *rheuma*, a flux.] A mucous or watery discharge. **epidem'ic r.,** influenza. **salt r.,** eczema.

rheum (re'um). [G. *rhēon*.] (U.S., Br.) Rhei radix, rhubarb, the rhizome of *Rheum officinale*; tonic and astringent in doses of gr. 1–2 (0.06–0.13) and laxative in doses of gr. 5–10 (0.3–0.6).

rheumapyra (roo-map'ĭ-rah) [G. *rheuma*, flux, + *pyr*, fire.] Rheumatic fever.

rheumarthritis (roo-mar-thri'(thre')tis) [G. *rheuma* flux, + *arthron*, joint, + *-itis*.] Articular rheumatism.

rheumarthrosis (roo-mar-thro'sis). Rheumarthritis

rheumatalgia (roo-mă-tal'jĭ-ah) [G. *rheuma* flux, + *algos*, pain.] Rheumatic pain

rheumatic (roo-mat'ik). Relating to or suffering from rheumatism

rheu'matin. Saloquinine* salicylate.

rheumatism (roo'mă-tizm) [G. *rheuma*, a flux.] 1. Rheumatic fever; an acute, probably infectious, disease, characterized by fever, profuse perspirations, painful inflammation and swelling of one or more of the joints, and often endocarditis; called also *acute articular r.* 2. An indefinite term applied to various conditions characterized by pains in the muscles, joints, and fibrous tissues. **acute artic'ular r., acute inflam'matory r.,** see *rheumatism* (1). **chronic r.,** an affection of the joints, slow in progress, producing a painful thickening and contraction of the fibrous structures, interfering with motion, and causing more or less deformity. **gonorrhe'al r.,** an arthritis, often a polyarthritis, due to a systemic infection with the gonococcus **inflamm'atory r.,** acute articular r. **mus'cular r.,** a painful inflammation of the voluntary muscles, especially of their fibrous attachments. **nodose r.,** (1) arthritis deformans; (2) an acute or subacute articular r., accompanied by the formation of nodules on the tendons, ligaments, and periosteum in the neighborhood of the affected joints. **subacute' r.,** a mild, but usually protracted form of acute rheumatism, often rebellious to treatment **tuber'culous r.,** Poncet's disease, an inflammatory condition of the joints or fibrous tissues caused by the toxins of tuberculosis.

rheumatismal (roo-mă-tiz'mal). Rheumatic.

rheu'matism-root. Dioscorea.

rheumatoce'lis [G. *rheuma*, flux, + *kēlis*, spot.] Purpura rheumatica.

rheumatoid (roo'mă-toyd) [G. *rheuma*, flux, + *eidos*, resemblance.] Resembling rheumatism in one or more features **r. arthri'tis,** arthritis deformans.

rheumatopyra (roo-mă-top'i-rah). Rheumapyra.

rheumatosis (ru-mă-to'sis). An affection, such as erythema nodosum, believed to be of rheumatic origin yet not so frankly so as the arthritic form.

rheumic (roo'mik). 1. Catarrhal, eczematous. 2. Relating to rhubarb. **r. acid,** an acid, $C_{40}H_{32}O_8$ derived from rheotannic acid.

rhex'is [G *rhēxis*, rupture] Bursting or rupture of an organ or vessel.

rhigolene (rig'o-lēn) [G *rhigos*, cold, + *elaion*, oil.] A very volatile liquid obtained in the distillation of petroleum; employed as a local anesthetic, its rapid evaporation, when sprayed on the skin, causing a freezing of the tissues.

rhi'nal [G. *rhis*(*rhin-*) nose] Relating to the nose nasal.

rhinal'gia [G. *rhis*(*rhin-*), nose, + *algos*, pain.] Pain in the nose, rhinodynia.

rhinedema, rhinœdema [G. *rhis*(*rhin-*), nose, + *oidema* swelling.] Swelling of the nasal mucous membrane.

rhinencephal'ic. Relating to the rhinencephalon.

rhinenceph'alon [G. *rhis*(*rhin-*), nose, + *enkephalos* brain.] [BNA] Olfactory brain (in man), the rudimentary olfactory lobe, consisting of the olfactory bulb and peduncle, parolfactory (Broca's) area, subcallosal gyrus, and anterior perforated substance.

rhinenceph'alus. Rhinocephalus.

rhinenchysis (ri-nen'ki-sis) [G. *rhis*(*rhin-*), nose, + *enchysis*, a pouring in.] A nasal douche, washing out the nasal cavities.

rhinesthesia, rhinæsthesia (ri-nes-the'zī-ah) [G. *rhis* (*rhin-*), nose, + *aisthēsis*, sensation.] The sense of smell.

rhineurynter (ri-nu-rin'ter) [G. *rhis*(*rhin-*), nose, + *eurynō*, I dilate.] A dilatable bag used to make pressure within the nostril to arrest a profuse epistaxis.

rhinion (rin'ī-on) [G. *rhinion*, nostril.] A craniometric point, the lower end of the suture between the nasal bones, punctum nasale inferius

rhinism (rī'nizm) [G. *rhis*(*rhin-*), nose.] The presence of a nasal quality of voice, rhinolalia.

rhinitis (ri-ni'(ne')tis) [G. *rhis*(*rhin-*), nose, + *-itis*.] Inflammation of the nasal mucous membrane. **acute' r.,** coryza, cold in the head, an acute catarrhal inflammation of the mucous membrane of the nose, marked by sneezing, lacrymation, and a profuse secretion of watery mucus. **atroph'ic r.,** chronic r with thinning of the mucous membrane **chron'ic r.,** a protracted sluggish inflammation, usually with profuse mucopurulent discharge, of the nasal mucous membrane; in the later stages the mucous membrane with its glands may be thickened, *hypertroph'ic r.*, or thinned, *atroph'ic r* **croupous r.,** membranous r **fi'brinous r.,** membranous r. **gan'grenous r.,** cancrum nasi. **hypertroph'ic r.,** chronic r with permanent thickening of the mucous membrane. **mem'branous r.,** a chronic inflammation of the nasal mucous membrane attended with a fibrinous or pseudomembranous exudate. **pseudomem'branous r.,** membranous r. **r. caseo'sa,** caseous r., a form of chronic r. in which the nasal cavities are more or less completely filled with an ill-smelling cheesy material. **r. nervo'sa,** hay-fever. **r. purulen'ta,** purulent r., a chronic r. in which pus formation is excessive. **r. sic'ca,** a form of chronic r. with little or no secretion. **r. spas'tica vasomoto'ria,** tropical hay-fever. **r. vasomoto'ria,** hay-fever. **scrof'ulous r.,** tuberculous infection of the nasal mucous membrane.

rhinoantritis (ri"no-an-tri'(tre')tis) [G. *rhis* (*rhin-*), nose, + *antron*, a cave.] Inflammation of the nasal cavities and one or both maxillary antra.

rhino'byon [G. *rhis*(*rhin-*), nose, + *byō*, I plug] A nasal plug or tampon

rhinocanthec'tomy [G. *rhis*(*rhin-*), nose, + *kanthos*, canthus, + *ektomē*, excision] Excision of the inner canthus of the eye, rhinommectomy.

rhinocele, rhinocœle (ri'no-sēl) Rhinocœlia

rhinoceph'alus [G *rhis*(*rhin-*), nose, + *kephalē*, head] A cyclopic monster having simple skin folds in place of a nose, rhinencephalus, rhinophthalmus.

rhinochiloplasty (ri-no-ki'lo-plas-tī) [G *rhis*(*rhin-*), nose, + *cheilos*, lip, + *plassō*, I form] Plastic or reparative surgery of the nose and upper lip.

rhinocleisis (ri-no-kli'sis) [G. *rhis*(*rhin-*), nose, + *kleisis*, a closure.] Nasal obstruction, rhinostenosis.

rhinocœlia (ri-no-se'lī-ah) [G. *rhis*(*rhin-*), nose, + *koilia*, a hollow.] The primitive cavity or ventricle of the rhinencephalon.

rhinoc'ulin. Trade name of an ointment containing a local anesthetic, asserted to be non-toxic, recommended in the treatment of hay-fever.

rhinodacryolith (ri-no-dak'rī-o-lith) [G. *rhis*(*rhin-*), nose, + *dakryon*, tear, + *lithos*, stone.] A calculus in the nasal duct

rhinodynia (ri-no-din'ī-ah) [G. *rhis*(*rhin-*), nose, + *odynē*, pain.] Rhinalgia.

rhinola'lia [G. *rhis*(*rhin-*), nose, + *lalia*, talking] Nasal speech, rhinophonia, rhinism; it may be caused by abnormal size of the posterior nasal apertures, *r. aper'ta*, or by partial or complete closure of the same, *r. clau'sa*

rhinolaryngitis (ri-no-lar-in-ji'(je')tis) [G. *rhis (rhin-)*, nose, + *larynx(laryng-)* + *-itis*.] Inflammation of the nasal and laryngeal mucous membranes.

rhinolaryngol'ogy. Rhinology and laryngology combined.

rhi'nolith [G. *rhis(rhin-)*, nose, + *lithos*, stone.] Nasal calculus; a calcareous concretion in the nasal cavity.

rhinolithi'asis. The presence of a nasal calculus.

rhinological (ri-no-loj'ĭ-kal). Relating to rhinology.

rhinol'ogist. One versed in rhinology, a specialist in diseases of the nose.

rhinology (ri-nol'ojĭ) [G. *rhis(rhin-)*, nose, + *-ology*.] The branch of medical science which has to do with the nose and its diseases.

rhinomanometer (ri-no-man-om'e-tur) [G. *rhis-(rhin-)*, nose, + *manometer*.] An instrument used to determine the presence and amount of nasal obstruction, as shown by the rise and fall of a column of water.

rhinom'eter [G. *rhis(rhin-)*, nose, + *metron*, measure.] An instrument, consisting of a rod with two separable arms, used to measure the width of the nasal passages.

rhinomio'sis [G. *rhis(rhin-)*, nose, + *meiosis*, a making smaller.] An operation for reducing the size of the nose.

rhinommec'tomy [G. *rhis(rhin-)*, nose, + *omma*, eye, + *ektomē*, excision.] Excision of the inner canthus of the eye, rhinocanthectomy.

rhinonecrosis (ri"no-ne-kro'sis) [G. *rhis(rhin-)*, nose, + *nekrōsis*, deadness.] Necrosis of the bones of the nose.

rhinopharyn'geal. 1. Relating to the nose and the pharynx. 2. Relating to the rhinopharynx.

rhinopharyngitis (ri-no-far-in-ji'(je')tis). Nasopharyngitis, epipharyngitis, inflammation of the mucous membrane of the upper part of the pharynx and posterior nares. **r. mu'tilans,** a destructive ulceration beginning on the soft palate and extending thence to the hard palate, nasopharynx, and nose, resulting in mutilating cicatrices; the disease, so far as known, occurs only in certain portions of the tropics, especially the islands of the Pacific; gangosa.

rhinopharyngolith (ri"no-far'ing-go-lith) [G. *lithos*, stone.] A concretion in the rhinopharynx.

rhinophar'ynx [G. *rhis(rhin-)*, nose.] Nasopharynx, the upper portion of the pharynx, above the level of the palate.

rhinopho'nia [G. *rhis(rhin-)*, nose, + *phōnē*, voice.] Rhinolalia.

rhinophy'ma [G. *rhis(rhin-)*, nose, + *phyma*, tumor.] Acne rosacea of the nose, associated with a marked degree of connective-tissue hypertrophy, rosacea hypertrophica.

rhinoplasty (ri'no-plas-tĭ) [G. *rhis(rhin-)*, nose, + *plassō*, I form.] Reparative or plastic surgery of the nose, the supplying of a partial or complete defect of the nose by tissue taken from elsewhere. **Carpue's r.,** Indian r. **English r.,** r. by means of a flap from the cheek. **In'dian r.,** r. by means of a flap from the forehead. **Ital'ian r.,** r. by means of a flap taken from the arm. **Tagliaco'tian r.,** Italian r.

rhinopol'ypus. A nasal polypus.

rhinop'sia [G. *rhis(rhin-)*, nose, + *opsis*, vision.] Convergent squint

rhinoreaction (ri"no-re-ak'shun). Moeller's test for tuberculosis; one drop of a 2 per cent. solution of tuberculin is placed on the mucous membrane of the middle nasal fossa and inferior turbinate and distributed by a wad of gauze on a probe; a positive reaction is indicated by marked redness of the parts followed by an exudate which soon dries to a crust.

rhinorrha'gia [G. *rhis(rhin-)*, nose, + *-rhagia*.] Epistaxis, nosebleed, especially if profuse.

rhinorrhaphy (ri-nor'ă-fĭ) [G. *rhis(rhin-)*, + *rhaphē*, sewing.] Excision of an oval piece of skin from the bridge of the nose and union of the edges of the wound, so as to take up the slack, for the relief of epicanthus.

rhinorrhe'a, rhinorrhœ'a [G. *rhis(rhin-)*, nose, + *rhoia*, flow.] Nasal hydrorrhea; a profuse watery discharge from the nasal mucous membrane. **cerebrospi'nal r.,** a spontaneous discharge of cerebrospinal fluid from the nose.

rhinosalpingitis (ri"no-sal"pin-ji'(je') tis) [G. *rhis (rhin-)*, nose, + *salpinx(salping-)*, tube, + *-itis*.] Inflammation of the mucous membrane of the nose and Eustachian tube.

rhinoscle'rin. Trade name of a vaccine from a culture of the bacillus of rhinoscleroma, recommended in the treatment of that disease.

rhinoscleroma (ri"no-skle-ro'mah) [G. *rhis(rhin-)*, nose, + *sklēros*, hard, + *-ōma*.] A hard, nodular, reddish, glossy growth, tender on pressure, but not spontaneously painful, occurring chiefly at the anterior nares, but occasionally in the external auditory meatus. It is believed to be due to the presence of a specific bacillus.

rhinoscope (ri'no-skōp). A small mirror attached at a suitable angle to a rod-like handle, used in posterior rhinoscopy.

rhinoscop'ic. Relating to the rhinoscope or to rhinoscopy.

rhinoscopy (ri-nos'ko-pĭ) [G. *rhis(rhin-)*, nose, + *skopeō*, I examine.] Inspection of the nasal cavity. **ante'rior r.,** inspection of the anterior portion of the nasal cavity with or without the aid of a nasal speculum. **me'dian r.,** inspection of the roof of the nasal cavity and openings of the posterior ethmoid cells and sphenoidal sinus by means of a long-bladed nasal speculum. **poste'rior r.,** inspection of the nasopharynx and posterior portion of the nasal cavity by means of the rhinoscope.

rhinosporidiosis (ri"no-spo-rid-ĭ-o'sis). Invasion of the nasal cavity by a species of *Rhinosporidium* (*q.v.*).

Rhinosporid'ium kineal'yi [G. *rhis (rhin-)*, nose, + *sporidion*, dim. of *sporos*, seed.] A protozoan organism of the order *Haplosporidia*, found in certain vascular raspberry-like tumors of the septum nasi in natives of India.

rhinostenosis (ri"no-stĕ-no'sis) [G. *rhis(rhin-)*, nose, + *stenōsis*, a narrowing.] Rhinocleisis, nasal obstruction.

Rhipiceph'alus [G. *rhipis*, fan, + *kephalē*, head.] A genus of ticks, several species of which are agents in the infection of cattle and sheep with "coast fever," "heart-water disease," and various other affections. **R. appendicula'tus,** brown tick, a species transmitting *Piroplasma parvum*, the protozoan parasite of Rhodesian redwater fever. **R. bursa,** a species of tick which transmits the pathogenic protozoan of heart-water in sheep. **R. decolora'tus,** a species supposed to transmit *Borrelia theileri*,[0] the cause of a relapsing fever in cattle. **R. simus,** black-pitted tick, a species which, like *R. appendiculatus*, transmits the parasite of Rhodesian redwater fever.

rhitidectomy (rĭ-tĭ-dek'to-mĭ) [G. *rhitis*, wrinkle, + *ektomē*, excision.] The operative removal of wrinkles.

rhitidosis (rĭ-tĭ-do'sis) [G. *rhitis*, wrinkle, + *-ōsis*.] 1. Wrinkling of the face out of proportion to the age. 2. A laxity and wrinkling of the cornea, an indication of approaching dissolution.

Rhiz. Abbreviation of *Rhizobium*.

Rhizobium (rĭ-zo'bĭ-um) [G. *rhiza*, root, + *bion*, a living thing.] A genus of nitrogen-fixing bacteria of the family *Nitrobacteriaceæ*, containing minute rod-shaped organisms occurring in masses forming nodules on the roots of leguminous plants; the type species in **Rhiz. leguminosarum,**⁰ *B. radicicola* or *Ps. radicicola*.

rhizodontropy (ri″zo-don'tro-pĭ) [G. *rhiza*, root, + *odous(odont-)*, tooth, + *tropē*, a turn.] The attachment of an artificial crown to the root of a tooth by means of a peg.

rhizodontrypy (ri″zo-don'tri-pĭ) [G. *rhiza*, root, + *odous(odont-)*, tooth, + *trypaō*, I bore.] The operation of drilling into the root of a tooth

rhi'zoid [G. *rhiza*, root, + *eidos*, resemblance.] 1. Root-like. 2. In botany, a filamentous branching resembling a root. 3. Irregularly branching, like a root; noting a form of plate culture; see cut under *colony*, 1, c.

rhizome (rī'zōm) [G. *rhizōma*, root.] In botany, a subterraneous stem, or one lying on the surface, which sends up aerial shoots or branches.

rhizomelic (rī-zo-mel'ik) [G. *rhiza*, root, + *melos*, limb.] Relating to the "roots" of the limbs, *i.e.* to the hips and shoulders, as in *r. spondylosis*.*

rhizoneure (rī'zo-nūr) [G. *rhiza*, root, + *neuron*, nerve.] A neuron of the posterior nerve-root ganglion.

rhizoplast (rī'zo-plast) [G. *rhiza*, root, + *plastos*, formed.] A prolongation of the flagellum or of the blepharoplast of a protozoon to the nucleus of the cell.

Rhizop'oda [G. *rhiza*, root, + *pous(pod-)*, foot.] A class of the *Sarcodina* having pseudopodia of various forms, but without axial filaments; the amebas belong to a subclass of this class.

rhizot'omy [G. *rhiza*, root, + *tomē*, section.] Section of the posterior spinal nerve-roots for the relief of pain or spastic paralysis; Dana's operation.

rho'daline. Thiosinamine.

rhodanate (ro'dan-āt). A salt of rhodanic or sulphocyanic acid; thiocyanide, sodium thiocyanate.

rho'dium [G. *rhodios*, rose-colored.] A metallic element, symbol Rh, atomic weight 102.9, of bluish gray color, forming reddish compounds with acids.

Rhodobacillus⁰ (ro″do-bă-sil'us) [G. *rhodon*, rose]. A genus of the family *Rhodobacteriaceæ*, motile rod-shaped water organisms, occurring singly.

Rhodobacteriaceae⁰ (ro″do-bak-te-rĭ-a'se-e) [G. *rhodon*, rose.] A family of the order Thiobacteriales, containing two subfamilies in one of which the cells contain sulphur, in the other not.

Rhodobacterioideae⁰ (ro″do-bak-te-rĭ-oyd'e-e) [G. *rhodon*, rose, + *bakterion*, a small rod, + *oidos*, similar.] A subfamily of the family *Rhodobacteriaceæ*, containing the genera, *Rhodocystis*, *Rhodonostoc*, *Rhodorhagus*, *Rhodobacterium*, *Rhodobacillus*, *Rhodovibrio*, and *Rhodospirillum*.

Rhodobacterium⁰ (ro″do-bak-te'rĭ-um) [G. *rhodon*, rose.] A genus of water organisms of the family *Rhodobacteriaceæ*, consisting of non-motile encapsulated rod-forms.

Rhodocapsa (ro-do-kap'sah) [G. *rhodon*, rose, + *kapsa*, basket.] A genus of the family *Rhodobacteriaceæ* consisting of non-motile cells grouped in cherry-red masses and containing sulphur granules; water organisms.

Rhodococ'cus⁰ (ro-do-kok'kus) [G. *rhodon*, rose + *kokkos*, berry.] A genus of the family *Coccaceæ*, containing several species of gram-positive, aerobic coccal forms, non-pathogenic to man, found usually in water. **R. hæmatoi'des**, oval-shaped cocci forming zooglœa masses, found on the hairs in the axilla, causing red sweat.

Rhodocystis⁰ (ro-do-sis'tis) [G. *rhodon*, rose, + *kystis*, bladder.] A genus of rod-shaped, encapsulated water organisms, of the family *Rhodobacteriaceæ*.

rhodogen'esis [*rhodopsin* + G. *genesis*, production.] The reproduction of the visual purple, after it has been bleached out by light, through the withdrawal of light or its absorption by the pigment cells of the chorioid.

Rhodonostoc⁰ (ro-dŏ-nos'tok) [G. *rhodon*, rosa, + *Nostoc*, a genus of algæ.] A genus of water organisms of the family *Rhodobacteriaceæ*, consisting of rod-shaped or spherical cells arranged in encapsulated chains.

rhodophylac'tic. Relating to rhodophylaxis.

rhodophylaxis (ro-do-fi-laks'is) [*rhodopsin* + G. *phylaxis*, a guarding.] The action of the pigment cells of the chorioid in preserving or facilitating the reproduction of the visual purple.

rhodop'sin [G. *rhodon*, rose, + *ōps*, eye.] The visual purple, a red pigment found in the external segments of the rods of the retina; it is bleached by the action of light and restored in the dark or by the action of the pigment of the chorioid.

Rhodorhagus⁰ (ro-do-ra'gus) [G. *rhodon*, rose, + *rhax* (*rhagos*), grape, berry.] A genus of water organisms of the family *Rhodobacteriaceæ*, consisting of non-motile spherical cells, some species encapsulated, others not.

Rhodospirillum⁰ (ro-do-spi-ril'um) [G. *rhodon*, rose, red.] A genus of motile, flagellated, spiral cells of the family *Rhodobacteriaceæ*, most of the species being water organisms.

Rhodothece⁰ (ro-do-the'se) [G. *rhodon*, rose, + *thēkē*, box, capsule.] A genus of spherical cells, grouped in pairs surrounded by a capsule, belonging to the family *Rhodobacteriaceæ*; they are water organisms, pigmented, and containing sulphur granules.

Rhodovibrio⁰ (ro-do-vib'rĭ-o) [G. *rhodon*, rose, + *vibrio*.] A genus of water organisms of the family *Rhodobacteriaceæ*, motile comma-shaped cells.

rhœadine (re'ă-dēn) [G. *rhoias*, a species of poppy.] An alkaloid obtained from opium, $C_{21}H_{21}NO_6$, white tasteless prismatic crystals, non-poisonous.

rhombenceph'alon [G. *rhombos*, a lozenge-shaped figure, + *enkephalos*, brain.] [BNA] The lozenge-shaped brain, the posterior of the three primitive cerebral vesicles, dividing secondarily into myelencephalon and metencephalon.

rhomboatloideus (rom″bo-at-lo-id'e-us). See under *musculus*.

rhombocœle, rhombocœlia (rom'bo-sēl, rom″bo-se'lĭ-ah) [G. *rhombos*, rhomb, + *koilos*, hollow, or *koilia*, a hollow.] Sinus rhomboidalis.

rhomboid (rom'boyd) [G. *rhombos*, a rhomb, + *eidos*, appearance.] Rhomboidal, resembling a rhomb, *i.e.* an oblique parallelogram, but having unequal sides; noting especially a ligament and two muscles. **r. impress'ion,** tuberositas costalis. **r. lig'ament,** ligamentum costo-

claviculare [BNA]. **r. muscle,** musculus rhomboideus. **r. nu'cleus,** nucleus olivaris inferior [BNA]. **r. sinus,** the fourth ventricle of the brain.

rhomboideus (rom-bo-id'e-us). See under *musculus.*

rhonchal, rhonchial (rong'kal, rong'kĭ-al). Relating to a rhonchus.

rhonchus (rong'kus) [G. *rhonchos,* a snoring.] Râle, especially a whistling or sonorous (snoring) râle produced in the larger bronchi or the trachea.

Rhopaloceph'alus canceromato'sus. A sporozoon regarded by Korótneff as pathogenic for cancer.

rhotacism (ro'tah-sizm) [G. *rhō,* the letter r] The too frequent use or incorrect pronunciation of the letter r.

rhu'barb [G. *rhēon* (or *rha*) *barbaron,* foreign rhubarb.] Any plant of the genus *Rheum,* especially *R. rhaponticum,* garden rhubarb, pie-plant, and *R. officinale,* or its rhizome, the drug rheum.

Rhus, gen. *rhois* [G *rhous,* sumach.] A genus of trees of the order *Anacardiaceæ,* several species of which are employed in medicine. **R. aromat'ica,** sweet or fragrant sumach; the root bark is employed in the treatment of incontinence of urine in doses of gr. 5–10 (0.3–0.6), or 3–5 drops of the eclectic specific medicine. **R. caus'tica,** a South American irritant species. **R. diversilo'ba,** poison oak of the western United States. **r. gla'bra** (U.S.), sumach berries, the dried ripe fruit of *R. glabra,* brown, hard, globular or somewhat reniform, dry berries, inodorous, with acidulous and astringent taste; employed as an astringent in diarrhea in doses of gr. 5–15 (0.3–1.0), and in infusion as a gargle in chronic pharyngitis. **R. meto'pium,** a poisonous species of the West Indies and southern Florida. **R. pu'mila,** dwarf sumach, poisonous. **R. rad'icans,** poison vine or ivy, a variety of *R. toxicodendron.* **R. toxicoden'dron,** poison oak of the Eastern United States, poison ivy, climbing sumach, picry, the leaflets of *Rhus radicans;* a volatile acid contained in the leaves of this plant causes in susceptible individuals a violent dermatitis; it is employed in eclectic practice in the exanthemata and erysipelas; in homeopathy for erysipelas, eczema, sprains, lumbago, and rheumatism in the 6th to 30th potency. **R. t. an'tigen,** a solution of an extract from the fresh leaves of poison ivy, with 0.4 per cent. of procaine hydrochloride, employed by intradermal injection of 0.1 c.c. to determine sensitiveness to the poison of *Rhus toxicodendron,* and in dose of 0.5–1.0 c.c. intramuscularly injected to relieve poison ivy dermatitis. **R. venena'ta,** poison sumach, poison elder, poison ash, swamp dogwood, a shrub growing in swamps, having leaves arranged in seven pairs on long stems; it is similar to *R. toxidendron* in its toxication. **R. v. an'tigen,** a solution from an extract of the fresh leaves of poison sumach, employed to determine sensitiveness to the plant or to relieve the dermatitis caused by contact with the leaves. **R. vernicif'era,** lacquer tree, the source of Japan lacquer obtained by incisions in the bark.

rhus'in. A concentration product of rhus glabra, employed as an intestinal astringent in doses of gr. 1–2 (0.06–0.13).

rhpa'riya [G.] Sordes.

rhypophagy (ri-pof'a-jĭ) [G. *rhypos,* filth, + *phagō,* I eat.] The eating of filth, scatophagy.

rhypophobia (ri-po-fo'bĭ-ah) [G. *rhypos,* filth, + *phobos,* fear.] An exaggerated and morbid fear of dirt or filth.

rhythm [G. *rhythmos.*] Measured time or motion; the regular alternation of two different or opposite states. **can'tering r,** a disturbance of r. in the heart sounds comparable to the foot-falls of a cantering horse. **gallop r.,** cantering r. **nodal r.,** abnormal cardiac r. characterized by the simultaneous contraction of auricles (atria) and ventricles, or the ventricular contraction may precede the auricular by the fraction of a second; it is assumed that in this case the contraction starts from the atrioventricular instead of the sinoauricular node. **pen'dulum r.,** a condition in which the two sounds of the heart are practically alike, and resembling the even swing of a pendulum or ticking of a clock. **si'nus r.,** normal cardiac rhythm proceeding from the sinoauricular node, or remains of the sinus venosus. **ventric'ular r.,** noting the very slow ventricular contractions occurring in cases of heart-block.

rhythmeur (rēt-mer' or rith'mur) [Fr.] An apparatus for securing rhythmic interruptions of the electric current in an *x*-ray machine.

rhyth'mic. Marked by rhythm.

rhytidosis (rit-ĭ-do'sis) [G. *rhytidōsis,* a wrinkling.] A sinking in and wrinkling of the cornea.

rib [A.S. *ribb.*] 1. Costa, one of the twenty-four elongated curved bones forming the main portion of the bony wall of the chest; each rib articulates by its head (*capitulum*) and tubercle (*tuberositas* costæ*) with two adjacent vertebræ and terminates anteriorly in a cartilaginous extension which articulates directly or indirectly with the side of the sternum; the last two ribs on either side are not connected with the sternum, their anterior extremities being free; the 1st, 10th, 11th, and 12th ribs articulate each with only one vertebra; the 11th and 12th ribs have no tubercle or tuberosity. 2. In botany, nerve or vein. **cer'vical r.,** an occasional short rib, unattached anteriorly, in the neck above the first rib. **false r.,** costa spuria, one of the five lower ribs on either side which do not articulate with the sternum directly. **floating r.,** costa fluctuans, one of the two lower ribs on either side which are not attached anteriorly **true r.,** costa vera, the seven upper ribs on either side whose cartilages articulate directly with the sternum.

Rib'bert's the'ory [Moritz Wilhelm Hugo *Ribbert,* German pathologist, 1855–1920.] The theory that a tumor results from the growth of cell-rests permitted by reduction in tension of the surrounding tissues.

Ribera's meth'od (re-ba'rah) [José *Ribera* y Sans, Spanish surgeon, contemporary.] Production of artificial anemia of the lower extremities by means of compression by an elastic spica the circular turn of which is made around the waist.

Ribes' bag. See *Champetier* de Ribes.*

Ribes' gang'lion (rēb) [François *Ribes,* French physician, 1800–1864.] The uppermost of the sympathetic ganglia, situated on the anterior communicating artery of the brain.

rice. The grain of *Oryza sativa,* the rice-plant, used for food, and also when finely pulverized as a dusting powder.

rice-body. Corpus* oryzoideum.

rice-water dischar'ges or **stools.** A watery fluid containing whitish flocculi, discharged from the bowel in Asiatic cholera, and occasionally in other cases of serous diarrhea

Rich'ardson's spray-produ'cer [Sir Benjamin Ward *Richardson*, London physician, 1828–1890.] An apparatus for throwing ether spray to produce local anesthesia.

Richet's an'eurysm (re-sha') [Didier Dominique Alfred *Richet*, Parisian surgeon, 1816–1891.] Fusiform aneurysm.

Richter's her'nia (rikh'ter) [August Gottlieb *Richter*, German surgeon, 1742–1812.] Hernia engaging only a portion of the wall of the intestine, parietal hernia. **R's suture,** an interrupted silver suture for wounds of the intestine.

Rich'ter-Monro' line. Monro-Richter line.

ricin (ris'in). A specific poison, analogous to the bacterial toxins, occurring in the seeds of the castor-oil plant; a white, odorless powder which acts as a violent irritant poison to the gastroenteric tract, gall-passages, and kidneys.

ricinine (ris'in-ēn). A poisonous principle obtained from the castor-oil bean.

ricinoleated (rĭ-sin-o'le-a-ted). Treated with sodium ricinoleate, referring to a bacterial vaccine detoxicated with this substance.

Ricinus (ris'in-us) [L.] A genus of plants with one species, *R. commu'nis*, the castor-oil plant, the source of oleum* ricini; the leaves are said to be galactagogue.

rick'ets [E. *wrick*, to twist.] Rachitis, a disease, occurring in infants and young children; it is characterized by softening of the bones, enlargement of the liver and spleen, malnutrition, profuse sweating, and general tenderness of the body when touched. **acute r.,** infantile scurvy. **adult r.,** a disease resembling rickets in many of its features, occurring in adult life. **fetal r.,** achondroplasia. **hemorrhag'ic r.,** infantile scurvy. **late r.,** adult r. **re'nal r.,** a form of r. occurring in children in association with and apparently caused by chronic nephritis. **scurvy r.,** infantile scurvy.

Rick'etts or'ganism [Howard Taylor *Ricketts*, American pathologist, 1871–1910.] A polar-staining organism (*Rickettsia rickettsi*), a possible cause of Rocky Mountain tick* fever (4).

Rickettsia (rĭ-ket'sĭ-ah) [after H. T. *Ricketts*.] 1. Rickett's organism. 2. A doubtful genus of bacteria, defined as gram-negative, rod-shaped organisms of small size, staining well with Giemsa, found intracellularly in arthropods. It is not determined whether they are living organisms or inanimate particles resulting from the destruction of red or white blood cells; the species here described are therefore conjectural entities. **R. lectula'ria,** a form morphologically similar to *R. prowazeki*, found in the bedbug. **R. nippon'ica,** a similar form to the preceding, cultivated from animals inoculated with tsutsugamuchi fever in Japan. **R. pedic'uli,** an organism resembling, or identical with, *R. lectularia*, found by da Rocha-Lima in the body louse. **R. prowazek'i,** an organism believed by some to be the pathogenic agent in typhus fever. **R. psitt'aci,** a minute gram-negative coccoid or rod-shaped organism found in the tissue and mononuclear cells in parrots in cases of psittacosis. **R. quinta'na** and **R. wolhyn'ica,** alternate names for the supposed pathogenic agent in Volhynia or trench fever. **R. rick'ettsi,** *Dermacentroxenus rickettsi*, believed to be the cause of Rocky Mountain spotted fever. **R. ruminan'tium,** a possible cause of heartwater in cattle and sheep in S. Africa.

rick'ety. Rachitic, suffering from rickets.

Ricord's chan'cre (re-kor') [Philippe *Ricord*, Paris surgeon, born in Baltimore, 1800–1889.] A syphilitic chancre with a thin parchment-like base.

Rideal-Walker method (rid'el-waw'kur) [Samuel *Rideal*, English chemist and bacteriologist, *1863; J. T. Ainslie *Walker*, English chemist, contemporary.] A method of standardization of disinfectants by a comparison of the strength of a disinfectant necessary to kill the typhoid bacillus in a definite time with that of a solution of carbolic acid which will accomplish the same thing in the same time.

Ridell's opera'tion. Removal of the entire anterior and inferior walls of the frontal sinus, for chronic inflammation of that cavity.

rider's bone. See under *bone* **r.'s leg,** a strain of the adductor muscles of the thigh.

ridge [A. S. *hrycg*, back, spine.] 1. A, usually rough, linear elevation. 2. In dentistry, an elongated elevation on the surface of a tooth. **basal r.,** cingulum (2). **bicip'ital r.,** one of two elevated lines on the humerus, the *anterior* or *internal*, crista tuberculi minoris [BNA], and the *posterior* or *external*, crista tuberculi majoris [BNA]. **buccogin'gival r.,** a distinct ridge on the buccal surface of a deciduous molar tooth, close to the gingival margin. **epicondyl'ic r.,** one of two ridges for muscular attachments on the humerus, the *external* on the external border, and the *internal* on the internal border of the bone. **glu'teal r.,** one of three ridges on the femur which form the upper continuation of the linea aspera, tuberositas glutæa [BNA]. **linguocer'vical** or **linguogin'gival r.,** a ridge on the lingual surface of the incisor and canine teeth, near the gums. **mar'ginal r.,** one of the ridges of enamel on the outer edges of the masticatory, or occlusal surface of a premolar or molar tooth. **mylohy'oid r.,** linea mylohyoidea [BNA]. **oblique r.,** a ridge on the masticatory surface of an upper molar tooth from the mesiolingual to the distobuccal cusp. **pec'toral r.,** external bicipital r., crista tuberculi majoris [BNA]. **prona'tor r.,** an oblique r. on the anterior, or volar, surface of the ulna, giving attachment to the pronator quadratus muscle. **pter'ygoid r.,** crista infra-temporalis [BNA]. **supercil'iary r.,** arcus superciliaris [BNA]. **supplemen'tal r.,** a r. on the surface of a tooth that is not normally present. **supracon'dylar r.,** epicondylic r. **supraor'bital r.,** a ridge on the frontal bone marking the upper margin of the orbit. **tem'poral r.,** linea temporalis [BNA]. **transverse' r.,** a ridge running transversely across the occlusal surface of a molar tooth, formed by the junction of two triangular ridges. **trap'ezoid r.,** an oblique line on the upper surface of the clavicle giving attachment to the trapezoid ligament. **trian'gular r.,** in a molar tooth the ridge on the occlusal surface running from the point of a cusp to the center of the crown.

rid'gel, rid'gil. A horse with one testicle removed, ridgeling.

ridgeling (rij'ling). A horse or man with but one testicle, ridgel.

Rid'ley's cir'cle or **si'nus.** [Humphrey *Ridley*, English anatomist, 1653–1708.] Circulus venosus ridleyi, sinus circularis (1).

Riedel's disease' (re'del) [Bernhard Moritz Carl Ludwig *Riedel*, German surgeon, 1846–1916.] Ligneous thyroiditis.* **R.'s lobe,** a tongue-like process, occasionally extending downward from the lower margin of the liver external to the gall-bladder, lobus appendicularis.

Rieder's cells (re'der) [Hermann *Rieder*, German pathologist, *1858.] Polymorphonuclear lymphoidocytes.

Riegel's pulse (re'gel) [Franz *Riegel*, German physician, 1843–1904.] A diminution in the size of the pulse during expiration; the converse of the pulsus paradoxus. **R.'s symp'tom-com'plex,** tachycardia associated with asthmatic symptoms. **R.'s test** for rennin; 5 c.c. of neutralized gastric juice is added to 10 c.c. of milk, and if coagulation occurs after incubation for 15 minutes rennin is present. **R.'s test-meal,** consists of a plate of soup, 200 grams beefsteak, 50 grams mashed potatoes, and one roll.

Riga's disease' (re'gah) [*Riga*, Italian physician, contemporary.] Erosion or ulceration of the frenum of the tongue, with induration and the formation of a grayish membrane; it occurs in infants during dentition and is thought to be due to the habit of putting out the tongue, the frenum of which is irritated by rubbing against the new lower incisor teeth.

Rigal's suture (re-gal') [Joseph Jean Antoine *Rigal*, French surgeon, 1797–1865] Rubber suture* for harelip operations.

Riggs's disease' [John M. *Riggs*, American dentist, 1810–1885.] Pyorrhea alveolaris.

right [A.S. *riht.*] The side of the body opposite to that on which the apex beat of the heart is felt, dexter.

right-eyed. Seeing more distinctly with the right eye, or using that eye instinctively in one-eyed operations such as sighting a gun

right-hand'ed. Using the right hand for writing and most manual operations habitually or with greater ease than the left.

rigid (rij'id) [L. *rigidus.*] Stiff, inflexible.

rigidity (rĭ-jid'ĭ-tĭ). Stiffness, rigor. **anatom'ical r.,** r. of the cervix uteri in labor, not due to any pathological infiltration. **cadav'eric r.,** rigor mortis. **decer'ebrate r.,** rigid adduction and flexion of the elbows and extension of the legs, due to extensive destruction of the cerebrum. **mydriat'ic r.,** Westphal's pupillary reflex, paradoxical pupil phenomenon.* **patholog'ical r.,** r. of the cervix uteri in labor, due to cancer or other morbid condition. **post-mortem r.,** rigor mortis.

ri'gor [L.] 1. Rigidity. 2. A chill. **acid r.,** coagulation of muscle protein induced by acids. **heat r.,** coagulation of muscle protein induced by heat. **r. mor'tis** [L. *mors* (gen. *mortis*), death], stiffening of the body, from one to seven hours after death, due to hardening of the muscular tissues in consequence of the coagulation of the myosinogen and paramyosinogen; it disappears after from one to five or six days, or when decomposition begins. **r. nervo'rum,** tetanus. **r. tremens,** paralysis agitans.

ri'ma, gen. and pl. *ri'mæ* [L. a slit.] A slit or fissure, or narrow elongated opening between two symmetrical parts. **r. cornea'lis** [BNA], corneal cleft, a groove in the sclera into which the edge of the cornea fits. **r. glot'tidis** [BNA], glottis vera, true glottis, the interval between the true vocal cords. **r. o'ris** [BNA], the mouth-slit, the aperture of the mouth. **r. palpebra'rum** [BNA], the lid-slit or fissure between the opposed lids of the closed eye. **r. puden'di** [BNA], r. vulvæ, pudendal or vulvar slit, urogenital cleft, the cleft between the labia majora. **r. respirato'ria,** r. vestibuli. **r. vestib'uli** [BNA], glottis spuria, false glottis, the interval between the false vocal cords. **r. voca'lis,** r. glottidis. **r. vulvæ,** r. pudendi.

Rimini's test (re'me-ne). A test for formaldehyde in urine, milk, and other fluids, by the use of dilute solution of phenylhydrazin hydrochloride, sodium nitroprusside, and sodium hydroxide.

rimmose (rim'ōs) [L. *rima*, a fissure.] Fissured, marked by cracks in all directions, like the crackle of porcelain.

rim'ula [L. dim. of *rima.*] A minute slit or fissure.

rin'derpest [Ger. *rinder*, cattle] Cattle plague, an acute contagious disease affecting ruminants; it is characterized anatomically by inflammation, sometimes pseudomembranous, of the intestinal mucous membrane, with swelling and necrosis of Peyer's patches; the pathogenic organism of the disease is unknown.

Rindfleisch's cells (rint'flīsh) [Georg Eduard *Rindfleisch*, German physician, *1836] Granular eosinophile leucocytes. **R.'s folds,** semilunar folds of the serous surface of the pericardium embracing the beginning of the aorta.

ring [A.S. *hring*] 1. A circular band surrounding a wide central opening. 2. In anatomy, annulus, any approximately circular structure surrounding an opening or a level area. 3. The chain of atoms in a closed-chain* compound. 4. Marginal growth on the upper surface of a liquid bacterial colony, adhering to the cover glass in a circular form. **abdom'inal r.,** inguinal r., annulus inguinalis abdominalis, annulus inguinalis subcutaneus. **carbocy'clic r.,** see *carbocyclic.* **contraction' r.,** Bandl's ring, a slight constriction marking the boundary between the upper and the lower uterine segments. **cru'ral r.,** annulus femoralis. **exter'nal abdom'inal r.,** annulus inguinalis subcutaneus [BNA.] **fem'oral r.,** annulus femoralis. **glauco'matous r.,** a yellowish white ring, indicating atrophy of the chorioid, surrounding the optic disc in glaucoma. **heterocy'clic r.,** see *heterocyclic.* **in'guinal r.,** annulus inguinalis. **inter'nal abdom'inal r.,** annulus inguinalis abdominalis [BNA]. **isocy'clic r.,** see *isocyclic.* **lym'phoid r.,** the broken ring of lymphoid tissue, formed of the lingual, faucial, and pharyngeal tonsils. **retrac'tion r.,** contraction r. **ton'sillar r.,** Waldeyer's* throat-ring, lymphoid ring. **umbil'ical r.,** annulus umbilicalis.

ring-bone. A bony deposit on the pastern of a horse, forming a more or less complete ring around the bone; occurring just above the coronet, it is called *low ring-bone*, in the middle of the pastern, *high ring-bone.* **false r.-b.,** an exostosis on the middle or upper part of the long pastern bone in the horse.

ring-com'pound. Closed-chain compound; see under *chain.*

ringed (ringd). In bacteriology noting a surface culture with one or more circular elevations or depressions.

Ring'er's solu'tion [Sidney *Ringer*, English physiologist, 1835–1910.] A solution resembling the blood serum in constitution. One formula is: sodium chloride, 1.8; calcium chloride, 0.048; potassium chloride, 0.084; sodium bicarbonate, 0.06; distilled water, 200. Another formula is: sodium chloride, 229 gr.; magnesium chloride, 25¾ gr.; potassium chloride, 8¾ gr.; magnesium sulphate, 13 gr.; calcium sulphate, 8¾ gr.; distilled water, 1 pint.

ring-knife. Spoke-shave; a circular or oval ring of steel with internal cutting edge, on the model of the carpenter's spoke-shave, used for shaving off tumors in the nasal and other cavities

ring'worm. A vegetable parasitic disease of the skin and its appendages, tinea. **Bow'ditch Island r.,** tinea imbricata. **Burmese r.,** tinea imbricata. **Chinese r.,** tinea imbricata. **India r.,** tinea imbricata. **hon'eycomb r.,** favus. **hypertroph'ic r.,** granuloma trichophyticum. **r. of the beard,** tinea barbæ, tinea sycosis. **r. of the body,** tinea corporis, tinea circinata. **r. of the foot,** athlete's foot. **r. of the genitocru'ral re'gion,** tinea cruris. **r. of the nails,** tinea unguium, onychomycosis trichophytina. **r. of the scalp,** tinea capitis, tinea tonsurans. **scaly r.,** tinea imbricata. **To'kelan r.,** tinea imbricata.

Rinne's test (rin'neh) [Heinrich Adolf *Rinne*, German otologist, 1819–1868.] 1. *Positive test:* a vibrating tuning fork is held in contact with the skull until the sound is lost, its prongs are then brought close to the auditory orifice when, if the hearing is normal, a faint sound will again be heard. 2. *Negative test:* a vibrating tuning fork is heard longer and louder when in contact with the skull than when held near the auditory orifice, indicating some disorder of the sound-conducting apparatus.

riodine (ri'o-dīn). A 60 per cent. solution in oil of an iodine addition product of castor oil; it contains about 12 per cent. of iodine; it is an oil-like, light amber liquid, insoluble in water, but soluble in alcohol; employed as a substitute for the inorganic iodides in doses of gr. 6 to 18 (0.4–1.2) after meals.

Riolan's arch (re-ol-oṅ') [Jean *Riolan*, French anatomist, 1580–1657.] The arched transverse mesocolon. **R.'s bones,** several small detached pieces of bone occasionally present in the petro-occipital suture of the cranium. **R.'s bouquet',** a collective name for the 3 muscles and 2 ligaments attached to the styloid process of the temporal bone; the 3 muscles (red flowers) are the stylohyoid, styloglossus, and stylopharyngeus; the 2 ligaments (white flowers) are the stylohyoid and stylomaxillary. **R.'s muscle,** musculus ciliaris (2).

ri'pa [L. a bank.] 1. Tænia thalami. 2. Any line formed by the reflexion of the endyma of the brain from a ventricular surface.

ripa'rian. Relating to a ripa, marginal

Ripault's sign (re-po') [Louis Henri Antonin *Ripault*, French physician, 1807–1856.] A sign of death, consisting in a permanent change in the shape of the pupil produced by unilateral pressure on the eyeball.

ris'iccol. Trade name of a powder said to consist of equal parts of magnesia usta and castor oil with sugar and flavoring agents; recommended in place of castor-oil in dose of ʒ½ (15.0).

risk [Fr. *risque;* L. *re*, back, + *secare*, to cut.] 1. In life insurance, the company's obligation assumed in the policy contract. 2. An insured person or an applicant for life insurance. **impaired r.,** an insured person, or applicant for life insurance, whose family history is bad, denoting a positive lack of longevity, or who has had or now has some organic disease in a more or less advanced stage; a variety of substandard r **substan'dard r.,** a risk assumed in the insurance of a person who has some hereditary or acquired tendency to disease or a slight impairment of some organ; in view of the decreased expectancy of life in such a case an increased premium is charged. **superstan'dard r.,** an insured person or applicant for life insurance whose family history is exceptionally good or whose habits or circumstances are such as to warrant an expectancy of life greater than that of the average healthy man; it has been suggested to create a class of such exceptional risks who may be accepted at a smaller premium than the regular premium for others of the same age. **under-av'erage r.,** an insured person, or applicant for lifeinsurance, who is engaged in a hazardous occupation, who suffers from some slight ailment, whose general appearance is not good, or whose family history reveals a lack of resisting power; a division of substandard r.

Ris'ley's ro'tary prism [Samuel Doty *Risley*, Philadelphia opthalmologist, *1845.] A prism with circular base which can be rotated in a metal frame marked with a scale, used in examination of imbalance of the ocular muscles.

risorius (ri-saw'rī-us) [L. *risor*, a laugher.] See under *musculus*.

ri'sus [L.] A laugh. **r. cani'nus, r. sardon'icus,** the semblance of a grin caused by facial spasm, especially in tetanus.

Rit'ter's disease [Gottfried *Ritter* von Rittershain, German physician, 1820–1883.] 1. Dermatitis exfoliativa infantum. 2. Winckel's disease.

Ritter's law [Johann Wilhelm *Ritter*, German physicist, 1776–1810.] A nerve is stimulated at both the opening and the closing of an electrical current. **R.'s o'pening tet'anus,** the tetanic contraction which occasionally occurs when a strong current, passing through a long stretch of nerve, is opened.

Ritter-Rollett phenom'enon (rit'er-rol'let) [Johann Wilhelm *Ritter;* Alexander *Rollett*.] On equal electrical stimulation of motor nerve-trunks, the flexor and adductor muscle-groups react more readily than the extensors and abductors.

Ritt'er-Val'li law [J. W. *Ritter;* Eusebio *Valli*, Italian physiologist, 1726–1816.] If a nerve is cut off from its center or if the center is destroyed, the nerve at first shows increased irritability from the center outward, but it soon loses all irritability.

Rival'ta's disease' [Sebastiano *Rivalta*, Italian veterinary surgeon, 1852–1893.] Actinomycosis. **R.'s reac'tion,** a means of differentiating between transudates and inflammatory exudates into a test-tube containing 1 drop of a 50 per cent. solution of acetic acid in 50 c.c. distilled water, one drop of the fluid is let fall; a bluish white ring is formed which broadens out and presents opalescent striations when the fluid is of inflammatory origin; a pure dropsical transudate gives no reaction.

ri'vanol. Ethoxy-diamino- acridine-lactate, a yellow dye-stuff with alleged powerful antiseptic action; is used as a local antiseptic in various septic skin conditions and internally and by enema in colitis and dysentery and infections of the urinary mucous membranes.

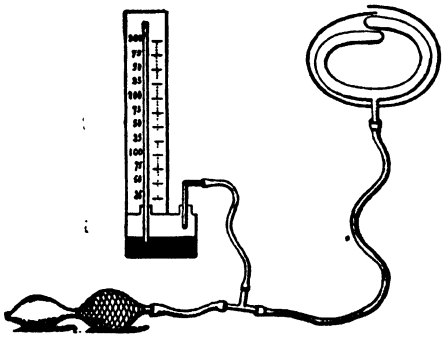
Riva-Rocci sphygmomanom'eter (re'vah-rōt'che) [Scipione *Riva Rocci*, Italian physician, *1863.] One of the earliest forms of sphygmomanometer in which the systolic or maximum blood-pressure is measured by the force necessary to arrest the circulation in the brachial artery, this force being shown by a mercury manometer; see illustration on page 940.

Rive'rius' po'tion. Rivière's potion. **R.'s salt** potassium citrate.

Rivière's po'tion (re-ve-air') [Lazare *Rivière*, French physician, 1589–1655.] An effervescing drink made by combining a solution of potassium or sodium bicarbonate and one of citric acid, official in the French codex; liquor sodii citratis (N.F.).

Rivinus's canals' or **ducts** (re-ve'noos) [August Quirin *Rivinus*, the Latinized form of *Bachmann*,

German anatomist, 1652–1723.] Ductus Rivini, ductus riviniani, the ducts of the sublingual gland; the ductus major Rivini is an occasional large duct of the sublingual gland, opening near Wharton's duct, it is also called Bartholin's duct. **R.'s fora'men,** a minute opening in Shrapnell's membrane thought to be normal, but later regarded as an artefact; also called Bochdalek's canal. **R.'s glands,** sublingual glands. **R.'s inci'sure,** R.'s notch. **R.'s mem'brane,** Shrapnell's* membrane. **R.'s notch** or **seg'ment,** the interrupted portion of the *sulcus tympanicus. **R.'s tympan'ic inci'sure,** R.'s notch.



THE RIVA-ROCCI SPHYGMOMANOMETER.

rivulose (riv'u-lōs) [L. *rivus*, a brook] Marked by irregular wavy lines, like the rivers on a map noting the appearance of a bacterial colony.

ri'vus lacrima'lis [L. *rivus*, stream.] A space between the closed lids and the eyeball through which the tears flow to the punctum lacrimale.

riz'iform [Fr. *riz*, rice, + *forme*, form.] Resembling rice-grains.

RLS person. A stammerer, so called because these are the letters which are usually mispronounced.

R.M.A. Abbreviation of right mentoanterior, noting a face presentation of the fetus with the chin pointing to the right acetabulum of the mother.

R.M.C. Abbreviation of Royal Medical Corps.

R.M.P. Abbreviation of right mentoposterior, noting a face presentation of the fetus with the chin pointing to the right sacroiliac joint of the mother.

R.N. Abbreviation for registered nurse.

R.O.A. Abbreviation of right occipitoanterior presentation, the occiput of the fetus being turned toward the right acetabulum of the mother.

roaring (rawr'ing). A rough inspiratory sound made by the horse when breathing rapidly; it is due to partial paralysis of the vocal cords or to obstruction in some part of the respiratory passages; occasionally the sound occurs with expiration as well.

Robert's pel'vis (rŏ-bair') [César Alphonse *Robert*, Parisian surgeon, 1801–1862.] A pelvis flattened transversely, the inlet being long and narrow; see cut under *pelvis*.

Rob'erts' test [Sir William *Roberts*, London physician, 1830–1899.] 1. The suspected urine is poured gently down the side of a test-tube containing (*a*) a saturated solution of sodium chloride with 5 per cent. hydrochloric acid, or (*b*) 1 part nitric acid and 5 parts saturated solution of magnesium sulphate; if albumin is present a white disc appears at the plane of contact. 2. A quantitive fermentation test for sugar by the addition of yeast; after 24 hours if fermentation has occurred, each degree of specific gravity lost will correspond to one grain of glucose per ounce of urine.

Rob'ertson's pu'pil. See *Argyll-Robertson*.

Robin's my'eloplaxes (rŏ-baṅ') [Charles Philippe *Robin*, Parisian physician, 1821–1885.] Osteoclasts, multinuclear cells of the bone-marrow. **R.'s spa'ces,** minute spaces between the adventitia and the muscularis of an artery, constituting the lymphatic system of the vessel. **R.'s sympex'ion,** nitrogenous concretions in the seminal vesicles.

ro'bin. A poisonous nucleoprotein from the inner bark of *Robinia pseudacacia* or American locust; emetic and purgative.

ro'binol [after Edouard Charles Albert *Robin*, French physician, 1847–1928.] Trade name of a preparation of the glycerophosphates of calcium, sodium, iron, manganese, quinine, and strychnine in a solution containing no sugar.

Robinson's circle (rob'in-sunz sur'kl) [Fred Byron *Robinson*, Chicago anatomist, 1857–1910.] An arterial circle formed by anastomoses between the abdominal aorta, common iliac, hypogastric, uterine, and ovarian arteries.

Rob'inson's disease' [Andrew R. *Robinson*, New York dermatologist, 1845–1924.] Hidrocystoma.

Rob'inson's opera'tion. For varicose veins, by section, between two ligatures of the affected veins.

Robiquet's paste (rŏ-be-ka') [Pierre Jean *Robiquet*, French physician, 1780–1840.] A cancer paste of equal parts of zinc chloride and flour with guttapercha added to form a firm mass.

Robles' fe'ver (ro'blās) [*Robles*, Honduras physician.] An affection, neither typhoid nor malaria, marked by an irregular fever and slight general symptoms, lasting from two or three weeks to as many months.

rob'orant [L. *roborare*, to strengthen.] 1. Tonic, strength-giving. 2. A strengthening agent, a tonic.

ro'borin. Trade name of a substance said to be prepared from beef blood, recommended as a tonic in anemia and convalescence from acute diseases.

Rob'son's point, R.'s posi'tion. See *Mayo-Robson*.

Roccellin (rok'sel-in). Orsellin.

Rochelle pow'der (ro-shel') [a city in France] Seidlitz* powder. **R. salt,** potassii et sodii tartras.

Rocher's sign (rŭ-sha') [*Rocher*, Bordeaux surgeon, contemporary.] Signe du tiroir, drawer sign; if one lies supine with knees flexed, the soles of the feet resting flat on the table, and then grasps the tibia pushing it forward, as in closing a drawer, it will slide freely over the femoral surface if the crucial ligaments have been injured.

rock fever. Malta fever.

rock-rose. Helianthemum

Rocky Mountain spotted fever. Tick* fever (4)

rod [A.S. *rōd*.] 1. A straight slender cylindrical formation. 2. One of the rhodopsin-containing cells forming with the cones the layer of rods and cones of the retina. **Corti's r.,** see *Corti*. **enam'el r.,** one of the enamel prisms of a tooth. **r. bacte'ria,** bacilli.

ro'dagen. A white powder prepared from the milk of goats from which the thyroid gland has been removed; employed in the treatment of Graves' disease and other forms of hyperthyroidism.

ro'dent ul'cer. A superficial ulcerating epithelioma of relatively slight malignancy, situated usually

on the face; ulcus exedens, ulcus rodens, Jacobs, ulcer, noli me tangere, basal cell carcinoma.

rodonalgia (ro-don-al'jĭ-ah) [G. *rodon*, rose, + *algos*, pain.] Erythromelalgia.

Roeder's treatment (re'dur). Suction of an inflamed tonsil, thereby removing the pus and other waste matters and reestablishing the flow of lymph.

Roederer's ecchymo'ses (rē'der-er) [Johann Georg *Roederer*, German obstetrician, 1727–1763.] Minute ecchymoses on the pleura and pericardium sometimes seen in stillborn infants, thought to be due to an attempt of the fetus to breathe while in the uterus. **R.'s obliq'uity,** the position of the fetal head at the brim of the pelvis in normal labor, with the occiput presenting, favoring subsequent flexion.

Roemer's exper'iment (re'mer) [Paul *Roemer*, German bacteriologist, 1876–1916.] The instillation of abrin into the conjunctiva, demonstrating the local formation of antitoxins. **R.'s test,** tuberculin either pure or diluted, is injected intracutaneously into a guinea-pig; if the animal is tuberculous a large papule with a necrotic hemorrhagic center appears in about 24 hours; this is called the cockade reaction.

Roenne's nasal step (ren'na). A right angled defect of the visual field on the nasal side, one side of the angle corresponding to the horizontal meridian, seen in glaucoma.

Roentgen rays (rent'gen) [Wilhelm Konrad *Roentgen*, German physicist, 1845–1923.] *X*-rays.*

roentgenism (rent'gen-izm). 1. The employment of the Roentgen rays* in the diagnosis and treatment of disease. 2. Any untoward effects of the Roentgen rays on the tissues.

roentgenization (rent"gen-i-za'shun). Roentgenism (1).

roentgenize (rent'gen-iz). To apply the Roentgen rays in diagnosis or treatment.

roentgenogram (rent'gen-o-gram). The shadow picture made on a sensitized film or plate by the Roentgen rays.*

roentgenograph (rent'gen-o-graf). To make a roentgenogram.

roentgenog'raphy [*Roentgen* (rays) + G. *graphō*, I write.] Examination of any part of the body for diagnostic purposes by means of the Roentgen rays, the record of the findings being impressed upon a photographic plate; skiagraphy.

roentgenologist (rent"gen-ol'o-jist). One skilled in the diagnostic or therapeutic application of Roentgen rays.

roentgenol'ogy [*Roentgen* (rays) + G. *-logia*.] The study of the Roentgen rays* in all their applications.

roentgenometry (rent-gen-om'e-trĭ) [G. *metron*- measure.] Measurement of the roentgenotherapeutic dosage and of the penetrating power of the *x*-rays; *x*-ray dosimetry.

roentgenoscope (rent'gen-o-scope). An apparatus for examination by means of the shadow picture produced by the Roentgen rays on a fluorescent screen; fluoroscope.

roentgenoscopy (rent-gen-os'ko-pĭ) [*Roentgen* (rays) + G. *skopeō*, I view.] Examination of any part of the body for diagnostic purposes by means of the Roentgen rays projected upon a fluorescent screen; skiascopy, fluoroscopy.

roentgenother'apy [*Roentgen* (rays) + G. *therapeia*, treatment.] The treatment of disease by means of the Roentgen rays.*

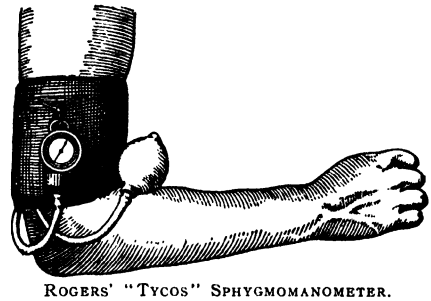
roethelen (rē'teln) [Ger. dim. of *roethe*, redness.] German measles, rubella.*

Roger-Josué test (rŏ-zha'-zho-zū-a') [H. L. *Roger*; Otto *Josué*, French physician, *1869.] Blister test.*

Roger's bacillus (rŏ-zha') [C. H. *Roger*, Parisian physician, *1860.] A bacillus of rather large size found in cases of dysenteriform enteritis.

Roger's disease' (rŏ-zha') [Henri Louis *Roger*, Parisian physician, 1811–1892.] Circulatory disturbances dependent upon a congenital defect of the interventricular septum. **R.'s reac'tion,** the presence of albumin in the sputum, regarded as corroborative evidence of tuberculosis **R.'s symp'tom,** a subnormal temperature toward the termination of tuberculous meningitis.

Rogers' sphygmomanom'eter [Oscar H. *Rogers*, New York physician, *1857.] Tycos sphygmomanometer, one constructed with the usual arm sleeve and inflating bulb, but with an aneroid barometer gauge instead of the mercury manometer, as in the Janeway* apparatus.



ROGERS' "TYCOS" SPHYGMOMANOMETER.

de Rohan's meth'od (dē-ro-aṅ'). Treatment of fissure of the nipple by means of a breast-pump.

Rokitan'sky's disease' [Carl Freiherr von *Rokitansky*, Viennese pathologist, 1804–1878.] Acute yellow atrophy of the liver. **R.'s divertic'ulum,** a traction diverticulum of the esophagus. **R.'s her'nia,** a separation of the muscular fibers of the bowel allowing protrusion of a sac of the mucous membrane or one of the peritoneum. **R.'s kidney,** amyloid kidney. **R.'s pelvis,** spondylolisthetic pelvis.* **R.'s tumor,** a multilocular ovarian cyst.

Rolan'dic. Relating to or described by Luigi Rolando,* as Rolandic fissure, line, point, etc.

Rolan'do's angle [Luigi *Rolando*, Italian anatomist, 1773–1831.] The angle which the direction of the fissure of R makes with the midplane, usually from 69° to 74°, with a general average of a few minutes over 73°. **R.'s a'rea,** the motor area in the cerebral cortex comprising the precentral and postcentral convolutions. **R.'s cells,** the ganglion cells in R 's gelatinous substance. **R.'s column,** a slight ridge on either side of the medulla obongata **R.'s fissure,** sulcus centralis. **R.'s gelat'inous substance,** a translucent substance of gelatinous appearance, consisting of ganglion-cells and neuroglia, capping the posterior cornu of the spinal cord on either side. **R.'s lobe,** operculum. **R.'s points,** two points in the surface of the skull on either side, corresponding to the upper and lower extremities of R.'s fissure. **R.'s substance,** substantia gelatinosa. **R.'s tu'bercle,** a small oblong grayish prominence on the external and inferior surfaces of the restiform body, below and behind the tip of the olive.

rolandom'eter [*Rolando* (fissure of) + G. *metron*, measure.] An appliance for tracing on the external surface of the skull the location and course of R.'s fissure.

roll-culture, roll-tube culture. See under *culture*.

roller (rōl'ur). A strip of muslin or cheese-cloth, usually from two to four or five inches wide and several yards long, rolled upon itself to form a compact cylinder; a roller-bandage.

Rol'ler's nu'cleus [Christian Friedrich Wilhelm *Roller*, German alienist, 1802–1878.] A small bulbar nucleus lying immediately anterior to the hypoglossal nucleus, believed to be an accessory hypoglossal nucleus.

Rollet's chancre (rō-la') [Joseph Pierre *Rollet*, French physician, 1824–1894.] Mixed chancre.

Rol'lett's stro'ma [Alexander *Rollett*, Austrian physiologist, 1834–1903.] The colorless stroma of the red blood-corpuscles.

Rol'let's stro'ma [Alexander *Rollet*, Austrian physiologist, 1834–1903.] The colorless stroma of the red blood-corpuscles.

Romanov'sky's chro'matin stain [Dimitri Leonidov *Romanovsky*, Russian physician, *1861–1921.] Aqueous solutions are made of methylene blue (saturated) and of eosin (1 per cent.), and a mixture is made of 1 part of the first to 2 parts of the second at the time of the staining operation. See *Nocht's* and *Goldhorn's modified stains*.

Romberg's disease (rom'berg) [Moritz Heinrich *Romberg*, Berlin physician, 1795–1873.] Facial hemiatrophy. **R.'s spasm,** trismus occurring in facial spasm. **R.'s symptom,** (1) Brauch*-Romberg symptom; (2) Romberg-Howship symptom.

Rom'berg-How'ship symp'tom [M. H. *Romberg;* John *Howship*.] Lancinating pains along the inner side of the thigh to the knee, or even down the leg to the foot, in cases of incarcerated obturator hernia; caused by compression of the obturator nerve.

Rom'berg-Paess'ler syn'drome [M. H. *Romberg;* H. *Paessler*, German physician, contemporary.] Tympanites, rapid heart action, low blood-pressure, stupor or coma, and the general symptoms of shock, due to dilatation of the blood-vessels in the splanchnic area.

Rom'melaere's sign [Guillaume *Rommelaere*, Belgian physician, *1836.] Diminution of the phosphates, sodium chloride, and nitrogen in the urine in cancer.

rongeur (rawn-zhĕr') [Fr. *ronger*, to gnaw.] A strong biting forceps for gouging away bone.

roof (A. S. *hrōf*.] Tegmen. **r. of fourth ventricle,** tegmen ventriculi quarti. **r. of mouth,** palatine vault. **r. of orbit,** paries superior orbitæ. **r. of skull,** calvaria. **r. of tympanum,** tegmen tympani, paries tegmentalis cavi tympani.

roof-cell. A nerve-cell of the roof-nucleus.

roof-nu'cleus. Nucleus fastigii.

root [A.S. *rōt*.] 1. The subterranean portion of a plant, which fixes the plant in the soil, and absorbs moisture and nutrient material. 2. In anatomy the base, foundation, or beginning of any part, radix. 3. Radix dentis, the portion of a tooth below the neck, covered by cementum, and fixed in the alveolus. **ante'rior r.,** radix anterior, the one of two bundles of nerve-fibers, emerging from the spinal cord and joining to form a spinal nerve, which is composed of motor fibers. **dorsal r.,** posterior r. **fa'cial r.,** radix nervi facialis. **nerve r.,** one of two bundles of nerve fibers emerging from the spinal cord which join to form a spinal nerve; some of the cranial nerves are similarly formed by the union of two roots. **olfac'tory f.,** stria olfactoria. **poste'rior r.,** radix posterior, the spinal nerve r. which contains sensory fibers and on which is seated a ganglion. **r. of a hair,** radix pili. **r. of the lung,** radix pulmonis .**r. of the nail,** radix unguis. **r. of a tooth,** radix dentis [BNA]. **ventral r.,** anterior r. **yellow r.,** hydrastis.

root-canal'. Pulp* canal.

root-sheath. One of the epidermic layers of the hair-follicle; the outer root-sheath is derived from the rete mucosum, the inner from the stratum corneum; the latter is composed of two layers, Henle's externally and Huxley's internally.

R.O.P. Abbreviation of right occipitoposterior presentation, the occiput of the fetus being in relation with the right sacroiliac joint of the mother.

Rosa (ro'zah) [L. rose.] A genus of plants including the roses. **R. centifo'lia,** the pale rose. **R. cani'na,** dog rose. **R. damasce'na,** damask rose. **R. gall'ica,** red rose; see the following.

ro'sa (U.S.). Rosæ gallicæ petala (Br.), red rose, the petals of *Rosa gallica* collected before expanding; employed in several pharmaceutical preparations.

rosa astu'rica. Pellagra.

rosacea (ro-za'se-ah) [L. *rosaceus*, rosy.] Acne* rosacea. **r. hypertroph'ica,** rhinophyma.

rosacic acid (rōz-as'ik as'id) Purpurin (1).

rosan'ilin, rosan'iline. A derivative of aniline, $C_{20}H_{21}N_3O$, occurring in brownish red crystals; used as a base in the manufacture of various dyes.

ro'sary. See under *rachitic*.

rose [L. rosa] 1. The flower of a plant of the genus *Rosa*. 2. Erysipelas. **cabbage r.,** *Rosa centifolia*. **damask r.,** *Rosa damascena*. **dog r.,** *Rosa canina*. **moss r.,** *Rosa centifolia*. **pale r.,** *Rosa centifolia*. **red r.,** *Rosa gallica*.

rose-cold. June cold, hay-fever occurring in the early summer.

Rose's blood test (ro'zeh) [Heinrich *Rose*, German chemist, 1795–1864.] The scrapings of a blood-stain are boiled in a dilute solution of caustic potassa; the dissolved hematin gives to the fluid, when examined in a thin layer, a bile-green color, and in thicker layer a red color. **R.'s metal,** an alloy of bismuth 2, lead 1, and tin 1.

Rose's cephal'ic tet'anus (ro'zeh) [Edmund *Rose*, Berlin physician, 1836–1914.] Tetanus confined to the head, characterized by spasmodic dysphagia and accompanied usually by paralysis of the facial nerve, following a wound of the head. **R.'s posi'tion,** an operative position of the body with the head in strong extension hanging over the end of the table, employed in operations on the pharynx to prevent the entrance of blood into the air passages.

Rose's position (ro'zez po-zĭ'shun) [Frank A. *Rose*, London surgeon.] The patient lies on his back with the head falling down over the end of the table, used in operations within the mouth, or the faucet, and on the fauciopharyngeal boundary.

rosein, roseine (roz'in, ro'zēn). Fuchsin.

rosemary (rōz'ma-rĭ). Rosmarinus.

Rosenbach's disease' (ro'zen-bahkh) [Ottomar *Rosenbach*, Berlin physician, 1851–1907.] Heberden's* nodes. **R.'s law,** (1) in affections of the nerve-trunks or nerve-centers, paralysis of the flexor muscles appears later than that of the extensors; (2) in cases of abnormal stimulation of organs with rhythmical functional periodicity, there is often a grouping of the individual acts with corresponding lengthening of the pauses, in such a way that the proportion of total rest and activity remains nearly the same. **R.'s sign,** (1) inability of neurasthenics to close the eyes immediately and completely on command; (2) trembling

of the upper lids, when the eyes are gently closed, in Graves' disease; (3) loss of the abdominal reflex in cases of acute inflammation of the viscera. **R.'s syn'drome,** tachycardia associated with gastric and respiratory disturbances. **R.'s test** for bile in the urine; the suspected urine is passed several times through the same filter paper, this is then dried and touched with a drop of slightly fuming nitric acid when the play of colors characteristic of the bile-pigments is produced, viz., a yellow spot surrounded by rings of red, violet, blue, and green.

Rosenbach's tuber'culin (ro'zen-bahkh) [F. J. R. *Rosenbach*, German physician, 1843-1923.] A 2 months old tubercle bacillus culture is sown with particles of *Trichophyton holosericum album;* in ten days the mould covering the culture and containing the bacilli is separated from the medium, triturated in a glycerin-phenol solution, filtered, and added to the filtered fluid of the culture medium.

Ro'senbach-Gmel'in test. Gmelin's* test.

Rosenheim's en'ema (ro'zen-hīm) [Theodor *Rosenheim*, German physician, *1860.] A nutrient enema composed of peptone, grape-sugar, and codliver oil emulsion in a 0.3 per cent. soda solution.

Rosenmueller's bod'y (ro'zen-mū-ler) [Johann Christian *Rosenmueller*, German anatomist, 1771-1820.] Parovarium, epoöphoron* [BNA]. **R.'s fossa,** recessus pharyngeus. **R.'s gland** or **node,** (1) lymphoglandula subinguinalis profunda; (2) glandula lacrimalis inferior, a large lymph-node at the entrance to the femoral canal. **R.'s organ,** R.'s body. **R.'s recess',** R.'s fossa. **R.'s valve,** plica lacrimalis.

Rosenow's stain for capsules (ro'zen-ow) [Edward Carl *Rosenow*, American bacteriologist,* 1875.] Immerse the film, when nearly dry, in a 10 per cent. tannic acid solution for 15 seconds, wash and stain by steaming with aniline gentian violet for 45 seconds, again wash and apply Lugol's solution for 45 seconds, decolorize with 95 per cent. alcohol, and finally stain with an alcoholic solution of eosin.

Rosenthal's canal' (ro'zen-tahl) [Isidor *Rosenthal*, German physiologist, *1836.] Canalis* spiralis cochleæ.

Rosenthal's test (ro'zen-tahl). To determine the presence of blood in the urine; caustic potash is added to the urine and the precipitate is removed and dried; a bit is then put on a slide with a crystal of sodium chloride, a cover glass is applied, and under it a few drops of glacial acetic acid are caused to flow; the plate is warmed and on cooling Teichmann's crystals of hemin will appear if blood is present.

Rosenthal's vein (ro'zen-tahl) [Friedrich Christian *Rosenthal*, German anatomist, 1780-1829.] Vena basalis.

roseola (ro-ze'o-lah) [L. dim. of *roseus*, rosy.] Rose-rash, scarlet-rash macular erythema; a symmetrical eruption of small closely aggregated patches of reddish color. **epidem'ic r.,** rubella. **idiopath'ic r.,** r. not occurring as a symptom of a recognized general disease. **symptomat'ic r.,** a rash symptomatic of typhoid fever, measles, or other eruptive fever. **syphilit'ic r.,** macular syphilide; usually the first eruption of syphilis, occurring in from 6 to 12 weeks after the initial lesion.

roseolous (ro-ze'o-lus). Relating to or resembling roseola

Ro'ser's sign [Wilhelm *Roser*, German surgeon, 1817-1888.] Absence of pulsation of the dura mater exposed after trephining, indicating a subjacent lesion; called also Roser-Braun sign.

Roser-Nélaton line (ro'zer-na-lă-toń'). Nélaton's* line.

rose-rash. Roseola.

rosette' [Fr. a little rose.] The tertian malarial parasite in its segmented or mature phase.

rosin (roz'in). Turpentine resin, resina.* **r. oil,** retinol.

ros'inol. Retinol.

rosmari'nus [L. sea-dew.] Rosemary, anthos, the dried leaves and flowering tops of *Rosmarinus officinalis*, an evergreen shrub of the Mediterranean region, from which is obtained a fragrant oil, oleum* rosmarini.

rosolic acid (ro-zol'ik as'id). Corallin, a substance occurring in amorphous reddish brown masses; employed as a test for alkalies and acids, the former turning its solution a violet red, the latter yellow. **r.-a. paper,** filter paper dipped in rosolic acid solution and dried, used to test the reaction of a fluid.

Ross's bod'ies [Edward Halford *Ross*, English pathologist, contemporary.] A round copper-colored body containing dark granules, sometimes having ameboid movements, found in the blood and tissue fluids in syphilis; called also *Lymphocytozoon pallidum.*

Ross's test [Hugh Campbell *Ross*, English pathologist, 1875-1926.] Film test for syphilis: to 5 c.c. of a 2 per cent agar solution add 0.4 c.c. Unna's polychrome blue, 0.4 c.c. of a 5 per cent. aqueous solution of sodium bicarbonate, and 4.2 c.c. of sterile water; pour a thin film of this on a clean slide and when it is solid place the material to be examined on a clean cover glass and drop gently on the jelly; this stains the spirochetes.

Rossbach's disease' (raws'bahkh) [Michael Joseph *Rossbach*, German physician, 1842-1894.] Gastroxynsis.

Rossell's' test [Otto *Rossel*, Swiss physician, 1875-1911.] For occult blood in the stools: an ethereal extract of feces is treated with aloin and oil of turpentine, the presence of blood being indicated by a bright red color.

Ross-Jones test. A test for an excess of globulin in the cerebrospinal fluid: 1 c.c. of cerebrospinal fluid is carefully floated over 2 c.c. of a concentrated ammonium sulphate solution and if globulin is present in excess a fine white ring appears at the line of junction in about three minutes.

Ros'so reac'tion. Russo's* reaction.

Rossolimo's reflex (ros-o-le'mo) [Serge *Rossolimo*, Russian neurologist, 1880-1928.] Stroking the plantar surface of the great toe causes extension or abduction of the digit, an indication of lesion of the pyramidal tract.

rostell'um [L. dim. of *rostrum*, a beak.] The anterior portion of the head of a tapeworm, provided with a row of hooks.

ros'tral [L. *rostralis*.] Relating to any rostrum or anatomical structure resembling a beak.

ros'trate [L. *rostratus*.] Having a beak or hook.

ros'triform [L. *rostrum*, beak, + *forma*, form.] Beak-shaped.

ros'trum [L. a beak.] Any beak-shaped structure. **r. cor'poris callo'si** [BNA], beak of the corpus callosum, the recurved portion of the corpus callosum passing backward from the genu to the anterior commissure. **r. sphenoida'le** [BNA],

the anterior projecting part of the body of the sphenoid bone which articulates with the vomer.

rot [A.S. *rotian*.] 1. To decay. 2. Decay, a process of decomposition. 3. A disease of sheep caused by the liver fluke, *Distoma hepaticum*.

ro'tary. Relating to or marked by rotation. **r. conver'ter,** a device for changing a direct to an alternating electric current. **r. joint,** a pivot-joint or trochoid.

rotate (ro'tāt) [L. *rotare*, to turn or swing around.] 1. To revolve. 2. To turn or twist.

rota'tion [L. *rota*, a wheel.] 1. Turning or movement of a body round its axis. 2. A recurrence in regular order of certain events, such as the symptoms of a periodical disease.

rota'tor, pl. *rotato'res*. A muscle which causes a part to revolve on its axis.

ro'tatory. Rotary, causing, caused by, or characterized by rotation.

Rotch's sign [Thomas Morgan *Rotch*, Boston physician, *1848.] Percussion dulness in the fifth intercostal space on the right, in cases of pericardial effusion.

Roth's disease' (rōt). Roth-Bernhardt disease.

Roth's spots [Moritz *Roth*, Swiss pathologist, 1832–1914.] Elliptic retinal hemorrhages with white centers, occurring in the course of bacterial endocarditis.

Roth's vas aber'rans (rōt) [Moritz *Roth*, Swiss physician, 1839–1914.] An inconstant aberrant vessel or diverticulum of the rete testis.

Roth-Bern'hardt disease' (rōt) [Vladimir Karlovich *Roth*, Russian neurologist, *1848; Martin *Bernhardt*, Berlin neurologist, 1844–1915.] Meralgia paræsthetica.

Rothberger's neu'tral red a'gar (rot'ber-gur). See under *agar*.

rott'lera. Kamala.

rot'ula [L. dim. of *rota*, a wheel.] 1. The patella. 2. A troche or lozenge.

rot'ulad [L. *rotula*, patella, + *ad*, to.] In a direction toward the patella.

rot'ular. Patellar.

Rouge's opera'tion (roozh). To obtain access to the nasal cavities, avoiding a subsequent scar; the upper lip is freed from the maxilla, the alar cartilages are separated from the maxilla and the cartilaginous septum is detached from the nasal spine; after the operation the flap is replaced and held in position by compresses without suture.

rouget (roo-zha') [Fr. *rouge*, red.] *Leptus autumnalis*. **r. des porcs** [Fr. *porc*, swine], swine erysipelas.

Rouget's bulb (roo-zha') [Antoine D. *Rouget*, French physiologist, 19th century.] A venous plexus on the surface of the ovary. **R.'s muscle,** Mueller's fibers (1).

rough (ruf). Not smooth, noting the irregular coarsely granular surface of a bacterial culture.

Rougnon-Heb'erden disease' (roo-nyoṅ') [Nicolas François *Rougnon*, French physician, 1727–1799; William *Heberden*.] Angina pectoris.

rouleaux-forma'tion (roo-lo') [Fr. pl. of *rouleau*, a roll.] The arrangement of red blood-corpuscles in shed blood with their flat surfaces in apposition, forming figures resembling stacks of coins.

round (rownd) [L. *rotundus*.] Circular. **r. lig'ament,** (1) ligamentum teres; (2) chorda obliqua. **r. worm,** ascaris.

roup. An infectious respiratory catarrh in poultry.

Rous tu'mors (rows) [Francis Peyton *Rous*, American physician,* 1879.] Three sarcoma-like tumors of chickens transplantable and inoculable by means of a filtrable virus.

Rousselot's caus'tic (roos-lo'). Frère Come's caustic, compound of arsenic trioxide 1, mercuric sulphide (red sulphuret) 5, burnt sponge 2.

Roux's exper'iment (roo). Destruction of a blastomere in the developing egg of a frog, followed by absence of a certain part in the embryo.

Roux's meth'od (roo) [Philibert Joseph *Roux*, Parisian surgeon, 1780–1854.] Division of the inferior maxilla in the median line, to facilitate the operation of ablation of the tongue.

Roux spat'ula (roo) [Pierre Paul Emil *Roux*, Paris bacteriologist, *1853.] A very small nickeled steel spatula used to transfer bits of infected material, such as diphtheritic membrane, to culture tubes. **R. serum,** Behring serum, diphtheria antitoxin. **R.'s stain,** a double stain for diphtheria bacilli, compound of gentian violet or dahlia 0.5, methyl green 1.5, distilled water 200.

Rov'sing's sign [Thorkild *Rovsing*, Copenhagen surgeon, 1862–1927.] Pain at McBurney's point induced in cases of appendicitis, by pressure exerted over the descending colon.

Rowntree and Geraghty's test (rown'tre, ger'ah-te) [Leonard George *Rowntree*, American physician, *1883; John T. *Geraghty*, American physician, 1876–1924.] Phenolsulphonphthalein test.

R.S.A. Abbreviation of right sacroanterior, noting a breech presentation of the fetus with the sacrum directed toward the right acetabulum of the mother.

R.S.B. Abbreviation for regimental stretcher bearer.

R.S.P. Abbreviation of right sacroposterior, noting a breech presentation of the fetus with the sacrum directed toward the right sacroiliac joint of the mother.

Ru. Chemical symbol of *ruthenium*.

rubber-dam'. A thin sheet of rubber-tissue used by dentists to keep the saliva away from the field of operation; called also *coffer-dam*.

rubber-tis'sue. A thin sheet of caoutchouc used as a protective in surgical dressings.

rube'do [L. redness.] A temporary redness or flushing of the skin, blushing.

rubefacient (ru-be-fa'shent) [L. *ruber*, red, + *facere*, to make.] 1. Causing a reddening of the skin. 2. A mild counterirritant which reddens the skin.

rubefac'tion. Redness of the skin caused by a counterirritant.

rubel'la [L. dim. of *ruber*, red.] German measles, roetheln, epidemic roseola, rubeola; an acute exanthematous disease resembling in several respects both measles and scarlet fever, having the catarrhal symptoms of the former and the angina of the latter; the rash more nearly resembles that of measles than of scarlatina; the constitutional symptoms are usually very mild. The incubation period varies between 5 and 20 days.

rubeola (ru-be'o-lah) [L. dim. of *rubeus*, red.] 1. Measles. 2. Rubella. **r. no'tha** [L. *nothus*, spurious], rubella. **r. scarlatinosa,** fourth disease.*

ruber (ru'bur) [L.] Red.

rubescent (ru-bes'ent) [L. *rubescere*, to become red.] Reddening.

ru'bi fruc'tus. Blackberries, the ripe fruit of *Rubus nigrobaccus* or *R. villosus*.

ru'bi idæ'i fruc'tus (N.F.). Raspberries, the ripe fruit of *Rubus idæus* or *R. strigosus*.

rubid'ium. A metallic element symbol Rb, atomic weight 84.8; a silvery white metal, the salts of which have been used in medicine for the

same purposes as the corresponding potassium or sodium salts.

rubiginous (ru-bij'in-us) [L. *rubigo*, rust.] Rusty, of the color of iron rust.

rubi'go [L.] Rust, mildew.

ru'bin, ru'bine. Fuchsin.

Rubin test. A test of potency of the Fallopian tubes. A cannula with rubber tip is introduced into the cervix uteri, slight pressure being made so that the cervix is tightly closed; the vagina is now filled with a boric acid solution, and the carbon dioxide gas is passed through the cannula by means of a syringe with manometer attachment; a pressure of 200 mm. of mercury is sufficient to force the air through the Fallopian tubes; if they are patent the escape of gas into the abdominal cavity is evidenced by a high pitched bubbling sound heard on auscultation over the lower abdomen.

Rubner's laws of growth (roob'ner) [Max *Rubner*, Berlin hygienist, 1854–1932.] 1. The *law of constant energy consumption*: the rapidity of growth is proportional to the intensity of the metabolic processes; (2) the *law of the constant growth quotient*: in most young mammals 34 per cent of the entire food energy, or calories, is utilized for growth, in man only 5 per cent is utilized. **R.'s test,** acetate of lead is added to the suspected urine and the latter is filtered; now ammonia is added until a permanent precipitate is formed; if grape sugar is present, on heating the fluid the precipitate will take on a pink to red color; if there is milk sugar the color will be yellow to brown.

ru'bor [L.] Redness; one of the classical symptoms of inflammation.*

rubrospi'nal. Relating to the red nucleus and the spinal cord. **r. system,** the linking of the red nucleus with the opposite side of the spinal cord by means of the r. tract, or Monakoff's bundle. **r. tract,** see under *tract*.

ru'bus (N.F.). Blackberry, the bark of the rhizome of *Rubus villosus*, *R. nigrobaccus*, or *R. cuneifolius*, bramble; tonic and astringent, employed in diarrhea in doses of gr. 20–30 (1.3–2.0).

Ru'bus [L. blackberry bush or bramble bush.] A genus of plants of the order *Rosaceæ*. **R. cuneifo'lius,** a variety of blackberry. **R. idæ'us,** raspberry. **R. nigrobac'cus,** blackberry. **R. occidenta'lis,** blackcap, black raspberry. **R. strigo'sus,** raspberry. **R. villo'sus,** a variety of blackberry. See *rubi fructus*, *rubi idæi fructus*, and *rubus*.

Ruck's tuber'culin [Karl von *Ruck*, American physician born in Germany, 1849–1922.] See under *tuberculin*.

ruc'tus [L.] Eructation.

Rudbeck'ia [after Olaus *Rudbeck*, Swedish botanist, 1630–1702.] A genus of plants of the order *Compositæ*, including *R. hirta*, yellow daisy, black-eyed Susan, and *R. laciniata*, cone-flower; has been employed in domestic medicine as a diuretic.

ru'diment [L. *rudimentum*, a beginning.] 1. An organ or other structure in an early stage of its development. 2. Any part the development of which has been arrested.

rudimen'tary. Relating to a rudiment, imperfectly developed, vestigial.

rudimen'tum, pl. *rudimen'ta* [L.] A rudiment.

rue. Ruta.

Ruffini's nerve'-endings (roof-fe'ne) [Angelo *Ruffini*, Italian anatomist, 1864–1929.] Sensory nerve endings in the subcutaneous connective tissue of the finger; each consists of an oval connective-tissue capsule within which the axones begin as numerous knobs from which extend the primitive fibrils.

rufous (ru'fus) [L. *rufus*, red.] Reddish yellow, ruddy, erythristic; having reddish hair and a ruddy complexion.

Ru'fus's pills. Pilulæ aloes et myrrhæ.

ru'ga, pl. *ru'gæ* [L. a wrinkle.] A fold, ridge, or crease; a wrinkle. **r. gas'trica,** one of the folds of the mucous membrane of the stomach when the organ is contracted. **r. ir'idis** [NK], plica iridis [BNA]. **r. palati'na,** one of five or six transverse ridges running outward on either side of the anterior portion of the raphe of the palate. **ru'gæ vagina'les** [BNA], a number of transverse ridges in the mucous membrane of the vagina.

Rug'by knee [*Rugby*, a public school in England.] Schlatter's disease, a painful enlargement of the tubercle of the tibia, occurring in youths given to athletics; a mild periostitis due to strain.

Ruge'Philipp virulence test (roo-ga-fil'ip). Some of the patient's blood is drawn into a test tube and is then inoculated with the organisms to be tested; if the latter survive and increase in number they are to be regarded as virulent.

rugine (ru-zhēn') [Fr.] Periosteum elevator, raspatory.

ru'gitus [L. roaring.] Borborygmus, intestinal rumbling.

ru'gose. Marked by rugæ, wrinkled

rugos'ity. 1. The state of being thrown into folds or wrinkles. 2. A ruga.

ru'gous. Rugose.

Ruhm'korff coil [Heinrich Daniel *Ruhmkorff*, German electrician, 1823–1887.] An induction-coil in which the secondary coil is not movable, as in the DuBois Reymond coil, but is fixed at the point of maximum intensity.

rum. A spirit distilled from the fermented juice of the sugar cane. **bay r.,** spiritus* myrciæ.

ru'men [L. throat.] The first stomach, or paunch of a ruminant.

rumenot'omy [L. *rumen* + G. *tomē*, incision.] Incision into the first stomach of a ruminant.

ru'mex (N.F.). Dock, the root of *Rumex crispus* or *R. obtusifolius*, curly or yellow dock; astringent and tonic, and has been employed in indigestion and in the treatment of various chronic skin diseases in doses of ʒ1–2 (4.0–8.0), or of ʒ1 (4.0) of the N.F. fluidextract.

ru'minant. An animal that chews the cud, such as the sheep and the cow.

rumina'tion [L. *ruminare*, to chew the cud.] Merycism.

Rummo's disease' (room'mo) [Gaetano *Rummo*, Italian physician, †1917.] Cardioptosia.

rump. The buttocks or gluteal region.

Rumpel-Leede sign (room'pel-la'deh) [Theodor *Rumpel*, 1862–1923; C. *Leede*, *1882; German physicians.] If a venous stasis is produced in the arm of a scarlet fever patient, the arteries being left alone, hemorrhages appear at the elbow in from five to twenty minutes—punctate or larger, in some cases becoming confluent. The phenomenon has been observed also in other exanthemata.

Rumpf's symp'tom [Theodor *Rumpf*, German physician, *1851.] 1. Pressure over a painful point, in cases of neurasthenia, will accelerate the pulse from ten to twenty beats in the minute. 2. Fibrillary twitching in traumatic neuroses.

run'around. A superficial paronychia.

Runeberg's for'mula (roo'na-berg) [Johan Wilhelm *Runeberg*, Finnish physician, 1843–1918.] A

formula for estimating the amount of albumin in a serous fluid, similar to Reuss'* formula except that, instead of 2.8, 2.73 is subtracted in the case of a transudation, and 2.88 in case of an inflammatory exudate. **R.'s type,** a clinical type of progressive pernicious anemia in which brief periods of apparent improvement occur from time to time.

Ruotte's opera'tion (rü-ot'). Veno-peritoneostomy

ru'pia [G. *rhypos*, filth.] The formation of thick crusts over ulcers following a pustular or tubercular syphilide. **r. escharot'ica,** dermatitis gangrænosa infantum.

ru'pial. Relating to rupia.

rupopho'bia. Rhypophobia.

Ruppell's se'rum (roop'el). A bacteriolytic serum prepared from several strains of the meningococcus, employed in cerebrospinal meningitis.

rup'ture [L. *ruptura; rumpere*, to break.] 1. Hernia. 2. A tear or solution of continuity; a break of any organ or other of the soft parts.

Rusco'ni's a'nus [Mauro *Rusconi*, Italian biologist, 1776–1849.] Blastopore. **R.'s nu'tritive cav'ity,** cœlenteron.

Russ'ell's bodies [William *Russell*, Edinburgh physician, contemporary.] Small hyaline spherical bodies, staining deeply with fuchsin, found in cancerous and simple inflammatory growths; regarded by some as blastomycetes and of etiological significance, by others as hyaline degenerated cells; called also fuchsin bodies.

Russo's reac'tion (roos'so) [Mario *Russo*, Italian physician in Catania, *1866.] To 4 or 5 c.c. of the patient's urine add 4 drops of a 0.1 per cent aqueous solution of methylene blue, and examine against the light; an emerald-green coloration is positive but a bluish tinge is a negative indication. The reaction is said to be positive in typhoid fever, measles, smallpox, and advanced tuberculosis.

rust [A.S.] The reddish coating forming on iron or steel exposed to moist air, composed of ferric oxide with some ferric hydrate.

Rust's disease' or **e'vil** [Johann Nepomuk *Rust*, Berlin surgeon, 1775–1840.] Tuberculosis of the two upper cervical vertebræ and their articulations. **R.'s phenom'enon,** in cancer or caries of the upper cervical vertebræ the patient will always support the head by the hands when changing from the recumbent to the sitting posture or the reverse.

rust'y. Reddish, iron-rust color, rubiginous. **r. spu'tum,** a tenacious reddish matter expectorated in pneumonia.

rut (O. F. *ruit*, roaring of deer, in the breeding season). Heat, estrus, in animals.

ru'ta. Rue, the leaves of *Ruta graveolens* or garden rue; carminative and emmenagogue in doses of gr. 15–30 (1.0–2.0), and applied externally as a rubefacient.

ruthe'nium. A metallic element, symbol Ru, atomic weight 101.7; a hard brittle metal of the platinum group.

rutido'sis. Rhytidosis.

ru'tin. A glucoside from ruta, $C_{42}H_{50}O_{25}$; rutic acid, rutinic acid.

Ruysch's mem'brane (rīsh) [Friedrich *Ruysch*, Dutch anatomist, 1638–1731.] Lamina choriocapillaris. **R.'s muscle,** the muscular tissue of the fundus uteri. **R.'s tube,** a minute tubular cavity, best seen in the fetus, opening in the lower and anterior portion of each surface of the nasal septum. **R.'s veins,** Retzius'* veins.

rye. *Secale cereale*, a cereal plant. **spurred r.,** ergot.

rye-smut. Ergot.

Ryle's tube. A thin rubber tube, with about the lumen of a No. 8 catheter, having an olive-pointed extremity, used in the giving of a test meal.

S

S. Abbreviation of L. *signa*, mark, the usual introduction of the signature in a prescription.* Abbreviation of spherical or spherical lens. Chemical symbol of sulphur.

s. Abbreviation of L. *sinister*, left; and of L. *semis*, half, in this case usually *ss*.

Sa. Chemical symbol of *samarium*.

sabadil'la. Cevadilla, the seed of *Asagræa officinalis*, a plant of the shores of the Gulf of Mexico and Caribbean Sea; it yields veratrine; employed externally in ointment as a parasiticide.

sa'bal (N.F.). Saw palmetto, the fruit of *Serenoa serrulata*, a small evergreen of the coast of the southern United States; tonic, diuretic, and expectorant, employed in the treatment of chronic inflammations of the respiratory and genitourinary tracts in doses of gr. 10–15 (0.6–1.0).

Sabba'tia [after Liberato *Sabbati*, Italian botanist, 18th century.] A genus of plants of the order *Gentianeæ*, native of the United States, American centaury; a number of the plants have tonic and antiperiodic properties, being employed as a substitute for quinine.

saber-legged (sa'ber-legd). Noting a horse in which the angle of the hock is very acute, the feet extending forward under the body.

sa'ber-shin. The sharp-edged anteriorly convex tibia in hereditary syphilis.

sabi'na. Savin, the tops of *Juniperus sabina*, a shrubby species of cedar of the north temperate zone in Europe and America; employed externally and internally in rheumatism and gout and in amenorrhea, in doses of gr. 5–10 (0.3–0.6), and locally for the removal of venereal warts and as a stimulant to sluggish ulcers.

Sabouraud's pastilles (să-boo-rōz' pas-tēlz). [Raymond J. A. *Sabouraud*, French dermatologist, *1864.] Discs of barium platinocyanide in a mixture of acetate of starch and collodion, which undergo a color change when exposed to the *x*-rays, the degree of change indicating, like Holzknecht's chromo-radiometer,* the strength of the rays

Sabouraud-Noiré in'strument (să-boo-ro' nwă-ra'). A device for measuring the quantity of *x*-rays by means of the change in color of a disc of barium platinocyanide which exposure to them produces; the unit employed in this method is called teinte B, or tint* B = erythema dose.

sabro'mine. Trade name of a calcium salt of dibrombehenic acid, $Ca(C_{22}H_{42}O_2Br)_2$, calbroben, used to meet the indications of the ordinary bromides in doses of gr. 7½ (0.5).

sab'ulous [L. *sabulum*, sand.] Sandy, gritty.

sabulum (sab'u-lum) [L. fine sand.] Brain-sand, acervulus [BNA].

sabur'ra [L. sand.] 1. Decomposition of the food in the stomach. 2. Sordes.

sabur'ral. Relating to saburra.

sac [L. *saccus*, a bag.] 1. A pouch, a bursa; the capsule of a tumor, or envelope of a cyst. 2. An encysted abscess at the root of a tooth. **abdom'inal s.**, the one of the four serous sacs in the embryo which forms the abdominal cavity. **air s.**, a pulmonary alveolus. **conjunc'tival s.**, the space between the palpebral and bulbar conjunctiva. **dental s.**, the envelope of a dental follicle which encloses the embryonic tooth. **embryon'ic s.**, blastodermic vesicle. **her'nial s.**, the peritoneal envelope of a hernia. **lac'rymal s.**, saccus lacrimalis. **oment'al s.**, the space between the folds of the great omentum. **puden'dal s.**, Broca's pouch, a pear-shaped encapsulated collection of connective tissue and fat in each labium majus. **tear s.**, saccus lacrimalis. **yolk s.**, umbilical vesical.

sac'cate [L. *saccus*, money-bag.] 1. Relating to a sac; pouched. 2. In bacteriology, of an elongated bag shape, noting the form of liquefaction in a gelatin stab culture; see cut under *culture*, C, 3.

saccharate (sak'ă-rāt). A salt of saccharic acid.

saccharated (sak'ă-ra-ted) [G. *sakcharon*, sugar.] Sweetened, mixed with sugar.

saccharephidrosis (sak-ar-ef-ĭ-dro'sis) [G. *sakcharon*, sugar, + *ephidrōsis*, a slight perspiration.] The presence of sugar in the sweat.

saccharic (sak-ar'ik). Relating to sugar. **s. acid**, 1. An amorphous deliquescent acid, $H_2C_6H_8O_8$, obtained by the action of nitric acid on sugar, forming salts, some crystallizable, some not crystallizable. 2. An acid, $H_6C_6H_6O_6$, not found in the free state, forming crystallizable salts.

saccharide (sak'ar-id). A sucrate, or compound of a sugar with a base. **s. group**, an atomic group ($C_6H_{10}O_5$) supposed to occur in most of the carbohydrates, except the pentoses.

saccharif'erous (sak-ar-if'er-us) [G *saccharum*, sugar, + *ferre*, to bear.] Producing sugar.

saccharification (sak-ă-rĭ-fi-ka'shon). The process of saccharifying.

saccharify (sak'ă-rĭ-fi) [L. *saccharum*, sugar, + *facere*, to make.] To convert starch into sugar

saccharimeter (sak-ă-rim'e-ter) [G. *sakcharon*, sugar, + *metron*, measure.] An instrument for determining the amount of sugar in a solution; it may be a polarimeter, an hygrometer, or a retort-like device in which the solution is fermented and the amount estimated by the volume of carbonic acid produced. See cut under *Einhorn*.

saccharin (sak'ar-in). Benzosulphinidum (U.S.), glusinum (Br.). **sol'uble s.**, sodii benzosulphinidum (U.S.), sodium-saccharin, the sodium salt of benzosulphinide.

saccharine (sak'ar-īn). Relating to sugar, sweet.

Saccharinum (sak-ar-e'num). Saccharin, glusidum (U.S.). **s. solubile** (Br.), soluble saccharin, glusidum solubile (U.S.), sodii benzosulphimidum.

saccharobacillus (sak"ar-o-bă-sil'us). *B. pasteurianus*, causing acetic fermentation of sugar.

saccharogalactorrhea (sak"ar-o-gal-ak-to-re'ah) [G. *sakcharon*, sugar, + *gala*, milk, + *rhoia*, a flow.] Excessive secretion of lactose in milk.

saccharometabolic (sak-ar-o-mĕ-tă-bol'ik). Relating to saccharometabolism, glycometabolic.

saccharometabolism (sak-ă-ro-mĕ-tab'o-lizm) [G. *sakcharon*, sugar.] The process of utilization of sugar in the animal economy, glycometabolism.

saccharometer (sak-ă-rom'e-ter). Saccharimeter.

Saccharomyces (sak-ă-ro-mi'sēz) [G. *sakcharon*, sugar, + *mykēs*, fungus.] A genus of budding fungi, or blastomycetes, the yeast fungi. **S. al'bicans,** *Oidium albicans*. **S. busse,** a species isolated by O. Busse in a case marked by broken-

down nodules in the internal organs and on the bones. **S. capillit'ii,** a form found on the scalp in certain cases of alopecia. **S. cerivi'siæ,** beer-yeast, ordinary yeast. **S. hom'inis,** a species isolated in a case of pyemia and found to be pathogenic for certain animals. **S. neofor'mans,** a blastomycete regarded by Sanfelice as pathogenic of cancer. **S. sterno'ni,** a species causing a dermatomycosis. **S. subcuta'neus tumefa'ciens,** a species isolated in a case of multiple tumors on the neck and hips which resembled myosarcomata, pathogenic for certain animals, but not for guinea-pigs. **S. tumefa'ciens albus,** a form isolated in a few cases of pharyngitis; pathogenic for guinea-pigs.

saccharomyce'tic. Relating to or caused by the yeast fungus.

saccharomycosis (sak-ar-o-mi-ko'sis) [G. *sakcharon*, sugar, + *mykēs* fungus.] Blastomycosis

saccharorrhea, saccharorrhœa (sak-ar-or-re'ah) [G. *sakcharon*, sugar, + *rhoia*, a flow.] Glycosuria.

saccharose (sak'kar-oze) [G. *sakcharon*, sugar] Sucrose, cane-sugar ($C_{12}H_{22}O_{11}$), a dextrorotatory disaccharide found in many plants.

saccharosuria (sak″ar-o-su'rĭ-ah) [G. *ouron*, urine.] The excretion of cane-sugar in the urine.

saccharum (sak'a-rum) [G. *sakcharon*.] Sugar, sucrosum (U.S.), sucrose, **s. purifica'tum** (Br.), refined sugar obtained from the sugar-cane, *Saccharum officinarum*, from several species of *Sorghum*, and from the sugar beet, *Beta vulgaris*, $C_{12}H_{22}O_{11}$; employed in pharmacy in the manufacture of syrup, confections, etc **s. acer'num,** maple sugar. **s. canaden'se,** maple sugar, **s. lac'tis** (Br.), sugar of milk, lactose, lactosum* (U.S.), diuretic and laxative, but employed chiefly in pharmacy in the making of triturations and other preparations.

sacciform (sak'sĭ-form) [L. *saccus*, sac, + *forma*, form.] Saccate, pouched, sac-shaped, saccular.

sacc'ular. Sacciform, sac-shaped.

sacc'ulated. Saccular.

saccula'tion. 1. A structure formed by a group of sacs. 2. The formation of a sac or pouch.

sacc'ule. Sacculus, a small sac.

sacculocochlear (sak″u-lo-kok'le-ar). Relating to the sacculus (2) and the membranous cochlea

sac'culus [L. dim. of *saccus*, sac.] Saccule. 1. A small sac or pouch. 2. The smaller of the two membranous sacs in the vestibule of the labyrinth, lying in the spherical recess; it is connected with the cochlear duct by a very short tube, *ductus reuniens*, and with the utriculus by the beginning of the *ductus endolymphaticus* and the *ductus utriculosaccularis* which joins it. **s. alveola'ris,** infundibulum, air-cell. **s. commu'nis,** utriculus of the labyrinth. **s. endolymphat'icus,** saccus endolymphaticus. **s. lacrima'lis,** saccus lacrimalis. **s. laryn'gis,** appendix ventriculi laryngis. **s. pro'prius,** sacculus (2) **s. vestib'uli,** sacculus (2).

sac'cus, pl. *sac'ci* [L.] A sac. **s. endolymphat'icus** [BNA], endolymphatic sac, the dilated blind extremity of the ductus endolymphaticus. **s. lacrima'lis** [BNA], lacrymal sac, the upper portion of the nasolacrymal duct into which empty the two lacrymal ducts. **s. reu'niens,** sinus venosus.

Sachs-Georgi reaction (zahkhs-ghaor'gē) [Hans *Sachs*, German bacteriologist,* 1877; Walter *Georgi*, German bacteriologist, 1889–1920.] A test for syphilis: the patient's inactivated serum is mixed with a cholesterized alcoholic organ-extract of predetermined strength; the occurrence of flocculation in the mixture after standing 24 hours in the incubator points to the presence of syphilis.

Sachsse's solution (zahkh'seh) [Georg Robert *Sachsse*, German agricultural chemist, 1840–1895.] A solution of red iodide of mercury 18, iodide of potassium 25, and caustic potash 80, in water 1000; employed as a test for glycosuria, sugar if present causing a reduction of the solution.

sa'cra. Arteria sacra.

sa'crad [L. *sacrum* + *ad*, to.] In the direction of the sacrum.

sa'cral. Relating to or in the neighborhood of the sacrum.

sacral'gia [L. *sacrum* + G. *algos*, pain.] Pain in the sacral region.

sacrec'tomy [L. *sacrum* + G. *ektomē*, excision.] Resection of a portion of the sacrum to facilitate excision of the rectum.

sa'criplex. The sacral plexus.

sa″croante'rior. With the sacrum directed forward, noting a breech presentation of the fetus with the sacrum directed to one or the other acetabulum of the mother.

sacrococcygeal (sa-kro-kok-sij'e-al). Relating to both sum and arcococyx.

sa″crococcyge'us. See under *musculus*.

sacrocoxal'gia [L. *sacrum* + *coxa*, hip, + G. *algos*- pain] Pain in the sacroiliac joint; sacrocoxitis.

sacrocoxitis (sa-kro-kok-si'(sc')tus) [L. *sacrum* + *coxa*, hip, + G. *-itis*] Inflammation of the sacroiliac joint.

sacroiliac (sa-kro-il'ĭ-ak). Relating to the sacrum and the ilium, noting the articulation between the two bones, and the associated ligaments.

sacrolumba'lis. Sacrolumbar, noting a muscle, the musculus* iliocostalis lumborum.

sacroposte'rior. With the sacrum directed backward, noting a breech presentation of the fetus with the sacrum pointing to one or the other sacroiliac articulation of the mother.

sacroprom'ontory. The promontory of the sacrum.*

sacrosciat'ic. Relating to both sacrum and ischium. **s. lig'aments,** ligamentum sacrotuberosum [BNA] (great or posterior) and ligamentum sacrospinosum [BNA] (small or anterior).

sacrospi'nal. Relating to the sacrum and the spinal column above, sacrovertebral.

sacrospina'lis. See under *musculus*.

sacrot'omy. Sacrectomy.

sacrovertebral (sa-kro-vur'te-bral). Relating to the sacrum and the vertebræ above. **s. angle,** promontory of the sacrum.*

sa'crum [L. neuter of *sacer*, sacred.] Os sacrum, sacred bone, so called because it was believed to escape disintegration and to serve as the basis for the resurrected body; a broad, slightly curved, spade-shaped bone, thick above, thinner below, closing in the pelvic girdle posteriorly; it is formed by the welding together of five originally separate sacral vertebræ. **assimila'tion s.,** one which is composed of six segments, the last lumbar vertebra assuming the appearance of a sacral segment; or one which is composed of but four segments, the first sacral being free and having the characteristics of a lumbar vertebra. **lat'eral masses of the s.,** bars formed by the fused costal elements at the sides of the coalesced sacral vertebræ. **prom'ontory of the s.,** the salient angle formed at the junction of the last lumbar vertebra with the sacrum.

sactosal'pinx [G. *saktos*, stuffed, + *salpinx*, tube.] Hydrosalpinx or pyosalpinx.

saddle-back (sad'l-bak). Lordosis.

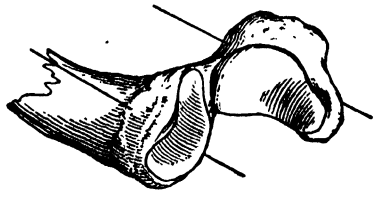
saddle-joint (sad'l-joynt). A joint in which the extremities of the two bones are inversely convex in one direction and concave in the other, allowing of anteroposterior and lateral motion with circumduction, but without rotation; the carpometacarpal joint of the thumb is the most perfect example of such a joint.

saddle-nose (sad'l-nōz). A sinking in of the bridge of the nose due to necrosis of the vomer.

sa'dism [after the Marquis de *Sade*, 1740–1814, who was confessedly addicted to the practice.] A form of sexual perversion in which the subject finds pleasure in inflicting severe pain upon his victim; the opposite of masochism.*

sa'dist. One who practises sadism.

sadis'tic. Marked by sadism.



THE CARPOMETACARPAL JOINT OF THE THUMB.

An example of the articulatio sellaris, or saddle-joint; the lines indicate the axes of motion when the surfaces are in apposition

Saemisch's ul'cer (za'mish) [Edwin Theodor *Saemisch*, German ophthalmologist, 1833–1909.] A serpiginous ulcer of the cornea, frequently accompanied by hypopyon.

Saenger's mac'ula (zeng'er) [M. *Saenger*, Prague obstetrician, 1853–1903.] Macula gonorrhoica. **S.'s opera'tion,** cesarean section followed by careful closure of the uterine wound by three tiers of sutures.

Saenger's sign (zeng'er) [Alfred *Saenger*, German neurologist, *1860.] A lost light reflex of the pupil returns after a short time in the dark, noted in cerebral syphilis but absent in tabes dorsalis.

sæptum [L.] Septum.

saf'flower [Ar. *safrā*, yellow.] Carthamus.

saff'ron [Ar. *safrā*, yellow.] Crocus.

saf'ranine. A base, $C_{21}H_{20}N_4$, obtained from aniline, aniline pink, used as a stain in histology.

saf'ranophil, saf'ranophile. Staining readily with safranine, noting certain cells and tissues.

saf'rol, saf'rolum. The methylene ether of allyl pyrocatechol, $C_{10}H_{10}O_2$, contained in oil of sassafras, oil of camphor, and various other volatile oils; it is obtained chiefly from oil of camphor by fractional distillation; tonic and carminative in doses of ℏ1–2 (0.06–0.13), but prolonged administration causes fatty degeneration.

sagapenum (sag-ah-pe'num) [G. *sagapēnon*.] An oleogum-resin obtained from *Ferula persica*, occurring in yellowish brown tears, having a bitter acid taste and a faint garlicky odor; formerly employed in hysteria.

sage [L. *salvia; salvus*, safe.] Salvia.

sagittal (saj'i-tal) [L. *sagitta*, an arrow.] Resembling an arrow; in the line of an arrow shot from a bow, *i.e.* in an anteroposterior direction. **s. crest,** a prominent ridge along the s. suture of the skull, present in certain animals. **s. groove,** sulcus sagittalis, the groove on the internal surface of the skull lodging the superior longitudinal sinus. **s. line,** any anteroposterior line. **s. plane,** an anterioposterior plane, either that of the s. suture or one parallel to it. **s. sinus, the** superior longitudinal sinus. **s. sulcus,** s. groove. **s. suture,** the interparietal suture.

Sagnac rays (san-yak'). Secondary rays produced when *x*-rays or gamma rays impinge upon the surface of any body; they resemble or are identical with the beta rays.

sa'go. A pearly starch made from the pith of several species of palms, the sago-palms, *Metroxylon lævis*, *M. rumphii*, or *Arenga saccharifera;* the sago of commerce is often tapioca.

sagra'din. Trade name of a laxative preparation from cascara sagrada.

Sah'li's test [Hermann *Sahli*, Swiss physician, *1856] 1. The salol test of pancreatic efficiency; salol is decomposed into phenol and salicylic acid by the action of the pancreatic juice, therefore if these substances cannot be found in the urine two hours after the administration of 30 grains of salol, the pancreatic function is presumably in abeyance. 2. Desmoid* reaction. **S.'s whistle,** a whistling sound heard on auscultation of the abdomen, due to flatus passing through a stenosed portion of intestine.

Saigon' cin'namon [*Saigon*, the capital of French Cochin China.] Cinnamomum saigonicum.

Saint Agatha's disease' (sānt ag'ă-thă). Any disease of the female breast.

Saint Aignan's disease' (san-tā-nyahn'). Ringworm.

Saint Amans' disease' (sañt am-ahn'). Pellagra.

Saint Anthony's dance (sānt an'to-ni). Chorea. **St. A.'s fire.** Hospital gangrene, ergotism.

Saint Apollo'nia's disease' [St. *Apollonia*, the patron saint of dentists; she was persecuted by the extraction of all her teeth, and still refusing to recant was burned at the stake in 249 A. D.] Toothache.

Saint Avertin's disease (sañ-tă-ver-tañ'). Epilepsy.

Saint Bartholomew's tea (sānt-bar-thol'o-mu). Paraguay tea, maté.

Saint Blaize's disease' (sānt blāz). Sore throat, especially tonsillitis.

Saint Claire's disease' (sānt klār). Conjunctivitis or any inflammatory disease of the eye.

Saint Dymphna's disease' (sānt dimf'na). Any mental disease, insanity.

Saint Erasmus's disease' (sānt e-raz'mus). Colic.

Saint Fiacre's disease' (san-fī-akr'). Hemorrhoids.

Saint Francis's fire (sānt fran'sis). Erysipelas.

Saint Gervasius's disease' (sānt jur-va'sī-us). Rheumatism.

Saint Gete's disease' (sānt jēt). Leprosy, cancer, syphilis, or any phagedenic disease.

Saint Giles's disease' (sānt jils). Cancer.

Saint Guy's disease' (sañ-gē or sānt gī). Chorea.

Saint Hubert's disease' (sānt hu burt). (*St. Hubert*, Bishop of Liege, the patron saint of hunters, †727.] Hydrophobia.

Saint Ignatius's bean (sānt ig-na'shus). Ignatia. **St. I.'s itch,** pellagra.

Saint John's dance (sānt jon). Chorea. **St. J.'s e'vil,** epilepsy.

St. Germain' tea. Species laxantes.

St. John Long's lin'iment [John *St. John Long*, London portrait painter and empiric, born in Ireland, 1800–1837.] A liniment composed of oil of turpentine 1½ oz., strong acetic acid 1 oz., distilled water 3 oz., and the yolk of one egg.

Saint Main's e'vil (sānt mīn). The itch.

Saint Martin's e'vil (sānt mar'tin). Dipsomania.

Saint Mathurin's disease' (san-mă-tu-ran'). Epileptic insanity.

Saint Modestus's disease' (sānt mo-des'tus). Chorea.

Saint Roch's disease' (sānt rok). Bubonic plague.
Saint Rose's disease'. Pellagra.
Saint Valentine's disease' (sānt val'en-tin). Epilepsy.
Saint Vi'tus's dance [*St. Vitus*, a martyr under Diocletian; at one time the superstition prevailed that dancing before his image would ensure good health for the following year.] Sydenham's chorea.
Saint With's dance (sānt with). Chorea.
Saint Zachary's disease' (sānt zak'ă-rĭ) [*Zachary*, the father of St. John the Baptist; the Bible narrative says that because he would not believe the word of the angel who announced to him that his wife would bear him a son, he was struck dumb until the child was born.] Mutism.
Sts. Cosmas and Damian. The patron saints of physicians. They were medical missionaries and suffered martyrdom in Cilicia at the beginning of the 4th century. They are venerated as saints in both the Roman and Greek Churches.
saiodine (sa-i'o-din). Trade name of calcii iodobehenas (U.S.), sajodin, calioben.
sajodin (sah-yōd'in). Saiodine.
sal [L. salt.] Salt. **s. acetosel'la.** s. limonis. **s. aera'tus**, saleratus, potassium bicarbonate. **s. alem'broth.** [Ar. salt of wisdom], ammoniomercuric chloride, a double chloride of mercury and ammonium, having 2 molecules of mercuric chloride and one of ammonium chloride. **s. ammo'niac,** ammonium chloride. **s. caroli'num facti'tium** (N.F.), artificial Carlsbad salt; potassium sulphate 2, sodium chloride 18 sodium bicarbonate 36, dried sodium sulphate 44; laxative in dose of gr. 15 (1.0) in a glass of water; it occurs as an amorphous powder and in crystalline form. **s. caroli'num facti'tium efferves'cens** (N.F.), effervescent artificial Carlsbad salt, made by the addition to the artificial Carlsbad salt 250, of sodium bicarbonate 400, tartaric acid 157, and citric acid 250; dose gr. 90 (6.0) dissolved in a glass of water. **s. de duo'bus,** potassium tartrate. **s. diuret'icum,** potassium acetate. **s. enix'um,** potassium bisulphate. **s. kissingen'se facti'tium** (N.F.), artificial Kissingen salt; potassium chloride 17, sodium chloride 357, anhydrous magnesium sulphate 59, sodium bicarbonate 107; antacid and laxative in dose of gr. 24 (1.5) in a glass of water. **s. kissingen'se facti'tium efferves'cens** (N.F.), effervescent artificial Kissingen salt, made by the addition to the artificial Kissingen salt 400, sodium bicarbonate 406, tartaric acid 94, citric acid 250; dose gr. 80 (5.5) in a glass of water. **s. limo'n's,** essential salt of lemon, salt of sorrel, salacetos, a poisonous mixture of potassium binoxalate and potassium tetroxalate; used for removing ink and other stains. **s. lith'ii citra'tis efferves'cens** (N.F.), effervescent salt of lithium citrate; lithium citrate 50, sodium bicarbonate 570, tartaric acid 300, citric acid 195; dose, gr. 120 (8.0) in a glass of water. **s. magne'sii sulpha'tis efferves'cens** (N.F.), effervescent salt of magnesium sulphate; magnesium sulphate 500, sodium bicarbonate 403, tartaric acid, 211, citric acid 136; dose ℥4 (16.0), containing about one-half the amount of magnesium sulphate. **s. mirab'ile,** sodium sulphate. **s. perla'tum,** sodium phosphate. **s. potas'sii bro'midi efferves'cens,** effervescent salt of potassium bromide; potassium bromide 166, sodium bicarbonate 530. tartaric acid 204, citric acid 250; dose, gr. 90 (6.0) in a glass of water. **s. potas'sii bro'midi efferves'cens compos'itus** (N.F.), compound effervescent salt of potassium bromide; caffeine 8, potassium bromide 83, lithium carbonate 42, sodium bicarbonate 587, tartaric acid 180, citric acid 250; dose, gr. 90 (6.0) in a glass of water. **s. prunelle',** fused potassium nitrate. **s. vichya'num facti'tium** (N.F.), artificial Vichy salt; sodium bicarbonate 846, anhydrous magnesium sulphate 38.5, potassium carbonate 38.5, sodium chloride 77; antacid in dose of gr. 15 (1.0) in a glass of water. **s. vichya'num facti'tium efferves'cens** (N.F.), effervescent artificial Vichy salt; artificial Vichy salt 250, sodium bicarbonate 485.5, tartaric acid 164.5, citric acid 250; dose, gr. 60 (4.0) in a glass of water. **s. vichya'num facti'tium efferves'cens cum lith'io,** effervescent artificial Vichy salt with lithium; artificial Vichy salt 250, lithium citrate 83.3, sodium bicarbonate 441.4, tartaric acid 125.4, citric acid 250; dose, gr. 90 (6.0) in a glass of water. **s. volat'ile,** ammonium carbonate.
salacetin (sal-as'e-tin). Trade name of phenylamine acetosalicylate, an antiseptic and analgesic
salacetol (sal-as'e-tol). Salicylacetol, salantol, acetyl-salicylic-ester; occurs in colorless scales or needles having a slightly bitter taste; employed as a substitute for salol in summer diarrhea and dysentery in doses of gr. 20–40 (1.3–2.6).
salacetos (sal-as'e-tos). Sal limonis.
salac'tol. A mixture of sodium salicylate and sodium lactate which is used as a solvent of diphtheritic membranes in a 1 per cent. spray.
sal'amide. A derivative of salicylic acid, having similar therapeutic action.
salan'tol. Salacetol.
salaz'olon. Salipyrine.
salbo'rol. Trade name of a compound of salol and boric acid; used in rheumatism.
salbro'malide. Salicylbromanilide.
sal'en. Trade name of a mixture of methyl and ethylglycolic esters, soluble in ether and alcohol.
sal'enal. A 33.3 per cent. ointment of salen.
sal'ep, sal'op [Ar. *sahleb.*] The dried tuber of several species of *Orchis* growing in Turkey and neighboring regions; employed as a demulcent in irritative intestinal disorders.
salera'tus [L. *sal aĕratus*, aerated salt.] Sal aĕratus was originally potassium bicarbonate, but the term saleratus is now applied to monosodic carbonate or sodium bicarbonate, baking soda.
saleth'yl. Trade name of ethyl salicylate put up in gelatin capsules of 5 ℥, each. **s. carbonate.** trade name of a salicylic compound, said to have antipyretic and analgesic properties, devoid of gastric disturbance or other unpleasant effects.
salia effervescentia (sal'ĭ-ah ef-er-ves-sen'tĭ-ah) [L. incorrect pl. of *sal effervescens*, effervescent salt.] (N.F.) Preparations made by adding sodium bicarbonate and tartaric and citric acids to the active salt; when thrown into water the acids break up the sodium bicarbonate, setting free the carbonic acid gas.
sal'icin, salici'num [L. *salix*, willow.] (U.S., Br.) Orthohydroxybenzyl-glucoside, $C_{13}H_{18}O_7$, a glucoside obtained from the bark of several species of *Salix* (willow) and *Populus* (poplar); occurs as a white crystalline powder of bitter taste. soluble in 21 parts of water; employed in rheumatism, influenza, and as a bitter tonic, in doses of gr. 5–30 (0.3–2.0). **ben'zoyl-s.,** populin.
salicitrin (sal'ĭ-sit'rin). Novaspirin.
sal'icyl [L. *salix*, willow, + G. *hylē*, stuff.] The hypothetical radical of salicylic acid, $C_7H_5O_2$. **s. salicyl'ic ac'id, diplosal,** used for the same purposes as sodium salicylate in doses of 5–15 gr. (0.3–1.0). **s. treatment,** treatment of rheu-

matism with salicin, salicylic acid, or any of its compounds or derivatives.

salicylacetol (sal-i-syl-as'e-tol). Salacetol

sal'icylage. The addition of salicylic acid as a preservative.

salicylamide (sal-i-sil-am'id). Obtained by the action of ammonia gas on methyl salicylate; colorless tasteless scales, soluble in 250 parts of water; antipyretic, analgesic, and antiseptic in doses of gr. 3–5 (0.2–0.3).

salicylan'ilide. A substance obtained by heating a mixture of aniline salicylic acid and phosphorus trichloride.

sal'icylate. 1. A salt of salicylic acid. 2. To salicylize.

sal'icylated. Treated by the addition of salicylic acid as a preservative.

salicylbroman'ilid. Antinervin, salbromalid, a preparation said to contain acetanilid, ammonium bromide, and salicylic acid; employed as an antipyretic and antineuralgic in doses of gr. 5–10 (0.3–0.6).

salicyl'ic [L. *salix*, willow, + G. *hylē*, stuff.] Derived from salicin; containing the radical salicyl. **s. ac'id, acidum* salicylicum.**

sal'icylide. Salicylous acid.

sal'icylism. Poisoning by salicylic acid or any of its compounds.

sal'icylize. To salicylate, to treat food-stuffs with salicylic acid as a preservative.

salicylous acid (sal-is'il-us as'id). Salicylic acid aldehyde, salicylide, salicylaldehyde, oxybenzaldehyde, $C_6H_4OH.CHO$; a colorless liquid of pungent taste and pleasant odor, obtained from *Spiræa ulmaria*, meadow sweet, and made synthetically; diuretic and antiseptic in doses of ♏2–8 (0.13–0.5).

salicylquinine (sal"i-sil-qwin-ēn', sal"i-sil-kwī'nīn) Saloquinine.

salicylu'ric acid. An acid formed in the urine after the administration of salicylic acid or its compounds.

salicylysin (sal-i-sil'i-sin). Trade name of an English make of thiosinamine salicylate, similar to fibrolysin.

salifeb'rin. Antifebrin salicylate, salicylanilide obtained by heating together salicylic acid and acetanilide; a white powder, insoluble in water, antipyretic and analgesic in doses of gr. 5–15 (0.3–1.0).

salifiable (sal-i-fi'a-bl) [L. *sal*, salt, + *fieri*, to be made, + *habilis*, fit.] Capable of being made into salts, said of a base that combines with acids to make salts.

salifor'min. Hexamethylene tetramine salicylate.

saligal'lol. Pyrogallol disalicylate, a resinous mass insoluble in water, employed in acetone solution in the treatment of eczema and psoriasis.

saligenin (sal-ij'en-in). Salicylic alcohol, occurs in the form of small white crystals soluble in water and alcohol; has properties similar to those of salicin and the salicylates in doses of gr. 3–10 (0.18–0.6).

salimen'thol. A compound of menthol with salicylic acid ether; a light yellow liquid recommended in the treatment of rheumatism in doses of gr. 3–5 (0.2–0.3).

salim'eter [L. *sal*, salt, + G. *metron*, measure.] An hydrometer used to determine the specific gravity, or the strength, of a saline solution.

salinaph'thol. Betanaphthol, or naphthyl, salicylate.

sa'line. Relating to, of the nature of, or containing salt; salty. **s. pur'gative,** Epsom salt, Rochelle salt, or any salt having purgative properties. **s. solu'tion,** a solution of any salt; specifically liquor sodii chloridi physiologicus (U.S.), physiological salt solution, one containing sodium chloride in the proportion of 8.5 to 1000, approximately that which exists in the blood.

salini'grin. A glucoside, $C_{13}H_{16}O_7$, obtained from the bark of *Salix discolor;* needle-shaped crystals soluble in 52 parts of water; has been used as a substitute for salicin.

sal'iphen. Salicylphenetidin, a derivative of phenetidin, occurring in colorless crystals insoluble in water; has antipyretic and analgesic properties.

salipyrine (sal-i-pī'rēn). A combination of antipyrine and salicylic acid, antipyrine* salicylate

Salisbury treatment (sawlz-bĕ-rĭ). The treatment of obesity and gastric troubles by an exclusive diet of minced beef.

sal'it. The salicylic-acid ester of borneol, bornyl or borneol salicylate, an oily liquid insoluble in water; has been employed in gout and rheumatism, neuralgia, and other painful conditions; it is applied externally, diluted with equal parts of olive oil, by inunction in doses of ʒ1–2 (4.0–8.0).

salitann'ol. A compound of gallic and salicylic acids; employed as an antiseptic dusting powder.

salithy'mol. Thymol salicylate.

saliva (să-li'vah) [L.] Spittle; a clear, tasteless, odorless, slightly alkaline, viscid fluid, consisting of the secretion from the parotid, sublingual, and submaxillary salivary glands and the mucous glands of the oral cavity; its function is to keep the mucous membrane of the mouth moist, to lubricate the food during mastication, and, in a measure, to convert starch into maltose, the latter action being effected by a diastatic enzyme, *ptyalin.* **chorda s.,** the secretion of the submaxillary gland obtained by stimulation of the chorda tympani nerve. **ganglion'ic s.,** submaxillary s. obtained by direct irritation of the gland. **rest'ing s.,** the saliva found in the mouth in the intervals of food taking and mastication. **s. pump,** dental pump.* **sympathet'ic s.,** submaxillary s. obtained by stimulation of the sympathetic.

sal'ivant. 1. Causing a flow of saliva. 2. An agent which increases the flow of saliva

salivary (sal'i-va-rĭ). Relating to saliva. **s. cal'culus,** a concretion in Wharton's duct. **s. gland,** one of the three pairs of glands furnishing the saliva; they are the parotid, sublingual, and submaxillary; these are called the *oral* salivary glands in distinction to the pancreas or *abdominal* salivary gland.

sal'ivate. To cause an excessive flow of saliva

saliva'tion. Ptyalism.

sal'ivator. Salivant (2).

sali"volithi'asis. Ptyalolithiasis.

sa'lix [L.] Willow, the bark of *Salix alba*, white willow, and other species of *Salix;* formerly employed as a tonic in doses of gr. 10–30 (0.6–2.0). **s. ni'gra,** the bark of the black or pussy willow, employed for the relief of nocturnal emissions and to quiet ovarian neuralgia in doses of gr. 30–60 (2.0–4.0). **s.n. am'ents,** the catkins of black willow, employed in eclectic practice as an anaphrodisiac and in irritable conditions of the genito-urinary tract in doses of 10 to 60 drops of the specific medicine in water three times a day.

Salkowski's test (sal-kov'ske) [Ernst Leopold *Salkowski*, German physician, 1844–1923.] 1. For indol; add to the solution a little nitric acid and then drop in a 2 per cent. solution of potassium nitrite; a red color is produced if

indol is present. 2. For carbon monoxide in the blood: add the blood to 2 volumes of a solution of caustic soda of specific gravity of 1.34 diluted with an equal amount of water; if CO is present the mixture becomes milky and changes gradually to bright red; if no CO is present the color changes to a greenish brown; this is a modification of Hoppe-Seyler's test. 3. For cholesterol: add to a solution of the substance in chloroform an equal volume of sulphuric acid; if cholesterol is present the mixture gradually changes from a bluish to a violet red.

sal-lamziekte (sal-lahm'zēk-teh). Lamziekte.

sall'enders. Sellanders.

salmester (sal-mes'tur). Mesotan.

sal'mine [L. *salmo*, salmon.] A protamine, $C_{32}H_{54}N_{18}O_4$, present in the sperm of the salmon.

Salmonella (sal-mon-el'ah) [after Daniel Elmer *Salmon*, American pathologist, 1850–1914.] A large genus of the family *Bacteriaceæ*, several species of which occur as intestinal pathogens in acute inflammations in man and the domestic animals. **S. aborti'vo-equinus**[0] *Bact. abortus-equi, B. abortivo-equinus*, short, motile, gram-negative rods, causative of abortion in mares, and experimentally in cows, sows, and various laboratory animals. **S. aer'tricke,**[0] *B. aertricke*, occurring as medium sized, motile, gram-negative rods which have been found in cases of meat poisoning and of the paratyphoid fevers. **S. ana'tum,**[0] pathogenic to ducklings. **S. archibal'di,**[0] a motile species inhabiting the intestinal canal. **S. columben'sis,**[0] *Bact. columbense*. **S. enterit'idis,**[0] *Bacillus enteritidis*, Gaertner's bacillus, an intestinal inhabitant of many animals, and isolated in some cases of meat poisoning in man. **S. gallina'rum,**[c] *Bacillus typhi gallinarum*, a species causing infectious leucemia of fowls and pathogenic in canaries and various game birds. **S. hirschfeld'ii,**[0] resembles Gaertner's bacillus (*S. enteritidis*) morphologically and culturally, but differs from it serologically; isolated from the intestinal contents in cases of paratyphoid C fever. **S. icteroi'des,**[0] *Bacillus icteroides, Bacillus X*, Sanarelli's bacillus, a species consisting of short, flagellated, motile rods, forming acid and gas in various sugar solutions; was once believed to be the pathogenic germ of yellow fever, but is now known not to be the cause of that disease. **S. mor'gani,**[0] motile rods of medium length found in the intestinal dejection of sufferers from dysentery. **S. paraty'phi,**[0] *Bacillus paratyphosus* A, short, flagellated, motile rods, the cause of paratyphoid A fever. **S. psittaco'sis,**[0] short, motile, flagellated rods, at one time believed to be the cause of pneumonia in parrots and, by contagion from sick parrots, in man. **S. schottmül'leri,**[0] *Bacillus paratyphosus* B, organisms morphologically similar to *S. paratyphi;* the cause of paratyphoid B fever. **S. suipes'tifer,**[0] *Bacillus choleræ suum*, medium sized motile organisms found in hog cholera, but not regarded as the primary causative agent in that disease. **S. ty"phimu'rium,**[0] motile, flagellated short rods, causing fatal epidemics in mice, pathogenic for both house and field mice. **S. watare'ka,** a short, motile, rod-shaped organism, found in the intestinal dejections of apparently healthy persons. **S. vebo'da** and **S. wolin'iæ** are forms similar to *S. watareka* and likewise found in the intestinal discharges.

salochinin (sal-o-kin'in). Saloquinine.

sal'ocoll. Phenocoll salicylate, in white silky crystals, antipyretic, antirheumatic, and antineuralgic, in doses of gr. 10–30 (0.6–2.0).

salocre'ol. Trade name of a compound of creosote and salicylic acid, used externally in rheumatism.

sal'ol (Br.). Phenylis salicylas (U.S.).

sal'ol-cam'phor. A yellowish oily liquid obtained by heating 3 parts of salol with 2 parts of camphor; local anesthetic; analgesic and antiseptic in doses of gr. 3–8 (0.2–0.5).

Sal'omon's test [Hugo *Salomon*, Vienna physician, contemporary.] For cancer of the stomach; after a day of non-albuminous fluid diet the stomach is washed out; the following morning it is again washed with physiological salt solution; in benign cases the return fluid never contains more than 16 milligrams of nitrogen in 100 c.c. and no albumin; in cancer the nitrogen ranges from 10 to 70 mg. per 100 c.c., and the albumin from $\frac{1}{16}$ to $\frac{1}{2}$ gram per liter.

Salonica or **Saloniki fever** (sal-o-ne'kah, or ke) [*Salonica*, anciently *Thessalonica*, a city in Grecian Macedonia.] A type of trench fever affecting the allied troops in Greece during the great European war, resembling clinically, but not pathologically a combination of malaria, typhoid fever, and bronchopneumonia.

sal'ophen. Acetpara-amidosalol, acetparaminosalol, acetamidosalol, acetylparamidosalol, acetylparamidophenol salicylate, phenetsal, $C_{15}H_{13}O_4N$; a synthetic compound proposed as a substitute for salol, occurring in fine, white, odorless, and tasteless scales, soluble in hot water; employed in rheumatism, gout, neuralgia, and as an intestinal antiseptic in doses of gr. 5–15 (0.3–1.0).

sal'ophenin. Salophen.

saloquinine (sal-o-kwin-ēn', sal-o-kwi'nin). Trade name for quinine salicylic acid ester, a tasteless substitute for quinine in doses of gr. 15–30 (1.0–2.0). **s. sal'icylate,** rheumatin, a white powder employed in neuralgia and acute rheumatism, in doses of gr. 5–15 (0.3–1.0).

salpingec'tomy [G. *salpinx(salping-)*, tube, + *ektomē*, excision.] Removal of the Fallopian tube.

salpingemphraxis (sal"pin-jem-fraks'is) [G. *salpinx (salping-)*, trumpet, + *emphraxis*, a stopping.] Obstruction of the Eustachian or of the Fallopian tube.

salpin'glan. Relating to the Fallopian or to the Eustachian tube.

salpingit'ic. Relating to salpingitis.

salpingitis (sal-pin-ji'(je')tis) [G. *salpinx*, trumpet, + *-itis*] Inflammation of the Fallopian tube or of the Eustachian tube.

salpingocath'eterism. Catheterism of the Eustachian tube.

salpingocele (sal'ping-go-sēl) [G. *salpinx(salping-)*, tube, + *kēle*, hernia.] Hernia of a Fallopian tube.

salpingocyesis (sal"ping-go-si-e'sis) [G. *salpinx(salping-)* tube, + *kyēsis*, pregnancy.] Tubal pregnancy.

sal"pingomall'eus [G. *salpinx(salping-)*, tube, + *malleus*, hammer.] Musculus tensor tympani.

salpingo-oophorectomy (sal"ping-go-o"o-for-ek'tomi). Salpingo-oothecectomy.

salpingo-oophoritis (sal"ping-go-o"o-for-i'(e')tis). Salpingo-oothecitis.

salpingo-oophorocele (sal"ping-go-o-of'ŏ-ro-sēl). Salpingo-oothecocele.

salpingo-oothecectomy (sal"ping-go-o"ŏ-the-sek'tomi) [G. *salpinx*, tube, + *ōothēkē*, ovary, + *ektomē*, excision.] Removal of the ovary and its Fallopian tube

salpingo-oothecitis (sal"ping-go-o"ŏ-the-si'(se')tis) [G. *salpinx*, tube, + *ōothēkē*, ovary, + *-itis*.] Inflammation of both Fallopian tube and ovary.

salpingo-oothecocele (sal"ping-go-o"ŏ-the'ko-sēl) [G. *salpinx*(*salping-*), tube, + *ōothēkē*, ovary, + *kēlē*, hernia.] Hernia of both ovary and Fallopian tube.

salpingoovariectomy (sal"ping-go-o-va-rĭ-ek'to-mĭ). Salpingo-oothecectomy.

salpingoovariotomy (sal"ping-go-o-va-rĭ-ot'o-mĭ). Salpingo-oothecectomy.

salpingoperitonitis (sal"ping-go-per"-ĭ-to-ni'(ne')tis) [G. *salpinx*(*salping-*), tube, + *peritonaion*, peritoneum, + *-itis*.] Inflammation of the peritoneum of the Fallopian tube.

salpingopexy (sal'ping-go-pek-sĭ) [*salpinx* + G *pēxis*, fixation.] The operative fixation of an oviduct.

salpingopharyn'geal. Relating to the Eustachian tube and the pharynx.

sal"pingopharynge'us. See under *musculus*.

salpingorrhaphy (sal-ping-gor'ă-fi) [G. *salpinx*, trumpet, + *rhaphē*, stitching.] Suture of the Fallopian tube.

salpingosalpingostomy (sal'ping-go-sal-ping-gos'to-mĭ) [*salpinx* + *salpinx* + G. *stoma*, mouth.] The anastomosing of one oviduct with its fellow on the other side.

sal"pingostaphyli'nus [G. *salpinx*(*salping-*), tube, + *staphylē*, uvula.] See under *musculus*.

salpingostomat'omy [G. *salpinx*(*salping-*), tube, + *stoma*, mouth, + *tomē*, incision.] Salpingostomy.

salpingos'tomy [G. *salpinx*(*salping-*), tube, + *stoma*, mouth.] Establishment of an artificial opening in a Fallopian tube, usually with suture to the ovary, in cases in which the fimbriated extremity has been closed by inflammation.

salpingot'omy [G. *salpinx*(*salping-*), tube, + *tomē*, incision.] Incision into th Fallopian tube.

salpingysterocyesis (sal"ping-jis"ter-o-si-e'sis) [G. *salpinx*(*salping-*), tube, + *hystera*, uterus, + *kyēsis*, pregnancy.] Ectopic pregnancy in the intramural portion, or uterine extremity, of the Fallopian tube.

sal'pinx [G. a trumpet.] 1 Fallopian tube, tuba* uterina. 2. Eustachian tube, tuba* auditiva.

salt. 1. A compound formed by the interaction of an acid and a base, the hydrogen atoms of the acid being replaced by the atoms of the base. 2 Sodium chloride, NaCl, common salt, table salt. **acid s.,** bisalt, a salt in which all of the hydrogen of the acid is not replaced by the electropositive element. **basic s.,** one in which there are one or more hydrogen atoms not replaced by the electronegative element. **double s.,** one in which two basylous elements or radicals are united with the same acid. **Epsom s.,** magnesium sulphate. **Glauber's s.,** sodium sulphate. **hal'oid s.,** a s formed from an hydracid by the substitution of a metal for the hydrogen, similar in constitution to common salt, or sodium chloride, NaCl. **-ic s.,** a salt in which the basic element occurs in a higher valency than it does in the -ous salt of the same element. **Monsel's' s.,** iron subsulphate. **neutral s.,** a s. in which the hydrogen of the acid has been wholly replaced by the electropositive element. **normal s.,** one which is neither basic nor acid. **-ous s.,** a salt in which the basic element occurs in a lower valency than it does in the -ic salt of the same element. **Rochelle' s.,** sodium and potassium tartrate. **s. ac'tion,** any one of a series of reactions produced by the physical effects on the cells of concentrated solutions of alkaline salts, sugar, or other substances circulating in the body. **s. solution,** saline solution.

saltation (sal-ta'shun) [L. *saltare*, to dance.] 1. Dancing, leaping. 2. In biology a wide and sudden fluctuation; mutation.

saltato'rial, sal'tatory. Relating to or marked by dancing or leaping. **s. spasm,** a spasmodic affection or tic of the muscles of the lower extremity.

salt-dye. A neutral staining substance, such as the eosinate of methylene blue.

Sal'ter's incremen'tal lines (sawl'tur) [Sir James A *Salter*, English dentist, 19th century.] Transverse lines, sometimes seen in dentine, due to improper calcification.

salt-fever. An elevation of temperature following the ingestion of salt and sugar in infants, occurring chiefly in those suffering from intestinal disorders—a form of anaphylaxis.

salt-free di'et. See *dechloridation*.

saltpe'ter, saltpe'tre [L. *sal*, salt, + *petra*, rock.] Niter, potassii* nitras. **Chil'e s.,** sodii nitras.

salts. A saline purgative.

salt-sensitiveness. The tendency of certain bacillary suspensions to agglutinate spontaneously in physiological saline solution.

salu'brious [L *salubris*, healthy.] Healthful.

sal'ubrol. Methylenediantipyrine tetrabromide, a yellow powder employed as an antiseptic dusting powder in place of iodoform.

sal'ufer [L. *salus*, health, + *ferre*, to bring.] Sodium silicofluoride, sodium fluosilicate, Na_2SiFl_6; a tasteless, odorless powder, employed as a deodorant, antiseptic, and styptic, in 1–500 to 1–5000 solution.

sal'umin. Aluminum salicylate, a slightly reddish powder, employed in ozena and pharyngitis. **sol'uble s.,** ammoniated aluminum salicylate, employed in solution as a spray in diseases of the upper air passages.

saluta'rium [L. *salutaris*, healthful.] Sanitarium.

sal'utary [L *salutaris*.] Healthful, wholesome.

sal'varsan [L. *salvare*, to preserve, + *sanitas*, health.] Trade name of dioxydiaminoarsenobenzol, No. 606, arsphenamina* (U.S.). **s. milk,** arsphenamine milk, the milk of a goat to which arsphenamine has been administered, suggested as a suitable food for heredosyphilitic infants. **sil'ver s.,** argentum arsphenamina.*

salvarsanized-serum method (sal'var-san-izd-se'rum meth'od). Arsphenaminized-serum method (see under *Swift-Ellis*).

salvatell'a [It.; L. *salvare*, to save.] The dorsal vein of the little finger, bleeding from which was anciently regarded as curative in melancholia.

salve (sahv) [A S. *sealf*.] An ointment, ceratum, unguentum. **moth'er's s.,** unguentum fuscum (N. F.) **s. mull,** unguentum extensum (N F.).

sal'veol. Trade name of a cresol solution of sodium creosolate; antiseptic.

sal'via [L.] Sage, the dried leaves of *Salvia officinalis*, garden sage, meadow sage; aromatic tonic, astringent, and diaphoretic in doses of gr. 15–30 (1.0–2.0).

salyrgan (sal-er-gan). Mersalyl, the sodium salt of a compound of mercury acetate and salicylalylamidoacetic acid, containing about 36 per cent. of mercury; antisyphilitic and diuretic in intramuscular doses of 8–15 ♏ (0.5–1.0) of a 10 per cent. aqueous solution every 2 to 5 days.

Salzer's opera'tion (zahlt'ser) [Fritz Adolf *Salzer*, Utrecht surgeon, born in Vienna, *1858.] 1 Exclusion of the intestine. 2. Excision of the mandibular division of the trigeminus nerve. **S.'s test-meals,** two meals given four hours apart; the first consists of moderate quantities of cold

roast beef, a soft-boiled egg, rice, and milk; the second of stale white bread and water; the contents of the stomach, removed an hour after the second meal, should show no remains of the first meal if digestion is normal

sama'rium. A rare grayish white metallic element, symbol Sa or Sm, atomic weight 150.43.

sambu'cus (N.F.). Sambuci flores (Br.), elder flowers; the dried flowers of *Sambucus canadensis* or *S. nigra*, the common elder or black elder; slightly laxative in doses of ʒi–2 (4.0–8.0), and employed in infusion and ointment in the treatment of bruises or sprains.

sam'ol. Trade name of a 25 per cent. ointment of salimenthol.

san'ative [L. *sanare*, to heal.] Curative, healing.

san'atogen. Proprietary name of a food preparation, said to consist of 95 per cent. milk casein in combination with 5 per cent. sodium glycerophosphate; employed in gastric disorders, anemia, and nervous affections.

san'atol. Artmann's creolin.

sanato'rium [L. *sanare*, to heal.] An institution for the treatment of chronic diseases, such as tuberculosis, nervous disorders, chronic rheumatism, etc., and as a place for recuperation under medical supervision; often improperly called *sanitarium*.*

san'atory. Health giving, curative.

san'atose. Trade name of a preparation said to be a compound of casein and sodium glycerophosphate, employed in anemia and gastric disorders.

sand [A.S.] The fine detritus of quartz and other crystalline rocks. **brain s.,** acervulus cerebri **intes'tinal s.,** minute calculi or gritty material occurring in feces, composed of soaps, bile pigment, cholesterin, magnesium salts, succinic acid, etc. **s. bath,** immersion of the body in hot sand **s. fly,** black fly, buffalo gnat, a biting dipterous insect of the genus *Simulium*. **s. treatment,** treatment by means of sand baths, ammotherapy, psammotherapy. **s. tumor,** psammoma.

san'dalwood. The heart-wood of various species of *Santalum*.* **red s.,** the wood of *Santalum rubrum*. **white s.,** the wood of *Santalum album*, see *oleum santali*.

san'darac [of Eastern origin.] An oleoresin from *Callitris quadrivalvis* and other species of *C.*, small trees of northwestern Africa; has been used as an expectorant, and externally as an ingredient of stimulating ointments.

sand-crack. A crack or fissure in the hoof of the horse, occurring usually on the inside of the fore-foot (*quarter-crack*) or in the fore-part of the hindfoot (*toe-crack*); when the crack is deep enough to expose the sensitive laminæ, or when it extends to the coronary band, lameness results.

San'ders' sign [James *Sanders*, English physician, 1777–1843.] Pulsatory movement of the thoracic wall in cases of adherent pericardium.

sand-fly fe'ver. Pappataci fever.

Sandstroem's bod'ies (sahn'strēm) [I. *Sandstrom*, Norwegian physician, 19th century] Glandulæ parathyreoideæ.

Sand'with's bald tongue [Fleming Mant *Sandwith*, English physician, 1853–1918.] The abnormally clean tongue seen in a later stage of pellagra.

sand'worm disease'. An inflammatory eruption on the inner side of the sole, observed in certain parts of Australia, marked by a patch of erythema spreading in spirals, and disappearing spontaneously.

sane [L. *sanus*.] Sound of mind.

sangaree (sang-gah-re') [Sp. *sangria*.] A beverage made of sweetened water, red wine, and nutmeg.

sangrenal (sang'gre-nal). An adrenal preparation, recommended as a hemostatic and heart stimulant.

sanguiferous (sang-gwif'er-us) [L. *sanguis*, blood, + *ferre*, to carry.] Conveying blood, circulatory.

sanguiferr'in. Trade name of a tonic said to be prepared from the iron of the blood with manganese.

sanquifica'tion [L. *sanguis*, blood, + *facere*, to make.] Hematopoiesis.

sang'uinal. Trade name of a preparation made from dried blood, recommended in anemia and chlorosis.

sanguinaria (sang-gwin-a'rĭ-ah) [L. *sanguis*, blood., (N.F.). The rhizome of *Sanguinaria canadensis*] bloodroot, tetterwort, a common wild flower of eastern North America; employed as an expectorant in doses of gr. 1–5 (0.06–0.3).

sanguin'arine. A poisonous alkaloid from sanguinaria, employed as a tonic and expectorant in doses of gr. $\frac{1}{12}$–$\frac{1}{8}$ (0.005–0.008).

sanguine (sang'gwin) [L. *sanguis*, blood.] 1. Plethoric. 2. Full of vitality, hopeful

sanguineous (sang-gwin'e-us) [L. *sanguis*, blood.] 1. Relating to blood, bloody. 2. Plethoric.

sanguin'olent. Bloody, tinged with blood.

sanguis (sang'gwis) [L.] Blood.

Sanguisuga (sang-gwĭ-su'gah) [L. *sanguis*, blood, *sugere* to suck.] A genus of leeches, now called *Hirudo*. **S. medicina'lis,** *Hirudo medicinalis*. **S. officina'lis,** *Hirudo provincialis*.

sanguisuge (sang'gwĭ-sūj) [L. *sanguis*, blood, + *sugere*, to suck.] A leech.

sanies (sa'nĭ-ēz) [L.] A thin, blood-stained, purulent discharge.

sa'nious. Relating to sanies; ichorous and blood-stained.

sanita'rian [L. *sanitas*, health] A hygienist, one versed in the science of public health.

sanita'rium [L. *sanitas*, health.] A health resort; not to be confused with *sanatorium*.*

san'itary. Healthful, conducive to health. **s. inspec'tor,** a public health official, trained in sanitary science, whose duty is to detect violations of public health regulations and to report upon the existence of insanitary conditions prejudicial to the health of the community. **s. survey',** a systematic inspection of any locality or building with regard to its water supply, drainage, atmospheric conditions, and other factors (and if a building, plumbing, ventilation, heating, etc.) affecting the health of the inhabitants.

san'itas. Trade name of a class of disinfectant preparations made from turpentine.

sanita'tion. The employment of measures designed to promote health and prevent disease; practical hygiene, assanation.

san'itol. A proprietary antiseptic mouth-wash.

san'ity [L. *sanitas*, health.] Soundness of mind.

sanmeth'yl. Trade name of a preparation of santal, methylene blue, copaiba, cubebs, and other drugs, recommended in gonorrhea.

sanmett'o. Trade name of a preparation of santal and saw palmetto (sabal), used in prostatic and vesical disorders.

sanocrysin (san-ŏ-kri'sin). Trade name of a double thiosulphate of sodium and gold, having the formula, $3Na_2S_2O_3.Au_2S_2O_3.4H_2O$; a white crystalline solid, recommended by Møllgaard in the treatment of tuberculosis.

san'oform. Methyl diiodosalicylate, a colorless crystalline powder, without odor or taste obtained by the interaction of iodine and methyl salicylate; employed as an antiseptic and deodorant dusting powder.

san'ose. Trade name of a food preparation of casein and albumose.

sansevier'ia (san-se-vĭ-ĕr'ĭ-ah) [after the Prince of *Sanseviero* of Naples, 1710–1771.] A genus of plants of South Africa and India. **S. thyrsiflo'ra,** a species of South Africa, employed internally as a domestic remedy for hemorrhoids.

San'som's sign [Arthur Ernest *Sansom,* English physician, 1838–1907.] Reduplication of the second sound of the heart at the base, occurring in mitral stenosis.

Sanson's im'ages (sahn-soń') [Louis Joseph *Sanson,* French physician, 1790–1839.] Purkinje's* images.

san'tal. Sandalwood, santalum.*

san'talin. A dye from red sandalwood.

santalol (san'tal-ol). An alcohol, $C_{15}H_{26}O$, which with the aldehyde, $C_{15}H_{24}O$, forms almost the entire part of oil of sandalwood; used in affections of the genito-urinary tract in doses of gr. 5 (0.3) 3 or 4 times a day. **s. sal'icylate,** santyl.

san'talum. Sandalwood, santal. **s. al'bum** (N.F.), white sandalwood, see *oleum santali.* **s ru'brum** (U.S.), red saunders, red sandalwood, pterocarpi lignum, the heart-wood of *Pterocarpus santalinus,* a small tree of India; employed in pharmacy as a coloring agent.

Santini's boom'ing (sahn-te'ne). A sonorous booming sound heard on auscultatory percussion of an hydatid cyst.

san'tol. Trade name of a sandalwood preparation, used in gonorrhea.

santon'ica [G. *santonikon,* wormwood.] Levant wormwood, semen-contra, the unexpanded flower heads of *Artemisia paucifolia,* a shrub growing in Turkestan; formerly employed for the expulsion of round worms, in doses of gr. 10–30 (0.6–2.0); now superseded by the active principle santonin; the eclectic specific medicine is given in a dose of 5 to 30 drops in water, repeated if necessary.

san'tonin, santoni'num (U.S., Br.). "The inner anhydride or lactone of santonic acid, obtained from santonica" (U.S.); "a crystalline principle prepared from the dried unexpanded flower-heads or capitula of *Artemisia maritima*" (Br.), $C_{15}H_{18}O_3$; occurs in colorless shining prismatic crystals, almost insoluble in water; employed to effect the expulsion of round worms (*Ascaris lumbricoides*) in doses of gr. ½–2 (0.03–0.13), and also in impaired vision from disease of the optic nerve and in incontinence of urine.

santoninox'ime. A derivative of santonin, $C_{15}H_{18}O_2.NOH$, occurring in the form of colorless acicular crystals; employed for the same purposes as santonin, in doses of gr. 1 (0.06) for a child, and gr. 2–3 (0.13–0.2) for an adult.

Santorini's canal' (sahn-to-re'ne) [Giovanni Domenico *Santorini,* Italian anatomist, 1681–1737.] S.'s duct. **S.'s car'tilage,** cartilago corniculata. **S.'s con'cha,** concha nasalis suprema. **S.'s carun'cula ma'jor,** papilla duodeni. **S.'s duct,** ductus pancreaticus accessorius. **S.'s fis'sures,** two fissures, one in the cartilaginous portion of the external auditory meatus, the other in the tragus. **S.'s inci'sure,** (1) incisura anterior auris [BNA]; (2) S.'s fissure. **S.'s lab'yrinth,** plexus pudendalis. **S.'s muscle,** (1) musculus risorius; (2) musculus incisuræ helicis; (3) an incomplete band of non-striated muscular fibers beneath the constrictor urethræ muscle. **S.'s papil'la,** papilla duodeni. **S.'s tu'bercle,** tuberculum corniculatum. **S.'s veins,** veins passing from the scalp to the cerebral sinuses.

santoze'a. A preparation of sabal, santol, and other drugs, recommended in vesical disorders.

san'tyl. Santalyl, or santalol, salicylate, salicylic-acid ester of santalol, an ester obtained by heating together salicylic acid and oil of sandalwood; a yellowish oil of balsamic odor and taste; employed in gonorrhea in doses of ♏20–30 (1.3–2.0).

sap. The circulating fluid of plants. **nu'clear s.,** caryolymph.

saphe'na [G. *saphēnēs,* visible.] See under *vena.*

saph'enous. Relating to or associated with a saphena vein, noting a number of structures in the leg. **s. opening,** fossa ovalis, an oval aperture in the fascia in the upper and inner part of the thigh below Poupart's ligament, which transmits the internal saphenous vein.

sap'id [L. *sapidus.*] Savory, tasty.

sa'po [L.] (U.S.) Soap, sapo durus (Br.), hard soap, Castile soap, a soap made with olive oil and sodium hydroxide; employed as an antidote in poisoning by mineral acids, and in the form of a suppository or of an enema of soap suds in constipation; used also as an excipient in pills. **s. anima'lis** (Br.), animal or tallow soap, curd soap, s. domesticus, soap made with sodium hydroxide and a purified animal fat consisting chiefly of stearin, used in pharmacy in the preparation of certain liniments. **s. domes'ticus,** s. animalis. **s. du'rus** (Br.), hard soap, sapo (U.S.). **s. mol'lis** (U.S., Br.), soft soap, green soap, potash soap, made with linseed oil (U.S.) or olive oil (Br.) and potassium hydroxide; employed as a stimulating application in various skin diseases. **s. vir'idis,** s. mollis.

sapocar'bol. Trade name of an antiseptic mixture of cresol and soft soap.

sapogenin (să-poj'en-in). Sapogenol, a white acicular crystalline substance, derived from saponin

sap'olan. Trade name of a dark brown ointment, said to consist of naphtha, soap, and lanolin, recommended as a stimulating application in certain skin diseases.

sapolan'olin. Trade name of a mixture of soft soap and lanolin, employed in eczema.

sapona'ceous [L. *sapo,* soap.] Soapy, relating to or resembling soap.

sapona'ria. Soapwort, soaproot, the dried roots of *Saponaria officinalis,* sweet betty, wild sweet william, an herb of temperate regions of Europe and America; formerly employed as an alterative in gouty and syphilitic skin diseases, in doses of ʒi–2 (30.0–60.0) of an infusion of an ounce to the pint.

sapona'tus [L.] Mixed with soap.

saponifica'tion [L. *sapo(sapon-),* soap, + *facere,* to make.] Conversion into soap, noting the action of an alkali upon fat.

sapon'ify. To make into soap.

sap'onin [L. *sapo,* soap.] A class of substances found in many plants which possess the common property of foaming, or making suds, when strongly agitated in aqueous solution; they also hold resinous and fatty substances in suspension in water; they are amorphous bodies as a rule, though a few are crystallizable, and possess the properties of glucosides; they are irritants when applied to the skin or mucous membranes, and given internally cause nausea and vomiting.

sapo'ta. The fruit of *Achras sapota*, a tree of tropical America, having diuretic properties.

sap'otin. A glucoside from the seeds of sapota

sapotox'in. A glucoside from quillaia, or soap-bark

sappan' [Malay.] (B.A.) The heart-wood of *Cæsalpinia sappan;* employed as a dye, and in medicine as an astringent, similarly to hæmatoxylon.

Sappey's fi'bers (sap-pa') [Marie Philibert Constant *Sappey*, French anatomist, 1810–1896.] Nonstriated muscular fibers in the check ligament of the eyeball. **S.'s lig'ament,** the posterior thickened portion of the capsule of the temporomandibular articulation. **S.'s veins,** accessory portal veins, venæ* paraumbilicales.

sapphism (saf'izm) [*Sapphō*, a Greek poetess of alleged irregular life.] Homosexual perversion among women, tribadism, Lesbian love.

sapre'mia, sapræ'mia [G. *sapros*, rotten, + *haima*, blood] Septicemia, the presence in the blood of the poisonous products of the putrefactive bacteria.

sapre'mic. Relating to or suffering from sapremia.

sap'rine. A ptomaine from the putrefying abdominal viscera.

saprodontia (să"pro-don'shyah) [G. *sapros*, rotten, + *odous(odont-)*, tooth.] Dental caries.

saprogen (sap'ro-jen) [G. *sapros*, decayed, + *gennaō*, I produce.] Any putrefactive microorganism.

saprogenic, saprogenous (sa-pro-jen'ik, să-proj'enus) [G. *sapros*, rotten, + *gennaō*, I produce] Causing or resulting from decay.

sap'rol. A disinfectant mixture of cresols in mineral oil.

Saproleg'nia [G. *sapros*, rotten, + *legnon*, an edge.] A genus of fungi, one species of which, *S ferax*, causes a destructive disease in salmon.

saproph'ilous [G. *sapros*, rotten, + *philos*, fond] Saprophytic.

saprophyte (sap'ro-fit) [G. *sapros*, decayed, + *phyton*, plant] A plant which grows on decaying vegetable matter. A microorganism which grows normally on dead matter, as distinguished from a *parasite*.

saprophytic (sap-ro-fit'ik) [G. *sapros*, decayed, + *phytikos*, vegetable.] Relating to a saprophyte; obtaining nourishment from decaying vegetable matter.

sapropy'ra [G. *sapros*, rotten, + *pyr*, fire] Typhus fever

Saprospira[0] (sap-ro-spi'rah) [G. *sapros*, decayed, + *speira*, a coil.] A genus of the family *Spirochætaceæ*, saprophytes, similar to those in the genus *Cristispira* but without the ridge, or so-called undulating membrane.

saproty'phus. Typhus fever.

saprozoic (sap-ro-zo'ik) [G. *sapros*, putrid, + *zōikos*, relating to animals.] Living in decaying organic matter, noting especially certain protozoa.

sar'cin. Hypoxanthin.

Sar'cina [L. *sarcina*, a pack, bundle.] A genus of non-flagellated organisms of the family *Coccaceæ*, in which division occurs in three planes, the newly formed cells remaining in position, thus forming cubes. **S. au'rea,** a species found in the exudate in certain cases of croupous pneumonia. **S. fuces'cens** [L. getting dark colored], a species occasionally found in the stomach contents. **S. no'bilis,** a form producing a reddish pigment, found once in a specimen of ascitic fluid. **S. ventric'uli,**[0] the type species, and practically the only one of medical interest, is found not infrequently in the stomach, but possesses little or no pathogenicity. **S. vir'chowii,** a species found in certain cases of chronic non tuberculous pulmonary disease, pseudomycosis sarcinica.

sar'cine. 1. Hypoxanthin. 2 A packet of cocci of the genus *Sarcina*.

sarcin'ic. Relating to the genus *Sarcina*.

sarcitis (sar-si'(se')tis) [G. *sarx(sark-)*, flesh, + *-itis*.] Myositis.

sarco- [G. *sarx(sark-)*, flesh.] A prefix denoting muscular substance or a resemblance to flesh.

sarcoadeno'ma. Adenosarcoma.

sar'coblast [G. *sarx(sark-)*, flesh, + *blastos*, germ.] A bud from a germinating cell.

sarcocarcino'ma. A mixed carcinoma and sarcoma or a transition form between the two.

sar'cocarp [G. *sarx(sark-)*, flesh, + *karpos*, fruit.] Mesocarp.

sarcocele (sar'ko-sēl) [G. *sarx(sark-)*, flesh, + *kēlē*, hernia, tumor.] A fleshy tumor or sarcoma of the testicle.

Sarcocystis [G. *sarx(sark-)*, flesh, + *kystis*, bladder.] A genus of protozoan parasites of the order *Sarcosporidia;* the initial stages are passed in muscular tissue. **S. muris,** a species parasitic in mice, causing the structures called Miescher's* tubes. **S. tenel'la,** a species in the sheep, producing cysts of large size in the muscles.

sarcode (sar'kōd) [G *sarx(sark-)*, flesh, + *eidos*, resemblance.] Animal, as distinguished from vegetable protoplasm.

Sarcodi'na [G. *sarx(sark-)*, flesh, + *dinē*, a whirling.] A subphylum (or class) of *Protozoa*, with naked protoplasm and without permanent organs of locomotion or prehension, these functions being performed by temporary extrusions of protoplasm called pseudopodia.

sarcoenchondroma (sar"ko-en-kon-dro'mah). Chondrosarcoma.

sarcoglia (sar-kog'li-ah). 1. The substance, assumed to be differentiated from neuroglia, at the junction of nerve and muscle fibers, or Doyen's hillocks. 2. Sarcoplasm

sar'coid [G. *sarx(sark-)*, flesh, + *eidos*, appearance.] 1. Resembling flesh. 2 A tumor resembling a sarcoma **mul'tiple benign' s.,** the occurrence of multiple nodules on the skin, resembling leucemia cutis, but due to a proliferation of connective-tissue cells surrounding the blood-vessels.

sarcolac'tate. A salt of sarcolactic acid, a paralactate.

sarcolac'tic acid. Paralactic acid, a dextrorotatory lactic acid.

sarcolem'ma [G. *sarx(sark-)*, flesh, + *lemma*, husk.] The sheath enclosing a muscle-fiber.

sarcolemm'ic, sarcolemm'ous. Relating to the sarcolemma.

sarcol'ogy [G. *sarx(sark-)*, flesh, + *-logia*.] 1. Myology. 2 The anatomy of the soft parts, as distinguished from osteology.

sarco'ma, pl. *sarco'mata, sarco'mas* [G. *sarx(sark-)*, flesh, + *-ōma*] A tumor, usually highly malignant, formed by proliferation of imperfectly differentiated cells of the vegetative or embryonic type; a malignant connective-tissue (parablastic) neoplasm. **alve'olar s.,** a tumor formed of a reticular stroma of connective tissue enclosing numerous round cells. **angiolith'ic s.,** psammoma. **decid"uocell'ular s.,** chorioma malignum. **enceph'aloid s.,** round-cell s. **fascic'ular s.,** spindle-cell s. **gi'ant-cell s.,** a giant-cell myeloma in which some of the spindle-cells have been replaced by smaller round cells; metastases are not infrequent. **infec'tive s.,** a growth occurring in the dog, apparently due to contagion; it is uncertain whether it is a true neoplasm or a

granuloma. **leucocyt'ic s.**, leucemia. **med'ullary s.**, a soft very vascular malignant growth, fungus hæmatodes. **melanot'ic s.**, melanoma, a markedly pigmented s **myelogen'ic s.**, one originating in the bone-marrow **my'eloid s.**, a mixed s. containing both round and spindle cells. **oat-cell s.**, a malignant tumor composed of short, bluntly spindle-shaped cells with comparatively long oval nuclei. **os'teoid s.**, a s. containing bony tissue. **round-cell s.**, a malignant tumor composed chiefly of closely packed round cells; the cells are of two kinds, small and large, the former consisting chiefly of nucleus with very little cytoplasm, the latter having a larger cell-body and tending, through pressure, to become oval or polygonal in shape **spin'dle-cell s.**, a malignant tumor composed of elongated, spindle-shaped cells; the cells are of two kinds, small and large.

sarco'matoid [G. *eidos*, resemblance] Resembling a sarcoma.

sarcomato'sis. The occurrence of several sarcomatous growths on different parts of the body **s. genera lis,** mycosis fungoides.

sarco'matous [L. *sarcomatosum*] Relating to or of the nature of sarcoma.

sarcomere (sar'ko-mēr) [G. *sarx(sark-)*, flesh, + *meros*, part] The section of muscle-fiber between two adjacent dark lines (Krause's membranes or Dobie's layers).

sarcomphalocele (sar-kom'fal-o-sēl) [G. *sarx(sark-)*, flesh, + *omphalos*, umbilicus, + *kēlē*, tumor] A hard fleshy tumor at or near the umbilicus

sarcomyces (sar-ko-mi'sēz) [G. *sarx(sark-)*, flesh, + *mykēs*, fungus.] A fungous fleshy growth.

sar'coplasm [G. *sarx(sark-)*, flesh, + *plasma*, a thing formed] 1. The undifferentiated protoplasm of a muscle-cell, hyaloplasm 2. The homogeneous semifluid interstitial substance surrounding the muscle-columns.

sarcoplas'mic. Relating to sarcoplasm

sar'coplast[G. *sarx*, flesh, + *plastos*, formed.] One of the rounded interfibrillary cells in a muscle fiber.

sarcopoietic (sar''ko-poy-et'ik) [G. *sarx(sark-)*. flesh, + *poieō*, I make.] Forming muscle.

Sarcopsyl'la pen'etrans [G. *sarx(sark-)*, flesh, + *psylla*, a flea.] *Dermatophilus penetrans*, jigger, chigoe, a minute insect, of which the impregnated female burrows into the skin or under the toenails, and there becomes distended with eggs to the size of a pea, causing abscesses and ulcers.

Sarcopsyllidæ (sar-kop-sil'lĭ-de). A family of fleas, containing the species *Dermatophilus penetrans* or jigger.

Sarcop'tes scabie'i [G. *sarx*, flesh, + *koptō*, I cut.] The itch-mite, formerly called *Acarus scabiei*.

sarco'sis [G. *sarx(sark-)*, flesh.] 1. An abnormal increase of flesh. 2 A multiple growth of fleshy tumors. 3. A diffuse sarcoma involving the whole of an organ.

Sarcosporid'ia [G. *sarx(sark-)*, flesh, + *sporos*, seed.] An order of *Neosporidia*, in which the early stage is passed in the muscle-cells of vertebrates.

sarcosporid'ium. One of the sarcosporidia.

sarcosporidio'sis. Infection of the voluntary muscles with sarcosporidia, causing Miescher's tubes in the mouse and Rainey's corpuscles in the pig. The affection is rare in man.

sarcosto'sis [G. *sarx(sark-)*, flesh, + *osteon*, bone.] Ossification of muscular tissue

sarcostyle (sar'ko-stīl) [G. *sarx(sark-)*, flesh, + *stylos*, *pillar*.] One of the delicate longitudinal fibrillæ in the spongioplasm of a muscle-cell.

sar''cother'apy [G. *sarx(sark-)*, flesh, + *therapeia*, **treatment.**] Zomotherapy.

sarcot'ic. 1. Relating to sarcosis. 2. **Causing an** increase of flesh.

sar'cous [G. *sarx(sark-)*, flesh] Relating to muscular tissue; muscular, fleshy.

sardon'ic grin [G. *sardonikos*, Sardinian, noting a plant supposed to cause death, the victim laughing the while.] Risus sardonicus.

Sarotham'nus [G. *saron*, broom, + *thamnos*, shrub.] A genus of shrubs including the common broom, *S. scoparius*.*

Sarrace'nia. The American pitcher plant, *Sarracenia purpurea*, sometimes given in the treatment of atonic dyspepsia in doses of ♏10–30 (0.6–2.0) of a fluidextract of the root; in eclectic practice it is employed as a diuretic and to promote the elimination of autotoxins in doses of 5 to 20 drops of the specific medicine in water every two or three hours.

sar'sa. Sarsaparilla.

sarsaparil'la [Sp *zarza*, a bramble] (U S.) Sarsæ radix (Br), the dried root of *Smilax medica* and other species of S., a thorny vine widely distributed throughout the tropical and semitropical world. It has been largely employed in gout, rheumatism, and syphilis, and popularly as a "blood purifier," in doses of gr. 15–30 (1 0–2.0) usually in some fluid preparation.

sar'sæ ra'dix (Br.). Sarsaparilla (U.S.), the dried root of *Smilax ornata* Jamaica sarsaparilla.

sarto'rius [L. *sartor*, a tailor, the muscle being used in crossing the legs in the tailor's position] See under *musculus*.

sas'safras (N.F.) [L. *saxifraga*, stone-breaker, noting its alleged property of dissolving vesical calculi.] The root-bark of *Sassafras variifolium*, a tree of the eastern United States; aromatic stimulant and astringent, employed as a flavoring addition to pharmaceutical preparations and as a diuretic and diaphoretic; dose, indefinite. **s. medul'la** (N.F.) sassafras pith, the dried pith of sassafras stems; it contains a gum extracted with water to make the formerly official (now N.F.) mucilago sassafras medullæ.

sas'sy bark. Erythrophleum.

sat. Abbreviation of saturated. **sat. sol.,** saturated solution.

satellite (sat'ĕ-līt) [L. *satelles*, guard] A minor structure accompanying a more important or larger one, as a vein accompanying an artery, or a small or secondary skin lesion in the neighborhood of a larger one.

satellito'sis [L. *satelles(satellit-)*, an attendant, + G. *-ōsis*.] A condition marked by an accumulation of free nuclei, probably neuroglia nuclei, around the neurons or ganglion cells of the cerebral cortex, it is present in general paresis and certain other affections.

Satt'ler's elas'tic lay'er. A thin layer of elastic connective-tissue fibers between the layer of large vessels and the choriocapillaris of the chorioid coat of the eye.

sat'urate [L. *saturare*, to fill.] 1. To impregnate to the greatest possible extent. 2. To neutralize, to satisfy all the chemical affinities of a substance. **sat'urated color,** a simple color of the spectrum which cannot be further decomposed; the smaller the admixture of white light with the simple color, the greater the degree of saturation. **sat'urated solu'tion,** a liquid holding all of a salt or other substance which it is capable of dissolving.

satura'tion. 1. Impregnation of one substance by another to the greatest possible degree, as a liquid by a soluble salt or the atmosphere by vapor. 2 Neutralization, as of an acid by an

alkali. 3. In optics, see *saturated color* under *saturate*.

sat'urnine [L. *saturninus; saturnus*, lead.] Relating to lead; due to or symptomatic of lead-poisoning.

sat'urnism [L. *saturnus*, the alchemical term for lead.] Lead-poisoning.

saturnotherapy (să-tur-no-ther'ă-pĭ) [*saturnum*, alchemical term for lead, G. *therapeia*, treatment.] Lead cure,* plumbotherapy.

satyriasis (sat-ĭ-rī'a-sis) [G. *satyros*, a satyr.] 1. Excessive venereal excitement in the male. 2. An obsolete term for elephantiasis or leprosy.

satyromania (sat"ir-o-ma'nĭ-ah) [G. *satyros*, satyr, + *mania*, frenzy.] Satyriasis.

Sauerbruch's cab'inet (zow'er-brookh) [Ferdinand *Sauerbruch*, Munich surgeon, *1875.] An air-tight chamber permitting operation on the thorax under negative air pressure, the patient lying within the cabinet with his head outside. **S.'s pros'thesis,** Vanghetti's prosthesis, an artificial limb in which motion is effected by means of plastic motors.*

sauerin (zow'er-in). Trade name of a German preparation, stated to be a pure active culture of the Bulgarian lactic acid (Massol's) bacillus.

Saundby's test (sawnd'be) [Robert *Saundby*, English physician, 1849–1918.] For blood in the stools; on the addition of 30 drops of a 20 volume hydrogen peroxide solution to a mixture of 10 drops of a saturated benzidin solution and a small quantity of feces in a test-tube, a persistent dark blue color denotes the presence of blood.

saunders (sawn'durz). Sandalwood, santalum.*

Saunders' disease' (sawn'dur) [Edward Watt *Saunders*, St. Louis physician, *1854.] Acute gastric disturbance in infants, due to an excess of carbohydrates in the diet.

sauriasis (saw-rī'a-sis) [G. *saura*, a lizard.] Ichthyosis sauroderma.

saurider'ma. Saurodermia.

saurio'sis. Saurodermia.

saurodermia (saw-ro-dur'mĭ-ah) [G. *sauros*, lizard, + *derma*, skin.] Ichthyosis hystrix.

sau'sage-poi'soning. Botulism

sau'sage-shaped roll. Iliac* roll

Saussure's hygrom'eter (so-sur') [Horace Bénédict de *Saussure*, Swiss physicist, 1740–1779.] An instrument for estimating atmospheric humidity, based upon the elongation of a hair by moisture.

Saussu'rea lap'pa [H. B. de *Saussure*.] Kuth root, an East Indian shrub used for relief of an asthmatic spasm, in doses of ʒss-ii (2.0–8.0) of a fluidextract.

Sav'ill's disease' [Thomas Dixon *Savill*, London physician, 1856-1910.] Dermatitis epidemica.

sav'in. Sabina.

sav'onal. Trade name of a preparation containing soap, used as a base for ointments.

saw [A.S. *saga*.] An instrument having an edge of sharp tooth-like projections; employed in surgery for cutting bone. **Adams' s., Gigli s., Hey's s.,** see the proper names. **butcher's s.,** a saw with narrow blade set in a D-shaped frame, used in amputations. **chain s.,** a saw made in short links, passed behind a bone and made to cut from below upward by pulling the two ends alternately. **crown s.,** a trephine. **subcuta'neous s.,** Shrady's* saw.

saw-palmett'o. Sabal.

saxifrage (saks'ĭ-frāj) [L. *saxifraga; saxum*, stone, + *frangere*, to break.] A plant of the genus *Saxifraga*, several species of which formerly enjoyed repute as solvents of urinary calculi.

saxifragant (saks if'ra-gant) [L. *saxum* stone, + *frangere*, to break.] Lithotritic, possessing the power of dissolving or of crushing calculi.

sax'in. Trade name of a sweet substance, used like saccharin as a substitute for sugar.

sax'ol. Trade name of a preparation of liquid paraffine.

Sayre's jack'et [Lewis Albert *Sayre*, New York surgeon, 1820–1900.] A plaster-of-Paris jacket, applied while the patient is suspended by the head and axillæ; used in the treatment of Pott's disease and lateral curvature of the spine. **S.'s suspen'sion appara'tus,** a tripod derrick with rope and pulley attachment for suspending the patient during the application of a plaster-of-Paris jacket

Sb. Chemical symbol of antimony (*stibium*).

$SbCl_3$. Antimony trichloride, butter of antimony.

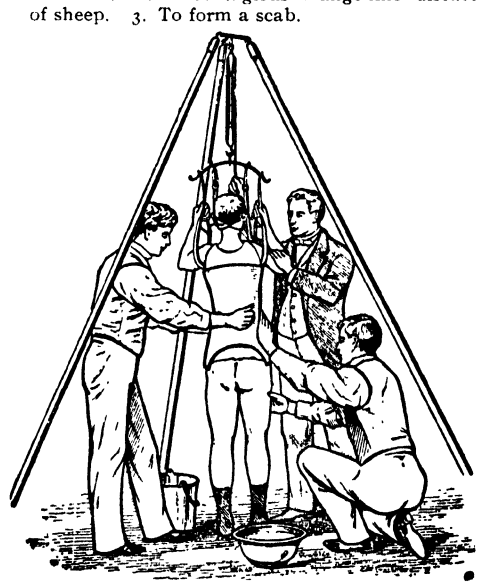
Sb_2O_5. Antimonic oxide.

Sb_4O_6. Antimonious oxide.

Sb_2S_3. Antimony trisulphide, black antimony.

Sc. Chemical symbol of *scandium*.

scab [A.S. *scæb*.] 1. Eschar, a crust formed by the drying of the pus on the surface of an ulcer or excoriation. 2. A contagious mange-like disease of sheep. 3. To form a scab.



SAYRE'S SUSPENSION APPARATUS for the application of a plaster jacket.

scabies (ska'bĭ-ēz) [L. *scabere*, to scratch.] The itch, dermatitis, accompanied with intense itching, caused by the burrowing beneath the skin of the itch-mite, *Sarcoptes scabiei*. **s. crusto'sa,** Boeck's* itch.

sca"biopho'bia [L. *scabies* + G. *phobos*, fear.] A morbid dread of, or delusion of suffering from, the itch.

scabiosus (ska-bĭ-o'sus) [L.] Scabious (1).

sca'bious. 1. Relating to or suffering from scabies. 2. Erigeron.

scabrities (ska-brish'ĭ-ēz) [L. *scaber*, scurfy.] 1 Roughness and scurfiness of the skin. 2. A chronic inflammatory granulation of the conjunctiva of the eyelids. **s. un'guium,** a roughening and thickening of the nails.

sca'la [L. a stairway.] See the subtitles. **s. me'dia,** middle scala or cochlear passage, ductus cochlearis [BNA]. **s. tym'pani** [BNA], tym-

panic canal, the division of the spiral canal of the cochlea lying below the lamina spiralis. **s. vestib'uli** [BNA], vestibular canal, the division of the spiral canal of the cochlea lying above the lamina spiralis.

scald (skawld) [L. *excaldare; ex*, from, + *calidus*, hot.] 1 To burn by contact with a hot liquid or steam. 2. The lesion resulting from such contact. 3. [see *scall.*] Any crusted or scurfy disease of the scalp, such as favus.

scald-head. Scald (3).

scalding (skawld'ing). A burning pain in urinating.

scale [A.S. *sceale.*] 1. A thin plate of bone. 2. A small thin plate of horny epithelium, resembling a fish-scale, cast off from the skin. 3. To desquamate. 4. To remove tartar from the teeth.

scale [L. *scala*, stairway.] A strip of metal, glass, or other substance, marked off in lines, for measuring. **Fahrenheit s., centigrade s., Réaumur s., absolute s.,** see the comparative thermometer scales in the Appendix.

scalene (ska-lēn') [G. *skalēnos*, uneven.] 1. Having sides of unequal length, said of a triangle so formed. 2. One of several muscles, see *musculus scalenus.* **s. tu'bercle,** tuberculum scalenum, a prominence on the upper surface of the first rib about an inch from its anterior extremity, giving insertion to the scalenus anterior muscle.

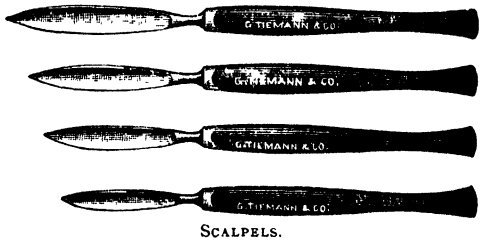
scale'nus. See under *musculus.*

sca'ler. An instrument for removing tartar from the teeth.

scall [Ice. *skalli*, bald-head.] A pustular scaly eruption of the skin or scalp. **hon'eycomb s.,** an eruption of minute contiguous ulcers separated by raised edges; porrigo favosa. **milk s.,** crusta lactea.

scalp. The hairy skin covering the cranium.

scalpel' [L. *scalpellum;* dim. of *scalprum*, a knife.] A pointed knife with convex edge.



SCALPELS.

scalpriform (skal'prĭ-form) [L. *scalprum*, chisel, + *forma*, shape.] Like a chisel. **s. inci'sors,** the cutting or gnawing incisors of a rodent

scal'prum [L. chisel, penknife.] 1. A large strong scalpel. 2. A raspatory.

sca'ly. 1. Scurfy. 2. Squamous.

scammonia (skam-mo'nĭ-ah)[G.] Scammony, the plant *Convolvulus scammonia*, the dried root of which, scammoniæ radix, is the source of the drug scammony, scammoniæ resina (Br.).

scamm'onin. A glucoside from scammony, purgative in doses of gr. 1–3 (0.06–0.2).

scamm'ony. Scammonia. **Mex'ican s.,** ipomœa (U.S.).

scan'dium. A rare metallic element, symbol Sc, atomic weight 44.1, which is known only in its white oxide

scann'ing speech. A form of speech in which the syllables or words are separated by distinct pauses.

scanso'rius [L relating to climbing.] See under *musculus*

Scanzoni's opera'tion (skahn-tso'ne) [Friedrich Wilhelm *Scanzoni*, German obstetrician, 1821–1891.] Bringing the occiput anterior by means of the forceps in order to expedite delivery. **S.'s second os,** Bandl's* ring.

sca'pha [L. skiff.] [BNA] Fossa of the helix, **scaphoid** fossa, the longitudinal furrow between the helix and the antihelix of the auricle.

scaph"ocephal'ic [G. *skaphē*, boat, + *kephalē*, head.] Noting a long narrow skull with a more or less prominent ridge along the prematurely ossified sagittal suture.

scaphoceph'alism. The state of having a scaphocephalic skull.

scaphoceph'alous. Scaphocephalic

scaphoceph'aly. Scaphocephalism.

scaph"ohydroceph'alus, scaph"ohydroceph'aly. The occurrence of hydrocephalus in a scaphocephalic individual

scaph'oid [G. *skaphē*, boat, + *eidos*, resemblance.] Boat-shaped, navicular; hollowed. **s. abdo'men,** a condition in which the abdomen is concave. **s. bone,** os naviculare [BNA]. **s. scap'ula,** see *scapula.*

scapula, gen. and pl. *scap'ulæ* (skap'u-lah) [L.] The shoulder-blade; a large triangular flattened bone lying over the ribs posteriorly on either side, articulating by its outer angle with the clavicle and the humerus. **scaph'oid s.,** one in which the vertebral border below the level of the spine presents a more or less marked concavity in place of the normal convexity; the *scaphoid type of s.* (Graves) is one in which the vertebral border between the spine and the teres major process is straight, or slightly, moderately, or markedly concave. **s. ala'ta,** winged scapula, scapula with prominent vertebral border and inferior angle.

scapulal'gia [G. *algos*, pain.] Scapulodynia.

scap'ular. Relating to the scapula.

scap'ulary. A form of brace or suspender for keeping a belt or body bandage in place; it is made of a broad roller bandage split half way, the undivided part being in front, the divided ends passing over the shoulders and down the back

scapulec'tomy [L. *scapula* + G. *ektomē*, excision.] Removal of the scapula or a portion of it

scapuloclavic'ular. Noting the articulation between the scapula and clavicle; acromioclavicular.

scapulodyn'ia [G. *odynē*, pain.] Rheumatism of the scapular muscles.

scapulohu'meral. Relating to both scapula and humerus.

scap'ulopexy [*scapula* + G. *pēxis*, fixation] Operative fixation of the scapula to the chest wall.

sca'pus [L. shaft, stalk.] The shaft or stem of the hair. It consists of *cuticle*, a fine layer of overlapping scales; *cortex*, the body of the hair made up of closely packed elongated fusiform cells, resembling fibers, containing pigment and sometimes air spaces; *medulla*, present only in the coarser hairs, a core of polyhedral nucleated cells, containing pigment, air spaces, and fat granules.

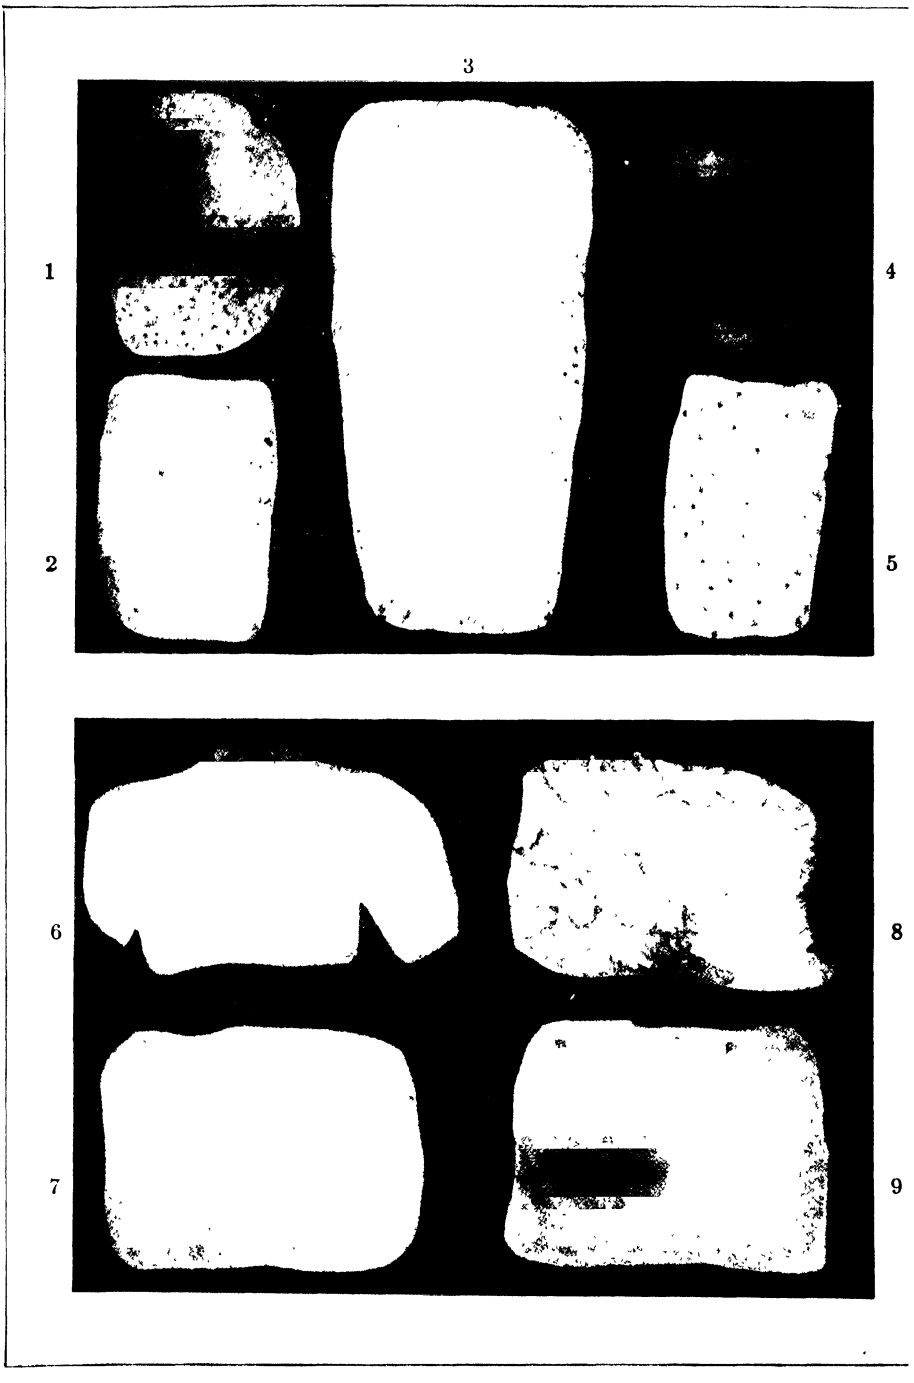
scar [G. *eschara*, scab.] Cicatrix.

scarf'skin [A.S. *scearfe*, fragment, scraping.] Epidermis.

scarifica'tion [L. *scarificare*, to scratch.] The act of scarifying, the condition of being scarified.

scar'ificator. An instrument for scarifying; it consists of a number of concealed cutting blades, set near together, which are projected at will by a spring.

scar'ify [L *scarificare*, to scratch.] To make a number of superficial incisions in the skin.



THE DIFFERENTIAL DIAGNOSIS OF SCARLET FEVER AND THE SCARLATINIFORM ERUPTIONS. 1. Scarlet fever rash showing sudaminal vesicles. 2. The fading scarlatina eruption. 3. Scarlatina eruption, early stage. 4. Typical scarlet fever tongue. 5. The scarlet fever rash, magnified. 6. Scarlet fever desquamation. 7. The scarlatinal form of rubella. 8. Acute exfoliative dermatitis. 9. Erythema infectiosa. (Pisek's original plate; courtesy Archives of Diagnosis.)

Scheele's acid (sha'leh, usually sheel) [Karl Willem *Scheele*, a Swedish chemist, 1742–1786.] A solution of hydrocyanic acid of 4 per cent strength. **S.'s green,** copper arsenite.

Scheiner's exper'iment (shi'ner) [Christoph *Scheiner*, German priest and physicist, 1575–1650.] Through two minute holes in a card, separated from each other by less than the diameter of the pupil, one looks at a pin; at a short distance from the eye the pin appears double; as it is moved from the eye a point is found where it appears single, and beyond which it remains single for the normal eye, but for the myopic eye it soon again becomes double.

schema (ske'mah) [G. *schēma*, outline, plan.] In homeopathy, the arrangement of the drug symptoms in anatomical order—head, nose, eyes, etc.

schematic (ske-mat'ik) [G. *schēma*, shape, figure.] Made after a definite type or formula; representing in general, but not with absolute exactness, noting an anatomical drawing or model.

Schenck's disease' (skenk) [Benjamin R. *Schenck*, American surgeon, *1872.] The gummatous lymphangitic form of sporotrichosis.

Scherer's test (sha'rer) [Johann Joseph von *Scherer*, German physician and chemist, 1814–1869.] 1. If a trace of leucin is carefully moistened with nitric acid on a platinum plate, and a solution of caustic soda is added to the residue a yellow to brown color appears, and upon heating an oil-like drop is formed. 2. A quantitative test for albumin, the precipitate obtained by boiling with acetic acid being weighed.

scherlievo (skair-lya'vo) [Dalmatian.] An endemic disease, now recognized as tertiary syphilis.

Schick's sign [Bela *Schick*, Viennese (now New York) pediatrist, *1877.] An expiratory stridor heard on ausculation of the chest in the case of an infant with tuberculosis of the bronchial glands. **S.'s meth'od,** production of immunity to diphtheria by the injection of a mixture of toxin and antitoxin of that disease. **S.'s test,** $\frac{1}{50}$ of the dose of diphtheria toxin fatal to a guinea-pig is injected just beneath the skin of a child; the appearance of a red spot at the site of injection within 48 hours indicates susceptibility to diphtheria, a negative reaction indicates immunity.

Schiff's test [Ugo *Schiff*, German chemist in Florence, 1834–1915.] 1. For sugar in the urine: a piece of filter-paper impregnated with xylidine and glacial acetic acid is exposed to the vapor of urine heated with sulphuric acid; if sugar is present the paper is reddened. 2. For urea: when furfurol and hydrochloric acid are added to a liquid containing urea a purple color is produced. 3. For uric acid: filter-paper impregnated with silver nitrate and dipped in an alkaline liquid containing uric acid turns brown.

Schilder's disease (shil'der). Encephalitis periaxialis diffusa.

Schimmelbusch's bacil'lus (shim'el-boosh) [Curt *Schimmelbusch*, German surgeon, 1860–1895.] An alleged organism causing cancrum oris. **S.'s disease,** a degenerative cystic change in the breast, associated with adhesion of the tube or ovary to the cecum which is inflamed and distended with feces.

schinus (ski'nus) [G. *schizō*, I split.] Pepper-tree, Peruvian mastic the seed of *Schinus molle;* employed, like cubebs, in catarrhs and gonorrhea.

schindylesis (skin-di-le'sis) [G. *schindylēsis*, splintering.] A form of synarthrosis (suture) in which the sharp edge of one bone is received in a cleft in the edge of the other, as in the articulation of the vomer with the rostrum of the sphenoid.

Schiötz's tonom'eter (she-ötz') [Hjalmar *Schiötz*, Norwegian physician, *1850.] An instrument for determining intraocular pressure by means of small weights supported by the resistance of the eyeball.

schistocephalus (skis-to-sef'al-us) [G. *schistos*, cloven, + *kephalē*, head.] A monster with a cloven head.

schistocœlia (skis-to-se'lī-ah) [G. *schistos*, cloven, + *koilia*, a hollow.] A congenital fissure of the abdominal wall.

schistocormus (skis-to-kor'mus) [G. *schistos*, cloven, + *kormos*, trunk of a tree.] A monster with a cleft of all or a part of the trunk, the lower extremities being usually imperfectly developed or absent; schistosomus.

schistocyte (skis'to-sīt) [G. *schistos*, cloven, + *kytos*, cell.] 1. Microcyte; it was so called because it has the appearance of having been produced by budding from an ordinary red blood-cell. 2. A dividing or fragmented red blood-cell.

schistocytosis (skis-to-si-to'sis) The occurrence of many schistocytes in the blood.

schistoglossia (skis-to-glos'ī-ah) [G. *schistos*, cloven, + *glōssa*, tongue.] A congenital fissure or cleft of the tongue.

schistomelus (skis-tom'e-lus) [G. *schistos*, cloven, + *melos*, member.] A monster with one or more cleft limbs.

schistometer (skis-tom'e-ter) [G. *schistos*, cleft, + *metron*, measure.] A device for measuring the opening of the glottis.

schistoprosopus (skis-to-pros-o'pus) [G. *schistos*, cloven, + *prosōpon*, face.] A monster with a more or less extensive cleft of the face.

schistorrhachis (skis-tor'ă-kis) [G. *schistos*, cloven, + *rhachis* spine] Spina bifida.

Schistosoma (skis-to-so'mah) [G. *schistos*, cloven, + *sōma*, body.] A genus of *Trematoda*, comprising the blood-flukes, in which the sexes are distinct. **S. catt'oi,** *S. japonicum.* **S. hemato'bium,** *Distoma hematobium*, a species with terminal-spined eggs, occurs as a parasite in the portal system and the veins of the bladder and rectum; it is common in Egypt and at the Cape of Good Hope. **S. japon'icum,** *S. cattoi*, a species with eggs without spines, or at most a mere knob, supposed to be the cause of a disease characterized by enlargement of the liver and spleen with ascites and cachexia. **S. man'soni,** a species with lateral spined eggs, found in the West Indies and South America.

schistosomiasis (skis-to-so-mi'ă-sis). Infestation with a species of Schistosoma. **Asiatic s.,** s. japonica, kabure, katayama disease, urticarial fever, infestation with *Sch. japonicum*, characterized by dysenteric symptoms, painful enlargement of liver and spleen, dropsy, urticaria, and progressive anemia. **intes'tinal s.,** infestation with *Sch. mansoni*, the eggs of which invade the intestinal wall and the liver, causing severe irritation and inflammation of those parts. **u'rinary s.,** endemic or Egyptian hematuria, bilharziasis, infestation with *Sch. hæmatobium*, the eggs of which invade the urinary tract, causing cystitis and hematuria.

Schistosomum (skis-to-so'mum). Schistosoma.

schistosomus (skis-to-so'mus) [G. *schistos*, cloven + *sōma*, body.] A monster with schistocœlia, or cleft body, schistocormus.

schistoster'nia (skis-to-ster'nĭ-ah) [G. *schistos*, cloven, + L. *sternum*.] A congenital cleft of the sternum, schistothorax.

schistothorax (skis-to-tho'raks) [G. *schistos*, cloven, + *thorax*.] Congenital cleft of the chest wall.

schistotrachelus (skis-to-trā-ke'lus) [G. *schistos*, cloven, + *trachēlos*, neck.] A monster with a cleft of the neck.

schizaxon (skiz-aks'on) [G. *schizō*, I cleave.] A neuraxon divided into two branches.

schizocyte (skiz'o-sīt) [G. *schizō*, I split, + *kytos*, a hollow (a cell).] Schistocyte.

schizocytosis (skiz-o-si-to'sis). Schistocytosis.

schizogenesis (skiz-o-jen'e-sis) [*schizō*, I split, + *genesis*.] Multiplication of cells by fission, scissiparity, fissiparity.

schizogony (skiz-og'o-ne) [G. *schizō*, I split, + *gonē*, generation.] Multiple fission in which the nucleus first divides into several and then the cell divides into as many parts as there are nuclei; the non-sexual multiplication of the hemoprotozoa in the blood of vertebrates occurs in this way.

Schizogregarina (skiz-o-greg-ar-i'nah) [G. *schizō*, I split.] A suborder of *Gregarinida* reproducing by fission or budding in addition to sporulation.

schizoid (skĭ'zoyd) [G. *schizo*phrenia + G. *eidos*, resemblance.] Suggesting schizophrenia; a term applied to a physical type, including pale, sharp-featured, censorious, non-social individuals; see *cycloid*.

schizomycete (skiz'o-mi-sēt). One of the *Schizomycetes* or fission-fungi.

Schizomycetes (skiz-o-mi-se'tēz) [G. *schizō*, I split, + *mykēs*, fungus.] A class of vegetable microorganisms which reproduce by fission, fission-fungi or bacteria; they probably belong to the phylum *Protophyta*, but by some are classed among the *Protista*. For the classification of the *Schizomycetes*, see under *Bacterium*.

schizomycetic (skiz-o-mi-se'tik). Relating to or caused by fission-fungi or bacteria.

schizomycosis (skiz-o-mi-ko'sis). Any schizomycetic or bacterial disease.

schizont (skiz'ont) [G. *schizō*, I split, + *ōn(ont-)*, a being.] An adult protozoon of the asexual cycle which produces only isospores developing into adult forms without conjugation.

schizophrenia (skiz-o-fre'ne-ah) [G. *schizō*, I split, + *phrēn*, mind.] 1. A condition marked by splitting of the personality or intrapsychic ataxia. 2. Dementia præcox.

schizophrenic (skiz-o-fren'ik). Relating to or suffering from schizophrenia.

schizothemia (ski-zo-the'mĭ-ah) [G. *schizō*, I split, + *thema*, the subject of an argument, proposition.] Repeated interruptions in a conversation by the speaker himself introducing other suggested topics.

schizotrichia (skiz-o-trik'ĭ-ah) [G. *schizō*, I split, + *thrix(trich-)*, hair.] A splitting of the hairs at their ends, scissura pilorum.

Schizotrypanum (skiz-o-tri'pă-num) [G. *schizō*, I split, + *trypanon*, a borer, an auger.] A genus of trypanosomes. **S. cru'zi**, *Trypanosoma cruzi*, the pathogenic organism in American trypanosomiasis.

Schlat'ter's disease' [K. *Schlatter*, Zurich surgeon, *1864.] A painful condition of the tuberosity of the tibia at the point of insertion of the ligamentum patellæ, occurring in young athletes; the pain is excited or increased by pressure and by movements of extension of the knee; a separation of the tubercle of the tibia is believed to be the condition present.

Schlatter-Osgood disease'. Same as Schlatter's* disease.

Schleich's anesthe'sia (shlīkh) [Karl Ludwig *Schleich*, German surgeon, 1859–1922.] 1. Local anesthesia produced by distending the subcutaneous tissues with a very weak cocaine solution introduced at successive points by means of a hypodermic syringe; called also infiltration anesthesia. 2. General anesthesia induced by inhalation of a mixture of chloroform, sulphuric ether, and petroleum ether. **S.'s marble soap,** lysol 12 fluidounces, distilled water 10 fluidounces, soft soap 7 pounds, ground white marble 11 pounds; used for cleansing the hands before a surgical operation and for scrubbing the field of operation. **S.'s solu'tion,** one of three solutions used for infiltration anesthesia; the strongest contains sodium chloride gr. 3 (0.2), cocaine hydrochloride gr. 3 (0.2), morphine hydrochloride gr. 4 (0.25), in water 100; in the two weaker solutions the amounts of cocaine and of morphine are gr. $1\frac{1}{2}$ (0.1) and gr. $\frac{1}{2}$ (0.01) of cocaine and gr. $\frac{2}{3}$ (0.025) and $\frac{1}{3}$ (0.005) of morphine.

Schlemm's canal' [Friedrich *Schlemm*, German anatomist, 1795–1858.] Fontana's or Lauth's canal, sinus* venosus scleræ. **S.'s lig'ament,** a band reenforcing the capsular ligament of the shoulder, passing from the under edge of the glenoid cavity to the lower part of the neck of the humerus.

Schlesinger's sign (shla'zing-er) [Hermann *Schlesinger*, Austrian physician, *1868.] In tetany, if the lower limb, kept extended at the knee, is strongly flexed at the hip a spasm quickly occurs in the extensors of the knee.

Schloesser's meth'od (shlēs'er) [Carl *Schloesser*, German oculist, 1857–1925.] Injection of alcohol into the foramina of exit of the branches of the fifth nerve, for the relief of tic douloureux.

Schmidel's anastomo'ses (shme'del) [Casimir Christoph *Schmidel*, German anatomist, 1718–1792.] Abnormal channels of communication between the vena cava and portal system, as for example, a communication between the coronary veins of the stomach and the azygos vein.

Schmidt's fi"brinoplas'tic [Eduard Oskar *Schmidt*, German anatomist, 1823–1886.] Serum-globulin which, according to Schmidt, unites, under the influence of the fibrin ferment, with fibrinogen to produce fibrin.

Schmidt's syn'drome [Johann Friedrich Moritz *Schmidt*, German laryngologist, *1838.] Unilateral paralysis of a vocal cord, the velum palati, trapezius, and sternocleidomastoid.

Schmidt's test [Adolf *Schmidt*, German physician, 1865–1918.] A fermentation test of intestinal digestion; the subject lives on a prescribed diet for a few days, and then a sample of feces is tested for fermentation, if this occurs within 48 hours it indicates that the digestion of starch in the intestine is defective; fermentation occurring at the end of about 4 days denotes the presence of albuminous matters.

Schmidt-Lan'termann inci'sures [Eduard Oskar *Schmidt*.] Irregular breaks in the medullary substance of a nerve-fiber.

Schmitz bacillus. A type of dysentery bacillus, *Shigella ambigua*.[0]

Schmorl's bacillus [Ch. G. *Schmorl*, German pathologist *1861.] Actinomyces necrophorus.[0] **S.'s furrow,** a furrow, due to lack of develop-

ment of the first rib, which touches the apex of the lung, said to predispose to tuberculosis.

Schneider's car'mine (shni'der) [Franz Coelestin *Schneider*, German chemist, 1813–1897.] A stain consisting of a saturated solution of carmine in concentrated acetic acid.

Schneide'rian mem'brane [Conrad Victor *Schneider*, German anatomist, 1610–1680.] Pituitary membrane, mucous membrane of the nasal fossæ.

Schnitter-Kurashige meth'od (shnit'er-koo-rah-she'ga). A method for detecting tubercle bacilli in the blood by treating the suspected blood with glacial acetic acid and antiformin, centrifuging, and staining the sediment according to Ziehl-Neelsen and Much-Weiss.

Schoeler's meth'od (shĕ'ler) [Heinrich Leopold *Schoeler*, German ophthalmologist, *1844.] Treatment of detachment of the retina by injection of tincture of iodine into the vitreous body.

Schoenbein reac'tion (shĕn'bīn) [Christian Friedrich *Schoenbein*, German chemist, 1799–1868.] If potassium iodide and sulphate of iron are added to a solution of hydrogen peroxide, iodine is set free. **S.'s test,** Almén's* blood test

Schoenlein's disease' (shĕn'līn) [Johann Lucas *Schoenlein*, Berlin physician, 1793–1864.] Purpura rheumatica.

Schott meth'od [August *Schott*, 1839–1886; Theodor *Schott*, *1852, German physicians in Bad Nauheim.] Nauheim method; a method of treatment of cardiac and vascular diseases by baths in carbonic-acid water followed by graduated resisting movements.

Schramm's phenom'enon (shrahm). A gaping sphincter vesicæ through which a cystoscopic view can be obtained of part or all of the posterior urethra; interpreted by Schramm as a sign of paralysis of the muscles of the pelvic floor from disease or injury of the spinal cord.

Schreger's lines (shra'ger) [Christian Heinrich Theodor *Schreger*, Danish anatomist, 1768–1833.] Dentinal striæ, concentric lines caused by a bending of the dentinal tubules near the surface of the dentine.

Schrei'ber's maneu'ver [Julius *Schreiber*, German physician, *1848.] Rubbing the inner side of the thigh in order to prevent voluntary muscular tension in testing the patellar reflex.

Schrei'ner's base. Spermin.

Schridde can'cer hairs (shrid'eh) [H. *Schridde*, German physician, contemporary.] Thick, lustreless hairs, growing here and there in the beard and the temporal region, said to occur in cancerous patients, but found also in other cachectic conditions. **S. gran'ules,** chondroconia.

Schroeder's contrac'tion ring (shrĕ'der) [Karl *Schroeder*, German gynecologist, 1838–1887.] Bandl's* contraction ring. **S.'s opera'tion,** excision of the diseased mucous membrane in obstinate catarrh of the cervix uteri.

Schroeder's por'tion of ure'a (shrĕ'der) [Woldemar von *Schroeder*, German physician, 1850–1898.] The amount of urea formed in the liver in twenty-four hours. **S.'s test for urea,** when a solution of urea is added to chloroform containing bromine, urea is decomposed, liberating oxygen.

Schroen's bacill'us [Otto von *Schroen*, German pathologist in Naples, 1837–1917.] An acid-fast bacillus, not identical with Koch's, asserted to be pathogenic of tuberculosis. **S.'s gran'ule,** a minute refractive body in the germinal spot.

Schroen-Much gran'ules (shrĕn-mookh) [Otto v. *Schroen;* Hans *Much.*] Much's* granules.

Schroetter's chore'a (shrĕ'ter) [Leopold von *Schroetter*, Viennese laryngologist, 1837–1908.] Chorea* of the larynx.

Schroth's meth'od (shrōt) [Johann *Schroth*, German physician, 1800–1856.] Dipsotherapy.

Schuchardt's opera'tion (shoo'khart). Paravaginal hysterectomy.

Schueffner's gran'ules (shuf'ner) [Wilhelm *Schueffner*, German physician in Sumatra.] Glistening granules, which take a deep red color with Romanovsky's stain, sometimes seen in the decolorized red blood corpuscles invaded by the parasite of tertian malaria.

Schuegner's gran'ules (shüg'ner). Plehn's* granules.

Schuele's sign (shu'leh) [Heinrich *Schuele*, German psychiatrist, 1839–1916.] Omega melancholicum.

Schueller's meth'od (shü'ler) [Karl Heinrich Anton Max *Schueller*, Berlin surgeon, 1843–1907.] Artificial respiration effected by hooking the fingers under the lower ribs and raising the thorax rhythmically.

Schueller's disease' (shül'er) [Arthur *Schueller*, Austrian neurologist, *1874.] Xanthomatosis, diabetes insipidus, exophthalamos, retardation of growth, and cranial defects (so-called maplike skull). **S.'s phenom'enon,** in cases of functional hemiplegia the patient usually turns to the sound side in walking, but to the affected side in case of an organic lesion.

Schuetz's micrococc'us (schuts) [Johann Wilhelm *Schuetz*, German veterinarian, 1839–1920.] *Streptococcus equi*, the pathogenic agent of strangles in the horse.

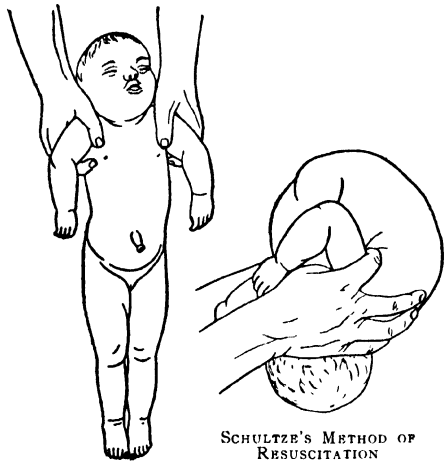
Schulte-Tigges stain. For acid-fast bacteria: immerse for 1 or 2 minutes in hot, or 24 hours in cold, carbol-fuchsin, then wash, decolorize with 10 per cent. aqueous sodium sulphite solution, renewed every 2 or 3 days, wash again and counterstain with concentrated aqueous solution of picronitric acid.

Schultz-Charlton reaction (shoolts charl'tun reak'shun). If 1 c.c. of serum from a healthy person is injected intracutaneously at the site of a scarlatinal rash, an area a few inches in diameter around the puncture becomes blanched; the injection of serum from a scarlet-fever patient causes no blanching.

Schult'ze's bun'dle or **com'ma** [Max Johann Sigismund *Schultze*, German anatomist, 1825–1874.] Comma tract, a longitudinal bundle of descending fibers in the inner portion of the fasciculus cuneatus, or Burdach's column, of the spinal cord. **S.'s cells,** olfactory cells. **S.'s tract,** S.'s bundle.

Schult'ze's fold [Bernhard Sigismund *Schultze*, German obstetrician, 1827–1919.] A crescentic amniotic fold between the remains of the umbilical vesicle and the placenta at the point of insertion of the cord. **S.'s meth'od,** resuscitation of the apparently stillborn child: one holds the child between his separated legs facing in the same direction as himself, with the forefingers in the axilla, the thumbs on the chest anteriorly, and the other fingers on the back; then the child is raised, with head down, so that the legs fall over in the direction of the operator; after a few seconds it is returned to the first position, and the maneuver is then repeated, the whole being done rhythmically in the time required for ordinary respiration. **S.'s phantom,** a model

of a female pelvis used in demonstrating the mechanism of childbirth and the application of forceps. **S.'s placen'ta,** a placenta expelled with the central portion in advance.



SCHULTZE'S METHOD OF RESUSCITATION

Schultze's monochord or **monocord** (shoolt'sez mo'no-kord) [G. *monos*, single, + *chordē*, cord.] A device formed of a metal wire tightly stretched and provided with an appliance for shortening the length of its vibrating portion, when plucked; used to determine the upper tone limit of hearing.

Schult'ze's test [Ernst *Schultze*, German-Swiss physiological chemist, 1860–1912.] For protein: a bluish red color is produced by adding a weak solution of cane-sugar and then concentrated sulphuric acid to a liquid containing any protein.

Schultze-Chvostek sign [Bernhard Sigismund *Schultze*.] Chvostek's* symptom.

Schu'mann rays, rays of various wave lengths between 1,850 and 1,230 A.u.

Schwabach test (shvah'bahkh) [Dagobert *Schwabach*, Berlin aurist, *1846.] A series of five tuning-forks of different tones is used and the number of seconds is noted in which the patient can hear each by air and bone-conduction.

Schwalbe's cor'puscles (shvahl'beh) [Gustav *Schwalbe*, German anatomist, 1844–1916.] Taste buds, calyculi gustatorii [BNA]. **S.'s fora'men,** Vicq d'Azyr's foramen, foramen* cæcum (2). **S.'s space,** (1) spatium* interfasciale; (2) the suprachoroid space, the sum-total of lymph spaces in the lamina fusca.

Schwann's sheath [Theodor *Schwann*, German anatomist, 1810–1882.] Neurilemma. **S.'s white substance,** medullary* substance.

Schwartz's meth'od (shvarts) [Charles Edouard *Schwartz*, French surgeon, *1852.] Treatment of varicose veins by multiple ligatures and sometimes excision of large varices.

Schwartze opera'tion (shvart'seh) [Hermann *Schwartze* German otologist, 1837–1910.] An incision is made from the temporal line to the apex of the mastoid process, parallel to and ½ inch behind the attachment of the pinna; then the mastoid antrum is cautiously opened and free drainage is established for the escape of pus; an operation for mastoiditis.

Schwartze-Stacke opera'tion [Hermann *Schwartze*; Ludwig *Stacke*.] A mastoid operation combining the main features of the Schwartze and the Stacke operations.

Schwarz's test [Karl Leonhard Heinrich *Schwarz*, German chemist, 1824–1890.] For sulphonal, heating of which with charcoal gives rise to the odor of mercaptan.

Schwediauer's disease' (shva'de-ow-er) [François Xavier *Schwediauer*, Austrian physician, 1748–1824.] Albert's* disease.

Schweitzer's rea'gent (shvi'tser) [Matthias Eduard *Schweitzer*, German chemist, 1818–1860.] An ammoniacal solution of copper oxide with caustic potassa, which dissolves cellulose (cotton, silk, etc.); a test for linen cloth; any admixture of cotton is dissolved out in half an hour, silk in 24 hours, while linen is unaffected.

Schweninger's meth'od (shren'ing-ger) [Ernst *Schweninger*, German physician, 1850–1924.] A method for reducing obesity, based largely on the restriction of fluids.

sciage (se-azh') [Fr. *scie*, saw.] A to-and-fro saw-like movement of the hand in massage.

sciatic (si-at'ik) [G. *ischiadikos*.] Relating to or situated in the neighborhood of the ischium or hip, ischiatic; relating to sciatica. **s. fora'men,** either s. notch converted into a foramen by the sacrosciatic ligaments. **s. nerve,** nervus ischiadicus. **s. notch,** incisura ischiadica, one of two curved notches on the posterior border of the ischium, converted into foramina by the sacrosciatic ligaments.

sciatica (si-at'i-kah). Sciatic neuritis, neuralgia of the sciatic nerve, felt at the back of the thigh.

scilla (sil'ah) [G. *skilla*.] (U.S., Br.) Squill, squills, the bulb of *Urginea maritima*, sea-onion, a bulbous plant of the eastern Mediterranean shores; stimulant, expectorant, and diuretic, employed in bronchitis and cardiac dropsy, in doses of gr. 1–5 (0.06–0.3).

scillain (sil'ah-in). A glucoside from scilla or squill; diuretic in doses of gr. $\frac{1}{100}$–$\frac{1}{60}$ (0.0006–0.001).

scillaren (sil'lar-en). One of the glucosides, said to be the cardio-active principle, of squill; recommended for use as a cardiac tonic in dose of gr. $\frac{1}{128}$ (0.0005).

scillin (sil'in). A yellow crystalline glucoside from squill; probably inert.

scillipic'rin [L. *scilla*, squill, + G. *pikros*, bitter.] A bitter yellowish red glucoside from squill, diuretic in doses of gr. ⅓–1 (0.02–0.06) hypodermically.

scillitin (sil'i-tin). A brownish amorphous glucoside from squill, diuretic in doses of gr. $\frac{1}{20}$–½ (0.003–0.015).

scillitox'in. A brown amorphous glucoside from squill, diuretic in doses of gr. $\frac{1}{60}$–$\frac{1}{30}$ (0.001–0.002).

Scindap'sus. A genus of East Indian climbing plants, some of which have anthelmintic properties. The fruit of S. *officinalis* is diaphoretic.

scintillascope (sin-til'ah-skōp) [L. *scintilla*, spark, + G. *skopeō*, I observe.] Spintharioscope.

scintillation (sin-til-a'shun) [L. *scintilla*, a spark.] A flashing or sparkling; a subjective sensation as of sparks or flashes of light.

scirrhencanthis (skir(sir)-en-kan'this) [G. *skirrhos*, a hard tumor, + *en*, in, + *kanthos*, canthus.] An indurated tumor of the lacrymal gland.

scirrhoblepharoncus (skir″(sir″)o-blef-ar-on'kus) [G. *skirrhos*, hard, + *blepharon*, eyelid, + *onkos* tumor.] A scirrhous cancer of the eyelid

scirrhoid (skir'(sir')oyd) [G. *skirrhos*, a hard tumor, + *eidos*, resemblance.] Resembling a scirrhous tumor.

scirrhoma (skir(sir)-ro'mah) [G. *skirrhos*, hard, + *-ōma*.] Scirrhus.

scirrhophthalmia (skir(sir)-of-thal'mĭ-ah) [G. *skirrhos*, hard, + *ophthalmos*, eye.] A scirrhous tumor of the eye.

scirrhosarca (skir(sir)-o-sar'kah) [G. *skirrhos*, hard, + *sarx(sark-)*, flesh.] Sclerema neonatorum.

scirrhosity (skir(sir)-os'ĭ-tĭ). A scirrhous state or hardness of a tumor.

scirrhous (skir'(sir')us). Hard, relating to a scirrhus.

scirrhus (skir'(sir')us) [G. *skirrhos*, a hardened tumor] Scirrhous carcinoma, fibrous cancer, a cancer in which induration has occurred through overgrowth of fibrous connective tissue in the stroma, the opposite of medullary cancer.

scission (sish'un) [L. *scissio; scindere*, to cleave] Fission.

scissiparity (sis-ĭ-par'ĭ-tĭ) [L. *scissio*, cleavage, + *parere*, to bring forth.] Schizogenesis, fissiparity, reproduction by fission.

scissor-leg (siz'ur-leg). X-leg, a crossing of the legs due to adduction at both hips.

scissors (siz'urs) [L. *scissus; scindere*, to cut.] An instrument with two blades moving on a pivot, cutting against each other.

scissura (sĭ-su'-rah) [L. *scissus; scindere*, to cut] 1. A cleft or fissure. 2. A splitting. **s. pilo'rum,** schizotrichia, a splitting of the ends of the hairs.

scissure (sish'ūr). Scissura.

Sclavo's serum (sklah'vo) [Achille *Sclavo*, Sienna bacteriologist, 1861–1930.] An antianthrax serum obtained from the blood of the immunized ass.

sclera (skle'rah) [G. *sklēros*, hard.] [BNA] Sclerotica, sclerotic coat, white of the eye, a fibrous membrane forming the outer envelope of the eye, except for its anterior sixth which is occupied by the cornea.

scleradenitis (sklēr-ad-en-ĭ'(e')tis) [G *sklēros*, hard, + *adēn*, gland, + *-itis*] Inflammatory induration of a gland.

scle'ral. Relating to the sclera

scleratitis (sklēr-ă-ti'(te')tis) Scleritis.

scleratogenous (skle-ră-toj'en-us). Sclerogenous.

sclerectasia (sklēr-ek-ta'zĭ-ah) [*sclera* + G. *ektasis*, an extension.] A protrusion or bulging of the sclera.

sclerectoiridectomy (sklēr-ek"to-ir-ĭ-dek'to-mĭ). A combined sclerectomy and iridectomy employed in glaucoma to form a filtering cicatrix.

sclerec'tomy [G. *ektomē*, excision.] 1. Excision of a portion of the sclera. 2. Removal of the fibrous adhesions formed in chronic otitis media.

scleredema (skle-re-de-mŭ) [G. *sklēros*, hard, + *oidēma*, a swelling.] Sclerema neonatorum.

sclere'ma [G. *sklēros*, hard.] Scleroderma, sclerodermia, dermatosclerosis, chorionitis, hidebound disease, skinbound disease; a hardening of the skin, occurring in patches or generalized. **s. adulto'rum,** diffuse symmetrical scleroderma. **s. neonato'rum,** an affection of the skin, usually fatal, occurring in premature infants; it consists in a progressive hardening of the skin, involving the entire body with the possible exception of the chest and abdomen; scleredema, scirrhosarca.

sclerencepha'lia, sclerenceph'aly [G. *sklēros*, hard, + *enkephalos*, brain.] Sclerosis and shrinkage of the brain substance.

sclerenchyma (sklēr-en'ki-mah) [G. *sklēros*, hard, + *enchyma*, infusion.] The woody fibrous substance in plants, such as forms the outer envelope of a nut.

sclererythrin (sklēr-er'ĭ-thrin). A red amorphous powder obtained from ergot; physiologically inert.

scleri'asis. 1. Sclerema adultorum, diffuse symmetrical scleroderma.* 2. Sclerosis.

sclerin (skle'rin). Rhinosclerin.

scleriritomy (sklēr-i-rit'o-mĭ) [*sclera* + *iris* + G. *tomē*, incision.] The operation of incising the iris and the sclera.

scleritis (skle-ri'(re')tis). Inflammation of the sclera.

scleroblastema (skle-ro-blas-te'mah) [G. *sklēros*, hard, + *blastēma*, sprout.] The embryonic tissue entering into the formation of the bones.

scleroblastemic (skle-ro-blas-tem'ik). Relating to or derived from the scleroblastema.

sclerocat'aract [G. *sklēros*, hard.] A hard cataract.

sclerochorioiditis (skle-ro-ko-re-oy-dĭ'(de')tis). Inflammation of the sclerotic and chorioid coats of the eye **s. poste'rior,** posterior staphyloma, myopic chorioiditis.

scleroconjunc'tival. Relating to the sclera and the conjunctiva.

sclerocor'nea. The cornea and sclera regarded as forming together one of the coats of the eye.

sclerodactyl'ia [G. *sklēros*, hard, + *daktylos*, finger.] Scleroderma affecting any of the digits of the hands or feet.

scleroderma, sclerodermia (skle-ro-dur'mah, skle ro-dur'mĭ-ah) [G. *sklēros*, hard, + *derma*, skin.] A hardening and thickening of the skin, with loss of elasticity; sclerema. **cir'cumscribed s.,** morphea. **diffuse' symmet'rical s.,** sclerema adultorum, scleriasis, an induration of the skin with stiffening and rigidity, or an edematous infiltration followed by atrophy and rigidity, occurring over large and usually symmetrical areas. **s. neonato'rum,** sclerema neonatorum.

sclerodermatitis (skle"ro-dur-ma-ti'(te')tis) [G. *sklēros*, hard, + *derma(dermat-)*, skin, + *-itis*.] Inflammatory induration of the skin.

sclerodermitis (skle"ro-dur-mi'(me')tis). Scleroderma titis.

sclerogenous (skle-roj'en-us) [G. *sklēros*, hard, + *gennaō*, I produce.] Producing hard or sclerotic tissue; causing sclerosis.

scle'roid [G. *sklēros*, hard, + *eidos*, resemblance] Of hard texture, sclerous.

scleroiritis (skle-ro-i-ri'(re')tis). Inflammation of both sclera and iris.

sclerokeratitis (skle-ro-ker-ă-ti'(te')tis) [G. *sklēros*, hard, + *keras*, horn.] Inflammatory cellular infiltration of the sclera and cornea.

sclerokeratoiritis (skle-ro-ker"ă-to-i-ri'(re')tis.] Inflammation of sclera, cornea, and iris.

sclero'ma [G. *sklēros*, hard, + *-ōma*.] A circumscribed indurated area of granulation tissue in the skin or mucous membrane. **respi'ratory s.,** rhinoscleroma in which the lesion involves the mucous membrane of the greater part or all of the upper respiratory tract.

sclerome'ninx [G *sklēros*, hard, + *mēninx*, membrane.] Dura mater, pachymeninx.

scleromere (skle'ro-mēr) [G. *sklēros*, hard, + *meros*, part.] Any metamere of the skeleton, such as a vertebral segment.

sclerom'eter [G. *sklēros*, hard, + *metron*, measure.] A form of penetrometer for determining the density or hardness of any substance.

scleromu'cin. A substance obtained from ergot, similar to or identical with sclerotic acid.

scleronychia (skle-ro-nik'ĭ-ah) [G. *sklēros*, hard, + *onyx*(*onych*-), nail.]* Induration and thickening of the nails.

scleronyx'is [*sclera* + G. *nyxis*, a pricking.] Puncture of the sclera; specifically, operative puncture with a view to couching or needling the lens.

sclero-oöphoritis (skle-ro-o-ŏ-for-i'(e')tis). Sclerooothecitis.

sclero-oothecitis (skle-ro-o-ŏ-the-si'(se')tis) [G. *sklēros*, hard, + *ōothēkē*, ovary, + *-itis*] Inflammatory induration of the ovary.

sclerophthal'mia [G. *sklēros*, hard, + *opthalmos*, eye] A congenital condition in which the opacity of the sclera has advanced over the edge of the cornea so that only a small central area of the latter remains transparent; it may be unilateral, one-half of the cornea being normal.

scleroprotein (skle-ro-pro'te-in) [G. *sklēros*, hard.] Albuminoid; one of a group of nitrogenous bodies, resembling proteins yet differing from them in solubility and in not being utilizable in nutrition, present in the connective and skeletal tissues of the body; gelatin, keratin, and elastin are scleroproteins.

sclero'sal. Sclerous.

sclerosarco'ma [G. *sklēros*, hard, + *sarx*(*sark*-), flesh, + *-ōma*.] A fleshy tumor of the gums, a form of epulis.

sclerose (skle-rōz'). To harden, to undergo sclerosis.

sclérose en plaques (skla-rōz' aṅ plak) [F. sclerosis in patches.] Multiple sclerosis.

sclerosis (skle-ro'sis) [G. *sklērōsis*, hardness.] Induration or hardening of chronic inflammatory origin; especially induration of nervous and other structures by a hyperplasia of the interstitial fibrous connective tissue **amyotroph'ic lat'eral s.**, a form of progressive muscular atrophy with increased reflexes and spastic irritability of the muscles. **arte'rial s.**, arteriosclerosis. **arteriocap'illary s.**, arteriosclerosis, especially of the finer vessels. **bone s.**, eburnation. **combined s.**, a form of sclerosis of the spinal cord involving both posterior and lateral columns. **dissem'inated s.**, multiple s. **focal s.**, multiple s. **in'sular s.**, multiple s. **lat'eral spi'nal s.**, spastic spinal paralysis. **lobar s.**, s. of the brain involving the greater part or all of a lobe. **mul'tiple s.**, the occurrence of patches of sclerosis in the brain and spinal cord, causing more or less paralysis, tremor, nystagmus, disturbances of speech, and apoplectiform attacks, the various symptoms depending upon the seat of the lesions; it occurs chiefly in early adult life. **poste'rior s.**, tabes dorsalis. **poste'rior spi'nal s.**, tabes dorsalis. **s. ventric'uli**, sclerotic gastritis. **unicel'lular s.**, a growth of fibrous tissue between and isolating the individual cells of a part. **vas'cular s.**, arteriosclerosis.

scleroskel'eton. Parts formed by ossification of fibrous structures, such as fascia, ligaments, and tendons; the sesamoid bones are parts of the scleroskeleton.

sclerosteno'sis [G. *sklēros*, hard, + *stenōsis*, a narrowing.] Induration and contraction of the tissues. **s. cuta'nea**, sclerema.

Scleros'toma [G. *sklēros*, hard, + *stoma*, mouth.] A genus of nematode worms, mostly parasitic. **S. duodena'le**, *Ankylostoma duodenale*. **S. syn'gamus**, *Syngamus tracheale*.

sclerostomy (skle-ros'to-mĭ) [*sclera* + G. *stoma*, mouth, opening.] The operative formation of an opening in the sclera.

scle'rothrix [G. *sklēros*, hard, + *thrix*, hair.] Induration and brittleness of the hair

sclerot'ic. 1. Relating to sclerosis. 2. The sclera of the eye. 3. Relating to ergot. **s. acid**, sclerotinic acid, an amorphous brown powder, obtained from ergot; hemostatic and oxytocic in dose of gr. 1 (0.06). **s. coat**, sclerotica, sclera.* **s. teeth**, teeth which are hard, yellowish in color, and comparatively immune to caries.

sclerot'ica [NL. *scleroticus*, hard, sc. *tunica*, coat.] Sclera [BNA].

scleroticec'tomy [*sclerotica* + G. *ektomē*, excision.] Sclerectomy (1).

scleroticochorioiditis (skle-rot"ĭ-ko-ko-rĭ-oy-di'(de')-tis). Inflammation of the sclerotic and chorioid coats of the eye.

scleroticonyx'is. Scleronyxis.

sclerot"icopunc'ture. Scleronyxis.

scleroticot'omy. Sclerotomy.

sclerotitis (skle-ro-ti'(te')tis). 1. Scleritis. 2. Otosclerosis.

sclerotium (skle-ro'shyum) [G *sklērotēs*, hardness.] A hard compact substance formed of mycelia and reserved food material, the resting stage of certain fungi; that of *Claviceps purpurea* is ergot.

scle'rotome [*sclera* + G. *tomos*, cutting.] 1. A knife used in sclerotomy. 2. A segment of the skeleton derived from a mesodermal somite.

sclerot'omy [*sclera* + G. *tomē*, incision.] An incision through the sclerotic coat of the eye. **ante'rior s.**, incision into the anterior chamber of the eye. **poste'rior s.**, incision through the sclera into the vitreous humor.

sclerotrichia (skle-ro-trik'ĭ-ah) [G. *sklēros*, hard, + *thrix*(*trich*-), hair.] Sclerothrix.

scoleciasis (sko-le-si'a-sis) [G. *skōlēx*, worm.] Infestation of the intestine by larvæ.

scoleciform (sko-le'sĭ-form) [G. *skōlēx*, worm + L. *forma*, form.] Scolecoid, vermiform.

scolecitis (sko-le-si'(se')tis) [G. *skōlēx*(*skōlēk*-), worm, + *-itis*.] Inflammation of the vermiform appendix.

sco'lecoid [G. *skōlēx*, worm, + *eidos*, appearance.] 1. Worm-like; vermiform. 2. Resembling a scolex, hydatid

scolecoidec'tomy [G. *skōlēkoeidēs*, vermiform, + *ektomē*, excision.] Removal of the vermiform appendix.

scolecoiditis (sko"le-koy-di'(de')tis) [G. *skōlēkoeidēs*, vermiform, + *-itis*.] Inflammation of the vermiform appendix, appendicitis.

scolecol'ogy [G. *skōlēx*(*skolēk*-), worm, + *-logia*.] Helminthology.

scolec'tomy. Scolicoidectomy.

sco'lex, pl. *scole'ces* (not *scol'ices*) [G. *skōlēx*, a worm.] The head of the tapeworm by which it is attached to the wall of the intestine; it is formed in the interior of the daughter cyst of an echinococcus.

scoliom'eter [G. *skolios*, curved, + *metron*, measure.] An instrument for measuring curves, especially those in lateral curvature of the spine.

scoliorachitic (sko"lĭ-o-răk-kit'ik). Noting a spinal curvature due to rickets.

scoliosiom'etry [G. *skoliōsis*, curvature, + *metron*, measure.] Measurement of the degree of spinal curvature in scoliosis.

scolio'sis [G. *skoliōsis*, a curvature.] Lateral curvature of the spine. There are usually at least two curves in the scoliotic spine; the main or original curve, and a compensatory curve in the other direction. **coxit'ic s.**, s. in the lumbar spine resulting from tilting of the pelvis in a case of hip-disease. **empye'mic s.**, s. due to retraction of one side of the chest following an empyema,

habit s., one supposed to be due to habitual standing or sitting in an improper position. **myopath'ic s.,** lateral curvature due to weakness of the spinal muscles. **oc'ular s., ophthal'mic s.,** s. supposed to be due to head-tilting, with the resultant cervical curve, in certain cases of astigmatism. **osteopath'ic s.,** lateral curvature due to vertebral disease. **rachit'ic s.,** s. occurring in rickets, either myopathic or osteopathic. **sciat'ic s.,** lateral curvature in sciatica, in which the primary lumbar curve is toward the affected side. **stat'ic s.,** lateral spinal curvature due to inequality in length of the two legs.

scoliot'ic. Relating to or suffering from scoliosis.

scoliotone (sko'lĭ-o-tōn) [G. *skolios*, crooked, + *tonos*, a stretching.] An apparatus for stretching the spine and reducng the curve in scoliosis.

scom'brin [G. *skombros*, mackerel.] A protamine present in the sperm of the mackerel.

scoop [A S *skopa*.] A narrow spoon-like instrument for extracting the contents of cavities or cysts.

scoop'ers' disease'. A form of pneumonoconiosis occurring in the scoopers or shovelers of grain in elevators.

sco'parin. A glucoside, $C_{22}H_{21}O_{10}$, from *scoparius*, occurring in yellow, tasteless, and odorless crystals; diuretic in doses of gr. 5–10 (0.3–0.6).

scopa'rius [L. *scopa*, a broom.] (N.F.) Scopa'rii cacu'mina [broom tops] (Br.), broom, besom, the dried tops of *Cytisus scoparius*, a shrub of Europe and northwestern Asia, containing sparteine; diuretic in cardiac dropsy and chronic Bright's disease in doses of gr. 10–15 (0.6–1.0).

scopo'la [after Giovanni Antonio *Scopoli*, Italian naturalist, 1723–1788.] The dried rhizome and roots of *Scopola carniolica*, an herb of Austria and neighboring countries of Europe; sedative, employed as an hypnotic in various maniacal conditions in doses of gr. 1–3 (0.06–0.2). **s. japon'ica,** Japanese belladonna, the root of which is allowable by the Japanese Pharmacopeia as a substitute for belladonna; it is used in eclectic practice to meet the same indication as belladonna.

scopolami'næ hydrobro'midum (U.S.). Scopolamine hydrobromide, the hydrobromide of an alkaloid derived from scopola; it is chemically identical with hyoscinæ hydrobromidum, but is claimed by some to be free from the occasional untoward effects of this salt; hypnotic and analgesic.

scopolamine (sko-po'lă-mēn). An alkaloid from scopola employed in the form of scopolaminæ* hydrobromidum. **s. sta'ble,** scopomannit.

scopoleine (sko-po'le-ēn). An alkaloid from scopola possessing mydriatic properties.

scopo'lia. Scopola.

scopomannit (sko-po-man'it). Scopolamine stable, trade name of an aqueous solution of scopolamine hydrobromide with 10 per cent. of mannite added as a preservative.

scopom'eter [G. *skopeō*, I view, + *metron*, measure.] A device for determining the density of a precipitate by the degree of translucency of a fluid containing it.

scopomor'phinism. Associated chronic addiction to scopolamine and morphine.

scopopho'bia [G. *skopeō*, I view, + *phobos*, fear.] An insane dread of being looked at.

scoracratia (skōr-ă-kra'shĭah). Scatacratia.

scorbu'tic. Relating to or suffering from scorbutus or scurvy.

scorbu'tus [Latinized form of the Teutonic word for scurvy, *schorbuyck*.] Scurvy

scordine'ma [G. yawning.] Heaviness of the head with yawning and stretching, occurring as a prodrome of an infectious disease.

scoretemia, scoretæmia (skōr-ĕ-te'mĭ-ah) [G. *skōr*, dung, or *skōria*, refuse.] Scatemia.

scotodinia (sko-to-din'ĭ-ah) [G. *skotos*, darkness, + *dinē*, a whirling.] Vertigo, faintness.

sco'tograph [G. *skotos*, darkness, + *graphō*, I write.] 1. An appliance for aiding one to write in straight lines in the dark or to aid the blind to write. 2. An impression made on a photographic plate by a radioactive substance without the intervention of any opaque object other than the screen of the plate.

scotog'raphy. Skiagraphy.

scotoma, pl. *scoto'mata* (sko-to'mah) [G. *skotōma*, darkness.] A spot of varying size and shape, within the visual field, in which there is no vision. **ann'ular s.,** ring s., a circular blank area surrounding the center of the field of vision. **cen'tral s.,** absence of vision at the point of fixation on the retina. **color s.,** a patch of color-blindness in the visual field. **flitter'ing s.,** scintillating s. **in'sular s.,** a small spot of blindness surrounded by an area of good vision. **neg'ative s.,** one which is not ordinarily perceived, but is detected only on examination of the entire visual field. **paracen'tral s.,** one which is only partly central, the fixation point not being entirely obscured. **periph'eral s.,** a spot where vision is absent anywhere within the field of vision outside of the point of fixation **physiolog'ical s.,** blind-spot, the point on the retina where the optic nerve enters. **pos'itive s.,** one which is perceived subjectively as a black spot within the field of vision. **rel'ative s.,** one in which vision is impaired but not entirely destroyed. **ring s.,** annular s **scin'tillating s.,** fortification-spectrum, teichopsia; the appearance of a dark patch with bright zigzag outline in the visual field of one or both eyes; it is usually of short duration and is indicative of eyestrain or follows intense mental or physical labor.

scoto'magraph [*scotoma* + G. *graphō*, I write.] An instrument for automatically recording the size and shape of a scotoma

scoto'matous. Relating to scotoma

scotom'eter. An instrument for measuring the size of a scotoma.

scotos'copy [G *skotos*, darkness, + *skopeō*, I view.] Skiascopy.

Scott's dressing. Unguentum hydrargyri compositum.

scrapie (skrā'pĭ). A dysentery-like disease in sheep caused by *Mycobacterium paratuberculosis*.[0]

screatus (skre-a'tus) [L.] Hawking.

screen [Fr. *écran*.] 1. A thin sheet of any substance used to shield an object from any influence, such as heat, light, *x*-rays, etc. 2. A sheet upon which a picture is projected. 3. To make a fluoroscopic examination. **fluores'cent s.,** a s. coated with crystals of calcium tungstate used in the fluoroscope.

screw-joint (skru'-joynt). Articulatio cochlearis.

screw-worm. The larva of the blue-bottle fly. *Lucilia macellaria, Compsomyia macellaria*, which sometimes hatches out from eggs deposited in the skin, nasal cavities, or external auditory canal, causing great distress and often serious pathological changes (*myiasis*).

scriv'ener's palsy. Writer's cramp.

scrobic'ulate (L. *scrobiculus;* dim. of *scrobis*, a trench.] Pitted, marked with minute depressions.

scrobic'ulus cor'dis [L. pit or fossa of the heart] The pit of the stomach; the point, normally a slight depression, just below the lower end of the sternum, precordial depression, infrasternal depression.

scrof'ula [L. dim of *scrofa*, an old sow.] A constitutional state, occurring in the young, marked by a lack of resisting power of the tissues, predisposing to tuberculosis; lymphatism is present and there is a proneness to eczematous eruptions, ulceration, glandular swellings, respiratory catarrhs, and granular lids; tuberculosis of the glands, bones, or joints is common. Two types are recognized: the *lymphatic* or *phlegmatic*, in which there is a tendency to fat with a coarse muddy complexion, thick lips, coarse hair, and stolidity of expression; and the *sanguine*, in which the skin is clear, changing readily from pale to pink, the eyes blue, and the hair fine and silky, with spareness of figure, vivacity, and mental activity.

scrof'ulide. A scrofulous skin lesion, scrofuloderma.

scrofuloderm, scrofuloderma (skrof'u-lo-durm, skrof"-u-lo-dur'mah) [*scrofula* + G. *derma*, skin.] Scrofulide, any scrofulous skin disease. **pap'-ular s.,** lichen scrofulosorum. **pus'tular s.,** acne agminata, folliclis. **tuber'culous s.,** granuloma, a granulating ulcer surrounding the orifice of a sinus leading down to a tuberculous gland or focus of bone tuberculosis. **ul'cerative s.,** tuberculous s. **verr'ucous s.,** a warty lupoid growth, scrofulophyma.

scrofulophy'ma [*scrofula* + G. *phyma*, a growth] Verrucous scrofuloderm.*

scrofulo'sis. Scrofula.

scrof"ulotuberculo'sis. Tuberculous scrofuloderma.

scrof'ulous. Relating to or suffering from scrofula.

scroll-bone. Turbinated bone.

scroll-ear. A deformity of the external ear in which the pinna is rolled forward.

scrophula'ria. The leaves and flowering tops and the root of *Scrophularia nodosa*, figwort, pilewort; diuretic and alterative, employed in domestic medicine in the treatment of scrofula and various skin diseases, in doses of ʒ½–1 (2.0–4.0) of a fluidextract.

scro'tal. Relating to the scrotum. **s. tongue,** furrowed tongue.

scrotitis (skro-ti'(te')tis). Inflammation of the scrotum.

scrotocele (skro'to-sēl) [*scrotum* + G. *kēlē*, hernia.] Scrotal hernia.

scro'tum [L. supposedly a transposition of *scortum*, a hide, skin.] A musculocutaneous sac containing the testes; it is formed of skin, containing a network of nonstriated muscular fibers (the *dartos*), cremasteric fascia, cremaster muscle, and the serous coverings of the testes and epididymides. **lymph s.,** stasis of the scrotal lymphatics, elephantiasis of the scrotum.

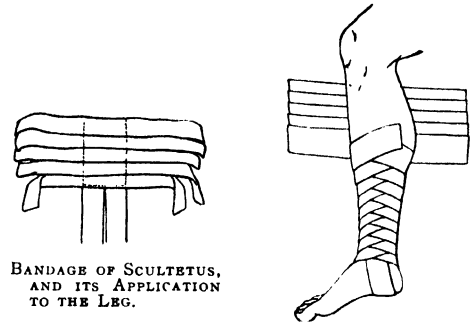
blood in, hematoscheocele, oschematedema. **calculus,** oscheolith. **dropsy,** hydroscheocele, oscheohydrocele, oschedema. **hernia in,** oscheocele, scrotocele. **inflammation,** oscheitis, oschitis, scrotitis. **plastic surgery,** oscheoplasty. **pus in,** oscheopyedema, empyocele. **swelling,** oscheoncus. **tumor,** oscheoma, oscheoncus, oscheophyma, oscheochalasis; oscheocarcinoma, chimney-sweep's cancer; hematoscheocele, varicocele, empyocele, hydrocele; oschelephantiasis.

scruff of the neck. Nucha, nape.

scrum-pox (skrum'poks). Impetigo.

scruple (skru'pl) [L. *scrupulus*, dim. of *scrupus*, a sharp stone.] An apothecaries' weight of twenty grains or one-third of a dram; symbol, ℈.

Scultet's' or Sculte'tus's ban'dage [Johann *Scultet;* originally *Schultes*, surgeon of Ulm in Swabia, 1595–1645.] An apparatus for fractures, especially compound fractures, of the lower extremity, it consists of a guttered wooden splint on which are laid overlapping strips of bandage, 1½ times the length of the circumference of the limb; the leg is then placed on the splint and the strips are applied over it so as to enwrap it and retain



BANDAGE OF SCULTETUS, AND ITS APPLICATION TO THE LEG.

SCULTETUS'S POSITION. (*Landouzy and Jayle.*)

the dressings. **S.'s posi'tion,** a position of the patient on an inclined plane with head low, recommended by S. for herniotomy and castration; see illustration.

scum. Epistasis, a film of insoluble material which rises to the surface of a liquid; that which sinks to the bottom of a liquid is the sediment or hypostasis.

scurf [A.S.] Dandruff; branny desquamation.

scurf'skin. Scarfskin, epidermis.

scur'vy [derivation uncertain] A disease marked by inanition, debility, anemia, edema of the dependent parts, a spongy condition, sometimes with ulceration, of the gums, and hemorrhages into the skin and from the mucous membranes; the disease is due to a monotonous diet of salt meats and the lack of fresh vegetables and fruits and other sources of vitamin C in the diet. **Alpine s.,** pellagra. **butt'on s.,** see *button*. **in'-fantile s.,** Barlow's disease, Moller's disease, Cheadle's disease, acute rickets; a cachectic condition, resulting from the use of improper food, in infants; marked by pallor, fetid breath, coated tongue, diarrhea, and subperiosteal hemorrhages. **land s.,** purpura hæmorrhagica. **sea s.,** scurvy.

scur'vy-grass. Cochlearia officinalis, a cress used as a salad and as a remedy for scurvy.

scu'tate. Relating to a scute; scutular.

scute [L. *scutum*, shield.] A thin lamina or plate, squama **tympan'ic s.**, the thin bony plate separating the attic of the tympanum from the mastoid cells.

scutellaria (sku-tĕ-la'rĭ-ah) [L. *scutella*, a dish.] (N.F.) The dried entire plant, *Scutellaria laterifolia*, blue pimpernel, a wild flower common in marshy regions of North America; antispasmodic and sedative in doses of gr. 15–30 (1.0–2.0), or of half a drop of the eclectic specific medicine in water every one to three hours.

scutell'arin. A bitter crystalline glucoside from scutellaria.

scutellum (sku-tel'lum) [L. dim. of *scutum*, shield.] In botany: 1. A broad cotyledon, in grasses, covering the albuminous seed. 2. A flattened apothecium rimmed by the thallus.

scu'tiform [L. *scutum*, shield, + *forma*, form] Shield-shaped, thyroid; scutate.

scu'tular. Relating to a scutulum.

scu'tulum [L. dim. of *scutum*, shield.] 1. A yellow saucer-shaped crust, the characteristic lesion of favus. 2. Scapula.

scu'tum [L. shield] 1. A scute 2 The thyroid gland. 3. The patella. **s. pec'toris,** sternum.

scybala (sib'ă-lah). Plural of scybalum.

scybalous (sib'ă-lus). Relating to scybala.

scybalum (sib'ă-lum) [G. *skybalon*, excrement.] A hard round mass of inspissated feces.

scyphiform (sī'fĭ-form) [G. *skyphos*, goblet, cup, + L. *forma*, form.] Scyphoid

scyphoid (sif'oyd) [G. *skypha*, cup, + *eidos*, resemblance] Cup-shaped

scythropasmus (sith-ro-paz'mus) [G. *skythrōpasmos*, sadness of countenance.] An expression of exhaustion or dulness, regarded as a bad prognostic sign in fevers.

scytitis (sī-tī'(te')tis) [G. *skytos*, skin, + *-itis*] Dermatitis.

scytoblastema (si-to-blas-te'mah) [G. *skytos*, skin, + *blastēma*, sprout.] The cuticular membrane of the embryo.

Scytone'ma [G. *skytos*, skin, + *nēma*, thread] A genus of algæ, composed of branching filaments

Se. Chemical symbol of *selenium*.

seal-fin defor'mity. Deflection outward of the fingers in rheumatoid arthritis.

seam'stress's cramp. An occupation neurosis, similar to writer's cramp, occurring in needle-women.

search'er. A form of sound used to determine the presence of a calculus in the bladder.

sea'sickness. A disorder of uncertain nature, affecting travelers by sea, characterized by headache, giddiness, nausea, and vomiting, and usually an abnormal drowsiness.

sea'-tangle. Laminaria, a form of seaweed, the dried stem of which was formerly much employed as a surgical tent.

sea-tent. Sea-tangle.

seat-worm. Pin-worm, oxyuris.*

sea-water treat'ment. See *marine serum* *

seba'ceous. Relating to sebum; oily, fatty. **s. cyst,** a distended s. follicle, wen. **s. crypt,** s. gland. **s. follicle,** s. gland. **s. gland,** one of the racemose glands of the skin situated in the corium, usually, though not always, in relation with the hair-follicles; they secrete sebum.

sebiagogic (seb-ĭ-ă-goj'ik) [L. *sebum* + G. *agōgos*, leading.] Sebiferous.

sebif'erous [L. *sebum*, suet, + *ferre*, to bear.] Producing fatty or sebaceous matter sebaceous, sebiparous.

sebip'arous [L. *sebum*, suet, + *parere*, to produce] Sebiferous.

seb'olith [L. *sebum*, suet, + G. *lithos*, stone.] A concretion in a sebaceous follicle.

seborrhagia (seb-ŏ-ra'jĭ-ah) [L. *sebum*, tallow, + *-rhagia*.] Steatorrhea, seborrhea.

seborrhe'a, seborrhœ'a [L. *sebum*, tallow, + G. *rhoia*, a flow.] Steatorrhea, overaction of the sebaceous glands. **s. adipo'sa,** s. oleosa. **s. capillit'ii, s. cap'itis,** s. of the scalp. **s. congesti'va,** lupus erythematosus. **s. cor'poris,** dermatitis seborrhœica **s. facie'i,** s. of the face, s. oleosa affecting especially the nose and forehead. **s. furfura'cea,** s. sicca (1), dandruff. **s. nigra,** a form characterized by a pigmented secretion. **s. oleo'sa,** a greasy condition of the skin due to a thin oily secretion of the sebaceous glands. **s. seni'lis,** keratosis senilis. **s. sicca** [L. *siccus*, dry], (1) an accumulation on the skin, especially the scalp; of greasy scales or crusts due to overaction of the sebaceous glands; (2) dermatitis seborrhœica. **s. squamo'sa neonato'rum,** ichthyosis sebacea

seborrheal (seb-ŏ-re'al). Relating to seborrhea.

seborrhe'ic. Seborrheal.

seborrheide (seb-or-re'ēd). A dermatosis in which seborrhea is the sole or a prominent symptom.

seborrhoic (seb-or-ro'ik). Seborrheic, seborrheal.

se'bum [L. tallow.] The secretions of the sebaceous glands. **s. cuta'neum** [BNA], cutaneous fatty secretion. **s. palpebra'le** [BNA], lema, secretion of the Meibomian glands. **s. præputia'le** [BNA], smegma, secretion of Tyson's glands. **s. ovi'le,** sevum præparatum.

secacornin (sek-ă-kor'nin). Trade name of a solution of the active principles of ergot in a mixture of alcohol, glycerin, and water; employed as a substitute for the galenical preparations in intramuscular doses of ♏8 to 15 (0.5 to 1.0).

Seca'le. A genus of grasses of the family *Gramineæ*. **S. cerea'le,** rye. **S. clava'tum, S. cornu'tum,** ergot of rye, ergota.*

secaline (sek'a-lēn). A crystaline alkaloid, $C_{19}H_{55}N_6O_{14}$, obtained from ergot; it is inert.

sec"alintox'in. A compound of sphacelotoxin and secaline, obtained from ergot.

sec'alose. A carbohydrate or sugar from rye.

secernent (se-sur'nent) [L. *secernens; secernere*, to separate.] 1. Secreting. 2. A secreting organ.

Sechenoff's center (sĕ-cha'nof) [Ivan *Sechenoff*, Russian neurologist, 19th century] A center in the brain inhibiting reflex movements.

secodont (sek'o-dont) [L. *secare*, to cut, + *odous* (*odont-*), tooth.] Noting an animal in which the tubercles of the molar teeth have cutting edges.

sec'ond [L. *secundus*] Following the first in any order or series. **s. inten'tion,** see *intention*. **s. nerve,** nervus opticus. **s. sight,** a condition due to alteration in the refractive power of the lens, in beginning cataract, causing myopia, so that reading becomes possible again without glasses

sec'ondaries. The lesions of secondary syphilis.*

sec'ondary. 1. Occupying the second place, occurring after the first, subordinate. 2. One of the symptoms of syphilis following the development of the chancre. **s. syphilis,** see *syphilis*.

secre'ta [L. neuter pl. of *secretus*, secreted.] Secretions, the products of secretion.

secretagogue (se-kre'tă-gog) [L. *secreta*, secretions, + G. *agōgos*, drawing, forth.] 1. Causing secretion. 2. An agent which stimulates the secreting organs.

secrete (se-krēt') [L. *secretus; secernere*, to separate.] To elaborate or produce a substance from the

blood, the sap of plants, or other material not previously containing it.

secre'tine. A hormone, formed by the epithelial cells of the duodenum under the stimulus of acid contents from the stomach, the office of which is to incite pancreatic secretion. **gas'tric s.,** gastrine.

secre'tion [L. *secernere* (pp. *secretus*), to separate, divide off.] 1. The production by a cell or aggregation of cells (a gland) of some substance differing in chemical and physical properties from the body from which or by which it is produced. 2. The product, solid, liquid, or gaseous, of cellular or glandular activity. A secretion is stored up in or utilized by the animal or plant in which it is produced, thereby differing from an *excretion* which is intended to be expelled from the body. **inter'nal s.,** an endocrine, an autacoid, the product of one of the so-called endocrine glands which is not discharged externally but is taken up directly into the blood; see *chalone* and *hormone*.

secre"todermato'sis. A skin disease characterized by disordered secretion.

secretogogue (se-kre'to-gog) [L. *secretum*, secretion, + G. *agogos*, leading.] An agent, specifically a hormone, which promotes secretion; secretagogue.

secretomotor, secretomotory (se-kre"to-mo'tor se-kre"to-mo'tor-ĭ). Stimulating secretion

secre'tory. Relating to secretion or the secretions.

sectile (sek'til) [L. *sectilis; secare*, to cut.] 1. Capable of being cut or divided. 2. Having the appearance of being divided.

sectio (sek'shyo) [L.] Section. **s. agrippi'na,** s. cæsarea. **s. alta,** the high operation for stone, suprapubic lithotomy or cystotomy. **s. cadav'eris,** autopsy, post-mortem examination. **s. cæsa'rea,** cesarean section * **s. latera'lis,** lateral lithotomy. **s. media'na,** median lithotomy.

section (sek'shun) [L. *sectio; secare*, to cut.] 1. The act of cutting. 2. A cut or division. 3. A cut surface. 4. A thin slice of any material for examination under the microscope. 5. A segment or part of any organ or structure delimited from the remainder. **abdom'inal s.,** celiotomy, laparotomy. **cesa'rean s.,** hysterotomy, the delivery of a fetus by incision into the uterus; the incision may be made through the abdominal wall (*abdominal cesarean section*) or through the vagina (*vaginal cesarean section*). **cor'onal s.,** a vertical section of the skull at right angles to the sagittal section. **microscop'ical s.,** section (4). **perine'al s.,** any section through the perineum, either lateral or median lithotomy or external urethrotomy. **sag'ittal s.,** a vertical section of the skull in an anteroposterior direction, dividing the cranium into two lateral halves. **se'rial s.,** one of a number of consecutive microscopical sections of the spinal cord or other structure for the purpose of a histological study of the part. **Sigaultian s.** (se-go'shyan) [see *Sigault*], symphyseotomy.

sectorial (sek-to'rĭ-al) [L. *sector*, cutter.] Cutting, noting molar and premolar teeth of the carnivora.

secundæ viæ (se-kun'de vi'e) [L. *secundus*, second, + *via*, a way.] The second channels for the passage of nutriment into the body, the lacteal and blood-vessels; see *primæ viæ*, under *via*.

secun"digrav'ida [L. *secundus*, second + *gravida*, pregnant.] A woman in her second pregnancy.

secundi'na [L. fem. of *secundinus; secundus*, second, agreeing with *tunica*, coat, understood.] The afterbirth, usually in plural *secundi'næ*. **s. cer'ebri,** the combined pia and arachnoid membranes. **s. oc'uli,** the vascular layer of the chorioid coat of the eye. **s. u'teri,** the chorion.

sec'undine [L. *secundus*, second] In botany, the envelope of the ovule next to the nucellus.

secundines (sek'un-dēnz) [L. *secundinæ*.] The afterbirth, the membranes and placenta, the expulsion of which, following the birth of the child, constitutes the third stage of labor.

secundip'ara [L. *secundus*, second, + *parere*, to give birth.] A woman who has borne two children at different labors.

secundipar'ity. The state of being a secundipara.

secun'dum artem [L.] According to art, by rule, in an approved way.

sed'atin. Valerydin, valerylphenetidin, occurring in tasteless odorless crystals; employed as a sedative in nervous affections in doses of gr. 8–15 (0.5–1.0).

seda'tion [L. *sedare*, to allay.] The act of calming; the state of being calm.

sed'ative [L. *sedare*, to allay.] 1. Calming, quieting. 2 An agent which quiets nervous excitement; the sedatives are designated, according to the part or the organ upon which their specific action is exerted, cardiac, cerebral, nervous, respiratory, spinal, etc

sed'entary [L. *sedere*, to sit.] 1. Sitting, relating to the sitting posture. 2. Physically inactive.

sed'iment [L. *sedimentum; sedere* to settle.] Hypostasis, insoluble material which sinks to the bottom of a liquid; that which rises to the surface is called epistasis or scum.

sedimenta'tion. The formation of a sediment. **s. test,** (1) agglutination test, Widal's test (in the case of typhoid fever); (2) the employment in gastric roentgenology of a non-suspended mixture of a contrast salt, such as barium or bismuth, in water; the salt sediments rapidly and can be spread over all parts of the stomach wall, thus giving information as to shape and movement of the organ, and also bringing into view lesions on the anterior or posterior wall invisible when the stomach is full. **s. rate,** sinking velocity of the blood cells, *i.e.* the degree of rapidity with which the red cells sink in a mass of drawn blood. **s. reaction,** s. rate.

sed'imentator. A centrifuge.

sedimen'tum. Sediment. **s. laterit'ium,** brick-dust* deposit.

sedobrol (sed'o-brol). Cubes containing each 17 grains of sodium bromide with vegetable extracts and flavoring, taken, dissolved in hot water, as a nerve sedative and for epilepsy.

sedormid (sĕ-dor'mid). Trade name of allyl-isopropyl-acetyl-carbamide, recommended as a sedative in doses of gr. 2 (0.13) and an hypnotic in doses of gr. 4–8 (0.25–0.5).

seed [A.S *sæd*]. 1. The reproductive body of a flowering plant, the mature ovule. 2. In bacteriology, to inoculate a culture medium with microorganisms.

seed'y-toe. A disease of the hoof of a horse consisting in separation of the outer wall, or crust, from the inner layer of soft horn derived from the laminæ; it affects the quarters usually.

Seeligmueller's sign (za'likh-mü-ler) [Otto Ludwig Gustav Adolf *Seeligmueller*, German neurologist, 1837–1912] Contraction of the pupil on the affected side in facial neuralgia.

Seessel's pock'et or **pouch** (za'sel) [A. *Seessel* German embryologist, 19th century.] An entodermic pouch in the buccopharyngeal membrane of the embryo.

Séglas type (sa-glah') [Jules *Séglas*, Parisian physician, *1856.] The so-called psychomotor type of paranoia

seg'ment [L. *segmentum; secare*, to cut.] 1. A section, a part of an organ or other structure delimited naturally, artificially, or in the imagination from the remainder. 2 Metamere. 3. To reproduce by budding. 4. To divide and redivide into minute equal parts **interann'ular s.**, the portion of a nerve-fiber between two successive nodes of Ranvier. **lower u'terine s.**, the inferior portion of the uterus which must be dilated in order to allow of the expulsion of the fetus in parturition. **prim'itive s.**, somite. **s. of the spi'nal cord,** a portion of the spinal cord corresponding to the line of attachment of one pair of spinal nerves. **upper u'terne is.,** the main portion of the body of the gravid uterus, the contraction of which furnishes the chief force of expulsion in labor.

segmen'tal. Relating to a segment.

segmenta'tion. 1. Dividing into segments; the state of being divided into segments. 2. The process of development of the impregnated ovum.

segmenta'tion-cav'ity. Blastocœle, the cavity formed in the segmentation sphere, by invagination into which the gastrula is formed.

segmenta'tion-nu'cleus. The compound nucleus in the impregnated ovum, formed by the conjugation of the nuclei of the germ-cell and of the sperm-cell, or the female and the male pronucleus

segmenta'tion-sphere. Morula, blastosphere.

seg'menting body. Schizont.

segregation (seg-re-ga'shun) [L. *segregare*, to separate.] 1. Separation; removal of certain parts from a mass. 2. The separation of the dominant and recessive characters in the offspring of hybrids. **law of s.,** see *law*.

seg'regator [L. *segregare*, to separate] A separator, a device by means of which the portions of urine entering the bladder from the two ureters are collected separately without being allowed to mingle; see *Cathelin, Downes, Harris, Luys*

Seidel's sign. An increase in the size of the blind spot by wing-like projections with concavity facing the fixation point, in incipient glaucoma.

Seidelin bod'ies (si'de-lin) [Harald *Seidelin*, of the Liverpool School of Tropical Medicine, contemporary.] *Paraplasma flavigenum*, an organism described by Seidelin as parasitic in the erythrocytes in yellow fever, and believed by him to be the cause of that disease.

Seidlitz pow'der (sed'lits, Ger. zīd'lits) [*Seidlitz*, a mineral spring in Bohemia.] Pulvis effervescens compositus.

Seignette's salt (sayn-yet') [Pierre *Seignette*, apothecary in Rochelle, France, 1660–1719.] Rochelle salt, potassium and sodium tartrate.

seismotherapy (siz-mo-ther'ă-pī). Sismotherapy.

seizure (se'zhūr). An attack, the sudden onset of a disease or of certain symptoms, such as convulsions. **psy'chic s.,** psycholepsy, an attack of morbid sensations, such as fulness in the head, vertigo, palpitation, etc., with temporary disturbance of consciousness, not amounting to unconsciousness.

sejunc'tion [L. *sejungere*, to disjoin.] A separation; a breaking of continuity in the mental processes resulting in a loss of personality.

selec'tion [L. *seligere*, to choose.] 1. In biology, the preservation of the lives of certain individuals and the destruction of those of others, in consequence of which the character of the race tends to change. 2. In life insurance, the choice among the applicants for insurance of those to whom policies may be issued. **adverse' s.,** s. against the company. the lapse of policies on the lives of young and healthy men with the continuance of those on the lives of the aged and invalids. **artific'ial s.,** interference by man with natural s., whereby a variety of animal (horse, dog, chicken, pigeon, etc.) is produced having special characteristics making for beauty, utility, or bizarrerie. **med'ical s.,** (1) in sociology, the preservation, by medical care and treatment, of the weak and unfit, whereby the race tends to degenerate; (2) in life insurance, selection based upon the results of a physical examination of the applicants, those found not to come up to the standard being rejected; the effect of this medical selection lasts only for five or ten years, the proportion of good, bad, and indifferent risks becoming ultimately the same as the proportions in a mass of non-select lives, since some fall into bad health, others are in indifferent health, and others still continue to be up to the medical standard at the time of selection. **nat'ural s.,** the elimination of the weak and unfit through the action of natural laws, whereby the race tends to grow stronger; opposed to *artificial s.* on the one side and *medical s.* on the other. **self-s.,** s. against the company, the s., unconscious or intentional, made by the applicant for insurance, of the form of policy; the rate of mortality among those taking out a term policy, the premium for which is comparatively low, is higher than among those taking out an endowment policy, the premium for which is comparatively high; in other words, the rule appears to be: the smaller the premium the higher the mortality. **s. against the com'pany,** adverse s., self-s.

selene unguium (se-le'ne ung'gwi-um) [G. *selēnē*, moon; L. *unguis*, nail] The white of the nails, lunula.*

sel'enin [G. *selēnē*, the moon.] An antiserum prepared by Klebs from cultures of *Diplococcus semilunaris*, employed in the treatment of the mixed infection in tuberculosis.

seleniovanadic ointment (sĕ-le"nĭ-o-van-ad'ik-oynt'ment). Trade name of a preparation of selenium and vanadium recommended as an application for the relief of pain in malignant disease.

sele'nium [G. *selēnē*, moon.] A metallic element, symbol Se, atomic weight 79.2, having some chemical similarity to sulphur.

selenodont (sĕ-le'no-dont) [G. *selēnē*, moon, + *odous* (*odont-*), tooth.] Noting an animal, or man, having teeth, as the human molars, with longitudinal crescent-shaped ridges.

self-abuse (self-ă-būs'). Masturbation.

self-diges'tion. Autodigestion.

selfed (selft). Self-pollinated.

self-fertilization (self-fur-til-i-za'shun). The fecundation of the ovules by the pollen of the same flower; or of the ova by the spermatozoa of the same animal, in hermaphrodite forms.

self-infec'tion. Autoinfection.

self-lim'ited. Noting a disease which tends to cease after a definite period, as a result of its own processes; pneumonia is a typical example of a self-limited disease.

self-poi'soning. Autointoxication.

self-pollu'tion. Masturbation.

self-selec'tion. See under *selection*.

self-suspen'sion. Stretching, or straightening of the spinal column by means of extension effected by the patient himself.

Selivanoff's test (sel-i-vah'nof) [Feodor *Selivanoff*, Russian chemist, *1859.] To 10 c.c. of urine are added 10 c.c. of hydrochloric acid and some crystals of resorcin; if levulose is present warming the mixture produces a brilliant red color, glucose producing no color.

sell'anders. Psoriasis or eczema at the bend of the hock in a horse.

Sellards' test [Andrew Watson *Sellards*, Boston, Mass., physician, *1884.] To a patient with acid urine a teaspoonful (5 grams) of sodium bicarbonate is given; if at the end of one or two hours the reaction of the urine is alkaline, there is no acidosis present.

sel'la tur'cica [L. Turkish saddle.] A saddle-like prominence on the upper surface of the sphenoid bone, situated in the middle cranial fossa and dividing it into two halves. The posterior part, dorsum sellæ [back of the saddle] is the highest; in front of this is the hypophyseal (pituitary) fossa, and in front of that the tuberculum sellæ or pommel of the saddle (olivary eminence).

Selter's disease (zel'ter) [Paul *Selter*, Swiss pediatrician, *1866.] Feer's disease.

Sel'ters or **Selt'zer water** [Nieder *Selters*, a mineral spring in Prussia.] A mineral water containing carbonates of sodium, calcium, and magnesium, and chloride of sodium. See *Nieder** *Selters*.

semeiography. (sem-ĭ-og'ră-fĭ). Semiography

semeiol'ogy. Semiology, symptomatology.*

semeiot'ic. Semiotic.

semelincident (sem"el-in'si-dent) [L. *semel*, once, *incidere*, to happen.] Happening once only, said of an infectious disease, one attack of which confers permanent immunity.

se'men [L. seed.] 1. Seminal fluid, sperm, a thick, yellowish white, viscid fluid containing spermatozoa; it is a mixture of the secretions of the testicles, vesiculæ seminales, prostate, and Cowper's glands. 2. A seed **s. cinæ,** santonica. **s. contra,** santonica. **s. lini,** linseed. **s. sanctum,** santonica.

semenuria (se"men-u'ri-ah). Seminuria, spermaturia.*

semi- [L. *semis*, half.] A prefix denoting one-half or partly; used with words derived from Latin roots; the corresponding Greek prefix is *hemi-*

semiautotrophic (sem-ĭ-aw-to-trof'ik) [L. *semi-*, half, + G. *autos*, self, + *trophē*, nourishment.] Hemiautotrophic.

semicanalis (sem-ĭ-kan-al'is) [L. *semi-*, half, + *canalis*, canal.] Semicanal, a half canal; one of the two parts into which the canalis musculotubarius is divided by the cochleariform process. **s. mus'culi tensor'is tym'pani** [BNA], semicanal of the tensor muscle of the tympanum, the division of the canalis musculotubarius containing the tensor tympani muscle. **s. tu'bæ auditi'væ** [BNA], semicanal of the auditory tube, the division of the canalis musculotubarius which forms the bony part of the Eustachian tube.

semicartilaginous (sem"i-kar-tĭ-laj'ĭn-us) Composed partly of cartilage.

semicircular (sem-ĭ-sur'ku-lar). Forming a half-circle or an incomplete circle. **s. canal,** ductus semicircularis.

semico'ma. A mild degree of coma from which it is possible to arouse the patient.

semico'matose. In a condition of unconsciousness from which one can be aroused.

semicre'tinism. A mild degree of cretinism, in which there is imbecility rather than idiocy.

semicrista (sem-ĭ-kris'tah) [L. *semi-*, half, + *crista*, crest.] A small or imperfect ridge or crest. **s. incisi'va,** nasal crest, crista nasalis.

semidecussa'tion. Incomplete decussation such as occurs in the optic chiasm

sem"idiagrammat'ic. Not wholly a copy of nature, noting an illustration in which some special point is emphasized by the omission of certain unessential or irrelevant details.

semiflex'ion. The position of a joint or segment of a limb midway between extension and flexion.

semilu'nar [L. *semi-*, half-, + *luna*, moon.] Half-moon shaped, crescentic. **s. bone,** os lunatum [BNA] **s. car'tilages,** two interarticular fibrocartilages of the knee-joint, meniscus lateralis and meniscus medialis [BNA]. **s. valves,** the valves of the heart guarding the aortic and the pulmonary orifices respectively; see under *valvula*.

semilunare (sem-ĭ-lu-nah'ra). Os lunatum.

semiluxa'tion. A partial dislocation, subluxation.

sem"imembrano'sus. See under *musculus*.

semimem'branous. Consisting partly of membrane, noting the musculus semimembranosus.

sem'inal. Relating to the semen **s. cap'sule,** vesicula seminalis. **s. cyst,** a cyst of the testicle. **s. flu'id,** semen (1) **s. lake,** the vault of the vagina after insemination. **s. ves'icle,** vesicula seminalis

semina'tion. Insemination

seminif'erous [L. *semen(semin-)*, seed, + *ferre*, to carry.] Carrying or conducting the semen, noting the tubules of the testis.

seminoma (sem-ĭ-no'mah) [L. *semen* + G. *-oma*.] Tumor of the seminal vesicle.

seminor'mal. One-half the normal, noting a solution* of a certain strength.

seminu'ria [L. *semen(semin-)* + G. *ouron*, urine.] Spermaturia.

semiography, semeiography (se-mĭ-og'ră-fĭ) [G. *sēmeion*, sign, + *graphē*, a description.] A treatise on symptomatology; a description of the symptoms of a disease.

semiological, semeiological (se-mĭ-o-loj'ĭ-kal) Relating to the symptoms of a disease.

semiol'ogy, semeiol'ogy [G. *sēmeion*, sign, + *-logia*.] Symptomatology

semiorbic'ular. Semicircular, hemispherical

semiotic, semeiotic (se-mĭ-ot'ik) [G. *sēmeion*, sign.] Symptomatic.

semiot'ics, semeiot'ics. Symptomatology,* semiology.

semipenn'iform [L. *semi-*, half-, + *penna*, feather, + *forma*, form.] Penniform on one side, noting a muscle the fibers of which are obliquely attached to one side of a tendon.

semiprone (sem-ĭ-prōn'). Halfway between the mid-position and pronation, three-quarters prone.

se'mis [L.] One-half; noted in prescriptions by *ss*.

semisideratio (sem"ĭ-sid-ĕ-ra'shyo) [L. *semi-*, half, + *sideratio*, sunstroke.] Hemiplegia.

semisom'nus. Semicoma.

semiso'por. Semicoma.

semispi'nal [L. *semi-*, half, + *spinalis*.] Half spinal; noting muscles attached in part to the spines of the vertebræ; see *musculus semispinalis*.

semisul'cus. A slight groove on the edge of a bone or other structure, which, uniting with a similar groove on the corresponding adjoining structure, forms a complete sulcus.

semisupine (sem-ĭ-su-pīn'). Halfway between the mid-position and supination, three-quarters supine.

semitendino'sus. See under *musculus*.

semiten'dinous. Composed in part of tendon, noting the musculus semitendinosus.

semitertian (sem-ĭ-tur'shyan). Partly tertian, partly quotidian; noting a malarial fever in which two paroxysms occur on one day and one on the succeeding day.

semitontine (sem-ĭ-ton'tēn) [L. *semi-*, half, + *tontine.**] A form of insurance in which the insured allows all the profits on his policy, from compound interest, lapses, etc., to accumulate for a number of years and then receives the whole amount in a dividend; the beneficiaries of those who die during the period receive the face value of their policies, but the interest in the profits is forfeited to the survivors.

Semon's law (se'mon or za'mon) [Sir Felix *Semon*, London laryngologist, 1849–1921.] In lesions of the ganglia or branches of the motor nerves of the larynx, paralysis of the abductor muscles occurs before that of the adductors. **S.'s sign,** impaired mobility of the vocal cords in carcinoma of the larynx.

Semon-Hering hypoth'esis (za'mon-ha'ring) [Richard *Semon*, German naturalist, 1859–1908; Ewald *Hering*, German physiologist, 1834–1918.] Mnemic* hypothesis.

Semples treatment of rabies. Injection of virus attenuated or killed with a 1 per cent solution of carbolic acid.

Sendal type of bacillus. A type differing only slightly from *Bacterium paratyphosum A*, *Salmonella paratyphi*.

sen'ecin A precipitation of the tincture of senecio, employed in doses of gr. 1–2 (0.06–0.13).

senecio (sĕ-ne'sĭ-o) [L. old man.] (N.F.) 1. The dried herb, *Senecio aureus*, life-root, squawweed, ragwort, a common weed of the eastern United States; employed in the amenorrhea and other menstrual irregularities of chlorotic girls, in leucorrhea, and in strangury, in doses of ʒ1 (4.0), or ʒ1 (4.0) of the N.F. fluidextract, or of ɱ½–2 (0.03–0.13) of the specific eclectic preparation every hour or two. 2. A tincture from the fresh flowering plants of *Senecio aureus*, employed in homeopathic practice in dysmenorrhea and other menstrual disorders in doses of the 1st to the 6th potencies.

sen'ega [*Seneca*, an Indian tribe, one of the Five Nations.] (U.S, Br.) Senegæ radix, the dried root of *Polygala senega*, an herb of eastern and central North America; expectorant in chronic bronchitis in doses of gr. 10–15 (0.6–1.0).

sen'egin. The active principle of senega occurring in the drug in a mixture with polygalic acid.

senescence (se-nes'ens) [L. *senescere*, to grow old.] The state of growing old; beginning old age.

senescent (se-nes'ent). Growing old.

seniculture (sen'ĭ-kul-chur) [*L. senex*, old man, + *cultura*, culture.] The hygiene of old age.

senile (se'nīl) [L. *senilis*.] Relating to or characteristic of old age. **s. at'rophy,** shrinking of the tissues consequent upon the involution of old age. **s. demen'tia,** dementia due to s. atrophy of the brain. **s. involu'tion,** the retrograde metabolism of old age. **s. tremor,** the trembling of the hands and shaking of the head sometimes seen in the aged.

se'nilism. Premature senility; progeria.

senil'ity. Old age. The sum of the physical and mental changes occurring in advanced life.

se'nium [L.] Old age, especially the debility of the aged. **s. præ'cox,** premature senility.

Senn's bone-plates [Nicholas *Senn*, Chicago surgeon of Swiss birth, 1844–1908.] Plates of decalcified bone employed in intestinal anastomosis. **S.'s test,** for perforation of the bowel; after the abdomen is opened hydrogen gas is injected into the rectum, and then a light held near the coils of intestines will reveal a perforation through ignition of the escaping gas.

sen'na [Ar. *senā*.] (U.S.) The dried leaflets of *Cassia acutifolia* and *C. angustifolia* sennæ folium (Br.); laxative in doses of gr. 40–60 (2.6–4.0). **Alexan'drine s.,** *Cassia acutifolia*. **Amer'ican s.,** *Cassia marilandica*. **Indian s.,** *Cassia angustifolia*. **Mecca s.,** an inferior grade of Indian s. **s. pods,** sennæ fructus (Br.), senna fruit, used for the same purpose as the leaves. **Tinn'evelly s.,** Indian s.

sennatin (sen'ă-tin). An active principle from senna, used as a cathartic in doses of 2 gr. (0.12) hypodermically.

senopia (se-no'pĭ-ŭ) [L. *senilis*, senile, + G. *ōps*, eye.] Gerontopia, second sight.*

sensa'tion [L. *sensa*, idea, conception.] The translation into consciousness of the effects of a stimulus exciting any of the organs of sense. **delayed' s.,** a s. which is not perceived until the lapse of an appreciable interval following the application of the stimulus. **gen'eral s.,** one referred to the body as a whole and not to any particular external object. **girdle s.,** zonesthesia. **objec'tive s.,** a s. caused by some material object. **referred' s.,** a sensation felt in one place in response to a stimulus applied in another. **re'flex s.,** referred s. **spe'cial s.,** one referred to a stimulus produced by an external body and acting on any of the sense organs. **subjec'tive s.,** a s. experienced by the individual, not excited by any external material stimulus of the organ to which the s. is referred. **transferred' s.,** referred s.

abnormality of, paresthesia, dysesthesia, cakesthesia, haphonosus. **absence,** anesthesia. **associated,** synesthesia. **belt-like,** zonesthesia, girdle sensation. **biting,** mordication, odaxesmus. **cold,** cryesthesia. **conveying,** esthesodic. **crawling,** formication, myrmecia, myrmeciasis. **description of,** esthesiography, **diminished acuteness of,** hypesthesia, bradyesthesia, obtusion. **disease affecting,** esthesionosis, esthesioneurosis, haphonosus. **erroneous localization,** allesthesia, alloesthesia, allachesthesia, allochiria. **general of existence,** cenesthesia, cœnesthesia. **heat, cau,** mesthesia. **increased acuteness of,** hyperesthesia, acroesthesia, supersensitiveness, oxyesthesia. **instrument for measuring,** esthesiometer **locality,** topesthesia. **movement,** kinesthesia, cinesthesia, muscle sense **muscular,** kinesthesia, cinesthesia, myonarcosis (dulled). **numb,** obdormition. **painful,** algesia, algesthesia. **pricking,** acanthesthesia. **relating to,** sensory, esthetic; tactile (touch). **science relating to,** esthesiology, esthematology. **seat of perception,** sensorium. **temperature,** thermesthesia. **unpleasant touch,** haptodysphoria.

sense [L. *sensus; sentire*, to feel, to perceive.] Feeling, sensation, the faculty of perceiving any stimulus, consciousness. **cinesthet'ic s.,** muscular s. **gene'sic s.,** the sexual instinct. **mus'cular s.,** the faculty of perceiving a muscular contraction, deep sensibility. **pressure s.,** the faculty of discriminating various degrees of pressure on the surface. **seventh s.,** visceral s. **sixth s.,** cenesthesia. **space s.,** the faculty of perceiving the relative positions of objects in the external world. **special s.,** one of the five senses related to the organs of sight, hearing, smell, taste, and touch. **vis'ceral s.,** the perception of the existence of the internal organs, seventh s.

sense-cen'ter. Any center in the cerebral cortex where a stimulus to a sense-organ is brought into the realm of consciousness; sensorium (1)

sense-or'gan. Any organ, as the eye, a stimulus of which is translated by the brain into a sensation.

sensibilin (sen'sĭ-bil-in). Toxogenin.

sensibilisatrice (soṅ-se-be-le-să-trēs') [Fr.] Substance sensibilisatrice, sensitizer, immune body, amboceptor.*

sensibilisin (sen-sĭ-bil'ĭ-sin). Sensibilin, toxozenin anaphylactin, anaphylactic antibody.

sensibil'ity [L. *sensibilitas*] The consciousness of sensation, the capability of perceiving sensible stimuli; sensation. **deep s.,** sensation in the muscles, tendons, and joint surfaces, by means of which the position of a limb, the tension, and the estimation of a difference in weights is appreciated, and the loss of which produces ataxia. **mesoblas'tic s.,** deep s.

sensibiliza'tion. Sensitization.

sen'sible [L. *sensibilis; sentire,* to feel, to perceive.] 1. Perceptible to the senses. 2. Capable of sensation. 3. Sensitive. 4. Having reason or judgment, intelligent.

sensif'erous [L. *sensus,* sense, + *ferre,* to carry.] Conducting a sensation.

sensigenous (sen-sij'en-us) [L. *sensus,* sense, + G. *gennaō,* I produce.] Giving rise to sensation.

sen'sitive. 1. Capable of perceiving sensations. 2. Responding to a stimulus. 3. Readily undergoing a chemical change, as a sensitive reagent. 4. Amenable to the destructive action of complement. 5. One who is readily hypnotizable. 6. One supposed to receive communications from spirits, a psychic.

sensitivity (sen-sĭ-tiv'ĭ-tĭ) [L. *sentire,* to feel.] The state of being sensitive.

sensitiza'tion. 1. The rendering of bacteria or animal cells amenable to the destructive action of alexin or complement by contact with immune body or amboceptor. 2. The production by the body cells of a specific proteolytic ferment which acts only upon the protein the presence of which has called it into existence; when the organism reacts to the special protein, it is said to be sensitized to that protein.

sen'sitize. To render sensitive (3 or 4). See also *sensitization.* **sen'sitized culture,** a live culture of an organism to which has been added an antiserum; after the mixture has been allowed to stand for a while the serum is removed by washing and centrifugation and the organism is then suspended in physiological salt solution.

sen'sitizer. Amboceptor.

sen'sitizing sub'stance. Amboceptor.*

sensomobile (sen-so-mo'bil). Capable of movement in response to a stimulus.

sensomobil'ity. The state of being sensomobile.

sensomo'tor. Sensorimotor.

senso'rial. Relating to the sensorium.

sensoriglan'dular. Relating to glandular secretion excited by stimulation of the sensory nerves.

sensorimetab'olism. Metabolism activated by stimulation of the sensory nerves.

sensorimo'tor. Both sensory and motor, noting a mixed nerve with afferent and efferent fibers.

sensorimus'cular. Noting muscular contraction in response to a sensory stimulus, reflex.

senso'rium. 1. The seat of sensation, sense-center. 2. The aggregate of the organs and centers in the body relating to sensation.

sensorivas'cular. Sensorivasomotor.

sensorivasomotor (sen"so-rĭ-vaz-o-mo'tor). Noting contraction or dilatation of the blood-vessels occurring as a sensory reflex, sensorivascular.

sen'sory. Relating to sensation. **s. nerve,** an afferent nerve, one which transmits peripheral stimuli to the sensorium.

sensualism (sen'shu-al-izm). Sensuality; domination by the passions or appetites.

sentient (sen'shyent) [L. *sentiens; sentire,* to feel, to perceive.] Sensitive; capable of sensation.

sen'timent [L. *sentire,* to feel.] Feeling or emotion in relation to one idea; the expression in conscious thought of a feeling, especially of any of the higher or nobler feelings or emotions.

sen'tinel gland. A single enlarged gland in the omentum, serving as a guide to an ulcer opposite to it in the greater or lesser curvature of the stomach.

sen'tinel pile. A pile-like thickening at the lower termination of a fissure of the anus.

sentisec'tion. Vivisection of an animal that is not anesthetized; see *callisection.*

sep'al [L. *sepalum; separ,* separate.] The leaf of a calyx.

sep'aloid [L. *sepalum,* sepal, + G. *eidos,* resemblance.] Resembling a sepal.

sep'arator. Anything which separates two or more substances or prevents them from mingling. 1. Specifically a device by means of which the portions of urine entering the bladder from the two ureters are prevented from mingling: a segregator; see *Cathelin, Downes, Harris, Luys.* 2. In dentistry an instrument for forcing two teeth apart so as to give room for examination, excavating cavities, etc.

separato'rium. An instrument used in separating the pericranium from the skull.

se"pedogen'esis [G. *sēpedōn,* rottenness, + *genesis,* origin, production.] The origin or causation of sepsis.

se'pedon [G. *sēpedōn,* rottenness] Putrescence, putridity.

se"pedonogen'esis. Sepedogenesis.

se'pia [G.] 1. A black secretion of the cuttlefish, from which a pigment is made. 2. In homeopathic practice, a tincture prepared from dried and powdered sepia, used in leucorrhea, dyspepsia, chronic nasal catarrh, and facial neuralgia in pregnant women, especially when associated with sallowness or a slight degree of jaundice; dose, 6th to 30th potencies.

se'pium [G. sēpion.] The bone of the cuttlefish, *Sepia officinalis.*

sep'sine. A ptomaine formed in putrefying animal matter.

sep'sis [G. *sēpsis,* putrefaction.] The presence of various pus-forming and other pathogenic organisms, or their toxins, in the blood or tissues; septicemia. **intes'tinal s.,** (1) autointoxication of intestinal origin; (2) ptomaine poisoning. **puer'peral s.,** puerperal* fever. **s. len'ta,** a slowly developing and more or less localized infection with (usually) *Streptococcus viridans.*

septa (sep'tah). Plural of septum.*

sep'tal. Relating to a septum.

sep'tan [L. *septem,* seven.] Noting a malarial fever, the paroxysms of which recur every seventh day.

sep'tate. Having a septum; divided into compartments.

septec'tomy [L. *sæptum,* septum, + *ektomē,* excision.] Operative removal of the whole or a part of a septum specifically of the septum narium.

septe'mia, septæ'mia. Septicemia.

septentrionaline (sep-ten-trĭ-on'al-ēn). An alkaloid derived from *Aconitum lycoctonum;* a local analgesic.

septfoil (set'foyl) [Fr *sept,* seven, *feuille,* leaf.] Tormentilla.

sep'tic. Relating to or caused by sepsis. **s. fever,** septicemia.

septicemia, septicæmia (sep"tĭ-se'mĭ-ah) [G. *sēpsis,* putrefaction, + *haima,* blood.] A systemic disease caused by the presence of microorganisms or their toxins in the circulating blood; the infecting germ may be one of the pus organisms, the pneumococcus, typhoid bacillus, coli bacillus, or other pathogenic bacterium. **cryptogen'ic s.,** a form of s. in which no primary focus of infection can be found. **hemorrhag'ic s.,** a term applied to a group of animal diseases, not transmissible to man, caused by a number of closely related bacteria, called collectively *Bacillus plurisepticus.* **mouse s.,** a disease of mice caused by *Bacillus murisepticus.* **puer'peral s.,** puerperal fever, septic infection occurring in women after childbirth. **rabbit s.,** a disease in rabbits caused by *Bacillus cuniculicidus.* **s. meliten'sis,** Malta fever, undulant fever.* **s. pluriform'is,** hemorrhagic s. **spu'tum s.,** a laboratory disease caused by inoculation with sputum containing *B. buccalis mucifereus* and probably other microorganisms.

septice'mic. Relating to, suffering from, or resulting from septicemia.

sep'ticine. A ptomaine from decaying animal matter.

septicophlebitis (sep-tĭ-ko-fle-bi'(be')tis) [G. *sēptikos,* putrefying, + *phleps(phleb-),* vein, + *-itis*] Septic inflammation of a vein.

septicopyemia, septicopyæmia (sep-tĭ-ko-pi-e'mĭ-ah). Pyemia and septicemia occurring together.

septicopye'mic. Relating to septicopyemia.

septigrav'ida [L. *septem,* seven, + *gravida,* pregnant.] A woman who is pregnant for the seventh time.

sep'tile. Septal.

septimetritis (sep-tĭ-me-tri'(tre')tis) [G. *sēptos,* decayed, + *mētra,* uterus, + *-itis.*] Septic inflammation of the uterus.

septipara (sep-tip'ah-rah) [L. *septum,* seven, + *parere,* to bear.] A woman who has borne seven children in as many pregnancies.

septiv'alent [L. *septem,* seven.] Having a valency of seven.

septomar'ginal. Relating to the margin of a septum.

septom'eter [*septum* + G. *metron,* measure.] An instrument, like a pair of calipers with straight arms, used for measuring the thickness of the nasal septum.

septona'sal. Relating to the nasal septum.

sep'totome [L. *sæptum,* septum, + G. *tomos,* cutting.] An instrument for incising or removing a section of the nasal septum.

septot'omy [L. *sæptum,* septum, + G. *tomē,* incision.] Incision of a septum, specifically of the septum narium.

sep'tulum, pl. *sep'tula* [L. dim. of *septum.*] A minute septum. **s. testis** [BNA], one of the trabeculæ of the testis, imperfect septa and fibrous cords radiating toward the surface of the gland from the mediastinum testis.

sep'tum, gen *sep'ti,* pl. *sep'ta* [L. *septum* or *sæptum,* a partition.] A thin wall dividing two cavities or masses of softer tissue. **gin'gival s., gum s.,** the portion of the gums occupying the interproximal spaces. **s. alve'oli,** one of the thin plates of bone separating the alveoli in the alveolar process of either jaw. **s. atrio'rum** [BNA], **s. auricula'rum,** the dividing wall between the atria of the heart. **s. a'trioventricula're** [NK], annuli fibrosi cordia. **s. bul'bi ure'thræ** [BNA], a fibrous septum in the interior of the bulb of the urethra which divides it into two hemispheres. **s. canal'is musculotuba'rii** [BNA], processus cochleariformis, a very thin horizontal plate of bone forming two semicanals, the upper, smaller, for the tensor tympani muscle, the lower, larger, for the Eustachian tube. **s. cartilagin'eum** [BNA], cartilaginous septum, the cartilaginous portion of the septum nasi. **s. cervica'le interme'dium** [BNA], intermediate cervical septum, a fibrous membrane uniting the cervical spinal arachnoid and dura mater in the median line posteriorly. **s. cor'porum cavernoso'rum** [BNA], an incomplete fibrous septum between the corpora cavernosa of the clitoris. **s. crura'le,** s. femorale [BNA]. **s. femora'le** [BNA], s. crurale, Cloquet's ganglion or septum, a lymphatic gland or plug of fat blocking the femoral ring. **s. glan'dis** [BNA], cartilago penis, a fibrous partition extending through the glans penis from the lower surface of the albuginea to the urethra. **s. interalveola're,** pl. *septa interalveola'ria* [BNA], **s. intraalveolarium** [NK], one of the interalveolar septa, the bony partitions between the tooth-sockets. **s. intermuscula're** [BNA], intermuscular septum, a term applied to aponeurotic sheets separating various muscles of the extremities; these are *s. i. ante'rius (fibula're), s. i. (fem'oris) latera'le, s. i. (f.) media'le, s. i. (hu'meri) latera'le, s. i. (h) media'le, s. i. poste'rius (fibula're).* **s. lin'guæ** [BNA], the median vertical fibrous partition of the tongue merging posteriorly into the traverse hypoglossal membrane. **s. lu'cidum,** clear septum, (1) stratum lucidum of the skin; (2) s. pellucidum [BNA]. **s. mediastina'le** [BNA], the mediastinum regarded as the dividing wall between the two pleural sacs. **s. membrana'ceum** [BNA], membranous septum, the membranous anteroinferior portion of the nasal septum. **s. membrana'ceum ventriculo'rum** [BNA], the membranous portion of the ventricular septum of the heart. **s. mo'bile na'si** [BNA], the anterior movable part of the nasal septum, formed by the recurving crus mediale of the cartilago alaris major on either side. **s. muscula're ventriculo'rum** [BNA], the muscular portion of the ventricular septum of the heart, formed of fibers derived from the musculature of both ventricles. **s. na'si** [BNA], the dividing wall between the two nasal cavities, formed posteriorly of bone (mainly the vomer and perpendicular plate of the ethmoid), anteriorly of cartilage. **s. na'si oss'eum** [BNA], osseous nasal septum, consisting of the vomer and perpendicular plate of the ethmoid. **s. orbita'le** [BNA], orbital s., palpebral ligaments, a fibrous membrane attached to the margin of the orbit and extending into the lids, constituting in great part the posterior fascia of the orbicularis oculi muscle. **s. pectinifor'me,** comb-like septum, the anterior portion of the s. penis which is broken by a number of slit-like perforations. **s. pellu'cidum** [BNA], transparent septum, s. lucidum, a thin plate made of two laminæ of gray matter, forming a partition between the anterior portions of the lateral ventricles; it extends from the anterior part of the body, the genu, and the rostrum of the corpus callosum to the fornix; the space between the two laminæ is the fifth ventricle. **s. penis** [BNA], the portion of the tunica albuginea separating the two corpora cavernosa penis. **s. posti'cum,** the fibrous membrane joining the arachnoid and pia along the posterior

line of the spinal cord. **s. scroti** [BNA], an incomplete wall of connective tissue and nonstriated muscle dividing the scrotum into two sacs, each containing a testis. **s. sin'uum fronta'lium** [BNA], the bony partition between the two frontal sinuses; it is often deflected to one or the other side of the middle line. **s. sin'uum sphenoida'lium** [BNA], the median dividing wall between the sphenoidal sinuses. **s. subarachnoidea'le,** subarachnoid s., s. posticum, a fibrous layer passing between the spinal arachnoid and pia mater in the middle line posteriorly. **s. transver'sum,** (1) the projection into each ampulla of the semicircular canals of the thickened wall on which the nerves terminate; (2) the partition which forms in the embryo and divides the splanchnocœle into the abdominal and pericardial regions, becoming in mammals the diaphragm. **s. tubæ,** cochleariform process, a bony partition dividing the canalis musculotubarius into two parts. **s. ventriculo'rum** [BNA], the dividing wall between the ventricles of the heart.

se'quel, sequela, pl. *se'quels, sequel'æ* (se-kwel'ah) [L. *sequela.*] A morbid condition following as a consequence of another disease.

seques'ter. Sequestrum.

seques'tral. Relating to a sequestrum.

sequestra'tion [L. *sequestratio; sequestrare,* to lay aside.] 1. Isolation, separation from others, as in the case of one with a contagious disease. 2. The formation of a sequestrum.

sequestrec'tomy [L. *sequestrum* + G. *ektomē,* excision.] The operative removal of a sequestrum

sequestrot'omy [L. *sequestrum* + G. *tomē,* incision. Sequestrectomy.

seques'trum [L. *sequestrare,* to lay aside, to separate A piece of necrosed bone which has become separated from the surrounding healthy osseous tissue. **pri mary s.,** a completely detached s. **sec'ondary s.,** one loosely attached to the surrounding sound bone. **ter'tiary s.,** one firmly attached to the surrounding bone.

se'ra. Plural of *serum.*

seralbu'min. Serum albumin.*

serenium (se-re'nĭ-um). Trade name of an azobenzene dye, a urinary antiseptic, acting especially on the gonococcus and staphylococcus and somewhat slowly on the colon bacillus.

Sereno'a [after *Sereno* Watson, Cambridge (Mass.) botanist, 19th century.] A genus of palms, the dried fruit of one species of which, *S. serrulata,* saw-palmetto, is the official sabal.*

Sergent's white line (sair-zhan') [Emil *Sergent,* French physician, contemporary.] On drawing the point of a penholder or the finger-nail across the skin a white line appears, lasting from three to five minutes; the phenomenon occurs in cases of low arterial tension, as in Addison's disease.

se'rial. Relating to a series. **s. change** in electric irritability, see *qualitative alteration.** **s. sec'tions,** see *section.*

ser'iceps [L. *sericum,* silk, + *caput,* head.] A bandage or sort of reversed cap, made of ribbon, used to make traction on the fetal head during parturition.

ser'icum [L.] Silk

series (se'rēz) [L. *serere,* to join together.] 1. A succession of similar objects following one another in space or time. 2. In chemistry, a group of substances either elements or compounds, having similar properties or differing from each other in composition by a constant ratio. **aliphat'ic s.,** fatty s. **aromat'ic s.,** all the compounds derived from benzene, distinguished from the fatty series derived from methane. **fat'ty s.,** all the open-chain compounds, derived from methane, distinguished from the aromatic series derived from benzene. **homol'ogous s.,** a series of organic compounds, the succeeding members of which differ from each other by the radicle CH_2.

se'riflux [L. *serum* + *fluxus,* a flow.] Orrhorrhea, a profuse serous discharge.

se'rine. 1. Serum albumin. 2. Alpha-amino-beta-hydroxypropionic acid, $CH_2.OH.CH.NH_2.COOH$, present in small amount in most proteins.

serinuria (se-rin-u'rĭ-ah). The excretion of serum albumin alone, without serum globulin, in the urine.

seriscission (ser-ĭ-sish'un) [L. *sericum,* silk, + *scissio,* a cleaving.] Division of the pedicle of a tumor or other tissue by a silk ligature.

serja'nia. The bark or wood of *Serjania nodosa,* or *Paullinia curura,* a South American plant, employed like curari as an arrow poison.

seroalbuminuria (se-ro-al-bu-min-u'rĭ-ah). Serous albuminuria *

serobacterine (se-ro-bak'ter-ēn). A bacterial vaccine treated with the serum of an animal partially immunized against the same microorganism.

serocolitis (se-ro-ko-lī'(le')tis) [L. *serosa,* serous membrane, + G. *kōlon,* colon, + *-itis.*] Colitis externa, pericolitis, inflammation of the peritoneal coat of the colon.

serocys'tic. Relating to one or more serous cysts

serodermatosis (se″ro-dur-mă-to'sis). Any skin disease with a watery discharge, or with cutaneous edema.

serodiagno'sis. Diagnosis made by means of a reaction obtained in the blood-serum or other serous fluids of the body; the Wassermann* reaction is an example; orrhodiagnosis.

seroenteritis (se-ro-en-ter-i'(e')tis) [L. *serosa* + G. *enteron,* intestine, + *-itis.*] Inflammation of the peritoneal coat of the intestine, enteritis externa, perienteritis.

serofi'brinous. Noting an exudate composed of serum and fibrin.

serofi'brous. Relating to a serous membrane and a fibrous tissue.

serofor'malin. Trade name of a mixture of formalin and dried and pulverized blood-serum; used as an antiseptic dusting powder.

serohepatitis (se-ro-hep-ă-ti'(te')tis) [L. *serosa* + G. *hepar(hepat-),* liver, + *-itis.*] Inflammation of the peritoneal coat of the liver, hepatitis externa, perihepatitis.

seroimmunity (se″ro-im-mu'nĭ-tĭ). Passive immunity.*

serolem'ma [L. *serum* + G. *lemma,* husk.] The outer or mesoblastic layer of the amnion.

serological (se-ro-log'ĭ-kal). Relating to serology.

serol'ogy [L. *serum* + G. *-logia.*] The branch of science dealing with serum, especially with specific immune or lytic sera; orrhology.

seromem'branous. Relating to a serous membrane.

seromu'cous. Composed of or containing serum and mucus.

seronol (se'ro-nol). A remedy proposed for the treatment of influenza; it is composed of guaiacol, 0.1, eucalyptol and camphor, of each, 0.5, in sterilized olive oil, 250 c.c., this amount being injected into the gluteal muscles once a day for 5 or 6 days.

seroperitoneum (se″ro-per-ĭ-to-ne′um). Hydroperitoneum, ascites.

serophthisis perniciosa endemica (se-rof-the′sis pur-nĭsh-i-o′sah en-dem′ĭ-kah). Beriberi.

serophyte (se′ro-fīt) [*serum* + G. *phyton*, plant.] A bacterium which develops readily in the normal body fluids; see *serosaprophyte*.

se″ropneu″motho′rax. Hydropneumothorax.

seropu′rulent. Composed of or containing both serum and pus, noting a discharge of thin, watery pus, or seropus.

se′ropus. Purulent serum; pus largely diluted with serum.

seroreaction (se-ro-re-ak′shun). 1. Serum-disease. 2. Any reaction occurring in serum, such as deflection of the complement.*

sero′sa [L. fem. of *serosus*, serous (sc. *tunica*, coat, or *membrana*, membrane)] Serous membrane, especially the serous or peritoneal, coat of the intestines.

serosamucin (se-ro″sah-mu′sin). Mucoid found in serous fluids—ascitic, synovial, etc.

serosanguineous (se″ro-sang-gwin′e-us). Noting an exudate or a discharge composed of or containing both serum and blood.

serosaprophyte (se-ro-sap′ro-fīt) [*serophyte* + *saprophyte*.] A microorganism which cannot grow and multiply in the normal unaltered body fluids, but readily adapts itself to development there when the fluids have undergone a degenerative change.

serose′rous. Relating to two serous surfaces; noting a suture, as of the intestine, in which the edges of the wound are infolded so as to bring the two serous surfaces in apposition.

serositis (se-ro-si′(se′)tis) [L. *serosa* + G. *-itis*] Inflammation of a serous membrane, orrhomeningitis. **multi′ple s.,** polyorrhomeningitis.

seros′ity. 1. A serous fluid, serum. 2. The condition of being serous. 3. The serous quality of a liquid.

serosynovial (se-ro-si-no′vĭ-al). Relating to both serum and synovia, or to both a serous and a synovial membrane.

serosynovitis (se-ro-si-no-vi′(ve′)tis) Synovitis attended with a copious serous effusion.

serotax′is [L. *serum* + G. *taxis*, a drawing up in line.] Hemospasia or edema of the skin induced by the application of a strong cutaneous irritant

serother′apy [L. *serum* + G. *therapeia*, treatment.] Orrhotherapy. 1. Treatment of an infectious disease by the injection of an antitoxin or specific serum. 2. The whey-cure.

serotho′rax. Hydrothorax.

seroti′na [L. fem. of *serotinus*, late] Decidua* serotina or basalis.

se′rous. Relating to, containing, or producing serum. **s. inflamma′tion,** inflammation of a serous membrane, especially when attended with a copious effusion of serum. **s. membrane,** serosa, one of the smooth membranes lining the closed cavities of the body (the pleura, the peritoneum, etc.), and forming the inner coat of a blood-vessel.

se″rovaccina′tion. A process for producing mixed immunity by the injection of a serum, to secure passive immunity, and by vaccination with a modified or killed culture to acquire active immunity later.

serozyme (se′ro-zīm) [L. *serum* + G. *zymē*, leaven.] A hypothetical substance formed in the blood plasma, which, upon contact with a foreign body or injured epithelium, reacts with cytozyme to form thrombin; thrombogen.

serpenta′ria (U.S., Br.). Serpentariæ rhizoma, the dried rhizome and roots of *Aristolochia serpentaria*, serpentary, sangree, Virginia snakeroot; stomachic, diuretic, and diaphoretic in doses of gr. 10–30 (0.6–2.0).

ser′pentary. Serpentaria. **English s.,** bistorta.

serpiginous (ser-pij′in-us) [L. *serpere*, to creep.] Creeping, noting an ulcer or other cutaneous lesion which extends gradually over the surface on one side while usually healing on the other.

serpi′go [L. *serpere*, to creep.] 1. Ringworm. 2. Herpes. 3. Any creeping or serpiginous eruption.

ser′pol, ser′polet. Serpyllum.

serpyll′um. The flowering herb, *Thymus serpyllum*, wild thyme, slightly diaphoretic and stimulant, like thyme.

serra′go [L. *serra*, a saw.] Sawdust.

serr′ate, serr′ated [L. *serra*, a saw.] Notched, dentate, toothed.

Serratia (ser-ra′shyah). A genus of the family *Bacteriaceæ*, having a large number of species, most of them isolated from water, saprophytic and, so far as yet known, non-pathogenic. **S. marces′cens,**[0] *B. prodigiosus, Bact. prodigiosum Chromobacterium prodigiosum. Micrococcus prodigiosus*, minute, rod-shaped or coccoid, aerobic, gram-negative organisms, found on various food-stuffs as a pink or reddish growth, non-pathogenic; the toxin of this organism mixed with that of *Streptococcus erysipelatis* constitutes Coley's* fluid.

serra′tion [L. *serra*, saw] 1. The state of being serrated or notched. 2. Any one of the processes in a serrate or dentate formation.

serra′tus [L.] Serrate, serrated; see under *musculus*.

serrefine (sair-fēn′) [Fr.] A small spring forceps, usually made of wire, used for approximating the edges of a wound or for closing the cut end of an artery during an operation. See the illustration.

serrenœud (sair-ne′) [Fr. *serrer*, to press, + *nœud*, knot] An instrument for tightening a ligature.

Serres's angle (sair) [Antoine Etienne Renaud Augustin *Serres*, Parisian physician, 1786–1868.] Metafacial angle. **S.'s glands,** gingival glands

serr′ulate, serr′ulated [G. *serrulatus*, dim. of *serratus*] Finely serrated.

Serto′li's cells [Enrico *Sertoli* Italian histologist 19th century.] Foot-cells; elongated striated cells in the testicular tubules, to which the spermatids are attached; nurse cells. **S.'s col′umns,** the columnar figures between the spermatoblasts formed of aggregations of S.'s cells.

SERREFINE.

se′rum, pl. *se′ra* [L. whey.] 1. A clear watery fluid, especially that moistening the surface of serous membranes, or exuded in inflammation of any of those membranes 2. The fluid portion of the blood obtained after coagulation, distinguished from the circulating *plasma* in live blood. 3. An antitoxin as prepared for therapeutic use. 4 Whey. **anti-s.,** a specific antitoxic or bacteriolytic s. obtained by inoculating animals with successively increasing numbers of the pathogenic microorganism against infection by which the serum is designed to be protective or curative. **antitox′ic s.,** a serum containing the antitoxin of the pathogenic microorganism, against infection by which it is protective or curative. **autosal′varsanized s.,** see *arsphenaminized-serum*. **bacter-**

iolyt'ic s., a serum containing a lysin destructive to a species of bacteria. **for'eign s.**, a s. derived from an animal and injected into an animal of another species or into man. **gly'cerin s.**, blood serum containing 5 per cent. of glycerin; used in the cultivation of the tubercle bacillus. **immune' s.**, specific s. **inorgan'ic s.**, a solution of various salts, not a serum derived from an animal; see *Bardel, Catani, Crocq, Cuguillère, Hayem, Huchard, Latta, Mathieu,* and *Trunecek.* **marine' s.**, a dilution of sea-water, 83 parts, with spring water, 190 parts, filtered through a germ-proof Berkefeld filter, employed by hypodermic injection to increase cellular resistance to infection and to improve the nutritive processes. **multipar'tial s.**, polyvalent s. **mercu'rialized s.** a solution of mercuric chloride in normal horse serum diluted with physiological saline solution, given by intraspinal injection in dose of oz. 1 (30 c.c.), containing gr. $\frac{1}{10}$ (0.0013 gm.) of the bichloride of mercury, after withdrawing a sufficient quantity of spinal fluid. **muscle s.**, the fluid remaining after the coagulation of muscle-plasma and the separation of myosin. **normal s.**, a s. containing complement and a great variety of interbodies, but only a small amount of each; it is by increasing the amount of one of the latter, now called immune-body, or amboceptor, that normal s. is converted into *specific s.* **polyv'alent s.** an antiserum obtained by inoculating an animal with several species or strains of the bacterium in question. **pooled s.**, the mixed serum from a number of individuals, used in determining the normal phagocytic index. **sal'varsanized s.**, see *arsphenaminized.* **s. antidiphther'icum, s. antidiphther'icum purifica'tum,** antitoxinum diphthericum (U.S.) **s. antidiphther'icum sic'cum** (U.S., IX), dried antidiphtheric serum, dried diphtheria antitoxin; evaporated antidiphtheric serum, occurring in the form of yellowish flakes or a whitish powder, having a potency of 4000 units per gram; dose: prophylactic 1000 units; curative 10,000 units. **s. antidysenter'icum,** antidysentonic serum (Shiga). **s. antitetan'icum,** antitoxinum tetanicum (U.S.), antitetanic serum. **s. antitetan'icum purifica'tum,** purified antitetanic serum, antitoxinum tetanicum (U.S.). **s. antitetan'icum sic'cum** (U.S., IX), dried antitetanic serum, dried tetanus antitoxin; yellowish or orange flakes or a yellowish white powder obtained by evaporating the antitetanic or the purified antitetanic serum; its potency is 1000 units per gram; dose: prophylactic 1500 units; curative 10,000 units. **s. equi'num,** normal horse serum, the sterile and filtered serum of a healthy horse. **s. lactis,** whey, the thin fluid which separates when milk is coagulated. **specif'ic s.**, a s. containing a large number of amboceptors which have a special affinity for a given bacterium, or the red cells of one animal in particular, and which serve to bind the complements in either specific or normal serum to these cellular elements and so to effect their destruction.

se'rumal. Relating to or derived from serum. **s. cal'culus,** a concretion formed around the neck or on the root of a tooth; it occurs especially in pyorrhea and differs in color and constitution from salivary calculus, or ordinary tartar.

serum-albu'min. A protein belonging to the group of native albumins, occurring with the globulins in the body fluids; it is coagulable by heat, but is not precipitated by magnesium or ammonium sulphate; its chemical formula is $C_{72}H_{122}N_{18}SO_{24}$.

serum-casein (se"rum-ka'se-in). Paraglobulin.

serum-disease'. Local and general symptoms (urticaria, fever, general glandular enlargement, edema, pains in the joints, and occasionally albuminuria) appearing in from 8 to 12 days after an injection of foreign serum; the *immediate* occurrence of the symptoms is regarded as anaphylactic in character, denoting sensitization by a previous injection of the same kind of serum; see anaphylactic shock.* Recovery takes place after a variable period, or in exceptional cases symptoms of collapse appear and sudden death may occur.

serum-glob'ulin. Paraglobulin, a variety of globulin present in the plasma and cells of the blood.

serum-rash. An urticaria or other eruption occurring after an injection of foreign serum; see *serum-disease.*

serum-sick'ness. Serum-disease.

serumuria (se-rum-u'rĭ-ah). Albuminuria.

Servet's' or **Serve'tus's circula'tion** [Michel *Servet,* Spanish physician, burned by Calvin at Geneva, 1509–1553.] The pulmonary circulation.

sesame (ses'ă-me). An herb, *Sesamum indicum,* the seeds of which contain a fixed oil, *oleum sesami,* used as a food.

ses'amoid [G. *sēsamē,* sesame, + *eidos,* appearance.] Resembling in size or shape a grain of sesame. **s. bone,** an oval nodule of bone or fibrocartilage in a tendon playing over a joint surface; most common in the metacarpo- and metatarso-phalangeal articulations and other joints of the fingers and toes; the patella is a sesamoid bone, the largest in the body **s. car'tilage,** (1) a small nodule of yellow fibroelastic cartilage found occasionally on the external border of the arytenoid cartilage of the larynx; (2) a small cartilage usually found in the fibrous tissue connecting the cartilage of the septum with the inferior lateral cartilage of the nose on either side.

sesamoiditis (ses-ă-moy-di'(de')tis). Inflammation of the sesamoid bones behind the fetlock in the horse.

sesqui- [L.] A prefix denoting one-half more.

sesquiba'sic. Noting a salt with three equivalents of the acid for two of the base.

sesquichloride (ses-kwe-klor'īd). A chloride in which the proportion between the chlorine atoms and those of the other element is as three to two.

sesquiho'ra [L.] An hour and a half; noting in prescription writing the interval between doses.

sesquiox'ide. An oxide in which the proportion between the oxygen atoms and those of the other element is as three to two.

ses'quisalt. A sesquibasic salt.

sesquisul'phide. A compound of sulphur with another element in the proportion of three atoms of the former to two of the latter.

sessile (ses'il) [L. *sessus; sedere,* to sit.] Having a broad base of attachment not pedunculated.

seta'ceous [L. *seta,* a bristle.] 1. Having bristles 2. Resembling a bristle.

Setaria (se-ta'rĭ-ah) [L. *seta,* a bristle.] A genus of the family *Filariidæ,* most of the species of which are parasitic in cattle or equines, domestic or wild, inhabiting for the most part the peritoneal cavity. **S. equi'na,** a species occasionally found in man.

Setchenoff's center. See *Sechenoff.*

setif'erous [L. *seta,* bristle, + *ferre,* to carry.] Bristly, having bristles.

setigerous (sĕ-tij'er-us) [L. *seta*, bristle, + *gerere*, to carry.] Setiferous.

se'ton [L. *seta*, bristle.] A wisp of threads or a strip of gauze passed through the subcutaneous tissues, forming an issue.* **s. wound,** a tangential perforating wound, the wounds of entrance and exit being on the same side of the head, limb, or body.

sev'en-barks. Hydrangea.

sev'en-day fe'ver. A sporadic fever attacking Europeans in Indian ports; it resembles dengue somewhat yet is apparently distinct from that as well as from malaria and influenza.

seventh nerve. 1. Nervus facialis. 2. In the older enumeration of the facial nerves, the seventh comprised the facial, called portio dura of the seventh nerve, and the acoustic or auditory, called portio mollis. **s. sense,** visceral sense.*

sev'etol. The trade name of an emulsion said to contain 30 per cent. of a mixture of beef fat, butter, olive oil, lard, and peanut oil.

se'vum [L.] Br., Suet or tallow. **s. benzoina'tum** (N.F.), benzoinated suet; benzoin 30, sevum præparatum 1000. **s. præpara'tum** (U.S., Br.), prepared suet, prepared mutton tallow; the internal fat of the abdomen of the sheep, *Ovis aries*, purified by melting and straining; employed in pharmacy in making ointments.

sewage (su'ăj). The waste matter, solid and liquid, passing through a sewer.

sewer (su'ur). A pipe or conduit for removing surface water, excrement, and liquid waste.

sewerage (su'ur-ăj). A system of sewers for removing excreta, surface water, and kitchen waste in a community.

sewer-gas (su'ur-gas). The foul air of a sewer.

sewing-spasm (so'ing-spasm). An occupation neurosis affecting seamstresses, tailors, and shoemakers, interfering with the use of the needle; seamstress's cramp.

sex [L. *sexus*.] The character or quality which distinguishes between male and female

sexdigitate (seks-dij'ĭ-tāt) [L. *sex*, six, + *digitus*, finger or toe.] Having six digits on one or both hands or feet.

sex-intergrade (seks-in'tur-grād). An individual having some of the characteristics, especially psychic, of both sexes.

sexiv'alent [L. *sex*, six, + *valere*, to have strength.] Having a combining power equal to six atoms of hydrogen.

sex-limited (seks'lim-ĭ-ted). Occurring in one sex only.

sex-linked (seks'linkt). Noting, in heredity, any character whose determinant is associated with the determinant of sex.

sexology (seks-ol'o-jĭ). The science of sex, study of the relations of the sexes.

sex'tan. Noting a malarial fever the paroxysms of which recur every sixth day.

sextigravida (seks-tĭ-grav'ĭ-dah) [L. *sextus*, sixth, + *gravida*, pregnant.] A woman in her sixth pregnancy.

sextipara (seks-tip'ah-rah) [L. *sextus*, sixth, + *parere*, to bear.] A woman who has borne six children in as many pregnancies.

sexto'nol. Trade name of a mixture of six glycerophosphates, as follows: calcium and sodium each 2 grains, iron ½ grain, manganese and quinine each ¼ grain, strychnine $\frac{1}{200}$ grain; see *tonol*.

sex'ual. 1. Relating to sex; genital. 2. A person considered in his or her sexual relation or tendencies. **con'trary s.,** an invert. **sec'ondary s. char'acters,** characters, not connected with the genital organs, which are peculiar to one or the other sex, such as the beard in man, the absence of beard or of hair on the chest in woman, etc. **s. aim,** the action toward which a sexual impulse strives. **s. ob'ject,** a person toward whom another is sexually attracted.

sexual'ity. Sex, the quality of sex.

sex'valent. Sexivalent.

Sgambati's test (zgahm-bah'te) [*O. Sgambati*, Roman physician, contemporary.] Along the wall of a slanting test-tube one-third full of urine, a few drops of nitric acid are poured carefully; at the zone of contact, above the usual orange yellow disc is formed a grayish blue halo; now a little chloroform is added and the tube is shaken, and after settling a permanent ruby red tint is seen. The reaction described is said to be indicative of peritonitis.

S.G.O. Abbreviation for Surgeon General's Office.

shad'dock. Grape-fruit, pomela, the fruit of *Citrus decumana*.

shad'ow [A.S. *sceadu*.] Achromatocyte, phantom corpuscle, a decolorized red blood-cell.

shad'owgram. Skiagram.

shad'owgraph. Skiagram.

shadowgraphy (shad'o-graf-ĭ). Skiagraphy.

shadow-nucleus (shad'o-nu"kle-us). A nucleus which has lost its pigment and staining properties.

shad'ow-test. Retinoscopy.

shaft [A. S. *sceaft*.] An elongated rod-like structure, as the part of a long bone between the epiphyseal extremities. **hair s.,** scapus pili [BNA].

shake [A. S. *sceacan*.] 1. To tremble, to shiver. 2. To agitate, to move (a thing) to and fro or up and down.

shakes. Ague, malarial chill.

sha'king pal'sy. Paralysis agitans.

shank [A. S. *sceanca*.] The tibia, the shin, the leg.

shank bone. 1. The tibia. 2. The middle metacarpal (or metatarsal) bone, or cannon* bone, in the horse.

shaped [A S. *scapan*, to form.] Formed, of the shape of, resembling.

animal, zooid. **anvil,** incudiform. **arch,** arciform. **bead,** moniliform. **beak,** rostrate, rostriform, coronoid, coracoid. **bed,** clinoid. **berry,** bacciform. **bladder,** cystoid, cystomorphous, cystiform. **boat,** navicular, scaphoid. **bone-marrow,** myeloid. **bow,** arciform, arcuate. **bubble,** physaliform. **bundle,** desmoid, fasciate. **chain,** catenoid. **club,** clavate, clavellate, claviform. **coin,** mummiform, mummular, discoid. **comb,** pectinate, pectiniform. **cone,** conical, conoid. **crescent,** semilunar, meniscoid, crescentic. **cross,** crucial; cruciform. **crown,** coronoid. **cube,** cuboid. **cup,** arytenoid, calyciform, cotyloid, crateriform, scyphoid. **cylinder,** cylindrical, cylindroid. **D (Greek),** deltoid. **dart,** belemnoid, styloid. **disc,** discoid. **ear,** auriform. **egg,** oval, oviform, ovoid. **elbow,** anconoid, olecranoid, olecranal. **fan,** flabellate, flabelliform. **feather,** penniform. **fiddle** panduriform. **fish,** ichthyoid. **fistula,** syringoid **flask,** lageniform. **forceps,** forcipate. **funnel,** infundibuliform, choanoid. **ganglion,** gangliform. **gland,** adeniform. **grain,** sesamoid. **grape,** aciniform, acinous; botryoid, racemose, staphylose, staphyloid. **heart,** cordate; cordiform. **hinge,** ginglymoid. **hook,** hamular, ankyroid, uncinate, unciform. **horn,** keroid, keratoid, ceratoid. **horseshoe,** hippocrepian, hippocrepiform. **kidney,** nephroid, reniform. **L (Greek),** lambdoid. **lattice-work,** cancellous. **lens,** lentiform, lenticular, phacoid. **mushroom,** fungiform, fungoid. **myrtle-leaf,** myrtiform **nail,** clavate, claviform, gomphoid; onychoid (of finger or toe) **needle,** acicular. **net,** retiform, reticulate, retecious. **network,** plexiform. **nipple,** mammillary, mastoid. **nucleus,** nucleiform, nucleoid. **olive,** olivary. **palate,** palatiform. **papilla,** papilliform. **pear,** piriform. **peg,** styloid. **penis,** phalliform, phalloid, phallic. **pinecone,** pineal, piniform. **pitcher,** urceiform, urceolate **plant,** phytoid. **ring,** annular, cricoid (seal ring). **rod,** bacteroid, bacterioid, bacilliform. **roof,** tectiform. **root,** rhizomorphoid. **rope,** restiform. **round,** cir-

cular. **S (Greek),** sigmoid. **sac,** sacciform. **saw,** serrate. **shield,** thyroid, scutiform, scutate, clypeate, clypeiform, clypeastriform. **sickle,** falciform, falcate. **sieve,** ethmoid, cribriform, coliform. **sphere,** spheroid. **sleep,** hypnoidal. **spinal cord,** myeloid. **spindle,** fusiform. **spiral,** helicoid. **spleen,** splenoid, spleniform. **sponge,** spongiform, spongioid, spongy. **star,** asteroid. **stone,** lithoid, calculous. **sword,** ensiform, xiphoid. **tapeworm,** tænioid, teniform, strobiloid. **teeth,** dentate. **tendril,** pampiniform. **thread,** filiform, nematoid. **tissues,** histioid, histoid. **tongue,** glossoid. **teeth,** dentate, dentoid, odontoid, odontinoid. **top,** turbinate. **tree,** dendritic, dendroid. **tube,** tubular, tubiform, canalicular, fistulous, syringoid. **ulcer,** ulcerous, helcoid. **varix,** cirsoid, variciform, varicoid. **vessel,** vasiform, vasoform, angioid **violin,** panduriform. **web,** arachnoid, areolar, reticulate. **wedge,** cuneiform, sphenoid. **wing,** aliform, pinnate, pterygoid. **worm,** lumbricoid, vermiform. **Y (Greek),** hyoid, hypsiloid.

Shar'pey's fi'bers [William *Sharpey*, British anatomist, 1802–1880.] Connective-tissue fibers by which the periosteum is attached to the underlying bone.

shaven-beard' appear'ance. The finely dotted appearance of Peyer's patches seen post mortem in cases of typhoid fever.

sha'ving cramp. Keirospasm, xyrospasm, an occupation neurosis affecting barbers.

shawl-muscle. Musculus trapezius.

sheath (shēth) [A.S. *scæth.*] 1. Any enveloping structure, such as the membranous covering of a muscle, nerve, or blood-vessel. 2. Vagina (1). 3. The prepuce of a horse. **dentinal s., dural s., femoral s.,** see the adjectives. **mucous s. of a tendon,** vagina mucosa tendinis [BNA], **Henle's s., Mauthner's s., Schwann's s.,** see the proper names.

sheep-pox. Ovinia, a disease similar to cowpox which occurs in sheep.

shell-shock. A general term used to cover all serious mental and nervous disturbances arising as a result of the circumstances of battle; the condition may be due to trauma of the head or other parts, to the atmospheric shock of near-by explosions, to prolonged or extreme psychic strain, or to minor insults in men of neuropathic heredity; war neurosis, sinistrosis.

shelter (shel'tur). A tent with open front in which a sanatorium patient may obtain sun baths with considerable privacy.

Shen'ton's arch or **line.** A curved line or arch, formed by the top of the obturator foramen and the inner side of the neck of the femur, seen in a skiagram of the normal joint; it is disturbed in many lesions of the hip joint, such as congenital dislocation.

Shep'herd's frac'ture. A fracture of the external tubercle (posterior process) of the talus, sometimes mistaken for a displacement of the os trigonum.

Sherman bolts (shur'man). Screw bolts with nuts, employed to fix and hold in apposition the fragments of a broken bone.

Sher'rington's law [Charles Scott *Sherrington*, English physiologist, *1859.] Every posterior spinal nerve root supplies a special territory of the skin, which is, however, invaded above and below by fibers from the adjacent spinal segments.

sher'ry. A strong white wine originally from Xeres in Spain.

shield [A.S. *scild.*] A protecting screen, such as a lead sheet for protecting the operator from the *x*-rays, a watch-glass sealed over the sound eye to protect it in a case of gonorrheal ophthalmia, a cap to protect a fissured nipple from injury, etc. **embryon'ic s.,** an area of proliferating cells in the developing ovum in which the primitive streak appears.

Shiga bacil'lus (she'gah) [K. *Shiga*, Japanese bacteriologist, *1870.] *Bacillus dysenteriæ.*

Shiga-Kruse bacill'us (she'gah-kru'zeh). Shiga* bacillus.

Shigella (she-gel'lah) [after K. *Shiga.*] A genus of the family *Bacteriaceæ*, containing the dysentery organisms formerly grouped under *Eberthella.* **S. alkales'cens,**⁰ short, non-motile, gram-negative rods, occurring singly and in pairs, found at times in the intestinal dejecta, but apparently non-pathogenic. **S. ambig'ua,**⁰ an intestinal inhabitant resembling the preceding, and also non-pathogenic, at least it does not cause dysentery. **S. dysenter'iæ,**⁰ *B. dysenteriæ, Bact. dysenteriæ*, the Shiga bacillus, short, non-motile, gram-negative rods, the cause of one form of dysentery. **S. minutis'sima,**⁰ *Bact. minutissimum*, a very small, non-motile, gram-negative, aerobic rod-formed inhabitant of the intestinal canal, found once in a cerebral abscess; of doubtful pathogenicity. **S. paradysenter'iæ,**⁰ Flexner's bacillus, an organism resembling *S. dysenteriæ* morphologically but not serologically or culturally; there are four types, the Flexner, the Hiss, the Sonne, and the Strong, differentiated by agglutination and fermentation peculiarities, but all causing a form of dysentery and the summer diarrhea of infants. **S. pfaff'i**⁰ and **S. rett'geri,**⁰ small, non-motile, gram-negative, aerobic organisms causing fowl typhoid and diarrhea in birds. **S. visco'sa,**⁰ *Bact. viscosum equi*, a long, non-motile, gram-negative rod-shaped organism, pathogenic to horses, the cause of joint-ill.

shimamushi disease' (she-mah-moo'she) [Jap. *shima*, island, + *mushi*, bug] Japanese* river fever.

shin [A.S. *scina*] The anterior portion of the leg. **s. bone,** tibia. **s. splints,** myositis and periostitis affecting chiefly the extensor muscles of the lower lateral aspect of the legs; the chief symptoms are swelling, pain, and tenderness lasting a week or ten days; the cause is overexercise in rapid walking and running.

shingles (shing'glz) [L *cingulum*, girdle] Herpes zoster

shirt-stud ab'scess. A bilocular abscess, the two cavities being connected by a short narrow sinus.

shiv'er. 1. To shake or tremble, especially from cold. 2. A tremor, a slight chill.

shiv'ering. 1. Trembling from cold or fear. 2. A spasmodic affection, resembling chorea, affecting the thigh muscles of the horse.

shock [*shake.*] 1. A sudden physical or mental disturbance 2. A state of profound mental and physical depression consequent upon severe physical injury or an emotional disturbance. **anaphylac'tic s.,** violent symptoms—cardiac or respiratory—often with a rash, following the injection of a foreign protein in one sensitized to that substance by a previous injection or in any other way; see *serum-disease.* **anaphylac'toid s.,** colloidoclastic s. **apathe'tic s.,** ordinary s. (2). **colloidoclas'tic s.,** anaphylactoid crisis, symptoms resembling those of anaphylaxis arising from colloidoclasis.* **deferred' s., delayed' s.** a state of shock coming on at a considerable interval after the receipt of the injury. **delir'ious s.,** erethistic s. **elec'tric s.,** a sudden violent impression caused by the passage of a current of electricity through any portion of the body. **erethis'tic s.,** traumatic or toxic delirium following s. **in'sulin**

s., a phenomenon sometimes noted during the administration of insulin intravenously when the amount of blood sugar is reduced too suddenly; the chief symptoms are sweating, tremor, anxiety, vertigo, and diplopia, followed by delirium, convulsions, and collapse. **ni'tritoid s.**, speed s., a syndrome resembling that produced by the administration of a large dose of a nitrite, sometimes caused by a too rapid intravenous injection of arsphenamine or some other drug; see under *nitritoid*. **pleural s.**, a condition marked by pallor, loss of consciousness, cyanosis, irregular pulse and respiration, and dilated pupils, sometimes following thoracentesis. **pro'tein s.**, the systemic reaction following the parenteral administration of a protein. **sec'ondary s.**, a return of the symptoms of shock after apparent recovery from the first attack. **shell s.**, see *shell-shock*. **sur'gical s.**, shock induced by a surgical operation or a trauma. **tor'pid s.**, ordinary s. (2).

shod'dy-fe'ver. An influenza-like affection from which workers in rags and shoddy garments suffer

shoe-boil. Capped elbow.

shoemakers' spasm (shoo'ma-kerz spazm). An occupation neurosis, analogous to writer's cramp, from which shoemakers sometimes suffer.

short cir'cuit. See *circuit*.

shortsight'edness. Myopia.

shot-feel. A peculiar sensation as of a nervous discharge or electric shower passing rapidly from the top of the head to the feet, sometimes described as a sensation of rolling of shot down the body, occurring in acromegaly.

shot'gun prescrip'tion. See *prescription*.

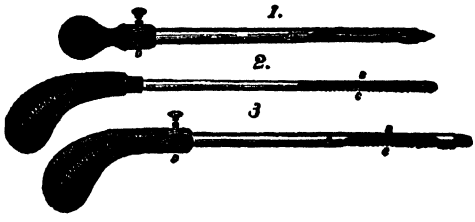
shot-silk phenom'enon. Shot-silk reflex *

shoulder (shōl'der) [A S *sculder*.] The lateral portion of the scapular region, where the scapula joins with the clavicle and humerus and is covered by the rounded mass of the deltoid. **pegged s.**, the shoulder of a horse, normal in contour, but without full freedom of movement. **s. blade**, scapula. **s. girdle**, see *girdle*. **s. joint**, the joint between the scapula and the humerus, articulatio humeri [BNA]. **tack'le s.**, a traumatic sprain of the shoulder-joint, not uncommon in foot-ball players.

shoul'der-slip. Inflammation of the muscles and tendons of the shoulder-joint in the horse.

show (sho) [A.S. *sceâwe*.] An appearance; specifically the first appearance of blood in beginning menstruation or labor.

shower (show'ur) [A.S. *scūr*.] A short brisk fall of rain. **uric-ac'id s.**, an attack, occurring at times in the gouty, in which the urine contains a large amount of uric acid, considerable gravel composed of this substance being passed.



SHRADY'S SUBCUTANEOUS SAW.
Trocar and fenestrated cannula; 2, saw; 3, saw within the cannula in place of the trocar; *A*, cannula; *B*, back of the saw; *C*, cutting edge; *D*, screw for fastening together cannula and trocar or saw.

Shrady's subcuta'neous saw [George Frederick *Shrady*, New York surgeon, 1837–1907.] An instrument consisting of a trocar and fenestrated cannula; when it has been introduced alongside the bone the trocar is withdrawn and a saw, set in a shaft of the same diameter as the trocar is introduced in its place.

Shrap'nell's mem'brane [Henry Jones *Shrapnell*, English anatomist, 19th century.] Pars flaccida of the membrana tympani, a small triangular area of the drum membrane whose apex is the malleolar prominence and base the notch of Rivinus

shriv'el. To shrink, to wither, to wrinkle, to lose moisture and contract.

shriv'eling. Kraurosis.

Si. Chemical symbol of *silicon*.

siagonantritis (si-ă-gon-an-tri'(tre')tis) [G. *siagōn*, jaw, + *antron*, cave, + *-itis*.] Inflammation of the maxillary sinus.

sial'aden [G. *sialon*, saliva, + *adēn*, gland.] A salivary gland.

sialadenitis (si-al-ad-en-i'(e')tis) [G. *sialon*, saliva, + *adēn*, gland, + *-itis*] Inflammation of a salivary gland.

sialadenoncus (si-al-a-de-non'kus) [G. *sialon*, saliva, + *adēn*, gland, + *onkos*, tumor.] A tumor of a salivary gland.

sial'agogue. Sialogogue.

sialapo'ria [G. *sialon*, saliva, + *aporia* want of.] A deficient secretion of saliva.

sialemesia, sialemesis (si-al-e-me'sĭ-ah, si-al-em'e-sis) [G. *sialon*, saliva, + *emesis*, vomiting.] Vomiting of saliva or vomiting caused by or accompanying an excessive secretion of saliva.

sial'ic. Salivary.

si'aline. Salivary.

si'alism, sialis'mus [G. *sialismos*.] Ptyalism.

sialoadenitis (si"al-o-ad-ĕ-ni'(ne')tis). Sialadenitis.

sialoaerophagy (si"a-lo-a-er-of'a-jĭ) [G. *sialon*, saliva, + *aēr*, air, + *phagō*, I eat.] A habit of frequent swallowing whereby quantities of saliva and air are taken into the stomach.

sialoangiitis (si"ă-lo--anje-i'(e')tis) [G. *sialon*, saliva, + *angeion*, vessel, + *-itis*.] Inflammation of a salivary duct.

sialodochitis (si-al"o-dŏ-ki'(ke')tis) [G. *sialon*, saliva, + *dochē*, receptacle, + *-itis*.] Inflammation of the duct of a salivary gland.

sialoductitis (si-al-o-duk-ti'(te')tis) [G *sialon*, saliva, + L. *ductus*, duct, + G *-itis*.] Sialodochitis.

sialogenous (si-al-oj'en-us) [G. *sialon*, saliva, + *gennaō*, I produce.] Producing saliva, sialogogue.

sialogogic (si-al-o-goj'ik). Sialogogue (1).

sialogogue (si-al'o-gog) [G. *sialon*, saliva, + *agōgos*, drawing forth] Ptyalogogue. 1. Stimulating the secretion of saliva. 2. An agent which promotes the flow of saliva.

sialogram (si-al'o-gram) [G. *sialon*, saliva, + *gramma*, a writing, a diagram.] A roentgenogram of one or more of the salivary ducts.

sialography (si-al-og'ră-fĭ.) [G. *sialon*, saliva, + *graphō*, I write.] X-ray examination of the salivary glands and ducts; ptyalography.

si'alolith [G. *sialon*, saliva, + *lithos*, stone.] A salivary calculus or concretion.

sialolithi'asis. The occurrence of salivary calculi.

sialorrhea, sialorrhœa (si"-al-or-re'ah) [G. *sialon*, saliva, + *rhoia*, a flow.] Ptyalism, salivation.

sialoschisis (si-al-os'ke-sis) [G. *sialon*, saliva, + *schesis*, retention.] Suppression of the secretion of saliva, sialaporia.

sialosemiology (si-al-o-se-mĭ-ol'o-jĭ) [G. *sialon*, saliva, + *sēmeion*, sign, + *-ology*.] The study and analysis of the saliva as an aid to diagnosis.

sialosteno'sis [G. *sialon*, saliva, + *stenōsis*, a narrowing.] Stricture of a salivary duct.

sialosyrinx (si-al-o-sir'inks) [G. *sialon*, saliva, + *syrinx*, fistula.] A salivary fistula, an unnatural opening into a salivary gland or duct.

Siamese' twins. Joined twins, Chang and Eng by name, born in Siam in 1811, who for many years were exhibited in the United States and finally settled in North Carolina, married, and brought up families. They died in 1874, Chang being found dead in bed one morning, and Eng dying a few hours later. The one dying first was intemperate, but his potations had no effect on the other, although post mortem there was found a communication between the portal system of the two brothers, a thin bar of liver tissue extending through the connecting band. Teratologically the two constituted a xiphopagus.

sibb'ens [Gaelic, *subhag*, raspberry, cf. *frambœsia*.] A form of syphilis formerly endemic in Scotland, the lesions of which resembled those of frambœsia.

sib'ilant [L. *sibilans; sibilare*, to hiss.] Hissing or whistling in character, noting a form of râle.

sib'ilus. A sibilant râle.

sibling [A.S., *sib*, relation, + *-ling*, diminutive.] One of two or more children of the same parents.

sibred (sib'red) [A.S. *sibraden*, relationship.] Relationship, as between children of the same parents.

Sib'son's aor'tic ves'tibule [Francis *Sibson*, English anatomist, 1814–1876.] Vestibulum aortæ, the portion of the left ventricle just below the aortic opening, having fibrous walls and affording room for the segments of the closed aortic valve. **S.'s aponeuro'sis,** vertebropleural ligament, attached to the seventh cervical vertebra above and the domeof the pleura below,supporting and strengthening the latter. **S.'s groove,** a groove occasionally seen on the outer side of the thorax formed by the prominent lower border of the pectoralis major muscle. **S.'s notch,** a notch on the left border of pericardial dullness in cases of extensive effusion.

sicc'ant [L. *siccans; siccare*, to dry.] Siccative.

sicc'ative [L. *siccare*, to dry.] Drying.

sicchasia (sĭ-ka'zĭ-ah) [G *sikchasia*, loathing.] The nausea of pregnancy.

sic'co. Trade name of an iron-protein combination occurring in the form of a brown soluble powder.

siccolabile (sik-o-lab'il) [L. *siccus*, dry, + *labilis*, perishable.] Subject to alteration or destruction on drying.

siccostabile, siccostable (sik-o-stab'il, sik-o-sta'bl) [L. *siccus*, dry, + *stabilis*, stable.] Not subject to alteration or destruction on drying.

sic'cus [L.] Dry.

sick [A.S. *seóc*.] 1. Ill, unwell, suffering from disease. 2. Nauseated. 3 Menstruating. 4. In childbed.

sick-head'ache. Migraine, megrim.

sickle-cell (sik'l-sel). Drepanocyte, an abnormal erythrocyte of sickle or crescent shape, present in certain forms of anemia.

sick'le-form. The malarial crescent, the primitive sexual form of the parasite of estivoautumnal fever.

sickle-hammed (sik'l-hamd). Sickle-hocked.

sickle-hocked (sik'l-hokt). A condition in the horse named from the rounded outline of the hock behind, which in conjunction with the thigh and leg, presents a somewhat semicircular outline.

sick'ness. 1. Disease. 2. Nausea. **car s.,** an affection resembling sea-sickness caused by railway riding. **falling s.,** epilepsy. **green s.,** chlorosis. **monthly s.,** menstruation. **morning s.,** the nausea and vomiting of pregnancy. **mountain s.,** a symptom-complex of nausea, vertigo, and prostration experienced by one on ascending to high altitudes. **sea s.,** naupathia. **serum s.,** see *serum*-sickness*.

Si'da [G. *sidē*, pomegranate.] A genus of plants some of which have medicinal properties. **S. asiat'ica,** a species of India the leaves of which are used as an application to ulcers. **S. carpinifo'lia,** a species said to be insecticidal. **S. lanceola'ta,** a species the root of which is diuretic. **S. rhomboid'ea,** an Indian species the root of which is used in dysentery.

Siddall test for preg'nancy [A. C. *Siddall*, American physician *1897.] Hormone test for pregnancy in its early or late stages; one c.c. of serum from a woman suspected to be pregnant is injected into a virgin immature white mouse daily for 4 or 5 days and the mouse is then killed and weighed and its weight is divided by the weight of its uterus and ovaries; if the ratio is less than 400 the test is positive. If the test is made with mature mice weighing 18 or more grams, a positive result is indicated by an hypertrophy of the ovaries.

side [A.S *sīde*.] One of the two lateral margins or surfaces of a body, midway between the front and back

side-bones. Ossified cartilages on either side of the coffin bone in the horse.

side-chain, side-chain theory. See under *chain*.

sid'erans [L. *sidus*, star.] Fulminating.

sidera'tion [L. *siderari*, to be planet struck.] Any sudden attack, as of apoplexy.

sid'erism, sideris'mus [G. *sidēros*, iron.] Metallotherapy.

siderodromophobia (sid"er-o-drom-o-fo'bĭ-ah) [G. *sidēros*, iron, + *dromos*, road, + *phobos*, fear.] Morbid fear aroused by the sight, or sometimes thought, of a railway, a locomotive, or a train of cars.

sid'erol. Trade name of a preparation said to contain beef essence and iron and phosphorus in organic combination; recommended as a hematinic in anemia, neurasthenia, rickets, and general debility.

sid'erophil, sid'erophile [G. *sidēros*, iron, + *philos*, fond.] 1. Absorbing iron. 2 A cell or tissue which contains iron.

sideroph'ilous. Siderophil (1)

sid'erophone [G. *sidēros*, iron, + *phōnē*, sound.] An electrical device for detecting a bit of iron in the eyeball, its presence causing the instrument to sound.

sid'eroscope [G. *sidēros*, iron, + *skepeō*, I view.] A very delicately poised magnetic needle for the detection of the presence and location of a particle of iron or steel imbedded in the eyeball.

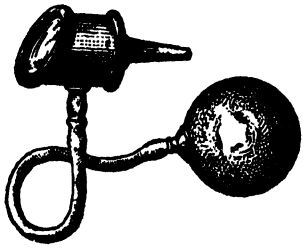
sidero'sis [G. *sidēros*, iron.] 1. A form of pneumonoconiosis due to the presence of iron dust; steel-grinder's disease, scissors-grinder's disease, grinder's asthma, etc. 2. A reddish brown or greenish discoloration of the iris and lens due to the presence of a particle of iron in the vitreous. 3. Discoloration of any part by an iron pigment; when the iron is derived from the blood it is called *hematog'enous s.*, when derived from an iron foreign body it is called *xenog'enous s.* 4. An excess of iron in the blood.

sid'erous. Containing or composed of iron.

si'donal. Piperazin quinate. **new s.,** the anhydride of quinic acid proposed as a substitute for the original sidonal.

Siebold's opera'tion (ze'bolt) [Gaspard von *Siebold*, German surgeon, 1736–1807.] Hebotomy.

Siegle's o'toscope (ze'gleh) [Emil *Siegle*, German otologist, 1833–1900.] An ear speculum with a bulb attachment by which the air pressure can be varied, thus imparting movement to the membrana tympani while under inspection.



SIEGLE'S OTOSCOPE.

sieve (siv) [A.S. *sife*.] A diaphragm of a coarse-meshed fabric, horsehair, wire, etc., used for separating the finer from the coarser parts of any broken or powdered matter. **s. bone,** ethmoid bone. **s. plate,** lamina cribrosa of the ethmoid.

sig. Abbreviation of L. *signa*, write.

Sigault's opera'tion (se-go') [J. R. *Sigault*, French surgeon, 18th century.] Symphyseotomy.

sigh (si) [A.S. *sīcan*.] 1. To make an audible inspiration and expiration under the influence of some emotion. 2. A deep inspiration, made involuntarily under the influence of some emotion, followed by an audible expiration.

sight (sīt) [A.S. *gesihth*.] Vision, the ability or faculty of seeing. **day s.,** night blindness, nyctalopia. **far s.,** hyperopia. **long s.,** hyperopia. **near s.,** myopia. **night s.,** day blindness, hemeralopia. **old s.,** presbyopia. **second s.,** an improvement in near vision in the aged, sometimes caused by swelling of the crystalline lens in incipient cataract. **short s.,** myopia.

sig'matism [G. *sigma*, the letter s.] A form of stammering in which pronunciation of the letter s is imperfect.

sig'ma reac'tion. A modification of the Sachs-Georgi reaction, in which an attempt is made to standardize the result by using a series of doses of the patient's serum and determining in which dose flocculation, which may be readily seen by the naked eye, occurs.

sig'moid [G. *sigma*, letter S, + *eidos*, form.] Resembling in outline the letter S or one of the forms of the Greek sigma (Σ or *C*). **s. cav'ity of the ra'dius,** incisura ulnaris [BNA]. **s. flex'ure,** colon sigmoideum [BNA], S. romanum; the lower curved portion of the colon, from the level of the crest of the ilium to its junction with the rectum. **s. sausage,** iliac roll. **s. valves,** semilunar valves* of the heart.

sigmoidec'tomy [*sigmoid* + G. *ektomē*, excision.] Excision of the sigmoid flexure.

sigmoiditis (sig-moy-di'(de')tis). Inflammation of the sigmoid flexure.

sigmoidopexy (sig-moy'do-pek-sĭ) [G. *sigmoeidēs*, sigmoid, + *pēxis*, fixation.] Operative attachment of the sigmoid colon to the belly wall for the relief of prolapse of the rectum.

sigmoidoproctostomy (sig-moy"do-prok-tos'to-mē) [G. *sigmoeidēs*, sigmoid, + *prōktos*, anus, + *stoma*, mouth.] Establishment of an artificial anus by opening into the junction of the sigmoid colon and the rectum

sigmoid'oscope [G. *skopeō*, I view.] A speculum for viewing the cavity of the sigmoid colon.

sigmoidos'copy. Inspection, through a speculum, of the interior of the sigmoid colon.

sigmoidos'tomy [G. *sigmoeidēs*, sigmoid, + *stoma*, mouth.] Establishment of an artificial anus by opening into the sigmoid colon.

sig'moscope [G. *sigma*, letter s, + *skopeō*, I view.] Sigmoidoscope.

Sigmund's glands (zēg'moond) [K. L. *Sigmund*, Viennese physician, 1810–1883.] The epitrochlear lymph nodes, enlargement of which S. held to be almost pathognomonic of syphilis.

sign [L. *signum*, mark.] 1. Any abnormality indicative of disease, discoverable by the physician at his examination of the patient; a sign in an objective symptom, a symptom is a subjective sign of disease. 2. An abbreviation or symbol. 3. Signature (3). **Abadie's s., Ahlfeld's s., Allis's s.,** for these and the other eponymic signs, see the proper names. **access'ory s.,** a symptom usually though not always present in a disease. **antece'dent s.,** a prodromic s. **assi'dent s.,** accessory s. **coin s.,** bellmetal resonance.* **car'diac s.,** see *cardiac*. **commem'orative s.,** a phenomenon pointing to the previous existence of some disease other than the one present at the time. **controlat'eral s.,** Brudzinski's sign (1). **ear s.,** the ears are not involved in cases of subcutaneous inflammation, because of the close adhesion of the skin and cartilage, but in erysipelas and other skin inflammations the ears do not escape. **echo s.,** the involuntary reduplication of the last syllable or word in a sentence. **eyelash s.,** in a case of unconsciousness due to functional disease, such as epilepsy or hysteria, stroking the eyelashes will occasion movement of the lids, but no such reflex will occur in case of organic brain lesion such as apoplexy, fracture of the skull or other severe traumatism. **fan s.** (Fr. *signe de l'éventail*), the spreading apart of the toes in the complete Babinski* phenomenon. **lig'ature s.,** in cases of hemophilia the application of a ligature, not very tightly drawn, around a limb will cause the production of ecchymoses in the peripheral portion of the member. **neck s.,** Brudzinski's sign (2). **object'ive s.,** one that is evident to the examiner. **phys'ical s.,** one that is elicited by auscultation, percussion, or palpation. **s. of ede'ma of the low'er lid,** swelling of the lower lid as an evidence of urinary retention. **spi'nal s.,** the spinal muscles are in a state of tonic contraction on the affected side in pleurisy. **spine s.,** resistance to flexion of the spine in cases of poliomyelitis. **subject'ive s.,** one that is perceived only by the patient, not objective.

sig'na. Imperative of L. *signare*, to write, a word used to introduce the signature in a prescription.

signature (sig'na-tūr). 1. The part of a prescription* containing the directions to the patient. 2. Some marking on, or the color or shape of, a plant or mineral, supposed to be symbolical or indicative of its therapeutic virtues. **doctrine of sig'natures,** the teaching that a signature is an indication of the therapeutic virtues of a plant or mineral.

sig'naturist. One who, like the followers of Paracelsus, believed in the doctrine of signatures.

Signorelli's sign (sēn-yor-el'le) [Angelo *Signorelli*, Italian physician, contemporary.] Tenderness on pressure in the glenoid fossa in front of the mastoid process in meningitis.

sil'bamine. Fluoride of silver, a light gray hygroscopic powder; employed for urethral and vesical irrigations in solution of 1:1000

sil'berol. A trade name for silver sulphocarbolate, silver phenolsulphonate, or silver phenylsulphonate; soluble in water and contains 38 per cent. of metallic silver; used in gonorrhea and in conjunctivitis.

si'lent gap. An interval of silence sometimes noted in the auscultatory estimation of blood-pressure, even through the pulse wave at the wrist continues.

sil'ica. Dioxide of silicon, silicic anhydride, SiO_2.

sil'icate. A salt of silicic acid. **s. of so'dium,** soluble glass; see under *sodium*.

silicea (si-lis'e-ah). The homeopathic preparation of silica triturated with sugar of milk; employed in the treatment of boils and carbuncles, rickets, chronic headache, and bromidrosis of the feet, in doses of the 6th to 200th potency.

siliceous (sĭ-lish'yus). Silicious.

silicic (sil-is'ik) Relating to silica or silicon. **s. acid,** one of several colloid acids, solutions of which in water are obtained by treating silicates, but which have not been isolated in a free state. **s. anhy'dride,** silica, silicon dioxide.

silicious (sil-is'-I-us). Containing silica.

Silicoflagell'ida [*silicon* + *flagellum*.] An order of *Zoömastigophora*, the individuals of which have an open skeletal framework of silicon and one flagellum.

silicoflu'oride. A compound of silicon and fluorine with another element.

sil'icon [L. *silex*, flint.] A very abundant non-metallic element, symbol S; atomic weight 28.3; like carbon it is obtained in three allotropic forms; it does not exist in a free state in nature.

silico'sis [L. *silex*, flint.] A form of lung-dust disease or pneumonoconiosis, due to the inhalation of stone-dust; stone-masons' disease, potters' consumption.

siliqua (sil'I-kwah). In botany a dry dehiscent fruit with two carpels, occurring in the *Cruciferæ*.

sil'iqua oli'væ [L. the husk of the olive.] The ectal arcuate fibers, white fibers which pass over the lower portion of the olive in the medulla oblongata.

silique (sĭ-lēk') [Fr.; L. *siliqua*, husk, pod] A long slender pod, like that of the mustard plant.

sil'iquose. Resembling a silique; noting a form of cataract resulting in shrivelling of the lens with calcareous deposit in the capsule.

silk'weed. Asclepias.

silk'worm gut. A suture material obtained by drawing out in a single thread the fluid silk in a silkworm just ready to spin its cocoon.

Sil'pha [G. *silphē*, a beetle.] A genus of beetles, the carrion beetles, which feed upon dead animal matter.

sil'phium. The rhizome of *Silphium perfoliatum* Indian cup, a plant of North America employed as a tonic alterative in doses of ℥½–1 (2.0–4.0) of a fluidextract.

sil'ver [A.S. *seolfor*.] Argentum; a metal of lustrous white color, of a specific gravity of 10.4 to 10.7; one of the elements, symbol Ag, atomic weight 107.88. **colloid'al s.,** collargol. **s. ac'etate,** argenti acetas. **s. acetguai'acol-trisul'phonate,** s. eosolate, argenti* eosolas. **s. albu'minate,** largin. **s. ar'senite,** argenti arsenis. **s. arsphenamine,** argentum arsphenamina.* **s. ca'seinate,** argonin. **s. chlo'ride,** argenti chloridum. **s. cit'rate,** itrol. **s. cy'anide,** argenti cyanidum. **s. e'osolate,** argenti eosolas. **s. ethylenedi'amine,** argentamine. **s. flu'oride,** silbamine, tachiol. **s. gel'atose,** albargin, albargol. **s. ich'thyolate,** ichthargan, ichthargol. **s. i'odate,** argenti iodas. **s. i'odide,** argenti iodidum. **s. lac'tate,** actol. **s. ni'trate,** argenti nitras. **s. nu'cleinate,** nargol. **s. ox'ide,** argenti oxidum. **s. oxyquin'olinesul'phonate,** argentol. **s. phenolsul'phonate, s. phenylsul'phonate,** silberol. **s. phos'phate,** a yellow amorphous powder, insoluble in water. **s. pic'rate,** picratol. **s. protal'binate,** largin. **s. pro'tein,** argento-proteinum forte (U.S.) and argento-proteinum mite (U.S.). **s. pro'teinate,** novargan. **s. quinasep'tolate,** argentol. **s. sal'varsan,** argentum arsphenamina.* **s. sodioca'seinate,** argonin. **s. sul'phate,** argenti sulphas. **s. sulphocar'bolate,** silberol. **s. vitell'in,** argyrol.

silver-fork deform'ity. The deformity resembling the curve of the back of a fork seen in Colles's fracture

sil'ver-leaf. Stillingia

sil'ver-stick. Pencil (2).

Silves'ter's meth'od [Henry Robert *Silvester*, English physician, 1829–1908.] Artificial respiration effected, the patient being on his back, by raising the arms upward by the sides of the head, keeping them there two seconds, then turning the arms down and pressing them firmly against the chest for two seconds Called by Silvester the physiological method.

sil'vol. Trade name of a soluble protein-silver compound, of the argentoproteinum* mite type; see *neosilvol*.

simaba (se-mah'bah). The seeds of the cedron fruit, *Simaba cedron*, a small tree of South America, antidyspeptic, antiperiodic, and antispasmodic, in doses of ♏2–5 (0.13–0.3) of a fluidextract.

simaruba (sim-ah-ru'bah). The root-bark of *Simaruba amara* and *S. glauca*, small trees of tropical America, employed as a bitter tonic in doses of ♏10–20 (0.6–1.3) of a fluidextract.

simil'ia simil'ibus curan'tur [L. likes are cured by likes.] The homeopathic formula expressing the law of similars, or the doctrine that any drug which is capable of producing morbid symptoms in the healthy will remove similar symptoms occurring as an expression of disease. Another reading of the formula, the one employed by Hahnemann, the founder of Homeopathy, is *similia similibus curentur*, let likes be cured by likes; this is called by homeopathic writers a rule of art, the other formula being regarded as expressing a law of nature.

simil'imum, simill'imum [L. *similimus*, most like.] In homeopathy, the remedy indicated in a certain case because the same drug, when given to a healthy person, will produce the symptom complex most nearly approaching that of the disease in question

Sim'monds' disease' [Morris *Simmonds*, Hamburg physician, *1855.] Cachexia hypophysea, a triad of symptoms—premature ageing, rapid atrophy of the genital organs with repression of the secondary sexual characters, and loss of hair—noted usually in comparatively young women, due to atrophy or diminished functioning of the hypophysis cerebri.

Si'mon's opera'tion [John *Simon*, English surgeon and obstetrician, 1824–1876] Repair of a ruptured perineum by suturing first the vaginal mucous membrane and then the cutaneous surface.

Simon's opera'tion (ze'mon) [Gustav *Simon*, German surgeon, 1824–1876.] 1. Colpocleisis. 2. Marckwald's* operation. **S.'s posi'tion,** a position for vaginal examination, the woman lying on the

back with hips elevated, thighs and legs flexed, and thighs widely separated; Edebohls' position.

Simon's sep'tic fac'tor (si'mon) [Charles E. *Simon*, American physician, *1866.] In pyogenic infections there is always a diminution or absence of the eosinophiles associated with an increase of the neutrophiles in the blood. **S.'s sign,** in incipient meningitis in children the movements of the diaphragm are dissociated from those of the thorax.

Simon's symp'tom (ze'mon). Polyuria occurring in cases of cancer of the breast, due to metastases to the hypophysis cerebri.

Simonart's threads (se-mŏ-nar') [Pierre Joseph Cécilien *Simonart*, Belgian obstetrician, 1817–1847.] Fibrous bands passing between the fetus and the amnion, due to the stretching of adhesions by the accumulation of fluid.

Simo'nea folliculo'rum. *Demodex folliculorum.*

Simonelli's test (se-mo-nel'le) [F. *Simonelli*, Italian physician] Of renal adequacy: iodine is given internally and if it appears at the same time in the urine and the saliva the kidneys are sound.

sim'ple [L. *simplex.*] 1. Plain, not complicated, not compound 2. A medicinal herb.

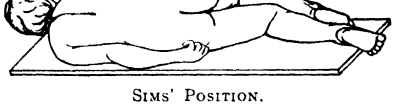
sim'pler, sim'plist. An herb-doctor, one who treats disease with simples.

simplex character (sim'pleks kar'ak-tur) [L. *simplex*, simple, unmixed. In heredity a character for which the determinant is derived from one parent only.

Simp'son for'ceps [Sir James Young *Simpson*, Scottish obstetrician, 1811–1870] An obstetrical forceps (see cut under *forceps*).

Simp'son light. A lamp emitting ultraviolet rays, produced by an electric arc between two electrodes, one of tungstate of iron and the other of manganese.

Simp'son's plug or **splint** [William Kelly *Simpson*, New York laryngologist, 1855–1914] A compressed cotton tampon, cut to shape, inserted into the nasal fossa to retain the parts after operation on the septum, or to plug the nares in epistaxis.



SIMS' POSITION.

Sims' posi'tion [J. Marion *Sims*, American gynecologist, 1813–1883.] To facilitate a vaginal examination, the woman lying on the side with the under arm behind the back, the thighs flexed, the upper one more than the lower. **S.'s spec'ulum,** a double duck-bill vaginal speculum.

SIMS' SPECULUM.

si'mul [L.] At once, at the same time, a term used in the signature of a prescription.

simula'tion [L. *simulare*, to imitate, to feign.] 1. Imitation, said of a disease or symptom which resembles another. 2. Malingering, feigning illness.

Simu'lium. A genus of biting gnats or midges including the black-flies and buffalo-gnats of North America.

sim'ulo. The seeds of *Capparis coriacea*, capers, employed in hysteria and epilepsy in doses of ʒ1–2 (4.0–8.0) of a tincture.

sinal'bin [*sinapis alba*, white mustard.] A fixed oil in white mustard from which acrinyl sulphocyanide is formed by the action of myrasin.

sinam'ine. Allyl cyanamide derived from oil of mustard.

sin'apine. A base, $C_{16}H_{23}NO_5$, not obtained in a free state, existing as a sulphocyanate in white mustard.

Sina'pis [G. *sinapi*, mustard.] A subgenus of *Brassica*, cruciform plants, including mustard. **s. al'ba, s. al'bæ sem'ina** (Br.), white mustard, the ripe seed of *Sinapis alba;* the powder is stomachic in small doses, emetic in large ones; externally is rubefacient and counterirritant employed in the form of poultices or pediluvia. **s. ni'gra** (U.S.), **sina'pis ni'græ sem'ina** (Br.), black mustard, the ripe seed of *Brassica nigra;* used for the same purposes and in the same way as s. alba

sinapis'copy [G. *sinapi*, mustard, + *skopeō*, I examine.] The testing of disorders of sensation by the application of mustard to the skin.

sin'apism. A mustard plaster.

sin'apize. To treat or mix with mustard.

sincipital (sin-sip'i-tal). Relating to the sinciput.

sin'ciput, gen. *sincip'itis* [L. half of the head.] 1. The upper half of the cranium; in a restricted sense the anterior part of the head just above and including the forehead. 2. Bregma.

sin'ew [A.S. *sinu*] 1. A tendon. 2. Popularly, in plural, nervous and muscular strength. **weeping s.,** ganglion (3).

sing. Abbreviation of *singular*, and of L. *singulorum*, of each.

sing'ers' nodes or **nod'ules.** Chorditis tuberosa.

singulta'tion [L. *singultus*, hiccup.] Hiccupping.

singul'tous. Relating to hiccups.

singul'tus [L.] A hiccup.

sin'igrin [*sinapis nigra*] Potassium myronate, a glucoside in black mustard from which the volatile oil of mustard, allyl isosulphocyanate, is formed by the action of myrosin.

sinis'ter, f *sinis'tra*, neut *sinis'trum* [L.] 1 Left. 2 (sin'is-ter) Of evil import, of bad prognosis

sinistrad (sin'is-trad, sin-is'trad) [L. *sinister*, left, + *ad*, to] Toward the left side.

sinistral (sin'is-tral, sin-is'tral). 1. Relating to the left side, left, sinister 2. A left-handed person.

sinistral'ity. Left-handedness.

sinistraural (sin-is-traw'ral) [L. *sinister*, left, + *auris*, ear.] Left-eared; noting one who hears more distinctly with the left ear.

sin'istrin. A levorotatory substance, resembling dextrin in other respects, obtained from squill.

sinistrocardia (sin-is''tro-kar'dĭ-ah) [L. *sinister*, left, + G. *kardia*, heart.] Displacement of the heart beyond the normal position on the left side.

sinis''trocer'ebral [L. *sinister*, left, + *cerebrum*, brain.] Relating to the left cerebral hemisphere.

sinistroc'ular [L. *sinister*, left, + *oculus*, eye.] Left-eyed; noting one who uses the left eye by preference in monocular work, such as the use of the microscope.

sinistrogyration (sin-is-tro-ji-ra'shun) [L. *sinister*, left, + *gyrare*, to turn around.] Sinistrotorsion.

sinistroman'ual [L. *sinister*, left, + *manus*, hand.] Lefthanded.

sinistrop'edal [L. *sinister*, left, + *pes(ped-)*, foot.] Left-footed; noting one who uses the left leg by preference, in hopping for instance.

sinistrorse (sin'is-trors) [*sinister*, left, + *versus*; *vertere*, to turn.] Turned or twisted to the left.

sinistrose (sin'is-trōz). A levorotatory sugar, levulose.

sinistrosis (sin-is-tro'sis) [L. *sinister*, awkward, unlucky, + *-osis*.] Shell-shock.

sinistrotorsion (sin-is"tro-tor'shun). A turning or twisting to the left.

sin'istrous. Sinistral.

sink'aline. Choline in mustard, combined with sinapic acid in sinapine.

sin'uate. Sinuous.

sinuat'rial, sinu-auric'ular. Relating to the sinus venarum and the right atrium of the heart.

sinuitis (sin-u-i'(e')tis) [L. *sinus* + G. *-itis*.] Inflammation of the lining membrane of any sinus, especially of one of the accessory sinuses of the nose, sinusitis. **frontal s.,** metopantritis.

sin'uous [L. *sinuosus*.] Tortuous, bending in several directions.

si'nus, pl. (Eng.) *si'nuses*, (L.) *sinus* [L. bay, hollow.] 1. A channel for the passage of blood, which has not the coats of an ordinary blood-vessel; such are the blood-passages in the gravid uterus or those in the cerebral meninges. 2. A hollow in bone or other tissue; antrum. 3. A fistula or tract leading to a suppurating cavity.

s. a'læ par'væ, s. of the small wing (of the sphenoid bone), s. sphenoparietalis [BNA].

s. aor'tæ [BNA], s. Valsalvæ, the space between each semilunar valve and the wall of the aorta.

s. arte'riæ pulmona'lis [NK], the space at the origin of the pulmonary artery between the wall of the vessel and each cusp of the semilunar valve.

s. basila'ris, plexus basilaris [BNA].

s. caverno'sus [BNA], cavernous sinus, a paired blood-sinus on either side of the sella turcica, the two being connected by anastomoses, the anterior and posterior intercavernous sinuses in front and behind the hypophysis respectively, making thus the circular sinus.

s. circula'ris (1) [BNA], Ridley's circle or sinus, a venous ring around the hypophysis, formed by the cavernous and the two intercavernous sinuses; (2) a venous sinus at the periphery of the placenta; (3) s. venosus scleræ.

s. corona'rius [BNA], a short trunk receiving most of the veins of the heart, running in the sulcus between the left atrium and ventricle, and emptying into the right atrium between the inferior vena cava and the atrioventricular orifice.

s. costomediastina'lis [BNA], see *sinus pleuræ*.

s. du'ræ ma'tris [BNA], sinuses of the dura mater, cerebral sinuses; see the following: *s. cavernosus*, *s. circularis*, *s. intercavernosus anterior*, *s. intercavernosus posterior*, *s. occipitalis*, *s. parasinoideus*, *s. petrosus inferior*, *s. petrosus superior*, *s. rectus*, *s. sagittalis inferior*, *s. sagittalis superior*, *s. sphenoparietalis*, *s. transversus*.

s. epididym'idis [BNA], a narrow space between the body of the epididymis and the testis.

s. ethmoida'lis, one of the air-cells or spaces in the ethmoid bone.

s. fronta'lis [BNA], frontal sinus; a hollow formed on either side by the separation of the two plates of the frontal bone, beneath the superciliary ridge; it communicates by the infundibulum with the nasal fossa of the same side.

s. intercaverno'sus ante'rior [BNA], anterior intercavernous s., see *sinus cavernosus*.

s. intercaverno'sus poste'rior [BNA], posterior intercavernous s., see *sinus cavernosus*.

s. jugula'ris, one of three enlargements of the jugular veins; that of the external jugular (*s. j. externæ*) is between the two sets of valves; those of the internal jugular (*s j. internæ*) are at the origin (*bulbus superior*) and near the termination (*bulbus inferior*).

s. lactif'erus [BNA], ampulla, a circumscribed spindle-shaped dilatation of the lactiferous duct just before it enters the nipple.

s. laryn'gis, ventriculus laryngis [BNA].

s. latera'lis, s. transversus.

s. longitudina'lis, s. sagittalis [BNA].

s. mastoid'eus, one of the cells in the mastoid process of the temporal bone.

s. maxilla'ris [BNA], maxillary sinus, antrum of Highmore; an air cavity in the body of the superior maxilla, communicating with the middle meatus of the nose.

s. obli'quus, oblique s., a pericardial fold covering the posterior aspect of the left atrium (auricle) between that and the esophagus.

s. occipita'lis [BNA], an unpaired vessel commencing at the confluens sinuum and passing downward in the base of the falx cerebri to the foramen magnum where it bifurcates and passes to the transverse sinus and the venous plexus of the upper cervical vertebræ.

s. paranasa'lis [BNA], accessory nasal sinus, one of the cavities in the bones of the face lined by mucous membrane continuous with that of the nasal cavities; these sinuses are the frontal, sphenoidal, maxillary, and ethmoidal.

s. parasinoid'eus, parasinoidal sinus, lacuna lateralis, one of a number of irregular spaces in the dura mater communicating with one of the cranial blood-sinuses.

s. petro'sus infe'rior [BNA], inferior petrosal s., a paired sinus running in the groove on the petro-occipital fissure connecting the cavernous sinus with the bulb of the internal jugular vein.

s. petro'sus supe'rior [BNA], superior petrosal sinus, a paired sinus in the groove on the pyramid of the temporal bone, connecting the cavernous sinus with the transverse sinus.

s. phrenicocosta'lis [BNA], see *sinus pleuræ*.

s. pirifor'mis, recessus piriformis [BNA].

s. pleu'ræ, two recesses of the pleura, one behind the sternum and costal cartilages (*s. costomediastinalis*), the other between the diaphragm and chest wall (*s. phrenicocostalis*).

s. pocula'ris [cup-cavity], utriculus* prostaticus BNA]

s. poste'rior [BNA], a deep groove above the pyramidal eminence in the posterior wall of the tympanic cavity

s. prostat'icus, s. pocularis, utriculus* prostaticus BNA].

s. recta'lis [BNA], one of the grooves, with pocket-like recess at the lower end, separating the rectal columns.

s. rec'tus [BNA], straight s., tentorial s., an unpaired sinus in the posterior part of the falx cerebri where it is attached to the tentorium cerebelli; it passes horizontally to the confluens sinuum.

s. rena'lis [BNA], the cavity of the kidney, containing the calyces and pelvis.

s. reu'niens, s. venosus.

s. rhomboida'lis, rhombocœlia, a dilatation of the central canal of the spinal cord in the lumbar region.

s. sagitta'lis infe'rior [BNA], s. longitudinalis inferior, an unpaired sinus in the lower margin of the falx cerebri, running parallel to the sinus sagittalis superior and emptying into the sinus rectus.

s. sagitta'lis supe'rior [BNA], s longitudinalis superior, an unpaired sinus in the sagittal groove, beginning at the foramen cæcum and terminating at the confluens sinuum.

s. sigmoid'eus, the S-shaped portion of the s. lateralis lying on the mastoid process of the temporal bone and the jugular process of the occipital bone.

s. sphenoida'lis [BNA], a cavity in the body of the sphenoid bone communicating with the nasal fossæ.

s. sphenoparieta'lis [BNA], s. alæ parvæ, a paired sinus beginning on the parietal bone, running along the posterior margin of the lesser wing of the sphenoid, and emptying into the cavernous sinus

s. tar'si [BNA], tarsal s., a hollow or canal formed by a broad groove in the talus, just anterior to the posterior articular facet (*sulcus tali*), and a corresponding groove in the calcaneus (*sulcus calcanei*).

s. termina'lis, the vein bounding the area vasculosa in the blastoderm.

s. tonsilla'ris [BNA], the space between the palatine arches in which lies the tonsil.

s. transver'sus [BNA], transverse s., (1) lateral s., it begins at the internal occipital protuberance (at the confluens sinuum), the right as the continuation of the superior sagittal, the left of the straight sinus, and at the jugular foramen becomes continuous with the internal jugular vein; (2) a passage in the pericardial sac between the tubular sheath covering the origins of the great vessels and the atria, or auricles.

s. tym'pani [BNA], sinus of the tympanum; a small circular depression between the vestibular and cochlear fenestræ on the inner wall of the tympanum.

s. urogenita'lis [BNA], an embryonic structure derived from the cloaca, which is transformed into the vestibule of the vagina in the female and the urethra in the male.

s. Valsal'væ, s. aortæ.

s. vena'rum [BNA], **s. vena'rum cava'rum,** the portion of the cavity of the right atrium (auricle) of the heart which receives the blood from the venæ cavæ; it is separated from the rest of the atrium by the crista terminalis.

s. veno'sus [BNA], saccus reuniens, the posterior of the four dilatations of the primitive tubular heart; the cavity at the posterior end of the cardiac tube in the embryo, in which the veins from the body unite; in the course of development it forms the termination of the venæ cavæ, the portion of the right auricle between the orifices of these vessels, and the coronary sinus.

s. veno'sus scle'ræ [BNA], venous s. of the sclera, canal of Schlemm or of Lauth, a ring-like vein in the sclera, near its anterior edge, encircling the cornea.

s. vertebra'les longitudina'les [BNA], columns of venous plexuses lying on the posterior surfaces of the vertebral bodies on either side of the posterior longitudinal ligament.

straight s., s. rectus.

sinusitis (si-nus-i'(e')tis). Sinuitis.

sinusoid (si'nus-oyd) [L. *sinus* + G. *eidos*, resembling.] 1. Resembling a sinus. 2. A blood-space in certain organs, as the spleen, liver, and pancreas. 3. In mathematics, a sine-curve.

sinusoidal (si-nus-oy'dal). Relating to a sinusoid.

s. current, an alternating induced electrical current in which the two current strokes are equal, the graphic illustration of the current being a sine curve, or sinusoid.

sinusoidaliza'tion. The application of a sinusoidal current; d'Arsonvalization.

SiO_2. Silicic anhydride, silicon dioxide.

siomine (si'o-mēn). Trade name of methenamine tetraiodide, $(CH_2)_6N_4I_4$, containing 78.5 per cent. of iodine; it occurs as a red powder of faint odor and taste; employed for the same purposes and in the same doses as potassium iodide.

si'phon [G. *siphōn*, a pipe.] 1. A bent tube or pipe having legs of unequal length; when the shorter leg is inserted in a vessel containing a liquid and suction is made on the longer leg so as to bring the liquid over the bend into the longer leg, the liquid will continue to flow through the siphon until the vessel is empty. 2. A bottle containing a liquid charged with carbonic acid, with a glass tube running to the bottom of the bottle; when a stop-cock at the upper end of the tube is opened, the presence of the carbonic acid gas forces the liquid out.

siphonage (si'fon-ej). Washing out the stomach or other cavity by means of a siphon.

Siphonaptera (si-fon-ap'tĕ-rah) [G. *siphon*, a tube, + *apteros*, wingless.] A genus of wingless suctorial insects; fleas.

siphono'ma [G. *siphōn*, tube, + *-ōma*.] A neoplasm of tubular structure.

Siphunculata (si-fun-ku-lah'tah) [L. *siphunculus*, dim. of G. *siphon*, tube. An order of suctorial insects which includes the lice.

Sip'py's meth'od [Bertram Welton *Sippy*, Chicago physician. *1866.] Treatment of gastric ulcer by neutralizing the free acid of the gastric juice, with a view to prevent further corrosive action.

si'ren-limb [L. *siren*, a mermaid.] Union of the two lower limbs with partial separation of the feet, sirenomelus; see cut under *sympus*.

sirenome'lia. A monstrosity in which the two lower limbs are fused into one.

sirenom'elus [G. *seirēn*, mermaid, + *melos*, limb.] A monster with fusion of the lower limbs.

siri'asis [G. *seiriasis*, from *seiriaō*, I am hot.] Sunstroke.

si'rolin. Trade name of a 10 per cent. solution of thiocol in syrup, recommended in the treatment of tuberculosis in doses of ʒ 1–2 (15.0–30.0).

sir'up. Syrup.

sismother'apy [G. *seismos*, shaking, + *therapeia*, treatment.] Vibratory massage.

sister. 1. In Great Britain (a) the title of a head nurse in a public hospital or in a ward or the operating room of a hospital; (b) any registered nurse in private practice. 2. In the Roman Catholic Church any member of a sisterhood, not necessarily a nursing sisterhood. **hos'pital s.,** see the main title (1). **the'atre s.,** the head of the nursing staff in a British hospital operating room. **ward s.,** see the main title (1).

Sisto's sign (sis'tōz sīn) [J. *Sisto*, Argentine pediatrist, †1923.] Continuous crying of infants suffering from heredosyphilis.

sistomen'sin. Trade name of an ovarian preparation—"the ovarian hormone in lipoid form"—proposed for the relief of disorders of the menstrual function.

sit'fast. A small hard cutaneous tumor on the back of a horse, often resulting from the induration of a neglected warble.

sitieirgia (sit-I-Ir'jĭ-ah) [G. *sition*, food, + *eirgō*, I refuse.] Refusal to take food.

sitiol'ogy [G. *sition*, food, + *-logia*.] Sitology.

sitioma'nia [G. *sition*, food, + *mania*, frenzy.] Sitomania, bulimia.

sitiopho'bia [G. *sition*, food, + *phobos*, fear.] Sitophobia

sitol'ogy [G. *sitos*, food, + *-logia*.] Dietetics.

sitoma'nia [G. *sitos*, food, + *mania*, frenzy.] Bulimia.

sitopho'bia [G. *sitos*, food, + *phobos*, fear.] An insane fear of taking food.

sitotherapy (si-to-ther'ă-pĭ) [G. *sitos*, food, + *therapeia*, treatment.] Dietotherapy,* trophotherapy.

sitotox'in. Any food poison, especially one developing in grain.

sitotox'ism [G. *sitos*, grain, food, + *toxikon*, poison.] 1. Poisoning by spoiled or fungous grain. 2. Food poisoning in general.

si'tus [L.] Site, situation. **s. inver'sus,** a transposition of the viscera, the liver being on the left side, the heart on the right, etc. **s. perver'sus,** malposition of any viscus. **s. transver'sus,** s. inversus.

sitz-bath [Ger. *sitzen*, to sit.] Hip-bath; one in which the bather sits in a small tub.

sixth nerve. Nervus abducens.

Sjöqvist's meth'od (syö'kvist) [John August *Sjöqvist*, Swedish physician, *1863.] The use of a baryta mixture in the determination of the amount of urea in the urine.

skat'ol skatol'ogy, etc. Scatol, scatology, etc.

skein (skān) [Gael., *sgeinnidh*, hempen thread.] The coiled thread of chromatin seen in the early stage of mitosis. **test skeins,** skeins of wool of various colors used in testing for color-blindness by Holmgren's method.

skelal'gia [G. *skelos*, leg, + *algos*, pain.] Pain in the leg.

skel'etal. Relating to the skeleton. **s. muscle,** a muscle connected at either or both extremities with the bony framework of the body.

skeletiza'tion. Extreme emaciation, "reduced to a skeleton."

skeletogenous (ske-lĕ-toj'en-us) [G. *skeleton*, + *gennaō*, I produce.] Producing a skeleton or bony framework, osteogenic.

skeletol'ogy [G. *skeleton* + *-logia*.] The branch of anatomy and of mechanics dealing with the skeleton.

skel'eton [G. *skeletos*, dried.] 1. The bony framework of the body in vertebrates (*endoskeleton* or *neuroskeleton*) or the hard outer envelope of insects (*exoskeleton* or *dermoskeleton*). 2. All the dry parts remaining after the destruction and removal of the soft parts; this includes ligaments and cartilages as well as bones. 3. All the bones of the body taken collectively. **appendic'ular s.**, the skeleton of the limbs. **ax'ial s.**, the skeleton of the head and trunk. **vis'ceral s.**, the skeleton of the hemal arches, that part of the skeleton which protects the viscera—the anterior portion of the skull, sternum, ribs, and innominate bones; splanchnoskeleton.

Skene's glands [Alexander Johnston Chalmers *Skene*, American gynecologist, 1838–1900.] Paraurethral glands, which see under *glandula*.

skeneitis, skenitis (skēn-i'(e')tis). Inflammation of Skene's glands.

skeneoscope (skēn'-o-skōp) [G. *skopeō*, I inspect.] A form of endoscope for inspecting Skene's glands.

skeocytosis (ske-o-si-to'sis) [G. *skaios*, left + *kytos*, cell, + *-ōsis*.] Deviation* to the left, neocytosis.

skew. 1. Squint, strabismus. 2. A piebald or spotted horse. **s. muscle**, see *muscle*. **s. pu'pils**, deviation of the ocular axes, one passing upward the other downward.

skiagenol (ski-aj'en-ol) [G. *skia*, shadow, + *gennaō*, I produce, + L. *oleum*, oil.] Trade name of a radiopaque oil, a vegetable oil containing 20 per cent of iodine in chemical combination, employed in skiagraphy.

ski'agram [G. *skia*, shadow, + *gramma*, a writing.] A print made from a photographic plate exposed to the action of the *x*-rays, an *x*-ray photograph.

ski'agraph. Skiagram.

skiag'raphy [G. *skia*, shadow, + *graphō*, I write.] The making of *x*-ray photographs, the passage of *x*-rays through a more or less solid substance, such as part of the body, in front of a photographic plate, the softer parts through which the rays penetrate readily appear in light shadow, the bones and other more solid structures appear in darker shadow on the plate.

skiam'eter [G. *skia*, shadow, + *metron*, measure.] A device for measuring the intensity or penetrating power of the *x*-rays.

ski'ascope [G. *skia*, shadow, + *skopeō*, I examine.] An instrument employed in skiascopy.

skias'copy [G. *skia*, shadow, + *skopeō*, I examine.] 1. Retinoscopy. 2. Fluoroscopy.

skin [A.S. *scinn*.] The membranous covering of the body, cutis, integumentum commune [BNA]. **decid'uous s.**, keratolysis. **elas'tic s.**, cutis elastica. **glos'sy s.**, shining atrophy of the skin, usually of the hands, following injury of the nerve supplying the part. **loose s.**, dermatolysis. **parchment s.**, atrophy of the skin. **scarf-s., scurf-s.**, epidermis, cuticle. **true s.**, cutis vera, corium, derma.

absence, adermia. **atrophy,** dermatrophia, atrophoderma, liodermia. **beneath,** hypodermic, hypodematic, subcutaneous. **bleeding from,** dermatorrhagic, hematidrosis, hematopedesis. **blistering,** epispastia-vesicant, vesicatory. **blueness,** cyanosis. **congestion,** dermathemia. **deficiency of pigment,** albinism, alphosis, leucopathia, leucopathy. **description,** dermatography, dermography. **disease,** dermatosis, dermatonosus, dermatopathy; dermatoneurosis, neurodermatosis (of nervous origin); dermatomycosis (parasitic). **discoloration,** dermatodyschroia, parachroia, parachroma, melanosis, denigration; argyria (from silver); xanthopathy, icterus, jaundice (yellow); cyanosis (blue). **dropsy,** anasarca, edema, dermatochysis, hygroderma. **dryness,** xeroderma. **goose,** cutis anserina, dermatospasmus, horripilation. **grafting,** dermepenthesis. **hypertrophy,** dermatauxe, dermatohypertrophy-dermypertrophy, pachyderma. **in,** endermic, endermatic. **inflammation,** dermatitis, dermitis, haplodermatitis, cutitis, scytitis. **livid eruption,** pelidnoma, pelioma, peliosis, ecchymosis, vibices, ecchysis, petechiæ, purpura. **on,** epidermic, epidermatic. **pain,** dermalgia, dermatalgia, dermatodynia. **parasite,** dermatophyte (vegetable), dermatozoon (animal). **pigmentation,** melanosis, melanoderma, hyperchromatosis. **reddening,** rubefacient, epispastic. **redness,** erythrodermia, erubescence, rubefaction. **relating to,** dermal, cutaneous, integumentary. **relaxation,** dermatolysis, dermectasia. **resembling,** dermatoid, dermoid. **science of diseases,** dermatology, dermatonosology, dermatopathology. **softening,** dermatomalacia. **through,** percutaneous, diadermic, diadermatic. **without,** adermic, adermatic, adermous, apellous, skinless. **yellowness,** xanthopathy, xanthochromia, xanthochroia, jaundice, icterus.

skin-bound. Hide-bound, affected with scleroderma.

skin-graft'ing. The placing of bits of epidermis or larger strips of the entire skin on a denuded surface in order to supply defects or to stimulate a new growth of epidermis; for a description of various methods, see *Krause, Ollier, Reverdin, Thiersch Wolfe*.

ski'odan. The sodium salt of iodomethane sulphonic acid, a white crystalline powder, employed in doses of 100 cc. of a 20 per cent solution by intravenous injection as a contrast medium in roentgenography of the urinary tract.

Sklowoky symptom (sklov'skĭ) [E. L. *Sklowsky*, Russian physician, contemporary.] Very slight pressure with the finger on a varicella vesicle will cause its rupture, greater pressure being necessary to break the vesicles of smallpox, herpes, or other affections.

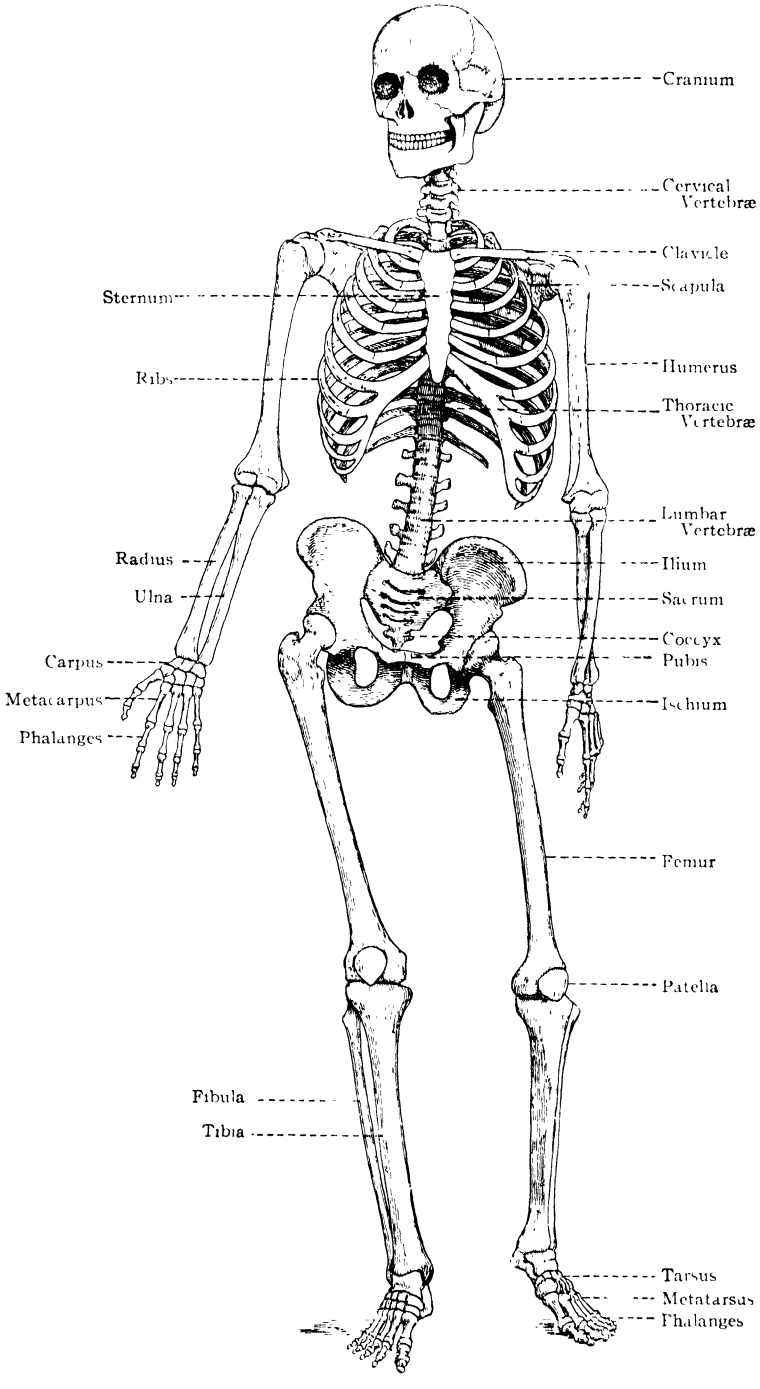
Sko'da's râle [Joseph *Skoda*, Viennese physician, 1805–1881.] A râle in a bronchus heard through an area of consolidated tissue in pneumonia. **S.'s sign,** Skodaic* resonance. **S.'s tym'pany,** S.'s sign.

Skoda'ic. Relating to Skoda. **s. res'onance,** a peculiar high-pitched sound, less musical than that obtained over a cavity, elicited by percussion just above the level of a pleuritic effusion.

sko'tograph. Scotograph.

skull [Early Eng. *skulle*, a bowl.] Cranium, calvaria, the bony framework of the head, consisting of 22 bones, 14 of the face and 8 of the brain-case. **maplike s.**, various defects in the skull, especially in the temporal bone, the anterior fossa, and orbits, forming irregular outlines resembling the national boundaries on an atlas. **nat'iform s.**, the appearance presented by the occurrence of two periostitic syphilitic nodes on the outer table of the skull (Parrot's nodes).

absence, acrania. **back,** occiput. **boat-shape,** scaphocephaly, cymbocephaly. **broadness,** platycephaly. **conical shape,** acrocephaly, oxycephaly. **craniometric points,** acanthion, alveolar, antimion, asterion, auriculare, basion, dacryon, glabella, glenoid, gonion, inion, lambda, malar, mental, metopion, nasion, obelion, ophryon, opisthion, pterion, stephanion (inferior and superior), subnasal. **crushing the fetal,** cephalotripsy, cephalothlasia, cranioclasis, cranioclasty, basilysis, basiolysis, basiotripsy, cephalotomy, craniotomy. **excision of part,** craniectomy; trephining, trepannation, cephalotrypesis, craniotrypesis. **fetal (cartilaginous),** chondrocranium. **fissure,** craniοschisis diastematocrania (longitudinal); craniorrhachischisis (skull and spine). **front,** sinciput, bregma. **having boat-shaped,** scaphocephalic, cymbocephalic. **having broad,** platycephalic, platycranial, platybregmatic.



THE HUMAN SKELETON

having conical, acrocephalic (vertical), oxycephalic, (longitudinal). **having high,** hypsicephalic. **having high and broad,** hypsibrachycephalic. **having high and narrow,** hypsistenocephalic. **having large,** megocephalic, megalocephalic, macrocephalic. **having long,** dolichocephalic, macrocephalic. **having medium sized,** mesocephalic, metriocephalic. **having narrow,** leptocephalic, stenocephalic, stenobregmatic. **having short,** brachycephalic. **having small,** microcephalic nanocephalic. **having thick,** pachycephalic. **having well proportioned,** metriocephalic, orthocephalic. **high vaulted,** hypsicephaly. **instruments for crushing the fetal,** craniotome, cephalotome, cranioclast, cephaloclast, cephalotribe, cephalotryptor, basilyst, basiotribe, craniotrypsotome. **large size of,** cephalonia, megacephaly, megalocephaly, macrocephaly **lengthy,** dolichocephaly, macrocephaly. **measurement of,** craniometry. **narrowness,** leptocephaly, stenocephaly. **plastic surgery,** cranioplasty. **protrusion of contents through a fissure,** craniocele, cephalocele, encephalocele. **puncture of,** cephalocentesis. **science relating to,** craniology, craniometry. **section of the fetal,** craniotomy, cranioclasis **shortness,** brachycephaly; hyperbrachycephaly (extreme). **smallness,** microcephaly, nanocephaly, microseme. **softening,** craniomalacia, craniotabes. **thickening,** craniosclerosis, craniostenosis, pachycephaly. **top,** vertex, calvaria, vault. **vault of,** calvaria. sinciput, skullcap.

skull'cap. 1. Calvarium, sinciput; the upper dome-like portion of the skull, roofing the brain. 2. Scutellaria.

skunk'-cabbage. Dracontium, *Symplocarpus fœtidus.*

slant, slant'-culture. See *culture.*

sleep [A.S. *slæp.*] A physiological state of relative unconsciousness and inaction of the voluntary muscles, the need of which recurs periodically. It is a period of regeneration of the higher nervous system and of muscular tissue, the nutritive and metabolic processes continuing. The number of hours in the twenty-four given to sleep varies from six or seven in the aged to twelve or fourteen in the infant, the average for the male adult being eight and for the female adult nine, these figures varying somewhat with the individual. **elec'tric s.,** a condition of unconsciousness induced by the passage of a Leduc* current through the brain. **mat'in s.,** [Fr. *matin,* morning] morning drowsiness following a dose of 10 grains of phenobarbital the previous evening, as a result of which only about ⅛ the usual amount of ether is needed for anesthetization. **paroxys'mal s.,** sleep epilepsy, narcolepsy; a sudden uncontrollable disposition to sleep occurring at irregular intervals, with or without obvious predisposing or exciting cause

sleep-disor'der. Somnipathy.

sleep-drunk'enness. Somnolentia; a half waking condition in which the faculty of orientation is in abeyance, and under the influence of nightmare-like ideas the person becomes actively excited and violent, sometimes to the extent of inflicting injury upon others.

sleep'iness. Somnolence, an inclination to sleep.

slee'ping cells. See under *cell.*

sleep'ing-sick'ness. 1. African trypanosomiasis, African lethargy, nelavan, narcolepsy; an endemic disease in tropical Africa caused by the presence in the blood and cerebrospinal fluid of *Trypanosoma gambiense,* a protozoan introduced by the bite of a species of tsetse fly, *Glossina palpalis.* The symptoms consist in mental deterioration, an increasing tendency to drowse or sleep, tremors, enlargement of the lymphatic glands, emaciation, an evening elevation of temperature, and a rapid pulse. The disease is uniformly fatal, if untreated, but recovery has been observed after the employment of organic arsenic compounds. 2. Encephalitis lethargica.

sleep'lessness. Insomnia.

sleep-produ'cing. Hypnotic, somniferous, somnifacient, soporific, soporiferous.

sleep-talking (slēp-taw'king). Somniloquence, somniloquism, somniloquy.

sleep-walking (slēp-waw'king). Somnambulism, somnambulance.

slide. An oblong glass plate on which is placed an object to be examined under the microscope.

sling. A supporting bandage, such as a loop suspended from the neck and supporting the flexed forearm. **lentic'ular s.,** ansa lenticularis.

slit-lamp. See *Gullstrand.*

slobb'ering. A condition in farm animals marked by an unnatural flow of saliva due to the ingestion of certain foods, such as fresh red clover hay.

slough (sluf). 1. Necrosed tissue separated from the living structure. 2. To separate from the living tissue, said of a dead or necrosed part. **sloughing phagede'na,** hospital gangrene.

slows (slōz). Milk-sickness, trembles.

Slu'der's meth'od or opera'tion [Greenfield *Sluder,* American laryngologist, *1865.] Removal of the faucial tonsil in its capsule.

S.M.A. Abbreviation for synthetic milk adapted, an artificial infant food, composed of skim milk, milk sugar, and cod-liver oil.

smallpox [E. *small pocks,* or pustules.] Variola, an acute eruptive contagious disease marked at the onset by chills, high fever, backache, and headache; in from 2 to 5 days the constitutional symptoms subside and the eruption appears; this is at first papular, the papules become vesicles, and the latter pustules; the vesicles are umbilicated; the pustules dry and form scabs which on falling off leave a permanent marking of the skin (*pock-marks*). The average incubation period is 8–14 days. **con'fluent s.,** a severe form in which the lesions run into each other, forming large suppurating areas. **discrete' s.,** the usual form in which the lesions are separate and distinct from each other. **hemorrhag'ic s.,** a severe form of s. accompanied by extravasation of blood into the skin in the early stage, or into the pustules at a later stage, accompanied often by nosebleed and hemorrhage from other orifices of the body. **mod'ified s.,** varioloid. **varicel'loid s.,** varioloid. **West Indian s.,** alastrim.

smear, smear-culture. See *culture.*

Smee cell [Alfred *Smee,* London surgeon, 1818–1877.] An electric cell consisting of plates of zinc and of platinized silver in dilute sulphuric acid.

smeg'ma [G. *smēgma,* unguent.] Sebum, secretion of the sebaceous glands; specifically, **s. præpu'tii** [BNA], the whitish cheesy secretion of Tyson's glands which collects beneath the prepuce. **s. clitor'idis** [BNA], the secretion of the odoriferous glands of the clitoris.

smell. 1. To scent, to perceive by means of the olfactory apparatus. 2. The sense of smell, olfaction. 3. An odor, a scent. **or'gan of s.,** organon olfactus. **sense of s.,** olfaction.

smell-brain. Rhinencephalon.

SMELLIE'S SCISSORS.

Smell'ie's scis'sors [William *Smellie,* London obstetrician of Scotch birth, 1697–1763.] Lance-pointed shears, with external cutting edges employed in craniotomy.

Smi'lacin. Smilasaponin, $C_{20}H_{32}O_{10}$, a non-crystalizable substance from sarsaparilla.

Smi'lax [G.] A genus of plants, the root of several tropical American species of which yields sarsaparilla; that of a North American species is used as a substitute for sarsaparilla in doses of ℥½-1 (2.0-4.0) of a fluidextract.

Smith's disease' [Eustace *Smith*, London physician, 1835-1914.] Mucous colitis. **S.'s sign,** a venous hum heard on auscultation over the manubrium sterni when the head is thrown back, in cases of enlarged bronchial glands.

Smith's frac'ture [Robert William *Smith*, Irish surgeon, 1807-1873.] Fracture of the radius near its lower articular surface.

Smith's opera'tion [Henry *Smith*, English surgeon in the India Medical Service.] Extraction of an immature cataract with the capsule intact.

Smith's phenom'enon [Theobald *Smith*, American pathologist, *1859.] A form of anaphylaxis, occasioned in certain animals by the injection of a foreign serum or of some otherwise inert protein, in which a second injection, even in minute quantity, causes respiratory failure, convulsions, paralysis, and often death.

Smith's solu'tion of bro'mine. Liquor bromi (N.F).

smith's spasm. Hephestic* hemiplegia

Smith's stain for pneumococci in sputum. Fix smear by heat, steam with aniline-oil gentian violet and then with a solution of iodine, decolorize in alcohol and then treat for a few seconds with a mixture of alcohol, 4 parts, and ether, 6 parts; stain in aqueous eosin and then in Loeffler's methylene blue, decolorize in 95 per cent. alcohol, dehydrate in absolute alcohol, clear in xylol, and mount in balsam.

Smith's test [Walter George *Smith*, Irish physician, contemporary.] For bile in the urine: when tincture of iodine is poured gently over urine containing bile pigments, a green color appears at the plane of contact of the two fluids.

Smith-Pit'field meth'od [John Blackburn *Smith*, English surgeon, contemporary; Robert L. *Pittfield*, American physician, *1870.] For staining flagella: a mordant is made by saturating a hot saturated solution of corrosive sublimate with ammonia alum, then mixing with an equal part of 10 per cent. tannic acid solution and adding one-half part 5 per cent. carbol-fuchsin solution; the preparation is treated with this mixture and then stained with a saturated alcoholic solution of gentian violet, 1, in a saturated ammonium alum solution, 10.

smokers' can'cer. Epithelioma of the lip or tongue, thought to be due to long continued irritation by hot tobacco smoke or by the stem of a clay pipe.

smudging (smuj'ing). A form of slurring or scamping speech in which the more difficult consonants are dropped.

Sn. The chemical symbol of tin (L. *stannum*).

snagg'le-tooth. A tooth which is out of line with the others.

snake'root. Serpentaria. **black s.,** cimicifuga. **Canada s.,** wild ginger, *Asarum canadense*. **Sen'eca s.,** senega. **smaller white s.,** *Eupatorium aromaticum*. **Texas s.,** *Aritolochia reticulata*, resembling serpentaria in its properties. **Virginia s.,** serpentaria. **white s.,** *Eupatorium ageratoides* or *E. urticæfolium*.

snake-stone. A smooth light piece of pumice stone or calcined bone, applied by natives of tropical countries to snake-bites in the belief that the stone will suck out the venom.

snakeweed. Euphorbia pilulifera.

snake'wort. Bistorta.

snap. 1. To make a sharp sound, as by the closure of a box-lid, the breaking of a dry stick, etc. 2. A short sharp sound, a crack, a click. **o'pening s.,** a sharp click or snap, heard usually in the fourth left interspace a fraction of a second after the beginning of the second heart sound, in cases of mitral stenosis.

snap'finger. Trigger-finger.

snare [A.S. *snear*, a cord.] An instrument for use in removing polypi and other projections from any surface, especially one within a cavity; it consists of a wire loop which is passed around the base of the tumor and gradually tightened. **cold s.,** the ordinary unheated s. **galvanocaus'tic s. hot s.,** a s. the wire of which is raised to a red or white heat by the galvanic current.

sneeze [A.S. *fneósan*.] 1. To expel air from the nose and mouth by an involuntary spasmodic contraction of the muscles of expiration. 2. An act of sneezing, a reflex excited by an irritation of the mucous membrane of the nose.

Snell's law [Willebrord *Snell*, Dutch mathematician, 1591-1626.] Descartes* law.

Snell'en's reform' eye [Herman *Snellen*, Dutch ophthalmologist, 1834-1908.] An artificial eye formed of two concavoconvex plates with a hollow space between them. **S.'s test types,** square black letters printed on a card, employed in testing the acuteness of distant vision; the letters vary in size in such a way that each one subtends a visual angle of 5′ at the distance at which the normal eye should be able to distinguish it.

snore [A.S. *snora*.] 1. A rough rattling inspiratory noise produced by vibration of the pendulous palate, or sometimes of the vocal cords, during sleep or coma; stertor, rhonchus. 2. To breathe noisily, or with a snore.

snot. A vulgar term for a thick mucous secretion from the nose.

snow [A.S. *snāw*.] A crystalline precipitation of frozen aqueous vapor. **carbon-diox'ide s.,** solidified (frozen) carbon dioxide employed in the treatment of warts, lupus, nevi, and other skin affections.

snow'-blindness. Conjunctival irritation caused by the reflection of bright sunlight from snow; it is characterized by photophobia, blepharospasm, a burning pain in the eyes, hyperemia, and chemosis, with or without pronounced amblyopia.

snuff. 1. To inhale forcibly through the nose. 2. Finely powdered tobacco used by inhalation through the nose or applied to the gums. 3. Any medicated powder applied by insufflation to the nasal mucous membrane; errhine. **catarrh' s.,** a powder used by insufflation in the treatment of coryza; a formula is given in the N.F. under the title, pulvis anticatarrhalis.

snuffles (snuf'lz). Obstructed nasal respiration, especially in the newborn infant, then often due to congenital syphilis.

SO_2. Sulphurous anhydride, sulphur dioxide, usually called sulphurous acid, which is properly H_2SO_3.

soam'ine. Sodium para-aminophenylarsonate, an arylarsonate employed in the treatment of syphilis, in doses of gr. 10 (0.6) by hypodermic injection every other day.

soap [A.S. *sāpe*, L. *sapo*, G. *sapōn*.] A compound of a fatty acid with an alkali, used for cleansing purposes and as an excipient in the making of pills and suppositories. **an'imal s.,** sapo animalis. **Castile' s.,** sapo (U.S.), sapo durus (Br.). **curd s.,**

sapo animalis. **green s.**, sapo mollis. **hard s.**, sapo (U.S.), sapo durus (Br.). **insol'uble s.**, a compound of a fatty acid with an earthy or metallic base. **marine' s.**, a soap made of cocoanut-oil or palm-oil and soda which dissolves in salt water. **salt-water s.**, marine s. **soft s.**, sapo mollis. **sol'uble s.**, a compound of a fatty acid with potassa, soda, or ammonia. **superfatt'ed s.**, a s. containing an excess (3 to 5 per cent.) of fat above that necessary to neutralize completely all the alkali; employed in the manufacture of medicated soaps and in the treatment of skin diseases. **tallow s.**, sapo animalis.

soap-albu'min. A combination of soap and albumin, supposed to be the constitution of the intracellular soap granules; protein-fat.

soap-bark. Quillaja.

soap-cyst. Butter-cyst.

soap-root. Yucca.

sob. A short involuntary inspiration, spasmodic in character, accompanying weeping.

socaloin (sok-al'o-in). An aloin, $C_{16}H_{16}O_7$, obtained from Socotrine aloes.

so'cia parot'idis [L. companion of the parotid.] Glandula parotis accessoria, an accessory parotid gland sometimes found detached from the parotid at the beginning of *Stenson's* duct.

social (so'shal) [L. **socius**, a companion.] Noting normal human life in association with others in the same community. **s. diseas'es**, a term incorrectly used to designate venereal diseases, especially gonorrhea and syphilis.

sock'et [L. *soccus*, a shoe, a sock.] 1 The hollow part of a joint, the excavation in one bone of a joint which receives the articular end of the other bone. 2. Any hollow or concavity into which another part fits, as the eye-socket. **s. joint**, enarthrosis. **tooth s.**, alveolus, the cavity in which the root of a tooth is fixed.

Socotrine (sok'o-trēn) [*Socotra*, an island in the Indian ocean.] Relating to the island of Socotra, noting a variety of aloes, *aloe socotrina*, imported from Bombay and official in the B.P.

so'da. Sodii hydroxidum. **s. caus'tica**, caustic soda, sodii hydroxidum. **s. cum calce**, soda with lime, London paste; equal parts of sodium hydroxide and lime; escharotic. **s. tartara'ta** (Br.), tartrated soda, potassii et sodii tartras (U.S.).

soderseine (so-dur'se-ēn). Trade name of colloidal bismuth proposed as a remedy for pertussis.

so''diarsphenami'na. Sodium arsphenamine (see under *arsphenamina*).

so'dic. Relating to or containing soda or sodium. **s. chalyb'eate**, noting a mineral water containing both sodium and iron.

so'dii. Genitive of sodium. **s. acetas, s. carbonas**, etc., see under *sodium*.

sodio-. A prefix denoting a compound containing sodium; as sodiocitrate, sodiotartrate, a citrate or tartrate of some element containing sodium in addition.

sodiocaff'eine sul'phonate. Symphorol Na.

sodiotheobro'mine sal'icylate. Diuretin.

so'dium. A metallic element, symbol Na (L. *natrium*), atomic weight 23, a silvery white lustrous alkali metal of the consistence of wax, oxidizing readily in air or water; the salts of sodium are extensively employed in medicine as well as in the arts. The metal itself is official in the B.P., but only its salts in the U.S.P.

so'dii ace'tas (U.S.), sodium acetate, $NaC_2H_3O_2 + 3H_2O$; colorless, odorless, translucent, prismatic crystals of saline taste, soluble in water; employed as a diuretic in doses of gr. 10–30 (0.6–2.0), and as a laxative in doses of ʒ 1–2 (4.0–8.0).

s. acetsulphan'ilate, cosaprin.

s. anhydrometh'ylene-cit'rate, citarin.

s. am'ytal, a soluble mixture of amytal and sodium for administration internally as a general anesthetic.

so'dii arse'nas (N.F.), sodium arsenate, $Na_2HAsO_4 + 7H_2O$; colorless, odorless, translucent, prismatic crystals, of alkaline taste soluble in water; employed for the same purposes as white arsenic, arsenous trioxide, in doses of $\frac{1}{20}$–$\frac{1}{10}$ (0.003–0.006); the official sodium arsenate of the B. P. is the equivalent of exsiccated sodium arsenate, N.F.

so'dii arse'nas exsicca'tus (N.F.), exsiccated sodium arsenate, sodii arsenas (Br.), Na_2HAsO_4; a white, odorless powder, soluble in water; employed for the same purposes as the preceding in smaller doses, gr. $\frac{1}{30}$–$\frac{1}{15}$ (0.002–0.004).

s. arsenphenolam'ine. s. arsphenamine, sodiarsphenomina (see under *arsphenamina*).

s. arsphenam'ine, s. arsenphenolamine, sodiarsphenamina (see under *arsphenamina*).

s. bar'biturate, barbitalum solubile (U.S.).

so'dii ben'zoas (U.S., Br.), sodium benzoate, $NaC_7H_5O_2$; a white crystalline or amorphous powder, without odor, of a sweetish and slightly astringent taste, soluble in water; employed in chronic gout and rheumatism in doses of gr. 20–60 (1.3–4.0).

so'dii benzosulphim'idum, sodium benzosulphimide, soluble saccharin, glucidum solubile (U.S.).

so'dii bibo'ras (Br.), sodii boras (U.S.), borax, occurs in the form of a white powder or colorless prismatic crystals; employed in solution as a gargle and mouth wash and as a deodorant in bromidrosis.

so'dii bicarbo'nas (U.S., Br.), sodium bicarbonate, sodium hydrocarbonate, $NaHCO_3$; a white inodorous powder of very faintly alkaline taste, soluble in 11 or 12 parts of water, employed in acid dyspepsia, in rheumatism, and in general as an antacid in doses of gr. 5–30 (0.3–2.0)

so'dii bicarbo'nas sacchara'tus, saccharated sodium bicarbonate; sodium bicarbonate 75, sugar 25; used in the preparation of effervescent powders.

so'dii biphos'phas (U.S.), sodium acid phosphate, sodii phosphas acidus (Br.), monosodium orthophosphate. $NaH_2PO_4 + H_2O$; employed to increase the acidity of the urine prior to the administration of hexamine, in doses gr. 10 to 15 (0.6–1.0) in sweetened water.

so'dii bisul'phis, sodium bisulphite, acid sodium sulphite, $NaHSO_3$; granular or crystalline powder, or prismatic crystals of sulphurous odor and taste, soluble in water; employed in gastric and intestinal fermentation in doses of gr. 10–20 (0.6–1.3).

so'dii bo'ras (U.S.), sodium borate, borax (Br.) $NaB_4H_7 + 10H_2O$, colorless, translucent, prismatic crystals without odor and of sweetish alkaline taste, soluble in 17 parts of water; employed as a mouth wash in aphthous stomatitis, and as a douche in leucorrhea, and recommended in epilepsy in doses of gr. 5–30 (0.3–2.0).

so'dii boroben'zoas, sodium borobenzoate; sodium borate 3, sodium benzoate 4; urinary antiseptic in doses of gr. 30 (2.0).

s. borosa'icylate, borsalyl.

so'dii bro'midum (U.S., Br.), sodium bromide, NaBr; colorless, translucent, prismatic crystals, of saline, bitterish taste, soluble in water; employed in epilepsy and other spasmodic affections and as an hypnotic in doses of gr. 10–60 (0.6–4.0).

so'dii cacod'ylas (U.S.), sodium cacodylate, sodium dimethylarsenate, $(CH_3)_2AsO.ONa + 3H_2O$; a white amorphous powder, soluble in water; employed in anemia, leucemia, chorea, and malaria in doses of gr. ½–3 (0.03–0.2).

s. caf'feine-sul'phonate, symphorol Na.

s. canthar'idate, a white, soluble, crystalline powder, employed hypodermically in laryngeal tuberculosis in doses of ♏3–6 (0.2–0.4) of a 0.06 per cent. (6–10,000) solution.

so'dii car'bolas, used in the form of a solution, consisting of phenol, 8 parts, caustic soda, 3½, in distilled water 100.

so'dii carbo'nas (Br.), sodium carbonate, sal soda, washing soda, Na_2CO_3 + 10 H_2O; an inodorous crystalline salt, of alkaline taste, soluble in water; employed internally to meet the same indications as sodium bicarbonate, and externally for the relief of burns, to rheumatic joints, and in scaly diseases of the skin; dose gr. 10–30 (0.6–2.0).

so'dii carbo'nas exsicca'tus (Br.), dried sodium carbonate, Na_2CO_3; a white powder of alkaline taste, soluble in water; employed for the same purposes as sodium carbonate.

so'dii carbo'nas monohydra'tus (U.S.), monohydrated sodium carbonate, $Na_2CO_3 + H_2O$; a white crystalline powder soluble in water; employed for the same purposes as sodium carbonate.

so'dii chlo'ras, sodium chlorate, $NaClO_3$; occurs as a white crystalline powder, of saline taste, soluble in water; employed for the same purposes as potassium chlorate; dose gr. 5–15 (0 3–1 0).

so'dii chlo'ridum (U.S., Br.), sodium chloride, common salt, table salt, NaCl; one of its most important medical uses is in making the physiological salt solution of 0.6 to 0.9 per cent. strength, or about a teaspoonful to the pint.

so'dii cin'namas, sodium cinnamate, hetol; employed in phthisis and as a vasodilator, in doses of gr. 3–5 (0.2–0.3).

so'dii ci'tras (U.S.), sodium citrate, $2Na_3C_6H_5O_7 + 11H_2O$; a white granular powder, of saline taste, soluble in water; diuretic and antilithic in doses of gr.10–30 (0.6–2.0).

so'dii citrotar'tras efferves'cens, effervescent sodium citrotartrate; sodium bicarbonate 17, tartaric acid 9, citric acid 6, sugar 5, thoroughly mixed and passed through a sieve to form a granular powder which dissolves with effervescence in water; diaphoretic and diuretic in doses of ʒi–2 (4.0–8 0).

so'dii cyan'idum, sodium cyanide, occurring in the form of a white granular powder or amorphous pieces, soluble in water and deliquescent; this takes the place of potassium cyanide in the U.S.P. 1900

sodii dehydrocho'las, decholin-sodium, possesses cholagogne properties when administered intravenously.

s. diar'senol, a special make of s. arsphenamine.

s. dithiosal'icylate, dithion

sodii et potassii tar'tras (Br.), Rochelle salt, potassii* et sodii tartras (U.S.)

s. eth'ylate, a reddish yellow, mildly caustic powder, soluble in alcohol and water; employed in 10 per cent aqueous solution in lupus and certain other skin diseases.

s. ethylsul'phate, s. sulphovinate, a white crystalline powder, soluble in water and alcohol; laxative in doses of ʒi–4 (4.0–16.0).

s. flu'oride, fluorol, a white crystalline powder of saline taste, soluble in 25 parts of water; employed in epilepsy, tuberculosis, and malaria in doses of gr $\frac{1}{2}$–$\frac{3}{4}$ (0 005–0.01), and externally in antiseptic dressings in 1 per cent. solution.

s. for'mate, a white crystalline powder soluble in water; employed in pneumonia and tuberculosis in doses of gr. 1–3 (0.06–0.2).

so'dii glycerophos'phas (N.F.), sodium glycerophosphate, sodium glycerinophosphate, occurring in the form of white scales or powder, soluble in water; employed in nervous affections, anemia, and debility in doses of gr. 2–6 (0.13–0.4).

s. group, a group of five (or six) basylous elements lithium, sodium, potassium, rubidium, cæsium (and silver); the latter is not always included in the group, for it differs from the others in physical properties, but resembles them in chemical properties.

so'dii hippu'ras, sodium hippurate, said to be a solvent of uratic gravel and calculi in doses of gr. 5–30 (0.3–2.0).

so'dii hydrox'idum (U.S., Br.), sodium hydroxide, sodium hydrate, caustic soda, NaOH; occurs in hard opaque masses, caustic and of an acrid alkaline taste, soluble in water; employed for the same purposes as, potassium hydroxide.

so'dii hypophos'phis (N.F., Br.), sodium hypophosphite, $NaPH_2O_2 + H_2O$; white granular powder of somewhat bitter sweetish taste, soluble in water; employed in anemia and debility in doses of gr. 5–15 (0.3–1.0).

so'dii hyposul'phis, s. thiosulphas.

so'dii ichthyolsul'phonas, sodium-ichthyol.

so'dii in"digotindisul'phonas (U.S.), sodium indigotindisulphonate, sodium indicarminum (Br.), occurs in the form of a blue powder or a soft purple mass; employed as a stain in microscopy and as a test for renal permeability.

so'dii io'didum (U.S., Br.), sodium iodide, NaI; occurs in cubical crystals or as a white crystalline powder, soluble in water; employed for the same purposes as potassium iodide in doses of gr. 10–30 (0.6–2.0).

so'dii methylarse'nas, sodium methylarsenate, arrhenal, arsenyl, neoarsycodile; colorless soluble crystals obtained by the interaction of methyl iodide and sodium arsenate in the presence of an excess of alkali; employed in tuberculosis, chorea, and other affections in which the cacodylates are used, in doses of gr. $\frac{1}{2}$–1$\frac{1}{2}$ (0 03–0.1).

s. methylsul'phate, colorless crystals, soluble in water, employed for the same purposes as s. ethylsulphate.

so'dii ni'tras, sodium nitrate, cubic niter, Chile saltpeter, $NaNO_3$; a colorless crystalline powder of a cooling, saline, bitterish taste, soluble in water; has been employed in diarrhea in doses of ʒi–2 (4 0–8.0).

so'dii ni'tris (U S , Br), sodium nitrite, $NaNO_2$; white crystalline powder of saline taste, soluble in water; has been employed for the same purposes as nitroglycerin in doses of gr. 1–3 (0 06–0.2).

s. nu'cleate, s. nu'cleinate, a salt employed, apparently beneficially, in the treatment of scarlet fever.

s. o'leate, eunatrol, a white soft mass, used as a cholagogue in doses of gr. 10–15 (0.6–1.0).

s. paracre'sotate, a crystalline powder of bitter taste, soluble in warm water; recommended as a gastric and intestinal antiseptic in doses of gr. 2–10 (0.13–0.6).

so'dii perbo'ras (N.F.), sodium perborate, obtained by the action of boracic acid on sodium peroxide; employed in the extemporaneous preparation of hydrogen peroxide, 25 gm. in 1 liter (7 drams to 1 quart) of water being said to make a 5-volume hydrogen peroxide.

so'dii perox'idum, a white or yellowish amorphous powder, used externally as a paste or soap in the treatment of comedones.

so'dii phenolsul'phonas, sodii sulphocarbolas (Br.), occurs as white rhombic crystals soluble in 5 parts of water; employed in tonsillitis and as an intestinal antiseptic in doses of gr. 5–15 (0.3–1.0).

so'dii phos'phas (U S., Br.), sodium phosphate, sodium orthophosphate, $Na_2HPO_4 + 12H_2O$; a granular crystalline salt, with a cooling saline taste, soluble in 5.5 parts of water; laxative in doses of ʒ$\frac{1}{2}$–2 (2 0–8 0)

sodii phos'phas ac'idus (Br.), sodii biphosphas (U.S.).

so'dii phos'phas efferves'cens (U.S , Br.), exsiccated sodium phosphate 200, sodium bicarbonate 477, tartaric acid 252, citric acid 162, mix and pass through a sieve to make a granular salt; dose ʒi–4 (4.0–16 0)

so'dii phos'phas exsicca'tus (U.S), exsiccated sodium phosphate, anhydrous or dried sodium phosphate; dose gr. 10–60 (0.6–4.0).

so'dii pyrophos'phas, sodium pyrophosphate, $Na_4P_2O_7 + 10H_2O$, a crystalline powder of cooling saline taste, soluble in 11$\frac{1}{2}$ parts of water; employed occasionally as a laxative in doses of gr. 10–20 (0 6–1.3).

s. rho'danate, s. thiocyanate.

so'dii salicyl'as (U.S. and Br.), sodium salicylate, in white tabular crystals or scales; employed in rheumatism, neuralgia, influenza, intestinal fermentation, tonsillitis, and other affections in doses of gr. 10–30 (0.6–2.0).

so'dii santoni'nas (U.S. 1880), sodium santoninate, colorless, translucent plates of bitter taste, soluble in water; formerly employed as an anthelmintic.

s. sil'icate, soluble glass, water glass, Na_2SiO_3, made by fusing together sodium carbonate and powdered quartz; a solution is used to impregnate bandages for applying fixed dressings; it has also been given internally in gout and tuberculosis.

s. silicofiu'oride, a white granular powder, odorless and tasteless, employed as an antiseptic irrigating fluid in solutions of from 1–2000 to 1–500.

s. ste'arate, a white powder of soapy feel, soluble in water; used externally in sycosis and parasitic skin diseases.

s. suc'cinate, white prismatic crystals, soluble in water; employed in catarrhal jaundice in doses of gr. 5–15 (0.3–1.0).

s. sulphan'ilate, white shining leaflets soluble in water, employed to correct iodism in doses of gr. 5–15 (0.3–1.0).

so'dii sul'phas (U.S., Br), sodium sulphate, Glauber's salt, $Na_2SO_4+10H_2O$; colorless, prismatic crystals, of a saline bitter taste, soluble in 2.8 parts of water; it is an ingredient of many of the natural laxative waters; employed as a purgative in doses of ʒ 2–8 (8.0–30.0).

so'dii sul'phas efferves'cens (Br), sodium sulphate 25, sodium bicarbonate 25, tartaric acid 13.5, citric acid 9, mix and pass through a sieve to form a coarsely granular powder; dose ʒ 1–2 (4.0–8.0).

so'dii sul'phis (Br.), sodium sulphite, $Na_2SO_3+7H_2O$; colorless, translucent, prismatic crystals of a sulphurous saline taste, soluble in water; employed for the relief of intestinal fermentation in doses of gr. 20–40 (1.3–2.6), and externally in aphthous stomatitis.

so'dii sul'phis exsicca'tus, dried sodium sulphite, occurring in the form of a white powder, soluble in three parts of water; employed for the same purpose as sodium sulphite in doses of gr. 10–20 (0.6–1.3).

so'dii sulphocar'bolas (Br.), sodii phenolsulphonas.

soddi sulphocy'anas, s. thiocyanate.

s. sulphoric'inate, s. sulphoricino'leate, polysolve, solvin, made by combining castor oil, sulphuric acid, and sodium hydroxide and chloride; a thick brownish yellow liquid forming an emulsion with water; used as a solvent for iodine, iodoform, resorcinol, pyrogallol, and a number of other substances for external use.

s. sulphovi'nate, s. ethylsulphate.

s. tar'trate, $Na_2C_4H_4O_6+2H_2O$; white soluble crystals, employed as a diuretic in doses of gr. 15–30 (1.0–2.0), and as a laxative in doses of ʒ 4–8 (15.0–30.0).

s. taurocho'late, a yellowish gray powder soluble in water, extracted from the bile of carnivora; cholagogue in doses of gr. 2–6 (0.13–0.4).

s. tel'lurate, a white soluble powder, employed in the night sweats of phthisis in doses of gr. ¼–½ (0.015–0.05).

s. thiocy'anate, s. sulphocyanate, s. rhodanate, a salt recommended for the reduction of high blood pressure, for the relief of insomnia due to hypertension, in cases of narcotic addiction and in the crises of tabes dorsalis.

so'dii thiosul'phas (U.S and Br.), sodium thiosulphate or hyposulphite, $Na_2S_2O_3+5H_2O$; employed in solution as a lotion for ringworm and chloasma, and internally as a purgative and to reduce blood pressure in doses of gr. 15–60 (1.0–4.0).

s. val'erate, s. vale'rianate, a white crystalline mass or powder, of unctuous feel with faint odor and taste of valerian, soluble in water; a nervine tonic in doses of gr. 2–5 (0.13–0.3).

so'dium-ichthyol (ik'the-ol). Sodium ichthyolsulphonate, occurs as a brown mass soluble in the usual menstrua; employed as an alterative and antiseptic in doses of gr. 2–10 (0.13–0.6).

sodoku (sŏ-do'koo) [Jap. rat-poison.] Rat-bite fever; the proper name is sokosho.

sod'omist, sod'omite [G. *sodomitēs*, an inhabitant of *Sodom*, a city destroyed by fire, according to the Biblical narrative, on account of the wickedness of its people.] One who practises sodomy.

sod'omy. Unnatural sexual relations between persons of the same sex, especially males, or between a beast and a human.

sodophthalyl (so-dof-thal'il). A derivative of phenolphthalein, disodoquinone phenolphthalein; used as a laxative.

Soemmering's fora'men (zē'mĕ-ring) [Samuel Thomas von *Soemmering*, German anatomist, 1755–1830.] Fovea centralis, which was thought at one time to be an opening. **S.'s gan'glion,** substantia nigra. **S.'s gray sub'stance,** the anterior portion of the anterior perforated space, of a darker color than the rest. **S.'s lig'ament,** suspensory ligament of the lacrymal gland. **S.'s nerve,** the long pudendal nerve, a branch of the small sciatic, running through the anterior portion of the perineum and supplying the skin of the scrotum. **S.'s spot** or **yellow spot,** macula lutea.

so'fos. Trade name of a mixture of acid sodium phosphate, sodium biphosphate, employed to meet the same indications as effervescent sodium phosphate, in doses of drams 1 to 4 (4 to 16) in a glassful of water.

soft [A.S. *sōfte.*] Not hard, not resistant, yielding. **s. comm'issure,** commissura media, commissura mollis, massa* intermedia [BNA]. **s. palate,** velum pendulum palati, palatum* molle. **s. parts,** the non-bony and non-cartilaginous tissues of the body. **s. soap,** sapo mollis.

softening (sawf'ning). Malacia, mollities, the act of becoming or state of being soft, a diminution of the normal consistence of a tissue. **ane'mic s.,** white softening of the brain. **gray s.,** a stage of s. following yellow s. in which there has been more or less absorption of the fat. **hemorrhag'ic s.,** red s. **mucoid s.,** myxomatous degeneration. **red s.,** s. of the brain in which bleeding has taken place into the necrosed part. **white s.,** anemic s., s. of the brain due to complete cutting off of the blood-supply. **yellow s.,** a late stage of s. of the brain in which fatty degeneration of the cells has occurred together with a deposit of altered blood pigment.

soil-disease'. A disease supposed to be caused by emanation from the soil.

soja bean (so'yah bēn). Soy bean.

soko'sho (Jap. *so,* rat, + *ko,* bite, + *sho,* malady] Rat-bite fever.

sol. 1. A colloidal dispersion in which the dispersed particles are of the size of submicrones. 2. Abbreviation of *solution.*

solan'idine. A crystallizable alkaloid, $C_{26}H_{41}NO_2$, obtained by treating solanine with dilute acids; its effects are similar to those of solanine, but it is said to be free from the irritant action of the latter.

so'lanine. An alkaloid of not definitely determined composition obtained from dulcamara and from potato sprouts; it causes nausea and vomiting, dryness of the fauces, vertigo, headache, weak pulse, and muscular tremors or convulsions.

sol'anoid [L. *solanum* + G. *eidos,* resemblance.] Resembling a potato in texture, said of certain malignant growths.

solano'ma [L. *solanum* + G. *-ōma.*] A solanoid neoplasm.

Sola'num [L. nightshade.] A genus of plants of the order *Solanaceæ,* including various species of nightshade as well as the potato. **S. carolinen'se,** the horse-nettle, apple of Sodom, a North American plant the berries of which are official in the N. F. and are used in eclectic practice in the treatment of epilepsy and other convulsive affections and of whooping-cough, in doses of ♏10–20 (0.6–1.3) of the specific preparation. **S. dulcama'ra,** bitter sweet, see *dulcamara.* **S. nigrum,** black nightshade. **S. tubero'sum,** the potato.

sola'num (N.F.). The dried ripe fruit of *Solanum carolinense;* used in epilepsy in doses of ʒ 1 (4.0) of the fluidextract.

so'lar [L. *solaris; sol,* sun.] Relating to the sun or sunlight. **s. fever,** dengue. **s. gan'glion,** ganglion cœliacum [BNA]. **s. plexus,** plexus cœliacus [BNA.] **s. ther'apy, s. treatment,** heliotherapy.

solargen'tum. Trade name of a silver preparation of the argentoproteinum mite type

sola'rium [L. *sol*, sun.] A sun-parlor, an outside gallery or roof-room enclosed in glass.

solarization (so-lar-i-za'shun). The loss of permeability to the short (ultraviolet) rays of the sun in "Vita" and similar makes of glass; this goes on for a period of eight or nine months after which (period of stabilization) no further change occurs.

solarize (so'lar-īz) [L. *solaris*, relating to the sun.] To expose vulcanite to sunlight in order to fix the color.

solarson (sōl-ar'son). A one per cent. solution of ammonium heptenchlorarsonate with the addition of sufficient sodium chloride to render it isotonic; employed in subcutaneous or intramuscular injections in doses of ♏15 to 30 (1 to 2 c.c.), as a tonic and hematinic in anemia, chlorosis, malaria and various nervous and cutaneous diseases.

solation (sol-a'shun). In colloidal chemistry, the transformation of a gel into a sol.

Soldaini's rea'gent (sol-dah-e'ne) [Arturo *Soldaini*, Italian chemist.] Copper carbonate 15, potassium bicarbonate 416, water 1400; one part of this reagent boiled with two parts of urine will result in the throwing down of a yellow precipitate if the urine contains glucose.

sole [A.S.] The under part of the foot, the plantar **surface, planta** [BNA].

solenoid (so-le'noyd, so'le-noyd) [G. *sōlēn*, a pipe, a groove, + *eidos*, resemblance.] 1. A coil of wire in the shape of a cylinder; when a bar of iron is placed in the center of the cylinder and a current of electricity is passed through the wire the iron core becomes a magnet. 2. An apparatus like a large solenoid used for d'Arsonvalization.

sole-plate. The arborization, surrounded by granular protoplasm, of the axis-cylinder, constituting the nerve end-organ in muscle

sole'us [L. *solea*, sole, sandal.] See under *musculus*.

solferino (sol-fer-e'no). Rosaniline, fuchsin.

sol'id [L. *solidus*.] 1. Firm, compact, not fluid; without interstices or cavities, not cancellous. 2. A body which retains its form when not confined, one which is not fluid, neither liquid nor gaseous.

Solida'go [L.] A genus of plants of the order *Compositæ*, the goldenrods. **S. odo'ra,** sweet or fragrant goldenrod, and **S. virgau'rea,** Aaron's rod, wound-wort, have carminative and astringent properties.

sol'idism. The ancient doctrine that diseases are due to changes in the solid parts of the body; opposed to *humoralism*.

sol'idist. An adherent of the doctrine of solidism.

solidis'tic. Relating to solidism.

sol'itary [L. *solitarius; solus*, alone.] Alone, single, not agminated or forming one of a group. **s. bundle,** fasciculus solitarius. **s. foll'icles, s. glands,** noduli lymphatici solitarii [BNA].

sol'oid. Trade name of a figure in the shape of a truncated cone into which certain salts and other drugs are compressed for convenience in dispensing. **s. ni'zin,** trade name of zinc sulphanilate in 2 grain tablets, used in the strength of 1 tablet in 2 fluidounces of water as a collyrium, and in solutions of 1 to 3 tablets in one fluidounce of water as an astringent and antiseptic injection in gonorrhea.

Sol'omon's seal. The rhizome of several species of *Polygonatum*, having properties similar to those of convallaria.

Solovieff's phenom'enon (sŏ-law'vĭ-yef). Phrenic* phenomenon in tetany

sol'phinol. Trade name of a white crystalline powder said to be composed of boric acid, borax, and various sulphites, recommended as an external antiseptic.

solubil'ity. The property of being soluble.

sol'uble [L. *solubilis; solvere*, to dissolve.] Capable of being dissolved.

sol'ubrol. Trade name of an orange-yellow inodorous powder recommended as a substitute for iodoform.

so'lum tym'pani [L. *solum*, bottom.] [NK]. Fundus tympani.

sol'urol. A trade name for thyminic* acid.

solute (so-lūt') [L. *solutus*, dissolved.] The dissolved substance in a solution.

solutio (so-loo'tĭ-o) [L.] Solution, a title given to two preparations in the National Formulary. **s. mas'tiches chlorofor'mica compos'ita** (N.F.), compound chloroformic solution of mastic, pulp-capping varnish (mastic and balsam of *Peru*, each 30, in chloroform q.s. to make 100). **s. resi'næ chlorofor'mica** (N.F.), rosin 20, dissolved in chloroform sufficient to make 100.

solution (so-lu'tion) [L. *solutio; solvere*, to dissolve.] 1. The termination of a disease by crisis. 2. A break, cut, or laceration of the solid tissues, used in the term, *solution of continuity*. 3. The incorporation of a solid or a gas in a fluid substance, the resultant being a homogeneous liquid; cf. *dispersion* and *suspension*. 4. Specifically, in pharmacy, an aqueous solution of a non-volatile substance. In the language of the Pharmacopœia, an aqueous solution of a non-volatile substance is called a solution or *liquor;* an aqueous solution of a volatile substance is a water or *aqua;* an alcoholic solution of a non-volatile substance is a tincture or *tinctura;* an alcoholic solution of a volatile substance is a spirit or *spiritus;* a solution in vinegar is a vinegar or *acetum;* a solution in glycerin is a glycerite or *glyceritum;* a solution in wine is a wine or *vinum;* a solution of sugar in water is a syrup or *syrupus;* a solution of a mucilaginous substance is a mucilage or *mucilago;* a solution of an alkaloid or metallic oxide in oleic acid is an oleate or *oleatum*. [For definitions of *Donovan's s., Fowler's s.*, and other eponymic terms, see the proper names.] **ace'tic s.,** acetum. **alcohol'ic s.,** spiritus; tinctura. **a'queous s.,** aqua; liquor. **arsen'ical s.,** Fowler's* s. **centinor'mal s.,** a solution one-hundredth the strength of a normal s., abbr. $\frac{n}{100}$. **chem'ical s.,** one in which the solute and solvent react to form a new substance which is then dissolved in the remainder of the solvent; the original substance cannot be recovered on evaporation. **coll'oid s.,** an apparent solution of a colloid substance, a dispersoid* or an emulsoid.* **decanor'mal s.,** one that is ten times the strength of a normal S. **decinor'mal s.,** a solution one-tenth the strength of a normal s., abbr. $\frac{n}{10}$. In the case of sodium chloride, this is approximately the so-called physiological salt solution, which is, however, frequently and incorrectly called a normal salt solution. **ethe'real s.,** a solution of any substance in ether. **grammolec'ular s.,** a solution of the strength of one gram*-molecule of any substance in one liter of water or other menstruum; normal s. **isoton'ic salt s.,** a solution of sodium chloride having the same density or osmotic tension as the blood serum; a physiological salt

solution, one which, when injected into the blood-vessels, ill cause neither a swelling nor a shrinking of the red corpuscles. **molec'ular dis'persed s.**, dispersoid. **normal s.**, one which contains in one liter sufficient of the dissolved substance to replace one gram of hydrogen; the number of grams per liter required to make a normal solution is that indicated by the molecular weight of the salt; a normal solution of NaCl contains therefore 58.37 grams per liter, or 5.837 per cent., which is approximately ten times the strength of the physiological salt solution, usually called, incorrectly, a normal salt solution. **nu'clear s.**, hypochromatosis, chromatolysis, caryolysis. **phys'ical s.**, a simple s. in which there is no change in composition of either solute or solvent, the former being found unaltered on evaporation of the latter. **physiolog'ical salt s.**, liquor sodii chloridi physiologicus (U.S.), a 0.85 per cent. solution of sodium chloride in distilled water; approximately a decinormal s., but usually called a normal salt solution. **saline s.**, a s. of sodium chloride. **sat'urated s.**, one which contains all of a substance which the menstruum is capable of dissolving. **seminor'mal s.**, a solution one-half the strength of a normal s., abbr. $\frac{n}{2}$. **standard s., stan'dardized s.**, a solution of definite strength used as a standard of comparison with other solutions of the same substance. **supersat'urated s.**, a solution containing more of the solid than the menstruum would ordinarily dissolve; it is made by heating the solvent when the substance is added, and on cooling the latter is retained without precipitation **test s.**, a solution of some reagent, in definite strength, used in chemical analytic operations. **volumet'ric s.**, standard s

solv. Abbreviation of L. *solve*, dissolve.

solvate (sol'vāt). A non-aqueous solution or dispersoid in which there is a combination of some kind between solvent and solute. or dispersion means and disperse phase; a similar aqueous solution or dispersoid is called a hydrate.

solvation (sol-va'shun). Chemical combination of a non-aqueous solvent with the solute, or of a dispersion means with the disperse phase.

sol'vent [L. *solvens; solvere*, to dissolve.] 1. Capable of dissolving. 2. A menstruum, a liquid which holds another substance in solution.

sol'veol. Trade name of a liquid said to contain cresol, dissolved in a solution of a sodium salt; employed as an antiseptic in surgical dressings and in the treatment of skin diseases, in 1 to 5 per cent. solution.

sol'vin. Sodium sulphoricinate.

solvochin (sol'vo-kin). Quinine urethane, recommended in the treatment of pneumonia.

soma (so'mah) [G.] The body, including the head and neck, without the limbs.

somacule (so'mah-kūl) [*somaculum*, L. dim. form of G. *sōma*, body.] A protoplasmic molecule, the smallest conceivable particle of protoplasm.

somæsthe'sia. Somatesthesia.

somasthenia (so-mas-the'nĭ-ă). Somatasthenia.

somatasthenia (so-mat-as-the'nĭ-ă) [G. *sōma* (*sōmat-*), body, + *asthenia*.] A condition of chronic physical weakness and fatigability, usually associated with low blood pressure, as distinguished from neurasthenia.

somatesthesia, somatæsthesia (so"mah tes-the'zĭ-ah) [G. *sōma*(*sōmat-*), body, + *aisthēsis*, sensation. Bodily sensation, the consciousness of the body

somatesthet'ic. Relating to somatesthesia

somat'ic [G. *sōmatikos*, bodily.] 1. Relating to the soma or trunk. 2. Relating to the wall of the body-cavity; parietal. 3. Relating to the body; corporeal, physical. 4. Relating to the vegetative as distinguished from the generative, functions; vegetative, trophic.

somaticosplanchnic (so-mat-ĭ-ko-splank'nik) [G. *sōmatikos*, relating to the body, + *splanchnikos*, relating to the bowels.] Relating to the body and the viscera.

somaticovisceral (so-mat-ĭ-ko-vis'er-al). Somaticosplanchnic.

somatist (so'mă-tist) [G. *sōma*, body.] In neurology and psychiatry one who regards any particular neurosis or psychosis as of organic or physical origin.

somatochrome (so'mat-o-krōm) [G. *sōma*, body, + *chrōma*, color.] Noting the group of neurons or nerve-cells in which there is an abundance of cytoplasm completely surrounding the nucleus.

somatodid'ymus [G. *sōma*(*sōmat-*), body, + *didymos*, twin.] A twin monster with fused bodies.

somatogenic (so"mah-to-jen'ik) [G. *sōma*(*sōmat-*), body, + *-genēs*.] Originating in the soma or body under the influence of external forces.

somatol'ogy [G. *sōma*, body, + *-logia*.] 1. The science which deals with the body, including both anatomy and physiology.

so'matome [G. *sōma*, body, + *tomos*, cutting.] A somite or metamere. 2. An instrument for cutting the trunk in embryotomy.

somatop'agus [G. *sōma*(*sōmat-*), body, + *pagos* fastened together.] A twin monster attached by the bodies.

somatopathic (so-mă-to-path'ik) [G. *soma*, body, + *pathos*, suffering.] Bodily or organically ill, as distinguished from nervous (neuropathic) or mental (psychopathic) disorder.

so'matoplasm [G. *sōma*(*sōmat-*), body, + *plasma*, something formed.] 1. The protoplasm of the cell-body. 2. The aggregate of all the forms of specialized protoplasm entering into the composition of the body.

so"matopleu'ral. Relating to the somatopleure.

somatopleure (so'mă-to-plūr) [G. *sōma*(*sōmat-*), body, + *pleura*, side.] The embryonic layer formed by the union of the parietal layer of the mesoderm with the ectoderm; somatic mesoblast.

somatopsychic (so"mă-to-si'kik) [G. *sōma*, body, + *psychē*, soul.] Relating to both body and mind.

so'matose. Trade name of a food preparation of the soluble albumin of beef.

somatosplanchnopleuric (so"mă-to-splank"no-plu'rik). Relating to both somatopleure and splanchnopleure.

somatot'omy [G. *sōma*(*sōmat-*), body, + *tomē*, a cutting.] Anatomy of the animal body; dissection.

so"matotrid'ymus [G. *sōma*(*sōmat-*), body, + *tridymos*, triplet.] A triple monster united by the bodies.

somesthe'sia. Somatesthesia.

somite (so'mīt) [G. *sōma*, body.] Primitive segment; one of the pair of masses, formed from the mesoderm between the digestive canal and the surface of the body in the embryo, from which the segment, provertebra, or metamere is developed.

som'nal [L. *somnus*, sleep.] An hypnotic compound of alcohol, chloral, and urethane, ethylated chloral-urethane; dose gr. 15–30 (1.0–2.0).

somnam'bulance. Somnambulism.

somnam'bulism [L. *somnus*, sleep, + *ambulare*, to walk about.] 1. A sleep disorder in which a person walks, writes, or performs other complex acts automatically while in a condition of som-

nolence, having no recollection, on awaking, of what he has done. 2. A condition in which one's mental processes are conducted in a more or less unusual or odd way, and in which one seems confused and almost as if asleep.

somnam'bulist. A sleep-walker, one who is subject to somnambulism.

somnifa'cient [L. *somnus*, sleep, + *facere*, to make.] 1. Soporific, hypnotic, causing sleep. 2. An agent which produces sleep.

somnifaine (som'nĭ-fah-ēn). A solution of somnifen, of the diethylamine salts of allyl-isopropyl-barbituric acid, and of veronal, hypnotic and surgical anesthetic in doses of ♏30 (2.0) intramuscularly.

somnifen (som'nĭ-fen). A soluble drug of the barbituric acid group, used as an hypnotic and in the treatment of psychoses by prolonged hypnosis.

somnif'erous [L. *somnus*, sleep, + *ferre*, to bring] Somnifacient (1).

somnif'ic. Somnifacient.

somniloquence, somniloquism (som-nil'o-kwens, som-nil'o-kwizm) [L. *somnus*, sleep, + *loqui*, to talk.] 1. Talking in one's sleep. 2. Somniloquy.

somnil'oquist. An habitual sleep-talker.

somniloquy (som-nil'o-kwĭ). Talking under the influence of hypnotic suggestion.

somnip'athist. 1. A sufferer from any sleep-disorder. 2. A subject of induced hypnotism.

somnip'athy [L. *somnus*, sleep, + G. *pathos*, suffering.] 1. Any disorder of sleep. 2. Hypnotism.

som'noform. Trade name of an anesthetic mixture, said to contain ethyl bromide, 5, ethyl chloride, 60, and methyl chloride, 35; recommended as an anesthetic for minor surgical operations and in dentistry.

som'nol. Trade name of a synthetic hypnotic derived from chloral-methane; dose ʒ½–2 (2.0–8.0).

som'nolence, som'nolency [L. *somnolentia*.] 1. Drowsiness, sleepiness. 2. A condition of semiconsciousness approaching coma.

som'nolent [L. *somnus*, sleep.] 1. Sleepy, drowsy, having an inclination to sleep. 2. In a condition of incomplete sleep, semicomatose.

somnolentia (som-no-len'shĭ-ah) [L.] 1. Somnolence. 2. Sleep-drunkenness.

somnolescent (som-no-les'ent). Inclined to sleep, drowsy.

som'nolism. Hypnotism.

som'nos. Trade name of an hypnotic, said to be a solution of chloral glycerolate, obtained by the interaction of glycerin and anhydrous chloral; dose ʒ1–4 (4.0–16.0).

som'nus [L.] Sleep.

somosphere (so'mo-sfēr) [G. *sōma*, body, + *sphaira*, sphere.] One of the constituents, with the centrosome and centrosphere, of the archiplasm.

son'ifer [L. *sonus*, sound, + *ferre*, to carry.] A form of ear-trumpet, consisting of a receiver connected by a flexible tube with an ear-piece

son'itus [L. din.] Tinnitus aurium.

Sonne bacill'us (sun'na) [Carl *Sonne*, Danish physician, contemporary.] An acid-forming bacillus, producing lateral branchings in gelatin stab cultures, found in certain cases of dysentery.

sonom'eter [L. *sonus*, sound, + G. *metron*, measure.] A form of acoumeter, in the shape of a bell struck with varying degrees of force.

sono'rous [L. *sonorus; sonor*, sound] Resounding, giving forth a sound. **s. râle**, a dry râle varying in character from a soft coo to a snore; it is often produced by the vibration of a mass of fibrinous exudate or viscid mucous secretion in a bronchus.

sophis'ticate [G. *sophistikos*, fallacious.] To adulterate.

sophistica'tion. Adulteration.

so'phol. Trade name of an organic silver compound, silver formonucleinate; a brown soluble powder recommended in conjunctivitis in 3 to 5 per cent. solution.

sophomania (sof-o-ma'nĭ-ah) [G *sophos*, wise, + *mania*, frenzy.] A form of megalomania in which the patient has an extravagant belief in his own wisdom.

Sopho'ra [Ar. *sofāra*.] A genus of plants of the order *Leguminosæ*, or bean-family. **S. secundiflo'ra,** coral-bean, a Texas species containing sophorine. **S. tomento'sa,** a tropical species, the bean of which has been used in cholera.

soph'orine. An amorphous poisonous alkaloid from *Sophora secundiflora* and other species of *S.*, probably the same as cytisine and ulexine.

so'por [L.] Stupor, an unnaturally deep sleep.

soporif'erous [L. *sopor*, deep sleep, + *ferre*, to bring.] Soporific.

soporif'ic [L. *sopor*, deep sleep, + *facere*, to make.] Hypnotic, somnifacient, causing deep sleep.

so'porose, so'porous [L. *sopor*, deep sleep.] Relating to or causing sopor; comatose, stuporous.

sorbefa'cient [L. *sorbere*, to suck up, + *facere*, to make.] 1. Causing absorption. 2. An agent which causes or facilitates absorption.

sor'bin. Sorbose, a very sweet non-fermentable glucose, $C_6H_{12}O_6$, obtained from the berries of the mountain ash, *Sorbus aucuparia*.

sor'bite. A sugar isomeric with mannite and dulcite, $C_6H_{14}O_6 + \frac{1}{2}H_2O$, obtained from the berries of the mountain ash, *Sorbus aucuparia;* it is non-fermentable, does not reduce copper salts, and is optically inactive.

sordes (sor'dēz) [L. *sordere*, to be foul.] A dark brown or blackish crust-like collection on the lips, teeth, and gums of a person with severe typhoid or other low fever.

sore [A.S. *sār*.] 1. A wound, ulcer, or any open skin lesion. 2. Painful. **bed-s.,** decubitus. **fun'gating s.,** a granulating chancroid. **hard s.,** chancre. **orien'tal s.,** oriental boil.* **pressure s.,** bedsore, decubitus.* **soft s.,** chancroid. **vene'real s.,** chancroid.

sore-shins'. Periostitis of the anterior surface of the metacarpal bones in the horse.

sore-throat'. Odynphagia, angina; a condition characterized by pain or discomfort on swallowing; it may be any of a variety of inflammations of the tonsils, pharynx, or larynx. **diphtherit'ic s.-t.,** croupous tonsillitis. **cler'gymen's s.-t.,** granular pharyngitis. **hos'pital s.-t.,** a superficial septic inflammation of the mucous membrane of the fauces and pharynx, sometimes observed in hospital internes and nurses. **putrid s.-t.,** gangrenous pharyngitis, angina maligna or gangrænosa, cyanche maligna. **sep'tic s.-t.,** a severe pseudomembranous inflammation of the fauces and tonsils, usually occurring in epidemic form, caused by the hemolytic streptococcus (*S. mixtus?*) transmitted in an infected milk-supply. **spotted s.-t.,** follicular tonsillits. **ul'cerated s.-t.,** putrid s.-t.

Soret's band (so-ra'). [C. *Soret*, French radiologist, † 1931.] A dark band in the violet end of the hemoglobin spectrum. **S.'s phenomenon,** in a solution kept in a long upright tube at room temperature, the upper part, being the warmer, is also the more concentrated.

sorghum (sor'gum). A plant with saccharine juice, *Andropogon sorghum;* the seeds are sometimes employed in domestic medicine as a diuretic.

soricin (so-ris'in). Trade name of a purified sodium ricinoleate, recommended as a detoxifying agent in infections of the mouth and the intestinal tract.

soroche (so-ro'cha) [Sp.] Mountain sickness.

sororiation (so-raw-rī-a'shun) [L. *sororiare*, to increase in size together (said of the female breasts); *soror*, sister.] Growth of the breasts at puberty.

sorr'el. A plant of the genus *Rumex*, containing oxalic acid; it is used as a salad. **salt of s.,** sal limonis.

sorus (so'rus) [G. *sōros*, a heap.] In botany, a mass, a heap, an aggregation; one of the dots on the back of a fern frond.

S.O.S. Abbreviation of si opus sit, if necessary, if occasion requires.

soterocyte (so'ter-o-sīt) [G. *sōtēr*, preserver, + *kytos*, cell.] Platelet.

souffle (soo'fl) [Fr. *souffler*, to blow.] A soft blowing sound heard on auscultation. **car'diac s.,** a soft puffing heart murmur. **fetal s., funic'ular s.,** a blowing sound, synchronous with the systole of the fetal heart, heard on auscultation over the pregnant uterus. **placen'tal s.,** uterine s. **umbil'ical s.** fetal s. **u'terine s.,** a blowing sound, synchronous with the cardiac systole of the mother, heard on auscultation of the pregnant uterus.

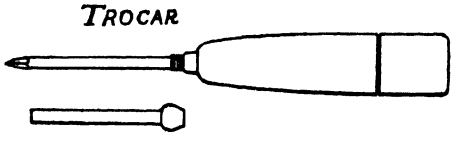
soul-pain (sōl'pān) Psychalgia.

souma (soo'mah). A trypanosomiasis of horses in West Africa and the Sudan; the pathogenic agent in *Trypanosoma cazalboui*.

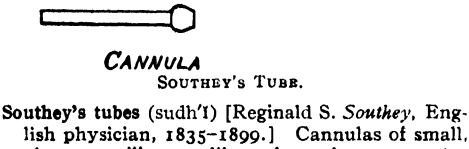
sound. 1. Noise; the vibrations produced by a sounding body, transmitted by the air or other medium, and perceived by the internal ear. 2. An elongated cylindrical, usually curved instrument of metal, used for exploring the bladder or other cavities of the body or for dilating strictures in the urethra or other canal. 3. Whole, healthy, not diseased or injured 4 To explore a cavity by means of a sound. **auscul'tatory s.,** a râle, murmur, bruit, fremitus, or other sound heard on auscultation of the chest or abdomen. **car'diac s., heart s.,** one of the two sounds heard on auscultation over the region of the heart; the first, the longer and duller of the two, occurs with the ventricular systole; the second, shorter and sharper, occurs in diastole, being the sound of the closure of the semilunar valves. **muscle s.,** a fine murmur heard on auscultation over the belly of a contracting muscle. **percussion s.,** any sound elicited on percussing over one of the cavities of the body. **respi'ratory s.,** a murmur, bruit, fremitus, or râle heard on auscultation over the lungs or any part of the respiratory tract.

sour'wood. Oxydendron.

south'ernwood. Brotanum.



TROCAR



CANNULA

SOUTHEY'S TUBE.

Southey's tubes (sudh'ī) [Reginald S. *Southey*, English physician, 1835–1899.] Cannulas of small, almost capillary, caliber, thrust by means of a trocar into the subcutaneous tissues to drain the same in case of anasarca.

Soxhlet's appara'tus (soks'let) [Franz *Soxhlet*, German chemist, 1848–1926.] An apparatus for sterilizing milk, the fluid being contained in sealed flasks surrounded by steam at a temperature of about 102° C. (215.6° F.).

so'ya, soy bean. The bean of the climbing herb *Glycine soja* or *G. hispida*, Chinese bean, a bean rich in albuminoids and containing little starch, the meal of which is used in preparing a bread for diabetics.

Soy'mida febrif'uga. The only species of the genus *Soymida*, a tree of the East Indies, the bark of which is astringent and antiperiodic.

so'zal. Aluminum paraphenolsulphonate, a granular powder of slight carbolic odor, used in one per cent. solution as an antiseptic application to tuberculous and other ulcers.

so'zin [G. *sōzō*, I preserve] Complement or alexin present in normal serum.

sozoiodol (so-zo-i'o-dol). Diiodoparaphenol-sulphonic acid, sozoiodolic acid; a crystalline powder readily soluble in water, employed chiefly in the form of salts with aluminum, ammonium, barium, lead, lithium, magnesium, mercury, potassium, sodium, and zinc, which see under the following.

sozoiodolate (so-zo-i'o-dol-ate). A salt of sozoiodolic acid; most of the salts may be employed in place of iodoform. **alu'minum s.,** occurs in colorless needles soluble in 3 parts of water **ammo'nium s.,** large shining prisms soluble in 30 parts of water **ba'rium s.,** colorless needles almost insoluble in water. **lead s.,** colorless acicular crystals soluble in 200 parts of water. **lith'ium s.,** acicular crystals or scales, soluble in 30 parts of water; has been employed internally as a substitute for the salicylates in rheumatism. **magne'sium s.,** colorless needles soluble in 16 parts of water. **mer'cury s.,** mercurous diiodoparaphenolsulphonate, orange-yellow powder soluble in 500 parts of water; employed externally in syphilitic skin diseases and ulcerations and joint affections and internally in dose of gr. ½ (0.03). **potas'sium s.,** crystalline powder soluble in 70 parts of water; employed externally in parasitic skin diseases, and in ozena and gonorrhea. **so'dium s.,** colorless shining needles soluble in 14 parts of water; employed externally or by insufflation in chancre tuberculous laryngitis, diphtheria, lupus, tuberculous abscesses and joint disease, and ulcers; internally as an intestinal antiseptic in doses of gr. 5–10 (0.3–0.6). **zinc s.,** colorless acicular crystals soluble in 20 parts of water; employed as an antiseptic and astringent application in various affections of the mucous membranes.

sozoiodolic acid (so-zo-i-o-dol'ik as'id). Sozoiodol.

sozo'lic acid. Acidum sulphocarbolicum.

sp. Abbreviation of L. *spiritus*, spirit.

spa (spah) [*Spa*, a mineral spring health resort in Belgium.] A health resort where there are one or more mineral springs the waters of which possess therapeutic properties. These waters are classified as: 1. Alkaline (sulphated, borated, or muriated); 2. Alkaline-saline (sulphated, borated, or muriated); 3. Saline (sulphated or muriated); 4. Acid (sulphated, muriated, or silicious); 5. Neutral or indifferent.

space [L. *spatium*.] Any demarcated portion of the body, either an area of the surface, a segment of the tissues, or a cavity. **arach'noid s.,** subarachnoids. **ax'illary s.,** the axilla. **car'tilage s.,** one of the spaces in the ground substance of hyaline

cartilage which contain the cartilage cells. **corneal s.,** lacuna, one of the stellate spaces in interstitial cement substance connecting the lamellæ of the cornea, each of which contains a cell or corneal capsule. **epidu'ral s.,** cavum epidurale, the space between the dura mater and the vertebral periosteum or the dura mater and the bones of the cranium, the latter probably lymph spaces. **epitympan'ic s.,** tympanic attic. **intercos'tal s.,** the interval between any two adjacent ribs. **intercru'ral s.,** the triangular area between the crura cerebri. **interglob'ular s.,** one of a number of irregular branching spaces near the periphery of the dentine, they are due to failure of calcification of the dentine. **interpleu'ral s.,** mediastinum. **medias'tinal s.,** mediastinum. **per'forated s.,** substantia perforata **pneumat'ic s.,** any one of the accessory sinuses of the nose. **poplit'eal s.,** a lozenge-shaped space at the back of the knee-joint bounded above by the biceps and semimembranosus and semitendinosus muscles, and below by the two heads of the gastrocnemius muscle; it contains the popliteal artery and vein and the small sciatic and popliteal nerves. **retroin'guinal s.,** see under *Bogros*. **retroperiton'eal s.,** the space behind the peritoneum containing the aorta and its branches, the great sympathetic nerve, and the kidneys. **retropharyn'geal s.,** the space posterior to the pharynx, filled with loose areolar tissue. **subarach'noid s.,** cavum subarachnoidale, the space between the pia mater and the arachnoid in which is the cerebrospinal fluid and, at the termination of the spinal cord, the nerves forming the cauda equina. **subdu'ral s.,** cavum subdurale, the space between the dura mater and the arachnoid. **subgin'gival s.,** the space between a tooth and the free margin of the gums. **supraster'nal s.,** a narrow interval between the deep and superficial layers of the cervical fascia above the manubrium sterni, Burns's space. **undefen'ded s.,** pars membranacea septi. **yolk s.,** an interval in the impregnated ovum between the zona pellucida and the vitellus. **zon'ular spaces,** Petit's canal, spatia* zonularia.

spa'dix [G. a palm-branch.] A fleshy spike enveloped in a bract called a spathe.

spagiric (spă-jir'ik) [G. *spaō*, I tear open, + *ageiro*, I collect.] Relating to the Paracelsian or alchemical system of medicine.

Spahlinger treat'ment (spah'ling-er) [Henri *Spahlinger*, a Swiss layman, contemporary.] A method of treatment of pulmonary tuberculosis by antitoxic serums and several varieties of tuberculin.

Spallanzani's law (spahl-lahn-tsah'ne) [Lazaro *Spallanzani*, Italian naturalist and physiologist, 1729–1799.] The younger the individual the greater is the regenerative power of its cells.

spane'mia, spanæ'mia [G. *spanos*, rare, + *haima*, blood.] Poverty of the blood, hydremia, anemia.

spane'mic. 1. Relating to spanemia, anemic. 2. An agent which thins the blood.

Span'ish fly. Cantharis.

Span'ish wind'lass. Garrote tourniquet.*

spanomenorrhea, spanomenorrhœa (span''o-men-or-re'ah) [G. *spanos*, rare, + *mēn*, month, + *rhoia*, flow.] Scanty menstruation.

spanopne'a, spanopnœ'a [G. *spanos*, rare, + *pnoē*, breath.] Slow and shallow respiration.

spar'adrap. Adhesive plaster, especially a medicated plaster.

sparganosis (spar-gă-no'sis). Infestation with some variety of *Sparganum*.

Sparganum (spar'gă-num) [G. *sparganon*, swaddling clothes.] An immature form of *Diphyllobothrium*. There are several (not definitely distinguishable) species, *S. bac'teri*, *S. man'soni*, *S. prolif'erum*, and *S. ralliet'i*. *S. prolif'erum* has been found in man only in Japan and Florida, though probably occurring elsewhere; it occurs in subcutaneous cysts, in elongate ribbon-like form This latter, which is morphologically very different from the other species, has been, by some, relegated to a subspecies, *Gatesius*, of the family *Dibothriocephalidæ*.

spargo'sis [G.] 1. Distention of the breasts with milk. 2. Swelling or thickening of the skin.

spark [A.S. *spearca*.] A small incandescent particle **elec'tric s.,** the flash of light attended with a crackling or hissing sound produced by a discharge of electricity.

sparteina (spar-te-e'na) [*spartium*.] Sparteine, an alkaloid obtained from scoparius, *Cytisus* or *Spartium scoparius*. **spartei'næ sul'phas** sparteine sulphate, a colorless, odorless, crystalline powder, of faint saline bitterish taste, soluble in water; employed as a cardiac stimulant and diuretic in doses of gr. ¼-1 (0.015-0.06).

spar'tium. Scoparius.

spasm (spazm) [G. *spasmos*.] An involuntary convulsive muscular contraction; convulsion, cramp. **cadav'eric s.,** rigor mortis occurring irregularly in the different muscles, causing movements of the limbs. **canine s.,** risus sardonicus. **carpoped'al s.,** see *carpopedal*. **clonic s.,** alternate involuntary contraction and relaxation of a muscle. **cynic s.,** risus sardonicus. **fa'cial s.,** mimic tic. **func'tional s.,** an occupation neurosis, such as writer's cramp. **habit s.,** tic. **histrion'ic s.,** facial s., mimic tic.* **inten'tion s.,** a spasmodic contraction of the muscles occurring when a voluntary movement is attempted. **mimic s.,** mimic tic. **mobile s.,** a tonic spasm occurring in spastic infantile hemiplegia on attempted movement. **nic'titating s.,** winking s., involuntary spasmodic winking. **nodding s.,** salaam convulsions, a neurosis characterized by rhythmical nodding movements of the head. **occupa'tion s., profes'sional s.,** occupation neurosis. **pho'nic s.,** dysphonia spastica. **progres'sive tor'sion s. of child'hood,** dystonia musculorum deformans. **ro'tatory s.,** spasmodic torticollis, a spasmodic contraction of the splenius muscle, causing rotation of the head. **salaam' s.,** nodding s. **sal'tatory s.,** Gower's disease, a spasmodic affection of the muscles of the lower extremities. **smith's s.,** hephestic* hemiplegia. **synclon'ic s.,** clonic s. of two or more muscles. **tonic s.,** a continuous involuntary muscular contraction. **winking s.,** nictitating s.

spasmod'ic. Relating to or marked by spasm. **s. asthma,** asthma due to spasm of the bronchioles. **s. croup,** laryngismus stridulus. **s. stricture,** a functional stricture, temporary narrowing of the urethra or other canal by a spasmodic localized contraction of its muscular coat.

spasmol'ogy [G. *spasmos*, spasm, + *-logia*.] Study of the nature, causation, and means of relief of spasms.

spasmolyg'mus [G. *spasmos*, spasm, + *lygmos*, a sobbing.] 1. Spasmodic sobbing. 2. Spasmodic hiccup.

spasmophilia (spaz″mo-fil′ĭ-ah). Spasmophilic* diathesis.

spasmophil'ic [G. *spasmos*, spasm, + *philos*, fond.] Having a tendency to convulsive seizures. **s. diath'esis,** a condition in which there is an abnormal mechanical or electrical excitability of the motor nerves, shown by a tendency to tetany, laryngeal spasm, or general convulsions.

spasmosedine (spaz-mo-sed′ēn). Trade name of a cardiovascular sedative containing phenylmethylmalonylurea, 0.015, extract of crataegus, 0.05, and quinine bromate, 0.05, in a compressed tablet; dose one or two tablets before each of the two principal meals for ten days in each month.

spas'motin. Sphacelotoxin, $C_{20}H_{21}O_9$, a yellowish resinous powder, used in amenorrhea and as a uterine tonic in doses of gr. ½–1 (0.03–0.06).

spasmotox'in. A toxic substance isolated from cultures of *Bacillus tetani*.

spas'mus [G. *spasmos*.] Spasm. **s. ag'itans,** paralysis agitans. **s. cani'nus,** risus sardonicus. **s. coordina'tus,** compulsive movements, such as imitative or mimic tics, festination, etc. **s. glott'idis,** laryngismus stridulus. **s. nic'titans,** nictitating spasm. **s. nu'tans,** nodding spasm.

spas'tic [G. *spastikos*, stretching.] Spasmodic, convulsive. **s. ane'mia,** local anemia from spasmodic vasoconstriction. **s. hemiple'gia,** partial hemiplegia with increased reflexes and spasmodic contraction of the muscles on attempted movement. **s. paral'ysis,** partial paralysis with muscular rigidity.

spasticity (spas-tis′ĭ-tĭ). A state of muscular rigidity and spasm with exaggeration of the reflexes.

spathe (spādh) [G. *spathē*, a broadsword.] A large bract enveloping a flower-cluster, or a spadix.

spa'tia. Plural of *spatium*, space.

spatial (spa′shal). Relating to space or a space.

spatium, pl. *spatia* (spa′shyum) [L.] A space. **s. an'guli ir'idis** [BNA], space of the angle of the iris, space of Fontana, one of a number of irregularly shaped spaces between the fibers of the pectinate ligament of the iris. **spa'tia intercosta'lia** [BNA], intercostal spaces, the intervals between the ribs. **s. interfascia'le** [BNA], the lymph space between Tenon's capsule (the connective tissue envelope of the eyeball) and the sclera. **s. interglobula're,** pl. *spa'tia interglobula'ria* [BNA], one of a number of irregular branched spaces near the periphery of the dentine of the crown of a tooth through which pass the ramifications of the tubules. **spa'tia inteross'ea metacar'pi** [BNA], the spaces between the metacarpal bones in the hand. **spa'tia inteross'ea metatar'si** [BNA], the spaces between the metatarsal bones in the foot. **spa'tia intervagina'lia** [BNA], spaces between the layers of the optic nerve sheaths, corresponding to the spaces between the meninges of the brain. **s. perichorioidea'le** [BNA], perichorioid space, the interval between the chorioid and the sclera, filled by the loose meshes of the lamina fusca and the lamina suprachorioidea. **s. perilymphat'icum** [BNA], a space between the bony and membranous portion of the labyrinth. **s. retroinguina'le,** Bogros' space, a triangular space between the peritoneum and the transversalis fascia in the inguinal region; it contains the lower portion of the external iliac artery. **s. retroperitonea'le** [BNA], the space between the parietal peritoneum and the muscles and bones of the posterior abdominal wall. **spa'tia zonula'ria** [BNA] Petit's canal, the spaces between the fibers of the zonule of Zinn at the equator of the crystalline lens.

spat'ula [L. dim. of *spatha*, a paddle.] 1. A flat blade like a knife-blade, with no sharp edge, used in pharmacy for spreading plasters and ointments. 2. Scapula.

spat'ulate, spat'ulated. Shaped like a spatula.

spav'in. A disease of the hock-joint of the horse, marked by inflammation and swelling. **blood s.,** a distention of the veins in the vicinity of the hock in a horse, due to pressure from the swelling of bog s. impeding the return flow of blood. **bog s.,** a distention of the capsular ligament of the true hock-joint in a horse, accompanied by heat and pain; the swelling appearing primarily in front is believed to be usually the result of sprain or other injury.

spay [Gael. *spoth*, castrate, or G. *spadōn*, eunuch(?).] To remove the ovaries, to castrate (a woman).

spearmint (spēr′mint). Mentha viridis.

special (spĕ′shal) [L. *specialis; species*, a kind.] Relating to a particular subject, individual. **s. practice,** specialism. **s. senses,** the five senses of seeing, hearing, smelling, tasting, and feeling.

specialism (spĕ′shal-izm). In medicine the study and treatment of a particular group of diseases, as of the eye, of the nervous system of children, etc.

specialist (spĕ′shal-ist). One who devotes himself to the study of a particular science or to the study and treatment of a particular group of diseases.

bacteria, bacteriologist. **childbirth,** obstetrician, accoucheur, man-midwife; accoucheuse, midwife. **deformities,** orthopedist, orthopedic surgeon. **diagnosis,** diagnostician. **digestive organs,** gastroenterologist. **diseases of children,** pediatrist. **diseases of women,** gynecologist. **ear,** aurist, otologist. **eye,** oculist, ophthalmologist; refractionist (fitter of glasses); optometrist (non-medical fitter of glasses); optician (maker of glasses). **feet,** podiatrist, chiropodist. **heart,** cardiologist. **internal diseases,** internist. **intestine,** enterologist. **larynx,** laryngologist. **mental disorders,** psychiatrist, alienist, psychiater **mouth,** stomatologist. **nervous diseases,** neurologist. **nose,** rhinologist, rhinatrist. **obstetrics,** obstetrician, accoucheur, man-midwife: accoucheuse, midwife. **operative medicine,** surgeon, chirurgeon. **pathology,** pathologist. **protozoa,** protozoologist **rectum,** proctologist. **skin,** dermatologist. **stomach,** gastrologist. **syphilis,** syphilographer. **teeth,** dentist, dental surgeon, odontologist. **treatment,** therapeutist; electrotherapeutist (electricity); hydrotherapeutist (water), aerotherapeutist, pneumatotherapist (air); balneologist (mineral springs); radiotherapeutist, roentgenologist, actinotherapeutist (radiant energy); pharmacotherapeutist (drugs) phototherapeutist (light rays); serotherapeutist (antitoxic and other sera); hypnotherapeutist (hypnotism). **tuberculosis,** phthisiotherapist, phthisiotherapeutist. **urinary organs,** urologist, genitourinary surgeon.

specialize (spĕ-shal-ize). To devote one's special study and attention to one subject or group of subjects.

specialty (spĕ′shal-tĭ). The particular group of diseases or branch of medical science to which one devotes his time and attention.

spe'cies, pl. *species* (spe′shēz) [L. a kind or sort.] 1. A biological division between the genus and a variety or the individual. 2. (plural) A class of pharmaceutical preparations in the P.G. and N.F., consisting of a mixture of dried plants, not pulverized, but in sufficiently fine division to be conveniently used in the making of extemporaneous decoctions or infusions; a tea. **s. aromat'icæ** (P.G.), aromatic tea, composed of peppermint leaves, wild thyme, and lavender flowers, each 2 parts, cloves and cubeb each 1 part. **s. diuret'icæ** (P.G.), diuretic tea, composed of levisticum root, ononis root, licorice root, and juniper berries

each 1 part. **s. emollien'tes** (P.G., N.F.), emollient cataplasm, composed of althæa leaves, malva leaves, melilot (wild laburnum), German chamomile flowers, and flaxseed, each 1 part. **s. laxati'væ** (N.F.), laxative tea, St. Germain tea, composed of senna 160, elder flowers 100, fennel and anise each 50, potassium tartrate 25, tartaric acid 15. **s. ligno'rum** (P.G.), wood tea, composed of guaiac root 5, ononis root 3, licorice root 1, and sassafras bark 1. **s. pectora'les** (P.G. N.F.), pectoral tea, composed of marshmallow root 8, licorice root 3, orris root 1, colt's foot leaves 4, mullein flowers 2, anise 2.

specif'ic [L. *species* + *facere*, to make.] 1. Relating to a species. 2. Relating to an individual infectious disease, one caused by a special microorganism; in a special restricted sense, syphilitic. 3. A remedy having a definite curative action in relation to a particular disease or symptom, as quinine in relation to malaria, or mercury to syphilis. **s. gravity,** see *gravity*. **s. med'icines,** in eclectic practice, denoting a class of drug preparations of standard strength designed to meet certain special indications in the treatment of diseases or symptoms.

specificity (spĕ-sĭ-fis'ĭ-tĭ). The condition or state of being specific, of having a fixed relation to a single cause, or to a definite result, as the case may be; specificity is manifested in the relation of a disease to its pathogenic microorganism, of a reaction to a certain chemical union, or of an antibody to its antigen, or the reverse.

specill'um, pl. *specill'a* [L. *specere*, to look.] A probe or small sound.

spectacles (spek'tă-klz) [L. *spectare*, to regard] Lenses set in a frame which holds them in front of the eyes, used to correct errors of vision or to protect the eyes from the glare of the sun or electric light. The parts of the spectacles are the *lenses;* the *bridge* between the lenses, resting on the nose; the *rims* or *frames*, encircling the lenses, now often omitted, the bridge and the shoulders being riveted directly to the lenses; the *sides* or *temples*, wires passing on either side of the head to the ears; the *bows*, the curved extremities of the sides over the roots of the auricles; the *shoulders*, short bars attached to the rims or riveted to the lenses and jointed with the sides. **bifo'cal s.,** see *bifocal*. **Franklin s.,** divided s., an early form of bifocal s. in which the lower half of the lens is for near, the upper half for distant vision. **pantoscop'ic s.,** bifocal s. **pul'pit s.,** s for near use, consisting of only the lower segment of the lens, so that the wearer may look over them for distance use. **stenope'ic s.,** discs of wood or metal, with narrow slits in the center allowing only a minimum amount of light to enter.

spec'tral. Relating to a spectrum.

spectrom'eter [L. *spectrum* + G. *metron*, measure.] An instrument for determining the refractive power of any translucent substance.

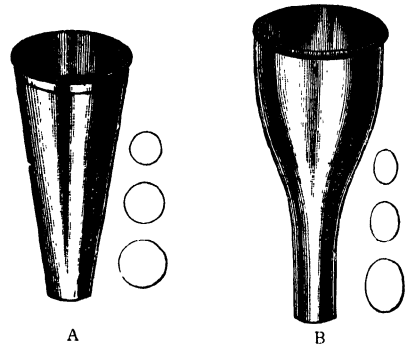
spectrophotom'eter [L. *spectrum* + G. *phōs*(*phōt-*), light, + *metron*, measure.] An instrument for determining the intensity of color in a solution by comparing it with the color in a spectrum.

spectroscope (spek'tro-skōp) [L. *spectrum* + G. *skopeō*, I view.] An instrument for resolving a ray of light from any luminous body into its spectrum, and for the observation of the spectrum so formed.

spectroscop'ic. Relating to or performed by means of a spectroscope.

spec'trum, pl. *spec'tra* [L. an image.] 1. The color picture presented when a ray of white light is resolved into its constituent colors by being passed through a prism or reflected from a glass diffraction grating. The colors of the spectrum, arranged according to the increasing rapidity of the vibrations, or decreasing length of the waves, of which they consist, are red, orange, yellow, green, blue, indigo, and violet; of these red, green, and blue-violet are called the primary colors. 2. After-image. **absorp'tion s.,** one produced by light which has passed through vapors of various substances, the single colored band which each of these substances, if viewed alone through the spectroscope, would give being absorbed by the corresponding color of the sun's light, appearing there as a black line (Fraunhofer's lines). **chem'ical s.,** ultra-violet s., the invisible part of the spectrum in which are the actinic rays, or those exercising a chemical action. **contin'uous s.,** one in which there are no absorption bands or lines. **fortifica'tion s.,** teichopsia, scintillating scotoma. **oc'ular s.,** after-image. **thermal s.,** the invisible part of the spectrum outside of the red rays, in which are the heat rays. **toxin s.,** a figure in the form of a spectrum used by Ehrlich to represent the neutralizing power of antitoxin in the presence of toxin, prototoxoid, toxone, etc.

speculum (spek'u-lum) [L. a mirror; *specere*, to look at.] 1. An instrument for enlarging the opening of any canal or cavity in order to facilitate inspection of its interior; see cuts under *Fergusson*, *Cusco*, and *Sims* for varieties of vaginal specula, under *Siegle* and here for ear specula. 2. Septum pellucidum. **Brink'erhoff's s.,** a conical tubular speculum for



A B

EAR SPECULÆ: A, Wilde's; B, Gruber's

rectal examination, with closed extremity but with a sliding bar on one side the opening of which gives a window of any desired size. **Cook's s.,** a three-pronged s. for rectal examinations and operations. **Kelly's s.,** a tubular s., with obturator, for rectal examination. **Math'ew's s.,** a four-pronged s. for rectal examination. **Mar'tin's s.,** a conicocylindrical s. with obturator for rectal examination. **s. Helmon'tii,** van Helmont's mirror, the central tendon of the diaphragm. **s. rhomboid'eum,** lumbodorsal fascia.

spe'dalskhed [Norw.] Leprosy.

Spee's curve (spa) [Ferdinand Graf von *Spee*, German embryologist, *1855.] A curved line touching the summits of the buccal cusps of the upper or lower teeth from first bicuspid to third molar, corresponding more or less accurately to

the arc of a circle, the center of which lies behind the crista lacrimalis posterior and on the line bisecting the horizontal plane passing through the orbit. **S.'s em'bryo,** an embryo supposed to be between one and two weeks old, 2 mm. in length, described by Graf v. Spee.

speech [A.S. *spæc.*] Speaking, talk, the use of the voice in conveying ideas. **clipped s.,** scamping s. **echo s.,** echolalia. **mirror s.,** a reversal of the order of syllables in a word, analogous to mirror writing. **scamping s.,** a form of lalling in which consonants or syllables are omitted when difficult of pronunciation. **scanning s.,** staccato s. **slurring s.,** slovenly articulation of the more difficult letter sounds. **stacca'to s.,** a slow and laborious utterance, each syllable being enunciated separately, noted especially in multiple sclerosis.

absence of power, dumbness, mutism, mutitas, deafmutism. **aphonic,** whisper, psithyrism. **ataxic,** ataxaphasia, ataxophemia. **defective,** olophonia, asaphia (from cleft palate); alalia, mogilalia (from lesion of vocal organs); aphthongia, laloplegia (from muscular lesion). **defective pronunciation,** stammering; gammacism (g for k); paragammacism (d for g, or t for k); lambdacism (l); lallation (too frequent use of l); mutacism, mytacism, mimmation (too frequent use of m); nunnation (too frequent use of n); rhotacism (r); sigmarism (s); thetism, lipsing (th for s); iotacism (too frequent use of ē sound); labialism (confusion in use of labial consonants); betacism (b). **difficult,** dyslalia, dysgrammatism, dysphasia, dysphrasia, dysphonia, dysphemia, baryphonia. **disinclination for,** lalophobia, taciturnity. **disorder of,** logopathy, logoneurosis, lalopathy, laloneurosis. **distinctness of phonation,** lamprophonia. **drawling,** angophrasia, baryphonia. **excessive,** loquacity, hyperlogia, volubility, polyphrasia, garrulity, leresis. **imitation of other's,** echomatism, echopathy. **incoherent,** lalling, lallation, dysphrasia, divagation, embolalia, embololalia, embolophrasia, agrammatism, acataphasia, heterolalia, heterophonia **loss of,** aphasia, aphemia, aphonia, alogia, logoplegia, logaphasia, logagnosia, logamnesia, alalia. **loss of understanding of,** acatamathesia **loss of whispering,** apsithyria **obscene,** coprolalia, æschrolalia, eschrolalia, eschromythesia. **rapid,** tachyphrasia, logorrhea. **repetition,** echolalia, echophrasia, cataphasia, cataphrasia. **slow,** bradylalia, bradyarthria, bradyphasia. **spasmodic,** logospasm, stammering, stuttering. **thick,** baryglossia, barylalia.

speed'y-cut. A wound of the foreleg of a horse in the neighborhood of the knee, made by a cut with the shoe of the opposite foot; it is inflicted usually at the gallop when the horse has begun to tire.

spel'ter [L. *pestrum,* pewter.] Crude commercial zinc **s. shakes,** brass*-founders' ague.

Spen'cer Wells' fa'cies [Sir Thomas *Spencer Wells,* English gynecologist, 1818–1897.] Facies ovarica. **S. W.'s for'ceps,** hemostatic forceps.

Speng'ler's frag'ments [Carl *Spengler,* Swiss physician, *1861.] Small round bodies resembling the cross-section of a bacillus, found in tuberculous sputum; they have the same staining qualities as the tubercle bacillus, and when inoculated in a suitable culture medium are said to develop into tubercle bacilli. **S.'s meth'od** for examining sputum; the sputum is mixed with an equal amount of lukewarm weak sodium carbonate solution; pancreatin is added and then crystallized carbolic acid, and the mixture is incubated for a short time at body temperature; the sediment is then examined for tubercle bacilli. **S.'s tuberculin,** S.'s immune bodies, IK. see under *tuberculin.*

Spens syn'drome [Thomas *Spens,* Edinburgh physician, 1764–1842.] Stokes*-Adams disease; it was described by Spens in 1792.

sperm [G. *sperma,* seed.] Semen. **s. cell,** spermatid.

sperma (spur'mah) [G. seed.] Semen, the testicular secretion containing the male reproductive cells. For words beginning *sperma-,* see *spermato-*

sper"macet'i [G. *sperma,* seed, + *kētos,* whale.] Cetaceum.

sperm-as'ter. A radiation in the fecundated ovum proceeding from the head of the spermatozoon.

spermatacra'sia [G. *sperma,* seed, + *akrasia,* incontinence.] Spermatorrhea.

spermatemphraxis (spur"mă-tem-fraks'is) [G. *sperma,* seed, + *emphraxis,* stoppage.] An impediment to the discharge of semen.

spermat'ic. Relating to the sperm or semen.

sper'matid [G. *sperma,* seed.] The rudimentary spermatozoon derived from division of the spermatocyte.

sper'matin. An albuminoid in the seminal fluid.

sper'matism. The emission of semen.

spermatitis (spur-mă-ti'(te')tis). Inflammation of the ductus deferens, funiculitis, deferentitis.

sper'matoblast [G. *sperma(spermat-),* seed, + *blastos,* germ.] Spermatid.

spermatocele (spur'mă-to-sēl) [G. *sperma,* seed, + *kēlē,* tumor.] A cystic heart-shaped tumor of the epididymis containing spermatozoa.

spermatocidal (spur-mă-to-si'dal) [G. *sperma(spermat-),* seed, + L. *cædere,* to kill.] Destructive to spermatozoa.

sper'matocyst [G. *sperma(spermat-),* seed, + *kystis,* bladder.] 1 Seminal vesicle. 2. Spermatocele.

spermatocystec'tomy [G. *sperma(spermat-),* seed, + *kystis,* bladder, + *ektomē,* excision.] Surgical removal of the seminal vesicles.

spermatocystitis (sper"mă-to-sis-ti'(te')tis) [G. *sperma(spermat-),* seed, + *kystis,* bladder, + *-itis.*] Inflammation of a seminal vesicle; seminal vesiculitis.

sper"matocystot'omy [G. *sperma(spermat-),* seed, + *kystis,* bladder, + *tomē,* incision.] Incision into a seminal vesicle.

spermatocy'tal. Relating to the spermatocytes

spermatocyte (spur'mă-to-sīt) [G. *sperma,* seed, + *kytos,* a hollow (cell).] A cell resulting from division of the spermatogonium, which in turn forms by division the spermatid.

spermatogen'esis [G. *sperma,* seed, + *genesis,* production.] The process of formation and development of the spermatozoon.

spermatogen'ic. Relating to spermatogenesis, forming spermatozoa.

spermatogenous (sper-mă-toj'en-us). Spermatogenic.

spermatogeny (sper-mă-toj'en-ĭ). Spermatogenesis.

spermatogone, spermatogonium (spur'mă-to-gōn, spur-mă-to-go'nĭ-um) [G. *sperma,* seed, + *gonē,* generation.] The primitive sperm-cell giving rise by division to the spermatocyte; spermatospore, spermatophore.

sper'matoid [G. *sperma(spermat-),* seed, + *eidos,* resemblance.] 1. Resembling semen. 2. Spermatozoid.

spermatol'ogy [G. *sperma(spermat-),* seed, + *-logia.*] The branch of histology, physiology, and embryology dealing with the seminal secretion.

spermatol'ysin. A specific lysin formed in the fluids of the body in response to the repeated injection of spermatozoa; it is destructive to the spermatozoa of animals of the same species as that from which the injection material was obtained.

spermatol'ysis [G. *sperma(spermat-),* seed, + *lysis,* solution.] Destruction, with dissolution, of the spermatozoa.

spermatolyt'ic. Relating to spermatolysis.

spermatomere (spur'mă-to-mēr) [G. *sperma*(*spermat-*), seed, + *meros*, part.] One of the particles into which the nucleus of the spermatozoon divides after fertilization of the ovum.

spermato'on [G. *sperma*(*spermat-*), seed, + *ōon*, egg.] Spermatid.

sper"matopath'ia, spermatop'athy [G. *sperma* (*spermat-*), seed, + *pathos*, suffering.] Any morbid change in the seminal secretion.

sper"matopho'bia [G. *sperma*(*spermat-*), seed, + *phobos*, fear.] A form of hypochondriasis in which the patient erroneously believes himself to be suffering from spermatorrhea.

sper'matophore [G. *sperma*(*spermat-*), seed (semen), + *phoros*, a bearer.] Spermatogonium.

spermatopoietic (spur"mă-to-poy-et'ik) [G. *sperma* (*spermat-*), seed, + *poieō*, I make.] Relating to the production of semen; secreting semen.

spermatorrhea, spermatorrhœa (spur'mă-to-re'ah) [G. *sperma*(*spermat*), seed, + *rhoia*, a flow.] An involuntary discharge of semen, without orgasm.

spermatoschesis (spur"mă-tos'kĕ-sis) [G. *sperma* (*spermat-*), seed, + *schesis*, retention.] Non-secretion of semen.

sper'matospore [G. *sperma*(*spermat-*), seed (semen), + *sporos*, seed.] Spermatogonium.

spermato'vum. An impregnated ovum.

spermatox'in. A cytotoxin specific for spermatozoa, spermotoxin.*

spermatozoa (spur-mă-to-zo'ah). Plural of spermatozoon.

spermatozo'al, spermatozo'an. Relating to spermatozoa.

spermatozoicide (spur"mă-to-zo'ĭ-sīd) [G. *spermatozōon*, + L. *cædere*, to kill.] Spermatocide.

sper'matozoid. Spermatozooid.

sper"matozo'oid [G. *sperma*(*spermat-*), seed, + *zōon*, animal, + *eidos*, resemblance.] 1. Resembling spermatozoa. 2. A spermatozoon.

spermatozoon, pl. *spermatozo'a* (spur"mă-to-zo'on) [G. *sperma*(*spermat-*), seed, + *zōon*, animal.] The male sexual cell, the human s. is described as composed of a head, a neck, and a tail; the head is a broadly oval flattened body containing the nucleus, the neck and tail are of protoplasm containing an axial filament; the head is from 4 to 6 micra in length the neck and tail from 41 to 53 micra.

spermatu'ria [G. *sperma*(*spermat-*), seed, + *ouron*, urine.] Spermatorrhea occurring with the passage of urine.

sperm-cell. Spermatozoon.

sper'miduct. The ductus deferens and ductus ejaculatorius.

sper'mine. 1. An organic base, C_7H_8N, contained in semen and in small amount in sputum and other secretions; its phosphate forms the Boettcher and Charcot-Leyden crystals. 2. A synthetic substance, $C_8H_{14}N_2$, stimulating to the metabolic processes, and said to exist naturally in the internal secretion of the testicle.

sper'mism. Spermatism.

sper'mium. Waldeyer's term for the mature male germ-cell or spermatozoon.

sperm-nu'cleus. The head of the spermatozoon, become spheroidal, after it has entered the ovum.

sper'moblast. Spermatoblast, spermatid.

sper'molith [G. *sperma*, seed, + *lithos*, stone.] A concretion in the ductus deferens.

spermoloropexis, spermoloropexy (spur"mo-lo-ro-peks'is, spur-mo-lo'ro-peks-ĭ) [G. *sperma*, semen, + *lōron*, a thong, + *pēxis*, fixation.] Fixation of the spermatic cord; an operation for retained testicle, which consists in freeing the testis and spermatic cord from adhesions, bringing the testis down into the scrotum, and attaching the cord by sutures to the periosteum of the pubes.

spermol'ysis. Spermatolysis.

spermoneural'gia. Neuralgia of the spermatic cord.

sper"mophlebecta'sia [G. *sperma*, seed, + *phleps* (*phleb-*), vein, + *ektasis*, extension.] Dilatation of the spermatic veins, varicocele.

sperm'oplasm. The protoplasm of the spermatozoon.

sper'mosphere [G. *sperma*, seed, + *sphaira*, sphere.] The mass of cells formed by the division of the spermatocyte and giving rise to the spermatids.

sper'mospore. Spermatospore, spermatogonium.

spermotox'ic. Relating to spermotoxin.

spermotox'in. A substance formed in animals, which have received injections of spermatozoa from another species, which has the power of immobilizing and clumping the spermatozoa of animals of that other species.

spes phthisica (spēz (or spās)tiz'ĭ-kah) [L. *spes*, hope.] The feeling of hopefulness and confidence of recovery experienced by many sufferers from tuberculosis even in the later stages of the disease.

spew [A.S. *spiwan*.] To vomit. **belyan'do s.,** grass-sickness.

sp. gr. Abbreviation of specific gravity.*

sph. Abbreviation for spherical, or spherical lens.

sphacelate (sfas'e-lāt) [G. *sphakelos*, gangrene.] To slough, to become gangrenous.

sphacelation (sfas-e-la'shun). 1. The process of becoming gangrenous. 2. Necrosis, gangrene.

sphacelin'ic acid. Sphacelotoxin, spasmotin; a yellow resinous acid, $C_{20}H_{21}O_8(?)$, obtained from ergot, it causes marked contraction of the blood-vessels, producing gangrene when long continued.

sphacelism (sfas'e-lizm). Sphacelation.

sphaceloder'ma [G. *sphakelos*, gangrene, + *derma*, skin.] Gangrene of the skin.

sphacelotox'in. An active principle obtained from ergot, believed to be identical with sphacelinic acid.

sphacelous (sfas'e-lus). Necrotic, gangrenous, sloughing.

sphacelus (sfas'e-lus) [G. *sphakelos*, mortification.] 1. Moist gangrene. 2. A slough, a soft mass of necrotic matter.

sphæræsthe'sia. Spheresthesia.

sphæran'thus in'dicus. A plant of India from which a reddish volatile oil is obtained; used as a stimulant aphrodisiac.

sphærobacte'rium, pl. *sphærobacte'ria* [G. *sphaira*, ball.] Micrococcus.

sphærococ'cus [G. *sphaira*, ball, + *kokkos*, berry.] Micrococcus.

sphæro'ma [G. *sphaira*, sphere, + *-ōma*.] A tumor of spherical shape.

Sphærot'ilus[0] [G. *sphaira*, globe, + *tilos*, something pulled, flock.] A genus of *Chlamydobacteriacæ* containing filamentous organisms or cylindrical cells enclosed in sheaths; found in stagnant water. **S. bo'vis,** *Actinomyces bovis.*[0]

sphagiasmus (sfă-jĭ-az'mus) [G. *sphagē*, throat.] Spasm of the neck muscles, spasmodic torticollis.

sphagitis (sfă-ji'(je')tis) [G. *sphagē*, throat, + *-itis*.] Sore-throat.

spheneth'moid. Sphenoethmoid.

sphe'nion. The tip of the sphenoidal angle of the parietal bone, a craniometric point.

sphenobas'ilar. Relating to the sphenoid bone and the basilar process of the occipital bone, noting a suture.

sphenoccip'ital. Sphenobasilar.

sphenoceph'aly [G. *sphēn*, wedge, + *kephalē*, head.] The state of having a wedge-shaped head.

sphenoethmoid (sfe-no-eth'moyd). Relating to the sphenoid and ethmoid bones. **s. recess'**, a recess above and behind the superior concha, or turbinated bone, into which the sphenoidal sinus opens.

sphenofron'tal. Relating to the sphenoid and frontal bones, noting a suture.

sphe'noid [G. *sphēn*, wedge, + *eidos*, resemblance.] Wedge-shaped, sphenoidal. **s. angle,** see *angle*. **s. bone,** os sphenoidale. **s. crest,** crista sphenoidalis. **s. fissure,** fissura orbitalis superior [BNA]. **s. process,** processus sphenoidalis. **s. sinus,** see *sinus*.

sphenoid'al. Sphenoid, relating to the sphenoid bone.

sphenoiditis (sfe-noy-di'(de')tis). 1. Inflammation of the sphenoid sinus. 2. Necrosis of the sphenoid bone.

sphenoma'lar. Sphenozygomatic.

sphenomax'illary. Relating to the sphenoid bone and the maxilla. **s. fissure,** fissura orbitalis inferior [BNA]. **s. fossa,** fossa pterygopalatina [BNA].

sphenom'eter [G. *sphēn*, wedge, + *metron*, measure.] An instrument for measuring the size of the wedge to be removed in the operation for the correction of knock-knee.

spheno-occip'ital. Sphenobasilar.

sphenopalatine (sfe-no-pal'a-tīn). Relating to the sphenoid and the palate bones. **s. fora'men,** the s. notch converted into a foramen by the under surface of the body of the sphenoid bone. **s. notch,** incisura sphenopalatina, a deep notch between the sphenoidal and orbital processes of the palate bone.

sphenopari'etal. Relating to the sphenoid and the parietal bones, noting a suture and a cerebral sinus which communicates with the cavernous sinus.

sphenopetro'sal. Relating to the sphenoid bone and the petrous portion of the temporal bone, noting a suture.

sphenor'bital. Noting the portions of the sphenoid bone in relation with the orbits.

sphe"nosal"pingostaphyli'nus. Musculus tensor veli palatini [BNA].

sphenosis (sfe-no'sis) [G. *sphēnōsis*, a wedging together.] Impaction of the fetus in the pelvic canal during labor.

sphe"nosquamo'sal. Relating to the sphenoid bone and the squama of the temporal bone.

sphenotem'poral. Relating to the sphenoid and the temporal bones.

spheno'tic [*sphenoid* + G. *ous*(*ōt*-), ear.] Relating to the sphenoid bone and the bony case of the ear. **s. center,** one of two centers of ossification of the sphenoid bone for the lingulæ, appearing about the eighth week. **s. fora'men,** foramen lacerum medium.

sphenotresia (sfe-no-tre'sī-ah) [G. *sphēn*, wedge, + *trēsis*, perforation.] Boring through the base of the skull, in order to facilitate its crushing, in craniotomy.

sphe'notribe [G. *sphēn*, wedge, + *tribō*, I bruise.] An instrument for crushing the base of the skull after sphenotresia.

sphenotrip'sy. Crushing the base of the skull after sphenotresia.

sphenotur'binal. Noting the concha sphenoidalis or Bertin's bone.

sphenovo'merine. Relating to the sphenoid bone and the vomer, noting a suture.

sphenozygomat'ic. Relating to the sphenoid and the zygomatic (malar) bones.

sphere [G. *sphaira*.] A ball or globular body **attrac'tion s.,** see *attraction*. **segmenta'tion s.,** morula. **vitell'ine s.,** morula.

spheresthesia, sphæræsthesia (sfe-res-the'zī-ah) [G *sphaira*, sphere, + *aisthēsis*, sensation.] Globus hystericus.

spher'ical. Relating to or having the shape of a sphere or globe; globular. **s. abberra'tion,** see *aberration* (4). **s. body,** the primitive sexual form of the non-malignant malarial parasite, developing later into the gametocyte, or flagellated body. **s. lens,** one the curved surfaces of which are segments of spheres; it may be either convex or concave, the former being called a converging, magnifying, or plus (+) lens, the latter a diverging, reducing, negative, or minus (−) lens; a s. lens refracts the rays of light equally in all meridians.

spherobacterium (sfe-ro-bak-te'rī-um). Sphærobacterium, micrococcus.

spherococc'us. Sphærococcus, micrococcus.

sphe"rocyl'inder. A combined spherical and cylindrical lens, one surface being spherical, the other cylindrical.

phe'roid [G. *sphaira*, sphere, + *eidos*, resemblance.] Resembling a sphere, spheroidal. **s. col'ony,** a colony of protozoa in which the individual cells are held together in a coherent spherical mass by a gelatinous material.

spheroid'al. Spheroid.

sphero'ma. Sphæroma.

spherom'eter [G. *sphaira*, sphere, + *metron*, measure.] An instrument for determining the degree of convexity of the surface of a sphere or a spherical lens.

spherospermia (sfe"ro-spur'mī-ah) [G. *sphaira*, ball, sphere, + *sperma*, seed.] Spermatozoa having no elongated tail, such as those of the nematoda; opposed to *nematospermia*.

spherule (sfer'ūl). A minute sphere. **paranu'clear s.,** archiplasm.

sphincter (sfink'tur) [G. *sphinktēr*, a band or lace.] An orbicular muscle which serves, when in a state of normal contraction, to close one of the orifices of the body. **prepylor'ic s.,** a band of circular muscular fibers in the wall of the stomach near the pylorus, the contraction of which during digestion forms the antrum pyloricum. **pylor'ic s.,** a circular thickening of the muscular wall of the stomach surrounding the pyloric orifice. **s. ani,** see under *musculus*. **s. oc'uli,** musculus orbicularis oculi. **s. o'ris,** musculus orbicularis oris. **s. ure'thræ,** see under *musculus*. **s. vagi'næ,** musculus bulbocavernosus. **s. vesi'cæ** [NK], annulus urethralis.

sphinc'teral. Relating to a sphincter.

sphincteralgia (sfink-tur-al'jī-ah) [G. *sphinktēr*, sphincter, + *algos*, pain.] Pain in the sphincter ani muscles.

sphincterec'tomy [G. *sphinktēr*, sphincter, + *ektomē*, excision.] Excision of a portion of the pupillary border of the iris

sphincte'rial, sphincter'ic. Sphincteral.

sphincteris'mus. Spasmodic contraction of the sphincter ani muscles.

sphincterol'ysis [G. *sphinktēr*, sphincter, + *lysis*, loosening.] Operation for freeing the iris from the cornea in anterior synechia involving only the pupillary border.

sphinc'teroplasty [G. *sphinktēr*, sphincter, + *plassō*, I form.] Reparative or plastic surgery of any sphincter muscle.

SECTIONS OF THE SPINAL CORD AT VARIOUS LEVELS

C. = Cervical. *Th.* = Thoracic or Dorsal. *L.* = Lumbar. *S* = Sacral.

spike [L. *spica*.] In botany, an indefinite inflorescence, in which the flowers are sessile on the central axis, differing from a raceme in which the flowers are stalked.

spikenard (spīk'nard) [L. *spica nardi*.] *Aralia*.

Spilan'thes olera'cea. Para cress, a plant of South America, employed as a salad and medicinally as a stomachic and antiscorbutic, and locally for the relief of toothache

spill. An overflow, a scattering of fluid or finely divided matter. **cel'lular s.,** a dissemination of cells through the lymph or blood, giving rise to metastases or implantation of foreign tissue in any part or organ.

spiloplania (spi-lo-pla'nĭ-ah) [G. *spilos*, spot, + *planĕ*, a wandering.] A condition marked by the appearance and disappearance of points and patches of discoloration or hyperemia on various parts of the surface.

spiloplax'ia [G. *spilos*, spot, + *plax*, a plaque, plate.] Leprosy.

spilo'ma [G. a spot.] Nævus.

spi'lus [G. *spilos*, a spot.] Nævus.

spi'na, gen. and pl. *spi'næ* [L. a thorn.] 1 The spine. 2. Any spine or sharp thorn-like process. **s. angula'ris** [BNA], angular spine, spinous process of the sphenoid bone, alar or sphenoidal spine, the posterior prolongation of the wing of the sphenoid bone on either side. **s. bif'ida,** a limited defect in the spinal column, consisting in absence of the vertebral arches, through which the spinal membranes, with or without spinal-cord tissue, protrude. **s. bif'ida occul'ta,** a form in which there is a spinal defect, but little or no protrusion of the cord or its membranes; the site of the defect is sometimes indicated by a growth of hair. **s. dorsa'lis,** the spinal column. **s. fronta'lis** [BNA], frontal spine, nasal spine of the frontal bone; a projection from the center of the nasal part of the frontal bone, which lies between and articulates with the nasal bones and the perpendicular plate of the ethmoid. **s. hel'icis** [BNA], an anteriorly directed spine at the extremity of the crus of the helix of the auricle. **s. ili'aca** [BNA], one of the four iliac spines, named respectively anterior superior, anterior inferior, posterior superior, and posterior inferior; the first of these gives attachment to the outer extremity of Poupart's ligament and part of the sartorius muscle. **s. ischiad'ica** [BNA], sciatic spine, spine of the ischium, a pointed process from the posterior border of the ischium on a level with the lower border of the acetabulum. **s. mea'tus,** Henle's* spine, spina supra meatum. **s. menta'lis** [BNA], mental spine, genial tubercle; a slight projection, sometimes two, in the middle line of the posterior surface of the body of the mandible, giving attachment to the geniohyoid muscle (above) and the geniohyoglossus (below). **s. nasa'lis,** nasal spine, s. frontalis [BNA]. **s. nasa'lis ante'rior** [BNA], anterior nasal spine; a pointed projection at the anterior extremity of the intermaxillary suture. **s. nasa'lis poste'rior** [BNA], posterior nasal spine, posterior palatine spine; the sharp posterior extremity of the nasal crest. **spi'næ palati'næ** [BNA], palatine spines; the longitudinal ridges on the lower surface of the palatal process of the maxilla. **s. pe'dis,** a corn. **s. peronea'lis,** processus trochlearis of the os calcis. **s. pu'bis,** tuberculum pubicum [BNA]. **s. scap'ulæ** [BNA], the prominent triangular ridge on the dorsal aspect of the scapula. **s. teg'minis,** a slight bony process in the tympanum just above the opening into the mastoid antrum. **s. supramea'tum** [BNA], Henle's* spine. **s. trochlea'ris** [BNA], trochlear spine, a spicule of bone arising from the edge of the fovea trochlearis, giving attachment to the pulley of the superior oblique muscle of the eyeball. **s. tympan'ica major** [BNA], the anterior edge of the notch of Rivinus, or incisura tympanica. **s. tympan'ica minor** [BNA], the posterior edge of the notch of Rivinus, or incisura tympanica. **s. vento'sa,** a condition occasionally seen in tuberculosis or cancer of bone, in which there is absorpton of bone bordering the medulla with a new deposit under the periosteum, looking as if the bone were inflated with air.

spin'ach stools. Dark greenish porridge-like stools, resembling chopped spinach, produced by calomel in infants.

spi'nal. 1. Relating to any spina or spinous process. 2. Relating to the vertebral column. **s. canal,** the canal formed by the vertebral arches, in which is the s. cord. **s. column,** spine, vertebral column, backbone, spina dorsalis, rhachis; the row or column of vertebræ with the intervertebral discs, forming the support of the neck and trunk and enclosing the spinal cord; it is composed of 33 vertebræ—7 cervical, 12 thoracic, 5 lumbar, 5 sacral, and 4 coccygeal; the 5 sacral vertebræ are fused, forming one bone, the sacrum, and the 4 coccygeal vertebræ are also fused, forming one bone, the coccyx. **s. cord,** medulla spinalis. **s. cur'vature,** see *kyphosis*, *lordosis*, and *scoliosis*. **s. irrita'tion,** neurasthenia, or a psychoneurosis, marked especially by paresthesiæ and pains in the back, with sensitiveness to pressure, associated with more or less muscular weakness, constipation, and gastric disturbances. **s. marrow,** medulla spinalis. **s. nerves,** the nerves arising from the s. cord; there are 31 on either side—8 cervical, 12 thoracic, 5 lumbar, 5 sacral, and 1 coccygeal. **s. sign,** tonic contraction of the spinal muscles on the affected side, in pleurisy.

spi'nal col'umn. Vertebral column, rhachis, spina, spine, backbone; see under *spinal*.

cleft, rachischisis, spondyloschisis, spina bifida. **curvature,** rhachiocampsis, scoliosis, rhachioscoliosis (lateral); cyrtosis, cyphosis, kyphosis, rhachiokyphosis, ithycyphosis, gibbus, gibbosity, humpback, hunchback (with convexity backward); lordosis, lordoma, ithylordosis (with convexity forward); cyphoscoliosis, kyphoscoliosis (backward and lateral); lordoscoliosis (forward and lateral); hettocyrtosis (slight curvature) **cutting into,** rhachiotomy, spondylotomy, laminectomy **disease,** spondylopathy, rhachiopathy, cacorrhachis. **dropsy,** hydrorrhachis, rhachiochysis. **hemorrhage into canal,** hematorrhachis. **imperfect development,** atelorrhachidia. **inflammation,** spondylitis, spondylarthritis, rhachialgitis, rhachiagra; spondylarthrocace, Pott's disease; spondylopyosis (purulent). **instrument for measuring curvature,** rhachiometer. **pain,** rhachiagra, rhachiorrheuma, rachialgia, rachiodynia; spondylalgia, spondylodynia; hieralgia (sacrum); coccyalgia, coccygodynia, coccydynia, coccyodynia (coccyx); notalgia. **puncture,** rhachiocentesis. **relating to,** spinal, rhachidian, vertebral, spondylic. **straightening of curvature,** rhachidasia, rhachilysis.

spinal cord. Spinal marrow, medulla* spinalis, the portion of the central nervous system contained within the spinal, or vertebral, canal.

absence, amyelia. **anemia,** myelanemia. **atrophy,** myelanalosis, myelatrophia, amyelotrophy, myelophthisis. **cavity formation in,** syringomyelia, myelosyringosis. **central canal,** myelocœle, syringocœle. **cystic disease,** myelocyst. **disease,** mye opathy, myeleterosis; leucomyelopathy (white substance); poliomyelopathy (gray substance). **disintegration,** myelodiastasis. **dropsy,** hydrorrhachis, myelochysis, hydromyelia. **hemorrhage,** hematomyelia, myelorrhagia, myelapo-

plexy; myelomenia (vicarious menstruation). **hyperemia,** myelyperemia. **hypertrophy,** myelauxe, myelypertrophy. **inflammation,** myelitis, notomyelitis; hematomyelitis (with blood effusion); leucomyelitis (white matter); poliomyelitis (gray matter); myelomeningitis (membranes); myeloneuritis (with multiple neuritis). **imperfect development,** atelomyelia, myelatelia. **membranes,** myelomeninges; ependyma (lining central canal). **pain,** myelalgia, myelodynia. **paralysis,** amyeloneuria, myeloparalysis, myeloplegia. **protrusion of,** myelocele, spina bifida, myelomeningocele, meningomyelocele, myelocystocele. **puncture,** rhachiocentesis. **sclerosis,** myelosclerosis. **smallness,** micromyelia. **softening,** myelomalacia. **tuberculosis,** myelophyma. **tumor,** myeloncus, myelophyma.

spina'lis [L.] Spinal. See under *musculus*.

spi'nant. An agent increasing the reflex irritability of the spinal cord.

spi'nate. Spined, having spines.

spindle (spin'dl) [A.S.] 1. In anatomy and pathology, any fusiform cell or structure, such as the inner segment of one of the rods or cones of the retina, or a spindle-cell. 2. Specifically the amphiaster, a spindle-shaped or fusiform figure formed by the fibrils of cytoplasm stretching between the asters, in the prophase of mitosis or caryocinesis.* **aor'tic s. of His,** a fusiform dilatation of the aorta following congenital narrowing at the part corresponding to the ductus arteriosus. **mus'cular s.,** a fiber of striated muscle. **neuromus'cular s.,** Kuehne's* muscle-spindle. **neuroten'dinous s.,** Golgi's* organ. **nu'clear s.,** spindle (2). **tigroid s.,** see *tigroid*.

spindle-cat'aract. Fusiform cataract, a central opacity of the crystalline lens having the form of a spindle with the long axis directed anteroposteriorly.

spin'dle-cell. A fusiform cell, such as those in the deeper layers of the cerebral cortex.

spin'dle-celled. Composed mainly of spindle-shaped or fusiform cells. **s.-c. layer,** the inner layer of the cerebral cortex. **s.-c. sarco'ma,** a sarcoma composed mainly of fusiform, or spindle-shaped cells.

spindle-shaped (spin'dl-shāpt). Having the form of a spindle, bulbous in the center and tapering to a point at the two opposite poles; fusiform.

spin'dle-tree. Euonymus.

spine [L. *spina*.] 1. A short sharp process of bone, a spinous process. 2. The backbone, the vertebral or spinal* column. 3. The bar* or stay in a horse's hoof. **alar s., an'gular s.,** spina angularis. **dorsal s.,** spina dorsalis, backbone, spinal or vertebral column. **he'mal s.,** the middle point of the hemal arch of the typical vertebra, represented by the sternum. **iliac s.,** spina iliaca. **ischiad'ic s.,** sciatic s., spina ischiadica. **me'atal s.,** Henle's* spine. **mental s.,** spina mentalis. **nasal s.,** spina frontalis; spina nasalis. **neural s.,** the middle point of the neural arch of the typical vertebra. represented by the spinous process. **pubic s.,** tuberculum pubicum. **railway s.,** traumatic neurasthenia. **s. of the scapula,** spina scapulæ. **suprame'atal s.,** Henle's* spine. **trochlear s.,** spina trochlearis. **typhoid s.,** weakness and hyperesthesia of the spinal column occasionally noted as a sequel of typhoid fever.

spine-cell. Prickle-cell.

Spinelli opera'tion (spe-nel'le). An operation splitting the anterior wall of the prolapsed uterus and reversing the organ preliminary to reposition.

spinifugal (spi-nif'u-gal) [L. *spina*, spine, + *fugere*, to flee.] Passing in a direction away from the spinal cord, noting the efferent fibers of the spinal nerves.

spinipetal (spi-nip'e-tal) [L. *spina*, spine, + *petere*, to seek.] Passing in a direction toward the spinal cord, noting the afferent fibers of the spinal nerves.

spinitis (spi-ni'(ne')tis). 1. Myelitis. 2. Pott's* disease, spondylitis.

spinobul'bar. Relating to the spinal cord and the medulla oblongata.

spinocaine (spi'no-ka-ēn) [*spine* + (novo)*caine*.] A solution for use in producing localized spinal anesthesia; it consists of novocaine 200.0 mg., strychnine sulphate, 2.2 mg., in a solvent of alcohol, starch water or gliadin solution (to prevent wide dissemination), and saline solution, 2 c.c.

spinocollic'ular. Spinotectal.

spinocor'tical. Corticospinal.

spinocosta'lis. The superior and inferior serratus posterior muscles regarded as one.

spi"nogalvaniza'tion. The application of the constant electrical current to the spinal cord.

spinogle'noid. Relating to the spine and the glenoid cavity of the scapula.

spinomus'cular. Relating to the spinal cord and the muscles supplied by the spinal nerves.

spinoneural (spi-no-nu'ral). Relating to the spinal cord and the nerves given off from it.

spi'nose. Spinous.

spinotectal (spi-no-tek'tal). Passing upward from the spinal cord to the tectum, spinocollicular.

spinotransversa'rius. The splenius and obliquus capitis major muscles regarded as one.

spi'nous. Relating to, shaped like, or having a spine or spines. **s. process,** processus spinosus.

spin'therism [G. *spinthēr*, spark.] A subjective perception of sparks before the eyes, photopsia, spintheropia, synchisis scintillans.

spintherom'eter [G. *spinthēr*, spark, + *metron*, measure.] An apparatus for determining the penetrating power of *x*-rays by measuring the degree of vacuity in the tube.

spintheropia (spin-ther-o'pī-ah) [G. *spinthēr*, spark, + *ōps*, eye.] Spintherism.

spiradeno'ma [G. *speira*, coil, + *adēn*, gland, + *-ōma*. Adenoma sudoriparum, multiple benign cystic epithelioma; small rounded epithelial growths, of a glistening semitranslucent appearance, occurring in numbers about the face.

spi'ral [L. *spiralis; spira*, a coil.] 1. Coiled, winding around a center like a watch-spring; winding and ascending like a wire spring. 2. A structure in the shape of a coil. **Curschmann's s.,** see *Curschmann*. **s. joint,** articulatio cochlearis.

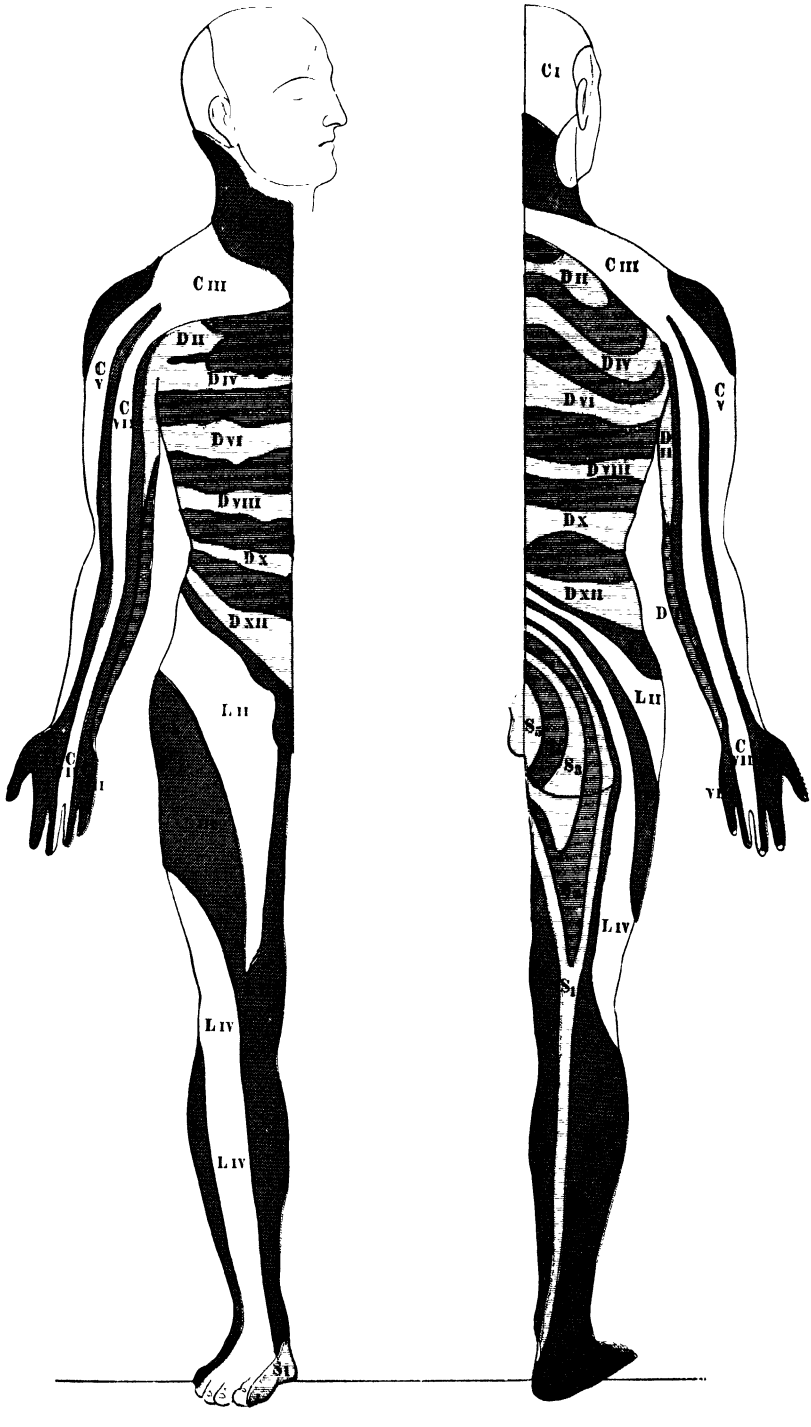
spirem, spireme (spi'rem, spi'rēm) [G. *speirēma*, a coil.] The first stage of mitosis in which the chromatin appears in the form of irregularly disposed fibrils, the wreath or mother skein.

Spirillaceæ (spi-ril-la'se-e). A family of *Eubacteriales* containing two genera (*Vibrio* and *Spirillum*) of curved, more or less spiral cells which divide always transversely.

spirillicidal (spi-ril-ĭ-si'dal) [*spirillum* + L. *cædere*, to kill.] Destructive to spirilla or spirochetes.

spirillosis (spi-ril-lo'sis). Any disease caused by the presence of spirilla in the blood or tissues.

Spiril'lum [L. dim. of *spira*, a coil.] A genus of *Spirillaceæ* containing motile spiral rods having a tuft of flagella at one or both extremities. **S. car'teri,** *Borrelia carteri*.⁰ **S. chol'eræ asiat'icæ,** *Vibrio comma*.⁰ **S. dutt'oni,** Borrelia duttoni.⁰ **S. fink'leri** *Vibrio proteus*.⁰ **S.**



AREAS OF THE SURFACE OF THE BODY RELATED TO THE VARIOUS SEGMENTS OF THE SPINAL CORD

c, cervical, d, dorsal or thoracic, l, lumbar, s, sacral

oil of allspice, each 0 5, alcohol 610, water to make 1000; employed as a toilet preparation.

s. myris'ticæ (Br.), spirit of nutmeg; volatile oil of nutmeg 1, 90 per cent. alcohol 9; employed as a flavoring agent in doses of ℥30–60 (2.0–4.0).

s. odora'tus (N.F.), perfumed spirit; oil of bergamot 15, oil of lemon 8, oil of rosemary 7, oil of lavender and oil of orange flowers, each 4, acetic ether 2, water 120, alcohol 840.

s. oleo'rum volat'ilum (N.F.), spirit of volatile oils; a 6½ per cent. alcoholic solution of any volatile oil.

s. ophthal'micus, ophthalmic spirit, alcoholic eyewash; oil of lavender 2, oil of rosemary 6, alcohol to make 100; used as an eyewash.

s. phos'phori, spirit of phosphorus; phosphorus 0 12, absolute alcohol 100; nerve tonic in dose of ♏8 (0.5).

s. rectifica'tus (Br.), rectified spirit, alcohol (U.S.), contains 90 per cent. by volume (85.65 per cent. by weight) of absolute alcohol.

s. rosmari'ni (Br.), spirit of rosemary s. anthos; oil of rosemary 1, 90 per cent. alcohol 9; employed as a perfume in lotions and liniments.

s. sapona'tus, spirit of soap; (1) Castile soap 17 5, in alcohol and water 100; detergent; (2) a preparation of the German Pharmacopeia similar to the linimentum saponis mollis (U.S.).

s. sina'pis (N.F.), spirit of mustard; a 2 per cent. solution of volatile oil of mustard in alcohol; counter-irritant.

s. tenu'ior [L. weaker spirit], proof-spirit.

s. vanilli'ni compos'itus (N.F.), compound spirit of vanillin; vanillin 40, oil of orange, 10, oil of cardamom 1, alcohol to make 200; used as a flavoring agent.

s. vi'ni, spirit of wine, alcohol (U.S.), s. rectificatus (Br.).

s. vi'ni gal'lici, spirit of French wine, brandy, s. vini vitis (U.S.).

s. vi'ni vi'tis (U.S.), s. vini gallici, spirit of French wine, brandy; an alcoholic liquid obtained by the distillation of the fermented juice of sound ripe grapes, and containing not less than 48 and not more than 54 per cent. by volume of alcohol (C_2H_5OH); employed as a stimulant in doses of ℥½–2 (15.0–60.0).

Spiro's test (spe'ro) [Karl *Spiro*, German physiological chemist, 1867–1932.] A method for the determination of ammonia and urea in the urine, by treatment with pulverized barium oxide and petroleum.

spirobacte'ria. The spiral or curved bacterial forms, including the spirilla, the spirochetes, and the vibrios.

Spirochæta (spi-ro-ke'ta) [G. *speira*, a coil, + *chaitē*, flowing hair.] A genus of the family *Spirochætaceæ*, the species of which (in the classification of the Committee of the Society of American Bacteriologists) are slender, non-flagellated, wavy forms, found in fresh or sea water, clean or foul, and one, *S. daxen'sis*,[0] in the hot spring at Dax. The term is often loosely used to denote any one of the group of spiral organisms of the genera *Borrelia*, *Cristispira*, *Leptospira*, *Spirochæta*, and *Treponema*, and also some probably protozoan forms. **S. argentinen'sis,** the Strasbourg spirochete, at one time thought to be the pathogenic organism of disseminated sclerosis. **S. balanit'idis,** a species found in balanitis circinata. **S. bronchia'lis,** a species found in the sputum in certain cases of nontuberculous bronchitis, or bronchopulmonary spirochetosis, attended with hemoptysis. **S. bucca'lis,** a form found in the mouth. **S. car'teri,** *Borrelia carteri*.[0] **S. den'tium,** a supposedly non-pathogenic species found in food collections between the teeth. **S. dut'toni,** *Borrelia duttoni*.[0] **S. fo'rans,** a species thought to be the pathogenic agent in spirochetosis arthritica, or Reiter's disease. **S. icterohæmorrha'giæ,** *Leptospira icterohæmorrhagiæ*.[0] **S. inter'rogans,** an organism found by Stimson in 1908 in the kidney in a case of yellow fever, and so named by him provisionally; it is possibly the same as *Leptospira icteroides* of Noguchi. **S. lymphat'ica,** a species asserted to be pathogenic of leucemia. **S. microgyra'ta,** a form marked by short sharp turns, found in ulcerating cancer and in feces, regarded by Robertson and Wade as pathogenic for cancer. **S. mor'sus mu'ris,** *Spirillum minus*. **S. nodo'sa,** an assumed pathogenic organism of Weil's disease. **S. no'vyi,** *Borrelia novyi*.[0] **S. obermei'eri,** *Borrelia recurrentis*.[0] **S. pal'lida,** *Treponema pallidum*. **S. pallid'ula** and **S. perten'uis** (L. very slender), *Treponema pertenue*. **S. plicat'ilis,** a very large species, the first discovered (by Ehrenberg in 1838); it is sometimes as long as 200 micra ($\frac{1}{125}$ inch), and is non-parasitic, so far as known. **S. recurren'tis,** S. obermeieri. **S. refrin'gens,** *Treponema refringens*.[0] **S. vin'centi,** *Borrelia vincenti*.

Spirochætaceæ[0] (spi-ro-ke-ta'se-e) [See *Spirochæta*.] The single family of the order *Spirochætales*, containing long, thin, spiral organisms, some multiplying by transverse, others by longitudinal, division.

Spirochætales (spi-ro-ke-ta'lēs). An order of *Schizomycetes*,[0] a number of the organisms in which were formerly, and still are by some protozoologists, regarded as belonging to the *Protozoa*.

spirochætidæ (spi-ro-ke'tĭ-de). Spirochaetacea with an undulating membrane.

spirochætosis. See *spirochetosis*.

spirochetal (spi-ro-ke'tal). Relating to spirochetes especially noting infection with such organisms.

spirochete (spi-ro-kēt'). Any individual of the genus *Spirochæta*.

spirocheticide (spi-ro-ke'tĭ-sīd) [*Spirochæta* + L. *cædere*, to kill.] An agent destructive to spirochetes.

spirochetolysis (spi-ro-ke-tol'i-sis) [*Spirochæta* + G. *lysis*, solution.] Destruction of spirochetes, by chemotherapy or by specific antibodies.

spirochetosis (spi-ro-ke-to'sis) [*Spirochæta* + *-osis*.] Any disease caused by a spirochete, such as syphilis. **bronchopul'monary s.,** hemorrhagic bronchitis, Castellani's bronchitis, a bronchitis marked by severe cough and frequent hemorrhages, caused by the presence in large number of *Spirochæta bronchialis*. **gas'tric s.,** grass-sickness. **s. arthrit'ica,** Reiter's disease, a triad of urethritis, conjunctivitis, and arthritis occurring in the sequence given, not due to the gonococcus but caused possibly by a sphirochete, *S. forans*.

spirochetotic (spi-ro-ke-tot'ik). Relating to or marked by spirochetosis.

spirocide (spi'ro-sīd) [*spirochete* + L. *cædere*, to kill.] Stovarsol.

spi'roform. Trade name of acetyl-phenyl salicylate, occurring in the form of a white crystalline powder without taste and with a faint aromatic odor, insoluble in water but soluble in alcohol, ether, chloroform, and fatty oils; recommended as an antipyretic and intestinal disinfectant for the relief of rheumatic pains, neuralgia, influenza, and intestinal disorders in doses of gr. 5–20 (0.3–1.2).

spi'rogram. The tracing made by the spirograph.

spirograph (spi'ro-graf) [L. *spirare*, to breathe, + G. *graphō*, I write.] A device for representing graphically the depth and the rapidity of the respiratory movements.

spiro'ma [G. *speira*, coil, + *-ōma*.] Spiradenoma.

spirometer (spi-rom'e-tur) [L. *spirare*, to breathe, + G. *metron*, measure.] An appliance for measuring the air-capacity of the lungs.

spirometr'ic. Relating to spirometry or the spirometer.

spirom'etry. Testing the air-capacity of the lungs by means of a spirometer.

Spirom'onas [G. *speira*, a twisted shape, + *monas*, a unit.] A group of flattened, ribbon-shaped *Spirillaceæ*.

Spironema (spi-ro-ne'mah) [G. *speira*, a coil, + *nēma*, thread.] *Treponema*.

spirophore (spi'ro-for) [L. *spirare*, to breathe, + G. *phoros*, a bearer.] A sort of pneumatic cabinet used for artificial respiration; the patient is placed in the cabinet, with his head outside and as the air within is alternately exhausted and under pressure the patient is made to inhale and exhale.

spi'rosal. Trade name of the monoglycol ester of salicylic acid, recommended as an external application in rheumatism and other painful conditions; glysal.

Spiroschaudinnia (spi"ro-show-din'ĭ-ah) [G. *speira*, a coil, + *Schaudinn*—see *Schaudinnella*.] A former term to include the spirochetal forms occurring in the blood, many now included in the genus *Borrelia*.

spiroscopes (pi'ro-skōp). A device for measuring the air capacity of the lungs.

Spiruli'na [L. dim. of *spira*, a twisted shape.] A group of *Spirillaceæ* much coiled and twisted.

spi'rus [G. *speiros*, a shroud, a wrapper.] A thin almost imperceptible layer or covering.

spiss'ated [L. *spissatus; spissare*, to thicken.] Inspissated, thickened.

spiss'itude [L. *spissitudo; spissus*, thick.] The state of being inspissated, noting the condition of a fluid thickened almost to a solid by evaporation or inspissation.

spit [A.S. *spittan*.] 1. To eject saliva, mucus, or other fluid from the mouth, to expectorate. 2 Saliva, expectoration, sputum. **s. neg'ative,** noting a case in which tubercle bacilli have never been found in the sputum. **s. pos'itive,** noting a case in which tubercle bacilli have been found in the sputum.

spittle (spit'l) [A.S. *spātl*.] Saliva.

Spitz'ka's bundle [Edward Charles *Spitzka*, New York neurologist, 1852–1914.] A collection of white fibers passing from the oculomotor nuclei to the cortex of the opposite side. **S.'s mar'ginal tract** or **zone,** a small thin layer of white substance in the spinal cord, just anterior to the posterolateral sulcus, containing some of the outer fibers of the posterior nerve-roots outside of Burdach's tract; called also Lissauer's marginal zone or tract and Waldeyer's zonal layer. **S.'s nu'cleus,** the central group of nerve-elements in the oculomotor nucleus; called also Perlia's nucleus.

Spix's spine [Johannes Baptist *Spix*, German anatomist, 1781–1826.] Lingula* mandibulæ [BNA].

splanchnapophyseal (splank"nă-pŏ-fiz'e-al). Relating to a splanchnapophysis.

splanchnapophysis (splank-nă-pof'e-sis) [G. *splanchnon*, viscus, + *apophysis*, offshoot.] An apophysis of the typical vertebra, on the side opposite to the neural apophysis, and enclosing any viscera.

splanchnectopia (splank-nek-to'pĭ-ah) [G. *splanchnon*, viscus, + *ektopos*, out of place.] Displacement of any of the viscera.

splanchnemphraxis (splank-nem-fraks'is) [G. *splanchnon*, viscus, + *emphraxis*, a stoppage.] Intestinal obstruction.

splanchnesthesia (splank-nes-the'zĭ-ah) [G. *splanchna*, viscera, + *aisthēsis*, sensation.] Visceral sensation, the sensibility of the intestines and other viscera.

splanchnic (splank'nik). Visceral.

splanchnoblast (splank'no-blast) [G. *splanchnon*, viscus, + *blastos*, germ.] The rudiment, in the embryo, of any viscus.

splanchnocele (splank'no-sēl) [G. *splanchnon*, viscus, + *kēlē*, hernia.] 1. Hernia of any of the abdominal viscera. 2. Splanchnocœle.

splanchnocœle (splank'no-sēl) [G. *splanchnon*, viscus, + *koilos*, hollow.] The primitive cavity or cœlum in the embryo developing into the cavities of the peritoneum, pleura, and pericardium.

splanchnodiastasis (splank-no-di-as'ta-sis) [G *splanchnon*, viscus, + *diastasis*, separation.] Splanchnectopia.

splanchnography (splank-nog'ră-fe) [G. *splanchnon*, viscus, + *graphē*, a description.] A treatise on or description of the viscera.

splanchnolith (splank'no-lith) [G. *splanchnon*, viscus, + *lithos*, stone.] An intestinal calculus.

splanchnology (splanck-nol'ŏ-jĭ) [G. *splanchnon*, viscus, + *-logia*.] The branch of medical science dealing with the viscera.

splanchnomegalia (splank-no-mĕ-ga'lĭ-ah). Splanchnomegaly.

splanchnomegaly (splank-no-meg'ă-lĭ) [G. *splanchnon*, viscus, + *megas(megal-)*, large.] Abnormal increase in size of any of the viscera.

splanchnopleural (splank-no-plu'ral). Relating to the splanchnopleure.

splanchnopleure (splank'no-plūr) [G. *splanchnon*, viscus, + *pleura*, side.] The embryonic layer formed by the union of the visceral layer of the mesoderm with the entoderm; splanchnic or visceral mesoblast.

splanchnoptosia, splanchnoptosis (splank-nop-to'sĭ ah, splank-nop-to'sis) [G. *splanchna*, viscera, + *ptōsis*, a falling.] Visceroptosia, enteroptosia, abdominal ptosis, Glénard's disease.

splanchnosclerosis (splank-no-skle-ro'sis) [G. *splanchnon*, viscus, + *sklēros*, hard.] Hardening, through connective-tissue overgrowth, of any of the viscera.

splanchnoscopy (splank-nos'ko-pĭ) [G. *splanchnon*, viscus, + *skopeō*, I view.] Examination of the viscera by the Roentgen-rays.

splanchnoskeleton (splank-no-skel'ĕ-ton) [G. *splanchnon*, an internal organ, + *skeleton*] 1. Any bony formation in an organ, as in the heart, tongue, or penis of certain animals; the term also includes, according to some anatomists, the cartilaginous rings of the trachea and bronchi. 2. The visceral skeleton, the bony framework protecting the viscera, as the ribs and sternum, the innominate bones, and the anterior portion of the skull.

splanchnosomatic (splank-no-so-mat'ik) [G. *splanchnon*, viscus, + *sōma*, body.] Relating to the viscera and the body.

splanchnotomy (splank-not'o-mĭ) [G. *splanchnno*, viscus, + *tomē*, a cutting] Visceral anatomy, dissection of the internal organs.

splanchnotribe (splank'no-trīb) [G. *splanchnon* viscus, + *tribō*, I bruise.] An instrument resembling a large angiotribe used for occluding the intestine temporarily, prior to resection.

splay-foot. Flat-foot, talipes valgus.

spleen. Lien [BNA], a large vascular ductless gland lying in the upper part of the abdominal cavity on the left side, between the stomach and the diaphragm. It is composed of a soft reddish brown cellular structure, the *pulp*, enclosed and supported by a connective-tissue network given off from the strong fibrous capsule. The spleen is regarded as a blood-forming organ but its functions are very imperfectly understood. **access'ory s.**, splenculus, splenule, an isolated body, composed of splenic tissue, found usually in one of the peritoneal folds or elsewhere. **bacon s.**, amyloid degeneration of the spleen giving it in parts the appearance of bacon; lardaceous s. **diffuse' waxy s.**, a condition of amyloid degeneration of the spleen, affecting chiefly the connective-tissue coats of the venous sinuses and the reticulum of the pulp. **larda'ceous s.**, waxy s. **mov'able s.**, floating s. **sago s.**, amyloid degeneration of the spleen affecting chiefly the Malpighian bodies. **waxy s.**, amyloid degeneration of the spleen.

accessory, splenculus, splenule, lienculus, lienunculus, lien accessorius, lien succenturiatus. **acting upon.** splenitive. **atrophy,** splenatrophia, splenophthisis, **congestion,** splenemphraxis, splenohemia. **description of,** splenography. **disease,** splenopathy **displacement,** splenectopia, splenoptosia, lien mobilis. **enlargement,** splenauxe, splenectasia, splenoparectasia, splenomegaly, megalosplenia; splenadenoma; ague-cake. **extirpation,** splenectomy. **fixation o movable,** splenopexy. **hardening,** splenocerato-is, splenosclerosis, lienosclerosis. **hemorrhage,** splenorrhagia **hernia,** splenocele, lienocele. **incision into,** splenotomy, **inflammation,** splenitis, lienitis; perisplenitis (capsule). **pain,** splenalgia, splenodynia. **relating to,** lienal. splenic, splenious. **science relating to,** splenology. **softening,** splenomalacia, lienomalacia. **suture of,** splenorrhaphy. **tumor,** splenoma, splenadenoma, splenocele, splenoncus. **ulceration,** splenelcosis.

sple"nadeno'ma [G. *splēn*, spleen, + *adēn*, gland, + *-ōma*.] Enlargement of the spleen through hyperplasia of the pulp.

splenæ'mia. Splenemia.

splenalgia (sple-nal'jĭ-ah) [G. *splēn*, spleen, + *algos*, pain.] A painful condition of the spleen, splenodynia.

splenauxe (splēn-awk'se) [G. *splēn*, spleen, + *auxē*, increase.] Splenomegaly, enlargement of the spleen.

splen'culus [L dim. of *splēn*, spleen.] Splenule, an accessory spleen.

splenectasia (sple-nek-ta'sĭ-ah) [G. *splēn*, spleen, + *ektasis*, extension.] Enlargement of the spleen.

splenec'tomize. To remove the spleen from, to perform splenectomy on.

splenec'tomy [G. *splēn*, spleen, + *ektomē*, excision.] Removal of the spleen.

splenecto'pia, splenec'topy [G. *splēn*, spleen, + *ektopos*, out of place.] Floating s., a condition of abnormal mobility of the spleen.

splenelco'sis [G. *splēn*, spleen, + *helkōsis*, ulceration.] Abscess of the spleen.

splene'mia, splenæ'mia [G. *splēn*, spleen, + *haima*, blood.] Splenic leucemia.

sple"nemphrax'is [G *splēn*, spleen, + *emphraxis*, stoppage.] Congestion of the spleen.

spleneolus (sple-ne'o-lus) [L. dim. of G. *splēn*.] Accessory spleen, lien accessorius [BNA].

splenepatitis (splēn-ep-ă-ti'(te')tis) [G. *splēn*, spleen, + *hēpar(hēpat-)*, liver, + *-itis*.] Inflammation of both spleen and liver.

splenet'ic. 1. Splenic, relating to the spleen. 2. Suffering from chronic disease of the spleen. 3. Fretful, surly

sple'nial [G. *splēnion*, bandage.] 1. Relating to the splenium. 2. Relating to a splenius muscle.

splen'ic. Relating to the spleen. **s. cell,** splenocyte.

splenic'terus. Jaundice associated with splenitis.

splenic'ulus. Splenculus.

spleniferr'in. Trade name of an extract of the spleen of an ox combined with iron, recommended as a hematinic.

splenifica'tion [L. *splen*, spleen, + *facere*, to make.] Splenization.

sple'niform [L. *splen*, spleen, + *forma*, form.] Resembling the spleen, splenoid.

sple'nin. Trade name of an extract of the spleen of the ox.

spleniserr'ate. Relating to the splenius and serratus muscles.

splenism (sple'nizm). The normal functioning of the spleen.

splenitis (sple-ni'(ne')tis) [G. *splēn*, spleen, + *-itis*.] Inflammation of the spleen.

sple'nium [G. *splēnion*, bandage.] 1. A compress or bandage. 2. In anatomy a structure resembling a bandaged part. **s. cor'poris callo'si** [BNA], the thickened posterior extremity of the corpus callosum.

sple'nius [G. *splēnion*, a bandage.] A muscle or group of muscles at the side and back of the neck; see under *musculus*.

spleniza'tion. A condition of the lung in which it is so intensely congested as to be quite solid so as to sink in water.

splenoblast (sple'no-blast) [*spleno(cyte)* + G. *blastos*, germ.] The mother cell of the splenocyte.

splenocele [sple'no-sēl) [G. *splēn*, spleen, + *kēlē*, tumor, hernia.] 1. A splenic tumor. 2. A splenic hernia.

splenocerato'sis [G. *splēn*, spleen, + *keras*, horn.] Induration of the spleen

splenocleisis (sple-no-kli'sis) [G. *splēn*, spleen, + *kleiō*, I shut up, confine.] Inducing the formation of new fibrous tissue on the surface of the spleen by friction or wrapping with gauze.

splenocol'ic. Relating to the spleen and the colon noting a ligament or fold of peritoneum passing between the two viscera.

splenocyte (sple'no-sīt) [G. *splēn*, spleen. + *kytos*, cell.] 1. One of the uninuclear leucocytes or lymphocytes of the spleen. 2. Endotheliocyte, any one of the large uninuclear leucocytes, excluding the lymphocytes.

splenodyn'ia [G. *splēn*, spleen, + *odynē*, pain.] Splenalgia.

splenogranulomatosis (sple-no-gran-u-lo-mă-to'sis) [G. *splēn*, spleen, + L. *granulum*, granule, + G. *-ōma*, + *-ōsis*.] Gamna's disease, enlargement of the spleen with thickening of its capsule and with brownish nodules, containing iron, in its substance; sometimes called *s. siderot'ica* [G. *sideros*, iron].

splenog'raphy [G. *splēn*, spleen, + *graphē*, a description.] A treatise on or description of the spleen.

splenohe'mia, splenohæ'mia. Splenemia.

sple"nohep"atomega'lia, sple"nohep"atomeg'aly [G *splēn*, spleen, + *hēpar(hēpat-)*, liver, + *mega (megal-)*, large.] Enlargement of both spleen and liver.

sple'noid [G. *splēn*, spleen, + *eidos*, resemblance Spleniform, resembling the spleen.

sple"nokerato'sis. Splenoceratosis.

splenolaparot'omy. Laparosplenotomy

splenology (sple-nol'o-jĭ) [G. *splēn*, spleen, *-ology*.] The branch of medical science which has to do with the spleen.

sple"nolymphat'ic. Relating to the spleen and the lymph-glands,

sple'nolymph gland. See *gland*.

splenol'ysin. A specific antibody destructive to the splenic cells, obtained by injection of splenic pulp into an animal.

splenol'ysis [G. *splēn*, spleen, + *lysis*, solution.] Destruction of the splenic tissue

spleno'ma. Splenocele (1), splenoncus, a tumor of the spleen.

sple"nomala'cia [G. *splēn*, spleen, + *malakia*, softness.] Softening of the spleen.

sple"nomed'ullary [L. *splēn*, spleen, + *medulla*, marrow.] Splenomyelogenous.

splę"nomega'lia, sple"nomeg'aly [G. *splēn*, spleen, + *megas*(*megal-*), large.] Enlargement of the spleen. **trop'ical s.,** kala azar.

splenomyelogenous (sple"no-mi-el-oj'en-us)[G. *splēn*, spleen, + *myelos*, marrow, + *gennaō*, I produce.] Originating in the spleen and bone-marrow, noting a form of leucemia.

splenomyelomalacia (sple"no-mi"el-o-mal-a'shĭ-ah) [G. *splēn*, spleen, + *myelos*, marrow, + *malakia*, softness.] Pathological softening of the spleen and bone-marrow.

splenon'cus [G. *splēn*, spleen, + *onkos*, tumor.] Splenoma, splenocele (1).

sple"noneph'ric. Relating to the spleen and the kidney, lienorenal.

sple"nopancreat'ic. Relating to the spleen and the pancreas.

sple"noparecta'sia [G. *splēn*, spleen, + *parektasis*, a stretching out.] Extreme enlargement of the spleen.

splenopathy (splc-nop'ă-thĭ) [G. *splēn*, spleen, + *pathos*, suffering.] Any disease of the spleen.

splenopex'ia, sple'nopexy [G. *splēn*, spleen, + *pēxis*, fixation.] Suturing in place an ectopic or wandering spleen.

sple"nophren'ic [G. *splēn*, spleen, + *phrēn*, diaphragm.] Relating to the spleen and the diaphragm, noting a ligament or fold of peritoneum extending between the two structures.

splenopneumonia (sple-no-nu-mo'nĭ-ah). Pneumonia with extensive splenization of the lung, the exudate filling the smaller bronchi as well as the alveoli.

splenopto'sia, splenopto'sis [G. *splēn*, spleen, + *ptōsis*, falling.] Floating spleen, abnormal mobility of the spleen.

splenorrhagia (sple-nor-raj'ĭ-ah) [G. *splēn*, spleen, + *-rhagia*.] Hemorrhage from a ruptured spleen.

splenorrhaphy (sple-nor"ră-fĭ) [G. *splēn*, spleen, + *rhaphē*, a suture.] 1. Suturing a ruptured spleen. 2. Splenopexia.

splenotomy (sple-not'o-mĭ) [G. *splēn*, spleen, + *tomē*, incision.] 1. Anatomy or dissection of the spleen. 2. A surgical operation on the spleen.

splenotox'in [G. *splēn*, spleen.] A cytotoxin specific for cells of the spleen.

splenoty'phoid fever. Typhoid fever marked by unusual enlargement of the spleen.

splen'ulus [L. dim. of *splen*, spleen.] A small or rudimentary spleen; accessory spleen.

splenun'culus, pl. *splenun'culi* [L. dim. of *splen*, spleen.] Accessory spleen, splenculus, splenulus, lienunculus.

splint. 1. An apparatus for preventing movement of a joint or between the ends of a broken bone. 2. The splint-bone, or fibula. 3. An exostosis between one of the small bones and the shank, or on any of the three bones of the foreleg, of the horse; it is apt to cause lameness, especially in the trot. **Bava'rian s.,** a splint made of plaster-of-Paris contained between two layers of flannel; when it is in place, adapted to the limb, the plaster is moistened and sets into a firm perfectly fitting splint. **coapta'tion s.,** a short splint designed to prevent overriding of the ends of a fractured bone, usually supplemented by a longer splint to fix the entire limb. **interden'tal s.,** a splint for a fractured jaw, consisting of two metal or vulcanite bands wired to the teeth of the upper and lower jaws respectively and then fastened together so as to keep the jaws immovable. **plaster s.,** a splint constructed of bandages or strips of gauze impregnated with plaster-of-Paris.

splint-bone. 1. Fibula. 2. The second or fourth, or internal or external small metacarpal bones in the horse; these are splinter-like in shape and lie on either side of the metacarpal, or cannon bone.

splint'er. A sharp fragment of bone separated in a fracture.

splints. Osteitis and periostitis resulting in the formation of nodules of new bone on the inner and upper aspects of the foreleg in young horses.

split-foot. Cleft foot.*

split-hand. Cleft hand.*

split-prod'ucts. Two substances into which protein is split by treatment with absolute alcohol containing 2 per cent. sodium hydroxide in solution; one, a poisonous body, soluble in the menstruum, is non-specific; the other, non-poisonous and insoluble, is specific; the poisonous body when injected into guinea-pigs produces symptoms identical with those of serum anaphylaxis; with injections of the non-toxic substance the animals are sensitized as with unbroken protein.

splitting (split'ing). A chemical change whereby a complex body is converted into two or more simpler products by a rearrangement of its constituents; hydrolysis.

spodiomyelitis (spod-ĭ-o-mi-ĕ-li'(le')tis) [G. *spodios*, gray, + *myelos*, marrow, + *-itis*.] Poliomyelitis.

spodogenous (spŏ-doj'en-us) [G *spodos*, ashes, + *gennaō*, I produce.] Caused by waste material. **s. splenomeg'aly,** enlargement of the spleen supposed to be due to an accumulation of degenerated erythrocytes in the organ.

spodophagous (spŏ-dof'a-gus) [G. *spodos*, ashes, + *phagō*, I eat.] Disintegrating the waste materials in the body, noting the scavenger cells.

spodophorous (spŏ-dof'o-rus) [G. *spodos*, ashes, + *phoros*, a carrier.] Removing or carrying off waste materials from the body, noting the emunctories.

spoke-shave. Ring-knife; a modification in miniature of the carpenter's tool of this name, for use in removing tumors in the nasal and other cavities.

spondylal'gia [G. *spondylos*, vertebra, + *algos*, pain.] Rhachialgia, spondylodynia, pain in the vertebral column.

spondylarthritis (spon-dil-ar-thri'(thre')tis) [G. *spondylos*, vertebra, + *arthron*, joint, + *-itis*] Inflammation of the intervertebral articulations.

spondylarthrocace (spon-dil-ar-throk'ă-se) [G. *spondylos*, vertebra, + *arthron*, joint, + *kakē*, badness.] Tuberculous inflammation of the vertebræ; Pott's disease, Rust's disease.

spondylexarthrosis (spon"dil-eks"ar-thro'sis) [G. *spondylos*, vertebra, + *ex*, out of, + *arthron*, joint.] Dislocation of a vertebra.

spondylit'ic. Relating to spondylitis.

spondylitis (spon-dĭ-li'(le')tis) [G. *spondylos*, vertebra, + *itis*.] Inflammation of one or more of the vertebræ; Potts' disease. **s. defor'mans,** arthritis

and osteitis deformans involving the spinal column; it is marked by nodular deposits at the edges of the intervertebral discs, with ossification of the ligaments and bony ankylosis of the intervertebral articulations, and results in a rounded kyphosis with rigidity. **s. rhizomel'ica,** rhizomelic spondylosis.* **s. typho'sa** typhoid spine.*

spondylize'ma [G. *spondylos*, vertebra, + *hizēma*, a settling down.] Kyphotic pelvis.

spondylocace (spon-dĭ-lok'ă-se) [G. *spondylos*, vertebra, + *kakē*, badness, vice.] Spondylarthrocace.

spondylodiagnosis (spon"dĭ-lo-di-ag-no'sis) [G. *spondylos*, vertebra, + *diagnosis*.] Diagnosis by means of visceral reflexes elicited by percussion or sinusoidal zation of the vertebræ, or of vertebral tenderness accentuated by manipulation of the suspected viscus.

spondylodymus (spon-dil-od'ĭ-mus) [G. *spondylos*, vertebra, + *didymos*, twin.] A twin monster with fusion along the vertebral column.

spondylodyn'ia [G. *spondylos*, vertebra, + *odynē*, pain.] Spondylalgia, rhachialgia.

spondylolisthesis (spon-dil-o-lis-the'sis) [G. *spondylos*, vertebra, + *olisthēsis*, a slipping and falling.] Forward subluxation of the body of one of the lower lumbar vertebræ on the vertebra below it, or upon the sacrum.

spondylolisthet'ic. Relating to or marked by spondylolisthesis.

spondylopathy (spon-dil-op-ă-thĭ) [G. *spondylos*, vertebra, + *pathos*, suffering.] Any disease of the vertebræ. **traumat'ic s.,** Kuemmell's* disease.

spondylopyosis (spon"dil-o-pi-o'sis) [G. *spondylos*, vertebra, + *pyōsis*, suppuration.] Suppurative inflammation of one or more of the vertebral bodies.

spondyloschisis (spon-dil-os'kĭ-sis) [G. *spondylos*, vertebra, + *schisis*, fissure.] Congenital fissure of one or more of the vertebral arches, rhachioschisis.

spondylo'sis [G. *spondylos*, vertebra.] Vertebral ankylosis. **rhizomel'ic s.** [G. *rhiza*, root, + *melos*, limb], a form of spondylitis deformans in which the hips and shoulders (the "roots" of the limbs) are involved more or less, being restricted in their movements or completely ankylosed.

spon"dylother'apy [G. *spondylos*, vertebra, + *therapeia*, treatment.] Spinal therapeutics; the treatment of disease by manipulation (massage, percussion, application of electricity counter-irritation, etc.) of the vertebral column.

spondylot'omy [G. *spondylos*, vertebra, + *tomē*, cut, severance.] 1. Section of the spine of the fetus to facilitate delivery in case of impaction. 2. Laminectomy, rhachitomy.

spon'dylous [G. *spondylos*, vertebra.] Vertebral, relating to a vertebra.

sponge (spunj) [G. *spongia, spongos*.] 1. The fibrous skeleton of an aquatic organism from which all cellular matter has been removed; employed in surgery for mopping away blood and other fluids during an operation; now usually replaced by 2. 2. Any absorbent material, such as gauze or prepared cotton, used in lieu of a sponge in surgical operations. 3 Any material having a sponge-like texture, such as iron sponge, used in the purification of water. **bleached s.,** spongia decolorata (N.F.). **bronchoscop'ic s.,** a small wad (10 × 6 mm.) of a few folds of gauze, used to remove secretion coughed into the bronchoscope tube.

sponge-graft'ing. The placing of small bits of sponge on a granulating surface in order to promote a growth of epidermis.

sponge-tent. Spongia compressa (N.F.).

spon'gia [G.] Sponge. In homeopathic practice roasted sponge, *spongia usta*, triturated with sugar of milk; employed in the treatment of croup and of chronic hoarseness in doses of the 3d to 30th potency; the eclectic specific medicine is used in the same affection in doses of one drop in water every hour or two. **s. cera'ta,** waxed sponge, sponge-tent; purified sponge cut to the desired shape and dipped in melted wax. **s. compres'sa,** compressed sponge, sponge-tent; a sponge is impregnated with thin mucilage of acacia, wrapped with twine to the desired shape, and then dried; used to dilate sinuses, the os uteri, etc., the dried sponge absorbing moisture after insertion. **s. decolora'ta,** decolorized or bleached sponge; a sponge treated successively with potassium permanganate, sodium thiosulphate, diluted hydrochloric acid, and sodium carbonate. **s. usta,** Turkish sponges cut into small pieces and heated in an apparatus like a coffee roaster; employed in homeopathy, see *spongia*.

spongiform (spun'jĭ-form) [L. *spongia*, sponge, + *forma*, form.] Having the appearance of a sponge.

spon'gin. The fibrous or horny constituent of sponges.

spongioblast (spun'jĭ-o-blast) [G. *spongia*, sponge, + *blastos*, germ.] 1. Amacrine* cell. 2. A primitive neuroglia cell, one of the layer of columnar cells in the neural tube.

spongiocyte (spun'jĭ-o-sīt) [G. *spongia*, sponge, + *kytos*, cell.] A neuroglia cell.

spon'gioid [G. *spongia*, sponge, + *eidos*, resemblance.] Spongiform.

spongiopi'lin. A tissue consisting of a loosely woven mesh enclosing bits of sponge, coated on the back with a layer of india rubber; used as a substitute for poultices, being dipped in hot water and applied to the skin.

spongioplasm (spun'jĭ-o-plazm) [G. *spongos*, sponge, + *plasma*, thing formed.] The fibrillar network supporting the fluid portion, or hyaloplasm, of protoplasm; cytoreticulum.

spongiosa (spun-jĭ-o-sah) [G. *spongos*, sponge.] The gray matter of the spinal cord forming the horns, except that which caps the head of the dorsal horn and encircles the central canal; see *substantia gelatinosa*.

spongiositis (spon-jĭ-o-si'(se')tis). Inflammation of the corpus spongiosum, or corpus cavernosum urethræ.

spongy (spun'jĭ). Of sponge-like texture, spongiform, spongioid. **s. bone,** (1) cancellous bone; (2) one of the turbinated bones.

spontaneous (spon-ta'-ne-us) [L. *spontaneus; sponte*, voluntarily.] Occurring without external stimulation.

spoon [A.S. *spōn*, chip.] An instrument consisting of a rod with a small bowl- or cup-shaped extremity. **Daviel's s.,** see *Daviel*. **sharp s.,** an instrument with a small cup-shaped extremity having sharpened edges, used for scraping skin lesions. **Volkmann's s.,** see *Volkmann*.

spoonerism (spōō'nur-izm) [Rev. W. A. *Spooner*, English clergyman.] Initial metathesis, the transposition of initial letters or syllables of two or more words in writing or speech.

spoon-nail. Celonychia.

sporad'ic [G. *sporadikos*, scattered.] Occurring singly, not grouped; neither epidemic nor endemic.

sporadoneure (spaw-rad'o-nūr) [G. *sporadikos*, scattered, + *neuron*, nerve.] A nerve-cell in the tissues outside of the nerve-centers or ganglia.

sporan'gia. Plural of sporangium.

sporan'gial. Relating to or of the nature of a sporangium.

sporan'gium [G. *sporos*, seed, + *angeion*, vessel.] In botany, a sac containing spores.

spore (spawr) [G. *sporos*, seed.] The reproductive cell of a sporozoan or of a cryptogamous plant; a cell of an inferior order to an ovum or seed. **black s.**, a degenerating malarial or other blood parasite in the body of the mosquito. **swarm-s.**, see *swarm*-spore*.

sporicidal (spawr-ĭ-si'dal) [G. *sporos*, seed, + L. *cædere*, to kill.] Destructive to spores.

sporicide (spawr'ĭ-sīd). 1. Sporicidal. 2. An agent which kills spores.

sporid'ium. A protozoan spore, an embryonic protozoan organism, sometimes parasitic in man or the lower animals

Sharp Spoon

sporiferous (spaw-rif'er-us) [L. *spora*, spore, + *ferre*, to bear.] Producing spores.

sporiparous (spaw-rip'ă-rus). [L. *spora*, spore, + *parere*, to bear.] Reproducing by means of spores, sporiferous.

sporoagglutination (spaw''ro-ag-glu-tĭ-na'shun). A diagnostic method in relation to the mycoses, based upon the fact that the blood of sufferers from diseases caused by fungi contains specific agglutinins which cause clumping of the spores of these organisms.

sporoblast (spawr'o-blast) [G. *sporos*, seed, + *blastos*, offspring.] A secondary cyst, containing the sporozoite, formed within the oocyst.

spo'rocarp [G. *sporos*, seed, + *karpos*, fruit.] In botany, a multicellular structure, in certain cryptogams, resulting from a sexual process, which produces the spores and atrophies when these are discharged.

sporocyst (spawr'o-sist) [G. *sporos*, seed, + *kystis*, bladder.] The intermediate (asexual) generation of a trematode worm, by some regarded as the second larval stage; it is developed in the body of a gastropod from the *miracidium* and gives origin to the *cercariæ*, either directly or through an intermediate generation, the *redia*.

Sporocystin'ea. A suborder of *Coccidiidia* in which the sporoblasts have sporocysts.

sporogen'esis [G. *sporos*, seed, + *genesis*, production.] 1. Sporogony. 2. The production of spores.

sporogenous (spaw-roj'en-us) [G. *sporos*, seed, + *gennaō*, I produce.] Sporiparous.

sporogeny (spaw-roj'en-ĭ). Sporogenesis.

sporogo'nium [G. *sporos*, seed, + *gonē*, generation.] The sporocarp in mosses, moss-fruit.

sporogony (spawr-og'ŏ-nĭ) [G. *sporos*, seed, + *gonē*, generation.] Sporogenesis, reproduction by means of spores.

sporont (spawr'ont) [G. *sporos*, seed, + *ōn(ont-)*, being.] A sexually mature protozoan parasite which has become detached from its host, leaving its attaching organ behind; it produces *anisospores* that conjugate to form the *zigote*, this developing into the *schizont* which begins the non-sexual cycle.

spo'rophore [G. *sporos*, seed, + *phoros*, bearer.] 1. In botany, the part which bears the seeds or spores. 2. Sporophyte.

spo'rophyl, spo'rophyll [G. *sporos*, seed, + *phyllon*, leaf.] A spore-bearing leaf, often greatly modified.

sporophyte (spaw'ro-fit) [G. *sporos*, spore, + *phyton*, plant.] Sporophore, the spore-bearing stage, or life-cycle, of a plant.

spo'roplasm [G. *sporos*, seed, + *plasma*, thing formed.] The protoplasm of the ovum.

sporoplas'mic. Relating to sporoplasm.

sporothe'ka [G. *sporos*, seed, + *thēkē*, case.] The envelope enclosing the minute needle-like spores of the malarial parasite in the mosquito.

sporotrichosis (spaw-ro-tri-ko'sis) [*sporotrichum* + *-osis*.] A cutaneous and subcutaneous mycosis (affecting also the mucous membrane of the mouth and pharynx) caused by mucedines of the genus *Sporotrichum;* three forms are described—a disseminated gummatous form (*s. beurmanni*), a gummatous lymphangitis (*s. schenkii*), and a form characterized by the presence of multiple abscesses (*s. dori*). **trop'ical s.**, due to *Sporotrichum indicum*.

Sporotrichum (spaw-rot'rik-um) [G. *sporos*, seed, + *thrix(trich-)*, hair.] A genus of fungi of the family *Mucedineæ*, some species of which give rise to various forms of sporotrichosis; the species described are *S. asteroides*, *S. beurmanni*, *S. dori*, *S. epidermidis*, *S. fonsecai*, *S. indicum*, and *S. schenkii*.

Sporozo'a [G. *sporos*, seed, + *zōon*, animal.] A subphylum (or class) of *Protozoa*, embracing parasitic forms without organs of locomotion, which reproduce chiefly by sexual or non-sexual spore formation

sporozo'an. 1. Relating to the *Sporozoa*. 2. An individual cell of the *Sporozoa*, a sporozoon.

sporozoite (spaw-ro-zo'it) [G. *sporos*, seed, + *zoōn*, animal.] One of the minute elongated bodies resulting from the repeated division of the oökinete or oocyst, falciform body; in the case of the malarial parasite it is the form which is introduced into the blood by the bite of a mosquito and enters the erythrocyte, there to develop into the mature parasite.

sporozooid (spawr-o-zo'oyd) [G. *sporos*, seed, + *zōon*, animal, + *eidos*, resemblance.] A falciform figure seen in certain cancerous tumors, regarded by some as a sporozoan spore or sporozoite.

sporozo'on [G. *sporos*, seed. + *zōon*, animal.] An individual sporozoan organism.

sport. An organism varying in whole or in part, without apparent reason, from others of its type; this variation may be transmitted to the descendants or the latter may revert to the original type.

spor'ular. Relating to a spore or sporule.

sporula'tion. Production of or division into spores, a mode of reproduction of unicellular organisms; see *multiple fission*.*

sporule (spawr'ūl) [L. *sporula;* dim. of *sporos*, seed.] A spore, a small spore.

spot [A.S. *splot*.] 1. A limited area differentiated in color, elevation, texture, or sensation from the general surface; macula, papule, pustule. 2. To lose a slight amount of blood *per vaginam*, sufficient to "spot" the napkin. **acoustic s.**, macula acustica. **blind s.**, papilla nervi optici. **blue s.**, macula cærulea. **embryon'ic s.**, area germinativa. **germ'inal s.**, a prominent nucleolus in the germinal vesicle or nucleus of the ovum. **hypnogen'ic s.**, a point sometimes present in susceptible

subjects, pressure upon which will throw the person into an hypnotic state. **hysterogen'ic s.**, a point pressure upon which will induce a paroxysm of hysteroepilepsy in a susceptible subject. **Koplik's s.**, see *Koplik*. **milk s.**, macula albida. **Mongo'lian spots**, Mongolian maculæ, dark bluish or mulberry-colored spots on the sacral region, observed as a congenital condition in children under four or five years in China, Japan, Burma, and Korea; the spots are rounded or oval, and do not disappear on pressure. **pelvic s.**, see *pelvic*. **spongy s.**, an area in the external auditory canal where a number of minute blood-vessels enter from the mastoid bone; vascular zone. **tem'perature s.**, one of a number of definitely arranged spots on the skin sensitive to heat and cold, but not to ordinary pressure or pain stimuli. **ten'dinous s.**, macula albida. **white s.**, macula albida. **yellow s.**, macula lutea.

spotted fever. 1. Typhus* fever. 2. Epidemic cerebrospinal* meningitis. 3. Tick* fever (4).

sprain [L. *exprimere*, to press out.] 1. An injury to a joint, with possible rupture of some of the ligaments or tendons, but without dislocation or fracture. 2. To cause a sprain of a joint.

spray. A jet of liquid in fine drops, coarser than a vapor; it is produced by forcing the liquid from the minute opening of an atomizer, mixed with air.

spreading (spred'ing). Noting a surface growth in a bacterial culture which extends a greater or less distance beyond the site of inoculation.

Spreng'el's defor'mity [Otto Gerhard Carl *Sprengel*, German surgeon, 1852–1914.] Congenital elevation of the scapula, attributed by Sprengel to pressure exerted in utero through deficiency of amniotic fluid.

sprew. Sprue.

spring-finger. Trigger finger.*

spring-halt. A myoclonus in a hind leg of a horse, the leg being flexed beyond the normal and then stamped on the ground.

spring-hock. Inflammation of the ligaments of the hock in the horse, caused by a strain, and marked by sudden and great swelling above and below the hock, local heat, and lameness.

spruce. A tree of the genus *Picea*. **s. gum**, an exudate from the trunk and branches of *Picea mariana*, extensively used, flavored in various ways, as a masticatory, or chewing-gum.

sprue. 1. Aphthæ,* thrush. 2. Tropical diarrhea, psilosis; a chronic remitting catarrhal inflammation of the mucous membrane of the alimentary tract, occurring in the tropics, characterized by stomatitis, diarrhea, anemia, and emaciation. 3. In mechanical dentistry, a piece of wood or metal used for making the ingate when casting molten metal.

spunk. Punk, fungus chirurgorum, touchwood, surgeons' agaric, amadou; the stem of a fungus, *Polyporus fomentarius*, impregnated with nitre.

spur [A.S. *spora*.] A horny outgrowth from the skin; a dull spine or projection from a bone; a small projection from any structure, calcar.

spurge. Euphorbia.

spurge-flax. Mezereum

spu'rious [L. *spurius*, of illegitimate birth.] False, not genuine, adulterated.

spurred rye. Ergot.

sputa. Plural of sputum.

sputamen'tum. Sputum.

spu'tum, pl. *spu'ta* [L. *sputum; spuere*, to spit.] 1. Expectorated matter, especially mucus or mucopurulent matter expectorated in diseases of the air-passages. 2. An individual mass of such matter. **albu'minoid s.**, the frothy expectoration of pulmonary edema. **glob'ular s.**, nummular s. **green s.**, s. æruginosum. **num'mular s.**, a thick coherent mass expectorated in globular shape which does not run at the bottom of the cup but forms a discoid mass resembling a coin. **prune-juice s.**, a thin reddish expectoration, characteristic of gangrene or cancer of the lung and certain cases of pneumonia. **rusty s.**, a reddish brown, blood-stained expectoration characteristic of croupous pneumonia. **s. ærogeno'sum**, a green expectoration seen occasionally in jaundice. **s. coctum**, the opaque purulent s. of the later stages of bronchitis. **s. crudum**, the clear viscid mucous expectoration of the early stages of bronchitis. **s. cruen'tum**, bloody expectoration.

squa'ma, pl. *squa'mæ* [L. a scale] 1. A thin plate of bone. 2. An epidermic scale. **s. fronta'lis** [BNA], frontal squama, the broad curved portion of the frontal bone forming the forehead. **s. occipita'lis** [BNA], the tabular or squamous portion of the occipital bone. **s. tempora'lis** [BNA], pars squamosa [NK], temporal squama or scale, squamous portion of the temporal bone, forming the temple on either side of the head.

squa'mate. Squamous, scale-like, scaly.

squamocell'ular. Relating to or having squamous epithelium.

squamofron'tal. Relating to the squama frontalis.

squamomas'toid. Relating to the squamous and petrous portions of the temporal bone.

squa"mo-occip'ital. Relating to the squamous portion of the occipital bone, developing partly in membrane partly in cartilage

squamoparietal (skwa"mo-pă-ri'e-tal). Relating to the parietal bone and the squamous portion of the temporal bone.

squamopetro'sal. Relating to the squamous and petrous portions of the temporal bone.

squamo'sa. The squama of the frontal, occipital, or temporal bone, especially the latter.

squamo'sal. Squamous, relating to the squama of the temporal bone.

squamosphenoid (skwa"mo-sfe'noyd). Sphenosquamosal, relating to the sphenoid bone and the squama of the temporal bone.

squamotem'poral. Relating to the squama temporalis.

squa'mous [L. *squamosus*.] Squamate, squamosal, scale-like, scaly; relating to or covered with scales; relating to a squama.

squa"mozygomat'ic. Relating to the squama and the zygomatic process of the temporal bone.

squarrose, squarrous (skwar'ōs, skwar'us). Scaly, scurfy.

squaw-root. 1. *Caulophyllum thalictroides*, blue cohosh. 2. *Conophalis americana*, cancer-root.

squaw-vine. Mitchella.

Squibb's diarrhe'a mix'ture [E. R. *Squibb*, American physician and chemist, 1819–1900.] Mistura opii et chloroformi composita (N.F.); tincture of capsicum 10, tincture of opium and spirit of camphor each 20, chloroform 8, alcohol to make 100; dose, ♏30 (2.0). **S.'s rhu'barb mix'ture** formerly the same in the N.F. mistura rhei composita, compound rhubarb mixture; each dose of ℥2 (8.0) contains ipecac, gr. ¼ (0.015), rhubarb, gr. 1½ (0.1), sodium bicarbonate, gr. 3 (0.2), in glycerin and peppermint water; antacid and stomachic.

squill. Scilla. **Indian s.**, urginea.

squillit'ic. Relating to, containing, or prepared from squill.

squint. 1. Strabismus. 2. To suffer from strabismus. **al'ternating s.,** a form of s. in which both eyes remain steady or move alike when either eye indifferently is covered; that is to say, one in which either eye fixes. **concom'itant s.,** strabismus in which the deviating eye follows the other in its movements, the angle between the visual axes remaining the same. **conver'gent s.,** internal s. **dynam'ic s.,** heterophoria. **diver'gent s.,** external s. **exter'nal s.,** divergent s., exotropia; the form in which the visual axes diverge. **inter'nal s.,** convergent s., esotropia, cross-eye; the form in which the visual axes converge. **la'tent s.,** heterophoria. **suppressed' s.,** heterophoria. **ver'tical s.,** a form in which the visual axis of one eye deviates upward (strabismus sursum vergens) or downward (strabismus deorsum vergens). **unioc'ular s.,** one in which one eye only fixes; that is, when one eye is covered both eyes move, when the other eye is covered both remain steady.

Squire's cath'eter [Trumann H. *Squire*, American surgeon, 1823–1889.] Vertebrated catheter.*

squir'rel corn. Corydalis.

squirt'ing cu'cumber. Elaterium.

Sr. Chemical symbol of strontium.

S roma'num. Sigmoid flexure, colon* sigmoideum.

ss. Abbreviation of L. *semis*, half; in prescription writing, *cum semisse*, with (or and) a half, *e.g.*, iiss, *duo cum semisse*, two and a half.

stab [Gael. *stob.*] 1. To pierce with a narrow pointed instrument, as a knife or dagger. 2. A stab wound.* 3. A stab culture.*

stabilarsan (stă-bil'ar-san). A compound of arsphenamine and glucose similar to or identical with eparsenó.*

stabile (stab'il) [L. *stabilis.*] Stable, steady, fixed, noting (1) certain constituents of serum unaffected by ordinary degrees of heat, etc., and (2) an electrode held steadily on a part during the passage of an electric current.

stable (sta'bl) [L. *stabilis; stare*, to stand] Firm, steady, stabile. **s. el'ements,** tissue cells which cease to multiply by mitosis at a certain period after the birth of the individual.

stabulation (stab-u-la'shun). The flushing of oyster beds with antiseptic solutions, such as hypochlorites.

staccato (stak-kah'to) [It. detached, separate.] A musical term noting a series of notes separated from one another by a distinct interval; noting in medicine a form of speech, also called scanning speech, in which the words and syllables are separated by brief pauses.

Stacke opera'tion (stah'keh) [Ludwig *Stacke*, German otologist, *1859.] The pinna and cartilaginous auditory canal are separated from their attachments and turned forward; the outer wall of the attic is now removed and the external wall of the antrum, so that tympanum, aditus, and antrum make but one cavity, thus giving free exit to pus in mastoiditis.

stactom'eter [G. *staktos*, dropping, + *metron*, measure.] Stalagmometer,* a dropper.

sta'dium, pl. *sta'dia* [G. *stadion*, a measure of distance, about 600 feet, used in races.] A stage in the course of a disease, especially of an acute pyretic disease. **s. acmes,** the acme or height of a disease. **s. augmen'ti,** the stage of rising temperature. **s. calo'ris,** the feverish stage in a malarial paroxysm. **s. decremen'ti,** the stage of falling temperature or defervescence. **s. defervescen'tiæ,** s. decrementi. **s. deflorescen'tiæ,** the stage of disappearing eruption in an exanthematous disease. **s. florescen'tiæ,** the eruptive stage in an exanthematous disease. **s. fri'goris,** (1) the cold stage or stage of chill in a malarial paroxysm; (2) the algid stage in cholera. **s. invasio'nis,** the prodromal or incubative stage of an infectious disease. **s. sudo'ris,** the sweating stage in a malarial paroxysm.

staff [A.S. *stæf.*] 1. A lithotomy guide; a curved sound, grooved on the convexity, introduced into the urethra, the groove serving as a guide for the point of the knife passed through the perineum and thence into the bladder. 2. See *attending* staff, consulting* staff, house* staff.*

stage [Fr. *étage*, story of a house.] 1. Stadium, a period in the course of a disease. 2. The part of a microscope on which the object to be examined is supported. **algid s.,** the cold stage or stage of collapse in cholera. **amphibol'ic s.** [G. *amphibolos*, doubtful], the stage following the acme of a disease in which the outcome, whether recovery or death, is in doubt. **cold s.,** stadium frigoris. **deferves'cent s.,** the stage of falling temperature. **erup'tive s.,** stadium florescentiæ. **first s.,** the beginning of labor, the period during which the cervix uteri is disappearing and the os is dilating. **hot s.,** stadium caloris. **in'cubative s.,** the primary stage of an infectious disease in which the toxins are being gradually elaborated and the prodromal symptoms are appearing. **prod'romal s.,** incubative stage. **pyrogen'ic s.,** stadium augmenti. **second s.,** the expulsive stage of labor, that during which the fetus is being forced through the maternal passages into the outer world. **s. of inva'sion,** incubative s. **sweating s.,** stadium sudoris. **third s.,** the stage of labor following the birth of the child, during which the secundines are being expelled.

stagg'er. To walk unsteadily, to reel.

stagg'ers. 1. Dizziness, vertigo. 2. A form of caisson disease in which vertigo, mental confusion, and muscular weakness are the chief symptoms. 3. A disease in sheep, marked by swaying and uncertain gait, caused by the presence of cœnure, the larva of *Tænia cœnurus*, in the brain or by other cerebral lesions called also sturdy and gid. **blind s.,** a disease of the cerebrospinal centers in the horse, marked at first by symptoms similar to those of stomach staggers, but ending in blindness. **grass s.,** loco poisoning in horses. **mad s.,** blind s. **sleepy s., stomach s.,** a disease in the horse, supposed to be of gastric origin, possibly gastric paralysis, in which the animal is somnolent, but when aroused begins at once to eat rapidly and without satiety; it is usually fatal.

stag'nate [L. *stagnum*, a pool.] To cease to flow.

stagna'tion. The retardation or cessation of flow of blood in the vessels; passive congestion; accumulation in any part of a normally circulating fluid.

stag'nin. Trade name of a styptic preparation derived from the spleen of the horse.

Stahl's ear [Friedrich Carl *Stahl*, German physician, 1811–1873.] A deformed external ear, in which the fossa ovalis and upper portion of the scaphoid fossa are covered by the helix; regarded as a stigma of degeneracy

stain [M.E. *steinen.*] 1. To discolor. 2. To color, to dye. 3. A discoloration. 4. A dye used in histological and bacteriological technique. For special stains (Gram's Jenner's, etc.) see the proper names. **acid s.,** an aniline salt in which the acid is the staining part such as the picrates, congo, etc.; the qualification "acid" has no reference to the litmus reaction and is not to be

taken in its chemical sense; acid stains affect chiefly the protoplasm. **basic s.,** an aniline salt (usually neutral in its litmus reaction) in which the basic element is the staining part, such as basic fuchsin, methylene blue, Bismarck brown, etc.; the stain affects chiefly bacteria and the nuclei of the cells. **con'trast s., differen'tial s.,** a dye used to color one portion of a tissue or cell which remained unaffected when the other part was stained by a dye of another color. **double s.,** a mixture of two dyes which stain different portions of a tissue or cell differently. **green s.,** a fungous deposit on the cervicolabial and cervicobuccal portions of the teeth, seen sometimes in children and in others who are neglectful of dental hygiene. **metachromat'ic s.,** a basic s., such as methylene-blue, which colors the different protein elements with varying degrees of intensity. **mul'tiple s.,** a mixture of several dyes each having an independent selective action on one or more portions of the tissue. **neutral s.,** a compound of an acid and a basic **stain,** necessary to color neutrophil cells or tissues which will not stain with either a basic or an acid dye alone. **nu'clear s.,** basic s. **panop'tic s.,** a method of blood staining; the film is flooded with Jenner's stain for 3 minutes; then with a mixture of Jenner's stain, 1, and distilled water, 20, for 5 minutes; then with Giemsa's stain, 1, and distilled water, 20, for 30 minutes; finally with distilled water for 5 to 30 minutes. **plasmat'ic s., plas'mic s.,** a dye coloring a tissue uniformly, the opposite of a selective s. **protoplas'mic s.,** acid s., one which stains the protoplasm rather than the nuclei **selec'tive s.,** a stain which colors one portion of a tissue or cell exclusively or more deeply than the remaining portions.

staining (stān'ing). Coloring (a cell or tissue) by one of the various dyes used in bacteriology, hematology, or histology. **intra-vi'tam, preag'onal,** or **vi'tal s.,** s. of a freshly drawn blood cell while still living, necessarily just before its death, as the stain is toxic to the cell.

stair'case. A series of reactions which follow one another in progressively increasing or decreasing intensity, so that the chart shows a continuous rise or fall.

stalagmom'eter [G. *stalagma,* drop, + *metron,* measure.] An instrument for determining exactly the number of drops in a given quantity of fluid; used as a measure of the surface tension of a fluid, for the lower the tension is, the smaller are the drops, and consequently the more numerous in the given quantity of fluid.

sta'ling. Urination of horses or cattle.

stalk-disease (stawk-diz-ēz'). An old term for a vesicular eruptive disease of the ox.

staltic (stal'tik) [G. *staltikos,* contractile.] Styptic.

sta'men [L. the warp in a loom.] 1. Power of endurance (usually in the plural form, *stamina*). 2 In botany, the male element of a flower; it consists typically of a slender stalk (the *filament*), tipped with the pollen bearing part (the *anther*).

stam'ina. Power of endurance, strength.

stam'inode [L. *stamen* + G. *eidos,* resemblance.] A sterile or aborted stamen.

stam'mer [A.S. *stamur.*] 1 To hesitate in speech, halt, repeat, and mispronounce, by reason of embarrassment, agitation, unfamiliarity with the subject, etc.; distinguished from *stutter.** 2. To mispronounce or transpose certain consonants in speech

stam'mering. A speech disorder characterized by (1) hesitation and repetition of words, or (2) mispronunciation or transposition of certain consonants, especially *l, r,* and *s.* Lisping, lalling, rhotacism, and idioglossia are varieties of the second form of stammering. **s. of the blad'der,** urinary stuttering, irregular halting or interruption of the stream in micturition.

Stamnosoma (stam-no-so'mŭ) [G. *stamnos,* a jar, + *sōma,* body.] A genus of flukes of the family *Heterophyidæ,* possibly identical with *Centrocestus.* Two species are described as sometimes infesting man, viz., *S. arma'tum* and *S. formosa'num.*

stamp'er. One who stamps, a term sometimes applied to one suffering from tabes dorsalis or other nervous disorder affecting the muscles of locomotion.

stamp-lick'ers' tongue. A form of stomatitis formerly occurring in those whose occupation was to apply stamps and labels, moistening them with the tongue.

stanch, staunch [L. *stagnare,* to stagnate.] To arrest bleeding.

stan'dard. Anything serving as a type or pattern to which other like things must conform. **s. candle,** a spermaceti candle burning 2 grains a minute, used as a standard of light, called candlepower. **s. guin'ea-pig,** one weighing about 250 grams, used for determining the minimal lethal dose of a toxin (toxic unit). **s. solu'tion,** a solution of known strength, usually a normal solution, employed in volumetric analysis.

standardiza'tion. 1. The making of a solution of definite strength so that it may be used for comparison and in tests. 2. Making any drug or other preparation conform to the type or standard.

Stange's test (stahng'a). The patient breathes deeply a few times, and then takes a deep inspiration and holds it as long as possible; if he cannot hold it for at least thirty seconds, he is a poor anesthetic risk.

Stanley bacillus. *Bacterium stanley.*

stann'ate. A salt of stannic acid.

stann'ic [L. *stannum,* tin.] Relating to tin, especially when in combination in its higher valency. **s. acid,** an acid, H_2SnO_3, of gelatinous consistency turning hard on exposure to the air; it forms stannates with bases.

stanniform (stan'ĭ-fawrm). Trade name of a preparation of methyl stannic iodide, recommended in the treatment of boils, carbuncles, ulcers, and other small wounds.

Stan'nius's lig'ature [Herman Friedrich *Stannius,* German biologist, 1808–1883.] 1. A ligature experimentally encircling the atrioventricular groove, following which the contractions of the auricle cease while those of the ventricle continue. 2. A ligature experimentally isolating the sinus venosus of the heart of a frog, following which the contractions of the rest of the heart cease while those of the sinus venosus continue.

stann'ous [L. *stannum,* tin.] Relating to tin, especially noting compounds containing tin in its lower valency. **s. chloride,** $SnCl_2+2H_2O$, employed as a reagent.

stannoxyl (stan-oks'il). Trade name of a combination of metallic tin and its oxide, employed in the treatment of staphylococcal affections, such as acne and furunculosis; it is given in tablet form in doses of 5 to 8 tablets, gr. 15–30 (1.0–2.0), a day.

stan'num [L.] Tin, a metallic element, symbol Sn, atomic weight 119. A trituration of the precipitated metal with sugar of milk is employed in homeopathy in chronic catarrhal and other conditions marked by extreme weakness; dose, 6th to 15th decimal potency.

stapedectomy (sta-pe-dek'to-mĭ) [L. *stapes* (*staped-*), stirrup, + G. *ektomē*, excision.] Removal of the stapes, performed sometimes in cases of chronic catarrhal otitis media.

stape'dial. Relating to the stapes.

stapediotenotomy (sta-pe"dĭ-o-ten-ot'o-mĭ) [L. *stapedius* + G. *tenōn*, tendon, + *tomē*, incision.] Division of the tendon of the stapedius muscle.

stapediovestibular (sta-pe"dĭ-o-ves-tib'u-lar). Relating to the stapes and the vestibule of the ear.

stape'dius. A small muscle in the tympanum inserted into the neck of the stapes.

stapes, gen. *sta'pedis* (sta'pēz) [L.] Stirrup (so named from its shape), the smallest of the three auditory ossicles; its base, or footpiece, fits into the vestibular or oval window, while its head is articulated with the lenticular process of the long limb of the incus.

Staph. Abbreviation of *Staphylococcus*.

staphisagria (staf-is-a'grĭ-ah) [G. *staphis*, raisin, + *agria*, fem. of *agrios*, wild.] Staphisagriæ semina (Br.). Stavesacre, larkspur; the dried ripe seed of *Delphinium staphisagria*, a plant of southern Europe; employed locally for the destruction of pediculi and in scabies, and internally, in doses of 2–4 drops of the eclectic specific medicine in water three or four times a day, for the relief of irritable conditions of the genito-urinary apparatus, especially the prostatic troubles of old age.

staphis'agrine. An alkaloid, $C_{32}H_{33}NO_6$, or a mixture of alkaloids, from staphisagria; it is said to be an antidote to strophanthin.

staphylag'ra [G. *staphylē*, uvula, + *agra*, a catching.] Uvula forceps.

staphylectomy (staf-il-ek'to-mĭ) [G. *staphylē*, uvula, + *ektomē*, excision.] Staphylotomy, uvulatomy, amputation of the uvula.

staphyledema, staphylœdema (staf-il-e-de'mah) [G. *staphylē*, uvula, + *oidēma*, swelling.] Edema of the uvula.

staphyline (staf'ĭ-lĭn) [G. *staphylē*, a bunch of grapes, the uvula.] 1. Resembling a bunch of grapes, botryoid. 2. Relating to the uvula, uvular.

staphyli"nopharynge'us. Musculus glossopalatinus.

staphyli'nus. See under *musculus*.

staphyl'ion [G. dim. of *staphylē*, a bunch of grapes.] A craniometric point, the midpoint of the posterior edge of the hard palate.

staphylitis (staf-ĭl-ī'(e')tĭs) [G. *staphylē*, uvula, + *-itis*.] Inflammation of the uvula.

staphyloangina (staf"il-o-an'ji-nah). A staphylococcic pharyngitis.

staphylococc'al. Relating to or caused by any species of *Staphylococcus*.

staphylococcemia, staphylococcæmia (staf'il-o-kok-se'mi-ah) [*staphylococcus* + G. *haima*, blood.] Staphylomycosis, staphylococcic sepsis, the presence of staphylococci in the blood.

staph"ylococ'cia. Any staphylococcic infection.

staphylococ'cic. Relating to or caused by any species of *Staphylococcus*.

Staphylococcus (staf"il-o-kok'kus) [G. *staphylē*, a bunch of grapes, + *kokkos*, a berry.] A genus of the family *Coccaceæ*, containing a number of pathogenic spherical organisms occurring singly or in irregular masses roughly comparable to a bunch of grapes. **Staph. al'bus,**[0] *Staph. pyogenes albus*, a non-motile, gram-positive form found in boils, abscesses, and suppurating wounds. **Staph. au'reus,**[0] a species found in the skin and mucous membranes, causing boils, abscesses, and other suppurative inflammations. **Staph. ce'reus au'reus,** a species isolated from the nasal mucus in coryza; it forms a reddish orange pigment in cultures. **Staph. ce'reus flavus,** a species isolated from pus; it produces a yellow pigment in cultures. **S. cit'reus,** an occasional form, feebly if at all pathogenic, cultures of which on potato and agar give a lemon-yellow color. **S. epider'midis**[0] an organism normally present in the skin, possibly an attenuated form of *S. pyogenes albus;* it is often found in stitch abscesses. **Staph. pharyn'gis,**[0] an aerobic, gram-positive organism sometimes found in acute nasopharyngeal catarrh. **Staph. plicat'ilis,** a species believed to be the pathogenic agent of perlèche. **Staph. pyog'enes albus,** a non-motile gram-positive form, causing suppuration. **Staph. pyog'enes au'reus,** a pus-producing form, occurring commonly on the skin, stab cultures of which in gelatin give a yellow precipitate. **Staph. vir'idis flaves'cens,** a species isolated from the lesions of varicella which forms a greenish yellow pigment in cultures.

staphylodermatitis (staf"il-o-dur-mă-ti'(té) tis). Inflammation of the skin due to the action of staphylococci.

staphylodialysis (staf"il-o-di-al'i-sis) [G. *staphylē*, uvula, + *dialysis*, loosening.] Relaxation of the uvula, "falling of the palate."

staphylœde'ma. Staphyledema.

staphylohe'mia, staphylohæ'mia. Staphylococcemia.

staphylol'ysin. 1. An hemolysin excreted by a staphylococcus. 2. An antibody causing lysis of staphylococci.

staphylo'ma [G.] A bulging of the cornea or sclera due to inflammatory softening. **ann'ular s.,** a s. extending around the periphery of the cornea. **ante'rior s.,** a bulging near the anterior pole of the eyeball. **cor'neal s.,** keratoconus, keratoglobus. **cil'iary s.,** scleral s. at the part where this coat is covered by the ciliary body. **equato'rial s.,** bulging of the sclera on one of the lateral aspects of the eyeball. **intercal'ary s.,** a scleral s. anterior to the insertion of the ciliary body. **poste'rior s.,** a protrusion of the sclera at the temporal side of the optic disc. **scleral s.,** equatorial s. or posterior s. **u'veal s.,** iridoncus or swelling of the iris, with protrusion through a rupture of the sclera.

staphylo'matous. Relating to or marked by staphyloma.

staphylomycosis (staf"il-o-mi-ko'sis). Staphylococcus infection or sepsis, staphylococcemia.

staphylon'cus [G. *staphylē*, uvula, + *onkos*, tumor.] Tumor or enlargement of the uvula.

staph"ylo-opson'ic in'dex. The opsonic index in relation to a staphylococcic infection.

staphylopharyngeus (staf"il-o-far-in-je'us). Musculus pharyngopalatinus.

staph"ylopharyngor'rhaphy [G. *staphylē*, uvula, + *pharynx* + *rhaphē*, suture.] Surgical repair of defects in the uvula or soft palate and the pharynx.

staphyloplas'min. Staphylotoxin.

staph'yloplasty [G. *staphylē*, uvula, + *plassō*, I form.] Reparative or plastic surgery of the uvula or soft palate.

staphylopto'sia, staphylopto'sis [G. *staphylē*, uvula, + *ptōsis*, a falling.] Relaxation or elongation of the uvula, staphylodialysis.

staphylor'rhaphy [G. *staphylē*, uvula, + *rhaphē*, suture.] Staphyloplasty, closure of a divided uvula or of a cleft of the soft palate, uranoplasty, uranorrhaphy.

staphylostreptococcia (staf″il-o-strep″to-kok'sĭ-ah). Double infection with staphylococci and streptococci.

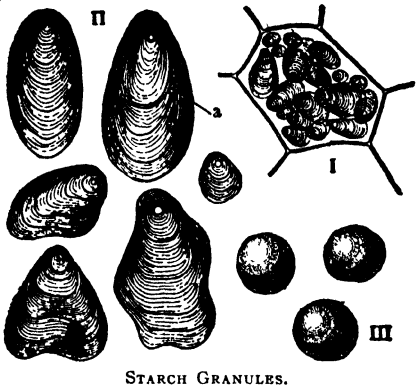
staphylotome (staf'il-o-tōm) [G. *staphylē*, uvula, + *tomos*, cutting.] A guillotine or knife for removing the uvula.

staphylot'omy [G, *staphylē*, uvula, + *tomē*, incision.] 1. Amputation of, or any cutting operation on, the uvula. 2. Cutting away a staphyloma.

staphylotox'in. The toxin elaborated by any species of *Staphylococcus*.

star [A.S. *steorra*.] Any star-shaped structure; aster.* **daughter s., polar s.,** one of the figures forming the diaster. **dental s.,** a spot of deeper yellow in the center of the dentine of a horse's incisor tooth, between the central enamel and the anterior border of the table; it varies considerably with the age of the animal.

star-an'ise. Illicium.



STARCH GRANULES.

I, In parenchyma cell of the potato; II, single granules from the same cell, showing laminæ (a); III, granules from wheat.

starch [A.S. *stearc*, strong] A carbohydrate, having the formula $C_6H_{10}O_5$ or some multiple thereof, the percentage composition being the same as that of cellulose; it exists more or less throughout the vegetable kingdom its chief commercial sources being the cereals and potatoes; it is not found in animal tissues. Starch is a white, tasteless, inodorous powder or mass consisting of minute rounded or ovoid granules which split into layers when heated. When soaked in water the granules swell and form a pasty mass; when subjected to the action of dry heat starch is converted into dextrin; it is converted into dextrin and glucose by the action of diastase and of the saliva and pancreatic juice. Starch is employed in medicine as a dusting powder and as an ingredient of certain ointments. For the therapeutic uses and preparations of starch see the official title, *amylum*. **an'imal s.,** glycogen. **i'odized s.,** amylum iodatum.

starch-su'gar. Glucose.

stare [A.S. *starian*.] 1. To look intently or fixedly with wide-open eyes at any object. 2. An intent gaze. **post-ba'sic s.,** a peculiar appearance in children with posterior basic meningitis, due to a retraction of the upper eyelid and a rolling down of the eyeball.

star'grass. Aletris.

Star'tin's mix'ture. Magnesium sulphate, ʒiv; dried iron sulphate, ʒi; dilute sulphuric acid, ʒiii; syrup of ginger, ʒvi; water to make ʒiii; dose, teaspoonful in water.

starva'tion. Suffering from long-continued deprivation of food.

starve [A.S. *steorfan*, to die.] 1. To suffer from lack of food. 2. To deprive of food so as to cause suffering or death. 3. Formerly, to die of cold.

stasibasiphobia (sta″sĭ-ba″sĭ-fo'bĭ-ah) [G. *stasis*, standing, + *basis*, stepping, + *phobos*, fear.] A delusion of inability to stand or walk, and a fear of making the attempt.

stasimor'phia [G. *stasis*, a standing still, + *morphē*, shape.] Deformity due to arrested development.

stasiphobia (sta-si-fo'bĭ-ah) [G. *stasis*, standing, + *phobos*, fear.] A delusion of inability to stand, and a morbid fear of making the attempt to do so.

sta'sis [G. a standing still.] Stagnation of the blood or other fluids. **pres'sure s.,** traumatic asphyxia, ecchymotic mask.*

Stas-Otto method (stahs-ot'o) [Jean Servaes *Stas*, Belgian chemist, 1813–1891] A method of extraction of alkaloids from plants and animal bodies; the substance is digested in alcohol and tartaric acid, then the fatty and resinous matters are precipitated with water, the fluid is treated with an alkali, and the alkaloids extracted with ether or chloroform.

state [L. *status stare*, to stand.] Condition, situation, status.

stat'ic, stat'ical [G. *statikos*, causing to stand.] In a state of equilibrium or rest, not in action. **s. electric'ity,** Franklinic electricity, electricity produced by friction. **s. gangrene,** moist gangrene, that caused by stasis of the blood. **s. med'icine,** a system of therapeutics based upon the varying weight of the body in relation to the amount of food taken and the total excretion. **s. sys'tem,** that part of the neuromuscular system whereby the animal organism is maintained in posture and equilibrium and which counteracts the forces of gravity and atmospheric pressure; distinguished from the kinetic* system (2).

statice (stat'ĭ-se) [G. *statikos*, causing to stand, noting the astringent properties.] The root of several species of *Statice* and of *Limonium*, containing considerable tannin and possessing therefore astringent properties. *Limonium caroliniarum*, *Statice caroliniarum*, or *S. limonium*, marsh rosemary, canker-root, ink-root, is the most used American species; given in diarrhœa in doses of ♏10–30 (0.6–2.0) of a fluidextract.

stat'ics. The branch of mechanics which has to do with matter at rest and the forces producing equilibrium.

stat'im [L.] At once, immediately.

station (sta'shun) [L. *statio*; stare, to stand.] 1. The art or manner of standing. 2. A stopping place, position. **aid s.,** a s. of the U. S. Army established temporarily during a battle, where the sick and wounded are assembled and cared for pending their evacuation by the medical regiment serving the division; the s. is operated by personnel from medical detachments. **hospital s.,** a s. serving an infantry or cavalry division and receiving the sick and wounded brought to it from aid stations by the collecting and ambulance

battalions of the medical regiment; it is operated by a hospital company of the hospital battalion.

stationary (sta'shun-a-rĭ). At rest, not moving or changing.

statistics (stă-tis'tiks). A collection of facts numerically grouped into definite classes. **vital s.,** biostatistics, s. relating to birth-rates, death-rates at different ages and from different causes, epidemics, etc.

statoliths (stat'o-liths) [G. *statos*, standing, placed, + *lithos*, stone.] Otoconia.

statom'eter [G *statos*, standing fixed, + *metron*, measure.] Exophthalmometer, an apparatus for measuring the amount of protrusion in exophthalmos.

stat'ure [L. *statura; statuere*, to put, to set.] The height of a person.

sta'tus [L.] State, standing, condition. **s. arthrit'icus,** gouty diathesis or predisposition. **s. cholera'icus,** a condition sometimes following the cold stage of cholera, marked by cold skin, feeble pulse, hebetude, and a dull expression. **s. chore'icus,** a very severe form of chorea in which the persistence of the movements prevents sleep and the patient dies of exhaustion. **s. cribro'sus,** a condition marked by dilatations of the perivascular lymph sheaths in the brain. **s. crit'icus,** a very severe and persistent form of crises in tabes dorsalis. **s. epilep'ticus,** a condition in which one major attack of epilepsy succeeds another with little or no intermission, lasting for 12 to 24 hours. **s. gas'tricus,** chronic indigestion. **s. hemicra'nicus,** a condition in which attacks of migraine succeed each other with such short intervals as to be almost continuous. **s. hydrocephal'icus,** the terminal condition in epidemic cerebrospinal meningitis, marked by extreme emaciation and exhaustion, vomiting, contractures of the extremities, and coma. **s. hypnot'icus,** the hypnotic state. **s. lacuna'ris,** a condition, occurring in cerebral arteriosclerosis, in which there are numerous small losses of substance of irregular outline in the brain. **s. lymphat'icus,** lymphatism, a condition of infancy and childhood, marked by hyperplasia of the lymphatic structures, spleen, and bone-marrow, and persistence of the thymus gland; sudden death, especially when the child is under the influence of an anesthetic, is not unusual in subjects of this affection. **s. nervo'sus,** (1) an erethistic state; (2) a typhoid* condition or state. **s. præsens,** the present state, the part of the anamnesis or history of a case, describing the condition of the patient at the time when he comes under observation. **s. raptus,** ecstasy. **s. thy'micus,** a condition similar to s. lymphaticus in which persistence of the thymus gland seems to be an especial factor. **s. thy"micolymphat'icus,** s. thymicus. **s. typho'sus,** s. nervosus (2). **s. vertigino'sus,** chronic vertigo; a condition in which attacks of vertigo occur in rapid succession.

statuvo'lence [L. *status(hypnoticus)* + *volens; volere*, to wish.] Self-induced hypnotism.

statuvo'lent. Relating to statuvolence, noting a person capable of self-hypnotism.

staurion (staw'rĭ-on) [G. dim. of *stauros*, cross.] A craniometric point at the intersection of the median and transverse palatine sutures.

stauroplegia (staw-ro-ple'jĭ-ah) [G. *stauros*, cross, + *plēgē*, stroke.] Crossed hemiplegia.

stave of the thumb. Bennett's* fracture.

stavesacre (stāvz'a-ker) [L. *staphisagria*.] Staphisagria.

staxis [G. a dripping.] Stillicidium

stay. The bar of the horse's hoof.

stay knot. See under *knot*.

steam-tent. A tent which may be made extemporaneously by hanging blankets over two clothes-horses so as to cover the bed, with an opening through which is passed the spout of the croup kettle.

steapsin (ste-ap'sin) [probably G. *stear*, tallow. A steatolytic enzyme in the pancreatic juice, which converts the neutral fats into fatty acids and glycerin; lipase.

ste'arate. A salt of stearic acid.

stearic acid (ste-ar'ik as'id). A white fatty acid, $CH_3.(CH_2)_{16}COOH$, occurring in solid animal fats and in some of the vegetable fats.

ste'arin. 1. A glyceride of stearic acid, $C_3H_5(C_{18}H_{35}O_2)_3$, present in the solid animal fats and in some of the vegetable fats. 2. Stearic acid.

stearocono'tum [G. *stear*, fat, + *konis*, dust.] A yellowish dry fat, containing sulphur and phosphorus, found in brain tissue.

stearodermia (ste"ar-o-dur'mĭ-ah) [G *stear*, tallow, + *derma*, skin.] Any disease of the sebaceous glands of the skin.

stearodine (ste'ar-o-din). Calcium iodostearate, containing about 27 per cent. of iodine, employed as a substitute for the inorganic iodides.

stearoptene (ste-ar-op'tēn) [G. *stear*, tallow, + *ptēnos*, winged.] A tough, crystalline solid which separates out from a volatile oil which has been standing for some time or has been subjected to cold; sometimes called a camphor.

ste'arosan. Trade name for santalyl stearate an oily, odorless, tasteless liquid employed as a substitute for oil of santal in catarrhal affections of the genitourinary tract in dose of ♏ 10 (0 6).

stearrhe'a, stearrhœ'a. Steatorrhea.

ste'atin, steati'num. Unguentum extensum, mulla (N.F.).

ste'atite. Soapstone, talcum.*

steatitis (ste-ă-ti'(te')tis) [G. *stear(steat-)*, tallow + *-itis*.] Inflammation of adipose tissue.

steatocele (ste'at-o-sēl) [G. *stear(steat-)*, tallow, suet, + *kēlē*, tumor.] A fatty tumor within the scrotum.

ste"atocrypto'sis [G. *stear*, tallow, + *kryptē*, crypt.] Any disease of the sebaceous glands of the skin, stearodermia.

steatogenous (ste-ă-toj'en-us) [G *stear(steat-)*, tallow, + *gennaō*, I produce.] 1. Causing fatty degeneration. 2 Causing any disease of the sebaceous glands

steatolysis (ste-ă-tol'ĭ-sis) [G. *stear(steat-)*, tallow, + *lysis*, solution.] The hydrolysis or emulsion of fat in the process of digestion.

steatolytic (ste-ă-to-lit'ik). Relating to steatolysis.

steatoma (ste-ă-to'mah) [G. *stear(steat-)*, tallow, + *-ōma*] 1. A fatty tumor, lipoma. 2. A sebaceous cyst.

steatopyga, steatopygia (ste-ă-to-pi'ga, ste-ă-to-pi'jĭ-ah) [G. *stear(steat-)*, suet, + *pygē*, buttocks.] An excessive accumulation of fat on the buttocks.

steatop'ygous. Having excessively fat buttocks

steatorrhea, steatorrhœa (ste-ă-tor-re'ah) [G. *stear (steat-)*, tallow, + *rhoia*, a flow.] 1. Overaction of the sebaceous glands, seborrhea. 2. Fatty stools, the passage of fat in large amounts in the feces, as noted in certain cases of pancreatic disease.

steatosis (ste-ă-to'sis) [G. *stear(steat-)*, tallow.] 1 Adiposis. 2. Fatty degeneration. 3. Any disease of the sebaceous glands.

steatozoon (ste-ă-to-zo'on) [G. *stear(steat-)*, tallow, + *zōon*, animal.] *Demodex folliculorum.*

stechiology (ste-kĭ-ol'o-jĭ) [G. *stoicheion*, element, + *-logia*.] The science which deals with the elements in any branch of knowledge, as in chemistry, or in anatomy or physiology; cellular physiology, histology of the cells; also written stœchiology, stoichiology.

stechiometry (ste-kĭ-om'e-trĭ) [G. *stoicheion*, element, + *metron*, measure.] The determination of the actual and relative quantities of the elements concerned in any chemical reaction; also written stœchiometry and stoichiometry

stee'ple-skull. Oxycephaly.

steel [A.S. *style*.] An alloy of iron, usually with carbon (¼ to 3 per cent.); in medicine, iron or ferrum.* **tincture of s.,** tincture of iron, tinctura ferri chloridi. **wine of s.,** wine of iron, vinum ferri.

steel-grinders' disease or **lung.** Siderosis.

stege (ste'ge) [G. *stegos*, roof.] The internal pillar of Corti's organ.

steg'month (G *stegō*, I cover.] The puerperium, the period, roughly calculated as one month, between childbirth and perfect return to the normal state.

stegno'sis [G. stoppage.] 1. A stoppage of any of the secretions or excretions, constipation. 2. Constriction, stenosis.

stegnot'ic. 1. Astringent, constipating. 2. An astringent agent, one checking secretion or causing constipation.

Stegomyia (steg-o-mi'ĭ-ah) [G. *stegos*, roof, + *myia*, fly.] The former name of a genus of tropical and semitropical mosquitos, the transmitters of the pathogens of dengue and yellow fever. The genus is now called *Aedes* (q.v.).

Stein's test [Stanislav Aleksandr Fyodorovich von *Stein*, Russian otologist, *1855.] In cases of labyrinthine disease the patient is unable to stand or to hop on one foot with his eyes shut.

Steinach's meth'od (sti'nahkh) [Eugen *Steinach* Austrian physiologist, *1861.] Subcutaneous division of the vas deferens which is claimed to cause a rejuvenation of elderly men.

Steiner's tu'mors (sti'nur). Jeanselme's nodules.

stel'la len'tis hyaloid'ea [L. *stella*, star.] [NK]. The posterior pole of the crystalline lens. **s. len'tis irid'ica** [NK], the anterior pole of the crystalline lens.

stell'ate [L. *stella*, a star.] Star-shaped. **s. cells of v. Kupffer,** see *Kupffer's** *cells*. **s. lig'ament,** ligamentum radiatum [BNA], any fan-shaped ligament, such as those connecting the costal cartilages with the sternum anteriorly.

stell'ula [L. dim. of *stella* star.] A small star or star-shaped figure. **s. vasculo'sa,** s. Winslowii. **s. Verheyen'ii,** one of the venæ stellatæ, the star-shaped groups of veins in the cortex of the kidney. **s. Winslow'ii,** Winslow's star, one of the capillary whorls in the lamina choriocapillaris from which arise the venæ vorticosæ.

Stellwag's sym'ptom (stel'vahgh) [Carl *Stellwag* von Carion, Viennese ophthalmologist, 1823–1904.] Retraction of the lids and consequent widening of the palpebral slit, or infrequency and incompleteness of nictitation, in exophthalmic goiter.

Sten'der dish [Wilhelm P. *Stender*, Leipsic manufacturer of scientific apparatus, contemporary.] A flat shallow vessel used in staining sections.

stenion (sten'ĭ-on) [G. *stenos*, narrow.] The termination in either temporal fossa of the shortest transverse diameter of the skull, a craniometric point.

Ste'no's duct, etc. See *Stensen*.

steno- [G. *stenos*, narrow.] A prefix denoting narrowness or constriction

stenobreg'mate, stenobregmat'ic. Noting a skull narrow anteriorly, at the part where the bregma is.

stenocar'dia [G. *stenos*, narrow, + *kardia*, heart.] Constriction of the heart, angina* pectoris.

stenoceph'alous. Noting one with a narrow head, marked by stenocephaly.

stenocepha'lia, stenoceph'aly [G. *stenos*, narrow, + *kephalē*, head.] Marked narrowness of the head

stenochoria (sten-o-ko'rĭ-ah) [G. *stenochōria*, narrowness.] Abnormal contraction of any canal or orifice, especially of the lacrymal ducts.

ste"nocompres'sor [*Steno's* duct + L. *compressor*.] An instrument for compressing the ducts of the parotid glands in order to keep back the saliva during dental operations.

stenocori'asis [G. *stenos*, narrow, + *korē*, pupil.] Contraction of the pupil, myosis.

stenocrota'phia, stenocrot'aphy [G. *stenos*, narrow, + *krotaphos*, temple.] Narrowness of the skull in the temporal region; the condition of a stenobregmate skull.

Sten'on's duct, etc. [*Stenonius*, Latin form of Stensen.] See *Stensen*.

stenope'ic [G. *stenos*, narrow, + *opē*, opening.] Provided with a narrow opening or slit; noting *s. spectacles* used as a protective against snow-blindness.

sten'osal. Relating to stenosis.

stenosed (sten-ōzd'). Narrowed, contracted, strictured.

sten'osin. Arrhenal, sodium methylarsenate.

stenosis (sten-o'sis) [G.] A narrowing of any canal, a stricture; especially a narrowing of one of the cardiac valves.

stenostenosis (ste"no-sten-o'sis). Stricture of the parotid duct, Steno's or Stensen's duct.

stenosto'mia [G. *stenos*, narrow, + *stoma*, mouth.] Narrowness of the oral cavity.

stenothermal (sten-o-thur'mal) [G. *stenos*, narrow, + *thermē*, heat.] Thermostable through a small range, able to withstand only slight changes in temperature.

stenotho'rax [G. *stenos*, narrow.] A narrow contracted chest.

stenot'ic. Affected with stenosis; narrowed, constricted, strictured.

Sten'sen's duct [Nicholaus or Nils *Stensen*, Danish anatomist, 1638–1686.] 1. Ductus parotideus. 2. Ductus incisivus. **S.'s exper'iment,** compression of the abdominal aorta of an animal very promptly causes paralysis of the posterior portions of the body since the blood supply to the lumbar cord is almost entirely shut off. **S.'s fora'men,** foramen incisivum. **S.'s plex'us,** the venous network surrounding S.'s duct. **S.'s veins,** venæ vorticosæ.

Stent's mass. A plastic material used for taking an impression of the mouth in making a dental plate.

step. 1. A rectangular projection in a tooth cavity prepared for filling. 2. See *Kroenig's** *steps*.

stepha'nion [G. dim. of *stephanos*, wreath, crown. A craniometric point where the coronal suture intersects the temporal crest (linea temporalis).

Ste'phenson's wave [William *Stephenson*, Scotch obstetrician, 1837–1908.] Congestion of the pelvic organs, gradually increasing prior to the menses, becoming stationary when the flow begins, and gradually subsiding at the termination of the menstrual period.

stepp'age [Fr.] The peculiar gait of sufferers from diabetic neuritis of the peroneal nerve and from tabes dorsalis; in consequence of this dorsal

flexion of the foot is impossible, and the patient in walking is obliged to raise the foot very high in order to clear the ground with the drooping toes.

stercobi'lin [L. *stercus*, excrement.] A brown coloring matter, derived from the bile, present in the feces.

stercoporphyrin (stur''ko-por'fi-rin) [L. *stercus*, feces.] Porphyrin existing in the stools in both health and disease, but in greater amount in cases of gastric ulcer.

stercora'ceous [L. *stercus*(*stercor-*), excrement.] Fecal, relating to or containing feces.

ster'coral. Stercoraceous, stercorous. **s. ulcer,** an ulcer of the colon caused by the pressure of inspissated fecal masses.

stercoremia, stercoræmia (stur-ko-re'mĭ-ah) [L. *stercus*(*stercor-*), feces, + G. *haima*, blood.] Copremia, intestinal autointoxication.

ster'corin. A substance resembling cholesterin, derived from feces.

stercoroma (stur-ko-ro'mŭ) [L. *stercus*, feces, + G. -ōma.] Scatoma.

ster'corous. Stercoraceous, stercoral.

stercu'lia [L. *ster'cus*, excrement, referring to the fetid odor of some of the species.] The seeds of *Sterculia* (*Cola*) *acuminata*, cola.*

ster'cus [L.] Feces.

stere (stair) [Fr. *stère;* G. *stereos*, solid.] A measure of capacity, a cubic meter, a kiloliter.

stereo- [G. *stereos*, solid] A prefix denoting a solid, or a solid condition or state.

stereognosis (ster''e-o-ag-no'sis) Astereognosis.

stereoanesthesia (ster-e-o-an-es-the'zĭ-ah) [G. *stereos*, solid, + *an-* priv. + *aisthēsis*, sensation.] Inability to recognize the form of objects by handling them.

stereoarthrolysis (ster''e-o-ar-throl'ĭ-sis) [G *stereos*, solid, + *arthron*, joint, + *lysis*, loosening.] The production of a new joint with mobility in cases of bony ankylosis

stereochemical (ster''e-o-kem'ĭ-kal). Relating to stereochemistry.

stereochemistry (ster-e-o-kem'is-trĭ) [G. *stereos*, solid.] The branch of chemistry dealing with atoms in their space relations, with the positions which the atoms in a compound bear in relation to one another.

stereogno'sis [G. *stereos*, solid, + *gnōsis*, knowledge.] The appreciation of the form of an object by means of touch.

stereognos'tic. Relating to stereognosis.

stereoisomer (ster-e-o-i'so-mur) [G. *stereos*, solid, + *isos*, equal, + *meros*, part.] A molecule containing the same number and kind of atoms as another but in which these have a different arrangement in space, in virtue of which it may exhibit different properties.

stereoisomeric (ster''e-o-i-so-mer'ik). Relating to stereoisomerism.

stereoisomerism (ster''e-o-i-som'er-izm) [G. *stereos*, solid, + *isos*, equal, + *meros*, part.] The condition in which two or more substances, having the same molecular and constitutional formulas, differ in physical properties; these differences are due to different spatial arrangements of the atoms or radicals in relation to the carbon atom.

stereometer (ster-e-om'e-tur) [G. *stereos*, solid, + *metron*, measure.] 1. An instrument for measuring the capacity of a vessel or the size of a solid body. 2. An instrument for determining the specific gravity of a liquid.

stereom'etry. 1. The measurement of a solid object or the cubic capacity of a vessel. 2. Determination of the specific gravity of a liquid.

stereophan'toscope [G. *stereos*, solid, + *phantos*, visible, + *skopeō*, I view.] A stereophoroscope with moving discs of different colors instead of pictures.

stereophor'oscope [G. *stereos*, solid, + *phoros*, a bearer, + *skopeō*, I view.] A stereoscopic zoetrope used in testing vision.

stereoplasm (ster'e-o-plazm) [G. *stereos*, solid.] The outer more solid portion of the protoplasm of a cell, especially of a protozoan.

stereop'sis [G. *stereos*, solid, + *opsis*, vision.] Stereoscopic vision.

stereoradiography (ster-e-o-ra-dĭ-og'ră-fĭ). Stereoskiagraphy.

stereoroentgenography (ster-e-o-ront-gen-og'ră-fĭ). Stereoskiagraphy.

ster'eoscope [G. *stereos*, solid, + *skopeō*, I view.] An instrument by means of which two images of the same object, as seen from slightly different view-points, are blended into one, giving an appearance of relief to the picture.

stereoscop'ic. Relating to a stereoscope or to the appearance of relief presented by a solid body. **s. vision,** the perception of objects in relief and not as all in one plane.

stereoskiagraphy (ster''e-o-ski-ag'ră-fĭ) [G. *stereos*, solid, + *skia*, shadow, + *graphē*, a writing.] The taking of an *x*-ray picture from two slightly different positions so as to obtain a stereoscopic effect.

stereotrop'ic. Relating to or exhibiting stereotropism.

stereot'ropism [G. *stereos*, solid, + *tropos*, a turning.] Growth or movement of a plant or animal toward (*positive* s.) or away from (*negative* s.) a solid body.

stereotypy (ster'e-o-ti-pĭ). 1. The maintenance of one attitude for a long period 2. The constant repetition of certain meaningless gestures or movements.

ster'esol. A liquid composed of benzoin, tincture of tolu, ethereal oil, carbolic acid, saccharin, and shellac dissolved in alcohol; it dries to a varnish adherent to skin and mucous membranes; employed as a paint to diphtheritic pseudomembrane and as an adhesive to hold thin dressings in place.

ster'iform. Trade name of a 5 per cent. mixture of formaldehyde in sugar of milk; employed as an antiseptic. **s. chlo'ride,** s. containing ammonium chloride, 10, and pepsin, 20 per cent. **s. i'odide,** s. containing ammonium iodide, 10, and pepsin, 20 per cent.

sterig'ma [G. *stērigma*, a support.] In botany, the stalk which bears the gonidium or spore in fungi.

sterile (ster'il) [L. *sterilis*, barren.] 1. Unfruitful, not fertile, bearing no progeny. 2. Aseptic, free from all living microorganisms and their spores.

sterility (ster-il'ĭ-tĭ). Barrenness, infertility, unproductiveness. **one-child s.,** s. occurring in a woman who has borne one child and has no more.

sterilization (ster''il-i-za'shun). 1. The act or process of making any person or thing sterile. 2. Castration. 3. The destruction of all microorganisms in or about an object; cf. *pasteurization*. In the process of sterilization of milk, the degree of heat necessary is so high as to alter the flavor, which pasteurization will not affect. **discontin'uous s.,** exposure to a temperature of 100° C. (212° F.) for a definite period, usually an hour, on each of several succes-

sive days. **frac'tional s.,** the heating of a fluid to 56° to 70° C. (132.8° to 158° F.) for a given period, usually one hour, on each of several successive days; at each heating the developed bacteria are destroyed, but the spores are unaffected; also called tyndallization. **intermitt'ent s.,** fractional s. or discontinuous s. **s. by flowing steam,** s. by exposure in an unsealed vessel to the action of steam at a temperature of 100° C. (212° F.). **s. by steam under pressure,** s. effected by exposure to the action of superheated steam in an autoclave.*

ster'ilize. To render sterile; to castrate; to make aseptic.

ster'ilizer. An apparatus for making anything aseptic or germ-free.

ster'isol. Trade name of an antiseptic solution of formaldehyde, potassium phosphate, sodium chloride, and sugar of milk in water.

Stern's pos'ture [Heinrich *Stern*, New York physician, 1868–1918.] In cases of tricuspid insufficiency the murmur is developed or made more distinct if the patient lies supine with the head extended and lowered over the end of the table; this is S.'s posture or position. **S.'s proce'dure,** placing the patient on the left side, when tympany and gurgling will be perceived in the mid-abdomen in cases of typhlatonia.

ster'nad. In a direction toward the sternum.

ster'nal. Relating to the sternum.

sternalgia (stur-nal'jĭ-ah) [G. *sternon*, sternum, + *algos*, pain.] Pain in the sternum or the sternal region, sternodynia.

sterna'lis. See under *musculus*.

Stern'berg's bacillus [George M. *Sternberg*, American bacteriologist, 1838–1915.] 1. *Bacillus X*; 2. Pneumococcus, *Diplococcus pneumoniæ*.[0]

Stern'berg's disease. Paltauf-Sternberg disease, lymphogranulomatosis.

sternebra, pl. *ster'nebræ* (stur'ne-brah) [*stern(um)* + *(vert)ebra*.] A sternal vertebra, one of the four segments by the fusion of which in early life the body of the sternum is formed.

sternen (stur'nen) [G. *en*, in.] Relating to the sternum independent of any other structures.

sternochondroscapularis (stur-no-kon″dro-skap-u-la'ris) [G. *sternon*, sternum, + *chondros*, cartilage, + L. *scapula*.] See under *musculus*.

sternoclavic'ular. Relating to the sternum and the clavicle; noting an articulation, and an occasional muscle.

sternoclavicual ris. See under *musculus*.

sternoclei'dal [G. *sternon*, sternum, + *kleis(kleid-)*, key (clavicle).] Relating to the sternum and the clavicle.

sternocleidomastoid (stur″no-kli″do-mas'toyd). Relating to sternum, clavicle, and mastoid process, noting the origins and insertion of the muscle so named.

sternocleidomastoideus (stur″no-kli″do-mas-to-id'e-us). See under *musculus*.

sternocos'tal [L. *sternum* + *costa*, rib.] Relating to the sternum and the ribs.

sternodym'ia. Sternopagia.

sternod'ymus [G. *sternon*, sternum, + *didymos*, twin.] Sternopagus.

sternodyn'ia [G. *sternon*, sternum, + *odynē*, pain.] Sternalgia.

sternofascialis (stur″no-fă-shĭ-al'is). See under *musculus*.

sternogloss'al. Noting muscular fibers which occasionally pass from the sternohyoid muscle to join the hyoglossal muscle.

sternohyoideus (stur″no-hi″o-id'e-us). See under *musculus*.

ster'noid [G. *sternon*, sternum, + *eidos*, resemblance.] Resembling the sternum.

sternomas'toid. Relating to the sternum and the mastoid process of the temporal bone, noting the musculus* sternocleidomastoideus.

sternopa'gia. Sternodymia, a double monstrosity with fusion at the sternum.

sternop'agus [G. *sternon*, sternum, + *pagos*, joined together.] Sternodymus, a twin monster with fusion of the sterna or the anterior chest-walls.

sternopericar'dial. Relating to the sternum and the pericardium; noting the superior and inferior *s. ligaments*, passing from the posterior surface of the sternum to the anterior surface of the pericardium.

sternothyroideus (stur″no-thi-ro-id'e-us). See under *musculus*.

sternotracheal (stur-no-tra'ke-al). Relating to the sternum and the trachea.

sternotrype'sis [G. *sternon*, sternum + *trypēsis*, a boring.] Trephining of the sternum.

sternovertebral (stur-no-vur'te-bral). Vertebrosternal, relating to the sternum and the vertebræ, noting the true ribs, or the seven upper ribs on either side, which articulate with the vertebræ and with the sternum.

sternum, gen. *ster'ni*, pl. *ster'na* (stur'num) [G. *sternon*, the chest.] The breast-bone, a long flat bone, articulating with the cartilages of the first seven ribs and with the clavicle, forming the middle part of the anterior wall of the thorax; it consists of three portions: the corpus or body, mesosternum, gladiolus; the manubrium or presternum; the ensiform or xiphoid cartilage or appendix or process, or metasternum.

sternutatio (stur-nu-ta'shyo) [L. *sternutare*, *sternuere*, to sneeze.] Sternutation, sneezing. **s. convulsi'va,** paroxysmal sneezing, the sneezing of hay fever.

sternuta'tion [L. *sternutatio*.] Sneezing.

sternutator (stur'nu-ta-tur) [L. *sternutare*, to sneeze.] Sneezing gas,* diphenylchlorarsine.

sternu'tatory. Errhine.

ster'tor [L. *stertere*, to snore.] A snore, a noisy inspiration occurring in coma or deep sleep. **hen-cluck s.,** a breath-sound like the clucking of a hen, sometimes heard in cases of postpharyngeal abscess.

stertorous (stur'tor-us). Relating to or characterized by stertor or snoring.

ster'ule. Trade name for a flask-shaped glass capsule containing a sterile solution of an alkaloid or other drug, chiefly for hypodermic or ophthalmic use; the neck of the flask is broken when it is desired to use the solution.

stetharteritis (steth-ar-ter-i'(e')tis) [G. *stēthos*, chest, + *artēria*, artery, + *-itis*.] Inflammation of the aorta or other arteries in the chest.

stethe'mia, stethæ'mia [G. *stēthos*, chest, + *haima*, blood.] Pulmonary congestion.

stethocathar'sis [G. *stēthos*, chest, + *katharsis*, a purging.] Expectoration.

stethocyr'tograph [G. *stēthos*, chest, + *kyrtos*, bent, + *graphō*, I record.] An apparatus for measuring and recording the curvatures of the thorax.

stethogoniom'eter [G. *stēthos*, chest, + *gōnia*, angle, + *metron*, measure.] An apparatus for measuring the curvatures of the thorax.

steth'ograph [G. *stēthos*, chest, + *graphō*, I record.] An apparatus for recording the respiratory movements of the chest.

stethokyrtograph (steth″o-kur'to-graf). Stethocyrtograph.

stethome'nia [G. *stēthos*, chest, + *mēn*, month.] Hemoptysis occurring as a form of vicarious menstruation.

stethometer (steth-om'e-tur) [G. *stēthos*, chest, + *metron*, measure.] An instrument for measuring the circumference of the chest and its variations in respiration.

stethomyitis, stethomyositis (steth-o-mi-i'(e')tis, steth-o-mi-o-si'(se')tis) [G. *stēthos*, chest, + *mys*, muscle, + *-itis*.] Inflammation of the muscles of the chest-wall.

stethoparal'ysis [G. *stēthos*, chest.] Paralysis of the respiratory muscles.

stethophone (steth'o-fōn) [G. *stēthos*, chest, + *phōnē*, sound.] Stethoscope.

stethophonom'eter [G. *stēthos*, chest, + *phōnē*, sound, + *metron*, measure.] A device for measuring the intensity of the sounds heard on auscultation or of the percussion note.

stethopol'yscope [G. *stēthos*, chest, + *polys*, many, + *skopeō*, I examine.] A stethoscope with a number of flexible ear tubes, so that several persons can listen at the same time to the same auscultatory sound.

steth'oscope [G. *stēthos*, chest, + *skopeō*, I examine.] An instrument originally devised by Laennec for aid in hearing the respiratory and cardiac sounds in the chest; now modified in various ways and employed in mediate auscultation of any of the vascular or other sounds in the body anywhere. **binau'ral s.**, Cammann's s. or some modification of it; it consists essentially of two self-retaining ear pieces connected with a single bell. **differen'tial s.**, one having two bells, or chest pieces, so that two sounds in different parts of the chest may be heard simultaneously and compared.

stethoscop'ic. 1. Relating to or effected by means of a stethoscope. 2. Relating to an examination of the chest.

stethos'copy. 1. Examination of the chest by menas of auscultation, either mediate or immediate, and percussion. 2. Mediate auscultation with the stethoscope. For the system of stethoscopic abbreviations adopted by the International Tuberculosis Association in 1913, see the Appendix.

Stew'art's solu'tion [Douglas Hunt *Stewart*, New York surgeon, 1860–1933.] 1. An antiseptic solution of alum sulphate 1, calx chlorinata 2, in water 100, boiled for 5 minutes; used for hand sterilization. 2. Biniodide solution, containing calomel 1 gr., in two ounces each of alcohol, tincture of iodine, and glycerin. **S.'s pur'ple,** an antiseptic preparation made by triturating 1 gm. of iodine with 1 c.c. of ether and adding albolene to 240 c.c. **S.'s vein fluid,** for the cure of varicose veins: salicylic acid and sodium borate, of each ℥2 (8.0), phenol ℥6 (24.0), glycerin ℥2 (64.0), spirit of camphor to make ℥4 (128.0); dose 5 minims (0.3) injected into the vein by means of a hypodermic syringe.

Stew'art's test. Estimation of the amount of collateral circulation, in case of an aneurysm of the main artery of a limb, by means of a calorimeter.

Stewart-Holmes sign (stu'art-hōmz' sīn). The patient rests his elbow on the table and attempts to flex the arm, this being resisted by the examiner grasping the wrist; the wrist being now released flexion at once occurs but is soon arrested by the involuntary contraction of the triceps; in cerebellar hypotonia, however, this reflex does not occur and flexion of the arm is continued.

sthe'nia [G. *sthenos*, strength.] A condition of activity and apparent force, as in an acute sthenic* fever.

sthen'ic. Strong, active; marked by sthenia, said of a fever with strong bounding pulse, high temperature, and active delirium.

sthenop'yra [G. *sthenos*, force, + *pyr*, fire.] A sthenic* fever.

stibenyl (stib'ĕ-nil) [G. *stibi*, antimony, + *hylē*, stuff.] The sodium salt of p-acetyl-aminophenylstibinic acid; it has been employed in the treatment of leprosy.

stib'ialism. Chronic antimonial poisoning.

stib'iated [L. *stibium*, antimony.] Impregnated with or containing antimony, antimonialized.

stibia'tion. Impregnation with antimony.

stib'ine. A compound of antimony and hydrogen SbH_3, acting chemically as a basic radical

stib'ium [L.; G. *stibi*.] Antimony.

stibo'nium. The hypothetical radical SbH_4, analogous to ammonium.

stichochrome (stik'o-krōm) [G. *stichos*, a row, + *chrōma*, color.] Noting a nerve-cell in which the tigroid mass, or stainable material, is arranged in roughly parallel rows or lines.

Stick'er's disease' [G. *Sticker*, German physician *1860.] Erythema infectiosum.

stick'ing-plaster. Court plaster, a protective plaster made of silk spread with isinglass.

stic'ta [G. *stiktos*, dappled.] Lungwort, a lichen *Sticta pulmonaria;* employed in eclectic and homepathic practice for chronic coughs and muscular soreness of the chest walls and neck; it is recommended also for the relief of the night sweats of tuberculosis; dose, one to four drops of the eclectic specific medicine in water every one to three hours.

Stieda's frac'ture (ste'dah) [Alfred *Stieda*, German surgeon, *1860.] Fracture of the internal condyle of the femur, resulting occasionally in a bony outgrowth of the condyle (Pellegrini's disease).

Stieda's process [ste'dah] [Ludwig *Stieda*, German anatomist, 1837–1913.] Processus posterior tali.

Stifel's figure (sti'felz fig'ŭr). A black disc with a central white spot, used to determine the position and diameter of the blind spot in the human eye.

stiff-neck'. Wryneck, torticollis. **s.-n. fever,** (1) dengue;)2) cerebrospinal* meningitis.

sti'fle-bone. The patella of the stifle-joint of a horse.

sti'fle-joint. The femorotibial joint in the hind leg of a horse.

stig'ma, pl. *stig'mata* [G. a mark; *stizō*, I prick.] 1. In botany, the part of the pistil of a flower, sessile on the ovary or at the extremity of the style, usually moistened with a viscid fluid, which receives the pollen. 2. In anatomy: (*a*) the interval between the endothelial cells in the wall of a capillary or lymph-channel; (*b*) the point of rupture of a Graafian follicle on the surface of the ovary. 3. In pathology: (*a*) any spot or blemish on the skin; (*b*) a bleeding spot on the skin of an hysterical person; (*c*) see *stigma of degeneration*. 4. In protozoology, the eye-spot of an infusorian. **cos'tal s.,** Stiller's* sign. **s. of degenera'tion,** one of a number of physical, nervous, or psychic abnormalities occurring solely, or with preponderating frequency, in degenerates. **s. ventric'uli,**

one of a number of miliary ecchymoses of the gastric mucosa.

stig'mal. Stigmatic.

stig'mata. Plural of *stigma*. **s. may'dis,** corn-silk; employed in eclectic practice as a mild stimulating diuretic and in cystitis and gravel, in doses of ℥20–60 (1.3–4.0) of the specific preparation. For the U.S.P. preparation see *zea*.

stigmat'ic. Relating to or marked by a stigma or stigmata.

stig'matism. The condition of having stigmata.

stigmatiza'tion. 1. Stigmatism. 2. The production of stigmata, especially of hysterical stigmata.

stigmatodermia (stig"mă-to-dur'mĭ-ah) [G. *stigma* (*stigmat-*), mark, + *derma*, skin.] A disorder of the skin marked by the occurrence of spotted lesions.

stigmatom'eter. Astigmatometer.

stigmato'sis. Stigmatodermia.

stigmomet'ric card [G. *stigmē*, a point, + *metron*, measure.] Fridenberg's test card; a card containing a series of dots and squares, of definite and graduated size, arranged in groups; these dots are to be counted at various distances as a test of vision and accommodation in illiterates.

sti'let, stilette'. Style.

sti'li. Pl. of stilus (*q.v.*). **s. ac'idi salicyl'ici** (N.F.), salicylic acid pencils, containing 10 per cent. of the active agent. **s. cocai'næ dilu'biles,** cocaine pencils, containing 5 per cent. cocaine hydrochloride. **s. dilu'biles** (N.F.) [L. *diluere*, to dilute], paste pencils, Unna pencils; a paste of starch, dextrin, tragacanth, and sugar; after the incorporation of a medicinal substance, the paste is rolled into cylinders and dried; employed as a means of making direct application to the skin.

Still's disease [George Frederic *Still*, English physician, *1868.] A peculiar form of polyarticular joint disease, associated with glandular and splenic enlargement, occurring in infants and young children; it is accompanied by profuse sweating, a mild fever of intermittent type, and occasionally prominence of the eyes; retarded development is a feature of sufferers from the disease.

still-birth. The delivery of a dead fetus.

Still-Chauffard syn'drome (stil-sho-far'). Chauffard* syndrome.

Stil'ler's sign [Berthold *Stiller*, Budapest physician, *1837.] The presence of a floating tenth rib as indicative of a neurasthenic tendency; called also costal stigma.

stillicidium (stil-ĭ-sid'ĭ-um) [L. the trickling of rain, *stilla*, drop, + *cadere*, to fall.] A dripping, dribbling, or falling of a liquid drop by drop. **s. lacrima'rum,** epiphora. **s. na'rium,** the discharge of watery mucus in the early stages of coryza. **s. uri'næ,** incontinence of urine in cases of distended bladder; strangury.

Still'ing's canal' [Benedict *Stilling*, German anatomist, 1810–1879.] Cloquet's canal, canalis* hyoideus. **S.'s cells** or **S.'s column,** S.'s nucleus. **S.'s fleece,** the white fibers surrounding the nucleus dentatus of the cerebellum. **S.'s gelat'inous sub'stance,** the neuroglia surrounding the central canal of the spinal cord. **S.'s nu'cleus,** a group or column of scattered cells running the greater part of the length of the spinal cord just anterior (ventrad) to Clarke's column. **S.'s raph'e,** the transverse fibers uniting the pyramids on the anterior surface of the oblongata.

Still'ing's col'or ta'bles [Jacob *Stilling*, German ophthalmologist, 1842–1915.] Reuss's color tables.

stillin'gia [Benjamin *Stillingfleet*, an English botanist, 1702–1711.] (N.F.) The dried root of *Stillingia sylvatica*, queen's delight, silver-leaf, yaw-root, an herb of the southeastern United States; employed as an alterative in doses of gr. 15–30 (1.0–2.0); in eclectic practice it is employed in the treatment of ozena, chronic laryngitis and pharyngitis, and syphilis.

still'ingin. A precipitate from a tincture of stillingia, employed as an alterative in the treatment of syphilis and scrofula.

sti'lus [L. a stake.] Stylus; a pencil-shaped medicinal preparation for external application; a medicated bougie; a pencil or stick of nitrate of silver or other caustic. See *stili*.

stim'ulant [L. *stimulans; stimulare*, to urge on, to incite.] 1. Stimulating, exciting to action. 2 An agent that arouses organic activity, strengthens the action of the heart, increases vitality, and promotes a sense of well-being. Stimulants are classified, according to the parts upon which they chiefly act, as cardiac, respiratory, stomachic, hepatic, cerebral, spinal, vascular, genital, etc. **diffu'sible s.,** one that produces a rapid but temporary effect **gen'eral s.,** one that affects the entire body. **local s.,** one whose action is confined to the part to which it is applied.

stim'ulate. To arouse the system in general or any special system or organ to increased functional activity.

stimula'tion. 1. The arousing of the body or any of its parts or organs to increased functional activity. 2. The condition of being stimulated.

stim'ulin. 1. A substance said to be present in fresh gastric juice which stimulates the gastric glands to renewed secretion. 2. A substance in normal and especially in immune serum which stimulates the cells to increased phagocytic activity. 3. A non-specific substance, such as broth, which has the supposed power of increasing the activity of the leucocytes

stim'ulus, pl. *stim'uli* [L. a goad.] 1. A stimulant 2 Anything which arouses action (the response) in a muscle, nerve, or gland, or which promotes some trophic change. **ad'equate s.,** homologous s. **heterol'ogous s.,** a s. which acts upon any part of the sensory apparatus or nerve-tract. **homol'ogous s.,** one which acts only upon the nerve terminations in a special sense organ.

Sti'pa [L. tow.] A genus of grasses some species of which are ornamental, others used for forage. **S. ine'brians,** a species which is said to produce stupor in animals grazing on it. **S. sibe'rica,** that Siberian species having an action similar to a of *S. inebrians*. **S. vas'eyi, S. virid'ula,** sleepy grass, a species growing in the southwestern United States, which is said to be narcotic.

stipe, stipes (stīp, sti'pēz) [L *stipes*, trunk.] 1. The stalk which supports the pileus of a mushroom. 2. The stalk which supports the carpel. 3. The petiole of a frond.

stipp'ling. In histology, a speckling of a blood-cell or other structure with fine dots when exposed to the action of a basic stain, due to the presence of free basophile granules in the cell protoplasm.

stip'ule [L. *stipula*, dim. of *stipes*, trunk, stock.] An appendage at the base of a leaf.

Stirling's modification of Gram's stain [William *Stirling*, British histologist and physiologist, 1851–1932.] Gentian-violet, 5 gm. is ground in a mortar with 10 c.c. of 95 per cent. alcohol; when dissolved, aniline oil, 2 c.c. is added and then distilled water, 88 c.c.

stirp [sturp) [L. *stirps*, a stock.] 1. A race or family. 2. Galton's term for the aggregation or sum total of gemmules or organic units in the fertilized ovum.

stirpiculture (stur'pĭ-kul"tūr) [L. *stirps*, stock, + *cultura*, cultivation.] Scientific selection in breeding in order to improve the stock.

stirr'up [A.S. *stīrāp.*] Stapes.

stitch [A.S. *stice*, a pricking.] 1. A sharp sticking pain of momentary duration. 2. A suture.

stith [an obsolete term for anvil.] Incus.

stock [A.S. *stoc.*] A supply ofany material kept on hand ready for use. **s. culture,** a culture of any microorganism kept constantly active, by reinoculation of fresh media from time to time. **s-vaccine,** a bacterial vaccine made from any of the species, not from one individual strain, distinguished from an autogenous vaccine.

Stock'er's sign. For the differentiation between typhoid fever and tuberculous meningitis; if in the former disease, the bedclothes are pulled down the patient takes little or no notice, but in tuberculous meningitis the interference is resented and the clothes are quickly pulled up again.

stock'ing. Edema of the leg in the horse.

Stodd'art's gel'atin a'gar. See under *agar.*

stœchiology, stoichiology (ste-kĭ-ol'o-jĭ, stoy-kĭ-ol'o-jĭ). Stechiology.

stœchiometer, stoichiometer (ste-kĭ-om'e-ter, stoy-kĭ-om'e-ter). Stechiometer.

stœchiometry, stoichiometry (ste-kĭ-om'e-trĭ, stoy-kĭ-om'e-trĭ). Stechiometry.

Stoerk's blenorrhe'a [Karl *Stoerk*, Viennese laryngologist, 1832–1899.] Chronic, first purulent then dry, catarrh of the upper air-passages with hypertrophy of the mucous membrane and submucosa, in many cases the same as scleroma.

Stoff'el's opera'tion. Division of certain motor nerves for the relief of spastic paralysis.

Stokes's expec'torant [William *Stokes*, Dublin physician, 1804–1878.] Mistura pectoralis, Stokes (N.F.). **S.'s law,** a muscle lying above an inflamed mucous or serous membrane is frequently the seat of paralysis. **S.'s lin'iment,** a turpentine liniment, practically the same as linimentum terebinthinæ aceticum (N.F.). **S.'s opera'tion,** amputation through the articular extremity of the femur; see cut under *amputation.* **S.'s sign,** pulsation felt on palpation of the right side of the abdomen in acute enteritis.

Stokes's rea'gent [William Royal *Stokes*, American pathologist, *1870.] A solution of ferrous sulphate, with the addition of citric acid, alkalinized with ammonia; employed as a test for hemoglobin.

Stokes-Adams disease' [William *Stokes*, Dublin physician, 1804–1878; Robert *Adams*, Glasgow physician, 1794–1861.] A syndrome characterized by slow and occasionally irregular pulse, vertigo, syncope, pseudoepileptic convulsions, and sometimes Cheyne-Stokes respiration; the pathology is uncertain, but arteriosclerosis is almost constantly present. The syndrome was described by Adams in 1827 and by Stokes in 1842; also by Spens* in 1792.

Stok'vis's test [Barend Joseph E. *Stokvis*, Dutch physician, *1834.] For bile in the urine: the suspected urine is mixed with a solution of zinc acetate, the precipitate is washed in water, dissolved in aqua ammoniæ, and filtered; if the urine contains bile-pigments the filtrate will gradually turn a greenish blue color.

sto'lon [L. *stolo*, a shoot.] In botany, a slender shoot trailing on the ground.

Stoltz's opera'tion [Joseph *Stoltz*, French gynecologist, 1803–1896.] Pubiotomy.

sto'ma, pl. *sto'mata* [G. a mouth.] 1. A minute opening or pore. 2. Stigma (*2a*). 3. In botany, a minute aperture on the surface of a leaf or young stem communicating with an air-space in its substance. 4. In composition, noting the mouth, or an artificial opening between two cavities or canals, or between such and the surface of the body.

stomacace (sto-mak'a-se). Stomatocace.

stomach (stum'ak) [G. *stomachos*, L. *stomachus.*] Ventricula [BNA]; a large irregularly piriform sac between the esophagus and the small intestine, lying just beneath the diaphragm; when distended it is 10 or 11 inches in length and 4 to 4½ inches in its greatest diameter, and has a capacity of about 1 quart. Its wall has four coats or tunics—mucous, submucous, muscular, and peritoneal: the muscular coat is composed of three layers—the fibers running longitudinally in the outer, circularly in the middle, and obliquely in the inner layer. **biloc'ular s.,** hourglass s **car'diac s.,** fundus. **drain-trap s.,** water-trap s. **hour'glass s.,** a condition in which there is a central constriction of the wall of the stomach dividing it more or less completely into two cavities, a cardiac and a pyloric. **leather-bott'le s.,** a condition of extreme hypertrophy of the wall of the stomach, resulting from stenosis of the pylorus or occurring in cases of cirrhosis; in the latter case there is also marked contraction of the cavity of the organ. **pit of the s.,** epigastrium, scrobiculus cordis. **pylor'ic s.,** antrum. **tri'fid s.,** a condition in which the stomach is divided by two constrictions into three pouches. **wal'let s.,** a form of dilated stomach in which there is a general bag-like distention, the antrum and fundus being indistinguishable. **water-trap s.,** a ptotic and dilated s., having a relatively high (though normally placed) pyloric outlet which is held up by the gastrohepatic ligament.

acidity, gastroxia, gastroxynsis, pyrosis, heartburn, hyperchlorhydria. **atrophy,** gastratrophia. **calculus,** gastrolith; bezoar (in animals). **congestion,** gastremia gastræmia, gasterangemphraxis. **connecting the pyloric and cardiac extremities in cases of constriction,** gastrogastrostomy, gastroanastomosis. **dilatation,** gastrectasia, gastroectasia, macrogastria. **diminution,** gastrophthisis, gastrostenosis. **disease,** gastropathy. gastronosus, gastrosis, gastricism, gastrypopathia (slight); gastryperpathia (severe); gastromycosis (due to fungi). **ejection of matter from,** vomiting, emesis; eructation, belching (gas). **examination of,** gastroscopy, stomachoscopy. **excessive mucous secretion,** gastroblennorrhea, gastromyxorrhea, gastrorrhea. **excessive secretion of gastric juice,** gastrochymorrhea, gastrosuccorrhea. **excision,** gastrectomy, gastropylorectomy. **fixation of a prolapsed,** gastropexy. **functional weakness,** gastrasthenia, gastroadynamia. **gaseous distention,** gastrotympanites. **hemorrhage,** gastrorrhagia, hematemesis, gastrostaxis. **hernia,** gastrocele. **incision into,** gastrotomy. **inflammation,** gastritis, mycogastritis; gastroadenitis (glands); linitis (connective tissue); gastroenteritis (stomach and intestine); gastrocolitis (stomach and colon); gastroduodenitis (stomach and duodenum); gastroenterocolitis (stomach, small and large intestine). **instrument for recording movements,** gastrograph, gastrocinesograph. **irregular movements,** gastrataxia, gastroataxia, gastrospasm. **irritability,** gastrerethism, gastrohyperneuria. **large size,** megalogastria, gastromegaly, macrogastria. **motor activity,** prochoresis **operative communication with colon,** gastrocolostomy. **operative communication with duodenum,** gastroduodenostomy. **operative communication with intestine,** gastroenterostomy. **operative formation of a fistula** gastrostomy. **operative reduction in size,** gastroplication. **pain,** gastralgia, gastrodynia, stomachodynia, cardialgia, stomachalgia, hyperesthesia ventriculi, stomach-ache; gastralgocenosis (relieved by taking food). **paralysis,** gastroparalysis, gastroplegia. **perforation of ulcer,** gastrobrosis, gastrodialysis. **plastic**

surgery, gastroplasty. **prolapse,** gastroptosia. **science relating to,** gastrology. **small size,** microgastria. **softening,** gastromalacia; malacoma, malacosis, mollities, or malacia ventriculi. **suppressed secretion,** achylia gastrica, anadenia ventriculi, achlorhydria, hypochlorhydria. **suture of,** gastrorrhaphy, ulceration, gastrohelcosis, gastrohelcoma, gastrelcosis. **vicarious menstruation,** gastromenia.

stomach-ache (stum'ak-āk). Gastralgia, gastrodynia, stomachalgia, stomachodynia.

stomachal (stum'ak-al). Relating to the stomach.

stomachalgia (stum-ak-al'jĭ-ah) [G. *stomachos*, stomach, + *algos*, pain.] Pain in the stomach, stomach-ache.

stomachic (stum-ak'ik). 1. Stomachal. 2. An agent which improves appetite and digestion.

stomachodynia (stum-ak-o-din'ĭ-ah) [G. *stomachos*, stomach, + *odynē*, pain.] Gastrodynia.

stomachoscopy (stum-ak-os'ko-pĭ) [G. *stomachos*, stomach, + *skopeō*, I examine.] Gastroscopy.

stomach-reefing (stum'ak rēf'ing). Gastroplication.

sto'mata. Plural of *stoma*.

sto'matal. Relating to a stoma.

stomatal'gia [G. *stoma*, mouth, + *algos*, pain.] Pain in the mouth.

stomat'ic [G. *stoma*, mouth.] Relating to the mouth, oral.

stomatitis (sto-mă-ti'(te')tis) [G. *stoma*(*stomat-*), mouth, + *-itis*.] Inflammation of the mucous membrane of the mouth, sore-mouth. **aph'thous s.,** a catarrhal s. with the formation of minute vesicles on the mucous membrane of the lips, cheeks, and tongue. **catarrh'al s.,** a simple nonulcerative inflammation of the mucous membrane of the mouth. **epidem'ic s.,** foot-and-mouth disease. **follic'ular s.,** aphthous s. **gan'grenous s.,** noma. **herpet'ic s.,** aphthous s. **mycot'ic s.,** thrush. **parasit'ic s.,** thrush. **s. intertrop'ica,** sprue (2). **s. neurot'ica chron'ica,** pemphigus neuroticus occurring in the mouth. **s. simplex,** catarrhal s. **s. ulcero'sa,** ulcerative s, stomatocace, putrid sore mouth, a destructive ulceration of the mucous membrane of the mouth. **s. ulcero'sa chron'ica,** Riggs's disease. **vesic'ular s.,** aphthous s. **Vincent's s.,** Vincent's* angina.

stomatocace (sto-mă-tŏk'a-se) [L. *stoma*(*stomat-*), mouth, + *kakē*, badness.] Ulcerative stomatitis, putrid sore mouth.

sto"matocathar'sis [G. *stoma*, mouth, + *katharsis*, purgation, cleansing.] 1. Disinfection of the oral cavity. 2. Salivation.

stomatodyn'ia [G. *stoma*(*stomat-*), mouth, + *odynē*, pain.] Stomatalgia.

stomatodyso'dia [G. *stoma*(*stomat-*), mouth, + *dysōdia*, bad odor.] A bad odor or stench from the mouth.

stomatological (sto-mă-to-loj'ĭ-kal). Relating to stomatology.

stomatol'ogist. One who is skilled in stomatology.

stomatol'ogy [G. *stoma*, mouth, + *-logia*.] The branch of medical science which has to do with the mouth and teeth and their diseases.

stomatomalacia (sto-mă-to-mal-a'sĭ-ah) [G. *stoma*(*stomat-*), mouth, + *malakia*, softness.] Pathological softening of any of the structures of the mouth; noma.

stomatome'nia [G. *stoma*(*stomat-*), mouth, + *mēn*, month.] Bleeding from the gums as a form of vicarious menstruation.

stomat'omy. Stomatotomy.

stomatomycosis (sto"mă-to-mi-ko'sis) [G. *stoma*-(*stomat-*), mouth, + *mykēs*, fungus.] Thrush or other disease of the mouth due to the presence of a microscopic fungus.

stomatonecrosis (sto"mă-to-ne-kro'sis) [G. *stoma*-(*stomat-*), mouth, + *nekrōsis*, a killing.] Gangrene of the mouth, noma.

sto"matono'ma [G. *stoma*(*stomat-*), mouth, + *nomē*, spreading.] Gangrene of the mouth, noma.

stomatopathy (sto-mă-top'ă-thĭ) [G. *stoma* (*stomat-*), mouth, + *pathos*, suffering.] Any disease of the mouth.

stomatoplas'tic. Relating to stomatoplasty.

stomatoplasty (sto'mă-to-plas-tĭ) [G. *stoma* (*stomat-*), mouth, + *plassō*, I form.] Reparative or plastic surgery of the mouth.

stomatorrhagia (sto"mă-tor-raj'ĭ-ah) [G. *stoma* (*stomat-*), mouth, + *-rhagia*.] Bleeding from the gums or other part of the oral cavity.

sto'matoscope [G, *stoma*(*stomat-*), mouth, + *skopeō*, I examine.] An apparatus for illuminating the interior of the mouth to facilitate examination.

stomato'sis [G. *stoma*(*stomat-*), mouth.] Any disease of the oral cavity.

stomatot'omy [G. *stoma*(*stomat-*), mouth, + *tomē*, incision.] Nicking the edge of a rigid os uteri to facilitate labor.

stomatoty'phus. Ulcerative stomatitis, stomatocace.

stomenorrhagia (sto-men-or-raj'ĭ-ah) [G. *stoma*, mouth, + *mēn*, month, + *-rhagia*.] Stomatomenia.

stomoceph'alus [G. *stoma*, mouth, + *kephalē*, head.] A monster with undeveloped jaw and a snout-like mouth.

stomod'eal. Relating to the stomodeum.

stomodeum, stomodæum (sto-mo-de'um) [G. *stoma*, mouth, + *daiō*, I divide.] The invagination of the ectoderm forming the mouth cavity.

Stomox'ys cal'citrans [G. *stoma*, mouth, + *oxys*, sharp; L. *calcitrare*, to kick, noting the efforts of cattle to rid themselves of the insect.] A species of biting fly, resembling in size and general appearance the common house-fly; this or another species of the same genus is believed to be the intermediate host of *Trypanosoma evansi*, the cause of surra, and is also accused of transmitting tularemia.

stone [A.S. *stān*.] 1. Calculus.* 2. An English unit of weight of the human body, equal to 14 pounds. 3. Noting a complete loss of any of the senses or of life; as stone blind, stone deaf, stone dead. **blue s.,** cupri sulphas. **rott'en s.,** pumice.

stone'-bruise. A bruise of the foot received in walking barefoot over loose stones.

stone'-masons' disease' or lung. Silicosis.

stone'-searcher. A steel sound with an angular curve near its tip, used in the examination of the bladder in the case of a suspected calculus.

stool [A.S. *stōl*, seat.] 1. An evacuation of the bowels. 2. Feces, the matter discharged at one movement of the bowels.

stop. In dentistry, to fill a tooth-cavity.

stop'-needle. A surgical needle, with the eye at the tip, the shank of which has a projecting shelf to arrest the needle when it has passed the desired distance through the tissues.

stop'-speculum. A dilating speculum, as for example one for the eyelids, which is provided with a catch to prevent its being opened too wide.

stor'age batt'ery. A battery having two plates of lead or other material immersed in an electrolyte; when these are charged with a current of electricity they become negative and positive, and when a connection is made the current flows from one to the other as between the poles of a

galvanic battery; accumulator. See cut under *battery*.

sto'rax. Styrax.

storesinol (sto-rez'ĭ-nol). One of two amorphous resins, or alcohols, $C_{31}H_{55}(OH)_3$, contained in styrax.

stork-legs. The picture presented by extreme wasting of the feet and legs as far as the knees in cases of progressive muscular atrophy.

Stoughton's elix'ir (sto'ton) [*Stoughton*, English physician, eighteenth century.] An elixir containing aloes, rhubarb, gentian, and cascarilla, with various flavoring tinctures.

stovaine (sto'vah-een). Amylocainæ hydrochloridum (Br.), a local anesthetic, used especially to induce intraspinal anesthesia, in injections of gr. $\frac{1}{4}$–$\frac{3}{4}$ (0.015–0.045); chemically it is benzoyl-ethyldimethyl-aminopropanol hydrochloride.

stovainization (sto-vah-e-ni-za'shun). The induction of spinal anesthesia by subarachnoid injections of stovaine.

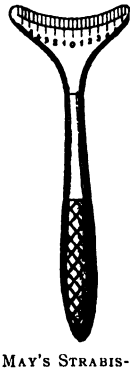
stovarsol (sto'var-sol). Spirocide, sodium salt of acetyloxyamino-hydroxyphenyl arsonic acid, No. 190; a synthetic pentavalent arsenic compound used, like arsphenamine, in the treatment of syphilis, yaws, and other spirochetal infections, and also of amebic dysentery, in the dose of 0.25 gm. 2 or 3 times a day.

Str. Abbreviation of *Streptococcus*.

strabis'mal, strabis'mic. Relating to or affected with strabismus.

strabismom'eter [G. *strabismos* + *metron*, measure.] An ivory plate with upper margin curved, to conform with the lower lid, and marked in millimeters or fractions of an inch, used to measure the lateral deviation in squint.

strabismus (străb-biz'mus) [G. *strabismos*.] Heterotropia, squint; a constant lack of parallelism of the visual axes of the eyes. **al'ternating s.**, see *squint*. **dynam'ic s.**, latent squint, heterophoria.* **s. conver'gens**, internal squint.* **s. diver'gens**, external squint.* **s. deor'sum ver'gens**, vertical squint, in which the visual axis of one eye deviates downward. **s. sur'sum ver'gens**, vertical squint, in which the visual axis of one eye deviates upward. **unioc'ular s.**, see *squint*.



MAY'S STRABISMOMETER.

strabo'meter. Strabismometer.

strabotome (strab'o-tōm). A knife for use in performing strabotomy.

strabot'omy [G *strabismos*, strabismus, + *tomē*, a cutting.] Division of one or more of the ocular muscles or their tendons for the correction of squint.

Strachan's disease (strawn) [William Henry Williams *Strachan*, English physician nineteenth century.] Pellagra.

strain (strān) [A.S. *strȳnd; streōnan*, to beget.] 1. A race or stock; said of bacteria or protozoa derived from a definite source and preserved in successive cultures or by successive animal inoculations. 2. An hereditary tendency.

strain (strān) [L. *stringere*, to bind.] 1. To make an effort to the limit of one's strength. 2. To injure by overuse or improper use. 3. To filter, to percolate. 4. An act of straining. 5. Injury resulting from strain or overuse.

strainer (strān'ur). A filter or percolator.

strait. In obstetrics (1) the upper opening, *superior strait*, or inlet; or (2) the lower opening, *inferior strait*, or outlet, of the pelvic canal.

strait'-jacket. A shirt with very long sleeves, used to restrain a violently insane person; the shirt is put on and securely laced, and then the patient's arms are folded and the ends of the sleeves are fastened behind the back sometimes simply a square of canvas buckling behind, binding the arms to the sides of the body.

stramo'nium (U.S., Br.). The dried leaves (and ripe seeds—Br.) of *Datura stramonium*, thorn-apple, Jamestown or Jimson weed, stink-weed, an herb abounding in temperate and subtropical countries. It contains an alkaloid, daturine, resembling hyoscyamine or atropine; it is antispasmodic in doses of gr. 1–3 (0.06–0.2) and anodyne locally applied.

strangalesthesia, strangalæsthesia (strang"gal-es-the'zĭ-ah) [G. *strangalē*, halter, + *aisthēsis*, sensation.] Girdle-sensation, zonesthesia.

strangle (strang-gl) [G. *strangaloō*, I choke.] To suffocate, to choke; to compress the trachea so as to prevent respiration.

strangles (strang'glz). An acute infectious disease in the horse, marked by catarrh of the anterior respiratory passages with enlargement and suppuration of the glands in the floor of the mouth; it is caused by *Streptococcus equi*,[0] and affects chiefly horses under the age of five years.

strang'ulated. Constricted so as to prevent the passage of air, noting the trachea; or so as to cut off the blood-supply, noting a hernia or any part encircled by a tight band.

strangula'tion. The act of strangulating or the condition of being strangulated, in any sense.

strangury (strang'gu-rĭ) [G. *stranx*(*strang-*), a drop, + *ouron*, urine.] Difficulty in micturition, the urine being passed drop by drop with pain and tenesmus.

strap [A.S. *stropp*.] 1. A strip of adhesive plaster. 2. To apply overlapping strips of adhesive plaster, covering an ulcer for example.

Strassburg's test (strahs'boorg) [Gustav Adolf *Strassburg*, German physiologist, *1848.] For bile in the urine: albumin, if present, is precipitated, then cane-sugar is added and filter paper is dipped in the fluid and dried; if bile pigments are present in the urine sulphuric acid will turn the filter paper a reddish violet color

stratifica'tion [G. *stratum*, layer, + *facere*, to make.] An arrangement in the form of layers or strata.

strat'ified. Arranged in the form of layers or strata.

strat'iform [L. *stratum*, cover, layer + *forma*, shape.] Arranged in the form of a layer or in strata; descriptive of the manner of liquefaction in a gelatin stab-culture; see cut under *culture*, C, 5.

stra'tum, gen. *stra'ti*, pl. *stra'ta* [L. a layer.] One of the layers of differentiated tissue, the aggregate of which forms any given structure, such as the retina or the skin.

s. al'bum profun'dum [BNA], a mass of white matter separating the corpora quadrigemina from the central gray stratum of the cerebral aqueduct.

s. bacilla're ret'inæ, the layer of rods and cones of the retina.

s. cine'reum, s. griseum centrale.

s. cine'reum collic'uli superio'ris, ashen (gray) layer of the superior colliculus, s. griseum colliculi superioris.

s. compac'tum, the superficial layer of decidual tissue in the pregnant uterus, in which the interglandular tissue preponderates.

s. cor'neum [BNA], horny layer, the outer layer of the epidermis, consisting of several layers of flat keratinized non-nucleated cells.

s. cylin'dricum, s. germinativum, the deepest layer of the epidermis.

s. denta'tum, dentate layer, so called because of the fibrils or intercellular bridges of the cells of this layer; s. mucosum, s. germinativum [BNA].

s. disjunc'tum, the layer of partly detached cells on the free surface of the s. corneum.

s. fibro'sum [BNA], the outer, fibrous, layer of the capsular ligament of a joint.

s. filamento'sum, filamentous layer, so called because of the presence of fibrils or filaments connecting the polygonal cells; s. mucosum, the polygonal cell, or prickle-cell, layer of the s. germinativum [BNA].

s. ganglionare, ganglionic layer, nerve-cell layer, the second layer, from within, of the retina, consisting of nerve-cells with large nuclei.

s. germinati'vum [BNA], germinative or Malpighian layer, s. mucosum, rete mucosum, the inner layer of the epidermis resting on the corium; it consists of several layers of polygonal cells and one, lowest, layer of columnar cells; some regard this latter as a separate layer to which they apply the name s germinativum or basilar layer, calling the other layers of this stratum s. mucosum.

s. germinati'vum un'guis [BNA], the layer on the concave surface of the nail which passes imperceptibly into the germinal layer of the epidermis.

s. granulo'sum [BNA], (1) granular layer, a layer of flattened cells containing granules of keratohyalin and eleidin, lying just above the s. mucosum of the epidermis; (2) the outer layer of cells surrounding the ovum in the Graafian follicle; (3) stratum nucleare retinæ.

s. gris'eum centra'le [BNA], central gray layer, Sylvian gray matter, a layer of gray substance surrounding the aquæductus cerebri and continuous with the gray matter of the third and fourth ventricles

s. gris'eum collic'uli superio'ris [BNA], a layer of gray matter beneath the stratum zonale and capping the stratum opticum of the colliculus superior (nates).

s. interme'dium, intermediate layer, the layer formed by the deeper cells of s. lucidum of the epidermis, considered by Ranvier to constitute a distinct layer.

s. interoliva're lemnis'ci [BNA], the decussating fibers of the fillet (lemniscus) longitudinally disposed between the olivary nuclei.

s. lacuno'sum, a cortical-cell layer in the hippocampus.

s. lemnis'ci, fillet layer, a layer of gray matter in the lower part of the colliculus superior (nates), transversed by fibers of the lemniscus.

s. lu'cidum, clear layer, the layer of the epidermis just beneath the s. corneum, it consists of two or three layers of flat clear cells with atrophied nuclei.

s. molecula're, molecular layer, (1) plexiform layer, one of two layers, inner and outer, of the retina, composed chiefly of interlacing dendrites from the cells of the adjoining nuclear layers, (2) the brain cortex.

s. muco'sum, mucous layer, rete mucosum, rete Malpighii, stratum germinativum [BNA]; by some this term applies to the layers of polygonal cells only, the lower layer of columnar cells being called the basilar layer or s. germinativum; it is this layer which contains the pigment of the skin.

s. nuclea're, nuclear layer, granular layer, one of two layers, inner and outer, of the retina, composed of nerve-cells of various kinds.

s. op'ticum, optic layer, (1) a layer of gray matter below the s. cinereum of the colliculus superior, traversed by numerous fibers from the cortex of the occipital lobe of the cerebrum; (2) the inner layer of the retina, consisting of (mostly centripetal) nerve-fibers.

s. papilla're, papillary or superficial layer of the corium, corpus* papillare [BNA].

s. pigmen'ti ret'inæ, the outer layer of the retina, consisting of pigmented epithelium.

s. plexifor'me, s. moleculare.

s. reticula're, reticular or deeper layer of the corium, tunica propria [BNA].

s. spino'sum, prickle-cell layer, spinous layer, so called because of the cellular fibrils or intercellular bridges of the cells of this layer; s. mucosum, s. germinativum [BNA].

s. spongio'sum, the middle layer of the decidua formed chiefly of dilated glandular stuctures.

s. subcuta'neum, the subcutaneous connective tissue.

s. synovia'le [BNA], the inner, lining, membrane of the capsular ligament of a joint.

s. zona'le [BNA], (1) a mass of white substance covering the upper surface of the thalamus and forming part of the floor of the central portion of the lateral ventricle; (2) a layer of white substance seen on the surface of a section of the lamina quadrigemina.

Straus's sign [Isidore *Straus*, Parisian physician 1845–1896.] In case of facial paralysis, if an injection of pilocarpine is followed by sweating on the affected side later than on the other, the prognosis is grave.

Strauss' test (strows). A test for lactic acid in the contents of the stomach, by means of a solution of ferric chloride and ether.

straw'berry-cream blood. The appearance of the blood in marked lipemia.

straw'berry-tongue. The white-coated tongue with large projecting red papillæ, seen in scarlatina.

straw-itch. An urticarioid dermatitis caused by a mite *Pediculoides ventricosus* occasionally infesting the straw of which mattresses are made.

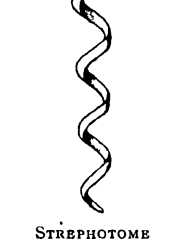
streak (strēk) [A.S. *strica.*] A line, stria, or stripe, especially one which is more or less indistinct or evanescent. **germ'inal s.,** the first trace of the blastoderm in the impregnated ovum, consisting of a longitudinal grouping of cells at one end of the germinal area. **meningit'ic s.,** *tache cérébrale*, a line of redness following the drawing of the nail or a pencil-point across the skin, marked especially in cases of meningitis and other acute affections of the nerve-centers. **prim'itive s.,** germinal s.

stremma (strem'ŭ) [G. a twist.] Sprain.

strength'ening-plaster. Emplastrum ferri.

strephosymbolia (stref-o-sim-bo'lĭ-ŭ) [G. *strephō-* I turn, + *symbolon*, a mark or sign.] The perception of objects reversed as if in a mirror.

streph'otome [G. *strephō*, I turn, + *tomē*, incision.] A corkscrew-shaped instrument, with flat ribbon-like spirals, formerly used in the radical cure of inguinal hernia; the instrument was introduced, encircling the canal, the walls of which were thus brought together, and was left *in situ* until obliterating adhesions had formed.



STREPHOTOME

strepticemia (strep-tĭ-se'mĭ-ŭ). Streptococcemia.

streptoangina (strep-to-an'ji-nah). Membranous sore-throat due to the presence of a streptococcus.

Streptobacillus (strep-to-bă-sil'us) [G. *streptos*, curved.] Any chain-bacillus, erroneously regarded as a species of a separate genus. **S. leb'enis,** *Lactobacillus caucasicus.*[0] **S. monilifor'mis,** a bacillus infesting the intestines of mice and other rodents and transmitted to man through food products contaminated by the excreta of the mice; the organism has been regarded as the pathogenic agent of acute erythema multiforme.

streptobacte'ria. Any bacterial forms arranged in chains or wreaths, including **Streptococcus** and *Streptothrix*.

streptococc'al. Streptococcic, relating to or caused by some species of streptococcus.

Streptococceae (strep-to-kok'se-e). A tribe of the family *Coccaceæ*, containing the genera *Diplococcus*, *Streptococcus*, and *Leuconostoc*.

streptococcemia, streptococcæmia (strep"to-kok-se'mĭ-ah). Streptococcus infection or sepsis, streptomycosis, the presence of streptococci in the blood.

streptococ'cic. Streptococcal.

streptococcicosis (strep-to-kok-sĭ-ko'sis). Any streptococcal infection.

streptococcolysin (strep"to-kok-ol'i-sin). An hemolysin excreted by a streptococcus.

Streptococcus (strep-to-kok'us) [G. *streptos*, curved, + *kokkos*, a berry.] A genus of the family *Coccaceæ*, consisting of spherical organisms occurring in pairs or longer or shorter wavy chains, seldom singly, division of the individuals taking place in one plane only. **Str. angino'sus,**[0] an aerobic, gram-positive, hemolytic chain-coccus, found quite commonly in cases of acute pharyngitis. **Str. anhæmolyt'icus,**[0] a non-pathogenic, aerobic, coccus found in the nose, throat, and vagina. **Str. bo'vis,**[0] a lactic-acid, aerobic, non-pathogenic coccus, occurring in cow manure and occasionally found in milk. **Str. cardioarthrit'idis,**[0] an aerobic, gram-positive, coccal-chain organism found at times in the throat secretions or in blood cultures in cases of acute articular rheumatism. **Str. epidem'icus,**[0] a small aerobic, gram-positive, encapsulated coccus, occurring in long chains; found in the throat in cases of epidemic sore-throat and sometimes found on the udders of cows. **Str. e'qui,**[0] an organism resembling *Str. pyogenes* morphologically but differing from it serologically; the cause of strangles in horses. **Str. erysipel'atis,**[0] Fehleisen's streptococcus, resembles *Str. pyogenes* and regarded by some as identical with it, but differs serologically; the cause of erysipelas. **Str. fæca'lis,**[0] enterococcus, a gram-positive, aerobic, apparently non-pathogenic coccus, found in the intestinal dejections in man. **Str. hæmolyt'icus,** *Str. mixtos.*[0] **Str. lac'tis,**[0] *Bact. lacticum, B. acidi lactici*, Guenther's streptococcus, *Str. lebenis* (?), the most common cause of the souring and coagulation of milk. Four varieties of this organism have been described. **Str. mastitidis,**[0] an organism resembling *Str. pyogenes* morphologically but differing serologically, the cause of mastitis in cows. **Str. mit'ior,**[0] an aerobic coccus found in the nasopharynx and in tooth abscesses, thought by some to be the same as *Str. viridaus* (*q.v.*). **Str. mix'tos,**[0] *Str. hemolyticus*, a pyogenic organism resembling morphologically and culturally *Str. pyogenes*[0] but differing serologically. **Str. morbil'li,**[0] a small, aerobic, gram-positive organism, occurring singly as well as in pairs or chains, found on the mucous membranes of the nose, throat, and eyes and in the blood in cases of measles and believed to be the cause of that disease. **Str. mu'ris rat'ti,** an organism found in certain cases of rat-bite fever and thought by some to be the cause of that disease. **Str. puerperal'is,**[0] an organism resembling *Str. pyogenes*, but differing from it serologically and culturally, occurring in puerperal septicemia. **Str. pyog'enes,**[0] a gram-positive, aerobic, hemolytic, coccal-chain organism, the type of hemolytic streptococci, the usual cause of acute pyogenic inflammations and septicemia in man and other vertebrates. **Str. saliva'rius,**[0] a gram-positive, aerobic coccus, occurring in pairs or short chains, found in the saliva and throughout the intestinal canal; it has been isolated in chronic forms of malignant endocarditis and not infrequently in terminal infections. **Str. saprophyt'icus,**[0] an aerobic organism found in acute nasal catarrh and occasionally also in the vagina. **Str. scarlati'næ,**[0] *Micrococcus scarlatinæ*, an organism resembling, both morphologically and culturally, *Str. pyogenes*, found often in the throat in cases of scarlet fever. **Str. sten'os,**[0] an organism closely resembling *Str. pyogenes*, but said to differ slightly in cultures; found in many inflammatory conditions. **Str. vir'idans,** a form which grows in green colonies, is not hemolytic, and produces neither gas nor pus; it is a frequent cause of neuritis, endocarditis, and non-suppurative arthritis, the focus of infection often being in the teeth or tonsils. **Str. wies'neri,** a species said to have a special tendency to invade the gray matter of the central nervous system, and suggested as a possible cause of encephalitis lethargica.

streptocol'ysin. Streptococcolysin

streptocyte (strep'to-sīt) [G. *streptos*, curved, + *kytos*, cell.] Streptococcus.

streptodermatitis (strep-to-dur-mă-ti'(te')tis). Inflammation of the skin caused by the presence of streptococci.

streptomyco'sis. Streptococcus infection or sepsis, streptococcemia.

streptoseptice'mia, streptosepticæ'mia. Streptomycosis, streptococcemia.

streptoserin (strep-to-se'rin). A polyvalent, antitoxic, and anti-infectious serum, recommended for the treatment of erysipelas and other streptococcal infections.

streptothricial (strep-to-thrish'al). Streptotrichal.

streptothrico'sis. 1. An infectious disease caused by one or more species of *Streptothrix;* it is marked by a chronic suppurative inflammation, the pus containing granules composed chiefly of colonies of the causal microorganism. 2. Actinomycosis.

Strep'tothrix [G. *streptos*, bent, + *thrix*, hair.] A genus of *Chlamydobacteriaceæ*, which includes the forms of unbranched threads in which division occurs in only one plane. **S. actinomy'ces,** *Actinomyces bovis.*[0] **S. cunic'uli,** *Actinomyces necrophorus.*[0] **S. farcin'ica,** *Actinomyces farcinicus.*[0] **S. leproid'es,** a microorganism obtained in cultures made from leprous nodules; the source of nastin.* **S. madu'ræ,** a species found in the lesions of fungous foot of India; probably not pathogenic. **S. mu'ris ratt'i,** an organism believed by Schlottmueller to be pathogenic of rat-bite fever.

streptotrichal (strep-tot'rik-al). Relating to, or caused by the presence of, some species of *Streptothrix*.

streptotrichiasis (strep-to-trik-i'a-sis). Streptothricosis.

stress [L. *stringere*, to draw together.] In dentistry the pressure of the upper teeth against the lower as the jaws are closed in mastication.

stretch'er [A.S *streccan*, to stretch.] A sheet of canvas stretched to a frame with four handles, used for transporting the sick or wounded; a litter.

stri'a, gen. and pl. *stri'æ* [L. channel, furrow.] A stripe, band, or line, distinguished by color, texture, depression, or elevation from the tissue in which it is found. **acous'tic s., au'ditory s.,** s medullaris (2). **brown s.,** s. of Retzius.* **den'tinal stri'æ,** Schreger's* lines. **s. acus'tica,** s. medullaris [BNA]. **s. atroph'ica,** an atrophic, glistening, white band or streak in the skin, occurring as the result of overstretching. **s. for'nicis,** s. of the fornix, s. medullaris [BNA]. **s. longitudina'lis latera'lis** [BNA], s. tecta, a longitudinal band of gray matter near each outer edge of the upper surface of the corpus callosum under cover of the gyrus cinguli. **s. longitudina'lis media'lis,** [BNA], a longitudinal band of gray matter running along the surface of the corpus callosum on either side of the median line. **s. malleola'ris,** [BNA], malleolar stripe, a bright line seen through the membrana tympani, produced by the attachment of the manubrium of the malleus. **s. medulla'ris** [BNA], medullary s., (1) s. fornicis, s. pinealis, a longtudinal strand of fibers along the walli of the third ventricle just below the tænia thalami; many of the fibers end in the nucleus, or ganglion, habenulæ, others cross to the opposite side on the dorsum of the habenula forming there the commissura habenularum; (2) acoustic s., aud itory s., one of the horizontal white stripes on the floor of the fourth ventricle passing from the mesial groove outward over the upper part of the restiform body; they divide the rhomboidal fossa into the fovea inferior and fovea superior on either side. **s. olfacto'ria** [BNA], olfactory stria, one of three white bands (*s. media'lis, s. interme'dia, s. latera'lis*) passing backward from the olfactory trigone; the medial stria curves upward behind the area of Broca and terminates in the callosal gyrus; the intermediate, imperfectly developed, passes into the anterior perforated substance; the lateral runs along the border of the anterior perforated substance and joins the limen insulæ. **s. pinea'lis,** pineal s., s. medullaris [BNA]. **s. paralle'la,** brown s., s. of Retzius.* **s. tec'ta,** s. longitudinalis lateralis. **s. termina'lis** [BNA], terminal stria, tænia semicircularis, a band of fibers running first in the roof of the inferior horn and then in the floor of the body of the lateral ventricle, passing from the amygdaloid nucleus to the anterior perforated substance. **s. vascula'ris** [BNA], vascular stripe, a portion of the upper part of the ligamentum spirale cochleæ containing numerous small blood-vessels. **s. ventric'uli ter'tii,** s. medullaris (1).

striatal (stri'a-tal). Relating to the corpus striatum.

stri'ate, stri'ated [L. *striatus,* furrowed.] Striped, marked by striæ. **s. body,** corpus striatum.

striation (stri-a'shun). 1. Stria, striæ. 2. A striate appearance. 3. The act of streaking or making striæ.

stria'tum [L neut. of *striatus,* furrowed.] Corpus striatum.

stric'ture [L. *strictura; strictus,* bound.] A circumscribed narrowing or stenosis of a tubular structure. **ann'ular s.,** a ring-like constriction encircling the wall of a canal. **bridle s.,** narrowing of a canal by a band of tissue stretching across part of its lumen. **contrac'tile s.,** recurrent s. **func'tional s.,** spasmodic s. **organ'ic s.,** one due to the presence of cicatricial or other new tissue, not spasmodic. **per'manent s.,** organic s. **recurr'ent s.,** a s. due to the presence of contractile tissue which may be dilated but soon returns. **spasmod'ic s.,** a s. due to localized spasm of muscular fibers in the wall of the canal. **tem'porary s.,** spasmodic s.

stricturotome (strik'tu-ro-tōm) [L. *strictura,* stricture, + G. *tomos,* a cutting.] A stricture-knife, an instrument for use in dividing a stricture.

stricturot'omy [L. *strictura,* stricture, + *tomē,* incision.] Surgical division of a stricture.

stri'dent [L. *stridens,* creaking.] Creaking grating, noting an auscultatory sound or râle.

stri'dor [L.] A high-pitched noisy respiration, like the blowing of the wind. **congen'ital s.,** crowing inspiration occurring at birth or within the first two or three weeks of life; infantile respiratory spasm. **laryn'geal s.,** habitual noisy respiration sometimes occurring without apparent cause in infants; congenital s. **s. den'tium,** grinding of the teeth. **s. serrat'icus,** a rough grating like the sound of a saw.

strid'ulous [L. *stridulus; stridere,* to creak, to hiss.] Having a shrill or creaking sound.

string-galvanom'eter. Electrocardiograph.

string-halt. Spring-halt.

striocellular (stri"o-sel'u-lar). Striocellularis, relating to or composed of striated muscular tissue.

striocellula'ris, neutr. *striocellula're* [L. *stria,* a furrow, + *cellula,* cell.] Noting striated muscular tissue.

striospinoneural (stri"o-spi"no-nu'ral). Relating to the corpus striatum, the spinal cord, and the nerves, noting a system of nerve fibers passing through the first two structures mentioned.

strip [A. S. *strypan,* to rob.] To express the contents from a flexible tube or canal, such as the urethra, by running the finger along it.

stripe. Stria, streak.

strobi'la [G. *strobilē,* a twist of lint.] A number of consecutive tapeworm segments.

strobile (strob'il). Strobila.

strob'iloid [G. *strobilē,* strobile, + *eidos,* resemblance.] Resembling a chain of segments of a tapeworm.

Strogan'off's meth'od [Vasilii Vasilovich *Stroganoff,* Russian obstetrician, contemporary.] Treatment of puerperal eclampsia by narcotics, shielding the patient from all external sources of irritation, and rapid delivery.

stroke [A.S. *strāc.*] 1. A blow; hence a sudden attack, as a sunstroke, a paralytic or apoplectic stroke. 2. A pulsation. 3. [A.S. *strācian.*] To pass the hand or any instrument gently over a surface. 4. A gliding movement over a surface, a stroking. **back s.,** the recoil of the ventricle of the heart during systole, basculation.

stroke'-culture. Smear-culture.*

stro'ma, pl. *stro'mata* [G. *strōma,* a mattress.] The framework, usually of connective tissue, of an organ, gland, or other structure; distinguished from the parenchyma, or specific substance, of the part. **s. plexus,** see *plexus.* **s. vit'reum** [BNA], s. corporis vitrei [NK], the delicate framework of the vitreous body.

stro'mal. Relating to the stroma of an organ or other structure.

stromat'ic. Stromal.

stromatolysis (stro-mă-tol'i-sis) [*strōma* + G. *lysis,* solution.] Solution of the enveloping membrane of a bacterial or other cell, the cell body not being affected.

Stro'meyer-Little opera'tion [G. F. L. *Stromeyer;* W. J. *Little.*] An operation for abscess of the liver, the pus being found by a cannula and the abscess being then opened by the knife running along the cannula as a guide

Stro'meyer's splint [Georg Friedrich Louis *Stromeyer*, German surgeon, 1804–1876.] A hinged splint for the knee, admitting of being set at any angle.

Strong's bacillus. A dysentery bacillus belonging to the group, *Shigella paradysenteriæ.*[0]

Strongyloides intestina'lis (stron-jĭ-loy'dēz) [*Strongylus* + G. *eidos*, resemblance.] *Anguillula intestinalis* et *stercoralis, Rhabdonema intestinale, R. strongyloides;* an intestinal parasitic worm having a parasitic and a free-living generation; it has been found in sufferers from diarrhea acquired in Cochin China, but its pathogenic relation to the disease is doubtful; called also *S. stercora'lis.*

strongyloplasm (stron'jĭ-lo-plazm) [G. *strongylos*, round, + *plasma*, image, figure.] A filtrable virus.

strongylosis (stron-jĭ-lo'sis). Infestation with a species of *Strongylus.*

strongylus (stron'jĭ-lus) [G. *strongylos*, round.] A genus of *Nematoda.* **S. a'pri** [L. *aper*, wild boar], a round worm parasitic in the bronchial tubes of the pig and wild boar, and occasionally found in man. **S. duodena'lis,** *Uncinaria duodenalis.* **S. elonga'tus,** *S. apri.* **S. equi'nus,** a nematode worm, parasitic in the intestine of the horse. **S. gi'gas,** *Eustrongylus gigas.* **S. longevagina'tus,** *S. apri.* **S. paradox'us,** *S. apri.* **S. quadridenta'tus,** *Uncinaria duodenalis.* **S. rena'lis,** *Eustrongylus gigas.* **S. sub'tilis,** a species found in the small intestine in native Egyptians, and also in the intestine of the camel. **S. su'is,** *S. apri.*

strontia (stron'shĭ-ah). Strontium oxide, SrO.

strontium (stron'shyum) [*Strontian*, a town in Scotland.] A metallic element, symbol Sr, atomic weight 86.62, of dark yellow color; some of its salts are used in medicine. **stron'tii bro'midum,** strontium bromide, $SrBr_2 + 6H_2O$; colorless translucent crystals, of saline bitterish taste, soluble in water; employed to meet the same indications as the other bromides in doses of ʒ1–3 (4.0–12.0). **s. caf'feine-sul'phonate,** symphoral Sr. **stron'tii carbo'nas,** strontium carbonate, a white tasteless powder, insoluble in water. **stron'tii io'didum,** strontium iodide, $SrI_2 + 6H_2O$, occurs in colorless plates or a white granular powder, of saline bitter taste, soluble in water; used for the same purposes as the other iodides in doses of gr. 5–60 (0.3–4.0). **stron'tii lac'tas,** strontium lactate, a white granular or crystalline powder, of saline bitterish taste, soluble in 4 parts of water; has been employed in albuminuria in doses of gr. 20–60 (1.3–4.0). **stron'tii perox'idum,** strontium peroxide, a fine white odorless and tasteless powder, insoluble in water, but decomposed in it to hydrogen peroxide; employed externally as a dusting powder and in the form of an ointment. **stron'tii salicy'las** (U.S.), strontium salicylate, a white crystalline powder of saline, sweetish taste, soluble in 18 parts of water; employed for the same purposes as sodium salicylate in doses of gr. 5–30 (0.3–2.0).

strophanthi'num (U.S., Br.). Strophanthin, a glucoside or mixture of glucosides from strophanthus; a whitish or yellowish powder, soluble in water, extremely poisonous; cardiac tonic, like strophanthus, in doses of gr. $\frac{1}{100}$–$\frac{1}{100}$ (0.0002–0.0003). **crys'tallized s.,** ouabain obtained from *Strophanthus gratus;* dose the same as that of the official s.

strophanthone (stro-fan'thōn). Trade name of a liquid preparation of the active principles of strophanthus, employed in doses of ♏15 (1.0).

strophanthus (stro-fan'thus) [G. *strophos*, a cord, + *anthos*, flower.] (U.S., Br.). Strophanthi semina, the dried ripe seeds of *Strophanthus kombé*, or *S. hispidus*, a vine of East Africa, used by the natives as an arrow poison; a cardiac tonic and vasoconstrictor resembling digitalis; dose gr. ½–1 (0.03–0.06).

strophoceph'alus [G. *strophē*, a spiral, + *kephalē*, head.] A monster with a distorted head and face.

strophulus (strof'u-lus) [L. dim. of *strophus*, colic.] Red gum, gum rash, lichen infantum; miliaria* rubra, sometimes associated with intestinal disturbances, occurring in infants. **s. al'bidus** [L. whitish], milium. **s. can'didus** [L. dazzling white], a form in which the papules are colorless and shining. **s. intertinc'tus, s. prurigino'sus,** a form marked by much itching. **s. volat'icus,** wildfire rash,* a fugitive miliary eruption, coming and going without apparent cause and without marked general symptoms.

struc'tural. Relating to the structure of a part; having a structure.

struc'ture [L. *structura; struere*, to build] 1. The arrangement of the details of a part; the manner of formation of a part. 2. A tissue or formation made up of different but related parts.

Struempell's disease' (strŭm'pel) [Adolf von *Struempell*, German physician, 1853–1925.] 1. Spondylitis deformans. 2. Acute poliencephalitis in children. **S.'s phenom'enon,** dorsal flexion of the great toe, sometimes of the entire foot, in a paralyzed limb when the extremity is drawn up against the body, flexing both knee and hip. **S.'s reflex,** stroking the abdomen or thigh causes flexion of the leg and adduction of the foot. **S.'s type,** (1) familial type of lateral spinal sclerosis. (2) acute hemorrhagic encephalitis.

Struempell-Marie disease' (strum'pel-mă-re') [Adolf v. *Struempell;* Pierre *Marie*.] Rhizomelic spondylosis.*

stru'ma [L. *struere*, to build] 1. Scrofula. 2. Goiter, bronchocele. **adre'nal s.,** hyperplasia of the suprarenal bodies. **s. aberra'ta,** a goitrous tumor of an accessory thyroid gland. **s. aneurysmat'ica,** vascular goiter with dilated vessels. **s. colloid'es,** colloid goiter, enlargement of the thyroid gland with an increase in colloid due to degeneration of the glandular epithelium. **s. colloid'es cys'tica,** colloid goiter in which the increased colloid occurs in the form of cystic collections. **s. cys'tica oss'ea;** cystic goiter with calcification in the hyaline connective tissue. **s. endothorac'ica,** enlargement of a deeply lying thyroid or of an accessory thyroid in the anterior mediastinum. **s. fibro'sa,** enlargement of the thyroid due to hyperplasia of the interstitial connective tissue. **s. follicula'ris,** colloid parenchymatous goiter. **s. gelatino'sa,** s. colloides. **s. lipomato'des aberra'ta re'nis,** hypernephroma. **s. lymphat'ica,** status lymphaticus. **s. malig'na,** cancer of the thyroid gland. **s. moll'is,** soft or colloid goiter. **s. parenchymato'sa,** enlargement of the thyroid due to hyperplasia of the parenchyma. **s. petro'sa,** hard or fibrous goiter. **s. pul'sans,** s. aneurysmatica. **s. suprarena'lis,** fatty tumor of the suprarenal body. **s. thy'mica,** enlargement of the thymus, or persistence of this gland after the period at which it usually undergoes atrophy. **s. thymicolymphat'ica,** thymic struma associated with status lymphaticus. **s. vasculo'sa,** vascular goiter.

strumectomy (stru-mek'to-mĭ) [L. *struma* + G. *ektomē*, excision.] 1. Excision of a scrofulous gland. 2. Surgical removal of all or a portion of a goitrous tumor. **me'dian s.**, isthmectomy, removal of a median goiter or an enlarged isthmus of the thyroid gland.

strumiform (stru'mĭ-form) [L. *struma* + *forma*, form.] 1. Resembling scrofula. 2. Resembling a goiter.

strumiprivic (stru-mĭ-priv'ik). Strumiprivus.

strumiprivous (stru-mip'rĭ-vus). Strumiprivus.

strumiprivus, fem. *strumipriva* (stru-mĭ-pre'vus) [L. *struma* + *privus; privare*, to deprive of.] Strumiprivic, strumiprivous, relating to the removal of a goiter; noting a constitutional state, cachexia* strumipriva

strumitis (stru-mi'(me')tus) [L. *struma*, goiter, + G. *-itis*.] Inflammation of a goitrous tumor; inflammation, with swelling, of the thyroid gland.

strumoderma (stru-mo-dur'mah). Scrofuloderma.

stru'mous. 1. Scrofulous. 2. Goitrous.

Stru've's test [Heinrich *Struve*, German physician in St. Petersburg, 19th century.] The suspected fluid is treated with ammonia or caustic potassa and then with tannin, and finally with acetic acid until the reaction is distinctly acid; if blood is present a dark precipitate of tannate of hematin is formed; this precipitate treated with glacial acetic acid and ammonium chloride gives the characteristic hemin crystals.

strychnina (strik-ne'nah). (N.F., Br.) An alkaloid from nux vomica, $C_{21}H_{22}N_2O_2$; occurs as colorless crystals or a white crystalline powder, odorless, but of intensely bitter taste, nearly insoluble in water; cardiac and general tonic, stomachic, and nervine in doses of gr. $\frac{1}{60}$–$\frac{1}{20}$ (0.001–0.003). **strychni'næ glycerophos'phas,** strychnine glycerophosphate or glycerinophosphate, a white fine or crystalline powder; dose, gr. $\frac{1}{10}$ (0.0015). **strychni'næ hydrochlo'ridum** (Br.), strychnine hydrochloride, occurs in colorless prismatic crystals, soluble in 35 parts of water; dose gr. $\frac{1}{60}$–$\frac{1}{20}$ (0.001–0.003). **strychni'næ ni'tras** (U.S.), strychnine nitrate, colorless shining crystals, soluble in 42 parts of water; dose, gr. $\frac{1}{60}$–$\frac{1}{20}$ (0.001–0.003). **strychni'næ sul'phas** (U.S.), strychnine sulphate, a white crystalline powder, of intensely bitter taste, soluble in 31 parts of water; dose, gr. $\frac{1}{60}$–$\frac{1}{20}$ (0.001–0.003). **strychni'næ val'eras,** strychnine valerate, a white-crystalline powder; dose, gr. $\frac{1}{10}$ (0.0015).

strychnine (strik'nēn). Strychnina. **saccharinated s.** (sak'ar-in-a-ted), a mixture of strychnine and saccharin, the saccharin disguising somewhat the bitterness of the strychnine; dose slightly larger than that of pure strychnine. **s. ar'senite,** a white crystalline powder, used in malaria and skin diseases in doses of gr. $\frac{1}{60}$–$\frac{1}{25}$ (0.001–0.003). **s. cit'rate,** a constituent of the official ferri* et strychninæ citras

strychninism (strik'nēn-izm). Chronic strychnine poisoning.

strychninize (strik'nēn-īz). To bring under the influence of strychnine.

strychninomania (strik"ne-no-ma'nĭ-ah). Addiction to the use of strychnine.

strychni'num. Strychnina.

strychnism (strik'nizm). Strychninism.

strychnize (strik'nīz). Strychninize.

Strychnos (strik'nos) [G. nightshade.] A genus of tropical shrubs or trees of the order *Loganiaceæ*. **S. igna'tia,** the source of ignatia.* **S. nux-vom'ica,** the source of nux* vomica.

stuck-finger. Trigger-finger.

Stuetz's test (stŭts). Fuerbringer's test.

stump. The extremity of a limb left after amputation; the pedicle remaining after removal of the tumor which was attached to it. **s. hallucina'tion,** the sensation as of the continual presence of a limb or a portion of a limb after its amputation.

stump-foot. Club-foot.

stump-root. Finger-and-toe disease.

stun [A S. *stunian*, to make a loud noise.] To stupefy; to render unconscious by cerebral concussion.

stupe [L. *stupa*, oakum, tow.] A compress or cloth wrung out of hot water, usually impregnated with turpentine or other irritant, applied to the surface to produce counterirritation.

stupefa'cient, stupefac'tive [L. *stupor* + *facere*, to make.] Causing stupor, narcotic.

stupema'nia [L. *stupor* + G. *mania*, frenzy.] Insanity with stuporous symptoms.

stu'por [L.] Lethargy, torpor, unconsciousness.

stu'porous. Relating to or marked by stupor.

stur'dy. Staggers in sheep, gid.

stu'rin [L. *sturio*, sturgeon.] A protamine in the sperm of the sturgeon.

Sturm's in'terval (stoorm) [Johann Christoph *Sturm*, 1635–1703.] The distance between the anterior and posterior foci or focal points in the eye.

stutter (stut'ur) [frequentative of *stut*, from Goth. *stautan*, to strike.] To enunciate certain words with difficulty and with frequent halting and repetition of the initial consonant of a word or syllable; the cause is a spasm of the lingual and palatal muscles.

stuttering (stut'ur-ing). A spasmodic speech disorder in which certain words are enunciated with difficulty through inability, as it were, to pass the initial consonant; distinguished from the hesitating form of *stammering* which is not due to spasm but to faulty innervation or to psychic causes. **u'rinary s.,** stammering of the bladder, frequent involuntary interruptions occurring during the act of urination.

sty, stye, pl. *sties, styes* (sti). Hordeolum, inflammation of one of the sebaceous glands of the eyelid. **Meibo'mian s.,** inflammation of a Meibomian* gland. **Zeiss'ian s.,** inflammation of one of Zeiss's* glands.

style, stylet, stylette (stīl, sti'let, sti-let') [It. *stiletto*, a dagger; dim. of L. *stilus* or *stylus*, a stake, a pen.] 1. A wire contained in the lumen of a flexible catheter used to stiffen it and give it form during its passage; mandril, mandrin. 2. A slender probe. 3. In botany, the prolongation of a pistil supporting the stigma. **ba'sal** or **bas'ilar s.,** one which apparently arises from the base of a simple ovary.

styliform (sti'lĭ-form) [L. *stilus* (*stylus*), a stake, + *forma*, form.] Peg-shaped, styloid.

stylo-. In composition, relating to a styloid process, specifically to the styloid process of the temporal bone.

styloauricularis (sti"lo-aw-rik-u-la'ris). See under *musculus*.

styloglos'sus [G. *glōssa*, tongue.] Relating to the styloid process and the tongue; see under *musculus*.

stylohyal (sti-lo-hi'al). Relating to the styloid process of the temporal bone and to the hyoid bone.

stylohyoid (sti-lo-hi'oyd). Stylohyal; relating to the musculus stylohyoideus.

stylohyoideus (sti-lo-hi-o-id'e-us). See under *musculus*.

styloid (sti'loyd) [G. *stylos*, a peg, a post, + *eidos*, resemblance.] Peg-shaped, styliform; noting one of several slender bony processes, see under *processus*. **s. cor'nua**, the lesser cornua of the hyoid bone.

sty"lolaryngeus. See under *musculus*.

stylomandib'ular. Relating to the styloid process of the temporal bone and the mandible, noting the ligamentum stylomandibulare, a flat ligamentous band of the cervical fascia extending from the styloid process to the inner side of the angle of the jaw.

stylomas'toid. Relating to the styloid and the mastoid processes of the temporal bone; noting especially a small artery and a foramen.

stylomax'illary. Stylomandibular.

stylomy'loid. Stylomandibular.

stylopharynge'us. See under *musculus*

styloph'orum [G. *stylos*, a style, + *phoros*, a bearer] Yellow poppy, the plant *Stylophorum diphyllum*, resembling chelidonium in its action.

stylostaphyline (sti-lo-staf'ĭ-līn). Relating to the styloid process of the temporal bone and the uvula or velum pendulum palati.

stylosteophyte (sti-los'te-o-fīt) [G. *stylos*, post, + *osteon*, bone, + *phyton*, growth.] A peg-shaped bony outgrowth.

stylostix'is [G. *stylos*, pen, style, + *stixis*, a pricking.] Acupuncture.

sty'lus [G. *stylos;* L. *stilus*(*stylus*).] A style, a stilet; stilus.*

stymato'sis [G. *styma*, priapism.] Painful priapism

stype [G. *stypē*, tow.] A tampon.

styp'sis [G.] 1. Astringency. 2. The application of a styptic.

stypsticks (stip'stiks). Wooden sticks of various lengths tipped with a mixture of alum, 75 %, and potassium nitrate, 25 %, employed for the arrest of external bleeding.

styp'tic [G. *styptikos*.] 1. Astringent, hemostatic, 2. An astringent hemostatic agent.

styp'ticin. Cotarnine hydrochloride.

styp'tol. Cotarnine phthalate.

sty'racin. Cinnamyl cinnamate, $C_9H_9C_9H_7O_2$, a crystalline constituent of styrax

sty'racol. Guaiacol cinnamate.

sty'rax [G.] (U.S., Br.) Storax, styrax liquidus, liquid storax, a liquid balsam obtained from the wood and inner bark of *Liquidamber orientalis*, a tree of Asia Minor; has been employed in the treatment of chronic inflammation of the mucous membranes in doses of gr. 10–20 (0.6–1.3), and externally for scabies.

sty'rol. Styrene, cinnamene, phenylethylene, C_8H_8, a colorless liquid of pleasant odor, contained in styrax.

sty'rone. Cinnamyl alcohol, $C_9H_{10}O$, obtained from styrax by distillation with caustic potassa; employed as a deodorant in 12 per cent. glycerin solution, and as a decolorizing agent in histology.

sub- [L. *sub*, under.] A prefix to words formed from Latin roots, noting beneath, less than the normal or typical, inferior; it corresponds to the Greek prefix *hypo-*.

subabdom'inal. Below the abdomen.

subabdominoperitoneal (sub-ab-dom"ĭ-no-per-ĭ-to-ne'al). Beneath the abdominal, as distinguished from the pelvic, peritoneum.

subacetate (sub-as'e-tāt). An acetate containing one or more atoms of the base still capable of combining with the acid to form higher salts, a basic acetate.

subacid (sub-as'id). Slightly acid, acidulous.

subacid'ity. Slight acidity, the condition of being subacid.

subacro'mial. Beneath the acromion process.

subacute (sub-ă-kūt'). Not frankly acute, yet not chronic, noting the course of a disease.

subalimentation (sub-al-i-men-ta'shun) [L. *sub*, under, + *alimentation*.] A condition of insufficient nourishment.

subanal (sub-a'nal). Below the anus.

subancone'us [L. *sub*, beneath, + G. *ankōn*, elbow.] Below the elbow; see under *musculus*.

subap'ical. Below the apex of any part.

subaponeurot'ic. Beneath an aponeurosis

subarachnoid (sub-ă-rak'noyd). Beneath the arachnoid membrane.

subar'cuate. Slightly arcuate or bowed

subareolar (sub-a-re'o-lar). Beneath an areola, especially the areola of the mamma.

subastrag'alar. Beneath the astragalus

subastrin'gent. Slightly astringent.

subaural (sub-aw'ral) [L. *auris*, ear] Below the ear; subauricular.

subauricular (sub-aw-rik'u-lar). Below an auricle, especially the concha or pinna of the ear.

subax'ial. Below the axis of the body or any part.

subax'illary. Beneath the axilla.

subba'sal. Beneath any base or basal membrane.

subbrachial (sub-bra'kĭ-al). Relating to the inferior quadrigeminal brachium or postbrachium

subbrachycephalic (sub-brak-ĭ-sĕ-fal'ik). Slightly brachycephalic, having a cephalic index of 80.01 to 83.33.

subcal'carine. Below the calcarine fissure, noting a cerebral convolution, or gyrus.

subcallo'sal. Below the corpus callosum, noting a cerebral convolution, or gyrus.

subcap'sular. Beneath any capsule, as the internal or external capsule of the brain, or a capsular ligament.

subcar'bonate. A carbonate having one or more unsatisfied bases, a basic carbonate.

subcartilaginous (sub-kar-tĭ-laj'ĭn-us). 1. Partly cartilaginous. 2. Beneath a cartilage.

subce'cal. Below the cecum, noting a fossa.

subchloride (sub-klo'rīd). The chloride of a series which contains proportionally the greatest amount of the other element in the compound; subchloride of mercury is Hg_2Cl_2; chloride or perchloride of mercury is $HgCl_2$.

subchondral (sub-kon'dral) [G. *chondros*, cartilage.] Subcartilaginous; beneath or below the cartilages of the ribs.

subchordal (sub-kor'dal). Below the notochord.

subchorioidal (sub-ko-rĭ-oy'dal). Subchoroidal.

subchorionic (sub-ko-rĭ-on'ik). Beneath the chorion.

subchoroid'al (sub-ko-roy'dal). Beneath the choroid (chorioid) coat of the eye.

subchronic (sub-kron'ic) Almost, but not frankly chronic, rather slower than subacute; noting the course of a disease.

subclass' [L. *sub*, under, + *classis*, a division.] In biological classification, an occasional division between the *class* and the *order*.

subcla'vian. Beneath the clavicle

subclavic'ular. Subclavian.

subcollat'eral. Below the collateral fissure, noting a cerebral convolution, or gyrus.

subcla'vius. See under *musculus*.

subconjunc'tival. Beneath the conjunctiva.

subconscious (sub-kon'shus). 1. Not wholly conscious. 2. Noting an idea or impression which is present in the mind, but of which there is at the time no conscious knowledge or realization.

subconsciousness (sub-kon'shus-nes). 1. Partial unconsciousness. 2. The state in which mental

processes take place without the conscious perception of the individual.

subcontinuous (sub-kon-tin'u-us). Almost continuous, having only slight breaks in continuity.

subcor'acoid. Beneath the coracoid process.

subcor'tex. The white matter of the brain immediately underlying the cortex.

subcor'tical. 1. Relating to the subcortex; beneath the cerebral cortex. 2. In botany, beneath the bark.

subcos'tal [L. *costa*, rib.] Beneath the ribs, noting a number of arteries and grooves.

subcra'nial. Beneath or below the cranium.

subcrep'itant. Nearly, but not frankly crepitant, noting a râle.*

subcrepita'tion. 1. The presence of subcrepitant râles.* 2. A sound approaching crepitation in character.

subcruræ'us, subcrure'us [L. *sub*, below, + *crus* (*crur-*), leg.] See under *musculus*.

subcrura'lis. Subcruræus.

subculoyd (sub-ku'loyd) [L. *sub*, beneath, + *cutis*, skin.] Trade name of a preparation of an eclectic remedy suitable for hypodermic administration.

subcul'ture. 1. A culture made by transferring to a fresh medium microorganisms from a previous culture; a method used to prolong the life of a particular strain where there is a tendency to degeneration in older cultures. 2. To make a fresh culture with material obtained from a previous one.

subcu'neus. Below the cuneus, noting a gyre on the mesial surface of the occipital lobe of the brain.

subcuta'neous [L. *sub*, beneath, + *cutis*, skin.] Beneath the skin; hypodermic.

subcuta'neus coll'i [L. beneath the skin of the neck.] See *musculus platysma*.

subcutic'ular. Beneath the cuticle or epidermis, subepidermic.

subcu'tin. Paraphenolsulphonic-acid ethyl ester of paraminobenzoic acid, a white crystalline powder soluble in 100 parts of water but more readily in physiological salt solution; local anesthetic in 12.5 per cent. solution in saline solution.

subcu'tis. 1. The corium or true skin. 2. The subcutaneous connective tissue.

subdelir'ium. Slight or not continuous delirium.

subdel'toid. Beneath the deltoid muscle, noting a bursa.

subden'tal. Beneath the roots of the teeth.

subder'mic [L. *sub*, under, + G. *derma*, skin.] Subcutaneous, hypodermic.

subdiaphragmat'ic. Beneath the diaphragm.

subdor'sal. Below the dorsal region.

subduce', subduct' [L. *sub*, below, + *ducere*, to lead] To pull or draw downward.

subdu'ral. Beneath the dura mater, between it and the arachnoid.

subenceph'alon [L. *sub*, under, + G. *enkephalos*, brain.] Hypencephalon

subendocar'dial. † Beneath the endocardium.

subendothe'lial. Beneath endothelium.

subendothe'lium. Subepithelium (2).

suben'dymal. Subependymal.

subepider'mal, subepider'mic. Beneath the epidermis, subcuticular.

subepithe'lial. Beneath the epithelium.

subepithe'lium. 1. Any structure beneath the epithelium. 2. A fine layer between the epithelium and the basement membrane of the mucous membrane of the intestine and bronchi; Debove's membrane.

su'berin [L. *suber*, cork.] The modified cellulose in cork.

subes'ton. Aluminum subacetate, used as a dusting powder in hyperidrosis, decubitus, herpes, etc.

subfam'ily. In biological classification, an occasional division between the *family* and the *tribe*, often the same as *tribe*.

subfascial (sub-fash'yal). Beneath a fascia.

subfe'brile. Slightly feverish.

subfissure (sub-fish'ūr). A cerebral fissure beneath the surface, concealed by overlapping convolutions.

subfla'vous [L. *sub*, under, + *flavus*, yellow.] Slightly yellow, yellowish; noting the *ligamenta subflava*, connecting the laminæ of the vertebræ.

subfo'lium. One of the secondary divisions of the folium vermis.

subfron'tal. Below or beneath a frontal convolution or lobe of the brain.

subgall'ate. A salt of gallic acid having one or more atoms of the base unsatisfied, a basic gallate.

subgemm'al. Below a gemma or bud.

subge'nus. A subdivision of a genus, not recognized as a distinct genus, yet regarded as higher than a species.

subgerminal (sub-jur'mĭ-nal). Beneath the germinal streak of an impregnated ovum, noting the yolk cavity.

subgle'noid. Below the glenoid fossa or glenoid cavity, infraglenoid.

subgloss'al [L. *sub*, beneath, + G. *glōssa*, tongue.] Sublingual, hypoglossal.

subglossitis (sub-glos-si'(se')tis) [L. *sub*, under, + G. *glōssa*, tongue, + *-itis*.] Inflammation of the tissues beneath the tongue, or of the under surface of the tongue.

subglott'ic. Below the glottis, an opening between the vocal cords.

subgran'ular. Slightly granular.

subgrunda'tion [L. *sub*, under, + A.S. *grund*, bottom, foundation.] The depression of one fragment of a broken cranial bone below the other.

subgyre, subgyrus (sub-jīr', sub-ji'rus) [L. *sub*, under, + *gyrus*, a circle] A cerebral convolution which lies beneath the surface concealed by other superficial convolutions.

subhepat'ic [L. *sub*, under, + G. *hēpar*(*hēpat-*), liver.] Beneath the liver.

subhu'meral. Below the humerus.

subhyaloid (sub-hi'al-oyd). Beneath, on the vitreous side of, the hyaloid membrane.

subhy'oid, subhyoid'ean. 1. Below the hyoid bone. 2. After the hyoid arch in the embryo.

subicteric (sub-ik'ter-ik). Slightly jaundiced.

subicular (su-bik'u-lar). Relating to the subiculum, noting the cortical area in the neighborhood of the uncinate gyre.

subiculum (su-bik'u-lum) [L. *subex*(*subic-*), a layer.] The uncinate gyre, uncus gyri hippocampi [BNA]. **s. promonto'rii,** support of the promontory; a bony ridge bounding the fenestra vestibuli posteriorly.

subiliac (sub-il'ĭ-ak). 1. Below the ilium. 2. Relating to the subilium.

subilium (sub-il'ĭ-um). The lower portion of the ilium.

subinfec'tion. 1. A secondary infection occurring in one exposed to and successfully resisting an epidemic of another infectious disease. 2. Poisoning of the organism by toxins liberated from collections of bacteria undergoing lysis.

subinflamma'tion. A very mild degree of inflammation, irritation.

subinflam'matory. Very slightly inflammatory, showing irritation of the tissues.

subin'timal. Beneath the intima.

subintrance (sub-in'trans). Anticipation of the malarial paroxysm.

subin'trant [L. *subintrare*, to steal into.] Noting a malarial paroxysm which anticipates, or returns before its proper time, to such an extent that its first symptoms are manifested before the previous paroxysm has entirely disappeared.

subinvolu'tion. An arrest in the normal involution of the uterus following childbirth, the organ remaining abnormally large.

subiodide (sub-i'o-dīd). That one of a series of iodine compounds containing the least iodine.

subja'cent [L. *subjacere*, to lie under.] Below or beneath another part.

sub'ject [L. *subjectus*, lying beneath.] 1. A person under medical or surgical treatment. 2. An animal upon which an experiment is being made. 3. A body for dissection.

subjec'tive. Perceived by the individual only and not evident to the examiner, noting certain symptoms, such as pain.

subjec'toscope [L. *subjectus*, subject, + *skopeō*, I examine.] An instrument for examination of subjective vision.

subju'gal. Below the jugal bone, or os zygomaticum.

subking'dom. A large or primary division of a kingdom, either animal or vegetable; it is not a definite division, some naturalists recognizing more, some fewer, subkingdoms.

sub'lamine. Ethylenediamine mercuric sulphate, a white crystalline powder containing about 40 per cent. of mercury; employed instead of corrosive sublimate in 1–500 or 1–1000 solution.

sublatio (sub-la'shĭ-o) [L. *sublatus*, raised up, taken away.] Sublation. **s. ret'inæ,** detachment of the retina.

sublation (sub-la'shun) [L. *sublatio.*] Detachment, elevation, or removal of a part.

subleucemia (sub-lu-se'mĭ-ah) [L. *sub*, under.] Hypoleucemia (2).

sublimate (sub-li-māt) [L. *sublimare*, to raise on high.] 1. To bring a solid substance into a state of vapor and then to cause its condensation, in order to free it from non-vaporizable impurities. 2. Any substance which has been submitted to sublimation. 3. Corrosive sublimate, hydrargyri chloridum corrosivum.

sublima'tion. 1. The process of vaporizing a solid substance by heat and then condensing it, a process of purification by separating the non-vaporizable impurities; a process analogous to the distillation of liquids. 2. Freud's term for the diversion of certain components of the sexual instinct to a higher and non-sexual aim.

sublime (sub-līm'). 1. To sublimate. 2. To undergo a process of sublimation.

sublim'inal [L. *sub*, under, + *limen*(*limin*-), threshold.] Below the limit of sensory perception; below the limit or threshold of consciousness, subconscious. **s. self,** subconscious mind, the sum of the mental processes which take place without the conscious knowledge of the individual.

subli'mis [L.] At the top; on the surface; superficial.

sub"limophe'nol. Said to be phenolated mercuric chloride or a mixture of mercury phenolate and calomel, employed as an antiseptic in surgery.

sublingual (sub-ling'gwal) [L. *sub*, under, + *lingua*, tongue.] Beneath the tongue.

sublingua'lis. See under *arteria*, *fovea*, and *glandula*.

sublinguitis (sub-ling-gwi'(gwe')tis). Inflammation of the sublingual salivary gland.

sublob'ular. Beneath a lobule, as of the liver.

sublum'bar. Below the lumbar region.

subluxa'tion. An incomplete luxation or dislocation.

sublymphemia (sub-lim-fe'mĭ-ah) [L. *sub*, under, + *lymph* (*cells*) + G. *haima*, blood.] A blood state in which there is a great increase in the proportion of lymphocytes although the total number of white cells is normal.

submamm'ary. Below or beneath the mammary gland.

submar'ginal. Near the margin of any part.

submarine (sub-ma-rēn'). In dentistry noting a field of operation or other part beneath a lake of saliva.

submaxill'a. The mandible, or lower jaw.

submaxillaritis (sub-maks"ĭl-ar-ī'(e')tis). Mumps affecting the submaxillary salivary gland.

submax'illary. 1. Mandibular. 2. Beneath the lower jaw, noting a salivary gland and its duct, lymph glands, an artery and vein, a nerve, a fossa (fovea*), and a triangle of the neck.

submaxillitis (sub-maks-ĭl-ī'(e')tis). Submaxillaritis.

subme'dial, subme'dian. Almost, but not exactly in the middle.

submem'branous. Partly or nearly membranous.

submen'tal [L. *sub*, under, + *mentum*, chin.] Beneath the chin.

submicron, submicrone (sub-mi'kron, sub-mi'krōn) [L. *sub*, under, + *microne.*] Hypomicrone, ultramicrone, a colloid particle, smaller than 0.1 μ and larger than 1 $\mu\mu$, recognizable in the ultramicroscope; distinguished from *microne* and *amicrone*.

submicroscopic (sub-mi-kro-skop'ik). Too minute to be visible under the most powerful microscope.

submorphous (sub-mor'phus). Neither frankly amorphous nor frankly crystalline, noting the structure of certain calculi.

submuco'sa. A layer of tissue beneath a mucous membrane.

submu'cous. Beneath a mucous membrane.

subnarcot'ic. Slightly narcotic.

subna'sal [L. *sub*, under, + *nasus*, nose.] Under the nose. **s. point,** a craniometric point at the root of the nasal spine.

subneu'ral [L. *sub*, under, + *neuron*, nerve.] Below the neural axis.

subni'trate. A basic nitrate, a salt of nitric acid having one or more atoms of the base still capable of combining with the acid.

subnor'mal. Below the normal.

subnormal'ity. The state of being below what is normal.

subnotochordal (sub-no-to-kor'dal). Below the notochord.

subnu'cleus. A secondary nucleus.

subnutri'tion. A mild degree of innutrition.

suboccip'ital. Below the occiput or the occipital bone.

suboper'culum. The orbital operculum.*

suborbital (sub-or'bĭ-tal). Beneath the orbit.

subor'der. In zoological classification an occasional division between the *order* and the *family*.

suboxide (sub-oks'id). That of a series of oxides which contains the least oxygen.

suboxida'tion. Deficient oxidation.

subpap'ular. Noting an eruption of few and scattered papules, or one in which the lesions are very slightly elevated, being scarcely more than macules.

subparalyt'ic. Paretic.

subparietal (sub-pă-rī'e-tal). Below or beneath any structure called parietal—bone, lobe, layer of a serous membrane, etc.

subpatell'ar. Beneath the patella.

subpec'toral. Beneath the pectoralis muscle.

subpedun'cular. Below a cerebral peduncle.
subpel"viperitone'al. Beneath the pelvic, as distinguished from the abdominal, peritoneum.
subpericar'dial. Beneath the pericardium.
subperiosteal (sub-per-ĭ-os'te-al). Beneath the periosteum.
subperitoneal (sub-per-ĭ-to-ne'al). Beneath the peritoneum.
subperitone"oabdom'inal. Subabdominoperitoneal.
subperitone"opel'vic. Subpelviperitoneal.
subpetro'sal. Inferior petrosal, noting a cerebral sinus.
subpharyngeal (sub-fă-rin'je-al). Below the pharynx.
subphren'ic [L. *sub*, under, + G. *phrēn*, diaphragm.] Subdiaphragmatic.
subphy'lum [L. *sub*, under, + G. *phylon*, race.] In biological classification the division between the *phylum* and the *class*.
subpi'al. Beneath the pia mater.
subplacen'tal. Beneath the placenta, noting the decidua vera.
subpleural (sub-plu'ral). Beneath the pleura.
subplex'al. Below or beneath any plexus.
subpon'tine. Below the pons Varolii.
subpreputial (sub-pre-pu'shyal). Beneath the prepuce.
subpu'bic. Beneath the pubic arch; noting a ligament, ligamentum arcuatum pubis, connecting the two pubic bones below the arch.
subpul'monary. Below the lungs.
subpyramidal (sub-pĭ-ram'i-dal). 1. Below any pyramid, noting especially the *s. fossa* in the tympanum. 2. Nearly pyramidal in shape
subret'inal. Beneath, on the outer side of, the retina.
subros'tral. Beneath the rostrum, noting a cerebral fissure below the genu of the callosum.
subsalt'. A basic salt, one in which the base has one or more unsaturated molecules still capable of combining with the acid.
subsarto'rial. Beneath the sartorius muscle, noting a nerve plexus.
subscap'ular. Beneath or below the scapula
subscapula'ris. See under *musculus*.
subscle'ral. Beneath the sclerotic coat of the eye, *i.e.* on the choroidal side of this layer.
subsclerot'ic. 1. Subscleral. 2. Partly or slightly sclerotic or sclerosed.
subscription (sub-skrip'shun). The part of a prescription* preceding the signature, in which are the directions for compounding.
subse'rous. Beneath a serous membrane.
subsib'ilant. Noting a râle with a quality between blowing and whistling.
subspi'nous. Infraspinous. 1. Beneath any spine, as of the scapula, of a vertebra, etc. 2. Beneath, or anterior to, the spinal column.
subsple'nial. Beneath the splenium of the corpus callosum.
substage'. An attachment to a microscope, below the stage, supporting the condenser or other accessory.
substance (sub'stans) [L. *substantia*, essence, material.] Matter, stuff, material. **al'pha s.,** reticular s. (1) **be'ta s.,** Heinz* bodies. **gray s.,** substantia cinerea or grisea, the ganglionic or cellular portion of the brain and spinal cord. **interspongioplastic** s., cytochylema. **released s.,** H. s., a substance formed as a result of an irritant applied to the skin; its action resembles that of histamine and is thought to be the cause of the triple response to irritation, viz., dilatation of the capillaries followed by that of the neighboring arterioles, and increased permeability of the vessel walls, whence occurs local edema. **retic'ular s.,** (1) substantia reticulofilamentosa, filar mass, filar structure, a filamentous plasmatic material, beaded with granules, demonstrable by means of vital staining in the red blood-cells; (2) substantia reticularis. **white s.,** substantia alba, the conducting or dendritic portion of the brain and spinal cord. **white s. of Schwann,** see *Schwann*.
substance (sŭb-stahns') [Fr.] Substance. **s. fixatrice** (fĕks-ă-trēs') [Fr. fixing substance], Metchnikoff's term for immune body or amboceptor. **s. sensibilisatrice** (sahn-se-be-le-să-trēs') [Fr. sensitizing substance], Bordet's term for immune body or amboceptor.
substan'dard. Below the standard or the normal. **s. risk,** see *risk*.
substantia (sub-stan'shyah) [L.] Substance **s. adamanti'na** [BNA], enamel, the hard substance covering the exposed portion of the teeth; it is composed chiefly of calcium phosphate, carbonate, and fluoride, and magnesium phosphate. In structure it is a mass of hexagonal prisms held together by an extremely thin calcified matrix. **s. alba** [BNA], white substance.* **s. cine'rea,** gray substance.* **s. compac'ta,** the compact, non-cancellous portion of bone. **s. cortica'lis** [BNA], cortex, cortical substance; the [BNA] notes the following: *s. c. cerebell'i*, cerebellum, *s. c. glan'dulæ suprarena'lis*, suprarenal gland, *s. c. len'tis*, crystalline lens, *s. c. lymphoglan'dulæ*, lymph node, *s. c. oss'ium*, bones, *s. c. re'nis*, kidney, *s. c. telenceph'ali*, cerebrum. **s. ebur'nea** [BNA], dentine, the ivory forming the mass of the tooth; it is composed of collagen, elastin, calcium phosphate, carbonate, and fluoride, and magnesium phosphate. It is structureless, but contains a large number of fine tubules running in a direction from the pulp cavity to the external surface, in which are found processes (dentinal fibrils, Tomes's fibrils) from the odontoblasts **s. ferrugin'ea,** ferruginous substance, an elongated group of pigmented cells, underlying and giving a bluish tint to the locus cæruleus in the floor of the fourth ventricle of the brain. **s. gelatino'sa centra'lis** [BNA], s. grisea centralis. **s. gelatino'sa Rolan'di** [BNA], gelatinous substance of Rolando, a light-colored glassy semitranslucent substance, composed chiefly of neuroglia, with, in certain regions, small ganglion cells, which forms the apex of the posterior gray column and, when seen on section, seems to fit over the caput cornu like a cap. **s. gris'ea** [BNA], s. cinerea, gray substance.* **s. gris'ea centra'lis** [BNA], s. gelatinosa centralis, central gray matter of the spinal cord, a mass of neuroglia surrounding the central canal. **s. len'tis** [BNA], substance of the crystalline lens; it is divided into *s. corticalis*, cortex, and *nucleus lentis*, inner or main substance of the lens. **s. medulla'ris** [BNA], medullary substance; the [BNA] notes the following: *s. m. glan'dulæ suprarena'lis*, suprarenal gland, *s. m. lymphoglan'dulæ*, lymph node, *s. m. re'nis*, kidney, *s. m. oss'ium*, bone-marrow, medulla ossium [BNA]. **s. metachromat'ico-granula'ris,** Heinz* bodies. **s. ni'gra** [BNA], black substance intercalatum, locus niger, ganglion of Soemmering; a mass of gray matter, crescentic on cross section, containing a large number of deeply pigmented nerve-cells; it extends from the upper border of the pons into the subthalamic region between the dorsal (tegmental) and ventral (pedal) portions of the pedunculus (crus) cerebri. **s. os'sea** [BNA], cement, crusta pe-

trosa, a layer of modified bone covering the dentine of the root and neck of a tooth. **s. perfora'ta ante'rior** [BNA], anterior perforated substance, locus perforatus anticus, area olfactoria [NK], an area on either side of the optic chiasm in the olfactory trigone, which is perforated by numerous blood-vessels. **s. perfora'ta poste'rior** [BNA], posterior perforated substance, locus perforatus posticus, a gray area at the base of the brain anterior to the pons, containing numerous openings for the passage of branches of the posterior cerebral artery. **s. pro'pria cor'neæ** [BNA], the proper substance of the cornea, consisting of modified transparent connective tissue between the layers of which are open spaces or lacunæ nearly filled with the corneal cells or corpuscles. **s. pro'pria membra'næ tym'pani,** membrana propria, the middle, fibrous layer of the drum membrane. **s. reticula'ris,** formatio reticularis. **s. reticula'ris al'ba** [BNA], (1) reticular white substance of Arnold, a thin layer of fibers covering the medial surface of the hippocampal gyrus; (2) a region extending on either side of the raphe of the medulla oblongata as far as the root fibers of the hypoglossal nerve. **s. reticula'ris gris'ea** [BNA], an area in the medulla behind the olive containing white and gray matter, the latter in considerable amount. **s. reticulo-filamento'sa,** reticular substance (1). **s. spongio'sa** [BNA], spongy substance of the bones, composed of trabeculæ crossing each other in every direction. **s. vit'rea,** s. adamantina.

substernal (sub-stur'nal). Beneath the sternum.

substernomastoid (sub-stur"no-mas'toyd). Beneath the sternomastoid muscle, noting a group of deep cervical lymph-glands.

substitu'tion. In chemistry, the displacing of one or more atoms of one element in a compound by an equivalent number of atoms of another element. **s. product,** a product obtained by replacing one element in a molecule with an atom or radical of another substance. **s. ther'apy,** opotherapy or organotherapy, administration of preparations made from organs, especially the endocrine, in order to relieve conditions believed to be caused by a deficiency of the internal secretion of those organs.

substitutive (sub'sti-tu-tiv). Substituting; causing a substitution or change. **s. ther'apy,** treatment designed to excite an acute non-specific inflammation to overcome one of a specific character, as in the former practice of injecting a strong solution of silver nitrate in a beginning gonorrhea; allopathy.

sub'strate, substra'tum [L. *substratus*, spread under.] 1. Any layer or stratum lying beneath another. 2. Any substance acted upon by an enzyme or ferment.

subsul'phate. A basic sulphate, one which contains one or more atoms of the base unsatisfied and still capable of combining with the acid.

subsul'tus [L. *subsilire*, to start up.] A twitching or jerking. **s. clonus, s. ten'dinum** [L. *tendo*, tendon], a twitching of the tendons, especially noticeable at the wrist, occurring in low fevers.

subsyl'vian. Below the fissure of Sylvius, noting the anterior horizontal ramus of the Sylvian fissure.

subtar'sal. Below the tarsus.

subtegumen'tal. Subcutaneous, hypodermic.

subtem'poral. Beneath or at the lower part of the temporal lobe or temporal convolution of the brain; noting a fissure, sulcus temporalis inferior [BNA], extending along the ventral surface of the temporal lobe.

subte'nial. Beneath or below any tænia of the brain.

subterminal (sub-tur'mĭ-nal). Situated near the end or extremity of an oval or rod-shaped body.

subtetan'ic. Not quite tetanic, noting convulsions which are not clonic nor yet altogether tonic (as those of tetanus), but rather of a remittent tonic character.

subthalam'ic [L. *sub*, beneath, + *thalamus*.] Lying beneath the thalamus. **s. nu'cleus,** hypothalamic nucleus, Luys' body. **s. re'gion,** hypothalamus [BNA].

subthal'amus. Hypothalamus.

subthyroidea, subthyroidism (sub-thi-ro-id'e-ah, sub-thi'roy-dizm). Hypothyroidism.

subthyroideus (sub-thi-ro-id'e-us). A muscular bundle formed of fibers derived from the thyreoarytenoidæus and the vocalis muscles.

subtile, subtle (sut'il). 1. Slender, fine. 2. Sharp, acute.

subtrapezial (sub-tra-pe'zĭ-al). Beneath the trapezius muscle, noting a nerve plexus.

subtribe'. In zoological and botanical classification, an indefinite division of a tribe.

subtrochanteric (sub-tro-kan-ter'ik). Below any trochanter.

subtrochlear (sub-trok'le-ar). Below the trochlea

subtu'beral. Lying below any tuber.

subtympan'ic. Below the tympanum.

subumbil'ical. Below the umbilicus.

subungual, subunguial (sub-ung'gwal, sub-ung'gwĭ-al) [L. *sub*, beneath, + *unguis*, nail.] Beneath the (toe or finger) nail; hyponychial.

suburethral (sub-u-re'thral). Below or beneath the urethra; noting a gland on either side of the beginning of the vagina, the *suburethral* or *vulvovaginal* gland, called also gland of Bartholin or of Duverney.

subvaginal (sub-vaj'in-al). 1. Below the vagina. 2. On the inner side of any tubular membrane serving as a sheath.

subver'tebral. Beneath, or on the ventral side, of a vertebra or the vertebral column, subspinal.

subvir'ile. More or less lacking in virility.

subvit'rinal. Beneath the vitreous body.

subvo'la [L. *sub*, under, + *vola*, palm or sole.] Hypothenar, the fleshy projection on the ulnar side of the palm of the hand.

subvolu'tion [L. *sub*, under, + *volvere*, to turn.] Turning under of a flap of mucous membrane, after an operation for pterygium, to prevent adhesion.

subwa'king. Noting a state intermediate between sleeping and waking; hypnoidal.

subzo'nal. Below or beneath any zone or zona such as the zona radiata or zona pellucida.

subzygomat'ic. Below or beneath the zygoma.

succeda'neous. Relating to a succedaneum, employed as a substitute.

succedaneum (suk-se-da'ne-um) [L. *succedere*, to follow, to take the place of.] A drug or any therapeutic agent that has the properties and can be employed in place of another. **caput s.,** a swelling of the scalp and subjacent connective tissue forming on the presenting part of the head of a fetus during its birth.

succenturiate (suk-sen-tu'rĭ-āt) [L. *succenturiare*, to receive into a company of soldiers, to substitute.] Substituting, accessory **s. kidney,** adrenal, or suprarenal body. **s. placen'ta,** an accessory or supernumerary placenta.

suc'cinate. A salt of succinic acid with a base, usually ammonium or potassium.

succin'ic acid [L. *succinum*, amber.] An acid, $H_2C_4H_4O_4$, occurring in colorless crystals, obtained by the destructive distillation of amber and by treating fats with nitric acid; employed for the relief of spasmodic pains in doses of gr. 5–10 (0.3–0.6).

succinol (suk'sin-ol) [L *succinum*, amber, + *oleum*, oil.] Refined oil of amber, employed, like other tar oils, in the treatment of various skin diseases.

succinoresinol (suk"si-no-rez'i-nol) A resinol derived from amber.

suc'cinous. Relating to amber.

succinum (suk'se-num) [L.] Amber, a fossil resin; a volatile oil obtained by its destructive distillation is sometimes used in medicine; see *oleum succini*.

succorrhea, succorrhœa (suk-kor-re'ah) [L. *succus*, juice, + G. *rhoia*, a flow.] An abnormal increase in the secretion of a digestive fluid, such as the saliva or gastric juice.

succuba (suk'ku-bah) [L. *succumbere*, to lie under.] A female demon formerly supposed to seduce a man during sleep, and to be the cause of nocturnal pollutions.

suc'cubus [L.] A demon anciently believed to have intercourse with a woman during sleep, and to be the cause of lascivious dreams.

suc'cus, gen. and pl. *suc'ci* [L.] Juice. 1. The fluid constituents of the body tissues. 2. A fluid secretion, especially the digestive fluid. 3. The fluid portion of plants. 4. Specifically a pharmacopeial (B.P.) preparation obtained by expressing the juice of a plant and adding to it sufficient alcohol (1 part to 3 of juice) to preserve it; formerly official also in the U.S.P., but now replaced by tinctures. **s. acal'yphæ** (B.A.), the fresh juice of acalypha with the addition of ¼ volume 90 per cent. alcohol; dose ʒ1–4 (4.0–16.0). **s. adhat'odæ** (B.A.), adhatoda juice; dose ʒ1–4 (4.0–16.0). **s. belladon'næ** (Br.), juice of belladonna; dose, ♏5–15 (0.3–1.0). **s. cit'ri,** lime juice, the juice of *Citrus medica acida*. **s. cit'ri et pepsi'num** (N.F.), lime juice and pepsin, formerly called succus limettæ cum pepsino; glycerite of pepsin 400, lime juice 600; dose, ʒ2 (8.0). **s. coni'i** (Br.), the fresh juice of conium preserved with the addition of 25 per cent. alcohol; has been used in chorea in doses of ʒ1–2 (4.0–8.0). **s. enter'icus,** intestinal juice; an opalescent, straw-colored, alkaline fluid, containing the enzymes maltase, invertase, erepsin, and enterokinase, and the non-enzymic secretin. **s. gas'tricus,** gastric juice; a clear, nearly colorless, acid fluid, containing pepsin, rennin, lipase, hydrochloric acid, and various salts. **s. hyoscy'ami** (Br.), juice of hyoscyamus; dose, ♏30–60 (2.0–4.0). **s. limet'tæ cum pepsi'no,** s. citri et pepsinum (N.F.). **s. pancreat'icus,** pancreatic juice; a clear syrupy fluid, containing several enzymes, viz., trypsinogen, amylopsin, lipase, and probably rennin, lactase, and invertase. **s. pomo'rum** (N.F.), fresh apple juice, sweet cider, the juice of *Pyrus malus*. **s. prostat'icus,** prostatic fluid; a whitish secretion, one of the constituents of the semen, the office of which is believed to be to preserve the vitality of the spermatozoa. **s. scopa'rii** (Br.), juice of broom; dose ʒ1–2 (4.0–8.0). **s. tarax'aci** (Br.), juice of dandelion; dose ʒ2–4 (8.0–16.0).

succuss (suk-kus') [L. *succutere*, to shake up.] To make succussion.

succussion (suk-kush'un). A diagnostic procedure which consists in shaking the body so as to elicit a splashing sound in a cavity containing both gas and fluid.

sucholotoxin (su-ko-lo-toks'in) [L. *sus*, hog, + *cholera* + *toxin*.] The toxin of hog-cholera.

suck [A.S. sūcan.] 1. To draw a fluid through a tube by exhausting the air in front. 2. To draw a fluid into the mouth, specifically to draw milk from the breast.

suck'ing-pad. Corpus adiposum buccæ.

suckle (suk'l). 1. To nurse, to feed by milk from the breast. 2. To suck, to draw sustenance from the breast.

su'crate. A compound of sucrose.

su'crol. Dulcin, paraphenetol carbamide, a derivative of paraphenetidin; used as a substitute for sugar, being 200 times as sweet as cane-sugar.

sucrose (su'krōz) [Fr. *sucre*, sugar.] Sucrosum.

sucrosemia (soo-kro-se'mĭ-ŭ) [*sucrose* + G. *haima*, blood.] The presence of cane sugar in the blood serum.

sucro'sum (U.S., Br.). Sucrose, saccharose, saccharum purification, cane sugar, obtained from *Saccharum officinarum* (fam. *Gramineæ*) and other sources (see *saccharum*).

sucrosuria (soo-kro-su'rĭ-ŭ) [*sucrose* + *urine*.] The excretion of cane sugar in the urine.

suction (suk'shun) [L. *sugere*, to suck.] The act or process of sucking, aspiration. **post-tus'sive s.,** a suction sound heard on auscultation over a pulmonary cavity at the end of a cough.

suc'tion-cups. Cupping-glasses of various shapes, employed to produce local hyperemia according to Bier's* method.

suc'tion-plate. A plate, supporting a denture, which is held in place by atmospheric pressure.

Sucto'ria [L. *sugere*, to suck.] A subclass of *Ciliata* including organisms with cilia only in the early stages as a rule, but having tentacles for piercing or sucking.

suctorial (suk-to'rĭ-al). Relating to suction, or the act of sucking; adapted for sucking. **s. insect,** a mosquito or other insect which draws blood by piercing the skin. **s. pad,** sucking pad, corpus* adiposum buccæ.

suda'men, pl. *sudam'ina* [L. *sudare*, to sweat.] A minute vesicle due to retention of fluid at the mouth of a sweat follicle.

sudam'ina. 1. Plural of *sudamen*. 2. Miliaria crystallina..

sudam'inal. Relating to sudamina.

sudan'. A name given to several fat-dyes. **s. brown,** a brown stain for fats, derived from alpha-naphthylamine. **s. red III,** sudan III, brown powder, aminoazobenzene-azobetanaphthol ($C_{22}H_{16}N_4O$), used as a stain in histological technique; it colors fatty tissues red, leaving connective tissue uncolored, it also stains the fatty envelope of the tubercle bacillus. **s. yellow G.,** metadioxyazobenzene, a yellow fat-stain.

sudan'ophil [*sudan* + G. *philos*, fond.] Staining readily in a solution of sudan, usually sudan III.

sudanophil'ia [*sudan III* + G. *phileō*, I love.] A condition in which the leucocytes contain minute fat droplets which take a brilliant red stain when treated with 0.2 per cent. sudan III and 0.1 per cent. cresyl blue in absolute alcohol.

suda'tion [L. *sudatio; sudare*, to sweat.] Sweating.

sudato'ria [L. *sudatorius*, relating to sweating.] Ephidrosis, hyperidrosis.

sudato'rium [L. *sudare*, to sweat.] A hot-air or Turkish bath to induce profuse perspiration.

sudomotor (su-do-mo'tor) [L. *sudor*, sweat, + *motor*, mover.] Sudoriferous, noting especially the nerves which stimulate the sweat-glands to activity.

su'dor [L.] Sweat, perspiration.*

su'doral. Relating to perspiration.

sudore'sis. Diaphoresis.

sudoriceratosis (su-dor-ĭ-ser-a-to'sis) [L. *sudor*, sweat, + G. *keras*, horn.] Sudorikeratosis.

sudorif'erous [L. *sudor*, sweat, + *ferre*, to bring forth.] Carrying or producing sweat. **s. ducts,** the excretory ducts of the sudoriparous glands.

sudorif'ic [L. *sudor*, sweat, + *facere*, to make.] Diaphoretic, sudoriferous, sudoriparous, causing perspiration.

sudorikeratosis (su-dor-ĭ-ker-a-to'sis). Sudoriceratosis, keratosis of the sudoriferous ducts.

sudoriparous (su-dor-ip'ă-rus) [L. *sudor*, sweat, + *parere*, to produce.] Producing sweat. **s. gland,** sweat-gland, glandula* sudoripara.

su'et. The internal fat of the sheep and other animals. **prepared s.,** sevum præparatum.

suff'ocate [L. *suffocare; sub*, under, + *fauces*, pharynx.] 1. To impede respiration, to asphyxiate. 2. To suffer from want of oxygen, to be unable to breathe.

suffoca'tion. The act or condition of suffocating, asphyxiation.

suffu'migate [L. *sub*, under, + *fumigare*, to smoke.] To treat by means of fumigation.

suffumiga'tion. Treatment by the application of medicated fumes or smoke.

suffu'sion [L. *sub*, under, + *fundere*, to pour out.] 1. The act of pouring a fluid over the body. 2. Reddening of the surface. 3. The condition of being wet with a fluid. 4. An extravasation.

sugar (shŏŏg'ar) [G. *sakcharon;* L. *saccharum*.] A carbohydrate of sweet taste; see *saccharum*. **beech-wood s.,** xylose. **beet s.,** saccharose extracted from beet-root. **brain s.,** cerebrose. **cane s.,** saccharose extracted from the sugar-cane, saccharum.* **fruit s.,** levulose. **gel'atin s.,** glycocoll. **grape s.,** glucose, dextrose.* **heart s.,** muscle s. **in'vert s.,** a mixture of equal parts of dextrose and levulose. **liver s.,** glycogen. **malt s.,** maltose. **maple s.,** saccharum canadense, saccharose extracted from the sap of the sugar-maple, *Acer saccharinum*. **milk s.,** lactose. **muscle s.,** inosite. **redu'cing s.,** one which has the property of causing oxidation. **s. of lead,** acetate of lead, cupri* acetas. **vir'tual s.,** a carbohydrate, neither dextrorotatory nor reducing, found in the blood, especially that of the right ventricle; the passage of the blood through the lungs turns it into ordinary sugar.

su'garin. A synthetic sweetening agent said to be several hundred times sweeter than cane-sugar; it is a methyl derivative of saccharin or benzosulphinidum.

suggestibil'ity. A state in which one is prone to think or to do whatever is put in the mind by another.

sugges'tible. Susceptible to suggestion.

suggestion (sug-jes'chun) [L. *suggerere*, to supply.] The implanting of an idea in the mind of another by some word or act on the part of the operator, the subject being more or less influenced in his conduct or physical condition by such implanted idea. See *autosuggestion*.

suggestionist (sug-jes'chun-ist). One who employs suggestion in the treatment of disease.

sugges'tive. Relating to suggestion. **s. therapeu'tics,** treatment of disease by means of suggestion; pithiatism.

suggilla'tion [L. *suggillare*, to beat black and blue.] 1. Ecchymosis, a black and blue mark. 2. Livor.

suint (swint) [Fr. wool-grease.] The natural grease in wool, a mixture of a soluble soap and insoluble fatty matter, from which the official adeps* lanæ is extracted.

sul'cal. Relating to a sulcus. **s. artery,** a small branch of the anterior spinal artery running in the anterior median fissure of the spinal cord.

sul'cate, sul'cated. Grooved, furrowed, marked by a sulcus or sulci.

sulciform (sul'sĭ-form) [L. *sulcus* + *forma*, form.] Having the form of a groove or sulcus.

sulcomar'ginal tract. Tractus tectospinalis.

sul'culus, pl. *sul'culi* [L dim. of *sulcus*, furrow.] A small sulcus.

sul'cus, gen. and pl. *sul'ci* [L. a furrow or ditch.] 1. One of the grooves or furrows on the surface of the brain, bounding the several convolutions or gyri, a fissure. 2. Any long narrow groove, furrow, or slight depression.

s. ampulla'ris [BNA], ampullary sulcus, a slight groove on the external surface of that part of the ampulla of each semicircular duct of the labyrinth which corresponds to the convex side of the duct, it is where the nerve enters.

s. angula'ris, incisura angularis, a sharp angular depression of the gastric wall, forming an apron-like fold of mucosa projecting into the stomach between the body and the pyloric canal.

s. anthel'icis transver'sus [BNA], a deep groove on the cranial surface of the auricle separating the eminences of the triangular fossa and of the concha.

s. aor'ticus [NK], a broad deep groove on the medial facies of the left lung above and behind the hilus receiving the arch of the aorta and the thoracic aorta.

s. auric'ulæ ante'rior, anterior auricular groove, between the crus helicis and the tuberculum supratragicum.

s. auric'ulæ poste'rior [BNA], posterior auricular groove, between the antitragus and the cauda of the helix marking the location of the antitragicohelicine fissure.

s. basila'ris [BNA], basilar groove, a mesial groove on the ventral surface of the pons Varolii in which lies the basilar artery.

s. bicipita'lis latera'lis [BNA] external bicipital groove on the outer side of the biceps in the middle of the arm.

s. bicipita'lis media'lis [BNA], internal bicipital groove, a furrow on the inner side of the biceps in the middle of the arm.

s. calca'nei [BNA], interosseous groove, a deep furrow on the upper surface of the calcaneus giving attachment to the interosseous ligament.

s. callosa'lis, callosal s., s. corporis callosi [BNA].

s. callosomargina'lis, callosomarginal fissure, s. cinguli [BNA].

s. carot'icus [BNA], carotid sulcus, cavernous groove* of the sphenoid bone.

s. car'pi [BNA], the concavity on the anterior surface of the arch formed by the carpal bones.

s. centra'lis [BNA], central s., fissure of Rolando, a fissure running obliquely upward and backward on the lateral surface of each cerebral hemisphere, between the frontal and parietal lobes.

s. cerebell'i [BNA], cerebellar sulci, the irregular furrows between the gyri or convolutions of the cerebellum.

s. cer'ebri [BNA], cerebral sulci or fissures, grooves bounding the cerebral gyri or convolutions.

s. chias'matis [BNA], sulcus of the chiasma, optic groove of the sphenoid bone.

s. cin'guli [BNA], s. of the cingulum, callosomarginal fissure, a fissure on the mesial surface of the cerebral hemisphere, bounding the upper surface of the gyrus cinguli (callosal convolution); the anterior portion is called the *pars subfrontalis*, the posterior portion, which curves up to the superomedial margin of the hemisphere, bounding the paracentral lobule posteriorly, the *pars marginalis*.

s. circula'ris [BNA], circular sulcus of Reil, limiting sulcus of Reil, a semicircular fissure separating the insula from the operculum above, in front, and behind.

s. corona'rius [BNA], coronary sulcus, auriculoventricular groove, a groove on the outer surface of the heart marking the division between the auricles (atria) and the ventricles.

s. cor'poris callo'si [BNA], s. of the corpus callosum, callosal s., a fissure separating the corpus callosum from the gyrus cinguli above.

s. cos'tæ [BNA], a groove in the lower inner border of the rib, lodging the intercostal vessels and nerve.

s. cru'ris heli'cis [BNA], groove of the crus of the helix a transverse fissure on the cranial surface of the auricle corresponding to the crus of the helix.

s. cu'tis [BNA], groove of the skin, one of a large number of grooves of variable depth on the surface of the corium.

s. ethmoida'lis [BNA], ethmoidal sulcus, nasal groove; a groove on the inner surface of each nasal bone, lodging the internal nasal or anterior ethmoidal nerve.

s. fimbriodenta'tus, fimbriodentate s., a groove separating the fimbria from the fascia dentata hippocampi.

s. fronta'lis, frontal groove; the continuation on the cerebral surface of the frontal bone of the sagittal sulcus.

s. fronta'lis infe'rior [BNA], inferior frontal s., a sagittal fissure on the outer surface of each frontal lobe of the cerebrum separating the middle from the inferior frontal gyrus.

s. fronta'lis me'dius, middle or median frontal s., an imperfectly developed sagittal fissure dividing the middle frontal convolution into an upper and a lower part; this s. is found only in man and the anthropoid apes; at its anterior extremity it bifurcates, the two branches spreading out laterally and constituting the *rontomarginal s.*

s. fronta'lis supe'rior [BNA], superior frontal s., a sagittal fissure on the superior surface of each frontal lobe of the cerebrum, starting from the anterior border of the anterior central s.; it forms the outer boundary of the superior frontal convolution.

s. frontomargina'lis, see *s. frontalis medius.*

s. glutæ'us [BNA], gluteal furrow, the furrow between the buttock and thigh.

s. ham'uli pterygoid'ei [BNA], hamular groove, a groove at the base of the hamular process which forms a pulley for the tendon of the tensor veli palatini.

s. horizonta'lis cerebel'li [BNA], horizontal sulcus of the cerebellum, great horizontal fissure, a deep cleft encircling the circumference of the cerebellum, and receiving the three cerebellar peduncles anteriorly.

s. hypothalam'icus [BNA], hypothalamic s., s. of Monroe, a groove in the lateral wall of the third ventricle on either side leading from the foramen interventriculare to the aditus ad aquæductum cerebri.

s. infraorbita'lis [BNA], infraorbital groove; a gradually deepening groove on the orbital surface of the maxilla, which leads to the infraorbital canal.

s. infrapalpebra'lis [BNA], the hollow or furrow below the lower eyelid.

s. interme'dius ante'rior [BNA], anterior intermediate sulcus, anterior paramedian groove an occasional furrow between the anterior median fissure and the anterior lateral sulcus of the spinal cord, usually present only in the fetus, indicating the lateral border of the anterior cerebrospinal fasciculus.

s. interme'dius poste'rior [BNA], posterior intermediate sulcus, posterior paramedian furrow or groove, a longitudinal furrow between the posterior median and the posterior lateral sulci of the spinal cord in the cervical region, separating the funiculus gracilis from the funiculus cuneatus.

s. interparieta'lis [BNA], interparietal s., intraparietal s. of Turner, a branched fissure starting from near the lateral (Sylvian) fissure at the posterior border of the posterior central gyrus, and running obliquely backward and medially to terminate in the transverse occipital sulcus; it separates the superior and inferior parietal lobules; a horizontal branch proceeds medially forming the posterior boundary of the posterior central gyrus.

s. intertubercula'ris [BNA], intertubercular sulcus, bicipital groove, a furrow running down the shaft of the humerus from between the two tuberosities, lodging the tendon of the long head of the biceps, and giving attachment in its floor to the latissimus dorsi muscle.

s. intragra'cilis, a cerebellar fissure between the gracilis minor and gracilis posterior lobuli.

s. intraparieta'lis, intraparietal s. of Turner, s. interparietalis [BNA].

s. lacrima'lis [BNA], lacrymal groove; (1) a hollow in front of the lacrymal crest of the lacrymal bone; (2) a groove on the nasal process of the maxilla, the upper part of which forms with (1) a fossa for the lodgment of the lacrymal sac.

s. latera'lis [BNA], a groove on the lateral aspect of the mesencephalon which is continuous below with the furrow between the middle and superior peduncles of the cerebellum.

s. latera'lis ante'rior [BNA], anterior lateral, or anterolateral, sulcus, an indistinct furrow on either side of the spinal cord and medulla oblongata, near the anterior median fissure, marking the line of exit of the anterior nerve-roots.

s. latera'lis poste'rior [BNA], posterior lateral, or posterolateral, sulcus, a longitudinal furrow on either side of the posterior median sulcus of the spinal cord and medulla oblongata, marking the line of entrance of the posterior nerve-roots.

s. lim'itans (1) [BNA] a lateral groove running the whole length of the rhomboidal fossa on either side of the posterior median fissure, the remains of the embryonic sulcus separating the ventral and dorsal zones of the medullary canal; (2) limiting s. of Reil, s. circularis [BNA].

s. longitudina'lis [BNA], longitudinal sulcus, interventricular groove, ventricular groove, crena cordis; a groove on the anterior and posterior surfaces of the heart, marking the location of the septum between the two ventricles.

s. longitudina'lis supe'rior, s. sagittalis [BNA].

s. luna'tus, a sulcus in the human brain comparable to, if not identical with, the ape-fissure (*Affenspalte*).

s. malleola'ris [BNA], s. malleoli tibiæ [NK], malleolar s. or groove, a broad groove on the posterior surface of the internal or medial malleolus, through which the tendon of the tibialis posterior muscle runs.

s. ma'tricis un'guis [BNA], the cutaneous furrow in which the root and posterior part of the lateral border of the nail are situated.

s. media'nus lin'guæ [BNA], median longitudinal raphe of the tongue, a slight longitudinal depression running forward on the dorsal surface of the tongue from the foramen cæcum.

s. media'nus poste'rior [BNA], posterior median sulcus, posteromedian fissure, a shallow furrow in the median line of the posterior surface of the cord.

s. mentolabia'lis [BNA], the mentolabial furrow, the indistinct line separating the lower lip from the chin.

s. mylohyoid'eus [BNA], mylohyoid sulcus, a groove on the inner surface of the ramus of the mandible leading to the opening of the inferior dental canal; it lodges the mylohyoid artery and nerve.

s. nasolabia'lis [BNA], nasolabial furrow, the furrow between the ala nasi and the lip.

s. ner'vi radia'lis [BNA], groove for radial nerve, musculospiral groove, a furrow between the external epicondylic ridge of the humerus and the deltoid eminence, winding round the outer surface of the shaft, lodging the musculospiral (radial) nerve and the superior profunda artery.

s. ner'vi ulna'ris [BNA], groove for ulnar nerve, a furrow on the posterior surface of the internal epicondyle of the humerus, lodging the ulnar nerve

s. nym"phocaruncula'ris, a groove between the labium minus and the border of the remains of the hymen, in which is the opening of the duct of Bartholin's gland on either side.

s. nymphohymenea'lis, s. nymphocaruncularis.

s. obturato'rius [BNA], obturator s. or groove, a broad, shallow furrow on the pelvic surface of the pubis external to the obturator crest.

s. occipita'lis latera'lis [BNA], lateral occipital s., one of several variable fissures on the lateral aspect of the

occipital lobe of each cerebral hemisphere, bounding the lateral occipital convolutions.

s. occipita'lis supe'rior [BNA], superior occipital s., one of several small and variable sulci separating the superior occipital gyri on the upper aspect of the occipital lobe of the cerebrum.

s. occipita'lis transver'sus [BNA], transverse occipital s., the extremity of the occipital ramus of the interparietal suture, regarded by some as the representative in man of the ape-fissure.

s. occipitotempora'lis, occipitotemporal s., **s. temporalis inferior** [BNA].

s. olfacto'rius [BNA], olfactory s., a fissure on the inferior surface of each frontal lobe of the cerebrum, running parallel with the longitudinal fissure and separating the gyrus rectus from the orbital gyri.

s. orbita'lis [BNA], orbital s., one of a number of irregularly disposed fissures on the inferior surface of each frontal lobe of the cerebrum, dividing it into the orbital gyri.

s. palati'nus [BNA], palatine groove, one of a number of grooves on the lower surface of the palatal process of the maxilla in which run the vessels and nerves of the hard palate.

s. paraglenoida'lis [BNA], paraglenoid groove, a furrow on the inner face of the ala of the ilium, at the border of the auricular surface.

s. parallel'is, s. temporalis superior.

s. parolfacto'rius ante'rior [BNA], anterior parolfactory sulcus, a fissure separating the parolfactory area from the superior frontal gyrus.

s. parolfacto'rius poste'rior [BNA], posterior parolfactory sulcus, a shallow groove on the medial surface of the hemisphere separating the subcallosal gyrus from the parolfactory area.

s. petro'sus infe'rior [BNA], inferior petrosal groove; (1) a shallow groove on either side of the basilar portion of the occipital bone lodging the inferior petrosal sinus; (2) a groove, on the posterior surface of the petrous portion of the temporal bone, lodging the inferior petrosal sinus.

s. petro'sus supe'rior [BNA], superior petrosal groove, a groove on the superior border of the petrous portion of the temporal bone in which rests the superior petrosal sinus.

s. poplite'us [NK], a groove at the lower end of the femur in which is the origin of the popliteus muscle.

s. præcentra'lis [BNA], precentral s., s. verticalis, an interrupted fissure anterior to and in general parallel with the fissure of Rolando, forming the anterior boundary of the gyrus centralis anterior.

s. promonto'rii [BNA], a narrow groove running vertically over the surface of the promontory in the tympanum, lodging the tympanic nerve.

s. pterygopalati'nus [BNA], pterygopalatine groove a sulcus on the sphenoidal process and posterior surface of the vertical plate of the palate bone which, with grooves of the same name on the maxilla and pterygoid process of the sphenoid, forms the canal of the same name, the inferior extremity of which is the foramen palatinum majus.

s. sagitta'lis [BNA], sagittal sulcus, superior longitudinal sulcus; (1) a groove on the inner surface of the occipital bone which lodges the superior longitudinal sinus; (2) a groove at the line of junction of the two parietal bones, which lodges the superior longitudinal venous sinus and to the edges of which the falx cerebri is attached; it extends down in the center of the frontal bone, and terminates in the frontal crest.

s. scle'ræ [BNA], s. of the sclera, a slight groove on the external surface of the eyeball indicating the line of union of the sclera and cornea.

s. sigmoid'eus [BNA], sigmoid sulcus, sigmoid fossa or groove; a broad groove in the posterior cranial fossa, first situated on the lateral portion of the occipital bone, then curving around the jugular process on to the mastoid portion of the temporal bone, and finally turning sharply on the posterior inferior angle of the parietal bone and becoming continuous with the transverse groove; it lodges the lateral (transverse) sinus.

s. spira'lis exter'nus, external spiral sulcus, a concavity in the outer wall of the ductus cochlearis between the prominentia spiralis and the crista basilaris.

s. spir'alis inter'nus, internal spiral sulcus, a concavity in the floor of the ductus cochlearis formed by the overhanging labium vestibulare.

s. subcla'vius [BNA], a groove on the surface of the lung just below the apex, corresponding to the course of the subclavian artery.

s. subparieta'lis [BNA], subparietal s., a fissure continuing the direction of the s. cinguli from where the pars marginalis of that fissure bends upward; it forms the upper boundary of the posterior portion of the gyrus cinguli.

s. ta'li [BNA], interosseous groove; a deep furrow on the under surface of the astragalus giving attachment to the interosseous ligament.

s. tempora'lis infe'rior [BNA], inferior temporal s., occipitotemporal s., a sagittal fissure on the under surface of the temporal lobe of the cerebrum, separating the inferior temporal from the fusiform (occipitotemporal) convolution.

s. tempora'lis me'dius [BNA], middle temporal s., second temporal s., a sagittal fissure on the lower part of the lateral surface of the temporal lobe of the cerebrum, separating the middle and inferior temporal convolutions.

s. tempora'lis supe'rior [BNA], superior temporal s., supertemporal s., first temporal s., parallel s., a long deep fissure running the whole length of the lateral surface of the temporal lobe of the cerebrum, parallel with the lateral (Sylvian) fissure, separating the superior and middle temporal convolutions; its posterior extremity, running into the parietal lobe, is deflected upward and is capped by the angular gyrus.

s. tempora'lis transver'sus [BNA], transverse temporal s., one of a number of transverse fissures on the surface of the temporal lobe of the cerebrum bordering on the lateral (Sylvian) fissure, running from the region of the superior temporal gyrus to the insula; they separate the transverse temporal convolutions from each other.

s. termina'lis [BNA], (1) a V-shaped groove, with apex pointing backward, on the surface of the tongue, marking the separation between the oral, or horizontal, and the pharyngeal, or vertical, parts of this organ; (2) a groove on the surface of the right atrium of the heart, marking the junction of the primitive sinus venosus with the atrium.

s. transver'sus [BNA], transverse sulcus, groove on the inner surface of the parietal bone, at its posterior inferior angle, which receives the lateral venous sinus.

s. tu'bæ auditi'væ [BNA], a furrow on the inner surface of the posterior border of the greater wing of the sphenoid bone, for the cartilaginous Eustachian tube.

s. tympan'icus [BNA], tympanic sulcus, a groove in the tympanic ring in which the circumference of the drum membrane is fixed.

s. venæ ca'væ crania'lis [NK], a groove on the surface of the right lung, above the hilus, in which runs the superior vena cava.

sul'ci veno'si [BNA], grooves occasionally found on the internal surface of the parietal bone, in which veins lie.

s. ventra'lis, the anterior median fissure of the spinal cord.

s. vertica'lis, s. præcentralis.

sulfate, sulfonal, sulfur, etc. See *sulphate, sulphonal, sulphur,* etc. The American Chemical Society prefers this spelling, but the Pharmacopœias of Great Britain and the United States and the National Formulary prefer the spelling sulphate, etc.

sulfosin (sul'fo-sin). Trade name of a 1 per cent. solution of sublimed sulphur in sterilized olive oil; employed, like malarial infection, in the treatment of tabes and other parasyphilitic manifestations.

sullage (sul'ăj) [Old F. *soillage*]. Sewage, liquid refuse.

sulph-, sulpho-. A prefix denoting that the compound to the name of which it is attached contains the group SO_2, sulphurous anhydride.

sulphacid (sulf-as'id). Thioacid.

sulphaldehyde (sulf-al'de-hīd). Thioaldehyde, a colorless liquid of strong odor, employed as a hypnotic in place of paraldehyde, than which it is much stronger.

sulpham'inol. Thioxydiphenylamine.

sulphan'ilate. A salt of sulphanilic acid.

sulphanil'ic acid. A coal-tar derivative occurring in small white crystals; has been used for the relief of iodism and catarrhal troubles in doses of gr. 5–10 (0.3–0.6).

sulpharsenol (sul-far'sen-ol). A special make of sulpharsphenamine.

sulpharsphenamina (sul-far-sfen'ă-mē'nŭ). (Br.) Sulpharsphenamine.

sulpharsphenamine (sul"far-sfen-am'in). A combination of arsphenamine, sodium bisulphite, and formalin, said to be safer and therapeutically more efficacious than arsphenamine in the treatment of heredosyphilis and neurosyphilis.

sul'phate. A salt of sulphuric acid with a base.

sulphemoglobin, sulphæmoglobin (sulf"hem-o-glo'bin) [*sulphur* + *hemoglobin*.] A substance formed by the action of hydrogen sulphide on hemoglobin; sulphmethemoglobin.

sulphemoglobine'mia, sulphæmoglobinæ'mia. A morbid condition due to the presence of sulphemoglobin in the blood; it is marked by a persistent cyanosis, but the blood count does not reveal any special abnormality in that fluid; it is thought to be caused by the action of hydrogen sulphide absorbed from the intestine.

sulph-hemoglo'bin. Sulphemoglobin.

sulphenthal (sul'fen-thal). Phenolsulphonphthalein, phenol red.

sulphichthyolic acid (sulf-ik-thī-ol'ic as'id). Ichthyosulphonic* acid.

sul'phide. A compound of sulphur with a base sulphuret.

sulphindigotic acid (sulf"in-di-got'ik as'id). Sulphoindigotic acid, an acid $C_8H_5NO.SO_3$, formed by the interaction of sulphuric acid and indigo; it forms with sodium, indigo-carmine, or sodium sulphindigotate.

sulph'inide. Saccharin, benzosulphinidum.*

sul'phite. A salt of sulphurous acid with a base.

sulphmethemoglo'bin, sulphmethæmoglo'bin. Sulphemoglobin.

sulphoacid (sul'fo-as-id). 1. Thioacid. 2. Sulphonic acid.

sulphocar'bol. Acidum* sulphocarbolicum.

sulphocar'bolate. A salt of sulphocarbolic acid.

sulphocarbol'ic acid. See under *acidum*.

sulphocy'anate. A salt of sulphocyanic acid.

sulphocyanic acid (sul"fo-si-an'ik as'id). Thiocyanic acid, rhodanic acid, an acid, CNHS, occurring in human saliva and in the seeds of certain plants.

sulphogel (sul'fo-jel). Same as hydrogel, with sulphuric acid instead of water as the dispersion means.

sulphohy'drate. Sulphydrate.

sulphoichthyolic acid (sul-fo-ik-thī-ol'ik as'id). Ichthyolsulphonic* acid.

sulphoindigotic acid (sul"fo-in-dĭ-got'ik as'id). Sulphindigotic acid.

sul'phonal (Br.). Sulphonmethane (U. S.).

sul'phonalism. Chronic sulphonal poisoning; addiction to sulphonal.

sul'phone. The radical SO_2, or a compound of it with carbon.

sulphonethylmethane, sulphonethylmethanum (sul"fŏn-eth"il-meth'ān, sul"fŏn-eth"il-meth'a-num). (U.S.) Trional, $C_8H_{18}S_2O_4$, obtained by the oxidation of a mercaptol formed by the condensation of methylethylketone with ethylmercaptan; colorless, shining scales, soluble in 195 parts of water and readily soluble in alcohol; hypnotic in doses of gr. 15–30 (1.0–2.0).

sulphon'ic acid. A monobasic acid derived from benzene in which hydrogen is replaced by $SO_2.OH$.

sulphonmethane, sulphonmethanum (sul"fŏn-meth'ān, sul"fŏn-meth'a-num). (U.S.) Sulphonal. (Br.), $C_7H_{16}S_2O_4$, obtained by the oxidation of a mercaptol formed by the condensation of acetone with ethylmercaptan; a colorless crystalline powder, soluble in 360 parts of water and in 47 parts of alcohol; hypnotic in nervous and mental diseases in doses of gr. 20–40 (1.3–2.6).

sulphoparaldehyde (sul"fo-par-al'de-hīd). Triethialdehyde, a substance said to have hypnotic properties.

sulphophe'nol. Acidum* sulphocarbolicum.

sulphosalicylic acid (sul"fo-sal-i-sil'ik as'id). Salicyl-sulphonic acid, a crystalline acid, $C_6H_3SO_3H.OH.COOH$, obtained by the interaction of salicylic acid and sulphuric anhydride; employed as a test for albumin, and has been given internally as a substitute for salicylic acid in doses of gr. 5–10 (0.3–0.6).

sul'phosalt. A salt of sulphonic acid.

sulphose (sul'fōz). Trade name of a preparation of ammonium ichthyolsulphonate, used for the same purposes as ichthyol.

sulphosol (sul'fo-sol). Same as hydrosol, with sulphuric acid instead of water as the dispersion means.

sul'phoxism. Chronic sulphuric-acid poisoning.

sul'phur (U.S., Br.). 1. Brimstone, an element, symbol S, atomic weight, 32.07, occurring in native state in volcanic countries. It is of bright yellow color and occurs as a crystalline solid or as an amorphous powder; it combines with oxygen to form sulphurous and sulphuric acids and with many of the metals and nonmetallic elements to form sulphides. The pharmacopeia recognizes three preparations: washed, precipitated, and sublimated sulphur. It is mildly laxative in doses of gr. 45–90 (3.0–6.0), and has been employed in rheumatism, gout, and bronchitis in doses of gr. 5–10 (0 3–0.6); externally it is valuable in the treatment of skin diseases, and the fumes of burning sulphur were formerly extensively used in the disinfection of rooms after being occupied by a patient with contagious disease. 2. In homeopathic practice a trituration of sublimed sulphur with sugar of milk, employed as an antipsoric, to control the psora or underlying hereditary constitutional taint which interferes with the effect of otherwise well indicated drugs; dose ix to 30th potency. **colloid'al s.,** s. in a state of very fine division, used locally in the treatment of rheumatism and certain skin diseases. **flow'ers of s.,** s. sublimatum. **liver of s.,** hepar sulphuris, potassa sulphurata. **milk of s.,** s. præcipitatum. **precip'itated s.,** s. præcipitatum. **roll s.,** brimstone, sublimed s. melted and cast in cylindrical moulds. **soft s.,** an allotropic form obtained by dropping very hot melted s. into water; it is then temporarily of a viscid or waxy consistency. **sublimed' s.,** s. sublimatum. **s. arsphenam'ine,** sulpharsphenamine. **s. group,** the three bivalent metalloids, sulphur, selenium, and tellurium; they form dibasic acids with hydrogen, and their oxyacids are also dibasic. **sul'phuris io'didum** (N.F., Br.), sulphur iodide, a grayish black crystalline mass of metallic luster applied as a stimulant or slight caustic in the

treatment of certain skin diseases. **s. lo'tum** (U.S.), washed sulphur, sublimed s. macerated in diluted ammonia water to remove the free acid; a yellow or greenish yellow gritty powder, without odor or taste. **s. præcipitatum** (U.S., Br.), precipitated s., milk of s., sublimed s. boiled with lime water, the lime being removed from the precipitate by washing with diluted hydrochloric acid; a yellowish or grayish, fine, non-crystalline powder. **s. sublima'tum** (U.S., Br.), sublimed s., flowers of s., prepared by distilling the rough sulphur of commerce; a yellow somewhat gritty powder of faint sulphurous odor. **veg'etable s.,** lycopodium. **washed s.,** s. lotum.

sulphura'ria. A mineral deposit from certain sulphur waters, composed of a mixture of sulphur compounds, employed in the treatment of various diseases of the skin.

sul'phurated. Sulphureted.

sul'phurator. An apparatus for applying the fumes of burning sulphur for disinfection or bleaching.

sul'phuret. Sulphide.

sul'phureted, sul'phuretted. Combined with sulphur; noting a sulphide, as *sulphureted hydrogen.**

sulphu'ric acid. Acidum sulphuricum.

sul'phurize. To sulphurate, to combine with sulphur.

sulphurous (sul'fu-rus). Containing or relating to sulphur. **s. acid,** acidum sulphurosum.

sulphuryl (sul"fu-ril) [*sulphur* + G. *hylē*, stuff.] The radical SO_2.

sulphy'drate. Sulphohydrate, a compound of the radical SH with another radical or element.

sulphydryl (sul-fi'dril) [*sulphur* + *hydrogen* + G. *hylē*, stuff] The radical SH.

sum. Abbreviation of L. *suma*, take, or *sumendus, sumendum*, to be taken, a direction in the signature of a prescription.*

sumac, sumach (su'mak) [Ar. *summāg*] Rhus glabra. **fra'grant s.,** *Rhus aromatica.*

sum'bul [Hindu word.] (N.F.) Sumbul root, musk root, the dried rhizome and roots of an unknown plant, probably of the order *Umbelliferæ;* stimulant and antispasmodic in doses of gr. 15–60 (1.0–4.0) **s. ra'dix** (Br.), dried transverse slices of the root of *Ferula sumbul;* nervine and sedative, similar in action to valerian, in doses of gr. 15–30 (1.0–2.0).

summa'tion [L. *summare*, to sum up.] The aggregation of a number of similars, totality. **s. of stim'uli,** muscular or mental effects produced by the frequent repetition of slight stimuli, one of which alone would be without evident response.

summ'er [A.S. *sumer.*] The hot season of the year in non-tropical ˙nates, varying in length according to the latitude and elevation above the sea. **s.-au'tumn fever,** estivoautumnal* fever. **s. asth'ma, s. bronchi'tis, s. catarrh',** rose cold, hay-fever. **s. chol'era, s. complaint', s. diarrhe'a,** cholera morbus. **s. fever,** hay-fever, June cold, rose cold. **s. rash,** prickly heat, lichen tropicus.

Sum'ner's sign [F. S. *Sumner*, British surgeon, contemporary.] A slight increase in tonus of the abdominal muscles, an early indication of inflammation of the appendix, stone in the kidney or ureter, or a twisted pedicle of an ovarian cyst; it is detected by exceedingly gentle palpation of the right or left iliac fossa.

sun'burn. An erythema or dermatitis caused by the actinic rays of the sun.

Sun chol'era mix'ture [New York *Sun*, in which the formula was originally published at the time of a cholera epidemic in New York.] Mistura opii et rhei composita (N.F.); tinctures of capsicum and of rhubarb each 10, spirits of camphor and of peppermint, laudanum, and alcohol each 20; dose ♏30 (2.0).

sun'stroke. Insolation, siriasis; a form of heatstroke resulting from undue exposure to the sun's rays, probably caused by the action of the actinic rays combined with the high temperature. The symptoms are those of heatstroke, but there is often an absence of fever, with extreme prostration and collapse.

super- [L. *super*, above, beyond.] A prefix to words of Latin derivation, signifying in excess, above, superior, or in the upper part of; often the same as *supra;* it corresponds to the Greek prefix *hyper-*.

superabduc'tion. Abduction of a limb beyond the normal limit.

superacid (su-per-as'id). Overacid, more than normally acid.

superacid'ity. Hyperacidity, an excess of acid; specifically excessive acidity of the gastric juice, hyperchlorhydria.

superacro'mial. Above the acromion process

superactiv'ity. Abnormally great activity; hyperactivity.

superacute (su"pur-ă-kūt'). Extremely acute, marked by great severity of symptoms and rapid progress; noting the course of a disease.

superal'bal [L. *super*, above, + *albus*, white.] 1. Relating to, or situated in the upper part of the white substance of the brain.

superalbumino'sis. The presence of an excess of albumin.

superalimenta'tion. Overfeeding, luxus consumption, gavage; the forcing of food upon a patient with tuberculosis or neurasthenia, in excess of the demands of the appetite or of the nutritional needs of a person in health.

superalkalin'ity. Excessive alkalinity

supercallo'sal. Above the corpus callosum, noting the callosomarginal sulcus, sulcus cinguli [BNA].

supercar'bonate. Bicarbonate.

supercen'tral. Above the center or any central part.

supercerebel'lar. Situated in, or relating to, the superficial portion of the cerebellum

supercer'ebral. Situated in, or relating to, the superficial portion of the cerebrum.

supercil'iary. Relating to or in the region of the eyebrow. **s. arch,** arcus superciliaris. **s. ridge,** s. arch.

supercil'ium, pl. *supercil'ia* [L. *super*, above, + *cilium*, eyelid] 1. Eyebrow. 2. An individual hair of the eyebrow.

superdicrot'ic. Hyperdicrotic.

su"perdisten'tion. An extreme distention.

superduct' [L. *super*, above, + *ducere*, to lead] To elevate or draw upward.

superdu'ral. Above or relating to the superficial portion of the dura mater.

superexcita'tion. 1 The act of exciting or stimulating unduly. 2. Overstimulation; a condition of extreme excitement

superextens'ion. Extension beyond normal limits.

superfecundation (su"pur-fe-kun-da'shun) [L. *super*, above, + *fecundus*, fertile.] The impregnation of two or more ova, liberated at the same ovulation, by successive acts of coitus.

superfeta'tion [L. *super*, above, + *fetus.*] The presence of two fetuses of different ages, not twins, in the uterus; due to the impregnation of two ova liberated at successive periods of ovulation.

superfibrina'tion. The presence of an excessive amount of fibrin or fibrinogen in the blood or other body fluids.

superficial (su-per-fish'al) [L. *superficialis; super*, above, + *facies*, figure, form.] 1. On, near, or relating to the surface, sublimis. 2. Cursory, not thorough.

superficia'lis [L.] Superficial; noting a number of nerves, arteries, veins, and other structures near the surface of the body. **s. colli,** see *nervus cutaneus colli.* **s. volæ,** ramus volaris superficialis [BNA], a branch of the radial artery anastomosing with the anterior carpal branch of the ulnar artery, forming the anterior carpal arch, rete* carpi volare, in front of the wrist.

superficies (su-per-fish'ĭ-ēz) [L. *super*, above, + *facies*, figure, form.] Outer surface, facies [BNA].

superfissure (su-pur-fish'ur). Supersulcus.

superflex'ion. Flexion beyond the normal limit.

superfœta'tion. Superfetation.

superfron'tal. Above or in the upper part of the frontal region; noting a sulcus in the upper part of the frontal lobe of the cerebrum, sulcus præcentralis superior.

superfunc'tion. Excessive function of a gland, organ, or other part.

supergen'ual. Above the knee or any genu.

superimpregna'tion. 1. Superfecundation. 2. Superfetation.

superinduce (su"pur-in-dūs'). To induce or bring on in addition to something already existing.

superinfection (su-per-in-fek'shun) [L. *super*, over, above, + *infection*.] A fresh infection added to one of the same nature already present.

superinvolu'tion. An extreme reduction in size of the uterus, after childbirth, below the normal size of the non-gravid organ.

supe'rior [L. comparative of *super*, above.] 1. Above in relation to another structure, higher, cephalic [NK]. 2. Better, of more value.

superlacta'tion [L. *super*, above, + *lactare*, to suckle.] The continuance of lactation beyond the normal period, hyperlactation.

superle' hal [G. *super*, over, + *letalis*, fatal.] Beyond the fatal limit, noting a dose of a drug that will probably kill.

superliga'men [L. *super*, above, + *ligamen*, bandage.] A retentive dressing; a bandage retaining a surgical dressing in place.

superme'dial. Above the middle of any part.

supermoron (su-pur-mo'ron). A person who is but slightly subnormal mentally, in a grade above that of a moron.

su"permotil'ity. Hypercinesis, the capability of motion in excess of the normal.

supernor'mal. Above the normal.

supernumerary (su-pur-nu'mur-a-rĭ) [L. *super*, above, + *numerus*, number.] Exceeding the normal number; accessory.

supernutrition (su-per-nu-trish'un). Superalimentation, leading to hypertrophy.

superoccip'ital. Above or at the upper part of the occiput or occipital bone or region.

superofron'tal. Superfrontal.

superolat'eral. At the side and above.

superpalite (su-per-pal'it). Diphosgene.

superpar'asite. Hyperparasite.

superpetro'sal. Above or at the upper part of the petrous portion of the temporal bone.

superphos'phate. That phosphate of a series which contains the greatest proportion of phosphoric acid; an acid phosphate.

superpigmenta'tion [L. *super*, over, + *pigmentum*, paint.] An excess of pigment in a part.

su'persalt. An acid salt, a salt containing one or more acid molecules which may still combine with the base.

supersat'urate. To make a solution hold more of a salt or other substance than it will normally dissolve.

superscrip'tion. The beginning of a prescription,* consisting of the injunction, *recipe*, take, usually noted by the sign ℞.

supersecretio (su-pur-se-kre'shyo) [L.] Excessive secretion, hypersecretion.

supersecre'tion [*super*, over, + *secernere*, to separate.] Hypersecretion; oversecretion; secretion in amount greatly in excess of the normal.

supersensita'tion, supersensitiza'tion. Increased susceptibility to the action of a protein following a first injection of the same; the production of anaphylaxis.

supersep'tal. Above a septum, noting the supersepta fissure in the cuneus or quadrate lobe of the cerebrum.

superstan'dard. Above the standard; see *risk.*

supersul'cus. Superfissure, a cerebral sulcus formed above a gyrus by the overlapping of another.

supertem'poral. Above or in the upper part of the temporal bone, lobe, or region. **s. convolu'tion,** gyrus temporalis superior. **s. fissure,** sulcus temporalis superior.

superten'sion. Extreme tension. Incorrectly used as a synonym of high blood pressure, or hyperpiesis.

supervenos'ity. A state of incomplete oxidation of the blood.

supervisor (su'pur-vi-zur). A graduate nurse who is responsible for two or more hospital wards in care of charge nurses. See *head nurse.**

supinate (su'pi-nāt). To turn the forearm and hand volar side uppermost.

supina'tion. 1. The act of supinating. 2. The state of being supinated, or turned volar side upward, referring to the hand, or with the face and abdomen upward, referring to the body.

su'pinator. A muscle which produces supination of the forearm; see under *musculus.*

supine (su-pīn') [L. *supinus.*] Lying on the back, supinated or in a position of supination.

suplagotoxin (su-plag-o-toks'in) [L. *sus*, hog, + *plaga*, plague, + G. *toxikon*, poison.] The toxin of swine plague.

suppeda'nium, pl. *suppeda'nia* [L. *sub*, beneath, + *pes*, foot.] An application to the sole of the foot.

supplemen'tal. Relating to a supplement, additional. **s. air,** reserve air.*

supplemen'tary. Supplemental, supernumerary.

support'ing cells. See *Hensen*, and cut of Corti's organ.

suppositoria (sŭ-poz-ĭ-to'rĭ-ah) [L. pl. of *suppositorium*, something placed underneath.] Suppositories A suppository is a small mass shaped for ready introduction into one of the orifices of the body, made of a substance, usually medicated, which is solid at ordinary temperatures but melts at blood heat; it is composed usually of oil of theobroma, soap (sodium stearate), or glycerinated gelatin. A *rectal* suppository is in the shape of a cone or a spindle, weighing about 30 grains (2.0). An *urethral* suppository, or bougie, is pencil-shaped, pointed at one extremity, either 2.8 inches (7 cm.) or 5.6 inches (14 cm.) in length, weighing 30 or 60 grains (2.0 or 4.0) when made of glycerinated gelatin. A *vaginal* suppository is globular or egg-shaped, weighing about 150 grains (10.0), if made of glycerinated gelatin, or 60 grains (4.0) if made of cocoa butter. **s. ac'idi carbol'ici,** carbolic acid, or phenol, suppositories, made with white wax and oil of theobroma, containing

1 gr. (0.06) of phenol in each suppository; disinfectant and anesthetic in cancer of the rectum. **s. ac'idi tan'nici** [Br.], tannic acid suppositories, contain each 3 gr. (0.2) of tannic acid; employed in hemorrhoids and prolapse of the rectum, and in leucorrhea. **s. belladon'næ** [Br.], belladonna suppositories, contain each 1½ gr. (0.1) of extract of belladonna; employed in painful conditions of the rectum and neighboring pelvic organs. **s. boroglyceri'ni** (N.F.), suppositories of boroglycerin; contains boroglycerin gr. 15 (1.0) in glycerinated gelatin; astringent. **s. glyceri'ni** (U.S., Br.), glycerin suppositories, made of glycerin 30.0 monohydrated sodium carbonate 0.5, stearic acid 2.0, water 5.0, to make 10 suppositories (U.S.); gelatin ½ ounce, glycerin 2½ ounces, water q.s., boil down to 1563 grains and pour into moulds of 30, 60, or 120 grain measure (Br); employed in constipation. **s. iodofor'mi** (Br.), iodoform suppositories, each contains gr. 3 (0.2) of iodoform; employed in hemorrhoids, fissure of the anus, etc. **s. pheno'lis** (Br.), phenol or carbolic acid suppositories, each containing 1 gr. (0.06) of the active ingredient. **s. plum'bi cum opio** (Br.), compound lead suppositories, contain each lead acetate gr. 3 (0.2), opium gr. ½ (0.06); employed in dysentery, rectal hemorrhage, and hemorrhoids. **s. morphi'næ** (Br.), morphine suppositories, each contains gr. ¼ (0.015) morphine hydrochloride; for strangury and other painful affections of the rectum or bladder.

supposito'rium [L. *sub*, under, + *positus*, placed.] Suppository; see *suppositoria*.

suppos'itory. Suppositorium.

suppress'ion [L. *supprimere*, to press down.] 1. Holding back, repression, arrest; noting any symptom or other abnormal phenomenon. 2. Arrest of the secretion of a fluid, as urine or bile; to be distinguished from *retention*, in which secretion occurs but the discharge from the body is prevented.

suppuran'tia [L. neuter pl. of *suppurans*, causing suppuration.] Agents that cause suppuration.

supp'urate [L. *suppurare*.] To form pus.

suppura'tion. The formation of pus.

supp'urative. Forming pus. suppurating.

supra- [L. above.] A prefix denoting a position above the part indicated by the word to which it is joined; often signifying the same as *super*.

supraacromial (su-prah-ă-kro'mĭ-al). Superacromial.

su"praacro"miohumera'lis. Musculus deltoideus.

supra-a'nal. Superanal.

supra-auric'ular. Above the auricle or pinna of the ear. **s.-a point,** a craniometric point at the root of the zygoma, directly above the auricular point.

supra-ax'illary. Above the axilla.

suprabucc'al. Above the cheek.

supracap'sulin. Trade name of a preparation containing the active principle of the suprarenal gland; hemostatic and vasoconstrictor.

supracerebellar (su"prah-ser-e-bel'ar). On or above the surface of the cerebellum.

supracer'ebral. On or above the surface of the cerebrum.

suprachorioidea (su-prah-ko-rĭ-o-id'e-ah). Suprachoroid* lamina.

suprachoroid (su-prah-ko'royd). On the outer side of the choroid of the eye. **s. lam'ina,** the connective tissue between the choroid and the sclerotic coats of the eye.

supracil'iary. Superciliary.

supraclavic'ular. Above the clavicle. **s. fossa,** the hollow on either side of the neck dipping down behind the clavicle.

supraclavicula'ris. See under *musculus*.

supracommissure (su-prah-kom'ĭ-shūr). Commissura habenularum, dorsal stalk of the corpus pineale.

supracon'dylar, supracon'dyloid. Above a condyle, noting a foramen and various bony ridges or markings.

supracos'tal. Above the ribs.

supracot'yloid. Above the cotyloid cavity, or acetabulum.

supradiaphragmat'ic. Above the diaphragm.

supraepicondylar (su"prah-ep-ĭ-kon'dĭ-lar). Above an epicondyle.

supraepitrochlear (su-prah-ep-ĭ-trok'le-ar). Above the internal epicondyle of the humerus.

supragle'noid. Above the glenoid cavity or fossa. **s. tu'bercle,** a rough surface just above the glenoid cavity of the scapula, giving attachment to the large head of the biceps muscle.

supraglott'ic. Above the glottis, or chink between the vocal cords.

suprahepat'ic [L. *supra*, above, + G. *hēpar(hēpat-)*, liver.] Above the liver.

suprahy'oid. Above the hyoid bone, noting certain accessory thyroid glands lying within the geniohyoid muscle.

suprainguinal (su"prah-ing'gwin-al). Above the inguinal region, or groin.

supraintestinal (su"prah-in-tes'tĭ-nal). Above the intestine.

supralum'bar. Above the lumbar region.

supramalle'olar. Above either malleolus.

supramamm'ary. Above the mammary gland.

supramandib'ular. Above the mandible, or lower jaw.

supramar'ginal. Above any margin, noting especially the **s. gyre,** a cerebral convolution on the lateral surface of the parietal lobe of the cerebrum.

supramas'toid. Above the mastoid portion of the temporal bone.

supramaxill'a. The maxilla.

supramax'illary. Relating to the maxilla or upper jaw.

supramen'tal [L. *supra*, above, + *mentum*, chin.] Above the chin.

suprana'sal [L. *supra*, above, + *nasus*, nose.] Above the nose. **s. point,** ophryon.

supraneural (su"prah-nu'ral) [L. *supra*, above, + G. *neuron*, nerve.] Above the neural axis.

supranuclear (su"prah-nu'kle-ar). Between a nucleus of the brain and the cortex.

supraobli'quus. Musculus obliquus superior.

supraoccip'ital. Superoccipital.

supraorbital (su"prah-or'bĭ-tal). Above the orbit, either on the face or within the cranium; noting numerous structures, see *canalis. foramen incisura*, *nervus*, etc. **s. ridge,** arcus superciliaris. **s. neural'gia,** neuralgia of the supraorbital nerve, brow-ache, hemicrania. **s. point,** ophryon.

suprapatell'ar. Above the patella.

suprapel'vic. Above the pelvis.

suprapineal (su-prah-pin'e-al). Above the corpus pineale.

suprapon'tine. Above the pons Varolii.

suprapu'bic. Above the pubic arch. **s. cystot'omy,** operation of opening into the bladder by an incision just above the symphysis pubis, the bladder being distended with air or water so as to raise the peritoneal investment above the point of incision

supraren'aden. Trade name of a preparation made from the suprarenal gland; recommended in Addison's disease.

suprare'nal [L. *supra*, above, + *ren*, kidney.] 1. Above the kidney. 2. A suprarenal gland. **s. capsule, s. body, s. gland,** glandula suprarenalis.

suprare'nalin. Trade name of a preparation made from the suprarenal gland; hemostatic and vasoconstrictor.

suprarenalism (soo-prah-re'nal-izm). A condition due to overactivity of the suprarenal glands.

suprarenalum siccum (su-prah-re'nă-lum sik'kum) (U.S., IX.) Dried suprarenal (gland), desiccated suprarenal; the suprarenal glands of animals which are used for food by man, cleaned, dried, freed from fat and powdered; employed for the same purposes as epinephrine —as a hemostatic, in surgical shock, as an oxytocic, for the relief of asthma, to relieve congestion of the nasal mucous membrane, and in Addison's disease, being regarded by some authorities as preferable to the extract in the last-named disease.

suprarene (su'prah-rēn). A suprarenal or adrenal body.

supraren'in. Trade name of a preparation of the suprarenal gland; hemostatic and vasoconstrictor applied locally in 1–10000 up to 1–1000 solutions.

suprarenopathy (su-prah-re-nop'a-thy). Any disease of the sprarenal glands.

suprascap'ular. Above the scapula.

suprascle'ral. On the outer side of the sclera noting the suprascleral or perisclerotic lymph-space between the sclera and Tenon's capsule, or fascia bulbi.

suprasep'tal. Above any septum.

supraspi'nal. Above the spinal column or any spine.

supraspina'lis. See under *musculus*.

supraspina'tus. See under *musculus*.

supraspi'nous. Above any spine, especially above one or more of the vertebral spines or the spine of the scapula.

suprastape'dial. Above the stapes.

supraster'nal [L. *supra*, above, + *sternum*.] Above the sternum; episternal.*

suprasyl'vian. Above the fissure of Sylvius.

suprasymphysary (su-prah-sim-phiz'ă-rĭ). Above the symphysis pubis

supratem'poral. Supertemporal.

suprathoracic (su-prah-tho-ras'ik). Above or in the upper part of the thorax.

supraton'sillar. Above the tonsil, noting a recess above and slightly back of the tonsil.

supratroch'lear (su-prah-trok'le-ar). Above a trochlea, especially the trochlea of the humerus

supratur'binal. The fourth turbinated body concha of Santorini, concha nasalis suprema [BNA].

supratympan'ic. Above the tympanum.

supravaginal (su-prah-vaj'in-al). Above the vagina, or above any sheath.

supravital staining (su''prŭ-vi'tul stā'ning.) A very thin layer of a concentrated alcoholic solution of a stain is put on the object glass and over it is placed a cover glass having in its center a small drop of freshly drawn blood; used in the examination for reticulocytes.

su'ra [L.] Calf of the leg.

su'ral. Relating to the calf of the leg.

suralimenta'tion [Fr. *sur;* L. *super*, above.] Superalimentation.

surcingle (sur'sing-gl) [L. *super*, over, + *cingulum*, belt.] The posterior narrowing part of the nucleus caudatus, cauda striati.

sur'dity [L. *surditas*.] Deafness.

sur'domute. 1. Deaf and dumb. 2. A deafmute.

surexcita'tion [Fr. *sur;* L. *super*, above.] Superexcitation.

sur'face [F.] The outer part of any solid; see *facies*. **s. ten'sion,** see under *tension*.

surfeit (sur'fit) [Fr. *surfait;* L *super*, above, + *facere*, to make.] Urticaria in the horse.

surgeon (sur'jun) [G. *cheirourgos;* L. *chirurgus*.] 1. A medical practitioner who performs operations or treats external diseases or those amenable to operative measures. 2. In England, formerly a general practitioner, one without a degree of M.D., but with the license of the Royal College of Surgeons. **acting assist'ant s.,** a non-commissioned surgeon in one of the public services who has the duties of an assistant surgeon, but is not in line of promotion. **assist'ant s.,** a member of the junior grade of surgeons in one of the public services, a newly appointed member of the medical corps. **house s.,** the chief among the surgical internes in a hospital. **passed assist'ant s.,** an assistant s. in one of the public services who has passed the examination entitling him to the rank of surgeon when a vacancy occurs.

sur'geon-apoth'ecary. In England, a general practitioner who has not the M. D. degree, but has the license of the Royal College of Surgeons and the Apothecaries Hall.

sur'geon-dent'ist. A dental surgeon, a dentist.

sur'geon gen'eral. The chief medical officer in the U. S. Army, Navy, or Public Health Service. In other armies any member of the medical corps who has the rank of general, not necessarily the chief medical officer.

surgery (sur'jer-ĭ) [L. *chirurgia;* G. *cheir*, hand, + *ergon*, work.] The branch of medicine which has to do with external diseases (those of the skin excepted) and all other diseases and accidents amenable to operative or manual treatment. **dental s.,** dentistry. **major s.,** operative surgery in which the operation itself is hazardous, as in amputation above the ankle or wrist, abdominal and cerebral surgery, the removal of large tumors, etc. **minor s.,** surgery which has to do with slight and not hazardous operations, the application of splints, bandages, etc. **orific'ial s.,** see under *orificial*. **orthope'dic s.,** the branch of surgery which embraces the treatment of deformities and of chronic joint diseases. **plastic s.,** this branch of operative surgery which has to do with the repair of defects, the results of loss of tissue, of extensive cicatrices, etc., by direct union of parts, by grafting, the transfer of tissue from one part to another, etc. **railway s.,** treatment of injuries resulting from railways, including also the sanitation of cars and of stations, the ocular and physical examination of engineers and other employees, etc. **vet'erinary s.,** medicine and surgery dealing with the diseases and injuries of the lower animals.

sur'gical. Relating to surgery. **s. anatomy, s. kidney, s. pathology,** etc., see the nouns. **s. home,** a private hospital for the special care of surgical cases.

surra (soor'rah) [East Indian name.] A disease of horses, mules, and cattle in Mauritius, Africa, Southern Asia, and the Philippines, caused by the presence in the blood of *Trypanosoma evansi*, infection probably occurring through the agency of a biting fly, a species of *Stomoxys*, or of *Tabanus*, or

both. The symptoms are anemia, ecchymoses, edema, and emaciation; the disease is almost invariably fatal.

surrenal (sûr-re'nal). Suprarenal.

surr'ogate [L. *surrogare*, to substitute; *sub*, under, + *rogare*, to ask.] A substitute.

sursa'nure [Fr.; L. *super*, over, + *sanus*, healthy.] A superficially healed ulcer, with pus beneath the surface.

sursumduc'tion [L. *sursum*, upward, + *ducere*, to draw.] A drawing upward, specifically the moving upward of one eye independently of its fellow.

sursumvergence (sur-sum-vur'jens) [L. *sursum*, upward, + *vergere*, to bend.] An upward turning; specifically upward movement of the eyeballs.

sursumversion (sur-sum-vur'shun) [L. *sursum*, upward, + *vertere*, to turn.] The act of moving the eyes upward.

sus'citate [L. *sub*, under, + *citare*, to excite.] To stimulate, to arouse to increased activity.

suscita'tion. Excitation.

susotoxin (sus"o toks'in) [L. *sus*, hog.] A toxin extracted from a pure culture of the hog-cholera bacillus.

Suspec'ta. A former division or class of serpents concerning which it was not definitely known whether they were venomous or not; see *Venenosa*.

suspen'sion [L. *suspensio; sub*, under, + *pendere*, to hang.] 1. A temporary interruption of any function. 2. A hanging from a support, as employed in the treatment of spinal curvatures or during the application of a plaster jacket. 3. The diffusion through a liquid of a solid in finely divided particles; this differs from a solution* in that the particles retain their solid form and are not liquefied, consequently in time they may sink to the bottom of the vessel as a precipitate or sediment; a perfect solution forms no precipitate so long as evaporation of the solvent is prevented; it differs from a dispersion in that in the latter the particles are held in a condition between suspension and solution by virtue of their electrical charge, surface energy, kinetic energy, and the adsorbed ions of electrolytes, and neither are so coarse as to separate from their medium and form a deposit, nor have so lost their identity as to be incorporated in a homogeneous mass with the fluid medium. **Sayre's s.**, see *Sayre*. **s. stability** a very slow sedimentation rate.*

suspensoid (sus-pen'soyd) [*suspension* + G. *eidos*, resemblance.] Suspension colloid; a colloid solution in which the disperse particles are solid and lyophobe or hydrophobe, and are therefore sharply demarcated from the fluid in which they are suspended; distinguished from *emulsoid*.

suspen'sory. 1. Suspending, supporting, noting a ligament or other structure the office of which is to keep an organ or other part in place. 2. Noting a bandage applied as a support to a dependent part, such as the scrotum or a pendulous breast.

sustentac'ular. Relating to a sustentaculum, supporting.

sustentac'ulum [L. a prop.] A structure which serves as a stay or support to another. **s. li'enis,** ligamentum phrenicocolicum, on which rests the base of the spleen. **s. ta'li,** support of the anklebone; a bracket-like lateral projection from the inner surface of the os calcis, the upper surface of which presents a facet for articulation with the astragalus.

susur'rus [L.] Murmur.

sutura (soo-too'rah) [L.] Suture, in any sense, especially a cranial or anatomical suture.

s. corona'lis [BNA], coronal suture, line of union of the frontal with the two parietal bones.

s. denta'ta, dentate suture, one which presents tooth-like projections on its interlocking margins, as the interparietal.

s. ethmoid"eomaxilla'ris [BNA], ethmoideomaxillary suture, line of apposition of the orbital surface of the body of the maxilla with the lamina papyracea (os planum) of the ethmoid bone.

s. fronta'lis [BNA], frontal suture, remains of the s. metopica, sometimes discernible for a short distance above the nasofrontal suture.

s. frontoethmoid'ea, s. frontoethmoida'lis [BNA] frontoethmoidal suture, line of union between the cribriform plate of the ethmoid and the orbital plate and posterior margin of the nasal process of the frontal bone.

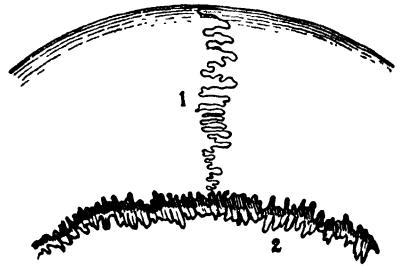
s. fron"tolacrima'lis [BNA], frontolacrymal suture, line of union between the upper margin of the lacrymal and the orbital plate of the frontal.

s. frontomaxilla'ris [BNA], frontomaxillary suture-articulation of the nasal process of the maxilla with the frontal bone.

s. harmo'nia, harmonic suture, a simple firm apposition of two contiguous bones having smooth or roughened edges, as the palatal portion of the intermaxillary.

s. incisi'va [BNA], s. premaxillaris.

s. infraorbita'lis [BNA], infraorbital suture, an inconstant suture sometimes found running from the infraorbital foramen, on the anterior surface of the maxilla, to the infraorbital groove in the floor of the orbit, separating the orbital plate of the malar process from the rest of the maxilla.



CRANIAL SUTURES.
1, Sutura dentata (the sagittal suture); 2, sutura limbosa (the coronal suture).

s. intermaxilla'ris [BNA], intermaxillary suture, the line of union of the two superior maxillary bones.

s. internasa'lis [BNA], internasal suture, line of union between the two nasal bones.

s. interparieta'lis, s sagittalis

s. lacrimoconcha'lis [BNA], lacrymoconchal suture, line of union of the lacrymal with the inferior turbinated bone.

s. lacrimomaxilla'ris [BNA], lacrymomaxillary suture, line of union, on the inner wall of the orbit, between the anterior and inferior margin of the lacrymal bone and the maxilla.

s. lambdoid'ea [BNA], lambdoidal suture, line of union between the occipital and two parietal bones.

s. limbo'sa, limbous or bevelled suture, one in which the opposing margins fit by parallel ridges.

s. mendo'sa, a suture separating the upper part of the squamous portion from the remainder of the occipital bone; it usually closes during the first year of life, but sometimes persists, bounding one side of the interparietal bone.

s. metop'ica, metopic suture, line of union between the two halves of the frontal bone, obliterated at the fifth or sixth year.

s. nasofronta'lis [BNA], nasofrontal suture, line of union of the frontal and of the two nasal bones.

s. nasomaxilla'ris [BNA], nasomaxillary suture, line of union of the lateral margin of the nasal bone with the frontal process of the maxilla.

s. notha (no'tah), false suture, one the opposing margins of which are smooth or present only a few ill-defined projections.

s. occipitomastoid'ea [BNA], occipitomastoid suture, continuation of the lambdoid suture between the posterior border of the mastoid portion of the temporal bone and the occipital.

s. palati'na media'na [BNA], median or middle palatine suture, line of union between the horizontal plates of the palate bones, continuing the intermaxillary suture posteriorly.

s. palati'na transver'sa [BNA], transverse palatine suture, line of union of the palatal processes of the maxillæ with the horizontal plates of the palate bones.

s. palatoethmoid'ea, s. palatoethmoida'lis [BNA], palatoethmoidal suture, line of junction of the orbital process of the palate bone and the lamina papyracea, os planum, of the ethmoid.

s. palatomaxilla'ris [BNA], palatomaxillary suture, line of union, in the floor of the orbit, between the orbital process of the palate bone and the orbital surface of the maxilla.

s. pari"etomastoid'ea [BNA], parietomastoid suture, articulation of the posterior inferior angle of the parietal with the mastoid process of the temporal bone.

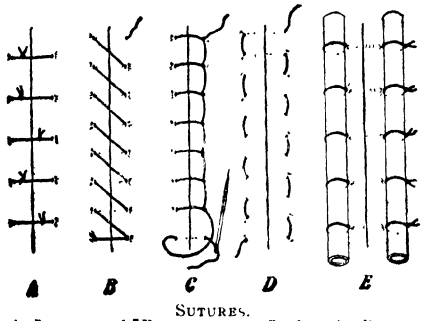
s. petrosquamo'sa, petrosquamous suture, temporal suture, a suture, distinct in early life, uniting the petrous and squamous portions of the temporal bone.

s. premaxilla'ris, premaxillary or incisive suture, an occasional suture running from the anterior palatine foramen in the intermaxillary suture forward and outward on either side to the interval between the canine and lateral incisor teeth; it marks the line of union of the premaxillary (when present) and the maxillary bones.

s. sagitta'lis [BNA], sagittal suture, line of union between the two parietal bones.

s. serra'ta [BNA], serrate suture, one the opposing margins of which present deep saw-like indentations, as the frontal; it resembles a dentate suture, but the indentations are deeper and more irregular.

s sphe"noethmoid'ea, s. sphenoethmoida'lis [BNA], sphenoethmoidal suture, line of union between the crest of the sphenoid bone and the perpendicular plate of the ethmoid.



SUTURES.
A, Interrupted; *B*, continuous; *C*, glover's, *D*, mattress; *E*, quilled.

s. sphenofronta'lis [BNA], sphenofrontal suture, line of union between the orbital plate of the frontal and the two wings of the sphenoid on either side.

s. sphenomaxilla'ris [BNA], sphenomaxillary suture, an inconstant suture between the pterygoid process of the sphenoid bone and the body of the maxilla.

s. spheno-occipitalis, line of union between the sphenoid and the basilar process of the occipital bones.

s. spheno-orbita'lis [BNA], spheno-orbital suture, articulation between the orbital process of the palate bone and the outer surface of the body of the sphenoid.

s. sphenoparieta'lis [BNA], sphenoparietal suture, line of union of the lower border of the parietal with the upper edge of the great wing of the sphenoid.

s. sphenosquamo'sa [BNA], sphenosquamous or sphenosquamosal suture, articulation of the great wing of the sphenoid with the squamous portion of the temporal bone.

s. sphenozygomat'ica [BNA], sphenozygomatic suture, junction of the malar bone and greater wing of the sphenoid.

s. squa"momastoid'ea [BNA], squamomastoid or mastosquamosal suture, line of union of the squamous and mastoid portions of the temporal bone, fused in early life.

s. squa"moparieta'lis, squamoparietal suture, **s. squamosa** (2).

s. squamo'sa [BNA], (1) squamous or scale-like suture, one the opposing margins of which are scale-like and overlapping; (2) specifically, the squamosal or squamoparietal suture, articulation of the parietal with the squamous portion of the temporal bone.

s. ve'ra, true suture, one whose opposing margins present well defined and truly interlocking projections.

s. zygomaticofronta'lis [BNA], zygomaticofrontal suture, line of union between the external angular or zygomatic process of the frontal and the frontal process of the malar bone.

s. zygomaticomaxilla'ris [BNA], zygomaticomaxillary suture, articulation of the malar bone with the zygomatic process of the maxilla.

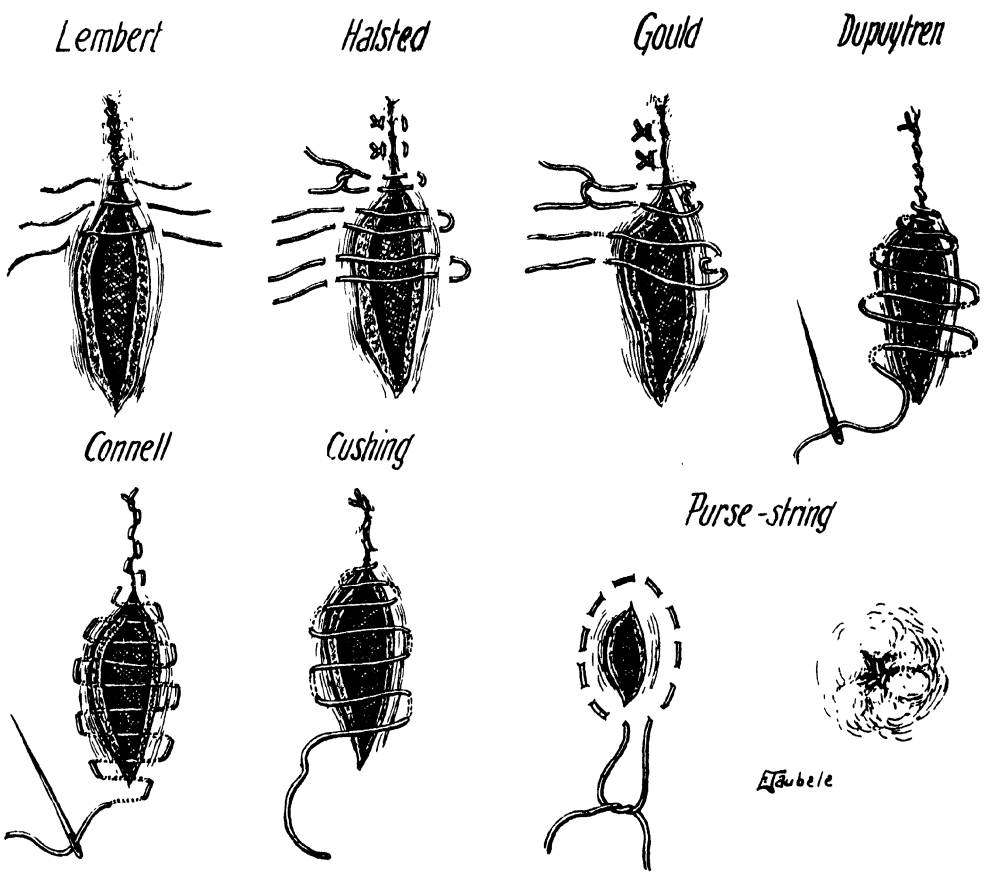
s. zygomaticotempora'lis [BNA], zygomaticotemporal suture, line of junction of the zygomatic process of the temporal and the temporal process of the malar bone.

su'tural. Relating to a suture in any sense. **s. joint,** suture (1). **s. lig'ament,** the fibrous structure uniting the opposed bones forming a cranial suture.

sutura'tion. Sewing, stitching, the application of sutures.

suture (su'chūr) [L. *sutura*, a seam.] 1. Sutura, a synarthrosis between two bones formed in membrane, the uniting medium (which tends to disappear eventually) being a fibrous membrane continuous with the periosteum. 2. The surgical uniting of two surfaces by means of stitches. 3. The material, silk thread, catgut, wire, etc., by means of which the two surfaces are kept in apposition. 4. The seam so formed; a surgical suture. [For the anatomical sutures see *sutura;* for the surgical sutures bearing the names of the surgeons who devised them (Connell, Czerny, Gould, Halsted, Lembert, *et al.*) see the proper names.] **apposition s.,** a s. of the skin only. **approxima'tion s.,** one involving the deep tissues. **buried s.,** a s. of the deeper tissues which is entirely covered when the cutaneous lips of the wound are approximated. **button s.,** one in which the threads are passed through the eyes of a button and then tied; used when there is danger of the threads cutting through the flesh. **coapta'tion s.,** apposition s. **cobbler's s.,** one made with a thread having a needle at each end. **contin'uous s.,** see cut. **false s.,** sutura notha. **figure-of-8 s.,** harelip s. **glover's s.,** a continuous suture in which each stitch is passed through the loop of the preceding one; see cut. **harelip s.,** a pin is passed through the lips of the wound at right angles to the line of incision and a thread is passed over the ends of the pin in the form of a figure-of-8. **implant'ed s.,** a pin is passed through each lip of the wound parallel to the line of incision and the pins are then tied together. **interrupt'ed s.,** see cut. **mattress s.,** see cut. **pin s.,** harelip s. **purse-strings.,** a s. is passed in and out through the skin in a continuous line encircling the wound, and the two ends are then drawn together and tied (see cut). **quilled s.,** one in which the threads are tied over a quil on either side of the line of incision, to prevent tearing out when there is much tension; see cut **quilted s.,** mattress s. **relaxa'tion s.,** one so ar-

TWISTED, FIGURE-OF-8, OR HARELIP SUTURE.



SUTURES

ranged that it may be loosened if the tension of the wound becomes excessive. **rubber s.**, a harelip s. in which a rubber band is slipped over the ends of the pin. **shotted s.**, one in which the ends are fastened by passing through a split shot which is then compressed. **spiral s.**, continuous s. **subcutic'ular s.**, Halsted* s. (2). **tension s.**, relaxation s. **true s.**, sutura vera. **twisted s.**, harelip s. **uninterrupt'ed s.**, continuous s.

suxiphen (suk'sĭ-fen). Trade name of a mixture of sodium monobenzyl succinate, squill, sanguinaria, phenophthalein, and mentholated syrup of tolu, recommended for the relief of coughs in doses of 2 teaspoonfuls after meals and on retiring.

Suzanne's gland (su-zan') [Jean Georges *Suzanne*, French physician, *1859.] A small mucous gland in the floor of the mouth.

svap'nia [Sansk. *svapna*, sleep.] Trade name of a preparation of opium, used in doses of gr. ½–1 (0.03–0.06).

swab (swob). A tuft of cotton, ball of gauze, or the like attached to the end of a stick or wire; used for cleansing cavities, applying remedies to the walls of cavities, or getting a bit of secretion for bacteriological examination. **iodine s.**, see ampullæ iodi.

swage (swāj). 1. A tool used for shaping metal, such as a die and counter-die. 2. To shape by means of a swage

swallow (swol'o) [A.S. *swelgan*.] To pass anything through the fauces, pharynx, and esophagus into the stomach; to perform deglutition.

swamp'-fever. 1. A disease of horses, sometimes called infectious anemia, due to a microorganism and marked by general debility, remittent fever, staggering gait, the voidance of large amounts of urine, progressive anèmia, and loss of flesh; the appetite, however, remains good, as a rule. 2. Malaria.

swamp-itch. 1. Water itch, uncinariasis cutis. 2. Pruritus of the legs occurring in lumbermen.

swarm-cell. Zoogonidium.

swarming (swor'ming) [A. S. *swearm*.] A progressive surface-spreading by the microbes from the edge of the parent colony, a characteristic of some *Proteus* cultures.

swarm-spore. One of a large number of active motile individuals resulting from the sporulation or multiple fission of the parent cell. **ame'boid s.-s.**, amœbula. **flag'ellated s.-s.**, flagellula.

sway-back. Lordosis, or sinking down of the back, in horses.

sweat (swet) [A.S. *swāt*.] 1. Sudor, perspiration, especially sensible perspiration. 2. To perspire.

absence of, anhidrosis, adiaphoresis, adiapneustia, anaphoresis **agent checking secretion**, antisudoral, antisudorific, antihidrotic, anaphoretic, anhidrotic. **agent**

promoting secretion, sudorific, diaphoretic, hidrotic, hydropoietic. **bloody, hematidrosis, hæmathidrosis,** transudation; menidrosis (vicarious menstruation). **colored,** chromidrosis, chromhidrosis; cyanhidrosis (blue); melanidrosis, melanephidrosis (black); melinephidrosis (yellow); galactidrosis (milky). **disease of glands,** hidronosus, hidrocryptosis; hidroadenitis (inflammation). **excessive secretion,** ephidrosis, hyperidrosis, sudoresis, hidropedesis, hidrorrhea, diaphoresis, desudation; bromohydrosis (fetid). **fetid,** bromidrosis, osmidrosis **general,** panhidrosis, panidrosis. **local,** meridrosis **phosphorescent,** phosphoridrosis. **producing,** hidropoietic, hidrotic, hidrophorous, sudorific, sudoriferous, sudoriparous, diaphoretic; diapnoic (moderate). **secretion of,** sudation, perspiration, hidropoiesis, hidrotopoiesia, diaphoresis, hidrosis; hyphidrosis (deficient); diapnoe; transpiration (insensible); paridrosis, hidrodermia-sudatoria (abnormal); chromidrosis (colored); hemi, diaphoresis, hemidrosis (unilateral); meridrosis (local), panhidrosis, panidrosis (general). **suppression,** anhidrosis, anidrosis, hidroschesis, ischidrosis, oligidria, anaphoresis (partial). **urinous,** urhidrosis, uridrosis.

sweat-gland. One of the tubular coil-glands in the corium and subcutaneous connective tissue, secreting sweat; glandula sudoripara.

sweating (swet'ing). 1. Perspiring. 2. Causing profuse perspiration. **bloody s.,** hemathidrosis. **colliq'uative s.,** profuse clammy s. **col'ored s.,** chromhidrosis. **exces'sive s.,** hyperhidrosis **fet'id s.,** bromhidrosis. **phosphores'cent s.,** phosphorhidrosis. **profuse s.,** hidrosis, sudoresis, hyperhidrosis. **scan'ty s.,** anhidrosis

sweat'ing-herb. Eupatorium.

sweating-sick'ness. Miliary* fever (1).

Swediaur's disease'. See *Schwediauer.*

Swedish gymnas'tics. A series of systematized gymnastic exercises without apparatus, employed for the correction of deformities and for other therapeutic measures; Lingism. **S. leech,** *Hirudo medicinalis,* **S. movements,** S. gymnastics.

swee'ny. Wasting of the muscles over the shoulder-blade of a horse, caused by a sprain or by a bruise from an ill-fitting collar

sweet [A.S. *swēte.*] Having a taste like that of sugar. **s. almond,** amygdala dulcis. **s. orange,** aurantium dulce **s. urine,** diabetes, glycosuria.

sweet'bread. The thymus gland (*neck s., throat s.*) or the pancreas (*stomach s. abdominal s.*) of an animal used for food.

sweet-dock. Bistorta.

swell-foot [Ger. *schwellfuss.*] Swelling and redness of the metatarsus, with pain and disability, due to sprain of the ligaments (syndesmitis metatarsea), and frequently detachment of them from the bones, chips of bone being torn off with the rupture The trouble results from jumping or the strain of dancing or long marches, being especially produced, it is said, by the goose-step method of marching practised in the German army.

swell'ing. An enlargement, a protuberance, a tumor. **albu'minous s.,** cloudy* s. **Cal'abar s.,** see *Calabar.* **cloudy s.,** see under *cloudy.* **glassy s.,** amyloid degeneration.* **white s.,** tuberculous arthritis, especially of the knee.

Swieten's liq'uor or **solu'tion** (sve'ten) [Gerard van *Swieten,* Dutch physician, 1700–1772.] A solution of bichloride of mercury 4, chloride of sodium and chloride of ammonium, each 1, water 500.

Swift's disease'. Acrodynia, erythredema, dermatopolyneuritis, erythema* arthriticum epidemicum.

Swift-Ellis meth'od [Homer Fordyce *Swift,* New York physician, *1881; Arthur W. M. *Ellis,* New York physician.] Arsphenaminized-serum method; salvarsanized-serum method; the treatment of cerebrospinal syphilis by the subarachnoid injection of serum taken from the patient half an hour after an intravenous injection of arsphenamine. When the patient's own serum is used, it is sometimes called auto-arsphenaminized, to distinguish it from the arsphenamine-impregnated serum derived from another individual.

swine [A.S. *swīn.*] Hog, pig; a quadruped of the family *Suidæ.* **s. chol'era,** hog* cholera. **s. diphthe'ria,** hog* cholera. **s. erysip'elas,** rouget, a specific, usually fatal infectious disease of swine, resembling a septicemia in its clinical course; there are gastric hemorrhages with enlargement of the spleen and parenchymatous inflammation of other internal organs, and a characteristic eruption of red spots, later becoming brown, on the neck, breast, and abdomen; the pathogenic microorganism has been thought to be *Bacillus rhusiopathiæ suis.* **s. fat,** lard, adeps.* **s. fever,** hog* cholera. **s. pest,** (1) s. plague; (2) hog* cholera. **s. plague,** an infectious disease of swine caused by *Bacillus suisepticus;* the pectoral form is characterized by pleurisy with necrosis of portions of the pulmonary tissue; another, the septicemic, form is marked by edema and redness of the skin, edema of the lungs, with fever. **s. pox,** see *swinepox.*

swinepox. 1. A disease of swine marked by circumscribed phlegmons on the legs. 2 A form of chickenpox in which the vesicles are not umbilicated

swinn'y. Sweeny.

swoon. A faint, syncope.

syco'ma [G *sykōma; sykon,* fig.] A pendulous fig-like growth; a large soft wart.

sy'cose. Saccharin, benz sulphinidum *

syco'siform. Resembling sycosis.

sycosis (si-ko'sis) [G. a fungous fig-like tumor; *sykon,* fig.] 1. Mentagra, a pustular folliculitis of the beard. 2. Hahnemann's term for the constitutional effects of the gonorrheal virus. **chron'ic coccogen'ic s.,** barber's itch, s. vulgaris. **lu'poid s.,** a papular or pustular inflammation of the hair-follicles of the beard, followed by punctuate scarring and loss of the hair; ulerythema sycosiforme. **non-parasit'ic s.,** s. vulgaris **s. contagio'sa,** tinea* sycosis. **s. frambœsifor'mis,** s. nuchæ necrotisans. **s. nu'chæ necroti'sans,** a pustular folliculitis, occurring at the scalp line at the back of the neck, resulting in permanent scarring. **s. staphylog'enes,** s. vulgaris. **s. vulga'ris,** barber's itch, chronic coccogenic s. **tin'ea s.,** parasitic s., ringworm of the beard, see under *tinea.*

Syd'enham's chore'a [Thomas *Sydenham,* English physician, 1624–1689.] See *chorea.* **S.'s lau'danum,** vinum* opii.

syllab'ic speech. Scanning* speech.

syll'able-stumbling. A form of stuttering in which the patient halts before certain syllables which efinds difficult to enunciate.

syll'abus [G. *syllabos; syllambanō,* I collect.] A list of the titles of a lecture course, or an abstract of the main points in a lecture or a book.

syllepsiol'ogy [G. *syllēpsis,* pregnancy, + *-logia.*] The science which treats of conception and of the period of pregnancy.

syllep'sis. [G.] Pregnancy.

Sylves'ter's meth'od. See *Silvester.*

Syl'vian. Relating to Franciscus or Jacobus Sylvius* or to any of the structures described by either of them. **S. an'gle,** the angle formed by the S. line and a line perpendicular to the horizontal plane tangential to the highest point of the hemisphere. **S. aq'ueduct,** aquæductus cerebri.

S. ar'tery, arteria cerebri media. **S. fis'sure,** fissura cerebri lateralis. **S. fos'sa,** fossa cerebri lateralis. **S. gray matter,** stratum griseum centrale **S. line,** the line of the posterior limb of the s. fissure **S. os'sicle,** processus lenticularis. **S. point,** the point of division of the s. fissure into its anterior, ascending, and posterior limbs. **S. valley,** vallecula Sylvii. **S. valve,** Eustachian valve, valvula* venæ cavæ inferioris. **S. vein,** vena cerebri media. **S. ven'tricle,** fifth ventricle of the brain, cavum septi pellucidi.

syl'viduct. Sylvian aqueduct, aquæductus* cerebri.

Syl'vius [Franciscus *Sylvius*, Latinized form of François Dubois (or de le Boe), anatomist of Leyden, 1614–1672.] All the cerebral structures defined under *Sylvian* were described by or named after this Sylvius.

Syl'vius [Jacobus *Sylvius*, Latinized form of Jacques Dubois, French anatomist, 1478–1555.] The Sylvian* valve, Sylvian* ossicle, and caro* quadrata Sylvii were described by this Sylvius

sym'bion [G. *syn*, with, + *bios*, life, mode of living.] An organism associated with another in symbiosis; a commensal.

symbio'sis [G. *syn*, with, + *bios*, life, mode of living.] The mutually advantageous association of two or more organisms; commensalism; the growth together of the cholera bacillus, an ameba, and the lepra bacillus, although the latter cannot be cultivated alone, is an example of symbiosis

symbiote (sim'bi-ōt) [G. *syn*, with, + *bios*, life.] 1. Portier's name for one of the alleged intracellular organisms supposed to be essential in the process of metabolism, and possibly the same as vitamins. 2. Symbion.

symbiot'ic. Relating to symbiosis. **s. fermenta'tion phenom'enon,** "two organisms, neither of which alone produces gas-fermentation in certain carbohydrates, may do so when living in symbiosis or when artificially mixed" (Castellani).

symbleph'aron [G. *syn*, together, + *blepharon*, eyelid.] Adhesion of one or both lids to the eyeball **ante'rior s.,** union between the lid and eyeball by a fibrous band not involving the fornix. **complete' s.,** adhesion involving the entire surface between the lid and eyeball. **par'tial s.,** anterior or posterior s., incomplete s. **poste'rior s.,** adhesion between the eyeball and lid involving the fornix. **total s.,** complete s.

symblepharopterygium (sim-blef"ar-o-ter-ij'ĭ-um) [] Union of the lid to the eyeball through the intervention of a pterygium-like growth.

sym'bol [G. *symbolon̄*, a mark or sign.] 1. A conventional sign serving as an abbreviation, such as the ℞ at the beginning of a prescription. 2. In chemistry an abbreviation (the initial and sometimes one other letter) of the Latin name of an element, expressing, in chemical formulæ, one atom of that element.

symbo'lia [G. *symbolon*, a mark or sign.] The power of recognizing the form and nature of an object by touch.

symbolism (sim'bo-lizm). 1. In psychoanalysis, a term expressing the manner of unconscious or subconscious thinking in a form in which it would be unrecognized by the consciousness. 2. A mental state in which everything that happens is regarded by the individual as symbolic of his own thoughts.

symbolopho'bia [G. *symbolon*, mark or sign + *phobos*, fear.] A morbid fear of having a symbolical meaning attached to one's acts or words.

Syme's opera'tion [James *Syme*, Scotch surgeon, 1799–1890.] 1. Amputation of the foot at the ankle-joint, the malleoli being sawn off, and a flap being made with the soft parts of the heel; see cut under *amputation*. 2. Excision of the tongue. 3 External urethrotomy.

sym'elus. Symmelus.

Sy'mington's anococcyg'eal body [Johnson *Symington*, Scotch anatomist, 1851–1924.] A small mass of connective tissue and muscle between the coccyx and the anal canal.

symme'lia [G. *syn*, with, + *melos*, limb.] Sirenomelia, sympodia.*

symm'elus. Sirenomelus, sympus.

symmet'ric, symmet'rical. Relating to or marked by symmetry. **s. asphyx'ia, s. gan'grene,** Raynaud's* disease.

symmetromania (sim"ĕ-tro-ma'nĭ-ah) [G. *symmetria*, symmetry, + *mania*, madness.] An irresistible impulse to perform symmetrical actions such as moving both arms when motion of one only is intended.

symm'etry [G. *syn*, with, + *metron*, measure.] Equality or correspondence in form of parts distributed around a center or an axis, at the two extremities or poles, or on the two opposite sides of any body. **inverse' s.,** correspondence of the right or left side of an asymmetrical individual to the left or right side of another.

sympathec'tomy, sympathetec'tomy [*sympathetic* + G. *ektomē*, excision.] Excision of a segment of a sympathetic nerve or of one or more sympathetic ganglia. **periarte'rial s.,** arterial decortication, removal of the arterial sheath containing the sympathetic nerve fibers; Leriche's operation.

sympathet'ic [G. *syn*, with, + *pathos*, suffering.] 1. Relating to or exhibiting sympathy. 2. Noting the nerves of organic life. **s. nervous system,** systema nervorum sympathicum [BNA]. **s. ophthal'mia,** the occurrence of inflammation in one eye following disease in the other, not due to any apparent or direct contagion.

sympathet"icoparalyt'ic. Noting paralysis of a sympathetic nerve.

sympathe'ticotonia (sim-pă-thet"ĭ-ko-to'nĭ-ah). Sympathicotonia.

sympathet"icoton'ic. Sympathicotonic.

sympathetoblast (sim-pă-thet'o-blast) [*sympathetic*, ganglion + G. *blastos*, sprout.] One of the primitive cells derived from the sympathetic ganglia which, with the pheochromoblasts,* enter into the formation of the medulla of the adrenal gland.

sympath'ic. Sympathetic.

sympathicec'tomy. Sympathectomy.

sympathiconeuritis (sim-path'ĭ-ko-nu-ri'(re')tis). Inflammation of the sympathetic nerves.

sympathicopathy (sim-path-ĭ-kop'ă-thĭ) [L. *sympathicus*, sympathetic, + G. *pathos*, suffering.] A disease resulting from disordered action of the sympathetic nervous system.

sympathicotonia (sim-path"ĭ-ko-to'nĭ-ah). A condition in which there is increased tonus of the sympathetic system and a marked tendency to vascular spasm and high blood pressure; opposed to *vagotonia.**

sympathicotonic (sim-path"ĭ-ko-ton'ik). Relating to or characterized by sympathicotonia, *i.e.* increased tone in the arteries or vasoconstriction caused by action of the sympathetic nervous system.

sympath'icotrip"sy [*sympathicus*, sympathetic, + G. *tripsis*, a rubbing.] Operation of crushing the superior cervical ganglion of the sympathetic.

sympathicotropic (sim-path″ĭ-ko-trop'ik) [G. *tropikos*, from, *tropē*, a turning.] Having a special affinity for the sympathetic nerve.

sympath'icus. The sympathetic nervous system, systema* nervorum sympathicum.

sympathin (sim'path-in). An assumed hormone excreted by smooth muscular tissue which causes rapid heart action.

sym'pathism [G. *sympatheia*, sympathy.] Suggestibility.

sym'pathizer. An eye affected with sympathetic ophthalmia.

sym'pathy [G. *sympatheia; syn*, with, + *pathos*, suffering.] 1. The mutual relation, physiological or pathological, between two organs, systems, or parts of the body. 2. Mental contagion, as seen in the spread of chorea or other nervous disease through a school, the yawning induced by seeing another person yawn, etc.

symperitoneal (sim-per-ĭ-to-ne'al). Relating to the surgical induction of adhesion between two portions of the peritoneum, as in Talma's* operation.

sympex'ion [G. *sympēxis*, concretion.] A concretion of nitrogenous matter in the seminal vesicles.

sympexis (sim-pek'sis) [G. concretion.] A term proposed by Heidenhain to denote the deposition of red blood-cells according to the laws of surface tension.

symphalangism (sim-fal'an-jizm) [G. *syn*, with, + *phalanx* + *-ism*.] 1. Syndactylism. 2. Ankylosis of the finger- or toe-joints.

sym″phoricar'pus [G. *symphoreō*, I bear together, + *karpos*, fruit.] Snowberry, waxberry, a plant of the elderberry family reputed to have diuretic properties.

sym'phorol. A substance made by heating chlorocaffeine or bromocaffeine with anhydrous lithium, sodium, or strontium sulphite, the resultant being a white soluble powder, known as *symphorol L*, *Na*, or *Sr*, (or lithium, sodium, or strontium caffeinesulphonate), according to the base; it is diuretic and recommended in fatty heart, renal diseases, and obesity in doses of gr. 10–20 (0.6–1.3).

symphyocephalus (sim″fi-o-sef'al-us) [G. *symphyēs*, grown together, + *kephalē*, head.] Syncephalus,* monocephalus.

symphyseal (sim-fiz'e-al). Relating to a symphysis.

symphyseorrhaphy (sim-fiz-e-or'ră-fĭ) [G. *symphysis* + *rhaphē*, suture.] The fastening together of the parts of a divided symphysis.

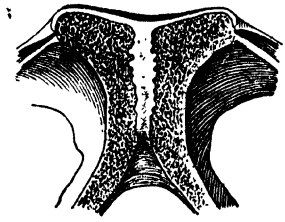
symphyseotome (sim-fiz'e-o-tōm) [G. *symphysis* + *tomē*, incision.] An instrument for use in symphyseotomy.

symphyseotomy (sim-fiz-e-ot'o-mĭ) [*symphysis*(*symphyse-*) + G. *tomē*, cutting.] The operation of cutting through the symphysis pubis in order to enlarge the pelvic diameters.

symphys'ic. Relating to a symphysis, symphyseal; grown together, fused.

symphysion (sim-fiz'ĭ-on). A craniometric point, the most anterior point of the alveolar process of the mandible.

symphysis, gen. *symphys'eos* (sim'fi-sis) [G. a growing together.] 1. A form of synarthrosis (mixed synarthrosis) in which union between two bones is effected by means of fibrocartilage. 2. A union, meeting point, or commissure of any two structures. 3. A pathological adhesion or growing together. **car'diac s.**, adhesion between the parietal and visceral layers of the pericardium. **s. mandib'ulæ**, a vertical ridge in the center of the lower jaw, indicating the line of union of the two parts of which the bone is composed at birth. **s. os'sium pu'bis** [BNA], the line of union of the two pubic bones in the middle line of the pelvis anteriorly. **s. sacrococcyge'a** [BNA], the articulation of the coccyx with the sacrum.



SYMPHYSIS.

symphysodactyl'ia [G. *symphysis*, fusion, + *daktylos*, finger.] Syndactylia, syndactylism, syndactyly.

sym'phytum [G. *symphyton*.] Comfrey, bruisewort, slippery root; the leaves and root of *Symphytum officinale;* employed as a vulnerary and as a demulcent and astringent in diarrhea and bronchitis.

Symplocar'pus fœt'idus. Dracontium.*

sympo'dial. Relating to, or characterized by, a sympodium.

sympo'dium [G *syn*, together, + *pous*(*pod*), foot.] In botany, a false axis, an apparently continuous stem made up of successive branches from preceding stems which are deflected from the axis at the point of branching.

symp'tom [G. *symptōma*, *syn*, with, + *ptōma*(*piptō*), fall.] Any morbid phenomenon or departure from the normal in function, appearance, or sensation, experienced by the patient and indicative of disease. For the various symptoms and varieties of symptoms, see below and also under *phenomenon*, *reflex*, *sign*, and *syndrome*. **ab'stinence s.**, withdrawal s. **acciden'tal s.**, any morbid phenomenon occurring in the course of a disease, but having no relation with it. **access'ory s., ass'ident s.**, one which usually but not always accompanies a certain disease; distinguished from a pathognomonic s. **characteris'tic s.**, in homeopathy, a s. peculiar to or specially characteristic or pathognomonic of any drug. **concom'itant s.**, accessory s. **consec'utive s.**, one that appears in the stage of decline or during convalescence, having, however, no necessary connection with the original disease; an accidental sequel. **constitu'tional s.**, a symptom indicating that the disease has become general, the toxins or other materies morbi being present in the blood. **dissocia'tion s.**, see *dissociation*. **drug s.**, in homeopathy, one of the unusual sensations or deviations from normal health experienced by a person who is proving a drug; it offers an indication, according to the doctrine of similars, for the therapeutic employment of the drug. **equiv'ocal s.**, one which points definitely to no special disease, being associated with any one of a number of morbid states. **esophagosal'ivary s.**, an excessive secretion of saliva occurring in certain cases of cancer of the esophagus. **guiding s.**, characteristic s. **induced' s.**, one excited by a drug, exercise, or other means—often intentionally for diagnostic purposes. **keynote s.**, characteristic s. **local s.**, one of limited extent caused by disease of a particular organ or part. **lo'calizing s.**, one indicating clearly the seat of the morbid process. **objec'tive s.**, one which is evident to the observer. **pathogen'ic s.**, in homeopathy, one observed in the proving of a drug, and also one of the symptoms of poisoning by a drug. **pathognomon'ic s.**, one which, when present, points unmistakably

to a certain definite disease. **press'ure s.,** paralysis, spasm, or other nervous s., caused by pressure upon the spinal cord or brain. **reflex s.,** a disturbance of sensation or function in an organ or part more or less remote from the morbid condition giving rise to it, as vertigo or headache due to eyestrain. **signal s.,** the aura of epilepsy or other initial symptom of a convulsive or paralytic attack. **subjec'tive s.,** one apparent only to the patient himself. **sympathet'ic s.,** reflex s. **withdraw'al symp'toms,** abstinence symptoms, a group of morbid symptoms, predominently erethistic, occurring in a narcotic addict who is deprived of his accustomed dose of the drug.

symptomat'ic. Relating to a symptom or symptoms, indicative. **s. anthrax,** see *anthrax.*

symp"tomatol'ogy [G. *symptōma(symptōmat-),* symptom, + *-logy.*] 1. Semiology, the science of the symptoms of disease, their production, and the indications they furnish. 2. The aggregate of symptoms of a disease.

symptomatolytic (simp"to-mat"o-lit'ik) [G. *symptōma,* symptom, + *lytikos,* able to dissolve.] Removing symptoms.

symptom-com'plex. Complex (1), syndrome.*

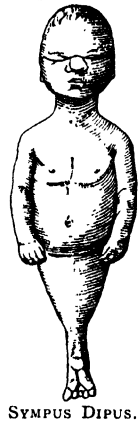
symptômes complices (samp-tōm' koṅ-plēs') [F. accomplice or assisting symptoms.] In Roentgenography of the gastroenteric tract, a group of symptoms, recognized in part by the use of the Roentgen ray, usually by fluoroscopic examination, which help to establish the diagnosis.

symp'tom-group. Symptom-complex, syndrome.*

symptomolytic (simp-to-mo-lit'-ik). Symptomatolytic.

sympto'sis [G. *syn,* together, + *ptōsis,* a falling.] Marasmus; atrophy, either local or general.

sympus (sim'poos) [G. *syn,* together, + *pous,* foot.] Sirenomelus, a monster with lower extremities fused. **s. a'pus, s. di'pus, s. mon'opus,** a sirenomelus without feet, with both feet more or less distinct, and with but one foot respectively.



SYMPUS DIPUS.

Syms' trac'tor (simz) [Parker *Syms,* New York surgeon, 1860–1933.] A collapsible rubber bag attached to the extremity of a tube; the tube is introduced into the bladder through the perineal wound and the bag is inflated; traction now made brings the enlarged prostate into the wound where it is readily accessible.

syn- [G. *syn,* with, together.] A prefix to words of Greek derivation, indicating together, with, joined; it corresponds to the Latin *con-*.

synadelphus (sin-ă-del'fus) [G. *syn,* together, + *adelphos,* brother.] A twin monster with single head and trunk, but with four arms and four legs.

synæsthe'sia. Synesthesia.

synalgia (sin-al'jĭ-ah) [G. *syn,* with, + *algos,* pain.] Reflex or referred pain; pain felt at a part more or less remote from the seat of the causative lesion.

synal'gic. Relating to or marked by reflex or referred pain.

syn"anastomo'sis [G. *syn,* together.] An anastomosis between several blood-vessels.

synanche (sin-an'ke) [G. sorethroat; *syn,* together, + *anchō,* I choke.] Cynanche.

synan'them, synanthe'ma [G. *syn,* together, + *antheō,* I blossom.] An exanthem consisting of several different forms of eruption.

synaphymenitis (sin-ă-fi-me-ni'(ne')tis) [G. *synaptos,* joined, + *hymēn,* membrane, + *-itis.*] Conjunctivitis.

synapse, synapsis (sin-aps', sin-ap'sis) [G. a binding together.] 1. The gathering of the chromatin into a tangled skein at one side of the nucleus during the prophase of heterotypical division of the nucleus of a sex-cell, forming the union of chromosomes in pairs, thereby effecting the reduction of chromosomes. 2. The close approximation of, or contact between, the processes of different neurons.

synaptase (sin-ap'tāz) [G. *synaptō,* I join (because forming as it were a union between amygdalin and water).] Emulsin.

synap'tic. Relating to synapsis. **s. phase,** synapsis (1).

synarthro'dia. Synarthrosis.

synarthro'dial. Relating to synarthrosis; noting an immovable articulation between two bones.

synarthrophysis (sin-ar"thro-fi'sis) [G. *syn,* together, + *arthron,* joint, + *physis,* growth.] The process of ankylosis.

synarthro'sis, pl. *synarthro'ses* [G. *syn,* together, + *arthrōsis,* articulation.] A fixed articulation; union of two bones without an intervening joint cavity and without the possibility of movement of one on the other. The chief varieties of synarthrosis are known as *synchondrosis, syndesmosis* (suture), and *symphysis,* or mixed synarthrosis. *Gomphosis* and *schindylesis* are also varieties of synarthrosis.

synathre'sis, synathroe'sis [G. *synathroisis,* a gathering together.] 1. Congestion. 2. Bier's method of induced hyperemia.

syncaryon (sin-kar'ĭ-on) [G. *syn,* together, + *karyon,* kernel (nucleus).] The nucleus formed by the fusion of the two pronuclei in caryogamy.

syncephalus (sin-sef'ă-lus) [G. *syn,* together, + *kephalē,* head.] A double monster having a single head with two bodies; symphyocephalus, monocephalus: cf. *craniopagus, janiceps.*

synchilia (sin-ki'lĭ-ah) [G. *syn,* together, + *cheilos,* lip.] A more or less complete adhesion of the lips, atresia of the mouth.

synchiria (sin-ki'rĭ-ah) [G. *syn,* together, + *cheir,* hand.] A form of dyschiria in which the subject refers a stimulus applied to one side of the body to both sides.

synchondroseotomy (sin-kon-dro-se-ot'o-mĭ) [*synchondrosis* + G. *tomē,* cutting.] Operation of cutting through a synchondrosis; specifically Trendelenburg's operation, cutting through the sacroiliac ligaments and forcibly closing the arch of the pubes in the treatment of exstrophy of the bladder.

synchondrosis, pl. *synchrondro'ses* (sin-kon-dro'sis) [G. *syn,* together, + *chondros,* cartilage, + *-ōsis.*] A synarthrosis between two bones formed in cartilage, the uniting medium being hyaline cartilage which tends to disappear with the advance of ossification. **s. arycornicula'ta** [BNA], the junction of the cartilage of Santorini with the arytenoid. **s. epiphy'seos,** epiphyseal line, a layer of unossified cartilage uniting the epiphysis and the diaphysis or shaft of a long bone, disappearing at maturity, when the two parts become one bone. **s. intersphenoida'lis** [BNA], a layer of cartilage separating the two halves of the body of the sphenoid in the newborn. **s. intraoccipita'lis ante'rior** [BNA], cartilaginous union in the new-born between the

lateral and the basilar portions of the occipital bone. **s. intraoccipita'lis poste'rior** [BNA], cartilaginous union between the squama and the lateral portions of the occipital. **s. petrooccipita'lis** [BNA], fibrocartilage filling the petro-occipital fissure. **s. sphenooccipita'lis** [BNA], cartilaginous union in the new-born between the body of the sphenoid and the basilar portion of the occipital. **s. sphenopetro'sa** [BNA], sphenopetrous or sphenopetrosal s., fibrocartilage filling the sphenopetrosal fissure. **s. sterna'lis** [BNA], sternal synchondrosis, the cartilaginous line of junction between the manubrium and body of the sternum.

synchondrotomy (sin-kon-drot'o-mĭ). Symphyseotomy.

synchopexia (sin-ko-peks'ĭ-ah). Tachycardia.

synchronia (sin-kro'nĭ-ă) [G. *syn*, with, + *chronos*, time.] 1. Synchronism. 2. The origin, development, involution, or functioning of tissues or organs at the usual time for such an event; opposed to *heterochronia*.

synchronism (sin'kro-nizm) [G. *syn*, together, + *chronos*, time.] Occurrence of two or more events at the same time; the condition of being simultaneous.

synchronous (sin'kro-nus) [G. *syn*, together, + *chronos*, time.] Occurring simultaneously.

synchysis (sin'ki-sis) [G. a mixing together.] A fluid condition of the vitreous humor of the eye. **s. scintill'ans**, an appearance of glistening spots in the eye, due usually to cholesterin crystals floating in an abnormally fluid vitreous.

Synchytrium (sin-ki'trĭ-um). A genus of microscopic fungi parasitic on certain food-plants, such as cabbages, potatoes, and strawberries.

syncinesis (sin-sin-e'sis) [G. *syn*, with, + *kinēsis*, movement.] Synkinesis, involuntary movement accompanying a voluntary one; as the movement of a closed eye following that of the uncovered one, or the movement occurring in a paralyzed muscle accompanying motion in another part.

syncinet'ic. Relating to or marked by syncinesis.

syn'clinal [G. *syn*, together, + *klinō*, I incline.] Noting two structures inclined one toward the other.

synclit'ic. Relating to or marked by synclitism.

synclitism (sin'klĭ-tizm) [G. *syn*, together, + *klisis*, an inclining.] A condition of parallelism between the planes of the fetal head and of the pelvis, respectively.

syn'clonus [G. *syn*, together, + *klonos*, a tumult.] Clonic spasm or tremor of several muscles.

syncœlom (sin-se'lom) [G. *syn*, together, + *cœlom*.] The aggregate of perivisceral spaces—the pericardial, pleural, and peritoneal cavities and the tunicæ vaginales.

syn'copal. Relating to syncope.

syncope (sin'kŏ-pe) [G. *synkopē*, a cutting short, a swoon.] Fainting, a swoon; a sudden fall of blood-pressure or failure of the cardiac systole, resulting in cerebral anemia and more or less complete loss of consciousness. **cat s.**, ailurophobia. **laryn'geal s.**, laryngeal vertigo.* **lo'cal s.**, limited numbness in a part, especially of the fingers; one of the symptoms, usually associated with local asphyxia, of Raynaud's* disease. **s. angino'sa**, primary cardiac angina pectoris, the cardiac spasm being due to stenosis or occlusion of the coronary arteries.

syncop'ic. Syncopal.

syncy'anin. The pigment formed by the *Bacillus syncyaneus*, a non-pathogenic species found in water.

syncytial (sin-sit'ĭ-al). Relating to a syncytium; formed of a multinucleated protoplasmic mass without apparent division into cells.

syncytiolysin (sin-sit-ĭ-ol'i-sin). A cytolysin formed in response to injections of emulsions of placental tissue.

syncytioma (sin-sit-ĭ-o'mah). Deciduoma, chorioma.* **s. benig'num**, chorioma benignum. **s. malig'num**, chorioma malignum.

syncytiotoxin (sin-sit"ĭ-o-toks'in). A cytotoxin specific for the cells of the syncytium.

syncytium (sin-sit'ĭ-um) [G. *syn*, with, + *kytos*, a hollow (cell).] 1. A multinucleated protoplasmic mass, seemingly an aggregation of several cells but without any perceptible cell-outlines. 2. A nucleated protoplasmic membrane, without cell-outlines, lining the blood lacunæ of the placenta; placental plasmodium.

syndac'tyl, syndac'tyle. Syndactylous.

syndactyl'ia, syndac'tylism, syndac'tyly [G. *syn*, together, + *daktylos*, finger.] A growing together, or fusion, usually congenital, of two or more fingers or toes.

syndac'tylized. Fused or grown together, having reference to two or more fingers or toes.

syndac'tylous. Having fused or webbed fingers or toes.

syndac'tylus. A person with fused or webbed fingers or toes.

syndec'tomy [G. *syndesmos*, a conjunction (conjunctiva), + *ektomē*, excision.] Peritomy, excision of a ring of conjunctiva around the periphery of the cornea.

syndel'phus. Synadelphus.

syndesmectopia (sin-dez-mek-to'pĭ-ah) [G. *syndesmos*, ligament, + *ektopos*, out of place.] Displacement of a ligament.

syndesmitis (sin-dez-mi'(me')tis) [G. *syndesmos*, a ligament, conjunction (conjunctiva), + *-itis*.] 1. Inflammation of a ligament. 2. Conjunctivitis. **s. metatar'sea**, inflammation of the metatarsal ligaments occurring in swell*-foot.

syndesmography (sin-dez-mog'ră-fĭ). [G. *syndesmos*, ligament, + *graphē*, a description.] A treatise on or description of the ligaments.

syndesmology (sin-dez-mol'o-jĭ) [G. *syndesmos*, ligament, + *-logia*.] The branch of anatomy which has to do with the ligaments.

syndesmoma (sin-dez-mo'mah) [G. *syndesmos*, ligament, conjunction (connective tissue), + *-ōma*.] A connective-tissue tumor.

syndes"mo-odon'toid joint. The posterior atlantoepistrophic articulation, between the anterior surface of the transverse ligament of the atlas and the back of the odontoid process of the epistropheus (axis).

syndesmopexy (sin-dez'mo-peks-ĭ) [G. *syndesmos*, ligament, + *pēxis*, a putting together.] The joining of two ligaments, or attachment of a ligament in a new place.

syndesmosis (sin-dez-mo'sis) [G. *syndesmos*, ligament.] A synarthrosis in which opposing surfaces are united by fibrous connective tissue; as the union between the lower ends of the tibia and fibula. **s. tibiofibula'ris** [BNA], junctura tibiofibula'ris [NK], tibiofibula syndesmosis, inferior tibiofibular articulation. **s. tym"panostape'dia** [BNA], tympanostapedial junction, the connection of the base or footpiece of the stapes with the vestibular or oval window.

syndesmot'omy [G. *syndesmos*, ligament, + *tomē*, incision.] 1. The surgical division of a ligament. 2. The anatomy of the ligaments

syndrome (sin'drōm) [G. *syndromos*, a running together, a meeting.] The aggregate of symptoms associated with any morbid process, and constituting together the picture of the disease. The term is employed especially, though not exclusively, in relation to the grouped symptoms of disease of the central nervous system. See also *sign* and *symptom*. For a definition of the various syndromes see under the qualifying word. **hep'atore'nal s.**, liver-kidney s., a condition due to inflammation of the liver and gall-bladder with parenchymatous nephritis, marked by abdominal distension, rapid pulse, high fever, oliguria with albumin and casts in the urine, muttering delirium merging into coma, preceded by nausea and vomiting, blood in the stools and urine and in the vomitus. **Laur'ence-Moon-Bie'del syn'drome**, one characterized by dystrophia adiposogenitalis, atypical retinitis pigmentosa, mental deficiency, familial occurrence, and skeletal abnormalities, due apparently to endocrine deficiency.

syndrom'ic. Relating to a syndrome.

synechia (sin-ek'ĭ-ah, sin-ĕ-ki'ah) [G. *synecheia*, continuity.] Any adhesion; specifically adhesion of the iris to the cornea (*anterior s.*) or to the capsule of the lens (*posterior s.*). **an'nular s.**, adhesion of the entire pupillary margin of the iris to the capsule of the lens. **total s.**, adhesion of the entire surface of the iris to the lens capsule.

synechotome (sin-ek'o-tōm). A small knife for use in synechotomy.

synechotomy (sin-ĕ-kot'o-mĭ) [G *synecheia*, synechia, + *tomē*, incision.] Division of the adhesions in synechia.

synectenterotomy [G. *synektos*, held together, + *enteron*, intestine, + *tomē*, incision.] The separation of intestinal adhesions.

synencephalocele (sin-en-sef'al-o-sēl) [G. *syn*, together, + *enkephalos*, brain, + *kēlē*, hernia.] Protrusion of brain substance through a defect in the skull, with adhesions preventing reduction.

synenceph'alus [G. *syn*, together, + *enkephalos*, brain.] Syncephalus.

syn'ephrin tar'trate. The tartrate of a synthetic alkaloid, hydroxyphenylmethylaminoethanol, used as a vasoconstrictor and to reduce edematous swelling of nasal and other mucous membranes; applied locally or per os or hypodermically in doses of 1½–3 gr. (0.1–0.2).

syneresis (sin-er'e-sis) [G. *syn*. together, + *airesis*, a taking.] The contraction of a gel, *e.g.* a blood clot, by which part of the dispersion medium is squeezed out.

synerget'ic (sin-ur-jet'ik) [G. *synergētikos*.] Working together noting especially the cooperative action of certain muscles.

synergia (sin-ur'jĭ-ah). Synergy.

syner'gic. Synergetic.

syn'ergist. 1. An adjuvant, a remedy which aids the action of another. 2. A muscle which assists another in its action; the flexor muscles of a part, for example, are synergists one of another.

synergis'tic. Synergetic.

synergy (sin'ur-jĭ) [G. *synergia; syn*, together, + *ergon*, work.] Cooperation in action, coordination.

synesthesia, synæsthesia (sines-the'zĭ-ah) [G. *syn-*, together, + *aisthēsis*, sensation.] A condition in which a stimulus, in addition to exciting the usual and normally located sensation, gives rise to a subjective sensation of different character or localization; color-hearing and color-taste are forms of synesthesia. **s. al'gica**, painful s.

synesthesialgia (sin-es-the-zĭ-al'jĭ-ah) [*synesthesia* + G. *algos*, pain.] Synesthesia algica.

syngamous (sin'gam-us) [G. *syn*, with, + *gamos*, marriage.] Noting the theory that the sex of the child is determined at the time of fertilization of the ovum; see *epigamous* and *progamous*.

Syn'gamus. A genus of nematode worms, parasitic in many animals. **S. trachea'lis**, *Sclerostoma syngamus*, a parasite of the trachea of fowls, causing the disease called *gapes*.

syn'gamy [G. *syn*, with, + *gamos*, marriage.] Conjugation of cells; sexual reproduction.

syngen'esis [G. *syn*, together, + *genesis*, production.] 1. Sexual reproduction. 2. The doctrine that in each sexual cell are contained the germs of all future generations of cells that may be derived from it.

syngenet'ic. Relating to syngenesis.

syngen'ic [G. *syngenēs*, congenital] 1. Congenital. 2. Reproduced by the union of both sexual elements, syngenetic.

syngignoscism (sin-jig'no-sizm) [G. *syngignōskō*, I agree with.] Hypnotism; suggestion.

synize'sis [G. a falling in.] 1. Closure or obliteration of the pupil. 2. The massing of chromatin at one side of the nucleus which occurs usually at the beginning of synapsis.

synkar'yon. Syncaryon.

synkine'sis. Syncinesis.

synneurosis (sin-nu-ro'sis) [G. *syn*, with, + *neuron*, tendon.] Syndesmosis, ligamentary union of bones.

synocha (sin'o-kah) [G. *synochos*, lasting.] Febris synocha, a continued fever.

synochal (sin'o-kal). Noting a continued fever.

synochus (sin'o-kus) [G. *synochos*, lasting.] A continued fever.

synococcus (sin-o-kok'kus) [G. *syn*, with.] A microorganism frequently associated with the gonococcus.

synol (si'nol). Trade name of a liquid antiseptic soap.

synophrys (sin-of'ris) [G. *syn*, together, + *ophrys*, eyebrow.] The growing together of the eyebrows.

synophthal'mia [G. *syn*, together, + *ophthalmos*, eye.] Cyclopia, congenital fusion of the eyes.

synophthal'mus [G. *syn*, together, + *ophthalmos*, eye] Cyclops.

synorchidism, synorchism (sin-or'kĭ-dizm, sin-or'-kizm) [G. *syn*, together, + *orchis*, testis.] Congenital fusion of the testes in the abdominal cavity.

synoscheos (sin-os'ke-os) [G. *syn*, together, + *oschē*, scrotum.] Partial or complete adhesion of the penis and scrotum, a malformation in hemaphroditism.

synosteol'ogy [G. *syn*, together, + *osteon*, bone, + *-logia*.] Arthrology.

synosteo'sis [G. *syn*, together, + *osteon*, bone.] 1. Synostosis, bony ankylosis. 2. Synarthrosis.

synosteot'ic, synostot'ic. Relating to synosteosis or bony ankylosis.

synosteot'omy [G. *syn*, together, + *osteon*, bone, + *tomē*, incision.] Arthrotomy.

synosto'sis. Synosteosis.

synotia (sin-o-shĭ-ah). Fusion of the ears in agnathia.*

syno'tus [G. *syn*, together, + *ous(ōt-)*, ear.] An agnathous monster with fused ears, otocephalus.

synovectomy (si-no-vek'to-mĭ) [*synovia* + G. *ektomē*, excision.] Exsection of a portion or all of the synovial membrane of a joint.

synovia (si-no'vĭ-ah) [G. *syn*, together, + L. *ovum*, egg.] Joint-oil, a clear viscid fluid secreted by a synovial membrane, the function

of which is to lubricate the joint or the surfaces of an enclosed tendon, or to serve as a water-pad in a bursa. It consists mainly of mucin with some albumin, fat, epithelium, and leucocytes.

synovial (si-no'vĭ-al). Relating to, containing, or consisting of synovia. **s. bursa,** bursa mucosa. **s. capsule,** stratum synoviale. **s. crypt,** a diverticulum of the synovial membrane of a joint. **s. cyst,** a tumor caused by the accumulation of synovia in a bursa, a s. crypt, or the sac of a synovial hernia. **s. fluid,** synovia. **s. fold,** plica synovialis. **s. frenum,** frenulum synoviale. **s. fringe,** plica synovialis. **s. glands,** Havers's* glands. **s. hernia,** protrusion of a fold of the stratum synoviale through a rent in the stratum fibrosum of a joint capsule. **s. lig'ament,** one of the large synovial folds in a joint. **s. membrane,** see *membrane*. **s. sheath,** vagina mucosa. **s. tuft,** villus synovialis.

syno'vin. One of two mucinous substances present in synovia.

synoviparous (si-no-vip'ă-rus) [*synovia* + L. *parere*, to produce.] Producing synovia; synovial.

synovitis (si-no-vi'(ve')tis). Inflammation of a synovial membrane, especially that of a joint, arthromeningitis; in general, when unqualified, the same as arthritis. **bursal s.,** bursitis. **dry s.,** s. with but little serous or purulent effusion. **fungous s.,** fungous arthritis.* **pu'rulent s.,** suppurative s. **serous s.,** s. with a large effusion of non-purulent fluid; hydrarthrosis, hydrops articuli. **supp'urative s.,** suppurative arthritis, pyarthrosis, empyema articuli. **s. sicca,** dry s. **ten'dinous s., vag'inal s.,** inflammation of a tendon sheath, tenosynovitis. **vibra'tion s.,** inflammation of a joint caused by the passage of a bullet or other missile through the soft parts in its immediate vicinity without wound of the joint itself.

syntax'is [L. *syn*, together, + *taxis*, arrangement] Articulation.

synteno'sis [G. *syn*, with, + *tenōn*, tendon.] A hinge-joint largely guarded by tendons, as one of the phalangeal articulations.

syntere'sis [G. close observation.] Prophylaxis.

syntex'is [G. *syntēxis*, a melting together.] Emaciation, wasting, phthisis.

syn'thaline. A synthetic compound, decamethylenediguanidine, recommended as an antidiabetic remedy for oral administration. **s.-B.,** a modified s. containing two more methyl groups, said to cause less digestive disturbance; called also neosynthaline.

synthermal (sin-thur'mal) [G. *syn*, together, + *thermē*, heat.] Having the same temperature.

syn'thesis [G. *syn*, together, + *thesis*, a putting, arranging.] 1. A building up, a putting together, composition. 2. In chemistry the formation of compounds by the union of simpler compounds or elements.

synthet'ic. Relating to or made by synthesis.

syn'thetize. To make synthetically.

syn'tonin [G. *syntonos*, strained tight.] Acid-albumin.

syntoxoid (sin-toks'oyd) [G. *syn*, with.] A toxoid having the same degree of affinity for an antitoxin that the toxin has.

syntrip'sis [G. a shattering.] A comminuted fracture, or its production.

syn'trophus [G. *syntrophos*, brought up or nursed together.] A congenital disease.

syntrop'ic [G. *syn*, together, + *tropikos*, turning.] In anatomy, noting a number of similar structures inclined in one general direction, as the spinous processes of a series of vertebræ, or the ribs.

syntropy (sin'tro-pĭ) [G. *syn*. together, + *tropē*, a turning.] The tendency sometimes seen in two diseases to coalesce into one.

synulo'sis [G. *synoulōsis*.] Cicatrization.

synulot'ic. 1. Promoting cicatrization. 2. An agent which promotes healing.

Syphacia obvelata (si-fa'si-ah ob-ve-lah'tah). A species of nematode worm found once in the dejections of a child in the Philippines.

syphilelco'sis [G. *helkōsis*, ulceration.] Syphilitic ulceration.

syphilel'cus [G. *helkos*, ulcer.] A syphilitic ulcer.

syphilemia (siph-il-e'mĭ-ah) [*syphilis* + G. *haima*, blood.] Constitutional syphilis; presence of the specific organism in the blood stream.

syphilide (sif'il-ēd) [Fr.] Syphiloderma, any of the cutaneous lesions of syphilis. **acne'iform s.,** pustular s. **acu'minate pap'ular s.,** follicular s. **an'nular s.,** a syphilitic eruption of large papules spreading peripherally while healing in the center, or of circinate groups of papules. **bullous s.,** a bullous eruption arising from the enlargement of the lesions of a pustular s. **corym'bose s.,** a syphilitic eruption consisting of a large central papule surrounded by a more or less complete ring of smaller papules. **ecthy'matous s.,** pustular s **erythem'atous s.,** syphilitic roseola. **flat pap'ular s.,** lenticular s **follic'ular s.,** a small conical papular eruption around the hair-follicles in syphilis. **frambe'sioid s.,** vegetating s. **gum'matous s.,** gumma. **herpet'iform s.,** vesicular s. **lentic'ular s.,** an eruption of flattened papules, up to the size of a pea or larger, in syphilis. **mac'ular s.,** syphilitic roseola. **mil'iary pap'ular s.,** follicular s. **nod'ular s.,** cutaneous gummata. **pal'mar s.,** any syphilitic eruption of the palms. **pap'ular s.,** see follicular s. and lenticular s. **pem'phigoid s.,** bullous s. **pig'mentary s.,** a syphilitic eruption consisting of rounded white patches surrounded by a layer of pigmentary deposit. **plan'tar s.,** any syphilitic eruption of the soles of the feet. **pus'tular s.,** a pustular eruption supervening upon a papular s. **ru'pial s.,** rupia. **sec'ondary s.,** one of the skin lesions of secondary syphilis. **serpig'inous s.,** an ulcerating tubercular s. spreading on one side while being replaced by thin scar tissue on the other. **ter'tiary s.,** a syphilitic skin lesion peculiar to the third stage of the disease. **tuber'cular s.,** cutaneous gummata. **varicel'liform s.,** vesicular s. **vario'liform s.,** pustular s. **veg'etating s.,** an eruption consisting of warty vegetations springing from moist papules or other lesions of syphilis. **vesic'ular s.,** an eruption of small vesicles topping the lesions of a papular syphilide.

syphilidog'raphy. Syphilography.

syph'ilin. An old term for the then unknown materies morbi or contagious principle of syphilis.

syphili'num. A homeopathic attenuation of the syphilitic virus.

syphilion'thus [G. *ionthos*, acne of adolescence.] A copper colored syphilide with branny scales.

syphilipher (sĭ-fil'ĭ-fur) [G. *pherō*, I carry.] A syphilis carrier; one who has syphilis in the infectious stage.

syphilipho'bia. Syphilophobia.

syphilis (sif'ĭ-lis) [fancifully and incorrectly derived (according to tradition) from G. *sys*, hog, +

philos, loving; or *syn*, with, + *philos*, loving.] An infectious disease spread by inoculation through sexual intercourse and also largely through the medium of contaminated table utensils, pipes, towels, etc. After an incubation period of 12 to 20 days, the first symptom is the chancre,* followed by slight fever and other constitutional symptoms, and a skin eruption of various appearances with mucous patches; this constitutes the second stage. The third stage is marked by the formation of gummata. The specific organism is *Treponema pallidum* (*Spirochæta pallida*). **congen'ital s.**, s. hereditaria. **equine s.**, dourine. **pri'mary s.**, the first stage of the disease from the development of the chancre to the appearance of the eruption. **sec'ondary s.**, the second stage of the disease, beginning with the appearance of the eruption and lasting an indefinite period. **quater'nary s.**, parasyphilis. **s. d'emblée** (doṅ-bla') [Fr. right away], s. occurring without an initial sore. **s. heredita'ria**, hereditary s., s. present in a child at the time of birth. **s. heredita'ria tar'da**, s., supposed to be hereditary or congenital, which does not manifest itself until several years after birth. **s. innocen'tium, s. inson'tium** [L. s. of the innocent], syphilis acquired in other ways than by coitus or other sexual practices, as may occur through the common use of table instruments, public drinking cups, lavatory towels, etc. **s. œconom'ica**, s. insontium in which infection occurs through the medium of table utensils, towels, and other articles of domestic use. **ter'tiary s.**, the final stage of the disease, of indefinite beginning and ending, marked by the formation of gummata.

syphilit'ic. Relating to, caused by, or suffering from syphilis. **s. fever**, the elevation of temperature often present in the early roseolous stage of secondary syphilis.

syphiliza'tion. Inoculation with the pus of a chancre, with prophylactic or curative intent.

syph'ilize. To infect with syphilis, to practise syphilization.

syphiloderm, syphiloderma, pl. *syphiloder'mata.* (sif'il-o-durm, sif-il-o-dur'mah) [*syphilis* + G. *derma*, skin.] Syphilide

syphiloder'matous. Relating to a syphilitic skin lesion

syphilodol (sif'il-o-dol). Trade name of a substance compounded of silver, arsenic, and antimony, offered for the treatment of syphilis, yaws, and various protozoal diseases as a substitute for salvarsan and similar substances; a yellow powder or yellowish brown tablets; administered by intravenous injection and per os.

syphilogen'esis, syphilogeny (sif-il-oj'en-I) [*syphilis* + G. *genesis*, production.] The origin and progressive course of syphilis.

syphilog'rapher. A writer on syphilis.

syphilog'raphy [*syphilis* + G. *graphē*, a description.] A treatise on or description of syphilis.

syphiloid (sif'il-oyd) [G. *eidos*, resemblance.] Resembling syphilis.

syphilologist (sif-il-ol'o-jist). 1. One versed in the knowledge of syphilis. 2. A specialist in the diagnosis and treatment of syphilis.

syphilol'ogy [*syphilis* + *-ology*.] The branch of medical science which has to do with syphilis in all its relations.

syphilo'ma. A syphilitic tumor, gumma.

syphiloma'nia. Syphilophobia.

syphilo'matous. Relating to a syphiloma, gummatous.

syphilomyces (sif"il-o-mi'sēz) [*syphilis* + G. *mykēs*, fungus.] 1. Condyloma. 2. A polymorphous bacillus obtained by van Niessen from syphilitic blood, and believed by him to be pathogenic.

syphilop'athy [*syphilis* + G. *pathos*, suffering.] Any morbid manifestation of syphilis

syphilopho'bia [G. *phobos*, fear.] A morbid fear of acquiring syphilis through the use of table utensils, towels, etc., or of touching any contaminated object.

syphilophyma (sif"il-o-fi'mah) [*syphilis* + G. *phyma*, a tumor.] Syphiloma, gumma.

syphilosis (sif-i-lo'sis) [*syphilis* + *-osis*.] A more or less generalized syphilitic disease.

syph'ilous. Syphilitic.

syphion'thus. Syphilionthus.

syr. Abbreviation of L. *syrupus*, syrup.

syr'gol. A colloidal oxide of silver, occurring in brown shining plates, soluble in water; is said to contain 20 per cent. of silver.

Syr'iac ulcer. Diphtheria.

syrigmophonia (sir"ig-mo-fo'nī-ah) [G. *syrigmos*, a hissing, + *phōnē*, sound, voice] 1. A sibilant râle. 2. A whistle accompanying the production of s-sounds, due usually to some peculiarity in the denture.

syrig'mus [G. *syrigmos*, a hissing.] Tinnitus aurium.

syrin'ga. The leaves of *Syringa vulgaris*, or lilac, employed as an intestinal astringent

syringadenoma (sir-ing-gad-e-no'mah) [G. *syrinx*, tube, + *adēn*, gland, + *-oma*.] A sweat-gland tumor.

syringadenosus (sir-ing-gad-e-no'sus) [G. *syrinx*, tube, + *adēn*, gland.] Relating to the sweat-glands.

syringe (sir'inj) [G. *syrinx*, a tube.] An instrument used for injecting fluids. **Anel's s., Davidson s., fountain s., Pravaz s.**, etc., see the nouns.

syr'ingin. A crystalline tasteless glucoside, $C_{17}H_{24}O_9$, in the bark and leaves of *Ligustrum vulgare*, or privet, and *Syringa vulgaris*, or lilac; employed as a tonic and antiperiodic.

syringitis (sir-in-ji'(je')tis) [G. *syrinx*(*syring-*) tube, + *-itis*.] Inflammation of the Eustachian tube.

syringobul'bia [G. *syrinx*(*syring-*), a mine, + L. *bulbus*, medulla oblongata.] A condition of porosity of the medulla analogous to syringomyelia.

syringocœle, syringocœlia (sir-ing'go-sēl, sir-ing-go-se'lI-ah) [G. *syrinx*(*syring-*), tube, + *koilia*, a hollow.] The central canal of the spinal cord.

syringocystadeno'ma [G. *syrinx*, tube, + *kystis*, cyst, + *adēn*, gland, + *-ōma*.] A multiple nodular growth due to dilatation and epithelial hypertrophy of the sweat-glands; a form of multiple benign cystic epithelioma.

syringocysto'ma [G. *syrinx*, tube, + *kystis*, cyst, + *-ōma*] A cystic tumor composed of cylindrical-celled epithelium, originating from the hair-follicles.

syringoencephalia (sI-ring"go-ĕn-sĕ-fal'I-ah) [G. *syrinx*, syringe, + *enkephalos*, brain.] A condition of oprosity of the brain substance.

syringoencephalomyelia (sI-ring"go-en-sef"ă-lo-mi-e'lI-ah) [G. *syrinx*, tube, + *enkephalos*, brain, + *myelos*, marrow.] A condition of porosity involving the brain and spinal cord.

syringoid (sir-ing'goyd) [G. *syrinx*, tube, + *eidos*, resemblance.] Resembling a tube; fistulous.

syringomeningocele (sI-ring"go-men-ing'go-sēl) [G. *syrinx*, tube, + *mēninx*, membrane, + *kēlē*, tumor.] A form of spina bifida in which the tumor consists chiefly of the membranes, with very little cord substance, enclosing a hollow center which

communicates with the central canal of the cord.

syringomyelia (sĭ-ring''go-mi-e'lĭ-ah) [G. *syrinx*, pipe, + *myelos*, marrow.] The presence of cavities in the spinal cord due to the breaking down of gliomatous new-formations; it is marked clinically by pain and paresthesia followed by muscular atrophy of the hands; there is analgesia with thermoanesthesia of the hands and arms, but the tactile sense is preserved. Later painless whitlows are seen, spastic paralysis appears in the lower extremities, and scoliosis of the lumbar spine occurs.

syringomyelitis (sir-ing''go-mi-ĕ-li'(le')tis) [G. *syrinx* (*syring-*), tube, + *myelos*, marrow, + *-itis*] Inflammation of the spinal cord with the formation of cavities in its substance; syringomyelia.

syringomyelocele (sir-ing''go-mi'el-o-sēl) [G. *syrinx* (*syring-*), pipe, + *myelos*, marrow, + *kēlē*, tumor.] Hydrorrhachis interna; a form of spina bifida, consisting in a protrusion of the membranes and spinal cord through a defect in the vertebral column, the fluid of the central canal of the cord being increased and expanding the cord tissue into a thin-walled sac

syringomyelus (sir-ing''go-mi'el-us) [G. *syrinx*, a tube, + *myelos*, marrow.] Dilatation of the central canal of the spinal cord.

syringotome (sir-ing'go-tōm) [G. *syrinx*(*syring-*) pipe, + *tomos*, cutting.] A fistula knife.

syringot'omy [G. *syrinx*(*syring-*), pipe, + *tomē*, incision.] Slitting up a fistula.

syrinx (sir'inks) [G. a tube.] 1. The Eustachian tube. 2. A fistula.

syrup (sir'up). 1. Refined molasses; the uncrystallizable saccharine solution left after the refining of sugar. 2. Any sweet fluid; a solution of sugar in water in any proportion. 3. The official syrupus.* **croup s.,** syrupus scillæ compositus. **hive s.,** syrupus scillæ compositus. **s. of Do'ver's pow'der,** syrupus ipecacuanhæ et opii (N.F.). **pec'toral s.,** syrupus pectoralis (N.F.) **simple s.,** syrupus.

syrupus (sĭ-roo'poos) [Ar. *sharāb*.] (U.S., Br.) Syrup, simple syrup; sugar 850, distilled water to make 1000 (U.S.); sugar 5 lb., water to make 7½ lb. (Br.). The pharmacopeial *syrupi*, syrups, are solutions of medicinal, or simply aromatic, substances in syrup of about the official strength.

s. aca'ciæ, syrup of gum arabic; acacia 100, sugar 800, distilled water to make 1000; used as a demulcent and to hold insoluble drugs in suspension.

s. ac'idi cit'rici (U.S.), syrup of citric acid; citric acid 10, tincture of fresh lemon peel 10, syrup to make 1000; used as a flavor

s. ac'idi hydrio'dici (U.S.), syrup of hydriodic acid; diluted hydriodic acid 100, water 300, syrup 600; employed as an alterative and in the chronic tuberculous affections of children in doses of ♏30 to 90 (2.0–6.0).

s. actæ'æ compos'itus, compound sprup of actæa, s. cimicifugæ compositus (N.F.).

s. al'lii (N.F.), syrup of garlic; garlic 200, sugar 800, water to make 1000; dose, ℥1 (4.0).

s althæ'æ (N.F.), syrup of marshmallow; althæa 50, alcohol 30, glycerin 100, sugar 700, water to make 1000; demulcent in doses of ℥1–4 (4.0–16.0).

s. ammo'nii hypophosphi'tis (N.F.), syrup of ammonium hypophosphite; ammonium hypophosphite, 35; hypophosphorous acid, 1; distilled water, 100; glycerin, 50; syrup, to make 1000; dose, ℥1 (4.0).

s. amyg'dalæ, syrup of almond; spirit of bitter almond 10, orange flower water 100, syrup to make 1000, demulcent, employed in expectorant mixtures in doses of ℥1–2 (4.0–8.0).

s. aromat'icus, aromatic syrup; tincture of orange 5, cinnamon water 5, syrup 10, plus a flavoring agent.

s. as'ari compos'itus (N.F.), compound syrup of Canada snakeroot; each dose of ℥1 (4.0) contains asarum gr. 3½ (0.23) and ipecac gr. ½ (0.01); stomachic

s. auran'tii (U.S., Br.), orange syrup; tincture of sweet orange peel 50, citric acid 5, magnesium carbonate 10, sugar 820, water to make 1000 (U.S.); tincture of orange 1, syrup 7 (Br.); a flavoring agent.

s. auran'tii flo'ris (Br.), **s. auran'tii flo'rum** (U.S.), syrup of orange flowers, made by dissolving sugar 850, in orange flower water, 1000; used for flavoring.

s. bromido'rum (N.F.), syrup of the bromides; each dose of ℥1 (4.0) contains about gr. 3 (0.2) each of the bromides of ammonium, calcium, lithium, potassium, and sodium in compound syrup of sarsaparilla.

s. caca'o (N.F.), syrup of cocoa; cocoa 50, tincture of vanilla 2, alcohol 50, sucrose 800, distilled water to make 1000.

s. cal'cii hydrochlo''rophospha'tis, syrup of calcium chlorhydrophosphate; each dose of ℥1 (4.0) contains calcium phosphate gr. 1 (0.06) with hydrochloric acid in syrup.

s. cal'cii et so'dii hypophosphi'tum (N.F.), syrup of the hypophosphites of calcium and sodium; each dose of ℥1 (4.0) contains gr. 2 (0.13) of each of these salts

s. cal'cii hypophosphi'tis (N.F.), syrup of calcium hypophosphite; each dose of ℥1 (4.0) contains gr. 2 (0.13) of this salt.

s. cal'cii io'didi (N.F.), syrup of calcium iodide; each dose of ℥½ (2.0) contains gr. 2½ (0.16) of this salt; used in asthma and as an alterative.

s. cal'cii lactophospha'tis (N.F., Br.), syrup of calcium lactophosphate; precipitated calcium carbonate 25, lactic acid 60, phosphoric acid 36, stronger orange flower water 50, sugar 650, glycerin 50, distilled water to make 1000; dose, ℥2½ (10.0).

s. cal'cii lactophospha'tis et fer'ri (N.F.), syrup of calcium lactophosphate and iron; each dose of ℥1 (4.0) contains ferrous lactate gr. ¼ (0.03), calcium lactate gr. ¼ (0.015), calcium lactophosphate gr. ⅛ (0.024).

s. cal'cis, syrup of lime, syrup of calcium hydroxide; lime 65, sugar 350, water to make 1000; used as a substitute for lime-water in doses of ♏20–60 (1.3–4.0).

s. cas'caræ aromat'icus (Br.), aromatic syrup of cascara; liquid extract of cascara 8, tincture of orange 2, 90 per cent. alcohol 1, cinnamon water 3, syrup 6; dose, ℥½–2 (2.0–8.0), see *s. rhamni catharticæ* (N.F.).

s. chlo'ral (Br.), syrup of chloral; chloral hydrate 80 grains, distilled water 1½ fluidrachms, syrup to make 1 ounce, contains gr. 10 (0.6) in ℥1 (4.0).

s. chon'dri compos'itus, compound syrup of Irish moss; each dose of ℥2 (8.0) contains fluidextract of ipecac ♏¼ (0.008), fluidextracts of senna and of squill each ♏2 (0.13), and paregoric ♏3½ (0.23), in mucilage of Irish moss and sugar; expectorant.

s. cimicif'ugæ compos'itus, compound syrup of cimicifuga, formerly called compound syrup of actea; fluidextract of cimicifuga 40, fluidextract of licorice and fluidextract of senega, each 20, fluidextract of ipecac 10, wild cherry 40, talc 15, sugar 650, water to make 1000, mixed and filtered; dose, ℥1 (4.0).

s. cinnamo'mi (N.F.), syrup of cinnamon; contains Saigon cinnamon gr. 6 (0.4) in ℥1 (4.0); carminative and flavoring agent.

s. codei'næ (Br.), syrup of codeine; codeine phosphate 0.2, syrup to make 100; dose, ℥1 (4.0).

s. cof'feæ, syrup of coffee, represents about 25 per cent. roasted coffee; used as a flavoring agent.

s. cor'rigens, corrective syrup, s. eriodictyi aromaticus (N.F.).

s. eriodic'tyi aromat'icus (N.F.), aromatic syrup of eriodictyon or yerba santa, s. corrigens; each dose of ℥2 (8.0) contains fluidextract of eriodictyon ♏4 (0.25), solution of potassium hydroxide ♏3 (0.2), with compound tincture of cardamom, and oils of clove, lemon, and sassafras, alterative, used chiefly as a vehicle.

s. fer'ri arsena'tis, syrup of arsenate of iron; each dose of ♏8 (0.5) contains about gr. 1/120 (0.0002) of this salt.

s. fer'ri citro-io'didi, syrup of citro-iodide of iron, tasteless syrup of iodide of iron; each dose of ʒ½ (2 0) contains gr. 2 (0 13) of ferrous iodide.

s. fer'ri et man'gani io'didi, syrup of iodide of iron and manganese each dose of ♏15 (1.0) contains gr. 1½ (0.1) of ferrous iodide and gr. ½ (0.03) of manganous iodide.

s. fer'ri hypophosphi'tis, syrup of ferric hypophosphite; each dose of ʒ1 (4.0) contains gr. 1 (0.06) of this salt.

s. fer'ri io'didi (U.S., Br.), syrup of ferrous iodide; iron wire 12.5, iodine 41.5, diluted hypophosphorous acid 20, sugar 600, distilled water to make 1000; employed in strumous affections and in tuberculous adenitis in doses of ʒ1–2 (4.0–8.0); the B.P. preparation is double the strength and is given in half these doses.

s. fer'ri lactophospha'tis, syrup of lactophosphate of iron; each dose of ʒ1 (4.0) contains gr. 1½ (0.1) of this salt.

s. fer'ri oxyda'ti solu'bilis (P.G.), syrup of soluble oxide of iron, s. ferri saccharati solubilis (N.F.).

s. fer'ri phospha'tis, syrup of ferrous phosphate; iron wire 75 grains, concentrated phosphoric acid 1½ fluidounces, syrup 14 fluidounces, distilled water to make 20 fluidounces: dose ʒ½–2 (2.0–8.0).

s. fer'ri phospha'tis compos'itus (Br.), compound syrup of ferrous phosphate, Parrish's food, Parrish's syrup, contains iron 4.3, phosphoric acid 18, calcium carbonate 13.6, potassium bicarbonate 1, sodium phosphate 1, cochineal 3.5, sucrose 700, orange-flower water 50, distilled water to make 1000; dose, ♏30–120 (2.0–8.0).

s. fer'ri phospha'tis cum quini'na et strychni'na (Br.). syrup of the phosphate of iron with quinine and strychnine, Easton's syrup; practically the same as s. ferri, quininæ et strychninæ phosphatum (N.F.).

s. fer'ri protochlo'ridi, syrup of ferrous chloride; each dose of ʒ1 (4.0) contains gr. 1 (0 06) of this salt,

s. fer'ri, quini'næ, et strychni'næ phospha'tum (N.F.), syrup of the phosphates of iron, quinine, and strychnine, s. ferri phosphatis cum quinina et strychnina (Br.), syrup of phosphate of iron with quinine and strychnine; ferric phosphate 20, quinine 26, strychnine 0 2, phosphoric acid 50, glycerin 100, water 50, syrup to make 1000; dose, ʒ1 (4 0).

s. fer'ri sacchara'ti solu'bilis (N.F.), syrup of soluble saccharated iron, s ferri oxydati solubilis (P.G.); each dose of ʒ1 (4 0) contains gr. ⅛ (0 05) of this salt.

s. fi'cus compos'itus (N.F.), compound syrup of figs; figs, 300; fluidextract of senna, 200; aromatic fluidglycerate of cascara sagrada, 100; oil of fennel, 1; spirit of peppermint, 3; sugar, 400; water, to make 1000; laxative dose, ʒ1 (4 0).

s. fuscus, molasses.

s. gluco'si liq'uidi (Br.), syrup of liquid glucose, 50 per cent, employed as an excipient for pill masses.

s. glycyrrhi'zæ (N F), syrup of licorice, a dose of ʒ2 (8 0) represents ʒ1 (4 0) of licorice root; used as a vehicle for quinine and other bitter drugs.

s. hemides'mi, syrup of hemidesmus, or Indian sarsaparilla; hemidesmus root 4, sugar 28, distilled water 20; used as a flavoring agent and adjuvant in prescriptions for syphilis, in doses of ʒ1–4 (4.0–16.0)

s. hypophosphi'tum (N.F.), syrup of hypophosphites, calcium hypophosphite 45, potassium hypophosphite, 15, sodium hypophosphite 15, diluted phosphorous acid 2, sugar 650, tincture of fresh lemon peel 5, water to make 1000, dose ʒ1–4 (4.0–16.0).

s. hypophosphi'tum compos'itus (N.F.), compound syrup of hypophosphites; calcium hypophosphite 35, potassium hypophosphite 17.5, sodium hypophosphite 17.5, ferric hypophosphite 2.25, manganese hypophosphite 2.25, quinine 1 1, strychnine 0 115, sodium citrate 3.75, diluted hypophosphorous acid 15, sugar 700, glycerin 50, water to make 1000; dose, ʒ1–4 (4 0–16 0).

s. iodotann'icus (N.F.), syrup of iodotannin; iodine, 2 7; tannic acid, 5.4; sugar, 800; distilled water, 800; dose, ʒ1 (4.0).

s. ipecacuan'hæ (U.S.), syrup of ipecac; fluidextract of ipecac 70, acetic acid 10, glycerin 100, sugar 700, water to make 1000; adult emetic dose ʒ½–1 (15.0–30.0), expectorant ♏20–60 (1.3–4.0).

s. ipecacuan'hæ et o'pii (N.F.), syrup of ipecac and opium, syrup of Dover's powder; tincture of ipecac and opium with cinnamon, each dose of ʒ1 (4.0) representing gr. 5 (0.3) of Dover's powder.

s. krame'riæ (N F.), syrup of krameria, or of rhatany; fluidextract of krameria 450, syrup 550; does, ʒ2–4 (8 0–16 0).

s. lactuca'rii, syrup of lactucarium; tincture of lactucarium 100, glycerin 200, citric acid 1, orange-flower water 50, syrup to make 1000; dose ʒ2–4 (8.0–16.0)

s. limo'nis (Br.), syrup of lemon; fresh lemon peel 1, 90 per cent. alcohol 2, lemon juice 25, sugar 38; employed as a flavor, and diluted to make lemonade.

s. man'næ (P.G., N.F.), syrup of manna; each dose of ʒ2 (8.0) contains gr. 15 (1.0) of manna.

s. morphi'næ compos'itus, compound syrup of morphine; each dose of ʒ1 (4 0) contains morphine sulphate gr. $\frac{1}{12}$ (0 002), fluidextract of ipecac ♏½ (0 008), fluidextract of senega ♏6 (0 4), fluidextract of rhubarb ♏1 (0 06), flavored with oil of sassafras; expectorant.

s. morphi'næ et aca'ciæ, syrup of morphine and acacia, pectoral syrup, Jackson's pectoral syrup; each dose of ʒ1 (4 0) contains morphine sulphate gr. $\frac{1}{32}$ (0 002) in syrup of acacia flavored with oil of sassafras.

s. morphi'næ sulpha'tis, syrup of morphine sulphate; each dose of ʒ½ (2 0) contains gr. $\frac{1}{16}$ (0 004) of this salt.

s. papav'eris, syrup of poppy; each dose of ʒ½ (2.0) contains about ♏28 (1.75) tincture of poppy.

s. phospha'tum compos'itus (N F.), compound syrup of phosphates, chemical food, each dose of ʒ1 (4 0) contains calcium phosphate gr. 2 (0.13), ammonium phosphate and iron phosphate each gr. 1 (0.06), and also sodium phosphate; nutrient tonic.

s. phospha'tum cum quini'na et strychni'na (N.F.), syrup of phosphates with quinine and strychnine; each dose of ʒ1 (4 0) contains quinine hydrochloride gr. ¼ (0 015), strychnine sulphate gr. $\frac{1}{34}$ (0 0005), ferric phosphate gr. 1 (0.06), with citrophosphates of calcium and magnesium.

s. pi'cis pi'ni (U.S.), syrup of tar; tar 5, alcohol 50, magnesium carbonate 10, sugar 850, water to make 1000, dose, ʒ1–4 (4.0–16.0).

s. pi'ni al'bæ compos'itus (N.F.), compound syrup of white pine; white pine bark and wild cherry, each 85, aralia and balsam poplar buds, each 10, sanguinaria 8, sassafras 7, cudbear 1, chloroform 6, sugar 650, glycerin 100, oil of sassafras 0 2, alcohol and water of each enough to make 1000; dose, ʒ1 (4 0).

s. pi'ni al'bæ compos'itus cum morphi'na (N.F.), compound syrup of white pine with morphine; morphine sulphate 0 4, compound syrup of white pine 1000; dose, ♏30 (2 0).

s. pru'ni seroti'næ (Br.), s. pruni virginianæ (U.S.).

s. pru'ni virgini'næ (U.S.), syrup of wild cherry, syrup of Virginian prune; wild cherry 150, sugar 700, glycerin 150, water to make 1000; dose, ʒ1–4 (4 0–16.0)

s. quinidi'næ (N.F.), syrup of quinidine, bitterless syrup of quinidine, each dose of ʒ1 (4 0) contains gr. 2 (0.13) of this alkaloid.

s. rham'ni cathar'ticæ (N.F.), syrup of rhamnus cathartica, syrup of buckthorn berries, s spinæ cervinæ (P.G.); each dose of ʒ2 (8 0) contains ʒ1 (4.0) of the fermented juice of buckthorn berries; laxative.

s. rhe'i (U S.), syrup of rhubarb; fluidextract of rhubarb 100, spirit of cinnamon 4, potassium carbonate 10, water 50, syrup to make 1000 (U.S.); rhubarb root 2, coriander 2, sugar 24, 90 per cent. alcohol 8, distilled water 24 (Br.); dose for young children, ʒ½–1 (2.0–4 0).

s. rhe'i aromat'icus (U.S.), aromatic syrup of rhubarb, spiced syrup of rhubarb; aromatic tincture of rhubarb 150, potassium carbonate 1, syrup 850; dose ʒ1–2 (4 0–8.0).

s. rhe'i et potas'sæ compos'itus, compound syrup of rhubarb and potassa, now called mistura rhei alkalina (N.F.).

s. rhœ'ados, syrup of red poppy; red poppy petals 13, sugar 36, alcohol 2½, distilled water 20; dose, ʒ½–1 (2.0–4.0).

s. ro'sæ (N.F.), syrup of rose; fluidextract of rose 125, diluted sulphuric acid 10, sugar 750, water to make 1000 (U.S.); dried red-rose petals 2, sugar 30, water 20 (Br.); used as a flavor.

s. ru'bi (N.F.), syrup of rubus, or of blackberry-bark; fluidextract of rubus 250, syrup 750; used in diarrhea in doses of ʒi–2 (4.0–8.0).

s. ru'bi aromat'icus, aromatic syrup of blackberry; each dose of ʒ2 (8.0) represents blackberry root gr. 15 (1.0) with allspice, cinnamon, cloves, and nutmeg; used in diarrhea.

s. ru'bi fruc'tus, blackberry syrup, syrup of blackberry fruit.

s. ru'bi idæ'i (N.F.), raspberry syrup.

s. sanguina'riæ, syrup of sanguinaria or blood root; each dose of ʒ½ (2.0) represents gr. 6 (0.4) of sanguinaria.

s. sarsaparil'læ compos'itus (U.S.), compound syrup of sarsaparilla, s. sudorificus; fluidextract of sarsaparilla 200, fluidextract of licorice 15, oil of sassafras 0.2, oil of anise 0.2, oil of gaultheria 0.2, sugar 650, water to make 1000; used as a vehicle for potassium iodide, in doses of ʒi–4 (4.0–16.0).

s. scil'læ (U.S., Br.), syrup of squill, s. aceti scillæ, syrup of the vinegar of squill; vinegar of squill 450, sugar 800, water to make 1000 (U.S.); vinegar of squill 20, sugar 38 (Br.); dose, ʒ½–1 (2.0–4.0).

s. scil'læ compos'itus (U.S.), compound syrup of squill, fluidextract of squill 80, fluidextract of senna 80, antimony and potassium tartrate 2, purified talc 20, sugar 750, water to make 1000; expectorant and diaphoretic in doses of ♏20–30 (1.3–2.0).

s. sen'egæ (U.S.), syrup of senega; fluidextract of senega 200, ammonia water 10, syrup 800; dose ʒi–2 (4.0–8.0).

s. sen'næ (U.S., Br.), syrup of senna; fluid extract of senna 250, oil of coriander 5, syrup to make 1000 (U.S.); alcoholic extract from senna 40 ounces, sugar 50, oil of coriander 10 minims (Br.); dose ʒ½–2 (2.0–8.0).

s. sen'næ aromat'icus (N.F.), each dose of ʒ2 (8.0) contains fluidextract of senna ♏15 (1.0), jalap gr. 3 (0.2), rhubarb gr. 1 (0.06), with cinnamon, cloves, nutmeg, and oil of lemon.

s. sen'næ compos'itus, compound syrup of senna; each dose of ʒ2 (8.0) contains fluidextract of senna ♏15 (1.0), fluidextracts of rhubarb and of frangula each ♏4 (0.25), flavored with wintergreen.

s. sim'plex, simple syrup, syrupus (U.S., Br.).

s. so'dii hypophosphi'tis, syrup of sodium hypophosphite; each dose of ʒi (4.0) contains gr. 2 (0.13) of this salt.

s. spi'næ cervi'næ (P.G.), syrup of buckthorn, is similar to s. rhamni catharticæ (N.F.).

s. stillin'giæ compos'itus (N.F.), each dose of ʒi (4.0) is equivalent to compound fluidextract of stillingia (N.F.) ♏15 (1.0); alterative.

s. sudorif'icus, s. sarsaparillæ compositus (U.S.).

s. thy'mi (N.F.), syrup of thyme; fluidextract of thyme 200, syrup 800; dose ʒi (4.0).

s. thy'mi compos'itus (N.F.), compound syrup of thyme; ammonium bromide 35, distilled water 50, syrup of thyme to make 1000; dose ʒi(4.0).

s. tolu' (U.S.), syrup of tolu; tincture of tolu 50; magnesium carbonate 10; sugar 820; water to make 1000.

s toluta'nus (Br.), syrup of tolu; balsam of tolu 1¼ ounces, boiled ½ hour in water 1 pint, with sugar 2 lb., and when cool add enough water to make 16 ounces (Br.); used in expectorant mixtures in doses of ʒi–2 (4.0–8.0).

s. trifo'lii compos'itus (N.F.), compound syrup of trifolium (red clover blossoms); compound fluidextract of trifolium 300.0, powdered tragacanth 1.0, oil of sassafras 0.4, methyl salicylate 0.2, sucrose 659, distilled water to make 1000; dose ʒ2 (8.0).

s. urgin'eæ (B.A.), syrup of urginea; resembles syrup of squill; dose, ʒ½–1 (2.0–4.0).

s. zingib'eris (U.S., Br.), syrup of ginger; fluidextract of ginger 30, alcohol 20, magnesium carbonate 10, sugar 820, water to make 1000 (U.S.); strong tincture of ginger 1, syrup 19 (Br.); dose, ʒi–4 (4.0–16.0).

syr'upy. Relating to syrup; of the consistency of syrup.

syssarco'sic. Syssarcotic.

syssarcosis (sis-ar-ko'sis) [G. *syssarkōsis; syn*, with, + *sarx*(*sark-*), flesh.] Union of bones by muscle, a muscular articulation; in man examples of s. are the muscular connections of the hyoid bone, of the patella, and of other sesamoid bones.

syssarcot'ic. Relating to or characterized by syssarcosis.

sysso'mus [G. *syn*, together, + *sōma*, body.] A twin monster with two heads, but more or less extensive fusion of the bodies.

systal'tic [G. *systaltikos*, contractile.] Pulsating, alternately contracting and dilating; noting the action of the heart.

sys'tem [*systēma*, a complex whole.] A consistent and complex whole made up of correlated and semi-independent parts. Specifically: 1. The entire organism. 2. Any complex of structures anatomically related, as the vascular system. 3, Any complex of structures functionally related, as the digestive system. 4. In zoology and botany a method of classification, as the Linnean system. 5. A scheme of medical theory, as the Brunonian system. 6. An encyclopedic treatise on medicine or any of its branches, the work of several authors, arranged systematically according to subjects. 7. A progressive course of instruction, arranged according to a definite plan. **absor'bent s.**, lymphatic s. **alimen'tary s.**, digestive s. **associa'tion s.**, see *association*-system*. **autonom'ic s.**, see *autonomic* nervous system*. **blood-vas'cular s.**, the heart and blood-vessels considered as a whole. **central nervous s.**, systema nervorum centrale [BNA]. **cerebrospinal s.**, the combined systema* nervorum centra'e and systema* nervorum periphericum [BNA]. **cir'culatory s.**, vascular s. **coll'oid s.**, a combination of the two phases, internal and external, of a colloid solution; the various systems are: gas + liquid (foam); gas + solid (meerschaum); liquid + gas (fog); solid + gas (smoke); solid + liquid (sol); liquid + solid (gel); liquid + liquid (emulsion); solid + solid (colored glass). **den'tinal s.**, all the dentinal tubules in a tooth. **dermal s.**, **dermoid s.**, the skin and its appendages, the nails and hair. **diges'tive s.**, the digestive tract from the mouth to the anus with all its associated organs and glands, apparatus digestorius [BNA]. **en'docrine s.**, the collection of ductless and other glands (thyroid, thymus, adrenal, pituitary, pancreatic, etc.) which furnish internal secretions. **esthesiod'ic s.**, see *esthesiodic*. **glan'dular s.**, all the glands of the body collectively. **Haver'sian s.**, see *Havers*. **hematopoiet'ic s.**, the blood-making organs, the spleen and bone-marrow. **heteroge'neous s.**, one which contains various distinct and mechanically separable parts, as for example a suspension or an emulsion. **homoge'neous s.**, one the parts of which cannot be mechanically separated, which is therefore uniform throughout and possesses in every part identically physical properties; a perfect solution, *e.g.* of sodium chloride, is such a system. **kinesod'ic s.**, see *kinesodic*. **kinet'ic s.**, see *kinetic*. **lymphat'ic s.**, the lymphatic spaces, vessels, and glands, including the lacteals. **mus'cular s.**, all the muscles of the body collectively. **neokinet'ic s.**, see *neokinetic*. **nervous s.**, the central, peripheral, and sympathetic nervous systems collectively. **neuromus'cular s.**, the muscles of the body collectively and the nerves supplying them. **paleokinet'ic s.**, see *paleokinetic*. **parasympathet'ic s.**, autonomic* nervous system. **pedal s.**, see *pedal*. **period'ic s.**, the arrangement of the chemical elements in a definite

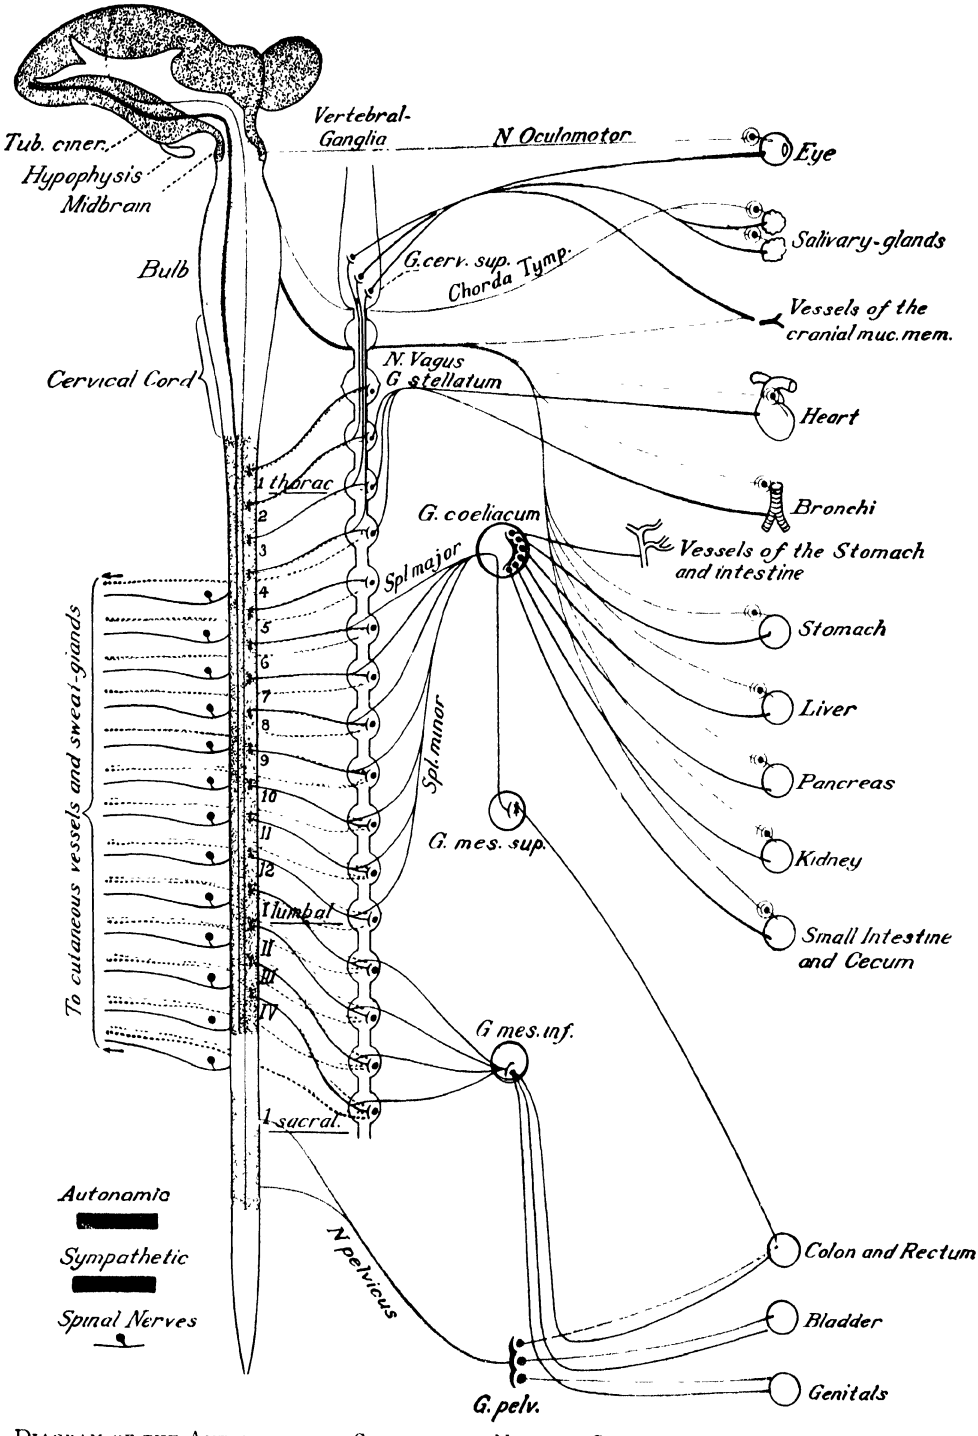


DIAGRAM OF THE AUTONOMIC AND SYMPATHETIC NERVOUS SYSTEMS. (After Meyer and Gottlieb.)

order as indicated by their respective atomic numbers. **periph'eral nervous s.**, systema nervorum peripheric um [BNA.] **portal s.**, the capillaries of the liver carrying venous blood from the portal vein and discharging it through the hepatic vein into the vena cava inferior. **projec'tion s.**, see *projection*. **respi'ratory s.**, apparatus respiratorius [BNA], all the air passages from the nose to the pulmonary alveoli. **retic'ulo-endothe'lial s.**, a group of morphologically distinct mesenchymal cell types, but all with endothelial and reticular attributes, scattered about in various organs and tissues, and seemingly chiefly concerned in phagocytosis and in the production of immune bodies. **static s.**, that part of the neuromuscular s. whereby the animal organism is maintained in posture and equilibrium, and counteracts the forces of gravity and atmospheric pressure; distinguished from the kinetic s. (2). **sympathet'ic nervous s.**, systema nervorum sympathicum [BNA]. **s. disease'**, a disease involving only one of the nerve-fiber systems or tracts in the spinal cord. **transi'tion s.**, the type of a solution which is neither frankly an emulsoid nor frankly a dispersoid. **urogen'ital s.**, apparatus urogenitalis [BNA], the external and internal organs of generation together with the kidneys, ureters, and bladder. **uropoiet'ic s.**, the organs concerned in the secretion and excretion of urine, viz., the kidneys, the ureters, the bladder, and the urethra. **vas'cular s.**, the blood-vascular and lymphatic systems collectively. **veg'etative s.**, systema nervorum sympathicum [BNA].

syste'ma [G.] System. **s. lymphat'icum** [BNA], the lymphatic system, including the lymphatic vessels, lymph nodes, and central lymphatic trunks. **s. nervo'rum centra'le** [BNA], the central nervous system, comprising the brain and spinal cord. **s. nervo'rum peripher'icum** [BNA], the peripheral nervous system, comprising the cerebral, or cranial, and the spinal nerves. **s. nervo'rum sympath'icum** [BNA], sympathetic system of nerves, trisplanchnic or vegetative system; a collection of nerve ganglia arranged on either side of and anterior to the vertebral column, connected with each other by longitudinal and transverse nerve-fibers and also with the cerebrospinal nerves by the *rami communicantes;* these ganglia and their connecting nerve cords form the *truncus sympathicus*, sympathetic trunk, and the ganglia are distinguished as the *ganglia trunci sympathici*, ganglia of the sympathetic trunk. The sympathetic nerves, non-medullated and of a grayish color, arise from the ganglia of the trunk and pass to the viscera and blood-vessels, being broken up, however, before distribution into numerous plexuses (*plexus sympathici*) situated in great part on the arteries; in these plexuses are other ganglia called *ganglia plexuum sympathicorum*, ganglia of the sympathetic plexuses, from which new nerve-fibers arise. The sympathetic system supplies the non-striated muscular system (visceral and arterial) and also regulates in great part glandular activity; its nerve cords convey fibers to the viscera from the cerebrospinal system and also transmit afferent fibers from the viscera to the cerebrospinal centers, thus bringing the organic or vegetative processes more or less under the control of sentient and voluntary nervous action. **s. nervo'rum vegetati'vum**, s. nervorum sympathicum [BNA]. See Plate XIX.

sys"tem-diseas'es. Degenerative diseases of the spinal cord, limited to certain definite tracts, distinguished from those marked by transverse lesions; in the *combined* system-diseases, several tracts are simultaneously affected.

systemat'ic. Relating to a system in any sense; arranged according to a system. **s. anat'omy**, descriptive anatomy.

sys'tematize. To arrange according to a system; to classify.

system'ic. Relating to a system; specifically somatic, relating to the entire organism as distinguished from any of its individual parts. **s. circula'tion**, see *circulation*. **s. death**, somatic death.

sys'temoid [G. *systēma* + *eidos*, resemblance.] Resembling a system; noting a tumor of complex structure resembling an organ.

systole (sis'tŏ-le) [G. *systolē*, a contracting.] The rhythmical contraction of the heart, especially of the ventricles, by which the blood is driven through the aorta and pulmonary artery to traverse the systemic and pulmonary circulations, respectively; its occurrence is indicated physically by the first sound of the heart heard on auscultation, by the apex beat felt in the fifth intercostal space to the left of the sternum, and by the swelling of the pulse. **abort'ed s.**, a loss of the systolic beat in the radial pulse through weakness of the ventricular contraction or mitral regurgitation. **arte'rial s.**, the contraction of an artery following its dilatation by the pulse wave. **extra s.**, a premature contraction of the heart or one of its chambers in response to a stimulus from some unusual point, the fundamental or sinus rhythm of the organ being maintained. **s. alter'nans**, hemisystole.

systol'ic. Relating to, or occurring at the time of the cardiac systole.

systolom'eter [G. *systolē* + *metron*, measure.] 1 An apparatus for determining the force of the cardiac contraction. 2. An instrument for analyzing the sounds of the heart.

systremm'a [G. anything twisted.] A muscular cramp in the calf of the leg, the contracted muscles forming a hard ball.

syzygial (sĭ-zij'ĭ-al). Relating to a syzygium.

syzygiology (siz"ĭ-jĭ-ol'o-jĭ) [G. *syzygios*, bound together, joined, + *-ology*.] The study of interrelationships, or interdependencies, especially of the whole, as opposed to the study of separate parts or isolated functions.

syzygium (sĭ-zij'ĭ-um) [G. *syzygos*, yoked.] 1. The conjugation of certain protozoans. 2. The partial fusion of two parts or organs, each, however, remaining distinct. 3. Jambul.

syzygy (siz'ĭ-jĭ). Syzygium (1 and 2).

Szabo's test (sah'bo). For hydrochloric acid: a liquid containing hydrochloric acid will turn a brownish red or yellow color on the addition of a mixture of sodioferric tartrate and ammonium sulphocyanide.

T

T. Abbreviation for tension. T+, increased tension; T−, diminished tension.

t. Abbreviation for temporal and for Lat. *ter*, three times.

TA. See *alkaline tuberculin.**

Ta. Chemical symbol of *tantalum*.

tabacism (tab'ă-sizm) Tabacosis.

tabaco'sis [L. *tabacum*, tobacco.] Chronic tobacco poisoning, especially the occupational disease from inhaling the dust in cigar and tobacco factories.

tabac'um [L.] Tobacco,* the plant *Nicotiana tabacum*.

tab'anid. A gadfly.

Taba'nus [L. a gadfly.] A genus of biting flies, gadflies, horse-flies, breeze-flies; several of the species are believed to transmit trypanosomes.

tabardillo (tab-ar-dil'yo). The Mexican term for the typhus fever of that country, matlazahuatl.

tabasheer (tab-ă-shēr') [Hindu word.] An excretion found at the joints of the bamboo in India and Brazil, employed as a tonic and cough remedy.

tabatière (tă-bă-te-air') [Fr. snuffbox.] The hollow at the base of the metacarpal bone of the thumb when the digit is extended; it is formed by the prominence on either side of the tendons of the extensor primi and extensor secundi internodii pollicis muscles (musculus extensor pollicis brevis and musculus extensor pollicis longus [BNA]).

tabby-cat stria'tion. Tigroid* striation.

tabefaction (ta-be-fak'shun) [L. *tabefacere*, to melt.] Tabescence, emaciation, atrophy, tabes.

tabell'æ [L. plural dim. of *tabula*, tablet.] Medicated tablets or lozenges. **t. carbo'nis anima'lis** (N.F.), tablets of animal charcoal, replacing trochisci carbonis ligni (N.F. IV), compressed tablets, each containing 4.6 grains (0.3) of purified animal charcoal. **t. glycery'lis trinitra'tis** (Br.), tablets of nitroglycerin, each tablet contains 0.0005 gram (gr. $\frac{1}{120}$) of nitroglycerin; dose, 1 or 2 tablets. **t. hydrar'gyri chlor'idi corrosi'vi**, see *toxitabellæ*. **t. hydrar-gyri chlor'idi mi'tis** (N.F.), tablets of mild mercurous chloride, calomel tablets; calomel 0.65, carmine 0.05, light liquid petroleum 1.40, powdered starch 4.00, powdered sucrose 12.00, to make 100 tablets, each containing $\frac{1}{10}$ gr. (0.0065) of calomel; dose 10 tablets at 15 minute intervals. **t. phenolphthalei'ni** (N.F.), tablets of phenolphthalein, replacing trochisci phenolphthaleini (N.F. IV); phenolphthalein 6.00, gluside 0.15, spirit of cinnamon 0.15, cocoa 6.00, sucrose 18, to make 100 tablets; dose, 1 tablet containing 1 gr. (0.06) of phenolphthalein. **t. santoni'ni** (N.F.), tablets of santonin, replacing trochisci santonini (N.F. IV), santonin 3.00, gluside 0.06, tincture of vanilla 1.50, cocoa 6.00, sucrose 21.00, to make 100 tablets; dose, 1 tablet containing about ½ gr. (0.03) of santonin. **t. santoni'ni compos'itæ** (N.F.), compound tablets of santonin, replacing trochisci santonini compositi (N.F. IV); santonin and calomel of each 3.00, gluside 0.06, tincture of vanilla 1.50, cocoa 6.00, sucrose 18.00, to make 100 tablets; dose, 1 tablet containing about ½ gr. (0.03) each of santonin and calomel. **t. so'dii bicarbona'tis** (N.F.), tablets of sodium bicarbonate, sodamint tablets, replacing trochisci sodii bicarbonatis (U.S. IX), sodium bicarbonate 25.0, oil of peppermint 0.3, light liquid petrolatum, 1.0, powdered starch 4.0, to make 100 tablets, each containing about 4 grains of sodium bicarbonate. **t. sul'phuris et potas'sii bitartra'tis** (N.F.), tablets of sulphur and potassium bitartrate, or cream of tartar, replacing trochisci sulphuris et potassii bitartratis (N.F. IV); washed sulphur 20.0, potassium bitartrate 6.0, oil of orange 0.3, starch 4.0, to make 100 tablets, each containing gr. 3 (0.20) of sulphur and gr. 1 (0.06) of potassium bitartrate.

tabes (ta'bēz) [L. a wasting away.] Progressive wasting or emaciaton, phthisis; usually signifying tabes dorsalis. **cer'ebral t.**, a form of t. dorsalis in which the earliest symptoms are in the region innervated by the cranial nerves. **cer'vical t.**, a form of t. dorsalis in which the upper extremities are first affected. **maran'tic t.**, a form of t. dorsalis marked by extreme emaciation. **t. diabet'ica**, diabetic neuritis, especially of the motor nerves of the lower extremities, marked by muscular atrophy and a steppage gait. **t. dorsa'lis**, locomotor ataxia, posterior spinal sclerosis a chronic progressive sclerosis of the posterior spinal ganglia and roots, the posterior columns of the spinal cord, and the peripheral nerves; the symptoms are ataxia, or muscular incoordination, anesthesia, neuralgia, lancinating pains, visceral crises, and muscular atrophy; atrophy of the optic nerve is not uncommon, trophic disorders of the joints (arthropathies) are frequent, and paralysis is a late symptom; the disease begins usually in middle life and is often, if not always, a sequel of syphilis. **t. heredita'ria**, Friedreich's,* or hereditary, ataxia. **t. infe'rior**, degeneration of the posterior roots in the lumbar region, the lower extremities being the parts affected. **t. mesenter'ica**, tuberculosis of the mesenteric and retroperitoneal lymph-nodes. **t. spasmod'ica**, Little's* disease. **t. spina'lis**, t. dorsalis. **t. supe'rior**, a form of t. dorsalis in which the ataxia is especially marked in the upper extremities or region supplied by the cranial nerves, cerebral or cervical t.

tabescent (ta-bes'ent) [L. *tabescere*, to waste away.] Progressively emaciating, tabetic, phthisical.

tabet'ic. Relating to or suffering from tabes, especially tabes dorsalis.

tabet'iform [L. *tabes(tabet-)*, a wasting, + *forma*, form.] Resembling tabes dorsalis.

tab'ic. Tabetic.

tab'id. Tabetic, tabic; emaciating, wasting away.

tablature (tab'la-tūr) [L. *tabula*, table.] The state of division of the cranial bones into two plates separated by the diploë.

ta'ble [L. *tabula*.] 1. One of the two plates or laminæ, separated by the diploe, into which the cranial bones are divided. 2. An arrangement of the data of a clinical history, the steps of an experiment, etc., in parallel columns, showing all the essential facts in a readily appreciable form. 3. The occlusal or grinding surface of the tooth of a horse. **Amer'ican Expe'rience t.**, a table, based upon the statistics of a number of American life insurance companies, showing the mortality rates of the insured, and serving as a basis for the determination of the expectation of life at differ-

ent ages. **Carlisle t.,** a mortality table, similar to the American experience t., based upon the vital statistics for a number of years of Carlisle, England. **Combined Experience t.,** a mortality table, similar to the American and the Carlisle tables, based upon the statistics of a large number of life insurance companies. **exam'ining t.,** a table on which the patient lies during a gynecological or other medical examination. **Gill's t.,** said to be the first American mortality table; it was based, however, on English statistics, being a sort of composite of the Carlisle, the Healthy English Lives, and other tables. **Healthy English Lives t.,** a mortality table constructed by Dr. Farr, based upon the statistics of certain districts in England in which the annual mortality was 17 per 1000 or less. **Northamp'ton t.,** a mortality table constructed in the 18th century from the statistics of baptisms and funerals of the churches of Northampton; owing to the error of regarding the number of baptisms the same as the number of births the table is inaccurate, the life expectation being too low. **op'erating t.,** a table on which the patient lies during a surgical operation. **vit'reous t.,** the inner table of one of the cranial bones; it is more compact and harder than the outer table.

ta'blespoon. A large spoon, used as a measure of the dose of a medicine, equivalent to about 4 fluidrams or ½ fluidounce.

tab'let [Fr. *tablette*, dim. of L. *tabula*, table.] Tabella, a small disc, usually of sugar of milk, impregnated with a tincture or other fluid form of some medicament (*tablet saturate*), or containing a finely powdered drug incorporated with it (*tablet triturate*), or the pure drug, powdered and compressed into a disc-shaped mass (*compressed tablet*); each tablet contains a dose, or a fraction of a dose, of the remedy, and is taken internally or dissolved in water and administered hypodermically. **poi'son tab'lets,** toxitabellæ (U.S.), tablets stamped with the skull and cross bones and the word "poison;" the only ones official in the U.S.P. are those containing bichloride of mercury.

tab'loid [*tablet* + G. *eidos*, resemblance.] Trade name of a special make of tablet.

ta"bopar'esis. A condition in which the symptoms of tabes dorsalis and general paresis are associated

tabophobia (ta-bo-fo'bĭ-ah) [L. *tabes* + G. *phobos*, fear.] Ataxophobia.

tab'ular [L. *tabula*, table] 1. Laminar, table-like. 2. Arranged in the form of a table (2).

tab'ule. Tablet.

tac'ahout [a native name.] A gall formed on the Indian tamarisk, furnishing tannic acid.

tacamahaca (tah-kah-mah-hah'kah) [S.A. Indian name.] A gum-resin from several South American trees; used internally as a pectoral, and externally in plasters for rheumatic pains.

tache (tash) [Fr. spot.] A macule, a freckle, a circumscribed discoloration of the skin or mucous membrane. **t. blanche** (blahńsh), white spot, macula* albida. **t. bleuatre** (blē-atr'), blue spot, macula* cærulea. **t. cérébrale** (sa-ra-bral'), meningitic streak.* **t. laiteuse** (la-tēz'), milk spot, macula* albida. **t. méningéale** (ma-nañzha-al'), meningitic streak.* **t. spinale** (spe-nal'), a trophic bulla forming on the skin in certain cases of disease of the spinal cord. **t. vierge** (vĭ-airzh'), one of a number of small circular areas on the surface of a bacterial culture, assumed by d'Herelle to be evidence of the action of a bacteriophage.

tachetic (tă-ket'ik) [F. *tache*, spot.] Marked by bluish or brownish spots.

tachiol (tak'ĭ-ol). A trade name for silver fluoride; said to be powerfully germicidal.

tachistoscope (tă-kis'to-skōp) [G. *tachistos*, very rapid, + *skopeō*, I examine.] An instrument employed in experimental optics to determine the shortest exposure capable of making a conscious impression on the retina; it is on the plan of the movable shutter employed in photography.

tachogram (tak'o-gram) [G. *tachos*, speed + *gramma*, mark.] Record made by the tachometer.

tachography (tă-kog'ră-fĭ) [G. *tachos*, speed, + *graphō*, I write.] The recording of the rapidity of the blood-current.

tachometer (tă-kom'e-ter) [G. *tachos*, speed, + *metron*, measure.] An instrument for measuring the rapidity of the blood-current, hemotachometer.

tachycardia (tak-e-kar'dĭ-ah) [G. *tachys*, quick, + *kardia*, heart.] Very rapid action of the heart, heart-hurry. **auric'ular t.,** auricular flutter. **essen'tial t.,** persistent rapid action of the heart due to no discoverable organic lesion. **paroxys'mal t.,** recurrent attacks of rapid heart-action, with normal intervals. **t. exophthal'mica,** the rapid heart-action occurring as one of the symptoms of exophthalmic goiter.

tachycar'diac. Relating to or suffering from excessively rapid action of the heart.

tachymeter (tă-kim'e-tur) [G. *tachys*, swift, + *metron*, measure] An instrument for determining the rapidity of motion of any object; tachometer.

tachyphagia (tak-ĭ-fa'jĭ-ah) [G. *tachys*, rapid, + *phagō*, I eat.] Rapid eating, bolting of food.

tachyphasia (tak-ĭ-fa'zĭ-ah) [G. *tachys*, rapid, + *phasis*, speaking.] Tachyphrasia, tachyphemia.

tachyphemia (tak-ĭ-fe'mĭ-ah) [G. *tachys*, rapid, + *phēmē*, speech.] Tachyphrasia, rapid speech.

tachyphrasia (tak-ĭ-fra'zĭ-ah) [G. *tachys*, rapid, + *phrasis*, speaking.] Very rapid speech.

tachyphrenia (tak-ĭ-fre'nĭ-ah) [G. *tachys*, rapid, + *phrēn*, mind. Rapidity of the mental processes.

tachyphylaxis (tak"ĭ-fi-lak'sis) [G. *tachys*, quick, + *phylaxis*, protection.] Rapid production of immunity, as is exemplified by the fact that a second injection of the pressor hormone of the pituitary, a few minutes after the first, produces no further rise of blood pressure (Schäfer).

tachypnea, tachypnœa (tak-ĭ-pne'ah) [G. *tachys*, rapid, + *pnoē*(*pnoiē*), breathing.] Very rapid breathing, polypnea.

tachyrhythmia (tak-ĭ-rith'mĭ-ah) [G. *tachys*, rapid, + *rhythmos*, rhythm.] Tachycardia. **auric'ular t.,** auricular flutter.

tachysystole (tak-ĭ-sis'to-lĭ) [G. *tachys*, rapid, + *systolē*, a contracting.] Tachycardia. **auric'ular t.,** auricular flutter.

taco'sis. Tecosis.

tactile (tak'til) [L. *tactilis; tactus*, touch.] Relating to touch or to the sense of touch. **t. cell,** one of the cells, either single or compound, in which a sensory nerve-fibril terminates. **t. cor'puscle,** corpusculum* tactus. **t. eleva'tion,** torulus tactilis. **t. disc,** t. meniscus. **t. hair,** a hair having the function of an end-organ, as one of a cat's whiskers. **t. menis'cus,** a discoid expansion of the axis-cylinder of a sensory nerve in the epidermis. **t. papil'la,** one of the papillæ of the skin containing a t. cell or corpuscle.

taction (tak'shun) [L. *tactio; tangere*, to touch.] 1. The sense of touch. 2. The act of touching.

tactom'eter [L. *tactus*, touch, + G. *metron*, measure.] Esthesiometer.

tac'tor [L. one who or that which touches.] A tactile end-organ.

tac'tual. Relating to or caused by touch.

tac'tus [L.] Touch, the sense of touch. **t. erudi'tus** [L. skilled], the trained sense of touch in a diagnostician or obstetrician. **t. exper'tus** [L. experienced], t. eruditus.

tæ'dium [L.] Weariness, loathing. **t. vi'tæ**, weariness of life.

tænia, tenia (te'nĭ-ah) [G. *tainia*, band, tape.] 1. Any anatomical band-like structure. 2. A tapeworm. **t. acus'tica,** pl. *tæniæ acusticæ*, stria* medullaris [BNA]. **t. chorioid'ea** [BNA], the border of the chorioid plexus in the lateral ventricles. **t. co'li** [BNA], t. of Valsalva, one of the three bands in which the longitudinal muscular fibers of the large intestine, except the rectum, are collected; these are called respectively: *t. mesocolica*, situated at the place corresponding to the mesenteric insertion, *t. libera*, free band, opposite the mesocolic band, and *t. omentalis* at the place corresponding to the site of adhesion of the omentum to the transverse colon. **t. fim'briæ** [BNA], tenia of the fimbria, the torn edge of the fimbria hippocampi after removal of the chorioid plexus. **t. for'nicis** [BNA], tenia of the fornix, the slightly dentated lateral border of each crus (anterior pillar) of the fornix. **t. hippocam'pi** [BNA], corpus fimbriatum. **t. lib'era** [BNA], see *t. coli*. **t. medulla'ris,** striamedullaris (1). **t. mesocol'ica** [BNA], see *t. coli*. **t. nervo'sa,** Gasserian* ganglion. **t. omenta'lis** [BNA], see *t. coli*. **t. pontis,** a band of white fibers detached from the anterior edge of the pons Varolii on either side, looping over the cerebellar peduncle and lateral lemniscus. **t. pylo'ri,** one of the thickened bands of the gastric muscle running longitudinally on the anterior and posterior aspects of the pylorus. **t. semicircula'ris,** semicircular tenia, stria* terminalis [BNA]. **t. tec'ta,** stria longitudinalis lateralis. **t. termina'lis,** a broad muscular band in the roof of the right cardiac atrium, contraction of which closes the mouths of the venæ cavæ during the auricular systole. **t. thal'ami** [BNA], tenia of the thalamus, thalamic tenia, the sharp edge or angle between the superior and inner or medial surfaces of the thalamus on either side; to it is attached the epithelial lamina forming the lining of the roof of the third ventricle. **t. ventric'uli quar'ti** [BNA], tænia of the fourth ventricle, the line of junction of the epithelial portion of the roof with the nerve substance. **t. ventric'uli ter'tii,** stria medullaris.

Tæ'nia, Te'nia [G. *tainia*, a ribbon.] A genus of *Cestoda* or tapeworms. It formerly embraced most of the tapeworms, but is now restricted to a few species. **T. ægyp'tica,** *T. nana*. **T. africa'na,** a tapeworm found in native Africans, the cysticercus of which is unknown. **T. arma'ta,** *T. solium*. **T. confu'sa,** a rare tapeworm, the cysticercus of which is unknown. **T. cucumeri'na,** *Dipylidium caninum*. **T. cucurbiti'na,** *T. solium*. **T. demerarien'sis,** *Davainea madagascariensis*. **T. denta'ta,** *T. solium*. **T. diminu'ta,** dwarf tapeworm, *Hymenolepis nana*. **T. echinococc'us,** a small tapeworm of the dog, the eggs of which, when ingested, cause echinococcous disease in man. **T. ellip'tica,** *Dipylidium caninum*. **T. iner'mis,** *T. saginata*. **T. lata,** *T. saginata, Dibothriocephalus latus*. **T. madagascarien'sis,** *Davainea madagascariensis*. **T. mediocanellata,** *T. saginata*. **T. min'ima,** *T. nana*. **T. muri'na,** *T. nana*. **T. na'na,** *Hymenolepsis nana, T. echinococcus* of dogs. **T. pellu'cida,** *T. solium*. **T. sagina'ta,** beef tapeworm, derived from *Cysticercus bovis* by eating the insufficiently cooked flesh of an infested ox. **T. so'lium,** pork tapeworm, a common tapeworm in man acquired by eating insufficiently cooked pork infested with *Cysticercus cellulosæ*, measly pork. **T. vulga'ris,** *T. solium*.

æ'niacide, tæ'niafuge, etc. See *teniacide, teniafuge*, etc.

tæniatus (te-nĭ-a'tus) [NK]. Tenial (2).

tæniola (te-ni'o-lah) [L. dim. of *tænia*, ribbon.] A slender tænia or band-like structure. **t. cine'rea,** a thin ridge of gray matter on the floor of the fourth ventricle of the brain to the outer side of the striæ medullares. **t. cor'poris callo'si,** lamina rostralis [BNA].

Tæniorhynchus (te-nĭ-o-rin'kus) [G. *tainia*, band, + *rhynchos*, snout.] A genus of mosquitos; also a species of the genus *Ochlerotatus*.

Taenzer's stain (tents'er). An orcein solution used for staining elastic tissue.

T.A.F. Abbreviation of the German Tuberculin Albumose frei, albumose-free tuberculin, employed in place of old tuberculin for the subcutaneous test.

Tagetes (ta-je'tēz) [*Tages*, an Etruscan god.] A genus of composite plants, two species of which, *T. erecta* and *T. patula*, are sometimes used as substitutes for calendula.*

Tagliacotian (tal-yah-ko'shyan). Referring to Gaspard *Tagliacozzi*, Italian surgeon in Bologna, 1546–1599. **T. meth'od** or **opera'tion,** a plastic operation in which the skin flap is taken from a distant part; especially rhinoplasty in which the new nose is fashioned from the forearm which is bound firmly to the face until the flap is solidly united in its new position.

tag'ma [G. a brigade of soldiers.] A molecular group; the largest indivisible particle of protoplasm.

tail [A.S. *tægl*.] 1. Cauda, the posterior free extremity of the spinal column in an animal. 2. Any tail-like structure. **t. bone,** coccyx. **t. fold,** an embryonic fold in which is developed the t. gut. **t. gut,** the portion of the archenteron in the caudal extremity of the embryo. **t. sheath,** the protoplasmic envelope of the tail of a spermatozoon.

tail'or's cramp. A spasmodic neurosis of the muscles of the forearm and hand, sometimes affecting tailors, analogous to writer's cramp; the same as seamstress's spasm. **t.'s muscle,** musculus sartorius. **t.'s spasm,** t.'s cramp.

Tait's knot (tāt) [Lawson *Tait*, English gynecologist, 1845–1899.] Staffordshire knot, a ligature for the pedicle of an ovarian tumor, see under *knot*. **T.'s law,** an exploratory laparotomy should be performed in every case of obscure pelvic or abdominal disease which threatens health or life. **T.'s opera'tion,** perineorrhaphy.

ta'ka-di'astase [after Jokichi *Takamine*, Japanese chemist, resident in New York, 1859–1922.] Trade name of a digestive ferment for starches, obtained from *Aspergillus oryzæ* (a fungus of the koji-yeast used in making rice-wine) grown on sterilized bran.

Takata's reagent (tah-kah'tah) [Maki *Takata*, Japanese physician.] A mixture of equal parts of 0.5 per cent. solution of mercuric chloride and a 0.02 per cent. basic fuchsin solution; used in the Takata-Ara test (*q.v.*).

Takata-Ara test (tah-kah'tah-ah'rah) [Maki *Takata*, Kiyoshi *Ara*, Japanese physicians.] A test for neurosyphilis: to 1 c.c. of spinal fluid, 1 drop of a 10 per cent. solution of sodium carbonate is added; to this is added 0.3 c.c. of Takata's reagent and the mixture is shaken and allowed to stand at room temperature; at the end of 24 hours a

luetic fluid gives a purple precipitate, and a meningitic reaction is rose red.

Takayama's solution (tah-kah-yah'mah). A solution used for the identification of blood stains; it consists of pyridine, 10 per cent., solution of sodium hydrate and saturated solution of dextrose, each 3, distilled water, 7; a small drop of this solution added to a minute fragment of a scraping of a suspected blood stain on a clean slide will, if positive, result in the formation of hemochromogen crystals.

talal'gia [L. *talus*, heel, + G. *algos*, pain.] Pain in the heel, pternalgia.

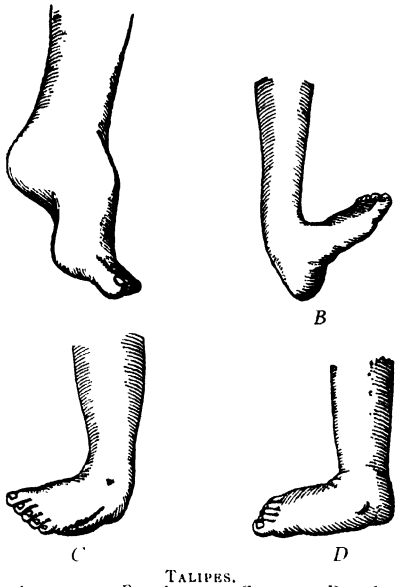
talc, tal'cum [Ar. *talq*.] Soapstone, native hydrous magnesium silicate. **talcum purifica'tum** (U.S.), purified talc, prepared by boiling powdered talc with hydrochloric acid in water; used in pharmacy as a filter, and also employed as a dusting powder and in many cosmetic preparations.

Taliaco'tian opera'tion. See *Tagliacotian*.

tal'iped. 1 Clubfooted. 2. One who has a club-foot.

taliped'ic. Clubfooted, taliped (1).

talipes (tal'i-pēz) [L. *talus*, heel, ankle, + *pes*, foot.] 1. Pes, or talipes, calcaneus. 2. Clubfoot in general, cyllosis. **t. arcua'tus,** t. cavus. **t. calca"neovalgus,** t. calcaneus and t. valgus combined. **t. calca"neova'rus,** t. calcaneus and t. varus combined. **t. calca'neus,** permanent dorsal flexion of the foot, so that the weight of the body rests on the heel only. **t. cavus,** hollow foot, an exaggeration of the normal arch of the foot. **t. equi"noval'gus,** t. equinus and t. valgus combined. **t. equi"nova'rus,** t. equinus and t. varus combined. **t. equi'nus,** permanent extension of the foot so that only the ball rests on the ground; it is commonly combined with t. varus. **t. perca'vus,** an extreme degree of t. cavus. **t. planoval'gus,** t. valgus. **t. planus,** flat-foot, splay-foot, a condition in which the arch of the foot is broken down, the entire sole touching the ground. **t. spasmod'icus,** a temporary distortion of the foot, usually t. equinus, due to muscular spasm. **t. valgus,** permanent eversion of the foot, the inner side alone of the sole resting on the ground; it is usually combined with a breaking down of the plantar arch. **t. varus,** inversion of the foot, the outer side of the sole only touching the ground; there is usually more or less t. equinus associated with it, and often t. cavus.



TALIPES.
A, equinus; *B*, calcaneus, *C*, varus; *D*, valgus.

talipom'anus [L. *talipes* + *manus*, hand.] Clubhand; a permanent distortion of the hand analogous in its varieties to talipes.

Tal'lerman appara'tus [Lewis A. *Tallerman*, English inventor, contemporary.] An apparatus in which one extremity or the trunk can be enclosed and submitted to dry air of a high temperature; used in the treatment of chronic rheumatism and other affections.

tall'ow. The harder fat of ruminants, especially of the sheep and the ox; suet, sevum.* **veg'etable t.,** a hard fat from various plant substances, especially the fruit-pulp of the Chinese plant, *Sapium sebiferum*, consisting chiefly of palmitin.

Tallqvist's hemoglo'bin-scale (tahl'kvist). [Theodor Waldemar *Tallqvist*, Finnish physician, *1871.] A chromolithograph of graduated blood tints showing the varying color of samples of blood containing from 10 to 100 per cent. of the normal content of hemoglobin; a piece of filter-paper is moistened with a drop of the blood to be examined and its color is then compared with those of the scale, the corresponding tint on the scale indicating the percentage of hemoglobin.

Tal'ma's disease' [A. Sape *Talma*, Dutch physician, 1847–1918.] Myotonia acquisita. **T.'s opera'tion,** a modified Drummond*-Morison operation for the relief of ascites.

talocalcaneal, talocalcanean (ta-lo-kal-ka'ne-al, ta-lo-kal-ka'ne-an). Relating to the talus, or astragalus, and the calcaneus, or os calcis; noting the joint between those bones and also the ligaments connecting them.

talocru'ral. Relating to the talus and the bones of the leg; noting the ankle-joint.

talofib'ular. Relating to the talus and the fibula; noting the anterior and posterior fasciculi of the external lateral ligament of the ankle attached to the malleolus and the talus, ligamentum talofibulare anterius et posterius [BNA].

tal'on [L. *talo*, claw of a bird.] A low cusp of a tooth; the posterior (distal) part or heel of an upper molar tooth.

talonavic'ular. Relating to the talus and the os naviculare or scaphoid bone of the tarsus; noting the ligamentum talonaviculare [BNA], or superior astragalonavicular ligament.

talonid (tal'ŏ-nid). The posterior (distal) part. or heel, of a lower molar tooth.

taloscaph'oid. Talonavicular.

talotib'ial. Relating to the talus and the tibia, noting the articulation between the two bones and also that portion of the deltoid ligament of the ankle which is attached to the talus and the internal malleolus.

tal'pa [L. a mole (the animal).] A wen.

ta'lus, gen. *ta'li* [L. one of a set of dice.] [BNA] Ankle-bone, astragalus, os tarsi tibiale [NK]; the bone of the foot which articulates with the tibia and fibula to form the ankle-joint.

tam'a [L.] Edema of the feet and legs.

tam'arac. Native Indian name of the American or black larch, *Larix americana*, the bark of which is reputed to be alterative and tonic in doses of ℥20–40(1.3–2.5) of a fluidextract.

tamar indien (tă-mar" aṅ-dyaṅ') [Fr. tamarind.] A laxative fruit confection containing tamarind, senna, and flavoring substances

tamarin'dus (N.F., Br.). Tamarind, the pulp of the fruit of *Tamarindus indica*, a large tree of India; mildly laxative in doses of ʒ2–4 (8.0–16.0).

tambour (tahm-boor') [Fr. drum.] The recording part of a graphic apparatus, such as a sphygmograph, consisting of a membrane stretched across the open end of a cylinder and the recording stile attached to it.

tam'pan [native name.] *Ornithodorus moubata.*

tam'picin. A resin from *Ipomœa simulans*, Tampico jalap; laxative in small doses, purgative in large ones.

tam'pon. 1. A cylinder or ball of cotton-wool, gauze, or other loose substance; employed as a plug in a canal or cavity to restrain hemorrhage, absorb secretions, or maintain a displaced organ, such as the uterus, in position. 2. To insert a tampon, to plug a canal with gauze, cotton-wool, or other substance.

tamponade', tam'ponage. The insertion of a tampon.

tam'poning, tampon'ment. The act of inserting a tampon.

ta'mus. Black bryony, the rhizome and seeds of *Tamus communis*, a plant of the Mediterranean region; diuretic and cathartic.

tan. Sunburn, pigmentation of the skin from exposure to the actinic rays of the sun or electric light.

tanace'tol, tanace'tone. A ketone ($C_{10}H_{16}O$) identical with absinthol and thuyol

tanace'tum [Latinized from *tansy*] Tansy, bitter-buttons, parsley fern; the flower heads or entire plant, *Tanacetum vulgare*, an aromatic herb of Europe and the neighboring portions of Asia, carminative, anthelmintic, and emmenagogue in doses of gr. 20–40 (1.3–2.6).

tanghin (tang'gin). A poisonous extract from the seeds of *Tanghinia venenifera*, a tree of Madagascar; it is a cardiac poison, like strophanthus, employed formerly as an ordeal poison

tangle (tang'gl). Laminaria.

tann'al. A brownish yellow powder employed locally as an astringent; *soluble t.* is aluminum tannotartrate; *insoluble t.*, aluminum tannate.

tannal'bin. Trade name of albumini tannas (U.S.). **vet'erinary t.,** employed in doses of ʒ5–8 (20.0–32.0) for horses and cattle, and of gr. 45–90 (3.0–6.0) for foals and calves.

tannal'um. Tannal.

tannase (tan'āz). A ferment produced in cultures of *Penicilium glaucum* and found in certain tannin forming plants.

tann'ate. A salt of tannic acid

tan'nic. Relating to tan (tan-bark) or to tannin. **t. acid** tannin, acidum* tannicum.

tan'nigen. Trade name of acidum acetyltannicum (U.S.).

tan'nin [*tan*, the bark of oak and other trees containing the substance.] Acidum tannicum (U.S.). **t. nucleopro'teid,** protan.

tannis'mut, tannis'muth. Trade name of a light yellow powder, said to be a bitannate of bismuth, recommended in the treatment of chronic intestinal catarrh in doses of gr. 5–10 (0.3–0.6).

tan'nisol. Methylene ditannic acid; a reddish brown powder, employed in diarrhea in doses of 3–6 grains (0.2–0.4).

tannoca'sum. An astringent compound of tannin and casein, used in diarrhea.

tannochloral (tan-o-klo'ral). A compound of chloral hydrate and chloral, astringent and parasiticide; same as captol.

tannochrome (tan'o-krōm). Trade name of a gray powder, insoluble in water, composed of equal portions of resorcinol and chromium bitannate; recommended in eczema and some other skin diseases.

tann'ocol. Trade name of a compound of tannin and gelatin, employed in diarrhea in dose of gr. 15 (1.0).

tann'oform. Methyl ditannin; trade name of a compound of tannin with ferric aldehyde, a reddish white powder; used locally as an astringent and antiseptic, and internally in diarrhea in doses of gr. 3–10 (0.18–0.6).

tannogel'atin. Tannocol.

tannoguaiaform (tan-o-gwi'ă-form). A compound of guaiacol, tannin, and formaldehyde; an odorless and tasteless powder recommended for its antiseptic and astringent properties in the treatment of intestinal tuberculosis, in doses of gr. 8–15 (0.5–1.0).

tann'on. Hexamethylene tetramine tannin.

tann'opin. Hexamethylene tetramine tannin.

tann'osal. Creosal, creosoti tannas.

tannothy'mal. Proprietary name of a mixture of tannic acid, formaldehyde, and thymol, employed in diarrhea in doses of 5–15 grains (0.3–1.0).

tan'nyl ac'etate. Acidum acetyltannicum (U.S.)

Tanret's rea'gent (tahn-ra') [Charles *Tanret*, French physician, 19th century] For albumin in the urine: potassium iodide 3.32, mercuric chloride 1.35, acetic acid 20, water 64; it gives a white precipitate when added to albuminous urine.

Tansini's operation (tahn-se'ne) [Iginio *Tansini*, Italian surgeon, *1855.] 1. An operation for the removal of a cyst of the liver. 2. Amputation of the breast with removal of all the skin covering it, the loss being compensated for by a generous flap taken from the back. **T.'s sign,** in cases of cancer of the pylorus the abdomen is sunken, except when there is metastasis to the intestine, in which case the abdomen is prominent.

tan'sy [G. *athanasia*, immortality] Tanacetum.

tan'talum. A rare metal seldom seen except as a compound; symbol Ta, atomic weight 181.

taon (tah-ōn'). Philippine name for infantile beriberi.

tap. 1. To withdraw fluid from a cavity by means of a trocar and cannula or a hollow needle. 2. To strike lightly with the finger or a hammer-like instrument in percussion or to elicit a tendon reflex. 3. A light blow. 4. An East Indian fever of undetermined nature **front t.,** a quick light blow on the muscles of the front of the leg, causing contraction of the calf muscles in cases of spinal irritability.

tapeinocephalic, tapeinocephaly (tă-pi-no-sĕ-fal'ik, tă-pi-no-sef'al-i). See *tapinocephalic, tapinocephaly.*

tape'tum [L. a carpet] 1. Membrana versicolor of Fielding, a stratum formed by the commissural fibers of the body and upper part of the splenium of the corpus callosum, bending round the lateral ventricle. 2. In botany a cell, or layer of cells, surrounding the archesporium, and becoming absorbed as the spores develop. **t. alve'oli,** alveolar periosteum. **t. cellulo'sum, t. chorioid'ea,** t. lucidum, an iridescent layer in the choroid coat of the eye in certain of the carnivorous animals, giving the shining appearance seen in the cat's eyes in the dark. **t. cor'poris callo'si,** a band of white fibers passing from the corpus callosum to the temporal lobe over the middle cornu of the lateral ventricle. **t. fibro'sum,** a layer of wavy connective-tissue fibers in the choroid coat of the eye of grazing animals, giving

a metallic hue to the eye. **t. lu'cidum,** t. cellulosum. **t. nigrum, t. oc'uli,** the pigment layer of the retina. **t. ventric'uli,** a bundle of white fibers running from the cortex of the frontal lobe to that of the occipital lobe.

tape'worm. Tænia, an intestinal parasite, consisting of a head, or scolex, by which the worm is attached to the wall of the intestine, and several, usually a large number of, segments (proglottides) containing the reproductive organs. The ovum, entering the intestine of man or one of the lower animals is there hatched and the embryo, carried to the tissues by the blood stream, develops into an hydatid or cysticercus. The cysticercus, when ingested, becomes in the intestine the mature tapeworm. **armed t.,** *Tænia solium*, pork tapeworm. **beef t.,** *Tænia saginata*. **broad t.,** Swiss t., *Bothriocephalus latus*. **dog t.,** *Tænia echinococcus*. **dwarf t.,** *Hymenolepsis nana*. **hookless t.,** *Tænia saginata* or *T. mediocanellata*. **hydat'id t.,** dog t., *Tænia echinococcus*. **pork t.,** armed t. **sol'itary t.,** armed t., *Tænia solium*. **Swiss t.,** broad t. **unarmed t.,** hookless t.

taphopho'bia [G. *taphos*, a funeral, the grave, + *phobos*, fear.] An extreme fear of being buried alive

taph'osote. Trade name of creosote tannophosphate, recommended in pulmonary tuberculosis.

Tapia's syn'drome (tah'pe-ah). Unilateral paralysis of the larynx, the velum palati, and the tongue, with atrophy of the latter.

tapinocephal'ic. Having a low flat head; relating to tapinocephaly.

tapinocephaly (tă-pi-no-sef'ă-lĭ) [G. *tapeinos*, low, + *kephalē*, head.] A condition of flat head in which the skull has a vertical index below 72; similar to chamecephaly.

tapio'ca. Cassava starch, amylum manihot, a starch from the root of *Jatropha manihot* and other species of *J.*, plants of tropical America.

ta'pir-mouth. Atrophy of the orbicularis oris muscle with thickening and separation of the lips, the upper slightly overhanging, suggesting a tapir's snout; it occurs in facioscapulohumeral muscular atrophy.

ta'piroid [G. *eidos*, resemblance] Resembling a tapir's snout, a term sometimes applied to an elongated cervix uteri.

tapotage (tă-pŭ-tazh') A loose cough excited in certain pulmonary diseases by strong percussion in the supraclavicular space

tapotement (tă-put-moṅ') [Fr.] A massage movement consisting in striking with the side of the hand, usually with partly flexed fingers.

tapp'ing. 1. Tapotement. 2. Thoracentesis, paracentesis, etc.

tap'root. In botany, a continuation of the radicle of the embryo forming the main descending root of the plant.

tar. A thick, semisolid, blackish brown mass, of complex composition, obtained by the destructive distillation of the wood of various species of pine; pix* pini (U.S.). **beechwood t.,** oleum fagi, a thick oily liquid of dark brown color and odor of creosote; largely employed as a source of creosote. **birch t.,** oleum rusci. **coal t.,** a thick tarry liquid formed in the distillation of coal gas; it is the source of aniline, benzene, and many valuable substances, among them a number of the synthetic drug compounds. **t. acne,** acne artificialis. **t. camphor,** naphthalin. **t. mixture,** mistura olei picis (N.F.). **t. ointment,** unguentum picis liquidæ (U.S.P.). **t. syrup,** syrupus picis liquidæ (U.S.P.). **t. water,** water slightly impregnated with tar. **t. wine,** vinum picis (N.F.).

Taractogenes (tar-ak-toj'en-ēs) [G. *taraktēs*, a disturber (of the stomach), + *gennaō*, I produce.] A genus of trees from a species of which, *T. kurzii*, chaulmoogra oil is said to be derived.

tar'antism. Dancing mania of Italy, popularly supposed to be caused by the bite of a tarantula.

taran'tula. One of a number of poisonous spiders around the shores of the Mediterranean and in tropical and subtropical America. **t. cuben'sis,** a tincture made from the live Cuban tarantula, employed in homeopathic practice in the treatment of carbuncles, felons, and malignant diphtheria, in doses of the 6th to 30th potency.

taraxacerin (tar-aks-as'er-in). A white waxy substance, $C_9H_{18}O$, obtained from taraxacum.

tarax'acin. A bitter principle from taraxacum.

tarax'acum [derivation uncertain.] (N.F.) The dried root of *Taraxacum officinale*, a wild plant of wide distribution throughout the temperate regions of the northern hemisphere; tonic, laxative, and an hepatic stimulant in doses of ʒ1–3 (4.0–12.0).

tar'bagan plague. Bubonic plague endemic in Eastern Siberia and Mongolia, so called because it attacks a species of rodent resembling a marmot, the local name of which is *tarbagan*.

Tardieu's ecchymo'ses (tar-de-e') [Auguste Ambroise *Tardieu*, French physician, 1818–1879.] Subpleural and subpericardial ecchymoses observed in the bodies of persons who have been strangled; the same as Bayard's* ecchymoses, occurring, however, in adults

tare. In commerce, an allowance made for the weight of a box or other vessel containing the goods; hence, in chemistry, a control vessel kept by the side of, and exposed to the same influences as, the vessel holding the compounds under examination or treatment, used as a basis of comparison in weighing the crucible or other vessel containing the compound

tar'entism. Tarantism

taren'tula. Tarantula.

tar'get [It. *targhetta*, a small shield.] 1. In the ophthalmometer, the same as *mire*. 2. In the *x*-ray generator the anode in the tube against which the electrons, or cathode rays, impinge, producing the *x*-rays.

Tarin's fas'cia (tă-ran') [Pierre *Tarin*, French anatomist, 1725–1761.] Fascia dentata **T.'s fora'men,** hiatus Fallopii **T.'s fos'sa,** fossa interpeduncularis. **T.'s space,** porus Tarini, substantia* perforata posterior. **T.'s tæ'nia,** tænia semicircularis, stria* terminalis. **T.'s valve,** velum medullare posterius

Tarnier's for'ceps (tar-ne-a') [Etienne Stéphane *Tarnier*, French obstetrician, 1828–1897.] Axis-traction forceps.* **T.'s sign of coming abortion,** straightening out of the angle between the upper and lower uterine segments.

tarsadenitis (tar-sad-en-i'(e')tis) [G. *tarsos*, tarsus, + *adēn*, gland, + *-itis*.] Inflammation of the tarsal borders of the eyelids and of the Meibomian glands.

tar'sal. Relating to a tarsus in any sense. **t. bones,** see *tarsus*. **t. car'tilages,** t. plates. **t. cyst,** chalazion. **t. glands,** Meibomian glands, glandulæ tarsales [BNA]. **t. lig'aments,** ligamentum palpebrale mediale [BNA] (*internal*), and raphe palpebralis lateralis [BNA] (*external*). **t. plates,** tarsus superior and tarsus inferior [BNA].

tarsale, pl. *tarsa'lia* (tar-sa'le) [L.] Any tarsal bone.

tarsal'gia [G. *tarsos*, tarsus, + *algos*, pain.] Policeman's disease, podalgia; pain in the tarsus due usually to incipient flat-foot or to an abnormal shortening of the tendo Achillis.

tarsa'lis. Musculus* tarsalis.

tarsec'tomy [G. *tarsos*, tarsus, + *ektomē*, excision.] Excision of the tarsus of the foot or of a segment of the tarsus of an eyelid.

tarsecto'pia, tarsec'topy [G. *tarsos*, tarsus, + *ek*, out of, + *topos*, place.] Subluxation of one or more tarsal bones.

tar'sen [G. *tarsos*, tarsus, + *en*, in.] Within the tarsus; relating to the tarsus independent of other structures.

tarsitis (tar-si'(se')tis). 1. Inflammation of the tarsus of the foot. 2. Inflammation of the tarsal border of an eyelid, marginal blepharitis.

tarsochiloplasty (tar-so-ki'lo-plas-tĭ) [G. *tarsos*, tarsus, + *cheilos*, lip, + *plassō*, I form.] Reparative or plastic surgery of the borders of the eyelids, marginal blepharoplasty.

tarsocla'sia, tarsoc'lasis [G. *tarsos*, tarsus, + *klasis*, a breaking.] Instrumental fracture of the tarsus, for the correction of club-foot.

tarsomalacia (tar"so-mă-la'sĭ-ah) [G. *tarsos*, tarsus, + *malakia*, softness.] Softening of the tarsal cartilages of the eyelids.

tarsometatar'sal. Relating to the tarsal and metatarsal bones; noting the articulations between the two sets of bones, and the ligaments in relation thereto.

tarso-or'bital. Relating to the eyelids and the orbit.

tarsophalangeal (tar-so-fa-lan'je-al). Relating to the tarsus and the phalanges. **t. re'flex,** extension of all the toes except the first, when the outer part of the tarsus is tapped; in certain cerebral diseases the reverse takes place, the toes being flexed.

tarsophyma (tar-so-fi'mah) [G. *tarsos*, tarsus, + *phyma*, a tumor, boil.] A tumor of the tarsal border of the eyelid; hordeolum, or sty.

tarsopla'sia, tar'soplasty [G. *tarsos*, tarsus, + *plassō*, I form.] Blepharoplasty.

tarsopto'sia [G. *tarsos* + *ptōsis*, a falling.] Flat-foot.

tarsorrhaphy (tar-sor'ră-fĭ) [G. *tarsos* + *rhaphē*, a stitching.] An operation for reducing the length of the palpebral fissure by stitching together the margins of the eyelids at the outer canthus.

tarsotar'sal. Midtarsal; referring to the articulation between the two rows of tarsal bones, or Chopart's joint.

tarsotib'ial. Relating to the tarsal bones and the tibia, tibiotarsal, talotibial. **t. amputa'tion,** amputation through the ankle-joint. **t. lig'aments,** tibiotarsal, or talotibial,* ligaments.

tarsot'omy [G. *tarsos*, tarsus, + *tomē*, incision.] 1. Incision of the tarsal cartilage of an eyelid. 2. Any operation upon the tarsus of the foot.

tar'sus, gen. and pl. *tar'si* [G. *tarsos*, a wicker-work frame.] 1. The root of the foot, or instep. As a division of the skeleton, the seven bones of the instep, viz., astragalus or talus [BNA], os calcis or calcaneus [BNA], scaphoid or naviculare [BNA], os centrale tarsi [NK], three cuneiform, or wedge bones os tarsale primum, o. t. secundum, and o. t. tertium [NK], and the cuboid, os tarsale quartum [NK]. 2. Tarsi palpebrarum [NK], the fibrous material giving solidity and form to the edges of the eyelids; it is often called erroneously tarsal cartilage.

tar'tar. 1. Acid potassium tartrate, potassium bitartrate, forming a crust on the interior of wine-casks. 2. A brownish or yellowish brown substance, chiefly calcium phosphate, deposited on the teeth from the saliva. **cream of t.,** potassii bitartras (U.S.), potassii tartras acidus (Br.) **sol'uble t.,** potassii tartras. **t. emet'ic,** antimonii et potassii tartras. **t. lithin,** lithium bitartrate. **vit'riolated t.,** potassium tartrate.

Tar'tar type [*Tartar*, or Tatar, a Mongolian race in eastern and northern Asia.] Mongolian idiocy.*

tartarated (tar'tar-a-ted). Combined with tartar (1). **t. an'timony,** antimonii et potassii tartras. **t. soda,** potassii et sodii tartras.

tartar'ic acid. Acidum* tartaricum.

tartariza'tion. The production of the systemic effects of tartar emetic, especially in the treatment of syphilis.

tar'tarized. Tartarated.

tar'tar-lith'in. Trade name of a preparation of lithium bitartrate.

tar'trate. A salt of tartaric acid. **acid t.,** bitartrate, a salt of tartaric acid which contains an acid molecule still capable of combining with a base. **normal t.,** one which contains no uncombined acid molecules.

tar'trated. Tartarated.

taste [It. *tastare;* L. *tangere*, to touch.] 1. To perceive through the medium of the gustatory nerves. 2. The sensation produced by a suitable stimulus applied to the gustatory nerve endings in the tongue. **after t.,** a taste remaining after all the substance producing the original impression has apparently disappeared. **franklin'ic t.,** a sour taste produced by the application of static electricity to the tongue. **organ of t.,** organon gustus [BNA]. **t. bud, t. bulb,** calyculus gustatorius [BNA]. **t. cell,** a cell in a t. corpuscle in which the axis-cylinder of the gustatory nerve-fiber ends. **t. cor'puscle,** calyculus gustatorius [BNA]. **t. end,** t. cell. **t. goblet,** calyculus gustatorius [BNA]. **t. pore,** one of several depressions on the circumference of the vallate papillæ into which the gustatory hairs of the taste-bulbs project. **t. ridge,** one of the ridges surrounding the vallate papillæ of the tongue. **volta'ic t.,** franklinic t.

acuteness of, hypergeustia, hypergeusesthesia. **dullness of,** hypogeustia. **having,** sapid, savory. **loss of,** ageusia, ageustia, gustatory anesthesia. **perversion of,** allotriogeusia, parageusia, dysgeusia, pseudogeusia. **without,** tasteless, insipid.

Tatar type (tah'tar) [*Tatar* or Tartar, a Mongolian race in eastern and northern Asia.] Mongolian idiocy.*

tattoo'ing [Tahiti, *tatu*.] Marking the skin with various designs by pricking in an indelible pigment.

tau'rin [L. *taurus*, bull.] 1. A crystallizable substance, $C_2H_7SNO_3$, formed by the decomposition of taurocholic acid. 2. An unmodified virulent tuberculous virus; see *bovovaccine*.

taurocholate (taw-ro-ko'lāt). A salt of taurocholic acid.

taurocholic acid (taw-ro-ko'lik as'id) [G. *tauros*, bull, + *cholē*, bile.] One of the two organic acids in bile, $C_{26}H_{45}NSO_7$; by hydrolysis it forms cholic acid and taurin.

tautomenial (taw-to-me'nĭ-al) [G. *tautos*, the same, + *mēn*, month.] Relating to the same menstrual period.

tautomeral (taw-tom'er-al). Tautomeric (1).

tautomeric (taw-to-mer'ik) [G. *tautos*, the same, + *meros*, part.] 1. Relating to the same part; noting certain nerve-fibers on the same side of the spinal cord in which are the nerve-cells from which they originate. 2. Relating to or marked by tautomerism.

tautomerism (taw-tom'er-izm) [G. *tautos*, the same, + *meros*, part.] The power of a chemical compound of reacting in different ways as if it were two or more distinct substances.

Tawara's node (tah-wah'rah) [*Tawara*, Japanese physician, contemporary.] A node near the coronary sinus in the right atrium, from which starts the bundle of His; Aschoff's node, Koch's node.

tax'ine. A crystalline alkaloid from the leaves, seeds, and bark of several species of *Taxus*, or yew; is said to be serviceable in epilepsy.

tax'is [G. arrangement, order.] 1. Reduction of a hernia or of a dislocation of any part by means of manipulation. 2. Systematic classification or orderly arrangement. 3. Tropism, the reaction of protoplasm to a stimulus, by virtue of which animals and plants are led to move or act in certain definite ways in relation to their environment; the various kinds of taxis are designated by prefixing a word noting the stimulus governing them; see chemotaxis, electrotaxis, thermotaxis, etc. A taxis is *positive* when the body is attracted toward the stimulus, *negative* when it is repelled by it. **bipo'lar t.**, the reposition of a retroverted uterus by making traction on the cervix in the vagina, and pushing up the fundus by the finger in the rectum.

Taxo'dium [G. *taxos*, yew, + *eidos*, resemblance.] A genus of coniferous trees, cypress. The leaves and cones are said to be diuretic.

taxol'ogy [G. *taxis*, order, + *-logia*.] Taxonomy.

taxonom'ic. Relating to taxonomy or the science of classification.

taxon'omy [G. *taxis*, order, arrangement, + *nomos*, law.] The science of classification, taxology.

Taxus [G. *taxos*.] A genus of coniferous trees, the yews. The leaves, seeds, and bark of several species contain an alkaloid, taxine.*

Tay's cherr'y red spot [Warren *Tay*, English ophthalmologist, contemporary.] The chorioid appearing as a red spot through the fovea centralis surrounded by a contrasting white circle; noted in cases of amaurotic idiocy. **T.'s disease'**, chorioiditis guttata.

Tay-Sachs disease [Waren *Tay*, English physician, contemporary; Bernard *Sachs*, New York neurologist, *1858.] Amaurotic family idiocy.

Tay'lor's appara'tus or **brace** [Charles Fayette *Taylor*, New York orthopedic surgeon, 1827–1899.] A steel spinal support for the treatment of Pott's disease.

Tay'lor's di'et [Sir Frederick Taylor, English physician, 1847–1920.] A mixture of white of egg, sugar, and olive oil, employed in certain cases when the urine is to be examined for chlorides.

tayu'ya. The root of a Brazilian plant, *Trianosperma ficifolia;* employed in syphilis and scrofula in doses of ♏5–15 (0.3–1.0) of a tincture.

Tb. Chemical symbol of *terbium*.

tb. Abbreviation for tuberculosis and tubercle bacillus.

T-bandage. A strip of roller bandage with another strip attached to its center at right angles; employed as a retentive bandage for dressings to the external genitals or anus; see cut under *bandage*.

TC [*tuberculin* + Ger. *contagiöse*, contagious.] v. Behring's formula for the principle remaining after the extraction from the tubercle bacillus of the various constituents soluble respectively in pure water, in a 10 per cent. salt solution, and in alcohol and ether; it is the active principle of bovovaccine.* After inoculation it is assumed that TC becomes an integral part of the cells of the immunized animal, and is metamorphosed into a hypothetical body, TX.

t.d.s. Abbr. of L. *terdie sumendum*, to be taken three times a day.

Te. 1. Abbreviation in electrodiagnosis denoting tetanic contraction. 2. Chemical symbol of *tellurium*.

tea [of Chinese derivation.] 1. The dried leaves of *Thea sinensis*, a shrub of China and southern and southeastern Asia and Japan; its chief constituent, upon which its stimulating action largely depends, is the alkaloid theine (caffeine) which is present in amount of from 1 to 4 per cent. 2. The infusion made by pouring boiling water upon tea leaves. 3. Any infusion or decoction made extemporaneously, usually with herbs used in domestic medicine, or with the "species" of the P.G. **black t.**, thea nigra. **green t.**, thea viridis. **teamster's t.**, ephedra.

LINES OF INCISION FOR TEALE'S LEG AMPUTATION. The bone section is made at the upper extremity of the vertical line.

tea'berry. Wintergreen, gaultheria.*

teach'ers' nodes or **nod'ules.** Chorditis nodosa.

teak (tēk). The tree *Tectona grandis*, of eastern and southern Asia, furnishing a timber wood the leaves are astringent and the flowers diuretic.

Teale's amputa'tion [Thomas Pridgin *Teale*, English surgeon, 1801–1868.] 1. Amputation of the forearm in its lower half, or of the thigh, with a long posterior rectangular flap and a short anterior one. 2. Amputation of the leg, with a long anterior rectangular flap and a short posterior one.

team'ster's tea. *Ephedra*.*

tear (tēr) [A.S. *teár*.] 1. A drop of the fluid secreted by the lacrymal glands by means of which the conjunctiva is kept moist. 2. A rounded bead-like mass of exuded gum or resin.

tear-sac (ter'sak). Saccus* lacrimalis.

tease (tēz) [A.S. *tæsan*.] To separate the structural parts of a tissue by means of a needle, in order to prepare it for microscopical examination.

tea'spoon. A small spoon, holding about one dram of liquid; used as a measure in the dosage of fluid medicines.

teat [A.S. *tit*.] 1. Nipple, papilla* mammæ. 2. Breast, mamma. 3. Any nipple-like protuberance.

technic (tek'nik). 1. Technical. 2. Technique.

technical (tek'nĭ-kal). Relating to technique.

technician (tek-nish'un) [G. *technē*, an art.] One trained in the performance of any special art. **phys'ical ther'apy t.**, any person, usually a graduate nurse or a physician, skilled in the practice of physiotherapy. See also *A. P. A.*

technique (tek-nēk') [Fr. from G. *technikos*, relating to *technē*, art, skill.] The manner of performance, or the details, of any surgical operation, experiment, or mechanical act.

technocausis (tek-no-kaw'sis) [G. *technos*, art, + *kausis*, a burning.] Actual cautery.

technoctonia, technoctony (tek-nok-to'nĭ-ah, tek-nok'to-ni) [G. *teknon*, child, + *ktonos*, murder. Child-murder, infanticide.

tecosis (te-ko'sis) [G. *tēkō*, I waste away, + *-osis*.] A wasting disease of goats, caused by *Micrococcus caprinus*.[0]

tectocephal'ic [L. *tectum*, roof, + G. *kephalē*, head.] Scaphocephalic.

tectoceph'aly. Scaphocephaly.

tectol'ogy [G. *tektōn*, builder, + *-logia*,] Structural morphology.

tecton'ic [G. *tektonikos*, relating to building.] Relating to plastic surgery or to the restoration of lost parts by grafting.

tecto'rial. Relating to or forming a roof or cover, tegminal. **t. nu'cleus,** nucleus ruber. **t. membrane,** (1) posterior occipitoaxial ligament, membrana tectoria [BNA]; (2) Corti's membrane.

tecto'rium [L. a covering; *tegere*, to cover.] 1. Any roof-like structure. 2. Corti's membrane.

tectospinal (tek-to-spi'nal). Passing from the tectum downward to the spinal cord, colliculospinal.

tectum (tek'tum) [L. roof.] Tectorium, tegmen, any covering or roofing structure, noting especially: **t. mesenceph'ali,** the corpora quadrigemina forming the roof of the midbrain.

te'dious [L. *tædium*, wearisomeness.] Irksome, slow **t. labor,** prolonged labor, but not so difficult as dystocia.

teel oil. Oleum* sesami.

teeth. Dentes [BNA], plural of tooth (*q.v.*). **ante'rior t.,** the four incisors and two canine teeth in each jaw. **au'ditory t.,** Huschke's* auditory teeth. **back t.,** all t. posterior to the canines, t. of the molar series. **decid'uous t.,** milk t. **malacot'ic t.,** t. which are comparatively soft in structure, white in color, and prone to decay. **mastoid t.,** supernumerary t. in the horse. **milk t.,** the first set of teeth, see *primary dentition** and *dens deciduus*. **notched t., pegged t., peg'top t., screw'driver t., syphilit'ic t.,** Hutchinson's* teeth. **oral t.,** anterior t. **per'manent t.,** see *secondary* dentition* and *dens permanens*. **sclerot'ic t.,** t. which are naturally hard, usually yellowish in color, and little subject to decay.

absence, anodontia **boring into,** odontotrypy, odontocentesis. **calculus,** odontolith, tartar. **chattering,** odonterism, crepitatio dentium. **cutting,** eruption. **decay of,** odontosphacelism, dental caries, odontonecrosis, odontorrhizophthisis. **development of,** odontogeny, odontophyia. **disease,** odontopathy, odontia, odontonosus. **eruption of,** odontiasis, odontophyia, dentition. **falling out of,** odontoptosia, odontosteresis. **filling cavities in,** odontoplerosis, obturation. **first set,** dentes caduci, dentes lactei, dentes decidui [BNA], milk teeth, temporary teeth, deciduous teeth. **fissure,** odontoschism **fracture,** odontagma, odontoclasis. **grinding,** stridor dentium. **having all of same kind,** homodont, isodont. **having but one set,** monophyodont. **having different kinds,** heterodont. **having large,** macrodont, megalodont. **having more than two sets,** polyphyodont. **having small,** microdont. **having straight,** orthodont. **having two successive sets** (deciduous and permanent), diphyodont. **having white,** leucodont. **having yellow,** xanthodont. **hemorrhage following extraction,** odontorrhagia. **imperfect development,** odontatrophia, odontatrophy. **inflammation,** odontitis, odontophlegmon. **irregularity,** odontoloxia, odontoparallaxis. **looseness,** odontoseisis, odontoseism, agomphiasis. **pain,** odontagra, odontalgia, odontodynia, odontoneuralgia, odontharpaga, odontorrheumalgia, dentagra, dentarpaga, dentalgia, dolor dentium, toothache. **science relating to,** odontology, dentology; odontonosology, odontopathology (disease); odontiatria, odontotechny, odontotherapy, dentistry, dental surgery (treatment of disease). **second set,** dentes fixi, dentes permanentes [BNA], permanent teeth. **sensitiveness,** odonthyperesthesia, odonthæmodia. **set of,** denture. **specialist in disease of,** dentist, dental surgeon, odontiater. **splitting,** odontoschisis. **straightening,** orthodontia. **transplantation,** allotriodontia. **tumor of,** odontoma, exostoma or exostosis dentium, odontosteophyte. **tumor containing,** odontocele; dentigerous cyst, dermoid cyst. **without,** edentulous, edentate, anodont, agomphious, toothless.

teeth'ing. Dentition, the eruption or "cutting" of the teeth, especially of the milk teeth.

teg'men, gen. *teg'minis*, pl. *teg'mina* [L. a cover, roof.] 1. A structure which covers or roofs over a part. 2. In botany, the inner coat of the seed. **t. cruris** tegmentum. **t. mastoid'eum,** the lamina of bone roofing over the mastoid cells. **t. tym'pani** [BNA], roof of the tympanum or middle ear, formed by the thinned superior (anterior) surface of the petrous portion of the temporal bone. **t. ventric'uli quar'ti** [BNA], roof of the fourth ventricle, formed in its upper part by the superior, or anterior, medullary velum stretching between the two brachia conjunctiva, in its lower part by the inferior medullary velum and chiefly by the epithelial lining, the tela chorioidea. **t. ventriculo'rum,** centrum semiovale [BNA].

tegmen'tal. 1. Relating to any tegmentum or covering. 2. [NK]. Superior, looking toward the tegmen or cover. **t. cells,** cells roofing in or covering any delicate or highly differentiated cells or structures. **t. nu'cleus,** nucleus ruber [BNA]. **t. por'tion of the pons,** dorsal portion of the pons, pars dorsalis pontis.

tegmen'tum [L. cover.] The dorsal portion of the pedunculus (crus) cerebri, containing fibers passing to the cortex.

teg'min. Trade name of a preparation like collodium.

teg'ument. Integument.

tegumen'tal. Relating to the integument, cutaneous.

tegumen'tary. Tegumental.

Teichmann's crys'tals (tīkh'mahn) [Ludwig *Teichmann*, German histologist, 1825–1895.] Crystals of hemin. **T.'s test,** for blood; a scraping from the suspected spot is moistened with acetic acid, a little chloride of sodium is added, and the whole is warmed; if the stain was of blood the rhombic crystals of hemin will be formed.

teichopsia (ti-kop'sī-ah) [G. *teichos*, wall, + *opsis*, vision.] Scintillating scotoma *

teinte B (tant ba) [Fr. for tint.] Tint B.

te'la, gen. and pl. *te'læ* [L. a web.] 1. Any thin web-like structure. 2. A tissue, especially one of delicate formation. **t. ara'nea,** cobweb, employed in eclectic practice as a nervous and vascular sedative, in the treatment of intermittent fever, of asthma, and hiccough, in doses of ℿ5–10 (0.3–0.6), of the specific preparation. **t. cellulo'sa,** connective tissue. **t. chorioid'ea,** that portion of the pia mater which covers the roof or any portion of the wall of a cerebral ventricle. **t. chorioid'ea infe'rior,** inferior chorioid tela, t. chorioidea ventriculi quarti [BNA]. **t. chorioid'ea supe'rior,** superior chorioid tela, t. chorioidea ventriculi tertii [BNA]. **t. chorioid'ea ventric'uli quar'ti** [BNA], chorioid tela of the fourth ventricle, t. chorioidea inferior, the fold of pia mater covering over the lower part of the roof or posterior wall of the fourth cerebral ventricle. **t. chorioid'ea ventric'uli ter'tii** [BNA], chorioid tela of the third ventricle, t. chorioidea superior, velum interpositum, a double fold of pia mater between the fornix above and the epithelial roof of the third ventricle and the thalami below; at each lateral margin is a vascular fringe projecting

into the lateral ventricle (chorioid plexus of the lateral ventricle) and from its under surface are two small vascular projections running in the center anteroposteriorly (chorioid plexus of the third ventricle). **t. conjuncti'va,** connective tissue.* **t. elas'tica,** elastic tissue.* **t. subcuta'nea,** subcutaneous tissue.* **t. submuco'sa,** the layer of connective tissue beneath the tunica* mucosa, submucosa. **t. submuco'sa pharyn'gis** [BNA], pharyngeal aponeurosis, pharyngobasilar fascia, the upper portion of the posterior wall of the pharynx, consisting of a fibrous membrane attached to the basilar process of the occipital bone. **t. subsero'sa,** the layer of connective tissue beneath a serous* membrane. **t. vasculo'sa,** plexus chorioideus.

telæsthe'sia. Telesthesia.

telangiecta'sia, telangiec'tasis (tel-an"jĭ-ek-ta'sĭ-ah, tel-an"jĭ-ek'ta-sis) [G. *telos*, end, + *angeion*, vessel, + *ektasis*, a stretching out.] Dilatation of the small or terminal vessels of a part. **t. lymphat'ica,** lymphangiectasia.

telangiectat'ic. Relating to or marked by telangiectasia.

telangiectodes (tel-an-jĭ-ek-to'dēz) [*telangiectasis*, + *-odes*.] A term used to qualify highly vascular tumors.

telangiitis (tel-an-je-i'(e')tis) [G. *tēle*, far off, + *angeion*, vessel, + *-itis*.] Inflammation of the capillary blood-vessels.

telangioma (tel-an-jĭ-o'mah). Angioma due to dilatation of the capillaries or terminal arterioles.

telan'gion [G *tēle*, far off, + *angeion*, vessel] One of the terminal arterioles or a capillary vessel.

telangio'sis. Any disease of the capillaries and terminal arterioles.

telecardiogram (tel"e-kar'dĭ-o-gram). Telelectrocardiogram.

telecardiophone (tel-e-kar'dĭ-o-fōn) [G. *tēle*, far off, + *kardia*, heart, + *phōnē*, sound.] A specially constructed stethoscope by means of which heart sounds can be heard by listeners at a distance from the patient.

telecinesis (tel-e-sin-e'sis) [G. *tēle*, far away, + *kinēsis*, movement.] Movement of an object without contact with the mover; an alleged spiritistic manifestation.

teledac'tyl [G. *tēle*, far away, + *daktylos*, finger.] An apparatus for picking up objects without stooping.

teledendron (te"le-den'dron) [G. *tēle*, far away, + *dendron*, a tree.] A terminal dendron.

telediastol'ic [G. *tēle*, far away.] At the end of the diastole of the heart.

teleg'ony [G. *tēle*, far off, + *gonē*, generation.] The alleged hereditary influence of the father of the first child upon subsequent children of the same mother by another man.

teleg'rapher's cramp. An occupation neurosis affecting chiefly the extensor muscles of the fingers of the right hand, the spasm being excited on grasping the telegraphic key.

telekine'sis. Telecinesis.

telelectrocardiogram (tel-e-lek"tro-kar'dĭ-o-gram) [G. *tēle*, far off.] An electrocardiogram taken in the laboratory, the galvanometer being connected by a wire with the patient.

telemnemonike (tel-e-mne-mon'ĭ-ke) [G. *tēle*, far off, + *mnēmonikos*, relating to memory.] Acquiring consciousness of matters held in the memory of another person.

telen'cephal. Telencephalon.

telencephal'ic. Relating to the telencephalon or endbrain.

telenceph'alon [G. *telos*, end, + *enkephalos*, brain.] [BNA] The end-brain, the anterior division of the prosencephalon from which are developed the cerebral hemispheres, the lateral ventricles, the anterior part of the third ventricle, the foramina of Monro, and the olfactory lobes.

teleneurite (tel-e-nu'rīt). The terminal expansion of the axis-cylinder.

teleneu'ron [G. *tēle*, far away, + *neuron*, nerve.] End-neuron, that at which an impulse terminates.

teleodendron (te"le-o-den'dron). Teledendron.

teleol'ogy [G. *telos*, end, + *-ology*.] The doctrine that everything that is or that takes place has a definite purpose.

teleomito'sis [G. *teleos*, complete, + *mitos*, thread.] A completed caryocinesia or mitosis.

teleorganic (tel-e-or-gan'ik) [G. *teleos*, complete, + *organon*, organ.] Necessary to organic existence.

telep'athy [G. *tēle*, far away, + *pathos*, feeling.] Mind-reading, the simultaneous occurrence of the same thought or impulse in the minds of two individuals at a distance from one another.

teleph'ium [*Telephos*, a warrior, in Greek mythology, who had a wound that would not heal.] An ulcer that will not yield to treatment.

teleradiography (tel-ĕ-ra-dĭ-og'ră-fĭ) [G. *tēle*, far off, + *radiography*.] Röntgenography with the tube held about 2 meters (6½ ft.) from the body, thereby securing practical parallelism of the rays.

telergy (tel'ur-jĭ) [G. *tēle*, far off, + *ergon*, work.] Automatism.

teleröntgenogram (tel-ĭ-rent'gen-o-gram). The picture obtained by telerontgenography.

teleroentgenography (te"le-rĕnt-gen-og'ră-fĭ). Teleradiography.

telescop'ic [G. *tēle*, far away, + *skopeō*, I view.] Capable of extension or shortening by means of cylinders sliding one within another after the model of a telescope.

telesthesia, telæsthesia (tel-es-the'zĭ-ah) [G. *tēle*, far away, + *aisthēsis*, sensation.] Telepathy.

telesyphilis (te-le-sif'i-lis) [G. *tēle*, far away, + *syphilis*.] Metasyphilis, parasyphilis.

telesystol'ic [G. *tēle*, far off.] Relating to the termination of the systole of the heart.

telether'apy [G. *tēle*, away off, + *therapeia*, treatment.] The "absent treatment" of Christian scientists and mental healers.

tell'urate. A salt of telluric acid. **so'dium t.,** a white soluble powder, $NaTeO_4+5H_2O$, employed as an astringent in the night sweats of phthisis and in the treatment of ulcers of the stomach and intestine, in doses of gr. ¼–½ (0.015–0.03)

tellu'ric [L. *tellus*, the earth.] 1. Relating to or originating in the earth. 2. Relating to the element, tellurium. **t. acid,** an acid, H_2TeO_4, occurring in the form of a white powder.

tell'urism [L. *tellus(tellur-)*, the earth.] The alleged influence of soil emanations in producing disease.

tellu'rium [L. *tellus(tellur-)*, the earth.] A rare non-metallic element, symbol Te, atomic weight 127.5, belonging to the sulphur group; in its pure state it is a lustrous white brittle substance.

Tellyesniczky's fluid (tel-yes-nits'ke) [Kálmán *Tellyesniczky*, Hungarian histologist, contemporary.] A hardening fluid consisting of a 3 per cent. solution of potassium bichromate in water, 5 per cent. glacial acetic acid being added just before using.

tel'oblast [G. *telos*, end, + *blastos*, germ.] A terminal blastomere.

teloblas'tic. Relating to the teloblast

telocine'sia, telocine'sis. Telophase.

teloden'drion [G. *telos*, end, + *dendrion*, small tree.] The mass of terminal twigs of the dendrites of a neuron.

telolecithal (tel-o-les'i-thal) [G. *telos*, end, + *lekithos*, yolk.] Noting an ovum in which the deutoplasm accumulates at one pole.

telolem'ma [G. *telos*, end, + *lemma*, husk.] A membrane covering the motor nerve-ending in a muscle-fiber.

telophase (tel'o-fāz) [G. *telos*, fulfilment, end, + *phasis* appearance.] The final stage in mitosis, in which the cytoplasm divides, forming two daughter cells.

telophragma (tel-o-frag'mah) [G. *telos*, terminal, + *phragma*, fence, screen.] Krause's membrane.

Telosporid'ia [G. *telos*, end.] A class of *Sporozoa* in which the reproductive spore-producing phase follows the trophic phase and is distinct from it.

telosynap'sis [G. *telos*, end, + *synapsis*, a binding together.] Union of chromosomes end to end in the process of "reduction."

tel'otism [G. *telos*, end.] The perfect performance of a function, as that of sight or hearing.

tel'son [G. limit.] The terminal point of a crustacean, such as the sting of a scorpion.

tem'perament [L. *temperamentum*.] The physical organization peculiar to the individual, which influences one's metabolic processes, manner of thought and action, and general views of life. **atrabil'ious t.,** melancholic t. **bil'ious t.,** one marked by more or less general pigmentation, high blood pressure, slow pulse, well developed muscle, strong appetites, tenacity of purpose, and a choleric temper. **choler'ic t.,** bilious t. **lymphat'ic t.,** one marked by pallor of skin, slow and shallow respiration, sluggish circulation, hyperplasia of the lymphatic glands and of the thymus, and a tendency to inflammations of the skin and lymphatics; it is much the same as the scrofulous diathesis. **melancholi'c t.,** one marked by emaciation, extreme and lasting irritability, and a pessimistic outlook on the world. **nervous t.,** one in which the subject is mentally and physically alert, with rapid pulse, excitability, often volubility, but not always fixity of purpose. **phlegmat'ic t.,** lymphatic t. **san'guine t., sanguin'eous t.,** one the subject of which has a fresh complexion, light hair and eyes, a full pulse, good digestion, and a quick but not lasting temper.

tem'perance [L. *temperantia*, moderation.] 1. Moderation in eating, drinking, exercise, and all things else 2. In a special and restricted sense, abstinence from the use of alcoholic beverages.

tem'perans, pl. *temperan'tia* [L.] 1. An antipyretic. 2. A sedative.

tem'perate. Moderate; restrained in the indulgence of any of the appetities, in thought, or in action.

tem'perature [L. *temperatura; temporare*, to moderate.] The sensible heat of any substance. **ab'solute t.,** temperature measured from the absolute* zero. **crit'ical t.,** the temperature of a gas below which it is possible by great pressure to reduce it to liquid form. **max'imum t.,** in bacteriology, noting a t. above which growth will not take place. **mean t.,** the average atmospheric t. in any locality for a designated period of time, as a month or a year. **min'imum t.,** in bacteriology, noting a t. below which growth will not take place. **normal t.,** the temperature of the animal body in health; that of man is 98.6° F. (37° C.), that of the monkey a little higher; of the horse about 100 4° F. (38° C.); of the rabbit, 100.8° to 102° F (38.2° to 39° C.); of the guinea-pig, 101.3° to 103.1° F. (38.5° to 39.5° C.); of the dog, 100.8° to 103.1° F. (38.2° to 39.5° C.). **op'timum t.,** the temperature at which any operation, such as the culture of any special microorganism, is best carried on. **room t.,** the ordinary temperature (65°–80° F.) of the atmosphere in the laboratory; a culture kept at room t. is one kept in the laboratory, not in an incubator. **sen'sible t.,** the atmospheric temperature as felt by the individual, supposed to be that recorded by the wet-bulb thermometer.

temple (tem'pl) [L. *tempus*.] 1. The area of the temporal fossa on the side of the head above the zygoma. 2. The wire of a spectacle* frame passing from the rim backward over the ear.

tempolabile (tem-po-la'bil) [L. *tempus*, time, + *labilis*, perishable.] Undergoing spontaneous change or destruction within a certain period of time—hours, days, or weeks.

tem'pora [plural of *tempus*.] The temples.

tem'poral [L. *tempus(tempor-)*, time, temple.] Relating to time; limited in time, temporary. 2. Relating to the temple. **t. aponeuro'sis,** the fascia covering the temporal muscles. **t. ar'tery,** see under *arteria*. **t. bone,** os temporale. **t. canal,** a canal in the zygomatic bone transmitting small blood-vessels and a nerve. **t. convolu'tion,** gyrus temporalis. **t. crest,** crista temporalis. **t. fascia,** t. aponeurosis. **t. fissure,** sulcus temporalis. **t. fossa,** fossa temporalis. **t. ganglion,** a sympathetic ganglion on the external carotid artery. **t. gyre,** gyrus temporalis. **t. line,** linea temporalis. **t. lobe,** lobus temporalis. **t. muscle,** musculus temporalis. **t. nerve,** nervus temporalis. **t. pole,** polus temporalis. **t. process,** processus temporalis. **t. ramus,** one of the branches of the facial nerve in the temporal region. **t. ridge,** linea temporalis. **t. squama,** squama temporalis. **t. sulcus,** sulcus temporalis. **t. suture,** sutura petrosquamosa. **t. veins,** see under *vena*.

tempora'lis. See under *musculus*.

tem'poren [L. *tempus(tempor-)*, temple, + G. *en*, in.] Relating to the temporal bone independent of other structures.

temporoauricular (tem"po-ro-aw-rik'u-lar). Relating to the temporal region and the auricle.

tem"porocen'tral. Noting the tractus* temporocentralis.

temporocerebell'ar. Noting the tractus* temporocerebellaris.

temporofa'cial. Noting the nervus temporofacialis.

tem"porofron'tal. Noting the tractus* temporofrontalis.

tem"porohy'oid. Relating to the temporal and the hyoid bones or regions.

temporoma'lar. Temporozygomatic.

tem"poromandib'ular. Relating to the temporal bone and the mandible, noting the articulation of the lower jaw.

tem"poromax'illary. 1. Relating to the regions of the temporal and maxillary bones. 2. Temporomandibular.

tem"poro-occip'ital. Relating to the temporal and the occipital bones or regions.

temporoparietal (tem"po-ro-pă-ri'e-tal). Relating to the temporal and the parietal bones or regions

temporopon'tile. Relating to the temporal lobe of the brain and the pons Varolii; see under *tractus*.

tem"porosphe'noid. Relating to the temporal and sphenoid bones.

tem"porozygomat'ic. Relating to the temporal and zygomatic (malar) bones or regions.

tempostabile, tempostable (tem-po-sta'bil, tem-po-sta'bl). [L. *tempus*, time, + *stabilis*, stable.]

Not subject to spontaneous alteration or destruction when kept for a time.

tem'pus, gen. *tem'poris* [L.]* 1. The temple. 2. Time.

tem'ulence [L. *temulentia.*] Drunkenness.

tena'cious [L. *tenax; tenere,* to hold.] Sticky, glutinous, viscid.

tenacity (ten-as'ĭ-tĭ). Adhesiveness; the character of holding fast. **cell'ular t.,** the inherent property of all cells to persist in a given form or direction of activity.

tenac'ulum [L. *tenere,* to hold.] A sharp-pointed wire hook set in a handle, used for picking up the divided end of an artery, or bits of tissue during an operation. **t. ten'dinum,** vinculum tendinum.

tenalgia (ten-al'jĭ-ah) [G. *tenōn,* tendon, + *algos.* pain.] Pain referred to a tendon, tenodynia, **t. crep'itans,** tendosynovitis crepitans.

tenal'gin. Trade name of a teniafuge preparation from the betel-nut, or areca.*

ten'alin. Trade name of a vermifuge made from areca,* or betel-nut; employed in veterinary practice.

te'nax. Trade name of a purified oakum employed for surgical dressings.

tender (ten'dur) [L. *tener,* soft, delicate.] Sensitive, painful on pressure or contact. **t. lines,** t. zones. **t. points,** Valleix's* points. **t. zones,** Head's* zones.

ten'derness. The condition of being tender, painfulness to pressure or contact.

tendinoplasty (ten'dĭ-no-plas''tĭ) [L. *tendo(tendin-),* tendon, + G. *plassō,* I form.] Tenoplasty.

tendino'sus [L.] Tendinous; see *musculus semitendinosus.*

tendinosu'ture. Reunion of a divided tendon by suture, tenorrhaphy.

tendinotrochanteric lig'ament (ten''dĭ-no-tro-kanter'ik). A thickened band of the capsular ligament of the hip-joint, attached to the greater trochanter of the femur.

ten'dinous. Relating to, composed of, or resembling a tendon; aponeurotic, fascial. **t. arch,** the border of an opening in a fascia through which passes an artery or other structure. **t. cord,** chorda* tendinea. **t. inscrip'tion,** see *inscriptio.* **t. spot,** macula albida. **t. synovi'tis,** inflammation of the synovial sheath of a tendon.

ten'do, gen. *tend'inis,* pl. *ten'dines* [L. *tendere,* to stretch.] Tendon. **t. Achil'lis,** t. calcaneus [BNA]. **t. calca'neus** [BNA], t. Achillis, the tendon of insertion of the triceps suræ (gastrocnemius and soleus) into the tuberosity of the calcaneus (os calcis). **t. cordifor'mis,** centrum tendineum [BNA], a trilobed fibrous sheet occupying the central portion of the diaphragm. **t. oc'uli,** internal tarsal ligament, ligamentum palpebrale mediale [BNA]. **t. palpebra'rum,** t. oculi.

tendomu'cin, tendomu'coid. A form of mucin in tendon.

ten'don [L. *tendo.*] A fibrous cord or band of variable length serving to connect a fusiform muscle with its bony attachment; it may unite with the muscle at its extremity or may run along the side or in the center of the muscle for a longer or shorter distance, receiving the muscular fibers along its lateral border. **back t.,** in veterinary anatomy, the tendon at the back of the cannon bone. **central t. of the diaphragm,** tendo cordiformis, centrum* tendineum [BNA]. **conjoin'ed** or **conjoint' t.,** falx inguinalis [BNA]. **cor'onary t.,** a fibrous ring around one of the orifices of the heart, giving attachment to the valvular leaflets. **hamstring t.,** see *hamstring* **heel t.,** tendo calcaneus. **t. advance'ment,** division of the tendon of an eye-muscle and fixation of the same farther forward on the globe. **t. grafting,** (1) the insertion of a piece of tendon from one of the lower animals to supply a defect; (2) t. transfer. **t. reces'sion,** division of the tendon of an eye-muscle and fixation of the same farther backward on the globe. **t. reflex,** involuntary contraction of a muscle when its tendon of insertion is smartly tapped. **t. suture,** tendinosuture, tenorrhaphy. **t. trans'fer, t. transplanta'tion,** the insertion of a slip from the tendon of a sound muscle into the tendon of a paralyzed muscle.

calculus, tenophyte. **description,** tenography, tenontography. **disease of,** tenopathy. **division,** tenotomy, tenontomia; achillotomy (of tendo Achillis.) **excision,** tenectomy, tenonectomy. **inflammation,** tenontitis, tenositis, tenophlogosis; tendosynovitis, tenosynovitis, tenontolemmitis, tenontothecitis (with sheath). **implantation,** tenodesis. **ossification,** tenostosis. **pain,** tenalgia, tenodynia, tenontagra; achillodynia (in tendo Achillis). **plastic surgery,** tenoplasty, tendinoplasty. **science relating to,** tenology, tenontology. **suture,** tenorrhaphy, tendinosuture. **tumor,** tenontophyma. **twitching,** subsultus tendinum, tenotyrbe.

tendoph'ony [L. *tendo,* tendon, + G. *phōnē,* sound.] Tenophony.

ten'doplasty. Tenoplasty.

tendosynovitis (ten-do-si-no-vi'(ve')tis) [L. *tendo* tendon, + *synovia* + G. *-itis.*] Tenontothecitis, inflammation of the sheath of a tendon, tendovaginitis. **t. crep'itans,** inflammation of a tendon sheath in which movement of the tendon is accompanied by a cracking sound.

ten'dotome. Tenotome.

tendot'omy. Tenotomy.

tendovaginal (ten-do-vaj'ĭ-nal) [L. *tendo,* tendon, + *vagina,* sheath.] Relating to a tendon and its sheath.

tendovaginitis (ten-do-vaj-in-i'(e')tis) [L. *tendo,* tendon, + *vagina,* sheath, + G. *-itis.*] Tenontothecitis.

tenec'tomy [G. *tenōn,* tendon, + *ektomē,* excision.] Resection of part of a tendon.

tenes'mic. Relating to or marked by tenesmus.

tenesmus (te-nez'mus) [G. *teinesmos,* ineffectual effort to defecate.] A painful spasm of the anal or vesical sphincter, with an urgent desire to evacuate the bowel or bladder, involuntary straining, and the passage of but little fecal matter or urine.

Ten Horn's sign. Pain caused by gentle traction on the right spermatic cord, pointing to appendicitis.

te'nia. See *tænia.*

te'niacide [L. *tænia,* tapeworm, + *cædere,* to kill.] A remedy destructive to tapeworms.

te'niafuge [L. *tænia,* tapeworm, + *fugare,* to put to flight.] 1. Having the power to expel tapeworms. 2. An agent which causes the expulsion of tapeworms.

te'nial. 1. Relating to a tapeworm. 2. Relating to one of the structures called tænia.*

teni'asis, tæni'asis. The presence of a tapeworm in the intestine. **somat'ic t.,** invasion of the body by the cysticercus of a nematode worm.

ten'icide. Teniacide.

ten'iform [L. *tænia* + *forma,* form.] Tenioid.

tenif'ugal. Teniafuge (1).

ten'ifuge. Teniafuge.

tenioid (te'nĭ-oyd) [G. *tainia,* a tape, + *eidos,* resemblance.] 1. Band-shaped, ribbon-shaped. 2. Resembling a tapeworm.

teni'ola cine'rea. See *tæniola.*

tennis-el'bow. A strain of the elbow with soreness of the muscles of the forearm caused by excess in tennis playing.

tenodesis (ten-od'e-sis) [G. *tenōn*, tendon, + *desis*, fixation.] Implantation of a tendon; transferring a tendon to a new point of attachment.

tenodyn'ia [G. *tenōn*, tendon, + *odynē*, pain.] Tenalgia.

tenofibril (ten-o-fi'bril) [G. *tenōn*, tendon, + L. *fibrilla*, a small fiber.] One of the fine threads present in the cytoplasm of epithelial cells.

tenomy'oplasty [G. *tēnon*, tendon, + *mys(myo-)*, muscle, + *plassō*, I form.] Tenontomyoplasty

tenomyotomy (ten-o-mi-ot'o-mĭ). Tenontomyotomy, myotenotomy.*

Ten'on's cap'sule [Jacques René *Tenon*, French anatomist and oculist, 1724–1816.] The connective-tissue envelope of the eyeball, fascia* bulbi. **T.'s space,** interfascial space, a narrow interval, filled with connective tissue, between T.'s capsule and the posterior surface of the eyeball.

tenonec'tomy [G. *tenōn*, tendon, + *ektomē*, excision.] Excision of a portion of a tendon, with reunion of the several ends

tenonitis (ten-on-i'(e')tis). 1. Inflammation of Tenon's capsule or the fibrous sheath of the eyeball. 2. Tenontitis.

tenontag'ra [G. *tenōn(tenont-)*, tendon, + *agra*, a seizure.] Gouty inflammation of a tendon.

tenontitis (ten-on-ti'(te')tis) [G. *tenōn(tenont-)*, tendon, + *-itis.*] Inflammation of a tendon, tendinitis, tenositis.

tenontodyn'ia. Tenodynia, tenalgia.*

tenontog'raphy [G. *tenōn(tenont-)*, tendon, + *graphē*, description.] A treatise on or description of the tendons.

tenontolemmitis (ten-on-to-lem-i'(e')tis) [G. *tenōn (tenont-)*, tendon, + *lemma*, husk, + *-itis.*] Tendosynovitis.

tenontol'ogy [G. *tenōn(tenont-)*, tendon, + *-logia*] The branch of science which has to do with the tendons.

tenontomyoplasty (ten-on-to-mi'o-plas-tĭ) [G *tenōn-(tenont-)*, tendon, + *mys(myo-)*, muscle, + *plassō*, I form] A combined tenontoplasty and myoplasty, employed in the radical cure of hernia

tenontomyotomy (ten-on-to-mi-ot'o-mĭ) [G. *tenōn (tenont-)*, tendon, + *mys(myo)*, muscle, + *tomē*, incision.] Myotenotomy.

tenontophy'ma [G. *tenōn(tenont-)*, tendon, + *phyma.* growth.] A neoplasm connected with a tendon.

tenontoplas'tic. Relating to tenontoplasty.

tenon'toplasty [G. *tenōn(tenont-)*, tendon, + *plassō*, I form.] Reparative or plastic surgery of the tendons.

tenontothecitis (ten-on-to-the-si'(se')tis) [G. *tenōn (tenont-)*, tendon, + *thēkē*, case, box, + *-itis.*] Inflammation of a tendon and its sheath; tendosynovitis, tenosynovitis, tendovaginitis. **t. steno'sans,** chronic t. with narrowing of the sheath.

tenoph'ony [G. *tenōn*, tendon, + *phōnē*, sound.] A heart murmur assumed to be due to an abnormal condition of the chordæ tendineæ.

tenoplas'tic. Relating to tenoplasty.

ten'oplasty. Tenontoplasty.

tenor'rhaphy [G. *tenōn*, tendon, + *rhaphē*, suture.] Tendinosuture, suture of the divided ends of a tendon.

tenositis (ten-o-si'(se')tis). Tenontitis.

tenosto'sis [G. *tenōn*, tendon, + *osteon*, bone.] Ossification of a tendon.

tonosu'ture. Tendinosuture.

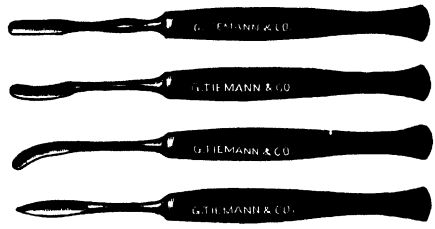
tenosynovitis (ten-o-si-no-vi'(ve')tis) [G. *tenōn*, tendon, + *synovia* + *-itis.*] Tendosynovitis, tendovaginitis, tenontothecitis.

tenotoma'nia. A facetious term expressing an exaggerated belief in the efficacy of cutting the tendons of the eye-muscles for the relief of all degrees of muscular imbalance.

ten'otome. A knife used in tenotomy, especially subcutaneous tenotomy.

tenot'omize. To perform tenotomy upon.

tenot'omy [G. *tenōn*, tendon, + *tomē*, incision.] The surgical division of a tendon for the relief of a deformity caused by congenital or acquired shortening of a muscle, as in club-foot or squint. **curb t.,** division of the tendon of the shortened muscle in squint, and fixation of the same farther back on the aponeurosis of the globe. **grad'uated t.,** partial division of the tendon of an eye-muscle for the relief of a slight degree of strabismus.



TENOTOMES.

tenovaginitis (ten"o-vaj-in-i'(e')tis) [G. *tenōn*, tendon, + L. *vagina*, sheath, + G. *-itis.*] Tenontothecitis.

tense [L. *tensus; tendere*, to stretch.] Tight, rigid, strained.

ten'sion [L. *tensio; tendere*, to stretch.] 1. The act of stretching. 2. The condition of being stretched or tense. 3. The tendency of a gas or other substance to return to its natural state when relieved of a constraining force. **arte'rial t.,** the condition within an artery at the height of the pulse wave. **intraoc'ular t.,** the internal pressure of the humors of the eye. **sur'face t.,** a condition of intramolecular attraction at the surface of a liquid, in contact with air or another gas, a solid, or another immiscible liquid, tending to pull the molecules inwards from that surface.

ten'sion-curves. The curved lines in the direction of greatest pressure, formed by the cancellous tissue at the ends of the long bones, especially marked at the upper end of the femur.

ten'sor, pl. *tenso'res* [L. *tendere*, to stretch.] A muscle the function of which is to render a part firm and tense; see under *musculus.*

tent [L. *tenta*, a probe; *tentare*, to feel, to test.] A cylinder of some material, usually an absorbent material (such as laminaria, tupelo, or compressed sponge or absorbent cotton) introduced into a canal or sinus to maintain its patency or to dilate it. **sponge t.,** spongia compressa (N.F.).

ten'tacle (ten'tă-kl) [L. *tentaculum*, a feeler; *tentare*, to feel.] A slender process for feeling, prehension, or locomotion in the lower vertebrates and the invertebrates.

ten'tative [L. *tentare*, to feel, attempt.] Experimental; noting an opinion or diagnosis based upon insufficient data and subject to change.

tenth'meter. The ten-millionth of a meter, or tenth of a micron, 1×10^{-10} meter, an Angström unit.

tenth nerve. The pneumogastric nerve, nervus* vagus [BNA].

tentiginous (ten-tij'in-us). Lustful, lacivious.

tenti'go [L.] Lust, satyriasis, nymphomania.

tento'rial. Relating to the tentorium. **t. angle,** the angle formed by the basicranial axis and the plane of the tentorium. **t. fissure,** fissura collateralis. **t. sinus,** sinus rectus [BNA].

tento'rium [L. tent.] A membranous cover or horizontal partition. **t. cerebell'i** [BNA], a fold of dura mater roofing over the posterior cranial fossa and separating the cerebellum from the posterior portion of the cerebral hemispheres; it is attached along the middle line to the falx cerebri. **t. hypophys'eos,** tentorium of the hypophysis, diaphragma* sellæ [BNA].

ten'tum. Penis.

te'nuis [L.] Slender, delicate. **t. mater,** pia mater.

tephromalacia (tef"ro-mal-a'sĭ-ah) [G. *tephros*, ashen-gray, + *malakia*, softness.] Softening of the gray matter of the brain or spinal cord.

tephromyelitis (tef"ro-mi-el-i'(e')tis) [G. *tephros*, ashen-gray, + *myelon*, marrow, + *-itis*.] Poliomyelitis.

tephro'sia. The herbage of *Cracca virginiana*, Turkey-pea, devil's shoestring, an herb of eastern North America; anthelmintic.

tephro'sis [G.] Incineration, cremation.

tephrylom'eter [G. *tephros*, ashen, + *hylē*, stuff, + *metron*, measure.] An instrument for measuring the thickness of the cerebral cortex; it consists of a graduated tube of thin glass which is plunged into the brain substance, the depth of the gray matter being read off on the scale.

tep'id [L. *tepidus; tepere*, to be lukewarm.] Lukewarm. **t. bath,** a bath in water at about 86° F. (30° C.).

tepida'rium [L.] 1. A hot-air chamber in the Roman bath. 2. A warm bath.

tepopote (tep-o-po'ta) [Am. Indian name.] Teamster's tea, *Ephedra* antisyphilitica*.

tep'or [L.] Lukewarmness, moderate warmth.

ter [L.] Three times, thrice. **t. in di'e** [L. *dies*, day], three times a day; abbreviation, t. i. d.

ter"abdell'a [G. *tereō*, I bore, + *bdella*, leech.] An artificial leech.

ter'as, pl. *ter'ata* [G.] A monster, a fetus with deficient, redundant, misplaced, or misshapen parts.

terat'ic. Relating to a monster.

ter'atism. Teratosis.

ter"atoblasto'ma [G. *teras(terat-)*, monster, + *blastos*, germ, + *-ōma*.] Teratoma.

teratogen'esis, teratogeny (ter-ă-toj'en-ĭ) [G. *teras (terat-)*, monster, + *genesis*, origin.] The origin or mode of production of a monster.

ter'atoid [G. *teras(terat-)*, monster, + *eidos*, resemblance.] Resembling a monster. **t. tumor,** teratoma.

teratological (ter"ă-to-loj'ĭ-kal). Relating to teratology.

teratol'ogy [G. *teras(terat-)*, monster, + *-logia*.] The branch of science which deals with the production, the anatomy, and the classification of monsters.

teratoma (ter-ă-to'mah) [G. *teras*, monster, + *-ōma*.] A tumor due to the inclusion in the individual of the products of development of independent or aberrant germ-cells; a dermoid tumor is a teratoma, and so is, according to one theory, a cancer. **t. strumo'sum thryeoidea'le ova'rii,** a t. of the ovary composed largely of thyroid gland tissue.

terato'matous. Relating to or of the nature of a teratoma.

teratophobia (ter"ă-to-fo'bĭ-ah) [G. *teras(terat-)*, monster, + *phobos*, fear.] Abnormal dread on the part of a pregnant woman lest she give birth to a monster.

terato'sis [G. *teras*, monster.] Monstrosity, teratism. **atre'sic t.,** one in which any of the normal openings, as the nares, mouth, anus, or vagina, is imperforate. **ceas'mic t.,** a monstrosity in which there is a failure of the lateral halves of a part to unite, as in cleft palate. **ectogen'ic t.,** one in which there is a deficiency of parts. **ectop'ic t.,** one in which the organs or other parts are misplaced. **hypergen'ic t.,** one in which there is a redundancy of parts. **symphys'ic t.,** one in which there is a fusion of normally separated parts.

ter'bium. A rare metallic element, symbol Tb, atomic weight 159.2.

terchloride (tur-klo'rīd). A compound containing three atoms of chlorine in the molecule, two of which are capable of uniting with more of the other element; trichloride.

te're [L.] Rub; a direction formerly used in prescription writing.

ter'ebene, terebe'num (U.S., Br.). A thin colorless liquid of an aromatic odor and taste, a mixture of terpene hydrocarbons, chiefly dipentene and terpinene, obtained from oil of turpentine; employed as an expectorant and in cystitis and urethritis in doses of ♏5–10 (0.3–0.6).

ter'ebinth. The tree, *Pistacia terebinthus*, from which Chian* turpentine is obtained; it is native to the shores of the eastern Mediterranean.

terebinthina (ter-e-bin'thĭ-nah) [L. fem. of *terebinthinus* (from G. *terebinthinos*), relating to turpentine; sc. *resina*, resin.] (N.F.) Turpentine, thus americanum (Br.), an oleoresin from *Pinus palustris* and other species of *Pinus*, the pitch pines; see *oleum terebinthinæ* and *resina*. **t. canaden'sis** (Br.), Canada turpentine, Canada balsam, balsam of fir, a liquid oleoresin from *Abies balsamea*, the balsam fir; a yellowish transparent viscid fluid of aromatic odor and slightly bitter taste; employed like turpentine, but chiefly for mounting microscopical specimens. **t. chi'a,** Chian* turpentine. **t. lar'icis,** larch turpentine, Venice turpentine, a transparent yellowish thick liquid, the oleoresin obtained from *Larix europæa*.

terebinthinate (ter-e-bin'thĭ-nāt). 1. Containing or impregnated with turpentine. 2. A preparation containing turpentine.

terebinthine (ter-e-bin'thin). Terebinthinate (1).

terebin'thinism. Turpentine poisoning.

terebrachesis (te"re-brăk-ke'sis) [L. *teres*, round, + G. *brachys*, short.] Shortening of the round ligaments of the uterus.

ter'ebrant, ter'ebrating [L. *terebrare*, to bore.] Boring, piercing; used figuratively, as in the term t. pain.

terebration (ter-e-bra'shun). 1. The act of boring, or of trephining. 2. A boring pain.

te'res, gen. *ter'etis*, pl. *ter'etes* [L.] Round and long, noting certain muscles and ligaments; see *ligamentum teres, musculus teres*, and *musculus pronator teres*.

ter"etiprona'tor. Musculus pronator teres [BNA].

ter"etiscapula'ris. Musculus teres major.

tergal (tur'gal) [L. *tergum*, back.] Relating to the back, dorsal.

tergolat'eral. Dorsolateral.

ter'gum [L.] The back.

term [G. *terma*, a limit, an end.] 1. A definite or limited period. 2. (pl.) Menses. **at t.,** at the normal time, at the end of pregnancy; noting a normal birth as distinguished from a miscarriage.

ter'ma [G. a limit.] Lamina terminalis.

termat'ic. Relating to the terma, noting a small artery.

term'inad [L. *terminus* + *ad*, to.] Toward the extremity or terminus.

ter'minal [L. *terminus*, a boundary, limit.] 1. Relating to the end, final. 2. Relating to the extremity or summit of any body. **t. alve'olus,** an air-sac or pulmonary vesicle. **t. ar'tery,** an artery which gives off no branches but splits up at once into capillaries. **t. cone,** conus medullaris [BNA]. **t. crest,** crista terminalis [BNA]. **t. demen'tia,** dementia following an acute form of insanity such as mania or melancholia. **t. filum,** the slender termination of the spinal cord, filum terminale. **t. infec'tion,** an infection with streptococci, staphylococci, or other pathogenic bacteria, occurring in the course of a chronic disease and acting as the direct cause of death. **t. thread,** filum terminale.

termina'tion [L. *terminus*, end, limit.] The end, expiration, limit.

terminol'ogy [L. *terminus*, a term, + G. *-logia*.] 1. Onomatology, the science of technical terms or words. 2. Nomenclature, the vocabulary of any science or branch of science.

term'inus [L.] The end, the conclusion; the extremity of any body.

terms. Menses.

ter'nary [L. *ternarius*, of three.] Noting a chemical compound containing three elements.

Ternidens (tur'nĭ-denz) [L. *terni*, three, + *dens*, tooth.] A genus of nematode worms, the single species of which, *T. deminutus*, is found in the large intestine of man and certain monkeys in Africa.

terni'trate. Trinitrate.

teroxide (tur-oks'id). Trioxide, a compound containing three atoms of oxygen, two of which are still capable of combining with the base.

ter'pene. A hydrocarbon, $C_{10}H_{16}$, occurring in essential oils and resins.

ter'pin. Turpentine camphor, a diatomic alcohol, $C_{10}H_{18}(OH)_2$, obtained by the action of nitric acid on alcohol and turpentine. **t. hy'drate,** terpini* hydras. **t. iodohy'drate,** chroatol.

terpin'eol. A colorless liquid with a lilac odor, $C_{10}H_{17}.OH$, obtained by heating terpin hydrate with diluted phosphoric acid; one of the constituents of terpinol; used to mask the odor of iodoform.

terpi'ni hy'dras (U.S.) Terpin hydrate, $C_{10}H_{20}O_2 + H_2O$, occurs in colorless lustrous prismatic crystals of a bitterish aromatic taste; employed as an expectorant in bronchitis and in the treatment of hay fever, in doses of gr. 2–5 (0.13–0.3).

ter'pinol. An oily liquid, with the odor of hyacinths, obtained by distilling terpin hydrate in the presence of dilute mineral acids; it is a mixture of terpineol, dipentene, and other similar substances, expectorant in doses of ♏2–5 (0.13–0.3).

terr'a [L.] Earth soil. **t. alba,** white clay. **t. fullon'ica,** fuller's earth. **t. japon'ica,** catechu. **t. sigilla'ta,** bole. **t. silic'ea purifica'ta** (U.S.), purified siliceous or infusorial earth; boiled, washed, and calcined siliceous earth containing fragments of diatoms; a light fine white or gray powder, insoluble in water but readily absorbing moisture; employed in various pharmaceutical operations.

terr'ace. To suture in several rows, in closing a wound through a considerable thickness of tissue.

terrain-cure (ter-ān'kūr) [Fr. from L. *terrenus*, relating to the ground.] A system of treatment by means of diet and of walking exercises taken in accurate dosage, along paths of measured ascent and measured length, see *Oertel's* method.*

Terrillon's operation (tĕ-re-yawn') [Octave Roch Simon *Terrillon*, French surgeon, *1844.] Removal of hydatids by gradual constriction with an elastic ligature.

tersulphate (tur-sul'fāt). A sulphate containing three molecules of sulphuric acid, of which two are still capable of combining with the base.

tersulphide (tur-sul'fid). A compound containing three atoms of sulphur united with one of the other element; trisulphide.

tertian fe'ver (tur'shun) [L. *tertianus*, relating to a third (thing).] A malarial fever, the paroxysms of which recur every other day (every third day, reckoning the day of the paroxysm as the first). It is caused by the sporulation and invasion of new red blood-corpuscles by a protozoan blood-parasite, *Plasmodium vivax*. In *double tertian* or *quotidian* fever, a paroxysm occurs every day, those of the alternate days being similar; it is due to infection by two groups of parasites so that those of one or the other group sporulate every day.

tertiarism, tertiarismus (tur'shyar-izm, tur-shyar-iz'mus). All the symptoms of the tertiary stage of syphilis taken collectively. **t. d'emblée** (dŏn-bla'), the occurrence of tertiary syphilitic symptoms, without distinct secondaries, in the mother of a child with taint from a syphilitic father.

tertiary (tur'shĭ-er-ĭ) [L. *tertiarius*, containing one-third.] Third in order. **t. al'cohol,** an alcohol formed by the substitution of three alkyl molecules for as many hydrogen atoms. **t. syph'ilis,** see *syphilis*.

tertipara (tur-tip'ah-rah) [L. *tertius*, third, + *parere*, to bear.] A woman who has borne three children

Tesla cur'rent (tesh'lah) [Nikola *Tesla*, American electrician of Hungarian birth, *1857.] High frequency current, one of high tension with very rapid alternation, employed therapeutically by the d'Arsonval method.

teslaization (tesh-lah-i-za'shun). Therapeutic employment of the Tesla current.

tess'ellated [L. *tessella*, a small square stone.] Made up of small squares, checkered. **t. epithe'lium,** pavement epithelium made of overlapping squamous cells.

test [L. *testum*, an earthen vessel.] 1. To try a substance, to prove, to determine the chemical nature of a substance by means of reagents. 2. A method of examination to determine the presence or absence of a definite disease, as the tuberculin test; or the presence or absence of some substance in any of the fluids or excretions of the body, as a test for albumin or sugar in the urine. 3. A substance used in making a test, a reagent. 4. Testa. (For tests not included in the following list, see under *reaction* and under the name of the inventor of the test.) **ac'etone t.,** the suspected urine is shaken up with a few drops of sodium nitroprusside, and strong ammonia water is then gently poured over the mixture; if acetone is present, a magenta ring forms at the line of contact. **acro'lein t.,** heating any material with acid potassium sulphate will develop an odor of acrolein if fat or glycerin is present. **agglutina'tion t.,** see *Widal's* reaction.* **at'ropine t.,** Dehio's* test. **auto-urine t.,** Wildholz* test. **azoru'bin t.,** see *azorubin S.* **bead t.,** Einhorn's* test. **belt t.,** firm upward pressure on the lower part of the abdomen will remove the feeling of discomfort in cases of enteroptosia. **ben'zidin t.,** for blood: the

suspected fluid is treated with glacial acetic acid and ether, and the latter is then decanted and treated with hydrogen peroxide and a solution of benzidin in acetic acid; the presence of blood is indicated by a bluish color turning to purple. **biu'ret t.,** (1) for proteins: add to the fluid to be tested a solution of potassium hydroxide, and to this, drop by drop, a dilute solution of copper sulphate; the presence of proteins will be indicated by the appearance of a pinkish-violet color; (2) for urea-caustic soda is added and then a copper sulphate solution drop by drop; the presence of urea is indicated by a pink color, changing to bluish, of the solution. **blister t.,** Roger-Josué t.; a blister is made on the skin and fluid from it is examined, especially for eosinophiles; if these exist in a proportion of less than 25 per cent., the case is probably one of an infectious disease. **bromine t.,** see *tetbrothalein, tryptophan,* and *Zeller.* **bromsulphthal'ein t.,** a measure of the degree of liver dysfunction; see the qualifying word. **calor'ic t.,** see *Bárány's* sign.* **coin t.,** see *bellmetal resonance.** **conjunc'tival t.,** conjunctival* reaction. **cur'rant t.,** a meal of currants is given and if the seeds are not found in the stools until after more than twenty-four hours there is impaired gastric motility. **dial'ysis t.,** see *Abderhalden.* **edes'tin t.,** see *edestin.* **epiph'anin t.,** for the serodiagnosis of syphilis; 0.1 c.c. of an alcoholic extract of syphilitic fetal liver is mixed with an equal quantity of a 10 per cent. solution of the suspected serum in physiological saline solution, and to the mixture are added 1 c.c. of decinormal solution of sulphuric acid and an equal amount of an equivalent solution of barium hydroxide; this mixture will turn red on the addition of a drop of phenolphthalein solution if the serum is from a syphilitic person. **e'ther t.,** a little 25 per cent. sulphuric acid solution is added to urine in a test-tube and a thin layer of ether is superimposed; after being shaken the mixture is allowed to stand for a time, and if the ether froth becomes viscous the reaction is regarded as positive for allergic asthma. **fatigue' t.,** fatigue reaction.* **fermenta'tion t.,** for sugar in the urine; yeast is added to the suspected urine in an inverted test-tube; if sugar is present fermentation will take place in a few hours, the amount of sugar being estimated by the bulk of carbon dioxide formed. **film t.,** Ross's* t. **fis'tula t.,** compression or rarefaction of the air in the external auditory canal excites nystagmus when there is an erosion of the inner bony wall of the tympanum, so long as the labyrinth is still capable of functioning; when the tympanic wall is intact, no nystagmus occurs. **flick'ing t.,** a tourniquet is applied two or three inches above the elbow for four or five minutes after which the distended vein is flicked with the operator's middle finger three or four times; if purpura exists petechiæ will appear; if the petechiæ previously present are the result of flea bites the flicking will produce no results. **for'malin t.,** if a few drops of formalin are added to a dram of centrifuged blood-serum, coagulation will occur if the blood was from a syphilitic. **girdle t.,** for a splanchnoptosia; the examiner stands behind the patient and makes both hands meet in front of the abdomen of the latter, pulling back and raising the viscera until the patient experiences relief; then the support is suddenly withdrawn and if ptosis of the viscera is present the patient will experience pain and sometimes dizziness. **glycerol-cholesterol t.,** Hinton* t. **glycyltryp'tophan t.,** see *glycyltryptophan.* **guai'ac t.,** Almén's* blood test. **hor'mone t.,** for pregnancy, see *Siddall t.* and *Zondek-Aschheim* t. **hy'drogen t.,** Marsh's* test. **hydrostat'ic t.,** if the lungs of a dead infant float in water it is a sign that the child was born alive, Raygat's t. **hypere'mia t.,** Moszkowicz's* test. **i'odine t.,** iodipin t., and see *teliothalein sodium* and *Bourget.* **iod'ipin t.,** Heichelheim's test of the motility of the stomach: a capsule containing iodipin is swallowed and then the saliva is tested at regular intervals for iodine; as iodipin is acted upon only by the intestinal juices, and not by the gastric, the time of the appearance of iodine in the saliva is an indication of the rapidity of the passage of the substance through the stomach. **meth'ylene-blue t.,** 0.05 gram of this substance in 1 c.c. of water is injected subcutaneously and if the urine becomes blue within half an hour it is assumed that the renal permeability is unimpaired; called also the Achard-Cartaigne method. **microprecipita'tion t.,** a precipitation t. in which a minute quantity of serum or other fluid—not more than a half to one drop—is used. **murex'ide t.,** Weidel's test for uric acid, see under *murexide.* **nystag'mus t.,** Barany's* test. **op'tical t.,** see *Abderhalden.* **or'cin t.,** Bial's* test. **phe"nolsulphonepthal'ein t.,** see this word. **phlorid'zin t.,** after the exhibition of a mixture of 30 grains each of phloridzin and sodium bicarbonate, glycosuria occurs if the kidneys are healthy; if there is renal insufficiency little or no sugar appears in the urine. **phloroglu'cin t.,** for glycuronates and pentose in the urine; the addition of a hydrochloric-acid solution of phloroglucin to the urine will give a reddish color in the presence of pentose or the glycuronates. **polyuria t.,** Albarran's* t. **precipita'tion t.,** any t. in which a positive reaction is indicated by the throwing down of a deposit in the fluid—urine, serum, spinal fluid, etc. See *Ascoli, Bordet-Gengou,* and *Uhlenhut.* **precip'itin t.,** (1) a biological test for human blood; to the suspected fluid, or washings from a suspicious stain, immune serum from an animal which has received peritoneal injections of human blood is added; if the stain is of human blood, there will be a precipitation on addition of the immune serum; (2) Ascoli* reaction. **preg'nancy t.,** see *Siddall* and *Zondek-Aschheim.* **red t.,** see *phenolsulphonphthalein.* **resor'cin t.,** Boas's* t., Vernes* t. **saf'ranin t.,** for sugar in the urine; safranin is added to a mixture of equal parts of the suspected urine and a normal solution of caustic soda, and will dissolve when the mixture is heated to 82° C. (180° F.) if sugar is present. **sal'ol t.,** Ewald's* t. of the motility of the stomach; the patient swallows a tablet of salol which is not decomposed until it reaches the intestine; hence the time of the appearance of phenol in the urine is a measure of the rapidity with which the salol was passed through the stomach. **sedimenta'tion t.,** see *sedimentation.* **se'rum t.,** precipitation t. **shad'ow t.,** retinoscopy. **sil'ver t.,** for sugar in the urine; when the suspected fluid is boiled with a solution of silver nitrate and ammonia, if glucose is present metallic silver will be formed. **slide t.,** Kline-Young* t. **sponge t.,** a hot sponge is passed down the spinal column; if caries is present pain will be felt as the sponge

passes over the spot. **sta'tion t.**, for ataxia; the subject is made to stand with the feet together and the eyes shut, and if ataxia is present there will be marked swaying of the body. **sul'phur t.**, for albumin; the suspected liquid is mixed with lead acetate and sodium hydrate and heated; if any protein is present there will be a black precipitate of sulphide of lead. **three-glass t.**, the bladder is emptied by passing urine into a series of three-ounce test-tubes, and the contents of the first and the last are examined; the first tube contains the washings from the anterior urethra, the second, material from the bladder, and the last, material from the posterior urethra, prostate, and seminal vesicles. **tryp'tophan t.**, see *tryptophan*. **tuber'culin t.**, an injection of a small dose of tuberculin will produce no reaction in a non-tuberculous subject, but will be followed by fever and a local swelling if the person has tuberculosis; the same method is used in testing cattle for tuberculosis. **typhoi'din t.**, see *typhoidin*. **ventila'tion t.**, see *ventilation*.

testa (tes'tah) [L. shell.] A shell; egg-shell. 2. An envelope of certain forms of protozoa, consisting of various earthy materials cemented to a chitinous base. 3. In botany, the outer, sometimes the only, coat of the seed. **t. ovi**, powdered eggshell, occasionally employed as an antacid. **t. prepara'ta**, prepared oyster-shell, powdered oyster shells, consisting chiefly of calcium carbonate; this was official in the U.S.P. of 1870, and was employed as an antacid like chalk.

Testa'cea [L. *testa*, shell.] A group of *Amœbea*, in which the cells are provided with a firm chitinous envelope, often containing earthy material, with an opening through which the pseupodia are protruded.

testa'ceous. Relating to or provided with a shell.

testacoids (tes'tah-koyds). Trade name of a preparation of the testicular hormones, or extract of Lydig's glands.

testaden (test-ad'en) [L. *testis* + G. *adēn*, gland.] Trade name of a preparation of bullock's testicles.

testamen'tary [L. *testamentum*, a will.] Relating to a will or testament. **t. capac'ity**, the ability, through mental soundness and legal right, to write a valid will.

test-break'fast. Test-meal; see *Boas* and *Ewald*.

testec'tomy [L. *testis* + G. *ektomē*, excision.] Orchidectomy, castration.

tes'tes. Plural of *testis*.

testibrachial (tes-tĭ-bra'kĭ-al). Relating to the testibrachia, superior cerebellar peduncles, or brachia conjunctiva.

testibrachium (tes-ti-bra'kĭ-um) [L. *testis*, one of the corpora quadrigemina, + *brachium*, arm.] A superior cerebellar peduncle, brachium conjunctivum [BNA].

testicle (tes'tĭ-kl) [L. *testiculus*, dim. of *testis*.] One of the male reproductive glans, normally present in the cavity of the scrotum; testis [BNA], orchis. **inver'ted t.**, one which is rotated in the scrotum, the epididymis being anterior. **irr'itable t.**, neuralgia of the t. **pulpy t.**, medullary sarcoma of the t. **retained t., undescend'ed t.**, failure of the testicle to descend into the scrotum, it being retained in the abdomen or inguinal canal.

absence, anorchism, anorchidia. **atrophy,** orchiatrophia, orchidatrophy. **descent of the,** orchidocatabasis. **enlargement,** orchidauxe. **excision,** orchiectomy, orchidectomy, orchectomy, didymectomy, castration, orchitomy, orchotomy, orchiotomy. **fusion of the two,** synorchism, synorchidism. **hernia,** orchiocele, orchocele. **inflammation,** orchitis, orchiditis, didymitis; gonorrhorchitis (gonorrheal); didymopyia (suppurative); periorchitis, albuginitis (of tissue surrounding); epididymitis (of epididymis). **non-descent,** cryptorchism, cryptorchidism, enorchism; monorchidism, monorchidia (of one testicle). **pain,** orchialgia, orchidalgia, orchiodynia, orchidodynia, orchioneuralgia, didymalgia, didymodynia. **plastic surgery,** orchioplasty. **person with more than two,** polyorchid, polyorchis. **person with one,** monorchid, monorchis; ridgel, ridgeling (applied to a horse). **person with three,** triorchid triorchis. **person without,** anorchid, eunuch. **person with undescended,** testicond. **presence of but one,** monorchism. **presence of more than two,** polyorchism. **presence of three,** triorchism. **relating to,** orchic, testicular, **suture of an ectopic,** orchidorrhaphy, orchiorrhaphy, orchidopexy, orchiopexy. **swelling,** gonocele, gonoscheocele, orchidauxe, orchidoncus. **tumor,** orchidocele, orchocele, sarcocele, orchidoncus; orchidotyloma, orchidotuberculum, orchidospongioma (tuberculous); orchidencephaloma, orchidomyeloma, orchidoscirrhus (malignant), orchiohydatidoma (hydatid cyst); spermatocele (cystic, containing spermatozoa); orchiostosis (bony).

tes'ticond [L. *testis* + *condere*, to hide.] A person having undescended testicles

testic'ular. Relating to the testicles. **t. cord.** spermatic cord, funiculus* spermaticus [BNA]. **t. duct,** vas deferens, ductus* deferens [BNA]. **t. fluid, t. juice,** spermin. **t. ther'apy,** treatment of senile debility and certain nervous affections by means of injectious of t. fluid or extract.

testic'ulin. Trade name of a preparation of testicular fluid.

testic'ulus [L.] Testicle.

tes'tidin. Trade name of a preparation of testicular fluid.

tes'timony [L. *testimonium; testis*, a witness.] The oral evidence given in a court of law. **ex'pert t.**, testimony regarding the medical facts in a case at law, given by one whose training and special knowledge warrant him in speaking authoritatively.

tes'tin, tes'tine. Trade name of an extract of the testicles of a ram or bullock; spermin.

tes'tis, pl. *testes* [L.] 1. Testicle, one of the two male reproductive glands, located in the cavity of the scrotum. 2. Postopticus, one of the inferior pair of the corpora quadrigemina, colliculus* inferior [BNA]. **descent' of the t.**, the gradual change of position of the testis, in the fetus and infant, from the abdominal cavity to the scrotum. **t. cer'ebri,** postopticus, colliculus inferior [BNA]. **t. fœmin'eus, t. mulieb'ris,** ovary. **t. redux,** a condition in which there is a tendency in the testicle to ascend to the upper part of the scrotum or into the inguinal canal. **t. viri'lis,** the male testicle.

testitis (tes-tĭ'(te')tis) [L. *testis*, testicle, + G. *-itis*.] Orchitis.

Testivin's sign (tes-te-vaṅ'). The formation of a thin pellicle, like gold-beaters' skin, on albumin-free urine after treatment with an acid and ether, alleged by the author to be a prodromal sign of an infectious disease.

test-meal. A simple meal, usually of a roll and sometimes a cup of coffee, given on an empty stomach; after a definite period the contents of the stomach are withdrawn and their condition furnishes evidence as to the digestive power of the stomach.

test-object. An object having very fine surface markings, mounted on a slide, used to determine the defining power of the object lens of a microscope.

test-paper. A strip of filter-paper dipped in a solution of litmus or other reagent and dried; used to

determine the acid or alkaline reaction of a fluid by its change of color when moistened with it.

test-solu'tion. A solution of some reagent used in the test for sugar in the urine, and in other chemical operations.

test-tube. A tube of thin glass closed at one end, used in the examination of urine and other chemical operations, for bacterial cultures, etc.

test-types. Black letters of various sizes printed on a card, used to test the acuity of vision; see *Jæger* and *Snellen*.

teta'nia. Tetany. **t. gas'trica,** a form associated with gastric disorder affecting the muscles of the extremities and of respiration **t. epidem'ica,** t. rheumatica. **t. parathyreopri'va,** tetany following excision of the parathyroid glands. **t. rheumat'ica,** an acute epidemic form of tetany, of several weeks' duration, occurring chiefly in winter.

tetanic (tĕ-tan'ik). 1. Relating to or marked by tetanus. 2. An agent, such as strychnine, which in poisonous doses produces tonic muscular spasm. **t. convul'sion,** tonic convulsion, one marked by firm and constant muscular contraction.

tetan'icum, pl. *tetan'ica.* Tetanic (2).

tetan'iform [L. *tetanus* + *forma,* form.] Resembling tetanus.

tetanigenous (tĕ-tan-ij'en-us) [G. *tetanos,* tetanus, + *gennaō,* I produce.] Causing tetanus or tetaniform spasms.

tetanill'a [L. dim. of *tetanus.*] 1. Fibrillary myoclonia. 2. Tetany.

tet'anin. Tetanotoxin.

tet'anism. A more or less continuous general muscular hypertonicity in young infants; myotonia neonatorum.

tetaniza'tion. 1. The act of tetanizing the muscles. 2. A condition of tetaniform spasm.

tet'anize. To cause tonic spasm in a muscle.

tet"anocann'abine. A substance found in cannabis indica, the same as choline.

tetanode (tet'an-ōd) [G. *tetanos,* tetanus, + *eidos,* resemblance.] 1. Tetanoid. 2. Noting the quiet interval between the recurrent tonic spasms in tetanus.

tet'anoid [G. *tetanos,* tetanus, + *eidos,* resemblance.] 1. Tetaniform. 2. Tetanilla, tetany. **t. fever,** cerebrospinal meningitis. **t. paraple'gia,** see *paraplegia.* **t. pseu"doparaple'gia,** spastic spinal paralysis.*

tetanol'ysin. A hemolytic toxin formed by *Bacillus tetani;* the toxin causing the characteristic symptoms is tetanospasmin.

tetanom'eter [G. *tetanos,* tetanus, + *metron,* measure.] An instrument for measuring the force of tonic muscular spasms.

tetanomo'tor [L. *tetanus* + *motor,* a mover.] An instrument by means of which tonic spasms are produced by the mechanical irritation of a hammer striking the motor nerve of the muscle affected.

tet"anospas'min. The one of the two toxins of *Bacillus tetani* which causes the characteristic symptoms; the other toxin is called tetanolysin.

tetanotox'in. A ptomaine derived from cultures of *Bacillus tetani.*

tet'anus [L.; G. *tetanos,* tension.] 1. An infectious disease marked by painful tonic muscular contractions; it is caused by the toxin (tetanospasmin) of *Bacillus tetani* acting upon the central nervous system; see *emprosthotonos, opisthotonos,* and *pleurothotonos.* 2. A tonic muscular contraction, especially one induced by an electrical current. **acous'tic t.,** experimental t. induced by a faradic current, the speed of which is estimated by the pitch of the vibrations. **an'odal clo'sure t.,** a tetanic muscular contraction occurring during the time the circuit is closed, the current then running, while the positive pole is applied **an'odal o'pening t.,** a tonic contraction in a muscle, to which the anode is applied, when the circuit is opened. **apyret'ic t.,** benign t., tetany. **cath'odal clo'sure t.,** a tetanic muscular contraction occurring during the time the circuit is closed, the current then running, while the negative pole is applied. **cath'odal o'pening t.,** a tonic contraction in a muscle, to which the cathode is applied, when the circuit is opened. **cephal'ic t.,** tonic spasms following injury to the facial nerve. **cer'ebral t.,** (1) cephalic t.; (2) experimental t. produced in animals by an injection of tetanospasmin into the brain substance. **drug t.,** tonic spasms caused by strychnine or other tetanic. **exten'sor t.,** t. affecting chiefly the extensor muscles. **flexor t.,** t. affecting chiefly the flexor muscles. **hydropho'bic t.,** cephalic t. **idiopath'ic** t., t. occurring without any visible wound to serve as a portal of entry for the specific bacillus. **intermitt'ent t.,** tetany. **med'ical t.,** idiopathic t. **post-par'tum t.,** puerperal t. **puer'peral t.,** t. occurring during the puerperium from infection of the obstetric wound. **rheumat'ic t.,** idiopathic t. **t. anti'cus,** emprosthotonos. **t. comple'tus,** t. involving most of the muscles of the body, generalized t. **t. dorsa'lis,** opisthotonos. **t. latera'lis,** pleurothotonos. **t. nascen'tium, t. neonato'rum,** a form of t. affecting newborn infants, especially in the West Indies, possibly due to infection through the open end of the severed umbilical cord. **t. posti'cus,** t. dorsalis. **tóxic t.,** drug t. **traumat'ic t.,** t. following infection of a wound. **u'terine t.,** puerperal t.

tet'any. A disorder marked by intermittent tonic muscular contractions, accompanied by fibrillary tremors, paresthesias, and muscular pains; the hands are usually first affected, the spasms occurring later in the face, trunk, and sometimes the laryngeal muscles; there is increased irritability of the motor and sensory nerves to electrical and mechanical stimuli; the disorder occurs with gastric and intestinal troubles, alkalosis, or a deficiency of calcium salts, after exhausting diseases, and as a consequence of removal of the parathyroids. **dura'tion t.,** a tonic spasm occurring in degenerated muscles upon application of a strong galvanic current. **epidem'ic t.,** tetania rheumatica. **gastric t.,** tetania gastrica. **parathyreop'rival t.,** tetania parathyreopriva. **rheumat'ic t.,** tetania rheumatica.

tetarcone (tet'ar-kōn). Tetartocone.

tetartanopia, tetartanopsia (tet"ar-tan-o'pĭ-ah, -op'sĭ-ah) [G. *tetartos,* fourth, + *an-* priv. + *ōps,* eye; + *opsis,* vision.] Loss of vision in an homonymous quadrant in each field, quadrantic hemianopsia.

tetartocone (tĕ-tar'to-kōn) [G. *tetartos,* fourth, + *kōnos,* a cone.] The fourth or distolingual cusp of a molar tooth of the upper jaw.

tetartoconid (tĕ-tar"to-kon'id). The fourth or distolingual cusp of a molar tooth of the lower jaw.

tetbrothalein sodium (tet-bro-thal'e-in so'di-um). Tetrabromophthalein sodium, the sodium salt of a dye; it contains about 47 per cent. of bromine; used in the *x*-ray examination of the gallbladder.

tethelin (teth'e-lin) [G. *tethēlōs,* p.p. of *thallō,* I flourish.] The growth-controlling principle iso-

lated from the anterior lobe of the hypophysis cerebri; pitglandin.

tetiothalein sodium (tet-i-o-thal'e-in so'di-um). Tetraiodophthalein sodium, the sodium salt of a dye; it contains about 54 per cent. of iodine; it is used in the *x*-ray examination of the gall-bladder.

tet'mil. Ten millimeters

tet'ra-. A prefix to words formed from Greek roots, meaning four.

tetraba'sic [G. *tetra-*, four, + *basis*, base.] Noting an acid having four replaceable hydrogen atoms.

tetrablas'tic [G. *tetra*, four, + *blastos*, germ.] Having four germinal layers, namely endoderm, ectoderm, and two layers of mesoderm.

tetraboric acid (tet"rah-bo'rik as'id). Pyroboric acid.

tetrabrachius (tet"rah-bra'kĭ-us) [G. *tetra-*, four, + *brachiŏn*, arm.] A monster with four arms.

tetrabromophthalein sodium (tet-rŭ-bro-mo-fthal'e-in so'dĭ-um). The sodium salt of a dibasic dye, employed for *x*-ray examination of the gall-bladder, the substance appearing in the gall-bladder after intravenous injection, in amount sufficient to cast a shadow.

tetracaine (tet'ră-kah-ēn). Pantocaine, the hydrochloride of *p*-butyl-aminobenzoyl-dimethyl-amino-ethanol, a white, soluble, crystalline powder, employed as a local anesthetic to mucous membranes in 2 per cent. solution and for spinal anesthesia in 1 per cent. solution.

tetrachirus (tet-ra-ki'rus) [G. *tetra-*, four, + *cheir*, hand.] A monster having four hands.

tetrachloric acid (tet-rah-klo'rik as'id). Perchloric acid.

tetrachlo'ride. A compound containing four atoms of chlorine to one atom of the other element or one radical equivalent.

tetrachlormeth'ane. Carbon tetrachloride.

tetracid (tet-ras'id) [G. *tetra-*, four, + L. *acidus*, acid.] Noting a base having four replaceable hydroxyl groups.

tetracoc'cus. *Micrococcus tetragenus.*

tetracrotic (tet-rah-krot'ik) [G. *tetra-*, four, + *krotos*, a striking.] Noting a pulse curve with four upstrokes in the cycle, that is with three interruptions in the descending limb in addition to the summit of the systolic wave, called also catatricrotic.

tet'rad [G. *tetras*, the number four.] 1. A collection of four things having something in common. 2. In chemistry, a quadrivalent element. 3. In heredity, a bivalent chromosome which divides into four in the maturation division.

tetradac'tyl [G. *tetra-*, four, + *daktylos*, finger.] Having only four fingers or toes on each hand or foot.

tetrad'ic. Relating to a tetrad.

tetragen'ic. Relating to or produced by *Micrococcus tetragenus.*

tetragenous (tĕ-traj'en-us). Producing fours; noting a schizomycete dividing in two planes, thus producing groups of four, such as *Micrococcus tetragenus.*

tet'ragon, tetrago'num [G. *tetra-*, four, + *gōnia*, angle.] Quadrangle **t. lumba'le,** lumbar quadrangle, a space bounded laterally by the obliquus externus abdominis muscle, medially by the sacrospinalis, above by the serratus posterior inferior, and below by the obliquus internus abdominis.

tetrago'nus. Quadrangular, a name given to the musculus* platysma [BNA].

Tetragyn'ia [G. *tetra-*, four, + *gynē*, female.] An order of plants, in the Linnean system, the flowers of which have four pistils.

tetrahy'dric. Noting a compound containing four replaceable hydrogen atoms.

tetrahy"droparaquinan'isol. Thalline sulphate.

tetraiodoethylene (tet-rah-i"o-do-eth'il-ēn). Diiodoform.

tetraiodophthalein sodium (tet-rŭ-i"o-do-fthal'e-in so'dium). Iodeikon, iodo-ray, opacol; the sodium salt of a dibasic dye, employed like tetrabromophthalein* sodium as an indicator in *x*-ray examination of the gall-bladder.

tetraiodopyrrhol (tet-rah-i"o-do-pir'ol). Iodol.

tetramas'tia [G. *tetra-*, four, + *mastos*, breast.] Tetramazia.

tetramas'tous. Having four breasts.

tetrama'zia [G. *tetra-*, four, + *mazos*, breast.] The presence of four breasts.

tetramas'tigote [G. *tetra-*, four, + *mastix*(*mastig-*), whip.] Noting a protozoan or other microorganism provided with four flagella.

tetram'elus [G. *tetra-*, four, + *melos*, limb.] Tetrascelus.

tetramer'ic, tetram'erous [G. *tetra-*, four, + *meros*, part.] Having four parts, or parts arranged in groups of four.

tetrameth"ylenedi'amine. Putrescine.

tetrameth"ylputres'cine. A poisonous derivative of putrescine, having the formula $C_8H_{20}N_2$, similar in its action to muscarine.

Tetran'dria [G. *tetra-*, four, + *anēr*(*andr-*), male.] A class of plants, in the Linnean system, the flowers of which have four stamens.

tetrani'trol. Erythrol tetranitrate, obtained by the nitration of erythrol, a tetratomic alcohol; occurs in colorless scales; a vasodilator and antispasmodic in doses of gr. ½–1 (0.03–0.06).

tetranop'sia [G. *tetra-*, four, + *an-* priv. + *opsis*, vision.] Diminution of the visual field by one-quarter.

Tetranychus (tĕ-tran'ĭ-kus) [G. *tetra-*, four, + *onyx* (*onych-*), nail, claw.] A genus of mites, chiefly injurious to plants, but some species of which are troublesome to man, sometimes burrowing under the skin.

tetraophthal'mus. Tetrophthalmus.

tetrao'tus. Tetrotus.

tetrapet'alous. Having four petals.

tetraphar'macon [G. *tetra-*, four, + *pharmakon*, a drug.] An ointment compounded of pitch, rosin, wax, and lard.

tetraple'gia [G. *tetra-*, four, + *plēgē*, stroke.] Paralysis affecting the four extremities.

tet'rapus [G. *tetra-*, four, + *pous*, foot.] A monster with four feet.

tetrascelus (tĕ-tras'ĕl-us) [G. *tetra-*, four, + *skelos*, leg.] A monster with four legs.

tetraschistic (tet-rah-skis'tik) [G. *tetra-*, four, + *schisis*, division.] Tetragenous.

tetrasep'alous. Having four sepals.

tetras'ter [G. *tetra-*, four, + *astēr*, star.] A figure exceptionally and abnormally occurring in mitosis, in which there are four asters.

tetrastichiasis (tet-rah-stĭ-ki'ă-sis) [G. *tetra-*, four, + *stichos*, row.] The arrangement of the eyelashes in four rows.

tetras'toma [G. *tetra-*, four, + *stoma*, mouth.] A trematode worm or fluke which has been found in the urine and is thought to be occasionally parasitic somewhere in the urinary tract.

tetratom'ic [G. *tetra-*, four, + *atomos*, atom.] Noting a quadrivalent element or radical; tetradic.

tetravaccine (tet-rah-vak'sēn) [G. *tetras*, the number four.] A vaccine recommended by Castellani, consisting of a mixture of dead cultures of typhoid, paratyphoid A, paratyphoid B, and cholera.

tetrav'alent [G. *tetra-*, four, + L. *valens*, worth.] Quadrivalent.

tetrelle (tĕ-trel') [Fr. dim. of *tetin*, nipple.] An appliance by means of which the feeble sucking of a weakly infant is made effectual by supplementary suction of the mother.

Tet'rodon [G. *tetra-*, four, + *odous*(*odont-*), tooth.] A genus of tropical or subtropical fishes, including a poisonous species of Eastern Asiatic seas.

tetrod'onine. A poisonous ptomaine from the roe of a species of *Tetrodon*, a fish of Japanese and Chinese waters; one of the fugu poisons of Japan.

tet'ronal. Diethlysulphone-diethylmethane, $C_8H_{20}S_2O_4$, occurring in colorless shining plates, soluble in 450 parts of water, readily soluble in alcohol; hypnotic in doses of gr. 15–30 (1.0–2.0).

tetrophthal'mos, tetrophthal'mus [G. *tetra-*, four, + *ophthalmos*, eye.] A monster with four eyes.

tet'rose. Erythrose, a monosaccharid, $C_4H_8O_4$, the molecule of which contains but four carbon atoms.

tetro'tus [G. *tetra-*, four, + *ous*(*ōt-*), ear.] A monster with four ears.

tetrox'ide. An oxide, the molecule of which contains four oxygen atoms.

tett'er [A.S. *teter*.] 1. A pruriginous skin disease of animals, contagious, and sometimes communicable to man. 2. A term popularly applied to eczema, lupus, and various other cutaneous disorders. **blister t.,** pemphigus. **brawny t.,** dandruff, seborrhea capitis. **crusted t.,** impetigo. **dry t.,** scaly eczema, psoriasis. **eating t.,** lupus. **hon'eycomb t.,** porrigo favosa, favus. **humid t.,** moist or weeping eczema. **milk t.,** crusta lactea. **moist t.,** humid t., **scaly t.,** dry t.

tet'y. A skin disease of uncertain nature, occurring in Madagascar; it is marked chiefly by a pustular eruption around the mouth.

teu'crin. A glucoside, $C_{21}H_{24}O_{11}$, from several species of *Teucrium;* employed as a tonic and nervine in doses of gr. 5–15 (0.3–1.0).

Teu'crium [G. *teukrion*, germander.] A genus of plants of the order *Labiatæ*, the germanders, several species of which have been more or less employed in medicine. **T. canaden'sis,** American germander, wood-sage, has been employed in various functional nervous affections in doses of gr. 10–30 (0.6–2.0).

Teutleben's lig'aments (toyt'la-ben). Lateral folds uniting the pericardium and diaphragm.

teutlose (tut'lōz) [G. *teutlon*, beet.] A saccharôse from beetroot.

Tex'as fe'ver. Redwater fever, bovine hemoglobinuria, bovine malaria, southern cattle fever; an infectious disease of cattle in the Southwestern United States and other subtropical regions; it is marked by fever, splenic enlargement, gastritis, and hemoglobinuria; the cause is the presence in the blood of a protozoan parasite, *Babesia bigemina*, which is transmitted by a tick *Margaropus annulatus*.

tex'is [G.] Childbearing.

tex'tiform [L. *textum*, something woven, + *forma*, form.] Reticular, tissue-like, web-like.

tex'tural. Relating to the texture of the tissues.

tex'ture [L. *textura; texere*, to weave.] The composition or structure of a tissue or organ.

tex'tus [L. *texere*, to weave.] A tissue.

TGl [*tuberculin* + Fr. *globulineuse*, "globulinous."] v. Behring's formula for a globulin constituent of the tubercle bacillus soluble in a 10 per cent. salt solution.

Th. Chemical symbol of *thorium*.

thalamen'cephal. Thalamencephalon.

thal"amencephal'ic. Relating to the thalamencephalon.

thalamencephalon (thal"am-en-sef'ă-lon) [G. *thalamos*, thalamus, + *enkephalos*, brain.] Thalamic brain, diencephalon, interbrain, 'tween-brain, the hinder original part of the forebrain; it includes the *thalamus*, the *epithalamus* (pineal body), and the *metathalamus* (geniculate bodies).

thalamic (thal-am'ik). Relating to the optic thalamus. **t. brain,** thalamencephalon. **t. ep'ilepsy,** epilepsy due to disease of the thalamus. **t. syn'drome,** hemianesthesia, slight hemiplegia and hemiataxia with more or less complete astereognosis, severe paroxysmal pain on the hemiplegic side and choreo-athetoid movements in the members of the same side, associated with a destructive lesion of the optic thalamus. **t. te'nia,** tænia thalami.

thalamocele, thalamocœle (thal'am-o-sēl) [G. *thalamos* + *koilia*, a hollow.] The third ventricle of the brain.

thalamocor'tical. Relating to the thalamus and the cerebral cortex.

thalamocru'ral [L. *crus*(*crur-*), leg.] Relating to the thalamus and one of the cerebral peduncles, or crura.

thal"amolentic"ular. Relating to the thalamus and the nucleus lentiformis.

thal"amomamm'illary. Relating to the thalamus and the mammillary bodies, corpora* mamillaria. **t. fascic'ulus,** bundle of Vicq* d'Azyr.

thalamopedun'cular. Thalamocrural.

thal'amotegmen'tal. Relating to the thalamus and the tegmentum, noting a tract of white fibers passing from the thalamus through the tegmentum to the opposite side of the spinal cord.

thal'amus [G. *thalamos*, a bed, a bedroom.] [BNA] Optic thalamus, a large ovoid mass of gray substance, with a flattened inner or medial surface, lying in the path of each pedunculus cerebri; from it fibers pass to all portions of the cortex; it is made up of two segments, anterior and posterior, the latter being also called *pulvinar*. **t. op'ticus,** optic thalamus, thalamus [BNA].

thalassin (thă-las'sin) [G. *thalassa*, the sea.] A poisonous principle, antagonistic to congestine, isolated (with the latter) from *Anemone sculletus;* it causes redness of the skin, and itching and congestion of the nasal mucous membrane with sneezing.

thalassopho'bia [G. *thalassa*, sea, + *phobos*, fear.] Unreasoning fear of the sea.

thalassother'apy [G. *thalassa*, the sea, + *therapeia*, treatment.] Treatment of disease by a residence at the seashore, by sea-bathing, or by a sea-voyage.

thalgrain (thal'grān). Barley or other grain mixed with 1 per cent. of thallium sulphate, used as a rodenticide.

Thalic'trum [G. *thaliktron*.] A genus of plants of the order *Ranunculaceæ*, several species of which contain berberine.

thal'ictrine. A yellowish poisonous alkaloid from a species of *Thalictrum*.

thal'line. The methylether of tetrahydroparaoxyquinoline, occurring in white prismatic crystals very sparingly soluble in water. **t. sal'icylate,** a

reddish crystalline powder, employed as an intestinal antiseptic and antirheumatic in doses of gr. 2–8 (0.13–0.5). **t. sul'phate,** tetrahydroparaquinanisol, a white granular powder or needle-shaped crystals, soluble in 7 parts of water; antiseptic, hemostatic, and antipyretic, employed in typhoid fever in doses of gr. 2–8 (0.13–0.5) and in 2 to 5 per cent. solution as an injection in subacute and chronic gonorrhea. **t. tar'trate,** in white crystalline powder, used for the same purposes as the sulphate, and in the same dose.

thalliniza'tion. The production of the systemic effects of thalline or its salts.

thall'ium [G. *thallos*, a green twig.] A soft, lustrous white metallic element, symbol Tl, atomic weight 204. **t. ac'etate,** has been employed in night sweats in doses of gr. 1–3 (0.06–0.2). **t. sulphate** has been recommended in 1 per cent. solution as an injection in cystitis.

Thalloph'yta [G. *thallos*, a green twig, + *phyton*, plant.] A subkingdom of plants, including the lower cryptogams—among them the algæ and fungi.

thallospore (thal'o-spōr) [G. *thallos*, a green twig, + *sporos*, seed.] A spore-like development in a fungus which is a portion of the thallus modified for purposes of reproduction.

thallotoxicosis (thal-lo-toks-ĭ-ko'sis) [*thallium* + G. *toxikon*, poison, + *-ōsis*.] Poisoning by thallium, marked by stomatitis, gastroenteritis, peripheral and retrobulbar neuritis, endocrine disorders, and alopecia.

thall'us [G. *thallos*, a young shoot.] In botany, a plant body without differentiation into true root, stem, or leaf.

Thalmann's a'gar (tahl'mahn). See under *agar*.

Thamm's tuber'culin. See under *tuberculin*.

thamu'ria [G. *thama*, often, + *ouron*, urine.] Frequent micturition, pollakiuria.

than"atognomon'ic [G. *thanatos*, death, + *gnōmonikos*, fit to give judgment.] Of fatal prognosis, indicating the approach of death.

thanatobiological (than"ă-to-bi-o-loj'ĭ-kal) [G. *thanatos*, death, + *bios*, life, + *-logia*.] Relating to the processes concerned in life and death.

thanatog'raphy [G. *thanatos*, death, + *graphē* description.] 1. A description of one's symptoms and thoughts while dying. 2. A treatise on death.

than'atoid [G. *thanatos*, death, + *eidos*, resemblance.] 1. Resembling death. 2. Mortal; deadly.

than'atol. Trade name of a disinfectant preparation of pyrocatechin ethyl ether.

thanatol'ogy [G. *thanatos*, death, + *-logia*.] The branch of science which treats of death in all its aspects.

thanatoma'nia [G. *thanatos*, death, + *mania*, frenzy.] Suicidal mania.

thanatom'eter [G. *thanatos*, death, + *metron*, measure.] An instrument to determine the presence of death; one form is a thermometer for taking the internal temperature.

thanatophid'ia [G. *thanatos*, death, + *ophis*, a serpent.] Venomous snakes.

thanatopho'bia [G. *thanatos*, death, + *phobos*, fear.] An extreme and abnormal fear of death.

thanatop'sia, than'atopsy [G. *thanatos*, death, + *opsis*, view.] Necropsy, autopsy.

thanato'sis [G. *thanatos*, death.] Necrosis; gangrene.

Thane's meth'od [Sir George Dancer *Thane*, English anatomist, 1850–1930.] For indicating the position of the fissure of Rolando; the upper end of the fissure corresponds to the midpoint of a line drawn from the glabella to the inion.

thap'sia. The resin of *Thapsia garganica* and *T. selphium*, plants of the Mediterranean region of Europe and Africa; employed as a constituent of a stimulant plaster used in skin diseases.

tharm [G. *tramis*.] Intestine.

thaumatropy (thaw-mat'ro-pĭ) [G. *thauma*, a wonder, + *tropē*, a turning.] The transforming of one form of tissue into another.

thaumaturgic (thaw-mă-tur'jik) [G. *thauma(thaumat-)*, a wonder, + *ergon*, work.] Miraculous; magical.

the'a. Tea, the dried leaf of a plant of the genus *Camellia*, formerly called *Thea*. **t. nigra,** black tea, prepared by allowing the leaves to wilt and keeping them in heaps for some time before drying. **t. vir'idis,** green tea, prepared by drying the leaves rapidly immediately after picking, without allowing them to wilt or macerate.

theaism (the'ah-izm). Theism.

theater, theatre (the'ă-tur) [G. *theatron*.] The operating room of a public hospital or one in which invited guests or the general surgical public are permitted to see the operations.

theba'ic [L. *thebaicus*, relating to Thebes, whence opium was formerly obtained.] Relating to or derived from opium.

thebaicine (the-ba'ĭ-sēn). An amorphous alkaloid, isomeric with thebenine, derived from thebaine by the action of dilute acids.

thebaine (the'bah-ēn). Paramorphine, $C_{19}H_{21}NO_3$, an alkaloid obtained from opium; occurs in white shining scales; it causes tetanic convulsions, resembling strychnine in its action.

thebaism (the'bah-izm). Opiumism, opium addiction.

the'benine. An amorphous alkaloid isomeric with thebaicine and, like it, derived from thebaine by the action of dilute acids.

Thebe'sian. Relating to or described by Adam Christian *Thebesius*, a German physician, 1686–1732. **T. foram'ina,** the openings of the Thebesian veins on the inner surface of the right atrium of the heart, foramina* venarum minimarum. **T. valve,** valvula sinus coronarii [BNA]. **T. veins,** venæ cordis minimæ.

theca, pl. *the'cæ* (the'kah) [G. *thēkē*, a box.] A sheath, especially the synovial sheath of a tendon. **t. cordis,** pericardium. **t. follic'uli,** the outer wall of a Graafian follicle, derived from the stroma of the ovary. **t. ten'dinis,** the synovial sheath of a tendon. **t. vertebra'lis,** the spinal dura mater.

the'cal. Relating to a sheath, especially a tendon-sheath.

thecitis (the-si'(se')tis) [G. *thēkē*, box (sheath), + *-itis*.] Inflammation of the sheath of a tendon, tendovaginitis.

the'codont [G. *thēkē*, box, + *odous(odont-)*, tooth.] Having the teeth inserted in alveoli.

Thecoso'ma, Thecoso'mum [G. *thēkē*, box (sheath), + *sōma*, body.] Schistosomum.

thecostegnosia, thecostegnosis (the"ko-steg-no'sĭ-ah, the"ko-steg-no'sis) [G. *thēkē*, box (sheath), + *stegnōsis*, a narrowing.] Constriction of a tendon-sheath.

Theden's meth'od (ta'den) [Johann Christian Anton *Theden*, German surgeon, 1714–1797.] Treatment of aneurysms or of large sanguineous effusions by compression of the entire limb by means of a roller bandage. **T.'s vul'nerary,** dilute sulphuric acid 40, vinegar 240, alcohol 75, purified honey 80, distilled water 30

theelin (the'lin) [G. *thēlys*, female.] Thelin, the estrus-exciting hormone, secreted by the ovary. See *theelol.*

theelol (the'lol). A second estrus-exciting hormone, a triatomic alcohol, excreted in the urine of pregnant women; it is much more active than theelin when injected into immature female rats, but the latter is more active than theelol when injected into adult spayed rats.

the'ic. An intemperate tea-drinker.

Theile's canal (ti'leh) [Friedrich Wilhelm *Theile*, German anatomist, 1801–1879.] The serous space formed by the reflexion of the pericardium on the aorta and pulmonary artery. **T.'s glands,** glandular structures in the walls of the cystic duct and, in small numbers, in the pelvis of the gall-bladder.

Theile'ria. *Piroplasma.*

theine, theina (the'(te')ēn, the(te)-ē'nah). Caffeine obtained from the dried leaves of *Thea sinensis* (U.S.) or *Camellia thea* (Br.); it is present in the amount of from 2 to 4 per cent.

theinism, theism (the'(te')in-izm, the'(te')izm). Chronic poisoning resulting from immoderate tea-drinking, marked by palpitation, insomnia, nervousness, headache, and dyspepsia.

thelal'gia [G. *thēlē*, nipple + *algos*, pain.] Pain in the nipple.

Thelazia (the-la'zĭ-ah). A genus of nematode worms, inhabiting the lacrymal ducts and eyes of cattle and domestic animals, one species, *T. callipæda*, having been found in man.

the'le [G.] Nipple, papilla mammæ [BNA].

the'leplasty [G. *thēlē*, nipple, + *plassō*, I form.] Reparative or plastic surgery of the nipple.

theler'ethism [G. *thēlē*, nipple, + *erethismos*, irritation.] Erection of the nipple.

the'lin. Thecelin.

thelitis (the-li'(le')tis) [G. *thēlē*, nipple, + *-itis.*] Inflammation of the nipple, mammary papillitis, mammillitis.

the'lium, pl. *thelia* [G. *thēlē*, nipple.] 1. A papilla. 2. A cellular layer. 3. Nipple, papilla mammæ [BNA].

thelon'cus [G. *thēlē*, nipple, + *onkos*, tumor.] A tumor of the nipple.

the"lophleb"ostem'ma [G. *thēlē*, nipple, + *phleps* (*phleb-*), vein, + *stemma*, a wreath.] A venous circle surrounding the nipple.

the"lorrha'gia [G. *thēlē*, nipple, + *-rhagia.*] Bleeding from the nipple.

the'lothism. Thelerethism.

thel'yblast [G. *thēlys*, female, + *blastos*, germ.] Feminonucleus.

thelyblas'tic. Relating to the thelyblast, or feminonucleus.

thel'yplasm [G. *thēlys*, female, + *plasma*, something made or formed.] The female element of idioplasm.

thelygon'ia [G. *thēlys*, female, + *gonē*, birth.] Thelytocia.

thelyma'nia [G. *thēlys*, female, + *mania*, frenzy.] Satyriasis.

thelyto'cia [G. *thēlys*, female, + *tokos*, birth.] Giving birth to females only, noting specifically the phenomenon of parthenogenesis in insects in which only females are produced.

thelytocous (the-lit'o-kus) [G. *thēlys*, female, + *tokos*, birth.] Giving birth to female offspring only.

thelytoky (the-lit'o-kĭ). Thelytocia.

the'nad [G. *thenar*, the palm of the hand, + L. *ad*, to.] Toward the outer side of the palm of the hand.

the'nal. Relating to the palm of the hand. **t. aspect,** the outer side of the palm. **t. em'inence,** the ball of the thumb, thenar.

the'nar [G. the palm of the hand.] 1. The fleshy mass on the outer side of the palm, the radial palm, the ball of the thumb. 2. Noting any structure in relation with this part. **t. em'inence, t. prom'inence,** thenar (1).

the'nen [G. *thenar*, palm, + *en*, in.] Relating only to the palm, specifically to the radial side of the palm.

The'obald Smith's phenom'enon. See *Smith's* phenomenon.*

theobro'ma [G. *theos*, a god, + *brōma*, food.] Cacao (incorrectly cocoa), the dried ripe seed of *Theobroma cacao*, the chocolate-tree, a tall bush or low tree extensively cultivated in the tropics; it yields chocolate and "cocoa," used as beverages, and a fat, oleum theobromatis, employed in the making of suppositories and for other pharmaceutical purposes.

theobro'mic acid. A waxy substance derived from theobroma.

theobromi'næ so'dio-salicyl'as (U.S.). Theobromine sodiosalicylate, theobromina et sodii salicylas (Br.), sodiotheobromine salicylate, diuretin, a mixture of sodium theobromine and sodium salicylate, occurring as a white odorless powder, of a sweetish alkaline taste, soluble in water; employed as a diuretic in doses of gr. 10–20 (0.6–1.3).

theobromine (the-o-bro'mēn). An alkaloid, $C_7H_8N_4O_2$, resembling caffeine in its action, present in the chocolate or cacao bean. **t. so"diosal'icylate,** theobrominæ sodio-salicylas (U.S.). **t. so'dium ac'etate,** a white crystalline, soluble bitter powder, employed for the same purposes as theobromine, than which it is better tolerated by the stomach; dose gr. 8–15 (0.5–1.0).

theobro'mose. Theobromine-lithium, occurring in the form of acicular crystals; diuretic.

theocal'cin. A compound of calcium salicylate and calcium theobromine, occurring as a white amorphous powder, having a saline taste, slightly soluble in water; recommended as a diuretic in place of theobromine sodiosalicylate, than which it is said to be less irritating to the stomach.

the'ocine. Synthetically made theophylline, employed as a diuretic in doses of gr. 3–8 (0.2–0.5). **sol'uble t.,** a double salt of sodium acetate and dimethylxanthin sodium, a white powder soluble in about 35 parts of water; employed as a diuretic in place of theocine in doses of gr. 1½–5 (0.1–0.3) two or three times a day. **t.-so'dium,** soluble theocine.

theolac'tin. Proprietary name for a preparation of sodium lactate and theobromine-sodium; a white soluble powder, employed as a diuretic in doses of 10–15 grains (0.6–1.0).

the'olin. Heptane, C_7H_{16}, a colorless liquid hydrocarbon resembling benzene, obtained from petroleum.

theoma'nia [G. *Theos*, God, + *mania*, frenzy.] Religious insanity; insanity in which the subject believes that he is God.

theoma'niac. A subject of theomania.

theominal (the'o-mĭ-nal). Trade name of a combination of theobromine, 10 parts, and luminal, 1 part, recommended in the treatment of hypertension and conditions associated therewith, in dose of 5 grains 2 or 3 times a day.

theonasal (the-o-na'sal) [*theo*bromine, *na*trium, *sali*cylate.] Diuretin, theobrominæ sodio-salicylas (U.S.).

theopho'bia [G. *Theos*, God, + *phobos*, fear.] An insane fear of the anger of God.

theoph'orin. The proprietary name of a double salt, theobromine sodium-sodium formate; a white powder of a saline bitter taste, freely soluble in alkaline water; said to be diuretic in doses of 7½ gr. (0.5).

theophylli'na [L. *thea*, tea, G. *phyllon*, leaf.] (U.S.) Theophylline, an alkaloid $C_7H_8N_4O_2 + H_2O$, found with theine (caffeine) in tea leaves; a white crystalline powder, soluble in 180 parts of water; diuretic in doses of gr. 3–8 (0.2–0.5). **t. et so'dii ac'etas** (Br.), theophylline and sodium acetate, similar in action to the synthetically made soluble theocine;* dose, gr. 2–5 (0.12–0.3).

theophylline (the-o-fĭ-lēn'). Theophyllina. **t. eth'ylene-di'amine,** suggested in doses of gr. 1.5–3 (0.09–0.18) for the relief of edema and arterial hypertension. **t. so'dio-a'cetate,** soluble theocine.*

theoret'ical. Relating to or based upon a theory; hypothetical.

the'ory [G. *theōria*.] An hypothesis; a reasoned and probable explanation of the manner in which something has been produced or will be produced; a doctrine of which absolute proof is lacking. **atom'ic t.,** the theory that all substances are composed of atoms—of one kind only (elements) or of several different kinds grouped often in most complex fashion (compounds). **emigra'tion t.,** Cohnheim's theory. **germ t.,** the theory, now a doctrine, that infectious diseases are due to the presence and functional activity, within the body, of animal or vegetable microorganisms. **migra'tion t.,** (1) the theory of Leber that sympathetic ophthalmia is caused by a transportation of the pathogenic agent through the lymph channels of the optic nerve; (2) the theory of Wagner that new animal species arise through adaptation to new surroundings of actively migrating or passively transported animals. **myogen'ic t.,** the theory that the cardiac movements are due mainly to stimuli originating in the heart muscle itself, and that the heart does not act solely in response to nerve stimulation. **neurogen'ic t.,** the theory that the cardiac movements are due solely to stimuli conveyed by the nerves; opposed to the myogenic t. **side-chain t.,** see under *chain*. **t. of med'icine,** the science, as distinguished from the art, or practice, of medicine.

theother'apy [G. *Theos*, God, + *therapeia*, treatment.] Treatment of disease by prayer or religious exercises.

thephyldine (thĕ-fil'dēn). Trade name of a brand of theophylline-ethylene-diamine, recommended in the treatment of cardiac insufficiency with edema, asthma, and angina; dose gr. 1.5–3 (0.09–0.18).

therapei'a [G.] Therapia.

therapeusis (ther-ah-pu'sis). Therapeutics, therapy.

therapeu'tic, therapeu'tical. Relating to therapeutics, or the treatment of disease; curative. **t. carbons, t. electrodes,** prescription* carbons or electrodes.

therapeu'tics [G. *therapeutikē*, medical practice.] The practical branch of medicine dealing with the treatment of disease. **empir'ical t.,** treatment of a morbid state by means of remedies which experience has shown to exert a favorable influence in similar conditions. **mass'ive ster'ilizing t.,** the treatment of an infectious disease, especially one of protozoal origin, by one large dose of a suitable remedy, large enough to sterilize all the tissues and to destroy the microorganisms contained therein; therapia magna sterilisans. **me'diate t.,** treatment of a nursing infant by administering remedies to the mother. **ra'tional t.,** a plan of treatment of disease based upon a correct interpretation of the symptoms and a knowledge of the physiological action of the remedy employed. **specif'ic t.,** treatment of a disease by means of a specific remedy, as of malaria by quinine, or syphilis by mercury or arsphenamine.

therapeu'tist. One skilled in the treatment of disease.

therapia (ther-ah-pe'ah) [G. *therapeia*.] Therapy, therapeutics. **t. magna sterili'sans,** massive sterilizing therapeutics.* **t. sterili'sans conver'gens,** in chemotherapy, a rapid decrease in the number of the parasites, following the administration of the remedy. **t. sterili'sans diver'gens,** Browning's phenomenon; in chemotherapy a primary increase in the number of the parasteis preceding their final disappearance; see anamnesic reaction.* **t. sterili'sans fractiona'ta,** in chemotherapy, the employment of small repeated doses of a microparasiticide when the organism does not become refractory to the drug so given.

therap'ic. Therapeutic.

ther'apist. Therapeutist.

therapy (ther'ă-pĭ) [G. *therapeia*, medical treatment.] The treatment of disease by various methods. See *cure*, *therapeutics*, *therapia*, *treatment*. **beam t.,** chromotherapy, exposure of the patient to one of the colors of the spectrum, especially red or blue. **collapse t.,** the induction of artificial pneumothorax or cleothorax in order to compress a tuberculous lung. **non-specific t.,** protein* t. **opsonic t.,** see under *opsonic*. **reflex t.,** treatment of some morbid condition by exciting a reflex action, as in the household treatment of nosebleed by a piece of ice applied to the cervical spine. **specific t.,** treatment of a disease by a remedy acting especially against it or its cause, as of malaria by quinine or of syphilis by mercury or arsphenamine. **zone t.,** the relief of pain or overcoming of morbid conditions by manipulation, pressure or stroking, of the extremities or orifices in the same zone, or longitudinal division, of the body. See also *actinotherapy*, *aerotherapy*, *balneotherapy*, *chemotherapy*, *climatotherapy*, *dietotherapy*, *dipsotherapy*, *electrotherapy*, *endocrinotherapy*, *heliotherapy*, *kinesitherapy*, *limotherapy*, *massotherapy*, *organotherapy*, *phototherapy*, *physiotherapy*, *psychotherapy*, *pyretotherapy*, *serotherapy*, *spondylotherapy*, *thermotherapy*, *vaccinotherapy*, *zomotherapy*.

therenceph'alous [G. *thēr*, wild beast, + *enkephalos*, brain.] Noting a skull in which the angle at the hormion, formed by lines converging from the inion and nasion, measures from 116° to 129°.

theri'aca [G. *thēriakos*, relating to wild beasts.] 1. An antidote to the poison of venomous animals; specifically *t. Andromachi*, Venice treacle, a compound containing seventy or more drugs. 2. Treacle or molasses.

theriat'rica [G. *thērion*, a wild beast, + *iatrikē*, medical treatment.] 1. The medical treatment of animals in a zoological garden or menagerie. 2. Veterinary medicine in general.

therio'ma [G.] A malignant tumor or ulcer.

theriother'apy [G. *thērion*, wild animal, + *therapeia*, treatment.] Veterinary therapeutics.

theriot'omy [G. *thērion*, wild beast, + *tomē*, incision.] Anatomy or dissection of the lower animals, zootomy.

therm [G. *thermē*, heat.] A small calory, the amount of heat needed to raise one gram of water one degree Centigrade, approximately 15 minims of water 1.8 degree Fahrenheit.

thermacogen'esis [G. *thermē*, heat, + *pharmakon*, drug, + *genesis*, production.] The elevation of body temperature by drug action.

ther'mæ [G. *thermai*, pl. of *thermē*, heat.] Hot springs.

thermaerotherapy (thur-ma''er-o-ther'ă-pĭ) [G. *thermos*, warm, + *aēr*, air, + *therapeia*, treatment.] The treatment of disease by means of heated air.

thermæsthe'sia. Thermesthesia.

ther'mal. 1. Relating to warmth or heat. 2. Noting mineral springs the waters of which issue from the ground at a temperature of 70° F. (26.7° C.) or over. **t. capac'ity,** the amount of heat required to raise any body from 0° to 1° C. **t. death-point,** the degree of heat necessary to kill a fluid culture in ten minutes. **t. hammer,** button cautery.* **t. sense,** thermesthesia. **t. springs,** see def. 2.

thermalge'sia. Thermoalgesia.

thermanalge'sia. Thermoanalgesia.

thermanesthe'sia, thermanæsthe'sia. Thermoanesthesia.

thermatol'ogy [G. *thermē*, heat, + *-logia*.] The branch of therapeutics dealing with the application of heat; thermotherapy.

thermesthesia (thur-mes-the'zĭ-ah). Thermoesthesia, the temperature sense.

therm''esthesiom'eter, therm''æsthesiom'eter. Thermoesthesiometer.

ther'mic [G. *thermē*, heat.] Relating to heat. **t. fever,** siriasis. **t. sense,** thermesthesia.

thermif'ugin [G. *thermē*, heat, + L. *fugare*, to drive away.] Trade name of sodium carbamate, employed as an antipyretic in doses of gr. 2–3 (0, 13–0.3).

ther'min. Tetrahydrobetanaphthylamine hydrochloride, $C_{10}H_{11}NH_2.HCl$; a reddish white crystalline powder, soluble in water; employed as a mydriatic in 1 to 5 per cent. solution, and is said to increase the body temperature.

thermo- [G. *thermē*, heat.] A prefix denoting heat or some relation to temperature.

thermoæsthe'sia. Thermoesthesia.

thermoalgesia (thur-mo-al-je'zĭ-ah) [G. *thermos*, hot + *algēsis*, sense of pain.] Excessive sensibility to heat, pain caused by slight degree of heat.

thermoanalge'sia. Thermoanesthesia.

thermoanesthesia, thermoanæsthesia (thur''mo-an-es-the'zĭ-ah) [G. *thermos*, hot + *an-* priv. + *aisthēsis*, sensation.] Loss of the temperature sense or of the ability to distinguish between heat and cold; insensibility to heat or to temperature changes.

thermocauterec' tomy [G. *ektomē*, excision.] Removal of a part by means of the thermocautery.

thermocautery (thur-mo-kaw'ter-ĭ). The actual cautery, thermoelectric cautery; specifically, the Paquelin* cautery.

thermochemistry (thur-mo-kem'is-trĭ). The interrelation of chemical action and heat.

thermochroic (thur-mo-kro'ik). 1. Relating to thermochrose. 2. Exerting a selective action on heat-rays.

thermochroism (thur-mok'ro-izm). Thermochrosis.

thermochrose (thur'mo-krōz). [G. *thermē*, heat, + *chrōsis*, coloring.] The property possessed by heat rays of reflection, refraction, and absorption, similar to that of light rays.

thermochrosis (thur-mo-kro'sis) [G. *thermē*, heat, + *chrōsis*, coloring.] The selective action of certain substances on radiant heat, absorbing some of the rays, reflecting or transmitting others.

thermoch'rosy. Thermochrose.

thermocouple (thur-mo-kup'l). Thermopile, a device for measuring slight changes in temperature.

ther'mocurrent. A current of thermoelectricity.

thermodiffu'sion. The diffusion of fluids, either gaseous or liquid, in consequence of difference of temperature.

ther'modin. Acetylparaethoxyphenylurethane, $C_{13}H_{17}NO_4$, occurring in colorless tasteless crystals, slightly soluble in water; antipyretic and antineuralgic in doses of gr. 5–15 (0.3–1.0).

thermodu'ric [G. *thermē*, heat, + L. *durus*, enduring.] Resistant to the action of heat, thermophylic.

ther''moelec'tric. Relating to thermoelectricity.

thermoelectricity (thur''mo-e-lek-tris'ĭ-tĭ) [G. *thermē*, heat.] An electrical current generated in a circuit of two or more metallic substances, such as antimony and bismuth, when the junction of the two is heated.

thermoesthesia, thermoæsthesia (thur-mo-es-the'zĭ-ah) [G. *thermē*, heat, + *aisthēsis*, sensation.] The warmth sense, temperature sense; the ability to distinguish differences of temperature.

ther''moesthesiom'eter, ther''moæsthesiom'eter. An instrument for testing the temperature sense, consisting of a metal disc with thermometer attached by which the exact temperature of the disc at the time of application may be known.

thermoexci'tory. Stimulating the production of heat.

thermogen'esis [G. *thermē*, heat, + *genesis*, production.] The production of heat; specifically the physiological process of heat production in the body.

thermogenet'ic, thermogen'ic. Relating to thermogenesis, heat producing. **t. center,** a nerve-center presiding over the production of heat in the body.

thermogen'ics. The science of heat production.

thermogenous (thur-moj'en-us). Thermogenic.

ther'mograph [G. *thermē*, heat, + *graphō*, I record.] A registering thermometer, one form of which records every variation of temperature by means of a style, moving with the mercury in the tube, and registering its rise and fall upon a circular temperature chart turned by clockwork.

ther''mohyperalge'sia [G. *thermē*, heat, + *hyper*, above, + *algēsis*, sense of pain.] Excessive thermoalgesia.

thermohyperesthesia, thermohyperæsthesia (thur-mo-hi''pur-es-the'zĭ-ah) [G. *thermē*, heat, + *hyper*, over, + *aisthēsis*, sensation.] Very acute thermoesthesia, or heat-sense.

thermohypesthesia, thermohypæsthe'sia [G. *thermē*, heat, + *hypo*, under, + *aisthēsis*, sensation.] Diminished heat perception.

thermohypoesthesia, thermohypoæsthesia (thur-mo-hi''po-es-the'zĭ-ah). Thermohypesthesia.

thermoinhibitory (thur-mo-in-hib'ĭ-to-rĭ). Impeding or arresting thermogenesis.

ther'mol. Acetyl-salicyl-phenetidin, $C_{17}H_{17}NO_4$, a white crystalline powder without odor or taste; antipyretic, antineuralgic, and antispasmodic, in doses of gr. 3–10 (0.2–0.6).

thermola'bile [G. *thermē*, heat, + L. *labilis*, perishable.] Subject to alteration or destruction by heat

thermol'ogy [G. *thermē*, heat, + *-logia*.] The science of heat, thermotics.

thermol'ysis [G. *thermē*, heat, + *lysis*, solution.] 1. The loss of body heat by evaporation, radiation, etc. 2. Chemical decomposition by heat.

thermolyt'ic. 1. Relating to thermolysis. 2. An agent promoting heat dissipation. **t. center,** a nerve-center presiding over the process of heat dissipation in the body.

thermom'eter [G. *thermē*, heat, + *metron*, measure.] An instrument for indicating the temperature of any substance. The ordinary thermometer is a sealed vacuum tube, expanded into a bulb at its lower extremity, and containing mercury; the latter expands with heat and contracts with cold, its level accordingly rising or falling in the tube, the exact degree of variation of level being indicated by a scale etched on the glass of the tube or marked on the frame which holds the tube. For measuring extreme degrees of cold, a thermometer filled with alcohol instead of mercury is used (*spirit thermometer*). High temperatures are measured by means of a vessel containing dry air or gas (*air* or *gas thermometer*), the expansion or increased pressure of which indicates the degree of heat. For measuring excessive heat, such as that of a furnace or pottery kiln, a special form of thermometer, in the shape of a metallic bar or other contrivance is used; this is termed a *pyrometer*. **clin'ical t.,** a small self-registering t., consisting of a simple glass tube without frame, used for taking the temperature of the body. **ho'migrade t.,** see *homigrade*. **kata-t.,** see *catathermometer*. **max'imum t.,** see *self-registering t.* **self-reg'istering t.,** one in which the maximum or minimum temperature, during the period of observation, is registered by means of a special appliance; in the clinical t. only the highest temperature is registered (*maximum thermometer*); this is effected usually by a steel bar above the column of mercury, or by a segment of the mercury separated from the main column by a bubble of air; after the maximum temperature is registered the bar or segment of mercury remains in place as the column of mercury contracts. **surface t.,** a clinical t. the bulb of which is flattened in the form of a disc which indicates roughly the temperature of the portion of the skin to which it is applied. **t. scale,** a scale employed to indicate the degree of heat registered by a thermometer; there are three of these in more or less common use, the *centigrade*, the *Fahrenheit*, and the *Réaumur;* see these names; the scale for measuring the absolute* temperature is a centigrade scale, the freezing point on which is marked 273° and the boiling point (100° C.) 373°. See the comparative thermometer scales (*absolute, centigrade, Fahrenheit*, and *Réaumur*) in the Appendix.

thermomet'ric. Relating to thermometry or to a thermometer.

thermom'etry. The measurement of temperature.

thermoneurosis (thur-mo-nu-ro'sis). An elevation of the temperature of the body due to nervous influence, as seen sometimes in hysteria.

thermopalpa'tion [G. *thermē*, heat, + L. *palpare*, to feel.] The estimation of the temperature of the body by the application of the palm or back of the hand to the surface.

thermopenetra'tion. Diathermia.

thermoph'agy [G. *thermē*, heat, + *phagō*, I eat.] The eating of hot food.

ther'mophil, ther'mophile. 1. Thermophilic. 2. A thermophilic microorganism.

thermophil'ic [G. *thermos*, warm, + *phileō*, I love.] Preferring heat; thriving best at a high temperature, said of bacteria which develop between the limits of 40° and 70° C. (104° and 158° F.), with an optimum of 50° to 55° C. (122° to 131° F.).

thermopho'bia [G. *thermē*, heat, + *phobos*, fear.] An abnormal dread or dislike of heat.

ther'mophore [G. *thermē*, heat, + *phoros*, bearing.] 1. An arrangement for applying heat to a part; it consists of a water heater, a tube conveying hot water to a coil, and another tube conducting the water back to the heater. 2. A flat bag containing certain salts which produce heat when moistened; used as a substitute for the hot-water bag. 3. An appliance for preventing cooling of the mask in ether inhalations.

thermophylic (thur-mo-fi'lik) [G. *thermē*, heat, + *phylassō*, I avoid.] Resistant to heat, noting certain microorganisms.

thermopile (thur'mo-pīl). A thermoelectric battery, consisting usually of a series of bars of antimony and bismuth joined together; used as a thermoscope, heating of the bars at their junctions giving rise to an electric current.

thermople'gia [G. *thermē*, heat, + *plēgē*, stroke.] Heat-stroke, siriasis, insolation.

ther"mopolypne'a, ther"mopolypnœ'a [G. *thermē*, heat, + *polys*, much, + *pnoiē*, breathing hard.] Rapid respiration caused by fever.

thermoreg'ulator. Thermostat.

ther'moscope [G. *thermē*, heat, + *skopeō*, I view.] Differential thermometer, an instrument for indicating slight differences of temperature, without registering or recording them.

thermostabile, thermostable (thur-mo-sta'bl) [G. *thermē*, heat, + L. *stabilis*, stable.] Not subject to alteration or destruction by heat.

ther'mostat [G. *thermē*, heat, + *statos*, standing.] An apparatus for the automatic regulation of heat, as in an incubator.

thermosteresis (thur-mo-stĕ-re'sis) [G. *thermē*, heat, + *sterēsis*, loss.] The abstraction or deprivation of heat.

thermosystal'tic [G. *thermē*, heat, + *systaltikos*, contracting.] Relating to thermosystaltism.

thermosystal'tism. Contraction, as of the muscles, under the influence of heat.

thermotac'tic, thermotax'ic. Relating to thermotaxis.

thermotax'is [G. *thermē*, heat, + *taxis*, orderly arrangement.] 1. Reaction of living protoplasm to the stimulus of heat, whereby the animal or plant is attracted (*positive t.*) or repelled (*negative t.*) by heat; thermotropism. 2. Regulation of the temperature of the body.

thermotherapy (thur-mo-ther'ă-pĭ) [G. *thermē, heat,* + *therapeia*, treatment.] Treatment of disease by the application of heat in any way.

thermot'ic. Relating to heat or to thermotics.

thermot'ics [G. *thermotēs*, heat.] The science of heat, thermology.

thermotonom'eter [G. *thermē*, heat, + *tonos*, tone, strain, + *metron*, measure.] An instrument for measuring the degree of thermosystaltism, or muscular contraction under the influence of heat.

thermotox'in. A toxin or poison formed in the tissues under the influence of excessive heat.

thermotracheotomy (thur-mo-tra-ke-ot'o-mĭ). Tracheotomy performed by means of the thermocautery.

thermot'ropism [G. *thermē*, heat, + *tropē*, a turning.] Thermotaxis (1).

the'roid [G. *thēr*, a wild beast, + *eidos*, resemblance.] Resembling an animal in instincts or propensities.

the'romorph. A monster having a malformation resembling a normal structure in one of the lower animals.

theromor'phia, theromor'phism [G. *thēr*, a wild animal, + *morphē*, shape.] A malformation or abnormality in man, resembling a normal structure in one of the lower animals.

the'sis [G. an arrangement.] 1. An essay on a medical topic prepared by the graduating student. 2 A proposition, submitted by the candidate for a doctorate degree in some universities, which must be substained by argument against any objections offered.

Theve'tia [after Andrew *Thevet*, a French missionary monk, 1502–1590.] A genus of plants of the order *Apocynaceæ*, or dogbanes. **T. ahou'ai** and **T. neriifo'lia,** containing the glucoside *thevetin*, are fish poisons of Brazil. **T. yccot'li,** a Mexican species, containing the glucosides, *cerberid* and *thevetosin*, is a heart poison.

thi'al. Hexamethylenamine oxymethylsulphonate, a white powder soluble in water; employed in antiseptic surgical dressings, and as a disinfectant.

thial'din. A prismatic crystalline substance, $C_6H_{13}NS_2$, of a peculiar characteristic odor, soluble in water, obtained by the action of sulphureted hydrogen or a solution of aldehyde ammonia; said to be a heart stimulant and, in large doses, paralyzant.

thial'ion. Trade name of a preparation containing lithium, recommended in gout and rheumatism.

thick-leg. Big-leg, lymphangitis of the leg in a horse.

thick-wind. Roaring, an ailment in horses marked by labored breathing due to thickening of the mucous membrane of the finer bronchial tubes and air cells.

Thielmann's diarrhe'a mix'ture (teel'mahn) [Karl Heinrich *Thielmann*, German physician, 1802–1872.] Fluidextract of ipecac 0.8, oil of peppermint 4, wine of opium 24, tincture of valerian 40, ether 12, alcohol to make 100; dose, ♏30 (2.0).

Thiersch's canalic'uli (tērsh) [Karl *Thiersch*, German surgeon, 1822–1895.] Minute channels in newly formed reparative tissue, permitting the circulation of nutritive fluids, precursors of new vascularization. **T.'s meth'od,** skin-grafting with films of epidermis with a portion of the dermis, shaved off in strips and applied to the surface after shaving down the granulations; the method was published in 1874 but had been previously recommended by Ollier of Lyons in 1872.

thieves' vin'egar. Acetum aromaticum.

thi'genol. Trade name of a synthetic sodium sulphonate, recommended as a substitute for ichthyol.

thigh. The upper leg, between the hip and the knee. **t. bone,** femur. **t. joint,** hip-joint, articulatio coxæ [BNA].

thigmotax'is [G. *thigma*, touch, + *taxis*, orderly arrangement.] A form of barotaxis, noting the reaction of plant or animal protoplasm to contact with a solid body.

thigmot'ropism [G. *thigma* touch, + *tropē*, a turning.] Thigmotaxis.

thio- [G. *theion*, sulphur.] A prefix denoting that sulphur has replaced oxygen in the compound to the name of which it is attached.

thioacid (thi"o-as'id). Sulphacid, sulphoacid; an acid derived from another acid by the replacement of oxygen by sulphur.

thi'oalcohol. Mercaptan.

Thiobacillus[0] (thi-o-bă-sil'us) [G. *theion*, sulphur.] A genus of the family *Nitrobacteriaceæ*, consisting of small rods causing the oxidation of sulphur or its salts, the species of which are isolated from soil or water.

Thiobacteriales[0] (thi-o-bak-te-rĭ-a'lēz) [G. *theion*, sulphur.] An order of *Schizomycetes* the organisms of which mostly contain sulphur.

Thiocapsa[0] (thi-o-kap'sŭ) [G. *theion*, sulphur, + *kapsa*, basket, case.] A genus of water organisms of the family *Rhodobacteriaceæ;* the cells of a rose-red color are massed in groups resembling algæ.

Thiocapseæ[0] (thi-o-kap'se-e) [see *thiocapsa*.] A tribe of the family *Rhodobacteriaceæ*, containing the genera *Thiocystis*, *Thiosphæra*, *Thiosphærion*, *Thiocapsa*, and *Thiosarcina*.

thi'ocol [G. *theion*, sulphur, + *kolla*, glue.] Potassium guaiacolsulphonate.

thiocy'anate. A salt of thiocyanic, or sulphocyanic acid.

Thiocystis[0] (thi-o-sis'tis) [G. *theion*, sulphur, + *kystis*, bladder.] A genus of the family *Rhodobacteriaceæ*, the species of which consist of spherical cells enclosed in capsules; they are water organisms, colored violet or reddish brown.

Thioderma[0] (thi-o-dur'mŭ) [G. *theion*, sulphur, + *derma*, skin.] A genus of the family *Rhodobacteriaceæ*, consisting of reddish spheroidal cells containing sulphur granules; they are found in thermal springs.

Thiodictyon[0] (thi-o-dik'tĭ-on) [G. *theion*, sulphur, + *diktyon*, a net.] A genus of spindle-shaped, sulphur-containing cells of the family *Rhodobacteriaceæ*, grouped in a net-like mass, living in water.

thiocyanic acid (thi"o-si-an'ik as'id). Sulphocyanic acid.

thi'odin. Trade name of a preparation obtained by the action of ethyl iodide upon thiosinamine, employed as a resolvent of scar tissue in doses of gr. 3–6 (0.2–0.4).

thi'oether. An ether in which the oxygen is replaced by sulphur, a sulphur ether.

thi'oform. Trade name for dithiosalicylate of bismuth, a light brownish powder, used as a substitute for iodoform.

thiogen'ic [G. *theion*, sulphur, + *gennaō*, I produce.] Producing sulphur, noting the bacteria in the waters of certain mineral springs, which convert hydrogen sulphide into higher sulphur compounds.

thi'ogenol. An external antiseptic of sodium sulphonate compounded with sulphur.

thi'ol, thio'lum. A mixture of sulphureted hydrocarbons, purified with ammonia; occurs in the form of a dark brown powder or a dark, reddish brown, syrupy liquid, employed as a dusting powder or in ointment in the treatment of skin diseases.

thi'olin. Thiolinic acid, a green oily substance prepared by boiling sulphur in linseed oil and treating with sulphuric acid; a sodium salt is employed in skin diseases as a substitute for ichthyol

thion'ic [G. *theion*, sulphur.] Relating to sulphur. **t. acid,** thioacid, sulphoacid.

thionine (thi'on-in). Amidophenthiazine, Lauth's violet, a dark green powder giving a purple solution in water, used as a stain in bacteriology and histology.

Thiopedia[0] (thi-o-pe'dĭ-ă) [G. *theion*, sulphur.] A genus of water organisms of the family *Rhodobacteriaceæ*.

Thiopedieæ[0] (thi-o-pe'dĭ-e-e) [G. *theion*, sulphur, + *paidia*, small children.] A tribe of the family *Rhodobacteriaceæ*, containing the genera *Thiopedia*, *Thioderma*, and *Lampropedia*.

thiophene (thi'o-fēn). A hydrocarbon found in commercial benzene, a colorless oily liquid; antiseptic, but employed only in salts with iodine and bromine. **so'dium t. sul'phonate,** a white crystalline powder used in prurigo in place of beta-naphthol. **t. bini'odide** a yellow crystalline powder, employed as an antiseptic dusting powder in place of iodoform. **t. dii'odide,** t. biniodide. **t. tetrabro'mide,** a yellow crystalline powder, used like the biniodide.

thi'ophil, thi'ophile [G. *theion*, sulphur, + *philos*, fond.] 1. Thiophilic. 2. A thiophilic microorganism.

thiophil'ic. Thriving in the presence of sulphur or sulphur compounds, noting certain bacteria.

Thiophysa[0] (thi-o-fi'sŭ) [G. *theion*, sulphur, + *physa*, bellows or its nozzle.] A genus of the family *Achromatiaceæ*, consisting of large spherical cells containing both sulphur and calcium oxalate in varying proportions; water organisms.

Thioploca[0] (thi-ŏ'plo-kă) [G. *theion*, sulphur, + *plokē*, a curl.] A genus of water organisms of the family *Beggiatoaceæ*, motile filaments containing sulphur granules.

Thiopolycoccus[0] (thi-o-pol''ĭ-kok'us) [G. *theion*, sulphur, + polys, much.] A genus of water organisms of the family *Rhodobacteriaceæ*, consisting of red colored masses of spherical cells containing sulphur granules.

thiopy'rine. A compound formed from antipyrine by replacing its oxygen by sulphur.

thioresor'cin. A grayish yellow powder, phenyl bisulphydrate, used as a substitute for iodoform.

Thiosarcina[0] (thi-o-sar'sĭ-nă) [G. *theion*, sulphur, + L. *sarcina*, a packet.] A genus of the family *Rhodobacteriaceæ* consisting of packets of red cells containing sulphur granules; they are water organisms.

thiosinamine (thi-o-sin-am'ēn). Rhodaline, allyl sulphocarbamide, a white crystalline powder of bitterish, sweetish taste and faint odor of garlic, slightly soluble in water; employed as a resolvent of scar tissue, uterine fibroids, and fibrous adhesions in joints; employed internally in doses of gr. ½–1 (0.03–0.06), and also subcutaneously.

Thiosphæra[0] (thi-o-sfe'ră) [G. *theion*, sulphur, + *sphaira*, a ball.] A genus of water organism of the family *Rhodobacteriaceæ*.

Thiosphærion[0] (thi-o-sfe'rĭ-on) [G. *theion*, sulphur, + *sphairion*, a little ball.] A genus of water organisms of the family *Rhodobacteriaceæ*, found in thermal springs.

Thiospira[0] (thi-o-spi'ră) [G. *theion*, sulphur, + *speira*, a coil.] A genus of the family *Achromatiaceæ*, containing flagellated, curved, motile organisms enclosing sulphur granules; habitat, water.

Thiospirillum[0] (thi-o-spi-ril'um) [G. *theion*, sulphur, + L. *spirillum*, a small coil.] A genus of spiral motile water organisms of the family *Rhodobacteriaceæ;* they are pigmented and contain sulphur granules.

thiosul'phate. A salt of thiosulphuric acid, a hyposulphite.

thiosulphu'ric acid. Hyposulphurous acid, a sulphuric acid in which an atom of oxygen has been replaced by one of sulphur.

Thiothece[0] (thi-o-the'se) [G. *theion*, sulphur, + *thēkē*, a box or chest.] A genus of water organisms of the family *Rhodobacteriaceæ*.

Thiothrix[0] (thi'o-thriks) [G. *theion*, sulphur, + *thrix*, hair.] A genus of the family *Beggiatoaceæ*, the species being found, some in hot sulphur springs, others in sea water; the filamentous cells usually contain sulphur granules.

thio-ure'a. Sulphocarbamide; urea in which the oxygen has been replaced by sulphur.

thioxydiphenylamine (thi-oks''ĭ-di-fen-il-am'ēn). A yellow odorless and tasteless powder insoluble in water, soluble in alcohol, alkaline solutions, and acetic acid; employed in laryngeal tuberculosis and generally as a substitute for iodoform, and internally in cystitis in doses of gr. 2–4 (0.13–0.25). Solutions of t. of 8 per cent. strength in eucalyptol, guaiacol, and creosote have been employed in tuberculous laryngitis.

third [A.S. *thridda*.] That one of a series between the second and the fourth. **t. cor'puscle,** platelet. **t. inten'tion,** see *intention*. **t. nerve,** nervus oculomotorius [BNA]. **t. sphincter,** plica transversalis recti. **t. ven'tricle,** ventriculus tertius.

thirst [A.S. *thurst*.] A desire for drink associated with uncomfortable sensations in the mouth and pharynx; dipsa sitis. **absence of t.,** adipsia, aposia. **excessive t.,** polydipsia. **morbid t.,** dipsosis.

thirst-cure. Treatment of disease by restricting the consumption of fluids; Schroth's method, dipsotherapy.

Thiry's fis'tula (te-re') [Jean Hubert *Thiry*, Belgian physician, 1817–1897.] An artificial fistula for collecting the intestinal juice of a dog or other animal for experimental purposes. A loop of intestine is isolated, its vascular and nervous connections being preserved, the continuity of the intestinal tract being restored by end-to-end anastomosis; one end of the isolated segment is closed, the other attached to the skin of the abdomen and provided with a cannula.

Thiry-Vella fis'tula. Vella's* fistula.

thi'uret. A light odorless powder, $C_8H_7N_3S_2$, employed as a substitute for iodoform.

thlip"senceph'alus [G. *thlipsis*, pressure, + *enkephalos*, brain.] A monster of the class of pseudencephalus, in which the brain is replaced by a spongy mass which extrudes through a defect in the upper cervical spine and back of the skull.

Thoma's ampull'a (to'mah) [Richard *Thoma*, German histologist, *1847.] The terminal dilatation of an interlobular artery in the spleen. **T's. fluid,** nitric acid 1, 95 per cent. alcohol 25; a fluid for decalcifying bone in the preparation of histological specimens.

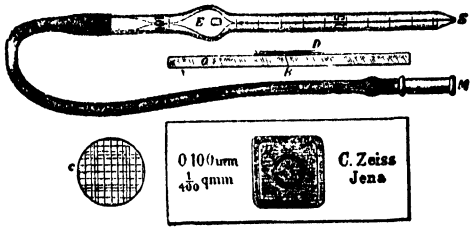
Thoma-Zeiss hemocytom'eter (to'mah-tsīs)] Richard *Thoma*, German histologist, *1847; Carl *Zeiss*, German maker of optical instruments.] An apparatus for counting the blood-cells; it consists of a glass pipette, provided with an ampulla for collecting the blood and diluting it, and a counting chamber; the latter has a depth of $\frac{1}{10}$ mm. and is marked off into squares of $\frac{1}{400}$ square mm., so that the space under each square contains $\frac{1}{4000}$ cubic mm.

Thom'as's bal'sam. Balsam of tolu. **T.'s collyr'ium** a solution of gr. 20 each of sodium chloride and zinc sulphate in one ounce of rosewater.

Thomas's splints [Hugh Owen *Thomas*, Liverpool surgeon, 1834–1891.] Rigid splints, made of

steel bars curved to the shape of the limb and retained by plaster-of-Paris bandages, employed in the treatment of chronic joint diseases.

Thomp'son's solu'tion of phos'phorus [Ashburton *Thompson*, English physician, 19th century.] Liquor phosphori (N.F.).

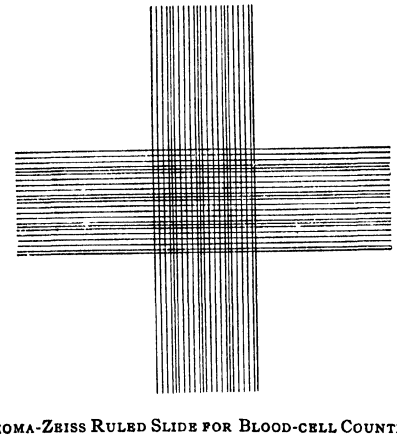


THOMA-ZEISS HEMOCYTOMETER.

SM, graduated pipette for drawing and diluting blood; E, mixing chamber; *D*, counting cell; *B*, ruled surface; shown enlarged at *c*.

Thomp'son's test [Sir Henry *Thompson*, London surgeon, 1820–1904.] The two-glass test, the urine, in a case of gonorrhea, is passed into two glasses; if the gonococci and gonorrheal threads are found only in the first glass the probability is that the process is limited to the anterior urethra.

Thomsen's disease' (tom'sen) [Asmus Julius *Thomsen*, Danish physician, 1815–1896.] Myotonia congenita.



THOMA-ZEISS RULED SLIDE FOR BLOOD-CELL COUNTING.

Thom'son's fas'cia [Allen *Thomson*, Scotch anatomist, 1809–1884.] Inconstant yellowish fibers, passing from the median line a little above the symphysis pubis obliquely downward and outward on the aponeurosis of the internal rectus femoris, under the spermatic cord, outside of the suspensory ligament of the penis, and in front of the femoral arch; they cover the inner half of the external abdominal ring.

Thomson's sign [F. H. *Thomson*, English physician, contemporary.] Pastia's sign.

Thomso'nianism [Samuel *Thomson*, Massachusetts physician, 1769–1843.] Herbalism, a therapeutic method in which none but remedies of vegetable origin are employed.

tho'racal. Thoracic.

thoracal'gia [G. *thōrax(thōrak-)*, chest, + *algos*, pain.] Pain in the chest, pleurodynia.

tho"racaor'ta. The thoracic aorta.

thoracec'tomy [G. *thōrax* + *ektomē*, excision.] Resection of a portion of a rib.

thoracente'sis [G. *thōrax(thōrak-)*, chest, + *kentēsis*, puncture.] Tapping the thorax, the thrusting of a trocar and cannula into the cavity of the chest for the removal of accumulated fluid.

thoracic (tho-ras'ik). Relating to the thorax. **t. aor'ta**, the portion of the aorta contained in the thorax. **t. ax'is**, arteria thoracoacromialis [BNA]. **t. cav'ity**, cavum thoracis, the cavity bounded by the diaphragm and the walls of the chest, containing the lungs and bronchi, heart and origin of the large vessels, and the esophagus. **t. choke**, see *choke*. **t. duct**, ductus thoracicus. **t. girdle**, shoulder girdle.* **t. index**, see *index*. **t. spine**, dorsal spine, that part of the spinal column which enters into the formation of the chest.

thoracicoabdom'inal. Relating to the thorax and the abdomen.

thoracico-acro'mial. Acromiothoracic.

thoracicohu'meral. Relating to the thorax and the humerus.

thoracispi'nal. Relating to the thoracic or dorsal portion of the spinal column or spinal cord.

thoracoabdom'inal. Thoracicoabdominal.

thoracoacro'mial. Acromiothoracic.

thoracoceloschisis, thoracocœloschisis (tho"ră-ko-se-los'kĭ-sis) [G. *thōrax* + *koilia*, belly, + *schisis*, fissure.] A congenital fissure of the trunk embracing both the thoracic and abdominal cavities.

thoracocente'sis. Thoracentesis.

thoracocyllo'sis [G. *thōrax* + *kyllōsis*, a crippling.] Any deformity of the chest walls.

thoracocyrtosis (tho"ra-ko-sur-to'sis) [G. *thōrax* + *kyrtos*, curved.] Abnormally wide curvature of the chest wall.

thoracodid'ymus [G. *thōrax* + *didymos*, twin.] A twin monster joined in the thoracic region.

thoracodyn'ia [G. *thōrax* + *odynē*, pain.] Thoracalgia.

tho"racogas"trodid'ymus [G. *thōrax* + *gastēr*, belly + *didymos*, twin.] A twin monster with fused abdomen and thorax.

thoracogastroschisis (tho-ră-ko-gas-tros'kĭ-sis) [G. *thōrax* + *gastēr*, belly, + *schisis*, fissure.] Thoracoceloschisis.

tho'racograph [*thōrax* + *graphō*, I record.] An instrument for obtaining the horizontal contour of the chest.

thoracolumbar (tho-ră-ko-lum'bar). Relating to the thoracic and lumbar portions of the spine, a term applied to the thoracic and lumbar ganglia and associated fibers constituting the sympathetic nervous system proper, as distinguished from the autonomic system.

thoracom'elus [G. *thōrax* + *melos*, extremity.] A double monster in which the parasite, often only a single arm or leg, is attached to the thorax of the autosite.

thoracom'eter [G. *thōrax* + *metron*, measure.] An instrument for measuring the size of the chest; stethometer.

thoracomyodynia (tho"ră-ko-mi-o-din'ĭ-ah) [G. *thōrax* + *mys*, muscle, + *odynē*, pain.] Pain in the muscles of the chest wall.

thoracop'agus [G. *thōrax* + *pagos*, attached, fused.] A twin monster with fusion in the thoracic region usually in the neighborhood of the sternum; xiphopagus.

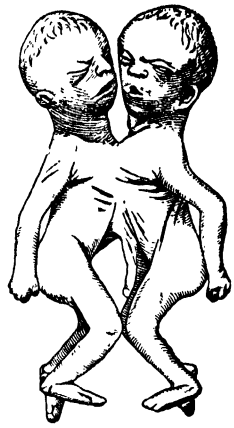
tho'racoplasty [G. *thōrax* + *plassō*, I form.] Reparative or plastic surgery of the thorax.

thoracopneumoplasty (tho"ră-ko-nu'-mo-plas-tĭ) [G. *thōrax* + *pneumōn*, lung, + *plassō*, I form.] Reparative or plastic surgery of the chest in which the lung is also involved.

thoracoschisis (tho-răkos'kĭ-sis) [G. *thōrax* (*thōrak-*), chest, + *schisis*, fissure.] Congenital fissure of the chest wall.

thorac'oscope [G. *thōrax* + *skopeō*, I examine.] Stethoscope.

thoracos'copy. Examination of the pleural cavity by means of an endoscope introduced through a cannula.



THORACOPAGUS.

thoracosteno'sis [G. *thōrax* + *stenōsis*, narrowing.] Narrowness of the chest.

thoracos'tomy [G. *thōrax* + *stoma*, mouth.] The establishment of an opening into the cavity of the chest, as for the drainage of an empyema; or resection of a portion of a rib over a greatly hypertrophied heart.

thoracot'omy [G. *thōrax* + *tomē*, incision.] Any cutting operation upon the chest wall.

thoradel'phus [G. *adelphos*, brother.] A twin monster belonging to the class of monocephalus, in which, from the navel upward, the two individuals are fused into one.

thor'adin. The former trade name of thoremedin.

thorax, gen. *thora'cis* [G. *thōrax*, breastplate.] The chest, the upper part of the trunk between the neck and the abdomen; it is formed by the twelve dorsal vertebræ, the twelve pairs of ribs, the sternum, and the muscles and fasciæ attached to these; below it is separated from the abdomen by the diaphragm; it contains the chief organs of the circulatory and respiratory systems, as distinguished from the abdomen which encloses those of the digestive apparatus.

Thorel's bun'dle (tōr'el) [Ch. *Thorel*, German physician contemporary.] A structure, analogous to the bundle of His, connecting the sinoauricular and auriculoventricular nodes.

thorem'edin. Trade name of a preparation said to contain radioactive thorium in combination with didymium and lead salts, sulphuric acid, and a small quantity of hydrochloric and nitric acids; recommended in the treatment of various skin diseases, and especially lupus and epithelioma.

tho'rium [*Thor*, the Norse god of thunder.] A metallic element, symbol Th, atomic weight 232.42; it is radioactive and antiseptic; its disintegration product is mesothorium. The four known thorium emanations are called respectively thorium A, B, C, and D.

Thormaehlen's test (tōr'ma-len) [Johann *Thormaehlen*, German physician, 19th century.] For melanin; the suspected liquid is treated with sodium nitroprusside, caustic potash, and acetic acid; if melanin is present the solution takes on a deep blue color.

Thorn's maneu'ver (torn) [Willy *Thorn*, German obstetrician, 1859–1913.] Conversion of a face into a vertex presentation by combined external and internal version.

thorn'-apple. Stramonium. **t.-a. crys'tals,** ammonium urate crystals in the shape of rounded bodies with many projecting points.

thorn'-poppy. A plant, *Argemone mexicana*, native of the southwestern United States and of Mexico; the seeds are purgative in doses of ʒi–ii (4.0–8.0) in infusion.

Thorn'ton's sign [J. Knowsley *Thornton*, English physician, 1845–1904.] Paroxysmal attacks of severe pain in the side in renal colic.

Thornwald's an'gina (torn'vahlt). See *Tornwald*.

tho'ron. Thorium emanation.

tho'rotrast [*thorium* + contrast.] A contrast fluid containing thorium.

thorough-joint (thur'o-joynt). Diarthrosis, arthrodia.

thorough-pin (thur'o-pin). 1. Synovial distention of the sheath of the flexor perforans tendon of the horse, causing a swelling on each side of the hollow of the hock. 2. Synovial distention on the posterior surface of the carpal joint, or knee of the foreleg of the horse.

thorough-wort (thur'o-wurt). Eupatorium.

thor'ter-ill. Louping-ill, leaping*-ill.

thought'-reading. Telepathy, mind-reading.

thought'-transfer. Telepathy.

thox'os. Trade name of a preparation containing strontium, lithium, and colchicum, recommended for rheumatism.

thread (thred) [A.S. *thræd*.] 1. A fine spun filament of flax, silk, cotton, or other fibrous material. 2. A filiform or thread-like structure.

thread'-fungus. Any species of *Trichophyton*.

thread-galvanometer (thred-gal-van-om'e-ter). Electrocardiograph.

thread-gran'ules. Mitochondria.

thread-reac'tion [Ger. *Fadenreaktion*.] If a drop of blood from a person suffering or convalescent from typhoid fever is added to a suitable medium inoculated with typhoid bacilli, the latter exhibit a tendency to arrange themselves in chains or threads; the reaction is present, but incomplete, in the case of a person who has had typhoid fever a number of years before. The phenomenon is observed in the case of other bacteria also when growing in a specific serum; it is supposed to be due to the presence of agglutinins in the serum.

thread-worm. *Oxyuris*.

thready. Filamentous, filiform.

three-cor'nered bone. Cuneiform bone of the carpus, os* triquetrum [BNA].

three-day fever. Dengue.

thremmatol'ogy [G. *thremma* (*thremmat-*), a nursling, + *-logia*.] 1. The science of breeding animals by artificial selection. 2. The branch of science which deals with the laws of heredity; see *eugenics*.

threpsol'ogy [G. *threpsis*, nourishment, + *-logia*.] The science of nutrition.

threshold (thresh'hold) [A.S. *therxold*.] Limen. 1. The point where a stimulus begins to produce a sensation, the lower limit of perception of a stimulus; schwelle. 2. The external opening of a canal, entrance. **ab'solute t.,** the lowest limit of any perception whatever; distinguished from differential t. **differen'tial t.,** the lowest limit at which two stimuli can be differentiated. **double-point t.,** the least degree of separation of two points applied to the surface which permits of their being felt as two. **rela'tional t.,** the smallest degree of difference between two stimuli which permits them to be perceived as different. **stim'ulus t.,** absolute t. **t. bod'y,** any substance in the blood plasma, the presence of which gives rise to more or less pronounced symptoms.

thridace, thridaceum (thrid'ās, thrĭ-da'se-um) [G. *thridax*, lettuce.] The expressed juice of *Lactuca virosa;* practically the same as lactucarium, which is the exuded juice of the plant.

thrill. The vibration accompanying a cardiac or vascular murmur, which can be felt on palpation; fremitus. **hydat'id t.,** the peculiar trembling or vibratory sensation felt on palpation of an hydatid cyst. **presystol'ic t.,** a thrill sometimes felt, on palpation over the apex of the heart, immediately preceding the ventricular contraction. **purring t.,** purring* fremitus.

throat (thrōt) [A.S. *throtu.*] 1. The gullet, the swallow, the fauces and pharynx. 2. The anterior aspect of the neck, jugulum. 3. Any narrowed entrance into a hollow part. **sore-t.,** see *sore-throat.*

throat-almond. Tonsil.

throat-ring. Waldeyer's* throat-ring

throat-root. Geum or water-avens.

throat-wort (thrōt'wurt). 1. Scrophularia or figwort. 2. Digitalis. 3. *Campanula trachelium.*

throb. 1. To pulsate. 2. A beating or pulsation.

throe (thro) [A.S. *thrāw.*] A severe pain or pang; the pain of childbirth.

throm'base [*thromb(ose)* + *-ase.*] Thrombin, the fibrin ferment.

thrombec'tomy [G. *ektomē*, excision.] The excision of a thrombus.

throm'bin [G. *thrombos*, clot.] A ferment (the activated thrombogen) formed in the blood, after this is shed, which converts fibrinogen into fibrin; it is formed from the conjunction of prothrombin and calcium salts.

thromboangiitis (throm-bo-an-je-i'(e')tis) [G. *thrombos*, a clot, + *angeion*, vessel, + *-itis.*] Inflammation of the intima of a vessel, with thrombosis. **t. oblit'erans,** obliteration of the larger arteries and veins of a limb by thrombi, with subsequent gangrene—presenile spontaneous gangrene.

thromboarteritis (throm-bo-ar-te-ri'(re')tis). Thromboangiitis affecting an artery.

thromboblast (throm'bo-blast) [*thrombo(cyte)* + G. *blastos*, germ.] A small basophile cell said to be the mother cell of the platelet.

thrombocin'ase. Thrombokinase.

throm'bocyst, thrombocys'tis [G. *kystis*, a bladder.] A membranous sac enclosing a thrombus.

thrombocyte (throm'bo-sīt) [G. *kytos*, cell.] Platelet.

throm'bogen [G. *thrombos*, clot, + *genesis*, source.] Prothrombin, a proferment supposed to be liberated from disintegrated blood-plates and which, when activated, converts fibrinogen into fibrin, causing coagulation of the blood.

thrombogen'ic [G. *thrombos*, clot, + *gennaō*, I produce.] 1. Relating to thrombogen. 2. Causing thrombosis or coagulation of the blood

throm'boid [G. *thrombos*, clot, + *eidos*, resemblance.] Resembling a clot or thrombus.

thrombokin'ase [*thrombogen* + G. *kineō*, I set in motion.] A zymoplastic substance contained in the tissues and the blood, which is supposed to possess the property of activating thrombogen when combined with a calcium salt.

thrombolymphangitis (throm-bo-lim-fan-ji'(je')tis). Inflammation of a lymphatic vessel with the formation of a lymph-clot.

thrombopenia (throm-bo-pe'nĭ-ah) [*thrombocyte* + G. *penia*, poverty.] Diminution in the number of blood platelets; purpura hæmorrhagica.

thrombophilia (throm-bo-fil'ĭ-ah) [*thrombosis* + G. *philos*, fond.] A blood state in which there is a tendency to the occurrence of thrombosis.

thrombophlebitis (throm-bo-fleb-i'(e')tis) [G. *thrombos*, a clot, + *phleps(phleb-)*, vein, + *-itis.*] Thrombosis with secondary phlebitis, as contrasted with phlebothrombosis.*

thromboplastin (throm-bo-plas'tin). Trade name of an extract, in physiological saline solution, of the brain substance of cattle, employed as a local hemostatic.

thrombosed (throm'bōzd). 1. Clotted. 2. Noting a blood-vessel which is the seat of thrombosis.

throm'bosin. Thrombin.

thrombo'sis [G. *thrombōsis*, a curdling.] 1. The formation of a thrombus. 2. The presence of a thrombus. **atroph'ic t.,** t. due to feebleness of the circulation, in a case of marasmus for example; marantic t. **compres'sion t.,** t. due to arrest of the circulation in a vessel by compression, as from a tumor. **creep'ing t.,** a gradually increasing t. involving one section of a vein after another in continuity. **dilata'tion t.,** t. due to slowed circulation consequent upon dilatation of a vein. **jump'ing t.,** t. occurring in one vein and another in different regions. **maran'tic t., maras'mic t.,** atrophic t. **placen'tal t.,** t. of the veins of the uterus at the placental site. **plate t., platelet t.,** t. thought to be due to an abnormal accumulation of platelets.

thrombosta'sis. Local arrest of the circulation caused by thrombosis.

thrombot'ic. Relating to, caused by, or characterized by thrombosis.

throm'bus [G. *thrombos*, a clot.] A plug more or less completely occluding a blood-vessel or one of the cavities of the heart, formed *in situ* by coagulation of the blood or a deposition of some of its formed elements. **agglu'tinative t.,** hyaline t. **ag'ony t.,** a heart clot formed during the act of dying after prolonged heart failure. **antemor'tem t.,** a clot formed in running blood during life. **ball t.,** a white antemortem t. found in the left atrium in certain cases of mitral stenosis. **fer'ment-t.,** a t. supposed to be formed in consequence of the liberation of fibrin-ferment in the circulating blood. **fi'brinous t.,** one formed by repeated deposits of fibrin from the circulating blood; it usually does not completely occlude the vessel. **glob'ular t.,** one of a number of thrombi of varying size, from a pea to a walnut, within the heart cavity, connected by a delicate fibrinous network; they are usually cystic in character, the interior having broken down into a thick fluid mass. **hy'aline t.,** a translucent colorless plug, partly or completely filling a capillary or small artery or vein; it is formed by an agglutination of red blood-corpuscles which lose their hemoglobin. **infec'tive t.,** one formed in septic phlebitis. **lam'inated t.,** one formed gradually by clotting of the blood in successive layers. **maran'tic t., maras'mic t.,** a t. formed in cases of marasmus or general debility. **milk t.,** a localized swelling in the breast due to obstruction in the milk-ducts. **mixed t.,** laminated t., the layers of different ages being of different color or consistency. **mu'ral t.,** a t. formed on and attached to a diseased patch of endocardium, not on a valve. **obstruc'tive t.,** one due to obstruction in the vessel from compression or other cause. **pale t.,** a clot of opaque, dull white color, in the heart or any vessel, composed essentially of blood-platelets. **pari'etal t.,** an arterial t. which has been in large part absorbed, the remains adhering to one side of the wall of the vessel. **postmor'tem t.,** a heart clot formed after death. **prop'agated t.,** see *creeping throm-*

*bosis.** **red t.**, one formed rapidly by the coagulation of stagnating blood. **sec'ondary t.**, one formed about an embolus as a nucleus. **strat'ified t.**, mixed t. **val'vular t.**, a parietal t. which projects into the lumen of the vessel. **white t.**, pale t.

through-drain'age. Drainage through a tube which passes from one portion of the surface to another through the wound cavity.

through-illumina'tion. Transillumination.

throw'back. An individual organism which manifests certain characters peculiar to a remote ancestor or to the original type, which have been in abeyance during one or more of the intermediate generations.

throwing-back'. Telegony (in animals), xenia (in plants).

thrush. 1. Aphthous stomatitis, sprue (1), aphthæ.* 2. A disease of the frog of a horse's foot attended with a malodorous discharge, due to filth and neglect.

thrush'-fungus. *Oidium albicans*, or *Saccharomyces albicans*.

thrust'-culture. Stab culture.*

thryp'sis [G. a breaking in pieces.] A comminuted fracture.

Thudichum's test (too'de-khoom) [Johann Ludwig Wilhelm *Thudichum*, London physician, of German birth, *1829.] For creatinin: a mixture of the suspected fluid with dilute ferric-chloride solution will turn dark red on heating, if creatinin is present.

thu'ja (thoo'yah). (N.F.) Thuya.

thu'jol. Thuyol.

thu'lium. A metallic element, symbol Tm, atomic weight 168.5.

thumb [A.S. *thūma*.] The first finger on the radial side of the hand, pollex. **stave of the t.**, Bennett's* fracture. **t. lancet**, see illustration under *lancet*.

thumps. Singultus, or hiccup in the horse.

thun'der-disease. Apoplexy.

thun'der-humor. An obstinate skin eruption.

thus, gen. *thu'ris* [L. incense.] Frankincense. **t. america'num** (Br.), terebinthina (U.S.), turpentine.

thu'ya [G. *thyia*.] Thuja (N.F.), arbor vitæ, the fresh tops of *Thuya occidentalis*, an evergreen tree of eastern North America largely cultivated for ornamental purposes and as a hedge; has been employed internally as an expectorant, emmenagogue, and anthelmintic, in doses of ♏15–30 (1.0–2.0) of the fluidextract, locally for the cure of hydrocele, and externally to remove epithelial growths—warts and epithelioma.

thu'yol, thu'yone. A volatile oil of thuya, $C_{10}H_{18}O$, possessing stimulant properties.

thylacitis (thi'-lă-si'(se')tis) [G. *thylax(thylak-)*, bag, + *-itis*.] Inflammation of the sebaceous glands of the skin.

thymacetin (ti-mas'et-in). A white crystalline powder, slightly soluble in water $C_{14}H_{21}NO_2$; it is made from thymol as phenacetin is from phenol, and resembles phenacetin in its antipyretic and analgesic properties; dose gr. 5–15 (0.3–1.0).

thyme (tīm). The dried leaves and flowering tops of *Thymus vulgaris*, sweet thyme, garden thyme, employed as a condiment; it contains a volatile oil, oleum* thymi, and is a source of thymol.

thymec'tomize [G. *thymoi* thymus, + *ektomē*, excision.] To deprive, by operation, of the thymus gland.

thymec'tomy [G. *thymos*, thymus, + *ektomē*, excision.] Operative removal of the thymus gland.

thymegol (thi'(ti') me-gol). See *egols*.

thymelco'sis [G. *thymos*, thymus, + *helkōsis*, ulceration.] Suppuration of the thymus gland.

thymene (ti'mēn). A colorless volatile oil, $C_{10}H_{16}$, derived from oil of thyme, possessing antiseptic properties.

-thymia [G. *thymos*, the mind or heart as the seat of strong feelings or passion.] The deuterotheme in the construction of words referring to the emotions.

thymic (thi'mik). Relating to the thymus gland. **t. acid**, adenylic* acid. **t. asthma**, laryngismus stridulus. **t. death**, sudden death occurring in the status* lymphaticus. **t. stridor**, t. asthma.

thymic (ti'mik). Relating to or containing thyme. **t. acid**, thymol.

thy'micolymphat'ic. Relating to the thymus and the lymphatic glands, noting especially the status lymphaticus or thymicus.

thy'mine. 1. A purine formed by the decomposition of adenylic, or thymic acid. 2. Trade name of an extract of the thymus gland.

thymin'ic acid. Nucleolin-phosphoric acid; said to be a solvent of uric acid and to prevent its deposition in the tissues, and recommended therefore in the treatment of gout in doses of 5–10 gr. (0.3–0.6).

thymi'odide. Thymol iodide.

thym'ion [G.] A wart.

thymio'sis [G. *thymion*, a wart.] 1. A warty condition. 2. Yaws.

thymitis (thi-mi'(me')tis) [G. *thymos*, thymus, + *-itis*.] Inflammation of the thymus gland.

thymocyte (thi'mo-sīt) [G. *thymos*, thymus, + *kytos*, cell.] A lymphocyte originating in the thymus gland.

thymoform (ti'mo-form). A condensation product of thymol and formaldehyde, occurring as a yellowish powder, tasteless, but with a slight odor of thyme, insoluble in water; is recommended as a substitute for iodoform.

thymohydroquinone (ti"mo-hi-dro-kwin'ōn). A substance occurring in the urine after the administration of thymol.

thymoke'sis. Abnormal persistence and enlargement of the thymus gland.

thymol (ti'(thi')mol). (U.S., Br.) Thymic acid, $C_{10}H_{14}O$, a phenol present in the volatile oil of *Thymus vulgaris* (thyme), *Monarda punctata* (horsemint), *Carum copticum* or *Ptychotis ajowan* (ajowan seed), and in other volatile oils; it is obtained chiefly from ajowan oil; occurs in large colorless prismatic crystals, insoluble in water, of the odor of thyme; employed externally and internally as an antiseptic, as a deodorizer of offensive discharges, and as a specific for uncinariasis in doses of gr. ½–3 (0.03–0.2). **t. car'bonate**, thymotal, tyratal, occurs as colorless crystals insoluble in water; recommended as a teniacide in doses of gr. 8–30 (0.5–2.0). **t. i'odide**, thymolis* iodidum (U.S.). **t. sal'icylate**, salithymol, a reaction product of sodium salicylate with sodium thymolate and phosphorus trichloride; occurs as a white crystalline powder of sweetish taste, slightly soluble in water; recommended as an antiseptic.

thymo'lis io'didum (U.S.). Thymol iodide, aristol, $C_{20}H_{24}O_2I_2$, a reddish brown powder obtained by the interaction of thymol and iodine in alkaline solution; employed as a substitute for iodoform in skin diseases, wounds, ulcers, purulent rhinitis, otitis, etc.

thy'molize. To impregnate with thymol.

thy'molol. Thymolis iodidum.

thymol'oform. Thymoform.

thymoma (thi-mo'mah). Lymphosarcoma of the thymus gland.

thymop'athy [G. *thymos*, thymus, the mind, + *pathos*, suffering.] 1. Any disease of the thymus gland. 2. Any mental disease.

thymophysin (thi-mof'i-sin). Trade name of a combination of thymus and pituitary extracts, said to have the property of accelerating labor when once it has begun, but not of inducing labor; dose, 0.5 cc. repeated, if necessary, in ¾ to 1 hour.

thymoprivic (thi-mo-priv'ik). Thymoprivus.

thymoprivous (thi-mop'rĭ-vus). Thymoprivus.

thymoprivus (thi"mo-pre'vus) [*thymus* + L. *privus*, deprived of.] Thymoprivic, thymoprivous, noting the condition caused by premature atrophy or removal of the thymus.

thymopsyche (thi"mo-si'ke) [G. *thymos*, desire, courage, anger, + *psychē*, soul.] The affective processes.

thymotal (ti'mo-tal). Thymol carbonate.

thymotol (ti'mo-tol). Thymolis iodidum.

thymus (ti'mus). (N.F.) Thyme, the dried flowering tops of *Thymus vulgaris*, sweet thyme, garden thyme; a condiment, employed occasionally in hot infusion as a diaphoretic; the volatile oil, oleum* thymi, is official in the U.S.P., and the fluidextract in the N.F.

thymus (thi'mus) [G. *thymos*, excrescence, sweetbread.] 1. A ductless gland located in the superior mediastinum and lower part of the neck; it is a structure of early life, reaching its maximum development at the end of the second year, and then gradually undergoing retrograde changes, being absent in the adult. It consists of two irregularly shaped, nearly entirely separated lobes, divided into a number of polyhedral lobules separated by septa from the enveloping sheath of the lobe. Each lobule consists of clusters of lymphoid follicles consisting of an outer cortical and an inner medullary portion. It is supplied by the inferior thyroid and internal mammary arteries, and its nerves are derived from the vagus and sympathetic. It supplies an internal secretion of undetermined nature and action. 2. The thymus of the calf or lamb is the sweetbread, called also the throat-sweetbread, the pancreas being the stomach-sweetbread. **t. persis'tens hyperplas'tica**, a thymus which, instead of atrophying, persists in the adolescent or adult, or even hypertrophies.

thyractin (thi-rak'tin). Trade name of a brand of prothyrin, an extract of the thyroid gland obtained by a fractionizing process which, it is claimed, eliminates inert and toxic products; given in hypothyroidism, especially obesity, in doses of 0.025 three times a day for two days alternating with one day of abstention.

thy'raden. Trade name of a thyroid gland extract, employed in myxedema, cretinism, etc., and to stimulate metabolism in doses of gr. 3–8 (0.2–0.5).

thyrasthenia (thi-ras-the'nĭ-ah) [*thyroid* gland + G. *astheneia*, weakness.] A neurasthenic condition due to deficient thyroid secretion.

thyrein (thi're-in). Iodothyrin.

thyreiodine (thi-re-i'o-din). Iodothyrin.

thyremphrax'is [G. *emphraxis*, a stoppage.] Diminished or arrested function of the thyroid gland.

thyreo-. For words not here found, see under *thyro-*.

thyreoaplasia (thi're-o-ă-pla'zĭ-ah) [G. *thyreos*, shield (thyroid gland), + *a-* priv., + *plasis*, a moulding.] The anomalies observed in cases of congenital defects of the thyroid gland and deficiency of its secretion.

thyreocele (thi're-o-sēl) [G. *thyreos*, shield, + *kēlē*, tumor.] Enlargement of the thyroid gland, goiter, struma.

thyreochondrotomy (thi"re-o-kon-drot'o-mĭ) [G. *thyreos*, shield, + *chondros*, cartilage, + *tomē*, incision.] Division of the thyroid cartilage laryngotomy.

thyreocricot'omy. Division of the cricothyroid membrane, tracheotomy.

thy"reoepiglottid'eus. Musculus thyreoepiglotticus.

thyreogĕnic (thi-re-o-jen'ik). Thyrogenous; caused by an excess or deficiency of the thyroid secretion.

thyreohyoid'eus. See under *musculus*.

thy'reoid [G. *thyreos*, shield, + *eidos*, resemblance.] Thyroid.

thyreoidea (thi-re-o-id'e-ah). The thyroid gland. **t. accesso'ria, t. ima,** accessory thyroid gland, an outlying mass of thyroid gland tissue.

thyreoidec'tin. Trade name of a reddish brown powder prepared from the blood of animals from which the thyroid gland has been removed; employed in the treatment of Graves' disease and other conditions of supposed hypersecretion of the thyroid gland, in doses of gr. 5(0.3).

thyreoidec'tomy. Thyroidectomy.

thyreoitis (thi-re-o-i'(e')tis). Thyroiditis.

thyreolyt'ic [G. *lytikos*, dissolving.] Causing destruction of the thyroid gland cells.

thyreon'cus [G. *thyreos*, shield, + *onkos*, tumor.] Goiter, struma, thyreocele.

thy"reo-œsophage'us. A small inconstant band of muscular fibers passing between the esophagus and the thyroid cartilage.

thyreophy'ma [G. *phyma*, a tumor.] Goiter, struma, thyreocele, bronchiocele, bronchocele.

thyreoprivic (thi-re-o-priv'ik). Thyreoprivus.

thyreoprivous (thi-re-op'rĭ-vus). Thyreoprivus.

thyreopri'vus [G. *thyreos*, shield (thyroid), + L. *privus*, deprived of.] Noting symptoms or a constitutional state caused by removal of the thyroid gland; strumiprivus, thyreoprivic, thyreoprivous. **cachex'ia thyreopri'va,** cachexia strumipriva

thyreopro'tein (thi-re-o-pro'te-in). Thyroantitoxin.

thyreotherapy (thi-re-o-ther'ă-pĭ). Treatment by means of a preparation of the thyroid gland.

thyreotox'in, thyrotox'in. A cytotoxin specific for the cells of the thyroid gland.

thy'resol. Trade name of the methyl ester of santal oil, a colorless liquid of aromatic odor; recommended in the treatment of gonorrhea and other inflammatory affections of the urinary passages in doses of ♏ x (0.6) three or four times a day.

thyrine (thi'rēn). The active principle of the thyroid gland secretion.

thyroadenitis (thi-ro-ad-e-ni'(ne')tis) [G. *thyreos*, shield, + *adēn*, gland, + *-itis*.] Inflammation of the thyroid gland.

thyroantitox'in. A protein derivative of the thyroid gland, employed therapeutically for the same purposes as other thyroid preparations.

thyroarytenoid (thi-ro-ă-rit'en-oyd). Relating to the thyroid and arytenoid cartilages. **t. lig'aments,** the inferior is the ligamentum vocale, the superior the ligamentum ventriculare. **t. muscles,** the external is the musculus thyreoarytænoideus, the internal is the musculus vocalis.

thy'rocele. Thyreocele, goiter.

thyrochondrotomy (thi"ro-kon-drot'o-mĭ). Thyreochondrotomy.

thyrocoll'oid. A colloid substance in the thyroid gland.

thyrocricotomy (thi"ro-kri-kot'o-mĭ). Thyreocricotomy.

thyroepiglott'ic. Relating to the thyroid cartilage and the epiglottis; noting the musculus thyreoepiglotticus and the ligamentum thyreoepiglotticum, a band passing from the thyroid notch to the tip of the epiglottis.

thyrogenous (thi-roj'en-us) [*thyroid* + G. *gennaō*, I produce.] Of thyroid-gland origin, thyreogenic.

thyroglan'din. Trade name of a preparation of the thyroid gland, recommended in myxedema and other morbid states.

thyroglob'ulin. An iodine-containing globulin in the thyroid gland.

thyrogloss'al. Relating to the thyroid gland and the tongue, noting a duct in the embryo.

thyrohy'al. The greater cornu of the hyoid bone.

thyrohy'oid. Relating to the thyroid cartilage and the hyoid bone, hyothyroid; see *musculus thyreohyoideus*.

thy'roid [G. *thyreos*, an oblong shield, + *eidos*, form.] Resembling a shield, scutiform; noting a gland (*glandula* thyreoidea*) and a cartilage of the larynx (*cartilago* thyreoidea*). Also written, more correctly, but less commonly, *thyreoid*. **access'ory t.,** an outlying mass of thyroid gland tissue. **t. axis,** truncus thyreocervicalis [BNA]. **t. bar,** one of the two visceral arches of the embryo, which develops into the t. cartilage. **t. body,** t. gland. **t. car'tilage,** cartilago thyreoidea. **t. disloca'tion,** dislocation of the head of the femur into the obturator foramen. **t. em'inence,** the Adam's apple, the prominence of the thyroid cartilage in the front of the neck. **t. fora'men,** foramen obturatum. **t. gland,** (1) glandula* thyreoidea [BNA], a ductless gland lying in front of the upper part of the trachea; it furnishes an internal secretion of influence upon metabolism, the deficiency of which (hypothyroidism) results in cretinism and myxedema, an excess (hyperthyroidism) causing exophthalmic goiter, or Graves' disease. (2) The thyroid gland of the sheep employed in crude form, in extract, or desiccated (thyroideum U.S.P.) in the treatment of myxedema, cretinism, and to promote metabolism. **t. ther'apy, t. treat'ment,** the treatment of myxedema, cretinism, and other conditions by some preparation of the thyroid gland of the sheep.

thyroidec'tin. Thyreoidectin.

thyroidec'tomize. To remove the thyroid gland from.

thyroidec'tomy [G. *ektomē*, excision.] Removal of the thyroid gland.

thyroideum (thi-roy'de-um) (U.S., Br.). Thyroid, dried thyroid gland; the cleaned, dried, and powdered thyroid gland obtained from one of the domesticated animals used for food; a yellowish amorphous powder of a slight characteristic odor; dose, gr. 1 (0.06).

thyroid'in. Trade name of a thyroid gland preparation, employed in myxedema and other conditions.

thy'roidism. 1. Hyperthyroidism. 2. Poisoning by overdoses of a thyroid extract.

thyroiditis (thi-roy-di'(de')tis). Inflammation of the thyroid gland. **lig'neous t.,** Riedel's disease, a condition due to the development of a dense fibrosis in the thyroid gland. **parasit'ic t.,** an infectious disease of the ductless glands, marked clinically in the chronic form by enlargement of the thyroid and myxedematous symptoms; by enlarged thyroid, submaxillary, and axillary glands, and fever in the acute form; the pathogenic microorganism is believed to be a trypanosome, *Schyzotripanum cruzi*, transmitted by a hematophagous bug, *Lamus* (*Conorrhinus*) *megistus*, in which it is parasitic in the intestine; called also Chagas's, or Chagas-Cruz, disease.

thyroidiza'tion. The therapeutic use of a thyroid gland preparation.

thyroidot'omy [G. *tomē*, incision.] 1. Any cutting operation on the thyroid gland. 2. Division of the thyroid cartilage; laryngotomy.

thyroiodine (thi-ro-i'o-din). An organic (non-protein) iodine compound in the thyroid gland which, when combined with a protein, forms thyroglobulin.

thyroiodinine (thi-ro-i'o-din-ēn). Iodothyrin.

thyrolaryngeal (thi"ro-lă-rin'je-al). Relating to the thyroid gland or cartilage and the larynx; see *arteria thyreolaryngea*.

thyrolin'gual [L. *lingua*, tongue.] Thyreoglossal.

thy'ron. Trade name of a preparation from the thyroid gland of the pig; used for the same purposes as the other thyroid preparations in doses of gr 1–3 (0.06–0.2).

thyron'cus. Thyreoncus.

thyronucleoalbumin (thi-ro-nu"kle-o-al-bu'min). A nucleoalbumin in the thyroid gland.

thyropal'atine. Noting the musculus* pharyngopalatinus.

thyropharyngeal (thi-ro-fă-rin'je-al). Noting the musculus* thyreopharyngeus.

thyrop'rival. Thyreoprivus, strumiprivus.

thyroprotein (thi-ro-pro'te-in). Trade name of an extract containing the active principles of the thyroid gland adjusted to a standard of 0.33 per cent. iodine.

thyroptosia (thi-rop-to'sĭ-ah) [G. *ptōsis*, a falling.] Downward dislocation of the thyroid gland.

thyrot'omy [G. *tomē*, a cutting.] 1. Incision of the thyroid cartilage, laryngotomy. 2. Any cutting operation on the thyroid gland.

thyrotox'ic. Relating to thyrotoxin. **t. se'rum,** a thyrotoxin obtained by injecting into animals the nucleo-proteins of the thyroid gland.

thyrotoxicosis (thi-ro-tok-sĭ-ko'sis) [*thyroid* + G. *toxikon*, poison, + *-ōsis*.] Poisoning by an excess of thyroid secretion; exophthalmic goiter.

thyrotox'in. A specific cytotoxin obtained by injections of thyroid gland emulsion.

thyrotrope (thi'ro-trōp). One who has a thyroid type of constitution.

thyrotropic (thi-ro trop'ik). Relating to thyrotropism; of the thyroid type of constitution.

thyrotropism (thi-rot'ro-pizm) [*thyroid* gland + G. *tropos*, a turning.] A type of endocrine constitution in which the thyroid exercises a dominating influence.

thyroxin (thi-roks'in) [abbreviation of thyro-oxyindol.] The active iodine compound existing normally in the thyroid gland and extracted therefrom in crystalline form for therapeutic use; it is also prepared synthetically; chemically it is trihydro-triiodo-oxy-beta-indol-propionic acid.

thyroxinsodium (thi-rok"sin-so'dĭ-um) (Br.). A preparation obtained by the action of a limited amount of sodium carbonate upon thyroxin; it contains between 61 and 65 per cent. of iodine.

thyroxinum (thi-roks'i-num) (U.S.). Thyroxin,* originally, when still hypothetical, called alpha-iodine; an active principle, $C_9H_8ONI_3.C_2H_4.COOH$, obtained from the thyroid gland and containing not less than 63 per cent. of iodine; it occurs as white or slightly yellow, needle-like, odorless crystals or powder; dose, gr. $\frac{1}{120}$ (0.0005).

thyrsus (thur'sus) [G. *thyrsos*, an ivy-wound wand.] Penis.

Ti. Chemical symbol of titanium.

tib'ia, gen. and pl. *tib'iæ* [L. pipe, flute.] Shin-bone; the inner and larger of the two bones of the leg, articulating with the femur, fibula, and astragalus.

tib'iad [L. *ad*, to.] In a direction toward the tibia.

tibiæ'us. Tibialis.

tib'ial. Relating to the tibia.

tibia'le posti'cum. A sesamoid bone in the tendon of the tibialis posterior muscle.

tibia'lis [L.] Tibial; relating to the tibia or to any structures named from it; see under *arteria* and *musculus*.

tib'ien [G. *en*, in.] Relating to the tibia independent of other parts.

tibiocalca'nean. Relating to the tibia and the calcaneus.

tibiofascia'lis. See under *musculus*.

tibiofem'oral. Relating to the tibia and the femur, noting the *t. articulation*, or knee-joint, and the *t. index*.*

tibiofib'ular. Relating to both tibia and fibula. **t. articula'tion,** (1) *inferior*, syndesmosis tibiofibularis [BNA] (2) *superior*, articulatio tibiofibularis.

tibionavic'ular. Relating to the tibia and the navicular bone of the tarsus.

tibioperone'al. Tibiofibular.

tibioscaph'oid. Tibionavicular.

tibiotar'sal. Relating to the tibia and the tarsus; noting the *t. articulation*, or ankle-joint.

tic [Fr.] A more or less involuntary repeated contraction of a certain group of associated muscles; an habitual spasmodic movement of any part; a habit contraction. **convul'sive t.,** mimic t. **fa'cial t.,** mimic t. **hab'it t.,** an habitual repetition of some grimace, shrug of the shoulder, twisting or jerking of the head, or the like. **lo'cal t.,** a t. of very limited extent, as the winking of an eye, a twitch of a finger, or the like **mim'ic t.,** facial spasm, involuntary twitching of the facial muscles, usually unilateral **psy'chic t.,** a gesture or ejaculation made under the influence of an irresistible morbid impulse. **ro'tatory t.,** rotatory spasm.* **spasmod'ic t.,** a disorder in which sudden spasmodic coordinated movements of certain muscles or groups of physiologically related muscles occur at irregular intervals. **t. de pensée** (tik de pahñ-sa') [Fr. of thought], the habit of involuntarily giving expression to any thought that happens to be present in the mind. **t. douloureux** (doo-loo-re') [Fr. painful], a form of trigeminal neuralgia due to degenerative changes in the nerve. **t. non-douloureux,** myoclonus.

tick. A mite of the families *Ixodidæ* and *Argasidæ*, both of which contain many parasitic species which transmit pathogenic protozoa to man and the lower animals; so far as known only members of the family *Argasidæ* are injurious to man. **African relapsing fever t.,** *Ornithodorus moubata*. **spotted-fever t.,** *Dermacentor modestus*, *D. andersoni*, *D. reticulatus*, and *D. occidentalis*. **Texas-fever t.,** *Margaropus annulatus*, the t. instrumental in the spread of Texas cattle fever.

tick-fe'ver. 1. Any infectious disease of man or the lower animals caused by a protozoan blood-parasite transmitted through the agency of a tick. 2. African relapsing* fever. 3. Texas cattle fever. 4. Rocky Mountain spotted fever; an acute infectious disease, of high mortality, characterized by arthritic and muscular pains, a moderately high continuous fever, and a profuse petechial eruption; it occurs in the spring of the year in several of the States in the Rocky Mountain region; the pathogenic organism is not definitely determined (see *Rickett's* organism* and *Babesia hominis*), but it is transmitted by two or more species of tick of the genus *Dermacentor*, *D. andersoni*, properly so called instead of *D. venestus*, and *D. modestus* both being implicated; it has also been found in the body of the American dog-tick (*D. rariabilis*). 5. Colorado t.-f., a disease transmitted to man by the bite of the same tick that conveys (4); the symptoms are mild, there is no rash, the temperature is not excessive, and the disease is very rarely, if ever, fatal; the prodromes are similar to those of Rocky Mountain t.-f., and it is possible that it is merely an attenuated form of that disease.

tick-paral'ysis. A nonfebrile, noneruptive, paralysis affecting sheep and man in British Columbia, it follows the bite of a tick *Dermacentor venuslus andersoni* or *Hæmaphysalis cinnabarina*. A similar paralysis occurs in Australia, following the bite of *Ixodes ricinus* or *I. holocylus*, and in South Africa following the bite of *I. pilosus*.

tickle (tik'l). To cause a peculiar and intolerable sensation by repeated light stimulation of the cutaneous nerve-endings, to titillate.

tick'ling. Titillation; a peculiar disagreeable sensation, caused by repeated light stimulation of the cutaneous nerve-endings; it is accompanied by reflex involuntary laughing, sometimes followed, if the irritation is continued, by convulsions.

Tico'rea febrif'uga. A small tree of Brazil, the bark of which is employed as a bitter astringent and antipyretic.

ticpolon'ga. Cobra manil, a venomous serpent of Ceylon.

tictol'ogy [G. *tiktō*, I bear young, + *-logia*.] Obstetrics.

t.i.d. Abbreviation of *L. ter in die*, three times a day.

ti'dal. Relating to or resembling the tides, alternately rising and falling. **t. air,** the ebbing and flowing air, that which enters and leaves the lungs with each cycle of respiration. **t. respira'tion,** Cheyne-Stokes* respiration. **t. wave,** the sphygmographic line of descent before the first dicrotic break.

tide [A.S. *tīd*, time] An alternate rise and fall, ebb and flow. **acid t.,** a temporary increase in the acidity of the urine occurring during fasting. **al'kaline t.,** a temporary decrease in the acidity of the urine occurring after eating.

Ti'dy's test [Charles Meymott *Tidy*, English physician, 1843–1892.] For albuminuria; a white precipitate is thrown down on the addition of phenol and alcohol, or phenol and acetic acid, if albumin is present.

Tiedemann's gland (te'deh-mahn) [Friedrich *Tiedemann*, German anatomist, 1781–1861.] Bartholin's gland, glandula* vestibularis major. **T.'s nerve,** a nerve accompanying the central artery of the retina in the optic nerve.

tiger lily (ti'gur lil'ĭ). *Lilium tigrinum*, employed in eclectic practice for the relief of congestion of the uterus or ovaries and in chronic vaginitis in doses of 1 to 6 drops of the specific medicine in water, every one to four hours. **t. l. appear'ance,** the peculiar speckled appearance noted in the fatty cardiac muscle in pernicious anemia.

tig'lic al'dehyde. A substance, C_4H_6O, obtained from acetaldehyde by heating with zinc choride and diluted hydrochloric acid.

tig'lium. *Croton tiglium*, the source of oleum* tiglii, or croton oil.

tigretier (te-grĕ-tya') [Fr.] A form of saltatory chorea or dancing mania occurring in certain parts of Abyssinia.

ti'groid [G. *tigris*, tiger, + *eidos*, appearance.] Spotted and streaked like a tiger, noting the *tigroid masses*, or Nissl bodies, which are collections of deeply stainable substance in the protoplasm of the neurons, or nerve-cells. These bodies are of various forms called *nuclear caps* (cone-shaped masses covering each pole of the nucleus), *tigroid spindles* (spindle-shaped collections variously placed in the cell protoplasm), and *wedges of division* (masses found at the point of bifurcation of a dendrite). **t. bodies,** Nissl bodies, t. masses; see above. **t. ret'ina,** see *retina*. **t. masses,** see the main title. **t. spindle,** one of the forms of t. masses or Nissl bodies; see the main title. **t. stria'tion,** linear whitish or yellowish markings on the fatty degenerated heart-muscle.

tigrol'ysis [G. *lysis*, solution.] Disintegration and solution of the tigroid masses in a nerve-cell; chromatolysis, chromolysis, chromophilysis.

til'ia. Linden* flowers.

tili'acin. A glucoside from the leaves of tilia, or linden* flowers.

Tillaux's disease' (te-lo') [Paul Jules *Tillaux*, Parisian surgeon, 1834–1904.] Nodular disease of the mamma; a form of mammitis marked by the presence of multiple fibrous tumors in the substance of the breast; also called *Tillaux-Phocas disease*.

til'ma [G.] Lint.

til'mus [G. *tilmos*, plucking, tearing.] Carphologia.

timbre (tañ'br) [Fr.] Tone-color, the distinguishing quality of a sound, by which one may determine its source.

time [A.S. *tīma*.] 1. That form of the relation of events which is expressed by the terms past, present, and future, and measured by various units such as minutes, hours, days, months, years, etc. 2. A certain period during which something definite or determined is done. **iner'tia t.,** the interval elapsing between the reception of the stimulus from a nerve and the contraction of the muscle. **reac'tion t.,** the interval between the application of a stimulus to a nerve and the responsive contraction of a muscle, or other reaction. **recogni'tion t.,** the interval between the application of a stimulus and the recognition of its nature.

time-sense. The faculty by which the passage of time is appreciated.

tin. A metallic element; see *stannum*. **t. group,** a group of three amphoteric elements, tin, titanium, and zirconium.

tin'ca [L. a tench.] The tench, a fresh water fish tenacious of life, and in consequence thought in former times to possess healing virtues. **os tin'cæ,** tench's mouth, the os uteri.

tinct. Abbreviation of L. *tinctura*, tincture.

tinct'able. Stainable, capable of taking up a dye.

tinction (tink'shun) [L. *tingere*, to dye.] 1. A stain, a preparation for staining. 2. The act of staining.

tincto'rial [L. *tinctorius*, dyeing.] Relating to coloring or staining.

tinctu'ra, gen. and pl. *tinctu'ræ* [L. *tingere*, to dye.] Tincture, the pharmacopeial name of an alcoholic solution or extract of a non-volatile vegetable substance, an alcoholic solution of a volatile substance being called *spiritus*. There are four exceptions, however, to this definition in the list of official tinctures, viz., tinctures of iodine, ferric chloride, musk, and cantharides; in two of these the active substances are inorganic, in one volatile, and in two the tincture is made from an animal substance. The tinctures of iodine and ferric chloride are simple solutions, the others are extractive preparations. All tinctures are made with alcohol which is usually diluted with water and sometimes is ammoniated.

t. aconi'ti (U.S.), tincture of aconite; the U.S. tincture is now of 10 per cent strength (formerly of 35 per cent), dose, ♏ 3–5 (0.18–0.3); the Br. tincture is of about 10 per cent strength, dose, ♏ 3–5 (0.18–1.3).

t. aconi'ti, Flem'ing, Fleming's tincture of aconite; aconite 70, alcohol 100; this is 7 times stronger than the official (U.S.) tincture, 15 minims being the equivalent in strength of 10 grains of the crude drug; dose ♏1–2 (0 06–0 12).

t. actæ'æ, tincture of actæa, t. cimicifugæ.

t. adhat'odæ (B.A.), tincture of adhatoda; adhatoda leaves, dry, 1, 60 per cent. alcohol 8; dose ♍30–60 (2.0–4.0).

tinctu'ræ æthe'reæ (N.F.), ethereal tinctures; a class of preparations consisting of 10 per cent. percolations of drugs in a menstruum of ether 1 and alcohol 2.

t. al'oes (N.F.), tincture of aloes; aloes 100, licorice 200, diluted alcohol to make 1000 (N.F.); extract of Barbados aloes ½, liquid extract of licorice 3–45 per cent alcohol to make 20 (Br.); does (N.F.), ʒ 2–4 (8.0–16.0), (Br.), ʒ ½–2 (2.0–8.0).

t. al'oes et myr'rhæ (N.F.), tincture of aloes and myrrh, elixir proprietatis Paracelsi, elixir pro; aloes 100, myrrh 100, licorice 100, alcohol 750, water 250; dose, ʒ 1–2 (4.0–8.0).

t. al'oes compos'ita (P.G.), compound tincture of aloes, Swedish bitters; aloes 6, gentian, zedoary, rhubarb, and saffron each 1, 90 per cent. alcohol 200; dose, ♍5–15 (0 3–1.0).

t. alsto'niæ (B.A.), tincture of alstonia or dita bark, alstonia bark 1, 60 per cent. alcohol 8; dose ♍30–60 (2.0–4.0).

t. ama'ra, (1) (N.F.) bitter tincture, stomachic tincture, stomach drops; a tincture of gentian, centaury, zedoary, bitter orange peel, and orange berries; bitter tonic in dose of ♍30 (2.0); (2) (P.G.) bitter tincture; gentian 3, centaury 3, bitter orange peel 2, orange berries 1, zedoary 1, 68½ per cent. alcohol 50; stomachic in doses of ʒ 1–2 (4.0–8.0).

t. andrograph'idis (B.A.), tincture of andrographis; made by percolating with 60 per cent. alcohol; dose, ʒ ½–1 (2.0–4.0).

t. antac'rida, antacrid tincture, Fenner's guaiac mixture; each dose of ♏15 (1 0) contains corrosive chloride of mercury gr. ⅛ (0 005), guaiac and Canada turpentine each gr. 1 (0 06), oil of sassafras ♏½ (0 015); emmenagogue.

t. antimo'nii (N.F.), tincture of antimony, replacing vinum antimonii (N.F. IV); antimony and potassium tartrate 4, boiling distilled water 25, caramel 2, acetic ether 2, alcohol 200, distilled water to make 1000; dose, ♏15 (1.0).

t. antiperiod'ica (N.F.), antiperiodic tincture, Warburg's tincture; rhubarb and angelica fruit, each 8, inula, saffron, and fennel, each 4, gentian, zedoary, cubeb, myrrh, camphor, and agaric, each 2, pepper 0 35, Saigon cinnamon and ginger, each 0 75, quinine bisulphate 20, extract of aloes 17.5, alcohol and water of each enough, in the proportion of 3 volumes of alcohol to 2 of water, to make 1000; dose ʒ 1–4 (4.0–16.0).

t. antiperiod'ica si'ne a'loe (N.F.), antiperiodic (Warburg's) tincture without aloes; same as the preceding with the omission of the aloes; dose, ʒ 1–4 (4.0–16 0).

t. aristolo'chiæ (B.A.), tincture of aristolochia; aristolochia 1, 70 per cent. alcohol 5; dose, ʒ ½–1 (2.0–4.0).

t. ar'nicæ (N.F.) tincture of arnica; arnica 200, diluted alcohol 1000 (N.F.); arnica 1, 70 per cent. alcohol 20 (Br.); applied externally for bruises and sprains.

t. aromat'ica (N.F.), aromatic tincture; Saigon cinnamon 100; Jamaica ginger 40, galangal, clove, and cardamom seed, each 20, alcohol and water, in the proportion of 2 volumes to one, to make 1000; dose ♏30 (2 0).

t. asafœt'idæ (U.S., Br.), tincture of asafetida; asafetida 200, alcohol 1000 (N.F.); asafetida 4, 70 per cent. alcohol 20 (Br.); dose, ♏10–30 (0.6–2.0).

t. auran'tii (Br.), tincture of orange peel; bitter orange peel 5, 90 per cent alcohol 20; dose, ʒ½–2 (2.0–8.0).

t. auran'tii ama'ri (U.S.), tincture of bitter orange peel; bitter orange peel 200, alcohol 600, water 400; dose ʒ½–2 (2.0–8.0).

t. auran'tii dul'cis (U.S.), tincture of sweet orange peel; sweet orange peel 500, alcohol 1000; dose, ʒ½–2 (2.0–8.0).

t. azadirach'tæ (B.A.), tincture of azadirachta or of margosa bark; azadirachta 1, 45 per cent. alcohol 10; dose, ʒ½–1 (2.0–4.0).

t. belladon'næ (Br. '14), tincture of belladonna; liquid extract of belladonna root 2, 60 per cent alcohol 30; dose, ♏5–15 (0.3–1.0).

t. belladon'næ (U.S., Br.), tincture of belladonna; belladonna leaves 100, diluted alcohol 1000; dose ♏5–15 (0.3–1.0); this tincture is about ½ weaker than the same preparation in the U.S.P. 1890.

t. benzoi'ni (U.S.), tincture of benzoin; benzoin 100, alcohol 1000; used externally for sunburn, chilblains, etc

t. benzoi'ni compos'ita (U.S., Br.), compound tincture of benzoin, elixir traumaticum; benzoin 100, aloes 20, storax 86, balsam of Tolu 40, alcohol to make 1000 (U.S.); benzoin 2, storax 1½, balsam of Tolu ½, socotrine aloes ½, 90 per cent. alcohol 20 (Br.); employed by inhalation in croup and bronchitis, and externally as a vulnerary.

t. bryo'niæ (N.F.), tincture of bryonia; bryonia 100 to alcohol 1000; dose, ʒ1 (4 0).

t. bu'chu, tincture of buchu; buchu leaves 4, 60 per cent. alcohol 20; dose ʒ1–2 (4 0–8.0).

t. cac'ti grandiflor'i (N.F.), tincture of cactus grandiflorus; dose ♏15 (1 0).

t. calen'dulæ (N.F.), tincture of calendula or of marigold; calendula 200, alcohol 1000; employed externally in sprains and bruises.

t. calotrop'idis (B.A.), tincture of calotropis; calotropis 1, 60 per cent. alcohol 10; dose ʒ½–1 (2.0–4.0).

t. calum'bæ (U.S., Br.), tincture of calumba or of colombo; calumba 200, alcohol 600, water 400; dose, ʒ½–2 (2.0–8 0).

t. campho'ræ compos'ita (Br), compound tincture of camphor, t. opii camphorata (U.S), paregoric, paregoric elixir; tincture of opium 585 minims, benzoic acid 40 grains, camphor 30 grains, oil of anise 30 minims, 60 per cent. alcohol to make 20 fluidounces; dose, ♏30–60 (2.0–4.0).

t. can'nabis, t. can'nabis in'dicæ, tincture of cannabis, tincture of Indian hemp; cannabis 100, alcohol 1000 (U.S. IX); extract of Indian hemp 1, 90 per cent. alcohol 20 (Br.); dose, ♏5–15 (0.3–1.0).

t. cantharidi'ni, tincture of cantharidin; cantharidin, 0.1, chloroform, 10, alcohol, to make 1000; dose ♎2–5 (0.12–0.3).

t. canthar'idis (U.S.), tincture of cantharides, tincture of Spanish flies; cantharides 100, glacial acetic acid 50, alcohol to make 1000 (U.S.); dose ♏1–5 (0.06–0.3).

t. cap'sici (U.S., Br.), tincture of capsicum; capsicum 100, alcohol 950, water 50 (U.S.); capsicum 1, 70 per cent. alcohol 20 (Br.); dose ♏5–15 (0.3–1.0).

t. cap'sici et myr'rhæ (N.F.), tincture of capsicum and myrrh, hot drops, "number six"; each dose of ʒ½ (2.0) contains capsicum gr. 1 (0.06) and myrrh gr. 4 (0.25); carminative and stomachic.

t. caramell'is, tincture of caramel; caramel, 100; alcohol, 250; water, 750.

t. cardamo'mi (U.S.), tincture of cardamom; cardamom 200, diluted alcohol 1000; dose ʒ½–2 (2.0–8.0).

t. cardamo'mi compos'ita (U.S., Br.), compound tincture of cardamom; cardamom 25, Saigon cinnamon 25, caraway 12, cochineal 5, glycerin 50, diluted alcohol to make 1000 (U.S.); cardamom ½ ounce, caraway ½ ounce, raisins 2 ounces, Ceylon cinnamon ½ ounce, cochineal 55 grains, 60 per cent. alcohol 20 (Br.); dose ʒ½–2 (2.0–8,0).

t. cascaril'læ, tincture of cascarilla; cascarilla 4, 70 per cent. alcohol 20; dose, ʒ½–2 (2.0–8.0).

t. cat'echu (Br.), tincture of catechu; catechu 4, Ceylon cinnamon 1, 60 per cent. alcohol 20; dose ʒ½–2 (2.0–8 .

t. cat'echu compos'ita (U.S. 1890), t. gambir composita.

t. chira'tæ, tincture of chirata or of chiretta, chirata 2, 60 per cent. alcohol 20; dose, ʒ½–2 (2.0–8.0).

t. chlorofor'mi et morphi'næ compos'ita, compound tincture of chloroform and morphine; chloroform 1½ fluidounces, morphine hydrochloride 87½ grains, diluted hydrocyanic acid 1 fluidounce, tincture of capsicum ½ fluidounce, tincture of Indian hemp 2 fluidounces, oil of peppermint 14 minims, glycerin 5 fluidounces, 90 per cent. alcohol to make 20 fluidounces; made to imitate chlorodyne; employed in diarrhea in doses of ♏10–30 (0.6–2.0).

t. cimicif'ugæ (N.F.,), tincture of cimicifuga, tincture of actæa racemosa or of black cohosh, or of black snakeroot; cimicifuga 200, alcohol 1000 (U.S.); cimicifuga 2, 60 per cent. alcohol 20 (Br.); dose, ʒ½–2 (2.0–8.0).

t. cincho'næ (U S., Br.), tincture of cinchona, tincture of bark; cinchona 200, glycerin 75, alcohol 675, water 250 (U.S); red cinchona 1, 70 per cent. alcohol 5 (Br.); dose, ʒ½–2 (2.0–8.0).

t. cincho'næ compos'ita (U.S , Br), compound tincture of cinchona, Huxham's tincture of bark; red cinchona 100, bitter orange peel 80, serpentaria 20, glycerin 75, alcohol 675, water 250 (U S); bitter orange peel 1 ounce, serpentaria ½ ounce, cochineal 28 grains, saffron 55 grains, 70 per cent alcohol 10 fluidounces, tincture of cinchona 10 fluidounces (Br); dose, ʒ½–2 (2.0–8 0).

t. cincho'næ detanna'ta, detannated tincture of cinchona, made from the fluidextract after removal of the tannin by ferric oxide; its strength is the same as that of t. cinchonæ (U.S.).

t. cinnamo'mi (N.F.), tincture of cinnamon; Saigon cinnamon 200; glycerin 75, alcohol 675, water 250 (U.S.); Ceylon cinnamon 4, 70 per cent alcohol 20 (Br. '14); dose, ʒ ½–2 (2.0–8.0).

t. coc'ci (Br.), tincture of cochineal; cochineal 2. 45 per cent. alcohol 20; used as a coloring agent only,

t. coc'culi (N.F.), tincture of cocculus, used externally as a parasiticide.

t. col'chici cor'mi for'tis (N.F.), strong tincture of colchicum corm, replacing vinum colchici cormi (N.F. IV); prepared by a mixture of 1 volume of alcohol and 2 volumes of water as the menstruum; dose, ♏10 (0.6).

t. col'chici (U.S.), **t. col'chici sem'inum**; tincture of colchicum, tincture of colchicum seeds; colchicum seed 100, alcohol 600, water 400 (U.S.), colchicum seed 4, 45 per cent. alcohol 20 (Br.); dose (U.S.), ♏15–60 (1.0–4.0), (Br.), ♏10–30 (0.6–2.0).

t. coni'i, tincture of conium; conium fruit 4, 70 per cent. alcohol 20; dose ♏20–60 (1.3–4.0).

t. coscin'ii (B.A.), tincture of coscinium; 1 part macerated in 10 parts of 60 per cent. alcohol; dose, ♏30–60 (2.0–4.0).

t. co'to, t. paracoto.

t. creso'lis sapona'ta, saponated tincture of cresol; soft soap 45, cresol 35, alcohol 100; used externally as an antiseptic.

t. cro'ci (N.F.), tincture of saffron; saffron 100, alcohol 1000; used chiefly as a coloring agent.

t. cube'bæ (N.F), tincture of cubeb; cubeb 200 alcohol 1000; dose ʒ½–2 (2 0–8 0).

t. delphin'ii (N.F.), tincture of larkspur, used chiefly externally as a parasiticide.

t. digita'lis (U.S., Br.), tincture of digitalis; digitalis 100, diluted alcohol 1000 (U.S.).

t. ergo'tæ ammonia'ta, ammoniated tincture of ergot; ergot 5, solution of ammonia 2, 60 per cent., alcohol to make 20; dose ʒ½–2 (2.0–8.0).

t. fer'ri chlora'ti æthe'rea (P.G.), ethereal tincture of chlorated iron, t. ferri chloridi ætherea (N.F.).

t. fer'ri chlo'ridi (U.S.), tincture of ferric chloride, t. ferri perchloridi (Br.), tincture of the perchloride or chloride of iron; solution of ferric chloride 350, alcohol 650 (U.S.); strong solution of ferric chloride 5, 90 per cent. alcohol 5, distilled water 10 (Br.); dose, ♏5–20 (0.3–1.3).

t. fer'ri chlo'ridi æthe'rea (N.F.), ethereal tincture of ferric chloride, Lamotte's drops, Bestucheff's tincture; each dose of ℥ 1 (4.0) contains the equivalent of about gr. ½ (0.03) of metallic iron, in a mixture of alcohol 7, ether 2, tincture of ferric chloride 1.

t. fer'ri citrochlo'ridi (N F.), tincture of citrochloride of iron, tasteless tincture of iron; prepared by heating together solutions of ferric chloride and sodium citrate, and adding alcohol and water; each dose of ♏10 (0.6) contains about gr. 1 (0.06) of ferric chloride.

t. fer'ri poma'ta (P.G., N.F.), tincture of ferrated extract of apples; a hydroalcoholic solution of extractum ferri pomatum (N F.) flavored with cinnamon; each dose of ℥ 1 (4.0) represents gr. ⅛ (0.008) of metallic iron.

t. gal'læ (N.F.), tincture of nutgall, tincture of galls; nutgall 200, glycerin 100, alcohol 900; employed locally as an astringent in relaxed uvula, tonsillitis and prolapse of the rectum; internal dose, ♏30–60 (2.0–4.0).

t. gambir compos'ita (U.S.), compound tincture of gambir, t. catechu composita (U.S. 1890); gambir 50, Saigon cinnamon 25, diluted alcohol 1000; dose ℥ ½–2 (2.0–8.0).

t. gelsem'ii (N.F.), tincture of gelsemium; gelsemium 100, alcohol 650, water 350 (U.S.); gelsemium 2, 60 per cent alcohol 20 (Br.); dose, ♏ 5–15 (0.3–1 0).

t. gentia'næ compos'ita (U.S , Br.), compound tincture of gentian; gentian 100, bitter orange peel 40, cardamom 10, alcohol 600, water 400 (U.S.), gentian 2, bitter orange peel ⅔, cardamom ⅓, 45 per cent. alcohol 20 (Br.); dose, ℥ ½–2 (2.0–8.0).

t. guai'aci (N.F.), tincture of guaiac; guaiac 200, alcohol 1000; dose ℥ ½–2 (2.0–8.0).

t. guai'aci ammonia'ta (N.F.), ammoniated tincture of guaiac; guaiac 200, aromatic spirit of ammonia 1000 (U.S.) guaiac 4 ounces, oil of lemon 20 minims, oil of nutmeg 30 minims, strong solution of ammonia 1¼ fluidounces, alcohol 18 fluidounces (Br.); dose, ℥ ½–2 (2.0–8.0).

t. guai'aci compos'ita (N.F.), compound tincture of guaiac, Dewee's tincture of guaiac; each dose of ℥ 1 (4.0) contains guaiac gr. 7½ (0.5), potassium carbonate gr. ½ (0.02), flavored with allspice, emmenagogue and alterative.

t. hamamel'idis, tincture of hamamelis, tincture of witch hazel; hamamelis bark 2, 45 per cent. alcohol 20; dose, ♏30–60 (2.0–4.0).

t. herba'rum recen'tium, tincture of fresh herbs; formerly a class of U.S.P. preparations, now transferred to the N.F. with the title tincturæ medicamentorum recentium (*q.v.*).

t. hu'muli (N.F.), tincture of hops; hops 200, alcohol 1000; dose ℥ 1 (4 0).

t. hydras'tis (N.F.), tincture of hydrastis; hydrastis 200, alcohol 650, water 350 (U.S.); hydrastis 2, 60 per cent alcohol 20 (Br.); dose, ♏ 30–60 (2.0–4.0).

t. hyoscy'ami (U.S., Br.), tincture of hyoscyamus; hyoscyamus 100, diluted alcohol 1000 (U.S.); hyoscyamus leaves and tops 2, 45 per cent. alcohol 20; dose, ♏30–60 (2.0–4.0).

t. igna'tiæ (N.F.), tincture of ignatia; ignatia 100, alcohol and water, in the proportion of 8 to 1, 1000; dose ♏10 (0 6).

t. io'di (U.S.), tincture of iodine; iodine 70, potassium iodide 50, distilled water 50, alcohol to make 1000 (U.S.); usually employed externally; internal dose ♏ 1–3 (0.06–0.2).

t. io'di for'tior (N.F.), stronger tincture of iodine Churchill's tincture of iodine, containing iodine 16 5, potassium iodide 3 3, in alcohol and water 100; locally counterirritant; internal dose ♏1 (0 06).

t. io'di for'tis, strong tincture of iodine; iodine 100, potassium iodide 60, water 100, alcohol to make 1000; used externally.

t. io'di mi'tis, iodine and potassium iodide, of each 25, water 25, alcohol to make 1000; dose, ♏2–5 (0.13–0.3).

t. iodido'rum (N.F.), tincture of iodides, decolorized tincture of iodine; made with iodine, sodium thiosulphate, ammonia water, and diluted alcohol; practically a solution of ammonium iodide; rubefacient.

t. ipecacuan'hæ (N.F., Br.), tincture of ipecac, replacing vinum ipecacuanhæ (N.F. IV); fluidextract of ipecac 100, alcohol 200, distilled water to made 1000; dose ♏15 (1.0).

t. ipecacuan'hæ et o'pii (N.F.), tincture of ipecac and opium; liquid Dover's powder; fluidextact of ipecac 100, tincture of deodorized opium 900; dose, ♏5–20 (0.3–1.3).

t. jaboran'di, tincture of jaborandi or of pilocarpus; jaborandi leaves 4 ounces, 45 per cent. alcohol 20; dose, ℥ 1–2 (4 0–8.0).

t. jala'pæ, (1) tincture of jalap; jalap 4,70 per cent. alcohol 20; dose ℥ ½–1 (2.0–4.0); (2) (N.F.) tincture of jalap; each dose of ℥ 1 (4.0) represents gr 12 (0.8) of jalap.

t. jala'pæ compos'ita, (1) (B.A) compound tincture of jalap; jalap 8, scammony 2, turpeth 1, 60 per cent. alcohol 100; purgative in doses of ℥ ½–1 (2 0–4.0); (2) (N.F.) compound tincture of jalap; each dose opium, t. opii (U.S.).
of ℥ 1 (4.0) represents jalap, gr. 8 (0.5), and scammony gr. 2 (0.13).

t. ki'no (U.S.), tincture of kino; kino 50, purified talc 10, glycerin 150, alcohol 650, water to make 1000 (U.S.) kino 2, glycerin 3, water 5, alcohol to make 20 (Br.); dose, ℥ ½–1 (2.0–4.0).

t. ki'no et o'pii compos'ita, compound tincture of kino and opium; each dose of ℥ 1 (4.0) represents gr. ½ (0.03) each of kino and opium, in addition to smaller amounts of camphor, cloves, cochineal, and aromatic spirit of ammonia.

t. krame'riæ (U.S., Br.), tincture of krameria, tincture of rhatany; krameria 200, diluted alcohol 1000 (U.S.); krameria 4, 60 per cent. alcohol 20 (Br.); dose ℥ ½–2 (2.0–8.0).

t. lactuca'rii, tincture of lactucarium; lactucarium 500, glycerin 250, a mixture of alcohol, diluted alcohol, and purified petroleum benzin equal parts to make 1000; dose, ℥ ½–1 (2.0–4.0).

t. lavan'dulæ compos'ita (U.S.), compound tincture of lavender; oil of lavender flowers 8, oil of rosemary 2, Saigon cinnamon 20, cloves 5, nutmeg 10, red saunders 10, water 250, alcohol 750 (U.S.); oil of lavender 1¼ fluidrachms, oil of rosemary 10 minims, cinnamon bark 150 grains, nutmeg 150 grains, red sandal-wood 300 grains, 90 per cent alcohol 40 fluidounces (Br.); employed for flatulence and nausea in doses of ♏ 30–60 (2.0–4.0).

t. limo'nis (U.S., Br.), tincture of lemon, t. limonis corticis (U.S. IX); fresh lemon peel 5, 90 per cent. alcohol 20 (Br.), fresh lemon peel 500, alcohol 1000 (U.S.); employed as a flavor in doses of ℥ ½–2 (2.0–8.0).

t. lobe'liæ (U S), tincture of lobelia; lobelia 100, diluted alcohol 1000; dose, ♏10–20 (0.6–1.3) as an expectorant, ℥ 1–2 (4.0–8.0) as an emetic.

t. lobe'liæ æthe'rea (Br.), ethereal tincture of lobelia; lobelia 4, spirit of ether 20; dose, ♏5–20 (0.3–1.3).

t. lu'puli (Br.), tincture of hops; hops 4, 60 per cent. alcohol 20; dose, ℥ 1–2 (4.0–8.0).

tinctu'ræ medicamento'rum recen'tium (N.F.), tinctures of fresh drugs; the general formula for these tinctures is to macerate 500 grams of the cut, bruised, or crushed fresh drug in alcohol, 1000 cc., for 14 days, then strongly express the liquid and filter it through paper.

t. mos'chi, tincture of musk; musk 5, alcohol 45, water 45, diluted alcohol 10; dose, ℥ ½–1 (2.0–4.0).

t. myr'rhæ (U.S., Br.), tincture of myrrh; myrrh 200, alcohol 1000 (U.S.); myrrh 4, 90 per cent. alcohol 20 (Br.); employed as an astringent in receding and spongy gums, relaxed uvula, etc.

t. nu'cis vom'icæ (U.S., Br.), tincture of nux vomica; extract of nux vomica 20, alcohol 750, water 250 (U.S); liquid extract of nux vomica 2, distilled water 3, 90 per cent. alcohol 9 (Br.); the U.S. tincture is ½ weaker than that of the U.S.P. 1890 and ½ the strength of the B.P. tincture; dose (U.S.), ♏5–10 (0.3–0.6), (Br.), ♏5–15 (0.3–1.0).

t. oliv'eri cor'ticis (B.A.), tincture of black sassafras bark; oliveri cortex 1, 60 per cent. alcohol 10; carminative in doses of ♏30–60 (2.0–4.0).

t. o'pii (U.S., Br.), tincture of opium, laudanum, t. opii deodorata (U.S. IX); opium 100, alcohol, water, and diluted alcohol equal parts to make 1000 (U.S.); the B.P. tincture of opium is about ⅜ the strength; dose (U.S.), ♏5–20 (0.3–1.3), (Br.), ♏30 (2.0).

t. o'pii ammonia'ta ammoniated tincture of opium; tincture of opium 3 fluidounces, benzoic acid 180 grains, oil of anise 1 fluidrachm, solution of ammonia, 4 fluidounces, 90 per cent alcohol to make 20; dose ♏ 30–60 (2.0–4.0).

t. o'pii camphora'ta (U.S., Br.), camphorated tincture of opium, paregoric, paregoric elixir, t. camphoræ composita (Br.); opium 4, benzoic acid 4, camphor 4, oil of anise 4, glycerin 40, diluted alcohol to make 1000 dose, ℥ 1–4 (4.0–16.0).

t. o'pii croca'ta (N.F.), tincture of opium with saffron, practically the same as Sydenham's laudanum or wine of opium; granulated opium, 100; saffron, 25; Saigon cinnamon and clove, of each 6; diluted alcohol to make 1000; dose, ♏ 10 (0 6).

t. o'pii deodora'ta (U.S. IX), tincture of deodorized

t. o'pii et gam'bir compos'ita (N.F.), compound tincture of opium and gambir, t. pectoralis, guttæ, pectoralis, Bateman's pectoral drops; a mixture of laudanum, compound tincture of gambir, oil of anise, and camphor; expectorant for children in dose of ♏ 10 (0.6), representing ♏ ½ (0.03) of laudanum.

t. papav'eris, tincture of poppy; each dose of ℥ ½ (2 0) represents the extract from gr. 15 (1 0) of poppy capsules.

t. paraco'to, tincture of paracoto, formerly tincture of coto; paracoto 125, alcohol 1000; dose, ♏ 30 (2.0).

t. passiflor'æ (N.F.), tincture of passion flower; dose, ♏ 10 (0 6).

t. pectora'lis, t. opii et gambir composita

t. persio'nis (N.F.), tincture of cudbear; used as a bright red coloring agent.

t. persio'nis compos'ita (N F.), compound tincture of cudbear; differs from the preceding by the addition of caramel; a dark brown coloring agent.

t. phos'phori, tincture of phosphorus, spiritus phosphori (N.F.).

t. physostig'matis, tincture of physostigma, tincture of Calabar bean; physostigma 100, alcohol 1000; dose ♏ 10–30 (0.6–2.0).

t. picrorrhi'zæ (B.A.), tincture of picrorrhiza; picrorrhiza 1 part, macerated in 45 per cent. alcohol 8 parts, dose ℥ ½–1 (2.0–4.0).

t. pimpinel'læ, tincture of pimpinella; pimpinella 16.5, extracted with diluted alcohol 100; diuretic and tonic in dose of ℥ 1 (4.0).

t. podphyl'li, tincture of podophyllum; resin of podophyllum 320 grains, 90 per cent alcohol 20 fluidounces; dose, ℥ 1–2 (4 0–8.0).

t. podophyl'li in'dici (B.A.), tincture of Indian podophyllum, of the strength of 1 part of the resin to 30 parts of 90 per cent. alcohol; dose, ♏ 5–15 (0 3–1 0)

t. pru'ni virginia'næ tincture of Virginian prune, tincture of wild cherry; wild cherry bark 4, distilled water 7½, 90 per cent alcohol 12½; dose, ℥ 1–2 (4.0–8.0).

t. pulsatill'æ (N.F.), tincture of pulsatilla; dose, ♏ 30 (2 0).

t. pyr'ethri, tincture of pyrethrum, tincture of pellitory; pyrethrum 200, alcohol 1000 (U.S. IX); pyrethrum 4, 70 per cent. alcohol 20 (Br.); employed locally in relaxation and paralysis of the uvula and pharynx.

t. quas'siæ (N.F., Br.), tincture of quassia; quassia 200, alcohol 1000 (U.S.); quassa 2, 45 per cent. alcohol 20 (Br.); dose, ♏ 15–60 (1.0–4.0).

t. quilla'jæ (N.F., Br.), tincture of quillaja, tincture of soap bark; quillaja 200, alcohol 350, water 650; employed as a shampoo.

t. quini'næ, tincture of quinine; quinine hydrochloride 175 grains, tincture of orange, 20 fluidounces, dose, ℥ 1–2 (4.0–8.0).

t. quini'næ ammonia'ta, ammoniated tincture of quinine; quinine sulphate 175 grains, solution of ammonia 2 fluidounces, 60 per cent. alcohol 18 fluidounces; dose, ℥ 1–2 (2.0–4.0).

t. rhe'i (U.S.), tincture of rhubarb; rhubarb 200, cardamom 40, glycerin 100, alcohol 500, water 400; dose, ♏ 30–60 (2.0–4 0).

t. rhe'i aquo'sa (P.G., N F.), aqueous tincture of rhubarb; a dose of ℥ 1 (4.0) represents rhubarb gr. 6 (0.4), sodium borate and potassium carbonate each gr. ⅜ (0.04), flavored with cinnamon; cathartic.

t. rhe'i aromat'ica (U.S.), aromatic tincture of rhubarb; rhubarb 200, Saigon cinnamon 40, cloves 40, nutmeg 20, glycerin 100, alcohol 550, water 450; dose ♏ 15–60 (1.0–4.0).

t. rhe'i compos'ita (Br.), compound tincture of rhubarb; rhubarb 2, cardamom ½, coriander ½, glycerin 2, 60 per cent. alcohol 18; dose, ℥ 2–4 (8.0–16.0).

t. rhe'i dul'cis (N.F.), sweet tincture of rhubarb; rhubarb 100, licorice and anise, each 40, cardamom seed 10, alcohol and water 1000; dose ♏ 30 (2 0).

t. rhe'i et gentia'næ (N.F.), tincture of rhubarb and gentian; each dose of ℥ 1 (4.0) represents rhubarb gr. 4 (0.25) and gentian gr. 1 (0.06); tonic laxative.

t. rhe'i vino'sa (P.G.), vinous tincture of rhubarb, vinum rhei compositum (N.F.).

t. sa'bal et san'tali (N.F.), tincture of saw palmetto and santal; saw palmetto, 200; sandalwood, 65; alcohol and water, of each sufficient to make 1000; dose, ℥ 1 (4 0).

t. sanguina'riæ (N.F.), tincture of sanguinaria, tincture of bloodroot; sanguinaria 100, acetic acid 20, alcohol 600, water 400; dose, ♏ 10–30 (0.6–1.0).

t. sapo'nis vir'idis (U.S. 1880), tincture of green soap, linimentum saponis mollis (U.S.).

t. sapo'nis vir'idis compos'ita, compound tincture of green soap, linimentum saponis mollis compositum (N.F.); employed externally in the treatment of skin diseases.

t. scil'læ (U.S., Br.), tincture of squill; squill 100, alcohol 750, water 250 (U.S.); squill 4, 60 per cent. alcohol 20 (Br.); dose, ♏ 10–30 (0 6–2 0).

t. sen'egæ (Br.), tincture of senega; senega 4, 60 per cent. alcohol 20; dose ℥ ½–1 (2.0–4.0).

t. sen'næ compos'ita, compound tincture of senna: senna 4, raisins 2, caraway ½, coriander ½, 45 per cent alcohol 20; dose, ℥ 1–2 (4.0–8.0).

t. serpenta'riæ (N.F.), tincture of serpentaria; serpentaria 200, alcohol 650, water 350 (U.S.); serpentaria 4, 70 per cent alcohol 20 (Br.); dose, ℥ ½–2 (2.0–8.0).

t. stramo'nii (U.S., Br.), tincture of stramonium stramonium 100, diluted alcohol 1000 (U.S.); stramonium 4, 45 per cent. alcohol 20 (Br.); dose, ♏ 5–15 (0 3–1.0).

t. strophan'thi (U S., Br.), tincture of strophanthus; strophanthus 100, alcohol 650, water 350 (U.S.); strophanthus ½, 70 per cent. alcohol 20 (Br.); the U.S. tincture is twice the strength of that of the U.S P. 1890, and four times as strong as the B P. tincture; dose (U S.), ♏ 3–8 (0.2–0.5), (Br.), ♏ 5–20 (0.3–1.3).

t. sum'bul (N.F.); sumbul 100, alcohol 1000; dose ℥ 1–2 (4.0–8.0).

t. tinos'poræ (B.A.), tincture of tinospora or of gulancha; resembles tincture of calumba in action; dose, ℥ ½–1 (2 0–4 0).

t. tolu' (U.S.), t. tolutana (Br.), tincture of tolu; balsam of tolu 200, alcohol 1000 (U.S.); balsam of tolu 2, 90 per cent. alcohol 1000 (Br.); used as a flavor in doses of ♏ 15–60 (1 0–4.0).

t. toluta'na æthe'rea, ethereal tincture of tolu; balsam of tolu dissolved in alcohol and ether; used for coating pills.

t. toluta'na solu'bilis, soluble tincture of tolu; a mixture of balsam of tolu, magnesium carbonate, glycerin, alcohol, and water; used as a flavor.

t. urgin'eæ (B.A.), tincture of urginea; urginea 1, macerated in 60 per cent. alcohol 5; dose ♏ 5–15 (0.3–1.0).

t. valeria'næ (U S.), tincture of valerian; valerian 200, alcohol 750, water 250; dose, ℥ ½–2 (2.0–8.0).

t. valeria'næ ammonia'ta (U.S., Br), ammoniated tincture of valerian; valerian 200, aromatic spirit of ammonia 1000 (U.S.); valerian 4 ounces, oil of nutmeg 30 minims, oil of lemon 20 minims, solution of ammonia 2 fluidounces, 60 per cent. alcohol 18 ounces (Br.); dose, ♏ 15–60 (1.0–4.0).

t. valeria'næ in'dicæ ammonia'ta (B.A.), ammoniated tincture of Indian valerian; resembles in preparation and use the official ammoniated tincture of valerian; dose, ℥ ½–1 (2.0–4.0).

t. vanil'læ (N.F.), tincture of vanilla; vanilla 100, sugar 200, alcohol 650, water 350; used as a flavor.

t. vanilli'ni compos'ita, compound tincture (or essence) of vanillin; alcoholic solution of vanillin and cumarin, used for flavoring.

t. vera'tri vir'idis (U.S.), tincture of veratrum viride, tincture of American hellebore; veratrum viride 100,

alcohol 1000; this is one-quarter the strength of the tincture of the U.S.P. 1890; dose, ♏10–30 (0.6–2.0).

t. vibur'ni op'uli compos'ita (N.F.), compound tincture of viburnum; each dose of ʒi (4.0) represents viburnum opulus and dioscorea each gr. 2 (0.13) and scutellaria gr. ½ (0.03), with cloves and cinnamon; emmenagogue, antispasmodic.

t. zedoa'riæ ama'ra, bitter (or compound) tincture of zedoary; a dose of ʒi (4.0) represents zedoary gr. 15 (1.0), aloes gr. 8 (0.5), rhubarb, gentian, white agaric, and saffron each gr. 4 (0.25), in glycerin, alcohol, and water; tonic laxative, resembling Warburg's tincture, t. antiperiodica, without quinine.

t. zingib'eris (U.S.), tincture of ginger; ginger 200, alcohol 1000; dose ♏ 20–60 (1.3–4.0).

t. zingib'eris for'tis (Br.), strong tincture of ginger, essence of ginger; powdered ginger 500, percolated with 90 per cent alcohol 1000; dose ♏ 5–10 (0.3–0.6).

t. zingib'eris mi'tis (Br.), weak tincture of ginger; strong tincture of ginger 200, 90 per cent alcohol to produce 1000; dose, ♏ 30–60 (2.0–4.0).

tinctura'tion. The making of a tincture from a crude drug.

tincture (tink'chur) [L. *tinctura*.] A liquid alcoholic extractive of a non-volatile vegetable substance, tinctures of iodine, ferric chloride, cantharides, and musk excepted; see *tinctura*. **alcohol'ic t.**, a t. made with undiluted alcohol. **ammo'niated t.**, a t. made with ammoniated alcohol (aromatic spirit of ammonia). **ethe'real t.**, a t. made with a mixture of alcohol and ether. **glyc'erinated t.**, a t. made with diluted alcohol to which glycerin is added to facilitate the extraction or to preserve the preparation. **golden t.**, a mixture of 4 fluid drachms of chloroform and 2 fluidounces each of ether, alcohol, and laudanum. **Hahnemann'ian t.**, in homeopathy a preparation of equal parts by weight of alcohol and of the expressed juice of a plant; this is allowed to stand for eight or ten days and is then filtered. **hy"droalcohol'ic t.**, a t. made with diluted alcohol in various proportions with water. **mother t.**, the standard homeopathic tincture of any drug, made by macerating or dissolving the drug in alcohol or water; the attenuations or dilutions are made from this; its sign is *θ*, the Greek *th;* the mother t. of an acid is the first decimal dilution, or one part of acid to nine parts of distilled water, but in a few cases it is the centesimal dilution, and in the case of phosphorus it is the third decimal dilution. **t. of fresh drugs,** tinctura medicamentorum recentium.

tine (tīn) [A. S. *tind*, a prong.] In dentistry a slender pointed instrument.

tin'ea [L. a bookworm.] Ringworm. **t. al'ba,** due to *Trichophyton macfadieni*. **t. albig'ena,** due to *Trichophyton albiscicans*. **t. axilla'ris,** ringworm of the axilla, a localized form of t. tropicalis. **t. bar'bæ,** t. sycosis. **t. cap'itis,** ringworm of the scalp, t. tonsurans. **t. circina'ta,** trichophytosis corporis, herpes tonsurans, ringworm of the body, an eruption, usually annular in form, occurring on the non-hairy parts of the body. **t. circina'ta trop'ica,** t. imbricata. **t. cru'ris,** t. inguinalis, ringworm of the inner side of the thighs and the perineal region, a localized form of t. tropicalis. **t. favo'sa,** favus. **t. fla'va,** a form which is very common in tropical Asia, due to *Malassezia tropica*. **t. imbrica'ta** [L. overlapping like tiles], herpes desquamans, Tokelau or Bowditch Island ringworm, a circinate eruption consisting of a number of concentric rings of overlapping scales, occurring in tropical Asia and the Malay Archipelago, due to the presence of a fungus, one of several species of *Endodermophyton*. **t. inguina'lis,** t. cruris. **t. interse'cta,** an eruption of roundish or oval, slightly elevated, itching patches on the trunk and extremities; the patches may remain isolated or several may fuse together, but they do not form concentric rings; it is due to the presence of a fungus. **t. ke'rion** [G. *kērion*, honeycomb], (1) inflammatory ringworm of the scalp and beard, marked by pustules and a boggy infiltration of the surrounding parts; (2) favus. **t. lupino'sa** [L. *lupinus*, relating to a wolf], favus. **t. ni'gra,** due to *Foxia* (*Cladosporium*) *mansoni* and other species. **t. ni"grocircina'ta,** due to *Trichophyton ceylonense*. **t. nodo'sa,** a trichomycosis affecting the beard, marked by the presence of hard nodular masses surrounding the hairs. **t. sabourau'di,** due to *Trichophyton blanchardi*. **t. syco'sis** [G. *sykon*, a fig], parasitic sycosis, ringworm of the beard, occurring as a mild superficial affection, or in an inflammatory form resembling granuloma trichophyticum. **t. ton'dens,** t. tonsurans. **t. ton'surans,** herpes tonsurans, porrigo furfurans, Gruby's disease, ringworm of the scalp, with involvement of the hair and more or less complete alopecia. **t. trichophyti'na,** ringworm, trichophytosis, a disease of the skin, hair, and nails, due to the growth of a fungus of the genus *Trichophyton*. **t. tropica'lis,** Dhobie itch, epidermophytosis, t. axillaris, t. cruris, t. inguinalis; a pruritic affection due to the presence of a fungus, *Trichophyton perneti*, *T. nodoformans*, *Epidermophyton rubrum*, *T.* or *E. cruris*. **t. un'guium,** ringworm of the nails, causing thickening, roughness, and splitting. **t. ve'ra,** favus. **t. versic'olor** [L. party-colored], pityriasis versicolor, chromophytosis, Eichstedt's disease, a chronic eruption of brownish yellow, branny patches on the skin of the trunk, due to the presence of a fungus, *Microsporon furfur*.

Tinel's sign (te-nelz' sīn). Signe de fourmillement; a sensation of tingling, or "pins and needles," felt in the distal extremity of a limb when percussion is made over the site of a divided nerve above; it indicates beginning of regeneration in the nerve. It is sometimes called "distal tingling on percussion," abbreviated to D.T.P.

tingibil'ity. The property of being tingible.

tingible (tin'jĭ-bl) [L. *tingere*, to dye, + *habilis*, fit, apt.] Capable of being stained.

tingle (ting'gl). To feel a peculiar pricking sensation.

ting'ling. A peculiar pricking thrill, caused by cold, by a mental shock, or striking a nerve, such as the ulnar at the elbow (the "funny bone").

tinkle (ting'kl) [an imitative word.] To make a metallic clinking sound like that of a coin or a small bell. 2. A clinking metallic sound sometimes heard on auscultation over a pneumothorax or a large pulmonary cavity.

tink'ling. Tinkle (2).

Tinnevell'y senna [*Tinnevelly*, Tinnevelli, or Tinavely, a district in Madras, British India.] A senna derived from the cultivated *Cassia angustifolia*, marketed usually as Indian senna.

tinni'tus [L. jingling.] Sonitus, subjective noises (ringing, whistling, booming, etc.) in the ears; called also *t. au'rium*, noises in the ears, and *t. cer'ebri*, head noises. **click'ing t.,** an objective clicking sound in the ear in cases of chronic catarrhal otitis media; it may be audible to a bystander as well as to the patient and is supposed to be due to an opening and closing of the mouth of the Eustachian tube, or to a rhythmical spasm of the velumpalati.

tinos'pora (B.A.). Gulancha, the stem of *Tinospora cordifolia* of India and Ceylon; bitter tonic like calumba; employed in rheumatism and as a stomachic.

tint [L. *tinctus; tingere*, to dye.] A shade of color varying according to the amount of white admixed with the pigment. **tint B,** in *x*-ray measurement by the Sabouraud-Noiré instrument, a color of the pastille indicating the quantity of radiation which will cause the hair to fall; about ⅓ the erythema dose.

tintom'eter [*tint* + G. *metron*, measure.] A scale of colors of different shades, used to determine by comparison the intensity of color of the blood (hemoglobinometer) or of other fluids.

tintometric (tin-to-met'rik). Relating to tintometry.

tintometry (tin-tom'e-trĭ). Estimation of the intensity of color in a fluid by comparison with a standard color scale.

tiodine Cognet (ti'o-din con-ya'). Thiosinamine ethyliodide, a combination of sulphur and organic iodine, proposed for the treatment of sclerosing processes, such as arteriosclerosis, sclerosing arthritides, etc.

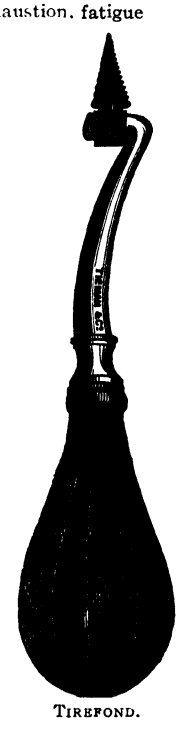
tip. 1. A point, a more or less sharp extremity. 2. A separate, but attached piece, of the same or another structure, forming the extremity of a part.

tip-foot. Talipes equinus.

tiqueur (te-ker') [Fr.] One who suffers from a tic.

tire [A.S. *teorian*.] 1. To fatigue, to exhaust. 2. To become fatigued. 3. Exhaustion. fatigue

tireballe (tēr-bal') [Fr. *tirer*, to draw, + *balle*, ball.] An instrument in the form of a screw or spiral, designed for extracting a bullet or other foreign body from the tissues.



TIREFOND.

tirefond (tēr-fawn') [Fr. *tirer*, to pull, + *fond*, bottom.] An instrument in the form of a conical screw, designed for raising depressed bone as in fracture of the skull.

tires (tīrz). Trembles, milk*-sickness.

tiring (tīr'ing). Fixing the fragments of a broken bone by fastening a wire around them.

tisane (te-zan') [F.] The equivalent in the French Codex of infusum in the U.S.P. and B.P. or of a "tea" in English and American domestic medicine; ptisan.

tis'ic. Phthisis.

tissue (tish'u) [Fr. tissu, woven; L. *texere* to weave] A collection of cells or derivatives of cells, forming a definite structure. **ad'enoid t.,** lymphoid t. **ad'ipose t.,** fatty t., a structure consisting chiefly of fat droplets, originating in the granular cells of areolar t. and arranged in lobular groups or along the course of one of the smaller blood-vessels. **are'olar t.,** the type of connective t. consisting of wavy bundles of white fibrous tissue mingled with straight threads of elastic tissue contained in a ground substance of mucin in which are imbedded also the connective-tissue cells; these are flattened lamellar cells, granule cells, Waldeyer's plasma cells, and wandering cells. **cartilag'inous t.,** (1) cartilage, a connective t., the ground substance of which is hard and yields chondrin on boiling; (2) a pure connective tissue having a cartilaginous consistency, as the tarsal plate (tarsus) of the eyelid. **connec'tive t.,** the supporting or framework tissue of the animal body, formed of fibrous and intercellular substance with more or less numerous cells of various kinds; it is derived from the mesenchyme and this in turn from the mesoderm; the varieties of connective t. are: areolar, adipose, fibrous, elastic, and lymphoid tissues, cartilage, and bone; the blood and lymph may be regarded as connective tissues the ground substance of which is a liquid. **elas'tic t.,** a form of connective t. in which the elastic fibers predominate; it constitutes the ligamenta subflava of the vertebræ and the ligamentum nuchæ, especially of quadrupeds; it occurs also in the walls of the arteries and of the air-tubes and connects the cartilages of the larynx. **epithelial t.,** see *epithelium*. **fi'brous t.,** a tissue composed of bundles of white fibers between which are rows of connective-tissue cells; the tendons, ligaments, aponeuroses, and some of the membranes, such as the dura mater. **gelat'inous t.,** an embryonic connective tissue found in the umbilical cord, and constituting the vitreous humor of the eye. **hy'lic t.,** primitive-pulp t.; see under *hylic*. **lepid'ic t.,** lining-membrane t.; see under *lepidic*. **li'ning-mem'brane t.,** lepidic t. **lymphoid t.,** retiform t. in which the meshes of the network of white fibers are filled with lymphoid cells, or lymph-corpuscles. **mesen'chymal t.,** mucous t., the embryonic tissue from which all connective tissues are derived. **mucoid t.,** gelatinous t. **mucous t.,** mesenchymal t. **mus'cular t.,** muscle; *voluntary muscular t.* is composed of long cylindrical fibers, or muscle-cells (plasmodia), containing several nuclei and embedded in a thin ground substance; the fibers are marked by transverse lines, whence the term striated or striped muscle; *involuntary muscular t.* consists of long spindle-shaped uninuclear cells held together by a delicate connective-tissue membrane. **nervous t.,** a highly differentiated tissue composed of nerve-cells, or ganglion-cells, nerve-fibers, or dendrites, and a supporting tissue, the neuroglia. **oss'eous t.,** bone, a connective tissue, the ground substance of which is calcified, or hardened by the deposit of various lime salts—phosphate, carbonate, and some fluoride. **prim'itive car'diac t.,** that tissue in the mammalian heart which represents the cardiac tube of the primitive vertebrates. **prim'itive-pulp t.,** hylic t. **retic'ular t., ret'iform t.,** areolar t. in which there is little or none of the ground substance, the white fibers forming a strong and dense network. **subcuta'neous t.,** a layer of loose connective tissue immediately beneath the skin and closely attached to the corium by coarse fibrous bands, *retinacula cutis;* it contains more or less fat except in the auricles, eyelids, penis, and scrotum.

tis'sue-rem'edies. Twelve salts especially used in the biochemical school of homeopathy; these are: kali sulfuricum, natrum sulfuricum, calcarea fluorica, silicea, calcarea sulfurica, natrum muriaticum, kali muriaticum, calcarea phosphorica, magnesia phosphorica, ferrum phosphoricum, natrum phosphoricum and kali phosphoricum.

tis'sue-ten'sion. A theoretical condition of equilibrium or balance between the tissues and cells whereby overaction of any part is restrained by the pull of the mass.

tita'nium [*Titan*, one of the primitive gods of antiquity.] A metallic element, symbol Ti, atomic weight 48.1.

titer, titre (ti'tur) [Fr. *titre*, standard.] The standard of strength per volume of a volumetric test solution.

titilla'tion. Tickling.

ti'trate. To analyze volumetrically by means of a test solution of standard strength.

titra'tion. Volumetric analysis by means of the addition of definite amounts of a test solution to a solution of a known amount of the substance analyzed.

tituba'tion [L. *titubare*, to stagger.] 1. A staggering or stumbling in trying to walk, due to a spinal lesion. 2. Restlessness. **lingual t.**, stammering, stuttering.

Tizzoni's antitox'in (tid-zo'ne) [Guido *Tizzoni*. Italian physician, 1853-1932.] Tetanus antitoxin **T.'s test**, for iron in the tissue: it consists in treating the tissue with a 2 per cent. solution of potassium ferrocyanide and then with a 0.5 per cent. solution of hydrochloric acid; a blue coloration indicates the presence of iron.

Tl. Chemical symbol of *thallium*.

Tm. Chemical symbol of *Thulium*.

Tn. Abbreviation for normal intraocular tension.

T.N.T. Abbreviation of trinitrotoluene.

TO [Ger. *tuberculin oberer* (upper), + *t. original*.] Old tuberculin; the upper layer of fluid removed in the preparation of new tuberculin; see under *tuberculin*.

TOA [Ger. *tuberculin-original-alt*.] A tuberculin apparently corresponding to Denys's bouillon filtré (B.F.).

toadstool. 1. A mushroom, usually of the genus *Agaricus*. 2. Popularly, a poisonous mushroom of any genus.

tobac'co [of Native Caribbean origin.] The dried leaves of *Nicotiana tabacum* and other species of *N.*, used as a sedative by smoking, chewing, or inhalation of the powdered leaves. It contains various narcotic and other principles—nicotine, pyridine, collidine, and picoline. Tobacco was formerly employed in medicine to relax spasm in strangulated hernia, asthma, hiccup, etc., and applied externally in scabies and other skin affections. **In'dian t.**, lobelia.

tobacc'oism, tobacco'sis. Tobacco poisoning, nicotinism.

To'bold's appara'tus (to'bolt) [Adelbert August Oskar *Tobold*, German laryngologist, *1827.] An illuminating apparatus, with three lenses, for use in laryngoscopy.

toc"odynamom'eter [G. *tokos*, birth, + *dynamis*, force, + *metron*, measure.] Tocometer.

tocol'ogy [G. *tokos*, birth, + *-logia*.] Obstetrics, the branch of medical science dealing with childbirth.

tocoma'nia [G. *tokos*, birth, + *mania*, frenzy.] Puerperal mania.

tocom'eter [G. *tokos*, birth, + *metron*, measure.] An instrument for measuring the force of the uterine contractions in labor.

Todd's cirrho'sis [Robert Bentley *Todd*, English physician, 1809–1860.] Hypertrophic cirrhosis of the liver. **T.'s po'tion**, tincture of canella 5, syrup 30, brandy 40, water 75.

todda'lia [Malabar.] (B.A.) Lopez-root, the bark of the root of *Toddalia aculeata*, a prickly climbing plant of India; employed as an aromatic tonic.

toddy [Hindoo, *tādi*.] 1. Pahu wine. 2. Sweetened gin and water.

toe [A.S. *ta*.] Digitus pedis, one of the digits of the feet. **great t.**, the toe on the inner, tibial side of the foot, corresponding to the thumb; like the latter it has one phalanx less than the other digits. **hammer t.**, permanent flexion at the mid-phalangeal joint of one or more of the toes. **seedy t.**, a wart-like fungous growth between the hoof and the coffin-bone in the horse.

toe-clo'nus. Alternating movements of flexion and extension of the great toe following forcible extension at the metatarsophalangeal joint.

toe-crack. See *sand-crack*.

toe-drop. A drooping of the anterior portion of the foot, owing to paralysis of the muscles which dorsally flex the foot.

toe-nail. One of the nails on the toes. **in'growing t.**, onyxis, a lateral projection of the borders of a toe-nail into the soft parts, causing pain and sometimes resulting in paronychia.

Toepfer's test (tèp'fer) [Alfred Eduard *Toepfer*, German physician, *1858.] For free hydrochloric acid in the gastric contents; a 0.5 per cent. alcoholic solution of dimethylamidoazobenzene gives, in the presence of a fluid containing free hydrochloric acid, a bright cherry-red color.

toe-phenom'enon. Babinski's* phenomenon.

toi'let [Fr. *toilette*.] The cleansing of the parts after childbirth or of a wound after an operation preparatory to the application of the dressing.

Toison's solution (twah-zawń') [J. *Toison*, French histologist, *1858.] A blood diluent and leucocyte stain, consisting of methyl violet 0.025, sodium chloride 1, sodium sulphate 8, glycerin 30, water to 200.

To'kelau ring'worm [*Tokelau*, a group of islands in Oceanica.] Tinea imbricata.

tolamine (tō'l-am'ēn). Chloramine-T.

tol'erance, tolera'tion [G. *tolerare*, to endure.] The power of resisting the action of a poison, or of taking a drug continuously or in large doses without injurious effects.

tol'erant. Having the property of tolerance.

Toll'ens' reac'tion [Bernhard *Tollens*, German chemist, 1841–1918.] A mixture of 3 c.c. of a saturated solution of phloroglucin in hydrochloric acid and 0.5 c.c. of urine decolorized with animal charcoal is warmed in a water-bath; if pentose and glycuronic acid are present an intensely red layer appears on the surface which gradually spreads throughout the fluid; if, instead of phloroglucin, one uses orcin, there is first a reddish and then a violet coloration.

tolu (tŏ-loo') (U.S.) Balsamum tolutanum (Br.), tolu, balsam of tolu; a balsam obtained from *Toluifera balsamum* (fam. *Leguminosæ*); a brown or yellowish-brown plastic solid, having a pleasant aromatic odor and a mild aromatic taste; employed as a stimulant expectorant in the form of the syrup or of the tincture.

tol'uene. Toluol.

tolu'idine. Amidotoluene, one of three isomeric substances, C_7H_9N, derived from toluol.

tol'uol. Toluene, methyl-benzene; obtained by the dry distillation of tolu and other resinous bodies, and also derived from coal-tar; its physical and chemical properties resemble those of benzol.

tolu'ylene. Stilbene, a derivative of toluol; used as a basis for dyes.

tolu"ylenedi'amine. Alphadiaminotoluol, a poisonous substance having a destructive influence on the erythrocytes.

tolyl (tol'il) [*tol*(uene) + *-yl* (G. *hylē*, matter).] A univalent radical, $C_6H_4CH_3$. **bromide**, xylyl

bromide, $CH_3C_6H_4CH_2Br$, one of the poison gases used in the World War. **t. hydrox'ide,** cresol.

tolypy'rine. Tolyantipyrine, $C_{12}H_{14}N_2O$, obtained by the action of acetoacetic ether on paratolylhydrazin with methylation of the resulting product; soluble in 10 parts of water; antipyretic and analgesic in doses of gr. 10–30 (0.6–2.0). **t. sal'icylate,** tolysal, slightly soluble in water; employed in neuralgia and rheumatism in doses of gr. 8–15 (0.5–1.0).

tol'ysal. Tolypyrine salicylate.

tolysin (tol'ĭ-sin). Trade name of a make of neocinchophen.

Toma's sign (to'mahz sīn). To distinguish between inflammatory and non-inflammatory ascites; in inflammatory conditions of the peritoneum the mesentery contracts, drawing the intestines over to the right side; consequently, when the patient lies on his back, tympany is elicited on the right side, dulness on the left.

Tomaselli's disease' (to-mah-sel'le). Hemoglobinuria supposed to be due to quinine intoxication.

toma'to [Mex. *tomatl.*] The edible fruit of *Lycopersicum esculentum,* a solanaceous plant; largely used as a vegetable and a salad.

-tome [G. *tomos,* cutting.] A termination denoting a cutting instrument, the first element in the compound usually indicating the part which the instrument is designed to cut.

tomen'tum, tomen'tum cer'ebri [L. a stuffing for cushions.] The numerous small blood-vessels passing between the cerebral surface of the pia mater and the cortex of the brain.

Tomes's fi'brils [Sir John *Tomes,* English dentist, 1836–1895.] Processes from the odontoblasts which are continued into the tubules of dentine **T.'s gran'ular lay'er,** the outer less dense layer of dentine next to the cement. **T.'s process,** a fibrillar process from an enamel-cell, in or around which calcification is assumed to occur.

tomoma'nia [G. *tomos,* cutting, + *mania,* frenzy.] 1. A term applied to the propensity of certain surgeons to resort to operation for small ills which may be removed by conservative treatment; furor secandi, cacoethes operandi. 2. A morbid desire of being operated upon.

tomoto'cia [G. *tomos,* cutting, + *tokos,* birth.] Extraction of a child by hysterotomy, cesarean section.

-tomy [G. *tomē,* incision.] A termination denoting a cutting operation.

tonaphasia (tōn-ă-fa'zĭ-ah) [G. *tonos,* tone, + *a* priv. + *phasis,* speech.] Vocal amusia; loss, through cerebral lesion, of the ability to sing.

tone [G. *tonos,* tone or a tone.] 1. A musical sound. 2. The character of the voice expressing an emotion. 3. Firmness of the tissues; normal functioning of all the organs; strength.

tone'-color. Timbre.

tone'-deafness. Amusia.

tonga (tong'gah) (N.F.). A mixture of equal parts of the root of *Epiphremnum pinnatum* (fam. *Araceæ*) and of the bark of *Premna arborea* (fam. *Verbenaceæ*), plants of the Tonga and Fiji Islands; employed in the treatment of neuralgia in doses of gr. 5–30 (1.0–2.0). **t. bean,** tonka bean.

ton'galine. Trade name of a preparation of tonga, cimicifuga, and colchicine and pilocarpine salicylates; recommended in neuralgia, rheumatism, and gout.

ton'gine. An alkaloid derived from tonga.

tongue (tung) [A.S. *tunge.*] Lingua, the muscular structure in the mouth, attached to its floor; it is the organ of taste, an accessory organ of speech, and turns the food in the mouth, insalivating it, and passing it backward into the pharynx. **baked t.,** the dry blackish tongue noted in the typhoid state. **ball t.,** a smooth t., with indistinct papillæ, observed in pernicious anemia. **bi'fid t.,** cleft t., one whose extremity is divided longitudinally for a greater or lesser distance. **black t.,** nigrities linguæ, glossophytia, the presence of a blackish to yellowish brown patch or patches on the tongue, accompanied by elongation of the papillæ; due to the presence of a fungous growth of glossophyton. **cleft t.,** bifid t. **coated t.,** one with a whitish layer on its upper surface, composed of epithelial débris, food particles and bacteria; it is often an indication of indigestion or of fever. **dotted t.,** one in which each separate papilla is capped with a whitish deposit. **fluted t.,** furrowed **t. furred t.,** coated **t. fur'rowed t.,** a tongue marked by numerous longitudinal grooves on the dorsal surface. **geograph'ical t.,** the occurrence on the dorsum of the tongue of peripherally spreading scaly patches, the coalescence and mutual interference of the edges of which produce an irregular map-like appearance. **grooved t.,** furrowed t. **hairy t.,** black t. **raspberry t.,** dark red strawberry t. **ribbed t.,** furrowed t. **scrotal t.,** a chronic glossitis marked by multiple deep fissures on the surface of the organ. **smoker's t.,** leucoplakia. **stippled t.,** dotted t. **straw'berry t.,** a tongue with a whitish coat through which the enlarged papillæ project as red points, characteristic of scarlet fever. **sul'cated t.,** furrowed t. **wooden t.,** actinomycosis. **wrinkled t.,** furrowed t.

absence, aglossia. **beneath the,** sublingual, hypoglossal ranine. **bifid or double,** diglossia. **border,** margo lateralis. **description of,** glossography. **diagnosis from observing the,** glossoscopy, glossosemiotics. **disease of,** glossopathy. **division of frenum,** ankylotomy. **enlarged,** macroglossia, megaloglossia; glossocele, paraglossa. **excision of,** glossectomy, glossosteresis, glossotomy. **hemorrhage,** glossorrhagia. **hypertrophy,** macroglossia, megaloglossia, glossauxis, glossyper-trophy, glossocele. **imperfect development,** ateloglossia. **inflammation,** glossitis. **instrument to determine firmness of,** glossodynamometer. **instrument to record movements,** glossograph. **lower surface,** facies inferior linguæ. **pain,** glossagra, glossalgia, glossodynia. **paralysis,** glossoplegia, glossolysis. **plastic surgery,** glossaplasty, glossoplasty. **prognosis from observing the,** glossom antia, **projecting,** glossocele, glossoptosia, **relating to,** glossal, lingual; ranine (under surface). **root,** radix linguæ. **science relating to,** glossology. **small,** microglossia. **spasm,** glossospasm; aphthongia. **suture of,** glossorrhaphy. **tip,** apex linguæ. **tumor-**glossocele, glossoncus; ranula (beneath). **upper surface,** dorsum linguæ.

tongue-bone. Hyoid bone.

tongue-depress'or. An instrument with broad flat extremity used for pressing down the tongue to facilitate examination of the fauces and pharynx.

tongue-shaped. Linguiform.

tongue-spat'ula. Tongue-depressor.

tongue-swall'owing. A slipping back of the tongue over the laryngeal orifice, causing choking.

tongue-tie. Ankyloglossia, abnormal shortness of the frenulum linguæ. **operation for relief of,** ankylotomy.

tongue-trac'tion. Laborde's* method.

ton'ic [G. *tonikos; tonos,* tone.] 1. In a state of continuous, unremitting action, noting especially a muscular contraction. 2. Increasing physica or mental tone or strength, invigorating. 3. A remedy which restores enfeebled function and promotes vigor and a sense of well-being. Tonics are qualified, according to the organ or system upon which they act, as cardiac, digestive,

hematic, vascular, nervine, uterine, general, etc. **bitter t.**, a tonic of bitter taste, such as quinine, gentian, quassia, etc., which acts chiefly by stimulating the appetite and improving digestion. **t. spasm**, a continuous muscular contraction, as in tetanus; opposed to *clonic spasm*. **t. treatment**, treatment of syphilis by the administration of small doses of mercury continued over a long period.

tonicity (to-nis'ĭ-tĭ). A state of normal elastic tension of the tissues, in virtue of which the parts are kept in shape and, as it were, alert and ready to functionate in response to a suitable stimulus.

tonicize (ton'ĭ-sīz). To produce tone or tension in a part; to cause tonic contraction of a muscle.

tonicoclonic (to-nĭ-ko-klon'ik). Both tonic and clonic, referring to muscular spasms.

ton'ikum Roche. Trade name of a compound of arsylen, manganese, nux vomica, kola, and phosphorus, employed as a general tonic in doses of ʒ1-2 (4.0-8.0).

tonitrophobia (to-nĭ-tro-fo-bĭ'ah) [L. *tonitrus*, thunder, + G. *phobos*, fear.] Astrapophobia, morbid fear of thunder.

ton'ka-bean [native Guiana, *tonca*.] Dipteryx.

tonoclonic (to-no-klon'ik). Tonicoclonic.

to'nograph [G. *tonos*, *tone*, + *graphō*, I record.] An instrument for recording the blood-pressure.

to'nol. Trade name for a special preparation of glycerophosphates, the number of drugs in the mixture being indicated by a numeral prefix, as duotonol, triotonol, sextonol, etc.

tonom'eter [G. *tonos*, tone, + *metron*, measure.] 1. An instrument for determining intraocular tension. 2. An instrument for determining the degree of blood-pressure; see *sphygmomanometer*.

tonom'etry. The measurement of the tension of a part, as intraocular or intravascular tension.

to'nophant [G. *tonos*, tone, + *phainō*, I appear.] An instrument for visualizing sound waves.

to'noplast [G. *tonos*, tension, + *plastos*, formed.] An intracellular structure or vacuole.

tonoscillograph (to-nos'cil-o-graf) [G. *tonos*, tension, + L. *oscillare*, to swing, + G. *graphō*, I write.] An instrument which produces graphic records of arterial and capillary pressures as well as of individual pulse characters.

Tonquin-bean (ton-kin'bēn). Tonka-bean.

tonquinol (ton'kin-ol). Artificial musk.

ton'sil [L. *tonsilla*.] 1. Any collection of lymphoid tissue, specifically the faucial or palatine tonsil. 2. An anatomical structure resembling the faucial tonsil. **cerebell'ar t.**, tonsilla cerebelli. **Eusta'chian t.**, Gerlach's t., a collection of lymphoid tissue within the Eustachian tube near its pharyngeal orifice, noduli lymphatici tubarii [BNA]. **fau'cial t.**, tonsilla palatina [BNA]. **Ger'lach's t.**, Eustachian t. **laryn'geal t.**, an irregular collection of lymphoid tissue on the ventricular band, or false vocal cord, on either side, noduli lymphatici laryngei [BNA]. **lin'gual t.**, tonsilla lingualis [BNA]. **Lusch'ka's t.**, tonsilla pharyngea [BNA]. **na'sal t.**, tubercle of Morgagni or of Zuckerkandl, a fusiform collection of lymphoid tissue on the nasal septum opposite the anterior extremity of the middle turbinated body. **pal'atine t.**, tonsilla palatina [BNA]. **pharyn'geal t.**, Luschka's t., tonsilla pharyngea [BNA]. **submerged' t.**, a faucial t. which is flat and lying below the level of the pillars of the fauces. **third t.**, tonsilla pharyngea [BNA]. **tube t.**, Eustachian t.

tonsill'a [L.] Tonsil, amygdala. **t. cerebell'li** [BNA], cerebellar tonsil, amygdala cerebelli, a rounded lobule on the under surface of each cerebellar hemisphere, corresponding to the uvula of the vermis. **t. intestina'lis**, Peyer's patch, noduli lymphatici aggregati [BNA]. **t. lingua'lis** [BNA], lingual tonsil, a collection of lymphoid follicles on the posterior or pharyngeal portion of the dorsum of the tongue. **t. palati'na** [BNA], faucial or palatine tonsil, a large oval mass of lymphoid tissue embedded in the lateral wall of the oral pharynx on either side between the pillars of the fauces. **t. pharynge'a** [BNA], pharyngeal tonsil, third tonsil, Luschka's tonsil, a collection of more or less closely aggregated lymphoid nodules on the posterior wall of the nasopharynx, the hypertrophy of which constitutes the morbid condition called *adenoids*.

ton'sillar, ton'sillary. Amygdaline, relating to a tonsil, especially the faucial, or palatine tonsil. **t. ring**, Waldeyer's* throat-ring.

tonsillec'tomy [L. *tonsilla*, tonsil, + G. *ektomē*, excision.] Amygdalectomy; removal of the entire tonsil.

ton'sillith. Amygdalolith.

tonsillit'ic. Relating to or suffering from tonsillitis; amygdalitic.

tonsillitis (ton-sil-ī'(e')tis) [L. *tonsilla*, tonsil, + G. *-itis*.] Amygdalitis, inflammation of a tonsil, especially of the palatine tonsil. **lacu'nar t.**, inflammationof the mucous membrane lining the tonsillar crypts. **parenchy'matous t.**, inflammation of the entire substance of the faucial tonsil often passing into quinsy. **superfi'cial t.**, inflammation simply of the mucous membrane covering the tonsil.

tonsillolith (ton'sil-o-lith) [L. *tonsilla*, tonsil, + G *lithos*, stone.] Amygdalolith; a calcareous concretion in a distended tonsillar crypt, tonsillar calculus.

ton'sillotome [L. *tonsilla*, tonsil, + G. *tomē*, a cutting.] Amygdalotome; an instrument, sometimes modelled after a guillotine, for use in cutting away a portion of an hypertrophied tonsil.

tonsillot'omy. Amygdalotomy; the cutting away of a portion of an hypertrophied faucial tonsil.

tonsilloty'phoid. Typhoid fever complicated with a pseudomembranous deposit on the tonsils.

tontine (ton-tēn') [after Lorenzo *Tonti*, Italian banker, 17th century.] A form of life-insurance in which no dividends are paid until the end of a specified period, at which time the profits are divided among the survivors and those of the same class of insurance who have kept their policies in force.

to'nus [L.; G. *tonos*.] Tonicity.

tooth, pl. *teeth* [A.S. *tōth*.] Dens, one of the hard conical structures set in the alveoli of the upper and lower jaws, employed in mastication and assisting also in articulation. A tooth is a dermal structure, not bone; it is composed of *dentine* (substantia* eburnea [BNA]), encased in *cement* (substantia* ossea [BNA]) on the covered portion, and *enamel* (substantia* adamantina [BNA]), on its exposed portion. It consists of a *root* (radix) buried in the alveolus, a *neck* (collum) covered by the gum, and a *crown* (corona) the exposed portion. In the center is a hollow, the *tooth-cavity* or pulp-cavity (cavum dentis [BNA]), filled with a connective-tissue reticulum containing a jelly-like substance (pulpa dentis) and blood-vessels and nerves which enter through a canal at the apex of the root. The 20 milk-teeth or deciduous teeth (see *dens* deciduus*) appear between the sixth or ninth and the twenty-fourth months of life. These fall out and are replaced by the 32 perma-

nent teeth (see *dens* permanens*) appearing from the 5th or 7th to the 16th or 23d years. There are four kinds of teeth; incisor (dens incisivus), canine (dens caninus), bicuspid or premolar (dens premolaris), and molar (dens molaris). See *dens, dental, dentition,* and *teeth.* **axle t.,** molar t. **bicus'pid t., bicus'pidate t., dens* premolaris. buck t.,** a tooth which has erupted outside of the dental arch. **ca'nine t.,** dens caninus. **cross-pin t.,** an artificial t. in which the pins are placed horizontally. **cuspid t., cus'pidate t.,** dens caninus. **decid'uous t.,** milk t. **eye t.,** the canine tooth, on either side, in the upper jaw. **gum t.,** a molar t., dens* molaris. **inci'sor t.,** dens incisivus. **infundib'ulum of the t.,** see *mark.* **milk t.,** dens deciduus. **mo'lar t., multicus'pid t.,** dens* molaris. **per'manent t.,** dens permanens. **premo'lar t.,** dens premolaris. **stomach t.,** one of the lower canine teeth. **straight-pin t.,** an artificial tooth with the pins vertical. **succeda'neous t.,** dens succedaneus, one of the permanent teeth which replace the deciduous teeth, an incisor, cuspid, or bicuspid. **wisdom t.,** dens serotinus.

toothache (tooth'āk). Pain in a tooth, of neuralgic character or due to caries or periodontitis; odontalgia.

tooth-band. Lamina dentalis.

tooth-cough. Cough of reflex origin, due to caries or other disease or malformation of the teeth.

toothed. Having teeth; having tooth-like projections, dentate, serrate. **t. ver'tebra,** axis, epistropheus [BNA].

tooth-germ (tooth'jurm). The enamel organ and dentine papilla, constituting the developing tooth. **reserve' t.-g.,** enamel organ and papilla of a permanent tooth.

tooth-key. An instrument formerly used for extracting a tooth by grasping it and then twisting it by a movement similar to the turning of a key.

tooth-rash. Strophulus.

tooth-sac. A capsule, developed from the connective tissue of the gum, which encloses the developing tooth.

tooth-spasms (tooth'spazmz). Infantile eclampsia.

Tooth's type [Howard Henry *Tooth,* English physician, 1856–1925.] Charcot*-Marie type of progressive muscular atrophy.

topal'gia [G. *topos,* place, + *algos,* pain.] Pain localized to one spot; the presence of a painful point or spot; a symptom occurring in hysteria or neurasthenia.

topesthesia, topæsthesia (to-pes-the'zĭ-ah) [G. *topos,* place, + *aisthēsis,* sensation.] The ability to locate any part touched, through the tactile sense alone.

topha'ceous. Sandy, gritty; relating to a tophus.

to'phi. Plural of tophus.

to'phus, pl. *tophi* [L. a calcareous deposit from springs, tufa.] 1. A deposit of sodium biurate in the subcutaneous fibrous tissues in the neighborhood of a joint or in the cartilage of the external ear; chalk-stone. 2. A salivary calculus, or tartar. 3. A node or swelling on the periosteum of the cranium or tibia in syphilis.

top'ica [neut. pl. of L. *topicus,* local, agreeing with *remedia.*] Remedies for local external use.

top'ical [G. *topikos; topos,* place.] Relating to a definite place or locality, local.

Topinard's angle (tŏ-pe-nar') [Paul *Topinard,* French anthropologist, 1830–1912.] Facial angle, ophryospinal angle.* **T.'s line,** a line running between the glabella and the mental point.

topoanesthesia (to-po-an-es-the'zĭ-ah) [G. *topos,* place, + *anesthesia.*] Inability to localize a cutaneous sensation.

topognosis (to-pog-no'sis) [G. *topos,* place, + *gnōsis,* knowledge.] The recognition of the location of a painful or other sensation; topes thesia.

topograph'ical. Relating to topography. **t. anat'omy,** regional anatomy, topography.* **t. diagno'sis,** the determination of the seat of a disease.

topog'raphy [G. *topos,* place, + *graphē,* a description.] In anatomy, the description of any part of the body, especially in relation to a definite and limited area of the surface.

toponarco'sis [G. *topos,* place + *narkōsis,* a benumbing.] A localized cutaneous anesthesia.

toponeuro'sis [G. *topos,* place.] A localized neurosis.

to'ponym [G. *topos,* place, + *onyma,* name.] A regional term, one designating a region as distinguished from the name of a structure, system, or organ.

topon'ymy. Topical or regional nomenclature, as distinguished from *organonymy.**

topophobia (to-po-fo'bĭ-ah) [G. *topos,* place, + *phobos,* fear.] Abnormal fear or dread of certain localities.

topophylaxis (to-po-fi-lak'sis) [G. *topos,* place, *phylaxis,* guarding, protection.] Prevention of arsphenamine shock by a tourniquet applied to the limb above the site of injection and its slow release five or six minutes later.

topotherm"esthesiom'eter [G. *topos,* place, + *thermē,* heat, + *aisthēsis,* sensation, + *metron,* measure.] A device for determining the temperature sense in different parts of the surface.

toramine (tor-am'ēn). Trade name of ammonium trichlorbutylester-malonic acid; employed for the relief of cough.

tor'cular Heroph'ili [L. wine-press of *Herophilus.**] Confluens sinuum [BNA].

to'ric. Relating to, or having the curvature of, a torus. **t. lens,** a lens ground on a glass curved like the surface of a torus.

tor'men. See *tormina.*

tor'ment [L. *tormentum,* anguish.] Suffering, anguish; colic, ileus, tormina.

tor'mentil, tormentil'la. The rhizome of *Potentilla tormentilla,* septfoil, a plant of northern Europe and Asia; employed for the same purposes as geranium.

tor'mina [L. pl. of *tormen; torquere,* to twist.] Severe colic or griping intestinal pain.

tor'minal. Relating to or marked by tormina.

Tornwald's disease' (torn'vahlt) [Gustavus Ludovicus *Tornwaldt,* German physician, 1843–1910.] Inflammation of the lacuna or crypt of the pharyngeal tonsil, with the formation of a cyst containing pus; called also *T.'s angina, T.'s bursitis.*

to'rose, to'rous [L. *torosus,* fleshy.] Bulging, tubercular, knobby.

tor'pent [L. *torpere,* to be numb.] 1. Torpid. 2. A benumbing agent.

tor'pid [L. *torpidus; torpere,* to be numb.] Inactive, sluggish.

torpid'ity. Torpor.

tor'por [L.] Numbness, insensibility, stupor. **t. intestino'rum,** constipation. **t. peristal'ticus,** atonic constipation. **t. ret'inæ,** a form of nyctalopia, the retina responding only to strong luminous stimuli.

torrefac'tion [L. *torrefacere,* to parch.] Parching or drying by heat; a pharmaceutical operation for rendering drugs friable.

torrefy (tor'e-fi). To parch to dry by heat.

Torricellian exper'iment (tor-re-chel'ĭ-an) [Evangelista *Torricelli,* Italian physicist, 1608–1647.] A

glass tube sealed at one end is filled with mercury and is then everted with the open end beneath the surface of mercury in an open vessel; the mercury in the tube will be observed to sink to a certain point, about 30 inches above the level of the mercury in the vessel, being kept at this elevation by the pressure of the atmosphere; this experiment revealed the principle of the mercurial barometer. **T. vac'uum,** the vacuum at the upper end of the barometer tube resulting from the sinking of the column of mercury to the point where it is balanced by the atmospheric pressure.

torsiom'eter [L. *torsio,* torsion, + G. *metron,* measure.] Clinometer.

tor'sion [L. *torquere,* to twist.] 1. A twisting or rotation of a part upon its axis. 2. Twisting of the cut end of an artery to arrest hemorrhage. **t. angle,** the angle formed by any two axial planes of a long bone. **t. forceps,** forceps used for making torsion of an artery to arrest hemorrhage. **t. fracture,** fracture of a bone caused by a twisting force. **t. of a tooth,** twisting of an irregular tooth without extraction, to bring it into line with the dental arch.

tor'sive. Twisted in a spiral.

torso (tor'so) [Ital.] The trunk; the body without relation to head or extremities.

torsoclu'sion [L. *torquere,* to twist, + *cludere,* to close.] 1. Acupressure performed by entering the needle in the tissues parallel with the artery, then turning it so that it crosses the artery transversely, and passing it into the tissues on the opposite side of the vessel. 2. Torso-occlusion, the condition of a tooth which is twisted around its vertical axis.

torticoll'ar. Relating to or marked by torticollis.

torticol'lis [L. *tortus,* twisted, + *collum,* neck.] Wry-neck, stiff-neck, caput obstipum, a spasmodic contraction of the muscles of the neck, chiefly those supplied by the spinal accessory nerve; the head is drawn to one side and usually rotated so that the chin points to the other side. **intermitt'ent t.,** t. spastica. **rheumat'ic t.,** symptomatic t. **spu'rious t.,** stiffness of the neck due to caries of the cervical vertebræ. **symptomat'ic t.,** rheumatic t., stiff-neck due to rheumatism of the muscles of the neck, chiefly of the sternocleidomastoid, occurring especially in children. **t. spas'tica,** intermittent stiff-neck due to clonicotonic spasm of the neck muscles.

tor'tuous [L. *tortuosus.*] Having many curves, full of turns and twists.

tor'ula [L. *torulus,* dim. of *torus,* a swelling.] A former genus of budding fungi; now indicating the globular forms of these microorganisms, such as are frequently assumed by the wild yeasts.

tor'uliform [L. *torulus,* dim. of *torus,* a knot, swelling, + *forma,* shape.] Having the form of a torula, beaded; noting a plate culture with a group of similar colonies resembling a budding yeast-plant; see cut under *colony,* 2, B.

tor'uloid [L. *torulus,* dim. of *torus,* a knot, swelling, + G. *eidos,* resemblance.] Toruliform.

tor'ulus [L. dim. of *torus,* a swelling.] A minute elevation, papilla. **t. tac' ilis,** tactile elevation, one of a number of small areas in the skin of the palms and soles especially rich in sensory nerve-endings.

to'rus [L. a bulge.] 1. A geometrical figure formed by the revolution of a circle round the base of any of its arcs; such is the convex molding at the base of a pillar. 2. A rounded swelling, such as that caused by a contracting muscle. 3. Tuber cinereum. 4. In botany, the base into which the parts of a single flower are inserted. **t. fronta'lis,** a slight prominence on the frontal bone at the root of the nose. **t. ma'nus,** the metacarpal region. **t. occipita'lis** [BNA], an occasional ridge near the superior curved line of the occipital bone. **t. palati'nus** [BNA], palatine torus or protuberance; a bony swelling sometimes present upon the median line (median palatine suture) of the roof of the oral cavity. **t. spira'lis,** stria medullaris. **t. tuba'rius** [BNA], Eustachian cushion, a ridge in the pharyngeal wall posterior to the opening of the Eustachian tube, caused by the projection of the cartilaginous portion of this tube. **t. ureter'icus,** a smooth ridge in the bladder wall stretching between the ureteral orifices. **t. uteri'nus,** a transverse ridge on the back part of the isthmus uteri, formed by the junction of the rectouterine, or sacrouterine folds.

totaquina (to'tah-kwin-ah) [L. *totus,* all,] (Br.), totaquine, a mixture of alkaloids from the bark of *Cinchona succirubra, C. robusta,* and other suitable species of C.; "it contains not less than 70 per cent. of crystallizable cinchona alkaloids, of which not less than one-fifth is quinine;" dose, gr. 1–10 (0.06–0.6).

Toti's operation (to'te) [Addeo *Toti,* Italian ophthalmologist and laryngologist, contemporary.] Dacryocystorrhinostomy.

totipotential cell (to-tĭ-po-ten'shal) [L. *totus,* all, + *potentia,* power.] A cell capable of giving origin to other cells of every kind necessary to form the entire individual; such are the impregnated ovum and certain cells in the primitive germinal area or in the germinal blastomere.

touch (tuch) [Fr. *toucher.*] 1. The tactile sense. 2. Digital examination. **royal t.,** adenochiropsalogy, a former practice by the kings of England and France of tapping a scrofulous person with the finger; it was supposed to be curative of the disease.

touch-cor'puscle. Meissner's or Wagner's corpuscle, corpusculum* tactus [BNA].

touch-me-not. Noli me tangere.

touch-wood. 1. Spunk. 2. Rotten wood used as tinder.

tour de maître (toor-dĕ-mātr') [Fr. the master turn.] An old and spectacular method of passing a catheter or sound through the male urethra; the instrument was introduced with concavity downward and stem parallel with the thighs, then, when the beak was in the neighborhood of the membraneous urethra, the catheter was turned rapidly with concavity upward and the tip swept into the bladder.

Tourette's' disease'. See *Gilles* de la Tourette.*

tournesol (turn'sōl) [Fr. *tourner,* turn, + *sol(soleil),* sun.] Litmus.

tourniquet (toor'nĭ-ket) [Fr. *tourner,* to turn.] An instrument for arresting temporarily the flow of blood through a large artery in a limb; it consists of a broad band drawn tightly around the limb, with a pad over the artery, the pressure of which is increased by means of a screw. **Dupuytren's t.,** an instrument for compressing the abdominal aorta. **garrote' t.,** a bandage tied tightly round the limb over a stick, a pad being sometimes placed over the artery; when the bandage is securely tied it is tightened as much as may be desired by turning the stick: called also *Spanish t.*

Tourtual's canal' (toor'tu-al). Canalis pterygopalatinus.

tow (to). The coarse and broken part of flax, unfit for spinning, used in surgical dressings.

tow'elling. Friction with a coarse towel.

tower skull. Oxycephaly.

Town'send's mix'ture [Joseph *Townsend*, English clergyman, 1739–1816.] A solution of red oxide of mercury 1, potassium iodide 300, in water 2000, flavored with cardamom and syrup of orange peel.

toxæ'mia. Toxemia.

toxalbu'min. Toxin, a toxic albumin.

toxal'bumose. A poisonous albumose.

toxamin (taks'am-in). A term, formed after the analogy of "vitamin," to denote certain substances in food-stuffs which are injurious to the normal processes of growth and health unless counterbalanced by the vitamins.

toxane'mia, toxanæ'mia [G. *toxikon*, poison, + *an*, priv. + *haima*, blood.] Anemia due to the action of a hemolytic poison.

Toxascaris (toks-as'kă-ris) [G. *toxon*, bow, + *ascaris*.] A genus of *Ascaridæ*, one species of which *T. limba'ta*, a parasite of the dog, has been found exceptionally in man.

toxe'mia, toxæ'mia [G. *toxikon*, poison, + *haima*, blood.] Blood-poisoning, the presence in the blood of the poisonous products of any pathogenic microorganism.

toxe'mic. Relating to or suffering from toxemia.

toxen'zyme. A poisonous enzyme.

tox'ic. [G. *toxikon*, an arrow-poison.] 1. Poisonous. 2. Relating to a toxin. 3. Caused by a poison. **t. unit**, see *unit*.

tox'icant. 1. Toxic, poisonous. 2. Any poisonous agent, specifically an alcoholic or other poison causing symptoms of what is popularly called intoxication.

toxice'mia, toxicæ'mia. Toxemia.

toxicide (toks'ĭ-sīd) [G. *toxikon*, poison, + L. *cædere*, to kill.] 1. Destructive to poisons. 2. An agent which destroys a poison; a chemical antidote.

toxicity (toks-is'ĭ-tĭ). A state of being poisonous, poisonousness.

toxicoden'drol. A fixed oil contained in the leaves of *Rhus toxicodendron*.

toxicoden'dron [G. *toxikon*, poison, + *dendron*, tree.] Poison ivy, *Rhus* toxicodendron*.

toxicoder'ma [G. *toxikon*, poison, + *derma*, skin.] Any skin disease caused by a poison.

toxicodermatitis (toks-ĭ-ko-dur-mă-ti'(te')tis). Inflammation of the skin caused by the action of a poison.

toxicodermato'sis. Toxicoderma.

toxicogen'ic [G. *toxikon*, poison, + *gennaō*, I produce.] 1. Producing a poison. 2. Caused by a poison.

toxicohe'mia, toxicohæ'mia. Toxemia.

tox'icoid [G. *eidos*, resemblance.] Having an action like that of a poison, temporarily poisonous.

toxicological (toks-ĭ-ko-loj'ĭ-kal). Relating to toxicology.

toxicol'ogist. One who has a special knowledge of poisons and their antidotes.

toxicol'ogy [G. *toxikon*, arrow-poison, + *-logia*.] The science of poisons—their source, chemical composition, action, tests, and antidotes.

toxicoma'nia [G. *toxikon*, poison, + *mania*, frenzy.] A craving for any poison.

toxicomu'cin. A specific toxic mucin obtained from cultures of tubercle bacilli.

toxicopath'ic. Noting any morbid state caused by the action of a poison.

toxicop'athy [G. *toxikon*, poison, + *pathos*, suffering.] Any disease of toxic origin.

toxicopectic (tok"sĭ-ko-pek'tik). Relating to toxicopexis.

toxicopexis (tok-sĭ-ko-pek'sis) [G. *toxikon*, (arrow-) poison, + *pēxis*, fixation.] The neutralization of a poison in the body, thus permitting its retention.

toxicophid'ia [G. *toxikon*, poison, + *ophidion*, a serpent.] The venomous serpents, thanatophidia.

toxicophlœa (toks"ĭ-ko-fle'ah) [G. *toxicon*, arrow-poison, + *phloios*, bark.] Acocanthera.

toxicophobia (toks-ĭ-ko-fo'bĭ-ah) [G. *toxikon*, poison, + *phobos*, fear.] A morbid or insane fear of being poisoned.

toxicophylax'in [G. *toxikon*, poison, + *phylaxis*, a guarding.] An antitoxic phylaxin, a defensive protein which destroys or neutralizes a toxin or other poisonous bacterial product.

toxico'sis. Systemic poisoning; any disease of toxic origin, toxicopathy. **endogen'ic t.**, autotoxicosis, antointoxication. **exogen'ic t.**, any disease caused by a poison introduced from without and not generated within the body. **reten'tion t.**, endogenic t., nosotoxicosis, a disease due to the retention of waste products which are normally excreted as formed.

toxicoso'zin. A sozin, or normal defensive protein, which destroys or neutralizes a toxin or other poisonous bacterial product.

toxidermitis (toks-i-dur-mĭ'(me')tis). Toxicoderma titis.

toxif'erous [G. *toxikon*, poison, + *pherō*, I bear.] Containing poison, poisonous.

toximu'cin. Toxicomucin.

tox'in [G. *toxikon*, (arrow-)poison.] A poisonous substance of undetermined chemical nature, elaborated during the growth of pathogenic microorganisms. **an'imal t.**, zootoxin, a substance having the properties of an extracellular bacterial t., excreted by certain animal cells. **bacte'rial t.**, one produced by bacteria; there are two classes of bacterial toxins, differing markedly from each other in their mode of action and in their chemical and physical properties, viz., *extracellular* toxins, or exotoxins, and *intracellular* toxins, or endotoxins. **extracell'ular t.**, exotoxin, a t. excreted by a bacterial cell; it is soluble in water, uncrystallizable, precipitable by alcohol, and thermolabile; it is capable, within the animal organism, of exciting the production of a specific antitoxin; according to the side-chain* theory a toxin molecule has two atomic groups; the toxophore, which is the poisonous element, and the haptophore, which anchors it to the cell upon which it acts; substances of a character similar to the exotoxins are produced by certain animals (*zootoxin*) and plants (*phytotoxin*); the extracellular toxins are analogous to the ferments and it has been suggested that they are specific ferments (themselves non-toxic), by the action of which certain of the albumoses of the animal body are changed into highly poisonous compounds—the true toxins; according to this theory the extracellular product of the bacteria is called *primary* toxin, the product of its enzymic action upon the albumoses of the host, *secondary* toxin. **fatigue t.**, ponogen, kinotoxin, a substance isolated by Weichardt from the body fluids, after excessive muscular exertion, believed to be the cause of the phenomena of fatigue; by methods analogous to those employed in the case of bacterial toxins W. claims to have obtained a fatigue antitoxin possessing recuperative powers. **intracell'ular t.**, endotoxin, a specific poisonous substance formed and retained within the bacterial cell,

which exerts a poisonous action upon the animal cells only when freed by the disintegration (bacteriolysis) of the bacteria; it differs somewhat from an exotoxin in its resistance to heat, being in general more thermostabile. **plant t.**, a substance, similar in its properties to an extracellular bacterial toxin, a phytotoxin. **pri'mary t.**, see *extracellular t.* **sec'ondary t.**, see *extracellular t.*

toxine'mia, toxinæ'mia. Toxemia.

toxi-infec'tion. Toxinfection.

toxi-infec'tious. Toxinfectious.

toxinfec'tion. Infection with a toxin, the microorganism causing which not being demonstrable.

toxinfec'tious. Noting a disease due to the action of a toxin, the microorganism producing which not being demonstrable in the tissues or fluids of the body.

toxin'ic. Relating to a toxin.

toxinicide (toks-in'ĭ-sīd) [*toxin* + L. *cædere*, to kill.] 1. Destructive to a toxin. 2. An antitoxin or other agent which destroys or neutralizes a toxin.

toxino'sis. Any disease or lesion caused by the action of a toxin; toxinfection.

toxinum (toks-e'num) [L. from G. *toxikon*, poison.] Toxin, **t. diphther'icum calefac'tum** (Br.), heated (sterilized) diphtheria toxin, **t.d. diagnosticum,** dose, ♏ 3 (0.2). **t.d. detoxica'tum** (Br.), diphtheria prophylactic, a sterile filtrate of a culture on nutrient broth of *Corynebacterium diphtheriæ;* dose (subcutaneous), the volume indicated on the label on two or three occasions at intervals of two or three weeks. **t.d. diagnos'ticum, t.d. calefactum,** toxin used for the diagnosis of susceptibility to diphtheria; dose (intradermal), ♏ 3 (0.2).

toxipep'tone. A poisonous peptone.

toxipho'bia. Toxicophobia.

toxires'in. A resinous substance, a cardiac poison, derived from digitoxin by the action of acids.

tox'is. Poisoning.

toxitabel'læ hydrar'gyri chlo'ridi corrosi'vi (U.S.). Poison tablets of corrosive mercuric chloride, corrosive sublimate tablets, bichloride tablets; angular tablets, colored blue, weighing about 1 gram (15 grains), containing about 0.5 gram (7 to 8 grains) of corrosive sublimate, and stamped with the skull and cross bones and the word "poison."

toxither'apy. Treatment of an infectious disease by means of an antiserum.

toxituberculide (toks-ĭ-tu-bur'ku-līd). A cutaneous lesion believed to be due to the action of tuberculous toxin, the specific bacillus not being locally demonstrable.

toxoalexin (toks″o-ă-leks'in). A defensive protein, protecting the cells from the action of a toxin.

Toxocara (toks-o-kah'rah) [G. *toxon*, bow, + *kara*, head.] A genus of *Ascaridæ*, one species of which *T. mys'tax*, has been, though rarely, found in man.

toxogen (tok'so-jen). Toxogenin.

toxogenin (toks-oj'en-in) [G. *toxikon*, poison, + *gennaō*, I produce.] A hypothetical substance formed in the blood by the injection of antigen, which in itself is innocuous, but which, on the addition of fresh antigen, gives rise to the phenomena of anaphylaxis; anaphylactin, sensibilin, sensibilisin.

toxoid (toks'oyd) [*toxin* + G. *eidos*, resemblance.] A toxin which has lost its toxophore group and so is devoid of poisonous action, though still retaining its haptophore group, and capable of combining with receptors, either free (antitoxin), or attached; also called **anatoxin.** **diphthe'ria t.,** prepared from diphtheria toxin which has been detoxified with formaldehyde.

toxoinfec'tion. Toxinfection.

toxointec'tious. Toxinfectious.

toxolecithin (toks-o-les'ĭ-thin). A mixture of a venom with lecithin, the latter acting as a complement* for the former.

toxol'ysin [*toxin* + G. *lysis*, solution.] Toxicide, antitoxin.

toxomu'cin. Toxicomucin.

tox'on, toxone. Epitoxoid, a hypothetical bacterial product, of feeble toxicity and weak affinity for antitoxin; it is supposed to be the cause of the paralysis in the case of diphtheria; see *toxonoid.*

tox'onoid. A hypothetical substance in cultures of the diphtheria bacillus, which has weak affinity for antitoxin; it is non-toxic to guinea-pigs but causes paralysis in rabbits.

toxono'sis [*toxin* + G. *nosos*, disease] Toxicosis, toxicopathy; toxinosis.

toxopep'tone. Toxipeptone.

tox'ophil, tox'ophile [G. *toxikon*, poison, + *philos*, fond.] Susceptible to the action of a poison.

tox'ophore [*toxin* + G. *phoreō*, I bear.] Noting the atomic group of the toxin molecule which carries the poisonous principle, and upon which, when anchored to the cell by its haptophore group, the specific action of the toxin depends; ergophore.

toxoph'orous. Relating to the toxophore group of the toxin molecule.

toxophylax'in. Toxicophylaxin.

Toxoplasma pyrogenes (toks-o-plaz'mah pi-roj'en-ēs) [G. *toxikon*, poison, + *plasma; pyr*, fire (fever), + *genēs*, producing.] A protozoan blood parasite, causing irregular fever with headache, cough, and diarrhea, followed by anemia and sore and bleeding gums; quinine has no effect on the disease.

toxoso'zin. Toxicosozin.

Toyn'bee's cor'puscles [Joseph *Toynbee*, English otologist, 1815–1866.] Corneal corpuscle.* **T.'s exper'iment,** swallowing when the mouth and nose are closed causes rarefaction of air in the tympanum. **T.'s law,** in brain disease due to otitis media, the lateral sinus and cerebellum are involved in case of mastoiditis, the cerebrum in case of inflammation of the tympanic attic. **T.'s lig'ament,** tensor tympani muscle. **T.'s o'toscope,** see *otoscope.*

TP [*tuberculin precipitation.*] See *Calmette's tuberculin.**

TR [Ger. *Tuberculin Rückstand*, residuum.] New tuberculin; the lower layer of sedimented powdered bacilli, the extract of which forms the new tuberculin of Koch; see under *Tuberculin.*

Tr. Abbreviation for L. *tinctura*, or tincture.

trab'al. Relating to the trabs cerebri, callosal.

trabec'ula, gen. and pl. *trabec'ulæ* [L. dim. of *trabs*, a beam.] One of the supporting fibers traversing the substance of a structure, usually derived from the capsule or one of the fibrous septa. **trabec'ulæ car'neæ** [BNA], columnæ carneæ, muscular bundles on the lining walls of the ventricles of the heart. **t. cer'ebri,** trabs cerebri, corpus callosum. **t. cine'rea,** the middle commissure of the brain, massa* intermedia [BNA]. **t. cra'nii,** an embryonic structure at the base of the skull where the sphenoid bone is developed later. **trabec'ulæ cor'porum cavernoso'rum,** fibrous bands and cords given off from the fibrous envelopes and septum of the corpora cavernosa penis. **trabec'ulæ lien'is** [BNA], small fibrous bands given off from the capsule of the spleen and con-

stituting the framework of that organ. **trabec'ulæ testis,** septula testis [BNA].

trabec'ular. Relating to or containing trabeculæ. **t. re'gion,** a part of the base of the skull in the embryo, see *trabecula* cranii.*

trabec'ularism. A state marked by the presence of trabeculæ.

trabec'ulate. Trabecular, marked by the presence of trabeculæ, cross-barred.

trabs, pl. *tra'bes* [L. a beam.] Corpus callosum, called also *t. cerebri, trabecula cerebri.*

trace [Fr.; L *trahere,* to draw.] A mark; a slight, scarcely measurable quantity. **prim'itive t.,** germinal streak.*

tra'cer. An instrument used in dissecting out nerves and blood-vessels.

trachea (tra-ke'ah; more commonly tra'ke-ah) [G. *tracheia artēria,* rough artery.] Windpipe; the air-tube extending from the larynx, at the level of the disc between the 6th and 7th cervical vertebræ, to the giving off of the bronchi, at the level of the disc between the 4th and 5th thoracic vertebræ; this point is called the bifurcation of the trachea. The trachea is composed of from 16 to 20 cartilaginous rings, connected by a membrane, the annular ligament; posteriorly the rings are defective for $\frac{1}{5}$ to $\frac{1}{3}$ of their circumference, the interval, forming the membranous wall, being closed by a fibrous membrane containing unstriped muscular fibers. **scab'bard t.,** a deformity of the t. caused by flattening and approximation of the lateral walls, producing more or less pronounced stenosis.

trachea-ec'tasy [G. *ektasis,* extension.] Dilatation of the trachea.

tracheal (tra'ke-al). Relating to the trachea. **t. catarrh,** tracheitis. **t. forceps,** forceps with long slender curved blades and scissors handle, used for the extraction of foreign bodies from the trachea. **t. pain,** trachealgia. **t. tri'angle,** inferior carotid triangle.* **t. tugging,** a downward pull of the trachea, manifested by a depression of the pomum Adami, synchronous with the action of the heart, symptomatic of aneurysm of the aortic arch; the sign is elicited most easily by drawing the cricoid cartilage upward with the thumb and forefinger while the patient sits with head thrown back and mouth closed; Oliver-Cardarelli sign, Porter's sign.

trachealgia (tra-ke-al'jĭ-ah) [G. *algos,* pain.] Pain in the trachea.

trachealis (tra-ke-a'lis). See under *musculus.*

tracheitis (tra-ke-ī'(e')tis). Inflammation of the lining membrane of the trachea, tracheal catarrh.

trachelagra (trăk-ke-lag'rah) [G. *trachēlos,* neck, + *agra,* a seizure.] A gouty or rheumatic affection of the muscles of the neck, producing torticollis.

trachelalis (trak-e-la'lis). Noting a muscle of the neck, musculus* longissimus capitis [BNA].

trachelectomopexy (trăk-ke-lek'tom-o-pek-sĭ) [G. *trachēlos,* neck, + *ektomē,* excision, + *pēxis,* fixation.] Partial excision, with fixation of the remaining portion of the cervix uteri.

trachelectomy (trăk-kel-ek'tŏ-mĭ) [G. *trachēlos,* neck, + *ektomē,* excision.] Amputation of the cervix uteri.

trachelematoma (trăk-ke-le-mă-to'mah) [G. *trachēlos,* neck, + *haima(haimat-),* blood, + *-ōma.*] A hematoma of the neck.

trachelian (trăk-ke'le-an) [G. *trachēlos,* neck.] Cervical.

trachelism, trachelismus (trak'e-lizm, trăk-ke-liz'mus) [G. *trachēlismos.*] A bending backward of the neck, such as sometimes ushers in an epileptic attack.

trachelitis (trăk-ke-lī'(le')tis) [G. *trachēlos,* neck, + *-itis.*] Inflammation of the mucous membrane, frequently involving also the deeper structures, of the neck of the womb; cervicitis.

tracheloacromialis (trăk"ke-lo-ă-kro-mĭ-a'lis). An anomalous muscle, arising occasionally from the occipital bone and inserted into the acromion process; it occurs normally in some animals, being called the levator scapulæ muscle.

trachelocele [trak'e-lo-sel) [G. *trachēlos,* neck, + *kēlē,* tumor, hernia.] Tracheocele, bronchocele.

tracheloclavicularis (trak"e-lo-klă-vik"u-la'ris). An anomalous muscle occasionally arising from the cervical vertebræ and inserted into the outer end of the clavicle.

trachelocyllosis (trak-e-lo-sil-lo'sis) [G. *trachēlos,* neck, + *kyllōsis,* a bending.] Torticollis,* wryneck.

trachelocystitis (trak-e-lo-sis-ti'(te) tis) [G. *trachēlos,* neck, + *kystis,* bladder, + *itis.*] Inflammation of the neck of the bladder.

trachelocystosis (trak-e-lo-sur-to'sis) [G. *trachēlos,* neck, + *kyrtosis,* humpback.] Trachelokyphosis.

trachelodynia (trak-e-lo-din'ĭ-ah) [G. *trachēlos,* neck, + *odynē,* pain.] Pain in the neck.

trachelokyphosis (trak-e-lo-ki-fo'sis) [G. *trachēlos,* neck, + *kyphosis,* humpback.] Pott's disease, with its angular deformity, of the cervical spine.

trachelology (trak-e-lol'o-jĭ) [G. *trachēlos,* neck, + *-logia.*] The study of the neck and its injuries and diseases.

trachelomastoid (trak-e-lo-mas'toyd). Noting a muscle of the neck, musculus* longissimus capitis [BNA].

trachelomyitis (trak-e-lo-mi-i'(e')tis) [G. *trachēlos,* neck, + *mys,* muscle, + *-itis.*] Inflammation of the muscles of the neck.

trachelooccipitalis (trak-e-lo-ok-sip-i-ta'lis). Noting a muscle of the neck, complexus, musculus* semispinalis capitis [BNA].

trachelopanus (trak"e-lo-pa'nus) [G. *trachēlos,* neck + L. *panus,* tumor, swelling.] 1. Swelling of the lymphatic vessels of the neck. 2. Lymphatic engorgement of the cervix uteri.

trachelopexia (trak-e-lo-pek'sĭ-ah). An operation for fixation of the cervix uteri.

trachelopexy (trak'e-lo-pek-sĭ). Trachelopexia.

trachelophyma (trak-e-lo-fi'mah) [G. *trachēlos,* neck, + *phyma,* tumor.] A tumor or swelling of the neck.

trachelоplasty (trak'e-lo-plas-tĭ) [G. *trachēlos,* neck, + *plastos,* formed.] Surgical repair of lacerations or other defects of the cervix uteri.

trachelorrhaphy (trak-e-lor'ă-fĭ) [G. *trachēlos,* neck, + *rhaphē,* suture.] Repair by suture of a laceration of the cervix uteri.

trachelorrhectes (trak-e-lŏ-rek'tēz) [G. *trachēlos,* neck, + *rhēktēs,* a breaker.] An instrument used in embryotomy to crush the cervical vertebræ.

tracheloschisis (trak-e-los'kĭ-sis) [G. *trachēlos,* neck + *schisis,* fissure.] A congenital opening in the neck, due to persistence of one or more of the branchial fissures.

trachelotomy (trăk-ke-lot'ŏ-mĭ) [G. *trachēlos,* neck, + *tomē,* incision.] 1. Incision into the cervix uteri. 2. Trachelectomy.

tracheoaerocele (tra-ke-o-a'e-ro-sēl) [G. *tracheia,* windpipe, + *aēr,* air, + *kēlē,* hernia.] An air-cyst in the neck caused by distention of a tracheocele.

tracheobronchial (tra"ke-o-brong'kĭ-al). Relating to both trachea and bronchi.

tracheobronchitis (tra-ke-o-brong-ki'(ke')tis). Inflammation of the mucous membrane of both trachea and bronchi. Bronchitis with extension of the inflammation to the trachea.

tracheobronchoscopy (tra"ke-o-brong-kos'ko-pĭ) [G. *tracheia*, trachea, + *bronchos*, bronchus, + *skopeō*, I view.] Inspection of the interior of the trachea and bronchi.

tracheocele (tra'ke-o-sēl) [G. *tracheia*, windpipe, + *kēlē*, hernia.] Aerocele, a protrusion of the mucous membrane through a defect in the wall of the trachea.

tracheochromatic erythroblasts (trā-ke-o-kro-mat'ik er'ĭ-thro-blasts) [G. *trachys*, rough, + *chrōmatikos*, relating to color; *erythros*, red, + *blastos*, germ.] Normoblasts.

tracheoesophageal (tra"ke-o-e-sŏ-faj'e-al.) Relating to the trachea and the esophagus, noting some sparse muscular fibers passing between the two structures.

tracheolaryngeal (tra-ke-o-lar-in'je-al). Relating to the trachea and the larynx.

tracheolaryngotomy (tra-ke-o-lar-in-got'ŏ-mĭ). Laryngotracheotomy, cricotomy, cricothyreotomy.

tracheopharyngeal (tra-ke-o-far-in'je-al). Relating to both trachea and pharynx, noting an occasional band of muscular fibers passing from the inferior constrictor of the pharynx to the trachea.

tracheophonesis (tra"ke-o-fo-ne'sis) [G. *tracheia*, trachea, + *phōnēsis*, a sounding.] Auscultation of the heart sounds at the sternal notch.

tracheophony (tra-ke-of'o-nĭ) [G. *tracheia*, windpipe, + *phōnē*, voice.] Bronchophony, the hollow voice sound heard in auscultating over the trachea.

tracheophyma (tra"ke-o-fi'mah) [G. *tracheia*, windpipe, + *phyma*, tumor.] Bronchocele, goiter.

tracheoplasty (tra'ke-o-plas-tĭ)[G. *tracheia*, windpipe, + *plassō*, I form.] Reparative or plastic surgery of the trachea.

tracheopyosis (tra-ke-o-pi-o'sis) [G. *tracheia*, windpipe, + *pyon*, pus, + *-ōsis*.] Suppurative inflammation of the trachea.

tracheorrhagia (tra-ke-ŏ-ra'jĭ-ah) [G. *tracheia*, windpipe, + *-rhagia*.] Hemorrhage from the mucous membrane of the trachea.

tracheoschisis (tra-ke-os'kĭ-sis) [G. *tracheia*, windpipe, + *schisis*, fissure.] A fissure into the trachea.

tracheoscopic (tra-ke-o-skop'ik). Relating to tracheoscopy.

tracheoscopy (tra-ke-os'ko-pĭ) [G. *tracheia*, windpipe, + *skopeō*, I examine.] Inspection of the interior of the trachea.

tracheostenosis (tra-ke-o-sten-o'sis) [G. *tracheia*, trachea, + *stenōsis*, constriction.] Narrowing of the lumen of the trachea.

tracheotome (tra'ke-o-tome). A knife used in the operation of tracheotomy.

tracheotomize (tra-ke-ot'o-mīz). To perform tracheotomy upon.

tracheotomy (tra-ke-ot'o-mĭ) [G. *tracheia*, windpipe, + *tomē*, incision.] The operation of opening into the trachea. **infe'rior t.**, t performed below the isthmus of the thyroid gland. **supe'rior t.**, t. performed above the isthmus of the thyroid gland.

trachitis (tra-ki'(ke')tis). Tracheitis.

trachoma (trā-ko'mah) [G. *trachys*, rough, harsh.] Contagious granular conjunctivitis, granular lids; a chronic contagious inflammation, with hypertrophy, of the conjunctiva, marked by the formation of minute grayish or yellowish translucent granules of adenoid tissue. **brawny t.**, a condition in which there is a general lymphoid infiltration of the conjunctiva without marked granulation. **diffuse' t.**, a form in which the granulations are of large size, approaching brawny t. **follic'ular t., gran'ular t.**, the ordinary form of t. marked by the presence of granulations on the conjunctiva. **pap'illary t.**, a form in which the granulations are acuminate and red. **t. bod'y**, Prowazek-Greef body, the supposed microbic cause of trachoma. **t. defor'mans**, t. pudendorum with cicatricial contractions of the altered mucous membrane. **t. of the vocal bands**, singers' nodes or nodules, vocal nodules, chorditis nodosa or tuberosa. **t. pudendo'rum, t. vulvæ**, kraurosis vulvæ. **Tuerck's t.**, laryngitis sicca.

trachomatous (trā-ko'mă-tus). Relating to or suffering from trachoma.

trachychromatic (trak-ĭ-kro-mat'ik) [G. *trachys*, rough.] Noting a nucleus with very deeply staining chromatin.

trachypho'nia (trā-kĭ-fo'nĭ-ah) [G. *trachys*, rough, + *phōnē*, voice.] Roughness of voice.

tract [L. *tractus*.] An area of greater length than breadth, a path, a track, a way; see *tractus* and *fasciculus*. **aliment'ary t.**, digestive t. **ascend'ing t.**, a fasciculus of afferent white fibers in the spinal cord, the course of progressive degeneration in which proceeds from below upward. **associa'tion t.**, a bundle of nerve-fibers connecting neighboring or distant parts of the same hemisphere of the brain. **Bur'dach's t.**, fasciculus cuneatus [BNA]. **cerebellospi'nal t.**, vestibulospinal t., Marchi's t., Loewenthal's t. **comma t.**, Schultze's bundle, a bundle of descending fibers from the dorsal root cells of the spinal cord on the inner border of the dorsolateral fasciculus. **crossed pyram'idal t.**, fasciculus cerebrospinalis lateralis [BNA]. **diges'tive t.**, the passage leading from the mouth to the anus through the pharynx, esophagus, stomach, and intestine. **descending t.**, motor t., vestibulospinal t., a bundle of efferent fibers in the spinal cord. **direct' pyram'idal t.**, fasciculus cerebrospinalis anterior [BNA]. **Flech'sig's direct' cerebel'lar t.**, fasciculus cerebellospinalis [BNA]. **Goll's t.**, fasciculus gracilis [BNA]. **Gowers' t.**, fasciculus anterolateralis superficialis [BNA]. **haben'ular t.**, a bundle of white fibers passing from the habenula to the red nucleus. **Hel'weg's t.**, olivospinal t. **intermediolat'eral t.**, fasciculus intermedius, the rubrospinal, cerebellospinal, lateral vestibulospinal, and olivospinal tracts of the spinal cord. **Lis'sauer's t.**, Spitzka's* marginal bundle. **Loe'wenthal's t.**, vestibulospinal t., **Mar'chi's t.**, vestibulospinal t. **Mona'kow's t.**, rubrospinal t. **motor t.**, descending t., vestibulospinal t. **olfac'tory t.**, tractus* olfactorius **oli"vospi'nal t.**, a crossed t. arising in the olivary body and terminating in relation with the motor cells of the anterior horn. **optic t.**, tractus* opticus. **prepyram'idal t.**, rubrospinal t. **respi'ratory t.**, the air passages from the nose to the pulmonary alveoli, through the pharynx, larynx, trachea, and bronchi. **retic'ulospi'nal t.**, a tract of fibers passing from the pons to the reticular portion of the brain stem. **rubrospi'nal t.**, a bundle of fibers running from the red nucleus, decussating, and descending through the lateral column of the spinal cord as far as the sacral portion, ending in the anterior horns. **sen'sory t.**, ascending t., a bundle of afferent fibers in the spinal cord. **spino-ol'ivary t.**, Helweg's bundle, a triangular tract in the anterior portion of the

anterolateral column of the spinal cord. **Spitzka's t.**, see *Spitzka*. **sulcomar'ginal t.**, tectospinal t. **Syl'vian t.**, the area of the cerebrum in the neighborhood of the fissure of Sylvius. **tectospi'nal t.**, tractus tectospinalis. **temporofron'tal t.**, tractus temporofrontalis. **temporocen'tral t.**, tractus temporocentralis. **temporocerebell'ar t.**, tractus temporocerebellaris. **temporopon'tile t.**, Tuerck's bundle, tractus* temporopontilis. **u'rinary t.**, the passage from the pelvis of the kidney to the meatus urinarius, through the ureters, bladder, and urethra. **u'veal t.**, the iris, ciliary body, and choroid coat of the eye. **vestib''ulospi'nal t.**, a bundle of motor fibers running from Deiters' nucleus through the anterior column of the spinal cord, in front of the rubrospinal t., ending in the anterior horns of the lumbar cord; some of the fibers cross to the other side, but most do not.

tractell'um, pl. *tractell'a* [L. dim. of *tractus*.] An anterior locomotor flagellum of a protozoan.

traction (trak'shun) [L. *tractus; trahere*, to draw.] Drawing, pulling; attraction; contraction. **t. an'eurysm**, an aneurysm of the aorta caused by the pull of the ductus arteriosus, or duct of Botal. **t. divertic'ulum**, a diverticulum of the esophagus caused by the pull of contracting adhesions.

trac'tor [L. a drawer; *trahere*, to draw.] An instrument for making traction. **metall'ic t.**, see under *Perkins*.

tractora'tion. The system of treatment by metallic tractors; see *Perkins*.

trac'tus, gen. and pl. *tractus* [L. a region or territory, from *trahere*, to draw.] A tract; for the various tracts see below, and also *tract* and *fasciculus*. **t. iliotibia'lis** [BNA], iliotibial band, Maissiat's band, a fibrous reinforcement of the fascia lata on the outer surface of the thigh, extending from the crest of the ilium to the external tuberosity of the tibia. **t. olfacto'rius** [BNA], olfactory tract, a narrow whitish band lying in the olfactory sulcus on the under surface of the frontal lobe of the brain, terminating anteriorly in the olfactory bulb and posteriorly in the olfactory trigone. **t. op'ticus** [BNA], optic tract, a flattened white band extending forward fin either side from the geniculate bodies and pulvinar of the thalamus to the optic chiasm. **t. quintofronta'lis**, the ventral path of trigeminal obers passing from the sensory trigeminal nucleus to the area parolfactoria. **t. solita'rius** [BNA], solitary tract, respiratory bundle, a small isolated tract, anterior and external to the nucleus of the ala cinerea, composed of the afferent fibers of the vagus and glossopharyngeal nerves. **t. spina'lis ner'vi trigem'ini** [BNA], spinal tract of the trigeminal nerve, ascending root of the trigeminal nerve, a bundle of fibers of the 5th nerve running down from the sensory nucleus on the outer side of the gray column formed by the substantia gelatinosa Rolandi, into which the fibers gradually enter. **t. spira'lis foramino'sus** [BNA], openings in the cochlear area of the internal auditory meatus, transmitting the nerves for the basal and central coils of the cochlea. **t. spira'lis foraminulo'sus**, macula* cribrosa quarta. **t. tectospina'lis**, sulcomarginal tract, a thin bundle of white fibers arising in the quadrigeminal bodies on one side, decussating beneath the aqueduct of Sylvius, and passing down through the oblongata into the spinal cord, the exact distribution of the fibers not being known. **t. tem''porocentra'lis**, an association tract of white fibers passing between the temporal lobe of the brain and the cerebral convulutions. **t. tem''porocerebella'ris**, an association tract of white fibers passing from the cortex of the temporal lobe backward toward the cerebellum. **t. tem''porofronta'lis**, an association tract of white fibers passing from the cortex of the temporal to that of the frontal lobe of the brain. **t. temporoponti'lis**, Tuerck's bundle, a collection of white fibers running from the cortex of the temporal lobe to the cells of the nuclei pontis through the outer fifth of the crusta. **t. thalamocortica'lis**, thalamocortical tract, thalamic radiation, pedunculus* thalami.

trag'acanth, tragacan'tha [G. *tragos*, goat, + *akanthos*, thorn.] (U.S., Br.) A gummy exudation from *Astragalus gummifer* and other species of the subgenus *Tragacantha*, shrubs of the eastern end of the Mediterranean. It occurs as bands or strings of a tough gummy substance, forming a jelly-like mucilage with 50 parts of water. It is employed in pharmacy and occasionally as a demulcent.

tra'gal. Relating to the tragus.

tra'galism [G. *tragos*, a goat.] Sensuality.

tra'gi [pl. of *tragus*.] [BNA] The hairs growing at the entrance to the external auditory meatus.

Tra'gia [after the Latinized name of Hieronymus Bock [L. *Tragus*], German botanist, 1498–1554.] A genus of tropical and subtropical plants of the order *Euphorbiaceæ;* some of the species have been employed in domestic medicine as diaphoretics.

tra'gicus. See under *musculus*.

tragomaschalia (trăg-go-mas-kal'ĭ-ah) [G. *tragos*, goat, + *maschalē*, the axilla.] Bromidrosis of the axillæ.

tragopho'nia, tragoph'ony [G. *tragos*, goat, + *phōnē*, voice.] A sort of bleating vocal resonance heard at the level of the fluid in hydrothorax; egophony.

tragopo'dia [G. *tragos*, goat, + *pous(pod-)*, foot.] Knock-knee.

tra'gus [G. *tragos*, goat, in allusion to the hairs growing on the part, like a goatee.] 1. A tongue-like projection of the cartilage of the auricle in front of the opening of the external auditory meatus and continuous with the cartilage of this canal. 2. [BNA] One of the hairs growing at the entrance to the external auditory meatus.

train [Fr. *trainer;* L. *trahere*, to draw.] 1. To fit by education and practice for some definite purpose. 2. To increase the virulence of bacteria by successive inoculations in animals.

trained nurse. A sick-nurse who has received scientific and practical instruction in a training school to fit her, or him, for the care of the sick.

training (trān'ing). 1. A system of diet and exercise designed to increase muscular strength and endurance in order to fit one for an athletic contest. 2. A system of practical education designed to fit one for a special calling or profession. **t. school**, a school for nurses, attached to a hospital, where didactic and practical instruction is given in the care of the sick.

trait (trāt or tra) [Fr.; L. *tractus*, a drawing.] A distinguishing characteristic.

trajec'tor [L. *trajectus; trajicere*, to throw over or across.] An instrument for locating the course of a bullet in a wound.

tra'ma [L. woof.] The hyphal tissue within the lamellæ of a mushroom.

trance [L. *transire*, to pass over.] 1. Hypnotism. 2. Catalepsy. 3. Ecstasy. **death t.**, a condition of profound insensibility simulating death. **induced t.**, hypnotic or somnambulistic t. **som-**

nambulis'tic t., a state of somnambulism, paralysis, anesthesia, or catalepsy induced by suggestion in major hypnotism.

trance-co'ma. The deep sleep following major hypnotism.

trans- [L.] A prefix denoting through, beyond.

transanimation (tranz-an-i-ma'shun) [L. *trans*, across, through, + *anima*, breath, life.] Resuscitation of a stillborn infant.

transaudient (tranz-aw'dĭ-ent) [L. *trans*, through, + *audire*, to hear.] Permeable to sound waves.

transca'lent [L. *trans*, through, + *calere*, to be warm.] Permeable to radiant heat rays, diathermanous.

transcon'dylar. Across or through the condyles, noting the line of bone incision in Carden's* amputation.

transcor'tical. 1. Across or through the cortex of the brain, ovary, kidney, or other organ. 2. From one part of the cerebral cortex to another, noting the various association tracts.

transection (tran-sek'shun) [L. *trans*, across, + *secare*, to cut.] 1. A cross-section. 2. Cutting across.

trans'fer, transfer'ence [L. *trans*, across. + *ferre*, to carry.] 1. The shifting of symptoms from one side of the body to the other, as seen in certain forms of hysteria. 2. The displacement of the affect from one person or one idea to another.

transfix, [L. *trans*, through, + *fixus; figere*, to fasten.] To pierce with a sharp instrument.

transfix'ion. A maneuver in amputation in which the knife is passed from side to side through the soft parts, close to the bone, and the muscles are then divided from within outward.

trans'forate [L. *trans*, through, + *forare*, to pierce.] To perforate; specifically to bore through the base of the fetal skull as the first step in craniotomy.

transfora'tion. Perforation of the base of the fetal skull in craniotomy.

trans'forator. An instrument for use in transforation.

transforma'tion [L. *trans*, across, + *formare*, to shape.] 1. Metamorphosis, change of form and shape. 2. A change of one tissue into another, as cartilage into bone. 3. Degeneration.

transformer (trans-for'mur). A device for changing the ratio of voltage and amperage in an alternating current; this is effected by induction by means of two insulated windings on an iron core; or one for use with either direct or alternating current, consisting of a motor driven by a high-potential current which in turn drives a dynamo that will furnish a current with any desired ratio of voltage and amperage. **step-down t.,** one by which the voltage of the original current is lowered. **step-up t.** one by which the voltage of the original current is raised.

transfuse'. To perform transfusion.

transfusion (tranz-fu'zhun) [L. *trans*, across, + *fusus; fundere*, to pour.] 1. The transfer of blood from one person to another. 2. The injection into a vein of physiological saline solution or, formerly, of other fluids such as milk. **arte'rial t.,** the passage of blood into an artery of the receptor or from an artery of the donor. **direct' t.,** immediate t., the transfer of blood from a vessel of one person (the *donor*) to one of another person (the *receptor*), either through a tube connecting the two vessels or by suturing the vessels together. **imme'diate t.,** direct t. **indirect' t.,** mediate t., the donor is bled into a warmed vessel, the blood is defibrinated, and is then injected into a vein of the receptor. **me'diate t.,** indirect t. **peritone'al t.,** the injection of saline solution or other fluid into the peritoneal cavity whence it is absorbed into the circulation. **recip'rocal t.,** an attempt to confer immunity by transfusing blood taken from a donor just recovered from an infectious disease into a receptor suffering from the same affection, the balance being maintained by transfusing an equal amount from the sick to the well person. **subcuta'neous t.,** the infusion of saline solution or other fluid beneath the skin, whence it is taken into the circulation. **venous t.,** direct t from a vein of the donor into a vein of the receptor.

transil'iac. Extending from one ilium or iliac crest or spine to the other.

transil'ient [L. *trans*, across, + *salire*, to leap.] Jumping across, passing over, noting those cortical association fibers in the brain which pass from one convolution to another non-adjacent one.

transillumina'tion [L. *trans*, through, + *illuminare*, to light up.] Causing a light to shine through a normally translucent part, the presence of fluid or of a degenerative lesion being indicated by varying degrees of opacity.

transin'sular [L. *trans*, across, + *insula*, island.] Across the insula or island of Reil.

transischiac (tranz-is'kĭ-ak). Extending from one ischium to the other.

transisth'mian. Across any isthmus; specifically across the isthmus of the gyrus fornicatus, noting the gyrus transitivus.

transition (tranz-ish'un) [L. *transitio; transire*, to pass over.] Change, passage from one condition or one part to another. **t. douche,** a douche of alternately hot and cold water. **t. tumor,** a benign tumor which upon recurrence after removal begins to assume malignant characteristics.

transitional (tranz-ish'un-al). Relating to or marked by a transition, transitory. **t. convolu'tion,** gyrus transitivus. **t. epithe'lium,** epithelium composed of layers of cells of different kinds, each layer being renewed, as the surface layer is scraped away, by the transformation of the cells in the layer below. **t. zone,** the region of the crystalline lens where the anterior epithelial capsule-cells become transformed into the fibers composing the lens substance.

transkutan (tranz-ku-tan') [L. *trans*, through, + *cutis*, skin.] A proprietary substance for use in medicated baths for the treatment of gouty and rheumatic manifestations; it is said to be composed of concentrated alkaline solutions combined with menthol, methyl salicylate, peppermint oil, turpentine and pine-needle oil.

transla'tion [L. *translatus; transferre*, to carry across.] Metastasis; transference.

translu'cent [L. *trans*, through, + *lucere*, to shine.] Permitting the passage of light, but not transparent.

transmigra'tion [L. *trans*, through, + *migrare*, to remove elsewhere.] The passage of blood-cells through the walls of the vessels; diapedesis. **o'vular t.,** the passage of an ovum from one ovary into the Fallopian tube of the other side; it is *external*, or *direct*, when it passes across the pelvic cavity, *internal*, or *indirect*, when it crosses the uterine cavity and so enters the tube of the opposite side.

transmissible (tranz-mis'sĭ-bl) [L. *trans*, across, + *mittere*, to send, + *habilis*, skilful (able).] That can be carried across or from one person to another, as a *t. disease*, an infectious or contagious disease.

transmission (trans-mish'un) [L. *trans*, across, + *missio; mittere*, to send.] 1. Transfer. 2. The

conveyance of an infectious disease from one person to another. 3. Heredity. **duplex t.,** the passage of impulses in both directions through a nerve-trunk.

transmuta'tion [L. *trans*, over, + *mutare*, to change.] A change, transformation.

transnor'mal [L. *trans*, beyond.] More than normal, supernormal.

transoc'ular [L. *trans*, across, + *oculus*, eye.] Across the eye.

transpar'ent [L. *trans*, through, + *parere*, to appear.] Noting a substance so permeable to light rays that objects may be seen through it.

transperitoneal (tranz-per-ĭ-ton-e'al). Through the peritoneum, noting, for example, a nephrotomy performed by abdominal section.

transpina'lis. Any one of the muscular bands passing from one transverse process to another of the vertebræ.

transpi'rable. That can transpire or be transpired.

transpira'tion. The passage of watery vapor through the skin or any membrane; perspiration, especially insensible perspiration. **pul'monary t.,** the passage of watery vapor from the blood into the air in the pulmonary alveoli.

transpire' [L. *trans*, through, + *spirare*, to breathe.] To exhale vapor from the skin or respiratory mucous membrane.

transplan'tar. Across the sole of the foot, noting certain muscular fibers or ligamentous structures.

transplant' [L. *trans*, across, + *plantare*, to plant.] To transfer from one part to another, as in plastic operations or grafting.

transplanta'tion. Grafting, implanting in one part a tissue or organ taken from another part or from another person.

transpleu'ral. Through the pleura or across the pleural cavity; on the other side of the pleura.

transport' [L. *trans*, across, + *portare*, to carry.] To transfer, to transplant.

trans'port. Ecstasy.

transpose' [L. *trans*, across, + *ponere*, to place.] To transfer one tissue or organ to the place of another and *vice versa*.

transposition (tranz-po-zish'un). 1. Removal from one place to another, transference, metathesis. 2. The state of being transposed or of being on the wrong side of the body; as in *t. of the viscera*, in which the viscera are on the side of the body opposite to that on which they are normally found, the liver being on the left, the heart on the right, etc.

transsec'tion. Transection.

transsegmen'tal. Across any segment.

transsep'tal. Across or through a septum; on the other side of a septum.

transtem'poral. Passing across the temporal lobe of the brain, noting an anomalous fissure.

transthalam'ic. Passing across the thalamus.

transther'mia [L. *trans*, through, + G. *thermē*, heat.] Diathermia.

transthoracic (tranz-tho-ras'ik). Passing through the thoracic cavity, transpleural.

transthoracotomy (tranz-thō-răk-kot'o-mĭ) [L. *trans*, *across*, + G. *thōrax* + *tomē*, incision.] Cutting through the chest.

transubstantia'tion [L. *trans*, over, + *substantia*, substance.] The substitution of one tissue for another, as in the experimental patching of an artery with peritoneal membrane.

trans'udate [L. *trans*, through, + *sudare*, to sweat.] An exudate.

transudation (tran-su-da'shun). The passage of a fluid through a membrane; diapedesis. It differs from osmosis in that the fluid passes with nearly all the salts and other substances held in solution or suspension, and from exudation in that *all* the solids do not pass.

transude (trans-ūd'). To pass through a membrane; see *transudation*.

transvaginal (tranz-vaj'in-al). Across or through the vagina.

transversalis [NK]. Transverse to the body axis.

transversarius [NK]. Pertaining to some other structure which is transverse.

transverse (tranz-vurs') [L. *transversus*.] Crosswise, lying across the long axis of the body or of a part **t. fora'men,** foramen transversarium [BNA].

transversec'tomy [G. *ektomē*, excision.] Exsection of the transverse process of a vertebra.

transver"soana'lis. Musculus transversus perinei.

transversocos'tal. Costotransverse.

transversospina'lis. The semispinalis capitis, semispinalis cervicis, and semispinalis dorsi muscles regarded as one.

transversourethralis (trans-ver-so-u-re-thra'lis). The transverse fibers of the musculus sphincter urethræ membranaceæ, arising from the arch of the pubes.

transver"sover'tical index. Vertical index.*

transversus [NK]. Transverse to an organ or part, lying across the long axis of an organ or a part.

transvestism (trans-vest'izm) [see *transvestite*.] The practice of masquerading in the clothes of the opposite sex.

transvestite (trans-vest'īt) [L. *trans*, across, over, + *vestitus*, clothed.] A person who delights in masquerading in the clothing of the opposite sex.

trap [A.S. *træppe*, a snare.] In plumbing, a pipe with double curve in which water remains at a desired level, sealing the pipe and preventing the passage of gases.

trape'zial. Relating to any trapezium. **t. ni'dus,** nucleus olivaris superior.

trapez'iform [L. *forma*, form.] Resembling a trapezium, trapezoid.

trape"ziometacar'pal. Relating to the trapezium (os multangulum majus [BNA]) and the metacarpus.

trape'zium [G. *trapezion*, a table or counter.] 1. A four-sided geometrical figure having no two sides parallel. 2. Os multangulum majus [BNA]. 3. A transverse band of fibers passing across the lower extremity of the pons Varolii, between the median raphe and the accessory auditory nucleus.

trape'zius. Cucullaris, cowl-muscle, shawl-muscle, musculus* trapezius.

trap'ezoid [G. *trapezion*, a table or counter, + *eidos*, appearance.] 1. Trapeziform, resembling a trapezium. 2. A geometrical figure resembling a trapezium except that two of its opposite sides are parallel. 3. Os multangulum minus [BNA]. **t. body,** (1) arbor vitæ of the cerebellum; (2) trapezium (3). **t. lig'ament,** ligamentum trapezoideum. **t. line,** a rough line on the clavicle giving attachment to the t. ligament.

Trapp-Hae'ser for'mula [Julius *Trapp*, Russian pharmaceutist, 1815–1908; see *Haeser*.] A formula for an approximate estimation of the solids of the urine from the specific gravity; one multiplies the last two digits of the sp. gr. by 2.33 which gives the amount of solids in 1000 parts of urine; if the sp. gr. is 1.015, for example, $15 \times 2.33 = 34.95$ grams in 1000 c.c. of urine.

trash. Trade name for the wrapping of poppy leaves in which Bengal opium is packed.

Traube's bruit (trow'beh) [Ludwig *Traube*, German physician, 1818–1876.] Bruit de galop, cantering rhythm.* **T.'s cor'puscles,** phantom

corpuscles. **T.'s double tone,** a double sound (diastolic and systolic) heard on auscultation over the femoral or other large artery in aortic insufficiency. **T.'s dyspne'a,** inspiratory dyspnea with maximum expansion of the chest and a slow respiratory rhythm. **T.'s plugs,** Dittrich's* plugs. **T.'s mur'mur,** T.'s bruit, cantering rhythm.* **T.'s pres'sure curves,** Traube-Hering curves. **T.'s space,** a semilunar space about 3½ inches wide, bounded internally by the left border of the sternum, above by an oblique line from the sixth costal cartilage to the lower border of the eighth or ninth rib, and below by the costal margin; the percussion note here is normally tympanitic, because of the underlying stomach, but is modified by pulmonary emphysema or a pleural effusion.

Traube-Hering curves (trow'beh-ha'ring) [Ludwig *Traube;* Ewald *Hering.*] Rhythmical variations in blood-pressure, running parallel with the respiratory movements, caused by rise and fall of irritability of the respiratory center.

trauma, pl. *trau'mata* (traw-mah) [G.] A wound, an injury inflicted, usually more or less suddenly, by some physical agent; traumatism. **psy'chic t.,** an experience of a painful emotional character.

traumasthenia (traw-mas-the'nĭ-ah) [G. *trauma,* a wound, + *astheneia,* weakness.] Nervous exhaustion following an injury; railway-spine; traumatic neurasthenia.

traumatic (traw-mat'ik). 1. Relating to or caused by a wound or injury. 2. Causing the healing of wounds, vulnerary. 3. A remedy which promotes healing, a vulnerary. **t. balsam,** balsamum traumaticum. **t. fever,** an elevation of temperature following the receipt of an injury, without signs of infection. **t. neurasthe'nia,** see *neurasthenia.*

traumat'icin. Trade name of a solution of gutta percha in chloroform; when applied to a surface the chloroform evaporates, leaving a film of gutta percha.

traumatism (traw'mă-tizm). 1. An injury. 2. A wound produced by an injury, trauma.

traumatize (traw'mă-tize)[G. *traumatizō,* to wound.] To injure or wound.

trau'matol. Trade name of an antiseptic compound of iodine and cresol; employed as a substitute for iodoform.

traumatol'ogy [G. *trauma,* a wound, + *-logia.*] The branch of surgery dealing with wounds; accident surgery.

traumatopathy (traw-mă-top'ă-thĭ) [G. *trauma,* wound, + *pathos,* suffering.] Any pathological condition resulting from violence or wounds.

traumatopnea, traumatopnœa (traw-mă-top-ne'ah) [G. *trauma(traumat-),* wound, + *pnoiē,* breath.] The passage of air in and out through a wound of the chest wall.

traumatopyra (traw-mă-top'ĭ-rah) [G. *trauma(traumat-),* wound, + *pyr,* fire.] Traumatic* fever.

traumatosepsis (traw-mă-to-sep'sis). Infection of a wound; septicemia following a wound.

traumato'sis. Traumatism.

traumatotherapy (traw-mă-to-ther'ă-pĭ). Treatment of traumata or the results of injury.

trav'el-sickness. Carsickness.

treacle (tre'kl) [L. *theriaca;* G. *thēriakē.*] 1. Theriaca. 2. Molasses. **Venice t.,** theriaca andromachi.

tread (tred) [A.S. *tredan,* to tread.] 1. A wound of the coronet of a horse's hoof caused by striking with the shoe of the opposite foot of either the same or the other pair of legs. 2. The cicatricula of an egg.

treat (trēt) [Fr. *traiter;* L. *tractare,* to handle.] To attack a disease by medicinal, surgical, dietary, or other measures; to care for a patient medically or surgically

treat'ment. Therapeutics, therapy; the medical or surgical care of a patient; the institution of measures or the giving of remedies designed to cure a disease. **active t.,** energetic t. directly applied to the disease. **causal t.,** t. directed to the removal of the continuously active cause of a disease. **conser'vative t.,** abstention from the giving of remedies or from operative procedures until clear indications present themselves; treatment of an injured part by means directed to the preservation of the part and the prevention of surgical mutilation. **cu'rative t.,** active t., t. aiming at a cure of existing disease; distinguished from palliative and prophylactic t. **drug t.,** medicinal t. **empir'ical t.,** the employment of remedies or measures which experience has shown to be of benefit in the disease in question, but for the success of which no scientific explanation can be given. **expec'tant t.,** management of disease by treatment of the symptoms as they arise, as distinguished from treatment directed to the specific cause. **hygien'ic t.,** t. by fresh air, cleanliness, and other non-medicinal measures. **med'ical t.,** t. of internal or other diseases by hygienic and medicinal remedies, as distinguished from surgical t. **medic'inal t.,** drug t., the employment of drugs in the attack on disease. **moral t.,** psychotherapy. **pall'iative t.,** t. directed toward an alleviation of the symptoms without expectation of a cure of the disease. **preven'tive t., prophylac'tic t.,** the institution of measures designed to protect a person from an attack of a disease to which he has been, or is liable to be, exposed. **ra'tional t.,** t. based upon a knowledge of the nature of the disease and of the action of the remedies employed to combat it; distinguished from empirical t. **specif'ic t.,** t. directed to the removal of the intrinsic cause of a disease. **support'ing t.,** t directed toward maintaining the strength of the patient until the disease, self-limited in character, shall have spent its force- **sur'gical t.,** treatment by any manual or cutting operation. **symptomat'ic t.,** expectant t. **terrain' t.,** see terrain*-cure.

by means of air, aërotherapy, aërotherapeutics, pneumatotherapy, pneumotherapy, **animal extracts,** opotherapy, organotherapy, **antitoxic and other sera,** serotherapy, orrhotherapy. **arsenic,** arsenotherapy. **bacteria,** bacteriotherapy; opsonotherapy. **based on experience,** empiricism. **baths,** balneotherapy; thalassotherapy (sea-baths); Brand method (in fevers). **blood,** hematotherapy, hemotherapy. **chemicals,** chemotherapy. **climate,** climatotherapy. **cold,** crymotherapy, psychrotherapy. **colored light,** chromotherapy. **crude drugs,** galenical therapy. **diet,** dietetics, dietotherapy. **disease-products,** isotherapy, isopathy. **dishonest,** charlatanism, quackery. **drugs,** medication, pharmacotherapy. **electricity,** electrotherapy, galvanotherapy, galvanization, faradization, franklinization, darsonvalization. **expectant,** physiatrics, physiotherapy. **fasting,** limotherapy, nestiatria, nestitherapy, hunger-cure, pinotherapy. **flagellation,** mastigotherapy. **forest,** dasetherapy. **friction,** diathermy, infrared treatment, thermotherapy, **hill-climbing,** terrain-cure, **nature.** hippocratism, physiotherapy. **increasing doses,** anatherapeusis. **inducing another disease,** allopathy, heteropathy, **inhalation,** anemotherapy, anemopathy, atmiatrics. atmotherapy. **inunction,** alephotherapy, alœphother. apy. **light,** phototherapy, Finsen-light therapy, heliotherapy. **manipulation,** osteopathy. **massage,** massotherapy. **mercury,** hydrargyrosis, mercurialization- **milk,** galactotherapy; orrhotherapy (whey). **mountain climates,** orinotherapy. **movement,** kinesither-

apy, cinesitherapy, kinesiatrics, kinesipathy. **mud-baths,** illutation, fangotherapy, pelotherapy, peloppathy, liman-cure. **multiple small doses,** dosimetria, dosimetrics. **music,** musicotherapy; rhythmotherapy. **ocean climate,** thalassotherapy. **opposites,** enantiotherapy, enantiopathy. **preventive,** prophylaxis, immunotherapy, vaccination. **rays,** radiotherapy, actinotherapy, roentgenotherapy (x-rays); ultraviolet, phototherapy (light rays). phacotherapy (concentrated by a lens). **revulsion,** antilepsis, counterirritation. **sand-bath,** psammotherapy. **sea-baths,** thalassotherapy. **similars,** homeopathy. **single dose,** therapia magna sterilisans. **suggestion,** hypnotherapy, psychotherapy, pithiatism. **sunlight,** heliotherapy. **sweating,** sudation, hidrotherapy, hidrosudotherapy. **vapor,** atmotherapy, atmiatrics. **vibrations,** vibratory massage, rhythmotherapy. **water,** hydrotherapy, hydriatrics; hydropathy, Kneipp cure (unscientific). **whey,** orrhotherapy, orotherapy, whey-cure. **wrong,** malpractice, malpraxis.
of children, pediatrics. **deformities,** orthopedics, orthopedia, orthopraxis. **dental diseases,** odontotherapy. **diseases of women,** gyniatrics. **dislocations,** diaplasis. **ear diseases,** ototherapy. **eye diseases,** ophthalmotherapy. **fevers,** pyretotherapy. **fractures,** agmatotherapy. **heart diseases,** cardiotherapy. **intestinal disorders,** enterotherapy. **kidney diseases,** nephrotherapy. **liver troubles,** hepatotherapy. **lung diseases,** pneumonotherapy. **mental disorders,** psychiatrics, psychotherapy **nasal diseases,** rhinotherapy. **nervous diseases,** neurotherapy, neurotherapeutics. **old age,** geriatrics. **skin diseases,** dermatotherapy. **stomach diseases,** gastrotherapy. **syphilis,** syphilotherapy. **tuberculosis,** phthisiotherapy, tuberculotherapy.

tre'foil. Clover. **t. tendon,** cordiform tendon, centrum tendineum diaphragmatis [BNA].

trefu'sia. Trade name of a preparation of albuminate of iron made from blood.

trehala (tre-hah'lah). A saccharine substance resembling manna, excreted by an insect, *Larinus maculatus*, of Turkey in Asia and Persia.

trehalose (tre'hah-lōs). A sugar, $C_{12}H_{22}O_{11}$, contained in trehala.

Treitz's arch [Wenzel *Treitz*, Austrian physician, 1819–1872.] A vascular arch formed by the left superior colic artery and the inferior mesenteric vein, between the left border of the ascending portion of the duodenum and the inner border of the left kidney. **T.'s fossa,** recessus duodenojejunalis, a depression in the peritoneum to the left of the duodenojejunal flexure. **T.'s her'nia,** retroperitoneal hernia. **T.'s lig'ament,** T.'s muscle. **T.'s muscle,** musculus suspensorius duodeni.

TREITZ'S FOSSA. (*Landouzy and Jayle.*)

Trélat's sign (tra-lă') [Ulysse *Trélat*, Parisian surgeon, 1828–1890.] The presence of disseminated yellowish spots in the neighborhood of tuberculous ulcers of the mouth; they are minute tubercles or miliary abscesses. **T.'s spec'ulum,** a bivalve rectal speculum. **T.'s stools,** glairy stools streaked with blood in proctitis.

tre'ma [G. a hole.] 1. Foramen. 2. The vulva.

Tremato'da, Tremato'des [G. *trēmatōdēs*, full of holes.] An order of *Platyhelmintha*, containing a large number of parasitic worms, the trematoids or flukes.

trem'atode, trem'atoid. 1. A parasitic worm of the order *Trematoda*, a fluke. 2. Relating to a fluke, or trematoid worm. See *Distoma*, *Fasciola*, and *fluke*.

trembles (trem'blz) [L. *tremulus; tremere*, to tremble.] 1. Milk sickness in cattle; slows; alkali poisoning. 2. Paralysis agitans.

trem'bling [L. *tremulus; tremere*, to tremble.] 1. Shaking, quaking. 2. A tremor. **t. palsy,** paralysis agitans.

trem'elloid, trem'ellose. Jelly-like.

tre'mens [L. *tremere*, to tremble.] 1. Trembling, quaking. 2. Delirium* tremens.

trem'ogram. The graphic representation of a tremor taken by means of the tremograph or kymograph.

trem'ograph [L. *tremor* + G. *graphō*, I record.] An apparatus for making a graphic record of a tremor.

tremopho'bia [G. *tremō*, I tremble, + *phobos*, fear.] An abnormal fear of trembling.

trem'or [L. a shaking.] Trembling, shaking; a disorder of the muscular tonus or loss of equilibrium, the normal inappreciable clonic contractions being exaggerated. **arsen'ical t.,** one due to chronic poisoning by arsenic. **coarse t.,** one in which the vibrations number not more than six or seven per second. **contin'uous t.,** persistent t. **fi'brillary t.,** myokymia, a twitching of the fine strands or fasciculi of a muscle. **fine t.,** one in which there are ten or twelve vibrations per second. **inten'tion t.,** a t. which occurs when a voluntary movement is made. **mercu'rial t.,** one due to chronic poisoning by mercury. **metall'ic t.,** one due to poisoning by lead, zinc, or other metal. **passive t.,** one which occurs when the subject is at rest, and diminishes or ceases during voluntary movement. **persis'tent t.,** a t. which is constant, whether the subject is at rest or moving. **purring t.,** purring* fremitus. **sat'urnine t.,** a t. due to chronic lead poisoning. **senile t.,** a t., usually an intention t., but sometimes a persistent t., occurring in the aged. **stat'ic t.,** a t. excited when the person makes an effort to hold a limb in a certain position. **t. ar'tuum,** trembling of the extremities, especially of the hands. **t. cordis,** palpitation of the heart. **t. opiophago'rum,** a t. occurring in opium addicts. **t. potato'rum,** a t. occurring in the subjects of chronic alcoholism. **t. ten'dinum,** subsultus tendinum. **voli'tional t.,** one which can be arrested by a strong effort of the will.

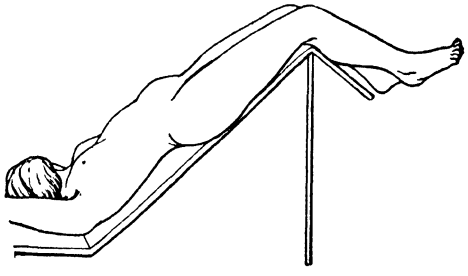
trem'ulor. An instrument for giving vibratory massage.

trem'ulous. Trembling, shaking.

trench diseas'es. Various diseases observed in soldiers on trench duty in the World War, which were assumed to be caused by the exposure and other special conditions of trench life. **t. back,** painful rigidity of the back affecting soldiers on trench duty, who are compelled to remain for long periods of time in a constrained position, at the same time exposed to wet and cold. **t. fe'ver,** a fever, probably specific, affecting soldiers in the trenches; it is remittent or relapsing in type, transmissible by injection of whole blood but not of serum alone, and spread by lice; it was at one time supposed to be malarial or to be the same as ratbite fever. **t. foot,** a condition of frost-bite affecting the feet of soldiers on trench duty, obliged to stand for long periods of time in cold water. **t. hand,** frost bite of the hand, resulting sometimes in gangrene; the hand may be merely stiff and clawlike, or there may be discoloration of the skin with phlyctenulæ, or finally there may be both moist gangrene and mummification, affecting one or more fingers or the entire hand. **t. leg,** t shin. **t. lung,** a condition marked by paroxysmal attacks of rapid breathing, but without any signs of organic disease. **t. mouth,** Vincent's*

angina. t. nephri'tis, war nephritis, acute nephritis occurring in soldiers on trench duty, due to exposure. **t. shin,** a disease marked by fever, headache, and dull aching pain in the tibiæ and tibiales antici muscles; there is present also a polymorphonuclear leucocytosis; an affection observed chiefly in soldiers serving in the trenches; it is believed to be an infectious fibrositis affecting chiefly the tibiæ.

Tren'delenburg's cann'ula [Friedrich *Trendelenburg*, German surgeon, 1844–1924.] A cannula covered with a dilatable rubber bag which occludes



TRENDELENBURG'S POSITION.

the trachea, applied after tracheotomy to prevent the entrance of blood during operations on the mouth or larynx. **T.'s operation,** (1) ligation of the saphena magna for the cure of varicose veins; (2) excision of varicose veins; (3) synchondroseotomy. **T.'s posi'tion,** a supine position on the operating table or the bed, inclined at an angle of 45°, so that the pelvis is higher than the head; assumed during and after operations in the pelvis. **T.'s sign,** in congenital dislocation of the hip if the patient stands on the dislocated leg and flexes the hip and knee on the other side the pelvis on this side will sag, whereas if there is no dislocation it will be raised on the side of the flexed hip and knee; the sign may occur also in cases of marked coxa vara, ankylosis of the hip in adduction, and infantile paralysis involving the lateral abdominal muscles on one or both sides. **T.'s symp'tom,** a waddling gait in paresis of the gluteal muscles, as in progressive muscular dystrophy. **T.'s tampon,** T.'s cannula. **T.'s test,** the leg is raised above the level of the heart until the veins are empty; it is then rapidly lowered and in case of varicosity and incompetence of the valves the veins will at once become distended.

Trep. Abbreviation of *Treponema*.

trepan' [G. *trypanon*, a borer.] 1. A trephine, specifically one patterned after a carpenter's bit. 2. To trephine.

trepana'tion. Trephining, the removal of a disc of bone from the skull. **t. of the cor'nea,** the removal of a circular bit from the cornea in the treatment of anterior corneal staphyloma.

trep'anize. To trepan.

trepann'er. One who trepans, or trephines.

trephina'tion. Trepanation.

trephine (tre-fīn') [Fr.] 1. A modified and improved trepan, a cylindrical or crown saw used for the removal of a disc of bone, especially from the skull, or of other firm tissue as that of the cornea. 2. To remove a disc of bone or other tissue by means of a trephine.

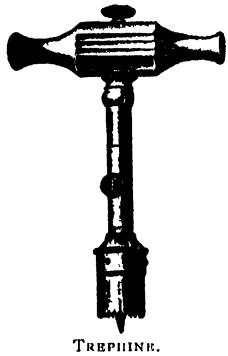
trephinement (tre-fīn'ment). Trephination, trepanation.

trephi'ner. One who trephines.

trephocyte (trĕ'fo-sīt) [*trephō*, I nourish, cause to grow, + *kytos*, cell.] Nurse cell.*

trephone (tref'ōn) [G. *trephōn*, pres. part of *trephō*, I cause to grow.] A group of principles elaborated by leucocytes and possibly other cells, which are used in the building up of protoplasm by epithelial and connective tissues.

trep'idant [L. *trepidans; trepidare*, to tremble, to be agitated.] Trembling, marked by tremor. **t. aba'sia,** paroxysmal abasia.*



TREPHINE.

trepida'tio [L.] Trepidation. **t. cordis,** palpitation.

trepida'tion. 1. Trembling, tremor. 2. Anxious fear.

Treponema (trĕ-po-ne'mah) [G. *trepō*, I turn, + *nēma*, thread.] A genus of the family *Spirochætaceæ*, the species of which are rigid or waving spiral forms; some of them are pathogenic. **T. callig'yrum,**⁰ a non-pathogenic smegma organism. **T. macroden'tium**⁰ and **T. microden'tium,**⁰ two mouth organisms, nonpathogenic, but the cause of a fetid odor of the breath. **T. muco'sum,**⁰ spiral organisms of variable length with six to eight curves, isolated from the tooth roots in pyorrhea alveolaris. **T. pal'lidum,**⁰ a spiral organism with numerous curves, the pathogenic agent of syphilis. **T. perten'ue**⁰ a spiral organism, the cause of yaws. **T. refrin'gens,** a species found occasionally in balanitis, gonorrheal papillomata, and condylomata; apparently non-pathogenic. **T. schau'dinni,** *Spirochæta schaudinni*, a species found in the pus of tropical ulcers.

treponemicidal (trep-o-nem-i-si'dal) [*treponema* + L. *cædere*, to kill.] Destructive to any species of *Treponema*, therefore antisyphilitic.

treppe (trep'eh) [Ger.] Staircase.

Tresil'ian's sign [Frederick James *Tresilian*, British physician, contemporary.] A reddish prominence at the orifice of Stenson's duct, noted in mumps.

tre'sis [G. *trēsis*, a boring.] Perforation.

Treves' fold [Sir Frederick *Treves*, English surgeon, 1853–1923.] A peritoneal fold attached to the left border of the cecum, above to the ileum, below to the appendix or mesoappendix.

tri- [L. and G.] A prefix denoting three.

triacetate (tri-as'e-tāt). An acetate containing three acetic-acid molecules.

triacetin (tri-as'ĕ-tin). An oily liquid, $C_3H_5(C_2H_3O_2)_3$, derived from various oils.

triacid (tri-as'id) [L. *tri-*, three, + *acidus*, acid.] Noting a base having three replaceable hydroxyl groups.

tri'acol. Trade name of a preparation of ethylmorphine-guaiacol, with alkalies, recommended in tuberculosis.

tri'ad [G. *trias*, the number 3.] 1. A collection of three things having something in common. 2. In chemistry, a trivalent element. **Grancher's t., Hutchinson's t.,** see the proper names.

triakaidekaphobia (tri"ah-ki-dek-ah-fo'bĭ-ah) [G. *tria kai deka*, three and ten, thirteen, + *phobos*, fear.] The superstitious fear of thirteen at table.

tri'al-case. A box containing an assortment of trial-lenses.

tri'al-frame. A spectacle frame into which lenses can be readily slipped when testing the acuteness of a person's vision.

tri'al-lenses. A series of cylindrical and spherical lenses used in testing vision.

tri'al-plate. In dentistry a temporary plate of soft metal or other substance, used for testing and fitting an artificial denture.

trialylam'ine. An oily liquid amine, $N(C_3H_5)_3$.

triam'ide. A tertiary amide.*

triam'ine. A tertiary amine.*

triangle (tri'ang-gl) [L. *triangulum; tri-*, three, + *angulus*, angle.] 1. A geometrical figure having three straight lines, joined two by two, forming three angles; trigone. 2. In anatomy and surgery, a more or less triangular area bounded by muscles, bony prominences, or other structures, within which are normally found certain important nerves or blood-vessels; for these various triangles (Petit's, Scarpa's, etc.) see the proper names. **ante'rior t.,** a large t. in the neck, bounded by the mandible above, the sternocleidomastoid muscle, and the midline of the neck anteriorly; it is subdivided into the inferior and superior carotid triangles and the submandibular t. **auric'ular t.,** a t. formed by the base of the auricle and by lines drawn from the true tip of the auricle to the extremities of the base. **ax'illary t.,** a triangular area embracing the inner aspect of the arm, the axilla, and the pectoral region which is one of the seats of predilection for the petechial initial rash of smallpox. **car''diohepat'ic t.,** an area in the fifth intercostal space on the right side, marking the interval between the heart and the liver. **carot'id t.,** see *inferior carotid t.*, and *superior carotid t.* **cephal'ic t.,** a t. on the cranium formed by lines connecting the metopion, the mental point, and the occipital point. **cru'ral t.,** an area of predilection for the petechial initial rash of smallpox; it occupies the lower abdominal, inguinal, and genital regions and the inner aspects of the thighs, the base of the triangle traversing the umbilicus. **digas'tric t.,** submandibular t. **fa'cial t.,** a t. formed by lines connecting the basion, the alveolar point, and the nasal point. **fem'oral t.,** Scarpa's* t. **frontal t.,** a t. bounded above by the maximum frontal diameter and laterally by lines joining the extremities of this diameter with the glabella. **iliofem'oral t.,** Bryant's* t. **infe'rior carot'id t.,** bounded by the sternomastoid behind, the anterior belly of the omohyoid above, and the middle line of the neck anteriorly; the common carotid artery and jugular vein lie at the posterior limit of this space. **infe'rior occip'ital t.,** one formed by a line between the two mastoid processes and the two converging lines between the mastoid process on either side and the inion, or external occipital protuberance. **infraclavic'ular t.,** one bounded by the clavicle, the anterior border of the deltoid muscle, and the upper border of the pectoralis major muscle. **in'guinal t.,** (1) femora. t., subinguinal t., Scarpa's t.; (2) inguinal trigonel Henke's* trigone. **lum''bocos''toabdom'inal t.,** an irregular area bounded by the serratus posterior inferior, obliquus externus, obliquus internus, and sacrospinalis muscles. **lym'phoid t.,** Waldeyer's ring, the broken chain of lymphoid tissue formed by the lingual, faucial, and pharyngeal tonsils. **med'ullary t.,** capsula interna. **occip'ital t.,** a t. of the neck bounded by the trapezius, the sternocleidomastoid, and the omohyoid muscles; see *inferior occipital t.* **pal'atal t.,** a triangular area bounded by the greatest transverse diameter and by lines converging fromits extremities to the alveolar point. **paraver'tebral t.,** Grocco's* triangle. **poste'rior t.,** a cervical t. bounded anteriorly by the sternocleidomastoid muscle, posteriorly by the trapezius, below by the clavicle, with apex at the occipital bone. **puboure'thral t.,** a triangle in the perineum bounded by the transversus perinei, the ischiocavernosus, and the bulbocavernosus muscles. **sacral t.,** the surface area over the sacrum. **subcla'vian t.,** trigonum omoclaviculare [BNA]. **subin'guinal t.,** Scarpa's* t. **submandib'ular t.,** submaxillary t., a subdivision of the anterior t. of the neck, bounded by the mandible above, the stylohyoid and the posterior belly of the digastric muscle, and anteriorly by the midline of the neck. **submax'illary t.,** submandibular t. **submen'tal t.,** a t. bounded on either side by the anterior belly of a digastric muscle, and below by the hyoid bone; the myohyoid muscle forms its floor. **suboccip'ital t.,** one bounded by the obliquus inferior, the obliquus superior, and the rectus capitis posterior major muscles. **supe'rior carot'id t.,** bounded by the sternomastoid behind, the anterior belly of the omohyoid below, and the posterior belly of the digastric above; the bifurcation of the common carotid artery occurs here. **supe'rior lum'bar t.,** a space bounded by the external oblique muscle anteriorly, the iliocostal posteriorly, the serratus posticus inferior and end of the twelfth rib above, and the internal oblique below. **suprame'atal t.,** Macewen's t., a triangle formed by the root of the zygoma, the posterior wall of the bony external auditory meatus, and an imaginary line connecting the extremities of the first two lines, used as a guide in mastoid operations. **sur'gical t.,** see *triangle* (2). **t. of ausculta'tion,** space bounded by the lower border of the trapezius, the latissimus dorsi, and the vertebral border of the scapula. **t. of el'bow,** a space between the pronator teres and the supinator longus muscles on the flexor side of the elbow. **t. of elec'tion,** superior carotid triangle' **t. of neces'sity,** inferior carotid triangle. **umbil''icomam'millary t.,** a triangle with apex at the umbilicus and base at the line joining the mammillæ. **vag'inal t.,** Pawlik's* t. **ves'ical t.,** trigonum vesicæ [BNA].

triangular (tri-ang'gu-lar). Three-cornered. **t. bone,** os trigonum, os triquetrum. **t. fas'cia,** fascia triangularis. **t. lig'ament,** ligamentum triangulare. **t. muscle,** musculus triangularis.

triangula'ris [L.] Triangular; see under *musculus*.

triangular'ity of the teeth. A very well-marked indication of advancing age in the horse, shown by increasing depth from front to rear in the occlusal surfaces of the incisor teeth. At nine years, when the marks fail, this sign becomes of service in determining the age of the animal.

trian'gulum [L.] · Triangle, trigone.

Triatoma (tri-at'o-mah). A genus of biting bugs of the family *Reduviidæ*, formerly called *Lamus* or *Conorhinus*, several of the species of which, (*T. cha'gasi, T. dimidia'ta, T. genicula'ta, T. infes'tans, T. megis'ta, and T. sor'dida*) transmit *Trypanosoma cruzi*, the pathogen of Chagas' disease. **T. protrac'ta,** the "kissing bug" of the Western United States. **T. sanguisu'ga,**

sometimes found associated with the common bedbug, *Cimex lectularius* in the United States.

triatom'ic [G. *tri-*, three, + *atomos*, atom.] Noting a compound having three hydroxyl groups by means of which other atoms or radicals may be added to the molecule. 2. Trivalent.

tribade (trib'ăd) [see *tribadism*.] A woman with abnormally developed clitoris who takes the active rôle in sapphism.

trib'adism, trib'ady [G. *tribō*, I rub.] Unnatural sexual practices between women.

triba'sic [G. *tris*, thrice, + *basis*, base.] Having three replaceable hydrogen atoms, noting an acid with a basicity of 3.

tribas'ilar. Having three bases. **t. synosto'sis,** fusion in early life of the three bones at the base of the skull resulting in arrest of development of the brain and idiocy.

tribe [L. *tribus*.] In biological classification, an occasional division between the *family* and the *genus;* often the same as the *subfamily*.

triboluminescence (tri″bo-lu-min-es'ens) [G. *tribō*, I rub.] Luminosity caused by friction.

tribrachius (tri-bra'kĭ-us) [G. *tri-*, three, + *brachiōn*, arm.] A monster with three arms.

tribroman'iline. A colorless acicular crystalline powder, the hydrobromide of which (*bromamide*) is employed in neuralgia in doses of gr. 5–10 (0.3–0.6).

tribromethanol (tri-brōm-eth'an-ol). Avertin.

tribromhy'drin. Allyl tribromide, a colorless liquid, $C_3H_5Br_3$, employed as an antispasmodic and sedative in doses of ♏5 (0.3).

tribro'mide. A bromide having three bromine atoms in the molecule.

tribrommeth'ane. Bromoform.

tribromophe'nol, tribromphe'nol. Bromol, $C_6H_2Br_3OH$, obtained by the action of bromine on an aqueous solution of phenol; occurs as reddish crystals of a bromine odor and sweetish astringent taste, soluble in alcohol, insoluble in water. Employed as an intestinal antiseptic in doses of gr. 2–8 (0.13–0.5), and externally as an antiseptic in 3 per cent. solution in oil, or mixed with talcum as a dusting powder. **t. bis'muth,** xeroform, a greenish yellow powder, employed as an intestinal antiseptic in doses of gr. 5–15 (0.3–1.0).

tribromphen'yl sal'icylate. Tribromsalol.

tribromsal'ol. Cordol, a white, odorless, tasteless crystalline powder, insoluble in water; employed as an intestinal antiseptic in doses of gr. 5–15 (0.3–1.0).

trical'cic. Containing three calcium atoms.

tricell'ular. Three-celled.

triceph'alus [G. *tri-*, three, + *kephalos*, head.] A monster with three heads.

tri'ceps [L. *tri-*, three, + *caput*, head.] Three-headed; noting especially two muscles: *t. brachii* and *t. suræ*, which see under *musculus*.

trichangiectasia (tri-kan-ji-ek-ta'sĭ-ah) [G. *thrix* (*trich-*), hair, + *angeion*, vessel, + *ektasis*, extension.] Dilatation of the capillary blood-vessels; telangiectasia.

trichatrophia (tri-kă-tro'fĭ-ah) [G. *thrix*(*trich-*), hair, + *atrophia*, atrophy.] Atrophy of the hair-bulbs, with brittleness, splitting, and falling of the hair.

trichauxis (trik-awk'sis) [G. *thrix*(*trich-*), hair, + *auxis*, increase.] Hypertrophy, as to both size and number, of the hairs of a part.

trichia (trik'ĭ-ah). Entropion, trichiasis.

trichiasis (trĭ-ki'a-sis) [G. *thrix*(*trich-*), hair.] Inversion of one or more of the eyelashes causing irritation of the corneal conjunctiva.

trichina, pl. *trichinæ* (trĭ-ki'nah). A larval worm of the genus *Trichinella*.

Trichina (trĭ ki'nah) [G. *thrix*(*trich-*), hair.] A genus of nematode worms, more correctly called *Trichinella*. **T. cys'tica,** *Filaria bancrofti*. **T. spira'lis,** *Trichinella spiralis*.

Trichinella (trĭ-ki-nel'ah) [dim. of *trichina*.] A genus of *Nematoda*. **T. spira'lis,** a nematode, the adult of which inhabits the intestine of man and other mammals, the larvæ invading the muscles, and giving rise to the disease, *trichinosis*.

trichinelliasis (trik-e-nel-ĭ'a-sis). Trichinosis.

trichinellosis (trĭ-kĭ-nel-lo'sis). Trichinosis.

trichiniasis (trĭ-kin-i'a-sis). Trichinosis.

trichiniferous (trĭ-ki-nif'er-us) [*trichina* + *ferre*, to bear.] Containing trichinæ.

trichiniza'tion (trĭ-kin-i-za'shun). Infestation with trichinæ.

trichinopho'bia (trĭ-kin-o-fo'bĭ-ah) [*trichina* + G. *phobos*, fear.] Abnormal fear of acquiring trichinosis.

trichinoscope (trĭ-ki'no-skōp) [*trichina* + G. *skopeō*, I view.] A magnifying glass used in the examination of meat suspected of being trichinous.

trichinosis (trĭ-kin-o'sis). A disease caused by the presence of the larvæ of *Trichinella spiralis* in the muscles. The larvæ are ingested in insufficiently cooked pork and reach maturity in the intestine; the mature worm then gives birth to multitudes of larvæ which are carried in the lymph and blood to the muscles, where they become encysted, their presence causing severe pain, edema, fever, and marked eosinophilia.

trichinous (trik'in-us). Infested with trichinæ.

trichite (tri'kīt) [G. *thrix*(*trich-*), hair, + *-ite*.] One of a number of plastids, derived from the nucleus, in acicular form, arranged radially around the periphery of a protozoan cell, which may be extruded as weapons of offense or defense.

trichitis (tri-ki'tis) [G. *thrix*(*trich-*), hair, + *-itis*.] Inflammation of the hair-bulbs.

trichloracetic acid (tri-klor-ă-se'tik as'id). Acidum trichloraceticum.

trichloraldehyde (tri-klor-al'de-hīd). Chloral.

trichlorbutylal'cohol. Chloretone.

trichlorbutylaldehyde (tri-klor-bu″til-al'de-hīd). Butyl-chloral.

trichlorethylene (tri-klor-eth'il-ēn). An analgesic substance recommended for the relief of tic douloureux by inhalation.

trichlorhy'drin. Allyl trichloride, recommended as a hypnotic.

trichloride (tri-klo'rīd, tri-klo'rid). A chloride having three chlorine atoms in the molecule.

trichlormeth'ane. Chloroform.

trichlormethylchloroformate (tri-klor-meth″il-klo-ro-for'māt). Diphosgene.

trichloropropane (tri-klo-ro-pro'pān). Trichlorhydrin, allyl trichloride.

trichlorphe'nol. Trichlorphenic acid, a derivative of carbolic acid occurring in white acicular crystals; used as an antiseptic and disinfectant.

tricho- [G. *thrix*(*trich-*), hair.] A prefix denoting a hair or hair-like structure, capillary.

trichoæsthesia (tri-ko-es-the'sĭ-ah). Trichoesthesia.

trichobacteria (tri-ko-bak-te'rĭ-ah) [G. *thrix*, hair.] Flagellated bacteria.

trichobezoar (tri-ko-be'zōr) [G. *thrix*(*trich-*), hair, + Pers. *bezoar*.] A hair-ball in the stomach

trichocardia (tri-ko-kar'dĭ-ah) [G. *thrix*, hair, + *kardia*, heart.] Hairy heart,* shaggy pericardium, cor hirsutum.

trichocephaliasis (tri''ko-sef-al-i'a-sis). Infestation with a worm of the genus *Trichocephalus*.

Trichocephalus (tri-ko-sef'al-us) [G. *thrix(trich-)*, hair, + *kephalē*, head.] A genus of *nematoda*, parasitic in the large intestine of **mammals**. **T. affinis,** cecum-worm a worm parasitic in the cecum of the sheep. **T. crena'tus,** a species parasitic in the cecum of the dog. **T. dis'par, T. hom'inis,** *T. trichiurus*. **T. trichiu'rus** [G. *thrix*, hair, + *oura*, tail], whip-worm; a very common intestinal parasite in man, inhabiting the cecum.

trichocirsus (tri-ko-sur'sus) [G. *thrix(trich-)*, hair, + *kirsos*, varix.] Dilatation of the capillary blood-vessels.

trichoclasia, trichoclasis (tri-ko-kla'sĭ-ah, tri-kok'la-sis) [G. *thrix(trich-)*, hair, + *klasis*, breaking off.] Brittleness of the **hairs**, trichorrhexis.

trichocryptosis (tri-ko-krip-to'sis) [G. *thrix(trich-)*, hair, + *kryptos*, concealed.] Any disease of the hair-follicles.

trichocyst (tri'ko-sist) [G. *thrix(trich-)*, hair, + *kystis*, bladder.] One of a number of plastids, derived from the nucleus, in the form of minute elongated cysts, arranged radially around the periphery of a **protozoan** cell, the contained fluid, when discharged, serving for offense or defense.

trichodangeitis (tri-ko-dan-je-i'(e')tis) [G. *trichōdēs*, capillary, + *angeion*, vessel, + *-itis*.] Inflammation of the capillary blood-vessels.

trichodarteritis (tri-ko-dar-ter-ĭ-i'(e')tis) [G. *trichōdēs*, capillary, + *artēria*, artery, + *-itis*.] Inflammation of the arterioles, telangeitis.

Trichodectes (tri-ko-dek'tēz) [G. *thrix(trich-)*, hair, + *dektēs*, a beggar.] A genus of insects parasitic on some of the lower animals. **T. latus,** the dog-louse. **T. sphæroceph'alus,** the round-headed sheep-louse.

trichodophlebitis (tri-kod-o-fle-bi'(be')tis) [G. *trichōdēs*, capillary, + *phleps(phleb-)*, vein, + *-itis*.] Inflammation of the venules.

trichoepithelioma (tri-ko-ep-ĭ-the-lĭ-o'mah) [G. *thrix(trich-)*, hair, + *epithelioma*.] Benign cystic epithelioma; an epithelial neoplasm originating in the hair-follicles. **t. papillo'sum mul'tiplex,** an eruption of papules and nodules, resembling spiradenoma, originating in the hair-follicles.

trichoesthesia, trichoæsthesia (tri-ko-es-the'zĭ-ah) [G. *thrix(trich-)*, hair, + *aisthēsis*, sensation.] 1. The sensation felt when a hair is touched. 2. A form of paresthesia in which there is a sensation as of a hair on the skin, on the mucous membrane of the mouth, or on the conjunctiva.

trichoesthesiometer, trichoæsthesiometer (tri-ko-es-the-sĭ-om'e-ter) [*trichoesthesia* + G. *metron*, measure.] A device for testing the sensibility of the scalp and other hairy parts.

trichogen (tri'ko-jen) [G. *thrix(trich-)*, hair, + *gennaō*, I produce.] 1. An agent which promotes the growth of hair. 2. Trade name of a preparation from the sebaceous glands and cholesterin, recommended to be given by hypodermic injection to stimulate the growth of hair.

trichogenous (tri-koj'en-us) [G. *thrix(trich-)*, hair + *gennaō*, I produce.] Promoting the growth of the hair.

trichoglossia (tri-ko-glos'ĭ-ah) [G. *thrix(trich-)*, hair, + *glōssa*, tongue.] Hairy tongue.

trichohyaline (tri-ko-hi'al-in). A substance of the nature of keratohyaline or eleidin, found in the hair.

trichoid (tri'koyd) [G. *thrix(trich-)*, hair, + *eidos*, resemblance.] Hair-like.

trichokyptomania (tri-ko-kyp''to-ma'nĭ-ah) [G. *thrix (trich-)*, hair. + *kyptos*, crooked, + *mania*, madness.] Trichorrhexomania.

tricholabis, tricholabum (tri-kol'ă-bis, tri-ko-la'bĭ-um) [G. *thrix(trich-)*, hair, + *labis*, pincers; *labion*, dim. of *labē*, a grip.] Hair-tweezers.

tricholith (tri'ko-lith) [G. *thrix(trich-)*, hair, + *lithos*, stone.] A concretion on the hair, the lesion of piedra.*

trichologia (tri-ko-lo'jĭ-ah) [G. *trichologō*, I pick out hairs.] 1. A tic consisting in plucking at the hair 2. Trichotillomania. 3. Carphologia.

trichology (tri-kol'o-jĭ) [G. *thrix(trich-)*, hair, + *-logia*.] 1. The branch of medicine which has to do with the hair—its anatomy, growth, and diseases. 2. [G. *legō*, I pick out.] Trichologia.

trichoma (tri-ko'mah) [G. *thrix(trich-)*, hair, + *-ōma*.] 1. Plica polonica. 2. Trichiasis.

trichomania (tri-ko-ma'nĭ-ah). Trichotillomania.

trichomaphyte (tri-ko'mă-fīt) [*trichoma* + G. *phyton*, plant.] A fungus found in plica polonica.

trichomatose (tri-ko'mă-tōz). Trichomatous.

trichomatosis (tri-ko-mă-to'sis). Trichoma.

trichomatous (tri-ko'mă-tus). Relating to or suffering from **trichoma**.

trichome (tri'kome) [G. *trichōma*, a hairy growth.] One of the epidermal hairs, prickles, or scales of plants.

Trichomonas (tri-kom'o-nas) [G. *thrix(trich-)*, hair, + *monas*, single.] A genus of flagellate protozoa. **T. hom'inis**, a species found in the human intestine, sometimes apparently the cause of diarrhea. **T. intestina'lis,** a species sometimes found in the intestine in bacillary dysentery. **T. vagina'lis,** a species found in the vaginal secretions and sometimes in the male urethra.

Trichomycetes (tri-ko-mi-se'tēz) [G. *thrix(trich-)*, hair, + *mykēs*, fungus.] Hair-fungus; a family of *Hyphomycetes* including the higher bacteria.

trichomycetosis (tri-ko-mi-se-to'sis). Trichomycosis.

trichomycosis (tri-ko-mi-ko'sis) [G. *thrix(trich-)*, hair, + *mykēs*, a fungus.] Any disease of the hair caused by a bacterial invasion; tinea. **t. axilla'ris,** trichonocardiasis. **t. nodo'sa, t. nodula'ris,** nodular t., t. palmellina, lepothrix, a disease of the hair, characterized by the presence on the hairs of reddish nodular masses composed of agglutinated microorganisms; certain tropical forms are due to the presence of *Trichosporon foxei* and *T. krusei*. **t. palmelli'na,** t. nodosa. **t. pustulo'sa,** any parasitic disease of the hair marked by pustulation at the orifices of the hair-follicles.

trichonocardiasis (tri''ko-no''kar-di'a-sis) [G. *thrix (trich-)*, hair, + *Nocardia*.] A nodular affection of the hair, generally of the axillary region, caused by the presence of a species of Nocardia (*N. tenuis*); trichomycosis axillaris; four varieties have been described—*t. fla'va, t. fus'ca, t. ni'gra*, and *t. ru'bra;* in the first *N. tenuis* is found alone, in the others there is a symbiosis of this fungus with pigment-forming cocci.

trichonodosis (tri-ko-no-do'sis) [G. *thrix (trich-)*, hair, + L. *nodositas*, marked by nodes or knot-like swellings.] Trichomycosis or trichorrhexis nodosa.

trichonosis (trik-ŏ-no'sis). Trichonosus.

trichonosus (tri-kon'o-sus) [G. *thrix(trich-)*, hair, + *nosos*, disease.] Any morbid condition of the hair, trichopathy. **t. versic'olor,** ringed hair.

trichopathic (tri-ko-path'ik). Relating to any disease of the hair.

trichopathophobia (tri-ko-path-o-fo'bĭ-ah) [G. *thrix* (*trich-*), hair, + *pathos*, suffering, + *phobos*, fear.] Excessive worry regarding disease of the hair, its color, or abnormalities of its growth.

trichopathy (tri-kop'ă-thĭ) [G. *thrix*(*trich-*), hair, + *pathos*, suffering.] Any disease of the hair, trichonosis, trichonosus.

trichophagy (tri-kof'a-jĭ) [G. *thrix*(*trich-*), hair, + *phagō*, I eat.] The tic of biting the hair.

trichophobia (tri-ko-fo'bĭ-ah) [G. *thrix*(*trich-*), hair, + *phobos*, fear.] A morbid, almost insane, disgust caused by the sight of loose hairs on the clothing or elsewhere.

trichophytic (tri-ko-fit'ik). 1. Relating to trichophytosis. 2. Promoting the growth of the hair, trichogenous. 3. An agent which promotes the growth of the hair, trichogen.

trichophytin (tri-kof'ĭ-tin). An extract of cultures of several species of Trichophyton, the ringworm fungus, used in the diagnosis and treatment of the different varieties of ringworm.

trichophytobezoar (tri-ko-fi-to-be'zor) [G. *thrix* (*trich-*), hair, + *phyton*, plant, + *bezoar*.] A mixed hair- and food-ball, consisting of vegetable fibers, seeds and skins of fruits, and animal hair which are matted together to form a ball in the stomach of man or animals, especially ruminants.

Trichoph'yton [G. *thrix*(*trich-*), hair, + *phyton*, plant.] A genus of fungi pathogenic of tinea or ringworm. **T. ec'tothrix** [G. *ektos*, without], and **T. en'dothrix** [G. *endon*, within], see *T. megalosporon*. **T. megalos'poron** [G. *megas*(*megal-*), large, + *sporos*, seed], the large spored ringworm fungus, common in France, but rare in England and the United States; it occurs in two forms: *T. m. ectothrix*, the spores of which are found usually outside the cuticle of the hair; and *T. m endothrix*, which invades the substance of the hair; the first is the form occurring in ringworm in domestic animals. **T. micros'poron** [G. *mikros*, small, + *sporos*, seed], *Microsporon audouini*, the species of fungus usually productive of ringworm in the United States. **T. ra'dens**, a species which has been mentioned as the cause of alopecia areata. **T. ro'dens**, *Achorion quinckeanum*. **T. rosa'ceum**, a species occasionally found in cases of typical ringworm; it produces cultures of a pink color. **T. ton'surans**, a variety of the ringworm fungus, said to be a distinct species, causing tinea tonsurans.

trichophytosis (tri-ko-fi-to'sis) [G. *thrix*(*trich-*), hair, + *phyton*, plant.] Ringworm, tinea* trichophytina. **t. cap'itis**, tinea tonsurans. **t. cor'poris**, tinea circinata. **t. cruris**, eczema marginatum.

trichopoliosis (tri-ko-po-lĭ-o'sis) [G. *thrix*(*trich-*) hair, + *polios*, gray.] Canities.

trichoptilosis (tri-kop-til-o'sis) [G. *thrix*(*trich-*), hair, + *ptilōsis*, plumage.] 1. A condition of splitting of the shaft of the hair, giving it a feathery appearance. 2. Trichorrhexis nodosa.

trichorrhea, trichorrhœa (tri-kŏ-re'ah) [G. *thrix* (*trich-*), hair, + *rhoia*, a flow.] Falling of the hair.

trichorrhexis (tri-kŏ-reks'is) [G. *thrix*(*trich-*), hair, + *rhēxis*, a breaking.] Fragilitas crinium, trichoschisis, a condition in which the hairs readily break or split. **t. nodo'sa**, Beigel's disease, trichoclasia, clastothrix, a condition in which minute nodes are formed in the shafts of the hairs, the latter splitting and breaking incompletely at these points.

trichorrhexomania (tri-ko-reks"o-ma'nĭ-ah) [G. *thrix*(*trich-*), hair, + *rhēxis*, breaking, + *mania*, madness.] A tic of breaking off the hair of the head or beard by rubbing it against the thin edge of a finger nail.

trichoschisis (tri-kos'kĭ-sis) [G. *thrix*(*trich-*), hair, + *schisis*, a cleaving.] Splitting of the [redacted] trichorrhexis.

trichoscopy (tri-kos'ko-pĭ) [G. *thrix*(*trich-*), hair, + *skopeō*, I examine.] Examination of the hair.

trichosis (tri-ko'sis) [G. *thrix*(*trich-*), hair.] 1. Any disease of the hair, trichonosus, trichopathy. 2. Abnormal growth of the hair, or growth of hair in an abnormal location. **t. a'thrix**, alopecia. **t. carun'culæ**, a growth of hair on the lacrymal caruncle. **t. dec'olor**, canities, or any abnormal coloration of the hair. **t. distrix**, trichorrhexia. **t. sensiti'va**, hyperesthesia of the hairy parts. **t. seto'sa**, coarseness of the hair.

Trichosoma contortum (tri-ko-so'ma kon-tor'tum) [G. *thrix*(*trich-*), hair, + *sōma*, body; L. *contortus*, twisted.] A thread-worm, parasitic in fowls.

trichosomatous (tri-ko-so'mă-tus) [G. *thrix*(*trich-*), hair, + *sōma*, body.] Having flagella with a small body, noting certain protozoan organisms.

Trichos'poron [G. *thrix*, hair, + *sporos*, seed.] A genus of fungi causing trichomycosis nodosa.

trichosporosis (tri-ko-spo-ro'sis). A disease of the hair caused by a species of *Trichosporon*. **t. in'dica**, a mild form of piedra observed in India. **t. trop'ica**, piedra.

Trichostomina (tri-ko-sto-mi'nah) [G. *thrix*(*trich-*), hair, + *stoma*, mouth.] A suborder of *Holotrichida*, having an undulating membrane at the mouth opening.

Trichostrongylus (tri"ko-stron'jĭ-lus) [G. *thrix* (*trich-*), hair, + *strongylos*, round.] A genus of Nematoda, formerly included in *Strongylus*. **Tr. ins'tabilis**, a species found in Egypt. **Tr. orienta'lis**, a Japanese species. **Tr. probol'urus** and **Tr. vitri'nus** are two species found in Egypt, infecting the antelope, camel, and sheep, but rarely man.

trichosyphilis, trichosyphilosis (tri-ko-sif'ĭ-lis, tri-ko-sif-ĭ-lo'sis). Any syphilitic disease of the hair.

Trichothecium (tri-ko-the'sĭ-um) [G. *thrix*, hair, + *thēkion*, dim. of *thēkē*, box, case.] A genus of mould fungi sometimes causing disease of the hair. **T. ro'seum**, a species which has been found in certain cases of mycomyringitis.

trichotillomania (tri-ko-til-o-ma'nĭ-ah) [G. *thrix* (*trich-*), hair, + *tillō*, I pluck, + *mania*, madness.] The habit of plucking at the hairs of the beard or moustache, or those at the anterior nares or ears.

trichotomy (tri-kot'o-mĭ) [G. *tricha*, threefold, + *tomē*, a cutting] Division into three parts.

trichotoxin (tri-ko-tox'in) [G. *thrix*(*trich-*), hair, referring to the cilia.] A cytotoxin specific for ciliated epithelium.

trichotrophy (tri-kot'ro-fĭ) [G. *thrix*(*trich-*), hair, + *trophē*, nourishment.] Nutrition of the hair.

trichroic (tri-kro'ik) [G. *trichroos*, three-colored.] Relating to or marked by trichroism.

trichroism (tri'kro-izm). The property of showing a different color when viewed in each of three positions.

trichromatic (tri-kro-mat'ik) [G. *tri-*, three, + *chrōma*, color.] Relating to or capable of perceiving the three fundamental colors, red, green, and violet; noting the eye normal in respect of color-sensation.

trichromic (tri-kro'mik) [G. *tri-*, three, + *chrōma*, color.] 1. Capable of distinguishing the three colors—red, blue, and green. 2. A person of

weak color vision, who is yet able to distinguish the three colors—red, blue, and green.

richuriasis (tri-koo-ri'ă-sis). The presence of *Trichuris trichiura*, or whipworm, in large numbers in the large intestine or ileum.

richuris (tri-koo'ris) [G. *thrix(trich-)*, hair, + *oura*, tail.] A genus of Trematoda of the family *Trichinellidæ*. **T. trichiu'ra**, the whip-worm. *Trichocephalus* dispar or *trichiurus*.

ricip'ital. Having three heads; noting a triceps muscle.

ri'corn [L. *tri-*, three, + *cornu*, horn.] 1. One of the lateral ventricles of the brain. 2. Tricornute.

ricor'nute. Having three cornua or horns.

ricre'sol. A proprietary name for a purified mixture of the three cresols.

ricresolamine (tri-kre-sol-am'ēn). An antiseptic liquid containing two per cent. each of tricresol and ethylenediamine.

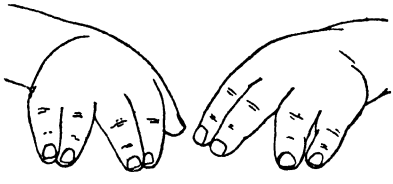
tricrot'ic [G. *tri-*, three, + *krotos*, a beat.] Marked by three beats, noting a down stroke of the sphymographic tracing interrupted by three upward notches.

tri'crotism. The condition of being tricrotic.

tri'crotous. Tricrotic.

tricus'pid [L. *tres(tri-)*, three, + *cuspis*, point.] Having three points, prongs, or cusps. **t. a'rea**, the region of the chest wall over the lower part of the body of the sternum, where the sounds produced at the right atrioventricular orifice are heard most distinctly. **t. murmur**, a murmur produced by stenosis or incompetency of the t valve. **t. or'ifice**, the right atrioventricular aperture of the heart, guarded by the t. valve. **t. tooth**, a tooth having a crown with three cusps. **t. valve**, valvula tricuspidalis. **t. ver'tebra**, the sixth cervical vertebra in quadrupeds.

tricus'pidal, tricus'pidate. Tricuspid.



TRIDENT HANDS.

tri'dent. Tridendate. **t. hand**, a deformity in chondrodystrophy marked by a divergence of the second and third from the fourth and fifth fingers at the end of the first phalanx, the two pairs of fingers and the thumb giving a three-pronged shape to the hand.

triden'tate [L. *tri-*, three, + *dens(dent-)*, tooth.] Trident, three-toothed, three-pronged.

tridermic (tri-dur'mik) [G. *tri-*, three, + *derma*, skin.] Relating to or derived from the three "derms" of the embryo—*ecto*derm, *endo*derm, and *meso*derm.

tridermoma (tri-dur-mo'mah) [G. *tri-*, three, + *derma*, skin, + *-oma*.] A teratoid growth representing all three germ-layers. **adult' or coeta'neous t.**, one the different elements of which resemble fully matured tissue; **em'bryonal t.**, one in which the tissue elements are of embryonal character.

tridymus (trid'ĭ-mus). 1. A triple monster. 2. One of normal triplets.

trielcon (tri-el'kon) [G. *tri-*, three, + *helkō*, I draw.] A long three-jawed forceps for the extraction of foreign bodies from wounds or canals.

triencephalus (tri-en-sef'a-lus). Triocephalus.

triethylamine (tri-eth-il-am'ēn). A liquid ptomaine of ammoniacal odor, $C_6H_{15}N$, formed in decaying fish; it is not violently poisonous.

trifa'cial [L. *tri-*, three, + *facies*, face.] Noting the fifth pair of cranial nerves, nervus trigeminus [BNA]. **t. neural'gia**, neuralgia of one of the branches of the trifacial nerve, tic douloureux.

trifer'rin. Ferric paranucleinate, trade name of a preparation said to be a compound of casein-paranucleinic acid and iron, prepared by digesting the casein of cow's milk with pepsin and precipitating with a salt of iron. It is a reddish tasteless powder, insoluble in water; recommended in anemia and chlorosis in doses of gr. 5 (0.3).

trifer'rol. Trade name of a liquid said to contain triferrin gr. 1 (0.06) in each fluidrachm (4.0).

tri'fid [L. *trifidus; tri-*, three, + *findere*, to split.] Three-cleft, split into three.

trifolio'sis [L. *trifolium*, trefoil, clover.] A disease of the horse, said to be due to the ingestion of hybrid clover, and marked by symptoms showing irritation of skin and buccal mucous membrane, or by manifestations of grave disturbance of the internal organs.

Trifo'lium [L. *tri-*, three, + *folium*, leaf.] A genus of plants of the order *Leguminosæ*, including the trefoils or clovers. **T. arven'se** [L. *arvensis*, of the field], hare's foot, field clover, employed in domestic medicine in the treatment of gout. **T. praten'se** [L. *pratensis*, of the meadow], red clover, trifolium (N.F.), employed in eclectic practice in the treatment of whooping cough and tuberculosis, and as an alterative, especially in the treatment of inoperable cancer. **T. re'pens** [L. *repere*, to creep], Dutch clover, white clover, used in domestic practice in the treatment of gout and gouty pains.

trifo'lium (N.F.). Red clover blossoms, the dried inflorescence of *T. pratense;* dose, ʒi (4.0); a fluidextract is official in the N.F.

trifor'mol. Paraform.

trigas'tric [L. *tri-*, three, + *gastēr*, belly.] Having three bellies, noting a muscle with two tendinous interruptions.

trigem'in. Trade name of a synthetic preparation, dimethylaminoantipyrine-butylchloralhydrate, recommended in the treatment of tic douloureux and other forms of neuralgia, influenza, and sore-throat in doses of gr. 5–15 (0.3–1.0).

trigeminal (tri-jem'ĭ-nal). Relating to the fifth cranial or trigeminus nerve. **t. cough**, a reflex cough due to irritation of the terminals of the trigeminus nerve in the upper respiratory passages. **t. impres'sion**, impressio trigemini [BNA]. **t. nerve**, nervus trigeminus. **t. neural'gia**, facial neuralgia, tic douloureux. **t. pulse**, pulsus trigeminus.

trigeminus (tri-jem'ĭ-nus) [L. triplet.] See under *nervus* and *pulsus*.

trigg'er-a'rea. Any point or circumscribed area, irritation of which will give rise to functional action or disturbance elsewhere.

trigg'er-finger. See under *finger*.

trigg'er-mate'rial. A hypothetical substance which acts as a sort of a fuse, its decomposition causing that of the protoplasm, when the splitting of the latter is necessary for the performance of a definite function.

trigoceph'alus. Trigonocephalus.

trig'onal. Triangular; relating to a trigonum.

tri'gone. 1. Triangle, trigonum. 2. The first three cusps, taken collectively, of an upper molar tooth.

Trigonell'a [G. *trigōnos*, triangular, noting the shape of the flowers.] A genus of leguminous herbs, containing the species *T. fœnum græcum*, fenugreek.

trigonid (tri-gon'id) [see *trigonum*.] The first three cusps, taken collectively, of a lower molar tooth.

trigonitis (tri-go-ni'(ne')tis) [L. *trigonum* + G. *-itis*.] Inflammation of the urinary bladder, localized in the mucous membrane at the trigonum.

trigonocephal'ic. Marked by trigonocephaly, relating to a trigonocephalus.

trigonoceph'alus [G. *trigōnon*, triangle, + *kephalē*, head.] A monster having a more or, less triangular skull owing to arrested development of the frontal bone and of the frontal lobes of the brain.

trigonoceph'aly. The condition of a trigonocephalus.

trigo'num, pl. *trigo'na* [L. from G. *trigōnon*, a triangle.] Trigone, any triangular area. **t. acus'tici,** trigone of the acoustic nerve, a prominence on the outer side of the fovea inferior of the floor of the fourth ventricle, below the striæ medullares. **t. carot'icum,** the superior carotid triangle,* or triangle of election. **t. cerebra'le,** fornix (1). **t. cervica'le,** t. colli. **t. collatera'le** [BNA], collateral trigone, **t.** ventriculi, an approximately triangular space in the pars centralis of the lateral ventricle of the brain, between the posterior and descending horns. **t. colli,** any one of the triangles of the neck, more especially t. caroticum. **t. deltoid'eopectora'le** [BNA], Mohrenheim's fossa, a space between the pectoralis major and deltoid muscles, below the clavicle. **t. dorsa'le, t. du'rum,** the space between the nates, or colliculi superiores [BNA]. of the quadrigeminal bodies. **t. femora'le** [BNA], Scarpa's triangle, a triangular space at the upper and inner part of the thigh, bounded by the sartorius and adductor longus muscles and the inguinal (Poupart's) ligament. **t. fibro'sum** [BNA], nodus cordis [NK], one of two cartilaginous nodules, to the right and left of the root of the aorta, forming the extremities of the incomplete fibrous ring which surrounds the left atrioventricular orifice. **t. fluc'tuans,** commissura posterior cerebri. **t. haben'ulæ** [BNA], trigone of the habenula, a small triangular area between the habenula and the thalamus, immediately anterior to the superior quadrigeminal body on either side. **t. hypoglos'si,** t. nervi hypoglossi. **t. inguina'le,** (1) a triangular space above and external to the pubic spine. formed by the outer edge of the rectus abdominis muscle and the inguinal furrow; (2) t. femorale. **t. lemnis'ci** [BNA], triangle of Reil, triangle or trigone of the fillet, a triangular area on the upper part of the outer side of the brachium* conjunctivum. **t. lumba'le** [BNA], Petit's lumbar triangle, an interval bounded by the edges of the latissimus dorsi and obliquus externus muscles and the crest of the ilium. **t. ner'vi hypoglos'si** [BNA], trigone of the hypoglossal nerve, a slight elevation in the fovea inferior of the fourth ventricle, beneath which is the nucleus of origin of the 12th cranial nerve. **t. olfacto'rium** [BNA], oltactory trigone, a grayish triangular area forming the posterior extremity of the olfactory tract where it diverges into the three roots, or olfactory striæ; the trigone lies just above the optic nerve near the chiasm. **t. omoclavicula're** [BNA], subclavian triangle, a triangle bounded by the clavicle, the omohyoid muscle, and the sternocleidomastoid muscle. **t. pala'ti,** palatal triangle.* **t. pen'sile, t. fluctuans. t. sternocosta'le,** a muscular defect in the diaphragm between the costal and the sternal portions. **t. urogenita'le,** diaphragma urogenitale. **t. va'gi,** trigone of the vagus nerve, ala* cinerea [BNA]. **t. vagina'le,** Pawlik's triangle, the area in the vagina corresponding to the t. vesicæ. **t. ventric'uli,** trigone of ventricle, t. collaterale [BNA]. **t. ve[redacted]** [BNA], Lieutaud's trigone, a triangular smooth area at the base of the bladder bounded by lines drawn between the ureters and from each ureter to the urethra.

trihal'oid. A compound containing three hydroxyl radicals in the molecule.

trihybrid (tri-hi'brid) [L. *tri-*, three, + *hybridus*, hybrid.] The offspring of parents which differ from them in three characters.

trihy'drate. A compound containing one atom of the base to three hydroxyl radicals in the molecule.

trihy'dric. Noting a chemical compound containing three replaceable hydrogen atoms.

trihydrox'ide. Trihydrate.

tri-iniod'ymus [G. *tri-*, three, + *inion*, nape of the neck, + *didymos*, twin.] A monster with three heads, joined at the occiput, and a single body.

triiodide (tri-i'o-did, or -did). An iodide with three atoms of iodine and one of the other elements in the molecule.

triiodometh'ane. Iodoform.

triketohydrinden hydrate (tri-ke-to-hi'drin-den hi'drāt). A colorless, crystallizable, water-soluble substance, $C_6H_4.CO.CO.C(OH)_2$, employed as a test for albumin, peptone, polypeptids, and amino acids and also for specific proteolytic ferments in the blood, as in the Abderhalden tests; called also ninhydrin.

triketopu'rin. Uric acid.

tri'labe [G. *tri-*, three, + *labē*, a grip.] A three-pronged forceps for removal of foreign bodies from the bladder.

trilam'inar. Having three laminæ.

trilat'eral [L. *tri-*, three, + *latus(later-)*, side.] Having three sides.

trilau'rin. A glyceride found abundantly in cocoanut oil and some other oils.

trilinolein (tri-li-no'-le-in). A glyceride found in linseed oil and some other drying oils.

trill'in. An alcoholic extract of trillium, employed in eclectic practice as a tonic expectorant, astringent, hemostatic, and ecbolic in doses of gr 2–4 (0.13–0.25).

trillium (tril'ĭ-um) [L. *tres*, three, referring to the arrangements of parts of the flowers in threes.] (N.F.) The rhizome of *Trillium erectum* and other species of *T.*, birthroot, bethroot, wake-robin, Indian shamrock, plants of eastern North America; tonic, astringent, and antispasmodic in dose of gr. 30 (2.0), or ℥30 (2.0) of the N.F. fluidextract.

trilo'bate, tri'lobed [L. *tri-*, three, + *lobus*, lobe.] Having three lobes.

triloc'ular [L. *tri-*, three, + *loculus*, cell.] Having three cells.

triman'ual [L. *tri-*, three, + *manus*, hand.] Performed by the aid of three hands, noting certain obstetrical maneuvers.

trimas'tigate [G. *tri-*, three, + *mastix(mastig-)*, a whip.] Having three flagella, noting certain protozoans.

trimen'sual [L. *tri-*, three, + *menses*, month.] Occurring every three months, quarterly.

trimercu'ric. Noting a compound having three bivalent atoms of mercury in the molecule.

trimes'tral, trimes'trial. Trimensual.

trimethyl'amine. An alkaloid, $N(CH_3)_3$, obtained from herring brine by distillation with lime; it is a colorless liquid at low temperatures but a gas at ordinary temperature. It is marketed in a 10 per cent. aqueous solution, a clear liquid with the odor of herring brine, caustic and antiseptic; recommended in rheumatism in doses of ♏10–30 (0.6–2.0).

trimethylenedi'amine. A ptomaine formed in cultures of the cholera bacillus.

trimethylxanthine (tri-meth-il-zan'thin). Caffeine.

trimor'phic. Trimorphous.

trimor'phism. Existence under three forms, as in the case of certain insects which pass through the stages of *larva*, *pupa*, and *imago*.

trimor'phous [G. *tri-*, three, + *morphē*, form.] Existing under three forms, marked by trimorphism.

trineu'ric [G. *tri-*, three, + *neuron*, nerve.] Having three neuraxons or axis-cylinders.

trini'trate. Ternitrate, a nitrate having three nitric-acid radicals in the molecule.

trini'trin. Nitroglycerin, glyceryl-trinitrate.

trinitrocell'ulose. Gun-cotton, pyroxylin.

trinitrocre'sol. A yellowish powder obtained from creosol, employed as an antiseptic application.

trinitroglycerin (tri-ni-tro-glis'er-in). Nitroglycerin.

trini'trol. Erythrol nitrate, having properties similar to those of nitroglycerin.

trinitrophenol (U.S., Br.) (tri-ni-tro-fe'nol). Picric acid, carbazotic acid, $C_6H_2(NO_2)_3OH$; occurring as yellow crystals of bitter taste slightly soluble in water; employed sometimes as an application to burns and various skin affections, and as a vulnerary; its dose is given in the U.S.P. as gr. ½ (0.03), and it has been suggested for use in malaria, but it is seldom given internally.

trinitrotoluene (tri-ni-tro-tol'u-ēn). Trinitrotoluol, T.N.T., an explosive made by the nitrification of toluol, or toluene, $CH_3.C_6H_2.(NO_2)_3$; it causes toxic symptoms—gastric and intestinal disturbances and dermatitis—in workers in munition factories.

trino'mial [L. *tri-*, three, + *nomen*, name.] Having three names, noting certain zoological or botanical terms, as *Diplococcus intracellularis meningitidis*.

trinophe'non. Trade name of a solution of picric acid employed in the local treatment of burns.

trioceph'alus. Triencephalus, a monster having an imperfectly formed head without mouth, nose, or eyes.

Tri'odon [G. *tri-*, three, + *odous(odont-)*, tooth.] A genus of fishes, having a divided upper jaw, several species of which are poisonous.

triolein (tri-o'le-in). Olein.

tri'onal. Sulphonethylmethane.

triorchid, triorchis (tri-or'kid tri-or'kis) [G. *tri-*, three, + *orchis*, testicle.] One who has three testicles.

tri'ose. A monosaccharid, or sugar, having three carbon atoms in the molecule.

trioto'nol. Trade name of a mixture the glycerophosphates of calcium, sodium, and strychnine, in the proportion of 2½ grains of each of the first two and gr. $\frac{1}{16}$ of the last, see *tonol*.

trio'tus [G. *tri-*, three, + *ous(ōt)*, ear.] A diprosopic monster with three ears.

triox'ide. Teroxide.

trioxybenzophe'non. Salicyl-resorcinolketone, a compound obtained by heating together salycylic acid and resorcinol; antipyretic, analgesic, and antiseptic, in doses of gr. 5–15 (0.3–1.0).

trioxymeth'ylene. Paraform.

tripal'mitin. Palmitin.

trip'ara [L. *tri-*, three, + *parere*, to bear.] A woman who has borne three children in as many pregnancies.

tripep'tid. A combination of three amino-acids; see *peptid*.

triphalan'gia. A malformation consisting in the presence of three phalanges in the thumb or great toe.

triphar'macon, triphar'macum. A pharmaceutical compound containing three drugs.

tripha'sic [G. *tris*, thrice, + *phasis*, appearance.] Occurring in, or referring to, three phases or stages.

triphenamine (tri-fen-am'ēn). A preparation of three salts of phenocoll, recommended in the treatment of rheumatism.

triphen'etol-guan'idin hydrochlo'ride. A local anesthetic recommended as a collyrium in 1 per cent. solution.

triphen'in. Propionylphenetidin, a crystalline powder, antipyretic and analgesic; recommended in rheumatism, influenza, headache, and neuralgia, in doses of gr. 5–15 (0.3–1.0).

triphthe'mia, triphthæ'mia [G. *triptos*, pounded, rubbed, + *haima*, blood.] The loading of the blood with waste material. **t. carbonif'era,** t. resulting from the immoderate ingestion of carbohydrates.

Tripier's amputa'tion (tre-pe-a') [Léon *Tripier*, French surgeon, 1842–1891.] A modification of Chopart's amputation, in that a part of the calcaneus is also removed.

triple (trip'l) [G. *triploos*.] Threefold, consisting of three parts. **t. phos'phate,** ammoniomagnesium phosphate. **t. stain,** see under *Ehrlich*. **t. vis'ion,** triplopia.

triple'gia [G. *tri-*, three, + *plēgē*, stroke.] Paralysis of an upper and a lower extremity and of the face, or of both extremities on one side and of one on the other.

trip'let. 1. One of three children delivered at the same birth. 2. A set of three similar objects, as a compound lens in a microscope, formed of three planoconvex lenses.

tri'plex [L. *tri-*, three, + *plexus; plicare*, to fold.] Triple, threefold. **t. pills,** pilulæ triplices (N.F.).

triploblas'tic [G. *triploos*, threefold, + *blastos*, germ.] Formed of three blastodermic membranes.

triplo'pia [G. *triploos*, triple, + *ōps(ōp-)*, eye.] A visual defect in which three images are seen of the same object.

tri'pod [G. *tri-*, three, + *pous(pod-)*, foot.] 1. Three-legged. 2. A stand having three legs or supports. **Haller's t.,** celiac axis, arteria* cœliaca [BNA]. **vital t.,** the brain, the heart, and the lungs regarded as the three organs essential to life.

triprosopus (tri-pros-o'pus) [G. *tri-*, three, + *prosōpon*, face.] A monster with three heads fused, leaving only parts of three faces.

trip'sis [G. rubbing.] 1. Trituration, 2. Massage.

tri'pus [L.] Tripod. **t. cœli'acus,** celiac axis, arteria cœliaca [BNA].

triquet'rous [L. *triquetrus*.] Triangular. **t. bone,** (1) a Wormian bone; (2) os triquetrum [BNA]. **t. car'tilage,** (1) discusarticularis of the distal radioulnar articulation; (2) cartilago arytænoidea.

triquet'rum. 1. Os triquetrum. 2. A Wormian bone.

trira'dial, trira'diate [L. *tri-*, three, + *radius*, ray.] Radiating in three directions. **t. fissure,** t. sulcus. **t. pelvis,** pelvis triradiata **t. sulcus,** sulcus orbitalis.

triradius (tri-ra'dĭ-us). The figure at the base of each finger in the palm, produced by rows of papillæ running in three directions so as to form a triangle; Galton's delta.

trisaccharid, trisaccharide (tri-sak'kar-id) [G. *tri-*, three, + *sakcharis*, sugar.] A carbohydrate containing three saccharid groups plus a molecule of water ($C_{18}H_{32}O_{16}$); raffinose is a member of this group.

tri'salt. A salt each molecule of which contains three acid radicals with one atom of the base.

tris'mic. Relating to or marked by trismus.

tris'moid [G. *trismos*, trismus, + *eidos*, resemblance.] 1. Resembling trismus. 2. Trismus nascentium, formerly regarded as a distinct variety due to pressure on the occiput during birth.

trismus (triz'mus) [G. *trismos*, a creaking] Lockjaw, a firm closing of the jaw due to tonic spasm of the muscles of mastication from disease of the motor branch of the trigeminus; usually associated with, and due to the same cause as, general tetanus. **t. capistra'tus** [L. *capistrum*, a muzzle], congenital adhesion of the cheeks to the gums. **t. dolorif'icus,** tic douloureux. **t. nascen'tium, t. neonato'rum,** tetanus* neonatorum which usually begins with stiffness of the jaw muscles **t. sardon'icus,** risus sardonicus.

trisni'trate. Trinitrate.

trisplanchnic (tri-splank'nik) [G. *tri-*, three, + *splanchnon*, viscus.] Relating to the three visceral cavities—skull, thorax, and abdomen. **t. nerve,** sympathetic nerve, see *systema** *nervorum sympathicum*.

triste'arin. Stearin.

tristema'nia [L. *tristis*, sad, + G. *mania*, frenzy.] Melancholia.

tristichia (tri-stik'I-ah) [G. *tri-*, three, + *stichos*, row.] The presence of three rows of eyelashes.

trisub'stituted. In chemistry, having three hydrogen atoms replaced by three other atoms or radicals.

trisul'phide. A chemical compound containing in each molecule three atoms of sulphur and one of the other element.

trisul'cate. Marked by three grooves.

tritanopia (tri-tan-o'pĭ-ah) [G. *tritos*, third, + *anopia*.] Blue-blindness, blue being the third of the primary colors, red, green, and blue; see *deuteranopia* and *protanopia*.

triticeoglossus (trĭ-tis'e-o-glos'us) [L. *triticeum* + G. *glōssa*, tongue.] Bochdalek's muscle, musculus* triticeoglossus.

triticeous (tri-tis'e-us). Of the size of a grain of wheat. **t. car'tilage, t. nod'ule,** triticeum,* cartilago triticea [BNA].

triticeum (trĭ-tis'e-um) [L. *triticeus*, relating to *triticum*, a grain of wheat.] Corpus triticeum, cartilago triticea [BNA], a small cartilaginous (sometimes bony) nodule often present in the hyothyroid membrane of the larynx.

trit'icum [L. wheat, from *terere*, to thresh.] (N.F.) Couch-grass; the rhizome of *Agropyron repens*, witch-grass, quick-grass; diuretic in doses of ʒ2 (8.0) in infusion. **t. re'pens,** triticum.

tritocone (tri'to-kōn) [G. *tritos*, third, + *kōnos*, cone.] The distobuccal cusp of an upper premolar tooth in a mammal.

tritoconid (tri"to-kōn'id). The distobuccal cusp of a lower premolar tooth in a mammal.

trit'opine [G. *tritos*, third, + *opion*, opium.] An alkaloid derived from the mother liquor of morphine, $C_{42}H_{44}N_2O_7$, occurring in prismatic crystals or a white powder; its action resembles that of strychnine.

tritotox'in. A hypothetical form of toxin in certain bacterial cultures, which has less affinity for antitoxin than has deuterotoxin.

tritox'ide. Trioxide.

tritubercular (tri-tu-bur'ku-lar) [L. *tri-*, three, + *tuberculum*, tubercle.] Tricuspid, having three tubercles or cusps, as the second upper molar tooth, occasionally, and the third upper molar, usually.

trit'urable. Capable of being triturated.

trit'urate [L. *triturare*.] 1. To rub to a fine powder, specifically to powder a drug very fine and mix it thoroughly with a definite proportion of sugar of milk. 2. Trituratio. **tablet t.,** a compressed tablet of a medicated powder rubbed up with sugar of milk.

tritura'tio [L. *triturare*, to rub, grind, triturate.] Trituration, a term in homeopathic pharmacy, adopted by the U.S.P., to denote a powder prepared by triturating together definite quantities of a medicinal substance and sugar of milk. In homeopathic pharmacy the triturations are in the proportion of one part of the drug to 9 parts of sugar of milk (decimal), or of 1 of the drug to 99 of sugar of milk (centesimal trituration); in the U.S.P. the general formula is 10 parts of the drug to 90 of sugar of milk. **t. elateri'ni,** trituration of elaterin; elaterin 10 parts, sugar of milk 90; dose, gr. ½–1 (0.015–0.06).

tritura'tion [L. *trituratio*.] 1. Trituratio. 2. The act of reducing a drug to a fine powder, and at the same time incorporating it thoroughly with sugar of milk, by rubbing the two together in a mortar.

tritu'rium. A vessel used to hold liquids of different densities, which rise to their respective levels and are then drawn off.

tri'valence. The property of being trivalent.

tri'valent [L. *tri-(tres)*, three, + *valere*, to have power.] Having the combining power of three atoms of hydrogen.

tri'valve. Provided with three valves, as a speculum with three diverging blades.

trizo'nal. Having, or arranged in, three zones or layers.

TROCAR AND CANNULA.

tro'car [Fr. *trois*, three, + *carre*, side.] An instrument for withdrawing fluid from a cavity, or for use in paracentesis; it consists of a metal tube (*cannula*), open at both ends, in which fits a rod with a sharp three-cornered tip, which is withdrawn after the instrument has been pushed into the cavity. The term *trocar* is usually applied to the rod with sharpened tip alone, the entire instrument being designated trocar and cannula.

troch. Abbreviation of L. *trochiscus*, troche.

trochanter (tro-kan'ter) [G. originally the head of the femur.] One of the bony prominences, developed from independent osseous centers, near the upper extremity of the femur; there are two in man, three in the horse. **greater t.,** t. major. **lesser t.,** t. minor. **small t.,** t. minor. **third t.,** t. tertius, tuberositas glutæa. **t. major** [BNA], great t., a strong process at the upper and outer part of the shaft of the femur, overhanging the root of the neck; it gives attachment to the gluteus medius, pyriformis, obturator internus, and gemelli muscles. **t. minor** [BNA],

lesser t., a pyramidal process projecting from the inner and upper part of the shaft of the femur at the line of junction of the shaft and the neck; it receives the insertion of the psoas magnus and iliacus (iliopsoas) muscles. **t. ter'tius** [BNA], third t., an occasional process at the upper end of the outer lip of the linea aspera of the femur, about on a level with the small t., giving insertion to the greater part of the gluteus maximus muscle; gluteal tuberosity.

trochanterian, trochanteric (tro-kan-te'rĭ-an, tro-kan-ter'ik). Relating to a trochanter, especially the trochanter major.

trochantin (tro-kan'tin). Trochanter minor.

trochantinian (tro-kan-tin'ĭ-an). Relating to the lesser trochanter.

trochar (tro'car). Trocar.

troche (trōk, tro'ke) [G. *trochos*, a pill.] Lozenge, a medicated disc intended to be dissolved in the mouth, the contained drug acting locally upon the mucous membrane of the mouth or throat; see *trochiscus*.

trochin (tro'kin). The lesser tuberosity of the head of the humerus, tuberculum minus [BNA].

trochinian (trō-kin'ĭ-an). Relating to the trochin.

trochisci, gen. *trochisco'rum* (tro-kis'si). Plural of *trochiscus;** troches. (See also *tabellæ*.)

t. ac'idi benzo'ici, benzoic acid lozenges, contain each gr. ½ (0.03) of benzoic acid in a fruit basis; used for hoarseness.

t. ac'idi carbol'ici, carbolic acid or phenol lozenges, contain each gr. 1 (0.006) in a tolu basis; used in stomatitis.

t. ac'idi tan'nici (U.S., Br.), troches of tannic acid, tannic acid lozenges, contain each gr. 1 (0.06) in sugar basis (U.S.), gr. ½ (0.03) in fruit basis (Br.); employed in relaxed condition of the uvula and pharynx.

t. ammo'nii chlo'ridi (U.S.), troches of ammonium chloride, contain each gr. 1½ (0.1) of ammonium chloride in a tolu basis; used in chronic bronchitis.

t. bismuth'i compos'iti (Br.), compound bismuth lozenges, contain each gr. 2 (0.13) of bismuth oxycarbonate and of heavy magnesium carbonate and gr. 4 (0.26) of precipitated calcium carbonate in a rose basis; employed in gastric acidity and diarrhea.

t. carbo'nis lig'ni, charcoal tablets, containing each about 5 grains of wood charcoal with sugar, vanillin, and tragacanth.

t. cat'echu, catechu lozenges, t. gambir (U.S.), contain each gr. 1 (0.06) in a simple (sugar) basis; used in relaxed conditions of the uvula and pharynx.

t. cube'bæ, troches of cubeb, contain each gr. ½ (0.02) of oleoresin of cubeb, flavored with oil of sassafras and licorice, in a tolu basis; employed in subacute laryngitis and pharyngitis.

t. eucalyp'ti gum'mi (N.F.), eucalyptus gum lozenges, red gum lozenges, contain each about gr. 1 (0.06) in a fruit basis; used to relieve cough in laryngitis.

t. fer'ri reduc'ti, reduced iron lozenges, contain each gr. 1 (0.06) in a simple sugar basis; used in anemia.

t. gam'bir, troches of gambir, t. catechu (Br. and U.S. 1890), contain each gr. 1 (0.06) in a sugar basis; used in relaxed conditions of the uvula and pharynx.

t. glycyrrhi'zæ et o'pii, troches of glycyrrhiza and opium, licorice and opium lozenges, Wistar's cough lozenges, contain each gr. 2½ (0.14) of extract of licorice and gr. 1/12 (0.005) of opium in a sugar basis; used to relieve cough in bronchitis and pharyngitis.

t. guai'aci resi'næ, guaiacum resin lozenges, contain each gr. 3 (0.2) in a fruit basis; used to loosen a cough.

t. ipecacuan'hæ, ipecac lozenges, contain each gr. ¼ (0.015) in a fruit basis; used in the dry stage of laryngitis or bronchitis.

t. krame'riæ (Br.), troches of krameria, rhatany lozenges, contain each gr. 1 (0.06) of extract of krameria in a sugar (U.S.) or fruit (Br.) basis; used in relaxed conditions of the uvula and pharynx.

t. krame'riæ et cocai'næ (Br.), krameria (rhatany) and cocaine lozenges, contain each gr. 1 (0.06) of extract of krameria and gr. 1/20 (0.003) of cocaine hydrochloride in a fruit basis; used in sore throat.

t. men'thæ piperi'tæ, troches of peppermint; oil of peppermint 1, sugar 100, mucilage of tragacanth to make 100 troches; dose, 1 troche.

t. morphi'næ, morphine lozenges, contain each gr. 1/60 (0.0018) of morphine hydrochloride in a tolu basis; used to relieve bronchial and laryngeal cough.

t. morphi'næ et ipecacuan'hæ (Br.), morphine and ipecac lozenges, contain each gr. 1/60 (0.0018) of morphine hydrochloride and gr. 1/12 (0.005) of ipecac in a tolu basis; used to relieve cough in the dry stage of bronchitis.

t. pheno'lis (Br.), lozenge of phenol, each lozenge contains about ½ gr. (0.03) or half as much as the former t. acidi carbolici.

t. phenolphthalei'ni, phenolphthalein troches containing each about one grain (0.06) of phenolphthalein, with sugar, vanillin, carmine, and acacia; dose, 1 troche.

t. potas'sii chlora'tis (Br.), troches of potassium chlorate, potassium chlorate lozenges, contain each gr. 2½ (0.14) in a sugar basis (U.S.), gr. 3 (0.2) in a rose basis (Br.); used in aphthous and other forms of stomatitis.

t. quini'næ tanna'tis, troches of quinine tannate, containing each one grain (0.06) of quinine tannate, with cocoa, sugar, vanillin, oil of theobroma, sodium benzosulphinide, chloroform, and tragacanth; dose, 1 troche.

t. santoni'ni (Br.), troches of santonin, santonin lozenges, contain each gr. ½ (0.03) (N.F. IV), gr. 1 (0.06) (Br.), in a simple (sugar) basis; anthelmintic.

t. santoni'ni compos'iti, compound santonin troches, santonin and calomel troches, containing ½ grain each of santonin and calomel, flavored with cocoa, vanillin, and sugar; dose, 1 troche.

t. so'dii bicarbona'tis (Br.), troches of sodium bicarbonate, sodium bicarbonate lozenges, contain each gr. 2½ (0.18) flavored with nutmeg in a sugar basis (U.S.), gr. 3 (0.2) in a rose basis (Br.); employed in gastric acidity.

t. sul'phuris (Br.), sulphur lozenges, contain each gr. 5 (0.3) of sulphur and gr. 1 (0.06) of acid potassium tartrate in a sugar basis; used in chronic diseases of the liver and intestines, and in skin and articular affections.

t. sul'phuris et potass'ii bitartra'tis, troches of sulphur and potassium bitartrate, sulphur and cream of tartar troches, containing each 5 grains (0.3) of sulphur and 1 grain (0.06)-of cream of tartar, flavored with oil of orange and sugar; dose, 1 troche.

t. ul'mi (N.F.), slippery elm troches, containing 3 grains (0.2) of ulmus, flavored with methyl salicylate and sugar; dose, 1 troche.

trochiscus, pl. *trochisci* (tro-kis'kus) [L. from G. *trochiskos*, a small disc.] Troche, pastil, lozenge (see also *tabellæ*); a term used to denote a solid, usually flattened, disc-like body, composed of a solidifying paste containing an astringent, antiseptic, or demulcent drug, with which it is desired to treat locally the mouth or throat, the troche being held in the mouth until dissolved. The vehicle or base of the troche is usually sugar, made adhesive by admixture with acacia or tragacanth, fruit paste, made from black or red currants, confection of rose, or balsam of tolu. (For the official troches see under *trochisci*.)

trochiter (trok'ĭ-ter.) The greater tuberosity of the humerus, tuberculum majus [BNA]; cf. *trochin*.

trochiterian (trok-ĭ-te'rĭ-an). Relating to the trochiter.

trochlea (trok'le-ah) [L. pulley.] 1. A structure serving as a pulley. 2. A smooth articular surface of bone upon which another glides. 3. [BNA] A fibrous loop in the orbit, near the internal angular process of the frontal bone, through which passes the tendon of the superior oblique muscle of the eye. **t. fem'oris,** the smooth ante-

rior depression between the condyles of the femur; **facies patellaris** [BNA]. **t. hu'meri** [BNA], trochlea or pulley of the humerus, the grooved surface at the lower end of the humerus articulating with the great sigmoid cavity of the ulna. **t. labyrin'thi,** cochlea. **t. phalan'gis** [BNA], pulley of the phalanx, the rounded articular or condyoid surface at the distal end of the first and second phalanx of each finger and toe. **t. tali** [BNA], pulley of the ankle-bone, the saddle-shaped articular surface of the ankle-bone articulating with the under surface of the tibia.

trochlear (trok'le-ar). Relating to a trochlea, especially the trochlea of the superior oblique muscle of the eye.

trochleariform (trok-le-ar'i-form) [L. *trochlearis*, relating to a pulley, + *forma*, form.] Trochleiform, pulley-shaped.

trochlearis (trok-le-a'ris). 1. Musculus obliquus superior. 2. Nervus trochlearis.

trochleator (trok-le-a'tor). Nervus trochlearis.

trochleiform (trok'le-i-form) [L. *trochlea*, pulley, + *forma*, form.] Trochlear; pulley-shaped, trochleariform.

trochocardia (trok-o-kar'dĭ-ah) [G. *trochos*, wheel, + *kardia*, heart.] A rotary displacement of the heart around its axis.

trochocephalia, trochocephaly (trok-o-sĕ-fa'lĭ-ah, trok-o-sef'ă-lĭ) [G. *trochos*, wheel, + *kephalē*, head.] Roundheadedness; a deformity of the skull due to premature partial ossification of the frontal suture.

trochoid (tro'koyd) [G. *trochos*, wheel, + *eidos*, resemblance.] Revolving, rotaing; noting a revolving or wheel-like articulation.

trochoides (tro-ko-e'des). A lateral ginglymus, a rotary joint, such as the superior radioulnar or the atlantoepistrophic joint.

trochorizocardia (trŏ-kor-i"zo-kar'dĭ-ah). Combined trochocardia and horizocardia.

Troeltsch's cor'puscles (trĕlch) [Anton Friedrich *Troeltsch*, German otologist, 1829–1890.] Minute spaces, resembling corpuscles, between the radial fibers of the drum membrane of the ear. **T.'s pock'ets** or **recesses,** two folds, anterior and posterior, in the mucous membrane covering the tympanic surface of the drum membrane, one on either side of the handle of the malleus; recessus membranæ tympani anterior and posterior [BNA].

Troisier's ganglion (troah-ze-a') [Émile *Troisier*, French physician, 1844–1919.] Supraclavicular cancerous adenopathy, symptomatic of carcinoma of one of the thoracic or abdominal viscera.

Trolard's vein (trŏ-lar') [Paulin *Trolard*, French anatomist in Algiers, contemporary.] An occasional anastomotic loop uniting the superficial Sylvian vein with the superior longitudinal sinus.

troll'ey-buzz. Tinnitus aurium affecting motormen and conductors on noisy trolley-cars.

troll'ey-eye. Conjunctivitis supposed to be due to brass poisoning contracted by motorman rubbing the eyes after continually handling the brass handle of a brake; chaleitis.

troll'ey-sickness. Carsickness.

Trombid'ium. A genus of mites, many of which attack man, producing an eruption similar to that caused by the harvest-mites; sometimes confused, and possibly identical, with *Tetranychus*. **T. mus'cæ domes'ticæ,** a parasite of the house-fly, employed in homeopathic therapeutics.

trombid'ium [*Trombidium*, a genus of mites.] In homeopathic practice a trituration made from the parasitic red acarus of the fly, *Trombidium muscæ domesticæ;* employed in the treatment of dysentery, especially when the symptoms are made worse by eating and drinking, in doses of the 6th to the 30th potency.

Trom'mer's test [*Trommer*, German chemist, 1806–1879.] For sugar in the urine; to the suspected urine, made alkaline with caustic potassa, in a test-tube a 10 per cent. copper sulphate solution is added drop by drop until the blue precipitate no longer dissolves on shaking; then the upper part of the fluid is heated carefully, and if grape sugar is present a yellowish red color of copper oxide appears.

tromoma'nia [G. *tromos*, a trembling, + *mania*, frenzy.] Delirium tremens.

tro'na. A native sodium carbonate.

tropacocaine (tro-pah-ko'kah-ēn). Benzoyl-pseudotropeine an alkaloid obtained from Java coca leaves; a local anesthetic, but much less strongly mydriatic than cocaine; used in the form of *t. hydrochloride*, for intraspinal anesthesia and in ophthalmology and dentistry in 3 to 10 per cent. solutions.

tropæ'olin [G. *tropaios*, a change.] One of a group of sulphonic-acid orange dyes.

tro'pate. A salt of tropic acid.

tropein (tro'pe-in). A group of mydriatic alkaloids.

trope'olin. Tropæolin.

trophede'ma, trophœde'ma [G. *trophē*, nourishment, + *oidēma*, swelling.] Chronic edema of the extremities, not due to cardiac or renal disease.

trophe'ma [G. *trophē*, nourishment, + *haima*, blood.] The nutrient blood of the uterine mucosa.

troph'esy [G. *trophē*, nourishment.] The results of any disorder of the trophic nerves.

troph'ic. Relating to or dependent upon nutrition. **t. center,** a nerve-center regulating nutrition. **t. nerve,** a nerve regulating the nutritive functions **t. neuro'sis,** trophoneurosis.

trophicity (trŏ-fis'ĭ-ty). A trophic influence or condition.

trophism (trof'izm) [G. *trophē*, nourishment.] 1. Trophicity. 2. Nutrition.

tro'phoblast [G. *trophē*, nourishment, + *blastos*, germ.] 1. The characteristic tissue of the asexual generation in the development of the organism. 2. An epiblastic layer which has no part in the development of the embryo, or the outer layer of cells enveloping the morula in the cystic stage.

trophoblas'tic. Relating to the trophoblast.

trophoblasto'ma [*trophoblast* + G. *-ōma*.] Chorioepithelioma.

trophochromid'ia [G. *trophē*, nourishment, + *chromidia*.] Non-germinal or vegetative extranuclear chromatin masses, found in certain protozoan forms.

trophoderm (trof'o-durm) [G. *trophē*, nourishment, + *derma*, skin.] A layer of cells on the outer surface of the ectoderm in the mammalian blastodermic vesicle; it effects the implantation of the ovum, or attachment to the wall of the uterus, and dissolves the uterine tissues with which it comes in contact in order to supply nutrition to the embryo.

trophodynamics (troph-o-di-nam'iks) [G. *trophē*, nourishment, + *dynamis*, power.] Nutritional energy; the dynamics of metabolism.

trophoedema (trof-o-e-de'mah). Trophedema.

tropholecithus (trof-o-les'ĭ-thus) [G. *trophē*, nourishment, + *lekithos*, yolk.] The food-yolk, vitellus* nutritivus.

trophol'ogy [G. *trophē*, nourishment, + *-logia*.] The science of nutrition.

trophoneuro'sis, pl. *trophoneuro'ses* (trof"o-nu-ro'-sis) [G. *trophē*, nourishment, + *neuron*, nerve, + *-ōsis*.] A trophic disorder, such as atrophy, hypertrophy, or a skin eruption, occurring as a consequence of disease or injury of the trophic nerves of the part. **dissem'inated t.,** scleroderma. **fa'cial t.,** facial hemiatrophy.* **lin'-guăl t.,** progressive lingual hemiatrophy.* **muscular t.,** progressive muscular atrophy.* **Rom'berg's t.,** facial t.

trophoneurot'ic. Relating to a trophoneurosis.

troph'onine. Trade name of a predigested food said to contain beef-albumin, the gluten of wheat and the yolk of eggs.

trophono'sis, trophon'osus [G. *trophē*, nourishment, + *nosos*, disease.] Any disorder of nutrition or metabolism or disease resulting therefrom.

trophonucleus (trof-o-nu'kle-us) [G. *trophē*, nourishment.] The nucleus in protozoa which is concerned with the vegetative metabolic functions, distinct from the gonad, or germ-nucleus; macronucleus.

trophopath'ia, trophop'athy [G. *trophē*, nourishment, + *pathos*, suffering.] 1. A disorder of nutrition. 2. A trophic disease, one due to excessive, deficient, or perverted nutrition, either local or general; trophonosus.

trophoplasm (trof'o-plazm) [G *trophē*, nourishment, + *plasma*, a thing formed.] The achromatin or supposed formative substance of a cell.

troph'oplast. A plastid.

trophospongia (trlf-o-spun'jĭ-ah) [G. *trophē*, nourishment, a brood, + *spongia*, a sponge.] 1. Certain chromatin-staining canalicular structures described by Holmgren in the protoplasm of intestinal epithelia and other cells. 2. A layer of cells between the decidual membrane and the trophoblast.

trophotax'is [G. *trophē*, nourishment, + *taxis*, arrangement.] Trophotropism.

trophotherapy (trof-o-ther'ă-pĭ) [G. *trophē*, nourishment, + *therapeia*, healing.] Dietetics; dietotherapy, sitotherapy.

trophot'onus [G. *trophē*, nourishment, + *tonos*, tension.] Rigidity of muscular or other contractile tissue due to disordered nutrition.

trophotrop'ic. Relating to trophotropism.

trophotropism (trof-ot'ro-pizm) [G. *trophē*, nourishment, + *tropos*, a turning.] Chemotaxis of living cells in relation to nutritive material; it may be *positive*, toward, or *negative*, away from, nutritive material.

trophozoite (trof-o-zo'ĭt) [G. *trophē*, nourishment, + *zōon*, animal.] Schizont.

trop'ic acid. An acid, $C_9H_{10}O_3$, derived from atropine by hydrolysis when it is treated with barium hydroxide.

trop'ical. Relating to the tropics. **t. abscess,** an abscess of the liver occurring in residents in the tropics, usually a sequel of dysentery. **t. ane'-mia,** anemia, or often simply a pallor without blood changes, affecting natives of northern regions sojourning in the tropics. **t. boil,** oriental boil.* **t. cachex'ia,** a cachectic condition affecting residents in the tropics, associated or not with evident lesions of the liver, spleen, or other organs, often a malarial cachexia. **t. lichen,** prickly heat, lichen tropicus. **t. mask,** chloasma bronzinum. **t. measles,** a disease of uncertain character, somewhat resembling roetheln, occurring in southern China. **t. phagede'na,** an atonic ulcer affecting residents in southern Asia.

tro'pidine. A decomposition product of atropine and cocaine, an oily liquid, $C_8H_{13}N$, having the odor of coniine.

tro'pine. A crystalline substance, $C_8H_{15}NO$ derived from atropine, together with tropic acid by hydrolysis with barium hydroxide.

tro'pism [G. *tropē*, a turning.] The phenomenon observed in living organisms of moving toward (*positive t.*) or away from (*negative t.*) a focus of light, heat, or other stimulus; taxis (3).

tropom'eter [G. *tropē*, a turning, + *metron*, measure.] Any instrument for measuring the degree of rotation or torsion, as of the eyeball, of the shaft of a long bone, etc.

tro'pon. Trade name of a special albuminous food preparation.

Trousseau's disease' (troo-so') [Armand *Trousseau*, French physician, 1801–1867.] 1. Bonfil's disease, adenia, generalized hypertrophy of the lymphatic glands without hyperleucocytosis. 2 Gastric vertigo. **T.'s diuret'ic wine,** vinum digitalis compositum. **T.'s point,** a painful point, in neuralgia, at the spinous process of the vertebra below which arises the offending nerve. **T.'s sign** or **symp'tom,** return of the spasms in tetany on compression of the main vessel or nerve of the limb. **T.'s spots,** taches cérébrales. **T.'s test,** Maréchal's* test.

Trousseau-Lallemand bod'ies (troo-so'lal-mahn') Same as Lallemand's* bodies.

troy weight. A system of weights, now used only by jewellers; the grain and the ounce are the same as those of apothecaries' weight.

true [A.S. *treówe*.] Genuine, real, not false. **t. pelvis,** pelvis minor. **t. rib,** costa vera, see *rib*.

truncal (trung'kal). Relating to the trunk of the body or to any arterial or nerve-trunk, etc.

truncate (trung'kāt) [L. *truncare*, to cut off.] Truncated, cut across at right angles to the long axis, or appearing to be so cut.

trun'cus, gen. and pl. *trunci* [L. stem, trunk.] 1. The body, excluding the head and extremities; torso. 2. [NK] a primary nerve or blood-vessel before its division. 3. A large collecting lymphatic vessel. **t. bronchiomediastina'lis dex'ter** [BNA], right bronchomediastinal trunk, a lymphactic vessel arising from the union of the efferent lymphatics from the bronchial and mediastinal nodes of the right side, and discharging into the right lymphatic duct. **t. cor'poris callo'si** [BNA], trunk or body of the corpus callosum, the main arched portion of the corpus callosum. **t. costo-cervica'lis** [BNA], the beginning of the superior intercostal artery, regarded as an independent trunk giving off two branches—an ascending, cervicalis profunda, and a descending, intercostalis suprema. **t. intestina'lis** [BNA], intestinal lymphatic trunk, conveying lymph from the lower part of the liver, the stomach, spleen, pancreas, and small intestine; it discharges into the cisterna chyli. **t. jugula'ris** [BNA], jugular lymphatic trunk or duct, one on each side, conveying the lymph from the head and neck; that on the right side empties into the right lymphatic duct, that on the left into the thoracic duct. **t. lumba'lis** [BNA], lumbar lymphatic trunk, one of two lymphatic ducts conveying lymph from the lower extremities, pelvic viscera and walls, large intestine, kidneys, and suprarenal capsules; they discharge into the cisterna chyli. **t. lum'-bosacra'lis** [BNA], a large nerve, formed by the union of the fifth lumbar and first sacral, with a branch from the fourth lumbar nerve, which enters into the formation of the sacral plexus. **t. subcla'vius** [BNA], subclavian lymphatic

trunk or duct, formed by the union of the vessels draining the lymph-nodes of the left upper extremity, emptying into the thoracic duct at the root of the neck. **t. sympath'icus** [BNA], sympathetic trunk, see *systema nervorum sympathicum*. **t. thyreocervica'lis** [BNA], thyroid axis; a short arterial trunk arising from the subclavian and dividing generally into three branches—thyreoidea inferior, transversa colli, and transversa scapulæ.

Trunecek's serum (troo'net-sek) [C. *Trunecek*, Prague physician, *1865.] A solution of alkaline salts in the relative proportions in which they exist in the blood, proposed for the treatment of arteriosclerosis; the formula is: sodium phosphate, 0.15; sodium carbonate, 0.21; potassium sulphate, 0.40; sodium sulphate, 0.44; sodium chloride, 4.92; distilled water, 200; this is given by hypodermic injection in doses of ʒss (2.0), gradually increased to ʒij ss (10.0) daily. **T.'s symp'tom,** palpable impulse of the subclavian artery near the point of origin of the sternocleidomastoid muscle in cases of aortic sclerosis.

trunk [L. *truncus*.] 1. The torso, the body exclusive of head and extremities. 2. The main stem of a tree from which the branches arise. 3. The main stem of a blood-vessel, lymphatic, or nerve.

trusion (tru'zhun) [L. *trudere*, to thrust.] Displacement of a tooth forward.

truss [Fr. *trousser*, to tie up, to pack.] An instrument used to prevent the return of a reduced hernia or the increase in size of an irreducible hernia; it consists of a pad attached to a belt and kept in place by a spring or straps.

trypaflavine (tri-pah-fla'vēn). An acridine dye, acriflavine,* suggested originally as a remedy in the treatment of trypanosome infections.

trypanide (tri'pan-ēd). Trypanosomide.

trypanocide, trypanocidal (tri-pan'o-sīd, tri-pan-o-si'dal). Trypanosomicide.

Trypanoplas'ma [G. *trypanon*, auger, + *plasma*, anything formed.] A genus of flagellate *Protozoa*, the members of which have a body of varying shape with an undulating membrane and a flagellum projecting from either extremity; parasitic in the blood of fishes.

Trypanosoma (tri-pan-o-so'mah) [G. *trypanon*, an auger, + *sōma*, body.] A genus of flagellate *Protozoa*, the members of which have a spindle-shaped body with an undulating membrane on one side and a single flagellum. The trypanosomes are parasitic in the blood plasma of a vertebrate (only a few being pathogenic) and as a rule have an intermediate host, an invertebrate animal, in which the sexual cycle occurs. The pathogenic forms cause sleeping-sickness in man and a number of diseases in animals. **T. bru'cei,** the parasite of nagana or tsetse fly disease. **T. dimor'phon,** the pathogenic parasite of Gambian horse disease. **T. equi'num,** the parasite of mal de caderas. **T. equiper'dum,** the parasite of dourine. **T. ev'ansi,** the parasite of surra. **T. gambien'se,** the parasite of sleeping-sickness. **T. hipp'icum,** the parasite of murrina. **T. inopina'tum,** a species found in the blood of a frog. **T. lew'isi,** a non-pathogenic parasite in the blood of rats. **T. luis,** the supposed female sexual form of *Treponema pallidum*. **T. noc'tuæ,** a species found in the blood of the owl, the intermediate host being *Culex pipiens*. **T. san'guinis,** the earliest discovered species, having been found in the blood of the frog in 1843. **T. thei'leri,** causes galziekte (gall-sickness) in cattle. **T. uganden'se,** *T. gambiense*. **T. venezuelen'se,** a species found in murrina in horses, probably the same as *T. hippicum*. **T. vitta'tæ,** a species in the blood of the tortoise.

Trypanosomat'ida. An order of *Zoömastigophora*, embracing elongated forms with undulating membrane and one or two flagella, one of which runs along the edge of the undulating membrane; the members of this order are, so far as known, parasitic.

trypanosome (tri'pan-o-sōm). Any protozoan of the genus *Trypanosoma;* all of them, so far as known, are parasitic in the blood of vertebrates, though not all are pathogenic. **t. fever,** sleeping-sickness.

Trypanosomeæ (tri-pan-o-so'me-e). A tribe of trypanosomes infecting cold-blooded vertebrates.

trypanosomiasis (tri-pan-o-so-mi'a-sis). Any disease caused by a trypanosome. **Af'rican t.,** sleeping sickness. **South Amer'ican t.,** Chagas' or Chagas-Cruz disease, caused by *Trypanosoma* (*Schizotrypanum*) *cruzi*, which is transmitted from the sick to the well by the bedbug, *Lamus megistus;* in its acute form the disease resembles polyorrhomeningitis, Pichini's* syndrome; in its chronic form it assumes several aspects—cardiac, nervous, or myxedematous, according to the predominating symptoms; there may also be acute exacerbations.

trypanosomic (tri-pan-o-so'mik). Relating to trypanosomes, especially noting infection by such organisms.

trypanosomicide (tri-pan-o-so'mĭ-sīd) [*trypanosoma* + L. *cædere* to kill.] 1. Destructive to trypanosomata. 2. An agent which kills trypanosomes.

trypanosomide (tri-pan'o-so-mēd) [from *trypanosome* after the analogy of syphilide.] A skin lesion occurring in relation with any disease caused by a trypanosome.

try'pan-red. A brownish red powder derived from benzopurpurine by the action of sulphuric acid, it is employed in gastric ulcer and in trypanosomiasis, in doses of gr. 5–8 (0.3–0.5).

tryparo'san. Chlorinated parafuchsin, employed in the treatment of trypanosomiasis.

tryparsamide (tri-par'să-mīd or mid). The sodium salt of n-phenylglycine-amide-p-arsonic acid, recommended in the treatment of trypanosomic and spirochetal infections, especially neurosyphilis.

trype'sis [G. boring.] Trephining.

Trypocastellanelleæ (tri"po-kas-tel-ă-nel'e-e). A tribe of trypanosomes infecting warm-blooded animals; it includes the genera *Schizotrypanum*, *Castellanella*, and *Duttonella*.

tryp'sin [G. *tripsis*, a rubbing, referring to the mode of preparation by trituration.] The protein-splitting ferment, derived from trypsinogen, in the pancreatic juice; it differs from pepsin in that it acts better in a slightly alkaline medium such as it finds in the intestine. It is used in medicine in cases of intestinal indigestion in doses of gr. 8–15 (0.5–1.0) in keratin coated pills or capsules; it is also used to peptonize milk, and as a solvent of diphtheritic membrane, and has been given by hypodermic injection in connection with amylopsin in the treatment of cancer.

trypsin'ogen, tryp'sogen [*trypsin* + G. *genesis*, source.] A substance secreted by the pancreas which is converted into trypsin by the action of enterokinase.

tryp'tic. Relating to trypsin, as *tryptic digestion*.

tryp'tone. A modified albumin, analogous to peptone, produced by the action of trypsin on a protein.

tryptone'mia, tryptonæ'mia. The presence of tryptone in the blood.

tryp'tophan [*trypsin* + G. *phanos*, bright.] Indol alpha-amino-propionic acid, a product of the digestion of protein by trypsin; it is chromogenic, producing a violet color with chlorine or bromine solution. **t. test,** for cancer of the stomach; a test meal of bread and sweetened water or an ordinary meal, without coffee or other dark matter, is withdrawn at the end of an hour, filtered, and tested with bromine water for tryptophan; the presence of the latter indicates cancer.

T.S. Abbreviation of test solution.*

tset'se [S. African native name.] Tsetse-fly, a dipterous insect of the genus *Glossina*,* the intermediate host, or at least the transmitter of the pathogenic trypanosomes of sleeping-sickness and nagana. (See cut below.) **t.-f. disease',** (1) sleeping sickness; (2) nagana.

Tsu'ga [Jap. evergreen.] A genus of coniferous trees, the hemlocks. **T. canaden'sis,** the hemlock-spruce, the source of pix canadensis, Canada pitch.

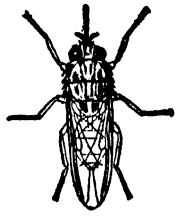
tsutsugamu'shi disease' [Jap. *mushi*, bug.] Japanese* river fever.

T. tet'anase [*t* = tetanizing.] v. Behring's term for the constituent of tetanus toxin which excites the tetanic spasm.

T.U. Abbreviation for toxic unit.*

tub. To treat by means of the cool bath.

tu'ba, gen. and pl. *tubæ* [L. a straight trumpet.] A tube, or a tube-like structure or canal. **t. acus'tica,** t. auditiva. **t. auditi'va** [BNA], auditory tube, Eustachian tube, a tube leading from the tympanic cavity to the nasopharynx; it consists of an osseous (posteroexternal) portion at the tympanic end, and a fibrocartilaginous (anterointernal) portion at the pharyngeal end, where the two portions join, in the region of the sphenopetrosal fissure, is the narrowest portion of the tube, the isthmus. **t. eustachia'na, t. Eusta'chii,** Eustachian tube, tuba auditiva [BNA]. **t. fallopia'na, t. Fallo'pii,** Fallopian tube, tuba uterina [BNA]. **t. uteri'na** [BNA], oviduct, Fallopian tube, salpinx, one of the tubes, leading on either side from the fundus of the uterus to the upper or outer extremity of the ovary.



Tsetse Fly.

tu'bage. The introduction of a tube into a canal intubation of the larynx.

tu'bal. Relating to a tube, especially the Fallopian tube, or oviduct.

tub'ba, tub'bæ. Crab-yaws; yaws, or frambœsia, attacking the soles of the feet or palms of the hands.

tube [L. *tubus*.] 1. A hollow cylinder or pipe. 2 A canal or tubular organ, tuba, tubule. **air t.,** the trachea, or a bronchus or any of its branches conveying air to the lungs. **Bellini's t., Crookes' t., O'Dwyer's t.,** etc., see the proper names. **car'diac t.,** the primitive heart in the embryo consisting in a simple tube which becomes bent upon itself and finally broadens out into pouches which become the auricles (atria) and ventricles the original tube is believed to persist as a band of fibers constituting the auriculoventricular bundle.* **cor'neal t.,** a tube-like artefact between the lamellæ of the cornea. **drain'age t.,** drain (2). **feeding t.,** a flexible tube passed through the esophagus into the stomach, through which liquid food is poured. **intuba'tion t.,** O'Dwyer's* t. **med'ullary t.,** the primitive neural canal in the embryo from which are developed the brain and spinal cord. **neu'ral t.,** medullary t. **otopharyn'geal t.,** Eustachian t., tuba* auditiva [BNA]. **ova'rian t.,** see *Pflueger's* tubes.* **stomach t.,** a flexible tube passed into the stomach for use in lavage or in forcible feeding. **test t.,** see *test-tube.* **tracheot'omy t.,** a curved silver tube used to keep the opening free after tracheotomy. **u'terine t.,** Fallopian t., tuba* uterina [BNA]. **Veillon t.,** a special form of test-tube used in making bacterial cultures; see **Veillon.**

tubectomy (tu-bek'to-mĭ) [G. *tuba*, trumpet, tube, + G. *ektomē*, excision.] Salpingectomy.

tu'ber, pl. *tu'bera* [L.] 1. A localized swelling, a knob. 2. A subterranean enlargement of the branches of the rhizome of certain plants, such as the potato. 3. Tuber cinereum. **t. annula're,** pons Varolii. **t. ante'rius,** t. cinereum. **t. calca'nei** [BNA], calcanean tuber, the posterior extremity of the calcaneus, or os calcis, forming the projection of the heel. **t. calcis,** t. calcanei. **t. can'dicans,** pl. *tu'bera candican'tia,* corpus albicans **t. cine'reum** [BNA], ashen (gray) tuber, a small slightly raised area of gray matter in the interpeduncular space between the corpora mamillaria and the optic chasm **t. coch'leæ,** promontorium (2). **t. cor'poris callo'si,** splenium corporis callosi. **t. dorsa'le,** t. vermis [BNA]. **t. Eusta'chii,** see *Eustachian.* **t. fronta'le** [BNA], frontal tuber, frontal eminence; the most prominent portion of the forehead on either side **t. ischiad'icum** [BNA], sciatic tuber, tuberosity of the ischium; a rough pyriform mass at the angle formed by the two rami of the ischium, giving attachment to the semimembranosus and the biceps and semitendinosus muscles. **t. maxilla're** [BNA], maxillary tuberosity; the bulging lower extremity of the posterior surface of the body of the maxilla, behind the root of the wisdom tooth. **t. olfacto'rium,** tuberculum olfactorium. **t. omenta'le,** (1) a projection on the under surface of the left lobe of the liver to the right of the gastric impression; it is so called because the lesser omentum is in front of it; (2) [BNA], a prominence at the junction of the neck and body of the pancreas, which projects against the small omentum when the stomach is distended. **t. parieta'le** [BNA], parietal tuber, parietal eminence, a prominent portion of the parietal bone, a little above the center of its external surface, usually corresponding to the point of maximum width of the head. **t. ra'dii,** tuberositas radii. **t. ver'mis** [BNA], tuber of the vermis, tuber valvulæ, the posterior division of the inferior vermis of the cerebellum. **t. zygomat'icum,** a slight prominence near the origin of the zygomatic process of the temporal bone.

tu'bercle [L. *tuberculum*, dim. of *tuber*, a swelling.] 1. A circumscribed, rounded, solid elevation on the skin, mucous membrane, or surface of an organ. 2. The lesion of tuberculosis, consisting of a small isolated nodule or aggregation of nodules, formed of epithelioid and giant cells, which are prone to undergo caseation. 3. Same as tuberculosis. 4. A slight elevation from the surface of a bone giving attachment to a muscle

or ligament; tuberosity. 5. In dentistry, a cusp. [For the anatomical tubercles, see *tuberculum*.] **anatom'ical t.**, verruca necrogenica, lupus* verrucosus (2), post-mortem wart.* **carot'id t.**, a slight projection on the transverse process of the sixth cervical vertebra. **dissec'tion t.**, post-mortem wart.* **fi'brous t.**, one in which there is a marked increase in the connective-tissue reticulum, showing an attempt at cure. **hy'aline t.**, the early stage of coagulation necrosis, marked by hyaline degeneration of the reticulum of the t. **la'bial t.**, tuberculum labiale, the slight projection on the free edge of the center of the upper lip. **pearl'y t.**, milium. **prim'itive t.**, one of the clusters of cells of which the ordinary t. (lesion of tuberculosis) is composed. **retic'ulated t.**, the ordinary lesion of tuberculosis, tubercle (2). **seba'ceous t.**, milium. **t. bacil'lus**, *Bacillus tuberculosis*. **Zuck'erkandl's t.**, nasal tonsil.*

tuber'cula. Plural of tuberculum. **t. den'tis** [BNA], the cusps or tubercles of the crown of a molar or premolar tooth. **t. doloro'sa**, multiple cutaneous myomata or neuromata, painful on pressure.

tuber'cular. 1. Relating to or marked by tubercles or nodules on the skin or in the tissues, tuberculated, nodular. 2. Tuberculous.* **t. lep'rosy**, see under *leprosy*. **t. syph'ilide**, cutaneous gummata.

tuberculase (tu-bur'ku-lāz). An extract of tubercle bacilli employed by v. Behring as an immunizing substance against bovine tuberculosis; see *v. Behring's tuberculin*.*

tuber'culate, tuber'culated. Tubercular, nodular.

tubercula'tion. 1. The formation of tubercles or nodules. 2. The arrangement of tubercles or nodules in a part.

tuberculide (tu-bur'ku-lēd) [Fr.] A lesion of the skin due to the action of the toxins of tuberculosis. **pap'ular necrot'ic t.**, Barthélemy's disease, acne* agminata.

tuberculigenous (tu-bur-ku-lij'e-nus) [L. *tuberculum*, tubercle, + G. *gennaō*, I give origin to.] Causing or predisposing to tuberculosis.

tuber'culin. A preparation made from cultures of the tubercle bacillus, employed as a means of diagnosis and in the treatment, by active immunization, of tuberculosis.

alkaline t., TA, an extract of triturated tubercle bacilli, obtained by treatment with a decinormal solution of caustic soda.

bac'illary emul'sion, BE; new tuberculin in which the pulverized bacilli are not removed by centrifugation, but are allowed to settle as much as they will, after which the supernatant fluid is mixed with equal parts of glycerin.

v. Behr'ing's, (1) an extract made by the treatment of tubercle bacilli with chloral hydrate and alcohol is called *tuberculase;* the process is very complicated; the preparation is now recommended solely for the immunizing treatment of tuberculous cattle; (2) *tulase* is a somewhat similar preparation obtained by treating tubercle bacilli with chlorides; it is employed by v. Behring in the prevention of tuberculosis in children, being given in milk.

Beran'eck's t., this is prepared by adding to the extracellular toxins, obtained from a bouillon culture of the tubercle bacillus, the intracellular toxins extracted from the protoplasm of the bacilli by phosphoric acid.

bouillon' fil'trate, bouillon' filtré, BF; this is practically the same as non-concentrated old t. (TO), that is, TO of ½ strength; a similar preparation is made by the manufacturers of Koch's tuberculins, and called by them TOA (*tuberculin original alt*).

Buch'ner's t., tuberculoplasmin, a preparation made by triturating dried tubercle bacilli with sand, and expressing under hydraulic pressure.

Calmette's' t., purified t., TP [*tuberculin precipitation*]; prepared by precipitating old t. with 94 per cent. alcohol, washing, dissolving in water, and filtering; this is again precipitated with alcohol, washed, and dried; it is prepared in tablets or in aqueous solution, and is used in testing for tuberculosis by means of Calmette's ophthalmoreaction.

Denys' t., see *bouillon filtrate* in this table.

Dreyer's t., a bacillacy vaccine made from cultures of *B. tuberculosis* extracted with hot acetone to remove the waxy envelope; defatted or diaplyte t.

en'dotin, Koch's TO treated with xylol, ether, chloroform, and alcohol to free it from admixture with albuminous and other inert substances.

Hirsch'felder's t., oxytuberculin; a preparation is made by treating old tuberculin with peroxide of hydrogen, on the theory that toxins are converted into antitoxins by oxidation.

Klebs' t., (1) Klebs' first preparation was obtained from old tuberculin by treatment with alcohol and bismuth, in order to remove certain injurious substances; to this preparation he gave the name *tuberculocidin;* (2) by treatment of the fluid portion of a tubercle-bacillus culture with sodium-bismuth-iodide in acetic acid and absolute alcohol, Klebs obtained a still purer preparation, called *antiphthisin;* (3) a preparation from a culture of *Diplococcus semilunaris*, called *selenin*, for use in mixed infections.

Klem'perer's t., PTO [Ger. *perlsucht-tuberculin original*], a tuberculin prepared, in the same way as Koch's old tuberculin (TOA), from cultures of bovine tubercle bacilli.

Koch's t., see *new t., old t., alkaline t., bacillary emulsion*, and *bouillon filtrate* in this table.

Land'mann's t., tuberculol, a preparation made from very virulent cultures by fractional extractien with water, physiological salt solution, and diluted glycerin, under gradually increasing temperature; it is said to contain all the toxic principles existing in the tubercle bacilli.

Maraglia'no's t., aqueous t. containing all the water-soluble extracts of the tubercle bacillus.

new t., Koch, TR, residual tuberculin; an emulsion is made of finely triturated tubercle bacilli in distilled water or physiological salt solution, which on centrifugation separates into an upper translucent fluid layer (TO, *tuberculin ober*) and a muddy sediment (TR, *tuberculin rest*); the latter is dried, again triturated, emulsified, and centrifugated, and this process is repeated until only an opalescent fluid is obtained; glycerin is now added in quantity to make a 20 per cent. solution which is then ready for use; this is intended to immunize against the bacilli.

old t., Koch, TO [Ger. *tuberculin original*]; a pure culture of tubercle bacilli in 5 per cent. glycerin bouillon, from 4 to 6 weeks old, is filtered and the filtrate is evaporated by heat to $\frac{1}{10}$ its volume; it contains only the soluble bacterial products, and whatever immunity it confers is against the toxins only, not the bacilli.

Ro'senbach t., a t. obtained by the biochemical action of a trichophyton (*T. holosericum album*) upon a culture of tubercle bacilli.

v. Ruck's t., tubercle bacilli are filtered out of a rapidly growing and virulent culture, dried, powdered and extracted with ether; the extract is again dried, powdered, and extracted with distilled water.

Speng'ler's t., (1) a preparation made from the bacilli of bovine tuberculosis, recommended on the ground that its immunizing properties are equal to those of preparations made from cultures of the bacilli of human tuberculosis, while it is much less dangerous. (2) IK (Ger. *immun-körper*); a preparation made from the blood-corpuscles of animals immunized against both human and bovine tubercle bacilli, the claim being made that the immunizing substances in tuberculosis are in the blood-cells and not in the serum.

Thamm's t., tuberculoalbumin, a preparation similar to v. Behring's *tuberculase*.

tuber'culo-toxoi'din, a clear brown liquid, made by washing a culture of tubercle bacilli and treating with strong sulphuric acid to remove the endotoxin; the preparation is then dissolved in a large amount of

water and the precipitate is collected and dried; this is dissolved in a weak alkaline solution, in the proportion of 0.5:100.0. It is claimed that the preparation is nontoxic, but powerfully immunizing.

vac'uum t., VT, old tuberculin reduced in a vacuum to one-tenth its original volume.

tuber'culine. A ptomaine derived from cultures of the tubercle bacillus.

tuberculin'ic acid. An acid derived from cultures of the tubercle bacillus.

tuberculiniza'tion. Treatment of tuberculosis by tuberculin.

tuber'culinose. A variety of tuberculin.

tuberculi'num 1. A homoeopathic trituration of dried tuberculous sputum. 2. Tuberculin. **t. pristi'num** (Br.), old tuberculin; doses (subcutaneous), diagnostic, ♏ $\frac{1}{6}$–$1\frac{1}{2}$ (0.001–0.005), therapeutic ♏ $\frac{1}{60,000}$ (0.000001). The B.P. directs that when this is prescribed with suffix T, the t. from the human type of bacilli is to be dispensed; when with the suffix PT, the t. from the bovine type of bacilli is to be dispensed.

tuberculitis (tu-bur-ku-li'(le')tis) [L. *tuberculum*, tubercule, + G. *-itis*.] Inflammation of any tubercle.

tuberculiza'tion. 1. The formation of tubercles. 2. Tuberculinization.

tuberculoalbumin (tu-bur"ku-lo-al-bu'min). A tuberculin made by Thamm, which is similar in several respects to tuberculase.

tuberculocele (tu-bur'ku-lo-sēl) [*tuberculosis* + G. *kēlē*, tumor, hernia.] Tuberculosis of the testicle.

tuberculo'cidin [*bacillus tuberculosis* + *cædere*, to kill.] Klebs' tuberculin.*

tuberculoderma (tu-bur"ku-lo-dur'mah) [*tuberculosis* + G. *derma*, skin.] Tuberculide.

tuberculofi'broid. Noting fibroid degeneration of tubercle.

tuber'culoid [G. *eidos*, resemblance.] Resembling tuberculosis, or tubercle.

tuberculoid'in. Old tuberculin treated with alcohol to clear it of glycerin; see *Calmette's tuberculin.**

tuber'culol. A powdered extract made from virulent cultures of tubercle bacilli; Landmann's tuberculin.*

tuberculo'ma, tuber'culome. 1. A tuberculous abscess. 2. Any neoplasm of tuberculous origin.

tuberculomania (tu-bur"ku-lo-ma'nĭ-ah) [*tuberculosis* + G. *mania*, madness.] An unfounded but unalterable conviction that one is suffering from tuberculosis; phthisiomania.

tuberculomucin (tu-bur"ku-lo-mu'sin). A mucin-like substance obtained from old glycerin-peptone-bouillon cultures of the tubercle bacillus, from which the zooglea scum has been removed every three weeks during a period of about a year: it is claimed by Weleminsky of Prague, its discoverer, to have prophylactic and curative properties in tuberculosis, especially of the glands and skin.

tuberculomy'ces. A group including all the varieties of tubercle bacilli—human, bovine, etc.

tuber"culo-opson'ic in'dex. The opsonic* index in relation to tuberculous infection.

tuberculopho'bia [*tuberculosis* + G. *phobos*, fear.] An unreasonable fear of tuberculosis or of association in any degree with a sufferer from that disease; phthisiophobia.

tuberculoplas'min. A tuberculin made by expression from tubercle bacilli; see *Buchner's tuberculin.**

tuberculo'samine. An amine found in cultures of the tubercle bacillus.

tuberculo'sis [L. *tuberculum*, tubercle, + G. *-osis*.] Phymatiosis; a specific disease caused by the presence of *Bacillus tuberculosis;* it may affect almost any tissue or organ of the body, the most common seats of the disease being the lungs and the joints; the anatomical lesion is the tubercle; it causes a breaking down of the affected tissues with suppuration, and is usually complicated with a streptococcal infection. The local symptoms vary according to the part affected; the general symptoms are those of sepsis—hectic fever, sweats, and emaciation. **acute' t.**, acute miliary t., a rapidly fatal disease due to the general dissemination of tubercle bacilli, resulting in the formation of miliary tubercles in various organs and tissues, and producing symptoms of profound toxemia. **atten'uated t.**, a mild chronic form, marked by caseous tubercles of the skin and the occurrence of cold abscesses **a'vian t.**, t. affecting birds. **bo'vine t.**, t. of cattle, pearl disease [Ger. *perlsucht*], grapes. **dermal t.**, t. cutis. **dissem'inated t.**, acute miliary t. **gen'eral t.**, miliary t. **lymphat'ic t.**, scrofula. **lym'phoid t.**, a form in which there is a diffuse embryonal cell infiltration instead of the ordinary tubercle. **mil'iary t.**, a general dissemination of tubercle bacilli with the production of countless minute discrete tubercles in various organs and tissues. **open t.**, pulmonary t., tuberculous ulceration, or other form in which the bacilli are cast out of the body in the excretions. **pul'monary t.**, t. of the lungs, phthisis, consumption. **sur'gical t.**, t. of the bones or joints. **t. conclama'ta** [L. *conclamare*, to cry aloud], pronounced, fully developed, unmistakable tuberculosis. **t. cu'tis**, tuberculide, tuberculoderma. **t. cu'tis orificia'lis**, t. cutis vera. **t. cu'tis prurigino'sa**, urticaria perstans, a form of urticaria in which the wheals persist and are the seat of constant itching. **t. cu'tis ve'ra**, miliary t. of the skin, occurring in the form of superficial ulcers, covered with reddish yellow granulations. **t. ulcero'sa**, t. cutis vera. **t. verruco'sa cu'tis**, lupus verrucosus.

tuberculotox'in. Any of the toxins, intracellular or extracellular, of the tubercle bacillus.

tuberculotoxoid'in. See under *tuberculin*.

tuberculother'apist. A physician who makes a special study of the treatment of tuberculosis.

tuberculother'apy [G. *therapeia*, treatment.] 1 Treatment of tuberculosis. 2. An attempt at an immunizing treatment of tuberculosis by feeding with the raw flesh of tuberculous cattle.

tuber'culous. Relating to or affected by tuberculosis. It is the better practice, following the analogy of the Latin terminations *-aris* and *-osus*, to restrict the term *tubercular* to conditions marked by the presence of (non-specific) tubercles or nodules, reserving *tuberculous* for conditions marked by an infiltration of (specific) tubercle, thus we may speak of *tubercular*, or nodular, leprosy, and *tuberculous* disease of the skin, or lupus.

tuber'culum, pl. *tuber'cula* [L. dim. of *tuber*.] A tubercle or nodule, especially in an anatomical, not pathological, sense.

t. acus'ticum [BNA], the dorsal nucleus of the cochlear nerve, a pyriform mass on the restis.

t. annula're, pons Varolii.

t. ante'rius (atlan'tis) [BNA], anterior tubercle of the atlas, a conical protuberance on the anterior surface of the arch of the atlas.

t. ante'rius (thal'ami) [BNA], anterior tubercle of the thalamus, the prominent anterior extremity of the thalamus which projects into the lateral ventricle.

t. arthrit'icum, Heberden's nodule or any gouty concretion in or around a joint.

t. articula're [BNA], articular eminence of the zygomatic process of the temporal bone which bounds the glenoid or mandibular fossa anteriorly; it forms the anterior root of the zygoma.

t. auric'ulæ (Dar'wini) [BNA], Darwinian tubercle of the auricle, t. superius, a small projection from the upper end of the posterior portion of the helix; when the helix is not incurved the tubercle projects posteriorly and slightly upward as in the macaque.

t. carot'icum [BNA], carotid or Chassaignac's tubercle; **t. c. vertebræ cervicalis sixtæ** [NK]; the anterior tubercle of the transverse process of the sixth cervical vertebra, against which the carotid artery may be compressed by the finger.

t. cine'reum [BNA], ashen or gray tubercle, the bulbous extremity in the medulla oblongata of the posterior horn or column of the spinal cord.

t. cornicula'tum [BNA], Santorini's corniculate tubercle, a rounded eminence on the posterior part of the aryepiglottic fold, formed by the underlying corniculate cartilages.

t. costæ [BNA], tubercle of a rib, the knob on a rib, near its head, which articulates with the transverse process of a vertebra.

t. cunea'tum, wedge-shaped tubercle, the bulbous extremity in the medulla of the fasciculus cuneatus, lying above the clava and separated from the t. cinereum by the posterior lateral sulcus.

t. cuneifor'me [BNA], Wrisberg's tubercle, a rounded eminence on the posterior part of the aryepiglottic fold, formed by the underlying cuneiform cartilage.

t. den'tis, see *tubercula dentis.*

t. doloro'sum, neuroma; see *tuberculum dolorosum.*

t. epiglot'icum [BNA], epiglottic tubercle, cushion of the epiglottis; a convexity at the lower part of the epiglottis over the upper part of the thyroepiglottic ligament.

t. ephip'pii, oliva.

t. genia'le, spina mentalis.

t. hypogloss'i, trigonum nervi hypoglossi.

t. im'par, a small protuberance on the floor of the pharynx in the embryo, from which the tongue is developed.

t. intercondyloid'eum [BNA], intercondyloid tubercle of the tibia, one of two projections (*t. i. mediale,* or inner tubercle, and *t. i. laterale* or outer tubercle) springing from the central lip of each articular surface of the tibia on either side of the intercondyloid eminence or spine.

t. interveno'sum [BNA], tubercle of Lower, the slight projection on the wall of the right cardiac auricle (atrium) between the orifices of the venæ cavæ

t. jugula're [BNA], jugular tubercle, an oval elevation on the cerebral surface of the lateral part of the occipital bone, on either side of the foramen magnum.

t. labia'le, a slight projection on the free edge of the upper lip at the lower termination of the philtrum.

t. latera'le [NK], t. intercondyloideum laterale.

t. media'le [NK], t. intercondyloideum mediale.

t. Lisfran'ci, t. scaleni.

t. Low'eri, t. intervenosum.

t. ma'jus hu'meri [BNA], larger tubercle, greater tuberosity of the humerus, the posterior of two tubercles just external to the anatomical neck, giving attachment to the supraspinatus, infraspinatus, and teres minor muscles.

t. mall'ei, short process of the malleus, processus lateralis mallei [BNA].

t. menta'le [BNA], mental tubercle, a prominence on the lower border of the mandible on either side of the mental protuberance.

t. milia're, milium.

t. mi'nus hu'meri [BNA], smaller tubercle, lesser tuberosity of the humerus, the anterior of two tubercles just external to the anatomical neck, giving attachment to the subscapularis muscle.

t. Morgagn'i, (1) nasal tonsil,* (2) bulbus* olfactorius.

t. obturato'rium [BNA], obturator tubercle, one of two processes, anterior and posterior, on the margin of the pubic portion of the obturator foramen, bounding the termination of the obturator groove.

t. olfacto'rium, olfactory tubercle, a small pyramidal elevation rising from the trigonum olfactorium; caruncula mamillaris.

t. oss'is multan'guli majo'ris [BNA], oblique ridge of the trapezium, a prominent ridge on the trapezium (os multangulum majus) forming the external border of the groove in which runs the tendon of the flexor carpi radialis.

t. oss'is navicula'ris [BNA], tuberosity of the scaphoid, a projection at the inferior lateral angle of the navicular (scaphoid) bone; it can be felt at the root of the thumb.

t. pharynge'um [BNA], pharyngeal tubercle, a projection from the under surface of the basilar portion of the occipital bone, giving attachment to the fibrous raphe of the pharynx.

t. poste'rius (atlan'tis) [BNA], a protuberance at the posterior extremity of the arch of the atlas, a rudiment of the spinous process, giving attachment to the rectus capitis posterior muscle.

t. poste'rius (thal'ami), pulvinar [BNA].

t. pu'bicum [BNA], pubic tubercle, pubic spine, a small projection at the anterior extremity of the crest of the pubis about half an inch from the symphysis.

t. quadrigem'inum, one of the corpora quadrigemina.

t. scale'ni [BNA], scalene tubercle of Lisfranc, a small spine on the inner edge of the first rib, giving attachment to the scalenus anticus muscle.

t. seba'ceum, milium.

t. sell'æ [BNA], tubercle of the saddle, olivary eminence, the slight elevation in front of the pituitary fossa on the body of the sphenoid bone.

t. sep'ti, a slight protuberance on the upper and anterior portion of the septum nasi.

t. sep'ti na'rium, a flat elevation on the septum in each naris opposite the anterior end of the middle turbinate; it is due to an aggregation of glands.

t. supe'rius auric'ulæ, superior tubercle of the auricle, t. auriculæ (Darwini) [BNA].

t. supratrag'icum [BNA], supratragic tubercle, a small nodule often present on the edge of the lamina just above the tragus.

t. syphilit'icum, gumma of the skin.

t. thyreoid'eum infe'rius [BNA], a slight lateral projection from the lower margin of the thyroid cartilage on either side, at the beginning of the inferior notch.

t. thyreoid'eum supe'rius [BNA], a blunt projection on the outer surface of the thyroid cartilage on either side near the posterior portion of the upper margin.

tubercumet (tu-bur'ku-met). Trade name of a water-soluble derivative of the tubercle bacillus, used in the diagnosis of active tuberculosis; when a small quantity is brought in contact, in a test-tube, with the clear blood serum of a patient, a cloud ring will appear at the surface of contact of the two fluids in case of active tuberculosis, but not when there are only latent foci.

tuberif'erous [L. *tuber* + *ferre,* to bear.] Tuberous, having tubers.

tuberose. Tuberous.

tuberos'itas [L. *tuberosus; tuber,* a knob.] Tuberosity, tubercle.

t. coracoid'ea [BNA], coracoid tuberosity, conoid tubercle; an outgrowth from the posterior border of the clavicle near its acromial end, giving attachment to a portion of the conoid ligament.

t. cos'tæ secun'dæ [BNA], tuberosity of the second rib a rough oval area, about the middle of the outer surface and lower border of the rib, for the attachment of the serratus magnus muscle.

t. costa'lis [BNA], costal tuberosity, rhomboid impression; an irregular pitted area on the inferior surface of the clavicle at its sternal end, giving attachment to the rhomboid ligament.

t. deltoid'ea [BNA], deltoid tuberosity or eminence, a rough elevation about the middle of the outer side of the shaft of the humerus, giving attachment to the deltoid muscle.

t. fem'oris exter'na, external tuberosity of the femur, epicondylus lateralis [BNA], a projection on

the outer surface of the external condyle of the femur, giving attachment to the gastrocnemius muscle.

t. fem'oris inter'na, internal tuberosity of the femur, epicondylus medialis [BNA], a projection on the outer surface of the internal condyle of the femur, giving attachment to the internal lateral ligament of the knee-joint and the gastrocnemius muscle.

t. glutæ'a [BNA], gluteal tuberosity, the point of insertion in the upper portion of the shaft of the femur of the greater part of the gluteus maximus muscle; when markedly developed this tuberosity is called the third trochanter.

t. hu'meri, tuberculum* majus humeri and tuberculum* minus humeri.

t. ili'aca, iliac tuberosity, a rough area above the auricular surface on the outer aspect of the ala of the ilium, giving attachment to the posterior sacroiliac ligament.

t. infraglenoida'lis [BNA], infraglenoid impression, a rough surface below the glenoid cavity of the scapula, giving attachment to the broad tendon of the triceps.

t. masseteri'ca [BNA], masseteric tuberosity; a roughened surface on the external aspect of the angle of the mandible, giving attachment to fibers of the masseter muscle.

t. maxill'æ, tuber maxillare [BNA].

t. oss'is cuboid'ei [BNA], a slight eminence on the external surface of the cuboid bone, capped with an articular facet for a sesamoid bone in the tendon of the peroneus longus muscle.

t. oss'is metatarsa'lis primi [BNA], tuberosity of the first metatarsal bone, a tubercle at the base of the bone to which is attached the tendon of the peroneus longus muscle.

t. oss'is metatarsa'lis quin'ti [BNA], tuberosity of the fifth metatarsal bone, a tubercle at the base of this bone to the posterior part of which is attached the tendon of the peroneus brevis muscle.

t. oss'is navicula'ris [BNA], a rounded eminence on the inner surface of the navicular bone of the tarsus, giving attachment to a part of the tendon of the tibialis posterior muscle.

t. pterygoid'ea [BNA], pterygoid tuberosity; a roughened area on the internal aspect of the angle of the mandible, giving attachment to fibers of the internal pterygoid muscle.

t. ra'dii [BNA], tuberosity of the radius, bicipital tuberosity, an oval projection from the inner surface of the radius just below the neck, giving attachment on its posterior half to the tendon of the biceps.

t. sacra'lis [BNA], a prominence on the lateral surface of the sacrum below the auricular surface.

t. supraglenoida'lis [BNA], supraglenoid tuberosity or tubercle, a rough surface above the glenoid cavity of the scapula, giving attachment to the tendon of the long head of the triceps.

t. tib'iæ [BNA], tuberosity, anterior tuberosity, or tubercle of the tibia; an oval elevation on the anterior surface of the tibia about an inch below the upper end, giving attachment at its lower part to the ligamentum patellæ.

t. tib'iæ exter'na, condylus lateralis [BNA].

t. tib'iæ inter'na, condylus medialis [BNA].

t. ul'næ [BNA], tuberosity of the ulna, a prominence at the lower border of the anterior surface of the coronoid process.

t. unguicula'ris [BNA], ungual tuberosity; a roughened raised surface of horseshoe shape on the palmar surface of the distal end of the terminal or ungual phalanx of each finger and toe, which serves to support the pulp of the digit.

tuberos'ity. Tuberositas, tubercle, a small rounded elevation, especially from the surface of a bone **bicip'ital t.,** tuberositas radii. **calca'neal t.,** tuber calcanei. **costal t.,** tuberculum costæ. **cuboid t.,** tuberositas ossis cuboidei. **fem'oral t.,** tuberositas femoris. **hu'meral t.,** tuberositas humeri. **is'chial t.,** tuber ischii. **max'illary t.** tuber maxillare. **navic'ular t.,** tuberositas ossis, navicularis. **pal'atal t.,** processus pyramidalis. **pter'ygoid t.,** tuberositas pterygoidea. **ra'dial t.,** tuberositas radii. **sa'cral t.,** tuberositas sacralis. **scaph'oid t.,** tuberositas ossis navicularis. **tib'ial t.,** (1) *anterior,* tuberositas tibiæ; (2) *external,* condylus lateralis, the outer portion of the upper articular surface of the tibia; (3) *internal,* condylus medialis, the inner portion of the upper articular surface of the tibia.

tu'berous [L. *tuberosus.*] Knobby, lumpy, nodular, presenting many tubers or tuberosities.

tuboabdominal (tu"bo-ab-dom'i-nal). Relating to a Fallopian tube and the abdomen, noting an ectopic gestation with the embryo partly in the tube and partly in the abdominal cavity.

tuboligamen'tous. Relating to the Fallopian tube and the broad ligament of the uterus.

tubo-ova'rian. Relating to the Fallopian tube and the ovary.

tubo-ovariot'omy. Salpingo-oothecotomy.

tuboperitone'al. Relating to the Fallopian tubes and the peritoneum.

tubotorsion (tu"bo-tor'shun). Twisting of the Eustachian tube.

tubotym'panal. Relating to a Eustachian tube and the tympanum of the ear.

tubo-u'terine. Relating to a Fallopian tube and the uterus.

tubovaginal (tu-bo-vaj'in-al). Relating to a Fallopian tube and the vagina.

tu'bular. Relating to or of the form of a tube or tubule. **t. breathing,** bronchial* breathing.

tu'bulature. The short neck of a retort.

tu'bule [L. *tubulus,* dim. of *tubus,* tube.] A small tube. **collect'ing t.,** tubulus renalis rectus, one of the straight tubules of the medulla of the kidney which intervene between the convoluted and the discharging tubules. **connect'ing t.,** a narrow arching t. of the kidney joining the distal convoluted t. and the collecting t. **convo'luted t.,** (1) tubulus renalis contortus; (*a*) the *primary* or *proximal* c. t. leads from the Malpighian body arching toward the free surface of the kidney, then turns toward the medulla and becomes the descending limb of the loop of Henle; (*b*) the *secondary* or *distal* c. t. is the convoluted portion of the end of the ascending limb of the loop of Henle; (2) tubulus seminiferus contortus. **dental t.,** dentinal* tubule. **discharg'ing t.,** a urinary t. formed by the union of several collecting tubules and terminating as a papillary duct. **seminif'erous t.,** tubulus seminiferus. **spiral t.,** the segment of urinary tubule coming next after the proximal convoluted tubule. **straight t.,** (1) collecting t.; (2) tubulus seminiferus rectus. **urinif'erous t.,** tubulus renalis.

tu'buli. Plural of tubulus.

tu'buliform [L. *tubulus,* tubule, + *forma,* form.] Tubular; resembling a tubule.

tubuliza'tion. Enclosing the joined ends of a divided nerve, after neurorrhaphy, in a cylinder of paraffin or of some slowly absorbable material to keep the surrounding tissues from pushing in and preventing union.

tu'bulocyst. A cyst formed by the dilatation of any occluded canal or tube.

tubuloder'moid. A dermoid tumor arising from a persistent embryonal tubular structure.

tubuloracemose (tu-bu-lo-ras'e-mōz). Noting a gland of combined tubular and racemose structure.

tu'bulose, tu'bulous. Having many tubules.

tu'bulus [L. dim. of *tuba.*] A tubule. **t. contor'tus,** (1) t. renalis contortus; (2) t. seminiferus contortus. **t. bilif'erus,** ductus biliferus. **t. denta'lis,** dentinal tubule, canaliculus dentalis. **t. galactoph'orus, t. lactif'erus,** ductus lactiferus.

t. rectus, (1) t. renalis rectus; (2) t. seminiferus rectus. **t. rena'lis contor'tus** [BNA], convoluted tubule of the kidney; the *first, proximal,* or *primary* leads from the capsule; the *second* or *distal* is formed from the ascending limb of Henle's loop which enters the labyrinth; it ends in a collecting tube. **t. rena'lis rec'tus** [BNA], one of the straight or collecting tubules* of the kidney. **t. seminif'erus contor'tus** [BNA], convoluted seminiferous tubule, one of two or three twisted curved tubules in each lobule of the testis, conveying the semen to the rete testis. **t. seminif'erus rectus** [BNA], straight seminiferous tubule, the t. seminiferus contortus which becomes straight just before entering the mediastinum to form the rete testis. **t. spira'lis,** the wavy portion of the uriniferous tubule where it passes through a medullary ray to become the descending limb of Henle's loop.

tu'bus [L.] Tube, canal. **t. digesto'rius** [BNA], digestive canal, t. alimentarius, t. cibarius; it comprises the esophagus, stomach, and intestine. **t. medulla'ris,** vertebral canal. **t. respirato'rius,** respiratory canal, air passage; it comprises the larynx, trachea, and bronchi. **t. vertebra'lis,** vertebral canal, spinal canal.

Tuebingen heart (tü'bing-en) [*Tuebingen*, a university town in Germany.] The damaged heart of an athlete or of a laborer, marked by increased area of dullness, abnormal accentuation of the sounds, murmurs heard after exertion or constantly, and slow and irregular pulse.

Tuerck's bun'dle (türk) [Ludwig *Tuerck*, Austrian neurologist, 1810–1878.] Tractus temporopontilis. **T.'s col'umn,** direct pyramidal tract, fasciculus* cerebrospinalis anterior. **T.'s degenera'tion,** secondary degeneration of a nerve. **T.'s tracho'ma,** laryngitis sicca.

Tuerck's cell (turk) [Wilhelm *Tuerck*, Austrian hematologist, 1871–1916.] Plasma cell, irritation cell, a large unicellular leucocyte with excentrically located nucleus, found in the peripheral circulation in pathological conditions only. **T.'s stain,** a weak iodine-potassium iodide solution for staining polymorphonuclear basophile leucocytes.

Tuffier's meth'od (tü-fe-a') [Théodore *Tuffier*, French surgeon, 1857–1929.] Corning's* method of spinal anesthesia. **T.'s technique',** in vaginal hysterectomy, ablation of the uterus after angiotripsis of the broad ligaments without the use of permanent clamps or of ligation. **T.'s test,** Hallion's test, when the main artery and vein of a limb are compressed, in a case of aneurysm, swelling of the veins of the hand or foot will take place only when the collateral circulation is free.

Tuff'nell's bandage [Thomas Jolliffe *Tuffnell*, English surgeon, 1819–1885.] A permanent bandage, consisting of a cheese-cloth roller impregnated with a mixture of flour and white of egg. **T.'s method,** treatment of internal aneurysms by potassium iodide, together with a low diet, abstention from fluids as far as possible, and absolute rest.

tuft. Glomerulus, rete, cluster.

tugg'ing. See *tracheal** *tugging*.

tuitral (too'ĭ-tral) [*pituitary* gland.] Prolan, antophysin.

tularemia (too-lar-e'mĭ-ah) [Tulare Lake and County, Calif., + G. *haima*, blood.] Deer-fly fever, rabbit disease, Pahvant Valley plague, a disease first described and studied by Edward Francis, U.S.P.H.S., caused by *Pasteurella tularensis*[0] which is transmitted to man from rodents through the bite of a fly, *Chrysops discalis*, and other insects; it can also be acquired directly through the bite of a coyote or other infected animal or through handling of an infected animal's carcass. The symptoms recall those of undulant fever and the plague, consisting of a prolonged intermittent or remittent fever, and often swelling and suppuration of the lymph nodes in the neighborhood of the site of infection.

tu'lase. See *Behring's tuberculin.**

tu'lipine. An alkaloid from the tulip, *Tulipa geseriana;* sialagogue in doses of gr. $\frac{1}{10}$ (0.001).

tu'lip-tree bark. The dried bark of *Liriodendron tulipifera*, the tulip tree, tulip poplar; tonic and antiperiodic in doses of ♏10–30 (0.6–2.0) of a fluidextract.

Tul'ly's pow'der [William *Tully*, American physician, 1785–1859.] Pulvis morphinæ compositus, suggested as a substitute for Dover's powder.

Tulp's or **Tul'pius's valve** [Nicholas *Tulp*, Dutch physician, 1594–1674.] Ileocecal valve, valvula* coli.

tumefa'cient [L. *tumefacere*, to cause to swell.] Swelling or swollen.

tumefac'tion. 1. A swelling. 2. The condition of becoming or of being swollen.

tu'mefy. 1. To swell. 2. To cause to swell.

tu'menol, tumeno'lum. A mixture of sulphones and sulphonic acids obtained by the action of sulphuric acid on bituminous oils; employed as an antiseptic application in skin diseases.

tu'menolsulphon'ic acid. A dark yellow soluble powder of bitter taste, claimed to be the active ingredient of tumenol; employed as an antiseptic dusting powder and in ointment in dermatology.

tumentia ((tu-men'shyah)) [L.] Swelling.

tumescence (tu-mes'ens) [L. *tumescere*, to begin to swell.] Tumefaction.

tumescent (tu-mes'ent). Tumefying, swelling.

tu'mid [L. *tumidus*.] Swollen, tumefied.

tu'mor, tu'mour [L. a swelling.] 1. Any swelling or tumefaction. 2. Neoplasm, a circumscribed growth, not inflammatory in character, arising from preexisting tissue, but independent of the normal rate or laws of growth of such tissue, and subserving no physiological function. **ad'enoid t.,** adenoma. **ad'ipose t.,** lipoma. **benign' t.,** one which does not form metastases and does not tend to recur after removal. **cel'lular t.,** a tumor composed mainly of cells embedded in a greater or lesser amount of homogeneous stroma, without distinct histoid structure, such as sarcoma. **chro'maffin t.,** paraganglion. **connec'tive-tis'sue t.,** histoid t., any t. of the connective-tissue group, such as osteoma, fibroma, etc., including also sarcoma. **dermoid t.,** see *dermoid* (2). **epithe'lial t.,** organoid t., including also carcinoma. **fe'cal t.,** scatoma. **fibrocel'lular t.,** fibroma. **heterol'ogous t.,** a t. composed of a tissue unlike that from which it springs. **his'tioid** or **his'toid t.,** a t. composed of a single tissue, such as a fibroma. **homol'ogous t.,** a t. composed of tissue of the same sort as that from which it springs. **inn'ocent t.,** benign t. **malig'nant t.,** cancer, a tumor producing metastases, and likely to recur after removal. **mar'garoid t.,** cholesteatoma. **mixed t.,** one composed of two or more varieties of tissue. **oil t.,** eleoma. **or'ganoid t.,** a t. of complex structure, glandular in origin, containing epithelium, connective tissue, etc. **oss'eous t.,** osteoma. **pap'illary t.,** papilloma.

paraffin t., paraffinoma. **pearl t.**, cholesteatoma. **phantom t.**, see *phantom*. **Pott's puffy t.**, see *Pott*. **sand t.**, psammoma. **seba'ceous t.**, sebaceous cyst.* **ter'atoid t.**, teratoma. **transi'tion t.**, a benign t. which recurs after removal and in its recurrence begins to assume malignant characters. **vas'cular t.**, angioma. **villous t.**, papilloma. **t. al'bus**, white swelling, the granulating or fungous form of tuberculous arthritis of the knee. **t. car'neus**, sarcoma. **tur'ban t.**, endothelioma capitis.

anal, proctoncus, hemorrhoid. **arising from different tissue**, heterologous or heteroplastic tumor. **arising from similar tissue**, homologous, homeoplastic, or histoid tumor. **axillary**, maschaloncus. **blood**, hematoma, ecchymoma, hematoncus; erectile tumor; cephalhematoma; cephalhema cele (beneath scalp); othematoma (auricle). **blood-vessels**, a. gioma, hemangioma, cavernoma, endothelioma, aneurysm, varix; telangioma, nævus tuberosus (of skin); hemorrhoid (at anus). **bone-marrow**, myeloma; chloroma (greenish). **bony**, osteoma, exostoma, exostosis, osteophyte, endostoma, enostoma. **brain-sand**, psammoma, acervuloma. **breast**, mastoncus; mastocarcinoma, mastoscirrhus (cancer); mastopimeloncus (fatty); galactocele (milk). **cartilaginous**, chondroma, enchondroma, ecchondroma; osteoenchondroma (partly ossified); enchondroma petrificum (calcareous), **chorionic**, syncytioma, deciduoma. **colloid**, colloma. **connective tissue**, desmoma, desmoneoplasm. **containing urine**, uroma, uroncus. **cystic**, cystoma; cystoadenoma, cystochondroma, cystomyoma, cystosarcoma, etc.; hygroma; ganglion; wen (sebaceous). **embryonal**, teratoma, dermoid cyst, heterochronic tumor. **epithelium**, epithelioma. **eyelid**, chalaza chalazion, hordeolum, sty. **false**, phantom tumor, pseudoncus. **fatty**, lipoma, steatoma, pimeloma, adipoma; xanthoma (yellowish); cholesteatoma (containing cholesterin). **fibrous**, fibroma, fibroid, inoma, desmoma, desmoneoplasm. **gland**, adenoma, adenosarcoma. **granulation**, acestoma, granuloma. **hard**, scirrhus. **instrument for measuring**, oncometer, oncograph. **intestine**, enteroncus. **kidney**, nephroncus. **liver**, hepatophyma, hepatoncus. **lymphatics**, lymphangioma, angiolymphoma. **lymph-gland**, lymphoma, lymphosarcoma. **malignant**, cancer, carcinoma, sarcoma, syncytioma, mesothelioma; scirrhus (hard); encephaloid, colloid (soft). **mucoid**, myxoma, collonema; polypus. **muscle**, myoma, fibromyoma. rhabdomyoma, myoma striocellulare (striated); leiomyoma, liomyoma, myoma lævicellulare (nonstriated); adenomyoma (containing gland tubules). **nerve**, neuroma, neuroglioma, neurofibroma. **neuroglia**, glioma. **notochordal**, chordoma. **operation on**, oncotomy. **ovary**, oothecoma, oophoroma, ovariocele. ovarioncus, oariophyma, ovarioncus, ovariophyma. **pancreas**, pancreoncus. **papillary**, papilloma, verruca; wart, condyloma, tumor villosus. **pearly**, cholesteatoma, margaroid tumor. **pendulous**, eiloid tumor, pachydermatocele, dermatolysis (skin); polypus (mucous membrane). **pigmented**, melanoma. **prostate**. prostatoncus. **scar**, keloid, cheloid. **science relating to**, oncology. **sebaceous**, wen. **skin**, dermatoma. **soft**, encephaloid. **spleen**, splenoma, splenoncus. **suprarenal**, hypernephroma. **syphilitic**, gumma; **thyroid**, bronchocele, bronchiocele, goiter, struma, thyreocele, thyreophyma. **tooth**, odontoma, odontos, teophyte. **tuberculous**, tuberculoma. **urethral**, urethrophyma; caruncle (at opening of female). **uterus**-hysteroncus, hysterophyma. **verminous**, helminthoma,

tumoraffin (tu'mor-af-in) [L. *tumor* + *affinis*, related to.] Oncotropic, attracted toward or having a selective affinity for tumor cells; noting a drug, radiant energy, or other force acting especially on new growths.

tu'morous. Swollen, tumor-like, protuberant.

tumul'tus [L.] A commotion, agitation, overaction, disturbed action. **t. cor'dis**, palpitation and irregular action of the heart. **t. sermo'nis**, extreme stuttering.

tung'state. A salt of tungstic acid.

tung'sten [Sw. *tung*, heavy, + *sten*, stone.] A metallic element, symbol W [*wolframium*), atomic weight 184, occurring as a gray powder of metallic luster. A form of incandescent electric lamp is made of a tungsten filament.

tung'stic acid. A dibasic acid, H_2WO_4, prepared from tungstic oxide by precipitation with an acid.

tu'nic [L. *tunica*.] One of the layers or envelopes of a part, especially of a hollow organ or blood-vessel; see *tunica*.

tu'nica [L. a coat.] A coat or tunic; one of the enveloping layers of a part, especially one of the coats of a blood-vessel or other tubular structure.

t. abdomina'lis, the aponeurosis of the abdominal muscles of the horse and certain other quadrupeds.

t. adna'ta, the inner layer of the conjunctiva, lying upon the sclera and cornea.

t. adventi'tia [BNA], the outer, fibroelastic, coat of a blood-vessel or other tubular structure, t. externa, t. extima.

t. albugin'ea [BNA], a tough white fibrous envelope of a part, such as the ovary, testicle, corpora cavernosa of the penis, or eye (sclera).

t. albugin'ea cor'porum cavernosc'rum [BNA], a strong fibrous membrane enveloping each corpus cavernosum penis.

t. albugin'ea li'enis [BNA], tunica propria lienis, the fibrous capsule of the spleen, containing elastic fibers and involuntary muscular tissue.

t. albugin'ea oc'uli [BNA], the sclerotic coat of the eye.

t. albugin'ea ova'rii [BNA], the harder outer layer of the stroma of the ovary.

t. albugin'ea testis [BNA], a thick white fibrous membrane forming the outer coat of the testicle.

t. car'nea, t. dartos.

t. cœru'lea, the iris.

t. conjuncti'va [BNA], the mucous membrane investing the anterior surface of the eyeball and the inner surface of the lids.

t. cor'nea, t. fibrosa [BNA], including *t. cornea opaca*, the sclerotic, and *t. cornea pellucida*, the cornea.

t. dar'tos [BNA], (1) a layer of non-striated muscular tissue in the integument of the scrotum; (2) a similar, but very thin, layer in the skin of the labia majora.

t. elas'tica, t. media.

t. exter'na, (1) the outer of two or more enveloping layers of any structure; (2) specifically [BNA], the outer coat or adventitia of an artery. **t. e. oc'uli** [NK], the combined sclera and cornea of the eye.

t. ex'tima, t. externa, especially when there are several coats; t. adventitia.

t. fibro'sa, (1) any fibrous envelope of a part; (2) [BNA] the fibrous coat or tunic of the eye, the sclerocornea, the outer layer of the eyeball composed of sclera and cornea.

t. gla'bra, t. intima.

t. granulo'sa, the granular epithelial lining of a Graafian follicle.

t. hyaloid'ea, membrana hyaloidea [BNA].

t. inter'na oc'uli [NK], retina.

t. in'tima [BNA], the inner, serous, coat of an artery.

t. me'dia, the middle, usually muscular, coat of an artery or other tubular structure.

t. muco'sa [BNA], the mucous coat, as of the intestine or vas deferens, mucous membrane.

t. muscula'ris [BNA], the muscular, usually middle, layer of a tubular structure.

t. ner'vea, Bruecke's layer, the retina, exclusive of the layer of rods and cones.

t. pro'pria, (1) [BNA] the special envelope of a part as distinguished from the peritoneal or other investment common to several parts; (2) the membrane forming the membranous labyrinth of the ear; (3) [BNA] stratum reticulare, the deeper portion of the corium, consisting of a coarse network of fibrous bundles in the meshes of which are the glands, hair-follicles, nerves, and blood-vessels.

t. reflex'a, the reflected layer of the t. vasculosa testis which lines the scrotum.

t. rhagoid'es, choroid coat of the eye.

t. ruyschia'na, Ruysch's membrane, entochoroid, choriocapillary or inner layer of the chorioid coat of the eye, lamina choriocapillaris [BNA].

t. sclerot'ica, sclera.

t. sero'sa, [BNA], a serous membrane.

t. submuco'sa, (1), **tela submucosa** [BNA]; (2) [BNA], the submucous coat of the female urethra.

t. vagina'lis commu'nis [BNA], a layer of fascia, continuous with the transversalis fascia of the abdomen, enveloping the testicle and spermatic cord in the scrotum, outside of the t. vaginalis propria.

t. vagina'lis pro'pria tes'tis [BNA], the serous sheath of the testicle and epididymis, derived from the peritoneum; it consists of an outer, fibrous, layer, *lamina parietalis*, and an inner, serous, layer, *lamina visceralis*.

t. vasculo'sa, any vascular layer.

t. vasculo'sa len'tis, nutrient vascular layer enveloping the crystalline lens in the fetus.

t. vasculo'sa oc'uli [BNA], vascular or middle coat of the eye, comprising the choroid, ciliary body, and iris.

t. vasculo'sa tes'tis, the vascular layer enveloping the testis beneath the t. albuginea.

t. vit'rea, membrana hyaloidea [BNA] surrounding the vitreous humor of the eye.

Tunica'ta. A class of animals just below the *Vertebrata*, having the rudiments of a spinal column; the sea-squirts.

tu'nicin. A substance resembling cellulose found in the outer envelope of the sea-squirt and other tunicates; called also animal cellulose.

tu'ning-fork. A steel instrument roughly resembling a two-pronged fork, the vibrations of the prongs of which, when struck, give a musical note; used to test the hearing, especially bone-conduction, in the deaf.

tunnel-ane'mia. Ancylostomiasis.

tunnel-disease'. 1. Caisson disease. 2. Ancylostomiasis.

tunnel of Corti. See *Corti*.

Tunnicliff se'rum (tun'nĭ-klif) [Ruth *Tunnicliff*, Chicago physician,* 1876.] A serum, claimed to be prophylactic and curative of measles, obtained from culture of a green diplococcus isolated from the blood in measles. See *Ferry serum*. **T. tox'in,** a toxin produced by the assumed pathogenic organism of measles, offered as a diagnostic skin test.

tu'pelo, tu'pola. The spongy wood of *Nyssa grandidentata* and *N. capitata*, small trees of the southern United States; used, like laminaria, for surgical tents.

tur'ban tu'mor. Endothelioma capitis.

tur'bid [L. *turba*, a crowd.] 1. Cloudy, muddy. 2. Muddled, mentally confused.

turbidimet'ric [*turbidity* + G. *metrikos*, relating to measure.] Noting the determination of the degree of turbidity in a fluid.

tur'binal. Turbinated* body.

tur'binate. 1. Turbinated. 2. Turbinated body, turbinated bone, concha* nasalis [BNA].

tur'binated [L. *turbinatus*, shaped like a top (*turbo*).] Scroll-shaped. **sphenoid'al t. bones,** conchæ sphenoidales [BNA], Bertin's bones. **t. body,** turbinal, the t. bone or concha with its covering of mucous membrane and other soft parts. **t. bone,** concha nasalis [BNA]. **t. crest,** crista conchalis [BNA].

turbinec'tomy [G. *ektomē*, excision.] Surgical removal of a turbinated bone.

turbinotome (tur'bin-o-tōm). An instrument for use in turbinotomy or turbinectomy.

turbinot'omy [G. *tomē*, incision.] Incision into or excision of a turbinated body.

turbo cer'ebri [L. *turbo*, a top, + *cerebrum*, brain.] Corpus pineale [BNA].

Turck's zone [Fenton B. *Turck*, American physician, 1857–1932.] Zona* transformans.

turgescence (tur-jes'ens) [L. *turgescere*, to begin to swell.] Swelling, inflation.

turgescent (tur-jes'ent). Swollen, turgid tumid.

tur'gid. Swollen, tumid, congested.

tur'gor [L. *turgere*, to swell.] Fulness. **t. vita'lis,** the normal fulness of the capillaries.

Turkestan' ulcer. Oriental boil.*

Tur'key-corn, Tur'key-pea. 1. Corydalis. 2. Tephrosia.

Turkey-rhu'barb. Rheum,* produced in China, but formerly brought into commerce through Turkish channels.

Turkish bath. See *bath*. **T. saddle,** sella turcica.

Tur'lington's bal'sam or drops. Balsamum traumaticum.

tur'meric. Curcuma, formerly used in medicine, but now employed only as a condiment. **In'dian t.,** hydrastis. **t. oil,** turmerol.

tur'merol. An oily constituent of turmeric upon which the taste and smell of this substance depend.

turn [A.S. *tyrnan*.] 1. To revolve or cause to revolve; specifically to change the position of the fetus in utero so as to convert a malpresentation into one permitting of normal delivery. 2. A change of position. **t. of life,** climacteric.

Turn'bull's tinc'ture of ac'onite [Alexander *Turnbull*, Scotch physician, *1797.] A strong tincture of aconite, about 12 times the strength of the official B.P. tincture.

Tur'ner's ce'rate. Ceratum calaminæ.

Tur'ner's sul'cus [William Aldren *Turner*, English neurologist, *1864.] Sulcus interparietalis.

Tur'nera [W. *Turner*, English physician and botanist, 1520(?)–1568.] 1. A genus of herbs or shrubs of tropical America, several of the species of which are reputed to possess medicinal properties. 2. Specifically, damiana (N.F.), *T. aphrodisiaca*.

turn'ing. In obstetrics, version.

turn'sickness. Gid.

tur'pentine [G. *terebinthinos*.] Terebinthina (U.S.). **Bordeaux' t.,** gallipot, derived from *Pinus maritima*. **Can'ada t.,** Canada balsam. **Chi'an t.,** obtained from *Pistacia terebinthus;* has been used in the treatment of cancer in doses of gr. 3–5 (0.2–0.3). **larch t.,** terebinthina laricis. **t. oil,** oleum terebinthinæ (U.S., Br.). **t. spirit,** oleum terebinthinæ. **Ven'ice t.,** terebinthina laricis. **white t.,** obtained from *Pinus palustris*.

tur'pentole. A purified petroleum.

tur'peth, tur'pethum [Pers. *turbad*, a laxative plant] (B.A.) Turbith root, the dried root of *Operculina turpethum* (*Ipomœa turpethum*), Indian jalap, a plant of Ceylon and Australia; purgative in doses of gr. 5–20 (0.3–1.3). **t. min'eral,** hydrargyri subsulphas flavus.

tur'pethin. A resin obtained from turpeth; the active purgative principle of the plant.

turps. A popular or shop name for oil of turpentine.

turun'da, pl. *turun'dæ* [L.] A surgical tent, gauze drain, or tampon.

tush, tusk. A canine tooth in the horse.

tuss'al [L. *tussis*, cough.] Relating to a cough, tussive, tussicular.

tussic'ular. Tussal.

tussicula'tion. A hacking cough.

tussila'go, gen. *tussilag'inis* [L.] Coltsfoot, farfara (N.F.), the dried plant *Tussilago farfara*, an herb of Europe and northern Asia; used, chiefly in domestic practice, in bronchitis and pulmonary affections in doses of ʒ4–8 (15.0–30.0) of an infusion or decoction of an ounce to the pint (30.0 to 480.0).

tussis [L.] A cough. **t. convulsi'va,** whooping-cough, pertussis. **t. feri'na, t. quin'ta,** t. convulsiva. **t. stomacha'lis,** stomach cough, a reflex cough due to irritation of the gastric mucous membrane.

tuss'ive. Tussal.

tus'sol. Antipyrine mandelate.

tuta'men, pl. *tuta'mina* [L. protection.] Any defensive or protective structure. **tuta'mina cer'ebri,** the scalp, cranium, and cerebral meninges. **tuta'mina oc'uli,** the eyebrows, eyelids, and eyelashes.

tutocaine (tu'to-ka-ēn). Butamin, a hydrochloride of a base belonging to the procaine type, a local anesthetic employed by surface application and hypodermically; for the conjunctiva it is used in 0.25 to 1 per cent. strength.

tut'san [F. *tout*, all, + *sain*, healthy.] St. John's wort, the plant *Hypericum androsæmum*, formerly in repute as a vulnerary.

Tutt'le's mask [Edward Gerry *Tuttle*, New York gynecologist, *1862.] A wire frame over which gauze is spread, so shaped as to cover the face and ears of the surgeon when operating.

Tuttle's proc'toscope (tut'l) [James P. *Tuttle*, American surgeon, 1857–1913.] A tubular speculum with electric light at its distal extremity; after introduction the obturator is withdrawn and a glass window is inserted in the proximal end; then by means of a rubber bulb and tube connected with the proctoscope the rectal ampulla may be inflated.

TV [*tuberculin* + *volutin*.] v. Behring's formula for the constituent of the tubercule bacillus soluble in pure water; it possesses the chromophil, physical, and chemical properties of volutine.

twang. A harsh tone of the voice.

'tween-brain. Diencephalon.

twee'zers [A.S. *twisel*, fork.] Volsella.

twelfth nerve. Nervus hypoglossus.

twelfth-year mo'lar. The second molar tooth of the permanent dentition.

twig [A S.] One of the finer terminal branches of an artery.

twilight (twi'līt) [A.S. *twi-*, two, + *light*.] The light existing when the sun is below the horizon; a faint light; figuratively, faint or indistinct mental perception. **t. sleep,** a mental condition in which, as Guttmann says, perception remains but apperception is lost; specifically, an amnesic state induced by the administration of morphine, or narcophine, and scopolamine, in which the pains of childbirth are perceived but slightly if at all, or else, if felt, are very speedily forgotten. **t. state,** absence, a transitory disturbance of consciousness during which many acts, sometimes very complicated ones, may be performed without the conscious volition of the individual and without any remembrance of them being retained.

twin [A.S. *getwin*, double.] 1. One of two children born at one birth. 2. Double, growing in pairs, geminate. **allan"toidoangiop'agous twins,** omphaloangiopagous twins. **enzygot'ic twins,** twins derived from a single fertilized ovum. **frater'nal twins,** twins derived from different ova and having different hereditary characters. **ident'ical twins,** two perfectly formed enzygotic twins of the same sex. **om"phaloangiop'agous twins,** enzygotic twins united only by the umbilical vessels. **t. cone,** two retinal cones fused together.

twinge (twinj). 1. A sudden momentary sharp pain.

Twi'ning's pill [William *Twining*, Anglo-Indian physician, 1813–1848.] A pill of calomel, blue pill, and ipecac, formerly of great repute in the treatment of dysentery.

twin'ning. The production of equivalent structures by division; the tendency of divided parts to assume symmetrical relations.

twist'er. Twitchup.

twist'ing. In life insurance, persuading a policyholder to drop existing insurance in one company and take out new insurance in another.

twitch [A.S. *twiccian*.] 1. To jerk spasmodically. 2. A momentary spasmodic contraction of a muscle-fiber.

twitch-grass. Couch-grass, triticum.*

twitch-up. A stick having a perforation in one end through which is passed a loop for the purpose of compressing the upper lip or ear of a horse. The animal may be sufficiently distracted by the pain to remain quiet during slight operations.

twixt-brain. 'Tween-brain.

Twort phenom'enon [F. W. *Twort*, British bacteriologist, contemporary.] Bacterioclasis or destruction and fragmentation of micrococci and certain other bacteria, effected by inoculation of cultures of these microorganisms with material from other diseased cultures; the materies morbi is a glassy transparent substance consisting of minute granules staining reddish with Giemsa. The phenomenon is similar to that of d'Herelle* in that it is reproducible in series, but the difference appears to be that the Twort is a bacterioclasis and the d'Herelle a bacteriolysis; the transparent material of Twort will not grow on any medium, but the bacteriophage of d'Herelle can be propagated in successive cultures.

TX [*tuberculin* + *x*, algebraic symbol of an unknown quantity.] v. Behring's formula for a derivative of TC* after its union with an analogous constituent of the animal cell.

ty'le [G. *tylē*, a lump.] A callosity.

ty'lion [G. dim. of *tylē*, a lump.] A craniometric point at the middle of the anterior edge of the sulcus chiasmatis

tyl'marin. Acetyl orthocumaric acid; a soluble crystalline powder, employed in rheumatism in doses of 3–8 grains (0.2–0.5).

tylo'ma [G. a callus.] Callosity. **t. conjuncti'væ,** xerosis of the conjunctiva due to dryness following insufficiency of the eyelids.

tyloph'oræ fo'lia [G. *tylos*, knot, + *phoros*, bearing.] (B.A.) Tylophora leaves, Indian ipecac: the dried leaves of *Tylophora asthmatica;* expectorant in doses of gr. ½–2 (0.03–0.13), emetic in doses of gr. 15–30 (1.0–2.0).

tyloph'orine. An alkaloid from the root of tylophora, possessing emetic and expectorant properties similar to those of the leaves of the plant.

tylo'sis [G.] 1. Tyloma. 2. The formation of a callosity. **t. cilia'ris,** pachyblepharon. **t. lin'guæ,** leucoplakia.

tylot'ic. Callous, marked by a callosity.

tym'panal. Relating to the tympanum, tympanic.

tympanec'tomy [G. *tympanon*, drum, + *ektomē*, excision.] Excision of the membrana tympani.

tympa'nia. Tympanites.

tympan'ic. 1. Relating to the tympanum, tympanal. 2. Resonant. **t. angle,** the angle formed by the basilar membrane and the wall of the cochlea. **t. attic,** recessus epitympanicus [BNA]. **t. body,** t. gland. **t. bone,** a horseshoe-shaped piece of bone, attached by its extremities to the inferior border of the squamosal bone in the infant; annulus tympanicus [BNA]. **t. canal,** (1) scala tympani; (2) canaliculus tympanicus. **t. cav'ity,** cavum tympani. **t. gan'glion,** a small ganglion on the tympanic nerve during its passage through

the petrous portion of the temporal bone. t. gland, intumescentia tympanica [BNA]. **t. nerve,** nervus tympanicus. **t. roof,** tegmen tympani.

tympanichord (tim-pan'ĭ-kord). Nervus* chorda tympani.

tympanichordal (tim-pan-ĭ-kor'dal). Relating to the chorda tympani nerve.

tympanicity (tim-pan-is'ĭ-tĭ). The quality of being tympanic or drum-like in tone.

tym'panism. Meteorism, tympanites.

tympanites (tim-pan-i'(e')tēz) [G. *tympanon*, drum, + *-itēs*.] Meteorism, inflation of the abdomen with gas, either within or outside of the intestine.

tympanit'ic [L. *tympanites*.] 1. Referring to tympanites. 2. Tympanic, noting the quality of sound elicited by percussing over the inflated intestine or a large pulmonary cavity. See *resonance*.

tympanitis (tim-pan-i'(e')tis) [G. *tympanon*, drum, + *-itis*.] Otitis media.

tympanocer'vical abscess. An abscess formed in inflammation of the middle ear and burrowing through the tissues of the neck.

tympanoeustachian (tim"pan-o-ūs-ta'kĭ-an). Relating to the ear drum and the Eustachian tube.

tympanohy'al bone. A small nodule of bone forming the base of the cartilaginous styloid process of the petrosal bone at birth.

tympanomall'eal. Relating to the tympanic bone and the malleus.

tympanomandib'ular. Relating to the tympanum and the mandible, noting Meckel's* cartilage.

tympanomas'toid. Relating to the tympanum and the mastoid cells, noting suppurative disease of the latter originating in the former.

tympanomastoiditis (tim"pan-o-mas-toy-di'(de')tis) Inflammation of the middle ear and the mastoid cells.

tympanopho'nia, tympanoph'ony [G. *tympanon*, drum, + *phōnē*, sound.] 1. Tinnitus aurium. 2. Autophony.

tympanosquamo'sal. Relating to the tympanic ring and the squama of the temporal bone.

tym"panostape'dial. Relating to the tympanum and the stapes, noting especially the junction of the base of the stapes with the vestibular or oval fenestra.

tympanotem'poral. Relating to the tympanum and the temporal region or bone.

tympanot'omy [G. *tympanon*, drum + *tomē*, incision.] Incision of the membrana tympani, paracentesis tympani, myringotomy.

tym'panum [G. *tympanon*, drum.] The ear-drum, the middle ear, the cavity in the petrous portion of the temporal bone which lodges the ossicles; it is closed externally by the membrana tympani, communicates with the nasopharynx through the Eustachian tube, and with the mastoid cells, and is lined with mucous membrane.

tym'pany. Tympanites.

Tyndall phenomenon (tin'dal fe-nom'e-non) [See *Tyndallization*.] The visibility of floating particles in gases or liquids when illuminated by a ray of sunlight.

tyn"dalliza'tion [after John *Tyndall*, English physicist, 1820–1893.] Fractional sterilization.*

type [G. *typos*, a mark, a model.] 1. The usual form, or a composite form, which all others of the class resemble more or less closely; a model; noting especially a disease or a symptom-complex giving the stamp or characteristic to a class. 2. In chemistry, a substance in which the arrangement of the atoms in a molecule may be taken as representative of that in a class of other substances; organic substances may be classed under the three types: hydrogen $\left.\begin{matrix}H\\H\end{matrix}\right\}$, water $\left.\begin{matrix}H\\H\end{matrix}\right\}$O, and ammonia $\left.\begin{matrix}H\\H\\H\end{matrix}\right\}$N. **scap"ulohu'meral t.,** Vulpian's atrophy, progressive spinal muscular atrophy beginning in the shoulder. **test t.,** see *test-types*, *Jaeger*, *Snellen*. **vesan'ic t.,** functional insanity or that due to no evident external cause.

type-em'bryo. An embryo of the age at which it becomes possible to recognize the structural characteristics of the genus or type of animal to which it belongs.

typh (tĭf). Typh-fever.

Typha'ceæ. A term proposed by Loeffler to include the group of bacteria causing infection clinically identical with typhoid fever; this group comprises the typhoid bacillus, the paratyphoid and paracolon bacilli, *Bacillus fæcalis alkaligenes*, *B. psittacosis*, *B. enteritidis*, and *B. coli*.

typhase (tĭ'fāz). A bacteriolytic enzyme present in cultures of the typhoid bacillus.

typhe'mia, typhæ'mia. Typhoid bacillemia, the presence of typhoid bacilli in the blood.

typh-fe'ver. A term proposed to include all low fevers of the type of typhus or typhoid

ty'phia. Typhoid fever.

typhin'ia. Relapsing fever.

typhiza'tion. 1. Infection with typhus or typhoid fever. 2. Preventive inoculation with typhoid vaccine

typhlec'tomy [G. *typhlon*, cecum, + *ektomē*, excision.] Exsection of the cecum.

typhlenteritis (tĭ-flen-ter-i'(e')tis) [G. *typhlos* blind + *enteron*. intestine, + *-itis*.] Typhlitis.

typhlitis (tĭ-fli'(fle')tis) [G. *typhlon*, cecum, + *-itis*.] Inflammation of the cecum.

typhlocele (tif'lo-sēl) [G. *typhlon*, cecum, + *kēlē*, hernia.] Cecal hernia.

typhlodicliditis (tif-lo-dik-lĭ-di'(de')tis) [G. *typhlos*, blind (cecum), + *diklis(dıklid-)*, folding door (valve), + *-itis*.] Inflammation of the ileocecal valve.

typhloempyema (tif-lo-em-pi-e'ma) [G. *typhlon*, cecum, + *empyēma*, abscess.] The presence of an abscess following typhlitis

typhloenteritis (tif-lo-en-ter-i'(e')tis). Typhlenteritis.

typhlolex'ia [G. *typhlos*, blind, + *lexis*, speech, a word.] Word-blindness.

typhlolithi'asis [G. *typhlon*, cecum, + *lithos*, stone.] The presence of fecal concretions in the cecum.

typhlol'ogy [G. *typhlos*, blind, + *-logia*.] The branch of science having to do with blindness and the blind

typh'lon [G.] Cecum.

typhlopex'ia [G. *typhlon*, cecum, + *pēxis*, fixation.] Operation for anchoring a movable cecum.

typhlopto'sis [G. *typhlon*, cecum, + *ptosis*, a falling.] Downward displacement of the cecum.

typhlo'sis [G.] Blindness.

typhlosteno'sis [G. *typhlon*, cecum, + *stenōsis*, a narrowing.] Stricture or stenosis of the cecum.

typhlos'tomy [G. *typhlon*, cecum, + *stoma*, mouth.] The surgical establishment of a cecal fistula.

typhlot'omy [G. *typhlon*, cecum, + *tomē*, incision.] The operation of cutting into the cecum.

typhoæ'mia. Typhemia.

typhobacillo'sis. Any continued fever with typhoid symptoms due to bacillary infection. **t. tuberculo'sa,** a continued fever with enlarged

spleen but no visceral lesions, due to infection with the tubercle bacillus; the condition, which resembles typhoid fever, usually ends in recovery, but is followed later by pulmonary or mesenteric tuberculosis.

typhobac'terin. A vaccine of a killed culture of the typhoid bacillus.

typho'des. Typhoid.

typhogen'ic [*typhus* + G. *gennaō*, I produce.] Causing or predisposing to typhus fever.

ty'phoid [*typhus* + G. *eidos*, resemblance.] 1. Typhus-like; stuporous from fever. 2. Same as t. fever. **am'bulatory t.,** walking t., t. fever in which prostration is not a marked feature, and the patient does not take to the bed or may even continue at his daily work. **apyret'ic t.,** t. fever in which the temperature does not rise more than a degree or two Fahrenheit. **bil'ious t.,** icteric form of relapsing fever. **intermitt'ent t.,** Malta* fever. **la'tent t.,** ambulatory t. **t. bacill'us,** *Bacillus typhosus.* **t. condi'tion,** a state of depression of the vital forces, muttering delirium or stupor, carphologia, involuntary discharges, etc., resembling the symptom-complex in severe typhoid fever, occurring in the course of other acute diseases. **t. fe'ver,** enteric f., abdominal typhus, dothienenteritis; an acute infectious disease caused by the *Bacillus typhosus.* It is characterized by a continued fever, rising in a step-like curve the first week, great physical and mental depression, an eruption of rose-colored spots on the chest and abdomen, meteorism, often diarrhea, sometimes intestinal hemorrhage or perforation of the bowel; the average duration is four weeks, though aborted forms and relapses are not uncommon. The lesions are located chiefly in the lymph-follicles of the intestines, the mesenteric glands, and the spleen. **t. lympho'ma,** the occurrence of masses of lymphoid tissue in the peritoneum and some of the abdominal viscera in cases of typhoid fever. **t. measles,** (1) measles attended with typhoid symptoms; (2) typhorubeoloid. **t. meningi'tis,** epidemic cerebrospinal meningitis. **t. pneumo'nia,** pneumonia marked by evidences of profound physical and mental depression. **t. res'idue,** a preparation remaining after treating a pure culture of typhoid bacilli with absolute alcohol, ether, and an alcoholic solution of sodium hydroxide, whereby the extraneous matters, fats, and toxin are removed; it is non-toxic and is used as an immunizing agent and as a curative remedy in the early stages of typhoid fever. **t. septice'mia,** a general infection with the t. bacillus without specific local manifestations. **t. spine,** a sequel of typhoid fever, consisting in weakness and pain on movement of the spine. **t. state,** t condition. **t. symptoms,** the symptoms marking the t. condition. **t. toxe'mia,** t. septicemia. **walking t.,** ambulatory t.

typhoid'al. Typhoid; relating to or resembling typhoid fever.

typhoidette (ti-foy-det') [Fr. dim. of *typhoïde*, typhoid.] A mild or abortive form of typhoid fever.

typhoidin (ti-foy'din). A preparation of a killed and concentrated broth culture of the typhoid bacillus, similar in its method of preparation to Koch's old tuberculin; it is employed in the

typhol'ysin. An hemolysin formed by *Bacillus typhosus.*

typhomala'rial. Relating to typhoid fever and malaria, noting an assumed hybrid of the two diseases.

typhoma'nia [G. *typhos*, stupor, + *mania*, frenzy.] Bell's disease, periencephalitis; meningoencephalitis, marked by acute maniacal excitement followed by coma.

typho'nia. The typhoid* condition.

typhopal'udism. Typhoremittent* fever.

typhophor (ti'fo-for) [*typhoid* + G. *phoreō*, I carry.] A typhoid bacilli-carrier.

typhopneumonia (ti-fo-nu-mo'nĭ-ah). Typhoid* pneumonia.

typhoremitt'ent. Noting a remittent malarial fever, accompanied by typhoid symptoms.

typhoru'beoloid. Typhoid fever in which the eruption resembles that of measles.

typhose'. Resembling typhoid fever; referring especially to certain cases of syphilis with pyrexia, in which typhoid symptoms are present.

typhosep'sis. Typhoid* septicemia.

typho'sis. A morbid state in which the symptoms resemble more or less those of typhoid fever.

typho'sus. Typhous, relating to typhus or typhoid fever.

typhotox'in. A base isolated from old cultures of the typhoid bacillus; it is a ptomaine with the formula $C_7H_{17}NO_2$, causing in animals paralysis, diarrhea, and dilatation of the pupils.

ty'phous. Relating to typhus fever.

ty'phus [G. *typhos*, stupor.] Typhus fever, an acute infectious and contagious disease, marked by high temperature, great mental and physical depression, and a macular and petechial eruption, lasting about two weeks. Called also jail or gaol fever. The disease occurs where large numbers are crowded together in poorly ventilated quarters and appears to be disappearing as municipal hygiene advances. **abdom'inal t.,** typhoid* fever. **blast'ing t.,** t. malignans. **hepat'ic t.,** Weil's* disease. **Mex'ican t.,** tabardillo, matlazahuatl. **t. ambulato'rius,** ambulatory typhoid. **t. bilio'sus nos'tras,** Weil's* disease. **t. exanthemat'icus,** t. fever. **t., fever,** typhus. **t. ictero'des,** yellow* fever. **t. levis'simus,** (1) typhoid fever with very mild symptoms; (2) mild or abortive typhus fever. **t. malig'nans,** severe and rapidly fatal t. fever. **t. mit'ior,** a mild or abortive typhus. **t. petechia'lis,** epidemic cerebrospinal meningitis. **t. recur'rens,** relapsing* fever.

typ'ical. Relating to, having the characters of or conforming to a type

typus (te'poos) [L.] Type **t. Froehlich,** Froelich's syndrome, dystrophia* adiposogenitalis.

tyramine (ti-ram'ēn). Trade name of parahydroxyphenylethylamine hydrochloride, a decomposition product of tyrosin, found also in ergot; its action is that of a vasoconstrictor and cardiac tonic in dose of gr. $\frac{1}{12}$ (0.005).

tyr'annism. Sadism; a lust for cruelty.

ty'ratol. Thymol carbonate.

tyrein (ti're-in) [G. *tyros*, cheese.] Coagulated casein.

tyrem'esis [G. *tyros*, cheese, + *emesis*, vomiting] The vomiting of curdy material by infants

solution, containing chlorides of sodium (0.8), potassium (0.02), calcium (0.02), and magnesium (0.01), sodium bicarbonate (0.1) and phosphate (0.005), and dextrose (0.01) in aqueous solution (100.0); employed (without dextrose) to supply the necessary inorganic salts in certain reducing methods.

tyrogenous (ti-roj'en-us) [G. *tyros*, cheese, + *gennaō*, I produce.] Produced by, or originating in, cheese.

Tyrog'lyphus [G. *tyros*, cheese, + *glyphō*, I carve.] A genus of mites, or acarids, including *T. siro* and *T. longior*, the cheese-mites.

ty'roid [G. *tyros*, cheese, + *eidos*, resemblance.] Cheesy, caseous.

tyroleu'cin [G. *tyros*, cheese, + *leukos*, white.] A substance formed by decomposing albumin.

tyro'ma [G. *tyros*, cheese, + *-ōma*.] A caseous tumor.

tyromato'sis [G. *tyros*, cheese.] Caseation

ty'rosal. Salipyrine.

ty'rosine [G. *tyros*, cheese.] An amino-acid formed as a protein cleavage product.

tyrosinase (ti'ro-sin-āz). A ferment acting upon tyrosin.

tyrosinu'ria [*tyrosin* + G. *ouron*, urine.] The excretion of tyrosin in the urine.

tyro'sis [G. *tyros*, cheese.] 1. The curdling of milk. 2. Tyromatosis. 3. Tyremesis.

ty'rothrix [G. *tyros*, cheese, + *thrix*, hair.] A bacillus causing the coagulation of casein.

tyrotox'icon [G. *tyros*, cheese, + *toxikon*, poison.] A ptomaine, diazobenzol, which is the toxic agent in many cases of ice-cream and cheese poisoning.

tyrotox'in [G. *tyros*, cheese, + *toxin*.] Tyrotoxicon, or any toxic product of milk.

tyrotox'ism. Poisoning by cheese or any milk-product.

tyrox'in. A decomposition product of albumin.

Tyrr'ell's fas'cia [Frederick *Tyrrell*, English physician, 1797–1843.] Denonvillier's* aponeurosis. **T.'s hook,** a slender blunt hook used for drawing out the iris in iridectomy.

Ty'son's antimo'nial pow'der A powder resembling pulvis antimonialis (B P.) though weaker, containing only 10 per cent. antimony oxide.

Ty'son's glands [Edward *Tyson*, English anatomist, 1649–1708.] Glandulæ odoriferæ, sebaceous glands of the corona glandis and inner surface of the prepuce.

TZ [*tuberculin* + Ger. *zymoplastische Substanz* zymoplastic substance.] v. Behring's formula for the dried residue of the constituents of the tubercle bacillus soluble in alcohol.

U

U. 1. The chemical symbol of *Uranium*. 2. Abbreviation for *unit*. 3. Symbol for kilurane, or 1000 uranium units.

uabain (wah'bah-in). Ouabain.

u'berous [L. *uber*, fruitful] Fertile, prolific.

u'berty [L. *ubertas; uber*, fruitful.] Fertility, fruitfulness.

ucam'bin. An African arrow poison, a heart-poison resembling digitalis or strophanthus in its action.

udd'er [A.S. *ūder*.] The large bag-like mammary gland of the cow and certain other animals.

Udrauszky's test (oo-drow'skĭ) [László *Udrausky*, Hungarian physiologist, 1862–1914.] For bile in the urine: a solution of furfurol and sulphuric acid are added to the urine, whereupon a bluish red color will appear if bile pigments are present.

Uffelmann's rea'gent (oo'fel-mahn) [Julius *Uffelmann*, German physician, 1837–1894.] A solution of 3 drops each of concentrated carbolic acid and liquor ferri chloridi in 300 drops of water. The solution is of an amethyst blue color which turns a lemon yellow in the presence of lactic acid, assumes an opaline tint in that of butyric acid, and is decolorized by hydrochloric acid.

Uhlenhuth's meth'od (oo'len-hoot) [Paul *Uhlenhuth*, Berlin bacteriologist, *1870.] 1. Precipitin test for human blood by means of an immune-serum obtained from rabbits or horses which have received repeated injections of human blood. 2. A method of the examination of tuberculous sputum by the addition of antiformin.*

Uhthoff's sign (oot'hawf) [W. *Uhthoff*, Breslau ophthalmologist, 1853–1927.] Nystagmus-like movements of the eyeballs in multiple sclerosis.

ukam'bin. Ucambin.

ulæmorrhagia (u-lem-or-rah'jĭ-ah) [G. *oulon*, gum, + *hæmorrhagia*.] Ulemorrhagia.

ulatro'phia [G. *oulon*, gum, + *atrophia*, atrophy.] Shrinkage or retraction of the gums.

ulcer (ul'sur) [L. *ulcus*.] A lesion of a cutaneous or mucous surface, caused by a molecular disintegration of the superficial parts, attended usually by more or less suppuration. A wound, or superficial loss of tissue due to traumatism, is not primarily an ulcer, but may become such if the healing process is arrested or the wound becomes infected with pyogenic microorganisms. **aton'ic u.**, one which shows little or no tendency to heal. **autoch'thonous u.**, chancre. **call'ous u.**, indolent u. **constitu'tional u.**, one due to a systemic disease, such as tuberculosis. **creep'ing u.**, serpiginous u. **cystoscop'ic u.**, an ulcer of the bladder resulting from a burn of the mucous membrane by the lamp of a cystoscope. **den'driform u.**, a linear u. of the cornea which sends out branches in various directions. **den'tal u.**, an irritable ulcer on the side of the tongue caused by rubbing against the projecting edge of a broken tooth or a rough coating of tartar. **disten'tion u.**, an u. of the intestine in the dilated part above a stricture. **endem'ic u.**, oriental boil.* **groin u.**, granuloma inguinale tropicum. **in'dolent u.**, callous u., a chronic ulcer, with hard elevated edges and few or no granulations, and showing no tendency to heal. **mar'ginal ring u. of the cor'nea**, a slowly creeping intermittent ulcer involving gradually the circumference of the corneal margin. **pep'tic u.**, round u., an ulcer of the mucous membrane of the stomach or duodenum, caused by the action of the gastric juice upon a portion where the nutrition has been interfered with in some way. **per'forating u. of the foot**, malum perforans pedis, a round, deep, trophic ulcer of the sole of the foot, following disease or injury, in any part of its course from the center to the periphery, of the nerve supplying the part. **phageden'ic u.**, a rapidly spreading u. attended by the formation of more or less extensive sloughing. **phleg'monous u.**, one attended with inflammation of the neighboring tissues. **ro'dent u.**, ulcus exedens, noli me tangere, Jacob's ulcer; a superficial erosion due to the breaking down of a cutaneous epithelioma of slight depth. **round u.**, peptic u. of the stomach or duodenum. **ser'pent u. of the cor'nea**, a creeping u. of the cornea. **serpig'inous u.**, a creeping u., extending on one side while healing at the opposite edge. **simple u.**, a local, not constitutional, u. attended with no marked pain or inflammation. **ster'coral u.**, an u. of the colon due to pressure and irritation of retained fecal masses. **symptomat'ic u.**, a constitutional u. **transpa'rent u. of the cor'nea**, an u. of the cornea, occurring usually in children, which heals without opacity. **troph'ic u.**, one due to impaired nutrition of the part. **trophoneurot'ic u.**, decubitus. **trop'ical u.**, oriental boil.* **var'icose u.**, localized destruction of the skin over a varicose vein, usually of the leg, due to mechanical pressure, nutritive disturbances, or bacterial action. **warty u.**, Marjolin's* u.

ulcerate (ul'sur-āt). To break down into an ulcer.

ulcerated (ul'sur-a-ted). Converted into or containing an ulcer or ulcers. **u. sore-throat**, putrid sore*-throat. **u. tooth**, suppurative inflammation of the alveolar periosteum with ulceration of the gum around the decaying root of a tooth.

ulcera'tion. 1. The formation of an ulcer. 2. An ulcer or aggregation of ulcers.

ul'cerative. Relating to or causing an ulcer or ulcers. **u. scrof'uloderm**, mycosis fungoides.

ulceromem'branous. Relating to or characterized by ulceration and the formation of a false membrane.

ul'cerous. Relating to or affected with ulceration.

ul'cus, pl. *ul'cera* [L.] Ulcer.* **u. cancro'sum**, (1) rodent ulcer, an ulcerating cancer; (2) chancre chancroid. **u. cystoscop'icum**, cystoscopic ulcer. **u. du'rum**, chancre. **u. ex'edens**, rodent ulcer.* **u. gra've**, mycetoma. **u. indura'tum**, chancre. **u. moll'e**, chancroid. **u. pulmo'nis**, a tuberculous pulmonary cavity. **u. ro'dens**, rodent ulcer. **u. rotun'dum**, round ulcer. **u. ser'pens cor'neæ**, a creeping ulcer of the cornea, Saemisch's ulcer. **u. tuberculo'sum**, lupus. **u. vene'reum**, (1) chancre; (2) chancroid. **u. ventric'uli**, gastric ulcer. **u. vul'væ acu'tum**, acute ulceration of the vulva, one nonvenereal form of which is called Lipschuetz'* disease.

ulec'tomy 1. [G. *oulē*, scar, + *ektomē*, excision.] Excision of cicatricial tissue. 2. [G. *oulon*, gum.] Gingivectomy, excision of gum tissue, especially

as applied to the surgical treatment of pyorrhea alveolaris.

ulemorrha'gia. Ulaemorrhagia, bleeding from the gums, ulorrhagia.

ulerythema (u-ler-ĭ-the'mah) [G. *oulē*, scar, + *erythēma*, redness of the skin.] An erythematous affection of the skin resulting in atrophic scar formation; lupus erythematosus. **u. ophryog'enes,** a folliculitis of the eyebrows resulting in scarring and falling of the hairs. **u. sycosifor'me,** lupoid sycosis, a chronic papular or pustular folliculitis resulting in destruction of the hair follicles with the formation of atrophic punctate scars and baldness.

ulet'ic [G. *oulon*, gum; *oulē*, a scar.] 1. Relating to the gums. 2. Relating to a scar, cicatricial, scarred.

ulet'omy [G. *oulē*, scar, + *tomē*, incision.] Incision of a cicatrix in order to relieve tension; cicatricotomy.

Ulex europæ'us. Furze, gorse, a spiny shrub, the seeds of which contain cytisine and ulexine, and are a cardiac stimulant, diuretic, and anthelmintic.

ulexine (u'leks-ēn). An alkaloid, $C_{11}H_{14}N_2O$, derived from the seeds of gorse, *Ulex europæus;* diurectic in doses of gr. $\frac{1}{2}$–$\frac{1}{6}$ (0.003–0.006).

uliginous (u-lij'ĭ-nus) [L. *uliginosus*, moist, wet.] Slimy, muddy.

ulitis (u-li'(le')tis) [G. *oulon*, gum, + *-itis*.] Inflammation of the gums, gingivitis. **intersti'tial u.,** inflammation of the connective tissue of the gums around the necks of the teeth; pyorrhea alveolaris.

ul'mus [L. elm.] (U.S.) Slippery elm, the inner bark of *Ulmus fulva*, red elm, a tree of eastern and central North America. Employed internally in inflammation of the respiratory passages in the form of mucilago* ulmi, and externally to make poultices.

ul'na, gen. *ul'næ* [L. elbow, arm.] The inner and larger of the two bones of the forearm.

ul'nad [L. *ulna* + *ad*, to] In a direction toward the ulna.

ul'nar. Relating to the ulna, or to any of the structures (artery, nerve, etc.) named from it.

ulna're. Os triquetrum [BNA].

ulnaris (ul-nah'ris) [L.] Ulnar; relating to the ulna or to any structures named from it; see under *arteria* and *musculus*.

ul'nen [G. *en*, in.] Relating to the ulna independent of other structures.

ulnocar'pal. Relating to the ulna and the carpus, or to the ulnar side of the wrist.

ulnora'dial. Relating to both ulna and radius, noting the two articulations, ligaments etc.

ulocace (u-lok'ă-se) [G. *oulon*, gum, + *kakē*, badness.] Ulcerative inflammation of the gums.

ulocarcino'ma [G. *oulon*, gum.] Carcinoma of the gums.

ulodermatitis (u-lo-der-mă-ti'(te')tis) [G. *oulē*, scar, + *derma*, skin, + *-itis*.] Inflammation of the skin resulting in destruction of tissue and the formation of cicatrices.

uloglossitis (u"lo-glos-i'(e')tis) [G. *oulon*, gum, + *glōssa*, tongue, + *-itis*.] Inflammation of both gums and tongue, gingivoglossitis, stomatitis.

u'loid [G. *oulē*, scar + *eidos*, resemblance.] 1. Resembling a scar. 2. A scar-like lesion due to a degenerative process in the deeper layers of the skin.

ulon'cus [G. *oulon*, gum, + *onkos*, tumor.] Any tumor of the gums; epulis, parulis.

ulorrha'gia [G. *oulon*, gum, + *rēgnymi*, I burst forth.] Bleeding from the gums, ulæmorrhagia.

ulorrhe'a, ulorrhœ'a [G. *oulon*, gum, + *rhoia*, a flow.] Oozing of blood or any fluid from the gums.

ulo'sis [G. *oulē*, scar.] Cicatrization.

ulot'ic [G. *oulē*, scar.] Cicatricial; causing cicatrization.

ulotrichous (u-lot'rik-us) [G. *oulotrichos*, curly-haired.] Having short curly hair, like the negro; opposed to *liotrichous*.

ul'sanin [L. *ulcus*, ulcer, + *sanare*, to heal.] Trade name of a compound of iodine and boric acid employed in ulceration of the larynx.

ul'tex. A bifocal glass in which the near addition is ground integral with the spherical curve.

ul'timate [L. *ultimus*, last.] Final, the last of a series. **u. anal'ysis,** see *analysis*.

ultimister'nal. Relating to the xiphoid cartilage or lowest segment of the sternum.

ul'timum mo'riens [L. the last thing dying.] 1. The upper portion of the trapezius which often escapes involvement in progressive muscular atrophy. 2. The right atrium of the heart, said to contract after the rest of the heart is still.

ultra- [L. beyond.] A prefix denoting excess or exaggeration, or beyond.

ultrabrachycephalic (ul-trah-brak-ĭ-sĕ-fal'ik). Noting an extremely short skull, one with a cerebral index of at least 90°.

ultradolichocephalic (ul-trah-dol-ĭ-ko-sĕ-fal'ik) Noting a very long skull, one with a cephalic index of less than 65°.

ultrafilter (ul'trah-fil"tur) [L. *ultra*, beyond.] A sac-like membrane of collodion, fish-bladder, or filter-paper impregnated with gels of varying condensation (in proportion to which the permeability of the filter varies); used in the ultrafiltration* of colloids.

ultrafiltration (ul"trah-fil-tra'shun) [L. *ultra*, beyond.] Filtration through a jelly filter or any ultrafilter which serves to separate colloid solutions from crystalloids and to separate particles of different size in a colloid mixture.

ultragas'eous state. The condition in which radiant* matter exists.

ultraliga'tion [*ultra*, beyond]. Ligation of a blood-vessel beyond the point where a branch is given off.

ultramicrobe (ul-trah-mi'krōb). A microorganism of such extreme minuteness as to be invisible under any of our present means of magnification.

ultramicron, ultramicrone (ul"trah-mi'kron, ul"-trah-mi'krōn). A term applied to both amicrons and submicrons.

ultrami'croscope. A microscope which renders visible, by means of diffraction produced by side illumination, objects too small to be visible otherwise under the most powerful microscope

ultramicroscop'ic [L. *ultra*, beyond, + *microscopic*.] Too small to be visible under the ordinary microscope.

ultraquinine (ul-trah-kwĭ-nēn'). Homoquinine.

ultrared'. Infrared, noting the heat rays beyond the red end of the spectrum.

ultrasterile (ul"trah-ster'il). Noting a medium which contains neither visible microorganisms nor an actually demonstrable ultravirus.

ultravi'olet. Noting the actinic or chemical rays beyond the violet end of the spectrum; **extravital u.** includes rays of wave lengths of 2,900 to 1,850 A.u. **intravital u.,** having wave lengths between 3,900 and 3,200 A.u. **vital u.,** rays necessary or helpful to normal growth, promoting calcium metabolism, and antirachitic in action, having wave lengths between 3,200 and 2,900 A.u.

ultravirus (ul"trah-vi'rus). Any virus or pathogenic microorganism which is filtrable or ultramicroscopic, the presence of which, however, can be demonstrated by the inoculation test.

ultromotiv'ity [L. *ultro*, on one's own part.] Power of spontaneous movement.

Ultz'mann's test [Robert *Ultzmann*, German chemist, 1842–1889.] To the suspected fluid one adds a 30 per cent. caustic potassa solution and then hydrochloric acid; if it contains bile pigments the fluid will assume a bright green color.

ululation (u-lu-la'shun) [L. *ululare*, to howl.] The inarticulate crying of hysterical or insane persons.

ulyp'tol. Trade name of an antiseptic mixture of salicylic acid, carbolic acid, and eucalyptol.

um'bel [L. *umbella*, a sunshade.] In botany, a form of inflorescence in which the flower-stems all spring from one point, radiating like the ribs of an umbrella.

umbell'ic acid. A yellow amorphous substance derived from umbelliferon by the action of caustic potash.

umbellif'eron. A crystalline substance, $C_9H_6O_3$, obtained from galbanum and other gum-resins.

Umbellula'ria califor'nica. California laurel, the leaves of which are used in neuralgia and nervous diarrhea in doses of gr. 10–30 (0.6–2.0). The leaves also furnish an oil, used for the same purposes in doses of ♏2–5 (0.13–0.3).

umber [L. *umbra*, shade, or *Umbria*, a province in Italy where it was first obtained.] A brownish yellow pigment, a natural earth containing manganese and iron oxide.

umbil'ical. Relating to the umbilicus. **u. cord,** funiculus umbilicalis [BNA]. **u. duct,** omphalomesenteric* duct. **u. fissure, u. fossa,** fossa venæ umbilicalis [BNA]. **u. notch,** incisura umbilicalis [BNA]. **u. stalk,** u. duct. **u. ves'icle,** see *vesicle*.

umbil'icate, umbil'icated [L. *umbilicatus*.] Of navel shape, pit-like, dimpled.

umbilica'tion. 1. A pit or naval-like depression. 2. The formation of a depression at the apex of a vesicle or pustule.

umbili'cus [L. a round pebble, navel.] The pit in the center of the abdominal wall marking the point where the umbilical cord entered in the fetus; the navel, "belly button."

um'bo, gen. *umbo'nis*, pl. *umbo'nes* [L. prominence or boss.] 1. A projecting point on a surface. 2. The depression on the external surface (projection on the tympanic surface) of the membrana tympani caused by the pull of the manubrium of the malleus, umbo membranæ tympani [BNA].

um'bonate [L. *umbo*, boss of a shield, knob.] Marked by a knob, noting a form of surface elevation of a bacterial culture; see cut under *culture* A, 7.

umbras'copy [L. *umbra*, shadow, + G. *skopeō*, I view.] Skiascopy.

umstimmung (oom'stim-moong) [Ger. *umstimmen*, to give a different tune.] Neisser's term for a condition of irritability of the skin in syphilitics in which a slight traumatism will excite an abnormally severe reaction.

unbal'ance. Imbalance.

Unca'ria [L. *uncus*, a hook.] A genus of plants of the order *Rubiaceæ*. **U. acida, U. gambir,** are sources of gambir, the latter the principal one.

un'cia [L.] An ounce.

un'ciform [L. *uncus*, hook, + *forma*, form.] Hook-shaped. **u. bone,** os hamatum [BNA].

unciforme (un-si-for'me) [L.] Unciform bone, **os*** hamatum [BNA].

un'cinal. Uncinate, hooked.

Uncina'ria [L. *uncinus*, a hook.] A genus of *Nematoda*, formerly including the genera *Ancylostoma and Necator*, but now confined to worms infesting lower animals only. **U. america'na,** *Necator americanus*. **U. duodenal'is,** *Ancylostoma duodenale*. **U. stenoceph'ala,** a species occurring in dogs, a cause of kennel anemia.

uncinariasis (un-sĭ-na-ri'ă-sis). Ancylostomiasis.

un'cinate [L. *uncinatus*.] Hooked, hook-shaped. **u. convolu'tion,** uncus gyri hippocampi [BNA]. **u. epilep'sis,** temporal epilepsy, see under *epilepsy*.

uncina'tum. Unciform bone, os* hamatum [BNA].

un'cipressure [L *uncus*, hook, + *pressura*, pressure.] Arrest of hemorrhage from a cut artery by pressure with a blunt hook.

uncom'plemented. Not united with complement and therefore inactive, noting interbodies or amboceptors.

unconscious (un-kon'shus). Not conscious, insensible. **u. cerebra'tion,** subconsciousness.

uncoossified (un-ko-os'ĭ-fīd). Not coössified, not united into one bone.

unction (unk'shun) [L. *unctio; ungere*, to anoint.] The action of anointing, or smearing with an ointment or oil.

unctuous (unk'chu-us). Greasy, oily.

unc'ture. Ointment, unguent.

un'cus [L. a hook.] Any hook-shaped process or structure; specifically, the hooked extremity of the hippocampal convolution. **u. gy'ri fornica'ti,** u. gyri hippocampi. **u. gy'ri hippocam'pi** [BNA], hook of the hippocampal convolution, the curved anterior extremity of the hippocampal gyrus, lying on the under surface of the brain just behind the substantia perforata anterior.

un'dercut. A shelf or depression from the general surface of a tooth-cavity made for the purpose of anchoring a filling.

un'derhorn. Cornu inferius of the lateral ventricle of the brain.

underhung', underjawed (un-der-jawd'). Having a prominent lower jaw.

undescen'ded. Not descended, noting a testicle which is retained within the abdomen.

un'dine [L. *undina* a water-sprite.] A small glass flask used in irrigation of the conjunctiva, and in cataract extraction.

un'dertoe. A displacement of the great toe beneath the second toe.

un'dulant [L. *unda*, a wave.] Waving, rising and falling or moving to and fro with a wave-like motion. **u. fever** [referring to the wavy appearance of the long temperature curve], Gibraltar fever, Malta fever, Mediterranean fever, Neapolitan fever; a specific fever of long duration due to the presence of *Brucella melitensis*; it has no distinctive pathology, but is marked clinically by repeated febrile paroxysms a week or more in duration, attended with enlargement of the spleen, profuse sweating, and painful swelling of the joints, separated by intervals of normal or nearly normal temperature. **u. membrane,** the delicate lateral membranous expansion of trypanosomes and spirochetes.

un'dulate. Having an irregular wavy border, noting the shape of a bacterial colony; see illustration under *colony*.

un'dulating. Waving, wave-like, undulant.

undula'tion [L. *unda*, wave.] A wave-like movement, fluctuation.

ung. Abbreviation of L. *unguentum*, ointment.

ungual (ung'gwal) [L. *unguis*, nail.] Relating to a nail or the nails, unguinal. **u. phalanx,** the terminal phalanx of each of the fingers and toes. **u. tuberos'ity,** tuberositas unguicularis; the spatula-like extremity of the terminal phalanx of each of the fingers and toes, which supports the nail.

un'guent [L. *unguentum*.] Ointment, salve.

un'guentine. Trade name of an antiseptic ointment, containing phenol, ichthyol, and alum in petrolatum.

unguen'tum, gen *unguen'ti*, pl. *unguen'ta* [L.] 1. Ointment salve; an unctuous preparation, with which a medicinal agent may be intimately incorporated, solid or semisolid at ordinary temperatures, but liquefied at the temperature of the skin. Ointments are used, according to the vehicle employed or the medicinal agent incorporated therewith, as simple protectives, as agents in the treatment of skin diseases or as a means of systemic medication by absorption through the skin. The usual bases for ointments are petrolatum and hard paraffin (non-absorbable), lard, wax, oil, and spermaceti, alone or mixed in various proportions (for ointments to act upon the skin only), and lanolin (absorbable and used for systemic medication) 2. (U.S.) u. simplex, simple ointment; yellow wax 200, benzoinated lard 800; used as an emollient and protective application, and as a base for remedies intended for local application.

u. ac'idi bo'rici (U.S., Br.), ointment of boric acid; boric acid 10, yellow wax 5, petrolatum 85 (U.S.); boric acid 1, paraffin ointment 9 (Br.); used in burns and abrasions.

u. ac'idi carbol'ici (Br.), carbolic acid or phenol ointment, u. phenolis (U.S.); carbolic acid 1, glycerin 3, white paraffin ointment 21; used in burns and superficial wounds.

u. ac'idi salicyl'ici (Br.), salicylic acid ointment, salicylic acid 10, paraffin ointment 490, used in certain skin diseases.

u. ac'idi tan'nici (U.S., Br.), ointment of tannic acid, tannic acid 20, glycerin 20, ointment 60; application for hemorrhoids and ulcers.

u. aconiti'næ (Br.), aconitine ointment; aconitine 10, oleic acid 80, lard 410; used especially in supraorbital neuralgia.

u. aq'uæ ro'sæ (U.S., Br.), ointment of rose water, cold cream; spermaceti 125, white wax 120, expressed oil of almond 560, sodium borate 5, stronger rose water 190 (U.S.); white wax and spermaceti each 1½ ounces, almond oil 9 ounces, rose water 7 fluidounces, oil of rose 8 minims (Br.); soothing and protective application.

u. aquo'sum (Br.), hydrous ointment; distilled water 240, borax 10, white beeswax 125, white soft paraffin 125, olive oil 500.

u. atropi'næ (Br.), atropine ointment; atropine 10, oleic acid 40, lard 450, used locally as an anodyne in neuralgia.

u. belladon'næ (U.S., Br.), belladonna ointment, pilular extract of belladonna 10, diluted alcohol 5, wool-fat 30, yellow wax 5, petrolatum 50 (U.S.); liquid extract of belladonna 2, evaporated to ½ and then mixed with benzoinated lard 2¼ (Br.), anodyne application.

u. bitu'minis sulphona'ti (N.F.), ointment of sulphonated bitumen; sulphonated bitumen 10, petrolatum 90.

u. calami'næ (N.F.), calamine ointment, Turner's cerate; prepared calamine 1, unguentum (U.S.) 5; astringent and protective.

u. campho'ræ (N.F.), **u. camphora'tum,** camphor ointment; camphor 22 in a mixture of lard and white wax 78; stimulating.

u. canthar'idis (Br.), ointment of cantharides, cantharidal ointment, cantharides 1, benzoinated lard 10; rubefacient.

u. cap'sici (N.F., Br.), capsicum ointment; oleoresin of capsicum 5, paraffin 10, petrolatum 85 (N.F.); capsicum 120 grains, spermacetic 60 grains, olive oil 1 ounce (Br.); rubefacient.

u. chrysarobi'ni (U.S., Br.), chrysarobin ointment; chrysarobin 6, hydrous wool fat 94 (U.S.); chrysarobin, 20, benzoinated lard 480 (Br.); employed in psoriasis and other affections of the skin.

u. cocai'næ (Br.), cocaine ointment; cocaine 20, oleic acid 80, lard 400; employed locally in painful conditions of superficial structures.

u. coni'i (Br.), conium ointment; conium juice 2, evaporated to ½ and mixed with hydrous wool fat ½; employed for the relief of superficial pains.

u. creoso'ti (Br.), creosote ointment; creosote 1, soft paraffin 5, hard paraffin 4; applied to chilblains, indolent ulcers, and various skin diseases.

u. creoso'ti salicyla'tum exten'sum, creosote-salicylic acid salve mull, mulla* creosoti salicylata (N.F.)

u. diach'ylon, diachylon ointment, Hebra's lead ointment, u. plumbi oleatis (U.S.).

u. eucalyp'ti (Br.), eucalyptus ointment; oil of eucalyptus 1, hard paraffin 4, white soft paraffin 5; applied to indolent ulcers and in various skin diseases.

u. exten'sum, salve mull, steatinum, mulla* (N.F.).

u. fus'cum (N.F.), brown ointment, mother's salve; camphorated brown plaster 2, olive oil 1, suet 1; discutient.

u. gal'læ (U.S., Br.), nutgall ointment, ointment of galls; nutgall 20, ointment 80 (U.S.), nutgall 1, benzoinated lard 4 (Br.), employed as a local astringent.

u. gal'læ cum o'pio (Br.), ointment of galls and opium, opium 75, ointment of galls 925; used as a local astringent in painful conditions, such as hemorrhoids.

u. hamamel'idis (Br.), ointment of hamamelis, witch hazel ointment, liquid extract of hamamelis ½, hydrous wool-fat 2½; a soothing application

u. hydrar'gyri (Br.), mercurial ointment, u. hydrargyri fortius (U.S.), triturate together 1 lb. of mercury, 1 lb. of lard, and 1 oz. of suet, employed by inunction in syphilis.

u. hydrar'gyri ammonia'ti (U.S., Br.), ointment of ammoniated mercury, white precipitate ointment: ammoniated mercury 10, white petrolatum 40, liquid petrolatum 10, hydrous wool-fat 40 (U.S.); ammoniated mercury 1, paraffin ointment 9 (Br.); applied in chronic skin diseases and in tubercular syphilides.

u. hydrar'gyri chlo'ridi corrosi'vi exten'sum, corrosive mercuric chloride salve mull, mulla* hydrargyri chloridi corrosivi (N.F.).

u. hydrar'gyri chlor'idi mi'tis (N.F.), ointment of mild mercurous chloride, prophylactic ointment, calomel ointment; calomel 30, white petrolatum 70; recommended in the prophylaxis of venereal disease.

u. hydrar'gyri compos'itum (Br.), compound ointment of mercury; mercurial ointment 10, yellow wax 6, olive oil 6, camphor 3, used by inunction in syphilis.

u. hydrar'gyri dilu'tum, diluted mercurial ointment, blue ointment, u. hydrargyri mite (U.S.).

u. hydrar'gyri for'tius (U.S.), stronger mercurial ointment, u. hydrargyri (Br.); mercury 500, oleate of mercury 20, prepared suet 230, benzoinated lard 250; used by inunction in syphilis.

u. hydrar'gyri io'didi ru'bri (Br.), ointment of red iodide of mercury; mercuric iodide 20, benzoinated lard 480; applied to syphilitic and tuberculous ulcers.

u. hydrar'gyri mi'te (U.S.), mild mercurial ointment, diluted mercurial ointment, blue ointment; stronger mercurial ointment 600, petrolatum 200, ointment 200; used by inunction in syphilis.

u. hydrar'gyri nitra'tis (N.F.), ointment of mercuric nitrate, citrine ointment; mercury 70, nitric acid 175, anhydrous lard 760; mercury 10, nitric acid 30, lard 40, olive oil 70 (Br.); a stimulating application in chronic skin diseases.

u. hydrar'gyri nitra'tis dilu'tum (Br.), dilute ointment of mercuric nitrate, strong ointment of mercuric nitrate 200, soft paraffin, yellow, 800.

u. hydrar'gyri nitra'tis forte (Br.), strong ointment of mercuric nitrate; mercury 10, nitric acid 30, lard 40, olive oil 70.

u. hydrar'gyri olea'tis (Br.), oleate of mercury ointment; oleate of mercury 1, benzoinated lard 3; used for the same purposes as mercurial ointment.

u. hydrar'gyri ox'idi fla'vi (U.S.), ointment of yellow mercuric oxide; yellow mercuric oxide 1, liquid petrolatum 1, hydrous wool fat 10, petrolatum 88 (U.S.); yellow mercuric oxide 10, soft paraffin 490 (Br.); applied diluted to blepharitis, sties, etc.

u. hydrar'gyri ox'idi ru'bri (N.F., Br.), ointment of red mercuric oxide, red precipitate ointment; red mercuric oxide 10, distilled water 10, hydrous wool-fat 40, petrolatum 40 (U.S.); red mercuric oxide ½, paraffin ointment 2½; used in the treatment of indolent ulcers.

u. hydrar'gyri subchlor'idi (Br.), mercurous chloride ointment, calomel ointment; mercurous chloride ½, benzoinated lard 2½; applied in certain skin diseases

u. io'di (U.S., Br.), iodine ointment; iodine 4 potassium iodide 4, glycerin 12, wool fat 80; employed in chilblains and in the treatment of glandular enlargements.

u. io'di denigres'cens (N.F.), stainless iodine ointment; iodine 50, paraffin 50, oleic acid 200, petrolatum 700.

u. io'di intinc'tum, stainless iodine ointment; iodine 1, oleic acid 4; heat to effect absorption and mix with soft paraffin 14, and hard paraffin 1, previously melted together (Martindale).

u. iodofor'mi (U.S., Br.), iodoform ointment; iodoform 10, wool fat 20, petrolatum 70 (U.S.); iodoform ½, paraffin ointment 2½ (Br.); employed for the same purposes as iodoform in powder.

u. ma'tris, mother's salve, u. fuscum (N.F.).

u. mylab'ridis (B.A.), mylabris ointment, resembles u. cantharidis in preparation and use.

u. myrobal'ani (B.A.), myrobalan ointment; myrobalan 1, benzoinated lard 4; used for the same purposes as ointment of galls.

u. myrobal'ani cum o'pio (B.A.), same as the preceding with the addition of opium 7.5 per cent.; same uses as u. gallæ cum opio.

u. paraffi'ni (Br.), paraffin ointment; hard paraffin 3, soft paraffin 7; employed as a protective and as a base for medicated ointments.

u. pheno'lis (U.S., Br.), phenol ointment, ointment of carbolic acid, u. acidi carbolici (Br. '14); phenol 2, yellow wax 5, petrolatum 93; employed in wounds, burns, etc.

u. pi'cis compos'itum (N.F.), compound tar ointment; oil of tar 4, tincture of benzoin 2, zinc oxide 3, in a mixture of cottonseed oil, lard, and yellow wax 91, antiseptic and antipruritic.

u. pi'cis pi'ni (U.S.), **u. pi'cis liq'uidæ,** tar ointment; pine tar 50, yellow wax 15, petrolatum 35 (U.S.); tar 5, yellow wax 2 (Br.); employed in psoriasis, eczema, and ringworm.

u. plum'bi aceta'tis, lead acetate ointment; lead acetate 20, white paraffin ointment 480; an astringent application in burns, chilblains, etc.

u. plum'bi carbona'tis, lead carbonate ointment, white lead ointment; lead carbonate ½, white paraffin ointment 2½; a soothing application to burns and superficial inflammations.

u. plum'bi io'didi (N.F.), lead iodide ointment; lead iodide ½, yellow paraffin ointment 2½ (Br.); lead iodide 10, benzoinated lard 90 (N.F.); a stimulating application to indolent ulcers.

u. plum'bi olea'tis (U.S.), ointment of lead oleate, diachylon ointment, Hebra's lead ointment; lead oleate plaster 50, oil of lavender 1, white petrolatum 49, employed in eczema and hyperidrosis.

u. potass'ii io'didi (N.F.), ointment of potassium iodide; potassium iodide 10, sodium thiosulphate 7, water 9, benzoinated lard 80 (N.F.); potassium iodide 50, potassium carbonate 3, distilled water 47, benzoinated lard 400 (Br.); employed as an application to enlarged glands.

u. resi'næ (Br. '14), resin or rosin ointment, ceratum resinæ (U.S.); resin 4, yellow beeswax 4, lard 3, olive oil 4; a stimulating application to indolent ulcers and chilblains.

u. resorcino'lis compos'itum (N.F.) compound resorcinol ointment, "soothing ointment;" resorcinol, zinc oxide, bismuth subnitrate, and rectified oil of birch tar, of each 6; yellow wax, 10; petrolatum, 25; anhydrous wool fat, 28; glycerin, 13; astringent and antiseptic.

u. salicyla'tum exten'sum, salicylic acid salve mull, mulla* acidi salicylici (N.F.).

u. sim'plex (Br.), simple ointment, wool fat 50, hard paraffin 100, white or yellow soft paraffin 850.

u. sina'pis (N.F.), mustard ointment; volatile oil of mustard 2, white wax 15, lard 83; used as a counter-irritant.

u. staphisa'griæ, stavesacre ointment; stavesacre seeds 2, yellow wax 1, benzoinated lard 8½; employed as a parasiticide.

u. stramo'nii (N.F.), stramonium ointment; extract of stramonium 10, diluted alcohol 5, hydrous wool-fat 20, benzoinated lard 65; employed to relieve the pain of hemorrhoids, fissures, etc.

u. sul'phuris (U.S., Br.), sulphur ointment; washed sulphur 150, benzoinated lard 850 (U.S.); sublimed sulphur 1, benzoinated lard 4 (Br.); employed in the treatment of scabies.

u. sul'phuris alkali'num (N.F.), alkaline sulphur ointment; sublimed sulphur 20, potassium carbonate 10, water 5, benzoinated lard 65.

u. sul'phuris compos'itum (N.F.), compound sulphur ointment, Wilkinson's ointment, Hebra's itch ointment; precipitated calcium carbonate 10, sublimed sulphur 15, oil of cade 15, soft soap and lard each 30, employed in scabies and as an antiseptic and antipruritic in eczema

u. sul'phuris io'didi, ointment of iodide of sulphur; sulphur iodide 20, glycerin 20, benzoinated lard 460; employed in the treatment of certain chronic skin diseases.

u. veratri'næ (N.F.), veratrine ointment; veratrine 4, expressed oil of almond 6, benzoinated lard 90 (U.S.); veratrine 10, oleic acid 40, lard 450 (Br.); employed externally in neuralgia.

u. zin'ci exten'sum, zinc salve mull, mulla*zinc (N.F.).

u. zin'ci olea'tis (Br.), zinc oleate ointment; precipitated zinc oleate 1, white soft paraffin 1; used in the treatment of eczema.

u. zin'ci ox'idi (U.S., Br.), ointment of zinc oxide, u. zinci; zinc oxide 20, paraffin 15, white petrolatum 65; used as a soothing mildly astringent application in skin diseases, burns, and abrasions.

u. zin'ci stea'ris (N.F.), ointment of zinc stearate; zinc stearate 50, white petrolatum 50; employed as a mildly astringent protective in skin affections.

Unguicula'ta [L. *unguiculus*, nail or claw.] A class or division of *Mammalia*, including all having nails or claws, as distinguished from the *Ungulata*.

unguic'ulate. 1. Having nails. 2. Having claws, as distinguished from hoofs.

unguic'ulus [L. dim. of *unguis*, nail.] A small nail or claw.

un'guinal. Relating to a nail or the nails, ungual.

un'guis, gen. *un'guis*, pl. *un'gues* [L.] 1. Onyx, nail, one of the thin, horny, transparent plates covering the dorsal surface of the distal end of each terminal phalanx of fingers and toes. A nail consists of corpus or body, the visible **part,** and radix or root at the proximal end concealed under a fold of skin. The under part of the nail is formed from the stratum germinativum and mucosum of the epidermis, the free surface from the stratum lucidum, the thin cuticular fold overlapping the lunula representing the stratum corneum. 2. Os unguis, the lacrymal bone, os lacrimale [BNA]. 3. Hippocampus minor, calcar avis [BNA]. 4. A collection of pus in the cornea, onyx, hypopyon. **u. a'vis, u. Hall'eri,** calcar avis [BNA].

un'gula [L. a claw.] 1. Hoof of the horse, ox, etc. 2. An instrument used for the extraction of a dead fetus from the uterus.

Ungula'ta [L. *ungula*, hoof.] A class or division of the *Mammalia*, containing the animals with hoofs, as distinguished from the *Unguiculata*.*

unhealthful (un-helth'fŏŏl). Unwholesome, insalubrious, injurious to health.

unhealthy (un-hel'thĭ). Unsound, not well, morbid, inclined to be ill.

uni- [L. *unus*, one.] A prefix denoting one, single, not paired; equivalent to the Greek prefix *mono-*.

uniarticular (u-nĭ-ar-tik'u-lar) [L. *unus*, one, + *articulus*, joint.] Monarthric, relating to a single joint.

uniax'ial. Having but one axis; growing chiefly in one direction.

uniba'sal. Having but one base.

unicam'erate [L. *unus*, one, + *camera*, chamber.] Having but one cavity, unilocular.

unicell'ular [L. *unus*, one, + *cellula*, a cell.] Composed of but one cell, as the protozoans.

unicen'tral. Having a single center, as of growth or of ossification.

unicep'tor [*unus*, one, + *capere*, to take.] A receptor which has only a haptophore group or a haptophore and a zymophore group, but no complementophile group.

unicism (u'nĭ-sizm) [L. *unus*, one.] The doctrine formerly held by many that there was but one venereal poison, at least that chancroid and the syphilitic chancre were due to the same virus; opposed to *dualism*.

u'nicornous. Having but one horn, or cornu.

u'nicorn [L. *unus*, one, + *cornu*, horn.] Unicornous having a single horn or cornu. **u. root,** aletris. **u. u'terus,** a unilaterally developed uterus in which one cornu is imperfectly formed.

unicus'pid [L. *unus*, one, + *cuspis*, point.] 1. Provided with but one cusp, as a canine tooth. 2. One of the canine or incisor teeth which have but one cusp.

unicus'pidate. Unicuspid.

unifamil'ial [L. *unus*, one, + *familia*, family.] Relating to or occurring in a single family; noting especially a nervous disease attacking several of the children in the same family in which no hereditary taint is apparent.

uniflagellate (u-nĭ-flaj'el-āt). Having but one flagellum, monotrichate, monotrichous.

unifo'rate [L. *unus*, one, + *foratus; forare*, to pierce.] Having but one foramen, pore, or opening of any kind.

u'niform [L. *unus*, one, + *forma*, form.] 1. Having but one form, not variable in form. 2. Of the same form or shape as another structure or object.

uniger'minal [L. *unus*, one, + *germen*, bud, germ.] Relating to a single germ or ovum.

uniglan'dular. Involving, relating to, or containing but one gland.

unigrav'ida [L. *unus*, one, + *gravida*, pregnant.] A woman who is pregnant for the first time.

unilam'inar, unilam'inate. Having but one layer or lamina.

unilat'eral [L. *unus*, one, + *latus*(*later-*), side.] Confined to one side only.

unilo'bar. Having but one lobe.

uniloc'ular [L. *unus*, one, + *loculus*, compartment.] Having but one compartment, unicamerate.

uninuclear, uninucleate (u-ni-nu'kle-ar, u-ni-nu'kle-āt). Having but one nucleus.

uniocular (u-ni-ok'u-lar). [L. *unus*, one, + *oculus*, eye.] 1. Relating to one eye only. 2. Having but one eye, one-eyed.

union (ūn'yun) [L. *unus*, one.] 1. The joining or amalgamation of two or more bodies; adhesion or growing together. 2. The structural adhesion or growing together of the edges of a wound. **u. by first inten'tion,** etc., see *intention*. **vic'ious u.,** union of the ends of a broken bone in such a way as to cause a deformity, or a crooked limb.

unioval, uniovular (u-nĭ-o'val, u-nĭ-ov'u-lar). Relating to or formed from a single ovum.

unip'ara [L. *unus*, one, + *para*, from *parere*, to bring forth.] A woman who has borne but one child.

unipar'iens. Uniparous.

unip'arous. 1. Giving birth to one young at a time. 2. Noting a unipara.

unipen'nate [L. *unus*, one, + *penna*, feather.] Having a feather arrangement on one side; resembling one-half of a feather. **u. muscle,** a muscle with a lateral tendon to which the fibers run obliquely, giving a resemblance to one lateral half of a feather.

unipo'lar [L. *unus*, one, + *polus*, pole.] 1. Having but one pole, noting a nerve-cell in which the branches project from one side only. 2. Situated at one extremity only of a cell.

unisep'tate. Having but one septum or partition.

unisex'ual. Relating to or having one sex only.

u'nit [L. *unus*, one.] 1. One, a single person or thing. 2. A standard of measure, weight, or any other quality, by multiplications or fractions of which a scale or system is formed. **alexin'ic u.,** the minimum amount of alexinic serum necessary to dissolve a determined volume of red blood corpuscles in the presence of an excess of hemolytic serum. **ambocep'tor u.,** the smallest quantity of amboceptor in the presence of which a definite quantity of red blood cells will be dissolved by an excess of complement. **an'tigen u.,** the smallest amount of antigen which will fix one complement unit so as absolutely to inhibit hemolysis. **antitox'ic u.,** immunizing u **antiven'ene u.,** the amount of antivenene which, injected into the ear vein, will protect one gram weight of rabbit against a fatal dose of snake venom. **British ther'mal u.,** the quantity of heat required to raise one pound of water at a temperature of 39° F. one degree F.; see *calory*. **cat u.,** the dose of a drug (per kilogram of the animal's weight) which is just large enough to kill a cat when administered intravenously. **C.G.S. u.,** any unit in the centimeter-gram-second system. **com'plement u.,** the smallest amount of complement which will cause solution of a definite quantity of red blood cells in the presence of an amboceptor unit. **elec'trical u.,** see *ampère. coulomb, dyne, erg, farad, joule, ohm, volt, watt, weber*. **Hamp'son u.,** see *Hampson*. **Hanson u.,** see *Hanson*. **hemolyt'ic u.,** the quantity of inactivated immune serum, which, complement being present, will cause complete hemolysis in 1 c.c. of a 5 per cent. emulsion of washed red blood-corpuscles. **IK u.,** infusoria-killing u. **im'munizing u.,** the amount of antitoxin which will exactly neutralize 100 toxic units. **Kien'boeck u.,** see *Kienboeck*. **Ma'che u.,** see *Mache*. **mouse u.,** see *Allen*-Doisy unit*. **tox'ic u.,** the minimal dose of a toxin which will kill a standard guinea-pig (one weighing about 250 grams) in three or four days. **u. of char'acter,** in heredity a character which is inherited as a whole and cannot be divided. **u. of force,** dyne. **u. of heat,** in the metric system, calory, or the amount necessary to raise a kilogram of water from 0° to 1°C.; in the English system the pound-degree, or the amount necessary to raise a pound of water from a temperature of 50° to one of 51°F. **u. of length,** in the metric system, meter; in the C.G.S. system, centimeter; in the English system it is variable; the inch for short distances,

the foot for moderate distances and for elevation, and the mile for long distances. **u. of light,** candle-power. **u. of radioactiv'ity,** see *Curie, Hampson, Kienboeck, Mache,* and *uranium u.* **u. of weight,** in the English system the pound, in the metric system the gram. **ura'nium u.,** a unit for the measurement of radioactivity, that of uranium being taken as 1. **urotoxic u.,** see *urotoxic.*

unita'rian. Unitary. **u. the'ory,** Bordet's theory that the serum of each animal contains but one alexin or complement although the alexins of different species of animals differ.

u'nitary. Relating to a unit, unitarian.

univalence (u-niv'a-lens, u-nĭ-va'lens). A valence of one, the state of being univalent.

univalent (u-niv'a-lent, u-nĭ-va'lent) [L. *unus,* one, + *valere,* to have power.] Having the combining power of an atom of hydrogen.

Unna's disease' (oon'nah) [Paul *Unna,* German dermatologist, 1850–1929.] Seborrheic eczema. **U.'s lay'er,** stratum granulosum (1). **U.'s mulls,** salve mull, mulla (N.F.). **U.'s paste,** (1) soft zinc paste, pasta* zinci mollis; (2) sulphurated zinc paste, pasta* zinci sulphurata. **U.'s pencil,** stilus dilubilis. **U.'s plas'ma cell,** a histioid cell with basophil cytoplasm occurring in inflammatory exudates; fibroblast. **U.'s stain,** alkaline methylene-blue stain, 1 part each of methylene-blue and potassium carbonate in 100 parts of water.

Unna-Pappenheim stain. A contrast stain for gonococci, consisting of a methylene-green pyronin solution.

Unna-Taenzer stain (oon'nah-tent'ser). An orcein stain for fibroelastic tissues.

unnerve (un-nurv'). In veterinary practice to exsect a nerve or a tendon.

unofficial (un-ŏ-fish'al). Not listed in the pharmacopeia.

unor'ganized. 1. Inorganic. 2. Without definite structure. 3. Not provided with organs.

unorienta'tion. Disorientation.

unrest'. Inquietude; instability; nervousness. **peristal'tic u.,** a spasmodic irregularity of the movements of the stomach or intestine.

unsat'urated. Not saturated; noting a solution in which the menstruum is capable of dissolving more of the solid; noting also a chemical compound in which all the affinities are not satisfied, so that still other atoms or radicals may be added to it.

Unschuld's sign (oon'shoolt). [Paulus *Unschuld,* German physician, *1835.] Frequent cramps in the calves of the legs, occurring in diabetes.

unsex'. To castrate, to deprive of the ovaries.

unsound'. Unhealthy, morbid, defective.

unstri'ated. Without striations, not striped; noting the structure of the smooth or involuntary muscles.

ununi'ted. Not united or knit, noting an unhealed fracture.

Unverricht's disease' (oon'fer-rikht) [Heinrich *Unverricht,* German physician, 1853–1912.] Thomsen's disease, myotonia* congenita.

unwell'. 1. Slightly ill, indisposed. 2. Menstruating.

unwholesome (un-hōl'sum). Unhealthful.

u'pas [Malay, poison.] An arrow poison from the sap of *Antiaris toxicaria* and other trees of the Philippines and the coast of southern Asia.

upsiloid (ūp'sĭ-loyd). Hypsiloid.

urachal (u'ră-kal). Relating to the urachus, noting a *fold* of peritoneum enveloping the urachus, and a *fossa* alongside the fold just above Poupart's ligament, the *fossa inguinalis interna.*

urachus (u'ra-kus) [G. *ourachos.*] The portion of the allantois which lies within the body of the fetus, forming in postuterine life the ligamentum umbilicale medium.

uracil (u'ră-sil). A pyrimidine base, $C_4H_4N_2O_2$, derived from various nucleic acids; it occurs in the form of acicular crystals arranged in rosettes.

uracra'sia [G. *ouron,* urine, + *akrasia,* ill mixture, incontinence.] 1. A condition of foulness of the urine. 2. Incontinence of urine, enuresis.

uracratia (u-ra-kra'she-ah) [G. *ouron,* urine, + *akrateia,* incontinence.] Uracrasia (2).

uræ'mia. Uremia.

uragogue (u'ra-gog) [G. *ouron,* urine, + *agōgos,* drawing forth.] Diuretic.

u'ral, u'ralin, ura'lium. Chloral-urethane.

uramidoacetic acid (u-ram"ĭ-do-ă-se'tic as'id). Glycoluric acid, hydantoic* acid.

u'ramil. A crystalline body, $C_4H_5N_3O_3$, derived from alloxantin, uric acid, and other allied substances.

uramil'ic acid. Dialuramic acid, $C_8H_9N_3O_7$, derived from uramil by treating with sulphuric acid.

uramine (u-ram'ēn). 1. Guanidine. 2. One of the trade names of hexamethylenamina.

uranal'ysis [G. *ouron,* urine, + *analysis.*] Analysis of the urine.

uran'idine. A yellow animal pigment.

u'ranin. Sodium-fluorescein, a yellowish brown powder, employed in solution in the diagnosis of corneal ulcer and as a test of death; about an hour after the injection of gr. 15 (1.0) the sclerotic will acquire a greenish color if life is still present.

uraninite (u-ran'in-īt). Pitchblende.

uraniscochasma (u-ran-is"ko-kaz'mah) [G. *ouraniskos,* roof of the mouth, + *chasma,* chasm.] Cleft palate, uranoschisis.

uranisconitis (u-ran-is"kon-i'(e')tis) [G. *ouraniskos,* roof of the mouth, + *-itis.*] Inflammation of the palate.

uranis'coplasty [G. *ouraniskos,* roof of the mouth, + *plassō,* I form.] Uranoplasty, uraniscorrhaphy, staphyloplasty, staphylorrhaphy, operation for cleft palate.

uraniscorrhaphy (u-ran-is-kor'ră-fĭ) [G. *ouraniskos,* roof of the mouth, + *rhaphē,* suture.] Uraniscoplasty, staphylorrhaphy.

uranis'cus [G. *ouraniskos,* roof of the mouth.] Palate.

u'ranism [G. *Ouranos,* a sexual pervert among the gods, the husband of his mother, the father of monsters, and from whose dismembered arm, cast into the sea, sprang Aphrodite without mother.] Unnatural sexual relations between men; urnism.

u'ranist. Urnist, urning, one who practises uranism.

ura'nium [named from the planet *Uranus.*] A metallic element, symbol U, atomic weight 238.5, occurring mainly in pitchblende from which it was first isolated by Klaproth in 1789; a hard heavy metal of gray or black color, feebly radioactive. **u. II,** an element (?) closely associated with uranium, atomic weight 234; its disintegration product is **u. X** which gives off beta and feeble gamma rays; its disintegration product is supposed to be ionium. There is said to be a **u. Y,** but little is known of it. **u. u'nit,** a unit for the measurement of radioactivity, that of uranium being taken as 1. **u. ni'trate,** ura'nii ni'tras, occurring as light yellow prismatic crystals, radioactive, soluble in water, alcohol, and ether; it has been employed in dose of gr. ½ (0.01)

in the treatment of diabetes; in animal experiments, given in large doses, it causes glycosuria.

uranoplas'tic. Relating to uranoplasty.

u'ranoplasty [G. *ouranos*, palate, + *plassō*, I form.] An operation for the closure of a cleft palate; for synonyms, see *uraniscoplasty*.

uranople'gia [G. *ouranos*, palate, + *plēgē*, stroke.] Paralysis of the muscles of the soft palate.

uranor'rhaphy. Uraniscorrhaphy.

uranoschisis (u-ran-os'kĭ-sis) [G. *ouranos*, roof of the mouth, + *schisis*, fissure.] Cleft palate, uranischochasma, uranoschism.

uranoschism (u-ran'o-sizm) [G. *ouranos*, roof of the mouth, + *schisma*, cleft.] Cleft palate.

u"ranostaph'yloplasty [G. *ouranos*, palate, + *staphylē*, uvula, + *plassō*, I form.] Repair of a cleft of both hard and soft palate.

uranostaphylorrhaphy (u"ran-o-staf-il-or'ra-fĭ) [G. *ouranos*, palate, + *staphylē*, uvula, + *rhaphē*, suture.] Uranostaphyloplasty.

u'ranyl. Uranous oxide UO_2, a divalent group or radical which forms salts with acids, taking the place of two hydrogen atoms in the combination. **u. ac'etate,** a uranium salt occurring as yellowish rhombic crystals soluble in water; has been used locally in coryza. **u. ni'trate,** a uranium salt, occurring in greenish yellow prismatic crystals soluble in water; it has been used in diabetes in doses of gr. ½–¼ (0.01–0.015).

urari (u-rah're). Curare.

uraro'ma [G. *ouron*, urine + *arōma*, spice.] A spicy, aromatic odor of the urine.

urarthritis (u"rar-thri'(thre')tis) [*uric acid* + G. *arthron*, joint, + *-itis*.] Gouty inflammation of a joint.

urase (u'rāz). Urease.

urasep'tine. Trade name of a mixture of several urinary antiseptics

u'rasin. A ferment derived from urea.

u'rasol. Acetyl-methylene-disalicylic acid; a yellowish white powder, insoluble in water; used in muscular rheumatism and cystitis in doses of gr. 5–8 (0.3–0.5).

u'rate. A salt of uric acid **so'dium u.,** the substance found in gouty tophi.

urate'mia, uratæ'mia [*urate* + G. *haima*, blood.] The presence of urates, especially sodium urate, in the blood.

urat'ic. Relating to or consisting of urates.

uratol'ysis [*urate* + G. *lysis*, solution.] The decomposition or solution of urates.

uratolyt'ic. Causing the decomposition, or solution and removal from the tissues, of urates.

urato'ma [*urate* + G. *-ōma*.] Tophus.

urato'sis. Any morbid condition due to the presence of urates in the blood or tissues.

uratu'ria. The passage of an increased amount of urates in the urine.

urbaniza'tion [L. *urbs*, town.] The movement of the population toward cities

urce'iform [L. *urceus*, pitcher, + *forma*, form.] Pitcher-shaped, urceolate.

ur'ceolate [L. *urceolus*, dim. of *urceus*, pitcher.] Urceiform

urea (u-re'ah). Carbamide, CH_4N_2O or $CO(NH_2)_2$, the diamide of carbonic acid, one of the end-products of metabolism, excreted in the urine in the amount of about 32 grams (one ounce) a day, this varying within the limits of 20 and 70 grams according to the diet; it carries off about ⅘ of the nitrogen excreted from the body. Urea is formed in muscle, but chiefly in the liver, and is thought to be derived from ammonium carbonate by the successive loss of two molecules of water, the intervening product being ammonium carbamate. It may be obtained artificially by heating a solution of ammonium cyanate. It occurs as colorless or white prismatic crystals, without odor but with a cooling saline taste, soluble in water, it forms salts with acids. Urea has been used in medicine as a diuretic and in the treatment of tuberculosis; it is official in the B.P. which gives the doses of gr. 15–240 (1.0–16.0). Some of its salts also have been employed for the same purposes. **u. and quinine' hydrochlo'ride,** quininæ* et ureæ hydrochloridum (U.S.).

ure'a-frost. Minute masses of urea sometimes observed on the skin of the face in Bright's disease.

ure'a-fer'ment. Urease.

u'real. Relating to or containing urea, ureic.

ureameter [*urea* + G. *metron*, measure.] A device for estimating the amount of urea in the urine.

uream'etry. The determination of the amount of urea in the urine.

ure'a-quinine'. Quininæ hydrochlorocarbamidum.

u'rease. Urea-ferment, a ferment causing the splitting of hippuric acid into glycocoll and benzoic acid, and ammoniacal decomposition of urea. It is found in cystitis of diverse pathogeny.

urecchysis (u-rek'i-sis) [G. *ouron*, wine, + *ekchysis*, a pouring out.] Extravasation of urine into the tissues.

Urechites suberecta (u-re-ki'tēz sub-e-rek'tah). Savannah flower, the source of a South American arrow poison; the leaves are used as an antiperiodic in doses of ɱ2–8 (0.13–0.5) of a fluidextract.

urechitin (u-rek'ĭ-tin). A glucoside from *Urechites suberecta*.

urechitox'in A glucoside from *Urechites suberecta*.

uredema, urœdema (u-re-de'mah) [G. *ouron*, urine, + *oidēma*, swelling.] Infiltration of urine into the subcutaneous tissues.

ure'do [L. a blight.] 1. Urticaria 2. A burning sensation in the skin.

ureide (u're-īd) Any compound of urea in which one or more of its hydrogen atoms have been substituted by acid radicals.

ureine (u're-in). 1. A supposed ammoniacal ferment of urea. 2 An oily substance derived from urine, alleged to be the active cause of uremic symptoms.

urelco'sis [G. *ouron*, urine, + *helkōsis*, ulceration.] Ulceration of any part of the urinary tract.

uremia (u-re'mĭ-ah) [G. *ouron*, urine, + *haima*, blood.] 1. An excess of urea and other nitrogenous waste in the blood. 2. An autointoxication occurring in certain cases of nephritis or in anuria from any cause; it is not known what the toxic agent or agents may be, whether poisons normally formed in the body and excreted in the urine or some new substance formed in consequence of the altered metabolism. The symptoms are chiefly nervous—headache, vomiting, dyspnea, insomnia, delirium, convulsions, and coma.

ure'mic. Relating to or caused by uremia.

uremide (u're-mēd) [formed from *uremia*, after the analogy of *syphilide*.] A skin lesion occurring in uremic poisoning.

uremigenic (u-re-mĭ-jen'ik). 1. Of uremic origin or causation. 2. Causing or resulting in uremia.

ureom'eter. Ureameter.

urerythrin (ūr-er'ĭ-thrin) [G. *ouron*, urine, + *erythros*, red.] A red pigment found in the urine in certain fevers, especially rheumatic fever.

uresiesthesia, uresiæsthesia (u-re'sĭ-es-the'zĭ-ah) [G. *ourēsis*, urinating, + *aisthēsis*, sensation.] The desire to urinate.

u'resin. Trade name of a citrate of lithium and urotropin, claimed to be a uric-acid solvent.

ure'sis [G. *ourēsis*.] Urination.

u'ret. The radical, CH_2NO, which replaces one atom of hydrogen in ammonia to form urea.

-uret. A suffix denoting a binary chemical compound, now substituted by *-ide* (*q.v.*).

u'retal. Ureteral, ureteric.

ure'ter [G. *ourētēr*, urinary canal.] The tube conducting the urine from the kidney to the bladder

ure'teral. Ureteric; relating to the ureter.

ureteral'gia. Pain in the ureter.

ure"tercys'toscope. A cystoscope with a ureteral catheter in a groove in its wall; the catheter is passed into the ureter when the orifice is brought into view with the cystoscope.

ureterectasia (u-re'ter-ek-ta'sĭ-ah) [G. *ourētēr*, ureter, + *ektasis*, a stretching out] Dilatation of an ureter.

ureterec'tomy [G. *ourētēr*, ureter, + *ektomē*, excision.] Exsection of a segment or all of an ureter.

ureter'ic. Relating to one or both ureters.

ureteritis (u-re-ter-i'(e')tis). Inflammation of an ureter.

ureterocele (u-re'ter-o-sēl) [G. *ourētēr*, ureter, + *kēlē*, hernia] The presence of an ureter amid the contents of a hernial sac.

ureterocer'vical. Relating to an ureter and the cervix uteri, noting a fistula between the two.

ureterocystoneostomy (u-re"ter-o-sis"to-ne-os'to-mĭ) [G. *ourētēr*, ureter, + *kystis*, bladder, + *neos*, new, + *stoma*, mouth.] Ureterocystostomy.

ureterocystoscope (u-re"ter-o-sis'to-skōp). Ureterocystoscope.

ure"terocystos'tomy [G. *ourētēr*, ureter, + *kystis*, bladder, + *stoma*, mouth] Formation of an opening other than the natural one between an ureter and the bladder

ure"terodial'ysis [G. *ourētēr*, ureter, + *dialysis*, a breaking up] Rupture of an ureter

ure"teroenter'ic. Relating to an ureter and the intestine, noting a fistula uniting the two.

ure"teroenteros'tomy [G. *ourētēr*, ureter, + *enteron*, intestine, + *stoma*, mouth] The formation of an opening between an ureter and the intestine.

ureterography (u-re-ter-og'ră-fĭ) [G. *ourētēr*, ureter, + *graphē*, a writing] Radiography of the ureter after the injection of collargol or argyrol or some similar substance.

ureterolith (u-re'ter-o-lith) [G. *ourētēr*, ureter, + *lithos*, stone.] A calculus in the ureter.

ureterolithiasis (u-re"ter-o-lĭ-thi'a-sis). The formation or presence of a calculus in an ureter

ure"terolithot'omy [G. *ourētēr*, ureter, + *lithos*, stone, + *tomē*, incision.] Operation for the removal of a stone lodged in an ureter.

ureterol'ysis [G. *ourētēr*, ureter, + *lysis*, solution] Rupture of an ureter, ureterodialysis.

ure"terone"cystos'tomy [G. *ourētēr*, ureter, + *neos*, new, + *kystis*, bladder, + *stoma*, mouth.] Ureterocystostomy.

ure"terone"opyelos'tomy [G. *ourētēr*, ureter, + *neos*, new, + *pyelos*, pan (pelvis), + *stoma*, mouth.] The formation of an artificial opening between the ureter and the pelvis of the kidney.

ure"teronephrec'tomy [G. *ourētēr*, ureter, + *nephros*, kidney, + *ektomē*, excision.] Removal of a kidney with its ureter.

ure"terophleg'ma [G. *ourētēr*, ureter, + *phlegma*, phlegm.] An accumulation of mucus in the ureter.

ureteroplasty (u-re'ter-o-plas"tĭ) [G. *ourētēr*, ureter, + *plassō*, I form.] Reparative or plastic surgery of the ureters.

ure"teroproctos'tomy [G. *ourētēr*, ureter, + *proktos*, anus (rectum), + *stoma*, mouth.] The establishment of an opening between an ureter and the rectum.

ureteropyelitis (u-re"ter-o-pi-el-i'(e')tis) [G. *ourētēr*, ureter, + *pyelos*, pan (pelvis), + *-itis*.] Inflammation of of the pelvis of a kidney with its ureter.

ureteropyelography (u-re"ter-o-pi-el-og'ră-fĭ). Pyelography.

ure"teropy"eloneos'tomy [G. *ourētēr*, ureter, + *pyelos*, pan (pelvis), + *neos*, new, + *stoma*, mouth] Ureteroneopyelostomy.

ureteropyelonephritis (u-re"ter-o-pi"el-o-ne-fri'-(fre')tis) [G. *ourētēr*, ureter, + *pyelos*, pan (pelvis), + *nephros*, kidney, + *-itis*.] Ureteropyelitis.

ureteropyosis (u-re"ter-o-pi-o'sis) [G. *ourētēr*, ureter, + *pyōsis*, suppuration.] An accumulation of pus in the ureter.

ure"terorectos'tomy [G. *ourētēr*, ureter, + L. *rectum* + G. *stoma*, mouth.] Ureteroproctostomy.

ure"terorrha'gia [G. *ourētēr*, ureter, + *-rhagia*.] Hemorrhage from an ureter.

ure"teror'rhaphy [G. *ourētēr*, ureter, + *rhaphē*, suture] Suture of a wounded ureter, ureteroplasty.

ure"terostegno'sis [G. *ourētēr*, ureter, + *stegnōsis*, a making close.] Ureterostenosis.

ure"terosteno'ma [G. *ourētēr*, ureter, + *stenōma*, a narrow place] The site of a stricture of an ureter.

ure"terosteno'sis [G. *ourētēr*, ureter, + *stenōsis*, a narrowing] Stricture of an ureter

ureteros'toma [G. *ourētēr*, ureter, + *stoma*, mouth.] An ureteral fistula

ureteros'tomy [G. *ourētēr*, ureter, + *stoma*, mouth.] The establishment of an external opening into the ureter.

ureterot'omy [G. *ourētēr*, ureter, + *tomē*, incision.] Any cutting operation on an ureter.

ure"tero-ure'teral. Relating to two segments of the same ureter or to both ureters, noting an artificial anastomosis between them.

ure"tero-ure"teros'tomy [G. *ourētēr*, ureter (bis), + *stoma*, mouth.] The establishment of an anastomosis between the two ureters or between two segments of the same ureter.

ure"tero-u'terine. Relating to an ureter and the uterus, noting a fistula between the two.

ureterovaginal (u-re"ter-o-vaj'in-al). Relating to an ureter and the vagina, noting a fistula, either surgical or pathological, connecting the two.

u'rethan, u'rethane [*ur(ea)* + *eth(er)*] Any ester of carbamic acid; specifically ethyl carbamate, employed as an hypnotic in doses of gr. 10–30 (0.6–2.0).

urethra (u-re'thrah) [G. *ourēthra*.] A canal leading from the bladder, discharging the urine externally. **female u.,** u. muliebris. **male u.,** u. virilis. **membranous u.,** pars membranacea [BNA]. **penile u.,** spongy u. **prostatic u.,** pars prostatica [BNA] **spongy u.,** pars cavernosa [BNA]. **u. muliebris** [BNA], female urethra; a canal about an inch and a half in length passing from the bladder, in close relation with the anterior wall of the vagina, opening in the vestibule behind the clitoris. **u. virilis** [BNA], the male urethra, a canal about eight inches in length opening at the extremity of the glans penis; it gives passage to the spermatic fluid as well as the urine.

abnormal opening, epispadia, epispadias, anaspadias (above); hypospadia, hypospadias (below); paraspadia, paraspadias (lateral). **bleeding,** urethrorrhagia, urethræmorrhagia. **discharge from,** urethrorrhea, blennorrhea, urethrocatarrh; gonorrhea (venereal). **division of stricture,** urethrotomy, coarctotomy; meatotomy, porotomy (of meatus). **escape of gas from,** pneumaturia. **exsection,** urethrectomy. **externa-opening,** meatus. **imperforate,** urethratresia, atretourethra. **incision of meatus,** meatotomy, porotomy. **inflammation,** urethritis; gonorrh a (venereal). **instrument for dilating stricture,** urethreurynter, sound, bougie. **instrument for examining.,** urethroscope, sound, bougie. **instrument for measuring caliber,** urethrameter, urethrometer, urethrograph; meatoscope (opening). **instrument for passage through to draw urine,** catheter. **obstruction,** urethremphraxis, urethrophraxis. **pain,** urethralgia, urethrodynia; urodynia, scalding, dysuria, strangury (in passing water). **plastic surgery,** urethroplasty. **spasm,** urethrospasm, urethrism. **stricture,** urethrostenosis, ankylurethria; urethrospasm, urethrism (spasmodic). **suture of,** urethrorrhaphy. **thickening of wall of female,** urethrocele. **tumor,** urethrophyma.

urethræmorrha'gia [G. *ourēthra*, urethra, + *haima*, blood, + *-rhagia*.] Bleeding from the urethra, urethrorrhagia.

ure'thral. Relating to the urethra. **u. fever,** urinary fever.*

urethral'gia [G. *ourēthra*, urethra, + *algos*, pain.] Pain in the urethra.

urethram'eter. Urethrometer.

ure'thrascope. Urethroscope.

urethratresia (u-re"thră-tre'zĭ-ah) [G. *ourēthra*, urethra, + *a-* priv. + *trēsis*, a boring.] Imperforation or occlusion of the urethra.

urethrec'tomy [G. *ourēthra*, urethra, + *ektomē*, excision.] Excision of a segment or the whole of the urethra.

urethrem'orrhage. Urethræmorrhagia.

ure"thremphrax'is [G. *ourēthra*, urethra, + *emphraxis*, a stoppage.] Obstruction, from any cause, to the free flow of urine through the urethra.

urethreurynter (u-re"thru-rin'tur) [G. *ourēthra*, *urethra*, + *eurynō*, I dilate.] An instrument for dilating the urethra.

u'rethrism, urethris'mus. Irritability or spasmodic stricture of the urethra.

urethritis (u-re-thri'(thre')tis) [G. *ourēthra*, urethra, + *-itis*.] Inflammation of the urethra. **anterior u.,** inflammation of the portion of the urethra anterior to the triangular ligament. **nonspecif'ic u.,** simple u. **poste'rior u.,** inflammation of the membranous and prostatic portions of the urethra **simple u.,** a catarrhal inflammation of the urethra, blennorrhea. **specif'ic u.,** gonorrhea. **u. petrif'icans,** a form, sometimes of gouty origin, in which there is a deposit of calcareous matter in the wall of the urethra. **u. vene'rea,** gonorrhea.

urethrobul'bar. Relating to the urethra and the bulb of the corpus cavernosum urethræ, noting a small artery.

urethrocele (u-re'thro-sēl) [G. *ourēthra*, urethra, + *kēlē*, tumor, hernia.] 1. A hyperplasia of the connective tissue surrounding the female urethra. 2. A prolapse of the female urethra.

urethrocystitis (u-re"thro-sis-ti'(te')tis) [G. *ourēthra*, urethra, + *kystis*, bladder, + *-itis*.] Inflammation of the urethra and bladder.

ure'throgram [G. *graphō*, I record.] A recording urethrometer, indicating graphically the location and extent of a stricture or strictures of the urethra.

urethrom'eter [G. *ourēthra*, urethra, + *metron*, measure.] An instrument for measuring the caliber of the urethra.

urethropenile (u-re"thro-pe'nīl). Relating to the urethra and the penis.

ure"throperine'al. Relating to the urethra and the perineum.

ure"throperine"oscro'tal. Relating to the urethra, perineum, and scrotum.

urethrophrax'is. Urethremphraxis.

urethroplasty (u-re'thro-plas"tĭ) [G. *ourēthra*, urethra, + *plassō*, I form.] Reparative or plastic surgery of the urethra.

ure"throprostat'ic. Relating to the urethra and the prostate.

urethrorec'tal. Relating to the urethra and the rectum.

urethrorrha'gia [G. *ourēthra*, urethra, + *-rhagia*.] Urethræmorrhagia.

urethror'rhaphy [G. *rhaphē*, suture.] Suture of a wound of the urethra.

urethrophy'ma [G. *phyma*, a tumor.] Any tumor or circumscribed swelling of the urethra.

ure"throrrhe'a, ure"throrrhœ'a [G. *rhoia*, a flow.] An abnormal discharge of mucus or pus from the urethra, blennorrhea.

ure'throscope [G. *ourēthra*, urethra, + *skopeō*, I view.] An instrument for affording a view, under electrical illumination, of the urethra.

urethroscop'ic. Relating to the urethroscope or to urethroscopy.

urethros'copy. The inspection of the urethra by means of the urethroscope.

ure'throspasm. Spasmodic contraction of the muscular fibers surrounding the urethra, spasmodic stricture of the urethra, urethrism.

urethrostax'is [G. *staxis*, trickling.] Oozing of blood from the mucous membrane of the urethra.

urethrosteno'sis [G. *stenōsis*, a narrowing.] Stricture of the urethra.

urethros'tomy [G. *stoma*, mouth.] Formation of a permanent opening into the membranous portion of the urethra through the perineum.

ure'throtome [G. *tomos*, cutting.] An instrument for dividing a stricture of the urethra.

urethrot'omy [G. *ourēthra*, urethra, + *tomē*, incision.] Operation for division of a stricture of the urethra. **exter'nal u.,** division of a stricture of the membranous urethra by an incision through the perineum. **inter'nal u.,** division of a stricture by means of an instrument passed through the urethra.

urethrovaginal (u-re"thro-vaj'in-al). Relating to the urethra and the vagina.

urethroves'ical. Relating to the urethra and the bladder.

urethylane (ūr-eth'il-ān). A colorless crystalline substance, $C_2H_5NO_2$; diuretic and hypnotic.

uret'ic [G. *ourētikos*, relating to the urine.] 1. Relating to the urine. 2. Increasing the excretion of urine, diuretic. 3. An agent which promotes the flow of urine, a diuretic.

urgin'ea [L. *urgere*, to press, referring to the shape of the seeds.] (B.A.) Indian squill, the young bulbs of *Urginea indica*, *Scilla indica;* expectorant and diuretic, resembling the official squill.

ur'gosan. Trade name of a mixture of hexamethylenamine, 1 part, and gonosan 2 parts.

urhidrosis (u-ri-dro'sis). Uridrosis.

u'rian. Urochrome.

u'ric [G. *ouron*, L. *urina*, urine.] Relating to urine. **u. acid,** lithic acid, a crystalline acid, $C_5H_4N_4O_3$, contained in solution in the urine of mammals, but in solid form in that of birds and reptiles; when pure it occurs as white scaly crystals, but as obtained from the urine is reddish yellow in color. It is sometimes solidified in small masses as gravel or in larger concretions as calculi. With sodium and other bases it forms urates.

uricacide'mia, uricacidæ'mia. Uricemia, lithemia, the presence of uric acid in excess in the blood.

uricacidu'ria. The presence of large amounts of uric acid in the urine.

uricase (u'rĭ-kāz). A hydrolytic enzyme, present in certain of the lower animals, which converts uric acid into allantoin.

uricedin (u-ris'e-din). Trade name of a mixture of lithium citrate and sodium citrate, sulphate, and chloride; it occurs as a white powder, soluble in water, and is recommended in the treatment of rheumatism and gout in doses of gr. 15–30 (1.0–2.0).

urice'mia, uricæ'mia. The presence of uric acid in excess in the blood; lithemia.

uricol'ysis [*uric acid* + G. *lysis*, a loosening.] Decomposition of uric acid into urea.

uricolyt'ic. Relating to or effecting the hydrolysis of uric acid.

uricometer (u-rĭ-kom'e-tur) [*uric* acid, + G. *metron*, measure.] An appliance for determining the amount of uric acid voided in the urine.

uridrosis (u-rĭ-dro'sis) [G. *ouron*, urine, + *hidrōs*, sweat.] The excretion of urea or uric acid in the sweat. **u. crystalli'na,** a deposit of a white powder of uric acid on the skin.

uriesthesia, uriæsthesia (u-rĭ-es-the'zĭ-ah). Uresiesthesia.

u'riform. Trade name of a mixture of hexamethylenamine, santal, and sabal, a urinary antiseptic.

urina (oo-re'nah) [L.] Urine. **u. chy'li,** u. cibi. **u. chylo'sa,** chylous urine, urine of a milky color containing chyle. **u. ci'bi** [L. *cibus*, food], the urine excreted after a meal. **u. cruen'ta,** bloody urine. **u. galacto'des** [G. *gala*, milk], milky urine, u. chylosa. **u. hyster'ica,** the pale urine secreted in large amount during an hysterical attack. **u. jumento'sa** [L. *jumentum*, a beast of burden], cloudy urine like that of the horse. **u. po'tus** [L. *potus*, drink], the urine excreted after the ingestion of a large amount of fluid. **u. san'guinis** [L. *sanguis*, blood], the urine passed in the morning or after long abstinence from food and drink. **u. spas'tica,** u. hysterica.

u"rinaccel'erator. The accelerator urinæ muscle, musculus bulbocavernosus [BNA].

urinæ'mia. Uremia.

u'rinal. A vessel into which urine is passed or one which contains urine.

urinal'ysis. Uranalysis.

u'rinary [L. *urinarius*.] Relating to urine. **u. appara'tus,** u. system. **u. bladder,** vesica urinaria [BNA], the musculomembranous bag which receives the urine discharging from the ureters and retains it until it is voluntarily passed by the urethra. **u. stutt'ering,** the occurrence of frequent interruptions during the act of urination. **u. system,** the kidneys, ureters, bladder, and urethra.

uri"nase'rum. An antibody formed in response to the injection of albuminous urine; it will precipitate albumin in the urine and in a pleural or peritoneal exudate of an animal of the same species as that from which the injected urine was derived.

u'rinate. To pass urine, to micturate.

urina'tion. Micturition, the passing of urine. **stutt'ering u.,** the passage of urine in jets caused by intermittent spasmodic contraction of the bladder.

u'rinative. Diuretic.

urine (u'rin) [L. *urina*; G. *ouron*.] A clear, transparent, amber-colored liquid, of a peculiar aromatic odor, and bitterish, saline taste, normally of acid reaction and of a specific gravity of about 1.020; it is excreted by the kidneys and contains urea, uric acid, mucus, coloring matters, and organic waste products. The quantity passed in the twenty-four hours varies with the amount of fluid ingested, but averages from 1000 to 1500 c.c. (36 to 54 ounces), the total solids averaging 60 grams (920 grains), about half of which is urea. **black u.,** black water, the urine of melanuria or hemoglobinuria. **chy'lous u.,** u. of a milky appearance, containing chyle. **cloudy u.,** u. containing earthy phosphates in excess. **crude u.,** pale urine of low specific gravity, with very little sediment. **febrile u., fe'verish u.,** dark-colored, concentrated u. of strong odor, passed by one suffering from fever. **gouty u.,** urine of a high color containing uric acid in excess. **hyster'ical u.,** pale urine of low specific gravity, passed in large amount during an hysterical attack. **milky u.,** chylous u., urina galactodes, see *chyluria*. **neb'ulous u.,** cloudy u. **nervous u.,** hysterical u. **resid'ual u.,** u. remaining in the bladder at the end of micturition in cases of enlarged prostate or paresis of the bladder.

abnormal condition, uracrasia. **abscess containing** urapostema. **acetone in,** acetonuria. **acidity,** aciduria, oxyuria. **albumin in,** albuminuria, urorrhorrhea-globulinuria. **alcaptone in,** alcaptonuria. **alkalinity,** alkalinuria. **amebas in,** ameburia, amœburia. **analysis,** uranalysis. **bile in,** choluria. **blood in,** hematuria, hematuresis. **blood-cells in,** hematocyturia. **blood-pigment in,** hemoglobinuria, hematinuria; blackwater fever (in men); redwater fever (in cattle). **blue,** urocyanosis. **calculus,** urolith, urolite. **carbohydrates in,** carbohydraturia, glycosuria mellituria, uroglycosis, diabetes mellitus. **carrying,** uriniferous, urophorous. **casts in,** cylindruria. **chief solid constituent of,** urea, carbamide. **chyle in,** chyluria, galacturia, galactosuria. **cloudy,** nephela, nepheloid urine, urina jumentosa. **coloring matter of,** urochrome, urohematin, urobilin; uromelanin (black) uroglaucin (bluish); uroxanthin (yellow); urorrhodin (pink); uropurpurin (purple), urocyanin, urocyanogen (blue) **colorless condition,** achromaturia, albiduria, albinuria **cystin in,** cystinuria. **decreasing the excretion of,** hypuretic, oliguretic. **desire to pass,** diuresiesthesia, uresiesthesia. **determination of freezing point,** cryoscopy, urocryoscopy. **diacetic acid in,** diaceturia. **diagnosis from examination of,** urocrisia, urosemiology. **discharge through unusual passage,** planuria, uroplania; urochesia (through rectum). **dribbling of,** stillicidium urinæ. **examination of,** urinoscopy, uroscopy, uranalysis. **excessive secretion,** polyuria, urorrhagia, hyperuresis, diuresis, diabetes, hydruresis, hydruria. **extravasation,** urecchysis, urapostema, uredema, urinoma, uroncus; urocele, uroscheocele (in scrotum); urocelia, urocœlia (in abdominal cavity). **fatty,** chyluria, galacturia, galactosuria, adiposuria, lipuria. **fibrin in,** fibrinuria. **frequent passage of,** pollakiuria, thamuria. **globulin in,** globulinuria **high specific gravity,** baruria. **incontinence,** enuresis, anischuria, uracratia, uroclepsia, urorrhea. **increasing secretion,** diuretic, emictory, uragogue, uretic. **instrument for determining acidity,** uroacidimeter; uricometer (uric acid). **instrument for determining amount of urea in,** ureameter, ureometer, uroazotometer. **instrument for determining specific gravity,** urinometer, urogravimeter. **involuntary discharge,** enuresis; nycturia, bed-wetting (at night). **lime salts in,** calcariuria. **low specific gravity,** hydruria, hydruresis. **milky,** galacturia, galactosuria, chyluria, urina galactodes. **mucus in,** blennuria. **oxalates in,** oxaluria. **passage of,** uresis, urination, micturition, emiction, making water; dysuria, paruria (difficult). **passage of gravel,** lithuresis. **phosphates in,** phosphaturia, phosphoruria, phosphuria. **poisoning by absorption,** uremia, urinemia, urosepsis. **producing,** uriniparous, uropoietic, urogenous. **prognosis from examination,** uromancy, uromantia. **pus in,** pyuria. **red,** erythruria. **red blood-cells in,** erythrocyturia, hemocyturia. **retention,** ischuria. **scanty secretion,** oliguria, hypourocrinia, hypuria, oliguresis. **science relating to,** urology, urinology. **scum,** epistasis. **secretion of,** uropoiesis. **sediment,** urocheras, uropsammus, hypostasis. **slow passage of,** bradyuria. **sugar in,** glycosuria, uroglycosis, mellituria, diabetes mellitus, dextrosuria, carbohydraturia; inosituria (muscle sugar); lactosuria (milk sugar); levulosuria

(fruit sugar). **sulphureted hydrogen in,** hydrothionuria. **suppression of,** urodialysis, uroschesis, anuria, nephranuria. **urates in,** uraturia. lithuria. **uric acid in,** uricaciduria, lithuria. **urobilin in,** urobilinuria. **white blood-cells in,** leucocyturia.

urine'mia, urinæ'mia. Uremia.

u"rine-mu'coid. A mucoid sometimes found in the urine.

urineserum (u"rin-se'rum). Urinaserum.

urinif'erous [L. *urina*, urine, + *ferre*, to carry.] Conveying urine, noting the tubules of the kidney.

urinif'ic [L. *urina*, urine, + *facere*, to make.] Uriniparous, uropoietic.

urinip'arous [L. *urina*, urine, + *parere*, to produce.] Producing or excreting urine, noting the Malpighian bodies and certain tubules in the renal cortex.

u"rinocryos'copy. Cryoscopy of the urine.

urinod (u'rin-od) [L. *urina*, urine, + *odor*.] A substance having the empirical formula, C_6H_8O, upon the presence of which the odor of stale urine is said by Dehn and Hartman to depend.

urinogen'ital. Urogenital.

urinogenous (u-rin-oj'en-us) [L. *urina*, urine, + G. *gennaō*, I produce.] 1. Urogenous, uropoietic, uriniparous, producing or excreting urine. 2. Of urinary origin.

u"rinoglucosom'eter. An apparatus for determining the amount of glucose in the urine.

urinol'ogist. Urologist.

urinol'ogy [L. *urina*, urine, + G. *-logia*.] Urology.

urino'ma. A cyst containing urine.

urinom'eter. An hydrometer for determining the specific gravity of the urine.

urinom'etry. The determination of the specific gravity of the urine.

urinos'copy. Uroscopy.

u'rinose. Urinous.

urinosex'ual. Urogenital, genitourinary.

u'rinous. Relating to or of the nature of urine.

urinserum (u-rin-se'rum) Urinaserum

urisep'tin. Trade name of a urinary antiseptic containing lithia and formaldehyde.

urisol'vent. Dissolving uric acid, or causing it to be dissolved.

urisol'vin. Trade name of a preparation of urea and lithium citrate, recommended as a solvent of uric-acid calculi, in doses of gr. 3 (0.2).

uritis (u-ri'(re')tis) [L. *urere*, to burn, + G. *-itis*.] Dermatitis calorica.

u'ritone. Trade name for a special make of hexamethylenamina.

urning (oor'ning) [Ger.] One given to the practice of uranism, uranist.

uroacidimeter (u-ro-as-i-dim'e-tur). An apparatus for determining the degree of acidity of the urine.

uroammoniac (u-ro-am-mo'ni-ak). Relating to uric acid and ammonia, noting a variety of urinary calculus.

uroazotometer (u-ro-az-o-tom'e-tur) [*urine* + Fr. *azote*, nitrogen, + G. *metron*, measure.] Ureameter.

Urobacillus (u-ro-bă-sil'us) [G. *ouron*, urine.] A pseudo-genus of motile rod-shaped organisms which have the power of decomposing urea. **U. leub'ii** a species somewhat resembling *Kurthia zopfii*, having oval spores. **U. miquel'ii,** a non-sporing rod. **U. pasteur'ii,** a species having subterminal spores.

urobenzo'ic acid. Hippuric* acid.

urobi'lin [G. *ouron*, urine, + L. *bilis*, bile.] A pigment, derived mainly from bilirubin, present normally in the urine, and often in large amount in the case of fever.

urobilinemia, urobilinæmia (u-ro-bi-lin-e'mi-ah) [*urobilin* + G. *haima*, blood.] The presence of urobilin in the blood.

urobilinic'terus. Urobilin-jaundice, jaundice dependent upon urobilinemia.

urobilin'ogen [G. *gennaō*, I produce.] A chromogen which decomposes into urobilin.

urobilinuria (u-ro-bi-lin-u'ri-ah) [*urobilin* + G. *ouron*, urine.] The presence in the urine of urobilin in excessive amount, formed in such case mainly from hemoglobin.

urocan'ine [G. *ouron*, urine, + L. *caninus*, canine.] A substance, $C_{11}H_{10}N_4O$, obtained from urocaninic acid.

urocanin'ic acid. A substance, $C_{12}H_{12}N_4O_4$, occurring in acicular crystals, obtained from dog's urine; it is converted by heat into urocanine.

urocele (u'ro-sēl) [G. *ouron*, urine, + *kēlē*, tumor, hernia.] Extravasation of urine into the scrotal sac.

urocheras (u-rok'er-as [G. *ouron*, urine, + *cheras*, gravel.] Uropsammus.

urochesia (u-ro-ke'zi-ah) [G. *ouron*, urine, + *chezō*, I defecate.] The passage of urine from the anus.

urochrome (u'ro-krōm) [G. *ouron*, urine, + *chrōma*, color.] A brownish or yellowish substance, upon the presence of which the yellow color of the urine is thought to depend.

urochromogen (u"ro-kro'mo-jen) [*urochrome* + G. *gennaō*, I produce.] A body in the urine which, on taking up oxygen, forms urochrome. **u. reac'tion,** Moriz Weisz test: to fresh urine diluted with twice its volume of water is added 3 drops of a 1:1000 aqueous solution of potassium permanganate; a positive reaction, marked by a distinct canary yellow coloration, is believed to be indicative of an active and progressive process in tuberculosis.

urocinet'ic, urokinet'ic [G. *ouron*, urine, + *kinēsis*, movement.] Occasioned by a reflex from the urinary tract, noting especially a form of dyspepsia secondary to disease in the bladder or urethra.

uroclep'sia [G. *ouron*, urine, + *kleptō*, I steal.] The involuntary and unconscious passage of urine.

u'rocol. Trade name of a preparation of colchisine and urea quinate, recommended in the treatment of gout.

urocris'ia [G. *ouron*, urine, + *krinō*, I judge.] 1 Urocrisis. 2. Diagnosis based upon the results of a urinary examination.

urocri'sis [G. *ouron*, urine, + *krisis*, crisis.] 1. The critical stage of a disease accompanied by a copious discharge of urine. 2. Severe pain in any of the urinary organs or passages occurring in tabes dorsalis.

urocrite'rion [G. *ouron*, urine, + *kritēria*, test.] Any fact observed in a urinary examination upon which a diagnosis is based, such as the presence of sugar or of albumin in the urine.

urocy'anin [G. *ouron*, urine, + *kyanos*, blue.] A blue pigment, indigo-blue, sometimes observed in the urine in certain diseases, especially scarlet fever.

urocyanogen (u-ro-si-an'o-jen) [G. *ouron*, urine, + *kyanos*, blue, + *gennaō*, I produce.] A blue pigment sometimes observed in the urine in cases of cholera.

urocyano'sis. A bluish discoloration of the urine in indicanuria.

u'rocyst [G. *ouron*, urine, + *kystis*, bladder.] The urinary bladder, vesica urinaria [BNA].

urocys'tic. Relating to the urinary bladder.

urocys'tis. Urocyst.

urocystitis (u"ro-sis-ti'(te')tis) [G. *ouron*, urine, + *kystis*, bladder, + *-itis*.] Inflammation of the urinary bladder.

urodial'ysis [G. *ouron*, urine, + *dialysis*, separation.] Temporary suppression of urine.

urodochium (u-ro-dō-ki'um) [G. *ouron*, urine, + *docheion*, a container.] A urinal.

urod'onal. Trade name of a mixture of lysidin, sidonal, and hexamethylenamine, recommended as a uric acid solvent.

urodyn'ia [G. *ouron*, urine, + *odynē*, pain.] Pain on urination; dysuria.

uroedema (u-ro-e-de'mŭ) [G. *ouron*, urine, + *oidēma*, swelling.] Infiltration of urine.

uroerythrin (u-ro-er'ith-rin) [G. *ouron*, urine, + *erythros*, red.] A urinary pigment which gives a pink color to deposits of urates; it is an amorphous reddish substance, present in very small amount in normal urine, but often abundant in rheumatism and gout.

urofuscohem'atin [G. *ouron*, urine, + L. *fuscus*, tawny, + *hematin*.] A brownish red pigment found in the urine in a case of leprosy.

urogas'ter [G. *ouron*, urine, + *gastēr*, belly.] The urinary apparatus in the embryo.

urogen'ital. Genitourinary.

urogenous (u-roj'en-us) [G. *ouron*, urine, +*gennaō*, I produce.] Uropoietic, uriniparous.

uroglaucin (u-ro-glaw'sĭn) [G. *ouron*, urine, + *glaukos*, bluish gray.] Urocyanin.

u'rogram. The picture obtained by urography.

urography (u-rog'ră-fĭ) [G. *ouron*, urine, + *graphō*, I write.] Roentgenography of any part (kidneys, ureters, or bladder) of the urinary tract.

urogravimeter (u-ro-grăv-im'e-tur) [G. *ouron*, urine, + L. *gravis*, heavy, + G. *metron*, measure.] Urinometer, an instrument for determining the specific gravity of the urine.

urohem'atin. The urinary pigment, supposed to be the same as hematin, which gives varying color to the urine according to its varying degrees of oxidation.

urohematonephrosis (u-ro-hem"ă-to-ne-fro'sis) [G. *ouron*, urine, + *haima*, blood, + *nephros*, kidney, + *-osis*.] Distention of the pelvis of the kidney with urine and blood.

urohem"atopor'phyrin. Iron-free hematin, excreted in the urine in certain cases marked by hematolysis.

urohypertensin (u-ro-hi-pur-ten'sin). A pressor* substance derived from the urine.

urokinet'ic. Urocinetic.

u'rol. Trade name of a preparation containing urea quinate; diuretic.

urolagnia (u-ro-lag'nĭ-ah) [G. *ouron*, urine, + *lagneia* lust.] A form of sexual perversion in which the sight of urine or of a person urinating causes erethism.

uroleucinic acid (u-ro-lu-sin'ik as'id). An aromatic substance, $C_9H_{10}O_5$, found in the urine in alkaptonuria.

u'rolite, u'rolith [G. *ouron*, urine, + *lithos*, stone.] Urinary calculus

urolithiasis (u-ro-lĭ-thi'ă-sis). 1. The condition marked by the presence of urinary calculi. 2. The formation of urinary calculi.

urolith'ic. Relating to urinary calculi.

urolithol'ogy [G. *ouron*, urine, + *lithos*, stone, + *-logia*.] The branch of science which has to do with the formation, composition, effects, and removal of urinary calculi.

urol'ithus. A urinary calculus, urolite, urolith.

urological (u-ro-loj'ĭ-kal). Relating to urology.

urol'ogist. One versed in urology.

urol'ogy [G. *ouron*, urine, + *-logia*.] The branch of medical science which has to do with the urine and its modifications in disease.

urolutein (u-ro-lu'te-in) [G *ouron*, urine, + L. *luteus*, yellow.] A yellow pigment in the urine.

u'romancy [G. *ouron*, urine, + *manteia*, divination.] Uroscopy, urocrisia (*2*), uromantia.

uromantia (u-ro-man'shĭ-ah). Urocrisia (*2*).

uromel'anin [G. *ouron*, urine, + *melas*, black.] A black pigment occasionally found in the urine, $C_{18}H_{43}N_7O_{10}$, probably a decomposition product of urochrome.

urom'elus [G. *oura*, tail, + *melos*, extremity.] A monster with fused lower extremities.

urom'eter [G. *ouron*, urine, + *metron*, measure.] Urogravimeter, urinometer, an instrument for determining the specific gravity of the urine.

Uron (u'ron). 1. Proton. 2. Trade name of a urinary antiseptic.

uron'cus [G. *ouron*, urine, + *onkos*, tumor.] A urinary cyst, a circumscribed area of extravasation of urine.

uronephro'sis [G. *ouron*, urine, + *nephrosis*.] Hydronephrosis.

uronol'ogy. Urology.

urophan'ic [G. *ouron*, urine, + *phainō*, I appear.] Appearing in the urine, noting any constituent, normal or pathological, of the urine.

urophe'in, urophæ'in [G. *ouron*, urine, + *phaios*, gray.] A grayish pigment occasionally found in the urine, possibly identical with urobilin.

uroph'erin [G. *ouron*, urine, + *pherō*, I carry.] Lithium theobromine, $LiC_7H_7N_4O_2$. **u. b., u. ben'zoate,** lithium* theobromine benzoate. **u. s., u. sal'icylate,** lithium* theobromine salicylate, lithium diuretin.

urophthisis (u-rof-thi'(the')sis) [F. *ouron*, urine, + *phthisis*, emaciation.] Diabetes mellitus.

uropitt'in [G. *ouron*, urine, + *pitta*, pitch.] A resin derived from urine by the decomposition of urochrome.

uropla'nia [G. *ouron*, urine, + *planē*, a wandering.] Extravasation of urine.

uropoiesis (u-ro-poy-e'sis) [G. *ouron*, urine, + *poiēsis*, a making.] The production or excretion of urine.

uropoiet'ic. Relating to uropoiesis, urogenous.

uroporphyrin (u"ro-por'fĭ-rin). Porphyrin found in the urine, a sign often of internal hemorrhage, especially that associated with peptic ulcer.

uropsammus (u-ro-sam'us) [G. *ouron*, urine, + *psammos*, sand.] 1. Gravel. 2. Any inorganic or uratic urinary sediment.

urorosein (u-ro-ro'se-in) [G. *ouron*, urine, + L. *roseus*, rosy.] Urorrhodin, a chromogen in the urine which forms a rosy red color on the addition of nitric acid; it normally exists in very minute quantity but is increased in tuberculosis and other wasting diseases.

uroroseinogen (u-ro-ro-se-in'o-jen). Urorrhodinogen

urorrha'gia [G. *ouron*, urine, + *-rhagia*.] Polyuria, diabetes insipidus, an excessive excretion of urine.

urorrhe'a, urorrhœ'a [G. *ouron*, urine, + *rhoia*, flow.] 1. Polyuria. 2. Enuresis.

urorrho'din [G. *ouron*, urine, + *rhodon*, rose] A pink pigment occasionally found in the urine.

urorrhodin'ogen [G. *ouron*, urine, + *rhodon*, rose, + *gennaō*, I produce.] A urochrome, the decomposition of which produces urorrhodin.

uroru'bin [G. *ouron*, urine, + L. *ruber*, red.] A red pigment derived from the urine by treatment with hydrochloric acid.

urorubrohem'atin [G. *ouron*, urine, + L. *ruber*, red, + *hematin*.] A reddish pigment occasionally present in the urine in various chronic diseases.

uro'sacin [G. *ouron*, urine, + L. *rosa*, rose.] Urorrhodin.

urosan'ol. Trade name of a mixture of protargol in gelatin, recommended as a prophylactic against gonorrhea.

uroscheocele (u-ros'ke-o-sēl) [G. *ouron*, urine, + *oscheon*, scrotum, + *kēlē*, tumor.] Urocele.

uroschesis (u-ros'ke-sis) [G. *ouron*, urine, + *schesis*, a checking.] 1. Retention of urine. 2. Suppression of urine.

uroscop'ic. Relating to uroscopy.

uros'copy [G. *ouron*, urine, + *skopeō*, I examine. Uranalysis, examination of the urine.

uroselectan (u-ro-se-lek'tan). Trade name of an iodide preparation for use in pyelography. It is given intravenously in dose of 100 c.c. of a 10 per cent. solution in two injections (the first of 40 c.c. and the second of 60 c.c. three minutes later), thus doing away with ureteral catheterization.

urosemiol'ogy [G. *ouron*, urine, + *sēmeion*, a sign, + *-logia*.] The study of the urine as an aid to diagnosis.

urosep'sin. A substance formed by the decomposition of urine, supposed to be the cause of septic poisoning after urinary extravasation.

urosep'sis [G. *ouron*, urine, + *sēpsis*, decomposition.] Septicemia resulting from the decomposition of extravasated urine.

urosep'tic. Relating to urosepsis.

u'rosin. Trade name of a mixture of lithium citrate and quinic acid, recommended as a solvent of uric acid calculi.

uro'sis [G. *ouron*, urine.] 1. Any disease of the urinary apparatus. 2. A morbid condition of the urine.

urospec'trin [G. *ouron*, urine, + L. *spectrum*.] A pigment found in the urine, possibly the same as urohematoporphyrin.

urostealith (u-ros'te-ă-lith) [G. *ouron*, urine, + *stear*, tallow, + *lithos*, stone.] A renal calculus formed chiefly of a saponaceous material.

urotheobro'mine. A leucomaine, isomeric with theobromine, $C_7H_8N_4O_2$, sometimes present in the urine; paraxanthine.

urotox'ia. Urotoxy. 1. Systemic urinary poisoning. 2. The toxicity or poisonous character of the urine.

urotoxic (u-ro-toks'ik). Relating to the poisonous character of the urine. **u. coeffic'ient,** the number of urotoxic units per kilogram of body weight excreted in the twenty-four hours. **u. unit,** the amount of toxic constituents of the urine, or urotoxin, necessary to kill an animal weighing one kilogram.

urotoxicity (u-ro-toks-is'i-ti) [G. *ouron*, urine, + *toxikon*, poison.] The toxicity or poisonous character of the urine.

urotox'in. Any poisonous substance excreted normally in the urine.

u'rotoxy. Urotoxia.

urotropin (u-ro-tro'pin). Trade name for a special make of methenamina. **u. new,** methenamine methylene-citrate. **u. sal'icylate,** methanemine salicylate.

uroureter (u-ro-u-re'ter) [G. *ouron*, urine, + *ourētēr*, ureter.] Hydroureter.

uroxan'ic. Relating to uric acid and alloxantin. **u. acid,** a white crystalline acid, $C_5H_{10}N_4O_6$, obtained by treating uric acid with caustic potassa.

uroxanthin (u-ro-zan'thin) [G. *ouron*, urine, + *xanthos*, yellow.] Potassium indoxyl sulphate, indican.

urox'in [G. *ouron*, urine, + *oxys*, sharp.] Alloxantin.

urrho'din. Urorrhodin.

ursal (ūr'sal). Trade name of a compound of urea and salicylic acid, recommended in the treatment of rheumatism in doses of gr. 5–15 (0.3–1.0).

ur'sin. Arbutin.

urtica (ur-ti'kah) [L. *urere*, to burn.] The herb, *Urtica dioica*, nettle, a weed the leaves of which produce a stinging sensation when touching the skin, due to the presence of formic acid; diuretic in doses of ℥15 (1.0) of the fluidextract; given in eclectic practice for the relief of subacute and chronic bronchitis and in passive hemorrhages from the mucous membranes in doses of 1–3 drops of the specific medicine in water every half to two hours.

urticaria (ur-ti-ka'ri-ah) [L. *urtica*, nettle.] Hives, nettle-rash; an eruption of itching wheals usually of systemic origin and following the ingestion of shellfish, pork, strawberries, etc., in individuals with an idiosyncrasy in respect of these substances. **u. acu'ta,** acute u., u. febrilis. **u. bullo'sa,** an eruption of wheals capped with an effusion of fluid under the epidermis. **u. chron'ica,** chronic u., a form in which the wheals recur frequently, with no or very brief intervals of entire freedom. **u. confer'ta,** a form of u. in which the wheals are aggregated in groups. **u. endem'ica, u. epidem'ica,** u. caused by the nettling hairs of certain caterpillars. **u. evan'ida,** a form in which the eruption is of short duration. **u. facti'tia,** artificial u., the occurrence of wheals following slight irritation such as the drawing of a pencil over the skin; autographism. **u. febri'lis,** febrile u., u. accompanied by slight constitutional symptoms. **u. gi'gans, u. gigan'tea,** giant u., an eruption of wheals of very large size; angioneurotic edema. **u. hæmorrhag'ica,** u. bullosa in which the serum contains more or less blood; purpura urticans. **u. maculo'sa,** a more or less chronic form of u with lesions of a red color. **u. marit'ima,** u. occasionally produced in susceptible persons by salt-water bathing. **u. medicamento'sa,** an urticarial form of drug eruption. **u. œdemato'sa,** u. gigans. **u. papulo'sa,** a form of u. perstans in which the wheals, when they finally disappear, are followed by a chronic eruption of inflammatory papules. **u. per'stans** [L. persisting], a form of chronic u. in which the wheals persist unchanged for long periods; tuberculosis cutis pruriginosa. **u. pigmento'sa,** xanthelasmoidea. **u. subcuta'nea,** u. in which itching is present without the wheals. **u. tubero'sa,** tuberous u., u. occurring when the subcutaneous tissue is lax, being marked then by the occurrence of large, edematous, tumor-like swellings; u. gigans, angioneurotic edema. **u. vesiculo'sa,** u. bullosa

urtica'rial, urtica'rious. Relating to or marked by urticaria.

ur'ticate. 1. To whip with nettles, to perform urtication. 2. Marked by the presence of wheals, noting a dermatosis.

urtica'tion [L. *urtica*, nettle.] 1. Whipping with nettles in order to induce counterirritation, formerly employed in the treatment of peripheral paralysis. 2. A burning, itching sensation such as that of urticaria or resulting from nettle poisoning. 3. An eruption of urticaria.

urticatus (ur-ti-ka'tus). Urticate (2).

urystamine (u-ris-tam'ēn). Urotropin-lithium-benzoate, recommended as a urinary antiseptic.

U.S.A. Initials of (*a*) United States of America, (*b*) United States Army.

U.S.M.H. United States Marine Hospital.

U.S.N. Initials of United States Navy.

Us'nea [A.S. *achneh*, lichen.] A genus of lichens, tree-mosses. **U. angula'ta,** a species employed like *U. plicata.* **U. barba'ta,** beard moss, hanging moss. **U. plica'ta,** a species employed like *U. angulata* as a substitute for litmus.

U.S.P.H.S. Initials of United States Public Health Service, formerly the Marine Hospital Service.

Ustila'go [L. *ustio*, cauterizing, burning.] A genus of fungi. **U. may'dis,** corn-smut, corn-ergot, resembles ergot of rye in its ecbolic action; dose gr. 15–60 (1.0–4.0).

ustula'tion [L. *ustulatus; ustulare*, to scorch.] 1 The separation of compounds by heat, as in the process of freeing ores from sulphur by roasting. 2 The drying of a drug by heat to prepare it for pulverization.

ustion (us-chun) [L. *ustio; urere*, to burn.] Cauterization by means of the actual cautery.

us'tus [L. *urere*, to burn.] Calcined, roasted, burnt.

U.S.V.B. United States Veterans' Bureau.

uteral'gia [L. *uterus* + G. *algos*, pain.] Hysteralgia, metralgia.

uterec'tomy [L. *uterus* + G. *ektomē*, excision.] Hysterectomy.

uterine (u'ter-in, u'ter-īn). Relating to the uterus. **u. brothers and sisters,** children of the same mother but of different fathers. **u. cake,** placenta. **u. lyre,** arbor vitæ uteri, plicæ* palmatæ.

uteris'mus. Painful spasmodic contraction of the uterus.

uteritis (u-ter-i'(e')tis) [L. *uterus* + G. *-itis.*] Metritis.

uteroabdominal (u"ter-o-ab-dom'i-nal). Relating to the uterus and the abdomen.

uterocer'vical. Relating to the cervix uteri.

uterofixa'tion [L. *uterus*, womb, + *fixus; figere*, to fasten.] Hysteropexy.

uterogestation (u"ter-o-jes-ta'shun) [L. *uterus* womb, + *gestatio; gestare*, to bear.] Normal pregnancy; the development of the fetus within the uterus.

uteroma'nia [L. *uterus*, womb, + G. *mania*, frenzy.] Nymphomania.

utero-ovarian (u'ter-o-o-va'ri-an). Relating to the uterus and an ovary, noting the *utero-ovarian ligament,* ligamentum ovarii proprium [BNA].

uteropari'etal. Relating to the uterus and the abdominal wall, noting a form of hysteropexy.

uteropel'vic. Relating to the uterus and the pelvis, noting the so-called *uteropelvic ligaments,* fibers from the obturator fascia passing between the folds of the broad ligaments to the sides of the uterus.

u'teropexy [L. *uterus*, womb, + G. *pēxis*, fixation.] Uterofixation, hysteropexy.*

uteroplacen'tal. Relating to the uterus and the placenta.

uterosa'cral. Relating to the uterus and the sacrum; noting the *uterosacral ligaments,* strands of smooth muscular tissue and of connective tissue, passing from the uterus through the folds of Douglas to the anterior surface of the second and third sacral segments.

u'terotome [L. *uterus*, womb, + G. *tomos*, cutting.] Hysterotome.

uterot'omy [L. *uterus*, womb, + G. *tomē*, incision.] Hysterotomy.

uteroton'ic. 1. Giving tone to the uterine muscle. 2. An agent which overcomes relaxation of the muscular wall of the uterus.

uterotrac'tor. An instrument for pulling upon and steadying the uterus in cesarean section or other operation on this organ.

uterovaginal (u-ter-o-vaj'in-al). Relating to the uterus and the vagina.

uteroven'tral [L. *uterus* + *venter*, belly.] Uteroabdominal.

uteroves'ical. Relating to the uterus and the urinary bladder, noting the *uterovesical folds* and *uterovesical pouch,* or Douglas's* folds and pouch.

u'terus [L.] The womb; the hollow muscular organ in which the impregnated ovum is developed into the child; it is about three inches in length in the non-pregnant woman, and consists of a main portion, corpus or body, with an elongated lower part, cervix or neck, at the extremity of which is the opening, os or mouth. The upper rounded portion of the uterus, opposite the os, is the fundus, at each extremity of which is the cornu or horn marking the part where the Fallopian tube joins the uterus and through which the ovum reaches the cavity of the womb after leaving the ovary. The organ is supported in the pelvic cavity by the broad ligaments, round ligaments, and rectouterine and vesicouterine folds or ligaments. **capped u.,** a condition of tonic contraction of the fundus musculature of the u. **sadd'le-shaped u.,** u. arcuatus. **u. arcua'tus,** arcuate u., saddle-shaped u; one with a depression at the fundus, an incomplete u. bicornis. **u. bicamera'tus vetula'rum** [L. two-chambered womb of the aged], a condition in which fluid accumulates in and distends the cervix and body of the uterus, the two ora being sealed by adhesions. **u. bicor'nis,** bifid u., one which is more or less completely divided into two lateral organs; it differs from u. bilocularis in that there is no external mark of separation in the latter. **u. bi'fidus,** bifid u., u. bicornis. **u. bifor'is** [L. *bi-*, two, + *foris*, entrance], double-mouthed u., u. subseptus, in which the body is single but the cervix is divided into two by a septum. **u. bilocula'ris,** bipartite u, one which is divided into two cavities by an anteroposterior septum. **u. biparti'tus,** u. bilocularis. **u. cordiform'is,** heart-shaped u., an incomplete u. bicornis with a wedge-shaped depression at the fundus. **u. didel'phys** [G. *di-*, two, + *delphys*, womb], double u. due to failure of the ducts of Müller to unite. **u. du'plex,** double u., u. bifidus, or u. bilocularis. **u. incudiform'is** [L. of anvil form], u. bicornis in which the fundus between the two cornua is broad and flat, u. planifundalis, u. triangularis. **u. masculi'nus,** sinus pocularis, prostatic vesicle, utriculus prostaticus [BNA]. **u. parvicoll'is** [L. *parvus*, small, + *collum*, neck], a uterus with abnormal and disproportionately small cervix. **u. planifunda'lis,** u. incudiformis. **u. sep'tus,** septate u., u. bilocularis. **u. subsep'tus,** an incomplete u. septus. **u. triangula'ris,** u. incudiformis. **u. unicor'nis,** one-horned u., one in which only one lateral half exists, the other half being undeveloped or absent.

absence, ametria. **anemia,** ametrohemia, metranemia **atony,** hysteranesis, metratonia. **analogue in the male,** utriculus prostaticus. **atrophy,** metratrophy, metratrophia. **blood in,** hematometra, metrohemia. **calculus,** hysterolith, metrolith, uterolith, lithometra, womb-stone; lithopedion (calcified fetus). **cancer,** hysterocarcinoma, metrocarcinoma, metroscirrhus, carcinoma uteri. **closure o. os, hysteratresia,**

metratresia, **atretometria**; hysterocleisis (operative). **congestion,** metroplethora, metryperemia, hysterohyperemia. **contraction of cavity,** metrostenosis, stenometria. **correction of displacement,** metrorthosis, see also *fixation of displaced.* **curvature,** metroscoliosis, metrocampsia, metroloxia, hysteroloxia, anteroflexion, anteflexion, posteroflexion, retroflexion, lateroflexion. **dilatation,** metrectasia, hysterectasia, metraneurysm; hystereurysis metreurysis (mechanical). **discharge from,** hysterorrhea, metrorrhea; metrydrorrhea (serous); leucorrhea, menstrua alba (mucopurulent), metrostaxis (slight). lochia (following childbirth). **disease of,** hysteropathy, metropathy, **displacement,** metrectopia metroptosia, hysteroptosia, prolapsus uteri, procidentia uteri (downward); anteroversion, anteversion (forward); lateroversion (laterally); posteroversion, retroversion (backward). **dropsy,** hydrohysstera, hydrometra. **enlargement,** hysterauxesis, metrauxe, metrypertrophia. **excision,** hysterectomy, metrectomy, uterectomy, hysterolaparotomy hysteroceliotomy, metrosteresis. **fibroid tumor,** hysteroma, hysteroncus, metrofibroma, hysteromyoma. **fixation of displaced,** hysteropexy, hysteropexia, uteropexia, hystero astrorrhaphy, uterofixation, ventrofixation, vaginofixation, ventrovesicofixation, hysterocystopexy. **gangrene,** cacometria, metrocace, hysterocace. **gas in,** hysteremphysema, physometra. **hemorrhage,** hysterorrhagia, metrorrhagia, uterorrhagia,hæmorrhagia uteri, metrostaxis(slight). **hernia,** hysterocele, metrocele, hysterobubonocele **imperforate** metrophlogosis; lochometritis (following childbirth); metroperitonitis, perimetritis (of peritoneum) **of cervix,** atretometria hysteratresia, metratresia. **incision into,** hysterotomy, cesarean section, laparohysterotomy, cenohysterotomy, metrotomy; hysterotrachelotomy trachelectomy, hysterostomatomy. **inflammation,** metritis, hysteritis, uteritis(toneal investment); trachelitis, cervicitis (of neck); metrophlebitis, metrophlebothrombosis (of veins), metrosalpingitis (with oviducts); parametritis, pelvic cellulitis (of connective tissue surrounding); endometritis (of mucous membrane). **instrument for dilating,** hystereurynter, metreurynter. **instrument for examining,** hysteroscope, metroscope, uterine speculum, uterine sound. **instrument for making traction on,** uterotractor. **instrument for measuring.** hysterometer, **metrometer,** uterometer. **instrument for measuring force of contractions,** metrodynamometer **instrument for pushing up a displaced,** uteropositor **instrument for supporting,** pessary, hysterophore. **inversion,** metranastrophe **neurosis of,** hysteroneurosis, metroneuria. **normal pregnancy in,** hysterocyesis, uterogestation. **pain,** hysteralgia, hysterodynia, metralgia, metrodynia, uteralgia, dolor uterinus, uterism, hysterocolic. **paralysis,** hysteroparalysis, metroparalysis. **prolapse,** hysteroptosia, metroptosia, hysterocolpocele, prolapsus uteri, procidentia uteri. **relating to,** uterine, metric,utricular. **retention of lochia in,** lochiometra, lochioschesis **rupture,** hysterorrhexis, metrorrhexis. **science in relation to,** hysterology. **sensitiveness,** metryperesthesia. **softening,** hysteromalacia, hysteromalacoma, metromalacia, metromalacoma, metromalacosis **spasmodic contraction,** hysterospasm, hysterotrismus, metrypercinesia **surrounding,** perimetric, periuterine. **suture,** hysterorrhaphy; trachelorrhaphy, hysterotrachelorrhaphy. **tumor,** hysteroma, hysteroncus, metrofibroma, hysteromyoma, hysteropolypus **ulceration,** hysterelcosis, ulcus uteri, metrelcosis, metrocace.

utricle (u'tĭ-kl) [L. *utriculus*, dim. of *uter*, a skin bag.] 1. Utriculus. 2. Utriculus prostaticus. **prostat'ic u., ure'thral u.,** utriculus prostaticus.

utric'ular. 1. Relating to the utricle 2. Relating to the uterus, uterine.

utriculitis (u trik-u-li'(le')tis) [L. *utriculus* + G. *-itis*.] 1. Inflammation of the internal ear. 2. Inflammation of the utriculus prostaticus.

utriculoplasty (u-trik'u-lo-plas-tĭ) [L. *utriculus*, dim. of uterus, + G. *plassō*, I form] An operation for reducing the size of the uterus by excision of a wedge-shaped longitudinal strip the entire thickness of the wall of the organ.

utriculosacc'ular. Relating to the utricle and the saccule of the labyrinth, noting the u. canal, ductus utriculosaccularis, which arises from the inner aspect of the utricle and empties into the ductus endolymphaticus.

utric'ulus [L. dim. of *uter* or *uterus*.] Utricle, the larger of the two membranous sacs in the vestibule of the labyrinth, lying in the recessus ellipticus; from it arise the semicircular ducts **u. masculi'nus,** u prostaticus [BNA]. **u. prostat'icus** [BNA], sinus pocularis, uterus masculinus; a minute pouch in the prostate leading back from the summit of the colliculus seminalis, the analogue of the uterus and vagina in the female, being the remains of the fused posterior ends of the Müllerian ducts. **u. urethra'lis, u. viri'lis,** u. prostaticus.

u'triform [L. *uter*, a skin bag, + *forma*, form.] Shaped like a leather bottle.

u'va, pl. *u'væ* [L.] Grape, the fruit of *Vitus vinifera*. **u. pas'sa,** a raisin.

u'va ur'si (U.S.), **u'væ ur'si fo'lia** (Br.) [L. *uva*, grape, *ursus*, bear.] The dried leaves of *Arctostaphylos uva-ursi*, bearberry, mountain box, a common plant of the North Temperate Zone; diuretic and astringent, employed in chronic inflammations of the urinary tract in doses of gr. 20–60 (1.3–4.0).

uvæfor'mis [L. *uva*, grape, + *forma*, form.] The lamina vasculosa or lamina propria of the chorioid coat of the eye.

uvea (u've-ah) [L. *uva*, grape.] The tunica vasculosa oculi, the vascular, pigmentary, or middle, coat of the eye, comprising the chorioid, the ciliary body, and the iris.

uveal (u've-al). Relating to the uvea or middle coat of the eye. **u. tract,** uvea.

uveitic (u-ve-it'ik). Relating to or marked by uveitis.

uveitis (u-ve-i'(e')tis). Inflammation of the entire uveal tract—iris, ciliary body, and chorioid.

u'viform [L. *uva*, grape, + *forma*, form] Resembling a grape or a bunch of grapes, staphyloid.

uviol (u'vi-ol) [*u(ltra)-viol(et)*.] A special kind of glass more than usually transparent to the ultra-violet or actinic rays. **u. lamp,** an electric lamp with uviol glass, furnishing especially the violet rays, used in phototherapy.

u'vula [L dim. of *uva*, a grape] 1. Pendulum palati, a conical projection from the posterior edge of the middle of the soft palate; it is composed of connective tissue containing a number of racemose glands, and some muscular fibers (azygos uvulæ muscle). 2. A triangular elevation on the vermis of the cerebellum, lying between the two tonsils anterior to the pyramis. 3. One of several anatomical structures bearing a fancied resemblance to the palatine uvula **bi'fid u.,** bifurcation of the uvula, constituting an elementary cleft palate. **u. cerebel'li,** uvula (2). **u. Lieutaud'i,** a slight ridge along the center of the trigone of the bladder. **u. palati'na** [BNA], uvula (1). **u. ver'mis** [BNA], uvula (2). **u. vesi'cæ** [BNA], a slight projection into the cavity of the bladder in old men, just behind the urethral opening, marking the location of the middle lobe of the prostate.

uvulapto'sia [L. *uvula* + G. *ptōsis*, a falling.] Staphyloptosia.

u'vular. Relating to the uvula.

uvula'ris. The azygos uvulæ muscle.

u'vulatome. Staphylotome.

uvulat'omy. Staphylotomy.

uvulitis (u-vu-li'(le')tis) [L. *uvula* + G. *-itis*.] Staphylitis, cionitis, inflammation of the uvula.

uvulopto'sia [L. *uvula* + G *ptōsis*, a falling.] Staphyloptosia.

u'vulotome [L. *uvula* + G. *tomos*, cutting.] Staphylotome, an instrument for cutting off the uvula.

uvulot'omy [L. *uvula* + G. *tomē*, incision.] Staphylotomy, cutting off the uvula.

uzara (u-zah'rah). The root of a plant of the order *Asclepiadaceæ*, growing in equatorial Africa; it is employed by the native medicine-men as a remedy for diarrhea.

V

V. 1. Abbreviation for vision or visual acuteness. The acuteness of vision is indicated by a fraction in which the numerator is a number expressing the distance in feet of the observer from the chart (usually 20 feet), and the denominator a number expressing the distance in feet at which the normal eye would see the smallest letters which the patient sees at the distance at which he is; thus, if at 20 feet he sees only the letters which the normal eye would see at 50 feet, the formula of his vision will be V. = $\frac{20}{50}$. 2. Chemical symbol for vanadium. 3. Abbreviation for *Vibrio*.

v. Abbreviation for volt.

vaccigenous (vak-sij'en-us). Vaccinogenous.

vacci'na [L. *vaccinus*, relating to a cow.] 1. Cowpox, a contagious eruptive disease occurring in cattle; it is similar in its lesions to smallpox in man, but much milder; inoculation of man with the virus of this disease confers more or less lasting immunity against smallpox. 2. A disease, usually local and limited to the site of inoculation, induced in man by inoculation with the virus of cowpox (*vaccination*). On about the third day after vaccination papules form at the site of inoculation which become transformed into umbilicated vesicles and later pustules; they then dry up and the scab falls off about the 21st day, leaving a pitted scar; in some cases there are more or less marked constitutional disturbances.

vac'cinable. Susceptible to the action of vaccine.

vac'cinal. Relating to vaccine or vaccination.

vac'cinate. 1. To inoculate with the virus of cowpox as a protection against smallpox. 2. To inoculate with any vaccine in order to secure immunity against the corresponding disease.

vaccina'tion. 1. Inoculation with the virus of cowpox, or vaccina, as a means of producing immunity against smallpox. 2. The injection of a killed culture of a specific bacterium as a means of prophylaxis or cure of the disease caused by that microorganism. **an'imal v.**, v. with virus derived from a heifer. **arm-to-arm v.**, v. with fresh serum drawn from a vaccina vesicle and immediately introduced into the arm of another person. **bacte'rial v.**, vaccination (2). **bovine v.**, animal v. **Jenne'rian v.**, vaccination (1)

vaccina'tionist. One who believes in the protective efficacy of Jennerian vaccination.

vac'cinator. 1. A person who vaccinates. 2. A scarifier or other instrument used in vaccination.

vac'cine. 1. Relating to vaccina in the cow or man. 2. The virus of cowpox, used by inoculation to confer immunity against smallpox; what is now employed is a suspension of the vesicles of the disease from a heifer, but formerly the scab of the dried pustule, taken from the animal or from man, was used; see vaccinum* variolæ (U.S.). The term has been extended by analogy, but incorrectly, to denote: 3. The modified and attenuated virus of any disease, incapable of producing a severe infection, but affording protection, when inoculated, against the action of the unmodified virus; 4. Bacterine, emulsion of dead cultures of specific bacteria in saline solution, employed hypodermically. **a'queous v.**, a v. having physiological salt solution as the vehicle, distinguished from lipovaccine.* **autog'enous v.**, a vaccine (4) made from a culture of bacteria obtained from the patient himself. **bacte'rial v.**, bacterine (a trade name). vaccine (4). **bovine v.**, vaccine (2) obtained from the heifer. **Calmette-Guérin v.**, see *Calmette-Guérin*. **correspond'ing v.**, a vaccine (4) made with bacteria of the same species as those causing the infection to be treated, but not derived from the patient himself, *i.e.* not autogenous. **heterog'enous v.**, corresponding v. **hu'manized v.**, vaccine (2) obtained from the vesicles of vaccina in man. **mixed v.**, a bacterial v. made from killed cultures of more than one bacterial species; see polyvalent v. **multipar'tial v.**, polyvalent v. **multiv'alent v.**, polyvalent v. **oil v.**, lipovaccine, a v. in which oil instead of saline solution is used as the vehicle. **polyv'alent v.**, a bacterial vaccine prepared from cultures of two or more strains of the same species of microorganism. **sen'sitized v.**, a. v. which has been made more active by treatment with the corresponding antiserum; see *sensitized** *culture*. **smallpox v.**, vaccinum variolæ (U.S.). **stock v.**, corresponding v. **T.A.B. v.**, vaccinum typhoparatyphosum (Br.), a v. containing killed typhoid, paratyphoid-A, and paratyphoid-B bacilli, called also *triple v.* **v. ther'apy**, opsonic therapy, treatment of disease by the injection of killed cultures of the pathogenic microorganism with the design of rousing the natural protective agencies to greater activity.

vac'cine-body. Cytoryctes.

vac'cine-farm. A farm where heifers are used for the production of vaccine.

vac'cine-lymph. Dried serum from vaccinal vesicles, used for vaccination.

vac'cine-point. A sharpened quill or lancet-shaped shave of bone, covered with dried vaccine-lymph.

vac'cine-vi'rus. Vaccine (2)

vaccinel'la [L. dim. of *vaccina*.] False vaccina, pseudovaccina, an atypical eruption following vaccination.

vaccin'ia. Vaccina

vaccinicul'turist. One who has a farm where heifers are used for the production of vaccine.

vaccin'iform [L. *vaccina* + *forma*, form.] Resembling cowpox.

vaccin'ifer [L. *vaccina* + *ferre*, to carry.] 1. The person from whom the vaccine was derived in the former practice of arm-to-arm vaccination * 2. A vaccine-point or similar device used in vaccination.

vac'cinin. 1. A bitter principle from the leaves of *Vaccinium vitis idæa*, red bilberry, whortleberry. 2. A homeopathic attenuation of the virus of cowpox, vaccinium.

vaccini'num. A homeopathic attenuation of the virus of cowpox.

vaccini'ola [L. dim. of *vaccina*.] A secondary general eruption sometimes following the local vaccine eruption.

vac'cinist. 1. A vaccinator (1). 2. A vaccinationist.

Vaccin'ium [L. blueberry.] A genus of plants several species of which yield whortleberries or blueberries. **V. hispid'ula,** white wintergreen, a species containing oil of wintergreen and used as a source of gaultheria.

vacciniza'tion. Vaccination repeated at short intervals until it will no longer take.

vaccinogen (vak-sin'o-jen) [L. *vaccina* + G. *gennaō*, I produce.] A source of vaccine, such as an inoculated heifer.

vaccinogenous (vak-sin-oj'en-us). Producing vaccine, or relating to the production of vaccine.

vac'cinoid [L. *vaccina* + G. *eidos*, resemblance.] 1. Resembling vaccine. 2. Vaccinella. **v. reac'tion,** the slight local reaction to vaccination in a person with partial immunity from a previous vaccination or attack of smallpox.

vaccinopho'bia [L. *vaccina* + G. *phobos*, fear.] A morbid fear or dread of being vaccinated.

vaccinostyle (vak'sin-o-stīl). A pointed instrument employed in vaccination.

vaccinosyph'ilis. Syphilis acquired through vaccination, either with humanized virus from a syphilitic, or from the use of an instrument which has been used on a syphilitic and not subsequently sterilized.

vaccinum (vak-se'num) [L. *vacca*, a cow.] Vaccine.* **v. ty'phoparatypho'sum** (Br.), antityphoid-paratyphoid vaccine, T.A.B. vaccine.* **v. vacciniæ** (Br.), vaccine lymph, see *vaccine* (2). **v. vario'læ** (U.S.), smallpox vaccine, Jennerian vaccine, vaccine virus; a glycerinated suspension of the vesicles of cowpox obtained from healthy vaccinated animals of the bovine species; only such virus should be used as complies with the requirements of the law and the regulations established by the U. S. Public Health Service.

vacuo'lar. Relating to or resembling a vacuole.

vac'uolate, vac'uolated. Having vacuoles.

vacuola'tion. The formation or the presence of vacuoles.

vac'uole [L. *vacuolum*, dim. of *vacuum*, an empty space.] 1. A minute space in any tissue, the source or origin of a lymphatic vessel. 2. A clear space in the substance of a cell, sometimes degenerative in character, sometimes surrounding an englobed foreign body and serving as a temporary cell-stomach for the digestion of the body. **contrac'tile v.,** a cavity formed by the accumulation of fluid in the ectoplasm of a protozoan; after increasing for a time it empties itself externally by a sudden contraction.

vacuoliza'tion. Vacuolation.

vacuum (vak'u-um) [L. *vacuus*, empty.] An empty space, one practically exhausted of air or gas.

vac'uum-chamber. Air chamber, a depression in a dental plate from which air is exhausted in order to keep the plate in position by atmospheric pressure.

vac'uum-plate. A plate for artificial teeth which is held in place largely by air-pressure.

vac'uum-tube. A glass tube from which the air has been nearly removed, used in the experimental passage of an electrical current or spark and in the production of the *x*-rays; see *Geissler's** *tubes*, *Coolidge** *tubes*, and *Crookes'** *tubes*.

va'dum [L. a ford.] An occasional elevation from the bottom of a cerebral sulcus nearly obliterating it for a short distance.

vag'abonds' disease'. Pediculosis corporis, an eruption of papules with scattered petechiæ, many scratch marks, and pigmentation, caused by the presence of body lice; vagrants' disease

va'gal. Relating to the vagus nerve **v. attack',** a condition marked by a sinking sensation and feeling as of impending death, without loss of consciousness, by cardiac discomfort, and by dyspnea, due supposedly to vasomotor spasm. **v. ner'vous sys'tem,** autonomic nervous system.

vagina, gen. and pl. *vagi'næ* (vă-ji'nah) [L. sheath.] 1. Any sheath-like structure. 2. The genital canal in the female, extending from the uterus to the vulva. **v. bulbi,** Tenon's* capsule. **v. cellulo'sa,** the connective-tissue sheath of a nerve or muscle, perineurium or perimysium. **v. cordis,** pericardium. **v. fem'oris,** fascia lata. **v. fibro'sa ten'dinis** [BNA], fibrous sheath of a tendon. **v. masculi'na,** utriculus prostaticus. **v. muco'sa ten'dinis** [BNA], mucous sheath of a tendon, a sheath of synovial membrane enveloping certain of the tendons; vaginal synovial membrane. **vagi'næ ner'vi op'tici** [BNA], sheaths of the optic nerve, formed of extensions of the central meninges. **v. oc'uli,** Tenon's* capsule. **v. pili,** the hair-sheath. **v. proces'sus styloi'dei** [BNA], sheath of the styloid process, vaginal process, a crest of bone (edge of the tympanic portion of the temporal bone) running from the front and inner side of the mastoid process to the alar spine of the sphenoid; it splits to ensheathe the base of the styloid process. **v. sæpta,** a bipartite vagina caused by the presence of a more or less complete longitudinal septum. **v. synovia'lis,** v. mucosa tendinis [BNA]. **v. synovia'lis troch'leæ** [NK], the loop (trochlea) through which runs the tendon of the superior oblique muscle of the eyeball. **v. ten'dinis** [BNA], tendon sheath surrounding one of the tendons of the hand or foot, serving to protect it from friction. **vagi'næ vaso'rum,** sheaths of the vessels, fibrous envelopes ensheathing the arteries with their accompanying veins and sometimes nerves as well.

blood in, hematocolpos. **cyst in,** hydrocolpocele **dilatation,** colpectasia; colpeurysis, eletreurysis (operative). **discharge,** leucorrhea, coleorrhea, elytrorrhea, colporrhea. **disease,** colpopathy. **dryness of mucous membrane,** colpoxerosis. **edema,** coleedema, elytredema, colpoedema. **excision,** colpectomy, elytrectomy, vaginectomy. **fistula into bladder,** colpocystosyrinx, vesicovaginal fisture. **fistula into bladder and rectum,** colpocystarchosyrinx, ves corectovaginal fisture. **fixation of,** colpopexy, elytropexia, vaginopexy, vaginofixation, fixura vaginæ. **gangrene,** colpocace, cacocolpia. **hemorrhage from,** colporrhagia, elytrorrhagia, **hernia,** coleocele colpocele, elytrocele, **vaginocele. incision,** coleotomy, colpotomy, elytrotomy, **vaginotomy. inflammation,** coleitis, colpitis, kysthitis, **vaginitis. instrument for dilating,** colpeurynter, elytreurynter. **instrument for inspecting,** colposcope, vaginoscope, vaginal speculum. **mucus in,** mucocolpos. **obstruction in,** elytremphraxis. **occlusion,** coleatresia, colpatresia, elytratresia, coleostenosis, colpostenosis, colpostegnosis, gynatresia, elytrostenosis; colpocleisis, elytrocleisis, elytroclisia, elytrorrhaphy, colporrhaphy, (operative). **pain,** colpalgia, elytrodynia, **vaginodynia. plastic surgery,** colpoplasty, elytroplasty, coleoplasty. **pregnancy in,** elytrocyesis. **prolapse,** colpoptosia, kysthoptosia, kysthoproptosia, elytroptosia, coleoptosia. **pus in,** pyocolpos. **rupture,** coleorrhexis, colporrhexis, elytroclasia. **spasm of,** colpospasm, vaginismus. **stricture,** coleostegnosis, colpostegnosis. **suture,** colporrhaphy, elytrorrhaphy; colpodesmorrhaphy, episiorrhaphy, elytroepisiorrhaphy (including vulva); colpoperineorrhaphy (including perineum). **thickening of walls,** colpohyperplasis. **tumor,** elytrophyma, elytroncus, elytropolypus.

vagi'næ fixu'ra [L.] Fixation of the vagina.

vaginal (vaj'in-al)[L. *vaginalis*.] Relating to the vagina or to any sheath.

vaginalectomy (vaj-in-al-ek'to-mĭ) [L. *tunica vaginalis* + G. *ektomē*, excision.] Excision of a portion of the tunica vaginalis testis.

vaginalitis (vaj-in-al-i'(e')tis) [L. *tunica vaginalis* + G. *-itis*.] Inflammation of the tunica vaginalis testis.

vaginapexy (vă-ji'nă-peks-ĭ) [L. *vagina* + G. *pēxis*, fixation.] Colpopexy.

vaginate (vaj'in-āt). 1. To ensheathe, to enclose in a sheath. 2. Ensheathed, provided with a sheath.

vaginec'tomy [L. *vagina* + G. *ektomē*, excision.] 1. Exsection of a portion of the vagina. 2. Vaginalectomy.

vaginicoline (vaj-in-ik'o-lin) [L. *vagina* + *colere*, to inhabit.] Inhabiting the vagina, noting certain microorganisms normally there present.

vagi"niglutæ'us. Musculus tensor fasciæ latæ [BNA].

vaginismus (vaj-in-iz'mus). Painful spasm of the vagina preventing coitus. **mental v.**, v. caused by repugnance to the sexual act. **posterior v.**, spasmodic stenosis of the vagina caused by contraction of the levator ani muscle.

vaginitis (vaj-ĭ-ni'(ne')tis) [L. *vagina* + G. *-itis*.] Inflammation of the vagina, colpitis. **v. adhæsi'va,** inflammation of the vagina with areas of exfoliation of the mucous membrane which subsequently adhere, causing more or less obliteration of the lumen of the vagina. **v. emphysemato'sa,** v. attended with an accumulation of gas in the connective tissue. **v. seni'lis,** v. occurring in old age, often assuming the form of v. adhæsiva.

vaginoabdominal (vă-ji"no-ab-dom'in-al). Relating to the vagina and the abdomen.

vaginocele (vaj'in- -sēl) [L. *vagina* + G. *kēlē*, tumor, hernia.] Colpocele.

vaginodyn'ia [L. *vagina* + G. *odynē*, pain.] Colpodynia, neuralgic pain in the vagina.

vaginofixa'tion. 1. Colpopexy. 2. Vaginal hysteropexy.

vaginola'bial. Relating to the vagina and the labia, vaginovulvar vulvovaginal.

vagi"nomyco'sis [L. *vagina* + G. *mykēs*, fungus, + *-ōsis*.] Colpomycosis.

vaginoperitone'al. Relating to the vagina and the peritoneum.

vagi'nopexy [L. *vagina* + G *pēxis*, fixation.] Colpopexy, vaginofixation.

vagi'noscope [L. *vagina* + G. *skopeō*, I view.] Colposcope, a vaginal speculum.

vaginot'omy [L. *vagina* + G. *tomē*, incision] Colpotomy.

vaginovesical (vaj"in-o-ves'ĭ-kal). Relating to the vagina and the bladder, vesicovaginal.

vaginovulvar (vaj"in-o-vul'var). Vulvovaginal, noting especially the glands commonly called Bartholin's* glands.

vagi'tus [L. *vagire*, to squall.] The crying of an infant. **v. uteri'nus,** crying of the fetus while still within the womb, possible when the membranes have been ruptured and air has entered the uterine cavity.

vagoaccessorius (va-go-ak-ses-so'rĭ-us). The vagus and the accessory portion of the spinal accessory nerve, regarded as one nerve.

va"goglos"sopharyn'geal. Relating to the vagus and glossopharyngeal nerves; noting their adjacent nuclei of origin.

vagot'omy [L. *vagus* + G. *tomē*, incision.] Division of the vagus nerve.

vagoto'nia [*vagus* + G. *tonos*, strain.] Irritability of the vagus nerve, often marked by excessive peristalsis and loss of the pharyngeal reflex.

vagotonic (va-go-ton'ik). Relating to or marked by vagotonia.

vagotonine (vag-o-to'nēn). A vagotropic hormone extracted from the pancreas.

vagotropic (vag-o-trop'ik) [*vagus* nerve + G. *tropos*, a turning.] Attracted by, hence acting upon, the vagus nerve.

va'grant [L. *vagare*, to wander.] 1. Wandering, moving from place to place; noting the wandering cells or leucocytes. 2. A vagabond, a tramp. **v.'s disease,** vagabond's* disease.

va'gus, gen. and pl. *va'gi* [L. wandering, so called because of the extensive distribution of the nerve.] Pneumogastric nerve, nervus* vagus [BNA]. **v. a'rea,** a portion of the floor of the fourth ventricle overlying the vagoglossopharyngeal nuclei.

vagus-pneumo'nia. Pneumonia following injury of the vagus nerve.

va'gus-pulse. A slow pulse due to the inhibitory action of the vagus nerve on the heart.

Valan'gin's solu'tion [Francis Joseph Pahud de *Valangin*, London physician of Swiss birth, 1725–1805.] Liquor acidi arsenosi (U.S.).

va'lence, va'lency [L. *valentia*, strength.] Quantivalence, equivalence; the combining power of one atom of an element (or a radical), that of the hydrogen atom being the unit of comparison.

va'lent. Possessing valency, quantivalent.

Valen'ta's test. A test of purity of butter; it is heated with an equal quantity of glacial acetic acid and if on cooling it does not become opaque until the temperature is around 17° C. (62° F.) it is pure; opacity appearing at a higher temperature indicates adulteration with suet or other fat.

Valen'tin's cor'puscles [Michael Bernard *Valentin* or *Valentini*, German anatomist, 1657–1729.] Small differentiated bodies, probably amyloid, found occasionally in nerve tissue. **V.'s gan'glion,** an enlargement on the middle superior dental nerve, above the root of the second bicuspid tooth, at its point of communication with the posterior superior dental nerve. **V.'s membrane,** Schwann's* sheath.

Valentine's position (val'en-tīnz po-zish'un) [Ferdinand C. *Valentine*, New York surgeon, 1851-1909.] A supine position on a table with double inclined plane so as to cause flexion at the hips; used to facilitate urethral irrigation. **V.'s test,** three-glass test.*

val'eral, valeral'dehyde. A colorless liquid, C_4H_9-CHO, obtained by the oxidation of amyl alcohol.

val'erate. Valerianate, a salt of valeric or valerianic acid.

val'erene. Amylene.

vale'rian. Valeriana (U.S.), valerianæ rhizoma (Br.). **American v.,** cypripedium. **Indian v.,** derived from *Valeriana wallichii*, similar in action to valerian.

valeria'na (U.S., Br.), **valeria'næ rhizo'ma** [L. probably from the proper name *Valerianus*.] Valerian, the dried rhizome and roots of *Valeriana officinalis*, an herb native in Southern Europe and Northern Asia, cultivated also in England and America; employed a a nerve sedative in hysteria and at the menopause, in doses of gr. 10–60 (0.6–4.0). **valeria'næ in'dicæ rhizo'ma** (B.A.), the rhizome and rootlets of *Valeriana wallichii*, Indian valerian; stimulant and antispasmodic, resembling official valerian.

vale'rianate. A salt of valerianic acid, valerate.

valerian'ic acid. A volatile acid, $C_5H_{10}O_2$, distilled from valerian root; it has an acid taste and a pungent cheesy odor; some of its salts are used in medicine for the same purposes as valerian; called also valeric acid.

valer'ic acid. Valerianic acid.

valer'idin. A substance occurring in the form of white acicular crystals prepared by heating

valerianic acid and phenetidin; recommended as a nerve sedative in doses of gr. 8–15 (0.5–1.0).

val'erol. A colorless oily liquid of disagreeable odor, obtained from valerian.

valer'ydine. Valeridin.

val'eryl. An oily liquid derived from various valerianates. **v. hydride,** valeral.

val"eryldiethyl'amide. Valyl.

valetudina'rian [L. *valetudinarius; valetudo,* ill health.] 1. Infirm, sickly. 2. A person in chronically poor health, an invalid, valetudinary.

valetudina'rianism. Invalidism.

valetu'dinary. Valetudinarian.

valeur globulaire (val-ĕr' glob-ū-lair') [Fr. globular value.] Color-index.

val'goid [L. *valgus,* bow-legged + G. *eidos,* resemblance.] Relating to valgus, bow-legged (more commonly, knock-kneed); suffering from talipes valgus.

val'gus [L. bow-legged.] 1. A bow-legged person; more commonly, one with knock-knees, the terms genu valgum and genu varum having become mutually reversed in meaning. 2. Talipes* valgus.

val'idol. Menthol valerate, a compound of valeric acid and menthol; a colorless liquid of agreeable odor and cool slightly bitter taste; employed as a nerve sedative in hysteria and functional nervous disorders in doses of ♏10–15 (0.6–1.0) **cam'phorated v.,** a 10 per cent. solution of camphor in validol; employed locally for the relief of toothache, and internally as a stimulant and restorative in doses of ♏10–15 (0.6–1.0).

val'in. Alpha-amino-isovalerianic acid, $(CH_3)_2$.-$CH.CH.NH_2.COOH$, one of the amino-acids produced by the hydrolysis of most proteins.

val'isan. Trade name of the bromo-isovalerianic ester of borneol, employed as a nerve sedative

vall'ate [L. *vallatus; vallum,* a rampart.] Cupped; surrounded with an elevation; circumvallate.

vallec'ula [L. dim. of *vallis,* valley.] 1. A crevice or depression on any surface. 2. A depression on the dorsum of the tongue on either side of the frenulum epiglottidis. **v. cerebel'li** [BNA], a deep hollow on the inferior surface of the cerebellum, between the hemispheres, in which the medulla oblongata rests. **v. epiglot'tica** [BNA], a depression between the median and lateral glossoepiglottic folds on either side. **v. ova'ta,** fossa vesicæ felleæ [BNA], a depression of the liver in which rests the gall-bladder. **v. Syl'vii,** basisylvian fissure, a depression in the substantia perforata anterior, marking the beginning of the fissure of Sylvius. **v. un'guis,** sulcus matricis unguis, the fold of skin in which the lateral and proximal edges of the nail are imbedded.

Valleix's points (val-la'e) [François Louis Isidore *Valleix,* Parisian physician, 1807–1855.] Various points in the course of a nerve, pressure upon which is painful in cases of neuralgia; these points are: where the nerve emerges from the bony canal; where it pierces a muscle or aponeurosis to reach the skin; where a superficial nerve rests upon a resisting surface where compression is easily made; where the nerve gives off one or more branches; where the nerve terminates in the skin.

Vallet's mass (val-la'). Massa ferri carbonatis.

valley. Vallecula.

Valli-Ritter law. See *Ritter-Valli.*

vall'is [L. valley.] Valley, specifically the valley of the cerebellum, vallecula* cerebelli [BNA].

val'lum [L. a rampart.] 1. Any raised, more or less circular ridge. 2. The slightly raised outer wall of the circular depression, or fossa, surrounding a vallate papilla of the tongue. **v. un'guis** [BNA], wall of the nail, nail-wall, the fold of skin overlapping the lateral and proximal margins of the nail.

val'oid [L. *valere,* to be equal.] Equivalent extract, a fluidextract of the same strength, weight for weight, as the original drug.

valo'nia [G. *balanos,* an acorn.] Acorn-caps of *Quercus ægilops,* an oak of Asia Minor and Greece, containing a large proportion of tannin.

Valsal'va's an'trum [Antonio Maria *Valsalva,* Italian anatomist, 1666–1723.] Antrum tympanicum. **V.'s exper'iment,** inflation of the Eustachian tube and tympanum by a forced expiration, the mouth being closed and the nose held by thumb and forefinger. **V.'s lig'aments,** ligamenta auricularia. **V.'s meth'od,** treatment of internal aneurysm by bloodletting, purgatives, abstention from fluids, as far as possible, and a reduced diet, with the aim of increasing the coagulability of the blood. **V.'s si'nus,** sinus aortæ.

val'sol. Trade name of a paraffin base for ointments.

val'va, pl. *valvæ* [L. one leaf of a double door.] Valve, valvula.

val'val, val'var. Relating to a valve.

val'vate. Valvular, relating to or provided with a valve.

valve [L. *valva*] Valvula. 1. A fold of the lining membrane of a canal or other hollow organ serving to retard or prevent a reflux of fluid. 2. Any reduplication of tissue or flap-like structure resembling a valve. See also *valvula* and *plica.* **v. of Amussat, v. of Bauhin, v. of Heister,** etc., see the proper names. **aor'tic v.,** valvula semilunaris [BNA]. **auriculoventric'ular v.,** *left,* mitral valve, valvula bicuspidalis, *right,* valvula tricuspidalis. **bicus'pid v.,** the valve of the left atrioventricular orifice, mitral v., valvula bicuspidalis. **ca'val v.,** Eustachian v., valvula venæ cavæ [BNA]. **cor'onary v.,** v. of Thebesius, valvula sinus coronarii [BNA] **ileoce'cal v.,** v. of Bauhin, valvula coli [BNA]. **mi'tral v.,** valvula bicuspidalis [BNA]. **pul'monary v.,** valvula semilunaris arteriæ pulmonalis see under *semilunar v.* **pylor'ic v.,** valvula pylori **rectal v.,** plica* transversalis recti [BNA] **semilu'nar v.,** (1) one of the valves guarding the orifice of the aorta (valvulæ semilunares aortæ [BNA]) or that of the pulmonary artery (valvulæ semilunares arteriæ pulmonalis [BNA]); (2) v. of Tarini, velum medullare posterius [BNA]. **sig'moid v.,** valvula semilunaris [BNA]. **spiral v.,** valve of Heister, valvula spiralis. **triscus'pid v.,** the valve at the right atrioventricular orifice, valvula tricuspidalis.

valved. Valvate, having valves.

valveless (valv'les). Without valves, noting certain veins, such as the portal, which are not provided with valves as are most of the veins.

val'viform [L. *valva,* valve, + *forma,* form.] Valve-shaped.

valvot'omy [L. *valva,* valve, + G. *tomē,* incision.] Dichidotomy, cutting through a valve; specifically an incision of too large or rigid rectal folds.

val'vula [L. dim. of *valva.*] 1. A valve, especially one of small size. 2. Valve of Vieussens, velum* medullare anterius [BNA]. **v. bicuspida'lis** [BNA], bicuspid valve, mitral valve, left auriculoventricular valve, the valve closing the orifice between the left auricle (atrium) and ventricle of the heart; its two cusps are called anterior and posterior. **v. co'li** [BNA], ileocecal valve, two folds of mucous membrane, formed

by a projection of the termination of the ileum into the cavity of the large intestine, guarding the orifice so as to prevent regurgitation of the intestinal contents. **v. conni'vens,** pl *val'vulæ conniven'tes*, plicæ circulares [BNA]. **v. foram'inis ova'lis** [BNA], a fold projecting into the left auricle from the margin of the foramen ovale in the fetus; when, with beginning inspiration, the blood pressure within the left auricle (atrium) increases, the valve closes and its edges become adherent to the margin of the foramen ovale, occluding it. **v. fos'sæ navicula'ris** [BNA], Guérin's fold, a fold of mucous membrane sometimes found in the roof of the fossa navicularis urethræ. **v. mitra'lis,** v. bicuspidalis. **v. proces'sus vermifor'mis** [BNA], a fold of mucous membrane at the opening of the vermiform appendix into the cecum. **v. prostat'ica,** Mercier's barrier, the enlarged middle lobe of the prostate. **v. pylor'i** [BNA], a prominent fold of mucous membrane at the pyloric orifice of the stomach, enclosing the sphincter pylori. **v. semiluna'ris** [BNA], one of three semilunar segments serving as the three cusps of a valve preventing regurgitation at the beginning of the aorta; a similar valve guards the entrance of the pulmonary artery; the segments are named, respectively, *v. s. anterior, dextra*, and *sinistra* in the right ventricle, and *v. s. posterior, dextra*, and *sinistra* in the left ventricle. **v. semiluna'ris Tari'ni,** velum medullare posterius **v. si'nus corona'rii** [BNA], Thebesian valve, coronary valve, an endocardial fold at the orifice of the coronary sinus in the right auricle (atrium) of the heart. **v. spira'lis** [BNA], valve of Heister, a series of crescentic folds of the mucous membrane of the cystic bile-duct, directed obliquely around the inner surface of the canal. **v. tricuspida'lis** [BNA], tricuspid valve, right auriculoventricular valve, the valve closing the orifice between the right auricle (atrium) and ventricle of the heart; its three cusps are called anterior or infundibular, right or marginal, and posterior or septal. **v. vagi'næ,** hymen. **val'vulæ vaso'rum lymphaceo'rum** [NK], valves of the lymphatic vessels. **v. ve'næ ca'væ inferior'is** [BNA], valve of the inferior vena cava, Eustachian valve, an endocardial fold extending from the anterior inferior margin of the inferior vena cava to the anterior part of the limbus fossæ ovalis. **val'vulæ vena'rum** [NK], valves of the veins. **v. vestib'uli,** one of two endocardial folds in the right fetal heart at the orifice of the saccus reuniens; from one are developed the v. sinus coronarii and the v. venæ cavæ inferioris.

val'vular. Relating to a valve, valval, valvar.

val'vule [L. *valvula*.] A small valve.

valvulitis (val-vu-li'(le')tis) [L. *valvula*, valve, + G. *-itis*.] Diclidtis, inflammation of a valve, especially a heart-valve.

val'yl. Valeric acid diethylamide, $C_9H_{19}ON$, a colorless liquid with an odor of peppermint; employed as a sedative and antispasmodic in hysteria, insomnia, and neurasthenia, in doses of from 1 to 3 capsules of ℥ss (0.13) each.

valylene (val'il-ēn). Pentone; a hydrocarbon, C_5H_6, of oily consistency.

val'zin. Sucrol

vampirism (vam'pĭr-izm). Necrophilism (*2*).

van'adate. A salt of vanadic acid; the vanadates are said to resemble arsenic in their tonic effect.

vanad'ic acid. An acid, H_3VO_4, derived from vanadium, forming salts with various bases.

vana'dium [*Vanadis*, a goddess of Scandinavian mythology.] A metallic element, symbol V, atomic weight 50.8, of light gray color. Its salts are said to be tonic, somewhat resembling arsenic in their action.

Van Bu'ren's disease' [William Holme *Van Buren*, New York surgeon, 1819–1883.] Induration of the corpora cavernosa.

Van Deen's test [Izaak *Van Deen*, Dutch physician, 1804–1869.] For blood in any of the secretions or excretions; equal volumes of tincture of guaiac and turpentine are shaken with the suspected fluid and if blood, or iron, is present a blue color will be produced.

Vandel'lia [*Vandelli*, Italian botanist, 18th century.] A genus of plants of the order *Scrofulariaceæ*, the figwort family. **V. diffu'sa** is a South American herb, with an odor of tobacco, employed as a cholagogue cathartic and in the treatment of malaria. **V. urinophilus.** Candirú, a very small fish of the Amazon River which, explorers say, often enters the urethra of a bather who urinates while in the water.

Van den Bergh's test [A. A. Hysman *van den Bergh*, Dutch physician, contemporary.] For bilirubin. 1. Direct test. to 1 c.c. of blood serum diluted with double the quantity of water, add 0.5 c.c. of the reagent used in Ehrlich's diazo* reaction; a violet color appearing after a brief delay or immediately, or a reddish color changing to violet, indicates the presence of free bilirubin. 2. Indirect test: a mixture of 1 c.c. of serum in 2 c.c. of 96 per cent. alcohol is centrifugalized and to the clear centrifugate is added 0.5 c.c. of the diazo reagent; a reddish violet color indicates the presence of combined bilirubin.

Van der Kolk's law. In a mixed nerve the sensory fibers are distributed to the parts moved by the muscles controlled by the motor fibers.

Van der Vel'den's test [Reinhardt *van der Velden*, German physician, *1851.] For free hydrochloric acid, the presence of which turns an added solution of methylene blue from violet to green; called also Maly's test.

Van Er'mengem's meth'od [Emile P. *Van Ermengem*, Belgian bacteriologist, *1851.] For staining flagella. The cover-slip preparation is immersed for an hour in a mixture of glacial acetic acid, osmic acid, and tannic acid solutions, washed in water and then alcohol, immersed for two seconds in 0.5 per cent. silver nitrate solution, transferred to a solution of gallic and tannic acids and fused potassium acetate in water, and finally returned to the silver solution and then washed in water.

Van Gehuchten's meth'od (fahn ga-hookh'ten) [Arthur *Van Gehuchten*, Belgian anatomist, 1861–1915.] In histology, fixing in a mixture of glacial acetic acid 10, chloroform 30, and alcohol 60.

Vanghetti's pros'thesis (vahn-get'te) [*Vanghetti*, Italian army surgeon.] An artificial limb in which movements are executed by means of plastic motors* after cinematization.*

Van Gieson's stain (van-ge'zon) [Ira *Van Gieson*, New York histologist and bacteriologist, 1865–1913.] Saturated aqueous acid fuchsin solution 2, saturated picric acid solution 100.

Van Hel'mont's mirr'or (Joannes Baptista *Van Helmont*, Belgian physician, 1577–1644.] Speculum Helmontii, the central tendon of the diaphragm, centrum tendineum [BNA].

Van Hoorne's canal' (fahn-hōrn') [Jan *van Hoorne*, Dutch anatomist, 1621–1670.] Thoracic duct.

vanil'la [Sp. dim. of vaina, sheath, pod.] (N.F.) The dried nearly ripe fruit of *Vanilla planifolia*, an orchid, native of Mexico and cultivated in other tropical countries; employed in pharmacy only as a flavoring agent.

vanilli'num (U.S.). Vanillin, methylprotocatechuic aldehyde, a neutral principle, $C_8H_8O_3$, obtained from vanilla and also prepared synthetically; it occurs in white needle-shaped crystals with the odor and taste of vanilla, soluble in 100 parts of water; employed chiefly as a flavor, but has been recommended as a remedy in atonic dyspepsia in doses of gr. ¼–1 (0.015–0.06).

vanill'ism. Symptoms of irritation of the skin, nasal mucous membrane, and conjunctiva from which workers in vanilla sometimes suffer.

Van Slyke's for'mula (van-slīk') [D. D. *Van Slyke*, American physician, contemporary.] A formula for calculating the urinary coefficient in relation to various substances: $\frac{D}{Bl \times \sqrt{Wt} \times V}$; D = daily output of the substance in the urine expressed in grams; Bl = grams of the same substance per liter in the blood; Wt = weight of the patient in kilograms; V = amount of total urine excreted in 24 hours.

Van Swieten's liq'uor or **solu'tion** (fahn sve'ten) [Gerard *van Swieten*, Dutch physician, 1700–1772.] Mercuric chloride 1, alcohol 100, distilled water 900; dose 3½–2 (2.0–8.0).

Van't Hoff's law [Jacobus Hendricus *Van't Hoff*, Dutch chemist, 1852–1911.] 1. In stereochemistry, all optically active substances have one or more multivalent atoms united to other atoms or radicals so as to form in space an unsymmetrical arrangement. 2. The osmotic pressure exerted by any substance in very dilute solution is the same that it would exert if present as gas in the same volume as that of the solution; or, at constant temperature the osmotic pressure of dilute solutions is proportional to the concentration (number of molecules) of the dissolved substance. **V. H.'s solu'tion**, calcium chloride, 2, potassium chloride, 2.2, magnesium chloride, 7.8, magnesium sulphate, 3.8, sodium chloride, 100.2, water, 1000.

Vanzetti's sign (vahn-tset'te) [Tito *Vanzetti*, surgeon in Padua, 1809–1888.] Scoliosis ischiadica, scoliosis as a symptom of sciatica.

va'pex. A proprietary remedy recommended for the prevention and cure of coryza, by inhalation.

vapoaural massage (va-po-aw'ral mas-sahzh'). Massage of the tympanum effected by the forcible insufflation of medicated vapors into the external auditory meatus.

vapocauteriza'tion. Cauterization by steam.

va'por [L. steam.] 1. The gaseous form assumed by a solid or liquid when sufficiently heated. 2 A visible emanation of fine particles of a liquid. 3. A medicinal preparation to be administered in the form of vapor. **v. ac'idi carbol'ici**, 20 drops of liquefied phenol in a pint of water, used in a spray. **v. ac'idi carbol'ici compos'itus**, phenol 2, creosote 2, tincture of iodine 1, spirit of ether 1, spirit of chloroform 2; used in an inhaler. **v. ammo'nii chlor'idi**, a mixture of ammonia and hydrochloric acid, purified by passing the vapor through water; used in catarrhal conditions of the Eustachian tube. **v. creoso'ti**, creosote 80, magnesium silicate 30, water 480; a teaspoonful in a pint of hot water for inhalation. **v. eucalyp'ti**, eucalyptus oil 20, magnesium carbonate 10, water 460; a teaspoonful in a pint of hot water for inhalation. **v. eucalyp'ti compos'itus**, eucalyptus oil 2, compound tincture of benzoin 3, thymol 1, spirit of choloroform 3; ten drops used in an inhaler. **v. guai'acol compos'itus**, guaiacol 2, terebene 2, menthol 1, thymol 1, spirit of chloroform 3; used by inhalation in phthisis. **v. io'di ætherea'lis**, iodine 3, ether 120, carbolic acid 120, creosote 60, alcohol 180; dose ♏10 (0.6) used in an inhaler. **v. o'lei pi'ni sylves'tris**, fir-wood oil 40, magnesium carbonate 20, water 480; a teaspoonful in a pint of water for inhalation. **v. terebe'ni**, terebene 40, magnesium carbonate 20, water 480; a teaspoonful in a pint of water for inhalation. **v. thy'molis**, thymol 6, alcohol 60, magnesium carbonate 3, water 420; dose a teaspoonful in a pint of water for inhalation.

vapora'rium. Vaporium.

va'porish. Hypochondriacal, hysterical, melancholic, splenetic, notional.

vapo'rium. An apparatus for applying hot or cold or medicated vapors.

vaporiza'tion. 1. The change of a solid or liquid to a state of vapor. 2. The therapeutic application of a vapor.

va'porize. 1. To convert a solid or liquid into a vapor. 2. To apply a vapor therapeutically.

va'porizer. An apparatus for reducing medicated liquids, usually oils, to a state of vapor fit for inhalation or application to the accessible mucous membranes.

va'porole. 1. A pearl or ampule of glass containing a volatile liquid for inhalation, the liquid being set free by crushing the glass. 2. Trade name of "a twenty per cent. extract of the posterior lobe and the pars intermedia of the hypophysis of the ox."

va'pors. Hypochondriasis, depression.

Vaquez's disease' (vă-ka') [L. H. *Vaquez*, French physician, *1860.] Polycythemia myelopathica, a form of erythremia occurring in middle life, associated with erythrosis, enlarge spleen, and disease of the bone-marrow; cf. *Osler's* disease.*

varalette (var-ă-let'). Trade name of a compressed tablet of effervescent salts.

varenetz (var-en-yets') [Rus.] Boiled milk soured by means of a yeast, largely used in Russia.

var'gol. Trade name of a silver preparation of the argentoproteinum mite type.

variabil'ity. The capability of deviating from the type in structure or form.

varia'tion. Deviation from the type, especially the parent type, in structure or form. **contin'uous v.**, a series of very slight variations. **meris'tic v.**, in heredity, v. in the number of parts of the developing organism.

varica'tion. The formation or presence of varices.

varicel'la [L. dim. of *variola*.] Chicken-pox; an acute infectious disease marked by an eruption of vesicles, rarely umbilicated like those of smallpox, and seldom becoming pustules; there is usually a slight fever lasting from a few days to a week. **v. gangræno'sa**, dermatitis gangrænosa infantum. **v. pustulo'sa**, varioloid. **var'ioloid v.**, alastrim.

varicellation (var-ĭ-se-la'shun). Inoculation with the virus of chickenpox as a means of protection against that disease.

varicell'iform [L. *varicella* + *forma*, form.] Resembling varicella.

varicell'oid [L. *varicella* + G. *eidos*, resemblance.] Varicelliform.

varices (var'ĭ-sēz). Plural of *varix.*

var'iciform [L. *varix(varic-)* + *forma*, form.] Resembling a varix, varicose.

varicobleph'aron [L. *varix(varic-)* + G. *blepharon*, eyelid.] A varicosity of the eyelid.

varicocele (var'ĭ-ko-sēl) [L. *varix(varic-)* + G. *kēlē*, tumor, hernia.] Hernia varicosa; a varicose enlargement of the veins of the spermatic cord, causing a boggy tumor of the scrotum. **ova'rian v., tu'bo-ova'rian v., u"tero-ova'rian v.,** a varicose condition of the pampiniform plexus in the broad ligament.

varicocelec'tomy [*varicocele* + G. *ektomē*, excision.] An operation for the relief of a varicocele by excision of a portion of the scrotum with ligature of the dilated veins.

var'icoid [L. *varix(varic-)* + G. *eidos*, resemblance.] Variciform.

varicole (var'ĭ-kōl). Varicocele.

varicom'phalus [L. *varix(varic-)* + G. *omphalos*, navel.] A swelling formed by varicose veins at the umbilicus.

var'icose. Relating to, affected with, or designed for the relief or cure of, a varix.

varico'sis. A dilated or varicose state of a vein or veins.

varicos'ity. Varicosis; a varix.

varicot'omy [L. *varix(varic-)* + G. *tomē*, severance.] An operation for the cure of varicose veins by subcutaneous incision.

varic'ula [L. dim. of *varix*.] Conjunctival varix, a varicose condition of the veins of the conjunctiva.

variegated (va'rĭ-e-ga-ted) [L. *variegatus*.] Marked by a diversity of coloration.

variegation (va"rĭ-e-ga'shun). A diversity of coloration.

vari'ety. In botany and zoology, a subdivision of a species.

variola (vă-re'o-lah) [L. dim. of *varius*, spotted.] Smallpox. **v. benig'na,** varioloid. **v. hæmorrha'gica,** hemorrhagic smallpox.* **v. major,** smallpox. **v. malig'na,** malignant smallpox, usually of the hemorrhagic form. **v. milia'ris,** a form of varioloid in which the eruption consists of miliary vesicles without the formation of pustules. **v. minor,** alastrim or varioloid. **v. pemphigo'sa,** a form of smallpox in which the eruption consists of pemphigus-like blebs. **v. siliquo'sa** [L. *siliqua*, a husk], a form of smallpox in which the empty pustules remain for a time after the absorption of the contents. **v. si'ne eruptio'ne,** an abortive form of smallpox in which the disease subsides without the appearance of any eruption, or at most a few papules which never go on to pustulation. **v. ve'ra,** simple smallpox of ordinary severity in the unvaccinated. **v. verruco'sa,** wartpox, a mild or abortive form of varioloid, the eruption of which consists mainly of papules, with occasionally minute vesicles at the apices, which persist for a time as wart-like lesions.

vari'olar. Relating to smallpox.

Variola'ria. A former indefinite genus of lichens, some species being a source of litmus, and one, *V. ama'ra*, being reputed to be anthelmintic and febrifuge.

var'iolate. 1. To inoculate with smallpox. 2. Pitted or scarred, as if with smallpox.

variola'tion. Inoculation with smallpox. **bo'vine v.,** inoculation of a heifer with smallpox with the object of obtaining a virus for vaccination.

variol'ic. Variolar, variolous.

varioliform (vă-re'o-lĭ-form) [L. *variola*, smallpox, + *forma*, form.] Resembling smallpox, varioloid (1).

varioli'num. A homeopathic or isopathic preparation of the contents of a smallpox pustule, potentized by trituration or succussion.

variolization (vă-re"o-li-za'shun). Variolation.

varioloid (va'rĭ-o-loyd) [L. *variola*, smallpox, + G. *eidos*, resemblance.] 1. Varioliform, resembling smallpox. 2. In veterinary medicine, resembling measles. 3. A mild form of smallpox occurring in persons who are relatively immune either naturally or as a result of a previous vaccination; the course of the disease is materially shortened and the different stages of the eruption follow each other rapidly, or the lesions may abort at any stage. It is contagious and may cause virulent smallpox in a non-immune contact.

vari'olous. Variolar, variolic, relating to smallpox

vari"olovacci'na. A form of cowpox produced by inoculation of a heifer with smallpox of the human.

variolovaccine (vă-re"o-lo-vak'sēn). A vaccine obtained from the eruption following inoculation of a heifer with smallpox from the human.

vari"olovacci'nia. Variolovaccina.

varisse (vă-rēs') [G. *varix*.] A small tumor on the inner aspect of the hind leg of a horse.

var'ix [L.] An enlarged and tortuous vein, artery, or lymphatic vessel. **aneurys'mal v.,** dilatation and tortuosity of a vein resulting from a direct communication with an adjacent artery. **gelat'inous v.,** a lumpy or nodular condition of the umbilical cord. **tur'binal v.,** a condition of permanent dilatation of the veins of the turbinated bodies, especially of the inferior turbinate. **v. anastomot'icus,** aneurysmal v.

var'nish [Fr. *vernis*.] A solution of a resin in oil or alcohol which dries quickly leaving a thin film on the surface to which it is applied.

Varo'lian. Relating to Varolius or to the pons Varolii.

Varo'lius. Latinized form of Costanzio *Varolio*, Italian anatomist, 1543–1576. **bend of V.,** the anterior extension of the hind-gut on its ventral surface, in the embryo. **pons Varo'lii,** see *pons* (1). **valve of V.,** v. of Bauhin, ileocecal valve, valvula* coli [BNA].

va'rus [L. knock-kneed.] 1. Originally a knock-kneed man, now employed in the opposite sense—a bowlegged person; see *valgus*. 2. Talipes* varus. 3. [L. *varus*, a pimple.] Any papular eruption, acne. **v. com'edo,** comedo.

vas, gen. *va'sis*, pl. *va'sa*, gen. pl. *vaso'rum* [L.] A vessel. **v. aber'rans supe'rius,** a diverticulum from the globus major of the epididymis. **v. aber'rans infe'rius,** v. aberrans of Haller, a diverticulum from the globus minor of the epididymis, where it terminates in the vas deferens, extending upward between the two tubes. **v. aber'rans hep'atis,** pl. *va'sa aberran'tia hep'atis*, one of numerous irregularly coursing arterial twigs found along with blind bile-ducts in the fibrous appendix and in the capsule of the liver. **v. aff'erens,** (1) any artery conveying blood to a part; (2) a lymphatic vessel entering a lymph-gland. **v. anastomot'icum,** anastomotic* vessel **v. capilla're** [BNA], capillary (3), or capillary vessel. **v. collatera'le** [BNA], collateral* vessel. **v. def'erens,** ductus deferens [BNA]. **v. eff'erens,** (1) a vein carrying blood away from a part; (2) lymphatic vessel leaving a lymph-gland; (3) one of the excretory ducts, ductuli efferentes testis [BNA]. **v. lymphat'icum** [BNA], pl. *va'sa lymphat'ica*, lymphatic vessel, one of the vessels which convey the lymph; they anas-

tomose freely with each other, and communicate with the serous cavities, intercellular spaces, and lymph-glands. **v. prom'inens** [BNA], a blood-vessel in the substance of the prominentia spiralis of the cochlea. **v. sanguin'eum,** pl. *va'sa sanguin'ea*, a blood-vessel. **v. spira'le,** a blood-vessel, larger than its fellows, in the basilar membrane just beneath the tunnel of Corti. **v. va'sis,** see *vasa vasorum*.

vasa (va'sŭ, vah'sah). Plural of *vas*. **v. aberran'tia hep'atis** [BNA], see *vas aberrans hepatis*. **v. afferen'tia,** see *vas afferens*. **v. bre'via,** branches of the splenic artery distributed to the greater curvature of the stomach. **v. chylif'era,** lacteals. **v. corona'ria,** coronary vessels, as those of the heart or stomach, see *arteria coronaria* and *vena coronaria*, and also *vasocorona*. **v. deferen'tia,** see *ductus deferens*. **v. efferen'tia,** see *vas efferens*. **v. intesti'ni ten'uis,** vessels of the small intestine, arteriæ intestinales [BNA] twelve to fifteen arteries arising from the superior mesenteric and running between the layers of the mesentery to the jejunum (arteriæ jejunales) and ileum (arteriæ ileæ). **v. priva'ta,** the blood-vessels which have to do with the nutrition of the lungs, the bronchial vessels. **v. pub'lica,** the pulmonary arteries and veins. **v. rec'ta,** (1) straight, slightly diverging arterioles, running between the straight uriniferous tubules of the Malpighian pyramids of the kidney; these are the *true v. recta;* the so-called *false v. recta* are efferent vessels of the glomeruli lying nearest the bases of the Malpighian pyramids, passing into the pyramids along with the true v. recta, (2) **tubuli, seminiferi recti. v. sero'sa,** minute blood-vessels allowing the passage of the plasma but not the corpuscles, assumed to exist in the cornea and elsewhere. **v. vaso'rum** [BNA], vessels of vessels, small arteries distributed to the outer and middle coats of the larger blood-vessels, and their corresponding veins. **v. vortico'sa,** venæ vorticosæ.

va'sal. Relating to a vas or to vasa.

vas'cular. Relating to or containing blood-vessels.

vav. arches, visceral arches. **v. glands,** ductless glands. **v. tumor,** angioma, telangioma.

scular'ity. The condition of being vascular.

vasculariza'tion. The formation of new blood-vessels in a part.

vas'cularized. Rendered vascular by the formation of new vessels.

vasculi'tis [L. *vasculum*, a small vessel, + G *-itis*.] Angeitis.

vas"culomo'tor. Vasomotor.

vas'culum [L. dim. of *vas*, a vessel.] A small vessel.

vasec'tomy [L. *vas deferens* + G. *ektomē* excision.] Excision of a segment of the vas deferens.

vaseline (vas'ĕ-lēn). A trade mark word distinguishing a petroleum jelly and articles made from it and also various toilet preparations, such as the camphor ice, cold cream, "hair tonic," etc., made by a certain manufacturing company. The term, being a registered trade mark, is loosely and improperly applied to paraffinum molle (Br.), paraffinum liquidum (Br.), petrolatum (U.S.), petrolatum album (U.S.). and petrolatum liquidum (U.S.).

vas'elon. Trade name of an ointment base.

vas'enol. Trade name of an ointment base.

vas'icine. An alkaloid from *Adhatoda vasica*, an East Indian shrub, destructive to low forms of animal and vegetable life; expectorant and anthelmintic.

vasifac'tive [L. *vas*, vessel, + *facere*, to make.] Forming new blood-vessels, noting certain cells in newly organized tissues.

vas'iform [L. *vas*, vessel, + *forma*, form.] Having the shape of a vas or tubular structure.

vasoconstric'tine. Trade name of a preparation of the suprarenal gland.

vasoconstric'tion. Narrowing of the blood-vessels.

vasoconstric'tive. Causing narrowing of the blood-vessels.

vasoconstrictor (vaz-o-kon-strik'tor). An agent which causes narrowing of the blood-vessels; a nerve, stimulation of which causes vascular constriction.

vasocoro'na [L. *vas*, vessel, + *corona*, crown.] The system of peripheral vessels encircling the spinal cord and sending branches inward.

vasoden'tine. Vascular dentine, dentine in which the primitive capillaries have remained uncalcified and so are wide enough to give passage to the formed elements of the blood.

vasodilata'tion. Dilatation of the blood-vessels. **reflex' v.,** reflex diastole.*

vasodilatin (vaz-o-di-la'tin). A hypothetical depressor substance alleged to be present in organic extracts.

vasodilator (vaz-o-di-la'tor). An agent which causes dilatation of the blood-vessels; a nerve, stimulation of which results in dilatation of the blood-vessels.

vasofac'tive. Vasifactive, vasoformative.

vasofor'mative [L. *vas*, vessel, + *formare*, to form.] Causing the formation of blood-vessels in newly organized tissue, noting certain cells; vasifactive, angiopoietic.

vasoganglion (vaz"o-gang'glĭ-on). Glomus, a mass of blood-vessels, rete.

vas'ogen. Trade name of a yellowish brown viscid mass, claimed to be oxygenated petrolatum; when mixed with menthol, iodine, ichthyol, and other substances it is said to render them more readily absorbable, and is employed as a vehicle for such remedies in the treatment of skin diseases.

vasohyperton'ic [L. *vas*, vessel, + G. *hyper*, over, + *tonos*, tone.] Relating to increased arterial tension or vasoconstriction.

vasohypoton'ic [L. *vas*, vessel, + G. *hypo*, under, + *tonos*, tone.] Relating to reduced arterial tension or vasodilatation.

vasoinhibitor (vaz-o-in-hib'ĭ-tor). An agent which restricts or prevents the functioning of the vasomotor nerves, resulting in passive dilatation of the blood-vessels.

vasoinhib'itory. Restraining vasomotor action.

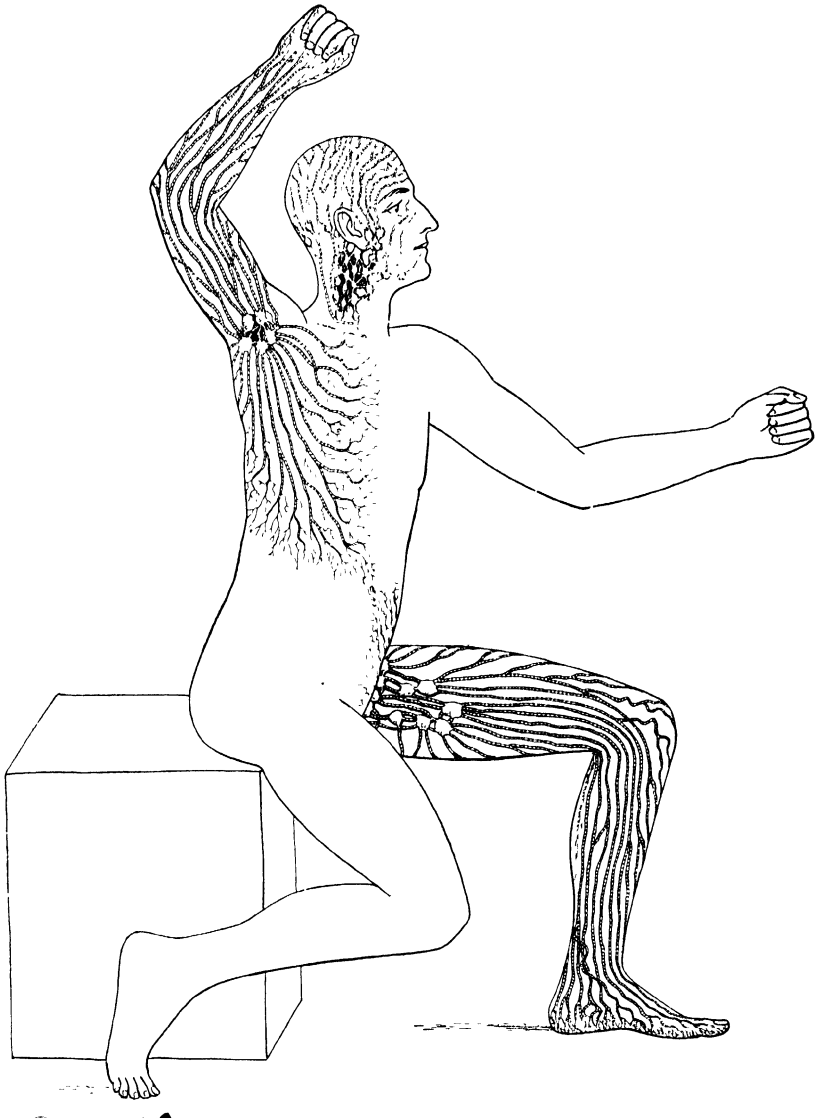
vas'ol. Trade name of a liquid paraffin with ammonium oleate, used as a menstruum for medicaments applied in the form of vapor.

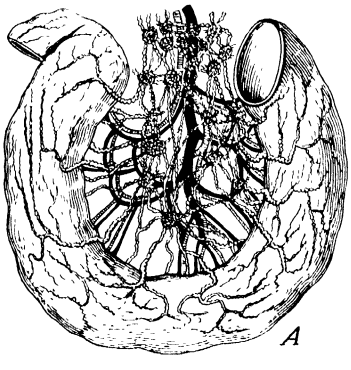
vasolimen'tum. An ointment base having properties similar to those of vasogen; it occurs in two forms: *v. liq'uidum*, liquid v., and *v. spis'sum*, solid v., which are similar in composition to petrolatum saponatum liquidum and petrolatum saponatum spissum of the N.F.

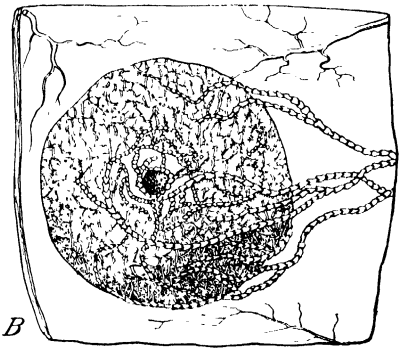
vasolin'iment. Parogen.

vasomo'tion. Change in caliber of a blood-vessel.

vasomotor (vaz-o-mo'tor) [L. *vas*, vessel, + *motor*, mover.] Causing dilatation or constriction of the blood-vessels, noting the nerves which have this action. **v. catarrh',** hay-fever. **v. ep'ilepsy,** epilepsy preceded or accompanied by vasomotor changes in the cutaneous vessels. **v. paral'ysis,** vasoparesis. **v. spasm,** spasmodic contraction of the smaller arteries.







LYMPHATICS OF THE BODY

A, of the Mesentery; *B*, of the Breast

vasomoto'rial, vasomotor'ic, vasomo'tory. Vasomotor

vasomotricity (vas-o-mo-tris'i-ti). Vasomotor action.

vasoneuro'sis [L. *vas*, vessel, + *neurosis*.] Angioneurosis.

vasoparesis (vaz-o-par'e-sis) [L. *vas*, vessel, + G. *paresis*, weakness.] Paralysis of the vasomotor nerves.

vasorelaxation (vaz-o-re-laks-a'shun). Reduction in tonicity of the blood-vessels.

vasosec'tion [L. *vas deferens* + *sectio*, a cutting.] Division of the vas deferens, vasotomy.

vasosen'sory. Relating to sensation in the blood-vessels, noting sensory nerve-fibers going to the vessels.

vas'ospasm [L. *vas*, vessel, + G. *spasmos*, tension.] Angiospasm, vasoconstriction.

vasospas'tic. Relating to vasospasm, angiospastic.

vasostim'ulant. 1. Exciting vasomotor action. 2. An agent which urges the vasomotor nerves to action.

vasostomy (vaz-os'to-mi) [*vas* deferens + G. *stoma*, mouth.] Belfield's operation, an artificial opening into the ductus (vas) deferens.

vasothi'on. Vasogen containing 3 per cent. of sulphur.

vasothrombin (vaz"o-throm'bin) [L. *vas*, vessel.] Thrombin derived from the lining cells of the blood-vessels.

vasotonic (vaz-o-ton'ik). 1. Relating to vascular tone. 2. An agent which increases vascular tension; vasostimulant.

vasoto'nin. Trade name of a compound or combination of yohimbin and urethane, recommended in angina pectoris, arteriosclerosis, and to reduce blood-pressure.

vasotribe (vaz'o-trīb) [L. *vas*, vessel, + G. *tribō*, I crush.] Angiotribe.

vasotroph'ic [L. *vas*, vessel, + G. *trophē*, nourishment.] Angiotrophic

vasova'gal. Relating to the action of the vagus nerve upon the blood-vessels; vasomotor **v. attack'**, vagal* attack.

vas'tus [L. huge.] See under *musculus*.

vasovesic"ulec'tomy [G. *ektomē*, excision.] Excision of the vas deferens and seminal vesicles.

Vate'ria [after Abraham *Vater*, German anatomist and botanist, 1684–1751.] A genus of plants of the order *Dipterocarpaceæ*. **V. in'dica**, *Elæocarpus copalliferus*, a species furnishing a copal varnish; the seeds are used as a gastric sedative in nausea and vomiting.

Vater's ampul'la or **divertic'ulum** (fah'ter) [Abraham *Vater*, German anatomist, 1684–1751.] A dilatation at the point of junction of the pancreatic and the common bile-ducts just before they empty into the duodenum. **V.'s cor'puscle,** Pacinian corpuscle, corpusculum* lamellosum. **V.'s divertic'ulum,** papilla duodeni. **V.'s fold,** a fold of mucous membrane in the duodenum just above V.'s papilla. **V.'s papil'la,** papilla duodeni [BNA].

Vater-Pacini corpuscle (fah'ter-pah-che'ne). Corpusculum lamellosum.

Vauban's fortifica'tion pic'tures (vo-bahń') [Sebastian Leprestre, Seigneur de *Vauban*, French military engineer, 1633–1707.] Teichopsia.

Vaugh'an's ty'phoid res'idue [Victor Clarence *Vaughan*, American chemist and physician, 1851–1929.] See *typhoid* residue*.

Vaughan-Novy test (vo'an-no'vi) [Victor Clarence *Vaughan*; Frederick George *Novy*, American bacteriologist, *1864.] For tyrotoxicon: the suspected substance is extracted with ether, dried, and dissolved in water, and to the solution are added equal amounts of phenol and sulphuric acid; a positive result is indicated by the appearance of an orange-red coloration.

vault (vawlt) [L. *voluta; volvere*, to turn.] An anatomical part resembling an arched roof or dome, as the *vault of the pharynx*, the upper part or roof of the rhinopharynx; the *palatine vault*, roof of the mouth; *vault of the vagina*, fornix.

vauqueline (vo-kĕ-lēn') [after L. N *Vauquelin*, French chemist, 1763–1829.] An old term for strychnine.

V.C. Abbreviation for color vision

V.D.G. Abbreviation for venereal disease, gonorrhea.

V.D.H. Abbreviation for valvular disease of the heart.

V.D.S. Abbreviation for venereal disease, syphilis.

veal-skin. An eruption of white patches resembling veal in color and texture, on the skin of the face and neck.

vection (vek'shun) [L. *vectio*, conveyance.] The transference of the germs of disease from the sick to the well. **circumferen'tial v.,** transference by means of an intermediate host. **direct' v.,** radial v. **imme'diate v.,** radial v. **indirect' v.,** circumferential v. **me'diate v.,** circumferential v. **ra'dial v.,** direct transference from the sick or a carrier to the well without the mediation of another host

vec'tis [L. a bar.] Lever, an instrument resembling one of the blades of an obstetrical forceps, used as an aid in delivery by making traction on the presenting part of the fetus.

vec'tor [L. *vector*, a carrier.] Term noting an insect or any living carrier which transports a pathogenic microorganism from the sick to the well, inoculating the latter; the organism may or may not pass through any developmental cycle within the vector. **circumferen'tial v.,** one who carries the infectious agent from the sick to the well either mechanically (as the rat flea carries the plague bacillus) or biologically (as the mosquito carries the plasmodium of malaria). **ra'dius v.,** one who carries disease directly without the intermediation of another host, such as a typhoid bacillus carrier.

vectorial (vek-to'ri-al). Relating in any way to a vector.

vegetable (vej'e-ta-bl) [L. *vegetare*, to animate.] 1. A plant, specifically one used for food. 2. Relating to plants, as distinguished from animals or minerals. **v. acid,** an acid derived from plants or fruits. **v. æ'thiops,** æthiops vegetabilis. **v. al'kali,** see *alkali*. **v. anat'omy,** the branch of botany which deals with the form and structure of plants. **v. base,** alkaloid. **v. cal'omel,** podophyllum. **v. gel'atin,** agar-agar. **v. mer'cury,** manaca. **v. sulphur,** lycopodium. **v. wax,** a substance resembling beeswax, forming the bloom on grapes and other fruits and existing on some plants in quantity sufficient for collection; it has been used in diarrhea and in pharmaceutical preparations as a substitute for beeswax.

vegetal (vej'e-tal). 1. Relating to plants, vegetable. 2. Noting the vital functions common to plants and animals, such as respiration, metabolism, growth, generation, etc., distinguished from those peculiar to animals, such as conscious sensation and the mental faculties.

vegetal'ity. The aggregate of the vital functions common to both plants and animals.

vegeta'rian. One who lives wholly on vegetables, eschewing meat; a strict v. avoids tubers and everything except fruits and vegetables grown in the sunlight; a lactovegetarian eats tubers, milk, eggs, and anything except flesh food.

vegeta'rianism. The practice as to diet of a vegetarian.

vegeta'tion [L. *vegetare*, to arouse, animate.] 1. The process of growths in plants. 2. A condition of sluggishness, comparable to the inactivity of plant life. 3. A growth or excrescence of any sort. 4. Specifically, a clot, composed largely of fused blood-platelets, adherent to a diseased heart-valve.

vegetative (vej'e-ta-tiv) [L. *vegetare*, to quicken, but in general with a nearly opposite meaning, derived from the manner of growth of a *vegetable*.] 1. Growing or functioning involuntarily or unconsciously after the assumed manner of vegetable life. 2. Resting, not active, noting the stage of a cell or its nucleus in which the process of caryocinesia is quiescent. **v. distur'bance,** any disorder, especially inhibitive, of growth. **v. ner'vous sys'tem,** systema nervorum sympathicum.

vegetoalkali (vej-e-to-al'kă-li). An alkaloid.

vegetoanimal (vej-e-to-an'ĭ-mal). Relating to both plants and animals, noting the vegetal functions. **v. matter,** gluten and albumin derived from plants.

vehicle (ve'hĭ-kl) [L. *vehiculum*, a conveyance.] An excipient, a menstruum, a substance, usually without therapeutic action, used as a medium, to give bulk, for the administration of medicines.

veil (vāl) [L. velum.] 1. Caul. 2. Velum.

Veillon tube (vayoń'). A piece of glass tubing, 8 or 10 inches long and about 1 cm. in diameter, one end being fitted with a rubber cork the other with a cotton-wool plug, used in making a bacterial culture.

vein (vān) [L. *vena*.] 1. A blood-vessel conveying blood toward the heart; all the veins, except the pulmonary, carry dark or unaerated blood. [For the table of the veins, see *vena*.] 2. In botany, a nerve, a fibrous bundle marking the surface of a leaf or petal. **flu'id v.,** the passage of a swiftly flowing current through a channel which suddenly widens, or sometimes the reverse, resulting in vibrations in the fluid which produce a murmur.

abnormal course, phlebectopia. **concretion,** phlebolith, phlebolite, vein-stone, venous calculus. **congestion,** phlebismus. **constriction of,** phlebostenosis. **cranial,** emissarium, emissary vein. **description of,** phlebography. **dilatation,** phlebectasia, varix, phlebeurysm. **disease of,** phlebocholosis. **drawing blood from,** phlebotomy, venesection. **excision,** phlebectomy. **hardening of,** phleboscleroses. **hemorrhage from,** phleborrhagia. **inflammation,** phlebitis, thrombophlebitis; endophlebitis (lining membrane); mesophlebitis (middle coat); periphlebitis (outer coat); pylephlebitis (portal vein); phlebometritis (uterine veins). **instrument for recording pulsations,** phlebograph. **intracranial,** sinus. **pain,** phlebalgia. **plexus,** veniplex. **plugging of,** phlebemphraxis, phlebothrombosis. **pulsation in,** phlebopalmus, phlebopalia. **puncture,** venipuncture. **rupture,** phleborrhexis. **science relating to,** phlebology. **small,** venula, venule, veinlet. **suture of,** phleborrhaphy, venesuture. **torsion of,** phlebostrepsis. **turgescence,** phlebismus. **unpaired,** azygos.

veined (vānd). Marked by veins or lines resembling veins on the surface.

veinlet (vān'let). Venule.

vein-stone (vān'stōn). Phlebolith.

ve'lar. Relating to any velum, especially the velum palati.

vela'men, pl. *velam'ina* [L. a veil.] Velamentum. **v. vulvæ,** Hottentot* apron.

velamentous (ve-la-men'tus). Expanded in the form of a sheet or veil. **v. inser'tion,** separation of the umbilical vessels before reaching the placenta to which they come enclosed each in a fold of amnion.

velamen'tum, pl. *velamen'ta* [L. a cover.] Velum, velamen, a membrane or membranous envelope or covering. **v. abdomina'le,** peritoneum. **v. bombyci'num,** a villous membrane. **v. cerebra'le,** pl. *velamen'ta cerebra'lia*, one of the cerebral meninges. **v. cer'ebri,** v. cerebrale. **v. infan'tis,** one of the fetal envelopes. **v. lin'guæ,** plica epiglottica.

Veld sore [D. *veld*, field.] An ecthymatous ulceration affecting chiefly the forearm and legs, prevalent in South Africa; probably the same as Barcoo* rot.

vel'iform [L. *velum*, veil, + *forma*, form.] Velamentous.

Vel'la's fis'tula (vel'lah) [Luigi *Vella*, Italian physiologist, 1825–1886.] Experimental isolation of a segment of intestine in a dog or other animal, the mesenteric attachment being preserved; the divided ends of the intestine at either end of the segment are joined by anastomosis, and the ends of the segment itself are stitched to openings in the abdominal wall, the object being to obtain intestinal juice for study.

vell'icate [L. *vellicare*, to pluck, to twitch.] To twitch, to contract spasmodically, said especially of fibrillary muscular spasms.

vellica'tion. Twitching, fibrillary muscular spasm

vell'osine. Pareirine, an alkaloid in the bark, fruit, and leaves of *Geissospermum vellozii*, a plant of Brazil; it has antiperiodic properties.

vellus olivæ inferioris (vel'us o-le'va in-fa-rĭ-o'ris) [L. *vellus*, fleece.] A band of nerve fibers surrounding the inferior olive.

velop'ural. A soft mass made by mixing soap and olive oil in proper proportions, used as a base for ointments. **mer'cury v.,** see *mercury*.

velosyn'thesis [L. *velum palati* + G. *synthesis* a putting together.] Staphylorrhaphy.

Velpeau's bandage (velpo') [Alfred Armand Louis Marie *Velpeau*, Parisian surgeon, 1795–1867.] A bandage for retaining the arm, in fracture of the clavicle, in such a position that the hand rests on the acromion of the sound side and the elbow is in front of the xiphoid cartilage of the sternum. **V.'s deformity,** the characteristic (silver-fork) deformity in Colles' fracture. **V.'s diarrhe'a mix'ture,** camphor 4, tincture of opium 32, compound tincture of gambir to make 100; dose, ℥30 (2.0). **V.'s her'nia,** femoral hernia in which the intestine is in front of the blood-vessels.

VELPEAU'S BANDAGE.

ve'lum [L. veil, sail.] Any structure resembling a veil or curtain. **v. interpos'itum,** interposed veil, tela chorioidea ventriculi tertii [BNA]. **v. medulla're ante'rius** [BNA], anterior medullary velum, superior medullary velum, valve of Vieussens; a thin layer of white nervous tissue stretching between the two brachia conjunctiva

or superior cerebellar peduncles, forming the upper part of the roof or posterior wall of the fourth ventricle. **v. medulla're infe'rius,** v. medullare posterius. **v. medulla're poste'rius** [BNA], posterior medullary v., inferior medullary v., v Tarini, a thin lamina of white nerve substance extending on either side from the peduncle of the flocculus to the nodule which it covers in a very thin sheet; its posterior border unites with the posterior border of the anterior velum to form an angle, the fastigium. **v. medulla're supe'rius,** v. medullare anterius. **v. palati'num** [BNA], v. pendulum palati, palatum molle, soft palate.* **v. pen'dulum pala'ti,** v. palatinum [BNA]. **v. semiluna're,** v. medullare posterius. **v. termina'le,** lamina terminalis [BNA]. **v. triangula're,** v. interpositum

ve'na, gen. and pl. *ve'næ* [L.] Vein, a blood-vessel carrying blood toward the heart; all the veins except the pulmonary carry dark or unaerated blood.

v. acromiothorac'ica, v. thoracoacromialis [BNA].

v. ad'vehens, pl. *venæ advehen'tess,* one of the veins in the embryo, carrying blood to the capillaries of the liver, and representing the right and left divisions of the portal vein.

v. angula'ris [BNA], angular vein, a short vein at the anterior angle of the orbit, formed by the supraorbital and frontal veins and continuing as the anterior facial.

v. anon'yma [BNA], innominate or brachiocephalic vein; formed by the union of the jugularis interna and subclavia; *tributaries;* the right (*anonyma dextra*) receives the right vertebralis and mammaria interna, and the right lymphatic duct; the left (*anonyma sinistra*) receives the left vertebralis, mammaria interna, intercostalis suprema, thyreoidea ima, and various anterior pericardial, bronchial, and mediastinal veins.

ve'næ arciform'es [BNA], veins in the kidney which collect the blood from the capillaries surrounding the tubules and unite to form a series of arches across the bases of the pyramids.

v. arterio'sa (1) v. portæ, arterial vein, so called because it ramifies like an artery; (2) pulmonary artery, called arterial vein because while proceeding from the heart, like an artery, it contains unaerated blood, like a vein.

v. auditi'va inter'na [BNA], one of two veins accompanying each internal auditory artery; they drain the internal ear, pass out through the internal auditory meatus, and empty into the lateral sinus or the posterior part of the inferior petrosal sinus.

v. auricula'ris ante'rior [BNA], anterior auricular vein, one of several emptying into the posterior facial.

v. auricula'ris poste'rior [BNA], posterior auricular vein, drains the parietal and posterior portion of the temporal regions, and unites with the posterior facial to form the external jugular.

v. axilla'ris [BNA], axillary vein, is a continuation of the basilic, running from the lower border of the teres major muscle to the outer border of the first rib where it becomes the subclavian.

v. az'ygos [BNA], azygos vein, v. azygos major, arises from the right ascending lumbar vein or the vena cava inferior, ascends through the aortic orifice of the diaphragm, lies in the posterior mediastinum, and terminates in the vena cava superior.

v. az'ygos ma'jor, v. azygos [BNA].

v. az'ygos mi'nor infe'rior, v. hemiazygos [BNA].

v. az'ygos mi'nor supe'rior, v. hemiazygos accessoria [BNA].

v. basa'lis [BNA], basal vein, basilar vein, vein of Rosenthal, a vein which ascends from the base of the brain to empty into the internal cerebral.

v. basila'ris, v. basalis [BNA].

v. basil'ica [BNA], basilic vein, arises at the upper part of the bend of the elbow by the union of the median basilic and the posterior ulnar veins, or arises from the dorsal plexus of the hand following the course usually described as taken by one of the ulnar veins; it joins the brachial veins to form the axillary.

v. basivertebra'lis [BNA], basivertebral vein, one of a number of veins in the spongy substance of the bodies of the vertebræ, emptying into the longitudinal vertebral sinuses.

v. brachia'lis [BNA], brachial vein, one of two veins in either arm accompanying the brachial artery in the upper arm and emptying into the axillary vein.

v. brachiocephal'ica, v. anonyma [BNA].

v. bronchia'lis [BNA], bronchial vein, one of many running in front of and behind the bronchial tubes and uniting into two main trunks which empty on the right side into the vena azygos, on the left into the vena hemiazygos accessoria or the left superior intercostal.

v. bronchia'lis ante'rior, one of a number of veins of the systemic circulation coming from the lungs and emptying into the anonyma or vena cava superior.

v. canalic'uli coch'leæ [BNA], runs from the cochlea to the bulb of the jugular vein.

v. cana'lis pterygoid'ei [BNA], Vidian vein, a vein accompanying the Vidian artery throuh the pterygoid canal and emptying into the pharyngeal vein.

v. cardi'aca mag'na, v. cordis magna [BNA].

v. ca'va infe'rior [BNA], receives the blood from the lower extremities and the greater part of the pelvic and abdominal organs; it begins at the level of the fifth lumbar vertebra on the right side, pierces the diaphragm at the level of the eighth dorsal vertebra, passes through the anterior mediastinum and empties into the back part of the right atrium (auricle) of the heart.

v. ca'va supe'rior [BNA], **v. c. crania'lis** [NK] returns blood from the head and neck, upper extremities, and thoraxo *tributaries* formed by union of the two venæ anonymæ; receives also v. azygos.

ve'næ caverno'sæ pe'nis [BNA], the cavernous venous spaces in the erectile tissue of the penis.

v. centra'lis ret'inæ [BNA], central vein of the retina, formed by union of the retinal veins and accompanies the artery of the same name in the optic nerve.

v. cepha'lica [BNA], arises at the point of union of one of the radial veins and the median cephalic, or arises from the dorsal plexus of the hand following the course usually described as that of the radial veins; it empties into the upper part of the axillary vein.

v. cerebel'li [BNA], one of the numerous cerebellar veins; the *superior* drain the upper surface of the cerebellum and empty into the straight and the transverse sinuses; the *inferior* drain the under surface and empty into the inferior petrosal and transverse sinuses.

v. cer'ebri infe'rior [BNA], one of numerous cerebral veins which drain the under surface of the cerebral hemispheres and empty into the cavernous and transverse sinuses.

v. cer'ebri inter'na [BNA], v. Galeni, one of two veins running in the tela chorioidea of the third ventricle, formed by the union of the chorioid and terminal veins, and emptying into the v. cerebri magna.

v. cer'ebri mag'na [BNA], v. magna Galeni, formed by junction of the two internal cerebral veins, runs in the transverse cerebral fissure, and empties into the straight sinus which forms a continuation of it.

v. cer'ebri me'dia [BNA], in the lateral cerebral fissure, anastomosing with the superior ophthalmic, and emptying into the sphenoparietal sinus.

v. cer'ebri supe'rior [BNA], one of numerous veins which drain the surface of the cerebral hemisphere and empty into the superior sagittal sinus or the lateral lacunæ.

v. cervica'lis profun'da [BNA], deep cervical vein, runs with the artery of the same name between the semispinalis capitis and semispinalis cervicis and empties into the anonyma or the vertebralis.

v. cervica'lis transver'sa, v. transversa colli [BNA].

v. chorioid'ea [BNA], drains the lateral ventricle and chorioid plexus and unites with the terminal vein to form the v. cerebri interna, or Galen's vein.

v. cilia'ris [BNA], one of several small veins, anterior and posterior, coming from the ciliary body.

v. circumflex'a il'ium profun'da [BNA], deep circumflex iliac vein, corresponds to the artery of the same name, and empties, near or in a common trunk with the deep epigastric into the external iliac vein.

v. circumflex'a il'ium superfic'ia'lis, [BNA], superficial circumflex iliac vein, corresponding to the artery

of the same name, emptying usually into the saphena magna, or sometimes into the femoral.

v. co'mes, pl. *ve'næ com'ites* [L. companion vein], v. comitans [BNA].

v. com'itans, pl. *ve'næ comitan'tes* [L. accompanying vein], [BNA] v. comes, a deep vein following the same course as its corresponding artery.

v. com'itans ner'vi hypoglos'si, runs with the hypoglossal nerve below and to the outer side of the hypoglossus muscle, emptying usually into the lingualis.

v. cor'dis ante'rior [BNA], one of two or three small veins in the anterior wall of the right ventricle opening into the right atrium independently of the sinus coronarius.

v. cor'dis mag'na [BNA], v. cardiaca magna, left coronary vein, a tributary of the sinus coronarius, beginning at the apex and running in the anterior interventricular sulcus.

v. cor'dis me'dia [BNA], inferior cardiac, inferior interventricular; begins at the apex of the heart and passes through the inferior interventricular sulcus to the sinus coronarius.

v. cor'dis min'ima [BNA], Thebesian vein, one of a number of small veins commencing in the walls of the heart and opening separately into the atria or ventricles.

v. cor'dis par'va [BNA], small cardiac vein, an inconstant vessel, accompanying the right coronary artery in the coronary sulcus, from the right margin of the right ventricle, and empties into the coronary sinus or the middle cardiac vein.

v. corona'ria ventric'uli [BNA], coronary vein of the stomach arises in the gastrohepatic omentum from a union of veinlets from both surfaces of the stomach; it follows a tortuous course through the gastrohepatic omentum, the left and then the right pancreaticogastric folds, and empties into the portal vein.

v. costoaxilla'ris [BNA], costoaxillary vein, one of a number of anastomotic veins connecting the intercostal veins of the 1st to 7th intercostal spaces with the lateral thoracic or the thoracoepigastric vein.

v. diplo'ica [BNA], one of numerous veins in the diploe of the cranial bones, connected with the cerebral sinuses by emissary veins.

v. dorsa'lis clitor'idis [BNA], a branch of the pudendal plexus, corresponding to the vena dorsalis penis in the male.

v. dorsa'lis lin'guæ [BNA], a tributary of the lingualis.

v. dorsa'lis pe'nis [BNA], dorsal vein of the penis, an unpaired vein running between the two dorsal veins of the penis and emptying, usually by two forks, into the prostaticovesical plexus.

v. emissa'ria, emissarium, emissary vein, one of the venous connections between the sinuses of the dura mater, the diploic, the meningeal, and the extracranial veins.

v. epigas'trica infe'rior [BNA], inferior epigastric vein, deep epigastric vein, corresponds to the artery of the same name and empties into the external iliac vein.

v. epigas'trica profun'da, v. epigastrica inferior [BNA].

v. epigas'trica superficia'lis [BNA], superficial epigastric vein, drains the lower and inner part of the abdominal wall and empties into the saphena magna or long saphenous vein.

v. epigas'trica supe'rior [BNA], one of the venæ comitantes of the artery of the same name, tributaries of the mammaria interna.

v. facia'lis ante'rior [BNA], anterior facial vein a continuation of the angular vein at the inner angle of the orbit passes diagonally downward and outward, uniting with the posterior facial in the carotid fossa, below the border of the lower jaw, to form the common facial.

v. facia'lis commu'nis [BNA], common facial vein, arises in the carotid fossa from the union of the anterior and posterior facial veins, and empties into the external jugular.

v. facia'lis poste'rior [BNA], posterior facial vein, temporomaxillary vein, formed by the union of the temporal veins in front of the ear, runs behind the ramus of the lower jaw through the parotid gland, and unites with the anterior facial to form the common facial.

v. femora'lis [BNA], femoral vein, accompanies the femoral artery in the same sheath, being a continuation of the popliteal vein, and becomes the external iliac vein at the level of Poupart's ligament, a little to the inner side of its center.

v. fronta'lis [BNA], frontal vein, one of several veins which drain the front part of the scalp and unite with the supraorbital to form the angular.

v. Gale'ni, see *v. cerebri interna* and *v. cerebri magna.*

v. gas'trica, gastric vein, vena coronaria [BNA].

ve'næ gas'tricæ bre'ves [BNA], short gastric veins, in the wall of the stomach emptying into the coronary vein.

v. glutæ'a infe'rior [BNA], inferior gluteal vein, sciatic vein, one of the venæ comitantes of the branches of the sciatic artery uniting at the sciatic foramen to form a common trunk which empties into the hypogastric, or internal iliac, vein.

v. glutæ'a supe'rior [BNA], superior gluteal vein, one of the veins which accompany the gluteal artery, entering the pelvis as two veins which unite into one and empty into the hypogastric, or internal iliac, vein.

v. hæmorrhoida'lis, hemorrhoidal vein, see *plexus hæmorrhoidalis.*

v. hæmorrhoida'lis supe'rior [BNA], superior hemorrhoidal vein, drains the greater part of the hemorrhoidal plexus, and ascends between the layers of the mesorectum to the brim of the pelvis, where it becomes the inferior mesenteric.

v. hemiaz'ygos [BNA], v. azygos minor inferior, begins in the epigastric region, pierces the left crus of the diaphragm, ascends along the left side of the bodies of the lower dorsal vertebræ, opposite the eighth vertebra crosses the front of the spine, behind the aorta, thoracic duct, and esophagus, and empties into the vena azygos.

v. hemiaz'ygos accesso'ria [BNA], v. azygos minor superior, formed by the union of the 4th to 7th left posterior intercostal veins, passes upward along the side of the bodies of the 5th, 6th, and 7th dorsal vertebræ, then crosses the spine behind the aorta, esophagus, and thoracic duct, and empties into the vena azygos.

v. hypogas'trica [BNA], hypogastric vein, internal iliac vein, runs from the upper border of the great sciatic notch to the brim of the pelvis where it joins the external iliac to form the common iliac; it drains most of the territory supplied by the internal iliac artery.

v. ili'aca commu'nis [BNA], common iliac vein, formed by the union of the external and internal iliac veins at the brim of the pelvis and passes upward behind the internal iliac artery to the right side of the body of the fifth lumbar vertebra where it unites with its fellow of the opposite side to form the inferior vena cava.

v. ili'aca exter'na [BNA], external iliac vein, a direct continuation of the femoral above the inguinal (Poupart's) ligament, uniting with the hypogastric (internal iliac) to form the common iliac vein.

v. ili'aca inter'na, internal iliac vein, v. hypogastrica [BNA].

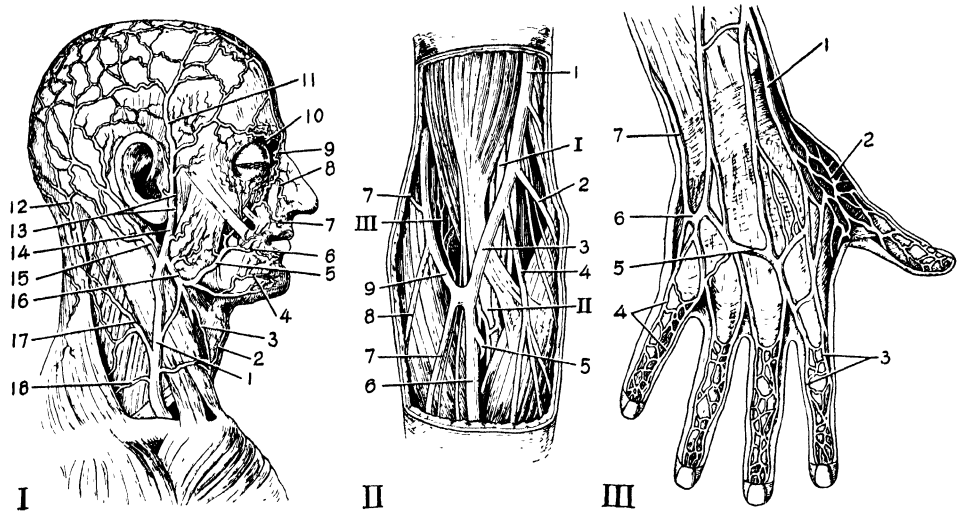
v. iliolumba'lis [BNA], iliolumbar vein, accompanying the artery of the same name, anastomosing with the lumbar and deep circumflex iliac veins, and emptying into the hypogastric.

v. innomina'ta, v. anonyma [BNA].

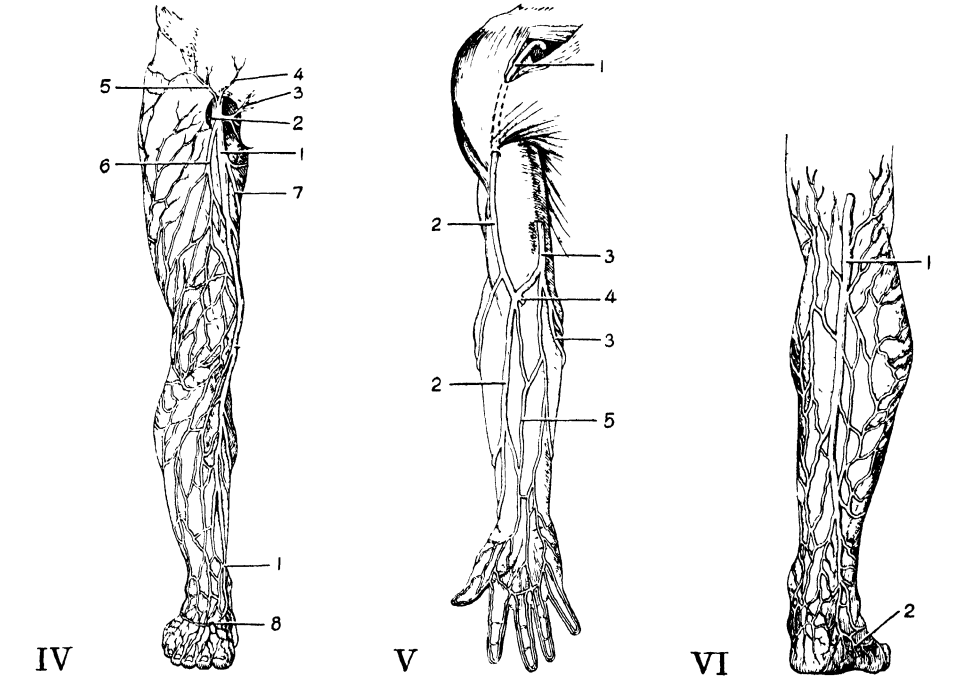
v. intercapitula'ris [BNA], intercapitular vein, one of the veins connecting the dorsal and volar veins in the hand, the dorsal and plantar veins in the foot.

v. intercosta'lis [BNA], one of the intercostal veins; the *anterior* are tributaries of the musculophrenic or internal mammary veins; the *posterior* terminate variously; on the right side the 1st terminates in the vertebral, the 2d to 4th form a common trunk, v. intercostalis suprema dextra, which empties into the azygos, the 5th to 11th empty separately into the azygos; on the left side the first empties into the vertebral or anonyma, the 2d to 4th form the v. intercostalis suprema sinistra, which empties into the left anonyma, the 5th to 8th empty into the hemiazygos accessoria, and the 9th to 11th into the hemiazygos.

v. intercosta'lis supre'ma [BNA], intercostalis superior, highest (superior) intercostal vein; a trunk formed by the 2d, 3d, and 4th posterior intercostal veins;



I. Veins of the Head and Neck 1 Jugularis externa, 2. Jugularis anterior, 3 Anastomosis between the anterior jugular and common facial, 4 and 6 Labialis inferior, 5 Facialis anterior, 7. Labialis superior, 8. Nasalis lateralis; 9. Angularis; 10 Supraorbitalis; 11 Temporalis superficialis; 12 Occipitalis, 13. Maxillaris interna; 14. Facialis posterior; 15 Auricularis posterior, 16 Facialis posterior, 17 Jugularis posterior externa, 18. Cervicalis transversa. II. Veins at the Front of the Elbow 1 and 2. Basilica; 3 Mediana basilica, 4 Accessoria ulnaris; 5 Profunda, 6. Mediana cubiti; 7. Cephalica, 8 Accessoria radialis; 9. Mediana cephalica, I Arteria brachialis, II Arteria ulnaris; III. Arteria recurrens radialis. III. Veins of the Back of the Hand: 1 and 2. Tributaries of the cephalica; 3 and 4. Dorsal digital plexuses, 5. Arcus venosus dorsalis manus, 6. Beginning of the basilica; 7. Basilica.



IV. Superficial Veins of the Front of the Thigh 1, 1, 1 Saphena magna, 2 Femoralis, 3 Pudendæ externæ; 4. Epigastrica superficialis; 5. Circumflexa ilium superficialis, 6. Femoralis superficialis lateralis; 7. Femoralis superficialis medialis, 8. Arcus venosus dorsalis pedis. V Superficial Veins of the Front of the Upper Extremity: 1, 2, 2. Cephalica; 3, 3. Basilica, 4 Profunda; 5. Mediana cubiti. VI. Tributaries of the Vena Saphena Parva: 1. Saphena parva; 2. Termination of the arcus dorsalis pedis on the outer side of the foot.

empties, on the right side, into the azygos, on the left into the anonyma.

v. interlobula'ris [BNA], branches of the portal vein in the liver dividing up into a network of capillaries which again unite to form the hepatic veins.

v. intervertebra'lis [BNA], intervertebral vein, one of numerous veins accompanying the spinal nerves, emptying in the neck into the vertebral, in the thorax into the intercostal, in the lumbar and sacral regions into the lumbar and sacral veins.

v. ischiad'ica, v. glutæa inferior [BNA].

v. jugula'ris anterior [BNA], arises on the digastric muscle from veins from the lower lip and mental region, descends the anterior portion of the neck superficially, pierces the superficial layer of the deep fascia, passes through Burns's space, and turns outward to empty into the external jugular at the outer border of the scalenus anticus muscle.

v. jugula'ris exter'na [BNA], external jugular vein, formed below the parotid gland by the junction of the posterior auricular and the posterior facial (temporomaxillary) it passes down the side of the neck external to the sternocleidomastoid muscle to the anterior part of the subclavian portion of the posterior triangle of the neck, where it crosses in front of the third portion of the subclavian artery and empties into the subclavian vein.

v. jugula'ris exter'na poste'rior, posterior external jugular vein, begins in the upper and back part of the neck, superficially, and runs downward and forward to empty into the external jugular at the posterior edge of the sternocleidomastoid muscle.

v. jugula'ris inter'na [BNA], a continuation of the transverse sinus of the dura mater, uniting, behind the cartilage of the first rib, with the subclavian to form the innominate (anonyma): *tributaries*, occipitalis thyreoidea superior, lingualis, facialis communis, facialis posterior, facialis anterior, pharyngeal, meningeal, and the vena comitans nervi hypoglossi.

v. labia'lis infe'rior [BNA], a tributary of the anterior facial vein draining the lower lip.

v. labia'lis supe'rior [BNA], superior labial vein taking blood from the upper lip and discharging into the anterior facial vein.

v. lie'na'lis [BNA], splenic vein, arises by the union of several small veins at the hilus on the anterior surface of the spleen, passes backward to the left kidney, then runs behind the upper border of the pancreas to the neck of the pancreas where it joins the superior mesenteric to form the portal.

v. lingua'lis [BNA], receives blood from the tongue, sublingual and submaxillary glands, and muscles of the floor of the mouth; empties into the jugularis interna or the facialis communis.

v. lumba'lis ascen'dens [BNA], ascending lumbar, arised from the sacral and lumbar veins and at the diaphragm becomes the azygos vein on the right side, the hemiazygos vein on the left.

v. mamma'ria inter'na [BNA], usually two veins accompany each artery of the same name, fusing into one at the upper part of the thorax and emptying into the anonyma of the same side.

ve'næ masseter'icæ [BNA], masseteric veins, plexiform veins accompanying arteries of the same name, which empty into the pterygoid venous plexus.

v. media'na antibra'chii [BNA], median nerve of the forearm, begins at the base of the dorsum of the thumb, curves around the radial side, ascends the middle of forearm, and just below the bend of the elbow divides into the median basilic and median cephalic veins; sometimes it divides lower down, one branch going to the basilic, the other to the median vein of the elbow.

v. media'na basil'ica [BNA], median basilic, the inner branch of the median, mediana antibrachii, which becomes the basilic when joined by the upper of the ulnar veins, the posterior ulnar.

v. media'na cepha'lica [BNA], median cephalic vein, the outer branch of the median, mediana antibrachii, which becomes the cephalic when joined by the radial.

v. media'na coll'i [BNA], median vein of the neck, occasionally present, due to fusion of the two anterior jugular veins.

v. media'na cu'biti [BNA], median vein of the elbow, a vein which passes across the bend of the elbow from the cephalic to the basilic; more commonly the vein in this location is called the median basilic.

v. mediastina'lis ante'rior [BNA], one of several small veins from the mediastinum emptying into the anonyma or the vena cava superior.

v. meninge'a [BNA], one of several small veins from the cerebral meninges emptying into the jugularis interna.

v. mesenter'ica infe'rior [BNA], inferior mesenteric vein, is a continuation of the superior hemorrhoidal at the brim of the pelvis, ascending to the left of the aorta behind the peritoneum and emptying into the splenic.

v. mesenter'ica supe'rior [BNA], superior mesenteric vein, begins at the ileum in the right iliac fossa, ascends in the root of the mesentery, and unites behind the neck of the pancreas with the splenic vein to form the portal.

ve'næ metacarpe'æ dorsa'les [BNA], dorsal metacarpal veins, given off from the digital venous arches, from the dorsal venous réte of the hand, from which extend the cephalic and basilic veins.

ve'næ metacarpe'æ vola'res [BNA], volar metacarpal veins emptying into the deep venous arch from which the radial and ulnar veins arise.

ve'næ metatarse'æ dorsa'les [BNA], dorsal metatarsal veins arising from the dorsal digital veins, forming the dorsal venous arch of the foot, and emptying into the long saphenous vein.

ve'næ metatarse'æ planta'res [BNA], plantar metatarsal veins, formed from the plantar digital veins, constituting the deep plantar venous arch, and emptying into the small saphenous vein.

v. obli'qua a'trii sinis'tri [BNA], oblique vein of Marshall; a small vein on the posterior wall of the left atrium, a tributary of the sinus coronarius; it is developed from the left duct of Cuvier.

v. obturato'ria [BNA], obturator vein, formed by the union of tributaries draining the hip and the muscles of the upper and back part of the thigh; it enters the pelvis by the obturator foramen and runs backward to empty into the hypogastric (internal iliac) vein.

v. occipita'lis [BNA], drains the occipital region and empties into the internal jugular or the suboccipital plexus.

v. œsophage'a [BNA], one of several small venous trunks bringing blood from the esophagus and emptying into the anonyma or the vena cava superior.

v. ophthal'mica infe'rior [BNA], arises from the inferior palpebral and lacrymal and divides into two terminal branches, one of which runs to the pterygoid plexus while the other joins the superior ophthalmic or empties into the cavernous sinus.

v. ophthal'mica supe'rior [BNA], superior ophthalmic vein, begins anteriorly from the nasofrontal vein, passes along the upper part of the inner wall of the orbit, passes out above the optic nerve and descends to empty into the cavernous sinus.

v. ova'rica [BNA], ovarian vein, begins at the pampiniform plexus at the hilus of the ovary and opens into the inferior vena cava.

v. palati'na [BNA], drains the palatine region and empties into the anterior facial.

v. palpebra'lis [BNA], one of the veins of the upper and lower eyelids, emptying for the most part into the anterior facial.

ve'næ pancreat'icæ [BNA], pancreatic veins, emptying into the superior mesenteric vein; one of the roots of the portal vein.

v. paraumbilica'lis [BNA], paraumbilical vein, Sappey's vein, one of several small veins arising from cutaneous veins about the umbilicus, running along the ligamentum teres of the liver, and terminating as accessory portal veins in the substance of this organ.

v. parotide'a ante'rior [BNA], one of several veins which, draining part of the parotid gland, empty into the anterior facial.

v. parotide'a poste'rior [BNA], draining part of the parotid gland and emptying into the posterior facial.

v. pericardi'aca [BNA], one of several small veins from the pericardium emptying into the anonyma or vena cava superior.

v. pharynge'a [BNA], one of several veins from the pharyngeal plexus emptying into the jugularis interna.

v. phren'ica infe'rior [BNA], inferior phrenic vein, drains the substance of the diaphragm and empties on

the right side into the vena cava, on the left side into the left suprarenal vein.

v. phren'ica supe'rior [BNA], one of the veins accompanying the pericardiacophrenica artery and emptying into the anonyma or vena cava superior.

v. poplitæ'a [BNA], popliteal vein, arises at the lower border of the poplitæus muscle by the union of the tibial veins, ascends through the popliteal space, and pierces the adductor magnus muscle to become the femoral vein.

v. por'tæ [BNA], portal vein, a wide short vein formed by the superior mesenteric and splenic (v. lienalis) behind the neck of the pancreas, ascending in front of the inferior vena cava, and dividing at the right end of the transverse fissure of the liver into two branches, right and left, which break up into numerous capillaries ramifying in the right and left lobes, respectively, of the liver.

v. poste'rior ventric'uli sinis'tri [BNA], posterior vein of the left ventricle of the heart, arises on the diaphragmatic surface of the heart near the apex, runs parallel to the longitudinal sulcus and empties with the vena cordis magna.

ve'næ puden'dæ exter'næ [BNA], these correspond to th arteries of the same name, they empty into the long saphenus or directly into the femoral, and receive the subcutaneous dorsal vein of the penis (clitoris) and the anterior scrotal (or labial) veins.

v. pulmona'lis [BNA], pulmonary vein, one of four veins, two on each side, conveying the blood from the lungs to the left atrium of the heart.

v. pylor'ica, pyloric vein, receives the veinlets from both surfaces of the upper portion of the stomach, runs to the right along the lesser curvature of the stomach, and empties into the portal vein.

v. radia'lis [BNA], radial vein, arises from the dorsal venous plexus of the hand, ascends the forearm passing to the flexor side, and empties into the cephalic.

v. radia'lis profun'da, deep radial vein, one of several veins continuing the deep palmar veins on the outer side, and accompanying the radial artery.

ve'næ rena'les [BNA], renal veins, accompanying the arteries of the same name, open at right angles into the vena cava at the level of the second lumbar vertebra.

v. re'vehens, pl *ve'næ revehen'tes*, one of several veins in the embryo, passing from the capillaries of the liver to the sinus venosus, developing into the hepatic veins.

v. sacra'lis latera'lis [BNA], lateral sacral vein, one of several veins which accompany the corresponding arteries and empty into the internal iliac (hypogastric) vein on each side.

v. sacra'lis me'dia [BNA], middle sacral vein, the vena comitans of the middle sacral artery emptying into the left common iliac vein.

v. salvatell'a, the dorsal vein of the little finger, bleeding from which was formerly resorted to in the treatment of melancholia.

v. saphe'na accesso'ria [BNA], accessory saphenous vein, an occasional vein running in the thigh parallel to the long saphenous which it joins just before the latter empties into the femoral vein.

v. saphe'na bre'vis, v. saphena parva [BNA].

v. saphe'na exter'na, v. saphena parva [BNA].

v. saphe'na inter'na, v. saphena magna [BNA].

v. saphe'na lon'ga, v. saphena magna [BNA].

v. saphe'na mag'na [BNA], large saphenous vein, long or internal saphenous vein, formed by the union of the dorsal vein of the great toe and the dorsal venous arch of the foot, ascends in front of the inner malleolus, behind the inner condyle of the femur, and empties into the femoral vein in the upper part of Scarpa's triangle.

v. saphe'na par'va [BNA], small saphenous vein, short or external saphenousvein, arises on the outer side of the foot from a union of the dorsal vein of the little toe with the dorsal venous arch, ascends behind the outer malleolus, along the outer border of the tendo Achillis and then through the middle of the calf to the lower portion of the popliteal space where it empties into the popliteal vein.

ve'næ scrota'les [BNA], scrotal veins, anterior and posterior, the former emptying into the external pudendal, the latter into the internal pudendal veins.

v. spina'lis exter'na [BNA], one of the external spinal veins, lying on the external surface of the spinal cord, emptying into the intervertebral veins.

v. spina'lis inter'na [BNA], one of the internal spinal veins, running in the interior of the spinal cord.

v. stella'ta [BNA], pl. *ve'næ stella'tæ*, one of the stellate veins, Verheyen's stars, the star-shaped groups of veins in the renal cortex.

v. stylomastoid'ea [BNA], stylomastoid vein, drains the tympanum and empties into the posterior facial.

v. subcla'via [BNA], subclavian vein, the direct continuation of the axillary, running from the outer border of the first rib to the sternal end of the clavicle where it terminates in the anonyma.

v. sublingua'lis [BNA], a tributary of the lingualis.

v. submenta'lis [BNA], situated below the chin, anastomosing with the sublingual, connecting with the anterior jugular, and emptying into the anterior facial.

v. supraorbita'lis [BNA], supraorbital vein, drains the front of the scalp and unites with the frontal to form the angular.

v. suprascapula'ris, v. transversa scapulæ [BNA].

v. tempora'lis me'dia [BNA], middle temporal vein, arises near the lateral angle of the orbit, runs backward above the zygoma and joins the superficial temporal veins to form the posterior facial.

v. tempora'lis profun'da [BNA], one of the deep temporal veins, corresponding to the arteries of the same name, emptying into the pterygoid venous plexus.

v. tempora'lis superficia'lis [BNA], the superficia veins, corresponding to though not accompanying the arteries of the same name, unite to form a single trunk which unites with the middle temporal artery to form the posterior facial.

v. temporomaxilla'ris, v. facialis posterior [BNA].

v. termina'lis [BNA], terminal vein, vein of the corpus striatum, collects blood from the thalamus, corpus callosum, and corpus striatum and empties with the chorioid into the internal cerebral.

v. testicula'ris [BNA], testicular or spermatic vein, passing upward from the pampiniform plexus, at the posterior border of the testis, in the spermatic cord.

v. thoraca'lis latera'lis [BNA], lateral thoracic vein, long thoracic vein, lying on the inner wall of the axilla, and emptying into the axillary; it anastomoses with the thoraco-epigastric and with a number of the intercostal veins.

v. thorac'ica longa, v. thoracalis lateralis [BNA]

v. thorac'ica longitudina'lis [NK], one of the longitudinal thoracic veins, belonging to the azygos system

v. thoracoacromia'lis [BNA], thoracoacromial vein, acromiothoracic vein, thoracic axis; corresponding to the artery of the same name, empties into the axillary, sometimes by a common trunk with the cephalic vein.

v. thoracoepigas'trica [BNA], thoracoepigastric vein, one of two veins, sometimes a single vein, arising from the region of the superficial epigastric and opening into the axillary or the lateral thoracic vein.

v. thy'mica [BNA], one of a number of small veins from the thymus gland emptying into the left innominate (anonyma sinistra).

v. thyreoid'ea i'ma [BNA], arises from the plexus thyreoideus impar, descends in front of the trachea, and empties into the anonyma sinistra.

v. thyreoid'ea infe'rior [BNA], formed by veinlets from the isthmus and lateral lobe of the thyroid gland and from the plexus thyreoideus impar.

v. thyreoid'ea supe'rior [BNA], superior thyroid vein, receives blood from the upper part of the thyroid gland and larynx, accompanies the artery of the same name, and empties into the internal jugular.

v. tibia'lis [BNA], tibial vein, one of the veins accompanying the anterior and posterior tibial arteries, and uniting to form the popliteal vein.

v. trachea'lis [BNA], one of several small venous trunks from the trachea, emptying into the anonyma or the vena cava superior.

v. transver'sa col'li [BNA], one of the transverse veins of the neck, transversales colli, transverse cervical, veins accompanying the corresponding arteries, emptying into the external jugular or sometimes into the subclavian.

v. transver'sa facie'i [BNA], transverse vein of the face, a tributary of the posterior facial, anastomosing with the upper portion of the external jugular.

v. transver'sa scap'ulæ [BNA], transverse vein of the scapula, suprascapular vein, a vein accompanying the artery of the same name and emptying into the external jugular or occasionally the subclavian.

v. transversa'lis col'li, v. transversa colli [BNA].

v. tympan'ica [BNA], tympanic vein, one of the veins draining the tympanum, emptying into the posterior facial.

v. ulna'ris [BNA], one of the ulnar veins which arise in the dorsal venous plexus of the hand and ascend, curving around the ulnar side of the forearm, to the flexor surface when they empty into the basilic vein.

v. umbilica'lis [BNA], a vein in the fetus which is connected with the portal vein until birth when it is obliterated, becoming thea ligmentum teres of the liver.

v. uteri'na [BNA], uterine vein, one of two veins on each side which arise from the uterine plexus, pass through a part of the broad ligament and then through a peritoneal fold, and empty into the hypogastric (internal iliac) vein.

v. vertebra'lis [BNA], derived from tributaries which run through the foramina in the transverse processes of the cervical vertebræ and form a plexus around the vertebral artery; it empties as a single trunk into the anonyma.

ve'næ vestibula'res [BNA], branches of the internal pudendal vein, corresponding to the veins of the bulb of the urethra in the male.

v. vortico'sa [BNA], pl. *ve'næ vortico'sæ*, one of the vortex or vorticose veins, several veins in the tunica vasculosa formed of branches from the posterior surface of the eye and the ciliary body, emptying into the superior or inferior ophthalmic.

venæsec'tio. Venesection

vena'tion. The arrangement and distribution of veins, especially the veins of a leaf or petal, nervation.

venenation (ve-ne-na'shun) [L. *venenum*, poison.] Poisoning.

veneniferous (ve-ne-nif'er-us) [L. *venenum*, poison, + *ferre*, to carry.] Conveying poison.

Veneno'sa. *Nocua, Thanatophidia*, a former division or class of serpents including the distinctly venomous ones; the non-poisonous serpents were classed as *Innocua*, and those the character of which was not known, as *Suspecta*.

ve"nenosal'ivary. Secreting a poisonous saliva, said of venomous reptiles.

ven'enous [L. *venen m*, poison.] Poisonous.

venepuncture (ve-ne-punk'chūr). The puncture of a vein for any purpose.

venereal (ve-ne're-al) [L. *Venus*, the goddess of love.] Relating to or resulting from sexual intercourse. **v. bubo,** an enlarged gland in the groin associated with any venereal disease, especially chancroid. **v. carnos'ity,** v. wart. **v. disease',** any disease which is usually acquired during sexual intercourse—gonorrhea, syphilis, or chancroid. **v. sore, v. ulcer,** chancroid. **v. wart,** condyloma, verruca acuminata.

venereol'ogy. The special study of venereal diseases.

venereophobia (ve-ne"rĭ-o-fo'bĭ-ah) [venereal (disease) + G. *phobos*, fear.] Cypridophobia.

ven'ery. Excessive, especially illicit, sexual intercourse.

venesec'tion [L. *vena*, vein, + *sectio*, a cutting.] Phlebotomy, the opening of a vein for the abstraction of blood.

venesu'ture. Suture of a vein, phleborrhaphy.

ve'niplex. A venous plexus.

venoclysis (ve-nok'li-sis) [L. *vena*, vein, + G. *klysis*, a syringing.] The continuous intravenous administration of a medicinal or nutrient solution.

venofibrosis (ve-no-fi-bro'sis) [L. *vena*, vein, + *fibrosis*.] Phlebosclerosis.

ven'om [Fr. *venin*; L. *venenum*, poison.] The poison excreted by certain animals, such as reptiles and insects, as a means of protection or for destroying their prey.

ven"omosal'ivary. Venenosalivary.

venomotor (ve-no-mo'tor). Causing change in the caliber of a vein.

veno-peritoneostomy (ve"no-per-ĭ-to-ne-os'to-mĭ). The operation of inserting the cut end of the saphenous vein into the peritoneal cavity in cases of ascites; the vein is inverted so that the valves prevent regurgitation of blood into the cavity while the ascitic fluid readily flows away into the vein; Ruotte's operation.

venopressor (ve-no-pres'or). Relating to the venous blood-pressure and consequently the volume of venous supply to the right side of the heart.

venosclerosis (ve-no-skle-ro'sis). Phlebosclerosis.

venose (ve'nōz). Having veins, in either the botanical or the anatomical sense; venous, veiny.

venos'ity. 1. A venous state, a condition in which the bulk of the blood is in the veins at the expense of the arteries. 2. The unaerated condition of venous blood.

ve'nous [L. *venosus*.] Relating to a vein or to the veins. **v. angle,** see *angle*. **v. blood,** see *blood*. **v. cal'culus,** phlebolith. **v. heart,** the right side (atrium and ventricle) of the heart. **v. hum,** a musical murmur heard on auscultation over the larger veins in the neck, especially when pressure on them is made with the bell of the stethoscope. **v. hypere'mia,** passive congestion; venosity. **v. sinus,** cerebral sinus.

venovenos'tomy [L. *vena*, vein, + *vena*, vein, + G. *stoma*, mouth.] The formation of an anastomosis between two veins.

vent [O. Fr. *fente*, a chink, cleft.] An opening into a cavity or canal, especially one through which the contents of such cavity are discharged, as the anus.

ven'ter [L. belly.] 1. The abdomen. 2. Any one of the three great cavities of the body. 3. The uterus. 4. The wide swelling part of a muscle. 5. In botany, the lower part of the archegonium in which the ovum is formed. **v. ante'rior,** the anterior division of a digastric muscle **v. il'ii,** the internal concave surface of the ilium, fossa iliaca. **v. i'mus** [L lowest], the abdomen. **v. me'dius** [L. middle], the thorax. **v. po te'rior,** the posterior division of a digastric muscle. **v. propen'dens,** (1) anteversion of the uterus; (2) a pendulous abdomen. **v. re'num,** pelvis of the kidney **v. scap'ulæ,** fossa subscapularis, the broad concave anterior surface of the scapula. **v. supre'mus** [L. highest], the cranial cavity.

ven'tilate [L *ventilare*, to fan.] 1 To renew the air in an apartment or closed space. 2. To aerate, or oxygenate, the blood in the pulmonary capillaries.

ventila'tion. 1. Expulsion of foul air and admission of fresh in an apartment or other closed space 2. Aeration of blood in the lungs. **bal'ance v.**, a combination of the plenum and vacuum systems. **exhaus'tion v.,** forcible withdrawal of air from a room, as by a suction fan, fresh air being admitted through the windows and doors; an open fire provides exhaustion v. **ple'num v.,** ventilation by forcing fresh air into a room by means of a fan or blower, the foul air escaping through the doors or windows; a hot-air furnace affords plenum v. **vac'uum v.,** exhaustion v. **v. in'dex,** see under *index*. **v.**

test, measurement of the amount of air expired by the subject during a period of standardized exercise and for a certain length of time after the exercise is ended.

ventose (ven-tōs') [L. *ventosus*, windy.] 1. Flatulent, puffed out with gas. 2. A cupping-glass.

ventouse (vahn-tooz') [Fr.] Ventose.

ven'trad [L *venter*, belly, + *ad*, to.] Toward the ventral aspect; opposed to *dorsad*.

ven'tral. Relating to the belly or the abdomen, abdominal; opposed to dorsal; relating to the spinal cord in man, anterior [NK], as v. column, v. fissure. **v. aspect,** the anterior or inferior aspect, that directed toward the belly and away from the back. **v. hernia,** hernia through any part of the abdominal wall.

ventricle (ven'trĭ-kl) [L. *ventriculus*, dim. of *venter*, belly, uterus.] A small cavity, especially one in the brain or the heart; see *ventriculus*. **collo'sal v.,** sulcus corporis callosi. **car'diac v.,** see *ventriculus dexter* and *ventriculus sinister*. **cer'ebral v.,** see *ventriculus lateralis*, *ventriculus quartus*, *ventriculus tertius*, and *cavum septi pellucidi*. **laryn'geal v.,** ventriculus laryngis. **sixth v.,** a space containing cerebrospinal fluid sometimes existing between the fornix and the callosum

ventricolum'na. Ventricornu.

ventricor'nu. The anterior horn of gray matter, columna anterior [BNA], of the spinal cord.

ventricor'nual. Relating to the ventricornu.

ventricose (ven'trĭ-kōs). Inflated, bellied; corpulent.

ventric'ular. Relating to a ventricle, in any sense **v. band,** false vocal cord, plica* ventricularis [BNA]. **v. fibrilla'tion,** see under *fibrillation*. **v. plateau** (plă-to'), a level portion of the intraventricular blood-pressure curve, representing graphically the maintenance of contraction of the ventricle. **v. septum,** (1) the septum between the cardiac ventricles; (2) septum pellucidum [BNA]

ventricula'ris. Musculus thyreoepiglotticus.

ventric'ulin. Trade name of the desiccated and defatted wall of the hog's stomach, recommended in the treatment of pernicious anemia.

ventriculography (ven-trik-u-log'ră-fĭ) [L *ventriculum*, ventricle, + G. *graphē*, a writing.] Radiography of the cerebral ventricles.

ventriculonector (ven-trik''u-lo-nek'tor) [L. *ventriculus*, ventricle, + *nector*, joiner.] Atrioventricular bundle,* bundle of His. See *cardionector*.

ventric'ulus, pl. *ventric'uli* [L. dim. of *venter*, belly.] [BNA] 1. The stomach. 2. A ventricle, as of the brain or heart. **v. dex'ter** [BNA], right ventricle of the heart, the cavity on the right side of the heart which receives the venous blood from the right atrium and drives it by the contraction of its walls into the pulmonary artery. **v. laryn'gis** [BNA], sinus laryngis, the recess in each lateral wall of the larynx between the false and true vocal cords. **v. latera'lis** [BNA], lateral ventricle, a cavity in the interior of each cerebral hemisphere, communicating through the foramen of Monro with the third ventricle; it has four indistinctly separated parts, the pars centralis (cella media) and three cornua—anterior, posterior, and inferior or descending. **v. quar'tus** [BNA], fourth ventricle, a cavity of roughly rhomboidal shape in the brain, the floor, or anterior wall, of which is formed by the dorsal surface of the pons and medulla; it is continuous below with the central canal of the spinal cord, anteriorly with the aqueduct of Sylvius. **v. quin'tus,** fifth ventricle, cavum* septi pellucidi [BNA]. **v. sinis'ter** [BNA], the left ventricle of the heart, the cavity on the left side of the heart which receives the arterial blood from the left atrium and drives it by the contraction of its walls into the aorta. **v. termina'lis** [BNA], the dilated portion of the central canal of the spinal cord at the tip of the conus medullaris. **v. ter'tius** [BNA], third ventricle of the brain, a narrow cavity between the two optic thalami, extending from the lamina cinerea to the pineal body; its floor is formed by the tuber cinereum, the corpora mamillaria, the substantia perforata posterior, and a portion of the tegmenta of the pedunculi cerebri; its roof is formed by a fold of pia mater (velum interpositum) lined by a thin epithelial layer attached to the tænia thalami on either side.

ventricum'bent [L. *venter*, belly, + *cumbere*, to lie down.] Prone, lying on the belly.

ven'triduct [L. *venter*, belly, + *ducere*, to lead.] To draw toward the belly, as in flexion of the thigh

ventriduc'tion. Drawing toward the belly.

ventrifixa'tion. Ventrofixation.

ventrim'esal. Relating to the midline of the ventral surface.

ven'trimeson [L. *venter*, belly, + G. *mesos*, middle] The ventral border of the meson, or median plane of the body.

ventripyr'amid. Pyramis medullæ oblongatæ [BNA].

ventrocystor'rhaphy [L. *venter*, belly, + *kystis*, cyst, + *rhaphē*, suture.] The operation of opening an abdominal cyst and stitching it to the borders of the wound in the abdomen; marsupialization.

ventrodor'sad. Dorsad, in a direction from the venter to the dorsum.

ventrofixa'tion. The suture of a displaced viscus such as the uterus, to the abdominal wall, ventrosuspension; abdominal hysteropexy, ventrohysteropexy.

ventrohys'teropexy [L. *venter*, belly, + *hystera*, uterus, + *pēxis*, fixation.] Ventrofixation of a displaced, retroverted, uterus.

ventroin'guinal. Relating to the abdomen and the groin.

ventrolat'eral. Both ventral and lateral.

ventrome'dian. Ventrimesal.

ventromy'el [L. *venter*, belly, + G. *myelos*, marrow] The anterior portion of the spinal cord.

ventropto'sia, ventropto'sis [L. *venter*, belly + G. *ptōsis*, a falling.] Gastroptosia.

ventros'copy [L. *venter* belly, + *skopeō* I view.] Celioscopy.

ventrose (ven'trōs) [L. *venter*, belly.] 1. Corpulent. 2. Having a belly, or belly-like swelling.

ventros'ity. Corpulence.

ventrosuspen'sion [L. *venter*, belly, uterus, + *suspendere*, to hang.] Ventrofixation.

ventrot'omy [L. *venter*, belly, + G. *tomē*, incision.] Laparotomy, celiotomy.

ventroves"icofixa'tion. Hysterocystopexy.

ve'nula [L. dim. of *vena*.] [BNA] Venule, veinlet, a minute vein, a venous radicle continuous with a capillary.

venule (ve'nūl). Venula.

ve'nus [L. *Venus*, the goddess of love.] 1. Sexual intercourse. 2. Copper, in old chemistry. **V.'s collar,** melanoleucoderma colli, a marbleization of the skin encircling the neck, occasionally seen as a syphilitic eruption.

veratral'bine. An alkaloid or mixture of alkaloids derived from veratrum album.

verat'ric acid. An acid, $C_9H_{10}O_4$, present in sabadilla; it occurs in the form of prismatic crystals soluble in alcohol and hot water; with bases it forms salts, called *veratrates*

veratriin (ver-at'rĭ-in) A concentration product of veratrum viride.

veratri'na N.F., Br.). Veratrine, a mixture of alkaloids from the seed of *Asagræa officinalis* (U.S.), or of *Schœnocaulon officinale* (Br.); a grayish white powder of acrid taste and intensely irritating to the nasal mucous membrane, nearly insoluble in water; employed in neuralgia and rheumatism and as a cardiac sedative in dose of gr. $\frac{1}{16}$ (0.002), but chiefly externally in ointment.

ver'atrinize, ver'atrize. To produce in one the physiological effects of veratrine.

veratroid'ine. An alkaloid or mixture of alkaloids derived from veratrum album, perhaps the same as veratralbine.

verat'rol. Pyrocatechin dimethyl ester, a colorless crystalline derivative of veratric acid; used in tuberculosis, like guaiacol, in doses of gr. 1–3 (0.06–0.2), and externally in the treatment of neuralgia.

verat'rone. Trade name of a liquid preparation of veratrum viride, employed for the same purposes as the fluidextract of veratrum viride.

veratrum viride (ve-rat'rum vir'i-de) (U.S.) Hellebore, the dried rhizome and roots of *Veratrum viride*, American or green hellebore; a nervous, respiratory, and cardiac sedative, diuretic, and diaphoretic, in doses of gr. 1–3 (0.06–0.2). *V. album*, European or white hellebore, having properties similar to the preceding was formerly included with it under the official title of veratrum, but has now been discarded.

verbas'cum [L. mullein.] Mullein, flannel-leaf, from *Verbascum phlomoides*, *V. thapsus*, and *V. thapsiforme;* employed in catarrhal conditions of the respiratory tract. Two parts of the plant are listed in the N.F., namely, the flowers, *verbas'ci flor'es*, dose ʒ2 (8.0), and the leaves, *verbas'ci fo'lia*, dose ʒ1 (4.0); of the latter the N.F. contains a fluidextract, dose ʒ1 (4.0).

verbe'na [L. *verbenæ*, sacred boughs (laurel, myrtle, and the olive).] The rhizome and roots of *Verbena hastata*, blue vervain, wild hyssop; expectorant and diaphoretic in doses of ɱ15 (1.0) of the fluidextract.

verbigeration (ver-bij-er-a'shun) [L. *verbum*, word, + *gerere* to carry about] Oral stereotypy, the constant repetition of meaningless words or phrases.

verdigris (ver'de-grēs) [O.Fr. *verd*, green, *de*, of, *Gris*, Greeks.] 1. Copper subacetate, ærugo. 2. Green rust, the stain on dirty copper vessels, usually a carbonate of copper. **crys'tallized** or **distilled v.**, cupri acetas neutralis.

verdunization (vār-dun-i-za'shun) [*Verdun*, a besieged French city during the World War where the method was originated.] The sterilization of the water supply by the addition of small quantities of chlorine and potassium permanganate.

Ver'ga's lac'rymal groove (vair'gah) [*Verga*, Italian anatomist, 1811–1895.] A groove passing down from the lower orifice of the nasal duct when the latter opens on the lateral wall of the nasal fossa; when the orifice of the duct is at the upper part of the inferior meatus the groove is wanting. **V.'s ven'tricle,** a narrow space sometimes found beneath the psalterium (commissura hippocampi), when this lamina is not completely fused to the under surface of the corpus callosum.

ver'gence [L. *vergere*, to incline, to turn.] Inclining, turning, said of the movements of the eyeballs.

Verheyens stars (fer-hi'en) [Philippe *Verheyen*, Flemish anatomist, 1648–1710.] **Stellula Verheyenii**, venæ stellatæ, the star-shaped groups of veins in the renal cortex.

Verhoeff's opera'tion (fer'hĕf). Sclerotomy combined with electrolytic punctures for detachment of the retina.

ver'juice [Fr. *verd*, green + *jus*, juice.] The acid juice of unripe fruits.

Vermale's opera'tion (ver-mal') [Raymond de *Vermale*, French surgeon, 18th century.] A double-flap transfixion amputation.

Ver'mes (vur'mēz) [L. *vermis*, worm.] A class or subkingdom of invertebrate legless animals, the worms.

vermici'dal [L. *vermis*, worm, + *cædere*, to kill.] Destructive to worms, specifically destructive to the parasitic intestinal worms.

vermicide (vur'mĭ-sīd) [*vermis*, worm, + *cædere*, to kill.] 1. Vermicidal. 2. An agent which kills intestinal parasitic worms.

vermic'ular [L. *vermiculus*, dim. of *vermis*, worm.] Relating to, resembling, or moving like a worm vermiform **v. appen'dix**, vermiform appendix. **v. movement**, peristaltic movement. **v. pulse**, a small rapid pulse, giving a worm-like sensation to the finger.

vermicula'tion. A worm-like movement, peristalsis.

vermicule (vur'mĭ-kūl) [L. *vermiculus*, a small worm] 1. A small worm. 2. Ookinete.

vermic'ulose, vermic'ulous. 1. Wormy, infested with worms or larvæ. 2. Worm-like, vermiform, vermicular.

vermiculus (vur-mik'u-lus) [L. dim. of *vermis*, worm.] Vermicule. 1. A small worm or grub. 2. Ookinete.

vermiform (vur'mĭ-form) [L. *vermis*, worm, + *forma*, form.] Worm-shaped, resembling a worm in form. **v. appen'dix,** an intestinal diverticulum normally extending from the head of the cecum; it is from 3 to 6 inches in length and ends in a blind extremity; processus vermiformis [BNA]. **v. process,** (1) the middle lobe, or vermis, of the cerebellum; (2) the v. appendix.

vermif'ugal [L. *vermis*, worm, + *fugare*, to chase away.] Causing the expulsion of parasitic worms from the intestine.

vermifuge (vur'mĭ-fūj). 1. Vermifugal. 2. An agent which causes the expulsion of intestinal worms.

vermijelli (vur-mĭ-jel'ĭ) [*vermin* + *jelly*.] Proprietary name of an ointment employed in the treatment of pediculosis.

vermil'ion. A red pigment formerly made from cinnabar or red mercuric sulphide. **v. border,** the red border of the lips where the skin merges into mucous membrane.

ver'min. Parasitic insects, such as lice and bedbugs.

ver'minal. Verminous.

vermina'tion. 1. The production or breeding of worms or larvæ. 2. Infestation with vermin.

ver'minous. Relating to, caused by, or infested with worms, larvæ, or vermin.

ver'mis [L. worm.] 1 A worm. 2. The narrow middle lobe or connecting mass between the two hemispheres of the cerebellum; the portion projecting above the level of the hemispheres on the upper surface is called the *superior v.*, the lower portion, forming the floor of the vallecula, is the *inferior v.*

ver'mix. Vermiform appendix.

vermuth, vermouth (vur'mooth) [A.S. *vermōd*, wormwood.] A wine flavored with wormwood.

ver'nal [L. *vernalis; ver*, spring.] Relating to, or occurring in the springtime. **v. catarrh', v. conjunctivi'tis,** see under *conjunctivitis*. **v. fever,** a malarial fever.

verna'tion [L. *vernatio*, growing again.] In botany, the manner of grouping of the leaves in a bud.

Vernes' test (vairn) [A. *Vernes*, French physician, contemporary.] A color blood test for syphilis; a mixture is made of the subject's serum, pig serum, perethynol, and sheep's cells; if syphilis is present the mixture is colorless, if it is not present there is a deep red coloration; the gradation in color between the two constitutes *V.'s syphilitic index* which is of value in the control of treatment. **V.'s resorcin test.** To 0.6 c.c. of the patient's blood serum is added an equal quantity of a 1.25 per cent. solution of resorcin in doubly distilled water and the optic density of the medium is determined by a photometer; if the reading gives a figure below 15 the person is regarded as free from tuberculosis, if it is above 30 the patient has the disease in the lungs or elsewhere.

Verneuil's canals' (ver-ne'e) [Aristide Auguste *Verneuil*, Parisian surgeon, 1823–1895.] Collateral veins; vessels which arise from a venous trunk, run parallel with it for a variable distance, and then join it again **V.'s neuro'ma,** a nodular enlargement of the cutaneous nerves.

vernier (vur'ne-ur) [after the inventor, Pierre *Vernier*, French physicist, 1580–1637] A finely graduated scale, moving along a more coarsely graduated fixed scale, used for measuring fractions of the graduations on the latter.

ver'nine. An alkaloid derived from clover and other plants and also from ergot.

ver'nix [L.] Varnish. **v. casein'i,** casein varnish, a substance forming a creamy mixture with hot water, used as a menstruum for powders which are held suspended in it with little tendency to form a sediment. **v. caseo'sa,** the fatty substance, consisting of desquamated epithelium and sebaceous matter, which covers the skin of the fetus.

Verno'nia [after William *Vernon*, English botanist, 17th century.] A genus of plants of the order *Compositæ*, the seeds of one species of which, *V. anthelmin'tica*, an East Indian plant, have vermifuge properties; the root of another species, *V nigritia'na*, of West Africa, is a cardiac poison resembling digitalis, and contains a glucoside, *vernonin*.

ver'onal. Barbitalum (U.S.). **sol'uble v.,** barbitalum solubile (U.S.). **v.-so'dium,** barbital sodium, barbitalum solubile (U.S.).

Veron'ica. A genus of plants of the order *Scrophulariaceæ*. **V. beccabun'ga,** brooklime or water-pimpernel, a European plant formerly employed as a bitter tonic. **V. officina'lis,** speedwell, Paul's betony, an astringent employed as a tonic tea in domestic medicine. **V. virgin'ica,** leptandra (U.S.).

verru'ca [L.] Wart, a circumscribed hypertrophy of the papillæ and epidermis. **v. acumina'ta,** fig-wart, condyloma acuminatum **v. digita'ta,** a wart in which the papillæ are very distinct. **v, filifor'mis,** a wart made up of a few greatly elongated papillæ. **v. gy'ri hippocam'pi,** one of the numerous small wart-like prominences on the convex surface of the gyrus hippocampi. **v. molluscifor'mis,** condyloma. **v. necrogen'ica,** lupus verrucosus (2). **v. perua'na, v. peruvia'na,** a stage or form of Oroya fever or Carrion's disease; a specific endemic disease of the Peruvian Andes, marked by fever, rheumatic pains, progressive anemia, and an eruption of softish conical or pedunculated tumors of the size of a pea and larger; the disease lasts from a few weeks to several months, and has a fatality of from 8 to 50 per cent. **v. pla'na juveni'lis,** a flat wart of small size and often glistening aspect, seen especially on the face of the young. **v. pla'na seni'lis,** keratosis senilis. **v. seni'lis,** keratosfs senilis. **v. sim'plex,** v. vulgaris. **v. vulga'ris,** common wart, a circumscribed overgrowth of the papillæ of the skin covered with a more or less thickened epidermis.

verru'ciform [L. *verruca*, wart, + *forma*, form.] Wart-shaped.

verrucose, verrucous (ver'u-kōs, ver'u-kus). Warty, presenting wart-like elevations.

verruga peruana (ver-roo'gah pa-roo-ah'nah) [Sp. Peruvian wart.] Carrion's disease, verruca* peruana

verru'gas [Sp. warts.] Verruca peruana.

versicolor (vur-sik'o-lor) [L. *partycolored*.] Marked by several shades of color.

version (vur'shun) [L. *vertere*, to turn.] 1. A displacement of the uterus, consisting in a tilting of the entire organ without bending upon itself; the varieties of displacement are termed *anteversion*, forward, *retroversion* backward, and *lateroversion*, to one or the other side. 2. Change of position of the fetus in the womb, occurring spontaneously or effected by the manipulations of the accoucheur. 2. Inclination.* **biman'ual** or **bipo'lar v.** is performed by the hands acting upon both extremities of the fetus; it may be external or combined. **cephal'ic v.** is that in which the fetus is turned so that the head presents. **combined v.,** bipolar v. by means of one hand in the vagina, the other on the abdominal wall. **exter'nal v.,** performed entirely by external manipulation. **inter'nal v.,** performed by means of one hand within the vagina. **pel'vic v.,** v. by means of which a cross presentation is converted into a pelvic one. **podal'ic v.,** seizure of the foot of the fetus and turning so that this part presents. **pos'tural v.,** non-manual v. obtained by placing the mother in a certain position. **sponta'neous v.,** turning of the fetus effected by the contraction of the uterine muscle.

vert [L. *vertere*, to turn.] To turn, to duct, noting the revolving motion of any part.

vertebra, gen. and pl. *ver'tebræ* (vur'te-brah) [L.] One of the segments of the spinal column; in man there are thirty-three vertebræ, 7 cervical, 12 thoracic, 5 lumbar, 5 sacral (fused into one bone, the sacrum), and 4 coccygeal (fused into one bone, the coccyx). **bas'ilar v.,** the lowest lumbar vertebra. **cra'nial v.,** a segment of the skull regarded as homologous with a spinal vertebra. **false v.,** v. spuria, any one of the fused vertebral segments of the sacrum or coccyx. **ōdon'toid v.,** epistropheus [BNA]. **tricus'pid v.,** the sixth cervical vertebra in quadrupeds. **true v.,** v. vera, any one of the cervical, thoracic, or lumbar vertebræ. **typ'ical v.,** see *Owen*. **v. denta'ta,** the second cervical vertebra, axis, epistropheus [BNA]. **v. mag'na,** sacrum. **v. prom'inens** [BNA], the seventh cervical vertebra. **ver'tebræ spu'riæ,** false vertebræ, the fused vertebral segments of the sacrum and coccyx, **ver'tebræ ve'ræ,** true vertebræ, the cervical, thoracic, and lumbar vertebræ.

ver'tebral. Relating to a vertebra or the vertebræ. **v. for'mula,** a formula indicating the number of vertebræ in each segment of the spinal column; for man it is C. 7, T. 12, L. 5, S. 5, Cd. 4=33, the letters standing for cervical, thoracic (or dorsal), lumbar, sacral, and caudal (or coccygeal).

vertebra'rium. The spinal column.

vertebrarte'rial. Relating to a vertebra and an artery, noting the row of foramina in the transverse processes of the cervical vertebræ through which passes the vertebral artery on either side; the foramen is called also transverse foramen, costotransverse foramen, and foramen transversarium [BNA].

Vertebra'ta. A phylum of the animal kingdom composed of all having a spinal column; it includes the mammals, birds, reptiles, and fishes.

ver'tebrate. 1. Having a vertebral column. 2. An animal having vertebræ.

ver'tebrated. 1. Vertebrate. 2. Jointed, composed of segments arranged longitudinally, as a *v. catheter** or a *v. probe.**

vertebrec'tomy [*vertebra* + G. *ektomē*, excision.] Exsection of a vertebra.

ver"tebroarte'rial. Vertebrarterial.

vertebrochondral (vur"te-bro-kon'dral) [L. *vertebra* + G. *chondros*, cartilage] Noting the three false ribs (8th, 9th, and 10th), which are connected with the vertebræ at one extremity and the costal cartilages at the other, these cartilages not articulating directly with the sternum.

ver"tebrocos'tal [L. *vertebra* + *costa*, rib.] 1. Costovertebral. 2. Vertebrochondral.

vertebrodid'ymus, vertebrod'ymus [L. *vertebra* + G. *didymos*, twin.] A twin monster with fused spinal columns.

vertebrofem'oral. Relating to the vertebræ and the femur.

vertebro-il'iac. Relating to the vertebræ and the ilium, iliolumbar; noting a ligament.

vertebromamm'ary. Relating to the vertebræ and the mammary region.

vertebrosa'cral. Relating to the vertebræ and the sacrum, noting the union between the last lumbar vertebra and the sacrum and the *v angle*, or promontory of the sacrum, formed by the axes of the sacrum and the lumbar spine.

vertebrosternal (vur"te-bro-stur'nal). Relating to the vertebræ and the sternum, noting the true ribs which articulate with the vertebræ at one extremity and the sternum, through the cartilages, at the other.

vertex, gen. *ver'ticis*, pl. *ver'tices* [L.] 1. The crown of the head; the topmost point of the vault of the skull, a landmark in craniometry. 2. In obstetrics the portion of the fetal head bounded by the planes of the trachelobregmatic and biparietal diameters, with the lesser fontanelle at the apex. **v. cor'dis,** the apex of the heart.

ver'tical. 1. Relating to the vertex, or crown of the head. 2. Perpendicular.

ver'ticil [L. *verticillum*, dim. of *vertex*, a whirl.] A whorl, a collection of similar parts radiating from a common axis.

verticill'ate. Whorled, disposed in the form of a verticil.

Verticill'ium [L. *verticillum*, a whorl.] A genus of hyphomycetous fungi. **V. candela'brum,** a species found in decayed wood and, it is claimed, also in the excretions in scarlet fever. **V. graph'ii,** a mould occasionally found in the meatus in cases of otitis externa

verticomen'tal. Relating to the crown of the head and the chin, noting a diameter in craniometry.

vertiginous (vur-tij'in-us) [L. *vertiginosus*.] Relating to or suffering from vertigo.

ver'tigo (vur'tī-go, vur-ti'go) [L. *vertere*, to turn around.] 1. Dizziness, giddiness, a sensation of irregular or whirling motion, either of oneself (*subjective v.*) or of external objects (*objective v.*); 2. In the horse, a cerebral affection, resembling epilepsy in man; the animal shakes his head, reels, stands still or runs, and finally falls to the ground partly insensible or in convulsions; the attack lasts but a short time and at its conclusion the animal rises and proceeds on his way. **au'ditory v.,** Ménière's* disease. **aural v.,** v. vaused by disease of the internal ear or pressure of cerumen on the drum membrane. **endem'ic paralyt'ic v.,** Gerlier's* disease. **gas'tric v.,** v. symptomatic of disease of the stomach. **height v.,** dizziness experienced when looking down from a great height or in looking up a high building or cliff. **horizon'tal v.,** dizziness experienced on lying down. **kayak' v.,** see *kayak*. **labyrin'thine v.,** Ménière's* disease. **laryn'geal v.,** a paroxysmal neurosis characterized by attacks of coughing, with unusual sensations, as of tickling, in the throat, followed by a brief period of unconsciousness; more properly called laryngeal syncope. **lat'eral v.,** dizziness caused by watching the telegraph poles and fences from the window of a railway carriage. **oc'ular v.,** dizziness caused by refractive errors in the eye or imbalance of the extrinsic muscles. **par'alyzing v.,** Gerlier's* disease. **ro'tary v.,** a form in which there is a sensation of rotation in a definite direction of the surrounding objects as well as of oneself. **sham-move'ment v.,** dizziness accompanied by an impression as if the body were rotating or as if objects were rotating about it. **stom'achal v.,** v., often accompanied by loss of consciousness, due to distention of the stomach and arrest of digestion. **systemat'ic v.,** rotary v. **v. ab au're læ'so,** v. dependent upon chronic middle-ear lesions. **v. a stom'acho læ'so,** v. from an injured stomach, v. occurring as a symptom of dilatation or other abnormality of the stomach, stomachal v. **volta'ic v.,** a lateral movement of the head upon galvanization of the vestibular nerve, the movement being in the direction opposed to the course of the current, *i.e.* toward the positive pole.

verumontanitis (ve-ru-mon-tan-i'(e')tis). Colliculitis.

verumonta'num [L. *veru*, a broach, + *montanus*, mountainous.] Colliculus seminalis [BNA].

ver'vain. Verbena.

vesalianum (ves-a-lī-a'num). Vesalius's* bone in the foot.

Vesa'lius's bones [Andreas *Vesalius*, Latinized form of André *Wesal*, Italian anatomist at Padua, born in Brussels, called the "Father of Anatomy," 1514–1564.] Sesamoid bones, one or more in the tendon of origin of the gastrocnemius muscle, another on the outer border of the foot in the angle between the cuboid and the 5th metatarsal bones. **V.'s fora'men,** a minute and not constant opening in the sphenoid bone, anterior and internal to the foramen ovale, transmitting a small emissary vein from the cavernous sinus. **V.'s glands,** mucous glands in the bronchi. **V.'s lig'ament,** Poupart's ligament, ligamentum* inguinale. **V.'s vein,** the emissary vein passing through V.'s foramen.

vesa'nia [L. *ve-* negative + *sanus*, sound.] Insanity.

vasan'ic [L. *vesanus*, insane.] Relating to insanity.

vescette (vĕ-set') [(*effer*) *vesce* + *-ette*, Fr. dim. termination.] Trade name of an effervescent salt in compressed form; used as a vehicle for various drugs.

vesi'ca, gen. and pl. *vesi'cæ* [L.] A bladder. **v. fel'lea** [BNA], gall-bladder, a pear-shaped receptacle on the under surface of the liver, in a hollow between the right lobe and the quadrate lobe, containing bile. **v. prostat'ica**, utriculus prostaticus [BNA]. **v. urina'ria** [BNA], urinary bladder, a musculomembranous elastic bag serving as a storage place for the urine which is received from the kidneys through the two ureters and is discharged voluntarily through the urethra.

ves'ical. Relating to the bladder. **v. re'flex**, the desire to urinate caused by moderate distention of the bladder. **v. tri'angle**, trigonum vesicæ [BNA].

ves'icant. 1. Blistering, epispastic. 2. An agent which produces a blister, a vesicatory.

Vesica'ria commu'nis [L. *vesica*, bladder; *communis*, common.] Bladder-plant; the tincture is used in the treatment of urinary affections.

ves'icate. To blister. **ves'icating collo'dion**, collodium cantharidatum. **ves'icating oint'ment**, an ointment of stronger ammonia water 17, oil of sweet almond 2, lard 31, used as a counterirritant and vesicant. **ves'icating plas'ter**, ceratum cantharidis.

vesica'tion. 1. The production of a blister. 2. A blister.

ves'icatory. Vesicant.

vesicle (ves'ĭ-kl) [L. *vesicula*, little bladder.] 1. A small circumscribed elevation on the skin, containing non-purulent fluid. 2. A small sac containing liquid or gas. **air v.**, pulmonary v., alveolus pulmonis, pl. *alveoli pulmonum* [BNA]. **allanto'ic v.**, the hollow portion of the allantois. **archoplasmic v.** (ar-ko-plaz'mik), a vesicle formed from the attraction-sphere of a spermatid which becomes the tail-sheath of the spermatozoon. **acous'tic v., au'ditory v.**, the embryonic expansion of the epiblast on either side, which develops into the membranous labyrinth, otic v. **blastoder'mic v.**, blastocyst. **cer'ebral v., encephal'ic v.**, one of the three divisions of the primitive brain; the anterior is the *prosencephalon*, the middle the *mesencephalon*, and the posterior the *rhombencephalon*. **germ'inal v.**, the large spherical nucleus embedded in the protoplasm of the ovum. **lentic'ular v.**, in embryology, a structure formed by cupping of the ocular vesicle from which the crystalline lens is developed. **oc'ular v.**, in embryology, a hollow protrusion from the forebrain from which are developed the structures of the eye. **olfac'tory v.**, an outgrowth of the anterior cerebral v. from which are developed the olfactory lobe and tract. **optic v.**, ocular v. **otic v.**, acoustic v. **prim'itive cer'ebral v.**, one of the three enlargements into which the primitive brain is incompletely divided, from before backward the prosencephalon, the mesencephalon, and the rhombencephalon. **sem'inal v.**, vesicula seminalis. **umbil'ical v.**, the portion of the yolk-sac in the embryo which is outside the body cavity, communicating with it at the umbilicus through the omphalomesenteric duct.

ves"icoabdom'inal. Relating to the urinary bladder and the abdominal wall.

vesicocele (ves'ĭ-ko-sēl) [L. *vesica*, bladder, + G. *kēlē*, hernia.] Cystocele.

vesicocer'vical. Relating to the urinary bladder and the cervix uteri.

vesicoc'lysis [L. *vesica*, bladder, + G. *klysis*, a washing out.] Washing out, or lavage, of the urinary bladder.

vesicofixa'tion [L. *vesica*, bladder.] 1. Cystopexy. 2. Attachment by suture of the uterus to the bladder wall.

vesicoprostat'ic. Relating to the bladder and the prostate gland.

vesicopu'bic. Relating to the bladder and the os pubis, noting the *v. ligament*, plica pubovesicalis [BNA], and the *v. muscle*, a band of muscular fibers passing from the lower part of the bladder, on either side of the middle line, to the pubes.

vesicorectal (ves"ĭ-ko-rek'tal). Relating to the bladder and the rectum, noting a peritoneal fold on either side, in the male.

vesicosigmoid (ves"ĭ-ko-sig'moyd). Relating to the bladder and the sigmoid colon.

vesicosigmoidos'tomy [L. *vesica*, bladder, + *sigmoid* + G. *stoma*, mouth.] The operative formation of a communication between the bladder and the sigmoid colon.

vesicospi'nal. Relating to the urinary bladder and the spinal cord, noting a nerve-center in the lumbar cord controlling urination.

vesicot'omy [L. *vesica*, bladder, + G. *tomē*, incision.] Cystotomy

vesicoumbilical (ves"ĭ-ko-um-bil'ĭ-kal). Relating to the urinary bladder and the umbilicus, noting three so-called ligaments, or folds of peritoneum, passing between the two, viz., the plica umbilicalis media [BNA], and the plica umbilicalis lateralis [BNA] on either side.

vesicoureteral (ves"ĭ-ko-u-re'ter-al). Relating to the bladder and the ureters.

vesicouterine (ves"ĭ-ko-u'ter-in). Relating to the bladder and the uterus, noting the *v. ligament*, plica vesicouterina, on either side, and a pouch, excavatio rectouterina [BNA], between the two.

vesicouterovaginal (ves"ĭ-ko-u"ter-o-vaj'in-al). Relating to the bladder, uterus, and vagina.

vesicovaginal (ves-ĭ-ko-vaj'in-al). Relating to the bladder and vagina, noting a fistula sometimes produced by pressure of the fetal head in a tedious labor.

vesicovaginorectal (ves"ĭ-ko-vaj"in-o-rek'tal). Relating to the bladder, vagina, and rectum, noting a fistulous communication between the vagina and the bladder and rectum.

vesic'ula, gen. and pl. *vesic'ulæ* [L. dim. of *vesica*.] Vesicle, a small bladder or bladder-like structure. **v. fel'lis** [L. *fel*, bile], vesica fellea [BNA], gall-bladder. **v. graafia'na**, Graafian* follicle. **v. ophthal'mica** [BNA], ophthalmic vesicle, lenticular vesicle, an embryological structure from which the crystalline lens is developed. **v. semina'lis** [BNA], one of two hollow sacculated structures lying between the rectum and the bladder, apparently a diverticulum of the ductus deferens, serving as a reservoir for the semen. **v. sero'sa**, the false or mesoblastic amnion. **v. umbilica'lis**, umbilical vesicle.*

vesic'ular. Relating to a vesicle, containing vesicles. **v. column**, Clarke's* column. **v. fe'ver**, (1) a disease marked by a localized pain followed by a vesicular eruption, becoming general, accompanied by a slight rise of temperature; (2) pemphigus. **v. murmur**, the normal respiratory sound heard on auscultation. **v. nerve-substance**, gray matter of the brain, spinal cord, and ganglia. **v. râle**, crepitant râle **v. res'onance**, the percussion sound over a normal lung.

vesic'ulate. 1. To become vesicular. 2. Vesiculated.

vesic'ulated. Vesicular, containing vesicles.

vesicula'tion [L. *vesicula*, dim. of *vesica* bladder.] 1. The formation of vesicles. 2. Inflation. 3. The presence of a number of vesicles.

vesiculec'tomy [L. *vesicula*, vesicle, + G. *ektomē*, excision.] Resection of a portion or all of each of the seminal vesicles; an operation for producing sterility.

vesic'uliform [L. *vesicula*, vesicle, + *forma*, form.] Resembling a vesicle.

vesiculitis (ves-ik-u-li'(le')tis). Inflammation of any vesicle, specifically inflammation of a seminal vesicle.

vesiculobronchial (ves-ik"u-lo-brong'kĭ-al). Noting an auscultatory sound partaking of both a vesicular and a bronchial character.

vesiculocav'ernous. 1. Noting an auscultatory sound partaking of both a vesicular and a cavernous quality. 2. Both vesicular and cavernous, noting the structure of certain neoplasms.

vesiculopus'tular. Noting a mixed eruption of vesicles and pustules.

vesic'ulose. Vesicular.

vesiculot'omy [L. *vesicula*, vesicle, + G. *tomē*, incision.] Division of the seminal vesicles.

vesiculotubular (ves-ik'u-lo-tu'bu-lar). Noting an auscultatory sound partaking of both a vesicular and a tubular quality.

vesic"ulotympan'ic. Noting a percussion sound partaking of both a vesicular and a tympanic quality.

vesic'ulous. Vesiculose, vesicular.

vesipy'rine. Acetyl salol, occurs as a white powder or colorless crystals, insoluble in water; employed in neuralgia, rheumatism, and influenza in doses of gr. 10–20 (0.6–1.3).

vespa'jus [L. *vespa*, wasp.] 1. Suppurative inflammation of the hair-follicles of the scalp. 2. A small carbuncle.

vess'el [L. *vascellum*, dim. of *vas*, vessel.] Vas, angeion, a duct or canal conveying any liquid, such as blood, lymph, chyle, or semen. **absorb'ent v.**, lymphatic vessel. **blood v.**, vas sanguineum [BNA], one of the tubes conveying blood—artery, vein, or capillary. **chyle v.**, one of the afferent lymphatics from the intestinal wall to a mesenteric node. **collat'eral v.**, vas collaterale, a branch of an artery running parallel with the parent trunk. **lac'teal v.**, chyle v. **lymphat'ic v.**, **lymph v.**, vas lymphaticum, one of the tubes or elongated spaces serving as channels for the conveyance of lymph. **nu'trient v.**, nutrient artery, an artery supplying the bone tissue. **sem'inal v.**, vas deferens; vesicula seminalis.

vessignon (vĕ-se-nyoń') [Fr.] Wind-gall.

vestib'ular. Relating to a vestibule, especially the vestibule of the ear.

vestib'ulate. Vestibular.

ves'tibule [L. *vestibulum*, an entrance-court.] 1. A small cavity or a space at the entrance of a canal; see the subtitles under *vestibulum*. 2. Specifically, vestibulum* labyrinthi.

vestibulot'omy [L. *vestibulum*, vestibule, + G. *tomē*, incision.] Operation for opening into the vestibule of the labyrinth; it is called *superior* or *inferior* according as the opening is made from above or from below.

vestibulourethral (ves-tib"u-lo-u-re'thral). Relating to the vestibulum vaginæ and the urethra.

vestib'ulum, gen. *vestib'uli*, pl. *vestib'ula* [L. an antechamber.] Vestibule. **v. ana'le**, an invagination on the surface of the embryo where later the anus is formed. **v. aor"tæ**, the portion of the ventricle of the heart immediately below the aortic orifice. **v. bur'sæ omenta'lis** [BNA], the upper part of the bursa omentalis, just within the epiploic foramen (of Winslow), behind the caudate lobe of the liver the posterior surface of which it invests with peritoneum. **v. labyrin'thi**, the central, somewhat ovoid, cavity of the osseous labyrinth communicating with the semicircular canals behind and the cochlea anteriorly. **v. laryn'gis**, vestibule of the larynx, false glottis, the upper part of the laryngeal cavity from the aperture to the false vocal cords. **v. na'si**, the anterior part of the nasal cavity, practically that enclosed by cartilage. **v. o'ris**, the entrance to the mouth; the space between the lips and the gums and teeth. **v. puden'di**, v. vaginæ. **v. vagi'næ** [BNA], the space behind the glans, clitoridis between the labia minora, containing the openings of the vagina, urethra, and ducts of Bartholin's glands.

vestige (ves'tij) [L. *vestigium*, a footstep.] A trace, a rudimentary structure; the remains of a structure in the embryo or one corresponding to a perfect structure in one of the lower animals.

vestigial (ves-tij'ĭ-al). Relating to a vestige; rudimentary. **v. fold**, a triangular duplicature of the serous layer of the pericardium, enclosing areolar tissue, fat, blood-vessels, and nerves, between the left pulmonary artery and the pulmonary veins. **v. muscle, v. organ**, an imperfect structure in man corresponding to a functionating muscle or organ in the lower animals. **v. re'flex**, a reflex due to conditions affecting the lower order of creation but no longer present in man.

vestigium (ves-tij'ĭ-um) [L.] Vestige.

vesu'vine. Bismarck-brown, metaphenylene diamine-diazobimetaphenylenediamine hydrochloride, a dye used as a nuclear stain in histology.

ves'ypin. Acetylsalol.

veta (va'tah) [Sp.] A South American term for mountain-sickness.

vet"erina'rian [L. *veterinarius; veterina*, beast of burden.] One who studies and treats the diseases of the horse and other of the domestic animals, a veterinary physician or surgeon.

vet'erinary [L. *veterinarius*.] 1. Relating to the horse and other domestic animals, especially to the pathology and treatment of the diseases to which they are subject. 2. A veterinarian. **v. med'icine, v. sur'gery**, the science and art of medicine and surgery as applied to the domestic animals.

vi'a, pl. *vi'æ* [L. way, road.] Any passage in the body, as the intestine, the vagina, etc. **per vi'as natura'les**, through natural channels, noting the birth of a child through the vagina as distinguished from delivery by cesarean section. **pri'mæ vi'æ**, the first channels for the passage of nutriment, that is to say the alimentary canal. **secun'dæ vi'æ**, the second channels for the passage of nutriment into the body, that is to say the lacteals and blood-vessels.

viabil'ity [Fr. *viabilité*; L. *vita*, life.] Capability of living, the state of being viable.

vi'able [Fr.; L. *vita*, life, + *habilis*, fit.] Capable of living, noting a fetus sufficiently developed to live outside of the womb, *i.e.* a fetus of seven months or older.

vi'al [G. *phialē*, a drinking-cup.] Phial, a small bottle for holding liquid medicines.

vi'bex, vi'bix, pl. *vibi'ces* [L. the mark of a blow.] A linear ecchymosis.

vi'bratile. Vibrating, having an oscillatory movement, as the cilia or flagella of certain microorganisms.

vibra'tion [L. *vibratio; vibrare*, to shake.] A shaking, a to-and-fro movement, oscillation.

vi'brative. Vibratory.

vi'brator. An instrument used for imparting vibrations, used in vibratory massage.

vi'bratory. Vibrative, marked by vibrations.

Vib'rio [L. *vibra're*, to vibrate.] A genus of the family *Spirillaceæ*, most of the species of which are found in river water and are not known to be pathogenic. **V. com'ma,**[0] comma bacillus, *Spirillum choleræ asiaticæ*, short slightly curved, motile rods with one or two polar flagella; found in the intestinal contents of sufferers from cholera and of carriers. **V. fetus,** a form, sometimes comma-shaped, possibly a cause of abortion in cows. **V. pro'teus,**[0] spirillum of Finkler and Prior, *V. finkleri*, a species found in the dejections of patients with cholera nostras and cholera infantum. **V. metch'nikovi,**[0] Gamaleia's spirillum, found in the intestine of fowls dead of chicken cholera. **V. sputig'enus,**[0] a motile gram-negative, aerobic organism, possibly one of the pathogens of sputum septicemia. **V. tyrog'enus,**[0] Denecke's spirillum, an organism morphologically similar to *V. comma*, but non-pathogenic; it is found occasionally in cheese. **V. wolfii,**[0] a species found in the discharge from the cervix in a case of chronic endometritis.

vibrion septique (ve-bre-oṅ' sep-tēk') [Fr. septic vibrio.] A Gram-negative anaerobic microorganism of variable morphology, pathogenic for man and laboratory animals, causing a blood-stained edema.

vibris'sa, gen. and pl. *vibris'sæ*. One of the hairs growing at the anterior nares, or vestibulum nasi.

vibromasseur (vi"kro-mas-er'). An instrument for giving vibratory massage, vibrator.

vibrom'eter [L. *vibrare*, to shake, + *metrum*, measure.] An instrument for making auditory massage.

vi'brophone [L. *vibrare*, to shake, + *phōnē*, sound.] An instrument for effecting auditory massage by means of sound waves.

vi"brotherapeu'tics [L. *vibrare*, to shake, + G. *therapeuō*, I treat.] Seismotherapy, vibratory massage.

vibur'num op'ulus (N.F.). Cramp-bark, cranberry-tree bark; employed as an antispasmodic in asthma, hysteria, and dysmenorrhea, in doses of gr. 20–60 (1.3–4.0). **v. prunifo'lium** (N.F.) black haw, the bark of the root of *Viburnum prunifolium*, sheep-berry, stag-bush; employed in dysmenorrhea in doses of gr. 20–60 (1.3–4.0). An eclectic preparation of this drug is known as colloidum black haw; it is given in dose of 2 drops in water every hour or two.

vica'rious [L. *vicarius*, substituted, delegated.] Compensatory, substitutive. **v. menstrua'tion,** periodical losses of blood from the stomach or other part in cases in which normal menstruation is absent. **v. respira'tion,** increased respiratory action in one lung when that in the other lung is diminished or abolished.

vice [L. *vitium*.] In pathology, a defect or imperfection, especially in physical conformation.

Vichy salts (vish'e). See under *Sal.*

vicious (vish'us) [L. *vitiosus*] Faulty, defective-harmful. **v. cica'trix,** one which by its contrac, tion causes a deformity. **v. circle,** see under *circle.*

Vicq d'Azyr's band (vik-dă-zēr) [Félix *Vicq d'Azyr*, Parisian anatomist, 1748–1794.] The outer band of Baillarger in the region of the calcarine fissure. **V. d'A.'s bundle,** fasciculus thalamomamillaris. **V. d.'A.'s centrum semiova'le,** Vieussens' centrum ovale, centrum* semiovale [BNA]. **V. d'A.'s fora'men,** foramen cæcum (2). **V. d'A.'s line,** V. d'A.'s band. **V. d'A.'s opera'tion,** cricothyroid laryngotomy.

Victo'ria blue [after Queen *Victoria* of England, 1819–1901.] A dye, phenyltetramethyltriamidoalphanaphthyl-diphenylcarbinol hydrochloride, occurring in the form of a bronze crystalline powder forming a blue solution in water; used as a stain in histology. **V. orange,** an alkaline salt of dinitrocresol, aniline orange, English yellow; a reddish yellow stain used in histology.

victo'rium. A supposed metallic element discovered by Sir William Crookes, the existence of which is, however, doubtful:

Vidal's meth'od (ve-dal') [Emile *Vidal*, Parisian dermatologist, 1825–1893.] Treatment of lupus vulgaris by scarification.

Vidal's opera'tion (ve-dal') [Auguste Théodore *Vidal* de Cassis, French surgeon, 1803–1856.] Subcutaneous ligature of the veins for the cure of varicocele.

Vid'ian. Named after or described by Vidus *Vidius*, Latinized form of Guido Guidi, Italian anatomist, 1500–1569. **V. ar'tery,** arteria canalis pterygoidei. **V. canal',** canalis pterygoideus. **V. nerve,** nervus canalis pterygoidei. **V. plexus,** a plexus of the V. nerve around the V. artery. **V. vein,** vena canalis pterygoidei.

Vien'na caus'tic. Potassa cum calce. **V. paste,** V caustic made into a firm paste with water for convenience of application.

Vierordt's hemotachom'eter (fēr'ort) [Karl *Vierordt*, German physiologist, 1818–1884] An instrument for measuring the rapidity of the flow of blood in the arteries.

Vieussens's an'nulus (vyé-soṅ') [Raymond *Vieussens*, French anatomist, 1641–1716.] Limbus fossæ ovalis. **V.'s ansa,** ansa subclavia. **V.'s ar'tery,** a branch of the right coronary artery supplying the cellulofatty tissue in front of the pulmonary artery. **V.'s cen'trum ova'le,** the white substance of each cerebral hemisphere as seen on horizontal section made just above the level of the corpus callosum, centrum semiovale [BNA]. **V.'s foram'ina,** Thebesian foramina, foramina* venarum minimarum. **V.'s gan'glion,** plexus cœliacus. **V.'s isth'mus,** V.'s annulus. **V.'s lim'bus,** V.'s annulus. **V.'s loop,** V.'s ansa. **V.'s ring,** V.'s annulus. **V.'s valve,** (1) velum medullare anterius; (2) an inconstant and insufficient valve in the large coronary vein of the heart as it widens into the coronary sinus. **V.'s veins,** innominate cardiac veins, the small superficial coronary veins of the heart. **V.'s ven'tricle,** Sylvian ventricle, fifth ventricle, ventriculus* septi pellucidi.

vifer'ral. Hydronal.

vigantol (vig'an-tol). Trade name of a make of irradiated ergosterol (viosterol).

vigil (vij'il) [L. waking.] Wakefulness, sleeplessness, insomnia. **coma v.,** a state of muttering delirium in which the person is lethargic and partly conscious, yet never actually sleeping or completely comatose.

vigilam'bulism [L. *vigil*, waking, + *ambulare*, to walk about.] A condition of unconsciousness regarding one's surroundings, with automatism, resembling somnambulism but occurring in the waking state.

vigilance (vij'il-ans). Agrypnia, insomnia, pervigilium, morbid wakefulness.

vigin"tinor'mal [L. *viginti*, twenty.] One-twentieth of the normal, noting the strength of a solution.

Vignal's cells (vin-yal') [Guillaume *Vignal*, French physiologist, 19th century.] Embryonal connective-tissue cells associated with the axis-cylinders of nerves in the fetus; they elongate and become curved, forming a sheath for the axis-cylinder; there is one cell to each interannular segment; they secrete the myelin.

Vigo's plas'ter (ve'go) [Giovanni da *Vigo*, Italian physician, 1460–1534(?).] A diachylon plaster containing mercury and eleven other ingredients, official in the French Codex. **V.'s pow'der,** red oxide of mercury.

vig'oral. Trade name of a beef food-preparation.

Vigouroux's sign (ve-goo-roo') [Auguste *Vigouroux*, French neurologist, 19th century.] Charcot*-Vigouroux sign.

Villard's butt'on (ve-lar') [E. *Villard*, French surgeon in Lyons, contemporary.] A modified Murphy's button.

Villate's mix'ture or **solu'tion** (ve-lat'). Mistura adstringens (N.F.).

Villemin's the'ory (vēl-mañ') [Jean Antoine *Villemin*, French military surgeon, 1827–1892.] The theory of the specificity, inoculability, and infectiousness of tuberculosis, promulgated in 1865.

vill'i. Pl. of *villus*. **arach'noid v.,** Pacchionian* bodies. **chorion'ic v.,** vascular processes on the chorion of the embryo in the early stages of its development, later entering into the formation of the placenta. **v. intestina'les** [BNA], intestinal v., numerous minute filiform projections from the mucous membrane of the small intestine which give to its surface a velvety appearance; they contain blood-vessels and lacteals. **v. pericardi'aci,** pericardial v., minute filiform projections from the free surface of the pericardium. **v. peritonea'les,** peritoneal v., v. on the surface of the peritoneum. **v. pleura'les** [BNA], pleural v., shaggy appendages on the pleura in the neighborhood of the costomediastinal sinus. **v. synovia'les** [BNA], synovial v., synovial tufts, microscopic thread-like vascular processes given off from a synovial membrane.

villitis (vil-i'(e')tis). Coronitis.

villo'ma [L. *villus* + G. *-ōma*.] A villous tumor, papilloma.

vill'ose. Villous.

villositis (vil-os-i'(e')tis). Inflammation of the villous surface of the placenta.

villos'ity. Shagginess; an aggregation of villi.

vill'ous. Covered with villi, shaggy. **v. tumor,** papilloma.

vill'us, pl. *villi* [L. a tuft of hair.] A minute projection from the surface, especially of a mucous membrane; see under *villi*.

vin [Fr.] Wine.

vin. Abbreviation of L. *vinum*, wine.

Vin'cent's an'gina [H. *Vincent*, Parisian physician, *1862.] Ulceromembranous angina, trench mouth; inflammation of the tonsil extending usually to the floor of the mouth; it is characterized by a pseudomembranous exudate and subsequent ulceration, accompanied by painful swelling of the neighboring lymphatic nodes, fever, and other signs of systemic infection; a fusiform bacillus, *Fusiformis fusiformis* or *F. dentium*,[0] and another organism, *Trep. vincenti* or *Borrelia vincenti*[0] both possibly forms of one and the same organism, have been found in the lesion. **V.'s bacill'us,** a fusiform organism, about 10 or 12 μ in length, not cultivable on the usual media, gram-negative, found in cases of V.'s angina in association with a spirochete. **V.'s spiril'lum,** the spirillum or spirochete found in association with V.'s bacillus. **V.'s tonsillitis,** angina limited chiefly to the tonsils, caused by V.'s organisms (bacillus and spirillum).

Vin'cent's pow'der. A mixture of one part of calcium hypochlorate with nine parts of boric acid.

vincetox'icum. The root of *Vincetoxicum officinale* or *Cynanchum vincetoxicum*, swallow-wort, a plant of middle Europe, employed in domestic medicine in the treatment of dropsy, and also in veterinary practice as an emetic.

vin'culum, pl. *vin'cula* [L. a fetter.] Frenum, frenlum, ligament. **v. lin'guæ,** frenulum linguæ. **vin'cula lin'gulæ cerebell'i** [BNA], the lateral prolongations of the lingula of the vermis of the cerebellum resting on the anterior medullary velum. **v. præpu'tii,** frenulum præputii. **v. ten'dinum,** (1) [BNA] one of the ligamentous fibers connecting the flexor tendons of the fingers to the basal phalanges; (2) retinaculum* tendinum.

vin'egar [Fr. *vinaigre; vin*, wine, + *aigre*, sour.] Acetum,* impure dilute acetic acid, made from wine, cider, malt, etc **ice v.,** glacial acetic acid. **moth'er of v.,** *Mycoderma aceti, Acetobacter acetus*.[0] **thieves' v.,** acetum aromaticum. **v. of lead,** lead water, liquor* plumbi subacetatis dilutus **wood v.,** pyroligneous acid, an impure acetic acid obtained by the dry distillation of wood.

vi'nic [L. *vinum*, wine.] Relating to or derived from wine.

vinopy'rine. Trade name of a white crystalline powder said to be paraphenetidin bitartrate; employed as an antipyretic in doses of gr. 10–20 (0.6–1.3).

vi'nous. Relating to, containing, or of the nature of wine.

vi'num, gen. *vi'ni*, pl *vi'na* [L.] 1. Wine. 2. A group of Br. and N.F. preparations consisting of a solution of one or more medicinal substances in wine, usually white wine because of its comparative freedom from tannin.

v. al'bum, white wine, the fermented juice of the grape, the fresh fruit of *Vitis vinifera*, freed from seeds, skins, and stems.

v. album hispa'num, v. xericum.

v. antimonia'le (Br.), antimonial wine, wine of antimony tincture antimonii (N.F.); tartarated antimony 40 grains, boiling distilled water 1 ounce, sherry 19 ounces; expectorant dose, ♏10–30 (0.6–2.0), emetic dose, ♏30–60 (2.0–4.0).

v. auran'tii, orange wine; (1) (Br.) made by the fermentation of a syrup containing fresh bitter orange peel; used as a flavor; (2) oil of bitter orange in alcohol and sherry; used as a vehicle and flavoring agent.

v. auran'tii compos'itum, compound orange wine, compound elixir of orange; prepared by percolating bitter orange peel 200, absinthium, buckbean, and cascarilla, each 65, Saigon cinnamon and gentian, each 43, potassium carbonate 10, with sherry enough to make 1000; bitter tonic in dose of ℥1 (4 0).

v. auran'tii detanna'tum (B.P.C.), detannated orange wine; gelatin 1, orange wine 640, macerate 24 hours and decant.

v. car'nis, wine of beef, beef and wine; extract of beef in alcohol, syrup, and sherry flavored with compound spirit of orange; tonic in dose of ℥2 (8.0).

v. car'nis et fer'ri, wine of beef and iron, beef, wine, and iron, elixir carnis et ferri (N.F.).

v. car'nis, fer'ri, et cincho'næ, wine of beef, iron, and cinchona; beef, wine, iron, and cinchona, same as the preceding with the addition of quinine sulphate gr. ¼ (0.008) and cinchonidine sulphate gr. $\frac{1}{16}$ (0 004) in each dose of ℥1 (4 0).

v. chalybea'tum, chalybeate wine, v. ferri, v. ferri citratis (Br.).

v. co'cæ, wine of coca; fluidextract of coca 65, alcohol 75, sugar 65, red wine to make 1000; dose ʒ2–8 (4.0–16.0).

v. co'cæ aromat'icum, aromatic wine of coca or of erythroxylon; each dose of ʒ2 (8.0) contains fluidextract of coca ♏8 (0 5) with compound elixir of taraxacum, syrup of coffee, aromatic elixir, port, and sherry; tonic and stimulant.

v. col'chici (Br.), colchicum wine; colchicum corm 4, sherry 20; dose, ♏10–30 (0.6–2.0).

v. col'chici cor'mi, wine of colchicum corm, wine of colchicum root; tinctura colchici cormi fortis (N.F.).

v. col'chici sem'inis, wine of colchicum seed; fluidextract of colchicum seed 100, alcohol 150, sherry wine 750; this is ½ the strength of the preparation of the U.S.P. 1890; dose ♏30 (2 0).

v. digita'lis compos'itum, compound wine of digitalis, v. diureticum, Trousseau's diuretic wine; digitalis 5, squill 7.5, juniper berries 75, potassium acetate 50, alcohol 100, white wine 900; diuretic in cardiac or renal dropsy in doses of ʒ2–4 (8 0–16.0).

v. diuret'icum, diuretic wine, v. digitalis compositum.

v. ergo'tæ, wine of ergot; fluidextract of ergot 200, alcohol 50, white wine 750; this is about ½ stronger than the preparation of the U.S.P. 1890; dose, ʒ1–4 (4.0–16 0).

v. fer'ri, wine of iron, v. chalybeatum; iron and ammonium citrate 40, tincture of sweet orange peel 60, syrup 100, white wine to make 1000; dose, ʒ1–4 (4.0–16.0).

v. fer'ri ama'rum, bitter wine of iron; iron and quinine citrate 50, tincture of sweet orange peel 60, syrup 300, white wine to make 1000; tonic chalybeate in doses of ʒ1–4 (4.0–16.0).

v. fer'ri citra'tis (Br.), wine of iron citrate; iron and ammonium citrate 160 grains, orange wine 20 ounces; dose, ʒ1–4 (4.0–16.0).

v. frax'ini, wine of white ash; white ash bark 500, percolated with alcohol 125, and sherry wine 875; each dose of ʒ1 (4 0) representing gr. 30 (2 0) of the bark; alterative and emmenagogue.

v. ipecacuan'hæ (Br.), wine of ipecac tinctura ipecacuanhæ (N.F.); liquid extract of ipecac 1, sherry 19; expectorant and diaphoretic dose, ♏10–30 (0.6–2.0); emetic dose ʒ1 (30.0).

v. o'pii, wine of opium, Sydenham's laudanum; opium 100, Saigon cinnamon 10, cloves 10. alcohol 150, white wine 850; dose, ♏5–20 (0 3–1 3).

v. pepsi'ni, wine of pepsin; glycerite of pepsin in alcohol and sherry, each dose of ʒ2 (8.0) containing gr. 2 (0.13) of pepsin

v. pi'cis, wine of tar; each dose of ʒ2 (8.0) contains gr. 12 (0.8) of tar; stimulant expectorant.

v. porten'se, port, port wine, a reddish brown wine originally obtained from Oporto, Portugal, but now extensively made in California; it contains from 16 to 22 per cent. of alcohol.

v. pru'ni virginia'næ, wild cherry wine; each dose of ʒ1 (4.0) represents gr. 15 (1.0) of wild cherry bark percolated with sweetened angelica wine; tonic and astringent.

v pru'ni virginia'næ ferra'tum, ferrated wine of wild cherry; same as the preceding with the addition of tincture of citrochloride of iron ♏5 (0.3) in each dose of ʒ1 (4.0).

v. quini'næ (Br.), quinine wine; quinine hydrochloride 20 grains, orange wine 20 ounces; dose ʒ½–1 (15.0–30.0).

v. rhe'i compos'itum, compound wine of rhubarb formerly called tinctura rhei vinosi; fluidextract of rhubarb 80, fluidextract of bitter orange peel 20, tincture of cardamom 80, sugar 125, sherry wine to make 1000; dose, ʒ1 (4.0).

v. ru'brum, red wine, claret, an alcoholic liquor made by fermenting grapes, the fruit of *Vitis vinifera,* with their skins; employed as a tonic in convalescence from acute disease, and in pharmacy as the base of wine of coca.

v. xer'icum, sherry, sherry wine, a wine of amber color obtained from Xeres, Spain; it contains about 20 per cent. of alcohol; directed by the National Formulary to be used in the preparation of its official wines.

vi'nyl [L. *vinum,* wine, + G. *hylē,* stuff.] A univalent radical, CH_2CH. **v. benzene,** styrol. **v. bromide,** ethylene bromide.

vi'oform. Iodochloroxyquinoline, a greenish yellow powder, nearly odorless, insoluble in water, obtained by treating an alkaline solution of chlorinated hydroxyquinoline with iodine; employed as a substitute for iodoform.

Vi'ola [L. violet.] A genus of flowering plants including the pansies and violets. **V. odora'ta,** the sweet or English violet, contains an alkaloid, *violine,* resembling emetine in action. **V. tri'color,** pansy, hearts' ease, formerly employed in cutaneous disorders and in tuberculosis.

vi'olet. 1. *Viola odorata.* 2. A purple color, the color at the actinic end of the spectrum. **crys'tal v.,** see under *crystal.* **gentian v.,** see under *gentian.* **Lauth's v.,** thionine. **methyl v.,** see under *methyl.*

vi'oline. An emetic alkaloid from *Viola* odorata,* and *V. tricolor.*

violin'ist's cramp. A professional neurosis affecting the fingers of the left hand, or sometimes the right arm, in violin players.

viosterol (vi-os'ter-ol). Ergosterol subjected to ultraviolet radiation by which an antirachitic (vitamin D) potency is developed. **v. in oil,** v. dissolved in a vegetable oil and standardized to a definite potency.

vi'perine [L. *vip.rinus.*] 1. Relating to or derived from a viper. 2. Serpentaria.

Vipond's sign (ve-pawn') [*Vipond,* French physician, contemporary.] A generalized adenopathy occurring during the period of incubation of various of the exanthemata of childhood, affording an early diagnostic sign in a case of known exposure.

viragin'ity [L. *virago,* an amazon.] The presence of pronounced masculine qualities in a woman.

Virchow's angle (fēr'khō) [Rudolf *Virchow,* German pathologist and anthropologist, 1821–1902.] An angle formed by the meeting of a line drawn from the middle of the nasofrontal suture to the base of the anterior nasal spine with a line drawn from this last point to the center of the external auditory meatus. **V.'s ax'iom,** "omnis cellula e cellula," every cell from a cell. **V.'s cells** or **cor'puscles,** (1) the lacunæ in osseous tissue containing the bone-cells, also the bone-cells themselves; (2) corneal corpuscles. **V.'s crys'tals,** hematoidin crystals. **V.'s disease',** (1) acute congenital encephalitis; (2) leontiasis ossea. **V.'s gland,** a lymph-node lying behind the clavicular origin of the sternocleidomastoid muscle; its cancerous enlargement constitutes Troisier's* ganglion. **V.'s law,** there is no special tumor cell, for the cells of all tumors spring from preexisting cells. **V.'s psammo'ma,** a collection of small cerebral tumors developing at the expense of the pia mater or of the pial vessels; called also *angiolithic sarcoma.*

Vir'chow-Has'sall bod'ies. Hassall's* concentric corpuscles.

Vir'chow-Hol'der angle. Virchow's* angle.

Vir'chow-Robin' space. Robin's* space.

virga (vēr'gah) [L. a rod.] Penis.

virgin (vur'jin) [L. *virgo.*] 1. A woman (or a man) who has never had sexual intercourse. 2. Fresh, unused, uncontaminated. **v. genera'tion,** parthenogenesis. **v. oil,** olive oil obtained by expression from the nearly ripe fruit. **v. tooth,** a horse's tooth not yet worn down by attrition.

virginal (vur'jin-al). Relating to a virgin, innocent; virgin (2). **v. membrane,** hymen.

Virgin'ia creeper. *Ampelopsis*, a climbing vine, the leaves of which, containing tartaric acid, have been used in domestic medicine as a refrigerant **V. prune,** prunus virginiana. **V. snakeroot,** serpentaria.

virginity (vur-jin'ĭ-tĭ). The virgin state.

viricidal (vĭ-rĭ-si'dal) [L. *virus* + *cædere*, to kill.) Destructive to a virus.

vir'idin. An oily substance, $C_{21}H_{19}N$, obtained by dry distillation from coal-tar and from bone-oil.

vir'idine. Jervine.

virile (vir'il) [L. *virilis; vir*, a man.] Relating to the male sex, masculine. **v. member,** penis. **v. reflex,** see under *reflex*.

virilescence (vir-il-es'ens). The assumption of male characteristics by the female, especially in the lower animals, and not infrequently in the human when past the reproductive age.

viril'ia. The male sexual organs.

virilism (vir'il-izm) [L. *virilis*, relating to the male sex, + *-ism*.] The presence of male secondary sexual characteristics (hypertrichosis, small breasts, broad shoulders, etc.) in a woman; these may become manifest at puberty or, more commonly, at the menopause, but the condition is rare at any age.

viril'ity [L. *virilitas; vir*, man.] The reproductive age in the man, manhood.

viripo'tent [L. *vir*, man, *potens*, having power.] Sexually mature, noting one of the male sex.

viroid (vi'royd) [*virus* + G. *eidos*, resemblance. Any prophylactic vaccine.

virol (vi'rol). An invalid food containing eggs, yellow and red bone marrow, and malt extract.

vir'ose. Poisonous, virulent.

virtual (vur'chu-al) [L. *virtus*, power.] Potential, not actual. **v. cautery,** potential cautery.* **v. focus,** the point at which divergent rays would meet, if reversed in direction. **v. image,** the image which would be formed by reflected rays were they prolonged beyond the reflecting surface.

virtue (vur'chu) [L. *virtus*.] 1. Power efficacy, said of the quality of an active medicinal substance. 2. Manliness, rectitude; chastity.

virulence (vir'u-lens) [L. *virulentus*, full of virus, or poison.] The quality of being poisonous; the disease-producing power of a microorganism.

virulent (vir'u-lent). Extremely poisonous; noting a markedly pathogenic microorganism. **v. bubo,** a chancroidal bubo.

virulif'erous [L. *virus(virulentus)* + *ferre*, to carry.] Conveying virus.

vir'ulin. Antiphagin.

vi'rus [L. poison.] 1. Contagium, the specific poison of an infectious disease. 2. A collective term for extremely minute living organisms, varying in estimated size from the limit of microscopical vision to the diameter of a molecule of hemoglobin. 3. Vaccine lymph. **atten'uated v.,** a virus, or pathogenic microorganism, so modified by heat, cultivation under unfavorable conditions, etc., as to be incapable of producing the specific disease, yet exciting to the production of protective antibodies. **fil'trable v.,** see definition 2, a pathogen capable of passing through a porcelain filter or a filter of diatomaceous earths. **fixed v.,** v. of rabies of the utmost possible virulence, obtained by numerous passages through rabbits; see *v. of the streets*. **hu'manized v.,** humanized vaccine.* **inclu'sion v.,** toxins in the vaginal secretions causing a non-gonococcal conjunctivitis of the newborn. **or'ganized v.,** a pathogenic microorganism. **parrot v.,** the virus of psittacosis, thought to be possibly of the same group as the herpes virus. **unorg'anized v.,** a toxin or other chemical poison produced through the action of microorganisms or the body cells. **v. of the streets,** the v. of rabies present naturally in rabid dogs, less potent than fixed v. **v. vaccin'icum,** vaccine virus, vaccinum variolæ (U.S.).

vis, pl. *vi'res* [L. force.] Force, energy, power. **v. a fron'te,** a force acting from in front, an obstructive, restraining, or impeding force. **v. a ter'go,** a force acting from behind, a pushing or accelerating force. **v. conserva'trix,** the inherent power in the organism resisting the effects of injury. **v. formati'va,** the plastic or healing power in the organism. **v. medica'trix natu'ræ,** the natural curative power, the power inherent in the organism of overcoming disease without the aid of any therapeutic agencies. **v. ner'vea,** nerve force. **v. vi'tæ, v. vita'lis,** vital force.

viscera (vis'er-ah). Plural of *viscus*.

viscerad (vis'er-ad) [L. *viscera* + *ad*, to.] In a direction toward the viscera.

visceral (vis'er-al). Relating to the viscera, splanchnic.

visceralgia (vis-er-al'jĭ-ah) [L. *viscera* + G. *algos*, pain.] Pain in any of the viscera.

visceralism (vis'er-al-izm). The theory that all disease is of visceral origin.

viscerimo'tor. Visceromotor.

viscerogenic (vis-er-o-jen'ik) [L. *viscera* + G. *gennaō*, I produce.] Of visceral origin, noting a number of sensory and other reflexes.

visceroinhib'itory. Restricting or arresting the functional activity of the viscera.

visceromo'tor. [L. *viscera* + *motor*, mover.] 1. Relating to or controlling movement in the viscera, noting the sympathetic nerves innervating the viscera, especially the intestines. 2. Noting a movement having a relation to the viscera, referring to reflex muscular contractions of the abdominal wall in cases of visceral disease.

visceropari'etal [L. *viscera* + *paries(pariet-)*, wall.] Relating to the viscera and the wall of the abdomen, noting the operation of fixation of an unduly movable organ to the abdominal wall.

visceroperitoneal (vis"er-o-per-ĭ-to-ne'al). Relating to the peritoneal and the abdominal viscera.

visceropleu'ral. Pleurovisceral, relating to the pleura and the thoracic viscera.

visceropto'sia [L. *viscera* + G. *ptōsis*, a falling.] Splanchnoptosia.

viscerosen'sory. Noting sensation in relation to the viscera, referring especially to peripheral pain or sensitiveness caused by visceral disease.

visceroskel'etal. Relating to the visceral skeleton, or that part of the bony skeleton enclosing the viscera, such as the sternum, ribs, and pelvis; splanchnoskeletal.

viscerosomatic (vis"er-o-so-mat'ik). [L. *viscera* + G. *sōma*, body.] Splanchnosomatic, relating to the viscera and the body.

viscerotrophic (vis-er-o-trof'ik). Relating to any trophic change determined by visceral conditions.

viscid (vis'id) [L. *viscidus; viscum*, birdlime.] Adhesive, sticky, glutinous.

viscid'ity. Stickiness, adhesiveness.

viscin (vis'in). A glutinous substance from mistletoe, *Viscum album*, forming the principal ingredient of birdlime.

viscom'eter. Viscosimeter.

vis'cose. Viscous.

viscosim'eter [*viscosity* + G. *metron*, measure,] An apparatus for determining the degree of

viscosity of a fluid; in medicine, usually of the blood.

viscosimetry (vis-ko-sim'e-trĭ). The determination of the viscosity of a fluid, such as the blood.

viscos'ity. 1. Viscidity. 2. A condition of more or less adhesion of the molecules of a fluid to each other, so that it flows with difficulty.

vis'cous. Viscid, sticky; marked by viscosity (2)

vis'cum. 1. Mistletoe, the berries of *Viscum album*, a parasitic plant growing on apple, pear, and other trees; has been employed as an oxytocic in doses of ℈½–1 (2.0–4.0) of a fluidextract. 2. Herbage of *Phorodendron flavescens* (Pursh.) Nutt, American mistletoe; it has been employed in doses of 15 to 40 grains in infusion, or 15 to 40 ♏ of the fluidextract as a substitute for ergot in labor, as an emmenagogue, and for the relief of cerebral congestion.

vis'cus, pl. *vis'cera* [L.] An internal organ, especially one of the large abdominal organs.

visibil'ity. The condition of being visible.

visible (viz'ĭ-bl) [L. *visibilis*.] Capable of being seen.

visile (viz'il). Relating to vision; specifically, noting the type of mental imagery in which the person recalls most readily that which he has seen; contrasted with *audile* and *motile*.

vision (vizh'un) [L. *visio videre*, to see] Sight; the act of seeing. **binoc'ular v.,** vision, with a single image, by both eyes simultaneously. **central v., direct v.,** vision produced by the rays falling on the fovea centralis. **fa'cial v.,** the sensing of the proximity of objects by the nerves of the face in the case of the blind or when one is in the dark or blindfolded. **field of v.,** the area bounded by the limits of peripheral v., the space within which objects can be more or less distinctly seen while the eye is fixed on one point. **indirect' v., periph'eral v.,** the indistinct vision obtained when the rays from the image fall on the retina outside of the fovea centralis. **shaft v.,** a narrowing of the visual field, as if one were looking through a hollow cylinder or tube; a symptom of hysteria. **v. null** [Fr. *vision nulle*], the presence of abnormal blind spots in the visual field in certain cases of lesion of the cortical center; the patient is unaware of the presence of these scotomata until they are discovered by the examiner; see *v. obscure*. **v. obscure',** the presence of abnormal blind spots in the visual field in cases of lesion below the cortical center; the patient is himself aware of the resultant defect of vision; see *v. null*.

acuteness of, oxyblepsia, oxyopia, galeropia, galeropsia. **blue,** cyanopia, cyanopsia. **colored,** chromatopsia. **day,** nyctalopia, night-blindness. **defective,** paropsia. **deviation of axes,** heterophoria, strabismus, squint; esophoria (inward); exophoria (outward); hyperphoria (upward); hypophoria (downward); hypoesophoria (downward and inward); hyperexophoria (upward and outward). **dim,** dysopsia, amblyopia. obcecation, meropia, nephalopia. **distorted,** metamorphopsia **double,** diplopia, ambiopia; monodiplopia, uniocular diplopia (in one eye); amphodiplopia, binocular diplopia (with the two eyes). **equal in both eyes,** isopia. **false,** parablepsia, pseudoblepsia, pseudopsia. **fatigue,** copiopia, copopsia, eyestrain. **green,** chloropia, chloropsia. **instrument for testing,** opsiometer, optometer, ophthalmometer, photoptometer, diopsimeter, dioptometer. haploscope, refractometer, ophthalmoscope, chromatoptometer. **measurement of,** optometry, opsiometry, ophthalmometry, perimetry, chromatoptometry. **multiple,** polyopia. **normal,** emmetropia, orthopsia. **night,** hemeralopia, day-blindness. **red,** erythropia, erythropsia. **refractive errors,** astigmatism, myopia, hyperopia, hypermetropia, presbyopia. **relating to,** visual, optical; orthoptic, emmetropic (normal); myopic, brachymetropic (short); hyperopic, hypermetropic (far); presbyopic (of old age). **triple,** triplopia. **unequal in both eyes,** anisopia. **weakness,** asthenopia, eye-strain. **yellow,** xanthopia, xanthopsia.

vis'iting physic'ian. Attending* physician.

vis'iting staff. Attending* staff.

vis'iting sur'geon. Attending* surgeon.

vis'ual. Relating to vision.

vis'ualize. To make visible.

visuoauditory (viz-u-o-aw'dĭ-to-rĭ). Relating to both vision and hearing, noting nerves connecting the centers for these senses.

vi'sus [L.] Vision. **v. amplifica'tus,** macropsia, **v. defigura'tus,** metamorphopsia. **v. dimidia'tus,** hemianopsia. **v. diminu'tus,** micropsia. **v. diur'nus,** nyctalopia. **v. duplica'tus,** diplopia. **v. lu'cidus,** photopsia. **v. musca'rum,** myodesopsia. **v. noctur'nus,** hemeralopia. **v. reticula'tus,** the occurrence of many scotomata giving a sieve-like character to the field of vision. **v. triplex,** triplopia.

Vita'ceæ [L. *vitis*, vine.] An order of polypetalous plants which includes the grape vine, *Vitis vinifera*, and *Ampelopsis*.

vi'tal [L. *vitalis; vita*, life.] Relating to life.

Vitali's test (ve-tah'le) [Dioscoride *Vitali*, Italian physician, 1832–1917.] 1. For bile in the urine: add to the suspected urine quinine bisulphate, ammonia, sulphuric acid, sugar, and alcohol; if bile-pigments are present a violet color will be produced. 2. For pus in the urine: the urine is acidified with acetic acid and filtered; to the filtrate guaiac is added, when a dark blue color indicates the presence of pus.

vitalism (vi'tal-izm). The theory that all animal functions are dependent upon a special form of energy or force, the vital force, distinct from any other of the physical forces.

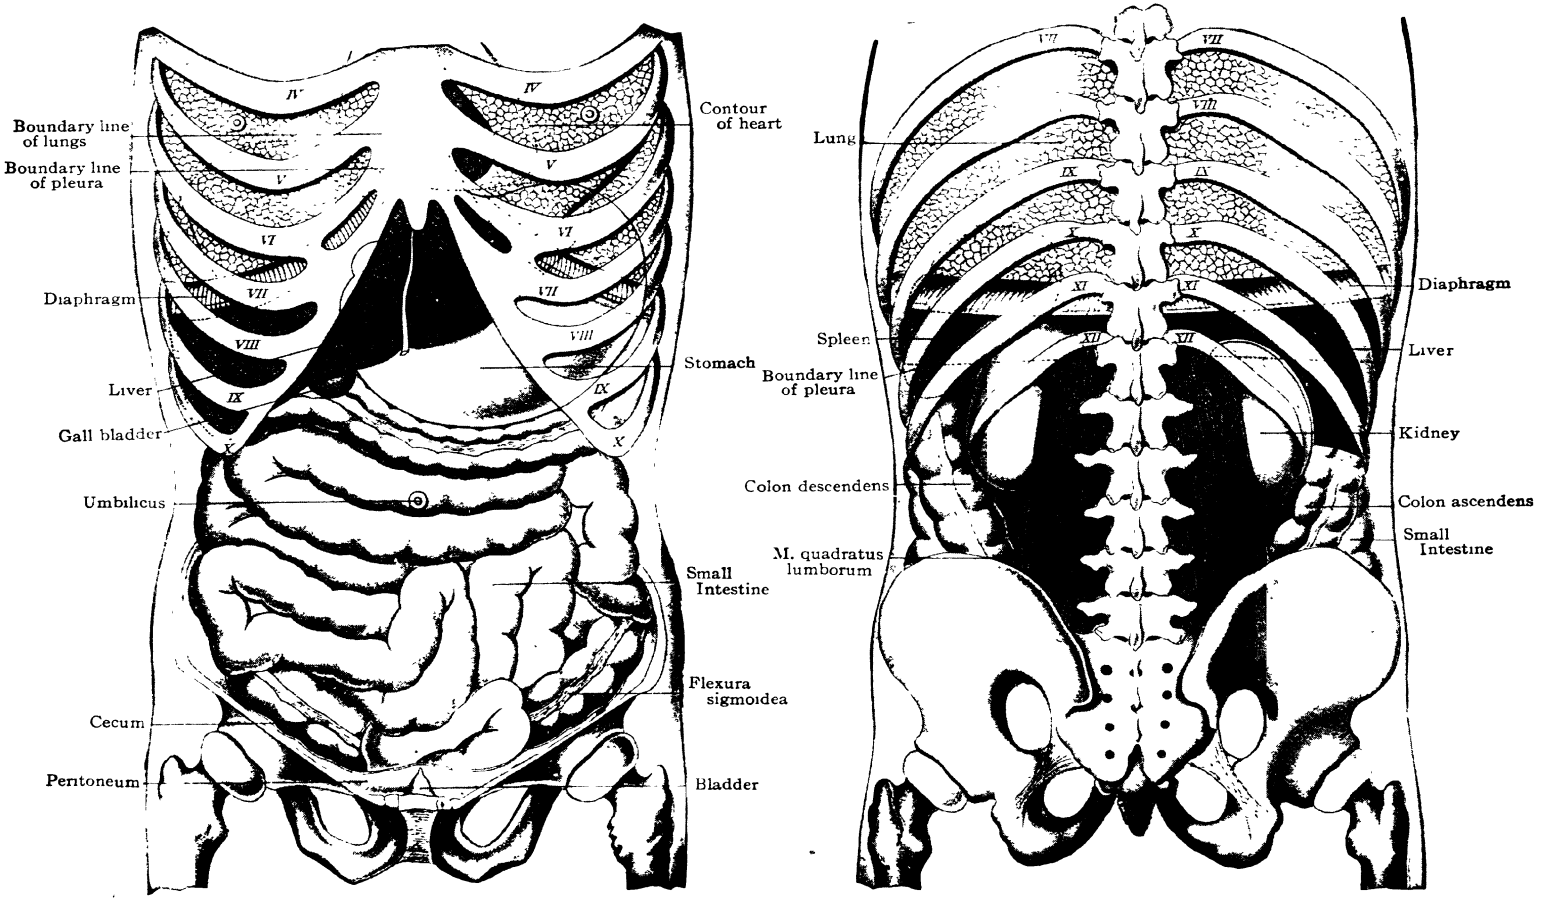
vi'talist. One who adheres to the doctrine of vitalism

vital'ity. Vital force or energy.

vi'talize. To endow with vital force

vi'tals. Viscera.

vitamin (vi'tam-in) [L. *vita*, life, + *amine*.] One of a group of substances for the most part as yet of unknown composition, present in minute amount in natural foodstuffs, which are essential to normal metabolism and the lack of which in the dietary causes beriberi, rickets and other deficiency diseases. There are six now recognized vitamins: **v. A,** contained in butter and cod liver oil, spinach, potatoes, carrots, egg yolk, cream, and other yellow plant and animal substances; it promotes growth and maintenance of health and its absence results in a form of ophthalmia following drying up of the tears, diminution of the salivary secretion, and also an ovarian dysfunction; **v. B_1,** antineuritic, called sometimes *B-P*, (beriberi preventive) or **v. F.,** contained in milk, yeast and in the germ and husk of grains; it is also essential for growth. **v. B_2,** antidermatitic and growth factor, called sometimes *P-P* (pellagra preventive) or **v. G.,** contained in beef liver, yeast and generally in meats; **v. C,** antiscorbutic, contained in fresh vegetables, orange and lemon juices and many other fresh fruit juices; its absence results in unhealthy gums, and predisposes to dental caries. **v. D,** called popularly the sun-ray v., antirachitic, contained in ergosterol whose potency is greatly increased by irradiation with ultraviolet light and also in butter, egg-yolk, and yeast; it is related in its effects to v. A., promoting growth in the young child and the formation of sound teeth. **v. E.** contained in various oils (olive, cotton-seed, peanut) constituting the nonsaponifiable fraction,



RELATIONS OF THE ABDOMINAL AND THORACIC VISCERA

in animal tissue (especially liver, pancreas, heart), and in green salads; it is a reproductive or antisterility factor. **v. G., v. P,** the same as *v. B_2*.

vitavose (vi'tă-vŏz). Trade name of a maltose-dextrin preparation, recommended as a vitamin B food.

vitell'ary [L. *vitellus*, yolk.] Vitelline.

vitell'icle. Yolk-sac, umbilical vesicle.*

vitell'in. A protein combined with lecithin in the yolk of egg.

vitell'ine [L. *vitellus*, yolk.] Relating to the yolk of an egg, or the vitellus.

vitellolutein (vi-tel-o-lu'te-in). Lutein from the yolk of egg.

vitelloru'bin. A reddish pigment from the yolk of egg

vitellose (vi-tel'ōs). A proteose from vitellin.

vitell'us [L.] The yolk of egg; the germinal portion of the ovum together with the substance destined for the nutrition of the embryo. **v. formati'vus,** morpholecithus, the germinal or true yolk that part of the ovum from which the embryo is developed. **v. nutriti'vus,** tropholecithus, the main portion of the yolk in a bird's egg, destined for the nutrition of the developing embryo, the food yolk. **v. ovi,** yolk of egg; employed in pharmacy for emulsifying oils and camphors.

vi'tex peduncula'ris. A plant growing in India, the leaves of which are used in infusion in the treatment of malaria and blackwater fever.

vitiatin (vit-i'a-tin). A substance occasionally found in the urine in association with the related creatin and creatinin.

vitiation (vish-ĭ-a'shun) [L. *vitiatio; vitiare*, to corrupt.] 1. Corruption. 2. Impairment, rendering less efficacious or useless.

vitili'go [L. a skin disease.] Acquired leucoderma, piebald skin, the appearance on the skin of white patches of greater or lesser extent, due to simple loss of pigment without other trophic changes.

vitiligoidea (vit-il-i-go-id'e-ah) [*vitiligo* + G. *eidos*, appearance.] Xanthoma.

Vi'tis [L. a vine.] A genus of plants including the grape, **V. vinif'era,** the several varieties of which are used in the production of wine.

vitium, pl. *vitia* (vish'ĭ-um) [L. vice.] Defect, fault vice **v. cordis,** an organic lesion of the heart. **v. pri'mæ formatio'nis** [L. vice of first formation], a prenatal developmental irregularity.

vitodynamic (vi-to-di-nam'ik). [L. *vita*, life, + G. *dynamis*, force.] Biodynamic, relating to vital force.

vitol (vi'tol). An obsolete term for vitamin.

vitreocapsulitis (vit"re-o-kap-su-li'(le')tis) [L. *vitreus*, vitreous (humor), + *capsula*, capsule, + G. *-itis*.] Hyalitis.

vitreoden'tine [L. *vitreus*, glassy.] Dentine of a peculiar brittle hardness.

vit'reous [L. *vitreus*, glassy.] 1. Glassy, resembling glass. 2. Used elliptically for vitreous body. **v. bod'y,** corpus vitreum, a transparent jelly-like substance filling the interior of the eyeball behind the crystalline lens; it is composed of a delicate network (*v. stro'ma*) enclosing in its meshes a watery fluid (*v. hu'mor*), and surrounded by a membranous condensation of the stroma, the hyaloid membrane. **v. degenera'tion,** (1) coagulation necrosis;* (2) hyaline degeneration.* **v. humor,** (1) see under *v. body;* (2) endolymph. **v. membrane,** a thin membrane forming the external layer of the chorioid; Bruch's membrane. **v. table,** the inner layer of one of the bones of the cranium. **v. wart,** a small rounded transparent body on the posterior surface of the cornea near the periphery

vit'reum [L. *vitreus*, glassy.] Corpus vitreum [BNA], vitreous* body.

vit'riol [L. *vitreolus*, glassy.] Sulphuric acid. **elix'ir of v.,** aromatic sulphuric acid. **green v.,** ferrous sulphate. **oil of v.,** sulphuric acid. **Ro'man v.,** copper sulphate, $CuSO_4$. **white v.,** zinc sulphate.

vitri'na [L. *vitrum*, glass.] Corpus vitreum. **v. auris,** endolymph. **v. oc'uli,** vitreous humor.

vitropression (vi'tro-prĕ"shun) [L. *vitrum*, glass.] Pressure on the skin with a glass slide, in order to eliminate redness due to hyperemia and thus permit a study of the permanent lesions.

vit'rum [L.] Glass. **in vitro,** in glass, in a test-tube, distinguished from *in vivo*.

vitt'a, pl. *vitt'æ* [L. headband, fillet.] In botany, the oil-ducts in the shoots of *Umbelliferæ*

vit'ular, vit'ulary, vit'uline [L. *vitulus*, a calf.] Relating to a calf. **v. ap'oplexy, v. fever,** puerperal fever in the cow.

vives (vīvz) [O.Fr.] Enlarged glands, sometimes suppurating, on the side of the head below the ear in young horses.

viv'ianite. A mineral occurring in pale blue crystals, composed chiefly of ferrous phosphate.

vivi-diffusion (viv"ĭ-dĭ-fu'zhun) [L. *vivus*, alive] A term suggested by Abel, Rowntree, and Turner to denote a method by which the blood of a living animal may be submitted to dialysis outside the body, and again returned to the natural circulation, without exposure to the air or to any noxious influences.

vivifica'tion [L. *vivificare; vivus*, alive, + *facere*, to make.] 1. The change of the protein of the food into living matter of the cells, in the final stage of assimilation. 2. Revivification, freshening the edges of a wound by paring off the surface layer in order to facilitate union.

vivip'arous [L. *vivus*, alive, + *parere*, to bear.] Giving birth to living young, in distinction to *oviparous*.

viviperception (viv-ĭ-per-sep'shon) [L. *vivus*, living, + *perceptio; percipere*, to perceive.] Observation of the vital processes in the organism without the aid of vivisection.

vivisect (viv-ĭ-sekt') [L. *vivus*, living, + *sectus; secare*, to cut.] To practise vivisection.

vivisection (viv-ĭ-sek'shon). Any cutting operation on a living animal for purposes of experimentation; extended to denote any form of animal experimentation.

vivisec'tionist, vivisec'tor. One who practises vivisection.

vivisecto'rium. A laboratory for animal experimentation.

Vladimiroff opera'tion (vlă-de'me-rawf). Mikulicz-Vladimiroff operation.

Vleminckx's solu'tion (flem'inks) [Jean François *Vleminckx*, Belgian physician, 1800–1876.] Liquor calcis sulphuratæ (N.F.).

vo'cal [L. *vocalis; vox*, voice.] Relating to the voice. **v. cords,** four folds of mucous membrane in the interior of the larynx; the *true* vocal cords (plicæ vocales [BNA]) are agents of voice production; the *false* vocal cords (plicæ ventriculares [BNA]) are not integral parts of the vocal apparatus. **v. frem'itus,** a vibration felt on palpation of the chest wall when the subject speaks. **v. process,** processus vocalis [BNA], the anterior process of the arytenoid cartilage, giving attachment to the true vocal cord. **v. res'onance,** a sound heard on auscultation of the chest when the subject speaks. **v. shelves,** folds of mucous membrane, the free edges of which form the v. cords.

Vogt's angle (fōkht) [Karl *Vogt*, German physiologist, 1817–1895.] A craniometrical angle formed by the nasobasilar and alveolonasal lines.

Vogt's point (fōkht) [Paul Friedrich Emmanuel *Vogt*, German surgeon, 1847–1885.] Vogt-Hueter point.

Vogt syndrome (fōgt sin'drōm) [Cecile *Vogt*, German neurologist, contemporary.] Spastic diplegia with athetosis and pseudobulbar paralysis associated with a lesion of the caudate nucleus and putamen.

Vogt-Hueter point (fōkht-hū'ter) [P. F. E. *Vogt*; Carl *Hueter*.] A point for the application of a trephine in case of hemorrhage from the middle meningeal artery; it is at the junction of a horizontal line two finger-breadths above the zygomatic arch and a vertical line one finger-breadth behind the nasal process of the malar bone.

voice [L. *vox*.] The sound made by air passing out through the larynx, the vocal cords being approximated and made tense. **v. sound,** vocal* resonance.

voice-box. Larynx.

void. To evacuate excrementitious matter.

Voigt's lines (foykht) [Christian August *Voigt*, Austrian anatomist, 1809–1890.] Ill-defined lines bounding the areas of distribution of the peripheral nerves.

Voillemier's point (vwal-me-a') [Léon Clément *Voillemier*, French urologist, contemporary.] A point in the linea alba, 2½ inches (6.25 cm). below the level of a line joining the anterior superior spinal processes of the ilium, where a distended bladder can be safely punctured.

Voit's nu'cleus (foyt) [Carl von *Voit*, Munich physiologist, 1831–1908.] A mass of ganglion cells in the nucleus dentatus. **V.'s nu'tritive meas'ure,** a laborer requires on a daily average, 118 grams albumin, 56 g. fat, and 500 g. carbohydrate.

vo'la [L.] Palm of the hand or sole of the foot.

vo'lar [L. *volaris; vola*, palm] Referring to the vola, the palm of the hand or sole of the foot; palmar; plantar, [NK] dorsal.

vol'atile [L. *volatilis; volare*, to fly.] Not permanent, evaporating spontaneously. **v. al'kali,** ammonia. **v. lin'iment,** linimentum* ammoniæ. **v. oil,** oleum volatile.

volatiliza'tion. The process of conversion of a solid or liquid into a vapor; evaporation.

vol'atilize. 1. To convert a solid or liquid into vapor, to cause to evaporate 2. To evaporate.

Vol'dagsen bacillus. *Bacterium voldagsen.*

Volhard's solution (fōl'hart) [J. *Volhard*, German chemist, *1834.] A decinormal solution of potassium sulphocyanate.

Volhard's test (fōl'hart) [Franz *Volhard*, German physician, *1872.] The patient drinks 1,500 c.c. (about 3 pints) of water on an empty stomach; if the kidneys are normal all this fluid will be excreted by the end of four hours, the specific gravity of the urine being from 1001 to 1004.

Volhynia fever (vol-hin'ĭ-ah fe'vur) [*Volhynia*, a government in Russia.] See under *fever*.

volition (vo-lish'un) [L. *velle*, to desire.] The conscious impulse to perform any act or to abstain from its performance, excited by a realization of the dominant feeling.

volitional (vo-lish'un-al). Voluntary, done by an act of will; relating to volition. **v. insan'ity,** mental derangement in which the will power especially is impaired. **v. tremor,** a tremor excited by an attempt at voluntary movement.

Volkmann's canals' (fōlk'mahn) [Alfred Wilhelm *Volkmann*, German physiologist, 1800–1877.] Vascular canals in bone which, unlike those of the Haversian system, are not surrounded by concentric lamellæ of bone; they run for the most part transversely, perforating the lamellæ of the Haversian system, and communicate with the canals of that system. **V.'s hemodromom'eter,** an instrument for measuring the rapidity of the blood circulation.

Volkmann's ca'ries (fōlk'mahn) [Richard *Volkmann*, German surgeon, 1830–1889.] Caries sicca. **V.'s contrac'ture,** ischemic muscular atrophy, degeneration, and contracture of a muscle consequent upon prolonged interference with the circulation by tight bandaging, exposure to cold, or injury of a large artery. **V.'s deform'ity,** congenital luxation of the tibiotarsal joint. **V.'s disease',** myxadenitis* labialis, Baelz's disease. **V.'s splint,** a splint for fractures of the lower extremity, consisting of a guttered splint with a foot-piece with two lateral supports to prevent turning. **V.'s spoon,** a sharp spoon for scraping away carious bone or other diseased tissue.

voll'ey [Fr. *volée*; L. *volare*, to fly.] 1. The discharge simultaneously or in rapid succession of a number of guns. 2. In neurology, a series of rapid muscular contractions artificially induced.

volsell'a. Vulsella

volt [after Allessandro *Volta*, Italian physicist 1744–1827.] The unit of electromotive force; the electromotive force which will produce a current of one ampère with a resistance of one ohm; practically the electromotive force of a Daniell cell.

voltage (vōlt'ej). The electromotive force of a current expressed in volts.

volta'ic. Relating to Volta (see *volt*) who discovered the means of producing electricity by chemical action. **v. electric'ity,** galvanic electricity.

voltaism (vol'tah-izm). Galvanism.

voltam'eter. An apparatus for measuring the strength of a galvanic current by its electrolytic action.

volt'am"meter. An apparatus for measuring both volts and ampères.

volt'ampère. A watt, a unit of electrical effect, the product of one volt by one ampère.

volt'meter. An apparatus for measuring the electromotive force or difference of potential.

Voltolini's disease' (vol-to-le'ne) [Fridericus Eduardus Rudolphus *Voltolini*, German laryngologist, 1819–1889.] Disease of the labyrinth, leading to deaf-mutism, in young children.

Voltolini-Heryng sign. Heryng's* sign of antra disease.

volumenom'eter [L. *volumen*, volume, + G. *metron*, measure.] A device for determining the volume of a solid by measuring the amount of liquid which it displaces.

volumet'ric [L. *volumen*, volume, + G. *metron*, measure.] Relating to measurement by volume; see *analysis*. **v. solu'tion,** see under *solution*.

volumom'eter. Volumenometer.

vol'untary [L. *voluntarius; voluntas*, will.] Relating or acting in obedience to the will; not obligatory,

voluntomo'tory. Relating to voluntary movements.

voluptuous (vo-lup'tu-us) [L. *voluptas*, pleasure.] Causing or caused by sensual pleasure; given to gratification of the senses.

volute (vo-lūt') [L. *voluta*, a scroll.] Rolled up, convoluted.

volutin (vol'u-tin). A nucleoprotein found in certain bacteria and in yeasts.

volvulosis (vol-vu-lo'sis). A disease marked by the presence of one or more elastic, cutaneous or subcutaneous, fibrous tumors caused by the worm, *Oncocerca volvulus*.

vol'vulus [L. *volvere*, to roll] A twisting of the intestine causing obstruction.

vo'mer, gen. *vo'meris* [L. ploughshare.] A flat bone of trapezoidal shape forming the inferior and posterior portion of the nasal septum; it articulates with the sphenoid, ethmoid, two superior maxillary, and two palate bones. **v. cartilag-in'eus**, Jacobson's cartilage, cartilago* vomeronasalis.

vo'merine. Relating to the vomer.

vo"merobas'ilar. Relating to the vomer and the base of the skull; noting the *v. canal* at the line of union of the vomer and the sphenoid bone.

vomerona'sal. Relating to the vomer and the nasal bone; noting the *v. cartilage*, cartilago* vomeronasalis. **v. or'gan**, Jacobson's organ, organon* vomeronasale.

vom'ica [L. an ulcer.] 1. A pulmonary cavity containing pus. 2. [L. *vomicus*, vomiting.] Profuse expectoration of purulent matter. **v. laryn'gis**, laryngeal perichondritis.

vom'icine [*nux vomica*.] Brucine.

vom'ic-nut. Nux vomica

vom'icose [L. *vomica*, an ulcer.] Ulcerous, marked by many ulcers; profusely suppurating.

vomicus (vom'ĭ-kus) [L.] Vomica (2).

vom'it [L. *vomitus; vomere*, to vomit.] 1. To eject matter forcibly from the stomach. 2. Matter thrown up from the stomach. 3. An emetic. **black v.**, hematemesis; specifically, severe yellow fever attended with hematemesis.

vom'iting. The ejection of matter through the esophagus and mouth from the stomach. **cy'clic v.**, periodical v. **dry v.**, retching, movements of vomiting without the ejection of matter from the stomach. **fecal v.**, stercoraceous v. **morning v.**, v. occurring on rising or immediately after breakfast in cases of chronic gastritis or in early pregnancy. **period'ical v.**, Leyden's disease, an affection marked by the periodical recurrence, in otherwise apparently healthy persons, of paroxysms of vomiting lasting from one to ten days; the patient has no symptoms of gastric disturbance in the intervals. **pernic'ious v.**, uncontrollable v. **projec'tile v.**, expulsion of the contents of the stomach with great force. **recur'rent v.**, periodical v. **stercora'ceous v.**, copremesis, the ejection of fecal matter, aspirated into the stomach from the intestine by the repeated spasmodic contractions of the gastric muscles. **v. of preg'nancy**, morning vomiting occurring in the early months of pregnancy.

vomition (vo-mish'un). Vomiting.

vom'itive. Emetic.

vomito negro (vom'ĭ-to na'gro) [Sp.] Black vomit.*

vom'itory. Emetic.

vomiturition (vom-ĭ-tu-rish'un). Retching.

vom'itus. 1. Vomiting. 2. Vomited matter. **v. cruen'tus**, hematemesis. **v. gravida'rum**, vomiting of pregnancy. **v. mari'nus**, seasickness. **v. matuti'nus**, morning vomiting.* **v. niger**, black vomit,* vomito negro.

Von. A German title of nobility prefixed to the surname, often abbreviated to v. For the eponymic terms beginning with *Von*, as Von Leyden, etc., see the proper name without the prefix.

Voorhees bag (voor'ēz) [James Ditmars *Voorhees*, New York obstetrician, *1869.] A hydrostatic bag for dilating the cervix in accouchement forcé.

Voronoff's method (vor'o-nof) [Serge *Voronoff*, Russian physician in Paris, *1866.] Transplantation into man of the testis of a young anthropoid ape, alleged to cause a rejuvenescence of the subject.

vor'tex, pl. *vor'tices* [L. eddy, whirlpool.] 1. The whorl of muscular fibers at the apex of the heart, v. cordis [BNA]. 2. One of the stellar figures on the surface of the crystalline lens of the eye, v. lentis. **v. coccyge'us** [BNA], coccygeal whorl, a spiral arrangement of coarse hairs sometimes present over the region of the coccyx. **v. lentis**, see *vortex* (2). **v. cor'dis** [BNA], the whorl of muscular fibers at the apex of the heart. **v. pilo'rum** [BNA], hair whorl, crown, a spiral arrangement of the hairs, as at the crown of the head.

Vortice'lla. A genus of *Infusoria* of the order *Peritrichida*, of bell shape and having a spiral of cilia around the adoral zone; various free species have been found at times in the feces, urine, and mucous discharges.

vor'ticose. Arranged in a whorl, noting the v. veins of the chorioid coat of the eye, venæ* vorticosæ.

vox [L.] Voice. **v. cholera'ica**, a peculiar hoarse almost inaudible voice of a sufferer in the last stage of Asiatic cholera.

voyeurism (vwah-yer'izm) [Fr. *voire*, to see.] A morbid desire to look at the sexual organs or other usually clothed parts of the body of one of the opposite sex.

V.R. Abbreviation for vocal resonance.*

vril [L. *virilis*, pertaining to a man, vigorous.] A word proposed by Bulwer Lytton to denote the initial energy with which every living organism is assumed to start, which enables it to reach maturity and reproduce its kind.

V.S. Abbreviation of volumetric solution.*

V.T. Vacuum tuberculin; old tuberculin reduced in a vacuum to one-tenth its original volume.

vuerometer (vu-rom'e-tur) [Fr. *vue*, sight, + G. *metron*, measure.] An instrument for measuring the distance between the pupils of the two eyes.

vul'canite. Hard rubber, used for splints, in dental work, etc.

vulgaris (vul-ga'ris). Ordinary, of the usual type.

vul'nerable [L. *vulnus(vulner-)*, wound, + *habilis*, fit.] Capable of being wounded, easily injured.

vul'nerant. Vulnerating.

vul'nerary [L. *vulnus(vulner-)*, wound.] 1. Relating to a wound. 2. An agent which promotes the healing of wounds.

vul'nerate [L *vulnerare*.] To wound.

vul'nus [L.] A wound or injury, trauma, traumatism.

VULSELLA.

Vul'pian's at'rophy [Edme Félix Alfred *Vulpian*, Parisian physician, 1826–1887.] Progressive spinal muscular atrophy beginning in the shoulder the scapulohumeral type. **V.'s con'jugate devia'tion**, a turning of the head and eyes

toward one side, occasionally observed after an apoplectic attack. **V.'s type.** V.'s atrophy.

Vulpian-Prévost law (vül-pe-oń″pra-vo′). Prévost's* law.

vulsell'a [L. pincers.] Volsella, a forceps armed at the tips of the blades with sharp-pointed rectangular hooks. See illustration on page 1185.

vulsell'um. Vulsella. **v. for'ceps,** vulsella.

vul'va [L. a wrapper or covering.] Pudendum muliebre [BNA], the labia majora and the cleft between them. **v. cer'ebri,** the space between the anterior pillars of the fornix in the third ventricle. **v. conni'vens,** a v. with very narrow opening. **v. hians,** a v. in which the labia are loosely approximated.

atrophy of skin and mucous membrane, kraurosis pudendi, kraurosis vulvæ **blood-tumor,** episiohematoma, hematoma vulvæ. **closure,** episioclisia. **hemorrhage,** episiorrhagia **incision,** episiotomy **inflammation,** episiitis, episioitis, vulvitis, edeitis, ædœitis, bartholinitis; vulvovaginitis (with vagina). **narrowing,** episiostenosis. **pain,** pudendagra. **passage,** introitus vaginæ. **plastic surgery,** episioplasty. **protrusion,** episiocele. **spasm,** vulvismus. **suture,** episiorrhaphy, episioelytrorrhaphy. **swelling,** episiocele. **tumor,** episioncus, episiophyma.

vul'val, vul'var. Relating to the vulva.

vulvis'mus. Vaginismus.

vulvitis (vul-vi′(ve′)tis) [L. *vulva* + G. *-itis*.] Inflammation of the vulva. **follic'ular v.,** inflammation of the vulvar follicles.

vulvouterine (vul-vo-u′ter-in). Relating to the vulva and the uterus, noting the *v. canal,* or vagina.

vulvovaginal (vul-vo-vaj′in-al). Relating to the vulva and the vagina; noting the *v. gland,* glandula vestibularis major [BNA].

vulvovaginitis (vul-vo-vaj-in-i′(e′)tis). Inflammation of both vulva and vagina, or of the vulvovaginal glands.

W

W. Chemical symbol for tungsten (*wolfram*).

wabain (wah'bah-in). A glucoside from waba, the root of *Carissa schimperi;* a local anesthetic and heart stimulant.

Wachendorf's membrane (vah'khen-dorf) [Eberhard Jacob von *Wachendorf*, Dutch physician, 18th century.] 1. The ectoplasm of a cell. 2. Membrana pupillaris [BNA].

Wachsmuth's mix'ture (vahkhs'moot) [Hans *Wachsmuth*, German neurologist, *1872.] A mixture of 5 parts chloroform and 1 part oil of turpentine, used by inhalation to induce general anesthesia.

wadd'ing. Carded cotton or wool in sheets, used for surgical dressings.

waddle (wod'l). To walk with a side-to-side, swaying motion; occurring in pseudohypertrophic muscular paralysis and certain other nervous conditions.

Wade's bal'sam. Tinctura benzoini composita. **W.'s suppos'itories,** urethral suppositories containing iodoform, chloral, morphine, and bismuth subnitrate.

Wads'worth's meth'od [Augustus Baldwin *Wadsworth*, American bacteriologist, contemporary.] For demonstrating the capsules of bacteria: smears are fixed by immersion in 40 per cent. formalin for two to five minutes, then stained by 10 per cent. aqueous solution of gentian violet, or by Gram's differential method.

wa'fer. A thin sheet of dried flour paste, used to enclose a powder, the wafer being moistened and folded over the drug, so that it can be swallowed without taste.

Wagner's cor'puscle (vahg'ner) [Rudolf *Wagner*, German physiologist, 1805–1864.] Touch corpusle, corpusculum* tactus [BNA,] Meissner's corpuscle. **W.'s spot,** germinal spot, the nucleolus of the nucleus of the ovum.

Wagner's ham'mer (vahg'ner) [Johann Philip *Wagner*, German physicist, 1799–1879.] Neef's hammer, an automatic interrupter of a galvanic current.

Wag'ner's line. A narrow, whitish, slightly curved line, representing an area of preliminary calcification, at the junction of the epiphysis and diaphysis of a long bone.

Wagner's opera'tion (vahg'ner) [Wilhelm *Wagner*, German surgeon, 1848–1900.] Osteoplastic resection of the skull.

Wagner's the'ory (vahg'ner) [Moritz *Wagner*, German scientist, 1813–1887.] Migration theory* (2).

Wag'staffe's frac'ture [William Warwick *Wagstaffe*, English surgeon, 1843–1910.] Fracture, with displacement, of the inner malleolus.

Wahl's sign (vahl) [Eduard von *Wahl*, German surgeon in Dorpat, 1833–1890.] 1. A moist blowing sound heard over a wounded artery; halituous bruit. 2. Distention of the bowel with gas above the seat of an obstruction.

wahoo (wah'hoo) [Am. Ind. name.] Euonymus.

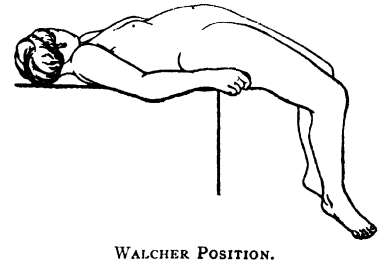
waist (wāst) [A.S. *wæxt.*] The portion of the trunk between the ribs and the pelvis.

wait'er's cramp. A professional neurosis, a spasm of the muscles of the back and right arm in waiters.

wakam'ba. A Zanzibar arrow poison which stimulates powerfully the vasomotor nerves causing a marked rise of blood pressure

wake'fulness. The state in which there is an absence of the inclination to sleep; occurring at the time when sleep should normally occur it is synonymous with insomnia.

Walcher posi'tion (vahl'kher) [Gustav Adolf *Walcher*, German obstetrician, *1856.] A supine position of the parturient woman with the lower extremities falling over the edge of the table



WALCHER POSITION.

Walcheren fever [vahl'kha-ren) [*Walcheren*, a place in Holland.] Malarial fever formerly endemic in parts of Holland.

Waldenburg's appara'tus (vahl'den-boorg) [Louis *Waldenburg*, German physician, 1837–1880.] An apparatus for compressing or rarefying air, from which one inhales or into which one exhales; it consists of a cylinder, closed at one end, which is inverted in a vessel of water like a gasometer.

Waldeyer's epithe'lium (vahl'di-er) [Heinrich Wilhelm Gottfried v. *Waldeyer-Hartz*, German anatomist, 1836–1921.] Germinal epithelium.* **W.'s fos'sæ,** duodenal fossæ, recesses in the peritoneum along the ascending portion of the duodenum and at the duodenojejunal angle. **W.'s glands,** coil glands near the margins of the eyelids. **W.'s neu'ron,** the nerve-cell with its processes, neuron* (1). **W.'s ring, W.'s throat-ring,** or **W.'s ton'sillar ring,** the incomplete ring of lymphoid tissue, formed by the faucial, lingual, and pharyngeal tonsils. **W.'s vas'cular lay'er,** the vascular layer of the ovary. **W.'s zo'nal lay'er,** Lissauer's tract.

WALDEYER'S DOUBLE FOSSA. (*Landouzy and Jayle.*)

wale [A.S *walu.*] A linear wheal, especially one produced by a blow with a stick or a whip.

Walker-Gor'don milk. A modified milk made according to a physician's prescription, by a company of this name.

wall [L. *vallum.*] Paries, an investing part enclosing a cavity such as the chest or abdomen, or covering a cell or any anatomical unit.

Walle'rian. Relating to or described by Augustus Volney *Waller*, an English physiologist, 1816–1870. **W. degenera'tion,** degeneration of a nerve-fiber separated from its trophic center; it is characterized by proliferation of the nucleus of the interannular segment and by segmentation

of the myelin, ending in atrophy and destruction of the axis-cylinder. **W. law,** after section of the posterior root of a spinal nerve between the root ganglion and the spinal cord, the central portion degenerates; after division of the anterior root, the peripheral portion degenerates; the trophic center of the posterior root is therefore the ganglion, that of the anterior root the spinal cord.

wall-eye. 1. Divergent squint. 2. Absence of color in the iris, or leucoma of the cornea.

Wallhauser and Whitehead's meth'od [A. *Wallhauser** 1892; J. M. Whitehead,* 1889, American practitioners.] Treatment of Hodgkin's disease by an autogenous gland filtrate.

wall-tooth. Molar tooth.

wal'nut. Juglans.

Walther's canals' or **ducts** (vahl'ter) [August Friedrich *Walther,* German anatomist, 1688–1746.] Ductus sublingualis minores, Rivinus' ducts, from 8 to 10 excretory ducts of the lobules of the sublingual glands; they are inconstant, the gland sometimes discharging through a single duct. **W.'s gan'glion,** ganglion coccygeum. **W.'s lig'ament,** a fibrous band connecting the external malleolus and the astragalus. **W.'s plex'us,** plexus cavernosus.

wan'dering [A.S. *wandrian,* to wander.] Moving about, not fixed. **w. cell,** leucocyte. **w. impul'sion,** fugues, ambulatory automatism. **w. organ,** an organ with loose attachments, permitting its displacement, floating or ptotic organ.

Wang's test [Wang Chung Yik, Chinese pathologist, 1889–1931.] A quantitative test for indican, which is transformed into indigo-sulphuric acid and then titrated by a solution of potassium permanganate.

wang-tooth [A.S. *wange,* jaw, cheek.] A molar tooth.

war'as. Warras.

warble (wawr'bl). 1. A small soft tumor of the skin of a horse, usually caused by chafing or undue pressure of the saddle-girth or collar. 2. A small tumor on the back of cattle caused by the larva of a gadfly.

War'burg's tinc'ture [Carl *Warburg,* Austrian physician, *1804.] As originally compounded a preparation containing over 60 ingredients, including 40 in the confection of Damocrates; once in great repute in India as an antiperiodic. The preparation now called by that name contains but 17 of the original ingredients; see *tinctura antiperiodica* (N.F.).

ward [A.S. *weard.*] A room or hall in a hospital containing a number of beds. **accident w., causal w., casualty w.,** a hospital w. for the reception of accident cases.

Ward's paste [Nathaniel Bagshaw *Ward,* London surgeon and botanist, *1868.] A paste of elecampane, black pepper, sugar, and fennel seed in honey; employed as a stimulant tonic.

War'drop's disease' [James *Wardrop,* English surgeon, 1782–1869.] Onychia maligna. **W.'s meth'od,** treatment of aneurysm by ligation of the artery at some distance beyond the sac, leaving one or more branches of the artery between the sac and the ligature; see cut under *aneurysm.*

ware'houseman's itch. Eczema of the hands from handling irritating substances.

warm'ing-plaster. 1. Emplastrum picis cantharidatum (U.S. 1880). 2. Emplastrum calefaciens (Br.).

war'ras. An African drug having the properties of kamala; also used as a purple dye.

Warr'ens fat column [John Collins *Warren,* Boston surgeon, 1778–1856.] Columna adiposa.

Warr'ens styp'tic. Lotio adstringens (N.F.). **W.'s test,** Trommer's test.

wart. A circumscribed hypertrophy of the papillæ of the corium, usually of the hand covered by thickened epidermis; verruca.* **butcher's w.,** a nodular growth, usually multiple, on the skin, of tuberculous nature. **fig. w.,** condyloma acuminatum. **flat w.,** verruca plana. **moist w.,** condyloma acuminatum. **pointed w.,** condyloma acuminatum. **post-mor'tem w.,** anatomical tubercle, dissecting tubercle, a warty growth on the hands of one making frequent post-mortem examinations or dissections. **seborrhe'ic w.,** keratoma senile. **se'nile w.,** keratoma senile. **vene'real w.,** condyloma acuminatum.

Wartenberg's symp'tom (var'ten-bairg) [Robert *Wartenberg,* German neurologist, *1887.] 1. Intense pruritus of the tip of the nose, and nostrils in cases of cerebral tumor. 2. Flexion of the thumb when the patient attempts to flex the four fingers against resistance, a "pyramid sign."

wart'pox. Variola verrucosa.

warty. Relating to or covered with warts.

wash. A lotion. **black w.,** lotio hydrargyri nigra (Br.), lotio nigra (N.F.). **eye w.,** collyrium. **mouth w.,** collutorium, a medicated liquid used for cleansing the mouth and treating diseased states of the mucous membrane. **yel'low w.,** lotio hydrargyri flava (Br.), lotio flava (N.F.).

wash'-bottle. 1. A bottle containing water, with a tube passing to the bottom, through which gases are forced to purify them. 2. A stoppered bottle containing fluid, provided with two tubes, one ending above the other below the fluid, so that by blowing through the short tube the liquid is forced in a small stream from the free end of the long one; used for washing chemical apparatus.

wash'erwoman's itch. Eczema or psoriasis of the hands of laundry workers, caused by irritation of soapy water.

wash'ing-soda. Commercial sodium carbonate

wash'-leather skin. A trophic change in the skin, occurring in certain cases of chronic constitutional disease, in which the texture is altered and a silver coin drawn across the skin will leave a dark line.

Wassermann-fast. A term used to designate a case in which the W. reaction remains positive despite all treatment.

Wassermann reac'tion (vahs'ermahn) [August Paul v. *Wassermann,* Berlin bacteriologist, 1866–1925.] W. test. **W. se'rum-nu'trose a'gar** see under *agar.* **W. test,** a diagnostic test for syphilis, based upon the theory of complement fixation. Measured quantities of extract from the liver and spleen of a syphilitic fetus or from normal heart tissue, either animal or human (representing the antigen) and of the blood-serum of the person to be tested are mixed in a test-tube, and some fresh normal guinea-pig serum (containing the complement) is added; after incubation at body temperature for about an hour the contents of this tube are added to a mixture of the red blood-cells of a sheep or other animal, suspended in physiological saline solution, and of the serum of a rabbit which has been immunized to these particular red cells; if the serum mixed with the extract of syphilic organs in the first test-tube is from a syphilitic individual, no hemolysis of the red blood-cells in the second tube will occur after

incubation for one hour. See *Noguchi's* test.* **provoc'ative W. t.,** the employment of the W. test one or two days up to one or two weeks after the administration of salvarsan or neosalvarsan; the result may then be positive when before the giving of salvarsan it was negative.

Wassermann-Uhlenhuth blood-test (vahs'er-mahn-oo'len-hoot). Uhlenhuth's* blood-test.

waste [L. *vastare*, to empty, to destroy.] 1. To emaciate, to grow thin. 2. Excrementitious material.

waster (wāst'er). 1. A marantic infant. 2. An animal, usually a cow, affected with tuberculosis and losing flesh.

wasting (wāst'ing). Emaciation. **w. palsy** or **paral'ysis,** progressive muscular atrophy.

watch'maker's cramp. A professional neurosis consisting in (1) spasm of the orbicularis palpebrarum muscle, from holding the lens to the eye; (2) spasm of the muscles of the hand in attempting the delicate movements of watch-repairing.

water (waw'ter) [A.S. *wæter.*] 1. A clear, odorless, tasteless liquid, H_2O, solidifying at 32° F. (0° C. and R.), and boiling at 212° F. (100° C., 80° R.). It is regarded as a mixture, of varying molecular complexity, of units having the formula OH_2. Water is present in all animal and vegetable tissues and in nearly all other substances; it is also a solvent of more substances than any other liquid. 2. The pharmacopeial preparation, aqua.* 3. The urine. **acid'ulous w.,** carbonic w., one which contains a considerable amount of carbonic acid in solution. **al'kaline w.,** one which contains appreciable amounts of the bicarbonates of calcium, lithium, potassium, or sodium **bitt'er w.,** a natural mineral water containing Epsom salt. **bro'mine w.,** one containing the bromides of magnesium, potassium, or sodium in therapeutic amounts. **cal'cic w.,** one containing appreciable quantities of calcium salts in solution. **cap'illary w.,** water filling the interstices of a structure, but not held in contact with the individual units by molecular attraction. **car'bonated** or **carbon'ic w.,** acidulous w. **chalyb'eate w.,** one which contains salts of iron in appreciable quantities. **chlo'rine w.,** one which contains the chlorides of sodium, potassium, calcium, and magnesium in varying amounts. **combined' w.,** water which enters as an essential part in the constitution of a molecule. **deep w.,** w. coming from below an impervious stratum of the earth, as spring-water or that from an artesian well. **earth'y w.,** one containing a large amount of mineral matter, chiefly calcium sulphate, in solution. **ground w.,** w. contained in the superficial strata of the earth, such as collects in wells. **hard w.,** one which contains an excess of calcium or magnesium salts, in which soap forms a curdy deposit; *temporary hardness,* removable by boiling and filtering, is due to the presence of the carbonates of these metals; *permanent hardness* is due to the presence of the sulphates of these metals which are not decomposed by boiling. **indif'ferent w.,** a mineral w. containing but a small quantity of saline matter. **i'odine w.,** one containing the iodides of magnesium, potassium, or sodium in therapeutic amounts. **meteor'ic w.,** rain-water or w. from melting snow. **min'eral w.,** one which contains appreciable amounts of certain salts which give to it therapeutic properties. **po'table w.,** a water fit for drinking, being free from contamination and not containing a sufficient quantity of saline material to be regarded as a mineral w. **sa'line w.,** one which contains neutral salts (chlorides, bromides, or iodides, or sulphates) in appreciable amounts. **soft w.,** one which contains a minimum amount of salts of calcium or magnesium, in which soap dissolves without a sediment. **sul'phate w.,** one holding in solution appreciable quantities of the sulphates of calcium, magnesium, or sodium. **sul'phur w.,** one containing sulphureted hydrogen or the metallic sulphides. **sur'face w.,** the w. of ponds, lakes, or streams. **ther'mal w.,** a w. which is hot as it issues from the spring. **w. of adhe'sion,** water held by molecular attraction in contact with units of structure, but not forming an essential part of their constitution. **w. of constitu'tion,** water held by a unit of structure as an essential part of its constitution, though not an ingredient of its molecules. **w. of crystalliza'tion,** w. of constitution which unites with certain salts and is essential to their arrangement in crystalline form.

wa'ter-bath. 1. A bath in water, as distinguished from a vapor-bath, mud-bath, sand-bath, etc. 2. In chemistry, a double vessel, the outer one containing water, the inner one the substance to be heated or evaporated without exposing it to too high a temperature.

wa'ter-bed. A mattress in the form of a closed rubber bag filled with water.

wa'ter-bite. Trench foot.

wa'terborne. Transported by drinking-water, said of diseases such as cholera and typhoid fever, which are spread largely by this means.

wa'ter-brash. The eructation of an acid fluid from the stomach.

wat'er-braxy. Inflammation of the bowels in sheep, attended with hemorrhage into the peritoneal cavity.

wa'ter-cancer, wa'ter-canker. Noma.

wa'ter-coil. Leiter's* coil.

wa'ter-cure. Hydrotherapy, balneotherapy.

wa'ter-dressing. The application of water to a wound by means of wet compresses, constant irrigation, or immersion.

wa'ter-farcy. Inflammation of the lymphatics in the leg of a horse.

water-glass. Soluble glass, silicate of sodium or of potassium, soluble in hot water but solid at ordinary temperatures; used for fixed dressings.

wa'ter-gurgle test. A gurgling sound heard on auscultation of the throat when the patient swallows, in cases of esophageal stricture.

wa'ter-hammer pulse. See *pulse.*

wa'ter-itch. Uncinariasis cutis, ground itch.*

wa'ter-pang. Pyrosis.

wa'ter-pock, wa'ter-pox. Varicella.

waters (waw'ters). Liquor amnii. **bag of w.,** the closed sac formed of the fetal membranes enclosing the liquor amnii. **false w.,** a leakage of fluid in beginning labor, before the rupture of the bag of waters.

water-soluble (waw'tur-sol'u-bl). Capable of being dissolved in water. **w.-s. B., w.-s. C.,** see *vitamin.*

wa'ter-sore. Water-itch.

wa'ter-stroke. Serous apoplexy.*

water-vas'cular system. The lymphatic system of vessels and glands.

water-whistle sound (waw'ter-hwis'l-sownd). A bubbling whistle heard on auscultation over a pulmonary fistula.

watt [after James *Watt,* Scottish engineer, 1736–1819.] The unit of electrical power, the power

available when the current is one ampère and the electromotive force is one volt.

watt'meter. An apparatus for measuring electrical activity or power.

wave [A.S. *wafian*, to fluctuate.] 1. A movement of particles in an elastic body, whether solid or fluid, whereby an advancing series of alternate elevations and depressions, or expansions and condensations, is produced. 2. The elevation of the pulse, felt by the finger, or represented graphically in the curved line of the sphygmogram. **anacrotic w., catacrotic w., dicrotic w.,** etc., see the adjectives. **electrocardiograph'ic w.,** a deflection of special shape and extent in the electrocardiogram representing the activity of a definite portion of the heart muscle; these waves are called: P = auricular systole, Q = beginning ventricular contraction, R = activity of base of ventricle, S = activity of apex of ventricle, T = ending of ventricular contraction.

wavy respira'tion. Interrupted or cogwheel respiration.*

wax [A.S. *weax*.] 1. A thick, tenacious substance plastic at room temperature, secreted by bees for building their cells, or the honeycomb; cera. 2. Any substance of physical properties similar to those of beeswax, of animal, vegetable, or mineral origin. 3. Cerumen, earwax. **an'imal w.,** beeswax, spermaceti, and any wax derived from the animal kingdom. **Brazil' w., carnau'ba w.,** a product of a South American palm, *Copernicia cerifera*. **Chinese' w.,** (1) a vegetable w.; (2) a wax secreted by a scale insect. **Japan' w.,** a vegetable wax derived from *Rhus succedanea* and *R. vernicifera*. **min'eral w.,** paraffin w. **palm w.,** Brazil w. **par'affin w.,** a wax derived from petroleum. **veg'etable w.,** palm w. or any wax derived from plants, such as the bayberry. **vir'gin w.,** pure white wax. **w. form,** a wax impression of a tooth cavity, which is reproduced in ivory, gold, or silver and then cemented into the cavity. **white w.,** bleached beeswax. **yellow w.,** natural unbleached beeswax.

wax [A.S. *weaxan*.] To grow, to increase in size **waxing ker'nels,** enlarged lymph-glands in the groin in children. **waxing pain,** growing pain.*

wax'y. Relating to or resembling wax. **w. cast,** hyaline cast.* **w. degenera'tion,** amyloid degeneration.*

weak [A.S. *wac*.] Deficient in strength, feeble; delicate, not robust. **w. minded,** of deficient mentality, noting a high-grade imbecile or moron. **w. sight,** asthenopia.

wean (wēn) [A.S. *wenian*.] To take from the breast, to deprive permanently of breast milk and nourish with other food.

weaning. Taking from the breast, ablactation. **w. brash,** a diarrhea sometimes occurring in a child when nourishment by other food than breast-milk is begun.

weasand (we'zand) [A.S. *wæsend*.] The trachea.

weavers' bott'om. A condition of similar nature to housemaid's knee, consisting in chronic inflammation of the ischiatic bursa (bursa ischiadica) due to ill-directed pressure.

web [A.S.] A tissue, a membrane, tela.* **w. eye,** pterygium. **webbed fing'ers,** a form of syndactylism in which two or more of the fingers are not fused, but are joined by a fold of skin. **webbed penis,** penis palmatus. **webbed toes,** a condition, similar to webbed fingers, affecting the toes.

weber (web'er or va'ber) [after Wilhelm *Weber*, German physicist, 1804–1891.] 1. Ampère. 2. Coulomb. The term is seldom, if ever, now used.

Weber's cor'puscle (va'ber) [Moritz Ignatz *Weber*, German anatomist, 1795–1875.] W.'s organ. **W.'s glands,** muciparous glands at the border of the tongue on either side posteriorly. **W.'s or'gan,** utriculus prostaticus.

Weber's douche (va'ber) [Theodor *Weber*, German physician, 1829–1914.] Nasal douche.

Weber's exper'iment (va'ber) [Ernst Heinrich *Weber*, German physiologist, 1795–1878.] If the peripheral end of the divided vagus nerve is irritated the heart is arrested in diastole. **W.'s law,** (1) when the strength of the stimulus varies in geometric progression, the response will vary in arithmetical progression. (2) Fechner's* law. **W.'s par'adox,** if a muscle is loaded beyond its power to contract it may elongate. **W.'s syn'drome,** paralysis of the oculomotor on the side of the lesion and that of the extremities and of the facialis and hypoglossus on the opposite side; indications of a lesion in the lower and internal part of a cerebral peduncle. **W.'s test** for indican; the suspected urine is heated with an equal amount of hydrochloric acid, and when it is cool ether is added and the mixture is shaken; if indican is present the fluid will have a reddish hue, the foam being bluish. **W.'s test** for hearing; the application of a vibrating tuning-fork to one of several points in the midline of the head or face, to ascertain in which ear the sound is heard best by bone conduction, that ear being the affected one if the sound-conducting apparatus (middle ear) is at fault (positive test), but probably the normal one if the sound-perceiving apparatus (inner ear) is diseased (negative test).

Web'ster's dinner-pill. Lady Webster's dinner pill, pilula* aloes et mastiches.

Web'ster's opera'tion [John Clarence *Webster*, Chicago gynecologist, *1863.] Correction of retrodisplacement of the uterus by passing the round ligaments through the perforated broad ligaments and stitching them to the back of the uterus.

Webster's test [John *Webster*, English chemist, 1878–1927.] A test for trinitrotoluene in the urine.

wedge [A.S. *weeg*.] A solid body having the shape of an acute-angled triangular prism. **w. of division,** one of the tigroid masses located at the point where a dendrite divides into two branches.

weed. Lymphangitis in the horse.

Weeks' bacill'us [John Elmer *Weeks*, New York ophthalmologist, *1853.] Koch*-Weeks bacillus.

weep'ing [A.S. *wēpan*, to wail.] 1. Shedding tears. 2. Dripping, moist. **w. ec'zema,** eczema* vesiculosum. **w. sinew,** ganglion (3).

W.E.F. Abbreviation for war emergency formula, noting a permissible departure from certain B. Ph. formulæ containing syrup when sugar was scarce during the World War.

Wegner's disease' (veg'ner) [Friedrich Rudolf Georg *Wegner*, German pathologist, *1843.] Separation of the epiphyses through osteochondritic processes, in infants with hereditary syphilis. **W.'s sign,** broadening, roughening, and discoloration of the epiphyseal line, observed post mortem in infants dead of hereditary syphilis.

Wehnelt's interrupt'er (va'nelt) [Arthur *Wehnelt*, German physicist, *1871.] An appliance making extremely rapid interruptions in the electric current.

Weichselbaum's coc'cus (vikh'zel-bowm) [Anton *Weichselbaum*, Viennese pathologist, 1845–1920.] ***Diplococcus intracellularis meningitidis.***

Weidel's reac'tion (vi'del). Showing the presence of xanthin bodies; a solution of the suspected substance in chlorine water with a little nitric acid is evaporated in a water-bath, and then exposed to the vapor of ammonia; the presence of the xanthin bodies is shown by a red or purple color. **W.'s test,** for uric acid, murexide* test.

Weigert's law (vi'gert) [Karl *Weigert*, German pathologist, 1843–1905.] The destruction of a part, in the organic world, is followed by reproduction in excess, as shown, for example, in the overproduction of callus after a bone fracture, or (hypothetically) in the formation of antitoxin by the production in excess of receptors to replace those rendered useless by the anchoring of the toxin molecule. **W.'s solu'tion,** iodine, 1 part, potassium iodide, 2 parts, water, 100 parts. **W.'s stains,** (1) *elastin;* a solution of fuchsin, resorcin, and chloride of iron stains elastic fibers blue-black; (2) *fibrin:* stain in concentrated anilin-water-gentian-violet solution, wash, dip in iodine-potassium iodide solution, decolorize in aniline oil and xylol; the fibrin is stained a dark blue; (3) *myelin:* stained with chloride of iron and hematoxylin a deep blue, degenerated portions taking a light yellowish color; (4) *neuroglia;* a complicated process in which the final treatment is like that for staining fibrin; neuroglia and nuclei stain blue; (5) copper hematoxylin, a stain especially for the nervous tissues: I. copper solution: a saturated aqueous solution of copper acetate; II. hematoxylin solution: hematoxylin crystals 2, 95 per cent. alcohol 20, distilled water 80; III. iron solution: potassium ferricyanide 25, borax 20, water 2000; for *actinomyces:* immerse for 1 hour in a dark red orsellin solution in alcohol 20, acetic acid 5, distilled water 40; then wash and stain in 1 per cent. aqueous gentian-violet solution, decolorizing in 60 per cent. alcohol.

Weigert-Gram stain for bacteria in tissues [Karl *Weigert,** H. C. J. *Gram.**] Harden in Zenker's fluid and mount in paraffin; stain sections in alum-hematoxylin, wash and treat for 1 to 5 minutes with a 1 per cent. aqueous solution of eosin, wash again and treat with aniline methyl violet for 30 to 60 minutes, wash and apply Lugol's solution for 1 or 2 minutes, then clear in equal parts of xylol and aniline.

weight (wāt) [A.S. *gewiht.*] The pull toward the center of the earth of a body at its surface; the force of gravity acting upon a mass. See *Tables of Weights and Measures* in the Appendix. **atom'ic w.,** the weight of an atom of any element as compared with the weight of an atom of hydrogen, the latter being taken as 1; according to the international system of atomic weights adopted in 1910, the comparison is made with oxygen, the weight of the latter being 16, see the *Table of Chemical Elements* (in the Appendix) in which the atomic weights according to both systems are given. **molec'ular w.,** the sum of the weights of all the atoms constituting a molecule.

Weil's disease' (vīl) [Adolf *Weil*, German physician, 1848–1916.] Mediterranean yellow fever, acute febrile jaundice, spirochetosis icterohæmorrhagica, icterus febrilis, infectious jaundice, typhus biliosus nostras; a specific infection, characterized by fever, jaundice albuminuria, muscular pains, and enlargement of the liver and spleen. **W.'s syn'drome,** neuromuscular hemihyperesthesia, associated with other disorders of central and peripheral sensibility, said to occur frequently in the tuberculous.

Weil's test (wīl) [Richard *Weil*, New York physician, 1876–1917.] For syphilis; **an emulsion,** in 0.9 per cent. sodium chloride solution, of washed red blood cells is mixed with a solution of dried cobra venom; in the case of blood drawn from a healthy person hemolysis occurs, but not if the person from whom the blood is drawn is syphilitic.

Weil-Felix bacillus (vīl-fa'lēks bă-sil'us) [E. *Weil*, Austrian physician, 1880–1922; Arthur *Felix*, Prague bacteriologist, *1887.] A proteus-like germ, which is claimed to be the pathogenic organism of typhus fever. **W.-F. reac'tion,** a specific agglutination of the W.-F. bacillus with the serum of typhus-fever patients; it develops about the sixth day of the disease and disappears with defervescence.

Weill's sign (va-ēl) [Edmond *Weill*, French physician, 1859–1925.] Diminished excursion of the chest in the subclavicular region, on the affected side, in cases of grave pneumonia.

Weinberg's reac'tion (vine'berg). A complement fixation test of the presence of hydatid disease.

Weinstein's test [Julius William *Weinstein*, New York physician.] Tryptophan* test.

Weir's opera'tion (wēr) [Robert Fulton *Weir*, New York surgeon, 1838–1927.] Appendicostomy. **W.'s technique',** sterilization of the hands by scrubbing for 5 minutes with green soap, friction with calx chlorinata for 5 minutes, and washing off with carbonate of soda and running water.

Weir-Mit'chell's disease' [Silas *Weir Mitchell*, American neurologist, 1830–1914.] Erythromelalgia. **W.-M.'s symp'tom,** causalgia. **W.-M. treat'ment,** rest in bed, isolation, and a nourishing diet in the treatment of certain neuroses and psychoses.

Weisbach's angle (vīs'bahkh) [Albin *Weisbach*, Vienna anthropologist, 19th century.] A craniometrical angle formed by the junction, at the alveolar point, of lines passing from the basion and from the middle of the frontonasal suture.

Weismann's theory (vīs'mahn) [August Friedrich Leopold *Weismann*, German biologist, 1834–1914.] Weismannism; the theory that the vehicle of inheritance is the germ-plasm, transmitted from one generation to another, and that modifications in the offspring can be effected only by the mingling of the germ-plasm of the parents; acquired characters, which affect only the somatic cells, are never transmitted since the somatic cells are mortal and perish with the individual, only the germ cells passing down the succeeding generations and transmitting the inheritance.

Weiss's reflex (vīs) [Leopold *Weiss*, Berlin oculist, *1849.] A bowed light reflex seen in the retina to the inner, nasal, side of the papilla; regarded as a sign of myopia.

Weiss's sign (vīs) [Nathan *Weiss*, Austrian physician, *1874.] Facialis phenomenon.*

Weiss's stain (vīs) [Leonhard *Weiss*, German physician, contemporary.] A combined stain for both acid-fast and non-acid-fast microorganisms; keep for 24 hours in methyl violet solution 25, carbol fuchsin 75, then in Lugol's solution 10 minutes, in 5 per cent. nitric acid 1 minute, in 3 per cent. hydrochloric acid 10 seconds, and in acetone alcohol until no more color comes off; then dry with filter paper and stain for 1 minute in 10 per cent. Bismarck brown.

Weisz' test (vīs) [Moriz *Weisz*, Austrian physician, contemporary.] A specimen of urine is diluted with 2 parts of water, and 3 drops of a 1 : 1000 aqueous solution of potassium permanganate

added; after shaking, a positive reaction is marked by a golden or greenish yellow color; said to indicate tuberculosis in an advanced stage.

Weitbrecht's car'tilage (vīt'brekht) [Josias *Weitbrecht*, German anatomist in St. Petersburg, 1702–1747.] The interarticular fibrocartilage of the acromioclavicular joint. **W.'s cord,** W.'s ligament (2). **W.'s fora'men,** an opening in the capsular ligament of the shoulder-joint, communicating with a bursa beneath the tendon of the subscapularis muscle. **W.'s lig'ament,** (1) the sphenomaxillary ligament; (2) a thin fibrous band attached to the coronoid process of the ulna and the upper part of the anterior surface of the radius.

Welander's method (va'lahn-der) [Edvard *Welander*, Stockholm physician, 1846–1917.] Inunction treatment for syphilis by the application of a flannel jacket spread with gray ointment.

Welch's bacillus [William Henry *Welch*, Baltimore pathologist, *1850.] *Bacillus aerogenes capsulatus, Clostridium welchii.*[0] **W.'s method,** a method of demonstrating the capsules of microorganisms; apply glacial acetic acid for a few seconds; draw off and add aniline-water gentian violet solution; then wash in 1 or 2 per cent. sodium chloride solution.

well [A.S.] In good health.

well-be'ing. A condition of conscious mental and physical health, giving comfort and satisfaction.

Wells's fa'cies [Sir Thomas Spencer *Wells*, English gynecologist, 1818–1897.] Facies ovarica.

Weltmerism (welt'mur-izm) [Sidney A. *Weltmer*, founder of the system, contemporary.] A system of therapeutics based on suggestion.

wen [A.S.] A sebaceous cyst, especially one occurring on the scalp. **explo'sive w.,** a sebaceous cyst which becomes inflamed and then assumes a malignant character.

Wender's test (ven'der) [Neumann *Wender*, Austrian pharmaceutical chemist, 19th century] For sugar in the urine: the suspected fluid is heated with a solution of methylene blue made alkaline with caustic potassa; if sugar is present, it will decolorize the solution.

Wenzell's test (vent'sel) [William Theodore *Wenzell*, American physician of German birth, *1820] For strychnine, which gives a color reaction on the addition of a few drops of a solution of 1 part of potassium permanganate in 2000 parts of concentrated sulphuric acid.

Weppen's test (vep'en). A test for morphine, the presence of which in a solution is indicated by a red color after the addition successively of sugar, sulphuric acid, and bromine

Werdnig-Hoffmann type (verd'nig-hof'mahn) [Guido *Werdnig*, Austrian neurologist; Ernst *Hoffmann*, German neurologist, *1868.] An infantile form of muscular atrophy or myopathy, beginning in the early years of life and terminating fatally in from one to four years.

Werlhoff's disease' (verl'hof) [Paul Gottlieb *Werlhoff*, German physician, 1699–1767.] Purpura hæmorrhagica, thrombopenia.

Wernekinck's comm'issure (ver'na-kink) [Friedrich Christian Gregor *Wernekinck*, German anatomist, 1798–1835.] The decussation of the brachia conjunctiva before their entrance into the red nucleus of the tegmentum.

Werner-His disease' (vair'ner-his). Volhynia fever.*

Wernicke's apha'sia (ver'ne-keh) [Karl *Wernicke*, German neurologist, 1848–1905.) Temporoparietal aphasia; alexia, agraphia, difficulty in understanding what is said, and incoherence, but with retention of the power of articulation; in Broca's aphasia the latter is lost. **W.'s a'rea,** an area comprising the supramarginal and angular gyri and the bases of the first and second temporal convolutions, where Marie locates the speech center. **W.'s center,** sensory speech center, the center for understanding the spoken word, located in the first temporal convolution and in the supramarginal gyrus on the left side. **W.'s disease',** acute hemorrhagic poliencephalitis. **W.'s fi'bers,** a compact mass of fibers enveloping the external portion of the pulvinar and geniculate body. **W.'s field,** W.'s area. **W.'s radia'tion,** radiatio occipitothalamica. **W.'s reac'tion,** in hemianopsia from disease of the centers in the thalamus and corpora quadrigemina; it consists in loss of the light reflex when the light is thrown on the blind side of the retina, with preservation of the same when the light strikes the sensitive side. **W.'s re'gion,** W.'s area. **W.'s sign,** W.'s reaction. **W.'s syndrome,** presbyophrenia. **W.'s zone,** W.'s area.

Wertheim's ointment (vert'hīm) [Gustav *Wertheim*, Vienna physician, 1822–1888.] An ointment for chloasma made of ammoniated mercury and bismuth each 2 drachms, in glycerin ointment, 1 ounce.

Wertheim's operation (vert'hīm) [Ernst *Wertheim*, Viennese gynecologist, 1864–1920.] A multiple plastic operation for procidentia uteri, consisting in amputation of the cervix, vaginofixation of the uterus so as to support the bladder, anterior and posterior colporrhaphy, perineauxesis, and sometimes partial salpingectomy.

Westberg's disease' (vest'berg) [Friedrich *Westberg*, German physician, 19th century.] White spot disease, the occurrence of a number of white or atrophied spots on the skin, probably morphea alba or atrophica. **W.'s space,** the space surrounding the origin of the aorta which is invested with the pericardium.

Westphal's contrac'tion (vest'fahl) [Karl Friedrich Otto *Westphal*, German neurologist, 1833–1890.] Contraction of the tibialis anterior muscle and its synergists on passive dorsal flexion of the foot. **W.'s neuro'sis,** pseudosclerosis (2). **W.'s nu'cleus,** a small bulbar nucleus, above and posterior to the nucleus of the pathetic (4th cranial) nerve. **W.'s phenom'enon,** W.'s sign, abolition of the patellar tendon reflex. **W.'s pu'pillary re'flex,** paradoxical pupil phenomenon.* **W.'s sign,** abolition of the patellar reflex. **W.'s zone,** an area in the posterior column of the spinal cord in the lumbar region, the center of the patellar reflex.

Westphal-Erb sign. Westphal's* sign.

Westphal-Pilcz phenom'enon (vest'fahl-pilts) [Alexander Karl Otto *Westphal*, German neurologist, *1863; Alexander *Pilcz*, Austrian neurologist, *1871.] Paradoxical pupil phenomenon.*

wet-brain. Serous meningitis* (2).

wet-cup. A cupping glass applied to the skin after scarification.

wet-dream. A nocturnal seminal emission accompanying a lascivious dream.

wet-nurse. A nursing woman who gives suck regularly to the child of another.

wet-pack. Wrapping in a sheet wet with cold or hot water and covered with blankets.

wet-scald. An eczematous skin eruption in sheep.

wet-tett'er. Weeping eczema, eczema* vesiculosum

Wetzel's test (vet'sel) [Georg *Wetzel*, German physician, *1871.] For carbon monoxide in the blood. the blood is diluted with four volumes of water and then with three volumes of a 1 per cent. solution of tannin; the presence of carbon monoxide is indicated by a carmine tint, its absence by a gray color.

Weyl's test (vīl) [Theodor *Weyl*, German chemist, 1851–1913.] For creatinin: to the suspected solution are added a dilute solution of sodium nitroprusside and a few drops of a dilute solution of caustic soda; a ruby color is produced which, on the further addition of acetic acid, the fluid being warmed, will change to yellow and blue.

Whar'ton's duct [Thomas *Wharton*, English anatomist, 1610–1673.] Ductus submaxillaris. **W.'s jelly,** the mucoid connective tissue forming the basic substance of the umbilical cord.

whartonitis (hwawr-ton-i'(e')tis). Inflammation of the submaxillary (Wharton's) duct.

wheal (hwēl) [A.S. *hwēle.*] An acute circumscribed elevation of the skin, of varying shape according to the cause, due to edema of the cutis vera; the surface is whitish or pinkish and the lesion is surrounded by a pink area. The lesion occurs as a result of irritation (blow of a whip, bite of an insect) or as the characteristic eruption of urticaria.

Wheat'stone's bridge [Charles *Wheatstone*, English physicist, 1802–1875.] An apparatus for determining the electrical resistance of a substance; the current flows along two divergent conductors which subsequently come together again, and which in the middle are joined by a cross-bar, the "bridge," in the center of which is a galvanometer.

Wheel'house's opera'tion [Claudius Galen *Wheelhouse*, English surgeon, 19th century.] External urethrotomy.

wheeze [A.S *hwēsan.*] 1. To breathe with difficulty and noisily. 2. The sound made by air passing through the fauces and glottis in difficult breathing, a puffing. **asth'matoid w.,** Jackson's sign, a puffing sound heard in front of the patients' open mouth in a case of foreign body in the trachea or a bronchus.

whelk [from *wheal.*] A wheal; a pustule; a tubercle or nodule on the face, ionthus.

whet'stone crys'tals. Xanthin crystals in the urine.

whettle-bone (hwet-l-bōn). A vertebra.

whey [A.S. *hwæg.*] Milk serum, serum lactis, the watery part of milk remaining after the separation of the casein. **alum w.,** w produced by curdling milk by means of powdered alum. **w. cure,** the treatment of disease by the use of whey internally and by bathing.

whiff. A slight inhalation or exhalation of air; a puff. **oral w.,** Drummond's sign.

whip'worm. *Trichocephalus trichiurus.*

whirl'bone. 1. Patella. 2. The rounded head of the femur or of the humerus.

whis'key, whis'ky [Gael. *usquebaugh*, water of life.] Spiritus frumenti (U.S.), strong alcoholic liquor made from barley, Indian corn, or rye.

whis'per [A.S. *hwisprian.*] 1. To speak without phonation. 2. The sound heard on auscultation of the chest when the subject whispers; called also *whispering pectoriloquy* and *whispering resonance* **whis'pered bronchoph'ony,** a hollow reverberating whisper heard in auscultating over a bronchus through solid or compressed lung tissue.

whistle (hwis'l) [A.S. *hwistle.*] 1. A sharp shrill sound made by forcing air through a narrow opening. 2. An instrument for producing a whistle. **Galton's w.,** see *Galton.*

white [A.S. *hwīt.*] The color resulting from the perfect commingling of all the rays of the spectrum; the color of chalk or of snow. **w. ar'senic,** arsenic trioxidum **w. at'rophy,** see *atrophy.* **w. blood-cell,** leucocyte **w. com'missure,** commissura anterior alba [BNA] **w. cor'puscle,** leucocyte. **w. hell'ebore,** veratrum viride. **w. in'farct,** pale infarct.* **w. kidney,** large white kidney.* **w. lead,** plumbi carbonas. **w. lep'rosy,** see *macular leprosy.** **w. line,** a white streak, lasting several minutes, following the drawing of a pen-holder or the finger over the skin, occurring in certain cases of degeneration of the suprarenal glands. **w. of egg,** albumen. **w. of the eye,** the visible portion of the sclerotic. **w. plague,** pulmonary tuberculosis. **w. pneumo'nia,** a catarrhal pneumonia occurring in congenital syphilis, in which the lungs appear light colored post mortem. **w. pox,** see *alastrim.* **w. precip'itate,** hydrargyrum ammoniatum. **w. snakeroot,** *Eupatorium ageratoides,* or *E. aromaticum.* **w. substance** of the brain and spinal cord, substantia alba. **w. swelling,** tuberculous arthritis of the knee-joint. **w. thrombus,** an antemortem heart clot. **w. vit'riol,** zinci sulphas. **w. wax,** cera alba.

White's disease' [James C. *White*, Boston dermatologist, 1833–1916.] Darier's disease, keratosis* follicularis

White'head's opera'tion [Walter *Whitehead*, English surgeon, 1840–1913.] Excision of hemorrhoids by two circular incisions above and below the tumors in the mucous membrane just inside the sphincter.

whites. Leucorrhea.

white-spot disease'. Westberg's* disease.

whit'low. Paronychia, panaris, felon, suppurative inflammation of the structures in the distal phalanx of a finger or toe; it may be superficial, involving the parts about the nail, or deep-seated, involving the bone and periosteum. **melanot'ic w.,** a melanotic or pigmented sarcoma of the skin, beginning at the border of the nail. **painless w.,** Morvan's* disease.

Whit'more bacillus [A. *Whitmore*, surgeon, Anglo-Indian Medical Service.] *Pfeifferella whitmori.* **W.'s disease,** a disease observed in Rangoon, resembling glanders somewhat, marked by bronchopneumonia, multiple abscesses, and fever of an intermittent type.

whoop. The sonorous inspiration with which the paroxysm of coughing terminates in pertussis.

whooping-cough (hoop'ing-kawf). Pertussis, tussis convulsiva; an acute infectious disease marked by recurrent attacks of spasmodic coughing continued until the breath is exhausted, then ending with a deep noisy inspiration; the lesion, other than those caused by the violent cough, is a catarrh of the respiratory passages.

whorl (hwurl). 1. A turn of the spiral cochlea of the ear. 2. The spiral twist of muscular fibers at the apex of the heart; vortex. 3. A turn of a turbinate bone. 4. A verticil. 5. One of the figures in a finger-print; see *finger-print* and *Galton.*

whorled (hwurld). Marked by whorls, turbinate convoluted, verticillate

Whytt's disease' [Robert *Whytt*, Scottish physician, 1714–1766.] Tuberculous basilar meningitis.

Wichmann's asth'ma (vikh'mahn) [Johann Ernest *Wichmann*, German physician, 1740–1802.] Mil-

lar's asthma, Kopp's asthma, laryngismus* stridulus.

Wickersheimer's fluid (vik'ers-hi-mer) [J. *Wickersheimer*, conservator of the Berlin anatomical museum, 1832–1896.] A fluid for the preservation of anatomical specimens; alum 100, sodium chloride 25, potassium nitrate 12, potassa 60, arsenous acid 10, in boiling water 3000; filter and to 10 volumes of the fluid add 4 volumes of glycerin and 1 of methyl alcohol.

Widal's reac'tion (ve-dal') [Fernand *Widal*, Parisian physician, 1862–1929.] A diagnostic method in cholera, typhoid fever, and other infectious diseases, founded upon the agglutinating action of the patient's serum upon the specific germ of the disease; called also Gruber's, Gruber-Durham, or Gruber-Widal reaction; a drop of bouillon culture of typhoid bacilli is added to a drop of a dilute mixture in saline solution of the blood-serum of the sufferer from the suspected disease; if the disease is typhoid fever, the bacilli in the bouillon culture will be seen under the microscope to become motionless and grouped together in small masses or clumps. **W.'s syndrome,** acquired hemolytic icteroanemia, an affection characterized by jaundice and anemia accompanied by urobilinuria, enlargement of the spleen, and fragility of the red blood-corpuscles.

Wid'mer's sign. In appendicitis the temperature is higher in the right axilla than it is in the left.

Wien's displacement law (vēnz dis-plās'ment law). As the temperature increases the wave-lengths become shorter.

Wildbolz reaction (vilt'bolts re-ak'shun) [H. *Wildbolz*, Swiss urologist in Berne, *1873.] A local reaction following the intradermic injection of a few drops of his own urine in a tuberculous subject; a prior tuberculin reaction prevents this, but a subsequent injection of tuberculin in the vicinity reactivates the point of the urine injection.

Wilde's cords (wīld) [Sir William Robert Willis *Wilde*, Dublin oculist and aurist, 1815–1876.] Transverse markings on the corpus callosum. **W.'s incis'ion,** an incision parallel to the pinna of the ear and about half an inch behind it, made to relieve tension in mastoid periostitis. **W.'s tri'angle,** Politzer's* luminous cone.

Wilder's quadrant (wīl'der) [Burt Green *Wilder*, American anatomist, *1841.] A small area on the ventral surface of the cerebral peduncle in the cat

Wilder's sign [William Hamlin *Wilder*, Chicago ophthalmologist,* 1860.] A slight twitch of the eyeball when changing its movement from abduction to adduction or the reverse, noted as an early symptom of Graves' disease.

Wildermuth's ear (vil'der-moot) [Hermann A. *Wildermuth*, German psychiatrist, 1852–1907.] An ear in which the helix is turned backward and the anthelix is prominent.

Wil'kinson's oint'ment or **salve** [J. H. *Wilkinson*, English physician, 19th century.] Unguentum sulphuris compositum (N.F.).

Wilks's disease [Sir Samuel *Wilks*, London physician, 1824–1911.] 1. Chronic parenchymatous nephritis. 2. Lupus verrucosus (2). **W.'s kidney,** large white kidney.*

will [A.S. *willa*.] Inclination, purpose, volition.

Will'an's lep'ra [Robert *Willan*, English physician, 1757–1812.] Psoriasis circinata. **W.'s lu'pus,** lupus vulgaris, especially of the cheek.

Will'ard's disease'. Lupus vulgaris.

Willems' meth'od (vil'lems) [Charles *Willems*, Belgian surgeon, contemporary.] Treatment of wounded joints by active mobilization.

Will'iams's sign [Charles *Williams*, London physician, 1838–1889.] Diminished descent of the diaphragm on the affected side in pulmonary tuberculosis. **W.'s tra'cheal res'onance** or **tra'cheal tone,** a subclavicular tympanic resonance, of higher pitch when the mouth is open, occurring in cases of compression of the lung with an abundant pleural effusion.

Williams's stain [Anna Wessels *Williams*, American bacteriologist, *1863.] For Negri bodies: the fixed films (1 per cent. picric acid in neutral methyl alcohol) are stained with a saturated alcoholic solution of fuchsin (0.5), a saturated alcoholic solution of methylene-blue (10.0), and distilled water (50.0); the smear is flooded with the stain, heated over the flame until vapor rises, then washed and blotted; the Negri bodies are magenta and the granules blue, the nerve cells blue and the erythrocytes yellowish.

Williamson's sign [Oliver K. *Williamson*, English physician, contemporary.] Reduced blood pressure in the leg as compared with that in the arm on the same side, indicative of water or air in the pleural cavity.

Will'iamson's test [Richard Thomas *Williamson*, English physician, contemporary.] To a mixture of 20 c.c. blood and 40 c.c. water, are added 1 c.c. of a 1:6000 methylene blue solution and 40 c.c. of a 6 per cent. solution of caustic potassa; after three minutes in a water bath, if the blood is that of a diabetic it will assume a greenish yellow color.

Will'is's ar'teries [Thomas *Willis*, English anatomist, 1621–1675.] The anterior and posterior communicating arteries in the brain which with the anterior and posterior cerebral, the basilar, and the anterior carotid arteries form W.'s circle. **W.'s cen'trum nervo'sum,** ganglion cœliacum. **W.'s circle,** circulus* arteriosus. **W.'s cords,** several fibrous cords crossing the superior longitudinal sinus. **W.'s disease',** diabetes mellitus. **W.'s glands,** corpora albicantia. **W.'s nerve,** spinal accessory nerve or eleventh cranial nerve. **W.'s ophthal'mic branch,** the ophthalmic division of the trigeminal nerve. **W.'s pan'creas,** pancreas minus. **W.'s paracu'sis,** better hearing in the midst of noise than in quiet. **W.'s prepara'tion of steel,** tartrated iron made from equal parts of iron filings and crude tartar moistened with water and mixed in an earthen vessel.

Will'ner's spots. Efflorescences, becoming pustules, on the internal lamella of the prepuce, preceding the skin eruption in smallpox.

will'ow [A.S. *welig*.] A tree of the genus *Salix* from the bark of several species of which, especially *S. fragilis*, salicin is obtained; see *salix*.

Wilms's meth'od (vilms) [*Wilms*, Swiss surgeon.] Perineal prostatectomy through a lateral incision. **W.'s operation,** resection of the ribs anteriorly and posteriorly so that the chest may be flattened and the lungs compressed by the sinking in of the chest wall; it is resorted to in certain cases of pulmonary tuberculosis.

Wilms's tu'mor (vilms) [Max *Wilms*, German surgeon, 1867–1918.] Embryoma of the kidney.

Wil'son's disease' [Sir William James Erasmus *Wilson*, English dermatologist, 1809–1884.] Extensive dermatitis exfoliativa. **W.'s li'chen,** lichen planus. **W.'s oint'ment** or **salve,** a 10 per cent. zinc oxide ointment.

Wil'son's muscle [James *Wilson*, English surgeon, *1822.] 1. Sphincter urethræ membranaceæ, the anterior fiber of the constrictor urethræ muscle. 2. Certain fibers of the levator ani muscle.

Wil'son's syn'drome [Samuel Alex. Kinnear *Wilson*, English physician, contemporary.] Progressive degeneration of the lenticular nucleus, occurring as a familial disease associated with cirrhosis of the liver.

Wilson-Brocq disease. Wilson's* disease.

Winckel's disease' (ving'kel) [Franz C. L. W von *Winckel*, German obstetrician, 1837–1911.] A rapidly fatal disease of the newborn, marked by cyanosis, jaundice, hemoglobinuria, various hemorrhages, and fatty degeneration of the heart and liver.

Winckler's reac'tion (vink'ler). The addition of a few drops of a 5 per cent. alcoholic solution of alphanaphthol, containing ½ to 1 per cent. glucose, to an equal amount of filtered gastric juice will give a purplish color on heating if free hydrochloric acid is present.

wind'age. Wind-contusion, injury of an internal organ caused by a large missile, which produces no lesion of the skin; the injury is due to the compression of the air by the ball or to the fact that the missile does actually strike a glancing blow.

wind'-broken. Heaving, asthmatic, said of a horse

wind-contu'sion. Windage.

wind'-dropsy. Subcutaneous emphysema or meteorism.

wind'gall. A soft, pulpy swelling in the neighborhood of the fetlock-joint of the horse, varying in size from a pinhead to a large hen's egg.

wind'lass. Spanish windlass, garrote tourniquet.*

win'dow. Fenestra. **w. resec'tion,** submucous resection; removal of a projecting portion of the nasal septum, first dissecting back a flap of mucous membrane, and replacing the same after the operation.

wind'pipe. Trachea.

wind'puffs. An affection of horses marked by a collection of synovial fluid between the tendons of the legs, particularly just above the fet-lock joint, the prominence appearing on both sides of the tendon. The condition is most common in hard-worked animals and may end in lameness.

Windscheid's disease (vint'shits diz-ēz'). The neurotic syndrome dependent upon arteriosclerosis.

wind'stroke. Spinal paralysis in the horse.

wind-sucking. Cribbing in horses.

wine [L *vinum*.] 1. The fermented juice of the grape, the fruit of *Vitis vinifera*. 2. In pharmacy, vinum,* a solution or extract of a medicinal substance in wine—usually white wine; for the official wines, see *vinum*. **high w.,** the strong spirit obtained by rectification or redistillation of low wine in making whiskey. **low w.,** the first, weak, distillate obtained from the mash in the process of making whiskey. **oil of w.,** $(C_2H_5)_2SO_4$, ethyl sulphate. **red w.,** vinum gallicum, vinum rubrum (U.S.) **white w.,** vinum album (U.S.).

wine'glass. A small glass used for wine, containing about 2 fluidounces.

wing. 1. The forelimb of a bird. 2. In anatomy a wing-shaped part, ala.*

Winiwarter's operation (ve-ne-var'ter) [Alexander von *Winiwarter*, Austrian surgeon, *1848.] Cholocystenterostomy performed in two stages: (1) the establishment of adhesions between the gall-bladder and the intestine, and (2) when these are firm, the formation of an opening between the two.

wink [A.S. *wincian*.] To close and open the eyes rapidly, an involuntary act by which the tears are spread over the conjunctiva, keeping it moist.

wink'er. An eyelash, cilium.

wink'ing-spasm. Nictitating spasm.*

Wins'low's fora'men [Jacob Benignus *Winslow*, Danish anatomist resident in Paris, 1669–1760.] Foramen* epiploicum, the small orifice of communication between the lesser and the greater peritoneal cavities. **W.'s lig'ament,** ligamentum posticum Winslowii, a fasciculus forming part of the posterior ligament of the knee-joint (ligamentum popliteum obliquum), running from the tendon of the semimembranosus to the back part of the outer condyle of the femur. **W.'s pan'creas,** lesser pancreas, processus* uncinatus. (2) **W.'s pouch,** gastrohepatic omentum. **W.'s stars,** capillary whorls in the lamina choriocapillaris, from which arise the venæ vorticosæ.

win'tera, Winter's bark. The bark of *Drimys winteri*, a dwarf tree growing at the southern extremity of South America and further north in the Andes; employed as a digestive tonic in doses of gr. 20–30 (1.3–2 0).

Win'terbottom's symp'tom [Thomas *Winterbottom*, American physician, 19th century.] Cervical polyadenitis observed in sleeping sickness.

win'tergreen. Gaultheria.

Winternitz's pul'pit (vin'ter-nits) [Wilhelm *Winternitz*, Viennese physician and hydrotherapist, 1835–1917.] A pulpit-like arrangement used in giving hot or cold needle douches. **W.'s sound,** a double-current catheter in which water at any desired temperature circulates. **W.'s test,** Heichelheim's test, iodipin* test.

Wintrich's sign (vin'trikh) [Anton *Wintrich*, German physician, 1812–1882.] The tympanitic resonance on percussion over a pulmonary cavity, or in case of pneumothorax; if the cavity communicates with a bronchus, it is higher in pitch when the patient's mouth is open than when it is closed.

wiring (wīr'ing). Fastening together the ends of a broken bone by wire sutures.

Wirsung's canal' or **duct** (vēr'soong) [Johann Georg *Wirsung*, German anatomist in Padua, *1643.] The pancreatic duct, draining the entire length of the pancreas and joining the common bile-duct to empty into the duodenum.

wiry (wīr'ī). Resembling or having the feel of a wire; filiform and hard, noting a variety of pulse.

wis'dom-tooth. Dens sapientis, dens* serotinus [BNA].

wis'mol [Ger. *wismut*, bismuth.] Trade name of an antiseptic dusting powder.

witchha'zel. Hamamelis.

witch-milk. A secretion of colostrum-like milk sometimes occurring in the mammary glands of newborn infants of either sex.

Witha'nia. A genus of plants of the order *Solanaceæ*, several species of which contain mydriatic alkaloids similar to atropine.

with'ers [A.S. *wither*, against.] The ridge on a horse's back between the shoulders at the termination of the mane.

Witte's peptone (vit'tehz pep'tōn). A commercial product consisting of a mixture of albumoses or related substances, derived by peptic digestion from fibrin.

Witz's test. For hydrochloric acid in the gastric juice; a solution of methyl violet (1:40) will be changed from violet to blue and green on the

addition of gastric juice containing free hydrochloric acid.

witzelsucht (vit'sel-zukht) [Ger. *witzeln*, to affect wit, + *sucht*, mania.] A morbid tendency to pun, make poor jokes, and tell pointless stories, while being oneself inordinately entertained thereby.

Wladimiroff operation (vlah-de'me-rawf). Mikulicz*-Vladimiroff operation.

Woelde's tri'angle (vĕl'deh). Politzer's luminous cone.

Woelfler's opera'tion (vĕlf'ler) [Anton *Woelfler*, Prague surgeon, 1850–1917.] Anterior gastroenterostomy. **W.'s sign,** in cases of hourglass stomach fluids quickly disappear, but on lavage later one obtains food remains and the wash-water is foul and discolored. **W.'s su'ture,** an intestinal suture by which broad layers of the serosa are united, the knots being tied on the inner surface of the bowel.

Wohlfartia (vōl-far'tĭ-ah). A genus of dipterous insects, the larvæ of some species of which breed in ulcerated surfaces and flesh wounds of men and animals. **W. magnifica,** *Sacrophaga wohlfarti*, flesh flies.

Wohlgemuth's test (vōl'gĕ-moot) [Julius *Wohlgemuth*, German physician, contemporary.] A test for renal adequacy based on the fact that normal renal tissue excretes a diastatic enzyme, which fails in proportion as the parenchyma of the kidney is diseased. The urine is treated with a solution of soluble starch, 1–1000; and after exposure in the incubator to allow a digestive reaction, the fluid is tested with iodine to determine the degree of starch hydrolysis.

Woillez's disease' (vwă-la') [Eugène Joseph *Woillez*, Parisian physician, 1811–1882.] Acute, apparently idiopathic, pulmonary congestion running the course of a mild croupous pneumonia.

Wolfe's graft [John Reisberg *Wolfe*, Glasgow ophthalmologist, 19th century.] A dermal graft involving the entire thickness of the skin but without any subcutaneous fat. **W.'s meth'od,** treatment of ectropion by incision and the insertion of a large graft, the entire thickness of the skin but without any subcutaneous fat.

Wolff's law (volf) [Julius *Wolff*, German anatomist, 1836–1902.] Every change in the form and the function of a bone, or of its function alone, is followed by certain definite changes in its internal architecture and secondary alterations in its external conformation.

Wolff-Eisner reac'tion (volf-īz'ner) [Alfred *Wolff-Eisner*, Berlin physician, *1877.] Ophthalmoreaction, conjunctival* reaction.

Wolff'ian. Relating to or described by one of the name Wolff, specifically Kaspar Friedrich *Wolff*, St. Petersburg embryologist born in Germany, 1733–1794. **W. body,** mesonephros, a transitory paired organ in the fetus, one on either side of the spinal column, composed of convoluted tubules opening into a duct discharging into the cloaca; it persists in the male as the epididymis, in the female as the parovarium. **W. duct,** a canal in the embryo connecting the cœlom and the cloaca, forming later the duct of the mesonephros; in the male it persists as the ductus deferens, in the female it is represented by the rudimentary Gartner's canal. **W. mes'entery,** a membranous fold, developed from the W. body, which enters into the formation of the primitive diaphragm. **W. ridge,** a slight prominence on each side of the attachment of the primitive mesentery in the embryo which later develops into the W. body or mesonephros.

Wolff-Junghans test (volf-yoong'hahns). A quantitative estimation of the albumin in the gastric contents is made after a test-meal; a very rapid digestion of protein is indicative of cancer, a positive result being claimed in 70 to 80 per cent. of cases of gastric cancer.

wolf-grape. Dulcamara.

wolfs'bane. Aconite.

wolf's tooth. A supplementary, rudimentary molar tooth of the horse, sometimes appearing in either jaw.

Woll'aston's doub'let [William Hyde *Wollaston*, English physician and physicist, 1766–1828.] A combination of two planoconvex lenses in the eyepiece of a microscope designed to correct the chromatic aberration.

womb [A.S. the belly.] Uterus.

womb-stone. 1. A calcified myoma of the uterus 2. A uterine calculus.

wood-al'cohol. Methyl alcohol.*

Wood'bridge treat'ment [John Eliot *Woodbridge*, American physician, 1845–1901.] A method of treatment of typhoid fever by elimination and intestinal antisepsis; it consists in the administration of small and frequently repeated doses of calomel and various antiseptics.

wood-char'coal. Carbo ligni.

wood'en tongue. Actinomycosis of the tongue in cattle.

wood-flour. A fine sawdust used as an absorbent in surgical dressings.

wood-naph'tha. Wood alcohol, methyl alcohol.*

wood-oil. Gurjun balsam, oleoresina* diptero carpi. **Chinese' w.-o., Japanese' w.-o.,** the expressed oil of the nut of *Aleurites cordata*, not employed in medicine.

wood-pulp. Wood-fiber reduced to a pulp and compressed into sheets, employed in the manufacture of paper; it is used also in the making of extemporaneous splints, a sheet of the substance being moistened and moulded to the limb.

Wood's glass [Robert W. *Wood*, American physicist, *1868.] A glass containing nickel oxide, used in the diagnosis of microsporon ringworm, the hairs from which are brilliantly fluorescent when viewed in light passing through this glass.

Wood's met'al. A mixture of bismuth, 4 parts; lead and tin, of each 2 parts; cadmium, 1 part; used in making casts of blood-vessels.

wood-su'gar. Xylose.

wood-tar. Pix liquida

wood-wool. A specially prepared not compressed, wood-fiber used for surgical dressings.

Wood'yatt pump [Rollin Turner *Woodyatt*, American physician, *1878.] An apparatus devised to effect continuous intravenous injection at a constant rate.

wool. The hair of the sheep, sometimes, when defatted, used as a surgical dressing.

wool-fat. Adeps* lanæ. **hy'drous w.-f.,** lanoline adeps* lanæ hydrosus.

Wool'ner's tip [Thomas *Woolner*, English sculptor, 1826–1892.] The extremity of the helix of the auricle.

wool'sorter's disease'. The pulmonary form of anthrax caused by inhalation of dust laden with *Bacillus anthracis;* the symptoms are often obscure, pointing only to some mild pulmonary infection, but death is common and frequently sudden.

woo'rali, woo'rara, woo'rari. Curare.

word-blind'ness. Inability to recognize written or printed words; text-blindness, alexia, visual aphasia

word-deaf'ness. Inability to understand spoken words although their sound is heard.

word débris (wurd da-bre'). A number of syllables or meaningless sounds explosively emitted by the aphasic in attempting to talk.

word-salad. A term applied by Forel to the jumble of meaningless words uttered by a patient suffering from catatonia.

working-dis'tance. In microscopy, the distance of the objective from the object.

worm (wurm) [A. S. *wyrm.*] 1. In zoology, any member of the invertebrate group or subkingdom *Vermes*. Popularly, any non-vertebrate, cylindrical, legless creature which moves on land by creeping; any vermiform parasite of oblong shape, whether cylindrical or flat; certain grubs and larvæ are also called worms. 2. In anatomy, any structure resembling a worm, such as the middle lobe of the cerebellum. 3. The vermiform cartilage in the tongue of a dog. 4. The spiral tube of a still in which the vapor is condensed.

Worm'ian bones [Olaus *Worm*, Danish anatomist, 1588–1654.] Sutural bones [BNA], epactal bones; small irregularly shaped pieces of bone occasionally found along the lines of the cranial sutures.

Worm'ley's test [Theodore G. *Wormley*, American chemist, 1826–1897.] For alkaloids, by treating the solution with picric acid or a dilute iodine-potassium-iodide solution, the presence of alkaloids being shown by a color reaction.

Worm-Mueller's for'mula (vorm-mŭ'ler) [Jacob *Worm-Mueller*, Norwegian physician, 1834–1889.] Roberts'* formula for the quantitative estimation of sugar in the urine.

worm'seed. 1. Santonica. 2. Chenopodium.

worm'wood. Absinthium.

wors'ted test. A test for color-perception by means of skeins of variously colored worsteds, Holmgren's test.

wort [A.S. *wyrt*, a plant.] 1. A suffix in the popular names of many plants, such as liverwort, lungwort, woundwort, etc. 2. An infusion of malt.

Woulfe's bott'le [Peter *Woulfe*, English chemist, 1727–1803.] A bottle with two or three necks, used in a series, connected with tubes, for working with gases (washing, drying, absorbing, etc.).

wound (woond or wownd). An injury or traumatism to any of the tissues of the body caused by mechanical violence, with or without a solution of continuity. **contused w.**, a bruise, an injury to the soft parts without a break in the skin. **gunshot w.**, one made with a bullet or other missile projected by a firearm. **gutter w.**, a tangential glancing w. which merely makes a furrow on the side of the injured part, without perforating. **incised w.**, a clean cut made with a sharp instrument. **lacerated w.**, a tear of the tissues. **open w.**, one in which the affected tissues are freely exposed by an external opening. **pen'etrating w.**, one that extends into the abdomen or other cavity of the body. **punctured w.**, one made by a narrow pointed instrument. **se'ton w.**, a tangential perforating w., the wounds of entrance and exit being on the same side of the body, head, or limb involved. **subcuta'neous w.**, one in which there is no opening or only a very small one in the skin. **tangen'tial w.**, a w., whether perforating (seton w.) or glancing (gutter w.), involving only one side of the injured part.

wound'wort. 1. *Solidago virgaurea*, Aaron's rod, employed in domestic medicine as a vulnerary. 2. *Stachys palustris*, the hedge-nettle, a vulnerary in domestic practice.

W.r. Abbreviation for **Wassermann reaction.**

wreath (rēth) [A.S. *wræth*, a bandage.] Spirem. **daughter w.**, diaster, viewed from the surface. **mother w.**, aster, viewed from the surface.

Wreden's sign (vra'den) [Robert Robertovich *Wreden*, St. Petersburg otologist, 1837–1893.] In the case of a stillborn child a gelatinous material more or less completely fills the external auditory meatus.

Wright's blood-stain [James Homer *Wright*, American pathologist, *1869.] Methylene blue is added to a 0.5 per cent. aqueous solution of sodium bicarbonate, in the proportion of 1 gm. to 100 c.c., and heated at 100° C. for an hour; it is then filtered and a 0.1 per cent. aqueous solution of water-soluble eosin is added in the proportion of 5 of the latter to 1 of the methylene blue solution; the precipitate which forms is dried and then dissolved in methyl alcohol in the proportion of 0.1 gm. to 60 c.c. of alcohol, to make the stain. **W.'s solu'tion,** a solution of sodium citrate and sodium chloride, in the proportion of 1 of the former to 2½ of the latter.

Wright's meth'od [Sir Almroth Edward *Wright*, English bacteriologist, *1861.] The opsonic method.

wrightine (rīt'ēn). Conessine, an alkaloid, $C_{24}H_{40}N_2$, derived from *Holarrhena antidysenterica;* a yellowish astringent and anthelmintic powder.

wrinkle (ring'kl). A furrow, fold, or crease in the skin.

Wrisberg's anastomo'sis (vriz'berg) [Heinrich August *Wrisberg*, German anatomist, 1737–1808.] 1. Between W.'s nerve and the intercostobrachialis. 2. Between the greater splanchnic and the right vagus nerves. **W.'s an'sa,** a loop formed by W.'s anastomosis (2) and the right semilunar ganglion. **W.'s car'tilage,** cartilago cuneiformis **W.'s gan'glion,** (1) ganglion cardiacum; (2) ganglion semilunare. **W.'s lig'ament,** ligamentum menisci lateralis. **W.'s nerve,** (1) nervus cutaneus brachii medialis; (2) nervus intermedius, called also *W.'s pars intermedia*. **W.'s staff,** the prominence of the cuneiform cartilage seen on a laryngoscopic examination. **W.'s tu'bercle,** tuberculum cuneiforme.

wrist [A.S. wrist-joint, ankle-joint.] The segment of the upper extremity between the forearm and the hand; carpus.

wrist-clo'nus. Rhythmical contractions and relaxations of the muscles of the forearm excited by a forcible passive extension of the hand.

wrist-drop. Paralysis of the extensors of the wrist and fingers from lesion of the musculospiral nerve.

wrist-joint. Radiocarpal articulation, between the radius and the scaphoid, semilunar, and cuneiform bones.

wri'ter's cramp. Mogigraphia, an occupation neurosis affecting chiefly the muscles of the thumb and two adjoining fingers of the right hand, induced by excessive use of the pen; it occurs in one of four main forms—spastic, paralytic, neuralgic, and tremulous.

wri'ting-hand. A contraction of the hand muscles in paralysis agitans, bringing the fingers somewhat in the position of holding a pen.

wryneck (ri-nek'). Torticollis.

Wuchereria (vu-ker-er'ī-ah). A genus of *Filariidæ* with one species. *W. ban'crofti*, a common parasite of man in warm countries and one of the causes of elephantiasis; mosquitos of many species are vectors of the microfilariæ.

Wunderlich's curve (voon'der-likh) [Carl Reinhold *Wunderlich*, German physician, 1815–1867.] The typical fever curve of typhoid fever.

wu'rari. Curare.

wurr'as. Warras.

Wurster's rea'gent (voor'ster) [Casimir *Wurster*, German chemist, *1856.] Filter-paper impregnated with tetramethylparaphenylendiamin, which is turned blue in the presence of ozone. **W.'s test** for tyrosine; the substance is dissolved in boiling water and quinone is added; if tyrosine is present a ruby colored reaction takes place, the solution changing to brown after a few hours.

wych-hazel. Witch-hazel, hamamelis.*

Wy'eth's operation [John Allan *Wyeth*, New York surgeon, 1845–1922.] Bloodless amputation of the hip, hemorrhage being controleld by a strong elastic tube held in place by long needles transfixing the tissues above the joint.

Wy'lie's drain [Walter Gill *Wylie*, New York gynecologist, 1848–1923.] An instrument resembling a stem pessary with enlarged, but not bulbous, extremity, on the lateral surface of which is a deep longitudinal groove, forming a gutter for drainage of the uterine cavity. **W.'s opera'tion,** intra-abdominal shortening of the round ligaments; each ligament is folded on itself and held by sutures, the opposing surfaces being freshened

X

X. 1. The Roman numeral 10. 2. In homeopathy, noting the decimal scale of dilutions or potencies; see *potency*. 3. Symbol for Kienboeck's* unit. 4. Chemical symbol for *xenon*. 5. Symbol for reactance.

xanol (zan'ol). Trade name of sodium-caffeine salicylate, recommended as a diuretic and vasomotor tonic.

xanthæ'matin. Xanthematin.

xanthaline (zan'thal-ēn) An alkaloid, $C_{37}H_{36}N_2O_6$, derived from the mother liquor of morphine.

xanthamide (zan'tham-id). A crystalline body, C_8H_7NSO, derived from xanthic acid.

xanthate (zan'thāt). A salt of xanthic acid.

xanthein (zan'the-in) [G. *xanthos*, yellow.] The water-soluble part of the yellow pigment of flowers, the insoluble part being *xanthin*.

xanthelas'ma [G. *xanthos*, yellow, + *elasma*, a beaten metal plate.] Xanthoma.

xanthelasmoidea (zan-the-laz-mo-id'e-ah) [*xanthellasma* + G. *eidos*, resemblance.] Urticaria pigmentosa; a cutaneous disorder of childhood, marked by the occurrence of wheals succeeded by brownish yellow patches or nodules.

xanthematin, xanthæmatin (zan-them'ă-tin) [G. *xanthos*, yellow, + *hematin*.] A yellow substance derived from hematin by treating with nitric acid.

xanthemia (zan-the'mĭ-ŭ) [G. *xanthos*, yellow, + *haima*, blood.] Carotinemia, cholemia.

xanthic (zan'thik). 1. Yellow, yellowish 2 Relating to xanthine. **x. acid,** a thiosulphocarbonic-acid ester, an oily liquid with pungent odor. **x. cal'culus,** a urinary calculus of xanthin **x. oxide,** xanthine.

xanthin (zan'thin) [G. *xanthos*, yellow.] The water-insoluble portion of the coloring matter of yellow flowers, distinguished from *xanthein*.

xanthine (zan'thin). Xanthic oxide, a white substance, $C_5H_4N_4O_2$ occurring in many of the organs and in the urine, and occasionally forming urinary calculi **x. bases,** alloxuric bases, nitrogenous substances resulting from the cleavage of nucleins

xan'thinin. A substance derived from ammonium thionurate by heating the latter.

xanthinox'idase. An oxidase which converts xanthine and hypoxanthine to uric acid.

xanthinuria (zan-thin-u'rĭ-ah) [*xanthine* + G. *ouron*, urine.] The excretion of abnormally large amounts of xanthine in the urine.

Xanthium (zan'thĭ-um). A genus of plants of the order *Compositæ*, several species of which have been used in medicine **X. canaden'se,** cocklebur, clotbar, has been used in the treatment of skin diseases **X. spino'sum,** spicy clotbur, the leaves have been used as a diaphoretic, diuretic, and antiperiodic in doses of gr. 8–15 (0.5–1.0); in eclectic practice it is employed in chronic cystitis with a mucous or hemorrhagic discharge, and in the sweating stage of intermittent fever in doses of 5–10 drops in water ever hour. **X. struma'rium,** a species credited with antidotal power to the venom of poisonous insects, and has also been employed as a styptic.

xanthiu'ria. Xanthinuria.

xanthochroia (zan-tho-kroy'ah) [G. *xanthos*, yellow, + *chroia*, color.] Xanthochromia, xanthopathy, xanthoderma

xanthochromia (zan-tho-kro'mĭ-ah) [G. *xanthos*, yellow, + *chrōma*, color.] The occurrence of patches of yellow color in the skin, resembling xanthoma, but without the nodules or plates.

xanthochroous (zan-thok'ro-us) [G. *xanthos*, yellow + *chroa*, complexion.] Having a fair complexion, light-skinned, blond, xanthochrous. xanthochroic.

xanthocre'atine, xanthocreat'inine. A yellow leucomaine, $C_6H_{10}N_4O$, resembling creatine, which is found in muscular tissue.

xanthocyanopia (zan-tho-si-an-o'pĭ-ah) [G. *xanthos*, yellow, + *kyanos*, blue + *ōps*, eye.] Red-green blindness; partial color-blindness in which yellow and blue only are discriminated.

xanthoderm (zan'tho-durm) [G. *xanthos*, yellow, + *derma*, skin.] A member of one of the yellow races.

xanthoder'ma, xanthoder'mia. A yellowish discoloration of the skin, xanthochromia.*

xan'thodont, xanthodon'tous [G. *xanthos*, yellow, + *odous(odont-)*, tooth.] Having yellow teeth.

xanthogen'ic acid. Xanthic* acid.

xanthoma (zan-tho'mah) [G. *xanthos*, yellow.] A skin disease characterized by the presence of yellow nodules or slightly raised plates in the skin, especially of the eyelids; Rayer's disease, fibroma lipomatodes, xanthelasma, vitiligoidea. **x. diabetico'rum,** a form of x. of inflammatory origin occurring in diabetes. **x. mul'tiplex,** xanthomatosis, xanthoma, usually x. tuberosum, generally distributed over the body, sometimes affecting the mucous membranes as well as the skin. **x. palpebra'rum,** xanthoma, usually x. planum, confined to the eyelids. **x. pla'num,** a form marked by the occurrence of yellow bands or rectangular plates in the corium. **x. tubero'sum,** x. in the form of yellow nodules of varying size in the corium.

xanthomato'sis. A generalized eruption of xanthoma, xanthoma multiplex.

xantho'matous. Relating to or suffering from xanthoma.

xanthone (zan'thōn). Brometone

xanthop'athy [G *xanthos*, yellow + *pathos*, suffering.] Xanthoderma, xanthochromia.

xanthophose (zan'tho-fōz) [G. *xanthos*, yellow, + *phōs*, light.] A yellow phose.*

xanthophyll (zan'tho-fil) [G. *xanthos*, yellow, + *phyllon*, leaf.] A decomposition product of chlorophyll which gives the yellow color to autumn leaves.

xantho'pia [G. *xanthos*, yellow, + *ōps(ōp-)*, eye.] Xanthopsia.

xanthopic'rine, xanthopic'rite [G. *xanthos*, yellow, + *pikros*, bitter.] Berberine.

xan'thoplasty [G. *xanthos*, yellow + *plassō*, I form] Xanthopathy. xanthrochromia.*

xanthoproteic (zan-tho-pro'te-ik). Relating to xanthoprotein. **x. acid,** a non-crystallizable yellow substance derived from proteins upon treating with nitric acid. **x. test,** a test for protein, by treating the substance with nitric acid; if protein is present a yellow color is produced (indicating the presence of xanthoprotein) which becomes more intense upon alkalinizing with ammonia.

xanthoprotein (zan-tho-pro'te-in). A yellow substance formed upon treating protein with hot nitric acid.

xanthopsia (zan-thop'sĭ-ah) [G. *xanthos*, yellow, + *opsis*, vision.] Yellow vision, a state in which all objects appear of a yellow color.

xanthop'sin [G. *xanthos*, yellow, + *opsis*, vision.] Visual yellow the visual purple (rhodopsin) bleached by the action of light.

xanthopsydracia (zan-thop-sĭ-dra'sĭ-ah) [G. *xanthos*, yellow, + *psydrax*(*psydrak*-) pimple.] Any disease of the skin marked by an eruption of yellow pustules.

xanthopuccine (zan-tho-puk'sēn) [G. *xanthos*, yellow, + Am. Ind. *puccoon*, hydrastis.] Canadine, an alkaloid, $C_{20}H_{21}NO_4$, derived from hydrastis.

Xanthorrhiza (zan-tho-ri'zah) [G. *xanthos*, yellow, + *rhiza*, root.] Yellow-root, a genus of plants of the order *Ranunculaceæ*, the only species of which, *X. apiifolia*, is a bitter tonic with properties like those of berberis.

xanthorrhœa (zan-tho-re'ah) [G. *xanthos*, yellow + *hoia*, a flow.] Acaroid or yellow gum, Botany-Bay resin, resina lutea a balsam exuding from *Xanthorrhœa arborea*, *X. hastilis*, and other species of *X.*, plants of Australia; it has properties similar to those of storax. but is seldom employed medicinally.

xanthosis (zan-tho'sis) [G. *xanthos*, yellow.] A yellowish discoloration of degenerating tissues, especially seen in malignant neoplasms.

xanthous (zan'thus) [G. *xanthos*, yellow.] Yellow.

xanthoxylene (zan-thoks'ĭ-lēn).] A volatile oil $C_{10}H_{16}$, obtained from several species of *Xanthoxylum*.

xanthoxyli fructus [zan-thoks'ĭ-li fruk'tus) (N.F.). Prickly ash berries, the dried fruit of *Xanthoxylum americanum* or *X. clava-herculis;* dose, gr. 15 (1.0).

xanthoxylin (zan-thoks'ĭ-lin). 1. An inert crystalline body present in prickly ash bark. 2 A concentration product of xanthoxylum; dose, gr 2 (0.13).

xanthoxylum (zan-thoks'ĭ-lum) [G. *xanthos*, yellow, + *xylon*, wood.] (N.F.) Prickly ash, the bark of *Xanthoxylum americanum* or of *Fagara clava-herculis*, the northern and southern prickly ash respectively; employed as an alterative, carminative and diaphoretic in doses of gr. 20–60 (1.3–4.0); in eclectic practice it is employed in atonic conditions with sluggish capillary circulation and in chronic catarrhal affections, in doses of 5–30 drops of the specific medicine in water every hour.

xanthu'ria. Xanthinuria.

xanthylic (zan-thil'ik) [*xanthine* + G. *hylikos*, material.] Relating to xanthine.

x-bacil'lus, *Bacillus* X.*

x-bod'ies. 1. Certain appearances noted in specimens of blood in malaria and other febrile conditions, and of apparently normal ox blood and rabbit blood; their nature and significance are undetermined, and it has been claimed that they are artefacts occurring in old slides especially after long use in the tropics. 2. Plimmer's* bodies.

x-chromosome. Accessory chromosome.*

x-disease'. A term applied by James Mackenzie to a train of indefinite symptoms of ill health associated with coldness of the extremities, sensitiveness to cold, absence of reaction after a cold bath, dyspepsia bowel disturbances, etc.; a remission in the symptoms is common, when the patient feels well, but a relapse usually occurs; respiration is slow and the heart's action may be slow or irregular; the nature of the disease is not yet known, whence its appellation *x*-disease.

x-element. The aggregate of accessory chromosomes which may or may not be paired with a group of different shape or size called the y-element.

xenembole (zen-em'bo-le) [G. *xenos*, a stranger + *embolē*, insertion,] The introduction of a foreign body or foreign substances into the system.

xenenthesis (zen-en'the-sis) [G. *xenos*, stranger, + *enthesis*, introduction.] Xenembole.

xenia (ze'nĭ-ah) [G. *xenia*, hospitality.] Apparent double fertilization observed in maize; if the pollen of one variety is made to fall on the silk of another variety of maize, the kernels sometimes present the characters of the male parent.

xenogenesis (zen-o-jen'e-sis) [G. *xenos*, stranger, + *genesis*, origin.] A term used to denote the hypothetical production of offspring unlike the parents and never returning, either in the present or succeeding generation, to their type. See *heterogenesis*.

xenogenic (zen-o-jen'ik) [G. *xenos*, host, + *-genēs*, producing.] 1. Originating in the host, said of cytotoxins and analogous substances resulting from the action of bacterial stimuli on cells of the host, and also of stimuli emanating from the host and acting upon the bacteria. 2. [G. *xenos*, foreign.] Originating outside of the organism, or from a foreign substance which has been introduced into the organism.

xenogenous (zen-oj'en-us). Xenogenic.

xenomenia (zen-o-me'nĭ-ah) [G. *xenos*, strange, + *mēniaia*, menses.] Vicarious menstruation.

xenon (zen'on) [G. *xenos*, a stranger.] A gaseous element, symbol X, atomic weight 130.7, present in minute proportion in the atmosphere; so far as known it is incapable of combining with any other element.

xenoparasite (zen"o par'ă-sīt) [G. *xenos*, host.] An ecoparasite which becomes pathogenic in consequence of weakened resistance on the part of its host.

xenophobia (zen-o-fo'bĭ-ah) [G. *xenos*, a stranger, + *phobos*, fear.] A morbid dread of meeting strangers.

xenopho'nia [G *xenos*, foreign, + *phōnē*, voice.] A speech defect marked by an alteration in accent and intonation.

xenophthal'mia [G *xenos*, a stranger, + *ophthalmia*, inflammation of the eye.] Inflammation excited by the presence of a foreign body in the eye.

Xenopsylla (zen-op-sil'ah) [G. *xenos*, guest, + *psylla*, flea.] A genus of fleas. **X. cheo'pis**, the rat-flea of hot countries, which transmits the plague bacillus and possibly the virus of the endemic typhus of those regions.

xeransis (ze-ran'sis) [G. *xēransis; xēros*, dry.] A gradual loss of moisture in the tissues, siccation.

xeran'tic. Siccant, siccative, causing dryness.

xeraph'ium [G. *xēraphion.*] A drying powder.

xerasia (ze-ra'zĭ-ah) [G. *xērasia; xēros*. dry.] A disease of the hair characterized by extreme dryness and brittleness and cessation of growth.

xerium (ze'rĭ-um) [G *xērion*.] Xeraphium.

xerocollyrium (ze"ro-kol-ir'ĭ-um) [G. *xēros*, dry, + *kollyrion*, eye-salve.] An eye-salve, a non-liquid collyrium.

xeroderma (ze-ro-dur'mah) [G. *xēros*, dry, + *derma*, skin.] A condition of roughening of the skin due to a slight increase of the horny layer and diminished cutaneous secretion; a mild form of ichthy-

osis. **x. pigmento'sum,** Kaposi's disease, atrophodermia pigmentosa; a disease of the skin, occurring in childhood, characterized by numerous pigment spots, resembling freckles, larger atrophic lesions, resulting in glossy white thinning of the skin, surrounded by telangiectases, and multiple carcinomata and sarcomata; it often terminates fatally.

xeroder'mia. Xeroderma.

xeroform (ze'ro-form). Bismuthi tribromphenas.

xero'ma [G. *xēros*, dry.] Xerophthalmia.

xeromenia (ze-ro-me'nĭ-ah) [G. *xēros*, dry, + *mēniaia*, menses.] The occurrence of the usual constitutional symptoms at the menstrual period without any show of blood.

xeromycteria (ze-ro-mik-te'rĭ-ah) [G. *xēros*, dry, + *myktēr*, the nose.] Extreme dryness of the nasal mucous membrane.

xeron'osus [G. *xēros*, dry, + *nosos*, disease.] Xerosis.

xerophagia (ze-ro-fa'jĭ-ah) [G. *xērophagia; xēros*, dry, + *phagō*, I eat.] The eating of dry food; subsisting on a dry diet.

xerophagy (ze-rof'ă-jĭ). Xerophagia.

xerophthalmia, xerophthal'mus (ze-rof-thal'mĭ-ah) [G. *xēros*, dry, + *ophthalmos*, eye.] Xeroma, extreme dryness of the conjunctiva which loses its luster and becomes skin-like in appearance, thought to be due to a deficiency of vitamin A in the diet.

xerosis (ze-ro'sis) [Gr. *xēros*, dry.] 1. Pathological dryness of the skin (*xeroderma*) or of the conjunctiva (*xerophthalmia*) or other mucous membranes. 2. The normal evolutionary sclerosis of the tissues in old age.

xerostomia (ze-rŏ-sto'mĭ-ah) [G. *xēros*, dry, + *stoma*, mouth.] A dryness of the mouth resulting from diminished or arrested salivary secretion, or aptyalism.

xerot'ic. Dry, affected with xerosis

xeroto'cia [G. *xēros*, dry, + *tokos*, labor.] Dry labor, partus siccus.

xerotrip'sis [G. *xēros*, dry, + *tripsis*, rubbing.] Dry friction.

xi'nol. Zinol.

xiphisternal (zif-ĭ-ster'nal). Relating to the xiphisternum, or xiphoid cartilage.

xiphister'num. Xiphoid or ensiform process, metasternum.

xiphocostal (zi-fo-kos'tal) [G. *xiphos*, sword, + L. *costa*, rib.] Relating to the xiphoid cartilage and the ribs.

xiphodid'ymus, xiphod'ymus [G. *xiphos*, sword (xiphoid cartilage), + *didymos*, twin.] A twin monster joined by a band extending from the umbilicus to the xiphoid cartilage, as in the case of the Siamese* twins, or with the bodies fused at the part mentioned; xiphopagus.

xiphodyn'ia [G. *xiphos*, sword (ensiform cartilage), + *odynē*, pain.] Pain, of a neuralgic character, in the region of the xiphoid cartilage.

xiphoid (zi'foyd) [G. *xiphos*, sword, + *eidos*, appearance.] Sword-shaped, ensiform; noting the cartilaginous process, shaped like a sword-tip, forming the lower extremity of the sternum; the xiphoid or ensiform cartilage or process, metasternum, processus xiphoideus [BNA].

xiphop'agus. Xiphodidymus.

x-ograph. Skiagram.

x-rays. Roentgen rays; see under *ray.*

x-stuff. A hypothetical substance supposed to be present in cases of malignant growth and to facilitate the nutrition of the cancer cells.

xylan'thrax [G. *xylon*, wood, + *anthrax*, coal.] Charcoal.

xylan (zi'lan) [G *xylon*, wood.] A gum-like substance, a hemicellulose, present in various woods.

xylem (zi'lem) [G *xylon*, wood.] In botany, the inner portion of a vascular bundle.

xylene (zi'lēn). Xylol.

xylenin (zi'len-in). Xylenobacillin.

xylenobacillin (zi-len-o-bas'il-ın). A toxic substance extracted from cultures of the tubercle bacillus by treatment with xylol.

xylenol (zi'len-ol). A substance, $C_8H_{10}O$, occurring in three isomeric forms (meta-, ortho-, and para-xylenol). The salicylates, meta-, ortho-, and para-xylenol-salol, are used as internal antiseptics in rheumatism and diarrhea in doses of gr. 2–5 (0.13–0.3).

xylidine (zi'lĭ-dēn). Aminoxylene, $C_8H_{11}N$, employed as a reagent and in the manufacture of dyes.

xylobal'samum. Balm of Gilead.

Xylocarpus (zi-lo-kar'pus) [G. *xylon*, wood, + *karpos*, fruit.] A genus of trees, a species of which, *X. carapa*, yields a fixed oil, *carapa oil*, used externally as a protection against insects; taken internally it is reputed to be stomachic and laxative.

xylocas'sia. Cassia-wood.

xy"locinnamo'mum. Cinnamon-wood.

xyloidin (zi-loy'din) [G. *xylon*, wood, + *eidos*, resemblance.] An explosive obtained by treating starch with nitric acid.

xylol (zi'lol). Xylene, dimethyl-benzene, a volatile liquid obtained from coal-tar, having physical and chemical properties similar to those of benzol; it has been employed in warfare as a lacrymator or tear gas.*

xyloma (zi-lo'mah) [G. *xylon*, wood, + *-ōma.*] A woody tree-tumor.

xylonite (zi'lo-nīt) [G *xylon*, wood.] Celluloid.

Xylo'pia. A genus of plants of the order *Anonaceæ*, the custard-apple family, the seeds of two species of which, *X. glabra* and *X. salicifolia*, yield an antiperiodic bitter.

xy'lose [G. *xylon*, wood.] Wood sugar, a dextrorotatory pentose obtained by boiling various wood gums with dilute acid.

xylostein (zi-los'te-in). A bitter glucoside contained in the seeds of *Lonicera xylosteum*, a species of honeysuckle; it possesses emetic and purgative properties.

xylostyp'tic e'ther. Collodium stypticum.

xylother'apy [G. *xylon*, wood, + *therapeia*, treatment.] A form of suggestive therapeutics consisting in the application of various woods to the body.

xylyl bromide (zi'lil bro'mīd). Tolyl bromide, $CH_3C_6H_4CH_2Br$, one of the poison gases used in the World War.

xyol (zi'ol). Trade name of a soft soap preparation containing formaldehyde.

xyrospasm (zi'ro-spazm) [G. *xyron*, razor.] Shaving cramp, keirospasm.

xysma (ziz'mah) [G. filings, shavings.] Membranous shreds in the feces.

xyster (zis'ter) [G. scraper.] A raspatory.

xystus (zis'tus) [G. *xystos*, scraped.] Scraped lint, lint made by scraping linen with a sharp instrument.

Y

Y. Chemical symbol of *yttrium*.

ya'bine. An alkaloid from andira,* or cabbage-tree bark.

ya'dil. Proprietary name of trimethanal-allyl-carbide, claimed to be an antiseptic, deodorizer, and bactericide.

yaghourt (yah-ghoort') [Bulg.] Curdled milk prepared by a ferment, "maya," which contains a very active species of lactic-acid bacillus, *B. bulgaricus;* it is a staple article of diet in Bulgaria.

Yakimoff's test (yah-ke'mof). On warming atoxyl in a test-tube, the slightest yellow discoloration indicates the presence of dangerous impurities.

yam [African, *myahme*.] The edible root of a plant of the genus *Dioscorea*. **wild y.,** colic root, rheumatism root, dioscorea.*

y-angle. In craniometry the angle at the inion formed by lines drawn from the hormion and the lambda.

yard [A.S. *gyrd*, rod.] A measure of three feet, about three inches less than a meter.

yar'row [A.S *gearwe*.] Milfoil, *Achillea** *millefolium*.

yatren (yah'tren). A combination of iodine with oxyquincline-sulphonic acid, with the addition of 20 per cent. sodium bicarbonate; used as a tissue stimulant and wound antiseptic.

yaw. An individual lesion of the eruption of yaws. **moth'er y.,** a large tubercle in the yaws eruption.

yaw'ey. Relating to or suffering from yaws.

yawn [A.S. *gānian*.] 1. To gape. 2. An involuntary opening of the mouth, usually accompanied by a movement of respiration; it may be a sign of drowsiness or of vital depression, as after hemorrhage, but is often caused by suggestion

yawn'ing. The act of producing a yawn; pandiculation, chasma, gaping, oscitation.

yaw-root. Stillingia.

yaws [African, *yaw*, a raspberry.] Frambesia, pian, an infectious disease of the tropics, marked by febrile disturbances, rheumatic pains, and an eruption of aggregated rounded or flattened tubercles capped with a caseous crust; the specific organism is believed to be *Treponema pertenue*. **guin'ea-corn y.,** a form in which the lesions resemble grains of Indian corn. **ring'worm y.,** a circular disposition of the eruption in yaws.

Yb. The chemical symbol of *ytterbium*.

Y-bacillus. A dysentery bacillus resembling, yet believed to be distinct from the Flexner bacillus.

y-car'tilage. Hypsiloid cartilage, the cartilage uniting the three bones of the pelvis at the bottom of the cotyloid cavity in early life.

yeast (yēst or yest) [A. S. *gyst*.] A ferment consisting of a culture of *Saccharomyces cerevisiæ* or other species of *S*. The yeast fungus is a blastomycete some species of which are pathogenic; see *blastomycosis, Saccharomyces, Torula*. **compressed y.,** cerevisiæ frumentum compressum (N.F.), used for acne, furunculosis, constipation, and diabetes, in doses of ʒ1–3 (4.0–12.0). **cul'tivated y.,** a form propagated by culture and used in bread-making, brewing, etc. **wild y.,** any of the uncultivated forms of yeasts, useless as ferments and sometimes pathogenic.

y-el'ement. See *x-element*.

yelk. Yolk.

yell'ow [A.S. *geolu*.] A color, that of gold or butter, occupying a position in the spectrum between green and orange. **an'iline y.,** an unstable substance used as a base for more permanent dyes. **chrome y.,** precipitated lead chromate, a fine yellow powder used in paints and dyes. **egg y.,** yolk, vitellus.* **Leipzig y., lemon y.,** chrome y. **Man'chester y., Martins' y., naph'thalene y.,** a coal-tar dye. **Paris y.,** chrome y. **vis'ual y.,** xanthopsin.

yell'ow. Having the color of butter or gold, flavescent, xanthic; flavus, luteus; in composition xantho-. **y. at'rophy of the liver,** see under *liver*. **y. body,** corpus luteum. **y. car'tilage,** elastic car tilage.* **y. cerate,** ceratum flavum. **y. cincho'na-** cinchona flava. **y. disease',** xanthopathy; jaundice. **y. fever,** see *yellow*-fever*. **y. jack,** y fever. **y. lig'ament,** ligamentum subflavum. **y. lotion.** lotio flava. **y. precip'itate,** hydrargyri oxidum flavum. **y. root,** hydrastis. **y. skin,** xanthoderma. **y. spot,** (1) macula flava; (2) macula lutea. **y. toothed,** xanthodontous. **y. vision,** xanthopsia. **y. wash,** lotio flava. **y. wax,** cera flava.

yell'ow-fe'ver. An acute infectious disease due to the action of a specific virus, as yet undiscovered, transmitted by a mosquito of the genus *Aëdes* (*Stegomyia*). It is marked by fever, with one remission, slow pulse, albuminuria, jaundice, congestion of the face, and hemorrhages, especially hematemesis, whence the synonym black vomit. **Mediterra'nean y.-f.,** Weil's disease.

Yem'en ul'cer [*Yemen*, a district in Arabia bordering on the Red Sea.] Oriental boil.*

Ye'o's meth'od [Isaac Burney *Yeo*, London physician, 1836–1914.] A plan of treatment of obesity consisting substantially in the ingestion of large quantities of hot drinks and abstention from carbohydrates, fats being allowed in limited quantities.

yerba buena (yer'bah bwa'nah) [Sp. good herb.] Micromesia.

yer'ba man'sa [Sp. gentle herb.] The rhizome of *Houttuynia californica*, a piperaceous tree of the west coast of North America and Asia; employed as a tonic and antispasmodic in doses of ♏15–30 (1.0–2.0) of a fluidextract.

yer'ba maté (yer'bah mah'ta). Paraguay tea, maté.*

yer'ba san'ta [Sp. sacred herb.] Eriodictyon.

yer'bine. An alkaloid from maté, resembling caffeine in its action.

Yersin's se'rum (yer-zaṅ') [Alexandre *Yersin*, French army surgeon, born in Switzerland, *1863.] An antitoxic protective and curative serum for plague; it is obtained by repeated intravenous injections of a virulent culture of the plague bacillus (first dead, later living and in increasing amount) into the horse; the animal is bled a fortnight after the final injection and the serum is prepared from the blood.

-yl [G. *hylē*, stuff.] In chemistry a termination signifying that the substance is a radical.

y-lene. In chemistry, a suffix denoting a bivalent hydrocarbon radical.

y-lig'ament. Ligamentum iliofemorale [BNA].

yoghourt (yōg'hoort). Yaghourt.

yohimbé, yohimbi (yo-him'ba, yo-him'be) [native African name.] The bark of *Corynathe yohimbi*, an African tree supposed to possess aphrodisiac properties.

yohimbine (yo-him'bēn). An alkaloid, the active principle of yohimbi; employed hypodermically or by the mouth for impotence, in the form of the hydrochloride, in doses of gr. $\frac{1}{10}$–$\frac{1}{5}$ (0.006–0.012).

yoke (yōk) [A. S. *geoc.*] Jugum. **y. bone**, malar bone, os* zygomaticum [BNA].

yolk [A.S. *geolca; geolu*, yellow.] Vitellus.

Young-Helm'holtz the'ory of color blindness. [Thomas *Young*, English physicist, 1773–1829; Hermann Ludwig *Helmholtz*, German physicist, 1821–1894.] There are three sets of color-perceiving elements in the retina, for red, green, and violet, respectively, the perception of the other colors arising from the combined stimulation of these elements. The loss of any one of these elements results in inability to perceive that primary color and a misperception of any other color of which it forms a part.

Young's rule [Thomas *Young*, English physician, physicist, and Egyptologist, 1773–1829.] A rule to determine the dose of a medicine suitable for a child; 12 is added to the child's age and the sum is divided by the age; the adult dose divided by the figure so obtained gives the proper dose for the child. Thus, for a child of 6 years: $6+12=18\div6=3$; the adult dose divided by 3 is the proper dose for the child.

youth'wort. Drosera.

yperite (e'per-īt) [*Ypres*, a town in Belgium, where the Germans first used this gas.] Dichlorethyl* sulphide, mustard gas.*

yp'siliform [G. *hypsilon*, the letter u or y, + L. *forma*, form.] Hypsiloid.

y-shaped lig'ament of Bigelow. Ligamentum iliofemorale.

ytterbium (ĭ-tur'bĭ-um) [from *Ytterby*, a place in Sweden.] The same as dubhium. A rare metallic element, symbol Yb, atomic weight 173.60.

yttrium (it'rĭ-um) [from *Ytterby*, a place in Sweden.] A metallic element, symbol Y, atomic weight 88.92.

Yuc'ca. A genus of plants of the order *Libiaceæ*, growing in Mexico and the Southwestern United States; several of the species are called soaproot, their roots containing much mucilage and saponaceous matter; employed occasionally as a diuretic.

Yvon's test (e-vawń') [Paul *Yvon*, French physician and chemist, 1848–1913.] 1. A test for alkaloids; to the suspected solution is added a mixture of bismuth subnitrate, potassium iodide, and hydrochloric acid in water; a positive reaction is indicated by the appearance of a red color. 2. A test for acetanilid in the urine; extract the suspected fluid with chloroform and heat with yellow nitrate of mercury; if acetanilid is present the fluid will be colored green.

Yzquierdo's bacillus (ēs-ke-er'do) [Vicente *Yzquierdo*, histologist of Santiago, Chile, contemporary.] The supposed pathogenic cause of Carrión's disease.

Z

Zaglas' lig'ament (zăg-glah'). A short thick fibrous band extending across the sacroiliac joint from the posterior superior spine of the ilium to the second transverse tubercle of the sacrum.

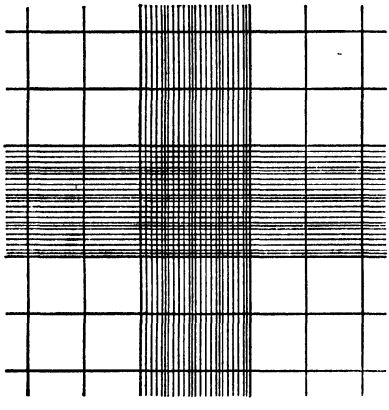
Zambesi ulcer (zam-be'sĭ ul'sur). An ulcer, usually single, about the size of a two-shilling piece, or a half-dollar, seated on the foot or leg, occurring in laborers in the Zambesi Delta; it has a sloughing surface, but does not spread and produces no constitutional symptoms or glandular enlargement; it is associated with the presence of a spirillum and a large fusiform bacillus; one attack seems to confer a partial immunity.

zanal'oin. Aloin obtained from Zanzibar aloes the same as that from Socotrine aloes.

Zan'der's sys'tem [Jonas Gustaf Willem *Zander*, Swedish physician, 1835–1920.] Treatment by means of mechanical apparatus giving passive movements.

Zang's space (tsahng) [Christoph Bonifacius *Zang*, German surgeon, 1772–1835.] Fossa supraclavicularis minor.

Zappert's counting cell (tsahp'ert) [Julius *Zappert*, Viennese physician, *1867.] A counting chamber for blood estimation, practically the same as Thema's cell.



ZAPPERT'S RULED SLIDE FOR BLOOD-CELL COUNTING.

Zaufal's sign (tsow'fahl) [Emanuel *Zaufal*, rhinologist of Prague, 1837–1910.] Saddlenose.

ze'a [G. a coarse fodder grain.] (N.F.) corn-silk stigmata maydis, the styles and stigmas of *Zea mays*, maize or Indian corn; diuretic and antispasmodic in subacute and chronic affections of the urinary tract in doses of ʒ2 (60.0) of an infusion of 2 ounces to the pint (60: 480), or of ʒ1 (4.0) of the N.F. fluidextract.

ze'an. Trade name of a fluidextract of zea, recommended as a diuretic in doses of ♏15–30 (1.0–2.0).

zedoaria (zed-o-a'rĭ-ah). (N.F.) Zedoary, the dried rhizome of *Curcuma zedoaria*, the long zedoary, of East India; aromatic and carminative in dose of gr. 15 (1.0); the round zedoary (*C. aromatica*) is also employed for the same purposes.

Zeisel's test (tis'zel). For colchicine: the substance is dissolved in hydrochloric acid, boiled with chloride of iron, and then shaken with chloroform; the presence of colchicine is shown by a dark red or brown precipitate.

ze'ism [*zea*, maize.] Pellagra, on the assumption that it is due to eating maize.

Zeiss's gland (tsīs). One of a number of sebaceous glands opening into the follicles of the eyelashes.

Zeissel's lay'er (tsi'sel). A homogeneous layer in the wall of the stomach between the muscularis mucosæ and the submucosa.

ze'ist [*zea*, maize.] An adherent of the theory that pellagra is due to the ingestion of Indian corn.

Zeller's test (tsel'er) [M. *Zeller*, German physician, contemporary.] The addition of bromine water to urine containing melanin causes a yellow precipitate which gradually becomes black.

zelotypia (ze-lo-tip'ĭ-ah) [G. *zēlotypia; zēlos*, zeal, + *typē*, a blow.] Excessive zeal, carried to the verge of insanity, in the advocacy of any cause

zem'atol. Trade name of an ointment said to contain oil of betula, ichthyol, and zinc oxide, recommended in eczema.

Zenker's degenera'tion (tseng'ker) [Friedrich Albert *Zenker*, German pathologist, 1825–1898.] Hyaline degeneration of muscular tissue, the fibers losing their striations and becoming sinuous, and later undergoing fragmentation and absorption. **Z.'s leiomyo'ma,** malignant myoma with smooth fibers. **Z.'s myomala'cia cor'dis,** softening of the heart muscle. **Z.'s paral'ysis,** paresthesia and paralysis in the area of the external popliteal nerve. **Z.'s solu'tion,** a fixative, consisting of corrosive sublimate 5, potassium bichromate 2.5, sodium sulphate 1, water 100.

Zeno'ni test. Sputum is treated with alcohol and then stained with a weak aqueous solution of safranin, the albumin appearing red, and the mucin yellow.

ze'oscope [G. *zeō*, I boil, + *skopeō*, I examine.] A device for determining the alcoholic content of a liquid by ascertaining its exact boiling point.

ze'ro [Sp.; Ar. *sifr*, cipher.] The figure 0, indicating nothingness. In thermometry, the point from which the figures on the scale start in one or the other direction; in the Centigrade and Réaumur scales zero indicates the freezing point for distilled water; in the Fahrenheit scale it indicates the degree of cold obtained by mixing ice and salt and is 32° below the freezing point. **ab'solute z.,** the point of the assumed greatest possible cold, or absence of all heat; it is −273.7° C.

zerum'bet. The rhizome of *Zingiber zerumbet*, a plant of Java, resembling ginger.

zestocausis (zes-to-kaw'sis) [G. *zestos*, boiling hot, + *kausis*, a burning.] Cauterization by means of hot steam.

zestocautery (zes-to-kaw'ter-ĭ). An appliance for zestocausis.

Zieg'ler's operation [S. Louis *Ziegler*, Philadelphia ophthalmologist, 1861–1925.] A V-shaped iridotomy for the formation of an artificial pupil.

Ziehen test (tse'hen) [Georg Theodor *Ziehen* German psychiatrist, *1862.] For mental

disease; the patient is asked to explain the difference between certain contrasted objects, such as water and ice, child and dwarf, horse and ox, etc.

Ziehen-Oppenheim disease' (tse'hen-op'en-hīm) [Georg Theodor *Ziehen;* H. *Oppenheim*, German neurologist, 1858–1919.] Dystonia musculorum deformans.

Ziehl's solu'tion (tsēl) [Franz *Ziehl* German bacteriologist, *1857.] Fuchsin 1, absolute alcohol 10, 5 per cent. phenol solution 100; used as a stain for the tubercle bacillus; carbolic fuchsin, carbol-fuchsin.

Ziehl-Neelsen method (tsēl-nāl'sen) [Franz *Ziehl;* Friedrich Carl Adolph *Neelsen*, German pathologist, 1854–1894.] Staining tubercle bacilli in Ziehl's* solution.

Ziemssen's artifi'cial respira'tion (tsēm'sen) [Hugo von *Ziemssen*, Munich physician, 1829–1902.] Faradic stimulation of the phrenic nerves. **Z.'s mo'tor points,** points on the surface corresponding to the entrance of the nerves into the underlying muscles; the electrodes are best applied at these points.

zimb. A gadfly, *Pangonia brucei* or *P. beckeri*, of Somaliland and Abyssinia; it bites man severely and is suspected of transmitting disease.

Zimmerlin's type (tsim'mer-lin) [Franz *Zimmerlin*, Swiss physician, 19th century.] A variety of hereditary progressive muscular atrophy in which the atrophy begins in the upper half of the body.

Zimmermann's arch (tsim'er-mahn) [Karl Wilhelm *Zimmermann*, German histologist, *1861.] A non-existent aortic arch in the embryo, supposed to have been originally present and aborted, indicated by occasional irregular vessels between the fourth and fifth arches. **Z.'s cor'puscle, gran'ule,** or **elemen'tary par'ticle,** Hayem's hematoblast, platelet.*

Zimmermann's decoc'tion (tsim'er-mahn). A decoction of rhubarb gr. 30 (2.0), potassium bitartrate ʒ4 (16.0), barley ʒ4 (16.0), in water ʒ16 (500.0).

zim'phen [Ger. *zimmt*, cinnamon.] Sodium meta-oxycyanocinnamate, recommended as a gastro-enteric stimulant and tonic in doses of gr. 8 (0.5).

zinc [Ger. *zink*.] A metallic element, symbol Zn, atomic weight 65.37, bluish white in color, malleable and ductile. A number of salts of zinc are used in medicine. Crude commercial zinc is called spelter. For the official salts of zinc, see under *zincum*. **z. caustic,** a mixture of zinc chloride, 1, and flour, 3. **z. colic,** colic resulting from chronic zinc poisoning. **z. ointment,** unguentum* zinci oxidi. **z. white,** zinc oxide used in paint as a substitute for white lead.

zin'ci. Genitive of zincum.*

zincoid (zing'koyd) [G. *eidos*, resemblance.] Relating to or resembling zinc; noting the negative plate, of platinum or other substance, in a voltaic battery, so called because it acts like the zinc plate for which it is substituted.

zin'cum, gen. *zinci* (U.S.). Zinc. **zinci ace'tas** (U.S., Br.), zinc acetate $Zn(C_2H_3O_2)_2 + 2H_2O$; local astringent used in conjunctivitis and gonorrhea in solutions of gr. 1 or 2 (0.06–0.13) to the ounce (30 0). **zinci bro'midum,** zinc bromide, $ZnBr_2$, a white granular powder, formerly recommended in the treatment of epilepsy in doses of gr. 1–2 (0.06–0.13). **zinci carbo'nas zinci carbo'nas præcipita'tus** (U.S. IX), precipitated zinc carbonate, hydrated zinc carbonate; employed as a dusting powder, and in ointment as a mildly astringent protective. **zinci chlo'ridum** (U.S., Br.), zinc chloride $ZnCl_2$, a white powder or opaque crystalline rods or plates; employed as a caustic for the removal of cutaneous cancers, nevi, etc., and in weak solution in the treatment of gonorrhea and conjunctivitis. **zinci io'didum,** zinc iodide, ZnI_2, a white crystalline powder, without odor but with an acrid saline taste, has been employed in chorea in doses of gr. ½–2 (0.03–0.13), and externally in solution in gonorrhea. **zinci oleoste'aras,** zinc oleostearate, a fine white powder of nearly equal parts of zinc oleate and zinc stearate; used as a dusting powder. **zinci ox'idum** (U.S., Br.), zinc oxide, ZnO, a white or yellowish white soft powder, employed as a protective in ointment and as a dusting powder, and internally as an antispasmodic in doses of gr. 1–2 (0.06–0.13). **zin'ci perman'ganas,** zinc permanganate, acts like potassium permanganate but is more astringent. **zin'ci perox'idum,** zinc peroxide, a yellowish white, odorless and tasteless powder, insoluble in water but decomposed by it into hydrogen peroxide; employed as a dusting powder or in ointment. **zinci phenolsul'phonas** (N.F.), zinc phenolsulphonate, zinci sulphocarbolas (Br.), colorless prismatic or tubular crystals of astringent metallic taste; employed as an intestinal antiseptic in doses of gr. 1–4 (0.06–0.26), and locally as an astringent in chronic inflammation of the mucous membranes. **zinci ste'aras** (U.S., Br.), zinc stearate, a white tasteless powder of a faintly fatty odor; employed in the treatment of eczema, acne, and other skin diseases. **zinci sulphan'ilas,** nizin, has been used in 1–500 or 1–250 solution as an injection for gonorrhea. **zinci sul'phas** (U.S., Br.), zinc sulphate, $ZnSO_4 + 7H_2O$, occurs in the form of prismatic crystals; employed as a local astringent in solution in the treatment of gonorrhea, indolent ulcers, and various skin diseases; and internally as an emetic in doses of gr. 10–30 (0.6–2.0). **zinci sulphocar'bolas** (Br.), zinc sulphocarbolate, zinci phenolsulphonas (U.S.). **zinci val'eras, zinci valeria'nas** (Br.), zinc valerate or valerianate, occurs in the form of white pearly scales with a slight odor of valerian and a sweetish metallic taste, soluble in 50 parts of water, employed as an antispasmodic in doses of gr. 1–5 (0.06–0.3).

zin'giber, gen. *zingib'eris* [L. from G. *zingiberis*.] (U.S., Br.) Ginger, the rhizome of *Zingiber officinale*, a reedy plant growing in tropical countries; internally employed as a carminative in doses of gr. 10–30 (0.06–2.0) and externally as a rubefacient.

Zinn's ar'tery (tsin) [Johann Gottfried *Zinn*, German anatomist, 1727–1759.] Arteria centralis retinæ. **Z.'s lig'ament,** annulus tendineus communis [BNA], a mass of connective tissue surrounding the optic nerve, giving attachment to the tendons of the rectus muscles of the eyeball. **Z.'s mem'brane,** the anterior layer of the iris. **Z.'s ring,** Z.'s ligament. **Z.'s ten'don,** Z.'s ligament. **Z.'s vas'cular cir'cle** or **ring,** Haller's circle (1), a plexus of arteries in the sclera surrounding the optic nerve. **Z.'s zon'ula,** zonula circularis [BNA].

zi'nol. Trade name of a mixture of zinc acetate and aluminum-naphthol-disulphonate; recommended in the local treatment of gonorrhea.

zirco'nium. A metallic element, symbol Zr, atomic weight 90.6; it is widely distributed in nature, but never found in quantity in any one place;

in its properties it resembles somewhat silicon and titanium.

Zitt'mann's decoc'tion (tsit'mahn) [Johann Friedrich *Zittmann*, German military surgeon, 1671–1757.] 1. Decoctum Zittmanni fortius (stronger decoction), a decoction of sarsaparilla 200, senna 50, licorice root 20, potash alum 10, calomel 8, and cinnabar 2, in water 5000. 2. Decoctum Zittmanni mitius (milder decoction), a decoction of sarsaparilla 100, lemon peel, cardamon, licorice root, and cassia bark each 6, in water 5000. The stronger decoction contains about gr. $\frac{1}{150}$ (0.001) mercury in a quart (1 liter). Dose of either decoction, ℥ 3–6 (90.0–180.0).

Zn. Chemical symbol of zinc.

$ZnBr_2$. Zinc bromide.

$Zn(C_2H_3O_2)_2$. Zinc acetate.

$ZnCl_2$. Zinc chloride.

ZnI_2. Zinc iodide.

ZnO. Zinc oxide.

$ZnSO_4$. Zinc sulphate, white vitriol.

zo'alite. Trade name of an appliance for producing infrared rays.

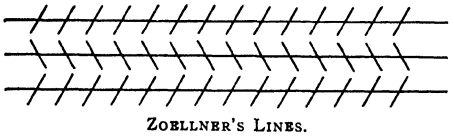
zoam'ylin [G. *zōē*, life, + *amylon*, starch.] Glycogen.

zoanthrop'ic. Relating to or marked by zoanthropy.

zoanthropy (zo-an'thro-pĭ) [G. *zōon*, animal, + *anthrōpos*, man.] An insane delusion that one is a horse or a dog or any other of the lower animals.

zodiophilous (zo-dĭ-of'ĭ-lus) [G. *zōdion*, dim. of *zōon*, animal, + *philos*, fond.] In botany, noting a flower pollinated by the agency of animals.

Zoellner's fig'ures (tsèl'ner) [Friedrich *Zoellner*, German physicist, 1834–1882.] Various figures devised to show the possibility of optical delusions; a common one consists of two parallel lines which are met by numerous short lines obliquely placed, the parallel lines then seeming to converge or diverge.



Zoellner's Lines.

zoetic (zo-et'ik) [G. *zōē*, life.] Relating to life.

zoiatria (zo-e-at'rĭ-ah) [G. *zōon*, animal, + *iatreia*, healing.] Veterinary medicine, zoiatrics.

zoiatrics (zo-e-at'riks) [G. *zōon*, animal, + *iatrikē*, medicine, surgery.] Veterinary medicine or surgery, zoiatria.

zo'ic [G. *zōikos*, relating to an animal.] Relating to living things; having life.

zo'mol [G. *zōmos*, broth.] Trade name of a preparation of meat juice.

zomother'apy [G. *zōmos*, broth, + *therapeia*, healing.] Treatment of disease by means of raw or rare meat or meat-juice.

zo'na, pl. *zonæ* [L. girdle.] 1. A zone; any encircling or belt-like structure, either external or internal, longitudinal or transverse. 2. Herpes zoster. **z. arcua'ta,** arcuate zone, the inner portion of the membrana basilaris of the cochlea, underlying the organ of Corti. **z. cartilagin'ea,** crista spiralis. **z. cilia'ris,** the ring of the ciliary processes. **z. cor'nu commissura'lis** the ventral field of the posterior column of the spinal cord containing the endogenic fibers. **z. denticula'ta,** the row of processes above the crista spiralis of the cochlea. **z. dermat'ica,** a ridge of thickened skin surrounding the protrusion in spina bifida. **z. epithe'liosero'sa,** the membranous ring, within the **z. dermatica,** surrounding the protrusion in spina bifida. **z. fascicula'ta,** the layer of elongated spaces in the cortical portion of the suprarenal gland, between the z. glomerulosa and z. reticularis. **z. gangliona'ris,** the ganglionic masses on the cochlear divisions of the auditory nerve. **z. glomerulo'sa,** the outer layer of the cortex of the suprarenal gland just beneath the capsule. **z. granulo'sa,** discus proligerus. **z. ig'nea,** zona (2). **z. medull'ovasculo'sa,** the fissured segment of the spinal cord which closes dorsally the sac in myelomeningocele. **z. membrana'cea,** membrana basilaris. **z. ophthal'mica,** herpes zoster in the distribution of the ophthalmic nerve. **z. orbicula'ris** [BNA], orbicular zone, zonular band or ring ligament; circular fibers of the capsular ligament of the hip-joint. **z. pectina'ta,** pectinate zone, the outer part of the membrana basilaris of the cochlea. **z. pellu'cida,** clear zone, z. striata, z. radiata, oolemma; a tough, refractile, clear membrane enveloping the ovum; it has a striated appearance owing to the numerous fine canals with which it is pierced; it is derived from the cells of the Graafian follicle. **z. perfora'ta,** the inner portion of the membrana basilaris. **z. radia'ta,** the faintly striated investment of the oocyte; z. pellucida. **z. reticula'ris,** the inner layer of the cortex of the suprarenal gland. **z. septomargina'lis,** the median peripheral field of the posterior column of the spinal cord, containing the endogenic fibers. **z. serpigino'sa,** zona (2). **z. spongio'sa,** caput gelatinosum Rolandi, the V-shaped tip of the dorsal horn of the spinal cord. **z. stria'ta,** striated zone, z. pellucida. **z. tecta,** z. arcuata. **z. tendino'sa,** annulus fibrosus [BNA]. **z. transfor'mans,** the connective-tissue layer of the intestinal wall just beneath the muscularis mucosæ, where normally the microörganisms penetrating from the lumen of the intestine are destroyed. **z. vasculo'sa,** vascular zone, an area in the external auditory meatus where a number of minute blood-vessels enter from the mastoid bone; spongy spot. **z. volat'ica,** zona (2).

zonæsthe'sia. Zonesthesia.

zo'nal. Relating to a zone.

zo'nary. Relating to or having the form of a zone or belt. **z. placen'ta,** a placenta formed of chorionic villi arranged in the form of a zone or band.

zo'nate. Zoned, ringed, having concentric layers of differing texture or pigmentation.

Zondek-Aschheim test for pregnancy (tson'dek-ahsh'hīm) [B. *Zondek*, *1891, S. *Aschheim*, *1868, German obstetricians.] Repeated injections of small quantities of urine voided during the first weeks of pregnancy produce in infantile mice, within 100 hours, (1) minute intrafollicular ovarian hemorrhages and (2) the development of lutein cells. The test is similar to that of Siddall* except that in the latter the mice are injected with blood serum of the pregnant woman.

zone. Zona(1). For the various zones in anatomy, see under *zona*. **latent z.,** that portion of the cerebral cortex a lesion of which produces no motor symptoms. **language z.,** a large area of the cerebral cortex on the left side (in right-handed persons) embracing all the centers of memories and associations connected with language; see *word center*.* **motor z.,** that portion of the cerebral cortex a lesion of which produces spasm or paralysis. **z. of alarm',** Chauvet's term for

the apical area of the lung in which signs of tuberculosis appear early. **z. therapy,** treatment of a morbid symptom or process by pressure or other manipulation in the same zone (longitudinal or horizontal line) as the cause.

zonesthesia, zonæsthesia (zōn-es-the'zĭ-ah) [G. *zōnē*, girdle, + *aisthēsis*, sensation.] Girdle-sensation, strangalesthesia; a sensation as if a cord were drawn around the body, constricting it.

zonifugal (zo-nif'u-gal) [L. *zona*, zone, + *fugere*, to flee.] Passing from within any region outward; as in mapping out an area of disturbed sensation, when the stimulus is first applied to the affected region and is carried along into the part where sensation is normal.

zo'ning. A phenomenon observed sometimes in complement fixation employed in the diagnosis of syphilis; it is the occurrence of a stronger fixation of complement in a less amount of suspected serum.

zonipetal (zo-nip'e-tal) [L. *zona*, zone, + *petere*, to seek.] Passing from without toward and into any region; as in mapping out an area of disturbed sensation, when the stimulus begins in the normal part and is carried into the affected region.

zon'ula [L. dim of *zona*, zone] A zone, especially a small zone. **z. cilia'ris** [BNA] apparatus suspensions lentis [NK], ciliary zonule, zonule of Zinn, suspensory ligament of the crystalline lens; a fine transparent membrane composed of meridional fibers arising from the inner surface of the orbiculus ciliaris; these run in bundles between, and in a very thin layer over, the ciliary processes; at the inner border of the corona the membrane splits into two folds attached to the capsule on the anterior and posterior surfaces of the crystalline–lens close to the equator; the spaces between these two layers of fibers is filled with aqueous humor, they are known as spatia zonularia, or the canal of Petit.

zon'ular. Relating to a zonula. **z. cat'aract,** see *cataract*. **z. fibers,** fibræ zonulares, the interlacing fibers of the zonula ciliaris. **z. spaces,** spatia zonularia [BNA], the spaces between the fibers of the suspensory ligament of the lens, forming the canal of Petit.

zon'ule. Zonula.

zonulitis (zon-u-li'(le')tis) [L. *zonula* + G. *-itis*.] Inflammation of the zonule of Zinn, or suspensory ligament of the crystalline lens of the eye.

zoobiology (zo"o-bi-ol'o-jĭ) [G. *zōon*, animal, + *bios*, life, + *-logia*.] Biology.

zoobiotism (zo-o-bi'ot-izm) [G. *zōon*, animal, + *bios*, life.] Biotics.

zooblast (zo'-o-blast) [G. *zōon*, animal, + *blastos*, germ.] An animal cell.

zoochemical (zo-o-kem'ĭ-kal). Relating to zoochemistry.

zoochemistry (zo-o-kem'is-trĭ) [G. *zōon*, animal.] Animal chemistry, the chemistry of the animal tissues and of the vital processes.

zoocyst (zo'o-sist) [G. *zōon*, animal, + *kystis*, bladder.] A sporocyst, a protozoan cyst.

zoodermic (zo-o-dur'mik) [G. *zōon*, animal, + *derma*, skin.] Relating to the skin of an animal, noting the method of skin-grafts in which the grafts are taken from the skin of an animal, dermatozooplasty.

zoodynamic (zo-o-di-nam'ik). Relating to zoodynamics.

zoodynamics (zo-o-di-nam'iks) [G. *zōon*, animal, + *dynamikos; dynamis*, force.] Animal physiology.

zooerastia (zo"o-er-as'tĭ-ah) [G. *zōon*, animal, + *erastēs*, lover.] Sexual connection with an animal.

zoogenesis (zo-o-jen'e-sis) [G. *zōon*, animal, + *genesis*, origin.] The doctrine of animal production or generation, zoogeny, zoogony.

zoogenic (zo-o-jen'ik). Relating to zoogenesis.

zoogenous (zo-oj'en-us) [G. *zōon*, animal, + *gennaō*, I produce.] 1. Relating to zoogenesis. 2. Of animal origin.

zoogeny (zo-oj'en-ĭ). Zoogenesis.

zoogeography (zo-o-je-og'ră-fĭ) [G. *zōon*, animal, + *gē*, earth, + *graphē*, description.] The geography of animals, the study of the distribution of animals on the earth's surface.

zooglœa, zooglœa (zo-ŏ-gle'ah) [G. *zōon*, animal, + *gloia*, glue.] An aggregation or colony of bacteria enclosed in a glue-like mass, a stage in the development of certain microorganisms.

zoogleic, zooglœic (zo-ŏ-gle'ik). Relating to or occurring in the form of a zooglea mass.

zoog'onous (zo-og'on-us). Giving birth to living animals, viviparous.

zoogony (zo-og'o-nĭ) [G. *zōon*, animal, + *gonē*, generation.] Zoogenesis.

zoograft (zo'o-graft) [G. *zōon*, an animal.] A graft of tissue from one of the lower animals.

zoografting (zo-o-graf'ting). Zooplasty.

zoography (zo-og'ra-fĭ) [G. *zōon*, animal, + *graphē*, description.] A description of or treatise on animals.

zooid (zo'oyd) [G. *zōon*, animal, + *eidos*, resemblance.] 1. Resembling an animal. 2. A unicellular organism of indefinite classification, a zoophyte. 3. An animal cell capable of independent existence or movement, as the ovum or a spermatozoon. 4. A term sometimes applied to hemoglobin because of its assumed vital properties.

Zoolagnia (zo-o-lag'nĭ-ah) [G. *zōon*, animal, + *lagneia*, lust.] Sexual attraction toward animals.

zoolak (zoo'lak). Trade name of a preparation of coagulated milk.

zoolite, zoolith (zo'o-līt, zo-o-lith) [G. *zōon*, animal, + *lithos*, stone.] A petrified animal.

zoologist (zo-ol'o-jist). One versed in zoology.

zoology (zo-ol'o-jĭ) [G. *zōon*, animal, + *-logia*.] The science which deals with animals in all their relations.

Zoomastigophora (zo"o-mas-tĭ-gof'o-rah) [G. *zōon*, animal, + *mastix(mastig-)*, whip, + *phoros*, a bearer.] A class of *Mastigophora* embracing the forms with evident animal characteristics.

zoonite (zo'on-īt). A cerebrospinal segment or metamere.

zoonomy (zo-on'o-mĭ) [G. *zōon*, animal, + *nomos* law.] Animal physiology, the science dealing with the laws of the vital functions in animals.

zoonosis (zo-ŏ-no'sis) [G. *zōon*, animal, + *nosos*, disease.] Any disease in man acquired from one of the lower animals; rabies is an example.

zoonotic (zo-on-ot'ik). Relating to a zoonosis.

zooparasite (zo-o-par'a-sīt) [G. *zōon*, animal.] An animal parasite, an animal existing as a parasite.

zoopathology (zo-o-pă-thol'o-jĭ) [G. *zōon*, animal, + *pathos*, suffering, + *-logia*.] The pathology of the lower animals, veterinary pathology.

zoopeiral (zo-op'i-ral). Relating to zoopeiry.

zoopeiry (zo-op'i-rĭ) [G. *zōon*, animal, + *peira*, a trial.] Animal experimentation.

zoophagous (zo-of'a-gus) [G. *zōon*, animal, + *phagō*, I eat.] Subsisting on animal food, carnivorous.

zoophile (zo'o-fīl) [G. *zōon*, animal, + *philos*, fond.] 1. A lover of animals; especially one more fond of animals than of his own kind, one opposed to

any animal experimentation, an antivivisection ist. 2. Fond of animals, especially unduly fond of them.

zoophilia (zo-o-fil'ĭ-ah). Zoophilism.

zoophilism (zo-of'il-izm). Fondness for animals, especially an extravagant fondness for them; antivivisectionism. **erot'ic z.,** the deriving of sexual pleasure by patting or stroking animals.

zooph'ilist. Zoophile (1).

zoophobia (zo-o-fo'bĭ-ah) [G. *zōon*, animal, + *phobos*, fear.] An unreasoning fear of animals.

zoophyte (zo'o-fīt) [G. *zōon*, animal, + *phyton*, plant.] A plant-like animal; a colony of animals resembling a plant, as the coral; phytozoan.

zooplasty (zo'o-plas-tĭ) [G. *zōon*, animal, + *plastos*, formed.] Zoografting, the grafting of skin or other tissue from one of the lower animals.

zooprecipitin (zo-o-pre-sip'ĭ-tin) [G. *zōon*, animal.] A precipitin obtained by repeated injection of an animal protein.

zoopsia (zo-op'sĭ-ah) [G. *zōon*, animal, + *opsis*, vision.] A delusion of seeing animals.

zoopsychology (zo-o-si-kol'o-jĭ) [G. *zōon*, animal, + *psychē*, mind, + *-logia*.] Animal psychology, the study of the mental processes or instincts of the lower animals.

zooscopy (zo-os'ko-pĭ) [G. *zōon*, animal, + *skopeō*, I view.] Zoopsia.

zoosis (zo-o'sis) [G. *zōon*, animal.] 1. A disease caused by an animal parasite. 2. Zoonosis.

zoosmosis (zo-oz-mo'sis) [G. *zōos*, living.] The process of osmosis in living tissues.

zoosperm, zoospermium (zo'o-spurm, zo-o-spur'mĭum) [G. *zōon*, animal, + *sperma*, seed.] A spermatozoon.

zoospore (zo'o-spōr) [G. *zōon*, animal, + *sporos*, seed.] Any spore having independent motion; a swarm-spore.

zootherapy (zo-o-ther'ă-pĭ) [G. *zōon*, animal, + *therapeia*, treatment.] Veterinary therapeutics.

zootomist (zo-ot'o-mist). A comparative anatomist.

zootomy (zo-ot'o-mĭ) [G. *zōon*, animal, + *tomē*, a cutting.] 1. Comparative anatomy. 2. Dissection of one of the lower animals.

zootox'in (zo-o-toks'in) [G. *zōon*, animal.] A substance, resembling the bacterial toxins in its antigenic properties, found in the fluids of certain animals; snake-venom, the secretions of poisonous insects, and eel-blood contain zootoxins.

zootrophic (zo-o-trof'ik) [G. *zōon*, animal, + *trophē*, nourishment.] Relating to or serving for the nutrition of the lower animals.

Zopfius (tsop'fi-us). See *Kurthia*.[0]

zos'ter [G. *zōstēr*, a girdle.] Herpes zoster, zona.

zoster'iform. Zosteroid.

zos'teroid [G. *eidos*, resemblance.] Resembling herpes zoster, zosteriform.

Zr. Chemical symbol of zirconium.

Zsigmondy's move'ments (tsig'mon-de) [R. *Zsigmondy*, German chemist, contemporary.] Brownian* movements. **Zs.'s test,** Lange's* test.

Zuckerkandl's convolu'tion (tsoo'ker-kahn-dl) [Emil *Zuckerkandl*, German anatomist, 1849–1910.] Gyrus subcallosus. **Z.'s gland,** a little yellow hemispherical mass, the size of a hempseed, sometimes found between the two geniohyoid muscles, believed to be an accessory thyroid gland. **Z.'s tu'bercle,** nasal tonsil. **Z.'s vein,** a communicating branch between the nasal and the cerebral veins.

zu'moid. Zymoid.

Zur Nedden. See *Nedden*.

Zwenger's test (tsveng'er). If a crystal of cholesterol is dropped into a mixture of 5 parts sulphuric acid and 1 part water, a red ring changing to violet will form.

zy'gal. Relating to or shaped like a zygon or yoke; H-shaped. **z. fissure,** a figure formed by two nearly parallel cerebral fissures connected by a short fissure at right angles, forming an H.

zygapophyseal (zi-gap-o-fiz'e-al). Relating to a zygaphophysis or articular process of a vertebra.

zygapophysis (zi-gă-pof'ĭ-sis) [G. *zygon*, yoke, + *apophysis*, offshoot.] An articular process of a vertebra, processus articularis [BNA].

zygion (zij'ĭ-on) [G. *zygon*, yoke.] The point on the zygoma on either side, at the extremity of the zygomatic diameter.

zygocyte (zi'go-sīt) [G. *zygōsis*, a joining, + *kytos*, cell.] Zygote.

zygolabia'lis. The caput zygomaticum of the musculus quadratus labii superioris [BNA], or musculus* zygomaticus minor.

zygo'ma [G. cheekbone.] 1. Arcus zygomaticus [BNA], a strong bar of bone bridging over the temporal fossa, formed by the union of the zygomatic processes of the temporal and malar bones. 2. The malar bone, jugal bone, os zygomaticum [BNA].

zygomat'ic. Relating to the zygoma. **z. apoph'ysis,** processus zygomaticus [BNA]. **z. arch,** zygoma (1),* arcus zygomaticus [BNA]. **z. bone,** malar bone, jugal bone, os* zygomaticum [BNA]. **z. crest,** the portion of the great wing of the sphenoid bone which articulates with the zygomatic bone, margo zygomaticus [BNA]. **z. diam'eter,** the extreme breadth of the skull at the zygomatic arches. **z. foramen,** (1) foramen zygomaticofaciale [BNA]; (2) foramen zygomaticotemporale [BNA]. **z. fossa,** fossa infratemporalis [BNA]. **z. muscle,** see under *musculus*. **z. suture,** sutura zygomaticotemporalis [BNA]. **z. tu'bercle,** eminentia articularis, tuberculum* articulare [BNA].

zygomat'icoauric'ular. Relating to the zygoma and the auricle, noting a muscle, musculus* auricularis anterior [BNA], and a craniometrical index.*

zygomat'icoauricula'ris. Musculus auricularis anterior [BNA].

zygomaticofa'cial. Relating to the zygoma and the face, noting a foramen.

zygomaticofron'tal. Relating to the zygoma and the frontal bones, noting a suture.

zygomaticomax'illary. Relating to the zygoma and the maxilla, noting a suture.

zygomat'ico-or"bital. Relating to the zygoma and the orbit, noting an artery and a foramen.

zygomati"cosphe'noid. Relating to the zygoma and the sphenoid bone, noting a fissure between the greater wing of the sphenoid and the zygomatic bone.

zygomat'icotem'poral. Relating to the zygoma and the temporal bone, noting a foramen and a suture.

zygomat'icus. See under *musculus*.

zygomatoauricularis (zi-go"mă-to-aw-rik-u-lar'is). Musculus auricularis anterior.

zy"gomaxilla're. The zygomaxillary point, a craniometrical point at the inferior extremity of the zygomaticotemporal suture.

zygomax'illary. Relating to the zygoma and the maxilla, noting a suture and a craniometrical point, the zygomaxillare.

zygomycetes (zi"-go-mi-se'tēz). A group of hyphomycetes, or mould fungi.

zygon [G. crossbar.] The short crossbar connecting the branches of a zygal* fissure.

zygoneure (zi'go-nūr) [G. *zygōn*, yoke, + *neuron*, *nerve*.] A neuron seemingly connecting other nerve cells.

zygo'sis [G. a joining.] True conjugation or sexual union of two unicellular organisms, consisting essentially in the fusion of the nuclei of the two cells.

zygosperm (zi'go-spurm) [G. *zygōsis*, a joining, + *sperma*, seed.] A spore formed by the conjugation of two other spores, zygospore.

zy'gospore [G. *zygosis*, a joining, + *sporos*, seed.] Zygosperm.

zygote (zi'gōt) [G. *zygōtos*, yoked.] The individual produced by the fusion of two cells in true conjugation or zygosis; the fertilized macrogamete; a zoosperm. **du'plex z.**, one resulting from the union of the germ cells each with a determinant. **null'iplex z.**, one resulting from the union of germ cells neither of which has a determinant. **sim'plex z.**, one resulting from the union of the germ cells only one of which has a determinant.

zygo'toblast [G. *zygotos*, yoked, + *blastos*, germ.] Sporozoite.

zygotomere (zi-go'to-mēr) [G. *zygōtos*, yoked, + *meros*, part.] Sporoblast.

zy'lonite. Xylonite, celluloid.*

zy'mad [G. *zymē*, leaven, with termination formed after the analogy of monad.] The contagium vivum of a zymotic or infectious disease.

zymase (zi'mās) [G. *zymē*, leaven, + *-ase*.] An enzyme.

zyma'sis. The extraction by pressure of the fermenting principle of yeast.

zyme (zīm) [G. *zymē*.] 1. A ferment. 2. Contagium* vivum of an infectious disease

zy'mic. 1. Relating to a ferment. 2. Noting an anaerobic microorganism.

zy'min. 1. A ferment. 2. Pancreatin.

zy'mocide [G. *zymē*, leaven, + L. *cædere*, to kill.] A proprietary liquid antiseptic, said to contain golden seal, calendula, witch hazel, boric acid, sodium thymolate, menthol, zinc sulphocarbolate, oil of eucalyptus, and oil of wintergreen.

zy'mogen [G. *zymē*, leaven, + *gennaō*, I produce.] 1. A substance in a digestive gland which is convertible into an enzyme; proferment. 2. A microorganism which causes fermentation.

zymogen'ic. Relating to a zymogen; causing fermentation.

zymogenous (zi-moj'en-us). Zymogenic.

zymohydrol'ysis [G. *zymē*, leaven, + *hydōr(hydr-)*, water, + *lysis*, a loosening.] Hydrolysis or cleavage of any compound under the influence of a ferment; zymolysis, zymosis (1).

zy'moid [G. *zymē*, leaven, + *eidos*, resemblance.] Resembling a ferment or enzyme.

zy'moidin. Trade name of a mixture of various substances—aluminum, bismuth, and zinc oxides, phenol, salicylic acid, etc.—recommended as an antiseptic dusting powder.

zymol'ogist. One who is versed in the science of fermentation, or zymology.

zymol'ogy [G. *zymē*, leaven, + *-logia*.] The branch of chemistry which deals with fermentation.

zymol'ysis [G. *zymē*, leaven, + *lysis*, solution.] Fermentation, zymosis (1).

zymolyt'ic. 1. Fermentative. 2. Zymotic (2).

zymo'ma, zy'mome [G. *zymōma*.] 1. A ferment. 2. Microzyme, a pathogenic microorganism

zymom'eter [G. *zymē*, leaven, + *metron*, measure.] An instrument for estimating the degree of fermentation.

Zymonema (zi-mo-ne'mah) [G. *zymoō*, I cause to ferment, + *nēma*, a thread.] A genus of fungi usually called *Cryptococcus*, or *Blastomyces*.

zymonematosis (zi-mo-ne-mă-to'sis). Blastomycosis.

zy'mophore [G *zymē*, leaven, + *phoros*, bearer] Noting the atomic group of a receptor* of the second order which carries the digestive principle.

zymophor'ic, zymoph'orous. Zymophore.

zymophyte (zi'mo-fīt) [G. *zymē*, leaven, + *phyton*, plant.] A fermentation-exciting vegetable microorganism.

zymoplas'tic [G. *zymē*, leaven, + *plassō*, I form.] Producing a ferment.

zymose (zi'mōz). Invertin, a ferment changing a disaccharide, such as cane-sugar, into a monosaccharide, invert-sugar.

zymosim'eter, zymosiom'eter [G. *zymōsis*, fermentation, + *metron*, measure.] Zymometer.

zymo'sis [G.] 1. Fermentation, zymolysis. 2. The infective process. 3. An infectious disease. **z. gas'trica,** organacidia.

zymosthen'ic (zi-mos-then'ik) [G. *zymē*, leaven, + *sthenos*, strength.] Increasing the functional activity and power of an enzyme.

zymotechny (zi-mo-tek'nĭ) [G. *zymē*, leaven, + *technē*, art] Any technique in which a process of fermentation is involved; zymurgy.

zymot'ic. 1. Relating to fermentation. 2. Noting an infectious disease. **z. disease,** zymosis (3). **z. doctrine,** the doctrine that an infectious disease is in its nature essentially a fermentative process **z. papillo'ma,** yaws. **z. prin'ciple,** the contagium of an infectious disease. **z. the'ory,** z. doctrine.

zy'motoid [G. *zymē*, leaven, + *eidos*, resemblance.] Trade name of a preparation, said to contain boric acid, sulphur, potassium nitrate, and other substances, recommended for internal and external use in various diseases of the skin and mucous membranes.

zymotox'ic group. The active atom-complex of a complement, analogous to the toxophore group of a toxin.

zymurgy (zi'mur-jĭ) [G. *zymē*, leaven, + *ergon*, work.] The branch of chemistry which deals with fermentation as applied to the manufacture of alcoholic beverages.

APPENDIX

APPENDIX.

TABLE OF DRUGS, THEIR DOSES AND USES.

For further details regarding the sources and therapeutics of the various drugs, see under their respective titles in the body of this Dictionary. The drugs are usually listed under their English titles (unless the Latin is more familiar), and compound titles, such as acetic acid or wild cherry, are entered under the first word.

Drugs and Doses	Therapeutic Indications
acacia (U.S., Br.)	demulcent and used as an excipient.
mucilage (U.S.), ℥4 (16.0)	
syrup, ℥1 (4.0)	
acacia bark (Br.)	astringent in diarrhea and as gargle in pharyngitis.
decoction (Br.), ℥1 (32.0)	
acalypha (B.A.)	expectorant, laxative, antirheumatic.
liquid extract (B.A.), ♏30 (2.0)	
succus (B.A.), ℥1–4 (4.0–16.0)	
acetal, ℥2–3 (8.0–12.0)	hypnotic.
acetanilid (U.S., Br.), gr. 3 (0.2)	analgesic, hypnotic.
acetic acid (U.S., Br.), ♏10 (0.6)	internally, the diluted acid is astringent and, when well diluted, is given in fever as a refrigerant; locally the glacial acetic acid is a caustic applied to corns and warts.
diluted (U.S., Br.), ℥1 (4.0)	
glacial	
acetone (U.S.), ♏15 (1.0)	antirheumatic, anthelmintic.
acetophenone, ♏3 (0.2)	hypnotic.
acetopyrine	*antipyrine acetylsalicylate.*
acetozone, gr. 5 (0.3)	intestinal and dermal antiseptic.
acetparatoluid gr. 15 (1.0)	antipyretic.
acetphenetidin (U.S.), gr. 7½ (0.5)	analgesic, antipyretic.
acetylsalicylic acid (U.S., Br.), gr. 5 (0.3)	rheumatism, coryza, influenza, headache.
acetyltannic acid (U.S.), gr. 10 (0.6)	diarrhea, and as a local astringent.
achillea (Ec,), ♏30 (2.0)	amenorrhea menorrhagia, leucorrhea, hematuria menstrual disorders and affections of the urinary system.
aconite (U. S., Br.), gr. 1 (0.06)	antipyretic, anodyne, cardiac sedative, diaphoretic.
fluidextract (U.S.), ♏½–1 (0.03–0.06)	
tincture (U.S., Br.), ♏3–5 (0.2–0.3)	
Fleming's tincture, ♏1–2 (0.06–0.13)	
extract (U.S.), gr. ⅛ (0.01)	
aconitine (U.S., Br.), gr. $\frac{1}{450}$ (0.00015)	cardiac sedative; locally, in ointment, antineuralgic: a dangerous remedy.
acopyrine	*antipyrine acetylsalicylate.*
actæa (Ec.), ♏2 (0.13)	atonic gastroenteric indigestion and constipation.
actæa racemosa	*cimicifuga, macrotys.*
adalin (N.N.R.)	*carbromalum.*
adonin, adonidin, gr. ¼ (0.01)	cardiac tonic.
adonis (N.F.), gr. 3–6 (0.2–0.4)	cardiac tonic.
fluidextract (N.F.), ♏2 (0.13)	
adrenalin chloride, ♏5 (0.3) of a 1:1000 solution	locally as hemostatic and capillary constringent; internally to raise blood pressure.
æsculus (Ec.), ♏2–5 (0.13–0.3)	dry bronchitis, hemorrhoids.
afenil (N.N.R.), ℥2½ (10.0) of a 10% solution	asthma, anaphylaxis, arsphenamine reactions.
agaric (N.F.), gr. 5–15 (0.3–1.0)	colliquative sweating.
agrimony (Ec.), ♏10–15 (0.6–1.0)	atonic condition of mucous membranes, especially of the genito-urinary apparatus, when there is excessive secretion; chronic bronchitis.
ailanthus (Ec.), ♏5–15 (0.3–1.0)	septic sore throat, scarlatinal angina; chronic septic conditions with low fever.
aletris (N.F.), gr. 8–15 (0.5–1.0)	simple bitter, useful in atonic dyspepsia and flatulence.
specific medicine (Ec.), ♏2–4 (0.13–0.26)	
allium (N.F.), gr. 30 (2.0)	expectorant, pulmonary tuberculosis.
allonal, gr. 2½–5 (0.15–0.3)	analgesic, hypnotic.
alnus (Ec.), ♏2–3 (0.13–0.2)	chronic skin and glandular affections, aphthous stomatitis.
aloes (U.S., Br.), gr. 2–10 (0.13–0.6)	cathartic, anthelmintic emmenagogue.
extract (N.F., Br.), gr. 1–2 (0.06–0.13)	
tincture (U.S., Br.), ℥1–2 (4.0–8.0)	
aloin (U.S., Br.), gr. ½–2 (0.03–0.13)	cathartic.
althæa leaves (N.F.), gr. 30 (2.0)	demulcent, excipient.
alum (U.S., Br.), gr. 30–60 (2.0–4.0)	local astringent and hemostatic; internally, emetic.
alypin, ½ to 2% solution	local anesthetic.
amber oil, ♏5–10 (0.3–0.6)	stimulant, antispasmodic; counterirritant.
ambergris, gr. 1–3 (0.06–0.2)	stimulant antispasmodic.
ambrosia (Ec.), ♏5–10 (0.3–0.6)	hay fever, chronic malaria, diarrhea, hematuria, hemorrhoids; externally in sprains and contusions.
amidopyrine (U.S.), gr. 5 (0.3)	analgesic, antipyretic, used in influenza and coryza.
ammonium acetate solution (U.S., Br.), ℥2–4 (8.0–16.0)	diaphoretic, diuretic, refrigerant.
bromide (U.S., Br.), gr. 10–30 (0.6–2.0)	sedative, antispasmodic, hypnotic.
carbonate (U.S., Br.), gr. 2–5 (0.13–0.3)	expectorant, cardiac and respiratory stimulant.
chloride (U.S., Br.), gr. 5–15 (0.3–1.0)	stimulant, expectorant, cholagogue.

Drugs and Doses	Therapeutic Indications
ammonium hippuras, gr. 5–10 (0.3–0.6)	said to hold urates in solution, preventing gravel.
hypophosphite (N.F.), gr. 2–4 (0.13–0.26)	nerve tonic, tuberculosis.
iodide, gr. 2–5 (0.13–0.3)	syphilis, high blood pressure, angina pectoris.
phosphate (N.F.), gr. 10–20 (0.6–1.3)	antirheumatic, antilithic.
salicylate (U.S.), gr. 10–30 (0.6–2.0)	rheumatism.
succinate, gr. 2–5 (0.13–0.3)	spasmodic pain.
valerate (N.F.), gr. 10–15 (0.6–10)	antispasmodic, nervine.
amphotropin (N.N.R.)	*methenamine.*
amygdalus (Ec.), ♏1–3 (0.06–0.2)	gastric irritation, obstinate vomiting.
amyl nitrite (U.S., Br.), ♏1–3 (0.06–0.2)	vasodilator, antispasmodic; inhalation in angina pectoris.
amylene chloral, ♏5–30 (0.3–2.0)	hypnotic.
hydrate, ♏10–30 (0.6–2.0)	hypnotic, antispasmodic.
analgen, gr. 8–15 (0.5–1.0)	antipyretic, analgesic.
anemopsis californica (Ec.), ♏2–3 (0.13–0.2)	nasal and pharyngeal catarrh.
anesthesin (N.N.R.)	*ethyl aminobenzoate.*
angelica seed (N.F.), gr. 15 (1.0)	tonic and stimulant.
root (N.F.), gr. 30 (2.0)	
angostura, gr. 10–30 (0.6–2.0)	simple bitter, used also in diarrhea and dysentery.
tincture, ♏30–60 (2.0–4.0)	
anilipyrine, gr. 8–15 (0.5–1.0)	rheumatism, influenza.
anthemis (Br., Ec.), gr. 30–60 (2.0–4.0)	stomachic tonic, relief of flatulence and of dysmenorrhea.
specific medicine (Ec.) ♏5–10 (0.3–0.6)	
anthrasol, 10 to 20% ointment	antipruritic and for various dermatoses.
antifebrin	*acetanilid.*
antimony chloride, gr. $\frac{1}{10}$ (0.006)	expectorant, emetic in $\frac{1}{4}$ grain dose.
oxide, gr. 1 (0.06)	expectorant, emetic.
sulphurated, gr. 2 (0.13)	emetic.
thiocollamide, gr. 1 (0.06)	trypanosomiasis, filariasis, kala azar.
and potassium tartrate, gr. $\frac{1}{10}$ (0.006)	expectorant, emetic in $\frac{1}{4}$ grain dose.
antipyrine (U.S.), gr. 10 (0.6)	antipyretic, analgesic, and antirheumatic.
acetylsalicylate, gr. 5–10 (0.3–0.6)	
benzoate, gr. 5–10 (0.3–0.6)	
butylchloral, gr. 5–20 (0.3–1.3)	
and caffeine citrate, gr. 5–15 (0.3–1.0)	for the relief of headache.
dichloral, gr. 5–20 (0.3–1.3)	analgesic, hypnotic, and antitussive in dry coughs.
mandelate, gr. $\frac{1}{2}$–10 (0.03–0.6) according to the age	antitussive in whooping-cough
monobromide, gr. 5–15 (0.3–1.0)	antipyretic and analgesic.
monochloral, gr. 5–20 (0.3–1.3)	analgesic, hypnotic, and antitussive in the hacking cough of phthisis.
salicylacetate, gr. 5–10 (0.3–0.6)	analgesic, antipyretic, and antirheumatic.
salicylate (N.N.R.), gr. 10–15 (0.6–1.0)	dysmenorrhea, acute catarrhs, and influenza in the early stage.
antithermin, gr. 3–5 (0.2–0.3)	antipyretic.
apinol (N.N.R.), ♏5–15 (0.3–1.0)	antiseptic, expectorant, local anesthetic.
apocodeine hydrochloride, gr. $\frac{1}{4}$–1 (0.015–0.06)	sedative, hypnotic, and antitussive.
apocynum (N.F.), gr. 5–30 (0.3–2.0)	diuretic, diaphoretic.
fluidextract, ♏8–10 (0.5–0.6)	
apomorphine hydrochloride (U.S., Br.), gr. $\frac{1}{64}$–$\frac{1}{10}$ (0.0001–0.006)	expectorant, emetic, hypnotic.
aralia (N.F.)	*spikenard.*
arbutin (N.N.R.), gr. 3–8 (0.2–0.5)	urinary antiseptic, diuretic.
argentoprotein	local antiseptic application to mucous membranes.
argentum	*silver.*
arheol (N.N.R.), gr. 6–10 (0.4–0.6)	urethritis, cystitis.
arhovin, ♏4 (0.25)	gonorrheal cystitis or rheumatism.
aristochin, gr. 8–15 (0.5–1.0)	malaria.
arnica, specific medicine (Ec.), ♏2 (0.13)	gout, rheumatism, low fevers.
arsacetin, gr. 10 (0.6)	syphilis.
arsenauro, ♏5–15 (0.3–1.0)	alterative, tonic, antisyphilitic.
arsenic (U.S., Br.), gr. $\frac{1}{60}$–$\frac{1}{30}$ (0.0015–0.003)	tonic, hematinic, antimalarial, alterative in skin diseases; externally caustic.
iodide (U.S., Br.), gr. $\frac{1}{30}$–$\frac{1}{30}$ (0.002–0.006)	alterative.
arsenohemol, gr. 1–2 (0.06–0.13)	nerve tonic and alterative in skin diseases.
arsenotriferrin, gr. 5 (0.3)	hematinic.
arsphenamine (U.S., Br.), and its silver, sodium, and sulphur compounds, gr. 6–10 (0.4–0.6).	syphilis, yaws, and some other diseases of protozoan causation.
asaprol, gr. 8–15 (0.5–1.0)	antiseptic, analgesic, antipyretic.
asarum (N.F.), gr. 15–30 (1.0–2.0)	aromatic stimulant and diaphoretic.
compound syrup (N.F.), ʒ$\frac{1}{2}$–1 (2.0–4.0)	
europæum, gr. 30–60 (2.0–4.0)	emetic and cathartic; errhine in dose of gr. 1 (0.06).
asclepias (N.F.), gr. 20–60 (1.3–4.0)	diuretic and cathartic in pleurisy and ascites.
fluidextract (N.F.), ♏20–30 (1.3–2.0)	
asferryl, gr. $\frac{1}{2}$–$\frac{3}{4}$ (0.02–0.04)	hematinic.
asparigin, gr. $\frac{1}{2}$–$\frac{3}{4}$ (0.06–0.13)	diuretic.
aspidium (U.S.)	*male fern.*
aspidosperma, gr. 15–60 (1.0–4.0)	dyspnea.
aspirin	*acetylsalicylic acid.*
asurol, ♏30 (2.0) of 10% solution	syphilis.
atophan	*cinchophen.*
atoxyl, gr. $\frac{1}{2}$–3 (0.03–0.2)	syphilis, malaria, trypanosomiasis.
atropine (U.S., Br.), gr. $\frac{1}{150}$–$\frac{1}{75}$ (0.0003–0.0008)	antispasmodic, sedative, antisudorific, narcotic, mydriatic.
sulphate (U.S., Br.), gr. $\frac{1}{150}$–$\frac{1}{60}$ (0.0004–0.0016)	
auremetine, gr. 1 (0.06)	dysentery.

Drugs and Doses	Therapeutic Indications
aurum	*gold.*
avena sativa (N.F.), gr. 60 (4.0)	nerve tonic, antispasmodic.
fluidextract, ♏60 (4.0)	
azurin, gr. 10–15 (0.6–1.0)	diuretic.
baptisia, tincture, ♏1–5 (0.06–0.3)	typhoid and septic conditions; locally, in decoction, for
specific medicine (Ec.), ♏1–2 (0.06–0.13)	aphthous stomatitis.
barbital (U.S., Br.), gr. 8–15 (0.5–1.0)	sedative and hypnotic.
sodium (U.S.), gr. 8–15 (0.5–1.0)	
barium chloride, gr. ¼–1 (0.01–0.06)	heart tonic, and for varicose veins.
bebeerine sulphate, gr. 2–5 (0.13–0.3)	tonic and antiperiodic.
bebeeru, gr. 10–30 (0.6–2.0)	antiperiodic.
belladonna (U.S., Br.), gr. ¼–2 (0.03–0.13)	anodyne, narcotic, mydriatic, and checking secretion.
extract, gr. ⅛–½ (0.01–0.02)	
fluidextract, ♏1 (0.06)	
tincture, ♏5–15 (0.3–1.0)	
specific medicine (Ec.), ♏½–¼ (0.008–0.015) hourly	
benzene (Br.), ♏5–10 (0.3–0.6)	trichiniasis, leucemia.
benzoic acid (U.S., Br.), gr. 30 (2.0)	antiseptic, diuretic, expectorant.
benzoin (U.S.), gr. 5–30 (0.3–2.0)	stimulant expectorant.
benzoiodohydrin, gr. 60 (4.0)	the same as the *iodides.*
benzopyrine	*antipyrine benzoate.*
benzosol	*guaiacol benzoate.*
benzoyl naphthol, gr. 4–8 (0.25–0.5)	intestinal antiseptic.
salicin, gr. 2–4 (0.13–0.26)	antipyretic.
benzyl benzoate (N.N.R.), ♏5–8 (0.3–0.5)	spasm of smooth muscle, asthma, dysmenorrhea, biliary and renal colic, etc.
berberine, gr. 2–5 (0.13–0.3)	tonic and antiperiodic.
berberis (N.F.), gr. 15–60 (1.0–4.0)	tonic, antiperiodic, and in catarrh of the upper air-passages.
betaine, gr. 2–4 (0.13–0.26)	emmenagogue.
hydrochloride, gr. 1–5 (0.06–0.3)	tetanus.
betanaphthol (U.S., Br.), gr. 1–5 (0.06–0.3)	intestinal antiseptic, and externally in certain skin diseases.
bismogenol, ♏15 (1.0)	syphilis.
bismosol, ♏15 (1.0)	syphilis.
bismutan, gr. 1–5 (0.06–0.3)	diarrhea.
bismuth and ammonium citrate, gr. 2–5 (0.13–0.3)	intestinal astringent.
betanaphtholate, gr. 5–20 (0.3–1.3)	in enteritis used as an intestinal antacid.
oxide (Br.), gr. 5–10 (0.3–0.6)	intestinal astringent, and in gastric ulcer.
oxycarbonate (Br.)	*bismuth subcarbonate.*
salicylate, gr. 5–20 (0.3–1.3)	typhoid fever and diarrhea.
subcarbonate (U.S.), gr. 10–60 (0.6–4.0)	intestinal astringent and in gastric ulcer.
subgallate (U.S.), gr. 5–10 (0.3–0.6)	diarrhea, and externally as an antiseptic dusting powder.
subnitrate (U.S., Br.), gr. 5–30 (0.3–2.0)	intestinal astringent used in gastric ulcer.
subsalicylate (U.S.), gr. 5–10 (0.3–0.6)	intestinal antiseptic.
tribromphenate, gr. 3–8 (0.2–0.5)	intestinal antiseptic, used externally as a substitute for iodoform.
bitter almond oil (U.S.), ♏½–1 (0.015–0.06)	in gastrodynia, for the relief of cough, nerve sedative.
black haw	*viburnum prunifolium.*
boldin (boldoglucin), gr. 1–3 (0.06–0.2)	cholagogue, diuretic, antirheumatic.
boldine, gr. 3 (0.2)	hynotic and local anesthetic.
boldus (boldo) (N.F.), gr. 5–10 (0.3–0.6)	hepatic disorders and genito-urinary inflammations.
fluidextract (N.F.), ♏5–10 (0.3–0.6)	
boletus (Ec.), ♏1 (0.06)	in malaria, chronic diarrhea, and as a nerve tonic.
bonduc-seeds, gr. 10–15 (0.6–1.0)	antiperiodic and tonic.
borax (U.S., Br.), gr. 5–30 (0.3–2.0)	epilepsy, locally in solution as a mouth wash in aphthous stomatitis and as a vaginal douche in leucorrhea.
boric acid (U.S., Br.), gr. 10 (0.6)	antiseptic dusting powder, collyrium, and in aphthæ and stomatitis.
bornyval, ♏4–12 (0.25–0.8)	neurasthenia, hysteria, neuralgia, neuritis.
borsalyl, gr. 5–30 (0.3–2.0)	analgesic in rheumatism, gout, and pleurisy.
brayera	*cusso.*
bromal, ♏2–5 (0.13–0.3)	hypnotic and antispasmodic.
hydrate, gr. 1–5 (0.06–0.3)	
bromalin, gr. 10–30 (0.6–2.0)	nerve sedative, antiepileptic.
bromamide, gr. 8–10 (0.5–0.6)	antipyretic, analgesic, antirheumatic.
bromauric acid (N.F.), gr. $\frac{1}{10}$ (0.006)	syphilis.
bromethylene, ♏1–3 (0.06–0.2)	epilepsy.
brometone (N.N.R.), gr. 2–10 (0.13–0.6)	nerve sedative and hypnotic.
bromides (U.S., Br.), gr. 5–60 (0.3–4.0)	nerve sedative in chorea, epilepsy, and other spasmodic affections; hypnotic.
bromoform, ♏1–5 (0.06–0.3)	sedative and antispasmodic.
bromohemol, gr. 15 (1.0)	epilepsy.
bromol, gr. ¼–1 (0.015–0.06)	intestinal antiseptic.
bromopyrine	*antipyrine monobromide.*
bromural, gr. 5–10 (0.3–0.6)	sedative and hypnotic.
brovalol, gr. 4–12 (0.25–0.8)	sedative and antispasmodic.
bryonia (N.F.), gr. 5–20 (0.3–1.3)	dyspepsia, constipation, pleurisy, pleurodynia, hacking cough.
tincture, ♏60 (4.0)	
specific medicine (Ec.), ♏1 (0.06)	
bryonin, gr. ¼–2 (0.015–0.13)	hydragogue cathartic.
buchu (U.S., Br.), ℥1–4 (4.0–16.0) in infusion	carminative, diuretic, urinary antiseptic.
fluid extract, ℥½–1 (2.0–4.0)	

Drugs and Doses	Therapeutic Indications
bulbocapnine, gr. 1–2 (0.06–0.13)	paralysis agitans and other tremors.
butesin picrate (N.N.R.)	analgesic and antiseptic dusting powder; in 1:1400 solution as a local anesthetic to the conjunctiva.
butyl-chloral hydrate (Br.), gr. 5–20 (0.3–1.3)	analgesic and hypnotic.
buxine, gr. 10–20 (0.6–1.3)	bitter tonic and antipyretic.
cactus (N.F., Ec.)	heart tonic especially in functional disorders, such as tobacco heart and nervous palpitation.
fluidextract, ♏2–4 (0.13–0.26)	
tincture, (N.F.) ♏10–15 (0.6–1.0)	
specific medicine (Ec.), ♏2–5 (0.13–0.3)	
caffeine (U.S., Br.), gr. ½–2 (0.03–0.13)	heart tonic; for relief of neuralgia and headache.
citrated (U.S., Br.), gr. 1–5 (0.06–0.3)	
sodiobenzoate (U.S.), gr. 2–3 (0.13–0.2)	
sodiosalicylate (N.F.), gr. 2–3 (0.13–0.2)	
cahinca, gr. 20–60 (1.3–4.0)	tonic, diuretic, purgative.
cahincin, gr. 2–4 (0.13–0.26)	diuretic and purgative.
calbroben (N.N.R.)	*calcium dibrombehenate.*
calcidin, gr. ½–1 (0.02–0.06)	catarrhal laryngitis.
calcium benzoate, gr. 5–10 (0.3–0.6)	intestinal antiseptic, and in albuminuria and acidosis.
betanaphthol sulphonate, gr. 5–15 (0.3–1.0)	rheumatism, gout, neuralgia.
borate, gr. 2–5 (0.13–0.3)	diarrhea in children.
bromide (U.S.), gr. 5–30 (0.3–2.0)	same indications as for the bromides.
carbonate (U.S.), gr. 10–30 (0.6–2.0)	antacid in diarrhea.
chloride (U.S., Br.), gr. 2–15 (0.13–1.0)	for lime deficiency in hemophilia, tuberculosis, and spasmophilia.
dibrombehenate, gr. 8 (0.5)	same as the *bromides.*
glycerophosphate (U.S.), gr. 3–10 (0.2–0.6)	nerve tonic.
hippuras, gr. 5–20 (0.3–1.3)	uratic gravel.
hypophosphite (N.F., Br.), gr. 10–30 (0.6–2.0)	rickets, tuberculosis, defective nutrition.
iodide, gr. 1–4 (0.06–0.25)	tuberculosis; same as the other *iodides.*
iodobehenate (U.S.), gr. 8–15 (0.5–1.0)	same as the *iodides.*
lactate (U.S.), gr. 4–8 (0.25–0.5)	rickets and lime deficiency in general.
lactophosphate (N.F.), gr. 5–10 (0.3–0.6)	tuberculosis and other wasting diseases.
permanganate, gr. ½–1 (0.03–0.06)	intestinal antiseptic.
peroxide, gr. 3–10 (0.2–0.6)	intestinal antiseptic.
phosphate (N.F., Br.), gr. 10–30 (0.6–2.0)	tuberculosis, rickets, and lime deficiency in general.
saccharate, gr. 8–30 (0.5–2.0)	antacid in dyspepsia, antidote in phenol poisoning in 2 to 5 dram doses.
salicylate, gr. 8–15 (0.5–1.0)	intestinal antiseptic.
santonate, gr. ½–1 (0.03–0.06)	anthelmintic.
sulphide, gr. ½–1 (0.03–0.06)	acne and boils, externally in ringworm and scabies.
sulphite, gr. 1–5 (0.06–0.3)	intestinal antiseptic, externally in parasitic skin diseases.
calcreose, gr. 4–16 (0.25–1.0)	bronchitis, tuberculosis, gastroenteric affections.
calendula (N.F.), gr. 10–15 (0.6–1.0)	employed externally (diluted 1:4) and interally for sprains and bruises marked by ecchymoses.
fluidextract (N.F.) ♏10–15 (0.6–1.0)	
specific medicine (Ec.), ♏2–3 (0.13–0.2)	
calomel	see under *mercury.*
calumba (U.S., Br.), gr. 20–30 (1.3–2.0)	bitter tonic—used in intestinal flatus and by the natives of East Africa in diarrhea and dysentery.
fluidextract (N.F.), ♏10–60 (0.6–2.0)	
infusion (Br.), ℥1–2 (32.0–64.0)	
tincture (U.S., Br.), ℥1–2 (4.0–8.0)	
cambogia	*gamboge.*
camphor (U.S., Br.), gr. ½–3 (0.03–0.2)	stimulant (general and cardiac), carminative, expectorant, and diaphoretic.
monobromate, gr. 1–3 (0.06–0.2)	antispasmodic, sedative, soporific.
camphoric acid, gr. 30 (2.0)	night sweats and cystitis.
canella (N.F.), gr. 10–30 (0.6–2.0)	aromatic stimulant and carminative.
cannabin, gr. ½–1 (0.015–0.06)	hysteria, neuralgia, delirium tremens.
cannabine, gr. 1–3 (0.06–0.2)	hypnotic.
cannabinon, gr. ½–1 (0.015–0.06)	hypnotic.
cannabis (U.S., Br.)	narcotic, sedative, analgesic, antitussive.
extract (U.S., Br.), gr. ¼–½ (0.008–0.015)	
fluidextract (U.S.), ♏½–1 (0.03–0.06)	
tincture (Br.), ♏5–15 (0.3–1.0)	
specific medicine (Ec.), ♏½–1 (0.015–0.06).	
cantharis (U.S., Br.), gr. ¼–½ (0.015–0.03)	diuretic; externally counterirritant and vesicant.
tincture (U.S., Br.), ♏1–3 (0.06–0.2)	
capsicum (U.S., Br.), gr. 1–5 (0.06–0.3)	carminative and stimulant; externally, counterirritant.
tincture (U.S., Br.), ♏5–15 (0.3–1.0)	
caraway (U.S., Br.), gr. 1–10 (0.06–0.6)	carminative, diuretic.
carbolic acid	*phenol.*
carbon tetrachloride, ♏30–40 (2.0–2.6)	anthelmintic, especially against the hookworm.
carbromal (U.S.), gr. 8–15 (0.5–1.0)	sedative and hypnotic.
cardamom (U.S., Br.), gr. 3–15 (0.2–1.0)	aromatic carminative.
compound tincture (U.S.), ♏30–60 (2.0–4.0)	
tincture (U.S.), ♏20–30 (0.3–2.0)	
cardiazol, gr. 1–2 (0.06–0.12)	cardiac and respiratory stimulant.
carpaine, gr. ¼–½ (0.01–0.02)	diuretic and cardiac tonic.
cascara amarga (N.F.), gr. 10–15 (0.6–1.0)	alterative and bitter tonic.
sagrada (U.S., Br.), gr. 3–15 (0.2–1.0)	tonic laxative.
extract (U.S., Br.), gr. 2–8 (0.13–0.5)	
fluidextract (U.S., Br.), ♏15–30 (1.0–2.0)	
aromatic fluidextract (U.S.), ♏15–30 (1.0–2.0)	
specific medicine (Ec.), ♏5–30 (0.3–2.0)	

Drugs and Doses	Therapeutic Indications
cascarilla (Br.), gr. 20–30 (1.3–2.0)	aromatic stimulant, useful in atonic dyspepsia.
infusion (Br.), ʒ½–1 (16.0–32.0)	
tincture (Br.), ♏30–60 (2.0–4.0)	
cassia fistula (N.F., Br.), ʒ1–2 (4.0–8.0)	laxative.
castanea	*chestnut.*
castor oil (U.S., Br.), ʒ4–8 (16.0–32.0)	purgative.
aromatic (N.F.), ʒ4–8 (16.0–32.0)	
catalpa, specific medicine (Ec.), ♏1–5 (0.06–0.3)	asthma, chronic bronchitis.
catechu (U.S., Br.), gr. 5–15 (0.3–1.0)	astringent in diarrhea.
compound tincture (U.S.), ♏30–60 (2.0–4.0)	
cathartic acid, gr. 2–5 (0.13–0.3)	cathartic.
caulophyllum (N.F., Ec.), gr. 6–8 (0.4–0.5)	emmenagogue, oxytocic, antispasmodic.
fluidextract (N.F.), ♏6–8 (0.4–0.5)	
specific medicine (Ec.), ♏1–3 (0.06–0.2)	
cayaponine, gr. ¼–½ (0.01–0.03)	purgative.
ceanothus, specific medicine (Ec.), ♏½–2 (0.03–0.13)	splenitis, mucous catarrhs with profuse secretion.
cephalanthus	antipyretic, antiperiodic.
fluidextract, ♏30–60 (2.0–4.0)	
cesium bromide, gr. 3–5 (0.2–0.3)	epilepsy, functional heart disturbances.
chalk	*calcium carbonate.*
chamomile	*anthemis.*
charcoal (U.S., Br.), gr. 5–60 (0.3–4.0)	gastric fermentation and flatulence.
chaulmoogra oil (U.S.), ♏2–6 (0.13–0.4)	leprosy and certain chronic dermatoses.
chekan	urinary and respiratory catarrhs.
fluidextract, ʒi–2 (4.0–8.0)	
chelidonium, gr. 30–60 (2.0–4.0)	diseases of the liver and digestive apparatus, hepatic
specific medicine (Ec.), ♏5–10 (0.3–0.6)	gravel.
chelone, specific medicine (Ec.), ♏2–5 (0.13–0.3)	digestive tonic; anthelmintic in large doses.
chenopodium, gr. 20–30 (1.3–2.0)	anthelmintic.
chestnut leaves (N.F.), gr. 40–60 (2.6–4.0)	whooping cough.
fluidextract, ʒ1–4.0	
chimaphila (N.F., Ec.), gr. 15–30 (1.0–2.0)	genito-urinary affection with frequent micturition and
specific medicine (Ec.), ♏10–60 (0.6–4.0)	tenesmus.
chinaphenin, gr. 5–15 (0.3–1.0)	antipyretic, antitussive.
chinaphthol, gr. 5–15 (0.3–1.0)	intestinal tuberculosis, acute rheumatism.
chionanthus (N.F., Ec.)	diuretic, laxative, in jaundice.
fluidextract (N.F.), ♏20–30 (1.3–2.0)	
specific medicine (Ec.), ♏5–10 (0.3–0.6)	
chirata (N.F., Br.), gr. 10–30 (0.6–2.0)	stomachic, tonic.
chloral hydrate (U.S., Br.), gr. 5–10 (0.3–0.6)	hypnotic, analgesic.
chloralamide, gr. 15–30 (1.0–2.0)	hypnotic, analgesic.
chloral amylene hydrate, ♏8–15 (0.5–1.0)	hypnotic.
chloralformamide, gr. 10–30 (0.6–2.0)	hypnotic, analgesic.
chloralimide, gr. 15–45 (1.0–3.0)	hypnotic, analgesic.
chloralose, gr. 3–12 (0.2–0.8)	hypnotic.
chloralmethane, gr. 10–45 (0.6–3.0)	hypnotic.
chloretone, gr. 5–20 (0.3–1.3)	sedative, hypnotic.
chlorodyne, ♏5–10 (0.3–0.6)	local anesthetic, anodyne.
chloroform (U.S., Br.), ♏3–5 (0.2–0.3)	sedative, anodyne, antispasmodic; general anesthetic
spirit (U.S., Br.), ♏20–60 (1.3–4.0)	by inhalation.
water (U.S., Br.), ʒ1–8 (4.0–32.0)	
chloroxyl	same dose and indications as *cinchophen.*
chondrus (N.F.)	demulcent in chronic respiratory and intestinal catarrhs.
infusion (ʒ1–Oi), ʒ1–2 (32.0–64.0)	
cimicifuga (U.S., Br.), gr. 10–15 (0.6–1.0)	alterative, emmenagogue, antispasmodic, antirheumatic;
extract (U.S.), gr. 2–8 (0.13–0.5)	see also *macrotys.*
fluidextract (U.S.), ♏10–15 (0.6–1.0)	
cimicifugin, gr. 1–6 (0.06–0.4)	tonic and antispasmodic.
cinchona (U.S., Br.), gr. 10–30 (0.6–2.0)	antiperiodic, bitter tonic.
extract (N.F.), gr. 10–30 (0.6–2.0)	
fluidextract (U.S.), ♏15 (1.0)	
tincture (U.S., Br.), ʒ½–2 (2.0–8.0)	
cinchonamine, gr. 4–8 (0.25–0.5)	antiperiodic, antipyretic.
cinchonine, gr. 1–20 (0.06–1.3)	tonic, antiperiodic.
cinchophen (U.S.), gr. 5–8 (0.3–0.5)	diuretic, uric-acid eliminant.
cinnaldehyde, ♏1–5 (0.06–0.3)	carminative and aromatic stomachic.
cinnamic acid, gr. 1/10 (0.006)	increases leucocytosis in infections.
cinnamon, gr. 1–10 (0.06–0.6)	carminative, stomachic.
cinnamyl-eugenol, ♏2–8 (0.13–0.5)	tuberculosis.
citarin, gr. 15–30 (1.0–2.0)	rheumatism, gout.
citresia, ʒ6–8 (24.0–32.0)	laxative.
citric acid (U.S., Br.)	to make refrigerant drink in fevers.
citrophen, gr. 3–15 (0.2–1.0)	sedative, analgesic, antipyretic.
clove (U.S., Br.), gr. 1–10 (0.06–0.6)	carminative, aromatic, stimulant.
coca (Br.), gr. 30–60 (2.0–4.0)	tonic, stimulant.
cocaine (U.S., Br.), gr. ¼–½ (0.015–0.03)	cerebral and respiratory stimulant, local anesthetic.
hydrochloride (U.S., Br.), gr. ¼–½ (0.015–0.03)	
cocapyrine, gr. 2–5 (0.13–0.3)	antipyretic, analgesic.
cocillana (N.F.), gr. 10–15 (0.6–1.0)	expectorant in bronchitis.
fluidextract (N.F.), ♏8–15 (0.5–1.0)	
codeine (U.S., Br.), gr. ¼–2 (0.03–0.13)	analgesic, hypnotic, antitussive.
phosphate (U.S., Br.), gr. ¼–2 (0.03–0.13)	

Drugs and Doses	Therapeutic Indications
codeine sulphate (U.S.), gr. ½–2 (0.03–0.13)	
cod-liver oil (U.S., Br.), ʒ2–8 (8.0–32.0)	tuberculosis, rickets, anemia.
cola (N.F.), gr. 20–40 (1.3–2.6)	cardiac and nerve stimulant.
fluidextract (N.F.), ♏20–40 (1.3–2.6)	
colchicein, gr. $\frac{1}{150}$–$\frac{1}{60}$ (0.0005–0.001)	gout.
colchicine, (U.S.), gr. $\frac{1}{150}$–$\frac{1}{100}$ (0.0004–0.0006)	gout.
colchisal, gr. $\frac{1}{100}$ (0.0006)	gout.
collargol, gr. ¼ (0.02)	septic conditions.
collinsonia (Ec.), ♏10–15 (0.6–1.0)	sore throat, urinary disorders, hemorrhoids.
colocynth (U.S., Br.), gr. 1–5 (0.06–0.3)	hydragogue cathartic.
colocynthin, gr. ¼ (0.01)	purgative.
condurango (N.F.), gr. 15–60 (1.0–4.0)	alterative, formerly reputed a remedy for gastric cancer.
fluidextract (N.F.), ♏30–60 (2.0–4.0)	
coniine, gr. $\frac{1}{150}$–$\frac{1}{50}$ (0.0006–0.003)	antispasmodic, anodyne.
conium (N.F., Br.), gr.1–3 (0.06–0.2)	sedative, antispasmodic, anodyne.
fluidextract (N.F.), ♏2–5(0.13–0.3)	
tincture (Br.), ♏20–60 (1.3–4.0)	
convallaria (N.F.), gr. 5–8 (0.3–0.5)	heart tonic, diuretic.
fluidextract (N.F.), ♏5–8 (0.3–0,5)	
convallarin, gr. ½–1 (0.03–0.06)	heart tonic.
convolvulin, gr. ½–2 (0.03–0.13)	purgative.
copaiba (U.S., Br.), ♏10–30 (0.06–0.2)	diuretic, expectorant.
coptis (N.F.), gr. 15–30 (1.0–2.0)	bitter tonic.
fluidextract (N. F.), ♏15–30 (1.0–2.0)	
corallorhiza, gr. 15–30 (1.0–2.0)	diaphoretic.
coramine, ♏15-30 (1.0-2.0)	cardiac and respiratory stimulant.
coriamyrtin, gr. $\frac{1}{60}$ (0.001)	cardiac and respiratory stimulant.
coriander (N.F.), gr. 5–10 (0.3–0.6)	aromatic stimulant.
cornin (Ec.), gr. 2–5 (0.13–0.3)	antiperiodic, tonic.
cornus (N.F., Ec.)	aromatic astringent, antiperiodic.
fluidextract (N.F.), ♏15–60 (1.0–4.0)	
specific medicine (Ec.), ♏10–30 (0.6–2.0)	
corrosive sublimate	see under *mercury*.
corydalin, gr. 1–3 (0.06–0.2)	syphilides and skin diseases.
corydaline, gr. ½–1 (0.03–0.06)	tonic, diuretic.
corydalis (N.F.), gr. 10–15 (0.6–1.0)	tonic, alterative.
fluidextract (N.F.), ♏10–15 (0.6–1.0)	
cosaprin, gr. 4–8 (0.25–0.5)	antipyretic.
cotarnine chloride (U.S.), gr. ½–2	hemostatic internally and also locally, (in 1% or 2% solution) to still uterine bleeding.
phthalate, gr. ½–1 (0.03–0.06)	
coto, gr. 1–8 (0.06–0.5)	diarrhea and night sweats of phthisis.
cratægus (Ec.), ♏5–20 (0.3–1.3)	cardiac tonic.
creosol, ♏½–1 (0.03–0.06)	internal antiseptic.
creosote (U.S., Br.), ♏1–10 (0.06–0.6)	tuberculosis, fermentative dyspepsia.
carbonate (U.S.), ♏5–10 (0.3–0.6)	bronchitis, pneumonia.
formaldehyde, ♏5–30 (0.3–2.0)	tuberculous enteritis.
valerate, ♏2–10 (0.13–0.6)	tuberculosis, gastric fermentation.
crocus (N.F., Br.), gr. 5–30 (0.3–2.0)	flatulent dyspepsia, asthma.
cryptopine, gr. $\frac{1}{12}$–¼ (0.005–0.008)	analgesic, hypnotic.
cubeb (U.S., Br.), gr. 30–60 (2.0–4.0)	stimulant, carminative.
fluidextract (N.F.), ♏10–15 (0.6–1.0)	
oleoresin, gr. 8–10 (0.5–0.6)	
tincture (N.F.), ʒ1 (4.0)	
curare, gr. $\frac{1}{10}$–½ (0.006–0.015)	tetanus, strychnine poisoning.
cusparia, gr. 10–30 (0.6–2.0)	*angostura*.
cussin, gr. 20–40 (1.3–2.6)	teniacide.
cusso (N.F., Br.), ʒ2–8 (8.0–32.0)	teniacide.
fluidextract, ʒ2–8 (8.0–32.0)	
cypripedium, gr. 5–30 (0.3–2.0)	antispasmodic, nerve tonic.
fluidextract (N.F.), ♏5–15 (0.3–1.0)	
damiana (N.F.), gr. 20–40 (1.3–2.6)	stimulant, tonic, laxative with alleged aphodisiac powers.
fluidextract (N.F.), ♏15–30 (1.0–2.0)	
delphinine, gr. $\frac{1}{60}$–$\frac{1}{30}$ (0.001–0.002)	neuralgia, chronic rheumatism.
delphinium (N.F.)	dropsy, asthma, dysuria; externally as a parasiticide.
tincture (N.F.), ♏5–10 (0.3–0.6)	
dermatol	*bismuth subgallate*.
diacetylmorphine	*heroine*.
diaspirin, gr. 5–15 (0.3–1.0)	rheumatism, influenza.
digalen, ♏15 (1.0)	same as digitalis.
digipuratum, gr. ½–1 (0.03–0.06)	same as digitalis.
digitalein, gr. $\frac{1}{60}$ (0.001)	same as digitalis.
digitalin, French, amorphous, gr. $\frac{1}{60}$–$\frac{1}{30}$ (0.001–0.002)	same as digitalis.
French, crystallized, gr. $\frac{1}{250}$–$\frac{1}{125}$ (0.00025–0.0006)	
German, gr. $\frac{1}{60}$–$\frac{1}{30}$ (0.001–0.002)	
digitalis (U.S., Br.), gr. ½–1 (0.03–0.06)	cardiac tonic, diuretic, increasing blood pressure, strengthening the systole, and prolonging the diastole.
fluidextract, ♏30–60 (2.0–4 0)	
infusion (U.S., Br.), ʒ2–4 (8.0–16.0)	
tincture (U.S., Br.), ♏10–15 (0.6–1.0)	
specific medicine (Ec.), ♏½–1 (0.015–0.06) hourly	
digitoxin, gr. $\frac{1}{250}$–$\frac{1}{100}$ (0.0003–0.0006)	same as digitalis.
dionine (U.S.), gr. ½–¾ (0.015–0.03)	analgesic, hypnotic, antispasmodic, in asthma and bronchitis; locally in 5% solution for corneal ulcer and iritis.

Drugs and Doses	Therapeutic Indications
dioscorea (N.F.)	expectorant, diaphoretic; used also in bilious colic and rheumatism.
fluidextract, ♏30–60 (2.0–4.0)	
specific medicine (Ec.), ♏½–2 (0.03–0.13)	
diuretin (U.S.), gr. 10–20 (0.6–1.3)	diuretic.
dormiol, gr. 8–15 (0.5–1.0)	hypnotic.
Dover's powder (U.S., Br.), gr. 5–15 (0.3–1.0)	anodyne, diaphoretic.
syrup (N.F.), ℥1–4 (4.0–16.0)	
dracontium, gr. 10–20 (0.6–1.3)	sialagogue, antispasmodic, narcotic.
drosera (N.F.)	chronic bronchitis, asthma.
fluidextract (N.F.), ♏30–60 (2.0–4.0)	
specific medicine (Ec.), ♏½–2 (0.015–0.13)	
duboisine, gr. $\frac{1}{60}$–$\frac{1}{40}$ (0.0008–0.0016)	paralysis agitans, insomnia; locally mydriatic.
dulcamara (N.F.), gr. 30–60 (2.–4.0)	diuretic, diaphoretic, sedative; in skin diseases with sluggish circulation.
fluidextract (N.F.), ♏30–60 (2.0–4.0)	
specific medicine (Ec.), ♏2–8 (0.13–0.5)	
duotal	*guaiacol carbonate.*
echinacea (N.F. Ec.)	alterative in chronic septic condition, boils.
fluidextract (N.F.), ♏10–30 (0.6–2.0)	
specific medicine (Ec.), ♏5–20 (0.3–1.3)	
elarson, gr. $\frac{1}{10}$–$\frac{1}{8}$ (0.006–0.008)	anemia, chorea, various skin diseases.
elaterin (U.S.), gr. $\frac{1}{50}$–$\frac{1}{40}$ (0.002–0.003)	hydragogue cathartic especially in renal dropsy; used also in purulent cystitis.
elaterium, gr. $\frac{1}{8}$–$\frac{1}{4}$ (0.01–0.015)	hydragogue cathartic.
specific medicine (Ec.), ♏1–2 (0.06–0.13)	
elder flowers	*sambucus.*
elecampane	*inula.*
embelia (B.A.), ℥1–4 (4.0–16.0)	anthelmintic.
embelic acid, gr. 3–6 (0.2–0.4)	teniafuge.
ephedra	gonorrhea and syphilis.
fluid extract, ℥1–2 (4.0–8.0)	
ephedrine, ♏1–2 (0.06–0.13) of a 10% solution	mydriatic.
epigæa, gr. 30–60 (2.0–4.0)	diuretic.
fluidextract, ♏30–60 (2.0–4.0)	
specific medicine (Ec.), ♏5–15 (0.3–1.0)	
epilobium (Ec.), ♏30–60 (2.0–4.0)	chronic diarrhea.
epinephrine (U.S.), gr. $\frac{1}{120}$ (0.0005)	shock; locally in 1: 15,000 to 1: 1000 solutions as a hemostatic.
equisetum (Ec.), ♏5–30 (0.3–2.0)	diuretic, especially in dysuria and vesical tenesmus.
ergoapiol, gr. 8–15 (0.5–1.0)	menstrual disorders.
ergot (U.S., Br.), gr. 20–30 (1.3–2.0)	raises blood pressure, diminishes shock, contracts the uterus.
ammoniated tincture, ℥1 (4.0)	
aqueous extract, gr. 3–5 (0.2–0.3)	
extract (Br.), gr. 2–8 (0.13–0.5)	
fluidextract (U.S., Br.), ℥½–2 (2.0–8.0)	
specific medicine (Ec.), ♏½–2 (0.03–0.13)	
ergotinine citrate, gr. $\frac{2}{150}$–$\frac{1}{150}$ (0.0003–0.0006) hypodermically	same as ergot.
erigeron, gr. 30–60 (2.0–4.0)	diaphoretic, expectorant, renal and vesical affection.
fluidextract, ♏30–60 (2.0–4.0)	
specific medicine (Ec.), ♏5–10 (0.3–0.6)	
eriodictyon	*yerba santa.*
ernutin, ♏30–60 (2.0–4.0)	same as *ergot.*
eryngium (Ec.), ♏5–8 (0.3–0.5)	irritable conditions of the bladder.
erythrophleine, gr. $\frac{1}{80}$–$\frac{1}{50}$ (0.001–0.002)	cardiac tonic.
erythrophleum, gr. $\frac{1}{8}$–$\frac{1}{4}$ (0.01–0.02)	cardiac tonic.
esculin, gr. 5–15 (0.3–1.0)	antiperiodic.
ether (U.S., Br.), ♏10–60 (0.6–4.0)	carminative and stimulant; general anesthetic by inhalation and rectal injection.
spirit (Br.), ℥1–3 (4.0–12.0)	
acetic (N.F., Br.), ♏5–30 (0.3–2.0)	stimulant and antispasmodic.
ethoxycaffeine, gr. 5–10 (0.3–0.6)	neuralgia, migraine.
ethyl aminobenzoate (U.S.), gr. 5 (0.3)	local anesthetic, internally for the relief of pain of gastric ulcer and gastritis.
carbamate, gr. 10–30 (0.6–2.0)	hypnotic.
chaulmoograte (U.S.), ♏15 (1.0)	leprosy.
iodide, ♏10–15 (0.6–1.0)	asthma, glottic edema, nervous dyspnea.
ethylmorphine hydrochloride (U.S.)	*dionine.*
ethylhydrocupreine, gr. 4–5 (0.26–0.3)	pneumonia and other pneumococcal affections.
eucaine hydrochloride, 2% solution	local anesthetic.
eucalyptene hydrochloride, gr. 2–6 (0.13–0.4)	diarrhea and phthisis.
eucalyptol (U.S.), ♏5–10 (0.3–0.6)	stimulant expectorant.
eucalyptus (U.S.), gr. 20–30 (1.3–2.0)	bronchitis, asthma, chronic gonorrhea, malaria.
fluidextract (U.S.), ♏20–30 (1.3–2.0)	
specific medicine (Ec.), ♏ 1–3(0.06–0.2)	
oil (U.S.), ♏10–20 (0.6–1.3)	
gum (N.F.), gr. 8–10 (0.5–0.6)	diarrhea, and locally for relaxed conditions of the pharynx and elongated uvula.
eudermol, 0.1% ointment	scabies and pruritus.
eugenoform, gr. 8–15 (0.5–1.0)	intestinal disinfectant.
eugenol (U.S.), ♏3–5 (0.2–0.3)	intestinal antiseptic; local antiseptic and analgesic in dentistry.
eulatin, gr. 5–10 (0.3–0.6)	whooping-cough.
eumydrine, gr. $\frac{1}{50}$–$\frac{1}{24}$ (0.001–0.0025)	night sweats of phthisis.

Drugs and Doses	Therapeutic Indications
euonymus (N.F., Br.), gr. 3–10 (0.2–0.6)	hepatic tonic and laxative.
specific medicine (Ec.), ♏10–60 (0.6–4.0)	
eupatorin, gr. 1–3 (0.06–0.2)	*diaphoretic* and tonic.
eupatorium (N.F.), gr. 60 (4.0)	bitter tonic; for the relief of deep-seated pains; chronic malaria.
fluidextract (N.F.), ♏20–30 (0.3–2.0)	
specific medicine (Ec.), ♏2–4 (0.13–0.26)	
euphorbia (N.F.), gr. 20–30 (1.3–2.0)	asthma, coryza, and other respiratory affections, angina pectoris.
fluidextract (N.F.), gr. 20–30 (1.3–2.0)	
eupyrine, gr. 15–30 (1.0–2.0)	antipyretic.
euquinine	*quinine ethylcarbonate.*
exalgine, gr. ½–2 (0.03–0.13)	analgesic, antipyretic.
exodin, gr. 15–23 (1.0–1.5)	cathartic.
fabiana, gr. 5–10 (0.3–0.6)	renal calculi, vesical catarrh.
farfara (N.F.), gr. 40–60 (2.6–4.0)	bronchitis.
fennel, gr. 10–30 (0.6–2.0)	carminative, diaphoretic, diuretic.
ferratin, gr. 5–10 (0.3–0.6)	acute anemia.
ferratogen, gr. 5–8 (0.3–0.5)	chlorosis.
ferripyrine, gr. 5–10 (0.3–0.6)	anemic neuralgia and headache.
ferrum	*iron.*
fibrolysin, ♏35 (2.3)	softening of cicatrices.
filicic acid, gr. 6–15 (0.4–1.0)	anthelmintic.
fluoroformal, ʒ2–4 (8.0–16.0)	tuberculosis.
formanilid, gr. 2–5 (0.13–0.3)	analgesic, antipyretic.
formic acid (N.F.), ♏5 (03)	stimulant, muscular tonic in tremor; locally for rheumatic pains and (diluted) to prevent bedsores.
spirit, ♏20–40 (1.3–2.6)	
fortoin, gr. 2–5 (0.13–0.3)	diarrhea.
franciscea	*manaca.*
frangula (N.F.), gr. 5–15 (0.3–1.0)	laxative, cathartic.
frangulin, gr. 1–3 (0.06–0.2)	purgative.
frasera, gr. 40–80 (2.5–5.0)	bitter tonac, laxative.
fluidextract, ♏30–60 (2.0–4.0)	
specific medicine (Ec.), ♏5–30 (0.3–2.0)	
fraserin (Ec.), gr. 1–3 (0.06–0.2)	atonic constipation.
fucus (N.F.), gr. 10–15 (0.6–1.0)	obesity and enlarged glands.
galactochloral, gr. 3–10 (0.2–0.6)	hypnotic.
galangal (N.F.), gr. 10–20 (0.6–1.3)	aromatic stimulant.
galbanum (Br.), gr. 10–20 (0.6–1.3)	expectorant, antispasmodic.
galium (Ec.), ♏30–60 (2.0–4.0)	strangury and vesical irritation.
galla (U.S., Br.), gr. 5–10 (0.3–0.6)	astringent and styptic.
gallic acid, gr. 5–20 (0.3–1.3)	astringent locally and internally, and styptic.
gallogen, gr. 5–15 (0.13–1.0)	diarrhea.
gambir (U.S.), gr. 8–15 (0.5–1.0)	diarrhea.
gaultheria (Ec.), ♏4–10 (0.25–0.6)	irritation of bladder, prostate, or urethra.
gelsemium (N.F.), gr. ½–1 (0.03–0.06)	congestive headache, facial neuralgia.
fluidextract (N.F.), ♏½–1 (0.03–0.06)	
tincture (N.F.), ♏5–15 (0.3–1.0)	
specific medicine (Ec.), ♏2–3 (0.13–0.2)	
genista, ½–1 (2.0–4.0)	cathartic, diuretic.
fluidextract, ʒ1–2 (4.0–8.0)	
gentian, (U.S., Br.), gr. 10–30 (0.6–2.0)	simple bitter and tonic.
extract (N.F., Br.), gr. 1–8 (0.06–0.5)	
fluidextract (N.F.), ♏10–30 (0.6–2.0)	
compound tincture (U.S., Br.), ʒ½–2 (2.0–8.0)	
specific medicine (Ec.), ♏2–5 (0.13–0.3)	
geranium (N.F.), gr. 10–15 (0.6–1.0)	diarrhea, locally astringent in catarrhal sorethroat and rectal catarrh.
fluidextract, ♏10–15 (0.6–1.0)	
specific medicine (Ec.), ♏2–10 (0.13–06)	
gillenia, gr. 2–5 (0.13–0.3)	expectorant and tonic.
ginger	*zingiber.*
ginseng, gr. 3–30 (0.2–2.0)	emetic in large dose, demulcent in small.
glutannin, gr. 10–15 (0.6–1.0)	diarrhea.
glycosal, gr. 5–15 (0.3–1.0)	urinary antiseptic.
glycyrrhiza, gr. 15–60 (1.0–4.0)	demulcent, expectorant, laxative.
gold bromide, gr. $\frac{1}{8}$–½ (0.013–0.03)	nerve sedative in epilepsy and headache.
and sodium chloride, gr. $\frac{1}{20}$–$\frac{1}{10}$ (0.003–0.006)	alterative and tonic.
gossypiin, gr. 2–4 (0.13–0.26)	diuretic and emmenagogue.
gossypii cortex (N.F., B.A.), gr. 15–30 (1.0–2.0)	emmenagogue and oxytocic.
fluidextract (N.F.), ♏15–30 (1.0–2.0)	
granatum (U.S., Br.), gr. 15–30 (1.0–2.0)	anthelmintic.
gratiola, gr. 10–30 (0.6–2.0)	diuretic, purgative, emetic.
gravel root (Ec.), ♏4–8 (0.25–0.5)	irritation of urinary passages.
grindelia (N.F.), gr. 15–30 (1.0–2.0)	stomachic, expectorant, cardiac tonic; externally in rhus poisoning.
fluidextract (N.F.), ʒ1–2 (4.0–8.0)	
specific medicine (Ec.), ♏2–8 (0.13–0.5)	
guaiacol (U.S.), ♏2–8 (0.13–0.5)	expectorant, intestinal disinfectant, antipyretic.
benzoate (N.N.R.), gr. 3–10 (0.2–0.6)	
carbonate (U.S.), gr. 2–10 (0.13–0.6)	
salicylate, gr. 10–15 (0.6–1.0)	
guaiacum (N.F., Br.), gr. 10–30 (0.6–2.0)	stimulant, diaphoretic; used in rheumatic tonsillitis. laryngitis, pharyngitis.
tincture (N.F.), ʒ½–2 (2.0–8.0)	

Drugs and Doses'	Therapeutic Indications
guaiacum, ammoniated tincture (N.F., Br.), ʒ½–2 (2.0–8.0)	
specific medicine (Ec.), ♏2–4 (0.13–0.26)	
guaiacyl, ♏8–15 (0.5–1.0) of 5% solution	local anesthetic.
guaialin, gr. 8–15 (0.5–1.0)	hectic fever.
guaiamar, gr. 5–15 (0.3–1.0)	intestinal antiseptic.
guaiaquin, gr. 1 (0.06)	lymphoid hypertrophy.
guaiarsine, gr. ¼–1 (0.03–0.06)	influenza, tuberculosis.
guaiasanol, gr. 15–30 (1.0–2.0)	intestinal antiseptic.
guarana (N.F.), ʒ1–2 (4.0–8.0)	headache.
elixir (N.F.), ʒ1 (4.0)	
fluidextract (N.F.), ♏30–60 (2.0–4.0)	
guaranine, gr. 1–2 (0.06–0.13)	headache.
guipsine, gr. ¼–1 (0.03–0.06)	high blood pressure.
gurjun balsam, ♏10–30 (0.6–2.0)	leprosy, chronic catarrhs.
haematoxylon (N.F.,Br.), gr. 10–30 (0.6–2.0)	diarrhea.
hamamelis (N.F.), gr. 20–40 (1.3–2.6)	passive hemorrhage from digestive or genito-urinary tract, hemorrhoids.
fluidextract (N.F.), ♏20–40 (1.3–2.6)	
water "extract of witch hazel" (N.F.),	used externally.
specific medicine (Ec.), ♏10–30 (0.6–2.0)	
helexin, gr. ¼–1 (0.03–0.06)	diarrhea, bronchorrhea.
helianthemum, gr. 30–60 (2.0–4.0)	astringent tonic.
fluidextract, ♏30–60 (2.0–4.0)	
helleborus niger (Ec.), ♏½–1 (0.03–0.06)	emmenagogue, diuretic.
viridis	*veratrum viride.*
helmitol, gr. 10–15 (0.6–1.0)	urinary antiseptic.
helonias (N.F.), gr. 20–30 (1.3–2.0)	anthelmintic.
fluidextract, ♏20–30 (1.3–2.0)	
specific medicine (Ec.), ♏1–4 (0.06–0.24)	uterine tonic, to prevent abortion.
hepatica (Ec.), ♏10–20 (0.6–1.3)	expectorant, antitussive.
heroine, gr. 1/20–1/12 (0.003–0.005)	cough, asthma.
hexalet, gr. 10–15 (0.6–1.0)	urinary antiseptic.
hexamethylenamine	*methenamine.*
hexylresorcinol, ♏2½–10 (0.15–0.6)	bacteriuria.
homatropine hydrobromide (U.S., Br.)	cycloplegic in 1% solution.
homoarecoline hydrobromide, gr. 1/8–1/6 (0.004–0.006)	anthelmintic.
horsechestnut (Ec.), ♏2–5 (0.13–0.3)	hemorrhoids.
humulus (N.F.), gr. 20–30 (1.3–2.0)	tonic, sedative, diuretic.
infusion (ʒ½:ʒi), ʒ1–2 (32.0–64.0)	
specific medicine (Ec.), ♏6–10 (0.4–0.6)	
hydracetin, gr. ½–2 (0.03–0.13)	antipyretic.
hydrangea (N.F.), gr. 20–30 (1.3–2.0)	frequent micturition with pain and strangury.
fluidextract (N.F.), ♏20–30 (1.3–2.0)	
specific medicine (Ec.), ♏10–30 (0.6–2.0)	
hydrargyrum	*mercury.*
hydrastine, gr. ¼–½ (0.015–0.03)	mucous membrane catarrhs.
hydrochloride (N.F.), gr. ½–¾ (0.01–0.02)	
hydrastis (U.S.), gr. 10–30 (0.6–2.0)	catarrhal conditions of the intestinal tract, metrorrhagia; nerve tonic.
extract (N.F.), gr. 8–10 (0.5–0.6)	
fluidextract (U.S.), ♏10–30 (0.6–2.0)	
tincture (N.F., Br.), ♏30–60 (2.0–4.0)	
specific medicine (Ec.), ♏3–4 (0.2–0.25)	
hydriodic acid, diluted (U.S.), ♏15 (1.0)	substitute for the *iodides.*
hydrobromic acid, diluted (Br.), ♏15 (1.0)	substitute for the *bromides.*
hydrochloric acid diluted (U.S., Br.), ♏10 (0.6)	in nonacid forms of dyspepsia, biliary stimulant, tonic.
hydrocyanic acid, diluted (Br.), ♏1–5 (0.06–0.3)	sedative in gastralgia and bronchitis.
hydroquinone, gr. 5–10 (0.3–0.6)	antipyretic.
hyoscine hydrobromide (Br.), gr. 1/150–1/100 (0.0004–0.0006)	hypnotic, and nerve sedative.
hyoscyamine, gr. 1/150–1/75 (0.0004–0.0008)	antispasmodic, sedative, analgesic.
hydrobromide (U.S.), gr. 1/150–1/75 (0.0004–0.0008)	
sulphate, gr. 1/150–1/75 (0.0004–0.0008).	
hyoscyamus (U.S., Br.), gr. 4–8 (0.25–0.5)	anodyne, antispasmodic, sedative, hypnotic.
extract (U.S.), gr. 1–2 (0.06–0.13)	
green extract (Br.), gr. 2–8 (0.13–0.5)	
fluidextract (U.S.), ♏5–6 (0.3–0.4)	
tincture (U.S., Br.), ♏30–60 (2.0–4.0)	
specific medicine (Ec.), ♏1–5 (0.06–0.3)	
hypnal	*antipyrine monochloral.*
hypnone	*acetophenone.*
hypnopyrine, gr. 2–4 (0.13–0.25)	antipyretic, analgesic, hypnotic.
hypophosphorous acid, diluted (U.S.), ♏5–10 (0.3–0.6)	nerve sedative.
hyssop	dyspepsia, muscular rheumatism, senile bronchitis.
fluidextract, ʒ1–2 (4.0–8.0).	
ichthalbin, gr. 10–30 (0.6–2.0)	intestinal antiseptic.
ichthoform, gr. 15–30 (1.0–2.0)	intestinal antiseptic.
ichthyol, gr. 2–10 (0.13–0.6)	alterative, antiseptic.
ignatia (N.F.), gr. ¼–1 (0.045–0.06)	bitter tonic, heart stimulant lumbago, colic, dysmenorrhea.
extract (N.F.), gr. ½–¾ (0.015–0.03)	
fluidextract, ♏2–5 (0.13–0.3)	
tincture (N.F.), ♏5–10 (0.3–0.6)	
specific medicine (Ec.), ♏1–2 (0.06–0.13)	
illicium, gr. 20–30 (1.3–2.0)	stimulant, carminative.

Drugs and Doses	Therapeutic Indications
inula (N.F.), gr. 10–30 (0.6–2.0)	diuretic, diaphoretic, expectorant, emmenagogue.
specific medicine (Ec.), ♏1–8 (0.06–0.5)	
iodalbacide, gr. 15 (1.0)	alterative, antisyphilitic.
iodalbin, gr. 5–8 (0.3–0.5)	substitute for the iodides.
iodine (U.S., Br.), gr. ¼ (0.005)	alterative; externally antiseptic and counterirritant.
tincture (U.S., Br.), ♏1–3 (0.06–0.2)	
iodic acid, gr. 1–2 (0.06–0.13)	deodorant, intestinal antiseptic.
iodipin, ʒ1–2 (4.0–8.0)	syphilis, tuberculous adenitis.
iodoform (U.S., Br.), gr. 1–3 (0.06–0.2)	gastric catarrh; locally, anesthetic and antiseptic.
ipecac (U.S., Br.), gr. 1–2 (0.06–0.13); emetic gr. 20 (1.3)	expectorant, antidysenteric antipyorrheic, emetic.
fluidextract (U.S.), ♏1–2 (0.06–0.13); emetic, ♏20 (1.3)	
compound powder (U.S.), gr. 5–15 (0.3–1.0)	
syrup (U.S.), ♏10–60 (1.3–4.0); emetic ʒ4–8 (15.0–30.0)	
specific medicine (Ec.), ♏1–2 (0.06–0.13); emetic ♏5–20 (0.3–1.3)	
ipomœa (U.S.), gr. 20–40 (1.3–2.6)	cathartic.
resina (U.S.), gr. 3–4 (0.2–0.25)	
iridin, irisin, gr. 1–3 (0.06–0.2)	cholagogue, cathartic.
iris versicolor (N.F.), gr. 10–20 (0.6–1.3)	cathartic, hepatic stimulant, for chronic scaly dermatoses and thyroid enlargements.
fluidextract (N.F.), ♏20–30 (1.3–2.0)	
specific medicine (Ec.), ♏2–4 (0.13–0.26)	
iron	
albuminate, gr. 5–8 (0.3–0.5)	anemia.
arsenate, gr. 1/20–¼ (0.003–0.015)	tonic, antiperiodic.
hydroxide, *ad lib.*	antidote to arsenic.
hypophosphite, gr. 5–10 (0.3–0.6)	nerve tonic in anemia.
lactate, gr. 10–20 (0.6–1.3)	nonastringent chalybeate.
peptonate, gr. 3–10 (0.2–0.6)	chlorosis.
reduced, gr. 1–3 (0.06–0.2)	anemia.
salicylate	tonic in convalescence.
sulphate, gr. 5–10 (0.3–0.6)	astringent in diarrhea and as a styptic.
tartrate	nonastringent chalybeate.
isoform, gr. 4–8 (0.25–0.5)	alterative.
isopelletierine, gr. 10 (0.6)	anthelmintic.
isopral, gr. 5–20 (0.3–1.3)	hypnotic.
jaborandi (Br.), **pilocarpus** (U.S.)	diaphoretic, sialogogue.
tincture (Br.), ʒ1–2 (4.0–8.0)	
specific medicine (Ec.), ♏1–5 (0.06–0.3)	
jacaranda (caroba)	chronic rheumatism, neurasthenia, syphilis.
fluidextract, ♏15–30 (1.0–2.0)	
specific medicine (Ec.), ♏8–15 (0.5–1.0)	
jalap (U.S., Br.), gr. 5–15 (0.3–1.0)	purgative in smaller dose; hydragogue cathartic in larger one.
fluidextract (N.F.), ♏10–20 (0.6–1.3)	
compound powder (U.S., Br.), gr. 10–30 (0.6–2.0)	
tincture (N.F., Br.), ʒ½–1 (2.0–4.0)	
resin (U.S.), gr. 2–5 (0.13–0.3)	
jalapin, gr. 1–5 (0.06–0.3)	purgative.
juglans (N.F., Ec.)	hepatic stimulant, laxative, various irritable dermatoses.
fluidextract (N.F.), ʒ1 (4.0)	
specific medicine (Ec.), ♏1–3 (0.06–0.2)	
juniper (N.F.)	cystitis, chronic nephritis, gleet.
fluidextract (N.F.), ʒi (4.0)	
kairin, gr. 5–10 (0.3–0.6)	antipyretic.
kaladana (B.A.), gr. 30–60 (2.0–4.0)	purgative, anthelmintic.
resin (B.A.), gr. 2–8 (0.13–0.5)	
kalmia	chronic atonic inflammations.
specific medicine (Ec.), ♏1–2 (0.06–0.13)	
kamala, ʒ1–3 (4.0–12.0)	purgative, anthelmintic.
specific medicine (Ec.), ♏ 15–60 (1.0–4.0)	
kava (N.F.), gr. 10–15 (0.6–1.0)	stimulant, diuretic.
extract, gr. 5–10 (0.3–0.6)	
fluidextract (N.F.), ♏10–15 (0.6–1.0)	
kephaldol, gr. 10–15 (0.6–1.0)	antipyretic, analgesic.
kino (U.S., Br.), gr. 10–20 (0.6–1.3)	diarrhea, dysentery, diabetes.
tincture (U.S., Br.), ♏30–60 (2.0–4.0)	
eucalypti (Br.)	*eucalyptus gum.*
krameria (rhatany) (U.S), gr. 10–30 (0.6–2.0)	tonic, astringent, styptic, in diarrhea, bronchorrhea, leucorrhea.
extract (N.F.), gr. 5–8 (0.3–0.5)	
fluidextract (N.F.), ♏8–15 (0.5–1.0)	
syrup (N.F.), ʒ1 (4.0)	
tincture (U.S.), ʒ1 (4.0)	
specific medicine (Ec.), ♏10–30 (0.6–2.0)	
kryofine, gr. 5–15 (0.3–1.0)	anodyne, antipyretic.
lactic acid (U.S., Br.), ♏5–20 (0.3–1.3)	concentrated, as caustic; diluted internally, as gastric antifermentative.
lactopeptin, gr. 5–15 (0.3–1.0)	indigestion.
lactophenin, gr. 5–15 (0.3–1.0)	antipyretic, analgesic, hypnotic.
lactucarium, gr. 1–2 (0.06–0.13)	nervous cough.

Drugs and Doses	Therapeutic Indications
lappa (N.F., Ec.), gr. 10–30 (0.6–2.0)	alterative, diuretic.
fluidextract (N.F.), ♏10–30 (0.6–2.0)	
specific medicine (Ec.), ♏2–5 (0.13–0.3)	
lead acetate (U.S., Br.), gr. 1–3(0.06–0.2)	chronic diarrhea; externally, eczema.
iodide (Br.), gr. ½–2 (0.03–0.13)	scrofulous swellings.
lecithin, gr. ½–2 (0.03–0.13)	faulty nutrition.
leptandra (N.F., Ec.), gr. 5–20 (0.3–1.3)	hepatic stimulant, intestinal antiseptic, laxative.
extract (N.F.), gr. 3–5 (0.13–0.3)	
fluidextract (N.F.), ♏10–15 (0.6–1.0)	
specific medicine (Ec.), ♏2–8 (0.13–0.5)	
lithium benzoate (N.F.), gr. 15–30 (1.0–2.0)	diuretic, antirheumatic, antilithic; employed in gouty and rheumatic states, uratic gravel. The citrate is given with citrates of potassium and sodium to combat a tendency to acidosis; the theobromine salts are used as diuretics in renal or cardiac dropsy; the bromide is a sedative and mild hypnotic; the valerate is recommended as a sedative in nervous states; the vanadate has been employed tentatively in anemia.
bitartrate, gr. 3–8 (0.2–0.5)	
bromide (N.F.), gr. 10–30 (0.6–2.0)	
caffeine-sulphonate, gr. 10–15 (0.6–1.0)	
carbonate (N.F., Br.), gr. 5–15 (0.3–1.0)	
citrate (N.F., Br.), gr. 10–20 (0.6–1.3)	
ichthyolsulphonate, gr. 5–8 (0.3–0.5)	
iodate, gr. 2–3 (0.13–0.2)	
salicylate (N.F.), gr. 10–15 (0.6–1.0)	
theobromine benzoate, gr. 10–15 (0.6–1.0)	
theobromine salicylate, gr. 10–15 (0.6–1.0)	
valerate, gr. 5–15 (0.3–1.0)	
vanadate, gr. $\frac{1}{16}$ (0.004) every 2d day.	
lupulin (N.F., Br.), gr. 2–5 (0.13–0.3)	antispasmodic, sedative.
fluidextract (N.F.), ♏5–8 (0.3–0.5)	
specific medicine (Ec.), ♏3–8 (0.2–0.5)	
oleoresin, gr. 1–3 (0.06–0.2)	
lycetol, gr. 15–30 (1.0–2.0)	diuretic, uric acid solvent.
lycopodium (U.S., Ec.)	absorbent on excoriated surfaces (U.S.); uric acid diathesis, rheumatic troubles, local sensitiveness (Ec.).
specific medicine (Ec.), ♏5–10 (0.3–0.6)	
lycopus, gr. 5–30 (0.3–2.0)	hemostatic, astringent, in diarrhea, pulmonary congestion, irritable cough, hemoptysis.
specific medicine (Ec.), ♏5–15 (0 3–1.0)	
lysidine, gr. 15–30 (1.0–2.0)	uric acid diathesis.
bitartrate, gr. 15–45 (1.0–3.0)	
mace, gr. 8–10 (0.5–0.6)	aromatic, feebly narcotic.
macrotys (Ec.) (*cimicifuga*, U.S.)	muscular rheumatism, fibrositis, false labor pains, afterpains.
specific medicine, ♏1–5 (0.06–0.3)	
magnesium benzoate, gr. 3–15 (0.2–1.0)	gout, gravel.
borocitrate, gr. 15–30 (1.0–2.0)	urinary antiseptic.
carbonate (U.S., Br.), gr. 10–60 (0.6–4.0)	acidity of primæviæ.
chloride (N.F.), ʒ3–4 (12.0–16.0)	laxative.
effervescing citrate, ʒ1–3 (4.0–12.0)	laxative.
lactate, gr. 15–60 (1.0–4.0)	laxative.
oxide (U.S., Br.), gr. 15–30 (1.0–2.0)	antacid and laxative.
peroxide, gr. 4–8 (0.25–0.5)	rheumatism, gout, acidity.
salicylate, gr. 15–30 (1.0–2.0)	typhoid fever, intestinal putrefaction.
sulphate (U.S., Br.), ʒ4 (16.0)	purgative; intraspinally in tetanus.
sulphite, gr. 15–30 (1.0–2.0)	pyemia and septic states.
magnolia, gr. 30–60 (2.0–4.0)	bitter tonic, diaphoretic.
male fern (U.S., Br.), gr. 30–60 (2.0–4.0)	teniacide.
oleoresin (U.S.), gr. 15–30 (1.0–2.0)	
manaca (N.F.), gr. 10–30 (0.6–2.0)	rheumatism, syphilis.
fluidextract (N.F.), ♏10–30 (0.6–2.0)	
manganese carbonate, gr. 10–20 (0.6–1.3)	anemia, chlorosis, alterative in syphilis.
citrate (N.F.), gr. 3–5 (02.–0.3)	
dioxide, gr. 3–8 (0.2–0.5)	
glycerophosphate (N.F.), gr. 3–5 (0.2–0.3)	
hypophosphite (N.F.), gr. 2–5 (0.13–0.3)	
iodide, gr. 1–3 (0.06–0.2)	
lactate, gr. 1–5 (0.06–0.3)	
phosphate, gr. 2–5 (0.13–0.3)	
sulphate (N.F.), gr. 1–3 (0.06–0.2)	
tartrate, gr. 2–5 (0.13–0.3)	
mangifera indica (Ec.), ♏2–5 (0.13–0.3)	tonic, astringent.
manna (U.S., Br.), ʒ1–2 (4.0–8.0)	laxative.
marshmallow	*althæa*.
matico (N.F.), gr. 30–60 (2.0–4.0)	tonic, diuretic; in leucorrhea and catarrhs.
fluidextract (N.F.), ʒ1(4.0)	
specific medicine (Ec.), ♏2–5 (0.13–0.3)	
matricaria (N F.), ʒ2–4 (8.0–16.0)	stimulant, tonic; in nervous irritability and atonic constipation.
specific medicine (Ec.), ♏2–5 (0.13–0.3)	
melilotus (N.F., Ec.)	neuralgia, colic, dysuria, dysmenorrhea.
specific medicine, ♏5–15 (0.3–1.0)	
melissa, ʒ1–2 (4.0–8.0) in infusion	diaphoretic.
melubrin (N.N.R.), gr. 15–30 (1.0–2.0)	rheumatism.
menthol (U.S., Br.), gr. 1–2 (0.06–0.13)	nausea, gastrodynia.
mercurialis, gr. 5–30 (0-3–2.0)	alterative in syphilis and scrofula.
fluidextract, ♏5–30 (0.3–2.0)	
mercurol, gr. 2–3 (0.13–0.2)	syphilis.
mercurosal, gr. 1–2 (0.06–0.13)	syphilis.
mercury acetate, gr. ⅛–¼ (0.01–0 03)	syphilis.
corrosive chloride (U.S.Br.), gr. $\frac{1}{60}$–$\frac{1}{20}$ (0.001–0.003)	alterative, antisyphilitic; locally antiseptic.

Drugs and Doses	Therapeutic Indications
mercury, mild chloride (U.S.,Br.)	intestinal antiseptic, laxative, antisyphilitic.
cyanide, gr. $\frac{1}{12}$ (0.005)	alterative, antisyphilitic.
gallate, gr. $\frac{1}{2}$–1 (0.03–0.06)	syphilis.
yellow iodide (U.S.), gr. $\frac{1}{2}$–1 (0.015–0.06)	secondary syphilis.
red iodide (U.S., Br.), gr. $\frac{1}{24}$ (0.004)	syphilis.
naphtholate, gr. $\frac{1}{2}$–1 (0.03–0.06)	intestinal antiseptic.
nitrate, gr. $\frac{1}{12}$–$\frac{1}{4}$ (0.005–0.01)	alterative, antisyphilitic.
yellow oxide (U.S., Br.)	externally for styes and sore eyelids.
red oxide (Br.)	externally for syphilides.
salicylate (U.S.), gr. $\frac{1}{2}$–7 (0.008–0.06)	antisyphilitic.
yellow subsulphate, gr. 2–5 (0.13–0.3)	emetic.
tannate, gr. 1–2 (0.06–0.13)	antisyphilitic.
thymolacetate, gr. $\frac{1}{2}$–1 (0.03–0.06)	antisyphilitic.
mergal, gr. 1–2 (0.06–0.13)	antisyphilitic.
methacetin, gr. 4–8 (0.25–0.5)	antipyretic, antineuralgic.
methaform, gr. 3–8 (0.2–0.5)	hypnotic, analgesic.
methoxycaffeine, gr. 4 (0.25)	antineuralgic.
methylal, gr. 8–30 (0.5–2.0)	antispasmodic, hypnotic.
methylatropine bromide, gr. $\frac{1}{10}$ (0.006)	night sweats.
methyl salicylate (U.S.), 5–10 (0.3–0.6)	rheumatism.
methylene blue (U.S.), gr. 2–4 (0.13–0.26)	malaria, neuralgia, inflammation of urogenital tract.
mistletoe, fluidextract, ♏30–60 (2.0–4.0)	oxytocic.
mitchella (N.F., Ec.), gr. 20–30 (1.3–2.0)	uterine tonic, partus preparator.
fluidextract (N.F.), ♏20–30 (1.3–2.0)	
specific medicine (Ec.), ♏$\frac{1}{2}$–1 (0.03–0.06)	
monarda, ʒ1–2 (4.0–8.0) in infusion	carminative, antiperiodic, in flatulent colic.
fluidextract, ♏15–30 (1.0–2.0)	
monobromacetanilid, gr. 2–8 (0.13–0.5)	neuralgia.
morphine (Br.), $\frac{1}{4}$–$\frac{1}{2}$ (0.008–0.03)	analgesic, hypnotic, sedative, antispasmodic, diuretic.
acetate (Br.), gr. $\frac{1}{4}$–$\frac{1}{2}$ (0.008–0.03)	
hydrochloride (U.S., Br.), gr. $\frac{1}{4}$–$\frac{1}{2}$ (0.008–0.03)	
sulphate (U.S.), gr. $\frac{1}{4}$–$\frac{1}{2}$ (0.008–0.03).	
tartrate (Br.), gr. $\frac{1}{4}$–$\frac{1}{2}$ (0.08–0.03).	
mucuna (cowhage), gr. 1–2 (0.06–0.13)	anthelmintic.
muira puama, fluidextract, ♏10–20 (0.6–1.3)	antidysenteric, aphrodisiac, antirheumatic.
musenna, ʒ2 (60.0)	teniafuge.
musk (Br.), gr. 2–5 (0.13–0.3)	nerve sedative, diffusible stimulant.
tincture, ♏40–60 (2.5–4.0)	
myrica (N.F., Ec.), gr. 8–10 (0.5–0.6)	diarrhea, jaundice, mucous catarrhs, sore mouth, spongy gums.
compound powder (N.F.), gr. 10–15 (0.6–1.0)	
specific medicine (Ec.), ♏2–20 (0.13–1.3)	
napelline, gr. $\frac{1}{100}$ (0.0006)	analgesic.
naphthalene, gr. 2–8 (0.13–0.5)	intestinal antiseptic.
naphthyl salicylate, gr. 4–8 (0.25–0.5)	rheumatism, cystitis, intestinal autointoxication.
narceine, gr. $\frac{1}{4}$–$\frac{1}{2}$ (0.015–0.03)	hypnotic, analgesic.
narcotine, gr. 1–3 (0.06–0.2)	antiperiodic.
narcyl, gr. $\frac{1}{2}$–2 (0.03–0.13)	antispasmodic in asthma and whooping-cough.
neoarsphenamine	see *arsphenamine*.
neocinchophen	see *cinchophen*.
nepeta (*catariа*) (N.F.), gr. 30–60 (2.0–4.0)	antispasmodic in dysmenorrhea and infantile colic.
fluidextract (N.F.), ʒ1 (4.0)	
specific medicine (Ec.), ♏$\frac{1}{2}$–2 (0.03–0.13)	
nerianthin, gr. $\frac{1}{10}$–$\frac{1}{6}$ (0.006–0.013)	heart tonic, diuretic.
nervosine, gr. 3–5 (0.2–0.3)	hysteria.
neurodin, gr. 5–15 (0.3–1.0)	antiperiodic, analgesic.
neuronal, gr. 8–20 (0.5–1.3)	hypnotic, sedative.
nickel bromide, gr. 5–10 (0.3–0.6)	same as *sodium bromide*.
sulphate, gr. $\frac{1}{2}$–2 (0.03–1.3)	chlorosis, tabes, amenorrhea.
nicotine, gr. $\frac{1}{60}$–$\frac{1}{30}$ (0.001–0.002)	strychnine poisoning.
nitric acid, diluted (Br.), ♏5–20 (0.3–1.3)	tonic, hepatic stimulant.
nitroglycerin, gr. $\frac{1}{250}$–$\frac{1}{50}$	vasodilator.
spirit (U.S.), ♏1–2 (0.06–0.13)	
nitrohydrochloric acid, diluted (N.F., Br.), ♏5–20 (0.3–1.3)	tonic, hepatic stimulant.
novaspirin, gr. 10–15 (0.6–1.0)	antipyretic, analgesic.
novasurol (N.N.R.), ♏15–30 (1.0–2.0)	diuretic, antisyphilitic.
numoquin base, gr. 4 (0.25)	pneumonia.
hydrochloride, ʒ2 (30.0) of 1:1000 solution	pneumococcal meningitis and conjunctivitis.
nutgall (*galla*, U.S.)	astringent, hemostatic.
tincture (N.S.), ♏30–60 (2.0–4.0)	
specific medicine (Ec.), ♏5–20 (0.3–1.3)	
nutmeg (U.S., Br.)	aromatic, carminative, slightly narcotic.
oil (U.S., Br.), ♏1–3 (0.06–0.2)	
spirit (Br.), ♏5–20 (0.3–1.3)	
tincture (N.F.), ♏30–60 (2.0–4.0)	
nux vomica (U.S., Br.), gr. 1–2 (0.06–0.13)	tonic, stomachic, nervous and cardiac stimulant, useful in atonic constipation.
extract (U.S., Br.), gr. $\frac{1}{4}$–$\frac{1}{2}$ (0.015–0.03)	
fluidextract (U.S.), ♏1–5 (0.06–0.3)	
tincture (U.S., Br.), ♏5–15 (0.3–1.0)	
specific medicine (Ec.), ♏$\frac{1}{4}$–$\frac{1}{2}$ (0.015–0.03)	
oat	*avena*.
œnanthe (Ec.)	epilepsy, spasmophilia, cerebral anemia.
specific medicine (Ec.), ♏$\frac{1}{4}$–$\frac{1}{2}$ (0.008–0.015)	

Drugs and Doses	Therapeutic Indications
orexin, gr. 5–10 (0.3–0.6)	appetizer, antiemetic.
oridine, gr. 15 (1.0)	substitute for inorganic *iodides*.
orsudan, gr. 10 (0.6) intramuscularly	syphilis.
orthoform, gr. 8–15 (0.5–1.0)	gastric ulcer, externally antiseptic.
osmic acid, gr. $\frac{1}{60}$–$\frac{1}{30}$ (0.001–0.002)	neuralgia, muscular rheumatism.
oxalic acid, gr. $\frac{1}{4}$–$\frac{1}{2}$ (0.015–0.03)	amenorrhea, cystitis, asthma.
oxydendron, specific medicine (Ec.), ♏1–3 (0.06–0.2)	ascites, cystitis, prostatitis.
oxysparteine, gr. $\frac{1}{2}$–1 (0.03–0.06)	cardiac tonic.
palmoform, gr. 8–15 (0.5–1.0)	expectorant, intestinal disinfectant.
panax, specific medicine (Ec.), ♏$\frac{1}{2}$–1 (0.03–0.06)	nervous dyspepsia, neurasthenia.
pancreatin (U.S.), gr. 5–10 (0.3–0.6)	indigestion of starches.
papain, gr. 2–5 (0.13–0.3)	indigestion of protein.
papaverine, gr. $\frac{1}{4}$–$\frac{1}{2}$ (0.01–0.015)	sedative, narcotic.
papaya, gr. 2–8 (0.13–0.5)	indigestion of proteins.
parachlorphenol salicylate, gr. 15–20 (1.0–0.13)	intestinal antiseptic.
paracoto, gr. 2–8 (0.13–0.5)	diarrhea, cholera, night sweats of phthisis.
fluidextract, ♏2–8 (0.13–0.5)	
tincture, ♏20–30 (1.3–2.0)	
paracotoin, gr. 1–3 (0.06–0.2)	catarrhal gastritis, diarrhea.
paraformaldehyde (U.S.), gr. 5–10 (0.3–0.6)	antiseptic, astringent.
pareira (N.F., Br.), gr. 20–40 (1.3–2.5)	diuretic, in irritation of the urinary tract.
fluidextract (N.F.), ♏20–40 (1.3–2.5)	
specific medicine (Ec.), ♏5–20 (0.3–1.3)	
parsley, fluidextract, ♏20–30 (1.3–2.0)	emmenagogue, diuretic, carminative.
passiflora (N.F., Ec.), gr. 2–5 (0.13–0.3)	neuralgia, dysmenorrhea, insomnia.
tincture (N.F.), ♏10–20 (0.6–1.3)	
specific medicine (Ec.), ♏2–8 (0.13–0.5)	
pelletierine tannate (U.S.), gr. 3–8 (0.2–0.5)	teniacide.
pellotine hydrochloride, gr. $\frac{1}{2}$–1 (0.03–0.06)	maniacal excitement, insomnia.
penthorum (Ec.), specific medicine, ♏3–6 (0.2–0.4)	chronic catarrh of the air passages.
pepsin (U.S., Br.), gr. 5–20 (0.3–1.3)	protein indigestion.
pereirine, gr. 8–10 (0.5–0.6)	antiperiodic.
perezon, gr. 4–8 (0.25–0.5)	drastic cathartic.
phenacetin (Br.)	*acetphenetidin*.
phenazone (Br.)	*antipyrine*.
phenobarbital (U.S.), gr. 1–5 (0.06–0.3)	sedative, hypnotic.
phenocoll, gr. 8–12 (0.5–0.18)	analgesic, antipyretic, diaphoretic.
hydrochloride, gr. 8–15 (0.5–1.0)	rheumatoid arthritis, neuralgia.
phenol (U.S., Br.), ♏$\frac{1}{2}$–1 (0.03–0.06)	flatulent dyspepsia, intestinal putrefaction.
phenolphthalein (U.S., Br.), gr. 1–5 (0.06–0.3)	laxative.
phenyl salicylate (U.S.), gr. 5–10 (0.3–0.6)	antipyretic, intestinal antiseptic; employed in rheumatism, cystitis, pharyngitis.
phenyl quinaldine, gr. 3–5 (0.2–0.3)	antiperiodic.
phlorrhizin, gr. 5–10 (0.3–0.6)	tonic, antiperiodic.
phosphoric acid, diluted (U.S., Br.), ♏15–30 (1.0–2.0)	tonic, digestive stimulant.
phosphorus (U.S., Br.), gr. $\frac{1}{100}$ (0.0006)	rickets, neurasthenia, sexual weakness.
physostigma (Br.), gr. 1–1$\frac{1}{2}$ (0.06–0.09)	expectorant, also for meteorism.
extract, gr. $\frac{1}{10}$–$\frac{1}{4}$ (0.006–0.013)	
tincture, ♏10–15 (0.6–1.0)	
specific medicine (Ec.), ♏$\frac{1}{4}$–$\frac{1}{2}$ (0.015–0.03)	
physostigmine salicylate (U.S.), gr. $\frac{1}{60}$–$\frac{1}{12}$ (0.001–0.005)	meteorism.
sulphate (Br.), gr. $\frac{1}{60}$–$\frac{1}{12}$ (0.001–0.005)	
phytolacca (N.F.), gr. 3–5 (0.2–0.3)	rheumatism, sore throat alterative, emetic in large dose.
fluidextract (N.F.), ♏1–2 (0.06–0.13)	
specific medicine (Ec.), ♏$\frac{1}{2}$–2 (0.03–0.13)	
picradonidin, gr. $\frac{1}{10}$–$\frac{1}{4}$ (0.006–0.015)	cardiac tonic.
picrin, gr. $\frac{1}{4}$ (0.015)	cardiac tonic.
picrotoxin, gr. $\frac{1}{60}$–$\frac{1}{30}$ (0.001–0.003)	epilepsy, chorea.
pinus alba (N.F.), gr. 20–30 (1.3–2.0)	expectorant.
syrup (N.F.), ʒi(4.0)	
pinus, canadensis specific medicine (Ec.), ♏2–4 (0.13–0.25)	catarrhs, asthenia, diarrhea.
piper (N.F.), gr. 5–20 (0.3–1.3)	stimulant, carminative.
methysticum (N.F.), gr. 10–20 (0.6–1.3)	diuretic, appetizer.
specific medicine (Ec.), ♏10–30 (0.6–2.0)	
piperazin, gr. 15–30 (1.0–2.0)	uric-acid gravel, gout.
piperine, gr. 3–5 (0.2–0.3)	tonic, antiperiodic.
piscidia, gr. 5–8 (0.3–0.5)	anodyne.
pituitarium (U.S.), gr. $\frac{1}{2}$–1 (0.03–0.06)	oxytocic, vasoconstrictor.
solution (U.S.), ♏15 (1.0)	
plantago, specific medicine (Ec.), ♏5–10 (0.3–0.6)	hemoptysis, menorrhagia, bleeding piles.
plumbum	*lead*.
podophyllin	*podophyllum resin*.
podophyllotoxin, gr. $\frac{1}{60}$–$\frac{1}{30}$ (0.001–0.002)	cathartic.
podophyllum (U.S.), gr. 5–8 (0.3–0.5)	laxative, cholagogue.
fluidextract (U.S.), ♏5–8 (0.3–0.5)	
specific medicine (Ec.), ♏1–5 (0.06–0.3)	
resin (U.S., Br.), gr. $\frac{1}{20}$–$\frac{1}{10}$ (0.003–0.006)	
polemonium, specific medicine (Ec.), ♏5–30 (0.3–2.0)	diaphoretic, expectorant.
polygala, gr. 5–10 (0.3–0.6)	expectorant, tonic.
polygonatum, gr. 5–15 (0.3–1.0)	congestion of abdominal organs, gout, rheumatism; diuretic, purgative.
specific medicine (Ec.), ♏2–15 (0.13–1.0)	

Drugs and Doses	Therapeutic Indications
polygonum, specific medicine (Ec.), ♏1–3 (0.06–0.2)	diaphoretic, diuretic, emmenagogue.
polymnia, specific medicine (Ec.), ♏1–2 (0.06–0.13)	chronic malaria, enlarged glands.
polyporus (*agaric*), gr. 3–5 (0.2–0.3)	night sweats of phthisis.
polytrichum, specific medicine (Ec.), ♏5–60 (0.3–4.0)	diuretic.
pomegranate	*granatum.*
populus fluidextract, ♏10–30 (0.6–2.0)	tonic, stimulant.
potassa sulphurata (U.S., Br.), gr. 3–8 (0.2–0.5)	pertussis, asthma, tuberculosis.
potassium acetate (U.S., Br.), gr. 10–30 (0.6–2.0)	diuretic, diaphoretic.
bicarbonate (U.S., Br.), gr. 5–30 (0.3–2.0)	diuretic, to alkalinize urine.
bitartrate (U.S.), gr. 30–60 (2.0–4.0)	diuretic, to acidify urine.
bromide (U.S., Br.), 5–60 (0.3–4.0)	hypnotic, sedative, antispasmodic.
chlorate (U.S., Br.), gr. 2–8 (0.13–0.5)	stomatitis, follicular pharyngitis.
citrate (U.S., Br.), gr. 5–30 (0.3–2.0)	diuretic, to reduce acidity of urine, diaphoretic.
cyanide, gr. $\frac{1}{2}$–$\frac{1}{1}$ 0.005–0.008	sedative, antispasmodic.
guaiacol-sulphonate, gr. 5–20 (0.3–1.3)	expectorant, intestinal disinfectant.
hypophosphite (N.F.), gr. 20–30 (0.6–2.0)	nervous and general tonic.
iodide (U.S., Br.), gr. 5–20 (0.3–1.3)	syphilis, chronic rheumatism.
nitrate (U.S., Br.), gr. 5–20 (0.3–1.3)	diuretic, diaphoretic, antiasthmatic.
permanganate (U.S., Br.), gr. 1–2 (0.06–0.13)	dyspepsia, amenorrhea.
succinas, gr. 5–10 (0.3–0.6)	hemostatic.
sulphate (N.F., Br.), gr. 30–60 (2.0–4.0)	laxative.
tartrate, gr. 30–60 (2.0–4.0)	to reduce urinary acidity, diuretic.
propylamine, gr. 30–60 (2.0–4.0)	chorea, pneumonia, rheumatism.
prunella (Ec.), specific medicine, ♏5–60 (0.3–4.0)	diarrhea of infants, chronic cystitis.
prunin, gr. 2–8 (0.13–0.5)	bronchitis, palpitation.
prunus virginiana (U.S., Br.), gr. 20–30 (1.3–2.0)	cough occurring as gastric or hepatic reflex.
syrup (U.S.), ℥1 (4.0)	
specific medicine (Ec.), ♏2–8 (0.13–0.5)	
pseudaconitine, $\frac{1}{1200}$–$\frac{1}{600}$ (0.00005–0.0001)	same as aconitine.
ptelia (*ptelea*), fluidextract, ♏15–30 (1.0–2.0)	bitter tonic, antiasthmatic.
specific medicine (Ec.), ♏1–20 (0.06–1.3)	
pulsatilla (N.F.), gr. 2–5 (0.13–0.3)	gonorrhea, rheumatism, mental depression, ungrounded fears.
tincture (N.F.), ♏20–40 (1.3–2.6)	
specific medicine (Ec.), ♏1–3 (0.06–0.2)	
pyramidon	*amidopyrine.*
pyrantin, gr. 5–15 (0.3–1.0)	antipyretic.
pyranum, gr. 10–15 (0.6–1.0)	rheumatism, neuralgia, bronchitis.
pyrethrum (Br.), gr. 30–60 (2.0–4.0)	atonic pharyngitis.
pyridine, ♏2–8 (0.13–0.5)	asthma, angina pectoris.
pyrodin, gr. $\frac{1}{2}$–2 (0.03–0.13)	antipyretic.
pyrogallol, gr. $\frac{1}{4}$–1 (0.03–0.06)	hemoptysis.
pyrola, gr. 5–30 (0.3–2.0)	spasmophilia, gravel.
quassia (U.S., Br.), gr. 5–30 (0.3–2.0)	bitter tonic; locally for expulsion of pinworms
extract, gr. 1–3 (0.06–0.2)	
fluidextract (N.F.), ♏15–30 (1.0–2.0)	
tincture (N.F., Br.), ♏15–60 (1.0–4.0)	
specific medicine (Ec.), ♏5–30 (0.3–2.0)	
quebrachine, gr. 1–2 (0.06–0.13)	cardiac dyspnea.
hydrochloride, gr. $\frac{1}{4}$–1$\frac{1}{2}$ (0.05–0.1)	
quebracho	*aspidosperma.*
quercus (N.F.), gr. 10–15 (0.6–1.0)	astringent, hemostatic.
fluidextract, ♏15–30 (1.0–2.0)	
specific medicine (Ec.), ♏1–3 (0.06–0.2)	
quinacetine, gr. 5–10 (0.3–0.6)	antipyretic, analgesic.
quinidine (N.F.), gr. 3–6 (0.2–0.4)	auricular fibrillation, extra-systoles.
sulphate (U.S.), gr. 3–5 (0.2–0.3)	
quinine (U.S., Br.), gr. 2–15 (0.13–1.0)	antipyretic, antiperiodic, antimalarial, tonic.
acetate, gr. 1–10 (0.06–0.6)	
bisulphate (U.S.), gr. 2–15 (0.13–1.0)	
citrate, gr. 2–20 (0.13–1.3)	
dihydrochloride (U.S., Br.), gr. 2–15 (0.13–1.0)	
ethylcarbonate (U.S.), gr. 2–15 (0.13–1.0)	
hydrobromide (U.S.), gr. 3–15 (0.2–1.0)	
hydrochloride (U.S., Br.), gr. 3–15 (0.2–1.0)	
hypophosphite, gr. 1–5 (0.06–0.3)	
sulphate (U.S., Br.), gr. 1–15 (0.06–1.0)	
tannate (U.S.), gr. 3–5 (0.2–0.3)	
and urea hydrochloride (U.S.), gr. 10–15 (0.6–1.0)	cholera; local anesthetic by subcutaneous injection of 1% solution.
quinisal, gr. 4–8 (0.25–0.5)	coryza, influenza.
quinoidine, gr. 5–30 (0.3–2.0)	tonic, antiperiodic.
quinoline, ♏10–20 (0.06–0.13)	antipyretic.
salicylate, gr. 5–15 (0.3–1.0)	
tartrate, gr. 5–15 (0.3–1.0)	
quinopyrine, gr. 5–15 (0.3–1.0)	malaria.
resorcinol (U.S.), gr. 5–10 (0.3–0.6)	nausea, asthma; locally in microparasitic dermatoses.
salol, gr. 3–8 (0.2–0.5)	intestinal antiseptic.
resotpyrine, gr. 5–10 (0.3–0.6)	analgesic, antipyretic
retinol, ♏5–8 (0.3–0.5)	gonorrhea.
rhamnus californica, specific medicine (Ec.), ♏10–100 (0.6–4.0)	inflammatory rheumatism, all rheumatic pains.

Drugs and Doses	Therapeutic Indications
rhamnus cathartica (N.F.), gr. 10–20 (0.6–1.3)	cathartic.
purshiana	*cascara sagrada.*
rhatany	*krameria.*
rheum	rhubarb.
rhubarb (U.S., Br.), gr. 1–10 (0.06–6.0)	tonic, astringent, laxative.
extract (U.S., Br.), gr. 5–10 (0.3–0.6)	
fluidextract (U.S.), ♏15–30 (1.0–2.0)	
syrup (U.S., Br.), ʒi–3 (4.0–12.0)	
tincture (U.S.), ♏30–60 (2.0–4.0)	
specific medicine (Ec.), ♏1–4 (0.06–0.25)	
rhus aromatica, gr. 5–10 (0.03–0.06)	incontinence of urine.
glabra (U.S.), gr. 5–15 (0.3–1.0)	astringent in diarrhea.
toxicodendron (Ec.), specific medicine, ♏1–3 (0.06–0.2)	the exanthemata, erysipelas, and sthenic fevers.
rhusin, gr. 1–2 (0.06–0.13)	astringent in diarrhea.
riodine (N.N.R.), gr. 6–18 (0.4–1.2)	substitute for inorganic *iodides.*
risiccol, ʒ4 (16.0)	cathartic.
rubus (N.F., Ec.), gr. 20–30 (1.3–2.0)	diarrhea.
fluidextract (N.F.), ʒi–2 (4.0–8.0)	
specific medicine (Ec.), ♏5–30 (0.3–2.0)	
rue, gr. 15–30 (1.0–2.0)	carminative, emmenagogue.
rumex (N.F.), gr. 40–80 (2.5–5.0)	tonic, astringent, alterative.
fluidextract (N.F.), ʒi–2 (4.0–8.0)	
specific medicine (Ec.), ♏5–30 (0.3–2.0)	
sabal (N.F.), gr. 10–15 (0.6–1.0)	subacute and chronic inflammation of the respiratory and genito-urinary tracts.
fluidextract, (N.F.), ♏10–20 (0.6–1.3)	
sabromine, gr. 8–15 (0.5–1.0)	substitute for inorganic bromides.
safrol, ♏1–2 (0.06–0.13)	tonic, carminative.
saiodine (*sajodin*), gr. 15–45 (1.0–3.0)	substitute for inorganic iodides.
salacetol, gr. 20–40 (1.3–2.6)	diarrhea.
salicin (U.S., Br.), gr. 5–30 (0.3–2.0)	antipyretic, bitter tonic.
salicylamide, gr. 3–5 (0.2–0.3)	analgesic, antipyretic.
salicylbromanilid, gr. 5–10 (0.3–0.6)	antipyretic, antineuralgic.
salicylic acid (U.S., Br.), gr. 5–15 (0.3–1.0)	antirheumatic, antiseptic, antipyretic.
salicylous acid, ♏2–8 (0.13–0.5)	diuretic, antiseptic.
salifebrin, gr. 5–15 (0.3–1.0)	antipyretic, analgesic.
saligenin, gr. 3–10 (0.2–0.6)	antipyretic.
salimenthol, gr. 3–5 (0.2–0.3)	rheumatism.
salipyrine	*antipyrine salicylate.*
salix alba, gr. 10–30 (0.6–2.0)	tonic.
salix nigra, gr. 30–60 (2.0–4.0)	ovarian neuralgia, nocturnal emissions.
aments, specific medicine (Ec.), ♏10–60 (0.6–4.0)	irritable conditions of the genito-urinary tract.
salocol, gr. 10–30 (0.6–2.0)	rheumatism, neuralgia.
salol (U.S., Br.), gr. 5–10 (0.3–0.6)	intestinal and urinary antiseptic, antipyretic.
camphor, gr. 3–8 (0.2–0.5)	analgesic, antiseptic.
salophen, gr. 5–15 (0.3–1.0)	rheumatism, neuralgia, autotoxemia.
saloquinine, gr. 15–30 (1.0–2.0)	antimalarial.
salicylate, gr. 5–15 (0.3–1.0)	neuralgia, acute rheumatism.
salvia, gr. 15–30 (1.0–2.0)	aromatic, diaphoretic, astringent.
sambucus (N.F.), ʒi–2 (4.0–8.0)	alterative, laxative.
specific medicine (Ec.), ♏5–10 (0.3–0.6)	
sandalwood oil (U.S., Br.), ♏5–10 (0.3–0.6)	subacute bronchitis and inflammation of the genito-urinary tract.
sanguinaria (N.F.), gr. 1–5 (0.06–0.3)	expectorant.
fluidextract (N.F.), ♏1–2 (0.06–0.13)	
santalol, gr. 3–5 (0.2–0.3)	inflammation of the genito-urinary tract.
santonica, gr. 10–30 (0.6–2.0)	expulsion of round worms.
santonin (U.S., Br.), gr. ½–2 (0.03–0.13)	expulsion of round worms, incontinence of urine, optic nerve disease.
santoninoxime, gr. 1–3 (0.06–0.2)	expulsion of round worms.
santyl, ♏20–30 (1.3–2.0)	gonorrhea.
saponaria, gr. 4–8 (0.25–0.5) in infusion	alterative in dermatoses.
sarracenia, fluidextract, ♏10–30 (0.6–2.0)	eliminant in autotoxemia, diuretic.
specific medicine (Ec.), ♏5–20 (0.3–1.3)	
sarsaparilla (U.S., Br.), gr. 15–30 (10.–2.0)	alterative in gout, rheumatism, syphilis.
fluidextract (U.S.), ♏30–60 (2.0–4.0)	
specific medicine (Ec.), ♏10–60 (0.6–4.0)	
sassafras (N.F.), gr. 30–60 (2.0–4.0)	diuretic, diaphoretic.
fluidextract, ♏30–60 (2.0–4.0)	
savin, gr. 5–10 (0.3–0.6)	amenorrhea, gout, rheumatism.
fluidextract, ♏5–10 (0.3–0.6)	
saw palmetto	*sabal.*
scammonin, gr. 1–3 (0.06–0.2)	purgative.
scammony (Br.), gr. 5–10 (0.3–0.6)	purgative.
scoparin, gr. 5–10 (0.3–0.6)	diuretic.
scoparius (N.F.), gr. 10–15 (0.6–1.0)	cardiac and renal dropsy.
fluidextract (N.F.), ♏10–15 (0.6–1.0)	
scopola, gr. 1–3 (0.06–0.2)	hypnotic, to relieve neuralgic pains.
extract (N.F.), gr. ⅛–¼ (0.008–0.015)	
specific medicine (Ec.), ♏ ½–1 (0.03–0.06)	
scopolamine hydrobromide (U.S.), gr. $\frac{1}{200}$ (0.0003)	hypnotic in "twilight sleep."
scutellaria (N.F.), gr. 15–30 (1.0–2.0)	antispasmodic, sedative.
fluidextract (N.F.), ♏10–15 (0.6–1.0)	
specific medicine (Ec.), ♏½–1 (0.03–0.06).	

Drugs and Doses	Therapeutic Indications
senecio (N.F.), gr. 40–60 (2.6–4.0)	amenorrhea, leucorrhea, strangury.
fluidextract, ♏40–60 (2.6–4.0)	
specific medicine (Ec.), ♏½–2 (0.03–0.13)	
senega (U.S., Br.), gr. 10–15 (0.6–1.0)	expectorant.
fluidextract (U.S.), ♏10–15 (0.6–1.0)	
specific medicine (Ec.), ♏2–8 (0.13–0.5)	
senna (U.S., Br.), gr. 40–60 (2.5–4.0)	laxative.
fluidextract (U.S.), ♏30–60 (2.0–4.0)	
syrup (U.S.), ʒ1–2 (4.0–8.0)	
specific medicine (Ec.), ♏2–5 (0.13–0.3)	
serpentaria (U.S., Br.), gr. 10–30 (0.6–1.0)	diaphoretic, expectorant, diuretic.
fluidextract (N.F.), ♏10–15 (0.6–1.0)	
tincture (N.F.), ♏40–60 (2.5–4.0)	
specific medicine (Ec.), ♏5–10 (0.3–0.6)	
silver arsenite, gr. $\frac{1}{100}$–$\frac{1}{60}$ (0.0006–0.001)	alterative in skin diseases.
cyanide (Br.), gr. $\frac{1}{80}$–$\frac{1}{60}$ (0.001–0.003)	chorea, epilepsy.
iodate, gr. $\frac{1}{15}$–$\frac{1}{6}$ (0.005–0.01)	astringent in diarrhea.
nitrate (U.S., Br.), gr. ¼–½ (0.01–0.03)	epilepsy, gastritis, diarrhea; externally caustic.
oxide (Br.), gr. ½–2 (0.03–0.13)	epilepsy, chorea.
simaba, fluidextract, ♏2–5 (0.13–0.3)	stomachic, antiperiodic, antispasmodic.
simaruba, fluidextract, ♏10–20 (0.6–1.3)	bitter tonic.
sodium acetate (U.S.), gr. 10–60 (0.6–4.0)	diuretic, laxative.
arsenate (N.F., Br.), gr. $\frac{1}{30}$–$\frac{1}{20}$ (0.002–0.003)	tonic, alterative in dermatoses.
benzoate (U.S., Br.), gr. 20–60 (1.3–4.0)	chronic gout and rheumatism.
bicarbonate (U.S., Br.), gr. 10–60 (0.6–4.0)	antacid.
biphosphate (U.S.), gr. 10–15 (0.6–1.0)	to acidify the urine.
bromide (U.S., Br.), gr. 10–60 (0.6–4.0)	see *bromides*.
cacodylate (U.S.), gr. ½–3 (0.03–0.2)	anemia, leucemia, chorea, malaria.
chlorate, gr. 5–15 (0.3–1.0)	stomatitis, follicular pharyngitis.
cinnamate, gr. 3–5 (0.2–0.3)	vasodilator, recommended in phthisis.
citrate (U.S.), gr. 10–30 (0.6–2.0)	diuretic, antilithic.
ethylsulphate, ʒ1–4 (4.0–16.0)	laxative.
fluoride, gr. $\frac{1}{12}$–¼ (0.005–0.01)	epilepsy, tuberculosis, malaria.
formate, gr. 1–3 (0.06–0.2)	pneumonia, tuberculosis.
glycerophosphate (N.F.), gr. 2–6 (0.13–0.4)	debility, anemia.
hippurate, gr. 5–30 (0.3–2.0)	uratic gravel and calculi.
hypophosphate (N.F., Br.), gr. 5–15 (0.3–1.0)	anemia, debility.
ichthyol-sulphonate, gr. 2–10 (0.13–0.6)	alterative, intestinal antiseptic.
iodide (U.S., Br.), gr. 10–30 (0.6–2.0)	chronic rheumatism, syphilis.
methylarsenate, gr. ½–1½ (0.03–0.1)	anemia, leucemia, chorea, malaria.
nitrate, ʒ1–2 (4.0–8.0)	diarrhea.
nitrite (U.S., Br.), gr. 1–3 (0.06–0.2)	vasodilator in angina pectoris.
oleate, gr 10–15 (0.6–10)	cholagogue.
phenolsulphonate, gr. 5–15 (0.3–1.0)	intestinal antiseptic, tonsillitis.
phosphate (U.S., Br.), ʒ½–2 (2.0–8.0)	laxative.
salicylate (U.S., Br.), gr. 10–30 (0.6–2.0)	rheumatism, neuralgia, influenza, intestinal autotoxemia
succinate, gr. 5–15 (0.3–1.0)	catarrhal jaundice.
sulphate (U.S., Br.), ʒ2–8 (8.0–32.0)	purgative.
sulphite (Br.), gr. 20–40 (1.3–2.6)	intestinal fermentation.
tartrate, gr. 15–30 (1.0–2.0)	diuretic; laxative in doses of ʒ4–8 (16.0–32.0).
taurocholate, gr. 2–6 (0.13–0.4)	cholagogue.
thiosulphate (U.S., Br.), gr. 15–30 (1.0–2.0)	purgative, vasodilator.
valerate, gr. 2–5 (0.13–0.3)	nerve tonic.
solanum (N.F.), gr. 40–60 (2.5–4.0)	epilepsy and other convulsive disorders, whooping cough.
fluidextract (N.F.), ♏30–60 (2.0–4.0)	
specific medicine (Ec.), ♏5–20 (0.3–1.3)	
sparteine sulphate, gr. ¼–1 (0.015–0.06)	cardiac tonic, diuretic.
spigelia, gr. 40–60 (2.5–4.0)	anthelmintic, nerve sedative.
fluidextract, ʒ1 (4.0)	
specific medicine (Ec.), ♏1–30 (0.06–2.0)	
spiroform, gr. 5–20 (0.3–1.3)	influenza, neuralgia, intestinal disinfectant, rheumatic pains.
spikenard (N.F.), gr. 20–40 (1.3–2.6)	stimulant, diaphoretic, alterative.
fluidextract (N.F.), ♏20–40 (1.3–2.6)	
specific medicine (Ec.), ♏5–20 (0.3–1.3)	
spongia, specific medicine (Ec.), ♏1–3 (0.06–0.2)	spasmodic croup.
spotted spurge, specific medicine (Ec.), ♏½–½ (0.015–0.03)	cholera infantum, chronic diarrhea, dyspeptic vertigo.
squill (U.S., Br.), gr. 1–5 (0.06–0.3)	expectorant, diuretic, cardiac tonic.
fluidextract (U.S.), ♏2–3 (0.13–0.2)	
syrup (U.S., Br.), ♏30–60 (2.0–4.0)	
tincture (U.S., Br.), ♏10–30 (0.6–2.0)	
specific medicine (Ec.), ♏1–15 (0.06–1.0)	
staphisagria (Br.), fluidextract, used externally	externally antiparasitic; internally for prostatic troubles.
specific medicine (Ec.), ♏2–3 (0.13–0.2)	
sticta, specific medicine (Ec.), ♏1–5 (0.06–0.3)	chest pains and muscular soreness.
stigmata maydis, specific medicine (Ec.), ♏20–60 (1.3–4.0)	cystitis and gravel (see also *zea*).
stillingia (N.F.), gr. 15–30 (1.0–2.0)	alterative, ozena, chronic laryngitis and pharyngitis.
specific medicine (Ec.), ♏1–10 (0.06–0.6)	
stovaine, gr. ¼–¾ (0.015–0.045) intraspinally	spinal anesthesia.
stramonium (U.S., Br.), gr. 1–3 (0.06–0.2)	antispasmodic, anodyne.
extract (U.S., Br.), gr. ¼–¼ (0.008–0.015)	
fluidextract (N.F.), ♏1–2 (0.06–0.13)	
tincture (U.S., Br.), ♏5–15 (0.3–1.0)	

Drugs and Doses	Therapeutic Indications
stramonium, specific medicine (Ec.), ♏½–1 (0.03–0.06)	
strontium bromide, ℥ 1–3 (4.0–12.0)	see *bromides*.
iodide, gr. 5–60 (0.3–4.0)	see *iodides*.
lactate, gr. 20–60 (1.3–4.0)	albuminuria.
salicylate (U.S.), gr. 5–30 (0.3–2.0)	same as *sodium salicylate*.
strophanthin (U.S.), gr. $\frac{1}{300}$–$\frac{1}{200}$ (0.0002–0.0003)	cardiac tonic, vasoconstrictor.
strophanthus (U.S., Br.), gr. ½–1 (0.03–0.06)	cardiac tonic, vasoconstrictor.
extract (Br.), gr. ½–½ (0.008–0.015)	
tincture (U.S., Br.), ♏3–10 (0.2–0.6)	
strychnine (N.F., Br.), gr. $\frac{1}{60}$–$\frac{1}{20}$ (0.001–0.003)	cardiac and general tonic, stomachic, nervine.
glycerophosphate, gr. $\frac{1}{60}$ (0.0015)	
hydrochloride (Br.), gr. $\frac{1}{60}$–$\frac{1}{20}$ (0.001–0.003)	
nitrate (U.S.), gr. $\frac{1}{60}$–$\frac{1}{20}$ (0.001–0.003)	
sulphate (U.S.), gr. $\frac{1}{60}$–$\frac{1}{20}$ (0.001–0.003)	
styrax (*storax*) (U.S.), gr. 10–20 (0.6–1.3)	chronic catarrhs.
succinic acid, gr. 5–10 (0.3–0.6)	spasmodic pains.
sulphonal, gr. 8–15 (0.5–1.0)	hypnotic.
sulphonethylmethane	*trional*.
sulphonmethane	*sulphonal*.
sulphur (U.S., Br.), gr. 5–60 (0.3–4.0)	rheumatism, gout, bronchitis; in large doses, laxative.
sumbul (N.F.), gr. 15–60 (1.0–4.0)	stimulant, antispasmodic; in low fevers, delirium, tremor.
extract (N.F.), gr. 1–5 (0.06–0.3)	
fluidextract, ♏15–45 (1.0–3.0)	
tincture (N.F., Br.), ℥ 1–2 (4.0–8.0)	
specific medicine (Ec.), ♏½–3 (0.03–0.2)	
sulphuric acid, aromatic (U.S., Br.), ♏5–15 (0.3–1.0)	tonic, astringent, antisudorific.
diluted (U.S., Br.), ♏5–15 (0.3–1.0)	
swamp milkweed, specific medicine (Ec.), ♏1–4 (0.06–0.25)	chronic catarrhal gastritis, leucorrhea (see also *asclepias*)
tamarac, gr. 20–40 (1.3–2.6)	alterative, tonic.
fluidextract, ♏20–40 (1.3–2.6)	
tamarind, ℥ 2–4 (8.0–16.0)	laxative.
tanacetum (*tansy*), gr. 20–40 (1.3–2.6)	carminative, emmenagogue.
tannalbin, gr. 20–40 (1.3–2.6)	astringent disinfectant in diarrhea.
tannic acid (U.S., Br.), gr. 1–5 (0.06–0.3)	styptic, local and intestinal astringent.
tannismuth, gr. 5–10 (0.3–0.6)	chronic intestinal catarrh.
tannisol, gr. 3–6 (0.2–0.4)	diarrhea.
tannocol, gr. 10–15 (0.6–1.0)	diarrhea.
tannoform, gr. 3–10 (0.2–0.6)	diarrhea, local astringent.
tannoguaiaform, gr. 8–15 (0 5–1.0)	intestinal tuberculosis.
tannothymal, gr. 5–15 (0.3–1.0)	diarrhea.
taraxacum (N.F.), ℥ 1–3 (4.0–12.0)	hepatic stimulant, laxative, tonic.
extract (N.F.), gr. 10–15 (0.6–1.0)	
fluidextract (N.F.), ℥ 1–3 (4.0–12.0)	
compound elixir (N.F.), ℥ 1–3 (4.0–12.0)	
specific medicine (Ec.), ♏5–30 (0.3–2.0)	
tartar emetic	*antimony and potassium tartrate*.
tartaric acid (U S.), gr. 5–15 (0.3–2.0)	laxative, refrigerant.
tela aranea, specific medicine (Ec.), ♏5–10 (0.3–0.6)	asthma, hiccough.
terebene (U.S., Br.), ♏5–10 (0.3–0.6)	bronchitis, cystitis, urethritis.
terpin hydrate (U.S.), gr. 3–5 (0.2–0 3)	expectorant in bronchitis.
terpinol, ♏2–5 (0.13–0.3)	expectorant.
tetranitrol, gr. ½–1 (0.03–0.06)	vasodilator, antispasmodic.
tetranol, gr. 15–30 (1.0–2.0)	hypnotic.
thalline salicylate, gr. 2–8 (0.13–0.5)	intestinal antiseptic, antirheumatic.
sulphate, gr. 2–8 (0.13–0.5)	antipyretic, hemostatic.
theobromine sodio-salicylate (U.S.)	*diuretin*.
theocin, gr. 3–8 (0.2–0.5)	diuretic.
soluble, gr. 2–5 (0.13–0.3)	
theolactin, gr. 10–15 (0.6–1.0)	diuretic.
theophorin, gr. 8 (0.5)	diuretic.
theophylline, gr. 3–8 (0.2–0.5)	diuretic.
thermifugin, gr. 2–3 (0.13–0.2)	antipyretic.
thermol, gr. 3–10 (0.2–0.6)	antipyretic, antineuralgic.
thigenol, gr. 3–10 (0.2–0.6)	antipruritic, substitute for ichthyol.
thiodin, gr. 3–6 (0.2–0.4)	resolvent of scar tissue.
thiosinamine, gr. ½–1 (0.03–0.06)	resolvent of scars and fibrous adhesions.
thiodiphenylamine, gr. 2–4 (0.13–0.25)	cystitis.
thuya (N.F.), gr. 20–40 (1.3–2.5)	expectorant, emmenagogue nocturnal enuresis, incontinence of urine.
fluidextract (N.F.), ♏20–40 (1.3–2.5)	
specific medicine (Ec.), ♏2–5 (0.13–0.3)	
thymol (U.S., Br.), gr. ½–3 (0.03–0.2)	uncinariasis, intestinal fermentation.
carbonate, gr. 8–30 (0.5–2.0)	teniacide.
thryeodectin, gr. 5 (0.3)	Graves' disease.
thyresol, ♏10 (0.6)	gonorrhea.
thyroideum (U.S.), gr. ½–1½ (0.03–0.1)	myxedema, cretinism.
thyroxion (U.S.), gr. $\frac{1}{150}$ (0.0005)	hypothyroidism.
tiger lily, specific medicine (Ec.), ♏1–6 (0.06–0.4)	ovarian and uterine congestion.
tolu (U.S., Br.), ♏5–30	expectorant.
syrup (U.S., Br.), ℥ 1–2 (4.0–8.0)	
tincture (U.S., Br.), ♏15–60 (1.0–4.0)	
tolypyrine, gr. 10–30 (0.6–2.0)	antipyretic, analgesic.
salicylate, gr. 8–15 (0.5–1.0)	neuralgia, rheumatism.

Drugs and Doses	Therapeutic Indications
tonga (N.F.), gr. 5–30 (0.3–2.0)	neuralgia.
fluidextract (N.F.), ♏20–40 (1.3–2.6)	
tribromaniline hydrobromide	*bromamide.*
tribromphenol	*bromol.*
tribromsalol, gr. 5–15 (0.3–1.0)	intestinal antiseptic.
trichloracetic acid (U.S.)	escharotic for warts and other small growths.
trifolium (N.F.), ʒ½–1½ (2.0–6.0)	whooping-cough, tuberculosis, alterative in inoperable cancer.
fluidextract (N.F.), ʒ½–1½ (2.0–6.0)	
specific medicine (Ec.), ♏1–5 (0.06–0.3)	
trillium (N.F.), gr. 20–40 (1.3–2.6)	tonic, astringent, antispasmodic.
fluidextract (N.F.), ♏20–40 (1.3–2.6)	
trimethylamine solution, ♏10–30 (0.6–2.0)	rheumatism.
trinitrophenol (U.S.), gr. ½–1 (0.03–0.06)	trichinosis.
trioxybenzophenon, gr. 5–15 (0.3–1.0)	antipyretic, analgesic.
triphenin, gr. 5–15 (0.3–1.0)	influenza, rheumatism, neuralgia.
triticum (N.F.), ʒ½–1½ (2.0–6.0)	diuretic.
fluidextract (N.F.), ʒ1–3 (4.0–12.0)	
specific medicine (Ec.), ♏5–10 (0.3–0.6)	
trypsin, gr. 8–15 (0.5–1.0)	intestinal indigestion; externally, solvent of diphtheritic membranes.
tuberculin	see text.
tussilago	farfara.
tussol	antipyrine mandelate.
tylophora (B.A.), gr. ½–30 (0.03–2.0)	expectorant, emetic.
tyramine, gr. 1/15 (0.005)	cardiac tonic, vasoconstrictor.
uranyl acetate, gr. ¼–½ (0.01–0.015)	diabetes.
urasol, gr. 5–8 (0.3–0.5)	muscular rheumatism, cystitis.
urea, gr. 3–8 (0.2–0.5)	diuretic, antiphthisic.
urginea (Br.), gr. 1–3 (0.06–0.2)	expectorant, diuretic.
tincture (Br.), ♏5–15 (0.3–1.0)	
vinegar (Br.), ♏5–15 (0.3–1.0)	
uricedin, gr. 15–30 (1.0–2.0)	gout, rheumatism.
urisolvin, gr. 3 (0.2)	uric-acid solvent.
urotropin	*methenamine.*
urtica, fluidextract, ♏10–20 (0.6–1.3)	diuretic; subacute and chronic bronchitis with profuse secretion, bleeding from mucous membranes.
specific medicine (Ec.), ♏1–3 (0.06–0.2)	
ustilago maydis, gr. 15–60 (1.0–4.0)	ecbolic, vasoconstrictor.
specific medicine (Ec.), ♏ 1–3 (0.06–0.2)	
uva ursi (U.S., Br.), gr. 20–40 (1.3–2.6)	diuretic, astringent, in chronic inflammation of the genito-urinary tract.
specific medicine (Ec.), ♏5–40 (0.3–2.6)	
valerian (U.S.), gr. 10–60 (0.6–4.0)	nerve sedative in hysteria and at the menopause.
tincture (U.S.), ʒ1 (4.0)	
specific medicine (Ec.), ♏5–20 (0.3–1.3)	
valeridin, gr. 8–15 (0.5–1.0)	nerve sedative.
validol, ♏10–15 (0.6–1.0)	nerve sedative.
camphorated, ♏10–15 (0.6–1.0)	stimulant, restorative.
valyl, ♏2–6 (0.13–0.4)	sedative, hypnotic, antispasmodic.
vanillin (U.S.), gr. ¼–1 (0.015–0.06)	atonic dyspepsia.
veratrine (N.F., Br.), gr. 30 (0.002)	antineuralgic, antirheumatic, cardiac sedative.
veratrol, gr. 1–3 (0.06–0.2)	tuberculosis.
veratrum (U.S.), gr. 1–3 (0.06–0.2)	diuretic, diaphoretic, cardiac and respiratory sedative
fluidextract, ♏1–4 (0.06–0.25)	
tincture (U.S.), ♏10–30 (0.6–2.0)	
specific medicine (Ec.), ♏½–½ (0.015–0.03)	
verbascum flowers (N.F.), ʒ1–2 (4.0–8.0)	demulcent expectorant, sedative.
leaves (N.F.), ʒ½–1 (2.0–4.0)	
fluidextract (N.F.) ♏40–90 (2.5–6.0)	
specific medicine (Ec.), ♏5–10 (0.3–0.6)	
verbena, gr. 10–20 (0.6–1.3)	expectorant, diaphoretic.
fluidextract, ♏10–20 (0.6–1.3)	
vesipyrine	*spiroform.*
viburnum (N.F.), gr. 20–60 (1.3–4.0)	antispasmodic in asthma and dysmenorrhea
fluidextract (N.F.), ♏20–60 (1.3–4.0)	
specific medicine (Ec.), ♏1–2 (0.06–0.13)	
viburnum prunifolium (N.F.), gr. 20–60 (1.3–4.0)	dysmenorrhea, ovarian irritation, after-pains.
fluidextract (N.F.), ♏20–40 (1.3–2.6)	
specific medicine (Ec.), ♏2–4 (0.13–0.26)	
vinopyrine, gr. 10–20 (1.3–2.6)	antipyretic.
viscum	*mistletoe.*
witch hazel	*hamamelis.*
xanthium spinosum, gr. 8–15 (0.5–1.0)	diaphoretic, diuretic; in chronic cystitis.
fluidextract, ʒ1–2 (4.0–8.0)	
specific medicine, ♏5–10 (0.3–0.6)	
xanthoxylum (N.F.), gr. 20–60 (1.3–4.0)	diaphoretic, alterative; in chronic catarrhal condition.
fluidextract (N.F.), ♏20–60 (1.3–4.0)	
specific medicine (Ec.), ♏5–30 (0.3–2.0)	
yeast, compressed (N.F.), ʒ1–3 (4.0–12.0)	boils, acne, constipation, diabetes.
dried, gr. 10–30 (0.6–2.0)	
liquid, ʒ2–4 (64.0–128.0)	

Drugs and Doses	Therapeutic Indications
yerba mansa, gr. 15–30 (1.0–2.0)	diarrhea, dysentery, rheumatism.
fluidextract, ♏15–30 (1.0–2.0)	
yerba santa (U.S.), gr. 10–20 (0.6–1.3)	bitter tonic, expectorant.
fluidextract (U.S.), ♏10–20 (0.6–1.3)	
specific medicine (Ec.), ♏1–4 (0.06–0.25)	
yohimbin hydrochloride, gr. $\frac{1}{10}$–$\frac{1}{5}$ (0.006–0.012)	impotence.
zea (N.F.), gr. 40–90 (2.5–6.0)	diuretic in irritable states of the genito-urinary tract
fluidextract (N.F.), ♏40–90 (2.5–6.0)	
zedoary (N.F.), gr. 10–20 (1.3–2.6)	aromatic, carminative.
bitter tincture (N.F.), ♏40–60 (2.5–4.0)	
zinc acetate (U.S., Br.), solutions of gr. 1–2 (0.06–0.13) to ℥1 (32.0)	local astringent.
bromide, gr. 1–2 (0.06–0.13)	epilepsy.
chloride (U.S., Br.)	locally in gonorrhea, conjunctivitis.
iodide, gr. $\frac{1}{2}$–2 (0.03–0.13)	chorea.
oxide (U.S., Br.), gr. 1–2 (0.06–0.13)	antispasmodic; locally protective.
phenolsulphonate (N.F. Br.), gr. 1–4 (0.06–0.25)	intestinal antiseptic.
sulphate (U.S., Br.), gr. 10–30 (0.6–2.0)	emetic; locally astringent.
valerate, gr. 1–5 (0.06–0.3)	antispasmodic.
zingiber (U.S., Br.), gr. 10–30 (0.6–2.0)	carminative; in diarrhea.
fluidextract (U.S.), ♏10–20 (0.6–1.3)	
tincture (U.S.), ♏20–40 (1.3–2.6)	

WEIGHTS AND MEASURES.

There are, unfortunately, several systems of weights and measures in use among the English speaking peoples—the metric, the avoirdupois, the troy, and the apothecaries' weights, and the Imperial and the United States measures of quantity, in addition to the common British and American linear, square, and cubic measures. The metric system is universally employed by laboratory workers throughout the world and its use commercially and in pharmacy is legal in the United States and permissible in Great Britain; the U.S.P. and B.P. employ it together with their national weights and measures, and it will probably eventually supersede the latter in prescription writing as it has in the laboratory.

The Metric System.

Linear Measures.

The unit of the metric system is the meter, which is the one ten-millionth part of the meridian quadrant of the earth, the circumference of the earth at the equator being therefore 40,000,000 meters, or 40,000 kilometers, or roughly 25,000 miles. In the nomenclature of the system multiples of the meter are indicated by prefixes derived from the Greek, as follows:

Meter; decameter, 10 meters; hectameter, 100 meters; kilometer, 1000 meters; myriameter, 10,000 meters.

Fractions of the meter are indicated by prefixes derived from the Latin, as follows:

Meter; decimeter, $\frac{1}{10}$ meter; centimeter, $\frac{1}{100}$ meter; millimeter, $\frac{1}{1000}$ meter.

In microscopy, the unit of measure is $\frac{1}{1000}$ of a millimeter, called micron (symbol μ), or, incorrectly, micromilleter; the prefix micro- properly notes the one-millionth of the measure to which it is attached, the micron being therefore correctly called micrometer.

Square Measures.

A square meter, in land measure, is called a centiare; 100 sq. meters = 1 are; 100 ares (10,000 sq. meters) = 1 hectare.

Cubic Measures or Volumes.

The unit of volume is the cubic decimeter, called a liter; one liter of water weighs practically 1 kilogramme. It is divided into the deciliter, $\frac{1}{10}$ liter (weight 100 grams); centiliter, $\frac{1}{100}$ liter (weight 10 grams); and milliliter, abbreviated in U.S.P. and N.F. to mil (cubic centimeter), $\frac{1}{1000}$ liter (weight 1 gram).

Theoretically there are also multiples of the liter: decaliter, 10 liters; hectaliter, 100 liters; kiloliter, 1000 liters; practically, however, the hectaliter (weight of water 100 kilograms) is the only multiple in use.

Weights

The unit of weight is the gram, or gramme, abbreviation gr. (in English speaking countries usually g. or gm. to distinguish it from grain). It is practically the weight of one cubic centimeter of distilled water at its maximum density (4° C.); exactly it is one-thousandth the weight of a mass of platinum, called *kilogramme des archives*, preserved as the standard in Paris. Multiples of this unit are designated by prefixes derived from the Greek numerals, as follows:

Gram; decagram, 10 grams; hectagram, 100 grams; kilogram (abbr. kilo), 1000 grams. In France, multiples of the kilo are sometimes called: 100 kilos, quintal; 1000 kilos, tonne or millier. One-half a kilo is popularly called a livre (pound).

Fractions of the gram are designated by prefixes, derived from the Latin numerals, as follows:

Gram; decigram, $\frac{1}{10}$ gram; centigram, $\frac{1}{100}$ gram; milligram, $\frac{1}{1000}$ gram.

In pharmacy and laboratory work the unit of volume is the cubic centimeter, abbr. c.c., (called mil in the U.S.P.IX), that of weight is the gram. In the countries where the metric system is in use, liquid medicinal preparations are dispensed by weight and not by volume, by grams and not by cubic centimeters. In prescription writing, fractions of the cubic centimeter or of the gram are expressed by decimals, or by figures written to the right of a vertical line; thus:

2	cubic centimeters	or	2 gm., 2.	or 2
$\frac{1}{10}$	cubic centimeter	or	$\frac{1}{10}$ gm., 0.1	or 1
$\frac{3}{100}$	cubic centimeter	or	$\frac{3}{100}$ gm., 0.03	or 03
$\frac{2}{1000}$	cubic centimeter	or	$\frac{2}{1000}$ gm., 0.002	or 002
$1\frac{35}{100}$	cubic centimeters	or	$1\frac{35}{100}$ gm., 1 35	or 1 35

British and American Measures.

Linear Measures.

mile	furlongs.	rods.	yards.	feet.	inches
1 =	8 =	320 =	1760 =	5280 =	63360
	1 =	40 =	220 =	660 =	7920
		1 =	$5\frac{1}{2}$ =	$16\frac{1}{2}$ =	198
			1 =	3 =	36
				1 =	12

Other measures are: league, 3 miles; cable, 10 fathoms = 60 feet; fathom, 6 feet; chain, 22 yards = 66 feet = 100 links; link, 7.92 inches; cubit, 2 quarters = 18 inches; quarter, 9 inches; hand, 4 inches; palm, 3 inches; ell, 1.25 yards = 45 inches; line, $\frac{1}{12}$ inch.

Square Measure.

acre.	perches.	sq. yards.	sq. feet.	sq. inches.
1 =	160 =	4840 =	43,560 =	6,560,640
	1 =	30.25 =	272.25 =	39,204
		1 =	9 =	1296
			1 =	144

A square mile = 640 acres = 6400 square chains; 10 square chains (each 4356 square feet) = 1 acre.

Troy or Apothecaries' and Avoirdupois Weights.

In the United States the weights used in prescription writing and the compounding of drugs are those of the apothecaries' system; the weights of the British Pharmacopeia are those of the avoirdupois system. In both, the weight of the grain is the same, but the drachm, ounce, and pound differ-

Troy Weights.

pound.		ounces.		pennyweights.		grains.
1	=	12	=	240	=	5760
		1	=	20	=	480
				1	=	24

Apothecaries' Weights (U.S.P.).

pound.		ounces.		drachms.		scruples.		grains.
1	=	12	=	96	=	288	=	5760
		1	=	8	=	24	=	480
				1	=	3	=	60
						1	=	20

Avoirdupois Weights (B.P.)

pound.		ounces.		drachms.		grains.
1	=	16	=	256	=	7000
		1	=	16	=	437·5
				1	=	27·34375

To convert troy ounces to avoirdupois, add 10 per cent.; to convert avoirdupois ounces to troy, subtract $\frac{1}{11}$. These are approximate equivalents.

Other weights are: quarter, 28 pounds; hundredweight, 112 pounds; ton, 20 hundredweight = 2240 pounds; in America there is also the "short ton" of 2000 pounds, with the corresponding hundredweight of 100 pounds, and quarter of 25 pounds. The stone is 14 pounds for the weight of man, but varies in value for different commodities.

Liquid Measures.

United States Apothecaries' Measures.

gallon.		quarts.		pints.		fluid ounces.		fluid drachms.		minims.
1	=	4	=	8	=	128	=	1024	=	61440
		1	=	2	=	32	=	256	=	15360
				1	=	16	=	128	=	7680
						1	=	8	=	480
								1	=	60

Imperial Apothecaries' Measures.

gallon.		quarts.		pints.		fluid ounces.		fluid drachms		minims.
1	=	4	=	8	=	160	=	1280	=	76800
		1	=	2	=	40	=	320	=	19200
				1	=	20	=	160	=	9600
						1	=	8	=	480
								1	=	60

The minim, fluidrachm, and fluidounce of the U. S. apothecaries' measure are slightly larger than the corresponding denominations in the Imperial (British) measure; the pint, quart, and gallon, on the other hand, are materially smaller.

	U. S.	Imp.	Imp.	U. S.
minim, fluidrachm, fluidounce,	1 = 1.0406		1 = 0.9609	
pint, quart, gallon,	1 = 0.8325		1 = 1.2011	

Equivalents.

Tables of exact equivalents of metric and apothecaries' and avoirdupois weights, and metric and English and American measures are given below, but for rough calculations the following will suffice:

Linear Measures.

One kilometer = $\frac{5}{8}$ mile or 3281 feet; 8 kilometers = 5 miles; 1 meter = 39 inches; 1 centimeter = $\frac{2}{5}$ inch; 1 millimeter = $\frac{1}{25}$ inch or $\frac{1}{2}$ line; 1 micron = $\frac{1}{25000}$ inch.

One mile = $1\frac{3}{5}$ kilometers; 1 yard = 92 centimeters; 1 foot = 30.5 centimeters; 1 inch = 25 millimeters; 1 line = 2 millimeters.

To convert kilometers to miles, multiply by 5 and divide by 8; to convert miles to kilometers multiply by 8 and divide by 5.

To convert meters to yards, multiply by 70 and divide by 64; to convert yards to meters multiply by 64 and divide by 70.

To convert centimeters to feet, multiply by 10 and divide by 307; to convert feet to centimeters multiply by 307 and divide by 10.

To convert millimeters to inches, multiply by 10 and divide by 254; to convert inches to millimeters multiply by 254 and divide by 10.

Weights.

One kilogram = $2\frac{1}{5}$ pounds, or $35\frac{1}{5}$ ounces, avoirdupois; or $2\frac{7}{10}$ pounds, or $32\frac{2}{5}$ ounces, troy; 1 gram = $15\frac{1}{2}$ grains.

One pound avoirdupois = 453.6 grams; 1 pound troy = 373.2 grams; 1 ounce avoirdupois = 28.4 grams; 1 ounce troy = 31.1 grams; 1 drachm = 3.89 grams; 1 grain = 0.065 gram.

To convert kilograms to pounds avoirdupois multiply by 1000 and divide by 454; to convert pounds avoirdupois to kilograms, multiply by 454 and divide by 1000; to convert kilograms to pounds troy, multiply by 1000 and divide by 371; to convert pounds troy to kilograms multiply by 371 and divide by 100.

To convert grams to ounces avoirdupois, multiply by 20 and divide by 567; to convert grams to ounces troy, multiply by 20 and divide by 622; or in both cases simply divide by 30; to convert ounces avoirdupois to grams, multiply by 567 and divide by 20; to convert ounces troy to grams, multiply by 622 and divide by 20; or in both cases simply multiply by 30.

To convert grams to drachms, divide by 4; to convert drachms to grams multiply by 4.

To convert grams or fractions of a gram to grains, multiply by 155 and divide by 10, or simply multiply by 15; to convert grains to grams, multiply by 10 and divide by 155, or simply divide by 15.

To convert centigrams to grains, divide by 6; to convert grains to centigrams, multiply by 6.

To convert milligrams to grains, divide by 60; to convert grains to milligrams, multiply by 60.

Fluid Measures.

One liter = 1.76 imperial pints or 2.1 U.S. pints; 1 cubic centimeter = 17 minims (B.P.) or $16\frac{1}{2}$ minims (U.S.P.).

One imperial gallon = 4.55 liters; 1 U.S. gallon = 3.79 liters; 1 imperial pint = 568 cubic centimeters; 1 U.S. pint = 473 cubic centimeters; 1 fluid ounce (B.P.) = 28.4 cubic centimeters; 1 fluidounce (U.S.P.) = 29.5 cubic centimeters; 1 fluid drachm (B.P.) = 3.5 cubic centimeters; 1 fluidrachm (U.S.P.) = 3.7 cubic centimeters; 1 minim = 0.065 cubic centimeter.

To convert liters to imperial gallons, multiply by 22 and divide by 100; to convert liters to U.S gallons, multiply by 265 and divide by 1000 (by moving the decimal point three places to the left); to convert imperial gallons to liters, divide by 22 and multiply by 100; to convert U.S. gallons to liters divide by 265 and multiply by 1000.

To convert liters to imperial pints, multiply by 88 and divide by 50; to convert liters to U.S. pints,

multiply by 21 and divide by 10; to convert imperial pints to liters, multiply by 50 and divide by 88; to convert U.S. pints to liters, multiply by 100 and divide by 21.

To convert cubic centimeters to fluid drachms (B.P.), multiply by 2 and divide by 7; to convert cubic centimeters to fluidrachms (U.S.P.), multiply by 20 and divide by 74; or in both cases simply divide by 4; to convert fluid drachms (B.P.) to cubic centimeters, multiply by 7 and divide by 2- to convert fluidrachms (U.S P.) to cubic centime; ters, multiply by 74 and divide by 20; or in both cases simply multiply by 4.

To convert cubic centimeters, or fractions thereof, to minims, multiply by 100 and divide by 6; to convert minims to cubic centimeters, multiply by 6 and divide by 100 (by moving the decimal point two places to the left).

Approximate Liquid Measures.

In America a teaspoonful is reckoned as 1 fluidrachm, or 4 c.c.; a dessertspoonful as 2 fluidrachms, or 8 c.c.; a tablespoonful as half an ounce, or 16 c.c. Elsewhere a teaspoonful is regarded as approximately the equivalent of 5 c.c. (85 minims B.P.); a tablespoonful as three teaspoonfuls or 15 c.c. (255 minims B.P.).

A wineglassful is 2 fluidounces, or 64 c.c.; a teacupful = 2 wineglassfuls, 4 fluidounces, 125 c.c.; a tumblerful = 4 wineglassfuls, 8 fluidounces, half a pint, 250 c.c.

A drop is a measure of very uncertain quantity, varying in size not only according to the nature of the liquid but also according to the shape of the container, and its aperture, from which it falls. This is strikingly illustrated in the table given below, in which the number of drops in the fluidrachm varies from 41 to 172. Some of the Pharmacopeias give extensive tables of this kind showing the number of drops of the different liquid preparations in the gram. For these drops a measure is prescribed, consisting of a pipette with a diameter of 3 mm. giving 20 drops of distilled water per gram.

Drops in a Fluidrachm.

The wide difference in the size of drops of different liquids, and of the same liquid under different conditions, is shown in the following table prepared by Mr. Albert H. Kinsey, and published in the *American Journal of Pharmacy*, April, 1884.

Energy Measures.

One kilogrammeter is the energy or force expended in raising a weight of 1 kilogram to a height of 1 meter. One foot-pound is the energy or force expended in raising a weight of 1 pound avoirdupois to a height of 1 foot.

One kilogrammeter = 7.24 foot-pounds.

One foot-pound = 0.1381 kilogrammeter.

SYMBOLS.

(The abbreviations, such as gr., oz., c.c., etc. will be found in their alphabetical position in the body of the Dictionary.)

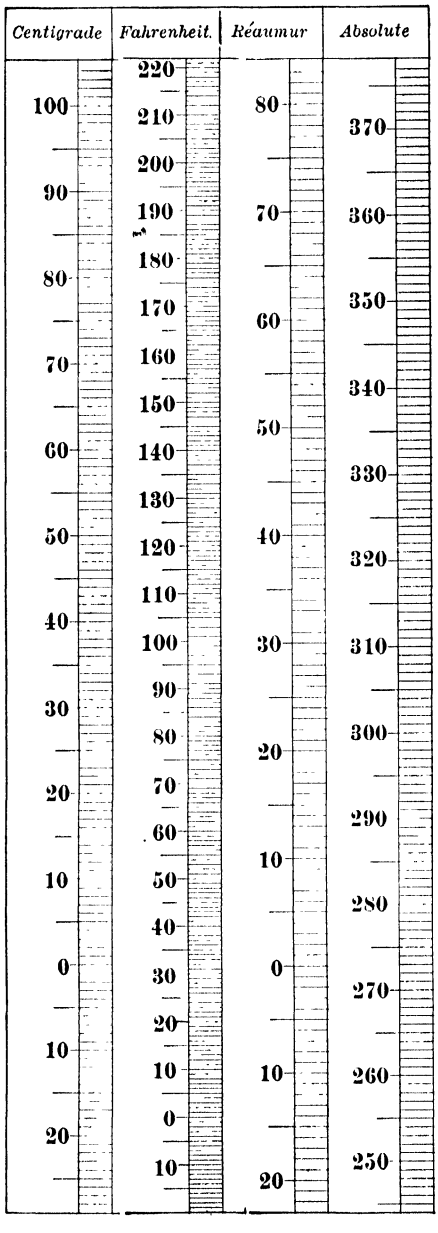
℥ minim.
℈ scruple.
ʒ drachm
℥ ounce.
O pint.
℔ pound.
℞ recipe, take; a modification of ♃ the sign of Jupiter.
℔ misce, mix.
′ foot; minute; primary accent; univalent.
″ inch; second; secondary accent; bivalent.
‴ line ($\frac{1}{12}$ inch); trivalent.
μ micron.
μμ micromicron.
\+ plus; excess; acid reaction; positive. In noting the result of the Wassermann test for syphilis, complete hemolysis is usually indicated by ++++ (or 4+); 75 per cent. hemolysis by +++ (or 3+); 50 per cent. hemolysis by ++ (or 2+), and less than 50 per cent. by +.
− minus; deficiency; alkaline reaction; negative.
± plus or minus; either positive or negative; indefinite.
÷ divided by.
× multiplied by; in microscopy, magnification.
= equal to.
> greater than; whence, from which is derived.
< less than; from, derived from.
$\sqrt{\ }$ root; square root; radical.
$\sqrt[2]{\ }$ square root.
$\sqrt[3]{\ }$ cube root.
∞ infinity.
: ratio; "is to".
:: equality between ratios; "as".
* birth.
† death.
♀ Venus; female; copper
♂ Mars; male; iron.
◯ undetermined sex.
☉ the sun; gold; a monocarpic plant.
☿ mercury; an hermaphroditic, or perfect, flower.
♃ Jupiter; tin; a perennial plant.
♄ Saturn; lead; a plant with a woody stem.
① an annual plant.
② a biennial plant.
☾ the moon; silver.
° degree.
% per cent.

STETHOSCOPIC ABBREVIATIONS.

The following abbreviations, suggested by Professor Langmann of the Veilefjord Sanatorium, were adopted by the International Antituberculosis Association at its meeting in Berlin in October, 1913, for use in the stethoscopic findings in the preparation of case reports:

Abbr	Latin	English	Abbr.	Latin	English
a.	anterior	anterior	p.	posterior	posterior
amph.	amphoricus	amphoric	Pap.	papilla mammæ	nipple
Ang.	angulus scapulæ	angle of the scapula	prolong.	prolongatus	prolonged
applan.	applanatus	flattened	Resp.	respiratio	respiration
bronch.	bronchialis	bronchial	retard.	retardatus	delayed
Brph.	bronchophonia	broncophony	rh.	rhonchi	râles
C.	costa	rib	rl.	.....	fine râles
C_2, C_3, etc.	costa II, costa III, etc.	2nd rib, 3d rib, etc.	Rl.	.....	medium râles
			RL.	.....	coarse râles
Cl.	clavicula	clavicle	rl_1	.....	few fine râles
cons.	consonans	tinkling	Rl_2	.....	moderate number of medium râles
Craq.	crepitus	crepitation			
crep.	crepitans	crepitant	RL_3	.....	many coarse râles
d.	dexter	right	s	sinister	left
dilat.	dilatatus	dilated	sacc.	saccatus?	cogwheel
dim.	diminutus	diminished	1/2 Sc.	medio regionis infraspinatæ scapulæ	middle of the infraspinous region of the scapula
Exsp.	expiratio	expiration			
fort.	fortis	strong			
Frem.	fremitus vocalis	vocal fremitus			
Fric.	frictio	friction	sicc.	siccus	dry
immobil.	immobilis	immovable	Sp.	spina scapulæ	spine of the scapula
inf.	inferior	inferior			
Insp.	inspiratio	inspiration	subcrep.	subcrepitans	subcrepitant
Interc.	spatium intercostale	intercostal space	sup.	superior	superior
M.	mutitas	dulness	Th.	thorax	chest
M_1	mutitas levis	slight dulness	Tymp.	tympanismus	tympanicity
M_2	mutitas gravis	marked dulness	u.a.	usque ad	up to, as far as
M_3	mutitas absoluta	absolute dulness	ves.	vesicularis	vesicular
Margo	margo pulmonis	border of the lung	( )	.....	only after coughing
Met.	metallia	metallic sound			
mobil	mobilis	movable			

COMPARATIVE TEMPERATURE SCALES.



There are three temperature scales in more of less general use, viz., the centigrade, the Fahrenheit, and the Réaumur. The Réaumur is in popular use in Russia and some parts of Germany, but is giving way to the centigrade; the Fahrenheit is in popular use in Holland and in English speaking countries; the centigrade is in popular use on the Continent of Europe and in Latin America, and is generally employed everywhere in laboratories and in scientific work. A fourth scale, the absolute, is used to indicate very low temperatures; it is based on the absolute zero, which is the point at which the form of motion which constitutes heat ceases, or the point of absence of all heat; it is calculated to be 273.7° (practically 274°) below zero of the centigrade scale; −461° F., or −219° R. The Celsius scale (no longer in use) was the same as the centigrade, but reversed, the temperature of boiling water being zero, that of melting ice, 100°. The object of Celsius in formulating this scale was to obviate the necessity of using + and − signs to indicate any degree of atmospheric temperature.

The zero of the centigrade and Réaumur scales marks the temperature of melting ice (32° F.); the zero of the Fahrenheit scale is an arbitrary point, that of the lowest temperature observed by the deviser of the scale during the winter of 1709, practically the temperature of a mixture of ice and salt; it corresponds to −17.77° C., −14.22° R. The temperature of boiling water, at sea-level, is marked 100° on the centigrade scale (hence the name), 80° on the Réaumur scale, and 212° on the Fahrenheit scale. A degree F. is therefore $\frac{5}{9}$ degree C. and $\frac{4}{9}$ degree R.; a degree R. is $\frac{5}{4}$ degree C.

The following are rules for the conversion of the temperature of one scale into that of one of the others:

I. *Above* 0° *C. and R., or* 32° *F.*

F. to C.: subtract 32, multiply by 5, divide by 9.
F to R.: subtract 32, multiply by 4, divide by 9.
C. to F : multiply by 9, divide by 5, add 32.
C. to R.: multiply by 4, divide by 5.
R. to F.: multiply by 9, divide by 4, add 32.
R. to C.: multiply by 5, divide by 4.

II. *Between* 0° *and* 32° *F.;* −17.77° *and* 0° *C.;* −14.22° *and* 0° *R.*

F. to C.: subtract from 32, multiply by 5, divide by 9.
F. to R.: subtract from 32, multiply by 4, divide by 9.
C. to F.: multiply by 9, divide by 5, subtract from 32.
C to R.: multiply by 4, divide by 5.
R. to F.: multiply by 9, divide by 4, subtract from 32.
R. to C.: multiply by 5, divide by 4.

III. *Below* 0° *F.*, −17.77° *C.*, −14.22° *R.*
F to C.: add 32, multiply by 5, divide by 9.
F. to R.: add 32, multiply by 4, divide by 9.
C. to F. multiply by 9, divide by 5, subtract 32.
C. to R.: multiply by 4 divide by 5.
R. to F.: multiply by 9, divide by 4, subtract 32.
R. to C.: multiply by 5, divide by 4.

EXAMPLES:

I. 63°F. to C.: 63 − 32 = 31 × 5 = 155 ÷ 9 = 17.2° C.
63°F to R.: 63 − 32 = 31 × 4 = 124 ÷ 9 = 13.8° R.
37°C. to F.: 37 × 9 = 333 ÷ 5 = 66.6 + 32 = 98 6° F.
37°C. to R.: 37 × 4 = 148 ÷ 5 = 29.6° R.
34°R. to F.: 34 × 9 = 306 ÷ 4 = 76.5 + 32 = 108.5° F.
34°R to C.: 34 × 5 = 170 ÷ 4 = 42.5° C.

II. 10°F. toC.: 32 − 10 = 22 × 5 = 110 ÷ 9 = −12.2° C.
10° F. to R.: 32 − 10 = 22 × 4 = 88 ÷ 9 = −9.8° R
−12°C. to F: 12 × 9 = 108 ÷ 5 = 21.6; 32 − 21.6 = 10.4° F.
−12°R. to F.: 12 × 9 = 108 ÷ 4 = 27; 32 − 27 = 5° F.

III. −10°F to C.: 10 + 32 = 42 × 5 = 210 ÷ 9 = −23.3° C.
−10°F to R.: 10 + 32 = 42 × 4 = 168 ÷ 9 = −18.7° R.
−18°C. to F.: 18 × 9 = 162 ÷ 5 = 32.4 − 32 = 0.4° F.
−18°R. to F.: 18 × 9 = 162 ÷ 4 = 40.5 − 32 = −8.5° F

THE IMPORTANT MICROPARASITES PATHOGENIC FOR MAN AND CERTAIN ANIMALS

In the following Table the essential data relating to morphology, staining characteristics, cultural peculiarities, pathogenicity, and mode of infection of the individual microorganisms are given under one title only (in the case of the bacteria under the terms proposed by the Committee of American Bacteriologists). This title may be found by reference to the following list. The terms in common use are those entered alphabetically, the second name (in italics) being the one given in the Table.

Acne bacillus, *Corynebacterium acnes*
Allantiasis bacillus, *Clostridium botulinum*
Amœba dysenteriæ, *Entamœba hystolytica*
Anthrax bacillus, *Bacillus anthracis*
Avian tubercle bacillus, *Mycobacterium avium*
Bacillus abortus, *Alcaligines abortus*
Bacillus acnes, *Fusiformis acnes*
Bacillus aerogenes capsulatus, *Clostridium welchii*
Bacillus aertrycke, *Salmonella aertrycke*
Bacillus anthracis symptomatici, *Clostridium chauvei*
Bacillus botulinus, *Clostridium botulinum*
Bacillus coli, *Escherichia coli*
Bacillus conjunctivitidis, *Hæmophilus conjunctivitidis*
Bacillus diphtheriæ, *Corynebacterium diphtheriæ*
Bacillus dysenteriæ (Flexner, Hiss, Sonne, Strong *Shigella paradysenteriæ*
Bacillus dysenteriæ (Shiga), *Shigella dysenteriæ*
Bacillus dysenteria Y, *Shigella paradysenteriæ*
Bacillus enteritidis, *Salmonella enteritidis*
Bacillus enteritidis sporogenes, *Clostridium welchii*
Bacillus fusiformis, *Fusiformis dentium*
Bacillus hystolyticus, *Clostridium hystolyticum*
Bacillus lepræ, *Mycobacterium lepræ*
Bacillus mallei, *Pfeifferella mallei*
Bacillus melitensis, *Alcaligines melitensis*
Bacillus mucosus capsulatus, *Klebsiella pneumoniæ*
Bacillus mucosus ozænæ, *Klebsiella ozænæ.*
Bacillus œdematiens, *Clostridium œdematiens*
Bacillus œdematis maligni, *Clostridium œdematis malign*
Bacillus of soft chancre, *Hæmophilus ducreyii*
Bacillus paratyphosus A, *Salmonella paratyphi*
Bacillus paratyphosus B, *Salmonella schotmülleri*
Bacillus paratyphosus C, *Salmonella hirschfeldii.*
Bacillus perfringens, *Clostridium welchii*
Bacillus pertussis, *Hæmophilus pertussis*
Bacillus pestis, *Pasteurella pestis*
Bacillus proteus, *Proteus vulgaris*
Bacillus pyocyaneus, *Pseudomonas aeruginosa*
Bacillus rhinoscleromatis, *Klebsiella rhinoscleromatis*
Bacillus sporogenes, *Clostridium sporogenes*
Bacillus suipestifer, *Salmonella suipestifer*
Bacillus tetani, *Clostridium tetani*
Bacillus tuberculosis, *Mycobacterium tuberculosis*
Bacillus tussis convulsivæ, *Hæmophilus pertussis*
Bacillus typhi exanthematici, *Rickettsia prowazeki*
Bacillus typhosus, *Eberthella typhi*
Bacillus welchii, *Clostridium welchii*
Bacillus whitmori, *Flavobacterium psuedomallei*
Bacillus xerosis, *Corynebacterium xerosis*
Bacterium abortus, *Alcaligines abortus*
Bacterium melitensis, *Alcaligines melitensis*
Bacterium mucosum capsulatum, *Klebsiella pneumoniæ*
Bacterium ozænæ, *Klebsiella ozænæ*
Bacterium pneumoniæ, *Klebsiella pneumoniæ*
Bacterium pneumosintes, *Dialister pneumosintes*
Bacterium rhinoscleromatis, *Klebsiella rhinoscleromatis*
Bacterium tularense, *Pasteurella tularensis*
Bacterium whitmori, *Flavobacterium pseudomallei*
Bang's bacillus, *Alcaligines abortus*
Blue-pus bacillus, *Pseudomonas aeruginosa*
Bordet-Gengou bacillus, *Hæmophilus pertussis*
Bovine tubercle bacillus, *Mycobacterium tuberculosis bovis*
Brazilian trypanosome, *Trypanosoma cruzi*
Brucella abortus, *Alcaligines abortus*
Brucella melitensis, *Alcaligines melitensis*
Cholera spirillum, *Vibrio comma*
Clostridium aerogenes capsulatum, *Clostridium welchii*
Colon bacillus, *Escherichia coli*
Comma bacillus, *Vibrio comma*
Corynebacterium hofmannii, *Corynebacterium pseudodiphtheriticum*
Diphtheria bacillus, *Corynebacterium diphtheriæ*
Diplobacillus of Morax, *Hæmophilus lacunatus*
Diplococcus intracellularis meningitidis, *Neisseria intracellularis*
Diplococcus scarlatinæ, *Streptococcus scarlatinæ*
Discomyces bovis, *Actinomyces bovis*
Ducrey's bacillus, *Hæmophilus ducreyii*
Eberth-Gaffky bacillus, *Eberthella typhi*
Endamœba hystolytica, *Entamœba hystolytica*
Entamœba tenuis, *Councilmania tenuis*
Fehleisen's streptococcus, *Streptococcus erysipelatos*
Finkler-Prior bacillus, *Vibrio proteus*
Flexner-Y bacillus, *Shigella paradysenteriæ*
Friedlander's bacillus, *Klebsiella pneumoniæ*
Fusiformis vincenti, *Fusiformis dentium*
Gaertner's bacillus, *Salmonella enteritidis*
Glanders bacillus, *Pfeifferella mallei*
Gonococcus, *Neisseria gonorrhœæ*
Guarnieri bodies, *Cytoryctes variolæ*
Hæmamœba immaculata, *Plasmodium falciparum*
Hæmamœba laverani, *Plasmodium vivax*
Hæmamœba malariæ, *Plasmodium malariæ*
Hæmamœba vivax, *Plasmodium vivax*
Hæmatozoon falciparum, *Plasmodium falciparum*
Helcosoma tropicum, *Leishmania tropica*
Herpetomonas donovani, *Leishmania donovani*
Hofmann's bacillus, *Corynebacterium pseudodiphtheriticum*
Hog-cholera bacillus, *Salmonella suipestifer*
Holophrya coli *Balantidium coli*
Infantile paralysis germ, *Globoid body*
Influenza bacillus, *Hæmophilus influenzæ*
Klebs-Loeffler bacillus, *Corynebacterium diphtheriæ*
Koch-Weeks bacillus, *Hæmophilus conjunctivitidis*
Laverania malariæ, *Plasmodium falciparum*
Leishman-Donovan body, *Leishmania donovani*
Leishmania furunculosa, *Leishmania tropica*
Leishmania tropica var. americana, *Leishmania americana*
Leprosy bacillus, *Mycobacterium lepræ*
Leptospira interrogans, *Leptospira icteroides*
Leucophrya coli, *Balantidium coli*
Loeschia hystolytica, *Entamœba hystolytica*
Meningococcus, *Neisseria intracellularis*
Microbium typhi exanthematici, *Ricketisia prowazeki*
Micrococcus catarrhalis, *Neisseria catarrhalis*
Micrococcus melitensis, *Alcaligines melitensis*
Micrococcus scarlatinosus, *Streptococcus scarlatinæ*
Micrococcus tetragenus, *Staphylococcus tetragenus*
Microspira finkleri, *Vibrio proteus*
Morax-Axenfeld bacillus, *Hæmophilus lacunatus*
Negri bodies, *Neuroryctes hydrophobiæ*

Nicolaier bacillus, *Clostridium tetani*
Nocardia bovis, *Actinomyces bovis*
Oidium albicans, *Monilia albicans*
Oidium schoenleinii, *Achorion schoenleinii*
Oidium tonsurans, *Microsporon audouini*
Oospora bovis, *Actinomyces bovis*

Welch's gas bacillus, *Clostridium welchii*

Name	Synonyms	Morphology	Staining	Culture	Pathogenicity	Mode of infection
Achorion schoenleinii...	Oidium schoenleinii, Oospora porriginis.	Mycelium and spores irregularly arranged and of varying size, forming characteristic yellow crateriform or saucer-like crusts.	.....	Grows moderately well on various media (see Trichophyton), producing colonies of a tough texture with yellowish white fluffy surface.	Favus.	Direct or indirect contagion.
Actinomyces bovis.....	Nocardia bovis, Discomyces bovis, Cladothrix actinomyces, Oospora bovis, Ray fungus.	A pleomorphic streptothrix, occurring as cocci, filaments, and club-shaped organisms forming a felted mass. Small yellow granules, consisting of masses of mycelium are seen in the pus.	Filaments and cocci are Gram-positive, but the peripheral clubs stain best in carbol fuchsin and picric acid.	Grows well on potato and glycerin-agar, except that the clubs are not then formed; grows both aerobically and anaerobically.	Actinomycosis in man or animals. The disease is not produced by inoculation, and the pathogenicity of the microorganism has been doubted.	Manner of infection not definitely determined.
Alcaligines abortus.. ... (This and the following organism are closely related and are believed by many to be identical.)	Bacillus abortus, Bacterium abortus, Brucella abortus, Bang's baciilus.	A very small ovoid or rod-shaped, non-motile organism.	Gram-negative, stains with the usual aniline dyes, methylene blue, Leishman, or Giemsa.	Grows rather slowly, best in an agar-gelatin serum or meat infusion; on potato the colonies resemble those of *A. melitensis*.	Causes abortion in cattle, but in man a disease closely resembling, if not indentical with, undulant fever.	Transmitted to man in the milk of infected cows.
Alcaligines melitensis...	Brucella melitensis, Bacillus melitensis, Micrococcus melitensis, Bacterium melitense.	A very minute coccus or ovoid bacillus, non-motile, non-sporing, occurring singly or in pairs, seldom in chains.	Gram-negative, stains well with fuchsin, methylene-blue, and other aniline dyes.	Grows slowly, forming round, slightly elevated, whitish colonies on solid media; produces turbidity and a flocculent sediment in broth. Aerobic and facultatively anaerobic.	Undulant, or Malta, fever.	Milk of infected goats.
Aspergillus flavescens....	Other species similar in morphology, culture, and pathogenicity, varying chiefly in color, are A. niger, A. glaucus, and A. albus.	Mycelial filaments more or less ramified, the hyphæ terminating in ovoid bodies with numerous sterigmata supporting chains of roundish conidia.	.....	Grows readily on various media, either arid or alkaline, especially those containing sugar. The colonies are greenish in color. The optimum temperature is 98° or 99° F.	Aspergillosis, less common in man than *A. fumigatus;* not infrequently a cause of otomycosis.	Air-borne, or by direct contact.
Aspergillus fumigatus...		Similar to *A. flavescens* but with finer fructification.	....	Grows under the same conditions as the other species of Aspergillus. Liquifies gelatin. On solid media the colonies are smoky or ashy-gray if the medium is alkaline, greenish on acid media.	A very common cause of aspergillosis in man, the most serious forms being the pulmonary and splenic.	Air-borne or by direct contact.
Aspergillus pictor.....	Trichophyton pictor.	The morphology in the same as that of other species of Aspergillus	.....	Grows readily on the various media favorable to the other species. The color of the colonies varies somewhat with different media.	The violet type of pinta.	Air-borne or by direct contact.

Name	Synonyms	Morphology	Staining	Culture	Pathogenicity	Mode of infection
Bacillus anthracis.....	Anthrax bacillus, drumstick bacillus.	Non-motile rods often joined in long threads matted together; large oval spores are abundant; capsule continuous over each chain.	Stains readily in the ordinary aniline dyes. Gram-positive.	In gelatine cultures the medium is liquefied and the white colony sinks to the bottom. On agar and in broth there is a felt-like growth. On potato a pasty white layer forms. Aerobic, facultatively anaerobic.	Anthrax, malignant pustule.	Hair, wool, and hides from infected animals carry the spores; transmission from animal to man by some suctorial insect seems possible.
Balantidium coli.....	Paramœcium coli, Leucophrya coli, Holophrya coli, Plagiostoma coli.	A large ameboid organism, oval in shape, more or less pointed anteriorly, with many parallel rows of cilia, motile; on leaving its normal habitat in the large intestine of the pig it becomes encysted.	On account of the large size (even up to 0.2 m. in length and 0.07 in breadth) it can be readily seen without staining. Can be stained, like the amebas, by Schaudinn's method.	Can be grown in a medium of human serum diluted with saline solution, and kept at or near body temperature.	Mucous colitis.	Infection from the pig through contaminated food and drink.
Bartonella bacilliformis..	.....	Occurs as a slightly curved rod-shaped body, or an oval or pear-shaped organism.	The rods are stained blue by Romanowsky.	Has not been cultivated.	Oroya fever, or Carrion's disease.	
Borrelia* recurrentis...	Spirochæta obermeieri, Spirochæta recurrentis, Borrelia recurrentis, Spironema obermeieri, Spiroschaudinnia recurrentis.	A motile spiral organism of varying length, provided with a terminal flagellum at either end.	Stains faintly in watery aniline dye solutions, but well by Giemsa's method.	Grows in hydrocele fluid containing a piece of fresh rabbit tissue. Anaerobic. Multiplies in cultures by both longitudinal and transverse division.	Relapsing or recurrent fever of Europe, Northern Africa, Central and Southern India, North America, and South America except Columbia and Venezuela.	The most common, if not the only vector is the body louse; the bedbug has been accused, but absolute proof is lacking.
Borrelia vincenti.....	Spironema vincenti, Spirochæta vincenti, Treponema vincenti.	A large but thin spiral organism with open irregular curves; motile, refringent.	Stained, but slowly and with difficulty, by the ordinary methods.	Cultivated anaerobically on a serum-agar medium.	Vincent's angina, in symbiosis with *Fusiformis dentium*.	

* Strains or Species of Borrelia Producing Varieties of Relapsing Fever.

Organism	Habitat	Vectors	Organism	Habitat	Vectors
Borrelia berbera.....	Northern Africa	Ornithodorus tholozeani and O. lahorensis	Borrelia carteri.....	India and Southern Asia	Cimex rotundatus
Borrelia duttoni.....	Central Africa	O. moubata and O. savignyi	Borrelia kochii...	East Africa	Ornithodorus moubata
Borrelia venezuelensis.....	Central America, Colombia and Venezuela	O. venezuelensis and O. talaje	Borrelia novyii.....	North America	Pediculus vestimenti

Name	Synonyms	Morphology	Staining	Culture	Pathogenicity	Mode of infection
Clostridium anthracis symptomatici	Bacillus anthracis symptomatici, Clostridium chauvæi.	Long rods with rounded ends, occurring singly or in pairs; actively motile, flagellated; central or subterminal spores.	Staining with the usual aniline dyes, but very slowly by Gram's method.	Grows at room temperature in the ordinary media, but best in those containing glycerin or glucose; anaerobic.	Symptomatic anthrax, or black-leg, in cattle.	
Clostridium botulinum	Bacillus botulinus, allantiasis bacillus, Van Ermengem's bacillus.	Large straight rods with rounded ends; slightly mobile; occurring singly or in short chains; produces oval spores.	Stained readily by the ordinary dyes. Gram-positive.	Grows well on the ordinary media, best with the addition of glucose and at body temperature or a little below; anaerobic.	Botulism.	Poison is contained in raw ham or sausages, or in canned fruits and vegetables.
Clostridium histolyticum	Bacillus histolyticus.	Straight or slightly curved rods, usually in pairs or sometimes short chains; motile; terminal or subterminal spores; no capsule.	Gram-positive in young cultures, but Gram-negative in old ones.	Grows well in the usual media anaerobically; in milk causes fine clotting, the clots being digested later, as the organism is markedly proteolytic.	Causes necrosis and gangrene in association with allied organisms.	Wound infection.
Clostridium œdematiens	Bacillus œdematiens.	Resembles somewhat the Welch bacillus; is flagellated, but not actively motile; oval spores, but no capsule.	Gram-positive in fresh cultures, but later may become Gram-negative.	Is cultivated with some difficulty on the usual laboratory culture media; is an obligate anaerobe.	Gangrenous edema; gas formation and necrosis are less marked than in Clostridium welchii infections.	Wound infection.
Clostridium œdematis-maligni	Vibrion septique, Bacillus œdematis maligni.	Straight or slightly curved rods, occurring singly, in pairs, or in chains; feebly motile; not encapsulated; oval spores; hemolytic.	Stains readily; Gram-positive in fresh cultures but may become Gram-negative in old ones.	Anaerobic, facultatively aerobic. Easily cultivated, cultures in milk resembling somewhat those of Clostridium welchii.	Gas gangrene; malignant edema in man; braxy or blackleg in sheep.	Infection in man occurs through wounds.
Clostridium sporogenes	Bacillus sporogenes.	Motile, non-capsulated rods, occurring singly or in pairs, with oval central or subterminal spores.	Gram-positive in young cultures, but often changing to Gram-negative in old ones.	Grows well anaerobically and sometimes aerobically; in milk, clots are formed which are digested later.	Causes gas-gangrene in conjunction with allied organisms, seeming to intensify their action.	Wound infection.
Clostridium tetani	Bacillus tetani, Nicolaier bacillus, tetanus bacillus.	Straight rods with rounded ends, often with a terminal spore; slightly motile; occurring singly or in pairs.	Gram-positive. Stains readily with the ordinary aniline dyes.	Is an obligatory anaerobe. Cultures in broth show a fine turbidity with sedimentation; on blood-agar hemolysis occurs.	Tetanus.	Infection occurs in wounds, especially deeply penetrating wounds, contaminated with richly cultivated soil.
Clostridium welchii	Bacillus welchii, B. perfringens, B. aerogenes capsulatus, B. enteritidis sporogenes, Clostridium aerogenes capsulatum.	Large rods with square-cut ends; non-motile; small oval spores, not numerous; encapsulated in the tissues, but normally not so in cultures; hemolytic.	Gram-positive.	Grows characteristically in whole milk, first clotting the casein and then breaking it up, with gas formation; anaerobic, gas-forming, saccharolytic, but not proteolytic.	Gas-gangrene, with tissue necrosis, hemorrhagic edema, and gas-formation.	Infection occurs through wounds.
Corynebacterium diphtheriæ	Bacillus diphtheriæ, Klebs-Loeffler bacillus, diphtheria bacillus.	Non-motile straight or slightly curved rods, pleomorphous.	Stain irregularly, showing beading by methylene blue and blue-black polar granules by Neisser's method. Gram-positive.	Cultivated in Loeffler's medium with the production of opaque white pin-head sized colonies; in broth a clumpy sediment forms.	Diphtheria.	Carriers, milk, droplet infection.

Name	Synonyms	Morphology	Staining	Culture	Pathogenicity	Mode of infection
Corynebacterium pseudodiphtheriticum	Corynebacterium hofmannii; pseudodiphtheria bacillus, Hofmann's bacillus.	An ovoid rod-shaped organism, somewhat shorter than the diphtheria bacillus.	When stained by Loeffler's methylene blue, there may be an unstained band in the middle. Gram-positive.	Grows aerobically on the ordinary media, showing larger and more opaque colonies than the diphtheria bacillus; grown in milk or glucose media an alkaline reaction is produced.	Sorethroat (?). Is often found in non-diphtheritic throats.	Mediate infection, droplet or by soiled handkerchiefs.
Corynebacterium xerosis	Bacillus xerosis.	A so-called diphtheroid bacillus, resembling the diphtheria bacillus morphologically.	Gram-positive, stains like the diphtheria organism save that it seldom shows polar staining.	Grows well, but slowly, on serum, and with apparent difficulty on agar; the colonies have irregular margins.	Conjunctivitis (?); or it may be merely a commensal, being found occasionally on the healthy conjunctiva.	
Councilmania dissimilis	.....	Resembles Entamœba hystolytica except that the nucleus in the anaphase has eight chromosomes instead of six.	Is stained with iron-hæmatoxylin in Schaudinn's fluid.	Grows well in serum, egg-albumin, and egg-blood media.	Amebic dysentery.	Ingested with the food and drink.
Councilmania tenuis	Entamœba tenuis.	Smaller than Entamœba hystolytica, but otherwise resembles it.	Stains rather faintly.	Grows in the media suitable for other amebas.	Infection not uncommon, but pathogenicity not determined.	Ingested with food and drink.
Cytoryctes variolæ (Cytoryctes vaccinіæ)	Guarnieri bodies.	Round or oval bodies found in the epithelial cells in the lesions of smallpox.	.....	.....	Smallpox (and cowpox?).	.....
Dermacentroxenus rickettsi	Rickettsia rickettsi.	Pleomorphous, or two distinct organisms—one rod-shaped, the other a diplococcal lanceolate body.	Stained readily in Giemsa.	May be cultivated in the tissue-plasma of the guinea-pig testis, then assuming filamentous forms.	Rocky Mountain spotted fever.	Transmitted by the bite of two ticks—*Dermacenter venustus* and *D. maturatus*.
Dialister pneumosintes	Bacterium pneumosintes.	A very minute short rod or coccus, occurring singly, in pairs, or in short chains; filter-passing.	Stains best with methylene blue. Gram-negative.	Grows in Smith-Noguchi medium and on blood-agar obligatorily anaerobic.	Influenza (?); is found in the nasal secretions early in the disease; not found in healthy persons or in ordinary coryza.	Probably by droplet infection, or soiled handkerchiefs.
Diplococcus mucosus	Streptococcus mucosus, Pneumococcus mucosus, Streptococcus capsulatus, type III pneumococcus.	Round or oval cocci of variable size, occurring in pairs or short chains, encapsulated.	Stain in the ordinary aniline dyes, but sometimes faintly owing to the viscid capsule; the latter can be shown by the methods of Hiss and others.	Grows readily in the ordinary culture media at body temperature.	Pneumonia, type III, the most fatal form; also certain cases of sinuitis, otitis media, etc.	
Diplococcus pneumoniæ (See also Diplococcus mucosus)	Streptococcus pneumoniæ, Micrococcus pneumoniæ, pneumococcus.	Oval or lance-shaped cocci, usually in pairs but occasionally single or in chains of 4 to 6 individuals; encapsulated, non-motile.	Stains readily in the ordinary aniline dyes. Gram positive.	Cultivated with some difficulty, best in media with glucose, blood, or serum; aerobic, facultatively anaerobic.	Acute lobar pneumonia, types I and II, comprising from 65 to 70 per cent. of all cases, those of type II being the more serious.	Acquired through droplet infection from the sick (and also carriers?).

Name	Synonyms	Morphology	Staining	Culture	Pathogenicity	Mode of infection
Eberthella typhi.....	Bacillus typhosus, Eberth-Gaffky bacillus, typhoid bacillus	Pleomorphous, motile, flagellated rods or filaments; non-sporing.	Gram-negative.	Grows well on ordinary media, colonies bluish gray or white, circular with crenated edges; in broth there is a uniform turbidity; aerobic, facultatively anaerobic.	Typhoid fever.	Food and drink contaminated by flies and other insects. Carriers.
Endodermophyton tropicale	Trichophyton concentricum, and other species of Trichophyton.	Occurs in the lesion as a felting of mycelial threads; it is closely related botanically to *Achorion schoenleinii.*	....	Cultivated first in glucose broth tubes and later on 4 per cent. glucose agar, the colonies being of a light amber color and wrinkled.	Tinea imbricata.	Contagion.
Entamœba histolytica ...	Endamœba histolytica, the dysentery amœba.	A clear transparent body, 3 to 5 times the diameter of a red blood cell, of a greenish tint, showing ameboid movements: it sometimes has an excentric nucleus.	Can be stained in liquid preparations after Schaudinn's method, showing a granular endoplasm surrounded by a clear ectoplasm.	Not successfully cultured, the organisms dying within a few hours after leaving the intestine; when passed normally they are in cystic forms which hatch out in the intestine of the new host.	Amebic dysentery and hepatitis or abscess of the liver.	Infection occurs through the ingestion of food or water contaminated by the dejections of patients or of healthy carriers (sometimes called "passers").
Epidermophyton cruris..	Epidermophyton inguinalis, Trycophyton castellani.	Straight mycelial tubes, rectangular in shape and often branching; large roundish spores, usually found singly and seldom if ever in clusters.	.....	Grows slowly on nutrient agar containing peptone and mannite. The colonies are first lemon-yellow later turning to white.	Tinea cruris, tinea tropicalis, dhobi itch.	Apparently not inoculable, yet is evidently contagious.
Escherichia coli.....	Bacillus coli, B. coli communis, colon bacillus.	Rod-shaped, motile, flagellated organisms, varying greatly in length.	Stained readily by the ordinary aniline dyes. Gram-negative.	Aerobic, facultatively anaerobic, growing on all the ordinary media; indol occurs in broth cultures.	Saprophytic in the intestine; parenterally pyogenic causing suppurative inflammation in various organs and tissues.	
Flavobacterium pseudomallei	Pfeifferella pseudomallei, Bacterium whitmori.	A small rodlike body, motile, very closely resembling *Pfeifferella mallei.*	Gram-negative.	Grow readily on glycerin agar, the colonies being wrinkled; on salt agar the growth looks like white paint.	Melioidosis or Stanton's disease.	
Fusiformis acnes.....	Bacillus acnes, acne bacillus.	Morphologically it resembles *Corynebacterium pseudodiphtheriticum*, or Hofmann's bacillus.	Stains rarely in the ordinary dyes. Gram-positive.	Grows best anaerobically on glucose agar, showing raised grayish-white colonies; is also a facultative aerobe.	Acne (?), seborrhea (?); it is usually found in symbiosis with *Staphylococcus albus* or *aureus.*	
Fusiformis dentium.....	Bacillus fusiformis, fusiformis vincenti.	Straight or slightly curved rods, thick in the center and tapering sharply to either end.	Stain with difficulty, best in carbol-fuchsin; the central portion often refuses the stain.	Cultivated anaerobically in media which contain human serum.	Vincent's angina in symbiosis with *Borrelia vincenti.*	Possibly by droplet infection or indirectly by soiled handkerchiefs or napkins

Name	Synonyms	Morphology	Staining	Culture	Pathogenicity	Mode of infection
"Globoid body"	.....	Extremely minute, filterable cocci occurring in pairs, short chains, or masses; non-motile.	Stain best by Giemsa's method; feebly Gram-positive.	Noguchi's technique in a semisolid mixture of agar and hydrocele fluid containing a bit of rabbit tissue; first an opalescent haze forms and later a sedimentation of the bodies occurs.	Poliomyelitis, or infantile paralysis (?).	Direct or indirect contagion from the sick or carriers.
Hæmophilus conjunctivitidis	Koch-Weeks bacillus Bacillus of conjunctivitis.	Small rods with rounded ends, resembling the influenza bacillus, but proportionally more slender, sporeless.	Do not stain readily, best with Loeffler's methylene blue or carbol-fuchsin; sometimes show polar staining. Gram-negative.	Grow best in moist and slightly alkaline peptone-agar, or in a mixture of glycerin, agar, and ascitic fluid at body temperature.	Infective conjunctivitis, "pink-eye."	
Hæmophilus ducreyii	Ducrey's bacillus of soft chancre.	Medium-sized bacillus, occasionally single but usually in chains of 5 to 20 individuals.	Gram negative. Polar staining common.	Cultivated with some difficulty, best on blood-agar, but not at all on gelatin or plain agar; hemolysis is evident in blood-agar cultures.	Chancroid, soft chancre.	Contagion.
Hæmophilus influenzæ	Pfeiffer's bacillus, influenza bacillus.	Extremely minute rods, rather thick in proportion to their length, occurring singly, in pairs, or in chains of 3 or 4 organisms.	Stain with difficulty with the usual aniline dyes, best with carbol fuchsin or Loeffler's methylene blue; ends stain more deeply than the central portion. Gram-negative.	Grows best in blood-agar, strictly aerobically, in cultures the organism is pleomorphous, producing short bacillary or filamentous forms; a faint white sedimentation occurs in blood-broth.	Influenza (?).	
Hæmophilus lacunatus	Bacillus of chronic conjunctivitis, Bacillus of Morax-Axenfeld, Diplobacillus of Morax.	Rod-shaped organism of small but not minute size; non-motile.	Stains well in dilute carbol-fuchsin.	Grows only in media containing blood or serum; colonies produce lacunæ on the surface of the medium.	Subacute or chronic conjunctivitis.	
Hæmophilus pertussis	Bacillus pertussis, Bacillus tussis convulsivæ, Bordet-Gengou bacillus.	Minute non-motile short rods, sometimes ovoid in shape, occurring singly or sometimes in pairs; sporeless.	Stained, but sometimes with difficulty, in methylene blue or in toluidin blue.	Grows readily on a blood-agar medium, forming dirty white hemolytic colonies; aerobic.	Whooping-cough (?).	Probably by droplet infection.
Klebsiella pneumoniæ	Bacterium pneumoniæ, Bacillus mucosus capsulatus; Bacterium mucosum capsulatum, Friedländer's bacillus, pneumobacillus.	Pleomorphous; short rods, nearly coccal in appearance, occurring singly or in pairs, rarely in short chains; non-motile, encapsuled. sporeless.	Gram-negative.	Grow readily on the usual media; in broth it produces turbidity and a slimy sediment; on agar moist light gray or white colonies. Aerobic, facultatively anaerobic.	Lobar and catarrhal pneumonia—rare but severe; sinusitis, otitis media, bronchitis.	Droplet infection, and handkerchiefs soiled with sputum.
Klebsiella rhinoscleromatis	Bacillus rhinoscleromatis, Bacterium rhinoscleromatis, Bacterium ozœnæ (?).	A short capsulated rod-like organism quite closely resembling morphologically the Friedländer bacillus.	Gram-negative.	Grows freely on the ordinary media, the colonies resembling those of Friedländer's bacillus, but the fermentative actions are different.	Rhinoscleroma; ozena?	Nasal secretions?

Name	Synonyms	Morphology	Staining	Culture	Pathogenicity	Mode of infection
Leishmania americana	Leishmania tropica, var. americana, Leishmania braziliensis.	Morphology identical with that of *L. donovani* or *L. tropica*.	Stained by eosine-methylene blue, after the Leishman method.	Cultures are obtained in the same way as those of *L. donovani*.	Espundia, forest yaws, or naso-pharyneal leishmaniasis.	Possibly transmitted by *Phlebotomus lutzi*, a sand-fly, or by a tabanid (gadfly).
Leishmania donovani	Leishman-Donovan body. Piroplasma donovani, Herpetomonas donovani.	A small oval body multiplying by binary fission. In cultures at a low temperature it increases in size, becoming elongated and developing a flagellum. This may be the form it takes in the insect host.	Stained by Leishman's eosine-methylene blue stain	Grows readily on NNN medium if care is taken to prevent contamination; grows also in citrated blood at a moderately low temperature.	Kala azar, tropical splenomegaly, Dumdum fever.	Transmitted by the tropical (Indian) bedbug *Cimex rotundatus* (?) or the Indian sandfly, *Phlebotomus argentipes* (?).
Leishmania infantum	.....	Indistinguishable morphologically from *L. donovani*.	Stained by the eosine-methylene blue of Leishman.	Grows readily on the NNN medium, but the cultures cannot be differentiated from those of the other species.	Ponos, infantile kala azar.	As dogs, especially in the countries of the Eastern Mediterranean are often infected with *L. infantum*, it is thought the disease may possibly be transmitted by fleas.
Leishmania tropica	Helcosoma tropicum, Leishmania furunculosa, Ovoplasma orientale.	Morphologically almost identical with *L. donovani*.	Stained by the Leishman eosine-methylene blue.	Grows in NNN medium and in citrated blood.	Oriental sore, Biskra button, cutaneous leishmaniasis. It has been suggested that this bears the same relation to kala azar as vaccinia does to smallpox.	Possibly, if not probably, be transmitted by the sand-fly, a species of Phlebotomus.
Leptospira hebdomadis	.....	Morphologically resembles *Leptospira icterohæmorrhagiæ* but differentiation is effected by the serological reactions.	Stainable by the Giemsa or Levaditi method.	Cultivated by the Noguchi method.	Seven-day fever, autumn fever, Sakushu fever.	Said to be transmitted by the bites of field mice which are often carriers of the leptospira.
Leptospira icterohæmorrhagiæ	Spirochæta icterhæmorrhagiæ.	A wavy spirillum, with very fine curves, having terminal hooks instead of flagella; motile.	Stains in Giemsa and by the silver-impregnation method of Levaditi and Fontana.	Cultures can be made on a semisolid mixture of agar and hydrocele fluid.	Infectious jaundice, or Weil's disease.	Occurs in rats; infection in man is caused by food contaminated by the animals' urine or by absorption through the skin from contaminated soil.
Leptospira icteroides	Leptospira interrogans (?).	Morphologically identical, or nearly so, with *Leptospira icterohæmorrhagiæ*.	Stained in the same way as *Leptospira icterohæmorrhagiæ*.	Cultivated in the Noguchi mixture of rabbit's serum and agar.	Was thought to be the cause of yellow fever, but this has been disproved.	
Microsporon audouini	Trichophyton microsporon, Trichophyton tonsurans, Oidium tonsurans.	Branded filaments with numerous terminal spores; in cultures the organism is pleomorphous.	.....	Grows well on glucose- or maltose-agar, forming white colonies with a downy surface.	Ringworm of the scalp in children, tinea tonsurans.	Direct, but occasionally indirect, contagion.

Name	Synonyms	Morphology	Staining	Culture	Pathogenicity	Mode of infection
Monilia albicans.....	Oidium albicans, Saccharomyces albicans, Thrush fungus.	A hyphomycetic fungus of tangled filaments and round or ovoid cells which multiply by budding.	.....	Grows on agar, forming tough, white colonies of yeast-like cells; in liquid cultures both cells and filaments grow; ferments sugar with gas production.	Thrush in children and young adults, occurring as white patches in the mouth and pharynx.	
Monilia psilosis.....	Parasaccharomyces ashfordi.	Yeast-like organisms, showing gemmation, but tending to elongate into filaments.	.....	May be cultivated in carbohydrate solutions, producing acid and gas.	Sprue, psilosis, aphthæ tropicæ (?).	
Mycobacterium avium..	Avian tubercle bacillus.	Morphologically similar to the bovine type.	Staining characteristics resemble those of the human and bovine types.	Growth is much more luxuriant than that of the human and bovine types, and the optimum temperature is much higher. The colonies are lemon colored or yellow rather than grayish.	Avian tuberculosis.	Occasionally, though very rarely, transmitted to man, especially by parrots.
Mycobacterium lepræ...	Bacillus lepræ, leprosy bacillus.	Straight or slightly curved slender rods with pointed, rounded, or club-shaped ends: non-motile, sporeless.	Stains readily with the ordinary aniline dyes. Gram-positive, acid-fast.	Claims of successful cultivation are conflicting and not yet conclusive.	Leprosy.	Probably by direct contagion though possibly also by some insect vector.
Mycobacterium tuberculosis	Bacillus tuberculosis, tubercle bacillus.	Fine straight or slightly curved rods, occurring singly or in pairs, occasionally in clusters; non-motile, sporeless, not encapsulated; pleomorphous in old cultures.	Stains very slowly, unless with heated dyes—warmed carbol-fuchsin is among the best; often shows beaded staining; acid-fast and alcohol-fast.	Grows slowly best on coagulated blood serum or egg media with the addition of glycerin; colonies usually grayish with wrinkled surface.	Human tuberculosis.	Inhalation of dust from dried sputum or of droplets dispersed in talking, coughing, or sneezing; in children also by the ingestion of milk from tuberculous cows.
Mycobacterium tuberculosis (bovis)	Bovine tubercle bacillus.	Resembles closely the human type, but is rather thicker and shorter, and usually more constant in type in cultures.	Staining similar to that of the human type.	Growth on the same media as those used for cultures of the human type, but without glycerin; never luxuriant.	Bovine tuberculosis.	Chi fly through the inhalation of dried dung or eating of grass contaminated with droppings from diseased animals. Conveyed to children in raw milk.
Neisseria catarrhalis....	Micrococcus catarrhalis.	Cocci occurring in pairs or tetrads.	Stains with the usual dyes. Gram-negative.	Grows on the ordinary culture media, best at body temperature, slowly at 45°–50°F., producing whitish colonies.	Acute and chronic affection of the respiratory tract. Pyorrhea alveolaris and other buccal affections.	Droplet infection spread by talking, coughing, and sneezing.
Neisseria gonorrhœæ....	Gonococcus.	A diplococcus, the paired cocci being flat or concave on their opposed sides; non-motile, sporeless.	Stains readily in the ordinary aniline dyes. Gram-negative.	Not easily cultivated, the best medium being blood-agar or serum-agar. Colonies are round with scalloped margins, grayish white and semi-transparent.	Gonorrhea and gonorrheal conjunctivitis.	Direct or indirect contact.

Name	Synonyms	Morphology	Staining	Culture	Pathogenicity	Mode of infection
Neisseria intracellularis.	Diplococcus intracellularis meningitidis, meningococcus.	Small cocci, occurring in pairs or sometimes in tetrads.	Stain with the usual aniline dyes, but best with Loeffler's alkaline methylene blue. Gram-negative.	Grow on Loeffler's medium and glycerin-agar, but best on blood-agar; colonies are round, whitish, and shining and tend to become confluent.	Cerebrospinal meningitis.	
Neuroryctes hydrophobiæ	Negri bodies.	Round, oval, or irregular organisms, varying greatly in size.	Stain pink by Giemsa's or Leishman's dye method.	May be cultivated by the Noguchi method in a semisolid mixture of agar and hydrocele serum containing a bit of rabbit tissue.	Rabies, or hydrophobia (?). It is uncertain whether the Negri body or a filterable virus causes the disease.	Contracted through the bite of a rabid animal or contamination of a wound with the saliva of a rabid animal.
Pasteurella pestis.....	Bacillus pestis, plague bacillus.	Short thick rod with rounded ends, occurring singly or in pairs, or exceptionally in short chains; non-motile, non-sporing, encapsulated.	Gram negative. Stains quite readily with the ordinary dyes; in fresh specimens polar staining is seen.	Grows on the usual media producing small, transparent, sticky colonies; in broth a granular sediment is thrown down; aerobic.	Plague.	Transmitted by rat fleas; the pneumonic form by droplet infection.
Pasteurella tularensis...	Bacterium tularense.	Short rods, sometimes coccoid, which appear in cultures to be surrounded by a capsule.	Stain best, in the tissues, with Giemsa; in smears from cultures stain well by aniline gentian violet.	Grow on egg-yolk medium, also on blood-agar containing a piece of sterile rabbit spleen.	Tularemia. Francis's disease, deer-fly or Pahvant Valley malady.	Transmitted by the deer-fly (*Chrysops discalis*), also from animal to animal by the rabbit louse (*Hæmodipsus ventricosus*).
Pfeifferella mallei.....	Bacillus mallei, glanders bacillus.	Straight or slightly curved rods with rounded ends, non-motile, sporeless.	Stain faintly in the ordinary aniline dyes. Gram-negative.	Grow readily on most of the ordinary media; on potato the growth looks like honey, on agar it is grayish white turning dark with age.	Glanders, farcy, equinia.	Infection occurs through the nasal mucosa and through broken skin in man or animals.
Plasmodium falciparum..	Laverania malariæ, Hæmatozoon falciparum, Hæmamœba immaculata, Plasmodium immaculatum, Plasmodium præcox.	Crescent-shaped bodies, numerous spores (merozoites); pigment granules coarse, very dark or black; young forms extremely active.	Stains well with the Leishman stain.	....	Malignant tertian malaria, or estivoautumnal fever.	Conveyed to man through the "bite" of an anopheline mosquito, in the body of which the organism has passed its sexual cycle.
Plasmodium malariæ....	Oscillaria malariæ, Hæmamœba malariæ.	Round or slightly oval bodies, flagellated bodies, rings, and spores (merozoites); feeble ameboid movements; pigment granules coarse dark brown.	.....	Grows well in Merck's dextrose; at 40°C. the colony forms three layers in the middle one of which the plasmodia grow and multiply.	Quartan malaria.	Transmitted by the "bite" of an infected anopheline mosquito.
Plasmodium vivax.....	Hæmamœba vivax, Hæmamœba laverani.	Pleomorphous, like the other malaria germs, occurring in two cycles, one in man the other in an anopheline mosquito; seen as spherical bodies, flagellated bodies, rings and spores; active ameboid movements; pigment granules fine yellowish brown.	Stains with Leishman's stain also with Jenner's blood stain, hematoxylin and eosin.	Cultivated by Bass's method: 10 cc. aseptically drawn blood from a person with untreated malaria is defibrinated and transferred to a tube containing 0.1 cc. of 50 per cent. solution of glucose.	Mild tertian malaria.	Acquired by inoculation by an infected anopheline mosquito.

Name	Synonyms	Morphology	Staining	Culture	Pathogenicity	Mode of infection
Proteus vulgaris.....	Bacillus proteus.	Pleomorphous, several individuals being seen varying from coccal forms to long filaments; motile, sporeless, non-capsulated.	Stain readily with the ordinary dyes; Gram-negative.	Grow readily on the usual media aerobically or anaerobically; on agar, flat, shining, moist, whitish colonies; in milk a clot is formed which is subsequently digested; in broth, first turbidity then sedimentation.	May be the cause of pyelitis, cystitis, summer diarrhea in children, and delayed healing, with suppuration of wounds.	By direct or indirect contagion.
Pseudomonas aeruginosa	Pseudomonas pyocyaneus, Bacillus pyocyaneus, blue-pus bacillus.	Short rods found singly, in small chains, or more commonly in pairs; motile, sporeless, without capsules.	Gram-negative; stains readily with the usual aniline dyes, methylene blue, and Ziehl's solution; produces two pigments—one blue, the other greenish yellow and fluorescent.	Grows readily on ordinary media at body temperature; aerobic, facultatively anaerobic.	Not markedly pathogenic, but, in rundown conditions, may provoke suppuration in various locations.	
Rickettsia prowazeki....	Bacillus typhi exanthematici, Microbium typhi exanthematici.	Minute diplococcus-like forms, or longer bacillary or filamentous shapes; mobile.	Gram-negative. Stain slowly in Giemsa, the short forms showing red polar staining, th central portion being of a light blue color.	Culturable in guinea-pig's blood serum.	Typhus fever.	Transmitted by the body louse, and possibly the head louse also.
Salmonella aertrycke....	Bacillus aertrycke.	Motile flagellated rods with rounded ends. The organism is believed by some to be identical with *S. suipestifer*.	Gram-negative. In young cultures there is a tendency to polar staining.	Grow readily on the ordinary media, the cultures being foul smelling.	Acute gastroenteritis from food poisoning.	Infected meat or other food.
Salmonella enteritidis...	Bacillus enteritidis, Gärtner's bacillus.	Coccoid and short bacillary forms, motile, sporeless.	Gram-negative. Stain by the ordinary aniline dyes.	Grow on the ordinary media; broth cultures exhibit marked turbidity and throw down a white sediment; on most solid media the colonies are small with smooth, thin or elevated edges.	An occasional source of food (meat) poisoning producing gastroenteritis.	Through infected meat and possibly, though rarely, by direct contagion.
Salmonella hirschfeldii	Bacillus paratyphosus C.	Similar to S. enteritidis.	Similar to S. enteritidis.	Similar to S. enteritidis, but differs in serological reactions.	Paratyphoid C fever.	Same as with the A type.
Salmonella paratyphi....	Bacillus paratyphosus A, paratyphoid A bacillus, Bacterium paratyphosum A.	Small thin rod-shaped organisms, rather thick when cultivated on dextrose agar; motile and flagellated.	Gram-negative. Stain in gentian-violet and other common dyes.	Grow on the usual culture media especially those containing agar, the colonies resembling those of the typhoid bacillus.	Paratyphoid A fever, the form most common in the tropics.	Direct contagion; carriers; indirect contagion by transport of the virus by flies and other insects.
Salmonella schotmülleri	Bacillus paratyphosus B, Paratyphoid B bacillus, Bacterium paratyphosum B.	Rod-shaped organisms, flagellated, actively motile especially in oung cultures.	Gram-negative. Stain in the ordinary aniline dyes.	Grow on the ordinary media, the cultures resembling those of the colon bacillus, but somewhat less dense.	Paratyphoid B fever, the type most common in the temperate zone.	Same as with the A type.

Name	Synonyms	Morphology	Staining	Culture	Pathogenicity	Mode of infection
Salmonella suipestifer...	Bacillus, suipestifer, Bacillus suichloleræ, Swine-plague bacillus, Hog cholera bacillus.	Pleomorphous—coccoid forms, short and larger rod-shaped organisms, flagellated and actively motile.	Gram-negative. Stain readily in carbol-fuchsin, methylene blue, and gentian violet, often showing polar staining in the first of these.	Grow well in all the usual media, especially if neutral or weakly alkaline, at body temperature.	Cause of intestinal disease in certain animals, especially hogs; possibly of food poisoning in man.	
Shigella dysenteriæ.....	Bacillus dysenteriae (Shiga), Shiga's bacillus, Eberthella dysenteriæ	Short, non-motile, spore-less rods with rounded ends.	Gram negative, Stains with the ordinary aniline dyes, showing polar staining with methylene blue or carbol fuchsin.	Grows in the ordinary media, the cultures closely resembling those of the typhoid bacillus.	Bacillary dysentery.	Infection through contaminated food and drink.
Shigella paradysenteriæ.	Bacillus dysenteriæ, (Hiss and Russell) B. dysenteriæ (Flexner), Eberthella paradysenteriæ	Non-motile, non-sporing coccobacillary forms.	Gram-negative. Stains with the usual aniline dyes.	Culture similar to that of the Shiga bacillus, differing in that the paradysentery bacilli, are mannite-fermenting.	Bacillary dysentery of milder form than that caused by the Shiga bacillus.	Infection through contaminated food and drink.
Spirillum minus.....	Spirochæta laverani, Spirochæta muris, Spironema morsus murium, Borrelia morsus-muris.	A comparatively short, rather broad spirillum, with five to ten sharp, regular curves and long terminal flagella.	Stain readily with the ordinary aniline dyes—Giemsa, Ziehl, Loeffler's methylene blue, etc.	Can be cultivated in ascitic fluid containing a piece of sterile rabbit kidney, the column of fluid in the tube being sealed with vaseline.	Rat-bite fever.	Infection occurs, as the name implies, through the bite of an infected rat.
Sporotrichum beurmanni; S. dori; S. schenkii	.....	Occurs in the form of mycelia or of oval spores.	.....	Grows on glucose or maltose agar, producing colonies of at first a light, later of a dark, brown color.	Sporotrichosis of a disseminated gummatous form (*s. beurmanni*), marked by multiple abscesses (*S. dori*), or appearing as a gummatous lymphangitis (*S. schenkii*).	
Staphylococcus aureus.	Staphylococcus pyogenes aureus. *Staphylococcus albus* is morphologically identical, and is practically the same incultures save that it produces no pigment. It is much less virulent than the golden staphylococcus.	Spherical cocci, sometimes a little flattened when in masses; may also occur singly, in pairs, or in short chains; non-motile and spore-less.	Stain readily with the basic aniline dyes; Gram-positive.	Grow readily on the ordinary media at body temperature; on agar the colonies in the presence of oxygen are deep yellow in color, but under anaerobic conditions they are white. In broth there is marked turbidity with later a yellow deposit.	Pustules, boils, and carbuncles, malignant endocarditis, osteomyelitis and other suppurative affections.	
Staphylococcus tetragenus	Micrococcus tetragenus.	Round or oval cocci found in fours, though exceptionally single or in pairs; sometimes encapsulated.	Gram-positive. Stain with the ordinary aniline dyes.	Grow readily on the usual culture media at body temperature; aerobic, facultatively anaerobic. Diplococcal forms are more common than tetrads in cultures.	Pulmonary abscesses, empyema, cervical adenitis and other suppurative affections in the mouth and on the skin.	

Name	Synonyms	Morphology	Staining	Culture	Pathogenicity	Mode of infection
Streptococcus cardio-arthritidis	Streptococcus rheumaticus (?).	Cocci occurring in short chains, non-motile, sporeless, without capsule or flagella.	Stain readily with the ordinary aniline dyes.	In broth there is turbidity with sedimentation later. On blood-agar colonies are opaque and red-brown by transmitted, grayish by reflected light non-hemolytic, aerobic.	Rheumatism with frequent cardiac complication.	
Streptococcus erysipelatos	Fehleisen's streptococcus.	Morphology the same as that of the streptococci in general—cocci grouped in chains, the planes of division being parallel.	Stains with all the usual basic aniline dyes. Gram-positive.	Cultures on blood-agar show the zone on decoloration characteristic of the hemolytic streptococci; growth in gelatin is slow.	Erysipelas.	Direct or indirect contagion.
Streptococcus pyogenes	Streptococcus epidemicus. By some regarded as identical with Str. erysipelatos.	Small hemolytic cocci, non-motile, sporeless, usually in short, more rarely long, chains, seldom singly or in pairs.	Stain readily with the ordinary aniline dyes. Gram-positive.	Grow well on any of the usual laboratory media, especially those to which serum has been added; aerobic, facultatively anaerobic.	Cellulitis, purulent inflammation of serous membranes, septic sorethroat, pyemia, erysipelas, puerperal infection.	Spread by direct or indirect contact; contaminated milk may cause septic sorethroat.
Streptococcus scarlatinæ	Micrococcus scarlatinosus, Diplococcus scarlatinæ.	Spherical bacteria in curved chain formation.	Gram-positive. Stain with the ordinary aniline dyes.	Cultures present the characteristics of other hemolytic streptococci; they resemble those of *Str. pyogenes*.	Scarlet fever.	
Streptococcus viridans	*Str. milior*, *Str. salivarius*, and *Str. fæcalis* are sometimes regarded as strains of the same species.	Coccal forms, sometimes more or less elongated, occurring in chains of moderate length, seldom singly or in pairs.	Stain with the ordinary aniline dyes.	Grow on the usual media; the colonies on blood-agar have a greenish color, and are not surrounded by a colorless zone, the organism not being hemolytic.	Dental root-abscesses, septic sorethroat, otitis media, endocarditis; rarely septicemia or puerperal sepsis.	
Treponema pallidum	Spironema pallidum, Spirochæta pallida.	Very thin spiral organism, varying in length and in the number of its curves, motile with a flagellum at either end.	Stained with difficulty by Giemsa or Levaditi, or India ink.	Can be cultivated on a semisolid mixture of agar agar and hydrocele fluid containing a piece of sterile rabbit's testicle or kidney; anaerobic.	Syphilis.	Inoculation occurs by direct or indirect contact.
Treponema pertenue	Spironema pertenue, Spirochæta pertenuis.	Practically identical morphologically with *Treponema pallidum*.	Staining with difficulty, similar to that of *Treponema pallidum*.	Grows on the agar and hydrocele serum mixture of Noguchi.	Yaws, or Frambœsia.	
Trichophyton megalosporon	Trichophyton crateriforme.	Two forms exist—one growing within the hairs (endothrix), the other with the spores outside the hairs (ectothrix).	Stains with fuchsin or by Gram's method.	Grows readily on beer-wort gelatin and on maltose agar, producing white fluffy colonies.	Tinea tonsurans in older children (endothrix); T. barbæ and T. unguium in adults (ectothrix). Athlete's foot.	Direct contact, or intermediate contagion by means of towels, brushes and combs, etc. Athlete's foot.
Trichosporon giganteum	.....	Septated mycelial cylindrical threads; spores of various sizes, possibly ciliated ascospores.	.....	Grows readily on the ordinary culture media, the colonies being of a light brown color.	Piedra.	Popularly believed to be transmitted in hair-oil or by washing the head in contaminated water.

Name	Synonyms	Morphology	Staining	Culture	Pathogenicity	Mode of infection
Trypanosoma cruzi.....	Schizotrypanum cruzi, Brazilian trypanosome.	Two forms—one slender, the other broad—are found in the peripheral blood.	Stained by eosine-methylene blue after Leishman's method.	Grows readily on the NNN medium.	Derrengadera, Chagas's disease, or South American trypanosomiasis.	Transmitted from sick to well by *Conorhinus*, (*Lamus*) *megistus*.
Trypanosoma gambiense	Trypanosoma hominis, Tr. nepveu.	An elongated slender body tapering to a point at either end; an undulating membrane extends nearly the entire length, terminating usually as an anterior flagellum.	Stained by Leishman's eosine-methylene blue.	Can be cultivated on NNN medium, assuming there various forms which often resemble those in the invertebrate host.	African sleeping-sickness, negro lethargy, or tsetse fly disease.	Transmitted by the tsetse fly (*Glossina palpalis*) in both cyclic and mechanical ways.
Trypanosoma rhodesiense	Rhodesian trypanosome.	Morphologically indistinguishable from *Tr. gambiense*, but when passed through the rat there is a shifting of the nuclei in some cases.	Stained, like *Tr. gambiense*, by the Leishman eosine-methylene blue method.	Cultivated on the NNN medium, like the other trypanosomes.	African (Rhodesian) sleeping sickness, tsetse fly disease of Rhodesia.	Transmitted by a tsetse fly (*Glossina morsitans*).
Vibrio comma.....	Comma bacillus, cholera spirillum.	An actively motile spirillum, but in old cultures occurs more frequently in the form of a short rod; no capsule, non-sporing.	Does not readily stain with the ordinary dyes. Gram-negative.	Grows in most of the ordinary media, if alkaline. Agar colonies are round and almost colorless; broth cultures turbid. Indol is present in the cultures. The organism is aerobic.	Cholera.	Water-borne; carriers.
Vibrio finkleri.....	Spirillum of Finkler-Prior.	Resembles the comma vibrio, but is rather larger and thicker.	.....	Grows well in gelatin causing rapid liquefaction; on potato forms yellowish slimy colonies.	Is often found in the stools of cholera infantum and cholera nostras, but whether it is or is not pathogenic has not been satisfactorily determined.	Ingested with the food and drink.

SUPPLEMENT TO STEDMAN'S PRACTICAL MEDICAL DICTIONARY, 12th EDITION

NEW NOMENCLATURE IN LATIN AND ENGLISH

ADOPTED BY THE

ANATOMICAL SOCIETY OF GREAT BRITAIN AND IRELAND

WITH THE

BASLE ANATOMICAL NOMENCLATURE [BNA] EQUIVALENTS

The greater number, if not all, of the anatomical as well as surgical and medical treatises published in Great Britain are adopting the new terminology, and therefore it is hoped that this glossary, published supplementary to the 12th edition of "A Practical Medical Dictionary," will be found useful if not indispensable to students of such works.

THOMAS LATHROP STEDMAN, A.M., M.D.

A

Latin Form of the English Equivalent	*British Anatomical Society's Nomenclature*	*[BNA] Term*
A lamas dentis	Enamel	Substantia adamantina
Adeps renis	Fatty capsule of the kidney	Capsula adiposa (renis)
Aditus ad saccum peritonæi minorem	Opening into the lesser sac of the peritoneum	Foramen epiploicum
Ampulla vasis deferentis	Ampulla of the vas deferens	Ampulla ductus deferentis
Angulus iridocornealis	Iridocorneal angle	Angulus iridis
Annulus inguinalis profundus	Internal abdominal ring	Annulus inguinalis abdominis
Annulus inguinalis superficialis	External abdominal ring	Annulus inguinalis subcutaneus
Annulus ovalis	Oval ring	Limbus fossæ ovalis
Apertura mediana ventriculi quarti	Median aperture of the fourth ventricle	Foramen Magendii
Aperturæ nasi posteriores	Posterior apertures of the nose	Choanæ
Apex vesicæ	Apex of the bladder	Vertex vesicæ
Aponeurosis epicranialis	Epicranial aponeurosis	Galea aponeurotica
Aponeurosis musculi bicipitis	Bicipital aponeurosis	Lacertus fibrosus
Appendix vermiformis	Vermiform appendix	Processus vermiformis
Aquæductus cochleæ	Aqueduct of the cochlea	Ductus perilymphaticı
Aquæductus mesencephali	Aqueduct of the midbrain	Aquæductus cerebri (Sylvii)
Arachnoidea mater encephali	Arachnoid mater of brain	Arachnoidea encephali
Arachnoidea mater spinalis	Spinal arachnoid mater	Arachnoidea spinalis
Arbor vitæ uteri	Arbor vitæ of the uterus	Plicæ palmatæ (uteri)
Arcus palatoglossus	Palatoglossal arch	Arcus glossopalatinus
Arcus palatopharyngeus	Palatopharyngeal arch	Arcus pharyngopalatinus
Arcus palmaris profundus	Deep palmar arch	Arcus volaris profundus
Arcus palpebralis	Palpebral arch	Arcus tarseus
Arcus venosus palmaris	Palmar venous arch	Arcus volaris venosus
Area nucleorum nervi vestibularis	Vestibular area	Area acustica
Arteria acromio-thoracalis	Acromio-thoracic artery	Arteria thoraco-acromialis
A. auditoria interna	Internal auditory artery	A. auditiva interna
A. buccalis	Buccal artery	A. buccinatoria
A. cervicalis transversa	Transverse cervical artery	A. transversa colli
A. colica sinistra inferior	Left inferior colic artery	A. sigmoidea
A. dentalis inferior	Inferior dental artery	A. alveolaris inferior
A. innominata	Innominate artery	A. anonyma
A. intrahyoidea	Intrahyoid artery	Ramus hyoideus
A. musculi cremasteris	Cremasteric artery	A. spermatica externa
A. pulmonalis dextra	Right pulmonary artery	Ramus dexter (a. pulmonalis)
A. pulmonalis sinistra	Left plulmonary artery	Ramus sinister (a. pulmonalis)
A. radialis indicis	Radial artery of the index	A. volaris indicis radialis
A. rectalis inferior	Inferior rectal artery	A. hæmorrhoidalis inferior
A. rectalis superior	Superior rectal artery	A. hæmorrhoidalis superior
A. suprascapularis	Suprascapular artery	A. transversa scapulæ
A. supratrochlearis	Supratrochlear artery	A. frontalis
A. supraatrochlearis	Supratrochlear artery	A. collateralis ulnaris inferior
A. vasis deferentis	Artery of the vas deferens	A. deferentialis

Latin Form of the English Equivalent	*British Anatomical Society's Nomenclature*	*[BNA] Term*
Articulatio tibio-fibularis inferior	Inferior tibio-fibular joint	Syndesmosis tibio-fibularis
Articulationes interphalangeæ	Interphalangeal joints	Articulationes digitorum
Auricula atrii sinistri	Auricle of the left atrium	Auricula sinistra
Auricula	Auricle	Auris

B

Basis encephali	Base of the brain	Basis cerebri
Bronchioli terminales	Terminal bronchioles	Bronchioli respiratorii
Bulbus penis	Bulb of the penis	Bulbus urethræ
Bursa intertendinea tibialis	Tibial intertendinous bursa	Bursa musculi sartorii propria
Bursa musculi obliqui superioris oculi	Bursa of the superior oblique muscle of the eye	Bursa musculi trochlearis
Bursa synovialis	Synovial bursa	Bursa mucosa
Bursa tendinis musculi psoadis majoris	Bursa of the tendon of the psoas magnus muscle	Bursa iliopectinea
Bursa tendinis musculi tricipitis	Bursa of the tendon of the triceps muscle	Bursa subtendinea olecrani

C

Caementum	Dental cement	Substantia ossea
Caliculus opticus	Optic cup	Caliculus ophthalmicus
Canaliculi lacrimales	Lacrimal canaliculi	Ductus lacrimales
Canalis alimentarius	Alimentary canal	Tubus digestorius
Canalis analis	Anal canal	Pars analis recti
Canalis cervicis uteri	Canal of the cervix uteri	Canalis cervicalis uteri
Canalis epididymidis	Canal of the epididymis	Ductus epididymidis
Canalis subsartorialis	Subsartorial canal	Canalis adductorius
Capsula fibrosa (renis)	Fibrous capsule (of the kidney)	Tunica fibrosa (renis)
Capsula hepatobiliosa	Hepatobiliary capsule	Capsula fibrosa (hepatis)
Cartilagines parvæ alæ	Small cartilages of the ala	Cartilagines alares minores
Cartilago nasi inferior	Lower nasal cartilage	Cartilago alaris major
Cartilago nasi superior	Upper nasal cartilage	Cartilago nasi lateralis
Cartilago semilunaris lateralis	Lateral semilunar cartilage	Meniscus lateralis
Cartilago semilunaris medialis	Medial semilunar cartilage	Meniscus medialis
Cartilago subvomerina	Subvomerine cartilage	Cartilago vomeronasalis
Cavum extradurale	Extradural space	Cavum epidurale
Chorda spinalis	Spinal cord	Medulla spinalis
Cisterna sulci lateralis	Cistern of the lateral sulcus	Cisterna fossæ lateralis cerebri
Colon pelvicum	Pelvic colon	Colon sigmoideum
Columna anterior (fornicis)	Anterior pillar (of the fornix)	Columna fornicis
Columna posterior (fornicis)	Posterior pillar (of the fornix)	Crus fornicis
Columnæ albæ chordæ spinalis	White columns of the spinal cord	Funiculi medullæ spinalis
Columnæ anales	Anal columns (Morgagni's)	Columnæ rectales
Connexus interthalamica	Interthalamic commissure	Massa intermedia
Cornua grisea	Grey horns	Columnæ griseæ
Corpus anococcygeum	Anococcygeal body	Ligamentum anococcygeum
Corpus quadrigeminum	Quadrigeminal body	Colliculus
Corpus spongiosum penis	Spongy body of the penis	Corpus cavernosum urethræ
Corpuscula ovalia	Oval corpuscles	Corpuscula tactus
Cortex	Cortex	Substantia corticalis
Crista infundibulo-ventricularis	Infundibulo-ventricular crest	Crista supraventricularis
Crus anterius capsulæ internæ	Anterior crus of the internal capsule	Pars frontalis capsulæ internæ
Crus posterius capsulæ internæ	Posterior crus of the internal capsule	Pars occipitalis capsulæ internæ
Cumulus ovaricus	Ovarian cumulus	Cumulus oophorus

D

Decussatio pedunculorum cerebellarium superiorum	Decussation of the superior cerebellar puduncles	Decussatio brachii conjunctivi
Decussatio sensoria	Sensory decussation	Decussatio lemniscorum
Discus interpubicus	Interpubic disc	Lamina fibrocartilaginica interpubica
Discus opticus	Optic disc	Papilla nervi optici
Ductuli biliferi	Bile ducts	Ductus biliferi
Ductus alveolares (pulmonis)	Alveolar ducts	Ductuli alveolares (pulmonis)
Ductus epoophori	Duct of the epoophoron	Ductus epoophori longitudinalis
Ductus glandulæ bulbourethralis	Duct of the bulbourethral gland	Ductus excretorius (glandulæ cowperi)
Ductus submandibularis	Duct of the submandibular gland	Ductus submaxillaris
Ductus vesiculæ seminalis	Duct of the seminal vesicle	Ductus excretorius (vesiculæ seminalis)

E

Latin Form of the English Equivalent	*British Anatomical Society's Nomenclature*	*[BNA] Term*
Ebur	Dentin	Substantia eburnea
Excavatio utero-vesicalis	Uterovesical pouch	Excavatio vesico-uterina
Extremitas lateralis	Lateral end (of the spleen)	Extremitas inferior (lienis)
Extremitas medialis	Medial end (of the spleen)	Extremitas superior (lienis)

F

Facies superolateralis hæmispherii	Superolateral surface	Facies convexa hæmispherii
Fascia cervicis	Cervical fascia	Fascia colli
Fascia clavipectoralis	Clavipectoral fascia	Fascia coracoclavicularis
Fascia lumbalis	Lumbar fascia	Fascia lumbodorsalis
Fascia musculorum pelvinorum	Fascia of the pelvic muscles	Fascia pelvis
Fascia parotidea	Parotid fascia	Fascia parotidea masseterica
Fascia spermatica interna	Internal spermatic fascia	Tunica vaginalis communis
Fascia viscerum pelvinosum	Fascia of the pelvic viscera	Fascia diaphragmatis pelvis superior
Fasciculus intersegmentalis anterior	Anterior intersegmental tract	Fasciculus anterior proprius
Fasciculus intersegmentalis lateralis	Lateral intersegmental tract	Fasciculus lateralis proprius
Fasciculus mamillo peduncularis	Mamillo-peduncular tract	Fasciculi pedunculo-mamillares
Fasciculus mamillo-thalamicus	Mamillothalamic tract	Fasciculus thalamomamillaris
Fasciculus olivocerebellaris	Olivocerebellar tract	Fibrae cerebello-olivares
Fasciculus semilunaris	Semilunar tract	Comma tract
Fasciculus spino-cerebellaris posterior	Posterior spinocerebellar tract	Fasciculus cerebellospinalis
Fibræ annectentes	Association fibres	Fibræ arcuatæ cerebri
Fibræ itinerantes	Itinerant fibres	Projection fibres
Fibræ pontis transversæ	Transverse fibres of the pons	Fibræ pontis profundæ
Fila communicantia	Communicating filaments	Fila anastomotica
Fissura horizontalis	Horizontal fissure	Sulcus horizontalis cerebelli
Fissura intratonsillaris	Intratonsillar fissura	Fossa supratonsillaris
Fissura ligamenti teretis	Fissure of the round ligament	Fossa umbilicalis (hepatis)
Fissura ligamenti venosi	Fissure of the venous ligament	Fossa ductus venosi
Fissura obliqua	Oblique fissure	Incisura interlobularis
Fissuræ cerebelli	Fissures of the cerebellum	Sulci cerebelli
Folia cerebelli	Cerebellar folia	Gyri cerebelli
Folia linguæ	Lingual folia	Papillæ foliatæ linguæ
Folliculi ovarii	Ovarian follicles	Folliculi oophori
Foramen radicis dentis	Root foramen	Foramen apicis dentis
Formatio reticularis alba	White reticular formation	Substantia reticularis alba
Formatio reticularis grisea	Grey reticular formation	Substantia reticularis grisea
Fossa piriformis	Piriform fossa	Recessus piriformis
Fossa scaphoidea	Scaphoid fossa	Scapha
Fossa terminalis urethræ	Terminal fossa of the urethra	Fossa navicularis urethræ
Fossa vestibuli vaginæ	Vestibular fossa of the vagina	Fossa navicularis (vestibuli vaginæ)

G

Ganglion inferius (vagi)	Lower ganglion (of the vagus)	Ganglion nodosum
Ganglion inferius (nervi glossopharyngei	Lower ganglion (of the glossopharyngeal nerve)	Ganglion petrosum
Ganglion nervi facialis	Ganglion of the facial nerve	Ganglion geniculi
Ganglion nervi trigemini	Ganglion of the trigeminal nerve	Ganglion semilunare
Ganglion submandibulare	Submandibular ganglion	Ganglion submaxillare
Ganglion superius	Upper ganglion	Ganglion jugulare
Genu nervi facialis	Genu (knee) of the facial nerve	Geniculum nervi facialis
Glandula lacrimalis	Lacrimal gland	Glandula lacrimalis superior
Glandula mammaria	Mammary gland	Mamma
Glandula submandibularis	Submandibular gland	Glandula submaxillaris
Glandulæ rectales	Rectal glands	Glandulæ intestinales
Glandulæ sine ductibus	Ductless glands	Glandulæ clausæ
Gyrus dentatus	Dentate gyrus	Fascia dentata hippocampi
Gyrus occipitotemporalis medialis	Medial occipitotemporal gyrus	Gyrus fusiformis
Gyrus paraterminalis	Paraterminal gyrus	Gyrus subcallosus
Gyrus postcentralis	Postcentral gyrus	Gyrus centralis posterior
Gyrus præcentralis	Precentral gyrus	Gyrus centralis anterior

H

Latin Form of the English Equivalent	*British Anatomical Society's Nomenclature*	*[BNA] Term*
Hiatus musculi adductoris magni	Opening in the adducter magnus muscle	Hiatus tendineus (adductorius)
Hiatus saphenus (fasciæ latæ)	Saphenous opening (in the fascia lata)	Fossa ovalis
Hiatus venæ cavæ	Opening (in the diaphragm) for the vena cava	Foramen venæ cavæ
Hymen vaginæ	Vaginal hymen	Hymen (femininus)

I

Impressio gastrica	Gastric impression	Facies gastrica (lienis)
Impressio renalis	Renal impression	Facies renalis (lienis)
Incisura ligamenti teretis (hepatis)	Notch for the ligamentum teres	Incisura umbilicalis (hepatis)
Infundibulum	Infundibulum (of the heart)	Conus arteriosus
Intersectio tendinea	Tendinous intersection	Inscriptio tendinea
Isthmus gyri cinguli	Isthmus of the gyrus cinguli	Isthmus gyri fornicati
Isthmus oropharyngeus	Oropharyngeal isthmus	Isthmus faucium

L

Lamina visceralis	Visceral layer (of the pericardium)	Epicardium
Laminæ albæ (cerebelli)	White laminæ	Laminæ medullares
Ligamenta carpometacarpea palmaria	Palmar carpometacarpal ligaments	Ligamenta carpo-metacarpea volaria
Ligamenta palmæ transversa profunda	Deep transverse palmar ligaments	Ligamenta capitulorum (oss. metacarp.) transversa
Ligamenta cuneonavicularia dorsalia	Dorsal cuneonavicular ligaments	Ligamenta naviculari-cuneiformia dorsalia
Ligamenta cuneonavicularia plantaria	Plantar cuneonavicular ligaments	Ligamenta naviculari-cuneiformia plantaria
Ligamenta intercarpea palmaria	Palmar intercarpal ligaments	Ligamenta intercarpea volaria
Ligamenta metacarpea dorsalia	Dorsal metacarpal ligaments	Ligamenta basium (oss. metacarp.) dorsalia
Ligamenta metacarpea palmaria	Palmar metacarpal ligaments	Ligamenta basium (oss. metacarp.) volaria
Ligamenta metacarpea interossea	Interosseous metacarpal ligaments	Ligamenta basium (oss. metacarp.) interossea
Ligamenta plantæ transversa profunda	Deep transverse plantar ligaments	Ligamenta capitulorum (oss. metatars.) transversa
Ligamenta metatarsea interossea	Intersseous metatarsal ligaments	Ligamenta basium interossea
Ligamentum arcuatum	Arcuate ligament	Arcus lumbocostalis
Ligamentum capitis femoris	Ligament of the head of the femur	Ligamentum teres femoris
Ligamentum genu posterius obliquum	Posterior oblique ligament of the knee	Ligamentum popliteum obliquum
Ligamentum genu arcuatum	Arcuate ligament of the knee	Ligamentum popliteum arcuatum
Ligamentum infundibulo-pelvinum	Infundibulo-pelvic ligament	Ligamentum suspensorium ovarii
Ligamentum ischiofemorale	Ischiofemoral ligament	Ligamentum ischio-capsulare
Ligamentum laterale (carpi)	Lateral ligament (of the wrist)	Ligamentum collaterale carpi radiale
Ligamentum laterale (genu)	Lateral ligament (of the knee)	Ligamentum collaterale fibulare
Ligamentum mediale (genu)	Medial ligament (of the knee)	Ligamentum collaterale tibiale
Ligamentum mediale (artic. cubiti)	Medial ligament (of the elbow joint)	Ligamentum collaterale ulnare
Ligamentum mediale (carpi)	Medial ligament (of the wrist)	Ligamentum collaterale carpi ulnare
Ligamentum palmæ transversum superficiale	Superficial transverse ligament of the palm	Fasciculi transversi
Ligamentum palmare (artic metacarpophalang.)	Palmar ligament (of the metacarpophalangeal joint)	Ligamenta accessoria volaria
Ligamentum plantare (artic. metatarsophalang.)	Plantar ligament (of the metatarsophalangeal joint)	Ligamenta accessoria plantaria
Ligamentum plantare breve	Short plantar ligament	Ligamentum calcaneo-cuboideum plantare
Ligamentum pubofemorale	Pubofemoral ligament	Ligamentum pubocapsulare
Ligamentum pubicum inferius	Inferior pubic ligament	Ligamentum arcuatura inferius
Ligamentum pterygomandibulare	Pterygomandibular ligament	Rhaphe pterygomandibularis
Ligamentum radiocarpeum anterius	Anterior radiocarpal ligament	Ligamentum radiocarpeum volare
Ligamentum radiocarpeum posterius	Posterior radiocarpal ligament	Ligamentum radiocarpeum dorsale
Ligamentum tibiofibulare inferius anterius	Anterior inferior tibiofibular ligament	Ligamentum malleoli lateralis anterius
Ligamentum tibiofibulare inferius posticus	Posterior inferior tibiofibular ligament	Ligamentum malleoli lateralis posterius
Ligamentum vestibulare (laryngis)	Vestibular ligament (of the larynx)	Ligamentum ventriculare (laryngis)

Latin Form of the English Equivalent	*British Anatomical Society's Nomenclature*	*[BNA] Term*
Linea arcuata	Arcuate line	Linea semicircularis
Lobi glandulæ mammæ	Lobes of the mammary gland	Lobi mammæ
Lobi testis	Testicular lobes	Lobuli testis
Lobulus ensiformis	Ensiform lobule	Lobulus semilunaris
Lobulus clivi	Lobule of the clivus	Declive monticuli
Lobulus culmini	Lobule of the culmen	Culmen monticuli
Lobulus folii	Lobule of the folium	Folium vermis
Lobulus lunatus anterior	Anterior lunate lobule	Lobulus quadrangularis
Lobulus tuberis	Lobule of the tuber	Tuber vermis
Lymphoglandula broncho-pulmonalis	Bronchopulmonary lymph gland	Lymphoglandula bronchialis
Lymphoglandulæ colicæ mediæ	Middle colic lymph glands	Lymphoglandulæ mesocolicæ
Lymphoglandulæ gastricæ sinistræ	Left gastric lymph glands	Lymphoglandulæ gastricæ superiores
Lymphoglandulæ gastroepiploicæ dextræ	Right gastroepiploic lymph glands	Lymphoglandulæ gastricæ inferiores
Lymphoglandulæ mammariæ internæ	Internal mammary lymph glands	Lymphoglandulæ sternales
Lymphoglandulæ mastoideæ	Mastoid lymph glands	Lymphoglandulæ auriculares posteriores
Lymphoglandulæ iliacæ internæ	Internal iliac lymph glands	Lymphoglandulæ hypogastricæ
Lymphoglandulæ inguinales profundæ	Deep inguinal lymph glands	Lymphoglandulæ subinguinales superficiales
Lymphoglandulæ innominatæ	Innominate lymph glands	Lymphoglandulæ mediastinales anteriores
Lymphoglandulæ supratrochleares	Supratrochlear lymph glands	Lymphoglandulæ cubitales superficiales

M

Maculæ labyrinthi membranacei	Maculæ of the membranous labyrinth	Maculæ acusticæ
Margo inferior (hepatis)	Inferior margin (of the liver)	Margo anterior (hepatis)
Margo linguæ	Margin of the tongue	Margo lateralis (linguæ)
Margo inferior (lienis)	Inferior margin (of the spleen)	Margo posterior (lienis)
Margo superior (lienis)	Superior margin (of the spleen)	Margo anterior (lienis)
Margo uteri	Margin of the uterus	Margo lateralis (uteri)
Meatus auditorius	Auditory meatus	Meatus acusticus
Mediastinum	Mediastinum	Septum mediastinale
Mediastinum thoracis	Thoracic mediastinum	Cavum mediastinale
Medulla	Medulla	Substantia medullaris
Membrana cricovocalis	Cricovocal membrane	Conus elasticus
Membrana mucosa laryngis	Mucous membrane of the larynx	Tunica mucosa laryngis
Membrana mucosa tympani	Mucous membrane of the tympanum	Tunica mucosa tympani
Membrana perinealis	Perineal membrane	Fascia diaphragmatica urogenitalis inferior
Membranæ intercostales anteriores	Anterior intercostal membranes	Ligamenta intercostalia externa
Membranæ intercostales posteriores	Posterior intercostal membranes	Ligamenta intercostalia interna
Mesenterium appendicis vermiformis	Mesentery of the vermiform appendix	Mesenteriolum processus vermiformis
Mesocolon pelvinum	Pelvic mesocolon	Mesocolon sigmoideum
Musculi interossei palmares	Palmar interosseous muscles	Musculi interossei volares
Musculus bulbospongeosus	Bulbospongeosus muscle	Musculus bulbocavernosus
M. compressor naris	Compressor m. of the nostril	M. nasalis, pars transversa
M. dilator naris	Dilator m. of the nostril	M. nasalis, pars alaris
M. dartos	Dartos muscle	Tunica dartos
M. depressor anguli oris	Depressor of the angle of the mouth	M. triangularis
M. depressor labii inferioris	Depressor of the lower lip	M. quadratus labii inferioris
M. flexor digitorum accessorius	Accessory flexor of the toes	M. quadratus plantæ
M. costalis	Costal muscle	M. iliocostalis dorsi
M. costocervicalis	Costocervical muscle	M. iliocostalia cervicis
M. iliocostocervicalis	Iliocostocervical muscle	M. iliocostalis
M. levator labii superioris	Elevator m. of the upper lip	Caput infraorbitale m. quadrati labii superioris
M. levator labii superioris alæque nasi	Elevator m. of the upper lip and ala of the nose	Caput angulare m. quadrati labii superioris
M. levator anguli oris	Elevator m. of the angle of the mouth	M. caninus
M. levator palati	Elevator m. of the palate	M. levator veli palatini
M. longissimus thoracis	Longest m. of the thorax	M. longissimus dorsi
M. longus cervicis	Long m. of the neck	M. longus colli
M. occipitofrontalis	Occipitofrontal muscle	M. epicranius
M. palatoglossus	Palatoglossal muscle	M. glossopalatinus
M. palatopharyngeus	Palatopharyngeus muscle	M. pharyngopalatinus
M. pterygoideus externus	External pteryoid m.	M. pterygoideus lateralis
M. pterygoideus internus	Internal pterygoid muscle	M. pterygoideus medialis
M. spinalis thoracis	Spinal muscle of the thorax	M. spinalis dorsi
M. semispinalis thoracis	Semispinal m. of the thorax	M. semispinalis dorsi
M. sternocostalis	Sternocostal muscle	M. transversus thoracis

Latin Form of the English Equivalent	*British Anatomical Society's Nomenclature*	*[BNA] Term*
M. tensor palati	Tensor m. of the palate	M. tensor veli palatini
M. zygomaticus major	Larger zygomatic muscle	M. zygomaticus
M. zygomaticus minor	Lesser zygomatic muscle	Caput zygomaticum m. quadrati labii superioris

N

Nervi dentales superiores posteriores	Posterior superior dental nerves	Rami alveolares superiores posteriores
Nervi digitales palmares	Palmar digital nerves	Nervi digitales volares communes

O

Operculum frontoparietale	Frontoparietal operculum	Pars parietalis operculi
Operculum orbitale	Orbital operculum	Pars frontalis operculi
Operculum temporale	Temporal operculum	Pars temporalis operculi
Orificium (tricuspidum) atrioventriculare dextrum	Right atrioventricular (tricuspid) orifice	Ostium venosum
Orificium (mitrale) atrioventriculare sinistrum	Left atrioventricular (mitral) orifice	Ostium venosum
Orificium trunci pulmonaris	Pulmonary orifice	Ostium arteriosum
Orificium aortæ	Aortic orifice	Ostium arteriosum
Os uteri externum	External os uteri	Orificium externum uteri
Os uteri internum	Internal os uteri	Orificium internum uteri
Ostium pelvinum tubæ uterinæ	Pelvic opening of the uterine (Fallopian) tube	Ostium abdominale tubæ uterinæ
Ovulum	Ovule	Ovum

P

Papilla sublingualis	Sublingual papilla	Caruncula sublingualis
Paries anterior (tympani)	Anterior wall (of the tympanum)	Paries carotica
Paries lateralis (tympani)	Lateral wall (of the tympanum)	Paries membranacea
Paries medialis (tympani)	Medial wall (of the tympanum)	Paries labyrinthica
Paries posterior (tympani)	Posterior wall (of the tympanum)	Paries mastoidea
Pars anterior lobuli parietalis inferior	Anterior portion of the inferior parietal lobule	Gyrus supramarginalis
Pars conoidea	Conoid part	Ligamentum conoideum
Pars lumbalis systematis sympathici	Lumbar portion of the sympathetic system	Pars abdominalis systematis sympathici
Pars media lobuli parietalis inferioris	Middle portion of the inferior parietal lobule	Gyrus angularis
Pars mobilis septi nasi	Movable portion of the septum nasi	Septum mobile nasi
Pars ocularis (conjunctivæ)	Ocular part (of the conjunctiva)	Tunica conjunctiva bulbi
Pars olfactoria	Olfactory part	Pars anterior (commissura anterior)
Pars palbebralis (conjunctivæ)	Palpebral part (of the conjunctiva)	Tunica conjunctiva palpebrarum
Pars pectinea	Pectineal portion	Ligamentum lacunare
Pars posterior (gyri frontalis inferioris)	Posterior portion (of the inferior frontal gyrus)	Pars opercularis (gyri frontalis inferioris)
Pars prima (duodeni)	First part (of the duodenum)	Pars superior (duodeni)
Pars quarta (duodeni)	Fourth part (of the duodenum)	Pars ascendens
Pars secunda (duodeni)	Second part (of the duodenum)	Pars descendens
Pars spongiosa (urethræ)	Spongy portion (of the urethra)	Pars cavernosa (urethræ)
Pars superficialis retinaculi	Superficial portion (of the annular ligament)	Ligamentum carpi volare
Pars tertia (duodeni)	Third part (of the duodenum)	Pars horizontalis (duodeni)
Pars trapezoidea	Trapezoid portion	Ligamentum trapezoideum
Pars vertebralis (diaphragmatis)	Vertebral part of the diaphragm	Pars lumbalis (diaphragmatis)
Pedunculus cerebellaris inferior	Inferior cerebellar peduncle	Corpus restiforme
Pedunculus cerebellaris medius	Middle cerebellar peduncle	Brachium pontis
Pedunculus cerebellaris superior	Superior cerebellar peduncle	Brachium conjunctivum
Pelvis ureteris	Pelvis of the ureter	Pelvis renalis
Pes hippocampi	Foot of the hippocampus	Digitationnes hippocampi
Pleura cervicalis	Cervical pleura	Cupula pleuræ
Plexus venosus prostaticus	Venous plexus of the prostate	Plexus pudendalis
Plica arteriæ epigastricæ	Fold of the epigastric artery	Plica epigastrica
Plica horizontalis recti	Horizontal fold of the rectum	Plica transversalis recti
Plica pharyngo-epiglottica	Pharyngo-epiglottic fold	Plica glosso-epiglottica lateralis
Plica sacro-genitalis	Sacrogenital fold	Plica rectovesicalis

Latin Form of the English Equivalent	*British Anatomical Society's Nomenclature*	*[BNA] Term*
Plica synovialis infrapatellaris	Infrapatellar synovial fold	Plica synovialis patellaris
Plica vestibularis	Vestibular fold	Plica ventricularis
Processus brevis (incudis)	Short process (of the incus)	Crus breve
Processus longus (incudis)	Long process (of the incus)	Crus longum
Processus palpebralis	Palpebral process	Glandula lacrimalis inferior
Processus septalis (nasi)	Septal process (of the nose)	Crus mediale (nasi)
Pyramis (tympani)	Pyramid (of the tympanum)	Eminentia pyramidalis
Pyramis olfactoria	Olfactory pyramid	Trigonum olfactorium

R

Radiatio optica	Optic radiation	Radiatio occipitothalamica
Radix medialis (tractus olfactorii)	Medial root (of the olfactory tract)	Stria medialis
Radix motoria ganglii ciliaris	Motor root of the ciliary ganglion	Radix brevis ganglii ciliaris
Radix motoria (nervi trigemini)	Motor root (of the trigeminal nerve)	Portio minor (nervi trigemini)
Radix sensoria (nervi facialis)	Sensory root (of the facial nerve)	Nervus intermedius
Radix sensoria (nervi trigemini)	Sensory root (of the trigeminal nerve)	Portio major (nervi trigemini)
Radix sympathica ganglii submandibularis	Sympathetic root of the submandibular ganglion	Radix sympathica ganglii submaxillaris
Rami cardiaci (nervi vagi)	Cardiac branches (of the vagus)	Rami cardiaci inferiores (nervi vagi)
Rami communicantes cum ganglio sphenopalatino	Branches communicating with the sphenopalatine ganglion	Nervi sphenopalatini
Rami glandulares	Glandular branches	Rami submaxillares (ganglii submaxillaris)
Rami glutæi (nervi cutanei femoris)	Gluteal branches (of the femoral cutaneous nerves)	Nervi clunium
Rami labiales (nervi ilioinguinalis)	Labial branches (of the ilioinguinal nerve)	Nervi labiales anteriores
Rami labiales (nervi perinei)	Labial branches (of the perineal nerve)	Nervi labiales posteriores
Rami nasales interni (nervi ethmoidalis anterioris)	Internal nasal branches (of the anterior ethmoidal nerve)	Rami nasales anteriores (nervi ethmoidalis anterioris)
Rami pharyngei et laryngei (nervi vagi)	Pharyngeal and laryngeal branches (of the vagus nerve)	Nervus laryngeus inferior
Rami pharyngei ganglii submandibularis	Pharyngeal branches of the submandibulas ganglion	Rami laryngopharyngei ganglii submaxillaris
Rami pulmonales (nervi vagi)	Pulmonary branches (of the vagus)	Rami bronchiales (nervi vagi)
Rami scrotales (nervi ilio-inguinalis)	Scrotal branches (of the ilioinguinal nerve)	Nervi scrotales anteriores
Rami scrotales (nervi perinei)	Scrotal branches (of the perineal nerve)	Nervi scrotales posteriores
Rami terminales (nervi hypoglossi)	Terminal branches (of the hypoglossal nerve)	Rami linguales (nervi hypoglossi)
Ramus cardiacus (ganglii cervicalis inferioris)	Cardiac branch (of the inferior cervical ganglion)	Nervus cardiacus inferior
Ramus cardiacus (ganglii cervicalis medii)	Cardiac branch (of the median cervical ganglion)	Nervus cardiacus medius
Ramus cardiacus (ganglii cervicalis superioris)	Cardiac branch (of the superior cervical ganglion	Nervus cardiacus superior
Ramus colli	Cervical branch	Ramus cervicalis
Ramus communicans	Communicating branch	Ramus anastomoticus
Ramus communicans cum ganglio ciliare	Branch communicating with the ciliary ganglion	Radix longa ganglii ciliaris
Ramus digitalis (nervi tibialis anterioris)	Digital branch (of the anterior tibial nerve)	Nervi digitales dorsales hallucis lateralis digiti secundi medialis
Ramus femoralis nervi genitofemoralis	Femoral branch of the genitofemoral nerve	Nervus lumboinguinalis
Ramus genitalis (nervi genitofemoralis)	Genital branch of the genitofemoral nerve	Nervus spermaticus externus
Ramus macularis inferior	Inferior macular branch	Arteriola (venula) macularis inferior
Ramus macularis superior	Superior macular branch	Arteriola (venula) macularis superior
Ramus medialis (nervi musculocutanei)	Medial branch (of the musculocutaneous nerve)	Nervus cutaneus dorsalis
Ramus mandibularis	Mandibular branch	Ramus marginalis mandibulæ
Ramus meningeus (nervi maxillaris)	Meningeal branch (of the maxillary nerve)	Nervus meningeus (medius)
Ramus nasalis inferior	Inferior nasal branch	Arteriola (venula) nasalis retinæ inferior
Ramus nasalis superior	Superior nasal branch	Arteriola (venula) nasalis retinæ superior
Ramus retinæ medialis	Medial retinal branch	Arteriola venula) retinæ medialis
Ramus temporalis inferior	Inferior temporal branch	Arteriola (venula) temporalis retinæ inferior
Ramus temporalis superior	Superior temporal branch	Arteriola (venula) temporalis retinæ superior

Latin Form of the English Equivalent	*British Anatomical Society's Nomenclature*	*[BNA] Term*
Ramus terminalis superficialis	Superficial terminal branch	Ramus superficialis (nervi ulnaris)
Recessus costodiaphragmaticus	Costodiaphragmatic recess	Sinus phrenicocostalis
Recessus costomediastinalis	Costomediastinal recess	Sinus costomediastinalis
Recessus duodenalis superior	Superior duodenal recess	Recessus duodenojejunalis
Recessus lateralis ventriculi quarti	Lateral recess of the fourth ventricle	Recessus lateralis fossæ rhomboidiæ
Recessus mesocoli pelvini	Recess of the pelvis mesocolon	Recessus intersigmoideus
Recessus pleuræ	Pleural recess	Sinus pleuræ
Recessus sacci peritonæi minoris	Recess of the lesser peritoneal sac	Recessus omentalis
Rete sinuum basilarium	Plexus of the basilar sinuses	Plexus basilaris
Retinaculum tendinum musculorum extensorum	Retinaculum of the tendons of the extensor muscles	Ligamentum carpi dorsale
Retinaculum tendinum musculorum extensorum inferius	Inferior retinaculum of the tendons of the extensor muscles	Ligamentum cruciatum cruris
Retinaculum tendinum musculorum extensorum superius	Superior retinaculum of the tendons of the extensor muscles	Ligamentum transversum cruris
Retinaculum tendinum musculorum flexorum	Retinaculum of the tendons of the flexor muscles (wrist)	Ligamentum carpi transversum
Retinaculum tendinum musculorum flexorum	Retinaculum of the tendons of the flexor muscles (ankle)	Ligamentum laciniatum

S

Sacculi coli	Sacculation of the colon	Haustra coli
Sacculus laryngis	Sacculation of the larynx	Appendix ventriculi laryngis
Saccus peritonæi minor	Lesser sac of the peritoneum	Bursa omentalis
Semen	Semen	Sperma
Septa testis	Septa of the testis	Septula testis
Septum cervicale medianum posterius	Posterior median cervical septum	Septum cervicale intermedium
Septum lucidum	Clear septum	Septum pellucidum
Sinus anales	Anal sinuses	Rectal sinuses
Sinus ethmoidales	Ethmoid sinuses	Cellulæ ethmoidales
Sinus laryngis	Laryngeal sinus	Ventriculus laryngis
Smegma penis	Sebum	Smegma præputii
Solum tympani	Floor of the tympanum	Paries jugularis
Solum ventriculi quarti	Floor of the fourth ventricle	Fossa rhomboidea
Spatia anguli iridocornealis	Spaces of the iridocorneal angle	Spatia iridis
Stratum fibrosum (membranæ tympani)	Fibrous layer (of the drum membrane)	Stratum radiatum
Stratum moleculare	Molecular layer	Stratum cinereum
Stratum spongiosum urethræ	Spongy layer of the urethra	Corpus spongiosum urethræ
Stria habenularis	Habenular stria	Stria medullaris
Striæ auditoriæ	Auditory striæ	Striæ medullares
Substantia alba	White substance	Corpus medullare
Substantia grisea centralis	Central grey substance	Stratum griseum centrale
Sulci paracolici	Paracolic sulci	Recessus paracolici
Sulcus atrioventricularius	Atrioventricular sulcus	Sulcus coronarius
Sulcus calcarinus	Calcarine sulcus	Fissura calcarina
Sulcus collateralis	Collateral sulcus	Fissura collateralis
Sulcus hippocampalis	Hippocampal sulcus	Fissura hippocampi
Sulcus intraventricularis (cordis)	Intraventricular sulcus (of the heart)	Sulcus longitudinalis (cordis)
Sulcus lateralis	Lateral sulcus	Fissura cerebri lateraliis
Sulcus medialis	Medial sulcus	Sulcus nervi oculomotorii
Sulcus occipitotemporalis	Occipitotemporal sulcus	Sulcus temporalis inferior
Sulcus parietooccipitalis	Parietooccipital sulcus	Fissura parietooccipitalis
Sulcus suprasplenialis	Suprasplenial sulcus	Sulcus subparietalis
Sulcus temporalis inferior	Inferior temporal sulcus	Sulcus temporalis medius
Sulcus venæ cavæ (hepatis)	Sulcus of the vena cava	Fossa venæ cavæ (hepatis)
Systema digestorium	Digestive system	Apparatus digestorius
Systema respiratorium	Respiratory system	Apparatus respiratorius
Systema urogenitale	Urogenital system	Apparatus urogenitalis

T

Tarsus palpebræ inferioris	Tarsus of the lower eyelid	Tarsus inferior
Tarsus palpebræ superioris	Tarsus of the upper eyelid	Tarsus superior
Tectum (mesencephali)	Roof (of the midbrain)	Lamina quadrigemina
Tegmen tympani	Roof of the tympanum	Paries tegmentalis
Tela adiposa subcutanea	Subcutaneous fatty tissue	Panniculus adiposus
Tendo centralis (diaphragmatis)	Central tendon (of the diaphragm)	Centrum tendineum (diaphragmatis)
Tendo conjunctus	Conjoined tendon	Falx aponeurotica inguinalis

Latin Form of the English Equivalent	*British Anatomical Society's Nomenclature*	*[BNA] Term*
Tonsilla nasopharyngea	Nasopharyngeal tonsil	Tonsilla pharyngea
Tractus mesencophalicus nervi trigemini	Mesencophalis tract of the trigeminal nerve	Radix descendens nervi trigemini
Trigonum nervi vagi	Trigone of the vagus nerve	Ala cinerea
Truncus mediastinus	Mediastinal trunk (lymphatic)	Truncus broncho-mediastinalis
Truncus pulmonalis	Pulmonary trunk	Arteria pulmonalis
Tuba pharyngotympanica	Pharyngotympanic tube	Tuba auditiva
Tuberculum gracile	Gracile tubercle	Clava
Tubuli epoophori	Tubules of the epoophoron	Ductuli transversi
Tubuli renales convoluti	Convoluted tubes of the kidney	Tubuli renales contorti
Tubuli seminiferi convoluti	Convoluted seminiferous tubules	Tubuli seminiferi contorti
Tunica mucosa	Mucous coat (mucous membrane)	Lamina mucosa
Tunica subserosa tubæ uterinæ	Subserous coat of the uterine tube	Tunica adventitia (tubæ uterinæ)

V

Vagina fascialis bulbi	Fascial sheath of the bulb (eyeball)	Fascia bulbi
Vagina fascialis prostatæ	Fascial sheath of the prostate	Fascia prostatæ
Vaginæ synoviales	Synovial sheaths	Vaginæ mucosæ
Valvula aortæ	Valve of the aorta	Valvulæ semilunares aortæ
Valvula atrioventricularis dextra (tricuspidalis)	Right atrioventricular valve	Valvula tricuspidalis
Valvula atrioventricularis sinistra (mitra is)	Left atrioventricular valve	Valvula mitralis
Valvula iliecolica	Iliecolic valve	Valvula coli
Velum medullare inferius	Inferior medullary velum	Velum medullare posterius
Velum medullare superius	Superior medullary velum	Velum medullare anterius
Vena acromiothoracalis	Acromiothoracic vein	Vena thoracoacromialis
Vena auditoria interna	Internal auditory vein	Vena auditiva interna
Vena cardiaca	Cardiac vein	Vena cordis
Vena cervicalis transversa	Transverse cervical vein	Vena transversa colli
Vena coronaria ventriculi	Corona y vein of the stomach	Vena gastrica sinistra
Vena diploica frontalis	Frontal diploic vein	Vena diploica temporalis
Vena emissaria	Emissary vein	Emissarium
Vena emissaria condylaris anterior	Anterior condylar emissary vein	Rete canalis hypoglossi
Vena iliaca interna	Internal iliac vein	Vena hypogastrica
Vena innominata	Innominate vein	Vena anonyma
Vena pericardiaco-phrenica	Pericardiaco-phrenic vein	Vena phrenica superior
Vena rectalis	Rectal vein	Vena hæmorrhoidalis
Vena saphena brevis	Short saphenous vein	Vena saphena parva
Vena saphena longa	Long saphenous vein	Vena saphena magna
Vena supratrochlearis	Supratrochlear vein	Vena frontalis
Vena thalamostriata	Thalamostriate vein	Vena terminalis
Venæ emissariæ foraminis ovalis	Emissary veins of the foramen ovale	Rete foraminis ovalis
Venæ jejunales et ileæ	Jejunal and ileal veins	Venæ intestinales
Venter frontalis	Frontal belly	Musculus frontalis
Venter occipitalis	Occipital belly	Musculus occipitalis
Vesicula optica	Optic vesicle	Vesicula ophthalmica
Vestigium processus vaginalis	Vestige of the vaginal process	Rudimentum processus vaginalis

Z

Zona cornea unguis	Horny zone of the nail	Stratum corneum unguis
Zona germinativa unguis	Germinative zone of the nail	Stratum germinativum unguis
