STEDMAN'S MEDICAL DICTIONARY

A PRACTICAL

MEDICAL DICTIONARY

OF WORDS USED IN MEDICINE WITH THEIR DERIVATION AND PRONUNCIATION INCLUDING DENTAL, VETERINARY, CHEMICAL, BOTANICAL, ELECTRICAL, LIFE INSURANCE AND OTHER SPECIAL TERMS; ANATOMICAL TABLES OF THE TITLES IN GENERAL USE, THE TERMS SANCTIONED BY THE BASLE ANATOMICAL CONVENTION AND THOSE SUGGESTED BY THE NOMENKLATUR-KOMMISSION; PHARMACEUTICAL PREPARATIONS OFFICIAL IN THE U. S. AND BRITISH PHARMACOPŒIAS AND CONTAINED IN THE NATIONAL FORMULARY, AND COMPREHENSIVE LISTS OF SYNONYMS

BY

THOMAS LATHROP STEDMAN, A. M., M. D.

EDITOR OF THE "TWENTIETH CENTURY PRACTICE OF MEDICINE," OF THE "REFERENCE HANDBOOK OF THE MEDICAL SCIENCES," AND OF "THE NURSE'S MEDICAL LEXICON" FORMERLY EDITOR OF THE "MEDICAL RECORD"

Twelfth, Revised Edition

PREFACE TO THE TWELFTH EDITION

The present edition of "A Practical Medical Dictionary" contains about a thousand new titles, without counting several hundred new sub-titles; that is to say, the prolific medical jargon has grown by an average of more than one new word a day during the past three years.

In this revision are noted all the changes in the British Pharmacopoeia of 1932, and it is interesting to observe that the two Pharmacopoeias, British and United States, are growing closer together in both titles and strengths of the official preparations.

The Committee on Nomenclature of the German Anatomical Society (*Nomenklatur-Kommission*) has recently suggested several changes in, and additions to, the Basle Anatomical Nomenclature [BNA.] The work of the Committee is not yet concluded and consequently no official list has been published. A preliminary report, however, contains quite a number of new terms, most of which, (marked [NK]) have been inserted in this edition for the convenience of readers of contemporary German medical literature in which the new terms are gradually, and sporadically, making way.

The admission of so large a number of new words has necessitated the addition of thirty-three pages to the book, despite the editor's frantic efforts at condensation. For their ready acquiescence in the increase in size of the work and for their courtesy and cooperation the editor would express his gratitude to the publishers.

T. L. S.

August, 1933.

PREFACE TO THE FIRST EDITION

John Hunter once said, "of all things on the face of the earth definitions are the most accursed." Another acute observer, long before the day of the professional critic, exclaimed from the fulness of his vengeful heart, "Oh, that mine enemy would write a book!" Mindful of these sayings and well aware that many may think the lexicological needs of the medical reader are already met, I have nevertheless, for several years, devoted the spare hours of a busy life to the making of a new medical dictionary. In explanation of such temerity, and by way of apology, I may be permitted to give my reasons for undertaking the labor, by noting the special features which a long editorial experience, a personal desire for special information, and the queries of many correspondents have led me to believe are desirable in a work of this nature.

The vocabulary of science is founded mainly upon the Greek and to a lesser extent upon the Latin, but has in any case a Latin form, and this unfortunate conjunction has resulted in many barbaric and cacophonic mixtures, painful to the ear and vexatious to the spirit of any one with a sense of linguistic fitness. If it were possible, a moulding of the language of medicine on pure Greek or Latin forms were most desirable, but the speech of man is wilful and cannot be coerced; at most an attempt can be made to guide it, or to point out what is preferable. It is not the function of a lexicographer to deny the right of citizenship to every word that is not constructed upon strict etymological lines, and it would do little good if he did, but he can indicate the correct terms and throw the weight of whatever authority may be accorded him on the right side. This I have endeavored to do. For example, one who consults this dictionary for a definition of *oophorectomy* will be referred to *oothecotomy* and under that title will find the definition. If, however, a barbarous word is in such common use that it were pedantic to question its right of existence, it will be defined, but the correct term will also be given. For example, *ovariotomy* (of mixed Latin and Greek derivation and therefore deplorable) is defined under that title, but a correct synonym, *oothecotomy* is also given, and the consulter can use the proper term, or can continue in his evil course as he will. Even under *appendicitis*, though with faint hope of the suggestion being adopted, the preferable term, *scolecoiditis*, is indicated.

Especial attention has been paid to synonyms, these being noted under the word defined, and also inserted as main titles with cross reference to the one selected for definition. In this relation attention may be called to the lists in small type, inserted here and there under the English titles, noting the scientific terms for the various conditions associated with the part. If the reader will turn to *abdomen*, *foot*, *hand*, *pain*, *phobia*, *uterus*, and many other titles, he will see, without further explanation, what I have there attempted to accomplish.

A dictionary is not intended for consecutive reading (though some have claimed to find pleasure, and even amusement, in this pursuit) but rather for the acquirement of knowledge or the satisfaction of curiosity with the least expenditure of time and trouble. A work of this kind should therefore afford every facility for such laudable effort, and should not balk it by interrupting the normal alphabetical arrangement with long lists of subtitles or tables breaking the continuity of the pages. Nevertheless, subtitles are sometimes necessary, and tables, as of the arteries, muscles, nerves, etc., cannot be dispensed with. I have endeavored to preserve these essential features, without increasing the difficulty of consultation, by several devices. In the first place the eponymic terms—and their name is legion—have been inserted as main titles; *Addison's disease*, *Bright's disease*, *Camper's angle*, *Cooper's hernia*, *Hutchinson's triad*, *Scarpa's space*, etc., are defined under the proper name, and not under *disease*, *angle*, *hernia*, *triad*, *space*, etc. This arrangement materially shortens the long and confusing lists of subtitles and at the same time affords the opportunity for the insertion of brief biographical details regarding nationality, profession, and dates of birth and death, which have always a human interest and are subjects of a legitimate curiosity. In other cases the qualifying word has been inserted as the main title, but only when this is the more obvious arrangement; *typhoid fever*, for example, is commonly called simply *typhoid*, and it is therefore defined under *typhoid* instead of under *fever*. When there is any doubt as to which word of a compound term would naturally be looked for, a cross reference is given to the main title. In cross references to a compound term, when uncertainty might arise as to the main title, this is indicated by an asterisk (*) appended to one of the words in the term. When the subtitles are many and not eponymic, reference to them has been facilitated by placing them in the form of a table of column width, distinguished by type of smaller size, under the main title, but alphabetically arranged, so that the one wanted will strike the eye at once. The lists of arteries, muscles, nerves, drugs, etc., have been arranged in the same way so as not to interrupt the alphabetical sequence by page-wide tables. These tables, or lists, embrace all the official preparations of the United States Pharmacopœia and the British Pharmacopœia, as well as those of the National Formulary, and also all the anatomical terms, these being placed under the Latin titles, with cross-references from the English names. The tables of weights and measures, comparative thermometrical and barometrical scales, the chemical elements with their symbols and atomic weights, and other tabular data have been placed in the Appendix, where they properly belong, since they are not, strictly speaking, definitions.

The Basle Anatomical Nomenclature, adopted in 1895, has been slow in winning its way in England and America, but is doing so surely and is now generally taught in the medical schools and is found in the anatomical textbooks. All the words sanctioned by the convention are given the preference in this dictionary, and when they differ from the terms formerly in use and still employed by the majority of older writers, they are indicated by the sign [BNA].

Medicine touches other sciences at so many points that the terms relating to them cannot be ignored, even in a purely medical dictionary; accordingly an effort has been made to include definitions of all the chemical, botanical,

dental, and veterinary words which a physician is likely to meet in his reading. The fact that there are many thousand insurance examiners in this country has led me to believe that the definitions of the terms relating to this branch, such as the different forms of insurance, life-tables, policies, risks, etc., would be found useful, and they have therefore been introduced in considerable number.

The sectarian lines which have divided medical practitioners are, happily, gradually fading away. Homeopathic and eclectic physicians no longer ignore the discoveries of modern experimental medicine, but rather are doing their part to advance true science. On the other hand, therapeutists of all schools are learning that there is virtue in homeopathy and isopathy, as well as in enantiopathy and allopathy, that, in fact, there is but one science of medicine, and they are ready to apply any one of these healing principles in suitable cases. Prejudice and antagonism are often based largely upon misunderstanding of terms, and in the effort to remove such misunderstanding and to promote unity among the practitioners of the therapeutic art, I have defined the terms peculiar to homeopathic and eclectic therapeutics.

Balneotherapy does not enjoy the repute in this country and Great Britain that it has on the Continent of Europe; nevertheless references to mineral springs are sufficiently numerous in medical literature to make it desirable to supply certain data regarding them, and it has consequently seemed advisable to include details regarding the composition and the therapeutic indications of the most important spas in Europe and America.

Special attention has been paid to the etymology of the words used in medicine, for nothing aids so much in fixing a definition in one's memory as a knowledge of the formation of the term; therefore the chief sources of our language, Anglo-Saxon, Latin, and Greek, and to a slight extent Arabic, have been indicated under the main titles and, where necessary, under the subtitles as well. In the case of the Greek sources, it has been thought best, after mature deliberation, to give them in Roman letters rather than Greek. This has been rendered advisable because of the deplorable tendency to eliminate Greek from the curriculum of preparatory schools and colleges, with the result that only a small percentage of even well educated physicians of the present day can read the Greek characters. I have therefore yielded to this tendency in the transliteration of the Greek words, but under protest, and I wish to register here the conviction that the elimination of Greek in our schools has done much to barbarize the language of medicine and to render necessary special dictionaries of this science. Some day the pendulum will swing the other way and a new renaissance will once more join culture to knowledge to make the perfect physician. In the transliteration of the Greek words, the gamma (γ) preceding another gamma (γ), a kappa (κ), or a chi (χ) is represented by *n*, which is the sonant value of the gamma in such situations.

In the spelling of medical terms, preference has been given to the simpler forms. In the matter of the elimination of the diphthongs, æ and œ, it is a significant fact that the languages which are the direct descendants of the Latin, especially the Italian and the Spanish, have dropped the *a* and the *o*, while the double vowels have been retained only by the Teutonic languages. It is surely proper to admit that this has been a natural process for those who have used the words from the beginning, and that the daughters of the Latin

A dictionary is not intended for consecutive reading (though some have claimed to find pleasure, and even amusement, in this pursuit) but rather for the acquirement of knowledge or the satisfaction of curiosity with the least expenditure of time and trouble. A work of this kind should therefore afford every facility for such laudable effort, and should not balk it by interrupting the normal alphabetical arrangement with long lists of subtitles or tables breaking the continuity of the pages. Nevertheless, subtitles are sometimes necessary, and tables, as of the arteries, muscles, nerves, etc., cannot be dispensed with. The tables of weights and measures, comparative thermometrical and barometrical scales, the chemical elements with their symbols and atomic weights, and other tabular data have been placed in the Appendix, where they properly belong, since they are not, strictly speaking, definitions.

The Basle Anatomical Nomenclature, adopted in 1895, has been slow in winning its way in England and America, but is doing so surely and is now generally taught in the medical schools and is found in the anatomical textbooks. All the words sanctioned by the convention are given the preference in this dictionary, and when they differ from the terms formerly in use and still employed by the majority of older writers, they are indicated by the sign [BNA].

Medicine touches other sciences at so many points that the terms relating to them cannot be ignored, even in a purely medical dictionary; accordingly an effort has been made to include definitions of all the chemical, botanical,

dental, and veterinary words which a physician is likely to meet in his reading. The fact that there are many thousand insurance examiners in this country has led me to believe that the definitions of the terms relating to this branch, such as the different forms of insurance, life-tables, policies, risks, etc., would be found useful, and they have therefore been introduced in considerable number.

The sectarian lines which have divided medical practitioners are, happily, gradually fading away. Homeopathic and eclectic physicians no longer ignore the discoveries of modern experimental medicine, but rather are doing their part to advance true science. On the other hand, therapeutists of all schools are learning that there is virtue in homeopathy and isopathy, as well as in enantiopathy and allopathy, that, in fact, there is but one science of medicine, and they are ready to apply any one of these healing principles in suitable cases. Prejudice and antagonism are often based largely upon misunderstanding of terms, and in the effort to remove such misunderstanding and to promote unity among the practitioners of the therapeutic art, I have defined the terms peculiar to homeopathic and eclectic therapeutics.

Balneotherapy does not enjoy the repute in this country and Great Britain that it has on the Continent of Europe; nevertheless references to mineral springs are sufficiently numerous in medical literature to make it desirable to supply certain data regarding them, and it has consequently seemed advisable to include details regarding the composition and the therapeutic indications of the most important spas in Europe and America.

Special attention has been paid to the etymology of the words used in medicine, for nothing aids so much in fixing a definition in one's memory as a knowledge of the formation of the term; therefore the chief sources of our language, Anglo-Saxon, Latin, and Greek, and to a slight extent Arabic, have been indicated under the main titles and, where necessary, under the subtitles as well. In the case of the Greek sources, it has been thought best, after mature deliberation, to give them in Roman letters rather than Greek This has been rendered advisable because of the deplorable tendency to eliminate Greek from the curriculum of preparatory schools and colleges, with the result that only a small percentage of even well educated physicians of the present day can read the Greek characters. I have therefore yielded to this tendency in the transliteration of the Greek words, but under protest, and I wish to register here the conviction that the elimination of Greek in our schools has done much to barbarize the language of medicine and to render necessary special dictionaries of this science. Some day the pendulum will swing the other way and a new renaissance will once more join culture to knowledge to make the perfect physician. In the transliteration of the Greek words, the gamma (γ) preceding another gamma (γ), a kappa (κ), or a chi (χ) is represented by *n*, which is the sonant value of the gamma in such situations.

In the spelling of medical terms, preference has been given to the simpler forms. In the matter of the elimination of the diphthongs, æ and œ, it is a significant fact that the languages which are the direct descendants of the Latin, especially the Italian and the Spanish, have dropped the *a* and the *o*, while the double vowels have been retained only by the Teutonic languages. It is surely proper to admit that this has been a natural process for those who have used the words from the beginning, and that the daughters of the Latin

have a finer instinct for the genius of the parent tongue, which even in classical times showed a tendency to drop the diphthongs. In English these words were originally exotic and were adopted with their classical spelling; but even with us, as they became incorporated into the language the unenglish diphthongs were dropped. We write *equal* and *economy* and not *æqual* and *æconomy;* surely *hemorrhage* and *edematous*, and other words of similar derivation, are now legitimate English and should not be spelled *hæmorrhage* and *ædematous*. Those who still cling to the old spellings will, however, find them here given as alternatives. In the spelling of medicinal terms the authority of the Pharmacopœia has been recognized, and the convenient distinction between alkaloids and glucosides, *-ine* for the former and *-in* for the latter, has been retained. The spelling of chemical terms recommended twenty years ago by the American Association for the Advancement of Science (the dropping of *e* in words like *chlorine* and *chloride*) has not been adopted here, for the reason that the chemists themselves are divided in their use of it, many of the Americans and almost all of the English still adhering to the old spelling; moreover the American Chemical Society specifically directs that the ending *-ine* shall always be employed for basic substances, *-in* being used for glucosides, bitter principles, proteins, etc. In words derived from the Greek, the *k* (kappa) is represented by English *c*, especially before a hard vowel. This is in accordance with the genius of the Latin as well as of the English. We write *catalepsy* and *cone*, why then should we write *katabolism* and *leukocyte?* If *karyokinesia*, why not *leukokyte? Leucocyte* is preferable and so is *caryocinesia.**

In writing on medical chemistry, authors are wont, for the sake of brevity, to employ the chemical symbols instead of writing out the name. Not as a mark of approval of this custom, but as an aid to the reader of such articles, who may be rusty in his chemistry, a number of the most common chemical formulæ have been here introduced as main titles with their definitions in ordinary language.

In conclusion, I desire to express my thanks to Dr. Emma E. Walker, who has contributed the balneological titles and many of the dental and veterinary terms, and has rendered great assistance in the laborious collection of biographical data. To my wife I am indebted for help in every step of the undertaking. It were ungrateful to omit an acknowledgment of the generous encouragement and assistance extended to me by the Publishers during all the years this work has been in preparation; without their sympathetic cooperation the difficulties of the task would have been almost insuperable.

T. L. S.

* It is gratifying to record that this objective—the purification of medical orthography—has, after two decades, been nearly attained. When this dictionary was begun in 1908, two similar works already existed. Both, however, were implicit advocates of incorrect spelling. Time alone might have extinguished the heresies, had not the editor of the *Journal* of the American Medical Association been converted to them in 1893, when he began to mar the pages of the *Journal* with them. The *Journal* insisted upon conformity of all contributors to its style, other medical journals fell into line, and it appeared that presently the faulty spelling would become fixed.

In 1916, eight years after the first edition of this dictionary, a revise of the older of the two dictionaries referred to expunged most of the bad spellings of the earlier editions. In 1926, the *Journal* of the American Medical Association quietly restored the *e* to the names of alkaloids and chemical bases. In 1928, under the urging of the editor of the *Journal*, the publishers of the second of the old dictionaries conformed to correct spelling.—*Abstract from Preface to the Eleventh Edition, 1930.*

KEY TO THE PRONUNCIATION.

a at the end of a syllable as a in mate, before a consonant as a in mat.

ă as a in mat.

ā as a in mate.

ah as a in father.

ai as ai in fair.

ar as a in far.

aw as a in fall.

e at the end of a syllable as e in be, before a consonant as e in met.

ĕ as e in met.

ē as e in be.

e as the French eu or the German oe, nearly as e in her.

eh as a in mate, though not so prolonged.

i at the end of a syllable as i in pine, before a consonant as i in pin.

ĭ as i in pin.

ī as i in pine.

o at the end of a syllable as o in note, before a consonant as o in not.

ŏ as o in not.

ō as o in note.

oo as oo in food.

o͝o as oo in foot.

or as o in for.

ow as ow in cow.

oy as oy in boy.

u at the end of a syllable as u in pure, before a consonant as u in bud, before r as u in fur.

ŭ as u in bud.

ū as u in pure.

ü as the French u or the German ü or ue.

dh as th in the.

g hard as in get.

kh a guttural k, as ch in the German bach or Scotch loch.

ṅ as the French nasal n in bon.

th as th in think.

zh as z in azure.

The other consonants as in English

STEDMAN'S

MEDICAL DICTIONARY

A

A. Chemical symbol of the element argon.

a. Abbreviation for accommodation, anode, anterior, and total acidity.

a-, an-. [G. *alpha* privative.] A prefix conveying a negative meaning—without, not, away from, -less, un-.

āa, ää [abbr. of G. *ana*, a distributive preposition.] A sign used in prescription writing to denote that the stated amount of each of the indicated substances is to be taken.

aaa disease. Endemic anemia or ancylostomiasis in ancient Egypt, ascribed in the Papyrus Ebers to the presence of an intestinal parasite.

Aaron's sign [Charles D. *Aaron*, American physician, *1866.] A referred pain or feeling of distress in the epigastrium or precordial region, on continuous firm pressure over McBurney's point, in cases of appendicitis.

ab- [L. *ab*, from.] A prefix signifying from, away from, off.

abaca (ah-bah-kah'). The plant, *Musa textilis*, and its product, Manila hemp.

abactio (ab-ak'shyo) [L. *abigere*, to drive away.] Induced abortion.

abac'tus ven'ter [L. *abactus*, driven away; *venter*, belly.] Induced abortion.

abadie's sign (ă-bă-de') 1. [J. M. *Abadie*, Parisian ophthalmologist, *1842.] Spasm of the levator palpebræ superioris in exophthalmic goiter. 2. [Charles Jean Marie *Abadie*, Bordeaux clinician, contemporary.] Insensibility to pressure over the tendo Achillis, in tabes dorsalis.

abaissement (ă-bās-mon') [Fr. a lowering.] Couching.

abalienated (ab-āl'yen-a-ted) [L. *abalienare*, to separate from.] Crazy, deranged.

abalienation (ab-āl-yen-a'shun). Lunacy, mental derangement.

abaptis'ton [G. *a-* priv. + *baptizo*, I immerse.] A trepan of conical shape, which cannot slip through far enough to injure the brain substance.

abarthro'sis [L. *ab*, from.] Diarthrosis.

abartic'ular [L. *ab*, from, + *articulus*, joint.] At a distance from, or not involving, a joint.

abarticula'tion [L. *ab*, from.] 1. Diarthrosis. 2. Dislocation of a joint.

abasia (ab-a'sĭ-ah) [G. *a-* priv. + *basis*, step.] Inability to walk; specifically the presence of such inability, although muscular power, sensation, and coordination are unimpaired in relation to other movements of the legs. **aba'sia-asta'sia,** inability either to walk or to stand, but with retention of the muscular functions in relation to other movements of the legs, when the patient is in bed, for example. **atac'tic a., atax'ic a.,** difficulty in walking by reason of ataxia, **paroxys'mal a., spas'tic a.,** a. due to a spastic contraction of the muscles when an attempt is made to walk.

abasic (ă-ba'sik). Affected by, or associated with, abasia.

ab'asin. Trade name of acetylbromdiethylacetylcarbamid an acetylcarbromal derivative; recommended as a sedative having no hypnotic properties.

abate (a-bāt') [L. *ab*, from, + *battere*, to beat.] 1. To do away with. 2. To lessen, decrease, become reduced.

abatement (a-bāt'ment). 1. Doing away with. 2. A lessening or decrease, as in the intensity of the symptoms of a disease.

abatic (ă-bat'ik). Abasic.

abaxial, abaxile (ab-ak'sĭ-al, ab-ak'sil) [L. *ab*, from, + *axis*.] 1. Lying outside of the axis of any body or part. 2. Situated at the opposite extremity of the axis of a part.

Abbé's conden'ser (ab'ba) [Ernst *Abbé*, a German physicist, 1845–1905.] An apparatus, consisting of two or three lenses, which concentrates the light reflected from a mirror on the object viewed under a microscope. **A.-Zeiss appara'tus,** an apparatus for counting the blood-corpuscles, consisting of a mixer for diluting the blood and a cell $\frac{1}{10}$ mm. deep, marked off into divisions of $\frac{1}{400}$ square mm. so that each division contains $\frac{1}{4000}$ cubic mm.; also called Thoma-Zeiss apparatus.

Abbe's opera'tion (ab'ĭ) [Robert *Abbe*, New York surgeon,* 1851–1928.] Dana's operation for relief of tic douloureux; intracranial resection of the 2d and 3d divisions of the 5th nerve, with interposition of rubber tissue at foramen rotundum and foramen ovale to prevent reunion of the divided nerves. **A.'s ring,** a ring of catgut used to reinforce the suture in intestinal anastomosis. **A's string meth'od,** sawing through an esophageal stricture by means of a string introduced through a gastric opening, up the esophagus, and out by the mouth.

Ab'bot's paste [William *Abbot*, London physician, *1831.] A mixture of arsenous acid, morphine, and creosote, made into a paste with water, employed to kill the nerve of a tooth.

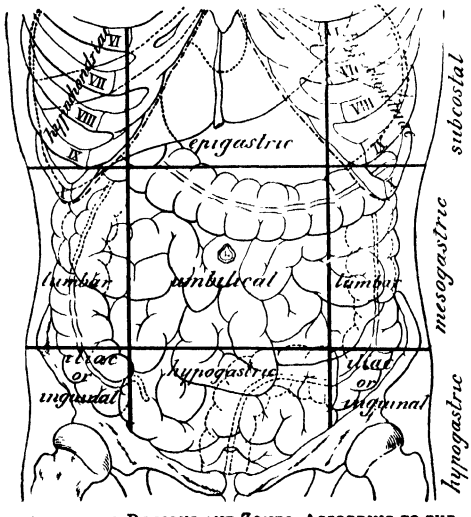
Ab'bott's method [Alexander C. *Abbott*, Philadelphia bacteriologist, *1860.] For staining spores: the specimen is covered with alkaline methylene blue and brought to a boil several times, then decolorized with a 2 per cent. solution of nitric acid in 80 per cent. alcohol, and finally dipped in a saturated alcoholic solution of eosin 10. in water 90; the spores are stained blue, the bodies of the bacilli pink.

Abb'ott's meth'od [Edville G *Abbott*, American orthopedic surgeon, *1872.] Treatment of lateral curvature of the spine by a series of plaster jackets applied after partial correction of the curvature by pulling on the flexed spine in various directions by bandages; the aim is to obtain overcorrection and maintain it for a time until the bones are restored to their normal shape.

A.B.C. lin'iment. Compound aconite liniment, a mixture of equal parts of the liniments of *a*conite, *b*elladonna, and *c*hloroform

A.B.C. process (pros'es). Purification of water or deodorization of sewage by a mixture of *a*lum, *b*lood, and *c*harcoal.

Abderhalden reac'tion or **test** (ahb'der-hahl"den) [Emil *Abderhalden*, German physiologist, *1877.] To determine the presence of protective ferments* in the blood; one-half gram of the prepared albumin (from the placenta, cancer, urine, or what not) is placed in a diffusion* shell, together with 1.5 c.c. of the serum to be tested, and the shell is suspended in a test-tube containing 20 c.c. sterile distilled water; the tube containing the shell is then incubated at 37°C. for 16 hours, after which 10 c.c. of the dialysate is removed and boiled for one minute with 0.2 c.c. ninhydrin; the development of a violet color within half an hour indicates a positive reaction. The test has been used to detect pregnancy, malignant disease, exophthalmic goiter, dementia precox, and various other conditions. The above is called the *dialysis test;* a less commonly employed form is called the *optical test:* the prepared albumin and the serum to be tested are mixed and after a definite period the fluid is examined by a polariscope to determine whether the presence of transformation products has effected any rotation differences.

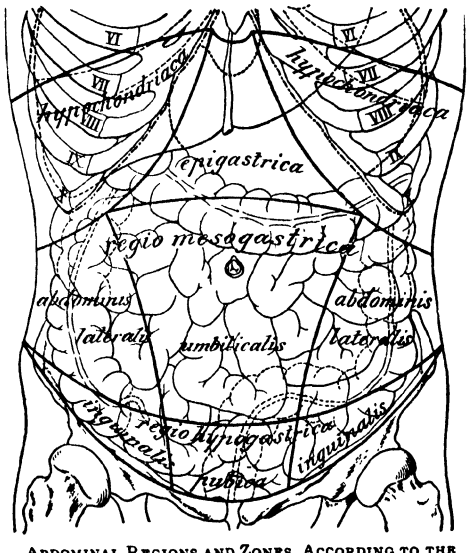


ABDOMINAL REGIONS AND ZONES, ACCORDING TO THE OLD NOMENCLATURE.

abdomen (ab-do'men) [L. *abdere*, to hide (?).] Belly, alvus, venter, the body cavity bounded by the diaphragm above and the pelvis below. (Some anatomists include in the abdomen all down to the pelvic floor.) It is lined by a serous membrane, the *peritoneum*, which also invests the contained viscera. It contains the greater part of the organs of digestion and also the spleen; the kidneys lie behind the peritoneum and are therefore outside the abdomina cavity. The abdomen is divided by arbitrary planes into nine regions; see *abdominal* regions*. **a. obsti'pum** [L. *obstipus*, awry], deformity of the abdomen caused by shortness of the rectus muscle. **acute' a.**, any acute condition within the a. calling for immediate operation. **car'inate a.** [L. *carina*, keel of a ship], a sinking at the sides with prominence of the central line of the abdomen. **navic'ular** or **scaph'oid a.** [L. *navicula*, G. *skaphē*, boat], boat-shaped a., a condition in which the anterior abdominal wall is sunken and presents a concave rather than a convex contour.

blood effusion, hemoperitoneum. **dropsy,** ascites, hydrocelia, hydroperitoneum **examination,** celioscopy, laparoscopy, abdominoscopy. **gas inflation,** aëroperitonia (outside the intestine); aerenterectasia, tympanites, tympany, meteorism, flatulence (within the intestine). **incision,** celiotomy, laparotomy, gastrotomy **inflammation,** celitis, peritonitis. **pain,** colic, tormina, celialgia, celiodynia, enteralgia, ileus, gastralgia. **puncture,** paracentesis abdominis, celioparacentesis. **relaxation of walls,** pendulous abdomen, celiochalasis. **sinking down of contents,** splanchnoptosia, enteroptosia, gastroptosia, Glenard's disease. **spasm,** tormina, colic. **tumor,** celioncus, celiophyma.

abdom'inal. Relating to the abdomen. **a. re'gions,** nine regions into which the abdomen is divided by four imaginary lines or planes; of these lines



ABDOMINAL REGIONS AND ZONES, ACCORDING TO THE BASLE [BNA] NOMENCLATURE.

two are horizontal, drawn at the levels of the cartilages of the ninth ribs (*subcostal line*) and of the crests of the ilia (*intertubercular line*), respectively, and two are vertical, passing through the center of Poupart's ligament on either side. The regions thus mapped out are named, from above downward, right hypochondriac, right lumbar (abdominis lateralis [BNA]), and

right inguinal or iliac; epigastric, umbilical, and hypogastric or pubic: left hypochondriac, left lumbar (abdominis lateralis [BNA]), and left inguinal or iliac. **a. zones,** three zones into which the abdomen is divided by horizontal lines at the level of the cartilages of the ninth ribs (subcostal line) and the iliac crests (intertubercular line) respectively; the upper or *subcostal zone* (regio epigastrica [BNA]) is subdivided into the right hypochondriac, epigastric, and left hypochondriac regions; the middle or *umbilical zone* (regio mesogastrica [BNA]) into the right lumbar, umbilical, and left lumbar regions, the lower or *hypogastric zone* (regio hypogastrica [BNA]) into the right iliac or inguinal, the hypogastric or pubic, and the left iliac or inguinal. The boundaries of the several regions differ somewhat in the old and the new nomenclatures (see the illustrations).

abdominoanterior (ab-dom″ĭ-no-an-te′rĭ-or). Noting a position of the fetus in utero, with its belly turned toward the anterior abdominal wall of the mother.

abdominocentesis (ab-dom″ĭ-no-sen-te′sis) [*abdomen* + G. kentēsis, puncture.] Paracentesis abdominis.

abdominocystic (ab-dom-i-no-sis′tik). Abdominovesical.

abdominogen′ital. Relating to the abdomen and the genital organs.

abdom″inohysterec′tomy. Removal of the uterus through an incision in the abdominal wall.

abdom″inohysterot′omy. Cutting into the uterus, cesarean section, performed through an incision in the abdominal wall.

abdom″inoposte′rior. Noting a position of the fetus in utero, with its abdomen turned toward the back of the mother

abdominoscopy (ab-dom-ĭ-nos′ko-pĭ) [*abdomen* + G. *skopeō*, I examine.] Examination of the abdomen or of its contained viscera.

abdom″inoscro′tal. Relating to the abdomen and the scrotum.

abdominothoracic (ab-dom″i-no-tho-ras′ik). Relating to both abdomen and thorax.

abdominous (ab-dom′ĭ-nus). Having a prominent abdomen.

abdom″ino-uterot′omy. Abdominohysterotomy

abdominovaginal (ab-dom″ĭ-no-vaj′ĭ-nal). Relating to both abdomen and vagina.

abdom″inoves′ical. Relating both to the abdomen and to the urinary or gall bladder.

abdu′cens [L. drawing away from.] Nervus abducens. **a. labio′rum,** a. oris. **a. oc′uli,** musculus rectus lateralis [BNA]. **a. o′ris,** musculus caninus [BNA].

abdu′cent. 1. Abducens. 2. Abducting.

abduct′ [*abducere*, to draw away.] To move away from the axis of the body or of one of its parts.

abduc′tion. 1. Movement away from the middle line. 2. A position resulting from such movement. **a. of the foot,** rotation of the foot outward around the axis of the leg, or rotation outward around its own axis.

abduc′tor. That which abducts or draws something in a direction away from the axis of the part, said of various muscles; the opposite of *adductor*.

Abée's support′ (ah′ba) [Ernst *Abée*, German physician, 1843–1913.] An apparatus for making pressure over the cardiac region in order to quiet the overacting heart.

abenter′ic [L. *ab*, from, + G. *enteron*, intestine.] Apenteric.

abepithymia (ab-ep-ĭ-thi′mĭ-ah) [L. *ab*, from, + G *epithymia*, desire.] Anepithymia.

Ab′ercrombie's degenera′tion [John *Abercrombie*, Scotch physician, 1780–1844.] Amyloid degeneration *

Ab′ernethy's fas′cia [John *Abernethy*, London surgeon, 1764–1831.] A layer of subperitoneal areolar tissue in front of the external iliac artery. **A.'s opera′tion,** ligation of the external iliac artery through an incision curving around the anterior superior spine of the ilium. **A.'s sarco′ma,** liposarcoma.

aber′rans [L. wandering away.] Vas aberrans.

aber′rant. 1. Wandering off, said of certain ducts or vessels taking an unusual course. 2. Differing from the normal, said in botany or zoology of certain atypical individuals in a family or species.

aberratio (ab-er-a′shyo) [L.] Aberration. **a. tes′tis,** presence of the testis in a part away from the path followed in a normal descent.

aberration (ab-er-a′shun). 1. Wandering away from the normal situation. 2. Atypical development or growth. 3. Slight mental derangement. 4. Unequal deviation of the rays of light in passing through a lens, so that the image is blurred (*spherical a.*) or colored (*chromatic a.*), owing to a breaking up of the rays of white light. **diop′tric a.,** spherical a. **distan′tial a.,** blurring of the image of a distant object. **Newto′nian a.,** chromatic a.

aberrometer (ab-er-om′e-tur) [L. *aberratio* + G. *metron*, measure.] An instrument for measuring optical aberration or any error in experimentation.

abevacuation (ab-e-vak-u-a′shun). An abnormal evacuation in the way either of excess or of deficiency.

abeyance (ab-a′ans) [from the Old French.] A state of temporary abolition of function.

Abies (ab′e-ēz) [L.] A genus of evergreen trees, the firs and spruces. **A. balsam′ea,** balsam fir, the source of Canada turpentine, or Canada balsam, terebinthina canadensis. **A. canaden′sis,** *Tsuga canadensis*, hemlock, the source of Canada pitch, pix canadensis. **A. excel′sa,** *Picea excelsa*, spruce fir, or Norway spruce, the source of Burgundy pitch, pix burgundica.

abietate (ab-i′ĕ-tāt). A salt of abietic acid.

abietene (ab-i′ĕ-tēn). A substance obtained from the nut-pine, *Pinus* (*Abies*) *sabiana;* it consists chiefly of heptane.

abietic (ab-e-et′ik). Relating to fir trees or their products. **a. ac′id,** an acid derived from abietin.

abietin (ab-i′ĕ-tin). A resin from the turpentine of certain species of fir.

abietite (ab-i′ĕ-tīt). A sugar obtained from the leaves of the silver fir.

abiochemistry (ab″i-o-kem′is-trĭ) [G. *a-* priv. + biochemistry.] Inorganic chemistry.

abiogenesis (ab-i-o-jen′e-sis) [G. *a-* priv. + *bios*, life, + *genesis*, production.] Spontaneous generation, the origin of living matter without descent from other living matter.

abiogenet′ic. Relating to spontaneous generation

abiological (ab″i-o-loj′i-kal). Not relating to biology or the science of living things.

abionergy (ab-i-on′ur-jĭ) [G. *a-* priv. + *bios*, life, + *energeia*, action, energy.] Premature degeneration with loss of function of certain cells or tissues, not due to any apparent external influence; abiotrophy.

abiosis (ab-i-o′sis) [G. *a-* priv. + *bios*, life.] 1. Non-viability. 2. Absence of life. 3. Abiotrophy.

abiot′ic Incompatible with life, non-viable,

abiotrophy (ab-ī-ot'ro-fī) [G. *a-* priv. + *bios*, life, + *trophē*, nourishment.] Premature loss of vitality or degeneration of certain cells or tissues, not caused by any apparent external influence; hypotrophy, abionergy.

abir'ritant. 1. Soothing, relieving irritation. 2. An agent possessing this property.

abir'ritate. To soothe, remove irritation, diminish reflex irritability.

abirrita'tion [L. *ab*, from, + *irritare*, to irritate.] The diminution or abolition of reflex or other irritability in a part.

abir'ritative. Soothing; tending to reduce reflex irritability.

abiuret (a-bi'u-ret). Non-biuret; not producing biuret, not giving a biuret reaction.

abjoint'. In botany, to detach by septa.

abjunc'tion [L. *abjungere*, to disjoin, to separate.] In botany, detachment by septa

ablacta'tion [L. *ab*, from.] Weaning.

ablastem'ic. Not germinal or blastemic.

ablate' [L. *ablatus*, taken away.] To remove.

ablatio (ab-la'shyo) [L.] Ablation, removal, amputation. **a. placen'tæ,** premature detachment of the placenta. **a. ret'inæ,** detachment of the retina.

abla'tion [L. *ablatio*.] The removal of a part of the body, as by amputation, or of any growth or noxious substance.

ablepha'ria, ableph'aron [G. *a-* priv. + *blepharon*, eyelid.] Congenital absence, partial or complete, of the eyelids.

ableph'arous [G. *a-* priv. + *blepharon*, eyelid.] Without eyelids.

ablephary (ă-blef'a-rī) Ablepharia.

ablepsia, ablepsy (ă-blep'sī-ah, ă-blep'sĭ) [G. *a-* priv. + *blepō*, I see.] Blindness.

ab'luent [L. *abluere*, to wash off.] 1. Cleansing 2. Anything with cleansing properties.

ablu'tion [L. *ablutio*.] A washing or cleansing

abner'val [L. *ab*, away from, + *nervus*, nerve.] Away from a nerve, noting specifically a current of electricity passing through a muscular fiber in a direction away from the point of entrance of the nerve fiber.

abneural (ab-nu'ral) [L. *ab*, away from.] 1. Abnerval. 2. Away from the neural axis.

abnor'mal [L. *ab*, away from, + *norma*, rule.] Not normal, contrary to the rule or type, irregular.

abnormal'ity. Irregularity, deviation from the type or rule.

abnor'mity. 1. Abnormality, deformity. 2. Monstrosity.

abomasitis (ab"o-mas-i'(e')tis). Inflammation of the abomasum.

aboma'sum, aboma'sus [L. *ab*, from, + *omasum*, third stomach of a ruminant.] The fourth stomach of a ruminant.

abo'rad [L. *ab*, from, + *os*(*or-*), mouth.] In a direction away from the mouth.

abo'ral [L. *ab*, from, + *os*(*or-*), mouth.] Away from, or opposite to, the mouth.

aboriginal (ab-o-rij'in-al) [L. *ab*, from, + *origo* (*origin-*), source, birth.] 1. Autochthon. 2. Autochthonous.

abort' [L. *abortare*, to miscarry.] 1. To give birth to an embryo or fetus before it is viable. 2. To arrest the development or growth of a living thing or part. 3 To become arrested in growth or development, to remain rudimentary.

abortient (ab-or'shent). 1. Miscarrying, aborting. 2. An agent producing abortion. 3. Sterile.

abortifacient (ab-or-tĭ-fa'shent) [L. *abortus*, abortion, + *facere*, to make.] 1. Producing abortion. 2. An agent which produces abortion.

abor'tin. A preparation made from cultures of *Bacillus abortus*, the pathogenic agent of Bang's* disease; it is analogous to tuberculin and is used in the diagnosis and treatment of puerperal fever in the cow.

abor'tion. 1. The giving birth to an embryo or non-viable fetus. 2. The product of such premature birth. 3. The arrest of any action or process before its normal completion, as the abortion of pneumonia. A distinction is sometimes made between *abortion* and *miscarriage*, the former signifying the emptying of the uterus prior to the fourth month of pregnancy, the latter during the fourth, fifth, or sixth month; *premature delivery* noting the delivery of a viable fetus after the beginning of the seventh month and before full term. **artifi'cial a.,** induced a. **conta'gious a.,** infectious a. **crim'inal a.,** induced a., undertaken solely for the purpose of getting rid of the product of conception, and not necessitated by the state of the mother's health. **em'bryonal** or **embryon'ic a.,** expulsion of the embryo prior to the fifth month of pregnancy, true abortion. **fe'tal a.,** miscarriage, a. during the fifth or sixth month. **habit'ual a.,** a. recurring, usually at about the same period, with each pregnancy. **incomplete' a.,** expulsion of the ovum with retention of the membranes. **induced' a.,** a. brought on by drugs or mechanical means. **infec'tious a.,** Bang's disease, a disease attacking cows with calf, a striking symptom of which is abortion; it is caused by the presence of *B. abortus*, and it may occur in the human female. **missed a.,** the long retention in the uterus, and subsequent expulsion, of a dead embryo. **ov'ular a.,** expulsion of the ovum in the first week or two of pregnancy. **tu'bal a.,** rupture of an oviduct, the seat of an ectopic pregnancy.

abor'tionist. One who practises criminal abortion

abor'tive. 1. Not coming to completion, said, for example, of an attack of a disease which subsides before it has become fully developed or has run its full course. 2 Rudimentary. 3. Cutting short an attack of a disease. 4 Abortifacient

abor'tus [L.] Abortion

aboulia (ă-boo'lĭ-ah) [G. *a-* priv. + *boulē*, will.] Abulia, loss or marked diminution of the will power.

aboulomania (ă-boo-lo-ma'nĭ-ah) [G. *a-* priv. + *boulē*, will, + *mania*, frenzy.] Abulomania, mental derangement accompanied by greatly weakened or abolished will power.

abrachia (ă-bra'kĭ-ah) [see *abrachius*.] The absence of arms.

abrachiocephalia (ă-bra"kĭ-o-sĕ-fa'lĭ-ah). Absence of arms and head.

abrachiocephalus (ă-bra"kĭ-o-sef'al-us) [G. *a-* priv. + *brachiōn*, arm, + *kephalē*, head.] A monster having neither arms nor head.

abrachius (ă-bra'kĭ-us [G. *a-* priv. + *brachiōn*, arm.] A monster without arms.

abradant (ă-bra'dant). Anything causing an abrasion.

abrade (ă-brād) [L. *ab*, from, + *radere*, to scrape.] 1. To wear away by mechanical action. 2. To excoriate, to scrape away the epidermis from a part.

A'brahams' sign [Robert *Abrahams*, New York physician, *1861.] 1. Rales and other adventitious sounds, changes in the respiratory murmur, and increase in the whispered sounds can be heard on auscultation over the acromial end of the clavicle some time before they become audible at the apex. 2. A dull-flat note, *i.e.*

one between the normal dulness at the right apex and absolute flatness, heard on percussion in that region, indicating the progress from incipient to advanced tuberculosis.

A'brams' heart re'flex [Albert *Abrams*, San Francisco physician, 1864–1924.] A contraction of the myocardium when the skin of the precordial region is irritated. **A.'s lung re'flex,** increase in the pulmonary area following irritation of the skin of the thorax or upper abdominal region. **A.'s treat'ment,** treatment of aortic aneurysm by percussion of the spine; see also spondylotherapy.

abra'sio [L.] Abrasion.

abrasion (ă-bra'zhun) [L. *ab*, off, + *radere*, to scrape.] 1. An excoriation, a circumscribed removal of the epidermis of skin or mucous membrane. 2. A scraping away of a portion of the surface. 3. In dentistry, the mechanical wearing away of the surface of a tooth.

abrasive (ă-bra'siv). 1. Causing abrasion. 2. An abradant.

abreaction (ab-re-ak'shun). The emotional discharge, obtained after the recall of the original psychic trauma, in the process called by Freud *catharsis*.

a'brin. Jequiritin, a specific poison, analogous to the bacterial toxins, occurring in jequirity seeds (*Abrus precatorius*).

ab'rodil. Skiodan.

abrotanum (ă-brot'a-num) [G. *abrotonon*, an aromatic plant.] The dried leaves and tops of southernwood, *Artemisia abrotanum;* employed as a vermifuge and tonic in doses of ℥10–20 (0.6–1.3) of a fluidextract.

abruptio (ab-rup'shyo) [L.] Abruption, a tearing away. **a. placen'tæ,** premature detachment of the placenta.

A'brus [more correctly *Habrus*, from G. *habros*, graceful.] A genus of leguminous plants. *A. precato'rius*, Indian liquorice, the root being sometimes used as a substitute for liquorice; the seeds have been employed in ophthalmic practice, see *jequirity*.

abscess (ab'ses) [L. *abscessus*, from *abscedere*, to go away.] A circumscribed collection of pus **acute' a.,** hot a. **alve'olar a.,** an a. in the alveolar process, either pericemental or apical. **ame'bic a.,** an abscess of the liver, complicating or following tropical dysentery, which contains amebas. **ap'ical a.,** an a. in the apex of the lung, or one in the alveolus at the extremity of the root of a tooth. **arthrif'luent a.,** a cold, gravitation a., due to disease, usually tuberculous, of a joint. **athero'matous a.,** a circumscribed area of atheromatous softening in the wall of an artery. **blind a.,** dental granuloma.* **canalic'ular a.,** an a. of the breast discharging into the milk ducts. **ca'seous a.,** one in which the pus has become inspissated, having a soft cheesy consistence. **chron'ic a.,** cold a. **circumton'sillar a.,** quinsy. **cold a.,** a collection of pus occurring without local heat or other signs of inflammation, commonly of tuberculous origin. **crit'ical a.,** an a. occurring toward the end of an acute disease. **den'tal a.,** alveolar a. **diffuse' a.,** a collection of pus not circumscribed by a well defined capsule. **dry a.,** the remains of an a. the pus having been absorbed. **embol'ic a.,** a suppurative focus established at the point of arrest of a septic embolus. **fe'cal a.,** stercoral a. **fixa'tion a.,** an a. artificially provoked by the subcutaneous injection of turpentine, alleged to be of therapeutic value in certain infectious processes. **gas a.,** an a. containing gas, due to the presence of *Bacillus aerogenes* or other species of gas-forming microorganism. **gravita'tion a., grav'ity a.,** a wandering a., the pus sinking to dependent parts. **hot a.,** an acute a., one occurring with all the evidences of local inflammation. **hypostat'ic a.,** gravitation a. **metastat'ic a.,** a secondary a formed, at a distance from the primary focus, as a result of the transportation of the pus germs by the lymph or blood stream. **mil'iary a.,** one of a number of minute collections of pus. **milk a.,** a mammary a. occurring during lactation. **mul'tiple a. of the liv'er,** numerous small purulent collections, of pyemic origin, in the liver. **mu'ral a.,** one occurring in the tissues of the abdominal wall following celiotomy. **ossif'luent a.,** an a., usually a cold wandering a., originating from a focus of disease in a bone. **periap'ical a.,** apical a. **periartic'ular a.,** one surrounding a joint, not involving it. **pericemen'tal a.,** an alveolar a. not connected with the apex of a tooth. **periodon'tal a.,** alveolar a. **phleg'monous a.,** circumscribed suppuration associated with acute inflammation of the subcutaneous connective tissue. **pso'as a.,** a cold or wandering abscess in the groin, associated with lumbar Pott's disease, the pus sinking down in the sheath of the psoas muscle. **resid'ual a.,** an a. recurring on the site of a former a., due to inflammation excited by the undischarged residue of pus **retropharyn'geal a.,** a phlegmonous inflammation involving the cellular tissue of the posterior wall of the oropharynx. **root a.,** a small mass of granulation tissue, constituting a focus of infection at the root of a tooth; dental granuloma. **scrof'ulous a.,** strumous a. **se'rous a.,** periostitis albuminosa, periosteal ganglion; a flattened subperiosteal cavity containing a clear, yellowish, viscid, synovia-like fluid. **shirt-stud a.,** two abscesses connected by a narrow channel. **sol'itary a. of the liver,** tropical a. **ster'coral a.,** a collection of pus mixed with fecal matter. **stitch a.,** an a. due to the use of septic suture material or to the inclusion in a stitch of pus germs from the skin. **stru'mous a.,** a cold a. of tuberculous origin. **subphren'ic a.,** circumscribed suppurative inflammation of the peritoneal surface of the diaphragm, and usually of the contiguous peritoneal surfaces of the liver and of the spleen. **trop'ical a.,** amebic a., a. of the liver associated with amebic dysentery, occurring chiefly in Europeans long resident in hot countries. **u'rinous a.,** an a. communicating with the bladder or the urethra, and containing urine mixed with pus. **ver'minous a.,** an a. due to inflammation caused by the presence of larvæ or of intestinal worms. **wan'dering a.,** an a. found at a distance from the focus of disease, the pus burrowing along the fascial sheaths of the muscles.

ab'scess-root. The root of *Polemonium reptans* or Greek valerian; it is sometimes used as a stimulant expectorant in doses of 3½–1 (2.0–4 0) of a fluidextract.

abscission (ab-sĭ'shun) [L *abscindere*, to cut away from.] Cutting away. **cor'neal a.,** cutting away of the prominence of the cornea in cases of staphyloma.

absconsio (ab-skon'shyo) [L. *abscondere*, to hide.] A recess or cavity.

ab'sence. A temporary abeyance of the mental functions.

absinthe (ab'sinth, Fr. ab-sant'). A liqueur consisting of an alcoholic extract of absinthium and other bitter herbs.

absin'thic. Relating to absinthe or absinthium. **a. acid,** an acid obtained from oil of wormwood.

ab'sinthin. A bitter principle, $C_{40}H_{66}O_8$, obtained from absinthium.

ab'sinthism. The pathological condition resulting from the habitual use of absinthe in excess.

absin'thium [*G. apsinthion.*] Wormwood, the dried leaves and tops of *Artemisia absinthium.* The infusion (℥1:01) has been employed as a tonic in doses of ℥1–2 (30.0–60.0). In large or frequently repeated doses it is a narcotic poison, causing headache, trembling, and epileptiform convulsions.

absin'thol. The chief constituent ($C_{10}H_{16}O$) of oil of wormwood, identical with thuyol and tanacetol.

absolute (ab'so-lūt) [L. *absolutus,* complete.] Unconditional, unlimited; complete, entire; fixed, certain. **a. al'cohol,** alcohol with no admixture of water, or at most 1 per cent. **s. di'et,** complete fasting. **a. field,** that portion of the cerebral cortex, a lesion of which invariably produces spasm or paralysis. **a. tem'perature,** temperature reckoned from the a. zero. **a. ze'ro,** the lowest possible temperature, that at which the form of motion constituting heat is assumed no longer to exist, reckoned as −273.7° C.

absorb' [L. *absorbere,* to suck in.] 1. To incorporate or take up gases, liquids, or the rays of light. 2. To take any material into the body through the lymphatics or blood-vessels. 3. To arrest the passage of radiant heat. 4. To neutralize an acid.

absorbefacient (ab-sor-bĭ-fa'shent) [L. *absorbere,* to suck in, + *facere,* to make.] 1. Causing absorption 2. Any substance possessing such quality.

absor'bent. 1. Having the power to absorb, suck up, or take into itself any gas or liquid or the light rays, or to neutralize an acid. 2. Any substance possessing such power. 3. A lymphatic or blood-vessel drawing material of any kind into the tissues, specifically a lacteal. **a. cott'on,** cotton from which all fatty matter has been extracted, so that it readily takes up fluids.

absorptiometer (ab-sorp-shĭ-om'e-tur) [L. *absorptio,* absorption, + G. *metron,* measure.] 1. An instrument for determining the amount of gas absorbed by a given quantity of liquid. 2. An appliance for determining the thickness of a layer of liquid between two glass plates in apparent apposition; used in hematoscopy.

absorption (ab-sorp'shun). 1. The taking up of gases by liquid or solid substances, or of liquids by solids. 2. The taking into the tissues, through the medium of the lymphatics or blood-vessels, of any material in suitable form. 3. The extinction of light or any of its component rays by black or colored objects. 4. The arrest of the rays of radiant heat, the temperature of the absorbing body being slowly raised. 5. The neutralization of an acid. **a. band,** a dark band in the spectrum seen during the passage of light through certain solid, liquid, or gaseous substances. **a. lines,** numerous dark lines in the solar spectrum due to absorption by the solar atmosphere, and also by that of the earth; the phenomenon is due to the fact that rays passing from an incandescent body through a cooler medium are absorbed by elements in that medium which would give out the same rays if the medium were itself made incandescent. **a. spec'trum,** a spectrum showing a. bands or lines. **disjunc'tive a.,** absorption of living tissue in immediate relation with a necrosed part, producing the line of demarcation. **interstitial a.,** the removal of water or of degenerated material in the tissues by the lymphatics.

absorp'tive. Absorbent.

abstergent (ab-stur'jent) [L. *abstergere,* to wipe off.] 1. Having cleansing or purgative properties. 2. A cleansing lotion. 3. A purgative.

ab'stinence [L. *abstinere,* to abstain.] Specifically, refrain from the use of certain articles of diet or of alcoholic beverages, or from sexual intercourse. **a. symp'toms,** erethism or partial collapse following the sudden withdrawal of an accustomed stimulant, such as alcohol or opium.

ab'stract [L. *abstractum,* from *abstrahere,* to draw away.] 1. A preparation formerly recognized by the U.S.P. under the name *abstractum,* made by evaporating a fluidextract to a powder and triturating with sugar of milk; one part of the abstract was equal in strength to two parts of the drug or its extract. The official abstracts were, of aconite, belladonna, conium, digitalis, hyoscyamus, ignatia, jalap, nux vomica, podophyllum, senega, and valerian. 2. A condensation or summary of an address or literary article.

abstract' [L. *abstrahere,* to draw away.] 1. To take away 2 To condense or abbreviate an article or paper. 3. To make an abstract of a drug.

abstrac'tion. 1. Taking away. 2. The making of an abstract from the crude drug 3. Bloodletting. 4 Distillation or separation of the volatile constituents of a substance. 5. Exclusive mental concentration, absentmindedness

abstric'tion [L. *abs,* from, + *stringere,* to bind.] In botany, a mode of spore formation by a constriction of the end of the mother cell, the spores seeming to be nipped off; abjunction

abter'minal [L *ab,* from, + *terminus,* end.] In a direction away from the end and toward the center, noting the course of an electrical current in a muscle.

abulia (ă-bu'lĭ-ah). Aboulia.

abu'lic. Relating to, or suffering from, abulia.

abulomania (ă-bu-lo-ma'nĭ-ah). Aboulomania.

abuse (ă-būs'). Misuse, wrong use, especially excessive use, of anything. **self-a.,** masturbation.

abuse (ă-būz') [L. *ab,* from, + *utere,* to use] To use wrongly, especially to overuse.

abut'ment. In dentistry the tooth to which a bridge is anchored.

A. C. Abbreviation for anodal closure; or alternating current.*

a. c. Abbreviation for L. *ante cibos,* before meals. **a-c in'terval,** the interval between the beginning of the auricular and that of the carotid wave in a tracing of the jugular pulse; the intersystolic period.

Acacia (ă-ka'shyŭ) [G. *akakia.*] A genus of plants of the order *Leguminosæ,* found especially in tropical and subtropical regions.

acacia (U.S. and Br.). Gum arabic, the dried exudation from *Acacia senegal* and other species of *A.* The official preparations are the *mucilago* and the *syrupus.* **aca'ciæ cor'tex** (B.A.), acacia bark, black wattle bark, the dried bark of *Acacia arabica* or *A decurrens;* astringent, employed locally and internally in decoction.

acalculia (ă-kal-ku'lĭ-ŭ) [G. *a*-prv. + L. *calculare,* to reckon.] Loss of the power to work out any mathematical problems, even the most simple.

acal'ypha [G. *akalyphēs,* uncovered.] (B.A.) The herb, dried or fresh, *Acalypha indica;* expectorant and laxative, resembling senega in its action; the liquid extract and succus are used.

acamp'sia [G. *a-* priv. + *kamptō*, I bend.] Rigidity of a joint, ankylosis

acan'tha [G. *akantha*, a thorn.] 1. The spine. 2 The spinous process of a vertebra.

acanthesthesia, acanthæsthesia (ă-kan-thes-the'zĭ-ah) [G. *akantha*, a prickle, + *aisthēsis*, sensation.] A form of paresthesia in which there is a sensation as of a pinprick.

Acan'thia lectula'ria [G. *akantha*, thorn, prickle; L. *lectus*, a bed.] *Cimex lectularius*, bedbug.

acan'thion [G. *akantha*, thorn.] The tip of the anterior nasal spine; see cut under *norma lateralis*, 5.

Acanthoceph'ala [G. *akantha*, thorn, + *kephalē*, head.] An order of nematode-like entozoa without alimentary canal. Various species are parasites, in the adult stage, of vertebrate animals, the larval stage being passed in invertebrates. They are exceptionally parasitic in man.

acanthocephaliasis (ă-kan-tho-sef-al-i'ă-sis). Infestation with a species of *Acanthocephala*.

Acanthocheilonema perstans (ă-kan-tho-ki-lo-ne'-mah pur'stanz) [G. *akantha*, thorn, + *cheilos*, lip. + *nēma*, thread; L. *perstare*, to persist.] *Filaria perstans*.

acanthokeratodermia (a-kan"tho-ker"ă-to-dur'mĭ-ah) [G. *akantha*, thorn, + *keras*, horn, + *derma*, skin.] Hyperkeratosis of the hands or feet.

acanthol'ysis [G. *akantha*, thorn, + *lysis*, solution] A skin disease characterized by atrophy of the prickle-cell layer of the epidermis **a. bullo'sa,** epidermolysis bullosa.

acantho'ma [G. *akantha*, thorn, + *-ōma*.] 1. Papilloma. 2. Cutaneous cancer. **a. adenoi'des cys'ticum,** an eruption of papules and nodules, resembling spiradenoma, originating in the rete spinosum.

acanthopel'vis, acanthopel'yx [G. *akantha*, thorn, + *pelyx*, pelvis.] A rachitic pelvis with a sharp and prominent pubic spine; pelvis spinosa.

acantho'sis [G. *akantha*, thorn.] Any skin disease due to an affection of the stratum mucosum or spinosum. **a. ni'gricans,** keratosis nigricans, hypertrophy with pigmentation of the papillæ of the skin, seen in malignant disease of the abdominal organs.

acap'nia [G. *a-* priv. + *kapnos*, smoke, the product of combustion.] A marked diminution in the amount of carbon dioxide in the blood; also the disturbances of function resulting from such diminution.

acar'dia [G. *a-* priv. + *kardia*, heart.] Absence of the heart, a condition present in certain parasitic monsters.

acar'diac. 1. Without heart. 2. An acardiacus.

acardiacus (ă-kar-di'ă-kus) [G. *a-* priv. + *kardia*, heart.] A monster, parasitic on another fetus, having no heart. **a. an'ceps** [L. doubtful], a monster with head, extremities, and heart all rudimentary; a. amorphus.

acari'asis. Any disease caused by an acarid, or mite.

acaricide (ă-kar'ĭ-sīd) [L. *acarus* + *cædere* to kill.] 1. Destructive to acarids, or mites. 2. An agent having this property.

ac'arid. A member of the order *Acarina*, a mite.

Acar'idæ. A family of the order *Acarina*, including the mites.

acar'idan. An acarid.

Acari'na [G. *akari*, a mite.] An order of *Arachnoidea* which includes the mites and ticks.

acarino'sis. Acariasis.

acaryote (ă-kăr'ĭ-ōt) [G. *a-*priv. + *karyon*, nucleus.] Akaryote, non-nucleated.

acarodermatitis (ak"ă-ro-dur-ma-ti'(te')tis). An inflammation of the skin caused by the presence of a mite; acariasis, the itch.

ac'aroid [G. *akari*, mite, + *eidos*, resemblance.] 1. Resembling a mite. 2. An acarus, or mite. **a. gum** or **res'in** [*Acarois*, the former name of the genus *Xanthorrhœa*], Botany Bay resin, an exudation from an Australian tree, *Xanthorrhœa hastilis*, employed as a stimulant in doses of gr 5–10 (0.3–0.6)

acaropho'bia [G. *akari*, mite, + *phobos*, fear.] 1 A morbid fear of acquiring the itch. 2. A belief that one has scabies; it may be caused by an essential or senile pruritus.

Ac'arus [G. *akari*, a mite, from *akarēs*, tiny.] A genus of mites of the family *Acaridæ*. **A. folliculo'rum,** *Demodex folliculorum*. **A. scabie'i,** *Sarcoptes scabiei*

ac'arus. Any mite or tick, an acaroid.

acatalep'sia, acat'alepsy [G. *a-* priv. + *katalēpsis*, comprehension.] 1. Mental deficiency characterized by a lack of understanding. 2. Uncertainty in diagnosis or prognosis.

acatalep'tic. 1 Deficient in comprehension. 2. Uncertain

acatamathesia (ă-kat-ă-mă-the'zĭ-ah) [G. *a-* priv. + *katamathēsis*, a thorough knowledge or understanding] A loss of the faculty of understanding

acatapha'sia [G. *a-* priv. + *kataphasis*, affirmation.] A loss of the power of correctly formulating a statement.

acatastasia (ă-kat-as-ta'sĭ-ah) [G. *a-* priv. + *katastasis*, condition] Deviation from type.

acathar'sia, acath'arsy [G. *a-* priv. + *katharsis*, a cleansing] A failure to obtain a desired purgation.

acathec'tic. Relating to acathexia.

acathex'ia [G *a-* priv. + *kathexis*, a holding **in.**] An abnormal loss of the secretions

acathisia (ă-kă-thiz'ĭ-ah) [G. *a-* priv. + *kathisis*, a sitting.] A neurosis characterized by an inability to remain in a sitting posture.

acaudal, acaudate (ă-kaw'dal, ă-kaw'dāt) [G *a-* priv. + L. *cauda*, tail] Having no tail.

acauline (ă-kaw'lēn) [G. *a-* priv. + L. *caulis*, stem.] Noting a group of stemless fungi.

acaulino'sis. An eczematous disease caused by the presence of an acauline fungus.

ACC. Abbreviation for anodal closing contraction, also written AnCC.

accelerans (ak-sel'er-anz) [L pres. part. of *accelerare* to hasten.] Accelerator* nerve of the heart.

accelera'tion. An increase in rapidity.

accelerator (ak-sel'er-a-tor) That which increases rapidity of action or function. **a. nerve,** a nerve originating in a center in the medulla and coming to the heart through the ganglion stellatum; its stimulation increases the rapidity of the heart. **a. uri'næ,** musculus bulbocavernosus.

accentuator (ak-sent'u-a-tor). A substance, such as aniline, the presence of which allows of a combination between a tissue or histological element and a stain which might otherwise be impossible.

acceptor (ak-sep'tor) [L. *accipere*, to accept.] A substance, such as indigo, nitrates, etc., which absorbs the nascent hydrogen set free by a reducing enzyme.

accessiflexor (ak-ses"ĭ-flek'sor). Accessory flexor.

accessorius (ak-ses-so'rĭ-us) [L. *accedere*, to move toward.] Accessory, supernumerary, adjuvant; noting certain muscles, nerves, glands, etc. See under *musculus* and *nervus*. **a. Willis'ii,** nervus accessorius spinalis.

acces'sory. Supernumerary, supplementary, adjuvant. **a. nerve of Willis,** nervus accessorius spinalis.

accip'iter [L. a hawk.] A bandage for the nose, so called because its ends branch out like the talons of a hawk grasping the face.

accladiosis (ak-kla-dī-o'sis). An incorrect spelling of acladiosis (*q.v.*).

acclimatation (ă-klī-ma-ta'shun). Acclimatization.

accli'mate [Fr. *à*, to. + *climat*, climate.] Acclimatize.

acclima'tion. Acclimatization.

acclimatization (ă-klī"mă-ti-za'shun). The habituation to a new climate; the acquiring of powers of resistance against unaccustomed influences in a new climate, especially a tropical climate.

accli'matize. To accustom one to live and retain health in a new climate; to make one used to new conditions and surroundings.

accommoda'tion [L *accommodare*, to suit, make fit.] Adaptation, adjustment; specifically, alteration of the convexity of the crystalline lens in order to bring light rays from an external object to a focus on the retina. **ab'solute a.,** a. of an eye independent of its fellow. **histolog'ical a.,** pseudometaplasia; change in shape of cells to meet altered physical conditions, as the flattening of cuboidal cells in cysts as a result of pressure. **neg'ative a.,** a. for distant vision by relaxation of the intrinsic muscles. **pos'itive a.,** a. for near vision. **rel'ative a.,** a. of the two eyes acting conjointly.

accommodative (ak-kom'mo-da-tiv). Relating to accommodation.

accouchement (ă-koosh-moṅ') [Fr. from *coucher*, to lie down] Delivery, childbirth. **a. forcé** (for-sa'), forced, artificially hastened delivery, by means of forceps, version, etc.

accoucheur (ă-koo-shĕr'). An obstetrician, one who delivers a woman in childbirth.

accoucheuse (ă-koo-shĕz'). A female obstetrician; one with medical education and training, as distinguished from an ordinary midwife.

accrementition (ă-kre-men-tish'un) [L. *accrescere* to increase] 1. Reproduction by budding or germination. 2. Accretion (1).

accretion (ă-kre'shun) [L. *accrescere*, to increase.] 1. Increase by the addition of material of the same nature as that already present. 2. Foreign material collecting on the surface of a tooth or in a cavity. 3. A growing together, adhesion. **a. lines,** lines seen in microscopical sections of the enamel, marking successive layers of added material.

accu'mulator [L. *accumulare*, to heap up.] 1. A storage battery. 2. A condenser (3).

A.C.E. mixture. A mixture of 1 part *a*lcohol, 2 parts *c*hloroform, and 3 parts *e*ther, used to produce general anesthesia by inhalation.

acenesthesia (ă-se-nes-the'zĭ-ah). Absence of the normal sensation of physical existence, or of the consciousness of visceral functioning.

acentric (a-sen'trik) [G. *a-* priv. + *kentron*, center.] Not central, peripheral; excentric.

acepha'lia, aceph'alism [G. *a-* priv. + *kephalē*, head] Absence of a head, as noted in certain parasitic monsters

acephalobrachia (ă-sef"al-o-bra'kĭ-ah) [G. *a-* priv. + *kephalē*, head, + *brachiōn*, arm.] Absence of head and arms, as noted in the case of some parasitic monsters.

acephalobrachius (ă-sef"al-o-bra'kĭ-us). A monster without head or arms.

acephalocardia (ă-sef"al-o-kar'dĭ-ah) [G. *a-* priv. + *kephalē*, head, + *kardia*, heart.] Absence of head and heart.

aceph"alocar'dius. A parasitic monster without head or heart

acephalochiria (ă-sef"al-o-ki'rĭ-ah) [G. *a-* priv. + *kephalē*, head, + *cheir*, hand.] Absence of head and hands

acephalochirus (ă-sef"al-o-ki'rus). A monster without head or hands.

acephalocyst (ă-sef'al-o-sist) [G. *a-* priv + *kephalē*, head, + *kystis*, bladder.] An echinococcus-cyst, hydatid, especially one with no daughter cysts, so called because it gives origin to no scolices or tenia heads, such as come from the cysticerci.

aceph"alogas'ter [G. *a-* priv. + *kephalē*, head, + *gastēr*, belly.] A parasitic monster consisting only of the pelvic extremity

acephalogaste'ria. Absence of head, thorax, and abdomen, as noted in a parasitic monster with pelvis and legs only.

aceph"alopo'dia [G. *a-* priv + *kephalē*, head, + *pous*(*pod-*), foot] Congenital absence of head and feet.

aceph"alopo'dius. A monster without head or feet

acephalorrhachia (ă-sef-al-o-rak'ĭ-ah) [G. *a-* priv, + *kephalē*, head, + *rhachis*, spine] Congenital absence of head and spinal column.

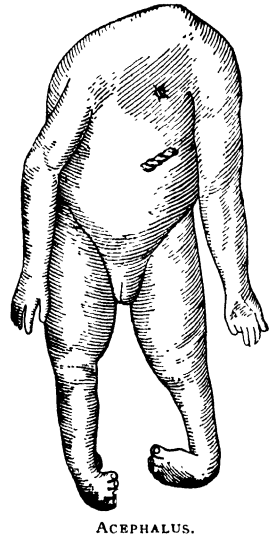
aceph"alosto'mia [G. *akephalos*, headless, + *stoma*, mouth] Absence of the greater part of the head with, however, the presence of a mouth-like opening at the upper extremity of the trunk or neck.

acephalos'tomus. A monster having no head, but only a mouth-like opening at the upper part.

aceph"alothora'cia [G. *a-* priv. + *kephalē*, head, + *thorax*, chest.] Absence of head and thorax.

aceph"alotho'rus. A monster without head or thorax.

aceph'alous. Headless.



ACEPHALUS.

aceph'alus [G. *a-* priv. + *kephalē*, head.] A headless monster. **a. paraceph'alus,** a monster with only partially formed skull and no brain

aceph'aly. Acephalia, headlessness.

acerato'sis [G. *a-* priv. + *keras*, horn] Akeratosis, deficiency or absence of horny tissue, as the nails.

acer'vuline [L. *acervulus*, a little heap.] Occurring in clusters, aggregated.

acervulo'ma. An intracranial tumor containing acervulus, or brain-sand; psammoma.

acer'vulus [L. dim. of *acervus*, a heap.] The sabulous matter, composed of epithelial cells and lime concretions, filling the follicle of the pineal body; brain-sand.

acescence (ă-ses'ens) [L. *acescere*, to become sour.] 1 A slight degree of acidity. 2 The process of becoming sour.

acescent (ă-ses'ent). Slightly acid.

acestoma (ă-ses-to'mah) [G. *akestos*, curable, + -ōma.] Exuberant granulations which are forming the cicatrix.

acetab'ular. Relating to the acetabulum.

acetab'ulum, gen. *acetab'uli*, pl. *acetab'ula* [L. a shallow vinegar vessel or cup.] Cotyloid cavity, a cup-shaped depression on the external surface of the innominate bone, in which the head of the femur fits.

acetal (as'et-al) [*acet(ic)* + *al(cohol)*.] A clear liquid made by the imperfect oxidation of alcohol, has been employed as an hypnotic in doses of ʒ 2–3 (8.0–12.0).

acetaldehyde (as-et-al'de-hīd). Aldehyde (2).

acetamide (as-et-am'id). Acetic acid amide, formed by the action of ethyl acetate on ammonia; occurs in colorless deliquescent crystals of a mousy odor.

acetanilid (as-et-an'ĭ-lid). Acetanilidum.

acetanili'dum (U.S. and Br.), Acetanilid, antifebrin. Made from aniline by acting upon it with acetyl chloride; occurring in the form of white scales or crystalline powder, very slightly soluble in water, but soluble in 5 parts of alcohol; employed as an analgesic and antipyretic in doses of gr. i–v (0.06–0.3)

acetan'nin. Acetyl tannate, tannigen, acidum acetyltannicum (U.S.).

acetarsone (as-et-ar'sōn). Stovarsol.

acetate (as'e-tate). A salt of acetic acid.

acetbromanilid (ă-set''brōm-an'ĭ-lid). Antisepsin, asepsin, employed as an analgesic and hypnotic in doses of gr. 1–3 (0.06–0.2).

acetic (ă-se'tik) [L. *acetum*, vinegar.] Relating to vinegar; sour. **a. acid,** acidum aceticum.

ace"ticocep'tor. One of the side chains* assumed to exist in trypanosomes and other organisms, which have a special affinity for the acetic-acid radical

acetidin. Ethyl acetate, acetic ether.

acetify (ă-se'tĭ-fi) [L. *acetum* vinegar, + *facere*, to make; or *fieri*, to be made, to become.] 1. To cause acetic fermentation, to make vinegar. 2. To become vinegar.

acetimeter (as-e-tim'e-tur) [L. *acetum*, vinegar, + G. *metron*, measure.] An apparatus for determining the content of acetic acid in vinegar or other fluid

acetin (as'et-in). A glycerin in which one or more hydrogen atoms have been replaced by acetyl.

acetoace'tic acid. Diacetic* acid.

Acetobacter (ă-se-to-bak'tur) [L. *acetum*, vinegar.] A genus of the family *Nitrobacteriaceæ*, containing rod-shaped, non-motile, aerobic organisms, with many filamentous, clubbed, and other involution forms. **A. ace'tus,**[0] *Mycoderma aceti*, causes the oxidation of alcohol in wine or cider to acetic acid, thus producing vinegar; it is seen as a stringy sediment or pellicle, in "mother" of vinegar.

acetol (as'e-tol). 1. Trade name of a toothache remedy. 2. Hydroxyacetone.

acetom'eter. Acetimeter.

acetomorphine (as"e-to-mor'fēn). Heroine.

acetone (as'e-tone). 1. A substance, $CO.(CH_3)_2$, found in the urine and blood in diabetes; it is the cause of the peculiar odor in that disease. 2. Acetonum. **a.-bro'moform,** brometone. **a.-chlo'roform,** chloretone. **a. com'pounds,** beta-oxybutyric acid, acetoacetic (diacetic) acid, and acetone.

acetone'mia, acetonæ'mia [G. *haima*, blood.] The presence of acetone, in large amount, in the blood manifested at first by erethism, later by a progressive depression; acidosis.

acetoni'trile. Methyl cyanide, a colorless fluid of aromatic odor, soluble in water and alcohol. **a reac'tion,** see under *reaction*

aceto''noresor'cin, aceto''noresor'cinol. An antiseptic compound of resorcin and acetone.

acetonum (as-e-to'num) (U.S.). Spiritus pyroaceticus, ether pyroaceticus; a thin colorless liquid of an ethereal odor, containing not less than 99 per cent. of absolute acetone dimethyl ketone; has been employed in rheumatism and gout in doses of ♏15–20 (1.0–1.3). It has also been used in warfare as a tear gas or lacrymator.

acetonu'ria [G. *ouron*, urine.] The excretion with the urine of large amounts of acetone, an indication of incomplete oxidation of the albuminous principles; see *acidosis*.

acetophe'none. Hypnone, phenyl-methyl acetone, a coal-tar derivative, a colorless liquid crystallizing in white needles at low temperatures, with an odor of bitter almond; has been recommended as an hypnotic in doses of ♏1–5 (0.06–0.3) **a. phenet'idin ci'trate,** malarin

acetopy'rine. Acopyrine, trade name for antipyrine acetsalicylate a white crystalline powder very slightly soluble in water; antipyretic analgesic, antirheumatic, in doses of gr. 7½–15 (0.5–1.0)

acetorthotoluid (as-et-or-tho-tol'u-id). An isomer of acetparatoluid having similar properties.

acetosol'uble. Soluble in acetic acid.

acetous (as'e-tus). Relating to vinegar; sour-tasting. **a. fermenta'tion,** fermentation of wine or beer whereby the alcohol is oxidized to form acetic acid, or vinegar.

acet'ozone. Trade name for a mixture of equal parts by weight of benzoyl-acetyl-peroxide and a moist infusorial earth; occurs as a white crystalline powder slightly soluble in water; employed as an intestinal antiseptic in typhoid fever and dysentery.

acetparaminosalol (as-et-par-am''ĭ-no-sal'ol) Salophen.

acetparaphenet'idin. Acetphenetidinum

acetparatol'uid. An antipyretic substance in the form of colorless crystals, slightly soluble in water, dose gr. 15–30 (1.0–2.0)

acetphenetidi'num, acetphenet'idin (U.S.). Phenacetin (Br.); an acetyl compound of phenetidin, occurring in the form of white crystalline powder or scales without odor or taste, soluble in 12 parts of alcohol and 925 parts of water; analgesic and antipyretic in doses of gr. 7½ (0.5).

acetral (as'e-tral). Trade name of a solution of aluminum acetate, used as a mouth-wash.

acet-theocin-sodium (as"et-the"o-sin-so'dĭ-um). Soluble theocin.*

acetum, pl. *aceta* (ă-se'tum, ă-se'tah) [L. *vinum acetum*, soured wine, vinegar.] Vinegar. The vinegars (aceta) are made by treating vegetable drugs with dilute acetic acid. One acetum is official in the U.S.P. and five in the B.P. **a. aromat'icum** (N.F.), aromatic vinegar, a solu-

tion of the volatile oils of cinnamon, cloves, juniper, lavender, lemon, peppermint, and rosemary in alcohol, acetic acid, and water: employed as a cooling lotion in headache and fever. **a. cantharidis** (Br.), vinegar of cantharides, 1 part, in 10 of 50 per cent. acetic acid: used externally. **a. ipecacuanhæ** (Br.), vinegar of ipecac; dose, ♏5–30 (0.3–2.0). **a. mylabridis** (Br.), vinegar of mylabris; a substitute for a. cantharidis, employed as a vesicant. **a. opii,** vinegar of opium, black drop; dose, ♏5–20 (0.3–1.2). **a. scillæ** (U.S., Br.), vinegar of squill, dose, ♏10–30 (0.6–2.0). **a. urgineæ** (B.A.), vinegar of urginea or Indian squill; urginea 1, macerated in diluted acetic acid 8; dose, ♏10–30 (0.6–2.0).

acetyl (as'et-il). A univalent radical, $CH_3.CO$, which is supposed to unite with hydroxyl, OH, to form acetic acid, $CH_3.COOH$; the acetates being formed by the substitution of a metallic atom for the hydrogen in the hydroxyl group. **a. chloride,** $CH_3.COCl$, a colorless liquid employed as a reagent. **a. benzacetonine,** aconitine. **a. paramidophenol salicylate,** or **a. paramidosalol,** salophen. **a. phenylhydrazin,** pyrodin. **a. salicylic acid,** aspirin, acidum acetylsalicylicum (U.S.). **a. salol,** vesipyrine. **a. tannin,** acidum acetyltannicum (U.S.). **a. thymol,** thymol acetate. **a. tribromsalol,** cordyl, analgesic and hypnotic doses of gr. 8–15 (0.5–1.0).

acetylcholine (ă-set-in-do-ēn). An alkaloid of ergot which causes a lowering of blood pressure. **a. chloride** is given intramuscularly in daily doses of 0.5–1.0 gm., dissolved in glucose.

acetylene (ă-set'e-lēn). A colorless gas, of a disagreeable odor, which burns with an intense white flame; it is prepared commercially by the action of water on calcium carbide.

achalasia (ă-kal-a'zĭ-ah) [G. *a-* priv. + *chalasis,* relaxation.] Failure to relax, referring especially to visceral openings, such as the pylorus, or to sphincter muscles.

Achalme's bacill'us (a-shalm'). Welch's bacillus, *Clostridium welchii.*[0]

Achard-Castaigne meth'od (ă-shar'kahs-tān'). Methylene-blue test.*

ache (āk) [A.S. *acan.*] 1 To be the seat of a continuous pain. 2. A peculiar dull yet often severe, continuous pain.

acheilia (ă-ki'lĭ-ah). Achilia.

acheilous (ak'i-lus). Achilous.

acheiria (ă-ki'rĭ-ah). Achiria.

acheiric (ă-ki'rik). Achiric

acheirous (ak'i-rus). Achirous

acheirus (ă-ki'rus). Achirus.

achene (a-kēn') [L. *achenium.*] A dry one-seeded, indehiscent fruit

achenium (a-ke'nĭ-um) [G. *a-* priv. + *chainō,* I gape.] Achene.

achilia (ă-ki'lĭ-ah) [G. *a-* priv. + *cheilos,* lip] Congenital absence of the lips.

Achillea (ă-kil-e'ah). A genus of herbaceous plants of the order *Compositæ.* **A. millefo'lium** [L. *mille,* thousand, + *folium,* leaf], milfoil, yarrow, a perennial shrub the herbage of which is employed as a bitter tonic in doses of ʒ4–6 (120.0–180.0) of a tea made with 1 ounce of the leaves to 1 pint of hot water; the dose of the volatile oil is ♏5–10 (0.3–0.6), of the eclectic specific medicine, gtt. 5–30(0.3–2.0); it is given also as a remedy in disorders of the urinary apparatus and of the female reproductive organs.

achilleine (ă-kil'e-ēn). An amorphous bitter alkaloid derived from *Achillea millefolium.* It has been used as an antiperiodic in doses of gr. 15–30 (1.0–2.0) but causes irregular heart action.

Achilles ten'don (ă-kil'ēz) [a Greek warrior who was vulnerable only in the heel.] Tendo Achillis, tendo* calcaneus [BNA] **A. t. re'flex,** see under *reflex*

achillobursitis (ă-kil"o-bur-sī'(se')tis). Inflammation of a bursa beneath the tendo* calcaneus

achillodynia (ă-kil-o-din'ĭ-ah) [*Achilles (tendon)* + G. *odynē,* pain.] Pain due to inflammation of the bursa between the calcaneus and the tendo Achillis (achillobursitis).

achillorrhaphy (ă-kil-or'ă-fĭ) [*Achilles (tendon)* + G. *rhaphē,* sewing.] Suture of the tendo Achillis.

achillotenotomy (ă-kil"o-ten-ot'o-mĭ). Achillotomy.

achillotomy (ă-kil-ot'o-mĭ) [*Achilles (tendon)* + G. *tomē,* incision.] Division of the tendo calcaneus.

achilous (ak'i-lus) [G. *a-* priv + *cheilos,* lip.] Having no lips.

achiria (ă-ki'rĭ-ah) [G *a-* priv. + *cheir,* hand] 1 Congenital absence of the hands. 2. Anesthesia in, with loss of the sense of possession of, one or both hands; a condition sometimes noted in hysteria. 3. A form of dyschiria in which the patient is unable to tell on which side of the body a stimulus has been applied.

achiric (ă-ki'rĭc). Relating to achiria in either sense.

achirous (ak'i-rus) [G *a-* priv. + *cheir,* hand.] Without hands

achirus (ă-ki'rus) [G. *a-* priv + *cheir,* hand.] A monster without hands.

achlamydeous (ak-lă-mid'e-us) [G. *a-* priv. + *chlamys(chlamyd-),* mantle.] In botany, noting a flower without calyx or corolla.

Achlea (ak'le-ah). A genus of thallophytic fungi, sometimes saprophytic but more often forming moulds on animals (fish, insects, etc.).

achlorhydria (ă-klor-hi'drĭ-ah) [G. *a-* priv. + *chlorhydric (acid)*] Absence of hydrochloric acid in the gastric juice.

achlorides (ă-klo'rĭdz). Non-chlorides; salts other than chlorides in the urine.

achlorop'sia [G. *a-* priv. + *chlōros,* green, + *opsis,* vision] Green-blindness, color-blindness as regards green.

acholia (ă-ko'lĭ-ah) [G. *a-* priv. + *cholē,* bile.] Suppressed secretion of bile

acholuria (ă-ko-lu'rĭ-ah) [G. *a-* priv + *cholē,* bile, + *ouron,* urine.] Absence of bile pigments in the urine in certain cases of jaundice.

acholuric (ă-ko-lu'rik). Without the presence of bile in the urine.

achondroplasia (ă-kon-dro-pla'zĭ-ah) [G. *a-* priv + *chondros,* cartilage, + *plasis,* a moulding.] Chondrodystrophy, diaphyseal aclasis.

achondroplasty (ă-kon'dro-plas-tĭ). Achondroplasia

achor (ak'or) [G. *achōr,* dandruff] 1. An eruption of small pustules on the hairy parts. 2. A scaly or scabby eruption on the face and scalp in infants. 3. An acuminate pustule

achoresis (ă-ko-re'sis) [G. *a-* priv. + *chōreō,* I hold] Permanent contraction of a hollow viscus such as the stomach or bladder, whereby its capacity is reduced

Achorion (ă-ko'rĭ-on) [G. *achōr,* dandruff] A genus of parasitic fungi producing several affections of the skin. **A. arloing'i,** *A. quinckeanum.* **A. ben'netti,** a species causing mouse favus, probably the same as *A. quinckeanum.* **A. ceratoph'agus** [G. *keras,* horn, + *phagō,* I eat], a name given to the favus fungus in onychomycosis. **A. gyp'seum,** a species producing a form of favus. **A. leber'tii.** The

phyton microsporon, the fungus of tinea tonsurans. **A. quinckea'num,** *A. arloingi*, alpha tungus of Quincke, the pathogenic fungus of tavus herpeticus. **A. schoenlei'nii,** the fungus of favus. **A. viola'ceum,** a species found in cases of favus in both mice and men.

achreocythemia (ă-kre-o-si-the'mĭ-ah) [G. *achroios*, colorless, + *kytos*, cell, + *haima*, blood.] A state marked by deficiency of hemoglobin and consequent paleness of the red blood-cells

achroacyte (ă-kro'ah-sīt) [G. *a-* priv + *chroa*, color, + *kytos*, a hollow (cell).] A colorless cell, a lymphocyte.

achroacytosis (ă-kro-ah-si-to'sis). The occurrence of a great number of lymphocytes in the peripheral circulation, lymphocytosis.

achroiocythemia (ă kroy"o-si-the'mĭ-ah). Achreocythemia

achroma (ak-ro'mah) [G. *a-* priv. + *chrōma*, color.] Leucoderma.

achromacyte (ă-kro'mah-sīt) Achromatocyte

achromasia (ă-kro-ma'sĭ-ah) [G. *achrōmatos*, colorless] 1. Absence of pigment in the skin; vitiligo, albinism 2. Cachectic pallor 3 Absence of the ordinary staining reaction in a cell or tissue

achromate (ă-kro'māt) [G. *a-* priv. + *chrōma*, color.] An absolutely color-blind person.

Achromatiaceæ[0] (ak-ro-mă-tĭ-a'se-e) [G. *a-* priv. + *chrōma*, color.] A family of the order *Thiobacteriales*, containing large motile cells with sulphur or calcium oxalate granules.

achromatic (ă-kro-mat'ik) [G. *a-* priv. + *chrōma*, color.] 1. Colorless. 2. Not decomposing white light. 3. Not staining readily. **a. lens,** a double lens, made of two kinds of glass with different chromatic qualities, so selected that one practically neutralizes the light dispersion of the other, without interfering with refraction.

achro'matin [G. *a-* priv. + *chrōma*, color] The hyaloplasm or plasm of the cell, so called because of its weak staining property; especially the caryoplasm or structureless protoplasm of the cell-nucleus.

achromatinic (ă-kro-mă-tin'ik). Relating to or containing achromatin

achromatism (ă-kro'mă-tizm). The quality of being achromatic.

Achromatium[0] (ak-ro-mă'tĭ-um) [G. *a-* priv. + *chrōma*, color.] A genus of the family *Achromatiaceæ*, consisting of large motile spheroidal cells, containing granules of calcium oxalate; water organisms.

achromatocyte (ă-kro-mat'o-sīt) [G. *a-* priv + *chrōma* color, + *kytos*, cell.] A decolorized erythrocyte

achromatolysis (ă-kro-mă-tol'i-sis). Plasmolysis, protoplasmolysis, caryoplasmolysis; dissolution of the achromatin of a cell or of its nucleus

achromatophil (ă-kro-mat'o-fil) [G. *a-* priv. + *chrōma*, color, + *philos*, fond.] 1. Not being colored by the histological or bacteriological stains. 2. A cell or tissue which cannot be stained in the usual way.

achromatopsia (ă-kro-mă-top'sĭ-ah) [G. *a-* priv. + *chrōma*, color. + *opsis*, vision] Color-blindness.

achromatopsy (ă-kro'mă-top-se). Achromatopsia

achromatosis (ă-kro-mă-to'sis) [G. *a-* priv. + *chrōma*, color.] Absence of natural pigmentation, as in albinism

achromatous (ă-kro'mă-tus). Colorless, unpigmented.

achromaturia (ă-kro-mă-tu'rĭ-ah) [G. *a-* priv. + *chrōma*, color, + *ouron*, urine.] The passage of colorless or nearly colorless urine.

achromia (ă-kro'mĭ-ah). Achromatosis.

achromic (ă-kro'mik). Colorless.

Achromobacter (ă-kro-mo-bak'tur) [G. *a-* priv. + *chrōma*, color, + *bakterion*, a small staff.] A genus of the family *Bacteriaceæ*, containing many species of rod-shaped, non-pigment forming, non-pathogenic organisms, found chiefly in soil, water, milk, and horse and cow manure. **A. ambiguum,**[0] *B. ambiguus*, non-pathogenic soil organism. **A. agile,**[0] *B. denitrificans*, an aerobic, gram-negative rod-shaped organism isolated from cow manure; it reduces nitrates.

Achromobacterieae[0] (ă-kro-mo-bak-te'rĭ-e-e) [G. *a-* priv. + *chrōma*, color, + *bakterion*, a small staff.] A tribe of the family *Bacteriaceae*, containing the genus *Achromobacter*.

achromoder'ma. Leucoderma.

achromophilous (ă-kro-mof'i-lus). Achromatophil.

achromotrichia (ă-kro-mo-trik'ĭ-ah) [G. *achrōmos*, colorless + *thrix(trich-)*, hair.] Absence or loss of pigment in the hair; canities

achroodextrin (ă-kro-o-deks'trin) [G. *achroos*, colorless.] A form of dextrin which is not colored by iodine.

achylia (ă-ki'lĭ-ah) [G. *a-* priv + *chylos*, juice.] 1 Absence of the chyle. 2 Absence of the gastric juice or other digestive ferment. **a. gas'trica,** diminished or abolished secretion of the gastric juice in atrophy of the mucous membrane of the stomach. **a. pancreat'ica,** deficiency or absence of the pancreatic secretion resulting in fatty stools, emaciation, and other symptoms of impaired nutrition.

achylosis (ă-ki-lo'sis) Achylia.

achylous (ak'i-lus) [G *achylos*, without juice.] 1. Lacking in gastric juice or other digestive secretion. 2. Having no chyle.

achymia, achymosis (ă-ki'mĭ-ah, ă-ki-mo'sis) [G. *a-* priv. + *chymos*, chyme.] Absence or deficiency of chyme.

acicular (ă-sik'u-lar) [L. *acicula*, a needle.] Needle-shaped.

acid (as'id) [L. *acidus*, sour.] 1. A compound of an electronegative element or radical with hydrogen; it forms salts by replacing all or part of the hydrogen with an electropositive element or radical. An acid containing one displaceable atom of hydrogen in the molecule is called *monobasic;* one containing two, such atoms, *bibasic;* and one containing more than two, *polybasic* 2. In popular language, any chemical compound which has a sour taste. 3. Sour, sharp to the taste 4. Relating to an acid; giving an acid reaction, turning a vegetable blue red. (For definitions of the different acids see the adjectives or under *acidum;* the acids official in the U.S. and Br. Pharmacopeias are defined under *acidum.*) **a.-albu'min,** syntonin; a derived albumin formed by the action of a dilute acid on a native albumin; it is not coagulable by heat, and is precipitated by neutralization of the solution. **a.-fast,** a term denoting bacteria which are not decolorized by mineral acids after having been stained with aniline dyes; the leprosy, smegma, tubercle, and hay bacilli are examples of acid-fast bacilli **a.-gland,** one of the stomach glands secreting the acid of the gastric juice. **a.-intoxica'tion,** a pathological state due to the toxic effect of an excess of acids formed within the organism or introduced from without. **a.-proof,** a.-fast. **bi'nary a.,** one containing only two elements, such as hydrochloric a., HCl. **polyatom'ic a., polyba'sic a.,** one containing two or more hydrogen atoms which can be replaced by basic radicals or metals. **ter'nary a.,** one

which contains three elements, such as an inorganic oxacid.

acidaminuria (as"id-am"in-u'rĭ-ah). The passage of an excess of amino-acids in the urine.

acidemia (as-ĭ-de'mĭ-ŭ) [L. *acidum*, acid, + G. *haima*, blood.] The presence of an acid in the blood.

acid-fast (as'id-fast). See under *acid*.

acid-gland. See under *acid*.

acidifiable (ă-sid-ĭ-fi'a-bl) [L. *acidus*, acid, + *fieri*, to be made, + *habilis*, capable.] Capable of being converted into an acid.

acidify (ă-sid'ĭ-fi) [L. *acidum*, acid, + *facere*, to make.] 1. To render acid. 2. To become acid.

acidimeter (as-ĭ-dim'e-tur) [L. *acidum*, acid, + G. *metron*, measure.] A device for determining the degree of acidity of a fluid, or the strength of an acid.

acidim'etry. The determination of (1) the acidity of a fluid, or (2) the strength of an acid.

acid-intoxica'tion. See under *acid*.

acidismus (as-ĭ-diz'mus). Poisoning by acids introduced from without, as contradistinguished from *acidosis*, or poisoning by acids formed in metabolism.

acidity (ă-sid'ĭ-tĭ). 1. The state of being acid. 2. The acid content of a fluid.

acidol (as'e-dol). Betaine hydrochloride

acidophil, acidophile (ă-sid'o-fil, ă-sid'o-fil) [L. *acidum*, acid, + G. *philos*, fond.] Oxyphile; also written acidophilic, acidophilous.

acidosis (as-ĭ-do'sis) [L. *acidum*, acid, + G. *-osis*.] Oxyosis, a condition of lessened alkalinity of the blood and tissues owing to the presence of an excess of acid products, either formed within the body or taken in from without and not destroyed by intracorporeal oxidation; when the condition gives rise to morbid symptoms it is called *acid intoxication*.

acidosteophyte (as-ĭ-dos'te-o-fīt) [G. *akis*, a point, + *osteon*, bone, + *phyton*, growth.] A sharp-pointed bony outgrowth or osteophyte.

acid'ulate. To render more or less acid or sour.

acid'ulous. Slightly acid or sour

acidum (as'ĭ-dum) [L.] Acid.

a. ace'ticum (U.S. and Br.), acetic acid, $HC_2H_3O_2$, $C_2H_4O_2$, or CH_3COOH; a product of the oxidation of ethylic alcohol and of the destructive distillation of wood; the official acid is a liquid containing 36 per cent. (B.P. 33 per cent.) of absolute acetic acid (hydrogen acetate); employed locally as a counterirritant, and occasionally internally in doses of ♏5–15 (0.3–1.0), employed also as a reagent.

a. ace'ticum dilu'tum (U.S. and Br.), dilute acetic acid, contains 6 per cent (B.P., 4.27 per cent) of absolute acetic acid (hydrogen acetate); dose, 3½–1 (4.0–4.0).

a. ace'ticum glacia'le (U.S. and Br.), glacial acetic acid, contains 99 per cent. absolute acetic acid (hydrogen acetate); employed externally as a caustic for the removal of corns and warts

a. acetylsalicyl'icum (U.S.), acetylsalicylic acid, $C_6H_4O(CH_3CO).COOH$ 1·2, aspirin; occurs as small colorless crystals or needles, or a white crystalline powder, odorless, soluble in 300 parts of water or 5 of alcohol; employed as an analgesic and in the treatment of rheumatism, grip, and coryza in average doses of gr. 5 (0.3).

a. acetyltan'nicum (U.S.), acetyltannic acid, diacetyltannic acid, tannyl acetate, acetannin, tannigen, a product obtained by the acetylization of tannic acid; occurs as a yellowish or grayish white powder, odorless, or with a slight acetone odor, and tasteless; employed locally as an astringent and also internally in diarrhea in average dose of gr. 10 (0.6).

a. am'ino-ace'ticum, amino-acetic acid, glycocoll, glycin; white sweetish crystals, soluble in 4½ parts of water; employed in photography.

a. arsenio'sum (Br.), white arsenic; arseni* trioxidum (U.S.).

a. arseno'sum, arseni trioxidum

a. benzo'icum (U.S. and Br.), benzoic acid, benzoyl hydrate; occurs in the form of whitish needles or scales, soluble in 400 parts of water, in 2½ parts of alcohol antiseptic, diuretic, and expectorant; dose, gr. 10–40 (0.6–2.6).

a. bo'ricum (U.S. and Br.), boric acid, boracic acid occurs in the form of pearly laminar crystals or a white unctuous powder, soluble in 25 parts of water; employed as an antiseptic dusting powder, in saturated solution as a collyrium, and with glycerin in aphthæ and stomatitis; internal dose, gr. 2–15 (0.12–1.0).

a. bromau'ricum (N.F.), bromauric acid, occurring in the form of reddish brown acicular crystals or granular masses having an acid metallic taste, soluble in water and in alcohol; employed in the preparation of liquor auri et arseni bromidi, and in the treatment of syphilis in dose of gr. $\frac{1}{75}$ (0.006).

a. camphor'icum, camphoric acid, a white crystalline powder obtained by the action of nitric acid on camphor; employed in cystitis and in the night sweats of phthisis in doses of gr. 20–60 (1.3–4.0).

a. carbol'icum, carbolic acid, phenyl alcohol, phenyl hydrate, phenol.*

a. carbol'icum ioda'tum, iodized carbolic acid or phenol, phenol iodatum (N.F.), iodine 20, phenol 60, glycerin 20; caustic and counterirritant.

a. carbol'icum liquefac'tum (Br.), phenol liquefactum (U.S.), absolute phenol liquefied by the addition of 10 per cent. of water; dose, ♏½–1 (0.03–0.06).

a. chro'micum, chromii trioxidum (U.S.), H_2CrO_4, occurs in the form of crimson, odorless, deliquescent crystals, employed as a caustic.

a. cinnam'icum, cinnamylic acid, phenylacrylic acid, occurs in the form of transparent scaly crystals; employed in infectious diseases to promote leucocytosis, in doses of gr. $\frac{1}{10}$–½ (0.003–0.015).

a. cit'ricum (U.S. and Br.), citric acid, the acid of citrus fruits; a clear crystalline deliquescent and efflorescent acid, usually made from lemon-juice, used as a preventive of scurvy and as a refreshing drink with water and sugar, dose, gr. 5–20 (0.3–1.3).

a. cit'ricum sacchara'tum, saccharated citric acid; citric acid 62.5, sugar 37.5; used with saccharated sodium bicarbonate in the preparation of effervescent saline mixtures.

a. cresyl'icum, cresol

a. dichlorace'ticum, a colorless liquid used as a caustic application to venereal sores

a. for'micum (N.F.), formic acid, aminic acid, a colorless liquid, employed as a muscular tonic in tremor and fatigue, in doses of ♏2–10 (0.2–0.6).

a. gal'licum, gallic acid, a yellowish white crystalline substance usually made from tannic acid or nutgalls; employed as an astringent for the same purpose as tannic acid in doses of gr. 2–30 (0.12–2.0).

a. glycerophosphor'icum, prepared by heating glycerin with two thirds its weight of phosphoric acid; used in making the glycerophosphates

a. hippu'ricum, benzoylglycocoll, a white crystalline substance ($C_9H_9NO_3$), used therapeutically in the form of its salts (hippurates of calcium, sodium, and ammonium).

a. hydriod'icum, hydriodic acid, HI, a colorless gas readily soluble in water.

a. hydriod'icum dilu'tum (U.S.), a solution containing not less than 10 per cent. of the absolute acid; employed in cases in which the iodides are indicated in doses of ♏5–30 (0.3–2.0).

a. hydrobro'micum, hydrobromic acid, hydrogen bromide, HBr, a straw-colored fluid, official in Br. as *a. hydrobromicum dilutum*, a solution containing not less than 10 per cent. of the absolute acid; employed as a substitute for the bromides in dose of ♏15–60 (1.0–4.0)

a. hydrochlo'ricum (U.S. and Br.), hydrochloric acid, muriatic acid, HCl; a liquid containing 31.9 (Br. 31.79) per cent. of the absolute acid, employed as an escharotic, and rarely internally in dose of ♏1–10 (0.12–0.6) well diluted.

a. hydrochlo'ricum dilu'tum (U.S. and Br.), dilute hydrochloric or muriatic acid, a liquid containing 10

(Br. 10.58) per cent. of the absolute acid; employed in dyspepsia and as a urinary stimulant in doses of ℥5–20 (0.3–1.3).

a. hydrocinnam'icum, beta-phenol-propionic acid, in white feathery crystals; employed in phthisis in doses of gr. ½–2 (0.03–0.12).

a. hydrocyan'icum, hydrocyanic acid, prussic acid, HCN; a colorless liquid, obtained from amygdalin; present in bitter almonds, the stones of peaches, plums, and other fruits, and laurel leaves. Scheele's acid is a 4 per cent. solution of absolute hydrocyanic acid.

a. hydrocyan'icum dilu'tum (Br.), dilute hydrocyanic acid; a 2 per cent. solution of absolute hydrocyanic acid; employed in gastralgia and as a sedative in doses of ♏ss–5 (0.06–0.3)

a. hydrofluor'icum, obtained by the action of sulphuric acid on fluor spar; has been used in doses of ℥5–20 (0.3–1.2) of the dilute acid (0.2 per cent.), in the treatment of goiter

a. hypophosphoro'sum (U S), hypophosphorous acid; a 30 per cent. aqueous solution of absolute hypophosphorous acid, HPH_2O_2; employed in pharmacy.

a. hypophosphoro'sum dilu'tum, dilute hypophosphorous acid, contains 10 per cent. of the absolute acid; employed rarely in nervous disorders in place of the hypophosphites in doses of ♏5–10 (0.3–0.6).

a. iod'icum, a white crystalline soluble powder, antiseptic and deodorant; used in ozena, as a lotion in ulcers and inoperable cancer, and internally as an alterative and intestinal antiseptic in dose of gr. 1–2 (0.06–0.12) well diluted.

a. lac'ticum (U S and Br), lactic acid, a syrupy, acid, odorless, and colorless liquid obtained by the action of the lactic acid bacillus on milk or milk-sugar, employed in concentrated form as an application to morbid growths, and internally in doses of ℥5–20 (0.3–1.2) well diluted to prevent gastrointestinal fermentation. A culture of the bacillus or milk containing it is usually given in place of the pure acid.

a. metaphosphor'icum dilu'tum, diluted metaphosphoric acid, diluted glacial phosphoric acid; a 10 per cent. aqueous solution of glacial phosphoric acid, formerly employed as a substitute for the official diluted phosphoric acid in certain mixtures

a. monochlorace'ticum, occurs in deliquescent white crystals; employed as a caustic for corns and warts.

a. ni'tricum (U.S. and Br), nitric acid, HNO_3 contains 68 (Br. 70) per cent. by weight of the concentrated acid; employed as a caustic for warts.

a. ni'tricum dilu'tum (Br.), contains 17.4 per cent. concentrated nitric acid; hepatic stimulant and tonic in doses of ♏5–20 (0.3–1.2).

a. ni'tricum fu'mans, fuming nitric acid, contains about 91 per cent concentrated nitric acid, employed as a caustic.

a. nitrohydrochlo'ricum (N.F.), nitrohydrochloric or nitromuriatic acid, aqua regia, contains nitric acid 18, hydrochloric acid 82 volumes; a fuming corrosive, yellowish liquid, used as a caustic.

a. nitrohydrochlo'ricum dilu'tum (N.F. and Br), dilute nitrohydrochloric or nitromuriatic acid; used as a tonic and hepatic stimulant in doses of ♏5–20 (0.3–1.2).

a. ole'icum (U.S.), oleic acid, an organic acid prepared from fats, occurs as a yellowish liquid; used to form oleates

a. os'micum, osmic acid, hyperosmic acid, osmium tetroxide, employed in solution for hardening tissues preparatory to mounting, and by hypodermic injection of 1 or 2 per cent. solution in neuralgia.

a. oxal'icum, oxalic acid, a poisonous acid in crystals resembling magnesium sulphate, employed in the removal of ink and other stains.

a. phenylæth''ylbarbitu'ricum, phenobarbitalum (U.S.)

a. phenylcinchonin'icum, phenylcinchoninic acid, cincophenum (U.S.).

a. phosphor'icum (U S.), a liquid containing 85 per cent. absolute orthophosphoric acid.

a. phosphor'icum concentra'tum (Br.), contains 66.3 per cent. of the absolute acid.

a. phosphor'icum dilu'tum (U.S. and Br.) contains 10 (Br. 13.8) per cent. absolute acid; tonic and stimulant digestive in doses of ♏15–30 (1.0–2.0) diluted.

a. pic'ricum (Br.), trinitrophenol.

a. salicyl'icum (U.S. and Br.), salicylic acid, orthooxybenzoic acid; white, colorless, odorless crystals, derived from oil of wintergreen or made synthetically from phenol; employed in rheumatism and gastrointestinal fermentation in doses of gr. 5–15 (0.3–1.0).

a. stear'icum (U.S.), stearic acid, a monobasic acid made from fats, occurs as a hard white solid; used in pharmaceutical preparations.

a. sulphocarbol'icum, phenol-sulphonic acid, sozolic acid; prepared by the action of strong sulphuric acid on phenol; antiseptic and disinfectant; *aseptol* is a 33 per cent. solution of this acid.

a. sulphu'ricum (U S. and Br.), sulphuric acid, oil of vitriol, H_2SO_4, colorless and nearly odorless, heavy, oily, corrosive liquid containing 92.5 (Br. 98) per cent of absolute acid; employed occasionally as a caustic.

a. sulphu'ricum aromat'icum (U S. and Br.), aromatic sulphuric acid, elixir of vitriol, contains sulphuric acid 11, tincture of ginger 5, oil of cinnamon 0.01, in alcohol 84; the Br. preparation contains about 6 per cent. acid; employed as a tonic and astringent and in the night sweats of phthisis in doses of ♏5–15 (0.3–1.0).

a. sulphu'ricum dilu'tum (U.S. and Br.), dilute sulphuric acid; employed as a tonic and intestinal astringent in doses of ♏5–15 (0.3–1.0).

a. sulphuro'sum (Br.), sulphurous acid, H_2SO_3, a 5 per cent. solution of the absolute acid; used chiefly as a disinfectant and bleaching agent, and occasionally as a spray in tonsillitis; internal dose, ♏30 (2.0).

a. tan'nicum (U S and Br.), tannic acid, tannin, a light greenish yellow, very soluble powder, extracted by ether from galls; styptic and astringent, employed in diarrhea in doses of gr. 1–5 (0.06–0.3).

a. tartar'icum (U S), tartaric acid, made from crude tartar or argol, occurring as a soluble white powder or crystals; laxative and refrigerant, employed in the manufacture of Seidlitz powders and various effervescing tablets and granules; dose gr. 5–15 (0.3–1.0).

a. tartar'icum sacchara'tum, saccharated tartaric acid; tartaric acid 67.5, sugar 32.5; used with saccharated sodium bicarbonate in the preparation of effervescent saline mixtures.

a. trichlorace'ticum (U.S.), trichloracetic acid, $C_2HCl_3O_2$, occurring in the form of deliquescent crystals prepared by the action of fuming nitric acid on chloral hydrate; it is acetic acid in which three of the four hydrogen atoms are replaced by chlorine; employed as an escharotic for venereal and other warts

acidu'ric [L. *acidum*, acid, + *durare*, to endure.] Noting bacteria which grow in acid media, but better in slightly alkaline media.

acidyl (as'id-il) [L. *acidum*, acid, + *hylē*, stuff.] A general term for the acid radicals.

acies (a'shi-ez) [L. edge.] Margin, border, edge.

a. thal'ami op'tici, stria medullaris.

acinesia (as-in-e'shi-ah). Akinesia.

acine'sic. Acinetic.

acinet'ic. Akinetic.

aciniform (as-in'i-form) [L. *acinus*, grape, + *forma*, shape.] Acinous.

acinose (as'in-oze). Acinous.

acinous (as'in-us) [L. *acinus*, grape.] Resembling a bunch of grapes; noting certain glands (*alveolar glands*), the excretory ducts of which start from little sacs (*acini*) arranged in clusters like grapes.

acinus, pl. and pl. *acini* (as'in-us) [L. berry, grape.] Alveolus. 1. One of the minute sac-like beginnings of the excretory ducts of an acinous or alveolar gland, an aggregation of which constitutes a lobule. 2. An air-cell of the lung. 3. A lobule of the liver.

acladiosis (ă-klă-di-o'sis). An ulcerative dermatomycosis caused by a fungus, *Acladium castellanii*.

aclasis (ak'la-sis) [G. *a-* priv. + *klasis*, a breaking away, a fragment.] Pathological continuity of

structure; chondrodystrophy. **diaphys'eal a.**, "multiple exostoses," imperfect formation of the cancellous bone laid down in the cartilage between the diaphysis and epiphysis.

aclas'tic [G. *a-* priv + *klastos*, broken in pieces.] Non-refractive, not refracting the rays of light.

acleistocardia (ă-klīs-to-kar'dĭ-ah) [G. *a-* priv. + *kleistos*, closed, + *kardia*, heart.] Patency of the foramen ovale of the heart.

aclu'sion [G. *a-* priv. + L. *claudere*, to shut.] Imperfect adjustment of the opposing surfaces of the molar and bicuspid teeth.

ac'me [G. *akmē*, the highest point.] 1 The period of greatest intensity of any symptom. 2. Acne

ac'ne [probably a corruption (or copyist's error) of G *akmē*, point or efflorescence.] A papular eruption due to inflammation, with accumulation of secretion, of the sebaceous glands. **a. agmina'ta,** acnitis, an eruption of small, dusky, reddish papules on the face, becoming pustular, and followed by slight scarring **a. al'bida** [L. whitish], milium **a. artificia'lis,** a produced by external irritants, such as tar, or drugs internally administered, such as iodine **a. atroph'ica,** a. vulgaris in which the lesions leave a slight amount of scarring, a varioliformis. **a. cachectico'rum,** simple a occurring in the subjects of anemia or of some debilitating constitutional disease. **a. decal'vans,** Quinquaud's disease, a suppurative inflammation of the hair follicles of the scalp causing a patchy alopecia. **a. dissemina'ta,** a vulgaris. **a. erythemato'sa,** a. rosacea. **a. exul'cerans serpigino'sa na'si,** a peripherally progressing eruption of minute papular granulomata, followed by scarring, on the nose. **a. fronta'lis,** a of the forehead. **a. hypertroph'ica,** a. vulgaris in which the lesions, on healing, leave conspicuous scars **a. indura'ta,** deeply seated a with hard tubercular lesions varying from simple papules to tumors the size of a pea. **a. ke'loid,** sycosis nuchæ necrotisans **a. kerato'sa,** an eruption of papules consisting of horny plugs projecting from the hair follicles, accompanied by inflammation. **a. lupoi'des,** a varioliformis. **a. mentag'ra,** sycosis vulgaris. **a. necrot'ica,** a. varioliformis **a. papulo'sa,** a vulgaris in which the papular lesions predominate **a. pustulo'sa,** a vulgaris in which the pustular lesions predominate **a. ro'dens,** a. varioliformis **a. rosa'cea,** a. erythematosa, rosacea, a of the cheeks and nose associated with congestion and the formation of telangiectases **a. scorbu'tica,** a papular eruption accompanied by cutaneous hemorrhages **a. scrofuloso'rum,** a form of a. cachecticorum, occurring in scrofulous children, seated chiefly in the lower extremities **a. sim'plex,** simple a, a vulgaris, **a. urtica'ta,** an eruption of acne-like lesions beginning as small urticarial wheals and followed by slight scarring. **a. variolifor'mis,** a pustulosa followed by scarring, occurring chiefly on the forehead and temples at the border of the scalp. **a. vulga'ris,** a simplex, a disseminata, simple uncomplicated a, an eruption of papules and pustules on an inflammatory base. **hal'ogen a.,** chloric a., an acneiform eruption caused by contact with, or ingestion of, bromine, chlorine, iodine, or their salts.

ac'neform, acne'iform. Resembling acne.

acnitis (ak-ni'(ne')tis). Acne agminata

acocan'thera. Toxicophlœa, juice from the leaves and stems of *Acocanthera venenata*, a South African arrow poison containing ouabain.

acocantherin (ă-ko-kan'ther-in). Ouabain.

acœlius (ă-se'lĭ-us) [G. *a-* priv + *koilia*, abdomen] A monster without abdomen

acognosy (ă-kog'no-sĭ) [G. *akos*, remedy, + *gnōsis* knowledge] A knowledge of remedies

acoin (ak'o-in). A white crystalline powder dipara-anisylmonophenetyl-guanidin hydrochloride, employed for infiltration anesthesia (1–1000 solution), and also as a local anesthetic in eye surgery, in 1 per cent. solution.

acol'ogy [G. *akos*, remedy, + *-logia*.] Materia medica.

aco'mia [G. *a-* priv. + *komē*, hair of the head], Alopecia, baldness.

ac'onine. An amorphous, bitter, non-poisonous alkaloid, derived from aconitine

ac'onite. The root of *Aconitum napellus;* see *aconitum.*

aconiti'na (U.S. and Br.). Aconitine, acetylbenzoylaconine, the active principle (alkaloid) of aconitum, occurring in white crystals; exceedingly poisonous; employed as a cardiac sedative in dose of gr. $\frac{1}{150}$ (0.00015). The unguentum is official in the B P.

Aconi'tum [L. wolfsbane] A genus of herbaceous plants of the natural order *Ranunculaceæ*, the root of one species of which, *A. napellus*, is the drug aconite. The alkaloid aconitine is usually obtained from the root of another species, *A. ferox*

aconi'tum, gen. *aconi'ti* [G. *akoniton*, monkshood.] (U.S.) Aconiti radix (Br.), the root of *Aconitum napellus*, monkshood or wolfsbane; anodyne, diuretic, diaphoretic, and anodyne, a cardiac and respiratory depressant; externally analgesic; dose of the crude drug, gr. 1 (0.06), of the eclectic specific medicine, a teaspoonful of a mixture of 5 to 10 drops in 4 ounces of water every hour. The fluid-extract, liniment, and tincture are official in the U.S.P., or B P., or both.

aconure'sis [G *akōn*, involuntary, + *ourēsis*, micturition.] Enuresis, involuntary urination

acoprosis (ă-kŏ-pro'sis) [G. *a-* priv + *kopros*, feces] Absence or great scantiness of fecal matter in the intestines.

acopyrine (ak-o-pi'rēn) Acetopyrine, antipyrine* acetylsalicylate.

a'cor [L. a sour taste] Gastric acidity, pyrosis.

acorea (ă-ko-re'ah) [G. *a-* priv. + *korē*, pupil] Congenital absence of the pupil of the eye

acoria (ă-ko'rĭ-ah) [G. excessive appetite, from *a-* priv + *korē*, satiety.] 1. Absence of the feeling of satiety after eating, from which may arise: 2. Gluttony To be distinguished from *bulimia* in which actual hunger persists

acor'mus [*a-* priv. + *kormos*, trunk.] A form of acardiacus in which the entire trunk is lacking.

acouesthesia (ă-koo-es-the'zĭ-ŭ) [G. *akouō*, I hear, + *aisthēsis*, sensation.] The sense of hearing; usually implying a very acute sense of hearing.

acoulal'ion [G *akouō*, I hear, + *lalia*, talking.] An instrument for enabling the very deaf to hear; it is constructed on the principle of the telephone with a sound-magnifying attachment.

acoumeter (ă-koo'me-ter) [G. *akouō*, I hear, + *metron*, measure] An instrument for measuring the acuity of hearing, consisting of a movable and a fixed steel rod, the striking of one of which upon the other gives a sharp click.

acoumetry (ă-koo'mĕ-trĭ). Measurement of the hearing faculty.

acouphone (ă'koo-fōn) [G. *akouō*, I hear, + *phōnē* sound] An electrical appliance, on the principle of the telephone, for enabling the deaf to hear spelled also *akouphone*

'sma (ă-kooz'mah) [G. *akoŭsma*, a rumor.] An illucination of elementary sounds. See *phoneme*.

smatagnosia (ă-kooz-mă-tag-no'sĭ-ah) [G. *akousma*(*akousmat-*), a thing heard, + *agnōsia*, ignorance] Mind-deafness; inability to grasp the meaning of what is heard.

usmatamnesia (ă-kooz-mă-tam-ne'sĭ-ah) [G. *akousma*, something heard, + *amnēsia*, forgetfulness.] A loss of memory for sounds.

acoustic (ă-koos'tik) [G. *akoustikos*.] Relating to hearing or the perception of sound.

acousticon (ă-koos'ti-kon) [G. *akoustikos*, relating to hearing] An electrical appliance, on the principle of the telephone, for enabling the deaf to hear better.

acoustics (ă-koos'tiks) [G. *akoustikos*, relating to hearing.] The science which treats of sounds and of their perception.

acquired (ă-kwīrd') [L. *acquirere*, to obtain] Noting a disease, predisposition, habit, etc., which is not congenital but has taken possession of one at some period after birth.

acquisitus (ă-kwiz'ĭ-tus) [L.] Acquired, noting a non-congenital dermatosis or other disease.

acraconitine (ak"ră-kon'ĭ-tēn) [L. *acer* (*acr-*), violent, + E. *aconitine*.] Pseudaconitine, an alkaloid from *Aconitum ferox*, said to be twice the strength of aconitine.

acrania (ă-kra'nĭ-ah) [G. *a-* priv. + *kranion*, skull] Congenital absence of most or all of the bones of the cranium.

acra'nial. [G. *a-* priv. + *kranion*, skull] Having no cranium; relating to an acranius.

acra'nius [G. *a-* priv. + *kranion*, skull] A monster having no cranium, or with only the bones forming the base of the skull

acrasia (ă-kra'sĭ-ah) [G.] Incontinence, intemperance.

Acra'sis. A species formerly included in the group *Mycetozoa*,* but now in the small group *Acrasieæ*, consisting of spore clusters growing in beer yeast

acratia (ă-kra'shyah) [G. *akrateia*, incontinence] 1 Incontinence. 2 Loss of strength, weakness. 3 Lack of control.

acraturesis (ak-ră-tu-re'sis) [G. *akratēs*, powerless, incontinent, + *ourēsis*, urination] 1. Incontinence of urine 2 Feeble urination due to vesical atony

Acree-Rosenheim test (ah'kra-ro'zen-hīm). For protein; mix 5 to 10 drops of a 1–5000 solution of formaldehyde with the suspected fluid in a test-tube, then trickle a little sulphuric acid down the side of the tube; if protein is present the line of contact will show a violet coloration.

Ac'rel's gang'lion [Olof *Acrel*, Swedish surgeon, 1717-1807.] Ganglion on the extensor tendons of the wrist

acremoniosis (ak-re-mo-nĭ-o'sis). A condition marked by fever and the occurrence of gummalike swellings, caused by a fungus *Acremonium potronii*.

acribom'eter [G. *akribēs*, exact, + *metron*, measure.] An instrument for measuring very minute objects.

ac'rid [L. *acer* (*acr-*), pungent.] Sharp, pungent, biting, irritating. **a. poison,** a poison which causes a destructive local irritation as well as systemic effects

acridine (ak'rĭ-dēn). An alkaloid derived from gas-tar; occurs in colorless crystals of an acrid odor and taste.

acriflavine (ak-rĭ-fla'vēn). Trypaflavine, an acridine dye, a brownish-red odorless soluble powder; it possesses powerful antiseptic properties, especially in the presence of serum; said to be 20 times more powerful than mercuric chloride, and 800 times more so than phenol.

acrimo'nia [L. pungency] A sharp, pungent disease-provoking humor; a term of the ancient humoral pathologists.

ac'rimony [L. *acrimonia*, pungency.] The quality of being intensely irritant, biting, or pungent

ac'rinyl sulphocy'anide. White mustard oil, a yellow, pungent, vesicating liquid.

acrisia (ă-kris'ĭ-ah) [G. *a-* priv. + *krisis*, judgment] A condition in which diagnosis and especially prognosis are uncertain.

acrit'ical [G. *a-* priv. + *kritikos*, critical.] 1. Not critical; marked by no crisis, noting the diseases terminating by lysis 2. Indeterminate, especially as regards prognosis.

acritochromacy (ă-krĭ-to-kro'ma-sĭ) [G. *akritos*, not distinguishing, + *chrōma*, color] Color-blindness.

acroæsthesia (ak"ro-es-the'zĭ-ah). Acroesthesia.

acroagnosis (ă"kro-ag-no'sis). Absence of acrognosis or of limb sensibility.

acroanesthesia, acroanæsthesia (ak"ro-an-es-the'zĭ-ah) [G. *akros*, extreme, + *an-* priv + *aisthēsis*, sensation.] 1. Complete anesthesia, total absence of sensation. 2 [G. *akron*, end, extremity] Anesthesia of one or more of the extremities.

acroarthritis (ak"ro-ar-thri'(thre')tis) [G. *akron*, end, extremity, + *arthron*, joint, + *-itis*.] Inflammation of the joints of the hands or feet.

acroasphyxia (ak"ro-as-fiks'ĭ-ah) [G. *akron*, extremity, + *asphyxia*, stoppage of the pulse] Raynaud's* disease.

acroataxia (ak"ro-ă-taks'ĭ-ah) [G. *akros*, highest, first part, + *ataxia*.] Ataxia affecting the distal portion of the extremities—hands and fingers, feet and toes. See *proximoataxia*.

ac'roblast [G. *akros*, topmost, + *blastos*, germ] One of the embryonic cells forming the outer layer of the mesoblast

acrobystiolith (ak-ro-bĭs'tĭ-o-lith) [G. , prepuce, + *lithos*, stone] A preputial calculus.

acrobystitis (ak-ro-bis-ti'(te')tis) [G. *akrobystia*, prepuce] Inflammation of the prepuce, posthitis.

acrocarpous (ak-ro-kar'pus) [G. *akros*, at the top, + *karpos*, fruit.] In botany noting a moss in which the archegonium is developed on the summit of the primary stem

acrocepha'lia. Acrocephaly.

acrocephal'ic [G. *akron*, tip, + *kephalē*, head] Having a high or peaked head. Noting a skull with a vertical index above 77. Similar to hypsicephalic (*q.v.*).

acroceph'alous. Acrocephalic

acroceph'aly [G. *akron*, tip, + *kephalē*, head] Malformation of the head, consisting in a high or pointed cranial vault, due to premature closure of the sagittal, coronal, and lambdoid sutures.

acrochordon (ak-ro-kor'don) [G. *akron*, extremity, + *chordē*, cord] A small pedunculated growth.

acrocinesia (ak-ro-sin-e'sĭ-ah) [G. *akros*, extreme, + *kinēsis*, movement.] Excessive movement

acrocontracture (ak"ro-kon-trak'chūr) [G. *akron*, extremity.] Contracture of the joints of the hands or feet.

acrocyanosis (ak-ro-si-an-o'sis) [G. *akron*, extremity, + *kyanōsis*, dark blue color.] Cyanosis of the finger-tips, resembling that of Raynaud's* disease, but differing from it in the absence of a paroxysmic local asphyxia, in its permanence, and in the absence or slight degree of accompanying pain.

acrodermatitis (ak-ro-dur-mah-ti'(te')tis) [G. *akron*, extremity, + *derma*, skin, + *-itis*.] Inflammation of the skin of the arms or legs. **a. per'stans,** a persistently recurring form of dermatitis

repens. **a. vesiculo'sa trop'ica,** a condition marked by a glossy appearance of the skin of the fingers, with minute vesicles imbedded in it; some pain in the hand and fingers is complained of.

acrodolichomelia (ak"ro-dol"ĭ-lo-me'lĭ-ă) [G. *akron*, extremity, + *dolichos*, long, + *melos*, limb.] Large size and disproportionate growth of the hands and feet

acrodont (ak'ro-dont) [G. *akros*, edge, + *odous* (*odont-*), tooth. Noting an animal (such as certain lizards) having the teeth attached directly to the edge of the jaws and not inserted in alveoli.

acrodynia (ak-ro-din'ĭ-ah) [G. *akron*, extremity, + *odynē*, pain.] 1. An epidemic disease, prevailing in Paris in 1828, which reappeared in the first quarter of the present century; erythema* arthriticum epidemicum. 2. Multiple neuritis of the fingers or toes.

acroesthesia (ak-ro-es-the'zĭ-ah) [G. *akros*, extreme, + *aisthēsis*, sensation] 1. Extreme degree of hyperesthesia 2. [G. *akron*, extremity] Hyperesthesia of one or more of the extremities

***acrogenous** (ă-kroj'en-us) [G *akros*, at the summit, + *gennaō*, I produce] In botany, increasing by apical growth

acrognosis (ă-krog-no'sis) [G. *akron*, extremity, + *gnōsis*, knowledge.] Cenesthesia in relation to the extremities; sensory perception of the limbs and their several parts.

acrolein (ă-kro'le-in) [L. *acer* (*acr-*), acrid, + *oleum*, oil] Allyl aldehyde, a light volatile oily liquid, giving off irritant vapor, derived from glycerin.

acroma'nia [G. *akros*, extreme, + *mania*, frenzy] Excessively violent mania

acromastitis (ă"kro-mas-ti'(te')tis) [G. *akron*, tip, + *mastos*, breast, + *-itis*] Thelitis, inflammation of the nipple

acromega'lia, acromeg'aly [G. *akron*, extremity, + *megas* (*megal-*), large.] Marie's disease, a trophic disorder marked by progressive enlargement of the head and face, hands and feet, and thorax, probably due to altered function of the hypophysis cerebri.

acromelalgia (ak-ro-mel-al'jĭ-ah) [G *akros*, terminal, + *melos*, limb, + *algos*, pain] A vasomotor neurosis marked by redness, pain, and swelling of the fingers and toes, headache, and vomiting, probably the same as erythromelalgia

acrometagenesis (ak-ro-met-ah-jen'e-sis) [G. *akron*, extremity, + *meta*, beyond, + *genesis*, origin] Abnormal development of the extremities resulting in deformity

acro'mial. Relating to the acromion. **a. angle,** the angle at the lower edge of the spine of the scapula where it ascends to become the acromion **a. process,** acromion.

acromicria (ak-ro-mik'rĭ-ah) [G *akron*, extremity, + *mikros*, small] Congenital shortness or general smallness of one or more extremities

acro"mioclavic'ular. Relating to the acromion and the clavicle, noting the articulation between the clavicle and the scapula, and its ligaments.

acro"miocor'acoid. Relating to the acromion and the coracoid process, same as *coracoacromial*

acro'miohu"meral. Relating to the acromion and the humerus

acro'mion [G. *akron*, tip, + *ōmos*, shoulder.] Acromial process, the outer end of the spine of the scapula which projects as a broad flattened process overhanging the glenoid fossa; it articulates with the clavicle and gives attachment to the deltoid and some fibers of the trapezius

acromiothoracic (ă-kro"mi-o-tho-ras'ik). Relating to the acromion and the thorax, noting a branch of the axillary artery.

acrom'phalus [G. *akron*, top, + *omphalos*, navel] Abnormal projection of the umbilicus

acromyotonia (ak"-ro-mi-o-to'nĭ-ah) [G. *akro* tremity, + *mys*, muscle, + *tonos*, tens Myotonia affecting the extremities only, re ing in spasmodic deformity of the hand or f

acromyotonus (ak-ro-mi-ot'o-nus). Acromyoto

acronarcot'ic [L. *acer* (*acr-*), pungent, acrid.] Both irritant in local effect and narcotic in acti upon the nerve centers. 2 A narcotic poiso which is locally irritant.

acroneurosis (ak-ro-nu-ro'sis) [G. *akron*, extremity Any neurosis, usually vasomotor in nature, mani festing itself in the extremities

acropachy (ak'ro-pak-ĭ). Pachyacria.

acroparal'ysis [G. *akron*, extremity] Paralysis of the muscles of one or more extremities.

acroparesthesia, acroparæsthesia (ak"ro-par-es-the'zĭ-ah) [G. *akron*, extremity] 1. Paresthesia (numbness, tingling, and other abnormal sensations) of one or more of the extremities. 2. [G. *akros*, extreme] An extreme degree of paresthesia.

ac"ropathol'ogy [G *akron*, extremity.] Pathology of the extremities; a study of the morbid changes in orthopedic affections

acrop'etal [G. *akron*, the top, + L *petere*, to seek] In a direction toward the summit; basifugal.

acropho'bia [G. *akron*, top, + *phobos*, fear.] A morbid dread of elevated places

acroposthitis (ak"ro-pos-thi'(the')tis) [G. *akroposthia*, prepuce, + *-itis*] Inflammation of the prepuce

acroscleroderma (ak"ro-skle"ro-dur'mah) G. *akron* extremity, + *sklēros*, hard, + *derma*, skin] Induration of the skin of the fingers or toes, sclerodactyly.

acrosome (ak'ro-sōm) [G *akron*, tip, + *sōma*, body] The anterior extremity of the head of the spermatozoon, or the body from which this is developed

acrosphacelus (ak"ro-sfas'e-lus) [G *akron*, extremity, + *sphakelos*, gangrene] Raynaud's* disease.

acroter'ic [G. *akrōtērion*, the topmost point] Relating to the extreme periphery, such as the tips of fingers and toes, the end of the nose, etc

acrotic (ă-krot'ik) 1 [G *akrotēs*, height] Relating to the surface of the body, especially the cutaneous glands 2 [G *a-* priv. + *krotos*, a striking] Marked by great weakness or absence of the pulse

ac'rotism [G *a-* priv. + *krotos*, a striking] Absence or imperceptibility of the pulse.

acrotrophoneurosis (ak"ro-trof"o-nu-ro'sis) [G. *akron*, extremity] A trophoneurosis of one or more of the extremities

acryl'ic acid. A volatile acid occurring in *Sarracenia purpurea* or the American pitcher-plant.

Actæ'a. A genus of plants, baneberry, of the order *Ranunculaceæ*, having for the most part properties similar to those of cimicifuga **A. al'ba,** white cohosh **A. argu'ta,** red cohosh of western America. **A. racemo'sa,** *Cimicifuga racemosa.* **A. ru'bra,** red cohosh of eastern America. **A. spica'ta,** herb Christopher, European baneberry.

actæa (ak-te'ă). White cohosh, *Actæa alba*, employed in atonic dyspepsia, constipation, and menstrual disorders in doses of gtt. 2–3 of the specific medicine.

acterol (ak'ter-ol). Trade name of a make of irradiated ergosterol (viosterol).

actin'ic [G. *aktis* (*artin-*), a ray.] Relating to the chemically active rays of the spectrum.

actinism (ak'tin-izm). The chemical action of rays from a luminous source, residing chiefly though not exclusively in and beyond the violet end of the visible spectrum.

actinium (ak-tin'ĭ-um) [G. *aktis*, a ray.] An element, symbol Ac, discovered by Debierne in pitchblende; its disintegration product (radioactinium) is radioactive, but actinium itself appears to be rayless. Actinium emanation, known as actinon, is derived from radioactinium; by loss of particles it passes through a series called respectively actinium A, B, C, and D. **a. X,** the disintegration product of radioactinium.

Actinobacillus (ak-tin-o-bă-sil'lus) [G. *aktis* (*aktin-*), ray, + L. *bacillus*, a little rod] A genus of the family *Actinomycetaceæ*. **Actinobacillus actinoi'des,** *B actinoides*, small rod-shaped forms causing necrotic foci of epizootic pneumonia in calves. **Actinobacillus actinomyce'tem com'itans,** coccoid forms found in symbiosis with *Actinomyces bovis*, but apparently non-pathogenic **Actinobacillus lignieres'i,**[0] *B. lignieresi*, medium to long filamentous non-motile rods, with terminal branching, causing abscesses of the lymph nodes in cattle, and pathogenic for the smaller domestic animals

actinochemistry (ak"tin-o-kem'is-trĭ). Chemical processes promoted by the action of rays from a luminous source

ac"tinoclad'othrix [G *aktis(aktin-)*, ray, + *klados*, branch, + *thrix*, hair] *Actinomyces bovis*

actinocutitis (ak"tin-o-ku-ti'(te)tis)[G *aktis(aktin-)*, ray, + L. *cutis*, skin, + G. *-itis*] Actinodermatitis

actinodermatitis (ak"tin-o-dur-ma-ti'(te')tis) [G. *aktis(aktin-)*, ray + *derma*, skin, + *-itis*] Inflammation of the skin produced by radioaction, as of light, radium, or *x*-rays

actin'ogram [G *aktis(aktin-)*, ray, + *gramma*, a drawing, picture] Skiagram; the record made on a photographic plate by the *x*-rays or rays proceeding from radium or other radioactive bodies.

actin'ograph [G *aktis(aktin-)*, ray, + *graphō*, I write] 1 Skiagraph, an apparatus for making actinograms 2 An apparatus for determining the proper exposure of a photographic plate according to the degree of light

actinograph'ic. Relating to actinography

actinog'raphy. Skiagraphy; the making of actinograms

actinokymography [G. *aktis*, ray, + *kyma*, wave, + *graphē*, a drawing.] Actinography or radiography of organs in motion

actinolyte (ak-tin'o-līt). An apparatus used in the application of the actinic rays

actinol'ogy [G. *aktis(aktin-)*, ray, + *-logia*] Radiology, the science which treats of radiant energy, of the chemical and other actions of rays proceeding from luminous bodies, of those from radium and other radioactive substances, and of *x*-rays, and of the sources of these rays

actinom'eter [G *aktis(aktin-)*, ray, + *metron*, measure] An instrument for determining the intensity and penetrating power of Roentgen and other rays

actinomycelial (ak"tĭ-no-mi-se'lĭ-al) Relating to the mycelium of the ray-fungus, or actinomyces.

Actinomy'ces [G *aktis(aktin-)*, ray, + *mykēs*, fungus.] Ray-fungus, so called because it occurs in the form of an aggregation of radiating club-shaped rods; a genus of the family *Actinomycetaceæ*, containing non-motile branching filamentous organisms forming a mycelium; they are mostly anaerobic, but some are microaerophilic. A few of the species are pathogenic for man, several cause scab and other potato diseases, but the greater number of them are non-pathogenic soil organisms. The genus *Nocardia** formerly included this and a number of other microorganisms. **A. actinoi'des,**[0] pleomorphous organisms, from slender rod-forms becoming spherical and club-shaped; the cause of epidemic pneumonia in calves. **A. asteroi'des,**[0] *Cladothrix asteroides*, straight mycelian filaments breaking up into conidia, found in a case of cerebral abscess and in chronic pulmonary disease. **A. bo'vis,**[0] *Nocardia actinomyces*, *Streptothrix actinomycotica* vel *bovis*, ray fungus, slender branching mycelium changing to large radiating club-shaped forms, the cause of actinomycosis in cattle **A. can'didus,**[0] long branching mycelium, found in the lungs in certain cases of tuberculosis **A. farcin'icus,**[0] *Nocardia farcinica*, branching filamentous mycelium, the cause of farcin du bœnf, a tuberculosis-like disease of cattle. **A. freer'i,**[0] short and long branching filaments and club-shaped forms, causing a variety of mycetoma. **A. hom'inis,**[0] straight branching hyphæ with radiating club forms, the cause of actinomycosis in man **A. madu'ræ,**[0] straight branching hyphæ with conidia, and club-shaped forms, the cause of mycetoma **A. necroph'orus,**[0] long filaments, sometimes branching, the cause of coagulation necrosis in cattle and occasionally in man. **A. pseudonecroph'orus,** a non-sporulating, Gram-negative, bacillus found in certain cases of puerperal infection. **A. variab'ilis,** a species, or strain, recovered from a prostatitic subject with pyuria and from a child with purulent keratitis

Actinomycetaceæ[0] (ak-tin-o-mi-se-ta'se-e) [G. *aktis* (aktin-), ray, + *mykēs*, fungus. A family of the order *Actinomycetales*, containing filamentous forms, frequently branched and often forming mycelia

Actinomycetales,[0] (ak-tin-o-mi-se-ta'lēz). [G *aktis* (*aktin-*), ray, + *mykē*, fungus] An order of *Schizomycetes*, containing elongated, sometimes filamentous forms, not infrequently branched, without endospores but sometimes developing conidia; it contains two families—*Actinomycetaceæ* and *Mycobacteriaceæ*

actinomycetic (ak"tĭn-o-mi-se'tik). Relating to actinomyces or the ray-fungus.

actinomyco'sis [G *aktis(aktin-)*, ray, + *mykēs*, fungus] A disease of cattle and swine, sometimes communicated to man, caused by the ray-fungus, *Actinomyces* (*Nocardia*). It affects the jaw most commonly (lumpy jaw), but it may invade the brain, lungs, or gastroenteric tract. It is characterized by the formation of granulomata of sluggish growth, which eventually break down and discharge a viscid pus containing minute yellowish granules; the constitutional symptoms are of a septic character

actinomycot'ic. Relating to actinomycosis

actinomy'cotin. A preparation from actinomyces cultures, analogous to tuberculin, employed therapeutically in actinomycosis.

Actinomyxid'ia [G. *aktis(aktin-)*, a ray, + *myxa*, mucus.] An order of *Neosporidia*, having a double cellular envelope, three polar capsules, and eight spores

ac'tinon. Actinium* emanation.

actinoneuritis (ak"tĭ-no-nu-rī'(re')tis) [G *aktis* (*aktin-*), ray + *neuron*, nerve, + *-itis*.] Neu-

ritis caused by prolonged and repeated exposure to the *x*-rays or radium.

actinophore (ak-tin'o-for) [G. *aktis(aktin-)*, ray, + *phoros*, bearer.] Pterygophore.

Actinop'oda [G. *aktis*, ray, + *pous(pod-)*, foot.] A class of *Sarcodina* having slender pseudopodia with a central axial filament.

actinoprax'is [G. *aktis(aktin-)*, ray, + *praxis*, a doing.] The employment of light rays, *x*-rays, or radium in diagnosis or treatment.

actinos'copy [G. *aktis(aktin-)*, ray, + *skopeō*, I examine.] Examination of the tissues and deep structures of the body by means of the *x*-rays; actinostereoscopy, skiascopy, fluoroscopy, radioscopy, rœntgenoscopy

actinostereos'copy [G. *aktis(aktin-)*, ray, + *stereos*, solid, + *skopeō*, I examine.] Actinoscopy.

ac"tinotherapeu'tic. Relating to actinotherapeutics.

ac"tinotherapeu'tics [G. *aktis(aktin-)*, ray, + *therapeuō*, I cure.] Actinotherapy.

ac"tinother'apy [G. *aktis(aktin-)*, ray, + *therapeia*, a healing.] Radiotherapy, actinotherapeutics, the treatment of disease by radiant energy, rays from the sun or electric light, those from radium or other radioactive body, or the *x*-rays.

actinotoxemia (ak-tin-o-toks-e'mĭ-ŭ) [G. *aktis (aktin-)*, a ray, + *toxikon*, poison, + *haima*, blood.] Blood-poisoning by the products of disintegration produced by the action of *x*-rays, or other forms of radioactivity.

action (ak'shun) [L. *actio*, from *agere*, to do.] 1. The performance of any of the vital functions, the manner of such performance, or the result of the same 2. The exertion of any force or power, physical, chemical, or mental. **a. patt'ern,** see *pattern*. **chem'ical a.,** see *reaction*. **re'flex a.,** see *reflex*.

activate (ak'tĭ-vāt). 1. To render active. 2. To make radioactive; specifically, to charge water with radium emanation.

activator (ak'ti-va-tor). 1. A substance, the presence of which renders another substance, such as an enzyme, active. 2. Cohnheim's term for the internal secretion of the pancreas. 3. An apparatus for impregnating water with radium emanation.

ac'tive. Efficient, producing effect, especially a prompt effect; not passive; bustling, busy.

activin (ak'tĭ-vin). Trade name of a preparation containing iodine and casein, recommended for the nonspecific protein treatment of various infections.

ac'tol, ak'tol. A trade name for silver lactate, a white powder soluble in 15 parts of water and containing about 50 per cent. of metallic silver; employed in solutions of 1–1000 to 1–200 as an irrigating fluid and as an application to fistulas, ulcers, etc.; its chemical formula is $C_3H_5O_3Ag + H_2O$.

actual (ak'chu-al) [L. *actus*, performance.] Real, existent, active, not potential. **a. cau'tery,** a cautery, such as the hot iron, which acts through virtue of its heat and not chemically.

acuflopressure (ak-u-fi'lo-presh-ur) [L. *acus*, needle, + *filum*, thread, + *pressura*, pressure.] Acupressure fortified by a ligature passed under the needle, increasing the compression of the artery

acu'ity [L. *acuere*, to sharpen.] Sharpness, clearness, distinctness.

acu'minate [L. *acuminatus*, sharpened.] Pointed, tapering to a point, conical.

acupressure (ak'u-presh-ur) [L. *acus*, needle, + *pressura*, pressure.] A procedure for occluding a wounded artery; a needle is passed in and out of the tissues on either side of the artery, so that its free central portion presses the vessel against the underlying tissues, thereby occluding it.

acupuncture (ak'u-punk-chūr) [L. *acus*, needle, + *punctura*, puncture.] Puncture made with long fine needles for diagnostic or therapeutic purposes; stylostixis.

a'cus [L needle.] A needle.

acute (ă-kūt') [L. *acutus*, sharp.] 1. Sharp 2. Clever. 3. Of short and sharp course, not chronic; said of a disease.

acutenaculum (ak"u-ten-ak'u-lum) [L. *acus*, needle, + *tenaculum*, holder.] Needle-holder.

acutorsion (ak-u-tor'shun) [L. *acus*, needle, + *torsio*, twisting.] Arrest of hemorrhage from a wounded artery by the passage of a needle through the vessel near the open end, including some of the tissues, and then making a half or a complete turn with the needle, twisting the tissues and the artery, occluding the latter.

acyanoblepsia, acyanoblepsy (ă-si"an-o-blep'sĭ-ah, ă-si"an-o-blep'sĭ) [G. *a-* priv. + *kyanos*, something blue, + *blepsis*, sight.] Blue-blindness, inability to distinguish the color blue.

acy"anop'sia [G *a-* priv. + *kyanos*, something blue, + *opsis*, sight.] Blue-blindness, acyanoblepsia.

acyclic (ă-si'klik). Not cyclic, noting especially an **a. com'pound,** open-chain* compound.

acyesis (ă-si-e'sis) [G. *a-* priv. + *kyēsis*, pregnancy. 1. The non-pregnant condition. 2. Sterility in the woman.

acys'tia [G. *a-* priv. + *kystis*, bladder.] Congenital absence of the urinary bladder.

acystineuria (ă-sis-tin-u'rĭ-ah) [G. *a-* priv. + *kystis*, bladder, + *neuron*, nerve.] Absence of nervous control of the bladder.

Acystospo'rea [G. *a-* priv. + *kystis*, bladder, + *sporos*, seed.] A suborder of *Hemosporidia* in which schizogony occurs in the blood-cells of the vertebrate host, the sexual cycle being completed in the body cavity or digestive tract of a blood-sucking insect or arachnid.

Acys"tosporid'ia [G. *a-* priv. + *kystis*, bladder, + *sporos*, seed.] A group of intracellular protozoan parasites found chiefly in the red blood-cells; the group includes the malarial organisms and other similar parasites which have a sporogenous life cycle in the body of an invertebrate host.

Ad. Chemical symbol of *aldebaranium*.

ad. A Latin preposition denoting to; it is used in prescription writing to indicate that enough of the ingredient is to be taken to make the entire mixture equal the amount stated.

ad- [L. *ad*, to.] A prefix denoting increase, adherence, or motion toward, and sometimes with an intensive meaning.

-ad [L. *ad*, to.] A suffix in anatomical nomenclature having the significance of the English -ward; denoting toward or in the direction of the part indicated by the main portion of the word.

A.D.A. Abbreviation for (1) the American Dental Association, or (2) the American Dietetic Association.

adactylia, adactylism (ă-dak-til'ĭ-ah, ă-dak'til-izm) [G. *a-* priv. + *daktylos*, digit.] Absence of fingers or toes.

adac'tylous. Without fingers or toes.

adac'tylus [G. *a-* priv. + *daktylos*, finger.] A monster without fingers or toes.

adac'tyly [G. *a-* priv. + *daktylos*, digit.] Adactylia, congenital absence of fingers or toes.

ad'alin. Trade name of a make of carbromal.

adamantine (ad-ă-man'tin) [G. *adamantinos*, very hard.] Exceedingly hard; specifically relating to the enamel of the teeth

adamantinocarcinoma (ad-ă-man"tĭ-no-kar-sĭ-no'mah). An adamantinoma which has assumed a malignant character.

ad"amantino'ma. A tumor of the lower (sometimes upper) jaw developing from the remains of the enamel organs.

adaman'toblast [G. *adamas* (*adamant-*), adamant, diamond, + *blastos*, germ, sprout.] Ameloblast one of a layer of cells lining the cup of the enamel organ, from which the enamel of the tooth is formed.

adamantoblastoma (ad-ă-man-to-blas-to'mah). Overgrowth of the adamantoblast.

adamanto'ma. Adamantinoma.

Adamkiewicz's pro'tein reac'tion (ah-dahm'kya-vits) [Albert *Adamkiewicz*, Viennese pathologist, 1850–1921]. Various protein solutions are stained violet by a mixture of concentrated sulphuric acid, 1, and glacial acetic acid, 2; and, when diluted, show an absorption band between green and blue in the spectrum. **A.'s dem'ilunes,** crescent-shaped cells beneath the neurilemma of medullated nerve fibers.

Ad'am's ap'ple. Prominentia laryngea.

Ad'ams's opera'tion [William *Adams* English surgeon, 1820–1900.] Subcutaneous palmar aponeurotomy for Dupuytren's contracture. **A.'s saw,** a small, short saw with long handle, used in osteotomy

ADAMS'S SAW.

Ad'ams's opera'tion [Sir William *Adams*, English surgeon, 1760–1829.] Excision of a wedge from the margin of the eyelid in order to shorten it in cases of ectropion

Ad'ams's solu'tion. Ammoniated alcohol, 100, ether (65°), 110.

Ad'ams-Stokes disease'. See *Stokes-Adams disease*

Adanso'nia [Michel *Adanson* French naturalist, 1727–1806.] A genus of trees of the natural order *Malvaceæ*. **A. digita'ta,** calabash-tree, baobab, a tree of Senegal the leaves of which have been used as a febrifuge.

adapta'tion [L. *adaptare*, to adjust.] 1. The acquiring of modifications fitting a plant or animal to life in a new environment or under new conditions. 2. An advantageous change in function or constitution of an organ or tissue to meet new conditions. 3. Adjustment of the iris and retina to varying degrees of illumination.

adap'ter. A device whereby one part of an apparatus is fitted or joined to another part.

adaptometer (ad-ap-tom'e-tur). A device for determining the time required in ocular adaptation.

ad'de [L.] Add! a word used in prescription writing

addiction (ă-dik'shun) [L. *addicere*, to consent] Habituation to some practice; specifically the enslavement to a drug-habit

ad'diment [L. *additamentum*, an increase.] Complement.

addisin (ad'ĭ-sin) [after Thomas *Addison*.] A bone-marrow stimulant present in human gastric juice and in swine juice, the latter given by intramuscular injection in the treatment of pernicious anemia.

Add'ison's ane'mia [Thomas *Addison*, English physician, 1793–1860.] Idiopathic pernicious anemia. **A.'s disease',** (1) melasma suprarenale, bronzed skin disease, a disease marked by "anemia, general languor and debility, remarkable feebleness of the heart's action, irritability of the stomach, and a peculiar change in the color of the skin, occurring in connection with a diseased condition of the suprarenal capsules." (2) Addison-Gull disease, vitiligoidea, xanthoma.* **A.'s ke'lis** or **ke'loid, morphea. A.'s pill,** Guy's pill.

Add'ison's clin'ical planes [Christopher *Addison*, English anatomist, *1869.] A series of planes used as landmarks in thoracoabdominal topography; the trunk is divided vertically by a *median line*, from the upper border of the manubrium sterni to the symphysis pubis, by a *lateral line* drawn vertically on either side through a point half way between the anterior superior iliac spine and the median line, in a line drawn transversely across between the two anterior iliac spines, and by a *spinous line* passing vertically through the anterior superior iliac spine on either side; transversely the trunk is divided by a *transthoracic line*, passing across the thorax 3.2 cm. above the lower border of the corpus sterni, a *transpyloric line*, corresponding to the disc between the 1st and 2d lumbar vertebræ and cutting the junction of the 8th and 9th costal cartilages at the tip of the 9th, and a *transtubercular line*, passing on an average 5 cm. above the anterior superior iliac spine and 3.5 cm. below the highest part of the crista iliaca and cutting usually the 5th lumbar vertebra; the planes formed on these lines, and also on transverse lines cutting the upper edge of the manubrium and the upper edge of the symphysis pubis, constitute the clinical planes of Addison

Addisonism (ad'ĭ-sun-izm). A symptom-complex resembling in many respects that of Addison's disease, but not due to disease of the suprarenal glands

addi'tion-com'pound, addi'tion-prod'uct. In chemistry, the direct union of two or more elements or compounds without substitution or loss of any of the atoms

addu'cens oc'uli [L. *adducere*, to bring to] Musculus rectus medialis [BNA]

addu'cent. Bringing to, adducting; noting certain adductor muscles, as the adducens oculi.

adduct' [L. *adducere*, to bring toward.] To draw toward the median line

adduc'tion. 1. Movement of a limb toward the central axis of the body, or beyond it 2 A position resulting from such movement. **a. of the foot,** rotation of the foot inward around the axis of the leg, or around its own axis.

adduc'tor. A muscle drawing a part toward the median line

Adelmann's maneuver (ah'del-mahn) [F. B. *Adelmann*, Russian surgeon, 1811–1888.] Forcible flexion of the extremities to arrest arterial hemorrhage

adelomorphous (ad"el-o-mor'fus) [G. *adēlos*, uncertain, not clear, + *morphē*, shape.] Of not clearly defined form, noting the principal cells in the pepsin glands of the stomach.

adelphotaxis (ă-del'fo-tak"sis) [G. *adelphos*, brother, + *taxis*, arrangement] A grouping together of cells or organisms in mutual relationship

adenalgia (ad-en-al'jĭ-ah) [G. *adēn*, gland, + *algos*, pain.] Pain in a gland, adenodynia.

adenase (ad'e-nāz) [G. *adēn*, gland, + *-ase.*] A deamidizing enzyme in the liver, pancreas, and spleen which converts adenine into hypoxanthin.

ad"enasthe'nia [G. *adēn*, gland, + *astheneia*, weakness.] Abnormally diminished functional activity of a gland.

adendrit'ic [G. *a-* priv.] Without dendrites, noting certain nerve cells in the spinal ganglia.

adenec'tomy [G. *adēn*, gland, + *ektomē*, excision.] Excision of a gland.

ad"enecto'pia [G. *adēn*, gland, + *ek*, out of, + *topos*, place.] The presence of a gland elsewhere than in its normal place.

ad"enemphrax'is [G. *adēn*, gland, + *emphraxis*, stoppage.] Obstruction to the discharge of a glandular secretion.

ade'nia [G. *adēn*, gland.] Generalized hypertrophy of the lymphatic glands without hyperleucocytosis.

ad'eniform [G. *adēn*, gland, + L. *forma*, shape.] Of glandular appearance, adenoid.

adenine (ad'en-ēn) [G. *adēn*, gland.] Aminopurin; a crystalline alkaloid or leucomaine of the uric acid group, $C_5H_5N_5$, present in the pancreas, spleen, kidneys, and other glands; it is found in the urine in leucocythemia.

adenitis (ad-en-i'(e')tis) [G *adēn*, gland, + *-itis.*] Inflammation of a gland.

adeniza'tion. Conversion into gland-like structure.

adeno- [G. *adēn*, gland.] A prefix denoting relation to a gland.

ad'enoblast [G. *adēn*, gland, + *blastos*, germ.] An embryonic cell destined to enter into the formation of a gland.

adenocarcino'ma. An adenoma exhibiting the characters of malignancy, such as infiltration of the surrounding tissues, recurrence after removal, and metastases.

adenocele (ad'e-no-sēl) [G. *adēn*, gland, + *kēlē*, tumor.] A tumor, especially a cystic tumor, springing from a gland, and presenting more or less glandular structure.

adenocellulitis (ad"e-no-sel-u-li'(le')tis). Inflammation of a gland and of the adjacent cellular tissue.

adenochiropsalogy (ad-e-no-ki-rop-sal'o-jĭ) [G. *adēn*, gland, + *cheir*, hand, + *psallō*, I touch, + *-logia.*] The former doctrine of the value of the royal touch* for the cure of scrofula.

adenochondroma (ad"e-no-kon-dro'mah). A tumor with the characteristics of both adenoma and chondroma.

adenochondrosarcoma (ad"e-no-kon"dro-sar-ko'ma). A mixed tumor with elements of adenoma, chondroma, and sarcoma.

adenocyst (ad'e-no-sist). A cystic tumor developing from a gland; adenocystoma.

ad"enocysto'ma. A cystic adenoma.

adenodynia (ad"e-no-din'ĭ-ah) [G. *adēn*, gland, + *odynē*, pain.] Adenalgia, pain in a gland.

ad"enofibro'ma. A fibrous glandular tumor, a tumor with the characteristics of adenoma and fibroma.

ad"enograph'ic. Relating to adenography.

adenography (ad"e-nog'ră-fĭ) [G. *adēn*, gland, + *graphō*, I write, I draw.] 1. Anatomy in special relation to the glands 2. A treatise on the glands

adenohypersthenia (ad"e-no-hi"pers-the'nĭ-ah) [G. *adēn*, gland, + *hyper*, in excess, + *sthenos*, strength.] Excessive functional activity of a gland or set of glands.

adenoid (ad'e-noyd) [G. *adēn*, gland, + *eidos*, appearance.] 1. Gland-like, adeniform, lymphoid; noting a form of connective tissue found in the lymph nodes, spleen, tonsils, solitary and aggregated nodules of the intestine, red bone-marrow and elsewhere; it consists of a connective-tissue framework, or reticulum, containing masses of round cells (lymphocytes) in its interstices. 2 In the plural, hypertrophy of the lymphoic nodules in the posterior wall of the nasopharynx the pharyngeal or Luschka's tonsil. **a. disease'** (1) an overgrowth of adenoid tissue in the rhinopharynx; (2) Hodgkin's* disease.

ad"enoidec'tomy [*adenoids* + G. *ektomē*, excision. An operation for the removal of adenoid growths in the rhinopharynx.

adenoiditis (ad"e-noy-di'(de')tis). Inflammation of adenoid growths in the rhinopharynx.

ad'enoids. See *adenoid* (2).

adenoliomyofibroma (ad"e-no-li"o-mi"o-fi-bro'mah) A liomyofibroma containing glandular elements

ad"enolipo'ma. A mixed tumor with characteristics of adenoma and lipoma.

adenol'ogy [G. *adēn*, gland, + *-logia.*] The science which treats of the glands, their development structure, functions, and diseases.

adenolymphitis (ad-e-no-lim-fi'(fe')tis). Lymphadenitis.

adenolymphocele (ad"e-no-lim'fo-sēl) [G. *adēn* gland, + L. *lympha*, a clear fluid, lymph, + G. *kēlē* tumor.] Cystic dilatation of a lymph node following obstruction of the efferent lymphatic vessels

ad"enolympho'ma. Lymphadenoma.

adeno'ma, pl. *adeno'mata, adeno'mas* [G. *adēn*, gland + *-ōma.*] A neoplasm formed of glandular epithelium of the same arrangement as that of the gland from which the growth arises. **a. adamanti'num,** a term incorrectly used as a synonym of adamantinoma. **a. fibro'sum,** fibroid a. fibroadenoma. **a. seba'ceum,** a small tumor of translucent appearance, usually multiple and occurring on the face, originating in the sebaceous glands. **a. sudorip'arum,** spiradenoma. **malig'nant a.,** adenocarcinoma.

adenomalacia (ad"e-no-mal-a'sĭ-ah) [G. *adēn*, gland + *malakia*, softness] A condition of glandular softening.

adenomatome (ă-de-no'mah-tōm) [*adenoma* - *tomē*, incision.] An instrument for removing adenoids.

adenomato'sis. A condition marked by the formation of multiple glandular overgrowths.

adeno'matous. Relating to adenoma.

adenomere (ad'en-o-mēr) [G. *adēn*, gland, - *meros*, part.] The functionating portion of a gland.

adenomycosis (ă"de-no-mi-ko'sis) [G. *adēn*, gland + *mykēs*, fungus, + *-osis.*] Hodgkin's disease once thought to be of mycotic nature.

adenomyoma (ad"e-no-mi-o'mah) [G. *adēn*, gland + *mys*, muscle.] A tumor composed of smooth muscle tissue containing gland tubules.

adenomyosis (ad-e-no-mi-o'sis) [G. *adēn*, gland, + *mys*, muscle, + *-osis.*] The ectopic occurrence or diffuse, implantation of adenomatous growths such as is seen often in endometriosis.

ad"enomyxo'ma. A mixed tumor with characteristics of adenoma and myxoma.

ad"enomyx"osarco'ma. A mixed tumor with characteristics of adenoma, myxoma, and sarcoma.

adenon'cus [G. *adēn*, gland, + *onkos*, tumor.] gland tumor; glandular enlargement.

adenop'athy [G. *adēn* gland, + *pathos*, suffering] Glandular disease; specifically swelling of an morbid changes in the lymph nodes.

adenopharyngitis (ad″e-no-far-in-ji′(je′)tis). Pharyngoamygdalitis, inflammation of the tonsils and of the pharyngeal mucous membrane.

ad″enophleg′mon [G. *adēn*, gland, + *phlegmonē*, inflammation.] Acute inflammation of a gland and the adjacent connective tissue.

ad″enophthal′mia [G. *adēn*, gland, + *ophthalmos*, eye.] Inflammation of the Meibomian glands.

ad″enosarco′ma. A mixed tumor with the elements of both adenoma and sarcoma.

adenosclerosis (ad″e-no-skle-ro′sis) [G. *adēn*, gland, + *sclērēsis*, hardening.] Induration of a gland.

adenose (ad′e-nōz). Relating to a gland.

adeno′sis [G. *adēn*, gland.] A more or less generalized glandular disease, especially one involving the lymphatic glands.

ad′enotome [G. *adēn*, gland, + *tomē*, a cutting down.] An instrument for the removal of adenoids in the rhinopharynx.

adenot′omy. 1. Adenography, glandular anatomy. 2. The cutting or removal of a gland or glands.

ad″enoty′phoid fe′ver. Typhoid fever with extreme swelling of the mesenteric glands.

ad″enoty′phus. Abdominal typhus, typhoid* fever.

ad′enous. Adenose, relating to a gland.

adenyl′ic acid [G. *adēn*, gland, + *hylē*, stuff.] An acid obtained from the thymus gland.

adephagia (ad-e-fa′jĭ-ah) [G. *adēphagia*, gluttony.] Bulimia.

ad′eps, gen. *ad′ipis* [L.] (U.S.). Lard, axungia porcis; purified leaf lard (omental fat of the hog, *Sus scrofa*), used in the preparation of ointments. **a. benzoa′tus** (Br.), **a. benzoina′tus** (U S.), benzoinated lard, contains 1 per cent. of benzoin; used as a base for ointments **a. la′næ,** wool-fat, the purified fat from sheep's wool. **a. la′næ hydro′sus** (U S. and Br.), hydrous or hydrated wool-fat, lanolin, a. lanæ mixed with 30 per cent. water; used as a basis for ointments, especially when penetration of the skin is desired

ader′mia [G. *a-* priv. + *derma*, skin.] Absence of skin.

ader″mogen′esis [G. *a-* priv. + *derma*, skin, + *genesis*, production.] Failure or imperfection in the growth of skin, especially the imperfect repair of a cutaneous defect.

adhat′oda [Tamil or Singalese.] (B.A.) The leaves of *Adhatoda vasica;* expectorant, antispasmodic, and abortifacient; used in the form of liquid extract, juice, or tincture.

adhere (ad-hēr′) [L. *ad*, to, + *hærere*, to stick. To remain in contact; to unite.

adhesion (ad-he′zhun) [L. *ad*, to, + *hærere*, to stick.] 1. The process of adhering or uniting of two surfaces or parts, especially the union of the opposing surfaces of a wound. 2. In dentistry, the mode in which an upper denture is held in place without vacuum-chambers. 3. In the plural, bands of more or less organized fibrinous exudate thrown out on the surface of a serous membrane and connecting the opposing surfaces. **pri′mary a.,** healing by first intention.* **sec′ondary a.,** healing by second intention.*

adhe′sive. Sticky; causing adhesion. **a. inflamma′tion,** inflammation of a serous membrane with exudation of fibrinous material giving rise to adhesions. **a. plas′ter,** emplastrum adhæsivum.

adhe′sol. A solution of alphanaphthol, balsam of tolu, benzoin, copal, and oil of thyme in ether; used for the same purposes as collodion.

adiadochocinesia (ad-e-ad″o-ko-sin-e′sĭ-ah) [G. *adiadochos*, perpetual, + *kinēsis*, movement.] 1. Incessant movement of a limb or of the entire body 2. [G. *a-* priv. + *diadochos*, successive.] Loss of the power for rapid alternating movements.

adiadochocinesis (ad-e-ad″o-ko-sin-e′sis). Adiadochocinesia.

adiadochokinesia (ad-e-ad″o-ko-kin-e′sĭ-ah). Adiadochocinesia.

adiaphore′sis [G *a-* priv. + *diaphorēsis*, perspiration] Absence or deficiency of perspiration.

adiapneustia (ad-i ap-nu′stĭ-ah) [G. *a-* priv. + *diapneusis*, an exhaling.] Adiaphoresis.

adiastole (ă-di-as′to-lĭ). [G. *a*-priv.] The absence or imperceptibility of the diastolic movement of the heart.

adiathermancy (ă″di-ă-thur′man-sĭ) [G. *a-* priv. + *dia*, through, + *thermē*, heat.] Impermeability to heat.

adiathetic (ad″i-ă-thet′ik) [G. *a-* priv. + *diathesis*.] Noting a symptom or disease which bears no relation to an existing diathesis.

adiemorrhysis (ad″i-em-or′i-sis) [G. *a-* priv. + *dia*, through, + *haima*, blood, + *rhysis*, a flowing.] Arrest of the capillary circulation

Adin′ida [G *a-* priv. + *dinē*, a whirling.] An order of *Dinoflagellata*, in which the flagella are free and do not lie in furrows

adip′ic [L. *adeps*(*adip-*), fat.] Fatty, relating to fat **a. acid,** an acid, $C_6H_{10}O_4$, occurring in the form of masses of soft crystals, obtained by the action of nitric acid on fats

adipocele (ad′ĭ-po-sēl) [L. *adeps*(*adip-*), fat, + G. *kēlē*, tumor.] Lipocele, the presence of fatty tissue without intestine in a hernial sac.

adipocell′ular. Relating to both fatty and cellular tissues, or to connective tissue with much fat.

adipoceratous (ad-ĭ-po-ser′ă-tus). Relating to adipocere.

adipocere (ad′ĭ-po-sēr) [L. *adeps*(*adip-*), fat, + *cera*, wax.] A fatty substance of waxy consistency into which dead animal tissues (as those of a corpse) are sometimes converted when kept from the air under certain favoring conditions of temperature; it is believed to be produced by the conversion into fat of the proteins of the tissues.

ad″ipofibro′ma. A mixed tumor with the characteristics of both adipoma and fibroma

adipogenous (ad-e-poj′en-us) [L. *adeps*(*adip-*), fat, + G. *gennaō*, I produce.] Producing or causing the formation of fat, lipogenous.

adipolysis (ad-ĭ-pol′i-sis) [L. *adeps*(*adip-*), fat, + *lysis* setting free.] The destruction of fat by hydrolysis.

adipolyt′ic. Relating to adipolysis.

adipo′ma [L. *adeps*(*adip-*), fat, + G. *-ōma*.] Lipoma.

adipopec′tic. Adipopexic, lipopectic.

adipopexia (ad-ĭ-po-pek′sĭ-ŭ) [L. *adeps*, lard, fat, + G. pēxis, fixation.] Lipopexia.

adipose (ad′ĭ-pōz) [L. *adeps*(*adip-*), fat.] Fatty, relating to fat. **a. cap′sule,** the fat surrounding the kidney. **a. foss′æ,** accumulations of fat on the outer surface of the mamma. **a. tiss′ue,** fatty tissue, connective tissue containing fat cells **a. tu′mor,** lipoma

adiposis (ad-ĭ-po′sis) [L. *adeps*(*adip-*), fat, + G. *-osis*.] Liposis, an excessive accumulation, either local or general, of fat in the body. **a. doloro′sa,** Dercum's disease, an affection characterized by a deposit of symmetrical nodular or pendulous masses of fat in various regions of the body, attended with more or less pain. **a. or′chica,** dystrophia adiposogenitalis. **a. tubero′sa sim′plex,** Anders' disease, an affection resembling a. dolorosa, in which the fat occurs in small, more or less circumscribed masses on the abdomen or confined to the extremities;

these masses are sensitive to the touch and may be spontaneously painful.

adipositas (ad-i-pos'i-tas). Adiposis, adiposity

a. ex vac'uo, fatty atrophy.*

adipositis (ad-i-po-si'(se')tis) [L. *adiposa*, adipose tissue, + G. *-itis*.] Inflammatory infiltration in and beneath the subcutaneous adipose tissue

adipos'ity. Adiposis

adipo"sogen'ital syn'drome. Hypophysis* syndrome.

adiposu'ria (L. *adeps(adip-)*, fat, + G. *ouron*, urine.] Lipuria

adip'sia, ad'ipsy [G. *a-* priv. + *dipsa*, thirst.] Absence of thirst.

ad'itus [L way.] In anatomy, a structure serving as a means of approach or entrance to a part. **a. ad an'trum,** approach to the antrum, recessus epitympanicus. **a. ad an'trum tympan'icum,** recessus epitympanicus. **a. ad aquæduc'tum cer'ebri,** entrance to the aqueduct of the cerebrum (of Sylvius), in the posterior part of the floor of the third ventricle. **a. ad infundib'ulum,** recessus infundibuli. **a. glot'tidis infe'rior,** the part of the larynx immediately below the glottis. **a. glot'tidis supe'rior,** the lower portion of the ventricle of the larynx. **a. laryn'gis,** the superior aperture of the larynx, bounded laterally by the aryepiglottic folds. **a. or'bitæ,** orbital opening.

adjust'ment. 1 The arrangement for bringing into focus the object under a microscope; the *coarse a.* is effected usually by a rack-and-pinion arrangement, the *fine a.* by a screw. 2. A chiropractic term for the reduction of subluxated vertebræ in order to relieve pressure on one or more of the spinal nerves.

ad'juvant [L. *adjuvare*, to help.] That which aids or assists another, noting a remedy which is added to a prescription to assist or increase the action of the main ingredient; synergist.

Ad'ler's test. [Oscar *Adler*, Carlsbad physician,* 1879 and Rudolph *Adler*, Carlsbad chemist,* 1882.] For blood; add the washings of the suspected spot to a mixture of equal parts of three per cent. hydrogen dioxide and a saturated solution of benzidin in alcohol; if blood is present the mixture takes on a blue or green color.

ad lib. [Abbreviation for L. *ad libitum* at pleasure.] As much as desired; used in directions for taking a remedy when the dose and time of taking are indefinite and unessential.

admax'illary [L. *ad*, to, + *maxilla*, jaw] Connected with the jaw. **a. gland,** an occasional accessory salivary gland, near the angle of the jaw, discharging through the parotid duct.

adminic'ulum [L. prop, stay.] 1. That which gives support to a part. 2 Adjuvant. **a. lin'eæ al'bæ,** a triangular fibrous expansion, sometimes containing a few muscular fibers, passing from the superior pubic ligament to the posterior surface of the linea alba.

adna'ta [L. *adnatus*, from *adnasci*, to grow to.] Tunica* adnata.

adneph'rin [L. *ad*, to, + G. *nephros*, kidney.] Trade name of a preparation made from the adrenal gland, possessing vasoconstrictor and hemostatic properties.

adnerval (ad-nur'val) [L. *ad*, to, + *nervus*, nerve.] 1. Lying near a nerve. 2. In the direction of a nerve, said of an electric current passing through muscular tissue toward the point of entrance of the nerve.

adneural (ad-nu'ral) [L. *ad*, to, + G. *neuron*, nerve.] Adnerval.

adnex'a. Annexa.

adnex'al. Annexal.

adnexitis (ad-neks-i'(e')tis). Annexitis

adnex'opexy. Annexopexy.

adolescence (ad-o-les'ens) [L. *adolescentia*.] Youth; the period of later growth, between puberty and adult life.

adoles'cent [L. *adolescere*, to grow up.] 1. Youthful growing up, between puberty and the attainment of full growth. 2. A youth, a young man or woman not yet full grown.

ad'onin, adon'idin. A yellowish white powder of bitter taste, soluble in water; it is a mixture of several glucosides and other substances, constituting the active principles of adonis; dose, gr. $\frac{1}{10}$–$\frac{1}{4}$ (0.006–0.015).

Ado'nis. A genus of plants of the natural order *Ranunculaceæ*. **A. æstiva'lis,** an annual species with orange flowers. **A. an'nua,** red chamomile, red morocco, an annual species with red flowers. **A. verna'lis,** a perennial species with bright yellow flowers, the one from which the drug *adonis* is chiefly obtained.

ado'nis [G. *Adonis*, a mythological character, the handsome favorite of Aphrodite.] (N.F.) The herb *Adonis vernalis*, bird's eye, pheasant's eye; employed as a cardiac tonic in place of digitalis, in doses of ʒ½ (16.0) of an infusion, ʒ1–2 in ʒ6. The fluidextract is contained in the N.F.; there is also an eclectic preparation.

adoral (ad-o'ral) [L. *ad*, to, + *os* (*or-*), mouth.] Near or directed toward the mouth.

adralgin (ad-ral'jin). Trade name of a local anesthetic containing adrenaline, cocaine, and thymol.

adre'nal [L. *ad*, to, + *ren*, kidney.] 1 Near or upon the kidney, noting the *a. body* or *gland*. 2. A crystalline basic substance, $C_{10}H_{15}NO_3$, derived from the suprarenal glands; vasoconstrictor and hemostatic in doses of ♏5–10 (0.3–0.6) of a 1–1000 solution. **acces'sory a.,** one of a number of small independent collections of tissue, resembling the cortical adrenal tissue, found in the various abdominal organs. **a. bod'y, cap'sule,** or **gland,** glandula suprarenalis. **a. ex'tract,** a preparation made from the a. gland, which possesses marked vasoconstrictor and hemostatic properties; it is prepared and sold under various proprietary or trade names, such as *adnephrin*, *adrenalin*, *supranephrin*, *suprarenaden*, *suprarenalin*, *suprarenin*, etc.; see also *glandulæ suprarenales siccæ*, and *epinephrine*.

adrenalectomy (ad-re-nal-ek'to-mĭ) [G. *ektomē*, excision.] Removal of an adrenal body.

adrenalin (ad-ren'al-in). Trade name of a principle obtained from the suprarenal glands, possessing marked vasoconstrictor, and consequently astringent and hemostatic properties. **a. chlo'ride,** the salt of a. used locally in hay fever, inflammations of the various accessible mucous membranes, hemorrhage, etc., and internally in doses of ♏5–20 (0.3–1.3) of a 1–1000 solution as a vasoconstrictor, to raise the blood pressure in shock, and as a cardiac stimulant. **a. inha'lant,** an oily solution of a. chloride applied in the form of vapor or spray to the nasal mucous membrane in coryza and hay-fever.

adrenaline (ad-ren'al-ēn). A collective term for the various adrenal extracts.

adre'nalism. Suprarenalism.

adrenalitis, adrenitis (ad-re"nal-i'(e')tis; ad-re-ni'(ne')tis). Inflammation of the suprarenal glands.

adrenocortin (ad-re"no-kor'tin). Cortin, an extract from the cortical portion of the suprarenal gland, recommended as a powerful analeptic

adrenop'athy. Suprarenopathy.

adrenotoxin (ad-re-no-toks'in). A specific cytotoxin produced by injections of adrenal extract.

adrenotrope (ad-ren'o-trōp). One who has the adrenal type of endocrine constitution.

adrenotropic (ad-ren-o-trop'ik). Relating in any way to adrenotropism.

adrenotropism (ad-ren-ot'ro-pizm) [*adrenal* body + G. *tropē*, a turning.] A type of endocrine constitution in which the adrenals exercise a dominating influence.

adrenoxidase (ad-ren-oks'ı-dāz). A term proposed by Sajous to denote the oxygenized adrenal secretion assumed to be present in the blood-plasma and to act throughout the body as a catalytic ferment.

adrephine (ad'ref-ēn). Trade name of a combination mixture of adrenalin and ephedrine.

ad'rin. Epinephrin hydrate, derived from the suprarenal glands; employed locally as an astringent and hemostatic

ad'rue. Antiemetic root, cyperus; the root of *Cyperus articulatus*, a West Indian plant; the fluidextract is employed in doses of ɱ10–20 (0 6–1 . 3) as an antihelmintic and antiemetic

adsorp'tion [L *ad*, to, + *sorbere*, to suck up.] The adhesion of a gas to the surface of a solid; adhesion of a liquid or gaseous substance to the more solid particles in a solution, the action by which a colloid particle attracts other substances.

adster'nal. Near or upon the sternum.

ADTe. AnDTe

adterminal (ad-tur'mĭ-nal). In a direction toward the nerve endings, muscular insertions, or the extremity of any structure.

adul'terate [L *adulterare*, to falsify.] To deteriorate by adding material of inferior quality, or indifferent material which increases the bulk without altering, otherwise than weakening, the action

adultera'tion. The addition to any substance of the same or different material of poorer quality.

advance' [Fr. *avancer*, to set forward.] To move forward, referring specifically to an operation on the tendinous insertion of a muscle which has become elongated and unable to perform its function properly: the tendon is severed from its attachment (to the globe of the eye for example) and sutured at a point farther forward

advance'ment. The moving forward of the tendinous insertion of an elongated muscle, see tendon* advancement.

adventitia (ad-ven-tish'yah) [L. *adventitius*, coming from abroad] The outermost covering of any organ or structure which is properly derived from without and does not form an integral part of such organ or structure. Specifically, the outer coat of an artery, the tunica adventitia **membra'na a., tu'nica a.**, see the nouns.

adventitious (ad-ven-tish'us). 1. Coming from without, extrinsic. 2. Accidental. 3. Relating to the adventitia of an artery or an organ.

adynam'ia [G. *a-* priv + *dynamis* power.] Weakness, vital debility, asthenia.

adynam'ic. Relating to adynamia; feeble, weak, asthenic

æ-. For words so beginning not found here, see under *e-*.

Aeby's plane (a'be) [Christoph Theodor *Aeby*, Swiss anatomist, 1835–1885.] In craniometry, a plane perpendicular to the median plane of the cranium, cutting the nasion and the basion.

Aëdes (ah-e'dēz) [G. *aēdēs*, unpleasant, unfriendly.] A genus of mosquitos of small size found in tropical and subtropical regions. **A. ægyp'ti,** *A. argenteus.* **A. argen'teus,** the yellow-fever mosquito, which is also the vector of the pathogen of dengue; it was formerly called *Stegomyia calopus* or *S. fasciata.* **A. cal'opus,** *A. argenteus.* **A. fus'cus,** a species found in certain parts of North America.

ædœ'a. Edea.

ædœol'ogy. Edeology.

æ'gilops. Egilops.

ægoph'ony. Egophony.

æquator (e-kwa'tor) [L.] Equator. **æ. bul'bi oc'uli** [BNA], equator of the eyeball, an imaginary line encircling the globe of the eye equidistant from the two poles. **æ. len'tis** [BNA], equator of the crystalline lens, the periphery of the lens lying between the two layers of the zonula ciliaris

aer (ah'air) [G. *aēr*, air.] Atmos

aerated (a'er-a-ted) [G. *aēr*, air.] Charged with air, carbon dioxide, or other gas.

aeration (a-er-a'shun) 1. Airing 2. Saturating a fluid with air, carbon dioxide, or other gas. 3 The change of venous into arterial blood in the lungs.

aerendocardia (a-er-en-do-kar'dĭ-ah) The presence of undissolved air in the blood within the heart.

aerenterectasia (a-er-en-ter-ek-ta'zĭ-ah) [G. *aēr*, air, + *enteron*, intestine, + *ektasis* a stretching out] Meteorism, tympanites, distention of the intestine with gas.

aerial (a-e're-al). Relating to the air.

aeriferous (a-er-if'er us) [L. *aer*, air, + *ferre*, to bear] Conducting air.

aeriform (a-er'ĭ-form) [L. *aer*, air, + *forma*, shape.] Resembling air, gaseous.

Aerobacter (a-er-o-bak'tur) [G. *aēr*, air, + *baktērion*, a small staff.] A genus of the family *Bacteriaceæ* containing rod-shaped organisms found chiefly in the intestinal dejections **A. aerog'enes,**⁰ *Actinobacter polymorphus, Bacterium lactis aerogenes*, a gas-forming organism in the intestinal canal and elsewhere. **A. clo'acæ,**⁰ motile, flagellated, gram-negative, aerobic rods, found in the intestinal canal and in sewage, pathogenicity undetermined. **A. lev'ans,**⁰ motile, flagellated, gram-negative, aerobic, rod-shaped organisms, found in fermenting dough and also in soil and the intestinal canal.

aerobian (a-er-o'bĭ-an) Noting an aerobion, living only in the presence of oxygen; aerobic, aerobiotic

aerobic (a-er-o'bik). Living in air; aerobian, aerobiotic.

aerobion, pl. *aerobia* (a-er-o'be-on) [G *aēr*, air, + *bios*, manner of living.] An organism which can live and grow only in the presence of oxygen. **fac'ultative a.,** one which normally thrives in the absence of oxygen, but which may acquire the faculty of living in the presence of oxygen. **ob'ligate a.,** one which cannot live without air.

aerobioscope (a-er-o-bi'o-skōp) [G. *aēr*, air, + *bios* life, + *skopeō*, I view.] An apparatus for determining the bacterial content of the air.

aerobiosis (a-er-o-bi-o'sis) [G. *aēr*, air, + *biōsis*, mode of living.] Existence in an atmosphere containing oxygen.

aerobiotic (a-er-o-bi-ot'ik). Relating to aerobiosis, living in an oxygen-containing atmosphere; aerobic, aerobian

aerocele (a'er-o-sēl) [G. *aēr*, air, + *kēlē*, tumor] Distention of a small natural cavity with gas.

aerocolpos (a-er-o-kol'pos) [G *aēr*, air. + *kolpos*, gulf (vagina).] Distention of the vagina with air

aerocoly (a-e-rok'o-lĭ) [G. *aēr*, air, + colon.] Distention of the colon with gas.

aerocystoscope (a-er-o-sis'to-skōp) [G. *aēr*, air + *kystis*, bladder, + *skopeō*, I view.] An instrument for viewing the interior of the bladder distended with air.

aerocystoscopy (a-er-o-sis-tos'ko-pĭ). Inspection of the interior of the bladder, distended with air, by means of a cystoscope.

aerodermectasia (a-er-o-der-mek-ta'zĭ-ah) [G. *aēr*, air, + *derma*, skin, + *ektasis*, a stretching out.] Subcutaneous emphysema.

aerodynamics (a-er-o-di-nam'iks) [G. *aēr*, air, + *dynamis*, force.] The study of air and other gases in motion, the forces that set them in motion, and the results of such motion.

aerogen (a'er-o-jen) [G. *aēr*, air, + *gennaō*, I produce.] A gas-forming microorganism.

aerogen'esis. The production of gas.

aerogenic (a-er-o-gen'ik). Gas-forming.

aerogenous (a-er-oj'en-us). Gas-forming

aerohydropathy (a-er-o-hi-drop'ath-ĭ) [G. *aēr* air, + *hydōr*, water, + *pathos*, suffering.] Aerohydrotherapy.

aerohydrotherapy (a-er-o-hi-dro-ther'ah-pĭ) [G. *aēr*, air, + *hydōr*, water, + *therapeia*, healing.] Treatment of disease by means of the application, at different temperatures and in different ways, of both air and water.

aerometer (a-er-om'e-ter) [G. *aēr*, air, + *metron*, measure.] An apparatus for determining the density of, or for weighing, air.

aeromicrobe (a-er-o-mi'krōb) [G. *aēr*, air, + *mikros*, small, + *bios*, mode of life.] Aerobion.

aeropathy (a-e-rop'ă-thĭ) [G. *aēr*, air, + *pathos*, suffering.] Any morbid state induced by a pronounced change in the atmospheric pressure, such as mountain sickness, caisson disease, etc.

aeroperitoneum (a-er-o-per-i-to-ne'um) [G. *aēr*, air.] Distention of the peritoneal cavity with gas

aeroperito'nia. Aeroperitoneum.

aerophagia (a-er-o-fa'jĭ-ah). Aerophagy.

aerophagy (a-er-of'a-jĭ) [G. *aēr*, air, + *phagō*, I eat.] Swallowing of air

aerophil (a'er-o-fil) [G. *aēr*, air, + *philos*, fond.] 1. Air-loving. 2. Aerobic.

aerophobia (a-er-o-fo'be-ah) [G. *aēr*, air, + *phobos*, fear.] Abnormal and extreme dread of fresh air or of air in motion.

aerophore (a'er-o-fōr) [G. *aēr*, air, + *phoros*, bearing.] 1. Air-conducting. 2. A portable apparatus for purifying air so that it can be breathed over again. 3. An apparatus for forcing air into the lungs in the treatment of asphyxia.

aerophyte (a'er-o-fīt) [G. *aēr*, air, + *phyton*, plant] An air-plant, orchid.

aeroplethysmograph (a"er-o-plĕ-thiz'mo-graf) [G. *aēr*, air, + *plethysmos*, enlargement, + *graphō*, I register.] An apparatus for determining the volume of inspired air.

aeropleura (a"er-o-plu'ra). The presence of air in the pleural cavity; pneumothorax.

aeroporotomy (a"er-o-po-rot'o-mĭ) [G. *aēr*, air, + *poros*, passage, + *tomē*, a cutting.] An operation for the admission of air in stenosis of the larynx; tracheotomy, laryngotomy.

aerosialophagy (a-er-o-si-al-of'a-jĭ). Sialoaerophagy.

aerostatics (a"er-o-stat'iks) [G. *aēr*. air, + *statos*, standing.] The branch of science which treats of the volume, pressure, etc., of air and other gases.

aerotaxis (a"er-o-tak'sis) [G. *aēr*, air, + *taxis*, arrangement.] The movement of living organisms to or away from the air, noting especially the attraction or repulsion by oxygen of aerobic and anaerobic organisms.

aerotherapeutics, aerotherapy (a"er-o-ther-ah-pu'tiks, a"er-o-ther'ah-pĭ) [G. *aēr*, air, + *therapeutikos*, treating—*therapeia*, medical treatment.] 1 Treatment of disease by fresh air. 2. Treatment of disease by air of different degrees of pressure or rarity, or medicated in various ways.

aerothermotherapy (a"er-o-ther"mo-ther'ă-pĭ) [G. *aēr*, air, + *thermos*, hot, + *therapeia*, healing.] Treatment of disease by hot air.

aerothorax (a"er-o-tho'raks). Pneumothorax

aerotonom'eter [G. *aēr*, air, + *tonos*, tension, + *metron*, measure.] 1. An instrument for estimating the tension or pressure of a gas. 2. An instrument for measuring the tension of oxygen and other gases in the blood or other fluids.

aerotropism (a-e-rot'ro-pizm) [G. *aēr*, air, + *tropos*, direction, turn.] The tendency of microorganisms in culture media to group themselves about a bubble of air.

aerotympanal (a"er-o-tim'pă-nal). Relating to air in the tympanum, noting especially the operation of politzerization or other means of forcing air through the Eustachian tube

aerourethroscope (a"er-o-u-re'thro-skōp) [G. *aēr*, air, + *ourēthra*, urethra, + *skopeō*, I view.] An instrument for inspection of the urethra after distending it with air.

aerozol (a'er-o-zol). A solution of ozone in oil.

aerterivers ion (ah-er"ter-ĭ-vur'shun). Arterioversion.

aerteriverter (ah-er-ter-ĭ-vur'tur). Arterioverter.

aertryckosis (ah-er-trĭ-ko'sis). Food poisoning by infection with *Bacillus aertrycke*.

æru'go [L.] Verdigris.

Æscula'pian [L *Æsculapius*, G. *Asklepios*, the god of medicine.] Esculapian. 1. Relating to Æsculapius 2 Medical. 3. A medical practitioner

æs'culin. A bitter principle obtained from the bark of the horse chestnut; occurs in needle-shaped crystals, giving a blue fluorescence when dissolved in water.

Æsculus (es'ku-lus) [L. the winter oak.] A genus of trees to which belongs the horsechestnut or buckeye, *Æ. hippocastanum*.

æsculus. A preparation from the back of *Aesculus glabra*, employed in eclectic practice as a remedy for hemorrhoids and in bronchitis with absence of secretion in doses of 2–5 drops in water four times a day.

æsthe'sia, æsthesiom'eter, æsthesioneuro'sis, etc. See *esthesia*, etc

æ'ther [G. *aithēr*, ether.] (U S. and Br.). Ether, a liquid containing 96 per cent. by weight of absolute ether (Br., 92 per cent. by volume of ethyl oxide). Employed by inhalation to produce general anesthesia; internally as a stimulant and carminative in doses of ♏10–60 (0.6–4.0). See also *ether*. **æ. ace'ticus** (N.F. and Br.), acetic ether, containing ethyl acetate 90, alcohol 10; stimulant and antispasmodic, dose ♏5–30 (0.3–2.0). **æ. purifica'tus** (Br), purified ether; the B.P. directs that it should assume no blue color when mixed with half its volume of potassium bichromate acidulated with sulphuric acid, showing absence of hydrogen peroxide; nor should it be colored by potassium hydroxide, showing absence of aldehyde; on evaporation it should leave no residue or abnormal odor.

æ'thiops [G. *Aithiops*, an Ethiopian.] A chemical or pharmaceutical term formerly applied to several blackish mineral preparations. **æ. creta'ceus** [chalky ethiops], hydrargyrum cum creta **æ. martia'lis,** black oxide of iron. **æ. minera'lis,** black sulphide of mercury. **æ. vegeta'bilis,** charcoal made from bladder-wrack. *Fucus vesiculosus.*

æth'yl, gen. *æth'ylis* [G. *aithēr*, ether. + *hylē*, matter.] Ethyl, the hypothetical radical, C_2H_5, of alcohol and ether. **æth'ylis aminoben'zoas** (U.S.), ethyl aminobenzoate. benzocaine, anesthesin, $C_6H_4NH_2.COO(C_2H_5)$ 1:4; occurs as small white or colorless crystals, or a white crystalline powder, odorless, soluble in 2500 parts of water, 5 of alcohol, 2 of chloroform, or 4 of ether; employed as a local anesthetic and internally to relieve the pain of gastritis or gastric ulcer in average dose of gr. 5 (0.3). **æth'ylis bro'midum,** ethyl bromide, hydrobromic ether; a colorless volatile liquid, used by inhalation as a general anesthetic and in spray as a local anesthetic. **æth'ylis car'bamas,** ethyl carbamate, an ester of carbamic acid, urethane, white colorless laminar crystals, obtained by the action of ethyl alcohol on urea; employed as an hypnotic in dose of gr. 10–30 (0.6–2 0). **æth'ylis chaulmoo'gras** (U.S.), ethyl chaulmoograte, the ethyl esters of the fatty acids of chaulmoogra oil; occurs as a clear, pale yellow liquid, having a slight fruity odor, insoluble in water but miscible with alcohol, chloroform, and ether; employed in the treatment of leprosy in average dose of ♏15 (1 c.c.) by mouth or intramuscular injection. **æth'ylis chlo'ridum** (U.S.), ethyl chloride, hydrochloric ether, chloryl anesthetic, kelene; a very volatile liquid made by the action of hydrochloric acid on ethyl alcohol; used as a local and general anesthetic. **æth'ylis iod'idum,** ethyl iodide, hydriodic ether, a volatile colorless liquid; employed by inhalation—♏10–15 (0.6–1.0), in edema of the glottis, spasmodic asthma, and nervous dyspnea.

æthylenum (eth-il-e'num). (Br.). Ethylene.* **æ. pro narco'si,** ethylene for anesthesia, a preparation containing not less than 98 per cent. by volume of ethylene, for producing surgical anesthesia by inhalation.

æthylmorphinæ hydrochloridum (eth'il-mor-fe'na-hi-dro-klo'rĭ-dum). (U.S.) Ethylmorphine hydrochloride or chloride, dionine; a yellowish white, bitterish powder, soluble in 8 parts of water, prepared by the action of ethyl iodide on morphine, with the addition of hydrochloric acid; antispasmodic and analgesic, employed in spasmodic respiratory diseases, insomnia, and neuralgia in doses of gr. ¼–½ (0.015–0.03), and locally as an irritant lymphagogue in painful ocular diseases (iritis, corneal ulcer, etc.) in 5 per cent. solution.

afeb'rile [G. *a-* priv. + L. *febris*, fever.] Non-febrile, apyretic.

afen'il. A compound of calcium chloride and urea, recommended by intravenous injection in asthma and anaphylactic conditions.

afetal (ă-fe'tal). Without relation to a fetus or intrauterine life.

affect (af'ekt) [L. *affectus*, disposition or state of mind.] Feeling (2); psychic trauma; the sum of an emotion. **a.-mem'ory,** the memory of a psychic trauma, the emotional element recurring whenever the original experience is recalled. **a. spasms,** spasmodic attacks of laughing, weeping, and screaming, accompanied by marked tachypnea, occurring in hysteria.

affection (ă-fek'shun) [L. *afficere*, to act upon.] 1. Feeling, love. 2. An abnormal condition of body or mind disease.

affec'tive. Pertaining to the mental state or feeling.

Affenspalte (ah'fen-spahl"teh) [Ger.] Ape-fissure.

aff'erent [L. *ad*, to, + *ferre*, to bear] Bringing to or into, noting certain veins, lymphatics, and nerves. **a. ar'teries,** branches of the interlobular arteries of the kidneys which pass to the Malpighian bodies, forming the glomeruli. **a. im'pulse** a nervous impulse passing from the periphery to the center. **a. lymphat'ics,** the lymphatic vessels which enter the glands. **a. nerves,** nerves conveying impulses from the periphery to the center, the sensory nerves. **a. veins,** veins conveying blood to the heart direct.

afferentia (ă-fer-en'shĭ-ah) [L.] Vasa afferentia, afferent vessels; specifically the afferent* arteries of the kidneys.

affin'ity [L. *affinis*, neighboring.] Attraction; in chemistry the force which impels certain atoms to unite with certain others to form compounds. **elec'tive a.,** in homeopathy, the specific localization of the action of a drug.

af'flux, afflux'ion [L. *ad*, to, + *fluere*, to flow] A flowing toward, specifically a flowing of blood toward any part; congestion.

affusion (ă-fu'zhun) [L. *ad*, to, + *fundere*, to pour.] The pouring of water upon the body or any of its parts for therapeutic purposes.

af'ter-birth. The placenta and membranes which are extruded after the birth of the child.

af'ter-brain. Myelencephalon,* metencephalon.

af'ter-cat'aract. Secondary cataract* (2).

af'ter-damp. Carbon dioxide formed by the explosion of a mixture of fire-damp, or methane, and air in a mine.

af'ter-im'age. The image of an object of which the subjective sensation persists after the object has disappeared or the eyes are closed; spectrum (2). The after-image is called *positive* when its colors are the same as in the original, *negative* when the complementary colors are perceived.

af'ter-pains. Painful cramp-like contractions of the uterus occurring after childbirth.

af'ter-sensa'tion. A sensation persisting after its original cause has ceased to act.

af'ter-sound. The subjective sensation of a sound after the cause of the sound has ceased to act.

af'ter-taste. A taste persisting after contact of the tongue with the sapid substance has ceased.

af'ter-vis'ion. See *after-image.*

Ag. Chemical symbol for argentum, silver.

agalactia (ă-gal-ak'tĭ-ah) [G. *a-* priv. + *gala*(*galakt-*) milk] Absence of milk in the breasts after childbirth

agalac'tous. Relating to agalactia, or to the diminution or absence of breast-milk.

agal-agal (ah'gal-ah'gal). Agar-agar.

agalorrhea, agalorrhœa (ă-gal-ŏ-re'ah) [G. *a-* priv + *gala*, milk, + *rhoia*, a flow.] Arrest of the secretion or flow of milk.

agamete (ag'am-ēt) [G. *a-* priv. + *gamētēs*, husband or wife.] A protozoan organism producing spores asexually.

agamic (ă-gam'ik). Agamous.

Agamofilaria (ă-gă-mo-fi-la'rĭ-ah) [G. *agamos*, unmarried.] A name given to immature filarial forms, the genera of the adult forms being undetermined.

agamogen'esis [G. *agamos*, unmarried, + *genesis*, production.] Reproduction without union of the male and female elements; non-sexual reproduction; parthenogenesis.

Agamomer'mis cu'licis. A hair-worm parasitic in the mosquito.

ag'amont [G. *a-* priv. + *gamos*, marriage, + *ōn* (*ont-*), being.] A non-sexual spore-like body forming one of the stages in the life-cycle of certain parasitic protozoans.

agamous (ag'ă-mus) [G. *agamos*, unmarried.] Noting non-sexual reproduction, as by fission, budding, etc.

agar (ah'(a')gar) [Bengalese.] (U.S.) A gelatinous substance prepared from seaweed in Japan and India, used in constipation to increase the bulk of the feces, and in bacteriology as a base for culture media; when unqualified, it is usually called agar-agar. **beer-wort a.,** beer-wort made from crushed malt, to which is added 2 per cent. agar. **blood a.,** a mixture of blood and a., used for the cultivation of trypanosomes. **chol'era a.,** an alkaline agar medium for cultures of the cholera vibrio; it is made by dissolving by heat agar, 30, in nutrient bouillon, 1000; and adding a 10 per cent. solution of potassium hydrate, 30. **Drigal'ski-Conra'di a.,** a nutrient a. containing horse-meat infusion, Witte's peptone, nutrose, sodium chloride, lactose, litmus, and crystal violet, used in the differentiation of the typhoid bacillus. **En'do's fuch'sin a.,** nutrient a. containing lactose, alcoholic solution of fuchsin, sodium sulphite, and soda solution, used as a culture medium to differentiate the typhoid bacillus from the colon bacillus and others of that group. **gel'atin a.,** made by dissolving peptone, gelatin, glucose or mannite, sodium chloride, and potassium chloride in water and adding agar. **glu'cose a.,** nutrient a., containing 2 per cent. glucose. **glyc'erin a.,** nutrient a. containing 5 per cent. glycerin. **Guarnie'ri's gel'atin a.,** similar to Stoddart's gelatin a., used for the cultivation of the pneumococcus. **lac'tose-lit'mus a.,** made by adding 2 per cent. lactose and litmus to acid-free nutrient agar, used in the differentiation of the typhoid bacillus. **MacConk'ey's bile-salt a.,** made by the addition of 1½ to 2 per cent. of agar to MacConkey's bile-salt bouillon. **man'nite a.,** nutrient a. containing 1 or 2 per cent. mannite. **Matzuschi'ta's liv'er-gall a.,** made by cooking together 500 gm. chopped ox-liver, 30 gm. peameal, and 1000 c.c. water, then straining and adding ox-gall and agar. **No'vy and McNeal's blood a.,** a nutrient agar containing 2 volumes of defibrinated rabbit's blood, suitable for the cultivation of a number of trypanosomes. **nu'trient a.,** bouillon to which 2 per cent. agar has been added. **Pfeiff'er's blood a.,** solid a. smeared on the surface with a few drops of human blood. **Roth'berger's neu'tral-red a.,** a 0.3 per cent. glucose a. to which 1 per cent. of a saturated aqueous neutral-red solution has been added. **se'rum a.,** prepared by adding sterile serum to melted agar. **Stod'dart's gelatin a.,** contains 5 per cent. gelatin, 1 per cent. peptone, and ½ per cent. each agar and sodium chloride. **Thal'mann's a.,** a form of nutrient agar, well adapted, it is claimed, to the cultivation of the gonococcus. **u'rine a.,** made by dissolving 2 per cent. of agar in fresh urine. **Was'sermann's se'rum-nu'trose a.,** hog serum, glycerin water, and nutrose are boiled together for twenty minutes and the mixture is then added to equal parts of a 2 per cent. peptone agar. **Weil's meat-pota'to a.,** a mixture of potato juice and bouillon containing ¾ per cent. of agar.

agaric (ag-ăr'ik) [G. *agarikon*, a kind of fungus.] Boletus, the dried plant *Polyporus officinalis*. It has been employed in the treatment of the night sweats of phthisis in dose of gr. 5 (0.3). **a. acid,** agaricic acid, agaricin.* **fe'male a.,** *Polyporus officinalis*. **fly a.,** *Agaricus muscarius*, a mushroom with red pileus and white gills, the juice of which has narcotic properties. **pur'ging a.,** *Polyporus officinalis*. **sur'geons' a.,** dried agaric used locally as a hemostatic. **white a.,** *Polyporus officinalis*.

agaricin, agaricinum (ă-găr'ĭ-sin, ă-găr-ĭ-se'num). Agaric acid, a white powder obtained from the white agaric, *Polyporus officinalis*, employed in the night sweats of phthisis in dose of gr. 1–2 (0.06–0.12).

Agar'icus [see *agaric*.] A genus of mushrooms, many of which are edible. **A. campes'tris,** the common edible field mushroom. **A. musca'rius,** fly agaric, poison mushroom; a tincture from the fresh fungus is employed in homeopathy in the irregular heart action of coffee- and tea-drinkers and tobacco-smokers, in doses of the third to the thirtieth decimal potency.

agar'icus (N.F.). Agaric, white or larch agaric, the dried fruit body of *Polyporus officinalis*, occurring in the form of brownish or whitish light masses; employed for the relief of colliquative sweating in doses of gr. 5–15 (0.3–1.0).

a'garol. An emulsion of agar and mineral oil.

agas'tric [G. *a* priv. + *gastēr*, belly.] Without stomach or digestive tract.

agastroneuria (ă-gas-tro-nu'rĭ-ah) [G. *a* priv. + *gastēr*, belly, + *neuron*, nerve.] Lowered nervous control of the stomach.

ag'athin [G. *agathos*, good.] Salicylalphamethylphenylhydrazone; yellowish insoluble crystals; used in the treatment of neuralgia and rheumatism in doses of gr. 2–5 (0.12–0.3).

Agave (ă-gah've) [G. fem. of *agauos*, noble.] A genus of plants of the natural order *Amaryllidaceæ*, found largely in Mexico; it includes the century plant, *A. americana*, from which pulque is made.

Agazotti mixture (ah-gaht-sawt'te) A mixture of 87 parts of oxygen and 13 parts of carbon dioxide, proposed by Agazotti an Italian aeronaut, for the relief of balloon sickness.

$AgC_3H_5O_2 + H_2O$. Silver lactate, actol.*

$Ag_3C_6H_5O_7$. Silver citrate, itrol.

Agchylostoma (ag-kĭ-los'to-mah) The spelling adopted by Dubini, and followed by some helminthologists; the Committee on Nomenclature of the International Congress of Zoologists in 1913 authorized the spelling *Ancylostoma* (*q.v.*).

AgCl. Silver chloride.

AgCN. Silver cyanide, argenti* cyanidum (U.S.P.).

age (āj) [F. *âge*, L. *ætas*.] 1. The period, usually expressed in number of years, which has elapsed since the birth of a living being. 2. One of the periods into which human life is divided, distinguished by physical evolution, equilibrium, and involution. The seven ages of man are: infancy, childhood, adolescence, maturity, middle life, senescence, and senility. 3. To grow old. 4. To cause artificially the appearances characteristic of one who has lived long or of a thing that has existed a long time; *e.g.* **to age** wine, or (in dentistry) to age amalgam by heating an alloy so as to make it set more slowly.

agenesia, agenesis (ă-jen-e'sĭ-ah, ă-jen'e-sis) [G. *a-* priv. + *genesis*, production.] Absent or imperfect development of any part.

agenitalism (ă-jen'ĭ-tal-izm). The complex of symptoms due to absence of the ovaries or testicles, as in castrated persons.

agenne'sia [G. *a-* priv. + *gennēsis*, producing.] Agennesis, sterility.

agennet'ic. Sterile.

a'gent [L. *agere*, to perform.] Anything which produces an effect upon the organism; especially a remedy of any sort, whether medicinal or not

ageusia (ă-ju'se-ah) [G *a-* priv + *geusis*, taste. Loss of the sense of taste.

ageustia (ă-jūs'tĭ-ah) [G. fasting.] Ageusia.

agger (aj'ur) [L. mound.] An eminence or projection. **a. na'si** [BNA], ridge of the nose. crista* ethmoidalis. **a. perpendicula'ris,** eminentia fossæ triangularis. **a. val'væ ve'næ,** a slight prominence on the wall of a vein corresponding to the location of a valve.

agglom'erate, agglom'erated [L. *agglomerare*, to wind into a ball; from *ad*, to, + *glomus*, a ball.] Crowded together into a noncoherent mass

agglomera'tion. A crowded mass of independent, but similar units, a cluster

agglu'tinant [L. *ad*, to, + *glutinare*, to paste.] 1. Uniting or causing to adhere. 2. Any substance which causes adhesion between two surfaces

agglutina'tion. 1. Loss of motility and aggregation in small masses of the microorganisms in a culture, when a specific immune serum is added. 2 Adhesion of the surfaces of a wound. **group a.,** the agglutination in minor degree, of several varieties of bacteria by a serum specific for another bacterial form. **imme'diate a.,** healing by first intention. **me'diate a.,** healing by second intention **a. test,** Widal* test

agglutinative (ă-glu'tin-a-tiv). Causing, or able to cause, agglutination.

agglu'tinin. An antibody which causes clumping or agglutination of the bacteria or other cells which have acted as antigen

agglutin'ogen. One of two substances present in the red cells which when brought in contact with an agglutinin, present in the serum, causes agglutination. See blood* typing.

agglu'tinoid [G. *eidos*, resemblance] An agglutinin which has lost its agglutinophore group while retaining its haptophore group, such substances can combine with bacteria or blood cells, but do not produce clumping.

agglutinophore (ă-glu'tin-o-fōr) [G. *phorō*, I bear,] Noting the molecular group in the agglutinin which is the active agent in effecting agglutination

agglutinoscope (ă-glu'tin-o-skōp) [*agglutination* + G. *skopeō*, I view.] A magnifying glass used to observe the phenomenon of agglutination in the test-tube.

agglu'togen. Agglutinogen

agglutom'eter. An apparatus used to simplify the agglutination or Widal* test.

ag'gregate [L. *aggregare* to assemble; from *ad*, to, + *gregus*, a flock.] 1. To unite or come together in a mass or cluster. 2. The total of independent units making up a mass or cluster.

ag'gregated. Collected together to form a total.

aggres'sin [L. *aggressor*, an assailant.] A substance, assumed to be an endotoxin liberated in consequence of bacteriolysis, which represses the activity of the phagocytes, and so weakens the resisting power of the organism to infection.

AgI. Silver iodide.

aglaucopsia (ă-glaw-kop'sĭ-ah) [G. *a-* priv. + *glaukos*, bluish-green, + *opsis*, vision.] Green-blindness. inability to distinguish the color green.

aglobu'lia [G. *a-* priv. + L. *globulus*, globule.] Marked diminution of the red blood-cells oligocythemia.

aglos'sia [G. *a-* priv. + *glōssa*, tongue.] Absence of the tongue.

aglossos'toma [G. *a-* priv. + *glōssa*, tongue. + *stoma*, mouth] A monster without a tongue but with a (generally closed) mouth.

agmatol'ogy [G. *agma(agmat-)*, a fragment. + *-logia*] The branch of surgery concerned especially with fractures.

ag'men, pl. *agmina* [L. a multitude.] A collection, an aggregation. **a. peyerian'um,** Peyer's patches, noduli lymphatici aggregati.

ag'minate, ag'minated [L. *agmen*, a multitude] Aggregate, agglomerate, collected together into clusters or masses. **a. glands,** Peyer's* patches in the intestines, as distinguished from the solitary glands.

ag'nail. 1 Hangnail. 2 Whitlow

agna'thia [G. *a-* priv. + *gnathos*, jaw] Absence of the lower jaw, usually with approximation of the ears or otocephaly.

agnathous (ag'na-thus). Without lower jaw.

ag'nathy. Agnathia

ag'nin, ag'nolin [L. *agnus*, lamb, + *oleum*, oil.] A prepared wool-fat similar to lanolin

$AgNO_3$. Silver nitrate, lunar caustic

agno'sia [G ignorance; from *a-* priv + *gnōsis*, knowledge] Absence of the ability to recognize the form and nature of persons and things, or of the perceptive faculty **au'ditory a.,** mind deafness.* **op'tic a.,** mind blindness * **tac'tile a.,** inability to recognize objects by the touch.

ag'nus cas'tus [L. chaste lamb] Chaste-tree Abraham's balm, monk's pepper-tree, the fruit of *Vitex agnus-castus*, employed as an antispasmodic and aphrodisiac, a tincture from the fresh berries is used in homeopathic practice for impotence following gonorrhea, in doses of the third to sixth decimal potency.

Ag_2O. Silver oxide, argenti* oxidum (U S and Br.)

agocholan (ag-o-ko'lan). Strontium cholate-salicylate, said to be a cholagogue and biliary antiseptic; recommended in the treatment of cholangitis, biliary stasis, and habitual constipation in dose of 2–6 gr. (0.12–0.36) three to five times a day.

agomphi'asis [G *a-* priv + *gomphios*, a molar tooth.] 1. Looseness of the teeth. 2 Toothlessness.

agomphious (ă-gom'fĭ-us) Without teeth, toothless.

ago'nad [G. *a-* priv. + *gonad.*] A person with absence, congenital or operative, of the sex glands.

ag'onal. Relating to the agony, or moment of death

agoni'adin. A glucoside, $C_{10}H_{14}O_6$, obtained from the bark of *Plumeria lancifolia* and other species of *P.*; employed as a febrifuge in malaria in doses of gr. 2–4 (0.12–0.25).

ag'onist [G. *agōn*, a contest.] Noting a muscle in a state of contraction, with reference to its opposing muscle, or antagonist.

ag'ony [G *agōn*, a struggle, trial] 1. Intense pain or anguish of body or mind. 2. The act of dying. **a. clot, a. throm'bus,** a heart clot formed during the act of dying after prolonged heart failure

agopyrine (ă-go-pi'rēn). Trade name of a mixture recommended in influenza, said to contain salipyrine and ammonium chloride.

agorapho'bia [G. *agora*, market-place, + *phobos* fear.] Dread of being in or crossing open spaces.

Agostini's reac'tion (ah-gos-te'ne). To a mixture of 1 c.c. of a 0.5 per cent. solution of gold chloride and 0.54 c.c. of a 20 per cent. solution of potassium oxide add 1 c.c. of the suspected urine; if it contains glucose the mixture will turn red.

agraffe (ă-graf') [Fr. *agrafe*, a hook, clasp] An appliance for clamping together the edges of a wound, used in lieu of sutures.

agramm'atism [G. *agrammatos*, unlearned] Loss, through cerebral disease, of the power to construct a grammatical or intelligible sentence; words are uttered, but not in proper sequence.

agranulocyte (ă-gran'u-lo-sīt). A non-granular leucocyte.

agranulocytosis. 1. Deficiency of polymorphonuclear leucocytes. 2. Malignant leucopenia.*

agranuloplastic (ă-gran"u-lo-plas'tik) [G. *a-* priv. + L. *granulum*, granule, + G. *plastikos*, formative.] 1. Capable of forming non-granular cells. 2. Incapable of forming granular cells.

agranulo'sis. Agranulocytosis.

agraph'ia [G. *a-* priv. + *graphō*, I write.] Loss of the power of writing, due either to muscular incoordination (*motor a.*) or to an inability to phrase thought (*cerebral* or *mental a.*) *Acoustic a.* is acquired inability to write from dictation, *optic a.*, to copy. In *amnemonic a* letters and words can be written, but not connected sentences; in *verbal a.* single letters can be written, but not words; in *absolute, atactic*, or *literal a.* not even unconnected letters can be written. *Musical a.* is the loss of power to write musical notation.

agraph'ic. Relating to or marked by agraphia.

ag'ria [G. *agrios*, wild.] 1. Herpes. 2 Any severe pustular eruption.

ag'rimony. The dried plant of *Agrimonia eupatoria*, a perennial herb of Europe and America; astringent and tonic in relaxed conditions, with secretion, of the mucous membranes of the urinary and respiratory systems; dose of the fluidextract ʒ½–1 (2.0–4.0), of the colloidum 5–10 drops.

ag"riothy'mia [G. *agrios*, wild, + *thymos*, wrath.] Wild, ferocious mania.

agrius (ag'rĭ-us) [G. *agrios*, wild.] Angry-looking, severe, noting especially certain dermatoses.

agroma'nia [G. *agros*, field, + *mania*, frenzy.] Intense and morbid desire to be in the open country, or to live in solitude

agrop'yrum. (B A.) Triticum (U.S.)

Agrostemma githago (ag-ro-stem'ah gith-a'go) [G *agros*, field, + *stemma*, wreath; L. *gith*, Roman coriander.] *Lychnis githago*, corn-cockle, the seeds of which are said to cause githagism.

agryp'nia [G. *agrypnos*, sleepless] Insomnia

agrypnot'ic. Sleepless; marked by, or suffering from, insomnia.

Ag_2S. Silver sulphide, found in nature in association with lead sulphide, forming argentiferous galena.

$AgSO_4$. Silver sulphate.

ague (a'gu) [Fr. *aigu*, acute.] 1. Malarial fever marked by chill, fever, and sweating. 2. A chill. **brow a.,** intermittent supraorbital neuralgia. **cat'enating a.,** malaria complicating some other disease. **dumb a.,** subacute malaria with irregular attacks of fever without chill **face a.,** facial neuralgia.

a'gue-cake. The enlarged spleen of chronic malaria

a'gue-drop. Fowler's solution.

a'gue-root. Aletris

ag'urin. A white soluble powder, a mixture of sodium acetate and theobromine-sodium; diuretic in doses of gr. 5–15 (0.3–1.0).

Ah. Abbreviation for hypermetropic astigmatism.

Ahlfeld's sign (ahl'felt) [J. F. *Ahlfeld*, German obstetrician, *1843.] Irregular circumscribed contractions of the uterus occurring after the third month of pregnancy.

ahypnia, ahypnosis (ah-hip'nĭ-ah, ah-hip-no'sis) [G. *a-* priv. + *hypnos*, sleep.] Insomnia.

aichmophobia (āk-mo-pho'bĭ-ah) [G. *aichmē*, a point, + *phobos*, fear.] Morbid fear of being touched by the finger or any slender pointed object.

aidoiitis (i-doy-i'(e')tis). Edeitis, vulvitis.*

ail (āl) [A.S. *eglan*, pain, distress] To suffer, be indisposed, ill. 2. To trouble or distress with some pain or illness. 3. An illness or indisposition.

Ailan'thus, Ailan'tus [of Eastern derivation.] Tree of heaven; a genus of trees of the natural order *Simarubaceæ*. The bark and leaves of *A. glandulosa* possess anthelmintic and purgative properties; dose of the fluidextract ♏10–30 (0.6–2.0), of the tincture ♏10–60 (0.6–4.0). In eclectic practice ailanthus is employed in septic conditions and low fevers in doses of 10 to 30 drops of the specific medicine.

ailment (āl'ment). An indisposition; slight and usually chronic illness. **min'or a.,** a mild disorder such as a headache, indigestion, etc.

ailourophilia, ailurophilia (a-loo-ro-fil'ĭ-ah) [G. *ailouros*, cat, + *philia*, friendship.] Fondness for cats; galeophilia, gatophilia.

ailourophobia, ailurophobia (a-loo-ro-fo'bĭ-ah) [G. *ailouros*, a cat, + *phobos*, fear.] An abnormal aversion to cats; galeophobia, gatophobia.

ainhum (īn'yoom) [from an African (Nagos) word meaning to saw] Spontaneous amputation of a toe by a constricting fibrous ring; it affects chiefly male negroes in the tropics.

aiodine (a-i'o-din) [G. *a-* priv. + *iodine*.] Trade name of a preparation of the thyroid gland, containing a very small percentage of iodine.

air [G. *aēr;* L. *aer*.] The atmosphere, a simple non-chemical mixture of oxygen, 1 volume, and nitrogen, 4 volumes, with varying proportions of carbon dioxide, vapor of water, argon, ammonia, nitric acid, and organic matter. **complemen'tal a.,** the excess of air which may be drawn into the lungs by forced inspiration. **dephlogis'ticated a.,** air deprived of "phlogiston," or oxygen. **fixed a.,** carbon dioxide. **liq'uid a.,** air which, by means of intense cold and pressure, has been liquefied. **reserve' a.,** a. which usually remains in the lungs after an ordinary expiration, but which can be expelled with effort. **resid'ual a.,** that which fills the pulmonary vesicles and cannot be expelled by forced expiration. **supplemen'tal a.,** reserve a. **ti'dal a.,** that which enters and leaves the lungs during ordinary respiration.

air-cham'ber. Vacuum-chamber.

air-em'bolism. Arrest of circulation in a vessel by a bubble of air or gas.

air-hunger (ār"hung'gur). Dyspnea characterized by deep labored respirations, such as occurs sometimes in acid intoxication.

ai'rol. Trade name for bismuth oxy-iodogallate, a greenish, tasteless, odorless powder, employed as an antiseptic and astringent in dressings, and also given internally as an astringent in doses of gr. 5–10 (0.3–0.6).

air-sickness (ār'sik-nes). A condition resembling seasickness to which one is exposed in an aeroplane flight when variations in the atmospheric

pressure cause sudden and unusual movements of the plane.

air-swallowing (ar'swol''o-ing). Aerophagia.

Ait'ken's opera'tion [John *Aitken*, Edinburgh surgeon, †1790.] Double pelvitomy in case of dystocia from a narrow pelvis.

Ait'ken's ton'ic pill [Sir William *Aitken*, Scotch physician, 1825–1892.] Pilulæ ferri, quininæ, strychninæ et arseni mites (N.F.).

ajakol (aj'ă-kol). Trade name of a disinfectant preparation of pyrocatechin ethyl ether.

aj'owan [East Indian.] The fruit of *Ptychotis coptica*, or *Carum copticum*, a plant of India, Persia, and Egypt; carminative in doses of gr. 10–30 (0.6–2.0); the source of oleum ajowan (B.A.).

akamushi disease (ak-kah-moo'shĭ diz-ēz') [Jap. *aka*, red, + *mushi*, bug.] Kedani disease, Japanese* river fever.

akan'thion. Acanthion

akaral'gia [G. *a-* priv. + *kar*, head, + *algos*, pain.] A proprietary remedy for migraine, consisting of an effervescent mixture of sodium salicylate, sodium sulphate, magnesium sulphate, lithium benzoate, and nux vomica, flavored with wintergreen.

akaryote (ă-kăr'ĭ-ōt). Acaryote, non-nucleated, a non-nucleated cell.

akar'kine. Trade name for arsenic albuminate, applied locally in the treatment of cancer

akatama (ah-kah-tah'mah) [a native word] An endemic peripheral neuritis affecting the adult natives of West Central Africa; the chief symptoms are numbness burning, and prickling of the surface, with erythema and occasionally swelling of the skin and excessive sweating; the symptoms are aggravated by cold and damp, but relieved by the application of dry heat; the cause is unknown.

akathis'ia. Acathisia.

akinesia (ă-kin-e'sĭ-ah) [G. *a-* priv. + *kinēsis*, movement.] 1. Absence or loss of the power of voluntary motion. 2 Immobility. 3. The postsystolic interval of rest of the heart. 4. A neurosis accompanied with paretic symptoms **a. al'gera** [G. *algos*, pain], a condition marked by severe neuralgic pain of indeterminate origin which is excited by any movement. **a. amnes'tica** [G. *amnēsia*, forgetfulness], loss of muscular power from disuse.

akine'sic. Akinetic.

akine'sis. Akinesia.

akinet'ic. 1. Relating to or suffering from akinesia. 2. Amitotic

Al. Chemical symbol of aluminum.

ala, gen. and pl. *a'læ* (ah'(a')lah) [L. wing.] 1. Any wing-like or expanded structure. 2. Axilla **a. al'ba,** white wing, a white area adjacent to the a. cinerea. **a. au'ris,** the auricle, or pinna of the ear. **a. cerebell'i,** a. lobuli centralis. **a. cine'rea** [BNA], ashen or gray wing, trigonum vagi, a prominence in the fovea inferior of the floor of the fourth ventricle, below the trigonum hypoglossi, subjacent to which is the terminal nucleus of the ninth and tenth cranial nerves **a. il'ii,** ala ossis ilium [BNA], the upper flaring portion of the ilium. **a. lin'gulæ cerebell'i,** vincula lingulæ cerebelli. **a. lob'uli centra'lis** [BNA], the lateral wing-like projection of the central lobule of the cerebellum. **a. mag'na,** the great wing of the sphenoid bone. **a. na'si,** the wing of the nostril; the outer more or less flaring wall of each nostril. **a. oss'is il'ium** [BNA], a. ilii. **a. par'va,** the lesser wing of the sphenoid bone. **a. pon'tis,** one of two thin white bands crossing the anterior extremity of the pyramid just below the pons. **a. sacra'lis,** a broad flat projection on either side of the articular surface of the base of the sacrum. **a. tempora'lis,** a. magna. **a. vespertilio'nis,** bat's wing, ligamentum latum uteri. **a. vo'meris,** wing of the vomer; an everted lip on either side of the upper border of the vomer, between which fits the rostrum of the sphenoid bone.

ala'lia [G. *a-* priv. + *lalia*, talking.] Loss of the power of speech through paralysis or defect of the vocal organs.

alal'ic. Relating to or suffering from alalia

alangine (al'an-jēn). An alkaloid obtained from the bark, root, and leaves of *Alangium lamarckii*, a tree of India; it is a bitter tonic, antiperiodic, and, in large doses, emetic and cathartic.

al'anin. Aminopropionic acid; alpha-alanin has the formula $CH_3.CH(NH_2).COOH$; beta-alanin, $CH_2(NH_2).CH_2.COOH$. **a. mer'cury,** hydrargyri amidopropionas

al'ant-cam'phor. A white stearoptene obtained from elecampane.

al'antin. Inulin.

al'antol. Inulol a yellowish liquid obtained by distillation from the root of *Inula helenium*, or elecampane; used internally as a substitute for turpentine in doses of ♏ss (0.01)

alar (a'lar) [L. *ala*, a wing.] 1. Relating to a wing, winged. 2. Axillary **a. ar'tery,** a small branch of the axillary supplying the tissues of the axilla **a. car'tilage,** the lower of the cartilages on each side of the nose. **a. lig'aments,** lateral expansions of the ligamentum mucosum of the knee-joint. **a. vein,** the vein accompanying the a. artery.

al'asil. Trade name of a combination of calcium acetylsalicylate and colloidal hydroxide of aluminum, proposed as an antipyretic, analgesic, and sedative.

alas'trim. Para-smallpox, milkpox, amaas, glasspox, white-pox, Kaffir-pox, Cuban itch, a disease which is believed to be modified smallpox, in which, however, there is no secondary rise of temperature, the pustules are not umbilicated, and fatal cases are practically unknown. It has been suggested that alastrim differs from smallpox in being caused by virus* alone whereas smallpox is due to virus in association with pyogenic cocci.

al'ate. Winged.

al'ba [fem of L. *albus*, white.] Substantia alba, the white substance of the brain.

albargin, albargol (al'bar-jin, al'bar-gol) [L. *albus*, white, + *argentum*, silver.] A trade name for silver gelatose, a combination of the nitrate salt and gelatose, a decomposition product of gelatin; a brown powder soluble in water and containing about 20 per cent. of silver nitrate; employed as an injection in gonorrhea in solutions of 1–1000

Albarran's' test [Joaquin *Albarran*, Parisian urologist of Cuban birth, 1860–1912.] Polyuria test; the drinking of large quantities of water will cause a proportionate increase in the urinary excretion if the kidneys are sound, but not if the epithelium of the secreting tubules is damaged. **A.'s tu'bules,** minute branching tubules in the subcervical region of the prostate gland, emptying for the most part into the posterior portion of the urethra.

albe'do [L. whiteness.] The light reflected from any surface. **a. ret'inæ,** edema of the retina.

Albee's opera'tion (awl'be) [Fred. Houdlett *Albee*, New York surgeon, *1876.] For producing

ankylosis of the hip; the upper surface of the head of the femur is sliced off and the corresponding point of the edge of the acetabulum is squared, so that the two freshened bony surfaces may rest in contact.

Albers-Schoenberg disease' (ahl-bārs-shĕn'bārg) [H. E. *Albers-Schoenberg*, German radiologist, 1865–1921.] Disseminated condensing osteopathy,* marble bones.

Al'bert's disease' [E. *Albert*, Vienna surgeon, 1841–1900.] Achillodynia. **A.'s operation,** exsection of the articular ends of the tibia and femur to obtain ankylosis of the knee. **A.'s suture,** a modified Czerny suture, the first row of stitches passing through the entire thickness of the wall of the gut.

al'bicans, pl. *albican'tia.* Corpus* albicans.

albidu'ria [L. *albidus*, whitish, + G. *ouron*, urine.] 1. Chyluria. 2. The passing of pale urine of low, specific gravity.

albidus (al'bĭ-dus) [L.] Whitish.

Albini's nod'ules (ahl-be'ne) [Giuseppe *Albini*, Italian physiologist, 1830–1911.] Minute nodules on the margins of the mitral and tricuspid valves of the heart, sometimes present in the newborn.

al'binism. Congenital leucoderma or absence of pigment in the skin and its appendages; it may be partial or complete

albi'no [Pg. from L. *albus*, white.] A person with very little or no pigment in the skin, hair, or iris.

albinu'ria. Albiduria.

albi'noism. Albinism

albocinereous (al-bo-sin-e're-us) [L. *albus*, white, + *cinereus*, ashen.] Relating to both the white and the gray matter of the brain or spinal cord

albofer'rin [L. *albus*, white, + *ferrum*, iron.] A light brown tasteless powder, a compound of iron, 0.68, phosphorus, 0.324, and albumin, 90.14 per cent.; used as a chalybeate.

albolene (al'bo-lēn) [L. *albus*, white, + *oleum*, oil.] A white oily substance, prepared from Russian mineral oil; it is used as a base for ointments, and the fluid form, *liquid albolene*, as a base for remedies applied by spray to the mucous membranes; also given internally as an intestinal lubricant.

albuginea (al-bu-jin'e-ah) [L. *albus*, white.] Resembling boiled white of egg; tunica* albuginea.

albugineotomy (al-bu-jin-e-ot'o-mĭ) [G. *tomē*, cutting.] Incision into any tunica albuginea.

albugin'eous. 1. Resembling boiled white of egg 2. Relating to any tunica albuginea.

albuginitis (al-bu-jin-i'(e')tis). Inflammation of any tunica albuginea.

albu'go [L. whiteness.] Leucoma, a white corneal opacity.

albulac'tin. Trade name of a soluble lactalbumin, in the form of a fine powder containing 5.22 per cent. of salts and 12.71 per cent. of nitrogen, employed in the modification of cow's milk for infant feeding

albu'men [L. the white of egg.] 1 White of egg, egg-albumin, ovalbumin. 2 Albumin.

albumim'etry. Albuminimetry.

albu'min [L. *albumen*, the coagulated white of egg.] A simple protein widely distributed throughout the tissues and fluids of plants and animals; it is soluble in pure water, precipitable from a solution by mineral acids, and coagulable by heat in acid or neutral solution. Varieties of a. are found in blood, milk, and muscle. **acid a.,** see under *acid.* **a. soap,** soap* albumin. **a. tan'nate,** albumini tannas (U.S.), albutannin, tannalbin. **al'kali a.,** see under *alkali.* **Bence-Jones a.,** see under *Bence-Jones.* **derived a.,** an a. formed from native a. by the action of weak acids or alkalies; albuminate; albumose; metaprotein. **egg-a.,** ovalbumin, albumen.* **na'tive a.,** a protein existing in its natural state in the body; it is soluble in water and not precipitated by diluted acids; the two principal forms are serum-albumin and egg-albumin. **se'rum-a.,** a form of a. present in the blood plasma and in serous fluids. **soap a.,** see under *soap.*

albuminate (al-bu'min-āt). Derived albumin, metaprotein, a product of the hydrolysis of albumin and globulin.

albu"minatu'ria. The presence of albuminates in the urine when voided.

albu'mini tan'nas (U.S.), albumin tannate, albutannin, tannalbin, a compound of albumin and tannic acid; occurs as a yellowish-white, odorless powder, nearly insoluble in water or alcohol; employed as an astringent disinfectant in diarrhea, being soluble in the intestine but unaffected by the acid gastric juice; average dose gr. 30 (2.0).

albuminif'erous [L. *albumen*, albumin, + *ferre*, to bear.] Producing albumin.

albuminim'eter [L. *albumen*, albumin, + G. *metron*, measure.] Albumimeter, an apparatus for determining the quantity of albumin in the urine or other fluids.

albuminim'etry. The determination of the amount of albumin present in solution in any fluid.

albuminip'arous [L. *albumen*, albumin, + *parere*, to bring forth.] Albuminiferous

albu'minoid [L. *albumen*, albumin, + G. *eidos*, resemblance.] 1. Resembling albumin 2 Any protein 3. Scleroprotein, glutinoid, a simple protein present in horny and cartilaginous tissues; it is insoluble in neutral solvents; keratin, gelatin, elastin, and collagen are albuminoids.

albuminolysis (al-bu-min-ol'i-sis) [G. *lysis*, solution.] Proteolysis.

albuminom'etry. Albumimmetry

albu'minone. Albumone

albuminoptysis (al-bu-min-op'ti-sis) [G. *ptysis*, a spitting.] Albuminous expectoration.

albuminoreaction (al-bu'mĭ-no-re-ak'shun). The presence (positive reaction), or absence (negative reaction) of albumin in the sputum, the positive reaction indicating an inflammatory process in the lungs

albuminorrhe'a, albuminorrhœ'a [L. *albumen*, albumin, + G. *rhoia*, a flow.] Albuminuria.

albuminose (al-bu'mĭ-nōz). 1. Albuminous. 2. Albumose

albumino'sis. A condition characterized by an abnormal increase in the albuminous constituents of the blood plasma.

albu'minous. Relating in any way to albumin; containing or consisting of albumin.

albu"minuret'ic [L. *albumen*, albumin, + G. *ourētikos*, causing a flow of urine.] 1. Causing albuminuria 2. Albuminuric.

albuminu'ria [L. *albumen*, albumin, + G. *ouron*, urine.] The presence of albumin in the urine as voided. **acciden'tal a.,** temporary a. due to some accidental and not lasting irritation of one or both kidneys. **adoles'cent a.,** functional a. occurring at about the time of puberty; it is usually cyclic or orthostatic a. **adventi'tious a.,** a due to the presence of blood escaping somewhere in the urinary tract, of chyle, or of some other albuminous fluid, not caused by filtration of

albumin from the blood through the kidneys. **colliq'uative a.**, an a. which is excessive in degree. **cy'clic a.**, a functional a. appearing intermittently in cycles of twelve to thirty-six hours' duration. **dietet'ic a.**, the discharge of albumin in the urine following the ingestion of certain foods. **false a.**, adventitious a. **feb'rile a.**, a. occurring during the course of a fever. **func'tional a.**, a. occurring without disease of the kidneys or evident lesions elsewhere. **hematog'enous a., he'mic a.**, a occurring in anemia, syphilis, various intoxications, and other states marked by profound blood changes. **intermitt'ent a.**, cyclic a. **intrin'sic a.**, true a., a. occurring in disease of the kidneys. **lordot'ic a.**, orthostatic a.; this term was suggested on the theory that the a. is due to pressure from lordosis in the lumbar spine. **neurot'ic a.**, a. associated with epilepsy or other convulsions, central hemorrhage or other trauma and occasionally exophthalmic goiter and various neuroses **orthostat'ic a.**, a condition characterized by the appearance of albumin in the urine when the patient is in the erect posture and its disappearance when he is recumbent. **pal'patory a.**, an a., sometimes lasting several hours, produced in healthy individuals by bimanual palpitation of the kidneys. **paroxys'mal a.**, cyclic a **physiolog'ical a.**, (1) the presence of slight traces of nucleoalbumin in normal urine; (2) functional a. **pos'tural a.**, orthostatic a. **reg'ulatory a.**, transitory a. occurring after severe physical exertion. **se'rous a.**, a. due to the escape of albumin from the blood through the kidneys **true a.**, (1) intrinsic a.; (2) serous a.

albuminu'ric. Relating to or suffering from albuminuria.

albuminurophobia (al-bu''min-u-ro-fo'bĭ-ah) [*albuminuria* + G. *phobos*, fear.] 1. A morbid fear of acquiring Bright's disease or albuminuria. 2. An exaggerated notion by the medical practitioner of the significance of albumin in the urine.

albu'moid. A protein found in cartilage; it is insoluble in neutral solutions and nearly so in acid and alkaline solutions

albumone (al-bu'mōn) A non-coagulable protein contained in blood serum; by some it is regarded as an artifical product formed from the globulins when heat is employed to separate the coagulable proteins.

albu'moscope [L. *albumen*, albumin, + G. *skopeō*, I view.] A specially mounted graduated glass tube, used in determining the presence and the approximate amount of albumin in the urine or other fluid; the operation consists in bringing the fluid and nitric acid in contact without mixing them.

albumose (al-bu'mōz). A derived albumin, formed during the digestion of a protein, and converted on further digestion into peptone; it is very soluble and is not coagulable by heat. **Bence-Jones a.**, see *Bence-Jones* albumin*.

albumosemia (al-bu-mo-se'mĭ-ah) [*albumose* + G. *haima*, blood.] The presence of albumose in the blood.

albumosuria (al-bu-mo-su'rĭ-ah) [*albumose* + G. *ouron*, urine.] The excretion of albumose in the urine. **myelopath'ic a.**, Kahler's* disease.

albur'num [L.] The sapwood of an exogenous tree. between the heart-wood and the bark.

albutan'nin. Albumini tannas (U.S.).

al'cali. Alkali.

Alcaligenes (al-kă-lij'en-ēz) [*alkali* + *-gen.*] A genus of the family *Bacteriaceæ*, occurring as motile or non-motile rod forms, found for the most part in the intestinal dejecta and in milk of cows and goats, some pathogenic, some not These organisms are placed by some authorities in the genus *Brucella*. **A. abor'tus,**[0] Bang's bacillus, *Brucella abortus*, short, non-motile rods, occurring singly, the cause of abortion in cows, mares, and sheep; probably identical with *A. melitensis*. **A. al'bus,**[0] *Bacterium lactis albus*, rather long non-motile rods, found by Conn on the udder of a cow; pathogenicity undetermined. **A. alcalofœt'idus,** *B. alcalofœtidus*, a motile, gram-negative, rod-shaped organism solated from the tonsils in certain cases of halitosis. **A. bronchisep'ticus,**[0] *Bacillus bronchisepticus*, *Brucella bronchisepticus*, a flagellated, motile, rather long, slender rod-shaped organism, occurring singly, the alleged cause of distemper in dogs, pathogenic also for cats and other small animals. **A. fæcal'is,** *Bacterium alkaligenes*, *Bacillus fæcalis alcaligenes*, moderately long motile rods, occurring singly or in chains, found in the intestinal discharges and in a case of endocarditis, but regarded as nonpathogenic. **A. marshal'lii,**[0] a non-motile rod of medium length, occurring singly, a milk organism. **A. meliten'sis,**[0] *Brucella melitensis*, *Micrococcus melitensis*, *Bacterium melitense*, very short rods of oval form, almost cocci in appearance, non-motile, occurring singly or occasionally in short chains; the cause of undulant (Malta) fever; probably identical with *A. abortus*. **A. rec'ti,**[0] moderately long, motile, flagellated rods, occurring singly, in pairs, and in chains, found in fecal matter; not known to be pathogenic.

al'caloid. Alkaloid

alcap'ton. Alkapton.

alcarnose (al-kar'nōz) A mixture of albumose and maltose, a concentrated predigested food

alcar'sin [*alc(ohol)* + *ars(enic)*.] Alkarsin, Cadet's fuming liquid, cacodyl oxide, $As(CH_3)_4O$

Al'cock's canal' [Thomas *Alcock*, English anatomist, 1784–1833.] A space in the outer fascial wall of the ischiorectal fossa about an inch and a half above the lower margin of the tuberosity of the ischium; it contains the internal pudic artery and veins and the terminals of the pudic nerve.

alcogel (al'ko-jel). Same as a hydrogel, with alcohol instead of water as the dispersion medium.

al'cohol [Ar *al*, the, + *koh'l*, fine antimonial powder, the term being applied first to a fine powder, then to anything impalpable—spirit.] 1. One of a series of organic chemical compounds in which the hydrogen (H) in a hydrocarbon is replaced by hydroxyl (OH); the hydroxide of a hydrocarbon radical, reacting with acids to form esters, as a metallic hydroxide reacts to form salts. 2. Any beverage containing ethyl alcohol. 3. (U.S.) A liquid containing 92.3 per cent by weight (94 9 per cent. by volume) of absolute ethyl hydroxide; the equivalent of the B P., called spiritus rectificatus, contains 85.65 per cent. by weight (90 per cent. by volume) of absolute ethyl hydroxide **a. absolu'tum** (Br.), absolute alcohol, a. dehydratum. **a. ammonia'tum,** ammoniated alcohol. spiritus* ammoniæ. **a. amyl'icum** (Br.) amyl or amylic a., $(CH_3)_2.CH.CH_2OH$, prepared by purifying fusel oil, collecting that part which distils between 257° and 289° F. (125°–143° C.). **a. dehydra'tum** (U.S.), dehydrated alcohol, absolute alcohol, ethyl hydroxide, $C_2H_5.OH$, containing not more than 1 per cent. by weight of water. **a. denatura'tum,** denatured alcohol,

methylated spirit; ethyl alcohol which has been made undrinkable by the addition of one-ninth of its volume of methyl alcohol and a small quantity of benzine or the pyridine bases. **a. dilu'tum** (U.S. and Br.), dilute alcohol, contains 41.5 per cent. by weight (48.6 per cent. by volume) of absolute alcohol or ethyl hydroxide. **all'yl a.**, a liquid of pungent odor (CH_2-$CHCH_2OH$) obtained by heating together oxalic acid, ammonium chloride, and glycerin. **ammo'niated a.**, spiritus* ammoniæ. **am'yl** or **amyl'ic a.**, a. amylicum. **anhy'drous a.**, absolutely pure a., containing no water. **ben'zyl a.**, phenmethylol, phenyl carbinol, a substance possessing local anesthetic properties. **bu'tyl a.**, propyl carbinol, primary normal butyl a., the butyl a. of fermentation, $CH_3.CH_2CH_2$-CH_2OH, is a colorless liquid, more poisonous than ethyl or methyl a.; there are three other butyl alcohols: isobutyl a., secondary butyl a., and tertiary butyl a., or isopropyl carbinol, ethyl-methyl carbinol, and trimethyl carbinol respectively. **dena'tured a.**, a. denaturatum. **diatom'ic** or **dihy'dric a.**, one containing two atom groups (OH), or having a bivalent radical. **eth'yl a.**, ethyl hydroxide, grain alcohol, CH_3-CH_2OH, the alcohol of wine, whiskey, and other spirituous beverages. **glyc'eryl a., gly'cyl a.**, glycerin. **grain a.**, ethyl a. **homeopath'ic a.**, ethyl a. of 87 per cent. strength, used in making attenuations. **isopro'pyl a.**, an isomer of propyl a. and a homologue of ethyl a., similar in its properties, when employed externally, to the latter, but more toxic when taken internally; employed as an ingredient of various cosmetics and of medicinal preparation for external use. **ke'tone a.**, one containing the carbonyl or ketone atom group (CO). **meth'yl** or **methyl'ic a.**, wood alcohol, pyroxylic spirit, $H.CH_2OH$, obtained by the destructive distillation of wood; it is poisonous, and often causes blindness. **monoatom'ic** or **monohy'dric a.**, one containing but one atom group (OH), or having a univalent radical. **phenylethyl a.**, phenethylol, benzyl carbinol. **pri'mary a.**, an alcohol characterized by the univalent atom group (CH_2OH) or methoxyl. **propen'yl a.**, glycerin. **pro'pyl a.**, ethyl carbinol, $CH_3.CH_2.CH_2OH$, a colorless fluid of alcoholic taste and fruity odor, more poisonous than ethyl alcohol. **salicyl'ic a.**, diathesin. **sec'ondary a.**, an alcohol characterized by the bivalent atom group (CHOH). **ter'tiary a.**, an alcohol characterized by the trivalent atom group (COH). **ter'tiary am'yl a.**, amylene hydrate. **thi'o-a.**, mercaptan. **triatom'ic** or **trihy'dric a.**, one containing three atom groups (OH), or having a trivalent radical. **wood a.**, methyl a.

alcoholase (al'ko-hol-āz). A ferment converting lactic acid into alcohol.

al'coholate. 1. A tincture or other preparation containing alcohol. 2. A chemical compound in which an atom of hydrogen in alcohol is replaced by an atom of an alkaline metal

alcohol'ic. 1. Relating to, containing, or produced by alcohol. 2. A person addicted to the use of alcoholic beverages in excess.

al'coholism. Poisoning with alcohol. **acute' a.**, intoxication, drunkenness, a temporary mental disturbance with muscular incoordination and paresis, induced by the ingestion of alcoholic beverages in poisonous amount. **chron'ic a.**, a pathological condition, affecting chiefly the nervous and gastroenteric systems, caused by the habitual use of alcoholic beverages in poisonous amount.

al'coholist. Alcoholic (2).

al'coholize. 1. To impregnate with alcohol 2. To convert into alcohol.

alcoholoma'nia. 1. A morbid craving for alcoholic beverages. 2. Delirium tremens.

alcoholom'eter [G. *metron*, measure.] An apparatus for determining the quantity of alcohol in a fluid.

alcoholophilia (al''ko-hol-o-fil'ĭ-ah) [*alcohol* + G. *phileō*, I love.] The craving for alcohol.

alcosol (al'ko-sol). Same as a hydrosol, with alcohol instead of water as the dispersion medium.

alcre'sol. Trade name for a solution of cresylic acid, employed as an antiseptic.

alcres'ta. Trade name of a preparation of ipecac that, it is claimed, may be administered in very large doses without exciting nausea or vomiting; it is in the form of tablets, each containing the alkaloids isolated from 10 grains of ipecac.

aldebaranium (al-de-bă-ra'nĭ-um). Thulium.

aldehydase (al'de-hi-dāz). An oxidizing ferment which converts an aldehyde into an acid.

aldehyde, aldehydum (al'de-hīd, al-de-hi'dum) [*al(cohol)* + L. *de*, from, + *hyd(rogen)*; alcohol deprived of hydrogen.] 1. A chemical body intermediate between an acid and an alcohol, containing less oxygen than the former and less hydrogen than the latter. 2. Acetaldehyde, acetic aldehyde, ethaldehyde a colorless liquid of irritating odor; it is polymerized into paraldehyde* in the presence of sulphuric acid. **ace'tic a.**, aldehyde (2). **al'lyl a.**, acrolein. **cinnam'ic a.**, cinnaldehydum. **for'mic a.**, formaldehyde. **lac'tic a.**, a ketone alcohol, isomeric with acetol. **meth'yl a.**, formaldehyde. **parafor'mic a.**, paraform.

alder (awl'der). A tree or shrub of the genus *Alnus*. The name is given also to plants of other and dissimilar genera. **black a.**, *Rhamnus frangula*.

al'din. An aldehyde base.*

al'dol. Beta-oxybutyric aldehyde, a thick liquid soluble in 2 parts of water, possessing hypnotic properties.

aldose (al'dōz). A carbohydrate containing the characterizing group of the aldehydes (CHO).

alecithal (al-es'ith-al) [G. *a-* priv. + *lekithos*, yolk.] Without yolk, noting ova, if such exist, in which there is no deutoplasm; in general, noting the mammalian ovum in which there is no distinct yolk.

alembic (al-em'bik) [Ar. *al.* the, + *anbiq*, cup.] A vessel used in former times for distillation, or more properly the cap of this vessel in which the recondensation occurred.

alem'broth. A double chloride of mercury and ammonia, sometimes employed as an antiseptic in surgical dressings

alemmal (ă-lem'al) [G. *a-* priv. + *lemma*, husk.] Noting a nerve fiber not provided with a neurilemma.

alepol (al'ĕ-pol). The sodium salts of the lower melting point fatty acids of hydrocarpus oil; it is a bactericide.

Alep'po boil or **e'vil** [*Aleppo*, a vilayet and its capital in Asiatic Turkey.] Oriental boil *

aletocyte (al-e'to-sīt) [G. *alētēs*, a wanderer, + *kytos*, cell.] A wandering cell.

al'etrin. A dark brown bitter powder, a concentration product obtained from the root of *Aletris** *farinosa*; dose, gr. 1–3 (0.06–0.2).

al'etris [G. a grinder of corn.] (N.F.) The dried rhizome and roots of *Aletris farinosa*, ague-root,

unicorn root, crow-corn, star-grass; an herb of the eastern United States; a simple bitter, said to be a uterine tonic, diuretic, and antirheumatic, in doses of gr. 8–15 (0.5–1.0).

aleucemia, aleucæmia (ă-lu-se'mĭ-ah) [G. *a-* priv. + *leukos*, white, + *haima*, blood.] 1. A condition marked by aleucocytosis or leucopenia. 2. Pseudoleucemia. 3. Myelomatosis. Also written *aleuchæmia, aleukæmia, aleukemia.*

aleuce'mic. 1. Marked by aleucemia. 2. Not associated with or characterized by leucemia, noting an early stage of Hodgkin's disease when the local symptoms are present, but the blood changes have not yet set in.

aleuchæmia (ă-lu-ke'mĭ-ah). Aleucemia.

aleucocytic (al-u-ko-si'tik). Marked by an absence of leucocytosis or by leucopenia.

aleucocytosis (ă-lu-ko-si-to'sis) [G. *a-* priv. + *leukos*, white, + *kytos*, cell.] Leucopenia, a diminution, relative or absolute, in the number of white blood-cells.

aleukæmia, aleukemia (ă-lu-ke'mĭ-ah). Aleucemia.

aleukia (ă-lu'kĭ-ah) [G. *a-* priv. + *leukos*, white.] 1. Aleucemia. 2. Absence of blood plates, thrombopenia. **a. hæmorrhag'ica,** aplastic anemia.

aleuronate (ă-lu'ro-nāt) [G. *aleuron*, flour.] A flour said to consist largely of vegetable albumin with a very small proportion of starch, used to make bread for diabetics

aleuron (al-u'ron) [G. *aleuron*, wheaten flour.] Protein granules; particles of protein found in the endosperm of seeds, supposed to contain the vitamins of edible seeds and grains.

Alexan'der crown [Charles L. *Alexander*, American dentist, contemporary.] A metal cap used as a pier for a bridge. **A. gold,** gold for tooth-filling, made more plastic by the admixture of a wax-like material.

Alexan'der's opera'tion. Alexander-Adams operation.

Alexan'der-Ad'ams opera'tion [William *Alexander*, Liverpool surgeon, †1919; James A. *Adams*, Glasgow surgeon.] Alexander's operation, Alquié's operation; shortening of the round ligaments of the uterus and suture of their ends to the external abdominal ring.

alexeteric (ă-lek-se-ter'ik) [G. *alexētērios*, able to defend.] Protective, defensive, in reference especially to infectious diseases; antidotal.

alex'ia [G. *a-* priv. + *lexis*, a word or phrase.] Loss of the power to grasp the meaning of written or printed words and sentences; word-blindness; called also *optical, sensory,* or *visual a.* in distinction to *motor a.* (aphemia or anarthria), in which there is loss of the power to read aloud although the significance of what is written or printed is understood. *Musical a.*, or music-blindness, is loss of the power to read musical notation.

alex'in [G. *alexō*, I ward off.] Complement, a labile substance, present in both normal and immune serum, possessing bactericidal and hemolytic properties when combined with immune body; the alexin in normal serum is sometimes called *sozin*, that in specific or immune serum, *phylaxin.*

alex'ine. A French proprietary remedy, said to contain chiefly phosphoric acid.

alexipharmic (ă-leks-ĭ-far'mik) [G. *alexipharmakos*, preserving against poison.] 1. Antidotal. 2. An antidote.

alexipyretic (ă-lek''sĭ-pi-ret'ik) [G. *alexō*, I ward off, + *pyretos*, fever.] Febrifuge.

alexocyte (ă-lek'so-sīt) [*alexin* + G. *kytos*, cell.] A leucocyte which is assumed to secrete alexin or complement.

al'gæ [pl. of L. *alga*, seaweed.] A division of cellular cryptogamous plants, including the seaweeds.

alganesthesia, alganæsthesia (al-gan-es-the'zĭ-ah) [G. *algos*, pain, + *an-* priv. + *aisthēsis*, sensation.] Analgesia.

al'garoth [after the inventor, V. *Algarotti*, Italian chemist, 1712–1764.] Oxychloride of antimony, formerly employed as an emetic.

algesia, algesis (al-je'sĭ-ah, al-je'sis) [G. *algēsis*, a sense of pain.] Hyperesthesia

alge'sic. Painful, hyperesthetic.

algesichronometer (al-je''sĭ-kro-nom'e-tur) [G. *algēsis*, sense of pain, + *chronos*, time, + *metron*, measure.] An instrument for recording the time required for the perception of a painful stimulus.

algesimeter, algesiometer (al-je-sim'e-tur, al-je-si-om'e-tur) [G. *algēsis*, sense of pain, + *metron*, measure.] An instrument for measuring the degree of sensitiveness of the skin to a painful stimulus.

algesthesia (al-jes-the'zĭ-ah) [G. *algos*, pain, + *aisthēsis*, sensation.] Hyperesthesia

alget'ic. Painful.

algid (al'jid) [L. *algidus*, cold.] Chilly, cold. **a. perni'cious fe'ver,** a pernicious malarial attack in which the patient presents all the symptoms of collapse. **a. stage,** a stage in certain diseases, notably in cholera, in which the skin is cold and cyanotic.

algiomo'tor [G. *algeinos*, painful.] Causing painful muscular contractions.

algiomus'cular [G. *algeinos*, painful] Algiōmotor.

algiovas'cular. Algovascular

algogen'esis [G. *algos*, pain, + *genesis*, production.] The production or origin of pain.

algogen'ic. Causing pain.

algolag'nia [G. *algos*, pain, + *lagneia*, lust.] A form of sexual perversion in which the infliction, or the experiencing of pain increases the pleasure of the sexual act or causes sexual pleasure independent of the act. **ac'tive a.,** sadism. **pas'sive a.,** masochism.

algom'eter [G *algos*, pain, + *metron*, measure.] An instrument for measuring the degree of sensitiveness to pain; algesimeter.

algophily (al-gof'i-lĭ) [G. *algos*, pain, + *philia*, love.] 1. Pleasure experienced in the thought of pain or in the infliction of pain upon others or the suffering it oneself. 2. Algolagnia.

algopho'bia [G. *algos*, pain, + *phobos*, fear] Abnormal fear of or sensitiveness to pain; odynephobia.

algopsychalia (al-go-si-ka'lĭ-ah) [G. *algos*, pain, + *psychē*, mind.] Psychalgia.

al'gor [L. coldness.] Cold or the sensation of cold; a chill

algos'copy [L. *algor*, cold, + G. *skopeō*, I view.] Cryoscopy.

algovas'cular [G. *algos*, pain.] Relating to changes in the lumen of the blood-vessels taking place under the influence of pain.

Alibert's che'loid or **chelo'ma** (al-e-ber') [Jean Louis *Alibert*, French physician, 1766–1837.] Cheloid. **A.'s disease',** (1) scleroderma; (2) mycosis fungoides.

alible (al'ĭ-bl) [L. *alibilis*, nutritive.] Capable of nourishing, nutritive, nutritious.

alicyclic (al-ĭ-si'klik). In chemistry, having the properties of both open-chain (aliphatic) and closed-chain (cyclic) compounds.

a''liena'tion [L. *alienare*, to make strange] Insanity.

a'lienist. One who treats the insane; a specialist in mental diseases

al'iform [L. *ala*, wing + *forma*, shape.] Wing-shaped, resembling a wing, pterygoid.

al'iment [L. *alere*, to nourish] Food, that which supplies nourishment, nutriment.

alimen'tary [L. *alimentum*, nourishment] Relating to food or nutrition.

alimenta'tion. 1 Nourishment, food. 2. Providing nourishment, feeding

alimen"tother'apy [L. *alimentum*, nourishment, + G. *therapeia*, healing.] Dietotherapy, bromatotherapy, dietetic treatment.

alinasal (al-ĭ-na'zal) [L *ala*, wing, + *nasus*, nose.] Relating to the alæ nasi, or flaring portions of the nostrils.

alinement (ă-līn'ment). 1. The act of bringing into line. 2. In dentistry, the line along which the teeth are adjusted.

alinjec'tion [*al(cohol)* + *injection*.] The injection of alcohol for hardening and preserving pathological and histological specimens.

aliphat'ic [G. *aleiphar(aleiphat-)*, fat, oil.] 1. Fatty. 2. Noting the open-chain* compounds, most of which belong to the fatty series.

Alisma'ceæ [G. *alisma* plantain.] An order of aquatic plants, some of which have edible tubers.

alisphenoid (al-ĭ-sfe'noyd) [L. *ala*, wing, + *sphenoid*.] Relating to the greater wing of the sphenoid bone. **a. car'tilage,** the cartilage in the embryo from which the greater wing of the sphenoid bone is developed.

aliz'arin. A red dye formerly obtained from madder, now made synthetically from anthracene, a coal-tar product; it is an acid stain.

alkalescence (al-kal-es'ens). 1. A slight alkalinity. 2. The process of becoming alkaline.

alkales'cent. Slightly alkaline; becoming alkaline

al'kali [Ar. *al*, the, + *qalīy*, soda-ash.] A strongly basic substance, alkaline in reaction, and capable of saponifying fats. **a. albu'min,** a derived albumin formed by the action of a weak alkali on native albumin; it is not coagulable by heat and is precipitated when the solution is carefully neutralized. **a. pois'oning,** milk sickness in cattle; trembles; slows. **a. reserve,** the sum total of alkaline salts in the blood and tissues which can be utilized to maintain the normal alkalinity of the blood. **car'bonated a.,** one of the carbonates of potassium or sodium. **caus'tic a.,** potassium or sodium hydrate, or hydroxide. **fixed a.,** lithium, potassium, or sodium hydroxide, as distinguished from ammonium hydroxide, or volatile a. **veg'etable a.,** (1) alkaloid; (2) a mixture of potassium hydrate and carbonate. **vol'atile a.,** ammonium hydroxide or carbonate.

Alkaligenes. See *Alcaligenes*.

alkalim'eter [*alkali* + G. *metron*, measure.] An instrument for determining the degree of alkalinity of any mixture

alkalim'etry. The determination of the degree of alkalinity of a mixture.

alkaline (al'kal-īn). Relating to an alkali; having the reaction of an alkali. **a. earths,** the hydroxides of barium, calcium, magnesium, and strontium **a. reac'tion,** the turning blue of red litmus paper

alkalin'ity. The condition of being alkaline

al'kalinize. To render alkaline

alkalinu'ria. The passage of alkaline urine

alkalith'ia. Trade name of an effervescent mixture containing lithium.

al'kalizate. Alkalinize.

alkaliza'tion. The process of rendering alkaline

al'kalize. Alkalinize.

al'kaloid [*alkali* + G. *eidos*, resemblance, in allusion to the basic or alkaline property of these substances.] A basic substance found in the leaves, bark, seeds, and other parts of plants, usually constituting the active principle of the crude drug. A substance of similar nature formed in animal tissues. Alkaloids are usually bitter in taste and alkaline in reaction and unite with acids to form salts. According to the usage of the U.S. and Br. Pharmacopeias, the name of an alkaloid terminates in *-ina* [L.] or *-ine* [E.], thereby distinguishing it from a glucoside, the termination of which is *-inum* [L.] or *-in* [E.]. **cadav'eric a.,** ptomaine. **excrementi'tious a.,** leucomaine. **fixed a.,** a solid, usually crystalline a., containing the elements C, H, N, and O, and not volatile. **putrefac'tive a.,** ptomaine. **tis'sue a.,** leucomaine **vol'atile a.,** a liquid a. containing the elements C H, and N, and volatile without decomposition; coniine and nicotine are volatile alkaloids.

alkalom'etry [*alkaloid* + G. *metron*, measure.] Dosimetry, dosimetric* system.

alkalosis (al-kă-lo'sis) [*alkali* + *-osis*.] A condition in which the blood is unduly alkaline, the equilibrium between its acids and bases being displaced in favor of the latter; it is marked by slow pulse, dizziness, and a jerky state of the muscles.

al'kanet. The root of an herb, *Alkanna*, or *Anchusa*, *tinctoria*, which yields a red dye.

al'kanin. The red dye from alkanet. **a. pa'per,** Boettger's test paper, anchusin paper; filter paper dipped in a 3 per cent. alcoholic solution of alkanin and dried; alkalies turn it blue or green, acids red.

alkap'ton [*alkali* + G. *haptō*, I seize.] Homogentisic acid, a yellowish red substance sometimes present in the urine and giving it a reddish color; believed to result from the incomplete oxidation of tyrosin.

alkaptonuria (al-kap-tŏ-nu'rĭ-ah) [*alkapton* + G. *ouron* urine.] The presence of alkapton in the urine; it occurs often over large periods of time or recurs at irregular intervals, and is sometimes associated with ochronosis

alkar'sin. Alcarsin.

alkasal (al'kă-sal). Aluminum and potassium salicylate, an antiseptic and antirheumatic

al'kyl [*alcohol* + G. *hylē*, stuff.] A general term for the alcohol radicals.

all or none. See *Bowditch's law*.

allachesthesia, allachæsthesia (al"ah-kes-the'sĭ-ah) [G. *allachē*, elsewhere, + *aisthēsis*, sensation.] A condition in which a sensation is referred to a point other than that to which the stimulus is applied

allæsthe'sia. Allesthesia.

allantiasis (al-an-tī'a-sis) [G. *allas(allant-)*, sausage. Botulism; sausage-poisoning

allantochorion (al-lan-to-ko'rĭ-on). Fusion of the allantois and chorion to form one structure.

allanto'ic. Relating to the allantois.

allan'toid [G. *allas(allant-)*, sausage, + *eidos*, appearance.] 1. Sausage-shaped. 2. Allantois. 3. Relating to the allantois. **a. mem'brane,** allantois.

allantoidean (al-an-to-id'e-an). One of the higher vertebrates, the embryo of which has an allantois.

allantoidoangiopagous (al-an"toy-do-an-jĭ-op'a-gus). Omphaloangiopagous.

allan'toin. A nitrogenous crystalline substance, $C_4H_6N_4O_3$, present in the allantoic fluid, the urine of the fetus, and elsewhere; it is also the active principle of symphytum, or comfrey; it promotes the epithelization of ulcers.

allantois (al-an'toys) [G. *allas(allant-)*, sausage, + *eidos*, appearance.] A fetal membrane developing from the hindgut; internally it enters into the formation of the bladder, externally it contributes to the formation of the umbilical cord and placenta.

allantotox'icon [G. *allas(allant-)*, sausage, + *toxicon*, (arrow)poison.] A poisonous ptomaine formed in decomposing sausage.

allelocatalytic (al-le-lo-kat-ă-lit'ik) [G. *allēlōn*, mutually, reciprocally, + *lytikos*, causing solution or destruction.] Mutually catalytic, noting two substances each of which is decomposed in presence of the other.

allelomorph (al'e-lo-morf) [G. *allēlōn*, reciprocally, + *morphē*, shape.] In Mendelian heredity, one of a pair of characters which are alternative in their inheritance, the descendants exhibiting one or the other of the characters, but not a mixture of the two.

allelomor'phic. Noting the characters (in Mendelian heredity) which become segregated or separate from each other; see *allelomorph*

allelomorphism (al"e-lo-mor'fizm). The transmission by heredity of allelomorphic characters.

All'en's law [Frederick M. *Allen*, American physician, *1879.] The more carbohydrate that is taken by a diabetic the less is utilized. **A.'s treatment,** the so-called starvation treatment of diabetes by means of certain days of absolute fasting followed by a spare diet with a minimum amount of carbohydrate.

All'en's cement' [John *Allen*, American dentist, 1810–1892.] A cement used in dentures for fastening the porcelain teeth to the plate.

All'en's test [Charles Warrenne *Allen*, American dermatologist, 1854–1906.] The application of Lugol's solution of iodine to a suspected eruption will produce a dark mahogany stain if the lesion is tinea versicolor.

All'en's test. 1. Upon the addition of a few drops of hydrochloric acid and then one of nitric acid to the suspected fluid, a red color will appear if the fluid contains carbolic acid. 2. If urine is added to boiling Fehling's solution, the fluid will become cloudy on cooling if sugar is present.

Allen-Doisy unit (al'en-doy'sĭ u'nit) [Edgar *Allen*, anatomist, Edward A. *Doisy*, biological chemist, St. Louis.] The smallest quantity of the estrus-producing hormone, secreted by the ovary during pregnancy, which is capable of producing in a spayed mouse a characteristic desquamation of the vaginal epithelium.

allergen (al'ur-jen) [*allergy* + G. *gennaō*, I produce] A hypothetical toxic substance in tuberculin, vaccine virus, and other infectious material, and in certain proteins upon the union of which with ergin the phenomenon of allergy depends.

allergenic (al"ur-jen'ik). Anaphylactogenic

allergia, allergy (al-ur'jĭ-ă, al'ur-jĭ) [G. *allos*, other, + (*en*)*ergeia*, from *ergon*, work.] 1. A modified sensitiveness in which reinoculation causes a renewal of the same infection, but in a manner different from that of the reaction to the primary infection. 2. A clinical change in the capacity of the organism to react to an infection or intoxication, following a primary infection: it may be in the direction of immunity or of increased susceptibility. 3. A hypersensitiveness of body cells to one or more specific proteins, with the result that various symptoms are caused which vary according to the sensitized cells and the specific protein.

allergic (al-ur'jik). Allergenic, anaphylactic, relating to or caused by allergy.

all'ergin. A term proposed by Anderson to denote an antibody characteristic of anaphylaxis, specific for its antigen, and thought to be the agent in the passive transference of anaphylaxis.

allergiza'tion. Sensitization.

allesthesia, allæsthesia (al-es-the'zĭ-ah) [G. *allos*, other, + *aisthēsis*, sensation.] A form of allachesthesia in which the sensation of a stimulus in one limb is referred to the opposite limb; allochiria.

alliaceous (al-ĭ-a'se-us) [L. *allium*, garlic.] Relating to, or having the odor or taste of, garlic or onion

alligation (al-ĭ-ga'shun) [L. *ad.* to, + *ligare*, to bind.] A rule of mixtures whereby (*a*) the cost of a mixture may be determined, given the proportions and prices of the several ingredients; or (*b*) in pharmacy the relative amounts of solutions of different percentages which must be taken to form a mixture of a given strength.

Al'lingham's opera'tion [Herbert William *Allingham*, English surgeon, contemporary.] Colotomy through an incision parallel to and just above Poupart's ligament.

Al'lingham's opera'tion [William *Allingham*, English surgeon, 1830–1908.] Exsection of the rectum through an incision in the perineum alongside the anus extending back to the coccyx. **A.'s ul'cer,** fissure of the anus.

Al'lis's inha'ler [Oscar H. *Allis*, Philadelphia surgeon, contemporary] An apparatus for giving ether by inhalation to induce general anesthesia. **A.'s sign,** in fracture of the neck of the femur, the trochanter rides up relaxing the fascia lata so that the finger can be sunk deeply between the great trochanter and the iliac crest.

allitera'tion [L. *ad*, to, + *littera*, letter.] The frequent employment of words having the same initial sound, occasionally noted as a form of dysphrasia

Al'lium [L. garlic.] A genus of plants of the natural order *Liliaceæ*; among the species are *A. cepa*, onion, *A. sativum*, garlic, *A. porrum*, leek, and *A. schœnoprasum*, chives.

al'lium (N.F.). Garlic; has been employed in the treatment of tuberculosis in doses of gr. 30 (2.0).

allochiral (al-ok'i-ral). Relating to or suffering from allochiria

allochiria, allocheiria (al"o-ki'rĭ-ah) [G. *allos*, other, + *cheir*, hand.] A form of dyschiria in which a stimulus applied to one side of the body is referred to the opposite side; allesthesia.

allochroic (al-o-kro'ik) [G. *allochroos*, changed in color.] Changed or changeable in color; relating to allochroism.

allochroism (al-ok'ro-izm) [G. *allos*, other, + *chroa*, color.] A change or changeableness in color.

allochromasia (al-o-kro-ma'zĭ-ah) [G *allos*, other, + *chrōma*, color] Change of color of the skin or hair.

allocinesis (al-o-sin-e'sis) [G. *allos*, other, + *kinēsis*, movement.] 1. Passive movement. 2. Reflex movement.

allocolloid (al-o-kol'oyd) [G. *allos*, other.] A colloid system made up by a single element (in allotropic forms); *e.g.*, sulphur undergoes several allotropic modifications when heated or when cooled suddenly.

alloesthesia, alloæsthesia (al-o-es-the'zĭ-ah). Allesthesia

allog'amy [G. *allos*, other, + *gamos*, marriage.] The fertilization of the ova of one individual by the spermatozoa of another, or, in plants, of the ovules by pollen from another flower or the

flowers of another individual; cross-fertilization; the opposite of autogamy.

allola'lia [G. *allos*, other, + *lalia*, talking.] Any speech defect, especially one due to disease affecting the speech center.

allomorphism (al-o-mor'fizm) [G. *allos*, other, + *morphē*, form.] A change of shape in cells due to mechanical causes, such as flattening from pressure, or to progressive metaplasia, such as the change of cells of the bile-ducts into liver-cells.

allonal (al'o-nal). Trade name of a mixture of allyl-isopropyl-barbituric acid with amidopyrine; recommended as a nerve sedative, hypnotic, and analgesic in doses of gr. 2.6–5.2 (0.13–0.32) as a simple hypnotic, and double those amounts as an analgesic.

allopath (al'o-path). 1. One who practises medicine according to the system of allopathy. 2. Erroneously, a physician of the rational or regular school, as distinguished from eclectic or homeopathic practitioners.

allopath'ic. Relating to allopathy

allop'athist. Allopath.

allop'athy [G *allos*, other, + *pathos*, suffering.] 1. A system of therapeutics in which disease is treated by exciting a morbid process of another kind or in another part—a method of substitution. When, in former times, an injection of strong solution of nitrate of silver was given in beginning gonorrhea in order to excite a substitutive, non-specific, inflammation, the gonococcus being unknown, the principle was one of allopathy. 2. Erroneously, the rational or regular practice of medicine, as distinguished from particular schools, such as homeopathy or eclecticism.

alloplasia (al-o-pla'zĭ-ah) [G. *allos*, other, + *plasis*, a moulding.] The replacing of normally dominant cell-forms in an organ or tissue by other cell-forms normally latent in such tissue, such as the presence of squamous epithelium in the bladder or of gastric mucosa in the esophagus; heteroplasia, dysplasia.

allopsychic (al-o-si'kik) [G. *allos*, other + *psychē*, soul.] Noting the mental processes in their relation to the outer world.

allorhythmia (al-ŏ-ridh'mĭ-ah) [G. *allos*, other, + *rhythmos*, rhythm.] Irregularity in the cardiac rhythm.

allorhythmic (al-ŏ-ridh'mik). Irregular in rhythm, noting especially the pulse or cardiac action.

allosome (al'o-sōm) [G. *allos*, other, + *sōma*, body.] Heterochromosome, heterotypical chromosome, one of the chromosomes differing in appearance or behavior from the ordinary chromosomes, or autosomes, and sometimes unequally distributed among the germ-cells. **paired a.,** diplosome. **unpaired a.,** monosome, accessory chromosome.*

allotox'in [G. *allos*, other.] An antitoxin or other substance formed in the blood or tissues, which checks the injurious action of a toxin.

allotriodontia (al-ot-rĭ-o-don'shĭ-ah) [G. *allotrios*, foreign, + *odous* (*odont-*) tooth.] 1. The growth of a tooth in some abnormal location. 2. The transplantation of teeth.

allotriogeustia (al-ot-rĭ-oj-ūs'tĭ-ah) [G. *allotrios*, foreign, + *geusis*, taste.] Perverted taste, one for innutritious and unusual objects, such as earth.

allotriophagy (al-ŏ-trĭ-of'a-jĭ) [G. *allotrios*, foreign to the purpose, + *phagō*, I eat.] The habit of eating unusual, innutritious, or injurious substances, dirt-eating, for example.

allotrope (al'o-trōp). A substance in one of the allotropic forms which the element may assume.

allotroph'ic [G. *allos*, other, + *trophē*, nourishment.] Having an altered nutritive value.

allotrop'ic. Relating to allotropy.

allot'ropism. Allotropy.

allot'ropy [G. *allos*, other, + *tropos*, manner, way.] The existence of certain elements, such as phosphorus and carbon, in several different forms with unlike physical properties.

allox'an. An oxidation product of uric acid, $C_4H_2N_2O_4$.

allox'antin. A derivative of alloxan, formed in the presence of reducing agents.

allox'ur ba'ses or bod'ies [*alloxan*(*an*) + *ur*(*ea*).] Xanthine bases.* Certain nitrogenous substances formed by the splitting up of nucleins.

alloxuremia (al-ok-su-re'mĭ-ah) [*alloxur* + G. *haima*, blood.] The presence of alloxur bases in the blood.

alloxu'ria. The presence of alloxur bodies in the urine.

alloxu'ric ba'ses. Alloxur bases, xanthine bases.*

alloy' [F. *alloyer* from L. *alligare*, to combine.] A substance composed of a mixture of two or more metals.

allspice (awl'spīs). Pimento, the fruit of *Eugenia pimenta*, a West Indian tree.

al'lyl [L. *allium*, garlic, + *hylē*, matter.] A univalent radical, C_3H_5, which has not been isolated as such, present in garlic. **a. al'dehyde,** acrolein. **a. isosulphocyanate,** volatile oil of mustard, derived from sinigrin.* **a. sul'phide,** oil of garlic. **a. tribro'mide,** trybromhydrin. **a. trichlor'ide,** trichlorhydrin.

allyl'amine. A liquid of sharp caustic taste derived from crude oil of mustard.

Almén's blood test (ahl-mān') [August Theodor *Almén*, Swedish physiologist, 1833–1903.] A mixture of equal parts of tincture of guaiac and oil of turpentine is added to washings of the suspected stain, and if it is blood a blue color will appear. **A.'s rea'gent,** a 2 per cent. alcoholic solution of tannin; 1 part added to 6 parts of urine will cloud the fluid if albumin is present. **A.'s test** for glucose; the liquid to be tested is heated with a solution of caustic soda. Rochelle salt, and bismuth subnitrate; the presence of glucose causes a back precipitation.

almond (al'mund or ah'mund). The kernel of the fruit of *Prunus communis* or *P. amygdalus* **bitt'er a.,** amygdala amara. **sweet a.,** amygdala dulcis.

al'nuin. A substance derived from the bark of the alder, one of several species of *Alnus;* it has been used as a tonic in doses of gr. 2–5 (0.12–0.3).

Al'nus [L. alder.] A genus of small trees or shrubs, the alders, the bark of which possesses tonic and astringent properties; it is used also in chronic skin and glandular affections and in aphthous stomatitis in doses of gr. 5–10 (0.3–0.6).

Al_2O_3. Aluminum oxide.

alochia (ă-lo'kĭ-ah) [G. *a-* priv. + *lochia*.] Absence of the lochia following childbirth.

al'ocol. Colloidal hydroxide of aluminum, suggested for the relief of hyperchlorhydria.

Aloe (al'o-e) [G. aloē.] A genus of plants of the natural order *Liliaceæ*. **A. chinen'sis,** one of the sources of Barbados aloes. **A. ferox,** a species from which is obtained the aloes used in South Africa **A. per'ryi,** the source of Socotrine aloes. **A. vera,** one of the species furnishing the official aloes. **A. vulga'ris,** a source of a non-official aloes used in the West Indies.

aloe (al'o-e) (U.S.). The inspissated juice from the leaves of *Aloe vera, A. chinensis, A. perryi*, or other species of aloe. **a. barbaden'sis** (Br.), obtained from *A. vera* and *A. chinensis*. **a. purifica'ta**, purified aloes, prepared by melting and straining Socotrine aloes; cathartic, emmenagogue, anthelmintic, dose gr. 2–10 (0.12–0.6). **a. socotri'na** (Br.), obtained from *A. perryi*.

aloes (al'ōz). Aloe (U.S. and Br.). **Barba'dos a.**, a variety of a obtained chiefly from *Aloe chinensis* and *A. vera;* official in the B.P. **Cape a.**, said to be derived from *Aloe ferox;* used chiefly in veterinary practice. **hepat'ic a.**, Socotrine a. **Natal' a.**, Cape a. **Soc'otrine a.**, hepatic a., from *Aloe perryi*, imported chiefly from Bombay.

aloet'ic. Relating to aloes.

alo'etin. Aloinum.

alo'gia [G. *a-* priv. + *logos*, speech.] Aphasia.

al'oin, aloin'um (U.S. and Br.). Aloin, a yellowish crystalline neutral principle derived from aloes; dose gr. ½–2 (0.03–0.12).

alopecia (al-o-pe'sĭ-ah) [G. *alopēkia*, the mange of foxes.] Acomia, calvities, baldness. **a. adna'ta**, congenital baldness. **a. area'ta**, a disease of the hair leading to the production of circumscribed patches of baldness. **a. Cel'si**, a areata. **a. cicatrisa'ta**, a. follicularis. **a. circumscrip'ta**, a areata. **a. follicula'ris**, a papular or pustular inflammation of the hair follicles of the scalp, resulting in scarring and loss of hair in the affected area. **a. furfura'cea**, dandruff with falling of the hair; a. pityrodes. **a. loca'lis**, falling of the hair in circumscribed spots corresponding to the area of distribution of the nerves of the scalp. **a. neurit'ica**, a. localis. **a. neurot'ica**, a. of trophoneurotic origin. **a. pityro'des** [G. *pityrōdes*, branny, scurfy], a falling of the hair, of the body as well as of the scalp, accompanied by an abundant bran-like desquamation. **a. præseni'lis**, baldness occurring in early or middle life without any apparent disease of the scalp. **a. seni'lis**, the normal falling of the hair of the scalp in old age. **a. sim'plex**, premature baldness, a. præsenilis. **a. symptomat'ica**, a occurring in the course of various constitutional or local diseases, or following long fevers. **a. universa'lis**, general falling of the hair from all parts of the body and not from the scalp only. **reflex' a.**, Jacquet's* disease.

aloxanthin (al-oks-an'thin) [*aloe* + *xanthos*, yellow.] A yellow substance obtained from aloes by treating with potassium bichromate.

al'pha. The first letter of the Greek alphabet (α). It is employed in chemistry to denote the first in a series of isomeric compounds; and is similarly used as a classifier in the nomenclature of other sciences. **a. leu'cocyte, a. rays**, etc., see the principal word.

alpha-eigone (al''fŭ-i'gōn). An albuminous compound of iodine. **a.-e. so'dium**, the sodium salt of alpha-eigone; it is similar to the former in action but is more soluble.

alpha-hypophamine (al''fŭ-hi-pof'am-ēn). The oxytocic principle of the posterior lobe of the hypophysis.

alpha-iodine (al-fŭ-i'o-dīn, al-fŭ-i'o-din) [G. *alpha*, a, + *iodine*.] Term applied by Kendall to the supposed active principle of the thyroid secretion, now called thyroxin* (U.S.).

alpha-naph'thol. A substance obtained from coal-tar and prepared artificially, a colorless crystalline powder; employed as an intestinal antiseptic in typhoid fever and other conditions in doses of gr. 10–15 (0.6–1.0), also externally in oily solution, in scarlet fever, erysipelas and smallpox.

al'phasol. Trade name of a proprietary remedy used as an external antiseptic in rhinology and laryngology.

alphebin (al'fĕ-bin). Trade name of a compound of phenyl-allyl-barbituric acid with dimethyl-amino-antipyrine, recommended for use as a sedative, analgesic, and hypnotic in doses of 1 to 2 tablets.

alphitomorphous (al-fi-to-mor'fus) [G. *alphiton*, barley-meal, + *morphē*, form.] Having a resemblance to barley-meal, noting certain fungi on plants.

al'phogen. Trade name for disuccinyl-dioxide or succinic peroxide, alphozone; a white amorphous substance, germicidal and deodorant in fresh solution or in powder.

al'phol. Trade name of alpha-naphthol salicylate; antiseptic and antirheumatic in doses of gr. 8–15 (0.5–1.0).

alphon'sin [*Alphonse* Ferri, Italian surgeon, 1515–1595.] A three-pronged bullet-forceps.

al'phos [G.] Psoriasis.

al'phozone. Trade name for succinic peroxide, alphogen.*

alphylarsonic acid (al''fil-ar-son'ik as'id). An arsonic acid to which a radical of the alphyl group is attached.

al'phyl group. A group of radicals of the fatty or paraffin series.

Alpinia (al-pin'ĭ-ă) [Prospero *Alpini*, Italian botanist, 1553–1617.] A genus of plants, one species of which, *A. officinarum*, is the source of galangal* (N.F.).

Alquié's opera'tion (al-ke-a') [Alexis Jacques *Alquié*, French surgeon in Montpellier, 1812–1865.] Alexander-Adams operation.

al'sol. Trade name of aluminum acetotartrate, occurring in colorless crystals slowly soluble in water; a disinfectant and astringent for use chiefly as an application to the mucous membrane of the nose and throat in 1 or 2 per cent. solution, and as an application to chilblains in 3 per cent. solution.

$Al_2(SO_4)_3$, $(NH_4)_2SO_4 + 24H_2O$. Alum.

alsto'nia [Charles *Alston*, Edinburgh physician, 1683–1760.] (B.A.) Dita bark, the dried bark of *Alstonia scholaris* and *A. constricta*, trees of tropical Africa, Asia, and Australia; bitter tonic, employed in malaria and dysentery in the form of infusion or tincture

al'stonine. Chlorogenine, an alkaloid from alstonia, occurs in the form of a brown powder, slightly soluble in water; antiseptic and antipyretic.

alter (awl'ter) [L. *alterare; alter*, other.] 1. To change; to make different, to become different 2. To castrate.

alterant (awl'tur-ant) [L. *alterare*, to change.] Alterative. 1. Causing a favorable change in the disordered functions of the body or in metabolism 2. A remedy, such as arsenic, iodine, or mercury, which acts in a way to correct disordered metabolic processes and promote repair.

altera'tion. 1. A change. 2. A changing, a making different. **mo'dal a.**, in electric irritability, a change in the mode of response of degenerated muscle to galvanic and faradic currents, the contraction being sluggish instead of quick. **qual'itative a.**, in electric irritability, a change in which the muscle contracts as readily on application of the anode as on that of the cathode. **quan'titative a.**, in electric irritability, a gradual loss of contrac-

tility in a muscle in response to static, faradic, and galvanic currents successively.

alterative (awl'tur-a-tiv). Alterant.

alternating (awl'tur-na-ting) [L. *alternare*, to do by turns.] Occurring in reciprocal succession, noting an electric current the direction of which changes in rapid succession

alterna'tion. The occurrence of two things or phases in reciprocal succession. **a. of generat'ion,** a phenomenon observed in certain protozoa which reproduce sexually and asexually in succeeding generations.

althæ'a (U.S.). Althea, marshmallow, the root of *Althæa officinalis;* used in powder as an excipient. **a. fo'lia** (N.F.), althea leaves, marshmallow leaves, the dried leaves of *A. officinalis;* employed as a demulcent in dose of gr. 30 (2.0).

althose (al'thōz). Trade name of an expectorant preparation containing senega, squill, and codeine salicylate.

Altmann's flu'id (ahlt'mahn) [Richard *Altmann*, German histologist, 1852–1900.] A fixing fluid containing equal parts of a 5 per cent. potassium bichromate solution and a 2 per cent osmic acid solution. **A.'s gran'ules,** granules demonstrable by certain methods of staining in the protoplasm of normal cells; their alleged absence in the cells of malignant growths has been thought to be of diagnostic value **A.'s the'ory,** that protoplasm is composed of a number of granular elements (bioblasts), grouped in zooglea-like masses, or united by threads, surrounded by an indifferent substance.

al'um [L. *alumen*] A double sulphate of aluminum and of an alkaline earth or ammonium; the potassium salt is official as alumen in the U.S.P., both the potassium and the ammonium salts in the B.P. Chemically, an alum is any one of the double salts formed by a combination of a sulphate of aluminum, iron, manganese, chromium, or gallium, on one side, with a sulphate of lithium, sodium, potassium, ammonium, cæsium, or rubidium, on the other **ammo'nia a.,** the double sulphate of aluminum and ammonium; alumen (Br.). **ammoniofer'ric a.,** ferri et ammonii sulphas. **burnt a.,** alumen exsiccatum. **chrome a.,** the sulphate of chromium and potassium, a violet pigment. **fer'ric a.,** ferri et ammonii sulphas. **iron a.,** ferric a. **potas'sium a.,** the double sulphate of aluminum and potassium; alumen (U.S. and Br.).

alumen (ă-loo'men) (U.S. and Br.). Alum, potassium alum (U.S.), potassium or ammonium alum (Br.), a double sulphate of aluminum and potassium or aluminum and ammonium; astringent and styptic, employed externally, and occasionally internally in doses of gr. 5–15 (0.3–1.0), or as an emetic in doses of ʒi–4 (4.0–16.0). **a. exsicca'tum** (U.S.), dried alum, burnt alum, alumen ustum; alum deprived of its water of crystallization by heat, occurring in the form of a white granular powder; used externally as an astringent dusting powder. **a. us'tum,** a. exsiccatum.

al'um-hematox'ylin. A purple tissue-stain used in histology, a mixture of an aqueous solution of potassium alum and an alcoholic solution of hematoxylin.

alumina (ă-loo'mĭ-nah). Aluminum oxide, Al_2O_3.

alu'minated. Containing alum

alumin'ium. Aluminum

alu'minol. Alumnol.

alumino'sis. A chronic catarrhal affection of the respiratory passages occurring in workers in alum.

aluminum (ă-loo'mĭ-num). A white silvery metal of very light weight; symbol Al, atomic weight 26.97. **a. group,** five of the basylous elements, glucinum, aluminum, scandium, gallium, and indium. **alu'mini hydrox'idum,** hydrated alumina, aluminum hydrate, a light white powder employed as an astringent dusting powder, and internally as a mild astringent antacid in doses of gr. 3–6 (0.2–0.4). **alu'minum naphtholdisul'phonate,** aluminol. **alu'mini sulphas** (N.F.), aluminum sulphate, a white crystalline mass or powder; employed as a caustic astringent in pencils.

alumnol (ă-lum'nol). Aluminol, alumini naphthosulphonas, aluminum betanaphthol disulphonate; astringent and antiseptic in 0.5 to 5 per cent. solutions; caustic in 10 to 20 per cent. solution; employed in the local treatment of gonorrhea in women.

Alvegniat's pump (al-vān-yat'). A mercurial vacuum pump used to remove gases from the blood, for estimation of the contained amount.

al'veloz. The inspissated juice of *Euphorbia heterodoxa*, a South American tree, used externally in lupus and cancer and to soften scar-tissue.

alveobronchiolitis (al''ve-o-brong''kĭ-o-li'(le')tis). Inflammation of the bronchioles and pulmonary alveoli; capillary bronchitis with involvement of the alveoli; bronchopneumonia.

alveolabial (al-ve-o-la'bĭ-al) [L. *alveolus* + *labialis*, relating to a lip.] Relating to the labial or outer surface of the alveolar processes.

alve'olar. Relating to an alveolus in any sense. **a. air,** the residual air in the pulmonary vesicles; its composition is believed to be obtained approximately by breathing back and forth a number of times into a closed bag and then analyzing the air in the bag. **a. in'dex,** gnathic index.* **a. periosti'tis,** alveolitis. **a. point,** see under *point.* **a. pro'cess,** the projecting ridge on each jaw containing the tooth sockets.

alveolectomy (al-ve-o-lek'to-mĭ) [L. *alveolus* + G. *ektomē*, excision.] 1. Excision of a portion or the whole of the alveolar process. 2. Alveolotomy.

alveoli (al-ve'o-li). Plural of alveolus. **a. denta'les** [BNA), tooth sockets. **a. pulmo'num** [BNA], the air-cells of the lungs, the terminal dilatations of the bronchioles.

al''veolin'gual. Relating to the lingual or inner surface of the alveolar process.

alveolitis (al-ve-o-li'(le')tis). Pyorrhea* alveolaris, alveolar periostitis, dentoalveolitis, pericementitis, Riggs's disease, Fauchard's disease.

alveoloclasia (al''ve-o-lo-kla'zĭ-ah) [L. *alveolus* + G. *klasis*, fracture.] 1. Absorption of a portion of the alveolar process, especially of its inner wall, causing a loosening of the teeth. 2. Operative crushing of a dental alveolus.

alveolocondylean (al-ve''o-lo-kon-dil'e-an). Relating to the alveoli and condyles of the mandible, or lower jaw.

alve'oloden'tal. Relating to the alveoli and the teeth.

alveololabial (al-ve-o-lo-la'bĭ-al). Alveolabial.

alveololingual (al-ve-o-lo-ling'gual). Alveolingual.

alveolotomy (al-ve-o-lot'o-mi) [L. *alveolus* + G. *tomē*, incision.] The operation of opening into a dental alveolus to give exit to retained pus or other fluid and to gain access to the cavity for treatment.

alve'olus, gen. and pl. *alve'oli* [L. dim. of *alveus* trough, tub] A small cell or cavity. 1. An air-cell, one of the terminal dilatations of the bronchioles in the lungs. 2. An acinus or terminal lobule of a racemose gland. 3. One of the honeycomb pits in the wall of the stomach. 4. A tooth-socket, alveolus dentalis.

alveolysis (al-ve-ol'i-sis) [*alveolus* + G. *lysis*, destruction.] Alveolitis, Riggs's disease.

al'veus [L. tray, trough, cavity.] The layer of fibers from the hippocampal fimbria spread out on the ventricular surface of the hippocampus. **a. commu'nis,** utriculus. **a. urogenita'lis,** utriculus prostaticus. **a. utriculo'sus,** utriculus.

alvine (al'vīn) [L. *alvus*, belly.] Relating to the abdomen or the intestine.

al'vus [L. belly.] The abdomen and its viscera.

A.L.W. Abbreviation for arch-loop-whorl, or Galton's* system of classification of finger-prints.

alym'phia [G. *a-* priv. + L. *lympha*, lymph.] Absence or deficiency of lymph.

alymphopotent (a-lim'fo-po"tent) [G. *a-* priv + *lymphocyte*, + L. *potens* able.] Unable to produce lymphocytes or lymphoid cells.

alypin (al'ī-pin). A synthetic crystalline powder soluble in water and alcohol; a local anesthetic, similar to, but less toxic than cocaine; used in 0.5–2 per cent. solutions; is not mydriatic. Chemically it is benzoyltetramethyl-diamino-ethyl-dimethyl-carbinol hydrochloride.

Alzheimer's disease' (ahlts'hi-mer) [Alois *Alzheimer*, Munich neurologist, 1864–1915.] Presenile dementia occurring usually in persons under fifty years of age, associated with A.'s sclerosis and neurofibril degeneration. **A.'s sclero'sis,** hyaline degeneration of the medium and smaller blood-vessels of the brain.

Am. Abbreviation for ametropia, or for mixed astigmatism.

A.M.A. Abbreviation for American Medical Association.

amaas (ah'mahs). Milk-pox, alastrim.

amacrinal (ă-mak'ri-nal). Relating to an amacrine.

amacrine (am'ă-krīn) [G. *a-* priv. + *makros*, long, + *is(in-)*, fiber.] A unipolar nerve-cell found in the retina, olfactory bulb, and within the meshes of Purkinje's cells in the cerebellum.

amadou (am'ă-doo) [Fr. *amadouer*, to coax.] A substance derived from fungi, *Boletus igniarius*, *Polyporus fomentarius*, and other varieties, found growing on tree-trunks; used as a hemostatic and, when impregnated with saltpeter, as punk.

amake'be. A disease of calves in Uganda, caused by a protozoan parasite, *Theileria parva*, transmitted by means of a tick, *Rhipicephalus appendiculatus*.

amal'gam [G. *malagma*, a soft mass.] An alloy of mercury with another metal, regarded as a solution of that metal in mercury. An amalgam of mercury, silver, and tin is used in dentistry as a filling for carious dental cavities

amal'gamate. To make an amalgam.

Amani'ta [G. *amanitai*, fungi.] A genus of fungi *Agaricus*. **A. musca'ria,** fly agaric.*

aman'itine. An alkaloid derived from poisonous species of *Amanita* or *Agaricus*

ama'ra [neut. pl. of L *amarus*, bitter.] Bitters

am'aril [Sp. *amarillo*, yellow.] The toxin of Sanarelli's bacillus, *B. icterodes*, at one time asserted to be the specific organism of yellow fever.

amarill'ic [Sp. *amarillo*, yellow.] Relating to yellow fever.

am'arin [L. *amarus*, bitter.] A name applied to various bitter principles derived from plants, especially to a poisonous substance, occurring in lusterless white crystals, obtained from oil of bitter almond.

am'aroid [L. *amarus*, bitter, + G. *eidos*, like.] A bitter extractive which does not belong to the class of glucosides, alkaloids, or any of the known proximate principles of plants

amaroi'dal. Resembling the bitters. Having a slightly bitter taste.

amarthritis (am-ar-thri'(thre')tis) [G. *ama*, at once, + *arthron*, joint, + *-itis*.] Polyarthritis.

amarum (ă-mah'rum) [neut. of L. *amarus*, bitter.] One of a class of vegetable drugs of bitter taste, such as gentian and quassia, employed as appetizers and tonics.

Amaryllida'ceæ. An order of monocotyledonous plants, the flowers having six, or a multiple of six, stamens and a trilocular inferior ovary; it includes *Narcissus*, *Agave*, and certain African plants used as arrow poisons.

amasesis (am-ă-se'sis) [G. *a-* priv. + *masēsis*, chewing.] Absence of mastication. Inability to masticate.

amas'tia [G. *a-* priv. + *mastos*, breast.] Absence of the breasts.

amativeness (am'ă-tiv-nes) [L. *amare*, to love.] 1 Sexual desire. 2 The propensity to love, a faculty located by phrenologists in the back part of the brain.

amaurosis (am-aw-ro'sis) [G *amauros*, dark, obscure] A total loss of vision without discoverable lesion in the eye structures or optic nerve. **a. partia'lis fu'gax,** temporary blindness occurring in attacks, associated with headache, nausea, and scotomata. **sabur'ral a.,** a. associated with symptoms of acute gastric disturbance. **tox'ic a.,** blindness due to optic neuritis excited by tobacco, alcohol, wood alcohol, lead, arsenic, quinine, or other poisons.

amaurotic (am-aw-rot'ik). Relating to or suffering from amaurosis. **a. id'iocy, a. fam'ily id'iocy,** see under *idiocy*

amaxophobia (ă-mak-so-fo'bĭ-ah) [G. *amaxa*, a carriage, + *phobos*, fear.] A morbid fear of meeting or of riding in any sort of vehicle.

amazia (ă-ma'zĭ-ah) [G. *a-* priv. + *mazos*, breast.] Absence of breasts, amastia.

Ambard's con'stant or **coeffi'cient** (ahm-bar') [Leo *Ambard*, Strasbourg pharmacologist,* 1876.] Ureosecretory constant; the relation between the amount of urea in the blood and that excreted in the urine—a measure of renal activity; it is given by the formula:

$$K = \frac{Ur}{\sqrt{D \times \frac{70}{P} \times \frac{\sqrt{C}}{25}}}$$

in which Ur means grams of urea per liter of blood, C grams of urea per liter of urine, D grams of urea excreted in twenty-four hours, P the weight of the patient in kilograms, K urea index. The normal figure is from 0.06 to 0.08, an increase denotes renal insufficiency. **A.'s laws,** (1) with the urinary urea concentration constant, the output of urea varies directly in the square of the concentration of the blood urea; (2) with the blood urea concentration constant, the output of urea varies inversely as the square root of its urinary concentration.

am'ber [L. *ambra*.] Succinum; the fossil resin of pine trees found in Northern Europe; it becomes

negatively electrified in friction. The oil is sometimes used as a stimulant antispasmodic in doses of ɱ5–10 (0.3–0.6).

am'bergris [Fr. *ambre gris*, L. *ambra grisea*, gray amber.] A grayish pathological secretion from the intestine of the sperm whale; it is used as a perfume, and has been employed as a nerve stimulant in doses of gr. 1–3 (0.06–0.2).

ambidex'ter [L. *ambi-*, on both sides, + *dexter*, right.] 1. Having equal facility in the use of both hands. 2. One who can write and do other acts equally well with either hand.

ambidexter'ity. The ability to use both hands with equal ease.

ambidextrism (ăm-bĭ-deks'trizm). Ambidexterity.

ambidex'trous. Ambidexter (1).

ambilat'eral [L. *ambo*, both, + *latus*, side.] Relating to both sides.

ambilevous (am-bĭ-le'vus) [L. *ambi-*, on both sides, + *lævus*, left.] Awkward in the use of both hands.

ambio'pia [L. *ambi-*, on both sides, + G. *ōps*, eye.] Diplopia.

ambisinister (am-bĭ-sin-ĭs'ter) [L. *ambi-*, on both sides, + *sinister*, left.] Ambilevous.

ambivalence (am-biv'a-lens, am-bĭ-va'lens) [L. *ambi-*, on both sides, + *valentia*, strength.] The property of having equal value or power applied in either of two contrary directions.

ambivalent (am-biv'a-lent) [L. *ambi-*, on both sides, + *valere*, to have power.] Of equal value or power in both directions. **a. feel'ings,** emotions of opposite character, such as love and hate, directed toward the same person.

amblyacousia (am''blĭ-ă-koo'sĭ-ah) [G. *amblys*, dull, + *akousis*, hearing.] Slight impairment of hearing.

amblyaphia (am-ble-af'ĭ-ah) [G. *amblys*, dull + *haphē*, touch.] Diminution in tactile sensibility.

amblychromasia (am-blĭ-kro-ma'sĭ-ah) [see *amblychromatic*.] A condition in which, chromatin being scanty, a cell nucleus stains faintly.

amblychromatic (am-blĭ-kro-mat'ik) [G. *amblys*, dim, + *chrōmatikos*, relating to color.] Staining faintly, noting especially a nucleus having but little chromatin.

amblygeustia (am-ble-jūs'tĭ-ah) [G. *amblys*, dull, + *geusis*, sense of taste.] A blunted sense of taste.

Amblyomma (am-ble-om'ah) [G. *amblys*, dull, + *omma*, eye, vision.] A genus of ticks. **A. hebræ'um,** a species said to transmit the specific organism of hemoglobinuria in sheep.

amblyopia (am-ble-o'pĭ-ah) [G. *amblys*, dim, + *ops*, sight.] Dimness of vision, partial loss of sight without discoverable lesion in the eye structures or the optic nerve. **a. ex anop'sia,** dimness of vision from non-use, occurring in the young as a result of cataract, refractive errors of high degree, etc., which prevent accurate focusing on the retina. **color a.,** incomplete or partial color-blindness. **postmar'ital a.,** Burns'* amaurosis. **quinine' a.,** dimness of vision caused by anemia of the retina sometimes following large doses of quinine. **tox'ic a.,** chronic retrobulbar optic neuritis caused by tobacco, alcoholic liquors, wood alcohol, lead, arsenic, and certain other poisons. **ure'mic a.,** loss of sight, without apparent lesion of the retina, sometimes occurring during an attack of uremia.

amblyopiatrics (am-ble-o''pĭ-at'rĭks) [G. *iatrikos*, relating to medicine.] Treatment of dimness of vision.

amblyoscope (am'ble-o-skōp) [*amblyo(pia)*, + G. *skopeō*, I regard.] An instrument resembling a stereoscope, used in training the fusion sense, and habituating an amblyopic eye to bear its share of vision.

am'bo [G. *ambōn*, edge of a dish.] The elevation surrounding a joint cavity, such as the glenoid cavity; also the annular fibrocartilage producing this elevation and deepening the cavity.

amboceptoid. An amboceptor with only the complementophil group.

am'boceptor [L. *ambo*, both, + *capere*, to take.] An antibody with two haptophore groups, cytophil and complementophil; the substance in serum which possesses an affinity for both the complement and the bacterium, erythrocyte, or other cell upon which the latter acts, and which serves to unite the two so that the lysis or destruction of the cell may be effected; *synonyms:* intermediary body, immune body, substance sensibilatrice, substance fixatrice, copula, desmon, preparator, sensitizer, fixative. **bacteriolyt'ic a.,** bacteriolysin, an a. capable of causing bacteriolysis in the presence of complement. **hemolyt'ic a.,** hemolysin, an a. capable of dissolving red blood-cells in the presence of complement. **immune' a.,** the a. produced in serum by repeated injections of foreign cells. **nat'ural a.,** the a. present in normal serum.

amboceptorgen. An antigen causing the production of amboceptor.

ambomalleal (am-bo-mal'e-al). Relating to the ambos, or incus, and the malleus.

am'bon. Ambo.

am'bos. Incus.

Amboy'na butt'on [*Amboyna*, one of the Spice Islands in the Malay Archipelago.] Yaws.

am'bra gris'ea. A homeopathic remedy prepared from ambergris, employed in cases marked by forgetfulness and a sense of hurry, sleeplessness from worry, and muscular twitchings.

ambrine (am'brēn) [F. from *amber* which it resembles somewhat.] A mixture of paraffin with wax and resins, including oil of amber, employed as an external application to burns and frost-bites.

ambrosia (am-bro'zhĭ-ah) [G. the food of the gods.] Rag-weed, Roman wormwood, the flowering tops of *Ambrosia artemisiæfolia;* tonic and astringent; employed in eclectic practice in intermittents, diarrhea, hematuria, hemorrhoids, and various nervous states, in doses of gtt. 5–10 (0.3–0.6) of the specific preparation of 240 grains to the ounce of alcohol. The pollen causes hay fever.

am'bulance [L. *ambulare*, to move about.] 1. A wagon used for the transportation of the sick or wounded. 2. The movable organization, including temporary hospital, medical and surgical supplies, surgeons and nurses, and means of transportation of the sick, accompanying an army, and intended for first aid and the care of emergency cases.

am'bulant, am'bulatory. 1. Moving about; noting pains and other symptoms which shift about from one place to another. 2. Walking about or able to walk about; noting a patient who is not confined to bed with the disease from which he suffers; noting also the disease in such cases.

ambustion (am-bus'chun) [L. *amburere*, to scorch.] A burn or scald.

ame'ba [G. *amoibē*, change.] A unicellular protozoan organism, of globular shape at rest, but endowed with the power of extruding pseudopodia and of assuming various shapes. Many amebas are parasitic, some pathogenic. See *Amœba*.

amebi'asis. Infection with pathogenic amebas.

ame'bic. Relating to, resembling, or caused by amebas.

ame'bicide [L. *cædere*, to kill.] 1. Destructive to amebas. 2 Any agent which causes the destruction of amebas.

ame'biform [L. *amœba* + *forma*, shape.] Of the shape or appearance of an ameba.

amebio'sis. Amebiasis

ame'bism. Amebiasis.

amebocyte (ă-me'bo-sīt) [G. *amoibē*, ameba, + *kytos*, cell.] A cell, such as a neutrophile leucocyte, having the power of ameboid movements

ame'boid [G. *amoibē*, ameba + *eidos*, appearance.] 1. Resembling an ameba in appearance or characteristics 2. Of irregular outline with peripheral projections noting the outline of a form of plate culture; see cut under *colony*, 1, B.

ameboididity (ă-me''boy-did'ĭ-tĭ). The power of locomotion after the manner of an ameboid cell.

ame'boidism. The performance of movements similar to those of an ameba, noting a condition sometimes seen in certain nerve-cells.

ame'bule. Amœbula.

ameburia (am-e-bu'rĭ-ah) [G. *ouron*, urine.] Amœburia, the presence of amebas in the urine when voided.

amelia (ă-mel'ĭ-ah) [G. *a-* priv. + *melos*, a limb.] Congenital absence of the extremities.

amelifica'tion [Early E *amel*, enamel, + L. *facere* to make.] Formation of the enamel of the teeth.

amelioration (ă-me-lĭ-or-a'shun) [L. *ad*, to, + *meliorare*, to make better.] Improvement; moderation in the intensity of symptoms.

am'eloblast [Early E. *amel*, enamel, + G. *blastos* germ.] Adamantoblast.

amelodentinal (ă-mel-o-den'tĭ-nal). Relating to both enamel and dentine of the teeth.

am'elus [G *a-* priv. + *melos*, limb] A monster without arms or legs.

amenia (ă-me'nĭ-ah) [G. *a-* priv. + *mēn*, month.] Amenorrhea.

amenomania (ă-me-no-ma'nĭ-ah) [L. *amœnus*, pleasant, + G. *mania*, frenzy.] Mental disorder with illusions and hallucinations of a pleasing character.

amenorrhea, amenorrhœa (ă-men-ŏ-re'ah) [G. *a-* priv. + *mēn*, month, + *rhoia*, flow.] Absence of the menses, due to other than natural causes such as pregnancy or advancing age.

amenorrhe'al, amenorrhe'ic. Relating to, accompanied by, or due to amenorrhea

AMELUS.

am'ent. 1. A subject of amentia. 2. Amentum.

amentia (am-en'shyah) [L madness, from *ab*, from, + *mens*, mind.] 1. A form of confusional insanity marked especially by apathy, disorientation, and more or less stupor. 2. Idiocy. **a. agita'ta,** a form marked by a high degree of excitement with great motor unrest and incessant hallucinations. **a. atton'ita,** a form of passive stupor with semiconsciousness, disorientation, mutism, immobility, and emotional indifference. **a. paranoi'des,** a mild form in which delusions are present, but there is only a slight clouding of consciousness.

amen'tum [L. a thong.] In botany, a catkin.

am'enyl. Trade name of a methylhydrastimide, allied to hydrastin, employed as an emmenagogue.

am'erism [G. *a-* priv. + *meros*, part.] The condition or quality of not dividing into parts, segments, or merozoites.

ameris'tic. Endowed with amerism, not dividing into parts or segments.

ametachromophil, ametachromophile (ă-met-ah-kro'mo-fil, or fīl) [G. *a-* priv. + metachromophile. Orthochromophile.

ametaneutrophil, ametaneutrophile (ă-met-ah-nu'-tro-fil, or fīl) [G. *a-* priv. + *meta*, beyond, + L. *neuter*, neither, + G. *philos*, fond.] Orthoneutrophile.

ame'tria [G. *a-* priv. + *mētra*, uterus.] Congenital absence of the uterus.

ametrometer (ă-mĕ-trom'e-tur). An appliance for measuring the degree of ametropia.

ametropia (ă-mĕ-tro'pĭ-ah) [G. *ametros*, disproportionate, + *ōps*, sight.] A condition in which there is some error of refraction in consequence of which parallel rays, with the eye at rest, are not focussed on the retina, but either in front of it (*myopia*) or behind it (*hyperopia*).

ametro'pic. Relating to, or suffering from, ametropia.

amfetin (am'fĕ-tin). A filtered sterile solution of concentrated bovine amniotic fluid (merthiolated), employed locally to promote healing after abdominal operations.

amicro'bic [G. *a-* priv. + *microbic.*] Not microbic, not related to or caused by microorganisms.

amicron, amicrone (ă-mi'kron). A colloid particle, smaller than 1$\mu\mu$, smaller than half the wave length of the light by which it is illuminated; it is unrecognizable even through the ultramicroscope, but indicated only by a diffuse illumination in the track of the beam; distinguished from *microne* and *submicrone*.

am'ide. A substance which may be derived from ammonia through the substitution of one or more of the hydrogen atoms by acid or oxidized radicals; the replacement of one hydrogen atom constitutes a *primary*, that of two hydrogen atoms a *secondary*, and that of three atoms a *tertiary* amide.

am'idin. Any one of the unstable organic monacid bases, containing the group C.NH.NH_2, in which amidogen and imidogen are joined by the same carbon atom.

amido-. A prefix denoting a compound containing the univalent atom group, NH_2; unless it is associated in the compound with the —CO radical, it is more properly called *amino-*. **a. acid,** an acid derived from one of the fatty acids by the substitution of NH_2 for H in a hydrocarbon group.

amidoben'zol. Aniline.

amidocapro'ic acid. Leucin.

amidogen (am'ĭ-do-jen) [*amido-* + G. *gennaō*, I produce.] The hypothetical univalent radical NH_2, replacing a hydrogen atom in an amido-compound.

amidophen (am'ĭ-do-fen). Trade name of a mixture of amidopyrine, phenacetin, caffeine, and extract of hyoscyamus, recommended in the treatment of neuralgia, rheumatism, and the malaise of grippal colds.

amidopyri'na (U. S., Br.) Amidopyrine, pyramidon, dimethylamino-antipyrine, $C_3ON_3(CH_3)_4.C_6H_5$; occurs as small colorless or white crystals or a white crystalline powder, odorless, soluble in 18 parts of water or 1.5 parts of alcohol; em-

ployed as an antipyretic and analgesic in rheumatism, neuritis, pulmonary tuberculosis, and common colds, in average dose of gr. 5 (0.3).

amidosuccinam'ic acid. Asparagin.

amidox'ime. A compound formed by the substitution of the hydroxyl radical, OH, for one hydrogen atom in the group NH_2 of an amidin.

amidoxyl (am-i-dok'sil). A term indicating the presence of the group NHOH in the compound. **a. benzoate,** the ammonium salt of 2-iodoxybenzoic acid, containing 42.7 per cent. of iodine, recommended in the treatment of arthritis; dose, 1 gm. in 100 c.c. of physiological salt solution intravenously, or twice that amount by mouth or rectum

amid'ulin [Fr. *amidon*, starch.] Soluble starch, made by boiling or treating with hydrochloric acid.

amim'ia [G. *a-* priv. + *mimos*, a mimic.] Loss of the power to express ideas by gestures or signs.

am'ine. A substance which may be derived from ammonia by the replacement of one or more of the hydrogen atoms by hydrocarbon radicals; the substitution of one hydrogen atom constitutes a *primary*, that of two atoms a *secondary*, and that of three a *tertiary* amine. The amines form salts with acids.

amino-. A prefix denoting a compound containing the radical group NH_2. **a.-acid,** an organic acid in which one of the hydrogen atoms has been replaced by NH_2; it is one of the products of the hydrolysis of proteins.

am''inoace'tic acid. Glycocoll

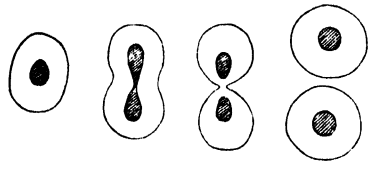
amin'oform. Methenamina.

am''ino-oxypu'rin. Guanine

aminopu'rin. Adenine

amino'sis. The occurrence of amino-acids in excess in the body.

amitosis (am-i-to'sis) [G. *a-* priv. + *mitosis*.] Direct division of the nucleus and cell, without the complicated changes in the former which occur in the ordinary process of cell reproduction.



AMITOSIS.

amitot'ic. Relating to or marked by amitosis.

ammeter (am'me-tur). Contraction of amperemeter.

Am'mon's horn [*Ammon*, an Egyptian deity having a ram's head.] Cornu Ammonis, hippocampus major.

Ammon's opera'tion (ah'mōn) [Friedrich August v. *Ammon*, German oculist, 1799–1861.] 1. Blepharoplasty by transplantation from the cheek. 2. Dacryocystotomy

ammonemia (am-mo-ne'mi-ah). Ammoniemia.

ammo'nia [*Ammon*, an Egyptian deity, ammonia having been obtained from camels' dung near his temple in Libya.] A volatile alkaline gas NH_3, very soluble in water, combining with acids to form a number of salts; see *ammonium*.

ammo'niac, ammoni'acum (Br.). A gum resin from a plant of western Asia. *Dorema ammoniacum;* stimulant expectorant in doses of gr. 10–30 (0.6–2 0); the *mistura ammoniaci* is a milky-looking emulsion, given in dose of ʒ½–1 (16.0–32.0). The drug is employed externally as a counterirritant in the form of the *emplastrum ammoniaci* and *emplastrum ammoniaci cum hydrargyro.*

ammoni'acal. Relating to ammonia or to ammoniac

ammo'niated. Containing or combined with ammonia

ammoniemia (am-mo-ni-e'mi-ah) [*ammonia* + G. *haima*, blood.] The presence of ammonia in the blood, supposed to be due to the decomposition of urea; it is marked by a subnormal temperature, weak pulse, gastroenteric symptoms, and coma.

ammonification (ă-mo-ni-fi-ka'shun) [*ammonia* + L. *facere*, to make.] The production of ammonia from proteins or their cleavage products by the action of bacteria

ammonio-. A prefix denoting ammoniated.

ammo'nioformal'dehyde. Hexamethylenamina.

ammo'nium. A group of atoms, NH_4, which behaves as a univalent metal in forming ammoniacal compounds; it has never been obtained in a free state **ammo'nii ace'tas,** a mild diaphoretic and refrigerant employed in the form of spirit of Mindererus, liquor * ammonii acetatis. **ammo'nii benzo'as** (U.S. and Br.), ammonium benzoate, occurs in colorless laminar crystals; stimulant diuretic, and antirheumatic in doses of gr. 10–30 (0.6–2 0). **ammo'nii bro'midum** (U.S. and Br.), ammonium bromide, a white crystalline hygroscopic powder, employed as a sedative in doses of gr. 10–30 (0 6–2 0) **ammo'nii carbo'nas** (U S. and Br), ammonium carbonate, a mixture of carbon dioxide and ammonium carbamate, occurs in white masses with ammoniacal odor, cardiac and respiratory stimulant and expectorant in doses of gr. 2–5 (0.12–0.3). **ammo'nii chlo'ridum** (U.S. and Br.), ammonium chloride, muriate of ammonia, sal ammoniac; a white crystalline powder; stimulant, expectorant, and cholagogue in doses of gr. 5–15 (0.3–1.0). **ammo'nii hippu'ras,** ammonium hippurate, said to be a solvent of uratic gravel and calculi in doses of gr. 5–10 (0 3–0.6). **ammo'nii hypophos'phis** (N.F.), ammonium hypophosphite, occurring as colorless hexagonal plates or granular powder of a bitter saline taste; employed as other hypophosphites in doses of gr. 2–4 (0.13–0.26). **a. ich'thynate** ichthynat. **a. ich'thyolate,** trade name of a solution of the ammonium salts of various organic acids obtained from an oily distillate of fossiliferous bitumen. **ammo'nii iod'idum** ammonium iodide, a white granular powder, very soluble in water; employed in place of potassium iodide than which it is less depressant; dose, gr. 2–5 (0.12–0.3). **ammo'nii ni'tras,** ammonium nitrate, a soluble crystalline salt, used in making nitrous oxide gas. **a. ortho-iodoxyben'zoate,** employed intravenously or by rectum, in doses of 15 grains (1 0) twice a week, in the treatment of chronic arthritis. **ammo'nii phos'phas** (N.F.), ammonium phosphate, occurs in colorless prismatic crystals; employed as an antilithic and antirheumatic in doses of gr. 10–20 (0.6–1.3). **ammo'nii salicyl'as** (U.S.), ammonium salicylate, white crystalline powder or colorless prisms; employed in rheumatism in doses of gr. 10–30 (0.6–2.0). **ammo'nii succinas,** ammonium succinate, a crystalline powder employed for the relief of spasmodic pains in doses of gr. 2–5 (0.12–0.3) **a. sulphoich'thyolate,** hirathiol. **ammo'nii val'eras** (N.F.), ammonium valerate or valerianate, colorless,

deliquescent, and efflorescent lamellar crystals, antispasmodic in doses of gr. 10–15 (0.6–1.0).

ammonium-ichthyol (am-mo'nĭ-um-ik'the-ol). Ammonium ichthyolsulphonate, ichthammol (Br.), ichthyol; a reddish brown syrupy liquid, with a bituminous odor and taste, soluble in most menstrua; employed as an alterative and antiseptic, in doses of gr. 2–10 (0.13–0.6), and locally in skin diseases.

ammoniu'ria [G. *ouron*, urine.] The passage of ammoniacal urine.

am'monol. An analgesic powder said to contain acetanilid, sodium bicarbonate, and ammonium carbonate.

ammother'apy [G. *ammos*, sand, + *therapeia*, treatment.] The therapeutic employment of sand-baths.

amne'sia [G. forgetfulness.] Loss of memory; specifically amnesic aphasia, inability to recall the name of an object or other word wanted to express an idea. **an'terograde a.**, a. in reference to events occurring after the establishment of the present condition. **au'ditory a.**, word-deafness. **lacu'nar a.**, a. in reference to isolated events; not a total loss of memory. **re'trograde a.**, a. in reference to events occurring before the attack leading to the present condition. **tac'tile a.**, astereognosis. **vis'ual a.**, inability to recall to mind the appearance of objects which have been seen or to recognize printed words.

amne'siac. One suffering from loss of memory.

amne'sic. Relating to or affected with amnesia, forgetful.

amniochorial, amniochorionic (am"nĭ-o-ko'rĭ-al, am"nĭ-o-ko-rĭ-on'ik). Relating to both amnion and chorion.

am"nioclep'sis [G. *kleptō*, I do secretly.] The gradual, unperceived escape of the liquor amnii.

amnio'ma. A broad flat tumor of the skin due to the antenatal adhesion of the amnion.

am'nion [G.] The inner of the membranes composing the sac, bag of waters, which envelops the fetus in the uterus. It consists of two layers, an inner or epiblastic, the *true amnion*, and an outer or mesoblastic, the *false amnion*. The latter, which is in contact with the chorion, either unites with that or disappears. The sac lined by the amnion contains the *liquor amnii* in which the fetus floats.

amnion'ic. Relating to the amnion, amniotic.

amniorrhea, amniorrhœa (am-nĭ-or-re'ah) [G. *rhoia*, flux, flow.] The premature escape of liquor amnii.

amniorrhexis (am-nĭ-ŏ-rek'sis) [G. *rhēxis*, rupture.] Rupture of the bag of waters.

amnio'sis. Amniotitis.

amniote (am'nĭ-ot). One of the higher vertebrates the embryo of which is provided with an amnion.

amniot'ic. Relating to the amnion, amnionic. **a. flu'id**, liquor amnii.

amniotin (am'nĭ-o-tin). Trade name of an ovarian follicular hormone, employed to relieve the symptoms, physical and mental, of the menopause and dysmenorrhea.

amniotitis (am"nĭ-o-ti'(te')tis). Inflammation of the amnion.

amniotome (am'nĭ-o-tōm) [G. *amnion* + *tomē*, cutting.] An instrument for puncturing the fetal membranes.

amnitis (am-ni'(ne')tis). Amniotitis.

Amœba, gen. and pl. *Amœ'bæ* [G. *amoibē*, change.] A genus of unicellular protozoan organisms of microscopic size, existing in nature in large numbers and many living as parasites; some species are pathogenic for man. **A. co'li**, *Entamœba coli*. **A. denta'lis**, *Entamœba buccalis*. **A. dysente'riæ**, *Entamœba histolytica*. **A. pro'teus**, a non-parasitic form, remarkable for the number and varied shapes of its pseudopodia. **A. urogenita'lis**, a non-pathogenic form occasionally found in the vaginal secretions or in the urine. **A. verruco'sa**, a species with large doubly contoured spherical nucleus and a spherical intensely staining nucleolus.

Amœbe'a [G. *amoibē*, change.] A subclass of *Rhizopoda* having lobopodia, or blunt pseudopodia, which do not adhere on contact; the amebas belong to this subclass.

Amœbobacter[0] (ă-me"bo-bak'tur) [*amœboid* + *bacterium*.] A genus of water organisms of the family *Rhodobacteriaceæ*, consisting of reddish cells aggregated in groups which are motile and changeable in contour.

Amœbobacterieæ[0] (ă-me"bo-bak-te'rĭ-e-e). A tribe of the family *Rhodobacteriaceae*, containing the genera *Amœbobacter*, *Thiodictyon*, *Thiothece*, and *Thiopolycoccus*.

amœ'boid. Ameboid.

amœbula (ă-me'bu-lah) [dim. of *amœba*.] 1. A minute ameba; specifically an ameboid swarm-spore, pseudopodiospore, resembling the parent cell in all particulars except size; contrasted with *flagellula*. 2. Schizont.

amok' [native word.] A psychic disturbance affecting Malays in which the subject becomes acutely maniacal and runs about striking with drawn knife any one he meets.

Amo'mum [G. *amōmon*, an Indian spice plant.] A genus of herbaceous plants of the natural order *Scitamineæ;* cardamom and grains of paradise are obtained from species of *Amomum*.

amoralia (a-mo-ra'lĭ-ah) [G. *a-* priv. + L. *moralis*, moral.] Moral imbecility.

amoralis (a-mŏ-ra'lis) [G. *a-* priv. + L. *moralis* moral.] A moral imbecile.*

amor'phia, amor'phism [G. *a-* priv + *morphē*, form.] The condition of being amorphous or without definite shape.

amor'phous. 1. Without definite shape or visible differentiation in structure. 2. Not crystallized.

amor'phus. An acardiac monster without limbs or other recognizable features.

Amoss' sign. When a patient is told to sit up in bed, he does so by extending his arms and supporting himself with the hands far behind him in cases in which flexion of the spine is painful.

amotio retinæ (ă-mo'shyo ret'i-ne) [L. *amovere*, to move from.] Detachment of the retina.

ampacoids (am'pă-koyds). Trade name of a liquid extract of the ovary, testicle, or prostate, for hypodermic injection.

ampelop'sin. A preparation made from ampelopsis; employed as a tonic astringent in doses of gr. 2–4 (0.12–0.25).

Ampelop'sis [G. *ampelos*, vine, + *opsis*, appearance.] A genus of climbing plants of the natural order *Vitaceæ*. **A. quinquefo'lia**, Virginia creeper, the herbage of which has been used as a tonic expectorant in doses of ʒ½–1 (2.0–4.0) of a fluidextract.

am"pelother'apy [G. *ampelos*, grape vine, + *therapeia*, treatment.] The grape-cure.

amperage (ahm-per'āj). The strength of an electric current.

ampere (ahm-per') [André Marie *Ampère*, French physicist, 1775–1836.] Unit of strength of an electrical current, representing a current having a force of one volt and passing through a conductor with a resistance of one ohm.

Ampère's pos'tulate. Avogadro's* postulate.

amperemeter (ahm-per'me-ter) [G. *metron*, measure.] An apparatus for measuring the amperage of an electric current.

amphiarthro'dial. Relating to amphiarthrosis.

amphiarthro'sis [G. *amphi*, on both sides, + *arthrōsis*, joint.] Mixed articulation, half-joint; one in which the opposing ends of the bones, tipped with hyaline cartilage, are united by fibrous or fibrocartilaginous material, with an incomplete joint cavity in its center, allowing of partial movement; as the articulations of the bodies of the vertebræ.

amphias'ter [G. *amphi*, on both sides, + *astēr*, star.] The double star, a figure formed of the chromatin of the nucleus during mitosis.

amphib'ia [G. *amphibios*, leading a double life.] A class of vertebrates which live both in the water and on land.

amphib'ious. Capable of living both on land and in water.

amphiblas'tula. A morula formed by unequal segmentation, as occurs in the human ovum.

amphiblestritis (am-fe-bles-trī'(tre')tis) [G. *amphiblēstron*, fishnet (retina), + *-itis*.] Retinitis.

amphiblestrodes (am"fi-bles-tro'dēz) [G *amphi blēstroeidēs*, net-like.] The retina.

amphibo'lia [G. uncertainty.] A stage in the course of a disease in which the outcome appears uncertain

amphibol'ic [G. *amphibolos*, doubtful.] Ambiguous, uncertain. **a. fis'tul** , see *fistula*. **a. pe'riod** or **stage**, the critical period of a disease when the outcome is uncertain.

amphib'olism. Amphibolia

amphib'olous. Amphibolic.

amphicelous, amphicœlous (am-fī-se'lus) [G. *amphi*, on both sides, + *koilos*, hollow.] Biconcave, concave at each end, as the body of a vertebra of a fish.

amphicen'tric [G. *amphi*, on both sides, + *kentron*, center.] Centering at both ends, said of a rete mirabile which begins by the vessel breaking up into a number of branches and ends by the branches joining again to form the same vessel.

amphichroic (am-fī-kro'ik) [G. *amphi*, on both sides, + *chroa*, color.] Amphichromatic

amphichromatic (am"fī-kro-mat'ik) [G. *amphi*, on both sides, + *chrōma*, color] Having the property of turning red litmus paper blue and blue litmus paper red, or of reacting both as an alkali and as an acid; having an amphoteric reaction

amphicra'nia [G. *amphi*, on both sides, + *kranion*, skull.] Double hemicrania, neuralgic pain on both sides of the head.

am"phicreat'inine. A leucomaine, $C_4H_{19}N_7O_4$, formed in muscular tissue.

amphicyte (am'fī-sīt). [G. *amphi*, around, + *kytos*, cell.] One of the cells (capsule cells) which envelope the bodies of the cerebrospinal, possibly also sympathetic, ganglionic neurons.

amphicytula (am-fī-si'tu-lah) The parent cell, or impregnated ovum, in man and other mammals, in which unequal segmentation of the vitellus occurs.

amphidiarthrosis (am-fī-di"ar-thro'sis). A form of articulation combining amphiarthrosis and diarthrosis, as that of the mandible or lower jaw.

amphigas'trula. The mammalian ovum in the late gastrula stage resulting from uneven segmentation of the vitellus.

amphileucemic, amphileukemic (am-fī-lu-se'(or ke') mik) [G. *amphi*, on both sides, + *leucemic*] Noting a leucemic state in which the hyperleucocytosis corresponds in degree to the organ changes.

am"phimi'crobe [G *amphi*, on both sides.] A microorganism which is either aerobic or anaerobic according to the environment

amphimix'is [G. *amphi*, on both sides, + *mixis* mingling.] Union of the paternal and maternal chromatin after impregnation of the ovum

am"phimor'ula. The morula in the mammalian ovum in which the composing cells are not equal.

amphinucle'olus [G. *amphi*, on both sides, + *nucleolus*.] Caryosome.

amphipyrenin (am"fī-pi'ren-in) [G. *amphi*, on both sides, + *pyrēn*, the pit of a fruit.] A basophile substance forming the nuclear membrane of a cell.

Amphis'toma. Amphistomum

Amphis'tomum hom'inis [G. *amphi*, on both sides, + *stoma*, mouth; L. *homo*, gen. *hominis*, man] *Gastrodiscus hominis*.

amphitheatre (am-fī-the'ă-tur) [G. *amphi*, around, + *theatron*, a place for seeing, a theatre.] A surgical operating room with rising seats about three sides for students and others who are to witness the operation.

amphithe'cium [G. *amphi*, about, + *thēkē*, box In botany, the peripheral layer of cells enveloping the endothecium.

amphitrichate, amphitrichous (am-fit'rī-kāt, am-fit'rī-kus) [G. *amphi*, on both sides, + *thrix* (*trich-*), hair.] Having a flagellum or flagella at both extremities, noting certain microorganisms.

am"phoal'bumose [G. *amphō*, both] Deuteroalbumose.

amphochromatophil, amphochromatophile (am-fo-kro-mat'o-fil, am-fo-kro-mat'o-fīl). Amphophil.

amphochromophil, amphochromophile (am-fo-kro'-mo-fil, or fīl) [G. *amphō*, both, + *chrōma*, color, + *philos*, fond.] Amphophil

am"phodiplo'pia [G *amphō*, both, + *diploos*, double, + *ōps*, vision.] Double vision in each of the two eyes

am'pholyte. Amphoteric electrolyte.*

am"phopep'tone [G. *amphō*, both.] The first peptone formed by the tryptic digestion of protein; it is identical with the peptone of gastric digestion and is further split into antipeptone and hemipeptone.

amphophil, amphophile (am'fo-fil, or fīl) [G. *amphō*, both, + *philos*, fond.] 1. Having an affinity equally for acid and for basic dyes, noting certain cells and tissues. 2. A cell which stains readily with either acid or basic dyes. **a.-bas'ophil**, slightly a., but with a preponderant affinity for basic dyes. **a.-ox'yphil**, slightly a., but with a preponderant affinity for acid dyes.

amphophil'ic, amphoph'ilous. Amphophil (1).

amphor'ic [L. *amphora*, a jar.] Noting the sound made by blowing across the mouth of a bottle. **a. res'onance**, cavernous resonance; a hollow sound obtained by percussing over a pulmonary cavity, the pitch depending upon the size of the cavity. **a. respira'tion**, a blowing respiratory sound heard on auscultation over a pulmonary cavity. **a. voice, a. whis'per**, a sound having a hollow, blowing character heard over a pulmonary cavity when the patient speaks or whispers.

amphoricity (am-for-is'ī-tī). A condition in which amphoric sounds are obtained on auscultation or percussion.

amphoriloquy (am-for-il'o-kwī) [L *loqui*, to speak.] The presence of the amphoric voice sound.

amphoroph'ony [G. *amphoreus*, a jar. + *phōnē*, voice.] The amphoric voice sound.

amphoter'ic [G. *amphoteroi*, both.] Having two opposite characteristics; see *amphichromatic*. **a. reac'tion,** a double reaction possessed by certain fluids, such as freshly drawn milk, which turns blue litmus paper red and red litmus paper blue.

amphot"erodiplo'pia [G *amphoteroi*, both, + *diploos*, double, + *ôps*, vision.] Amphodiplopia

amphot'ony [G. *amphō*, both, + *tonos*, tension.] Tonicity of both sympathetic and parasympathetic nervous systems.

amphotropin (am-fo-tro'pin). Trade name of hexamethylene tetramine camphorate.

am"plifica'tion [L. *amplificare*, to enlarge.] 1. An enlargement of the visual area in microscopy or telescopy. 2. Magnification of sound in telephony.

amplifier (am'plĭ-fi-er). 1. A concavoconvex lens between the eyepiece and objective in a microscope. 2. A device by means of which the voltage of a current of electricity is increased thereby magnifying sound in a radio transmitter or receiver.

amplitude (am'plĭ-tūd). Largeness, extent. **a. of accommoda'tion,** the total amount of accommodation between that necessary for distinguishing objects near at hand and for distant vision.

ampoule, ampul (am'pul). Ampulla (2).

ampul'la, gen. and pl. *ampul'læ* [L. a flask.] 1. A saccular dilatation of a canal, as is seen in the semicircular canals of the ear, or the lactiferous ducts of the mammary gland. 2. A minute sealed flask containing usually one dose of a solution for parenteral use; ampoule. **a. chy'li,** cisterna chyli. **a. duc'tus deferen'tis** [BNA], ampulla of the vas deferens, the dilatation of the duct where it approaches its fellow just before it is joined by the duct of the seminal vesicle. **a. duc'tus lacrima'lis,** ampulla of the lacrymal duct, a slight dilatation in the lacrymal duct just beyond the punctum. **a. duode'ni,** papilla duodeni. **a. lactif'era,** a dilatation of a milk duct just below the nipple, sinus lactiferus. **a. membrana'cea,** membranous ampulla, a nearly spherical enlargement of one end of each of the three semicircular ducts, where they connect with the utricle. **a. os'sea,** osseous ampulla, a circumscribed dilatation of one extremity of each of the three semicircular canals. **a. rec'ti,** a dilated portion of the rectum just above the anal canal. **a. tu'bæ uteri'næ,** the wide portion of the Fallopian tube near the fimbriated extremity. **Bry'ant's a., Ga'len's a., Hen'le's a., Lie'berkuehn's a., Tho'ma's a., Va'ter's a.,** see the proper names. **u'terine a.,** one of the dilatations of the horns of the gravid uterus in the bitch, containing the fetuses.

ampullæ (am-pul'le) [pl. of L. *ampulla*, a form of flask.] (N.F.). Ampuls, hermetically sealed, usually glass, containers filled with a medicinal solution in a sterile condition, intended for parenteral—subcutaneous, intramuscular, or intravenous—use. **a. caffein'æ sodiobenzoa'tis** (N.F.), ampuls of caffeine sodiobenzoate; a sterile aqueous solution of caffeine sodiobenzoate, gr. 7½ (0.5) in each ♏30 (2.0) sealed in an ampul, this being the average dose. **a. camphor'æ** (N.F.), ampuls of camphor, a sterile solution of gr. 3 (0.2) of camphor in ♏15 (1.0) of cottonseed oil sealed in an ampul, this being the average dose. **a. emetin'æ hydrochlor'idi** (N.F.), ampuls of emetine hydrochloride; a sterile solution of gr. ½ of emetine hydrochloride in ♏15 (1.0) of the physiological solution of sodium chloride in an ampul, this being the average dose. **a. io'di** (N.F.), ampuls of iodine, iodine swabs; iodine 35, potassium iodide 25, distilled water 300, alcohol to make 1000 c.c., contained in ampuls of any desired size, the preparation being for external use; when dispensed with a pledget of absorbent cotton or gauze for convenience in application, the ampul is called an iodine swab. **a. quinin'æ et ure'æ hydrochlor'idi** (N.F.), ampuls of quinine and urea hydrochloride; a sterile solution of gr. 7½ (0.5) of quinine and urea hydrochloride in ♏15 (1.0) of distilled water in each ampul, this being the average dose. **a. quinin'æ dihydrochlor'idi** (N.F.), ampuls of quinine dihydrochloride; a sterile solution of gr. 7½ (0.5) of quinine dihydrochloride in ♏15 (1.0) of distilled water in each ampul, this being the average dose. **a. so'dii cacodyla'tis** (N.F.), ampuls of sodium cacodylate; a sterile solution of gr. 2 (0.3) of sodium cacodylate in ♏15 (1.0) of distilled water, sealed in an ampul, this being the average dose.

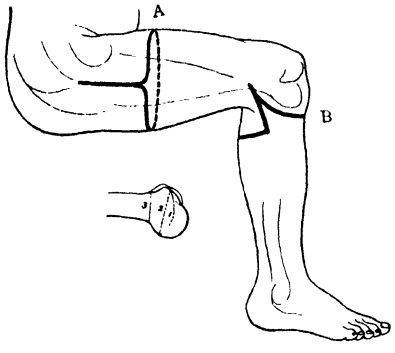
ampul'lar. Relating in any sense to an ampulla. **a. preg'nancy,** tubal pregnancy situated near the fimbriated extremity.

ampullitis (am-pul-i'(e')tis). Inflammation of any ampulla, especially of the dilated extremity of the vas deferens.

ampullula (am-pul'u-lah) [dim. of L. *ampulla*. A circumscribed dilatation of any minute lymphatic or blood-vessel or duct.

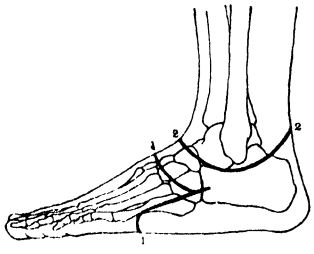
amputa'tion [L. *amputatio; ambi*, around, + *putare*, to prune.] 1. The cutting off of a limb or part of a limb, the breast, or other projecting part. (For amputations named after the operators, Chopart's, Lisfranc's, Pirogoff's, etc., see the proper names and the illustrations.) 2. In dentistry, the removal of the apical portion of the root of a tooth by means of the dental bur. **a. by transfix'ion,** one performed by transfixing the soft parts with a long knife and cutting the flap or flaps from within outward. **a. in contigu'ity,** disarticulation, a. through a joint. **a. in continu'ity,** a. through a segment of a limb, not at a joint. **blood'less a.,** one in which, by means of an Esmarch* bandage or some other appliance, the escape of blood from the cut surfaces is slight. **cen'tral a.,** one in which the flaps are so united that the cicatrix runs across the end of the stump. **chop a.,** a. by a circular cut through soft parts and bone without flaps. **cinemat'ic a.,** one leaving a muscular stump adapted to impart movement to an artificial limb. **cir'cular a.,** one performed by a circular incision through the skin, the muscles being similarly divided higher up, and the bone higher still. **coat-sleeve a.,** one in which there is one long skin flap folded over the stump. **congen'ital a.,** one produced in utero by the pressure of adventitious constricting bands. **diclas'tic a.,** one performed without the knife or saw, the bone being broken and the soft tissues bitten off with an écraseur. **doub'le flap a.,** one in which a flap is cut from the soft parts on either side of the limb. **dry a.,** bloodless a. **ellip'tical a.,** a circular a. in which the sweep of the knife is not exactly vertical to the axis of the limb, the outline of the cut surface being therefore elliptical. **excen'tric a.,** one in which the line of union of the flaps does not run across the end of the stump. **flap a.,** one in which flaps of the muscular and cutaneous tissues are made to cover the end of the bone. **imme'diate a.,** one necessitated by irreparable injury to

the limb, which is performed within twelve hours after the injury. **interme'diate a.,** one performed during the period of reaction from shock, and, in the older days, before the period of inevitable suppuration. **interpel"viabdom'inal a.,** a. of the thigh with removal of the corresponding lateral half of the pelvis; Jaboulay's operation. **interscap"ulothorac'ic a.,** a. of the arm with removal of the scapula and a portion of the clavicle on the

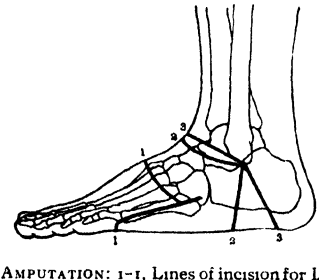


A, Racket Incision for Amputation of the Hip, B, Incision for Carden's, Gritti's, and Stokes' Amputations. The insert shows the lines of section of the femur for (1) Carden's, (2) Gritti's, and (3) Stokes' operations.

same side. **kineplas'tic a., kinetoplas'tic a.,** one in which the formation of the stump is made with regard to the subsequent fitting of an artificial limb. **ma'jor a.,** a. of the lower or upper extremity above the ankle or the wrist respectively. **mediotar'sal a.,** a. of the fore part of the foot through the tarsal region, Chopart's a. **mi'nor a.,** a of a hand or foot or any of its parts **mul'tiple a.,** a. of two or more limbs or parts of limbs performed at the same operation. **osteoplas'tic a.,** an a., such as several through the tarsus, in which the cut surface of another bone is brought in apposition with the one primarily divided so that the two unite, thus giving a better stump **o'val a.,** one in which the flaps are obtained by oval incisions through the skin and muscles **patholog'ical a.,** one necessitated by cancer or other disease of the limb and not by an injury **pri'mary a.,** intermediate a. **rack'et a.,** a circular or slightly oval a., in which a long incision is made in the axis of the limb. **rectan'gular a.,** one in which the flaps are fashioned in this shape. **root a.,** removal of the apical portion of the root of a tooth. **sec'ondary a.,** one performed some time after an injury when suppuration has set in. **sponta'neous a.,** congenital a. **subastrag'alar a.,** a. of the foot in which only the astragalus is retained, Malgaigne's a. **subperios'teal a.,** one in which the periosteum is stripped back from the bone and replaced afterward, forming a periosteal flap over the cut end. **syn'chronous a.,** a. of two parts performed at the same time by two operators



Tarsal Amputations: 1, Chopart's; 2, Mackenzie's.



Tarsal Amputation: 1–1, Lines of incision for Lisfranc's; 2–2, Pirogoff's; 3–3, Syme's amputation.

amuck'. Amok.

amusia (ă-mu'sĭ-ah) [G. *a-* priv. + *mousa*, music.] A form of aphasia characterized by loss of the faculty of musical expression.

Amussat's opera'tion (am-u-să') [Jean Zuléma *Amussat*, French surgeon, 1796–1856] Lumbar colostomy in the ascending colon, for the formation of an artificial anus. **A.'s probe,** a probe used for locating and steadying the stone in lithotrity. **A.'s valves,** Heister's valves.

amychophobia (ă-mi-ko-fo'bĭ-ah) [G. *amychē*, a scratch, + *phobos*, fear.] A morbid fear of being scratched or of claws (as of a cat for example).

amy"elencepha'lia [G. *a-* priv. + *myelos*, marrow, + *enkephalos*, brain.] Absence of both brain and spinal cord.

amyelencephalic, amyelencephalous (ă-mi"el-en-sefal'ik, ă-mi"el-en-sef'a-lus). Without brain or spinal cord.

amyelenceph'alus. A monster without brain or spinal cord.

amyelia (am"i-el'ĭ-ah) [G. *a-* priv. + *myelos*, marrow.] Absence of the spinal cord.

amyelic, amyelous (am-i-el'ik, ă-mi'e-lus) Without spinal cord.

amyelinic (am-i-el-in'ik) [G. *a-* priv.] Without a medullary sheath or without myelin.

amyeloic (ă-mi-el-o'ik). Amyelonic.

amyelonic (ă-mi-ĕ-lon'ik) [G. *a-* priv. + *myelos*, marrow.] 1. Amyelic. 2. Without bone-marrow. 3. Without participation of the bone-marrow, therefore purely lymphatic; a term used in hematology.

amyelotrophy (ă-mi-el-ot'ro-fĭ). Myelatrophy.

amyelus (ă-mi'e-lus) [G. *a-* priv. + *myelos*, marrow.] A monster without spinal cord.

amygdala (ă-mig'dah-lah) [G. *amygdalē*, almond.] 1. Tonsil. 2. A lobule on the under surface of the cerebellum, tonsilla cerebelli. 3. A nugget-like mass of gray matter in the anterior portion of the temporal lobe, in the roof of the apex of the medicornu, amygdaloid nucleus. 4. Almond, the ripe seed of *Amygdalus communis*. **a. accesso'ria,** lingual tonsil, tonsilla* lingualis. **a. ama'ra** (Br.), bitter almond, the seed of *Prunus amygdalus*, var. *amara*. **a. cerebell'i,** amygdala (2). **a. dul'cis,** sweet almond, the seed of *Prunus amygdalus*, var. *dulcis*.

amygdalectomy (ă-mig-dah-lek'to-mĭ) [G. *amygdalē*, tonsil, + *ektomē*, excision.] Tonsillectomy; excision or entire removal of a tonsil.

amygdalin (ă-mig'dah-lin). A glucoside, of bitter taste, in bitter almond and in cherry-laurel leaves; the addition of emulsin to a solution of amygdalin

splits the latter up into oil of bitter almond and hydrocyanic acid.

amygdaline (ă-mig'dah-lēn, or līn). 1. Relating to an almond. 2. Relating to a tonsil, especially to the brain structure called amygdala or amygdaloid nucleus. **a. fis'sure,** incisura temporalis. a fissure on the ventral aspect of the temporal lobe near its pole.

amygdalitis (am-ig-dal-i'(e')tis) [G. *amygdalē*, tonsil, + *-itis*.] Tonsillitis. inflammation of a tonsil

amyg'daloid [G. *amygdalē*, almond, + *eidos*, appearance.] Resembling an almond or a tonsil. **a. nu'cleus,** amygdala (3). **a. tu'bercle,** a projection from the roof of the middle. or descending, cornu of the lateral ventricle, marking the location of the a. nucleus.

amygdalolith (ă-mig'dă-lo-lith) [G. *amygdalē*, almond (tonsil), + *lithos*, stone.] A calcareous concretion in a distended crypt of the tonsil; tonsillar calculus.

amygdalop'athy [G. *amygdalē*. almond (tonsil), + *pathos*, suffering.] Any disease of a tonsil especially adenoid vegetations.

amyg"daloph'enin. Amygdophenin

amygdalothrypsis (ă-mig"dal-o-thrip'sis) [G. *amygdalē*, tonsil, + *thrypsis*, a crushing.] Crushing an hypertrophied tonsil by a strong flat-bladed forceps followed by excision of the crushed portion.

amyg'dalotome [G. *amygdalē*, tonsil, + *tomē*, a cutting.] Tonsillotome, an instrument for cutting off a portion of a tonsil.

amygdalot'omy. Tonsillotomy, excision of a portion of a tonsil.

Amygdalus (ă-mig'da-lus) [G. *amygdalē*, almond.] A genus of plants of the order *Rosaceæ;* the almonds, more correctly included in the genus *Prunus*.

amygdoph'enin. Phenetidin amygdalate; a compound of para-amidophenol and mandelic (amygdalic) acid; occurs in white slightly soluble crystals; recommended in neuralgia and rheumatism in doses of gr. 7½–15 (0.5–1.0).

amyl (am'il) [G. *amylon*, starch, + *hylē*, material.] A hypothetical univalent radical, C_5H_{11}, nonexistent in the free state. **a. al'cohol,** fusel oil, $C_5H_{12}O$ **a. chlo'ride,** a colorless fluid, $C_{51}H_1Cl$, possessing anesthetic properties **a. hy'drate,** a. alcohol. **a. hy'dride,** pentane **a. i'odide,** iodamyl, a yellowish liquid, $C_5H_{11}I$, employed by inhalation in cardiac disturbances and dyspnea. **a. ni'tris** (Br.), **am'ylis ni'tris** (U S), amyl nitrite, $C_5H_{11}NO_2$; a yellowish very volatile liquid of 80 per cent. strength; motor depressant and vasodilator; dose by inhalation ♏1–5 (0.06–0.3), internally or hypodermically ♏1–2 (0.06–0.12) **a. sal'icylate,** resembles methyl salicylate and is used instead of it as an application to the affected joints in rheumatism. **a. val'erate, a. vale'rianate, am'ylis val'eras** or **valerian'as,** apple oil. a volatile liquid, employed in the treatment of gallstones because of its solvent action on cholesterin; dose, gr. 1–5 (0.06–0.3).

amyla'ceous [L. *amylum*, starch] Starchy.

amylamine (am-il-am'ēn). 1. A colorless liquid, $C_5H_{11}NH_2$, obtained in various ways, found sometimes in codliver oil. 2. One of a series of amino-compounds of amyl, in which one or more atoms of H in the ammonia are replaced by a corresponding number of molecules of the amyl radical.

amylase (am'ĭ-lāz) [G. *amylon*, fine meal, starch, + *-ase*.] A starch-splitting or amylolytic enzyme, which causes hydrolytic cleavage of the starch molecule

amylemia (am-ĭ-le'mĭ-ah) [G. *amylon*, starch, + *haima*, blood.] The hypothetical presence of starch in the circulating blood.

amylene (am'ĭ-lēn) A colorless liquid hydrocarbon, C_5H_{10}, formed by the decomposition of amyl alcohol; it has anesthetic properties. **a. chlo'ral,** dormiol, dimethylethyl carbinol-chloral, an oily liquid possessing hypnotic properties in doses of ♏5–30 (0.3–2 0). **a. hy'drate,** dimethylethyl carbinol, tertiary amyl alcohol; a colorless pungent liquid possessing hypnotic properties in doses of ♏30–60 (2.0–4.0).

amyl'enol. Amyl salicylate.

amyl'ic. Relating to amyl. **a. al'cohol,** amyl alcohol,* fusel oil. **a. fermenta'tion,** fermentation of potato or corn mash. or other starchy material, by which fusel oil is produced.

amylin (am'ĭ-lin). The cellulose of starch, the insoluble envelope of starch-grains

am'ylis. Genitive of *amyl*.

am"ylobac'ter. A bacterial organism containing starch.

amylocainæ hydrochloridum (am'il-o-kah-e''ne hi-dro-klor'i-dum) (Br.) Stovaine

amylodex'trin. A soluble substance, coloring yellow with iodine, formed as an intermediate product during the change of starch into sugar

amylodyspepsia (am''i-lo-dis-pep'sĭ-ah). Inability to digest starchy food.

am'yloform. Trade name of a white, odorless, insoluble powder. made by adding a strong solution of formaldehyde to a weak suspension of starch in water; recommended as a substitute for iodoform

am"ylogen'ic [G *amylon*, starch, + *gennaō*, I produce.] Producing starch. **a. bod'y,** amyloplast.

am'yloid [G. *amylon*, starch + *eidos*, resemblance.] A glycoprotein occurring as a pathological infiltration in the kidneys, liver, and other organs and as a granular deposit in serous membranes. **a. degenera'tion,** see under *degeneration*.

amyloido'sis. Generalized amyloid infiltration, a deposit of amyloid in many organs and tissues.

amylol'ysis [G. *amylon*, starch, + *lysis*, solution.] The change of starch into sugar.

am"ylolyt'ic. Causing the conversion of starch into sugar.

am'yloplast [G *amylon*, starch, + *plastēs*, a former.] Amylogenic body, leucoplastid; a granule in the protoplasm of a vegetable cell which is the center of a starch-forming process.

amylop'sin [G. *amylon*, starch, + *opsis*, appearance.] A diastatic enzyme, resembling ptyalin, present in the pancreatic juice; it converts starch into maltose.

amylose (am'ĭ-lōz). One of the three groups of the carbohydrates, which contains starch, dextrin, and cellulose; the other groups are *glucose* and *saccharose*.

amylum (am'ĭ-lum) [L.] (U.S. and Br.) Starch; in U.S. cornstarch obtained from seed of *Zea mays;* in Br. this or starch from wheat, *Triticum sativum,* or rice, *Oryza sativa;* a white powder used as a dusting powder or as an excipient. **a. ioda'tum,** iodized starch, made of starch, 95 parts, and iodine, 5 parts; employed as an alterant in doses of gr. 30–60 (2.0–4.0).

amylu'ria [G. *amylon*, starch, + *ouron*, urine.] The presence of starch in the urine when voided.

amyocardia (am-i-o-kar'dĭ-ah) [G. *a-* priv. + *mys*, muscle, + *kardia*, heart.] Myasthenia cordis, weakness of the heart muscle.

amyostasia (am-i-o-sta'sĭ-ah) [G. *a* priv + *mys*, muscle, + *stasis*, standing.] Difficulty in standing, due to muscular tremor or incoordination.

amyosthenia (am-i-os-the'nĭ-ah) [G. *a-* priv. + *mys*, muscle, + *sthenos*, strength.] Muscular weakness, myasthenia.

amyosthen'ic. Relating to or causing muscular weakness.

amyotaxia (am-i-o-tak'sĭ-ah) [G *a-* priv. + *mys-*(*myo-*), muscle, + *taxis*, order.] Muscular ataxia.

amyotonia (am-i-o-to'nĭ-ah) [G. *a-* priv. + *mys-*(*myo-*), muscle, + *tonos*, tone.] Myatonia, a lack of muscular tone. **a. congen'ita,** myatonia congenita, Oppenheim's disease, congenital atonic pseudoparalysis, a form of muscular dystrophy of congenital origin, but neither familial nor hereditary.

amyotrophic (am-i-o-trof'ik). Relating to muscular atrophy. **a. lat'eral sclero'sis,** a form of progressive muscular atrophy with increased reflexes and spastic irritability of the muscles, due to sclerosis of the lateral columns of the spinal cord.

amyotrophy (am-i-ot'ro-fĭ) [G. *a-* priv. + *mys*(*myo-*), muscle, + *trophē*, nourishment.] Muscular wasting or atrophy. **progres'sive spi'nal a.,** progressive muscular atrophy.*

amyous (am'i-us) [G. *a-* priv. + *mys*(*myo-*), muscle.] Lacking in muscular tissue, or in muscular strength.

amytal (am'ĭ-tal). Trade name of isoamylethyl barbituric acid, sedative and hypnotic. **a. compound,** trade name of a mixture of amytal, gr. 1½, with amidopyrine, gr. 3½; analgesic and hypnotic.

amyxorrhea, amyxorrhœa (ă-mik-sor-re'ah) [G. *a-* priv. + *myxa*, mucus, + *rhoia*, flow.] Absence of the normal secretion of mucus.

An. Chemical symbol of *actinon*.

ana. A distributive Greek preposition, meaning of each; used in prescription writing in the abbreviated form āā, or more correctly āa.

anabacteria (an''ă-bak-te'rĭ-ă). A formalized autolysate obtained from macerated aqueous bacterial suspensions; employed as a prophylactic and curative vaccine.

anab'asis [G. a going up.] The stage of increase in a disease.

anabat'ic. Relating to the anabasis of a disease; increasing in severity.

anabio'sis [G. *ana*, again, + *biōsis*, life.] Resuscitation after apparent death.

anabiot'ic. 1. Resuscitating, restorative. 2. A revivifying remedy, a powerful stimulant.

anabol'ergy [G. *anabolē*, a building up, + *ergon*, work.] The amount of energy consumed in the process of anabolism.

anabol'ic. Relating to or promoting anabolism, or constructive metabolism.

anab'olin. 1. Any substance formed as a result of the anabolic processes. 2. Trade name of an extract of liver substance which is claimed to stimulate the detoxicating function of the liver.

anabolism (an-ab'o-lizm) [G. *anabolē*, a raising up.] Constructive metabolism; the process of assimilation of nutritive matter and its conversion into living substance.

anacamp'tic. In optics or acoustics, reflecting or reflected.

anacamp'tics [G. *anakamptō*, I bend back] The study of reflection of sound or light.

anacamptom'eter [G. *anakampsis*, reflection, + *metron*, measure.] An instrument for measuring the intensity, or lack of it, of the deep reflexes.

Anacar'dium [G. *ana*, according to, + *kardia*, heart, noting the heart shape of the fruit.] A genus of shrubs and trees growing in tropical America, of the natural order *Anacardiaceæ*. **A. occidenta'le,** the cashew-tree, furnishes the so-called cashew-nut, the kernel of the drupe of the fruit.

anacatadidymus (an''ah-kat''ah-did'i-mus) [G. *ana*, up, + *kata*, down, + *didymos*, twin.] A double monster united in the middle but separated above and below.

anacatesthesia (an''ah-kat''es-the'zĭ-ah) [G. *ana*, up, + *kata*, down, + *aisthēsis*, sensation.] A hovering sensation.

anacatharsis (an''ah-kă-thar'sis) [G. *ana*, up, + *katharsis*, cleansing.] Severe and long-continued vomiting.

anacathar'tic. Causing anacatharsis; emetic.

anacidity (an''ă-sid'i-tĭ) [G. *an-* priv.] Absence of acidity, noting especially absence of hydrochloric acid in the gastric juice.

anaclasim'eter [G *anaklasis*, reflection, + *metron*, measure.] An instrument for measuring the refraction of the media of the eye

anac'lasis [G. bending back, reflection.] 1. Reflection of light or sound. 2. Refraction of the ocular media. 3 Forcible flexion of a joint to break up the adhesions in fibrous ankylosis.

anacrot'ic. Anadicrotic.

anacu'sis [G. *an-* priv. + *akousis*, hearing.] Total deafness.

anade'nia [G. *an-* priv + *adēn*, gland.] Absence of glands, or abeyance of glandular function.

anadicrotic (an-ah-di-krot'ik) [G. *ana*, up, + *dikrotos*, double beating.] Noting a sphygmographic tracing in which two beats are marked on the ascending line.

anadic'rotism. The condition marked by a double beat on the ascending line of the sphygmogram.

anadidymus (an-ah-did'i-mus) [G. *ana*, up, + *didymos*, twin.] A double monster, united below but separated above.

anadip'sia [G *ana*, intensive, + *dipsa*, thirst.] Extreme thirst.

anæ'mia [*an-* priv. + *haima*, blood.] Anemia.

anaerobe (an-a'er-ōb) [G. *an-* priv. + *aēr*, air, + *bios*, way of living.] A microorganism which thrives best, or only, when deprived of oxygen.

anaerobian (an-a-er-o'bĭ-an). 1. Thriving without air or oxygen, having the characteristics of an anaerobe. 2. An anaerobe.

anaerobic (an-a-er-o'bik). Relating to an anaerobe

anaerobion (an-a-er-o'bĭ-on). Anaerobe.

anaerobiosis (an-a-er-o-bi-o'sis). Existence in an oxygen-free atmosphere.

anaerobious (an-a-er-o'bĭ-us) Anaerobic, living without oxygen.

Anaeromyces bronchitica (an-a-e-ro-mi'sēz brong-kit'ĭ-ka) [G. *an-* priv. + *aēr*, air, + *mykēs*, fungus.] An obligate anaerobe, resembling in shape a diphtheroid bacillus but more branching, gram-positive, non-motile, not acid-fast; it is regarded as the microbic cause of bronchitis in certain tropical regions.

anaerophyte (an-a'er-o-fīt) [G. *an-* priv. + *aēr*, air, + *phyton*, plant.] 1. A plant which grows without air. 2. An anaerobic bacterium.

anaeroplasty (an-a'er-o-plas-tĭ) [G. *an-* priv. + *aēr*, air, + *plassō*, I form.] Treatment of wounds by exclusion of air.

anæsthe'sia [G. *an-* priv. + *aisthēsis*, sensation.] Loss of the tactile or other sense; see *anesthesia*.

anæsthet'ic. Anesthetic.

anagen'esis [G. *ana*, up, + *genesis*, production.] Repair of tissue; reconstruction of lost parts.

anagnosasthenia (an"ag-no-sas-the'nĭ-ah) [G. *anagnōsis*, reading, + *astheneia*, weakness.] A form of neurasthenia in which the attempt to read causes distressing symptoms.

an'agraph [G. *anagraphē*, a writing out.] Prescription

anagyrine (an-aj'i-rēn). An alkaloid from *Anagyris fœtida*, a leguminous shrub of the Mediterranean region, having properties somewhat similar to scoparius. **a. hydrobro'mide,** occurs as yellowish soluble crystals; has been used as a heart tonic

anâkré (an-ah-kra') [native term on the French Ivory Coast in Africa, meaning "big nose."] Goundou.

a'nal. Relating to the anus. **a. canal',** (1) pars analis recti [BNA], the terminal portion of the rectum passing through the pelvic floor, extending from the upper level of the levatores ani muscles to the anal orifice; (2) a temporary opening in the primitive anus. **a. re'flex,** contraction of the internal sphincter gripping the finger passed into the rectum.

analep'tic [G. *analēptikos*, restorative.] 1. Strengthening, invigorating. 2. A restorative remedy.

analep'tol. Trade name of a tonic composed of cinchona, coca, nux vomica, and phosphorus.

analgen (an-al'jen) [G. *an-* priv. + *algos*, pain.] Orthoethoxy - anamonobenzoyl-amidoquinoline, labordin, quinalgen; colorless, tasteless, crystalline powder, insoluble in water; antipyretic and analgesic in doses of gr. 8–15 (0.5–1.0).

analgesia (an-al-je'zĭ-ah) [G. *an-* priv + *algos*, pain.] Loss of sensibility to pain. **a. al'gera,** spontaneous pain in a part, associated with loss of response to a painful stimulus. **a. doloro'sa,** a. algera.

analge'sic. Analgetic.

anal'gesin. Antipyrina.

analget'ic. Analgesic. 1. Causing analgesia or freedom from pain. 2. A pain-stilling remedy.

anal'gia [G. *an-* priv. + *algos*, pain.] Freedom from pain.

anal'gic. Without pain

anallergic (an-al-lur'jik). Not allergic, not producing super-sensitiveness or anaphylaxis; noting a serum possessing this negative quality.

analogue (an'ă-log) [G. *analogos*, conformable.] One of two organs or parts in different species of animals or plants which differ more or less in structure or development but are more or less similar in function or origin.

analysis, pl. *anal'yses* (an-al'i-sis) [G. dissolving.] 1. The breaking up of a chemical compound into its simpler elements; a process by which the composition of a substance is determined. 2. The separation of any compound substance or concept into the parts composing it. 3. See *psychoanalysis*.

bradycinet'ic a., study of motor activity by the cinematograph. **colorimet'ric a.,** determination of structure by means of chromatic reactions. **densimet'ric a.,** estimation of the amount of solids in a solution by the specific gravity. **gravimet'ric a.,** quantitative a. by weighing separately each constituent, as such or in the form of a compound of known gravimetric constitution. **prox'imate a.,** the resolution of a substance into its secondary principles, as of a salt into the acid and the base which form it; opposed to *ultimate a.* **qual'itative a.,** the determination of the nature of the elements entering into the composition of any substance. **quan'titative a.,** the determination of the amount, as well as the nature, of each of the elements composing a substance. **spec'trum a.,** determination of the components of a gas by means of the spectroscope. **ul'timate a.,** the resolution of a substance into the various elements composing it; opposed to *proximate a.* **volumet'ric a.,** quantitative a. by the addition of graduated amounts of a standard test solution to a solution of a known weight of the substance analyzed, until the reaction is just at an end.

an'alyst. One who is skilled in making analyses.

analyt'ic. 1 Relating to analysis in any sense. 2. Noting a language in which there are few inflections, prepositions and auxiliary words being employed in the conjugations and declensions.

an'alyze. To make an analysis.

an'alyzer. 1. One who analyzes, analyst. 2. The prism in a polariscope by means of which the polarized light is examined

anamirtin (an-ă-mur'tin). A glucoside from *Anamirta cocculus*, or *Cocculus indicus*.

anamne'sis [G. *anamnēsis*, recollection.] 1. The act of remembering. 2. The medical history of a patient previous to his present illness.

anamnes'tic. 1. Relating to the anamnesis or previous medical history of a patient. 2. Assisting the memory.

anamnion'ic. Without an amnion, anamniotic.

anamniot'ic. Without an amnion, anamnionic.

ananaphylaxis (an-an-ah-fi-lak'sis) [G. *an-* priv.] Antianaphylaxis.

anan'dria [G. *an-* priv. + *anēr(andr-)*, man.] Absence of masculinity

anan"giopla'sia [G. *an-* priv. + *angeion*, vessel, + *plassō*, I form.] Imperfect vascularization of a part from non-formation of the vessels

anangioplasic (an-an-jĭ-o-pla'sik). Relating to, characterized by, or due to defective development of the general vascular system. **a. infan'tilism** see *infantilism*

anan'gioplasm [G. *an-* priv. + *angeion*, vessel, + *plasma*, something formed.] Defective vascular development.

anapeiratic (an"ah-pi-rat'ik) [G. *anapeiraomai*, I try again.] Resulting from overuse, noting certain occupation neuroses.

anaphalanti'asis [G. *ana*, up, + *phalantias*, a bald man.] Loss of the eyebrows.

anaphase (an'ah-fāz) [G. *ana*, up, + *phasis*, from *phainō*, I appear.] The constructive stage in mitosis, during which the halves of the divided chromosomes pass toward the poles of the spindle and become united into spiremes, building up the daughter nuclei.

anaph'ia [G. *an-* priv. + *haphē*, touch.] Absence of the sense of touch.

anaphoresis (an-ă-fo-re'sĭs) [G. *an-*, negative particle, + (dia)*phoresis*, sweating.] Diminished perspiration.

anaphor'ia [G. *ana*, up, + *phoros*, bearing.] Anatropia, a tendency of the eyes, when in a state of rest, to turn upward.

anaphrodisia (an-af"ro-diz'ĭ-ah) [G. insensibility to love, from *an-* priv. + *Aphroditē*, the goddess of love.] Absence of sexual feeling.

anaphrodisiac (an-af"ro-diz'ĭ-ak). 1. Relating to anaphrodisia or absence of sexual feeling. 2. Repressing or destroying sexual desire. 3. An agent which lessens or abolishes sexual desire.

anaphylactic (an"ah-fi-lak'tik). Relating to anaphylaxis; increasing the susceptibility to an infection.

anaphylac'tin. The sensitizing substance which is believed to cause hypersusceptibility after the injection of a minute dose of a foreign protein, probably a haptin.

anaphylactogenic (an″ă-fi-lak-to-jen'ik) [G *gennaō*, I produce.] Producing anaphylaxis, noting substances with which the anaphylactic reaction is obtainable.

anaphylactoid (an-ŭ-fi-lak'toyd) [*anaphylaxis* + G. *eidos*, resemblance.] Resembling anaphylaxis; pseudoanaphylactic.

anaphylatoxin (an-ă-fi-lă-toks'in). The cause of the toxic symptoms in anaphylaxis, believed to be a compound of anaphylactin and the newly introduced protein.

anaphylaxis (an-ah-fi-lak'sis) G. *ana*, for *a* privative, + *phylaxis*, protection.] Increased susceptibility to an infection, or to the action of any foreign protein introduced into the body, following a primary infection or previous introduction by injection or otherwise, of the same protein; the opposite of immunity. **pas'sive a.**, a. produced in normal animals by the injection of serum from an already sensitized animal.

anaphy″lotox'in. Anaphylatoxin.

anaplasia (an-ah-pla'sī-ah) [G. *ana*, again, + *plasis*, a moulding.] A reversion, in the case of a cell, to a more primitive, embryonic type, *i.e.* to one in which reproductive activity is marked. A term used by Hansemann to denote the alteration in cell character which constitutes malignancy.

anap'lasis [G. *ana*, up, + *plasis*, a moulding.] Haeckel's term for the stage of growth or progressive evolution of the individual

Anaplasma (an-ah-plaz'mah) [G. a formed object.] A small coccoid protozoan body observed in the red blood cells of cattle, causing a disease resembling red-water; some regard the bodies not as entities but degenerative areas in the cells. **A. centra'le,** a form occupying the center of the corpuscle. **A. margina'le,** a name given to the organism when arranged near the margin of the red cell.

anaplas'tic. Relating to anaplasty or the operative restoration of lost parts.

an'aplasty [G. *ana*, again, + *plassō*, I form] Plastic surgery; the surgical restoration of lost or defective parts by transplantation of tissue

anaplero'sis [G. *anaplērō*, I fill up.] The form of plastic surgery which consists in the transplantation of tissue to fill a defect resulting from injury or disease.

anaplerot'ic. Relating to anaplerosis; filling a defect

anapnea, anapnœa (an-ap-ne'ah) [G. *anapnoia*.] 1. Respiration. 2. Recovery of breath.

anapne'ic. Relating to anapnea: (1) respiratory; (2) relieving dyspnea or reestablishing respiration.

anap'nograph [G. *anapnoē*, respiration, + *graphō*, I record.] An apparatus for recording the rate and force of the respiratory movements

anapno'ic. Anapneic.

anapnom'eter [G *anapnoē*, respiration, + *metron* measure.] Spirometer; an instrument for measuring the force of the respiratory movements

anapophysis (an-ă-pof'i-sis) [G. *ana* back, + *apophysis*, offshoot.] An accessory spinal process of a vertebra, found especially in the thoracic or lumbar vertebræ

anap'tic [G. *an-* priv. + *haptō*, I touch.] Relating to anaphia, or loss of the tactile sense

anar'cotine [G. *a-* priv.] Name proposed for narcotine, an alkaloid of opium, which is misnamed, having no narcotic properties

anarithmia (an-ah-ridh'mĭ-ah) [G. *an-* priv. + *arithmos*, numeration.] Aphasia marked by inability to count or employ numbers.

anar'thria [G. *an-* priv. + *arthron*, articulation.] The loss of power of articulate speech

anasar'ca [G. *ana*, through, + *sarx*(*sark-*), flesh.] Hyposarca, a general infiltration of clear watery fluid into the subcutaneous connective tissue

anasar'cin. Trade name of a remedy recommended as a heart tonic and diuretic; it is said to contain scillipicrin, scillitoxin, oxydendron, and sambucus.

anasar'cous. Dropsical; marked by anasarca.

anaspa'dia, anaspa'dias [G. *ana*, on, + *spaō*, I tear, draw in.] Epispadia

anastalsis (an-ah-stal'sis) [G. *ana*, throughout, up, + *stalsis*, constriction.] 1. Astriction, styptic action 2. Antiperistalsis.

anastal'tic [G. *anastaltikos*, capable of checking.] 1. Astringent. 2. An astringent or styptic remedy. 3. Antiperistaltic.

anastate (an'as-tāt) [G. *anastatos*, made to rise. Any product of anabolism.

an″astigmat'ic [G. *an-* priv.] Not astigmatic

anastole (an-as'to-lĭ) [G. *anastolē*, the laying bare of a wound.] Gaping of a wound.

anastomose (an-as″to-mōz') [G. *anastomoō*, I furnish with a mouth.] 1. To open one into the other directly or by connecting channels, said of blood-vessels and lymphatics, and also of nerves. 2. To unite by means of an anastomosis; to form an anastomosis

anastomo'sis [G. *anastomōsis*, from *anastomoō*, I furnish with a mouth.] 1 A natural communication, direct or indirect, between two blood-vessels or other tubular structures; also by extension, a passage of nerve-fibers from one nerve to another 2. An operative union of two hollow or tubular structures, as the divided ends of the intestine after a resection, or of the blood-vessels of two individuals, as in direct transfusion of blood. **cru'cial a.**, an a between branches of the perforans prima, glutæa inferior, circumflexa femoris lateralis and circumflexa femoris medialis **intes'tinal a.**, enterostomy **precap'illary a.**, an a. between minute arteries just before they become capillaries **stir'rup a.**, communicating branch from the dorsalis pedis to the external plantar artery, completing the plantar arch. **ter'minoter'minal a.**, an operation by which the central end of an artery is connected with the peripheral end of the corresponding vein, and the peripheral end of the artery with the central end of the vein

anastomot'ic. Relating to or marked by anastomosis

anastomot'ica mag'na. Great anastomotic artery 1. Arteria genu suprema 2. Arteria collateralis ulnaris inferior

anatherapeusis (an-ah-ther″ah-pu'sis) [G. *ana*, up] Therapeusis by steadily increasing doses

anatom'ical. 1 Relating to anatomy 2. Structural, not functional.

anatomicophysiological (an-ă-tom″ĭ-ko-fiz-ĭ-o-loj'ĭ-kal). Relating to both structure and function

anat'omize. To dissect.

anat'omy [G. *anatomē*, dissection, from *ana*, up, *tomē*, a cutting] 1. The structure of an organism, morphology. 2. The science of the morphology or structure of organisms 3. Dissection 4. A work describing the form and structure of an organism and of its various parts. **applied' a.**, anatomical knowledge utilized in the diagnosis of disease and in treatment, especially surgical treatment. **artifi'cial a.**, the manufacture of models of anatomical structures, or the study of a. from such models. **clas'tic a.**, the manufacture of models in layers which can be removed one after the other to show the structure of the deeper parts; also the study of a. by means of such

models. **compar'ative a.,** (1) anatomy of the lower animals; (2) the comparative study of the human body with those of other animals and observation of analogous and homologous parts. **descrip'tive a.,** a description of, especially a treatise describing, physical structure, more particularly that of man. **gen'eral a.,** the study especially of the structure, gross and minute of the body. **gross a.,** general a., so far as it can be studied without the use of the microscope. **med'ical a.,** anatomy in its bearing upon the diagnosis and treatment of internal (non-surgical) disorders. **minute' a.,** the study of the intimate structure of the tissues invisible to the naked eye; histological or microscopical a. **mor'bid a.,** pathological a. **pathолog'ical a.,** the a. of diseased or otherwise abnormal structures or parts. **philosoph'ical a.,** morphology. **physiolog'ical a.,** a studied in its relation to function. **plas'tic a.,** clastic a. **prac'tical a.,** a. studied by means of dissection. **re'gional a.,** a. of certain related parts or divisions of the body. **spe'cial a.,** the a. of certain definite organs or groups of organs concerned in the performance of special functions; descriptive a. dealing with the separate systems. **sur'gical a.,** applied a. in reference to surgical diagnosis and treatment. **topograph'ical a.,** regional a. **transcenden'tal a.,** the theories and deductions based upon the morphology of the organs and individual parts of the body.

anatox'ic. 1. Relating to anatoxin. 2. v. Behring's term for the pathogenic action of a substance which is observed only after its repeated introduction into the body, this phenomenon being called anaphylaxis.

anatoxin (an-ă-tok'sin) [G. *ana,* priv., + *toxin.*] Toxoid, a toxin so modified by heat and antiseptics as to be still capable of stimulating the formation of antibodies while no longer toxic.

anatricrotic (an-ah-tri-krot'ik). Characterized by anatricrotism; noting a sphygmographic tracing with three separate notches on the ascending or systolic line.

anatricrotism (an-ah-trik'rŏ-tizm). The condition of the pulse or heart beat manifesting itself by three notches on the ascending or systolic wave of the sphygmographic tracing.

anatrip'sis [G. a rubbing.] The therapeutic employment of friction, with or without at the same time the application of a medicament.

anatrip'tic [G. *anatriptos,* rubbed up.] A remedy to be applied by friction or inunction.

anatroph'ic [G. *ana,* up, + *trophē,* nourishment.] 1. Nourishing. 2. [G. *an-* priv. + *atrophia*] Preventing or curing atrophy.

anatro'pia [G. *ana,* up, + *tropē,* a turning.] Anaphoria, a tendency of the eyeballs to turn upward.

anat'ropous [G *ana,* up, + *tropos,* a turning] Inverted; in botany, noting an ovule in which the micropyle is turned toward the placenta and the funiculus is attached to the other extremity.

anax'on, anax'onè [G. *an-* priv. + *axōn,* axis.] Having no neuraxon, noting certain nerve cells in the retina, described by Ramón y Cajal.

anazoturia (an-az"o-tu'rĭ-ah) [G. *an-* priv. + *azoturia.*] The absence of urea or other nitrogenous compounds from the urine.

AnCC. Abbreviation for anodal or positive-pole, closure contraction.

anchorage (ang'kor-ej). 1. The operative fixation of loose or prolapsed abdominal or pelvic organs. 2. The part to which anything is fastened; specifically, in dentistry, a tooth to which a bridge is fastened, the root to which a crown is fastened, or one of the points serving to fix a filling.

Anchusa (an-ku'sah) [G. *anchousa,* alkanet.] A genus of plants of the natural order *Boraginaceæ.* **A. tinctoria,** *Alkanna tinctoria,* the source of alkanet, a red dye.

anchusin (an'ku-sin). Alkanin, red coloring matter from the root of *Anchusa,* or *Alkanna, tinctoria.* **a. pa'per,** alkanin* paper.

anchylo'sis. Incorrect form of ankylosis.

Anchylos'toma. Incorrect form of Ancylostoma.

ancip'ital, ancip'itate, ancip'itous [*L. anceps,* two-headed.] Two-headed; two-edged.

Ancis'trodon [G. *ankistron,* fishhook, + *odous,* tooth.] A genus of serpents, including the copperhead, *A. contor'trix,* and the water moccasin, *A piscivorus*

anconad (ang'ko-nad) [G. *ankōn,* elbow, + L *ad,* to.] Toward the elbow

anconagra (ang-ko-nag'rah) [G. *ankōn,* elbow, + *agra,* a seizure] Gout in the elbow.

anconal, anconeal (ang'ko-nal, ang-ko'ne-al). Relating to the elbow **a. fossa,** fossa olecrani.

anco'neus [G. *ankōn,* elbow.] A short muscle with origin from the external condyle of the humerus and insertion into the olecranon and the upper fourth of the shaft of the ulna.

anconitis (ang-ko-ni'(ne')tis) [G. *ankōn* elbow, + *-itis.*] Inflammation of the elbow-joint, olecranarthritis, olecranarthrocace, olecranarthropathy.

ancylo'sis. Ankylosis

Ancylostoma (an-sĭ-los'to-mah) [G. *ankylos,* curved, hooked, + *stoma,* mouth.] *Ankylostoma, Agchylostoma.* A genus of *Nematoda,* the old-world hookworm, the members of which are parasitic in the duodenum where they attach themselves to the mucous membrane, sucking the blood and causing a state of anemia and mental and physical inertia. The eggs are passed with the feces and the larvæ develop in moist soil; they enter the body of man through the skin of the feet and ankles, possibly also in the drinking water, and reach maturity in the intestine. **A. duodena'le,** a reddish worm with two pairs of hook-like teeth on the ventral surface and one rudimentary minor pair. This species and **A. braziliense** (with only one pair of ventral teeth) are found in man, the latter in dogs and cats also. **A. cani'num,** a species, with three pairs of ventral teeth in the oral cavity, infesting dogs and a cause of kennel anemia; it occurs also, though rarely, in man. See *Necator.*

ancylostomiasis (an-sĭ-los-to-mi'a-sis). Hookworm disease, dochmiasis, Egyptian chlorosis, tunnel anemia, miner's anemia, brickmaker's anemia, mountain-anemia; pronounced anemia, emaciation, dyspepsia, and swelling of the abdomen with mental and physical inertia due to the presence of a species of *Ancylostoma* or *Necator* in the intestine. **a. cu'tis,** ground itch, circumscribed inflammation of the skin, chiefly of the feet, caused by invasion of the larvæ of *Ancylostoma* or *Necator.*

an'cyroid [G. *ankyra,* anchor, + *eidos,* resemblance.] Ankyroid, shaped like the fluke of an anchor, noting the cornua of the lateral ventricles of the brain and the coracoid process of the scapula.

Andernach's oss'icles (ahn'der-nahkh) [Johann Winther v. *Andernach,* German physician, 1478–1574.] Wormian bones.

An'ders' disease' [James M. *Anders,* Philadelphia physician, *1854.] Adiposis tuberosa simplex.

An'dersch's gan'glion (Carl Daniel *Andersch*, German anatomist, 1732–1777.] Ganglion petrosum. **A.'s nerve.** Nervus tympanicus.

An'derson's Scots pill [Patrick *Anderson*, Scotch physician, 17th century.] A pill variously stated to be the same as pill of aloes and myrrh, a pill of aloes and jalap, and a compound of aloes and gamboge with oil of anise.

andi'ra [West Indian native name] Worm-bark, cabbage-tree, the bark of *Andira inermis*, a leguminous tree of tropical America; emetic, purgative and anthelmintic in doses of gr 10–30 (0.6–2.0).

Andral's' decu'bitus [Gabriel *Andral*, French physician, 1797–1876.] Position assumed by the patient who lies on the sound side in cases of beginning pleurisy.

andrase (an'drāz) [G. *anēr* (*andr-*), man. + *-ase.*] A hypothetical substance determining maleness in heredity; apposed to *gynase.**

andrecium, androecium (an-dre'sĭ-um) [G *anēr* (*andr*), man, + *oikion*, house.] All the stamens, or male organs, of a flower, considered collectively.

andriat'rics (an-drĭ-at'riks), **andriatry** (an-dri'ă-trĭ) [G. *anēr*, a man, + *iatreia*, medical treatment.] Medical science in relation to diseases of the male genital organs.

androgenous (an-droj'en-us) [G. *anēr*, a man, + *gennaō*, I bear.] Giving birth to males

androg'raphis. (B.A.) Creyat, kiryat, the dried plant *Andrographis paniculata*, of the order *Acanthaceæ;* a stomachic bitter tonic, employed in infusion, concentrated solution, and tincture.

androgyne (an'dro-jīn). Androgynus, hermaphrodite.

androgynoid (an-droj'i-noyd) [G. *anēr*(*andr-*), man, + *gynē*, woman, + *eidos*, resemblance.] A man with hermaphroditic sexual characteristics who is mistaken for a woman.

androgynos (an-droj'i-nos). Androgynus.

androgynous (an-droj'i-nus) [G. *anēr*, a man, + *gynē*, a woman.] 1. Hermaphroditic. 2. Having the characteristics, physical or mental, of both sexes.

androgynus (an-droj'i-nus) [G. *anēr*, a man, + *gynē*, a woman.] An hermaphrodite.

androgyny (an-droj'i-nĭ) [G. *anēr*, a man, + *gynē*, a woman.] Hermaphroditism.

androl'ogy [G. *anēr*(*andr-*), a man, + *-logia.*] The branch of medicine which treats of the man and of the diseases peculiar to the male sex.

androma'nia [G. *anēr*(*andr-*), a man, + *mania*, frenzy.] Nymphomania.

Androm'eda. A genus of plants of the natural order *Ericaceæ*, several species of which contain a narcotic poison.

andromedotoxin (an-drom"e-do-tok'sin). The active principle obtained from several species of the genus *Andromeda;* it is a heart poison, first stimulating and then paralyzing the vagus, and it also paralyzes the motor nerve ends in striped muscle.

andropathy (an-drop'ă-thĭ) [G. *anēr*, man, + *pathos*, suffering.] Any disease, such as prostatitis, peculiar to the male sex.

andropho'bia [G. *anēr*(*andr-*), a man, + *phobos*, fear.] Insane fear of men, or of the male sex.

an"dropho"noma'nia [G. *anēr*(*andr-*), man, + *phonos*, murder, + *mania*, frenzy.] Homicidal mania.

AnDTe. Abbreviation indicating a tetanic contraction occurring on application of the anode or positive pole while the circuit is closed; anodal duration tetanus.

anec'tasin [G. *an-* priv. + *ektasis*, dilatation.] A bacterial product which causes vasoconstriction.

Anel's method (an-el') [Dominique *Anel*, French surgeon, 1679–1730.] Ligation of an artery immediately above (on the proximal side of) an aneurysm; see cut under *aneurysm.* **A.'s probe,** a probe for the punctum lacrimale and nasal duct **A.'s syr'inge,** a syringe with very fine nozzle for use in injection into the nasal duct.

anelec'trode. Anode.

anelectroton'ic. Relating to anelectrotonus.

anelectrot'onus [*anelectrode* + G. *tonos*, tension.] The lessened irritability and conductivity of a nerve in the neighborhood of the anode, during the passage of an electric current through it

ane'matize. To render anemic

anemato'sis, anæmato'sis. 1. General anemia. 2. Pernicious anemia.

ane'mia, anæ'mia [G. *an-* priv. + *haima*, blood.] A condition in which the blood is reduced in amount (*oligemia*) or is deficient in red blood-cells (*oligocythemia*) or in hemoglobin (*oligochromemia*), manifested clinically by pallor, shortness of breath, and palpitation. **acute' a.,** temporary a. due to a copious hemorrhage. **acute' hemolyt'ic a.,** an acute, probably toxic, a., characterized by sudden onset with fever, rapid fall of hemoglobin percentage, and leucocytosis; in the few cases reported a cure has promptly followed a single blood transfusion. **a. infan'tum pseudoleucæ'mica,** pseudoleucemia in infants. **a. lymphat'ica,** Hodgkin's* disease. **aplas'tic a.,** a form in which the formative processes of the bone marrow are in abeyance. **cattle a.,** African coast fever.* **chlorot'ic a.,** chloranemia. **cres'cent-cell a.,** sickle-cell a., a form of anemia, said to be peculiar to the negro race, in which the red cells assume a crescentic shape in blood drawn from the veins. **cytogen'ic a.,** primary a. **erythro-normoblastic a.,** hypochromic a. **essen'tial a.,** primary a. **false a.,** pseudoanemia. **gen'eral a.,** a. affecting the entire volume of blood as distinguished from a deficiency in the local supply of a part. **glob'ular a.,** oligocythemia. **ground-itch a.,** hookworm disease, ancylostomiasis. **hemorrhag'ic a.,** a. due directly to loss of blood. **hy'perchrome a.,** pernicious a. in which the characteristic pallor of the skin is replaced by heightened color. **hypochro'mic a.,** erythro-normoblastic a., hypochromenia a form of (probably) secondary a., associated with achlorhydria, and marked by a lowered color index. **idiopath'ic a.,** primary or essential a. **infec'tious a.,** swamp-fever **intertrop'ical a.,** Egyptian chlorosis, uncinariasis, ancylostomiasis, hookworm disease. **ken'nel a.,** ancylostomiasis occurring in the dog, due to infestation with *Ancylostomacaninum* or *Uncinaria stenocephala.* **lo'cal a.,** a condition of diminished supply of blood to a part. **lymphat'ic a.,** Hodgkin's a. **malig'nant a.,** pernicious a. **metaplas'tic a.,** pernicious a., in which the formed elements in the blood are changed. **microcyt'ic a.,** small-celled a., see *microcythemia.* **mi'ners' a.,** ancylostomiasis. **neg'ative a.,** a. marked by the presence of erythroblasts, but without reduction in the number of red blood cells per cubic millimeter. **pernic'ious a.,** a form of progressive, usually fatal, a., of infectious or autotoxic origin; it is characterized by a very marked diminution in the number of red corpuscles and the presence of a large number of megaloblasts; the prominent symptoms are languor, breathlessness on slight exertion, muscular weakness, faintness, extreme pallor of skin and mucous membranes, anorexia, diarrhea, and frequently

hemorrhages either into the skin (*petechiæ*) or from the mucous membranes; it is in most cases relieved by the administration of liver or some preparation of it or by an extract of the wall of a pig's stomach. **po'lar a.**, a. sometimes affecting natives of temperate climes wintering in the arctic regions. **pri'mary a.**, essential a., cytogenic a., a. occurring apparently as an independent disease, due to a disturbance in function of the blood-making organs. **progress'ive perni'cious a.**, pernicous a. **sec'ondary a.** a occurring as a consequence of loss of blood, inanition, chronic poisoning, autointoxication or some local or general disease. **sick'le-cell a.**, crescent-cell a. **sla'ty a.**, a grayish pallor of the face in acetanilid poisoning and in argyria. **spas'tic a.**, local anemia due to contraction of the blood-vessels of the part. **splen'ic a.**, splenic pseudo-leucemia, a disease characterized by enlargement of the spleen, with moderate anemia and reduced percentage of hemoglobin. **symptomat'ic a.**, secondary a. **traumat'ic a.**, hemorrhagic a **trophoneurot'ic a.**, a. induced by a profound nervous shock **tunnel a.**, ancylostomiasis

anemic, anæmic (an-e'mik or an-em'ik). Relating to, caused by, or suffering from anemia.

Anemone (an-em'o-ne) [G. *anemōnē*, the wind-flower, from *anemos*, wind.] A genus of herbaceous plants of the natural order *Ranunculaceæ*. **a. cam'phor,** pulsatilla camphor anemonin* **A. pulsatill'a,** see *pulsatilla*

anem'onin. Pulsatilla camphor, a white crystalline principle obtained from *Anemone pulsatilla;* employed in orchitis and epididymitis, asthma, whooping cough, and bronchitis, in doses of gr $\frac{1}{10}$–$1\frac{1}{2}$ (0.001–0.005).

anem'onol. A volatile oil, possessing markedly toxic properties, obtained from plants of the genus *Anemone.*

anemop'athy [G. *anemos*, wind, + *pathos*, suffering.] 1. A disease caused by high winds. 2. Aerotherapy

anemoph'ilous [G *anemos*, wind, + *philos*, fond] In botany, noting flowers which are pollinated by the agency of wind.

anemophobia (an-em-o-fo'bĭ-ah) [G. *anemos*, wind *phobos*, fear.] Morbid fear of draughts or of winds

anemopsis (an-e-mop'sis). An herb employed in eclectic practice, both internally and externally, in catarrhal conditions of the mucous membranes; dose 5 drops of the specific medicine in water every two hours.

anemot'rophy, anæmot'rophy [G. *an-* priv. + *haima*, blood, + *trophē*, nourishment.] Atrophy of the blood, anemia from deficient formation of blood.

anempiria (an-em-pir'ĭ-ah) [G. *an-* privative, + *empeiria*, experience.] Lack of knowledge or skill acquired through experience.

anencephale'mia, anencephalæ'mia [G. *an-* priv. + *enkephalos*, brain, + *haima*, blood.] Cerebral anemia.

anencepha'lia [G. *an-* priv. + *enkephalos*, brain.] Anencephaly, absence of the brain.

anencephal'ic. Relating to anencephalia, without brain.

anencephalohe'mia, anencephalohæ'mia. Anencephalemia.

anenceph'alous. Anencephalic.

anenceph'alus [G *an-* priv. + *enkephalos*, brain] A monster without a brain

anenceph'aly [G. *an-* priv + *enkephalos*. brain] Absence of the brain, or of all but the basal ganglia and cerebellum.

anen'terous [G. *an-* priv. + *entera* intestines.] Having no intestine, noting certain parasites

anep'ia [G. *an-* priv. + *epos*. word] Aphasia.

anepithymia (an-ep-ĭ-thi'mĭ-ah) [G. *an-* priv. + *epithymia*, desire.] Absence of appetite or desire

anergasia (an-ur-ga'sĭ-ah) [G. *an-* priv. + *ergasia*, work] Absence of functional activity.

anergic (an-ur'jik) [G *an-* priv. + *ergon*, work.] 1 Lethargic; marked by total absence of energy or extreme inactivity 2 Relating to, or marked by, anergy

anergy (an'ur-jĭ) [G *an-* priv + (*en*)*ergeia*, from *ergon*, work.] Antianaphylaxis

an'eroid [G *a-* priv. + *nēros*, wet + *eidos*, form] Without fluid, noting a form of barometer and sphygmomanometer, without mercury, in which the varying air-pressure is indicated by a pointer governed by the movement of a metallic disc occluding a chamber exhausted of air.

anerythrocyte (an-er'ĭ-thro-sīt) [G. *an-* priv. + *erythros*, red, + *kytos*, cell] Lympherythrocyte a non-nucleated red cell without hemoglobin.

anerythroplasia (an-er''ĭ-thro-pla'zĭ-ah) [G. *an-* priv + *erythro(cyte)* + G. *plasis*, a moulding.] A condition in which there is no formation of red blood cells

anerythroplastic (an-er''ĭ-thro-plas'tik). Anerythroregenerative, marked by anerythroplasia

anerythropsia (an-er-ĭ-throp'sĭ-ah) [G. *an-* priv + *erythros*, red, + *opsis*, vision.] Red-blindness, inability to distinguish the color red.

anerythroregenerative (an-er''ĭ-thro-re-jen'er-a-tiv). Anerythroplastic, noting a condition in which regeneration of red blood cells does not take place

an'esin, an'eson. Trade name of a solution of chloretone

anesthecinesia, anæsthecinesia (an''es-the''sĭn-e'sĭ-ah) [G *an-* priv. + *aisthēsis*, sensation, + *kinēsis* movement] Combined sensory and motor paralysis

anesthekine'sia, anæsthekine'sia. Anesthecinesia.

anesthesia, anæsthesia (an-es-the'zĭ-ah) [G. *an* priv. + *aisthēsis*, sensation] Loss of sensation, especially of tactile sensibility. **a. doloro'sa** painful a., spontaneous pain in a part in which there is a loss of tactile sensation. **ba'sal a.,** the administration of an anesthetic, such as avertin or sodium amytal, per os, by enema, or intravenously, prior to the induction of inhalation a. **block a.,** conduction a. **conduc'tion a.,** local a. resulting from nerve blocking* by the injection of alcohol or other substance into or in close proximity to a nerve trunk. **crossed a.,** a. of one side of the body due to a lesion on the other side of the brain. **elec'tric a.,** general anesthesia induced by the passage through the brain of a Leduc* current. **gas-ether a.,** general a. induced first by nitrous oxide gas and maintained by ether. **gaunt'let a.,** loss of sensation in the hand, extending from the tips of the fingers to the wrist. **gen'eral a.,** inhalation a., surgical a., insensibility induced by the inhalation of chloroform or other anesthetic. **induced' a.,** temporary a produced by drugs or other means **infiltra'tion a.,** local a. induced by the injection of water or of a weak cocaine solution. Schleich's a **inhala'tion a.,** general a. induced by breathing the vapor of ether, chloroform, or the like, or nitrous oxide gas. **inhibition a.,** conduction a., local a., regional a. **insuffla'tion a.,** insufflation narcosis, a. by insufflating a mixture of compressed air and ether into the trachea through a slender tube passed between the vocal cords.

lo'cal a., a. of a limited area induced by freezing, the injection of cocaine or similar substance, or other means. **mixed a.**, general a. produced by more than one drug, as that produced primarily by nitrous oxide gas and continued by ether or chloroform. **morphine-sco'polamine a.**, general anesthesia, without unconsciousness, induced by the injection of a mixture of morphine and scopolamine. **mus'cular a.**, loss of the muscle sense, of the power to determine the position of a limb or to recognize a difference in weights. **neu'ral a.**, local a. induced by the injection of an anesthetic into a nerve (*intraneural*) or immediately around it (*paraneural*). **press'ure a.**, (1) the forcing of an anesthetic into the tissues, specifically into the pulp of a tooth, by pressure; (2) a. induced by firm pressure on the part. **pri'mary a.**, a condition of general a., prior to the loss of consciousness, induced by the inhalation of ether or other anesthetic. **rectal a.**, general a. induced by the rectal injection of a mixture of ether and olive oil. **refrigera'tion a.**, local a. induced by freezing by a spray of ethyl chloride or other very volatile substance. **re'gional a.**, insensibility over a certain area induced by nerve-blocking or field-blocking. **spi'nal a.**, (1) circumscribed anesthesia of the integument due to disease of the spinal cord; (2) anesthesia of the lower part of the body induced by the injection of a local anesthetic into the sheath of the lumbar cord, medullary narcosis. **splanch'nic a.**, (1) local, or regional, a. of the abdominal viscera, produced by injection of procaine (novocaine) in the neighborhood of the celiac ganglia; (2) loss of visceral sensation. **sur'gical a.**, general a **unilat'eral a.**, hemianesthesia. **ve'nous a.**, local a. obtained by filling a segment of a cutaneous vein, in an ischemic limb, with a solution of an anesthetic substance. **vis'ceral a.**, splanchnic a.

anesthesim'eter, anesthesiom'eter [G. *an-* priv. + *aisthēsis*, sensation, + *metron*, measure.] 1. An instrument for determining the degree of anesthesia of a part; same as *esthesiometer*. 2. An appliance for measuring the amount of an anesthetic administered by inhalation.

anes'thesin. Benzocaine, æthylis* aminobenzoas (U.S.).

anesthesiology (an-es-the-zĭ-ol'o-jĭ) [*anesthesia* + *-ology*.] The science that treats of the various means of inducing local or general anesthesia and of the accidents and complications of this condition.

anesthesiophore (an-es-the'zĭ-o-for) [*anesthesia* + G. *phoros*, a carrier.] Carrying the anesthetic action, noting the chemical group in cocaine and other substances upon which the anesthetic effect depends.

anesthet'ic, anæsthet'ic. 1. Marked by anesthesia, insensible to touch, or to pain or other stimuli. 2. Producing anesthesia. 3. A drug which produces local or general anesthesia. **gen'eral a.**, one which produces general anesthesia, either by injection or by inhalation. **lo'cal a.**, a drug which produces local anesthesia when applied to the surface or injected into the tissues

anes'thetist. One who administers an anesthetic, usually for the production of general anesthesia.

an"esthetiza'tion. The induction of anesthesia; rendering anesthetic

anes'thetize. To induce anesthesia; to render anesthetic

anesthetometer (an-es"the-tom'e-tur). Anesthesimeter.

anes'thol. A trade name for a mixture of ethyl chloride 17.00, ether 56.75, and chloroform 43.25, having a boiling point of 40° C. (104° F.); employed by inhalation for the induction of surgical anesthesia.

anesthone (an-es'thōn). Trade name of para-amido-ethyl-benzoate, a local anesthetic.

anes'thyl. A local anesthetic mixture of methyl chloride 1, and ethyl chloride 3.

an'estile. Trade name for a mixture of ethyl and methyl chlorides, for use as a general anesthetic.

ane'thi fruc'tus (Br.). Dill, the fruit of *Anethum graveolens;* stimulant carminative in dose of gr. 15 (1.0). The aqua anethi is official in the B.P.

ane'thol (N.F.). Paramethoxypropenylbenzene, anise camphor, a derivative of fennel and anise oils; a colorless liquid at temperatures above 23° C. (73.4° F.), below 20° C. (68° F.) a white glistening camphor-like mass; employed as a flavoring substance in doses of ♏2–4 (0.13–0.26).

Ane'thum [G. *anēthon*, dill.] A genus of plants of the natural order *Umbellifer æ;* two species, *A. fœnic'ulum*, fennel, and *A. grave'olens*, are employed in medicine; see *anethi fructus* and *fœniculum*.

anetic (ă-net'ik) [G. *anetikos*, relaxing.] Soothing; relaxing.

anetiological (an-e-tĭ-o-loj'ĭ-kal). Not etiological, not in accordance with the laws of etiology.

anetodermia (an'ĕ-to-dur'mĭ-ah) [G. *anetos*, relaxed + *derma*, skin.] Dermatolysis.

aneuria (ă-nu'rĭ-ah) [G. *a-* priv. + *neuron*, nerve.] A failure of nerve force; neurasthenia.

aneuric (ă-nu'rik). Of weak nervous constitution.

aneurilemmic (ă-nu-rĭ-lem'ik) [G. *a-* priv.] Without a neurilemma.

aneurysm (an'u-rizm) [G. *aneurysma*, a widening] A blood-containing tumor connecting directly with the lumen of an artery or formed by

LIGATIONS FOR ANEURYSM: A, Anel's; B, Hunter's; C, Brasdor's; D, Wardrop's; E, Antyllus'.

a circumscribed enlargement, either axial or lateral, of an artery. **ampull'ary a.**, sacculated a. **a. by anastomo'sis**, (1) cirsoid a.; (2) aneurysmal varix* **arte"riove'nous a.**, a blood-containing tumor connecting with both an artery and a vein; when a direct communication between the two vessels exists, without any intervening sac, the condition is called *aneurysmal varix;* when there is a sac between the two it is called *varicose aneurysm* **ax'ial a.**, one involving the entire circumference of a blood-vessel. **cir'soid a.**, active dilatation-a. **consec'utive a.**, diffuse a. **cylin'droid a.**, tubular a. **diffuse' a.**, one which has enlarged its area and spread to the surrounding tissues in consequence of rupture of its

walls. **dilata'tion-a.,** general enlargement of an artery; it may be *active*, due to an actual growth and dilatation of a vessel, usually of a group of smaller arteries (*cirsoid a.*); or *passive*, a simple stretching of the diseased wall of the aorta or one of its primary branches. **dissect'ing a.,** an a. formed by the escape of blood, through a crack in the intima, into the wall of the aorta or other large artery, leading to a separation of the coats of the vessel. **embol'ic a.,** an a. resulting from softening of the arterial wall at the site of lodgement of an embolus. **endog'enous a.,** a simple a. resulting from dilatation of the diseased coats of an artery. **exog'enous a.,** one due to traumatism **false a.,** a pulsating swelling caused by rupture of all the coats of an artery, with retention of the escaped blood in a sac formed by the surrounding tissues **fu'siform a.,** an elongated spindle-shaped dilatation of an artery **her'nial a.,** the protrusion of the stretched inner coats of an artery through a wound in the adventitia. **lat'eral a.,** peripheral a (1) **med'ical a.,** an a. of one of the internal arteries inaccessible to surgical measures. **mil'iary a.,** one of a number of minute sacculated or fusiform dilatations of the smaller cerebral arteries, the rupture of which is a frequent cause of apoplexy. **periph'eral a.,** (1) a sac-like a springing from one side of an artery; (2) an a. of one of the smaller branches of an artery. **rac'emose a.,** active dilatation-a. **sac'cular a.,** a sac-like bulging on one side of an artery, formed of the middle and outer coats. **ser'pentine a.,** dilatation and tortuosity of an artery, seen sometimes affecting the temporal artery in the aged. **sponta'neous a.,** endogenous a. **sur'gical a.,** an a. of one of the external arteries, which is amenable to surgical treatment. **trac'tion a.,** an aortic a. assumed to be due to the pull of a persistent ductus arteriosus. **traumat'ic a.,** exogenous a. **tu'bular a.,** the uniform dilatation of an artery along a considerable distance. **var'icose a.,** a blood-containing sac, communicating with both an artery and a vein.

aneurysmal (an-u-riz'mal). Relating to an aneurysm.

aneurysmatic (an-u-riz-mat'ik). Relating to an aneurysm, aneurysmal.

aneurysmectomy (an-u-riz-mek'to-mi). Excision of the sac of an aneurysm.

aneurys'moplasty. Matas's operation.

aneurysmor'rhaphy. Closure by suture of the sac of an aneurysm.

aneurysmot'omy. Incision into the sac of an aneurysm.

anfractuosity (an-frak-tu-os'i-ti) [L. *anfractus*, winding, crooked.] A brain fissure.

anfrac'tuous. Sinuous, bending.

angei-. For words so beginning, see *angi-*.

Angelescu's sign (ahn-ja-les'koo). In cases of vertebral tuberculosis, when the patient lies on the back, the endeavor to bend the spine, so that he rests on the heels and occiput only, is painful or impossible of accomplishment.

Angelica (an-jel'i-kah) [L. angelic (+ *herba*, herb).] A genus of umbelliferous plants, found chiefly in northern temperate regions. The ripe fruits of *A. archangel'ica* and other species of *A.*, are listed in the National Formulary as **angelicæ fructus**, angelica fruit or seed (dose, gr. 15 or 1.0), and the rhizome and roots of the same as **angelicæ radix**, angelica root (dose, gr. 30 or 2.0); the roots of *A. sylves'tris*, wild angelica are also used; the drug is tonic and stimulant in the doses above given.

angiectasia, angiectasis (an-ji-ek-ta'si-ah, an-ji-ek'-ta-sis) [G. *angeion*, vessel, + *ektasis*, a stretching.] Dilatation of a lymphatic or blood-vessel.

angiectaticus (an-ji-ek-tat'i-kus) [see *angiectasia.*] Marked by the presence of dilated blood-vessels.

angiecto'pia [G. *angeion*, vessel, + *ektopos*, out of place.] Abnormal location of a blood-vessel.

angiemphrax'is [G. *angeion*, vessel, + *emphraxis*, stoppage.] Embolism or thrombosis

angiitis, angitis (an-je-i'(e')tis, an-ji'(je')tis) [G *angeion*, vessel, + *-itis*.] Inflammation of a blood-vessel (*arteritis*, *phlebitis*) or of a lymphatic (*lymphangitis*). **consec'utive a.,** a. caused by extension of the inflammatory process from the surrounding tissues.

angileucitis (an-je-lu-si'(se')tis) [G. *angeion*, vessel, + *leukos*, white, + *-itis*.] Lymphangitis.

angina (an'i-nah; usually, though incorrectly, an-ji'nah) [L. quinsy.] 1. Sore-throat from any cause. 2. A severe cramp-like pain. **agranulocyt'ic a.,** agranulocytosis, malignant leucopenia.* **a. abdom'inis,** severe paroxysmal pain in the abdomen, due supposedly to irregular contractions of the blood-vessels of the intestinal walls. **a. arthrit'ica,** gouty or rheumatic sore-throat. **a. cruris,** intermittent claudication. **a. epiglottid'ea,** inflammation of the epiglottis. **a. follicula'ris,** follicular tonsillitis. **a. gangræno'sa,** a. maligna. **a. Ludovi'ci,** or **Lud'wig's a.,** phlegmonous inflammation of the connective tissue in the neighborhood of one of the submaxillary glands. **a. malig'na** gangrenous pharyngitis; septic sore* throat. **a. no'tha,** a. vasomotoria. **a. parotid'ea,** mumps. **a. pec'toris,** severe constricting pain in the chest, radiating from the region of the heart to the left shoulder and down the arm, accompanied by cardiac oppression and the apprehension of immediate death, due to aortic aneurysm or spasm of the coronary arteries; breast-pang. **a. p. sine dolore,** Gairdner's disease. **a. spu'ria,** a. vasomotoria. **a. ulcero'sa,** ulcerative pharyngitis. **a. urat'ica,** gouty pharyngitis. **a. vasomoto'ria,** a. pectoris in which the breast-pang is comparatively slight, but pallor, followed by cyanosis, and coldness and numbness of the extremities are marked. **diph'theroid a.,** septic sore*-throat, Vincent's a. **nerve a.,** a severe neuralgic attack due to spasmodic closure of sclerotic arteries of the nerves and posterior ganglia. **Plaut's a.,** Vincent's a. **reflex' a.,** a vasomotoria. **streptococ'cal a.,** septic sore*-throat. **ulcero-mem'branous a.,** Vincent's a **Vin'cent's a.** See under *Vincent.*

an'ginal. Relating to angina in any sense.

an'ginoid [*angina* + G. *eidos*, resemblance.] Resembling an angina, especially angina pectoris

anginopho'bia [*angina* + G. *phobos*, fear.] Extreme fear of an attack of angina pectoris

an'ginose, an'ginous. Relating to any angina **a. scarlati'na,** a form of scarlatina in which the throat affection is unusually severe.

angioataxia (an"ji-o-ă-tak'si-ah) [G *angeion*, vessel, + *ataxia*, confusion] A condition of irregular spasmodic variability in arterial tonus.

an'gioblast [G. *angeion*, vessel, + *blastos*, germ.] One of the cells from which the blood-vessels are developed

an"giocar"diocinet'ic, an"giocar"diokinet'ic [G. *angeion*, vessel, + *kardia*, heart + *kinēsis*, movement.] Causing dilatation or contraction in the heart and blood-vessels.

angiocarditis (an″jĭ-o-kar-di′(de′)tis) [G. *angeion*, vessel, + *kardia*, heart, + *-itis*] Inflammation of the heart and blood-vessels.

angiocar′pous [G. *angeion*, vessel, + *karpos*, fruit.] 1. In botany, noting fungi in which the hymeneal layer is disposed inside the tissue of the sporocarp. 2. Having the fruit enclosed.

angiocaverno′ma. Angioma cavernosum

angiocav′ernous. Relating to the condition present in angioma* cavernosum

angiocholitis (an-jĭ-o-ko-li′(le′)tis) [G. *angeion*, vessel, + *cholē* bile, + *-itis*.] Cholangitis; inflammation of the bile-ducts.

angiodermatitis (an″jĭ-o-dur-ma-ti′(te′)tis) [G. *angeion*, vessel, + *derma*, skin, + *-itis*.] Inflammation of the cutaneous vessels.

angiodys′trophy [G. *angeion*, vessel, + *dys-*, bad, + *trophē*, nourishment.] A nutritional disorder associated with marked vascular changes.

angiofibro′ma, pl. *angiofibro′mata*. An angioma with overgrowth of the connective-tissue framework, telangiectatic fibroma. **a. contagio′sum trop′icum,** a dermatosis occurring in southern Brazil; marked by an eruption of bright red papules becoming nodules of a violaceous color.

angiogen′esis [G. *angeion*, vessel, + *genesis*, origin] Development of the blood-vessels

angiogenic (an-jĭ-o-jen′ik). 1. Relating to angiogenesis. 2. Of vascular origin, due to arterial degeneration.

an″gioglio′ma. A mixed glioma and angioma

an″giogliomato′sis. The occurrence of multiple areas of proliferating capillaries and neuroglia.

angiogliosis (an-jĭ-o-gli-o′sis) The occurrence of an angioglioma.

an′giograph [G. *angeion*, vessel, + *graphō*, I record.] Sphygmograph.

angiog′raphy [G. *angeion*, vessel, + *graphē*, a record.] A description of the blood-vessels and lymphatics

angiohyalinosis (an″jĭ-o-hi″al-in-o′sis) [G. *angeion*, vessel, + *hyalos*, glass, + *-ōsis*.] Hyaline or waxy degeneration of the muscular coat of the blood-vessels. **a. hæmorrhag′ica,** hemophilia due to a congenital degeneration of the muscular coats of the arteries.

an″giohyperto′nia [G. *angeion*, vessel, + *hyper*, over, + *tonos*, tension.] A condition of spasmodic contraction of the arteries; angiospasm.

an″giohy″poto′nia [G. *angeion*, vessel, + *hypo*, under, + *tonos*, tension.] A condition of vascular relaxation; angioparalysis, angioparesis.

angioid (an′jĭ-oyd) [G. *angeion*, vessel, + *eidos*, resembling.] Resembling blood-vessels.

angiokerato′ma, pl. *angiokerato′mata* [G. *angeion*, vessel, + *keras*, horn, *-ōma*.] A wart-like outgrowth of the horny layer of the epidermis seated upon a telangiectatic patch

angiokerato′sis. The occurrence of multiple angiokeratomata

angioleucitis, angioleukitis (an″jĭ-o-lu-si′(se′)tis, an″jĭ-o-lu-ki′(ke′)tis) [G. *angeion*, vessel, + *leukos*, white, + *-itis*.] Lymphangitis.

an″giolipo′ma. A mixed lipoma and angioma.

an′giolith [G. *angeion*, vessel, + *lithos*, stone.] 1. A venous calculus, phlebolith.* 2. A calcareous deposit in the wall of an artery.

angiolith′ic. Relating to an angiolith.

angiol′ogy [G. *angeion*, vessel, + *-logia*.] The science which treats of the blood-vessels and lymphatics in all their relations.

angiolymphitis (an″jĭ-o-lim-fi′(fe′)tis). Lymphangitis.

an″giolympho′ma [G. *angeion*, vessel, + L. *lympha*, lymph, + G. *-ōma*.] A tumor composed chiefly of dilated lymphatics.

angiolysis (an-jĭ-ol′i-sis) [G. *angeion*, vessel, + *lysis*, destruction.] Obliteration of a blood vessel, such as occurs in the newborn infant after tying of the umbilical cord.

angioma, pl. *angio′mata* (an-jĭ-o′mah) [G *angeion* vessel, + *-ōma*.] A swelling or tumor due to dilatation of the blood-vessels (*hemangioma*) or lymphatics (*lymphangioma*). **a. caverno′sum** cavernous a., cavernoma; a vascular erectile tumor containing large blood-filled spaces due apparently to dilatation and thickening of the walls of the capillary loops. **a. cu′tis,** an extreme form of nævus vascularis, hypertrophic nevus, in which the tumor is formed of a network of widely dilated blood-vessels. **a. hypertroph′icum,** hypertrophic a., a tumor formed of capillary vessels and of solid cylinders caused by hyperplasia of the endothelium. **a. serpigino′sum,** Hutchinson's disease, infective a., the presence of rings of red dots on the skin, which tend to widen peripherally, due to proliferation, with subsequent atrophy, of the superficial capillaries. **a. sim′plex,** simple a., a new growth characterized by the formation of new, usually dilated, capillaries with thickened wall due to an overgrowth of the endothelium. **a. veno′sum racemo′sum,** the appearance (tortuous swelling) caused by varicosities of superficial veins. **infec′tive a.,** a. serpiginosum. **plex′iform a.,** a. cutis

angiomalacia (an″jĭ-o-mă-la′sĭ-ah) [G. *angeion* vessel, + *malakia*, softness] Softening of the walls of the blood-vessels.

angiomato′sis. A condition characterized by multiple angiomata.

angio′matous. Relating to or resembling an angioma

angiomegaly (an″jĭ-o-meg′al-ĭ) [G. *angeion*, vessel, + *megas* (*megal-*), large.] Enlargement of the blood vessels or lymphatics.

angiom′eter [G. *angeion*, vessel, + *metron*, measure.] An instrument for measuring the diameter of a blood-vessel.

angiomyocardiac (an″jĭ-o mi-o-kar′dĭ-ak) [G. *angeion*, vessel, + *mys*(*myo-*), muscle, + *kardia*, heart.] Relating to the blood-vessels and the cardiac muscle.

angiomyoma (an″jĭ-o-mi-o′mah). A mixed angioma and myoma; a very vascular myoma.

an″giomy″osarco′ma. A very vascular myosarcoma.

angioneuralgia (an-jĭ-o-nu-ral′jĭ-ă). An affection, marked by a burning pain in an extremity, accompanied by redness and edema of the affected area, thought to be an early stage of Raynaud's disease

angioneurectomy (an″jĭ-o-nu-rek′to-mĭ) [G. *angeion*, vessel, + *neuron*, nerve, + *ektomē*, exsection.] 1. Exsection of the vessels and nerves of a part. 2. [G. *neuron*, cord.] Exsection of a segment of the spermatic cord for the relief of an enlarged prostate or to produce sterility.

angioneuredema (an″jĭ-o-nu-re-de′mah) [G. *angeion*, vessel, + *neuron*, nerve, + *oidēma*, a swelling.] Edema due to an angioneurosis, or vasomotor disorder: written also *angioneuroœdema*.

angioneurosis, angeioneurosis (an″jĭ-o-nu-ro′sis) [G. *angeion*, vessel, + *neuron*, nerve, + *-ōsis*.] A disorder due to disease or injury of the vasomotor nerves or center.

an″gioneurot′ic. Relating to an angioneurosis

angioneurot'omy [G. *angeion*, vessel, + *neuron*, nerve, + *tomē*, a cutting.] Division of both nerves and vessels of a part.

angioparal'ysis [G. *angeion*, vessel, + *paralysis*.] A condition of relaxation and loss of tone in the muscular coats of the smaller arteries causing a fall in blood-pressure; angiohypotonus.

angiopar'esis. Angioparalysis of slight degree

angiopathology (an-jyo-păth-thol'o-jĭ). The morbid changes in diseases of the blood vessels.

angiop'athy [G. *angeion*, vessel, + *pathos*, suffering.] Any disease of the blood-vessels or lymphatics.

an'gioplany [G. *angeion*, vessel, + *planē*, wandering.] Angiectopia.

angiopoietic (an"jĭ-o-poy-et'ik) [G. *angeion*, vessel, + *poieō*, I make] Vasifactive, vasoformative, causing the formation of blood-vessels in newly organized tissues, noting certain cells.

an'giopressure. Pressure on a vessel for the arrest of bleeding.

angior'rhaphy [G. *angeion*, vessel, + *rhaphē*, a seam.] Suture of any vessel, especially of a blood-vessel.

an"giorrhex'is [G *angeion*, vessel, + *rhēxis*, rupture] Rupture of a blood-vessel or lymphatic.

angiosarco'ma. A mixed angioma and sarcoma.

angiosclero'sis [G. *angeion*, vessel, + *sklērōsis* hardening] Fibrous disease involving the entire vascular system

an'gioscope. A modified microscope for studying the capillary vessels

angiosialitis (an"jĭ-o-si-al-i'(e')tis) [G. *angeion*, vessel, + *sialon*, saliva, + *-itis*] Inflammation of a salivary duct.

angio'sis. Angiopathy.

an'giospasm [G. *angeion*, vessel, + *spasmos*, tension] A condition of spasmodic contraction of the muscular coats of the smaller arteries, causing muscular cramps or intermittent claudication, or, when in the brain, temporary paralysis. **labyrin'thine a.**, Lermoyez 's* syndrome

an"giospas'tic. Relating to or marked by angiospasm.

angiosperm (an'jĭ-o-spurm) [G *angeion*, vessel, + *sperma*, seed] A plant the seed of which is enclosed in a distinct covering, the ovules being enclosed in an ovary and fertilized through the medium of a stigma.

angiostaxis (an"jĭ-o-stak'sis) [G. *angeion*, vessel, + *staxis*, a trickling.] 1. Oozing of blood. 2. Hemophilia.

an"giosteno'sis [G *angeion*, vessel, + *stenoō*, I make narrow.] Contraction of the blood-vessels

angiosteosis (an"jĭ-os-te-o'sis) [G. *angeion*, vessel, + *osteon*, bone] Calcareous degeneration of the walls of the arteries.

angios'trophy [G. *angeion*, vessel, + *strophē*, a twist.] Twisting the cut end of an artery to arrest bleeding.

angiotelectasia (an"jĭ-o-tel-ek-ta'sĭ-ah) [G. *angeion*, vessel, + *telos*, end, + *ektasis*, a stretching out] Dilatation of the terminal arterioles.

angiot'omy [G. *angeion*, vessel, + *tomē* cutting.] 1. Section of an artery or vein. 2. Anatomy of the blood-vessels and lymphatics.

an"gioton'ic [G. *angeion*, vessel, + *tonos*, tension.] Increasing arterial tension.

angiotribe (an'jĭ-o-trīb) [G. *angeion*, vessel, + *tribō* I bruise.] A crushing instrument, in the shape of strong forceps with screw attachment, employed to crush the end of an artery together with the tissue in which it is embedded, to arrest hemorrhage

angiotrip'sy [G. *angeion*, vessel, + *tripsis*, friction, bruising.] The use of the angiotribe to arrest hemorrhage.

angiotroph'ic [G. *angeion*, vessel, + *trophē*, nourishment] Relating to the nutrition of the blood-vessels or lymphatics.

angioxyl (an-jĭ-oks'il). A deinsulinized pancreas extract suggested for the treatment of hyperpiesis and angina pectoris.

angitis (an-ji'(je')tis). Angiitis.

angle (ang'gl) [L. *angulus*.] The meeting point of two lines or planes; the figure formed by the junction of two lines or planes, the space bounded on two sides by lines or planes which meet.

al'pha a., the . between the axis of vision and the corneal axis.

alve'olar a., the a. between the horizontal plane and a line connecting the base of the nasal spine and the middle point of the projection of the alveolus of the upper jaw.

a. of aberra'tion, a. of refraction.

a. of ap'erture, the angle at the focus of a lens formed by two lines drawn from opposite sides of its periphery.

a. of conver'gence, the a. which the visual axis makes with the median line when a near object is looked at.

a. of devia'tion, a of refraction.

a. of in'cidence, (1) the a. which a ray entering a refracting medium makes with a line drawn perpendicular to the surface of this medium; (2) the angle which a ray striking a reflecting surface makes with a line perpendicular to this surface.

a. of reflec'tion, the a. which a ray reflected from a surface makes with a line drawn perpendicular to this surface; it is equal to the a. of incidence (2).

a. of refrac'tion, the a. which a ray leaving a refracting medium makes with a line drawn perpendicular to the surface of this medium.

a. of the i'ris, the angle between the iris and the cornea at the periphery of the anterior chamber of the eye

a. of the jaw, angulus mandibulæ [BNA], the a. formed by the lower surface of the body and the posterior edge of the ramus of the mandible.

a. of the man'dible, a. of the jaw.

a. of the pu'bes, pubic a.

a. of tor'sion, the angle formed by two axial planes of a long bone.

ax'ial a., an angle formed by two surfaces of a body, the line of union of which is parallel with its axis; the axial angles of a tooth are the *distobuccal*, *distolabial*, *distolingual*, *mesiobuccal*, *mesiolabial*, and *mesiolingual* (see these adjectives)

bas'ilar a., Broca's a., one formed by the intersection at the basion of lines coming from the nasal spine and the nasal point

be'ta a., the angle formed by a line connecting the bregma and hormion meeting the radius fixus.

bior'bital a., that formed by the meeting of the axes of the orbits.

bucco-occlu'sal a., line of junction of the buccal and occlusal surfaces of a tooth.

cephal'ic a., one of several angles formed by the intersection of two lines passing through certain determined points of the face or cranium.

cerebel'lopontile a., the recess at the junction of the cerebellum and pons.

cos'tal a., the a. at which the lower border of the false ribs meets the axis of the sternum.

craniofa'cial a., the angle formed by the meeting of the basifacial and basicranial axes at the midpoint of the sphenoethmoidal suture.

distobuc'cal a., line of junction of the distal and buccal surfaces of a tooth.

distobucco-occlu'sal a., a point a. formed by the junction of the distal, buccal, and occlusal surfaces of a tooth.

distogin'gival a., the junction of the distal surface with the gingival line of a tooth.

disto-inci'sal a., the point of junction of the distal surface and cutting edge of an incisor tooth.

distola'bial a., the line of junction of the distal and labial surfaces of an incisor or canine tooth.

distolin'gual a., the line of junction of the distal and lingual surfaces of a tooth.

distolinguo-occlu'sal a., the point a. formed by the junction of the distal, lingual, and occlusal surfaces of a tooth.

disto-occlu'sal a., line of junction of the distal and occlusal surfaces of a tooth.

fa'cial a., Camper's a., the angle made by lines from the external auditory meatus and the nasal spine meeting between the upper middle incisor teeth.

gam'ma a., the a. between the axis of the eyeball and line of vision.

inci'sal a., the apex of the distal or mesial surface of an incisor tooth.

iridocor'neal a., a. of the iris.

labiogin'gival a., the point of junction of the labial border and gingival line on the distal or mesial surface of an incisor tooth.

line a., the line of meeting of two surfaces.

linguogin'gival a., the point of junction of the lingual border and gingival line on the distal or mesial surface of an incisor tooth.

linguo-occlu'sal a., line of junction of the lingual and occlusal surfaces of a tooth.

mesiobuc'cal a., line of junction of the mesial and buccal surfaces of a tooth.

mesiobucco-occlu'sal a., the point a. formed by the junction of the mesial, buccal, and occlusal surfaces of a tooth.

mesiogin'gival a., the junction of the mesial surface with the gingival line of a tooth.

mesio-inci'sal a., the point of junction of the mesial surface and cutting edge of an incisor tooth.

mesiola'bial a., the line of junction of the mesial and labial surfaces of an incisor or canine tooth.

mesiolin'gual a., the line of junction of the mesial and lingual surfaces of a tooth.

mesiolinguo-occlusal a., the point a. formed by the junction of the mesial, lingual, and occlusal surface of a tooth.

mesio-occlu'sal a., line of junction of the mesial and occlusal surfaces of a tooth.

metafa'cial a., Serres' a., angle between the pterygoid processes and the base of the skull.

me'ter a., the unit of convergence, the angle which the visual line makes with the median line when looking at an object distant one meter.

occip'ital a., Daubenton's a., one formed by the intersection at the opisthion of lines from the basion and from the lower border of the orbit.

ophryospi'nal a., the a. formed at the anterior nasal spine by lines drawn from the auricular point and the glabella, Broca's facial a., Jacquart's a., Topinard's a.

op'tic a., the angle formed by the meeting of the visual axes.

pari'etal a., Quatrefages's a., one formed by the meeting of the prolongation of two lines tangential to the most prominent part of the zygomatic arch and to the parietofrontal suture on each side; when the lines remain parallel the angle is zero, when they diverge it is negative.

point a., in dental anatomy the point where three surfaces meet.

pon'tine a., cerebellopontile a.

pu'bic a., the junction of the two rami of the pubes, called by some anatomists the corpus or body of the pubes.

solid a., point a.

sphe'noid a., sphenoi'dal a., (1) Welcker's a., one formed by the intersection at the top of the sella turcica (dorsum sellæ), of lines coming from the nasal point and from the tip of the rostrum of the sphenoid; (2) the anterior inferior angle of the parietal bone

ster'nal a., a. of Louis, angulus Ludovici, the angle between the manubrium and the body of the sternum.

ve'nous a., Pirogoff's a., the junction of the internal jugular and subclavian veins, toward which converge the external and the anterior jugular and the vertebral veins, the thoracic duct, and the right lymphatic duct.

vis'ual a., the a. formed at the retina by the meeting of lines drawn from the periphery of the object seen.

Anglesey leg (ang'gl-se) [Marquis of *Anglesey*, 1768–1854, for whom the leg was made.] An early model of wooden leg, jointed at the knee and ankle.

angor (ang'gor) [L. quinsy, anguish.] Extreme distress. **a. abdom'inis,** angina abdominis. **a. pec'toris,** angina pectoris sine dolore.

angostura bark (an"gos-tu'rah) [Sp. *Angostura*, the "Narrows," a town on the Orinoco River, whence the bark is exported.] The bark of *Cusparia* angustura* (*Galipea cusparia*).

angosturine (an"gos-tu'rēn). An alkaloid derived from angostura bark; a bitter tonic.

Ångström's law (awng'strem) [Anders Jonas *Ångstrom* Swedish physicist, 1814–1874.] A substance absorbs light of the same kind, *i.e.* of the same wave-length, as it emits when luminous. **Å.'s scale,** a table of wave-lengths of a large number of light rays corresponding to as many Fraunhofer's lines in the spectrum **Å.'s u'nit,** $\frac{1}{10000}$ micron, .0000001 mm., or $\frac{1}{254000000}$ in.

Anguill'ula [L. dim. of *anguilla*, eel.] A genus of nematode worms. **A. ace'ti,** the vinegar eel. **A. intestina'lis,** *Strongyloides intestinalis*, the parasitic generation of a round worm infesting the intestine in tropical and subtropical countries. **A. stercora'lis,** *Strongyloides stercoralis*, the free stage of *A. intestinalis*, the mature worm of the embryo of the parasitic form.

anguilluli'asis, anguillulo'sis. Infestation with *Anguillula intestinalis*.

angular (ang'gu-lar). Relating to an angle; marked by one or more bends. **a. ar'tery,** the facial artery in the neighborhood of the inner canthus of the eye. **a. convolu'tion, a. gy'rus,** see *gyrus angularis*.

an'gulus, gen. and pl. *an'guli* [L.] An angle or corner; see *angle*. **a. cos'tæ,** costal angle.* **a. ir'idis** [BNA], angle of the iris, iridocorneal angle, the acute angle between the iris and the cornea at the periphery of the anterior chamber of the eye. **a. iridocor'nea'lis** [NK], a. iridis. **a. Ludovi'ci,** Louis' angle, sternal angle.* **a. mandib'ulæ** [BNA], angle* of the jaw. **a. oc'uli** [BNA], angle of the eye, canthus. **a. oc'uli** [NK], canthus, commissura pulpebrarum [BNA]. **a. o. nasa'lis** [NK], commissura palpebrarum medialis [BNA], the medial or inner canthus. **a. o. tempora'lis** [NK], commissura palpebrarum lateralis [BNA], the lateral or outer canthus. **a. o'ris,** angle of the mouth, commissura* labiorum [BNA]. **a. pubis** [BNA], pubic angle.* **a. ster'ni,** sternal angle.*

angustu'ra. Angostura.

anhal'onine. An alkaloid from *Anhalonium lewinii* occurring in the form of the hydrochloride, a white crystalline powder soluble in water, recommended in asthma and angina pectoris.

Anhalo'nium lewin'ii. Mescal buttons, a Mexican plant, employed in neurasthenia, asthma angina pectoris, and insomnia in doses of gr. 10–15 (0.6–1.0) of the crude drug, or ♏1–5 (0.06–0.3) of the fluidextract.

anhaph'ia. Anaphia

anhedo'nia [G. *an-* priv. + *hedonē*, pleasure.] Absence of pleasure from the performance of acts which would ordinarily be pleasurable.

anhe'la (anhela'tio) clamo'sa [L. *anhelare*, to pant; *clamosus*, noisy.] Whooping cough

anhela'tion [L. *anhelare*, to pant.] Shortness of breath, panting.

anhemato'sis [G *an-* priv. + *haimatōsis*, a changing into blood.] Insufficient or defective blood formation.

anhemolytic (an-hem-o-lit'ik) [G. *an-* priv. + *haima*, blood, + *lytikos*, capable of loosing or dissolving.] Not hemolytic, not destructive to the blood cells.

anhep"atogen'ic [G. *an-* priv. + *hepar(hepat-)*, liver, + *genna* I produced.] Not produced in or by the liver.

anhidrosis, anidrosis (an-hi-dro'sis, an-i-dro'sis) [G. *an-* priv. + *hidrōs*, sweat.] Marked diminution or suppression of perspiration.

anhidrotic, anidrotic (an-hi-drot'ik, an-i-drot'ik). 1. Checking perspiration. 2. Anything having a tendency to arrest or prevent perspiration.

anhis'tic, anhis'tous [G *an-* priv. + *histos*, web.] Without apparent structure.

anhydremia, anhydræmia (an-hi-dre'mĭ-ah) [G. *an-* priv. + *hydōr*, water, + *haima*, blood.] Deficiency in the fluid portion of the blood.

anhydride (an-hi'drīd) [G. *an-* priv. + *hydōr*, water.] An oxide which can combine with water to form an acid, or which is derived from an acid by the abstraction of water; see *basic oxide.**

anhydromyelia (an-hi"dro-mi-e'lĭ-ah) [G. *an-* priv. + *hydōr*, water, + *myelon*, marrow.] Deficiency in the spinal fluid.

anhydrous (an-hi'drus) [G. *an-* priv. + *hydōr*, water.] Containing no water.

anhypno'sis [G. *an-* priv. + *hypnos*, sleep] Insomnia.

anian'thinopsy [G. *an-* priv. + *ianthinos*, violet-colored, + *opsis*, vision.] Violet-blindness, inability to recognize violet or purple.

anidean (an-id'e-an). Shapeless, amorphous; noting a formless monster, anideus.

anideus (an-id'e-us) [G. *an-* priv. + *eidos*, shape.] Fetus anideus; a shapeless monster, a simple, rounded mass with slight indications of parts

anidro'sis. Anhidrosis.

an'ilide. Phenylamide, a compound in which an acid radical has been substituted for one of the hydrogen atoms of the amido group.

aniline (an'ĭ-lēn) [Ar. *an-nil*, indigo.] Phenylamine, $C_6H_5(NH_2)$, an oily, colorless or brownish fluid of aromatic odor and acrid taste, which combines with numerous substances to form dyes of various colors; it is derived from benzene by the substitution of the group (NH_2) for one of the hydrogen atoms.

an'iline-wa'ter solu'tion. Koch*-Ehrlich stain.

anilinophil, anilinophile (an"ĭ-lin'o-fil, or fīl) [*aniline* + G. *philos*, fond.] Noting a cell or histological structure which takes readily an aniline stain.

anilinoph'ilous. Anilinophil.

anilipyrine (an"il-ĭ-pi'rēn.) A substance obtained by fusing 188 parts of antipyrine with 135 parts of acetanilid; occurs as a white crystalline powder, soluble in water; employed in rheumatism and influenza in doses of gr. 8 (0.5).

an'ilism. Chronic aniline poisoning characterized by gastric and cardiac weakness, vertigo, muscular depression, intermittent pulse, and cyanosis.

anility (an-il'ĭ-tĭ) [L. *anilitas*, from *anus*, an old woman.] Old age in woman.

anil-quinoline (an"il-kwin'o-lēn). Quinoline prepared synthetically from aniline.

an'ima [L. air breath.] 1. The soul. 2. The active principle of a drug.

an'imal [L.] 1. A living and, in the higher orders, sentient being as distinguished from a vegetable or mineral. 2. One of the lower animals as distinguished from man. 3. Relating to the physical as distinguished from the intellectual or mental part of man.

animalcule (an-i-mal'kūl) [L. *animalculum*, dim. of *animal*.] A minute, microscopic, unicellular animal organism; protozoan.

animal'ity. The sum of characteristics distinguishing an animal from a vegetable organism.

anima'tion [L. *animare*, to make alive; *anima*, breath, soul.] 1. The state of being alive. 2. Liveliness, high spirits. **suspen'ded a.,** a temporary condition of apparent death, with cessation of respiration.

anincretinosis (an-in-kre-tin-o'sis) [G. *an-* priv. + *incretion* + *-osis*.] A disorder arising from failure of one or more of the organs of internal secretion.

ani'odol. Trade name of a preparation of paraformaldehyde employed as a disinfectant.

anion (an'ī-on) [*anode* + G. *iōn*, going.] An ion which carries a charge of negative electricity, going therefore to the oppositely charged anode; the element which, during electrolysis of a chemical compound, appears at the positive pole or anode. The atoms of iodine, bromine, and chlorine are anions; in salts the acid molecules are anions.

anios (an'ĭ-os). Trade name of a preparation of formaldehyde with phenol, used as an antiseptic.

anirid'ia [G. *an-* priv. + *iris*.] Absence, complete or partial, of the iris; irideremia.

an'isate. 1. A salt of anisic acid, usually possessing antiseptic properties. 2. To flavor with anise.

anischuria (an-is-ku'rĭ-ah) [G. *an-* priv. + *ischouria*, retention of urine.] Incontinence of urine.

anise (an'is). The fruit of *Pimpinella anisum;* see *anisum*. **Chinese' a., star a.,** illicium.

aniseed (an'ĭ-sēd). Anisum.

anis'ic. Relating to anise **a. acid,** a crystalline volatile acid, $C_8H_8O_3$, obtained from aniseed; it forms the antiseptic anisates.

ani'si fruc'tus (Br). Anisum. **a. stella'ti fruc'tus** (Br.), Chinese or star anise, illicium.

an'isine. An alkaloid derived from anisum.

an"isochromat'ic. [G *anisos*, unequal, + *chrōma* color.] Not of uniform color.

anisocor'ia [G. *anisos*, unequal, + *korē*, pupil] A condition in which the two pupils are not of equal size.

anisocyto'sis [G *anisos*, unequal, + *kytos*, a hollow (cell), + *-ōsis*.] A condition in which the red blood cells are not uniform in size

anisodont (an'ĭ-so-dont) [G. *anisos*, unequal, + *odous* (*odont-*), tooth.] Having teeth of unequal length.

anisog'amy [G. *anisos*, unequal, + *gamos*, marriage.] Fusion of two gametes unequal in size or form; fertilization as distinguished from isogamy or conjugation.

anisognathous (an-ĭ-sog'na-thus) [G. *anisos*, uneven, + *gnathos*, jaw.] Having jaws of abnormal relative size, the upper being wider than the lower.

an"isohy"percyto'sis [G. *anisos*, unequal, + *hyper-* above, + *kytos*, cell.] A blood state in which the number of leucocytes is increased and the normal proportion between the different varieties is disturbed.

an"isohy"pocyto'sis [G. *anisos*, unequal, + *hypo-* beneath, + *kytos*, cell.] A condition in which the number of leucocytes in the blood is decreased, the relative proportion between the different varieties being at the same time altered.

aniso'ic. Anisic.

an'isol. Methylphenyl ester, anisoïl: a colorless ethereal liquid obtained from anisic acid.

anisoleucocytosis (an″ĭ-so-lu″ko-si-to′sis) [G. *anisos*, unequal, + *leukos*, white, + *kytos*, cell.] Anisonormocytosis.

an″isome′lia [G. *anisos*, unequal, + *melos*, limb.] A condition of inequality between two paired limbs.

anisomeric (an-ĭ-so-mer′ik) [G. *anisos*, unequal, + *meros*, part.] Not isomeric.

anisometropia (an-ĭ-so-me-tro′pĭ-ah) [G. *anisos*, unequal, + *metron*, measure, + *ōps*, sight.] A state in which there is a pronounced difference in the power of refraction between the two eyes.

anisometrop′ic. 1. Relating to anisometropia. 2. Having eyes markedly unequal in refractive power.

an″isonor″mocyto′sis [G. *anisos*, unequal, + L. *norma*, rule, + G. *kytos*, cell.] A condition in which the number of leucocytes in the blood is normal, but the relation in numbers of the different forms is abnormal.

aniso′pia [G. *anisos*, unequal, + *ōps*, sight] A condition of inequality in visual power between the two eyes.

anisorhythmia (an″ĭ-sŏ-rith′mĭ-ă) [G. *anisos*, unequal, + *rhythmos*, rhythm.] Irregular action of the heart, or absence of synchronism in the rate of auricles and ventricles.

anisospore (an′ĭ-so-spōr) [G. *anisos*, unequal, + *sporos*, seed.] A sexual cell uniting with one of the opposite sex by conjugation to form a new organism, as distinguished from the nonsexual cell, or *isospore*.

an″isoste′monous [G. *anisos*, uneven, + *stēmōn*, stamen.] In botany, noting a flower in which the number of stamens is less than that of the parts of the corolla or of the petals.

an″isosthen′ic [G. *anisos*, unequal, + *sthenos*, strength.] Of unequal strength, noting two muscles or groups of muscles either paired or antagonists.

anisotonic (an-i-so-ton′ik) [G. *anisos*, unequal, + *tonos*, tone.] Not having equal tension; having unequal osmotic pressure.

anisot′ropal, anisotrop′ic, anisot′ropous [G. *anisos*, unequal, + *tropos*, a turning.] 1. Not equal in all directions. 2. Unequal in refracting power

ani′sum (N.F.), **ani′si fruc′tus** (Br.) [G. *anison*, anise, dill.] Anise, the fruit of *Pimpinella anisum;* aromatic and carminative. The aqua, oleum, and spiritus are official.

anisu′ria [G. *an-* priv. + *isos*, equal, + *ouron*, urine.] Excretion of urine at varying rates, as measured from hour to hour.

anitrogenous (ă″ni-troj′en-us). Non-nitrogenous.

ankis′trodon. Ancistrodon.

ankle (ang′kl) [A.S. *ancleow*.] 1. The ankle-joint. 2. The leg between the foot and the swell of the calf.

ank′le-bone. Talus,* astragalus.

ank′le-clo′nus. A rhythmical contraction of the calf muscles following a sudden passive dorsal flexion of the foot, the leg being semiflexed.

ank′le-jerk. Ankle reflex.*

ankle-joint′. Articulatio talocruralis, articulation between the tibia and fibula and the astragalus.

ankle-re′flex. See under *reflex*

ankyloblepharon (ang-ki-lo-blef′ar-on) [G. *ankylē*, a stiff joint (*ankylos*, bent), + *blepharon*, eyelid.] Adhesion of the eyelids to each other.

ankylochilia (ang-ki-lo-ki′lĭ-ah) [G. *ankylē*, a stiff joint (*ankylos*, bent), + *cheilos*, lip.] Adhesion of the lips to each other.

ankylocolpos (ang-ki-lo-kol′pos) [G. *ankylē*, stiff joint (*ankylos*, bent), + *kolpos*, gulf (vagina)] Adhesion of the walls of the vagina

ankylodactylia (ang-ki-lo-dak-til′ĭ-ah) [G. *ankylē*, stiff joint (*ankylos*, bent), + *daktylos*, finger] Adhesion between two or more fingers or toes.

ankyloglossia, ankyloglossum (ang-ki-lo-glos′ĭ-ah, ang-ki-lo-glos′um) [G. *ankylē*, stiff joint (*ankylos*, bent), + *glōssa*, tongue.] Adhesion of the tongue to any part of the mouth, specifically, abnormal shortness of the frenum linguæ, tongue-tie.

ankylomele (ang-ki-lo-me′le) [G *ankylos*, bent] 1. A curved or bent probe. 2. Fusion of the legs.

ankyloproctia (ang-ki-lo-prok′shĭ-ah) [G. *ankylē*, stiff joint (*ankylos*, bent), + *prōktos*, anus] Imperforation or stricture of the anus.

ankylosed (ang′ki-lōzd). Stiffened, bound by adhesions, noting a joint in a state of ankylosis

ankylosis (ang-ki-lo′sis) [G. *ankylōsis*, stiffening of a joint.] Stiffening or fixation of a joint. **bony a.,** true a., osseous union between the bones forming a joint. **extracap′sular a.,** stiffness of a joint due to induration of the surrounding tissues **false a.,** fibrous a. **fi′brous a.,** stiffening of a joint due to the presence of fibrous bands between the bones forming the joint **intracap′sular a.,** stiffness of a joint due to the presence of bony or fibrous adhesions between the bones forming the joint **ligamen′tous a.,** fibrous a. **spu′rious a.,** extracapsular a. **true a.,** bony a

Ankylos′toma [G *ankylos*, hooked, + *stoma*, mouth] Ancylostoma, Uncinaria,* Dochmius.

ankylos′toma [G *ankylē*, stiff joint (*ankylos*, bent), + *stoma*, mouth.] Trismus,* lockjaw.

ankylostomi′asis. Ancylostomiasis.

ankylotia (ang-ki-lo′shyah) [G *ankylē*, stiff joint (*ankylos*, bent), + *ous*(*ōt-*), ear] Imperforation or stenosis of the external auditory meatus.

ankylotome (ang′ki-lo-tōm) [G *ankylē*, stiff joint (*ankylos*, bent), + *tomos*, cutting.] A cutting instrument for separating abnormally adherent surfaces; specifically an instrument for cutting the frenum linguæ for the relief of tongue tie.

ankylot′omy [G. *ankylē*, stiff joint (*ankylos*, bent), + *tomē*, a cutting] The division of abnormal adhesions between opposing surfaces; specifically division of the frenum linguæ for the relief of tongue-tie.

ankylurethria (ang-kĭl-u-re′thrĭ-ah) [G. *ankylē*, stiff joint (*ankylos*, bent), + *ourēthra*, urethra] Imperforation or stricture of the urethra.

ankyroid (ang′ki-royd) [G. *ankyra*, hook, + *eidos*, shape.] Hook-shaped.

anlage (ahn′lah-gheh) [German.] Proton, primordium.

Ann′am ul′cer. Oriental boil.*

An′nandale's opera′tion [Thomas *Annandale*, Scotch surgeon, 1838–1907.] 1. Exsection of the internal condyle of the femur for knock-knee. 2. Fixation by sutures of a loose cartilage in the knee-joint

annatt′o. Arnotto

annealing (ă-nēl′ing) [A.S. *anaelan*, to burn.] In dentistry, heating the gold leaf preparatory to its insertion into a cavity, in order to soften it and make it aseptic. **a. lamp,** a small alcohol lamp used by dentists for heating the gold leaf in the operation of filling a tooth-cavity. **a. tray,** a small tray in which gold foil is annealed by electric heat.

annex′a [L *annectare*, to tie on, annex Appendages, parts accessory to the main organ or structure. **a. oc′uli,** the eyelids, lacrymal glands, etc., associated with the eyeball. **a. u′teri,** uterine appendages, the Fallopian tubes and ovaries.

annexal (an-neks′al). Relating to the annexa.

annexitis (an-neks-i'(e')tis) [L. *annexa* + G. *-itis*.] Inflammation of the uterine appendages, one or both ovaries and oviducts.

annex'opexy [L. *annexa* + G. *pēxis*, a putting together.] The operation of attaching the ovary and oviduct, on one or both sides, to the anterior abdominal wall.

annott'o. Arnotto.

ann'ual [L. *annus*, a year.] 1. Relating to a year, yearly, once a year. 2. A plant the root of which dies with the coming of frost, and which must be propagated anew each spring from seed or bulb.

ann'uens [L. *annuere*, to nod to.] Musculus rectus capitis anterior

ann'uent. Nodding noting the annuens* muscle

annu'itant. The designated person to whom an annuity is paid.

annu'ity [Fr. *annuité*, L. *annus*, year.] A definite sum of money paid annually to a designated person. **a. certain,** an a. paid for a specified number of years to the beneficiary of a life-insurance policy or to his heirs in lieu of the payment of the full amount of the policy at death. **contin'gent a.,** one which is to terminate on the occurrence of some specified event, such as the marriage of the annuitant **deferred' a.,** an a., the payments of which do not begin until some time in the future specified in the contract. **joint a.,** one in which two or more persons participate and which is terminated by the death of any one of the annuitants **life a.,** an a. continued until the death of the annuitant. **a. on the last survi'vor,** one in which two or more persons participate and which is terminated only on the death of the last survivor. **perpet'ual a.,** an a., to be paid for all time to the annuitant and to his heirs after his death. **survi'vorship a.,** an a. paid to a designated person, called the *nominee*, in case he survive the holder of an insurance policy which contains such a provision as part of the contract. **tem'porary a.,** one which terminates after a specified number of payments have been made, or earlier if the annuitant dies. **value of the a.,** the net cost of an a., that is, the net amount which must be paid therefor in one sum.

ann'ular [L. *annulus*, ring] Ring-shaped, circular

annulorrhaphy (an-u-lor'ă-fī) [L. *annulus*, ring, + G. *raphē*, seam] Closure of a hernial ring by suture.

ann'ulus [L.] A ring; a circular or ring-shaped structure. **a. abdomina'lis,** the internal or external opening of the inguinal canal, a. inguinalis abdominalis or a. inguinalis subcutaneus. **a. cilia'ris,** the periphery of the iris. **a. conjuncti'væ** [BNA], conjunctival ring, a narrow ring at the junction of the periphery of the cornea with the conjunctiva. **a. crura'lis,** a. femoralis. **a. femora'lis** [BNA], crural or femoral ring; the upper opening of the femoral canal, bounded in front by Poupart's ligament, behind by the pectineus muscle, internally by Gimbernat's ligament, and externally by the femoral vein. **a. fibrocartilagin'eus membra'næ tym'pani** [BNA], fibrocartilaginous ring of the drum membrane, the thickened portion of the circumference of the membrana tympani which is fixed in the sulcus tympanicus. **a. fibro'sus,** one of two fibrous rings surrounding the atrioventricular orifices, circulus callosus Halleri. **a. fibro'sus fibrocartilag'inis intervertebra'lis** [BNA], the fibrous ring forming the circumference of the intervertebral fibrocartilage. **a. hæmorrhoida'lis,** a circular elevation at the termination of Morgagni's rectal columns, corresponding to the location of the external sphincter muscle; it contains the venous anastomoses of the hemorrhoidal plexus. **a. inguina'lis abdomina'lis** [BNA], internal abdominal ring, the entrance to the inguinal canal, about half an inch above the center of Poupart's ligament. **a. inguina'lis subcuta'neus** [BNA], external abdominal ring, an opening in the aponeurosis of the obliquus externus just above the spine of the pubis, which transmits the spermatic cord in the male, the round ligament of the uterus in the female. **a. ir'idis,** ring of the iris, one of two zones on the anterior surface of the iris, separated by a circular line concentric with the pupillary border; the *a. iridis minor* is the inner of the two zones and is much narrower than the other, *a. iridis major*. **a. mi'grans lin'guæ,** geographical tongue.* **a. ova'lis,** limbus* fossæ ovalis [BNA]. **a. præputia'lis,** the line of junction of skin and mucous membrane at the anterior extremity of the prepuce **a. trache'æ,** one of the cartilaginous rings of the trachea. **a. tendin'eus commu'nis** [BNA], ligament of Zinn.* **a. tympan'icus,** tympanic ring, a more or less complete bony ring at the inner end of the external auditory meatus, giving attachment to the drum membrane **a. umbilica'lis,** umbilical ring, an opening in the linea alba through which pass the umbilical vessels in the fetus; it is at first near the pubis, but gradually ascends to the center of the abdomen; it is closed in the adult, its site being indicated by the umbilicus or navel. **a. urethra'lis,** a thickening of the middle muscular coat of the bladder around the urethral opening, forming the sphincter vesicæ muscle.

AnOC. Abbreviation for anodal, or positive pole, opening contraction.

anochlesia (an-ŏ-kle'zĭ-ah) [G. *an-* priv. + *ochlēsis*, disturbance.] 1. Catalepsy. 2. Quietude.

anochromasia (an"o-kro-ma'sĭ-ah). Acnromasia(3).

anoci-association (ă-no'sĭ-as-so-sĭ-a'shun) [G *a*, priv.] A condition in which all noci*-associations are excluded, thus preventing fear, pain, shock, and postoperative neuroses in cases of surgical operations or trauma.

anociation (ă-no-sĭ-a'shun). Anoci-association.

anococcygeal (a-no-kok-sij'e-al). Relating to both anus and coccyx. **a. body,** a mass of fibrous and muscular tissues lying between the anus and coccyx. **a. lig'ament,** a band of fibrous tissue connecting the external sphincter ani and the tip of the coccyx.

an'odal. Relating to the anode.

anode (an'ōd) [G. *anodos*, the upward way, or rising (of the sun), east; so named after the standard position of the system, with the negative electron stream going to the east.] The positive pole of a galvanic battery or the electrode connected with it; the goal of the negative anions; the point at which a voltaic current enters an electrolyte.

ano'dic. Relating to the anode; electronegative

anod'mia [G. *an-* priv. + *odmē*, stench.] Anosmia.

anod'olyte. Anion.

anodontia (an-o-don'shyah) [G. *an-* priv. + *odous* (*odont-*), tooth.] Absence of teeth.

anodyne (an'o-dīn) [G. *an-* priv. + *odynē*, pain.] 1. Quieting pain. 2. An agent which has the power to relieve pain. **Hoff'mann's a.,** see under *Hoffmann*.

anodyn'ia. Freedom from or cessation of pain

anoesia (an-o-e'sĭ-ah) [G. *anoēsia*, from *a-* priv. + *noos*, perception.] Idiocy, imbecility, lack of the power of comprehension.

anoetic (an-o-et'ic). 1. Relating to or suffering from anoesia. 2. Incomprehensible.

anoia (an-oy'ah) [G. *anoia*, from *a-* priv. + *noos*, understanding.] Anoesia.

anomaloscope (an-om'al-o-skōp) [G. *anomalos*, irregular, + *skopeō*, I examine.] An instrument in the form of a telescope, employed for the detection of color blindness; *i. e.* of dichromatism and of anomalous trichromatism.

anomalot'rophy [G. *anōmalos*, irregular, + *trophē*, nourishment.] Abnormality in the nutritive processes.

anom'alous [*anōmalos*, irregular.] Abnormal, unusual, irregular.

anomaly (ă-nom'ă-lĭ) [G. *anōmalia*, irregularity.] Anything unusual or irregular or contrary to the general rule.

anō'mia [G. *a-* priv. + *ōnoma*, name.] Optic aphasia, inability to name objects, although they are subjectively perceived.

anonychia (an-o-nik'ĭ-ah) [G. *an-* priv. + *onyx* (*onych-*), nail.] Absence of the nails

anon'ymous [G. *anōnymos*, from *an-* priv. + *onyma*, name.] Nameless. **a. ar'tery,** arteria anonyma. **a. veins,** venæ anonymæ.

anoopsia (an-o-op'sĭ-ah) [G *anō*, upward, + *opsis*, vision.] Hyperphoria.

Anopheles (an-of'ĕ-lēz) [G. *anōphelēs*, useless, harmful.] A genus of mosquitos of the family *Culicidæ*, subfamily *Anophelinæ*. The sporogenous cycle of the malarial parasite is passed in the body cavity of a female mosquito of certain species of this genus. **A. albima'nus** [L. *albus*, white, + *manus*, hand], a species having white hind feet, a common carrier of the malarial parasite. **A. maculipen'nis,** the type species of this genus; the wings are marked by spots formed of collections of scales; one of the most widely spread species and active in the dissemination of the malarial germ. **A. punctipen'nis,** a species which apparently does not transmit the malaria germ.

anophelicide (an-ŏ-fel'ĭ-sīd) [*anopheles* + L. *cædere*, to kill.] An agent which is destructive to the anopheles mosquito.

anophelifuge (an-ŏ-fel'ĭ-fūj) [*anopheles* + L. *fugare*, to chase away.] An agent which drives away or prevents the bite of anopheles mosquitos.

anoph'elism. The habitual presence in any region of anopheles mosquitos.

anopho'ria [G. *anō*, upward, + *phoros*, tending] Hyperphoria.

anophthal'mia (an-of-thal'mĭ-ah) [G. *an-* priv. + *ophthalmos*, eye.] Congenital absence of one or both eyes. **a. cyclo'pica,** a condition in which the eyes and the orbits are rudimentary and fused together.

anophthal'mos. Anophthalmus (1).

anophthal'mus [G. *an-* priv. + *ophthalmos*, eye.] 1. Congenital absence of an eye, its place being taken by a small solid or cystic body. 2. A monster without eyes.

ano'pia [G. *an-* priv. + *ōps*(*ōp-*) eye] 1. Anophthalmia. 2. Anopsia. 3. [G. *anō*, upward.] Hyperphoria.

Anoplura (an-o-ploo'rah) [G. *anoplos*, unarmed, + *oura*, tail.] An order of wingless insects with mouths adapted for sucking; lice; see *Pediculus* and *Phthirius*.

anop'sia [G. *an-* priv. + *opsis*, sight.] 1. Non-use of the faculty of vision, such as occurs in the case of prisoners confined in dark cells, or results from cataract or high degrees of refractive errors or from the disuse of one eye in marked strabismus; it results in amblyopia. 2. Anoopsia.

anorchidism, anorchism (an-or'kĭ-dizm, an'or-kizm) [G. *an-* priv. + *orchis*, testis.] Absence or failure of descent of the testicles.

anorchus (an-or'kus). A male without testicles in the scrotum, either through lack or through failure of descent.

anorec'tal. Relating to both anus and rectum.

anorexia (an-o-rek'sĭ-ah) [G. *an-* priv. + *orexis*, appetite.] Loss of appetite. **a. nervo'sa,** a condition marked by loss of appetite with loss of weight, accompanied by delusions and marked hysterical symptoms.

anorthog'raphy [G. *an-* priv. + *orthos*, straight, + *graphō*, I write.] Agraphia, especially motor agraphia.

anortho'pia [G. *an-* priv. + *orthos*, straight, + *ōps* (*ōp-*), eye.] Heterophoria.

a'noscope [L *anus* + G. *skopeō*, I view.] Anal speculum an instrument to facilitate inspection of the anal canal

anosmat'ic. Relating to anosmia

anosmia (an-oz'mĭ-ah) [G. *an-* priv. + *osmē*, sense of smell.] A loss of the sense of smell. It may be *essential* or *true*, due to lesion of the olfactory nerve; *mechanical* or *respiratory*, due to obstruction of the nasal fossæ; *reflex*, due to disease in some other part or organ; *functional*, without any apparent causal lesion.

anosmic (an-oz'mik). Without the sense of smell.

anosodiaphoria (ă-no''so-di-ă-for'ĭ-ah) [G. *a-* priv. + *nosos*, disease, + *diaphoria*, difference.] Indifference, real or assumed, regarding the presence of disease, specifically of paralysis.

anosognosia (ă-no''sog-no'sĭ-ah) [G. *a-* priv. + *nosos*, disease, + *gnōsis*, knowledge.] Ignorance, real or feigned, of the presence of disease, specifically of paralysis.

anosphra'sia [G. *an-* priv. + *osphrasia*, smell.] Anosphresia, anosmia.*

anosphre'sia [G. *an-* priv. + *osphrēsis*, smell.] Anosphrasia, anosmia.*

anospinal (a-no-spi'nal). Relating to the center in the spinal cord which controls the contraction of the anal sphincter.

anosto'sis [G. *an-* priv. + *osteon*, bone.] Failure of ossification.

anotia (an-o'shyah) [G. *an-* priv. + *ous*(*ōt-*), ear.] Congenital absence of the pinna of the ear.

anotro'pia [G. *anō*, up, + *tropē*, a turning] Upward squint, hyperphoria.

anotus (an-o'tus) [G. *an-* priv. + *ous*(*ōt-*), ear.] A monster without ears, external or internal

anovesical (a-no-ves'ĭ-kal). Relating in any way to both anus and urinary bladder.

anoxybiosis (an-oks''ĭ-bi-o'sis) [G. *an-* priv. + *oxygen* + G. *biōsis*, manner of living.] Anaerobiosis.

anoxe'mia, anoxæ'mia [G. *an-* priv. + E. *oxygen* + G. *haima*, blood.] Deficient aeration of the blood

anoxhe'mia, anoxhæ'mia. Anoxemia

anoxyemia, anoxyæmia (an-oks-e-e'mĭ-ah) Anoxemia.

an'ozol. Trade name of a mixture of thymol and iodoform, used in surgical dressings as a substitute for the latter.

an'sa, gen. and pl. *an'sæ* [L. handle of a jug.] Any anatomical structure in the form of a loop or an arc, specifically one of the anastomosing loops between the posterior spinal nerve roots, espe-

cially of the cervical nerves. 2. A small wire loop used in bacteriological technique. **a. cap'itis,** the zygomatic arch. **a. hypoglos'si,** loop of the hypoglossal nerve, a communicating branch, sometimes two, on each side, from the descending ramus of the hypoglossus nerve and the cervical nerves. **a. lenticula'ris,** lenticular ansa or loop, a group of fibers of the thalamic radiation, emerging from the anterior portion of the inferior aspect of the thalamus and passing to the lenticular nucleus. **an'sæ nervo'rum spina'lium** [BNA], loops of the spinal nerves, connecting branches between the anterior spinal nerves. **a. peduncula'ris,** peduncular ansa or loop, a group of fibers of the thalamic radiation emerging from the under surface of the anterior part of the thalamus and passing outward below the lenticular nucleus to the cortex of the temporal lobe and the insula; it includes the lenticular loop and fibers of the inferior peduncle of the thalamus. **a. sacra'lis,** a nerve cord connecting the sympathetic nerve trunk and the ganglion impar. **a. subcla'via,** subclavian loop, loop of Vieussens, the cord connecting the middle and inferior cervical ganglia of the sympathetic, which winds around the anterior and inferior aspects of the subclavian artery.

an'sate, an'siform [L. *ansa*, handle, loop, + *forma*, shape.] Loop-shaped.

anserine (an'sur-in) [L. *anser*, goose.] Relating to or resembling a goose or any part of one; see *cutis anserina* and *pes anserinus*.

Anstie's rule [Francis Edmund *Anstie*, English physician, 1833–1874.] The greatest amount of alcoholic beverages which a man with sound organs may take daily without injury is the equivalent of 1½ ounces of absolute alcohol. **A.'s test,** for alcohol in the urine; a mixture of potassium bichromate 1, sulphuric acid 300, is added a drop at a time, when a green color appears if alcohol is present.

antacid (ant-as'id) [G. *anti*, against, + L. *acidum*, acid.] 1. Neutralizing an acid. 2 Any agent which reduces or neutralizes the acidity of the gastric juice or any other secretion.

antacidin (ant-as'i-din). Calcii * saccharas.

antag'onism [G. *antagōnismos*, from *anti*, against, + *agōnizomai*, I fight.] Opposition, mutual resistance; noting mutual opposition in action between muscles, drugs, diseases, or physiological processes or between drugs and diseases or drugs and physiological processes.

antag'onist. That which opposes or resists the action of another; noting certain muscles, drugs, etc., which tend to neutralize or impede the action or effect of other muscles, etc. **asso'ciated a.,** one of two muscles or groups of muscles which pull in nearly opposite directions, but which, when acting together, move the part in a path between their diverging lines of action.

antagonization (an-tăg-gon-i-za'shun). Articulation; the varying contacts of the opposing teeth in mastication.

antag'onize. To neutralize, prevent action, or destroy effect.

antalge'sic [G *anti*, against, + *algēsis*, pain] Anodyne.

antal'gic [G. *anti*, against, + *algos*, pain.] Anodyne.

antal'kaline [G. *anti*, against.] Reducing or neutralizing alkalinity.

antaphrodisiac (ant"af-ro-diz'i-ak) [G. *anti* against, + *aphrodisiakos*, sexual.] Anaphrodisiac.

antaphrodit'ic. 1. Anaphrodisiac. 2. Antivenereal.

antapoplec'tic [G *anti*, against.] Having a supposed power to prevent apoplexy or relieve its effects.

ant"arthrit'ic [G. *anti*, against, + *arthritikos*, gouty.] 1. Relieving gout. 2. A remedy for gout.

antasthen'ic [G. *anti*, against, + *astheneia*, weakness.] Strengthening, invigorating, or an agent possessing such qualities.

ant"asthmat'ic [G. *anti*, against.] 1. Tending to relieve or prevent asthma. 2. An agent which prevents or arrests an asthmatic attack.

antatroph'ic [G. *anti*, against, + *atrophia*.] 1. Preventing or curing atrophy. 2 An agent which promotes the restoration of atrophied structures.

antebrachial (an'te-bra'kĭ-al). Relating to the forearm.

antebrachium (an-te-bra'kĭ-um) [L. *ante*, before, + *brachium*, arm.] Forearm; also written anti brachium.

antecar'dium. Præcordium.

an'te ci'bum [L.] Before a meal.

antecor'nu. Anterior cornu or horn, specifically the anterior cornu of a lateral ventricle of the brain.

antecu'bital [L. *ante*, before, + *cubitum*, elbow.] In front of the elbow **a. space,** the triangular hollow on the anterior surface of the elbow.

antecur'vature. Anterior curvature, anteflexion.

antefebrile (an-te-fe'brĭl, an-te-feb'ril) [L. *ante*, before, + *febris*, fever.] Before the occurrence of fever; before the period of reaction following shock.

anteflect' [L *ante*, before, + *flectere*, to bend] To bend forward, or cause to bend forward.

an"teflec'ted. Anteflexed.

anteflec'tion. Anteflexion.

anteflex'. Anteflect.

anteflexed (an-te-flekst'). In a state of anteflexion.

anteflex'io u'teri. See *anteflexion*.

anteflex'ion. A bending forward; a sharp forward curve or angulation; noting especially a forward bend in the uterus at the junction of body and neck.

anteloca'tion [L. *ante*, before, + *locare*, to place.] Forward displacement of an organ or other part; noting especially the anterior displacement as a whole, without flexion or version, of the uterus

antemet'ic [G. *anti*, against, + *emetikos*, emetic.] 1. Preventing or arresting vomiting. 2. A remedy which tends to control nausea and vomiting.

an'te mor'tem [L.] Before death. contrasting with *post mortem*, after death.

antenatal (an-te-na'tal) [L. *ante*, before, + *natus*, birth.] Occurring or existing before the birth of the individual.

antenna, pl. *antenn'æ* (an-ten'ah) [L. a sail-yard.] A feeler, one of the two lateral appendages projecting forward from the anterior segment of the head of an arthropod.

an'te par'tum [L.] Before delivery or childbirth; contrasted with *post partum*, after delivery.

antepros'tate [L. *ante*, before] Cowper's gland.

anteprostatitis (an-te-pros-tă-ti'(te')tis). Inflammation of Cowper's glands.

antepyret'ic [L. *ante*, before, + G. *pyretos*, fever.] Antefebrile. (Not to be confounded with *antipyretic*)

ante'rior [L.] 1. Before, in relation to time or space; in front of or in the front part of; ventral [NK], hemal, as contrasted with dorsal, neural. 2. In botany, noting that part of a lateral member which is away from the parent axis. 3. In dentistry, oral, noting the six front teeth in either jaw.

antero-. A prefix denoting anterior.
an'tero-exter'nal. In front and to the outer side.
an'terograde [L. *gradior, gradi*, to step.] Moving forward.
an'tero-infe'rior. In front and below.
an'tero-inter'nal. In front and to the inner side.
anterolat'eral. In front and to the side, especially the outer side.
anterome'dial. In front and toward the inner side or middle line.
anterome'dian. In front and in the central line.
anteroposte'rior. Relating to both front and rear.
anterosupe'rior. In front and above.
anteversion (an-te-vur'shun) [L. *ante*, before, + *versio*, a turning.] Turning forward, inclining forward as a whole without bending; noting a malposition of this nature of the uterus.
antevert'. To incline forward; to cause to incline forward.
antevert'ed. Tilted forward; in a position of anteversion.
anthe'la [G. *anthēlē*, the downy plume of the seed.] In botany, an irregular cymose corymb, in which the branches of the inflorescence are progressively shorter from below upward.
anthelix (ant'he-liks, an'the-liks) [G. *anti*, against, + *helix*.] An elevated ridge of cartilage anterior and roughly parallel to the posterior portion of the helix of the auricle.
anthelminthic (an-thel-min'thik). Anthelmintic.
anthelmintic (an-thel-min'tik) [G. *anti*, against, + *helmins*, worm.] 1. Having the power to destroy or expel intestinal worms. 2. A vermifuge **ven'enous a.,** one which acts by directly poisoning the worm.
antheloticum (an-thel-ot'ĭ-kum). A remedy for corns or helomata.
an'themis, anthem'idis flo'res (Br.). Chamomile, the flowering heads of *Anthemis nobilis*, tonic, aromatic, and stomachic, in doses of gr. 30–60 (2.0–4.0) in the form of a tea or extemporaneous infusion.
anthemorrhagic (ant-hem-ŏ-raj'ik) Having the power to prevent or arrest hemorrhage.
an'ther [G. *anthēros*, blooming] The part of the stamen of a flower which bears the pollen
antherid'ium. The spore-bearing organ in a cryptogamic plant corresponding to the anther in a phanerogamic plant.
antherozoid (an'ther-o-zoyd) A motile body, formed through the splitting up of the antheridium, which fertilizes the oosporangium in fungi.
Anthomy'ia canalicular'is [G. *anthos*, flower, *myia*, fly.] The small black horse-fly, the larvæ of which are sometimes parasitic in the intestine of man, being hatched there from the ingested eggs; alarming symptoms of gastroenteric irritation may be caused by it.
anthracemia, anthracæmia (an"thră-se'mĭ-ah) [G. *anthrax* + *haima*, blood] Generalized anthrax infection, with presence of the bacilli in the peripheral blood circulation; also written *anthrakemia*.
an'thracene [G. *anthrax*, coal.] A hydrocarbon, $C_{14}H_{10}$, obtained from coal-tar; the alizarin dyes are manufactured from it.
anthra'cia. The occurrence of carbuncles.
anthracic (an-thras'ik). Relating to anthrax
an'thracin. 1. Anthracene. 2. A toxin of the anthrax bacillus.
an'thracoid [G. *eidos*, resemblance.] Resembling a carbuncle or a malignant pustule; resembling anthrax or its bacillus.
anthracom'eter [G. *anthrax*, coal (carbon), + *metron*, measure.] An instrument for determining the amount of carbon dioxide in the air or other gaseous mixture.
an"thraconecro'sis [G. *anthrax*, coal, + *nekrōsis*, deadness.] Dry, black gangrene.
anthraco'sis [G. *anthrax*, coal.] A form of pulmonary dust-disease or pneumonoconiosis due to the inhalation of coal-dust; coal-miners' disease.
an"thragall'ol. Trioxyanthraquinone, a reaction product of benzoic, gallic, and sulphuric acids; a brown dye.
anthraglu"corham'nin. A glucoside from *Rhamnus frangula*, possessing cathartic properties.
anthraglucorhein (an"thra-glu-ko're-in). A glucoside from rhubarb, having cathartic properties.
an"thraquin'one. 1. $C_{14}H_8O_2$, the basis of the natural cathartic principles in plants; see *quinone* (2). 2. A yellow substance used in the manufacture of alizarin and as a reagent.
anthrar'obin. A derivative of alizarin, a light brownish or yellowish powder, employed in 5 to 10 per cent ointment in ringworm and psoriasis.
an'thrasol. A distillate from coal-tar, resembling olive oil in color and consistency; employed for the relief of pruritus and in skin affections in 10 to 20 per cent. ointment.
an'thrax [G. a live coal.] 1. Carbuncle. 2. Splenic fever, an infectious disease of animals, especially the herbivora, due to the presence in the blood of *Bacillus anthracis* 3. Wool-sorters' disease (pulmonary form), mycosis intestinalis (gastroenteric form), malignant pustule or malignant edema (cutaneous form), occurring in man from infection with *Bacillus anthracis;* the disease is marked by hemorrhage and serous effusions in the organs and cavities in the body, and symptoms of extreme prostration. **cer'ebral a.,** a form of interna la., associated with pulmonary or intestinal a., in which the specific bacilli invade the capillaries of the brain; in addition to the symptoms of pulmonary or intestinal a there is violent delirium. **emphysem'atous a.,** symptomatic a. **intes'tinal a.** gastroenteric a., a form of internal a. marked by chill, high fever pain in the head, back, and extremities, vomiting, bloody diarrhea, great prostration, and frequently hemorrhages from the mucous membranes and in the skin (petechiæ); the disease is usually fatal. **malig'nant a.,** splenic fever, charbon, same as anthrax (2). **pul'monary a.,** wool-sorters' disease, a form of internal a. acquired by inhalation of dust containing *B. anthracis;* there is an initial chill followed by pain in the back and legs, rapid respiration, dyspnea, cough, fever, rapid pulse, and extreme prostration. **symptomat'ic a.,** a disease of cattle and sheep, marked by foci of emphysematous phlegmons and gangrene; caused by the presence of *Cl. chauvei* in cattle and *Cl. œdematis maligni* in sheep.
an"thropogen'esis [G. *anthrōpos*, man, + *genesis*, origin.] Anthropogeny.
anthropogen'ic, anthropogenet'ic. Relating to anthropogeny
anthropogeny (an-thro-poj'en-ĭ) [G. *anthrōpos*, man, + *gennaō*, I produce.] Anthropogenesis; the origin and development of man, both individual and racial.
anthropog'ony. Anthropogeny.
anthropog'raphy [G. *anthrōpos*, man, + *graphō*, I write.] The geography of man, the distribution of the human races.

an'thropoid [G. *anthrōpos*, man, + *eidos*, resemblance] 1. Resembling man in structure and form. 2 One of the monkeys resembling man, an ape

Anthropoidea (an-thro-po-id'e-ah) [G. *anthrōpos*, man, + *eidos*, resemblance.] A suborder of *Primates*, including man and the monkeys.

anthropol'ogy [G. *anthrōpos*, man, + *-logia*.] The branch of science which treats of man in all his relations. **crim'inal a.**, a. in its relation to the habitual criminal, his physical and mental peculiarities, heredity, social relations, etc.

anthropom'eter. One skilled in anthropometry.

anthropom'etry [G. *anthrōpos*, man, + *metron*, measure.] The branch of anthropology which deals with the comparative measurements of the human body and its several parts. **crim'inal a.**, bertillonage.

anthropoph'agy [G. *anthrōpos*, man, + *phagō*, I eat.] Cannibalism.

an"thropopho'bia [G. *anthrōpos*, man, + *phobos*, fear.] A morbid aversion to or dread of human companionship.

anthroposomatology (an-thro"po-so-mă-tol'o-jĭ) [G. *anthrōpos*, man, + *sōma*, body, + *-logia*.] That part of anthropology which has to do with the human body, such as anatomy, physiology, pathology, etc

an"thropotox'in. A supposed toxin in the exhaled breath.

anthydrop'ic (ant-hi-drop'ik or an-thi-drop'ik). Antihydropic.

anthyll'is. The dried flowers of *Anthyllis vulneraria*, woundwort, stomachwort; they are styptic and vulnerary.

anthypnotic (ant-hip-not'ik). Antihypnotic.

anti- [G. *anti*, against] A prefix signifying against, opposing, or, in relation to symptoms and diseases, curative.

antia'brin. An antibody or antitoxin to abrin.

antiacid (an-tĭ-as'id). Antacid.

antiaditis (an-tĭ-ad-i'(e')tis) [G. *antias* (*antiad-*), tonsil, + *-itis*.] Tonsillitis.

antiagglu'tinin. A specific antibody preventing the action of an agglutinin.

antiaggress'in. A specific antibody preventing the action of an aggressin.

antial'bumate, antialbu'minate. Parapeptone

antial'bumid. An acid albumin or metaprotein, resistant to the action of the digestive fluids; it is obtained by boiling a protein with dilute sulphuric acid.

antialbumin (an-tĭ-al-bu'min). A constituent of albumin which is supposed to be the source of antialbumose formed during digestion.

antial'bumose. An albumose formed during the peptic digestion of albumin; further hydrolysis converts it into antipeptone.

antialex'in. Anticomplement.

antiam'boceptor. Anti-immune body.

antiamylase (an-tĭ-am'ĭ-lāz). A substance which neutralizes the action of amylase.

antianaphylac'tin. A specific antibody to an anaphylactin.

antianaphylaxis (an"tĭ-an"ah-fi-lak'sis). A condition neutralizing anaphylaxis; that is, immunity.

antian'tibody. An antibody to an antibody.

antiantitox'in. An antibody to an antitoxin.

antiapoplec'tic. Antapoplectic.

antiarachnolysin (an-tĭ-ar-ak-nol'i-sin) [G. *anti*, against, + *arachnē*, spider, + *lysin*.] An antivenin counteracting the poison of the spider.

antiarin (an-tĭ-ar'in). A glucoside, the active principle of antiaris.

antiar'is. Upas, a gum-resinous exudate from *Antiaris toxicaria*, a tree of the East Indies, used as an arrow poison; it is a vasomotor, cardiac, and muscular paralyzer.

antiar'senin. An antibody formed in the blood after repeated small, but increasing, doses of arsenic

antiar'thrin. 1. Trade name of a brown powder, the concentration product of saligenin and tannin; antiarthritic, antipyretic, and analgesic in doses of gr. 15–20 (1.0–1.2). 2. A proprietary antirheumatic remedy said to contain salicin with the taste masked by roasted chestnut

an"tiarthrit'ic [G. *anti*, against, + *arthritis*.] 1 Tending to prevent or cure gout 2 An antigout remedy.

antiasthmatic (an"tĭ-az-mat'ik) [G *anti*, against.] 1. Relieving or preventing asthma. 2 A remedy that may prevent or shorten an asthmatic paroxysm.

antiautolysin (an-tĭ-aw-tol'i-sin) An antibody antagonizing an autolysin.

antibacte'rial. Destructive to or preventing the growth of bacteria.

antibac'terin. Trade name of an antiseptic solution which has been proposed as a remedy for tuberculosis.

antibechic (an-tĭ-bek'ik) [G. *anti*, against, + *bēx* (*bēch-*), cough] 1. Having the property of relieving cough 2. A cough remedy.

antibio'sis [G. *anti*, against, + *biōsis*, life.] An association of two organisms which is detrimental to one of them.

antibiot'ic. 1. Relating to antibiosis 2. Prejudicial to life.

antiblennorrhagic (an-tĭ-blen-o-raj'ik) Preventive or curative of catarrh or of gonorrhea; also a remedy possessing such properties

an'tibody [G *anti*, against.] Any substance in the blood-serum or other fluids of the body which exerts a specific restrictive or destructive action on bacteria or other noxa, or neutralizes their toxin; antitoxins, precipitins, agglutinins, immune bodies, opsonins, and lysins are antibodies.

antibrachial (an-tĭ-bra'kĭ-al). Relating to the forearm

antibrachium (an-tĭ-bra'kĭ um) [G *anti*, against, opposed, + *brachiōn*, arm.] [BNA] The forearm.

antibro'mic. [G. *anti*, against, + *brōmos*, smell.] 1 Deodorizing 2. A deodorizer.

antibrule (an'ti-brool) [G. *anti*, against, + Fr. *brûler*, to burn] Trade name of an antiseptic preparation proposed as an application to burns and scalds

antical'culous. Antilithic; preventing the formation of calculi or promoting their solution

antican'crin. A supposed antibody to cancer cells.

anticar'dium [G *anti*, against, + *kardia*, heart.] Precordium

antica'rious. Preventing caries.

anticataphylaxis (an"tĭ-kat-ă-fi-laks'is) [L. *anti*, against, opposed to.] Interference with the cataphylaxis or the transport of phylactic agents to the site of infection.

anticatarrhal (an-tĭ-kă-tar'al). Preventive or curative of catarrhal inflammation of the mucous membranes

anticath'ode. Target, a metal plate in an *x*-ray tube on which the cathode rays impinge, giving origin to the *x*-rays.

an'tichlor. Trade name of a preparation of sodium sulphite used as a food preservative.

antichlor'en. Trade name of an albuminate of mercury prepared by the action of biniodide and bichloride of mercury on peptone; employed in the treatment of syphilis in dose of gr. ⅛ (0.01)

anticholagogue (an-tī-kol-ă-gog). Depressing the hepatic function, opposing the secretion of bile.

anticholerin (an-tī-kol'er-in). A protein obtained from cultures of the cholera bacillus, employed in the treatment of cholera.

anticipate (an-tis'i-pāt) [L. *anticipare*, to take in advance.] To come before the appointed time; said of a periodical symptom or disease, such as a malarial paroxysm, when it recurs at progressively shorter intervals.

anticli'nal [G. *anti*, against, + *klinō*, I incline.] Inclined in opposite directions, as the two sides of a pyramid.

anticloud'ine. Trade name of a preparation to prevent the precipitation of moisture on eyeglasses or on the mirror of a laryngoscope.

anticne'mion [G. *antiknēmion*.] The shin.

anticoagulant (an"tī-ko-ag'u-lant). 1. Anticoagulative. 2. An agent preventing coagulation.

anticoag'ulative. Preventing coagulation.

anticoagulin (an"ti-ko-ag'u-lin). An antibody to coagulin.

anticom'plement. A substance which combines with a complement and so neutralizes its action by preventing its union with the amboceptor; antialexin.

anticomplemen'tary. Noting a substance possessing the power of diminishing or abolishing the action of a complement.

anticoncip'iens [G. *anti*, against, + L. *concipere*, to conceive.] An agent preventing conception.

anticonta'gious. Preventing contagion.

anticonvul'sive. 1. Preventing or arresting convulsions. 2. An agent which tends to prevent or arrest convulsions.

anticor (an'tī-kor). A sore in the horse caused by pressure or friction by the harness

anticor'nutin. Trade name of an antiseptic preparation of the sulphates of iron, zinc, and copper or calcium.

antico'roin. Trade name of an antiseptic preparation of the sulphates of iron, zinc, and magnesium.

anticorro'sive. Preventing corrosion.

anticreatinine (an"tī-kre-at'in-ēn). A leucomaine from creatinine.

an'ticrisis. Anything which prevents the crisis of a disease, or one of the crises of tabes dorsalis.

anticrit'ical.—Preventing the crisis of a disease.

anti'cus [L. in the very front.] A term in anatomical nomenclature to designate a muscle or other structure which of all similar structures is nearest the front or ventral surface; the [BNA] employs "anterior" in place of anticus.

anticu'tine. An antibody in the serum of some tuberculous subjects which, when mixed with tuberculin, will so neutralize the latter that it will no longer cause a reaction.

anticytost (an-tī-si'tost). Turck's name for an antibody which gives immunity against the specific cellular toxin, cytost.*

anticytotox'in [G. *anti*, against, + *kytos*, cell + E. *toxin*.] A specific antibody inhibiting the action of a cytotoxin.

antidiabe'tin. Trade name of a sweetening substance, a mixture of mannite and saccharin, for the use of diabetics.

antidi'astase. An antibody to diastase.

antidin'ic [G. *anti*, against, + *dinos*, dizziness.] 1. Relieving vertigo. 2. An agent which prevents or relieves vertigo.

antidiph'therin. A protein obtained from cultures of diphtheria bacilli; used as a local application in diphtheria.

antido'lorin [G. *anti*, against, + L. *dolor*, pain.] Trade name of a preparation of ethyl chloride, used for the relief of superficial pain.

an'tidotal. Relating to or acting as an antidote.

an'tidote [G. *antidotos*, from *anti*, against, + *dotos*, what is given.] An agent which neutralizes a poison or counteracts its effects. **chem'ical a.,** a substance which unites with a poison to form an innoxious chemical compound. **mechan'ical a.,** a substance which prevents the absorption of a poison. **physiolog'ical a.,** an agent which produces systemic effects contrary to those of a given poison.

antido'tum. Antidote. **a. arsen'ici,** antidote to arsenic, ferri* hydroxidum cum magnesii oxido.

antidysenter'ic. Relieving or preventing dysentery.

antidysu'ric. Preventing or relieving strangury or distress in urination.

antiemetic (an"tī-e-met'ik) [G. *anti*, against, + *emetikos*, nauseated.] 1. Preventing or arresting vomiting 2. An agent which relieves nausea or arrests vomiting. **a. root,** cyperus.

antiendotox'in. An antibody elaborated by a leucocyte, acting upon the endotoxin of the ingested bacteria.

antienergic (an"tī-en-ur'jik) [G. *anti*, against, + *energos*, active.] Acting against or in opposition.

antienzyme (an"tī-en'zīm). 1. An antibody to an enzyme. 2. An inhibitory enzyme, one capable of retarding or checking the activity of another enzyme.

antiepithe'lial se'rum. A serum containing a cytotoxin specific for epithelium.

antifebrile (an"tī-fe'brīl, an"tī-feb'ril) [G. *anti*, against, + L. *febris*, fever.] Antipyretic.

antifeb'rin. Trade name of acetanilid. **a. sal'icylate,** salifebrin

antifer'ment. Antienzyme.

antifermen'tative. Preventing or arresting fermentation.

antiform'in. Trade name of a disinfectant containing about 5.3 per cent. of combined chlorine and 7.5 per cent. of free sodium hydrate; as it does not act upon tubercle bacilli, it is employed to isolate these organisms from sputum.

antifun'gin. Trade name of a preparation containing borate of magnesium, employed in solution as a gargle in diphtheria and sore throat.

antigalactagogue (an"tī-gal-ak'tă-gog) [G. *anti*, against, + *gala*(*galakt*-), milk, + *agōgos*, drawing forth.] Antigalactic.

antigalac'tic [G. *anti*, against, + *gala*(*galakt*-), milk.] 1. Diminishing or arresting the secretion of milk. 2. An agent which dries up the secretion of milk.

antigen (an'tī-jen) [*anti*(*body*) + G. *gennaō*, I produce.] 1. Any substance which, when introduced into the animal organism, causes the production of an antibody; haptin (2). 2. The extract of liver or spleen of a syphilitic fetus, or of normal heart tissue, used in the Wassermann* test. **acetone-insoluble a.,** the remainder of an alcoholic extract of heart tissue after treating it with acetone. **choles'terinized a., heart a.,** with the addition of 4 per cent. cholesterin. **heart a.,** an alcoholic extract of normal heart tissue, used in the Wassermann test. **therapeu'tic a.,** a substance which, when injected into the body, excites the production of protective antibodies.

antigentotherapy (an-tī-jen''-to-ther'ă-pī). Stimulation of antibody-production by the injection of an antigen; vaccine or opsonic therapy.

antigonorrhe'ic. Curative of gonorrhea.

antihe'lix. Anthelix.

antihemagglu'tinin. An antibody to hemagglutinin.

antihemolysin (an"tĭ-he-mol'i-sin). A substance which neutralizes the action of an hemolysin; an antibody to hemolysin.

antihemolyt'ic. Preventing hemolysis

antihemorrhagic (an-tĭ-hem-or-raj'ik). Hemostatic, arresting hemorrhage.

antihidrot'ic [G. *anti*, against, + *hidrōtikos*, sudorific.] Antisudorific. 1 Arresting the secretion of sweat. 2. An agent which prevents or arrests sweating.

antihormone (an-tĭ-hōr'mōn). Chalone.

antihydrop'ic [G. *anti*, against, + *hydrōpikos*, dropsical.] 1. Relieving dropsy. 2 An agent which causes dropsical effusions to disappear.

antihy'dropin. Trade name of a diuretic from *Blatta orientalis* or the cockroach, given in doses of gr. 10–15 (0.6–1.0).

antihyster'ical. Relieving or preventing hysteria.

antiicteric (an"tĭ-ik'ter-ik). Preventing or curing jaundice.

antiimmune body (an"tĭ-im-mūn' bod'ĭ). Antiamboceptor, an antibody to the immune body.

antiintermediary body (an"tĭ-in-tur-me'dĭ-a-rĭ bod'ĭ). Antiamboceptor.

antiisol'ysin. A substance which will inhibit the action of an isolysin

antikam'nia [G. *anti* against. + *kamnō*, I am ill.] A proprietary analgesic and hypnotic, said to contain acetanilid or acetphenetidin, caffeine, and sodium bicarbonate, the dose recommended is gr. 5–10 (0.3–0 6).

antiketogenesis (an-tĭ-ke-to-jen'e-sis) [G. *anti*, against, + *ketone* + *genesis*, production.] The lowering of acidosis through the oxidation of sugar and allied substances in the body; the sugar or alcohol is supposed to act as the reducing agent, becoming oxidized, while the diacetic acid through its ketone group acts as the oxidizer, thereby becoming reduced.

antiketogen'ic [*anti*, against, + *ketone*(acetone) + *gennaō*, I produce] Inhibiting the formation of acetone

antiketoplas'tic [*anti*, against, + *ketone*(acetone), + *plassō*, I form.] Reducing the amount of acetone compounds excreted in urine or breath.

antiki'nase. An antibody to kinase

antiku'tine. Anticutine

antilac'tase. An antibody preventing the ferment action of lactase.

antilactose'rum. A serum containing the antibody to the precipitin of lactoserum.

antilem'ic, antilœm'ic [G. *anti* against, + *loimos*, plague] Preventive or curative of the plague.

antilep'tic [G. *antilēptikos*, able to check] Preventing an attack of disease.

antileuco'cidin. An antibody to the leucocidin of streptococcus cultures.

antileucotox'in. An antibody to a leucotoxin.

antilith'ic [G *anti*, against, + *lithos*, stone.] 1. Anticalculous. 2. An agent which prevents the formation of calculi, especially uric-acid calculi, or is supposed to effect their solution

antilo'bium [G. *anti*, against, + *lobos*, lobe of the ear.] Tragus.

antiluetic (an-tĭ-lu-et'ik). Antisyphilitic.

antilysin (an-tĭ-li'sin). An antibody to a lysin.

antīl'ysis. The result of the action of an antilysin whereby cytolysis is prevented, and sometimes bacteriolysis is permitted

antilyss'ic. Antirabic preventing or curing rabies.

antilyt'ic. Preventing lysis, especially cytolysis or hemolysis.

antimala'rial. Preventing or curing malaria.

antimere (an'tĭ-mēr) [G. *anti*, against, + *meros*, a part.] 1. A segment of an animal body formed by planes cutting the axis of the body at right angles. 2. One of the symmetrical parts of a bilateral organism

antimer'istem [G. *anti*, against, + *meristem*, embryonal tissue.] An alleged antitoxin for the supposed pathogenic microorganism of malignant growths.

antimetro'pia. A form of anisometropia in which the refractive errors in the two eyes are of different kinds, as when one eye is myopic and the other hypermetropic.

antimiasmat'ic. Antimalarial.

antimicro'bic. 1 Opposed to or disbelieving in the pathogenic action of microorganisms. 2. Tending to destroy microbes, to prevent their development, or to prevent their pathogenic action

antimo'nial. Containing or relating to antimony.

antimon'ic. 1. Antimonial. 2. Noting a chemical compound containing antimony in its quinquivalent relation. **a. acid,** one of three acids H_3SbO_4 (ortho-), $HSbO_3$ (meta-), and $H_4Sb_2O_7$ (pyro-antimonic acid). **a. ox'ide,** Sb_2O_5, antimony pentoxide, a lemon-yellow insoluble powder.

an'timonide. A chemical compound containing antimony in union with a more positive element.

antimo'nious. 1. Antimonial. 2 Noting a chemical compound containing antimony in its trivalent relation. **a. chlor'ide,** $SbCl_3$, antimonii chloridum. **a. ox'ide,** Sb_4O_6 antimony trioxide, antimonii oxidum (Br). **a. sulphide,** black antimony.

antimo'nium. Antimony, a lustrous grayish metal, symbol Sb(*stibium*), atomic weight 121.77. **antimo'nii chlor'idum,** butter of antimony, employed externally as a caustic for the removal of warts and other small growths; **antimo'nii et potas'sii tar'tras** (U.S.), antimonium tartaratum (Br.), tartar emetic, antimonium and potassium tartrate; in crystals or white granular powder, expectorant in doses of gr. $\frac{1}{20}$–$\frac{1}{10}$ (0.003–0.006), emetic in doses of gr. $\frac{1}{4}$–1 (0.03–0.06). **antimo'nii et so'dii thioglycol'las,** antimony-sodium thioglycollate, a compound of antimony trioxide, sodium thioglycollate, and thioglycollic acid, occurring as a white or faintly pinkish powder, odorless, and freely soluble in water; employed for the same purpose as antimony thioglycollamide in doses of gr. 1–2 (0.05–0.1) dissolved in 15 c.c. of sterile water every three days for a period of 6 weeks. **a. ni'grum purifica'tum** (Br.), purified black antimony, a dark gray crystalline powder. **antimo'nii ox'idum** (N.F. and Br.), antimonious oxide, antimony trioxide, a heavy white powder; expectorant and emetic in doses of gr. 1–2 (0.06–0.13). **a. sulphura'tum** (Br.), sulphurated antimony, kermes-mineral, a reddish or orange-red powder, employed as an emetic in doses of gr. 1–3 (0.06–0.2). **antimo'nii sul'phidum purifica'tum,** purified antimonium sulphide, purified black antimony; employed in the manufacture of antimonium sulphuratum. **a. tartara'tum** (Br.), tartrated antimony, tartar emetic, antimonii et potassii tartras (U.S.). **antimo'nii thioglycollam'idum,** antimony thioglycollamide, the triamide of antimony thioglycollic acid, $Sb(S.CH_2CO.NH_2)_3$, occurring as a white crystalline powder, soluble in about 200 parts of water; recommended in the treatment of trypanosomiasis, kala azar, and filariasis in doses of 0.08 gm. dissolved in 20 c.c. of sterile

water by intravenous or intramuscular injection every other day for one month.

an'timony. Antimonium. stibium. **black a.,** the native sulphide of antimony, antimonious sulphide, stibnite, Sb_2S_3, freed from impurities. **butt'er of a.,** antimonii chloridum, $SbCl_3$, employed as a caustic. **com'pound pill of a.,** Plummer's* pill. **pow'der of a.,** James'* powder. **wine of a.,** vinum* antimonii.

antimu'corin. An antiseptic preparation of the sulphates of iron and zinc.

antimycot'ic [G. *anti*, against, + *mykēs*, fungus.] Antimicrobic, antibacterial; destructive to fungi.

antinephrit'ic. Preventing or relieving inflammation of the kidneys.

antiner'vin. Salicylbromanilide.

antineural'gic. Relieving the pain of neuralgia.

an"tineurotox'in. An antibody to a neurotoxin

antin'iad. Toward the antinion.

antin'ial. Relating to the antinion.

antin'ion [G. *anti*, against(opposite), + *inion*, nape of the neck.] The space between the eyebrows; the point on the skull opposite the inion.

antinonn'in. Trade name of sodium orthodinitrocresylate; a yellow paste soluble in water; antiseptic and insecticide in 1 per cent. solution.

antin'osin [G. *anti*, against, + *nosos*, disease.] Nosophen-sodium, a soluble bluish powder, antiseptic; employed as a substitute for iodoform, and in solution as an application to the inflamed mucous membranes of the upper air tract.

antiodontal'gic [G. *anti*, against, + *odous(odont-)*, tooth, + *algos*, pain.] 1. Relieving toothache. 2 A toothache remedy.

antiorgas'tic. Antaphrodisiac, anaphrodisiac

antiparalyt'ic. Reputed to relieve paralysis

antiparasit'ic. Destructive to parasites.

antipar'asitin. Potassium dinitrocresylate; antiseptic and antiparasitic.

antiparas'tata [G. *anti*, against, + *parastatēs*, a testicle.] Cowper's gland.

antip'athy [G. *anti*, against, + *pathos*, suffering] Enantiopathy.

antipep'tone [G. *anti*, instead of.] One of the products of the splitting of amphopeptone.

antiperiodic (an"tī-pe-rī-od'ik). Preventing the regular recurrence of a disease or a symptom; antimalarial.

antiperiostin (an"tī-per-ī-os'tin) Trade name of a remedy for spavin and other swellings in the horse.

antiperistal'sis. Reversed peristalsis; contrary intestinal contractions forcing the contents upward.

antiperistal'tic. 1. Relating to antiperistalsis. 2 Impeding or arresting peristalsis

antiphagin (an-tif'ă-jin) [G. *anti*, against, + *phag(ocyte)*.] Virulin, a substance developed in virulent bacteria which renders them resistant to the phagocytes; the substance is an antiopsonin neutralizing opsonin in the test-tube.

antiphagocyt'ic. Impeding or preventing the action of the phagocytes.

antiphial'tic [G. *anti*, against, + *ephialtēs*, nightmare.] Tending to prevent nightmare or distressing dreams.

antiphlogis'tic [G. *anti*, against, + *phlogistos*, on fire.] 1. Preventing or relieving inflammation. 2. An agent which subdues inflammation.

antiphlogis'tine. Trade name of a preparation, said to consist chiefly of a purified clay and glycerin, employed like a poultice in inflammatory conditions.

an'tiphone [G. *anti*, against, + *phōnē*, sound.] An appliance for occluding the external auditory meatus to dull the perception of disturbing noises.

antiphrynolysin (an-tī-fri-nol'ī-sin) [G. *anti*, against. + *phrynos*, toad, + *lysin*.] An antivenin counteracting the poison of the toad.

antiphthisical (an-tī-tiz'ī-kal). Relieving or curing phthisis.

antiphthisin (an-ti-te'zin). See Klebs' tuberculin.*

antiphy'min [G. *anti*, against, + *phyma*, a tubercle.] Trade name of a preparation employed in tuberculosis.

antiplas'tic. Preventing cicatrization.

antiplatelet (an-tī-plāt'let) [G. *anti*, against, + *platelet*.] Having a lytic or agglutinative action upon the platelets of the blood.

antipneumococ'cic. Destructive to, or repressing the growth of, the pneumococcus. **a. se'rum,** a bactericidal serum which has been employed in the treatment of croupous pneumonia.

antipneumotox'in. An antitoxin to the poison of the pneumococcus

antipodag'ric. Antiarthritic.

antip'odal. Opposite, occupying the opposite sides of a cell or other globular body **a. cell,** one of two cells formed from the nuclei at the base of the embryo sac in a seed, opposite the nuclei forming the oospore

antiprecip'itin. A specific antibody inhibiting the action of a precipitin.

antipros'tate. Anteprostatic. antiparastata. Cowper's* gland.

antiprurit'ic. 1. Preventing or relieving itching. 2. An agent which relieves itching

antipsoric (an-te-so'rik or an-tip-so'rik) [G. *anti*, against, + *psōra*, the itch] Curative of scabies, or the itch **a. rem'edy,** in homeopathy, one which is especially serviceable in the treatment of psora* or of chronic disease in general

antiputrefac'tive. Preventing putrefaction.

antipy'ic [G *anti*, against, + *pyon*, pus] Antipyogenic.

antipyogen'ic [G *anti*, against, + *pyon* pus, + *gennaō*, I produce] Preventing suppuration.

antipy'onin [G. *anti*, against, + *pyon*, pus] Neutral sodium tetraborate, a fine white powder obtained by fusing together equal parts of borax and boric acid; employed externally in conjunctivitis, keratitis, and otitis.

antipyre'sis. Treatment of fever as a symptom

antipyret'ic [G. *anti*, against, + *pyretos*, fever.] 1 Reducing fever. 2. An agent tending to reduce fever, a febrifuge.

antipyri'na (U.S.). Antipyrine, phenazone (Br.), phenyldimethyl-pyrazolon; in colorless lamellar crystals or a crystalline powder, soluble in water; antipyretic and analgesic in doses of gr. 5–20 (0.3–1.3).

antipyrine (an-tī-pi'rēn or an-tī-pi-rēn') [G. *anti*, against, + *pyretos*, fever.] Antipyrina (U.S.). phenazone (Br.). **a. acetylsal'icylate,** acetopyrine, acopyrine, a white crystalline powder, a compound of antipyrine and aspirin; antirheumatic and analgesic; dose, gr. 5–10 (0.3–0.6). **a. ben'zoate,** benzopyrine, a white crystalline powder, analgesic and antipyretic; dose, gr. 5–30 (0.3–2.0). **a. caff'eine cit'rate,** migrainin, obtained by fusing on a water-bath antipyrine 85, caffeine 9, citric acid 9; a colorless hygroscopic powder used for the relief of headache in doses of gr. 5–15 (0.3–1.0). **a. man'delate,** tussol, occurs in colorless crystals soluble in water, employed in whooping-cough in doses of gr. ½–10 (0.03–0.6) according to the age. **a. monobro'mide,** bromopyrine. **a. salicylac'etate,** pyrosal in colorless lamellar or acicu-

lar crystals, analgesic, antirheumatic, antipyretic; dose, gr. 5–10 (0.3–0.6). **a. sal'icylate,** salipyrine, a white crystalline powder; analgesic, antipyretic, employed in dysmenorrhea and in influenza and all acute catarrhs in the early stages, in doses of gr. 10–20 (0.6–1.3). **butylchlo'ral-a.,** occurring in colorless needles soluble in 30 parts of water; similar in properties and dosage to monochloral-a. **dichlo'ral-a.,** similar to monochloral-a. **dimethylam'ido-a.,** pyramidon, a yellowish-white crystalline powder, antipyretic and sedative; has been employed in pulmonary tuberculosis in doses of gr. 5–7½ (0.3–0.5). **monochlo'ral-a.,** hypnal, occurring in colorless octahedral crystals; analgesic and hypnotic; employed in the hacking cough of phthisis in doses of gr. 5–20 (0.3–1.3).

antipyrot'ic [G. *anti*, against, + *pyrōtikos*, burning, inflaming.] 1. Antiphlogistic. 2. Relieving the pain and promoting the healing of superficial burns. 3. An application for burns.

antirab'ic. Preventive or curative of rabies antilyssic.

antirachitic (an"tĭ-ră-kit'ik). 1. Promoting the cure of rickets. 2. An agent useful in the treatment of rickets.

antirenn'et. Antirennin

antirenn'in. An antibody to rennin which neutralizes the milk-curdling action of this enzyme.

antirheumatic (an"tĭ-ru-mat'ik). Preventive or curative of rheumatism.

antiri'cin. An antibody or antitoxin to ricin.

Antirrhi'num [G *anti*, in place of, + *rhis(rhin-)* nose.] A genus of shrubs of the natural order *Scrophulariaceæ*. **A. lina'ria,** *Linaria vulgaris* snap-dragon, toad-flax, herba linaria; the plant is of a bitter acrid taste and disagreeable odor, it possesses purgative properties

antiscab'ious. Antipsoric.

antiscle'rosin. Trade name of a solution of various salts, similar to Trunecek's* serum, used in the treatment of arteriosclerosis.

antiscorbu'tic. 1. Preventive or curative of scorbutus or scurvy. 2. A remedy for scurvy.

antisen'sitizer. An antibody to a sensitizer; amboceptor, anti-immune body.

antisep'sin. Monobromacetanilide

antisep'sis [G *anti*, against, + *sēpsis*, putrefaction.] The destruction of germs causing disease, fermentation, or putrefaction.

antisep'tic. 1. Destructive to the germs of disease, fermentation, or putrefaction 2. A substance which prevents the action of the germs of fermentation, decomposition, or disease **a. sur'gery,** see *Lister's method.*

antisep'ticin. Trade name of an antiseptic mixture of benzoic acid, boric acid, eucalyptol, thymol, and peppermint.

antisep'ticism. The exclusion of germs from a wound, antiseptic surgery; the employment of antiseptic measures in therapeutics.

antisep'ticize. To employ antiseptic agents for the removal or destruction of pathogenic microorganisms.

antisep'tin. Trade name of an antiseptic powder containing zinc oxide and sulphate and boric acid; employed in surgical dressings and as an application in skin diseases.

antisep'tol. Cinchoninæ iodosulphas

an'tiserum. A serum containing an antibody (antitoxin, bacteriolysin, precipitin, etc.) which is specific in relation to the substance in response to repeated injections of which it has been produced.

antisialic (an-tĭ-si-al'ik) [G. *anti*, against, + *sialon*, saliva.] Antisialogogue.

antisialogogue (an"tĭ-si-al'o-gog) [G. *anti*, against, + *sialon*, saliva, + *agōgos*, drawing forth.] 1. Diminishing the secretion of saliva. 2. An agent which diminishes or arrests the flow of saliva.

antisid'eric [G. *anti*, against, + *sideros*, iron. Chemically incompatible with iron, noting a substance such as tannin.

antispas'min [G. *anti*, against, + *spasmos*, convulsion.] A compound of sodium salicylate and narceine-sodium, a white powder, employed as an antispasmodic and sedative for children in doses of gr. ¼–1 (0.015–0.06).

antispasmodic (an-ti-spaz-mod'ik). 1. Preventive or curative of convulsions or spasmodic affections. 2. An agent which quiets spasm.

antispas'tic. Antispasmodic.

antispermatox'in. An antibody to spermatoxin.

antispirochet'ic. Destructive to spirochetes.

antisteapsin (an-tĭ-ste'ap-sin). A fat-splitting enzyme.

antistreptococcic (an"tĭ-strep-to-kok'sik). Destructive to streptococci or antagonistic to their toxins. **a. serum,** an antiserum employed in the treatment of diseases caused by the presence of streptococci.

antistreptococ'cin. The antitoxin of any species of *Streptococcus.*

an'tisubstance. Antibody

antisu'doral, antisudorif'ic. Antihidrotic.

antisympatone (an-tĭ-sim'pă-tōn). A preparation of the same nature as angioxyl.

antisyphilit'ic. 1. Curative of syphilis. 2. A specific remedy for syphilis.

antitabet'ic. Noting an agent useful in mitigating the symptoms of tabes dorsalis.

antitetan'ic. Noting an agent which tends to relax tetanic muscular contraction.

antithe'nar. Hypothenar.

antithermic (an-tĭ-thur'mik) [G. *anti*, against, + *thermē*, heat.] Antipyretic.

antither'min [G. *anti*, against, + *thermos*, hot.] Phenylhydrazin-levulinic acid, occurring in colorless lustrous crystals; recommended as an antipyretic in doses of gr. 3–5 (0.2–0.3).

antither'molin. Trade name of a preparation of clay, employed as a poultice in the treatment of inflammatory conditions.

antithrom'bin. A supposed antibody in the circulating blood which prevents its coagulation in the vessels.

antithy'roidin. A serum prepared from the blood of sheep from which the thyroid gland has been removed; employed in the treatment of Graves' disease and other conditions supposed to be due to hypersecretion of the thyroid gland, in doses of ♏8–15 (0.5–1.0).

antiton'ic. Diminishing muscular or vascular tonus

antitox'ic [G. *anti*, against, + *toxikon*, poison] Antidotal, neutralizing the action of a poison; specifically, relating to an antitoxin. **a. serum,** antitoxin

antitox'igen [*antitoxin* + *gennaō*, I produce.] An antigen(toxin) which stimulates the production of antitoxin in the blood.

antitox'in [G. *anti*, against, + *toxin*.] A substance in the serum which binds and neutralizes toxin; it consists, according to the side-chain* theory, of receptors which have been produced in excess and thrown off into the body fluids. In the artificial production of immunity* an animal, usually a horse, is injected with gradually increasing doses of the specific toxin of the dis-

ease in question, by which the animal's natural resistance is greatly increased through the production of antitoxin; the antitoxin-laden serum is then withdrawn and used to reinforce the resistance of a person suffering from the same infection. **anaero'bic a.**, an antitoxic serum obtained from animals immunized against the anaerobic bacteria present in gangrenous wounds. **diphtheria a.**, antitoxinum diphthericum (U.S.). **fatigue a.**, see under *fatigue toxin.** **tet'anus a.**, antitoxinum tetanicum (U.S.). **tet'anus-perfrin'gens a.**, an antitoxic serum prepared from the toxins of *Cl. welchii* (*B. aerogenes capsulatus*) and *Cl. tetani* (*B. tetani*).

A

DIAGRAM ILLUSTRATING THE FORMATION AND ACTION OF ANTITOXIN IN ACCORDANCE WITH EHRLICH'S SIDE-CHAIN THEORY: A, cell body; *b*, receptors combined with cell protoplasm, *c*, receptors separated from cell; *a*, toxin molecules; *y*, free receptors—antitoxin; *x*, receptors (antitoxin) united with the toxic molecules.

antitoxinum (an-tĭ-toks-e'num). Antitoxin. **a. diphther'icum** (U. S., Br.) serum antidiphthericum purificatum (U.S. IX), concentrated diphtheria antitoxin, refined diphtheria antitoxin, antidiphtheric globulins; an aqueous solution of certain antitoxic substances obtained from the blood serum or plasma of a horse immunized against diphtheria toxin; a transparent or slightly opalescent fluid, with sometimes a slight granular deposit, of a faint brownish, yellowish, or greenish color, nearly odorless or having the odor of the antiseptic used as a preservative; it has a potency of 350 antitoxin units per c.c.; average protective dose 1000 units, curative 10,000 units. **a. tetan'icum** (U.S., Br.), serum antitetanicum purificatum (U.S. IX), concentrated tetanus antitoxin, refined tetanus antitoxin, antitetanic globulins; an aqueous solution of certain antitoxic substances obtained from the blood serum or plasma of a horse immunized against tetanus toxin; a transparent or slightly opalescent liquid with sometimes a slight granular deposit, of a faint brownish, yellowish, or greenish color, nearly odorless or having the odor of the antiseptic used as a preservative; it has a potency of 300 units per c.c.; average dose: protective, 1500 units; curative, 10,000 units. **a. tetan'icum cru'dum** (U.S.), serum antitetanicum (U.S. IX), crude tetanus antitoxin, unconcentrated tetanus antitoxin, unrefined tetanus antitoxin; a fluid, having a potency of not less than 150 units per c.c., separated from the coagulated blood of a horse immunized against tetanus; a yellowish or yellowish-brown, transparent or slightly turbid liquid with sometimes a slight granular deposit, having the faint odor of horse serum or that of the antiseptic used as a preservative; dose: protective, 1500 units; curative, 10,000 units. **a. welch'icum** (Br.) gas-gangrene antitoxin (perfringens), serum or a preparation from serum containing the antitoxic globulins which have the specific power of neutralizing the toxin formed by *Bacillus perfringens* (*B. welchii*); dose (prophylactic), 4000 units, (therapeutic), 10,000 to 20,000 units.

antitragicus (an-tĭ-traj'i-kus). A small muscle in the pinna of the ear; see under *musculus*.

antitragohelicine (an"ti-tra-go-hel'i-sin). See *fissura antitragohelicina*.

antitra'gus [G. *anti*, against, opposite.] A projection of the cartilage of the auricle, in front of the cauda helicis, just above the lobule, and posterior to the tragus from which it is separated by the intertragic notch.

antitrismus (an-tĭ-triz'mus). A condition of tonic muscular spasm preventing closure of the mouth.

antitrope (an'tĭ-trōp) [G. *anti*, against, + *tropē*, a turn.] 1. Antibody. 2. Antimere (2).

antitryp'sic. Antitryptic.

antitryp'sin. An antibody or antiferment inhibiting the action of trypsin.

antitryp'tic. Opposed to the action of trypsin; antagonizing the digestive activity of the ferment trypsin. **a. in'dex,** the relative retardation in loss of viscosity of a solution of casein incubated with trypsin to which a drop of abnormal blood-serum (as from a cancerous patient) has been added compared with that in a similar solution to which normal serum has been added; if the former drips through the tube of the viscosimeter in 100 seconds, and the latter in 104 seconds, the antitryptic index is 4.

antituberculin (an"tĭ-tu-bur'ku-lin). An antibody formed in the body fluids in response to injections of tuberculin.

antitu'lase. A serum obtained from animals which have received repeated injections of tulase;* used in the treatment of tuberculosis.

antitu'man. Trade name of sodium chondroitinsulphate, proposed as a remedy for cancer on the theory that it is a constituent of cartilage and the walls of the arteries which seem to be immune to cancer; hypodermic dose, gr. 1½ (0.1).

antitus'sin. An ointment containing 5 per cent difluordiphenyl, used in whooping-cough and as a dressing for wounds.

antitus'sive [G. *anti*, against, + L. *tussis*, cough.] 1 Relieving cough 2 A cough remedy

antity'phoid. Preventive or curative of typhoid fever

antiurat'ic. Restricting the formation or preventing the precipitation of urates.

antiurease (an-tĭ-u're-āz). An antibody or antiferment to urease.

antivaccina'tion. Opposition to the practice of vaccination.

antivaccina'tionist. One who is opposed to the practice of vaccination as a preventive of small-pox

antivenene (an-tĭ-ven'ēn). A protein in the serum of an animal which has received repeated injections of small doses of serpent-venom; employed as a specific in the treatment of the bites of certain poisonous serpents.

antivenereal (an-tĭ-ve-ne're-al). 1. Opposed to venery. 2. Preventive or curative of venereal diseases.

antiven'in. The active substance in an antiserum against any animal or insect venom.

antivirus (an"tĭ-vi'rus). A broth culture filtered to remove bacteria and heated to reduce toxicity; employed in Besredka's* method of local immunity.

antivivisec'tion. Opposition to the practice of animal experimentation,

antivivisec'tionist. One who is opposed to animal experimentation and to the manufacture of antisera; a zoophilist.

antizymot'ic. Antiseptic; inhibiting the action of ferments; preventative or curative of any infectious disease.

antodontal'gic. Antiodontalgic.

antophysin (an-tof'i-sin) [*anterior* + *hypophysis*.] Trade name of a make of prolan or tuitral.

an'tra. Plural of antrum.

an'tral. Relating to an antrum.

antrec'tomy [L. *antrum* + G. *ektomē*, excision] Removal of the walls of an antrum; specifically, exsection of the walls of the mastoid antrum.

antritis (an-trī'(tre')tis). Inflammation of the mucous lining of an antrum; specifically of the antrum of Highmore.

antroatticotomy (an"tro-at"i-kot'o-mĭ) [L. *antrum* + *atticus* + G. *tomē*, a cutting] The operation of opening into and removing the contained parts of the mastoid antrum and attic of the tympanum.

antrocele (an'tro-sēl) [G. *antron*, antrum, + *kēlē*, swelling.] An accumulation of fluid in an antrum, specifically in the antrum of Highmore

antrona'sal. Relating to an antrum of Highmore and the corresponding nasal fossa

an'trophore [G *antron*, cavity, + *phoreō*, I carry.] A medicated bougie for the local treatment of disease in any accessible cavity or canal, especially the urethra.

an'troscope [G. *antron*, a cavity, + *skopeō*, I view.] An instrument to aid in the ocular examination of any cavity; specifically, an electric-light bulb for transillumination of the antrum of Highmore to determine the presence or absence of an accumulation of fluid or a tumor in that cavity.

antros'copy. Examination of any cavity, especially of the antrum of Highmore, by means of an antroscope.

antrostomy (an-tros'to-mĭ) [G. *antron*, cavity, + *stoma*, mouth] The formation of a more or less permanent opening into any antrum.

an'trotome. An instrument for opening into an antrum.

antrot'omy [G. *antron*, cavity, + *tomē*, incision.] Incision through the wall of any antrum.

antrotympan'ic. Relating to the mastoid antrum and the tympanum of the ear.

antrotympanitis (an"tro-tim-pan-i'(e')tis) Inflammation of the mastoid antrum and the middle ear.

an'trum, gen. *an'tri*, pl. *an'tra* [G. *antron*, a cavity.] 1. Any nearly closed cavity, particularly one with bony walls 2 The pyloric end of the stomach, partially shut off, during digestion, from the cardiac end, or fundus, by the prepyloric sphincter. **a. au'ris,** meatus acusticus externus. **a. cardi'acum,** forestomach. **a. mastoid'eum** [NK], mastoid a., a. tympanicum [BNA]. **a. of High'more,** sinus maxillaris [BNA]. **a. pylor'icum,** a bulging of the pyloric end of the stomach wall along the greater curvature when the organ is distended; see *antrum* (2). **a. tympan'icum** [BNA], tympanic a., mastoid a., a cavity in the mastoid portion of the temporal bone, communicating through the mastoid, or posterior, wall of the tympanum with the upper part of this cavity, the attic or epitympanum, and communicating also with the separate mastoid cells. **max'illary a.,** sinus maxillaris [BNA].

antuitrin (an-too'it-rin). Trade name of an extract of the anterior lobe of the pituitary body.

Antyl'lus's meth'od [*Antyllos*, a Greek physician, about the end of the third century, A. D.] Ligature of the artery above and below an aneurysm, followed by incision into and emptying of the sac; see cut under *aneurysm*.

anure'sis [G. *an-* priv. + *ourēsis*, urination.] Anuria.

anuret'ic, anu'ric. Relating to anuresis, or anuria.

anu'ria [G. *an-* priv. + *ouron*, urine] Total suppression of urine.

a'nus, gen. *a'ni* [L. *anus*, from *annus*, a ring (?)] Anal orifice, the lower opening of the digestive tract, lying in the fold between the nates, through which fecal matter is extruded. **a. cer'ebri,** aditus ad aquæductum cerebri. **artifi'cial a.,** a permanent opening into the bowel, usually in the right or left flank, made by the operation of colostomy **preternat'ural a.,** artificial a. **Rusco'ni's a.,** blastopore. **vestib'ular a., vulvovag'inal a.,** a female monstrosity in which the anus is imperforate, but the rectum opens into the vagina just above the vulva.

absence, aproctia. **closure,** atresia, imperforation proctatresia **dilatation,** proctectasia **dilator of;** procteurynter. **discharge,** *bloody*, proctorrhagia archorrhagia, *mucous*, proctorrhea. **excision,** proctectomy. **fistula,** archosyrinx. **incision,** proctotomy. **instrument for incision,** proctotome. **inflammation,** proctitis, architis. **inflammation of parts around,** periproctitis **occlusion of,** atretoproctia, proctatresia. **pain,** proctalgia, proctodynia, proctagra. **paralysis,** proctoparalysis, proctoplegia. **plastic surgery,** proctoplasty, proctorrhaphy (suture). **prolapse,** proctoptosia, proctocele, archocele, archoptoma, archoptosia. **stenosis, stricture,** proctencleisis, proctostenosis, archostenosis.

anusol (a'noo-sol). Trade name for bismuth iodoresorcin sulphonate, used in suppositories for hemorrhoids.

an'vil. Incus, one of the ossicles of the middle ear. **a. sound,** bell-metal resonance.*

anxi'etas [L. *angere*, to vex, trouble] Anxiety, restlessness, apprehension; epigastric oppression. **a. tibia'rum** [gen. pl. of *tibia*], twitching and a feeling of tire and restlessness in the legs when in bed.

anxiety (ang-zi'e-tĭ) [L. *anxietas*.] Apprehension of danger accompanied by restlessness and a feeling of oppression in the epigastrium. **situa'tion a.,** a feeling of anxious foreboding upon beginning any undertaking, as in the case of a clergyman entering the pulpit, or a barber beginning to shave a customer.

an'ytin. A dark brown liquid derivative of ichthyol employed, diluted, in various skin diseases.

an'ytol. An aqueous solution of phenol, cresol, camphor, or other substance, together with anytin; employed externally in erysipelas.

AOC. Abbreviation of anodal opening contraction, also written AnOC.

aolan (a'o-lan). Trade name of a sterilized milk preparation for use in protein therapy.*

aor'ta [L. from G. *aortē*, from *aeirō*, I lift up.] The main trunk of the systemic arterial system, arising from the base of the left ventricle; the *thoracic* aorta is divided into the *ascending* portion, the *arch*, and the *descending* portion; at the diaphragm it becomes the *abdominal* aorta and bifurcates at the left side of the body of the fourth lumbar vertebra into the right and left common iliac arteries. **a. abdomina'lis,** the terminal portion of the aorta, extending from the diaphragm to the bifurcation into the common iliac arteries; its branches are the paired inferior phrenic, lumbar, common iliac, suprarenal, renal, and spermatic or ovarian, and the single middle sacral, celiac, superior and inferior mesenteric arteries. **a. angus'ta,** congenital narrowness of

aorta. **a. chlorot'ica,** a general narrowing of the aorta associated with certain cases of chlorosis. **a. thoraca'lis,** thoracic aorta, the aorta from its origin to the diaphragm; its branches are the coronary, innominate, left subclavian and common carotid, intercostal, subcostal, diaphragmatic, vas aberrans, bronchial, esophageal, pericardial, and mediastinal arteries.

aor'tal. Aortic.

aortalgia (a-or-tal'jĭ-ŭ). Pain assumed to be due to aneurysm or other pathological conditions of the aorta.

aortarctia (a-or-tark'shya) [*aorta* + L. *arctare*, properly *artare*, to narrow.] Narrowing of the aorta, aortostenosis; written also *aortartia*.

aor'tic. Relating to the aorta or the aortic orifice of the left ventricle of the heart. **a. a'rea,** the region of the chest wall over the second right costal cartilage, where sounds produced at the aortic orifice are heard most distinctly. **a. isth'mus,** a slight constriction of the aorta at the point of attachment of the ductus arteriosus, most evident in the fetus. **a. spin'dle,** the dilated portion of the aorta just below the isthmus. **a. valve,** valvula semilunaris.

aortism (a-or'tizm). Hodgson's* disease.

aortitis (a-or-ti'(te')tis). Inflammation of the aorta.

aortography (a-or-tog'ră-fĭ) [*aorta* + G. *graphō*, I write.] A contrast fluid is injected into the abdominal aorta, the abdomen is then *x*-rayed, and shadows of the abdominal vessels, mesentery, liver, spleen, and kidneys are made plainly visible.

aor'tolith [G. *aortē*, aorta, + *lithos*, stone.] Calcareous deposit in the wall of the aorta.

aortomala'cia [G. *aortē*, aorta, + *malakia*, softness.] Abnormal softening of the walls of the aorta.

aortopto'sia, aortopto'sis [G. *aortē*, aorta, + *ptōsis*, a falling.] A sinking down of the abdominal aorta in splanchnoptosia.

aortosteno'sis [G. *aortē*, aorta, + *stenōsis*, a narrowing.] Narrowing of the aorta, aortarctia.

A. O. T. A. American Occupational Therapy Association.

a. p. Abbreviation for L. *ante prandium*, before dinner.

A. P. A. Initials of the American Physiotherapy Association, members of which are graduates of a nurses' training school or of a school of physical education, having had also one year's training in a recognized school of physical therapy.

apallesthesia (ă-pal"es-the'zĭ-ah) [G. *a-* priv. + *pallo*, I tremble, quiver, + *aisthēsis*, feeling.] Loss of the vibration sense, shown by an inability to perceive the vibrations of a tuning fork pressed against the skin; pallanesthesia.

apan'dria [G. *apo*, from, + *anēr(andr-)*, man.] Aversion to men, *i.e.* members of the male sex.

apanthro'pia, apan'thropy [G *apo*, from, + *anthrōpos*, man.] Aversion to man, to human society.

aparthro'sis [G. *apo*, from, + *arthron*, joint.] 1. Diarthrosis 2. Disarticulation

aparathyreosis (ă-par-ŭ-thi-re-o'sis). A marked degree of hypoparathyreosis.

apathet'ic. Exhibiting apathy; indifferent

ap'athism. A sluggishness of reaction, the opposite of erethism

ap'athy [G. *a-* priv. + *pathos*, suffering.] Absence of emotion; indifference; insensibility.

ape-fissure (āp'fish-ūr) [Ger. *Affenspalte*.] A well marked transverse fissure on the convex surface of the cerebral hemisphere separating the occipital from the parietal lobe, constantly present in the ape, but very rarely found in the human adult brain; in the human fetus it is represented by the temporary fissura perpendicularis externa.

ape-hand. The hand characteristic of paralysis of the median nerve, in which the thumb lies flaccid against the index finger.

apell'ous [G. *a-* priv. + L. *pellis*, skin.] 1. Without skin. 2. Without foreskin, circumcised.

apenter'ic [G. *apo*, from, + *enteron*, intestine.] Away from the intestine, said of a morbid process which would normally occur in the intestine.

apep'sia [G. *a-* priv. + *pepsis*, a digesting.] Extreme dyspepsia; complete cessation of digestion.

apepsin'ia. Lack of pepsin in the gastric juice.

aperient (ă-pe'rĭ-ent) [L. *aperire*, to open.] 1. Slightly cathartic. 2. A laxative or mild cathartic.

aperistal'sis. Absence of peristalsis, of the vermicular movement of the intestine.

aper'itive [Fr. *apéritif*, from L. *aperire*, to open.] 1. Aperient. 2. An appetizer.

apertom'eter [L. *apertura*, aperture, + G *metron*, measure.] An instrument for measuring the angular aperture of a microscope objective.

apertu'ra [L.] An opening or aperture. **a. inter'na canal'is carot'ici** [NK], the opening on the inferior surface of the petrous portion of the temporal bone. **a. media'lis ventric'uli quar'ti,** metapore, Magendie's* foramen. **a. pel'vis infe'rior** [BNA], pelvic outlet, the lower opening of the true pelvis, bounded anteriorly by the pubic arch, laterally by the rami of the ischium and the great sacrosciatic ligament on either side, and posteriorly by these ligaments and the tip of the coccyx **a. pel'vis minor'is** [NK], the lower aperture of the pelvis, exitus pelvis. **a. pel'vis supe'rior** [BNA], pelvic inlet, the upper opening of the true pelvis, bounded anteriorly by the symphysis pubis and the pubic crest on either side laterally by the iliopectineal lines, and posteriorly by the sacral prominence. **a. pirifor'mis** [BNA], piriform opening, the nasal openings in the skull

aperture (ap'er-chūr). 1. An opening, orifice. 2 The diameter of the objective of a microscope. **an'gular a.,** the diameter of the object glass of a microscope measured by the angle made by lines from the periphery of the objective to the focus.

apet'alous. In botany, having no petals.

a'pex, gen. *ap'icis* pl. *ap'ices* [L. summit or tip]. The extremity of a conical or pyramidal structure, such as the heart or the lung. **a. auric'ulæ Dar'wini,** tip of the auricle, a point projecting upward from the helix a little behind its upper end, when the helix is not incurved. **a. capit'uli fib'ulæ** [BNA], apex of the head of the fibula, processus* styloideus of the fibula **a. cor'dis,** the blunt extremity of the heart formed by the left ventricle (see *apex-beat*). **a. cor'nu,** tip of the horn, the pointed extremity of each posterior gray column or cornu of the spinal cord. **a. den'tis,** fang. **a. lin'guæ,** tip of the tongue. **a. na'si,** tip of the nose. **a. sat'yri,** a. auriculæ Darwini. **or'bital a.,** fissura orbitalis superior.

a'pex-beat. The palpable and frequently visible pulsation in the fifth intercostal space, 3½ inches to the left of the median line, made by the apex of the left ventricle as it strikes the chest wal in systole.

A. P. H. A. 1. American Public Health Association. 2. American Protestant Hospital Association.

aphacia (ă-fa'sĭ-ah) [G. *a-* priv. + *phakos*, lens.] Absence of the crystalline lens.

aphacial, aphacic (ă-fa'sĭ-al, ă-fa'sik). Devoid of crystalline lens.

apha'gia [G. *a-* priv + *phagō*, I eat.] Inability to swallow.

apha'kia. Aphacia.

apha'kial, apha'kic. Devoid of crystalline lens

aphantobiont (af-an-to-bi'ont) [G. *aphantos*, invisible, + *biōn*, a living thing.] Virus, one of a number of invisible, ultramicroscopic, filtrable particles, some the pathogens of certain diseases, and others assumed to be back of all vital processes.

aphasia (ă-fa'zĭ-ah) [G. speechlessness.] A weakening or loss of the faculty of language in any of its forms—reading, writing, speaking, and the appreciation of the written, printed, or spoken word—independent of disease of the vocal organs or of the mind. **amne'sic a.,** aphemia. **asso'ciative a.,** conduction a. **atax'ic a.,** motor a. **au'ditory a.,** word-deafness. **Bro'ca's a.,** complete a.; see *Broca*. **conduc'tion a.,** a form of a. in which the subject can speak and write in a way, but skips or repeats words or substitutes one word for another, the lesion being in the association tracts connecting the various language centers. **frontocor'tical a.,** motor aphasia. **frontolentic'ular a.,** mixed a., conduction a. **jar'gon a.,** the running together of a number of words as one, the syllables being articulated, but wrongly accented **lentic'ular a.,** conduction a., mixed a. **mixed a.,** aphemia, alexia, and mind-blindness. **mo'tor a.,** any of the varieties of a. in which the power o expression by writing, speaking, or signs is lost. **occip'ital a.,** alexia and apraxia **op'tic a.,** anomia, inability to name an object seen although the patient may comprehend what it is. **pari"eto-occip'ital a.,** alexia and apraxia. **sen'sory a.,** loss of the power to comprehend written (or printed) or spoken words, gestures, or signs; it includes word-blindness, sign-blindness, apraxia, and word-deafness. **subcor'tical mo'tor a.,** anarthria; loss of power of articulate speech, the ability to read, write, and understand spoken phrases being retained. **tem"poropari'etal a.,** Wernicke's a. auditory and optic a., anomia. **vis'ual a.,** word-blindness **Wer'nicke's a.,** see *Wernicke*.

apha'siac, apha'sic. Relating to or suffering from aphasia.

aphemesthesia, aphemæsthesia (af"e-mes-the'zĭ-ah) [G. *a-* priv. + *phēmē*, speech, + *aisthēsis*, sensation.] Loss of the sense of articulate speech; inability to recognize what oneself is saying

aphe'mia [G. *a-* priv + *phēmē*, speech.] 1. Amnesic aphasia, a form of motor aphasia in which the power of expressing one's ideas in spoken words is lost, owing to destruction of the memory center for words. 2. Anarthria.

aphe'mic. Relating to or suffering from aphemia.

aphepho'bia. Haphephobia.

aph'eter [G *aphetēr*, a thrower.] Term applied by M. Foster to a catastate which decomposes inogen and thus initiates muscular movement.

apho'nia [G. *a-* priv. + *phōnē*, voice.] Loss of the voice in consequence of disease or injury of the organ of speech. **a. clerico'rum,** clergymen's sorethroat. **spas'tic a.,** a spasmodic contraction of the adductor muscles excited by an attempt at phonation

aphon'ic. Relating to or suffering from aphonia

aph'onous. Voiceless; suffering from aphonia

aph'ose [G. *a-* priv. + *phōs*, light.] A subjective sensation of a dark spot or patch in the line of vision.

aphrasia (ă-fra'zĭ-ah) [G. *a-* priv. + *phrasis*, speaking.] Speechlessness, dumbness; inability to speak, from any cause.

aphrenia (ă-fre'nĭ-ah) [G. *a-* priv. + *phrēn*, mind.] 1. Dementia. 2. Unconsciousness. 3. Apoplexy.

aphrodis'ia [G. *aphrodisios*, relating to Aphrodite or Venus.] 1. Sexual desire. 2. Sexual congress.

aphrodisiac (ă-fro-diz'ĭ-ak). 1. Increasing sexual desire. 2. Anything which arouses or increases sexual desire.

aphronesia (ă-fro-ne'zĭ-ah) [G. *a-* priv. + *phronēsis*, common sense.] 1. Silliness. 2. Dementia.

aph'tha. A minute ulcer on a mucous membrane.

aph'thæ [G. *aphthai*, pl. of *aphtha*, ulceration.] Minute whitish spots on the mucous membrane of the mouth, constituting thrush; also the disease thrush or sprue. **a. epizoot'icæ,** foot-and-mouth disease.* **a. orienta'les, a. trop'icæ,** sprue(2). **Bed'nar's a.,** see *Bednar*. **chron'ic a.,** sprue(2). **conta'gious a.,** a epizooticæ.

aph'thoid [G. *eidos*, resemblance.] Resembling aphthæ or thrush

aphthoides chronica (af-thoy'dēz kron'ĭ-kah). Sprue(2)

aphthon'gia [G. *a-* priv. + *phthongos*, voice.] A form of lingual spasm sometimes affecting public speakers; it is a variety of occupation neurosis analogous to writers' cramp.

aph'thous. Relating to aphthæ.

aphylaxis (ă-fi-lak'sis) [G. *a-* priv. + *phylaxis*, a guarding.] Non-immunity, lack of protection against disease.

ap'ical. Relating to or situated at or near the apex of any structure **a. fora'men,** the opening at the apex of a tooth giving passage to the blood-vessels and nerve. **a. space,** the space between the alveolar wall and the apex of the root of a tooth where an alveolar abscess usually has its origin.

apiceotomy (ă-pĭ-se-ot'o-mĭ). Apicotomy.

apicitis (ap-ĭ-si(se)'tis) [*apex* + *-itis*.] Inflammation of any apical structure; specifically apical catarrh of the lungs.

apicoectomy (ap"ĭ-ko-ek'to-mĭ) [L. *apex* + G. *ektomē*, excision.] Excision of the apex of a tooth-root

apicolysis (ap-i-kol'i-sis) [L. *apex* (*apic-*), apex, + G. *lysis*, solution.] Artificial collapse of the upper portion of the lung by the operative detachment of the parietal pleura allowing a mesial displacement of the pulmonary apex.

apicotomy (ă-pĭ-kot'o-mĭ) [L. *apex* + G. *tomē*, a cutting.] Apicoectomy, amputation of any apical structure, especially the apex of a tooth-root.

apinealism (ă-pin'e-al-izm). The syndrome caused by absence of the pineal gland.

ap'inoid [G. *a-* priv. + *pinos*, dirt, + *eidos* appearance] Free from dirt, clean. **a. can'cer,** scirrhous cancer

apinol (ap'ĭ-nol). Trade name of a substance obtained by the destructive distillation of the wood of *Pinus palustris* and *P. australis;* locally antiseptic, given internally in doses of ♏5 to 15 (0.3 to 1.0) in catarrh of the gastroenteric tract, and by inhalation in respiratory catarrhs.

ap'iol [L. *apium*, parsley.] A clear, reddish or greenish oily fluid obtained from the fruit of parsley, *Apium petroselinum;* employed in amenorrhea in doses of ♏3–6 (0.2–0.4). **crys'tallized a.,** parsley-camphor, occurs in acicular crystals; emmenagogue in doses of gr. 3–6 (0.2–0.4), and employed as a substitute for quinine in malaria. **liq'uid a.,** oleoresina petroselini (U.S.).

ap'ioline. A yellow liquid derived from apiol, antiperiodic and emmenagogue; dose ♏3–5 (0.2–0.3).

apipho'bia [L. *apis*, bee, + G. *phobos*, fear.] Morbid fear of bees, melissophobia.

A'pis [L. bee.] A genus of hymenopterous insects, the bees. **A. mellif'ica** [L. *mel*, honey, + *facere*, to make.] (1) the honey-bee, hive-bee, the source of honey; (2) a homeopathic remedy, *apis mellifica*, made by shaking a number of bees together in a bottle to make them angry, and then pouring alcohol over them; employed in nephritis complicating scarlet fever, in erysipelas, conjunctivitis with smarting of the eyes, and to control night screaming of children; dose, 3rd to 30th potency; (3) in eclectic practice it is given in urinary troubles attended with burning and stinging in the passage of urine, in doses of one drop of the specific medicine in water every one to four hours.

apituitarism (ă-pĭ-tu'-ĭ-tar-izm) [G. *a-* priv.] A condition of total abeyance of functional activity in, or absence of, the pituitary body, or hypophysis cerebri; it results in cachexia* hypophyseopriva.

Apium (a'pĭ-um) [L. parsley.] A genus of plants containing celery and celeriac. Celery seed, **a'pii fruc tus** (N.F.), is the ripe fruit of *A. graveolens;* diuretic and antispasmodic in doses of gr. 30 (2.0), or of ♏30 (2.0) of the fluidextract. See under **apocynum.**

a'pium vi'rus [L. gen. pl. of *apis*, bee] Bee poison; a homeopathic remedy prepared by extracting bee-stings (see *apis mellifica*) and triturating them with sugar of milk; employed for the same purposes and in the same doses as apis.

aplacen'tal [G. *a-* priv.] Without a placenta, noting certain mammals, such as the kangaroo.

aplanat'ic [G. *a-* priv. + *planētos*, wandering.] Noting a lens free from chromatic or spherical aberration

aplasia (ă-pla'zĭ-ah) [G. *a-* priv. + *plasis*, a moulding.] Congenital absence of an organ or other part. **a. pilo'rum ꝑro'pria,** monilethrix.

aplas'tic [G. *a-* priv. + *plastikos*, formed.] Marked by defective or arrested development

a-le'sia [G. *aplēstos*, insatiate.] Loss of the sense of satiety after eating; acoria

apne'a, apnœ'a [G. *a-* priv. + *pnoē*, breath.] Cessation of respiration; inability to get one's breath **a. vera,** true apnea, absence of respiratory movements, owing to acapnia and the consequent lack of stimulus by carbon dioxide to the respiratory centers

apneumatic (ap-nu-mat'ik) [G. *a-* priv. + *pneuma*, breath.] Containing no air, noting the lungs in a state of collapse.

apneumato'sis [G. *a-* priv. + *pneumatoō*, I inflate] Congenital atelectasis

apneu'mia [G. *a-* priv. + *pneumōn*, lung.] Absence of the lungs.

apnœa. Apnea.

apobiosis (ap-o-bi-o'sis) [G. *apo*, from, + *biōsis*, life.] Death, especially local death of a part of the organism.

apocamno'sis [G. *apokamnō*, I grow very weary] Rapidly induced fatigue.

apocar'pous [G. *apo*, from, + *karpos*, fruit.] In botany, having separate carpels.

apochromatic (ap"o-kro-mat'ik.) Achromatic, noting an improved lens, doing away with the so-called secondary spectrum of the ordinary achromatic lens, and correcting the spherical aberration for two colors instead of for one only.

apocodeine (ap-o-ko'de-ēn). An alkaloid, $C_{18}H_{19}NO_2$, derived from codeine; its salt, **a. hydrochlo'ride,** a grayish powder, soluble in water is employed as a sedative, hypnotic, and expectorant in doses of gr. ¼–1 (0.015–0.06).

apocope (ă-pok'o-pe) [G. *apokopē*, a cutting off.] Amputation, a cutting away.

apocoptic (ap-o-kop'tik) [G. *apokoptō*, I cut off.] Relating to, or occurring as a result of an amputation; see *plethora** *apocoptica*

apocrine (ap'o-krĭn) [G. *apo*, from, + *krinō*, I separate.] Ptyocrinous, noting a gland the cells of which lose part of their protoplasmic substance when functioning; opposed to *exocrine* (2) or *diacrinous.*

Apocyna'ceæ. An order of dicotyledonous plants with imbricate-contorted estivation; 5 stamens, ovary with 2 carpels connate at their styles.

apocynein (ap-o-sĭ'ne-ĭn). An active principle of *Apocynum cannabinum*, acting upon the heart like digitalis.

apocynin (ap-os'ĭ-nin). 1. An active principle of *Apocynum cannabinum*, occurring in crystalline form. 2. A resinous substance obtained from *Apocynum cannabinum;* expectorant in doses of gr. ¼–½ (0.015–0.03).

Apocynum (ă-pos'ĭ-num) [G. *apokynon*, dogbane; *apo*, from, + *kyōn*, dog.] A genus of herbs of the natural order *Apocynaceæ* **A. androsæmifo'lium** dogbane, wild ipecac, bitter-root, rheumatism weed the rhizome is diuretic, cathartic, and diaphoretic in doses of ♏5–30 (0.3–2.0) of a fluidextract. **A. cannab'inum.** Canadian hemp, Indian physic; the rhizome is the official drug *apocynum.**

apocynum (ap-os'ĭ-num). (N.F.) The dried rhizome of *Apocynum cannabinum*, Canadian hemp, diuretic, diaphoretic, and cathartic, employed in cardiac dropsy and Bright's disease in doses of gr. 5–30 (0.3–2.0).

ap'odal. Without feet.

apodemialgia (ap"o-de-mĭ-al'jĭ-ah) [G. *apodēmia*, being away from home, + *algos*, pain] A longing to get away from home or to travel, *Wanderlust*, the opposite of *nostalgia.*

apod'ia [G. *a-* priv. + *pous(pod-)*, foot.] Congenital absence of feet.

ap'odous. Apodal, without feet.

apog'amy [G. *apo*, from, + *gamos*, marriage] In botany, the absence of sexual power, although the sexual organs may be present, reproduction occurring by parthenogenesis, budding, or other non-sexual means.

apo'lar. Having no poles, noting specifically nerve-cells without any apparent processes.

apol'ysin [G. *apolysis*, release] Monophenetidin, a soluble white powder of acid taste; antipyretic and analgesic in dose of gr. 8–15 (0.5–1.0).

apomorphi'næ hydrochlo'ridum (U.S. and Br.). Apomorphine hydrochloride, a derivative of morphine or codeine made by heating with an excess of hydrochloric acid in a closed vessel; small grayish-white prismatic crystals becoming greenish on exposure to the air; expectorant in doses of gr. $\frac{1}{60}$–$\frac{1}{30}$ (0.001–0.002); emetic, gr. $\frac{1}{10}$–$\frac{1}{5}$ (0.006–0.012); hypnotic, gr. $\frac{1}{30}$ (0.002)

apone'a [see *aponœa.*] Amentia.

aponeurography (ap"ŏ-nu-rog'ră-fĭ) [*aponeurosis* + *graphō*, I write.] The descriptive anatomy of aponeuroses.

aponeurol'ogy [*aponeurosis* + *-logia.*] The branch of anatomy which treats of aponeuroses and their relations.

aponeurorrhaphy (ă-pŏ-nu-ror'ă-fĭ) [G. *aponeurosis* + *rhaphē*, suture.] Fasciorrhaphy, suture of an aponeurosis or fascia.

aponeurosis (ap"ŏ-nu-ro'sis) [G. the passage of muscle into tendon; *apo*, from, + *neuron*, sinew.] A fibrous sheet or expanded tendon, giving attachment to muscular fibers and serving as the means of origin or insertion of a flat muscle; sometimes also performing the office of a fascia for other muscles. **a. of inser'tion,** a tendinous sheet serving for the insertion of a broad muscle. **a. of invest'ment,** a fibrous membrane covering and keeping in place a muscle or group of muscles. **a. of or'igin,** a tendinous expansion serving as the attachment of origin of a broad muscle **a. pharynge'a,** tela* submucosa pharyngis [BNA]. **epicra'nial a.,** galea aponeurotica.

aponeurositis (ap"ŏ-nu-ro-si'(se')tis). Inflammation of an aponeurosis.

aponeurot'ic. Relating to an aponeurosis.

apon'eurotome. An instrument for dividing an aponeurosis.

aponeurot'omy [*aponeurosis* + G *tomē*, section.] Incision of an aponeurosis.

apon'ia [G. *a-* priv + *ponos*, toil, pain.] 1. Non-exertion, abstention from labor. 2. Absence of pain.

aponic (ă-pon'ik). Relating to aponia; analgesic, relieving fatigue.

aponœa, aponoia, (ă-pon-e'ah, ă-pon-oy'ah) [G. *aponoia; apo*, away, + *nous*, mind.] Amentia.

apophlegmat'ic [G. *apo*, away, + *phlegma*, mucus] Producing a discharge of mucus; expectorant.

apophylaxis (ap"o-fi-laks'is) [G. *apo*, away from.] A diminution of the phylactic power of the blood fluids, constituting the negative phase of opsonic or vaccine therapy.

apophysary (ă-pof'i-sa-rĭ). Relating to an apophysis, apophyseal.

apophyseal (ă-po-fiz'e-al). Relating to or resembling an apophysis.

apoph'ysis [G. *apo*, from, + *physis*, growth; excrescence.] An outgrowth or projection, especially one from a bone. A bony process or outgrowth which has not an independent center of ossification. **a. con'chæ,** eminentia conchæ. **a. hel'icis,** spina helicis. **bas'ilar a.,** the basilar process of the occipital bone. **lentic'ular a.,** processus* lenticularis of the incus. **tem'poral a.,** processus* mastoideus.

apophysitis (ă-pof-i-si'(se')tis). 1. Inflammation of any apophysis. 2. Appendicitis. **a. tibia'lis adolescen'tium,** Schlatter's disease, prominence, with pain, of the tubercle of the tibia, due to its separation by muscular action

apoplas'mia [G *apo*, away, + *plasma*] Inspissation of the blood, deficiency of the fluid portion.

apoplec'tic. Relating to, suffering from, or predisposed to apoplexy

apoplec'tiform [G. *apoplēxia*, apoplexy, + L. *forma*, appearance.] Apoplectoid.

apoplec'toid [G. *apoplēxia*, apoplexy, + *eidos*, appearance.] Resembling apoplexy, apoplectiform.

ap'oplexy [G. *apoplēxia*.] 1. A sudden loss of consciousness followed by paralysis, due to cerebral hemorrhage or blocking of an artery of the brain by an embolus or thrombus. 2. An effusion of blood into the lungs or other organs. **embol'ic a.,** a. caused by the plugging of an artery of the brain by an embolus. **func'tional a.,** a condition simulating apoplexy without any cerebral lesion. **ingraves'cent a.,** the slowly progressive onset of apoplectic symptoms, due to the gradual escape of blood within the cranium. **menin'geal a.,** a. due to hemorrhage from the arteries of the dura mater. **mul'tiple a.,** a form of ingravescent a. due to repeated small hemorrhages. **neona'tal a.,** a. of the newborn, intracranial hemorrhage in newborn children, causing spastic paralysis and mental weakness in those who survive. **pul'monary a.,** hemorrhagic infarct of the lung, a circumscribed infiltration of the lung with blood in consequence of embolism or thrombosis of a branch of the pulmonary artery. **sanguin'eous a.,** true a. due to intracranial hemorrhage, as distinguished from serous a. **se'rous a.,** an exudation of serum distending the ventricles of the brain; meningitis serosa. **spasmod'ic a.,** the occurrence of apoplectic symptoms caused by a temporary spasm of a cerebral artery. **spi'nal a.,** hematorrhachis. **splen'ic a.,** hemorrhage into the spleen in animals suffering from anthrax. **thrombot'ic a.,** a. caused by thrombosis in a cerebral artery.

apoquin'amine. An alkaloidal derivative of quinamine.

apor'etin [G. *apo*, from, *rētinē*, resin.] A resinous substance, derived from rhubarb, possessing laxative properties.

aporioneurosis (ă-por-ĭ-o-nu-ro'sis) [G. *aporia*, doubt, uncertainty.] Anxiety neurosis.

aporrhegma (ap-or-reg'mă) [G. *apo*, from, + *rhegma*, a breakage.] A ptomaine or other toxic substance split off from an amino-acid during the decomposition of a protein.

apos'ia [G. *a-* priv. + *posis*, drink.] Absence of the feeling of thirst.

aposit'ia [G *apo*, away, + *sitos*, food.] Distaste for food

apos'pory [G. *apo*, from, + *sporos*, seed.] In botany, absence of the power of producing spores.

apos'tasis [G a departure from, an abscess.] 1. The termination of a disease. 2. Exfoliation of bone 3 Abscess.

apostax's [G a trickling down.] A slight hemorrhage, or bleeding by drops; epistaxis.

ap'ostem, aposte'ma, ap'osteme [G *apostēma*, abscess.] An abscess.

aposthia (ă-pos'thĭ-ah) [G. *a-* priv. + *posthē*, foreskin] Congenital absence of the prepuce.

Apostoli's meth'od (ă-pos-tŏ-le') [Georges *Apostoli*, Parisian physician, 1847–1900] Treatment of uterine fibroids by electrolysis.

apoth'ecary [G. *apothēkē*, a repository.] 1. Pharmacist, druggist. 2. In England, a medical practitioner, licensed by the Society of Apothecaries of London to practise medicine and dispense drugs; in Ireland one similarly licensed by the Apothecaries Hall of Ireland

apothe'cium [G. *apothēkē*, a storehouse.] Discocarp.

ap'othem, ap'otheme [G. *apo*, from, + *thema*, deposit.] A precipitate caused by long boiling of a vegetable infusion or its exposure to the air; extractive.

apothesine (a-poth'ĕ-sēn). Trade name of the cinnamic ester of gamma-diethylamino-propyl-alcohol hydrochloride, occurring in the form of snow-white crystals, soluble in alcohol and in water; recommended for use as a local anesthetic.

apoth'eter [G. *apotithemi*, *apothetō*, I stow away.] A slender rod with forked end used for pushing up a prolapsed umbilical cord during childbirth.

apotoxin (ap-o-tok'sin) [G. *apo*, from.] Richet's term for the anaphylactic substance caused by the action of the antibody, toxogenin, on the newly introduced toxin.

ap'ozem, apoz'ema [G.] A decoction.

apparatother'apy. Mechanicotherapy

appara'tus [L. *apparare*, to prepare.] 1. A collection of instruments adapted for a special purpose.

2. An instrument made up of several parts. 3. A system, the group of glands, ducts, blood-vessels, muscles, or other anatomical structures concerned in the performance of some function. **a. digesto'rius** [BNA], digestive system * **a. lacrima'lis,** lacrymal apparatus, consisting of the lacrymal gland, the lacrymal lake, the lacrymal canals, the lacrymal sac, and the naso-lacrymal duct. **a. ligamento'sus coll'i,** ligamentum nuchæ. **a. ligamento'sus si'nus tar'si,** the anterior ligament connecting the os calcis and the astragalus. **a. ligamento'sus Weitbrecht'i,** membrana tectoria. **a. ma'jor, a. mi'nor,** old terms for median and lateral lithotomy respectively. **a. respirato'rius,** respiratory system. **a. suspenso'rius len'tis** [NK], zonula ciliaris. **a. urogenita'lis,** urogenital or genitourinary system, including all the organs concerned in reproduction and in the formation and voidance of the urine.

appen'dage [L. *ad,* to, + *pendere,* to hang.] Appendix, annexum; any part, subordinate in function or size, attached to a main structure. **appendages of the eye,** the eyelids with their lashes, eyebrows, lacrymal apparatus, and conjunctiva **appendages of the skin,** the hairs, nails, sweat or sudoriparous glands, and sebaceous glands. **auric'ular a.,** auricula(3). **ova'rian a.,** parovarium **u'terine appendages,** annexa, the ovaries, Fallopian tubes, and ligaments. **ver'miform a.,** vermiform appendix.

appendal'gia. Pain in the right iliac fossa in the region of the vermiform appendix

appendect'omy [*appendix* + G. *ektomē,* excision.] Removal of any appendix, specifically of the vermiform appendix; scolecoidectomy.

appen'dical, appendicial (ap-pen-dis'ĭ-al). Relating to an appendix.

appen'dicism. Appendicosis, any chronic disease of the vermiform appendix, or a symptomatic uneasiness in the region of this structure.

appendicitis (ap-pen-dĭ-si'(se')tis). Inflammation of the vermiform appendix, apophysitis, scolecoiditis. **a. larva'ta,** a form of chronic a., manifest by induration or tumefaction, but without subjective symptoms. **a. oblit'erans,** an irritable subacute inflammatory condition of the appendix vermiformis, leading to adhesions of the opposing mucous surfaces, and associated with fibroid degeneration, occurring usually in late middle life. **masked a.,** a. larvata. **protec'tive a.,** a obliterans. **synconges'tive a.,** an irritable condition of the vermiform appendix, marked by interstitial serous infiltration and associated with congestion of neighboring structures.

appen'dico-enteros'tomy. 1. The establishment of an artificial opening between the appendix and the small intestine. 2. Appendicostomy.

appendicolysis (ap-pen-dĭ-kol'i-sis) [*appendix* + G. *lysis,* a loosening.] An operation for freeing the appendix from adhesions.

appendico'sis [*appendix* + *-osis.*] Appendicism. Any disease of the vermiform appendix

appendicos'tomy [*appendix* + G. *stoma,* mouth.] Operation for opening into the intestine through the tip of the appendix vermiformis, previously attached to the anterior abdominal wall, for the purpose of flushing out the cecum and colon; called also *Weir's operation.*

appendic'ular. 1. Relating to an appendix or appendage 2 Relating to the limbs, as opposed to *axial* which refers to the trunk and head. **a. muscles, skeleton,** etc , see the noun

appen'dix, gen. *appen'dicis,* pl. *appen'dices* [L.] An appendage. Specifically the processus vermiformis [BNA]. **a. cæ'ci,** processus vermiformis. **a. epididym'idis,** a small pedunculated body attached to the head, or globus major, of the epididymis. **a. epiplo'ica** (pl. *appendices epiploicæ*), epiploic appendage, one of a number of little processes or sacs of peritoneum projecting from the serous coat of the large intestine except the rectum; they are generally distended with fat. **a. fasci'olæ,** sternal prolongation of the "neck-band" lesion of pellagra. **a. fibro'sa hep'atis,** a fibrous process, into which the tip of the left lobe tapers out, which passes with the left triangular ligament to be attached to the diaphragm. **a. tes'tis** [BNA], Morgagni's hydatid, a small non-pedunculated body, or one of several, attached to the upper extremity of the testis. **a. ventric'uli laryn'gis** [BNA], laryngeal saccule; a small diverticulum, running up from the ventricle of the larynx between the false vocal cord and the ala of the thyroid cartilage. **a. vermifor'mis,** processus vermiformis [BNA]. **a. vesiculo'sa** [NK], vesicular appendage or hydatid of Morgagni, a small pedunculated cyst, sometimes multiple, frequently seen attached to the Fallopian tube near the fimbriated extremity. **auric'ular a.,** auricula (3), an ear-shaped projection from the anterior upper angle of each auricle (atrium) of the heart.

apperception (ap'ur-sep'shun) [L. *ad,* to, *percipere,* to perceive.] Comprehension, conscious perception.

appercep'tive. Relating to apperception; noting the full apprehension of any psychic content; referring the perception of ideas to one's own personality.

appetite (ap'e-tīt) [L. *appetere,* to long for.] A desire or longing to satisfy any conscious physical or mental need; specifically, a desire to take food.

ap'petite-juice. Gastric juice secreted at the time of eating, influenced in quality and quantity by the appetite and relish for the food ingested.

appetizer (ap'pe-ti-zur). Anything that stimulates the appetite for food.

applana'tion [L. *ad,* to, + *planare,* to flatten] Flattening of a normally convex surface.

ap'ple. The fruit of *Pirus malus* **Ad'am's a.,** (1) the projection of the thyroid cartilage in the neck; (2) the lime, a citrus fruit; (3) the banana. **bitt'er a.,** colocynth. **May a.,** podophyllum. **thorn a.,** *Datura stramonium.*

apple-jelly nodules (ap-l-jel'ĭ nod'ūlz). Small elevations of a reddish amber color seen on the surface of lupous ulcers.

app'le-oil. Amylis valeras.

ap'plicator. A slender rod of wood or flexible metal, at one end of which is attached a pledget of cotton or other substance for making local applications to the nose, throat, or other cavity.

apposition (ăp-po-zĭ'shun) [L *ad,* to, + *ponere,* to place.] 1. The putting in contact of two substances. 2 Contact of two surfaces.

approx'imate [L. *ad,* to, + *proximus,* nearest.] In dentistry: 1. Proximate, noting the contact surfaces, either mesial (proximal) or distal, of two adjacent teeth. 2. Close together, noting the teeth in the human jaw, as distinguished from the separated teeth in certain of the lower animals.

aprax'ia [G. *a-* priv. + *prattō,* I do.] 1. A disorder of voluntary movement, consisting in a more or

less complete incapacity to execute purposeful movements, notwithstanding the preservation of muscular power, sensibility, and coordination in general. 2. A psychomotor defect in which one is unable to apply to its proper use an object which he is nevertheless able to name and the uses of which he can describe. **a. al'gera,** an hysterical condition in which speaking, reading, writing, or consecutive thinking is impossible owing to the severe headache it causes. **cor'tical a.,** motor a. **idea'tional** or **i'deatory a.,** agnosia, a misuse of objects due to a disturbance of identification. **ideokinet'ic** or **i'deomo'tor a.,** a form in which there is a break between the limb center and the ideational center: thus simple movements, for which memories in the limb center suffice, are well executed, but unusual or complicated ones fail as the command cannot be carried to the limb center. **innerva'tion a.,** motor a. **limb-kinet'ic a.,** motor a. **mo'tor a.,** an inability to make movements or to use objects for the purpose intended by the will.

aproctia (ă-prok'shyah) [G. *a-* priv. + *prōktos*, anus.] Absence or imperforation of the anus

a'pron [O. Fr. *naperon*, a cloth.] An outer garment, covering the front of the body, to protect the clothing during surgical operations and other maneuvers. **Hott'entot a.,** hypertrophy of the nymphæ, common in Hottentot women

aprophoria (ă-pro-faw'rĭ-ah) [G. *a-* priv. + *prophora* utterance.] Aphasia, including agraphia.

aprosex'ia [G heedlessness.] Inattention, due to ocular, aural, or nasal defects or to mental weakness. **a. nasa'lis,** a mental change associated with adenoids in certain cases.

aproso'pia [G. *a-* priv + *prosōpon*, face.] Congenital absence of the greater part or all of the face, usually associated with other monstrosities.

apselaphesia, apselaphesis (ap"se-lă-fe'zĭ-ah, ap"se-lă-fe'sis) [G. *a-* priv + *psēlaphēsis*, feeling.] Impairment or total loss of tactile sensation.

apsithy'ria [G. *a-* priv. + *psithyrizō*, I whisper.] Loss of the ability to whisper

apsychia (ap-sī'kĭ-ah) [G. *a-* priv + *psychē*, soul.] Loss of consciousness.

apsychic, apsychical (ap-sī'kĭk, ap-sī'kĭ-kal). Not mental or psychic.

apsychosis (ap-si-ko'sis). 1. Unconsciousness, apsychia. 2. Loss of the power of thought.

aptyalia (ap-tĭ-a'lĭ-ah). Aptyalism

aptyalism (ap-ti'al-izm) [G. *a-* priv. + *ptyalon*, saliva.] Diminished or arrested secretion of saliva producing xerostomia

a'pus [G. *a-* priv. + *pous*, foot.] A monster without feet usually with entire absence of the lower extremities.

apycnomorphous (ă-pik"no-mor'fus [G. *a-* priv. + *pyknos*, thick + *morphē*, shape, form.] Noting a cell or other structure which does not stain deeply owing to the fact that the stainable or chromophil material is not closely aggregated.

apy'etous [G. *a-* priv. + *pyēsis*, suppuration.] Non-suppurative, not purulent.

apy'onin. Pyoktanin yellow.

apyous (ap'i-us) [G. *a-* priv. + *pyon*, pus.] Apyetous

apyret'ic [G. *a-* priv. + *pyretos*, fever.] Non-febrile, without fever.

apyrex'ia [G.] Absence of fever

apyrex'ial. Apyretic.

aq. Abbreviation for L. *aqua*, water.

aqua, gen. and pl. *aquæ* (ah'kwah) [L.] Water, chemical symbol H_2O, hydrogen monoxide. The pharmaceutical waters, *aquæ*, are aqueous solutions of volatile substances, the term for a solution of a non-volatile substance being *liquor*

a. aera'ta, aerated or carbonated water.

a. ammo'niæ (U.S.), water of ammonia, liquor ammoniæ (Br.), contains 10 per cent of ammonia gas: stimulant, ♏5–15 (0.3–1.0).

a. ammo'niæ for'tior (U.S.), stronger water of ammonia, liquor ammoniæ fortior (Br.), contains 28 per cent. of ammonia gas; employed locally as a counterirritant

a. amyg'dalæ ama'ræ, water of bitter almond, contains 0.1 per cent. by volume of oil of bitter almond; dose, ʒ1–2 (4.0–8.0).

a. ane'thi (Br.), dill-water, sometimes given to nursing women as a galactagogue in doses of ʒ½–1 (15.0–30.0) of **a. anethi destillata** (Br.); **a. anethi concentrata** is also listed in the B.P.; dose, ♏5–15 (0.3–1.0).

a. ani'si (U.S. and Br.), water of anise, contains 0.2 per cent. by volume of oil of anise; dose ʒ1–4 (4.0–16.0).

a. auran'tii flo'rum (Br.), orange-flower water, one-half the strength of stronger orange-flower water; dose, ʒ1–8 (4.0–32.0).

a. auran'tii flo'rum (U.S.), orange-flower water, a aurantii florum fortior (U.S. IX), a saturated solution of the odoriferous principles of the flowers of *Citrus aurantium* (var. *amara*); dose ʒ½–4 (2.0–16.0).

a. bul'liens, gen. *aquæ bullientis*, boiling water

a. cal'cis, liquor* calcis

a. campho'ræ (U.S. and Br.), camphor water, contains 0.8 per cent. of camphor; dose, ʒ1–4 (4.0–16.0).

a. ca'rui (Br.), caraway water; dose, ʒ½–1 (16.0–32.0)

a. chlo'ri, a. chlorata, chlorine water; an aqueous solution of chlorine of at least 0.4–0.5 per cent strength, official in the U.S.P., 1890; employed as a local stimulant and disinfectant application to ulcers and diluted as a gargle in sore throat; see also *liquor chlori compositus*.

a. chlorofor'mi (U.S. and Br.), chloroform water, saturated solution of chloroform in distilled water, dose, ʒ1–8 (4.0–32.0).

a. cinnamo'mi (U.S. and Br.), cinnamon water, contains 0.2 per cent of oil of cinnamon; dose, ʒ1–8 (4.0–32.0); this is the *a. c. destillata*; there is also *a. c. concentrata* in the B.P.; dose, ♏5–15 (0.3–1.0).

a. colonien'sis, eau de Cologne, Cologne water, a perfumed spirit containing a number of fragrant oils in alcohol.

a. commu'nis, ordinary tap-water

a. creoso'ti, creosote water, contains 1 per cent. of creosote; dose, ʒ1–8(4.0–32.0).

a. destilla'ta, gen *aquæ destillatæ* (U.S.,Br.), distilled water, used as a solvent.

a. destilla'ta sterilisa'ta (U.S.), distilled and sterilized water.

a. fer'vida, gen. *aquæ fervidæ*, hot water.

a. fœnic'uli (U.S. and Br.), water of fennel, contains 0.2 per cent of oil of fennel; dose, ʒ1–8 (4.0–32.0).

a. fonta'na, gen *aquæ fontanæ*, well water, spring water.

a. for'tis, weak nitric acid.

a. frig'ida, gen *aquæ frigidæ*, cold water

a. gel'ida, gen. aquæ gelidæ, ice-cold water.

a. hamamel'idis (N.F.), water of witch hazel, distilled extract of witch hazel, made by distilling bark of witch hazel with water and adding 15 per cent by volume of alcohol; dose, ʒ½–2 (2.0–8.0).

a. hydrogen'ii diox'idi, the former U.S.P. title of liquor* hydrogenii dioxidi, the 10-volume solution of hydrogen dioxide, or peroxide; dose ʒ1–2 (4.0–8.0).

a. laurocer'asi (Br.), cherry-laurel water; dose ʒ½–1 (2.0–4.0)

a. mari'na, sea-water.

a. medica'ta, gen. and pl *aquæ medicatæ*, medicated water, an aqueous solution of a volatile substance, usually a saturated solution

a. men'thæ piperi'tæ (U.S and Br.), peppermint water, contains 0.2 per cent of oil of peppermint dose, ʒ 1–8 (4.0–32.0); the B.P. lists a concentrated and a distilled peppermint water

a. men'thæ vir'idis (U.S and Br), spearmint water, contains 0.2 per cent. of oil of green mint or spearmint; dose, ʒi–8 (4.0–32 0).

a. ni'gra, black wash, lotio* hydrargyri nigra

a. phageden'ica, yellow wash.

a. phenola'ta (N.F.), phenolated water, carbolic acid water, a solution of liquefied phenol, 22, in distilled water, 978.

a. pimen'tæ (Br), allspice water, a solution of oil of pimento or allspice, dose, ʒi–8 (4.0–32 0)

a. pluvia'lis, rain water

a. pu'ra, gen. *aquæ puræ*, pure water

a. re'gia, a. rega'lis [L royal water, so called from its power to dissolve gold], acidum nitrohydrochloricum.

a. regi'næ Hunga'riæ, queen of Hungary water, a toilette preparation consisting of spirit of rosemary to which oil of lavender or of sage is added

a. ro'sæ (U.S. and Br.), rosewater, one-half the strength of stronger rosewater; dose, ʒi–8 (4 0–32 0).

a. ro'sæ for'tior (U.S.), stronger rosewater, saturated solution of oil of rose-petals made by distillation; dose, ʒi½–4 (2 0–16.0).

a. sambu'ci (Br.), elderberry water, prepared from the fresh flowers, used as an ingredient in lotions

a. saturni'na, lead water, liquor* plumbi subacetatis dilutus

a. sedati'va, sedative water, eau sédative de Raspail, lotio* ammoniacalis camphorata (N.F.).

a. sterilisa'ta (U.S, Br.), gen. *aquæ sterilisatæ*, sterilized water.

a. tofa'na, a solution of arsenic used by a poisoner of Palermo, named Tofana, in the seventeenth century

a. vi'tæ [water of life], brandy.

aquacapsulitis (ak-wah-kap-su-li'(le')tis). Serous iritis, descemetitis.

aquæ, Plural of *aqua*, water. **a. aromaticæ** (ar-o-mat'ĭ-se), (Br.), aromatic waters, made by distillation, solution, or dilution from concentrated waters.

aquæduc'tus [L. *aqua*, water, + *ductus*, duct] Aqueduct, conduit, canal **a. cer'ebri** [BNA], aqueduct of the cerebrum, aqueduct of Sylvius, iter a tertio ad quartum ventriculum; a canal about ¾ inch long, lined with ciliated epithelium, leading downward through the mesencephalon from the third to the fourth ventricle. **a. coch'leæ,** ductus perilymphaticus **a. Cotun'nii,** a. vestibuli. **a. Fallo'pii,** canalis facialis. **a. Syl'vii,** a. cerebri. **a. vestib'uli** [BNA], aqueduct of the vestibule, aqueduct of Cotunnius, a canal running from the vestibule and opening on the posterior surface of the petrous portion of the temporal bone, giving passage to the ductus endolymphaticus and a small vein.

aquapuncture (ak-wah-pung'chur) [L. *aqua*, water, + *punctura*, puncture.] Hypodermic injection of water to produce counterirritation or for any other purpose.

aqueduct (ak'we-dukt) [L *aquæductus*.] A conduit or canal; see *aquæductus*

aqueous (a'kwe-us) [L *aqua*.] Watery. **a. hu'mor,** the watery fluid filling the anterior and posterior chambers of the eye.

aquiferous (ă-kwif'er-us) [L. *aqua*, water, + *ferre*, to carry.] Conveying water or a watery lymph.

aquip'arous [L. *aqua*, water, + *parere*, to bring forth.] Secreting or excreting a watery fluid.

aquocapsulitis (ak-wo-kap-su-li'(le')tis). Aquacapsulitis

aquos'ity. 1. The state of being watery. 2. Moisture.

aquula (ak'woo-lah) [L. a small stream.] The endolymph (*a. interna*) and perilymph (*a externa*) in the membranous labyrinth.

ar'abate. A salt of arabic acid

ar'abic. Relating to or derived from various species of acacia giving a gummy or resinous exudate. **a. acid,** arabin. **gum a.,** acacia.

ar'abin. Arabic acid, a carbohydrate gum, $(C_6H_{10}O_5)_2 + H_2O$, forming gum arabic in union with calcium, potassium, and magnesium.

ar'abinose. A dextrorotatory pentose obtained from boiling gum arabic and some other gums with 0.5 per cent. sulphuric acid.

Ara'ceæ [L. *arum*, the wake-robin.] An order of monocotyledonous plants, having hermaphrodite flowers sessile in inflorescence on a spadix.

Arachis (ar'ă-kis). A genus of leguminous plants, the best known species of which is *A. hypogœa*, the peanut. **a. oil,** peanut oil.

arachnidism (ă-rak'nĭ-dizm) [G. *arachnē*, spider.] Systemic poisoning following the bite of a spider.

arachnitis (ar-ak-ni'(ne')tis). Inflammation of the arachnoid membrane, arachnoiditis

arachnodactyly (ă-rak-no-dak'tĭ-lĭ) [G. *arachnē*, spider, + *daktylos*, finger.] Spider fingers, a condition in which the phalanges of the fingers, and sometimes of the toes as well, are abnormally long.

arachnoid (ar-ak'noyd) [G. *arachnē*, cobweb, + *eidos*, resemblance] Resembling a cobweb; noting specifically the arachnoidea,* arachnoid membrane, or middle layer of membranes covering the brain and spinal cord.

arachnoidal (ar-ak-noy'dal). Relating to the arachnoid membrane, or arachnoidea.*

arachnoidea (ar-ak-no-id'e-ah) [L fem. (qualifying *tela*, web) of *arachnoideus*, cobweb-like, from G. *arachnē*, cobweb, + *eidos*, resemblance.] **Arachnoi'des** [NK], a delicate fibrous membrane forming the middle of the three coverings of the brain (*a. enceph'ali*) and of the spinal cord (*a. spina'lis*); it is closely applied to the dura mater, separated only by the subdural cavity, but between it and the pia mater there is in places a considerable space, the cavum subarachnoidale.

Arachnoidea (ar-ak-no-id'e-ah) [G. *arachnē*, spider, + *eidos*, resemblance] A group of *Arthropoda* which includes the spiders, mites and ticks

arachnoiditis (ar-ak-noy-di'(de')tis) Inflammation of the arachnoid membrane, arachnitis.

arachnolysin (ar-ak-nol'i-sin) [G. *arachnē*, spider, + *lysin*.] An hemolysin in the venom of the spider.

arachnopia (ar-ak"no-pi'ah). The arachnoid and pia mater regarded as one membrane.

ar'ack [Hindoo word.] A strong alcoholic liquor distilled from dates, rice, sap of the cocoanut palm, and other substances.

araeocar'dia. Areocardia.

araeom'eter. Areometer

araiocardia (ă-ra-o-kar'dĭ-ah) [G. *araios*, thin, rare, + *kardia*, heart.] Bradycardia.

Ara'lia. A genus of plants, several species of which have been more or less used in domestic medicine on account of their aromatic properties. The rhizome and roots of *A. nudicau'lis*, wild sarsaparilla, wild licorice, small spikenard, and *A racemosa*, American spikenard, plants growing in eastern and central North America, are stimulant, diaphoretic, and alterative; the latter is official in the N.F. as *aralia*, and is given in syphilis and rheumatism in doses of gr. 20–40 (1 2–2 5), and applied locally to indolent ulcers. The eclectic preparation is made from the dwarf elder; it is employed as a diuretic and as an eliminant of waste metabolic products, in diseases of the liver or kidneys and in dropsy and renal colic, in doses of 3 to 5 drops in water every three hours.

Aran's can'cer (ar-ahn') [François Amılcar *Aran*, Parisian physician, 1817-1861.] Chloroma of the orbit with leucemia. **A.'s law,** a blow on the vault of the cranium is more apt to cause a fracture of the base than of the vault.

Aran'-Duchenne's' disease'. Progressive muscular atrophy; see *Duchenne-Aran.*

araneous (ă-ra'ne-us) [L. *aranea*, cobweb.] Like a cobweb; arachnoid.

Aran'tius's canal' or **duct** [Latinized form of Giulio Cesare *Aranzio*, Italian physician, 1530–1589.] Ductus venosus. **A.'s lig'ament,** ligamentum venosum. **A.'s nod'ule,** nodule of Morgagni, the nodule at the center of the free border of each leaf of the aortic valve. **A.'s ven'tricle,** a small cul-de-sac on the floor of the fourth ventricle of the brain anterior to the tip of the calamus.

arar'oba [Brazil Indian, bark.] (Br.) Goa powder, crude chrysarobin, the dried and powdered concretion found in the wood of *Vouacapoua araroba* (*Andira araroba*) a forest tree of Brazil; it contains about 50 per cent. of chrysarobin.

ar'bor [L. tree.] In anatomy, one of the tree-like or branching structures, arbor vitæ (2 and 3). **a. vi'tæ** [L. tree of life], (1) thuja; (2) the branched configuration formed by ridges and folds of the mucous membrane of the cervix uteri, a. vitæ uteri or uterina, plicæ* palmatæ; (3) the arborescent appearance presented on cross-section of the cerebellum formed by the contrasting outlines of the white and gray matter, a vitæ cerebelli.

arbores'cent [L *arborescere*, to become a tree.] Tree-like, branching, dendritic.

arboriza'tion. Ramification; noting especially (1) the mode of termination of certain nerve processes or fibers; (2) the interlacing of the arterioles, capillaries, and veinlets.

ar'borize [L. *arbor*, a tree] To ramify.

ar'boroid [L. *arbor*, tree, + G. *eidos*, resemblance] Noting a colony of protozoa, each of which remains attached to another cell or to the main stem at one point, forming a branching or dendritic figure.

ar'bulith. Trade name of a mixture of hexamethylenamine lithium benzoate and arbutin, recommended as a urinary antiseptic and uric-acid solvent.

ar'butin. A white, bitter, crystalline glucoside from uva ursi, $C_{12}H_{16}O_7$, diuretic in doses of gr. 3–5 (0.2–0.3).

Ar'butus [L. wild strawberry.] A genus of evergreen shrub of the natural order *Ericaceæ*. **A. menzie'sii,** the madrono-tree of Oregon and California, a large tree the bark of which is astringent, but not used in medicine **A. officina'le,** *A. uva-ursi*. **A. une'do,** the strawberry-tree of southern Europe. **A. u'va-ur'si,** *Arctostaphylos uva-ursi*, the source of the drug uva* ursi.

arc [L. *arcus*, a bow.] 1. A curved line or segment of a circle. 2. Continuous passage of an electric current between two or more separated carbon or other electrodes. **auric'ular a., binauric'ular a.,** a line carried over the cranium from the center of one external auditory meatus to that of the other. **breg"matolamb'doid a.,** the line running along the sagittal suture from the bregma to the apex of the lambdoid suture. **cra'ter a.,** an a. of a direct current which forms a crateriform excavation at the positive pole. **flame a.,** an a. between two impregnated electrodes which causes volatilization of the core with resultant flame. **keratoscop'ic a.,** a form of ophthalmometer devised by DeWecker and Masselon for measuring corneal astigmatism. **longitu'dinal a. of the skull,** the line carried over the skull from the nasion to the opisthion. **mer'cury a.,** an a. between quartz tubes containing mercury as the cathode and mercury or tungsten as the anode; it produces ultraviolet rays. **na"sobregmat'ic a.,** a line running through the midline of the forehead from the nasion to the bregma. **re'flex a.,** the route followed in the production of a reflex act, from the periphery through the afferent nerve to the spinal center and thence through the efferent nerve to the periphery again.

arcade (ar-kād') [L. *arcus*, arc, bow.] An anatomical structure resembling a series of arches.

ar'canol. Trade name of a compound of atophan and aspirin, suggested in the treatment of catarrhal respiratory affections and influenza.

arca'num [L. *arcanus*, secret hidden.] A secret remedy of supposedly great therapeutic virtue.

arcate (ar'kāt) [L. *arcatus*, from *arcus*, bow.] Arched, bow-shaped

arcein (ar'se-in). Arecoline hydrobromide.

Arcella (ar-sel'lă). A widely distributed genus of amœbæ encased in shells

arch [L. *arcus*, bow.] 1. In anatomy, any vaulted or arch-like structure. See *arcus*. 2. In orthodontia a device consisting of a wire conforming to the alveolar or dental a., used as an anchorage in correcting irregularities in the position of the teeth. **abdom'inothorac'ic a.,** the line of the false ribs on either side with the lower end of the sternum, marking roughly the boundary line between the abdomen and thorax. **arches of the foot,** (1) the hollow on the inner part of the sole in the metatarsal region; (2) longitudinal a.; (3) plantar a.; (4) transverse a. **aor'tic a.,** the wide curve made by the aorta in the first part of its course, *arcus** *aortæ*. **aor'tic arch'es,** five pairs of curved primitive blood-vessels near the upper pole of the embryo. **bran'chial arch'es,** (1) four pairs of curved cartilages near the upper pole of the embryo; (2) aortic arches. **car'pal arch'es,** two anastomotic arterial twigs running transversely across the wrist: the *anterior* lies in front of the carpus, being formed by anterior carpal branches of the radialis and ulnaris; it is distributed to the structures of the wrist and carpal joints; the *posterior* or *dorsal* lies on the posterior surface of the carpus, being formed by the dorsal carpal branches of the radialis and ulnaris; it is distributed to the structures of the carpal and wrist-joints and gives out two dorsal interosseous branches. **cru'ral a.,** Poupart's ligament. **deep cru'ral a.,** upper edge of the aponeurosis covering the femoral vessels. **den'tal a.,** the curve formed by the alveolar process and the teeth in each jaw. **fallen arches,** a breaking down of the bony arches—either longitudinal or transverse or both—of the foot; the resulting deformity is flat foot or spread foot or both. **fem'oral a.,** Poupart's ligament. **glossopal'atine a.,** the curve formed by the two anterior pillars of the fauces, arcus* glossopalatinus. **he'mal a.,** the ventral arch of the typical vertebra, enclosing the thoracicoabdominal organs, represented by the ribs and sternum. **hy'oid a.,** the second visceral a. joins with the thyrohyoid a. to form the structures mentioned under that arch. **longitu'dinal a.,** the bow formed by the inner three metatarsal bones of the foot, represented in the sole by the a. of the foot. **mandib'ular a.,** the first visceral a. forming the maxilla, malar and palate bones,

the malleus, incus, tragus, and part of the helix, and the mandible. **neu'ral a.**, the dorsal a. of the typical vertebra, inclosing the cerebrospinal nervous system. **pal'atine a.**, arcus palatini. **pal'mar a.**, arcus volaris. **pharyngopal'atine a.**, arcus pharyngopalatinus. **plan'tar a.**, (1) arcus plantaris [BNA]; (2) either of two bony arches of the foot, longitudinal a. or transverse a. **pu'bic a.**, arcus pubis. **supercil'iary a.**, arcus superciliaris. **supraor'bital a.**, the superior curve of the anterior margin of the orbit. **tar'sal a.**, arcus tarseus. **thyrohy'oid a.**, the third visceral a. giving rise to the posterior portion of the tongue, the lesser cornu and part of the body of the hyoid bone, and the styloid process of the temporal bone. **transpal'atine a.**, palatine vault.* **transverse a.**, a transverse arching of the line of metatarsophalangeal articulations at the ball of the foot. **vis'ceral arch'es**, five round, curved bars with cartilaginous framework, in the embryo, which form various structures. **zygomat'ic a.**, the a. formed by the zygoma and corresponding process of the temporal bone.

archæocyte (ar'ke-o-sīt) [G. *archaios*, ancient, + *kytos*, a hollow (a cell).] A wandering cell

archamphiaster (ark-am-fe-as'ter) [G *archē*, origin, + *amphi*, around, + *astēr*, star.] The primordial amphiaster formed at the time the polar globules are extruded.

archebiosis (ar-ke-bī-o'sis) [G. *archē*, origin, + *biōsis*, life.] Spontaneous generation, abiogenesis.

archegenesis (ar-ke-gen'e-sis) [G *archē*, beginning, + *genesis*, origin] Spontaneous generation.

archegonium (ar-ke-go'nĭ-um) [G. *archē*, origin, + *gonē*, generation, seed] The female organ in the higher cryptogamic plants, the analogue of the pistil in flowering plants. It consists of a neck portion, pierced by a central canal leading down to an expanded portion, or venter, containing the ovum.

archenteron (ark-en'ter-on) [G *archē*, beginning, + *enteron*, intestine.] The primitive enteron, cœlenteron, formed by the invagination of the blastodermic vesicle.

archeocinetic (ar-ke-o-sin-et'ik) [G. *archaios*, ancient, + *kinētikos*, relating to movement.] Noting a low, and primitive, type of motor nerve mechanism such as is found in the peripheral and the ganglionic nervous systems; differentiated from the neocinetic and the paleocinetic systems.

archeocyte (ar'ke-o-sīt). Archæocyte.

archesporium (ar-ke-spo'rĭ-um) [G *archē*, beginning, + *sporos*, seed.] A layer of cells giving rise to the mother cells of spores or pollen.

archetype (ar'ke-tīp) [G. *archē*, beginning, + *typos*, type.] A primitive type of structure from which various forms have been developed by differentiation.

archiater (ar-kī-a'ter) [G. *archi-*, first, chief, + *iatros*, physician.] 1. A chief physician of any institution 2 A physician to royalty.

Archibald's fever (ar'chĭ-bawldz fe'vur) [Robert George *Archibald*, British Army Surgeon, *1880.] A fever marked by drowsiness, occurring in the Sudan, caused by a microorganism of the *B. cloacæ* group.

archiblast (ar'kĭ-blast) [G *archi-*, primitive, + *blastos*, germ.] 1. Epiblast* of His. 2. The formative part of the yolk distinguished from that which affords nourishment to the embryo.

archiblastic (ar-kĭ-blas'tic). Relating to the archiblast.

archiblastoma (ar"kĭ-blas-to'ma). A tumor derived from tissues of archiblastic origin.

archicarp (ar'kĭ-karp) [G. *archi-*, first, + *karpos*, fruit.] In botany, the female organ in certain of the lower cryptogams, having no special receptive apparatus.

archicytula (ar-ki-sit'u-lah) [G. *archi-*, first, + *kytos*, a hollow (a cell).] The primitive cytula or parent cell in the embryo.

archigaster [G. *gastēr*, belly.] Archenteron.

archigastrula (ar-kĭ-gas'tru-lah) [G. *archi-*, first.] The primitive gastrula developing from the archiblastula.

archigenesis (ar-kĭ-gen'e-sis) [G. *archi-*, first, + *genesis*, origin.] Archebiosis, archegenesis

archigonocyte (ar-kĭ-gon'o-sīt) [G *archi-*, first, + E. *gonocyte*.] One of the primary germ cells, formed by the division of the last protogonocyte.

archil (ar'kil). A violet dye from the lichens, *Roccella tinctoria* and *R. fuciformis*.

archimonerula (ar"kĭ-mon-er'u-lah) [G. *archi-*, first.] The primitive monerula from which the archicytula develops.

archimorula (ar-kĭ-mor'u-lah) [G. *archi-*, first.] The primitive morula, the stage of development of the impregnated ovum following the archicytula

archinephron (ar-kĭ-nef'ron) [G. *archi-*, first, + *nephron*, kidney.] Wolffian* body

archineuron (ar-kĭ-nu'ron) [G. *archi-*, first, chief, + *neuron*.] Central neuron, or pyramidal cell, a cell of the cerebral cortex, with all its processes.

archipallium (ar-kĭ-pal'ĭ-um) [G. *archi-* first, + *pallium*.] The olfactory cortex; distinguished from the neopallium which is of later development.

archiplasm (ar'ki-plazm) [G. *archi-*, first.] The substance of the attraction sphere surrounding the polar corpuscles; centroplasm.

archisome (ar'kĭ-sōm) [G. *archi-*, first, primitive, + *sōma*, body.] Archiplasm.

archisperm (ar'kĭ-sperm). Gymnosperm.

archistome (ar'kĭ-stōm) [G. *archi-*, first, + *stoma*, mouth.] Blastopore.

architis (ar-ki'(ke')tis) [G. *archos*, fundament, + *-itis*.] Proctitis.

arch-loop-whorl sys'tem. Galton's* system of classification of finger-prints.

archocele (ar'ko-sēl) [G. *archos*, fundament, + *kēlē*, tumor.] Prolapse of the rectum; hernia of the rectum.

archocystocolposyrinx (ar"ko-sis"to-kol"po-sir'inks) [G. *archos*, fundament, + *kystis*, bladder, + *kopos*, vagina, + *syrinx*, fistula] A fistulous tract involving rectum, bladder, and vagina.

archocystosyrinx (ar"ko-sis"to-sir'inks) [G. *archos*, fundament, + *kystis*, bladder + *syrinx*, fistula.] A rectovesical fistula

archoplasm (ar'ko-plasm) [G. *archos*, leader, + *plasma*.] 1. Kinoplasm, a differentiated self-perpetuating form of protoplasm in the protozoa, in which the motor activities of the cell reside 2 Archiplasm

archoptoma (ar-kop-to'mah) [G *archos*, fundament, + *ptōma*, a fall.] Archoptosia.

archopto'sia (ar-kop-to'sĭ-ah) [G. *archos*, fundament, + *ptōsis*, a falling] Prolapse of the rectum; written also *archoptosis*

archorrhagia (ar-ko-rai'ĭ-ah) [G. *archos*, fundament, + *-rhagia*.] A discharge of blood from the anus

archorrhea, archorrhœa (ar-ko-re'ah) [G. *arches*, fundament + *rhoia*, flow.] A discharge of pus from the anus.

archosoma (ar'ko-so-mŭ). Archiplasm.

archostenosis (ar"ko-stĕ-no'sis) [G. *archos*, fundament, + *stenōsis*, narrowing.] Stricture of the rectum or anus

archosyrinx (ar-ko-sir'inks) [G *archos*, fundament, + *syrinx*, fistula.] Fistula in ano

archusia (ar-koo'sĭ-ă) [G. *archos*, chief, + *ousia*, essence.] A hypothetical substance which stimulates growth and activity in the body cells; assumed to be the same as vitamin B.

archyle (ar-ki'le) [G. *archē*, origin, + *hylē*, stuff.] The hypothetical primitive stuff from which all atter has been developed by differentiation; protyle, psychoplasm.

ar'ciform [L. *arcus*, bow, + *forma*, shape] Arcuate, bow-shaped.

arcta'tion [L. *artare*, to contract, limit.] Narrowing, contraction, stricture.

Arc'tium. A genus of herbs of Europe and Asia, the burdocks. **A. lap'pa,** *A. officinale, Lappa officinalis*, the source of lappa,* or burdock.

Arctostaph'ylos [G. *arktos*, bear, + *staphylē*, bunch of grapes.] A genus of evergreen shrubs of the natural order *Ericaceæ*. **a. uva-ursi,** *Arbutus uva-ursi*, bearberry, the source of the drug uva ursi.

ar'cual. Relating to an arch

arcuate (ar'ku-āt) [L. *arcuatus*, bowed] Arched, bowed. **a. fascic'ulus,** (1) fasciculus longitudinalis superior; (2) fasciculus uncinatus. **a. fi'bers,** the transverse curving fibers of the pons and medulla. **a. lig'ament,** ligamentum arcuatum. **a. nu'cleus,** nucleus arcuatus. **a. u'terus,** uterus arcuatus.

arcuation (ar-ku-a'shun). 1. A bending. 2 A curvature.

ar'cus, gen. and pl. *ar'cus*, [L a bow.] Any structure resembling a bent bow or an arch: an arc.

a. adipo'sus, a. senilis

a. ante'rior atlan'tis [BNA], the anterior arch of the atlas.

a. aor'tæ, arch of the aorta, the curve between the ascending and descending portions of the thoracic aorta; it lies behind the manubrium sterni; it gives off the innominate, the left common carotid, and the left subclavian arteries

a. costa'rum [BNA], the arch formed by the ribs enclosing the thorax

a. denta'lis [BNA], dental arch.*

a. glossopalati'nus [BNA], anterior palatine arch, anterior pillar of the fauces; one of a pair of ridges or folds of mucous membrane, enclosing the palatoglossus muscle, passing from the under surface of the soft palate downward and forward to the sides of the tongue. Between this and the a. pharyngopalatinus lies the faucial or palatine tonsil.

a. juveni'lis, a grayish ring at the corneal margin of the iris, resembling the a senilis, but occurring in a young person.

a. lipoi'des, a. senilis.

a. lumbocosta'lis latera'lis [BNA], ligamentum arcuatum externum: a tendinous arch, formed by a thickening of the fascia of the quadratus lumborum muscle, passing from the transverse process of the first lumbar vertebra to the first rib on either side; the diaphragm is attached to it.

a. lumbocosta'lis media'lis [BNA], ligamentum arcuatum internum: a tendinous arch, formed by a thickening of the psoas fascia, passing from the body to the tip of the transverse process of the first lumbar vertebra on either side; the diaphragm is attached to it

a. palati'ni, pillars of the fauces; see *a. glossopalatinus* and *a. pharyngopalatinus*

a. palma'ris, a volaris [BNA].

a. pharyn'gopalati'nus [BNA], posterior palatine arch, posterior pillar of the fauces; one of a pair of ridges or folds of mucous membrane, enclosing the palatopharyngeus muscle, passing from the posterior margin of the soft palate to the side-walls of the pharynx. Between this and the a. glossopalatinus lies the faucial or palatine tonsil.

a. planta'ris, plantar arch, formed by the plantaris lateralis artery running across the bases of the metatarsal bones and anastomosing with the dorsalis pedis.

a. poste'rior atlan'tis [BNA], the posterior arch of the atlas.

a. pu'bis, pubic arch, the arch formed by the two inferior rami of the pubis

a. seni'lis, an opaque, grayish ring at the periphery of the cornea, of frequent occurrence in the aged; it results from a deposit of fatty granules in, or hyaline degeneration of, the lamellæ and cells of the cornea.

a. supercilia'ris [BNA], superciliary arch, superciliary or supraorbital ridge; a fullness extending outward from the glabella on either side, above the orbital margin of the frontal bone, marking the site of the frontal sinus

a. tar'seus, tarsal arch, one of two vascular arches, *a. t. supe'rior* and *a. t. infe'rior*, continuations of the internal palpebral arteries, which encircle the upper and lower eyelids respectively, near their tarsal margins

a. tendin'eus, tendinous arch, a fibrous band arching over a vessel or nerve, as it passes through a muscle, and protecting it from injurious compression.

a. tendin'eus mus'culi so'lei, a tendinous arch stretching over the popliteal vessels between the tibia and fibula, which gives origin to the central portion of the soleus muscle.

a. veno'sus dorsa'lis pe'dis, dorsal venous arch of the foot, in the subcutaneous tissue of the dorsum of the foot, formed by the dorsal digital veins; it unites internally with the dorsal vein of the great toe to form the vena saphena magna, and externally with the dorsal vein of the little toe to form the vena saphena parva

a. veno'sus planta'ris, plantar venous arch, formed by the plantar digital veins from the toes.

a. ver'tebræ [BNA], vertebral arch.

a. vola'ris profun'dus [BNA], deep palmar arch, extends from base of metacarpal bone of little finger to upper end of first interosseous space, formed by anastomosis of termination of the radialis with the deep branch (ramus volaris profundus) of the ulnar's.

a. vola'ris superficia'lis [BNA], superficial palmar arch; extends from ball of little finger to ball of thumb; formed by terminal portion of ulnaris and superficial volar branch of radialis

a. zygomat'icus, zygomatic arch, zygoma.

ardanesthe'sia, ardanæsthe'sia [L. *ardor*, heat, + G. *an-* priv. + *aisthēsis*, sensation.] Thermanesthesia.

ar'dent [L. *ardere*, to burn] Hot, burning. **a. spir'its,** brandy, whiskey, and other forms of distilled alcoholic liquors.

ar'dor [L. fire, heat] A hot or burning sensation. **a. uri'næ,** a scalding sensation on urinating. **a. ventric'uli,** pyrosis, heartburn

area (a're-ah) [L. a courtyard] 1. Any circumscribed surface or space; region. 2. All of the part supplied by a given artery or nerve. 3. A part of an organ having a special function, as the motor area of the brain. **a. acus'tica** [BNA], acoustic a., an area in the floor of the fourth ventricle over which run the striæ medullares; the lower part embraces the trigonum acustici. **a. Cel'si,** alopecia areata. **a. cribro'sa,** cribriform area, cribrum benedictum; (*a*) the apex of a renal papilla pierced by the openings of the excretory tubules, foramina papillaria; (*b*) the area surrounding the renal papillæ marked by numerous depressions where the vessels and nerves enter and leave the substance of the kidney. **a. gas'trica,** one of a number of small polygonal areas, separated by linear depressions, on the surface of the mucous membrane of the stomach; they contain the gastric foveolæ. **a. germinati'va,** germinal a., the place in the ovum where the embryo begins to be formed. **a. John'stoni** [Scotch physician in Poland, 1603–1675], a. Celsi, alopecia areata. **a. opa'ca,** the outer portion of the a. germinativa. **a. parolfacto'ria,** parolfactory a., Broca's a., a small and indistinctly defined gyrus on the mesial surface of the hemisphere between the subcallosal and the

superior frontal gyri, from which it is separated by respectively the posterior and anterior parolfactory sulci. **a. pellu'cida,** the clear center of the a. germinativa. **a. vasculo'sa,** the part of the a. opaca when the first blood-vessels appear. **a. vitelli'na,** the part of the ovum outside the a. germinativa. **associa'tion a.,** any a. in the brain connecting one sensory a., with another **mo'tor a.,** the cortical portion of the brain embraced in the frontal and parietal ascending convulutions. **senso'rial** or **sen'sory a.,** the general surface of the cerebral hemispheres outside of the motor a. **si'lent a.,** any area of the cerebral or cerebellar surface, lesion of which occasions no definite sensory or motor symptoms. **ven'tral a.,** anterior root zone, a collection of special nerve fibers in the posterior funiculus, or white column, of the spinal cord, near the posterior septum. **vis'ual a.,** the occipital lobe and angular gyrus of each cerebral hemisphere.

areatus (ă-re-a'tus). Occurring in patches or circumscribed areas.

Ar'eca. A genus of palms of India and the Malay Archipelago. **A. cat'echu,** a large handsome tree of the East Indies which furnishes the betel-nut or areca-nut. semen arecæ. an astringent and anthelmintic in doses of ʒ2–4 (8 0–16.0).

arecaine (ar-ek'ah-ēn). A crystalline alkaloid resembling betaine, derived from semen arecæ, or the betel-nut.

arecoline (ă-rek'o-lēn). A colorless oily alkaloid from the betel-nut. **a. hydrobro'mide,** occurs as colorless acicular crystals, anthelmintic in doses of gr. $\frac{1}{2}$–$\frac{1}{6}$ (0.003–0.006).

areflexia (ă-re-fleks'i-ah) [G. *a-* priv. + *reflex.*] A condition in which the reflexes are abolished.

arena'tion [L. *arena,* sand.] The use of hot sand in therapeutics.

areocar'dia [G. *araios,* thin, rare, + *kardia,* heart.] Bradycardia.

are'ola [L dim. of *area.*] 1. Any minute area. 2. One of the spaces or interstices in areolar tissue 3. The pigmented ring surrounding the nipple. 4. An erythematous ring surrounding a papule, pustule, or other inflammatory lesion of the skin **a. mam'mæ,** a circular pigmented area surrounding the nipple or papilla mammæ; its surface is dotted with little projections due to the presence of the areolar, or Montgomery's, glands beneath. **a. papilla'ris,** a mammæ. **a. umbilica'lis, a. umbilica'ris,** a pigmented ring around the umbilicus in the pregnant woman.

are'olar. Relating to an areola in any sense. **a. tis'sue,** loose connective tissue containing many interspaces.

areometer (ă-re-om'e-tur) [G. *araios,* thin (not solid), + *metron,* measure] Hydrometer, an instrument for determining the specific gravity of a liquid.

areomet'ric. Relating to areometry or the areometer.

areometry (ă-re-om'ĕ-trĭ). The determination of the specific gravity of a fluid by means of an areometer.

Aretæ'us' elephanti'asis [*Aretaios,* a Greek physician and writer, born in Cappadocia about the middle of the 1st century B.C.] Tubercular leprosy.*

argamblyo'pia [G *argos* not working.] Amblyopia ex anopsia, amblyopia from disuse of the eye

Argand'bur'ner [Aimé *Argand,* Swiss inventor, 1755–1803.] A gas or oil lamp with two concentric metal cylinders separated by a tubular wick, thus supplying air within and without the flame.

Ar'gas [G. contr. of *argēeis,* shining.] A genus of mites of the family *Ixodidæ,* some species of which, usually infecting birds, may attack man, causing severe pain and sometimes fever.

argentaffin (ar-jent'af-in) [L. *argentum,* silver, + *affinis,* taking part in, associated with.] Argyrophil, taking a silver stain.

argent'amine. A trade name for ethylene diamine silver nitrate or diaminoethane silver nitrate; a clear fluid containing 10 parts each of silver nitrate and ethylene diamine (diaminoethane) in 100 parts of water; said to be irritating, but less so than silver nitrate.

argenta'tion. 1. Local superficial staining with silver nitrate. 2. Argyria.

argen'ti. Gen. of *argentum.*

argen'tic. Noting a chemical compound containing silver in a higher valency, therefore in lesser proportionate amount, than an argentous compound **a. ox'ide,** Ag_2O.

ar'gentine. Relating to silver.

ar'gentol. A trade name for silver oxyquinoline (oxychinoline) sulphonate; a yellowish powder, slightly soluble in water, and containing 32 parts of metallic silver; used as a dressing for wounds, an intestinal antiseptic, and an injection, in solution of 1 to 1000, in gonorrhea.

argentoproteinum forte (ar-jen'to-pro-te-e'num for'te) (U.S.). Strong silver protein, strong protargin; a compound of silver and protein containing not less than 7.5 and not more than 8.5 per cent. of silver; it is a brown odorless powder, freely but clearly soluble in water, forming colloidal solutions; employed externally as an antiseptic, devoid of astringent and nearly so of irritant properties. **a.-p. mi'te** (U.S.), mild silver protein, mild protargin: silver rendered colloidal by the presence of or combination with protein; it contains not less than 19 and not more than 25 per cent. of silver; occurs as dark brown or almost black shining scales or granules, odorless and freely soluble in water or glycerin; employed externally as an antiseptic devoid of irritating properties.

argen'tose. A compound of nucleoprotein and silver, containing 30 per cent. of the latter; a local astringent and germicide.

argen'tous. Noting a chemical compound containing silver in a lower valency, therefore in a larger proportionate amount than an argentic compound. **a. ox'ide,** Ag_4O.

argen'tum, gen. *argen'ti* [L] Silver, a brilliant white metallic element, symbol Ag, atomic weight, 107.12. It is not employed in medicine as such, but silver wire is employed as a suture material, and silver leaf has been used in surgical dressings. For references to the various albuminous and other non-official salts see under *silver.* **argenti ace'tas,** occurs in white crystals freely soluble in water; recommended as a substitute for silver nitrate in ophthalmia neonatorum, as being less irritating. **argenti arse'nis,** a yellow powder, insoluble in water; employed as an alterative in diseases of the skin in doses of $\frac{1}{100}$ to $\frac{1}{60}$ gr. (0.0006–0.001). **a. arsphenamina,** see under *arsphenamina.* **argenti chlo'ridum,** a whitish mass insoluble in water, formerly employed as a substitute for the nitrate when the caustic action of the latter was not desired; on solidifying after being melted it forms a translucent mass known as horn silver; it is found native in this form. **a. colloida'le,** colloidal silver, collargol.* **argenti cyan'idum** (Br.), a white powder containing about 80 per cent. of silver;

used for making dilute hydrocyanic acid by treating with dilute hydrochloric acid; has been given in chorea and epilepsy in doses of $\frac{1}{80}$–$\frac{1}{20}$ gr. (0.001–0.003). **argenti eos'olas,** a salt containing 50 per cent. of silver; employed in gonorrhea in 1–200 solution or 1–50 ointment. **a. folia'tum,** silver leaf, silver foil, official in the German Pharmacopeia; employed in surgical dressings. **argenti io'das,** a white powder, nearly insoluble in water; employed as an astringent in diarrhea in doses of $\frac{1}{12}$–$\frac{1}{4}$ gr (0.005–0.01). **argenti io'didum,** a yellowish powder, insoluble in water; formerly used in syphilis, chorea, and other affections in dose of $\frac{1}{2}$–2 gr. (0.03–0.12), and externally in conjunctivitis and urethritis. **a. liq'uidum,** quicksilver, hydrargyrum * **argenti ni'tras** (U.S and Br.), occurs in clear, colorless crystals rapidly darkening on exposure to light, freely soluble in water; employed occasionally internally in epilepsy, gastritis and diarrhea, in doses of $\frac{1}{8}$–$\frac{1}{2}$ gr. (0.01–0.03); externally in solution in the treatment of gonorrhea, purulent ophthalmia, etc., and in the prevention of ophthalmia neonatorum. **argenti ni'tras fu'sus** (U.S.), molded silver nitrate, lunar caustic, stick caustic; employed externally as a caustic. **argenti ni'tras indura'tus** (Br.), toughened caustic; contains 1 part of potassium nitrate in 20 parts of silver nitrate. **argenti ni'tras mitiga'tus** (Br.), mitigated silver nitrate, mitigated caustic; a mixture of 1 part of silver nitrate and 2 parts of potassium nitrate. **argenti ox'idum** (Br.), silver oxide, a dark brown or blackish powder, explosive when mixed with readily combustible substances; has been employed in epilepsy and chorea in doses of $\frac{1}{2}$–2 gr. (0.03–0.12). **a. solu'bile,** collargol. **argenti sul'phas,** silver sulphate a crystalline powder, soluble in 200 parts of cold, and 70 parts of hot water; used as a chemical reagent. **a. vi'vum,** quicksilver, hydrargyrum.*

arginase (ar'jin-āz). An enzyme of the liver which splits up arginin, forming urea.

arginin (ar'jin-in). Guanidin alpha-amino-valerianic acid, one of the hexone bases, a decomposition product of protein.

ar'gol [derivation uncertain.] Crude potassium bitartrate formed in wine-casks.

ar'gon [G. *argos*, idle.] A gaseous element, symbol A, atomic weight 39.6, present in the atmosphere in the proportion of about 1 per cent. It is chemically very inert, but a compound with carbon has been obtained, and it is believed to unite with magnesium at a very high temperature.

ar'gonin. A trade name for silver caseinate; a white powder, insoluble in cold, but soluble in hot water, and containing 4 per cent. of silver. A similar compound, *argonin I.*, or *soluble argonin* is more freely soluble in cold water, and contains 10 per cent. of metallic silver

Ar'gyll-Rob'ertson pu'pil or **symp'tom** (ar'gil) [Douglas *Argyll Robertson*, Scotch ophthalmologist, 1837–1909.] Absence of the light reflex in the pupil, while the power of contraction during accommodation is preserved; one of the symptoms frequently present in tabes dorsalis and general paralysis.

argyn (ar'jin). Trade name of a silver preparation of the argentoproteinum mite type.

argyria (ar-jir'i-ah) [G. *argyros*, silver.] Argyriasis, argyrosis, argyrism; a slate-gray or bluish discoloration of the skin and deep tissues, due to the deposit of insoluble albuminate of silver, occurring after the medicinal administration for a long period of a soluble silver salt.

argyriasis (ar-jir-i'a-sis). Argyria.

argyr'ic. Argentic.

argyrism (ar'jir-izm). Argyria.

argyritis (ar''ji-ri'tis) [G. *argyros*, silver.] Silver or yellow litharge; plumbi oxidum when of a decidedly yellow color; see *chrysitis*.

argyrol (ar'jĭ-rol). A trade name for silver vitelline, a compound of silver and a protein obtained from serum-albumin, a preparation of the argentoproteinum mite type; a dark-brown powder or scales, freely soluble in water, and containing about 25 per cent. of silver; employed in gonorrhea and in eye diseases in solution of 1–50 to 1–20.

ar'gyrophil, ar'gyrophile [G. *argyros*, silver, + *philos*, fond.] Staining readily with silver dyes, argentaffin

argyro'sis. Chronic silver poisoning, argyria.

arheol (ah're-ol). Trade name of a preparation of oleum santali, or santalol.

arhinencephalia (ă-rin''en-sĕ-fa'lĭ-ah). Arrhinencephalia

arhin'ia. Arrhinia

ar'hovin. Trade name of a compound of diphenylamine and thymylbenzoic-acid ester; an oily liquid, employed in gonorrheal cystitis and gonorrheal rheumatism in doses of ℥ss (0.25)

arhythmia (ă-rith'mĭ-ah) [G. *a-* priv. + *rhythmos*, rhythm.] Irregularity, loss of rhythm; noting especially an irregularity of the heart beats, either in the rapidity or in the force of the pulsations. **si'nus a.,** any irregularity in the heart beat due to interference with the impulses originating at the sinoauricular node.

arhyth'mic. Marked by loss of rhythm.

ar'il [L. *arillus*, a raisin.] In botany, an outgrowth from any part—stalk, integument, or placenta—of a seed.

ar'illode [L. *arillus*, aril, + G. *eidos*, resemblance.] A false aril, or appendage of a seed, originating often from the micropyle.

ariphon (ar'ĭ-fon). Trade name of a mixture of acetylsalicylic acid, 16 parts, sodium citrate, 325 parts, and citrated caffeine, 0.325 part; analgesic in doses of gr. 8 (0.5).

aristochin (ă-ris'to-kin). Diquinine carbonic-acid ester; a white tasteless powder, containing 96 per cent. of quinine; employed in malaria in adult doses of gr. 8–15 (0.5–1.0).

aristogenics (ar''is-to-jen'iks) [G. *aristos*, best, + *genea*, race, offspring.] An extreme and intensive form of eugenics.

ar'istol [G. *aristos*, best.] Trade name of dithymoldiiodide, thymolis* iodidum (U.S.), a local antiseptic used in surgical dressings.

Aristolochia (ar-is-to-lo'kĭ-ah) [G. *aristos*, best, + *locheia* childbirth, some species having oxytocic powers.] A genus of plants, mostly climbers, some of which furnish drugs which have been used more or less in medicine. **A. antihyster'ica,** the root possesses emetic and diaphoretic properties. **A. clemati'tis,** has been used as an emmenagogue and oxytocic. **A. in'dica,** furnishes the drug aristolochia.* **A. serpenta'ria** furnishes the drug serpentaria.*

aristolochia (ar-is-to-lo'kĭ-ah). (B.A.) The dried stem and root of *Aristolochia indica;* employed as a tonic and stimulant and as a remedy for snakebite; the concentrated solution and tincture are used.

aristolochin (ar-is-tol'o-kin). A bitter principle, $C_{19}H_{10}O_6$, derived from serpentaria.

aristoquin (ar-is'to-kwin). Aristochin.

arith"moma'nia [G. *arithmos*, number, + *mania*, frenzy.] An insane insistence upon incessant counting.

arkyochrome (ar'ke-o-krome) [G. *arkys*, a net, + *chrōma*, color.] Noting a nerve-cell in which the stainable substance, or tigroid mass. of the protoplasm presents a network appearance.

arkyostichochrome (ar"ke-o-stik'o-krome) [G *arkys*, net. + *stichos*, row. + *chrōma*, color.] Noting a nerve-cell in which the tigroid, or stainable material is arranged partly as a network, partly in the form of parallel threads.

Arlt's opera'tion [Ferdinand Ritter von *Arlt*, Viennese oculist, 1812–1887.] Transplantation of the eyelashes back from the edge of the lid in trichiasis. **A.'s si'nus**, an inconstant depression on the internal surface of the lacrymal sac **A.'s tracho'ma**, granular conjunctivitis.

arm [L. *armus*, fore-quarter of an animal, G. *armos*, a joint, a peg.] The upper extremity; specifically the segment of the upper extremity between the shoulder and the elbow, the upper arm.

abnormally large, macrobrachia. **abnormally small** microbrachia. **absence**, abrachia. **amputation**-brachiotomy. **bone of**, humerus. **crooked**, brachio, cyllosis, brachicyrtosis. **forearm**, antebrachium, antibrachium, cubitus.

armamenta'rium [L. *armamentum*, an implement.] In medicine, all the means (drugs, instruments etc.) at the disposal of the physician or of the surgeon to fit him for the practice of his profession.

arma'rium [L. *armarium*, bookcase.] Armamentarium. especially the literary part, or the physician's library.

ar'mature. 1. A bar of soft iron which is kept across the ends of a horseshoe magnet, when the latter is not in use. 2. Apparatus (3).

armilla (ar-mil'ah) [L. a bracelet.] The annular ligament of the wrist.

armora'cia. Horseradish. **armora'ciæ ra'dix** (Br.), horseradish, the fresh root of *Koripa armoracia*, *Cochlearia armoracia*, an herb of eastern Europe now naturalized everywhere; employed as a condiment, for the relief of flatulence, and in the prevention and treatment of scurvy.

arm'pit. Axilla, maschale, axillary fossa.

Arndt's law (arnt) [Rudolph *Arndt*, German psychiatrist, 1835–1900.] Weak stimuli excite physiological activity, moderately strong ones favor it, strong ones retard it, and very strong ones arrest it.

Arneth's classifica'tion (ar'nāt) [Joseph *Arneth*, German physician, *1873.] A classification of the multinuclear neutrophiles according to the number of their nuclear lobes, from 1 to 5. **A.'s phagocyt'ic in'dex**, the proportionate number per cubic millimeter of multinuclear neutrophiles with nuclei of three or more lobes, which Arneth assumes to possess the greatest phagocytic power.

ar'nica, ar'nicæ flo'res (B.A.). The dried flower heads of *Arnica montana*, leopard's bane, wolf's bane, mountain tobacco; a cardiac sedative, but seldom given internally; employed externally as an application to sprains and bruises. The official preparation is the tincture; dose, ♏10–30 (0.6–2.0); in eclectic practice it is given in gout and rheumatism and in low fevers in doses of 2 or 3 drops of the specific medicine, diluted, every two to four hours.

Arning's tincture (ahr'ning) [Eduard *Arning*, Hamburg dermatologist,* 1855.] A tincture containing anthrarobin 1, tumenol 4, ether 15, and tincture of benzoin 10.

Ar'nold's bod'ies [Julius *Arnold*, German pathologist, 1835–1915.] Fragments of erythrocytes sometimes mistaken for blood-plates.

Ar'nold's canal' [Friedrich *Arnold*, German anatomist, 1803–1890.] A bony canal in the petrous portion of the temporal bone through which passes the small superficial petrosal nerve. **A.'s gan'glion,** (1) ganglion oticum; (2) a nervous ganglion in the intercarotid sympathetic plexus. **A.'s lig'ament,** passing between the atlas and the axis. **A.'s nerve,** ramus auricularis vagi. **A.'s oper'culum,** see *operculum* (1). **A.'s retic'ular white sub'stance,** substantia reticularis alba.

Arnold's test [V. *Arnold*, Austrian physician, nineteenth century.] For diacetic acid: mix two parts of urine with one part each of a 1 per cent. solution of sodium nitrite and a 1 per cent. solution of para-amidoacetphenone containing a few drops of strong aqua ammoniæ; the urine is colored brownish red; 1 part of this is added to 10 parts of hydrochloric acid when a purple color is produced if diacetic acid is present.

arnott'a, arnott'o. Annatto, annotto, a yellow coloring matter obtained from the seeds of *Bixa orellana*, a tree of tropical America.

Aroid'eæ. Araceæ.

aro'ma [G. *arōma*, a spice.] An odor, especially an agreeable odor, arising from condiments and spices.

aromat'ic. 1 Having an agreeable, somewhat pungent, spicy odor 2. One of a group of vegetable drugs having a fragrant odor and slightly stimulant properties. **a. com'pound,** cyclic, carbocyclic, or closed-chain* compound. **a. elix'ir, a. fluid-ex'tract, a. pow'der,** etc., see the nouns **a. se'ries,** all the closed-chain* compounds derived from benzene, distinguished from those of the fatty series derived from methane.

aro'matize. To render aromatic; to treat with aromatics in order to disguise the taste or smell.

aro'min. A substance derived from urine, containing members of the aromatic series of benzene derivatives.

Ar'onson's se'rum [Hans *Aronson*, German bacteriologist, 1865–1919.] An antistreptococcus serum prepared by injecting into horses a streptococcus culture the virulence of which has been increased by passage through animals.

arrachement (ă-rash-mon') [Fr. tearing out.] Pulling out the capsule, in membranous cataract, by means of a capsule-forceps inserted through a corneal incision.

arrectores pilorum (ă-rek-to'rēz pi-lo'rum) [L. pl. of *arrec'tor pi'li*, erector of the hair.] Unstriped muscular fibers in the skin inserted into the bases of the hair-follicles, contraction of which, under the stimulus of cold or of fright, causes the hairs to stand erect, at the same time pulling them outward so as to raise the skin at their base into papillæ; the condition so produced is called goose flesh or cutis anserina.

arrest' [L. *arrestare*, to restrain.] 1. To stop, check, restrain. 2. A stoppage; an interference with or a checking of the regular course of a disease or symptom or the performance of a function.

ar'rhenal [G. *arrhenikon*, arsenic.] Sodii* methylarsenas, arsenyl.

arrhen'ic. Relating to arsenic. **a. medica'tion,** treatment of disease by means of the organic preparations of arsenic, the cacodylates and methylarsinates.

Arrhenius' doctrine (ah-ra'ne-oos) [Svante August *Arrhenius*, Swedish chemist, 1859–1927.] The doctrine of ionization, or electrolytic dissociation; in an electrically conductive solution free ions are present before electrolysis, and the proportion of molecules dissociated into ions can be calculated from measurements of electrical conductivity as well as of osmotic pressure. **A.'s law**, only those solutions are electrically conductive which have high osmotic pressures.

arrhenoblastoma (ăr-re-no-blas-to'mŭ) [G. *arrhēn*, male, + *blastos*, germ, + *-oma*.] A tumor (of the ovary), consisting of an aggregation of masculine sex cells, causing virile sex characteristics.

arrhe'noplasm [G. *arrhēn*, male, + *plasma*, something made or formed.] The male element of idioplasm.

arrhenotocia (ăr-re-no-to'sĭ-ŭ) [G. arrhĕn, male, + *tokos*, birth.] A form of parthenogenesis in which the virgin female gives birth to males only, as in the case of the queen bee.

arrhenot'oky. Arrhenotocia.

arrhinencephalia (ar-in-en-sĕ-fa'le-ah) [G. *a-* priv. + *rhis(rhin-)*, nose, + *enkephalos*, brain.] An absence or rudimentary state of the rhinencephalon, or olfactory lobe, on one or both sides, with a corresponding lack of development of the external olfactory organs.

arrhin'ia [G. *a-* priv. + *rhis(rhin-)*, nose.] Absence of the nose.

arrhythmia (ă-rith'mĭ-ah). Arhythmia.

arrhyth'mical. Arhythmic.

arrosion (ă-ro'zhun) [L. *arrodere*, to gnaw at.] Erosion.

ar'row. An arrow-shaped instrument. A slender, sharp-pointed rod of silver nitrate or other caustic adapted for insertion into a tumor.

ar'rowroot. The rhizome of *Maranta arundinacea*, a plant of tropical America; the source of a form of starch formerly much used in the diet of children and invalids.

ar'row-wood. Euonymus.

Arroyo's sign (ar-ro'yo) [Carlos F. Arroyo, American physician, ‹1892.] Asthenocoria.

arsacetin (ar-sas'ĕ-tin). An acetyl derivative of atoxyl, employed in the treatment of syphilis, in doses of gr. 10 (0.6) by hypodermic injection every other day.

ar'samine. Atoxyl.

arsaminol (ar-sam'ĭ-nol). A Japanese make of arsphenamine.

ar'senate. A salt of arsenic acid.

arsenauro (ar"sen-aw'ro). Trade name of a preparation of the bromides of arsenic and gold employed in the treatment of syphilis.

arsenhe'mol. A brownish powder, a compound of hemol and arsenic, employed as an alterative in skin diseases and as a nerve-tonic in doses of gr. 1–2 (0.06–0.12).

arse'ni. Genitive of *arsenum*.*

arseni'asis. Chronic arsenical poisoning.

ar'senic. 1. Arsenicum, arsenium, arsenum*; a steel-gray metal, one of the elements, symbol As, atomic weight 75. 2. Arseni trioxidum, white arsenic

arsen'ic. Relating to the element arsenic, or one of its compounds; noting especially *arsenic acid*, $H_3AsO_4 + \frac{1}{2} H_2O$, which forms arsenates with certain bases; not to be confused with what is ordinarily called arsenic, which is arsenous acid, arseni trioxidum.

ar'senic-fast. Resistant to the poisonous action of arsenic; noting especially spirochetes and other protozoan parasites, which acquire an immunity after the repeated administration of the drug

arsen'ical. Relating to or containing any of the salts of arsenum.

arsen'icalism. Arseniasis.

arsenicoph'agy [G. *arsenikon*, arsenic, + *phagō*, I eat.] The habitual taking of arsenic (arseni trioxidum), arsenic-eating.

arsen'icum [G. *arsenikon*.] Arsenum.

ar'senide. Arseniuret, a compound of arsenic with a metal.

arsenionization (ar"sen-i"on-i-za'shun). Electrolytic diffusion of arsenic ions in the tissues.

arsenious (ar-se'nĭ-us). Arsenous.

ar'senite. A salt of arsenous acid (arseni trioxidum).

arse'nium. Arsenic, arsenum.* **arse'nii io'didum** (Br.), arseni iodidum (U.S.).

arseniuret (ar-se'nyu-ret). Arsenide.

arseniureted (ar-se'nyu-ret-ed). Combined with arsenic so as to form an arsenide. **a. hy'drogen,** arsine, a poisonous gas of fetid odor, AsH_3.

arsenobenzene (ar"sen-o-ben'zēn). A generic term proposed to include all the arsenic compounds, employed under the names, salvarsan, kharsivan, arsphenamine, arsenobenzol, arsenobillon, diarsenol, etc., in the treatment of syphilis and other spirochetoses.

arsenoben'zol. Arsenobenzene.

arsenoblast (ar'se-no-blast) [G. *arsēn*, male, + *blastos*, germ.] The male element in the nucleus of an impregnated ovum, or genoblast; masculonucleus.

arsenoph'agy. Arsenicophagy.

arsenorelapsing (ar"sen-o-re-laps'ing). Noting a case of syphilis in which the symptoms recur after an apparent cure by arsphenamine.

ar"senosty'racol. A preparation of guaiacol cinnamic ester and arsenic, recommended in tuberculosis.

ar'senotrifer'rin. Trade name of a tasteless, insoluble, orange-colored powder said to contain arsenic, phosphorus, and iron in organic combination, employed as a hematinic in doses of gr. 5 (0.3) three times a day.

ar'senotrifer'rol. Trade name of an elixir of arsenotriferrin, given in doses of ʒ½ (15.0) three times a day.

ar'senous. Relating to the metal arsenic or one of its compounds, noting especially a compound of arsenum in a low valency. **a. acid,** acidum arseniosum, arseni* trioxidum, As_2O_3.

arse'num [G. *arsenikon*, from *arsēn* strong.] The element arsenic, a steel-gray metal, symbol As, atomic weight 75, which forms a number of poisonous compounds, some of which are used in medicine. **arse'ni io'didum** (U.S.), arsenii **triiodidum** (Br.), arsenous iodide, AsI_3; orange-colored scales or masses; employed as an alterative in doses of gr. $\frac{1}{10}$–$\frac{1}{10}$ (0.002–0.006). **arse'ni triox'idum** (U.S., Br.), acidum arseniosum, arsenious acid, arsenous acid, arsenic, white arsenic, As_2O_3; occurs in heavy lumps or white powder; employed as a tonic and in skin diseases and malaria in doses of gr. $\frac{1}{10}$–$\frac{1}{10}$ (0.0015–0.003); externally as a caustic.

arsic'odile. Arsycodile.

arsine (ar'sēn). Arseniureted* hydrogen; it was employed as a poisonous (hemolytic) gas by the Germans in the world war.

arson'ic acid. A derivative of arsenic acid by replacement of the hydroxyl group by an organic radical; see *alphyl* and *aryl*.

arso'nium. A hypothetical univalent radical, AsH_4.

arsonvaliza'tion. Darsonvalization.

arsphenamina (ars-phe-nă-me'nŭ) (U.S.). Arsphenamine, diamino-dihydroxyarsenobenzene hydrochloride, salvarsan, No. 606, kharsivan, arsenobenzol, arsenobillon, diarsenol, arsaminol, $HCl.NH_2.OH.C_6H_2As : AsC_6H_3.OH.NH_2.HCl.2H_2O$; a light yellow powder, becoming darker and more toxic on exposure to the air, odorless or nearly so, soluble in water, alcohol, or glycerin; employed in the treatment of syphilis, yaws, and some other diseases of protozoan origin, in average dose of gr. 6½ (0.4) intravenously administered. **a. milk,** the milk of a goat to which a. has been administered, suggested as a suitable food for heredosyphilitic infants. **argen'tum a.,** silver arsphenamine, silver salvarsan, the sodium salt of silver diaminodihydroxy-arseno-benzene, occurring as a brownish black powder, readily soluble in water, the solution being of a dark brown color and alkaline reaction; it contains approximately 20 per cent. of arsenic and 15 per cent. of silver; employed for the same purpose as arsphenamine in dose of gr. 1½ to 5 (0.1 to 0.3) by intravenous or intramuscular injection. **sodiarsphenami'na,** sodium arsphenamine, $NaO.NH_2C_3H_3As:As.C_2H_3NH_2ONa$, occurring as a bright yellow powder readily soluble in water, the solution being of an orange-yellow color and alkaline reaction; the arsenic content of sodium arsphenamine and of arsphenamine is as 2:3; employed for the same purpose as arsphenamine in doses of from 0.45 to 0.9 Gm. **sulpharsphenami'na,** sulpharsenamine, $NaOSO_2.CH_2.NH.OH\ C_6H_3As : As.C_6H_3OH.NH.CH_2.O_2SONa$, occurring as an orange yellow powder with an odor resembling that of sulphur dioxide and arsine, readily soluble in water, the solution being of a yellow color and acid to litmus; it contains from 19 to 24 per cent. of arsenic; employed for the same purpose as neoarsphenamine in subcutaneous or intramuscular doses of 0.1 gm.

arsphenamine (ar-sfen-am'ēn) [*arsenic* + *phenol* + *amine*.] Arsphenamina. **sil'ver a.,** argentum arsphenamina.* **so'dium a.,** sodiarsphenamina (see under *arsphenamina*). **sul'phur a.,** sulpharsphenamina (see under *arsphenamina*).

arsphenamized (ars-fen'am-īzd). Treated with or impregnated by arsphenamine; salvarsanized.*

arsyc'odile. Trade name of a compound containing sodium cacodylate, employed in neurasthenia diabetes, malaria, and various skin diseases.

arsylen (ar'si-len). Trade name of a tonic preparation of sodium allyl-arsonate, one of the components of tonicum* Roche

ar'tarine. An alkaloid, $C_{21}H_{23}NO_4$, from artarroot, *Xanthoxylum senegalense;* it is said to be similar to veratrine in its action as a cardiac, stimulant.

ar'tefact. Artifact.

Artemis'ia. A genus of plants of the natural order *Compositæ*, found chiefly in Europe, Asia, and North America. **A. abrot'anum,** southernwood, a European cultivated plant, the leaves and tops of which have been used in medicine under the name of *abrotanum*.

arte'ria, gen. and pl. *arte'riæ* [L. from G. *artēria*, air-conveyer, windpipe; the arteries were formerly supposed to be air-tubes.] Artery.

a. acetab'uli [BNA], *origin*, a. obturatoria; *distribution*, ligamentum teres and head of femur.

a. acromiothorac'ica, a. thoracoacromialis [BNA].

a. alveola'ris infe'rior [BNA], inferior alveolar, inferior dental; *origin*, maxillaris interna; *distribution*, through various branches to buccal mucous membrane, floor of mouth, teeth of lower jaw; *anastomoses*, submental and inferior coronary branches of maxillaris externa and labialis inferior.

a. alveola'ris supe'rior ante'rior [BNA], anterior superior dental; one of several branches of the infraorbitalis supplying incisor and canine teeth of upper jaw.

a. alveola'ris supe'rior poste'rior [BNA], posterior dental; *origin*, maxillaris interna; *distribution*, molar and bicuspid teeth of upper jaw and mucous membrane of antrum.

a. anastomot'ica magna, (1) a. collateralis ulnaris inferior [BNA]; (2) a. genu suprema [BNA].

a. angula'ris [BNA], one of the terminal branches of the a. maxillaris externa (facial); *distribution*, muscles and skin of side of nose; *anastomoses*, lateral nasal, and dorsalis nasi and palpebrales from the ophthalmic.

a. anon'yma [BNA], innominate artery; *origin*, convexity of the arch of the aorta; *terminal branches*, right subclavian and right common carotid; occasionally just above its origin it gives off the thyreoidea ima.

a. appendicula'ris [BNA], *origin*, ileocolica or mesenterica superior; *distribution*, vermiform appendix.

a. arcua'ta [BNA], a. metatarsalis; *origin*, dorsalis pedis; *branches*, metatarseæ dorsales and digitales dorsales

a. articula'ris az'ygos, a. genu media [BNA].

a. articula'ris exter'na infe'rior, a. genu inferior lateralis [BNA].

a. articula'ris exter'na supe'rior, a genu superior lateralis [BNA].

a. articula'ris inter'na infe'rior, a. genu inferior medialis [BNA].

a. articula'ris inter'na supe'rior, a. genu superior medialis [BNA].

a. auditi'va inter'na [BNA], internal auditory; *origin*, basilaris; *distribution*, internal ear.

a. auricula'ris poste'rior [BNA], *origin*, external carotid; *branches*, muscular, parotid, auricular, and occipital rami, and stylomastoid artery.

a. auricula'ris profun'da [BNA], *origin*, maxillaris interna; *distribution*, articulation of jaw, parotid gland, and external auditory meatus; *anastomoses*, branches of temporalis superficialis and auricularis posterior.

a. axilla'ris [BNA], the continuation of the subclavian in the axilla, and becoming the brachial in the arm; *branches*, thoracalis suprema, thoracoacromialis, thoracalis lateralis, subscapularis, circumflexa humeri, posterior and anterior.

a. az'ygos articula'ris, a. genu media [BNA].

a. basila'ris [BNA], formed by union of the two vertebrates, runs from the lower to the upper border of the pons, and bifurcates into the two cerebri posteriores.

a. brachia'lis [BNA], *origin*, is a continuation of the axillaris; *branches*, profunda brachii (superior profunda), collateralis ulnaris superior (inferior profunda), collateralis ulnaris inferior (anastomotica magna), muscular and nutrient branches; bifurcates at the elbow into radialis and ulnaris.

a. bronchia'lis, one of three nutrient arteries of the lungs, two on the left and one on the right side, arising from the descending thoracic aorta.

a. bucca'lis, a. buccinatoria [BNA].

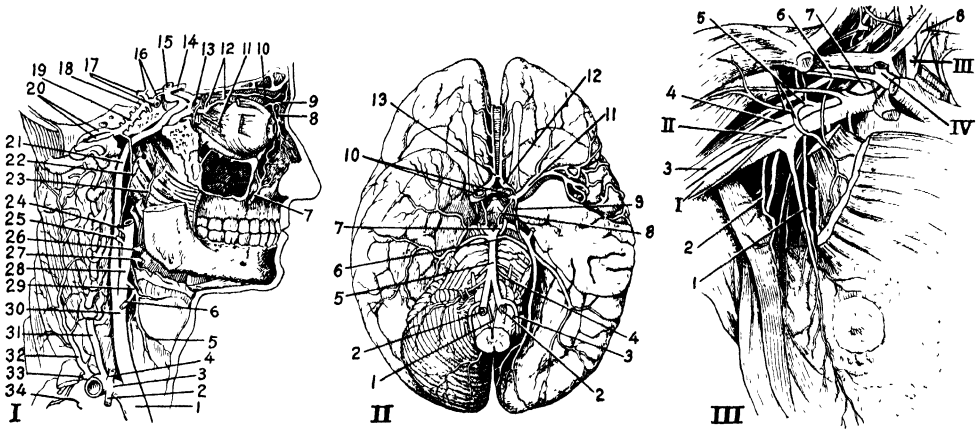
a. buccinato'ria [BNA], buccal; *origin*, maxillaris interna; *distribution*, buccinator muscle, skin and mucous membrane of cheek; *anastomoses*, bucca, branch of maxillaris externa.

a. bul'bi ure'thræ [BNA], *origin*, a. penis; *distribution*, bulb of urethra and corpus cavernosum urethræ.

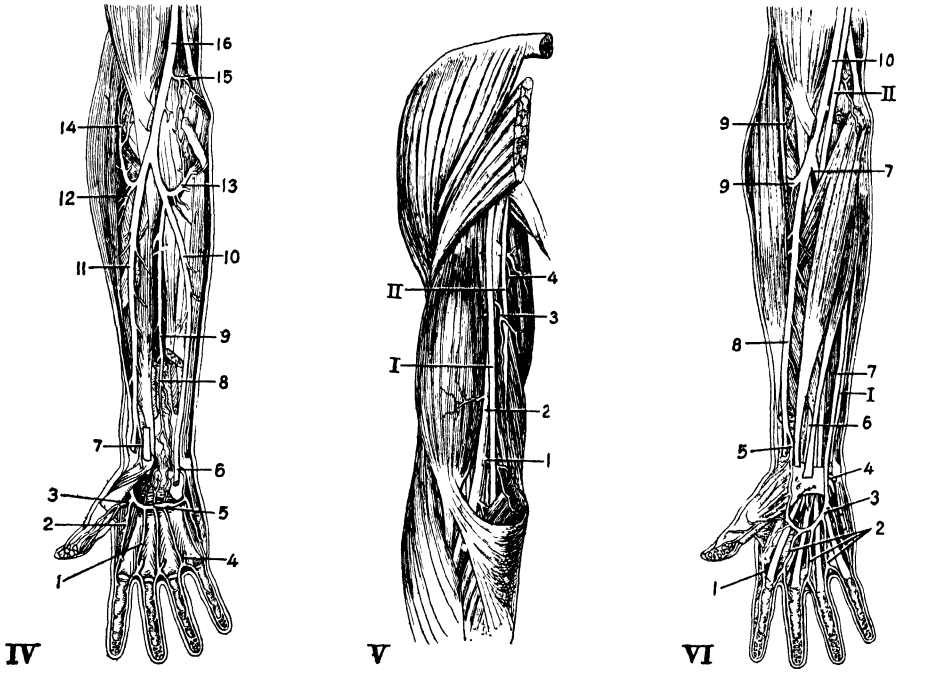
a. bul'bi vestib'uli [BNA], *origin*, a. clitoridis; *distribution*, vestibular bulb.

a. calcari'na, a continuation of the posterior cerebral artery along the calcarine fissure.

a. cana'lis pterygoid'ei [BNA], Vidian artery; *origin*, maxillaris interna or palatina descendens; *distribution*, upper part of pharynx, Eustachian tube, levator and



I. Arteries of the Neck and Face: 1. Anonyma; 2 Mammaria interna; 3. Subclavia; 4. Truncus thyreocervicalis (thyroid axis); 5. Cricothyreoidea; 6. Sternocleido-mastoidea; 7. Maxillaris externa; 8. Nasalis; 9. Frontalis; 10. Supraorbitalis; 11. Arteriæ ciliares, 12. Ethmoidalis, 13 Ophthalmica; 14. Cerebri anterior; 15. Cerebri media; 16 Communicans interior et posterior; 17. Cerebri posterior; 18. Cerebelli inferior; 19 Basilaris; 20 and 31. Vertebralis; 21. Carotis interna, 22. Pharyngea ascendens; 23. Palatina ascendens, 24. Auricularis posterior; 25. Occipitalis; 26. Maxillaris externa; 27. Lingualis; 28 Carotis externa, 29. Thyreoidea superior; 30 Carotis communis; 31. Vertebralis; 32. Cervicalis profunda, 33. Truncus costocervicalis (intercostalis superior); 34. Anastomosis between the intercostalis superior and first intercostalis aortica. II. Arteries of the Base of the Brain: 1. Spinalis anterior 2. 2. Vertebralis; 3. Cerebelli inferior posterior; 4. Cerebelli inferior anterior; 5. Basilaris; 6. Cerebelli superior; 7 Cerebri posterior; 8. Communicans posterior; 9. Chorcoidea; 10. Carotis interna; 11. Cerebri media; 12 Cerebri anterior; 13. Communicans anterior. III Axillaris and Its Branches: 1. Thoracalis lateralis; 2. Subscapularis, 3. Brachialis; 4. Axillaris; 5. Thoracoacromialis; 6. Transversa scapulæ; 7. Subclavia; 8. Carotis communis; 1 Vena basilica, 11. Vena axillaris; III. Vena jugularis interna, IV. Vena jugularis externa.



IV. Deep Arteries of the Front of the Forearm and Hand: 1. Metacarpea volaris, 2. Volaris indicis radialis; 3. Princeps pollicis; 4. Digitalis volaris communis; 5. Arcus volaris profundus; 6. Ramus profundus ulnaris; 7. Ramus volaris superficialis; 8. Interossea communis; 9. Interossea volaris, 10. Ulnaris; 11. Radialis; 12. Ramus muscularis radialis; 13. Recurrens ulnaris, 14. Recurrens radialis; 15 Collateralis ulnaris inferior; 16. Brachialis. V. Brachial Artery: 1. Collateralis ulnaris inferior; 2. Brachialis; 3. Collateralis ulnaris superior, 4 Profunda brachii. 1. Nervus medianus; 11. Nervus ulnaris. VI. Superficial Arteries of the Front of the Forearm and Hand: 1. Volaris indicis radialis; 2. Arteriæ digitales volares communes; 3. Arcus volaris superficialis; 4. Ramus profundus ulnaris; 5. Ramus volaris superficialis; 6. Mediana; 7, 7. Ulnaris; 8. Radialis; 9, 9. Recurrens radialis; 10. Brachialis. 1. Nervus ulnaris; 11. Nervus medianus.

tensor palati muscles; *anastomoses*, through tympanic branch with other tympanic arteries.

a. capsula'ris me'dia, a. suprarenalis media [BNA].

a. caro'tis commu'nis [BNA], common carotid; *origin*, right from innominate, left from arch of aorta; runs upward in the neck and divides opposite upper border of thyroid cartilage into *terminal branches*, external and internal carotid.

a. caro'tis exter'na [BNA], external carotid; *origin*, common carotid; *branches*, superior thyroid, lingual, facial, occipital, posterior, auricular, ascending pharyngeal, and *terminal branches*, internal maxillary and superficial temporal.

a. caro'tis inter'na [BNA], internal carotid; arises from the carotis communis opposite upper border of thyroid cartilage, and terminates in the middle fossa of the skull, dividing into the middle and anterior cerebral arteries; *branches*, ophthalmica, communicans posterior, cerebri anterior, and cerebri media, and tympanic, cavernous, Gasserian, pituitary, and meningeal rami.

a. centra'lis ret'inæ [BNA], *origin*, ophthalmica; *distribution*, the retina.

a. cerebel'li infe'rior ante'rior [BNA], *origin*, basilaris; *distribution*, lower surface of lateral lobes of cerebellum; *anastomoses*, cerebelli inferior posterior.

a. cerebel'li infe'rior poste'rior [BNA], *origin*, vertebralis; *distribution*, medulla, choroid plexus, and cerebellum; *anastomoses*, cerebelli superior and cerebelli inferior anterior.

a. cerebel'li supe'rior [BNA], superior cerebellar; *origin*, basilaris; *distribution*, upper surface of cerebellum, vermiform process, and valve of Vieussens; *anastomoses*, cerebelli inferior posterior.

a. cer'ebri ante'rior [BNA], one of the two terminal branches of the carotis interna; *branches*, communicans anterior, and various ganglionic and cortical rami; *distribution*, corpus callosum, lamina cinerea, septum lucidum, gyrus rectus, olfactory lobe, marginal, superior, middle, and ascending frontal and parietal convolutions, quadrate lobe, and superior parietal lobule.

a. cer'ebri me'dia [BNA], a. fos'sæ Syl'vii; one of the terminal branches of carotis interna; *distribution*, central and cortical portions of the brain.

a. cer'ebri poste'rior [BNA], posterior cerebral, formed by the bifurcation of the basilaris; *distribution*, central and cortical portion of brain; *anastomosis*, enters into formation of circle of Willis.

a. cervica'lis ascen'dens [BNA], *origin*, thyreoidea inferior, sometimes independently from the truncus thyreocervicalis; *distribution*, muscles of neck and spinal cord; *anastomoses*, branches of verticalis, occipitalis, pharyngea ascendens, and cervicalis profunda.

a. cervica'lis profun'da [BNA], deep cervical; *origin*, superior intercostal, or truncus costocervicalis; *distribution*, posterior deep muscles of neck; *anastomoses*, branches of princeps cervicis, cervicalis ascendens, and vertebralis.

a. cervica'lis superficia'lis [BNA], *origin*, transversa colli; *distribution*, posterior muscles of neck; *anastomoses*, princeps cervicis, transversa scapulæ.

a. choroid'ea [BNA], anterior choroidal; *origin*, carotis interna; *distribution*, optic tract, crus cerebri, uncinate convolution, and posterior part of internal capsule, terminating in choroidal plexus in descending cornu of lateral ventricle.

a. cilia'ris ante'rior [BNA], one of a number of branches of the lacrimalis which perforate the sclera and anastomose with the ciliares posteriores.

a. cilia'ris poste'rior bre'vis [BNA], one of several ciliary branches of the ophthalmica distributed to the choroid coat of the eye.

a. cilia'ris poste'rior lon'ga [BNA], one of two branches of the ophthalmica running forward between the sclerotic and choroid coats to the iris, at the outer and inner margins of which they form by anastomosis two circles.

a. circumflex'a fem'oris latera'lis [BNA], circumflexa femoris externa, lateral (external) circumflex artery of the thigh; *origin*, profunda femoris; *distribution*, hip-joint, thigh muscles; *anastomoses*, circumflexa femoris medialis, glutæa inferior, glutæa superior, poplitea.

a. circumflex'a fem'oris media'lis [BNA], circumflexa femoris interna, medial (internal) circumflex artery of the thigh; *origin*, profunda femoris. *distribution*, hip-joint, muscles of thigh; *anastomoses*, glutæa inferior, glutæa superior, circumflexa femoralis lateralis.

a. circumflex'a hu'meri ante'rior [BNA], *origin*, axillaris; *distribution*, shoulder-joint and biceps muscle: *anastomoses*, circumflexa humeri posterior.

a. circumflex'a hu'meri poste'rior [BNA], *origin*, axillaris; *distribution*, muscles and structures of shoulder-joint; *anastomoses*, circumflexa humeri anterior, transversa scapulæ, thoracoacromialis, and profunda brachii.

a. circumflex'a il'ium profun'da [BNA], deep circumflex iliac artery; *origin*, iliaca externa; *distribution*, muscles and skin of lower abdomen, sartorius and tensor fasciæ femoris; *anastomoses;* lumbalis, epigastrica, glutæa, iliolumbalis, and circumflexa ilium superficialis.

a. circumflex'a il'ium superficia'lis [BNA], superficial circumflex iliac artery; *origin*, femoralis; *distribution*, outer inguinal glands and integument of that region; sartorius, and tensor fasciæ femoris muscles; *anastomoses*, circumflexa ilium profunda.

a. circumflex'a scap'ulæ [BNA], dorsalis scapulæ. *origin*, subscapularis; *distribution*, muscles of shoulder and scapular region; *anastomoses*, branches of transversa scapulæ and transversa colli.

a. clitor'idis [BNA], *origin*, pudenda interna; *distribution*, clitoris, dividing into profunda and dorsalis clitoridis

a. cœli'aca [BNA], celiac artery, celiac axis; *origin*, abdominal aorta just below diaphragm; *branches*, gastrica sinistra, hepatica, lienalis.

a. col'ica dex'tra [BNA], right colic; *origin*, mesenterica superior, sometimes by a common trunk with the ileocolica; *distribution*, ascending colon; *anastomoses*, colica media, ileocolica.

a. col'ica me'dia [BNA], middle colic; *origin*, mesenterica superior; *distribution*, transverse colon; *anastomoses*, colica dextra and sinistra.

a. col'ica sinis'tra [BNA], left colic; *origin*, mesenterica inferior; *distribution*, descending colon and splenic flexure, *anastomoses*, colica media, sigmoidea.

a. collatera'lis digita'lis, a. digitalis volaris propria [BNA].

a. collatera'lis me'dia [BNA], the posterior terminal branch of the profunda brachii, anastomosing with the arteries which form the rete articulare cubiti.

a. collatera'lis radia'lis [BNA], articular branch of superior profunda, the anterior terminal branch of the profunda brachii, anastomosing with the recurrens radialis.

a. collatera'lis ulna'ris infe'rior [BNA], anastomotica magna; *origin*, brachialis; *distribution*, arm muscles at back of elbow; *anastomoses*, ulnaris recurrens anterior et posterior, collateralis ulnaris superior, profunda brachii, and interossea recurrens.

a. collatera'lis ulna'ris supe'rior [BNA], a. profunda brachii inferior; *origin*, brachialis; *distribution*, elbow-joint; *anastomoses*, recurrens ulnaris posterior and collateralis ulnaris inferior.

a. co'mes ner'vi ischiat'ici, a. comitans nervi ischiadici [BNA].

a. co'mes ner'vi phren'ici, a. pericardiacophrenica [BNA].

a. com'itans ner'vi ischiad'ici [BNA], a. comes nervi ischiatici; *origin*, glutæa inferior; *distribution*, sciatic nerve; *anastomoses*, branches of profunda femoris.

a. commu'nicans ante'rior [BNA], a short vessel joining the two anterior cerebral arteries and completing the circle of Willis anteriorly.

a. commu'nicans poste'rior [BNA], *origin*, carotis interna; *distribution*, optic tract, crus cerebri, interpeduncular region, and uncinate convolution; *anastomoses*, with cerebri posterior to form circle of Willis.

a. conjunctiva'lis, one of a number of minute arteries derived from muscular branches of the ophthalmica.

a. corona'ria, (1) [BNA] one of two arteries (*dextra* and *sinistra*) supplying the walls of the heart; they

arise from the sinuses of Valsalva: (2) a. gastrica sinistra [BNA]; (3) a. labialis superior [BNA].

a. corona'ria supe'rior, a. labialis superior [BNA].

a. cremaster'ica, a. spermatica externa [BNA].

a. cricothyreoid'ea, cricothyroid artery, a small branch of the a. thyreoidea superior crossing the cricothyroid membrane.

a. cys'tica [BNA], *origin*, right ramus of hepatica; *distribution*, gall-bladder and under surface of the liver.

a. deferentia'lis [BNA], *origin*, anterior division of hypogastrica, or sometimes vesicalis superior; *distribution*, vas deferens, seminal vesicles, testicle; *anastomoses*, spermatica, cremasteric branch of epigastrica inferior.

a. denta'lis infe'rior, a. alveolaris inferior [BNA].

a. denta'lis poste'rior, a. alveolaris superior posterior [BNA].

a. denta'lis supe'rior ante'rior, a. alveolaris superior anterior [BNA].

a. digita'lis dorsa'lis [BNA], one of the collateral digital branches of the metatarseæ dorsales in the foot, and of the metacarpeæ dorsales in the hand.

a. digita'lis palma'ris, a. digitalis volaris [BNA].

a. digita'lis planta'ris, one of the collateral digital branches of the metatarseæ plantares.

a. digita'lis vola'ris commu'nis [BNA], palmar digital artery, one of four arteries arising from the superficial palmar arch and running to the interdigital clefts where each divides into two digitales volares propriæ.

a. digita'lis vola'ris pro'pria [BNA], volar digital artery proper, collateral digital; one of eight arteries derived from the digitales volares communes, which run along the sides of the volar surfaces of the fingers.

a. dorsa'lis clitor'idis [BNA], dorsal artery of the clitoris, derived from the a. clitoridis, supplying the glans.

a. dorsa'lis na'si [BNA], *origin*, ophthalmica; *distribution*, skin of side of nose; *anastomoses*, angularis.

a. dorsa'lis pe'dis [BNA], dorsal artery of the foot; a continuation of the tibialis anterior; *branches*, tarsea lateralis, arcuata, metatarseæ dorsales, digitales dorsales; *anastomoses* with the plantaris lateralis to form the plantar arch.

a. dorsa'lis pe'nis [BNA], dorsal artery of the penis; *origin*, a. penis; *distribution*, skin, glans penis, and corpora cavernosa.

a. dorsa'lis scap'ulæ, a. circumflexa scapulæ [BNA].

a. epigas'trica infe'rior [BNA], a. epigastrica profunda; *origin*, iliaca externa; *branches*, spermatica externa (ligamenti teretis uteri), and muscular, cutaneous, and pubic rami; *distribution* of terminal branches, abdominal muscles; *anastomoses*, epigastrica superior.

a. epigas'trica profun'da, a. epigastrica inferior [BNA].

a. epigas'trica superficia'lis [BNA], *origin*, femoralis; *distribution*, inguinal glands and integument of lower abdomen; *anastomoses*, epigastrica inferior, circumflexa ilium superficialis, and pudenda externa superficialis.

a. epigas'trica supe'rior [BNA], *origin*, the inner terminal branch of mammaria interna; *distribution*, abdominal muscles and integument, falciform ligament; *anastomoses*, epigastrica inferior and hepatica.

a. episclera'lis [BNA], one of numerous twigs from the muscular branches of the ophthalmica, passing to the conjunctiva.

a. ethmoida'lis ante'rior [BNA], *origin*, ophthalmica; *distribution*, cerebral membranes in anterior cranial fossa, anterior ethmoidal cells, frontal sinus, anterior upper part of nasal mucous membrane, skin of dorsum nasi.

a. ethmoida'lis poste'rior [BNA], *origin*, ophthalmica; *distribution*, posterior ethmoidal cells and upper posterior part of outer wall of nasal cavity.

a. facia'lis, a. maxillaris externa [BNA].

a. femora'lis [BNA], *origin*, continuation of iliaca externa, beginning at Poupart's ligament; *branches*, pudenda externa superficialis, epigastrica superficialis, circumflexa ilium superficialis, pudenda externa profunda, profunda femoris, genu suprema, terminating in the poplitea at the upper part of the popliteal space.

a. fos'sæ Syl'vii, a. cerebri media [BNA].

a. fronta'lis [BNA], *origin*, ophthalmica; *distribution*, anterior portion of scalp; *anastomoses*, branches of supraorbitalis

a. gas'trica bre'vis [BNA], one of four or five small arteries (vasa brevia) given off from the lienalis, passing to the greater curvature of the stomach, and anastomosing with the other arteries in that region.

a. gas'trica dex'tra [BNA], a. pylorica; *origin* hepatica; *distribution*, pyloric end of stomach; *anastomoses*, gastrica sinistra.

a. gas'trica sinis'tra [BNA], coronary; *origin*, cœliaca; *distribution*, lesser curvature of stomach, *anastomoses*, œsophagea, gastroepiploica, gastrica dextra.

a. gastroduodena'lis [BNA], *origin*, hepatica; terminal *branches*, gastroepiploica dextra, pancreaticoduodenalis superior.

a. gastroepiplo'ica dex'tra [BNA], *origin*, gastroduodenalis; *distribution*, greater curvature and walls of stomach; *anastomoses*, unites with gastroepiploica sinistra and branches from this arch anastomose with branches of gastrica dextra and sinistra and of the colic arteries

a. gastroepiplo'ica sinis'tra [BNA], left gastroepiploic; *origin*, lienalis; *distribution*, greater curvature of stomach joining gastroepiploica dextra, which see for anastomoses

a. ge'nu infe'rior latera'lis [BNA], lateral inferior artery of the knee, inferior external articular artery; *origin*, poplitea; *distribution*, knee-joint; *anastomoses*, genu superior lateralis and recurrens tibialis anterior (and posterior).

a. ge'nu infe'rior media'lis [BNA], medial inferior artery of the knee, inferior internal articular artery; *origin*, poplitea; *distribution*, knee-joint; *anastomoses*, recurrens tibialis anterior (and posterior) and genu superior medialis.

a. ge'nu me'dia [BNA], middle artery of the knee, azygos articular artery; *origin*, poplitea; *distribution*, synovial membrane and crucial ligaments of knee-joint.

a. ge'nu supe'rior latera'lis [BNA], lateral superior artery of the knee, superior external articular artery; *origin*, poplitea; *distribution*, knee-joint; *anastomoses*, circumflexa femoris lateralis, perforans tertia, recurrens tibialis anterior, genu inferior lateralis.

a. ge'nu supe'rior medius [BNA], medial superior artery of the knee, superior internal articular artery; *origin*, poplitea; *distribution*, knee-joint; *anastomoses*, genu suprema, genu superior lateralis

a. ge'nu supre'ma [BNA], uppermost or highest artery of the knee, anastomotica magna; *origin*, femoral; *distribution*, knee-joint and adjacent parts; *anastomoses*, genu superior medialis, genu inferior medialis, genu superior lateralis, circumflexa femoris lateralis, and recurrens tibialis anterior.

a. glutæ'a infe'rior [BNA], ischiatica, sciatic; *origin*, anterior division of hypogastrica; *distribution*, hip-joint and gluteal region; *anastomoses*, branches of pudenda interna, sacralis lateralis, glutæa superior obturatoria, circumflexa femoris medialis and lateralis.

a. glutæ'a supe'rior [BNA], gluteal; *origin*, posterior division of hypogastrica; *distribution*, gluteal region; *anastomoses*, sacralis lateralis, glutæa inferior, pudenda interna, circumflexa ilium profunda, circumflexa femoris lateralis.

a. hæmorrhoida'lis infe'rior [BNA], *origin*, pudenda interna; *distribution*, rectum; *anastomoses*, hæmorrhoidalis media and superior, and a. perinei.

a. hæmorrhoida'lis me'dia [BNA], anterior division of hypogastrica; *distribution*, rectum; *anastomoses*, hæmorrhoidalis superior and inferior.

a. hæmorrhoida'lis supe'rior [BNA], *origin*, mesenterica inferior; *distribution*, sigmoid flexure and rectum; *anastomoses*, branches of sacralis media, sigmoidea, hæmorrhoidalis media, pudenda interna.

a. helici'næ pe'nis [BNA], the smaller branches of a. dorsalis penis

a. hepat'ica [BNA] **a. hepat'ica commu'nis** [NK] *origin*, cœliaca; *branches*, gastrica dextra (pyloric), gastroduodenalis, and right and left terminal rami

a. hepat'ica pro'pria [BNA], the continuation of the hepatica after giving off the gastrica dextra and gastroduodenalis

a. hyaloid'ea [BNA], a branch of the a. centralis retinæ which runs through the hyaloid canal of the vitreous body in the fetus; it disappears in the last month of intrauterine life.

a. hypogas'trica [BNA], a. iliaca interna; *origin*, iliaca communis; *branches*, iliolumbalis, sacralis lateralis, obturatoria, glutæa superior, glutæa inferior, umbilicalis, vesicales superiores, vesicalis inferior, hæmorrhoidalis media; the artery itself usually divides into an anterior and a posterior division, the anterior terminating in the pudenda interna, the posterior in the glutæa superior.

a. il'ea, *origin*, mesenterica superior; *distribution*, ileum; *anastomoses*, other branches of superior mesenteric.

a. ileocol'ica [BNA], *origin*, mesenterica superior; usually by a common trunk with the colica dextra, *distribution*, ascending colon; *anastomoses*, colica dextra.

a. ili'aca commu'nis [BNA], one of the two terminal branches of the abdominal aorta; opposite the lumbosacral articulation, it becomes the hypogastrica (internal iliac) and also gives off the iliaca externa.

a. ili'aca exter'na [BNA], *origin*, iliaca communis; *branches*, epigastrica inferior, circumflexa ilium profunda; becomes the femoralis at Poupart's ligament.

a. ili'aca inter'na, a. hypogastrica [BNA].

a. iliolumba'lis [BNA], iliolumbar; *origin*, posterior division of hypogastrica; *distribution*, pelvic muscles and bones; *anastomoses*, circumflexa ilium profunda, obturatoria, lumbalis.

a. infraorbita'lis [BNA], *origin*, maxillaris interna; *distribution*, inferior rectus and inferior oblique muscles, lacrymal gland, lower eyelid, lacrymal sac, and upper lip; *anastomoses*, branches of ophthalmica, maxillaris externa, labialis superior, transversa faciei, and buccinatoria.

a. innomina'ta, a. anonyma, [BNA].

a. intercosta'lis [BNA], one of nine pairs of arteries arising from the thoracic aorta and distributed to the nine lower intercostal spaces, spinal column, spinal cord, and muscles and integument of the back; they anastomose with branches of the musculophrenica, mammaria interna, epigastrica superior, subcostalis, and lumbalis.

a. intercosta'lis ante'rior, one of twelve rami intercostales [BNA]; *origin*, mammaria interna; *distribution*; intercostal muscles of upper six intercostal spaces; *anastomoses*, aortic and superior intercostal branches.

a. intercosta'lis supe'rior, (1) truncus* costocervicalis [BNA]; (2) a. intercostalis suprema [BNA].

a. intercosta'lis supre'ma [BNA], superior intercostal; *origin*, truncus costocervicalis; *distribution*, structures of first and second intercostal spaces; *anastomoses*, anterior intercostal branches of mammaria interna.

arte'riæ interloba'res ren'is [BNA], the larger branches of the a. renalis which occupy the intervals between the pyramids and divide to form a series of incomplete arches, arteriæ arciformes, across the bases of the pyramids.

arte'riæ interlobula'res ren'is [BNA], a number of small arteries passing outward from the arches of the interlobar arteries through the labyrinth and giving off branches to the glomeruli.

a. interos'sea ante'rior, a. interossea volaris [BNA].

a. interos'sea commu'nis [BNA], common interosseous; *origin*, ulnaris, *branches*, interossea volaris and dorsalis.

a. interos'sea dorsa'lis, (1) [BNA] posterior interosseous; *origin*, interossea communis; *distribution*, deep parts of back of forearm; *anastomoses*, interossea volaris, (2) a. metacarpea dorsalis [BNA].

a. interos'sea palma'ris, a. metacarpea volaris [BNA].

a. interos'sea poste'rior, a. interossea dorsalis [BNA].

a. interos'sea recur'rens [BNA], posterior interosseous recurrent branch of ulnaris, *distribution*, back of elbow-joint; *anastomoses*, branches of profunda brachii and collateralis ulnaris inferior.

a. interos'sea vola'ris [BNA], anterior interosseous, *origin*, ulnaris; *distribution*, deep parts of the front of the forearm; *anastomoses*, interossea dorsalis.

a. intestina'lis [BNA], one of numerous branches (10–16) passing from the mesenterica superior to the jejunum and ileum; *anastomoses*, with each other to form arterial loops in the mesentery and on the wall of the gut, and with other branches of the superior mesenterica.

a. ischiad'ica, **a. ischiat'ica**, **a. glutæa inferior** [BNA].

a. jejuna'lis [BNA], *origin*, mesenterica superior; *distribution*, jejunum; *anastomoses*, intestinales.

a. labia'lis ante'rior [BNA], termination of the pudenda externa profunda.

a. labia'lis infe'rior [BNA], *origin*, maxillaris externa (facial); *distribution*, structures of lower lip; *anastomoses*, mental branch of alveolaris inferior (inferior dental), submentalis, and inferior coronary branch of maxillaris externa.

a. labia'lis poste'rior [BNA], one of several twigs derived from the a. perinei, distributed to the labia majora.

a. labia'lis supe'rior [BNA], superior labial, superior coronary; *origin*, maxillaris externa (facial); *distribution*, structures of upper lip and, by a septal branch, the anterior and lower part of the septum nasi; *anastomoses*, lateral nasal and nasopalatine ramus of the sphenopalatine.

a. lacrima'lis [BNA], *origin*, ophthalmica; *distribution* lacrymal gland, external and superior rectus muscles, upper eyelid, forehead, and temporal fossa; *branches*, ciliares anteriores.

a. larynge'a infe'rior [BNA], *origin*, thyreoidea inferior; *distribution*, muscles and mucous membrane of larynx; *anastomoses*, laryngeal branch of thyreoidea superior.

a. larynge'a supe'rior [BNA], superior laryngeal; *origin*, thyreoidea superior; *distribution*, muscles and mucous membrane of larynx; *anastomoses*, cricothyroid ramus of thyroidea superior and terminal rami of thyroidea inferior.

a. lie'nalis [BNA], splenic; *origin*, cœliaca; *branches*, gastricæ breves, gastroepiploica sinistra, and pancreatic rami.

a. lingua'lis [BNA], *origin*, external carotid, runs along under surface of tongue, terminates as ranine artery, a. profunda linguæ; *branches*, suprahyoid and dorsalis linguæ branches and a. sublingualis.

a. lumba'lis [BNA], lumbar; one of four or five pairs; *origin*, abdominal aorta; *distribution*, lumbar vertebræ, muscles of back, abdominal wall; *anastomoses*, intercostalis, subcostalis, epigastrica superior and inferior, circumflexa ilium profunda, and iliolumbalis.

a. lumba'lis i'ma [BNA], lowest lumbar; *origin*, sacralis media; *distribution*, sacrum; *anastomoses*, sacralis lateralis.

a. malleola'ris ante'rior latera'lis [BNA], *origin*, tibialis anterior; *distribution*, ankle-joint; *anastomoses*, peronæa, tarsea lateralis.

a. malleola'ris ante'rior media'lis [BNA], *origin*, tibialis anterior; *distribution*, ankle-joint and neighboring integument; *anastomoses*, branches of tibialis posterior.

a. malleola'ris poste'rior latera'lis [BNA], peronæa posterior, lateral posterior malleolar, posterior peroneal; one of the terminal branches of the peronæa; *distribution*, outer side of ankle; *anastomoses*, malleolaris anterior lateralis.

a. malleola'ris poste'rior media'lis [BNA], a small branch of the posterior tibial distributed to the internal surface of the inner malleolus.

a. mamma'ria exter'na, a. thoracalis lateralis [BNA].

a. mamma'ria inter'na [BNA], internal mammary; *origin*, subclavian; *branches*, pericardiacophrenica, mediastinales anteriores, pericardial, muscular, and perforating rami, and bifurcates into the musculophrenica and epigastrica superior.

a. masseter'ica [BNA], *origin*, maxillaris interna, *distribution*, deep surface of masseter; *anastomoses*, branches of transversa faciei and masseteric branches of maxillaris externa.

a. maxilla'ris exter'na [BNA], facial artery *origin*, external carotid; *branches*, palatina ascendens, tonsillar and submaxillary rami, submentalis, labialis inferior, labialis superior, masseteric, buccal, and lateral nasal rami, and anguiaris.

a. maxilla'ris inter'na, *origin*, carotis externa; *branches*, auricularis profunda, tympanica anterior, meningea media, alveolaris inferior, masseterica, temporalis profunda anterior et posterior, buccinatoria, alveolaris superior posterior, infraorbitalis, palatina descendens, canalis pterygoidei, sphenopalatina, and accessory meningeal, pterygoid, and pterygopalatine rami.

a. media'na [BNA], a. comes nervi mediani; *origin*, ulnaris; *distribution*, accompanies median nerve to palm; *anastomoses*, branches of superficial palmar arch

a. mediastina'lis ante'rior [BNA], *origin*, one of numerous branches of the mammaria interna; *distribution*, lymphatic nodes in the anterior mediastinum and the sternum.

a. meninge'a ante'rior [BNA], *origin*, ophthalmica; *distribution*, cerebral membranes in middle cranial fossa; *anastomoses*, branches of meningea media and meningeal branches of carotis interna and lacrimalis.

a. meninge'a me'dia [BNA], *origin*, maxillaris interna; *branches*, petrosal, Gasserian, tympanic, orbital, anterior and posterior terminal; *distribution*, to parts mentioned and through terminal branches to anterior and posterior cranial fossæ; *anastomoses*, meningeal branches of occipitalis, pharyngeus ascendens, ophthalmica and lacrimalis, stylomastoidea, accessory meningeal ramus of maxillaris interna, and temporalis profunda.

a. meninge'a poste'rior [BNA], posterior meningeal; *origin*, pharyngea ascendens; *distribution*, dura mater; *anastomoses*, branches of meningea media and vertebralis.

a. menta'lis [BNA], terminal branch of alveolaris inferior.

a. mesenter'ica infe'rior [BNA], *origin*, aorta; *branches*, colica sinistra, sigmoidea, hæmorrhoidalis superior.

a. mesenter'ica supe'rior [BNA], superior mesenteric; *origin*, aorta; *branches*, intestinales, pancreaticoduodenalis inferior, jejunales, ileæ, ileocolica, appendicularis, colica dextra, colica media.

a. metacarpe'a dorsa'lis [BNA], dorsal interosseous, one of three branches of the medialis, running in the back of the 2d, 3d, and 4th interosseous muscles

a. metacarpe'a vola'ris [BNA], palmar interosseous, one of three arteries springing from the deep palmar arch and running in the three inner interosseous spaces; they anastomose with the metacarpeæ dorsales.

a. metatarsa'lis, a. arcuata [BNA].

a. metatarse'a dorsa'lis [BNA], dorsal interosseous artery; one of three branches of the arcuata, supplying the three outer toes and the outer side of the second toe through the collateral branches, the digitales dorsales.

a. metatarse'a planta'ris [BNA], one of four digital branches of the plantar arch.

a. musculophren'ica [BNA], *origin*, is the outer terminal branch of mammaria interna; *distribution*, diaphragm and intercostal muscles; *anastomoses*, branches of pericardiacophrenica, phrenica inferior, and aortic intercostal arteries.

a. nutri'cia fem'oris [BNA], nutrient artery of the femur; one of two arteries, superior and inferior, arising from the perforans prima and tertia respectively (sometimes secunda and quarta).

a. nutri'cia fib'ulæ [BNA], *origin*, peronæa; *distribution*, fibula.

a. nutri'cia hu'meri [BNA], a branch of the brachial artery entering the humerus through the nutrient foramen on the inner side of the shaft.

a. nutri'cia tib'iæ [BNA], derived from the upper part of the posterior tibial and enters through the medullary foramen on the posterior surface of the tibia.

a. obturato'ria [BNA], *origin*, anterior division of the hypogastrica; *distribution*, bladder, pelvic bones, psoas and levator ani muscle; *anastomoses*, iliolumbalis, epigastrica inferior, circumflexa femoris medialis.

a. occipita'lis [BNA], *origin*, external carotid; *branches*, sternocleidomastoidea, and muscular, meningeal, auricular, occipital, mastoid, and descending rami.

a. œsophage'a [BNA], one of several arteries arising from the descending thoracic aorta and supplying the œsophagus.

a. ophthal'mica [BNA], *origin*, carotis interna; *branches*, ciliares posteriores, centralis retinæ, meningea anterior, lacrimalis, supraorbitalis, ethmoidalis anterior, palpebrales, dorsalis nasi, and frontalis.

a. orbita'lis, a. zygomaticoorbitalis [BNA].

a. ovar'ica [BNA], *origin*, aorta; *branches*, ureteral, tubal, ligamentous, ovarian, and uterine rami; *anastomoses*, uterina.

a. palati'na ascen'dens [BNA], *origin*, maxillaris externa (facial); *distribution*, lateral walls of pharynx, tonsils, Eustachian tubes, and soft palate; *anastomoses*, tonsillar ramus of maxillaris externa, dorsalis linguæ and palatina descendens.

a. palati'na descen'dens [BNA], descending or posterior palatine; *origin*, maxillaris interna; *distribution*, soft palate, gums, and bones and mucous membrane of hard palate; *anastomoses*, sphenopalatina, palatina ascendens, pharyngea ascendens, and tonsillar branches of maxillaris externa (facial).

a. palati'na ma'jor [BNA], the anterior branch of the palatina descendens in the pterygopalatine canal, supplying the gums and mucous membrane of the hard palate.

a. palati'na mi'nor [BNA], one of several posterior branches of the palatina descendens in the pterygopalatine canal, distributed to the soft palate and tonsil.

arte'riæ palpebra'les [BNA] branches of the ophthalmic supplying the upper and lower eyelids, consisting of two sets *a. p. latera'les* and *a. p. media'les*.

a. pancreat'icoduodena'lis infe'rior [BNA], *origin*, mesenterica superior; *distribution*, head of pancreas, duodenum; *anastomoses*, pancreaticoduodenalis superior.

a. pancreat'icoduodena'lis supe'rior [BNA], *origin*, gastroduodenalis; *distribution*, head of pancreas, duodenum, common bile-duct; *anastomoses*, pancreaticoduodenalis inferior, lienalis.

a. pe'nis [BNA], deep terminal branch of the pudenda interna, dividing into the dorsalis and profunda penis.

a. per'forans [BNA], perforating artery; one of three or four branches (prima, secunda, tertia, quarta) of the profunda femoris which pierce the muscles to reach the vastus lateralis (externus) muscle; they anastomose with branches of the glutea inferior, circumflexa femoris medialis, circumflexa femoris lateralis, poplitea.

a. pericardi"acophren'ica [BNA], comes nervi phrenici, superior phrenic artery; *origin*, mammaria interna; *distribution*, pericardium, diaphragm, and pleura; *anastomoses*, musculophrenica, phrenica inferior, mediastinal and pericardial branches of the mammaria interna.

a. perinea'lis superficia'lis, a. perinei [BNA]

a. perine'i [BNA], perinealis superficialis; *origin*, pudenda interna; *distribution*, perineum; *anastomoses*, pudendæ externæ.

a. peronæ'a [BNA], *origin*, tibialis posterior; *distribution*, soleus, tibialis posterior, flexor longus hallucis and peroneal muscles and inferior tibiofibular articulation and ankle-joint; *anastomoses*, malleolaris anterior lateralis, tarsea lateralis, plantaris lateralis, dorsalis pedis.

a. peronæ'a ante'rior, ramus perforans arteriæ peronææ [BNA], perforating branch of the peroneal artery, going to the lateral malleolar rete.

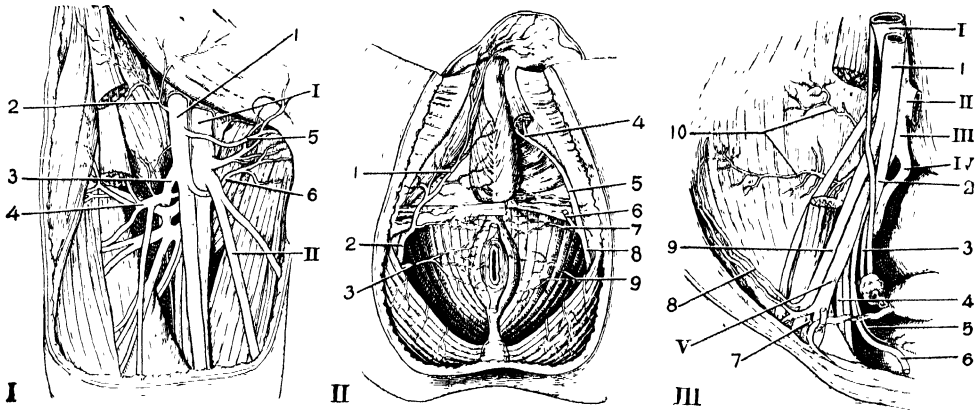
a. peronæ'a poste'rior, a. malleolaris posterior lateralis [BNA].

a. pharynge'a ascen'dens [BNA], ascending pharyngeal; *origin*, external carotid; *distribution*, wall of pharynx and soft palate.

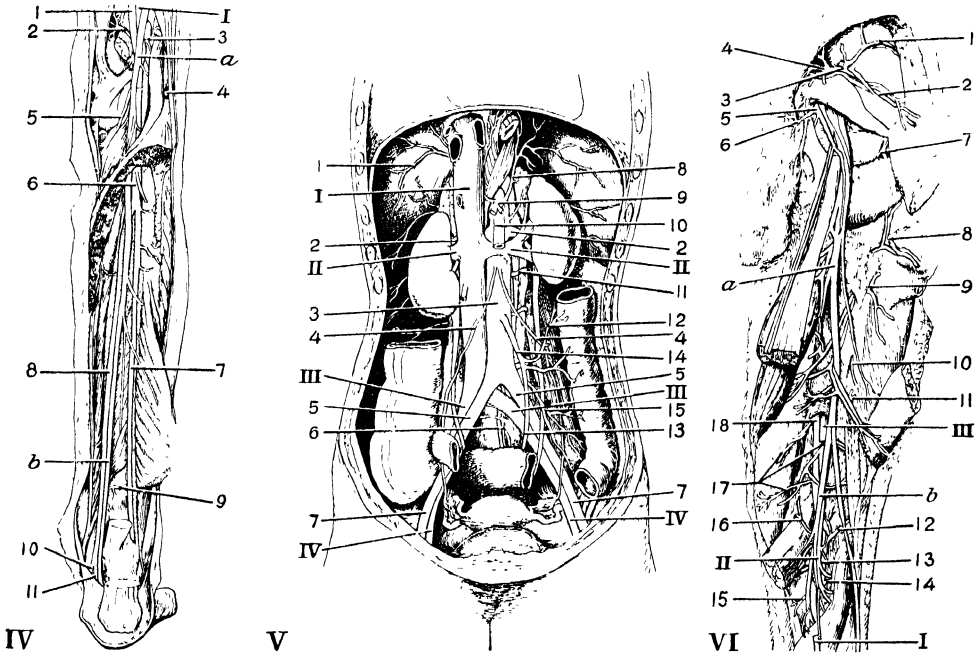
a. phren'ica infe'rior [BNA], *origin*, abdominal aorta just below diaphragm; *distribution*, diaphragm; *anastomoses*, phrenica superior, mammaria interna, and musculophrenica.

a. phren'ica supe'rior [BNA], one of several small arteries given off from the lower part of the thoracic aorta and distributed to the diaphragm; they anastomose with the musculophrenic.

a. planta'ris latera'lis [BNA], lateral (external) plantar; larger of the two terminal branches of the tibialis posterior; *distribution*, forms the plantar arch and through it supplies the sole of the foot and plantar



I Blood Vessels in the Femoral Triangle: 1 Femoralis; 2 Circumflexa ilium superficialis; 3. Profunda femoris, 4 Circumflexa femoris lateralis, 5 Pudenda externa superficialis; 6. Pudenta externa profunda. I. Vena femoralis, II V saphena magna. II. Arteries of the Male Perineum. 1. Perinei, 2. Pudenda interna, 3. Hæmorrhoidalis inferior, 4 Dorsalis penis and profunda penis, 5 Bulbi urethræ; 6. Perinei, 7. Ramus transversus perinei; 8 Pudenda interna; 9. Hæmorrhoidalis inferior. III. Arteries and Veins in the Female Pelvis 1. Iliaca communis, 2 Hypogastrica, 3 Uterina, 4. Obturatoria; 5. Vesicalis superior, 6 Ligamentum umbilicale laterale (obliterated a umbilicalis); 7 Epigastrica inferior, 8 Circumflexa ilium profunda; 9 Iliaca externa, 10 Rami iliaci arteriæ iliolumbalis I Vena cava inferior, II. V. iliaca communis sinistra; III. V. iliaca communis dextra, IV. V. hypogastrica.



IV. Arteries of the Back of the Leg: 1 Poplitea; 2 Genu superior medialis, 3. Genu superior lateralis; 4 Genu inferior lateralis, 5. Genu inferior medialis, 6. Tibialis posterior; 7. Peronea; 8. Tibialis posterior; 9. Ramus communicans; 10. Plantaris medialis; 11. Plantaris lateralis. I. V. poplitea. *a*. Nervus tibialis, *b*. N. plantaris lateralis V. Arteries of the Abdomen 1. Phrenica inferior; 2. Renalis; 3. Aorta abdominalis; 4. Ovarica; 5. Iliaca communis; 6 Sacralis media, 7. Iliaca externa; 8. Phrenica inferior; 9 Cœliaca; 10 Mesenterica superior; 11 Lumbalis; 12. Colica sinistra, 13 Hæmorrhoidalis superior; 14 Mesenterica inferior; 15 Sigmoidea. I. Vena cava inferior; II V. renalis, III V. iliaca communis; IV V iliaca externa VI. Arteries of the Back of the Thigh: 1, 2 Glutæa superior; 3. Glutæa superior (ramus profundus); 4. Glutæa superior (ramus superficialis); 5 Glutæa inferior; 6. Glutæa inferior (ramus coccygeus), 7. Circumflexa femoris medialis (ramus terminalis profundus); 8. Circumflexa femoris medialis (ramus terminalis transversus); 9. Perforans prima, 10. Perforans secunda, 11. Perforans tertia, 12 Genu suprema lateralis, 13. Poplitea; 14. Genu inferior lateralis, 15. Genu inferior medialis, 16. Genu superior medialis, 17. Rami musculares; 18. Poplitea. I. Vena saphena parva; II and III. V. poplitea. *a*. Nervus ischiadicus; *b*. N. tibialis.

surfaces of the toes; *anastomoses*, plantaris medialis, dorsalis pedis.

a. planta'ris media'lis [BNA], medial (internal) plantar, one of the terminal branches of the tibialis posterior; *distribution*, inner side of the sole of the foot; *anastomoses*, dorsalis pedis, plantaris lateralis.

a. poplite'a [BNA], continuation of femoral in the popliteal space, bifurcating at the lower border of the popliteus muscle into the tibialis anterior and posterior; *branches*, genu superior lateralis and medialis, genu inferior lateralis and medialis, and surales.

a. prin'ceps cervi'cis, descending ramus of the occipitalis [BNA]; *origin*, occipitalis; *distribution*, complexus and trapezius muscles; *anastomoses*, cervicalis superficialis and branches of vertebralis and cervicalis profunda.

a. prin'ceps pol'licis [BNA], *origin*, radialis; *distribution*, volar surface and sides of thumb; *anastomoses*, arteries on dorsum of thumb.

a. profun'da bra'chii [BNA], profunda brachii superior; *origin*, brachialis; *distribution*, humerus and muscles and integument of arm; *anastomoses*, recurrens radialis, interossea recurrens, collateralis ulnaris, circumflexa humeri posterior.

a. profun'da bra'chii infe'rior, a. collateralis ulnaris superior [BNA]

a. profun'da bra'chii supe'rior, a. profunda brachii [BNA].

a. profun'da clitor'idis [BNA], deep artery of the clitoris; a small vessel supplying the body of the clitoris, derived from the a. clitoridis.

a. profun'da fem'oris [BNA], deep artery of the thigh; *origin*, femoralis; *branches*, circumflexa femoris lateralis, circumflexa femoris medialis, perforans (3 or 4).

a. profun'da lin'guæ [BNA], deep artery of the tongue, ranine artery; termination of lingual; *distribution*, muscles and mucous membrane of under surface of tongue.

a. profun'da pe'nis [BNA], deep artery of the penis; *origin*, a. penis; *distribution*, corpus cavernosum penis.

a. puden'da exter'na profun'da [BNA], deep external pudendal (pudic) artery; *origin*, femoral; *distribution*, integument of scrotum, or labia majora; *anastomoses*, pudenda externa superficialis and spermatica externa, or a. ligamenti teretis uteri.

a. puden'da exter'na superficia'lis [BNA], superficial external pudendal (pudic) artery; *origin*, femoralis, *distribution*, root of dorsum penis, or mons Veneris, and skin of lower abdomen; *anastomoses*, pudenda externa profunda, epigastrica superficialis

a. puden'da inter'na [BNA], pudica interna; *origin*, anterior division of hypogastrica; *branches*, hæmorrhoidalis inferior, perinei, scrotales (or labiales) posteriores, penis, urethralis, bulbi urethræ (bulbi vestibuli vaginæ), profunda penis, dorsalis penis (clitoridis, profunda clitoridis, dorsalis clitoridis).

a. pulmona'lis [BNA], *origin*, right ventricle of the heart; *distribution*, the lungs; *branches*, right and left.

a. pylor'ica, a. gastrica dextra [BNA].

a. radia'lis [BNA], *origin*, brachialis; *branches*, recurrens radialis, metacarpeæ dorsales, digitales dorsales, princeps pollicis, metacarpeæ volares, and muscular, carpal, and perforating rami

a. radia'lis in'dicis, a. volaris indicis radialis [BNA].

a. rani'na, ranine, a. profunda linguæ [BNA].

a. recur'rens radia'lis [BNA], *origin*, radialis; *distribution*, supinator and extensor muscles; *anastomoses*, profunda brachii.

a. recur'rens tibia'lis ante'rior [BNA], *origin*, tibialis anterior; *distribution*, superior tibiofibular articulation and tibialis anterior muscle; *anastomoses*, genu (articular) arteries, circumflexa femoris lateralis, and genu suprema.

a. recur'rens tibia'lis poste'rior [BNA], an occasional branch of the tibialis anterior; *distribution*, back of knee-joint; *anastomoses*, genu inferior medialis and lateralis.

a. recur'rens ulna'ris [BNA], one of two (anterior and posterior) recurrent branches of the ulnaris; *distribution*, elbow-joint and adjacent muscles; *anastomoses*, collateralis ulnaris superior and inferior.

a. rena'lis [BNA], *origin*, aorta; *branches*, ureteral, perirenal, and glandular rami, and suprarenalis inferior; *distribution*, kidney.

a. sacra'lis latera'lis [BNA], lateral sacral; *origin*, posterior division of hypogastrica; *distribution*, region, of coccyx and sacrum; *anastomoses*, sacralis media, glutæa superior, glutæa inferior.

a. sacra'lis me'dia [BNA], middle sacral; *origin*, back of abdominal arota just above the bifurcation; *distribution*, lower lumbar vertebra, sacrum, and coccyx; *anastomoses*, sacralis lateralis, hæmorrhoidalis superior and media.

a. scrota'lis ante'rior [BNA], termination of the pudenda externa profunda.

a. scrota'lis poste'rior [BNA], one of several twigs derived from the a. perinei, distributed to the posterior portion of the scrotum.

a. sigmoid'ea [BNA], *origin*, mesenterica inferior; *distribution*, descending colon and sigmoid flexure; *anastomoses*, colica sinistra, hæmorrhoidalis superior.

a. spermat'ica exter'na [BNA], cremasterica; *origin*, epigastrica inferior; *distribution*, coverings of spermatic cord; *anastomoses*, pudenda externa, spermatica, and a. perinei.

a. spermat'ica inter'na [BNA], *origin*, aorta; *branches*, ureteral, cremasteric, epididymal rami, and a. testicularis; *distribution*, parts designated by names of branches; *anastomoses*, branches of renal, epigastrica inferior, deferentialis.

a. sphenopalati'na [BNA], *origin*, maxillaris interna; *distribution*, posterior portion of outer nasal wall and septum; *anastomoses*, branches of palatina descendens, labialis superior, and infraorbitalis.

a. spina'lis ante'rior [BNA], *origin*, vertebralis; *distribution*, spinal cord and pia mater; *anastomoses*, branches of intercostales and lumbales.

a. spina'lis poste'rior [BNA], *origin*, vertebralis; *distribution*, medulla, spinal cord, and pia mater; *anastomoses*, spinal branches of intercostales.

a. ster"noclei"domastoid'ea [BNA], *origin*, occipital; *distribution*, muscle of the same name; *anastomoses*, sternocleidomastoid ramus of the thyroidea superior.

a. stylomastoid'ea [BNA], *origin*, auricularis posterior; *distribution*, external auditory meatus, mastoid cells, semicircular canals, stapedius muscle, and vestibule; *anastomoses*, tympanic branches of carotis interna and pharyngea ascendens, and auditory branch of basilaris.

a. subcla'via [BNA], *origin*, right from anonyma (innominate), left from arch of aorta; *branches*, vertebralis, thyroid axis (truncus thyreocervicalis), mammaria interna; superior intercostal (truncus costocervicalis); it is directly continuous with the axillaris.

a. sublingua'lis [BNA], *origin*, lingualis; *distribution*, muscles of tongue; *anastomoses*, submentalis.

a. submenta'lis [BNA], maxillaris externa (facial); *distribution*, mylohyoid muscle, submaxillary and sublingual glands, and structures of lower lip; *anastomoses*, labialis inferior, mental branch of alveolaris inferior, sublingualis, and inferior coronary ramus of maxillaris externa.

a. subscapula'ris [BNA], *origin*, axillaris; *branch*, circumflexa scapulæ; *distribution*, muscles of shoulder and scapular region; *anastomoses*, branches of transversa colli, transversa scapulæ, thoracalis lateralis, and intercostals.

a. superficia'lis vo'læ, ramus volaris superficialis [BNA]; *origin*, radialis; *distribution*, ball of thumb; *anastomoses*, sometimes with ulnaris to form superficial palmar arch (arcus volaris superficialis).

a. supraorbita'lis [BNA], *origin*, ophthalmica; *distribution*, frontalis muscle and scalp; *anastomoses*, branches of the temporalis superficialis and frontalis.

a. suprarena'lis infe'rior [BNA], *origin*, renalis; *distribution*, suprarenal body; *anastomoses*, suprarenalis media.

a. suprarena'lis me'dia [BNA], capsularis media; *origin*, aorta; *distribution*, suprarenal bodies; *anastomoses*, suprarenalis superior and inferior.

a. suprascapula'ris, a. transversa scapulæ [BNA].

a. sura'lis [BNA], artery of the calf; one of four or five arteries arising (sometimes by a common trunk) from the poplitea; *distribution*, muscles and integument of the calf; *anastomoses*, tibialis posterior, genu inferior medialis and lateralis.

a. tarse'a latera'lis [BNA], *origin*, dorsalis pedis; *distribution*, tarsal joints and extensor brevis digitorum

muscle; *anastomoses*, arcuata, peronæa anterior, plantaris lateralis, malleolaris anterior lateralis.

a. tarse'a media'lis [BNA], one of two small branches of the dorsalis pedis; *distribution*, medial malleolar rete.

a. tempora'lis profun'da [BNA], two in number anterior and posterior; *origin*, maxillaris interna; *distribution*, temporal muscle; *anastomoses*, branches of temporalis superficialis, lacrimalis, and meningea media.

a. tempora'lis me'dia [BNA], *origin*, temporalis superficialis; *distribution*, temporal fascia and muscle; *anastomoses*, branches of maxillaris interna.

a. tempora'lis superficia'lis [BNA], *origin*, is a terminal branch of the external carotid; *branches*, transversa faciei, temporalis media, zygomaticoorbitalis, and parotid, anterior auricular, frontal, and parietal rami;

a. testicula'ris [BNA], *origin*, spermatica interna. *distribution*, testicle.

a. thoraca'lis latera'lis [BNA], lateral thoracic, long thoracic, external mammary; *origin*, axillaris; *distribution*, thoracic muscles and mammary gland; *anastomoses*, branches of thoracoacromialis, intercostal, and subscapularis.

a. thoraca'lis supre'ma [BNA], superior thoracic; *origin*, axillaris; *distribution*, muscles of chest; *anastomoses*, branches of transversa scapulæ, mammaria interna, and thoracoacromialis

a. thora'cica lon'ga, a. thoracalis lateralis [BNA].

a. thoracoacromia'lis [BNA], acromiothoracic; *origin*, axillaris; *distribution*, muscles and skin of shoulder and upper chest; *anastomoses*, branches of thoracalis suprema, mammaria interna, thoracalis lateralis, circumflexa humeri posterior and anterior, and transversa scapulæ.

a. thoracodorsa'lis [BNA], *origin*, axillaris; *distribution*, muscles of upper part of back; *anastomoses*, branches of thoracalis lateralis.

a. thy'mica [BNA], *origin*, mammaria interna; *distribution*, thymus gland.

a. thyreoid'ea i'ma [BNA], lowest thyroid, an inconstant artery; *origin*, arch of aorta or anonyma (innominate) artery; *distribution*, thyroid gland.

a. thyreoid'ea infe'rior [BNA], inferior thyroid; *origin*, truncus thyreocervicalis; *branches*, cervicalis ascendens, laryngea inferior, and muscular, esophageal, and tracheal rami.

a. thyreoid'ea supe'rior [BNA], superior thyroid; *origin*, external carotid; *branches*, infrahyoid branch, laryngea superior, thyreolaryngea, sternocleidomastoidea, a cricothyroid and two terminal branches.

a. thyreolaryngea, *origin*, thyreoidea superior; *distribution*, larynx and thyroid gland.

a. tibia'lis ante'rior [BNA], *origin*, poplitea; *branches*, recurrens tibialis posterior and anterior, malleolaris anterior lateralis and medialis, dorsalis pedis, tarsea lateralis, tarseæ mediales, metatarseæ dorsales, and digitales dorsales.

a. tibia'lis poste'rior [BNA], the larger and more directly continuous of the two terminal branches of the poplitea; *branches*, peronæa, nutricia fibulæ, malleolaris posterior lateralis and medialis, nutricia tibiæ, plantaris medialis and lateralis, metatarseæ plantares, digitales plantares, and various communicating and perforating rami.

a. tr nsver'sa col'li [BNA], a transversalis colli; *origin*, truncus thyreocervicalis; *branches*, cervicalis superficialis, muscular and descending rami.

a. transver'sa facie'i [BNA], transverse facial; *origin*, temporalis superficialis; *distribution*, parotid gland, Stensen's duct, masseter muscle, and overlying skin; *anastomoses*, infraorbital and buccal branches of maxillaris interna, and buccal and masseteric branches of maxillaris externa.

a. transver'sa scap'ulæ [BNA], suprascapular; *origin*, truncus thyreocervicalis; *distribution*, clavicle, scapula, muscles of shoulder, and shoulder-joint; *anastomoses*, subscapular, posterior scapular, and dorsalis scapulæ.

a. transversa'lis col'li, a. transversa colli [BNA.]

a. tympan'ica ante'rior [BNA], *origin*, maxillaris interna; *distribution*, tympanum; *anastomoses*, tympanic branches of carotis interna and pharyngea ascendens, and stylomastoidea.

a. tympan'ica infe'rior [BNA], inferior tympanic; *origin*, pharyngea ascendens; *distribution*, tympamnum of the ear; *anastomoses*, tympanic branches of other arteries.

a. tympan'ica poste'rior [BNA], *origin*, stylomastoidea; *distribution*, tympanic cavity; *anastomoses*, tympanic branches of maxillaris interna.

a. tympan'ica supe'rior [BNA], *origin*, meningea media; *distribution*, tympanum.

a. ulna'ris [BNA], *origin*, brachialis; *branches*, recurrentes ulnares, interosseæ, digitales volares.

a. umbilica'lis [BNA], before birth is continuation of iliaca communis; after birth it is obliterated between bladder and umbilicus, forming the lateral umbilical ligament, the remaining portion, between a. hypogastrica and bladder, being reduced in size and giving off the superior vesical arteries.

a. urethra'lis [BNA], *origin*, a. penis; *distribution*, membranous urethra.

a. uteri'na [BNA], *origin*, anterior division of hypogastrica; *distribution*, uterus, upper part of vagina, round ligament, and inner part of Fallopian tube; *anastomoses*, ovarica, vaginalis, epigastrica inferior.

a. vagina'lis [BNA], *origin*, anterior division of hypogastrica; *distribution*, vagina, base of bladder, rectum; *anastomoses*, uterina, pudenda interna.

a. vertebra'lis [BNA], *origin*, subclavia; *branches*, spinalis posterior, spinalis anterior, a. cerebelli inferior posterior, and various muscular, meningeal, and spinal branches; the two vertebrals unite to form the basilar; *anastomoses*, descending ramus of occipitalis and cervicalis profunda.

a. vesica'lis infe'rior [BNA], *origin*, anterior division of hypogastrica; *distribution*, base of bladder, ureter, and (in the male) seminal vesicles, vas deferens, and prostate; *anastomoses*, hæmorrhoidalis media, and other vesical branches.

a. vesica'lis supe'rior [BNA], *origin*, umbilicalis; *distribution*, bladder, urachus, ureter; *anastomoses*, other vesical branches.

a. vidia'na, a. canalis pterygoidei [BNA].

a. vola'ris in'dicis radia'lis [BNA], radialis indicis; *origin*, radialis; *distribution*, radial side of index finger.

a. zygomat" coorbita'lis [BNA], orbital; *origin*, temporalis superficialis, sometimes temporalis media; *distribution*, orbicularis palpebrarum muscle, and portion of orbit; *anastomoses*, lacrimalis and palpebral branches of ophthalmica.

arteriag'ra. Arteriosclerosis of gouty origin

arte'rial. Relating to one or more arteries or to the entire system of arteries

arterialization (ar-te"rĭ-al-i-za'shun). 1. Making or becoming arterial; aeration of the blood whereby it is changed in character from venous to arterial 2. Vascularization.

arteriarctia (ar-te-rĭ-ark'shĭ-ah) [L. *arctare*, to constrict.] Narrowing of the arteries; vasocontraction

arteri'asis. Generalized arteriosclerosis.*

arteriecta'sia [G. *ektasis*, distention.] Dilatation of the arteries. vasodilatation.

arterioatony (ar-te"rĭ-o-at'o-nĭ). A relaxed state of the arterial walls.

arteriocap'illary. Relating to both arteries and capillaries. **a. fibro'sis**, arteriosclerosis of the walls of the capillaries and terminal arterioles.

arteriococcygeal gland (ar-te"rĭ-o-kok-sij'e-al). Glomus coccygeum.

arteriofibro'sis. Arteriosclerosis.

arte'riogram [G. *gramma*, a drawing.] Sphygmogram.

arteriog'raphy [G. *graphō*, I write, I register.] 1. Sphygmography. 2. Description of the arteries.

arteri'ola [L. dim. of *arteria*.] Arteriole. **a. rec'ta**, one of the arterioles going to the pyramids in the cortex of the kidney.

arte'riole [L. *arteriola*.] A minute artery; a terminal artery continuous with the capillary network

arte'riolith. A calcareous deposit in the wall of an artery or in a thrombus.

arteriol'ogy. The anatomy of the arteries; usually associated with the study of the other vessels under the name angiology.

arteriomala'cia [G. *malakia*, softness.] Softening of the arteries.

arteriom'eter [G. *metron*, measure.] An instrument for measuring the diameter of an artery, or its change in size during pulsation.

arteriomotor (ar-te"rĭ-o-mo'tor). Causing changes in the caliber of an artery; vasomotor with special reference to the arteries.

arteriomyomatosis (ar-te"rĭ-o-mi-o-mă-to'sis) [L. *arteria*, artery, + G. *mys*, muscle, + *-oma* + *-osis*.] Thickening of the walls of an artery by an overgrowth of muscular fibers arranged irregularly, intersecting each other without any definite relation to the axis of the vessel.

arteriop'athy [G. *pathos*, suffering.] Any disease of the arteries.

arteriophlebot'omy [G. *artēria* + *phleps(phleb-)*, vein, + *tomē*, a cutting] Bloodletting from the minute arterioles and veinlets by scarification.

arteriopla'nia [G *planē*, a straying.] The presence of an anomaly in the course of an artery.

arte'rioplas"ty [G. *artēria*, artery, + *plassō*, I form.] Matas'* operation for aneurysm.

arteriopressor (ar-te"rĭ-o-pres'or). Causing increased blood-pressure in the arteries.

arterior'rhaphy [G. *artēria*, artery, + *rhaphē*, seam] Suture of an artery.

arteriorrhex'is [G. *rhēxis*, rupture.] Rupture of an artery.

arteriosclero'sis [G. *artēria* + *sklērōsis*, a hardening.] Arterial sclerosis; a fibrous overgrowth, mainly of the inner coat of an artery, associated with degenerative changes in the middle coat, causing thickening of the arterial wall with loss of elasticity and contractility. **decres'cent form of a.,** senile form, that occurring as one of the manifestations of senile involution.

arteriosclerot'ic. Relating to or affected by arteriosclerosis.

arterios'ity. A state of being arterial, noting the aeration of the blood

arteriosteno'sis [G. *artēria* + *stenōsis*, a narrowing.] Narrowing of the caliber of an artery, either temporary, through vasoconstriction, or permanent, through arteriosclerosis

arteriosto'sis [G *osteon*, bone.] Calcification of the arterial walls

arteriostrep'sis [G. *artēria* + *strepsis*, a twisting.] Twisting of the divided end of an artery for the arrest of bleeding.

arte'riotome. A lancet for performing arteriotomy.

arteriot'omy [G. *artēria* + *tomē*, incision.] Bloodletting from an artery, usually the temporal.

arteriotony (ar-te-rĭ-ot'o-nĭ) [G. *artēria*, artery, + *tonos*, tension.] Blood pressure; the intra-arterial tension of the blood.

arte"riove'nous. Relating to both an artery and a vein or to both arteries and veins in general; both arterial and venous.

arteriover'sion [L. *arteria*, artery. + *versio*, a turning.] The arrest of hemorrhage from the open end of an artery by everting the wall of the vessel.

arteriover'ter. An instrument for facilitating arterioversion.

arteritis (ar-te-rĭ'(re')tis) Inflammation of an artery. **a. defor'mans,** endarteritis deformans, chronic inflammation of the intima with thickening and subsequent degeneration. **a. nodo'sa,** periarteritis nodosa. **a. oblit'erans,** obliterating a., endarteritis* obliterans.

ar'tery [L. *arteria*.] A blood-vessel conveying blood in a direction away from the heart: with the exception of the pulmonary artery, the arteries convey red or aerated blood. For the table of the arteries, see under *arteria*. **nu'trient a.,** an artery carrying blood to the interior of a bone. **ter'minal a.,** one which gives off no further branches. **ve'nous a.,** arteria pulmonalis.

anomalous course, arterioplania. **calculus,** arteriolith. **contraction,** arteriostenosis, arteriarctia **description of,** arteriography. **dilatation,** aneurysm, arteriectasia. **disease,** arteriopathy, arteriosclerosis, arteriofibrosis, atheroma, arteriomalacia, arteriostosis, arteriasis. **drawing blood from,** arteriotomy. **inflammation of,** arteritis; *of inner tunic*, endarteritis; *of middle tunic*, mesarteritis; *of outer tunic*, exarteritis, periarteritis. **narrowing,** arteriarctia, arteriostenosis. **ossification,** arteriostosis. **recording pulsations,** arteriography, sphygmography. **rupture,** arteriorrhexis. **science of,** arteriology. **small,** arteriole. **softening,** arteriomalacia. **suture,** arteriorrhaphy. **terminal,** telangion. **torsion,** arteriostrepsis **union of two arteries** (normal or surgical), anastomosis.

arthrag'ra [G. *arthron*, joint, + *agra*, seizure.] Articular gout.

ar'thral [G. *arthron*, joint.] Relating to a joint; articular.

arthral'gia [G *arthron*, joint, + *algos*, pain.] Severe pain in a joint, especially one not inflammatory in character, arthrodynia. **a. saturni'na,** severe pain on movement, chiefly flexion, of the joints of the lower extremities, in cases of lead poisoning.

arthral'gic. Relating to or affected with arthralgia; arthrodynic.

arthrec'tomy [G. *arthron*, joint, + *ektomē*, excision.] Exsection of a joint.

arthrempyesis (ar-threm-pi-e'sis) [G. *arthron*, joint, + *empyēsis*, suppuration.] The presence of pus in a joint.

arthresthesia (ar-thres-the'zĭ-ah) [G. *arthron*, joint, + *aisthesis*, sensation.] Articular sensibility.

arthrifuge (ar'thrĭ-fūj) [*arthritis* + L. *fugare*, to chase away.] A gout remedy.

arthrit'ic. 1 Relating to arthritis. 2. Gouty.

arthritide (ar'thrĭ-tēd) [Fr.] A skin eruption of assumed gouty or rheumatic origin.

arthritis (ar-thri'(thre')tis) [G. *arthron*, joint, + *-itis*.] Inflammation of a joint **a. defor'mans,** a chronic disease, of uncertain origin, affecting the structures of one or more of the joints, producing deformity and loss of function. **a. defor'mans juveni'lis,** Still's disease, see also Legg's disease and Perthes' disease. **a. defor'mans neoplas'tica,** osteitis fibrosa. **a. fungo'sa,** white swelling; chronic inflammation, usually tuberculous, of a joint, commonly the knee, with proliferation of the synovial fringes producing a boggy swelling. **hypertrophic a.,** osteoarthritis, Heberden's rheumatism. **a. nodo'sa,** (1) a. deformans; (2) gout. **a. urat'ica,** gout. **atroph'ic a.,** rheumatoid a. **chron'ic rheumat'ic a.,** a. deformans. **rheu'matoid a.,** the atrophic form of a. deformans.

ar'thritism. A condition in which one is prone to various inflammatory processes of a gouty nature in the joints and skin.

arthrobacte'rium [G. *arthron*, joint.] A bacterium in which reproduction occurs by segmentation or fission without endogenous spore formation.

arthrocace (ar-throk'a-se) [G. *arthron*, joint, + *kakē*, badness] Caries of a joint.

arthrocele (ar'thro-sēl) [G. *arthron*, joint, + *kēlē* hernia, tumor.] 1. Hernia of the synovial mem-

brane through the capsule of a joint. 2. Any swelling of a joint.

arthrochondritis (ar"thro-kon-dri'(dre')tis) [G. *arthron*, joint, + *chondros*, cartilage, + *-itis*.] Inflammation of an articular cartilage

arthrocla'sia [G. *arthron*, joint + *klasis*, a breaking.] The forcible breaking up of the adhesions in ankylosis.

arthrocli'sis [G. *arthron*, joint, + *kleisis*. a shutting up.] Ankylosis of a joint.

arthrod'esis [G. *arthron*, joint, + *desis*, a binding together.] The stiffening of a joint by operative means.

arthro'dia [G. *arthrōdia*, a glidingjoint.] Gliding joint, a spherical joint in which the opposing surfaces are nearly planes and in which there is only a slight, gliding motion, as in the articular processes of the vertebræ. **doub'le a.**, amphiarthrosis.

arthro'dial. Relating to arthrodia.

arthrodyn'ia [G. *arthron*, joint, + *odynē*, pain.] Pain in a joint, arthralgia.

arthrodyn'ic. Relating to or suffering from arthrodynia; arthralgic.

arthroempyesis (ar"thro-em-pi-e'sis). Arthrempyesis

arthroereisis (ar-thro-er-i'sis). Arthrorisis.

arthrogenous (ar-throj'en-us) [G. *arthron*, joint, + *gennaō*, I produce.] 1. Of articular origin, starting from a joint. 2. Forming an articulation. **a. spore,** arthrospore.

arthrog'raphy [G *arthron*, joint, + *graphō*, I describe.] A treatise on the joints.

arthrogryposis (ar"thro-gri-po'sis) [G *arthron*, joint, + *grypōsis*, a crooking.] Retention of a joint in a flexed position, due to muscular contraction or to intracapsular or extracapsular adhesions.

ar'throlith [G. *arthron*, joint, + *lithos*, stone.] A gouty deposit in a joint; chalk-stone.

arthrolithi'asis. Articular gout.

arthrol'ogy [G *arthron*, articulation, + *-logia*.] The branch of science which has to do with the joints.

arthrolysis (ar-throl'I-sis) [G *arthron*, joint, + *lysis*, a loosening.] The restoration of mobility in stiff and ankylosed joints

arthromeningitis (ar"thro-men-in-ji'(je')tis) [G. *arthron*, joint, + *mēninx*, membrane, + *-itis*.] Inflammation of the membranes of a joint; synovitis

arthrometer (ar-throm'e-tur) [G. *arthron*, joint, + *metron*, measure.] An instrument for measuring the degree of motion in a joint, the range of mobility being registered on a dial.

arthrometry (ar-throm'e-trĭ) [See *arthrometer*.] Measurement of the range of movement in a joint.

arthron'cus [G. *arthron*, joint, + *onkos*, tumor.] 1. Swelling of a joint. 2. A joint tumor

arthroneural'gia. Arthralgia.

arthrop'athy [G *arthron*, joint, + *pathos*, suffering.] Any disease, especially a trophoneurosis (neuroarthropathy), affecting a joint. **osteopul'monary a.,** pulmonary osteoarthropathy.* **tabet'ic a.,** Charcot's disease, an enlargement of a joint, due to rarefying osteitis, often associated with spontaneous fractures, occurring in tabes dorsalis.

arthroph'lysis [G. *arthron*, joint, + *phlysis*, eruption.] An eczematous eruption in gouty or rheumatic subjects.

arthrophy'ma [G. *arthron*, joint, + *phyma*, swelling, tumor.] An articular tumor or swelling.

arthrophyte (ar'thro-fīt) [G. *arthron*, joint, + *phyton*, plant, growth.] A neoplasm in a joint

ar'throplasty [G. *arthron*, joint, + *plassō*, I form.] 1. The making of an artificial joint in case of bony ankylosis. 2 An operation to restore as far as possible the integrity and functional power of a joint.

ar'thropod [G. *arthron*, joint, + *pous(pod-)*, foot, limb.] A jointed-limbed invertebrate animal.

Arthrop'oda [see *arthropod*.] A phylum of the *Metazoa*, which includes insects, myriapods, arachnids, crustaceans, and protracheata.

arthropyo'sis [G. *arthron*, joint, + *pyōsis*, suppuration.] Suppuration in a joint

arthrorisis (ar-thro-ri'sis) [G. *arthron*, joint, + *ereisis*, a propping up.] An operation for limiting motion in a joint in cases of undue mobility from paralysis.

arthrorrheu'matism. Articular rheumatism.

arthrosclerosis (ar"thro-skle-ro'sis) [G. *arthron*, joint, + *sklērōsis*, hardening.] Stiffness of the joints, especially in the aged.

arthro'sis [G.] 1. A joint. 2. A trophic degenerative affection of a joint. **a. defor'mans,** arthritis deformans

ar'throspore [G *arthron*, joint, + *sporos*, spore.] A form of thallospore of large size, produced by segmentation of the hypha, and having a greater power of resistance than an endospore.

arthosteitis (ar-thros-te-i'(e')tis) [G. *arthron*, joint, + *osteon*, bone, + *-itis*.] Inflammation of the osseous structures of a joint.

arthrostomy (ar-thros'to-me) [G. *arthron*, joint, + *stoma*, mouth.] The establishment of a temporary opening into a joint cavity.

arthrosynovitis (ar'thro-si-no-vi'(ve')tis) [G. *arthron*, joint, + *synovia*, + *-itis*.] Inflammation of the synovial membrane of a joint.

ar'throtome. A large strong scalpel used in cutting cartilaginous and other tough joint-structures.

arthrot'omy [G *arthron*, joint, + *tomē*, cutting.] Cutting into a joint.

ar"throty'phoid. Typhoid fever with joint symptoms simulating rheumatism.

arthroxesis (ar-throks'e-sis) [G. *arthron*, joint, + *xesis*, scraping.] Removal of diseased tissue from a joint by means of the sharp spoon or other scraping instrument.

Arthus's phenom'enon (ar-tus') [Maurice *Arthus*, Swiss bacteriologist, *1862.] A phenomenon of anaphylaxis in which a rabbit, after receiving several injections of normal horse serum, develops an abscess, edema, or gangrene at the site of the last injection, becomes cachectic, and dies.

ar'tiad [G *artios*, even.] In chemistry, an element of even valence, a dyad, tetrad, or hexad; see *perissad*.

ar'ticle [L. *articulus*, joint.] A joint or articulation

artic'ular. Relating to a joint.

artic'ulate [L. *articulare*, to connect.] 1 To join together so as to allow motion between the parts. 2. In dentistry, to adjust artificial teeth in their proper positions. 3. To speak clearly and connectedly. 4. Articulated, jointed. 5. Distinct and connected, noting speech.

artic'ulated. Jointed. **a. skel'eton,** mounted skeleton one with the various parts connected in such a way as to allow of motion as in the living body.

artic'ulating pa'per. A carbon paper placed between the two rows of teeth showing, when bitten upon, their contact relationship.

articula'tio [L.] 1 Articulation, joint. 2. Articulation, speech.

a. acro"mioclavicular'is [BNA], acromioclavicular articulation.

a. atlan"teoepistroph'ica [BNA], atlanteoepistrophic, atloaxoid, or atlanto-odontoid articulation.

a. atlan"tooccipita'lis [BNA], atlanto-occipital or atlo-occipital articulation.

a. calca"neocuboid'ea [BNA], calcaneocuboid articulation.

articulatio'nes capitulo'rum costa'rum [BNA], articulations of the heads of the ribs.

articulatio'nes carpometacarpe'æ [BNA], carpometacarpal articulations.

a. carpometacarpe'a pol'licis [BNA], carpometacarpal joint of the thumb.

a. cochlea'ris [BNA], spiral or cochlear joint, a modification of the ginglymus, in which the configuration of the opposing surfaces is such that flexion is accompanied with more or less lateral deviation; as in the elbow-joint.

a. compos'ita [BNA], compound joint, one in which three or more bones enter, or in which the socket is composed partly of ligamentous structures.

articulatio'nes costotransversa'riæ [BNA], costotransverse articulations, articulations of the ribs with the transverse processes of the vertebræ.

articulatio'nes costovertebra'les [BNA], costovertebral or costocentral articulations, articulations of the ribs with the bodies of the vertebræ.

a. cox'æ [BNA], hip-joint.

a. cricoarytænoid'ea [BNA], cricoarytenoid articulation.

a. cricothyreoid'ea [BNA], cricothyroid articulation.

a. cu'biti [BNA], elbow-joint.

a. cuneonavicular'is [BNA], cuneonavicular or cuneoscaphoid articulation.

articulatio'nes digito'rum man'us [BNA], articulations of the digits of the hand, finger joints.

articulatio'nes digito'rum pe'dis [BNA], articulations of the digits of the foot, toe-joints.

a. ellipsoid'ea [BNA], elliptical, ellipsoidal, or condyloid joint, a biaxial joint in which the contour of the opposing surfaces is an ellipsoid, thus allowing of motion in two planes; as in the atlanto-occipital articulation.

a. ge'nu [BNA], knee-joint.

a. hu'meri [BNA], humeral articulation, shoulder-joint

a. humeroradia'lis [BNA], humeroradial articulation.

a. humeroulnar'is [BNA], humero-ulnar articulation.

a. incu"domalleolar'is [BNA], incudomalleolar joint, articulation of the anvil and the hammer, the head of the malleus fitting into a saddle-shaped articular surface on the body of the incus.

a. incu"dostape'dia [BNA], incudostapedial joint, the articulation of the head of the stapes with the lenticular process on the long limb of the incus.

a. intercar'pea [BNA], intercarpal articulation

articulatio'nes interchondra'les costa'rum [BNA], interchondral articulations of the ribs.

articulatio'nes intermetacar'peæ [BNA], intermetacarpal articulations.

articulatio'nes intertar'seæ [BNA], intertarsal articulations.

a. mandibula'ris [BNA], mandibular or maxillary articulation, jaw-joint.

articulatio'nes man'us [BNA], joints of the hand.

articulatio'nes metacarpophalange'æ [BNA], metacarpophalangeal articulations.

articulatio'nes metatarsophalange'æ [BNA], metatarsophalangeal articulations.

articulatio'nes ossiculo'rum audi'tus [BNA], articulations of the auditory ossicles.

a. os'sis pisifor'mis [BNA], articulation of the pisiform bone.

articulatio'nes pe'dis [BNA], joints of the foot.

a. radiocar'pea [BNA], radiocarpal joint, wrist-joint.

a. radioulnar'is dista'lis [BNA], junctura radioulnaris [NK], distal radio-ulnar articulation.

a. radioulnar'is proxima'lis [BNA], proximal radioulnar articulation.

a. sacroili'aca [BNA], sacroiliac joint.

a. sellar'is [BNA], saddle-joint, a biaxial joint in which the double motion is effected by the opposition of two surfaces each of which is concave in one direction and convex in the other; as in the carpometacarpal articulation of the thumb.

a. sim'plex [BNA], simple joint, one composed of two bones only.

a. sphæroid'ea [BNA], spherical or spheroid joint; a multiaxial joint, one in which the opposing surfaces are spherical; the two forms are arthrodia and enarthrosis.

a. sternoclavicular'is [BNA], sternoclavicular articulation.

articulatio'nes sternocosta'les [BNA], articuli sternocostales [NK], sternocostal articulations, junctures of the ribs with the sternum.

a. talocalca'nea [BNA], talocalcaneal or astragalocalcaneal articulation.

a. talocalcaneonavicular'is [BNA], articulation between the talus, or astragalus, the calcaneus, or os calcis, and the navicular, or scaphoid bone.

a. talocrural'is [BNA], talocrural articulation, ankle-joint, mortise joint.

a. talonavicular'is [BNA], talonavicular or astragaloscaphoid articulation.

a. tar'si transver'sa [BNA], transverse tarsal articulation, Chopart's joint.

articulatio'nes tarsometatar'seæ [BNA], tarsometatarsal articulations.

a. tibiofibular'is [BNA], tibiofibular articulation.

a. trochoid'ea [BNA], trochoid, rotary, or pivot joint, in which a section of a cylinder of one bone fits into a corresponding cavity on the other, as in the superior radio-ulnar articulation.

articulation (ar-tik"u-la'shun). 1. A jointing or connecting together loosely so as to allow of motion between the parts. 2. The fitting of an artificial tooth in its proper position in the dental arch. 3. Antagonization, the several contacts of the opposing teeth during mastication. 4. A joint. 5. Distinct connected speech; enunciation.

artic'ulator. 1. An instrument by means of which artificial teeth are properly adjusted or articulated. 2. An appliance for bringing the teeth of the two jaws into apposition.

artic'ulatory. Relating to articulate speech.

articulus (ar-tik'u-lus) [L. joint.] [NK] Diarthrosis.

a. atlantodenta'lis dorsa'lis [NK], posterior atlantoepistrophic joint. **a. atlantodenta'lis ventra'lis** [NK], anterior atlantoepistrophic joint **articuli atlantoepistroph'ici latera'les** [NK], the two lateral atlantoepistrophic joints.

ar'tifact [L. *ars*, art + *factus*, made] Artefact, an apparent lesion in a pathological or histological specimen, not existing during life, but made accidentally in the process of dissection or mounting the specimen

artificer (ar-tif'i-sur) [L. *artificium*, a craft.] Mechanical man, one who does the mechanical work (making plates, etc.) in dentistry.

artificial (ar-ti-fish'al) [L. *ars*, art, + *facere*, to make.] Not natural, manufactured; made in imitation of nature **a. feed'ing,** feeding an infant with other than breast-milk. **a. food,** any prepared food, especially one for infants. **a. respira'tion,** the maintenance of the respiratory movements, in case of suspended animation, by rhythmical compression of the chest wall or other means; see *Howard, Laborde, Marshall Hall, Schäfer, Silvester, Buist, Byrd-Dew, Doe,* and *Schultze.*

Artiodac'tyla [G. *artios*, even in number, + *daktylos*, finger.] A division of the ungulate or hoofed animals, having toes even in number, two or four; all ruminant animals and hog-like ungulates are artiodactylic.

artiodactylic (ar"ti-o-dak-til'ik). Having an even number (two or four) of toes on each foot, noting the ruminants and certain other ungulate animals.

Art'mann's cre'olin. A compound of phenols and sulphuric acid employed as an external antiseptic and disinfectant.

a'rum. The root of *Arum maculatum*, spotted arum, adder's root, a plant of southern Europe; employed in domestic medicine as a tonic in chlorosis.

aryepiglottic (ar"ĭ-ep-ĭ-glot'ik). Arytenoepiglottidean; relating to the arytenoid cartilage and the epiglottis; noting a fold of mucous membrane (*plica aryepiglottica*) and a muscle contained in it (*musculus aryepiglotticus*).

aryl group (ar'il groop) [*aromatic* + G. *hylē*, stuff.] In chemistry, a group of radicals of the aromatic or benzene series.

arylar'sonate. A salt of an arylarsonic acid, destructive in general to spirochetes and similar protozoan organisms.

arylarson'ic acid. An arsonic acid to which a radical of the aryl group is attached.

arytænoideus (ar-it"e-no-id'e-us). [G *arytaina*, a ladle, + *eidos*, resemblance.] Arytenoid.

arytenoepiglottidean (ar-it"e-no-ep"ĭ-glŏ-tid'e-an). Aryepiglottic.

arytenec'tomy. Arytenoidectomy.

aryt'enoid [G. *arytaina*, a ladle, + *eidos*, appearance.] Noting a cartilage (*cartilago arytænoidea*) and a muscle (*musculus arytænoideus*) of the larynx

arytenoidec'tomy [G. *ektomē*, excision.] Excision of an arytenoid cartilage.

arytenoiditis (ar-it"ĕ-noy-di'(de')tis) Inflammation of an arytenoid cartilage.

arythmia (ă-rith'mĭ-u). Arrhythmia.

Arzberger's pear (arts'ber-ger) [Friedrich *Arzberger*, Austrian physicist, 1833–1905.] An olive shaped ball which is introduced into the rectum and cooled by the passage of water through it.

A. S. Abbreviation for *auris sinistra*, left ear.

As. 1. Abbreviation for astigmatism or astigmatic, 2. Symbol of arsenum. **As.H.**, hyperopic astigmatism. **As.M.**, myopic astigmatism.

asafetida, asafœtida (as-ah-fet'ĭ-dah) [Pers. *aza*, mastic, + L. *fetidus*, fetid.] (U. S. and Br.) A gum resin, the inspissated exudate from the root of *Ferula fœtida*, antispasmodic in doses of gr. 3–10 (0.2–0.6). The official preparations are: *emulsum*, *pilulæ*, and *tinctura*.

asaph'ia [G *asapheia*, obscurity.] Indistinctness in speech.

as'aprol. Abrastol, betanaphthol-alphamonosulphonate; a slightly reddish, odorless, bitterish, soluble powder, employed as an antiseptic, antipyretic, and analgesic, in doses of gr. 8–15 (0.5–1.0).

as'arin, as'aron. Asarum camphor, $C_{20}H_{26}O_5$, obtained from the root of *Asarum europæum*, occurring in the form of yellowish white crystals, antiseptic and tonic.

As'arum. A genus of plants of the natural order *Aristolochiaceæ*. **A. canaden'se,** wild ginger, Indian ginger, Canada snakeroot; the rhizome and rootlets are official in the N.F. as *asarum;* employed as an aromatic stimulant and diaphoretic, in doses of gr. 15–30 (1 0–2.0), and also in the compound syrup in dose of ʒi (4.0). **A. europæ'um,** hazelwort, European snakeroot; the root is used as an emetic and cathartic in doses of ʒ½–1 (2.0–4 0), and as an errhine in doses of gr. 1–2 (0.06–0.13).

asbes'tos [G. unquenchable, a name anciently given to a mythical mineral that, once lighted, could not be extinguished: now applied to one that cannot be burned.] A fibrous form of hornblende consisting chiefly of magnesium silicate; used in the manufacture of incombustible clothing and as a covering for steam pipes, and in pharmacy as a filter material.

asbesto'sis. Pneumonoconiosis occurring among workers in asbestos factories.

ascari'asis. Ascaridiasis.

ascaricide (as-kar'ĭ-sīd) [L. *cædere*, to kill.] 1. Causing the death of ascarides. 2. An agent which destroys ascarides.

ascarides (as-kar'ĭ-dēz) [pl. of *ascaris*.] Pinworms, intestinal parasites of the species *Oxyuris vermicularis*.

ascaridi'asis. The presence of ascarides in the intestine and the symptoms caused thereby.

As'caris [G *askaris*, pinworm.] A genus of lumbricoid worms, of the order *Nematoda* or *Nematoidea*, parasitic in the intestine and other parts. **A. a'pri,** *Strongylus apri*. **A. ca'nis,** a species common in dogs and cats, but rarely found in man. **A. lumbricoi'des,** round worm, a common intestinal parasite, especially in children, a cylindrical worm pointed at both ends, of a reddish or yellowish color, 20 to 30 cm. (8 to 12 inches) in length; various reflex symptoms, restlessness, fever, and sometimes diarrhea, are attributed to its presence, but usually it causes no definite symptoms **A. marit'ima,** a species, only once recorded as present in a child. **A. mys'tax,** a species parasitic in dogs, cats, and some wild carnivores, and occasionally in man; it is characterized by a spatulate shape of the head produced by lateral membranous expansions of the cuticle. **A. trichiu'rus,** *Trichocephalus trichiurus*. **A. vermicula'ris,** *Oxyuris vermicularis*. **A. viscera'lis et rena'lis,** *Eustrongylus gigas*.

ascend'ing [L *ascendere*, to go up.] Going upward, having an upward direction. **a. aor'ta,** the first part of the aorta between its origin from the heart and the arch of the aorta. **a. co'lon,** the first part of the colon in the right side of the abdomen. **a. paral'ysis,** paralysis beginning in the peripheral muscles and involving successively those higher up.

ascen'sus [L. ascent.] A moving upward; having an abnormally high position. **a. u'teri,** the elevation of the uterus in the abdomen, independent of its increase in size, at a stage in pregnancy.

$As_2(CH_3)_4$. Cacodyl.

Asch's operation [Morris J. *Asch*, American laryngologist, 1833–1902.] An operation for deviated nasal septum by means of crucial incisions through the convex portion and then overlapping the flaps so as to straighten the septum.

Ascherson's mem'brane (ahsh'er-sōn) [Ferdinand Moritz *Ascherson*, Berlin physician, 1798–1879.] A film of casein assumed by A. to surround the fat droplets in milk, preventing their coalescence. (The theory is asserted by Hammersten to be untenable.) **A.'s ves'icles,** minute fat droplets surrounded by a film of albumin, obtained by A. in shaking a mixture of oil and an albuminous fluid.

Aschheim-Zondek test (ash'hīm-tson'dek). See *Zondek-Aschheim*.

Aschner's phenom'enon (ash'ner) [Bernhardt *Aschner*, Austrian gynecologist,* 1883.] Pressure on the eyeball causes a slowing of the pulse.

$As_2(CH_3)_4O$. Cacodyl oxide.

Aschoff bodies (ahsh'of bod'iz) [Ludwig *Aschoff*, German pathologist, *1866.] Rheumatic nodules in the myocardium and also in the lungs in pneumonia complicating rheumatic fever. **A.'s node,** Aschoff-Tawara node. Koch's node, atrioventricular node.*

asci (as'ki). Plural of *ascus*.

ascites (ă-si'(sc')tēz) [G. *askos*, a bag, + *-itēs*.] An accumulation of serous fluid in the peritoneal cavity; hydroperitoneum, abdominal dropsy. **a. adipo'sus,** chyliform a. **a. chylo'sus,** chylous a. **chy'liform a.,** a. adiposus, the presence of a milky fluid, containing suspended fat, in the peritoneal cavity. **chy'lous a.,** a. chylosus, the presence of chyle in the peritoneal cavity. **fatt'y a.,** chyliform a. **milk'y a.,** chylous a., chyliform a., pseudochylous a. **preag'onal a.,** an outpour of serum in the peritoneal cavity consequent upon an intense congestion of the viscera, sometimes immediately preceding death. **pseu"dochy'lous a.,** the presence of a milky fluid in the peritoneal cavity; the fluid contains protein of some sort, but no fat.

ascit'ic. Relating to ascites.

Asclepiada'ceæ. An order of gamopetalous plants, which includes the milk-weed, or Asclepias.

asclepi'adin. An amaroid contained in a number of species of *Asclepias;* it is emetic and diaphoretic in doses of gr 1–2 (0.06–0.13).

Ascle'pias [G. *Asklēpios*, Æsculapius.] A genus of plants of the natural order *Asclepiadaceæ*. **A. curassav'ica,** blood flower, bastard ipecac, a plant of the West Indies, the leaves and tops of which are astringent and anthelmintic in doses of ℥1–2 (4.0–8.0) of a fluidextract; locally hemostatic. **A. incarna'ta,** white Indian hemp, the root of which is expectorant, diuretic, and anthelmintic in doses of gr. 10–20 (0.6–1.2). **A. syri'aca,** wild cotton, silk-weed, the root of which is employed in amenorrhea, dropsy, rheumatism, and asthma in doses of ℥½–1 (2.0–4.0) of the fluidextract **A. tubero'sa,** butterfly-weed, yellow milk-weed, pleurisy root, the root of which, official in the N.F. as *asclepias*, is employed as a diuretic and cathartic and in pleurisy and peritonitis in doses of gr. 20–60 (1.3–4.0); of the eclectic preparation, the dose is a teaspoonful every hour of a mixture of ℥1 in water ℥2.

as'clepin. A resinous extract from asclepias (the root of *Asclepias tuberosa*) employed in eclectic practice in pleurisy, pneumonia, and other affections of the respiratory apparatus, in doses of gr. 1–2 (0.06–0.13).

as'cocarp [G. *askos*, bag, + *karpos*, fruit.] The sporocarp of *Ascomycetes*, producing asci and ascospores.

Ascococcus (as-ko-kok'kus) [see the following.] A genus of the family *Coccaceæ*, now called *Leuconostoc.*[1]

ascococ'cus [G *askos*, a leather bag.] Billroth's term for a mass of cocci held together in zooglea masses by a gelatinous or glairy substance.

ascogo'nium [G. *askos*, bag, + *gonos*, a begetting.] Archicarp.

Ascoli reac'tion (ahs-ko'le) [Alberto *Ascoli*, Italian veterinarian, contemporary.] 1. A precipitation test for anthrax; the suspected material is boiled for a few minutes in physiological salt solution which is then filtered, and over it is gently poured a little specific serum; a precipitate occurs at the plane of contact if the material is from a case of anthrax. 2. Miostagmin* reaction.

Ascomyce'tes [G. *askos*, a bag, + *mykēs*, mushroom.] A family of fungi marked by long spore-containing cells; ergot, truffles, moulds, and yeasts belong to this family.

as'cospore [G. *askos*, bag, + *sporos*, spore.] One of a number of spores contained in a sac or bag.

as'cus [G. *askos*, bag.] The elongated spore-containing cell of moulds, lichens, and other ascomycetes.

-ase [G. *asis*, slime, colloid material.] A termination denoting an enzyme (of colloid structure); it is suffixed to the name of the substance upon which the enzyme exerts its specific action. Thus a starch-splitting enzyme is called *amylase*, a fat-splitting enzyme *lipase*, etc. This rule is not strictly followed, since the enzyme sometimes receives a name indicating its general action rather than the body upon which it acts, the coagulating enzyme being called *thrombase*, an oxidizing enzyme, *oxidase*, etc.

Asel'li's glands or **pan'creas** [Gaspar *Aselli*, Italian anatomist, 1581–1626.] A collection of lymph glands lying in the mesentery.

aselline (ă-sel'ēn). A poisonous leucomaine found in cod-liver oil.

asema'sia [G. *a-* priv. + *sēmasia*, giving a signal.] Asymbolia (2).

ase'mia [G. *a-* priv. + *sēma*, sign.] Asymbolia (2).

asep'sin. Acetbromanilide.

asep'sis [G. *a-* priv. + *sēpsis*, putrefaction.] A condition in which living pathogenic organisms are absent.

asep'tic. Marked by or relating to asepsis **a. fe'ver,** pyrexia accompanied with malaise due to the absorption of dead, but not putrefactive, tissue following an injury. **a. sur'gery,** the performance of an operation, in a field free from pyogenic or septic germs, with sterilized hands, instruments, etc., preventing the introduction of germs from without.

asepticism (ă-sep'tĭ-sizm). The practice of aseptic surgery.

asep'ticize. To render aseptic or sterile.

asep'tol. A 33⅓ per cent. solution of orthophenol sulphonic acid; see *acidum sulphocarbolicum*.

asep'tolin. Name of pilocarpine phenate, an oily liquid employed in the treatment of tuberculosis and malaria in doses of ℥½–2 (2.0–8.0) of a 0.02 per cent. aqueous solution hypodermically.

asex'ual. Without sex

asferryl (as-fer'il) [*As*, chemical symbol of arsenic, + L. *ferrum*, iron, + G. *hylē*, stuff.] Trade name of a preparation, said to contain 23 per cent. arsenic and 18 per cent. iron; a greenish-yellow powder slightly soluble in water, employed in doses of gr. ⅓–⅔ (0.02–0.04) twice daily.

ash. 1. A tree of the genus *Fraxinus*. 2. What remains after any substance has been burned.

AsH_3. Hydrogen arsenide.

asialia (a-si-a'lĭ-ah) [G. *a-* priv. + *sialon*, saliva.] Arrest or diminution in the secretion of saliva.

asitia (a-sish'ĭ-ah) [G. *a-* priv. + *sitos*, food.] Anorexia; distaste for food.

asleep'. 1. In a state of sleep. 2. Paresthetic, noting the sensation of numbness and tingling in an extremity following temporary pressure on one of the nerve-trunks of the part. See *obdormition*.

As_2O_3. Arsenous anhydride, arsenic trioxide, ordinary arsenic, often called arsenous acid, which is properly H_3AsO_3.

aso'mus [G. *a-* priv. + *sōma*, body.] A monster with only a rudimentary body.

$AsO.OH(CH_3)_2$. Cacodylic acid.

as"palaso'mus [G. *aspalax*, a mole, + *sōma*, body.] A monster with eventration at the lower part of the abdomen, presenting three openings for intestine, bladder, and sexual organs.

asparagin (as-par'a-jin). Althein, amidosuccinamide, occurs in rhombic crystals; obtained from asparagus shoots and the roots of marshmallow, belladonna, liquorice, and several other plants;

diuretic in doses of gr. 1–2 (0.06–0.13). **a. mer'cury,** hydrargyri amidosuccinamas.

asparagin'ic acid. Aspartic, or aminosuccinic acid.

Aspar'agus. A genus of plants of the natural order *Liliaceæ*. **A. officina'lis,** an edible vegetable, the rhizome and roots of which, together with the young edible shoots, are employed as a diuretic in doses of ʒi–4 (4.0–16.0) of the fluidextract, a syrup, tincture, and extract are also used.

asparamide (as-par-am'id). Asparagin.

aspartic acid (as-par'tik as'id). Alpha-aminosuccinic acid, $COOH.CH.NH_2.CH_2.COOH$, a protein cleavage product formed during pancreatic digestion, and obtained also from beet root in the process of making sugar.

aspastic (a-spas'tik). Not spastic, non-spastic.

aspecif'ic. Not specific.

as'pect [L. *aspectus*, from *aspicere*, to look at.] 1 Appearance, looks. 2 The side of an object which looks in any designated direction.

aspergil'lin. A black pigment obtained from various species of *Aspergillus*

aspergillosis (as-pur-jil-o'sis). The presence of any species of *Aspergillus* in the tissues or on a mucous surface, and the symptoms produced thereby. **au'ral a.,** otomycosis. **pul'monary a.,** a destructive disease of the lung due to the presence and growth of a fungus, *Aspergillus fumigatus*.

Aspergillus (as-pur-jil'us) [L. *aspergere*, to sprinkle] A genus of fungi of the family *Ascomycetes*, containing many species of moulds, several with black spores. **A. auricular'is,** *A. niger*, a species found in the external auditory meatus. **A. flaves'cens,** a pathogenic form with yellowish spores. **A. fumiga'tus,** a form present in pulmonary aspergillosis. **A. glau'cus,** a blue mould on fruit. **A. mucuroid'es,** a form found in the lungs. **A. nid'ulans,** a species which causes one form of white mycetoma. **A. ni'ger,** a pathogenic form, with black spores often present in the external auditory meatus, *A. auricularis;* see *otomycosis*.

aspermatism (ă-spur'mă-tizm) [G. *a-* priv + *sperma*, seed.] Deficiency of the secretion or incomplete ejaculation of semen.

asper'mia. Aspermatism.

asper'sion [L. *aspersio*, sprinkling] A form of hydrotherapy in which water of a given temperature is sprinkled on the body.

asphyc'tic. 1. Relating to or suffering from asphyxia. 2. Pulseless.

asphyx'ia [G. *a-* priv. + *sphyxis*, pulse] 1. Unconsciousness due to suffocation or interference of any kind with oxygenation of the blood. 2. Absence of the pulse-beat. 3. Cyanosis, local or general, through interference with the circulation. **a. liv'ida,** a form of a. neonatorum in which the skin is cyanotic, but the heart is strong and the reflexes are preserved. **a. neonato'rum,** a. occurring in the newborn. **a. pall'ida,** a form of a. of the newborn, in which the skin is pale, the pulse weak and slow, and the reflexes abolished. **blue a.,** a. livida. **lo'cal a.,** stagnation of the circulation, sometimes resulting in gangrene of a limited part, especially of the fingers; one of the symptoms, usually associated with local syncope, or Raynaud's disease. **traumat'ic a.,** pressure stasis, ecchymotic mask.*

asphyx'ial. Relating to asphyxia, asphyctic.

asphyx'iant. 1. Asphyxiating, producing asphyxia. 2. Anything, especially a gas, which produces asphyxia.

asphyx'iate. To induce asphyxia, to suffocate.

as'pidin. An active principle, $C_{23}H_{28}O_7$, contained in aspidium, or filix mas.

aspid'ium (U.S.). Filix mas (Br.), the rhizome of *Dryopteris filix-mas*, male fern; employed in the treatment of tapeworm, usually in the form of the official oleoresin, in doses of ʒ½–1 (2.0–4.0).

aspidosam'ine. A strong base, $C_{22}H_{28}N_2O_2$ derived from aspidosperma, or quebracho

Aspidosper'ma [G. *aspis(aspid-)*, a shield, + *sperma*, seed.] A genus of trees of the family *Apocynaceæ*, the dried bark of a species of which, *A. quebracho-blanco*, is the drug quebracho, official in the U.S. IX as *aspidosperma;* it has been employed in dyspnea in doses of gr. 15–60 (1.0–4.0) of the powder, or mxl–lx (4.0) of the formerly official fluid-extract

aspidospermine (as''pid-o-spur'mēn). A base, $C_{22}H_{30}N_2O$, obtained from aspidosperma, or quebracho.

as'pirate. 1 A sound having the breathing character of the letter *h* 2. To remove by suction or aspiration

aspira'tion. The withdrawal, by suction, of air or fluid from any of the body cavities **a. pneumo'nia,** inhalation pneumonia.*

as'pirator. An apparatus for removing fluid by aspiration from any of the body cavities; it consists usually of a hollow needle or trocar and cannula, connected by rubber tubing with a bottle or metal cylinder from which the air is exhausted by means of a syringe or reversed air pump.

as'pirin. Trade name of acidum* acetylsalicylicum (U.S.).

as''pirolith'ine. Trade name of a combination of aspirin with acid citrotartrate of lithium; recommended in the treatment of gout and rheumatism in doses of gr. 5–10 (0.3–0.6).

aspi'rophen. Amido-acetparaphenetidin acetylsalicylate; a white crystalline powder; antipyretic and antirheumatic in doses of gr. 10–15 (0.6–1.0).

Asple'nium [G. *asplēnion*, spleenwort] A genus of ferns of the order *Filices*. **A adian'tum,** black maidenhair, and **A. rutamura'ria,** wall-rue, are mildly stimulant and astringent.

Asporocystin'ea [G. *a-* priv + *sporos*, seed, + *kystis*, bladder.] A suborder of *Coccidiidia* in which the sporoblasts have no sporocysts.

asporogen'ic. Asporogenous

asporogenous (as-po-roj'en-us) [G. *a-* priv. + *sporos*, spore, + *gennaō*, I produce.] Not reproducing by spores.

aspo'rous [G. *a-* priv + *sporos*, spore.] Having no spores, noting various bacteria.

assafœtida. Asafetida.

assana'tion. Sanitation

Asséżat's tri'angle (ah-sa-zā') [Jules *Asséżat*, French anthropologist, 1832–1876.] A triangle formed by lines connecting the nasion, the alveolar and the nasal points.

ass'ident [L. *assidere*, to sit by.] Concomitant. **a. signs, a. symp'toms,** occasional signs or symptoms of a disease, as distinguished from the pathognomonic, necessary, or constant signs.

assim'ilable. Capable of assimilation.

assim'ilate [L. *assimilare* to make alike; *ad*, to, + *similis*, like.] To absorb, and incorporate into the body, the digested food products.

assimila'tion [L. *assimilare*, to make alike.] The process of incorporation of materials, prepared by digestion from food, into the tissues of the organism **a. pel'vis,** an elongated pelvis in which the fifth lumbar vertebra or the first coccygeal vertebral segment assumes the appearance of a sacral vertebral segment

Assmann's tuber'culous infil'trate (ahs'mahn). Infraclavicular infiltrate, an early tuberculous lesion.

association (as-o-sĭ-a'shun) [L. *associare*, to join to; *ad*, to, + *socius*, companion.] 1. A society or union of persons of like tastes or pursuits, or of the same profession, for the promotion of the moral material, or professional interests of the members, such as the American Medical Association, the British Medical Association, etc. 2. Union; connection of persons, things, or ideas. **a. exper'iment or test,** a word (the *stimulus word*) is spoken to the subject who replies immediately with another word (the *reaction word*) suggested to him by the first; it is employed as an aid in diagnosis, clues being given by the length of time (*association time*) between the stimulus and reaction words, and also by the nature of the reaction word. **a. fi'bers,** longitudinal commissural fibers, shorts path fibers, nerve fibers originating from cells in the gray matter of the spinal cord which pas upward or downward in one of the tracts of the white columns to reenter the gray matter; they form a connection between different segments of the cord. **a. mech'anism,** the cerebral mechanism whereby the memory of past sensations may be compared or associated with present ones.

assu'rance [Fr. *assurer*, from L. *assecurare; ad*, to, + *securus*, secure.] Insurance.

astasia (as-ta'sĭ-ah) [G. unsteadiness, from *a* priv. + *stasis*, standing.] Inability, through muscular incoordination, to stand, although the same muscles functionate normally if the patient is lying down. **a. aba'sia,** a similar state in which the patient is unable either to walk or to stand.

asteatosis (ăs-te-ă-to'sis) [G. *a-* priv. + *stea oō*, I turn into fat.] Diminished or arrested action of the sebaceous glands, usually associated with anhidrosis.

as'ter [G. *astēr*, star.] One of the two rayed figures formed by the division of the centrosome in the initial stages of mitosis.

astereognosis (ă-ster"e-og-no'sis) [G. *a-* priv. + *stereos*, solid, + *gnōsis*, knowledge.] Loss of the power of judging of the form of an object by touch.

aste'rion [G. *asterios*, starry.] A craniometric point in the region of the posterolateral, or mastoid, fontanelle, at the junction of the mastoid temporal, parietal, and occipital bones, or where the lambdoid, occipitomastoid, and parietomastoid sutures meet.

aster'nal [G. *a-* priv. + *sternon*, sternum.] 1. Not related to or connected with the sternum. 2. Without a sternum.

aster'nia [G. *a-* priv. + *sternon*, sternum.] The condition of being without a sternum.

Asterococcus mycoides (as-ter-o-kok'kus mi-koy'dēs) [G. *astēr*, a star, + *kokkos*, a berry, + *mykoidēs*, mucoid.] A very minute pleomorphic, non-motile, multipolar organism, in a mucoid capsule, the pathogenic agent of pleuropneumonia in cattle.

as'teroid [G. *astēr*, star, + *eidos*, resemblance.] Star-like; resembling a star or the mitotic figure, aster

as'terol. Trade name for a mixture of ammonium tartrate and mercuric paraphenolsulphonate; a white powder, employed as an antiseptic in place of corrosive sublimate.

asthe'nia [G. *a-* priv. + *sthenos*, strength.] Weakness, debility. **a. pigmento'sa,** Addison's disease. **neu"rocir'culatory a.,** irritable heart, soldier's heart, a symptom-complex of nervous and circulatory irregularities associated with increased susceptibility to fatigue, observed especially in soldiers on active war service and occasionally, in milder form, in civil life as well.

asthen'ic. Relating to asthenia; weak.

asthenocoria (as-then-o-kor'ĭ-ă) [G. *asthenēs*, weak, + *korē*, pupil of the eye.] Slow reaction of the pupil to the light stimulus; noted as a sign of hypoadrenia.

asthenom'eter [G. *astheneia*, weakness, + *metron*, measure.] 1. An instrument for measuring the degree of asthenopia. 2. An instrument for measuring the degree of muscular weakness—or strength; dynamometer.

as'thenope. A subject of asthenopia; one suffering from weak sight.

asthenopia (as-then-o'pĭ-ah) [G. *asthenēs*, weak, + *ōps*, eye.] Weak sight, eyestrain. **accomm'odative a.,** eyestrain, a. due to errors of refraction and the consequent strain on the ciliary muscle. **mus'cular a.** a. due to imbalance of the extrinsic ocular muscles. **ner'vous a.,** a. due to functional or organic nervous disease. **neurasthen'ic a.,** a. occurring in nervous subjects who may be emmetropes or whose ametropia has been corrected by glasses. **ret'inal a.,** neurasthenic a. **tar'sal a.,** a. due to abnormal pressure of the eyelids on the globe of the eye.

asthenop'ic. Relating to or suffering from asthenopia.

asthenox'ia [G. *asthencia*, weakness, + *oxygen*.] A condition of deficient oxygenation of the products of catabolism.

asthma (as'mah) [G.] A disease marked by recurrent attacks of dyspnea, due to some temporary change in the bronchial tubes or to a reflex spasm of the diaphragm. It is in many or most cases an allergic phenomenon due to sensitization to contain emanations from plants or animals or to food products in respect of which the victim has an idiosyncrasy. **alve'olar a.,** dyspnea due to pulmonary emphysema. **amyg'daline a.,** a. excited reflexly by enlargement of the faucial tonsils or by adenoid vegetations. **a. noctur'num,** incubus, nightmare. **bron'chial a.,** the common form of a. due to a narrowing of the lumen of the bronchial tubes from spasm of the muscles in their walls, or to a congestive swelling of the bronchial mucous membrane. **bronchit'ic a.,** catarrhal a. **car'diac a.,** an attack of dyspnea, coming on usually in the night, associated with cardiosclerosis. **catar'rhal a.,** bronchitic a., spasmodic dyspnea accompanying bronchitis. **essen'tial a.,** nervous a., occurring without any perceptible changes in the bronchial mucous membrane. **grind'ers' a.,** the dyspnea of siderosis or silicosis. **hay a.,** the asthmatic stage of hayfever. **Heb'erden's a.,** angina pectoris. **horse a.,** a. caused by entering a stable or being near horses. **miners' a.,** the dyspnea of anthracosis. **na'sal a.,** reflex from deflected septum or other intranasal trouble. **pott'ers' a.,** the dyspnea of pneumonoconiosis. **re'flex a.,** symptomatic a. **re'nal a.,** the dyspnea accompanying disease of the kidneys. **sex'ual a.,** reflex a. from venereal disease or excessive sexual excitement. **steamfitters' a.,** asbestosis. **stone a.,** a feeling of pressure and burning pain in the chest, caused by the presence of a bronchial calculus, relieved at once when the concretion is dislodged by a violent paroxysm of coughing. **symptomat'ic a.,** a. occurring as a reflex in disease of the viscera, the nose, or other parts. **thy'mic a.,** spasmodic closure of the larynx in children, due to the irritation of

an enlarged thymus gland; called also Kopp's, Millar's, and Wichmann's asthma.

asth'ma-weed. 1. Lobelia. 2. Euphorbia.

asthmat'ic. Relating to or suffering from asthma.

asthmogen'ic [G. *gennaō*, I produce.] Causing asthma.

asthmolysin (as-mol'i-sin). Trade name of a mixture of extracts of the adrenal and pituitary bodies, recommended in the treatment of asthma in doses of ♏xv (1.0).

astigmat'ic. Relating to or suffering from astigmatism.

astig'matism [G. *a-* priv. + *stigma* (*stigmat-*), a point.] A condition of unequal curvatures along the different meridians in one or more of the refractive surfaces (cornea, anterior or posterior surface of the lens) of the eye, in consequence of which the rays from a luminous point are not focussed at a single point on the retina, but are spread out as a line in one or another direction. **a. against the rule** is when the greater curvature or refractive power is in the horizontal meridian. **a. with the rule** is when the greater curvature or refractive power is in the vertical meridian. **compound hyperop'ic a.,** a. in which both vertical and horizontal meridians are hyperopic. **compound myop'ic a.,** a. in which both vertical and horizontal meridians are myopic. **cor'neal a.,** a. due to defect in the curvature of the corneal surface. **irreg'ular a.,** a. in which different parts of the same meridian have different degrees of curvature. **lentic'ular a.,** a due to defect in the curvature of the lens. **mixed a.,** a. in which the vertical or horizontal meridian is hyperopic while the other is myopic. **reg'ular a.,** a. in which the curvature in each meridian is equal throughout its course, but those of the different meridians vary, and the meridians of greatest and least curvature are practically at right angles to each other **reversed a.,** a. against the rule. **simple hyperop'ic a.,** a. in which the curvature in one meridian is hyperopic while that of the meridian at right angles to it is normal, or emmetropic. **simple myop'ic a.,** a. in which the curvature of either the vertical or the horizontal meridian is myopic while that of the other is normal.

astigmatom'eter, astigmom'eter [G. *metron*, measure.] An instrument for measuring the degree and determining the variety of astigmatism.

astigmatom'etry, astigmom'etry. Determination of the form and measurement of the degree of astigmatism.

astigmatoscope (as-tig'mat-o-skop) [*astigmatism* + G. *skopeō*, I examine.] An instrument for detecting and measuring the degree of astigmatism.

astigmatoscopy (as-tig-măt-os'ko-pĭ). The use of the astigmatoscope.

astig'mia. Astigmatism.

astig'mic. Astigmatic.

astigmom'eter. Astigmatometer.

astigmom'etry. Astigmatometry.

astig'moscope. Astigmatoscope.

astigmos'copy. Astigmatoscopy.

asto'matous [G. *a-* priv. + *stoma*, mouth.] 1. without a mouth. 2. Without apertures, pores, or stomata.

asto'mia [G. *a-* priv. + *stoma*, mouth.] The condition of having no mouth.

as'tomous. Astomatous.

astrag'alar. Relating to the astragalus.

astragalec'tomy [G. *astragalos*, astragalus, + *ektomē*, excision.] Removal of the astragalus, or talus.

astragalocalcanean (as-trag"ă-lo-kal-ka'ne-an). Relating to both the astragalus or talus, and the calcaneus, or os calcis.

astrag"alofib'ular. Relating to both the astragalus, or talus, and the fibula.

astrag"aloscaph'oid. Talonavicular, relating to both the astragalus, or talus, and the scaphoid or navicular bone.

astrag"alotib'ial. Relating to both the astragalus, or talus, and the tibia.

astrag'alus [G. *astragalos*, one of a set of dice.] Talus* [BNA], the ankle-bone.

astrapho'bia. Astrapophobia.

astrapophobia (as"tră-po-fo'bĭ-ah) [G. *astrapē*, lightning, + *phobos*, fear.] Morbid fear of thunder storms.

astrict' [L. *astringere*, to contract.] To constrict, to compress, to contract.

astric'tion. 1. Constipation. 2. Astringent action. 3. Compression for the arrest of hemorrhage.

astringe (ă-strinj'). To act as an astringent.

astrin'gent [L. *astringere*, to contract.] 1. Causing contraction of the tissues. 2. Arresting secretion. 3. Styptic, arresting hemorrhage. 4. An agent which causes contraction of the tissues, arrest of the secretion, or the control of bleeding.

as'troblast [G. *astēr*, star, + *blastos*, germ.] A primitive cell developing into an astrocyte.

astrocinet'ic [G. *astēr*, a star, + *kinēsis*, movement.] Relating to the movements of the attraction-sphere or central portion of the aster.

astrocyte (as'tro-sīt) [G. *astēr*, star, + *kytos*, hollow, cell.] One of the cells forming the neuroglia fibres; a neuroglia cell proper, spider cell.*

astrocyto'ma. A glioma composed of astrocytes with comparatively short fibrillæ.

astroglia (as-trog'lĭ-ă). See *spider cell.**

as'troid [G. *astēr*, star, + *eidos*, resemblance.] 1. Star-shaped. 2. An astrocyte.

as'trosphere. [G. *astēr*, star, + *sphaira*, sphere.] Attraction-sphere.

astrostat'ic [G. *astēr*, star, + *statos*, standing.] Relating to the resting stage of the attraction-sphere.

astyclin'ic [G. *asty*, city.] Policlinic.

as'urol. Trade name of a soluble double salt of mercury and salicylic acid combined with an amino fatty acid salt of sodium, employed in the treatment of syphilis in doses of ♏30 (2.0) of a 10 per cent. solution given hypodermically twice a week.

asylla'bia [G. *a-* priv. + *syllabē*, syllable.] A form of alexia in which one recognizes the individual letters, but cannot comprehend them when arranged collectively in syllables or words.

asy'lum [G. *asylon*.] An institution for the housing and care, under restraint, of those who by reason of tender age, mental or bodily infirmities, etc., are unable to care for themselves. In the United States the public insane asylums are now usually called State hospitals.

asymbo'lia [G. *a-* priv. + *symbolon*, an outward sign.] 1. Loss of the power of appreciation by touch of the form and nature of an object. 2. A form of aphasia in which the significance of signs is not appreciated.

asymmet'rical. Not symmetrical, noting a lack of symmetry between two or more like parts.

asymm'etry [G. *a-* priv. + *syn*, with, + *metron*, measure.] Want of symmetry, disproportion between two or more like parts.

asynchronism (ă-sin'kro-nizm) [G. *a-* priv. + *syn*, together with, + *chronos*, time.] Lack of synchronism or concurrence in time; a condition in

which two or more occurrences do not coincide in point of time.

asynclitism (ă- sin'-kli-tizm). Absence of synclitism or parallelism between the axis of the presenting part of the child and the pelvic planes in childbirth. **ante'rior a.,** Naegele* obliquity. **poste'rior a.,** Litzmann* obliquity.

asynergia, asynergy (ă-sin-ur'jĭ-ah, ă-sin'ur-jĭ) [G. *a-* priv. + *syn*, with, + *ergon*, work.] Lack of cooperation or working together of parts which normally act in union.

asyne'sia [G.] Stupidity.

asyno'dia [G. *a-* priv. + *syn*, with, + *odos*, road, way.] Lack of coincidence in the orgasms in sexual intercourse.

asystemat'ic. Not systematic; not relating to one system or set of organs.

asystole (ă-sis'to-le) [G. *a-* priv. + *systolē*, a contracting.] Cardiac insufficiency with dilatation. **hepat'ic a.,** cardiac liver.*

asysto'lia. Asystole.

asystol'ic. 1. Relating to asystole. 2. Not systolic.

atac'tic. Ataxic.

atactil'ia [G. *a-* priv. + L. *tactilis*, relating to touch.] Loss of the sense of touch.

atav'ic. Atavistic.

at'avism [L. *atavus*, a great-great-great-grandfather, a remote ancestor.] The appearance in an individual of any mental or physical characteristic or tendency to disease or diathesis, peculiar to a remote ancestor, but not manifest in the intermediate generations.

atavis'tic. Atavic, relating to atavism.

ataxia [G. *a-* priv. + *taxis*, order.] A loss of the power of muscular coordination. **autonom'ic a.,** a lack of coordination (in balance) between the sympathetic and parasympathetic nervous systems. **cerebel'lar a.,** loss of muscular coordination as a result of disease in the cerebellum. **hered'itary cerebel'lar a.,** a disease of later childhood and early adult life, marked by ataxic gait, hesitating and explosive speech, nystagmus, and sometimes optic neuritis; it is due to atrophy of the cerebellum. **hered'itary spinal a.,** Friedreich's a., sclerosis of the posterior and lateral columns of the spinal cord, occurring in children; it is marked by ataxia in the lower extremities, extending to the upper, followed by paralysis and contractures. **intrapsy'chic a.,** splitting of the personality, schizophrenia (1). **locomo'tor a.** (1) motor a.; (2) tabes dorsalis. **mo'tor a.,** inability to perform coordinated muscular movements. **spi'nal a.,** a. due to spinal-cord disease, as in tabes dorsalis. **stat'ic a.,** inability to preserve the equilibrium in standing through loss of the deep sensibility. **vasomo'tor a.,** a form of autonomic a., a lack of coordination between the sympathetic and parasympathetic nervous systems in relation to the vasomotor phenomena, causing irregularity in the peripheral circulation, marked by alternations of pallor and suffusion, due to spasm of the smaller blood-vessels.

ataxiadynamia (ă-taks"ĭ-ad-i-nam'ĭ-ah). Muscular weakness combined with incoordination.

atax'iagram. The record, or curve, made by means of an ataxiagraph.

atax'iagraph [G. *graphō*, I write.] An instrument for measuring the degree and direction of the swaying of the head in static ataxia; a style attached to the top of the head records the movements on a disc supported just above it.

ataxiamne'sic. Relating to or suffering from both ataxia and amnesia.

ataxiaphasia (ă-taks"ĭ-ă-fa'zĭ-ah) [G. *a-* priv. + *taxis*, order, + *phasis*, an affirmation, speech.] Inability to form connected sentences, although single words may perhaps be used intelligibly.

atax'ic. Relating to, marked by, or suffering from ataxia.

atax"iophe'mia [G. *phēmē*, voice, speech.] Incoordination of the muscles concerned in speech production.

ataxiopho'bia [G. *phobos*, fear.] Morbid dread of suffering from tabes dorsalis.

at'axy. Ataxia.

atebrin (at'ĕ-brin). Trade name of a synthetic drug of unknown composition, proposed for the treatment of malaria in dose of gr. 1½ (0.1) three times a day for three days.

atelectasis (at"ĕ-lek'ta-sis) [G. *atelēs*, incomplete, + *ektasis*, extension.] An airless condition of the lungs, as in the fetus; or of a portion of a lung in later life, due to the pressure of a pleural effusion, blocking of the smaller bronchial tubes with mucus, etc.

atelectat'ic. Relating to atelectasis.

atelia (ă-tel'ĭ-ah) [G. *ateleia*, incompleteness.] Ateliosis.

ateliosis (at-el-ĭ-o'sis) [G *atelēs*, incomplete.] Incomplete development of the mind or the body or any of its parts; infantilism.

ateliotic (ă-tel-ĭ-ot'ik). Marked by ateliosis, incompletely developed, of infantile type.

atelocar'dia [G. *atelēs*, incomplete, + *kardia*, heart.] Incomplete development of the heart.

atelocepha'lia [G. *atelēs*, incomplete, + *kephalē*, head.] A monstrosity in which there is incomplete development of the head.

atelochilia (ă-tel-o-ki'lĭ-ah) [G. *atelēs*, imperfect, + *cheilos*, a lip.] Defective development of the lip; harelip.

atelochiria (ă"tel-o-ki'rĭ-ah) [G. *atelēs*, incomplete, + *cheir*, hand.] Imperfect development of the hands.

ateloencephalia (ă"tel-o-en-sĕ-fa'lĭ-ah) [G. *atelēs*, incomplete, + *enkephalos*, brain] Imperfect formation of the brain structures.

atelogloss'ia [G. *atelēs*, incomplete, + *glōssa*, tongue.] Imperfect development of the tongue

atelognathia (at"el-og-na'thĭ-ah) [G. *atelēs*, incomplete, + *gnathos*, jaw.] Defective formation of either jaw.

atelomyelia (at"el-o-mi-e'lĭ-ah) [G. *atelēs*, incomplete, + *myelon*, marrow.] Imperfect development of the spinal cord.

atelopod'ia [G. *atelēs*, incomplete, + *pous(pod-)*, foot.] Imperfect formation of the feet.

at"eloproso'pia [G. *atelēs*, incomplete, + *prosōpon*, face.] Imperfect development of the face.

atelorrhachidia (at"el-o-ră-kid'ĭ-ah) [G. *atelēs*, incomplete, + *rhachis*, spinal column.] Defective formation of the vertebral column.

atelosto'mia [G. *atelēs*, incomplete, + *stoma*, mouth.] Imperfect development of the mouth or its contained parts.

athe'lia [G. *a-* priv. + *thēlē*, nipple.] Absence of the nipples.

ather'mal [G. *a-* priv. + *thermē*, heat.] Not thermal, noting mineral springs the water of which issues from the ground at a temperature below 60° F.

ather'mancy [G. *athermantos*, not heated] Impermeability to heat.

ather'manous. Absorbing radiant heat, not permeable to heat rays.

ather'mic. Apyretic.

athermosystaltic (ă-thur″mo-sis-tal′tik) [G. *a-* priv. + *thermos*, hot, + *systaltikos*, constringent.] Not contracted or constringed by ordinary variations of temperature, said of certain tissues.

atheroma (ath-e-ro′mah) [G. *athērē*, gruel.] 1. A sebaceous cyst. 2. A disease of the arteries, consisting in a fatty degeneration of the wall, usually on the site of the lesions of arteritis deformans; this may result in a pultaceous deposit in the arterial wall or in a breaking down of the intima giving rise to an atheromatous ulcer.

ath″eromato′sis. A more or less generalized atheromatous disease of the arteries

athero′matous. Relating to or affected by atheroma.

atheronecrosis (ath″er-o-ne-kro′sis) [*atheroma* + *necrosis*.] The regressive alteration accompanying arteriosclerosis.

atherosclerosis (ath″er-o-skle-ro′sis). A senile type of arteriosclerosis, characterized by hyperplasia of the connective-tissue and elasticomuscular layers with atheromatous degeneration of the latter.

athero′sis. Atheroma.

ath″erosper′ma. The sassafras tree of Australia and New Holland, the bark of which is diuretic and diaphoretic.

ath′etoid [G. *eidos*, appearance] Resembling athetosis.

atheto′sis [G. *athetos*, without position or place.] A condition in which there is a constant succession of slow involuntary movements of flexion, extension, pronation, and supination of the fingers and hands, and sometimes of the toes and feet.

athlete (ath′lēt) [G. *athlētēs*, a combatant, one who engages in a contest for a prize.] One who is given to athletics or outdoor sports. **a's foot,** an infection with *Trichophyton microsporon* or *T. megalosporon* of the skin of the foot, marked by cracks, redness and minute vesicles, usually on the sole or between the toes, causing itching, pain, and disability.

athletics (ath-let′iks) [G. *athlētikos*, relating to one engaged in physical contests] 1. A system of physical training. 2. Sports.

athrep′sia [G. *a-* priv. + *threpsis*, nourishment.] 1. Innutrition; specifically, marasmus of the newborn. 2. Immunity to inoculation of tumor cells, assumed by Ehrlich to be due to the absence of the special nutritive substance upon which the growth of tumors was supposed by him to depend.

ath′repsy. Athrepsia.

athrep′tic. Relating to or suffering from athrepsia; marantic, marasmic.

athy′mia [G. *a-* priv. + *thymos*, mind.] 1. Amentia. 2. Absence of emotivity, morbid impassivity. 3. Absence of the thymus gland or its secretion.

athymism (a-thi′mizm) [G. *a-* priv. + *thymus*.] Athymia (3), absence of the thymus gland or its secretion with the phenomena dependent thereon.

athyrea (ă-thi′re-ah) [G. *a-* priv. + *thyreos*, a shield.] Absence of the thyroid gland, or deficiency of the thyroid secretion; myxedema.

athyreo′sis. Athyrea.

athy′ria. Athyrea.

athyroidemia (ath″i-roy-de′mĭ-ah). Absence of the thyroid secretion and the effect of its loss upon the condition of the blood.

athyroidism (ă-thi′roy-dizm). Absence of the thyroid gland, or suppression of its secretion, with the symptoms consequent thereon; athyrea.

atlan′tad. In a direction toward the atlas.

atlan′tal. Relating to the atlas.

atlan″todid′ymus. Atlodidymus.

atlantoepistrophic (at-lan″to-ep-ĭ-strof′ik). Relating to the atlas and the epistropheus, or axis; atloaxoid, atlantoaxoid; noting the rotary joint between the two vertebræ.

atlan′to-odon″toid. Relating to the altas and the odontoid process of the epistropheus, or axis.

at′las [G. *Atlas*, in Greek mythology a Titan who supported the earth on his shoulders.] [BNA] First cervical vertebra, articulating with the occipital bone and rotating around the odontoid process of the epistropheus, or axis.

atloax′oid. Relating to the atlas and the axis; also written atlantoaxoid.

atlodid′ymus [G. *atlas* + *didymos*, twin.] Atlantodidymus; a monster with two heads and but one neck.

at′loid. Atlantal.

atlo-occip′ital. Relating to the atlas and the occipital bone; also written atlanto-occipital.

atmiat′rics [G. *atmis*, vapor, + *iatrikē*, practice of medicine] 1. Pneumatotherapy. 2. The use of sprays in the treatment of diseases of the respiratory passages.

atmidalbu′min [G. *atmis*, steam.] A modified protein obtained by the action of superheated steam.

atmidal′bumose. A derivative of atmidalbumin

atmocausis (at″mo-kaw′sis) [G. *atmos*, steam, + *causis*, a burning.] The application of superheated steam, by means of a two-way catheter, to the mucous membrane, especially of the uterus; employed as a substitute for curettage.

atmocautery (at″mo-kaw′ter-ĭ). An instrument used in atmocausis.

at′mograph [G. *atmos*, vapor, + *graphō*, I write.] Pneumatograph.

atmol′ysis. The separation of mixed gases by passing them through a porous diaphragm.

atmom′eter [G. *atmos*, vapor, + *metron*, measure.] An instrument for measuring the degree of evaporation.

at′mos [abbreviation of *atmosphere*.] A proposed unit of air pressure, being the pressure of one dyne per square centimeter.

at′mosphere [G. *atmos*, vapor, + *sphaira*, sphere.] 1. The air. 2. Any gas surrounding a given body; a gaseous medium.

atmospher′ic. Relating to the atmosphere.

at″mother′apy [G. *atmos*, vapor, + *therapeia*, treatment of disease.] Atmiatrics.

ato′cia [G. *a-* priv. + *tokos*, childbirth.] Nulliparity

at′om [G. *atomos*, indivisible, uncut.] The assumed ultimate particle of an element, which cannot be further divided without change in its nature. **pri′mary a.,** electron. **recoil′ a., rest a.,** see *recoil*.

atom′ic. Relating to an atom. **a. num′ber,** theoretically the number of negatively charged electrons in an atom, which indicates the order of the element in the periodic system. **a. the′ory,** the theory that chemical compounds are formed by the union of atoms in certain definite proportions. **a. weight,** the weight of an atom of a chemical element in relation to the weight of an atom of hydrogen or oxygen as a unit.

atomicity (at-om-is′ĭ-tĭ). 1. The valence or combining power of a substance. 2. The number of hydroxyl groups contained in a base or an alcohol.

atom′idine. Trade name of a preparation liberating 1 per cent. of nascent iodine, employed internally in doses of 10 drops, and externally in ointment.

atomiza′tion. Spray production; the reducing of a fluid to the form of spray.

at'omizer. An apparatus for throwing a fluid in the form of spray.

aton'ic [G. *atonia*, languor.] Relaxed: without normal tone or tension.

atonicity (at-o-nis'ĭ-tĭ). Atony, lack of tone.

at'onied. Atonic, marked by lack of tone.

at'ony [G. *atonia*, languor.] Relaxation, flaccidity; lack of tone or tension.

ato'pen. The exciting cause of any form of atopy.

atophan (at'o-fan) [G. *a-* priv. + L *tophus*.] Trade name of phenylcinchoninic acid, cinchophen, a compound of phenylquinolin and carbonic acid ($C_{16}H_{11}O_2N$), said to increase greatly the excretion of uric acid; recommended in the treatment of gout and acute rheumatism in doses of gr. 45–75 (3.0–5.0), with sodium bicarbonate ʒ2–4 (8.0–15.0), daily.

atop'ic [G. *atopos*, out of place.] Displaced, misplaced.

atopogno'sia [G. *a-* priv. + *topos*, place, + *gnōsis*, knowledge.] Inability to locate a sensation properly.

atopomenorrhea (at"o-po-men-or-re'ah) [G. *atopos* out of place] Bleeding from some part other than the uterine cavity, taking the place of the normal menstrual flow; vicarious menstruation.

atopy (at'o-pĭ) [G. *atopia*, strangeness.] A general term embracing the several forms of idiosyncrasy or hypersensitiveness.

atoquinol (at-o-kwin'ol). Trade name of the allyl ester of 2-phenyl-quinoline-4-carboxylic acid; it is employed, like cinchophen, for the relief of articular rheumatism and the elimination of uric acid, in doses of 8–10 gr. (0.50–0.65) with 10–30 gr. (0.65–2.0) of sodium bicarbonate, 3 times a day after meals.

atox'yl [G. *a-* priv. + *toxikos*, for the bow or arrow (poisonous), + *hylē*, stuff.] Trade name of a sodium salt of arsenic acid in which one hydroxyl group has been replaced by aniline; a white crystalline powder, employed in the treatment of syphilis, malaria, and trypanosomiasis in doses of gr. ½–3 (0.03–0.2), or gr 6 (0.4) by hypodermic injection every second day. It is called also arsamine.

atrabil'iary [L. *atra bilis*, black bile (cf *melancholy*)] Depressed in mind, melancholic. **a. cap'sules,** suprarenal glands.

atrab'ilin. Trade name of a preparation of the suprarenal capsules; hemostatic, and vasoconstrictor in action

atrabil'ious. Melancholic, atrabiliary *

atrachelocephalus (ă-trak"e-lo-sef'a-lus) [G. *a-* priv. + *trachelos*, neck, + *kephalē*, head] A monster without head or neck.

atre'mia [G. *a-* priv. + *tremō*, I tremble] Absence of tremor.

atrepsy (ă'trep-sĭ) [G. *a-* priv. + *trephō*, I nourish.] A condition in which a living virus, such as cancer cells or bacteria, perishes after inoculation into the tissues because of the absence of adaptable nourishment there; an hypothesis offered in explanation of certain cases of immunity.

atrep'tic. Relating to atrepsy.

atre'sia [G *a-* priv. + *trēsis*, a hole.] Congenital absence or pathological closure of a normal opening or passage. As a suffix *-atresia* signifies the same as the prefix *atreto-*.

atre'sic. Relating to atresia; imperforate

atret'ic. Atresic.

atreto- [G *atrētos*, imperforate.] A prefix denoting imperforation of the part named, as *atretoblepha'ria*, eyelids; *atretocys'ia*, anus; *atretop'sia*, pupil; *atretorrhin'ia*, nostrils, etc. The signification is the same as that of the suffix *-atresia*.

a'tria. Plural of atrium.

atrial (a'trĭ-al). Relating to an atrium.

atricha (ă'trĭ-kah). A group of non-flagellated bacteria.

atrichia (ă-trik'ĭ-ah) [G. *a-* priv. + *thrix(trich-)*, hair.] Absence of hair, congenital or acquired.

atrichosis (ă-tri-ko'sis). Atrichia.

atrionector (a"trĭ-o-nek'tor) [L. *atrium*, antechamber (auricle), + *nector*, joiner.] Sino-auricular node,* node of Keith and Flack.

atrioventricular (at"rĭ-o-ven-trik'u-lar). Relating to both the atria and the ventricles of the heart; auriculoventricular. **a. bun'dle, fascic'ulus, node,** etc., see the nouns

atriplicism (ă-trip'li-sizm). An intoxication caused by the ingestion of certain species of Atriplex, eaten as greens in China; it is marked by pain and swelling of the fingers spreading to the forearm; bullæ and ulcers form and the fingers may become gangrenous.

a'trium [L. antechamber.] 1. [BNA] Auricle; the upper chamber of each half of the heart, receiving the blood from the venæ cavæ on the right side and from the pulmonary veins on the left, and transmitting it to the ventricle of the same side. 2. The tympanum proper, that part of the tympanic cavity which lies immediately to the inner aspect of the drum membrane. 3. The portion of the nasal cavity lying below and behind the agger and above the vestibule, anterior to the middle meatus. 4. Infundibulum (6). **a. dex'trum** [NK], the a. of the right side of the heart which receives the blood from the venæ cavæ **a. glott'idis,** vestibulum laryngis. **a. mea'tus me'dii,** the anterior expanded portion of the middle meatus of the nose, just above the vestibule. **a. pulmona'le,** a. sinistrum. **a. sinis'trum** [NK], a. of the left side of the heart which receives the blood from the pulmonary veins. **infec'tion a.,** the part through which the pathogenic microorganisms gain entrance into the body in any given infectious disease.

At'ropa [G. *Atropas*, one of the Fates cutting the thread of life.] A genus of plants of the natural order *Solanaceæ*, which, properly considered, contains but one species, viz., **A. belladonn'a,** the source of the drug belladonna **A. mandrag'ora,** *Mandragora officinarum*, the mandrake, a narcotic.

atro'phia [G *a-* priv + *trophē*, nourishment.] Atrophy. **a. infan'tum,** tabes mesenterica **a. musculo'rum lipomato'sa,** pseudomuscular hypertrophy. **a. pilo'rum pro'pria,** trichorrhexis nodosa.

atroph'ic. Relating to atrophy; atrophied.

at'rophied. Marked by atrophy; wasted.

atrophoderma (ă-trof-o-dur'mah) [G. *atrophia* + *derma*, skin.] Atrophy of the skin. **a. al'bidum** [L. *albidus*, whitish], pityriasis alba atrophicans, a congenital thinness of the skin with diminution of pigment, usually most marked on the legs and arms. **a. neurit'icum,** glossy skin.* **a. pigmento'sum,** xeroderma pigmentosum, Kaposi's* disease, **a. seni'le,** the loss of fat, increased pigmentation, and other involutionary changes in the skin in old age. **a. stria'tum,** the condition marked by the presence of lineæ albicantes.

atrophodermato'sis. Any cutaneous affection in which a prominent symptom is atrophy of the skin.

atrophoder'mia. Atrophoderma.

at'rophy [G. *a-* priv. + *trophē*, nourishment.] A wasting of the tissues of a part or of the entire

body. **acute yellow a. of the liver,** a disease characterized by rapid fatty degeneration of the parenchyma cells of the liver, with atrophy and softening of the organ; its chief symptoms are jaundice, hemorrhages into the skin and from the mucous membranes, gastric disorders, and mental disturbances. **arthrit'ic a.,** a. of the muscles which move a chronically inflamed, especially tuberculous, joint. **brown a.,** a form of degeneration of the heart wall, in which the muscle is firmer than normal, of a dark reddish brown color, and reduced in volume; the muscle fibers become pigmented, especially about the nuclei, and lose their striations more or less completely. **concen'tric a.,** a. of a hollow viscus, like the heart, in which the size of the cavity remains the same or is lessened. **cyanot'ic a.,** a. due to destruction of the parenchymatous cells of an organ in consequence of chronic venous congestion. **cyanot'ic a. of the liver,** nutmeg liver.* **excen'tric a.,** a. of a hollow organ, like the heart, in which the size of its cavity is increased. **fatty a.,** fatty infiltration secondary to an atrophy of the essential elements of an organ or tissue. **gen'eral a.,** emaciation, marasmus (in infants). **gray a.,** a degeneration of the optic disc in which it assumes a grayish or bluish gray color. **hered'itary muscular a. of perone'al type,** Charcot-Marie type, a familial muscular atrophy affecting primarily the anterior muscles of the legs, and later sometimes the muscles of the forearms and hands. **in'fantile a.,** marasmus, athrepsia. **lin'ear a.,** morphœa occurring in stripes or lines; the atrophic lines seen on the skin of the abdomen following pregnancy. **myopath'ic a.,** muscular a. due to disease of the muscle itself and not of paralytic or central nervous origin. **neurit'ic a.,** muscular a. due to neuritis or degeneration of the nerves, beginning usually in the lower extremities. **progres'sive muscular a.,** atrophy of the cells of the anterior cornua of the spinal cord, resulting in a slow progressive wasting and paralysis of the muscles of the extremities and of the trunk. **quan'titative a.,** hypoplasia. **red a.,** a. of an organ associated with chronic passive congestion, seen sometimes in the liver in connection with disease of the heart. **remit'ting spi'nal a.,** chronic anterior poliomyelitis. **se'nile a.,** a general wasting of the tissues in old age due to the slowing of the anabolic processes. **se'rous a.,** a degenerative change occurring in fat-cells, the fat being absorbed and its place being taken by a serous fluid. **spi'nal a.,** tabes dorsalis.

atropi'na (U.S. and Br.). Atropine, $C_{17}H_{23}NO_3$, an alkaloid obtained from *Atropa belladonna;* antispasmodic, antisudorific, sedative, mydriatic, and narcotic; dose, gr. $\frac{1}{200}$–$\frac{1}{75}$ (0.0003–0.0008). **atropi'næ sul'phas** (U.S. and Br.) atropine sulphate, occurs in small white crystals, very soluble in water; dose, gr. $\frac{1}{150}$–$\frac{1}{60}$ (0.0004–0.0016).

atropine (at'ro-pēn). Atropina.

at'ropinism. The symptoms of poisoning by atropine or belladonna.

at'roscine. An alkaloid isomeric with hyoscine, obtained from *Scopola carniolica, Scopolina atropoides;* it is optically inactive, according to Hesse who first prepared it from scopolamine.

at'tar of rose [Pers. *attara,* to smell sweet.] Oleum* rosæ.

atten'dant [L. *attendere,* to give heed to.] 1. Attending* physician. 2. A nurse or any non-medical assistant to the physician in the hospital.

attend'ing. Accompanying; waiting upon; looking after or caring for. **a. physician,** a physician attached to a hospital who visits the patients at stated times and gives directions to the house-physician regarding their treatment. **a. staff,** the entire body of attending physicians and surgeons attached to a hospital. **a. surgeon,** a surgeon attached to a hospital who visits the patients at stated times, performs major operations, and directs the house surgeon in the management of the cases under his charge.

atten'uant [L. *attenuare,* to make thin.] 1. Diluting; making thin, said of fluids. 2. A diluent; a medicine supposed to "thin the blood"; an agent which renders the secretions and excretions more fluid.

attenuate (ă-ten'u-āt). 1. To dilute, to make thinner. 2. To reduce the virulence of a pathogenic microorganism.

attenua'tion. 1. Dilution, thinning. 2. Diminution of virulence in an organism, obtained through heating, cultivation on certain media, and other ways. 3. In homeopathy, dynamization.

at'tic. Recessus epitympanicus [BNA].

atticoantrotomy (at"i-ko-an-trot'o-mi). Antroatticotomy.

atticomas'toid. Relating to the attic of the tympanum, and the mastoid antrum or cells.

atticot'omy [G. *tomē,* incision] Operative opening into the tympanic attic.

att'itude. Posture; position of the body and limbs. **defense a.,** one automatically assumed to avert discomfort or pain. **pas'sionate a.,** an attitude expressive in face and figure of extreme emotion.

attoll'ens [L. *attollere,* to lift up.] Lifting up, raising. **a. au'rem, a. auric'ulam,** musculus auricularis superior [BNA]. **a. oc'uli,** musculus rectus superior of the eye.

attrac'tion [L. *attrahere,* to draw toward.] The tendency of two bodies to approach each other. **a. par'ticle,** centriole, a minute spot in the center of the a. sphere. **a. sphere,** the centrosome with, the surrounding radially arranged protoplasm; a small body in the nucleus, or in the cytoplasm near the nucleus, supposed to be an independent and indispensable constituent of the cell; it plays an important part in mitosis. **cap'illary a.,** the force which causes fluids to rise through very fine tubes or the pores of a loose material. **chem'ical a.,** the force impelling atoms of different elements or molecules to unite to form new substances or compounds. **magnet'ic a.,** the force which draws iron or steel toward a magnet.

att'rahens [L. *attrahere,* to attract.] Drawing toward, noting a muscle (*attrahens aurem* or *auriculam*) rudimentary in man, which tends to draw the pinna of the ear forward; musculus auricularis anterior [BNA].

attraxin (ă-trak'sin). A hypothetical substance which is supposed to have a chemotactic influence upon certain cells of the body.

attrition (ă-trish'un) [L. *atterere,* to rub at.] Wearing away by friction or rubbing.

atyp'ical [G. *a-* priv. + *typikos,* conformed to a type.] Not typical; not corresponding to the normal form or type.

Au [L *aurum,* gold] Chemical symbol of the element gold.

A.u. Abbr. of Ångstrom's* unit.

Aubert's phenom'enon (o-bair'). A perpendicular line appears to incline to one side when the observer turns the head to the opposite side.

Auchmeromyia luteola (awk-mer-o-mi'yah lu-te'o-lah) [G. *auchmēros,* dirty, + *myia,* fly; L. *luteolus,* yellowish.] *Musca luteola,* a fly found in

Nigeria and the Congo, the larva of which is a blood-sucker.

$AuCl_3$. Auric chloride, trichloride of gold.

auctioneer's cramp (awk-shun-ēr'z' kramp). A professional neurosis, marked by a, generally unilateral, spasm of the orbicularis oris muscle

audile (aw'dil). Relating to audition; specifically, noting the type of mental imagery in which the person recalls most readily that which he has heard; contrasted with *visile* and *motile*.

audiogram (aw'dĭ-o-gram) [L. *audire*, to hear, + G. *gramma*, a drawing.] The graphic record made by the audiometer.

audiometer (aw-dĭ-om'e-tur) [L. *audire*, to hear, + G. *metron*, measure.] 1. An electrical instrument for recording the percentage of hearing remaining in a deaf person. 2. Acoumeter.

audiphone (aw'de-fōn) [L. *audire*, to hear, + G. *phōnē*, sound.] A fan-shaped piece of vulcanite, the upper edge of which is pressed against the upper teeth; collecting the sound waves, it transmits them to the auditory apparatus by bone-conduction.

audition (aw-dĭ'shun) [L. *audire*, to hear] Hearing **chromat'ic a.,** the subjective perception of color caused by the hearing of certain sounds. **gus'tatory a.,** a form of synesthesia in which a sensation of taste is noted when certain sounds are heard.

auditognosis (aw-dĭ-tog-no'sis) [L. *auditio*, hearing, + G. *gnōsis*, knowledge.] 1. The perception and interpretation of sounds. 2. Diagnosis by means of auscultation and percussion.

auditory (aw'dĭ-to-rĭ). Relating to the perception of sound. **a. ar'tery,** arteria auditiva, a branch of the basilar which accompanies the auditory nerve through the internal auditory meatus. **a. canal',** a. meatus. **a. cells,** columnar cells in the epithelium of the labyrinth and the organ of Corti. **a. epithe'lium,** the epithelium lining the labyrinth where the filaments of the a. nerve are distributed. **a. hairs,** cilia on the free surface of the a. cells. **a. mea'tus,** meatus acusticus, externus and internus. **a. nerve,** nervus acusticus. **a. teeth,** tooth-like projections in the floor of the scala media of the labyrinth. **a. ver'tigo,** Ménière's* disease. **a. ves'icle,** otic vesicle, a vesicular structure in the embryo from which a part of the membranous labyrinth is developed.

Audouin's micros'poron (o-dwaṅ') [Jean Victor *Audouin*, Paris physician, 1797–1841.] *Microsporon audouini*.

Auenbrugger's sign (ow'en-broog-er) [Leopold Joseph *Auenbrugger*, Austrian physician, 1722–1809.] An epigastric prominence noted in cases of marked pericardial effusion.

Au'er's bod'ies [John *Auer*, American physician, *1875.] Rod-like bodies of uncertain nature found in the lymphocytes in cases of leucemia.

Auerbach's gan'glia (ow'er-bahkh) [Leopold *Auerbach*, German anatomist, 1828–1897.] Numerous ganglia in the myenteric plexus of the sympathetic. **A.'s plex'us,** plexus myentericus [BNA].

Aufrecht's disease' (owf'rekht) [Emanuel *Aufrecht*, German physician, *1844.] Infectious jaundice with parenchymatous lesions in the kidneys and liver. **A.'s sign,** diminished breath sounds in the trachea just above the jugular notch, in cases of stenosis.

augmentor (awg-men'tor) [L. *augmentum*, increase.] A hypothetical substance supposed to increase the action of an auxetic or a kinetic. **a. nerves,** accelerator nerves, called augmentor because their action is to increase the force as well as the rapidity of the heart beat.

augnathus (awg-na'thus) [G. *au*, again, + *gnathos* jaw.] A monster with a double mandible.

aula (aw'lah) [G. *aulē*, hall.] The anterior portion of the third cerebral ventricle.

aulatela (aw-lă'tĕ-lah) [G. *tela*, web.] The membrane covering the aula.

aulic (aw'lic). Relating to the aula.

auliplexus (aw-le-plek'sus). The choroid plexus in the anterior part of the third ventricle of the brain.

aulophyte (aw'lo-fīt) [G. *aulos*, tube, + *phyton*, plant. A plant living within another, but not as a parasite.

aura (aw'rah) [L. breeze, odor, gleam of light.] A peculiar sensation felt by the patient immediately preceding an epileptic attack; it may be a paresthesia in the epigastric region or in the hand or leg ascending to the head, noises in the ears, flashes of light, vertigo, etc.; it is called auditory, epigastric, vertiginous, etc., according to its seat or nature. **intellec'tual a.,** a dreamy, detached, or reminiscent mental state preceding the epileptic paroxysm; also called *reminiscent aura*.

aural (aw'ral). 1. Relating to the ear (*auris*). 2. Relating to an aura.

auramine (aw'ră-mēn). Yellow pyoktanin.*

auran'tium [L.] Orange. **auran'tii ama'ri cor'tex** (U.S.), bitter orange peel, the dried rind of the unripe fruit of *Citrus vulgaris*, used for flavoring. **auran'tii cor'tex re'cens** (Br.), fresh bitter orange peel. **auran'tii cortex sicca'tus** (Br.), dried bitter orange peel. **auran'tii dul'cis cor'tex** (U.S.), sweet orange peel, the recently separated outer rind of the ripe fruit of *Citrus aurantium*; used for flavoring. **auran'tii flo'res,** orange flowers.

auremetine (or-em'ĕ-tēn). Trade name of a compound of emetine, auramine, and iodine, recommended in the treatment of dysentery in dose of gr. 1 (0.06) four times a day or alternate days for one week, then every day up to a total of gr. 40–60, if necessary.

auric (aw'rik). Relating to gold (*aurum*).

auricle (aw'rik-l). 1. Auricula (1,2,3). 2. In botany, zoology, and entomology, any ear-shaped appendage. 3. A form of ear-trumpet for the use of the deaf.

auric'ula [L. dim. of *auris*, ear.] Auricle. 1. [BNA] Pinna, the projecting shell-like structure on the side of the head, constituting, with the external auditory meatus, the external ear. 2. The upper receiving chamber of each half of the heart, atrium [BNA]. 3. [BNA] Auricular appendix, a small conical muscular pouch forming the upper portion of each auricle (atrium) of the heart

auricular (aw-rik'u-lar). Relating to the ear, or to an auricle in any sense. **a. fissure,** fissura tympanomastoidea. **a. point,** auriculare

auriculare, pl. *auricula'ria* (aw-rik-u-lah'ra) [L. neut. of *auricularis*.] Auricular point, a craniometrical point at the center of the opening of the external auditory canal; or, in certain cases, the middle of the upper edge of this opening.

auricularis (aw-rik-u lah'ris) [L. auricular.] 1. The little finger, so called because used to clean the auditory meatus. 2. Nervus* auricularis magnus.

auric"ulocra'nial. Relating to the auricle or pinna of the ear and the cranium.

auriculotemporal (aw-rik"u-lo-tem'po-ral). Relating to the auricle or pinna of the ear and the temporal region, noting the nervus* auriculotemporalis.

auric"uloventric'ular. Atrioventricular. **a. bun'dle,** His's band or bundle

auriginous (aw-rij'en-us) [L. *auriginosus*, golden.] Icteric, jaundiced.

aurilave (aw'ri-lāv) [L. *auris*, ear, + *lavare*, to wash.] A brush or sponge on the end of a slender rod, for cleaning the ear.

aurina'rium. A medicated bougie or suppository, with gelatin or cacao butter basis, for insertion into the external auditory meatus.

aurinasal (aw-ri-na'zal) [L. *auris*, ear, + *nasus*, nose.] Relating to the ear and the nose.

auripigmen'tum [L. *aurum*, gold, + *pigmentum*, pigment, so called because of its bright yellow color.] Orpiment.

auripuncture (aw-rĭ-pung'chur) [L. *auris*, ear, + *punctura*, puncture.] Incision of the membrana tympani; paracentesis of the tympanum.

auris (aw'ris) [L.] Ear. **a. exter'na,** the external ear, auricle,* pinna. **a. inter'na,** internal ear, labyrinth.* **a. me'dia,** the middle ear, tympanum.*

au'riscalp, auriscal'pium [L. *auris*, ear, + *scalpere*, to scrape.] 1. A scraping instrument used in operations on the ear. 2. An earpick.

auriscope (aw'rĭ-skōp) [L. *auris*, ear, + *skopeō*, I view.] An ear speculum,* otoscope.

aurist (aw'rist) [L. *auris*, ear.] Otologist, one who devotes special attention to diseases of the ear.

auristillæ (aw-rĭ-stil'le) [L. *auris*, ear, + *stilla*, drop.] Ear-drops.

aurococcus (aw'ro-kok'us) [L. *aurum*, gold, + G. *kokkos*, berry.] *Staphylococcus pyogenes aureus.*

aurotherapy (aw-ro-ther'ă-pĭ) [L. *aurum*, gold, + G. *therapeia*, treatment.] Chrysotherapy.

aurum (aw'rum) [L.] Gold; a yellow metal, one of the elements, symbol Au, atomic weight 197.2. The pure metal is used for filling cavities in the teeth; some of the salts are employed in medicine. **au'ri bro'midum,** gold bromide, a brown powder, employed in epilepsy, headache, and as a nerve sedative, in doses of gr. $\frac{1}{5}$–$\frac{1}{2}$ (0.013–0.03). **au'ri chlo'ridum,** gold chloride, orange colored deliquescent crystals; has been employed locally as a caustic in cancer. **au'ri et so'dii chlo'ridum,** double chloride of gold and sodium, a deliquescent orange-colored powder composed of equal parts of anhydrous gold chloride and sodium chloride; alterative and tonic in doses of gr. $\frac{1}{20}$–$\frac{1}{10}$ (0.003–0.006).

auscult (aws-kult') To auscultate.

auscultate (aws'kul-tāt) [L. *auscultare*, to listen.] To listen to the sounds made by the thoracic or abdominal viscera, as a means of diagnosis.

auscultation (aws-kul-ta'shun). Listening to the sounds made by the thoracic or abdominal viscera, by the contracting muscles, by the blood in the vessels, by the fetus *in utero*, or to sounds in any of the other internal parts of the body; employed as a diagnostic method. See also auscultatory percussion.* **imme'diate a.,** a. by application of the ear to the surface of the body. **me'diate a.,** a. practised by means of a stethoscope. **tri'angle of a.,** see *triangle*.

auscultatory (aws-kul'ta-to-rĭ). Relating to auscultation. **a. percus'sion,** see *percussion*.

auscultoscope (aws-kul'to-skōp). Stethoscope.

Auspitz's dermato'sis (ows'pits) [Heinrich *Auspitz*, German physician, 1835–1886] Granuloma fungoides.

Austra'lian blight. Angioneurotic edema.

autacoid (aw'tă-koyd) [G. *autos*, self, + *akos*, a remedy.] Any one of the internal secretions; a specific organic substance formed by the cells of an organ and passed from them into the circulating fluid to produce effects upon other organs similar to those produced by drugs (Schäfer). **exci'tatory a.,** hormone. **inhib'itory a., restrain'ing a.,** chalone.

au'tan. Trade name for a preparation said to be a mixture of barium peroxide, 66, and paraform 34 parts; used in solution for sterilization and disinfection.

autarcesis (aw-tar'sĕ-sis) [G. *autos*, self, + *arkesis*, aid, warding off.] Inherent or natural immunity.

autecic, autecious, autœcious (aw-te'sik, aw-te'shus) [G. *autos*, same, + *oikion*, house] Noting a parasite which infests, throughout its entire existence, the same host.

autechoscope (aw-tek'o-skōp) [G. *autos*, self, + *ēchō*, sound, + *skopeō*, I examine.] Autostethoscope.

auteme'sia [G. *autos*, self, + *emesis*, vomiting.] Idiopathic or functional vomiting.

autism (aw'tizm) [G. *autos*, self.] A tendency to morbid self-absorption and anthropophobia.

autistic (aw-tis'tik) [G. *autos*, self.] Self-centered. **a. par'asite,** a parasite descended from the tissues of the host.

auto- (aw'to) [G. *autos*, self.] A prefix denoting self, acting upon oneself, performed or produced by oneself, sufficient to oneself, etc.

autoanticom'plement. An anticomplement, formed within the body of an animal, which neutralizes the complement of its own serum.

autoaudible (aw"to-aw'dĭ-bl). Audible to oneself, said of sounds produced within one's own body.

autoblast (aw'to-blast) [G. *autos*, self, + *blastos*, germ.] An independent cell; bacterium; protozoon.

autocatalysis (aw-to-kat-al'ĭ-sis) [G. *autos*, self, + *catalysis*.] Catalysis in which certain of its products act themselves as catalysts, thus hastening or modifying the process.

autocatalytic (aw-to-kat-ă-lit'ik) Relating to autocatalysis

autocatheterism (aw-to-kath'e-ter-izm). Passage of a catheter upon oneself.

autochthon (aw-tok'thon) [G. *autos*, self, + *chthōn*, land] An aboriginal, one native to the place inhabited.

autochthonous (aw-tok'thon-us) 1. Native to the place inhabited, aboriginal. 2. Originating in the place where found; said of a disease originating in the part of the body where found, or of a disease acquired in the place where the patient is. **a. parasite,** a parasite descended from the tissues of the host

autocinesia, autocinesis (aw-to-sin-e'sĭ-ah, aw-to-sin-e'sis) [G. *autos*, self, + *kinēsis*, movement.] 1. Motility, as distinguished from movement impressed upon a body by the surrounding medium. 2. Voluntary motion.

autocinet'ic. Relating to autocinesis.

autoc'lasis [G. *autos*, self, + *klasis*, breaking.] A breaking up or rupturing from intrinsic or internal causes.

au'toclave [G. *autos*, self, + L. *clavis*, a key; in the sense of self-locking.] 1. An apparatus for sterilization by steam under pressure; it consists of a strong closed boiler containing a small quantity of water and, in a wire basket, the articles to be sterilized. 2. To sterilize in an autoclave.

autocoid (aw'to-koyd). Autacoid.

autoconduction (aw"to-kon-duk'shun) A method of general darsonvalization in which the patient is surrounded by the solenoid which forms the secondary spiral of the transformator

autocys'toplasty. Autoplasty of the bladder.

autocytol'ysin. An antibody destructive to the cells, produced in one's own body by retained degenerated cells acting as an antigen.

autocytolysis (aw"to-si-tol'i-sis) [G. *autos*, self, + *kytos*, cell, + *lysis*, a loosening.] 1. The self-digestion of cells by the enzymes which they normally contain. 2. Cell-destruction effected by a lysin formed in one's own body.

autocytotox'in. Autocytolysin.

autodermic (aw-to-dur'mik) [G. *autos*, self, + *derma*, skin.] Relating to one's own skin; noting the method of skin-grafting in which the grafts are taken from one's own skin, dermato-autoplasty.

autodidact' [G. *autos*, self, + *didaktos*, taught.] Self-taught; one who has taught himself.

autodiges'tion [G. *autos*, self.] Autolysis.

autoecholalia (aw"to-ek-o-la'lĭ-ah) [G. *autos*, self, + *echolalia*.] The repetition of some or all the words in one's own statements.

autœ'cic, autœ'cious. See *autecic*.

autoerotic (aw-to-er-ot'ik). Attracted sexually toward oneself.

autoeroticism, autoerotism (aw-to-er-ot'ĭ-sizm, aw-to-er'o-tizm) [G. *autos*, self, + *erōtikos*, relating to love.] Sexual self-love.

autog'amous. Relating to or characterized by autogamy.

autogamy (aw-tog'ă-mĭ) [G. *autos*, self, + *gamos*, marriage.] 1. A sort of abortive conjugation, or extreme inbreeding, in which fission of the cell nucleus occurs without division of the cell, the two pronuclei so formed reuniting to form the syncaryon. In other cases the cell body also divides, but the two daughter cells immediately conjugate; automixis. 2. In botany, self-fertilization. The opposite of allogamy.

autogen'esis [G. *autos*, self, + *genesis*, origin.] Self-production; abiogenesis.

autogenet'ic, autogen'ic. Relating to autogenesis; self-producing, self-produced.

autogenous (aw-toj'en-us) [G. *autos*, self, + *gennaō*, I produce.] 1. Autogenetic. 2. Endogenous, originating within the body or a part. **a. u'nion,** in dentistry, the union of two pieces of metal without solder.

autognosis (aw-tog-no'sis) [G. *autos*, self, + *gnōsis*, knowledge.] Self-knowledge, recognition of one's own character, tendencies, and peculiarities.

autograft (aw'to-graft) [G. *autos*, the same.] A portion of tissue taken from one part of the body to fill a defect in another part of the same person—not from another person, *isograft*, nor from an animal, *heterograft*.

au'togram [G. *autos*, self, + *gramma*, letter.] A mark on the skin either raised or colored, following pressure by a blunt instrument.

autog'raphism. Dermographism.

autohemolysin (aw-to-he-mol'i-sin). An antibody causing destruction of the red blood corpuscles in the same animal in whose blood it is formed.

autohypno'sis [G. *autos*, self, + *hypnos*, sleep.] Hypnosis induced in a very susceptible person, who has frequently been hypnotized, simply by mental concentration on the fact of hypnosis.

autohypnot'ic. Relating to autohypnosis.

autoimmunization (aw"to-im-u-ni-za'shun). The natural process of immunization against a disease effected by an attack of the same.

autoinfection (aw-to-in-fek'shun). Infection by germs or toxins produced within the body, as exemplified in the occurrence of a succession of boils.

autoinfusion (aw-to-in-fu'zhun). Forcing the blood from the extremities by the application of an Esmarch bandage, in order to raise the blood-pressure and fill the vessels in the vital centers; resorted to after excessive loss of blood or other body fluids.

autoinoculable (aw"to-in-ok'u-la-bl). Susceptible of autoinoculation.

autoinoculation (aw"to-in-ok"u-la'shun) [G. *autos*, self, + *inoculation*.] A secondary infection originating from a focus of disease already present in the body; it may be local, as when an ulcerated surface produces another sore in a part in contact with it, or systemic, by the setting free of bacteria or their products from a local infective focus.

autointox'icant. 1. Self-poisoning. 2. Any toxic agent active in autointoxication.

autointoxication (aw"to-in-tox-ĭ-ka'shun) [G. *autos*, self.] Self-poisoning; the result of the absorption of the waste products of metabolism or of the products of decomposition within the intestine. **dyscrat'ic a.,** a metabolic disturbance resulting in a pathological alteration in the body fluids **intes'tinal a.,** copremia, stercoremia.

autoisolysin (aw-to-i-sol'ĭs-in). A lysin which is destructive to the cells both of animals of the same species and of the individual in whose body it has been elaborated.

autokinesis (aw-to-kin-e'-sis). Autocinesis.

autokinetic (aw-to-kin-et'ik). Autocinetic.

autolaryngos'copy. Inspection of one's own larynx.

autolesion (aw'to-le"zhun) [G. *autos*, self.] A self-inflicted injury.

autologous (aw-tol'o-gus) [G. *autos*, self, + *logos*, relation.] Normal to the part, said of a tumor composed of tissue or cells occurring naturally in the same part of the body, or of a protein normally present in the fluids or tissues of the body.

autolysate (aw-tol'i-sāt). The specific product of autolysis.

autol'ysin. An hemolysin in the plasma which will destroy the blood cells of the same individual.

autol'ysis [G. *autos*, self, + *lysis*, solution.] 1. Self-digestion; dissolution of cells by products of their own secretion 2. Removal of worn-out or necrotic tissues and cells by solution with an intracellular ferment. 3. Spontaneous post-mortem dissolution of organs and tissues which have not undergone decomposition.

autolyt'ic. Relating to autolysis.

automat'ic [G. *automatos*, self-moving.] 1. Spontaneous, not induced by outside causes. 2. Involuntary or not voluntary, performed unconsciously. **a. ventric'ular contrac'tions,** escaped* ventricular contractions.

automatism (aw-tom'ă-tizm). 1 A state of independence of the will or of central innervation, said of the heart's action 2. A condition in which movements are made without conscious exercise of the will. 3. A condition in which a neuropathic or psychopathic individual is consciously or unconsciously, but involuntarily, compelled to the performance of certain acts, often purposeless and sometimes foolish or harmful **am'bulatory a.,** a. which takes the form of moving about aimlessly, of tramping (vagabondage), or of traveling; poriomania, fugue.

automat'ograph [G. *graphō*, I write.] An instrument for recording automatic movements

automix'is [G. *autos*, self, + *mixis*, intercourse.] Autogamy.

automysophobia (aw-to-mi-so-fo'bĭ-ah) [G. *autos*, self, + *mysos*, dirt, + *phobos*, fear.] An insane imagining that one is filthy or smells bad.

autonomic (aw-to-nom'ik) [G. *autos*, self, + *nomos*, law.] Self-controlling, independent of outside influences; spontaneous. **a. ner'vous sys'tem**, parasympathetic, vagal, or craniosacral nervous system, that portion of the vegetative system, the fibers of which are derived from the mid-brain, medulla, and sacral cord; the sympathetic and autonomic systems are antagonistic, yet both furnish fibers to the heart, to the muscles of the genital organs, and to the organs having smooth muscles: the vagus is the most important nerve of the autonomic system. (See Plate XIX.) By some writers the terms sympathetic and autonomic are used synonymously.

autonomin (aw-ton'o-min) [see *autonomic*.] A hypothetical hormone supposed to preside over the endocrine glands, correlating their activity, inhibiting or stimulating the secretion of each as the needs of the system demand.

auton'omous. Autonomic.

autonomy (aw-ton'o-mĭ) [G. *autos*, self, + *nomos*, law.] Independence of outside control, or of control by the cerebrospinal nerve centers; functional independence.

autopath'ic. Idiopathic.

autopathog'raphy [G. *autos*, self, + *pathos*, suffering, + *graphō*, I write.] The writing of one's own medical history.

autop'athy [G. *autos*, self, + *pathos*, suffering.] A disease originating without apparent cause; an idiopathic disease.

autopepsia (aw-to-pep'sĭ-ah) [G. *autos*, self, + *pepsis*, digestion.] Self-digestion, said of ulceration of the gastric mucous membrane by its own secretion.

autopha'gia [*autos*, self, + *phagō*, I eat.] Biting one's own flesh.

autophobia (aw-to-fo'bĭ-ah) [G. *autos*, self, + *phobos*, fear.] 1. Morbid fear of being egotistical. 2. Dread of being alone with oneself.

autophonomania (aw to-fo-no-ma'nĭ-ah) [G. *autos*, self, + *phonos*, murder, + *mania*, frenzy.] Insane impulse to self-destruction.

autophony (aw-tof'o-nĭ) [G. *autos*, self, + *phōnē*, sound.] Increased resonance of one's own voice, breath sounds, arterial murmurs, etc., noted especially in disease of the middle ear or of the nasal fossæ; tympanophonia.

autophthalmoscopy (aw"tof-thal-mos'ko-pĭ) [G. *autos*, self, + *ophthalmos*, eye, + *skopeō*, I view.] The examination of the inner parts of one's own eyes.

autoplast (aw'to-plast) [G. *autos*, same, + *plassō*, I form.] Autograft.

autoplas'tic. Relating to autoplasty.

autoplasty (aw'to-plas-tĭ) [G. *autos*, self, + *plasso* I form.] The repair of defects by transplanting or grafting tissues from the patient's own body.

autopoi'sonous. Autotoxic.

autopsia (aw-top'sĭ-ah). Autopsy. **a. in vi'vo**, examination of the organs, especially the abdominal organs, during life by means of an exploratory incision.

autopsy (aw'top-sĭ) [G. *autopsia*, seeing with one's own eyes.] Post-mortem examination; an examination of the internal organs of a dead body for the purpose of determining the cause of death or of studying the pathological changes present.

autopsyche (aw'to-si-ke) [G. *autos*, self, + *psychē*, soul.] Consciousness of personality.

autopsychosis (aw-to-si-ko'sis). A mental disease in which ideas and conceptions relating to oneself are disordered.

autopyotherapy (aw-to-pi"o-ther'ă-pĭ) [G. *autos*, self, + *pyon*, pus, + *therapeia*, treatment.] Autotherapy (4).

autoscope (aw'to-skōp) [G. *autos*, self, + *skopeō*, I inspect.] 1. Any instrument used in the visual examination of one's own organs or cavities. 2. A long concave spatula used to depress and drag forward the tongue in the process of direct inspection of the larynx.

autos'copy. 1. Inspection of one's own organs or cavities. 2. Direct or orthoscopic inspection of the larynx without the use of a mirror.

autosensitize (aw-to-sen'sĭ-tiz) [G. *autos*, self, + *sensitize*.] To sensitize against one's own body cells.

autosepticemia, autosepticæmia (aw"to-sep-ti-se'mĭ-ah) [G. *autos*, self, + *sēpsis*, decay, + *haima*, blood.] Autotoxemia, endosepsis, septicemia apparently originating from conditions existing within the organism and not introduced from without.

autoserotherapy (aw-to-se-ro-ther'ă-pĭ). The treatment of certain conditions, such as pleural effusions and dermatoses, by hypodermic injection of the patient's own blood-serum

autose'rum. A therapeutic serum obtained from the patient's own blood or cerebrospinal fluid.

autosite (aw'to-sīt) [G. *autos*, self, + *sitos*, food.] 1. The principal twin in a double monstrosity; the one which carries on the vital processes, nourishing itself as well as the lesser twin, or *parasite*. 2. A single monster with organs sufficiently developed to be capable of postnatal existence.

autosomatognostic (aw"to-so"mat-og-nos'tik) [G. *autos*, self, + *sōma(sōmat-)*, body, + *gnōstos*, known.] Relating to the sense of possession of a part due to memory of previous feeling there, even when the part is no longer present, as after amputation.

autosome (aw'to-sōm) [G. *autos*, self, + *sōma*, body.] One of the ordinary or homeotypical chromosomes which are believed always to be equally distributed among the germ-cells, differing in this and other respects from the allosomes.*

autosteth'oscope. A stethoscope for use in listening to the sounds of one's own organs.

autosuggestibility (aw"to-sug-jes"ti-bil'ĭ-tĭ). An unstable mental state in which autosuggestion readily occurs.

autosuggestion (aw"to-sug-jes'chun). 1. The voluntary retention and constant dwelling upon an idea or concept, thereby inducing some change in the mental or bodily functions. 2. The reproduction in the brain of impressions previously received which become then the starting point of new acts or ideas.

autosynnoia (aw-to-sin-noy'ah) [G. *autos*, self, + *syn*, with, + *noeō*, I think.] Self-centredness; a psychosis in which one never has a thought unconnected with himself.

autotemnous (aw"to-tem'nus) [G. *autos*, self, + *temnō*, I cut.] Noting a cell which propagates itself by fission without previous conjugation.

autother'apy [G. *autos*, self, + *therapeia*, treatment.] 1. Self-treatment. 2. Spontaneous cure. 3. Autoserotherapy. 4. Treatment of disease by the administration of the patient's own pathological excretions, as, for example, the swallowing of the discharge from a wound, or the subcutaneous injection of the filtered sputum in the case of tuberculosis; Duncan's method.

autotomy (aw-tot'o-mĭ) [G. *autos*, self, + *tomē*, a cutting.] 1. The casting off of a damaged limb through the innate power of the organism; such a power is possessed by some crustaceans, as crabs. 2. Fission, spontaneous division.

autotoxemia, autotoxæmia (aw"to-toks-e'mĭ-ah) [G. *autos*, self, + *toxikon*, poison, + *haima*, blood.] Autointoxication.

autotox'ic. Relating to autointoxication.

autotoxico'sis. Autointoxication, autotoxemia.

autotox'in. Any poison originating within the body upon which it acts.

autotox'is. Autointoxication.

autotransfu'sion. Autoinfusion.

autotroph'ic [G *autos*, self, + *trophikos*, tending, nourishing.] Self-nourishing, noting the green plants and those forms of bacteria which do not require organic carbon or nitrogen, but can form proteins and carbohydrates out of inorganic salts and carbon dioxide. Distinguished from *heterotrophic.** See *hemiautotrophic.*

autotuberculin (aw"to-tu-bur'ku-lin). Tuberculin prepared from cultures made from the patient's own sputum.

autotyphization (aw"to-ti-fi-za'shun). The production of symptoms resembling those of typhoid fever occurring as a result of autointoxication.

autourine test (aw-to-u'rin). Wildbolz* reaction.

autovaccina'tion. A second vaccination with virus from a vaccine sore on the same individual.

autum'nal. Relating to the autumn. **a. catarrh',** hay fever.

auxanogram (awks-an'o-gram). The picture, showing bacterial growths of varying degrees of luxuriance, presented by the plate of agar or other material. See *auxanography.*

auxanographic. Relating to auxanography. **a. meth'od,** diffusion method, for the study of bacterial enzymes; agar is mixed with the material (such as starch or milk) which is to serve as an indicator of the enzyme action and after being inoculated is plated; if the bacteria produce enzymes digesting the admixed material there will be a zone of clearing in the medium about each colony.

auxanography (awks-an-og'ră-fĭ) [G. *auxanō*, I increase, + *graphō*, I write.] A method of determining the most suitable medium for bacterial cultivation. On a simple agar plate, for example, are placed drops of various nutrient solutions, the most suitable being shown by the most luxuriant growth of the bacteria.

auxanology (awks-an-olo-jĭ') [G. *auxanō*, I increase, + *-logia*.] The scientific study of growth.

auxetic (awks-et'ik) [G. *auxētikos* promoting growth.] A hypothetical chemical substance, the supposed specific action of which is to excite proliferation in leucocytes and other cells.

auxiliary (awg-zil'ĭ-ar-ĭ) [L. *auxilium*, help.] 1. Aiding. 2. An aid or assistance.

auxilyt'ic [G. *auxō*, I increase.] Increasing the destructive power of a lysin, or favoring lysis.

auxocardia (awks-o-kar'dĭ-ah) [G. *auxō*, I increase, + *kardia*, heart.] 1. Enlargement of the heart, either hypertrophy or dilatation. 2. The cardiac diastole.

auxohormone (awk-so-hor'mōn) [G. *auxō*, I increase, + *hormone.*] Vitamin.

auxom'eter [G. *auxō*, I increase, + *metron*, measure.] An instrument for measuring the magnifying power of a lens.

auxospore (awks'o-spōr) [G. *auxō*, I grow, + *sporos*, seed.] In *Diatomaceæ*, a large cell, formed by simple growth or a conjugation, which divides to form successively smaller daughter cells, which in turn enlarge to form new auxospores.

avalanche [Fr. descent.] The sliding down a mountain side of a mass of snow; hence a sudden descent or a fall en masse. **a. conduc'tion,** see *conduction.* **law of a.,** see under *law.*

aval'vular. Non-valvular, without valves.

avascular (ă-vas'ku-lar). Non-vascular, not provided with blood-vessels or lymphatics, especially the former.

avasculariza'tion. Devascularization; the expulsion of blood from a part by means of an Esmarch bandage.

Avel'lis's syn'drome [Georg *Avellis*, German laryngologist, 1864–1916.] Unilateral paralysis of the larynx and velum palati, with contralateral loss of pain and temperature sensibility in the parts below.

Ave'na [L. oats.] A genus of grasses, the most important species of which is **A. sati'va,** the common oat of cultivation; of the grain (official in N.F.) a fluidextract is used as a tonic in doses of 5½–1 (2.0–4.0); the eclectic preparation is employed as a nerve tonic, stimulant, and antispasmodic in doses of 2 drops in water every two or three hours.

av'enin. An albuminoid from *Avena sativa*, thought to be identical with gluten casein.

ave'nolith [L. *avena*, oats, + G. *lithos*, stone.] An intestinal calculus having a mass of undigested oats as the nucleus.

avertin (ă-vur'tin). Tribromethyl alcohol, a general anesthetic said to be free from action on the heart and to have few if any unpleasant after-effects; it is given by rectum.

Avicen'na's gland [properly *Ibn Sina*, Arabian physician, 980–1037.] An encapsulated tumor.

avir'ulent. Not virulent.

avitaminosis (a-vi"tam-in-o'sis) [G. *a-* priv. + *vitamine* + *-osis.*] Deficiency disease, any disease due to a lack of vitamins in the diet, such as beriberi and scurvy.

Avogad'ro's num'ber [Amadeo *Avogadro*, Italian physicist, 1776–1856.] The number of molecules in one gram-molecular weight of any compound; it equals 6.06×10^{23}. **A'.s pos'tulate,** equal volumes of gases contain equal numbers of molecules, the conditions of pressure and temperature being the same.

avoirdupois (av-or-du-poyz') [Fr. to have weight.] A system of weights in which 16 ounces make a pound; the pound is the equivalent of 453 6 grams.

avul'sion [L. *avellere*, to separate by force.] A tearing away.

Ax. Abbreviation for axis.

axanthop'sia [G. *a-* priv. + *xanthos*, yellow, + *opsis*, vision.] Yellow blindness, inability to distinguish yellow tints.

Axenfeld's test (ahks'en-felt) [David *Axenfeld*, German physiologist in Perugia, nineteenth century.] For albumin in the urine; acidulate with formic acid and warm while adding a few drops of 22 per cent. solution of gold chloride; the presence of albumin is indicated by a red color which changes to blue on the addition of an excess of the gold chloride solution.

ax'ial. 1. Relating to an axis. 2. Relating to or situated in the central part of the body, in the head and trunk as distinguished from the extremities. 3. In dentistry, relating to or parallel with the long axis of a tooth. **a. angle,** see *angle.* **a. surface,** the surface of a tooth parallel with its long axis; the a. surfaces are the labial, or buccal, lingual,

mesial, and distal. **a. walls of the pulp chambers,** the walls parallel with the long axis of a tooth; these are the mesial, distal, buccal, and lingual.

axif'ugal [L *axis* + *fugere*, to flee from.] Centrifugal.

ax'il. 1. Axilla. 2. The acute angle between a leaf and the stem from which it springs.

axile (ak'sil). Axial.

axilemma (aks"i-lem'ah) [G. *axōn*, axis, + *lemma*, husk.] A delicate membrane surrounding the axis cylinder of a nerve-fiber.

axil'la, gen *axil'læ* [L.] The armpit; maschale, the axillary space.

glandular inflammation in, maschaladenitis, axillary bubo. **medication by inunction in,** maschaliatria **odor from,** hircismus **sweating,** maschalephidrosis, maschalyperidrosis. **tumor in,** maschaloncus

ax'illary. Relating to the axilla. **a. artery,** the continuation of the subclavian in the axilla, becoming in turn the brachial when it leaves this cavity. **a. cavity,** a space. **a. fascia,** a thin layer of fascia closing in the axillary cavity. **a. folds,** the folds of skin bounding the axillary fossa; the anterior fold encloses the border of the pectoralis major, the posterior that of the latissimus dorsi. **a. fossa,** the armpit, the hollow beneath the shoulder. **a. line,** an imaginary line passing from the highest point of the axillary fossa vertically downward **a. nerve,** a branch of the supraclavicular portion of the brachial plexus, mainly a motor nerve of the muscles of the shoulder, but containing sensory fibers. **a. space,** the cavity beneath the shoulder-joint, bounded roughly by the pectoralis major anteriorly, the latissimus dorsi posteriorly, the chest-wall internally, the humerus externally, the shoulder-joint above, and the axillary fascia and hairy integument below; it contains the axillary artery and vein, the brachial plexus, lymphatic nodes, and areolar tissue. **a. tail,** an extension from the mammary gland over the serratus magnus up into the axilla as far as the third rib. **a. vein,** a vein formed by the union of the two brachial and the basilic veins, continuous above with the subclavian.

ax'io-buc'co-lin'gual plane. A plane cutting the buccal and lingual surfaces of a tooth parallel with its long axis.

ax'io-la'bio-ling'ual plane. A plane cutting the labial and lingual surfaces of a tooth parallel with its long axis.

ax'io-me'sio-dis'tal plane. A plane cutting the mesial, or proximal, and distal surfaces of a tooth parallel with its long axis

ax'ioplasm. Axoplasm.

axiopo'dium, pl. *axiopo'dia* [G. *axis* + *podion*, little foot.] A permanent pseudopodium containing a stiff axial filament of differentiated protoplasm.

axip'etal [L. *axis* + *petere*, to seek.] Centripetal.

axis, pl. *axes* [L.] 1. A straight line passing through a spherical body between its two poles, and about which the body may revolve. 2. The central line of the body or any of its parts. 3. The spinal column. 4. The central nervous system. 5. The second cervical vertebra, epistropheus [BNA]. 6. The odontoid process of the epistropheus. 7. An artery which divides, immediately upon its origin, into a number of branches. **a. op'tica** [BNA], optic axis, line of vision. **basibregmat'ic a.,** a line extending from the basion to the bregma. **basicra'nial a.,** a line drawn from the basion to the midpoint of the sphenoethmoidal suture. **basifa'cial a.,** a line drawn from the subnasal point to the midpoint of the sphenoethmoidal suture. **binauric'ular a.,** a straight line joining the two auricularia (cf. *auriculare*). **ce'liac a.,** arteria cœliaca **cerebrospi'nal a.,** the central nervous system, the brain and spinal cord. **con'jugate a.,** conjugata. **craniofa'cial a.,** a straight line passing through the mesethmoid, presphenoid, basisphenoid, and basioccipital bones. **enceph''alomyelon'ic a.,** cerebrospinal a. **encephalorrhachid'ian a.,** cerebrospinal a. **fa'cial a.,** basifacial a. **fron'tal a.,** the transverse a. of the eyeball, a line running transversely through the center of the globe of the eye. **neu'ral a.,** cerebrospinal a. **pel'vic a.,** pelvic canal.* **prin'cipal op'tic a.,** a line passing through the center of a lens or refracting system at right angles to its surface. **sag'ittal a.,** the anteroposterior a. of the eyeball. **thora'cic a.,** (1) arteria thoracoacromialis [BNA]; (2) vena thoracoacromialis [BNA]. **thy'roid a.,** truncus thyreocervicalis [BNA]. **ver'tical a.,** the vertical line passing through the center of the eyeball. **vis'ual a.,** line of vision, the straight line extending from the object seen, through the center of the pupil, to the macula lutea of the retina.

ax'is-cyl'inder. The central, essential conducting portion of a nerve-fiber, continuous with the axon of the nerve-cell. **a.-c. process,** axon, the process of a neuron, or nerve-cell, which forms the a.-c. of the nerve-fiber.

ax'ite. A terminal filament of an axis-cylinder.

ax'le-tooth. Molar tooth.

axoden'drite. A process (not the axis-cylinder) given off from the axon of a nerve-cell.

axof'ugal [G. *axōn* + L. *fugere*, to flee.] Extending away from an axis-cylinder process.

axolem'ma. Axilemma.

axolysis (aks-ol'i-sis) [*axon* + *lysis*, solution.] Destruction of the axis-cylinder of a nerve.

axom'eter [G. *axōn*, axis, + *metron*, measure.] An instrument for determining the axis of a spectacle lens and bringing it in line with the center of the pupil

ax'on, ax'one [G. *axōn*, axis.] 1. The cerebrospinal axis. 2. The body-axis. 3 Neuraxon, or axis-cylinder process of a nerve-cell.

axoneu'ron. A neuron, or nerve-cell, of the cerebrospinal system, having an axon, or axis-cylinder process.

axonom'eter. Axometer.

axop'etal [G. *axōn* + L. *petere*, to seek.] Extending in a direction toward an axon or axis-cylinder process.

ax'oplasm. Neuroplasm of the axis-cylinder.

axospon'gium. The network of fine fibrils supporting the axoplasm.

axunge, axungia (aks'unj, aks-un'ji-ah) [L. wagon grease; *axis*, axle, + *ungere*, to grease] Lard. adeps.*

ayapana (ah-yah-pah'nah). The leaves of *Eupatorium ayapana*, or *E. triplinerve*, a Brazilian herb employed as an aromatic tonic.

Ayerza's disease' (ah-yer'thah or ah-yer'sah). A condition resembling Osler's or Vaquez' disease, and probably identical with it, marked by enlargement of the liver and spleen, hyperplasia of the bone marrow, and chronic cyanosis, dyspnea, and erythremia, associated with sclerosis of the pulmonary artery.

Az. Abbreviation of *Azotobacter* and *azote*.

azadirachta in'dica (az-ad-e-rak'tah). (B.A.) Azedarach, neem bark, margosa bark; the dried bark of the root and stem of *Melia azadirachta*, a handsome East Indian tree; anthelmintic and tonic, in infusion or tincture, also used externally in eczema and indolent ulcers

azalein (a-za'le-in). Fuchsin.

az'arin. A yellow dye from coal-tar.

azedarach (az-ed'ar-ak) [Pers. noble tree.] Azadirachta indica.

azo-. A prefix denoting a substance derived from a hydrocarbon by the replacement of part of the hydrogen by nitrogen. **azo-com'pound,** a compound containing two linked nitrogen atoms united to two hydrocarbon groups, either both of the aromatic series or one aromatic and one fatty.

azoamyly (az-o-am'i-lĭ) [G. *a-* priv. + *zōon*, animal, + *amylon*, starch.] Absence or diminution in the amount of glycogen in the liver.

azo'ic [G. *a-* priv. + *zōē*, life.] Containing no living things; without organic life.

azolit'min. A purplish red coloring matter obtained from litmus. **a. pa'per,** filter paper dipped in a solution of a. and dried; used as an indicator, acids turning the purplish red to bright red, and alkalies turning it blue.

azorubin S (az-o-roo'bin). A red dye excreted, when injected intravenously, in the bile, 5 per cent. only passing in the urine in health; employed as a test of the hepatic function, a larger proportion being excreted through the kidneys when the liver is diseased.

azoospermia (a-zo-o-sper'mĭ-ah) [G. *a-* priv. + *zōon*, animal, + *sperma*, seed.] Absence of spermatozoa in the semen.

az'ote [G. *a-* priv. + *zōtikos*, fit for preserving life.] Nitrogen.

azote'mia [*azote*, nitrogen (urea), + G. *haima*, blood.] Uremia.

az'otized. Nitrogenized, containing nitrogen.

Azotobacter[0] (az-o-to-bak'tur) [*azote* (nitrogen) + *bacterium*.] A genus of the family of nitrifying organisms, the *Nitrobacteriaceæ*, containing rather large rod-shaped, or sometimes coccoid, forms, some motile and flagellated, others nonmotile; all soil bacteria.

Azotobacteriæ[0] (ă-zo-to-bak-te'rĭ-e-e) [*azote*, nitrogen.] A tribe of the family *Nitrobacteriaceæ*, containing the azotobacteria and rhizobia, the nitrifying or nitrogen-fixing organisms; non-pathogenic.

azotom'eter [*azote*, nitrogen, + G. *metron*, measure.] A device for determining the amount of urea and uric acid in the urine.

azotorrhe'a, azotorrhœ'a [*azote*, nitrogen, + G. *rheō*, I flow.] Excessive discharge of nitrogenous material in the urine or feces, indicating impaired digestion of albumin.

azotu'ria [*azote* + G. *ouron*, urine.] An increased elimination of urea in the urine.

azoturic (az"o-tu'rik). Relating to the urinary excretion of nitrogen.

Azoulay stain (ă-zoo-la'). See *D'Azoulay*.

Az'tec type [*Aztec*, one of the aboriginal tribes of Mexico.] A type of idiocy (*q.v.*).

az'ulin. A blue aniline dye.

azure (azh'ūr). Sky-blue, cobalt-blue.

az'urin. Sodium-theobromine acetate; diuretic in doses of gr. 10–15 (0.6–1.0).

azurophil, azurophile (azh-u'ro-fil, or fīl) [*azure* + G. *philos*, fond.] Staining readily with an azure dye, noting especially the hyperchromatin.

az'ygos [G *a-* priv. + *zygos*, yoke.] 1. Azygous. 2. An unpaired anatomical structure. **a. u'vulæ mus'cle,** musculus uvulæ [BNA]. **a. veins,** see under *vena*.

az'ygous. Unpaired, single.

azy'mia [G. *a-* priv. + *zymē*, ferment.] Absence of a ferment.

azy'mic, az'ymous. 1. Without a ferment. 2. Unfermented, unleavened.

az'zle-tooth. Molar tooth.

B

B. Abbreviation for base. Chemical symbol of boron. Abbreviation of *Bacillus*.

Ba. Chemical symbol of barium.

Bab'bitt-met'al. An alloy of antimony, copper, and tin; used occasionally in dentistry.

Bab'cock's operation [William W. *Babcock*, American surgeon* 1872.] Extirpation of the varicosed saphenous vein by introducing an olive-tipped sound, and fastening the vein to it, and then drawing the latter out.

Babcock's test [*S. M. Babcock*, American chemist, 1843–1931.] To determine the amount of milk-fat, by centrifuging equal parts of milk and sulphuric acid.

Babès' stain (bah'bās) [Victor *Babès*, Roumanian bacteriologist, 1854–1926.] A solution of safranin-O in 2 per cent, aniline-water. **B's treatment of rabies,** injection of suspensions of the spinal cord heated for 10 minutes to temperatures of 45°, 60°, and 80°C., thereby attenuating the virus to varying degrees.

Babes-Ernst bod'ies (bah'bās-ernst) [Victor *Babès;* Paul *Ernst*, German pathologist, *1859.] Metachromatic particles in spore-bearing bacteria.

Babe'sia [Victor *Babès*.] A genus of hemosporidia, believed to be transmitted always by ticks. **B. bigem'ina,** the pathogenic organism of Texas cattle fever. **B. ca'nis,** a species pathogenic for dogs. **B. hom'inis,** supposed by some to be the pathogenic organism of Rocky Mountain tick fever. See *Piroplasma*.

babesiasis (bă-be-zi'a-sis). Any disease caused by infection with a species of *Babesia*, the affection being spread through the agency of ticks. **ca'nine b.,** red-water fever in dogs occurring around the Mediterranean, caused by *Babesia canis* and spread by the agency of a tick.

Babinski's meth'od (bă-bin'skĭ, Fr. bă-baṅ-skē') [J. *Babinski*, Parisian neurologist, 1857–1932.] A method of eliciting the Achilles tendon reflex, the tendon being tapped while the patient kneels on a chair. **B.'s phenom'enon** or **re'flex,** (1) extension instead of the normal flexion, of the great toe, sometimes with plantar flexion of the other toes, following tickling of the sole; usually associated with organic disease of the pyramidal tracts; (2) inverted radial reflex.* **B.'s syn'drome,** lightning pains, abolished patellar reflex, contraction of the pupil, and absence of the light reflex, with aneurysm—indications of tabes of parasyphilitic origin.

Babinski-Nazeotte syn'drome (bă-baṅ-ske' năzhut'). Contralateral hemiplegia and hemianesthesia with ipsilateral hemiasynergia, hemiataxia, and lateropulsion, due to multiple lesions of the pyramidal fillet, inferior cerebellar peduncle, and reticular formation.

ba'by. An infant, a newborn child, a child yet unable to walk. **blue b.,** a cyanotic newborn child, with persistence of the foramen ovale.

bacc'ate [L. *bacca*, berry.] Berry-like.

Baccelli's meth'od (baht-chel'le) [Guido *Baccelli*, Roman physician 1832–1916.] Treatment of tetanus by daily subcutaneous injections of 0.3 (5 gr.) of phenic acid. **B.'s sign,** good conduction of the whisper in non-purulent pleural effusions.

bacciform (bak'se-form) [L. *bacca*, berry, + *forma*, form.] Of berry shape; coccal.

Bacillaceæ (bă-sil-la'se-e). A family of the order *Eubacteriales*, containing two large genera—*Bacillus* (aerobic), and *Clostridium* (anaerobic or microaerophilic)

bacillæ'mia. Bacillemia.

bacillar, bacillary (bas'il-ar, bas'il-a-rĭ). Relating to or caused by bacilli.

bacille'mia [*bacillus* + G. *haima*, blood.] The presence of bacilli in the circulating blood.

bacill'i-car'rier. See *carrier*.

bacillici'dal [*bacillus* + L. *cædere*, to kill.] Destructive to bacilli.

bacillicide (ba-sil'ĭ-sīd). An agent destructive to bacilli

bacill'iculture. 1. The cultivation of bacilli. 2. A culture containing bacilli.

bacill'iform [L. *bacillus*, a rod, + *forma*, form.] Rod-shaped. Shaped like or resembling in other ways a bacillus.

bacilli'num. A homeopathic nosode prepared from tuberculous lung tissue.

bacillip'arous [L. *parere*, to produce] Producing bacilli, bacillogenic.

bacillogen'ic, bacillogenous (bă-sil-oj'en-us) [G. *gennaō*, I produce.] 1. Bacilliparous. 2. Of bacillary origin.

bacillol (bas'il-ol). Trade name of an antiseptic preparation from tar, containing cresol.

bacillophobia (bas-il"o-fo'be-ah) [*bacillus* + G. *phobos*, fear.] An unreasoning and exaggerated fear of bacilli or of microorganisms in general.

bacillo'sis. A general infection with bacilli.

bacillu'ria [G. *ouron*, urine] The passage of urine containing bacilli.

bacil'lus, pl. *bacil'li,* [L. dim. of *baculus*, a rod.] 1. In anatomy, a rod-shaped structure, as the rods in the layer of rods and cones of the retina. 2. In pharmacy, pencil, a remedy, usually for external use, moulded into a cylindrical form. 3. In bacteriology, loosely employed to designate any microscopic member of the class *Schizomycetes*, not necessarily a species of the genus *Bacillus;* for the latter see in the following section under this title with capital initial, and for the bacilli called after the name of the discoverer, such as Bang's b., Danysz b., Welch's b., etc., see under the proper name. **acne b.,** *Corynebacterium acnes.*[0] **acid-fast b.,** any one of a group which are not decolorized, after staining, by treatment with acids. **animal b.,** one growing in the living fluids or tissues as distinguished from being cultured in an artificial medium. **butter b.,** *Mycobacterium berolinensis,*[0] *Myco. butyricum,*[0] or *Myco. friburgensis.*[0] **cholera b.,** *Vibrio comma.*[0] **colon b.,** *B. coli.* **comma b.,** *Vibrio comma.*[0] **diphtheria b.,** *Corynebacterium diphtheriæ.*[0] **dysentery b.,** one of the genus *Shigella.* **fusiform b.,** *Fusiformis dentium.*[0] **grass b., hay b.,** *B. subtilis.*[0] **hog-cholera b.,** *Salmonella suipestifer.*[0] **lactic-acid b.,** one of several species of the genus *Lactobacillus.* **leprosy b.,** Mycobacterium lepræ.[0] **mist b.,** *Mycobacterium stercusis.*[0] **paracolon b.,** one of various strains of the colon b.

paradysentery b., see under *Shigella*.[0] **paratyphoid b.**, one of the three organisms causing the three forms, A, B, and C, of paratyphoid fever; see under *Salmonella*. **plague b.**, *Pasteurella pestis*.[0] **swine-plague b.**, *Pasteurella suiseptica*.[0] **timothy-grass b.**, *Mycobacterium phlei*.[0] **tubercle b.**, *Mycobacterium tuberculosis*.[0] **typhoid b.**, *Eberthella typhi*.[0]

Bacillus. A genus of the family *Bacillaceæ*, containing many species of aerobic, spore-bearing, mostly saprophytic, rod-shaped organisms, often occurring in long threads or chains, and gram-positive; a great number of these are soil bacteria but the habitat of many is milk and the intestinal contents; comparatively few are pathogenic, though some are extremely so. The anaerobic spore-bearing organisms formerly listed in this genus, are now usually grouped under *Clostridium*. **B. abor'tus,** Bang's bacillus, *Brucella abortus, Alcaligenes abortus*.[0] **B. ace'ticus,** *Acetobacter aceti*.[0] **B. acidi lac'tici,** *Escherichia acidilactici*.[0] **B. acidophilus,** *Lactobacillus acidophilus*.[0] **B. ac'nes,** *Corynebacterium acnes*.[0] **B. actinoi'des,** *Actinomyces actinoides*.[0] **B. aerog'enes capsula'tus,** *Cl. welchii*.[0] **B. aer'trycke,** *Salmonella aertrycke*.[0] **B. aerugino'sus,** *B. pyocyaneus, Pseudomonas aeruginosa*.[0] **B. albolac'tis,**[0] a motile, gram-positive, aerobic, soil bacillus, first isolated from milk. **B. alcales'cens,** *Shigella alcalescens*.[0] **B. alcalofœt'idus,** *Alcaligenes alcalofœtidus*. **B. al'vei,**[0] [L. *alveus*, beehive], an organism found in "foul brood" in bees. **B. ambig'uus,** *Shigella ambigua*,[0] *Achromobacter* ambignum,[0] the first a soil organism, the second a water one; neither is pathogenic. **B. amylobacter,** *B. butyricus, Cl. butyricum*.[0] **B. an'thracis,**[0] rather short, non-motile rods, with central spores, occurring in long chains; the cause of splenic fever in sheep and kine, and of anthrax in man. **B. an'thracis symptomat'ici,** *Cl. chauvei*.[0] **B. asiat'icus,** *Proteus asiaticus*.[0] **B. bif'idus,** *Lactobacillus bifidus, Bacteroides bifidus*,[0] rather long, non-motile, gram-positive, aerobic rods, occurring singly, sometimes bifurcated, non-pathogenic, found in the feces of breast-fed infants, most abundantly during the first few weeks of life, though occasionally in older and bottle-fed. infants and even in adults. **B. botuli'nus,** *Cl. botulinum*.[0] **B. bo'vis morbif'icans,** *Flavobacterium morbificans*.[0] **B. bronchisep'ticus,** *Alcaligenes bronchisepticus*.[0] **B. bucca'lis mucif'erens,** the organism, or one of the organisms, causing sputum septicemia. **B. bulgar'icus,** Massol's b., *Lactobacillus bulgaricus*.[0] **B. butyr'icus,** *B. amylobacter, Cl. butyricum*.[0] **B. cana'lis capsula'tus,** an organism resembling *B. pneumoniæ*. **B. capsula'tus,** *Klebsiella capsulatus*.[0] **B. capsula'tus muco'sus,** *Klebsiella pneumoniæ*.[0] **B. carbo'nis,** *B. anthracis symptomatici, Cl. chauvei*.[0] **B. ca'sei,** *Lactobacillus helveticus*.[0] **B. caucas'icus,** Lactobacillus caucasicus.[0] **B. ce'reus,**[0] a motile, aerobic, gram-positive soil bacillus, non-pathogenic. **B. ceylonen'sis,** an organism found in certain cases of a typhoid-like or paratyphoid fever in Ceylon, possibly the same as *B. columbensis* or *Salmonella columbensis*.[0] **B. chol'eræ gallina'rum,** *Pasteurella avicida*.[0] **B. cloa'cæ,** *Aerobacter cloacæ*.[0] **B. coli,** *Bact. coli, Escherichia coli*,[0] rod-shaped organisms of varying length, but for the most part short, sporeless, non-capsulated, non-acid fast, gram-negative, usually motile and lightly flagellated. The organism is a normal and usually harmless inhabitant of the intestine but it may become pathogenic and cause acute or chronic infection of the urinary tract or of the gall-bladder, or a general infection, and frequently enters the blood circulation during the death agony. Some authorities distinguish a number of varieties—*B. c. communis, B. c. communior, B. neapolitanus, B. c. immobilis, B. c. anaerogenes*—which differ in their fermentation properties. **B. co'li anaerog'enes,** *Escherichia anaerogenes*,[0] a strain of *B. coli* which does not produce gas from certain carbohydrates. **B. coli commu'nior,** *Escherichia communior*.[0] **B. coli commu'nis,** *Escherichia coli*.[0] **B. colofœt'idus,** *Escherichia colofœtida*. **B. columben'sis,** *Salmonella columbensis*.[0] **B. cory'zæ segmento'sus,** *B. septus*, an organism sometimes found in the nasal secretions in a case of "cold;" it has been thought, however, to be the cause of a mild pharyngitis, torticollis, or "muscular rheumatism" rather than of a coryza. **B. crass'us,** *Doederlein's b., Lactobacillus acidophilus*.[0] **B. cuniculici'da,** *Bact. lepisepticum, Pasteurella cuniculicida*.[0] **B. cyanog'enes,** *Pseudomonas syncyanea*.[0] **B. deni'trificans,** *Achromobacter agile*.[0] **B. d. fluores'cens,** *Pseudomonas denitrificans*.[0] **B. diphthe'riæ,** *Corynebacterium diphtheriæ*.[0] **B. ducrey'i,** *Hæmophilus ducreyi*.[0] **B. dysenter'iæ,** *Shigella dysenteriæ*,[0] *Shigella paradysenteriæ*.[0] **B. enterit'idis,** *Salmonella enteridis*.[0] **B. enterit'idis sporog'enes,** *Cl. welchii*.[0] **B. erysipel'atis su'is,** *Erysipelothrix rhusipathiæ*.[0] **B. fæca'lis alcalig'enes,** *Alcaligenes fæcalis*.[0] **B. figu'rans,** *B. mycoides*.[0] **B. fluores'cens liquefa'ciens,** *Pseudomonas fluorescens*.[0] **B. frag'ilis,** *Bacteroides fragilis*.[0] **B. fusiformis,** *Fusiformis dentium*,[0] associated with *Borrelia vincenti* in Vincents' angina. **B. gastroph'ilus,** *Lactobacillus boas-oppleri*.[0] **B. grave'olens,**[0] aerobic, non-motile, gram-positive rod-shaped organisms occurring singly or in pairs or chains found in the soil, but thought by some to be a cause of bromidrosis. **B. hoffman'ni,** *Corynebacterium pseudodiphthericum*.[0] **B. histolyti'cus,** *Cl. histolyticum*.[0] **B. icteroi'des,** *Salmonella icteroides*.[0] **B. in'dicus,** *Chromobacterium indicum, Serratia indica*.[0] **B. influen'zæ,** *Hæmophilus influenzæ*.[0] **B. lactimorbus,**[0] polymorphous, motile, flagellated, gram-positive, rod-shaped organisms with terminal spores, found in hay and the soil, the cause of milk-sickness in cattle. **B. lac'tis aerog'enes,** *Aerobacter aerogenes*.[0] **B. lepisep'ticus,** *Pasteurella cuniculicida*.[0] **B. lep'ræ,** *Hansen's bacillus, Mycobacterium leprae*.[0] **B. lev'ans,** *Aerobacter levans*.[0] **B. lignier'esi,** *Actinobacillus lignieresi*.[0] **B. mall'ei,** Pfeifferella mallei.[0] **B. megathe'rium,**[0] *B. anthracoides, B. pseudoanthracis*, long rods occurring singly or in pairs, motile, flagellated, found in soil and in milk; in general non-pathogenic. **B. melaninogen'icus,** *Hæmophilus melaninogenicus*.[0] **B. meliten'sis,** *Brucella melitensis, Alcaligenes melitensis*.[0] **B. mesenter'icus,**[0] rod-shaped soil organisms of variable size, aerobic, motile, sometimes encapsulated; so named from the appearance of the colonies on potato which present folds suggesting the mesentery. **B. morbif'icans bo'vis,** *Flavobacterium morbificans*.[0] **B. muco'sus capsula'tus,** *Klebsiella pneumoniæ*.[0] **B. muco'sus ozænæ,** *Klebriella ozænæ*.[0] **B. murisep'ticus,** *Erysipelothrix murisepticæ*.[0] **B. mycoi'des,**[0] *B. ramosus, B. figurans*, root bacillus, a motile, flagellated,

non-acid fast, non-capsulated, gram-positive, rod-shaped organism, proteolytic and denitrifying, occurring in the soil, non-pathogenic. **B. neapolita'nus,** *Escherichia neapolitana,*[0] *Bact. neapolitanum,* an organism found by Emmerich in the dejections of cholera patients n Naples (hence the name) and thought by him to be the cause of that disease; it is believed by some to be a variety of the colon bacillus group. **B. necroph'orus,** *Actinomyces necrophorus.*[0] **B. œdem'atis-malig'ni,** *Cl. œdematis-maligni.*[0] **B. ozæ'næ,** *B. mucosus ozœnæ, Klebsiella ozœnæ.*[0] This is not the same as the Perez bacillus, *Escherichia foetida,* the latter being a non-capsulated cocco-bacillus while the former is believed to belong to the Friedlander group of capsulated bacilli. **B. ozog'enes,** *Coccobacillus fœtidus ocœnæ,* Perez bacillus, *Escherichia fœtida.*[0] **B. pantot'rophus,** *Hydrogenomonas* pantotropha.[0] **B. paratypho'sus A,** *Salmonella paratyphi.*[0] **B. paratypho'sus B,** *Salmonella schottmülleri.*[0] **B. paratypho'sus C,** *Salmonella hirschfeldii.*[0] **B. perfrin'gens,** *Cl. welchii.*[0] **B. pertuss'is,** *Hœmophilus pertussis.*[0] **B. pes'tis,** *Pasteurella pestis.*[0] **B. phlegmo'nis emphysemato'sæ,** *Cl. welchii.*[0] **B. plu'ton,** *Diplococcus pluton.*[0] **B. pneumo'niæ,** *Friedlander's bacillus,* pneumobacillas *Klebsiella pneumoniœ.*[0] **B. pneumo'niæ cavia'rum,** Br. bronchisepticus *Alcaligenes bronchisepticus.*[0] **B. prodigio'sus,** *Serratia marcescens.*[0] **B. pro'teus,** *Proteus vulgaris.*[0] **B. pseudoan'thracis,** *B. megatherium.*[0] **B. pseudodiphther'icus,** *Corynebacterium pseudodiphthericum.*[0] **B. pseudomall'ei,** *Pfeifferella whitmori, Flavobacterium pseudomallei.*[0] **B. pseudotuberculo'sis,** *Corynebacterium pseudotuberculosis.*[0] **B. psittaco'sis,** *Salmonella psittacosis.*[0] **B. putrif'icus,** *Cl. putrificum.*[0] **B. pyocyan'eus,** *Pseudomonas aeruginosa.*[0] **B. pyog'enes,** *Corynebacterium pyogenes.*[0] **B. ramo'sus,** *B. mycoides.*[0] **B. rhinosclero'matis,** *Klebriella rhinoscleromatis.*[0] **B. rhusiopath'iæ su'is,** *Erysipelothrix rhusiopathiœ.*[0] **B. sep'ticus sputig'enus,** *Diplococcus pneumoniœ.* **B. sep'tus,** *B. coryzæ segmentosus.* **B. smeg'matis,** *Mycobacterium smegmatis.*[0] **B. sputig'enus,** *Vibrio sputigenus.*[0] **B. subtilis,**[0] hay bacillus, *Vibrio subtilis,* rather long, straight or curved rods, occurring singly or in short chains; in general non-pathogenic though they occasionally may cause conjunctivitis, iridocyclitis, and panophthalmitis. **B. suipes'tifer,** *Salmonella suipestifer,*[0] hog-cholera bacillus. **B. suisep'ticus,** *Pasteurella suiseptica,*[0] swine-plague bacillus. **B. syncyan'eus,** *Pseudomonas syncyanea.*[0] **B. tet'ani,** *Cl. tetani.*[0] **B. tuberculo'sis,** *Mycobacterium tuberculosis.*[0] **B. tuberculo'sis a'vium,** *Mycobacterium avium.*[0] **B. tuberculosis bovis,** *Mycobacterium tuberculosis* (bovis).[0] **B. tuss'is convulsi'væ,** *Hœmophilus pertussis.*[0] **B. ty'phi abdomina'lis,** *B. typhosus, Eberthella typhi*[0] **B. ty'phi exanthemat'ici,** *Corynebacterium typhi,* of doubtful pathogenicity; see *Rickettsia prowazeki.* **B. ty'phi mu'rium,** *Salmonella typhimurium.*[0] **B. typho'sus,** *Eberthella typhi.*[0] **B. vagina'lis,** *Lactobacillus acidophilus.*[0] **B. vulga'tus,**[0] *B. mesentericus vulgatus,* an aerobic, motile, gram-positive soil bacillus; non-pathogenic. **B. whitmori,** *Pfeifferella whitmori, Flavobacterium pseudomallei.*[0] **B. X,** an organism found by Sternberg in a number of cases of yellow fever and claimed by him to be the same as Sanorelli's *B. icteroides,* now called *Salmonella icteroides.* **B. xero'sis,** *Corynebacterium xerosis.*[0] **B. Y,** Hiss-Russell bacillus, a variety of *Shigella paradysenteriæ.*[0] **B. zopfii,** *Kurthia zopfii.*[0]

back [A.S. *bæc, baç.*] The hinder part of the trunk from the neck to the pelvis; dorsum, notos.

back-cross. The cross of a hybrid with one of the parental forms.

back'ing. In dentistry, a gold plate faced with porcelain used in crown or bridge work.

back-raking. In veterinary medicine, the removal of impacted feces from the rectum.

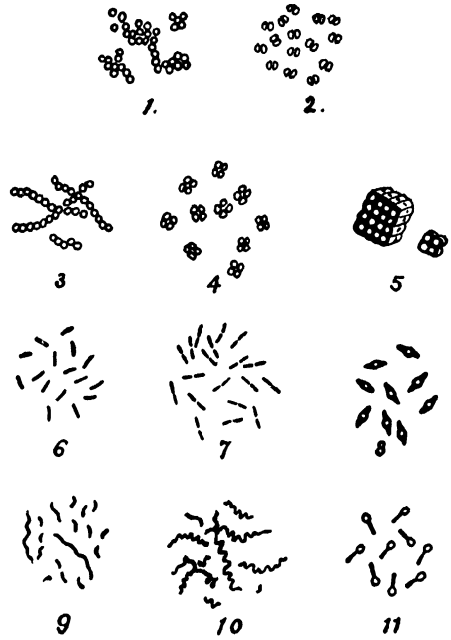
back-sinew (bak'sin-u). Back tendon.*

$BaCl_2$. Barium chloride.

Bact. Abbreviation of *Bacterium.*

bactere'mia. Bacteriemia.

bacte'ria. Plural of *bacterium.*



TYPES OF BACTERIA: 1. Staphylococcus; 2. diplococcus, 3. streptococcus; 4. tetrad; 5. sarcina; 6. bacillus; 7. diplobacillus; 8. clostridium forms with central spores; 9. spirilla (comma bacilli and spirals); 10. spirochetes; 11. bacilli with end spores (tetanus).

Bacteriaceæ[0] (bak-te-ri-a'se-e). A very large family of the order *Eubacteriales* containing twenty-one genera. The cells are rod-shaped without endospores, both saprophytes and parasites, many of the latter pathogenic.

bacte'rial. Relating to bacteria.

bacte'ria-carrier. See *carrier.*

bacterici'dal [L. *cædere,* to kill.] Causing the death of bacteria

bacter'icide [*bacterium* + L. *cædere,* to kill.] An agent which destroys bacteria. **specif'ic b.,** a bacteriolytic immune serum destructive to one bacterial species or genus only.

Bacterieæ[0] (bak-te'ri-e-e). A tribe of the family *Bacteriaceæ,* containing the genera *Escherichia, Aerobacter, Proteus, Salmonella, Eberthella, and Alcaligenes.*

bacteriemia, bacteriæmia (bak-ter-i-e'mi-ah) [*bacteria* + G. *haima,* blood.] The presence of living bacteria in the circulating blood.

bacter'iform [*bacterium* + L. *forma,* form] Of bacterial form; bacterioid.

bacterination (bak-ter-ĭ-na'shun). Vaccination (2).
bacterine (bak'ter-ēn). Vaccine (4).
bacterin'ia. The systemic reaction sometimes following an injection of bacterines.
bacterioclasis (bak-te-rĭ-ok'la-sis) [G. *klasis*, a breaking.] Fragmentation of bacteria, as in the Twort phenomenon.
bacteriofluorescin (bak-te''rĭ-o-flu-o-res'in). A fluorescent material produced by bacteria.
bacteriogen'ic [*bacterium* + G *-genēs*, producing] Of bacterial origin.
bacteriogenous (bak-te-rĭ-oj'en-us). 1. Producing bacteria. 2 Of bacterial origin or causation.
bacte"riohemagglu'tinin. A hemagglutinin formed by bacterial action.
bacte"riohemol'ysin. An hemolysin formed by bacterial action.
bacte'rioid [G. *eidos*, resemblance.] Bacteriform, resembling bacteria in form or in action.
bacteriological (bak-te-rĭ-o-loj'ĭ-kal). Relating to bacteriology.
bacteriol'ogist. Microbotanist; one who pursues the science of bacteriology.
bacteriol'ogy [*bacteria* + G. *-logia*] The branch of science which has to do with the study of unicellular vegetable organisms and with their relation to medicine, agriculture, and the arts.
bacteriol'ysin. A specific immune body causing the solution of bacteria when combined with complement.
bacteriol'ysis [*bacterium* + G *lysis*, solution] The destruction of bacteria by means usually of a specific antibody
bacteriolyt'ic. Relating to bacteriolysis, possessing a solvent action on bacteria.
bacte'riolyze. To cause the digestion or solution of bacteria.
bacteriopathol'ogy. Pathology as it relates to the morbid effects of bacteria or their toxins.
bacteriophage (bak-te'rĭ-o-fāj) [*bacteria* + G. *phagō*, I eat.] A lytic agent, assumed to be an ultramicrobe parasitic to ordinary microorganisms and causing their dissolution; an active agent in d'Hérelle's phenomenon. By some this agent is believed to be not a living virus but a ferment derived through the action of a leucocytic catalyzer upon the bacteria.
bacteriophagia (bak-te-rĭ-o-fa'jĭ-ŭ). The destruction of bacteria by a lytic agent, either a ferment or a bacteriophage; d'Herelle's phenomenon.
bacteriophagology (bak-te-rĭ-o-fă-gol'o-jĭ). Protobiology, study of the bacteriophage in all its relations—origin, size, parasitic action, etc.
Bacteriophagum intestinale (bak-te-rĭ-of'ă-gum in-tes-tĭ-na'lĭ). Protobios, bacteriophage.*
bacteriopho'bia [*bacterium* + G *phobos*, fear.] A morbid fear of bacteria and other microbes.
bacterioplas'min. A plasmin found in bacteria.
bacteriopro'tein (bak-te-rĭ-o-pro'-te-in). One of the albuminous substances, or proteins, in the bodies of bacteria; they vary in character and properties.
bacteriop'sonin. An opsonin acting upon bacteria, as distinguished from a hemopsonin which affects red blood corpuscles.
bacteriopur'purin. A purple coloring matter found in the bodies of certain of the sulphur bacteria, and supposed to have the same function as chlorophyll as regards the absorption of carbon dioxide.
bacte"rioscop'ic. Relating to bacterioscopy.
bacterios'copy [*bacterium* + G. *skopeō*, I examine.] The study of bacteria by means of the microscope.
bacterio'sis. A morbid state caused by a vegetable microparasite; a generalized bacterial infection.
bacteriostasis (bak-te-rĭ-os'ta-sis) [*bacteria* + G. *stasis*, standing still.] An arrest or retardation of growth of bacteria.
bacteriostat (bak-te'rĭ-o-stat). Any agent which inhibits or retards bacterial growth.
bacteriostatic (bak-te-rĭ-o-stat'ik). Inhibiting or retarding the growth of bacteria.
bacteriother'apy. Treatment of disease by means of bacteria or their products.
bacte"riotox'in. A specific substance injurious to bacteria, usually a bacteriolysin.
bacteriotrop'ic [*bacterium* + G. *tropē*, a turning.] Attracted toward bacteria; causing to be attracted to bacteria. **b. substance,** same as *opsonin*.
bacteriot'ropin [*bacterium* + G. *tropē*, a turning.] A constituent of the blood, usually a specific antibody, which renders bacteria more amenable to phagocytosis; possibly the same as opsonin.
bacte'rium, pl. *bacteria* [G. *baktērion*, dim of *baktron*, a staff.] Any unicellular vegetable microorganism, microphyte, especially one of the schizomycetes or fission fungi **endoter'ic b.,** one which forms an endotoxin. **exoter'ic b.,** a b which secretes an exotoxin **ni'trifying b.,** a microorganism which oxidizes ammonia to nitrous or nitric acid, or draws the nitrogen from the air and fixes it in the soil where it can be appropriated by growing plants. **pole b.,** a rod-shaped form which stains deeply at each extremity, found in certain cases of whooping-cough; called also Czaplewski's bacillus. **rod b.,** bacillus, one of the *Bacteriaceæ*. **rough b.,** a bacterial variant which forms rough or granular colonies on solid media. **round b.,** coccus, one of the *Coccaceæ*. **smooth b.,** an organism cultures of which are smooth or non-granular on the surface. **spi'ral b.,** spirillum, one of the *Spirillaceæ*. **sul'phur b.,** a microorganism found in sulphur water, usually one of the *Beggiatoa*; these bacteria are frequently colored, owing to the presence of bacteriopurpurin.

CLASSIFICATION OF BACTERIA.

The classification of bacteria presents many difficulties owing to their minute size, their simple structure, and the uncertainty, as regards the spirochetes especially, whether they belong to the animal or vegetable kingdom. The earlier classifications, such as those of Migula and of Zopf, were based chiefly on morphological resemblances. Orla Jensen's classification was based upon the nutritive characteristics. In this the bacteria were grouped according as they were (1) autotrophic, *i.e.* able to form protein and carbohydrates from inorganic carbon and nitrogen; (2) semiautotrophic, *i.e.* requiring organic carbon compounds, but able to form protein from inorganic nitrogen, or (3) heterotrophic, *i.e.* requiring for nourishment organic compounds of both carbon and nitrogen. The most recent and logical classification is that proposed by a committee of the Society of American Bacteriologists which, although not yet (1930) officially adopted by the Society, has obtained provisional and partial acceptation in the English-speaking countries. The main divergencies from this classification consist in the recognition by British and many American bacteriologists of the genus *Brucella* in place of *Alcaligenes*, and the retention of the genus *Bacterium* which the American Committee has discarded. In this work the specific forms proposed by the committee are distinguished by the mark,° and cross reference is made to them from the older titles.

Bacte'rium (bak-te'rĭ-um) [G. *baktērion*, dim. of *baktron*, a staff or club.] According to most classifications a genus of the family *Bacteriaceæ*, including ellipsoidal or rod-shaped, non-sporing, gram-negative organisms, some motile and flagellated, a few encapsulated. Most of these forms are variously grouped, in the classification

of the Committee of the Society of American Bacteriologists, under other generic terms, such as *Alcaligenes, Dialister, Eberthella, Escherichia, Klebsiella, Kurthia, Pasteurella, Salmonella*, and *Shigella*. **Bact. abor'tus e'qui,** *Salmonella abortivo-equinus*.[0] **Bact. aer'trycke,** *B. aertrycke, Salmonella*[0] *aertrycke*. **Bact. alcales'cens,** *Shigella alcalescens*,[0] a dysentery organism differing serologically and in its agglutination time from the Flexner and Shiga forms. **Bact. anthracoi'des,** *B. megatherium*.[0] **B. Binns,** a type of the typhoid-paratyphoid subgroup of the non-lactose-fermenting bacteria. **Bact. ceylonen'se,** *B. ceylonensis*. **Bact. co'li,** *B. coli, Eschorichia coli*,[0] see under *Bacillus*. **B. Dar-es-Salaam,** a type of *B. coli* isolated from cases of food poisoning. **B. Derby,** a type of B. coli isolated from cases of food poisoning. **Bact. dis'par,** *Shigella dispar*,[0] a dysentery organism, agglutinating much more slowly than the Flexner and Shiga forms, and differing also in its antigenic reaction. **Bact. dysenter'iae** (Flexner), *Shigella paradysenteriae*,[0] *B. paradysenteriæ, Eberthella paradysenteriæ*. **Bact. dysenter'iæ** (Shiga), *Shigella dysenteriæ*,[0] *Eberthella dysenteriæ*. **Bact. enterit'idis,** *B. enteritidis, Salmonella enteritidis*.[0] **Bact. erysipel'atis suis,** *Erysipelothrix rhusipathiæ*.[0] **B. Glaesser,** a type of organism differing from *B. coli* is not fermenting lactose, and from the typhoid-dysentery group in producing gas. **B. granulo'sis,** a microorganism said to be the pathogen of trachoma. **B. Hirschfeld,** a type of the typhoid-paratyphoid subgroup of bacilli. **Bact. lac'tis aerog'enes,** *Aerobacter aerogenes*.[0] **Bact. lepisep'ticum,** *Pasteurella cuniculicida*.[0] **Bact. lev'ans,** Aerobacter levans.[0] **Bact. melanogen'icum,** *Hæmophilus melanogenicus*.[0] **Bact. mor'gani,** Salmonella morgani.[0] **Bact. neapolita'num,** *Escherichia neapolitana*,[0] *B. neapolitanus* (*q.v.*). **B. Newport,** a type of *B. coli* isolated from cases of food poisoning. **Bact. paratypho'sum A,** *Salmonella paratyphi*.[0] **Bact. paratyphosum B,** *Salmonella schottmulleri*.[0] **Bact. paratyphosum C,** *Salmonella hirschfeldii*.[0] **Bact. pneumo'niæ,** *B. pneumoniæ, B. mucosus capsulatus, Encapsulatus pneumoniæ, Klebisella pneumoniæ*,[0] pneumobacillus, Friedlander's bacillus. **Bact. pneumosin'tes.** *Dialister pneumosintes*.[0] **Bact. pseudoan'thracis,** *B. megatherium*,[0] **B. Reading,** a type of *B. coli* isolated from the water supply of Reading, Eng. **B. Stanley,** a type of *B. coli* isolated from cases of food poisoning. **Bact. suipes'tifer,** *B. suipestifer, Salmonella suipestifer*.[0] **Bact. tularen'se,** *Pasteurella tularensis*.[0] **Bact. ty'phi-abdomina'lis** *B. typhosus*, typhoid bacillus, *Eberthella typhi*.[0] **Bact. ty'phi mu'rium,** *Salmonella typhimurium*.[0] **B. Voldagsen,** a microorganism differing from *B. coli* in not fermenting lactose, and from the dysentery group in producing gas. **Bact. vulga're,** *Proteus vulgaris*.[0] **Bact. whit'mori,** *Flavobacterium pseudomallei*.[0] **Bact. zopfii,** *Kurthia zopfii*.[0]

bacteriu'ria. The passage of bacteria in the urine.

Bacteroideæ (bak-te-royd'e-e). A tribe of the family *Bacteriaceæ*, containing the genus *Bacteroides*.

Bacteroides (bak-te-roy'dez). A genus of the family *Bacteriaceæ*, containing many species of rod-shaped organisms, some bifurcated, without endospores, some motile, but most non-motile; all are inhabitants of the intestinal canal, and most, if not all, are non-pathogenic. The 19 species in the classification of the Committee of the Society of American Bacteriologists are: *acumina'tus, angulo'sus, bif'idus* (most common in the feces of young bottle-fed infants, see *B. bifidus*), *bullo'sus, cornu'tus, dimor'phus, frag'ilis* (possibly pathogenic), *fundibuloformis, læ'vis, liquefa'ciens, multifor'mis, ovifor'mis, pseudoramo'sus, rig'idus, ten'uis, thetaiotaom'icron, tortuo'sus, variab'ilis*, and *variega'tus*. **B. fusifor'mis,** *Fusiformis dentium*.[0]

Bactrid'ium. A term formerly used as a generic name for the immotile rod-shaped bacteria, now called by some *Bacterium*, as distinguished from the motile *Bacillus*.

bac'uliform [L. *baculum*, a rod, + *forma*, form.] Rod-shaped.

Badal's opera'tion (bă-dal') [Antoine Jules *Badal*, Bordeaux ophthalmologist, *1840] Laceration of the infratrochlear nerve for the relief of pain in glaucoma.

bael-fruit (bel-froot). Belæ fructus, Bengal quince; the dried unripe fruit of *Ægle marmelos*, a tree of northern India, possessing astringent and aromatic properties; employed in dysentery in doses of ʒi–2 (4.0–8.0) of a fluid extract.

Baelz's disease' (bălts) [Erwin B. von *Baelz*, German physician, long resident in Tokio, 1845–1913. Myxadenitis labialis

Baer's cav'ity (bār) [Carl Ernst von *Baer*, Russian anatomist, 1792–1876.] The segmentation cavity of the blastula. **B.'s ves'icle,** the ovule.

Baer's meth'od [William Stevenson *Baer*, American orthopedic surgeon, *1872.] Injection of sterilized oil into an ankylosed joint, after the adhesions have been broken up, to prevent their reformation.

Baerensprung's erythras'ma (bār'en-sproong) [F. W. F. von *Baerensprung*, German physician, 1822–1864.] Eczema marginatum of the thighs.

bag [A. S. *baelg*.] 1. A pouch, sac, receptacle. 2. The udder of a cow. 3. The scrotum (vulg.). **b. of waters,** the membranous sac containing the liquor amnii.

Bagdad boil. Oriental boil.*

Baillarger's band (bi-yar-zha') [Jules Gabriel François *Baillarger*, French alienist, 1806–1891.] A thin lamina of white matter separating the gray substance of the cortex cerebri into two layers; called also the *outer* band of B., to distinguish it from another white layer, sometimes visible, separating the inner gray layer into two, and called the *inner* band of B. In the region of the calcarine fissure, the outer band is called the band of Vicq d'Azyr.

Baillie's pill (ba'le) [Matthew *Baillie*, English physician, 1761–1823] Guy's* pill.

Ba'ker's cyst [William Morrant *Baker*, English surgeon, 1839–1896.] A collection of synovial fluid which has escaped from a bursa and formed a new sac in the muscles or other tissues outside of the joint; seen in connection with osteoarthritis.

ba'ker's leg. Knock-knee, in-knee, genu* valgum.

bak'kola. A fungous growth on birch trees in Finland, a decoction of which is popularly used in cancer; it contains a principle resembling chrysarobin.

bal'ance [L. *bi-*, twice, +*lanx*, dish, scale.] 1. An apparatus for weighing; scales. 2. The normal state of action and reaction between two or more parts or organs of the body.

balan'ic [G. *balanos*, acorn, glans.] Relating to the glans penis or glans clitoridis.

bal'anism. The employment of a pessary or suppository.

balanitis (bal-an-i'(e')tis) [G. *balanos*, acorn, glans, + *-itis*.] Inflammation of the glans penis or glans clitoridis. **b. circina'ta,** a form thought to by due to the presence of *Spirochæta balanitidis*. **b. diabet'ica,** a form due to the irritation of the saccharine urine in diabetes.

bal"anoblennorrhe'a. Gonorrheal inflammation of the external surface of the glans penis.

balanocele (bal'an-o-sēl) [G. *balanos*, acorn, glans, + *kēlē*, hernia.] Protrusion of the glans penis through a gangrenous opening in the prepuce.

balanoposthitis (bal'an-o-pos-thi'(the')tis) [G. *balanos*, acorn, glans, + *posthē*, prepuce, + *-itis*.] Inflammation of the glans penis and overlying prepuce.

balanorrhagia (bal"an-ŏ-raj'ī-ah) [G. *balanos*, acorn, glans, + *-rhagia*.] Hemorrhage from the glans penis.

balanorrhea (bal-an-ŏ-re'ah) [G. *balanos*, glans, + *rhoia*, a flow.] Purulent balanitis.

Balantid'ium [G. *balantidion*, dim. of *balantion*, a bag.] A genus of ciliated *Infusoria*. **B. co'li,** *Parameciuм coli*, a parasitic infusorian in the rectum of man and other vertebrates; whether it is pathogenic or not is disputed. **B. minu'tum,** a species smaller than the preceding, also parasitic in the human intestine.

Balbiani's bod'y (bahl-be-ah'ne) [Edouard Gérard *Balbiani*, French embryologist, *1825.] Vitelline body, a temporary spherical structure in the vitellus of the impregnated ovum, consisting of a central nodule surrounded by a zone of modified protoplasm; the yolk-nucleus or idiosome of the oocyte.

balbuties (bal-bu'shī-ēz) [L. *balbus*, stammering] Stammering, stuttering.

bald [M.E. *balled*.] Without hair over a greater or lesser portion of the scalp.

bald'ness. Absence of hair from a greater or lesser portion of the scalp; calvities, alopecia.

Bal'dy's opera'tion [John Montgomery *Baldy*, Philadelphia gynecologist, *1860.] An operation for retrodisplacement of the uterus, consisting in bringing the round ligaments through the perforated broad ligaments and attaching them to each other and to the back of the uterus.

baleri (bal-a-ree') [a Peuhl (African) term meaning south.] A trypanosomiasis of horses, asses, and dogs in the upper Niger valley in West Africa; the causal agent is *Trypanosoma pecaudi*.

Bal'four's disease' [George William *Balfour*, English physician, 1822–1903.] Chloroma.

Bal'four's infec'tive gran'ule [Sir Andrew *Balfour*, Scotch physician in Khartoum, 1873–1931.] A minute highly refractile granule observed in some of the red blood corpuscles in the spirochete infection of fowls; the granules are derived from the spirochetes in the blood.

Balkan frame (bawl'kan frām). Balkan beam, an overhead pole or frame, supported on uprights attached to the bed-posts or to a separate stand, from which a splinted limb is slung in the treatment of fracture or joint-disease.

ball. In veterinary medicine a large pill or bolus, about the size of a man's thumb, made with honey or molasses and linseed meal as the excipient.

Ball's opera'tion [Sir Charles Bent *Ball*, Dublin surgeon, 1851–1916.] Division of the sensory nerve-trunks supplying the anus, for relief of pruritus ani.

Ball'ance's sign. The presence of a dull percussion note in both flanks, constant on the left side but shifting with change of position on the right, said to indicate ruptured spleen; the dulness is due to the presence of blood, fluid on the right side but coagulated on the left.

ball-and-sock'et joint. Enarthrosis.

ballet-dancer's cramp (bal'a-dan'surz). An occupation neurosis, marked by paresis or myalgia of the muscles of the calf, in ballet dancers.

Ballet's disease (bal-a'). [Gilbert *Ballet*, French neurologist, 1853–1916.] Ophthalmoplegia externa. **B.'s sign,** Paralysis of voluntary movements of the eyeball with preservation of the automatic movements, sometimes present in exophthalmic goiter and hysteria.

Ballingall's disease' (bal'ing-awl) [Sir George *Ballingall*, British surgeon, 1780–1855.] Mycetoma.

ball'ing-iron. In veterinary medicine, a mouth-gag for use when giving a ball or during operations in the mouth.

ballism (bal'izm) [G. *ballismos*, jumping about.] 1. The occurrence of lively jerking or shaking movements, especially as observed in chorea. 2. Paralysis agitans

ballistics (bă-lis'tiks). The science of the curves taken by projectiles.

ballistophobia (bal-is-to-fo'bī-ah) [G. *ballo*, I throw, + *phobos*, fear] A morbid fear of missiles.

balloon'. To distend a cavity with air to facilitate its examination.

balloon'-sick'ness. 1. A condition similar to mountain sickness, occurring in aeronauts on reaching a grea height. 2. A condition similar to seasickness occurring at low altitudes, due to the swaying and irregular motion of the car.

ballottable (bă-lot'a-bl). Capable of exhibiting the phenomenon of ballottement.

ballottement (bă-lot-moṅ') [Fr. *balloter*, to toss up.] A method of diagnosis of pregnancy, with the tip of the forefinger in the vagina, a sharp tap is made against the lower segment of the uterus; the embryo, if present, is tossed upward, and if the finger is retained in place will presently be felt to strike against the wall of the uterus as it falls back.

ball-throm'bus. An ante-mortem clot in the heart, not attached to the walls or valves of the organ.

balm (bahm) [L. *balsamum*.] 1. Balsam. 2. An ointment, especially a fragrant ointment. 3. A soothing application. **b. of Gil'ead,** (1) Mecca balsam, opobalsamum, an oleoresin from *Commiphora opobalsamum*, probably the myrrh of the Bible; (2) the balsam fir, the source of Canada balsam.

bal'mony. Snakehead, shellflower, bitter-herb, the dried herb *Chelone glabra;* laxative and anthelmintic, in doses of 3½–1 (2.0–4.0) of a fluidextract.

Bal'ne's cough. A paroxysmal cough occurring when the patient lies down, noted in certain cases of obstruction in the nasopharynx.

balneog'raphy [L. *balneum*, bath, + G. *graphō*, I write.] A treatise on mineral springs and baths.

balneol'ogy [L. *balneum*, bath, + G. *-logia*.] The branch of medical science which treats of the constitution of natural mineral waters and their therapeutic employment, especially in the form of baths.

balneotherapeutics (bal"ne-o-ther-ă-pu'tiks) [L. *balneum*, bath, + G. *therapeutikos*, relating to healing.] Balneotherapy

bal"neother'apy [L. *balneum*, bath, + G. *therapeia*, treatment.] The therapeutic application of baths.

bal'neum, pl. *bal'nea* [L.] A bath. **b. are'næ,** a sand-bath. **b. cal'idum,** a hot bath. **b. frig'-**

idum, a cold bath. **b. mari'æ,** a water-bath. **b. ma'ris,** a sea-bath. **b. tep'idum,** a warm bath.

balop'ticon [G *ballō*, I throw, cast, + *optikos*, relating to vision.] Projector, an instrument designed for the projection of the image of an opaque object on a screen.

balsam (bawl'sum) [G. *balsamon;* L. *balsamum.*] 1. A fragrant, resinous or thick, oily exudate from various trees and plants. 2. Balm, an aromatic ointment or other form of healing application to wounds. **b. of copai'ba,** copaiba. **b. of Mec'ca,** balm* of Gilead (1). **b. of Peru',** balsamum peruvianum. **b. of St. Roc'co,** a clear amber-colored fluid of a strong onion odor, employed as a preserving fluid for anatomical and histological specimens. **b. of sul'phur,** a suspension of sulphur in olive or linseed oil in the proportion of 1 part in 8. **b. of Tolu',** balsamum tolutanum. **Can'ada b.,** a liquid resin from the balsam-fir *Abies balsamea,* used for mounting histological specimens. **des'ert b.,** a resin from a Mexican species of pine, used in dentistry as a filling for root-canals. **fri'ars' b.,** tinctura benzoini composita; balsamum traumaticum (N.F.) **gur'jun b.,** wood-oil, an oleoresin from *Dipterocarpus alatus,* a tree of India and other regions of southern Asia; employed in leprosy and in catarrhal troubles in doses of ♏ 10–30 (0.6–2.0). **Tur'lington's b.,** friars' b. **Wade's b.,** friars' b.

balsam'ic. 1. Relating to balsam. 2 Fragrant, aromatic.

Bal"samoden'dron africa'num [G. *balsamon,* balsam, + *dendron,* tree.] A tree yielding bdellium, an adulterant of myrrh. **B. myr'rha,** *Commiphora myrrha,* the source of the official myrrh.

bal'samum [L. *balsamum;* G. *balsamon.*] Balsam, balm. **b. america'num,** b. tolutanum. **b. canaden'se,** Canada balsam.* **b. copai'væ,** capaiba. **b. peruvia'num** (U.S. and Br.) balsam of Peru, a thick, dark brown liquid balsam obtained from *Toluifera pereiræ,* used as a healing application to wounds. **b. tolu'** (U.S.), **toluta'num** (Br.), balsam of tolu, a yellowish brown soft mass, obtained from *Toluifera balsamum;* employed as a stimulant expectorant, dose gr. 10–30 (0.6–2.0). **b. tranquil'lans,** soothing balsam, a preparation of the French Codex somewhat similar in composition and effect to oleum hyoscyami compositum (N.F.). **b. traumat'icum,** traumatic, Wade's, friars', or Turlington's balsam; benzoin 40, storax 12.8, balsam of Tolu 12.8, balsam of Peru 6.4, aloes 3.2, myrrh 3.2, angelica root 1.6, alcohol to make 400; employed in catarrhal conditions in doses of ♏15–30 (1.0–2.0) and by inhalation, and formerly used as an application to wounds. **b. vi'tæ Hoffman'ni,** mistura oleobalsamica (N.F.).

Balser's necro'sis (bahl'zer) [August *Balser,* German surgeon.] Pancreatitis with areas of gangrene and fat-necrosis, associated occasionally with fat-necrosis in the omentum and mesentery.

balteum venereum (bahl'ta-oom va-na'ra-oom) [L. *balteum,* belt, girdle, + *venereus,* relating to *Venus.*] Venus's girdle.*

Bamberger's albuminu'ria (bahm'ber-ger) [Heinrich von *Bamberger,* Viennese physician, 1822–1888.] Hematogenous albuminuria occurring in anemia. **B.'s disease',** (1) saltatory spasm; (2) polyorrhomeningitis. **B.'s sign,** (1) jugular pulse in tricuspid insufficiency; (2) allochiria; (3) dulness on percussion at the angle of the scapula, clearing up as the patient leans forward, indicating pericarditis with effusion. **B.'s type,** pulmonary osteoarthropathy with drumstick deformity of the fingers and painful thickening of the long bones.

Bamberger-Marie disease' (bahm'ber-ger-mă-re'). [Heinrich v. *Bamberger;** Pierre *Marie.**] Hypertrophic pulmonary osteo-arthropathy.

banana (bă-nah'-nah) [Sp.] The edible fruit of *Musa sapientum,* a tropical plant; it contains much starch and about 3 per cent. albuminoids.

band. 1 Any appliance or part of an apparatus that encircles or binds the body or a limb. 2. Any ribbon-shaped or cord-like anatomical structure that encircles or binds another structure or that connects two or more parts; fascia. **anogen'ital b.,** the first indication of the perineum in the embryo. **atrioventric'ular b., auric"uloventric'ular b.,** His's band or bundle atrioventricular bundle.* **bell'y b.,** a strip of flannel or other material encircling the abdomen. **den'tate b.,** fascia dentata. **horn'y b.,** the anterior portion of Tarin's* tænia. **mod'erator b.,** Reil's band, a bundle of trabeculæ carneæ attached at one extremity to the septum, at the other to the anterior wall of the right ventricle of the heart, at the base of the papillary muscle. **zon'ular b.,** zona orbicularis [BNA].

ban'dage. A piece of cloth or other material, of varying shape and size, applied to a limb or other part of the body, to make compression, prevent motion, retain surgical dressings, etc. See also cuts under *Barton, Scultetus,* and *Velpeau.* **Barton's b., Esmarch b., Galen's b.,** etc., see the proper names. **cap'elline b.** [L. *capella,* a cap], a bandage covering the head or an amputation stump like a cap. **cir'cular b.,** one encircling a limb or the trunk. **elas'tic b.,** one of india rubber or webbing employed to make pressure on a limb or other part. **fig'ure-of-8 b.,** a b. applied alternately to two parts, usually two segments of a

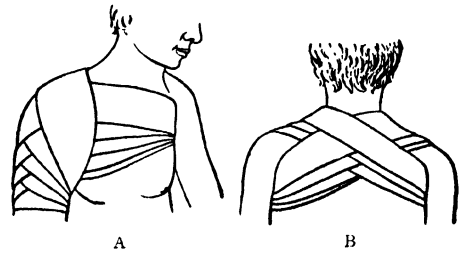
BANDAGES: A, gauntlet; B, figure-of-8 of the knee.

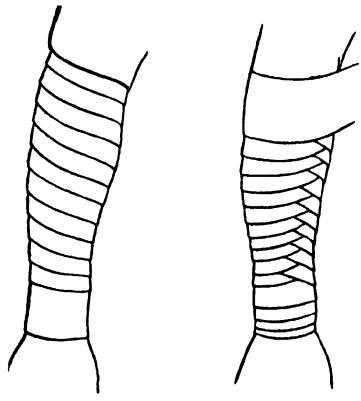


A B

BANDAGES: A, spica of the shoulder; B, figure-of-8 of the shoulders.

limb above and below the joint, in such a way that the turns describe the figure 8 **ham'mock b.,** a b. for retaining dressings on the head; the dressings are covered by a wide gauze strip the

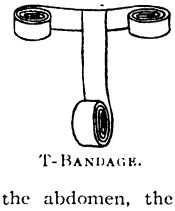
RECURRENT BANDAGE OF THE HEAD



A B

SPIRAL BANDAGE: A, simple; B, reversed.

ends of which are brought down over the ears and held while a narrow circular bandage is passed around the head, the ends are then turned up over the bandage and other turns are made securing them firmly. **immov'able b.,** a b. of cloth impregnated with plaster-of-Paris, liquid glass, or the like, which hardens soon after its application. **many-tailed b.,** a large oblong cloth, the ends of which are cut into narrow strips, which is applied to the abdomen, the strips being tied or overlapped and safety-pinned behind the back. **oblique' b.,** one in which the successive turns proceed obliquely up or down the limb. **recurr'ent b.,** (1) a spiral b. in which a second layer is formed by turns made in a direction the reverse of the first; (2) a b. applied to the end of an amputation stump, the head, etc., overlapping strips being carried forward and backward, retained by a circular b. at each equatorial turn. **reverse' b.,** a spiral b. in which with each turn the strip of cloth is turned back on itself, so as to facilitate adjustment to the swelling portion of a limb. **roll'er b.,** a strip of cheese-cloth or other material, of variable width, rolled into a compact cylinder so as to facilitate its application. **scarf b.,** triangular b. **spi'ca b.** [L. *spica*, ear of grain], a figure-of 8 b. applied to the body and the first part of a limb, or to the hand and a finger, in which the successive strips overlap slightly, giving a fancied resemblance to an ear of wheat. **spi'ral b.,** an oblique b. encircling a limb, the successive turns overlapping those preceding by one-half or one-third. **suspen'sory b.,** a bag of silk or cotton for supporting the scrotum and testes. **T-b.,** a bandage of two strips of cloth attached at right angles, used for retaining dressings on the perineum, etc. **triangular b.,** a piece of cloth cut in the shape of a right-angled triangle, used as a sling for the arm and for other purposes.



T-BANDAGE.

Bandl's ring [Ludwig *Bandl*, German obstetrician 1842–1892.] Contraction ring.*

ban'dy-leg. Bow leg, genu* varum.

Bang's bacill'us [Bernhard L. F. *Bang*, Danish physician, 1848–1932.] *Bacillus abortus, Brucella abortus, Alcaligenes abortus,*[0] the cause of puerperal fever in the cow. **B.'s meth'od,** segregation of tuberculous cows; also removal of their calves immediately after birth and feeding them with milk from healthy animals or with pasteurized milk. **B.'a necro'sis bacillus,** *Actinomyces necrophorus.*[0]

Bang's meth'od [Ivar *Bang*, Swedish physiological chemist, 1869–1918.] Microestimation of blood constituents; determination of the amounts of urea, sugar, albumin, etc. in the blood by the examination of one or more drops only, collected on blotting paper

banisterine (ban-is'tur-ēn). An alkaloid from a plant, *Banisteria caapi*, suggested in the treatment of encephalitis lethargica and in paralysis from organic brain disease; possibly the same as harmine (*q.v.*).

Bannister's disease [H. M. *Bannister*, Chicago physician, 1844–1920.] Angioneurotic edema.*

bant [see *banting*.] To follow the banting system for the reduction of flesh.

Ban'ti's disease' [Guido *Banti*, Italian physician 1853–1925.] An affection characterized by enlargement of the spleen, anemia, dyspnea, cirrhosis of the liver, and ascites.

bant'ing. Relating to William *Banting*, a London undertaker (1797–1878), who practised a system for reducing corpulency, recommended by William Harvey, and wrote a pamphlet in support of it; see *bantingism*

ban'tingism [see *banting*] A dietary method of treating corpulency by living chiefly on lean meat, avoiding fats and carbohydrates.

bap'tin. A glucoside from baptisia.

baptis'ia. Wild indigo, the root of *Baptisia tinctoria*, an herb of eastern and central North America; employed as a nerve stimulant in fevers, in doses of ♏1–5 (0.06–0 3) of a tincture, and locally in the form of decoction in aphthous stomatitis; in eclectic practice it is employed in typhoid conditions and all septic states in doses of a teaspoonful every hour of a dilution of 10 drops in eight tablespoonfuls of water.

bap'tisin (N.F.). A glucoside from baptisia, employed as a tonic and astringent in doses of gr. ½–3 (0 03–0 2), or ♏15 (1.0) of the fluid-extract.

bar. 1. A metallic support for a denture, distinguished as the palatal b. for the upper and lingual b. for the lower denture. 2. One of the two convergent ridges on the ground surface of the hoof of a horse, united by the frog, and fused with the sole in front; pars inflexa lateralis and pars inflexa medialis.

bar (bahr) [G. *barys*, heavy.] Barye, a unit of pressure, representing one megadyne per square-centimeter; as a unit of atmospheric pressure it is the equivalent of 29.53 mercury inches.

Bar's incision [Paul *Bar*, French obstetrician, contemporary.] An incision in the median line of the abdomen above the umbilicus, in cesarean sec-

tion; longitudinal incision of the uterus from the fundus to Bandl's ring

Bárány's sign (bah'rah-ne) [Robert *Bárány*, Viennese otologist, *1876.] In cases of ear disease, in which the vestibule is healthy, injection into the external auditory canal of water below the body temperature (65° F. or lower) will cause rotary nystagmus toward the opposite side when the injected fluid is above the body temperature (106° F. or higher) the nystagmus will be toward the injected side; if the labyrinth is diseased there is no nystagmus.

bar'ba [L.] 1. The beard. 2. A hair of the beard.

Barba'dos al'oes [*Barbados*, an island in the West Indies.] Aloe barbadense, see *aloes*. **B. leg,** elephantiasis.

barbaloin (bar-bal'o-in). Aloin prepared from Barbados aloes, used in the treatment of chronic constipation in doses of gr. ½–2 (0.03–0.12)

Barberio's test (bar-ba're-o), [Michele *Barberio*, Italian pathologist,* 1862.] A saturated aqueous solution of picric acid added to the washings of a suspected stain will give a yellow crystalline precipitate if the stain is that of semen.

bar'berry. Berberis.

bar'bers' itch. Sycosis vulgaris.

barbital (bar-bĭ-tal). Barbitalum (U.S.). **b. so'dium,** barbitalum solubile (U.S.).

bar'bitalism. Acute or chronic poisoning by veronal, luminal, or any of the barbituric compounds.

barbita'lum (U.S.), Barbitonum (Br.), barbital, barbitone, veronal, diethylbarbituric acid, diethylmalonylurea, $CO(HN.CO)_2C(C_2H_5)_2$; occurs as colorless or white crystalline powder, odorless, with a slightly bitter taste, soluble in 130 parts of water, 14 of alcohol; hypnotic in doses of gr. 8–15 (0.5–1.0). **b. solu'bile** (U.S.), soluble barbital, barbital sodium, barbitone sodium, medinal, an odorless white powder of bitter taste; soluble in 5 parts of water, slightly soluble in alcohol; sedative and hypnotic in doses of gr. 8–15 (0.5–1.0).

barbito'num (Br.). Barbitone, barbitalum (U.S.).

barbit'uism. Barbitalism.

barbitu'ric acid. A dibasic acid identical with malonylurea.

barbiturism (bar'bĭ-tu-rizm). Barbituism, barbitalism, chronic poisoning by luminal, veronal, or any of the derivatives of barbituric acid; the symptoms, which are not very distinctive, are a cutaneous eruption accompanied by chills, fever, and headache.

barbone (bar-bo'na) [It. bearded.] A disease of cattle marked by high fever, depression, loss of appetite, inflammation of the mucous membrane of the mouth and tongue, dyspnea, and edematous tumefactions on face, neck, shoulders, abdomen, and legs. These swellings consist of a yellow gelatiniform exudate. Death may occur in a few hours and the mortality amounts to 40 or 50 per cent. The disease occurs in young animals in the summer season. Ovoid cocci are found in the blood, saliva, milk, urine, and fetal blood Infection occurs through wounds of the skin, through the digestive mucous membrane, and through the pulmonary tissue.

bar'bula hir'ci [L. dim. of *barba*, beard; *hircus*, goat.] The hairs growing from the tragus, antitragus, and incisura intertragica at the opening of the external auditory meatus.

Bar'coo rot [*Barcoo*, a river in S. Australia.] 1. A disease occurring in the interior of the southern part of Australia, characterized by emaciation and extensive desquamation. 2. An affection occurring in the interior of subtropical Australia in which a hard thick crust forms on any abraded portion of the skin; the lesion is usually dry though occasionally a little pus or blood can be expressed from beneath the crust; the condition is believed by some to be the same as Veld sore. **B. vom'it,** attacks of nausea and vomiting accompanied by bulimia affecting those living in the interior of the southern part of Australia.

Bard's sign [Louis *Bard*, Swiss physician, 1857–1930.] Increased rapidity of the oscillations, in organic nystagmus, when the patient follows with his eye the examiner's finger moved back and forth in a lateral direction.

bar'dane oil. A thick oil from burdock.

Bar'del's se'rum. An inorganic serum containing phenol 0.5, sodium chloride 1, sodium sulphate 2, and sodium phosphate 3, in water 100.

Bardelebein bandage (bar'da-la-ben) [K. A. v. *Bardeleben*, German physician, 1861–1914.] A starch bandage containing bismuth used as a dressing for burns.

Bardinet's lig'ament (bar-de-na') [Barthélemy Alphonse *Bardinet*, French physician, 1809–1874.] The posterior band of the internal lateral ligament of the elbow.

Bareggi's test (bah-red'je). The clot formed after 18 to 24 hours in blood from a typhoid fever subject is soft and watery, the separated serum being comparatively small in amount.

baregin (bar-ezh'in) [*Barèges*, in the waters of which it is found.] Glairin.

baresthesia (bar-es-the'zĭ-ŭ) [G. *baros*, weight, *aisthēsis*, sensation.] The pressure sense.*

baresthesiometer (bar''es-the''zĭ-om'e-tur) [G. *baros*, weight, + *aisthēsis*, sensation, + *metron*, measure.] An instrument for measuring the pressure sense.

Baréty's meth'od (bar-a-te') [Jean Paul *Baréty*, French surgeon, 1887–1912.] A modified extension method for the treatment of hip disease and fracture of the thigh.

Barfoed's test (bahr'fed) [Christen Thomsen *Barfoed*, Swedish physician, 1815–1889.] For dextrose: a solution of acetate of copper in acetic acid forms a precipitate when added to a solution containing dextrose.

Bar'gen or'ganism (J. A. *Bargen*, American physician *1894.] A lanceolate, gram-positive diplococcus found in cases of ulcerative colitis and believed to be the etiological factor in this disease.

bar'ic. Relating to barium.

barill'a. Commercial sulphate and carbonate of sodium.

ba'rium. A metallic dyad element, symbol Ba, atomic weight 136.4, the oxide of which is an alkaline earth, baryta. **ba'rii chlo'ridum,** barium chloride, colorless lamellar crystals or a white crystalline powder; employed as a heart tonic and for varicose veins, in doses of gr. ½–1 (0.012–0.06). **ba'rii ox'idum,** barium oxide, baryta, BaO. **ba'rii sul'phas** (U.S., Br), barium sulphate $BaSO_4$, for *x*-ray work, being freed from soluble barium salts and therefore passing through the gastroenteric tract unabsorbed; it occurs as a fine, white, odorless, tasteless, and insoluble powder. **ba'rii sul'phidum,** barium sulphide, a grayish yellow powder, employed as a depilatory.

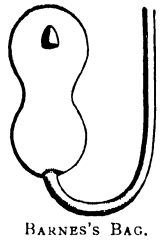
bark. 1. The envelope or covering of the roots, trunk, and branches of plants. 2. Cinchona **calisa'ya b.,** yellow b., the dried bark of *Cin*

chona calisaya. **cincho'na b.,** the dried bark of various species of *Cinchona*, the source of quinine and numerous other alkaloids. **crown b.,** pale b. **drug'gists' b.,** cinchona b., removed from the trunk and dried in quills. **Hux'ham's tinc'ture of b.,** tinctura cinchonæ composita. **Jes'uits' b.,** cinchona. **Lox'a b.,** pale b. **manufac'turers' b.,** cinchona b., broken and pressed flat to facilitate transportation. **mossed b.,** light colored cinchona b., the result of binding the trunk with paper, cloth, leaves, etc. **pale b.,** crown b., Loxa b., the dried b. of *Cinchona officinalis.* **Peru'vian b.,** cinchona. **red b.,** the dried bark of *Cinchona succirubra;* see *cinchona rubra.* **renewed b.,** cinchona b. which has been formed to cover portions of the tree previously denuded. **tinc'ture of b.,** tinctura cinchonæ. **yel'low b.,** cinchona flava.

Bar'ker's post-par'tum pills [Fordyce *Barker*, American obstetrician, 1817–1891.] Pilulæ laxativæ post partum (N.F.).

Barkow's lig'ament (bar'kōv) [Hans C. L. *Barkow*, German anatomist, 1798–1873.] Ligamentous fibers running from the posterior ligament of the elbow to the upper edge of the olecranon fossa

bar'ley. Hordeum. **b. water,** a decoction of pearl b., flavored with lemon peel. **pearl b.,** hordeum decorticatum, husked b.



BARNES'S BAG.

Bar'low's disease' [Sir Thomas *Barlow*, London physician, *1845.] Infantile scurvy.*

Barnes's bag or **dila'tor** [Robert *Barnes*, London obstetrician, 1817–1907.] A dilatable, hour-glass-shaped, rubber bag, made in various sizes, used for dilating the cervix uteri. **B.'s curve,** a curve corresponding in general with Carus' curve, being the segment of a circle whose center is the promontory of the sacrum. **B.'s spec'ulum,** a form of vaginal speculum. **B.'s zone,** cervical zone, the lower fourth of the pregnant uterus, attachment of the placenta to any part of which may cause dangerous hemorrhage.

barognosis (băr-og-no'sis) [G. *baros*, weight, + *gnōsis*, knowledge.] Sense of weight estimation.

bar'ograph [G. *baros*, weight, + *graphō*, I write.] A form of self-registering barometer.

barom'eter [G. *baros*, weight, + *metron*, measure.] An instrument for measuring the pressure of the atmosphere, either the variations of pressure in one locality determined by cyclonic and anticyclonic disturbances, or the diminution of pressure at elevations, thereby determining the height above sea-level The older form is a column of mercury in a tube sealed at its upper end, the pressure of the air being measured by the height of the column of mercury. **an'eroid b.,** see *aneroid.* **plague b.,** animals, such as guinea-pigs, are kept in a house during the prevalence of plague in the city; if one dies it is immediately examined, and if found to be plague infected, the necessary antiplague measures are at once instituted. **self-reg'istering b.,** barograph.

baromet'rograph. Barograph.

bar'oscope [G. *baros*, weight, + *skopeō*, I view.] An instrument for indicating, without accurately weighing, the variations of atmospheric pressure.

Baros'ma [G. *barys*, heavy, + *osmē*, odor.] A genus of shrubs of the natural order, *Rutaceæ.* **B. betuli'na,** a South African shrub, the leaves of which furnish buchu,* or barosma.

barotax'is [G. *baros*, weight, + *taxis*, order.] Reaction of protoplasm to pressure in any form.

barot'ropism [G. *baros*, weight, + *tropē*, a turning.] Barotaxis

bar'rel. The metallic band of a tooth crown.

barr'en. Noting a woman who has borne no children by reason of sterility in herself.

Barrier's vac'uoles (băr-re-a') [François Marguerite *Barrier*, French physician, 1813–1870.] Peribronchitic abscesses.

Barry's retinac'ula (bar'ĭ) [Martin *Barry*, English biologist, 1802–1855.] Filaments running in various directions in the Graafian follicle.

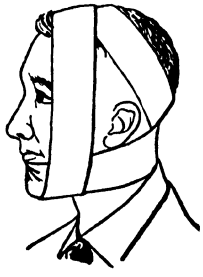
Barth's her'nia [Jean Baptiste *Barth*, Strasburg physician, nineteenth century.] Engagement of a loop of intestine between a persistent vitelline duct and the abdominal wall.

Barthélemy's disease' (bar-tāl-ĕ-me') P. Toussaint *Barthélemy*, French dermatologist,* 1850.] Acne agminata.

Bartholin's a'nus (bar'to-lin) [Kaspar *Bartholin*, Copenhagen anatomist, 1655–1738.] Aditus ad aquæductum cerebri [BNA]. **B.'s duct,** ductus major Rivini; an occasional large duct of the sublingual salivary gland, running beside Wharton's duct and opening with it. **B.'s gland,** (1) glandula vestibularis major; (2) a division of the sublingual gland.

bartholinitis (bar-to-lin-i'(e')tis). Inflammation of a vulvovaginal gland.

Bar'ton's ban'dage [John Rhea *Barton*, Philadelphia surgeon, 1794–1871.] A figure-of-8 bandage supporting the lower jaw below and anteriorly, employed in fracture **B.'s frac'ture,** fracture of the lower articular extremity of the radius.



BARTON'S BANDAGE.

Bartonella bacilliformis (bar-to-nel'ah bă-sil''i-for'-mis). Small, pleomorphous, motile, gram-negative, rods found in the red blood cells in cases of verruga peruana and Oroya fever; they were originally thought to be protozoan organisms, but are now regarded as belonging to the *Schizomycetes.* **B. mu'ris rat'ti,** an organism resembling *B. bacilliformis*, which occurs in the blood of rats and invades the erythrocytes when the animals are splenectomized or are poisoned with toluylenediamine or some other similar blood poison.

Baruch's law (bar-ookh') [Simon *Baruch*, New York physician, 1840–1921.] The effect of any hydriatic procedure is in direct proportion to the difference between the temperature of the water and that of the skin; when the temperature of the water is above or below that of the skin the effect is stimulating, when the two temperatures are the same the effect is sedative. **B.'s sign,** persistence of an elevated rectal temperature after the patient has been for 15 minutes in a bath at 75° F., indicative of typhoid fever.

baru'ria [G. *barys*, heavy, + *ouron*, urine.] Increase in the solid constituents of the urine.

Bar'well's opera'tion [Richard *Barwell*, English surgeon, 1826–1916.] Division of the lower end of the femur above, and upper end of the tibia

below, the epiphyseal line, for the correction of knock-knee.

barye (bar'ī) [G. *barys*, heavy.] Bar,* a unit of pressure.

baryecoia (bar"e-e-koy'ah) [G. *baryēkoia*.] Deafness, hardness of hearing.

barygloss'ia [G. *barys*, heavy, + *glōssa*, tongue.] Barylalia.

baryla'lia [G. *barys*, heavy, + *lalia*, speech.] Baryphonia (2), baryglossia; difficulty in speech.

baryma'zia [G. *barys*, heavy, + *mazos*, breast]. Hypertrophy of the breast.

barypho'nia [G. *barys*, heavy, + *phōnē*, voice.] 1. A deep voice. 2. Barylalia.

bary'ta. [G. *barytēs*, weight.] Barium oxide, BaO; it is caustic, and forms poisonous salts with many acids.

barythy'mia [G. *barys*, heavy, + *thymos*, mind, disposition.] Depression of spirits.

ba'sad. In a direction toward the base of any object or structure.

ba'sal. 1. Relating to a base. 2. In dentistry, noting the floor of a cavity in the grinding surface of a tooth.

bascula'tion [Fr. *basculer*, to swing.] 1. The replacement of a retroverted uterus by a sort of seesaw movement. 2. Systolic recoil of the heart.

base [G. *basis*.] 1. The lower part or bottom; the part opposite the apex. 2. In pharmacy, the chief ingredient of a compound. 3. In chemistry, an electropositive element or radical which unites with an acid to form a salt; a compound of hydroxyl which neutralizes an acid, taking the place in it of the hydrogen component, thereby forming a salt. 4. The support for the teeth in an artificial denture. **acidifi'able b.,** one which, by union with water, forms an acid. **al'dehyde b.,** one derived from an ammonia compound of aldehyde. **allox'ur b., alloxu'ric b.,** xanthine b. **an'imal b.,** a leucomaine or ptomaine. **hex'one b.,** a nitrogen-containing amino-body formed by the hydrolysis of a protamine; arginine, histidine, and lysine are hexone bases. **his'tone b.,** hexone b. **nuclein'ic b.,** xanthine b. **pres'sor b.,** one of several products of intestinal putrefaction, which are believed to cause functional hyperpiesis, or high blood pressure, when absorbed. **pu'rine b.,** xanthine b. **pyrim'idine b.,** certain bodies, such as cytosine, urasil, and thymine, resulting from the splitting up of protein; they are closely related to the purine bases. **xan'thine b.,** alloxur b., purine b., a group of nitrogenous bodies resulting from the splitting up of nucleins; such are xanthine, hypoxanthine, guanine, and adenine.

basedoid (baz'e-doyd) [*Basedow* + G. *eidos*, resemblance.] Noting a condition resembling Basedow's disease, but without toxic symptoms.

Basedow's disease' (bah'zeh-dawv or *anglicé* baz'e-dow) [Karl A. von *Basedow*, German physician, 1799–1854.] Exophthalmic goiter.*

Basedowian (baz-e-do'vī-an). A sufferer from Basedow's or Graves' disease.

basedowified (baz-e-dow'ī-fīd). Noting a simple goiter which has developed the characteristics of an exophthalmic goiter.

basement (bās'ment). Base. **b. mem'brane,** a very thin membrane beneath the epithelium of a mucous membrane and beneath the secreting glands opening on its surface.

base-plate (bās'plāt). Base (4).

bas-fond (bah-fawn') Fundus.

Bash'am's mix'ture [William Richard *Basham*, English physician, 1804–1877.] Liquor ferri et ammonii acetatis.

basial'is [NK] Basal, relating to a basis or the basion.

basialveolar (ba-sī-al-ve'o-lar). Relating to both basion and alveolar point, noting especially the *b. length*, or the shortest distance between these two points.

basiarachnitis, basiarachnoiditis (ba-sī'-ar-ak-ni'-(ne')tis, ba-se-ar-ak-noy-di'(de')tis). Inflammation of the arachnoid membrane at the base of the brain.

ba'sic. Relating to a base of any kind; basilar, basal, basylous.

basicaryoplastin (bas-ī-kar"ī-o-plas'tin) [G. *basis*, base, + *karyon*, kernel, nucleus, + plastin. Basiparachromatin, the form of basiparaplastin which occurs in the nucleus.

basichromiole (bas-ī-kro'mī-ōl) [G. *basis*, base, + *chroma*, color.] One of the basophil granules entering into the composition of the caryomitome.

basicity (ba-sis'i-tī) 1. The valence or combining power of an acid, or the number of replaceable atoms of hydrogen in its molecule. 2. The quality of being basic.

basicra'nial. Relating to the base of the skull.

basicytoparaplastin (bas-ī-si"to-par ah-plas'tin) [G. *basis*, base, + *kytos*, cell, + *paraplastin*.] The form of basiparaplastin which occurs in the cytoplasm.

basid'iospore. A space formed by abstriction from a basidium.

basid'ium. A large spore-producing cell in some of the lower plant forms.

basifa'cial. Relating to the lower portion of the face.

basif'ugal [L. *basis*, base, + *fugere*, to flee.] In botany, acropetal, proceeding upward from the base, said of the growth of leaves.

basihy'al, basihy'oid. Relating to the base or body of the hyoid bone.

bas'ilar. Relating to a base, basal. **b. ang'le,** Broca's angle, see under *angle*. **b. ar'tery,** arteria basilaris. **b. bone,** basioccipital bone, the basilar process of the occipital bone which exists as an independent center of ossification up to about the fourth or fifth year. **b. mem'brane,** membrana basilaris. **b. meningi'tis,** meningitis, usually tuberculous, at the base of the brain. **b. process,** the anterior portion of the occipital bone. **b. si'nus,** sinus transversus. **b. vein,** vena basalis.

basilat'eral. Relating to the base and one or more sides of any part.

basilemm'a [G. *basis*, base, + *lemma*, rind.] Basement membrane.

basil'ic vein [G. *basilikos*, royal.] Vena basilica, vena mediana basilica.

basil'icon [G. *basilikos*, royal.] Ceratum resinæ.

basil'ysis [G. *basis*, base, + *lysis*, a loosening.] Crushing the base of the skull of a fetus when delivery of a living child is impossible.

bas'ilyst [G. *basis*, base, + *lyō*, I break up.] An instrument for crushing and extracting the head after craniotomy.

ba'sin. 1. A circular dish, wider than deep, with sloping bottom. 2. The pelvis. 3. The third ventricle of the brain.

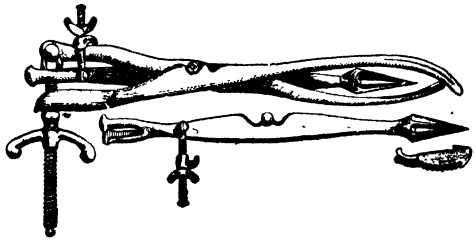
basinasal (ba'sī-na'zal). Relating to the basion and the nasion, noting especially the *b. length*, or the shortest distance between the two points.

basioccipital (bas"ĭ-ok-sip'ĭ-tal). Relating to the basilar process of the occipital bone. **b. bone,** basilar* bone.

basioglos'sus. The hyoid origin of the hyoglossus muscle.

ba'sion [G. *basis*, a base.] The middle point on the anterior margin of the foramen magnum, opposite the opisthion

basiotribe (bas'ĭ-o-trīb) [G. *basis*, base, + *tribō*, I bruise.] An instrument like a forceps with central perforator, employed in craniotomy



TARNIER'S BASIOTRIBE

basiotrip'sy. Basilysis.

basiparachromatin (bas-ĭ-par-ah-kro'ma-tin). Basicaryoplastin.

basiparaplastin (bas-ĭ-par-ah-plas'tin). The basophil or amphobasophil form of paraplastin.

basip'etal [L. *basis*, base, + *petere*, to seek] In a direction toward the base; in botany, noting a form of branching or leaf-formation in which the youngest members are near the base

basipho'bia [G. *basis*, a stepping, + *phobos*, fear.] An insane fear of walking.

basirrhi'nal. Relating to the base of the rhinencephalon.

ba'sis [L. and G.] Base, foundation. **b. cra'nii,** the base of the skull. **b. pedun'culi** [BNA], base of the peduncle, pedal portion or crusta of the crus cerebri, the ventral portion of the pedunculus (crus) cerebri passing to the outer side of the optic thalamus and continuous with the internal capsule; its fibers descend from the cortex

basisphenoid (bas-ĭ-sfe'noyd). Relating to the base or body of the sphenoid bone; noting the independent center of ossification in the embryo which forms the posterior portion of the body of the sphenoid bone.

basisyl'vian fis'sure. Vallecula Sylvii, the portion of the Sylvian fissure between the orbital surface of the frontal lobe and the temporal lobe.

basitem'poral. Relating to the lower part of the temporal region.

basivertebral (bas"-ĭ-vur'te-bral). Relating to the body of a vertebra.

Basle (Basel) anatom'ical no'menclature. A list of Latin terms in anatomy adopted by the German Anatomical Society at its meeting in Basle in 1895. The terms there authorized, especially when they differ from the older nomenclature, are indicated in this dictionary by the sign [BNA].

basograph (bas'o-graf) [G. *basis*, walking, + *graphō*, I write or sketch.] An apparatus for recording abnormalities of gait.

basometachromophil, basometachromophile (bas"o-met"ah-kro'mo-fil, or fīl) [G. *basis*, base + *meta*, beyond (change), + *chrōma*, color, + *philos*, fond.] Staining a color different from that of the surrounding substance with basic dyes.

basophil, basophile (bas'o-fil, or fīl) [G. *basis*, base, + *phileō*, I love.] 1. Having an affinity for basic or nuclear stains, noting certain cell-granules and tissues. 2 A cell, especially a white blood cell, which stains readily with basic dyes.

basophil'ia [G. *basis*, base, + *phileō*, I love.] 1. A condition in which basophil or mast cells are present in undue number. 2. A degenerative condition of the erythrocytes in which they present a number of minute granules taking a basic stain; granular degeneration, basophilic degeneration, punctate basophilia. **punc'tate b.,** stippling, staining of minute intracellular granules with basic dyes.

basoplasm (bas'o-plazm). That part of the cytoplasm which stains readily with basic dyes.

Bassini's opera'tion (bahs-se'ne) [Edoardo *Bassini*, Italian surgeon, 1844–1924.] For the radical cure of hernia; after reduction of the hernia, the sac is twisted, ligated, and cut off, obliterating the canal; then a new canal is made by uniting the edges of the rectus and internal oblique muscles and joining them to the transversalis fascia and Poupart's ligament, placing on this the cord, and covering the latter by the external oblique which is also sutured to Poupart's ligament.

Bassler's sign (bas'ler) [Anthony *Bassler*, New York physician, *1876.] In chronic appendicitis pinching the appendix between the thumb of the operator and the iliacus muscle causes sharp pain; the tip of the thumb is pressed into the abdominal wall halfway between the umbilicus and the anterior superior spine of the ilium and is then pushed to the right.

bas'sorin [*Bassora*, a Turkish city.] The main constituent ($C_6H_{10}O_5$) of an insoluble gum similar to or identical with tragacanth and the gum of cherry and plum trees.

bast. [A.S. *bæst*] The fibrous inner portion of the bark of linden and other trees.

bas'tard. 1. Illegitimate. 2. Spurious.

Baste'do's sign [W. A. *Bastedo*, New York physician, *1873] Pain and tenderness in the right iliac fossa on inflation of the colon with air, in cases of chronic appendicitis

Bas'tian-Bruns law [Henry Charlton *Bastian*, English neurologist, 1837–1915; Ludwig *Bruns*, German neurologist, *1858.] Loss of all reflexes in total obstruction of the conducting paths of the cord, high up.

Bastianelli meth'od (bahs-tyah-nel'le) [P. *Bastianelli*, Italian surgeon, contemporary] Sterilization of the skin of the abdomen, prior to operation, by the application of a 1–1000 solution of iodine crystals in benzin, and when this has dried, of a mixture of equal parts of alcohol and tincture of iodine

ba'syl [G. *basis*, base, + *hylē*, stuff.] The base or electropositive element of a salt.

bas'ylous. Basic, relating to the basyl or base of a salt.

Bate'man's disease' [Thomas *Bateman*, London physician, 1778–1821] 1 Molluscum contagiosum. 2. Alopecia areata. **B.'s her'pes,** herpes iris. **B.'s pec'toral drops,** tinctura pectoralis (N.F.).

bath. 1 The immersion of the body or any of its parts in water or any other yielding or fluid medium; or the application of such medium in any form—spray, vapor, affusion, jets, etc.—to a part or the whole of the body. 2. The apparatus employed in giving a bath of any form. The term is qualified according to the medium used: *water bath, air bath, sand bath, mud bath*, etc.; according to the temperature of the medium: *hot, warm, tepid, temperate, cool*, and *cold* (see below); according to the form in which the medium is applied: *spray bath, vapor*

bath, douche bath, etc.; according to the medica ment added to the medium: *acid bath, alkaline bath, alum bath, astringent bath, mustard bath, sulphur bath,* etc.; and according to the part bathed: *full bath, foot bath, sitz bath,* etc. Baths are given in therapeutics for their local effect upon the skin in cutaneous disorders or for their effect upon the nervous or circulatory system, either relaxing or stimulating. The science which treats of bathing, especially bathing in the sea or in the waters of mineral springs, is called *balneology;* the branch of therapeutics which deals with the local or general application of water in various forms and at various temperatures, chiefly for its systemic effects, is called *hydrotherapy* or (incorrectly) *hydropathy.* **air b.,** the exposure of the naked body to the air, either cold or warm. **an'imal b.,** the application of the warm tissue of a recently killed animal to any part. **blood b.,** a b. in the warm, freshly drawn blood of an animal. **Brand b.,** see *Brand.* **cold b.,** one in water at a temperature of 45° F. (7.5° C. or lower). **cool b.,** one in water at a temperature of about 68° F. (20° C.). **douche b.,** the local application of water in the form of a large jet or stream. **elec'tric b., electrotherapeu'tic b.,** (1) one in which the medium is charged with electricity; (2) the application of static electricity, the patient standing on an insulated platform. **foot b.,** pediluvium. **full b.,** one in which the entire body is immersed. **grad'uated b.,** one in which the temperature of the water is gradually lowered. **Greville b.,** a non-luminous electric hot-air b., given at a very high temperature. **gymnaco'lon b.,** an intestinal bath by means of a special apparatus, allowing of the injection of 8 to 16 ounces of an isotonic salt solution and the immediate evacuation of water and fecal masses, this being repeated until several quarts of water have been used. **hafus'si b.,** a modification of the Nauheim b., the hands and feet only of the patient being immersed in hot water through which carbon dioxide gas is made to pass. **half b.,** one in which only the hips and lower extremities are immersed. **hot b.,** one in water at a temperature of about 106° F. (41° C.) or over. **hydroelec'tric b.,** electric b. (1). **light b.,** exposure of the uncovered skin of the patient to light rays from the sun, a battery of electric light bulbs, or other source. **moor b.,** immersion of the body in thin mud taken from a swamp or other uncultivated tract. **Nau'heim b.,** see Schott* treatment. **nee'dle b.,** one in which water is thrown forcibly against the body in the shape of many very fine jets. **rain b.,** (1) one taken by standing naked in the rain; (2) a very gentle form of shower bath. **Rus'sian b.,** a warm vapor bath followed by rubbing and a cold plunge. **sand b.,** (1) covering the body with warm dry sand; (2) an arrangement whereby a substance to be treated (in chemical operations) is in a vessel which is protected from the direct action of the fire by a layer of sand. **sitz b.** [Ger. *sitzen,* to sit], a hip bath, the patient sitting in the tub, the legs being outside. **sun b.,** see *light b.* **tem'perate b.,** one at a temperature of about 78°F. (26.2°C.). **tep'id b.,** one in water at a temperature of about 86° F. (30° C.). **transcu'tan b.,** a b., in water containing in solution or suspension various remedial agents, which exerts a curative action by the heat of the water and the absorption of the chemical constituents of the added substances. **Turk'ish b.,** a hot-air bath followed by rubbing and hot and cold douching. **warm b.,** one at a temperature of about 98° F. (36.6° C.). **water b.,** see water*-bath.

bath'mic. Relating to bathmism. **b. evolu'tion,** orthogenic evolution, a change of type due to something inherent in the constitution, independent of the environment.

bath'mism [G. *bathmis,* a step.] The vital force governing the function of nutrition.

bathmotrop'ic [G. *bathmos,* threshold, + *tropē,* a turning.] Influencing nervous and muscular excitability in response to stimuli. **neg'atively b.,** lessening, and **pos'itively b.,** increasing nervous or muscular irritability.

bath"yanesthe'sia, bathyanæsthe'sia [G. *bathys,* deep, + *an-* priv. + *aisthēsis,* sensation.] Loss of deep or mesoblastic sensibility.

bathycar'dia [G. *bathys,* deep, + *kardia,* heart.] A condition in which the heart occupies a lower position than normal, but is fixed there, being thereby distinguished from cardioptosis.

bathyesthesia, bathyæsthesia (bath"ĭ-es-the'zĭ-ah) [G. *bathys,* deep, + *aisthēsis,* sensation.] Sensation in the parts below the surface of the body; the muscle sense, deep or mesoblastic sensibility.

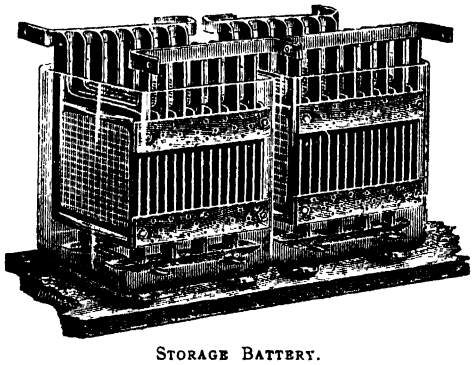
bathygastry (bath-ĭ-gas'trĭ) [G. *bathys,* deep, + *gastēr,* stomach.] Low-lying stomach, gastroptosis.

bathyhyperesthesia (bath-ĭ-hi"per-es-the'zĭ-ah) [G. *bathys,* deep, + *hyper,* above, + *aisthēsis,* sensation.] Exaggerated sensitiveness of the muscular tissues and other deep structures.

bathyhypesthesia (bath-ĭ-hip"es-the'zĭ-ah) [G. *bathys,* deep, + *hypo,* under, + *aisthēsis,* sensation.] Impairment of sensation in the deeper parts; partial loss of the muscle sense.

batrachoplasty (bat'rak-o-plas-tĭ) [G. *batrachos,* frog, ranula, + *plassō,* I form.] An operation for the cure of ranula.

batt'ery. An apparatus for the generation of galvanic electricity by chemical action; it may consist of one cell or of any number of cells connected in a series. **farad'ic b.,** an apparatus for producing induced electricity. **galvan'ic b.,** one in which an electric current is produced by chemical action. **stor'age b.,** secondary b., one in which chemical energy is stored and produces an electric current for a considerable period.



STORAGE BATTERY.

Bat'tey's opera'tion [Robert *Battey,* American surgeon, 1828–1895.] Removal of the normal ovaries to induce an artificial menopause for the cure of uterine fibroids and other conditions.

Battle's sign (bat'l). Postauricular and subconjunctival ecchymosis in cases of fracture of the base of the skull.

Batt'ley's sed'ative drops [Richard *Battley*, English chemist, 1770–1856.] Opium 3, water 30, alcohol 6; dose ♏5–15 (0.3–1.0).

Baudelocque's diam'eter (bōd-lok') [Jean Louis *Baudelocque*, Parisian obstetrician, 1745–1810.] External conjugate. **B.'s u'terine cir'cle,** Bandl's ring, contraction ring.

Baudelocque's opera'tion (bōd-lok') [Louis Auguste *Baudelocque*, Parisian obstetrician, nephew of Jean Louis B., 1800–1864.] B.'s elytrotomy, an incision through the posterior cul-de-sac of the vagina for the removal of the ovum, in extrauterine pregnancy.

Bauhin's gland (bo-an') [Gaspard *Bauhin*, Swiss anatomist 1560–1624.] Glandula lingualis anterior, **B.'s valve,** valvula* coli, the ileocecal valve, a fold of mucous membrane where the ileum empties into the cecum.

baume du commandeur (bōm du cum-mahn-dĕr') [Fr. commander's balsam.] A medieval vulnerary containing aloes.

Baumé scale (bo-ma') [Antoine *Baumé*, French chemist and pharmacist, 1728–1804.] One of two hydrometer scales for determining the specific gravity of liquids heavier and lighter than water respectively. To read the Baumé scale in terms of specific gravity: for liquids lighter than water divide 140 by 130 plus the Baumé degree; for liquids heavier than water divide 145 by 145 minus the Baumé degree.

Baumès' law (bo-mes') [Pierre Prosper François *Baumès*, French physician, 1791–1871.] Colles's law.

Baumès' symp'tom [Jean Baptiste Timotheée *Baumès*, French physician, 1777–1828.] Pain behind the sternum in angina pectoris.

Baumgarten's method (bowm'gar-ten) [P. von *Baumgarten*, German pathologist, *1848.] For the differentiation of the leprosy and the tubercle bacillus: smears are fixed and stained in dilute alcoholic fuchsin for five minutes, decolorized in a 10 per cent. solution of nitric acid in alcohol, washed, counterstained in methylene blue, again washed, and mounted; the leprosy bacillus is stained red, the tubercle bacillus blue.

baunscheidtism (bown'shīt-izm) [Carl *Baunscheidt*, a German mechanic, 19th century.] A method of producing counterirritation in the treatment of various diseases, by puncturing the skin with an instrument set with numerous needles, and then rubbing in croton oil or other irritant.

Bava'rian splint. A plaster-of-Paris splint made of two folds of canton flannel with plaster between.

bay [a body of water indenting the line of the coast.] In anatomy, a recess containing fluid, noting specifically the *lacrymal bay*, a slight recess at the internal angle or canthus of the eye, in which are the puncta lacrimalia or openings of the lacrymal ducts.

Bayard's ecchymo'ses (ba-yar') [Henri Louis *Bayard*, French physician, 1812–1852.] Subpleural and subpericardial hemorrhages in infants who have been suffocated in utero; see Tardieu's* ecchymoses.

bay'berry. 1. The fruit of *Myrica cerifera*, wax myrtle. candle-berry. 2. The fruit of *Laurus nobilis*, the baytree.

baycuru'. The root of *Limonium braziliensis* or *Statice braziliensis*, a plant of South America; astringent and hemostatic, employed in the treatment of diarrhea and dysentery and in metrorrhagia and hemoptysis in the form of a decoction or in doses of ♏10–20 (0.6–1.3) of a fluidextract.

Bayle's disease' [Antoine L. J. *Bayle*, French physician, 1799–1858.] General paralysis of the insane.

Bayle's granula'tions [Gaspard Laurent *Bayle*, French physician, 1774–1816.] Miliary tubercles.

Bayn'ton's ban'dage [Thomas *Baynton*, English surgeon †1820.] Adhesive plaster spiral bandage for ulcer of the leg.

bayonet-leg (ba'o-net). The deformity caused by a permanent backward dislocation of the bones of the leg at the knee-joint.

bay-rum. A toilette preparation distilled from a maceration of bay leaves (from *Myrcia acris*) in Santa Cruz rum; also made from oil of myrcia according to the formula for spiritus myrciæ (U.S., 1890).

Bazin's disease' (bah-zan') [Antoine Pierre Ernest *Bazin*, Paris dermatologist, 1807–1878.] 1. Buccal psoriasis. 2. Erythema induratum.

BCG. Abbreviation of Calmette*-Guérin bacillus.

b. d. Abbreviation for L. *bis die*, twice a day.

bdella (del'ah) [G. leech.] A leech, hirudo.

bdellepithecium (del-ep-ĭ-the'sĭ-um) [G. *bdella*, leech, + *epi*, upon, + *thēkē*, a box.] A cylinder for holding a leech until it has fastened itself to the skin.

bdellium (del'ĭ-um). A gum from *Balsamodendron africanum*, a common adulterant of myrrh. Also a gum from *B. mukul* of India, and another from *Hyphœne thebaica* of Egypt.

bdellometer (del-om'e-tur). An artificial leech.

bdellotomy (del-ot'o-mĭ) [G. *bdella*, leech, + *tomē*, incision.] Incision into or cutting off the end of a sucking leech so that the blood may escape from its body allowing it to continue sucking.

B.E. [Ger. *Bacillen-Emulsion*.] Bacillary emulsion; see under *tuberculin*.

beaded (be'ded). 1. Marked by numerous small rounded projections, often arranged in a row like a string of beads; see *rachitic** *rosary*. 2. Noting a line of stroke or stab culture formed of a series of non-continuous colonies; see cut under *culture*, B, 2. 3. Noting stained bacteria in which more deeply stained granules occur at regular intervals in the organism.

beaker (be'kur). A thin glass vessel, with a lip for pouring, used by chemists for heating liquids.

Beale's cells [Lionel Smith *Beale*, English physician, 1828–1906.] A bipolar cell of the heart with one spiral and one straight prolongation. **B.'s stain,** a fluid of carmine 1, ammonia 3, glycerin 96, distilled water 96, 95 per cent. alcohol 24.

bean. 1. The flattened seed, contained in a pod, of various leguminous plants of the genera *Vicia* and *Phaseolus*. 2. A hard, rounded or oval body resembling a bean in shape. **Cal'abar b.,** physostigma. **cas'tor b.,** ricinus. **Igna'tius b.,** ignatia. **orde'al** b., physostigma. **soy b.,** soya.

bearberry (bair'ber-ĭ). Uva ursi.

beard (bērd) [A. S.] Barba, the hair on the face of a man; specifically, the hair growing on and beneath the chin.

Beard's disease' [George M. *Beard*, American physician, 1839–1883.] Neurasthenia.

bear'ing down. The expulsive effort of a parturient woman in the second stage of labor.

bear's foot. Polymnia: tonic and laxative, employed in rheumatism in doses of ♏3 (0.2) of a fluidextract.

bear's weed. Eriodictyon.

beat [A.S. *beatan*.] 1. To strike; to throb or pulsate. 2. A stroke or pulsation, as of the heart or pulse. **a'pex b.**, the impulse felt by the hand applied to the fifth intercostal space on the left side. **ectop'ic b.**, a cardiac systole originating elsewhere than at the sinoauricular node. **forced b.**, an extrasystole caused by artificial stimulation of the heart.

beaten copper (be'ten kop'pur). Noting the surface of a culture in which there are numerous small crateriform depressions.

beat-knee. Inflammation of the subcutaneous connective tissue over the patella.

Beau's disease (bo) [Joseph Honoré Simon *Beau* Paris physician, 1806–1865.] B.'s syndrome cardiac asystole. **B.'s lines,** the transverse corrugations on the finger nails after typhoid fever and other exhausting diseases. **B.'s syndrome,** asystole.

Beauperthuy's treat'ment (bo-per-tu-e') [Louis Daniel *Beauperthuy*, West Indian physician.] Treatment of leprosy by mercury bichloride.

beb'eerine. An alkaloid. $C_{18}H_{21}NO_3$, from nectandra bark, or bebeeru; a dark yellow powder, practically insoluble in water, soluble in 5 parts of absolute alcohol; tonic and antiperiodic in doses of gr. 2–5 (0.13–0.3) of the alkaloid or its sulphate.

bebee'ru. The bark of *Nectandra rodiæi*, a large tree on the coast of Guiana antiperiodic in doses of gr. 10–30 (0.6–2 0) of the powder.

Beccaria's sign (bek-kah're-ah). Occipital pulsation in pregnancy.

bechic (bek'ik) [G. *bēx*, cough] 1 Controlling cough 2. A cough remedy.

Bechterew's disease' (bekh-ter'yef) [Vladimir Mikhailovich von *Bechterew*, Russian neurologist, 1857–1927.] Spondylitis deformans. **B.'s nu'cleus,** the upper part of the nucleus of Deiters in which the fibers of the vestibular nerve chiefly terminate. **B.'s re'flexes,** (*a*) *deep*, when the foot and toes are passively plantarflexed, dorsiflexion of the same follows and is succeeded by a movement of flexion of the knee and hip; (*b*) *hypogastric*, contraction of the lower abdominal muscles follows stroking of the skin of the internal surface of the thigh; (*c*) *pupil*, dilatation of the pupil on exposure to light, occasionally noted in general paralysis and tabes dorsalis. **B.'s symp'tom,** paralysis of the facial muscles limited to the automatic movements, the power of voluntary movement being retained.

Beck's meth'od [Emil G. *Beck*, American surgeon, 1866–1932.] Treatment of tuberculous cavities in bone by scraping and filling with a 30 per cent. bismuth nitrate paste; the paste is used also in the treatment of Riggs' disease.

Beck'er's phenom'enon [Otto Heinrich Enoch *Becker*, German oculist, 1828–1890.] Pulsation in the retinal arteries in exophthalmic goiter. **B.'s test,** for astigmatism, the subject is directed to look at a diagram of lines radiating in all directions, in sets of three, and to indicate which appear blurred.

Béclard's her'nia (ba-klar') [Pierre August n *Béclard*, French anatomist, 1785–1825.] Hernia through the opening for the saphena vein.

Becquerel rays (bek-rel') [Antoine Henri *Becquerel*, French physicist, 1852–1908.] Radiations, resembling in many respects the *x*-rays, given off by uranium salts.

bed. 1. A platform affording support for the body in the horizontal position; a mattress or other yielding object on which one lies or sleeps. 2. In anatomy, a base or structure giving support to another. **b. of the nail,** the part of the finger which forms a support to the nail, anterior to the matrix.

bed'bug. *Cimex lectularius;* its bite produces urticarial wheals with a central hemorrhagic point.

bedclothes, picking at. Carphologia, floccilation.

bed'lam [St. Mary of *Bethlehem* Hospital in London.] An insane asylum.

Bed'nar's aph'thæ [Alois *Bednar*, Viennese physician, 1816–1888.] An affection of the newborn consisting of two yellow, flattened, slightly elevated patches one on either side of the median raphe of the palate; they are often ulcerated.

bed'sore. Decubitus; an ulceration occurring on a part of the body exposed to pressure in one confined to the bed by a protracted disease.

bed-wetting. Nocturnal enuresis, nycturia.

bee [A S *beó*, *bī*.] An insect of the genus *Apis;* the honey-bee, *A mellifica*, is the source of honey and wax.

Beebe's serum (be'bĭz se'rum) [Silas Palmer *Beebe*, New York physician, contemporary.] A serum obtained from the blood of animals from whom the thyroid gland has been removed, employed in hyperthyroidism.

bee-bread. Borage.

Beech'am's pills [Sir James *Beecham*, the manufacturer.] Laxative pills prepared according to a secret formula, said to contain aloes 0 5 gr , ginger 0 55 gr., and soap 0 18 grain in each pill.

beeftea (bēf-te'). An infusion or hot-water extract of lean beef; bouillon.

beer. An alcoholic beverage made from an infusion of malted barley or other farinaceous grain, to which an infusion of hops is added, the whole being then fermented. The alcoholic strength of the average beer is about 3 per cent

Beer's opera'tion (bār) [Georg Joseph *Beer*, Austrian ophthalmologist, 19th century.] Flap operation for cataract.

beer-heart. An hypertrophied heart consequent upon the greater "load" resulting from an excessive consumption of fluids

bees'tings. The first milk given by a cow after calving

beeswax (bēz'waks). Wax (1).

Beg'bie's disease' [James *Begbie*, Edinburgh physician, 1798–1869.] 1. Graves' disease, exophthalmic goiter 2. Localized chorea.

beget' [A S. *begitan*] To procreate.

Beggiatoa[0] (bed-jĭ-ă-to'ah) [J. Beggiato, Italian botanist.] A genus of water organisms of the family *Beggiatoaceæ*, flat sluggishly motile cells, containing sulphur granules.

Beggiatoaceæ[0] (bed-jĭ-ă-to-a'se-e). A family of filamentous, usually oscillating, bacteria of the order *Thiobacteriales*.

behaviorism (be-ha'vyor-izm). A school of psychology which attempts to formulate, through systematic observation and experimentation, the laws and principles which underlie man's behavior. It denies the existence of mind or consciousness, and teaches that all the doings and sayings of man are the purely materialistic or mechanical results of trained reflexes originating from a group of antecedents termed a situation or stimulus.

behaviorist (be-ha'vyor-ĭst). An adherent of the school of behaviorism.

be'hen. The root of *Centaurea behen* or of *Statice limonium*. **b. oil,** the expressed oil from the seeds of *Moringa aptera*

behen'ic acid. A fatty acid derived from behen oil.

Behring's law (ba'ring) [Emil *v. Behring*, German physician, 1854–1917.] The serum of an immunized person will confer immunity against the same disease on another into whom it is injected. **B.'s tuber'culins,** see under *tuberculin.*

Beigel's disease' (bi'gel) [Hermann *Beigel*, Austrian physician, 1830–1897.] 1. A trichomycosis of false hair, communicated also to the natural hair in contact with it, resembling piedra or lepothrix; the microorganism supposed to be concerned in its production is called the chignon fungus. 2. Trichorrhexis nodosa.

bel'æ fruc'tus. (B.A.) Bael or bel fruit, the fresh half ripe fruit of *Ægle marmelos*, Bengal quince-tree; employed as an astringent in dysentery.

belch [A.S. *bælcian.*] To eructate; to raise gas from the stomach.

belch'ing. Eructation.

belem'noid [G. *belemnon*, a dart, + *eidos*, resemblance.] Dart-shaped, styloid.

Bel'field's opera'tion [William Thomas *Belfield*, Chicago surgeon, *1856] Vasostomy.

Bell's delir'ium [Luther V. *Bell*, American physician, 1806–1862.] Specific febrile delirium of Dercum, a very intense delirium associated with high fever but no physical signs of pneumonia, any exanthema, or other general disease. **B.'s dis'ease,** typhomania.

Bell's law [Sir Charles *Bell*, Scotch physiologist, 1774–1842.] Magendie's law, the anterior spinal roots are motor, the posterior sensory. **B.'s paral'ysis, B.'s pal'sy,** peripheral facial paralysis. **B.'s phenom'enon,** a patient with peripheral facial paralysis cannot close the eyelids of the affected side without at the same time moving the eyeball upward and outward **B.'s respi'ratory nerve,** a branch of the brachial plexus supplying the serratus magnus muscle, nervus thoracalis longus [BNA] **B.'s spasm,** mimic tic, not associated with tic douloureux.

Bell's meth'od [William Blair *Bell*, Liverpool physician, contemporary.] 1. To estimate the amount of calcium (not bound up with protein) in the blood; 100 c.mm. of blood is mixed with 250 c mm. of a 1–30 aqueous solution of oxalic acid; after standing for 10 minutes, 250 c.mm. of glycerin, 5 parts, in 95 parts of a 1 per cent solution of acetic acid is added; 100 c.mm. of the mixture is then added to 500 c.mm. of distilled water, and of this one drop is placed in a Thoma counting chamber and the crystals of calcium oxalate are counted. The relative number of crystals as compared with those in a 1–6000 solution of calcium oxide in distilled water constitutes the calcium index. 2. Treatment of cancer with lead, saturnotherapy, plumbotherapy.

Bell's mus'cle [John *Bell*, Scotch anatomist, 1762–1820.] A band of muscular fibers, forming a slight fold in the wall of the bladder, running from the uvula to the opening of the ureter on either side, bounding the trigonum

Bell-Beuttner opera'tion (bel-boyt'ner). Beuttner* method.

belladon'na [It. *bella*, beautiful, + *donna*, lady.] Deadly nightshade, *Atropa belladonna*, a perennial herb with dark purple flowers and shining purplish black berries. The leaves and root are employed in medicine. **belladon'næ fo'lia** (U.S. and Br.), belladonna leaves, the dried leaves of *Atropa belladonna*, containing 0.3 per cent. of mydriatic alkaloids; mydriatic, narcotic, anodyne, and used to check secretions; dose gr. ½–2 (0.03–0.12). **b. pulvera'ta** (Br.) pulvis belladonnæ, b. powder, powdered b. leaf. **belladon'næ ra'dix** (U.S. and Br.), belladonna root, the dried root of *Atropa belladonna*, containing 0.5 per cent. of mydriatic alkaloids, employed for the same purposes as the leaves in doses of gr. 1–2 (0.06–0.12).

belladonn'ine. An artificial alkaloid derived from atropine by warming with hydrochloric acid.

bell-crowned. Noting a tooth the crown of which has a mesiodistal diameter much greater than that of the neck.

Bellini's ducts (bel-le'ne) [Lorenzo *Bellini*, Italian anatomist, 1643–1704.] The straight tubules of the kidneys. **B.'s lig'ament,** a fasciculus of the capsular ligament of the hip extending to the great trochanter

bell'-metal res'onance. See *resonance*

Belloc's' cann'ula or **sound** [Jean Jacques *Belloc* or *Belloq*, French surgeon, 1732–1807.] A hollow sound containing a curved spring, used for passing a thread through the nostril and mouth in order to draw in a plug in case of profuse epistaxis

bellones (bel-ōnz') Pedunculated tumors in the posterior nares of the horse, they sometimes fall back over the opening of the glottis, causing intermittent roaring

Belloste's pill (bel-lost') [Augustin *Belloste*, French surgeon, 1654–1730.] Metallic mercury, white honey, aloes, of each 0.05; black pepper 0.008 rhubarb, 0.025; scammony 0.017. **B.'s solu'tion,** liquor hydrargyri nitrici oxydulati.

bell sound. Bell-metal resonance *

bell'y. 1 The abdomen; the stomach; the womb 2 The prominent thick central part of a muscle **b.-ache,** colic **b.-bound,** constipated. **b.-button,** umbilicus. **swollen b.,** in veterinary medicine, tympanites.

belonepho'bia [G. *belonē*, needle + *phobos*, fear] Morbid fear of needles, pins, and other sharp-pointed objects.

belonoid (bel'o-noyd) [G. *belonē*, needle, + *eidos*, resemblance.] Needle-shaped.

belonoskiascopy (bel-o-no-ski-as'ko-pĭ) [G. *belonē*, needle, + *skia*, shadow, + *skopeō*, I examine.] A subjective form of retinoscopy, employing the shadow phenomena and movements to determine the refractive condition of the eye.

Belyando spew (bel-yan'do spu) [*Belyando*, a district of Queensland, Australia] Grass-sickness.

be'max. Trade name of a food product, consisting of the embryo of various cereals, which is said to contain a large proportion of vitamin B.

ben. Behen.

ben'acol. Trade name of a local anesthetic said to be nontoxic, consisting of equal parts of para-aminobenzoyl ethanol benzoate and phenmethylol.

Bence-Jones' albu'min [Henry *Bence-Jones*, London physician, 1814–1873.] An albumose-like substance found in the urine in osteomalacia, myelomata, and various other conditions. **B.-J.'s bodies,** coagula of albumose occurring in the urine in disease involving the bone-marrow. **B.-J.'s cyl'inders,** gelatinous cylindrical bodies in the spermatic vesicles. **B.-J. reac'tion,** a test for albumose which is precipitated by nitric acid, redissolved on boiling, and thrown down again as the fluid cools.

bend. A curve, an angle, a turn.

bends. Caisson disease, especially a mild form in which pain and temporary weakness are the chief symptoms.

beneceptor (be-ne-sep'tor) [L. *bene*, well, + *capere*, to take.] A nerve organ or mechanism (ceptor) for the appreciation and transmission of stimuli of a beneficial character.

Ben'edict's test [A. L. *Benedict*, American physician, *1865.] Bubbling heard on auscultation of the stomach after the exhibition of sodium bicarbonate indicates the presence of hydrochloric acid, the loudness of the sound varying with the amount of HCl present.

Ben'edict's test [Stanley R. *Benedict*, American physiological chemist, contemporary.] For glucose in the urine; add 8 to 10 drops of urine to 5 c.c. of a solution of copper sulphate crystals 17.3, sodium or potassium citrate 173.0, sodium carbonate crystals 200.0, distilled water 1000.0; boil vigorously for a minute or two then allow to cool; if glucose is present the solution will become opaque and red, yellow, or greenish in hue; a faint blue turbidity does not indicate sugar.

benedic'tine. A cordial distilled at Fécamp in France; formerly made by the Benedictine monks.

Ben'edikt's syn'drome [Moritz *Benedikt*, Viennese physician, 1835–1920.] Hemiplegia with clonic spasm or tremor and oculomotor paralysis on the opposite side.

beneficiary (ben-e-fish'i-a-ri) [L. *beneficiarius; beneficium*, a favor, benefice. The person to whom the amount specified in an insurance policy is payable

Beng'er's food. Trade name of a farinaceous preparation containing amylopsin and trypsin which, when added to milk initiates its digestion.

Ben'ian's stain. For spirochetes. Mix the material containing the organisms with a couple of drops of a 2 per cent. aqueous solution of Congo-red, then wash with a 1 per cent. aqueous hydrochloric acid solution, then drain (not wash) and dry in the air; the organisms appear white in a blue field.

benign (be-nīn'). Mild in character, said of an illness; not malignant, not liable to recur, said of a neoplasm.

Béniqué's sound (ba-ne-ka') [Pierre Jules *Béniqué*, Paris physician, 1806–1851.] A sound of lead or block tin of wide curve used to dilate strictures in the male urethra.

ben'ne oil. Oleum sesami, an oil expressed from the seeds of *Sesamum indicum*, an herb of India and other tropical countries.

Benn'et's cor'puscles [James Henry *Bennet*, English obstetrician, 1816–1891.] Fatty cells occurring in ovarian cysts.

Benn'ett's disease' [John Hughes *Bennett*, English physician, 1812–1876.] Leucemia.

Ben'nett's frac'ture [Edward Hallaran *Bennett*, Dublin surgeon, 1837–1907.] Fracture of the proximal end of the first metacarpal bone, passing obliquely through the base of the bone, and detaching the greater part of the articular facet; it simulates a dislocation of the thumb.

benzacetin (ben-zas'e-tin). Acetamidomethylsalicylic acid; anodyne in doses of gr. 8–15 (0.5–1.0).

benzac'onine. A non-crystallizable alkaloid, a derivative of aconitine.

benzaldehy'dum, benzal'dehyde (U. S.) Essential oil of bitter almond, an aldehyde produced artificially or obtained from oil of bitter almond, containing 85 per cent. of pure benzaldehyde; a colorless liquid having the odor of oil of bitter almond and an aromatic taste; used as a flavoring agent in doses of ♏½–½ (0.015–0.03).

ben'zamide. Obtained by the action of ammonium carbonate on benzoyl chloride; occurring in colorless platelets.

benzamine (ben-sam'ēn). Betaeucaine.

benzanal'gen. Trade name of an anodyne and antiseptic substance obtained from chinolin; dose, gr. 8–30 (0.5–2.0).

benzanili'dum, benzan'ilid. Phenylbenzamide, benzoylanilid, a crystalline powder; employed as an antipyretic in doses of gr. 3–10 (0.2–0.6).

benzene (ben'zēn). Benzenum (Br.), benzol, chemical formula, C_6H_6, a hydrocarbon from light coal-tar oil; a thin, colorless, inflammable liquid; has been employed by inhalation in pertussis, locally for the destruction of pediculi, and internally for trichiniasis in doses of ♏5–10 (0.3–0.6), but is now seldom so used. **b. bro'mide,** a gas employed in warfare as a lacrymator or tear gas.* **b. nu'cleus,** the six carbon atoms of the b. ring. **b. ring,** the closed-chain arrangement of the carbon and hydrogen atoms in the benzene molecule, as shown in the graphic formula of that substance; see *closed-chain* compound.* **medic'inal b.,** medicinal benzol, prepared by fractional distillation of the light oil of coal tar; has been recommended in the treatment of leucemia in doses of ♏8 to 15 (0.5 to 1 c.c.) four times a day, given in emulsion, in capsules, or by enema. **meth'yl hydrox'y b.,** phenmethylol.

ben'zidine. Paradiaminodiphenyl, a grayish-yellow crystalline powder; used as a reagent in the analysis of water.

benzin, benzine (ben'zin, ben zēn'). Benzinum.

benzi'num. Benzin, petroleum benzin, petroleum ether, a purified distillate from American petroleum; a transparent, colorless fluid, used as a solvent. **b. purifica'tum** (U.S.), purified petroleum benzin sometimes employed as a parasiticide.

benzoate (ben'zo-āt) A salt of benzoic acid.

ben'zoated. Containing benzoic acid or a benzoate, usually sodium benzoate.

benzobis (ben'zo-bis). Mesurol.

benzocaina (ben-zo-kah-e'nah), (Br.).

benzocaine (ben"zo-kah-ēn'). Anesthesin, æthylis aminobenzoas (U.S.).

benzo'ic. Relating to or derived from benzoin **b. acid,** acidum benzoicum.

benzoin (ben'zoyn). Benzoinum.

benzo'inol. Trade name of a substance resembling liquid paraffin, used as a menstruum for local remedies applied to the mucous membranes.

benzoi'num (U.S., Br). Benzoin, a balsamic resin *Styrax benzoin;* a stimulant expectorant in doses of gr. 5–30 (0.3–2.0), but usually employed by inhalation in laryngitis and bronchitis.

benzoiodohydrin (ben-zo-i"o-do-hi'drin). Chloriodobenzoic-acid glycerin ester; a brownish yellow fatty substance employed, when saccharated, as a substitute for the iodides; dose, ʒi (4.0).

ben'zol. Benzene.

ben'zolism. The symptoms occasioned by the inhalation of benzol vapors.

benzonaph'thalene. A mixture of naphthalene and benzoic acid.

ben'zonaphthol. Benzoyl* naphthol.

benzoni'trile. Phenyl cyanide, a colorless oil with the odor of bitter almonds, derived from benzoic acid by the action of lead sulphocyanate.

benzoparacresol (ben"zo-par-ah-kre'sol). An intestinal antiseptic in doses of gr. 4 (0.25)

benzophenoneid (ben"zo-fe-no'ne-id). A non-caustic germicide, **tetramethyl-diapsidobenzo-phenoid,**

employed like yellow pvoktanin in ulcerative lesions of the cornea, skin, and mucous membranes.

benzopy'rine. Antipyrine benzoate.

ben"zoquin'one. A quinine derivative, $C_6H_4O_2$; it is shown experimentally to cause catharsis; see *anthraquinone*.

benzosal'icin. Populin, benzoyl* salicin.

benzosal'in. Trade name for the methyl ester of benzoylsalicylic acid; a white crystalline powder, soluble in alcohol and ether, but not in water; employed in rheumatism and neuralgia in doses of gr. 8–15 (0.5–1.0)

ben'zosol. Guaiacol* benzoate, benzoyl guaiacol.

benzosulphim'idum. Glusidum (U.S.).

ben'zoyl. The benzoic acid radical, C_7H_5O, forming benzoyl compounds or benzoates **b. chlo'ride,** C_6H_5COCl, a colorless liquid of pungent odor, derived from benzoic acid by the action of phosphorus pentachloride; used as a reagent. **b. gly'cin, b. gly'cocoll,** hippuric acid. **b. guai'acol,** guaiacol benzoate. **b. meth'ide,** hyp one. **b. naph'thol,** a white, tasteless, odorless, crystalline p wder obtained from betanaphthol by the action of benzoyl chloride; employed as an intestinal antiseptic in doses of gr. 4–8 (0.25–0.5). **b. perox'ide,** a crystalline substance made by the interaction of sodium peroxide and benzoyl chloride; employed in 2 or 3 per cent. solution in oi as an application to ulcers and to burns an l scalds. **b. sal'icin,** populin, benzosalicin, $C_{22}H_{22}O_8 + 2H_2O$, a glucoside from the bark and leaves of *Populus niger* and *P. tremula*, occurring in the form of a white powder, antipyretic in doses of gr. 2–4 (0.13–0.25)

ben'zyl. A hydrocarbon radical, C_7H_7, or $C_6H_5CH_2$. **b. al'cohol,** phenmethylol, phenyl carbinol, $C_6H_5.CH_2.OH$, a substance possessing marked local anesthetic properties. **b. ben'zoate,** a colorless, nearly odorless, oily liquid with a sharp burning taste, insoluble in water but miscible with alcohol; it reduces the contractility of unstriped muscular tissue, possessing marked antispasmodic properties; employed in biliary and renal colic, spastic constipation, vesical spasm, asthma, high blood pressure, uterine colic, etc. **b. cin'namate,** $C_9H_7O_2C_7H_7$, a constituent of balsam of Peru, employed in the treatment of pulmonary tuberculosis in intramuscular doses of 5 c.c. of a 1 per cent solution in olive oil. **b. fu'marate,** dibenzyl fumarate, $C_6H_5CH_2.OOC.CH{\cdot}CH.COO.CH_2C_6H_5$, a white crystalline solid, odorless, almost tasteless, and nearly insoluble in water, but soluble in alcohol; employed for the same purposes as benzyl benzoate but is slower in action; dose, gr. 5 to 20 (0.3 to 1.3). **b. man'delate,** the benzyl ester of mandelic acid, having an antispasmodic action similar to that of b. benzoate. **b. suc'cinate,** dibenzyl succinate, $C_6H_5CH_2.OOC.CH_2.CH_2.COO.CH_2.C_6H_5$, occurs as a white or slightly yellowish crystalline powder, odorless, and almost tasteless, soluble in alcohol and the fixed and volatile oils, but insoluble in water; its action and dosage are the same as those of b. fumarate.

benzyl'ic. Relating to or containing benzyl.

benzyl'idene. A hydrocarbon radical, C_7H_6.

Béraneck's tuber'culin (ba-ran-ek') [Edmond *Béraneck*, Swiss zoologist and bacteriologist, *1859.] See under *tuberculin*

Bérard's an'eurysm (ba-rar') [Auguste *Bérard*, French surgeon, 1802–1846.] An arteriovenous aneurysm in the tissues outside of the injured vein.

Béraud's lig'ament (ba-ro') [Bruno Jean Jacques *Béraud*, French surgeon, 1823–1865.] Vertebropericardial ligament, extending from the junction of the 4th and 5th dorsal vertebræ to the pericardium. **B.'s valve,** Krause's* valve.

Berberida'ceæ. An order of polypetalous dicotyledonous plants, which includes the barberry, or berberis.

ber'berine. An alkaloid, $C_{20}H_{17}NO_4$, from berberis, occurring in yellow needles or prisms of bitter taste; employed like berberis in doses of gr. 2–5 (0.13–0.3).

ber'beris, gen. *berber'idis* (N.F.). 1. Barberry, Oregon grape root, the rhizome and roots of *Berberis aquifolium, B. nervosa*, and other species of Berberis; tonic and antiperiodic in doses of gr. 15–60 (1 0–4.0). **B. aquifo'lium** is employed in eclectic practice as a tonic during convalescence, as an adjuvant in the treatment of syphilis, and in catarrhal condition of the upper air-passages, in doses of 2 drops of the specific medicine in water every two to four hours. 2. (B.A.). The dried stem of *B. aristata;* similar to the preceding.

ber'gamot. The fruit of *Citrus bergamia*, the rind of which contains the oil of bergamot, used as a perfume.

bergap'ten. A camphor-like substance obtained from the oil of bergamot.

Bergenhem's opera'tion (bair'gen-hem) [B. *Bergenhem*, Swedish surgeon, contemporary.] A method for the implantation of the ureter into the rectum.

Berger's meth'od (bair-zha') [Paul *Berger*, French surgeon, *1845] Treatment of transverse fracture of the patella by suture of the fragments.

Berger's paresthe'sia (bair'ger) [Emil *Berger*, Austrian physician, contemporary.] Paresthesia of the legs in young patients, especially at the beginning of a movement. **B.'s symp'tom,** irregularity of the pupil sometimes observed in tabes and general paralysis.

Bergeron's chore'a (bair-zhĕ-rawn') [Etienne Jules *Bergeron*, Parisian physician, 1817–1900.] Electric chorea (2); also called Bergeron-Henoch's disease.

Bergmann's incis'ion (bairg'mahn) [Ernst von *Bergmann*, German surgeon, 1836–1907.] An incision in the flank for exposing the kidney.

Bergonié meth'od (bair-gŭ-ne-a') [Jean A. *Bergonié*, Bordeaux physician, 1857–1925.] General faradization for the reduction of fat.

beriberi (ber'ĭ-ber'ĭ) [Singhalese, extreme weakness.] Kakké, endemic neuritis; a specific polyneuritis, occurring in endemic form in eastern and southern Asia, and sporadically in other tropical and mild temperate regions; it prevails especially in armies, prisons, ships, and wherever large numbers of men are kept together. There is stiffness of the muscles with atrophy, neuritic pains, and paresis. Dyspnea is frequent and in certain forms, called *wet b.*, edema is a prominent symptom. Beriberi is a deficiency disease due to a lack of vitamines in the diet; in the far East it is largely due to the almost exclusive use of polished rice.

Ber'kefeld fil'ter. A filter of diatomaceous earth through which bacteria of ordinary size cannot pass, so that the filtrate is practically sterile These are three grades—W, fine; N, normal; V, coarse.

Ber'kovitz test. For pregnancy: a few drops of the woman's citrated blood are instilled into one eye, causing dilatation or contraction, sometimes the two alternately, of the pupil if pregnancy exists.

Ber'lin-blue. Prussian blue, ferrocyanide of iron, used as a dye in histology.

Ber'lin's disease' [Rudolf *Berlin*, German ophthalmologist, 1833–1897.] Commotio retinæ.

Bernard's canal' or **duct** (bair-nar')[Claude *Bernard*, French physiologist, 1813–1878.] Santorini's duct, ductus pancreaticus accessorius [BNA]. **B.'s gran'ular lay'er,** the inner layer of cells lining the acini of the pancreas. **B.'s punc'ture,** diabetic* puncture.

Bernard-Horner syndrome (bair-nar'-hor'nur.) Horner's* syndrome.

Bernard-Sergent syn'drome (bair-nar' sair-zhań'). Diarrhea, vomiting, and collapse occurring in Addison's disease.

Ber'nays' sponge [Augustus Charles *Bernays*, St. Louis surgeon, 1854–1907.] A compressed disc of aseptic cotton which swells when moistened; used in packing cavities.

Bern'hardt's disease' [Martin *Bernhardt*, Berlin neurologist, 1844–1915.] Meralgia paræsthetica; also called *Bernhardt-Roth's syndrome*.

Bernheimer's fi'bers (bern'hi-mer) [Stefan *Bernheimer* Austrian oculist, *1861.] A bundle of white fibers connecting Luys' body with the optic tract.

berr'y [A.S. *berie*.] In botany, an indehiscent fruit with succulent pulp (*pericarp*) containing the seeds, and with a tough *epicarp* or skin

Berthollet's fluid (ber-to-la') [Claude Louis *Berthollet*, French chemist, 1748–1822.] A mixture of the solutions of sodium chloride and sodium hypochlorite. **B.'s law,** salts in solution will always react upon each other so as to form a less soluble salt, if possible.

Bertiella (bur-ti-el'lah). A genus of tapeworms occurring in apes and monkeys, a species of which, *B. studeri* or *satyri*, has been found once in a child in Mauritius.

bertillonage (bur'til-on-aj) [Jacques (1852–1922) and Alphonse (1853–1914) *Bertillon*, French scientists.] A method of physical measurements for purposes of identification.

Bertin's bones (bair-tań') [Exupère Joseph *Bertin*, French anatomist, 1712–1781.] Conchæ sphenoidales, sphenoidal turbinals; four ossicles of pyramidal shape, the spines of which are in contact with the medial pterygoid lamina, the bases forming the roof of the nasal cavity. **B.'s col'umn,** columna renalis. **B.'s lig'ament,** Bigelow's ligament, ligamentum iliofemorale. **B.'s oss'icles, B.'s bones,** conchæ sphenoidales.

beryll'ium. The element glucinum.

Berze'lius's quan'titative meth'od [Baron Johan Jakob *Berzelius*, Swedish chemist, 1779–1848.] Precipitation of albumin by acetic acid and weighing the precipitate. **B.'s test,** for albumin in the urine by the addition of metaphosphoric acid.

beset'ment. Obsession.

Besnier's rheu'matism (ba-ne-a') [Jules *Besnier*, French physician, nineteenth century.] Chronic synovitis.

Besredka's meth'od (bes-red'kah) [Alexander *Besredka*, of the Pasteur Institute, Paris.] The production of local immunity to staphylococci and other organisms, infection by which is thought primarily dependent upon an affinity between these organisms and special cells in the skin or mucous membranes. This is effected by application to the skin of dressings soaked in germ-free filtrates of bouillon cultures of the organisms. **B.'s vaccine,** sensitized vaccine.

Best's operation [Vans *Best*, Scotch surgeon, 1836–1875.] A radical operation for hernia, consisting in a subcutaneous suture of the abdominal ring.

bestiality (bes-ti-al'i-ti). Sexual relations with an animal.

Bestusheff's tinc'ture (bes-too'shef). [Count Alexei Petrovich *Bestusheff*-Riumin, Russian field marshal, 1693–1766.] Tinctura ferri chloridi ætherea (N.F.).

be'ta [L.] Beet.

be'ta [G.] The second letter of the Greek alphabet, *β* Used in chemical nomenclature to denote the second in a series of compounds; see *alpha*. **b. granule, b. rays, b. substance,** etc., see these words.

be'tacism [G *bēta*, the second letter of the alphabet.] A defect in speech in which the sound of *b* is given to other consonants.

beta-eigone (be"tă-i'gōn). An albuminous compound of bromine, similar in its therapeutic action to the bromides, but somewhat slower of absorption and more lasting in effects.

beta-eucaine (be"tă-u'kah-ēn). Eucainæ hydrochloridum (U.S.).

beta-eunol (be-tă-u'nol). Trade name of a mixture of naphthol and eucalyptol, employed as an antiseptic in surgical dressings.

beta-hypophamine (be"tă-hi-pof'am-ēn). The pressor, muscular tonic, and antidiuretic principle of the posterior lobe of the hypophysis.

beta-iminazolylethylamine (be"tă-im-in-az"o-lil-ĕthil'am-ēn) Ergamine.

betaine (be'tah-ēn). Trimethyl glycocoll, oxyneurine, a crystalline alkaloid, $C_5H_{11}NO_2$, a decomposition product of lecithin, occurs in *Beta vulgaris* (the common beet) and in many vegetable and animal substances; is said to be an emmenagogue in doses of gr. 2–4 (0.13–0.26) **b. hydrochlo'ride,** acidol; has been employed in hypochlorhydria, dose gr. 1–5 (0.06–0.3).

beta-naph'thol (U.S. and Br.). A buff colored powder or yellowish scales, a phenol occurring in coal-tar and also prepared from naphthalene, employed internally as an intestinal antiseptic in doses of gr. 1–5 (0.06–0.3), and externally in scabies, eczema, and certain other skin diseases. **b.-n. ben'zoate,** benzoyl naphthol. **b.-n. sal'icylate,** naphthyl salicylate.

beta-naph'thyl. Beta-naphthol.

beta-oxybutyric acid (be"tă-oks-i-bu-tir'ik as'id). An acid, $CH_3.CHOH.CH_2.COOH$, one of the acetone bodies occurring in the blood and urine in severe cases of diabetes.

beta-phenylpropionic acid (be"tă-fen"il-pro-pi-on'ik as'id). Acidum hydrocinnamicum.

be'tel (B.A.) The dried leaves of *Piper betle*, a climbing East Indian plant; stimulant and narcotic; the fresh leaves are wrapped around the betel nut (*Areca catechu*) and lime, and chewed.

Bethea's method (beth-a') [Oscar W. *Bethea*, New Orleans physician, *1878.] For the detection of unilateral impairment of expansion of the pulmonary apices. The examiner, standing behind the patient, places the tips of his fingers on the upper surfaces of corresponding ribs high up in the axillæ; unilateral impairment of expansion is indicated by the lessened respiratory movement of the rib on the affected side.

beth'root [corruption of *birthroot*.] Birthroot trillium.

be'tol. Naphthyl salicylate

beton'ica. Wood betony, the root of *Stachys betonica, Betonica officinalis,* formerly employed as an emetic and cathartic.

Bett'endorff's test [Anton Joseph Hubert Maria *Bettendorff,* German chemist, *1839.] For arsenic: after mixing the suspected fluid with hydrochloric acid a solution of chloride of tin is added, when now a piece of tin foil is added a brown precipitate forms.

Bet'ula [L.] A genus of trees or shrubs of the order *Betulaceæ,* birch, yielding an oil containing methyl salicylate, and employed internally and externally to meet the same indications as oil of wintergreen; see *oleum betulæ.* **B. al'ba,** white birch, the source of oleum betulæ empyreumaticum rectificatum of the National Formulary. **B. len'ta,** sweet birch, yields the official methyl salicylate, formerly called oleum betulæ, oil of sweet birch, or oil of teaberry.

bet'ulin. A resin from the white birch.

bet'ulol. Trade name of a preparation of methyl salicylate, used externally in rheumatism.

between'-brain. Diencephalon.

Betz's cells [Vladimir *Betz,* Russian physician, 1834–1894.] Large pyramidal cells in the Rolandic area, especially in the cortex of the precentral gyrus.

Beur'mann's disease' [Lucien de *Beurmann,* French physician, †1924.] Disseminated gummatous sporotrichosis.

Beuttner's meth'od (boyt'ner) [Oskar *Beuttner,* Swiss gynecologist, *1866.] Partial extirpation of the adnexa, with preservation of a portion of the ovaries, and transverse cuneiform excision of the fundus uteri.

Bev'an's incis'ion [Arthur Dean *Bevan,* American surgeon, *1860.] An incision along the lateral border of the rectus abdominis exposing the gall-bladder.

Beyerinck's reaction (bi'er-ink) [M. W. *Beyerinck,* Dutch physician, contemporary.] On the addition of a few drops of sulphuric acid to a twenty-four-hour culture of cholera spirilla in 0.5 per cent. peptone solution a bright rose-violet color is produced; cholera-red reaction.

bezoar (be'zōr) [Pers. *padzahr,* antidote.] A concretion formed in the stomach or intestine in ruminants and occasionally also in man, formerly, and still in certain countries of the far East, regarded as of antidotal and therapeutic value. According to the substance forming the ball, we find *trichobezoar* or hair-ball, *trichohytobezoar* consisting of hair and vegetable fiber mixed, and *phytobezoar* or food-ball.

Bezold's ab'scess (bets'ōlt) [Friedrich *Bezold,* Munich otologist, 1842–1908.] A deep abscess in the neck associated with suppuration of the middle ear and purulent sinus thrombosis. **B.'s mastoidi'tis,** primary mastoiditis. **B.'s perforation,** perforation on the inner surface of the mastoid. **B.'s sign** or **symp'tom,** inflammatory edema at the tip of the mastoid process in mastoiditis. **B.'s tri'ad,** diminished perception of the deeper tones, retarded bone conduction, and negative Rinne's sign, pointing, in the absence of objective signs, to otosclerosis.

BF. [Fr. *bouillon filtré,* filtered bouillon (culture)] Denys' tuberculin; see under *tuberculin.*

bhang (bang) [Hind.] Cannabis indica.

Bi. Chemical symbol of bismuth.

bi- [L. *bis,* twice] A prefix denoting two, twice, or double.

Bial's test (be'ahl). To 5 c.c. of a boiling mixture of 30 per cent. hydrochloric acid, 500 c.c., 10 per cent. ferric chloride, 25 drops, and orcin, 1 gram, add 0.5 c.c. of the suspected urine; if pentoses are present a green color appears.

Bianchi's nod'ule (be-ahng'ke) [Giovanni Battista *Bianchi,* Italian anatomist, 1681–1761.] Nodulus valvulæ semilunaris.

biarticular (bi-ar-tik'u-lar) [L. *bi-,* double, two, + *articulus,* joint.] Diarthric, relating to two joints.

biasterionic (bi-as-ter-i-on'ik). Relating to both asterions, noting especially the *b. diameter,* or *b. width,* the shortest distance from one asterion to the other.

biauricular (bi-aw-rik'u-lar). Relating to both auricles, in any sense.

biba'sic. Noting an acid having two hydrogen atoms replaceable by bases to form salts.

bib'ulous [L. *bibere,* to drink.] Absorbent.

bicam'eral [L. *camera,* chamber.] Having two cavities or hollows, noting especially an abscess divided by a more or less complete septum

bicap'sular. Having a double capsule.

bicar'bonate. Any carbonate having two parts or equivalents of carbonic acid to one of the base.

bicardiogram (bi-kar'di-o-gram) [L. *bi-,* two, twice doubled.] A composite curve in an electrocardiogram representing the combined effects of the right and left ventricles.

bicaudal, bicaudate (bi-kaw'dal, bi-kaw'dāt) [L. *cauda,* tail.] Having two tails.

bicell'ular. 1. Composed of two cells. 2. Having two compartments or chambers.

biceph'alus [L. *bi-,* double, + G. *kephalē,* head.] Dicephalus.

bi'ceps [L. *bi-,* double, + *caput,* head.] Having two heads; noting especially certain muscles, which see under *musculus.*

bicep'tor. A receptor having two complementophile groups.

Bichat's canal' (be-shă') [Marie François Xavier *Bichat,* French anatomist, 1771–1802.] Arachnoid canal, extending from the third ventricle to the middle of B.'s fissure. **B.'s fat-pad** corpus adiposum buccæ. **B.'s fis'sure,** a horseshoe-shaped fissure, with concavity forward and downward, below the corpus callosum, its extremities being continuous with the fissure of Sylvius. **B.'s fora'men.** B.'s canal. **B.'s lig'ament,** the lower fasciculus of the posterior sacroiliac ligament. **B.'s mem'brane,** lamina basalis. **B.'s protu'berance,** B.'s fat-pad. **B.'s tu'nic,** the tunica intima of the blood-vessels.

bichlo'ride. Noting a compound having two parts or equivalents of chlorine to one of the other element.

bicho (be'cho). Caribi; epidemic gangrenous proctitis.

bichro'mate. Noting a salt having two parts or equivalents of chromic acid to one of the base.

bicil'iate (bi-sil'i-āt). Having two cilia.

bicip'ital. 1 Two-headed. 2 Relating to a biceps muscle.

$Bi_2(CO_3)_3$. Bismuth carbonate.

bicon'cave. Concave on two sides, noting especially a form of lens.

bicon'vex. Convex on two sides, noting especially a form of lens.

bicor'nous, bicor'nuate, bicor'nate [L. *cornu,* horn] Two-horned; having two processes or projections.

bicus'pid [L. *bi-,* two, + *cuspis,* point.] Having two points, prongs, or cusps. **b. tooth,** one of the false molar or premolar teeth, see *tooth.* **b. valve,** mitral valve, valvula* bicuspidalis.

b. i. d. Abbreviation for L. *bis in die,* twice a day.

Bid'der's gang'lion [Heinrich Friedrich *Bidder* German anatomist in Dorpat, 1810–1894.] One of two ganglia on the cardiac nerves in the septum between the atria just above the atrioventricular septum.

bidermoma (bi-dur-mo'mah) [L. *bi-*, two, double, + G. *derma*, skin, + *-ōma*.] Didermoma, a teratoid growth representing two germ-layers.

bidet' [Fr. a small horse.] A tub for a sitz bath, having also an attachment for giving vaginal or rectal injections.

Biebrich scarlet (be'brikh skar'let). Scarlet* red.

Bieg's test (bēg). If hearing is better through an ear trumpet attached to a catheter in the Eustachian tube than through one resting in the external auditory meatus, there is probably destruction of the ossicular chain in the tympanum.

bienn'ial [L. *bi-*, two, + *annus*, year.] 1. Occurring once in two years. 2. Lasting two years; in botany, noting a plant which springs from the seed the first year, and blossoms and dies the second season.

Bier's meth'od (bēr) [August Karl Gustav *Bier*, Berlin surgeon, *1861.] 1. Venous anesthesia.* 2. Corning's method of spinal anesthesia. 3. Treatment of various surgical conditions by artificial hyperemia induced by suction or by constriction of the proximal portion of the limb. **B.'s spots,** light spots or patches occurring in an area of congested skin; similar appearances may be produced at times by tapping or stroking an engorged skin.

Biermer's disease' (bēr'mer) [Anton *Biermer*, German physician, 1827–1892.] Pernicious anemia. **B.'s sign,** Gerhardt's sign.

biermerin (bir'mur-in) [after Anton *Biermer*, German physician, 1827–1892.] An extract of the gastric mucosa suggested for the treatment of pernicious anemia.

Biernacki's sign (byer-naht'ske) [Edmund Adolfovich *Biernacki*, Polish pathologist, 1866–1912.] Analgesia of the ulnar nerve (the 'funny-bone,' sensation being absent) in tabes dorsalis and dementia paralytica.

Biesiadecki's fos'sa (bya-syah-det'ske) [Alfred von *Biesiadecki*, Polish physician, 1839–1888.] Fossa iliacosubfascialis.

Biett's col'lar (be-et') [Laurent Théodore *Biett*, Swiss physician in Paris, 1781–1840.] A raised epidermic ring surrounding a papulolenticular syphilide. **B.'s disease',** lupus erythematodes. **B.'s solu'tion,** a solution of ammonium arsenate, employed locally in skin diseases.

bi'fid [L. *bifidus*, forked.] Split or cleft; separated into two parts.

bifo'cal. Having two foci; noting a lens used in cases of presbyopia, in which one portion is suited for distant vision, the other for reading and near work in general; the latter, the cylinder, may be cemented to the base, spherical, lens (see *paster*), or it may be fused into the base (see *kryptok*), or it may be ground integral with the spherical lens (see *ultex*); see also *Franklin*.

bifo'rate [L. *bi-*, twice, + *foratus*, perforated.] Having two openings.

bifur'cate, bifur'cated [L. *bi-*, two, + *furca*, fork.] Forked, two-pronged, having two branches.

bifurca'tion. A forking; a division into two branches.

Bigelo'via [Jacob *Bigelow*, Boston physician and botanist, 1787–1879]. A genus of composite plants. **B. vene'ta,** a species from which damiana is obtained.

Big'elow's ligament [Henry Jacob *Bigelow*, Boston surgeon, 1816–1890.] Y-ligament, ligamentum* iliofemorale. **B.'s sep'tum,** calcar femorale.

bigemina (bi-jem'ĭ-nah). Pulsus bigeminus.

bigem'inal [L. *bi-*, two, + *geminus*, twin.] Paired, double, twin. **b. bod'ies,** corpora bigemina the anterior pair, or nates, of the corpora quadrigemina of the brain.

bigem'inum. One of the bigeminal* bodies.

biger'minal [L. *bis*, in a twofold manner, + *germen*, bud, germ.] Relating to two germs or ova.

big-head. Osteoporosis (2).

big-knee. 1. In cattle a bursitis over the knees due to injury from the hard floor of the cowbarn, when getting up or lying down. 2. In horses a tumor involving the bony structure of the knee-joint, of the nature of spavin or ringbone.

big-leg. Lymphangitis of the leg in the horse.

bi'labe [L. *bi-*, two, + *labium*, lip.] A slender forceps for seizing and removing urethral or small vesical calculi.

bilat'eral [*bi-*, two, + *latus*, side.] Relating to, or having two sides.

bilateralism (bi-lat'er-al-izm). A condition in which the two sides are symmetrical.

bil'berry. The fruit of *Vaccinium myrtillus*, the European whortleberry or blueberry.

bile [L. *bilis*.] Gall, fel; the yellowish brown or green fluid secreted by the liver; it contains sodium glycocholate and sodium taurocholate, cholesterin, biliverdin and bilirubin, mucus, fat, and lecithin; it is discharged into the duodenum and there assists in the emulsionizing of fats, increases peristalsis, and retards putrefaction. **A-b.,** bile from the common duct. **B-b.,** bile from the gall-bladder. **C-b.,** bile from the hepatic duct.

absence, acholia. **calculus,** cholelith, gallstone. **carrying or containing,** biliferous, choledochus. **causing secretion,** cholagogue. **deficiency,** oligocholia. **excess,** hypercholia, polycholia. **sormation,** cholopoiesis. **inspissation,** pachycholia. **in the blood,** cholemia. **in the urine,** choluria. **suppression,** ischocholia. **vomiting,** cholemesia.

bile-cyst. Gall-bladder.

bile-duct. One of the excretory ducts of the liver, ductus biliferus. **com'mon b.-d.,** ductus choledochus. **cys'tic b.-d.,** the duct leading from the gall-bladder to the common b.-d.

Bilhar'zia [Theodor *Bilharz*, German helmintholo-gist, 1825–1862.] A genus of trematode worms, now called *Schistosomum*.

bilhar'zial, bilhar'zic. Relating in any way to the parasite. *Bilharzia*, *Schistoma*, or *Distoma hæmatobium*.

bilharzi'asis, bilharzio'sis. Bilharz disease, Egyptian hematuria, urinary schistosomiasis.*

bil'iary. Relating to bile. **b. cal'culus** gallstone. **b. col'ic,** severe paroxysmal pain due to the passage of a gallstone through the cystic and common bile-ducts. **b. duct,** bile-duct. **b. secre'tion,** (1) the bile; (2) the secretion of bile.

bilicyanin (bil''ĭ-si'an-in) [L. *bilis*, bile, + G. *kyanos*, blue.] A pigment resulting from the oxidation of biliverdin; it is blue in an alkaline medium, purple in an acid one.

bilifac'tion, bilifica'tion [L. *bilis*, bile, + *facere*, to make.] The formation of bile.

bilifla'vin [L. *bilis*, bile, + *flavus*, yellow.] A yellow pigment derived from biliverdin.

biliful'vin [L. *bilis*, bile + *fulvus*, tawny.] A mixture of bilirubin with other substances of an indeterminate nature.

bilifuscin (bil-ĭ-fus'in) [L. *bilis*, bile, + *fuscus*, dusky.] A dark green pigment, $C_{16}H_{20}N_2O_4$, found in gallstones.

bilihu'min [L. *bilis*, bile, + *humus*, earth.] A blackish residue left after treatment of bile with various solvents.

bil'in. An extractive from bile consisting of a mixture of sodium glycocholate and sodium taurocholate.

bilineurine (bil''ĭ-nu'rēn). $C_5H_{15}NO_2$, a poisonous ptomaine from many organic substances; choline.

bil'ious. 1. Biliary, relating to bile. 2. Noting a digestive disturbance marked by anorexia, furred tongue, constipation, headache, more or less vertigo, and occasionally slight jaundice, assumed to be dependent upon disordered function of the liver. 3. Suffering from biliousness.

biliousness (bil'yus-nes). A minor ailment, thought to depend upon a slight disturbance of the hepatic functions; see *bilious* (2).

biliphe'in [L. *bilis*, bile, + G. *phaios*, dusky.] Bilifulvin, bilirubin, cholophein; the brown or orange-red coloring matter of bile, or a mixture of the same with other indeterminate substances.

bilipra'sin [L. *bilis*, bile, + *prasum*, leek.] A green pigment, similar to, if not identical with, biliverdin.

bilipur'pin, bilipur'purin [L. *bilis* bile, + *purpura*, purple.] A purple pigment derived from biliverdin.

bilipyrrhin (bil''ĭ-pir'rin) [L. *bilis*, bile, + G. *pyrrhos*, flame-yellow.] Bilifulvin.

biliru'bin [L. *bilis*, bile, + *ruber*, red.] A reddish bile pigment, $C_{16}H_{18}N_2O_3$, identical or isomeric with hematoidin.

biliru'binate. A chemical compound containing bilirubin.

bilirubinemia (bil-ĭ-roo-bin-e'mĭ-ă) [*bilirubin* + G. *haima*, blood.] The presence of bilirubin in the blood where it exists normally in a slight degree; the determination of the quantity, whether above or below normal, gives what is called the icterus index.

bi'lis [L.]. Bile, fel, gall. **b. bu'bula** [L. *bubulus*, pertaining to cattle], fel bovis.

biliu'ria [L. *bilis*, bile, + *urina*, urine.] Choluria, the passage of bile salts in the urine.

biliverdin (bil''ĭ-vur'din) [L. *bilis*, bile, + Fr. *verd* (L. *viridis*), green.] A green pigment, $C_{16}H_{20}N_2O_5$, in human bile and that of the herbivora.

biliver'dinate. A chemical compound containing biliverdin.

bilixanthin (bil-ĭ-zan'thin) [L. *bilis*, bile, + G. *xanthos*, yellow.] A yellow oxidation product of bilirubin, $C_{16}H_{18}N_2O_6$.

Billroth's anesthet'ic (bil'rōt) [Christian Albert Theodor *Billroth*, Viennese surgeon, 1829–1894.] A mixture of alcohol and ether, each 30.0, and chloroform, 100. **B.'s disease'**, malignant lymphoma. **B.'s opera'tions** for cancer of the stomach: I, excision of the pylorus with end-to-end anastomosis of the stomach and duodenum; II, resection of the pylorus with the greater part of the lesser curvature of the stomach, closure of the cut ends of the duodenum and stomach, followed by a posterior gastrojejunostomy. **B.'s strands,** trabeculæ lienis. **B.'s su'ture,** button suture.

bilo'bate [L. *bi-*, two, + *lobus*, lobe.] Having two lobes.

bilob'ular [L. *bi-*, two, + *lobulus*, lobule.] Having two lobules.

biloc'ular [L. *bi-*, two, + *loculus*, cell.] Bicellular, bicameral.

biloc'ulate. Bilocular.

bilophodont (bi-lof'o-dont) [L. *bi-*, two-, + G. *lophos*, ridge, + *odous* (*odont-*), tooth.] Having two ridges on the teeth, designating certain animals, such as the kangaroo.

Bim'ana [L. *bi-*, two, + *manus*, hand.] An order of *Mammalia*, coextensive with the genus *Homo:* it is now generally abandoned, the suborder of *Primates* which includes man being the *Anthropoidea*.

biman'ual [L. *bi-*, two, + *manus*, hand.] Relating to, or performed by, both hands.

bimas'toid [L. *bi-*, two.] Relating to both mastoid processes.

bimo'dal. Noting a frequency curve characterized by two peaks.

bi'nary [L. *binarius*, consisting of two.] Noting a chemical compound containing two elements.

binaural [bin-aw'ral) [L. *bini*, a pair, + *auris*, ear.] Relating to both ears; binotic.

binauricular (bin-aw-rik'u-lar). Biauricular.

bind (bīnd) [A.S. *bindan*.] 1. To bandage confine, encircle with a band. 2. To join together with a band or ligature. 3. To unite with, to neutralize; noting the combination of the toxin and antitoxin molecules, or of two substances having a chemical affinity.

binder (bīn'der). 1. A broad bandage, especially one encircling the abdomen. 2. Anything that binds, as in the case of the antitoxin molecule; see *bind* (3). **obstet'rical b.,** a broad piece of muslin, covering the abdomen from the ribs to the trochanters, tightly pinned at the back, affording support after childbirth.

bindweb (bīnd'web). Neuroglia.

biner'vate. Having two nerves, neurons, veins, or ribs, noting an insect's wing or a leaf.

Binet age (be-na') [Alfred *Binet*, French psychologist, 1857–1911.] The age of the normal child with whose intellection (as measured by the Binet-Simon tests) the intellection of the abnormal child corresponds. The Binet age of the idiot is 1 to 2 years; of the imbecile, 3 to 7 years; of the moron, 8 to 12 years. **B. test,** submitting a child or an adolescent to a mental examination by asking him a series of questions graded according to the intelligence of normal children at different ages; according to the answers given the subject is graded as normal, backward, a moron, an imbecile, or an idiot; see above, *Binet age*

Binet-Simon test (be-na'se-mawn') [Alfred *Binet* Th. *Simon*.] Binet* test.

Bing test [Albert *Bing*, Austrian otologist, 1844–1922.] The patient signals at the instant he no longer hears a vibrating tuning-fork in contact with the skull; the external auditory canal is then closed with the finger and the sound is again heard if the middle ear is unobstructed.

biniodide (bin-ī'o-dīd) [L. *bini*, double.] A compound having two equivalents of iodine to one of the other element

$Bi(NO_3)_3$. Bismuth nitrate.

binocular (bin-ok'u-lar) [L. *bini*, paired, + *oculus*, eye.] Adapted to the use of both eyes, said of an optical instrument.

bino'tic [L. *bini*, a pair, + G. *ous* (*ōt-*), ear.] Binaural.

binov'ular [L. *bini*, pair, + *ovulum*, dim. of *ovum*, egg.] Relating to two ova.

binoxide (bin-oks'īd) [L. *bini*, pair.] A compound containing two parts or equivalents of oxygen to one of the other element.

binuclear, binucleate (bi-nu'kle-ar, bi-nu'kle-āt) [L. *bi-*, two, + *nucleus*.] Having two nuclei.

binu'cleolate [L. *bi-*, two.] Having two nucleoli.

Binz's test (bints) [K. *Binz*, German pharmacologist 1832–1912.] For quinine in the urine: a precipitate is thrown down on the addition of iodine 2, potassium iodide 1, in water 40, if quinine is present.

bi'oblast [G. *bios*, life, + *blastos*, sprout, germ.] 1. Micella. 2. Altmann's* granule.

biocatalyst (bi-o-kat'al-ist) [G. *bios*, life, + *catalysl.*] A biochemical catalyzer, enzyme.

biochemical (bi-o-kem'i-kal). Relating to physiological chemistry.

biochmeics, biochemistry (bi-o-kem'iks, bi-o-kem'istrĭ) [G. *bios*, life.] Physiological chemistry.

bioclimatology (bi-o-kli-mă-tol'o-ji) [G. *bios*, life, + *klima*, climate, + *-ology*. The science of the relation of climate to life.

$(BiO)_2CO_3$. Bismuthyl carbonate, subcarbonate of bismuth.

biocolloid (bi-o-kol'oyd) [G. *bios*, life, + *colloid.*] A colloid existing in, and supplying the stable part of the plant or animal organism.

biodynam'ic. Relating to biodynamics.

biodynam'ics [G. *bios*, life, + *dynamis* force.] Biophysiology, the science dealing with the force or energy of living matter.

bi'ogen [G. *bios*, life, + *gennaō*, I produce.] 1. Protoplasm. 2. One of a number of unstable molecules in protoplasm which are assumed to be continually undergoing assimilation and disassimilation. 3. The assumed substance of the soul or spiritual body.

biogen'esis [G. *bios*, life, + *genesis*, origin.] The origin of living things from living things, as opposed to abiogenesis or spontaneous generation.

biogenet'ic. Relating to biogenesis.

biokinet'ics [G. *bios*, life, + *kinēsis*, motion.] The branch of science which treats of the changes which developing organisms undergo.

biolite (bi'o-lit). Trade name of an apparatus producing infrared rays.

biological (bi-o-loj'i-kal). Relating to biology.

biol'ogist. A student of biology.

biol'ogy [G. *bios*, life, + *-logia*.] The branch of science which deals with living organisms.

bioluminescence (bi"o-lu-min-es'ens) [G. *bios*, life.] Luminescence produced by living organisms.

biolyt'ic [G. *bios*, life, + *lytikos*, solvent.] Capable of destroying life.

biomag'netism. Animal magnetism.

biomechanics (bi-o-mĕ-kan'iks) [G. *bios*, life, + *mēkhanikos*, pertaining to movements or to machines.] The science of the action of forces, internal or external, on the living body.

biom'etry [G. *bios*, life, + *metron*, measure.] In life insurance, the determination of the probable duration or expectation of life.

bi'on [G. *biōn*, living.] A living thing.

Biondi-Heidenhain stain (bĭ-on'dĭ hi'den-hīn) [see *Heidenhain.*] For spirochetes: a mixture of saturated aqueous solutions of acid fuchsin or rubin S, 20, methyl-green, 50, and orange G, 100, diluted 1 to 60 or 1 to 100.

bion'ergy [G. *bios*, life, + *energeia*, energy.] Vital force.

$BiO(NO_3)$. Bismuthyl nitrate, subnitrate of bismuth.

bionomics (bi-o-nom'iks). 1. Bionomy. 2. Ecology.

bion'omy [G. *bios*, life, + *nomos*, law.] The laws of life; the science which treats of the laws regulating the vital functions.

biono'sis [G. *bios*, life, + *nosos*, disease.] A disease due to some living pathogenic agent.

biophagism, biophagy (bi-of'a-jizm, bi-of'a-jĭ) [G. *bios*, life, + *phagō*, I eat.] The deriving of nourishment from living organisms.

bioph'agous. Feeding on living organisms, noting certain parasites.

bi'ophore [G. *bios*, life, + *phoreō*, I carry.] The ultimate unit, according to Weissmann, an aggregation of which composes the determinant, which in turn is one of the units forming the id; it is so named on the supposition that in it resides the vitality of the cell.

biophysics (bi-o-fiz'iks) [G. *bios*, life, + *physikos*, natural, physical.] The science dealing with the phenomena and laws of matter as found in the living body.

biophysiog'raphy [G. *bios*, life, + *physis*, nature, + *graphō*, I write.] The branch of biology which deals with the natural history of living organisms; descriptive biology.

biophysiology (bi"o-fiz-i-ol'o-jĭ) [G. *bios*, life, + *physis*, nature, + *-logia*.] The science of the development, morphology, and functions of living organisms.

bi'oplasm [G. *bios*, life, + *plasma*, thing formed.] Protoplasm, especially in its relation to living processes and development.

bioplas'mic. Relating to bioplasm.

bioplas'min. The hypothetical constituent of the cytoplasm upon which the life and functional activity of the cell depends.

bioplas'son [G. *bios*, life, + *plassōn*, forming.] Elsberg's term for protoplasm.

bi'oplast [G. *bios*, life, + *plastos*, formed.] An amebiod cell, leucocyte, lymphocyte.

bioplas'tic. 1. Relating to a bioplast. 2. Promoting growth, noting the energy derived from food; vegetative.

bi'opsy [G. *bios*, life, + *opsis*, vision.] Examination of tissues, normal or morbid, excised from the living body.

biopyoculture (bi-o-pi'o-kul-chur) [G. *bios*, life, + *pyon*, pus, + culture.] A culture made from pus in which there are living phagocytes.

bior'bital [L. *bi-*, two.] Relating to both orbits.

bios (bi'os) [G. *bios*, life.] A substance found in cultures of growing yeast.

bi'oscope. Any instrument employed in bioscopy.

bios'copy [G. *bios*, life, + *skopeō* I view.] Examination of the body made to determine the presence or absence of life.

bio'sis [G. *biōsis*, life.] Life in general.

biostat'ics [G. *bios*, life, + *statikos*, causing to stand.] 1. The science of metabolism, of the relation between structure and function. 2. Vital statistics.*

biostatis'tics. Vital statistics.*

biosterin (bi-ŏ-ste'rin). Vitamin A, or some substance having similar properties.

Biot's breath'ing (be-o') [Camille *Biot*, French physician, nineteenth century.] Rapid respiration with rhythmical pauses, occurring commonly in meningitis.

biota (bi'o-tah) [G. *biotē*, life.] All living things, the combined fauna and flora of any region.

biotax'is [G. *bios*, life, + *taxis*, arrangement.] 1. The classification of living beings according to their anatomical characteristics. 2. Cytobiotaxis.

biotic (bi-ot'ik). 1. Relating to the life forces. 2. Relating to the biota, or the combined fauna and flora of a region or country.

biot'ics [G. *biōtikos*, relating to life.] The science which deals with the functions of life, or vital activity and force.

biot'omy [G. *bios*, life, + *tomē*, a cutting.] Vivisection.

biotox'in. A poisonous substance found in the urine and in the tissue juices.

biotrip'sis [G. *bios*, life, + *tripsis*, a rubbing.] A smooth, shiny, pigmented condition of the skin of the backs of the hands, forehead, shins, and elsewhere in the aged; life-wear.

bi'otype (bi'o-tīp). Genotype.

bipal'atinoid. A capsule with two compartments, used for taking remedies in nascent form; the reaction between the two substances takes place as the capsule dissolves in the stomach, and so sets free the remedy.

bipara (bip'ah-rah) [L. *bi-*, two, + *parere*, to give birth.] Secundipara, a woman who has borne two children at different labors.

biparasit'ic. Relating to a parasite of a parasite.

bipari'etal [L. *bi-*, two, + *paries*, wall.] Relating to both parietal bones of the skull.

bip'arous [L. *bi-*, two, + *parere*, to bring forth.] Bearing two young.

bipar'tite [L. *bi-*, two, + *pars*, part.] Divided into two parts.

bi'ped [L. *bi-*, two, + *pes*, foot.] 1. Two-footed. 2. Any animal with only two feet.

bi'pedal. 1 Relating to a biped 2 Having two feet only.

bipen'nate, bipen'niform [L. *bi-*, two, + *penna* feather.] Having a double feather arrangement. **b. muscle,** a muscle with a central tendon toward which the fibers converge on either side like the barbs of a feather.

bipep'tid. A combination of two amino-acids; see *peptid*.

biper'forate [L. *bi-*, two, + *perforatus*, pierced.] Having two foramina or perforations.

bipo'lar [L. *bi-*, two, + *polus*, pole.] 1. Having two poles, noting those nerve cells in which the branches project from two, usually opposite, points. 2. Relating to both ends or poles of a bacterial or other cell.

bipp [*bismuth-iodoform-paraffin-paste.*] A name given by Rutherford Morison to a mixture of one part bismuth, two parts iodoform, and one part paraffin, blended to form a paste; employed as an antiseptic application to wounds previously cleaned and dried.

bipubiot'omy. Double pubiotomy, division of the pubis on both sides.

birch [A.S. *birce*.] A tree of the genus *Betula*.

Bircher's opera'tion (bēr'kher) [Heinrich *Bircher*, Swiss surgeon, 1850–1923.] Reduction of a dilated stomach by a line of sutures uniting the anterior and posterior walls of the organ.

Birch-Hirschfeld's method (bērkh-hērsh'felt) [Felix Victor *Birch-Hirschfeld*, German pathologist, *1842.] A method of staining for amyloid degeneration. The specimen, fixed in alcohol and imbedded in paraffin, is cut into very thin sections; these sections, freed from the paraffin, are placed for 5 minutes in a 2 per cent. alcoholic solution of Bismarck brown, then washed in alcohol and distilled water and afterward placed for 5 or 10 minutes in a 2 per cent. aqueous solution of gentian violet and finally decolorized in dilute acetic acid. The nucleus is stained brown, the protoplasm is unstained, and the amyloid substance is colored a ruby red.

bird's-eye. Adonis.

Bird's for'mula [Golding *Bird*, English physician, 1814–1854.] The last two figures of the specific gravity of a specimen of urine give approximately the number of grains of solids to the ounce.

Bird's sign [Samuel Dougan *Bird*, Australian physician, contemporary.] The presence of a zone of dulness on percussion with absence of respiratory signs in hydatid cyst of the lung.

bird's-head type. Aztec idiocy.*

birefrac'tive, birefrin'gent [L. *bi-*, two.] Refracting twice, splitting a ray of light in two.

Bir'kett's her'nia [John *Birkett*, English surgeon, nineteenth century.] Protrusion of synovial membrane through a rent in the joint capsule.

Birkhaug test (burk'hawg) [Konrad E. *Birkhaug*, Rochester, N. Y., physician, *1892.] A test for rheumatism, analogous to the Dick and Schick tests, consisting in the injection of 0.1 c.c. of a 1:100 dilution of the toxin of a streptococcus isolated from a case of rheumatic fever.

birth. The passage of the child from the uterus to the outside world; the act of being born. **b.-control',** oligogenics, restriction of the number of offspring by means of contraceptive measures. **b. pal'sy,** obstetric paralysis, hemiplegia or paraplegia of the newborn due to injury received during birth. **premature' b.,** the b. of a viable child, *i.e.* from early in the seventh month to full term. **still b.,** the birth of a dead fetus.

birth'mark. Nævus.

birth'root. Trillium.

bisacro'mial [L. *bis*, twice.] Relating to both acromion processes.

bi'salt. An acid salt *

bisax'illary [L. *bis*, twice.] Relating to both axillæ.

Bischoff's crown (bish'of) [Theodor Ludwig Wilhelm von *Bischoff*, German anatomist, 1807–1882.] The inner zone resulting from the duplication of the epithelial capsule of the ovum, the external layer constituting the granular membrane.

Bischoff's opera'tion (bish'of) [Johann Jacob *Bischoff*, German gynecologist, *1841.] Total removal of the gravid uterus by the abdominal route.

Bischoff's test (bish'of) [Carl Adam *Bischoff*, German chemist, *1855.] For biliary acids; a red color appears upon adding sugar and dilute sulphuric acid and heating.

biscuit (bis'kit) [L. *bis*, twice, + *coctus*, cooked.] 1. Bread, raised or unraised, cooked in flat cakes. 2. In ceramics, once baked porcelain before being glazed; hence in dentistry porcelain baked sufficiently to harden but not to glaze.

bisect' [L. *bi-*, two, + *secare*, to cut.] To cut in two, to divide into two parts.

bisection (bi-sek'shun) Division into two parts.

bisexual (bi-seks'u-al) [*bi-*, two, + *sexus*, sex.] Hermaphrodite.

bisferious (bis-fer'ī-us) [L. *bis*, twice, + *ferire*, to strike.] Bisferiens, beating twice, said of the pulse.

bishop's cap. Cap (3).

Bishop's sphyg'moscope [Louis Faugères *Bishop*, New York physician, *1864.] An instrument for measuring the blood-pressure, with special reference to diastolic pressure. The tube is filled with a solution of cadmium borotungstate, and the scale is the reverse of that of a mercurial manometer, the pressure being made directly by the weight of the liquid and not by compressed air.

bish'oping. Altering the appearance of a horse with intention to deceive; as the simulation, in the case of an old horse, by means of caustic or the hot iron, of marks on the incisors.

bisiliac (bis-il'ī-ak). Relating to any two corresponding iliac parts or structures, as the iliac bones or iliac fossæ.

Bisk'ra but'ton [*Biskra*, a town in Algeria.] Oriental boil.*

bis'mal. Trade name for bismuth methylene-digallate, a bluish gray powder, employed as an intestinal astringent in doses of gr. 1–3 (0.06–0.2).

Bismarck-brown [after Prince *Bismarck* German statesman, 1815–1898.] Vesuvine.

bismarsen (biz'mar-sen). Sulpharsphenamine bismuth, the sodium salt of a bismuth derivative of arsphenamine-methylene-sulphonic acid, recommended for the treatment of syphilis in intramuscular doses of 0.1 to 0.2 gm.

bismogen (biz'mo-jen). An hypothetical constituent of the body tissues which is believed to convert inert bismuth into the therapeutically active bismoxyl.

bismogenol (biz-moj en-ol). A proprietary bismuth preparation recommended for the treatment of syphilis in doses of ♏15 (1 c.c.) given intramuscularly every 3 to 5 days, 12 to 15 times.

bis'mon. Colloidal bismuth oxide, employed like bismuth subnitrate in doses of gr. 8 (0.5) in milk.

bismosol (biz'mo-sol). A sterile solution of potassium sodium bismuthotartrate, 10 gm., piperazine, 0.3 gm., in 100 c.c. of an aqueous solution of glucose; suggested for use in the treatment of syphilis in intramuscular injection of ♏15 (1 c.c.) every 2 to 7 days until 20 doses have been given, the course being repeated, if necessary, after an intermission of one month.

bismostab (biz'mo-stab). A suspension of metallic bismuth, used by intramuscular injection in the treatment of syphilis.

bismoxyl (biz-mok'sil). A term applied to bismuth when activated by the hypothetical bismogen.

bis'mutal. A mixture of sodium salicylate and bismuth-sodium phosphate; antiseptic and astringent.

bis'mutan. Isutan, a yellow insoluble powder said to be a mixture of resorcin and bismuth tannate, employed in diarrhea in doses of gr. 1–5 (0.06–0.3).

bismuth (biz'muth). A reddish, crystalline, brittle, triad metal, chemical symbol Bi, atomic weight 208; several of its salts are employed in medicine; for the official salts see under *bismuthi*. **b. betanaph'tholate,** bismuthi betanaphtholas. **b. oxy-iodogall'ate,** airol. **b. vi'olet,** hexamethyl-para-rosaniline-bismuth, a bactericidal stain, prepared by titrating a weak solution of bismuth and ammonium citrate with a solution of crystal violet. **liq'uid b.,** liquor bismuthi (N.F.). **mag'istery of b.,** b. subnitrate.

bismu'thi betanaph'tholas. Bismuth betanaphtholate, orphol, an odorless, tasteless, grayish powder; employed especially in enteritis and as an intestinal antacid when a laxative effect is not desirable, in doses of gr. 5–20 (0.3–1.2). **b. carbo'nas,** b. subcarbonas (U.S.), b. oxycarbonas (Br. '14). **b. cit'ras,** bismuth citrate, a white amorphous powder; employed to make the following. **b. et ammo'nii cit'ras,** bismuth and ammonium citrate, ammoniocitrate of bismuth, occurs in white shining scales, soluble in water; intestinal astringent in doses of gr. 2–5 (0.12–0.3). **b. ox'idum** (Br.), a dull yellowish crystalline powder, employed for the same purposes as the subnitrate in doses of gr. 5–10 (0.3–0.6). **b. ox'idum hydra'tum,** hydrated oxide of bismuth; a yellowish white powder obtained by precipitating an aqueous solution of bismuth trinitrate; external application. **b. oxycarbo'nas** (Br.), b. subcarbonas (U.S.). **b. oxyni'tras,** b. subnitras. **b. salicyl'as,** (Br.), bismuth salicylate, a whitish or yellowish powder, used in diarrhea and typhoid fever in doses of gr. 5–20 (0.3–1.3). **b. subcarbo'nas** (U.S.), bismuth subcarbonate, b. oxycarbonate (Br.), a yellowish or whitish powder, used for the same purposes as the subnitrate in doses of gr. 10–60 (0.6–4.0). **b. subgal'las** (U.S.), bismuth subgallate, dermatol, a yellowish powder, employed internally in diarrhea in doses of gr. 5–10 (0.3–0.6), and externally as an antiseptic dusting powder. **b. subni'tras** (U.S. and Br.), bismuth subnitrate, magisterium bismuthi, a white powder employed internally as an intestinal astringent and in gastric ulcer in doses of gr. 5–30 (0.3–2.0), and externally as a dusting powder. **b. subsalicyl'as** (U.S.), bismuth subsalicylate, a white or whitish crystalline or amorphous powder; employed as an intestinal antiseptic in doses of gr. 5–10 (0.3–0.6). **b. tribromphe'nas,** xeroform, bismuth tribromphenate, bismuth tribromphenol, a yellowish insoluble powder, used as an intestinal antiseptic in doses of gr. 3–8 (0.2–0.5), and externally as a substitute for iodoform.

bis'muthol. Bismutal.

bismuthosis (biz-muth-o'sis) Chronic bismuth poisoning.

bismu'thum praecipita'tum (Br.) Bismuth.

bis'muthyl [*bismuth* + G. *hylē*, stuff.] The group, BiO, which behaves chemically as an atom of a univalent metal; its salts are the oxysalts or subsalts of bismuth.

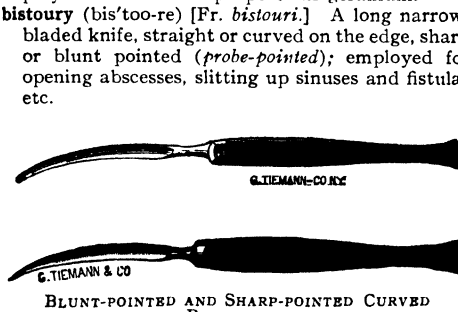
bismu'tose. Trade name of a compound of bismuth and albumin, a white powder insoluble in water; employed in intestinal disorders in doses of 3½–2 (2.0–8.0).

bi'sol. Trade name for soluble bismuth phosphate, a white powder, containing about 20 per cent. bismuth trioxide; intestinal antiseptic and astringent in doses of gr. 4–8 (0.25–0.5).

bistephan'ic. Relating to both stephanions, noting particularly the *b. width* of the cranium, or *b. diameter*, the shortest distance from one stephanion to the other.

bistor'ta [L. *bis*, twice, + *tortus*, twisted.] Bistort, the rhizome of *Polygonum bistorta*, English serpentary, sweetdock, snakewort; astringent, employed for the same purposes as geranium.

bistoury (bis'too-re) [Fr. *bistouri*.] A long narrow-bladed knife, straight or curved on the edge, sharp or blunt pointed (*probe-pointed*); employed for opening abscesses, slitting up sinuses and fistulæ, etc.



BLUNT-POINTED AND SHARP-POINTED CURVED BISTOURIES.

bistratal (bi-stra'tal) [L. *bi-*, two, + *stratum*, layer.] Having two strata or layers

bisul'phate. A compound having two parts or equivalents of sulphuric acid to one of the base

bisul'phide. A compound containing two equivalents of sulphur to one of the other element.

bisul'phite. A compound containing two equivalents of sulphurous acid to one of the base.

bitar'trate. A compound containing two equivalents of tartaric acid to one of the base.

bite (bit) [A.S. *bītan.*] 1. To cut or hold with the teeth. 2. A wound made with the teeth. 3. Puncture of the skin made by an insect. 4. In dentistry the bite is the force with which the jaws may be closed in the crushing of food, and also the mutual relation of the incisors in the upper and lower jaws. 5. The impression in paraffin, wax, or other plastic material of the teeth or edentulous alveolar processes to serve in modeling an artificial denture. **check b.**, the record, on a thin sheet of wax or other plastic material, of the impression of the teeth in central, lateral, or protrusive occlusion, constituting a check on the teeth in the articulator. **closed b.**, the lower incisors extend nearly or quite to the gingival line behind the upper incisors when the jaws are closed. **end-to-end b.**, the incisors meet along the biting edge when the jaws are closed. **open b.**, the upper and lower incisors do not meet when the jaws are closed. **over b.**, the upper incisors overlap the lower when the jaws are closed.

bitem'poral. Relating to both temples or temporal bones.

Bitot's spots (be-to'). Minute areas of desquamating epithelium on the conjunctiva in xerosis of that membrane.

bitrochanteric (bi-tro-kan-ter'ik). Relating to two trochanters, either to the two trochanters of one femur or to both great trochanters.

bitt'er. Having a taste like that of strychnine or quinine. **b. water**, one of a group of purgative mineral waters containing magnesium sulphate. **b. wood**, quassia.

bitt'ers. 1. An alcoholic liquor in which bitter vegetable substances, quinine, gentian, or the like, have been steeped. 2. Bitter vegetable drugs, usually employed as tonics; such are quassia, gentian, cinchona, etc. **Swe'dish b.**, tinctura aloes composita.

bit'tersweet. Dulcamara.

Bit'torf's reac'tion [Alexander *Bittorf*, German physician, contemporary.] In cases of renal colic the pain on squeezing the testicle or pressing the ovary radiates to the kidney.

bitukni (bi-took'nī). Trade name of a binocular attachment to the microscope, enabling one to view microscopic objects stereoscopically with the aid of a single objective.

bitu'men sulphona'tum (N.F.). Sulphonated bitumen, a viscous fluid, reddish-brown to brownish-black in color, with a strong, characteristic, empyreumatic odor, soluble in water and in glycerin, partly soluble in alcohol or ether and entirely soluble in a mixture of equal volumes of these solvents; it contains not less than 2.5 per cent. of ammonia, not more than 8 per cent. of ammonium sulphate, and not less than 10 per cent. of total sulphur; it is obtained by the destructive distillation of certain bituminous schists, sulphonating the distillate and neutralizing the product with ammonia; average dose gr. 3 (0.2).

biuret (bi-u'ret). Allophanamide, $C_2H_5N_3O_2.H_2O$, a derivative of urea, obtained by prolonged heating, occurring in the form of white acicular crystals. **b. reac'tion**, when to an aqueous solution of a protein, sodium hydroxide and a dilute solution of copper sulphate are added, a red to violet coloration is produced. **b. test**, the practical application of the b. reaction in the detection of urea or any soluble protein; see under *Test.*

biv'alence, biv'alency. A combining force, or valence, double that of the hydrogen atom.

biv'alent [L. *bi-*, two, + *valere*, to have power. Having a combining power equal to two atoms of hydrogen.

bi'valve [L. *bi-*, two, + *valva*, door.] Having two movable sides or parts connected by a hinge. **b. spec'ulum**, see under *speculum.*

biven'ter [L. *bi-*, two, + *venter*, belly.] Two-bellied digastric; noting several muscles. **b. cervi'cis** inner portion of the complexus, musculus* spinalis capitis. **b. mandib'ulæ**, musculus digastricus.

biven'tral. Digastric.

bi'vo. Trade name of a preparation of meat extract, iron, glucose, and alcohol.

bix'in. The orange dye obtained from arnotto.

bizygomatic (bi-zi-go-mat'ik). Relating to both zygomas.

Bizzozero's plate'let (bit-sot'ser-o) [Giulio *Bizzozero*, Italian physician, 1846–1901.] Hematoblast **B.'s red cells**, nucleated red blood-corpuscles.

Bjerrum's sign (byer'oom) J. *Bjerrum*, Danish ophthalmologist, 1827–1892.] A bow-shaped scotoma in close proximity to the blind spot, in beginning glaucoma.

black [A.S. *blaec.*] Without color, reflecting no light, the opposite of white. **b. draught**, mistura sennæ composita. **b. drop**, acetum opii. **b. fe'ver**, kala-azar. **b. fly**, buffalo gnat, sand fly a biting dipterous insect of the genus *Simulium* **b. head**, comedo. **b. spore**, a body noted by Ross in the malarial organism, either a hyperparasite (a species of *Nosema*) or indicating a special stage in the life history of the organism **b. wash**, lotio hydrargyri nigra.

Black's for'mula [J. A. *Black*, British army surgeon, contemporary.] A translation of Pignet's* formula into British measurements: F = (W + C) − H; F is the empirical factor W is the weight in pounds, C the chest girth in inches at full inspiration, and H the height in inches; a man is classed as very strong when F is over 120, strong between 110 and 120, good 100 to 110, fair 90 to 100, weak 80 to 90, very weak under 80.

black'berry. Rubus.

black-eye. An ecchymosis of the eyelids and surrounding parts.

black-haw. Viburnum prunifolium.

blackleg. 1. Purpura of the legs. 2. Quarter evil symptomatic anthrax.*

black-quart'er. Blackleg (2).

black'water fe'ver. Hemoglobinuria.

bladd'er [A.S. *blaedre.*] 1. Vesica; the distensible elastic bag serving as a receptacle and place of storage for the urine; also any similar receptacle for fluid, as the gall-bladder. 2. Vesicle, blister, any hollow structure or sac, normal or pathological containing a serous fluid. **brain b.**, a cerebral vesicle in the embryo. **fascic'ulate b.**, one with hypertrophied walls, the muscular bundles standing out like interlacing cords on the inner surface of the viscus. **gall-b.**, cholecyst, vesica fellea [BNA]. **stam'mering of the b.**, irregular halting or interruption of the stream in micturition. **u'rinary b.**, vesica urinaria [BNA.] a muscular bag in which the urine is received and stored temporarily before being discharged through the urethra.

absence, acystia. atrophy, cystatrophy. catarrh, cystorrhea. **dilatation,** cystauxe, cystectasy. **examination,** cystoscopy. **fixation,** cystopexy. **hemorrhage,** cystorrhagia. **hernia,** cystocele, colpocystocele (into vagina), proctocystocele (into rectum). **incision,** cystotomy; epicystotomy (suprapubic), hypocystotomy (perineal), colpocystotomy (through vagina), cystidolaparotomy, cystidoceliotomy (through abdominal

wall), proctocystotomy (through rectum), lithotomy (for stone) **inflammation,** cystitis; pericystitis, epicystitis, paracystitis (of parts around). **irritability,** cysterethism. **pain,** cystalgia, cystodynia, cystoneuralgia. **plastic surgery,** cystoplasty, cystorrhaphy (suture). **prolapse,** cystoptosia.

bladd'er-worm. Cysticercus.

bladder-wrack (blad'er-rak) Fucus vesiculosus.

blade-bone. Scapula.

blain [A.S. *blegen.*] A sore on the skin, blister, blotch.

Blainville ears (blaṅ-vēl') [Henri Marie Ducrotay de *Blainville*, French zoologist and anthropologist, 1777–1850.] Asymmetry in size or shape of the auricles.

Blan'card's pills [Stephen *Blancard*, Dutch physician, 1650–1702.] Pilulæ ferri iodidi.

Blan'chard's meth'od [Wallace *Blanchard*, Chicago surgeon, *1857.] Treatment of tuberculous cavities in bone by plugging with a non-medicated mixture of white wax, 1 part, and vaseline, 8 parts.

bland [L. *blandus*, soft.] Mild, unirritating, soothing.

Blandin's gland (blaṅ-dan') [Philippe Frédéric *Blandin*, Parisian surgeon, 1798–1849.] Glandula lingualis anterior; called also *Blandin-Nuhn's gland.*

Blasius' duct (blah'se-oos) [Gerard *Blasius*, Dutch anatomist, 17th century.] Ductus* parotideus

blast [G. *blastos*, offspring, germ.] Sporozoite. **b. form of red cells,** nucleated red blood cells, erythroblasts.

blastation (blas-ta'shun) [G. *blastos*, germ.] One of the inheritable variations of the germ-plasm.

blaste'ma [G. *blastēma*, a sprout.] The bioplasm of the developing embryo.

blastem'ic. Relating to the blastema.

blas'tid [G. *blastos*, germ.] The clear space in the impregnated ovum marking the site of the nucleus.

blastin (blas'tin) [G. *blastanō*, I cause to grow.] A substance which stimulates cell growth, such as comfrey or allantoin.

blastocele, blastocœle (blas'to-sēl) [G. *blastos*, germ + *koilos*, hollow.] The cavity in the morula of a developing ovum.

blastoce'lic. Relating to the blastocele.

blastochyle (blas'to-kīl) [G. *blastos*, germ, + *chylos*, juice.] The blastocelic fluid.

blas'tocyst [G. *blastos*, germ, + *kystis*, bladder.] Blastodermic vesicle, gastrocyst; the morula after its conversion into a cyst through the accumulation of fluid within the trophoblast.

blastocyte (blas'to-sīt) [G. *blastos*, germ, + *kytos*, cell.] An undifferentiated embryonic cell

blastocyto'ma. A tumor formed of blastocytes.

blastoderm, blastoderma (blas'to-durm, blas-to-dur'-mah) [G. *blastos*, germ + *derma*, skin.] The primitive cell layer in the beginning embryo, consisting of two or three layers of cells; the outer, or ectoderm, the inner, or entoderm, and a middle, or mesoderm, also called epiblast, hypoblast, and mesoblast, respectively. The blastoderm lies beneath the zona pellucida of the ovum and forms the wall of a sac the blastodermic vesicle

blastoder'mal. Blastodermic.

blastoder'mic. Relating to the blastoderm.

blas'todisc. A collection of protoplasm at one pole of the impregnated ovum.

blastogen'esis [G. *blastos*, germ, + *genesis*, origin.] Reproduction of unicellular organisms by budding.

blastogeny (blas-toj'en-ĭ) [G. *blastos*, germ, + *gennaō*, I produce.] The evolution of the body in its development from the ovum; the germ history of the organism.

blastolysis (blas-tol'i-sīs) [G. *blastos*, germ, + *lysis*, solution.] Lysis or destruction of a germ cell.

blasto'ma [G. *blastos*, germ.] 1. A neoplasm developing from an embryonic rest, blastocytoma. 2. A true tumor, a neoplasm possessing the power of autonomous growth.

blas'tomere [G. *blastos*, germ, + *meros*, part.] One of the segments into which the egg divides after conjugation of the sperm-nucleus and germ-nucleus.

blastomerot'omy. Blastotomy.

blastomycetes (blas-to-mi-se'tēz) [G. *blastos*, germ, + *mykēs*, fungus.] Saccharomycetes, yeasts, budding fungi; see *saccharomyces.*

blastomyce'tic. Relating to or caused by blastomycetes. **b. dermati'tis,** cutaneous blastomycosis.

blastomyco'sis. A disease caused by the presence and growth of blastomycetes in the tissues; it may be generalized or confined to the skin. The general symptoms are anorexia, emaciation, prostration, cough, an irregular temperature, weak and rapid pulse, multiple subcutaneous nodules which suppurate and form ulcers. The *cutaneous form* (blastomycetic dermatitis) is marked by the presence of elevated patches of varying size, presenting a verrucous surface sometimes discharging pus or crusted.

blastoneuropore (blas''to-nu'ro-pōr). An opening formed by the union of the blastopore and neuropore.

blas'tophore [G. *blastos*, germ, + *phoros*, bearing.] The part of the sperm cell which does not produce spermatozoa.

blastophthoria (blas''tof-tho'rĭ-ah) [G. *blastos*, germ, + *phthora*, corruption.] Degeneration of the germ cells as a result of poisoning by syphilis, **lead, a**lcohol, opium, etc.

blastophthoric (blas''tof-thor'ik). Relating to blastophthoria. **b. degenera'tion,** blastophthoria.

blastophyll'um [G. *blastos*, germ, + *phyllon*, leaf.] One of the blastodermal layers.

blas'topore [G. *blastos*, germ, + *poros*, opening.] The opening into the archenteron formed by the invagination of the blastula; Rusconi's anus, protostoma

blastosphere (blas'to-sfēr) [G. *blastos*, germ, + *sphaira*, sphere.] Blastodermic vesicle, blastula.

blastospher'ic. Relating to the blastosphere.

blastospore (blas'to-spōr) [G. *blastos*, germ, + *sporos*, seed.] A thallospore of round or ovoidal shape developed by budding from a hypha.

blastot'omy [G. *blastos*, germ, + *tomē*, incision.] The experimental destruction of one or more blastomeres.

blas'tula [G. *blastos*, germ.] Blastosphere.

blas'tular. Blastospheric.

blastula'tion. The formation of the blastula or blastosphere.

Blatin's syn'drome (blă-tan'). Hydatid thrill.*

Blatt'a orienta'lis. The common cockroach; the dried insect has been employed as a diuretic.

Blaud's pills (blawd, properly blo) [P. *Blaud*, French physician, 1774–1858.] Pilulæ ferri carbonatis.

bleach (blēch) [A. S. *blæcan*, to pale.] To remove color. **bleaching powder,** chlorinated lime, calx* chlorinata.

blear-eye. Lippitudo, a chronic inflammation of the margins of the eyelids.

bleb. Bulla, blister.

bleed'er. 1. A sufferer from hemophilia. 2. A phlebotomist.

blen'al. Santalol carbonate, used in gonorrhea.

blennadenitis (blen-ad-en-i'(e')tis) [G. *blenna*, mucus, + *adēn*, gland, + *-itis*] Inflammation of the mucous glands.

blennogen'ic [G. *blennos*, mucus, + *gennaō*, I produce.] Muciparous, forming mucus.

blennogenous (blen-oj'en-us). Blennogenic.

blenn'oid [G. *blennos*, mucus, + *eidos*, resemblance] Mucoid, resembling mucus.

blennometritis (blen-o-me-tri' (tre')tis) [G. *blennos*, mucus, + *mētra*, womb, + *itis*.] Inflammation of the uterine mucous membrane, especially when accompanied by a discharge.

blennophthal'mia [G. *blennos*, mucus, + *ophthalmia*] 1. Conjunctivitis 2 Gonorrheal ophthalmia

blennorrha'gia [G. *blennos*, mucus, + *-rhagia*] A profuse blennorrhea.

blennorrhagic (blen-o-raj'ik). Blennorrheal.

blennorrhe'a, blennorrhœ'a [G. *blennos*, mucus, + *rhoia*, a flow.] 1. Any mucous discharge, especially from the urethra or vagina 2. Gonorrhea. **b. alveola'ris,** pyorrhea alveolaris. **b. conjunctiva'lis,** gonorrheal ophthalmia **b. neonato'rum,** ophthalmia neonatorum. **inclu'sion b.,** conjunctivitis neonatorum caused by Chlamydozoa and not by the gonococcus; it closely resembles, histologically, trachoma.

blennorrhe'al. Relating to blennorrhea

blennos'tasin [see *blennostasis*] Cinchonidine hydrobromide, a yellow powder of bitter taste, hemostatic and astringent, employed in catarrhal inflammation of the respiratory mucous membranes in doses of gr. 1–4 (0.06–0.25).

blennos'tasis [G. *blennos*, mucus, + *stasis*, a standing] Diminution or suppression of secretion from the mucous membranes

blennostat'ic. Diminishing mucous secretion.

blennotho'rax [G. *blennos*, mucus] An accumulation of mucous secretion in the bronchi.

blennu'ria [G. *blennos*, mucus, + *ouron*, urine] The passage of an excess of mucus in the urine.

blepharadenitis (blef-ar-ad-en-i'(e')tis) [G. *blepharon*, eyelid, + *adēn*, gland, + *-itis*] Inflammation of the Meibomian glands.

bleph'aral [G. *blepharon*, eyelid] Referring to the eyelids.

bleph'arism [G. *blepharon*, eyelid] Spasmodic twitching of the eyelids.

blepharitis (blef-ar-i'(e')tis) [G. *blepharon*, eyelid, + *-itis*] Inflammation of the eyelids, especially of the margins of the lids, ciliary or marginal b., *b. ciliaris*, *b. marginalis*. **b. squamo'sa,** a chronic inflammation of the margins of the lids with the formation of branny scales. **b. ulcero'sa,** marginal b. with ulceration. **b. parasit'ica, b. phthiriat'ica,** marginal b. due to the presence of lice, *pediculous b.*

blepharoadenitis (blef-ar-o-ad-en-i'(e')tis) Blepharadenitis.

blepharoadenoma (blef"ar-o-ad-e-no'mah) [G. *blepharon*, eyelid, + *adēn*, gland, + *-ōma*] A glandular tumor, or adenoma, of the eyelid.

blepharoatheroma (blef"ar-o-ath-e-ro'mah) [G. *blepharon*, eyelid, + *athērē*, gruel, + *-ōma*] A sebaceous cyst of the eyelid.

blepharochalasis (blef-ar-o-kal'as-is) [G. *blepharon*, eyelid, + *chalasis*, a slackening.] A condition in which there is a redundancy of the upper eyelids so that a fold of skin hangs down, often concealing the tarsal margin when the eye is open; ptosis adiposa, false ptosis, dermatolysis palpebrarum.

bleph"arochromidro'sis [G. *blepharon* eyelid, + *chrōma*, color, + *hidrōs*, sweat.] Chromidrosis of the eyelids.

blepharoc'lonus [G. *blepharon*, eyelid, + *klonos*, a tumult.] Clonic spasm of the eyelids.

blepharoconjunctivitis (blef"ar-o-kon-junk-tī-vi'(ve') tis) [G. *blepharon*, eyelid, + L. *conjunctiva*, + G. *-itis*.] Inflammation of the palpebral conjunctiva

blepharodias'tasis [G. *blepharon*, eyelid, + *diastasis*, separation.] Abnormal separation or inability to close completely the eyelids.

blepharon'cus [G. *blepharon*, eyelid, + *onkos* a tumor.] A tumor of the eyelid.

blepharopachynsis (blef"ar-o-păk-kin'sis) [G *blepharon*, eyelid, + *pachynsis*, a thickening.] A thickening of an eyelid.

bleph"arophymo'sis [G. *blepharon*, eyelid, + *phimōsis*, a narrowing.] Inability to open the eye to the normal extent; blepharostenosis.

bleph"aroph'ryplasty [G. *blepharon*, eyelid, + *ophrys*, eyebrow, + *plassō*, I form.] A plastic operation for the restoration of a defect in the eyelid and the eyebrow.

bleph'aroplast [G. *blepharon*, eyelid, + *plastos*, formed.] A minute mass of chromatin formed from the nucleus in certain protozoa, or forming the base of a flagellum, acting as a center for movement of the organism; basal granule, micronucleus, motor or locomotor nucleus.

bleph"aroplas'tic. Relating to blepharoplasty.

bleph'aroplasty. [G. *blepharon*, eyelid, + *plassō*, I form] Any operation for the restoration of a defect in the eyelid

bleph"arople'gia [G. *blepharon*, eyelid, + *plēgē*, stroke] Paralysis of an eyelid, blepharoptosis.

blepharopto'sia [G. *blepharon*, eyelid, + *ptōsis*, a falling] Drooping of the upper eyelid.

blepharopyorrhea (blef"ar-o-pi-or-re'ah) [G *blepharon*, eyelid, + *pyon*, pus, + *rhoia*, a flow.] Purulent inflammation of the palpebral conjunctiva

blepharor'rhaphy [G. *blepharon*, eyelid, + *rhaphē*, seam] Tarsorrhaphy.

bleph'arospasm, blepharospas'mus [G. *blepharon*, eyelid.] Spasmodic winking, or contraction of the orbicularis palpebrarum muscle.

bleph"arosphinc"terec'tomy [G. *blepharon*, eyelid, + *sphinctēr*, sphincter, + *ektomē*, excision] Excision of a portion of the orbicularis palpebrarum muscle for the relief of obstinate blepharospasm.

bleph'arostat [G. *blepharon*, eyelid + *statos*, fixed] Eye-speculum.

blepharostenosis (blef"ar-o-sten-o'sis) [G. *blepharon*, eyelid, + *stenōsis*, a narrowing.] Blepharophymosis, inability to open the eye to the normal extent.

blepharosynechia (blef"ar-o-si-nek'ī-ah) [G. *blepharon*, eyelid, + *synechia*, continuity.] Permanent adhesion of the eyelids.

blepharot'omy [G. *blepharon*, eyelid, + *tomē*, incision.] A cutting operation on an eyelid

blepsopathia, blepsopathy (blep-so-path'ī-ah, blepsop'ă-thĭ) [G. *blepsis*, sight, + *pathos*, suffering.] Eyestrain.

bless'ed this'tle. Carduus benedictus.

Bless'ig's groove [Robert *Blessig*, Dorpat physician, 1830–1878.] A mark in the eye of the embryo indicating the position of the ora serrata, or anterior edge of the retina.

blind (blīnd) Unable to see. **b. spot,** optic disc, papilla nervi optici.

blind-gut. Cecum.

blind'ness. Loss of sight, amaurosis. **col'or b.,** an inability to recognize one or more of the seven primary colors; for the theories advanced to account for this condition, see under *Edridge-Green*, *Herring*, and *Young-Helmholtz*. **cor'tical b.,** loss of sight due to a lesion in the cortical

center of vision. **day-b.**, hemeralopia. **letter-b.**, a form of aphasia in which one is unable to recognize the significance of letters. **mind-b.**, a division of aphasia including alexia, sign-blindness, and apraxia, in which the person no longer understands what he sees. **moon-b.**, dimness of vision attributed to dazzling by the light of the tropical moon; moon-blink. **night-b.**, nyctalopia. **psy'chic b.**, loss of comprehension of the retinal images through destruction of the visual center in the brain. **red-green b.**, xanthocyanopia. **sign-b.**, loss of the ability to comprehend the meaning of signs or gestures, asymbolia (2). **snow-b.**, conjunctivitis with obscuration of vision caused by sunlight reflected from snow. **text-b., word-b.**, alexia.

blind-spot. Physiological scotoma, the point of entrance of the optic nerve into the retina.

blis'ter. 1. A collection of fluid in the skin beneath the epidermis which is raised to form the upper wall of the sac, the base of the blister being formed by the corium. 2. An agent the application of which to the skin will cause the formation of a blister. **blood-b.**, one which contains blood. **fever b.**, herpes labialis. **fly b.**, a vesicating application composed chiefly of cantharides. **fly'ing b.**, a vesicating agent applied in succession to different areas of the skin, being kept in each place only long enough to redden, but not to cause a blister.

blis'tering. 1. Causing a blister to form; vesicating. 2. The formation of a blister, bleb, or vesicle; vesication.

Bloch's scale (block) [Marcel *Bloch*, chief of laboratory in the Faculté de Médecine of Paris, †1925.] A series of mixtures of varing proportions of tincture of benzoin in glycerinated water, used to determine by comparison of turbidity the amount of albumin, precipitated by heat or nitric acid, in urine or one of the body fluids.

block [Fr. *bloquer*.] 1. To obstruct, arrest passage through. 2. A condition in which the passage of a nervous impulse is arrested, wholly or in part, temporarily or permanently; see *nerve blocking*.* **arboriza'tion b.**, heart-block. **heart-b.**, see heart-block.

blockade (blok-ād'). The intravenous injection of large amounts of colloidal dyes or other substances whereby the reaction of the reticuloendothelial cells to other influences (by phagocytosis for example) is temporarily prevented.

block'ing. 1. The arrest of passage through, obstructing. 2. In psychoanalysis, a sudden break in the association occurring when a complex is touched. **field b.**, Schleich's* anesthesia (1); insensibility over a certain area bounded by a series of injections of solution of cocaine, novocaine, or the like. **nerve b.**, arrest of the passage of impulses through a nerve, as by the injection of alcohol or of cocaine or the like; conduction anesthesia.

Blocq's disease' [Paul Oscar *Blocq*, Parisian physician, 1860–1896.] Astasia abasia.

Blondlot rays (blond-lo' rāz) [Prosper René *Blondlot*, physicist in Nancy, France, *1849.] Radiations having somewhat similar properties to those of light, but with a shorter wave length, which render certain bodies luminous; they are given off from luminous bodies, magnetic fields, certain non-luminous bodies in a state of stress, ferments, and animal and vegetable tissues; called also *n-rays*.

blood (blud) [A.S. blōd.] Sanguis, cruor; the red fluid circulating in the arteries, capillaries, and veins; it carries oxygen and reconstructive material to the tissues and removes from them carbon dioxide and other waste products. The *arterial blood* is that which has been depurated in the lungs, is of a bright red color, and is found in the pulmonary veins, left side of the heart, and the arteries; the *venous blood* is that charged with waste material, it is of a dark red color, and circulates in the veins, right side of the heart, and pulmonary artery. The blood is a fluid, *plasma*, in which are numerous cells, the *erythrocytes* and *leucocytes*, the *platelets*, and the *hemoconia*. **b.-cast**, a urinary cast formed of coagulated blood. **b.-cell**, b.-corpuscle. **b.-clot**, coagulum. **b.-cor'puscle**, b.-cell, either a red cell, erythrocyte, or a white cell, leucocyte. **b.-count**, a count of the absolute and relative numbers of red and white cells in a given quantity of blood. **b.-crys'tals**, hematoidin crystals **b.-cyst**, hematocyst, hematoma. **b.-disc**, platelet. **b.-dust**, hemoconia. **b.-motes**, hemoconia. **b.-plaque**, platelet. **b.-plas'ma**, the fluid portion of the blood as it is contained in the vessels; it differs from blood-serum chiefly in containing fibrinogen. **b.-plas'tid**, a red blood cell altered by the action of a too concentrated salt solution. **b.-plate, b.-plate'let**, hematoblast, platelet.* **b.-pois'oning**, septicemia, pyemia, toxemia.* Popularly used to designate syphilis. **b.-pres'sure**, the pressure or tension of the blood within the arteries, maintained by the contraction of the left ventricle, the resistance of the arterioles and capillaries, the elasticity of the arterial walls, and the condition of fluidity of the blood; the *systolic* or maximum b. p. is that occurring at the moment of ventricular systole; the *diastolic*, or minimum b. p. is that noted during ventricular diastole immediately preceding the systole; the difference between these two degrees of pressure is called the "pulse-pressure." **differential b.-p.**, the different readings of the b.-p. on the two sides of the body. **b.-puz'zles**, foreign bodies or deformed corpuscles, seen under the microscope, which often take stains and may be mistaken for microparasites. **b.-se'rum**, the fluid which is squeezed out by shrinkage of a blood-clot; in composition it is similar to the blood-plasma without the fibrinogen. **b.-tu'mor** (1) aneurysm (2) hematocyst, hematoma. **b. ty'ping**, determination of the isoagglutination of the blood of both donor and recipient preparatory to transfusion. The red cells contain one of two agglutinogens, A and B; the serum contains one of two agglutinins, α and β. Agglutination occurs when in the mixture of the two bloods A comes in contact with α or B with β. **b.-ves'sel**, one of the channels or tubes conveying blood, an artery, vein, sinus or capillary. **live b.**, myokymia.

aeration, arterialization, oxygenation, **hematosis. arresting discharge**, hemostatic, styptic. **cell**, hematocyte, erythrocyte, leucocyte, lymphocyte; hematoblast, platelet, hematoconia or blood-dust. **coloring matter**, hemoglobin. **deficiency**, oligemia, **ischemia**, local anemia, local asphyxia, local syncope. **destruction of**, hemolysis, hematolysis, hemocytolysis, hematocytolysis, cytohemolysis, leucocytolysis, erythrocytolysis, plasmolysis. **disease**, hematopathy, chlorosis, leucemia, anemia, methemoglobinemia, chloranemia, hematodyscrasia, oligemia, pyemia, septicemia **sapremia**, hemophthisis. **escape**, hematorrhea, **hemorrhage**, diapedesis, exudation. **excess**, polyhemia, plethora, congestion, hyperemia, hypostasis. **fatty**, lipemia, pionemia. **fibrin**, hypinosis (deficiency); **hyperinosis**, hyperinosemia (excess). **formation**, hematogenesis, hemogenesis, hematosis, hematoplasty, hematopoie-

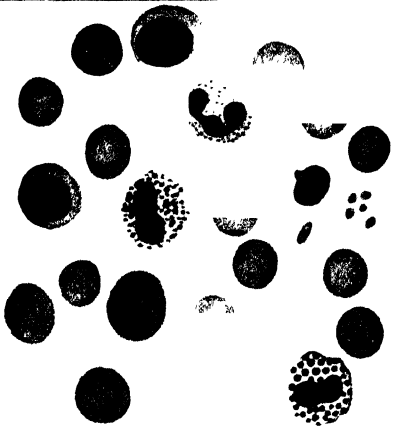


Fig. 1. Normal Blood.

Fig. 4. Pernicious Anemia.

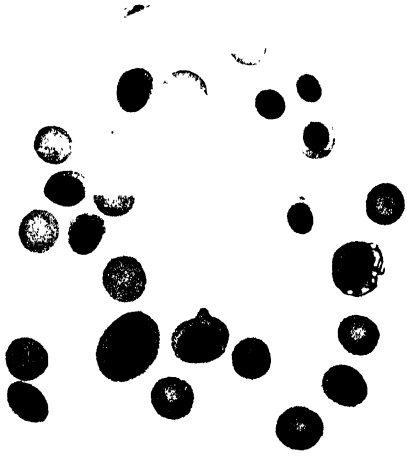

Fig. 5. Chronic Lymphatic Leucemia.

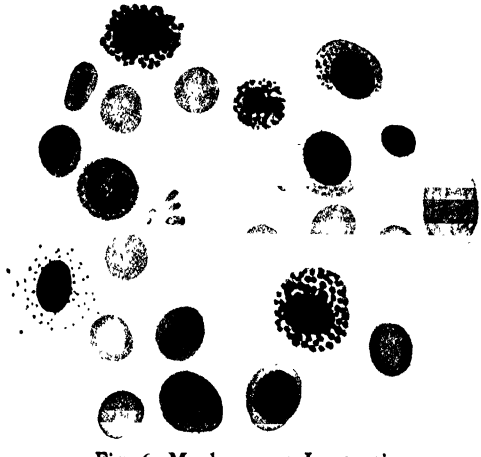

Fig. 6. Myelogenous Leucemia.

Changes in the Morphology of the Blood.

Drawn by Francis Carter Wood (Magnified 900 Diameters)

sis, sanguification; anhematosis (defective). **making of,** see *formation*. **micro-rganisms in,** bacteriemia, bacillemia, staphylococcemia, microbiohemia. **poisoning,** sapremia, septicemia, pyemia, uremia, stercoremia, copremia, toxemia, ichoremia. **prefixes** denoting, hema-, hemato-, hemo-, sangui-, **spitting,** hemoptysis. **sugar in,** glycemia, glycohemia, melitemia. **sweating of,** hematidrosis, hematohidrosis. **thickening,** anhydremia, hypohydremia, pachyemia, pachemia, pelohemia. **thinness,** anemia, spanemia, hydremia. **tumor** aneurysm, hematocyst, hematoma, hematocele. **urinary poisoning,** uremia, azotemia, urinemia. **vomiting** hematemesis.

blood'less. Without blood, anemic, exsanguinated. **b. opera'tion,** one performed with loss of little blood.

blood'letting. Abstraction of blood from the body as a remedial measure. **gen'eral b.,** abstraction of blood by an incision into an artery (*arteriotomy*) or a vein (*venesection, phlebotomy*). **lo'cal b.,** abstraction of blood from the smaller vessels by wet cupping or leeching.

blood'root. Sanguinaria.

blood'shot. Locally congested, the smaller blood-vessels of the part being dilated and visible.

blood'-vessel. A tube (artery, capillary, vein, or sinus) conveying blood.

affecting the tonus, vasomotor, vasotonic, angiotonic-vasohypotonic, vasodilator, angiohypotonic, vasohypertonic, vasoconstrictor, angiohypertonic. **capillary,** telangion, trichangion. **closure of,** by means of ligation, acupressure, torsion, artery forceps, angiotribe. **clot in,** embolus, thrombus. **coil of,** glomus, glomerulus. **degeneration,** atheroma, angiosclerosis. **dilatation,** angiectasia, vasodilatation, aneurysm, varix; telangiectasia, trichangiectasia, angiotelectasia (of capillaries). **disease,** angiopathy, angiosis; angiosclerosis, angiofibrosis, atheroma, angiomalacia; angioneurosis; telangiosis (of capillaries). **formation,** vasifaction, vasiformation, vasoformation, angiopoiesis, angiogenesis. **inflammation,** angeitis, angiitis. **junction of,** anastomosis, inosculation, synanastomosis. **narrowing,** angiostenosis, vasoconstriction. **paralysis,** angioparalysis, angioparesis, vasomotor paralysis, vasoparalysis, vasoparesis. **rupture,** angiorrhexis. **spasm,** angiospasm, vasospasm. **tumor,** angioma, hemangioma, endothelioma, aneurysm, angiosarcoma, angioglioma, telangioma, angionoma.

Blot's scis'sors (blo) [Claude Philibert Hippolyte *Blot*, Parisian obstetrician, 1822–1888.] An instrument for craniotomy, consisting of lance-pointed scissors by which the skull is pierced, and cut as the blades are opened.

blotch. A pimple, pustule, or other lesion of the skin. **pel .c b.,** pelvic* spot.

blow-fly. Flesh-fly, *Musca vomitoria*, a fly that deposits its eggs in flesh; the maggots are sometimes seen in subjects in the dissecting room.

blue. 1. Azure, the color of the clear sky, one of the primary colors of the spectrum between the indigo and the green. 2. Having the color of the sky, of the color blue. 3. Cyanotic. **b. ba'by,** a newborn infant with cyanosis, usually due to persistence of the foramen ovale of the heart. **b.-blind,** unable to distinguish the color blue. **b.-blind'ness,** acyanopsia. **b. disease',** (1) morbus cæruleus; (2) tick* fever (4). **b. gum,** (1) the line along the dental margin of the gums in lead-poisoning; (2) *Eucalyptus globulus*. **b. mass,** massa* hydrargyri. **b. oint'ment,** unguentum* hydrargyri. **b. pill,** b. mass. **b.-stone,** copper sulphate, see under *cuprum*.

blues (blūz). Mental depression or despondency.

Blum's reac'tion [Leo *Blum*, Strassburg physician, 1878–1930.] To a solution of manganese chloride and sodium metaphosphate a small quantity of lead dioxide is added and the solution is filtered; upon adding urine to the solution a pink color is formed if albumin is present

Blum'berg's sign. In active peritonitis the pain caused by pressure of the hand on the abdomen is less than that caused by sudden removal of the pressure; when the inflammatory process is subsiding the pain of pressure is greater than that produced by sudden relief of pressure.

Blumenau's nu'cleus (bloo'men-ow) [Leonid *Blumenau*, Russian neurologist, *1862.] The outer portion of the cuneate fasciculus in the oblongata.

Blumenau's plas'ter test (bloo'men-ow). A drop of tuberculin is placed in the forearm near the bend of the elbow and covered with adhesive plaster; in cases of tuberculosis a characteristic eruption appears in from 24 to 48 hours.

Blu'menbach's cli'vus [Johann Friedrich *Blumenbach*, German physiologist, 1752–1840.] The sloping portion of the sphenoid bone continuous with the basilar process of the occipital. **B.'s proc'ess,** processus uncinatus.

Blyth's test [Alexander Wynter *Blyth*, English sanitarian, contemporary.] Tincture of cochineal, added to water, forms a precipitate if lead is present.

B.M.R. Abbreviation of basal metabolism rate.

BNA. Abbreviation for Basel nomina anatomica, Basle* anatomical nomenclature.

Bo. Chemical symbol of *bohemium*.

Bo'as' point [Ismar *Boas*, Berlin physician, *1858.] A tender spot to the left of the twelfth thoracic vertebra, present in cases of gastric ulcer. **B.'s sign,** the presence of lactic acid in the gastric juice is indicative of cancer of the stomach. **B.'s test,** for hydrochloric acid in the gastric juice; a drop of a solution of resorcin and sugar, each 5, in dilute alcohol 100, added to a drop of the filtered gastric juice produces a temporary scarlet color if hydrochloric acid is present. **B.'s test break'fast,** consists of a tablespoonful of oatmeal in a quart of water boiled down to a pint; it is eaten in the morning, the stomach having previously been washed out, and the stomach contents are withdrawn and examined after one hour and a half.

Bo'as-Opp'ler bacill'us [Ismar *Boas;* Bruno *Oppler*, Breslau physician, contemporary.] *Lactobacillus boas-oppleri*.

Bob'roff's meth'od [V. F. *Bobroff*, Moscow surgeon, *1858.] Treatment of cyst of the liver by incision and removal of the lining membrane, followed by suture of the incision and closure of the abdomen without lavage or drainage.

Bochdalek's canal' or **fora'men** (bokh-dal'ek) [Vincent Alexander *Bochdalek*, Prague anatomist, 1801–1883.] Rivinus's* foramen. **B.'s gan'glion,** a ganglion of the plexus of the dental nerve lying in the maxilla just above the root of the canine tooth. **B.'s gap,** the opening in the diaphragm on either side posteriorly between the vertebral and the costal attachments. **B.'s muscle,** musculus triticeoglossus. **B.'s valve,** a fold of mucous membrane in the nasal canal at the punctum lacrimale.

Bock's nerve [August Carl *Bock*, German anatomist, 1782–1833.] The pharyngeal nerve arising from the posterior portion of the sphenopalatine ganglion, blended usually with the Vidian nerve.

Bock'hart's impeti'go [Max *Bockhart*, German physician, nineteenth century.] A form of impetigo involving the hair follicles, frequently a result of autoinoculation from the discharge of a boil.

Bo'dal's test. A test for color vision by means of variously colored blocks.

Bo'do. A genus of protozoan organisms some of which are parasitic in the intestine of man and other mammalians; it is wedge-shaped, the narrow part being twisted in itself, and is provided with two flagella. **B. urina'rius,** a species found occasionally in the urine, but probably not pathogenic.

bod'y [A.S. *bodig.*] Corpus, soma. 1. The trunk as distinguished from the head and extremities. 2. The material part of man, as distinguished from the mind and spirit. 3. The principal mass of any structure. 4. A thing, a substance. 5. In dentistry the inner portion of an artificial tooth beneath the vitreous surface. (For terms **Bollinger bodies,** see *Bollinger,* **Borrel bodies,** see *Borrel.* **brass'y b.,** a dark-colored erythrocyte containing a malarial parasite. **brown b.,** black* spore. **cil'iary b.,** the ciliary processes and muscles taken collectively. **dead b.,** corpse. **demilune' b.,** see *demilune.* **dentic'ulate b.,** fascia dentata hippocampi [BNA]. **elemen'tary b.,** (1) platelet; (2) one of the very minute organisms constituting virus;* see *Borrel* and *Paschen.* **epithe'lial b.,** parathyroid. **fat b. of the cheek,** corpus adiposum buccæ [BNA]. **fat b. of the or'bit,** corpus adiposum orbitæ [BNA]. **for'eign b.,** anything in the tissues or cavities of the body that has been introduced there from without, and that is not absorbable. **fuch'sin b.,** Russell's* body. **glass b.,** see *demilune* body.* **glo'boid b.,** a minute ultramicroscopic filtrable microorganism. **inclu'sion b.,** nucleoid, see under *inclusion.* **lentic'ular b.,** nucleus dentatus [BNA]. **no-threshold b.,** a substance in the blood plasma, the presence of which gives rise to no symptoms. **ol'ivary b.,** oliva. **pampin'iform b.,** epoophoron [BNA]. **paranu'clear b.,** attraction sphere. **perine'al b.,** the tissues between rectum and vagina in the female perineum. **pitu'itary b.,** hypophysis cerebri. **po'lar b.,** one of two minute globular masses in the ovum, expelled at the time of impregnation. **rice b.,** corpus oryzoideum.

body-cav'ity. Cœlom, the general cavity of the body, consisting of thorax, abdomen, and pelvis.

bod'y-snatch'ing. Robbing a grave of a newly buried corpse for purpose of dissection

Boeck's disease' [Caesar M. P. *Boeck,* Norwegian physician, 1845–1917.] A variety of multiple benign sarcoid,* marked by one or more large nodules or a number of firm, elastic, reddish papules, sometimes with slight scaling, with central umbilication, which finally disappear, leaving a pigmented area.

Boeck's itch [Carl Willem *Boeck,* Norwegian dermatologist, 1808–1875.] A severe form of scabies observed in Scandinavia, thought to be due to the itch-mite of the wolf, contracted by handling the skins of these animals; scabies crustosa.

Boedeker's test (be'da-ker) [Carl Heinrich Detlef *Boedeker,* German chemist, 1815–1895] For albumin in the urine, the urine is acidulated with acetic acid and potassium ferrocyanide is added; if albumin is present a white precipitate forms

Boehmer's hematox'ylin (be-mer). A. Hematoxylin crystals, 1 gm., absolute alcohol, 10 c.c.; B. potassium alum, 20 gm., distilled water, 200 c.c.; after standing for 24 hours these two solutions are mixed, and the mixture is exposed to the air for a week and then bottled; it should be filtered before use.

Boenninghausen's meth'od (bē'ning-how"zen) [C. von *Boenninghausen,* German physician, nineteenth century.] In homeopathy, the selection of a remedy by a comparison of the elements of the symptoms of the disease and the drug-symptoms without insisting upon an exact correspondence in location, sensation, and modality

Boerhaave's glands (boor'hah-veh) [Hermann *Boerhaave,* Dutch physician, 1668–1738.] Sweat glands

Boettcher's canal' (bĕt'kher) [Arthur *Boettcher,* German anatomist at Dorpat, 1831–1889.] A minute canal connecting the utricle and saccule of the internal ear. **B.'s cells,** a single layer of cells on the basilar membrane of the cochlea. **B.'s crys'tals,** crystals formed in prostatic fluid upon the addition of a one per cent. solution of ammonium phosphate. **B.'s gang'lion,** a small mass of gray matter on the vestibular branch of the cochlear nerve near its origin. **B.'s space,** Cotunnius'* space

Boettger's test (bet'ger) [Wilhelm Carl *Boettger* German chemist, *1871] For glucose: the suspected urine, alkalinized by means of sodium bicarbonate, is boiled with bismuth subnitrate, the presence of sugar is indicated by a black precipitate **B.'s test-paper,** alkanin paper.

bog'bean. Menyanthes.

Bogros's space (bog-ro') [Jean Annet *Bogros,* French anatomist, 1786–1823.] Retroinguinal space, a triangular space between the diaphragm and the fascia transversalis, at the lower angle of which is the inguinal ligament.

bohe'mium. Rhenium.

boil [properly *bile,* A S *byl,* a swelling] Furuncle. **orien'tal b.,** an infectious ulcer, beginning as a papule which soon enlarges to a nodule or large tubercle and then breaks down into an ulcer; the affection is endemic in parts of Asia Minor, Northern Africa, and India, as indicated by its various names, *Aleppo boil* or *evil, Biskra button, Delhi boil, Pendjdeh sore,* etc. It is a local infection by the Leishman-Donovan bodies.

bol'din. Boldoglucin, a glucoside from boldus, cholagogue and diuretic, employed in rheumatism and hepatic troubles in doses of gr. 1–3 (0.06–0.2).

bol'dine. A bitter alkaloid obtained from boldus, hypnotic in doses of gr. 3 (0.2), and local anesthetic

bol'do. Boldus (N.F.).

Bol'dus (N.F.). Boldo, the leaves of *Boldu boldus* or *Peumus boldus,* an evergreen shrub of Chile; employed in hepatic troubles and in genitourinary inflammations in doses of mg8 (0.5) of the N.F. fluidextract.

bole (bōl) [G *bōlos,* a lump of clay] An argillaceous earth or clay; it is found variously colored and is used as a pigment; it has also been employed medicinally as an astringent. **white b.,** terra alba, argilla.

Bole'tus [L.] A genus of mushrooms, common in pine woods, some of the species of which are edible. The eclectic remedy boletus is employed in intermittent and bilious remittent fevers when quinine fails, and also in chronic diarrhea and as a nerve stimulant in doses of a teaspoonful every two hours of a dilution of 10 drops of the specific medicine in eight tablespoonfuls of water.

Boley gauge (bo'leh gāj) [after the name of the inventor.] A watch-maker's gauge with millimeter markings, used by dentists.

Bollinger bodies (bol-lin-jur). Probably the same as the Gnarnieri bodies, composed of masses of Borrel bodies. **B. granules,** mulberry-like clusters of *Micrococcus ascoformans* occurring in botryomycosis.

Bolognini's symp'tom (bo-lon-ye'ne). A feeling of crepitation on gradually increasing pressure on the abdomen in cases of measles.

bolometer (bo-lom'e-tur) [G. *bolē*, a throw, a sunbeam + *metron*, measure.] 1. An instrument for measuring the force of the heart beat as distinguished from the blood pressure. 2. An instrument for determining minute degrees of radiant heat.

bo'lus [L.] 1. A very large pill, usually of soft consistence, made extemporaneously and to be taken at once. 2. A masticated morsel of food ready to be swallowed. 3. Bole. **b. alba,** white bole, argilla, terra alba.

bon'duc-seeds, bon'duc-nuts. The seeds of *Guilandina bonduc*, a tropical shrub growing near the seacoast; antiperiodic and tonic in doses of gr 10–15 (0.6–1.0).

bone [A.S. *bān*] 1 A hard animal tissue consisting of an organic matrix of fibers of collagen impregnated with mineral matter, chiefly calcium phosphate and carbonate; the animal matter or organic matrix, comprises about 33 per cent., the inorganic or mineral matter about 67 per cent., by weight of bone. 2 A portion of bone tissue of definite shape and size, forming a part of the animal skeleton; in man there are 200 distinct bones in the skeleton, not including the ossicles of the tympanum or the sesamoid bones other than the two patellæ. A bone consists of an outer layer of dense compact tissue, covered by the periosteum, and an inner loose, spongy tissue; the central portion of a long bone is filled with marrow (For the several bones of the body see *os*, or the qualifying word.) **ank'le b.,** astragalus, talus [BNA] **breast b.,** sternum. **car'tilage b.,** a b. developed from cartilage. **cav'alry b.,** rider's b. **coll'ar b.,** clavicle. **cor'tical b.,** the compact portion of the shaft of a long bone, surrounding the medullary cavity. **der'mal b.,** a b. formed by ossification of the cutis. **epac'tal b.,** Wormian b. **epipter'ic b.,** a Wormian b. occasionally present at the pterion or junction of the parietal, frontal, great wing of the sphenoid, and squamous portion of the temporal bones. **haunch b.,** hip b., os coxæ [BNA]. **inca'rial b.,** os* interparietale, os incæ. **inci'sive b.,** os incisivum. **intermax'illary b.,** os incisivum. **interpari'etal b.,** os incæ, os* interparietale. **jugal b.,** os zygomaticum. **lentic'ular b.,** processus lenticularis [BNA]. **len'tiform b.,** os pisiforme [BNA]. **lin'gual b.,** os hyoideum. **long b.,** pipe b., one of the bones of the extremities, of elongated shape consisting of an outer layer of compact tissue and an inner tube of spongy tissue the interstices of which are filled with marrow. **mem'brane b.,** a b. developed from membrane. **penis b.,** a more or less extensive area of ossification in the corpus cavernosum penis in certain of the lower animals, a vestige of which is occasionally found in man. **ping'pong b.,** the thin shell of osseous tissue covering a giant-cell sarcoma in a bone. **pipe b.,** long b. **pneumat'ic b.,** hollow b., one containing many air-cells. **post-ul'nar b.,** os pisiforme [BNA]. **pre-interpari'etal b.,** a large Wormian* b. occasionally found detached from the anterior portion of the interparietal b. **ri'der's b.,** ossification of the tendon of the adductor longus, following its rupture from strain in horseback riding. **ses'amoid b.,** a b. formed in a tendon where it passes over a joint. **sple'nial b., splint b.,** one of the dermal bones of the primitive head in the embryo. **su'prainterpari'etal b.,** a Wormian* b. at the posterior portion of the sagittal suture. **su'tural b.,** Wormian* b. **tympan'ic b.,** annulus* tympanicus. **Worm'ian b.,** see *Wormian*.

abscess, ostempyesis. **absorption,** osteoporosis, osteolysis, osteanabrosis, osteoclasis. **brittleness,** fragilitas ossium, osteopsathyrosis. **curvature,** osteocampsia. **death,** caries, necrosis, osteonecrosis, osteohelcosis. **disease,** osteopathy. **formation,** osteogenesis, osteogeny, ossification. **hardening,** osteosclerosis, eburnation. **inflammation,** osteitis, ostitis, osteomyelitis, osteoperiostitis, endostitis. **pain,** ostealgia, osteocope, osteodynia, osteoneuralgia **regeneration,** osteoanagennesis **softening,** osteomalacia, osteohalisteresis, mollities ossium, medullization, **tumor,** osteoncus, osteoma, osteospongioma, osteosarcoma, exostosis, osteophyma, osteophyte, osteocephaloma, osteocarcinoma, osteocystoma **ulceration,** osteohelcosis, caries

bone-ache (bōn'āk) Osteocopic pain, severe dull pain in the bones, usually of syphilitic origin.

bone-ash. Bone earth.

bone-car'tilage. 1. Cartilage which becomes ossified to form the cartilage-bones. 2. Ossein.

bone-cell. Osteoblast.

bone-conduc'tion. Transmission of sound-waves through the bones of the head; osteophony.

bone-cor'puscle. Osteoblast.

bone-earth. The mineral matter obtained by burning or calcining bones.

bone'let. Ossicle.

bone-oil. Dippel's* animal oil.

bone'set. Eupatorium.

bone'-setter. An empiric who claims the natural power of reducing old dislocations, relieving ankylosis, and setting fractures.

bone-wax. A mixture of iodoform, 40, spermaceti, 30, and oil of sesame, 30; used in filling bone cavities, by Mosetig*-Moorhof's method.

Bonfils' disease' (bawn-fēs') [Emile Adolphe *Bonfils*, French physician, nineteenth century.] Hodgkin's* disease.

Bonhoeffer's symp'tom (bon'hof-er) [Karl *Bonhoeffer*, Berlin psychiatrist, *1868.] Loss of the normal muscle tone in chorea.

Bonnaire's' meth'od. Digital dilatation of the cervix to facilitate induction of labor.

Bonnet's cap'sule (bon-na') [Amadée *Bonnet*, French surgeon, 1802–1858.] Tenon's* capsule **B.'s opera'tion,** enucleation of the eyeball.

Bonnier's syn'drome (bon-e-a') [Pierre *Bonnier*, French clinician, *1861.] Vertigo with inability to stand erect, various oculomotor troubles, pain in the area of the supraorbital nerve, auditory troubles, paroxysmal nausea, thirst, and anorexia, dyspnea, rapid or slow heart action, and various disturbances of secretion, occurring in the early stage of a bulbar lesion.

Bon'will crown [W. G. A. *Bonwill*, American dentist, 1833–1899.] An artificial crown attached to the root by means of a metal pin and nut. **B. tri'angle,** a triangle formed by lines passing from the center of the alveolar ridge of the lower jaw to the condyloid process on either side and from one condyloid process to the other.

boohoo'. Name formerly given to a fever with malaise, indigestion, and pain in various parts of the body, from which newcomers to the Hawaiian Islands sometimes suffered.

Boophilus (bo-of'i-lus) [G. *bous*, ox, + *phileō*, I love.] A genus of ticks infesting cattle; see *Margaropus*

boracic acid (bo-ras'ik as'id). Acidum boricum.

bo'racil. An antiseptic powder composed of boric and benzoic acids, acetanilid, and resorcinol.

bo'rage. Burrage, bee-bread; the leaves and flowers of *Borago officinalis;* diuretic and diaphoretic in doses of ʒ½–1 (2.0–4.0) of a fluidextract.

Boragina'ceæ. An order of gamopetalous dicotyledonous plants, which includes borage.

bo'ral. Borotartrate of aluminum, antiseptic and astringent.

bo'ralide. Trade name of an antiseptic dressing said to contain acetanilid and boracic acid.

bo'rate. A salt of boracic acid.

bo'rated. Noting anything to which borax has been added.

bo'rax (Br.). Sodii boras (U.S.).

borboryg'mus, pl. *borboryg'mi* [G. *borborygmos,* rumbling in the bowels.] The occurring of noises—rumbling, gurgling, etc.—in the stomach or intestine.

ordet's phenom'enon (bor-da') [J. *Bordet,* Belgian bacteriologist, contemporary.] Fixation of complement; on the addition of fresh serum to either sensitized blood-cells or sensitized bacteria *all* the complement, both hemolytic and bacteriolytic, in the former is removed; see Bordet-Gengou phenomenon.

Bordet-Gengou bacil'lus (bor-da'zhoń-goo'). A minute ovoid bacillus supposed to be pathogenic in whooping-cough. **B.-G. phenom'enon,** fixation of complement occurring in either Bordet's or Gengou's phenomenon; see these names. **B.-G. test,** to determine whether or not a serum contains certain amboceptors; the serum is heated and mixed with fresh normal serum (to furnish complement) and an emulsion of cells the amboceptors of which are to be tested for; after six hours sensitized erythrocytes are added; if now there is no hemolysis it is assumed that the specific amboceptors were present in the serum and appropriated the hemolytic complement.

Borgery's lig'ament (bor-zher-e'). Ligamentum popliteum obliquum.

bo'ric acid. Acidum boricum.

bo'ricin. A mixture of boracic acid and borax.

bo'rine. Trade name of a preparation said to consist largely of boracic acid with aromatic substances.

bo'rism. Symptoms caused by the ingestion of borax or any compound of boron.

Borna disease (bor'nah) [*Borna,* a locality in Saxony where a severe epidemic occurred.] An infectious encephalomyelitis of horses, cattle, and sheep caused by a filtrable virus.

bor'neol. Borneo camphor.*

bor'nyval. Borneol isovaleric acid ester; a clear, colorless, aromatic liquid, recommended as a nerve sedative in neurasthenia, hysteria, neuralgia, and neuritis; dose ♏4–12 (0.25–0.8).

borobo'rax. A mixture of boracic acid and borax.

borocaine (bo'ro-ka-ēn). Trade name of a borate of procaine.

borochloretone (bo-ro-klo're-tōn). An antiseptic dusting powder consisting of a mixture of boracic acid and chloretone.

boroflu'orin. Trade name of an antiseptic preparation said to consist of boracic and benzoic acids, sodium fluoride, and formaldehyde.

borofor'mal. An antiseptic compound of boracic and formic acids with alum ina.

bo'rogen. Ethyl borate, boric acid ethyl ester; an inflammable liquid, used by inhalation in catarrhal affections of the upper respiratory tract.

boroglyceride (bo-ro-glis'er-īd). Boroglycerin.

boroglycerin, borglyceri'num (bo-ro-glis'er-in). Glyceryl borate, boroglyceride, a soft mass obtained by heating glycerin 46, and boric acid 31, until the weight is reduced to 50; antiseptic, usually employed mixed with equal parts of glycerin, constituting the official glycerite of boroglycerin.

boroglycerol (bo-ro-glis'er-ol). Boroglycerin.

bo'rol. Borosulphate of potassium or sodium; used as an antiseptic in 20 per cent. solution in doses of ♏10–15 (0.6–1.0).

boroleum (bo-ro'le-um). An ointment said to contain boric acid, camphor, menthol, methyl salicylate, and eucalyptol in petrolatum, recommended for intranasal use in the prophylaxis and treatment of nasal catarrh.

borolyp'tol. Trade name of an intestinal antiseptic containing boracic acid.

bo'ron. A non-metallic triad element, symbol B, atomic weight 11; occurs as a hard crystalline mass or as a brown powder; with oxygen it forms boric acid.

borophe'nol. A disinfectant mixture of borax and phenol.

bo"rophenyl'ic acid. Phenyl boric acid, $C_6H_5B(OH)_2$; antiseptic in 1–5000 solution.

borosalicylic acid (bo"ro-sal-i-sil'ic as'id). An antiseptic solution containing 4 per cent. each of boracic and salicylic acids.

bo'rosol. Trade name of a mixture of boracic salicylic, and tartaric acids, aluminum tartrate and glycerin; astringent and deodorant.

Borrel blue (bor-el') [J. *Borrel,* French bacteriologist, contemporary.] A stain for spirochetes: a black precipitate of silver oxide, made by mixing solutions of silver nitrate and soda, is added to a saturated aqueous solution of methylene blue, and after shaking thoroughly the mixture is allowed to stand ten days or a fortnight; the supernatant fluid is the blue stain. **B. bodies,** elementary bodies, probably constituting the virus, found in fowl-pox and sheep-pox, thought to be the same as the Paschen* bodies.

Borrelia (bor-rel'ī-ah). A genus of bacteria of the family *Spirochætaceæ,* formerly called *Spironema,* the species of which include small corkscrew-like organisms with tapering filamentous ends. These organisms were formerly, and still are by many authorities, included in the genus *Treponema.* **B. ber'bera,**[0] the cause of relapsing fever occurring in the Arab countries of Northern Africa, probably transmitted by lice. **B. car'teri,**[0] the cause of relapsing fever in India and probably other southern Asian countries; it is transmitted by a bedbug, *Cimex rotundatus.* **B. dut'toni,**[0] the cause of West African relapsing fever, transmitted by a tick, *Ornithodorus moubata.* **B. gallina'rum,**[0] the cause of septicemia in fowls; it is transmitted by various ticks of the genus *Argas* and also by *Ornithodorus moubata.* **B. glossi'næ,**[0] a species found in the stomach of the tsetse fly, *Glossina palpalis.* **B. hy'os,**[0] a short, thick spiral organism found in the blood and diseased tissues in hog cholera. **B. koch'ii**[0] resembles *B. duttoni,* but differs from it serologically, it is the probable cause of East African relapsing fever. **B. no'vyi,**[0] is morphologically similar to *B. recurrentis,* but differs from it serologically, it is the cause of North American relapsing fever. **B. phagede'næ,**[0] a species found in the discharge from a phagedenic ulcer. **B. recurren'tis,**[0] *Spirochæta obermeieri,* Obermeier's

spirillum, the cause of European relapsing fever, transmitted by the bedbug, *Cimex lectularius*. **B. thei'leri,**[0] a species found in relapsing fever of cattle, transmitted by a tick, *Rhipicephalus decoloratus*. **B. vincent'i,**[0] *Spirochæta recta* or *Spirochæta tenuis*, a species occurring in association with *Fusiformis dentium* in Vincent's angina.

bor'sal. Borosalicylic acid.

borsal'yl. Sodium borosalicylate, prepared by heating sodium salicylate and boric acid in water; a white soluble powder, employed as an analgesic and antiseptic in rheumatism, pleurisy, chorea, and gout in doses of gr. 5–30 (0.3–2.0).

Borsieri's line (bor-sĭ-air'e). A phenomenon similar to the meningitic streak, occurring in scarlet fever.

Borthen's opera'tion (bor'ten) [Johan *Borthen*, Norwegian ophthalmologist, contemporary.] Iridotasis.

boss. 1. A protuberance, a circumscribed rounded swelling. 2. The prominence of a kyphosis, or humpback.

boss'elated. Marked by numerous bosses or rounded protuberances.

bossela'tion. 1. A boss. 2. A condition in which one or more bosses, or rounded protuberances are present.

Bossi's dila'tor (bos'se) [Luigi Maria *Bossi*, Italian obstetrician, 1859–1919.] An instrument for rapid dilatation of the cervix uteri; it consists of three or four blunt-pointed metallic rods which can be separated by a registering screw apparatus.

Bos'tock's catarrh' [John *Bostock*, British physician, 1773–1846.] Hayfever.

Bos'ton's sign [Leonard Napoleon *Boston*, Philadelphia physician, *1871.] A sign in exophthalmic goiter, consisting in (1) arrest of descent of the eyelid, (2) spasm, (3) continued descent, occurring as the eyeball is rotated downward.

Bostrœm's method. For staining actinomyses: stain in aniline water gentian violet solution, then in Weigert's picrocarmine solution, wash, and heat with alcohol until the sections are colored red-yellow.

bos'tryx [G. a curl.] In botany, a helicoid cyme.

Botal's' duct [Leonardo *Botalli*, Italian physician in Paris, *1530.] Ductus arteriosus. **B.'s fora'men,** the orifice of communication between the two atria of the fetal heart.

botan'ic, botan'ical. Relating to botany.

bot'any [G. *botanion*, dim. of *botanē*, grass.] The science which treats of plants in all their relations

Botelho's test (bo-tel'yo). To 3 c.c. of a 1 per cent. nitric acid solution in physiological saline are added 0.5 c.c. of the clarified blood serum of a cancer suspect and 0.5 c.c. of iodine-potassium iodide solution; 30 seconds later 0.5 c.c. more of the latter is added, and again 0.3 c.c. when the precipitate has sunk to the bottom of the tube; then after gentle shaking the tube is inverted, its mouth being closed with the thumb; if the cloud is sufficiently dense to hide the filaments of an electric light bulb the reaction is positive; it is positive in about 90 per cent. of cancer cases, and is negative in about 15 per cent. of non-cancerous cases.

Bothrioceph'alus [G. *bothrion*, dim. of *bothros*, a pit or ditch, + *kephalē*, head.] A genus of *Cestoidea*, or tapeworms, called also *Diphyllobothrium*.* **B. corda'tus,** a species common in dogs and man in Greenland. **B. la'tus,** *Tænia lata*, a large tapeworm of man, found in many parts of Europe, in Japan, and elsewhere in Asia; it often has several thousand segments, broader than long; the head has no sucking discs, but two deep grooves or suckers at the borders. **B. linguloid'es** or **B. man'soni,** a species of which only the larva form (*Sparganum*) has been studied; this is found in the subperitoneal connective tissue whence it wanders into the pleural cavity, urinary passages, etc.

botryoid (bot'rĭ-oyd) [G. *botryoeidēs*, like a bunch of grapes.] Having numerous rounded protuberances resembling a bunch of grapes.

Botryomy'ces [G. *botrys*, a bunch of grapes, + *mykēs*, fungus.] A genus of bacteria or fission fungi. **B. e'qui,** the specific organism of botryomycosis in horses.

botryomyco'ma Granuloma vegetans occurring in botyromycosis.

botryomyco'sis. Infection with botryomycetes, marked by the occurrence of masses of nodular growths in the lungs; it affects chiefly horses, but sometimes man.

botryomycot'ic. Relating to or affected by botryomycosis.

botryotherapy (bot"rĭ-o-ther'ă-pĭ) [G. *botrys*, a cluster of grapes, + *therapeia*, medical treatment.] Grape-cure, a method of treatment of chronic constipation, abdominal plethora, etc., by an exclusive or nearly exclusive diet of grapes.

Botry'tis [G. *botrys*, a bunch of grapes.] A genus of fungi, growing chiefly on rotten wood. **B. bassia'na,** a species causing the disease muscardine in silkworms.

bots, botts [Gael. *boiteag*, maggot] The larvæ of the botfly of the genus *Œstrus*, infesting stomach, throat, or intestines of the horse. These larvæ may cause certain digestive disorders and colics.

Bottini's opera'tion (bot-te'ne) [Enrico *Bottini*, Italian surgeon, 1837–1903.] The burning of deep channels in the enlarged prostate, by means of an intraurethral galvanocautery, in order to enlarge the orifice and cause subsequent shrinking of the middle and lateral lobes of the gland.

bottom-disease (bot'om-diz-ēz") [*bottom-lands*, where the disease prevails.] Poisoning in horses from eating rattlebox, *Crotalaria sagittalis*.

botuline (bot'u-lēn). A toxin found in sausages and imperfectly canned meats and vegetables, produced by *Bacillus botulinus;* it is poisonous.

bot'ulism [L. *botulus*, sausage.] Allantiasis; poisoning by botuline; food-poisoning.

botulismotox'in. Botuline.

boubas (bo-oo'bahs) [native Brazilian word.] Yaws.

Bouchard's coefficient (boo-shar') [Charles Joseph *Bouchard*, Parisian physician, 1837–1915.] The proportion of solids to fluid in the urine. **B.'s disease',** myopathic dilatation of the stomach. **B.'s nodes,** a thickening of the first interphalangeal joints in cases of dilatation of the stomach. **B.'s sign,** when the urine contains pus from the kidney, the addition of a few drops of Fehling's solution with shaking to the boiled urine will give rise to a number of fine bubbles which raise to the surface the coagulum produced by heating.

Bouchardat's test (boo-shar-dă') [Apollinaire *Bouchardat*, French physician and chemist, 1806–1886.] For alkaloids: a brown, alcohol-soluble precipitate is formed by the addition of potassium triniodide to a solution of any alkaloid.

Boucheron spec'ulum (boosh-rawn'). See under *ear speculum*.*

Bouchut's meth'od (boo-shū') [Jean Antoine Eugène *Bouchut*, Parisian physician, 1818–1891.] Intubation of the larynx, first suggested by

Bouchut, but not adopted because of the imperfection of the tubes employed; revived independently by O'Dwyer.* **B.'s respira'tion,** a form of respiration in children with bronchopneumonia, in which expiration is longer than inspiration. **B.'s tube,** a short cylindrical tube employed in intubation of the larynx.

Boudin's law (boo-daṅ') [Jean Christian Marie François Joseph *Boudin*, French physician, 1803–1867.] An incorrectly assumed antagonism between tuberculosis and malaria. **B.'s meth'od,** the giving of arsenic in large daily amount, but in small frequently repeated fractional doses.

Bougard's paste (boo-gar') [Jean Joseph *Bougard*, French physician, 1815–1884.] A cancer paste composed of corrosive sublimate 0.5, arsenic 1, cinnabar 5, sal ammoniac 5, wheat flour 60, starch 60, solution of zinc chloride 245.

bougie (boo-zhē') [Fr. candle.] A cylindrical instrument, resembling a sound, usually more or less flexible and yielding, employed in the diagnosis and treatment of strictures of tubular passages, such as the urethra or rectum. It is sometimes made of a soluble material, containing a medicament, and is used for making local applications to the urethra, etc. **b. à boule** (boo-zhe' ă-bool'), one with a bulbous extremity; also called *acorn-tipped*, *bulbous*, *olive-pointed*, etc.

bougienage (boo-zhe-nazh'). Examination or treatment of the interior of any canal by the passage of a bougie or cannula.

Bouillaud's disease' (boo-yo') [Jean Baptiste *Bouillaud*, French physician, 1796–1881.] Rheumatic endocarditis **B.'s tinkle,** a metallic clinking sound sometimes heard on auscultation, in cases of cardiac hypertrophy, a little to the right of the apex pulsation.

bouillon (boo-yawn') [Fr. broth, from *bouillir*, to boil.] 1. A clear beef-tea. 2 A culture medium made by soaking 500 gm. of chopped lean beef in 1,000 c.c. of water, adding 10 gm. powdered peptone, 5 gm. table salt, and 5 c.c. normal sodium hydrate (4 per cent.) solution, boiling, filtering, making alkaline by adding 10 c.c. more of normal sodium hydrate, and again boiling. **cal'cium-salt b.,** a b. to which calcium chloride, carbonate, or sulphate is added, it affords a medium comparable to one containing serum for the cultivation of certain bacteria. **carbol'ic b.,** b. containing 1 per cent. of phenol. **glyc'erin b.,** ordinary b. to which 5 per cent. glycerin has been added. **glu'cose b.,** made by adding 1 or 2 per cent. of glucose to sugar-free b., used for culture of gas-producing or acid-forming bacteria. **MacCon'key's bile-salt b.,** a culture medium prepared by the addition of bile-salts and certain sugars to b. **man'nite-pep'tone b.,** a one per cent. mixture of mannite in sugar-free b. **Mar'tin's b.,** a b. prepared by adding to sugar-free b. equal parts of a peptone solution obtained by the digestion of a pig's stomach. **ni'trate b.,** 1 gm. peptone is dissolved in 1000 c.c. water and 2 gm. of nitrite-free potassium nitrate added. **Pariet'ti's b.,** b. containing from 1 to 3 per cent. of a mixture of 4 c.c. hydrochloric acid in 100 c.c. five per cent. solution of phenol. **Peck'ham's b.,** a b. made by digesting sugar-free chopped beef with trypsin. **sug'ar-free b.,** b. for culture medium, from which the muscle-sugar has been removed by fermentation or other means.

Bouilly's operation (boo-ye') [Georges *Bouilly*, Parisian surgeon, †1848.] Excision of a part of the mucous membrane of the cervix uteri, leaving a portion at each side to avoid the production of atresia.

Bouin's fluid (bwaṅ) [Paul *Bouin*, French histologist, contemporary.] A hardening fluid consisting of glacial acetic acid 15, formalin 75, saturated aqueous solution of picric acid 225.

-boulia [G. *boulē*, will.] The deuterotheme in the formation of words referring to the will.

boulimia (boo-lim'ĭ-ah) [G. *bous*, ox, + *limos*, hunger.] Bulimia, hyperorexia, a voracious appetite, cynorexia.

Boulton's solu'tion. Liquor iodi carbolatus (N.F.).

bouquet (boo-ka') [Fr.] 1. A cluster or bunch of structures, especially of blood-vessels, suggesting a bouquet. 2. An agreeable aroma of good wine.

Bourdin's paste (boor-daṅ')[Claude Etienne *Bourdin*, French physician, *1815.] A caustic paste of sublimed sulphur moistened with nitric acid

Bour'don test. For mental disease; the patient is asked to strike out certain recurring letters or numbers in a standard page, the result and the time required being noted.

bourdonnement (boor-dun-moṅ') [Fr. a droning.] A humming sound.

Bourget's test (boor-zha') [Louis *Bourget*, Swiss pathological chemist, 1856–1913.] Filter paper is impregnated with starch solution and then wet with a 5 per cent. ammonium sulphate solution; if again wet with a solution containing iodine it turns a very deep blue color.

boutonnière (boo-ton-yair') [Fr. buttonhole.] An artificially produced slit or buttonhole-like opening in a membrane.

Bouveret's disease' (boo-vĕ-ra') [L. *Bouveret*, French physician in Lyons.] Paroxysmal tachycardia. **B.'s sign,** (1) an absence of concordance between the limits of a bilocular stomach as indicated by clapotage and by insufflation; (2) a tumor in the right iliac fossa in cases of obstruction in the colon.

Boveri test (bo-vair'e) [Pietro *Boveri*, Italian neurologist, †1933.] One c.c. of a 1–1000 solution of potassium permanganate is gently poured over an equal amount of the suspected cerebrospinal fluid in a test-tube; an excess of globulin in the fluid is shown by the appearance of a yellow ring at the line of junction and if the tube is shaken all the fluid becomes of a bright yellow color; if the cerebrospinal fluid is normal, the rose-violet color of the permanganate persists.

bo'vin [L. *bos(bov-)*, ox.] A modified tuberculous virus more virulent than bovovaccine.

bo'vine [L. *bos(bov-)*, ox.] Relating to cattle.

bo'vinin. Trade name of a preparation made from bullock's blood with the addition of boric acid and other substances; recommended as a tonic and in anemia.

bovis'ta. A fungus, *Lycoperdon bovista*, puffball, formerly called fungus chirurgorum, employed locally as a styptic

bovovaccine (bo-vo-vak'sēn) [L. *bos(bov-)*, ox, + *vaccine*.] A vaccine against bovine tuberculosis, elaborated by v. Behring. It consists of dried, but still living, tubercle bacilli (trocken-Tb.); it corresponds in virulence to Pasteur's *premier vaccine* against anthrax. *Bovin*, analogous to Pasteur's *deuxième vaccine*, is an attenuated virus, but stronger than bovovaccine. *Taurin* is an unmodified virulent tuberculous virus, employed to test and to complete the protection afforded by bovovaccine and bovin. *Bovovaccine* is harmless to cattle; *bovin* is sometimes, but not always,

fatal to unprotected cattle; *taurin* induces a fatal subacute tuberculosis in unprotected cattle.

bo'vril. Trade name of a preparation containing meat extract, glucose and alcohol.

Bow'ditch Island ring'worm [one of the Union Islands in Oceanica.] Tinea imbricata.

Bow'ditch's law [Henry P. *Bowditch*, American physiologist, 1840–1911.] Any stimulus, however feeble, which will excite a cardiac pulsation will produce as powerful a pulsation as the strongest stimulus; "minimal stimuli cause maximal pulsations," "all or none."

bow'el [through the Fr. from L. *botulus*, sausage.] The intestine. **b. complaint',** diarrhea.

Bowen's disease' (bo'en) [John T. *Bowen*, American dermatologist, *1857.] Precancerous dermatosis, atypical epithelial proliferation characterized by the development of pinkish papules covered with a thick horny layer.

Bowleg (bo'leg). Bandy-leg, genu* varum

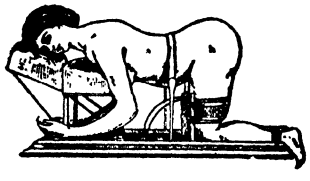
bow'man's cap'sule [Sir William *Bowman*, English anatomist, physiologist, and ophthalmologist, 1816–1892.] Capsula glomeruli. **B.'s discs,** discs resulting from transverse segmentation of striated muscular fiber treated with weak acids, certain alkaline solutions or freezing. **B.'s glands,** tubular glands, lined with pigmented epithelium, in the olfactory region of the nasal mucous membrane, behind the muciparous glands. **B.'s mem'brane,** the anterior elastic or limiting membrane of the cornea. **B.'s mus'cle,** musculus ciliaris. **B.'s opera'tion,** (1) double-needle operation for dilaceration of a cataract, two lance pointed needles being introduced through opposite sides of the cornea, the points meeting in the center of the lens and then being separated by moving the handles toward each other; (2) slitting the canaliculus for the relief of stenosis, to evacuate an abscess of the lacrymal sac, etc. **B.'s probe,** a double ended probe for the lacrymal duct, the body of the instrument being widened into a shield for convenience in manipulating. **B.'s root,** gillenia. **B.'s the'ory,** that the urine is secreted by simple filtration, influenced by the blood-pressure, in the glomeruli, and also by a principle of selection, not dependent on the blood-pressure, by the epithelium of the uriniferous tubules

box-note. A hollow reverberating sound, like that produced by tapping an empty box, heard on percussion of the chest in emphysema.

Boyer's bur'sa (bwă-ya') [Alexis, baron *Boyer*, Parisian surgeon, 1757–1833.] A bursa anterior to the thyrohyoid membrane. **B.'s cyst,** a subhyoid cyst.

Boyle's law [Robert *Boyle*, English chemist, 1627–1691.] Mariotte's law, the volume of a given quantity of gas varies inversely as the pressure upon it.

Bozeman's opera'tion (*Bōz'man*) [Nathan *Bozeman*, American surgeon, 1825–1905.] An operation for ureterovaginal fistula, the cervix uteri being attached to the bladder and opening into its cavity; hysterocystocleisis. **B.'s posi'tion,** knee-elbow position, the patient being strapped to supports. **B.'s spec'ulum,** a bivalve vaginal speculum, the long blades of which remain parallel when separated so that the vagina is evenly dilated



BOZEMAN'S POSITION.

Boze'man-Fritsch cath'eter [Nathan *Bozeman*, Heinrich *Fritsch*.] A slightly curved double-current uterine catheter with several openings at the tip.

Bozzi's fora'men (bot'tse). Macula lutea of the retina.

Bozzolo's sign (bot'tso-lo) [Camillo *Bozzolo*, Italian physician 1845–1920.] Pulsating vessels in the nasal mucous membrane, noted occasionally in thoracic aneurysm.

Br. Chemical symbol of bromum, or bromine; in bacteriology, abbreviation of *Brucella*.

brachia. Plural of *brachium*, arm.

brachial (bra'ke-al). Relating to the arm.

brachialgia (bra-ke-al'jĭ-ah) [G. *brachiōn*, arm, + *algos*, pain.] Severe pain in the arm.

brachialis (bra-ke-a'lis) See under *musculus*

brachiocephalic (bra-ke-o-sef-al'ik). Relating to both arm and head.

brachiocrural (bra-ke-o-kru'ral). Relating to both arm and thigh.

brachiocubital (bra-ke-o-ku'bĭ-tal). Relating to both arm and forearm.

brachiocyllo'sis (bra-ke-o-sil-o'sis) [G. *brachiōn*, arm, + *kyllōsis*, a crooking.] Curvature of the humerus

brachiotomy (bra-ke-ot'o-mĭ) [G. *brachiōn*, arm, + *tomē*, incision.] Incision into or amputation of an arm, especially removal of the arm of the fetus to allow of delivery.

brachium, pl. *brachia* (bra'ke-um) [L. from G. *brachiōn*, arm] 1. The arm, specifically the segment of the upper extremity between the shoulder and the elbow. 2. An anatomical structure resembling an arm. **b. cerebell'i,** b. conjunctivum. **b. cer'ebri,** b quadrigeminum superius. **b. conjuncti'vum ante'rius,** b. quadrigeminum superius. **b. conjuncti'vum cerebel'li** [BNA], "connecting arm" of the cerebellum, superior cerebellar peduncle, a band of white fibers emerging from each cerebellar hemisphere and passing upward over the pons, the two converging to form first the sides and then a part of the roof of the fourth ventricle, and finally dipping beneath the quadrigeminal bodies to enter the mesencephalon. **b. conjuncti'vum poste'rius,** b. quadrigeminum inferius. **b. copulati'vum,** b. conjunctivum cerebelli [BNA]. **b. pon'tis** [BNA], arm of the pons, middle cerebellar peduncle, a bundle of the transverse fibers of the pons which passes backward and outward on either side into the white substance of the cerebellum. **b. quadrigem'inum infe'rius,** inferior quadrigeminal b., a band passing from the colliculus inferior (testis) on either side along the border of the colliculus superior (nates) to the posterior end of the thalamus **b. quadrigem'inum supe'rius,** superior quadrigeminal b., a band passing laterally from the colliculus superior (nates) on either side into the substance of the thalamus.

brachybasia (brăk-kĭ-ba'sĭ-ă) [G. *brachys*, short, + *basis*, a stepping.] The shuffling gait characteristic of partial paraplegia.

brachycardia [brak-e-kar'dĭ-ah) [G. *brachys*, short, + *kardia*, heart.] Bradycardia.

brachycephalic (brak-e-sef-al'ik) [G. *brachys*, short, + *kephalē*, head.] Having a disproportionately short head. Noting a skull with a cephalic index over 80, or an individual with such a skull. Among the brachycephalic races are the American Indians, Malays, and Burmese.

brachycephalism (brak-e-sef'al-izm). Shortness of the head; see *brachycephalic.*

brachyceph'alous. Brachycephalic.

brachyceph'aly. Brachycephalism.

brachycercic (brak-e-sur'sic) [G. *brachys*, short, + *kerkos*, tail.] Having a short tail.

brachycnemic (brak-e-ne'mic) [G. *brachys*, short, + *knēmē*, leg.] Having short legs.

brachydactylia (brak-e-dak-til'ĭ-ah) [G. *brachys*, short, + *daktylos*, finger.] Shortness of the fingers.

brachydactyl'ic. Having short fingers, relating to brachydactylia.

brachyfacial (brak-e-fa'shal). Brachyprosopic.

brachygnathia (brak-ig-na'thĭ-ah) [G. *brachys*, short, + *gnathos*, jaw.] Abnormal shortness or recession of the mandible.

brachygnathous (brak-ig'na-thus). Having a receding under-jaw.

brachymetropia (brak-e-me-tro'pĭ-ah) [G. *brachys*, short, + *metron*, measure, + *ōps*, eye.] Myopia.

brachymetropic (brak-e-me-trop'ik). Myopic.

brachyodont (brak'ĭ-o-dont) [G. *brachys*, short + *odous* (*odont-*), tooth.] Having short teeth.

brachypodous (brak-ip'o-dus) [G. *brachys*, short, *pous*(*pod-*), foot.] Having short feet.

brachyprosopic (brak-e-pros-o'pik) [G *brachys*, short, + *prosōpikos*, facial.] Having a short face.

brachystaphyline (brak-ĭ-staf'ĭ-lin) [G. *brachys*, short, + *staphylē*, uvula.] Having a short palate, having a palatomaxillary index above 85.

brachyuranic (brak-e-u-ran'ik) [G. *brachys*, short, + *ouranos*, roof of the mouth.] Having a palatomaxillary index above 115.

bract [L. *bractea*, a thin metal plate] A leaf, usually differentiated, near a flower or in a flower cluster, or from the axil of which a flower springs

bracteole (brak'te-ōl) [L *bracteola*, dim of *bractea*, a thin metal plate.] A small bract on or at the base of a flower-stalk.

Brad'ford frame (brad'fud frām) Edward H. *Bradford*, American orthopedist, 1848–1926.] An oblong rectangular frame made of gas pipe, over which are stretched transversely two strips of canvas with a space between them to permit the use of a bedpan; used for patients with spine or joint disease, or fractures, or after certain operations when movement of the patient is to be avoided.

bradyacusia (brad"e ă-ku'sĭ-ah) [G. *bradys*, slow, + *akousis*, hearing.] Hardness of hearing.

bradyæsthe'sia. Bradyesthesia.

bradyarthria (brad-e-ar'thrĭ-ah) [*bradys*, slow, + *arthron*, articulation] An abnormal slowness or deliberation in speech.

bradycar'dia [G. *bradys*, slow, + *kardia*, heart.] Abnormal slowness of the heart beat. **cardiomus'cular b.,** b due to disease of the cardiac musculature. **cen'tral b.,** b. due to disease of the central nervous system. **essen'tial b.,** idiopathic b., a slow pulse for which no cause can be discovered. **no'dal b.,** that form of b in which there is no sign of an auricular systole between the ventricular contractions; see nodal rhythm.* **postinfec'tious b.,** a toxic b. occurring during convalescence from various infectious diseases, such as rheumatism, influenza, etc **ventricular b.,** heart-block.

bradycine'sia [G. *bradys*, slow, + *kinēsis*, movement.] Extreme slowness in movement.

bradycrot'ic [G. *bradys*, slow, + *krotos*, a striking.] Relating to or characterized by a slow pulse.

bradydiastole (brad-e-di-as'to-le) [G. *bradys*, slow, + *diastole*, dilatation of the heart.] Prolongation of the diastole of the heart.

bradyesthe'sia, bradyæsthe'sia [G. *bradys*, slow, + *aisthēsis*, sensation] A retardation in the rate of transmission of sensory impressions.

bradyglos'sia [G. *bradys*, slow, + *glōssa*, tongue.] Bradyarthria.

bradykinesia (brad-ĭ-kin-e'sĭ-ah). Bradycinesia.

bradylalia (brad-e-la'lĭ-ah) [G. *bradys*, slow, + *lalia*, speech] Bradyarthria.

bradylexia (brad-ĭ-lek'sĭ-ah) [G. *bradys*, slow, + *lexis*, word.] Abnormal slowness in reading.

bradylo'gia [G *bradys*, slow, + *logos*, word.] Bradyarthria.

bradypep'sia [G. *bradys*, slow, + *pepsis*, digestion.] Slowness of digestion.

bradypha'gia [G. *bradys*, slow, + *phagō*, I eat.] Extreme slowness in eating.

bradyphasia (brad-ĭ-fa'zĭ-ah) [G. *bradys*, slow, + *phasis*, speaking.] Bradyarthria, or slowness of speech, especially if due to a cerebral lesion.

bradyphemia (brad-ĭ-fe'mĭ-ah) [G. *bradys*, slow, + *phēmē*, speech.] Slow speech, bradyphasia.

bradyphrasia (brad-ĭ-fra'zĭ-ah) [G. *bradys*, slow, + *phrasis*, speech.] Bradyphasia.

bradyphrenia (brad-ĭ-fre'-nĭ-ă) [G. *bradys*, slow + *phrēn*, mind.] Sluggish mentality.

bradypnea, bradypnœa (brad-ip-ne'ah) [G. *bradys*, slow, + *pnoē*, breathing] Abnormal slowness of respiration.

bradyspermatism (brad"ĭ-spur'ma-tizm) [G. *bradys*, slow, + *sperma*, seed] Absence of ejaculatory force, so that the semen trickles away slowly.

bradysphygmia (brad-ĭ-sfig'mĭ-ah) [G *bradys*, slow, + *sphygmos*, pulse.] Abnormal slowness of pulse, bradycardia.

bradyteleocinesia (brad"ĭ-tel-e-o-sin-e'sĭ-ă) [G. *bradys*, slow, + *teleos*, end, + *kinēsis*, movement.] Sudden arrest of a movement just before its intended termination, then after a pause it is completed slowly or by jerks; a symptom of cerebellar disease; bradyteleokinesis.

bradyteleokinesis (brad"ĭ-tel-e-o-kin-e'sis). Bradyteleocinesia.

bradytocia (brad-ĭ-to'sĭ-ah) [G. *bradys*, slow, + *tokos*, childbirth.] Tedious labor, slow delivery.

bradytroph'ic [G. *bradys*, slow, + *trophē*, nourishment.] Characterized by sluggish metabolism

bradyuria (brad-ĭ-u'rĭ-ah) [G. *bradys*, slow, + *ouron*, urine.] Slow micturition.

Brahmachari's test (brah-mŭ-char'ĭ) [U.N *Brahmachari*, East Indian physician, contemporary.] In leishmaniasis the serum contains an excess of globulins, and in consequence great turbidity follows the addition of water

Braid'ism [James *Braid*, English physician, 1795–1860.] Hypnotism.

Brailey's opera'tion [William Arthur *Brailey*, London ophthalmologist, 1845–1915.] Stretching of the supratrochlear nerve for the relief of pain in glaucoma; a modification of Badal's* operation

braille (brāl) [invented by Louis *Braille*, French teacher of the blind, 19th Century.] A system of writing and printing by means of raised points representing letters, to enable the blind to read by touch.

brain [A.S. *brægen.*] Cerebrum, encephalon,* the mass of nervous matter within the cranium. **abdom'inal b.,** solar plexus, plexus* cœliacus. **acute' sof'tening of the b.,** embolic or thrombotic apoplexy. **af'ter-b.,** metencephalon. **b. ax'is,** the central portion of the brain extending from

the medulla to the insula. **b. man'tle,** pallium, cortex. **b. pan,** cranium, skull. **b. stem,** the medulla and pons; the rhombencephalon, excluding the cerebellum. **chron'ic sof'tening of the b.,** a condition of gradual softening of areas of brain tissue caused by progressive thrombosis of the small cerebral arteries. **end-b.,** telencephalon. **fore-b.,** prosencephalon. **hind-b.,** epencephalon. **inter-b.,** thalamencephalon. **litt'le b.,** cerebellum. **mid-b.,** mesencephalon. **red sof'tening of the b.,** the primary congestive stage of acute suppurative encephalitis. **smell b,** rhinencephalon. **thalam'ic b.,** thalamencephalon. **'tween-b.,** thalamencephalon. **wet b.,** the cerebral edema of chronic alcoholism.

abscess, encephalopyosis. **absence,** anencephalia, anencephaly **action,** cerebration. **anemia,** acephalemia, anencephalemia, anencephalohemia **compression,** encephalothlipsis. **congestion,** cephalemia, encephalemia **disease,** cerebropathy, cerebrosis, encephalopathy. **hardening,** cerebrosclerosis. **hemorrhage,** apoplexy, encephalorrhagia, hematencephalon. **hernia,** cephalocele, encephalocele, exencephalocele, **encephaloma,** craniocele, encephalomeningocele, derencephalocele. **hypertrophy,** encephalauxe, macroencephalon. **inflammation,** cerebellitis, cerebritis, encephalitis, phrenitis, encephalomeningitis, **meningoencephalitis,** poliencephalitis, porencephalitis. **large,** macroencephalon, megalencephalon. **membranes,** meninges, pia mater, leptomeninx, dura mater, pachymeninx, arachnoid **pain,** encephalalgia, encephalodynia. **small,** microencephalon. **softening,** cerebromalacia, encephalodialysis, encephalomalacia, mollities cerebri. **tumor,** encephalophyma, encephaloma, cerebroma.

brain-case. The cranium in its restricted sense, the part of the skull which encloses the brain.

brain-fag. Brain-tire

brain-fe'ver. Meningitis; cerebritis

brain-mur'mur. A systolic murmur, sometimes heard in cases of rickets, with the stethoscope applied to the temporal region

brain-pan. Brain case.

brain-sand. Acervulus, gritty material, consisting of crystals of calcium carbonate and calcium phosphate found in the follicles of the pineal body after the sixth or seventh year of life.

brain-storm. A violent, but temporary, outburst of maniacal excitement occurring in paranoia

brain-su'gar. Cerebrose.

brain-tire. Exhaustion of the mental faculties through overwork of an intellectual character, encephalasthenia.

bran. 1. The outer membrane of wheat and other grains, separated from the flour by the process of bolting. 2. Unbolted flour.

branal'cane. Boroglycerin containing resorcin, colored pink; employed as an external application in various skin affections

branchia (brang'ke-ah) [G. gills.] The gills, or organs of respiration in fishes; the analogue of the branchial clefts in the human embryo.

branchial (brang'ke-al). Relating to branchia or gills. **b. arch'es,** four pairs of curved cartilages near the upper pole of the embryo, separating the b. clefts. **b. clefts,** lateral openings behind the head in the embryo of man and other vertebrates.

branching (bran'ching) [Fr. *branche*, related to L. *brachium*, arm.] Dividing into parts; sending out offshoots; bifurcating. **false b.,** in bacteriology the breaking off of the terminal cell of a thread, which is then pushed out of the line of growth but continues to grow by fission, as does also what has now become the terminal cell of the thread, so that a running branch is given off.

branchiogenous (brang-ke-oj'en-us) [G. *branchia*, gills, + *gennaō*, I produce.] Originating from the branchial arches or clefts.

branchiomere (brang'ke-o-mēr) [G. *branchia*, gills + *meros*, part.] An embryonic segment corresponding to one of the visceral arches or clefts.

branchiomerism (brang-ke-om'er-izm). An arrangement into branchiomeres.

bran-disease. Rickets in the colt

Brand meth'od [Ernst *Brand*, German physician, 1827–1897.] The systematic giving of baths at room temperature or lower every three hours, so long as the rectal temperature exceeds 103° F. (39 4° C.) or the sensorium continues depressed in typhoid fever.

Brandt's meth'od [Thure *Brandt*, Swedish gynecologist, 1819–1895.] Stripping the Fallopian tube by a process of deep massage in cases of pyosalpinx.

bran'dy. Spiritus vini vitis (U.S.); a spirituous liquor distilled from wine; it contains from 40 to 50 per cent. of alcohol.

Braquehaye's meth'od (brak-a'e) [Jules Pie Louis *Braquehaye*, French gynecologist, *1865] Closure of a vesicovaginal fistula by invagination, after vivification, of the vaginal mucous membrane.

Brasdor's meth'od (brah-dor', usually braz'dawr) [Pierre *Brasdor*, French surgeon, 1721–1798.] Treatment of aneurysm by ligation of the artery immediately below (on the distal side of) the tumor; see cut under *aneurysm*.

brash. Acidity of the stomach with eructations of sour, burning fluid; also called water-brash, pyrosis. **weaning b.,** diarrhea from which the infant may suffer at the time of being weaned.

brass'-founders' a'gue. Spelter-shakes, a tremor due to chronic zinc poisoning from inhaling fumes of this metal in brass-foundries

Bras'sica [A.S. cabbage] A genus of plants to which belong cabbage, cauliflower, turnips, and mustard.

bras'sy bod'y. A darkened and shrivelled red corpuscle invaded by the malignant malarial parasite **b. eye,** see under *eye*.

Brauch-Romberg symp'tom (browkh-rom'berg) [*Brauch*, German neurologist, contemporary; see *Romberg*] Swaying of the body when the subject stands with the feet together and the eyes closed, a sign of ataxia.

Brauer meth'od (brow'er) [August L. *Brauer*, German physician, *1865.] The production of artificial pneumothorax by the injection of nitrogen in the cure of pulmonary tuberculosis. **B.'s operation,** cardiolysis.

Braun's hook (brown) [Gustav v. *Braun*, Viennese obstetrician, 1829–1911] A steel hook with sharp concavity, used for decapitation of the fetus.

Braun's meth'od [Christopher Heinrich *Braun*, German physician, *1847] Determination of free hydrochloric acid in the urine by means of caustic soda and phenolphthalein solution **B.'s test** for sugar in the urine, the suspected fluid is heated with a solution of caustic soda until a yellow color is obtained; then a dilute solution of picric acid is added and the mixture is boiled, a red color appearing if glucose is present.

Braun-Fernwald's sign (brown-fairn'valt) [Carl v. *Braun*, Austrian obstetrician 1823–1891.] Asymmetrical enlargement of the uterus in early pregnancy, one side being greater than the other, a perceptible furrow separating the two.

Braune's canal' (brow'neh) [Christian Wilhelm *Braune*, German anatomist, 1831–1892.] The parturient canal formed by the uterine cavity, dilated cervix, vagina, and vulva.

Braunia (brown'i-ah). A genus of tapeworms one species of which, *B. jassyen'sis*, has been found in the intestine of man in Roumania.

Bravais-Jacksonian ep'ilepsy (bră-veh'-jak-so'nĭ-an) [L. F. *Bravais*, French physician 19th century.] Jacksonian* epilepsy.

Brax'ton Hicks' sign. See *Hicks' sign.*

braxy (brak'sĭ) [Nor. *brad sot.* quick plague.] A fatal disease of sheep, marked by inflammation of the fourth stomach and duodenum; the symptoms preceding death in the less acute form are weakness, coma, dyspnea; the pathogenic organism is *Clostridium œdematis-maligni.*

braye'ra (N.F.). Cusso, kousso, the dried female inflorescence of *Hagenia abyssinica* (*Brayera anthelmintica*), a tree of the elevated region of Abyssinia, employed as a teniacide in doses of gr. 240 (15.0), or ℥8 (250 0) of the N.F. infusion.

bray'erin. Cussin, a resinous principle of bitter taste obtained from brayera; anthelmintic.

bread. A food preparation made by kneading the flour of some cereal with water to make dough, adding usually some yeast, and baking.

break. 1. A solution of continuity, fracture. 2. The interruption of an electric current. 3. To divide in two or into a number of parts.

break'bone fe'ver. Dengue.

break'down. In the horse, rupture of the suspensory ligament in consequence of which the fetlock falls, the toe pointing upward and the sole looking forward.

breast [A.S. *breōst.*] 1. The anterior surface of the thorax. 2. The mamma, mammary gland. **b. bone,** sternum. **bro'ken b.,** abscess of the mammary gland. **caked b.,** stagnation mastitis.* **chick'en b.,** pectus carinatum. **fun'nel b.,** a hollow at the lower part of the chest, caused by a backward displacement of the xiphoid cartilage. **gath'ered b.,** abscess of the mamma. **hyster'ical b.,** a painful swelling of the mamma, due to no definite or permanent lesion. **ir'ritable b.,** swelling and induration of the breast, not due to a neoplasm, and usually of comparatively brief duration. **pig'eon b.,** pectus carinatum. **wand'ering b.,** mamma erratica.

amastia, amazia. **amputation,** mastectomy, mammectomy. **atrophy,** mastatrophia, mastatrophy. **disease,** mastopathy. **fistula,** mastosyrinx. **fixation,** mastopexy, mazopexy. **hemorrhage,** mastorrhagia **hypertrophy,** mastauxe, hypermastia, macromastia, macromazia, barymazia. **incision into,** mastotomy, mammotomy. **inflammation,** mastitis, mammitis, mastadenitis. **pain,** mammalgia, mastalgia, mastodynia, mazodynia. **tumor,** mastoncus, mastadenoma, mastoscirrhus, mastocarcinoma, galactocele.

breast'pang. Angina pectoris.

breast-pump. A suction apparatus, usually of glass with a rubber bulb at the extremity, for withdrawing an excess of milk from the breast.

breath (breth) [A.S. *brœth.*] 1. The respired air. 2. An inspiration. **out of b.,** dyspneic. **short b.,** dyspnea. **bad b.,** halitosis, fetor ex ore.

breathing (bre'dhing). 1. The inhalation and exhalation of air, respiration. 2. The respiratory sound heard on auscultation of the chest. **abdom'inal b.,** diaphragmatic b., in which the chest expansion occurs chiefly downward, the depression of the diaphragm thus causing the abdomen to expand during inspiration. **cogwheel b.,** a jerky interruption of the breath sounds heard at times by auscultation. **diaphragmat'ic b.,** abdominal b. **goose b.,** a peculiar hissing type of respiration. **mouth b.,** habitual respiration through the mouth instead of the nose. **paradoxical b.,** deflation of the lung during inspiration, and inflation of the lung during the phase of expiration. **pu'erile b.,** an exaggeration of the breath sounds, inspiration being loud and harsh, such as is normally noticed in children. **thorac'ic b.,** b. in which expansion of the chest is produced chiefly by elevation of the ribs.

Brecht's car'tilage (brekht). Os* suprasternale.

Breda's disease' (bra'dah) [Achille *Breda*, Italian dermatologist, contemporary. Espundia.

breech [A.S. *brēc.*] The nates, the gluteal region, the buttocks. **b. presenta'tion,** see *presentation.*

breeze. A wind, a movement of air. **elec'tric b.,** the discharge of static electricity from a pointed electrode.

breg'ma [G. the forepart of the head.] The point on the skull corresponding to the junction of the coronal and sagittal sutures.

bregmat'ic. Relating to the bregma.

Brehmer's meth'od (bra'mer) [Hermann *Brehmer*, German physician 1826–1889.] Physico-dietetic treatment of pulmonary tuberculosis.

Breisky's disease' (bri'ske) [August *Breisky*, German gynecologist, 1832–1889.] Kraurosis vulvæ.

Brem'er's test [Ludwig *Bremer*, American chemist, 1844–1914.] A test for hyperglycemia; a smear of blood is made from the suspected person and another, for control, from a healthy person; the smears are heated to 130° C., and when cool treated with a 1 per cent. aqueous solution of Congo red; the normal blood stains red, the diabetic blood takes a yellow tint or does not stain at all.

Brenn'er's test [Rudolf *Brenner*, German physician, 1821–1884.] 1. A continuous current is passed through the ear, the positive pole applied to the side of the neck, the negative to the tragus; if the auditory nerve is normal there is a sound which is raised in pitch and finally ends in tinnitus. 2. With one electrode at each tragus, normally a sound is heard on cathodal closing or anodal opening, but none on cathodal opening or anodal closure.

brenzcain (brents'kah-ēn). [Ger.] Guaiacolbenzyl ester; a local anesthetic, usually applied by cataphoresis to take the place of cocaine.

brenzkatechin (brents-kat'e-kin). Brenzcain.

Breschet's canals' (brĕ-sha') [Gilbert *Breschet*, French anatomist, 1784–1845.] Diploic canals; channels in the diploë lodging the diploic veins. **B.'s hia'tus,** helicotrema. **B.'s si'nus,** sphenoparietal sinus. **B.'s veins,** diploic veins, anastomosing spaces in the cancellous tissue of the flat cranial bones, lined by epithelium and containing venous blood.

Bretonneau's meth'od (brĕ-ton-no') [Pierre *Bretonneau*, French physician, 1778–1862.] The administration of quinine in a single large dose after the paroxysm, in malaria.

Breus mole (broys) [Carl *Breus*, Austrian obstetrician, 1850–1914.] An aborted ovum in which the fetal surface of the placenta presents numerous hematomata, there is an absence of blood-vessels in the chorion, and the ovum is much smaller than it should be according to the duration of the pregnancy.

breviductor (brev-ĭ-duk'tor) [L. *brevis*, short, + *ductor*, leader.] Adductor brevis muscle; see under *musculus.*

breviflexor (brev-ĭ-fleks'or) [L. *brevis*, short, + *flexor*, bender.] Any flexor brevis muscle; see under *musculus.*

brevium (brev'ĭ-um) [L. *brevis*, short; referring to the very short life of the substance.] Uranium-X_2, a product of uranium-X; it is isotopic with ekatantalum or protoactinium.

brick'dust depos'it. An amorphous sediment of urates sometimes occurring in the urine.

brick'layer's cramp. A professional neurosis, marked by incoordination of the hand muscles when attempting to use the trowel.

brick'maker's ane'mia. Uncinariasis.

bridge. 1. A brace arrangement used in dentistry for attaching one or more false teeth to the neighboring sound teeth. 2. The upper part of the ridge of the nose formed by the nasal bones. 3. One of the threads of protoplasm which pass from one cell to another. **can'tilever b.,** in dentistry, a b. which is fastened securely by one end to a natural tooth or root, while the other end rests unattached in the depression of a tooth.

bridge-work. The adjustment of an artificial denture or a part of one by means of crowns, anchored to the roots of natural teeth, or natural abutments, to which are attached artificial teeth filling spaces devoid of natural roots.

bridle (bri'dl) 1. Frenum. 2. A band of fibrous material stretching across the surface of an ulcer or other lesion or forming adhesions between opposing serous or mucous surfaces.

Brieger's bacil'lus (bre'ger) [Ludwig *Brieger*, Berlin physician, *1849–1919.] *Bacillus cavicida*. **B.'s reac'tion,** the reaction by which is calculated the antitryptic* index.

Bright's disease' [Richard *Bright*, English physician, 1789–1858.] A term of very indefinite limitations, meaning in general acute or chronic nephritis; by some it is restricted to chronic nephritis, by others it is employed to denote the more serious forms of nephritis, either acute or chronic, and by others again it is used as synonymous with disease of the kidneys, including amyloid degeneration and granular kidney.

brightic (bri'tik). Relating to Bright's disease of the kidney.

brightism (brīt'izm). Chronic Bright's disease.

Brill's disease' [Nathan E. *Brill*, New York physician, 1860–1925.] A disease resembling mild typhus fever, and probably an attenuated form of that affection.

brilliant green (bril'yant grēn). A dye of the diamino-triphenylmethane group, possessing very powerful antiseptic properties.

brim. The upper edge or rim of a cup-like structure. **b. of the pel'vis,** the boundary of the inlet of the pelvis formed by the upper edge of the body of the pubis and the ileopectineal line on each side and the promontory of the sacrum behind

brim'stone [A.S. *brinnan*, to burn.] Sulphur, specifically sublimed sulphur remelted and cast in cylindrical molds.

Brin'ton's disease' [William *Brinton*, London physician, 1823–1867.] 1. Linitis plastica. 2. Infantile scurvy.*

Briquet's atax'ia (bre-ka') [Paul *Briquet*, Parisian physician, 1796–1881.] Weakening of the muscle-sense and increased sensibility of the skin, in hysteria; astasia abasia. **B.'s syn'drome,** aphonia and shortness of breath, due to hysterical paralysis of the diaphragm.

brisement forcé (brēz-mon' for-sa') [Fr. forcible breaking.] The breaking by forcible means of the adhesions in ankylosis, especially bony-ankylosis.

Brissaud's infan'tilism (bre-so') [Edouard *Brissaud*, French physician, 1852–1909.] Dysthyroidal infantilism. **B.'s re'flex,** tickling the sole causes a contraction of the tensor fasciæ femoris, sometimes even when there is no responsive movement of the toes.

Brissaud-Marie syn'drome (bre-so'mă-re') [Edouard *Brissaud; Pierre Marie.*] Unilateral spasm of the tongue and lips, of hysterical nature.

brittle (brit'l) [M.E. *britel.*] Easily broken, noting a bacterial colony which is dry and friable

broach. A dental tool for removing the pulp of a tooth or enlarging the canal

Broad'bent's ap'oplexy [Sir William Henry *Broadbent*, London physician, 1835–1907.] Progressive cerebral hemorrhage, at first extraventricular but gradually increasing until it breaks into the ventricle. **B.'s law,** lesions of the upper segment of the motor tract cause less marked paralysis of the muscles which habitually produce bilateral movements than of those which more commonly act independently of the opposite side **B.'s sign,** a retraction of the thoracic wall, synchronous with the action of the heart, visible especially on the left side posteriorly in the eleventh intercostal space; a sign of adherent pericardium.

Bro'ca's angle [Paul *Broca*, Parisian anthropologist and surgeon, 1824–1880.] Basilar angle.* **B.'s apha'sia,** loss, more or less complete, of the ability to read, write, speak, and understand the spoken word. **B.'s a'rea,** area parolfactoria. **B.'s cap,** pars triangularis, preoperculum. **B.'s cen'ter,** the supposed speech center, situated in the third left frontal convolution in righthanded persons, on the right side in lefthanded persons. **B.'s convolu'tion,** the third left frontal convolution. **B.'s fis'sure,** the fissure surrounding B.'s convolution. **B.'s for'mula,** a fully developed man (30 years old) should weigh as many kilograms as he is centimeters in height over and above one meter. **B.'s pouch,** pudendal sac.* **B.'s space,** the central, or cortical, portion of the rhinencephalon or olfactory lobe of the brain **B.'s vis'ual plane,** a plane drawn through the two axes of vision.

Brocq's disease' (brok) [Anne Jean Louis *Brocq*, French dermatologist, 1856–1929.] Parakeratosis psoriasiformis.

Bro'die's ab'scess [Sir Benjamin Collins *Brodie*, English surgeon, 1783–1862.] Tuberculosis, with suppuration, of the articular extremity of a bone; originally applied to this condition in the head of the tibia. **B.'s bur'sa,** a bursa beneath the gastrocnemius medialis muscle. **B.'s disease',** (1) gelatinous degeneration of the synovial membrane of the knee; (2) hysterical arthralgia; (3) hysterical spinal neuralgia, simulating Pott's disease, following a trauma.

Bro'die's lig'ament [J. Gordon *Brodie*, Edinburgh anatomist, 1786–1818.] The transverse humeral ligament, a fibrous band running more or less obliquely from the greater to the lesser tuberosity of the humerus, bridging over the bicipital groove.

Broesike's fos'sa (brë'ze-keh) [Gustav *Broesike*, German anatomist, *1853.] Jejunal fossa, a recess in the peritoneum in the mesentery of the upper part of the jejunum.

bro'ken-wind. Heaves in horses.

bro'kerage. In life-insurance, the percentage on the first premium, paid to the agent on commission.*

brom-. A prefix indicating the presence of bromine in a compound.

bro'mal. A thick oily liquid prepared by passing bromine through absolute alcohol and distilling; hypnotic and antispasmodic in doses of gr 2–5 (0.12–0.3). **b. hy'drate,** a white crystalline powder with pungent taste, made by mixing

anhydrous bromal with water; hypnotic in doses of gr. 1–5 (0.06–0.3).

bromal'bacid. Trade name of a compound containing albumin and bromine; recommended as a nerve sedative.

bromalbu'min. Trade name of a preparation or compound of bromine and albumin, recommended in the treatment of epilepsy.

bro'malin. Bromethylformin, hexamethylenetetraminebromethylate; occurs in colorless scales; employed as a nerve sedative and in epilepsy in doses of gr 10–30 (0 6–2.0)

broma'lium. Bromalin

bromamide (bro'mă-mīd). Tribromaniline hydrobromide, occurs in colorless, tasteless, acicular crystals, antipyretic, analgesic, antirheumatic, in doses of gr. 7½–10 (0.5–0 6).

bro'mate. A salt of bromic acid combined with a base.

bro'mated. Mixed with bromine or any of its compounds.

bromatog'raphy [G. *brōma* (*brōmat-*), food, + *graphō*, I write.] The study of or a treatise on food and foodstuffs.

bro"matother'apy [G. *brōma* (*brōmat-*), food + *therapeia*, treatment] The dietetic treatment of disease, alimentotherapy, dietotherapy.

bromatotox'icon [G. *brōma*, food, + *toxikon*, poison.] Any poison formed in spoiled food.

bromatotox'in. A poisonous ptomaine formed in spoiled or spoiling food.

bromatotox'ism. Food-poisoning.

bromdiethylacetylcarbamide (brōm-di-eth"il-ă-set"il-kar'bă-mīd or mid). Adalin.

bromeikon (brōm-i'kon) [*bromine* + G. *eikōn*, image.] A make of tetrabromophthalein* sodium.

bro'melin. A digestive ferment obtained from pineapple-juice.

brometh'yl. Ethyl hydrate **b.-for'min,** bromalin

bromethylene (bro-meth'il-ēn) Ethylene bromide, $C_2H_4Br_2$, a colorless oily fluid with a sweetish burning taste and an odor like chloroform, has been used in epilepsy in doses of ♏1–3 (0 06–0.2).

bro'metone. Xanthone, acetone bromoform, $C_4H_7OBr_3$, occurring in the form of white crystals; nerve sedative and soporific in doses of gr 2–10 (0.13–0.6)

bromhidro'sis. Bromidrosis.

bro'mic. Relating to bromine, noting especially an oxygen-containing acid which unites with bases to form bromates.

bro'mide. A compound formed by the replacement of the hydrogen in hydrobromic acid by a metal or an organic radical. The bromides official in the U.S.P. are of ammonium, calcium, homatropine, hyoscyamine, lithium, potassium, quinine, scopolamine, sodium, and strontium. See also *elixir trium bromidorum* and *syrupus bromidorum*.

bromid'ia. Trade name of a preparation recommended as an hypnotic and nerve sedative

bromidrosipho'bia [*bromidrosis* + G. *phobos*, fear.] A morbid fear of giving forth a bad odor from the body, with sometimes the belief that such odor is present.

bromidrosis (brōm-i-dro'sis) [G. *brōmos*, a stench, + *hidrōs*, perspiration.] Fetid or foul-smelling perspiration, bromhidrosis.

bro'mine. Bromum.

bro'minism. Bromism.

bro'minol. A solution of bromine in sesame oil.

bro'mipin. Trade name of a 10 per cent solution of bromine in sesame oil, recommended in epilepsy and as a nerve sedative in dose of ℥1 (4.0)

bro'mism. Chronic poisoning by bromine or any of its salts; the main symptoms are headache, mental inertia, occasionally violent delirium, muscular weakness, cardiac depression, an acneiform eruption, a foul breath, and anemia.

bromocaffeine (bro-mo-kaf'e-ēn). Trade name of a preparation for the relief of headache.

bromochlo'ralum. A mixture of solutions of the bromide and of the chloride of aluminum; disinfectant.

bro'mocoll [*bromum* + G. *kolla*, glue.] Trade name of a compound of bromine tannin, and gelatin, employed chiefly as a dusting powder.

bromoderma (bro-mo-dur'mah) [*bromine* + G. *derma*, skin.] An acneiform eruption due to chronic bromide poisoning.

bro'moform. Bromoformum. **ac'etone b.,** brometone.

bro"mofor'min. Hexamethylene tetramine bromethylate, bromalin *

bromofor'mism. Chronic bromoform-poisoning; bromoform-addiction.

bromofor'mum. Brōmoform, a sweetish, colorless, fragrant liquid; antispasmodic and sedative in doses of ♏1–5 (0.06–0.3).

bromog'raphy. Bromatography.

bromohe'mol. A brown powder, a compound of hemol and bromine; employed in epilepsy in doses of gr. 15 (1.0).

bro"mohy"perhidro'sis, bro"mohy"peridro'sis [G. *brōmos*, a stench, + *hyper*, over, + *hidrōsis*, sweating] Excessive secretion of sweat of a fetid odor.

bro'mol. Tribromophenol, silky acicular crystals obtained by the action of bromine on phenol in solution; employed as an intestinal antiseptic in doses of gr ¼–1 (0 015–0 06).

bromolith'ia. Trade name of a preparation recommended for gout and rheumatism.

bromoma'nia. Delirium caused by poisoning with bromine or any of its salts

bro"momenorrhe'a [G. *brōmos*, stench, + *mēn*, month, + *rhoia*, flow.] An excessive flow of menstrual fluid with a bad odor

bromophe'nol. Bromol.

bromopnea, bromopnœa (brōm-op-ne'ah). [G. *brōmos*, a stench, + *pnoē*, breath.] An offensive breath.

bromopy'rine. Antipyrine monobromide, in white crystals soluble in alcohol; antipyretic in doses of gr. 5–15 (0.3–1.0).

bromoselt'zer. Trade name of a preparation given for headache.

bro'mosin. Bromalbumin.

bromsulphalein (brom-sul-fal'e-in). Disodium phenoltetrabromphthaleinsulphonate, a white crystalline powder, soluble in water; employed as a test of the liver function, being rapidly removed from the blood, after intravenous injection, when the liver is normal, but retained in greater or lesser amounts in proportion to the degree of hepatic dysfunction.

bro'mum [G. *brōmos* a stench.] (N.F.) Bromine, a non-metallic, reddish, volatile, liquid element, symbol Br, atomic weight 79.92; it unites with hydrogen to form hydrobromic acid, and this unites with many metals to form bromides, some of which are employed in medicine.

bro'mural. Monobrom-iso-valeryl-urea; a white bitter powder, soluble in hot water, slightly so in cold water; hypnotic and sedative in doses of gr. 5–10 (0.3–0.6).

bro'muret. Bromide.

bronchadenitis (bronk-ad-en-i'(e')tis) [G. *bronchia*, bronchi, + *adēn*, gland, + *-itis*.] Inflammation of the bronchial glands.

bronchi. Plural of *bronchus*.

bronchia (brong'ke-ah) [G. pl. of *bronchion*, dim. of *bronchos*, trachea.] The bronchial tubes.

bronchial (brong'ke-al). Relating to the bronchial tubes. **b. breath'ing,** a blowing sound heard on auscultation over an area of consolidated lung tissue through which bronchial tubes of fairly large size pass. **b. glands,** lymphatic glands around the bronchi at the root of a lung. **b. tubes,** bronchia, the smaller divisions of the bronchi. **b. voice,** bronchophony.

bronchiarctia (brong-ke-ark'shyah) [G. *bronchia* + L. *arctare*, to compress.] Bronchiostenosis.

bronchiectasia (brong-ke-ek-ta'zī-ah) [G *bronkos* windpipe, + *ektasis*, extension.] Dilatation of a bronchus or of the bronchial tubes. **cap'illary b.,** bronchiolectasia. **cylin'drical b.,** a general symmetrical dilatation of a bronchus or bronchial tube. **sacc'ulated b.,** an irregular dilatation occurring in pockets of varying size and shape.

bronchiectasic (brong-ke-ek-tas'ik) Relating to bronchiectasia.

bronchiectasis (brong-ke-ek'ta-sis) Bronchiectasia.

bronchiloquy (brong-kil'o-kwe) [*bronchus* + L. *loqui*, to speak.] Bronchophony.

bronchiocele (brong'ke-o-sēl) [G. *kēlē*, tumor, hernia.] A circumscribed dilatation of a bronchus

bronchiocrisis (brong-ke-o-kri'sis) [G. *bronchia*, bronchial tubes, + *krisis*, crisis.] Bronchial crisis.*

bronchiole (brong'ke-ōl) Bronchiolus; one of the finer subdivisions of the bronchial tubes, less than 1 mm. in diameter, and having no cartilage in its wall. **respi'ratory b.,** a bronchiole having lateral communications with the air-cells or alveoli. **ter'minal b.,** alveolar duct, the last division of an air-tube opening into a number of culs-de-sac, the infundibula or atria

bronchiolectasia, bronchiolectasis (brong"ke-o-lek-ta'zī-ah, brong-ke-o-lek'tas-is) [L. *bronchiolus* + G. *ektasis*, extension.] Capillary bronchiectasia; dilatation of the minute bronchial tubules or bronchioles.

bronchiolitis (brong-ke-o-li'(le')tis). Inflammation of the smallest bronchial tubes; capillary bronchitis. **acute oblit'erating b.,** an acute form of pulmonary cirrhosis due to fibrous induration of the walls of the minute bronchioles **ex'udative b.,** inflammation of the bronchioles, with fibrinous exudation. **vesic'ular b.,** bronchopneumonia.

bronchiolus (brong-ki'o-lus) [L. dim. of *bronchus*.] Bronchiole, one of the very small or of the terminal bronchial tubes.

bronchiosteno'sis [G *stenōsis*, narrowing.] Narrowing of the lumen of a bronchial tube.

bronchitic (brong-kit'ik). Relating to bronchitis.

bronchitis (brong-ki'(ke')tis). Inflammation of the mucous membrane of the bronchial tubes **b. oblit'erans,** obliterative b. **cap'illary b.,** productive inflammation of the walls of the smaller bronchial tubes, combined usually with areas of pulmonary consolidation and atelectasis; catarrhal pneumonia; lobular pneumonia broncho-pneumonia. **crou'pous b.,** fibrinous b. **dry b.,** a form with scanty secretion. **epidem'ic b.,** bronchial influenza **fi'brinous b.,** inflammation of the bronchial mucous membrane, accompanied by a fibrinous exudation which often forms a cast of the bronchial tree. **hemorrha'gic b.,** Castellani's b., bronchopulmonary spirochetosis, a form of chronic bronchitis, attended with spitting of blood, believed to be due to the presence of *Spirochæta bronchialis*. **oblit'erative b.,** a fibrinous b. in which the exudate is not expectorated but becomes organized, obliterating the affected portion of the bronchial tubes. **plas'tic b.,** fibrinous b. **pu'trid b.,** b. accompanied by an expectoration of foul-smelling material. **ver'minous b.,** a disease of domestic animals caused by nematode worms in the trachea and bronchi; it is often followed by catarrhal pneumonia and verminous phthisis, and is especially common in rainy years. **vesic'ular b.,** capillary b. with extension of the inflammation to the pulmonary alveoli; lobular pneumonia.

bronchi'tis-ket'tle. Croup-kettle.

bronchium, pl *bronchia* (brong'ke-um) [L.; G. *bronchion*.] A bronchial tube.

bronchoalveolar (brong-ko-al-ve'o-lar). Bronchovesicular.

bronchocavernous (brong"ko-kav'er-nus). Relating to a bronchus or bronchial tube and a pulmonary cavity.

bronchocele (brong'ko-sēl) [G. *bronchos*, windpipe + *kēlē*, tumor.] Goiter, especially cystic goiter.

bronchocephalitis (bron-ko-sef-al-i'(e')tis) [G *bronchos*, bronchus, + *kephalē*, head, + *-itis*.] Whooping-cough.

bronchoconstriction (brong-ko-kon-strik'shun). Bronchostenosis.

bronchoconstrictor (bron-ko-kon-strik'tor) 1 Causing a reduction in caliber of a bronchus or bronchial tube. 2 An agent which possesses this power

bronchodilatation (brong-ko-di-la-ta'shun). Bronchiectasia.

bronchodilator (brong-ko-di-la'tor) 1 Causing an increase in caliber of a bronchus or bronchial tube. 2. An agent which possesses this power.

bronchoegophony, bronchoægophony (brong-ko-e-gof'o-nī) An accentuated or exaggerated egophony.

broncholith (brong'ko-lith) [G. *bronchos*, bronchus + *lithos*, stone.] Bronchial calculus, a hard concretion in a bronchus or bronchial tube

bronchomoniliasis (brong-ko-mon-il-i'a-sis). Infection of the bronchial mucous membrane with a species of Monilia.

bronchomotor (brong-ko-mo'tor). 1. Causing a change in caliber, dilatation or contraction, of a bronchus or bronchial tube. 2. An agent which possesses this power.

bronchomycosis (brong-ko-mi-ko'sis) [G. *bronchos*, bronchus, + *mykēs*, fungus.] Any fungous or microbic disease of the bronchial tubes or bronchi.

broncho-oidiosis (brong"ko-o-id-i-o'sis). A bronchitis, prevalent in Ceylon, simulating tuberculosis, caused by the presence of *Oidium tropicale*

bronchopathy (brong-kop'ă-thī) [G. *bronchos*, bronchus. + *pathos*, suffering.] Any bronchial disease.

bronchophony (brong-kof'o-nī). Exaggerated vocal resonance heard over a bronchus surrounded by consolidated lung tissue.

bronchoplasty (brong'ko-plas-tī) [G. *bronchos*, windpipe, + *plassō*, I form.] The surgical repair of any defect in the trachea or one of the bronchi.

bronchoplegia (brong-ko-ple'jī-ah) [G. *bronchos*, bronchus, + *plēgē*, a stroke.] Paralysis of the muscular fibers in the walls of the trachea and bronchi.

bronchopneumonia (brong"ko-nu-mo'nĭ-ah [*bronchitis* + *pneumonia*.] A productive inflammation of the walls of the smaller bronchial tubes combined with areas of atelectasis corresponding to some of the affected bronchi, and usually also with irregular areas of consolidation not necessarily corresponding to the involved bronchial tubes; catarrhal pneumonia, lobular pneumonia, capillary bronchitis, vesicular bronchiolitis. **tuber'culous b.**, phthisis florida.

bronchopneumonitis (brong"ko-nu-mo-ni'(ne')tis) Bronchopneumonia.

bronchopulmonary (brong-ko-pul'mo-na-rĭ) Relating to the bronchial tubes and the lungs.

bronchorrhagia (brong-ko-ra'jĭ ah) [G. *bronchos*, bronchus, + *-rhagia*.] Hemoptysis.

bronchorrhea, bronchorrhœa (brong-ko-re'ah) [G. *bronchos*, windpipe, + *rhoia*, a flow.] Excessive secretion from the bronchial mucous membrane.

bronchoscope (brong'ko-skōp) [G. *bronchos*, windpipe, + *skopeō* I view.] An instrument for use in inspecting the interior of the bronchi for the detection and removal of foreign bodies; it may be passed through the mouth and larynx or directly through a tracheotomy opening.

bronchoscopy (brong-kos'ko-pĭ) Inspection of the interior of a bronchus.

bronchospasm (brong'ko-spazm). Spasmodic narrowing of the lumen of a bronchus.

bronchostenosis (brong-ko-sten-o'sis). Stenosis or narrowing of the caliber of a bronchus

bronchostomy (brong-kos'to-mĭ) [G. *bronchos*, bronchus, + *stoma*, mouth.] Formation of an opening from without into a bronchus.

bronchotome (brong'ko-tōm) [G. *bronchos*, bronchus, + *tomē*, a cutting.] An instrument for incising the trachea or a bronchus.

bronchotomy (brong-kot'o-mĭ) Incision of the trachea or of a bronchus.

bronchotracheal (brong-ko-tra'ke-al). Relating to the trachea and bronchi.

bronchotyphoid (brong-ko-ti'foyd). Typhoid fever in which a violent bronchitis marks the initial stage.

bronchovesicular (brong-ko-ves-ik'u-lar). Relating to the bronchial tubes and air-vesicles in the lungs

bronchus, pl. *bronchi* (brong'kus) [G. *bronchos*, windpipe.] One of the two branches given off from the trachea at its bifurcation, one going to each lung; in structure the bronchi resemble the trachea. **eparte'rial b.**, the first collateral branch of the right bronchus, which passes above the right pulmonary artery. **hyparte'rial b.**, the left bronchus, and the right bronchus below its first collateral branch, which are placed below the left and the right pulmonary arteries respectively.

bronzed. Of a brownish or coppery color. **b. diabe'tes,** see under *diabetes*. **b. disease',** Addison's* disease. **b. skin,** the dark skin in Addison's* disease

brood-capsules (brōōd-kap'sūlz). Small hollow projections from the lining membrane of an hydatid cyst from which arise the scolices.

Brooke's disease' [H. A. G. *Brooke*, English dermatologist, 1854–1919.] 1. Spiradenoma. 2. Keratosis follicularis contagiosa, psoropermosis.

broom. Scoparius

brossage (bro-sazh') [Fr. brushing.] Scraping with a stiff brush to remove granulations, as in trachoma, or to excite adhesive inflammation, as in Talma's operation.

Brossard's type (bro-sar'). Eichhorst's type.

Brouha test (broo'ah) A. and L. *Brouha*, French physicians, [20th century.] A test for pregnancy resembling the Zondek-Aschheim, but made by injecting immature *male* mice with the patient's urine; if the mice give evidence of sexual gland secretion after ten daily injections the woman is believed to be pregnant.

broussaisism (broo-sa'izm) [François Joseph Victor *Broussais*, Parisian physician, 1772–1838.] The doctrine that living matter possesses the sole property of contractility which is excited by physical agents which produce irritation or action, and abirritation or quiet. The irritation, or cause of all disease, proceeds from inflammation of the gastroenteric tract, and consequently the treatment of all disease is directed to the cure of the causative gastroenteritis.

bro'valol. Trade name of the brom-isovaleric-acid ester of borneol, said to contain 25.2 per cent. bromine; a colorless oily liquid, recommended as an antispasmodic and nervine in doses of gr. 4–12 (0.26–0.8).

brow [A.S. brū] 1. The superciliary ridge. 2 The eyebrow 3. The forehead. **b. ache, b. a'gue, b. pang,** supraorbital neuralgia, migraine.

brown [A.S. brūn.] A dusky yellowish-red color. **Bis'marck b.,** an aniline dye used for staining histological sections. **b. at'rophy,** see *atrophy*.

Brown's reaction. Same as Zondek-Aschheim, pregnancy reaction except that the patient's blood serum is used instead of urine.

Brown's test. Gardiner-Brown's test.

Browne's sign. Crichton-Browne's sign.

Brown'ian move'ments [Robert *Brown*, English botanist. 1773–1858.] Rapid oscillations of minute particles suspended in certain fluids; brunonian movements.

Brownian-Zsigmondy movements (brow'nĭ-an sig-mun'de moov'ments) [Robert *Brown;* R. *Zsigmondy*.] Brownian* movements.

Brown'ing's phenom'enon. Therapia sterilisans divergens

brown'ism. Brunonianism.

Brown-Séquard's antineural'gic pill (brown-sa-kar') [Charles Edouard *Brown-Séquard*, French physiologist and neurologist, (1817–1894.] Extract of hyoscyamus and extract of conium each gr. ⅔ (0.045), extract of ignatia and extract of opium each gr. ½ (0.03), extract of aconite leaves (U.S. 1870) gr. ⅓ (0.02), extract of Indian cannabis gr. ¼ (0.015), extract of stramonium gr. ⅕ (0.013), extract of belladonna leaves gr. ⅛ (0.01). **B.-S.'s ep'ilepsy,** convulsions of epileptiform character following experimental lesions of the spinal cord in animals. **B.-S.'s injec'tions,** injections of testicular extract for senile debility. **B.-S.'s paral'ysis,** a reflex flaccid paraplegia occurring in the course of some affections of the urinary tract. **B.-S.'s syn'drome,** hemiparaplegia and hyperesthesia, but with preservation of the muscular sensation, on the side of the lesion, and hemianesthesia of the opposite side, in case of a unilateral compression of the spinal cord.

brown-tail moth. *Euproctis chrysorrhœa*, the caterpillar of which causes a more or less severe dermatitis on contact with the skin, the injury being due to penetration by the barbed nettling hairs.

Bruce's septice'mia [Sir David *Bruce*, British Army surgeon, 1855–1931.] Undulant* fever.

Brucella (bru-sel'lă) [Sir David *Bruce*.] A genus of bacteria of the family *Bacteriaceæ*, consisting of non-sporing, mainly non-motile, aerobic or

microaerophilic, gram-negative, short, almost coccoid, rods, pathogenic for man and certain animals. In the classification of the Committee of the Society of American Bacteriologists, these organisms, with the exception of *Br. Tularensis* are grouped under the genus *Alcaligenes* (*q.v.*). **Br. abor'tus,** Bangs' bacillus, *Alcaligenes abortus.*[0] **Br. abor'tus,** var. **lipolyt'icus,** a doubtful variety, the chief characteristic of which is its property of hydrolyzing butter; it is non-pathogenic for man or laboratory animals. **Br. bronchisep'ticus,** *B. bronchiseptiens, Alcaligenes bronchisepticus.*[0] **Br. meliten'sis,** *Micrococcus melitensis, Alcaligenes melitensis,*[0] the cause of Malta fever, thought by some to be the same as *Br. abortus.* **Br. tularen'sis,** *Bacterium tularense,* Pasteurella tularensis.[0]

brucelliasis (broo-sel-li'a-sis). Infection with any of the *Brucella* (*Alcaligenes*) group of organisms.

Bruch's glands (brookh) [Carl Wilhelm Ludwig *Bruch,* German histologist, 1819–1884.] Trachoma glands, lymphoid glands in the palpebral conjunctiva. **B.'s mem'brane,** Henle's membrane, lamina* basalis.

bru'cine. An alkaloid from *Strychnos nux vomica* and *S. ignatia,* resembling strychnine in its properties, but less poisonous; tonic in doses of gr. $1\frac{1}{2}$–$\frac{1}{2}$ (0.005–0.03).

Bruck's disease' (brook). A disease marked by fragilitas ossium, ankylosis of the joints, and muscular atrophy.

Bruck's test (brook) [C. *Bruck.* German physician, contemporary.] Precipitation test, syphilitic serochemical reaction; a nitric acid, alcohol, or lactic acid precipitate in syphilitic serum dissolves more slowly on neutralization with an alkali than does such precipitate in normal serum.

Brudzin'ski's sign [J. *Brudzinski,* Polish physician, 1874–1917.] 1. Contralateral reflex; when the thigh in a child is forcibly flexed against the abdomen there is a movement—sometimes of extension, sometimes of flexion—at the opposite hip; the sign is present in certain nervous diseases and neuropathic states in children, but its exact significance is not yet determined, nor is it known in what conditions flexion and in what extension of the thigh occurs. 2. Neck sign; if the neck is passively bent forward, flexion of the thighs and legs occurs; noted by Brudzinski in meningitis

Bruecke's muscle (brük'eh) [Ernst v. *Bruecke,* Viennese physiologist, 1819–1892.] 1. Longitudinal fibers of the musculus* ciliaris, fibræ meridionales [BNA]. 2. The muscular fibers in the intestinal villi. **B.'s pep'tone,** an albumose excreted in the urine. **B.'s tu'nic,** the retina, exclusive of the layer of rods and cones.

Bruenninghausen's meth'od (bru'ning-how-zen) [Hermann Joseph *Bruenninghausen,* German physician, 1761–1834.] The induction of premature labor by dilatation of the cervix; see *Kluge*

Bruhl's disease' (brool). Splenic anemia with fever

bruise (brooz). A contused wound.*

bruissement (brü-ēs-moṅ') [Fr.] A purring auscultatory sound.

bruit (brü-e') [Fr.] An auscultatory sound, especially an abnormal one. **b. d'airain** (da-raṅ') [Fr. brassy], a metallic tinkling sound heard over a pulmonary cavity. **b. de clapotement** (dė-klăput-moṅ'), the splashing sound elicited by succussion of a dilated stomach. **b. de claquement** (dė-klak-moṅ'), a slapping sound. **b. de craquement** (dė-krak-moṅ'), crepitant râle. **b. de cuir neuf** (dė-kwēr-nēf') [of new leather], a creaking râle like the sound produced by bending a piece of stiff leather. **b. de diable** (dė-de-abl') [Fr. humming-top], a buzzing or humming hemic murmur. **b. de drapeau** (dė-dră-po') [Fr. flag, a flapping sound produced by a polypus-like growth in an air-tube. **b. de frottement** (dė-frut-moṅ'), a friction râle **b. de galop** (dė-gă-lo'). cantering rhythm.* **de grelot** (dė-grel-o') [Fr. sleighbell], a bell-like sound caused by the pressure of a foreign body in a dilated bronchial tube, **b. de moulin** (dė-moo-laṅ') [Fr. mill], a splashing sound like that of a water-wheel. **b. de parchemin** (dė-parsh-maṅ'), a friction sound like that made by rubbing together two pieces of parchment. **b. de pluie** (de-plü-e') [Fr. rain], the sound made by air entering the tympanum, as heard by the examiner auscultating the external auditory canal during politzerization. **p. de pot fêlé** (dė-po-fa-la'), cracked-pot sound. **b. de scie** (dė-se'), a sawing sound. **b. de soufflet** (de-soo-fla'), a bellows murmur. **b. de tabourka'** [Algerian, a native drum], a clanging, drum-like second sound of the heart. **b. placentaire** (plă-soṅ-tair'), placental murmur.

Brunn's mem'brane (broon) [Albert von *Brunn,* German anatomist, 1849–1895.] Hyaline membrane or the epithelium of the olfactory region of the nose. **B.'s nests,** groups of epithelial cells, of unknown function, found in the walls of the male urethra.

Brunner's glands (broo'ner) [Johann Conrad *Brunner,* Swiss anatomist, 1653–1727.] Duodenal glands; see under *glandula.*

Bruno'nian move'ments. Brownian* movements. **B. system,** brunonianism.

bruno'nianism [John *Brown,* Scotch physician 1735–1788.] A theory something like that of Broussais, that all disease is due to excessive or deficient stimulation.

Bruns's disease' [John Dickson *Bruns,* American physician, 1836–1883.] Pneumonopaludism.

Bruns's sign (broons) [Ludwig *Bruns,* German neurologist, 1858–1916.] Intermittent headache, vertigo, and vomiting, especially excited by sudden movements of the head, occurring in cases of tumor of the fourth ventricle of the brain.

brush [A.S. *byrst,* bristle.] 1. An instrument made of some flexible material, such as bristles, attached to a handle. 2. A cone-shaped bluish light produced by the discharge of static electricity from a point or small knob. 3. To use a brush for any purpose.

brush'ing. In horses, striking the fetlock by the opposite foot, sometimes causing a contusion only but more often scratching or abrading the surface; interfering.

Bry'ant's ampul'la [Sir Thomas *Bryant,* English surgeon, 1828–1914.] The portion of an artery on the proximal side of a ligature, which contains the clot, its upper boundary being marked by a slight constriction. **B.'s line,** the base of B.'s triangle toward which the trochanter moves in fracture of the neck of the femur. **B.'s tri'angle,** a line (*a*) is drawn round the body at the level of the anterior superior iliac spines; from this line another (*b*) is drawn perpendicular to it to the great trochanter of the femur, and the triangle is completed by a line (*c*) drawn from the trochanter to the iliac spine; upward displacement of the trochanter, in fracture of the neck of the femur, is measured along line *b.*

Bryce's test [James *Bryce,* Scotch physician, nineteenth century.] A second vaccination is made on the fifth or sixth day with lymph from the vesicles resulting from the first vaccination, if the lesions

of the second inoculation overtake those of the first, so that the scabbing of the two occurs simultaneously, the vaccination has been successful.

bryonia (bri-o'nĭ-ah) [G. *bryōnē*.] (N.F.) The dried root of *Bryonia alba* or *B. dioica*, vines of the family *Cucurbitaceæ*, employed in dyspepsia, constipation, and pleurisy, in doses of gr. 5–20 (0.3–1.3); of the N.F. tincture the dose is ℥i (4.0); in eclectic practice it is given for the relief of pleurodynia and in respiratory affections accompanied by a hacking cough and thoracic pain, in doses of a teaspoonful of a dilution of 10 drops of the specific medicine in eight tablespoonfuls of water every hour or two.

bry'onin. A glucoside from bryonia; hydragogue cathartic in doses of gr ¼–2 (0.015–0.13)

bry'ony. Bryonia.

Bry'son's sign [Alexander *Bryson*, English physician, 1802–1860.] Diminished inspiratory enlargement of the thorax in exophthalmic goiter.

bubas (boo'bahs). Boubas, yaws.* **b. brazilia'na,** espundia.

bubble (bub'l). An auscultatory sound as of a bursting bubble. **amphor'ic b.,** an auscultatory sound resembling the gurgle of liquid escaping from a bottle.

bu'bo [G. *boubōn*, a swelling in the groin.] An enlargement, usually going on to suppurative inflammation, of a lymphatic gland, especially one in the groin or axilla. **bull'et b.,** a hard, painless swelling of a gland in the groin, accompanying a chancre. **chancroid'al b.,** an ulcerating b., due to the action of the virus of chancroid **climat'ic b.,** pestis minor, a disease of the tropics and subtropics, characterized by non-venereal inflammatory enlargement of the inguinal glands going on to suppuration, accompanied by some rise of temperature, physical weakness, and depression of pirits. **in'dolent b.,** an indurated enlargement of an inguinal gland, unaccompanied by marked pain or fever. **mala'rial b.,** climatic b. **nonvene'real b.,** climatic b **parot'id b.,** a swelling of the parotid gland due to secondary septic infection. **pri'mary b.,** one which occurs as the first sign of venereal infection. **trop'ical b.,** climatic b.

bubonal'gia [G. *boubōn*, groin, + *algos*, pain] Pain in the groin.

bubon'ic. Relating in any way to a bubo. **b. plague,** the most common form of the plague,* characterized by the occurrence of buboes in the groin or axilla.

bubonocele (bu-bon'o-sēl, bu-bon-o-se'le) [G. *boubōn*, groin, + *kēlē*, tumor.] Inguinal hernia especially one in which the knuckle of intestine has not yet emerged from the external abdominal ring.

bubon'ulus [L. dim. of *bubo*.] 1. An abscess occurring along the course of a lymphatic vessel. 2 One of a number of hard nodules, often breaking down into ulcers, which form along the course of acutely inflamed lymphatic vessels of the dorsum of the penis; Nisbet's chancre.

bucardia (boo-kar'dĭ-ah) [G. *bous*, ox, + *kardia*, heart.] Extreme hypertrophy of the heart, corbovinum.

buc'ca, gen. and pl. *buc'cæ* [L.] The cheek, mala.

bucc'al. 1. Relating to the cheek. 2. Oral. **b. cav'ity,** (1) vestibulum oris; (2) in dentistry, a cavity beginning by decay on the buccal surface of a tooth. **b. sur'face,** facies buccalis [BNA], the surface of a premolar or molar tooth which looks toward the cheek

buccilingual (buk"sĭ-ling'gwal) Buccolingual

buc'cinator [L. *buccinator*, trumpeter.] The muscle of the cheek; see under *musculus*.

buccocervical (buk"o-sur'vi-kal) [L. *bucca*, cheek, + *cervix*, neck.] Relating to the cheek and the neck.

buccogingival (buk"o-jin'ji-val). Relating to the cheek and the gum. **b. ridge,** see *ridge*.

buccola'bial [L. *bucca*, cheek, + *labium*, lip.] Relating to both cheek and lip.

buccolin'gual (buk"o-ling'gwal) [L. *bucca*, cheek, + *lingua*, tongue.] Relating to both cheek and tongue. **b. diam'eter,** the diameter of the crown of a tooth measured from the buccal to the lingual surfaces. **b. plane,** axio-buccolingual plane.

buccopharyngeal (buk"o-far-in'je-al). Relating to both cheek or mouth and pharynx.

buc'cula [L. dim. of *bucca*, cheek.] A fatty puffing under the chin, double chin.

Buchner's bodies (bookh'ner) [H. *Buchner*, German bacteriologist, *1850.] Defensive proteins. **B.'s exper'iment,** an experiment leading to the discovery of endotoxins or intracellular enzymes; B. found that the medium in which the yeast plant is grown contains a ferment which will invert glucose but will not convert it into alcohol; this is effected by the action of another ferment obtained only by expression of the body juices of the yeast plant by hydraulic pressure. **B.'s stain for spores of bacteria,** after treating the film for thirty seconds in concentrated sulphuric acid, strain with carbolfuchsin. **B.'s tuber'culin,** see under *tuberculin*.

buchu (bu'ku). (U.S. and Br.) The dried leaves of *Barosma betulina*, order *Rutaceæ*, a shrub growing in South Africa, carminative, diuretic, and urinary antiseptic; dose, ℥1–4 (4.0–15.0) in infusion. The fluidextract is official in U.S.; dose, ℥ ½–1 (2.0–4.0).

Buchwald's at'rophy (bookh'vahlt). Progressive, atrophy of the skin

Buck's exten'sion [Gurdon *Buck*, New York surgeon 1807–1877] An apparatus for making extension on the leg, in fracture of the thigh, by means of a weight attached to a cord running over a pulley, the cord being fastened to the leg by broad bands of adhesive plaster **B.'s fas'cia,** a fascial sheath of the penis, derived from the superficial perineal fascia.

buck'bean. Bogbean, water shamrock, marsh trefoil, menyanthes,* the leaves of which are credited with emmenagogue, antiscorbutic, and tonic properties.

bucked-shins. Albuminous periostitis of the metacarpal bones in young horses, caused by the violent concussion resulting from severe training on a hard track.

buck'eye. Hippocastanum,* horsechestnut.

buck'thorn. Frangula.

Bucky diaphragm (buk'ĭ-di'ă-fram) [Gustav *Bucky*, German physician, *1880.] A diaphragm with moving grids designed to do away with the grid shadows; employed in roentgenography.

bucne'mia [G. *bous*, ox, + *knēmē*, leg.] Any large tense swelling of the leg.

Budd's cirrho'sis [William *Budd*, English physician, 1811–1880.] Chronic enlargement of the liver, without jaundice, due to intestinal autointoxication. **B.'s jaun'dice,** acute yellow atrophy of the liver

Budde process (bood'deh pros'es) [E. *Budde*, Danish chemical engineer, contemporary.] A method of sterilization of milk. To the fresh milk peroxide of hydrogen is added in proportion of 15 c.c.

of a 3 per cent. solution to one liter of milk, and the mixture is heated to 51° or 52° C. (124° F.) for three hours; by this time the peroxide is decomposed and the nascent oxygen acts as an efficient germicide; the milk is now rapidly cooled and put into sealed bottles.

buddeise (bood'de-īze). To treat by the Budde process.

bud'ding. Gemmation.

bud-fission (bud'fish-un). A mode of reproduction in certain rhizopods in which part of the protoplasm protrudes and forms a new envelope, thus separating from the rest of the protoplasm which retains its old covering.

Budge's cen'ter (bood'ga) [Julius Ludwig *Budge*, German physiologist, 1811–1888.] Ciliospinal center.

budgerigar (bud''jer-ĭ-gar') [a native name.] The zebra parrakeet, used for experimental inoculation with the psittacosis virus.

Buelau's meth'od (bu'low) [Gotthard *Buelau*, German surgeon, 1835–1900.] Treatment of empyema by syphon drainage

Buerger's disease' (bur'ger) [Leo *Buerger*, New York pathologist, *1879.] Thromboangiitis obliterans. **B.'s meth'od,** for staining the capsules of bacteria: the smear is fixed in Mueller's fluid, washed in water, then alcohol, and covered with tincture of iodine for from 1 to 3 minutes; it is then again washed in alcohol, dried, stained for 2 to 5 seconds in aniline-water gentian-violet, and finally washed in 2 per cent. salt solution.

bufagin (boo'fa-jin) A substance, $C_{9}H_{12}O_{2}$, having properties similar to those of digitalis, contained in the secretion of the poison glands of a tropical toad, *Bufo agua*, and probably in that of the skin glands of other species of toads.

buffer (buf'ur). [Translation through the German (*buffer* or *puffer*) of the French word *tampon*, used by Sorensen in his articles (written in French) on this subject.] A term applied to the potential alkalinity of the blood, as determined by the amount of carbon dioxide it will take up, which acts as an intermediary between a tendency to acidosis and the normal alkalinity. **b. salts,** certain substances, such as monacid and diacid sodium phosphates and sodium bicarbonate, contained in the blood, which tend to fix any slight excess of acid or alkali, acting therefore as a "tampon" to absorb the excess of such acid or alkali; or it may be conceived to act as a "buffer" to ease the shock which such excess would otherwise cause. **b. salts solution,** a solution of buffer salts, given by injection for the relief of either acidosis or alkalosis. **b. value of the blood,** the ability of the blood to care for acid-alkali fluctuations without disturbance of the hydrogen-ion concentration. **sec'ondary b.,** see Hamberger's* law or interchange.

buf'fy coat. Crusta inflammatoria, crusta phlogistica; the upper, lighter portion of the blood-clot, occurring when coagulation is delayed so that the red corpuscles have had time to settle a little.

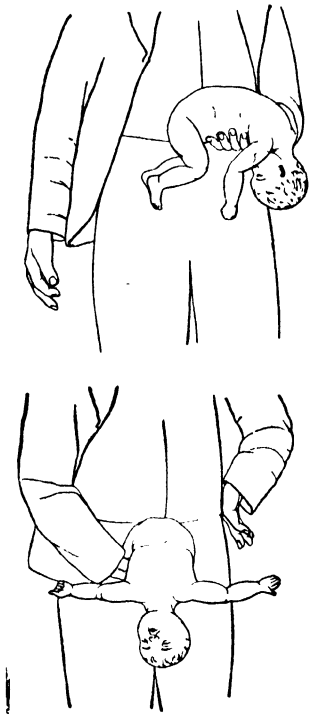
Bu'fo [L. toad.] A genus of animals which embraces the toads. **B. a'gua,** a tropical toad, the source of bufagin.

buggery (bug'er-ĭ) [O.F. *bougre*, heretic.] Bestiality, sodomy.

bug'wort [M. E. *wort*, from A.S. *wyrt*, a plant.] Cimicifuga.

Buhl's disease' (bool) [Ludwig von *Buhl*, German physician, 1816–1880.] Acute fatty degeneration of the newborn, affecting the heart, kidneys, livers and sometimes the voluntary muscles; Winckel's disease. **B.'s pneumo'nia,** caseous pneumonia.

Buist's meth'od [Robert Cochrane *Buist*, Scotch obstetrician, *1860.] For the resuscitation of an infant born asphyxiated: the child is simply transferred from one hand of the accoucheur to the other alternately, being held supine on one hand, prone on the other, thus causing alternate inspiration and expiration.



Buist's Method in Asphyxia of the Newborn.

bulb [L. *bulbus*, a bulbous root.] 1. An underground leaf-bud in which the leaves are superimposed on each other to form a rounded mass. 2. Any globular or fusiform structure. 3. Medulla oblongata. **aor'tic b.** the first of the four dilatations of the primitive heart in the embryo. **arte'rial b.,** aortic b. **b. of the cor'pus caverno'sum,** bulbus* urethræ **b. of the eye,** eyeball, globe of the eye. **b. of the ure'thra,** bulbus* urethræ. **b. of the ves'tibule,** bulbus* vestibuli. **den'tal b.,** the papilla, derived from the mesoblast, which forms the germ of the tooth. **duod'enal b.,** pileus ventriculi. **end-b.,** one of the oval or rounded bodies in which the sensory nerve fibers terminate in mucous membrane. **hair-b.,** bulbus* pili. **ju'gular b.,** bulbus* venæ jugularis. **olfac'tory b.,** bulbus* olfactorius. **rachid'ian b.,** medulla oblongata. **taste-b.,** one of the bulbous bodies in the papillæ of the tongue in which the gustatory nerves terminate.

bul'bar. 1. Relating to a bulb, or of bulb shape 2. Relating to the medulla oblongata.

bul'biform [L. *bulbus*, bulb, + *forma*, shape.] Bulb-shaped.

bul'bil. A deciduous bud in the axil of a leaf, capable of propagating its kind like a bulb.

bulbitis (bul-bi'(be')tis) [L. *bulbus* urethræ + *-itis*.] Inflammation of the bulbous portion of the urethra.

bulb'let. A small bulb, bulbil.

bulbocapnine (bul-bo-kap'nēn). An alkaloid from *Corydalis cava*, recommended in the treatment of paralysis agitans and other tremors, in dose of 1½ gr. (0.1) twice a day.

bul"bocaverno'sus. Musculus* bulbocavernosus.

bulboid (bul'boyd) [G. *bolbos*, bulb, + *eidos* resemblance.] Bulbiform, bulb-shaped.

bulbonuclear (bul-bo-nu'kle-ar). Relating to the nuclei in the medulla oblongata.

bulbourethral (bul"bo-u-re'thral). Relating to the bulbus urethræ.

bul'bous. Of bulb shape.

bul'bus, gen. and pl. *bul'bi* [L.] Bulb. **b. aor'tæ,** the anterior of the four dilatations of the primitive tubular heart, from which are formed the beginnings of the aorta and pulmonary artery. **b. cor'nu posterior'is,** bulb of the posterior horn of the lateral ventricle of the brain, a curved elevation on the inner wall of the posterior horn produced by the fibers of the forceps major of the corpus callosum as they bend backward into the occipital lobe. **b. den'tis,** tooth-pulp. pulpa dentis. **b. oc'uli,** eyeball, globe of the eye. **b. olfacto'rius,** olfactory bulb, the grayish expanded anterior extremity of the olfactory tract, lying on the cribriform plate of the ethmoid and receiving the olfactory nerves. **b. pi'li,** hair bulb, the lower expanded extremity of the hair which fits like a cap over the papilla pili at the bottom of the hair follicle. **b. ure'thræ,** the posterior expansion of the corpus cavernosum urethræ (corpus spongiosum) lying between the crura or diverging corpora cavernosa penis. **b. ve'næ jugula'ris,** bulb of the jugular vein; the superior is a dilatation at the beginning of the internal jugular vein in the jugular fossa of the temporal bone; the inferior bulb is a dilated portion of the vein just before it reaches the anonyma. **b. vestib'uli,** a mass of erectile tissue on either side of the vagina united in front by a slender portion, the *pars intermedia*.

bule'sis [G. *boulēsis*, a willing.] The will; a willing.

bulimia (boo-lim'ĭ-ah). Boulimia.

bulim'ic. Relating to bulimia.

Bull's se'rum [Carroll Gideon *Bull*, American physician, *1883.] Gas-bacillus antitoxin, employed in cases of infection with *Bacillus aerogenes welchii*.

bul'la [L. bubble.] A bleb, blister; a circumscribed area of separation of the epidermis, due to the presence of a clear non-purulent fluid. **b. ethmoida'lis,** ethmoidal bulla; a bulging of the inner wall of the ethmoidal labyrinth in the middle meatus of the nose, just below the middle turbinated bone; it is regarded as a rudimentary turbinal.

bul'late. Vesiculate, resembling a bulla or blister.

bulla'tion. 1. The formation of bullæ. 2. A swelling or inflation.

bull'dog head. The broad head with high vault occurring in achondroplasia.

Bul'ler's shield. A watchglass attached to the center of a square of adhesive plaster, used to protect the unaffected eye in cases of purulent ophthalmia.

bul'let. The fetlock of a horse.

bull'ock's liv'er crust. The reddish-brown crust on a scorbutic ulcer.

bul'lous. Relating to, of the nature of, or marked by, bullæ.

bulpiss (bool'pēs) [Mosq. Ind. *buluy*, spotted, + *piss*, gray.] A contagious skin disease endemic in Nicaragua, marked by a papular eruption followed by patches of a dirty white or greasy black color.

Bumke's pu'pil (boom'keh) [Oswald Conrad Edward *Bumke*, German neurologist, *1877.] Dilatation of the pupil in response to psychic stimuli; it is absent in dementia præcox.

bunch. A swelling on the bone, in a horse, due to trauma.

bun'dle. A structure composed of a group of fibers, muscular or nervous; a fasciculus. **aberr'ant b.,** a nerve tract in the isthmus of the fornicate gyrus. **ante'rior ground b.,** ground b. of the ventral column of the cord, consisting of association axones connecting various levels of the cord. **ante'rior mar'ginal b.,** Marchi's* bundle. **atrioventric'ular b., auriculoventric'ular b.,** a small bundle of fibers, remains of the primitive cardiac tissue, passing from the right atrium (auricle) of the heart to the ventricular musculature and septum; Gaskell's bridge; it consists of the *b.* of His, Tawara's node, and the Purkinje network. **ground b.,** a collection of association axones in the spinal cord, fasciculus proprius. **lat'eral ground b.,** fasciculus lateralis proprius [BNA]. **poste'rior longitu'dinal b.,** fasciculus longitudinalis medialis [BNA]. **respi'ratory b.,** tractus solitarius [BNA]. **root b.,** filum radiculare. **sinoa'trial b.,** a bundle of muscular fibers between the venæ cavæ in the wall of the atrium of the heart, which is believed to be the path of conduction of the impulse for the atrial contraction; Keith's bundle. **soli'tary b.,** tractus solitarius. **vas'cular b.,** in botany, a sheath of vascular tissue traversing other tissues, enclosed in a layer of cells forming the bundle-sheath.

bundle-sheath (bun'dl-shēth). In botany, a layer of cells surrounding a vascular bundle.

Bunge's the'ory (boong'eh) [Gustav v. *Bunge*, Swiss physiologist, 1844–1920.] There is a causal relation between alcoholism in the father and inability of the daughter to suckle her infant.

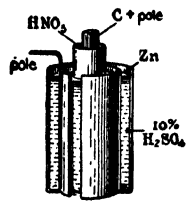
Bunge-Trantenroth method (boong'eh-trahn'ten-rōt) [R. *Bunge*, German physician, contemporary; A. *Trantenroth*, German physician, contemporary.] For differentiating the tubercle and smegma bacilli: wash with alcohol, treat with chromic acid, stain with hot carbol-fuchsin, decolorize with 16 per cent. sulphuric acid, counterstain with alcoholic methylene blue, and wash in water; the tubercle bacillus is stained red, the smegma bacillus is decolorized.

bungpagga (bung-pag'gah) [a native Lobi word.] An acute disease, occurring in West Africa, marked by rather high fever and the formation of painful egg-sized tumors in the muscles which later suppurate; the mortality is high.

bunion (bun'yun). An inflammatory swelling of the bursa over the metatarsophalangeal joint of the great toe.

bu'nodont [G. *bounos*, mound, + *odous(odont-)*, tooth.] Having molar teeth with rounded or conical cusps; opposed to *lophodont*.

Bun'sen burn'er [Robert Wilhelm *Bunsen*, German chemist and physicist, 1811–1899] A gas burner supplied with lateral openings admitting so much air that the carbon is completely burned giving a very hot but only slightly luminous flame. **B. el'ement,** one of the elements of a galvanic battery consisting of carbon in water acidulated with nitric acid, and zinc in sulphuric acid water, the two solutions being separated by a partition of porous material.



BUNSEN ELEMENT.

buphthal'mia. Buphthalmos.

buphthalmos, buphthalmus (boof-thal'mus) [G. *bous*, ox, + *ophthalmos*, eye.] Congenital glaucoma, hydrophthalmos, keratoglobus; an affection of infancy, marked by an increase of intraocular fluid with enlargement of the eye-ball.

bur. 1. The lobe of the ear. 2. A small disc or bulb made to revolve rapidly, used by dentists to remove tartar from the teeth; also one with cutting lines, used for excavating cavities in the teeth. 3. Burdock, lappa.*

Burckhardt's cor'puscles (boork'hart). Small yellowish granules in the secretion in trachoma.

Burdach's col'umn or **tract** (boor'dakh) [Karl Friedrich *Burdach*, German physiologist, 1776–1847.] Fasciculus cuneatus [BNA]. **B.'s fi'bers** nerve fibers in relation with B.'s nucleus. **B.'s nu'cleus,** a collection of gray matter at the base of the posterior horn of the lateral ventricle. **B.'s oper'culum,** see *operculum* (1).

bur'dock. Lappa.

burette' [Fr.] A graduated tube for measuring fluids.

Burghart's sign (boorgh'hart) [Hans Gerny *Burghart*, German physician, *1862.] Crepitant râles heard at the base of the lung anteriorly in incipient tuberculosis.

burn [A.S. *bærnan*.] 1. To consume with fire. 2. To cause a lesion of the skin by heat. 3. To cause a lesion by acid or any other agent, similar to that caused by heat; to cauterize. 4. To suffer pain caused by excessive heat, or a similar pain from any cause. 5. A lesion caused by heat or any cauterizing agent. Five degrees of burn are recognized: (1) scorching or painful redness of the skin, (2) blistering, (3) destruction of the epidermis and laying bare the sensitive nerve terminations, (4) destruction of the entire thickness of the skin and of the subcutaneous connective tissue. (5) charring of the subjacent soft parts and of the bone. **brush b.,** a b. caused by friction of a rapidly moving body against the skin. **radiation b.,** one caused by overexposure to radium, x-rays, ultraviolet rays, sunlight or other form of radiant energy.

Bur'nam's test [Curtis Field *Burnam*, American surgeon, *1877.] A test for formaldehyde in the urine; see *Rimini's* test.*

bur'ner. The part of a lamp where the flame is: so called because, in an oil or alcohol lamp, it is where the wick burns. **Argand b., Bunsen b.,** see these names.

Bur'nett's solu'tion [Sir William *Burnett*, English surgeon, 1779–1861.] A solution of zinc chloride containing 10 grains to the ounce of water; disinfectant and deodorant.

burn'ing-bush. Euonymus.

burnisher (bur'nĭsh-ur) [O. F. *burnir*, to polish. An instrument for smoothing and polishing the surface of a tooth filling.

Burns's amauro'sis [John *Burns*, Scotch obstetrician 1774–1850.] Postmarital a., blindness following sexual excess.

Burns's fal'ciform process or **lig'ament** [Allan *Burns*, Scotch anatomist, 1781–1813.] Hey's* femoral ligament. **B.'s space,** a space just above the manubrium sterni, between the first and second layers of the deep cervical fascia, through which pass the anterior jugular veins.

Burow's liq'uor (boo'rōv) [Karl August v. *Burow*, German surgeon, 1809–1874.] A solution of alum and lead acetate. **B.'s opera'tion,** (1) a flap operation for closing a defect in the lip; (2) an operation for entropion. **B.'s solu'tion,** B.'s liquor. **B.'s vein,** an occasional vein passing from the inferior epigastric, sometimes receiving a branch from the bladder, and emptying into the portal.

burr. Bur.

Burri's meth'od (boor're) [Robert *Burri*, Berne bacteriologist, *1867.] A method of examination for microorganisms; the specimen is fixed in arsenic acid and then immersed in a suspension of India ink; the microorganisms, if present, appear white by contrast on a black background.

burrow (bŭ'ro). 1. A subcutaneous tunnel or tract made by a parasite such as the itch-mite. 2. A sinus or fistula.

bur'sa, pl. *bursæ* [L. a purse.] A closed sac or pouch containing fluid, found, or formed as a result of pressure, over an exposed and prominent part, or where a tendon plays over a bone. **b. anseri'na,** separates the broad tendinous surface of the pes anserinus from the tubercle of the tibia. **b. copula'trix,** a wing-like epidermal appendage at the posterior extremity of a nematode; it contains a number of elongated tactile papillæ called ribs or rays. **b. muco'sa** [BNA], b. synovialis, a pouch, containing a viscid fluid, covering and protecting exposed bony surfaces, or interposed between a tendon and a bone over which it plays; many of these are permanent structures and receive various names, gluteal, plantar, prepatellar, etc., to indicate their location. **b. omenta'lis** [BNA], the lesser peritoneal sac, clothing the posterior surface of the stomach, quadrate and caudate lobes of the liver, upper surface of the pancreas, and part of the spleen and transverse colon. **b. pharyn'gea,** pharyn'geal b., a cyst formed by inflammation of a lacuna in the pharyngeal tonsil. **b. sublingua'lis,** Fleischmann's b. **b. synovia'lis,** b. mucosa.

bur'sal. Relating to a bursa.

bursal'ogy. The branch of anatomy dealing especially with the bursæ.

Bursata (bur-sah'tah) [L. *bursa*, a purse.] A division of *Nematoda* embracing those in which the bursa copulatrix is present in the male and contains fleshy ribs.

bur'sine. An alkaloid from capsella, employed as an astringent and styptic.

bursitis (bur-si'(se')tis). Inflammation of a bursa.

bur'solith [L. *bursa*, a purse, + G. *lithos*, stone.] A calculus formed in a bursa.

bursop'athy [L. *bursa*, + G. *pathos*, suffering.] Any disease of a bursa.

bursula (bur'su-lah) [L. dim. of *bursa*, purse.] A small pouch or bag. **b. tes'tium,** scrotum.

Bur'ton's line [Henry *Burton*, English physician, 19th century.] A bluish line on the free border of the gums occurring in chronic lead poisoning.

Bury's disease' [John Sykes *Bury*, English physician, 19th century.] Erythema elevatum diutinum.

Busquet's disease' (bus-ka') [*Busquet*, French physician, contemporary.] An osteoperiostitis of the metatarsal bones, leading to exostoses on the dorsum of the foot.

butamin (bu'tam-in). Tutocaine.

bu'teæ gum'mi [John, Earl of *Bute*, 1713–1792.] (B.A.) Butea gum, Bengal kino, the inspissated juice from the stem of *Butea frondosa*, palas-tree, dhak-tree, a shrub or small tree of India; astringent. **b. sem'ina** (B.A.), butea seeds, from *B. frondosa*, yield moodooga oil; anthelmintic

butesin (bu'tĕ-sin). The normal butyl ester of 4-aminobenzoic acid, $C_6H_4NH_2.COO(C_4H_9)$, occurring as a white crystalline powder, odorless and tasteless, almost insoluble in water but soluble in dilute acids, alcohol, and fatty oils; employed in the form of a dusting powder on ulcers, inflamed mucous membranes, and wounds. **b. pic'rate,** a compound of 1 molecule of picric acid and 2 molecules of butesin, occurring as a yellow amorphous powder, odorless and having a slightly bitter taste; anesthetic and antiseptic, employed in the treatment of burns, ulcers and lesions or wounds involving denudation of the skin, also as a local asesthetic in 1:1400 solution to the conjunctiva.

butine (bu'tēn) [L. *butyrum*, butter.] A hydrocarbon, C_4H_6.

butolan (bu'to-lan). Trade name of the carbonic acid ester of p-benzylphenol, an anthelmintic, employed in doses of 7½ gr. (0.5) 2 or 3 times a day to expel *Oxyuris vermicularis*.

butt'er [G. *boutyron*] 1. A coherent mass of milk-fat, obtained by churning or shaking cream until the separate fat globules run together, leaving a liquid residue, buttermilk. 2. A soft solid having more or less the consistency of butter. **b. of an'timony,** chloride of antimony. **b. of bis'muth,** chloride of bismuth. **b. of tin,** chloride of tin. **b. of zinc,** chloride of zinc **caca'o b., co'coa b.,** oleum theobromatis.

Butter's cancer (but'urz kan'sur) Cancer of the hepatic flexure of the colon.

but'ter-cyst. An area of saponifying necrosis in a lipoma.

butt'erfly. 1 Papilio, a day-flying lepidopterous insect. 2. Any structure, apparatus, or lesion resembling in shape a butterfly with outstretched wings, *i.e.*, having two lateral masses with a narrow band of union **b. patch,** the characteristic distribution of lupus erythematodes over each cheek-bone with a connecting loop across the bridge of the nose

butt'ermilk. The fluid containing casein and lactic acid, left after the process of making butter.

butt'ernut. Juglans.

butter-stools. Fatty stools, noted especially in steatorrhea of infants.

butt'erweed. Erigeron.

butt'ock. Natis, the prominence formed by the gluteal muscles on either side.

butt'on. 1. A structure or lesion of knob shape. 2. An apparatus or part of an apparatus of the shape of a small ball or knob. **Bisk'ra b.,** oriental boil. **Jaboulay' b., Mur'phy b.,** etc., see the proper names.

butt'onhole. 1. A short straight cut made through the wall of a cavity or canal. 2. The contraction of an orifice down to a narrow slit as in the so-called *mitral b.*

butt'on-scur'vy. Ecphyma globulus, an apparently contagious skin disease prevalent for a time in Ireland; it was characterized by an eruption of tubercles becoming gradually red and soft; it was thought possibly to be a form of yaws which it resembled superficially.

bu'tyl. A hydrocarbon radicle, C_4H_7. **b. al'cohol,** a colorless liquid ($CH_3(CH_2)_2CH_2OH$) produced by the fermentation of glycerin. **b. chlo'ral,** see *butyl-chloral hydras*. **b. phe'nate,** a colorless antiseptic liquid.

butyl'amine. A colorless, transparent liquid, $C_4H_{11}N$, soluble in water; diuretic.

bu'tyl-chlo'ral hy'dras (Br.). Formerly called, incorrectly, croton-chloral hydrate, occurs in white, glistening, scaly crystals; it is employed as an analgesic and hypnotic in doses of gr. 5–20 (0.3–1.3).

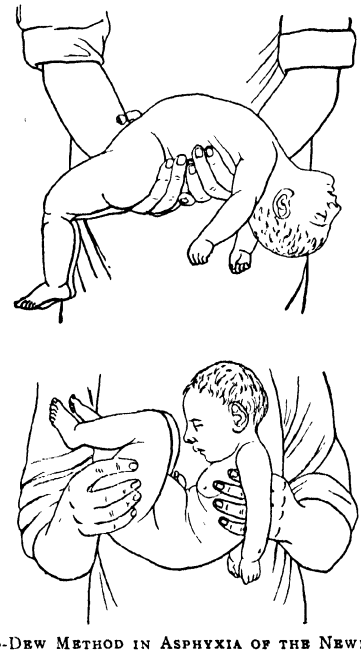
butyn (bu'tin). Trade name of a synthetic local anesthetic, paraminobenzoyl-gammadinormal-butyl-aminopropanol sulphate, structurally related to both cocaine and procaine, but less toxic than the former.

butyra'ceous. Buttery in consistence

bu'tyrate. A salt of butyric acid.

butyr'ic. Relating to butter. **b. acid,** an acid of unpleasant odor, occurring in butter, codliver oil, sweat, and many other substances; it exists in two forms: *normal butyric acid*, ethyl acetic acid, propyl formic acid, C_3H_7COOH, a colorless viscid liquid occurring as a glyceride in cow's butter; *isobutyric acid*, dimethyl acetic acid, $CH(CH_3)_2COOH$, is found as a glyceride in croton oil and elsewhere; it resembles the normal acid but has a somewhat less unpleasant odor.

bu'tyrin. Glyceryl* butyrate.



BYRD-DEW METHOD IN ASPHYXIA OF THE NEWBORN.

bu'tyroid [G *boutyron*, butter, + *eidos*, resemblance.] 1. Buttery. 2. Resembling butter.

butyr'omel. A mixture of butter and honey, recommended in debility and loss of flesh

butyrometer (bu-tir-om'e-tur) [G. *boutyron*, butter + *metron*, measure.] An instrument for determining the amount of butter fat in milk

butyrous (bu'tĭ-rus). Butyraceous, noting a tissue or bacterial growth of butter-like consistency.

bu'vo. Trade name of an extract, in tablet form, of beef and vegetable juices.

bux'ine. An alkaloid from the box, *Buxus sempervirens*, identical with berberine; used as a bitter tonic and antiperiodic in doses of gr. 10–20 (0.6–1.3).

Buzzard's maneuver (buz'ardz man-oo'vur) [Thomas *Buzzard*, London physician, 1831–1919.] Testing the patellar reflex while the sitting patient makes firm pressure on the floor by the toes.

Bv. Chemical symbol of *brevium*.

by'nin. Trade name of a malt extract said to contain about 51 per cent of maltose, 3 per cent. each of dextrin and protein, and 8 per cent. of alcohol.

Byrd-Dew meth'od [Harvey Leonidas *Byrd*, American physician, 1820–1884; James Harvie *Dew*, American physician, *1843.] For asphyxia of the newborn the child is supported supine on the palms of the operator's two hands, the head falling backward; then by simple supination of the operator's forearms the body of the child is flexed and expiration is effected, on pronation of the arms the body is again extended and inspiration is caused.

byssino'sis [G. *byssos*, cotton.] A form of pneumonoconiosis occurring in operatives in cotton mills.

byssocausis (bis"o-kaw'sis) [G. *byssos*, cotton, + *kausis*, burning.] Employment of the moxa.

byssophthisis (bis"o-ti'(te')sis). A chronic pneumonia caused by the inhalation of dust and particles of cotton occurring in operatives in cotton mills.

byss'us [G. *byssos*, cotton.] Cotton, lint.

byth'ium [G. *bythos*, depth.] Name given to a substance assumed to be a new element obtained from sulphur.

C

C. Abbreviation for cylinder or cylindrical lens, centigrade or Celsius, contraction, closure (of an electrical circuit), *Corynebacterium*, and congius (gallon). Chemical symbol for carbon.

c. Abbreviation for L. *centum* (one hundred) or *cum* (with).

C_3 popula'tion. Physically and mentally deficient persons—not throwbacks but the products of imperfect development.

Ca. Abbreviation for cathode. Chemical symbol for calcium.

Cab'ot's ring bod'ies [Richard Clarke *Cabot*, Boston physician, *1868.] Ring-shaped figures staining red with Wright's stain, occasionally seen in the erythrocytes in pernicious anemia, lead poisoning, and lymphatic leucemia.

CaC_2. Calcium carbide

cacao (kă-kah'o) [of native Mexican origin.] Theobroma; see also cocoa. **c. præpara'ta** (N.F.), prepared cacao, cocoa, a powder made from the roasted kernels of the ripe seeds of *Theobroma cacao*.

cac'atory [L. *cacare*, to go to stool.] Relating to bowel movements, especially excessive discharges or diarrhea.

CaCC. Abbreviation for cathodal, or negative pole, closure contraction.

cacergasia (kă-ser-gas'ĭ-ŭ) [G. *kakos*, bad, + *ergasia*, work.] Poor mentality.

cacesthesia (kak-es-the'zĭ-ŭ, kas-es-the'zī-ŭ) [G. *kakos*, bad, + *aisthēsis*, sensation.] 1. Malaise. 2. Any disorder of sensibility.

caché (kă-sha') [Fr. hidden, covered.] A lead cone covered with several layers of paper, having a mica window at the bottom; employed as an applicator in radiotherapy, the radium or other radioactive substance being at the apex of the cone and filters being placed below as required.

cachec'tic (kă-kek'tik). Relating to or suffering from cachexia.

cachet (kă-sha') [Fr. a seal.] A seal-shaped capsule or wafer for enclosing powders of disagreeable taste.

cachexia (kă-kek'sĭ-ah) [G. *kakos*, bad, + *hexis*, a habit of body.] A general lack of nutrition and wasting occurring in the course of a chronic disease. **Af'rican c.**, earth-eating. **c. aphtho'sa**, sprue (2). **c. aquo'sa**, an edematous form of uncinariasis. **c. hypophys"eopri'va**, a condition following total removal of the hypophysis cerebri, marked by a fall of body temperature, awkwardness in gait with irregular muscular contractions similar to those of tetany, followed by coma and death. **c. strumipri'va**, c. thyreopriva. **c. thyreoid'ea**, myxedema. **c. thyreopri'va**, myxedematous symptoms resulting from the removal of the thyroid gland. **c. thyroid'ea**, c. thyreoidea. **c. urina'ria** (1) toxic symptoms occurring with renal infection caused by back pressure from an overdistended bladder—in prostatic hypertrophy, for example, (2) the constitutional disturbance accompanying suppuration anywhere in the urinary tract. **lymphat'ic c.**, Hodgkin's disease. **mala'rial c.**, chronic malaria, a condition developing after repeated attacks of intermittent or remittent fever or affecting residents in malarious regions who may have had no distinct paroxysms of chills and fever. The subjects are anemic, emaciated, and cachetic looking, with sallow complexion, edema of the ankles, feeble digestion, enlarged spleen, muscular weakness, and mental depression. **mercu'rial c.**, chronic mercurial poisoning. **ne'gro c.**, African c., dirt-eating. **sat'urnine c.**, chronic lead poisoning. **splen'ic c.**, pernicious anemia with enlargement of the spleen. **u'rinary c.**, see *c. urinaria*.

cachexy (kă-kek'se). Cachexia.

cacidrosis (kak-i-dro'sis, kas-i-dro'sis) [G. *kakos*, bad, + *hidros*, sweat.] Morbid sweating, bromidrosis.

$CaCl_2$. Calcium chloride, bleaching powder.

$Ca(ClO_3)_2$. Calcium chlorate.

$CaCO_3$. Calcium carbonate, chalk

CaC_2O_4. Calcium oxalate.

cacocholia (kă-ko-ko'lĭ-ah) [G. *kakos*, bad, + *cholē*, bile.] An abnormal state of the bile.

cacochylia (kă-ko-ki'lĭ-ah) [G. *kakos*, bad, + *chylos*, juice.] An abnormal state of the gastric juice. 2. Indigestion.

cacochymia (kă-ko-ki'mĭ-ah) [G. *kakos*, bad, + *chymos*, juice.] 1. Cacochylia 2. Disordered metabolism.

caco'dyl [G. *kakōdēs*, ill-smelling, + *hylē*, stuff.] An evil-smelling oil, $As(CH_3)_4$, resulting from the distillation together of arsenous acid and potassium acetate.

cacod'ylate. A salt of cacodylic acid

cacodyl'ic. Relating to cacodyl, noting especially *cacodylic acid*, dimethylarsenic acid, prepared by treating cacodyl and cacodyl oxide with mercuric oxide; occurs in the form of odorless soluble prismatic crystals, and forms cacodylates with various bases, which are employed in skin diseases, tuberculosis, malaria, and other affections in the place of arsenical preparations.

cacoethes (kă-ko-e'thes) [G. *kakoēthēs*.] 1. A bad habit or propensity. 2. Malignancy. **c. operan'di**, tomomania.

cacoethic (kă-ko-e'thik) [G. *kakos*, bad, + *ēthos*, character.] Malignant.

cacogenesis (kă-ko-jen'e-sis) [G. *kakos*, bad, + *genesis*, origin.] 1. Monstrosity. 2. Abnormal growth or development.

cacogenic (kă-ko-jen'ik) [See *cacogenics*.] 1. Tending toward racial deterioration through bad sexual selection. 2. Relating to cacogenesis.

cacogenics (kă-ko-jen'iks) [G. *kakogenēs*, ill-born.] The opposite of eugenics; the aggregation of factors tending, through adverse sexual selection, to the deterioration of the race.

cacogeusia (kak-o-ju'sĭ-ah) [G. *kakos*, bad, + *geusis* taste.] A bad taste.

cacomelia (kă-ko-mel'ĭ-ah) [G. *kakos*, bad, + *melos*, limb.] A congenital deformity of one or more of the limbs.

cacoplas'tic [G. *kakos*, bad, + *plastikos*, fit for moulding, formed.] 1. Relating to or causing morbid growth, noting the cacoplastic albumin of Rokitansky the presence of which was assumed to be essential to the production of cancer. 2. Incapable of normal or perfect formation.

cacos'mia [G. *kakos*, bad, + *osmē*, the sense of smell.] A subjective perception of disagreeable odors which do not exist; a variety of *parosmia*.

cacosto'mia [G. *kakos*, bad, + *stoma*, mouth.] Noma; severe stomatitis.

cacothenic (kă-ko-then'ik) [See *cacothenics*.] Tending to racial deterioration through bad environmental influences.

cacothenics (kă-ko-then'iks) [G. *kakothēnia*, a state of ill-being.] The opposite of euthenics; racial degeneration through bad environmental and insanitary influences.

cacot'rophy [G. *kakos*, bad, + *trophē*, nourishment.] Malnutrition.

cac'tin. A glucoside from *Cactus grandiflorus*, recommended as a heart tonic in doses of gr. $\frac{1}{100}$ (0.001).

cactus grandiflorus (kak'tus gran-dĭ-flor'us) [G. *kaktos*; L. *grandis*, large, + *flos* (*flor-*), flower.] (N.F.) The fresh flowers and young stems of *Cactus grandiflorus* or *Cereus grandiflorus*, night-blooming cereus; recommended as a heart tonic and as a substitute for digitalis in doses of ♏10–15 (0.6–1.0) of the N.F. tincture, or of ♏2–4 (0.12–0.25) of the fluidextract. In eclectic practice there are two preparations; one called simply *cactus*, made from the green twigs, the other, *cactus flowers*, made from freshly opened flowers; the former is employed to strengthen and steady the dilated or weak heart, the latter more especially in functional troubles in nervous patients; dose of either preparation, 2 to 5 or 10 drops in water every 2 to 4 hours

cacu'men, pl. *cacumina* [L. summit.] 1. The top or apex of anything—of a plant or an anatomical structure. 2. The anterior portion of the superior vermis of the cerebellum, culmen [BNA].

cacu'minal. Relating to the top or apex of anything. **c. lobe,** folium* vermis, superior semilunar lobe of the cerebellum.

cadaver, pl. *cadav'era* (kă-dav'ur) [L. *cadere*, to fall.] A dead body, corpse.

cadaver'ic. Relating to a dead body.

cadav'erine. A ptomaine, $C_5H_{16}N_2$, formed during putrid decomposition of the human body, a heavy, foul-smelling liquid.

cadav'erous. Having the pallor and appearance of a corpse.

cade oil. Oleum cadinum.

Cadet's fuming liquor (kă-da') [Louis Claude *Cadet* de Gassicourt, French chemist, 1731–1799.] Alcarsin, the product of distillation of a mixture of equal parts of potassium acetate and arsenous acid.

cad'mium. A metallic element, symbol Cd, atomic weight 111.6, resembling tin in appearance and zinc in its chemical relations. Its salts are poisonous and little used in medicine **c. i'odide,** CdI_2, used externally in ointment in the treatment of chronic skin diseases, glandular enlargements, and chronic arthritis; *unguentum cadmii iodidi* was formerly official in the B.P. **c. sal'icylate** occurs in colorless tablets; it has been used in the treatment of purulent ophthalmia. **c. sul'phate** occurs as colorless rhombic crystals; it is an irritant astringent and has been employed locally in the treatment of gonorrhea and corneal opacities, in solutions of gr. 1 in ʒi–4.

CaDTe. Cathodal duration tetanus, a tetanic contraction occurring on application of the cathode or negative pole, while the circuit is closed.

caduceus (kă-du'se-us) [L. the staff of Mercury.] A staff with two oppositely twined serpents and surmounted by two wings. The symbol of the medical profession and the emblem of the Medical Corps, U. S. Army, and (with a gilt block letter **N** impressed upon it) of the army nurse corps, and also forming part of the emblem of the U. S. Public Health Service. The staff of Esculapius (which is the correct symbol of the medical profession) is a rod with only one serpent encircling it.

cadu'cous [L. *cadere*, to fall.] Deciduous; in botany, falling early, noting the sepals or petals which fall before or at the time of flowering.

cæ'citas [L.] Blindness.

cæ'cum. Cecum.

cæ'cus mi'nor ventric'uli. The cardiac portion of the stomach.

cæmen'tum. Cementum.

cænogenesis (se-no-jen'e-sis) [*G. kainos*, new, + *genesis*, origin, production.] Development of new species through adaptation to the environment.

cænophobia (se-no-fo'bĭ-ŭ). Cænotophobia.

cænotophobia (se-not-o-fo'bĭ-ah) [G. *kainotēs*, novelty, + *phobos*, fear.] Neophobia, morbid dread of anything new or novel.

cæsa'rean, cæsa'rian. Cesarean.

cæsium (se'zĭ-um). Cesium.

caf'fea [L.] Coffee.

caffeic (kă-fe'ik). Relating to coffee. **c. acid,** $C_9H_8O_4$, obtained from caffeotannic acid by precipitation, occurs in straw-colored crystals.

caffeina (kă-fe-e'nah). (U.S and Br.) Caffeine, theine, an alkaloid obtained from the dried leaves of *Thea sinensis*, tea, or the dried seeds of *Coffea arabica*, coffee, occurring in white silky needles; employed in cardiac weakness, neuralgia, and headache in doses of gr. ½–2 (0.03–0.13). **c. citra'ta** (U.S.), citrated caffeine, caffeinæ citras (Br.), caffeine citrate, a mixture of equal parts of caffeine and citric acid, dose, gr. 1–5 (0.06–0.3). **c. citra'ta efferves'cens** caffeinæ citras effervescens (Br.), effervescent citrated caffeine, a coarse granular white powder, containing 4 per cent. of citrated caffeine; effervesces when put into water; dose, ʒi–4 (4.0–15.0). **caffei'næ sodioben'zoas** (U.S.), **c. et so'dii ben'zoas** (Br.), caffeine sodiobenzoate; a mixture of equal parts of sodium benzoate and caffeine; employed to meet the indication of caffeine in doses of gr. 2–3 (0.13–0.2). **caffei'næ sodiosalicy'las** (N.F.), caffeine sodiosalicylate; a mixture of sodium salicylate and caffeine; employed for the relief of headache and neuralgia in doses of gr. 2–3 (0.13–0.2).

caffeine (kă'fe-ēn). The alkaloidal active principle of coffee, tea, guarana, maté, and kola; it is identical with theine and guaranine acid; see *caffeina*.

caffeinism (kaf'e-ēn-izm). Chronic coffee-poisoning, characterized by palpitation, dyspepsia-irritability, and insomnia.

caff'eol. Caffeone, $C_{11}H_{10}O_2$, an aromatic oil obtained by roasting coffee, probably the methyl ether of saligenin; the coffee aroma is believed to be due to this substance.

caff'eone. Caffeol.

caff"eotann'ic acid. Chlorogenic acid, an amorphous gum-like acid from coffee, yielding caffeic acid by precipitation with baryta and salts of lead.

Cagot ear (kă-go') [name of a degenerate race in the Pyrenees among whom physical stigmata are common.] An auricle having no lobulus.

cahin'ca root. The root of *Chiococca brachiata* and of *C. alba*, plants of tropical America; tonic,

diuretic, and purgative; dose, gr. 20–60 (1 3–4.0) as a diuretic.

cahin'cin. Cahincic acid, occurs in the form of white silky needles, of very bitter taste; diuretic and purgative in doses of gr. 2–4 (0.13–0.25).

CaH_2O_2. Calcium hydroxide, slaked lime.

caincic acid (ka-in'sik). Cahincin.

cainogenesis. Caenogenesis.

cainophobia. Caenophobia.

caisson disease' (ka'son) [*caisson* Fr. *caisse*, a box; a water-tight box or cylinder containing air under high pressure, used in sinking piers for bridges, etc.] A symptom-complex occurring in tunnel workers and others working in places under high air pressure when they return too suddenly to the normal atmosphere; it is marked by headache, pain in the epigastrium and the extremities, vertigo, dyspnea, coughing, nausea and vomiting, and paralysis; called also *the bends*, *diver's paralysis*, *tunnel disease*.

Cajal's cells (kah-hahl') [Santiago Ramon y *Cajal*, Spanish anatomist, *1852.] Nerve cells of the superficial (molecular) layer of the cerebral cortex, having several neuraxons. **C.'s stain** for nerve cells and fibers, potassium bichromate solution, 3 parts; 1 per cent. osmic acid solution, 25 parts, distilled water, to make 100 parts; the nerve cells and their processes stain a deep black, the neuroglia cells a reddish black.

caj'eput [Malay, white tree.] *Oleum cajuputi*.

cajeputene (kaj'e-pu-tēn). Dipentene, a substance found in ethereal oil of cajeput.

caj'eputol. 1. Eucalyptol. 2. Oleum cajuputi

caj'uput. Oleum* cajuputi.

cakæsthe'sia, cakesthe'sia [G. *kakos*, bad, + *aisthēsis*, feeling.] Cacesthezia.

cakergasia (kak-er-gas'ĭ-ă). Cacergasia.

Cal'abar bean [*Calabar*, a region in West Africa.] Physostigma. **C. swell'ings,** an eruption of transient circumscribed edema, affecting the natives in Calabar and other parts of West Africa, accompanied by soreness and heat or itching; they recur at irregular intervals for months or years, and are believed to be due to the presence of *Filaria loa* in the subcutaneous tissues.

calabarine (kal'ă-bar-ēn). A liquid alkaloid from physostigma, antagonistic in certain respects to physostigmine.

calage (kal-azh') [Fr. wedging.] Wedging the body in the berth by means of pillows, in order to prevent rolling in case of seasickness.

calamina præparata (kal-ah-me'nah pra-par-ah'tah). (N.F.) Prepared calamine, lapis calaminaris, native zinc carbonate prepared by calcination and elutriation; a pinkish powder; employed as a dusting powder.

calamine (kal'ă-min). Zinc carbonate, $ZnCO_3$. **prepared' c.,** calamina præparata. **silic'eous c.,** native hydrous zinc silicate Zn_2SiO_4.

cal'amus [L. reed, a pen.] The dried unpeeled rhizome of *Acorus calamus*, sweet flag; aromatic and stomachic in doses of gr. 5–30 (0.3–2.0). **c. scripto'rius,** writing pen, inferior part of the rhomboid fossa, the narrow lower end of the floor of the fourth ventricle between the two clavæ.

calbroben (kal'bro-ben). Calcii dibrombehenas, sabromine.

cal'calith. A proprietary remedy for rheumatism and uric acid conditions, consisting of calcium carbonate, colchicine, and lithia.

calcaneo-astrag'aloid. Relating to the calcaneus, or os calcis, and the astragalus, or talus.

calca"neocu'boid. Relating to the calcaneus and the cuboid bone.

calcaneodynia (kal-ka-ne-o-din'ĭ-ă) [L. *calcaneum*, heel, + G. *odynē*, pain.] Painful heel.*

calca"neonavic'ular. Relating to the calcaneus and the scaphoid bone, or os naviculare.

calca"neoscaph'oid. Calcaneonavicular.

calca"neotib'ial. Relating to the calcaneus and the tibia.

calca'neum. Calcaneus.

calcaneus, gen. *calca'nei* (kal-ka'ne-us) [L. relating to the *calx* or heel.] 1. [BNA] Os tarsi fibulare [NK], heel-bone, os calcis; the largest of the tarsal bones; it forms the heel and articulates with the cuboid anteriorly and the astragalus above. 2. Talipes* calcaneus.

cal'car [L. spur, cock's spur.] A spur-like process. **c. a'vis,** hippocampus minor, the lower of two elevations on the inner wall of the posterior horn of the lateral ventricle of the brain, caused by the proximity of the bottom of the calcarine fissure. **c. femora'le,** Bigelow's septum, a bony spur springing from the under side of the neck of the femur above and anterior to the lesser trochanter, adding to the strength of this part of the bone. **c. pe'dis,** heel, calx [BNA]

calca'rea. Lime, calx.* **c. carbon'ica,** a homeopathic preparation from the white middle layer of the oyster shell, given in scrofula, sweating of the feet, rickets, acid dyspepsia, gallstone colic, and night sweats, in doses of the 6th to 200th potencies. **c. chlorina'ta,** calx chlorinata. **c. fluor'ica,** a homeopathic preparation of fluorspar, used in bone tumors, cataract, and varicose veins in doses of the 3x to 12x potencies. **c. ostrea'rum,** c. carbonica. **c. phosphor'ica,** precipitated calcium phosphate, a homeopathic preparation, recommended in bone diseases, rickets, tuberculosis, leucorrhea, and rheumatism in doses of 3x to 12x potencies. **c. us'ta,** quicklime, calcium oxide.

calca'reous. Chalky, relating to or containing lime. **c. metas'tasis,** the deposit of calcareous material in remote tissues in case of extensive resorption of osseous tissue in caries, malignant growths, etc. **c. degenera'tion** or **infiltra'tion,** calcification.

cal'carine. Relating to the calcar; spur-shaped.

calcariuria (kal-kar-ĭ-u'rĭ-ah). Excretion of lime salts in the urine.

cal'cic. Relating to lime.

calcicosis (kal-sĭ-ko'sis). Pneumonoconiosis from the inhalation of limestone dust; marble-cutter's phthisis.

cal'cidine. Trade name of a preparation of calcium and iodine; recommended for catarrhal laryngitis in children in doses of gr. ½–1 (0.02–0.06)

calciferol (kal-sif'er-ol) [L. *calx*, lime, + *ferre*, to carry.] A crystalline product obtained from a distillation of irradiated ergosterol in vacuo. It has a high antirachitic potency.

calcific (kal-sif'ik) [L. *calx*, lime, + *facere*, to make.] Forming or causing a deposit of lime or one of its salts.

calcifica'tion [L. *calx*, lime, + *facere*, to make.] The deposition of insoluble salts of calcium or magnesium, especially calcium carbonate or phosphate, in weakened or degenerated tissues; petrifaction, calcareous infiltration or degeneration. **c. lines,** accretion* lines. **Moenckeberg's c.,** see *Monckeberg*.

calcigerous (kal-sij'er-us) [L *calx*(*calc*-), lime, + *gerere*, to bear.] Containing lime; producing any of the salts of calcium.

calcimeter (kal-sim'e-tur) [L. *calcium* + G. *metron*, measure.] A device for estimating the amount of

calcium in the blood. **Blair Bell's c.** is a graduated pipette in which a mixture is made for determining the calcium index (see *Bell's* method*).

calcina'tion [L. *calcinare*, to make lime.] The operation of calcining.

calcine (kal'sīn, kal'sin). To expel water and animal matter by heat; to roast metals, bones, etc., reducing them to a powder or a friable condition.

calcino'sis [*calcium* + *-osis*.] A condition marked by deposits of lime salts in the tissues.

calcipenia (kal-sĭ-pe'nĭ-ă). A condition in which there is an insufficient amount of lime salts in the tissues and flu s of the body.

calciphilia (kal-sĭ-fil'ĭ-ah) [L. *calx* (*calc-*), lime, + G. *philia*, friendship.] An affinity for lime salts circulating in the blood, hence a tendency to calcification.

cal'cium [L. *calx*(*calc-*), chalk.] A metallic dyad element, of a lustrous yellow color, symbol Ca, atomic weight 40.09. The oxide of calcium is an alkaline earth, CaO, quick lime, which on the addition of water becomes calcium hydrate, $Ca(OH)_2$, slaked lime. Several of the salts of calcium are employed in medicine **cal'cii benzo'as,** calcium benzoate, in colorless efflorescent crystals, soluble in 20 parts of water, employed as an internal antiseptic and in albuminuria, in doses of gr. 5–10 (0.3–0.6). **cal'cii betanaph'thol sulpho'nas,** calcium betanaphthol sulphonate, a reddish-white powder, used in rheumatism, gout, and neuralgia in doses of gr. 5–15 (0.3–1.0). **cal'cii bo'ras,** calcium borate, a white insoluble powder, applied locally for burns, moist eczema, etc., and given internally for the diarrhea of children in doses of gr. 2–5 (0.13–0.3). **cal'cii bro'midum** (U.S.), calcium bromide, a white deliquescent granular salt, employed to meet the same indications as potassium bromide, in doses of gr. 5–30 (0.3–2.0). **cal'cii car'bidum,** calcium carbide, occurs in blackish crystalline lumps; when in contact with water it yields acetylene gas; has been used locally to check fetor and discharge in cancer of the uterus. **cal'cii carbo'nas** (Br.), calcium carbonate, **c.c. præcipita'tus** (U.S.), precipitated calcium carbonate, creta præcipitata, a fine white impalpable powder, employed in diarrhea as an antacid in doses of gr. 10–30 (0.6–2.0). **c. ca'seinate,** a combination of casein and calcium containing 1.5 to 2 per cent. of calcium, occurring as a yellowish white powder; used as a food in cases of diarrhea, especially in infants. **cal'cii chlo'ridum** (U.S. and Br.), calcium chloride, occurs as translucent inodorous, deliquescent masses, of a sharp, bitter, saline taste; used to increase the coagulability of the blood in hemophilia and purpura, in doses of gr. 2–15 (0.13–1.0). **cal'cii dibrombe'henas,** sabromine, calbroben, a calcium salt of dibrombehenic acid, $Ca(C_{22}H_{42}O_2Br)_2$, used to meet the indications of the ordinary bromides in doses of gr. 8 (0.5). **c. glu'conate,** a salt of c. more palatable than the chloride, occurring in the form of odorless, tasteless, and colorless granules, given in dose of 75 gr. (5.0) three times a day. **cal'cii glycerophos'phas** (U.S.), a white crystalline powder soluble in 20 parts of water; employed as a nerve tonic in doses of gr. 3–10 (0.18–0.6). **c. group,** the metals of the alkaline earths, three basic or basylous elements, calcium, strontium, and barium. **cal'cii hippu'ras,** calcium hippurate, said to be a solvent of uratic gravel and calculi in doses of gr. 5–20 (0.3–1.3). **cal'cii hydrox'idum** (Br.), c. hydroxide, calcii hydras, a soft white powder of alkaline and slightly bitter taste, used to make liquor calcii hydroxidi, lime water. **cal'cii hypophos'phis** (N.F. and Br.), calcium hypophosphite, occurring as a white crystalline powder or in colorless transparent scales; employed in rickets, incipient tuberculosis, and other manifestations of defective nutrition, in doses of gr. 10–30 (0.6–2.0). **c. in'dex,** see under *Bell's* method*. **cal'cii io'das,** calcinol, a tasteless odorless powder, employed as a dusting powder and in lotion and ointment as an antiseptic and deodorant. **cal'cii iod'idum,** calcium iodatum, calcium iodide, has been recommended in tuberculosis in doses of gr. 1–4 (0.06–0.25). **cal'cii iodobe henas** (U.S.), calcium monoiodobehenate, $(C_{21}H_{42}ICOO)_2Ca$, calioben, saiodine, sajodin; a white or yellowish powder unctuous to the touch, odorless or with a slight fatty smell, insoluble in water, used to meet the indications of the ordinary iodides in doses of gr. 8–15 (0.5–1.0). **cal'cii lac'tas** (U.S., Br.), calcium lactate, occurs in white crystalline masses, soluble in 10 parts of water; employed in rickets in doses of gr. 4–8 (0.25–0.5). **cal'cii lactophos'phas** (N.F.), calcium lactophosphate, a mixture of calcium lactate, calcium acid lactate, and calcium acid phosphate, a white granular powder, soluble in water; employed in tuberculosis and other wasting diseases in doses of gr. 5–10 (0.3–0.6). **cal'cii monoiodobe'henas,** calcii iodobehenas (U.S.). **c. orthoiodoxybenzoate,** employed in the treatment of chronic arthritis in daily doses of gr. 15 (1.0). **cal'cii perman'ganas,** calcium permanganate, an intestinal antiseptic in doses of gr. ½–1½ (0.03–0.1). **cal'cii perox'idum,** calcium peroxide, gorit, employed in acid dyspepsia and as an intestinal antiseptic, in doses of gr. 3–10 (0.2–0.6). **cal'cii phos'phas monoac'idus,** dibasic calcium phosphat , calcium monohydrogen phosphate, $CaHPO_4.2H_2O$, employed by preference in place of the following and in the same dose. **cal'cii phos'phas præcipita'tus** (N.F.), **cal'cii phos'phas** (Br.), precipitated calcium phosphate, a white amorphous powder, used for the same purposes as calcium hypophosphite, in doses of gr. 10–30 (0.6–2.0). **cal'cii phos'phas triba'sicus,** tertiary calcium phosphate, $Ca_3(PO_4)_2$, a salt proposed for use as an antacid; it is said to neutralize an excess of acid in the stomach, but not to produce general alkalization of the system. **cal'cii sac'charas,** calcium saccharate, employed as an antacid in dyspepsia and flatulence in doses of gr. 7½–30 (0.5–2.0), and as an antidote in carbolic acid poisoning in dose of ʒ2–5 (8.0–20.0). **cal'cii salicy'las,** calcium salicylate, a white insoluble crystalline powder, used as an intestinal antiseptic in gastroenteritis in doses of gr. 8–15 (0.5–1.0). **cal'cii santo'nas,** calcium santonate, anthelmintic in doses of gr. ½–1½ (0.03–0.1). **cal'cii sul'phas exsicca'tus,** dried calcium sulphate, dried gypsum, plaster of Paris; used for making plaster splints and other fixed dressings. **cal'cii sul'phidum cru'dum,** crude calcium sulphide, calx sulphurata, sulphurated lime; a light grayish powder having a faint odor or hydrogen sulphide, employed in the treatment of boils and acne in doses of gr. ½–1 (0.03–0.06), and externally as an application to scabies and ringworm. **cal'cii sul'phis,** calcium sulphurosum, calcium sulphite, a white powder used as an intestinal antiseptic, and locally in the treatment of parasitic skin diseases.

calcoglob'ulin. A combination of an albuminate with a calcium salt, supposed to be the form in which lime salts are deposited in the bones and in areas of calcareous degeneration.

cal'coid [L. *calx(calc-)*, lime, + G. *eidos*, resemblance.] A neoplasm of the tooth-pulp.

calcophorous (kal-kof'or-us) [L. *calx(calc-)*, lime, + G. *phoros*, bearing.] Calcigerous.

calcospherite (kal-ko-sfe'rīt) [L. *calx*, lime, + G. *spaira*, sphere.] One of a number of very small concentric calcareous bodies (composed of calcoglobulin) found in nervous tissue, tumors, the thyroid, the prostate, and elsewhere.

calcreose (kal'kre-ōz). Trade name of a preparation said to contain 50 per cent. pure beechwood creosote with calcium hydrate; recommended in bronchitis, pulmonary tuberculosis, and gastrointestinal infections in doses of gr. 4–16 (0.25–1.0) every 3 to 6 hours.

cal'culary. Relating to a calculus or calculi.

cal'culous. Relating to calculi.

calculus, gen. and pl. *cal'culi* (kal'ku-lus) [L. a pebble.] A concretion formed in any portion of the body, usually (except in the case of gallstones) formed of inorganic matter, often deposited around a minute fragment of organic material, the *nucleus*. **arthrit'ic c.,** chalkstone, a gouty deposit of urates in or near a joint. **au'ral c.,** inspissated cerumen in the external auditory meatus. **bil'iary c.,** gallstone, a concretion, chiefly of cholesterin, formed in a bile duct or the gallbladder. **blood c.,** phlebolith; a calculus formed in a thrombus. **cor'al c.,** a large kidney stone moulded to the pelvis with branches filling the calyces. **dendrit'ic c.,** coral c. **den'tal c.,** (1) tartar; (2) serumal c. **fu'sible c.,** one composed of ammoniomagnesian phosphate and calcium phosphate. **hematogenet'ic c.,** serumal c. **he'mic c.,** blood c. **hemp'seed c.,** a small urinary c. of calcium oxalate forming, when multiple, gravel. **intes'tinal c.,** a concretion in the bowel, either a coprolith or an enterolith. **mul'berry c.,** a hard, dark brown or gray, usually nodulated concretion in the bladder, composed chiefly of calcium oxalate. **na'sal c.,** rhinolith. **pancreat'ic c.,** a concretion usually multiple, in the pancreatic duct, consisting of calcium carbonate and phosphate with organic matter. **prostat'ic c.,** one formed in the prostate, usually phosphatic **pulp c.,** pulp-nodule. **re'nal c.,** stone in the kidney, a concretion, usually of uric acid, calcium oxalate, or phosphates, in the kidney. **sal'ivary c.,** (1) a c. in a salivary duct; (2) tartar of the teeth. **se'rumal c.,** hematogenetic c., a greenish or dark brown deposit on the roots of the teeth in pyorrhea alveolaris. **ton'sillar c.,** amygdalolith, tonsillolith, a calcareous concretion in the substance of the tonsil. **u'rinary c.,** a c. in the kidney, ureter, bladder, or urethra. **u'terine c.,** womb-stone, a calcareous concretion in the uterus. **ves'ical c.,** stone in the bladder; a urinary c. formed or lodged in the bladder.

articular, arthrolith, chalkstone. **biliary,** gallstone cholelith, hepatolith, calculus fellei. **bladder,** vesical calculus, stone in the bladder, cystolith. **blood,** hemolith, hematolith, angiolith (in vessel), arteriolith (in artery), phlebolith (in vein). **cuta'neous,** milium. **gastric,** gastrolith. **heart cavity** or **wall,** cardiolith. **intestinal,** enterolith. **joint,** arthrolith, chalkstone. **lacrymal,** tearstone, dacryolith. **nasal,** rhinolith. **preputial,** postholith. **prostatic,** prostatolith. **pulmonary,** pneumolith. **tonsillar,** amygdalolith. **urinary,** nephrolith, renal calculus, ureteral calculus, cystolith, vesical calculus, urethral calculus. **uterine,** womb-stone, hysterolith.

Caldani's lig'ament (kahl-dah'ne) [Leopoldo Marco Antonio *Caldani*, Italian anatomist, 1725–1813.] A ligament arising from the internal border of the coracoid process and passing inward; it divides into two fasciculi, the upper one of which is attached to the under surface of the clavicle, the lower to the upper edge of the first rib.

Caldwell-Luc opera'tion (kawld'wel-luk) [George M. *Caldwell*, American physician; Henry *Luc*, French laryngologist, *1855.] Opening into the antrum of Highmore through the anterior wall, the primary incision being made in the supradental fossa opposite the second or third molar tooth.

calef. Abbreviation for L. *calefac*, make warm, or *calefiat*, let (it) be warmed.

calefacient (kal-e-fa'shent) [L. *calere*, to be warm, + *facere*, to make.] 1 Making warm or hot. 2. An agent causing a sense of warmth in the part to which it is applied.

calen'dula [L. *Calendæ*, the first day of the month, the plant flowering nearly every month.] (N.F.) The dried florets of *Calendula officinalis*, marigold; employed chiefly externally as an application to sprains and bruises.

calen'dulin. A yellow amorphous neutral principle in calendula.

calentura (kal-en-too'rah) [Sp. from L. *calere*, to be hot.] A mild ephemeral or continued fever of tropical countries, often called by the natives of the English-speaking tropics, a "cold"; thermic fever.

calenture (kal'en-tūr). Calentura.

calf, pl. *calves* (kaf or kahf) [Gael. *kalpa*.] The muscular swelling of the back of the leg, formed chiefly by the bellies of the gastrocnemius and soleus muscles. **gnome's c.,** the very full rounded calf occurring in pseudohypertrophic paralysis affecting the gastrocnemius muscles.

calf-bone. Fibula.

caliber (kal'ĭ-bŭr). The diameter of a tube or canal.

cal'ibrate. To measure the diameter of a tube.

cal'ibrator. An instrument for measuring the diameter of a tube or canal.

caliculus (kal-ik'u-lus) [L. dim. of *calix*, a cup.] Calyculus. **c. ophthal'micus** [BNA], optic cup, the secondary ocular vesicle made cup-shaped by the pressure of the lenticular vesicle.

caliga'tion. Caligo.

caligo (kal-i'go) [L. darkness.] Dimness of vision.

calioben (kal-i'o-ben). Calcii iodobehenas (U.S.). saiodine, sajodin.

cal'iper, cal'ipers, cal'lipers [*caliber*.] An instrument consisting of two legs hinged at one extremity, used for measuring diameters, in obstetrics the pelvic diameters.

calisa'ya. Yellow cinchona, the bark of *Cinchona flava*.

calisthenics (kal-ĭ-sthen'iks) [G. *kalos*, beautiful, + *sthenos*, strength.] The practice of various exercises ("setting-up exercises," the use of dumb-bells, Indian clubs, etc.) with the object of preserving health and increasing physical strength.

ca'lix. Calyx.

Call'away's proof [Thomas *Callaway*, English physician, nineteenth century.] In dislocation of the humerus the measurement over the acromion and through the axilla is greater on the injured side.

Calleja's islets (kahl-ya'hahz i'lets). Groups of pyramidal and stellate cells in the cortex of the gyrus hippocampi.

callisec'tion [L. *callus*, hard (insensitive), + *sectio*, a section.] Vivisection of an anesthetized animal; the opposite of sensisection.

Callisen's operation (kal'-e-sen). [Heinrich *Callisen*, Danish surgeon, 1740–1824.] Lumbar colostomy in the descending colon for the formation of an artificial anus.

Call'ison's flu'id [James G. *Callison*, New York physician, *1873.] A diluting fluid for counting red blood cells, composed of Loeffler's alkaline methylene blue, 1; liquor formaldehydi, 1; glycerin, 10; ammonium oxalate (neutral), 1; sodium chloride, 2.5; distilled water, 90. The various ingredients are added to the distilled water and allowed to stand until solution occurs. After being filtered, the preparation is ready to use.

callo'sal. Relating to the corpus callosum.

callos'itas, callos'ity [L. *callosus*, thick-skinned.] Callus, tyloma, keratoma, a circumscribed thickening of the epidermis as a result of friction or intermittent pressure.

callosomarginal (kă-lo''so-mar'jĭ-nal). Relating to the corpus callosum and the marginal gyrus, noting the sulcus between them.

callo'sum [L. *callosus*, hard.] Corpus callosum.

callous (kal'us). Relating to callus or to a callosity; thick-skinned, hard.

cal'lus [L. hard skin.] 1. Callosity. 2. The hard bone-like substance thrown out between and around the ends of a fractured bone. **cen'tral c.**, the provisional c. within the medullary cavity. **defin'itive c.**, the c. between the two ends of the fractured bone which becomes converted into osseous tissue. **ensheath'ing c.**, the mass of provisional c. around the outside of the bone. **interme'diate c.**, definitive c. **per'manent c.**, definitive c. **pin c.**, provisional c. occupying the medullary canal. **provis'ional c.**, the c. thrown out as nature's splint to keep the ends of the bone in apposition; it is absorbed after union is complete. **tem'porary c.**, provisional c.

cal'mative. 1. Quieting, sedative 2. An agent which quiets excitement, a sedative.

Calmette' test [Albert *Calmette*, French bacteriologist, *1863.] See conjunctival* reaction.

Calmette-Guérin bacil'lus (kal-met' ga-raṅ') [Albert *Calmette*.] BCG, a descendant of the tubercle b. which has lost its virulence through a long series of cultures in glycerinated ox-gall; employed in the prophylactic vaccination of newborn infants.

calolactose (kal-o-lak'tōz). Trade name of an intestinal disinfectant composed of calomel, bismuth subnitrate, and sugar of milk.

cal'omel [derivation uncertain.] Hydrargyri chloridum mite. **colloid'al c.**, calomelol.

cal'omelol. Colloidal calomel; a soluble compound of calomel with albumin, occurring as a grayish powder; used for the same purposes and in the same doses as calomel, and also as a dusting powder and in ointment.

Calophyllum bigator (kal-o-fil'lum bi-ga'tor) [G. *kalos*, beautiful, + *phyllon*, leaf, + L. *bigator*, charioteer.] A tree, *dilo* or *tamanu*, growing in the South Sea islands and other tropical regions, bearing a nut, the ethyl ester of the oil of which has been used in the treatment of leprosy.

ca'lor [L.] Heat; one of the four classical signs of inflammation; calor, rubor, tumor, dolor. **c. mor'dax, c. mordi'cans,** the hot burning skin, of a rosy or brick-red hue, seen in scarlet fever and sometimes in an early stage of pneumonia.

calora'diance. The giving out of heat rays.

calorescence (kal-or-es'ens). The heating to incandescence of a body by the convergence upon it, by means of a lens, of the invisible heat rays.

calor'ic. 1. Relating to a calory. 2. Relating to heat. 3. Heat.

calorie (kal'o-re). Calory.

Calori's bur'sa (kah-law're) [Luigi *Calori*, Italian anatomist, 1807–1896.] A bursa between the arch of the aorta and the trachea.

calorifacient (kal-or-ĭ-fa'shent) [L. *calor*, heat, + *facere*, to make.] Producing heat.

calorif'ic [L. *calor*, heat, + *facere*, to make.] Calorifacient. **c. cen'ter,** heat-center.

calorim'eter [L. *calor*, heat, + G. *metron*, measure.] An apparatus for measuring the amount of heat which a body gives off under varying conditions.

calorimetry (kal-or-im'e-trĭ). The measurement in calories of the amount of heat given off by a body under varying conditions.

calory (kal'o-re) [L. *calor*, heat.] The heat unit employed in the study of metabolism; it is the amount of heat required to raise a kilogram of water from zero to 1° C. This is sometimes called the *large calory* or *kilocalory*, to distinguish it from the original or *small calory*, which is the amount of heat necessary to raise one gram of water one degree Centigrade. See British thermal unit.*

Calot's meth'od (kă-lo') [François *Calot*, French surgeon of Berck-sur-Mer, *1861.] Forcible reduction of the gibbosity in Pott's disease, by extension and counterextension and direct pressure, and retention of the spine in a straight position by means of a plaster jacket. **C.'s solu'tion,** guaiacol 1.0, creosote 5.0, iodoform 10.0, sulphuric ether 30.0, olive oil 70.0; for external application to indolent granulations in fistulæ and sinuses and in chronic otorrhea.

calot'ropis [G. *kalos*, beautiful, + *tropis*, keel of a ship.] (B.A.) Mudar, yercum, the inner bark of the root of *Calotropis procera* and *C. gigantea*, shrubs of southern Asia; tonic and alterative in doses of gr. 3–10 (0.2–0.6), emetic in doses of ʒ ½–1 (2.0–4.0).

cal'ox. A dentifrice containing calcium peroxide.

cal'sa. Trade name of a preparation of agar-agar employed in the treatment of constipation.

calum'ba (U.S., Br.). Columbo, the dried root of *Jateorrhiza palmata*, a tall climbing vine of East Africa; used as a bitter tonic in doses of gr. 15–60 (1.0–4.0) in decoction.

cal'umbin. An amaroid, $C_{21}H_{24}O_7$, from calumba, occurring in colorless needles and prisms; it is upon the presence of this that the bitterness of the crude drug depends.

calva'ria, gen. and pl. *calvariæ* [L. a skull.] Skullcap; skull, cranium.

calva'rian. Relating to the skull-cap. **c. hook,** an instrument used in prying off the top of the skull after it has been sawn round, at autopsies and dissections.

calva'rium. Incorrectly used for calvaria.

Calvé-Perthes disease (kal-va'per'tās) [Jacques *Calvé*, French orthopedic surgeon, *1875: Georg Clemens Perthes, German surgeon, 1869–1927.] Legg's disease, an obscure non-tuberculous affection of the hip-joint in young children; called also osteochondritis deformans juvenilis coxæ.

calvities (kal-vish'e-ēz) [L. *calvus*, bald.] Alopecia, baldness.

cal'vity. Calvities.

calx, gen. *cal'cis* [L. limestone.] (U.S. and Br.) 1. Lime, calcium oxide, an alkaline earth occurring in grayish-white masses (quicklime) which on ex-

posure to the air become converted into a white powder of calcium hydrate and calcium carbonate (air-slaked lime); the addition of water to calcium oxide produces calcium hydrate or slaked lime. 2. [BNA], the heel. **c. chlorina'ta** (U.S. and Br.), chlorinated lime, incorrectly called "chloride of lime," in white friable lumps or powder made by the action of chlorine on calcium hydroxide; disinfectant and deodorant. **c. sulphura'ta** (Br.), sulphurated lime, calcii sulphidum crudum (U.S.). **c. us'ta**, burnt lime, quicklime, caustic lime, unslaked lime. **c. vi'va**, [L. *vivus*, living], c. usta.

calycine (kal'i-sin). Relating to, of the nature of, or resembling a calyx.

calycle (kal'i-kl). Calyculus.

calyculus (kă-lik'u-lus) [L. dim. from G. *calyx*, the cup of a flower.] Calycle; (1) in botany, an accessory calyx; (2) in anatomy a bud-shaped or cup-shaped structure, resembling the closed calyx of a flower. **c. gustato'rius**, taste bud, one of a number of flask-shaped cell-nests around the circumference of the vallate papillæ in the tongue; they consist of supporting cells and gustatory cells; the latter are found in the center of the bud and terminate in fine filaments, the gustatory hairs.

Calymmatobacterium granulomatis (kă-lim''ă-to-bak-te'ri-um gran-u-lo'mă-tis) [G. *kalymma*, hood, veil, + *bakterion*, rod, + *granuloma*.] A gram-negative, non-motile, non-spore-bearing, capsulated, rod-shaped organism (polymorphic under cultivation), found in ulcerating granuloma of the pudenda and believed to be the pathogenic agent in this affection.

calyptra (kă-lip'trah) [G. *kalyptra*, a veil.] A hood-like covering of the capsule of mosses, formed from the ruptured venter of the archegonium.

ca'lyx, pl. *cal'yces* [G. the cup of a flower.] 1. The outer leaflets forming the perianth of a flower. 2. Infundibulum; one of the branches or recesses of the pelvis of the kidney into which the orifices of the Malpighian pyramids project.

cam'biform. Resembling the cambium, noting the parenchymatous tissue on either side of the cambium.

cam'bium [L. exchange.] The layer of tissue between the wood and bark, which forms the secondary wood, or bast.

cambo'gia (U.S. and Br.). Gamboge, a gum resin obtained from *Garcinia hanburii;* purgative and anthelmintic in doses of gr. ½–5 (0.015–0.3). **c. in'dica** (B.A.), Indian gamboge, the gum resin from *Garcinia morella;* cathartic in doses of gr. ½–2 (0.03–0.13).

Camel'lia [G. J. *Kamel*, a Jesuit missionary in the East in the 17th century.] A genus of plants of tropical Asia, among the species of which are *C. japonica*, the cultivated camellia, and *C. thea* or *C. theifera*, the tea-plant; for the latter, see *thea*.

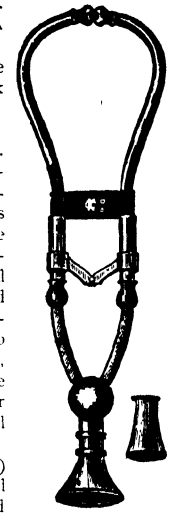
camen'thol. A mixture of menthol and camphor, used by inhalation in respiratory affections.

camera (kam'e-rah) [L. a vault.] 1. A closed box, especially one used to contain the lens and the plates in photography. 2. In anatomy any chamber or cavity, such as one of the cavities of the heart; especially the fifth ventricle of the brain, or cavity of the septum pellucidum. **c. oc'uli ante'rior**, c. o. major [NK], anterior chamber of the eye, the space between the cornea and the iris, filled with a watery fluid (aqueous humor) and communicating through the pupil with the posterior chamber. **c. oc'uli poste'rior** c. o. minor [NK] posterior chamber of the eye, the ring-like space (triangular on section) between the iris and the crystalline lens, filled with aqueous humor. **c. pul'pæ**, the pulp cavity* of a tooth. **c. sep'ti pellu'cidi**, cavum septi pellucidi [BNA].

Cam'erer's law. Two children of different ages, but of the same weight, have the same food requirements.

cami'ofen oint'ment. Trade name of an ointment of equal parts of iocamfen and an emollient base.

camisole (kam'i-sōl) [Fr. from It. dim. of *camisa*, shirt.] A strait-jacket.



CAMMANN'S BINAURAL STETHOSCOPE.

Camm'ann's steth'oscope [George Philip *Cammann*, New York physician, 1804–1863] . binaural stethoscope.

Cammidge reac'tion (kam'ij) [P. J. *Cammidge*, English physician, *1872.] A reaction obtained in the urine in cases of pancreatic disease; the first reactions (A and B) prepared have been discarded and the test now employed is called the C. reaction; this is obtained as follows. (1) To 40 c.c. of non-albuminous, non-saccharine 24-hour urine add 10 c.c. strong HCl; boil for 10 minutes and add distilled water to 40 c.c. (2) Add 8 gm lead carbonate and filter. (3) Shake with 8 gm. tribasic lead acetate, and filter (4) Add 4 gm. sodium sulphate, and filter. (5) To 10 c.c. of filtrate add 7 c.c. distilled water, 0.8 gm. phenylhydrazin hydrochloride, 2 gm. sodium acetate, and 1 c.c. 50 per cent acetic acid; boil for 10 minutes, filter while hot and make up to 15 c.c. with hot distilled water In case of disease of the pancreas, a light yellow flocculent precipitate is thrown down in a few hours.

cam'omile. Chamomile.

Campani's test (kahm-pah'ne) For glucose: a precipitate of red or orange color is formed by the addition of a mixture of solutions of acetate of copper and subacetate of lead to urine containing glucose.

Campanula'ceæ. An order of gamopetalous dicotyledonous plants, which includes the bell-flower

Campbell's suspen'sory lig'ament (kam'el) [William Francis *Campbell*, American surgeon, 1867–1926.] A fold of fascia extending from the clavicle to the axillary* fascia, forming part of the anterior wall of the axilla.

Cam'per's ang'le [Petrus *Camper*, Dutch physician and anatomist, 1722–1789.] Facial angle; the angle made by lines from the external auditory meatus and the nasal spine uniting between the middle upper incisor teeth. **C.'s chiasm,** chiasma* tendinum **C.'s fas'cia,** superficial layer of the superficial fascia of the abdomen. **C.'s lig'ament,** diaphragma* urogenitale. **C.'s line,** the horizontal line forming C.'s angle.

camp-fe'ver. Typhus* fever.

cam'phacol. A proprietary remedy for catarrhal affections of the respiratory and urinary organs, consisting of camphoric acid, formaldehyde, and guaiacol, dose gr. 5–15 (0.3–1.0).

camphene (kam'fēn). 1. Any hydrocarbon, especially one solid at ordinary temperature, having the formula $C_{10}H_{16}$. 2. Purified oil of turpentine

camphe'nol. A mixture of camphor and phenol; disinfectant

cam'phoid. A solution of camphor in collodion.

cam'phol. Salol-camphor.

campholyptus (kam-fo-lip'tus). A proprietary remedy containing camphor and eucalyptus.

camphomen'thol. Menthol camphoratum (N.F.).

camphor (kam'fur). 1. A solid, tough, crystalline, translucent substance, a ketone distilled from the bark and wood of *Cinnamomum camphora*, an evergreen tree of Southeastern Asia and the adjoining islands; see *camphora* 2. Any stearoptene resembling this. **Bor'neo c.,** borneol, camphyl alcohol, occurs in deposits in the wood of *Dryobalanops aromatica*, a tree of Borneo and Sumatra. **c. sal'icylate,** a white powder, antiseptic and astringent; used in lupus, and internally in diarrhea in doses of gr. 1–5 (0.06–0.3). **monobro'mated c.,** camphora monobromata. **pulsatil'la c.,** anemonin. **c. men'thol,** camphomenthol, menthol camphoratum (N.F.), a liquid prepared by triturating equal parts of camphor and menthol; employed locally as an antiseptic and deodorant, and diluted as a spray in rhinitis and pharyngitis.

camphora (kam-fo'rah) [L.] (U.S. and Br.) Camphor, "the dextrogyrate modification of the saturated ketone obtained from *Cinnamomum camphora* and purified by sublimation"; occurs in tough, translucent, crystalline masses, evaporating slowly on exposure to the air, very slightly soluble in water, but freely so in alcohol, ether, chloroform, and oils. Stimulant, carminative, expectorant, and diaphoretic in doses of gr. ½–3 (0.03–0.2). **c. monobroma'ta,** monobromated camphor, occurs in colorless or white needles and prisms or in glossy scales having a faint odor of camphor; antispasmodic, soporific, and cardiac sedative, in doses of gr. 1–3 (0.06–0.2).

camphora'ceous. Resembling camphor in appearance or odor.

cam'phorated. Containing camphor.

cam'phorism. Camphor-poisoning, marked by gastroenteritis, coma or convulsions, and other cerebral symptoms.

cam"phoroma'nia [*camphor* + G. *mania*, frenzy.] Camphor-addiction.

camphoroxol (kam-for-oks'ol). An antiseptic preparation of camphor with hydrogen dioxide.

campim'eter [L. *campus*, field, + G. *metron*, measure] An instrument for determining the field of vision.

camptocormia (kamp-to-kor'mĭ-ah) [G. *kamptos*, bent, + *kormos*, trunk.] A deformity characterized by habitual flexion of the trunk, the spine, however, not being rigid.

camptodactylia, camptodactyly (kamp-to-dak-til'ĭ-ah, kamp-to-dak'til-ĭ) [G. *kamptos*, bent, + *daktylos*, finger.] A condition of permanent flexion of one or both interphalangeal joints of one or more fingers, usually the little finger.

Can'ada bal'sam. Terebinthina canadensis. **C. hemp,** apocynum. **C. lin'iment,** linimentum opii compositum. **C. moon'seed,** menispermum. **C. pitch,** pix canadensis. **C. snake'root,** asarum **C. this'tle,** *Carduus arvensis*. **C. tur'pentine,** C. balsam. **C. yell'ow-root,** hydrastis canadensis.

canadine (kan'a-dēn). A white crystalline alkaloid, $C_{20}H_{21}NO_4$, derived from hydrastis canadensis.

can'adol. A fractional distillate from petroleum, consisting chiefly of hexane.

canal' [L. *canalis*.] A duct or channel, a tubular structure. See also *canalis*. **Arnold's c.,** **Bichat's c.,** etc. see the proper names. **abdom'inal c.,** canalis inguinalis. **alimen'tary c.,** the mouth, pharynx, esophagus, stomach, and intestine. **a'nal c.,** (1) a temporary opening in the primitive anus; (2) pars analis recti [BNA], the terminal portion of the rectum, passing through the pelvic floor from the upper level of the levatores ani muscles to the anal orifice. **arte'rial c.,** ductus arteriosus. **au'ditory c.,** meatus acusticus externus. **blastopor'ic c.,** an opening marking the remains of the notochordal canal. **arach'noid c.,** Bichat's* canal. **carot'id c.,** canalis caroticus. **cerebrospi'nal c.,** neural c. **cil'iary c.,** a tubular ring in the sclera around the margin of the iris. **coch'lear c.,** canalis spiralis cochleæ. **cra"niopharyn'geal c.,** a fetal canal leading from the pharynx to the hypophysis cerebri. **cru'ral c.,** canalis femoralis. **galactoph'orous c.,** one of the milk-bearing tubules in the mamma. **hy'aloid c.,** the central canal in the vitreous body. **juice c.,** Recklinghausen's c. **lac'rymal c.,** canalis nasolacrimalis. **mar'row c.,** root c. of a tooth. **na'sal c., nasolac'rymal c.,** canalis nasolacrimalis. **neu'ral c.,** (1) a canal formed by an upgrowth of folds of the ectoderm on the surface of the embryonic axis in front of the primitive streak; it is the rudiment of the cerebrospinal axis; (2) spinal canal, the canal of the vertebral column, containing the spinal cord. **neurenter'ic c.,** notochordal c., an open communication, in early fetal life, between the posterior portion of the medullary and the intestinal canals. **notochor'dal c.,** neurenteric c. **nu'trient c.,** Haversian* canal **partu'rient c.,** the cavity of the uterus and the vagina through which the fetus passes. **pel'vic c.,** the passage from the superior to the inferior strait of the pelvis. **perivas'cular c.,** the lymph-space surrounding a blood vessel. **pore c.,** an assumed opening in the ovum through which the spermatozoon gains entrance. **pterygopal'atine c.,** pharyngeal c. [BNA], a canal between the pterygoid process of the sphenoid bone and the palate bone, giving passage to a pharyngeal branch of the sphenopalatine ganglion and the pterygopalatine artery and vein. **pulp c.,** root c. **root c.,** the opening in the long axis of the root of a tooth, containing the pulp. **semicir'cular c.,** canalis semicircularis [BNA]. **spi'ral c.,** cochlear c. **spi'roid c.,** aqueduct of Fallopius. **tympan'ic c.,** canaliculus tympanicus. **ver'tebral c.,** (1) spinal canal; (2) the canal for the passage of the vertebral artery, formed by the foramina transversaria of the cervical vertebræ. **vo'merine c.,** canalis basipharyngeus [BNA].

canalic'ular. Relating to a canaliculus.

canaliculization (kă-nă-lik"u-li-za'shun). The formation of canaliculi, or small canals, in any tissue.

canalic'ulus [L. dim. from *canalis*, canal.] A small canal or channel. **auric'ular c.,** a canal opening on the outer wall of the jugular fossa, transmitting Arnold's nerve, the auricular branch of the vagus. **c. bilif'erus,** bile-duct, ductus* biliferus. **c. carot"icotympan'icus,** a small opening, sometimes one of several, within the orifice of the canalis caroticus which affords passage to branches of the internal carotid artery and carotid sympathetic plexus. **c. denta'lis** [BNA], one of the minute tubules of the dentine radiating more or less horizontally from the pulp cavity to the enamel (in the crown) or the cementum (in the root). **c. innomina'tus,** an occasional opening in the great wing of the sphenoid bone, between the foramen spinosum and foramen ovale, which transmits the small superficial

petrosal nerve. **c. lacrima'lis,** the canal leading into the lacrymal sac from the punctum. **c. mastoid'eus,** a small canal transmitting a twig from the vagus through the mastoid process. **c. tympan'icus,** a minute canal passing from the floor of the tympanum to the lower surface of the petrous portion of the temporal bone, transmitting the tympanic, or Jacobson's, nerve.

cana'lis [L.] A canal or channel.

c. adducto'rius [BNA], Hunter's canal, a groove between the tendon of origin of the vastus medialis and the insertions of the adductor brevis, adductor longus, and adductor magnus, converted into a canal by the overlying sartorius, in it run the femoral vessels.

cana'les alveola'res [BNA], alveolar canals, posterior dental canals; canals in the body of the maxilla which transmit nerves and vessels to the molar teeth.

c. basipharynge'us [BNA], basipharyngeal canal, vomerine canal, an occasional opening between the vaginal process of the sphenoid and the ala of the vomer on either side.

c. carot'icus, carotid canal, a canal passing from the inferior surface of the petrous portion of the temporal bone upward, inward, and forward to the apex where it opens into the foramen lacerum; it transmits the internal carotid artery and a plexus of sympathetic nerve fibers.

c. centra'lis, central canal, a minute canal, usually obliterated in the adult, running axially through the gray commissure of the spinal cord, the remains of the embryonic medullary cavity.

c. chor'dæ tym'pani, iter chordæ posterius, a canal leading from the aqueduct of Fallopius to the tympanum, through which the chorda tympani nerve enters this cavity.

c. condyloid'eus [BNA], condyloid canal, posterior condyloid foramen of the occipital bone.

c. crura'lis, c. femoralis [BNA].

cana'les denta'les, dental canals; the *anterior* and *middle* dental canals pass from the infraorbital canal to the alveoli conveying vessels and nerves to the incisor and bicuspid teeth; the *posterior* dental canals pierce the posterior surface of the body of the maxilla and convey vessels and nerves to the molar teeth; the *inferior* dental canal is called canalis mandibulæ.

c. diplo'icus, diploic canal, canal of Breschet *

c. facia'lis [BNA], facial canal, aqueduct of Fallopius, a canal from the superior surface of the petrous portion of the temporal bone to the under surface at the stylomastoid foramen, curving over the cavity of the tympanum; it gives passage to the facial nerve.

c. femora'lis [BNA], crural or femoral canal, the inner compartment of the femoral sheath.

c. hyaloid'eus [BNA], hyaloid canal, canal of Stilling, a minute canal running through the vitreous from the papilla of the optic nerve to the lens, containing in fetal life a prolongation of the central artery of the retina, the hyaloid artery.

c. hypoglos'si [BNA], hypoglossal canal, anterior condyloid foramen of the occipital bone.

c. incisi'vus [BNA], incisive or incisor canal, anterior palatine canal; the lower, single, portion of the foramen incisivum.

c. infraorbita'lis, infraorbital canal; a canal running beneath the orbital margin of the maxilla from the infraorbital groove, in the floor of the orbit, to the infraorbital foramen; it transmits the infraorbital artery and nerve.

c. inguina'lis, inguinal canal, transmitting the spermatic cord in the male and the round ligament in the female; it begins at the internal and terminates at the external abdominal ring.

c. mandib'ulæ [BNA], mandibular canal, inferior dental canal, traversing the greater portion of the body and ramus of the mandible between the mandibular and the mental foramina; it transmits the inferior dental vessels and nerves.

c. musculotuba'rius, a canal beginning at the anterior border of the petrous portion of the temporal bone near its junction with the squamous portion, and passing to the tympanum; it is divided by the cochleariform process into two canals, one for the Eustachian tube, the other for the tensor tympani muscle.

c. nasolacrima'lis [BNA], nasolacrymal canal, nasal canal, lacrymal canal; a canal leading from the orbital into the nasal cavity, containing the nasal duct.

c. ner'vi petro'si superficial'is minor'is [NK], canal for the transmission of the lesser superficial petrosal nerve.

c. nutric'ius, nutrient canal, Haversian* canal.

c. obturato'rius, an opening due to a defect in the upper part of the obturator membrane which closes the obturator foramen.

c. palati'nus, one of two canals; one, the *posterior palatine* or *palatomaxillary canal,* formed by the apposition of two grooves in the palate and the maxillary bones; the other, the *anterior palatine canal,* formed by the apposition of grooves in the two maxillæ just behind the alveolar processes.

c. pharynge'us [BNA], pharyngeal canal, pterygopalatine canal, between the sphenoid and palate bones.

c. pterygoid'eus, pterygoid canal, an opening through the pterygoid process of the sphenoid bone through which pass the Vidian artery, vein, and nerve.

c. pterygopalati'nus, pterygopalatine canal, posterior palatine canal, formed from the sulcus pterygopalatinus, which transmits the large palatine nerve and descending palatine vessels.

c. reu'niens, uniting canal, ductus reuniens [BNA]

c. semicircula'ris [BNA], semicircular canal, one of three canals (named according to their position superior, posterior, and lateral or external) in the labyrinth of the ear, which form loops of about two-thirds of a circle; they open into the vestibule by five openings, one aperture being the common opening of one extremity of each of two canals.

c. sacra'lis, the continuation of the spinal c. in the sacrum.

c. spina'lis, spinal or neural canal, a canal formed by the spinal foramina of the contiguous vertebræ

c. spira'lis coch'leæ, spiral canal of the cochlea, the winding tube which makes two and a half turns about the modiolus of the cochlea; it is divided incompletely into two compartments, *scala tympani* and *scala vestibuli,* by a winding shelf of bone, the lamina spiralis ossea.

c. tar'seus, sinus tarsi [BNA].

c. umbilica'lis annulus umbilicalis [BNA].

canalization (kă-năl-li-za'shun). The formation of canals or channels in any tissue.

can'cellated [L. *cancellare,* to make a lattice-work] Having a lattice-work structure, reticular.

cancelli (kan-sel'le) [L. pl. of *cancellus,* a grating, lattice.] The reticulations or cross lines forming the spongy tissue of bones.

can'cellous. Cancellated, noting the reticular or spongy tissue of bone.

cancell'us. See *cancelli.*

can'cer [L. a crab.] 1. Any malignant neoplasm. 2. Specifically, carcinoma* as distinguished from sarcoma. **ac'inous c.,** c. arising from the epithelium of the acini of the breast. **ad'enoid c.,** tubular c., cylindroma. **alve'olar c.,** colloid c. **c. à deux** [Fr. *deux,* two], c. occurring nearly simultaneously in two persons living together. **c. aquat'icus,** noma. **c. atroph'icans,** a scirrhus c. in which the cancer cells are degenerated and the surrounding tissue atrophied and solerosed. **c. en cuirasse** (oṅ-kwe-rahs') [Fr. breastplate], an epitheliomatous growth involving the greater part of one or both sides of the chest. **chim'ney-sweep's c.,** an epithelioma of the scrotum, occurring in chimney-sweeps, believed to be caused by irritation from soot. **coll'oid c.,** a degenerating carcinoma composed chiefly of colloid or glue-like matter. **con'jugal c.,** c. à deux occurring in man and wife. **con'tact c.,** a secondary c. occurring in a part in close contact with a previous c. in the same individual. **der'moid c.,** a c. containing dermoid structures, islets of epithelium, hair, etc.

duct. c., a c. developed from the epithelium of the mammary ducts. **enceph'aloid c.,** a c. of very soft, brain-like consistency; medullary c. **endothe'lial c.,** endothelioma. **epider'mal c.,** epithelioma. **epithe'lial c.,** epithelioma. **glan'dular c.,** adenocarcinoma. **green c.,** chloroma. **hard c.,** scirrhous c. **hem'atoid c.,** telangiectatic c. **kan'gri c.,** see *kangri*. **med'ullary c.,** a carcinoma in which the growth consists chiefly of cells, the stroma being scarcely noticeable. **melanot'ic c.,** a form of encephaloid c., in which the cells contain melanin. **mouse c.,** Jensen tumor, a malignant growth in mice which is inoculable and more or less contagious **scir'rhous c.,** scirrhus, a carcinoma in which there is an abundant fibrous stroma compressing the cells. **soft c.,** encephaloid c. **spider c.,** telangiectasis **telangiectat'ic c.,** an encephaloid c. filled with cavities containing blood. **tu'bular c.,** cylindroma, duct c.

cancera'tion. A change to malignancy, said of a previously benign tumor.

cancer-bodies (kan'sur-bod'iz). Hyaline bodies; small bodies of various shapes and sizes found in and around the cells in a cancerous growth, regarded by some as parasitic and of etiological significance, by others as degenerative changes or simple cell inclusions.

can'cer-house. A house in which several deaths from cancer have occurred, believed by some to be infected with the contagium of malignant disease.

cancerine (kan'sur-ēn). A ptomaine which has been found in the urine in cases of cancer.

can'cerism. A hypothetical tendency to the development of malignant disease.

canceroderm (kan'sur-o-durm [L. *cancer* + G. *derma*, skin.] De Morgan's spots; telangiectatic areas on the skin of the chest and abdomen, sometimes seen in cases of cancer.

cancerogenic (kan"sur-o-jen'ik). Carcinogenic.

canceromyces (kan-sur-o-mi'sēz). An organism apparently intermediate between a mycete and a mould, regarded by Niessen as pathogenic for cancer.

cancerophobia (kan-sur-o-fo'bĭ-ah) [L. *cancer* + G. *phobos*, fear.] A morbid apprehension of acquiring a malignant growth, carcinophobia.

can'cerous. Relating to or suffering from a malignant growth.

cancer-root. Conopholis americana.

can'cer-se'rum. A therapeutic serum, prepared in the same manner as diphtheria antitoxic serum, alleged to possess a curative action in cancer.

Cancriamœ'ba macroglos'sa. A body, supposed to be an ameba, found in cancer and alleged to be pathogenic of malignant growths.

cancriform (kang'krĭ-form). Resembling cancer.

cancroid (kang'kroyd) [L. *cancer* + G. *eidos*, resemblance.] 1. Cancriform. 2. A neoplasm, like rodent ulcer, of a mild degree of malignancy.

can'croin. A supposed antibody obtained from the serum of cancerous subjects and recommended in the treatment of malignant growths.

cancrol'ogy [L. *cancrum*, cancer, + *-ology*.] The science of cancer study.

can'crum [L. *cancer*.] A gangrenous ulceration. **c. na'si,** gangrenous inflammation of the nasal mucous membrane. **c. o'ris,** noma,* gangrenous stomatitis.

can'dĭcans [L. *candicare*, to be whitish.] One of the corpora albicantia

candirú (kahn-de-rōō'). *Vandellia urinophilus*, a minute fish in the Amazon river and its tributaries which has been said to dart into the male urethra when one urinates under water while bathing.

Candolle', Augustin Pyramus de. Swiss botanist, (1778–1841), the founder of a system of botanical classification, a development of the natural or Jussieuan* system.

canel'la (N.F.). White cinnamon, the bark of *Canella alba* or *C. winterana;* an aromatic stimulant and carminative, in doses of gr. 10–30 (0.6–2.0).

cane-sugar. Saccharose.

canine (ka'nīn) [L. *caninus*.] 1. Relating to a dog. 2. Relating to the canine teeth. 3. A canine tooth. **c. app'etite,** bulimia. **c. em'inence,** a ridge on the anterior surface of the superior maxilla corresponding to the socket of the canine tooth. **c. foss'a,** a depression on the superior maxilla, external to the c. eminence **c. muscle,** musculus* caninus [BNA], levator anguli oris. **c. prom'inence,** c. eminence. **c. tooth,** one of the four sharp-pointed teeth, two in each jaw, between the incisors and the premolar teeth.

canin'iform. Resembling a canine tooth.

canities (kan-ish'e-ēz) [L. *canus*, hoary, gray] Grayness of the hair.

canker (kang'ker) [L. *cancer*.] 1. Aphthous stomatitis. 2. Noma. 3. A morbid secretion of the sensitive frog and sole of the horse, involving also the corresponding insensitive parts.

cank'er-root. Coptis.

canna (kan'ah) [L. a reed.] One of the bones of the leg, either *c. ma'jor*, tibia, or *c. mi'nor*, fibula.

cannabene (kan'ă-bēn). A hydrocarbon obtained from cannabis indica.

cannabin (kan'ă-bin). A resinoid of greenish-black color, obtained from cannabis indica; used in hysteria, neuralgia, delirium tremens, and insomnia in doses of gr. ¼–1 (0.015–0.06).

cannabin'don. A dark red syrupy liquid from cannabis indica; hypnotic in doses of ♏¼–1 (0.015–0.06).

cannabine (kan'ă-bēn). An alkaloidal substance from cannabis indica; hypnotic in doses of gr. 1–3 (0.06–0.2)

cannab'inon. A balsamic resin from cannabis indica; hypnotic in doses of gr. ½–1½ (0.03–0.1).

can'nabis (U.S.), **can'nabis in'dica** (Br.). Indian hemp, hashish, the dried flowering tops of the pistillate plants of *Cannabis sativa*, gathered before the fruits are developed; narcotic, sedative-analgesic, and aphrodisiac. An extract, fluid, extract, and tincture are official in the U.S.P., an extract and tincture in the B.P.

cannabism (kan'a-bizm). Poisoning by Indian hemp, hashish intoxication.

cann'on-bone, can'on-bone. The middle or large metacarpal or metatarsal bone of a horse or other hoofed quadruped; the shank-bone, or bone above the fetlock in the fore or hind leg.

Can'non's ring. A tonically contracted muscular band in the transverse colon close to the hepatic flexure.

cann'ula [L. dim. of *canna*, reed.] A tube which is inserted into a cavity by means of a trocar filling its lumen; after insertion the trocar is withdrawn leaving the cannula as a channel for the escape of fluid in the cavity. **perfu'sion c.,** a double-barreled c. used for irrigation of a cavity, the wash fluid passing into the cavity through one tube and out through the other.

Canquoin's paste (kahn-kwaṅ') [Alexandre *Canquoin*, Parisian physician, 1795–1881.] A cancer paste made in four strengths of 1 part of zinc chloride

to 2, 3, 4, and 5 parts of wheat flour moistened with water.

Cantani's di'et (kahn-tah'ne) [Arnoldo *Cantani*, Italian physician of Bohemian birth, 1837–1893.] An exclusively meat diet in diabetes mellitus.

can'thal. Relating to a canthus.

canthar'idal. Relating to or containing cantharides.

canthar'idate. A salt of cantharidic acid with an alkali.

cantharides (kan-thar'i-dēz). Plural of *cantharis*

cantharid'ic acid. An acid, $C_{10}H_{14}O_5$, derived from cantharis which forms salts, cantharidates, with alkalies.

cantharidinum (kan-thar-ĭ-de'num) (Br.). Cantharidin, the active principle of cantharis, $C_{10}H_{12}O_4$, anhydride of cantharidic acid.

cantharidism (kan-thar'i-dizm) Poisoning by cantharis.

can'tharis, gen. *canthar'idis*, pl. *canthar'ides* [G, *kantharis*, a beetle.] (U.S.) Cantharides, Spanish fly, a dried beetle, *Cantharis vesicatoria;* employed internally as a diuretic and in the treatment of certain scaly skin diseases in doses of gr. ½–½ (0.015–0.03); externally as a counterirritant and vesicatory.

canthec'tomy [G. *kanthos*, canthus, + *ektomē*, excision.] Excision of a canthus.

canthitis (kan-thi'(the')tis) [G. *kanthos*, canthus, + *-itis*.] Inflammation of a canthus.

cantholysis (kan-thol'i-sis) [G. *kanthos*, canthus, + *lysis*, loosening] Incision of the canthus to widen the slit between the lids, canthoplasty (1).

canthoplasty (kan'tho-plas-ti) [G. *kanthos*, canthus, + *plassō*, I form.] 1. An operation for lengthening the palpebral fissure by cutting through the external canthus. 2. An operation for restoration of the canthus in case of pathological or traumatic defect.

canthorrhaphy (kan-thor'ă-fi) [G. *kanthos*, canthus, + *rhaphē*, seam.] Suture of the eyelids at either canthus; canthoplasty (2).

canthot'omy [G. *kanthos*, canthus, + *tomē*, incision.] Slitting of the canthus, cantholysis, canthoplasty (1).

can'thus [G. *kanthos*.] Commissura palpebrarum [BNA]. Either extremity of the rima palpebrarum or slit between the eyelids; the two are called *inner, internal,* or *nasal c.* and *outer, external,* or *temporal c.,* or *medial* and *lateral* palpebral commissures respectively.

can'tus gal'li [L. cock-crow.] Laryngismus stridulus

canula. An incorrect spelling of cannula.

CaO. Calx, calcium monoxide, quicklime.

CaOC. Abbreviation for cathodal, or negative pole, opening contraction.

caoutchouc (koo'chook or kow'chook) [S. A. Indian, *cahuchu.*] (Br.) Elastica ,(U.S.), India rubber; the prepared inspissated milky juice of *Hevea brasiliensis* and other species of *Hevea,* known in commerce as pure Para rubber. Used in the manufacture of various plasters, tissues, bandages, etc.

cap 1. Abbreviation for L. *capiat,* let (him or her) take, *capiatur,* let it be taken, or *capiendus, a, um,* to be taken. 2. Abbreviation for *capsula,* capsule.

cap [A.S. *cæppan.*] 1. To cover a part, especially its extremity or top; specifically, in dentistry, to cover an exposed pulp with an antiseptic paste or cement to prevent pressure from a filling 2. Cover of the pulp of a tooth protecting it from the filling. 3. The first portion of the duodenum, pileus ventriculi, as seen in the *x*-ray picture.

capacity (kă-pas'i-ti) [L. *capax,* able to contain; *capere,* to take.] 1. The potential cubic contents of a cavity or receptacle. 2. Ability, power to do. **breath'ing c.,** respiratory c. **cra'nial c.,** the cubic content of the skull; obtained by determining the cubage of small shot, seeds, or beads required to fill the skull. **respi'ratory c.,** (1) the amount of air which can be drawn into the lungs by deep inhalation; (2) the absorptive power of the blood as regards oxygen and carbonic acid, the one taken from the air, the other from the tissues; the capability of the blood for gaseous exchange. **ther'mal c.,** the amount of heat absorbed by a body in being raised 1° C. in temperature. **vi'tal c.,** respiratory c. (1).

cap'elet. A swelling on the back or elbow of a horse.

capeline (kap'e-lin). A bandage covering the head or an amputation stump.

ca'per. The bud of a plant, *Capparis spinosa,* used as a pickle or condiment.

capillarectasia (kap"i-lar-ek-ta'si-ah) [*capillary* + G. *ektasis,* extension.] Dilatation of the capillary blood-vessels.

capillariomotor (kap-ĭ-lar-ĭ-o-mo'tor). Vasomotor, with special reference to the capillaries.

capillarioscopy (kă-pil-lă-ri-os'ko-pi). Capillaroscopy, microscopical examination of the cutaneous capillary vessels at the sulcus matricis unguis.

capillaritis (kap-il-ar-i'(e')tis). Telangiitis.

cap'illary [L. *capillaris,* relating to hair] 1 Relating to hair. 2 Very fine and hair-like. 3. One of the microscopic blood-vessels forming the capillary system intermediate between the arteries and the veins. 4. Relating to a capillary vessel. **c. arte'riole,** a minute artery which terminates in a capillary. **c. attrac'tion,** see *attraction.* **c. bronchi'tis,** inflammation of the lining membrane of the terminal bronchial tubes. **c. lake,** the total mass of blood contained in the capillary vessels. **c. vein,** a venous radical or venule commencing from the capillaries. **lymph-c.,** the beginning of a lymphatic vessel, arising from a lymph-space; it is larger than the vessel with which it is continuous.

capill'iculture [L. *capillus,* hair, + *cultura,* culture.] The care of the hair; treatment of baldness or other diseases of the hair.

capillitium (kă-pĭ-lish'ĭ-um) [L. the hair.] A network of protoplasmic threads in the spore capsule of *Myxomycetes,* the function of which is to break up the spore masses.

capil'lus, gen. and pl. *capil'li* [L. hair.] [BNA]. A hair of the head.

cap'ital [L. *capitalis,* relating to the *caput,* head.] 1. Chief, most important. 2. Endangering the health or the life of the individual. **c. opera'tion,** an operation of such magnitude or involving vital organs to such an extent that it is *per se* dangerous to life.

cap'itate [L. *caput(capit-),* head.] 1. Head-shaped, having a rounded extremity. 2. Noting a hemispherical surface elevation of a bacterial culture; see cut under *culture,* A, 5. **c. bone,** os* capitatum, os magnum.

capitel'lum [L. dim. of *caput,* head.] A small head or rounded extremity. Specifically the outer condyle at the lower extremity of the humerus, radial head of the humerus, a rounded eminence articulating with the upper surface of the head of the radius, capitulum humeri [BNA].

capitoped'al [L. *caput,* head, + *pes(ped-),* foot] Relating to the head and the feet.

capit'ular. Relating to a capitulum. **c. articula'tions** or **joints** [BNA], articulations between the heads of the ribs and the vertebræ.

capit'ulum [L. dim. of *caput*, head.] 1. A small head or rounded articular extremity of a bone. 2. In botany, an inflorescence of sessile flowers crowded together into a common head. **c. cos'tæ** [BNA], the head of a rib articulating by two facets with the bodies of two contiguous vertebræ. **c. fib'ulæ,** head or upper extremity of the fibula, which articulates by a facet with the under surface of the external condyle of the tibia. **c. hu'meri** [BNA], small or radial head, capitellum, of the humerus. **c. mall'ei,** the head of the malleus articulating with the body of the incus. **c. mandib'ulæ** [BNA], little head of the mandible, condyle of the lower jaw, the posterior or articular process of the ramus of the mandible. **c. ra'dii,** head of the radius, the disc-shaped upper extremity articulating with the capitellum, or capitulum, of the humerus. **c. sta'pedis** [BNA], the head of the stapes which articulates with the lenticular process of the incus. **c. ul'næ,** head or lower extremity of the ulna.

$Ca_3(PO_4)_2$. Neutral phosphate of lime, tricalcic phosphate, bone phosphate.

capp'ing. In dentistry the substance used to cap the exposed pulp of a tooth

cap'rate. A salt of capric acid.

caprenalin (kă-pren'al-in). Trade name of a suprarenal extract; hemostatic and vasocon strictor.

cap'reolary, cap'reolate [L. *capreolus*, a tendril.] Spiral, tendril-shaped. **c. vess'els,** spermatic vessels.

cap'ric acid [L. *caper*, a goat.] A crystalline acid, $C_{10}H_{20}O_2$, found in goats' milk and cows' milk and other substances; it has a more or less pronounced goat-like odor.

Caprifolia'ceæ. An order of gamopetalous dicotyledonous plants; the flower has an ovary with 2 to 5 locules, ovules suspended, stamens 5; the fruit is a berry.

capriloquism (kă-pril'o-kwizm) [L. *caper*, goat, + *loqui*, to speak.] Egophony.

cap'rin. A caprate of glyceryl, found in butter, and one of the substances upon which the flavor of that substance depends.

cap'rizant. Bounding, leaping, noting a form of pulse-beat.

cap'roate. A salt of caproic acid.

capro'ic acid [L. *caper*, a goat.] A colorless oily fluid, $C_6H_{12}O_2$, found in butter and some other substances.

cap'roin. A caproate of glyceryl, found with caprone, caprin, and butyrin in butter.

cap'rokol. Trade name of hexylresorcinol.

cap'rone. A compound of caproic acid, an oily fluid in butter, one of the substances upon which the flavor of this substance depends.

cap'royl. The radicle of caproic acid, $C_6H_{11}O$.

caproylamine (kap-ro-il'am-in). A ptomaine from codliver oil.

cap'rylate. A salt of caprylic acid.

capryl'ic acid. A fatty acid, $C_8H_{16}O_2$, in butter and other substances.

cap'rylin. A caprylate of glyceryl.

capsell'a [L. dim. of *capsa*, a box.] Shepherd's purse, herba capsellæ; the dried herb *Bursa pastoris;* employed in eclectic practice in menorrhagia, urinary disorders, hemorrhoids, diarrhea, and atonic dyspepsia in doses of 5 to 10 drops of the specific preparation of an ounce to the ounce of alcohol.

cap'sicin. A yellowish-red oleoresin containing the active principle of capsicum.

cap'sicol. A red oily liquid from capsicum.

cap'sicum (U.S., Br.), **cap'sici fruc'tus** (Br. '14). The dried ripe fruit of *Capsicum fastigiatum*; Cayenne, African, or red pepper; carminative and stimulant, in doses of gr. 1–5 (0.06–0.3); externally rubefacient.

capsitis (kap-si'(se')tis). Capsulitis of the crystalline lens.

capsot'omy. Capsulotomy, incision through Tenon's capsule.

cap'sula, gen. and pl. *cap'sulæ* [L. dim. of *capsa*, a chest or box.] A capsule in any sense. Specifically the internal capsule, capsula* interna. **c. adipo'sa** [BNA], the perirenal fat. **c. bul'bi** [NK], Tenon's capsule, fascia bulbi [B N A]. **c. articula'ris,** joint-capsule; a fibrous sac, with synovial lining, enclosing a joint. **c. exter'na,** external capsule, a thin lamina of white substance separating the claustrum from the putamen or lateral portion of the lenticular nucleus; it joins the internal capsule at either extremity of the putamen, forming a capsule of white matter of the lenticular nucleus. **c. fibro'sa hep'atis,** Glisson's capsule, a thin layer of connective tissue surrounding the structures in the porta hepatis and forming a layer on the surface of the liver. **c. glan'dulæ thyreoid'eæ** [NK], sheath of the thyroid gland. **c. glomer'uli,** Bowman's capsule, Malpighian capsule, the expanded beginning of a small tubule surrounding a tuft of capillary vessels, the two constituting a Malpighian corpuscle. **c. inter'na,** internal capsule, a layer of white substances separating the caudate nucleus and thalamus from the lenticular nucleus (*thalamic region*) and also the hypothalamus from the lenticular nucleus (*subthalamic region*); it consists of two limbs—an anterior (*pars frontalis* [BNA]) and a posterior (*pars occipitalis* [BNA])—which join at an obtuse angle (*genu* or *knee* of the internal capsule) opening laterally (externally) in the horizontal plane; it joins the external capsule in front of and behind the putamen, thus forming a white capsule of the lenticular nucleus. **c. len'tis** [BNA], crystalline capsule, capsule of the crystalline lens. **c. li'enis** [NK], capsule of the spleen. **c. nu'clei denta'ti** [BNA], a corrugated lamina of gray matter enclosing the central white substance of the nucleus dentatus. **c. nu'clei lentifor'mis** [NK], a capsule of white matter covering the lenticular nucleus, formed by the junction of the c. externa and the c. interna.

cap'sular. Relating to any capsule.

capsula'tion. Enclosure in a capsule.

capsule (kap'sūl) [L. *capsula*.] 1. A membranous structure enveloping an organ or any other part, or a joint, or a tumor. 2. An anatomical structure resembling a capsule or envelope, such as the internal capsule, suprarenal capsule, etc. 3. A small sac or case of gelatin or other soluble material used to enclose powders or other drugs of disagreeable taste. 4. A shallow tray or dish used for holding staining solutions or other fluids in histological and bacteriological work. **ad'ipose c.,** the perirenal fat. **atrabil'iary c.,** glandula suprarenalis. **au'ditory c.,** the rudiment, in the embryo, of the auricle of the ear. **crys'talline c.,** c. of the crystalline lens. **exter'nal c.,** capsula externa. **eye c.,** Tenon's* c. **inter'nal c.,** capsula interna. **joint c.,** capsula articularis. **lentic'ular c.,** crystalline c **na'sal c.,** the rudiment of the nose in the embryo. **op'tic c.,** the rudiment of the eye in the embryo. **suprare'nal c.,** glandula* suprarenalis. **syno'vial c.,** capsula articularis.

capsulitis (cap-su-li'(le')tis). Inflammation of the capsule of an organ or part, as of the liver or

crystalline lens. **hepat'ic c.,** perihepatitis. **c. of the lab'yrinth,** otosclerosis.

capsulorrhaphy (kap-su-lor'ă-fi) [L. *capsula*, capsule, + G. *rhaphē*, a sewing.] Suture of a tear in any capsule; specifically, suture of a joint capsule to prevent recurring dislocation of the articulation.

capsulotome (kap'su-lo-tōm). An instrument for incising a capsule, especially one for cutting the capsule of the crystalline lens in a cataract operation.

capsulot'omy. Incision through a capsule, specifically through the capsule of the lens in a cataract operation.

cap'tol. Tannochloral; trade name for a compound of chloral hydrate and tannin; astringent and parasiticide.

Cap'uron's points. The iliopectineal eminences and the sacroiliac joints, constituting four fixed points in the pelvic inlet.

caput (cap'ut), gen. *cap'itis*, pl. *cap'ita* [L.] 1. The head. 2. Any head, or expanded or rounded extremity of an organ or other anatomical structure. **c. co'li,** cecum. **c. cor'nus,** the head or thickened portion of each gray column or cornu, anterior and posterior, of the spinal cord. **c. fem'oris,** head of the femur, hemispherical articular surface at the upper extremity of the femur, which fits into the acetabulum to form the hip-joint. **c. gallinaginis** (gal-lin-aj'in-is) [L. snipe's head], colliculus* seminalis. **c. hu'meri, c. humerale** [NK], head of the humerus, the upper rounded extremity fitting into the glenoid cavity of the scapula. **c. medu'sæ** [*Medusa*, a mythological character whose hair was transformed into serpents], a coil of varicose veins on the surface of the abdomen, surrounding the umbilicus, due to obstruction of the portal circulation in the liver. **c. mor'tuum,** impure ferrous oxide left after the ignition of iron pyrites. **c. nu'clei cauda'ti** [BNA], the head or anterior extremity of the caudate nucleus projecting into the anterior horn of the lateral ventricle. **c. obsti'pum** [L. *obstipus*, awry], torticollis. **c. proge'neum** [G. *pro*, before, + *geneion*, chin], marked forward projection of the jaw, prognathism. **c. quadra'tum,** a head of large size and square shape, owing to thickened parietal and frontal eminences, seen in rachitic children. **c. succeda'neum** [L. *succedaneus*, following, substituting], an edematous swelling formed on the presenting portion of the scalp of an infant during birth. **c. ta'li** [BNA], the head, or anterior portion, of the astragalus.

caraate (kă-rah-ah'ta). Pinta.

car'agheen. Carrageen, Irish moss.

caramel (kar'ah-mel) [L. *calamellus*, sugar cane(?).] (N.F.) Saccharum ustum, burnt sugar; a concentrated solution of the substance obtained by heating sugar with an alkali, a thick dark brown liquid, employed as a coloring and flavoring agent in pharmaceutical preparations.

Carabelli tubercle (kah-rah-bel'le tu'bur-kl) [Georg C. *Carabelli*, Edler v. Lunkaszprie, Vienna dentist, 1787–1842.] A small tubercle, resembling a supernumerary cuspid (though not on the grinding surface), found occasionally on the lingual surface of one or more of the molar teeth.

carapa'ta disease. A disease of the Zambesi basin, possibly a form of trypanosomiasis or a relapsing fever, transmitted by the bite of a tick, *Ornithodorus moubata*.

car'away. Carum.

car'bamate. A salt of carbamic acid.

carbam'ic. Relating to the amide of carbonic acid. **c. acid,** a hypothetical acid, CH_3NO_2, forming carbamates.

carbamide (kar'bă-mīd, kar'bă-mid) [*carb(on)* + *amide*.] Urea or one of its derivatives.

carbarsone (kar'bar-sōn). A crystalline odorless and tasteless powder, 4-carbamino-phenyl arsonic acid, containing 28.85 per cent. of arsenic when anhydrous; recommended in the treatment of amebiasis and other protozoal infections.

carbasus (kar'ba-sus) [L., G. *karpasos*, flax, cotton.] Lint, gauze. **c. carbola'ta,** carbolized gauze. **car'basi et gossyp'ii te'la,** Gamgee tissue. **c. hydrar'gyri et zin'ci cyan'idi,** mercury and zinc cyanide gauze, double cyanide gauze. **c. hydrar'gyri perchlor'idi,** sublimate gauze. **c. iodoforma'ta,** iodoform gauze. **c. immedica'ta,** unmedicated gauze, absorbent gauze. **c. sa'lis alem'broth,** sal alembroth gauze, blue gauze, gauze impregnated with a solution of alembroth and tinted with aniline blue.

carbaz'otate. Picrate.

carbazot'ic acid [*carbon* + *azote*, nitrogen] Picric* acid.

carbenzyme (kar'ben-zīm). Trade name of a mixture of trypsin and charcoal recommended as a digestant and remover of dead tissue especially tuberculous tissue about to disintegrate.

carbide (kar'bīd). A compound of carbon (not an oxide of carbon) with one of the elements, especially with a metal.

car'binol. Methyl alcohol.

car'bo [L. coal.] Charcoal. **c. anima'lis,** animal charcoal, bone-black, ivory-black; prepared by baking bone. **c. anima'lis purifica'tus,** purified animal charcoal; used in pharmaceutical processes. **c. lig'ni** (U.S. and Br.), charcoal, wood charcoal, a fine black powder; disinfectant and deodorant, employed internally in gastric fermentation in doses of gr. 5–60 (0.3–4.0).

carbocyclic (kar-bo-si'klik) [*carbon* + G. *kyklos*, *ring*.] Noting a closed-chain* compound; in this sense synonymous with cyclic or aromatic.

carbohe'mia, carbohæ'mia. Imperfect depuration of the blood, incomplete elimination of carbon dioxide.

carbohemoglobin (kar"bo-hem-o-glo'bin). Hemoglobin when in union with carbon dioxide.

carbohydrate (kar-bo-hi'drāt) [*carbon* + G. *hydōr*, water.] A substance containing carbon, hydrogen, and oxygen, the two latter in the proportion to form water, H_2O; the sugars, starches, and cellulose belong to the class of carbohydrates.

carbohydratu'ria. Glycosuria, mellituria.

car'bolate. 1. A salt of carbolic acid. 2. To carbolize.

carbolfuchsin (kar"bol-fook'sin). Ziehl's solution; a stain for use in histology composed of a mixture of one part of a 10 per cent. alcoholic solution of fuchsin and 9 parts of a 5 per cent. aqueous solution of carbolic acid.

carbol'ic [L. *carbo*, coal, + *oleum*, oil.] Relating to phenic or carbolic acid, or phenol. **c. acid,** phenol. **cam'phorated c. acid,** a liquid mixture of phenol 12, camphor 4, water 1; employed as a local anesthetic and for the relief of toothache. **c. fuch'sin,** Ziehl's solution, carbolfuchsin.* **c. oil,** carbolized oil, a solution of phenol, 1, in olive oil, 19; employed as an application to burns.

car'bolize. To mix with or add carbolic acid, or phenol.

car'bolly'soform. A 3 per cent. solution of phenol in lysoform.

carbolu'ria [G. *ouron*, urine.] The passage of phenol in the urine.

carbolxylene (kar-bol-zi'lēn). A mixture of carbolic acid, 1 part, and xylene, 3 parts.

carbom'etry. Carbonometry.

car'bon [L. *carbo*, coal.] A non-metallic tetrad element, symbol C, atomic weight 12. It occurs in two forms; the diamond and graphite, and also occurs in impure form in charcoal, coke, and soot. It is found in all living tissues, and the study of its vast number of compounds constitutes organic chemistry. **c. bisul'phide,** carbonei disulphidum. **c. diox'ide,** CO_2, the product of the combustion of carbon with a free supply of air; carbonic acid gas. **c. diox'ide snow,** see *snow*. **c. disul'phide,** carbonei disulphidum. **c. monox'ide,** CO, formed by the combustion of carbon with a limited supply of air, a colorless, odorless, and poisonous gas, its toxic action being due to its strong affinity for hemoglobin. **c. tetrachlo'ride,** carbonei tetrachloridum (U.S.).

car'bonate. A salt of carbonic acid.

carbo'nei diox'idum (Br.). Carbon dioxide. **c. disul'phidum, carbo'nis bisul'phidum** carbon bisulphide or disulphide, CS_2; a colorless liquid of a characteristic ethereal odor, fetid when impure; is parasiticide, but is seldom employed other than as a solvent. **c. tetrachlor'idum** (U.S., Br.), carbon tetrachloride, tetrachlormethane, CCl_4, a clear, colorless, mobile liquid having a characteristic ethereal odor resembling that of chloroform, miscible with alcohol, insoluble in water; used as a cleansing fluid, a local anesthetic, and an anthelmintic, especially against the hookworm; for the latter purpose it may be given in adult dose of ♏30–45 (2–3), for children ♏2 (0.13) for each year of age; the dose should not be repeated within three weeks.

carbone'mia, carbonæ'mia. Carbohemia.

carbo'neum. Carbon.

carbon'ic. Relating to carbon. **c. acid,** an acid formed by the union of carbon dioxide and water, H_2CO_3. **c. acid gas, c. anhy'dride,** carbon dioxide. **c. ox'ide,** carbon monoxide.

carbo'nis bisul'phidum (Br.). Carbonei disulphidum.

carboni'trogen constitu'tion. In homeopathy, one of von Grauvogel's three constitutional groups, the one in which there is too slow an oxidation of the blood, anoxemia.

car'bonize. To char.

carbonom'eter [L. *carbo*(*carbon-*), coal, + G *metron*, measure.] A device for determining the proportion of carbon dioxide in the air or expired breath by the precipitation of calcium carbonate from lime water.

carbonom'etry. The determination of the presence and the proportion of carbonic dioxide by means of the carbonometer.

carbonuria (kar-bon-oo'rĭ-ă). Excretion of carbonic oxide or its compounds in the urine.

car'bonyl. The characterizing group (CO) of the ketones.

carborun'dum. Carbide of silicon, SiC, a substance of extreme hardness used for polishing in place of emery.

carbosa'pol. A 50 per cent. carbolic-acid soap.

Carboxydomonas[0] (kar-bok-sĭ-dom'o-nas). A genus of the family *Nitrobacteriaceæ*, containing rod-shaped organisms which have the faculty of converting carbon monoxide, by oxidation, into carbon dioxide.

carboxyhemoglobin (kar-bok"sĭ-hem-o-glo'bin). The compound formed by carbon monoxide with the hemoglobin in poisoning by that gas.

carbox'yl. The characterizing group (COOH) of certain organic acids.

carbro'mal. Carbromalum (U.S.).

carbromalum (kar-bro-ma'lum) (U.S.). Carbromal, bromdiethylacetylurea, bromdiethylacetyl carbamide, $C(C_2H_5)_2Br.CONH.CONH_2$, adalin; a white, crystalline, odorless powder, of slightly bitter taste, soluble in 3000 parts of water, 18 of alcohol; employed as a sedative and hypnotic in doses of gr. 8–15 (0.5–1.0).

carbuncle, carbunculus (kar'bung-kl, kar-bun'kulus) [L. dim. of *carbo*, a live coal.] 1. A phlegmonous inflammation of the skin and subcutaneous tissues, similar to that of a furuncle but much more extensive; it is usually attended with great systemic depression, and may be fatal. 2. A reddish protuberance on the face, seen in alcoholic subjects; a whelk.

carbun'cular. Relating to a carbuncle.

carbunculo'sis. A condition marked by the occurrence of several carbuncles in rapid succession.

car'buret. Carbide.

Carcassonne's lig'ament (kar-kă-sun') [Bernard Gauderic *Carcassonne*, French surgeon, *1728.] The deep perineal fascia, Colles's*fascia.

carcinelcosis (kar"sin-el-ko'sis) [G. *karkinos*, cancer, + *helkōsis*, ulceration.] Rodent ulcer; an ulcerating cancer.

carcinogenesis (kar-sin-o-jen'e-sis) [G. *karkinos*, cancer, + *genesis*, generation.] The origin or production of cancer.

carcinoid (kar'sin-oyd) [*carcinoma* + G. *eidos*, resemblance.] An epithelial tumor presenting the picture of a very malignant carcinoma, but following clinically a rather benign course.

carcinolytic (kar"sin-o-lit'ik) [*carcinoma* + G. *lytikos*, causing a solution.] Destructive to the cells of carcinoma.

carcino'ma, pl. *carcino'mata, carcino'mas* [G. *karkinos*, crab, cancer.] Cancer (in its limited sense), a malignant new growth of epithelial or gland cells infiltrating the surrounding tissues **c. alveola're,** colloid cancer.* **c. basocellula're,** basal-cell c., rodent ulcer; a superficial gland-like tumor of the skin of relatively slight malignancy; it appears as a fungoid tumor or ulcer of the skin of the face or breast; it originates from the Malpighian basal layer. **c. colloid'es,** colloid cancer.* **c. cuta'neum,** epithelioma, rodent ulcer. **c. cylindromato'sum,** a cancer composed chiefly of cylindrical cells. **c. du'rum,** hard cancer, scirrhous cancer.* **c. encephaloid'es,** encephaloid cancer, medullary cancer.* **c. epithelioid'es,** epithelioma. **c. fibro'sum,** scirrhous cancer.* **c. gelatino'sum,** colloid cancer.* **c. gigantocellula're,** a malignant growth containing many giant cells. **c. glandula're,** adenocarcinoma. **c. hæmato'des,** a form of medullary cancer in which there is an excessive formation of large blood-vessels. **c. hyali'num,** colloid cancer.* **c. lenticula're,** a form of c. tuberosum, or scirrhous cancer of the skin, with flattened bean-shaped nodules. **c. medulla're,** medullary cancer, one in which the growth consists almost entirely of cells, the fibrous stroma being very small in amount. **c. melano'des, c. melanot'icum,** melanotic cancer.* **c. mol'le,** medullary cancer.* **c. mucip'arum, c. muco'sum,** colloid cancer.* **c. myxomato'des,** a form of colloid cancer in which the original fibrous

stroma has undergone myxomatous metaplasia. **c. ni'grum,** melanotic cancer.* **c. ossif'icans,** c. in which there is a more or less extensive formation of bony tissue. **c. osteoid'es,** c ossificans. **c. reticula're,** scirrhous cancer.* **c. sarcomato'des,** a tumor with transitional characters, a c. apparently assuming the sarcomatous type. **c. scirrho'sum,** scirrhus. **c. scro'ti,** cancer of the scrotum, chimney-sweeps' cancer.* **c. sim'plex,** one in which the relative proportions of the cells and the stroma are, so to say, normal, neither element preponderating. **c. spongio'sum,** encephaloid cancer, medullary c. **c. tubero'sum,** a cancerous growth of the subcutaneous tissues marked by the presence of numerous hard nodules. **c. villo'sum,** malignant papilloma. **hair-ma'trix c.,** basal-cell c., a form of superficial rodent ulcer, extending widely but not deeply.

carcino'matoid [*carcinoma* + *eidos*, appearance.] Resembling a carcinoma.

carcinomatophobia (kar-sĭ-no''mă-to-fo'bĭ-ah) [*carcinoma* + G. *phobos*, fear.] Morbid fear of getting a cancer.

carcinomato'sis. The occurrence of multiple carcinomata; carcinosis.

carcino'matous. Relating to carcinoma.

carcinomelcosis(kar'sin-o-mel-ko'sis). Carcinelcosis

carcino'sis. 1. A generalization of cancerous growths; the occurrence of multiple carcinomata, carcinomatosis. 2. A tendency to carcinoma, shown by the appearance of a new cancerous growth, not a local recurrence, after operative removal of a previous cancer.

carcoma (kar-ko'mah) [Sp. wood dust under the bark of a tree, caused by the wood-louse.] Mahogany-colored granules found in the feces in tropical regions; it gives the reaction of urobilinogen and is composed of calcium oxide, iron, phosphoric and carbonic acids, urobilinogen, cholerythrogen, and organic matter in varying proportions

car'damom (Br.), **cardamo'mi se'men** (U.S.), Cardamom seeds, the dried ripe fruit of *Elettaria repens* or *E. cardamomi* a seedy plant of India and Ceylon; aromatic carminative, in doses of gr. 3–15, (0.2–1.0).

Cardarelli's symp'tom (kar-dah-rel'le) [Antonio *Cardarelli*, Italian physician, 1831–1927.] Tracheal* tugging.

Car'den's amputa'tion [Henry Douglas *Carden*, English surgeon, †1872.] Transcondylar amputation of the leg, the femur being sawn through the condyles just above the articular surface; see cut under *amputation*.

cardia (kar'dĭ-ah) [G. *kardia*, heart.] The esophageal orifice of the stomach; the fundus ventriculi or left extremity of the stomach.

car'diac. 1. Relating to the heart. 2. Relating to the esophageal orifice of the stomach. 3. A tonic remedy. 4. A sufferer from heart disease. **c. sign,** a diminution in the area of cardiac dulness in the recumbent posture, occurring in carcinoma.

cardiagra (kar-dĭ-ag'rah) [G. *kardia*, heart, + *agra*, seizure.] 1. A gouty affection of the heart. 2. Angina pectoris.

cardialgia (kar-dĭ-al'jĭ-ah) [G. *kardia*, heart, + *algos*, pain.] 1. Heartburn, an uncomfortable burning sensation in the stomach. 2. Cardiodynia.

cardiam'eter. A device for determining the position of the cardia of the stomach.

cardianastrophe (kar-de-an-as'tro-fe) [G. *kardia*, heart, + *anastrophē*, a turning back.] A congenital transposition of the heart, the organ being on the right side; dextrocardia.

car'diant. A cardiac stimulant.

cardiasthe'nia [G. *kardia*, heart, + *astheneia*, weakness.] Weakness in the action of the heart.

cardiasthma (kar-de-as'mah). Cardiac asthma, dyspnea of heart disease.

cardiataxia (kar-dĭ-ă-tak'sĭ-ah) [G. *kardia*, heart, + *ataxia*, disorder.] Extreme irregularity in the action of the heart.

cardiazol (kar-di-az'ol). Metrazol, a synthetic preparation, pentamethylenetetrazol, soluble in water; employed as an analeptic and cardiac stimulant, administered intramuscularly or by mouth in doses of gr. 1–2 (0.06–0.13).

cardicente'sis. Cardiocentesis.

cardiectasia (kar-dĭ-ek-ta'sĭ-ah) [G. *kardia*, heart, + *ektasis*, a stretching out.] Dilatation of the heart.

car'din. An organic extract made from the heart of the bullock.

car'dinal [L. *cardinalis*, relating to a hinge, hinging, important.] 1. Of special importance. 2. Of a deep-red, nearly scarlet, color.

cardio- [G. *kardia*, heart.] A prefix signifying that the word has reference to the heart.

car''dioaccel'erator. Hastening the action of the heart.

cardioaortic (kar''dĭ-o-a-or'tik). Relating to the heart and the aorta.

cardioarterial (kar-dĭ-o-ar-te'rĭ al). Relating to the heart and the arteries.

cardiocele (kar'dĭ-o-sēl) [G. *kardia*, heart, + *kēlē*, hernia.] A hernia or protrusion of the heart through an opening in the diaphragm.

cardiocente'sis [G. *kardia*, heart, + *kentēsis*, a pricking.] Operative puncture of the heart.

cardiocinet'ic. Cardiokinetic.

cardiodyn'ia [G. *kardia*, heart, + *odynē*, pain.] Pain in the heart.

car'diogram [G. *kardia*, heart, + *gramma*, a diagram.] The graphic curve made by the stylet of a cardiograph.

car'diograph [G. *kardia*, heart, + *graphō*, I write] An instrument for recording graphically the movements of the heart, constructed on the principle of the sphygmograph

cardiohepat'ic [G. *kardia*, heart, + *hepar(hepat-)*, liver.] Relating to the heart and the liver.

cardioinhibitory (kar''dĭ-o-ın-hib'ĭ-to-rĭ). Arresting or slowing the action of the heart.

cardiokinet'ic [G. *kardia*, heart, + *kinēsis*, movement.] Influencing the action of the heart.

car'diolith [G. *kardia*, heart, + *lithos*, stone.] A concretion in the heart, or an area of calcareous degeneration in its walls or valves.

cardiol'ogist. One having special knowledge and experience in relation to disease of the heart.

cardiol'ogy [G. *kardia*, heart, + *-logia*.] The science of the heart and its diseases.

cardiol'ysis [G. *kardia*, heart, + *lysis*, loosening.] An operation for breaking up the adhesions in chronic mediastino-pericarditis; access is gained by resection of a portion of the sternum and the corresponding costal cartilages.

car''diomala'cia [G. *kardia*, heart, + *malakia*, softness.] Softening of the walls of the heart.

cardiomeg'aly [G. *kardia*, heart, + *megas(megal-)*, large.] Hypertrophy of the heart.

car''diomelano'sis [G. *kardia*, heart, + *melanōsis*, a blackening.] A deposit of pigment in the heart muscle.

cardiom'etry [G. *kardia*, heart, + *metron*, measure.] Measuring the dimensions of the heart or the force of its action.

cardiomyoliposis (kar"dĭ-o-mi"o-li-po'sis) [G. *kardia*, heart, + *mys*(*myo*-), muscle, + *lipos*, fat.] Fatty degeneration of the heart.

cardionector (kar-dĭ-o-nek'tor) [G. *kardia*, heart, + L. *nector*, joiner.] The combined structures which regulate the heart beat, the atrionector, or sino-auricular node (node of Keith and Flack), governing the auricular contraction, and the ventriculonector (bundle of His, node of Tawara, and Purkinje's network), regulating the contraction of the ventricles.

cardioneph'ric [G. *kardia*, heart, + *nephros*, kidney. Relating to the heart and the kidneys.

cardioneural (kar"dĭ-o-nu'ral) [G. *kardia*, heart, + *neuron*, nerve.] Relating to the nervous control of the heart.

cardiopal'mus [G. *kardia*, heart, + *palmos*, palpitation.] Palpitation of the heart.

cardiopal'udism [see *paludism*.] Irregularity in the heart's action due to malaria.

car'diopath. A sufferer from heart disease.

cardiop'athy [G *kardia*, heart, + *pathos*, suffering.] Any disease of the heart.

cardiopericarditis (kar-dĭ-o-per-ĭ-kar-di'(de')tis) [G. *kardia*, heart, + *peri*, around, + *kardia*, heart, + *-itis*.] Inflammation of both myocardium and pericardium.

cardiophone (kar'dĭ-o-fōn) [G. *kardia*, heart, + *phōnē*, sound.] A stethoscope specially designed to aid in listening to the sounds of the heart.

cardioplegia (kar-dĭ-o-ple'jĭ-ah) [G. *kardia*, heart, + *plēgē*, stroke.] Paralysis of the heart.

cardiopneumatic (kar"dĭ-o-nu-mat'ik) [G. *kardia*, heart, + *pneuma*, breath.] Relating to the heart's action and the respiration

cardiopneumograph (kar"dĭ-o-nu'mo-graf) [G *kardia*, heart, + *pneuma*, breath, + *grapho*, I write.] An instrument for recording graphically the cardiac and respiratory movements.

cardioptosia (kar"dĭ-op-to'sĭ-ah) [G. *kardia*, heart + *ptōsis*, a falling.] A condition in which the heart is unduly movable and displaced downward; cor mobile, cor pendulum; to be distinguished from *bathycardia*, in which the heart is fixed in a lower position.

cardiopul'monary [G. *kardia*, heart, + L. *pulmo*, lung.] Relating to the heart and lungs.

car"diopunc'ture. Cardiocentesis.

cardiopylor'ic. Relating to the cardiac and pyloric extremities of the stomach

cardiore'nal [G. *kardia*, heart, + L. *ren*, kidney.] Cardionephric.

cardior'rhaphy [G. *kardia*, heart, + *rhaphē*, a sewing.] Suture of the heart-wall.

cardiorrhex'is [G. *kardia*, heart, + *rēxis*, rupture.] Rupture of the heart-wall.

cardioschisis (kar-dĭ-os'kĭ-sis) [G. *kardia*, heart, + *schisis*, a division.] The division of adhesions between the pericardium and the chest-wall.

cardiosclero'sis [G. *kardia*, heart, + *sklērōsis*, hardening.] A condition of fibrous, or connective-tissue, overgrowth in the heart muscle and endocardium, associated usually with similar degenerative changes in the arteries.

car'diospasm. 1. Spasmodic action of the heart. 2. Spasmodic contraction of the cardiac end of the stomach or of the adjoining portion of the esophagus.

cardiosphyg'mograph [G. *kardia*, heart, + *sphygmos*, pulse, + *graphō*, I write.] An instrument for recording graphically the movements of the heart and the radial pulse.

cardiotachometer (kar-dĭ-o-tăk-kom'e-tur) [G. *kardia*, heart, + *tachos*, rapidity, + *metron*, a measure.] An instrument for measuring the rapidity of the heart-beat.

cardiot'omy [G. *kardia*, heart, + *tomē*, incision.] Incision into the heart-wall.

cardiovas'cular [G. *kardia*, heart, + L. *vasculum*, vessel.] Relating to the heart and the blood-vessels or the circulation.

carditis (kar-di'(de')tis). Inflammation of the heart.

cardivalvulitis (kar-de-val-vu-li'(le')tis). Inflammation of one or more of the valves of the heart.

car'dol. A yellowish or reddish oil, $C_{21}H_{30}O_2$, with vesicating properties, from the cashew-nut, the fruit of *Anacardium occidentale*.

car'dus. Carduus.

car'duus. Carduus benedictus, blessed thistle, the plant *Cnicus benedictus;* a bitter tonic in doses of 3½–1 (2.0–4.0).

cargentos (kar-jen'tos). Trade name of a preparation of colloidal silver oxide, of the argentoproteinum mite type.

Cargile mem'brane (kar'gīl) [Charles H. *Cargile*, American surgeon, *1853.] A membrane made from the peritoneum of the ox, employed to prevent adhesions after surgical operations.

caribi (kar-e'be). Bicho; epidemic gangrenous proctitis.

car'ica. Papaya, papaw.

car'icin. Papain.

car'icous [L. *carica*, fig.] Relating to or having the semblance of a fig.

caries (ka'rĭ-ēz) [L. dry rot] 1. Molecular decay of a bone in which it becomes friable, thinned, and dark, and gradually breaks down with the formation of pus; it is often of tuberculous origin. 2. A gradual decay with excavation of the dentine of a tooth, due possibly to the action of *Leptothrix buccalis*, commonly present in the mouth. **c. fungo'sa,** a form of c. of tuberculous origin accompanied with a fungous proliferation of the tissues. **c. hu'mida,** c. accompanied by suppuration. **c. necrot'ica,** c. with necrosis, in which pieces of bone slough off and lie in the carious cavity or are washed away in the purulent discharge. **c. sic'ca,** Volkmann's c., a form in which suppuration does not occur, **dry c.,** c. sicca. **hu'mid** or **wet c.,** c. humida, c. with suppuration.

carina (kă-ri'nah) [L. the keel of a boat.] A term applied or applicable to several anatomical structures forming a projecting central ridge. **c. for'nicis,** a ridge running along the under surface of the fornix. **c. urethra'lis,** the lower part of the anterior column of the vagina, in relation with the urethra. **c. vagi'næ,** c. urethralis.

car'inal canal'. In botany, an air-channel associated with a vascular bundle.

carinate (kar'ĭ-nāt) [L. *carina*, keel.] Keel-shaped, having a prominent central line like the bottom of a ship.

carios'ity. Cariousness, state of being carious.

ca'rious. Relating to or affected with caries.

caris'sin. A glucoside obtained from *Carissa ovata stolonifera* of Australia; it is a powerful heart poison.

Carleton's spots (karl'ton) [Bukk G. *Carleton*, New York physician, *1856.] Small sclerosed areas in the shaft of a long bone or in the epiphyses, in cases of gonorrheal bone lesions.

Carlsbad salt. See *sal carolinum.*

carmal'um. A 1 per cent. solution of carmine in 10 per cent. alum water; used as a stain in histology.

car'minate. A red-colored salt of carminic acid with an alkali.

carmin'ative [L. *carminare*, to cleanse.] 1. Preventing the formation or causing the expulsion of flatus. 2. An agent which relieves flatulence.

carmine (kar'mīn, kar'min). 1. The tinctorial principle, $C_{17}H_{18}O_{10}$, of cochineal. 2. Carminum (N.F.), a crimson pigment made from cochineal by treatment with alum.

carmin'ic acid. Carmine (1); a red substance derived from the cochineal, forming carminates with alkalis.

carmin'ophile, carminoph'ilous [G. *phileō*, I love.] Staining readily with carmine dyes.

carmi'num (N.F.). Carmine (2).

carnauba wax (kar-nah-oo'bah). A wax obtained from the Brazilian wax palm, *Copernicia cerifera.*

carnaubic acid (kar-nah-oo'bik as'id). A fatty acid, $C_{24}H_{48}O_2$, derived from carnauba wax.

car'neous [L. *carneus.*] Fleshy.

carniferr'in. Phosphosarcolactate of iron; employed as a chalybeate in anemia and chlorosis in doses of gr. 5–8 (0.3–0.5).

carniferr'ol. Trade name of a peptonate of iron preparation.

carnifica'tion [L. *caro(carn-)*, flesh, + *facere*, to make.] A change in certain tissues, especially the lungs, whereby they become fleshy, resembling muscular tissue.

car'nine. A leucomaine derived from beef extract; it occurs as a white crystalline powder having the formula, $C_7H_8N_4O_2$.

Carniv'ora [L. *caro(carn-)*, flesh, + *vorare*, to eat.] Flesh-eating animals.

carnivore (kar'nĭ-vōr). One of the Carnivora.

carniv'orous. Flesh eating.

Carnochan's opera'tion (kar'no-kan) [John M. *Carnochan*, American surgeon, 1817–1887.] Ligation of the femoral artery for elephantiasis of the leg.

car'nogen. Trade name of a preparation of bone marrow and fibrin.

carnos'ity. 1. Fleshiness. 2. A fleshy protuberance

ca'ro [L.] Flesh, muscle. **c. quadra'ta Syl'vii** [Jacobus Sylvius], musculus quadratus plantæ, accessory muscle of the flexor longus digitorum.

caro'ba. The leaflets of *Jacaranda procera*, a tree of tropical America; alterative and diuretic, given in syphilis and chronic rheumatism in doses of ℥15–30 (1.0–2.0) of a fluidextract.

car'obine. An alkaloid derived from caroba.

car'oid. Trade name of a protein digestant derived from the papaw.

car'otene. Carotin.

carot'ic [G. *karōtikos*, stupefying] 1. Carotid 2. Stuporous.

caroticotympanic (kă-rot''ĭ-ko-tim-pan'ik). Relating to the carotid canal and the tympanum.

carot'id [G. *karoō*, I cause to sleep profoundly (as by compression of the carotid artery).] 1. Arteria carotis. 2 Relating to a carotid artery. **c. ar'tery,** arteria carotis. **c. canal', c. fora'men, c. gland,** etc., see the nouns.

carotin (kă'ro-tin) [L. *carota*, carrot.] A yellow pigment (lipochrome) occurring in leaves, carrots, sweet potatoes, spinach, and other vegetables, oranges, egg yolk, milk, and other food stuffs.

carotinemia (kă-ro-tin-e'mĭ-ŭ) [*carotin* + G. *haima*, blood.] The presence of carotin in the circulating blood; when in excess it causes a yellow discoloration of the skin resembling jaundice, but said to be without pigmentation of the scleræ.

carpaine (kar'pah-ēn). An alkaloid, $C_{14}H_{25}NO_2$, from the leaves of *Carica papaya;* diuretic and cardiac tonic, resembling digitalis, in doses of gr. ⅛–½ (0.01–0.02) of the hydrochloride.

car'pal. Relating to the carpus **c. articula'tion,** (1) wrist-joint; (2) in veterinary anatomy, the collected carpal joints, popularly called the knee.

carpec'tomy [G. *karpos*, carpus, + *ektomē*, excision.] Exsection of a portion or all of the carpus.

car'pel [L *carpellum*, dim. of G. *karpos*, fruit.] In botany, a female sporophyll, forming a pistil or one of the elements of a compound or syncarpous pistil.

carphologia, carphology (kar-fŏ-lo'jĭ-ah, kar-fol'o-jĭ) [G. *karphos*, bits of wool, + *legō*, I collect.] Floccilation; purposeless, semiconscious picking at the bedclothes, in high fevers and stuporous conditions.

carpitis (kar-pī'(pe')tis) Carpal arthritis in the horse and other animals.

carpocar'pal. Midcarpal; referring to the articulation between the two rows of carpal bones.

carpogenic, carpogenous (kar-po-jen'ik, kar-poj'-en-us). Relating to the carpogonium.

carpogo'nium [G. *karpos*, fruit, + *gonos*, a begetting.] In botany, the lower part of the procarp, or female sexual organ, in *Ascomycetes.*

carpometacarpal (kar''po-met-ah-kar'pal). Relating to both carpus and metacarpus.

carpoped'al [L. *pes(ped-)*, foot.] Relating to the wrist and the foot, or the hands and the feet; noting especially *carpopedal spasm*, a spasm of the feet and hands sometimes observed in laryngismus stridulus, and formerly used as synonymous with this term

carpoptosia (kar-pop-to'sĭ-ah) [G. *karpos*, wrist, + *ptōsis*, a falling.] Wrist-drop.

Car'pue's meth'od [Joseph Constantine *Carpue*, English surgeon, 1764–1846.] Indian method of rhinoplasty by a flap from the forehead.

car'pus, gen. *car'pi* [G. *karpos.*] The wrist. As a division of the skeleton, the eight bones of the wrist, viz., the scaphoid or naviculare, semilunar or lunatum, cuneiform or triquetrum, pisiform, trapezium or multangulum majus, trapezoid or multangulum minus, os magnum or capitatum, and unciform or hamatum. (In the above list, when two names are given the second is the [BNA] term.) The carpus articulates above with the radius and ulna, and below with the five metacarpal bones.

car'rageen, car'ragheen. Chondrus (3).

Carrasquilla's se'rum (kahr-rahs-keel'yah). A serum believed by the author and others to be curative of leprosy.

carre-four sensitif (kar-foor''soń-se-tēf') [Fr. sensory crossroads.] A term given by Charcot to the posterior portion of the posterior limb of the internal capsule where the sensory nerve tracts pass.

Carrel's meth'od (kă-rel') [Alexis *Carrel*, French pathologist in New York, *1873.] End-to-end suture of blood vessels, permitting of the transplantation of large segments of limbs and of entire organs. **C.'s mixture** paraffin melting at 52° C. 18; paraffin melting at 20° C., 6; beeswax, 2; castor oil, 1; used to keep grafts in place on an ulcerated surface. **C.'s treat'ment,** treatment of wounds by intermittent irrigation with Dakin's fluid, the latter being made to flush

every part of the surface, the wound having previously been freed from all foreign material and dead tissue.

Carrel'-Da'kin fluid. Dakin's* fluid.

carrier (car'ĭ-ur). Vector, bacilli-carrier, a person in apparent health who is infected with some pathogenic organism to which he is himself, for the time being at least, immune but which, when accidentally transferred to another, may produce an attack of the specific disease.

Carrion's disease' (kahr-rĭ-ōn') [Daniel E. *Carrion*, a Peruvian student who inoculated himself with the disease in 1886, and lost his life thereby.] Oroya fever, the febrile form of verruga peruana.

Car'ron oil [*Carron* iron works in Scotland where the mixture was first employed.] Linimentum calcis, a mixture of equal parts of lime-water and olive or linseed oil, applied for the relief of burns and scalds.

carrot (kar'rot). The fruit or seed of *Daucus carota*, an herb yielding a common vegetable; used as a diuretic in doses of ʒ½–1 (2.0–4.0). **c.-root,** the vegetable, is used sometimes as a poultice in the treatment of ulcers.

car'sickness. Nausea, dizziness, and sometimes vomiting, a syndrome similar to seasickness, sometimes caused by riding on a railway.

Cars'well's grapes [Sir Robert *Carswell*, English physician, 1793–1857.] Masses of tubercles, in pulmonary tuberculosis, clustered around the finer bronchioles like a bunch of grapes.

Car'ter's fe'ver [Henry Vandyke *Carter*, Anglo-Indian physician, 1831–1897.] Asiatic relapsing* fever.

Car'ter's opera'tion [William Wesley *Carter*, New York laryngologist, *1869.] The formation of a new bridge of the nose by transplantation of a piece of bone taken from a rib.

car'thamus. Safflower, parrot-seed, false or bastard saffron, the dried florets of *Carthamus tinctorius;* sometimes used in domestic practice as a hot tea externally to "bring out the eruption" in exanthematous diseases.

cartilage (kar'tĭ-lej) [L. *cartilago*, gristle.] A connective tissue substance characterized by its non-vascularity and by a homogeneous or fibrillated basement substance containing mucin, gelatin, and chondrin; there are three kinds of cartilage called *hyaline cartilage*, *fibrocartilage*, and *fibroelastic cartilage*; see below. **access'ory c.,** a sesamoid c. **access'ory quad'rate c.,** cartilago alaris minor [BNA]. **alar c.,** see under *cartilago*. **ann'ular c.,** cricoid c. **aor'tic c.,** the cartilage of the second rib on the right side behind which is the arch of the aorta. **arthro'dial c., artic'ular c.,** the c. covering the articular surfaces of the bones forming a joint. **aryt'enoid c.,** see under *cartilago*. **au'ditory c.,** auditory capsule * **auric'ular c.,** the cartilage of the concha or auricle. **bone c.,** the animal matter of bone left after dissolving out the earthy matters with acid, ostein. **c. bone,** one formed from the ossification of cartilage. **c. capsule,** the ground substance in hyaline cartilage surrounding the lacunæ in which lie the c. cells. **c. cell,** a connective-tissue cell lying in one of the lacunæ or spaces in the ground substances of cartilage. **c. corpuscle,** c. cell. **c. space,** a lacuna in the ground hyaline c. in which lies a cartilage cell. **cell'ular c.,** an embryonic cartilage formed chiefly of cells with very little ground substance. **central c.,** a minute opacity in the center of the crystalline lens. **cil'iary c.,** tarsal c. **circumferen'tial c.,** labrum glenoidale [BNA]. **conchal c.,** auricular c., cartilago auriculæ [BNA] **connect'ing c.,** the cartilage in an immovable joint such as one of the sutures of the skull or the symphysis pubis. **costal c.,** the cartilage forming the anterior continuation of a rib. **cricoid c.,** see under *cartilago*. **cu'neiform c.,** see under *cartilago*. **den'tinal c.,** the animal matter of dentine remaining when the earthy matter has been dissolved out with acid. **diarthro'dial c.,** articular c. **elas'tic c.,** fibroelastic c. **en'siform c.,** processus xiphoideus [BNA]. **epac'tile c.,** cartilago sesamoidea nasi [BNA]. **epiphys'eal c.,** the disc of c. between the shaft and the epiphysis of a long bone. **Eusta'chian c.,** cartilago tubæ auditivæ [BNA]. **fi"brocar'tilage,** a form in which the basement substance is fibrillated, the fibers being arranged in bundles which interlace in all directions **fibroelas'tic c.,** a variety in which the cells are surrounded by a capsule of homogeneous basement substance, outside of which is an interlacing framework of elastic fibers in the basement substance; many granules of the same appearance as the elastic fibers, called elastic granules, are also present in the basement substance **floating c.,** a loose meniscus articularis, especially in the knee-joint. **gin'gival c.,** the fibrous tissue closing the open end of the loculus containing the unerupted tooth crown in the infant **hy'aline c.,** the usual form of permanent, non-articular cartilage, in which the cells are embedded in a homogeneous or finely granular basement substance. **innom'inate c.,** cricoid c **interartic'ular c.,** discus interarticularis [BNA] **inteross'eous c.,** connecting c **interver'tebral c.,** fibrocartilago intervertebralis [BNA]. **intrathy'roid c.,** a narrow slip of c. joining the alæ of the thyroid gland in infancy **invest'ing c.,** articular c. **lat'eral c.,** one of the cartilages from the extremity of the third phalanx or os pedis of the horse passing down to the heel of the hoof. **loose c.,** floating c. **mandib'ular c.,** an embryonic c., Meckel's c., which forms the malleus and its handle, and also the mandible **me'atal c.,** the cartilaginous portion of the external auditory meatus formed by the internal prolongation of the auricular c. **mu'cronate c.,** ensiform c., processus xiphoideus [BNA] **obdu'cent c.,** articular c. **parachor'dal c.,** the anterior cartilaginous investment of the notochord preceding the formation of the chondrocranium. **parasep'tal c.,** cartilago vomeronasalis [BNA]. **parenchy'matous c.,** cellular c. **perio'tic c.,** a cartilaginous mass on either side of the chondrocranium in the fetus. **per'manent c.,** cartilage which remains as such and does not become converted into bone. **plex'iform c.,** fibroelastic c. **precur'sory c.,** temporary c. **primor'dial c.,** temporary c. **pul'monary c.,** the c. of the second rib on the left side behind which is the beginning of the pulmonary artery. **quadrate c.,** accessory quadrate c. **retic'ular c., ret'iform c.,** fibroelastic c. **semilu'nar c.,** one of the interarticular cartilages of the knee-joint, meniscus* lateralis [BNA], meniscus* medialis [BNA]. **septal c.,** the c. completing the nasal septum anterior to the vomer. **ses'amoid c.,** cartilago sesamoidea. **sigmoid c.,** semilunar c. **sternal c.,** a costal c. of one of the true ribs. **supra-aryt'enoid c.,** corniculum laryngis, cartilago* corniculata [BNA]. **tarsal c.,** the fibrous framework giving firmness and shape to the eyelid; see *tarsus* (2). **tem'porary c.,** a cartilage which normally becomes ossified forming a part of the skeleton. **thyroid c.,** see *cartilago*. **true c.,** hyaline c. **tubal c.,** cartilago tubæ auditivæ. **uni'ting c.,** connecting c. **vo'merine c.,** Jacobson's c., cartilago* vomerona-

salis [BNA]. **xiphoid c.,** processus xiphoideus [BNA]. **Y-c.,** the cartilage at the bottom of the acetabulum forming the connecting c. for the ilium, ischium, and pubes.

conversion into, cartilaginification, chondrification **ear,** conchal c, auricular c., annular c., meatal c. **excision,** chondrectomy. **eyelid,** tarsal or ciliary cartilages, tarsus superior and tarsus inferior [BNA]. **formation,** chondrogenesis, chondrification, chondrosis. **inflammation,** chondritis. **joint,** arthrodial or articular c., circumferential c, meniscus. **knife for cutting,** chondrotome, ecchondrotome **larynx,** thyroid, cricoid, arytenoid, and cuneiform cartilages. **pain,** chondralgia, chondrodynia. **ribs,** costal cartilage. **softening,** chondromalacia **sternal,** ensiform or xiphoid c. **thinning,** chondroporosis. **tumor,** chondroma, ecchondroma, ecchondrosis.

cartilagineus (kar-tĭ-lă-jin'e-us) [NK]. Cartilaginous.

cartilaginification (kar"tĭ-lă-jin"ĭ-fi-ka'shun). Chondrification. conversion into cartilage

cartilaginoid (kar-til-aj'in-oyd) [L *cartilago* + G. *eidos*, resemblance.] Chondroid, resembling cartilage

cartilaginous (kar-til-aj'in-us). Relating to or consisting of cartilage.

cartila'go [L gristle] Cartilage

c. ala'ris ma'jor [BNA], greater alar cartilage, lower lateral cartilage, forming the anterior part of the ala nasi; the *crus laterale* is the outer plate; the *crus mediale* is the anterior part, curving backward to join the septum and forming with its fellow the tip of the nose.

c. ala'ris mi'nor [BNA], lesser alar cartilage, one of two to four cartilaginous plates on the side of the ala nasi posterior to the larger alar cartilage.

c. annula'ris, c. cricoidea.

c. articula'ris [BNA], articular cartilage, a cap of hyaline cartilage fitting over the joint surface of a bone.

c. arytænoid'ea [BNA], an approximately pyramidal cartilage lying on either side of the middle line posteriorly between the projecting alæ of the thyroid cartilage, just above the lamina of the cricoid; the junction of the external border and the base forms a prominent angle (processus muscularis), that of the anterior border and the base forms a sharp-pointed process (processus vocalis); the base articulates with the lamina of the cricoid cartilage.

c. auric'ulæ [BNA], the cartilaginous framework of the auricle or pinna of the ear.

c. basila'ris, the cartilage filling the foramen lacerum, fibrocartilago basalis [BNA].

c. clypea'lis [L. *clipeus*, *clypeus*, a shield], c. thyreoidea.

c. cornicula'ta [BNA], corniculate cartilage, cartilage of Santorini, a minute conical nodule of yellow elastic cartilage surmounting the apex of each arytenoid cartilage.

c. costa'lis, the cartilaginous portion of a rib.

c. cricoid'ea, the lowermost of the laryngeal cartilages; it is shaped like a seal-ring, being expanded into a nearly quadrilateral plate behind (lamina); the anterior portion is called the arch (arcus).

c. cuneifor'mis [BNA], cuneiform cartilage, cartilage of Wrisberg, a small rod of yellow elastic cartilage in the aryepiglottic fold in front of the arytenoid and corniculate cartilages.

c. ensifor'mis, c. xiphoidea, processus xiphoideus [BNA].

c. epac'tili s, c. sesamoidea nasi [BNA].

c. epiglott'ica, a thin lamina of yellow elastic cartilage forming the central portion of the epiglottis.

c. falca'ta [BNA], falciform cartilage, semilunar cartilage, meniscus medialis [BNA].

c. gingiva'lis, gingival cartilage.*

c. guttura'lis, c. arytænoidea.

c. innomina'ta, c. cricoidea.

c. intervertebra'lis, fibrocartilago intervertebralis [BNA].

c. linguæ, septum linguæ [BNA].

c. mucrona'ta [L. *mucro*, a sword], c. ensiformis, processus xiphoideus [BNA].

c. na'si latera'lis [BNA], upper lateral cartilage, the cartilage forming on either side the anterior and lateral wall of the nose, between the ala and the bony skeleton.

c. osses'cens [L. becoming bony], temporary cartilage.*

c. pelta'ta [L. *pelta*, a shield], c. thyreoidea.

c. pe'nis, septum glandis [BNA].

c. peren'nis, permanent cartilage.*

c. per'manens, permanent cartilage.

c. quadrangula'ris, c. septi nasi [BNA.

c. reticula'ris, fibroelastic cartilage.

c. santorinia'na, c. corniculata [BNA]

c. scutifor'mis, c. thyreoidea.

c. septi nasi [BNA], a thin cartilaginous plate filling in the gap between the vomer, mesethmoid, and nasal bones, and completing the septum nasi anteriorly.

c. sesamoid'ea laryn'gis [BNA], a small nodule of yellow elastic cartilage sometimes present on the external border of the arytenoid cartilage.

c. sesamoid'ea na'si [BNA], a small cartilage in the triangle on either side formed by the receding of the edge of the lower lateral cartilage from the cartilage of the septum nasi.

c. thyreoid'ea [BNA], thyroid cartilage, the largest of the cartilages of the larynx; it is formed of two approximately quadrilateral plates (*alæ*) joined anteriorly at an angle of from 90° to 120°, the prominence so formed constituting the pomum Adami, the posterior margins of the alæ are nearly straight and terminate above and below in horn-like extensions (*cornua*); on the outer surface of each plate is a smooth ridge (*linea obliqua*) connecting the superior and inferior tubercula (see *tuberculum thyreoideum*).

c. trachea'lis, one of from 16 to 20 incomplete rings of cartilage forming the skeleton of the trachea; the rings are deficient posteriorly for from one-fifth to one-third of their circumference.

c. triangula'ris, c. triquet'ra carpi, triangular fibrocartilage, discus articularis [BNA], of the distal radioulnar articulation.

c. triquet'ra, triquetrous cartilage, (1) articular cartilage (discus articularis [BNA]) of the inferior radioulnar articulation; (2) cartilago arytænoidea [BNA]

c. tritic'ea [BNA] [L. *triticeus*, wheaten], a rounded nodule of cartilage occasionally present in the lateral hyothyroid ligament.

c. tubæ auditi'væ [BNA], a triangular plate of fibroelastic cartilage, forming the cartilaginous portion of the Eustachian tube.

c. vera, hyaline cartilage *

c. vomeronasa'lis [BNA], vomeronasal, vomerine or Jacobson's cartilage, a narrow strip of cartilage lying between the lower edge of the cartilage of the septum nasi and the vomer.

c. xiphoid'ea, processus xiphoideus [BNA].

car'ui fruc'tus. Carum.

ca'rum (U.S., Br.). Carui fructus, caraway, caraway fruit; the dried nearly ripe fruit of *Carum carvi* (or *carui*), a biennial plant cultivated extensively in Siberia, Northern Europe, and the United States; carminative, stomachic, and diuretic, in doses of gr. 1–10 (0.06–0.6)

caruncle (kar'ung-kl). 1. A small fleshy protuberance, or any structure suggesting such a figure; see *caruncula* 2. In botany, an outgrowth of the outer coat of a seed, usually near its apex. **ure'thral c.,** a small, fleshy, painful growth from the mucous membrane, sometimes occurring at the meatus of the female urethra.

caruncula (kar-ung'ku-lah) [L. a small fleshy mass. Caruncle. **c. hymena'lis** (pl. *carunculæ hymenales*) [BNA], c. myrtiformis, one of the numerous tabs or projections surrounding the orifice of the vagina after rupture of the hymen. **c. lacrima'lis,** a small reddish body at the inner canthus of the eye, containing modified sebaceous and sweat glands. **c. ma'jor of Santori'ni,** papilla duodeni **c. mamilla'ris,** the collection of gray matter giving origin to part of the olfactory nerve, tuberculum olfactorium **c. Morgagn'ii,** the middle lobe

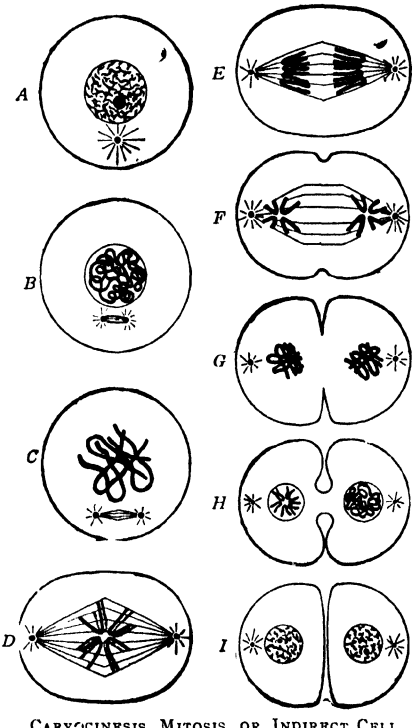
of the prostate gland. **c. myrtifor'mis** (pl. *caruncul*æ *myrtiformes*), c. hymenalis [BNA]. **c. saliva'ris,** c. sublingualis **c. sublingua'lis,** a papilla on each side of the frenulum linguæ marking the opening of the submaxillary (Wharton's) duct.

Carus's curve (kah'roos) [Carl Gustav *Carus*, German obstetrician, 1789–1869.] An imaginary curved line, obtained as the result of a mathematical formula, supposed to indicate the axis of the pelvic canal.

car'vacrol. Oxycymol, betacymophenol, a colorless liquid, $C_{13}H_{14}O$, obtained from oils of thyme, savory, and marjoram, with an odor of thyme; antiseptic, but employed chiefly as a perfume. **c. i'odide,** iodocrol, a yellowish brown powder, obtained from carvacrol as thymol iodide (aristol) is from thymol; employed like aristol as a substitute for iodoform.

carvene (kar'vēn). A tasteless and odorless terpene, $C_{10}H_{16}$, obtained from oil of caraway.

car'vol. A fragrant liquid, $C_{10}H_{14}O$, obtained from oil of caraway



CARYOCINESIS, MITOSIS, OR INDIRECT CELL DIVISION (diagrammatic).

A, Cell with resting nucleus; *B*, wreath, daughter centrosomes and early stage of achromatic spindle; *C*, chromosomes; *D*, monaster stage, achromatic spindle in long axis of nucleus, chromosomes dividing; *E*, chromosomes moving toward centrosomes; *F*, diaster stage, chromosomes at poles of nucleus, commencing constriction of cell body; *G*, daughter nuclei beginning return to resting state; *H*, daughter nuclei showing monaster and wreath; *I*, complete division of cell body into daughter cells whose nuclei have returned to the resting state. (*After Böhm and von Davidoff.*)

caryenchyma (kar-ī-en'ki-mah) [G. *karyon*, nut (nucleus), + *en*, in, + *chymos*, juice.] The more fluid portion of the caryoplasm, or protoplasm of a nucleus.

caryochromatophil (kar-ī-o-kro-mat'o-fil) [G. *karyon*, nut (nucleus), + *chrōma*, color, + *philos*, fond.] Noting a cell with a readily stainable nucleus.

caryochrome (kar'ī-o-krome) [G. *karyon*, kernel, nucleus, + *chrōma*, color.] Noting a nerve cell having only traces of a body, but a nucleus the size of an ordinary nerve-cell nucleus, larger than that of a cytochrome.

caryocine'sia, caryocine'sis (kar''ī-o-sin-e'sī-ah, kar''ī-o-sin-e'sis) [G. *karyon*, nut (nucleus), + *kinēsis*, movement.] Karyokinesis, the nuclear changes occurring in cell-division; these may be direct, *i.e.* without certain complicated changes in the chromatin of the nucleus (*amitosis*) or indirect, *i.e.* accompanied by these changes, with the formation of chromosomes (*mitosis*); the term was formerly employed as synonymous with mitosis.

caryocinet'ic. Relating to caryocinesis.

caryoclasis (kar-ī-ok'la-sīs) [G. *karyon*, nut (nucleus), + *klasis*, a breaking.] Fragmentation of the nucleus of a cell, caryorrhexis.

caryogam'ic. Relating to or marked by caryogamy

caryogamy (kar-ī-og'ă-mī) [G. *karyon*, kernel (nucleus), + *gamos*, marriage.] Fusion of the nuclei of two cells, as occurs in zygosis or true conjugation.

caryogenesis (kar-ī-o-jen'e-sis) [G. *karyon*, nucleus, + *genesis*, production.] Formation of the nucleus of a cell.

caryogenic (kar-ī-o-jen'ik). Relating to caryogenesis; forming the nucleus, parachromatic.

caryogonad (kar-ī-o-go'nad) [G. *karyon*, nut (nucleus), + *gonē*, generation, descent.] Gonad nucleus, germ nucleus, the nucleus in protozoa which contains the chromatin and has to do with the reproductive function.

caryolobic (kar-ī-o-lo'bik). Having a lobulated or lobe-shaped nucleus.

caryolobism (kar-ī-o-lo'bizm) [G. *karyon*, nut (nucleus), + L. *lobus*, lobe.] The state in which the nucleus of a cell, specifically a leucocyte, is lobulated, characterizing the polymorphonuclear neutrophiles.

caryolymph (kar''ī-o-limf) [G. *karyon*, nut (nucleus), + L. *lympha*, clear water.] The fluid substance contained in the meshes of the linin network of the nucleus; ground-substance, nuclear hyaloplasm, nuclear sap.

caryolysis (kar-ī-ol'i-sis)[G. *karyon*, nut (nucleus), + *lysis*, solution.] Apparent destruction of the nucleus at least the loss of affinity of its chromatin for basic dyes; chromatolysis.

caryolyt'ic. Relating to caryolysis.

caryomicrosome (kar-ī-o-mi'kro-sōm) [G. *karyon*, nut (nucleus), + *mikros*, small, + *sōma*, body.] One of the minute particles or granules making up the substance of the cell nucleus; nucleomicrosome.

car'yomit [G. *karyon*, nut (nucleus), + *mitos*, thread.] One of the chromatin threads formed in mitosis.

caryom'itome [G. *karyon*, nut (nucleus), + *mitos*, thread.] 1. The formed material of the cell-nucleus, consisting of the chromatin threads and the nuclear membrane. 2. One of the chromatin threads in the cell-nucleus.

caryomito'sis. Caryocinesis.

caryomitot'ic. Caryocinetic.

caryomor'phism. Noting the nuclear shapes of the cells, especially of the leucocytes.

car'yon [G. *karyon*, a nut, kernel.] The cell-nucleus.

caryophag, caryophage (kar'ī-o-fag, kar'ī-o-fāj) [G. *karyon*, nut (nucleus), + *phagas*, a devourer.] An intracellular protozoan parasite.

caryophil, caryophile (kar'ī-o-fil, or fīl). Staining readily with thiazin-ammonium dyes.

Caryophylla'ceæ. An order of polypetalous dicotyledonous plants, including the carnation.

caryoph'yllin. An odorless, tasteless, crystallizable body, $C_{10}H_{16}O$, from oil of cloves.

caryophyl'lus (U.S.), **caryophyl'lum** (Br.) [G *karyon*, nut, + *phyllon*, leaf.] Cloves, the dried unexpanded flowers of *Eugenia aromatica*, a handsome evergreen tree of tropical countries; carminative and aromatic stimulant, in doses of gr. 1–10 (0.06–0.6).

car'yoplasm [G. *karyon*, nut (nucleus), + *plasma*, a thing formed.] The protoplasm of a cell-nucleus.

caryoplastin (kar"ĭ-o-plas'tin). Parachromatin.

caryopsis (kar-ĭ-op'sis) [G. *karyon*, nut, + *opsis*, appearance.] In botany, a form of achene in which the pericarp is adherent to the coat of the seed, as in wheat.

caryorrhexis (kar-ĭ-ŏ-rek'sis) [G *karyon*, nut (nucleus), + *rhēxis*, rupture.] Fragmentation of the nucleus whereby its chromatin is distributed irregularly throughout the cytoplasm; a degenerative process and usually followed by caryolysis.

car'yosome [G. *karyon*, nut (nucleus), + *sōma*, body] One of the masses of chromatin at the nodes of the linin network of the nucleus; net-knot.

caryospherical (kar-ĭ-o-sfer'ĭ-kal). Having a spherical nucleus.

caryotheca (kar-ĭ-o-the'kah) [G. *karyon*, nut (nucleus), + *thēkē*, sheath.] The investing membrane of a nucleus.

caryozo'ic [G. *karyon*, nut (nucleus), + *zōon*, animal.] Noting a protozoan parasite inhabiting the cell nucleus of its host.

cascara amarga (cahs'kah-rah ah-mar'gah) [Sp. bitter bark] (N.F.). Honduras bark, the dried bark of an undetermined species (*antidesma?*) of *Picramnia* (fam. *Simarubaceæ*); it occurs in quills or broken flattened pieces, yellowish brown in color, of faint odor and extremely bitter and persistent taste; employed as a bitter tonic and alterative in average dose of gr. 15 (1.0); it enters into the composition of fluidextractum trifolii compositum and of syrupus trifolii compositus. **c. sagrada** (sah-grah'-dah) [Sp. sacred bark], (U.S. and Br.), the dried bark of *Rhamnus purshiana* (fam. *Rhamnaceæ*), occurring in flattened pieces or quills, dark brown or brownish-red in color, having a distinct odor and a bitter and slightly acrid taste; a tonic laxative in doses of gr. 3–15 (0.2–1.0).

cascaril'la [Sp. dim. of *cascara*, bark.] (Br.) Sweetwood bark; the dried bark of *Croton eluteria*, a shrub of the Bahama Islands; aromatic stimulant in doses of gr. 30 (2.0).

cascaril'line. A white, bitter, crystalline substance, the active principle of cascarilla.

case (kās) [L. *casus*, an occurrence.] An instance of disease with its attendant circumstances. The patient is not the case; the patient dies or recovers, the case terminates fatally or ends in recovery; the surgeon operates *in* a case, but operates *on* the patient.

casease (ka'se-āz). An albumin-digesting ferment of bacterial origin.

caseation (ka-se-a'shun) [L. *caseus*, cheese.] The conversion of necrotic tissues into a granular, more or less pultaceous, amorphous mass of a grayish or light yellowish color, resembling cheese.

ca'sec. Trade name of a make of calcium caseinate.

casein (ka'se-in) [L. *caseus*, cheese.] A nucleoprotein derived from milk, the substance of cheese; it is, when dried, a fine white powder insoluble in water but soluble in dilute alkaline and salt solutions. **c. i'odine,** caseo-iodine.

caseinogen (ka-se-in'o-jen) [*casein* + G. *gennaō*, I produce.] The chief protein in milk, the derivative of which is casein.

ca'seo-i'odine. A remedy for goiter made of a mixture or compound of casein and iodine.

caseose (ka'se-ōz). A product resulting from the hydrolysis or digestion of casein.

ca'seous [L. *caseus*, cheese.] Relating to or resembling cheese, noting a form of degeneration in which the tissues are transformed into a cheesy mass resembling inspissated pus.

casette (kă-zet') [dim. of F. *case*, compartment, box.] A plate-holder for use in photography and roentgenography.

case'worm. Echinococcus.

cashé (kă-sha'). Caché.

cashew'-nut. The nut of *Anacardium occidentale*.

$CaSO_4$. Calcium sulphate, gypsum, plaster-of-Paris

casoid bread (ka'soyd bred). A bread used in diabetes, made with a meal prepared from casein.

cassava starch (kah-sah'vah). Tapioca, starch from the root of *Manihot utilissima* (*Jatropha manihot*) and *M. palmata*, plants of tropical America.

Cas'selberry posi'tion [William Evans *Casselberry*, American laryngologist, *1858.] A prone position assumed when drinking, after intubation, in order to prevent the entrance of fluid into the tube.

Cas'ser's fontanelle' [Giulio *Casserio*, Italian anatomist, 1545–1616.] Mastoid fontanelle. **C.'s gan'glion,** Gasserian* ganglion **C.'s per'forated mus'cle,** the coracobrachialis through which the musculo-cutaneous nerve frequently passes. **C.'s per'forating nerve,** the musculocutaneous nerve of the arm which often passes through the coracobrachialis muscle.

Casse'rian. Relating to or described by Casser.

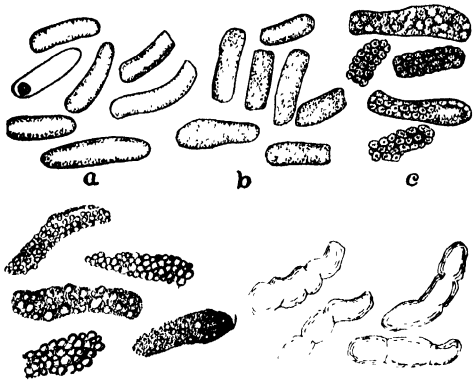
Cassia (kash'yah). A genus of herbs and trees of the family *Leguminosæ*. **C. acutifo'lia,** the source of Alexandrine senna. **C. angustifo'lia,** the source of Indian senna. **c. bark,** cinnamon **c. buds,** the immature fruits of various species of cinnamon. **C. caryophylla'ta,** clove-bark, a cinnamon-like bark.

cassia (Br.), **c. fis'tula** (N.F.), **cas'siæ pul'pa** (Br. '14), purging cassia, the dried ripe fruit of *Cassia fistula*, pudding-stick; laxative in doses of ʒ 1–2 (4.0–8.0). **C. marilan'dica,** the source of American senna, a drug of the same properties as the official senna, but much weaker. **C. occidenta'lis** furnishes ovate seeds used as a substitute for coffee, called Mogdad or Negro coffee. **C. zeylan'icum.** *Cinnamomum zeylanicum*.

cassiopeium (cas-ĭ-o'pe-um). Lutecium.

cast. 1. An object formed by the solidification of a liquid poured into a mould. 2. A mould of a tubular structure, such as a bronchial tube or a renal tubule, formed by a plastic exudate. **blood c.,** a renal c. formed chiefly of a blood-clot. **coma c.,** Külz's cylinder, a renal cast of strongly refracting granules said to be indicative of imminent coma in diabetes. **decid'ual c.,** a mould of the interior of the uterus formed of the exfoliated mucous membrane in cases of extrauterine gestation. **epithe'lial c.,** a renal c. consisting largely of cylindrical epithelium. **false c.,** cylindroid, mucous cast. **fatt'y c.,** a renal cast consisting largely of fat globules. **fi'brinous c.,** a yellowish, waxy-looking cast found sometimes in acute nephritis. **gran'ular c.,** a renal c. of granular texture, usually an altered hyaline c. **hy'aline c.,** a renal c. composed of albuminoid material. **mu'cous c.,** false or spuri-

ous c., a thick cylindrical shred of mucus in the urine. **re'nal c.,** cylinder, a mould of a renal tubule consisting of clotted blood, albuminoid matter, epithelium, etc. **spu'rious c.,** mucous c., cylindroid. **tube c.,** renal c. **wax'y c.,** a cylinder of colloid material, found in the urine, due to colloid degeneration of the tubular epithelium.



RENAL CASTS: *a*, hyaline; *b*, granular; *c*, epithelial, *d*, fatty; *e*, waxy.

casta'nea (N.F.). The dried leaves, collected late in the season, of *Castanea dentata*, the American chestnut, employed in the treatment of whooping-cough in the form of a tea or infusion (an ounce to a pint), or of the N.F. fluidextract in dose of ʒi (4.0). **C. equi'na** [L. *equinus*, relating to a horse], horse-chestnut, hippocastanum.

Castellanella (kas-tel-ă-nel'ŭ) [Aldo *Castellani.**] A genus of trypanosomes. **C. bru'cei,** the organism of nagana or tsetse-fly disease. **C. equiper'dum,** the pathogenic organism of dourine. **C. ev'ansi,** the cause of surra, a disease of horses, camels, and cattle.

Castellani's absorp'tion test (kas-tel-lah'ne) [Aldo *Castellani*, tropical physician *1876.] In certain infections the serum will agglutinate two organisms; if now this serum is saturated with one of these organisms the agglutinins for both will be removed, if it is saturated with the other organism the agglutinin relating to that infection only will be removed; the organism which, added in large amount to the serum, removes both agglutinins is the specific organism for that infection. **C.'s bronchi'tis,** hemorrhagic bronchitis,* bronchopulmonary spirochetosis.

Castellani-Low symp'tom (kas-tel-lah'ne) [Aldo *Castellani*, George Carmichael *Low*, Anglo-Indian physician.] A fine tremor of the tongue observed in sleeping sickness.

cas'tor. Castoreum.

cas'tor-oil. Oleum* ricini.

casto'reum. Castor, the dried preputial follicles and their secretion from the beaver, *Castor fiber* or *C. americanus;* nerve stimulant in doses of gr. 10–60 (0.6–4.0).

casto'ria. A proprietary remedy employed as a laxative for children.

cas'torin. A neutral principle, occurring in prismatic crystals, obtained from castoreum; it has the odor of castor, but little taste, and constitutes from 2 to 4½ per cent. of the crude drug.

cas'trate [L. *castrare*, to prune.] 1. To remove the testicles or the ovaries. 2. One from whom the testicles or ovaries have been removed.

cas'trated. Emasculated, deprived of the testicles or of the ovaries.

castra'tion. Removal of the testicles or ovaries. **parasit'ic c.,** an arrest of sexual development caused by intense parasitic infestation in the young

casual (kazh'u-al) [L. *casualis*, accidental, by chance.] 1. Incidental, occurring by chance. 2. Relating to or caused by an accident.

casualty (kazh'u-al-tĭ). 1. An accident causing injury or death. 2. In military parlance, any soldier or sailor disabled by wounds, illness, or death.

ata- [G. *kata*, down.] A prefix denoting down or in a downward direction, or destructive.

cataba'sial. Noting a skull in which the basion is lower than the opisthion.

catab'sis [*katabasis*, a going down.] The stage of decline of a disease.

catabiotic (kat"ah-bi-ot'ik) [G. *kata*, down, + *biōtikos*, relating to life, vital.] 1. Used up in the carrying on of the vital processes other than growth, or in the performance of function, referring to the energy derived from food. 2. Functional, noting an activity of the cell; opposed to bioplastic or vegetative.

catabol'ic. Relating to catabolism.

catab'olin. Any product of catabolism.

catab'olism [G. *katabolē*, a casting down.] Destructive or retrograde metabolism; the breaking down of complex bodies of living matter into waste products of simpler chemical composition.

catabolite (kat-ab'o-līt). Catabolin.

catacrot'ic [G. *kata*, down, + *krotos*, beat.] Noting a pulse-tracing in which the down stroke is interrupted by one or more upward notches.

catac'rotism. A condition of the pulse in which there are one or more secondary expansions of the artery following the main beat.

catadicrotic (kat-ah-di-krot'ik) [G. *kata*, down, + *di-*, two, + *krotos*, beat.] Noting a pulse-tracing in which there are two minor elevations or notches interrupting the descending line.

catadic'rotism. A condition of the pulse marked by two minor expansions of the artery following the main beat.

catadidymus (kat-ah-did'i-mus). A twin monster joined above but double below.

catadiop'tric. Relating to both refraction and reflection of light rays

catagenesis (kat-ah-jen'e-sis) [G. *kata*, down, + *genesis*, production.] Involution.

catalase (kat'ă-lāz [*catalysis* + *-ase*.] A supposed enzyme in plant and animal tissues capable of effecting the decomposition of hydrogen peroxide.

cat'alepsy [G. *kata*, down, + *lēpsis*, a seizure.] A morbid state, allied to autohypnosis or hysteria, in which there is a waxy rigidity of the limbs that may be placed in various positions which they will maintain for a time. The subject is insensible and irresponsive to stimuli; the pulse and respiration are slow, and the skin is pale.

catalept'ic. Relating to, or suffering from, catalepsy.

catalep'toid [G. *eidos*, resemblance.] Simulating or resembling catalepsy.

catal'pa. The bark or fruit of *Catalpa bignonioides* or *C. speciosa*, cigar-tree, bean-tree, a large tree of the eastern United States; it is employed in eclectic medicine in the treatment of asthma and chronic bronchitis, in doses of 1 to 5 drops of the specific preparation.

catalysin (kat-al'i-sin). Trade name of a lecithin preparation recommended for internal use to strengthen the natural resistance in infectious diseases.

catalysis (kă-tal'i-sis) [G. dissolution.] Chemical decomposition induced by the presence of a body which either takes no part in the reaction or is restored to its original state at the end of the process.

cat'alyst. An agent which induces catalysis, a catalyzer.

catalyt'ic. Relating to catalysis.

cat'alyzer. Catalyst.

catame'nia [G. *kata*, according to, + *mēn*, month] Menses.

catame'nial. Relating to the catamenia or menses.

catapasm (kat'ah-pazm) [G. *katapasma*, a powder; *katapassō*, I sprinkle over.] A dusting powder applied to raw surfaces or ulcers.

cataphasia (kat-ă-fa'zĭah) [G *kata*, down, + *phasis*, a declaration.] A disorder of speech in which there is an involuntary repetition several times of the same word.

cataph'ora [G. a falling down.] Semicoma, or somnolence interrupted by intervals of partial consciousness; coma somnolentium.

cataphoresis (kat"ah-fo-re'sis) [G. *kata*, down into, + *phorēsis*, a being carried.] Electric osmosis or transfer of fluids through a membrane from anode to cathode; the forcing of medicinal substances into the deeper tissues by this means

cataphoret'ic. Relating to cataphoresis.

catapho'ria [G. *kata*, down, + *phoreō*, I carry.] Tendency of the visual axes of both eyes to assume too low a plane.

cataphor'ic. Relating to cataphoresis, cataphora, or cataphoria.

cataphylaxis (kat-ă-fi-laks'is) [G. *kata*, down, + *phylaxis*, protection.] Transport of leucocytes and antibodies to the site of infection.

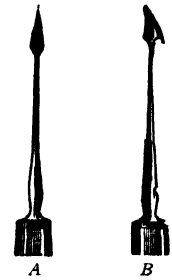
cat'aphyll, cataphyll'um [G. *kata*, down, + *phyllon*, leaf.] A scale leaf or cotyledon.

cataplasia, cataplasis (kat-ah-pla'zĭ-ah, kat-ap'la-sis) [G. *kata*, down, + *plasis*, a moulding.] Reversionary metamorphosis; a degenerative change in cells or tissues which is the reverse of the constructive or developmental change; a return to an earlier or embryonic stage.

cat'aplasm [G. *kataplasma*, poultice, from *kataplassō*, I spread over.] A poultice, a soft magma or mush prepared by wetting various powders or other absorbent substances with oily or watery fluids, sometimes medicated, and usually applied hot to the surface; it exerts an emollient, relaxing, or stimulant, counterirritant effect upon the skin and underlying tissues.

cataplasma (kat-ah-plaz'mah). Cataplasm, poultice. **c. alu'minis,** alum poultice, made by adding 2 drams of powdered alum to the whites of two eggs and coagulating; cooling and astringent. **c. carbo'nis,** charcoal poultice, made by macerating 2 ounces of bread crumbs, 1½ ounces of linseed meal, and ½ ounce of charcoal in 10 ounces of water and spreading ½ ounce charcoal over the surface before application; deodorant and emollient. **c. caro'tæ, c. dau'ci,** carrot poultice, made with 4 ounces scraped carrot and 1 ounce of cornmeal. **c. fermen'ti,** yeast poultice, made with 6 ounces each of beer yeast and water and 14 ounces wheaten flour, or 2 ounces yeast, ½ pint milk, and powdered slippery elm bark; stimulant and deodorant. **c. kaoli'ni** (Br., N.F.), clay poultice, made of kaolin 577.0 boric acid 45.0, thymol 0.5, methyl salicylate 2.0, oil of peppermint 0.5, glycerin 375.0, applied in inflammatory conditions. **c. li'ni,** flaxseed or linseed poultice, made with 4 ounces linseed meal in 10 ounces boiling water. **c. lobe'liæ,** lobelia poultice, equal parts of powdered lobelia and slippery elm bark made into a poultice with warm weak lye, employed to relax spasm. **c. sina'pis,** mustard poultice, mustard plaster made by forming a paste of ground mustard, mixed with more or less flour or corn meal according to the strength desired **c. so'dæ chlorina'tæ,** chlorine or chlorinated soda poultice, made by adding 2 ounces of solution of chlorinated soda to 4 ounces of linseed meal and 8 ounces of boiling water; stimulant and deodorant. **c. stramo'nii,** stramonium poultice, made by bruising fresh stramonium leaves and adding enough hot water to make a paste; employed in myalgia and neuralgia. **c. syru'pi fus'ci,** molasses poultice, made by mixing flour and molasses to make a soft paste, used as an application to burns and scalds.

cat'aract [G. *katarrhaktēs*, a trap-door.] A loss of transparency of the crystalline lens of the eye, or of its capsule. **af'ter c.,** secondary c. **arbores'cent c.,** one in which the opacity has an appearance of branching lines. **ar"idosil'iquate c., ar'idosilic'ulose c., ar"idosil'iquose c.,** siliculose c. **ax'ial c.,** nuclear c. **black c.,** one in which the lens is hardened and of a dark brown color. **blood c.,** the presence of a blood-clot anterior to the lens, blocking the pupil. **cap'sular c.,** one in which the opacity affects the capsule only **cap"sulolentic'ular c.,** one in which both the lens and its capsule are involved; membranous c. **ca'seous c.,** an overripe c. which has undergone cheesy degeneration. **cen'tral c.,** nuclear c. **complete' c.,** one involving the entire lens **com'plicated c.,** secondary c.(1). **cor'tical c.,** one in which the opacity affects the cortex of the lens. **dry-shell c.,** siliculose c **fi'broid c.,** a sclerotic hardening of the capsule of the lens **flu'id c.,** an overripe c. which has become liquefied **fu'siform c.,** spindle c **glass'worker's c.,** one occurring in glassmakers and supposed to be due to the glare from the molten glass **green c.,** glaucoma. **hard c.,** phacosclerosis. **hypermature' c.,** overripe c., one in which the sclerotic changes have progressed until the whole mass is shrunken, dry, and very hard (*phacosclerosis*), or in which the cortex has softened. **in'fantile c.,** juvenile c. affecting a very young child. **ju'venile c.,** a soft c. occurring in a child or young adult, especially one suffering from rickets. **lac'teal c.,** a fluid c. in which the liquid lens is opalescent or milky **lamell'ar c.,** one in which the opacity is limited to certain of the layers of the lens external to the nucleus. **lentic'ular c.,** one in which the opacity is confined to the substance of the lens phacoscotasmus **mature' c.,** one in which the entire lens is hard and opaque so that it can be shelled out easily from the capsule. **mem'branous c.,** a secondary c., composed of the remains of the thickened capsule with more or less degenerated lens substance. **milk'y c.,** lacteal c. **Morgagn'ian c.,** a hypermature c in which the cortex



A *B*

CATARACT NEEDLES: *A*, straight; *B*, curved.

becomes soft and of a milky opacity while the hard dark nucleus sinks. **nu'clear c.**, one involving the nucleus only. **overripe' c.**, hypermature c. **perinu'clear c.**, one in which the nucleus is clear but is surrounded by a ring or sphere of opacity. **po'lar c.**, a capsular c. limited to a certain area over the anterior or posterior pole of the lens. **pri'mary c.**, one occurring independently of any other disease of the eye. **progress'ive c.**, one in which the hardening process advances and finally involves the entire lens. **punc'tate c.**, an incomplete c. in which there are opaque dots scattered through the lens. **pyram'idal c.**, a cone-shaped polar c. **ripe c.**, mature c. **sanguin'eous c.**, blood c. **sec'ondary c.**, (1) complicated c., one which accompanies or follows some other eye disease such as glaucoma; (2) after-c., one which occurs in the remains of the lens or capsule after a cataract operation. **sedimen'tary c.**, Morgagnian c., **silic'ulose c.**, **sil'iquose c.**, calcareous degeneration of the capsule of the lens. **soft c.**, one which is of soft consistence throughout and white in color, phacomalacia. **spin'dle c.**, axial c., fusiform c., one in which the opacity is fusiform, extending from one pole to the other. **sta'tionary c.**, one which does not progress beyond a certain stage, such as a polar c. **to'tal c.**, one involving the entire lens. **unripe' c.**, immature c. **zon'ular c.**, lamellar c.

cataract-needle (kat'ă-rakt ne'dl) A small lance-pointed instrument used in the operation of discission of a cataract.

catarac'tous. Relating to a cataract.

cat'aract-spoon. A small spoon-shaped instrument for removing a cataractous lens.

cata'ria (N.F.). Catnep, catnip, catmint, the dried flowering tops of *Nepeta cataria;* employed as a "tea" in domestic practice as an emmenagogue and antispasmodic, in doses of ʒ1 (4.0), or a tablespoonful of the infusion of a strength of an ounce to a pint, or ʒ1 (4.0) of the N.F. fluidextract.

catarrh (kă-tahr') [G. *katarrheō*, I flow down.] Simple inflammation of a mucous membrane; popularly, chronic rhinitis. **atroph'ic c.**, a chronic c., especially of the nose and rhinopharynx, resulting in more or less destruction of the mucous membrane. **autum'nal c.**, hay fever. **bron'chial c.**, bronchitis. **epidem'ic c.**, influenza **gas'tric c.**, gastritis **hypertroph'ic c.**, a chronic c., especially of the nose and rhinopharynx, resulting in proliferation and sometimes polypoid thickening of the mucous membrane. **intes'tinal c.**, enteritis **laryn'geal c.**, laryngitis. **light'ning c.**, influenza; any severe and rapidly developing coryza. **lithogen'ic intes'tinal c.**, mild inflammation of the intestinal mucous membrane accompanied by the presence of intestinal sand in the stools. **na'sal c.**, rhinitis. **pharyn'geal c.**, pharyngitis. **postna'sal c.**, chronic rhinopharyngitis. **spring c.**, vernal conjunctivitis.* **suff'ocative c.**, asthma. **u'terine c.**, endometritis. **ver'nal c.**, vernal conjunctivitis. **ves'ical c.**, cystitis.

catarrhal (kă-tah'ral). Relating to or affected with catarrh.

catastal'tic [G. *katastellō*, I check.] 1. Inhibitory, restricting or restraining. 2. An inhibitory or checking agent, such as an astringent or antispasmodic.

catas'tasis. 1. A condition or state. 2. Restoration to a normal condition or a normal place

cat'astate [G. *katastatos*, settled down.] Any substance formed in the process of catabolism or retrograde metamorphosis.

catastat'ic. Relating to a catastate.

catathermometer (kat-ah-thur-mom'e-tur) [G. *kata*, down.] A large-bulbed spirit thermometer used to measure the rate of cooling; the dry bulb c. indicates the rate of heat loss by radiation and convection, the wet bulb by radiation, convection, and evaporation.

catato'nia [G. *kata*, down, + *tonos*, tone.] 1. Stupor. 2. A form of dementia præcox in which the progressive dementia is interrupted from time to time by maniacal, melancholic, or stuporous intervals.

catato'niac, catatonic. Relating to, or characterized by, catatonia; stuporous. **c. demen'tia**, catatonia (2).

cat'atony. Catatonia.

catatricrotic (kat"ah-tri-krot'ik). Noting a pulse curve with three minor elevations interrupting the downward stroke.

catatricrotism (kat"ah-trik'rŏ-tizm). The condition in which the pulse curve is catatricrotic

catatro'pia [G *kata* down, + *tropē*, a turn.] Cataphoria.

cataxia (ka-taks'ĭ-ă) [G. dissociation.] The breaking of a pathogenic symbiosis of microorganisms.

catechin (kat'ĕ-kin) [G. *katechō*, I restrain.] 1. A hypothetical substance in the blood which is supposed to prevent the excessive action of any hormone, such as that of the thyroid gland. 2. Catechinic or catechuic acid, $C_{21}H_{20}O_9+5H_2O$, an amorphous yellow powder from catechu; used as a stain.

catechol (kat'e-kol). Pyrocatechin.

catechu (kat'e-choo, kat'e-ku) [East Indian name.] (Br.) Gambir (U.S.) a dried extract of the leaves and young shoots of *Uncaria* (*Ourouparia*) *gambier*, employed as an astringent in diarrhea in doses of gr. 5–15 (0.3–1.0) **c. ni'grum** (B.A.), black catechu, cutch, an extract of the heart wood of *Acacia catechu*, employed as an astringent in diarrhea in doses of gr. 5–30 (0.3–2.0). **c. pal'lidum**, the official catechu (Br.) or gambir (U.S.).

catelectrot'onus [*cathode* + *electrotonus*.] The change of electrical irritability and conductivity in a nerve or muscle in the neighborhood of the cathode.

catenating (kat'e-na"ting). Occurring in a chain or series.

cat'enoid [L. *catena*, chain, + *eidos*, resemblance. Like a chain, noting a colony of protozoa in which the individuals are joined end to end.

cat'gut. Sheep's intestine twisted into cords of varying thickness, used in medicine as an absorbable suture and ligature material. **i.k.i.-catgut**, c. sterilized in a solution of 1 part of iodine in 100 parts of a solution of potassium iodide. **sil'verized c.**, prepared by immersion of c. in a 2 per cent. solution of collargolum for one week and then in 95 per cent. alcohol for a quarter to half an hour.

Catha (kath'ah) [Arab. *khat.*] A genus of African plants of the order *Celastraceæ*. **C. ed'ulis**, khat of the Arabs, a native of Abyssinia and Arabia which is cultivated for use as a stimulant, the leaves and twigs being used in the preparation of a beverage which has properties similar to those of tea and coffee, but said to be more stimulating to the imagination, like alcohol; the users of the beverage call the plant "flower of paradise."

cathar'sis [G. purification] 1. Purgation, excessive action of the bowels. 2. Freud's method of treatment of a psychoneurosis, or freeing the mind of an affect-memory, by recalling to the patient's consciousness the original exciting cause and then working it off by letting him give expression, in speech or action, to the mental reaction thereby produced.

cathar'tic. 1. Purging, relating to catharsis. 2. An agent causing active movement of the bowels.

cathar'tin. Cathartic acid, an extractive from rhubarb and senna; a brownish powder, cathartic in doses of gr. 2–5 (0.13–0.3).

Cathelin's ves'ical divi'sor (kat-laṅ') [Fernand *Cathelin*, Parisian urologist, *1873.] A rubber membrane attached to a very fine steel frame which, when introduced into the bladder, adapts itself to the inequalities of the inner surface dividing it into two compartments; used as a means of separating the portions of urine coming from the two ureters.

cath'eter [G. *katheter*.] 1. A hollow cylinder of silver, India rubber, or other material, designed to be passed through the urethra into the bladder to drain this viscus of urine in case of retention from any cause. 2. A similar instrument used for passage through other canals. **c. à demeure** (ă-dĕ-mĕr') [Fr. *demeurer*, to dwell], one which is retained permanently or for a considerable period in the urethra **el'bowed c.,** one with an angular bend near the beak, of use when there is obstruction by the prostate. **Eusta'chian c.,** one used for passage into the Eustachian tube. **fau'cial c.,** Eustachian c. **fe'male c.,** a short, nearly straight, metallic c. for passage into the female bladder. **prostat'ic c.,** elbowed c. **ver'tebrated c.,** one made of several segments moving on each other like the links of a chain. **winged c.,** a soft rubber c. with little flaps at each side of the beak in order to retain it in the bladder.

cath'eter-fe'ver. A chill and fever following the passage of a catheter.

catheter-gauge (kath'e-tur-gāj). A metal plate with holes of graduated diameter used to determine the size of a catheter.

cath'eterism, catheteriza'tion. The passage of a catheter.

catheterize (kath'e-tur-īz). To subject a person to the passage of a catheter.

catheterostat (kath'e-tur-o-stat) [*catheter*, + G. *statos*, standing.] A stand for holding catheters

cath'ion. Cation.

cath'odal. Relating to the cathode. **c. dark space,** Crookes'* space.

cathode (kath'ōd) [G. *kathodos*, downward way (of the sun), west.] The return goal of the electron, thus made negative and sought by the positive cation; negative pole or electrode of a constant electric current. **c. rays.** See under *Ray*.

catho'dic. Relating to the cathode; electropositive.

cathodograph (kă-thŏ'do-graf). An *x*-ray picture, skiagram.

cathod'olyte. Cation.

cathol'icon [G. *katholikos*, universal.] A panacea, a remedy good for all diseases.

cation (kat'i-on) [*cathode* + G. *iōn*, going.] Kation, an ion, the basic radical, carrying a charge of positive electricity, therefore going to the oppositely charged cathode; the element which, during electrolysis of a chemical compound, appears at the negative pole or cathode; the atoms of hydrogen and of all metals are cations; in the case of a salt the base is the cation, the acid the anion.

cat'kin [dim. of *cat*, from its fancied resemblance to the tail of a cat.] In botany, a deciduous, scaly spike of unisexual flowers, as in the willow

cat'lin, cat'ling. A long, sharp-pointed, double-edged knife used in amputations.

cat'nep, cat'nip. Cataria.

catopho'ria [G. *katō*, downward, + *phoros*, a bearer.] A tendency of the visual axes to turn too far downward.

catop'tric [G. *katoptron*, mirror.] Relating to reflected light.

cat's hair. Euphorbia pilulifera.

Cattani's serum (kaht-tah'ne) [Giuseppina *Cattani*, Italian pathologist, †1915.] A solution of sodium carbonate, 3, and sodium chloride, 4, in water, 100.

cauda (kaw'dah) [L. a tail.] Any tail, or tapering or elongated extremity of an organ or other part. **c. cerebell'i,** vermis. **c. epididym'idis,** the globus minor of the epididymis * **c. equi'na** [L. horse's tail], the bundle of spinal nerve roots arising from the lumbar enlargement and conus medullaris and running down through the lower part of the canal below the first lumbar vertebra; it comprises the roots of all the spinal nerves below the first lumbar. **c. hel'icis,** a flattened process terminating the cartilage of the helix posteriorly and inferiorly. **c. stria'ti,** the posterior narrowing portion of the nucleus caudatus

caudad (kaw'dad). In a posterior direction, or toward the tail.

caudal (kaw'dal) [L. *caudalis*.] 1. Relating to any cauda, or anatomical structure resembling a tail. 2. [NK] Inferior or, in the case of four footed animals, posterior.

caudate (kaw'dāt). 1. Tailed, possessing a tail. 2. Nucleus* caudatus.

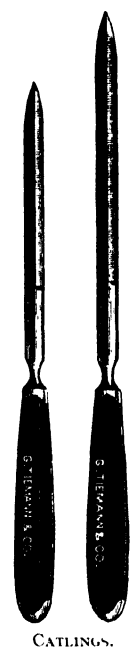
cauda"tolentic'ular, caudolentic'ular. Relating to the caudate and lenticular nuclei

cauda'tum. The nucleus caudatus

caudex (kaw'deks) [L trunk of a tree] The main portion or trunk of an anatomical structure. **c. cer'ebri,** (1) the main central portion of the brain—oblongata, pons, midbrain, thalami, and caudata; (2) pedunculus cerebri. **c. dorsa'lis,** (1) medulla oblongata; (2) spinal cord.

caudiduct (kaw'dī-dukt) To draw caudad, backward, or in the direction of the tail.

caudocephalad (kaw-do-sef'al-ad) In a direction from the tail toward the head.



CATLINGS.

caul (kawl) [Gaelic. *call*, a veil.] 1. The amnion forming the bag of waters, sometimes delivered unruptured with the child; a piece of amnion capping the child's head when born. 2. The great omentum. 3. Any serous membrane. **pseu"doperitone'al c.,** a pathological membranous formation about the colon.

caulicle (kaw'lĭ-kl) [L. *cauliculus*, dim. of *caulis*, stalk.] In botany, a minute embryonal or rudimentary stem.

caul'iflower excres'cence. Condyloma acuminatum

cauline (kaw'lin) [G. *kaulinos; kaulos*, a stalk] In botany, relating to a stem. **c. bundle,** a vascular bundle confined to the stem.

caulophyllin (kaw-lof'il-in). A concentration preparation of *Caulophyllum thalictroides* employed in frequently repeated doses of ½ gr. (0.01) for the same indications as the crude drug.

caulophyl'lum [G. *kaulos*, stem, + *phyllon*, leaf] (N.F.) Squaw root, papoose root, blue cohosh, the dried rhizome and roots of *Caulophyllum thalictroides;* dose gr. 8 (0.5), or ɱ8 (0.5) of the N.F. fluidextract; it is employed chiefly in eclectic practice as an emmenagogue, oxytocic, and antispasmodic in doses of 1 to 3 drops of the specific preparation frequently repeated.

caumesthesia, caumæsthesia (kaw-mes-the'zĭ-ah) [G. *kauma*, heat, + *aisthēsis*, sensation.] A sense of heat irrespective of the temperature of the air.

causal (kaw'zal). Relating to a cause. **c. treat'ment,** treatment directed especially to a removal of the cause of a disease.

causalgia (kaw-zal'jĭ-ah) [G. *kausis*, burning, + *algos*, pain.] A burning pain associated with glossy skin

cause [L. *causa*.] That which produces an effect or condition; that by which a morbid change or disease is brought about. **constitu'tional c.,** a c. acting from within or through some systemic defect. **exci'ting c.,** the direct provoking c of a disease. **predispo'sing c.,** anything which produces a susceptibility or predisposition to a disease without exciting the disease itself. **prox'imate c.,** the immediate actual c **specif'ic c.,** one the action of which produces only the one definite disease, such is the pathogenic microbe of diphtheria, tuberculosis, or tetanus.

caus'tic [G. *kaustikos; kaiō*, burn.] 1. Corrosive, exerting an effect resembling a burn; escharotic 2. An agent producing this effect. **lu'nar c.,** silver nitrate **mit'igated c.,** argenti nitras mitigatus. **Vien'na c.,** a mixture of quicklime and caustic potassa.

causticum (kaw'stĭ-kum) A homeopathic remedy prepared by mixing recently slaked lime with potassium bisulphate and distilling; employed in various neuroses and paralyses, chorea, chronic rheumatism, and catarrhal troubles

cauter (kaw'ter) A cautery iron

cauterant (kaw'ter-ant). 1 Cauterizing 2 A cauterizing agent.

cauteriza'tion. The act of cauterizing. **gas c.,** c. by means of a lighted gas jet. **Per'cy c.,** see Percy* method. **so'lar c.,** sun c. **steam c.,** atmocausis. **sun c.,** c. by means of the sun's rays focussed by a lens or a mirror.

cauterize (kaw'ter-īz) To apply a cautery; to burn with the actual or potential cautery.

cautery (kaw'ter-I) [G. *kautērion*, a branding iron] 1. An agent used for scarring or burning the skin or tissues by means of heat or of caustic chemicals 2. The destructive effect produced by a cauterizing agent. **ac'tual c.,** a c. consisting of actual fire or the heat produced by it. **butt'on c.,** an actual c. in which the heated part is a knob on the end of a non-conducting handle. **chem'ical c.,** chemocautery. **cold c.,** cryocautery. **Corr'igan's c.,** button c. **elec'tric c., galvan'ic c.,** galvanocautery. **Paquelin c.,** see *Paquelin*. **poten'tial c.,** a caustic, an agent such as potassium hydrate which forms an eschar without the agency of actual fire. **steam c.,** atmocausis. **vir'tual c.,** potential c.

ca'va. Vena* cava.

ca'val. Relating to a vena cava.

cav'alry-bone. Rider's bone.*

cav'ascope [L. *cavum*, hole, + G. *skopeō*, I view.] An instrument for examining the interior of any cavity.

cav'ern [L. *caverna*, a grotto] A cavity, especially a pathological excavation from loss of pulmonary tissue in tuberculosis.

cavernitis (kav-ur-ni'(ne')tis). Inflammation of the corpus cavernosum penis.

caverno'ma, pl. *caverno'mata* [L. *caverna*, cavern, + G. *-ōma*.] Cavernous angioma. **c. lymphat'icum,** lymphangioma cavernosum.

cavernous (kav'ur-nus). Relating to a cavern or a cavity; containing many cavities. **c. angio'ma,** a vascular tumor consisting of many large spaces, filled with blood, and freely intercommunicating. **c. bod'y,** corpus cavernosum. **c. groove,** sulcus caroticus [BNA], see under *groove*. **c. plex'us,** plexus cavernosus. **c. râle,** a hollow bubbling sound caused by air entering a cavity partly filled with fluid. **c. res'onance,** amphoric* resonance **c. respira'tion,** a blowing sound heard in both inspiration and expiration (the latter being lower in pitch), on auscultation over a pulmonary cavity. **c. rhon'chus,** c. râle. **c. sinus,** sinus cavernosus. **c. voice sound,** the hollow or metallic voice sound heard over a pulmonary cavity

cavilla (kă-vil'ah) [L. dim. of *cavum*, cavity.] Os sphenoidale [BNA].

cav'itary. Relating to a cavity.

cav'itas. A cavity. **c. glenoida'lis** [BNA], glenoid cavity.*

cavita'tion. The formation of a cavity, as in the lung in tuberculosis.

Cavité fe'ver (kah-ve-ta') [*Cavité*, a town on the Bay of Manila, P. I.] A fever with muscular pains and high temperature, occurring at the Cavité naval station, somewhat resembling dengue.

cavitis (kav-ī'(e')tis). Celophlebitis.

cav'ity [L *cavitas*.] A hollow space. **abdom'inal c.,** the space bounded by the abdominal walls, the diaphragm, and the pelvis. **amniot'ic c.** the space enclosed by the amnion, especially that between the amniotic sac and the embryo. **ank'yroid c.,** the cornu inferius of the latera ventricle. **buc'cal c.,** (1) vestibulum oris; (2) a carious c. starting from the buccal surface of a tooth. **com'plex c.,** in dentistry, a c. involving two or more surfaces of a tooth. **cot'yloid c.** the acetabulum. **cra'nial c.,** the space contained within the skull. **dig'ital c.,** the cornu posterius of the lateral ventricle. **fissure c.,** in dentistry a c. beginning in a fissure. **gle'noid c.,** the hollow in the head of the scapula which receives the head of the humerus to make the shoulder joint, omocotyle, acetabulum humeri **he'mal c.,** cœlom. **na'sal c.,** the nasal fossa. **occlu'sal c.,** a carious c. starting from the occlusal surface of a tooth. **o'ral c.,** cavum oris. **pel'vic c.,** the space bounded by the bones of the pelvis; it contains the bladder and rectum and, in the female, the uterus. **peritone'al c.,** cavum peritonæi. **pit c.,** in dentistry a c. beginning in a pit. **prox'imal c.,** a carious c. starting from the proximal surface, either *distal* or *mesial*, of a tooth. **pulp c.,** the central hollow of a tooth containing vascular tissue and the nerve termination. **sig'moid c.,** one of three hollows: two of the ulna, incisura semilunaris, incisura radialis; and one of the radius, incisura ulnaris. **somat'ic c.,** cœlom. **splanch'nic c.,** one of the three visceral cavities, cranial, thoracic, and abdominal including the pelvic.

thorac'ic c., the cavity of the chest. **vis'ceral c.**, splanchnic c.

cavo-surface (ka"vo-sur'fis). Relating to a cavity and the surface of a tooth, noting especially the c.-s. angle formed by the junction of the cavity wall and the surface of the tooth.

ca'vum [L.] A hollow, hole, or cavity. **c. abdomina'le, c. abdom'inis,** the abdominal cavity. **c. articula're,** a joint cavity. **c. con'chæ,** cavity of the concha, the lower, larger, portion of the concha below the crus helicis; it forms the vestibule to the external auditory meatus. **c. Doug'lasi,** excavatio rectouterina [BNA]. **c. epidura'le,** epidural cavity, the space between the walls of the spinal canal and the dura mater of the cord. **c. mediastina'le,** mediastinum. **c. m. ante'rius** [BNA], anterior mediastinum. **c. m. poste'rius** [BNA], posterior mediastinum. **c. o'ris,** cavity of the mouth, the space between the dental arches, limited posteriorly by the isthmus of the fauces. **c. pel'vis,** the pelvic cavity. **c. peritonæ'i,** peritoneal cavity, the interior of the sac formed by the parietal layer of the peritoneum, containing all the abdominal organs except the kidneys. **c. pleu'ræ** [BNA], pleural cavity. **c. Ret'zii,** preperitoneal space, Retzius'* space. **c. sep'ti pellu'cidi** [BNA], cavity of the septum pellucidum, fifth ventricle, a closed cavity, containing a little fluid, between the two laminæ forming the septum pellucidum; it does not communicate with the other cerebral cavities. **c. subarachnoida'le,** subarachnoid cavity or space, the interval between the arachnoidea and the pia mater; it varies in size, being practically nonexistent over the summits of the cerebral convolutions, but wider in the intervals, and is filled with a mesh of loose fibrous tissue and cerebrospinal fluid; it contains the larger branches of the blood-vessels of the brain. The spinal subarachnoid space is wide and is divided into three compartments by the subarachnoid septum and the ligamenta denticulata. **c. subdura'le,** subdural cavity or space, the very narrow interval between the dura mater and the arachnoid; it contains only a small amount of fluid sufficient to moisten the opposing surfaces of the two membranes. **c. thora'cis,** thoracic cavity. **c. tym'pani,** cavity of the tympanum, tympanic cavity, middle ear; an air chamber in the temporal bone containing the ossicles; it is divided into the atrium or tympanum, the lower part of the cavity lying to the inner side of the membrani tympani, and the recessus epitympanicus or attic. **c. u'teri** [BNA], uterine cavity. **c. ves'ico-uteri'num,** excavatio rectouterina [BNA].

ca'vus [L. hollow.] Talipes cavus.

cayapo'nia. The root of *Cayaponia globosa* or *C. caboclea*, Brazilian plants, having purgative and emmenagogue properties.

cayap'onine. An alkaloid from the root of *Cayaponia globosa*, a Brazilian plant; it is purgative in doses of gr ¼–½ (0.01–0.03).

Cayenne pepp'er (ka-en', ki-en'). Capsicum.

Cazenave's disease' (kahz-nav') [P. L. Alphée *Cazenave*, Parisian dermatologist, 1795–1877.] 1. Lupus erythematosus. 2. Pemphigus foliaceus. **C.'s vitili'go, area'** Celsi.

Cb. Chemical symbol of *Columbium*.

c.c. or **cc.** Abbreviation for cubic centimeter (about 16 minims); the U.S.P. term for this was formerly *mil.**

C.C.C. Abbreviation of cathodal closing, or closure contraction; also written CaCC.

$CCl_3.CH(OH)_2$. Chloral hydrate, $CCl_3CHO.H_2O$.

$C_2Cl_3HO_2$. Trichloracetic acid, $CCl_3.COOH$.

c.cm. Abbreviation for cubic centimeter, c.c.

C.C.S. Abbreviation for casualty clearing station.

CCTe. Abbreviation for cathodal closing, or closure, tetanus.*

Cd. Symbol of the element cadmium.

Ce. Symbol of the element cerium.

ceanothin (se-an'o-thin). An eclectic preparation from *Ceanothus americanus;* a brown powder having alterative properties; employed in syphilis, dysentery, and catarrhal pharyngitis in doses of gr. 1–2 (0.06–0.13).

ceanothus (se-ă-no'thus) [G. *keanōthos*, a kind of thistle.] New Jersey tea, the root or bark of the root of *Ceanothus americanus*, red root, a shrub of eastern North America; it is employed in eclectic practice in the treatment of diseases of the spleen and of catarrhal troubles associated with profuse mucous secretion; dose ♏½–2 (0.03–0.13) of the specific preparation.

ce'arin. An ointment vehicle composed of wax 1, paraffin 3, and liquid vaselin 4; is said to be miscible with water.

ceasmic (se-as'mik) [G. *keazō*, I split, cleave.] Noting a fissure or abnormal cleavage of parts.

cebocephalus (se-bo-sef'ă-lus) [G. *kēbos*, monkey, + *kephalē*, head.] A monster with features like those of a monkey, slightly marked or absent nose and close-set eyes.

ce'cal, cæ'cal. 1. Relating to the cecum. 2. Ending blindly or in a cul-de-sac.

cecec'tomy, cæcec'tomy [L. *cæcum* + G. *ektomē*, excision] Excision of the cecum, typhlectomy.

cecitis, cæcitis (se-si'(se')tis). Typhlitis

ce'copexy [*L. cæcum* + G. *pēxis*, fixation] Typhlopexia.

cecoplica'tion. Operative reduction in size of a dilated cecum by the formation of folds or tucks in its wall.

cecopto'sis [L. *cæcum* + G. *ptōsis*, a falling.] Typhloptosis, downward displacement of the cecum.

cecos'tomy, cæcos'tomy [L. *cæcum* + G. *stoma*, mouth.] The operative formation of a cecal fistula

cecum, cæcum (se'kum) [L. *cæcus*, blind.] 1. Typhlon, blind gut; the cul-de-sac, about 2½ inches in depth, lying below the ileocecal valve, forming the first part of the large intestine. 2. Any similar structure ending in a cul-de-sac. **c. cupula're,** cupular blind sac, lagena; the upper blind extremity of the ductus cochlearis. **c vestibula're,** vestibular blind sac; the lower extremity of the ductus cochlearis, occupying the recessus cochlearis in the vestibule.

ce'dar [L. *cedrus;* G. *kedros*.] A general term applied to many coniferous trees of the genera *Cedrus, Juniperus, Thuya*, etc. **c. oil,** oleum cedrelæ, cedar-wood oil, a volatile oil distilled from the wood of Spanish cedar or cigar-box cedar, *Cedrela odorata;* used as a perfume.

Ced'rela. A genus of tropical trees, one species of which, *C. odorata*, is the Spanish cedar from which cigar boxes are made; cedar oil, or cedar-wood oil, is distilled from the wood of this species.

ce'dron. The wood of *Simaba cedron*, a tree of tropical America; used as a febrifuge in doses of gr. 10–30 (0.6–2.0).

cel'andine. Chelidonium.

celas'trus [G. *kēlastros*, privet.] The bark, especially the root bark, of *Celastrus scandens*, climbing bittersweet, fever-twig, a woody climber of the eastern United States; employed in the treatment of hepatic affections and as a diuretic in doses of ʒ½–1 (2.0–4.0) of a fluidextract.

-cele [G. *kēlē*, tumor, hernia.] A suffix denoting a swelling or hernia of the part signified by the main word.

celec'tome [G. *kēlē*, tumor, + *ektomē*, excision.] An instrument, such as the harpoon, for obtaining a bit of tissue from the interior of a tumor for examination.

celen'teron. Cœlenteron, archenteron.

celeri'na. A proprietary remedy, recommended as a nerve-tonic

cel'ery [G. *selinon*, parsley.] Apium graveolens; a plant cultivated for use as a salad, the blanched stems being so used; the seeds are employed in medicine under the term, *apium*, as a diuretic and antispasmodic.

ce'liac, cœ'liac [G. *koilia*, belly.] Relating to the abdominal cavity. **c. ar'tery, c. ax'is,** arteria cœliaca **c. disease',** a subacute diarrhea, marked by large whitish, frothy stools, becoming later greenish or dark brown, occurring chiefly in children under five years of age; the general symptoms are pallor, arrest of development, high-pitched weak voice, and muscular weakness. **c. glands,** lymphoglandulæ cœliacæ [BNA], a group of preaortic lymph glands around the c. artery. **c. pas'sion,** diarrhea. **c. plex'us,** plexus cœliacus, solar plexus.

celiag'ra, cœliag'ra [G. *koilia*, belly, + *agra*, seizure.] A gouty affection of the stomach or other abdominal organs.

celial'gia, cœlial'gia [G. *koilia*, belly, + *algos*, pain.] Colic, abdominal pain.

celiectasia, cœliectasia (se-li-ek-ta'sĭ-ah) [G. *koilia*, belly, + *ektasis*, extension.] Abdominal distention.

celiec'tomy, cœliec'tomy [G. *koilia*, belly, + *ektomē*, excision.] Excision of any abdominal organ, or part of one.

celiocentesis, cœliocentesis (se″lĭ-o-sen-te'sis) [G. *koilia*, belly, + *kentēsis*, puncture.] Puncture of the abdomen, paracentesis, celioparacentesis.

celiocolpotomy, cœliocolpot'omy [G. *koilia*, belly, + *kolpos*, sinus (vagina), + *tomē*, incision] Celiocelytrotomy.

celioelytrotomy, cœlioelytrotomy (se″lĭ-o-el-ĭ-trot'o-mĭ) [G. *koilia*, belly, + *elytron*, sheath (vagina), + *tomē*, incision.] An operation involving an opening into the abdomen through the vagina, for the purpose of removing a tumor the product of an ectopic pregnancy, etc.

celioenterotomy, cœlioenterotomy (se″lĭ-o-en-ter-ot'o-mĭ) [G. *koilia*, belly, + *enteron*, intestine, + *tomē*, incision.] Opening into the intestine through an incision in the abdominal wall.

celiogastros'tomy, cœliogastros'tomy [G. *koilia*, belly, + *gastēr*, stomach, + *stoma*, mouth.] Establishment of a gastric fistula through an incision in the abdominal wall.

celiogastrot'omy, cœliogastrot'omy [G. *koilia*, belly, + *gastēr*, stomach, + *tomē*, incision.] Abdominal section with incision of the stomach.

celiohysterec'tomy, cœliohysterec'tomy [G. *koilia*, belly, + *hystera*, womb, + *ektomē*, excision.] Abdominal hysterectomy; removal of the uterus through an abdominal incision

celiohystero-oothecectomy, cœliohystero-oothecectomy (se″lĭ-o-his″ter-o-o-o-the-sek'to-mĭ) [G. *koilia*, belly + *hystera*, uterus, + *ōon*, ovum, + *thēkē*, case, box, + *ektomē*, excision.] Removal of uterus and ovaries through an abdominal incision.

celiohysterosalpingo-oothecec'tomy, cœliohysterosalpingo-oothecectomy (se″lĭ-o-his″ter-o-sal″pin-go-o-o-the-sek'to-mĭ) [G. *koilia*, belly, + *hystera*, uterus + *salpinx*(*salping-*), trumpet, + *ōon*, ovum, + *thēkē*, case, box, + *ektomē*, excision.] Removal of the uterus and adnexa through an abdominal incision.

celiohysterot'omy, cœliohysterot'omy [G. *koilia*, belly, + *hystera*, womb, + *tomē*, incision.] Abdominal hysterotomy; incision of the uterus through the abdominal wall, as in cesarean section.

celiomyal'gia cœliomyal'gia [G. *koilia*, belly, + *mys*(*myo-*), muscle, + *algos*, pain.] Rheumatic pain in the abdominal muscles.

celiomyomec'tomy, cœliomyomec'tomy [G. *koilia*, belly, + *myoma* + *ektomē*, excision.] Removal of a myoma of the uterus through an abdominal incision.

celiomyomotomy, cœliomyomotomy (se″lĭ-o-mi″o-mot'o-mĭ) [G. *koilia*, belly, + *myoma* + *tomē*, incision.] Celiomyomectomy.

celiomyositis, cœliomyositis (se-lĭ-o-mi-o-si'(se')tis) [G. *koilia*, belly, + *mys*(*myo-*), muscle, + *-itis*.] Inflammation of the abdominal muscles.

celioparacente'sis, cœlioparacente'sis [G. *koilia*, belly, + *parakenteō*, I puncture at the side] Paracentesis, or puncture, of the abdomen; celiocentesis.

celiopyo'sis, cœliopyo'sis (se″lĭ-o-pi-o'sis) [G. *koilia* belly, + *pyōsis*, suppuration.] Pyoperitoneum, purulent peritonitis.

celior'rhaphy, cœlior'rhaphy [G. *koilia*, belly, + *rhaphē*, seam.] Suture of a wound in the abdominal wall.

celiosalpingectomy, cœliosalpingectomy (se″lĭ-o-sal-pin-jek'to-mĭ) [G. *koilia*, belly, + *salpinx*, trumpet, + *ektomē*, excision.] Removal of one or both Fallopian tubes through an abdominal incision.

celiosalpingo-oothecectomy, cœliosalpingo-oothecectomy (se″lĭ-o-sal″pin-go-o-o-the-sek'to-mĭ) [G. *koilia*, belly, + *salpinx*(*salping-*), trumpet, + *ōon*, ovum, + *thēkē*, case, box, + *ektomē*, excision.] Removal of the Fallopian tube and ovary through an abdominal incision.

celiosalpingotomy, cœliosalpingotomy (se″lĭ-o-sal-ping-got'o-mĭ) [G. *koilia*, belly, + *salpinx* (*salping-*), trumpet, + *tomē*, incision.] Incision into the Fallopian tube, for tubal pregnancy, salpingitis, etc., through an opening in the abdominal wall.

celios'copy, cœlios'copy [G. *koilia*, the belly, a chamber, + *skopeō*, I view.] Examination of the abdominal cavity; see *celoscopy*.

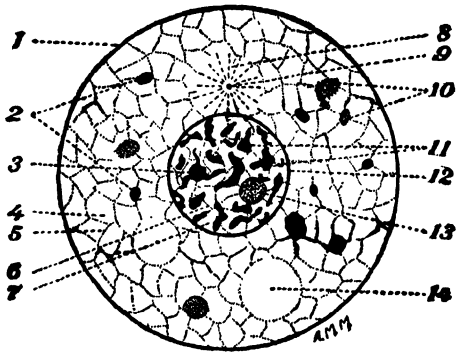
celiot'omize, cœliot'omize. To subject to the operation of celiotomy.

celiot'omy, cœliot'omy [G. *koilia*, belly, + *tomē*, incision.] Abdominal section, laparotomy.

celitis, cœlitis (se-li'(le')tis) [G *koilia*, belly, + *itis*.] Inflammation of the abdomen, peritonitis.

cell [L. *cella*, a small chamber.] 1. A minute structure, the living, active basis of all plant and animal organization, composed of a mass of protoplasm, enclosed in a delicate membrane and containing a differentiated part, the nucleus. Cells are of the most varied form and structure according to the function which they have to perform; some are simple in structure and lead an independent or quasi-independent existence, being capable of reproduction and adaptation to environment: others are highly differentiated, fixed in form and location, and incapable of reproduction, self-nutrition, or locomotion. 2. A small closed or partly closed cavity such as the air cells, or alveoli, of the lungs, the spaces in cancellous bone-tissue, etc. 3. An element or unit of a galvanic battery, or the chamber containing the metals and acid media by the chemical action of which the electricity is pro-

duced. (For the cells not here defined see the qualifying word.)



SCHEMATIC DIAGRAM OF A CELL: 1, Cell membrane; 2, metoplasm granules; 3, caryosome; 4, hyaloplasm, 5, spongioplasm; 6, linin network; 7, nucleoplasm, 8, attraction sphere; 9, centrosome; 10, plastids; 11, chromatin network; 12, nuclear membrane; 13, nucleolus; 14, vacuole.

acid c., one of the gastric cells supposed to secrete the acid of the gastric juice.

acous'tic c., a hair-cell of the organ of Corti.

adelomor'phous c., one of numerous small, pale, closely aggregated cells in the gastric glands, both of the cardia and of the pylorus; principal cell.

ad'ipose c., fat c.

adventi'tial c., perithelial c.

air c., one of the pulmonary alveoli, alveoli pulmonum [BNA].

albu'minous c., cellula aquifera.

am'acrine c., see *amacrine*.

ame'boid c., a c. such as a leucocyte, having ameboid movements, with a power of locomotion; wandering c.

apo'lar c., a neuron without processes.

apoplec'tic c., a cavity in the brain substance, resulting from the absorption of the blood effused during an apoplectic attack

autosynthet'ic c., an artificial c., such as one made by mixing together brain lipoids, the protein of any organ, and brain ash (electrolyte) solution (Crile).

basal c., bas'ilar c., one of the cells forming the deepest layer of the epithelium.

basket c., a neuron the fibrils of whose axis-cylinder form a network surrounding the body of another cell.

beaker c., goblet c.

bipo'lar c., a neuron having two processes.

blood c., one of the formed elements of the blood, a leucocyte or erythrocyte.

bone c., one of the nucleated cells in the lacunæ of bone tissue.

border c., delomorphous c.

bristle c., one of the hair cells of the organ of Corti.

bronchic c., pulmonary air cell.

brood c., mother c.

calcig'erous c., a c. of the dentine, containing calcareous salts.

calic'iform c., goblet c.

cap'sule c., amphicyte, one of the cells enveloping the bodies of the cerebrospinal, possibly also sympathetic ganglionic neurons.

carrier c., scavenger c., phagocyte.

car'tilage c., see *cartilage*.

central c., adelomorphous c.

column c., colum'nar c., one of the neurons in the posterior columns of the spinal cord, the axis cylinders of which pass to the anterior and lateral fasciculi proprii, or ground bundles, and to the posterior funiculus, or white column.

connec'tive-tiss'ue c., any of the cells of varied form occurring in connective tissue.

cres'cent c., sickle c.

daughter c., one of the cells resulting from the division of a parent c.

decid'ual c., one of the large granular cells arising from the mucous membrane of the uterus after impregnation of the ovum.

delomor'phous c., one of the large, isolated, readily stainable cells in many of the gastric glands, especially at the cardia; lab-cell, border cell.

dem'ilune c., Gianuzzi's* cell.

den'tinal c., calcigerous c.

dome c., one of cells composing the epitrichium in the embryo.

elemen'tary c., embryon'ic c., (1) one of the primitive cells in the embryo from which all the cells of the body are developed; (2) an undifferentiated cell in the adult having the characteristics of a cell of the embryo.

endog'enous c., a cell formed within a cell and retained within the common enveloping membrane.

endothe'lial c., a flat cell forming the lining membrane of the blood-vessels and serous membranes.

epen'dymal c., a cell lining the central canal of the spinal cord (those of pyramidal shape) or one of the cerebral ventricles (those of cuboidal shape).

epider'mic c., one of the cells of the epidermis.

epithe'lial c., one of the cells forming the epithelial surface of the skin and mucous membrane.

eth'moid c., cellula ethmoidalis.

fat c., a connective-tissue c. distended with fat globules, the cytoplasm being compressed into a thin envelope, with the nucleus at one point in the periphery.

fiber c., an elongated cell forming a connective-tissue or muscular fiber

floor c., one of the auditory cells in the floor of the arch of Corti.

foam c., Mikulicz's cell, one of the characteristic vacuolated connective-tissue cells, often containing numbers of the pathogenic bacilli, found in rhinoscleroma

foot c., Sertoli's* c.

galvan'ic c., see under *galvanic*.

ganglion c., nerve c.

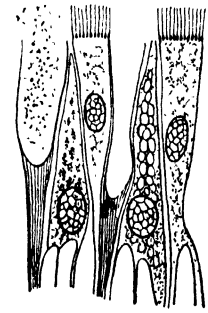
germ c., the primitive ovum.

ger'minal c., neuroblast.

giant c., a cell of large size, often with many nuclei.

git'ter c. [Ger., lattice, wire-net], a large round or oval c., of honeycombed appearance, packed with a number of fatty or lipoid granules.

goblet c., an epithelial cell which has been distended with mucin, and when this is discharged as mucus a crateriform or goblet-shaped shell remains.



CILIATED EPITHELIAL AND GOBLET CELLS. On the left is seen a goblet cell discharging its contents; in the center is an empty goblet cell.

grav'ity c., a galvanic c. in which the two fluids are not separated by a solid partition but are kept from mixing by difference in specific gravity.

hair c., a columnar cell having a row of fine stiff hair-like projections on the free surface, found in the maculæ acusticæ and in the organ of Corti.

hecateromer'ic c., see *hecateromeric*.

heckle c., prickle c.

heteromer'ic c., see *heteromeric*.

indiff'erent c., an undifferentiated, non-specialized embryonic cell.

intersti'tial c., Henle's c., Leydig's c., one of the cells in the connective tissue of the seminiferous tubules and the septa of the testis, or in the connective tissue of the ovary, which are believed to furnish the internal secretion of these organs.

irritation c., Tuerck's* c.

lymphoid c., a cell resembling a leucocyte with large nucleus, present in the lymph-glands.

macrog'lia c., a large c. of the neuroglia, mossy c.

mast c., see *mast*-cell.*

mastoid c., cellula mastoidea.

mesog'lia c., a c. of moderate size with few dendrites intermediate between the mossy and the spider cells, found sometimes in the neuroglia.

microg'lia c., a small c. of the neuroglia, spider c.

mossy c., one of the two types of neuroglia cells, consisting of a rather large body with numerous short branching processes.

mother c., a cell which, by division, gives rise to two or more daughter cells.

motor c., the neuron of a motor nerve-fibril.

mucous c., a cell secreting mucus, goblet c.

mus'cular c., one of the elongated fiber cells of muscular tissue.

nerve-c., ganglion c., the cell body of the neuron; a nerve-c. of the *first type*, or Deiter's c., has one neuraxon continuous with the axis-cylinder of a nerve-fiber; a nerve-c. of the *second type*, or Golgi's c., has one neuraxon which does not form the axis-cylinder of a nerve-fiber, but divides into numerous branches forming a dendraxon; a nerve-c. of the *third type*, or Cajal's c., has two or more neuraxons.

neurog'lia c., one of two types of cells, spider cells and mossy cells (*q.v.*) occurring in the neuroglia.

neuromus'cular c., a cell of a protozoan or lower metazoan organism which is both sensitive and contractile.

nurse c., Sertoli's* c.

oat-shaped c., a short, bluntly spindle-shaped cell containing a long oval nucleus, the characteristic element of some forms of sarcoma.

oligodendrog'lia c., mesoglia c.

oss'eous c., bone c.

parent c., mother c.

pari'etal c., Gianuzzi's* crescent.

perithe'lial c., adventitial c., a clasmatocyte* lying immediately external to the capillary wall.

pes'sary c., a red blood cell in which the hemoglobin has disappeared from the center, leaving only the periphery visible.

pigment c., a connective-tissue c containing pigment granules.

plasma c., irritation c., Tuerck's* c.

prickle c., one of the cells of the stratum germinativum (rete mucosum) of the skin, having numerous spines or radiating processes.

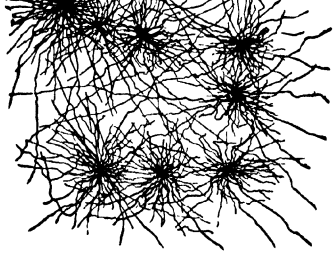
primor'dial c., embryonic c.

prin'cipal c., adelomorphous c.

prop c., Purkinje's* c.

pul'par c., the specific cell of the spleen substance; macrophag.

pus c., pyocyte, pus-corpuscle.



SPIDER CELLS.

pyram'idal c., a nerve-cell of the cerebral cortex; it is of triangular outline with apex directed toward the center of the convolution and drawn out into a long apical dendritic process, and gives out also numerous lateral dendrites; a slender axon proceeds from the base and descends to the white portion of the gyrus which it enters as a nerve-fiber.

pyr'rhol c.; perithelial c.; see also under *pyrrhol*.

resting c., a quiescent c., one not undergoing mitosis.

reticulo-endothelial c., see under reticulo-endothelial system.*

scav'enger c., a connective tissue or neuroglia cell which assists in absorbing and carrying off irritant products in inflammatory conditions.

serous c., cellula aquifera.

sick'le c., see under *sickle*.

sleeping c., a cell which has become atrophied through disease, but which is capable of renewed growth and activity when properly stimulated.

sperm c., a primitive spermatozoon.

spider c., one type of neuroglia cells, consisting of a small body with numerous long straight processes

squamous c., a flat scale-like epithelial cell.

staff c., a uninuclear leucocyte with a straight, curved, or horseshoe-shaped nucleus, thereby differing from a multinuclear cell with lobular nucleus or many nuclei connected by fine chromatin threads; see *leucocyte*.

sustentac'ular c., one of the ordinary elongated cells, resting on the basement membrane, which surround and serve as a support to the shorter specialized cells in certain organs, such as the labyrinth.

tubal air c., cellula pneumatica tubaria [BNA].

tympan'ic c., cellula tympanica.

wandering c., ameboid c.

cel'la, gen. and pl. *cellæ* [L. a cell, storehouse, or compartment.] A cell. **c. me'dia,** the body or central portion, pars centralis, of the lateral ventricle, of the brain, in the region of the parietal lobe, extending from the foramen of Monro to the splenium of the corpus callosum.

cellase (sel'āz). A ferment, or diastase, acting specifically upon cellose.

cellasin (sel'a-sin). Trade name of a ferment, said to be prepared from a culture of certain fungi, which splits sugars and is said to pass unchanged through the stomach and to act as an emulsifier of fats in the duodenum.

cell-bridges. Minute protoplasmic threads knitting together the constituent cells of multicellular organisms, serving presumably as nutrient channels and for the transmission of physiological impulses.

cell-color ratio (sel"kul-ur ra'shyo). A figure obtained by dividing the number of red blood cells in a cubic centimeter (5,000,000 being the normal) by the percentage of hemoglobin.

Cellfalcicula[n] (sel-fal-sik'u-lah). A genus of soil bacteria of the order *Actinomycetales*, including short motile rod-forms with polar flagellum; they oxidize cellulose.

celloi'din. Pyroxylin purified by solution in ether and alcohol, used for embedding histological specimens.

cellon (sel'on). Tetrachlorethane, acetylene tetrachloride, $CHCl_2.CHCl_2$; a substance employed as a solvent of cellulose to make a coating for the wings of aeroplanes; its fumes cause drowsiness, jaundice, and general malaise.

cell-organ. One of the differentiated parts of certain cells (situated usually in the outer zone or ectoplasm) which may perform functions of digestion, etc; such cell-organs are the cytosome, cytopyge, plastids, or protoplasts, etc

cell'ose. A product of the hydrolysis of cellulose

cellot'ropin. Monobenzoyl-arbutin, occurring as a white powder or in fine acicular crystals; employed in the treatment of tuberculosis and scrofulous affections in doses of gr. 5-8 (0.3–0.5).

cel'lula, gen. and pl. *cel'lulæ* [L. dim. of *cella*.] Cellule. a minute cell, a small compartment. **c. aquif'era,** albuminous cell, serous cell, one of the cells of the salivary glands secreting an albuminous fluid. **c. co'li,** haustrum. **c. ethmoida'lis,** ethmoidal cell; one of the air cells of the lateral masses of the ethmoid bone; they are arranged in three groups, anterior, middle,

and posterior, and communicate with the nasal fossæ, the cells of the first two with the middle meatus and those of the posterior group with the superior meatus. **c. mastoid'ea,** mastoid cell, one of numerous small intercommunicating cavities in the mastoid process of the temporal bone which empty into the mastoid or tympanic antrum. **c. mucip'ara,** mucous cell. **c. pneumat'ica tuba'ria** [BNA]. tubal air cell, one of several occasional small cavities in the lower wall of the Eustachian tube, near the tympanic orifice, communicating with the cavity of the tympanum. **c. tympan'ica,** tympanic cell, one of numerous groove-like depressions in the walls of the tympanic cavity, communicating with the tubal pneumatic cells.

cellular [L. *cellula*, a small compartment, dim. of *cella*, storeroom.] 1. Relating to, derived from, or composed of cells. 2. Areolar, having numerous compartments or interstices. **c. tis'sue,** a loose connective tissue, containing many spaces or interstices, such as the subcutaneous connective tissue. **c. tu'mor,** a tumor composed of cells in a more or less homogeneous stroma having no definite histoid structure, such as sarcoma.

cell'ule. Cellula.

cellulicidal (sel"u-lĭ-si'dal) [L. *cellula* + *cædere*, to kill.] Destructive to cells.

cellulif'ugal [L. *cellula* + *fugere*, to flee.] Moving from, or extending in a direction away from, a cell or cell-body, noting certain cells repelled by other cells, or processes extending from the body of a cell.

cell'ulin. Cellulose.

cellulip'etal [L. *cellula* + *petere*, to seek.] Moving toward, or extending in a direction toward, a cell or cell-body.

cellulitis (sel-u-li'(le')tis). Inflammation of cellular or connective tissue. **pel'vic c.,** parametritis, inflammation of the cellular tissue surrounding the uterus.

cell"ulocuta'neous. Relating to the skin and subcutaneous connective tissue.

cell'uloid. A mixture of camphor and gun-cotton, or pyroxylin, made to imitate ivory, tortoise-shell, etc.

Cellulomonadeæ[0] (sel-u-lo-mo-nad'e-e). A tribe of the family *Bacteriaceæ* containing the genus *Cellulomonas*.

Cellulomonas[0] (sel-u-lom'ŏ-nas) [L. *cellula*, cell + G. *monas*, single.] A genus of the family *Bacteriaceæ*, the many saprophytic, non-pathogenic species of which are found chiefly in soil.

celluloneuritis (sel"u-lo-nu-ri'(re')tis). Inflammation of the nerve cells. **acute' ante'rior c.,** Raymond's term for polyneuritis, acute anterior poliomyelitis, and Landry's paralysis which he regarded as one disease.

cel'lulose. A carbohydrate having the same percentage composition as starch, forming the basis of vegetable fiber.

Cellvibrio[0] (sel-vib'rĭ-o). A genus of soil bacteria of the order *Actinomycetales*, including long tortuous, motile rods with polar flagella. They disintegrate vegetable fiber.

celol'ogy [G. *kēlē*, hernia, + *-logia*.] The branch of surgery which has to do with hernia.

ce'lom. Cœlom.

celonychia (se-lo-nik'ĭ-ah) [G. *koilos*, hollowed, + *onyx*(*onych-*), nail.] A deformity of the nail marked by a concavity of the surface, spoon-nail.

celophlebitis, cœlophlebitis (se-lo-flĕ-bi'(be')tis) [G. *koilos*, hollow, + *phleps*(*phleb-*), vein, + *-itis*.] Inflammation of a vena cava; cavitis.

celoschisis (se-los'ki-sis) [G. *koilia*, belly, + *schisis*, a fissure.] Gastroschisis, a congenital fissure of the abdominal wall, usually with protrusion of the viscera.

celos'copy, cœlos'copy [G. *koilos*, hollow, + *skopeō*, I view.] Examination of any cavity of the body.

celoso'mia [G. *kēlē*, hernia, + *sōma*, body.] Congenital protrusion of the abdominal or thoracic viscera, usually with defect of the sternum and ribs as well as of the abdominal walls.

celoso'mus. A monster with celosomia.

celot'omy [G. *kēlē*, hernia, + *tomē* incision.] Division of the constricting ring for the relief of an irreducible or strangulated hernia, kelotomy.

celozo'ic, cœlozo'ic [G *koilos*, hollow, + *zō*, I live.] Inhabiting any of the cavities of the body (therefore extracellular); noting certain parasitic protozoa, chiefly gregarines.

Cel'sius scale [Anders *Celsius*, Swedish astronomer, 1701–1744.] Centigrade scale reversed; a thermometer scale in which 100 degrees indicates the freezing point (32° F.) and zero the point of boiling water (212° F.); each degree Celsius equals 1.8 degree Fahrenheit.

Cel'sus' or **Cel'sian a'rea** [Aulus (or Aurelius) Cornelius *Celsus*, a Roman writer of the first century, author of a treatise on medicine.] Alopecia areata. **C.'s chan'cre,** chancroid. **C.'s ke'rion,** inflamed and suppurating kerion. **C.'s opera'tion,** (1) circular amputation by a single sweep of the knife; (2) lithotomy performed by cutting directly upon the stone pressed into the perineum by two fingers in the rectum. **C.'s pap'ules,** lichen agrius. **C.'s vitili'go,** anesthetic leprosy.

cel'tium. Hafnium.

cement (se-ment', sem'ent) [L. *cæmentum*.] 1. Cementum, substantia ossea. 2. Any ground substance holding together cells or other structures. 3. In operative dentistry, zinc oxychloride or other adhesive material used in filling a tooth-cavity. **muscle c.,** myoglia. **nerve c.,** neuroglia. **sil'icate c.,** a mixture of magnesium phosphate and calcium phosphate, carbonate, and fluoride, in imitation of enamel, used as a filling for tooth cavities. **tooth c.,** substantia ossea.

cement'oblast [L. *cæmentum*, cement, + G. *blastos*, germ.] One of the cells from which the substantia ossea of the teeth is developed.

cemento'ma, cæmento'ma. A tumor arising from the substantia ossea of the teeth or composed of similar substance.

cementoperiostitis, cæmentoperiostitis (se-men-to-per-ĭ-os-ti'(te')tis) Riggs' disease.

cemento'sis. An enlargement or outgrowth from the root of a tooth.

cemen'tum, cæmen'tum. Cement; substantia ossea.

cenesthesia, cœnæsthesia (se-nes-the'zĭ-ah) [G. *koinos*, common, + *aisthēsis*, sensation.] The general sense of bodily existence; the subconscious sensation caused by the functioning of the internal organs.

cenesthe'sic, cenesthet'ic. Relating to cenesthesia to the subconscious perception of somatic existence.

ceno'bium, cœno'bium [G. *koinobion*, community life.] 1. In botany, a colony of independent organisms contained within a common investment. 2. In zoology, a cluster of many unicellular organisms on a single pedicel.

Cenomonadi'na [G. *kainos*, recent.] A family of *Monadina*, including ameboid organisms with small, frequently elongated, bodies provided with a flagellum at one end.

cenopho'bia [G. *kenos*, empty, + *phobos*, fear] Agoraphobia.

cenosite (se'no-sīt) [G. *koinos*, common, + *sitos* food.] A facultative commensal organism; one which can sustain itself apart from its usual host.

censor (sen'sor) [L. *censere*, to value, judge.] The psychic barrier which prevents certain unconscious thoughts and wishes from coming to consciousness unless they are so cloaked or disguised as to be unrecognizable.

centaurea (sen-taw're-ah) [See *centaurium*.] Blessed thistle, *Cnicus benedictus*, employed as a bitter tonic in doses of 3 ½–1 (2.0–4.0), usually in infusion.

centaurium, centaury (sen-taw're-um; sen'taw-rĭ) [G. *kentauros*, a centaur, the drug being said to have cured a wound in one of the centaurs.] (N.F.) The dried flowering plant, *Erythræa centaurium*, employed like gentian as a bitter tonic in dose of gr. 30 (2.0).

center, centre [L. *centrum*; G. *kentron*.] 1. The middle point of a body; loosely, the interior of a body. 2. A group of nerve-cells governing any function or receiving or sending out any stimulus.

abdom'inal c., (1) a c. in the lower thoracic spinal cord for skin reflexes of the epigastric region; (2) solar plexus.

accel'erating c., a c in the medulla supposed to increase the rapidity of the heart's action

acous'tic c., auditory c.

anospi'nal c., a c. in the lumbar enlargement of the spinal cord, controlling defecation.

arm c., a c. in the cerebral cortex in the fissure of Rolando, controlling arm movements

associa'tion c., one of several centers in the cerebral cortex and the cerebellum controlling associated movements.

auditopsy'chical c., a higher auditory center situated in the posterior part of the first temporal convolution

au'ditory c., the c for hearing, situated in the gyri in the Sylvian fissure.

cardioaccel'eratory c., accelerating c.

cardioinhib'itory c., a medullary c. excitation of which slows the action of the heart.

cerebrospi'nal c., cerebrospinal axis, the brain and spinal cord.

ciliospi'nal c., the center for dilatation of the pupil, in the lower cervical and upper thoracic portion of the spinal cord.

color c., a center assigned to the cortex of the occipital region where color perception resides.

convul'sion c., a c. in the floor of the fourth ventricle, injury to which excites convulsions.

coor'dinating c., association c.

cor'tical c., any of the many centers in the cerebral cortex.

coughing c., a c. above the respiratory c. in the medulla, excitation of which produces coughing.

defeca'tion c., anospinal c.

degluti'tion c., a c. in the floor of the fourth ventricle controlling the associated movements in swallowing.

diabet'ic c., a c. in the posterior part of the floor of the fourth ventricle puncture of which excites glycosuria.

divis'ion c., kinetonucleus.

ejacula'tion c., ejac'ulatory c., a center in the cord about opposite the fourth lumbar vertebra which controls erection and seminal emission; a portion of the genitospinal c.

epigas'tric c., abdominal c.

epio'tic c., the center of ossification of the mastoid process.

erec'tion c., ejaculation c.

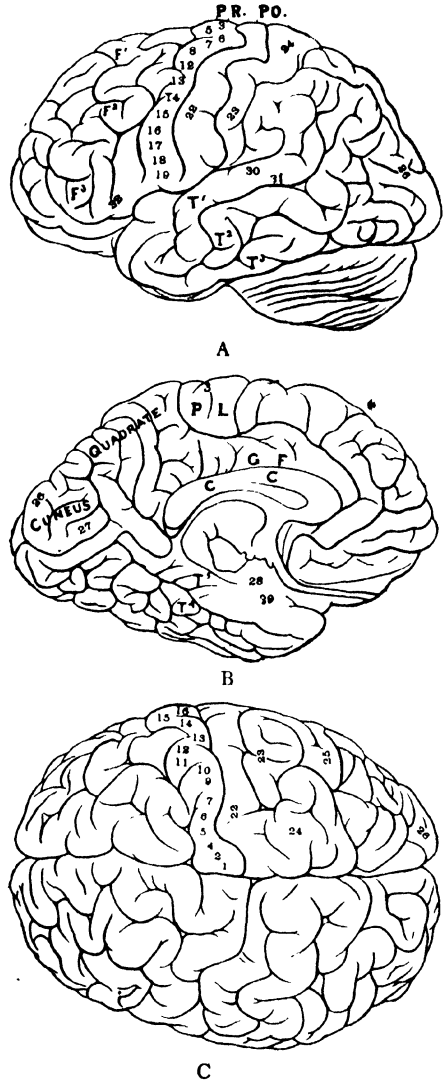
fa'cial c., a c. in the lower part of the ascending frontal convolution for movements of the face.

gen'ital c., genitospi'nal c., a center in the lumbar cord which controls erection and ejaculation in the male and partûrition in woman.

gus'tatory c., the taste c. located in the uncinate gyrus.

heat c., one of the centers regulating heat production, thought to be in the medulla and the nucleus caudatus.

high-level centers, the centers of reason, conscious action, thought, etc., located in the cerebral hemispheres



CORTICAL BRAIN-CENTERS: A, Lateral surface, B, medial surface, C, upper surface, of the hemispheres. C. C., corpus callosum: F^1, F^2, F^3, 1st, 2d, and 3d frontal convolutions; G. F., gyrus fornicatus; P. L., paracentral lobule; P O., posterior central gyrus; P R., precentral or anterior central gyrus; T^1, first or superior temporal gyrus; T^2, second or middle temporal gyrus; T^3, third or inferior temporal gyrus; T^4, occipitotemporal, subcollateral, or fusiform gyrus; T^5, subcalcarine or lingual gyrus. *Centers:* 1, foot; 2, knee; 3, leg; 4; hip; 5, body; 6, shoulder; 7, elbow; 8, arm; 9, wrist, 10, fingers; 11, thumb; 12, neck; 13, eyelids; 14, nose; 15, lips, 16, jaw; 17, tongue; 18, throat; 19, larynx; 22, cutaneous sensation; 23, deep sensation; 24, stereognosis; 25, reading; 26, usual memories; 27, vision; 28, smell; 29, taste; 30, hearing; 31, word memories; 32, speech memory.

ide'a c., naming c.

inhib'itory c., moderator c., one which prevents excess in the performance of any function.

language c., any one of the centers concerned in language—hearing, speaking, reading, or writing—comprised within the area of the brain called the zone of language.

leg c., a c. in the ascending frontal gyrus, controlling movements of the legs.

low-level centers, centers of automatic action, regulating the action of heart, stomach, breathing, etc., situated in the spinal cord and sympathetic ganglia.

mastica'tion c., a c. in the medulla presiding over the associated movements of mastication.

micturi'tion c., vesicospinal c.

mid-level centers, coordinating centers regulating muscular action, storing up impressions as memory, etc., but incapable of originating conscious action, supposed to be located in the system of white fibers lying about the primary fissure of the brain.

motor cor'tical c., one of the centers for voluntary movement in the ascending frontal and parietal convolutions.

naming c., the center for the memory of names.

nervous c., any one of the centers in the cerebrospinal or ganglionic nervous system which originates or controls any vital function.

olfac'tory c., the c. for smell, supposed to be in the fascia dentata.

optic c., the point in the crystalline lens where the rays cross each other in proceeding from the cornea to the retina.

oval c., centrum ovale.

parturi'tion c., genitospinal c.

peristal'tic c., a c. in the medulla presiding over the peristaltic movements of the intestine.

polypne'ic c., panting c., one in the tuber cinereum, excitation of which causes panting.

pu'pillary c., ciliospinal c.

re'flex c., any center of reflex movement, transforming a sensory into a motor impulse.

reserve' c., an unused or little used nerve center which can sometimes be brought into action in an emergency, as for example the speech center in the right frontal convolution.

respi'ratory c., the c. in the medulla, in the floor of the fourth ventricle, which controls the respiratory movements

sal'ivary c., saliva'tion c., a c. in the floor of the fourth ventricle controlling the secretion of saliva.

semio'val c., centrum semiovale [BNA].

sen'sory c., any c. for the perception of a sensation including any of the special sense centers.

smell c., olfactory c.

sneezing c., a part of the respiratory c. where the associated movements occurring in sneezing are controlled.

spasm c., convulsion c.

speech c., the center for the memories of articulate speech, situated in the posterior part of the third left frontal convolution.

subsid'iary respi'ratory cen'ters, parts of the cerebral cortex, tuber cinereum, optic thalamus, corpora quadrigemina, and pons, stimulation of which causes modification in the respiratory rhythm.

sudorif'ic c., a c in the medulla, with subordinate centers in the spinal cord, controlling sweating.

suprasegmen'tal c., one of the higher correlation centers of the prosencephalon.

swall'owing c., deglutition c.

sweat c., sudorific c.

taste c., gustatory c.

thermogen'ic c., heat c.

thermoinhib'itory c., a c. supposed to be in the tuber cinereum, which moderates heat production.

thermolyt'ic c., thermoinhibitory c.

trophic c., one of many centers in the sympathetic and cerebrospinal systems which preside over the nutritive processes.

vasoconstric'tor c., a c. stimulation of which causes contraction of the blood-vessels.

vasodila'tor c., a c. stimulation of which causes dilatation of the blood-vessels.

vasomo'tor c., one of the centers controlling the movements of contraction and dilatation of the blood-vessels.

ves'ical c., vesicospi'nal c., a c. in the lumbar region controlling micturition.

vis'ual c., one of the centers in the occipital lobe for the perception of sight; the primary, or visuosensory c. is situated on the mesial aspect and extremity of the occipital lobe; the higher, or psychovisual c. is situated on the external aspect in the cuneus and the lingual lobe.

vital c., respiratory c

vom'iting c., a c. in the medulla, stimulation of which results in vomiting.

word c., one of the centers in the language zone; the c. for visual word memories is in the angular gyrus extending backward into the occipital lobe; that for auditory word memories is in the posterior part of the first and the upper part of the second temporal convolution, that for memories of the movements in speaking is in the posterior part of the third frontal convolution

centes'imal [L. *centesimus*, hundredth] Relating to or divided into hundredths. **c. scale**, in homeopathy the system of potentization in which each succeeding trituration or dilution contains $\frac{1}{100}$ as much as the preceding one; *i.e.* one drop or one grain of any given potency is mixed with 99 drops or grains of the menstruum to make the next higher potency.

cente'sis [G. *kentēsis*, puncture.] Puncture of a cavity, usually for the purpose of letting out the contained gas or fluid

centibar (sen'tĭ-bar). A unit of atmospheric pressure, the hundredth part of a bar.

cen'tigrade [L. *centum*, one hundred, + *gradus*, step, degree.] 1. Consisting of one hundred degrees. 2. One hundredth part of a circle, equal to 3.6° of the astronomical circle. **c. scale**, a thermometer scale, in which there are 100 degrees between the freezing point and boiling point of water. **c. thermom'eter**, a thermometer graduated according to the c. scale.

cen'tigram, cen'tigramme. The hundredth part of a gram, 0.1543 grain

centiliter (sen'tĭ-le-tur). The hundredth part of a liter, ten cubic centimeters, 162.3 minims.

cen'timeter. The hundredth part of a meter, 0.3937 inch, or practically $\frac{2}{5}$ inch.

centinor'mal. One hundredth of the normal, noting the strength of a solution.

cen'trad. 1. Toward the center. 2. A unit of measurement of the refracting strength of a prism; it corresponds to the deviation of a ray of light, the arc of which is $\frac{1}{100}$ of the radius of the circle, or 0.57°; it is expressed by the symbol ∇.

cen'tral. Relating to or at the center.

centraphose (sen'tră-fōz) [G. *kentron*, center, + *a-* priv. + *phōs*, light.] A subjective sensation of a dark spot or patch, the cause being located in the optic brain centers.

cen'tre. Center.

cen'tric. Central.

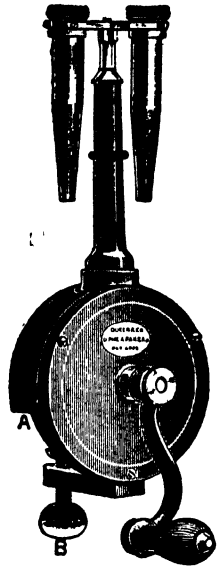
centriciput (cen-tris'ĭ-put) [L. *centrum*, center, + *caput*, head.] The central portion of the upper surface of the skull, between the occiput and the sinciput.

centrif'ugal [L. *centrum*, center, + *fugere*, to flee.] 1. In a direction away from any center, efferent. 2. A centrifuge.

centrifugaliza'tion. The sedimentation of solids suspended in a fluid, by means of the centrifuge.

centrif'ugalize. To submit to rapid rotary action in a centrifuge.

centrifuge (sen'trĭ-fūj). 1. An apparatus by means of which solid particles in suspension in a fluid are separated; this is done by attaching the vessel containing the fluid to a long lever which is made to revolve rapidly, the centrifugal force throwing the particles to the peripheral part of the rotated vessel. 2. To centrifugalize.



CENTRIFUGE FOR SEDIMENTING URINE.

centriole (sen'trĭ-ōl) [G. *kentron*, a point, center.] A single granule in the centrosome; attraction particle.

centrip'etal [L. *centrum*, center, + *petere*, to seek] In a direction toward any center, afferent.

Centrocestus (sen-tro-ses'tus) [G. *kentron*, point, center, + *kestos*, belt.] A genus of flukes of the family *Heterophyidæ*. **C. cuspida'tus** a species found in Formosa, probably identical with *Stamnosoma formosanum*.

centrocinesia (sen"trosin-e'sĭ-ah) [G. *kentron*, center, + *kinēsis*, movement] Movement excited by a stimulus of central origin.

centrocinet'ic. Excitomotor, relating to centrocinesia.

centrodesmose (sen-tro-dez'mōz). Centrodesmus.

centrodes'mus [G. *kentron*, center, + *desmos*, a band.] The substance connecting the two centrosomes in a nucleus during mitosis.

centrolecithal (sen-tro-les'ith-ĕl) [G. *kentron*, center, + *lekithos*, yolk] Noting an ovum in which the deutoplasm accumulates in the center

centronu'cleus. Amphinucleus.

centrophose (sen'tro-fōz) [G. *kentron*, center, + *phōs*, light.] A subjectiv sensation of a light spot or patch, the cause being located in the optic brain center.

cen'troplasm [G. *kentron*, center, + *plasma*, thing formed] Archoplasm; the substance of the attraction-sphere.

centrosclero'sis. A process of ossification filling up the marrow cavity of a bone.

cen'trosome [G. *kentron*, center, + *sōma*, body.] A minute round body in the attraction-sphere, which divides in the initial stages of mitosis; the dynamic center for the reproductive activity of the cell.

centrosphere (sen'tro-sfēr). The envelope surrounding two centrosomes.

cen'trum [L.] A center of any kind, especially an anatomical center. **c. commu'ne,** the common center, plexus* cœliacus. **c. media'num,** a spheroidal cell cluster in the nucleus medialis of the thalamus. **c. medulla're,** medullary center, c. semiovale [BNA]. **c. ova'le,** c. semiovale. **c. semiova'le** [BNA], semioval center, medullary center, the great mass of white matter at the center of each cerebral hemisphere, as seen on horizontal section at the level of the callosum, this is called sometimes the *major* semioval center, the *minor* semioval center being the figure presented on section about two centimeters above this level. **c. tendin'eum** [BNA], central tendon of the diaphragm; a three-lobed fibrous sheet occupying the center of this structure.

cephaëline (sef-a'e-lēn). An alkaloid, $C_{14}H_{20}NO_2$, derived from ipecac; it occurs in white silky needles; the hydrochloride is employed as an emetic in doses of gr. $\frac{1}{2}$–$\frac{1}{4}$ (0.005–0.01).

Cephaëlis (sef-ah-el'is) G. *kephalē*, head, + *eilō*, I press.] A genus of tropical plants of the order *Rubiaceæ*, two species of which, **C. ipecacuan'ha** and **c. acumina'ta,** furnish the drug ipecac.

ceph'alad [G. *kephalē*, head] In a direction toward the head or the anterior pole.

cephalag'ra [G. *kephalē*, head, + *agra*, seizure. Gouty pains in the head.

cephalal'gia [G. *kephalē*, head, + *algos*, pain.] Headache. **c. pharyngotympan'ica,** headache dependent upon pharyngitis and catarrhal inflammation of the middle ear, Legal's disease.

cephal'anthin. An amorphous bitter glucoside from cephalanthus.

cephalan'thus [G. *kephalē*, head, + *anthos*, flower.] The bark, especially the bark of the root, of *Cephalanthus occidentalis*, buttonwood, buttonbush, a North American tree, antipyretic and antiperiodic in doses of 3½–1 (2.0–4.0) of a fluidextract.

cephalea (sef-al-e'ah). Cephalalgia. **c. agita'ta, c. atton'ita,** violent headache sometimes occurring in influenza and in the early stages of other infectious diseases.

cephalede'ma, cephalœde'ma. Edema of the head

cephale'mia, cephalæ'mia, cephalhæ'mia [G. *kephalē*, head, + *haima*, blood] Congestion, active or passive, of the brain.

cephalhematocele, cephalhæmatocele (sef-al-hem-at'o-sēl) [G. *kephalē*, head, + *haima*, blood, + *kēlē*, tumor] 1. Cephalhematoma, especially one communicating with the cerebral sinuses 2. Caput succedaneum.

cephalhematoma (sef"al-hem-ă-to'mah) [G. *kephalē*, head, + *haima*, blood, + *-ōma*.] 1. A blood-cyst of the scalp in a new-born infant, due to an effusion of blood beneath the pericranium; caput succedaneum. 2. Cephalhematocele.

cephalhydrocele (sef-al-hi'dro-sēl) [G. *kephalē*, head, + *hydōr*, water, + *kēlē*, tumor.] An extracranial serous cyst.

cephal'ic [G *kephalē*, head.] 1. Relating to the head. 2. [NK]. Superior or, in the case of four-footed animals, anterior.

ceph'alin. An organic extract, resembling lecithin, derived from the brain substance of the ox or other mammal, employed locally for the arrest of hemorrhage.

cephalitis (sef-al-i'(e')tis). Inflammation of the brain, encephalitis.

ceph"alocathar'tic [G. *kephalē*, head, + *cathartikos*, cleansing] 1. "Clearing the head," causing the expulsion of mucus from the nose and accessory sinuses. 2. An agent having this property.

cephalocaudal (sef-al-o-kaw'dal) [G. *kephalē*, head, + L. *cauda*, tail.] Cephalocercal.

cephalocele (sef'al-o-sēl) [G. *kephalē*, head, + *kēlē*, henia.] Hernia of the brain, encephalocele.

cephalocente'sis [G. *kephalē*, head, + *kentēsis*, puncture.] Passage of a hollow needle or trocar and cannula into the brain to drain an abscess or the fluid of a hydrocephalus.

cephalocercal (sef"al-o-sur'kal) [G. *kephalē*, head, + *kerkos*, tail.] Relating to both head and tail, *i.e.* to the long axis of the body.

cephalochord (sef'al-o-kord). The cephalic portion of the chorda dorsalis in the embryo.

cephalodyn'ia [G. *kephalē*, head, + *odynē*, pain.] Cephalalgia, headache; specifically, rheumatism of the fibrous structure of the scalp muscle.

cephalogas'ter [G. *kephalē*, head, + *gastēr*, belly.] The portion of the enteron of the embryo nearest the anterior pole.

cephalogyric (sef-ă-lo-ji'rik) [G. *kephalē*, head, + *gyros*, a circle.] Relating to circular movements of the head.

cephalohæmat'ocele, cephalohæmato'ma. Cephalhematocele, cephalhematoma.

cephalohemom'eter [G. *kephalē*, head, + *haima*, blood, + *metron*, measure.] An instrument showing the degree of intracranial blood pressure.

cephalo'ma [G. *kephalē*, head, + *-ōma*.] Encephaloma, a soft carcinoma

cephalom'elus [G. *kephalē*, head, + *melos*, a limb.] A monster with an excrescence resembling a leg or arm, growing from the head.

cephalome'nia [G. *kephalē*, head, + *mēn*, month] Vicarious menstruation from the nose or other part of the head.

cephalomeningitis (sef-al-o-men-in-ji'(je')tis). Inflammation of the membranes of the brain.

cephalom'eter [G *kephalē*, head, + *metron*, measure.] Craniometer.

cephalometry (sef-al-om'ĕ-trĭ). Measurements on the living head, or head without removal of the soft parts. (See *craniometry*.)

cephalomotor (sef-al-o-mo'tor) [G. *kephalē*, head + L. *motus*, motion.] Relating to movements of the head.

cephalone (sef-al-o'na) [G. *kephalē*, head, + *It. -one*, an augmentative particle.] An idiot with large head and sclerotic hyperplasia of the brain.

ceph'alont [G *kephalē*, head, + *ōn*(*ont-*), being.] A parasitic protozoon having an organ (*protomerite*) for attachment to its host.

cephaloorbital (sef-al-o-or'bit-al). Relating to the head and the orbits; noting an index* so called.

cephalop'agus [G. *kephalē* head, + *pēgnymi*, I fasten together.] A twin monster joined at the head.

CEPHALOPAGUS.

cephalop'athy [G. *kephalē*, head, + *pathos*, suffering.] Any disease affecting the head or brain.

ceph"alopharynge'us. Musculus constrictor pharyngis superior.

cephaloplegia (sef"al-o-ple'jĭ-ah) [G. *kephalē*, head, + *plēgē*, stroke.] Paralysis of the muscles of the head.

cephalorrhachidian (sef"al-o-ră-kid'ĭ-an) [G. *kephalē*, head, + *rhachis*, spine.] Relating to the head and the spine.

cephalothoracic (sef"al-o-tho-ras'ik). Relating to the head and the chest.

ceph"alothoracop'agus [G. *kephalē*, head, + *thorax*, chest, + *pēgnymi*, I fasten together.] A double monster attached by the head and thorax.

ceph'alotome [G. *kephalē*, head, + *tomē*, a cutting.] An instrument for cutting into the fetal head to permit of its compression in cases of dystocia.

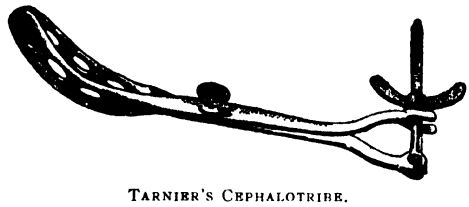
cephalot'omy. The operation of cutting into the head of the fetus. (See *cephalotome*.)

cephalotribe (sef'al-o-trīb) [G *kephalē*, head, + *tribō*, I bruise.] A forceps-like instrument, with strong blades and a screw handle, by means of which the fetal head can be crushed.

ceph'alotripsy. Crushing of the fetal head in cases of dystocia.

cephalotrype'sis [G. *kephalē*, head, + *trypēsis*, boring.] The operation of trephining.

cep'tor [L. *capere*, to take.] 1. In Ehrlich's theory of immunity, a receptor which has been thrown off as a result of overproduction; intermediary body, immune body, haptin; it may be an amboceptor (cytolysin or bacteriolysin) or a uniceptor (the antitoxin molecule). 2. A nervous mechanism adapted to the appreciation and transmission of stimuli from the periphery to the nerve centers; see *beneceptor* and *nociceptor*. **chem'ical c.,** one of the nerve ceptors widely distributed throughout the respiratory and alimentary systems and in the brain and medulla, which initiate



TARNIER'S CEPHALOTRIBE.

purely chemical reactions in response to the appropriate stimuli. **con'tact c.,** a nerve c. in the surface layer of skin or mucous membrane by means of which impulses contributed by direct physical impact are apprehended. **dis'tance c.,** a nerve mechanism of one of the organs of special sense whereby the being is brought into relation with his distant environment through unseen forces—aerial or ethereal vibrations. **effec'tor c.,** one of the specific receptor mechanisms, or nerve ceptors, within the brain which, according to Crile's theory, receive special action impulses and are thereby so modified that the subsequent passage of an identical impulse is greatly facilitated; see *action pattern*.* **nerve c.,** ceptor (2).

ce'ra. Wax. **c. al'ba** (U.S. and Br.), white wax. bleached wax; yellow wax bleached by being rolled very thin and exposed to the light and air **c. fla'va** (U.S. and Br.), yellow wax, a yellowish solid brittle substance prepared from the honeycomb of the hive-bee

ceramu'ria [G. *keramos*, potter's earth, + *ouron*, urine.] Phosphaturia.

ce'rasin. An eclectic preparation from wild cherry bark; a brown powder, employed as a bitter tonic, sedative, and expectorant in coughs, colds, palpitation, and general debility, in doses of gr. 2–10 (0.13–0.6).

cer'asinose. A carbohydrate in the gummy exudation from the bark of the cherry tree.

cer'asus [L.] Cherry: see *prunus*.

cerate (se'rāt). Ceratum. **cam'phor c.,** ceratum camphoræ. **com'pound cam'phor c.,** camphor ice, ceratum camphoræ compositum. **Goulard's' c.,** ceratum plumbi subacetatis. **sim'ple c.,** ceratum.

cer'atin. Keratin.

ceratitis (ser-ă-ti'(te')tis) Keratitis, inflammation of the cornea

cerato-. For words beginning thus, not given here, see under *kerato-*.

cer'atocele (ser'ă-to-sēl). [G. *keras*, horn, + *kēlē*, hernia.] 1. Hernia of Descemet's membrane through a defect in the outer layer of the cornea; keratocele. 2 A horny tumor.

ceratocente'sis [G. *keras*, horn (cornea), + *kentēsis*, puncture.] Puncture of the cornea, keratonyxis.

ceratoco'nus. Conical cornea, a cone-shaped bulging of the cornea, staphyloma corneæ.

ceratocri'coid [G. *keras*, horn, cornu, + *cricoid*.] Relating to the inferior cornua of the thyroid cartilage and to the cricoid cartilage, or the cricothyroid articulation. **c. muscle,** musculus ceratocricoideus.

ceratoder'mia. Keratodermia.

ceratodermatitis (ser-ă-to-der-mă-ti'(te')tis). Keratodermatitis.

ceratogenous (ser-ă-toj'en-us). Keratogenous, causing a growth of horny cells or tissue.

ceratoglos'sus. The fibers of the musculus hypoglossus arising from the greater cornu of the hyoid bone.

ceratohyal (ser"ă-to-hi'al) [G. *keras*, horn.] Relating to one of the cornua of the hyoid bone.

ceratohy'alin. Eleidin.

ceratomala'cia. Xerotic keratitis, keratomalacia.*

ceraton'osus [G. *keras*, horn, + *nosos*, disease] A disease of the cornea, keratonosus.

Ceratophyllus fasciatus (seratofil'lus fă-shĭ-a'tus) [G. *keras*, horn, + *phyllon*, leaf, + L. *fasciatus*, striped, banded.] The rat-flea of temperate climates, which transmits the plague bacillus.

cer'atoplasty [G. *keras*, horn, + *plassō*, I form] Plastic surgery to repair a defect of the cornea keratoplasty.

cerato'sis. Keratosis, any disease of the horny layer of the epidermis.

ceratot'omy [G. *keras*, horn, + *tomē*, a cutting] Incision into the cornea, keratotomy.

cera'tum [L. *ceratus*, waxed.] Cerate, an unctuous solid preparation, harder than an ointment, containing sufficient wax to prevent it from melting when applied to the skin. The U.S.P. *ceratum*, simple cerate, contains white wax 30, white petrolatum 20, benzoinated lard 50. **c. calami'næ,** Turner's cerate, calamine and yellow wax, of each 15, olive oil 40, application for burns. **c. campho'ræ,** camphor cerate; contains camphor liniment 10, white wax 35, white petrolatum 15, benzoinated lard, 40. **c. campho'ræ compos'itum,** compound camphor cerate, camphor ice; camphor 10.7, benzoic acid 1, phenol 0.2, oil of bitter almond 0.1, in a firm mixture of white wax, spermaceti, and castor oil to make 100; antiseptic and protective application for chapped lips, hands, etc. **c. canthar'idis,** cantharides cerate, contains cantharides 32, yellow wax 18, rosin 18, lard 17, liquid petrolatum 15; used locally as an epispastic. **c. ceta'cei,** spermaceti cerate, contains spermaceti 10, white wax 35, olive oil 55. **c. fla'vum,** yellow cerate, a mixture of yellow wax 10, oil of sweet almond 35, water 25. **c. gale'ni,** cold cream, unguentum* aquæ rosæ **c. iodofor'mi,** iodoform cerate, equal parts of iodoform and hard paraffin. **c. petro'lei,** soft white paraffin 2, hard paraffin 1. **c. plum'bi subaceta'tis,** cerate of lead subacetate, Goulard's cerate, contains solution of lead subacetate 20, wool-fat 20, paraffin 20, white petrolatum 38, camphor 2. **c. resi'næ,** rosin cerate, basilicon ointment; contains rosin 35, yellow wax 15, lard 50. **c. resi'næ compos'itum** (N.F.), compound rosin cerate, Deshler's salve; contains rosin 22.5, yellow wax 22.5, prepared suet 30, turpentine 11.5, linseed oil 13.5.

cer'berid. A glucoside from *Thevetia yccotli*.

cerca'ria [G *kerkos*, tail.] The final larval stage of the trematode worms; it consists of a body and (usually) an elongated tail, resembling a tadpole; it is developed within the redia or sporocyst.

cerclage (sair-klazh') [F. an encircling, hooping, banding.] Binding together the ends of an obliquely fractured bone or the fragments of a broken patella, brought into close apposition, by an encircling wire loop or bandage, tightly drawn, or a ring.

cercom'onad. A unicellular organism of the genus *Cercomonas*.

Cercom'onas [G. *kerkos*, tail, + *monas* unit, monad.] A genus of flagellate infusoria, some species of which are parasitic in man, but whether pathogenic or not is undetermined. **C. intestina'lis,** a species found in the intestinal discharges in certain cases of diarrhea.

cer'cus, gen. and pl. *cer'ci* [G. *kerkos*, tail.] A stiff hair-like structure

ce'real [L. *Ceres*, the goddess of agriculture.] Relating to any edible grain or the plant producing it.

cere'alin. A diastase obtained from bran.

cerebell'ar. Relating to the cerebellum.

cerebel'lic. Cerebellar.

cerebellif'ugal [L. *fugere*, to flee.] Extending from the cerebellum.

cerebellip'etal [L. *petere*, to seek] Extending toward the cerebellum.

cerebellitis (ser-e-bel-i'(e')tis). Inflammation of the cerebellum.

cerebell"o-ol'ivary. Relating to the cerebellum and the oliva.

cerebellopontile (ser-e-bel"o-pon'til). Relating to the cerebellum and the pons, noting especially the *c. recess* or *angle* between these two structures.

cerebelloru'bral. Relating to the cerebellum and the red nucleus. **c. system,** the linking of the dentate nucleus of the cerebellum with the red nucleus of the opposite side through the superior cerebellar peduncle; a motor system.

cerebellorubrospinal (ser-e-bel"o-ru-bro-spi'nal). Relating to the cerebellum, the red nucleus, and the spinal cord. **c. system,** the combined cerebellorubral and rubrospinal systems.

cerebellospi'nal. Relating to the cerebellum and the spinal cord.

cerebellum (ser-e-bel'um) [L. dim. of *cerebrum*, brain.] The posterior brain mass, lying behind the pons and medulla and beneath the posterior portion of the cerebrum; it consists of two lateral hemispheres united by a narrow middle portion, the vermis.

cer'ebral. Relating to the cerebrum **c. decompres'sion,** removal of a piece of the cranium, usually in the subtemporal region over the silent area, with incision of the dura, to relieve intracranial pressure **c. hem'isphere,** the large mass of brain substance on either side of the great longitudinal fissure.

cerebralgia (ser-e-bral'jĭ-ah) [L. *cerebrum*, brain, + G. *algos*, pain.] Cephalalgia, headache.

cerebrasthenia (ser"e-bras-the'nĭ-ah) [L. *cerebrum*, brain, + G. *astheneia*, weakness.] Psychasthenia.

cer'ebrate. To functionate, in reference to the brain.

cerebra'tion. Brain action mental activity.

cerebriform (ser-eb'rĭ-form) [L. *cerebrum*, brain, + *forma*, form.] Resembling the brain or the cerebrum in external appearance or structure.

cerebrifugal (ser-e-brif'u-gal) [L. *jugere*, to flee. Proceeding away from the brain, noting efferent nerve-fibers or impulses.

cer'ebrin. 1. One of a number of fatty nitrogenous substances, containing no phosphorus, derived

from nerve-tissue, yolk of egg, and various organs. 2. A brain extract which has been employed therapeutically.

cereb'rinin. Trade name of cerebrin (2) obtained from the calf's brain.

cerebrip'etal [L *petere*, to seek.] Proceeding toward the brain or cerebrum, noting nerve-fibers or impulses.

cerebritis (ser-e-bri'(bre')tis). Inflammation of the brain, more particularly of the cerebrum

cer"ebrogalac'tose. Cerebrose.

cer'ebroid [L *cerebrum*, brain, + G *eidos*, resemblance.] Cerebriform, encephaloid.

cer'ebrol. An oily reddish liquid obtainable from brain-tissue.

cerebrol'ogy [L. *cerebrum*, brain, + G *-logia*.] Encephalology.

cerebro'ma. Encephaloma (1), hernia of the brain substance.

cerebromala'cia [L. *cerebrum*, brain, + G. *malakia*, softness.] Encephalomalacia; softening of the brain, specifically of the cerebrum

cerebromed'ullary [L *cerebrum*, brain, + *medulla* spinal cord.] Cerebrospinal.

cerebrom'eter [L. *cerebrum*, brain, + G. *metron*, measure.] Encephalometer.

cerebrop'athy [L. *cerebrum*, brain, + G. *pathos*, suffering.] Encephalopathy.

cerebrophysiology (ser"e-bro-fiz-ĭ-ol'o-jĭ). The physiology of the brain.

cerebropon'tile. Relating to the brain and the pons Varolii.

cerebropsychosis (ser-e-bro-si-ko'sis). A mental disorder associated with or dependent upon a lesion of the cerebrum.

cerebrorrhachidian (ser-e-bro-răk-kid'ĭ-an) [L. *cerebrum*, brain, + G. *rhachis*, spine.] Cerebrospinal, encephalorrhachidian.

cer"ebrosclero'sis [L. *cerebrum*, brain, + G. *sklērōsis*, hardening.] Encephalosclerosis; hardening of the brain substance, specifically of the cerebral hemispheres.

cer'ebroscope. The ophthalmoscope applied to a study of the blood-circulation in the brain, as indicated by the condition of the circulation in the fundus of the eye.

cerebros'copy [L. *cerebrum*, brain, + G. *skopeō*, I view.] Encephaloscopy.

cer'ebrose. A sugar, $C_6H_{12}O_6$, obtainable from brain-tissue.

cerebroside (ser'e-bro-sīd). A phosphorus-free nitrogenous body found in protagon.

cerebro'sis. Encephalosis.

cerebrospinal (ser"e-bro-spi'nal). Relating to the brain and the spinal cord; encephalorrhachidian **c. fe'ver** spotted fever, epidemic c. meningitis; an acute infectious disease, caused by the meningococcus, *Diplococcus intracellularis meningitidis*, and marked by fever and inflammation of the meninges of the brain and spinal cord, giving rise to severe nervous symptoms of the most varied character; pneumonia, pleurisy, and arthritis are frequent complications, and deafness, blindness, and various paralyses may occur as sequels in case of recovery without specific treatment. **c. flu'id,** a fluid, secreted chiefly by the choroid plexuses of the lateral ventricles of the brain, filling the ventricles and the subarachnoid cavities of the brain and spinal cord; it is composed of serum globulin, 0.085; extractives, 0.06; salts, 0.855; water, 99.0. **c. meningitis, c. fever.**

cer"ebrospi'nant. 1. Acting upon the cerebral nervous system, the brain and spinal cord. 2 An agent affecting the cerebrospinal system,

cerebrospinase (ser"e-bro-spi'nāz). An oxidase present in the cerebrospinal fluid.

cerebrosuria (ser"e-bro-su'rĭ-ah) [*cerebrose* + G *ouron*, urine.] The excretion of cerebrose in the urine.

cer"ebrot'omy [L. *cerebrum*, brain, + G. *tomē*, incision.] 1. Incision of the brain substance to evacuate an abscess. 2. The anatomy of the brain.

cer'ebrum [L. brain.] The principal portion of the brain, including practically all parts within the skull except the medulla, pons, and cerebellum. **c. abdomina'le,** plexus cœliacus [BNA]. **c. exsicca'tum** [L. dried brain], the brain of the calf, dried and pulverized; employed in the treatment of cerebral neurasthenia.

cerecloth (sēr'cloth) [L. *cera*, wax.] Gauze or cheesecloth impregnated with wax containing an antiseptic, used in surgical dressings.

Ce'reus. A genus of cacti. **C. divarica'tus,** the juice is anthelmintic and diuretic, and locally vesicating. **C. flagellifor'mis,** a species the juice of which is reputed to be anthelmintic. **C. geometri'zans,** the fruit is diuretic. **C. grandiflo'rus,** night-blooming cereus; see *cactus*.

cerevisia (ser-e-vis'ĭ-ah) [L.] Beer. **cerevis'iæ fermen'tum,** beer yeast, brewer's yeast, fæx medicinalis, the cells and spores of *Saccharomyces cerevisiæ;* given internally in acne and furunculosis in doses of 3½–1 (2.0–4.0), and applied externally to sloughing wounds. **cerevis'iæ fermen'tum compres'sum** (N.F.), compressed yeast, the moist living cells of *S. cerevisiæ* combined with an absorbent base.

cerev'isin. Trade name of a preparation of yeast used in the treatment of boils

cer'idin. Cerolin, the proprietary name for a preparation said to be the active principle of yeast; employed in acne, furunculosis, and chronic constipation in doses of 5 to 8 grains (0.3–0.5).

ce'rin. Cerotic acid, a fatty acid, $C_{27}H_{54}O_2$ derived from beeswax.

ce'rium. A metallic element, symbol Ce, atomic weight 140.25. **ce'rii ox'alas** (Br.), cerium oxalate, an inodorous, tasteless, white, crystalline powder, consisting of a mixture of the oxalates of cerium, didymium, xanthanum, and other earths; used in the treatment of vomiting and for the relief of coughing, in doses of gr. 1–10 (0.06–0.6).

cerolin (ser'o-lin) [L. *cerevisia*, beer, + *oleum*, oil., Ceridin.

ceroma (se-ro'mah) [G. *kēros*, wax, + *-oma*.] A waxy tumor, one that has undergone amyloid degeneration.

ceroplasty (se'ro-plas-tĭ) [G. *kēros*, wax, + *plassō*, I mould.] The manufacture of wax models of anatomical and pathological specimens or of skin lesions.

cerot'ic acid. Cerin.

certifi'able. That can or should be certified, noting certain infectious diseases, the occurrence of which must, by law, be reported to the health authorities

certifica'tion. The reporting to the health authorities of the occurrence of an infectious disease.

cer'tify. [L. *certus*, certain, + *facere*, to make.] To give information regarding, to notify; specifically, to report to the health authorities the occurrence of a contagious disease.

cerumen (se-roo'men) [L. *cera*, wax.] Ear-wax, the soft, brownish yellow, waxy secretion (a modified sebum) of the ceruminous glands of the external auditory meatus. **c. inspissa'tum,**

inspissated cerumen, dried ear-wax plugging the external auditory canal.

ceruminal (se-roo'mĭ-nal). Relating to cerumen.

cerumino'sis. Excessive formation of cerumen.

ceru'minous. Relating to cerumen.

ceruse (se'rooz) [L. *cerussa.*] White lead; plumbi carbonas.

cer'vical [L. *cervix,* neck.] Relating to a neck, or cervix, in any sense.

cervica'lis [L.] Cervical **c. ascen'dens,** musculus iliocostalis cervicis.

cervicectomy (sur-vĭ-sek'to-mĭ) [L. *cervix,* neck, + G. *ektomē,* excision.] Trachelectomy, amputation of the cervix uteri.

cerviciplex (ser-vis'ĭ-plex). Plexus cervicalis.

cervicitis (ser-vĭ-si'(se')tis) [L. *cervix,* neck, + G. *-itis.*] Trachelitis; inflammation of the cervix uteri.

cervicobrachial (ser-vĭ-ko-bra'kĭ-al). Relating to the neck and the arm.

cervicobucc'al. Relating to the buccal surface of the neck of a premolar or molar tooth.

cervicodyn'ia [L. *cervix,* neck, + G. *odynē,* pain] Trachelodynia.

cervicofacial (sur-vĭ-ko-fa'shal). Relating to the neck and the face.

cervicola'bial. Relating to the labial surface of the neck of an incisor or canine tooth.

cervicolin'gual. Relating to the lingual surface of the cervix of a tooth.

cervicolumbar phenomenon (sur"-vĭ-ko-lum'bar fe-nom'e-non). A sense of weakness in the lower extremities on movement of the neck when a lesion is present in the upper portion of the spinal cord; or sensations referred to the neck when a lesion exists in the lower portion of the cord.

cervicooccipital (sur"vĭ-ko-ok-sip'ĭ-tal). Relating to the neck and the occiput.

cer"vicoves'ical. Relating to the cervix uteri and the bladder.

cer'vix, gen. *cervi'cis,* pl. *cervi'ces* [L. neck.] 1. The neck, particularly the posterior portion 2. Any neck-like structure, especially the lower cylindrical portion of the uterus (*c. uteri*) between the os externum and the os internum. **c. colum'næ posterio'ris** [BNA], a slight constriction of the posterior column of the spinal cord, seen on cross-section a little behind the gray commissure. **c. cor'nu,** the constricted portion of each gray column or cornu of the spinal cord where it joins the commissure. **c. den'tis,** collum dentis [BNA]. **c. of the ax'one,** the constricted portion of the axone just before the myelin sheath begins. **c. u'teri,** neck of the womb (see 2, above).

cesarean (or **cæsarean**) **opera'tion** or **sec'tion** (se-za'-re-an) [L. *cædere,* to cut.] Extraction of the fetus by means of an incision through the abdominal wall and the uterus; the mode by which Cæsar is said to have been brought into the world.

cesarot'omy. Cesarean section.

cesium (se'zĭ-um) [L. *cæ'sius,* bluish gray]. Cæsium, a metallic element, symbol Cs, atomic weight 132.81. Its salts are said to increase blood-pressure and have been recommended in the treatment of epilepsy, nervous palpitation, etc., the bromide being given in doses of gr. 3–5 (0.2–0.3).

Cestan-Chenais syn'drome (ses-tahn̄-shŭ-na'). Contralateral hemiplegia, hemianesthesia, and loss of pain and temperature sensibility, with ipsilateral hemiasynergia and lateropulsion, paralysis of the larynx and velum palati, enophthalmia, miosis, and ptosis, due to lesions of the pyramid, fillet, inferior cerebellar peduncle, nucleus ambiguus, and the oculopupillary center.

Cesto'da, Cesto'des, Cestoid'ea [G. *kestos,* girdle, + *eidos,* form.] An order of *Platyhelmintha,* or flatworms, the tapeworms.

ces'tode, ces'toid. A tapeworm, one of the *Cestoda.*

ceta'ceum [G. *kētos,* a whale.] (U.S. and Br.) Spermaceti, a peculiar fatty substance, chiefly cetin (cetyl palmitate), obtained from the head of the sperm whale, *Physeter macrocephalus.*

cetra'ria. Iceland moss, the dried plant, *Cetraria islandica;* used as a demulcent, nutrient, and digestive, and in the treatment of bronchitis in doses of ʒ ½–1 (2.0–4.0).

cet'rarin. Cetraric acid, a bitter principle, $C_{30}H_{30}O_{12}$, from *Cetraria islandica;* dose gr. 3 (0.2).

cevadil'la [Sp. dim. of *cebada,* barley.] Sabadilla.

cev'adine. An alkaloid occurring in cevadilla, resembling veratrine in its properties.

Ceylon' cinn'amon, cinnamomum zeylanicum. **C. moss,** fucus amylaceus, a seaweed, *Sphærococcus lichenoides,* one source of agar-agar.

c. g. s. Abbreviation for centimeter-gram-second, noting a system of physical units employing the centimeter for distance, the gram for weight, and the second for time

$CH_2.CH_2$. Ethylene, olefiant gas

CH_4. Methyl hydride, methane, marsh gas.

C_2H_2. Acetylene.

C_6H_6. Benzene.

C. H. A. Initials of Catholic Hospital Association and of Children's Hospital Association.

Chabert's disease' (shă-bair') [Philibert *Chabert,* French veterinarian, 1737–1814.] Symptomatic anthrax.* **C.'s oil,** oleum anthelminthicum, a distillate of animal oil and turpentine

Chadd'ock's sign [Charles Gilbert *Chaddock,* American neurologist, contemporary.] External malleolar sign; when the external malleolar skin area is irritated extension of the great toe occurs in cases of organic disease of the corticospinal reflex paths.

Chad'wick's sign [James Read *Chadwick,* American gynecologist, 1844–1905.] A dark bluish or purplish discoloration of the mucous membrane of the lower portion of the vagina in pregnancy, also called Jacquemier's sign.

chafe (chāf) [Fr. *chauffer,* to heat.] 1. To cause irritation by rubbing or the action of irritants. 2. Irritation, excoriation.

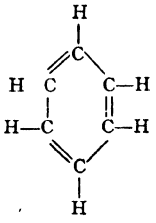
Chagas' disease' (chah'gahs) [Carlos *Chagas,* Brazilian physician, contemporary.] Chagas-Cruz disease; South American trypanosomiasis.*

Chagas-Cruz disease' (chah'gahs-krooz) [Carlos *Chagas;* Oswaldo *Cruz,* Brazilian physician, 1871–1917.] Chagas' disease.

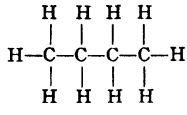
Chagres fe'ver (chah'grās) [*Chagres,* a river on the Isthmus of Panama] A pernicious malarial fever from which the laborers building the Panama railroad suffered

chain (chān) [L. *catena.*] 1. In chemistry, a series of atoms held together by one or more affinities. 2. In bacteriology, a number of microorganisms attached end to end. **closed-chain compound,** carbocyclic or cyclic compound, a compound of the aromatic series, the graphic formula of which is a ring of C atoms in which each C atom is supposed to be linked, three-

fourths to adjacent C atoms and one-fourth to an H atom, thus:



This is the so-called benzene ring. By substitution other atoms may be united to this ring, forming *lateral* or *side chains*. **hemolyt'ic c.,** union of complement, intermediary body or amboceptor, and erythrocyte, without which hemolysis cannot occur. **lat'eral c.,** side c. **long c.,** in bacteriology, a continuous line of more than 8 cocci or other bacteria. **o'pen-chain com'pound,** a compound of the fatty series, the graphic formula of which is a line of C atoms linked above and below, and at each extremity of the series, to H atoms or their substitutes, thus·



short c., in bacteriology, a string of 2 to 8 cocci or other bacterial cells. **side c.,** lateral c., a chain of atoms linked to the benzene ring, or closed-chain compound, by replacement of the H atoms. **side-chain the'ory,** the theory advanced by Ehrlich to explain the phenomena of infection, immunity, nutrition, etc.; it assumes that the protoplasmic molecule is analogous in constitution to the benzene molecule, or benzene nucleus, with its linked hydrogen atoms capable of being displaced by various groups to form side chains. So, linked to the protoplasmic molecule are numerous "side chains," or receptors, capable of seizing upon certain bodies, such as food stuffs or poisons, and incorporating them in the molecule; see *receptor*.

chalarosis (kal-ahr-o'sis). Infection with a fungus of the genus *Chalara;* it is marked by the appearance of subcutaneous nodules which break down, forming ulcers. The fungus consists of mycelial threads divided by transverse lines into segments which may separate and initiate new colonies.

chalastodermia (kal-as-to-der'mĭ-ah) [G. *chalastos*, loosened, relaxed, + *derma*, skin.] Dermatolysis.

chalaza (kă-la'zah). 1. Chalazion. 2. The suspensory ligament of the yolk in a bird's egg. 3. In botany, the base of the body of the ovule where it blends with its coats.

chalazion, pl. *chalazia* (kal-a'zĭ-on) [G. dim. of *chalaza*, a sty.] A small tumor of the border of the eyelid due to inflammation of a Meibomian gland; also written *chalazium*.

chalcitis (kal-si'tis) [G. *chalkos*, copper, brass.] Brassy eye.*

chalcosis (kal-ko'sis) [G. *chalkos*, copper.] 1. Chronic copper poisoning. 2. A deposit of fine particles of copper in the lungs or other parts.

chal'ice-cell. Goblet cell.*

chalicosis (kal-e-ko'sis) [G. *chalix*, gravel.] Pneumonoconiosis caused by the inhalation of dust incident to the occupation of stone-cutting.

chalinoplasty (kal'in-o-plas"tĭ) [G. *chalinos*, bridle, + *plassō*, I form.] The correction of defects of the mouth and lips, especially of the corners of the mouth.

chalk (chawk) [L. *calx*.] Calcium carbonate, **creta. French c.,** talcum, magnesium silicate.

chalk-stone. Tophus, Heberden's knob or node.

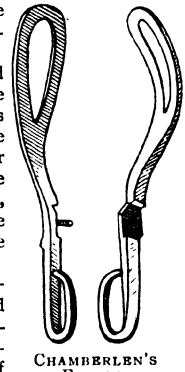
chalone (kal'ōn) [G. *chalaō*, I relax.] Colyone. 1. Antihormone, an inhibitory or restraining autacoid which opposes the action of a hormone (excitatory autacoid). 2. An endocrine substance which inhibits or diminishes the activity of the cells of the body.

chalybeate (kal-ib'e-āt) [G. *chalyps*, steel.] 1. Relating to or containing iron. 2. A therapeutic agent containing iron.

chamæcephal'ic. Chamecephalic.

chamælirium (kam-e-lir'ĭ-um) [G. *chamai*, on the earth, + *leirion*, lily.] Helonias.

chamber (chām'ber) [L. *camera*.] A compartment or enclosed space. **ante'rior c.,** the space between the cornea and the iris containing the aqueous humor **a'queous c.,** the anterior and posterior chambers of the eye containing the aqueous humor. **poste'rior c.,** the space behind the iris anterior to the lens, containing the aqueous humor. **vit'reous c.,** the large cavity behind the lens in the eye, containing the vitreous humor.



CHAMBERLEN'S FORCEPS.

Chamberland fil'ter (shahmber-lahn') [Charles-Edouard *Chamberland*, French scientist, 1851–1908.] Pasteur-Chamberland filter, one of unglazed porcelain through which liquid is forced under pressure; microorganisms not ultramicroscopic do not pass. There are various grades, numbered L_1, L_2, etc.; L_5(F) and L_7(B) are the usual types for filter purposes; F permits only particles smaller than 0.2 μ to pass, the bacteriophage (estimated size 0.03 μ) passes all grades, even the finest.

Cham'berlen for'ceps [Peter *Chamberlen*, 1560–16––, one of a family of English accoucheurs, sons and grandsons of a French émigré, Guillaume *Chambrelan*.] The first obstetrical forceps, invented by Peter or his father; its use was kept secret until revealed by Hugh Chamberlen (1630–1720), grandson of Peter.

chamecephalic (kam-e-sef-al'ik) [G. *chamai*, on the ground (low, stunted), + *kephalē*, head.] Having a flat head. Noting a skull with a vertical index of 70 or less. Similar to tapeinocephalic.*

chamecephalous (kam-e-sef'-al-us). Chamecephalic.

chameprosopic (kam-e-pros-o'pik) [G. *chamai*, on the ground (low, spread out), + *prosōpikos*, facial.] Having a broad face.

chamomile (kam'o-mīl) [G. *chamai*, on the ground + *mēlon*, apple.] In the U. S. and B. P. the flowering heads of *Anthemis nobilis*.

champagne (sham-pān'). An effervescent wine, made in the *Champagne* region of northeastern France, contains from 5 to 10 per cent. or more of alcohol.

Champetier de Ribes bag (shahmp-te-a' dĕ-rēb') [Camille *Champetier de Ribes*, Parisian obstetrician, *1848.] An elongated conical silk and rubber bag, used to dilate the cervix and to provoke

uterine contractions, in order to induce premature labor or in cases of placenta previa.

Championnière's disease' (shahn̄-pe-on-e-air'). See *Lucas-Championnière.*

chancre (shang'kur) [Fr. indirectly from L. *cancer.*] Primary lesion, initial sclerosis, syphilitic sore, the first manifestation of syphilis; it begins as a papule or area of infiltration, of dull red color, hard, and insensitive; the center usually becomes eroded or breaks down into an ulcer. **eat'ing c.,** chancroid. **hard c.,** true c., not chancroid. **Hunte'rian c.,** the typical ulcerated chancre with indurated base and edges; the initial lesion of syphilis. **in'durated c.,** hard c. **mixed c.,** Rollet's c., a sore resulting from simultaneous inoculation with syphilis and the pus organisms of chancroid. **Nis'bet's c.,** bubonulus. **noninfec'ting c.,** chancroid. **Rollet's c.,** mixed c. **sim'ple c.,** chancroid. **soft c.,** chancroid. **sporotricho'sic c.,** the initial lesion at the site of infection in sporotrichosis. **true c.,** Hunterian c.

CHAMPETIER DE RIBES BAG (dilated).

chancroid (shang-kroyd') [*chancre* + G. *eidos,* resemblance.] Soft or simple chancre; an infectious venereal ulcer, developing upon an inflamed edematous base from a pustule formed from a primary papule.

chancroid'al. Relating to or of the nature of chancroid.

chancrous (shang'krus). Relating to chancre.

change of life. Menopause, climacteric.

chann'el [L. *canalis.*] Canal, a passage through which a liquid flows.

Chan'ning's solu'tion [William *Channing,* American physician, nineteenth century] Liquor hydrargyri et potassii iodidi (N.F.).

Chantemesse reac'tion (shahnt-ĕ-mes') [André *Chantemesse,* French bacteriologist, 1851–1919.] Ophthalmoreaction.

chap. 1. To crack open. 2. A crack or slit in the skin of the hands or lips, due to the action of cold.

chaparro amargoso (chah-pahr'ro ah-mar-go'so) [Sp. *chaparro,* live oak or bramble, + *amargoso,* bitter.] Mexican name of a plant, *Castela nicholsoni,* fam. *Simarubaceæ,* employed in the treatment of intestinal protozoal infections.

chapas'gar [an artificial word compounded of *Chapoteau, ascites,* and *agar,* see the def.] A culture medium consisting of 1 part ascitic fluid and 2 parts of 3 per cent. agar with Chapoteau's peptone.

Chap'man bag [John *Chapman,* English physician practising in Paris, †1894.] An elongated icebag for application to the spine.

Chap'man's din'ner pill [Nathaniel *Chapman,* American physician, 1780–1853.] (N.F.) Purified aloes and mastic each gr. 1½ (0.1), powdered ipecac gr. 1 (0.06), oil of peppermint or oil of fennel ♏½ (0.015). **C.'s mix'ture,** mistura copaibæ et opii (N.F.); copaiba and spirit of nitrous ether each 25, tincture of opium 3.2, compound tincture of lavender 6.5, mucilage of acacia 12.5, water to make 100; employed in gonorrhea in dose of ʒi (4.0).

Chapoteau's pep'tone (shap-ŏ-to'). Trade name of a special make of peptone: see *chapasgar.*

chap'pa. A disease marked by subcutaneous nodules, the size of a pigeon's egg, which break down, giving exit to a fatty-looking material, and form ulcers; the eruption is preceded by severe muscular and articular pains.

chapped. Split open, cracked; noting a lesion of the skin produced by cold.

Chaput's meth'od (shă-pu') [H. *Chaput,* French surgeon, contemporary.] Treatment of osteomyelitis by scraping the cavity and filling with fatty tissue taken from the abdomen or the thigh. **C.'s opera'tion,** one of several intestinal operations for anastomosis and artificial anus.

char'acterizing group. A group of atoms in a molecule which distinguishes the class of substances in which it occurs from all other classes; thus carbonyl (CO) is the characterizing group of ketones.

charbon (shar-boṅ') [Fr. coal.] Anthrax (2) **c. symptomatique',** symptomatic anthrax.

char'coal [M. Eng. *charken,* to creak, + *coal.*] Carbon obtained by heating or burning wood with restricted access of air; see *carbo.*

Charcot's disease' (shar-ko') [Jean Martin *Charcot,* French physician, 1825–1893.] 1. Amyotrophic lateral sclerosis. 2. Tabetic arthropathy. **C.'s syn'drome,** intermittent claudication.* **C.'s ver'tigo,** laryngeal vertigo.

Charcot-Leyden crys'tals (shar-ko'-li'den) [see *Leyden.*] Crystals, of the shape of elongated double pyramids, composed of spermin phosphate, found in the sputum in bronchial asthma.

Charcot-Marie type (shar-ko'-mă-re') [see *Marie.*] A familial or hereditary form of progressive muscular atrophy beginning in the muscles of the legs and feet.

Charcot-Neumann crys'tals. See Charcot-Leyden.

Charcot-Robin crys'tals. See Charcot-Leyden.

Charcot-Vigouroux sign (shar-ko'-ve-goo-roo') [Romain *Vigouroux,* French physician, nineteenth century.] Diminished resistance to the conducting power of the skin for the galvanic current, in exophthalmic goiter.

charlatan (shar'lă-tan). A quack; one who claims falsely the possession of medical skill and knowledge.

charlatanism (shar'lă-tan-izm). Quackery, the methods characteristic of a charlatan.

Charles's law [Jacques A. C. *Charles,* French physicist, 1746–1823.] Gay*-Lussac's law.

char'ley horse [slang.] Sprain or muscular stiffness following excess in athletic sports

charpie (shar-pē') [Fr.] Lint, especially that made by scraping or ravelling linen cloth.

Charrière scale (shă-re-air') [Joseph Frédéric Benoit *Charrière,* Parisian instrument maker, 1803–1876.] The French scale for grading the sizes of urethral catheters or sounds; the size of any instrument is determined by *C.'s filière,* a metal plate perforated with 30 holes varying in diameter from ½ to 1 cm., each differing from the next above or below in the scale by ½ mm.

chart. 1. A sheet of paper on which various data relating to the disease—pulse, respiration, temperature, urinary analysis, etc.—are recorded in tabular form. 2. Curve (2).

charta, gen. and pl. *char'tæ* (kar'tah) [L. a sheet of paper.] 1. A pharmaceutical preparation consisting of a piece of paper impregnated or coated on one side with a medicinal substance. 2. A folded paper holding a medicinal powder. **c. antasthmat'ica,** blotting paper soaked in an infusion of belladonna, digitalis, sage, stramonium leaves, and niter, and after drying moistened again with tincture of benzoin. **c. canthar'idis, c. epispas'tica,** paper spread with a

mixture of spermaceti, olive oil, rosin, Canada balsam and cantharides. **c. explorato'ria cœru'lea etru'bra,** litmus paper. **c. nitra'ta, c. potas'sii nitra'tis,** niter-paper, blotting paper soaked in a 20 per cent. solution of potassium nitrate and dried; the fumes of this when burning are inhaled in asthma. **c. sina'pis** (Br.), **c. sinapisa'ta,** mustard paper, emplastrum sinapis (U.S.), a suspension of powdered mustard in liquor caoutchouc is applied to one side of a rather stiff paper and allowed to dry.

chart'ing. Making a record in tabular form of the progress of the disease; clinical recording.

chartula (kar'tu-lah) [L. small paper.] Charta (2).

Chase's sign [Ira Carleton *Chase*, American physician, *1868.] Pain felt in the cecal region, when the hand is drawn deeply and quickly along the transverse colon from left to right, the descending colon being blocked by deep pressure with the other hand.

chasma (kaz'mah) [G.] Pandiculation, yawning, an expanse, an opening.

chasmatoplasson (kaz'mă-to-plas''son). Plasson in an expanded state, opposed to *pycnoplasson.*

Chassaignac's écraseur (sha-sa-nyak'; a-krah-zer') [Charles Marie Edouard *Chassaignac,* Parisian surgeon, 1805–1879.] A strong steel-chain snare used for crushing through the pedicle of a tumor. **C.'s tu'bercle,** tuberculum caroticum

Chauffard's syn'drome (sho-far') [A. *Chauffard,* French physician, 1855–1932.] The symptoms of Still's* disease in one suffering from bovine or other non-human form of tuberculosis.

chauffeur's foot (sho-fẽrz). See *foot.* **c's fracture,** see *fracture.*

Chauliac. See Guy* de Chauliac.

chaulmestrol (chawl-mes'trol). The ethyl ester of chaulmoogra oil, used in the treatment of leprosy in doses of ♏15–60 (1.0–4.0).

chaulmoogra, chaulmugra (chawl-moo'grah), **chaulmaugra** (chawl-maw'grah). The ripe seed of *Hydnocarpus wightiana* or *Taraktogenos kurzii;* the oil, oleum chaulmoograe (U.S.), is employed in the treatment of leprosy and certain chronic dermatoses in doses of ♏2–6 (0.13–0.4).

Chaussier's are'ola (sho-se-a') [François *Chaussier* French physician, 1746–1828.] A ring of indurated tissue surrounding the lesion of malignant pustule. **C.'s line,** the median anteroposterior line of the corpus callosum. **C.'s sign,** severe pain in the epigastrium, a prodrome of eclampsia.

Chautard's test (sho-tar'). For acetone: the addition of a mixture of sulphurous acid and aqueous solution of magenta gives a violet color if the urine contains acetone.

Chauveau's bacte'rium (sho-vo') [Auguste *Chauveau,* Paris veterinary surgeon, 1827–1917.] *Bacillus anthracis symptomatici.*

Ch.B. Abbreviation for Chirurgiæ Bachelor, Bachelor of Surgery.

CH_3CH_2OH. Ethyl, or grain, alcohol.

$CHCl_3$. Chloroform.

$CH_3.COOH$. Acetic acid, $HC_2H_3O_2$.

Cheadle's disease' (che'dl) [Walter Butler *Cheadle,* English physician, 1836–1910.] Infantile scurvy.*

check. 1. To arrest or slow the course of anything, as of a disease. 2. To compare or review in order to ensure accuracy. **c. bite,** see under *bite.* **c. exper'iment,** control experiment.

check'erberry. Wintergreen, gaultheria.*

cheek (chēk) [A. S. *ceáce.*] Bucca, mala, the side of the face forming the lateral wall of the mouth. **c. bone,** os zygomaticum. **c. muscle,** buccinator. **c. teeth,** molar teeth.

cheese. The compressed casein of milk, variously altered by bacterial action and flavored.

cheesy (che'zĭ). Caseous, of the consistence of cottage cheese.

cheilectropion, cheilitis, etc. See *chilectropion,* etc.

cheiragra, cheiralgia, etc. See *chiragra, chiralgia,* etc

chek'an, chek'en, cheq'uen. The leaves of a South American plant, *Myrtus checken* or *Eugenia cheken;* employed in catarrhal affections of the respiratory and urinary tract in doses of ʒ1–2 (4.0–8.0) of a fluidextract.

chelen (ke'len). Ethyl chloride.

chelerythrine (kel-er'e-thrēn). Pyrrhopine, an alkaloid, $C_{21}H_{17}NO_4$, from chelidonium.

chelidon (kel'e-don) [G. *chelidōn,* a swallow, because of a fancied resemblance to the shape of a swallow's tail.] The cubital fossa or bend of the elbow.

chelid'onine (kel-id'on-ēn). Stylophorine, a crystalline alkaloid from chelidonium.

chelidonium (kel-e-do'nĭ-um). The dried plant, *Chelidonium majus,* great or garden celandine; nervous sedative and purgative in doses of ʒ½–2 (2.0–8.0); it is used in eclectic practice in diseases of the digestive apparatus, especially of the liver and gallbladder, in doses of 5 to 10 drops of the specific medicine in water several times a day.

cheloid (ke'loid) [G. *chēlē,* a claw, + *eidos,* resemblance.] A fibrous growth of the cicatricial type of connective tissue, arising in consequence of irritation and usually from a scar; keloid.

chelone (ke-lo'nĭ) [G. *chelōnē,* tortoise.] Balmony, employed in eclectic practice as a tonic to the digestive organs in small doses of 2 to 5 drops in water every hour or two, and as an anthelmintic in much larger single or repeated dose.

Chelsea pensioner (chel'se pen'shun-ur) [*Chelsea,* a district of London where is situated a hospital for invalid soldiers.] Confectio guaiaci composita.

chemasthenia (kem-as-the'nĭ-ă) [G. *chēmeia,* chemistry, + *astheneia,* weakness.] Chemiasthenia, sluggishness of the chemophysiological processes.

chemical (kem'ĭ-kal). Relating to chemistry, to the mutual relations and interaction of the elements, and to the phenomena resulting therefrom. **c. food,** syrupus phosphatum compositus (N.F.). **c. mess'enger,** autacoid; hormone or chalone (q.v.).

chemicocautery (kem''ĭ-ko-kaw'ter-ĭ) Chemical cautery, caustic, escharotic.

cheminosis (kem-ĭ-no'sis) [G. *chēmeia,* chemistry, + *nosos,* disease.] A disease caused by chemical noxa.

chemiotaxis (hem-ĭ-o-tak'sis). Chemotaxis.

chemise (shem-ēz') [Fr. shirt.] A square of linen tied to a catheter passed through its center; used to retain a tampon packed around the catheter inserted into a wound, such as that resulting from a perineal section.

chemism (kem'izm). Chemical action or influence

chemistry (kem'is-trĭ) [G. *chēmeia,* alchemy; *chymeia,* an infusion, from *chymos,* juice (?).] The science dealing with the intimate constitution of substances, the elements and their mutual reactions, and the phenomena resulting from the formation and decomposition of compounds. **analyt'ical c.,** the application of c. to the breaking up of compounds and the determination of their composition. **inorgan'ic c.,** the chemistry of compounds not containing carbon. **med'ical c.,** c. in its

relation to pharmacy, physiology, or any science connected with medicine. **metabol'ic c.,** physiological c. **organ'ic c.,** the c. of substances containing combustible carbon compounds. **physiolog'ical c.,** the c. of the living organism and of all its processes. **synthet'ic c.,** constructive c., that which has to do with the formation or building up of complex compounds by uniting and changing the more simple ones.

chemocautery (kem-o-kaw'tur-ĭ). Any substance such as caustic potash or Vienna paste, by the application of which tissue is destroyed.

chemoceptor (kem"o-sep'tor). One of the side chains or receptors in a living cell, having an affinity for and fixing the chemical substances or drugs.

chemoimmunity (kem-o-im-u'nĭ-tĭ) Immunochemistry.

chemoimmunology (kem-o-im-u-nol'o-jĭ). The science of immunochemistry.

chemoluminescence (kem"o-lu-min-es'ens). 1. Light produced by chemical action. 2. Radiation causing chemical action.

chemolysis (kem-ol'ĭ-sis) [G. *chēmeia*, chemistry, + *lysis*, solution.] Chemical decomposition.

chemophysiology (kem-o-fiz-ĭ-ol'o-jĭ). Physiological chemistry.

chemoreceptor (kem-o-re-sep'tor). Chemoceptor.

chemoresistance (kem-o-re-zis'tans) Immunity to the action of chemical poisons.

chemosis (ke-mo'sis) [G. *chēmē*, cockle] Edema of the ocular conjunctiva, forming a swelling around the cornea.

chemosynthesis (kem-o-sin'the-sĭs). The formation of certain definite compounds by chemical action.

chemotac'tic. Relating to chemotaxis.

chemotaxis (kem-o-tak'sis) [G. *chēmeia*, chemistry + *taxis*, orderly arrangement.] Reaction of living protoplasm to a chemical stimulus, whereby the cells are attracted (*positive c.*) or repelled (*negative c.*) by acids, alkalies, or other bodies exhibiting chemical properties; chemiotaxis chemotropism.

chemotherapy (kem-o-ther'a-pĭ) Treatment of infectious disease by means of chemical substances or drugs; see *therapia sterilisans*.

chemotic (ke-mot'ic). Relating to chemosis.

chemotropism (kem-ot'ro-pizm) [G. *chēmeia*, + *tropos*, direction, turn.] The capacity or impulse, possessed by cells or cellular organisms, to turn or progress in a certain direction under the influence of definite chemical stimuli; chemotaxis.

Chenopodia'ceæ. An order of dicotyledonous plants, the small flowers of which are clustered to form a dense inflorescence; it includes chenopodium, the beet, and spinach.

chenopodium (ke-no-po'dĭ-um) [G. *chēn*, goose, + *pous*(*pod*-), foot.] The dried ripe fruit of *Chenopodium ambrosioides*, American wormseed, Mexican tea, Jesuit tea; anthelmintic in dose of gr. 20 (1.3), or of 2 ounces (60.0) of a decoction of an ounce to the pint.

cheoplasty (ke'o-plas-tĭ) [G. *cheō*, I pour, + *plassō*, I form.] The manufacture of the base of an artificial denture by filling a mould with molten metal.

Cherchevski's disease' (sher-shev'ske) [Michael *Cherchevski*, Russian physician, contemporary.] Nervous ileus, false intestinal obstruction.

cheromania (ker-o-ma'nĭ-ah) [G. *chairō*, I rejoice, + *mania*, madness.] A form of insanity characterized by gaiety and exuberance of spirits.

cherophobia (ker-o-fo'bĭ-ah) [G. *chairō*, I rejoice, + *phobos*, fear.] An aversion to and morbid fear of gaiety.

cherr'y [L. *cerasus*.] The fruit of a species of *Prunus*. **c. lau'rel,** *Prunus laurocerasus*. **wild c.,** *Prunus serotina*, prunus* virginiana.

Chervin's meth'od (sher-vaṅ') [Claudius *Chervin*, French pedagogue, 1824–1896.] A gymnastic method of treating stuttering.

chest [A.S. *cest*, a box.] The thorax. **a'lar c.,** phthinoid* c. **bar'rel c.,** a c. permanently the shape of one during full inspiration, seen in cases of emphysema. **c. in'dex,** thoracic index.* **cobb'ler's c.,** characterized by a depression of the lower half of the sternum; seen in shoemakers and others whose occupation causes pressure to be made in this locality. **flat c.,** one in which the anteroposterior diameter is shorter than the average. **fo'veated c.,** funnel c. **funn'el c.,** funnel breast.* **phthin'oid c.,** see under *phthinoid*. **pter'ygoid c.,** phthinoid* c.

deformity, thoracocyllosis, pectus carinatum. **examination,** stethoscopy, thoracoscopy. **gas and pus in** pyopneumothorax. **gas and serum in,** hydropneumothorax **gas in,** pneumothorax, aerothorax **incision into,** thoracotomy, pleurotomy. **instrument for magnifying sounds in,** stethoscope, phonendoscope, stethophonometer, stethonoscope. **instrument for measuring curvature,** stethocyrtograph, stethokyrtometer, stethocyrtometer. **instrument for measuring movements,** pneograph, pneoscope, pneumoscope, pneumograph, pneumatograph, stethograph, stethometer, thoracometer. **muscular inflammation,** stethomyitis. **narrow,** stenothorax, thoracostenosis **pain,** pleurodynia, pleuralgia, thoracodynia, thoracalgia. **paralysis of muscles,** stethoparalysis. **puncture of,** paracentesis thoracis, thoracentesis, thoracocentesis, pleurocentesis. **pus in,** pyothorax. **serum in,** hydrothorax. **spasm of muscles,** stethospasm.

chest'nut. 1. Castanea. 2. In a horse, the rudiment of the nail or hoof of the internal digit or thumb; a horny growth on the middle or inferior third of the internal face of the hock.

chew [A.S. *ceowan*.] To masticate, to comminute with the teeth.

Cheyne's nystag'mus [See *Cheyne-Stokes*.] A nystagmus with a rhythm like that of Cheyne-Stokes respiration.

Cheyne-Stokes asth'ma (chān-stōks) [John *Cheyne*, Scotch physician, 1777–1836; William *Stokes*, Irish physician, 1804–1878.] The dyspnea of advanced myocardiac degeneration. **C.-S. respira'tion,** a type of breathing in which the respirations gradually increase in depth up to a certain point and then decrease; finally all respiration ceases for half a minute or so and then begins again as before.

CHI_3. Iodoform

C_2H_5I. Ethyl iodide

Chian tur'pentine (ki'an) [*Chios*, an island in the eastern Mediterranean] An exudation from *Pistacia terebinthus*, a small tree of Chios and regions to the eastward; has been used in cancer in doses of gr. 3–5 (0.2–0.3)

Chiari's net'work (ke-ah're) [Hans *Chiari*, German physician,* 1851] Fibers stretching across the cavity of the right atrium of the heart, thought to be the remains of the embryonic valves of the right venous sinus; they are very rarely present.

chiasm (ki'azm) [G. *chiasma*, two crossing lines.] A decussation or crossing of two tracts, such as tendons or nerves.

chiasma (ki-az'mah). Chiasm. **c. op'ticum,** optic chiasm, a flattened quadrangular body in front of the tuber cinereum and infundibulum, the point of crossing or decussation of the fibers of the optic nerves: most of the fibers cross to the

opposite side, some run directly forward on each side without crossing, some pass transversely on the posterior surface between the two optic tracts and others pass transversely on the anterior surface between the two optic nerves. **c. ten'dinum,** passage of the tendons of the flexor digitorum profundus through the intervals left by the splitting of the tendons of the flexor digitorum sublimis.

chiasmatic (ki-az-mat'ik). Relating to the optic chiasm. **c. syn'drome,** hypophysis* syndrome.

Chiazzi's operation (ke-at'se). Epiplopexy.

chick'en-breast. Pectus carinatum.

chick'en-pox. Varicella; an acute contagious disease, occurring usually in children only, marked by a sparse eruption of papules, becoming vesicles and then pustules, like that of smallpox though less severe; there are usually also mild constitutional symptoms. The incubation period is about 14 to 17 days.

chignon (she-nyoń'). Beigel's* disease.

chigo, chigre (che'go; che'gra) [Sp. from the Carib name.] Jigger.

chil'blain [E. *chill* + *blain*.] Pernio, frost bite, kibe, chimetlon; erythema of the hands and feet, with burning and itching, sometimes with chapping and ulceration, caused by damp cold.

child, pl. *chil'dren* [A.S. *cild*.] A young person, one who has not arrived at the age of puberty.

child'bearing. Pregnancy and parturition. **c. age,** the period in a woman's life between puberty and the menopause.

child'bed. Puerperium; the condition during and immediately following the giving birth to a child **c. fe'ver,** puerperal* fever, puerperal septicemia

child'birth. Parturition, labor, delivery.

child'hood. 1. The period of life between infancy and puberty. 2. In dentistry the period between the first appearance of the milk teeth and the complete formation of the roots of all the permanent teeth except the third molars; the childhood period of the permanent teeth is the time between their first appearance and the complete formation of all the roots except those of the third molars.

chilectomy (ki-lek'to-mĭ) [G. *cheilos*, lip, + *ektomē*, excision.] Chiseling away bony irregularities on the lips of a joint cavity, such as the cotyloid, which interfere with movements of the joint.

chilectropion (ki-lek-tro'pĭ-on) [G. *cheilos*, lip, + *ektropos*, a turning out.] Eversion of the lips or a lip.

chilitis (ki-li'(le')tis) [G. *cheilos*, lip, + *-itis*.] Inflammation of the lips or of a lip. **c. exfoliati'va,** seborrheic dermatitis affecting the vermilion border of the lips. **c. glandula'ris,** myxadenitis labialis.

chill [A.S. *cele*, cold.] 1. A sensation of cold. 2. Rigor, a feeling of cold with shivering and pallor, accompanied by an elevation of temperature in the interior of the body. It may be caused by excessive fear, joy, or other psychic emotion, or exposure to cold, or be a prodromal symptom of an infectious disease due to the invasion of the blood by the toxins, or an expression of poisoning by retained products of catabolism or by drugs. **conges'tive c.,** a form of pernicious malaria in which the paroxysm is accompanied by congestion of the gastroenteric tract and profuse diarrhea preceded by a chill, vomiting, and prostration.

chills and fe'ver. Malaria.

chilognathopalatoschisis (ki-log-nath"o-pal-at-os'kĭ-sis) [G. *cheilos*, lip, + *gnathos*, jaw, + L. *palatum*, palate, + G. *schisis*, fissure.] Chilognathouranoschisis, harelip and cleft palate.

chilognathouranoschisis (ki-log-nath"o-u-ran-os'ki-sis) [G. *cheilos*, lip, + *gnathos*, jaw, + *ouranos*-palate, + *schisis*, fissure.] Harelip with cleft palate

Chilomastix (ki-lo-mas'tiks) [G. *cheilos* lip, + *mastix*, whip.] Cercomonas, a genus of *Mastigophora*, one species of which, *C. mesnili* is parasitic in the human intestine.

chiloplasty (ki'lo-plas-tĭ) [G. *cheilos*, lip, + *plassō*, I form.] Operative repair of defects or malformations of the lip; plastic surgery of the lips.

chilopodiasis (ki-lo-po-di'ă-sis) [G. *cheilos*, lip, + *pous* (*pod-*), foot, + *-iasis*.] Invasion of one of the cavities, especially the nasal cavity, by a species of the *Chilopoda* or centipede family.

chiloschisis (ki-los'kĭ-sis) [G. *cheilos*, lip, + *schisis* fissure.] Harelip.

chilostomatoplasty (ki-los-to'mă-to-plas-tĭ) [G. *cheilos*, lip, + *stoma*(*stomat-*), mouth, + *plassō*, I mould.] An operation for harelip.

chilotomy (ki-lot'o-mĭ) [G. *cheilos*, lip, + *tomē*, incision.] 1. Excision of a portion of the lip, as for the removal of an epithelioma. 2. Cutting away an overgrowth near the articular end of a long bone which interferes with movement.

chimaphila (kim-af'e-lah) [G. *cheima*, winter, + *philos*, loving.] (N.F.) The dried leaves of *Chimaphila umbellata*, pipsissewa, Prince's pine; diuretic and alterative, in doses of gr. 15–30 (1.0–2.0); employed in eclectic practice in genito-urinary affections attended with frequent micturition, tenesmus, smarting, and a mucopurulent sediment in the urine.

chimaphilin (kim-af'il-in). A diuretic principle, $C_{24}H_{21}O_4$, from chimaphila; dose, gr. 3 (0.2).

chimelton (ki-met'lon) [G.] Chilblains; frost bite.

chim'ney-sweeps' can'cer. Epithelioma of the scrotum occurring in chimney-sweeps as a result. it is thought, of long continued irritation by soot particles.

chimogene(ki'mo-jēn) [G. *cheimōn*,winter, + *gennaō*. I produce.] Trade name of a volatile liquid used to produce local anesthesia by congelation.

chin [A.S. *cin*.] Mentum, the prominence formed by the anterior projection of the mandible, or lower jaw. **double c.,** buccula.

china (ki'nah). Cinchona.

chinaphenin (ki"nah-fen'in). Phenetidin quinine-carbonic-acid ester; a white tasteless powder, employed as an antipyretic in doses of gr. 5–15 (0.3–1.0); used for whooping-cough in doses of gr. 2–5 (0.13–0.3)

chinaphthol (ki-naf'thol). Quinaphthol, quinine betanaphthol-monosulphonate; a yellow crystalline powder, containing 42 per cent. of quinine; employed in intestinal tuberculosis, dysentery, acute rheumatism, and other affections in doses of gr. 5–15 (0.3–1.0).

China-root. The rhizome of *Smilax china*.

chinaseptol (ki-nă-sep'tol). Quinaseptol.

chin-cough. Whooping-cough.

chineonal (kin'e-o-nal). Quinine diethylbarbiturate, nerve sedative in doses of gr. 5–10(0.3–0.6).

chinin (ki'nin). Quinine.

chinioform (kĭn-i'o-form). Sodium-iodoxyquinoline-sulphonate; employed in the treatment of amebic dysentery in dose of 4–15 gr. (0.25–1.0) three times a day; it occurs as a bright yellow, odorless, bitter powder, with a sweetish aftertaste.

chinoform (ki'no-form). A compound of formaldehyde and cinchotannic acid, employed as an intestinal antiseptic.
chinoidin (kin-oy'din). Quinoidine.
chinol (ki'nol). A synthetic antipyretic and analgesic; dose, gr. 3–5 (0.2–0.3).
chinoline (kin'o-lēn). Quinoline.
chinone (ki'nōn). Quinone.
chinopyrin (ki"no-pi'rin). Quinopyrine.
chinosol (kin'o-sol). Quinosol.
chinotropin (ki-no-tro'pin). Quinate of urotropin; urinary antiseptic; dose, gr. 5–15 (0.3–1.0).
chionablepsia (ki-ōn-a-blep'sĭ-ah) [G. *chiōn*, snow, + *ablepsia*, blindness.] Snow-blindness.
chionan'thin. A dried extract from the bark of chionanthus; a bitter brown powder, employed in eclectic medicine as a diuretic and purgative in doses of gr. 1–3 (0.06–0.2).
chionanthus (ki-o-nan'thus) [G. *chiōn*, snow, + *anthos*, flower.] (N.F.) Fringe tree bark, old man's beard, the dried bark of the root of *Chionanthus virginica*, snowdrop tree; employed as an aperient and diuretic in diseases of the liver with jaundice and clay-colored stools, in doses of ℥30 (2.0) of the N.F. fluidextract, or of ℥5–10 (0.3–0.6) of the specific eclectic preparation.
Chipault's meth'od (she-po') [A. *Chipault*, Parisian surgeon, contemporary.] Straightening of the spine, in the angular curvature of Pott's disease, and then lacing the spinous processes together by silver wire.
chip-blower (chip'blo-ur). An instrument for blowing the dust out of a tooth cavity which is being excavated for a filling; it consists of a rubber bulb with metal nozzle.
Chiracanthus (ki-ră-kan'thus) [G. *cheir*, hand, + *akantha*, thorn.] A genus of nematoid worms, now called Gnathostoma.
chiragra (ki-rag'ra) [G. *cheir*, hand, + *agra*, seizure] Gout in the hand.
chiral'gia (ki-ral'jĭ-ah) [G. *cheir*, hand, + *algos*, pain.] Pain, especially nontraumatic or neuralgic pain, in the hand.
chiralkol (ki-ral'kol) [G. *cheir*, hand, + *alcohol*.] Trade name of a solid alcohol soap, said to contain from 70 to 80 per cent. or more of alcohol combined with palmitin, cocoa butter, or nut fat; recommended as a disinfectant of the hands.
chirapsia (ki-rah'sĭ-ah) [G. *cheir*, hand, + *hapsis*, a touching.] Rubbing or friction with the hand.
chirata (che-rah'tah, ki-ra'tah) [Hindu.] N.F. and Br.). The dried plant, *Swertia chirayita*, chiretta, a gentian of the Himalayas; stomachic and tonic in doses of gr. 10–30 (0.6–2.0).
chir'atin, chirett'in. A bitter principle, $C_{26}H_{48}O_{15}$, from chirata.
chiret'ta. Chirata.
chirocinesthesia, chirocinæsthesia (ki-ro-sin-es-the'-zĭ-ah) [G. *cheir*, hand, + *kinēsis*, movement, + *aisthēsis*, sensation.] The subjective sensation of movements of the hand.
chirocinesthetic, chirocinæsthetic (ki-ro-sin-es-thet'-ik). Relating to chirocinesthesia.
chirognomy (ki-rog'no-mi) [G. *cheir*, hand, + *gnōmōn*, a judge.] Physiognomy of the hand, study of the hand as an index of character.
chirognostic (ki-rog-nos'tik) [G. *cheir*, hand, + *gnōstikos*, good at knowing.] Able to recognize the hand, or to distinguish between right and left. **c. feeling**, the sense of "sidedness," the power to recognize, with eyes closed, which side is touched.
chirokinesthesia, chirokinæsthesia (ki-ro-kin-es-the'zĭ-ah). Chirocinesthesia.
chirokinesthetic, chirokinæsthetic (ki-ro-kin-es-thet'ik). Chirocinesthetic.
chirol (ki'rol) [G. *cheir*, hand, + L. *oleum*, oil.] An ethereal and alcoholic solution of various resins and oils, used as an antiseptic wash for the hands.
chiromegaly (ki-ro-meg'al-ĭ) [G. *cheir*, hand, + *megas* (*megal-*), large.] Abnormal size of one or both hands; macrocheilia.
chiropodist (ki-rop'o-dist) [G. *cheir*, hand, + *pous*(*pod-*), foot.] A non-medical person who treats corns, callosities, and other minor troubles of the feet.
chiropodol'ogy (ki-rop-o-dol'o-jĭ) [G. *cheir*, hand, + *pous*(*pod-*), foot, + *-logia*.] 1. The study of treatment of the minor ailments of the feet, such as corns, bunions, in-growing nail, etc. 2. A treatise on those affections.
chiropody (ki-rop'o-dĭ). Chiropodology (1).
chiropompholyx (ki-ro-pom'fo-liks) [G. *cheir*, hand.] Same as pompholyx.
chiropractic (ki-ro-prak'tik) [G. *cheir*, hand, + *praktikos*, efficient.] "The science that teaches health in anatomical relation, and disease in or from anatomical disrelation. The art of Chiropractic consists in the various means of restoring anatomical relation through the joints of the skeletal frame by a process of adjusting by hand." (Carver.) "A system of adjustment consisting of palpation of the spinal column to ascertain vertebral subluxations, followed by the adjustment of them by hand, in order to relieve pressure upon nerves at the intervertebral foramina so that nerve force may flow freely from the brain to the rest of the body." (Palmer.)
chiropractor (ki-ro-prak'tor) [G. *cheir*, hand, + *praktōr*, agent.] One who treats morbid conditions according to the chiropractic method.
chirospasm (ki'ro-spazm) [G. *cheir*, hand, + *spasmos*, spasm.] Writers' cramp or other spasmodic affection of the muscles of the hand.
chirurgeon (ki-rur'jon) [G. *cheir*, hand, + *ergon*, work.] Surgeon.
chirurgery (ki-rur'jer-ĭ.) [G. *cheirourgia*.] Surgery.
chirurgical (ki-rur'jĭ-kal). Surgical.
chis'el-frac'ture. A fracture of the head of the radius in which a segment is obliquely detached, though usually held by periosteum at its lower end.
chitin (ki'tin) [G. *chitōn*, a coat or tunic.] A keratoid substance forming largely the exoskeletal and other hard parts of non-vertebrates.
chitinous (ki'tin-us). Of or relating to chitin. **c. degenera'tion**, amyloid degeneration.*
chitoneure (ki'to-nūr) [G. *chiton*, tunic, + *neuron*, sinew, nerve.] A collective term for the sheaths of nerves, nerve bundles, and nerve fibrils, comprising the perineurium, neurilemma, sheath of Schwann, etc.
chitonitis (ki-ton-i'(e')tis) [G. *chitōn*, tunic, + *-itis*.] Inflammation of any investing membrane, such as the visceral pleura or peritoneum.
Chitt'enden's stand'ard di'et [Russell Henry *Chittenden*, American physiological chemist, *1856.] A diet containing from 47 to 55 grams of protein, said to be sufficient to maintain the nitrogenous equilibrium in an adult male.
chittim-wood bark (kit'im). Rhamnus purshiana.
Chlamydobacteriaceæ (klam"e-do-bak-te"re-a'se-e) [G. *chlamys*(*chlamyd-*), mantle.] A family of the order *Chlamydobacteriales*, the five genera of which are all water organisms.
Chlamydobacteriales[0] (klam-ĭ-do-bak-te-rĭ-a'lez). [G. *chlamys*, a mantle, + *bacterium*, + *-ales*.]

An order of *Schizomycetes* consisting of filamentous forms, often ensheathed, without endospores, sometimes twisted, or with pseudodichotomous branching. The single family of this order is *Chlamydobacteriaceæ*, with five genera of water organisms.

chlam'ydospore [G. *chlamys(chlamyd-)*, cloak.] A variety of the arthrospore, which becomes encysted in a chitin-like envelope, composed of cytoplasm, and containing food material.

Chlamydozoa (klam″e-do-zo'ah) [G. *chlamys*, a mantle, + *zōon*, an animal.] 1. A term applied to a collective group of minute animal parasites which are extracellular or intracellular; in the latter case their presence excites a reaction in the cell which forms for them a capsule or mantle. 2. Filtrable viruses.

chloasma (klo-az'mah) [G. *chloazō*, I become green.] The occurrence of light brown patches of irregular shape and size on the skin of the face and elsewhere; the pigmented patches are also called *moth patches* and *liver spots*. **c. bronzi'num,** tropical mask, a bronze colored pigmentation occurring in gradually increasing areas on the face, neck, and chest in persons exposed continuously to the tropical sun. **c. phthis'icum,** pigmentation of the chest in pulmonary tuberculosis **c. uteri'num,** c. of the face occurring in pregnancy and in diseases of the uterus or ovaries. **idiopath'ic c.,** c. occurring from external irritation, such as heat (*c. calor'icum*), scratching (*c. traumat'icum*), local poisoning (*c. tox'icum*), etc **symptomat'ic c.,** c. occurring in the subjects of various systemic affections, such as syphilis or malaria.

chlorace'tic acid. An acetic acid in which one or more of the hydrogen atoms are replaced by chlorine; according to the number of atoms so displaced the acid is called *monochloracetic* (1 atom), *dichloracetic* (2 atoms), or *trichloracetic* (3 atoms) acid.

chloracetiza'tion. The production of local anesthesia by the application of a mixture of chloroform and glacial acetic acid.

chlo'ral. Chloralum, trichloraldehyde, $CCl_3.CHO$, anhydrous chloral, a thin oily liquid of a pungent odor, formed by the action of chlorine gas on alcohol. **c. camphora'tum** (N.F.), camphorated chloral; a liquid prepared by triturating together equal parts of camphor and chloral hydrate; employed externally as an anodyne in neuralgia. **c. hy'drate,** chloralis hydras (U.S.).

chloralam'ide. Chloral-ammonia. Incorrectly applied to chloralformamide.

chloralam'ine. Chloralformamidum.

chloralammo'nia. Chloralamide, a white crystalline powder; hypnotic and analgesic, in doses of gr. 15–30 (1.0–2.0).

chloralam'ylene hy'drate. Dormiol, formed by mixing anhydrous chloral and amylene hydrate; a colorless fluid employed as an hypnotic in doses of ♏7½–15 (0.5–1.0).

chloralbacid (klo-ral-bas'id). A yellowish white powder, a compound of chloral and albumin; recommended in gastric and intestinal indigestion, in doses of gr. 15–30 (1.0–2.0).

chlo'ral-caf'feine. Made by mixing 10 parts of caffeine and 7.8 parts of chloral hydrate in a concentrated alcoholic or aqueous solution and evaporating; occurs in lustrous leaflets; hypnotic and sedative in doses of gr. 3–6 (0.2–0.4).

chlo″ralcam″phorox'ime. A white crystalline powder, a compound of camphor, chloral hydrate, and an oxime; hypnotic and antiseptic.

chloralfor″mami'dum. Chloralamide, formamidated chloral, $C_3H_4O_2Cl_3N$, derived from anhydrous chloral by the action of formamide; hypnotic and analgesic in doses of gr. 10–30 (0.6–2.0).

chloral'imide. Made by heating chloralamide or by the action of ammonium acetate on chloral hydrate; occurs in colorless, tasteless, and odorless crystals; hypnotic and analgesic in doses of gr. 15–45 (1.0–3.0).

chlora'lis hy'dras (U.S., Br.). Chloralum hydratum (U.S. IX), chloral hydras (Br. '14), chloral hydrate, $CCl_3CHO.H_2O$, occurs in colorless transparent crystals, with an aromatic and slightly acrid odor and a slightly bitter caustic taste, soluble in water and alcohol; hypnotic and analgesic in doses of gr. 5–10 (0.3–0.6).

chlo'ralism. The habitual use of chloral as an intoxicant, and the symptoms caused thereby.

chloralose (klo'ral-ōz). Made by heating anhydrous chloral with glucose; colorless crystals of bitter taste; hypnotic in doses of gr. 3–12 (0.2–0.8).

chloralox'ime. A compound of chloral hydrate with an oxime.

chlora'lum. Chloral.

chloralurethane (klo-ral-u're-thān). Ural, made by heating chloral with urethane and treating with hydrochloric and sulphuric acids; occurs in colorless crystals; hypnotic in doses of gr. 10–45 (0.6–3.0).

chloramina (klor-ă-me'nŭ) (U.S., Br.). Chloramine-T, sodium paratoluenesulphonchloramide, $C_6H_4(CH_3)(SO_2NNaCl).3H_2O$; occurs as white or faintly yellow crystals or a crystalline powder having a slight odor of chlorine, soluble in 7 parts of water; it contains not less than 11.5 and not more than 13 per cent. of active chlorine; it is nontoxic but strongly antiseptic and is employed in 0.5 to 4 per cent. solution in the irrigation of wounds and infected cavities; dichloramina[1] has similar properties, but is soluble in oil, not in water.

chloramine (klor'ă-mēn). Chloramina (U.S.). **c.B.,** sodium benzene sulphonechloramine, a nontoxic antiseptic substance employed in wound irrigation as a substitute for c.T. **c.T.,** chloramina (U.S.).

chloranemia, chloranæmia (klor-an-e'mĭ-ah) [*chlorosis* + *anemia*.] A chlorosis-like anemia occurring in tuberculosis, cancer, and other cachectic conditions.

chloran'odyne. Trade name of a mixture containing chloroform, morphine, cannabis indica, and hydrocyanic acid; anodyne in doses of ♏15(1.0)

chlo'rate. A salt of chloric acid.

chlorazene (klor'ă-zēn). Trade name of a special make of chloramine-T.

chlorbutanol (klor-bu'tan ol). Chloretone.

chlorbutol (klor-bu'tol) (Br.) Chloretone, chlorbutanol.

chlorcam'phor. A compound of camphor and chlorine.

chlorcosane (klor'ko-sān). Trade name of paraffinum* chlorinatum (U.S.).

chlore'mia, chloræ'mia. Chlorosis.

chlorephidrosis (klor-ef-I-dro'sis) [G. *chlōros*, green, + *ephidrōsis*, perspiration.] A greenish discoloration of the sweat.

chloreth'yl. Ethyl* chloride.

chloretone (klo're-tōn). Acetone-chloroform, chlorbutol (Br.), tertiary trichlorbutyl-alcohol, $CCl_3.C(OH),CH_3.CH_3$, occurring in white crystals of camphor-like odor and taste; hypnotic,

sedative, and local anesthetic in doses of gr. 5–20 (0.3–1.3).

hlo'ric. Relating to chlorine; noting compounds containing a smaller proportion of chlorine than the chlorous compounds. **c. acid,** a colorless, very acid liquid, $HClO_3$; it forms stable salts, but is itself easily decomposed. **c. e'ther,** spiritus* chloroformi.

hlo'ride. A compound of chlorine with another element.

hloridimetry (klor-ĭ-dim'e-trĭ) [*chloride* + G. *metron*, measure.] The process of determining the amount of chlorides in the urine or other fluid.

hlo'rinated. Containing chlorine.

hlorine (klo'rēn, klo'rin) [G. *chlōros*, yellowish green.] Chlorum, a greenish, irritating, gaseous element, symbol Cl, atomic weight 35.46; disinfectant and bleaching in the form of calcium chloride or of chlorine water, aqua* chlori. **c. group,** the four univalent metalloids, chlorine, bromine, iodine, and fluorine; the halogens; they form monobasic acids with hydrogen, and their hydroxides (fluorine forms none) are also monobasic acids. **c. water,** aqua chlori (U.S. 1890) liquor chlori compositus (U.S. 1900).

hlo'rite. A salt of chlorous acid

hlormeth'yl. Methyl chloride

hloroane'mia, chloroanæ'mia. Chloranemia.

hlorodyne (klo'ro-dīn). Trade name of an anodyne mixture of chloroform, cannabis indica, hydrocyanic acid, and capsicum; dose, ♏5–10 (0.3–0.6).

hloroflagell'ida [G. *chlōros*, green.] An order of the *Phytoflagellata*, the individuals of which have green chromatophores

hloroblast (klo'ro-blast) [G. *chlōros*, yellowish green, + *blastos*, germ.] Erythroblast.

hlo'roform. Chloroformum. **ac'etone c.,** chloretone. **delayed c. pois'oning,** the occurrence of grave symptoms, usually ending in death, coming on in from a few hours to several days after chloroform anesthesia; it is assumed to be due to autointoxication resulting from hepatic inadequacy in cases of fatty liver, the suppression of function being aggravated by the shock and the presence of chloroform in the blood.

hlorofor'min. A toxin extracted from tubercle bacilli by means of chloroform

hlo'roformism. The habit of chloroform inhalation and the symptoms caused thereby.

hlorofor'mum, chlo'roform (U.S. and Br.) Trichloromethane, methylene trichloride, $CHCl_3$, a heavy colorless liquid of sweetish taste and characteristic odor, prepared from alcohol or acetone by the action of chlorinated lime; employed by inhalation to produce general anesthesia, and internally as an anodyne, sedative, and antispasmodic in doses of ♏3–5 (0.2–0.3).

hlorogenine (klo-roj'en-ēn). Alstonine, an alkaloid, $C_{21}H_{21}N_2O_4$, from the bark of *Alstonia constricta*, Australian fever bark; antiperiodic, antipyretic, and tonic.

hlo'rol. Trade name of a liquid disinfectant, said to be an aqueous solution of mercuric chloride, sodium chloride, hydrochloric acid, and copper sulphate.

hlo'rolin. Trade name of a liquid disinfectant said to contain monochlorphenol and trichlor phenol.

hlorolymphosarcoma (klo"ro-lim"fo-sar-ko'mah). A variety of chlorosarcoma.

hloro'ma [G. *chlōros*, green, + *-ōma*] A condition marked by the occurrence of multiple growths, often of a greenish or greenish yellow color, on the periosteum of the bones of the face or skull and occasionally on the vertebræ, associated with the presence in the blood of numbers of lymphocytes or myeloblasts; green cancer, chlorosarcoma.

chloromorphine (klo-ro-mor'fēn). A product occurring as an intermediate body in the conversion of morphine into apomorphine; it is said to have a sedative action, but with a tendency to cause paralysis of the respiratory center.

chloromyeloma (klo-ro-mi-el-o'mah) [G. *chlōros*, green, + *myelos*, marrow, + *-ōma*.] Chloroma associated with multiple growths in the bone-marrow.

chloroper'cha. A solution of guttapercha in chloroform, used in dentistry as a protective varnish and for filling minute cavities.

chlorophane (klo'ro-fān) [G. *chlōros*, greenish yellow, + *phainō*, I show.] A greenish yellow pigment in the retina

chlorophe'nol. One of several substitution products, obtained by the action of chlorine on phenol, employed as antiseptics; see *trichlorophenol*. **c. sal'icylate,** chlorosalol.

chlo'rophyl, chlo'rophyll [G. *chlōros*, yellowish green, + *phyllon*, leaf.] The green pigment of plants extracted by ether and alcohol; preparations are made from it for the treatment of chlorosis and anemia.

chloropicrin (klo-ro-pik'rin) [*chlorine* + *picrin*.] Chlorpicrin, nitrochloroform, a pungent liquid (CCl_3NO_2) the vapor of which was used as an asphyxiant gas in the World War.

chloroplas'tid [G *chlōros*, green, + *plastos*, formed.] A granule of chlorophyl.

chlorop'sia [G. *chlōros*, yellowish green, + *opsis* eyesight.] Green vision, a condition in which all objects appear to be colored green

chlorosal'ol. Chlorophenol salicylate, an external antiseptic.

chlorosarcolymphadeny (klo"ro-sar"ko-limf-ad'en-ĭ) [chlorosarcoma + lymphadenia.] Chlorolymphosarcoma.

chlorosarco'ma [G. *chlōros*, green, + *sarx*, flesh, + *-ōma*.] A sarcomatous variant of chloroma.

chlorosarcomyeloma (klo"ro-sar"ko-mi-el-o'mah). A sarcomatous variant of chloromyeloma.

chloro'sis [G. *chlōros*, green] A form of anemia, occurring chiefly in young girls; it is characterized by a marked reduction in the hemoglobin, out of proportion to the diminution in number of red blood-cells. **Egyp'tian c.,** ancylostomiasis.

chlorostigma (klo-ros'tig-mah) [G *chlōros*, green, + *stigma*, spot.] The plant *Chlorostigma stuckertianum*, growing in the Argentine Republic; employed as a galactogogue.

chlorot'ic. Relating to or suffering from chlorosis.

chlo'rous. Relating to chlorine; noting compounds of chlorine containing a larger proportion of the element than the chloric compounds. **c. acid,** $HClO_2$, an acid forming chlorites with bases.

chloroxyl (klor-oks'ĭl). Trade name of cinchophen hydrochloride, a yellow crystalline powder with an astringent taste, insoluble in water and only slightly soluble in alcohol; used to meet the same indications and in the same dose as cinchophen.

Chloroxylon swietenia (klo-roks'i-lon swe-te'nĭ-ah) [G. *chlōros*, green, + *xylon*, wood; van *Swieten*.*] East Indian satinwood.

chloroxylonine (klo-rok-sil'o-nēn). A crystalline alkaloid, $C_{22}H_{23}NO_7$, derived from East Indian satinwood, *Chloroxylon swietenia*, locally irritating and often causing a dermatitis in workers in this wood.

chlo'rozone. Trade name of a disinfectant liquid containing chlorine and sodium hydroxide.
chlorphe'nol. Chlorophenol.
chlorpicrin (klor-pik'rin). Chloropicrin.
chlo'rum [L.] Chlorine. **c. solu'tum,** aqua* chlori, chlorine water
chloryl (klo'ril). Trade name of an anesthetic mixture of ethyl and methyl chlorides.
$C_6H_5(NH_2)$. Aniline.
CH_2NO_2. Carbamic acid.
$C_3H_5(NO_3)_3$. Trinitroglycerol, nitroglycerin, glonoin.
$C_5H_4N_4O_3$. Uric acid.
$C_5H_{11}NO_2$. Amyl nitrite
C_6H_5NO. Acetanilide.
$C_6H_2(NO_2)_3OH$. Picric acid, trinitrophenol.
CH_2O. Formaldehyde H.CHO.
CH_2O_2. Formic acid.
CH_4O. Methyl alcohol, wood alcohol.
$C_2H_2O_4$. Oxalic acid, COOH.COOH.
$C_2H_4O_2$. Acetic acid, $CH_3.COOH$, or $HC_2H_3O_2$.
C_2H_6O. Ethyl, or grain, alcohol.
$(C_2H_5)_2O$. Sulphuric ether.
C_3H_6O. Acetone, dimethyl ketone.
$C_3H_6O_3$. Lactic acid
$C_3H_8O_3$. Glycerol, glycerin.
$C_4H_6O_2$. Crotonic acid.
$C_4H_6O_5$. Malic acid.
$C_4H_6O_6$. Tartaric acid
$C_4H_8O_2$. Isobutyric acid.
$C_4H_8O_2$. Normal butyric acid.
$C_4H_{10}O$. Sulphuric ether.
$C_5H_{10}O_2$. Valerianic, or valeric, acid, $C_4H_9.COOH$
$C_5H_{12}O$. Amyl alcohol, fusel oil.
C_6H_6O. Carbolic acid, phenol.
$C_6H_8O_7$. Citric acid.
$C_6H_{10}O_5$. Cellulose, starch
$C_6H_{12}O_6$. Grape sugar.
$C_7H_4O_7$. Meconic acid.
$C_7H_6O_2$. Benzoic acid, $C_6H_5.COOH$
$C_7H_6O_3$. Salicylic acid, $C_6H_4.OH.COOH$
$C_7H_6O_5$. Gallic acid.
$C_{12}H_{22}O_{11}$. Cane sugar.
$C_{14}H_{10}O_9$. Tannic acid, gallotannic acid
$C_{15}H_{10}O_4$. Chrysophanic acid
$C_{18}H_{34}O_2$. Oleic acid
$C_{18}H_{36}O_2$. Stearic acid, $C_{17}H_{35}.COOH$.
choana, pl. *choa'næ* (ko-a'nah) [L. from G *choanē*, funnel.] An infundibulum; specifically [BNA] posterior naris, the opening into the nasopharynx of the nasal fossa on either side.
choanate (ko'an-āt). Having a funnel, *i.e.* with a ring or collar, noting the members of the *Choanoflagellata* and certain other protozoans.
Choanoflagellata (ko"an-o-flaj-el-a'tah) [G. *choanē*, a funnel.] A subclass of *Zoömastigophora*, the members of which present a ring or collar of protoplasm around the base of the flagellum.
choanoid (ko'an-oyd) [G. *choanē*, funnel, + *eidos*, resemblance.] Funnel-shaped, infundibuliform.
choc en retour (shok-oń-re-toor') [Fr. return shock.] 1. The falling of the fetus against the finger-tip in ballottement. 2. Infection of the mother from a syphilitic fetus.
choc'olate [Mex. *choco*, cacao, + *atl*, water.] A substance made by grinding the roasted seeds of cacao, or theobroma, and mixing with sugar, vanilla, cinnamon, or other flavor; also a beverage made by dissolving this in milk or water.
C_2H_5OH. Alcohol ethyl alcohol.
C_6H_5OH. Carbolic acid, phenol.
$C_6H_4.OH.COOH$. Salicylic acid.
choke. To prevent respiration by compression or obstruction of the larynx or trachea. **thorac'ic c.** obstruction by a foreign body in the thoracic portion of the esophagus of the horse.
choke'damp. Carbonic dioxide or anhydride, CO_2.
choked disc. Papillitis, with excessive serous infiltration.
chokes. Caisson disease in which dyspnea and coughing are the most marked symptoms.
cholæmia. Cholemia
cholagogic (kol-ă-goj'ik). Cholagogue (1).
cholagogue (kol'ă-gog) [G. *cholē*, bile, + *agōgos*, leading.] 1. Promoting the flow of bile. 2. An agent which increases the flow of bile.
cholalic (ko-lal'ik). Relating to bile. **c. acid,** cholic acid, a bile acid, $C_{24}H_{40}O_5$, found in the feces.
cholangeitis (ko-lan-je-i'(e')tis). Cholangitis.
cholangiostomy (ko-lan-jī-os'to-mī) [G. *cholē*, bile, + *angeion*, vessel, + *stoma*, mouth.] The surgical formation of a fistula into a bile-duct.
cholangiotomy (ko-lan-jī-ot'o-mī) [G. *cholē*, bile, + *angeion*, vessel, + *tomē*, incision.] Incision into a bile-duct.
cholangitis (ko-lan-ji'(je')tis) [G. *cholē*, bile, + *angeion*, vessel, + *-itis*.] Angiocholitis, inflammation of a bile-duct.
cholecyanin (ko-le-si'an-in) [G. *cholē*, bile, + *kyanos*, blue.] A blue pigment derived from biliverdin; bilicyanin.
cholecyst (ko'le-sist). Gall-bladder, vesica* fellea [BNA].
cholecystalgia (ko-le-sis-tal'jī-ah) [G. *cholē*, bile, + *kystis*, bladder, + *algos*, pain.] Biliary colic.
cholecystectasia (ko-lē-sis-tek-ta'zī-ah) [G. *cholē*, bile, + *kystis*, bladder, + *ektasis*, extension.] Dilatation of the gall-bladder.
cholecystectomy (ko-le-sis-tek'to-mī) [G *cholē*, bile, + *kystis*, bladder, + *ektomē*, excision.] Surgical removal of the gall-bladder.
cholecystendysis (ko-le-sis-ten'dī-sis) [G. *cholē*, bile, + *kystis*, bladder, + *endysis*, an entering in.] Ideal cholecystotomy, removal of a gallstone by incision into the gall-bladder, extraction of the calculus, and suture of the wound in the bladder and the abdominal wall.
cholecystenterorrhaphy (ko-le-sist-en-ter-or'ă-fī) [G. *cholē*, bile, + *kystis*, bladder, + *enteron*, intestine, + *rhaphē*, suture.] Suture of the gall-bladder to the intestinal wall.
cholecystenterostomy (ko-le-sist-en-ter-os'to-mī) [G. *cholē*, bile, + *kystis*, bladder, + *enteron*, intestine, + *stoma*, mouth.] Surgical formation of a direct communication between the gall-bladder and the intestine.
cholecystic (ko-le-sis'tik). Relating to the cholecyst, or gall-bladder.
cholecystis (ko-le-sis'tis) [G. *chole*, bile, + *kystis*, bladder.] Gall-bladder, vesica* fellea [BNA].
cholecystitis (ko-le-sis-ti'(te')tis) [G. *cholē*, bile, + *kystis*, bladder, + *-itis*.] Inflammation of the gall-bladder.
cholecystocolostomy (ko-le-sis-to-ko-los'to-mī) [G. *cholē*, bile, + *kystis*, bladder, + *kōlon*, colon, + *stoma*, mouth.] Operative establishment of a communication between the gall-bladder and the colon.
cholecystocolotomy (ko-le-sis-to-ko-lot'o-mī) [G. *cholē*, bile, + *kystis*, bladder, + *kōlon*, colon, + *tomē*, incision.] Incision into the gall-bladder and the colon.
cholecystoduodenostomy (ko-le-sis'to-du-o-de-nos'to-mī) [G. *cholē*, bile, + *kystis*, bladder, + L. *duodenum* + G. *stoma*, mouth.] Operative establishment of a direct communication between the gall-bladder and the duodenum.

cholecystogastrostomy (ko-le-sis″to-gas-tros'to-mĭ) [G. *cholē*, bile, + *kystis*, bladder, + *gastēr*, stomach, + *stoma*, mouth.] The establishment of a communication between the gall-bladder and the stomach.

cholecystoileostomy (ko-le-sis-to-il-e-os'to-mĭ) [G. *cholē*, bile, + *kystis*, bladder, + L. *ileum* + G. *stoma*, mouth.] The operative establishment of a communication between the gall-bladder and the ileum.

cholecystojejunostomy (ko-le-sis-to-je-ju-nos'to-mĭ) [G. *cholē*, bile, + *kystis*, bladder, + L. *jejunum* + G. *stoma*, mouth.] The surgical establishment of a communication between the gall-bladder and the jejunum.

cholecystolithiasis (ko-le-sis-to-lith-i'ă-sis) [G. *cholē*, bile, + *kystis*, bladder, + *lithos*, stone.] Cholecystic calculus, the presence of one or more gallstones in the gall-bladder.

cholecystolithotripsy (ko-le-sis-to-lith'o-trip-sĭ) [G. *cholē*, bile, + *kystis*, bladder, + *lithos*, stone, + *tripsis*, a rubbing] The crushing of a gallstone by manipulation of the unopened gall-bladder.

cholecystomy (ko-le-sis'to mĭ). Cholecystotomy.

cholecystopexy (ko-le-sis'to-pek-sĭ) [G. *cholē*, bile, + *kystis*, bladder, + *pēxis*, fixation.] Suturing the gall-bladder to the abdominal wall.

cholecystorrhaphy (ko-le-sis-tor'ă-fĭ) [G. *cholē*, bile, + *kystis*, bladder, + *rhaphē*, sewing.] Suture of the incised or ruptured gall-bladder.

cholecystostomy (ko-le-sis-tos'to-mĭ) [G. *cholē*, bile, + *kystis*, bladder, + *stoma*, mouth.] The surgical establishment of a fistula into the gall-bladder.

cholecystotomy (ko-le-sis-tot'o-mĭ) [G. *cholē*, bile, + *kystis*, bladder, + *tomē*, incision.] Incision into the gall-bladder. **ide'al c.**, cholecystendysis.

choledoch (ko'le-dok). Choledochus. **c. duct,** ductus choledochus.

choledochectasia (ko-led-o-kek-ta'zĭ-ah) [G. *choledochos*, common bile-duct, + *ektasis*, extension] Dilatation of the common bile-duct.

choledochectomy (ko-led-o-kek'to-mĭ) [G. *choledochos*, common bile-duct, + *ektomē*, excision.] Surgical removal of a portion of the common bile-duct.

choledochendysis (ko-le-dok-en'di-sis) [G. *cholē*, bile, + *dochos*, containing, + *endysis*, an entering in.] Ideal choledochotomy; removal of a gallstone from the common bile-duct by incision, extraction of the stone, and immediate suture of the duct.

choledochitis (ko-led-o-ki'(ke')tis) [G. *choledochos*, common bile-duct, + *-itis*.] Inflammation of the common bile-duct.

choledochoduodenostomy (ko-led-o-ko-du-o-de-nos'to-mĭ) [G. *choledochos*, common bile-duct, + L. *duodenum* + G. *stoma*, mouth.] Surgical formation of a communication, other than the natural one, between the common bile-duct and the duodenum.

choledochoenterostomy (ko-led″o ko-en-ter-os'to-mĭ) [G. *choledochos*, common bile-duct, + *enteron*, intestine, + *stoma*, mouth.] Surgical establishment of a communication, other than the natural one, between the common bile-duct and any part of the intestine.

choledocholithiasis (ko-led-o-ko-lith-i'ă-sis) [G. *choledochos*, common bile-duct, + *lithos*, stone.] The presence of a gallstone in the common bile-duct.

choledocholithotomy (ko-led-o-ko-lĭ-thot'o-mĭ) [G. *choledochos*, common bile-duct + *lithos*. stone. + *tomē*, incision.] Incision of the common bile-duct for the extraction of an impacted gallstone.

choledocholithotripsy (ko-led-o-ko-lith'o-trip-sĭ) [G. *choledochos*, common bile-duct, + *lithos*, stone, + *tripsis*, rubbing.] Crushing of a gallstone in the common duct by manipulation without opening of the duct.

choledochoplasty (ko-led'o-ko-plas″tĭ). A plastic operation on the common bile-duct.

choledochostomy (ko-led-o-kos'to-mĭ) [G *choledochos*, common bile-duct, + *stoma*, mouth.] The surgical establishment of a fistula into the common bile-duct.

choledochotomy (ko-led-o-kot'o-mĭ) [G. *choledochos*, common bile-duct, + *tomē*, incision.] Incision into the common bile-duct. **ide'al c.,** choledochendysis.

choledochous (ko-led'o-kus). Containing or conveying bile.

choledochus (ko-led'o-kus) [G. *cholē*, bile, + *dochos*, containing; *dechomai*, I receive.] The common bile-duct, ductus* choledochus.

cholehemia, cholehæmia (ko-le-he'mĭ-ah) [G. *cholē*, bile, + *haima*, blood.] Cholemia.

choleic (ko-le'ik). Cholic.

cholelith (ko'le-lith) [G. *cholē*, bile, + *lithos*, stone.] Gallstone, biliary calculus, a concretion of inspissated bile

cholelithiasis (ko-le-lith-i'a-sis) [G. *cholē*, bile, + *lithos*, stone.] Gallstone, biliary calculus; a condition in which concretions are present in the gall-bladder or bile-ducts.

cholelithotomy (ko-le-lith-ot'o-mĭ) [G. *cholē*, bile, + *lithos*, stone, + *tomē*, incision.] Operative removal of a gallstone.

cholelithotripsy (ko-le-lith'o-trip-sĭ) [G. *cholē*, bile, + *lithos*, stone, + *tripsis*, a rubbing.] The crushing of a gallstone.

cholelithotrity (ko-le-lĭ-thot'rĭ-tĭ) [G. *cholē*, bile, + *lithos*, stone, + L. *tritus*, from *terere*, to rub] Cholelithotripsy.

cholemia, cholæmia (ko-le'mĭ-ah). The presence of bile salts in the circulating blood

cholepathia (ko-le-path'ĭ-ŭ). Irregularity in contractions of the bile ducts. **c. spas'tica,** spastic contraction of the bile ducts.

cholepyrrhin (ko-le-pir'in) [G. *cholē*, bile, + *pyrrhos* flame-colored.] Impure bilirubin, biliphein.

cholera (kol'ĕ-rah) [G. *cholē*, bile, + *rheō*, I flow; or Heb. *choli-ra*, bad disease (?).] An acute epidemic infectious disease caused by a specific germ, *Spirillum choleræ asiaticæ;* it is marked clinically by a profuse watery diarrhea, muscular cramps, vomiting, and collapse. It is called also *Asiatic* or *Indian cholera, epidemic c., malignant c., algid c., asphyctic c.*, and *pestilential c.* **bil'ious c.,** (1) c. morbus; (2) a mild form of Asiatic c **chick'en c.,** fatal specific diarrhea of fowls. **c. infan'tum,** a disease of infants, characterized by vomiting, profuse watery diarrhea, fever, great prostration, and collapse. **c. mor'bus,** an acute gastroenteritis, marked by severe colic, vomiting, and watery stools, occurring in hot weather **c. nos'tras,** c. morbus. **c. sic'ca** [L. dry], a malignant form in which death occurs from toxemia before diarrhea has begun. **Europe'an c.,** c. morbus. **hog c.,** a specific contagious disease of swine marked by inflammation of the lungs and of the intestine; swine plague, pneumoenteritis, erysipelas malignum. **sim'ple c.,** bilious c.(2) **sporad'ic c.,** c. morbus. **sum'mer c.,** c. morbus. **win'ter c.,** an epidemic diarrhea occurring in the winter season.

choleraic (kol-ĕ-ra'ik). Relating to cholera.

chol″era-red reac'tion. Upon adding 3 or 4 drops of sulphuric acid (concentrated, chemically pure)

to an eighteen-hour-old bouillon or peptone culture of the cholera vibrio, a color from rose-pink to claret is produced.

choleresis (kol-er-e'sis). A word coined after the analogy of "uresis," to express the theory of the formation of bile as an excretory rather than a secretory process.

choleretic (ko-ler-et'ik). Cholagogue with respect to the quantitative amounts of the individual biliary constituents.

choleriform (kol'er-ĭ-form) [L. *forma*, form.] Resembling cholera, choleroid.

cholerigenous (kol-er-ij'en-us) [*cholera* + G *gennaō*, I produce.] Causing or engendering cholera.

cholerine (kol'er-ēn). A mild form of cholera, bilious cholera; it is common during epidemics of Asiatic cholera, but it is not determined whether it is simple cholera morbus, or the true epidemic disease in mild form.

cholerization (kol"er-i-za'shun). Inoculation with cholera as a prophylactic measure.

choleroid (kol'er-oyd) [G. *eidos*, resemblance.] Resembling cholera, choleriform.

cholerophobia (kol-er-o-fo'bĭ-ah) [G *phobos*, fever.] A morbid fear of acquiring cholera.

cholerythrin (kol-er'e-thrin) [G. *erythros*, red.] 1. Cholera-red. 2. A urinary pigment found in residents of the tropics.

cholerythrogen (kol-er'ĭ-thro-jen). A chromogen which decomposes into cholerythrin; a toxic substance which plays an important part in the genesis of gastrointestinal disturbances in the tropics.

cholestasia, cholestasis (ko-les-ta'sĭ-ŭ, ko-les'ta-sis) [G. *cholē*, bile, + *stasis*, a standing still.] An arrest in the flow of bile.

cholesteatoma, pl. *cholesteato'mata* (kol-es-te-ă-to'-mah) [G. *cholē*, bile, + *stear(steat-)*, fat, + *-ōma.*] 1. Pearl tumor, a growth of small, pearly nodules, usually springing from the cerebral meninges, formed of concentric layers of endothelial or epithelial cells, often surrounding a core of cholesterin crystals and fat globules. 2. A tumor of the middle ear resulting from nature's attempt to arrest suppuration in the tympanic cavity by a process of epidermatization; the new skin-like membrane degenerates and breaks down into masses of dead epithelium containing cholesterin crystals.

cholesteremia, cholesteræmia (ko-les-ter-e'mĭ-ah) [G *haima*, blood.] The presence of cholesterin in the blood.

cholesterilin (ko-les'ter-il-in). One of a number of isomeric hydrocarbons resulting from the splitting up of cholesterin in the presence of concentrated sulphuric acid.

cholesterin (ko-les'ter-in). Cholesterol. **c. cleft,** see under *cleft.*

cholesterinemia (ko-les-ter-in-e'mĭ-ah). Cholesteremia, cholesterolemia, the pressure of cholesterin, or cholesterol, in the blood.

cholesterinuria (ko-les-ter-in-u'rĭ-ah) [*cholesterin* + G. *ouron*, urine.] Cholesteroluria, the passage of cholesterin in the urine.

cholesterol (ko-les'ter-ol) [G. *cholē*, bile, + *stereos*, solid.] A monatomic alcohol, $C_{27}H_{45}OH$, occurring in the form of square scaly crystals with a notched corner, having an unctuous feel; it is found chiefly in the bile, forming the greater part of gallstones, and also in the brain, in the seeds of plants (phytosterol), in yolk of egg, and elsewhere; called also cholesterin.

cholesterolæmia, cholesterolemia (ko-les-ter-ol-e'mi-ah) [*cholesterol* + G. *haima*, blood.] The presence of cholesterol in the blood.

cholesteroluria (ko-les-ter-ol-u'rĭ-ah). Cholesterinuria, the presence of cholesterin, or cholesterol, in the urine when voided.

choletelin (ko-let'el-in) [G. *cholē*, bile, + *telos*, end.] Bilixanthin.

choletherapy (ko-le-ther'a-pĭ) [G. *cholē*, bile, + *therapeia*, treatment.] Treatment of disease by the use of oxgall.

choleuria (ko-le-u'rĭ-ah). Choluria.

cholever'din. Biliverdin.

cholic (kol'ik). Relating to the bile. **c. acid,** cholalic* acid.

choline (kol'ēn) [G. *cholē* bile.] A ptomaine occurring in the form of a thick syrupy liquid; it is found in bile, yolk of eggs, fungi, and other substances, and in the cerebrospinal fluid in certain nervous diseases. It is only slightly toxic.

cholochrome (kol'o-krōm) [G. *cholē*, bile, + *chrōma*, color] Bile pigment

chologestin (kol-o-jes'tin) Trade name of a preparation said to contain sodium glycocholate, sodium salicylate pancreatin, and sodium bicarbonate, in solution; recommended as a cholagogue in doses of ℨss (16.0).

chololith (kol'o-lith) [G. *cholē*, bile, + *lithos*, stone.] Gallstone, biliary calculus, cholelith.

chololithiasis (kol"o-lith-i'as-is). Cholelithiasis.

chololithic (kol"o-lith'ic) Relating in any way to gallstones.

choloplania (kol-o-pla'nĭ-ah) [G. *cholē*, bile, + *planē*, a wandering.] The presence of bile salts in the blood or tissues.

cholorrhea, cholorrhœa (kol-or-re'ah) [G. *cholē*, bile, + *rhoia*, a flow.] An excessive secretion of bile

choluria (kŏ-lu'rĭ-ah) [G. *cholē*, bile, + *ouron*, urine] The presence of bile salts in the urine.

chondral (kon'dral) [G. *chondros*, cartilage.] Relating to cartilage.

chondralgia (kon-dral'jĭ-ah) [G *chondros*, cartilage, + *algos*, pain.] Pain in or about a cartilage; chondrodynia.

chondralloplasia (kon"dral-o-pla'zĭ-ah) [G. *chondros*, cartilage, + *allos*, other, + *plasis*, a moulding.] The occurrence of cartilage in abnormal situations in the bony skeleton.

chondrectomy (kon-drek'to-mĭ) [G. *chondros*, cartilage, + *ektomē*, excision.] Excision of a cartilage.

chondrification (kon-drĭ-fi-ka'shun) [G. *chondros*, cartilage, + L. *facere*, to make.] Conversion into cartilage.

chondrify (kon'drĭ-fi). To become cartilaginous.

chondrigen (kon'drĭ-jen). Chondrogen, the special basal substance of cartilage which is converted into chondrin by boiling.

chondrin (kon'drin) A gelatin-like substance obtained from cartilage by boiling. **c. ball,** one of the globular masses formed by a group of cells inclosed in a capsule, in hyaline cartilage.

chondriomite (kon'dre-o-mite) [G. *chondros*, cartilage, + *mitos*, thread.] One of the chains of mitochondria formed in the process of maturation of the oocyte.

chondritis (kon-dri'(dre')tis). Inflammation of cartilage.

chondroblast (kon'dro-blast) [G. *chondros*, cartilage, + *blastos*, germ.] A cell of the primitive cartilage tissue in the embryo.

chondrocarcinoma (kon"dro-kar-se-no'mah). A carcinoma containing cartilaginous tissue.

chondroclast (kon'dro-klast) [*chondros*, cartilage, + *klastos*, broken in pieces.] A cell concerned in the absorption of cartilage.

chondroconia (kon-dro-ko'nĭ-ah) [G. *chondros*, cartilage, + *konis*, dust.] Schridde granules, mitochondria (3), reddish granules occurring in myelocytes, said to differ from the granules of lymphocytes and large uninuclear leucocytes.

chondrocostal (kon-dro-kos'tal) [G. *chondros*, cartilage + L. *costa*, rib.] Relating to the costal cartilages.

chondrocranium (kon-dro-kra'nĭ-um) [G. *chondros*, cartilage, + *kranion*, skull.] A cartilaginous skull; the embryonic skull before ossification.

chondrocyte (kon'dro-sīt) [G. *chondros*, cartilage, + *kytos*, cell.] A cartilage cell.

chondrodendron (kon-dro-den'dron) [G. *chondros*, cartilage, + *dendron*, tree.] A genus of South American trees, of which the species *C. tomento'sum* furnishes pareira.

chondrodynia (kon-dro-din'ĭ-ah) [G. *chondros*, cartilage, + *odynē*, pain.] Chondralgia, pain in or around a cartilage.

chondrodysplasia (kon''-dro-dis-pla'zĭ-ah)[G. *chondros*, cartilage, + *dys*, bad, + *plasis*, a moulding.] Chondrodystrophy, dyschondroplasia, achondroplasia.

chondrodystrophia (kon-dro-dis-tro'fĭ-ah). Chondrodystrophy, achondroplasia.

chondrodystrophy (kon-dro-dis'tro-fĭ) [G. *chondros*, cartilage, + *dys-*, difficult, + *trophē*, nourishment.] Achondroplasia, a disturbance in the normal process of ossification in cartilage, dating from intrauterine life, resulting in arrested growth of the long bones and a condition of stocky dwarfism; the head is large, the nates and abdomen are prominent, the fingers are divergent (see cut under *trident* hand*), and the extremities are disproportionately short in comparison with the torso. **asymmetrical c.,** Ollier's disease. **hered'itary deform'ing c.,** multiple cartilaginous exostoses; see under *exostosis*. **hyperplas'tic c.,** a form in which there is an extreme outgrowth of the epiphyses with corresponding distortion of the joints. **hypoplas'tic c.,** a form in which the shafts of the long bones are composed of spongy bone with irregular Haversian systems, the marrow cavity is not in the center of the shaft, the ends of the diaphysis are cup-shaped, and the epiphyses are irregular in shape and in time and character of ossification.

chondrofibroma (kon-dro-fi-bro'mah). A mixed tumor with elements of fibroma and chondroma.

chondroform (kon'dro-form). Trade name of an antiseptic lubricant made from seaweed.

chondrogen (kon'dro-jen). Chondrigen, the special cement substance of cartilage which on boiling yields chondrin.

chondrogenesis (kon-dro-jen'e-sis) [G. *chondros*, cartilage, + *genesis*, origin.] The formation of cartilage.

chondrography (kon-drog'ră-fĭ) [G. *chondros*, cartilage, + *graphō*, I write.] A description of, or a treatise on, cartilage and the cartilages of the body.

chondroid (kon'droyd) [G. *chondros*, cartilage, + *eidos*, resemblance.] 1. Resembling cartilage. 2. Cartilaginous.

chondroitic acid (kon-dro-it'ik). A substance existing in combination with a protein in chondromucoid.

chondrology (kon-drol'o-jĭ) [G. *chondros*, cartilage, + *-logia*.] Science in relation to cartilage and the cartilages.

chondroma, pl. *chondro'mata* (kon-dro'mah) [G. *chondros*, cartilage, + *-ōma*.] A tumor formed of one of the varieties of cartilage; enchondroma. **c. sarcomato'sum,** chondrosarcoma.

chondromalacia (kon-dro-mal-a'sĭ-ah) [G. *chondros*, cartilage, + *malakia*, softness.] Softening of any cartilage. **c. feta'lis,** an intrauterine form of chondrodystrophy in which the fetus is born dead with soft pliable limbs.

chondromatous (kon-dro'mă-tus). Relating to a chondroma or cartilage tumor.

chondromitome (kon-drom'ĭ-tōm) [G. *chondros*, cartilage, + *mitos*, thread.] Paranucleus.

chondromucoid (kon-dro-mu'koyd) [G. *chondros*, cartilage, + L. *mucus* + G. *eidos*, resemblance.] A substance in cartilaginous tissue consisting of a compound of chondroitic acid with an albuminate.

Chondromyces[0] (kon-dro-mi'sēz)[G. *chondros*, like groats, + *mykēs*, fungus.] A genus of *Myxobacteriaceæ*, the species of which are reddish or orange-colored rod-shaped organisms forming cysts, found in dung and decaying lichens and fungi.

chondromyoma (kon-dro-mi-o'mah). A mixed tumor with elements of chondroma and myoma.

chondromyxoma (kon-dro-miks-o'mah). A mixed tumor containing elements of chondroma and myxoma

chondropathology (kon-dro-pă-thol'o-jĭ). The science dealing with morbid changes affecting cartilage.

chondropathy (kon-drop'ă-thĭ). Any disease of cartilage.

chondropharyngeus (kon-dro-far-in-je'us) [G. *chondros*, cartilage, + *pharynx*.] See *musculus chondropharyngeus*.

chondrophyte (kon'dro-fīt) [G. *chondros*, cartilage, + *phyton*, a growth] A growth springing from articular cartilage.

chondroplast (kon'dro-plast) [G. *chondros*, cartilage, + *plastos*, formed.] Chondroblast.

chondroplasty (kon'dro-plas-tĭ) [G. *chondros*, cartilage, + *plassō*, I form.] Reparative or plastic surgery of cartilage.

chondroporosis (kon-dro-po-ro'sis) [G. *chondros*, cartilage, + *poros*, a passage.] A porous condition of cartilage, either normal (in the process of ossification) or pathological.

chondroprotein (kon-dro-pro'te-in). A protein occurring normally in cartilage, such as chondromucoid, chondrogen, etc.

chondrosarcoma (kon-dro-sar-ko'mah), pl. *chondrosarco'mata*, *chondrosarco'mas*. A mixed chondroma and sarcoma; a cartilaginous tumor containing many imperfectly differentiated, vegetative, or embryonic cells; chondroma sarcomatosum.

chondrosis (kon-dro'sis). The formation of cartilage.

chondrosome (kon'dro-sōm) [G. *chondros*, cartilage, + *sōma*, body.] A readily stainable cell granule which tends to form fibrillæ; mitochondria (1).

chondrosternal (kon-dro-ster'nal). Relating to a sternal cartilage, chondroxiphoid; relating to the costal cartilages and the sternum.

chondroglossus (kon-dro-glos'us) [G. *chondros*, cartilage, + *glōssa*, tongue.] See *musculus chondroglossus*.

chondroglucose (kon"dro-glu'kōs). A glucose obtained from cartilage by boiling in water containing a small proportion of a mineral acid.

chondrotome (kon'dro-tōm) [G. *chondros*, cartilage, + *tomē*, cutting.] Cartilage knife; a very strong scalpel-shaped knife, used in cutting cartilage.

chondrotomy (kon-drot'o-mĭ) [G. *chondros*, cartilage, + *tomē*, a cutting.] 1. The branch of anatomy treating of the cartilages. 2. Division of a cartilage.

chondroxiphoid (kon-dro-zi'foyd). Relating to the xiphoid or ensiform cartilage.

chondrus (kon'drus) [G. *chondros*, gristle.] 1. Cartilage. 2. A genus of seaweeds. 3. (N.F.) Irish moss, carrageen, pig-wrack, pearl moss; the plant *Chondrus crispus* or *Fucus crispus;* demulcent, in chronic respiratory and intestinal affections, in doses of ʒi–2 (30.0–60.0) of an infusion of ʒi½–1 to the pint.

Chopart's amputa'tion (sho-par') [François *Chopart*, Paris surgeon, 1743–1795.] Disarticulation at the midtarsal joint, leaving only the astragalus and calcaneum, with the soft parts of the sole of the foot to cover the stump; see cut under *amputation*. **C.'s joint,** articulatio tarsi transversa [BNA], the midtarsal joint between the astragalus and calcaneum on one side and the cuboid and navicular bones on the other.

chorda, pl. *chor'dæ* (kor'da) [L. a string, cord] 1. A tendon. 2. A tendinous or string-like structure. **c. dorsa'lis,** (1) the notochord; (2) the spinal cord. **c. mag'na,** tendo Achillis, tendo* calcaneus. **c. obli'qua** [BNA], oblique cord, oblique or round ligament of the elbow-joint, a slender band extending from the outer part of the coronoid process of the ulna downward and outward to the radius immediately below the bicipital tuberosity **c. spermat'ica,** spermatic cord, funiculus* spermaticus **c. spina'lis,** spinal cord, medulla* spinalis [BNA]. **c. tendin'ea,** pl. *chor'dæ tendin'eæ*, one of several fine tendinous cords stretching between the walls of the ventricles, often from the apices of the papillary muscles, and the ventricular surfaces of the cusps of the auriculoventricular valves. **c. transver'sa,** c. obliqua. **c. tym'pani,** cord of the tympanum, see under *nervus*. **c. umbilica'lis,** umbilical cord. **c. vertebra'lis,** notochord. **c. voca'lis,** pl. *chor'dæ voca'les*, vocal cord, plica* vocalis. **c. Willis'ii,** Willis's* cord.

chordal (kor'dal). Relating to any chorda or cord especially to the notochord.

chordee (kor-de') [Fr. corded] A painful erection of the penis in gonorrhea, the member being curved through lack of distensibility of the corpus cavernosum urethræ.

chorditis (kor-di'(de')tis) [G. *chordē*, cord, + *-itis*.] Inflammation of a cord, usually a vocal cord, sometimes a spermatic cord. **c. fibrino'sa,** inflammation of the vocal cords with fibrinous exudation. **c. nodo'sa,** c. tuberosa. **c. tubero'sa,** singer's nodes, vocal nodules, trachoma of the vocal bands; a condition marked by the formation of one or more nodules on one or both vocal cords. **c. voca'lis,** inflammation of the vocal cords. **c. voca'lis infe'rior,** chronic subglottic laryngitis, an inflammation limited mainly to the under surface of the vocal cords and adjacent parts.

chordoma (kor-do'mah), pl. *chordo'mata, chordo'mas* [*(noto)chord* + *-ōma*.] A small tumor situated at the spheno-occipital synchondrosis or, rarely, at one of the intervertebral discs, composed of notochordal tissue.

chordopexy (kor'do-pek-si) [L. *chorda*, cord, + G. *pēxis*, fixation.] The operative fixation of any displaced anatomical cord; specifically the fixation to one side of one or both vocal cords for the relief of laryngeal stenosis.

chordoskeleton (kor-do-skel'e-ton). The part of the skeleton in the embryo, in relation with the notochord.

chordotomy (kor-dot'o-mĭ) [G. *chorda*, cord, + *tomē*, a cutting.] Division of any cord, as of the anterolateral columns of the spinal cord for the relief of intractable pain.

chorea (ko-re'ah) [G. *choreia*, a choral dance.] A disorder, usually of childhood, characterized by irregular, spasmodic, involuntary movements of the limbs or facial muscles; when used without qualification the term usually refers to Sydenham's c., or St. Vitus's dance. **button-maker's c.,** ataxic movements of the hand and arm, a professional neurosis in button makers. **chronic progressive c.,** hereditory c., Huntington's c. **c. festi'nans** [L. *festinare*, to hasten], procursive c. **c. insa'niens,** a severe form of c. marked by the occurrence of delirium, chiefly at night. **c. ma'jor,** a spasmodic attack occurring in major hysteria. **dan'cing c.,** (1) procursive c; (2) choreomania **elec'tric c.,** (1) Dubini's disease, a progressively fatal spasmodic disorder, possibly of malarial origin, occurring chiefly in Italy; (2) Bergeron's chorea, electrolepsy, a disorder of benign course, marked by the sudden appearance of rhythmical spasms without obvious cause; (3) a severe form of Sydenham's c., in which the spasms are rapid and of a specially jerky character. **epidem'ic c.,** choreomania. **habit c.,** tic, the frequent involuntary repetition of the same movement. **hered'itary c.,** Huntington's c., a chronic disorder, beginning usually between the ages of 30 and 50 years, characterized by choreic movements in the face and extremities accompanied by a gradual loss of the mental faculties ending in dementia; it is hereditary and is due to chronic meningitis with degeneration in the cortical cells of the brain. **mani'acal c.,** c. insaniens **laryn'geal c.,** a spasmodic tic involving the muscles, resulting in an explosive manner of talking. **paralyt'ic c.,** a form in which there is weakness or paresis of one side of the body, or perhaps of one arm only with slight jerking movements. **post-hemiple'gic c.,** athetosis. **procur'sive c.,** a form in which the child whirls around, runs forward, or exercises a sort of rhythmical dancing movement. **se'nile c.,** a disorder resembling Sydenham's c., not associated with rheumatism or cardiac disease, occurring in the aged.

choreal (ko-re'al). Relating to chorea.

choreic (ko-re'ik). Relating to or of the nature of chorea.

choreiform (ko-re'ĭ-form) [L. *forma*, form.] Resembling chorea, choreoid.

choreoathetoid (ko"re-o-ath'e-toyd). Pertaining to, of the nature of, or resembling both chorea and athetosis.

choreoid (ko're-oyd) [G. *eidos*, resemblance.] Choreiform, resembling chorea.

choreomania (ko-re-o-ma'nĭ-ah). Epidemic chorea, choromania, the dancing mania of the middle ages.

chorioangioma (ko-rĭ-o-an-jĭ-o'mŭ) [*chorion* + *angioma*.] A vascular tumor of the chorion.

choriocapillaris (ko"rĭ-o-kap-ĭ-la'ris). The middle layer of the chorioid coat of the eye, lamina* choriocapillaris.

choriocarcinoma (ko"rĭ-o-kar-sĭ-no'mah). Chorioma malignum.

choriocele (ko'rĭ-o-sēl) [G. *kēlē*, hernia.] A bulging of the chorioid coat of the eye through a defect in the sclera.

chorioepithelioma (ko″re-o-ep-ĭ-the-lĭ-o′mah). Deciduoma malignum, chorioma* malignum.

chorioid (ko-rĭ-oyd). Choroid. 1. Resembling the chorion, the corium, or any membrane. 2. The middle coat of the eyeball, chorioidea. *Chorioid* is the correct form, but *choroid* is in more common use. **c. plex'us,** a vascular fringe or infolding of the metatela in one of the ventricles of the brain; there are four pairs of chorioid plexuses: of the third ventricle (*diaplexus*), of the fourth ventricle (*metaplexus*), and of the lateral ventricles (*paraplexus*).

chorioidea (ko-re-o-id'e-ah) [L. *chorioideus* (from G. *chorioeides*, skin-like), sc. *tunica*, coat.] Chorioid, choroid, the middle, vascular tunic of the eye lying between the retina and the sclera extending as far forward as the ora serrata of the former.

chorioiditis (ko-re-oy-di′(de′)tis). Inflammation of the vascular tunic of the eye or chorioid membrane. **are'olar c.,** a form in which the inflammation spreads concentrically from the region of the macula lutea. **cen'tral c.,** inflammation of the c. with exudation limited chiefly to the macula. **c. gutta'ta,** Hutchinson's or Tay's disease, the occurrence of yellowish spots of irregular outline surrounding the macula lutea; called also *c. gutta'ta seni'lis*. **c. sero'sa,** glaucoma. **diffuse' c.,** disseminated c. **dissem'inated c.,** inflammation of the chorioid in which there are numerous spots of exudation scattered over the fundus. **myop'ic c.,** chronic inflammation of the sclerotic and chorioid with posterior staphyloma, caused by eyestrain due to the uncorrected myopia.

chorioidocyclitis (ko-rĭ-oy″do-si-kli′(kle′)tis). Inflammation of the chorioid coat and the ciliary body.

chorioidoiritis (ko-rĭ-oy″do-ı-rı′(rĕ′)tis). Inflammation of the chorioid coat and the iris.

chorioidoretinitis (ko-re-oy″do-ret-in-i′(e′)tis). Retinochorioiditis, chorioretinitis.*

chorioma, pl. *chorio'mata* (ko-re-o'mah). Deciduoma, syncytioma; a tumor of the chorion. c. **benig'num,** benign c., fibroma chorii, myxoma chorii, mole. c. **malig'num,** deciduoma malignum, syncytioma malignum, chorioepithelioma; a tumor, formed of cells from the syncytium and chorion, developed at the site of the placenta in the pregnant or puerperal uterus, occurring most frequently after abortion.

chorion (ko'rĭ-on) [G. *chorion*, a skin.] The outermost of the fetal envelopes derived from the ovum. **c. frondo'sum** [leafy c.], the part of the chorion where the villi persist, forming the fetal part of the placenta. **c. le've** [smooth c.], the portion of the c. from which the villi have disappeared. **prim'itive c.,** the zona pellucida in the stage of developing villi. **shagg'y c.,** c. frondosum. **smooth c.,** c leve.

chorionepithelioma (ko″rĭ-on-ep-ĭ-the-lĭ-o'mah). Chorioma malignum.

chorionic (ko-rĭ-on'ik). Relating to the chorion. **c. vil'li,** vascular projections from the chorion formed by the indentation of the trophoblast by buds from the mesoderm.

chorionin (ko'rĭ-on-in). An organic extract from the placenta of the sheep, having alleged galactogogue properties.

chorionitis (ko-rĭ-on-i′(e′)tis) [G. *chorion*, corium, after-birth, + *-itis*.] 1. Inflammation of the corium or true skin. 2. Inflammation of the chorion, placentitis.

Chorioptes (ko-rĭ-op'tēz) [G. *chorion*, membrane, + *optikos*, optic.] A genus of mites. **c. bo'vis,** a species causing mange in cattle.

chorioretinal (ko-rĭ-o-ret'in-al). Relating to the chorioid coat of the eye and the retina.

chorioretinitis (ko-rĭ-o-ret-in-i′(e′)tis). Inflammation of the chorioid and retina, retinochorioiditis.

choripetalous (ko-rĭ-pet'al-us) [G. *chōris*, asunder, + *petalon*, petal.] Polypetalous

choriphyllous (ko-rĭ-fil'us) [G. *chōris*, asunder, + *phyllon*, leaf.] Polyphyllous.

chorisepalous (ko-rĭ-sep'al-us) [G. *chōris*, asunder, + L. *sepalum*, sepal.] Polysepalous.

chorisis (ko'rĭ-sis) [G. a separation.] In botany, the development of two or more stamens or other parts where there is normally but one.

chorista (ko-ris'tah) [G. *chōristos*, separated.] An error of development marked by separation or misplacement of anlage.

choristoblastoma (ko-ris-to-blas-to'mah) [*choristoma* + *blastoma*.] An autonomous neoplastic growth starting from a choristoma.

choristoma (ko-ris-to'mah) [G. *chōristos*, separated, + *-ōma*.] A neoplasm due to hyperplasia of an aberrant anlage or primordium.

choroid (ko'royd). Chorioid. **c. plex'us,** chorioid* plexus.

choroidal (ko-roy'dal) Chorioid, relating to the chorioid, or choroid, coat of the eye. **c. fis'sure,** a cleft in the secondary optic vesicle in the embryo.

choroideremia (ko-roy-der-e'mĭ-ah) [*choroid(chorioid)* + G. *erēmia*, absence.] Absence of the chorioid coat of the eye.

choroiditis (ko-roy-di'(de')tis). Chorioiditis.

choroidoretinitis (ko-roy″do-ret-in-i′(e′)tis). Chorioretinitis

chorology (ko-rol'o-jĭ) [G. *chōros*, place, country, + *-logia*.] The branch of science which treats of the geographical and topographical distribution of plants and animals.

choromania (ko-ro-ma'nĭ-ah) [G *choros*, dance, + *mania*, frenzy.] Choreomania, dancing mania.

Chr. Abbreviation of *Chromobacterium*.

Christian Science (kris'chun si'ens). A religious sect, the members of which regard disease as a product of erroneous thought or belief and curable by establishing a mental conviction of its non-material nature; Eddyism.

Chris'tison's for'mula [Sir Robert *Christison*, Scotch physician, 1797–1882.] To know the amount of solids per 1000 parts of urine, multiply the last two figures of the specific gravity by 2.33; same as Haeser's formula.

chro'atol. Terpin iodohydrate, $C_{10}H_{16}(HI)_2$; occurs in greenish yellow crystalline masses; employed externally, in powder or ointment, in the treatment of psoriasis.

Chrobak pel'vis (khro'bak) [Rudolph *Chrobak*, Austrian gynecologist, 1840–1910.] Coxalgic pelvis.*

chromaffin (kro'maf-in) [*chrom(ic salts)* + L. *affinis*, akin.] Chromaphil; giving a brownish yellow reaction with chromic salts; noting certain cells in the medulla of the adrenal bodies. **c. bod'ies,** paraganglia; small, independent, encapsulated collections of c. tissue. **c. cells,** homogeneous pigment cells, of sympathetic histogenesis, staining a yellow or yellowish brown in the presence of chromic salts; they occur in larger or smaller groups along the sympathetic nerves, in various organs (in the form of paraganglia), and in the adrenal medulla. **c. hor'mone,** epinephrine, adrenaline. **c. sys'tem,** the medullary portion of

the adrenal body. **c. tis'sue,** a cellular tissue, vascular and well supplied with nerves, made up chiefly of c. cells; it is found abundantly in the medulla of the adrenals and, in smaller collections (*c. bodies*), in the carotic and coccygeal glands and elsewhere. **c. tumor,** paraganglioma.

chromaffinopathy (kro"maf-in-op'ă-thĭ) [*chromaffin* + G. *pathos*, suffering.] Any morbid process affecting chromaffin tissue in the adrenals or elsewhere.

chro'mate. A salt of chromic acid.

chromatelopsia (kro"mat-ĕ-lop'sĭ-ah) [G. *chrmaō*, color, + *atelēs*, incomplete, + *opsis*, vision.] A more or less pronounced degree of color-blindness; chromatodysopia.

chromat'ic [G. *chrōmatikos*.] Relating to color. **c. aberra'tion,** see *aberration*(4).

Chromatieae[0] (kro-mat'ĭ-e-e). A tribe of the family *Rhodobacteriaceæ*, containing the genera *Chromatium*, *Rhabdomonas*, *Thiospirillum*, *Rhodocapsa*, and *Rhodothece*.

chromatin (kro'mă-tin) [G. *chrōma*, color.] The portion of the nucleus of a cell which is readily stained by dyes; distinguished from the non-stainable portion, or achromatin. **distrib'uted** or **extranu'clear c.,** chromidia.

chromatinolysis (kro-mă-tin-ol'i-sis) [G. *lysis*, solution.] Chromatolysis (1).

chromatinorrhexis (kro"mă-tin-or-rek'sis) [G. *rhēxis*, rupture.] Fragmentation of the chromatin.

chromatism (kro'mă-tizm) [G. *chrōma*, color.] 1. Abnormal pigmentation. 2. Chromatic aberration.

Chromatium[0] (kro-mat-ĭ-um). A genus of water organisms of the family *Rhodobacteriaceæ* containing several species of spherical or cylindrical cells, arranged in masses, for the most part reddish or brownish but some colorless.

chro'matize. To mix with a chromate.

chromatocinesis, chromatokinesis (kro"mă-to-sin-(kin)-e'sis) [G. *kinēsis*, movement.] Rearrangement of the chromatin into various forms.

chro"matodermato'sis [G. *chrōma*, color, + *derma*, skin.] A disease of the skin accompanied by pigmentation.

chromatodysopia (kro"mă-to-dis-o'pĭ-ah) [G. *chrōma*, color, + *dys-*, bad, + *ops*, eye.] Chromatelopsia.

chromatogenous (kro-mă-toj'en-us) [G. *chrōma*, color, + *gennaō*, I produce.] Producing color, causing pigmentation.

Chromatioideæ[0] (kro-mă-tĭ-o-ĭd'e-e). A subfamily of the family *Rhodobacteriaceæ*, containing the tribes *Thiocapseæ*, *Lamprocysteæ*, *Thiopedieæ*, *Amœbobacterieæ*, and *Chromatieæ*.

chromatolysis (kro-mă-tol'i-sis) [*chromatin* + G. *lysis*, solution.] 1. Destruction of the chromatin, or at least loss of its affinity for the basic dyes, in cloudy swelling and other forms of cellular degeneration; caryolysis, nuclear solution, hypochromatosis. 2. Lysis of the body of a bacterial or other cell, leaving the empty cell membrane.

chro'matolysm. Atrophy or shrinkage of Niessl's chromatophiles occurring in old age.

chromatolyt'ic. Relating to chromatolysis.

chromatom'eter [G. *chrōma*, color, + *metron*, measure.] A scale of various shades of color, used for determining the color or depth of color of a liquid or other substance.

chromatop'athy [G. *chrōma*, color, + *pathos*, suffering.] Chromatodermatosis.

chromatopectic (kro-mă-to-pek'tĭk). Relating to or causing chromatopexis.

chromatopexis (kro-mă-to-pek'sis) [G. *chrōma* (*chrōmat-*), color, + *pēxis*, fixation.] The fixation of color or staining fluid, chromopexis.

chromatophagous (kro-mă-tof'a-gus) [G. *chrōma*, color, + *phagō*, I eat.] Removing pigment, noting certain microorganisms which cause a loss of pigment.

chromat'ophil, chromat'ophile, chromatophil'ic, chromatoph'ilous. Same as *chromophil*, etc.

chro"matophil'ia. Chromophilia.

chromatopho'bia [G. *chrōma*, color, + *phobos*, fear.] Chromophobia.

chromatophore (kro'mă-to-fōr) [G. *chrōma* (*chrōmat-*), color, + *phoreō*, I carry.] 1. A colored plastid, due to the presence of chlorophyl, found in certain forms of protozoa. 2. A pigment-bearing cell found chiefly in the skin, mucous membrane, and chorioid coat of the eye, and also in melanomas.

chromatophoroma, pl. *chromatophoro'mata* (kro-mat-o-for-o'mah) [*chrōmatophore* + G. *-ōma*.] A circumscribed overgrowth of the pigment-bearing cells of the skin or chorioid coat of the eye; melanoma.

chromatophoromatosis (kro"mă-to-fo"ro-mă-to'sis). Melanomatosis.

chromatopsia (kro-mă-top'sĭ-ah) [G. *chrōma*, color + *opsis*, vision.] Colored vision, a condition in which all objects appear abnormally colored.

chromatoptometry (kro-mat-op-tom'e-trĭ) [G. *chrōma* (*chrōmat-*), color, + *optikos*, referring to vision, + *metron*, measure.] Measurement of the degree of color perception.

chromato'sis [G. *chrōma*, color.] 1. Chromatodermatosis. 2 Pigmentation.

chromaturia (kro-mă-tu'rĭ-ah) [G. *chrōma* (*chrōmat-*) color, + *ouron*, urine.] Abnormal coloration of the urine.

chrome-red. Basic lead chromate, $PbCrO_4.PbO$.

chromesthesia, chromæsthesia (kro-mes-the'zĭ-ah) [G. *chrōma*, color, + *aisthēsis*, sensation.] 1. The color sense. 2. A condition in which another sensation, such as taste or smell, is excited by the perception of color.

chrome-yel'low. Lead chromate, $PbCrO_4$

chromhidro'sis. Chromidrosis.

chro'mic acid. Chromii* trioxidum.

chro'micize. To mix with a chromium salt.

chromid'ia [G. *chrōma*, color.] Chromatin masses outside of the nucleus, found in certain forms of protozoa; especially *trophochromidia*, or nongerminal chromatin, as distinguished from *idiochromidia*.

chromid'ial. Relating to chromidia. **c. appara'tus,** the aggregate of extranuclear network, irregular strands, and masses of chromatin-staining material permeating the protoplasm of the cell. **c. net,** a reticulum of chromatin-staining material in the protoplasm.

chromidiation (kro-mid-ĭ-a'shun). Chromidiosis.

chromidio'sis [*chromidium* + *-osis*.] An outpouring of nuclear substance and chromatin into the cell protoplasm.

chromidium (kro-mid'ĭ-um) [G. *chrōma*, color, + *-idion*, a diminutive termination.] 1. The central chromatic structure of the blood-platelet. 2. See the plural, *chromidia*.

chromidrosis (kro-mi-dro'sis) [G. *chrōma*, color, + *hidros*, sweat.] The excretion of sweat containing pigment.

chromiole (kro'mĭ-ōl). One of a number of minute granules of chromatin contained within, and with the homogeneous chromoplasm constituting the chromosome.

chromium (kro'mĭ-um) [G. *chrōma*, color, because all its compounds are colored.] A metallic element, symbol Cr, atomic weight, 52, very hard, steel-gray in color. **chro'miitriox'idum** (U.S., Br.), acidum chromicum (Br.), CrO_3 chromic acid; occurs as small deliquescent needle-shaped or prismatic crystals, employed as a caustic in the removal of warts and other small growths from the skin and genitals, in a solution of gr. 100 to the ounce of water. The hydrated acid, H_2CrO_4, forms variously colored salts with potassium, lead, and other bases.

Chromobacteriеæ[0] (kro-mo-bak-te'rĭ-e-e). A tribe of the family *Bacteriaceæ*, containing the genera *Serratia*, *Flavobacterium*, *Chromobacterium*, and *Pseudomonas*.

Chromobacterium (kro-mo-bak-te'rĭ-um). A genus of the family *Bacteriaceæ*, containing a few species of rod-shaped organisms, found for the most part in water and soil, and forming a violet pigment in cultures; non-pathogenic. **Chr. prodigio'sum,** *B. prodigiosus*, *Bact. prodigiosum*, *Micrococcus prodigiosus*, *Serratia marcescens*.[0]

chromoblastomycosis (kro-mo-blas-to-mi-ko'sis) [G. *chrōma*, color, + *blastos*, germ, + *mykēs*, fungus, + *-osis*] A pigmented, verrucous blastomycosis due to the action of a fungus, *Phialophora verrucosa*.

chromocystoscopy (kro-mo-sis-tos'ko-pĭ) [G. *chrōma*, color, + *kystis*, bladder, + *skopeō*, I view.] Inspection of the ureteral orifices in the bladder after the giving of methylene blue or other aniline dye by the mouth, in order to determine the functional activity of the kidneys.

chromocyte (kro'mo-sīt) [G. *chrōma*, color, + *kytos*, cell.] Any pigmented cell, such as a red blood-corpuscle.

chromocytometer (kro-mo-si-tom'e-ter) [G. *chrōma*, color, + *kytos*, cell, + *metron*, measure.] A form of hemoglobinometer.

chromogen (kro'mo-jen) [G. *chrōma*, color, + *gennaō*, I produce.] 1. A substance, itself without definite color, which may be transformed into a pigment; noting especially benzene and its homologues, toluene or toluol, xylene or xylol, quinone, naphthalene, and anthracene, from which the aniline dyes are manufactured. 2. A microorganism which produces color.

chromogen'esis [G. *chrōma*, color, + *genesis*.] The production of coloring matter or pigment.

chromogen'ic. 1. Relating to chromogen. 2. Producing pigment, noting certain bacteria.

chromolipoid (kro-mo-li'poyd) [G. *chrōma*, color, *lipos*, fat, + *eidos*, appearance.] Lipochrome,* any pigmented lipoid, such as carotin.

chromolume (kro'mo-lūm) [G. *chrōma*, color, + L. *lumen*, light.] An apparatus for producing colored light rays.

chromol'ysis. Chromatolysis.

Chromomere (kro'mo-mēr) [G. *chrōma*, color, + *meros* part.] 1. A minute granule of chromatin or nuclein, the aggregate of a number of which constitutes the chromosome. 2. One of the segments into which the chromosome is divided by slight constrictions.

chromom'eter. Chromatometer.

chromopar'ic [G. *chrōma*, color, + L. *parere*, to bring forth.] Chromogenic.

chromopathy (kro-mop'ă-thĭ). Chromatopathy.

chromopectic (kro-mo-pek'tik). Chromatopectic.

chromopexis (kro-mo-pek'sis). Chromatopexis.

chromophag, chromophage (kro'mo-fag, kro'mo-fāj) [G. *chrōma*, color, + *phagō*, I eat.] A phagocyte which destroys pigment; term applied by Metchnikoff to the cells believed by him to be active in the blanching of the hair.

chro'mophan [G. *chrōma*, color, + *phainō*, I appear.] Retinal pigment.

chromophil, chromophile (kro'mo-fil, kro'mo-fīl) [G. *chrōma*, color, + *phileō*, I love.] 1. Chromophilic. 2. A cell or any histological element which stains readily. 3. Chromaffin.

chromophil'ic, chromoph'ilous. Staining readily, noting certain cells and histological structures.

chro'mophobe, chromopho'bic [G. *chrōma* color, + *phobos*, fear.] Resistant to stains, staining with difficulty or not at all; noting certain cells or tissues.

chromopho'bia. 1. Resistance to stains on the part of cells and tissues, chromatophobia. 2. A morbid dislike of colors.

chromophore (kro'mo-fōr) [G. *chrōma*, color, + *phoros*, bearing.] 1. Chromatophore. 2. Color-radical, the substance in an aniline dye upon which its color depends.

chromophor'ic, chromoph'orous. 1. Relating to a chromophore. 2. Producing or carrying color, noting certain microorganisms.

chromophose (kro'mo-fōz) [G. *chrōma*, color, + *phōs*, light.] A subjective sensation of a spot or patch of color in the eye.

chromophyto'sis [G. *chrōma*, color, + *phyton*, plant.] Tinea, or pityriasis, versicolor.

chro'moplasm [G. *chrōma*, color, + *plasma*, plasm.] A homogeneous substance containing the chromioles, and with them constituting the chromosome; chromatin.

chromoplas'tid. 1. A pigmented plastid, containing chlorophyl, formed in certain protozoans. 2. A colored plastid in plant cells, containing some other pigment than chlorophyl.

chromoprotein (kro-mo-pro'te-in). One of a group of conjugated proteins, consisting of a combination of pigment with a simple protein; hemoglobin is one such compound.

chromoptom'etry. Chromatoptometry.

chromorrhinorrhea (kro"mo-ri"nŏ-re'ah) [G. *chrōma*, color, + *rhis* (*rhin-*), nose, + *rhoia*, a flow.] The discharge of a colored fluid from the nares.

chro'moscope [G. *chrōma*, color, + *skopeō*, I view.] An apparatus for testing the color sense.

chromosome (kro'mo-some) [G. *chrōma*, color. + *sōma*, body.] A rod-shaped or thread-like body of chromatin in the cell nucleus, which splits longitudinally as the cell divides, one half going to the nucleus of each of the daughter cells. **access'ory c.,** monosome, an unpaired allosome, a chromosome which, in the last stage of spermatogenesis, goes over whole into one of the daughter cells instead of being divided among the two. **biv'alent c.,** a pair of chromosomes (paternal and maternal) temporarily united. **heterotrop'ic c.,** accessory c. **heterotyp'ical c.,** one differing in appearance or behavior from the ordinary c. **m-c.,** one of a pair of small chromosomes which remain distinct during the periods of synapsis and growth, conjugating only in the final prophases of the first spermatocyte division. **odd c.,** accessory c. **reduc'tion of the chro'mosomes,** a process occurring in gametogenetic mitosis, or division of the sexual cell formed by the conjugation of the ovum and spermatozoon, whereby the number of chromosomes in each of the conjugating cells is reduced one-half in order to preserve the number characteristic of the species in the impregnated ovum; a similar reduction is

said to occur in the somatic cells in malignant tumors, and also elsewhere under circumstances not yet understood. **sex c.,** accessory c., so-called because it is assumed to determine the sex of the individual. **small c.,** m-c.

chromother'apy [G. *chrōma,* color, + *therapeia,* treatment.] Treatment of disease by colored light.

chromotox'ic. Caused by a toxic action on the hemoglobin, as in chromotoxic hyperchromenia.*

chronax'ia, chronax'is. Chronaxy.

chronaxy (kro'nak-sĭ) [G. *chronos,* time, + *axia,* value.] The period of latency between the application of an electric stimulus to a muscle and the contraction of the same.

chron'ic [G *chronos,* time] Of long duration, noting a disease of slow progress and long continuance

chronicity (kron-is'ĭ-tĭ) The state of being chronic

chronobiology (kro-no-bi-ol'o-jĭ) [G. *chronos,* time, + *bios,* life, + *-ology.*] The science which deals with the duration of life and the means of prolonging it.

chronograph (kron'o-graf) [G. *chronos,* time, + *graphō,* I record.] An instrument for measuring and recording brief periods of time.

chronotrop'ic. Relating to chronotropism.

chronotropism (kron-ot'ro-pizm) [G. *chronos,* time, + *tropē,* a change, turn.] Modification of the rapidity of a periodical movement, such as the heart beat, through some external influence. **neg'ative c.,** retardation of the movement. **pos'itive c.,** acceleration of the movement.

chrysarobinum, chrysarobin (kris-ar''o-be'num, kris-ar'o-bin) [G. *chrysos,* gold, + Brazil Ind. *araroba,* bark.] (U.S. and Br.) An orange-yellow, finely crystalline powder extracted from Goa powder, employed locally in ringworm, psoriasis, and eczema.

chrysitis (kris-i'tis) [G. *chrysos,* gold.] Gold or red litharge; plumbi oxidum when of a decidedly red color; see *argyritis.*

Chrysoflagell'ida [G. *chrysos,* golden.] An order of the *Phytoflagellata,* marked by yellow chromatophores.

chrysoidin (kris-oy'din). Diamidoazobenzene hydrochloride, a reddish brown, crystalline powder made from aniline, a yellow dye and a non-toxic disinfectant.

chrysophan'ic acid [G. *chrysophanēs,* shining like gold.] Rheic acid, tasteless golden yellow crystals formed in rhubarb and chrysarobin, being thought formerly to be identical with the latter; its properties are similar to those of chrysarobin.

Chrysops discalis (kri'sops dis-ka'lis) [G. *chrysos,* gold, + *ōps, eye;* L. *discus,* disc.] Deer-fly, a biting fly the carrier of *Bacterium tularense* from the jack rabbit to man. See *tularemia.*

chrysotherapy (kris-o-ther'ă-pĭ) [G. *chrysos,* gold, + *therapeia,* treatment.] Treatment of disease by the administration of gold salts, aurotherapy. The "gold cure."

chrysotox'in [G. *chrysos,* gold, + *toxikon,* poison.] An odorless and tasteless principle, $C_{25}H_{35}N_6O_{10}$, obtained from ergot.

chthonophagia, chthonophagy (thon-o-fa'gĭ-ah; thon-of'a-jĭ) [G. *chthōn,* earth, + *phagō,* I eat.] Dirt eating; geophagy.

Church'ill's i'odine caus'tic. Liquor iodi causticus (N.F.), a very strong counterirritant or caustic made by dissolving iodine 25, and potassium iodide 50, in distilled water 100. **C.'s tinc'ture of i'odine,** tinctura iodi, Churchill (N.F.), iodine 16.5, potassium iodide 3.3, distilled water 2.5, alcohol to make 100.

Chvóstek's symp'tom (khvosh'tek) [Franz *Chvostek,* Austrian military surgeon, 1835–1884.] Facial irritability in postoperative tetany, unilateral spasm being excited by a slight tap.

chylangioma (kĭ-lan-jĭ-o'mah) [G. *chylos,* juice, + *angeion,* vessel, + *-ōma.*] A tumor formed of dilated lacteals.

chyle (kīl) [G. *chylos,* juice.] A creamy fluid taken up by the lacteals from the intestine during digestion it is alkaline in reaction and coagulates, outside the body, into fibrin and serum; it is conveyed by the thoracic duct to the left subclavian vein where it becomes mixed with the blood.

chylema (ki-le'mah) [G. *chylos,* juice.] Butschli's name for the minute droplets of liquid which he regarded as the essential elements of protoplasm.

chylemia, chylæmia (ki-le'mĭ-ah) [*chylos,* chyle, + *haima,* blood.] The presence of chyle in the peripheral circulation.

chylidrosis (ki-lĭ-dro'sis) [G. *chylos,* chyle, + *hidrōs,* sweat.] Sweating of a milky fluid like chyle.

chylifaction (kĭ-lĭ-fak'shun) [G. *chylos,* chyle, + L. *facere,* to make] The production of chyle.

chylifactive (ki-lĭ-fak'tiv). Forming chyle, chylopoietic.

chyliferous (ki-lif'er-us) [G. *chylos,* chile, + L *ferre,* to carry] Conveying chyle.

chylification (ki-lĭ-fi-ka'shun) [G. *chylos,* chyle, + L. *facere,* to make.] Chylifaction, chylopoiesis.

chylocele (ki'lo-sēl) [G. *chylos,* chyle, + *kēlē,* tumor] An effusion of chyle into the tunica vaginalis testis.

chylocyst (ki'lo-sist) [G. *chylos,* chyle, + *kystis,* bladder.] Receptaculum chyli, cisterna* chyli.

chyloderma (ki-lo-der'ma) [G. *chylos,* chyle, + *derma,* skin.] Lymph-scrotum.

chylopericarditis (kĭ-lo-per-ĭ-kar-di'(de')tis). Chylopericardium.

chylopericardium (ki''lo-per-ĭ-kar'dĭ-um). An accumulation of a milky white fluid in the pericardial sac.

chyloperitoneum (ki-lo-per-ĭ-to-ne'um). An accumulation of a milky fluid in the peritoneal cavity; chylous ascites.

chylophoric (ki-lo-for'ik) [G *chylos,* chyle, + *phoreō,* I carry] Chyliferous, conveying chyle.

chylopleura (kĭ-lo-plu'rah). An accumulation of a milky fluid in the pleural cavity.

chylopoiesis (kĭ-lo-poy-e'sis) [G. *chylos,* chyle, + *poiesis,* a making.] The formation of chyle in the intestine and its absorption by the lacteals.

chylopoietic (ki-lo-poy-et'ik). Relating to chylopoiesis, chyle-forming.

chylosis (ki-lo'sis). The formation of chyle from the food in the intestine. its absorption by the lacteals, and its mixture with the blood and conveyance to the tissues.

chylothorax (ki-lo-tho'raks). Chylopleura

chylous (ki'lus). Relating to chyle.

chyluria (ki-lu'rĭ-ah) [G. *chylos,* chyle, + *ouron* urine.] The passage of chyle, or a milky fluid containing suspended fat globules, in the urine

chyme (kīm) [G. *chymos,* juice.] The semifluid mass of partly digested food passed from the stomach into the duodenum.

chyme-mass (kīm'mas). Endoplasm.

chymification (ki-mĭ-fi-ka'shun) [G. *chymos,* chyme, + L. *facere,* to make.] Chymopoiesis, formation of chyme, gastric digestion.

chymosin (ki'mo-sin). Rennet, rennin.

chymosinogen (ki-mo-sin'o-jen). The zymogen of rennin or rennet.

chymous (ki'mus). Relating to chyme.

Chytridium (ki-trĭd'ĭ-um) [G. *chytridion*, a small pot.] A genus of microscopic fungi, parasitic on various plants.

C.I. Abbreviation of color-index.

Ciaccio's glands (chyah'chyo) [Giuseppe Vincenzo *Ciaccio*, Italian anatomist, 1824–1901.] Glandulæ lacrimales accessoriæ.

Ciaccio's meth'od (chyah'chyo) [Carmelo *Ciaccio* Italian pathologist.] A method of demonstrating under the microscope the invisible intracellular lipoids by fixation with acid chromate solutions and staining in sections with Sudan III.

Ciaglinski's tract (chyahl-yin'skĭ). A tract of sensory fibers in the posterior gray commissure of the spinal cord.

cibopho'bia [L. *cibus*, food, + G. *phobos*, fear.] Sitophobia.

cicatrice (sik'ă-tris). Cicatrix.

cicatricial (sik-ă-trish'al). Relating to a cicatrix.

cicatrisot'omy [L. *cicatrix*, scar, + G. *tomē*, cutting] Uletomy.

cicatrix, pl. *cicatri'ces* (sĭ-ka'triks) [L.] Scar; the fibrous tissue replacing the normal tissues destroyed by injury or disease. **fil'tering c.**, a c. through which fluid may seep, although no visible openings are present; noting especially a form of c. sometimes obtained after operation for glaucoma, through which there is a slight constant drainage of aqueous humor **u'loid c.**, see *uloid* (2).

cicat'rizant. Causing or favoring cicatrization.

cicatrization (sĭ-kat-ri-za'shun). 1. The process of scar formation. 2. The healing of a wound otherwise than by first intention.

cic'atrize. To heal, to be closed by scar-tissue, said of a wound or tissue defect.

cicinnus (si-sĭn'us) [G. *kikinnos*, curled hair] A scorpioid cyme.

Cicu'ta. A genus of umbelliferous plants, sometimes confused with *Conium*. **C. viro'sa**, water hemlock, a plant resembling hemlock, or conium in its properties.

cic'utine. A volatile alkaloid, resembling or identical with coniine, present in water-hemlock, *Cicuta virosa*.

cic'utism. Poisoning with water hemlock.

cicutox'in. An amorphous resinous substance obtained from the water-hemlock, *Cicuta virosa*.

cil'ia. Plural of *cilium*.

ciliarot'omy. Surgical division of the zona ciliaris

ciliary (sil'ĭ-ă-rĭ) [L. *ciliaris*, relating to or resembling a *cilium*, eyelash.] Relating to (1) any cilia or hair-like processes, (2) the eyelashes, (3) certain of the structures of the eyeball. **c. ar'tery**, one of a number of minute arteries in the eye, see *arteria ciliaris*. **c. body**, (1) the ciliary muscle and ciliary processes taken together; (2) the dentate nucleus. **c. canal'**, a space at the periphery of the iris. **c. gan'glion**, a small nerve ganglion, the size of a pinhead, on the outer side of the optic nerve in the posterior part of the orbit. **c. glands**, modified sweat glands of the eyelid, glands of Moll. **c. lig'ament**, the circular fibers of the c. muscle, ring muscle of Müller. **c. mar'gin**, margo ciliaris, (1) the circumference of the iris where it is continuous with the c. body; (2) the tarsal border of an eyelid. **c. muscle**, see under *musculus*. **nerves**, the *long* c. nerves, are branches of the nasal, the *short* c. nerves arise from the c. ganglion; see *nervus*. **c. pro'cesses**, see under *processus*. **c. vein**, vena ciliaris [BNA].

Cilia'ta. A class of *Infusoria* in which cilia are present in all stages of existence.

cil'iated. Having cilia

ciliectomy (sil-ĭ-ek'to-mĭ) [*ciliary* (body, border, or muscle) + G. *ektomē*, excision.] Cyclectomy.

cilioscle'ral. Relating to the ciliary body and the sclera.

ciliospinal (sil''ĭ-o-spi'nal). Relating to the ciliary body and the spinal cord, noting the *c. center*, in the lower cervical and upper thoracic region of the spinal cord which governs the dilatation of the pupil.

ciliotomy (sil-ĭ-ot'o-mĭ). Cyclotomy.

cil'ium, pl. *cilia* [L. an eyelid.] 1. Eyelash. 2. One of the hair-like processes of certain cells.

cillo'sis. Spasmodic twitching of an eyelid.

cim'bia. A slender band of white fibers crossing the ventral surface of a cerebral peduncle.

Ci'mex [L. bedbug.] *Clinocoris*, a genus of insects, family *Cimicidæ;* bedbug. **C. cilia'tus,** a small species indigenous in Russia. **C. lectula'rius,** *Acanthia lectularia*, the ordinary bedbug. **C. macroceph'alus,** *C. rotundatus*. **C. rotunda'tus,** the Indian bedbug, of large size, found in Mauritius, Reunion, India, Malay, and neighboring parts of southern Asia.

cimicifuga (U. S.), **cimicif'ugæ rhizo'ma** (Br) (sim-ĭ-sif'u-gah) [L. *cimex(cimic-)*, bedbug, + *fugare*, to chase.] Macrotys,* the rhizome and roots of *Cimicifuga racemosa*, *Actæa racemosa*, black snakeroot, black cohosh, bugwort, an herb of eastern and central United States and Canada; alterative, emmenagogue, antispasmodic, antirheumatic in doses of gr. 10–15 (0.6–1.0).

cimicifugin (sim-ĭ-sif'u-jin). Macrotin, a yellowish brown resinoid body, the active principle of cimicifuga; tonic and antispasmodic in doses of gr. 1–6 (0.06–0.4).

cin-, cine- [G. *kinēsis*.] A prefix denoting movement; also more commonly, though less properly, written *kin-*, *kine-*.

cina (si'nah) The homeopathic tincture from the dried flowers of wormseed, *Artemisia santonica;* employed as an anthelmintic, and in other conditions marked by itching of the nose or anus, night crying, and grinding of the teeth during sleep in doses of the 1st, 6th, or 30th potency.

cinæsthe'sia. Cinesthesia.

cinanesthesia, cinanæsthesia (sin-an-es-the'zĭ-ah) [G. *kinēsis*, motion, + *an-* priv. + *aisthēsis*, sensation.] A disturbance of deep sensibility in which there is inability to perceive either direction or extent of movement, the result being ataxia.

cinchamidine (sin-kam'ĭ-dēn). Hydrocinchonidine, an alkaloid, $C_{19}H_{24}N_2O$, from cinchona.

Cinchona (sin-ko'nah) [Countess of *Chinchon* who was cured of a fever by Peruvian bark in 1638.] A genus of evergreen trees, fam. *Rubiaceæ*, native of South America but cultivated in various tropical regions. The bark of all the species contains quinine and other cinchona alkaloids in varying amounts. (For the drug, see the following title, *cinchona*.) **C. calisa'ya,** yellow bark, one of the official cinchonas of the U.S.P. **C. micran'tha,** a species yielding a fair amount of alkaloids but not now used to any extent. **C. lancifo'lia,** a species quite rich in alkaloids, but not recognized in the U.S.P. or B.P. **C. ledgeria'na,** a species, cultivated chiefly in Java, rich in alkaloids and official in the U.S.P. **C. officina'lis,** the first discovered species, official in the U S.P., but seldom yielding the stipulated amount of alkaloids. **C. robus'ta,** a hybrid between *C. officinalis* and *C. succirubra*, very rich in quinine and a common source of the red bark. **C. succiru'bra,** one of

the sources of cinchona (U.S.) and the only recognized source of the official Br. cinchona.

cinchona (sin-ko'nah). 1. Peruvian bark Jesuits' bark, the bark of any species of *Cinchona* (*q.v.*). 2. (U.S., Br.). The dried bark of *Cinchona succirubra* Pavon or of its hybrids, known in commerce as red cinchona, or of *C. ledgeriana* Moens, *C. calisaya* Weddell, and of hybrids of those with other species of *Cinchona*, known in commerce as calisaya bark or yellow cinchona (Fam. *Rubiaceæ*). It yields not less than 5 per cent. of the alkaloids of cinchona. **c. fla'va,** yellow bark, the name in the U.S.P. of 1880 for what is now official as simply cinchona. **c. ru'bra** (U.S. IX) red bark, cinchonæ rubræ cortex (Br.), the dried bark of *C. succirubra* (more often probably *C. robusta*). Cinchona is an antiperiodic and bitter tonic in doses of gr. 10–30 (0.6–2.0) in decoction.

cinchonamine (sin-ko'nă-mēn). An alkaloid, $C_{19}H_{24}N_2O$, derived from cuprea bark, *Remijia purdicana*, related to cinchona; antipyretic and antiperiodic in doses of gr. 4–8 (0.25–0.5).

cinchonate (sin'ko-nāt). A salt of cinchonic, or quinic, acid.

cinchonic (sin-kon'ik). Relating to cinchona. **c. acid,** quinoline-carbonic acid, $C_{10}H_7NO_2$, obtained from cinchonine by the action of oxidizing agents.

cinchonicine (sin-kon'i-sēn). An amorphous alkaloid, $C_{19}H_{22}N_2O$, from cinchona.

cinchonidina (sin-kon-i-di'(de')nah). Cinchonidine, cinchonidia; formula, $C_{19}H_{22}N_2O$, an isomer of cinchonina; an alkaloid obtained from the bark of several species of cinchona; indications the same as those of quinine, but it must be given in larger doses. **cinchonidi'næ hydrobro'midum,** blennostasin. **cinchonidi'næ sul'phas** (U.S.) cinchonidine sulphate, occurs in white silky needles or prisms, odorless but with a very bitter taste; antipyretic and tonic in doses of gr. 5–15 (0.3–1.0).

cinchonina (sin-ko-ni'(ne')nah). Cinchonine, an alkaloid prepared from the bark of several species of cinchona; formula, $C_{19}H_{22}N_2O$; tonic in doses of gr. 1–2 (0.06–0.13) and antiperiodic in doses of gr. 10–30 (0.6–2.0). **cinchoni'næ hydrochlo'ridum,** cinchonine hydrochloride, occurs in white acicular crystals, dose, gr. 2–10 (0.13–0.6). **cinchoni'næ iodosul'phas,** cinchonine iodosulphate, antiseptol, an odorless brown powder used as a substitute for iodoform. **cinchoni'næ sul'phas** (N.F.), cinchonine sulphate, occurs in colorless rhombic crystals; dose and uses the same as those of cinchonina.

cinchonism (sin'kon-izm). Poisoning by cinchona or its alkaloids, marked by tinnitus aurium headache, and deafness.

cinchonize (sin'ko-nīz). To bring profoundly under the influence of cinchona or any of its alkaloids, especially quinine.

cinchonology (sin-kon-ol'o-jĭ). The branch of pharmacology which has to do with the botany, chemistry, pharmacy, and therapeutics of cinchona and its alkaloids.

cinchophen (sin'ko-fen). Cinchophenum.

cinchophenum (sin-ko-fe'num) (U.S., Br.). Cinchophen, acidum phenylcinchoninicum (U.S. IX), atophan, $C_6H_5.C_9H_5N.COOH$; occurs as small colorless, needle-like crystals, or a white to yellowish-white powder, odorless, of a slightly bitter taste, insoluble in water, soluble in 120 parts of alcohol; diuretic and uric-acid eliminant in doses of gr. 8 (0.5).

cinchotannic acid (sin-ko-tan'ik). A tannic acid derivable from cinchona.

cinchotoxin (sin-ko-tok'sin). A poisonous isomer of cinchonine.

cinc'ture sensa'tion. Girdle sensation, zonesthesia.*

cinema eye (si'ne-mŭ ī). Klieg* eye.

cinematics (sin-e-mat'iks) [G. *kinēma(kinēmat-)*, motion.] The science of motion.

cinematization (sin-e-mat-i-za'shun) [G. *kinēma*, motion.] Cineplastics.

cin'ene. Dipentene.

cin'eol [*cina* + L. *oleum*, oil.] Oil of wormseed.

cineplastics (sin-e-plas'tiks) [G. *lineōk*, I move.] The art of forming a muscular stump, after amputation, so shaped as to be capable of imparting direct and voluntary motion to an artificial limb, cinematization, kineplasty.

Cinera'ria marit'ima. An herb, dusty miller, *Sinecio cineraria*, the fresh juice of which has been credited with the faculty of causing the absorption of soft capsular cataract.

cinerea (sin-e're-ah) [L. *cinereus*, ashy.] 1. The gray matter of the brain and other parts of the nervous system. 2. A gray layer between the ectoglia and the ependyma layer in the beginning stratification of the medullary tube in the embryo; from it chiefly are developed the brain and spinal cord.

cine'real. Relating to the gray matter of the nervous system.

cineritious (sin-er-ish'us). Ashen, noting the gray matter of the brain, spinal cord, and ganglia. **c. tu'bercle,** (1) tuber cinereum; (2) tuberculum cinereum.

cinesalgia (sin-es-al'jĭ-ah) [G. *kinēsis*, motion, + *algos*, pain.] Pain caused by muscular movement.

cinesia (sin-e'sĭ-ah) [G. *kinēsis*, movement.] The symptom-complex caused by unwonted motion; seasickness, car-sickness, swing-sickness, etc.

cinesiatrics (sin-e-sĭ-at'riks) [G. *kinēsis*, movement, + *iatrikos*, relating to medicine.] The therapeutic employment of movements, either active or passive; cinesitherapy, movement-cure.

cinesiesthesiometer, cinesiæsthesiometer (sin-es"e-es-the-zĭ-om'e-ter) [G. *kinēsis*, movement, + *aisthēsis*, sensation, + *metron*, measure.] An instrument for determining the muscular sense

cinesimeter (sin-ĕ-sim'e-ter) [G. *kinēsis*, movement, + *metron*, measure.] An instrument for measuring the extent of a movement.

cinesiod'ic. Cinesodic.

cinesiology (sin-ĕ-sĭ-ol'o-jĭ) [G. *kinēsis*, movement, + *-logia*.] The science of movement, especially of the therapeutic use of movements; cinematics, cinesiatrics, cinesitherapy.

cinesiom'eter. Cinesimeter.

cinesioneurosis (sin-ĕ-sĭ-o-nu-ro'sis) [G. *kinēsis*, movement, + *neuron*, nerve, + *-ōsis*.] A neurosis, or functional nervous disease marked by tics, spasms, or other motor disorders. **vas'cular c.,** angioneurosis.

cinesipathist (sin-ĕ-sip'a-thist). A non-medical person who treats disease by movements of various kinds, a movement-curist.

cinesipathy (sin-ĕ-sip'a-thĭ) [G. *kinēsis*, movement, + *pathos*, suffering.] 1. An affection marked by motor disturbances. 2. Cinesitherapy.

cinesitherapy (sin-ĕ-sĭ-ther'ă-pĭ) [G. *kinēsis*, movement, + *therapeia*, treatment.] The therapeutic employment of movements, both active and passive; cinesiatrics, movement-cure.

cinesodic (sin-e-sod'ik) [G. *kinēsis*, motion, + *hodos*, way.] Relating to the paths by which motor impulses travel.

cinesthesia, cinæsthesia (sin-es-the'zĭ-ah) [G. *kinēsis*, motion, + *aisthēsis*, sensation.] 1. The sense perception of movement; the muscular sense. 2. An illusion of moving in space.

cinesthesiometer, cinæsthesiometer (sin-es-the-zĭ-om'e-ter) [G. *metron*, measure.] An instrument for determining the degree of muscular sensation.

cinesthet'ic, cinæsthet'ic. Relating to cinesthesia, or the sensation or feeling of muscular movement.

cinet'ic [G. *kinētikos*.] Relating to motion or muscular movements.

cinetocyte (si'ne-to-sīt) [G. *kinetos*, movable, + *kytos*, cell.] A fourth formed element in the blood, one of a number of small round or egg-shaped wandering cells, neither red cells, white cells, nor platelets.

cinetocythemia (si-ne'to-si-the'mĭ-ŭ) [*cinetocyte* + G. *haima*, blood.] The presence of an abnormally large number of cinetocytes in the blood, cinetocytosis.

cinetocytopenia (si-ne''to-si-to-pe'nĭ-ŭ) [*cinetocyte*, + G. *penia*, poverty.] The presence or an abnormally small number of cinetocytes in the blood.

cinetocytosis (si-ne'to-si-to'sis). The presence of an abnormally large number of cinetocytes in the blood, cinetocythemia.

cinetographic (sin-ĕ-to-graf'ik) [G. *kinētos*, movable, + *graphikos*, recording.] Relating to a graphic record of movements.

cinetog'raphy. The art of recording graphically movements of any sort.

cinetonucleus (sin-ĕ-to-nu'kle-us) [G. *kinētēs*, one that sets in motion.] An aggregation within the protozoan cell of the assumed specific material upon which the motor activities of the animal depend; division center.

cinetoplasm, cinetoplasma (sin-et'o-plazm, sin-et-o-plaz'mah) [G. *kinētēs*, an originator, mover, + *plasma*, a thing formed.] The chromophile substance, or tigroid masses, in the nerve-cells, so called because it is present only when the cells begin to perform their proper function.

cin'gule. Cingulum; the fifth cusp of an upper molar tooth; a small tubercle of the lingual surface of a tooth.

cin'gulum, gen. *cin'guli*, pl. *cin'gula* [L. girdle.] [BNA]. 1. A well marked band of association fibers in the medial portion of the centrum ovale of each hemisphere, passing from near the region of the anterior perforated substance backward over the upper surface of the corpus callosum in the medullary substance of the gyrus cinguli (callosal gyrus), some fibers then passing to the cuneus of the occipital lobe, others running forward around the splenium as far as the uncus of the temporal lobe. 2. Basal ridge, a U-shaped ridge at the base of the posterior concave surface of the crown of the upper incisors and canine teeth, the limbs of the U running for a short distance along the sides of the lingual surface, the loop pointing to the gum. **c. athlet'icum,** a zone of dilated venules in the skin outlining the insertion of the diaphragm; it is said to be common in athletes and those subject to severe physical strain, and occurs in asthmatics, especially those with the gouty diathesis. **c. extremita'tis inferior'is,** pelvic girdle.* **c. extremita'tis superior'is,** shoulder girdle.*

Ciniselli's meth'od (che-ne-sel'le) [Luigi *Ciniselli*, Italian surgeon, 1803–1878.] Treatment of aneurysm by galvanopuncture

cin'nabar [G. *kinnabari*.] The native ore from which metallic mercury is obtained by sublimation; red sulphide of mercury.

cinnaldehy'dum. Cinnaldehyde, cinnamic aldehyde, C_9H_8O; an aldehyde obtained from oil of cinnamon or prepared synthetically; aromatic, carminative, and stomachic in doses of ♏1–5 (0.06–0.3).

cin'namate. A salt of cinnamic acid.

cinnamein (sin-am'e-in). Peru balsam oil, obtained by the action of caustic soda or potash; it is an oily liquid containing a number of aromatic substances.

cinn'amene. Styrone.

cinnam'ic. Relating to cinnamon. **c. acid,** phenylacrylic acid, $HC_9H_7O_2$, obtained from oil of cinnamon, balsam of Peru and of tolu, or storax; employed hypodermically in tuberculosis in doses of gr. $\frac{1}{10}$–$\frac{1}{4}$ (0.001–0.015).

cinnamo'mum (U.S., Br.). Cinnamon, the dried bark of *Cinnamomum loureirii* Nees (Fam. *Lauraceæ*), an aromatic bark employed as a spice, and in medicine as a carminative and aromatic stomachic in doses of gr. 3–6 (0.2–0.4). **c. cas'sia,** the unofficial source of most of the cinnamon in the shops. **c. saigon'icum,** Saigon cinnamon, the bark of an undetermined species of cinnamon in Annam. **c. zeylan'icum,** Ceylon cinnamon, cinnamomi cortex, brought from Ceylon; it is the source of the B.P. cinnamomum. The dose of powdered cinnamon is gr. 1–10 (0.06–0.6).

cinn'amon. Cinnamomum.

cinn'amyl-eu'genol. A derivative of eugenol, occurring in colorless, odorless, tasteless, shining needles; employed hypodermically in tuberculosis in doses of ♏2–8 (0.13–0.5).

cinocentrum (sin-o-sen'trum) [G. *kineō*, I move, + *kentron*, center.] Zimmermann's term for centrosome.

cinol'ogy. Cinesology

cinom'eter. Cinesimeter.

cin'oplasm [G. *kineō*, I move, + *plasma*, a thing formed.] The portion of the protoplasm of a cell upon which its motor activity depends; cinetoplasm.

ci'on [G. *kiōn*, pillar.] The uvula.

cionec'tomy [G. *kiōn*, uvula, + *ektomē*, excision.] Amputation of the uvula.

cionitis (si-on-ī'(e')tis). Inflammation of the uvula.

cionoptosis (si-on-op-to'sĭ-ah) [G. *kiōn*, uvula, + *ptōsis*, a falling.] Elongation of the uvula.

cionotome (si'on-o-tōm) [G. *kiōn*, uvula, + *tomē*, cutting.] An instrument for cutting off part or all of the uvula.

cionot'omy. Cutting off a part of the uvula.

Cipollina's test (che-pol-le'nah). Add to the suspected urine an equal quantity of phenylhydrazine and a few drops of glacial acetic acid; after heating add a few drops of solution of caustic soda; on again heating and allowing to cool, crystals of glucosazone will form if the urine contains glucose.

circellus venosus hypoglossi (sur-sel'us ve-no'sus hi-po-glos'i) [L. *circellus*, dim. of *circus*, circle.] Rete canalis hypoglossi [BNA].

circinate (sur'sĭ-nāt) [L. *circinatus*, made round.] Circular, ring-shaped.

circle (sur'kl) [L. *circulus*.] A ring-shaped structure or group of structures. **c. of Haller,** circulus vasculosus nervi optici. **c. of Willis,** circulus arteriosus. **defen'sive c.,** the addition of a secondary disease limiting or arresting the progress of the primary affection, as when pneumothorax super-

venes on pulmonary tuberculosis, the two affections exerting a reciprocally antagonistic action **diffu'sion c.**, one of a number of circles formed on the plane of projection of an image when it is not in the focus of the lens. **vas'cular c.**, (1) the circle around the mouth formed by the inferior and superior coronary arteries; (2) c. of Haller. **vic'ious c.**, (1) the mutually accelerating action of two independent diseases, or of a primary and secondary affection; (2) the passage of food, after a gastroenterostomy, from the artificial opening through the intestinal loop by antiperistaltic action, into the stomach again by the pyloric orifice, or the reverse; (3) in aortic stenosis, the series of changes following dilatation of the left ventricle, namely, relative incompetency of the mitral valve, dilatation of the left atrium, pulmonary engorgement, hypertrophy and dilatation of the right ventricle, relative incompetency of the tricuspid valve, dilatation of the right atrium, and general venous engorgement.

circuit (sur'kit) [L. *circuitus*, going round] The path or course of an electric current **closed c.**, one in which the current flows continuously, **open c.**, one the continuity of which is interrupted so that the current cannot pass. **short c.**, (1) in electricity, a c. of low resistance formed between two points which diverts the greater part or the whole of the current from the longer c.; (2) in intestinal surgery, a communication formed by operation between two portions of the alimentary canal to enable the contents to pass by an obstruction; also (3), as a verb, to make a short circuit in either sense.

cir'cular. 1. Shaped like a circle, ring-shaped annular. 2. Taking a circular course, recurrent, periodic.

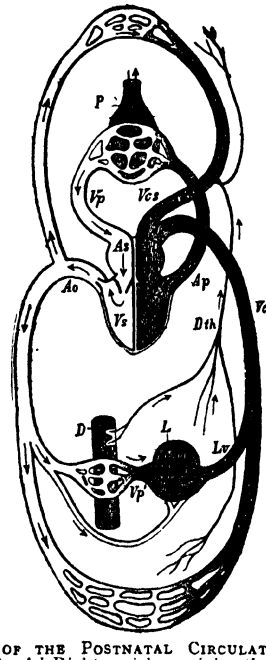


DIAGRAM OF THE POSTNATAL CIRCULATION. (After Huxley.) *Ad*, Right auricle receiving the superior and inferior venæ cavæ, *Vcs* and *Vci*; *Dth*, thoracic duct, the main trunk of the lymphatic system; *Ad*, right auricle; *Vd*, right ventricle; *Ap*, pulmonary artery; *P*, lung; *Vp*, pulmonary vein; *As*, left auricle; *Vs*, left ventricle; *Ao*, aorta; *D*, intestine; *L*, liver; *Vp*, portal vein; *Lv*, hepatic vein. See also *fetal** circulation.

circula'tion. Movement in a circle or through a circular course. **blood c.**, the course of the blood from the heart through the arteries, capillaries, and veins back again to the heart. **collat'eral c.**, that which is maintained in small anastomosing vessels when the main artery is obstructed. **compen'satory c.**, that which is established in dilated collateral vessels when the main artery of the part is obstructed. **deriv'ative c.**, the passage of blood directly from arteries to veins, without going through the capillary network. **fetal c.**, placental c. **greater c.**, systemic c. **lesser c.**, pulmonary c. **lymph c.**, the slow passage of lymph through the lymphatic vessels and glands. **placen'tal c.**, the circulation of blood during intrauterine life, aeration and depuration occurring in the placenta instead of in the lungs as in postnatal life; see cut under *fetal* **portal c.**, the capillary c. of venous blood in the liver, between the portal and the hepatic veins. **pul'monary c.**, the passage of blood from the right ventricle through the pulmonary artery to the lungs and back through the pulmonary veins to the left atrium. **system'ic c.**, the c. of blood through the arteries, capillaries, and veins of the general system, from the left ventricle to the right atrium.

cir'culatory. Relating to the circulation.

circulus, gen. and pl. *circuli* (sur'ku-lus) [L. dim. of *circus*, circle.] Any ring-like structure. A circle formed by connecting arteries, veins, or nerves. **c. arterio'sus,** circle of Willis, an anastomotic "circle" (roughly polygonal in outline) at the base of the brain, formed, in order from before backward, by the anterior communicating artery, the two anterior cerebral, the two internal carotid, the two posterior communicating, and the two posterior cerebral arteries. **c. arterio'sus Hal'leri** [BNA], c. vasculosus nervi optici. **c. arterio'sus ir'idis** [NK] arterial circle of the iris, one of two anastomosing circles of the ciliary arteries; the inner, smaller, *c. minor* is near the pupillary margin of the iris, the outer, larger, *c. major*, is at the ciliary border of the iris. **c. callo'sus Hal'leri,** one of the fibrous rings surrounding the opening of the mitral and tricuspid valves in the heart. **c. vasculo'sus ner'vi op'tici (Hal'leri)**, vascular circle of the optic nerve, or of Haller, a network of branches of the short ciliary arteries on the sclera around the point of entrance of the optic nerve. **c. veno'sus Hal'leri,** a ring of veins in the areola of the nipple. **c. veno'sus Rid'leyi,** a venous ring surrounding the sella turcica of the sphenoid bone. **c. Zinn'ii, c.** vasculosus nervi optici.

cir'cum- [L. around.] A prefix denoting a circular movement, or a position surrounding the part indicated by the word to which it is joined.

circumanal (sur-kum-a'nal). Surrounding the anus.

circumarticular (sur-kum-ar-tik'u-lar) [L. *circum*, around, + *articulus*, joint.] Periarthric, surrounding a joint.

circumax'illary [L *circum*, around, + *axilla*] About the axilla.

circumbul'bar. Around any bulb, especially the eyeball.

circumcision (sur-kum-sizh'un) [L. *circum*, around, + *cædere*, to cut.] The operation of removing part or all of the foreskin, or prepuce.

circumcorneal (sur-kum-kor'ne-al). Surrounding the cornea.

circumduction (sur-kum-duk'shun) [L. *circum*, around, + *ducere*, to draw.] Movement of a part, as the eye or an extremity, in a circular direction

circumferentia (sur-kum-fe-ren'shĭ-ah) [L.] Circumference. **c. articula'ris** [BNA], articular circumference; there are two structures with this title: *c. a. capit'uli ul'næ*, articular circumference of the small head of the ulna (at its upper end), and *c. a. ra'dii*, articular circumference of the radius (at its lower end).

circumflex (sur'kum-flex). Describing an arc of a circle, noting several anatomical structures—arteries, veins, nerves, and muscles.

circumgemmal (sur"kum-jem'al) [L. *circum*, around, + *gemma*, a bud.] Surrounding a bud-like or bulb-like body, noting a mode of nerve termination by fibrils surrounding an end-bulb.

circumin'sular. Situated around the island of Reil.

circumlen'tal. Surrounding the crystalline lens.

circumnuclear (sur-kum-nu'kle-ar) Surrounding any nucleus

circumoc'ular [L. *oculus*, eye.] Around the eye.

circumo'ral [L. *circum*, around, + *os(oris)*, mouth.] Encircling the mouth.

circumor'bital. Around the orbit.

circumre'nal [L. *ren*, kidney.] Perinephric.

circumscissile (sur-kum-sis'il) [L. *circumscindere*, to cut around.] In botany, noting a dehiscence or splitting of the capsule of a fruit in a circular line around the side.

circumscriptus (sur-kum-skrip'tus) [L. *circum*, around, + *scribere*, to write.] Circumscribed.

circumvall'ate [L. *vallum*, wall.] Noting a structure surrounded by a raised ring, as the *c. papillæ** of the tongue.

circumvas'cular [*circum*, around, + *vasculum*, vessel.] Surrounding any vessel, especially a blood-vessel.

circus movement (sur'kus mōōv'ment). "A term applied to a contraction or excitation wave travelling continuously in circular fashion around a ring of muscle or through the wall of the heart" (Lewis).

cirrhonosus (sir-ron'o-sus) [G. *kirrhos*, tawny, + *nosos*, disease.] A disease of the fetus marked anatomically by a yellow staining of the peritoneum and pleura.

cirrhosis (sĭ-ro'sis) [G. *kirrhos*, ~~tawny; the~~ term was first applied to diffuse fibrosis of the liver because of the yellowish color of sections of the organ, and later its use was extended to fibrosis or sclerosis of any organ.] A degeneration or atrophy of the parenchyma cells of an organ with hypertrophy of the interstitial connective tissue **atroph'ic c.**, the usual form of c. in which extreme contraction of the connective tissue and atrophy of the parenchyma cells lead to a marked reduction in size of the organ. **bil'iary c.**, Hanot's c., a chronic cholangitis, resulting in jaundice, attacks of abdominal pain, and enlargement of the liver and spleen, but usually without ascites; called also *hypertrophic biliary c.*; in *obstructive biliary c*, caused by obstruction in the extrahepatic bileducts, the liver is enlarged, jaundice is present, the stools are acholic, and the patient rapidly loses strength. **bil'iary c. of chil'dren,** infantile liver, a disease characterized by a growth of fibrous connective tissue within the lobules between the liver cells; it occurs in India, affecting children between 6 and 24 months of age; the liver is enlarged, jaundice is marked, and there is edema in the later stages; the disease lasts from a month or two to one or two years; the prognosis is almost uniformly unfavorable. **cap'sular c. of the liv'er,** Glissonian c. **c. mam'mæ**, chronic interstitial mastitis. **c. of the kidney,** granular kidney. **c. of the liver,** biliary c., Glissonian c. **c. of the lung,** chronic interstitial pneumonia. **c. of the stomach,** sclerotic gastritis a condition of connective-tissue hypertrophy, causing thickening of the walls with contraction of the cavity of the stomach. **Glisso'nian c.,** [see *Glisson*], chronic perihepatitis with thickening and subsequent contraction, resulting in atrophy and deformity of the liver. **Hanot's c.,** hypertrophic c. of the liver. **hypertroph'ic c.,** a form in which the hypertrophy of the connective tissue is in excess of the atrophy of the parenchyma cells. **Laënnec's' c.,** portal c. **multilob'ular c.,** atrophic c. of the liver. **peripor'tal c.,** atrophic c. of the liver. **pig'mentary c.,** pigmented cirrhosis, usually hypertrophic, of the liver, associated with bronzed diabetes. **por'tal c.,** Laennec's c., hobnailed liver; a form probably due to the action of some poison conveyed by the portal vein; the liver is usually decreased in size, though it may be slightly enlarged, ascites is common, hematemesis occurs at times, but jaundice is rare. **tox'ic c.,** c. of the liver due to chronic poisoning by lead, alcohol, etc. **unilo'bar c.,** hypertrophic c. of the liver. **vas'cular c.,** c. of the liver due to stasis of the circulation in the organ.

cirrhot'ic. Relating to or affected with cirrhosis.

cirrose, cirrous (sir'oz, sir'us). 1. Relating to or having cirri. 2. In botany, having tendrils or coiling like a tendril.

cirr'us, pl. *cirri* [L. a curl.] 1. A structure like a thickened or condensed cilium constituting one of the sensory or tactile organs of the protozoa. 2. The protruding male sexual organ of a tapeworm or a fluke.

cirsectomy (sur-sek'to-mĭ) [G. *kirsos*, varix, + *ektomē*, excision.] Excision of a section of a varicose vein.

cirsocele (sur'so-sēl) [G *kirsos*, varix, + *kēlē*, tumor.] Varicocele, a dilatation of the veins of the spermatic cord, marked by a boggy swelling, a dragging weight, and slight pain.

cirsoid (sur'soyd) [G. *kirsos*, varix, + *eidos*, appearance.] Varicose, resembling a varix. **c. an'eurysm,** dilatation and tortuosity of an artery resembling varices in a vein.

cirsom'phalos (sur-som'fa-los) [G. *kirsos*, varix, + *omphalos*, umbilicus.] The presence of varicose veins around the umbilicus.

cirsophthal'mia [G. *kirsos*, varix, + *ophthalmos*, eye.] Dilatation of the conjunctival blood-vessels.

cirsotomy (sur-sot'o-mĭ) [G. *kirsos*, varix, + *tomē*, incision.] Treatment of varicose veins by multiple incisions.

cissa (sis'ah) [G. *kissa*] A craving for unusual or unwholesome articles of food; the unnatural longings of pregnancy.

cissam'pelos [G. *kissos*, ivy, + *ampelos* vine.] (B.A.) The dried root of *Cissampelos pareira;* tonic and diuretic, given in the form of decoction and liquid extract.

cis'tern [L. *cisterna*.] A reservoir, or an enclosed space containing fluid, cisterna.

cister'na, gen. and pl. *cisternæ* [L.] Any cavity or enclosed space serving as a reservoir, especially for chyle or lymph. **c. basa'lis,** basal cistern, c. interpeduncularis [BNA]. **c. cerebellomedulla'ris** [BNA], cerebellomedullary cistern, postcisterna, c. magna, the largest of the subarachnoid cisterns between the under surface of the cerebellum and the posterior surface of the medulla oblongata. **c. chias'matis** [BNA], cistern of the chiasm, a dilatation of the subarachnoid space formed when the arachnoid

passes over from the optic chiasm to the rostrum of the corpus callosum. **c. chy'li** [BNA], chylecistern, receptaculum chyli, a dilated sac 2 or 3 in. (5–7.5 cm.) in length by ¼ to ⅓ in. (6–8 mm.) in width, lying between the vena azygos major and the aorta opposite the first and second lumbar vertebræ; it receives the intestinal, two lumbar and two descending lymphatic trunks, and gives origin to the thoracic duct. **c. crura'lis,** c. interpeduncularis. **c. fos'sæ latera'lis cer'ebri** [BNA], cistern of the lateral fossa of the cerebrum, an elongated expansion of the subarachnoid space where the arachnoid bridges over the opening of the Sylvian fissure. **c. interpeduncula'ris** [BNA], interpeduncular cistern, c. basalis, a dilatation of the subarachnoid space in front of the pons Varolii, where the arachnoidea stretches across between the two temporal lobes. **c. mag'na,** large cistern, c. cerebellomedullaris [BNA]. **c. perilymphat'ica,** the space between the osseous and the membranous labyrinth of the internal ear, containing the perilymph. **c. pon'tis,** an upward continuation of the subarachnoid space of the spinal cord, continuous about the oblongata with the c. cerebellomedullaris. **c. subarachnoida'lis,** an expanded portion of the subarachnoid space within the cranium where the arachnoid bridges over a depression on the surface of the brain; the cavity so formed is filled with fluid. **c. ve'næ mag'næ cer'ebri** [BNA], cistern of the great vein of the cerebrum, an expansion of the subarachnoid space below and behind the trunk of the corpus callosum and above the quadrigeminal bodies.

Cis'tus [G. *kistos*, the rock-rose.] A genus of plants in the Mediterranean region. **C. cre'ticus** and **C. ladanif'erus** furnish the resinous substance *labdanum* or *ladanum*, formerly employed in bronchitis and dysentery.

cit'arin. Trade name of sodium anhydromethylene citrate, a compound of sodium citrate and formaldehyde; used in rheumatism and gout in doses of gr. 15–30 (1.0–2.0), being said to liberate formaldehyde in the blood

citracon'ic acid. Pyrocitric acid, a crystalline acid, $C_5H_6O_4$, prepared from citric acid by distillation.

cit'ral. An aldehyde from oil of lemon.

cit'ramine. Hexamethylene* tetramine methylenecitrate.

cit'rate. A salt of citric acid.

cit'rated. Containing a citrate, specifically noting blood-serum or milk to which has been added a solution of potassium citrate.

citresia (si-tre'sĭ-ă). Trade name of magnesium acid citrate, $MgHC_6H_5O_7.5H_2O$; a white or slightly yellowish, crystalline, odorless, water soluble substance, offered as a laxative or purgative substitute for magnesium citrate in doses of drams 6 (25 gm.) as a laxative and of oz. 1½ (50 gm.) as a purgative.

cit'ric acid. Acidum* citricum.

citrin (sit'rin). Trade name of a preparation of cucurbocitrin recommended for the reduction of high blood pressure in doses of gr. ¾–1½ (0.05–0.1), three times a day.

citrine oint'ment (sit'rēn). Unguentum* hydrargyri nitratis.

cit'rocoll. Phenocoll citrate; colorless crystals soluble in water; antipyretic and analgesic in doses of 10–20 grains (0.6–1.2).

cit'rol. Citrate of itrol,* used like other organic silver preparations in gonorrhea.

cit'ron. In bacteriology, resembling a lemon, of oval shape with a small knob at each end.

citronell'a. 1 Collinsonia. 2. *Andropogon nardus*, a fragrant grass of Ceylon, from which is distilled a volatile oil used as a perfume and as a protection against insects

cit'rophen. A compound of citric acid and paraphenetidin, occurs as a white powder or crystals of a faintly acidulous taste; employed as an antipyretic, analgesic, and sedative in doses of gr. 3–15 (0.2–1.0).

citrurea (sit-ru-re'ah). Trade name of a mixture of lithium bromide, citric acid and urea, employed in gout and rheumatic affections.

Cit'rus. A genus of trees of the order *Rutaceæ*. **C. ac'ida,** the lime. **C. auran'tium** or **sinen'sis,** orange. **C. bergam'ia,** bergamot. **C. decu'mana** shaddock. **C. gran'da,** grape fruit. **C. limo'nis, C. med'ica,** lemon.

civ'et. The secretion from the anal glands of *Viverra civetta* and *V zibetha*, animals of Africa and southern Asia respectively; used, like musk, as a perfume and sometimes as a stimulant.

Civinini's pro'cess (che-ve-ne'ne). [Filippo *Civinini*, Italian anatomist, 1805-1844.] Processus pterygospinosus.

Cl. Symbol for chlorine. Abbreviation of *Clostridium*.

Clado's band (klah'do). The suspensory ligament of the ovary covered with peritoneum. **C.'s lig'ament,** a mesenteric fold running from the broad ligament on the right side to the appendix. **C.'s point,** a point at the junction of the interspinal and right semilunar lines, at the external border of the rectus abdominis muscle, where marked tenderness on pressure is felt in cases of appendicitis.

cladode, cladodium (klad'ōd, klă-do'dĭ-um) [G. *kladōdēs*, resembling a branch.] Cladophyll.

Clado'nia [G. *kladōn*, a branch.] A genus of lichens, of which one species, *C. rangiferi'na*, reindeer moss, has been used in bronchitis.

clad'ophyll [G. *klados*, a branch, + *phyllon*, a leaf.] In botany, a leaf-like branch

cladosporiosis (klad"o-spo-rĭ-o'sis). Infection with a fungus, a species of *Cladosporium*, specifically *C. madagascariense*, marked by the formation of gummatous nodules.

Cladosporium (klad-o-spo'rĭ-um) [G. *klados*, a branch, + *sporos*, seed.] A genus of fungi having greenish conidiophores with oval or round spores. **C. cancerog'enes,** canceromyces. **C. madagascarien'se,** a species producing gummalike nodules. **C. man'soni,** a species causing the lesions of tinea nigra.

cladothricosis (klad-o-thri-ko'sis). Infection with *Cladothrix* (*Actinomyces*) *asteroides*.

Clad'othrix [G. *klados*, a branch, + *thrix*, hair.] A genus of *Chlamydobacteriaceæ*, including the forms with branching cell threads.

claim [L. *clamare*, to call.] In life insurance, the amount of a policy matured and payable, either at the end of an endowment period or at the death of the insured. **death c.,** the amount of a policy maturing by the death of the insured.

clamp. 1. An instrument for making compression of an artery, the pedicle of a tumor, or other structures. 2. In dentistry, a metal spring used for attaching an artificial tooth to a natural one, obviating the necessity of a plate.

clang. 1. A loud metallic noise. 2. The quality of the voice or of a musical tone.

clap. 1. A sharp slapping sound. 2 Gonorrhea

clapotage, clapotement (klă-pŭ-tazh', klă-put-moṅ') [Fr.] The splashing sound heard on succussion of a dilated stomach.

Clap'ton's line. A greenish discoloration of the dental margin of the gums in cases of chronic copper poisoning.

clar'et-cheek. Capillary nevus of the face.

clarif'icant [L. *clarus*, clear, + *facere*, to make.] 1. Making a turbid liquid clear. 2. Any agent having this property.

clarification (klar"I-fi-ka'shun). The process of making a turbid liquid clear.

clar'ify. To make clear.

Clark's sign. [Alonzo *Clark*, New York physician, 1807–1887.] A tympanitic percussion note over the liver, denoting intestinal perforation.

Clarke's col'umn [Jacob Augustus Lockhart *Clarke*, English anatomist, 1817–1880.] Posterior vesicular column, nucleus* dorsalis [BNA]. **C.'s collat'eral bun'dle,** a bundle of nerve fibers passing between Burdach's and Clarke's columns. **C.'s nu'cleus,** a group of nerve cells situated at the level of the third cervical nerve, representing C.'s column at this level.

Clarke's tongue [Sir Charles Mansfield *Clarke*, English physician, 1782–1857.] An indurated tongue with fissured surface, due to syphilis. **C.'s ul'cer,** (1) rodent ulcer;* (2) ulcer of the cervix uteri.

clasmatoblast (klaz-mat'o-blast) [G. *klasma*, a fragment, + *blastos*, germ.] Mast-cell.

clasmatocyte (klaz-mat'o-sīt) [G. *klasma*, a fragment, + *kytos*, a hollow (cell).] A large, apparently wandering uninucleated cell, with many branches, derived probably from proliferating tissue elements, though possibly from the blood.

clasmato'sis [G. *klasma*, a fragment.] The extension of pseudopodia-like processes in unicellular organisms and blood cells by plasmolysis rather than by a true pseudopodia formation.

clasp-knife rigid'ity. Spastic motion in a joint, with first hesitation and then sudden flexion or extension.

class [L. *classis*, a division.] In biological classification the division next below the *phylum* (or *subphylum*) and above the *order*.

Class's cocc'us [W. J. *Class*, Chicago physician, 1874–1906.] An organism resembling a large gonococcus, found in the blood, throat secretions, and epidermal scales in scarlet fever and regarded by C. as the cause of this disease.

clas'tic [G. *klastos; klaō*, I break.] Breaking up into pieces, or exhibiting a tendency so to break or divide.

clas'tothrix [G. *klastos*, broken in pieces, + *thrix*, hair.] Trichorrhexis, brittleness of the hair.

claudication (klaw-dĭ-ka'shun) [L. *claudicare*, to limp.] Limping. **intermitt'ent c.,** (1) intermittent limping.* (2) A temporary loss of function in the heart or brain due to arterial spasm.

claudicatory (klaw'-dĭ-ka-to-rĭ). Relating to claudication, especially intermittent claudication (2).

Clau'dius's cells [Friedrich Matthias *Claudius*, German anatomist, 1822–1869.] Columnar cells on the floor of the ductus cochlearis external to the organ of Corti. **C.'s fos'sa,** a slight depression on either side, in the posterior part of the pelvis, in which the ovary lies

Claudius's meth'od (klaw'dĭ-us). Sterilization of catgut by immersion for a week or longer in a 1 per cent. iodine-potassium iodide solution.

claustral (klaw'stral). Relating to the claustrum.

claustrophobia (klaw-stro-fo'bĭ-ah) [L. *claustrum*, an enclosed space, + G. *phobos*, fear.] A morbid apprehension of being in a house or any enclosure.

claustrum (klaw'strum) [L. barrier.] One of several anatomical structures bearing a fancied resemblance to a barrier; specifically a thin vertically placed lamina of gray matter lying close to the outer portion (putamen) of the lenticular nucleus, from which it is separated by the external capsule. **c. gutt'uris, c. o'ris,** velum palatinum. **c. virgina'le,** hymen.

clausura (klaw-su'rah) [L. closure.] Atresia.

cla'va, gen. and pl. *cla'væ* [L.] Club, the swollen extremity of the funiculus gracilis in the posterior portion of the medulla oblongata, just below the rhomboidal fossa.

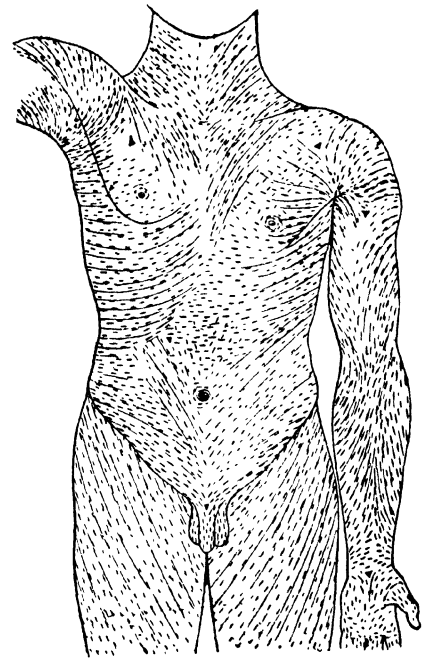
cla'val. Relating to the clava.

cla'vate [L. *clava*, a club.] Club-shaped.

clavelization (klav-el-i-za'shun) [Fr. *clavelé* sheeppox.] Preventive inoculation of sheeppox.

Clav'iceps [L. *clava*, club, + *caput*, head.] A genus of fungi producing smut in cereals. **C. purpu'rea,** the fungus of rye which produces ergot.

clavicle (klav'i-kl) [L. *clavicula*, a small key.] Collar-bone, a long doubly curved bone, forming part of the shoulder-girdle, its inner end articulating with the manubrium sterni, its outer with the acromial process of the scapula.



CLEAVAGE LINES OF THE SKIN. When the skin of the cadaver is pierced with a round instrument, like a shoemaker's awl, on withdrawal of the instrument the wound assumes a linear form, the direction of which in different parts of the body is here indicated.

clavicot'omy [L. *clavicula*, clavicle, + G. *tomē*, incision.] Surgical division of the clavicle.

clavic'ula [L. dim. of *clavis*, key.] Clavicle.

clavic'ular. Relating to the clavicle.

clavic'ulus [L dim. of *clavus*, a nail.] One of Sharpey's* fibers.

cla'vin. An extractive of ergot having oxytocic properties.

cla'vus [L. a nail.] 1. Corn, a small conical callosity caused by pressure over a bony prominence, usually on a toe. 2. A severe pain in the head, sharply limited in area, as if caused by the driving of a nail.

claw-foot. Muscular atrophy with caval contraction of the foot.

claw-hand. Muscular atrophy of the hand with claw-like flexion of the fingers.

Clay'ton gas. A gas, chiefly sulphurous acid with some sulphuric acid, used to kill the vermin in the hold of a ship.

cleavage (kle'vej). 1. The splitting up of a complex molecule into two or more simpler molecules. 2. Segmentation of the vitellus. yolk-c. **c.-cav'ity,** the interior of a morula or of a blastula, blastocœle. **c.-cell,** blastomere. **c. lines,** when a pin is driven into the skin of the cadaver, the opening made is linear, owing to the special distribution of the connective-tissue bundle; these lines take definite directions varying with the region of the body surface; see the illustration on page 223. **c.-mass,** the collection of cells resulting from the segmentation of the vitellus. **hydrolyt'ic c.,** hydrolysis, c. accompanied by the taking up of the constituents of water. **yolk-c.,** segmentation of the vitellus

clea'vers. Ladies' bed-straw, the dried herb *Galium verum*, having diuretic properties in doses of ʒ1–2 (4.0–8.0).

Cleemann's sign (kla'mahn). Wrinkling of the skin just above the patella, in fracture of the femur with overriding of the fragments.

cleft. A fissure. **bran'chial c.,** see *branchial* **choles'terin c.,** an artefact caused by the dissolving out of cholesterin crystals in sections of degenerated tissue embedded in paraffin. **gen'ital c.,** a fissure in the embryo from which is formed the cloaca. **vis'ceral c.,** any cleft between two visceral arches in the embryo

cleft-palate. A congenital fissure in the roof of the mouth, due to failure of the palate bones to unite; usually associated with harelip. **repair of c.-p.,** staphyloplasty, staphylorrhaphy, uranoplasty, uranorrhaphy.

cleft-tongue. Furrowed tongue *

cleidag'ra, etc. See *clidagra.*

cleithrophobia (klīth-ro-fo'bĭ-ah). Clithrophobia.

clem'atis [G. *klēmatis*, a vine.] A tincture of the fresh leaves and stems of *C. erecta*, virgin's bower, employed in homeopathic practice in the treatment of moist eczema and painful glandular swellings, in doses of the 1st to the 6th dilution

Clemen's solu'tion. Liquor potassii arsenatis et bromidi.

cleoid (kle'oyd) [A. S. *cle*, claw, + G. *eidos*, resemblance.] A claw-like dental instrument used in excavating cavities.

cleptoma'nia [G. *kleptō*, I steal, + *mania*, frenzy.] An uncontrollable impulse to steal without needing the thing taken.

cleptoma'niac. A person suffering from cleptomania

cleptopho'bia [G. *kleptō*, I steal, + *phobos*, fear.] A morbid dread of becoming a thief or a cleptomaniac.

cler'gyman's sore throat. Granular pharyngitis.

Clevenger's fiss'ure (klev'en-jur). Sulcus temporalis inferior.

clidagra (kli-dag'rah) [G. *kleis(kleid-)*, the clavicle, + *agra*, a seizure.] Gouty pain in the clavicle.

clidarthritis (kli-dar-thri'(thre')tis) [G. *kleis(kleid-)*, clavicle, + *arthron*, joint, + *-itis*.] 1. Cleidagra. 2. Inflammation of either of the articular ends of the clavicle.

clidocostal (kli-do-kos'tal) [G. *kleis(kleid-)*, clavicle, + L. *costa*, rib] Relating to the clavicle and a rib.

clidorrhexis (kli-do-rek'sis) [G. *kleis (kleid-)*, clavicle, + *rhēxis*, rupture.] Reduction of the diameter of the shoulder-girdle of the fetus by fracture or bending of the clavicles.

clidot'omy [G. *kleis*, clavicle, + *tomē*, a cutting.] Division of the clavicles to reduce the width of the shoulders of the fetus in certain cases of dystocia.

clidotripsy (kli'do-trip-sĭ) [*kleis(kleid-)*, clavicle, + *tripsis*, a rubbing.] Crushing of the clavicle of the fetus in order to reduce the width of the shoulder girdle in cases of dystocia.

clier (kli'er). Lymphadenitis in cattle.

climac'ter [G. *klimaktēr*, the round of a ladder Climacteric(1).

climacteric (kli-mak'ter-ik, kli-mak-ter'ik). 1. Climacter, a supposed critical period of life, after adolescence, occurring in men or women, especially the menopause in women. 2. Relating to a climacter, or critical period of life. **grand c.,** the sixty-third year, the ninth of the seven year periods, each of which from the third (twenty-first year) on is by many regarded as a critical period.

climatol'ogy [G. *klima*, climate, + *-logia*.] The branch of meteorology which has to do with a study of climate and its relation to disease.

climatother'apy [G. *klima(klimat-)*, climate, + *therapeia*, treatment.] The treatment of disease by a sojourn in a region having a certain climate.

cli'max [G. *klimax*, staircase.] The height of a disease, the stage of greatest severity.

climograph (kli'mo-graf) [G. *klima*, climate, + *graphō*, I record.] A diagram showing the effect of climate on health.

clin'ic [G. *klinē*, bed.] 1 An institution in which medical attention is given to patients who live at home, not requiring hospital care. 2. An institution in which medical instruction is given to students by means of demonstrations in the presence of the sick. 3. A clinical lecture.

clin'ical. 1. Relating to the bedside of a patient or to the course of his disease. 2. Noting the symptoms and course of a disease as distinguished from the anatomical changes. 3. Relating to a clinic **c. lec'ture,** a lecture on any disease during which the patient is present and is referred to in demonstration of the objective symptoms.

clinician (klin-ish'un) A practising physician, as distinguished from a pathologist or laboratory worker.

clin'icist. Clinician.

clinocephaly (kli-no-sef'ă-lĭ) [G. *klinē*, bed, + *kephalē*, head.] Saddle-head; a condition in which the upper surface of the skull is more or less concave, presenting a saddle-shaped appearance on profile; it is due to premature closure of the sphenoparietal suture.

Clinocoris (klin-ok'o-ris) [G. *klinē*, bed, + *koris*, bug.] Bedbug; the genus is usually called *Cimex.**

clinodac'tyly [G. *klinō*, I incline, bend, + *daktylos*, finger.] Permanent deflection of one or more fingers.

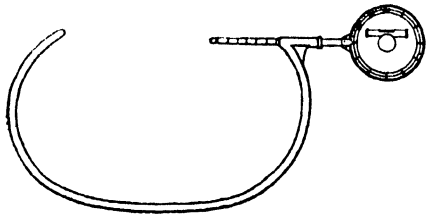
cli'noid [G. *klinē*, bed, + *eidos*, resemblance.] Resembling a bed; noting the *c. processes*, three pairs of prominences on the upper surface of the sphenoid bone, the *anterior* pair on the sides of

the olivary process, the *middle* and *posterior* pairs at the angles of the sella turcica.

clinology (kli-nol'o-jĭ) [G. *klinō*, I decline, + *-logia*.] The part of science which has to deal with the retrograde changes in living organisms following the period of maturity.

cli'noscope [G. *klinō*, I decline, + *skopeō*, I view.] An instrument for determining the degree of weakness of the ocular muscles by measuring the torsion of the eyeballs.

cliseometer (kliz-e-om'e-tur). [G *klisis*, inclination, + *metron*, measure.] An instrument for measuring the angle which the axis of the pelvis makes with that of the body.



CLISEOMETER.

clistogamy (klĭs-tog'ă-mĭ) [G. *kleistos*, closed, + *gamos*, marriage.] In botany, a condition in which there are unexpanded flowers which are nevertheless fertile, producing seed.

clithrophobia (klĭth-ro-pho'bĭ-ah) [G. *kleithron*, a bolt, + *phobos*, fear.] Morbid dread of being locked in.

clition (klĭt'ĭ-on) [G. *klitos*, a declivity.] A craniometric point in the middle of the highest part of the clivus on the sphenoid bone.

clitoridauxe (klĭt-or-id-awk'se) [G. *kleitoris*, clitoris, + *auxē*, increase.] Hypertrophy of the clitoris.

clitorid'ean. Relating to the clitoris.

clitoridectomy (klĭt-or-id-ek'to-mĭ) [G. *kleitoris* (*kleitorid-*), clitoris, + *ektomē*, excision.] Removal of the clitoris.

clitoriditis (klĭ-tor-id-ĭ'(e')tis) [G. *kleitoris* (*kleitorid-*) clitoris, + *-itis*.] Inflammation of the clitoris

clitoridotomy (klit-or-ĭ-dot'o-mĭ) [G. *kleitoris* (*kleitorid-*), clitoris, + *tomē*, a cutting.] Circumcision in the female.

clitoris (klĭt'or-ĭs or kli'tor-ĭs) [G. *kleitoris*.] An organ composed of erectile tissue, the analogue in the female of the penis, it is about an inch and a half in length, and is formed of two corpora cavernosa capped by a glans, the corpus spongiosum is absent except as it is represented by the glans.

clitoritis (klĭ-to-ri'(re')tis) Clitoriditis

clitorism (klit'or-ism). 1. Prolonged and usually painful erection of the clitoris, the analogue of priapism. 2. Clitoridauxe.

clitoroma'nia. Nymphomania

clitorot'omy. Clitoridotomy

cli'vis. Declivis cerebelli.

cli'vus [L. slope.] A sloping surface, especially of a bone such as the occipital and sphenoid. **c. Blumenbach'ii**, the slope at the base of the skull from the foramen magnum to the sella turcica. **c. montic'uli**, a division of the superior surface of the vermis of the cerebellum, continuous on either side with the posterior crescentic lobules.

cloaca (klo-a'kŭ) [L. sewer.] The combined urogenital and rectal opening in the embryo. **c. the'ory**, the belief sometimes held by neurotics or children that a child is born as a stool is passed, from a common opening.

Cloetta's digitoxin (klo-et'tahz dij-ĭ-toks'in) [Max *Cloetta*, Swiss pharmacologist, *1868.] A soluble preparation of digitoxin, digalen.

clon'ic. Of the nature of clonus, marked by alternate contraction and relaxation of muscle.

clonicity (klon-is'ĭ-tĭ). The state of being clonic.

clonicotonic (klon-ĭ-ko-ton'ik). Both clonic and tonic, said of certain forms of muscular spasm.

clon'ism. A long continued state of clonic spasms.

clon'ograph [G. *klonos*, tumult, + *graphō*, I write. An instrument for registering the movements in clonic spasm.

Clonorchiasis (klo-nor-ki'a-sis). Clonorchiosis.

Clonorchiosis (klo-nor-kĭ-o'sis). A condition marked by invasion of the bile ducts by *Clonorchis endemicus* or *C. sinensis*.

Clonorchis (klo-nor'kis) [G. *klōn*, a branch or shoot, + *orchis*, testicle.] A genus of flukes, formerly included in the genus *Distoma* or *Opisthorchis;* it is characterized by the fact that the testicles are ramified instead of being notched or lobate. **C. sinen'sis**, a fluke occurring in the bile ducts and occasionally in the duodenum and pancreas in man from India to Japan.

clon'ospasm. Clonus.

Clonothrix[0] (klo'no-thriks) [G. *klōn*, a branch, + *thrix*, a hair.] A genus of the family *Chlamydobacteriaceæ* containing ensheathed filaments, irregularly branched; found in water.

clon'us [G *klonos*, a tumult.] A form of convulsion marked by contractions and relaxations of a muscle, occurring in rapid succession. **ankle c., foot-c.**, see under *ankle*. **wrist c.**, see under *wrist*. **toe c.**, see under *toe*.

Cloquet's canal' (klo-ka') [Jules Germain *Cloquet*, Parisian surgeon, 1790–1883.] Stilling's canal, canalis* hyaloideus. **C.'s gang'lion**, septum femorale. **C.'s her'nia**, a femoral hernia perforating the aponeurosis of the pectineus and insinuating itself between this aponeurosis and the muscle, lying therefore behind the femoral vessels. **C.'s sep'tum**, C.'s ganglion. **C.'s sign**, a bright needle is not quickly rusted when passed into the muscular tissue, if life is extinct.

clostrid'ial. Relating to any bacterium of the genus *Clostridium*.

Clostridium (klŏs-trid'ĭ-um)[G. *klōstēr* a spindle.] A genus of bacteria of the family *Bacillaceæ*, containing many species, mostly anaerobic or microaerophilic, and spore-bearing, formerly of the genus *Bacillus;* their usual habitat is the intestinal canal or the soil; some are non-pathogenic, but many are the causal agents of disease in man and the lower animals. **Cl. botuli'num**,[0] large rod-shaped organisms, motile, gram-positive, with terminal spores, occurring singly or in short chains; they occur widely in nature and are a not-infrequent cause of food-poisoning (botulism) from preserved meats, fruits, or vegetables which have not been properly sterilized before canning; there are two types, A and B, both pathogenic for man. **Cl. butyr'icum**,[0] *B. amylobacter*, *Cl. pastorianum*, large, motile, gram-positive organisms with central spores, occurring in the soil; non-pathogenic, but causes acid and alcoholic fermentation in solutions of various sugars and starches. **Cl. chauve'i**,[0] large, motile, gram-positive, occurring singly or in chains, the cause of symptomatic anthrax or blackleg in cattle. **Cl. e'gens**,[0] non-motile, sometimes encapsulated, organisms, morphologically similar to *Cl. welchii*, and possibly the cause of some cases of gas gangrene. **Cl. histolyticum**,[0] *B. histolyticus*, moderately long, motile,

gram-positive rods, the occasional cause of gangrene in wounds. **Cl. lucil'iæ,**° long, nonmotile, gram-positive, rods, occurring singly or in chains, with terminal spores, found in the larvæ of the green fly, *Lucilia cæsar*, chickens eating which suffer from limber neck. **Cl. no'vyi,**° moderately long, motile, gram-positive rods, occurring singly, pathogenic for laboratory animals. **Cl. œdemat'iens,**° gas-edema bacillus, moderately short, sluggishly motile, gram-positive rods, occurring singly or in chains, pathogenic for laboratory animals, and an occasional cause of gas gangrene in man. **Cl. œdem'atis-malig'ni,**° *Cl. septicum*, *Cl. pastorianum*, Vibrion septique, long thick, motile, gram-positive rods, occurring usually in chains, a cause of malignant edema in man and of blackleg and braxy in sheep. **Cl. pastoria'num,** *Cl. butyricum.*° **Cl. putrif'icum,**° moderately long, motile, gram-positive rods, occurring singly and in chains, with large terminal spores; an intestinal organism, strongly proteolytic. **Cl. ter'tium,**° fairly long, sluggishly motile, gram-positive rods, with terminal spores, found in wounds but regarded as of doubtful pathogenicity. **Cl. tet'ani,**° *B. tetani*, rather long motile, flagellated, gram-positive rods, with terminal spores (whence the name "drumstick bacilli"), the cause of tetanus. **Cl. tetanomor'phum,**° *B. pseudo-tetani*, slender, motile, gram-positive rods with terminal spores, resembling the preceding, but non-pathogenic. **Cl. welch'ii,**° *B. aerogenes capsulatus*, *B. enteritidis sporogenes*, *B. perfringens*, Achalme's bacillus, gas bacillus, short, plump, nonmotile, encapsulated, gram-positive, rod-shaped organisms, occurring singly or in pairs, sometimes in chains, with central spores; a frequent cause of gas gangrene and pathogenic also for some laboratory animals.

clot [A.S. *clott*(?), a mass.] 1. To coagulate. 2. A coagulum, a thrombus. **ag'ony c.,** a heart clot formed during the act of dying in cases of prolonged heart failure. **ante-mor'tem c.,** a blood clot found at autopsy, which was formed in any of the heart cavities or the great vessels before death. **lam'inated c.,** a clot formed of a succession of layers such as occurs in the natural cure of an aneurysm. **passive c.,** a c. formed in an aneurysmal sac in consequence of the circulation through the aneurysm having ceased. **post-mor'tem c.,** a clot formed in the heart or great vessels after death.

clot'bur. A plant, *Xanthium spinosum*, the leaves of which are diuretic, diaphoretic, and sialogogue in doses of gr. 10 (0.6)

clott'age. The blocking of any canal or duct by a blood-clot.

cloudy swelling (klow'dĭ-swel'ing). Turbid swelling, albuminoid or parenchymatous degeneration; a degenerative change marked by a swelling of the cells, coarsening of the reticulum, and a clouding or granulation of the cytoplasm.

clove-hitch. A knot or loop used in making temporary traction on a limb; see cut under *knot*.

clo'ver-disease. Trifoliosis.

cloves. Caryophyllus.

clown'ism. A stage in hysteroepilepsy in which the patient assumes grotesque attitudes.

clubbed dig'its. Hippocratic* fingers.

club-foot. Talipes.* cyllosis, kyllosis.

club-hand. Talipomanus.

club-moss. Lycopodium.

clump [A.S. *clympre*, a lump.] To form into clusters or small aggregations or groups.

clump'ing. Agglutinating; the massing together of bacteria or other cells suspended in a fluid.

clu'nes [pl. of L. *clunis*, buttock.] Nates, buttocks

clupeine (klu'pe-ēn) [L. *clupea*, herring.] A protamine, $C_{30}H_{62}N_{14}O_9$, in the sperm of the herring.

cluttering (klut'er-ing). The dropping of letters or syllables by a hurried or nervous speaker.

cly'sis [G. *klysis*, a washing out.] A washing out of stagnant or waste materials in any cavity or in the blood, by means of injections of fluid.

clys'ma [G. *klysma*, a drenching.] An enema or clyster.

clyster (klis'ter) [G. *klystēr*.] Enema, clysma, a rectal injection of water, gas, or other fluid.

clys'terize. To administer a rectal injection.

C. M. Abbreviation for the degree *chirurgiæ magister*, master in surgery.

cm. Abbreviation for centimeter.

CN. 1. Cyanogen. 2. Trade name of a disinfectant containing cresols.

cnemial (ne'mĭ-al) [G. *knēmē* leg] Relating to the leg, especially to the shin.

cnemis (ne'mis) [G. *knēmis*, a legging.] The shin.

cnemitis (ne-mi'(me')tis). Inflammation of the tibia, especially periostitis of the anterior edge of the tibia.

cnemoscoliosis (ne-mo-sko-lĭ-o'sis) [G *knēmē*, leg, + *skoliōsis*, a bending.] Curvature of the bones of the leg, bowleg.

cnicin (ni'sin). The bitter principle of carduus, *Cnicus benedictus;* dose, gr. 5 (0.3).

Cnicus benedictus (ni'kus ben-e-dik'tus). Blessed thistle, carduus benedictus; see *carduus*.

cnidosis (ni-do'sis) [G. *knidōsis*, nettle-rash] Urticaria.

CNOH. Cyanic acid.

Co. Symbol for cobalt.

CO. 1. Carbon monoxide, carbonic oxide 2 Carbonyl

CO_2. Carbonic anhydride, carbon dioxide, sometimes called carbonic acid which is properly H_2CO_3.

coadunation, coadunition (ko-ad-u-na'shun ko-ad-u-nĭ'shun) [L. *co-*, with, + *ad*, to, + *unus*, one.] Union or junction, especially of two or more dissimilar substances in one mass.

coag'ula. Plura of *coagulum*.

coag'ulable. Capable of clotting, tending to clot

coag'ulant. 1. Causing coagulation. 2 An agent which causes a fluid to coagulate.

coagulase (ko-ag'u-lāz). A clotting enzyme, one which causes coagulation; thrombin and rennin are examples.

coag'ulate [L. *coagulare*, to curdle.] 1. To convert a fluid into a soft jelly-like solid. 2. To clot, to curdle, to change from a fluid state to that of a soft, jelly-like solid.

coagulation (ko-ag-u-la'shun). 1. Clotting, the process of change from a liquid state to that of a soft jelly-like solid. 2. A clot or coagulum. **c. time** the time required for a drop of blood to coagulate usually from 2 to 8 minutes.

coagulative (ko-ag'u-la-tiv). Coagulant, causing coagulation.

coagulen (ko-ag'u-len). Trade name of a white powder obtained by the fractional centrifugation of animal blood, supposed to possess in concentrated form the coagulation-stimulating properties of the platelets; it is employed externally, in a 10 per cent. solution in physiological salt solution, as a hemostatic.

coag'ulin. An antibody causing coagulation of the antigen.

coagulinoid (ko-ag'u-lin-oyd) [*coagulin* + G. *eidos*, resemblance.] A coagulin in which the function group has been destroyed by heating to 65°–70° C.

coagulom'eter [L. *coagulum*, clot, + G. *metron*, measure.] An apparatus for measuring the time required for a drop of blood to coagulate. One form (that of Russell and Brodie) consists of a truncated glass cone, on which a drop of blood is placed, which projects in a moist chamber; through a fine tube passing into the moist chamber a current of air is blown; the apparatus is placed under a microscope and the process of coagulation is observed and timed.

coagulose (ko-ag'u-lōz). Trade name of a powder obtained by precipitating normal blood serum; recommended locally and by subcutaneous injections for the control of hemorrhage.

coag'ulum, pl. *coag'ula* [L.] A clot; a curd.

Coak'ley opera'tion [Cornelius Godfrey *Coakley*, New York laryngologist, *1862.] An operation for frontal sinus disease. Skin incision from inner third of edge of orbit to the root of the nose or outward; anterior wall removed and mucous membrane curetted away under electric illumination; nasal duct curetted gently so as to secure obliteration.

coalesce (ko-al-es') [L. *coalescere*, to grow together.] To grow together, fuse, become one.

coalescence (ko-al-es'ens). The fusion or growing together of two or more bodies.

coal-miners' disease or **lung.** Anthracosis.

coal-tar. A black viscid liquid formed during the manufacture of illuminating gas from coal. It is a mixture of many hydrocarbons, and is the source of a great variety of substances, such as the aniline dyes, and a number of the so-called synthetic drugs. **c.-t. rem'edies,** drugs manufactured synthetically from c.-t. or its derivatives, such as acetanilid, antipyrine, etc.

coaptation (ko-ap-ta'shun) [L. *coaptare*, to fit together.] The joining together or fitting of two surfaces, as the lips of a wound or the ends of a broken bone. **c. splint,** one of a number of short splints used for the purpose of keeping the ends of a divided bone in place, usually supplemented by a long splint to prevent leverage.

coarct (ko-arkt') [L. *co-*, together, + *arctare*, to press.] To press together.

coarctate (ko-ark'tāt). 1. Coarct. 2. Pressed together.

coarcta'tion. 1. A narrowing 2. A compression.

coarctotomy (ko-ark-tot'o-mī) [L. *coarctum*, something pressed together, stenosed, + G. *tomē*, cutting.] Division of a stricture.

coarse. Rough, not fine in texture **c. adjust'ment,** see *adjustment.*

coarticula'tion. 1. A joining together. 2. An articulation.

coat (kōt). 1. The outer covering or envelope of an organ or part. 2. One of the layers of membranous or other tissues forming the wall of a canal or hollow organ; tunic.

cobalt (ko'bawlt). A steel gray metallic element, symbol Co, atomic weight 58.97. Its compounds afford pigments the protoxide being the beautiful cobalt blue.

cobaya (ko-ba'yah). Guinea-pig, *Cavia cobaya.*

Cobb's pig'mentary fe'ver. A fever observed in India, marked by sudden onset and rapid rise to 103° or 104°, accompanied with headache and nausea or vomiting, and associated with pigmentation of the nose and cheeks; the fever lasts eight or ten days, but the pigmentation fades away very slowly.

Cobel'li's glands. Mucous glands in the lower part of the esophagus.

cobra (ko'brah) [Port. snake, from L. *coluber*, snake] *Naja tripudians.*

cobra-lecithid (ko"brah-les'e-thid). A thermostable combination of cobra-venom and lecithin which is actively hemolytic.

cobral'ysin. An hemolysin in cobra venom.

cob'web [Early Eng. *coppe*, spider.] Tela aranea.

co'ca, co'cæ fo'lia (Br.). The dried leaves of *Erythroxylon coca* or *E. truxillense*, yielding not less than 0.5 per cent. of ether-soluble alkaloids; the source of cocaine and several other alkaloids; tonic and stimulant in doses of gr. 30–60 (2.0–4.0).

cocaina (ko-kah-e'nah) (U.S and Br.). Cocaine, methyl-benzoyl-ecgonine, an alkaloid derived from coca; formula $C_{17}H_{21}NO_4$; occurs in large colorless crystals very slightly soluble in water; local anesthetic, anodyne, sedative; internal dose, gr. $\frac{1}{6}$–$\frac{1}{2}$ (0.015–0.03). **cocaï'næ hydrochlo'ridum** (U.S. and Br.), cocaine hydrochloride, occurs in prisms, leaflets, or crystalline powder; local anesthetic, mydriatic, and sedative; internal dose gr $\frac{1}{4}$–$\frac{1}{2}$ (0.015–0.03).

cocaine (ko'kah-ēn). Cocaina.

cocainidine (ko-kah-in'ī-dēn) An alkaloid from coca leaves, similar to, but much weaker than, cocaine, and perhaps isomeric with it

cocainism (ko'kah-in-izm). The habitual use of cocaine as an intoxicant.

cocainist (ko'kah-ēn-ist). One suffering from cocaine addiction.

cocainiza'tion (ko-kah-ēn-i-za'shun). Bringing under the anesthetic influence of cocaine.

cocainize (ko'kah-en-īz). To render anesthetic by means of cocaine.

cocainomania (ko"kah-ēn-o-ma'nī-ah). Cocaine addiction, the habitual use of cocaine as an intoxicant.

cocainomaniac (ko-kah-ēn-o-ma'nī-ak) One who is addicted to the use of cocaine as an intoxicant

cocapyrine (ko-kah-pi'rēn). A mixture or compound of cocaine, 1 part, and antipyrine, 100 parts; antipyretic and analgesic in doses of gr. 2–5 (0.13–0.3)

Cocca'ceæ. A family of *Eubacteriales* which includes all the spherical cells dividing in one (*Streptococcus*), two (*Micrococcus*), or three (*Sarcina*) planes, then forming single cells, pairs, tetrads, cubes or larger packets, or chains.

coc'cal. Relating to cocci.

cocci (kok'si). Plural of *coccus.*

coccidial (kok-sid'ī-al). Relating to a protozoan of the genus *Coccidium.*

Coccidiidea (kok"sid-ī-id'e-ah) An order of *Telosporidia*, the members of which are cell-parasites, with an alternation of sexual and asexual generations (sporogony and schizogony).

Coccidioides immi'tis (kok-sid-ī-oy'dēz) [L. *coccidium* + G. *eidos*, resemblance; L. *immitis*, rough, harsh.] An organism found in certain cutaneous and pulmonary affections with lesions resembling infectious granulomata; it is uncertain whether the organism is a protozoan or a mould.

coccidiosis (kok-sid-e-o'sis). The occurrence in the liver, usually of the rabbit, of rounded whitish nodules of variable size situated along the smaller bile-ducts; these consist of hypertrophy of the epithelium of the ducts due to inclusions of coccidia.

Coccidium (kok-sid'ī-um) [dim. of G *kokkos*, berry.] A genus of protozoans, order *Coccidiidea*, many species of which are parasitic in vertebrates **C.**

bigem'inum, a species found in the feces of dogs cats, and possibly man. **C. cunic'uli,** a parasite in the intestine and liver of rabbits **C. hom'inis** a species, possibly identical with *C. cuniculi*, found in the human intestine and liver. **C. ovifor'me,** a species found in the intestine and liver of rabbits, mice, and man, sometimes causing cystic dilatation of the bile-ducts **C. per'forans,** *C. hominis*. **C. syphil'idis,** an organism believed by McDonagh to be the pathogenic agent of syphilis, one stage in its life cycle being the *Spirochæta pallida*.

coccinella (kok-sin-el'ah). Cochineal. coccus(1).*

coccinellin (kok-sin'el-in). The coloring matter derived from cochineal.

Coccobacil'lus. A short thick bacillus, of the shape of an oval or slightly elongated coccus. **C. fœtidus ozænæ** vel **nasi,** Perez bacillus, *B. ozogenes*, a small gram-negative rod-shaped organism found by Perez in the nasal secretion of ozæna pat ents and also in the na al mucus and saliva of apparently healthy dogs.

coccobacte'rium, pl. *coccobacte'ria* Coccus (2).

coccogenous (kok-oj'en-us) [G. *kokkos* berry (coccus), + *gennaō*, I produce.] Caused by cocci.

coccoid (kok'oyd) [*coccus* + G. *eidos*, resemblance.] Resembling a coccus, especially a micrococcus.

coc'culus [L. dim. of *coccus* (G. *kokkos*), berry.] (N.F.) Cocculus indicus (N.F. IV), fish berry, Indian berry, the dried fruit of *Anamirta cocculus* or *A. paniculata*, a climbing shrub of India, the source of picrotoxin.

coc'cus (U.S., Br.), **coc'cus cac'ti** (Br. '14). 1. Cochineal; the dried female insect, *Pseudococcus cacti*, a source of carmine; employed as a coloring agent in pharmaceutical preparations and as a dye in histology and bacteriology. 2. A bacterium of round spheroidal or ovoid form, including *micrococcus, gonococcus, meningococcus, staphylococcus, streptococcus*, and *pneumonococcus*.

coccyalgia (kok-sĭ-al'jĭ-ah) [G. *kokkyx*, coccyx, + *algos*, pain.] Coccygodynia

coccydyn'ia. Coccygodynia.

coccygalgia (kok-sĭ-gal'jĭ-ah) [G. *kokkyx(kokkyg-)*, coccyx, + *algos*, pain.] Coccygodynia.

coccygeal (kok-sij'e-al). Relating to the coccyx.

coccygectomy (kok-sĭ-jek'to-mĭ) [G. *kokkyx(kokkyg-)*, coccyx, + *ektomē*, excision.] Removal of the coccyx.

coccygerector (kok-sij-e-rek'tor). Musculus extensor coccygis

coccygeus (kok-sĭ-je'us). See under *musculus*.

coccygodynia (kok"sĭ-go-din'ĭ-ah) [G. *kokkyx(kokkyg-)*, coccyx, + *odynē*, pain.] Neuralgic or rheumatic pain in the coccygeal region.

coccygot'omy [G. *kokkyx(kokkyg-)* coccyx, + *tomē*, a cutting.] Operation for freeing the coccyx from its attachments.

coccyodynia (kok"sĭ-o-din'ĭ-ah). Coccygodynia, severe pain in the region of the coccyx.

coccyx, gen. *coc'cygis* (kok'siks) [G. *kokkyx*, a cuckoo, because of the fancied resemblance of the bone to the bill of this bird] Os coccygis, the small bone at the end of the spinal column in man, formed by the fusion of four rudimentary vertebræ; it articulates above with the sacrum.

cochia pills (koch'ĭ-ah). Pilulæ colocynthidis compositæ (B.P.), compound colocynth pills.

Co'chin leg. Elephantiasis.

cochineal (koch'in-ēl) [L. *coccineus*, scarlet.] Coccus (1).

cochlea (kok'le-ah) [L. snail shell.] A cone-shaped cavity in the petrous portion of the temporal bone, forming one of the divisions of the labyrinth or internal ear; it consists of a spiral canal making two and a half turns around a central core of spongy bone, the *modiolus;* this spiral canal of the cochlea contains the membranous cochlea or *ductus cochlearis* in which is the organ of Corti, one of the terminal auditory apparatuses.

cochlear (kok'le-ar). Relating to the cochlea.

cochleare (kok-le-a're) [L.] A spoon. **c. am'plum, c. mag'num,** large spoon, tablespoon. **c. me'dium,** medium-sized spoon. dessertspoon. **c. par'vum,** small spoon, teaspoon.

Cochlearia (kok-le-a'rĭ-ah). A genus of plants, containing *C. armora'cia*, horseradish, and *C officinalis*, scurvy-grass.

cochlearia (kok-le-a'rĭ-ah). Scurvy-grass, spoonwort, the herb *Cochlearia officinalis;* it resembles horseradish in taste and therapeutic properties.

cochleariform (kok-le-ar'ĭ-form) [L *cochleare*, spoon, + *forma*, form.] Spoon-shaped.

cochleate (kok'le-āt) [L. *cochlea*, a snail.] Resembling more or less a snail-shell, noting the appearance of a form of plate culture; see cut under *colony*, 1, A.

cochleitis (kok-le-i'(e')tis) [L. *cochlea* + G. *-itis*. Inflammation of the cochlea

cochleovestibular (kok-le-o-ves-tib'u-lar). Relating to the cochlea and the vestibule of the ear.

cochlitis (kok-lĭ'(le')tis). Inflammation of the cochlea.

cocillana (co-sĭ-lah'nah). (N.F.) The dried bark of *Guarea rusbyi*, a Bolivia tree; employed as an expectorant in bronchitis in doses of gr. 15 (1.0), or of ♏8–15 (0.5–1.0) of the N.F. fluidextract.

Cock's opera'tion [Edward *Cock*, English surgeon, 1805–1892.] Perineal urethrotomy without a guide. **C.'s pecu'liar tu'mor,** a fungating mass of granulations following rupture of a suppurating sebaceous cyst.

cock'roach. A common insect or black beetle often infesting houses; it has been employed in medicine as a diuretic; see *blatta*.

COCl. Abbreviation for cathodal opening clonus; written also CaOCl.

cockle (kok'l) [A.S. *coccel*, tares.] *Agrostemma (Lychnis) githago.*

cocoa (ko'ko) [a corruption of *cacao*.] A substance, cacao præparata (N.F.), and the beverage made from it, prepared from the seed of cacao or theobroma, in the same way as chocolate, with all the fat possible expressed.

cocoanut (ko'ko-nut). The fruit of a tall palm *Cocos nucifera*, employed as a food, and in the manufacture of an oil, also as a teniacide in India and the Far East.

coctola'bile [L. *coctus*, boiled, + *labilis*, perishable.] Subject to alteration or destruction when exposed to the temperature of boiling water.

coctostabile, coctostable (kok-to-stab'il, kok-to-sta'bl) [L. *coctus*, boiled, + *stabilis*, stable.] Resisting the temperature of boiling water without alteration or destruction.

co'damine. An alkaloid, $C_{20}H_{25}NO_4$, derived from the mother liquor of morphine, isomeric with laudanine; occurring in hexagonal crystals.

code [L. *codex*, a tablet for writing on.] A compendium of rules **c. of eth'ics,** a conventional set of rules for the guidance of the medical practitioner in his professional relations.

codeina (ko-de-e'nah) [G. *kōdeia*, poppy-head.] (U.S. and Br.) Codeine, an alkaloid, $C_{18}H_{21}NO_3 + H_2O$, obtained from opium or made artificially from morphine;.it occurs in the form of white prisms or a crystalline powder, employed as an analgesic and hypnotic and for the relief of cough

in doses of gr. ½–2 (0.03–0.13). **codei'næ phos'phas** (U.S. and Br.), codeine phosphate, in white granular soluble crystals; dose, gr. ½–2 (0.03–0.13). **codei'næ sul'phas** (U.S.), codeine sulphate. in white needles or a crystalline powder; dose gr. ½–2 (0.03–0.13)

codeine (ko'de-ēn). Codeina.

co'deonal. Trade name of a combination of codeine and veronal, recommended as an hypnotic.

Co'dex medicamenta'rius. The official title of the French Pharmacopeia

Codivilla's extension (ko-de-vil'lah) Alessandro *Codivilla*, Italian surgeon, 1861–1912.] Skeletal extension, the weight pulling from callipers or a nail passed through the lower end of the bone.

cod'-liver oil. Oleum morrhuæ.

co'dol. Retinol.

codren'in. Trade name of a mixture of cocaine hydrochloride and adrenalin chloride, employed as a hemostatic and local anesthetic

cœ'cum. Cecum.

coefficient (ko-ĕ-fish'ent). The expression of the amount or degree of any quality possessed by a substance, or of the degree of physical or chemical change normally occurring in that substance under stated conditions. **biolog'ical c.**, the energy expended by the body at rest. **Bouchard's' c.**, the proportion of solids to fluid in the urine. **Hygien'ic Lab'oratory c.**, a figure expressing the disinfectant value of any substance; it is obtained by dividing the figure representing the weakest dilution of the disinfectant which will kill the typhoid bacillus in 2½ or in 15 minutes by that representing the weakest dilution of phenol which will kill the same organism in the same periods of time. **isotɔn'ic c.**, the amount of salts in the blood plasma, or the amount which must be added to distilled water to make an isotonic solution. **Lan'cet c.**, a figure expressing the disinfecting power of any substance; it is obtained by dividing the figure representing the percentage strength of the weakest killing dilution of phenol by that representing the percentage strength of the weakest killing dilution of the disinfectant, both at 2½ and at 30 minutes. **respi'ratory c.**, respiratory quotient.* **Rid'eal-Walk'er c.**, phenol c., a figure expressing the disinfecting power of any substance; it is obtained by dividing the figure indicating the degree of dilution of the disinfectant that kills a microorganism in a given time by that indicating the degree of dilution of phenol which kills the organism in the same space of time under similar conditions; see *Rideal-Walker method.* **urotox'ic c.**, the number of urotoxic units per kilogram of body weight, excreted in the 24 hours.

cœla'rium, cela'rium. Mesothelium, the epithelial lining of the cœlom or body cavity in the embryo.

cœlen'teron [G. *koilos*, hollow, + *enteron*, intestine.] Archenteron

cœ'liac. Celiac.

CŒLIADELPHUS.

cœliadelphus (se-lĭ-ă-del'fus) [G *koilia*, belly, + *adelphos*, brother.] A twin monster with fused abdomens.

cœ'lom, cœlo'ma [G. *koiloma*, a hollow.] 1. The cavity between the two layers of the mesoderm after their union with the ectoderm and entoderm respectively. 2. The general body cavity in the adult.

cœlonychia (se-lo-nik'ĭ-ah). Celonychia

cœno'bium. Cenobium.

cœ'nosite. Cenosite.

cœ'nure. Cœnurus cerebralis.

Cœnu'rus cerebra'lis. Cœnure, the larva of *Tænia cœnurus;* it produces staggers when in the brain of the sheep, and leaping-ill when in the spinal cord; found also in man.

co-enzyme (ko-en'zīm). Activator(1).

coetaneous (ko-e-ta'ne-us) [L. *co-*, *cum*, with, + *ætas*, age.] Of the same age or date.

coferment (ko-fur'ment). Coenzyme.

coffee (kof'ĭ, kawf'ĭ). The seed of the berry of *Coffea arabica;* it is the source of the alkaloid caffeine; roasted coffee is official in the N.F. as *coffea tosta.* **ce'real c.**, roasted and ground wheat or other grain, from which a drink is made by decoction to be used as a substitute for coffee. **Soudan' c.**, cola.

cof'fee-ground vom'it. A form of black vomit; a dark brown or blackish material, resembling coffee-grounds in color and consistency, vomited in cases of cancer of the stomach and other diseases.

coff'er-dam. In dentistry a thin sheet of rubber tissue adjusted around the neck of a tooth so as to prevent the access of saliva to the part operated upon; also called rubber-dam.

Coff'ey-Hum'ber method [Walter B. *Coffey* *1868, John D. *Humber* *1895, San Francisco physicians.] Treatment of cancer by subcutaneous injections of an extract of suprarenal cortex.

coff'in. The hollow part of the hoof of a horse; the entire hoof below the coronet inclusive of the coffin bone.

coff'in-bone. The third or ungual phalanx in the foot of the horse, os pedis or foot bone; it is completely inclosed by the hoof to which it bears a resemblance in form.

coff'in-joint. The navicular joint of a horse, between the coronary and coffin bones.

cog [Celtic.] One of a series of teeth or projections on a wheel or other part of machinery; used figuratively in the sense of an interruption to the regular course of any action. **respi'ratory c.**, a sudden brief halt in either inspiration or expiration

cognac (ko'nyak) [*Cognac*, a district in France.] A fine French brandy.

COH.CCl$_3$. Chloral.

Co'hen's test. For albumin in the urine: if albumin is present a precipitate is formed upon the addition to the urine, acidulated with acetic acid, of a mixture of solutions of lead iodide and bismuth iodide.

cohesion (ko-he'zhun) [L. *cohærere* to stick together.] 1. The power of attraction between the molecules of any substance keeping the mass from falling apart. 2. The attraction between two masses of the same substance which permits them to be welded together into one mass.

cohesive (ko-he'ziv) [L. *cohærere*, to cohere.] Sticky, adhesive, noting the property of annealed gold by which the separate particles unite when hammered gently to form one homogeneous mass.

Cohn's sto'mata. Minute apertures in the walls of the pulmonary alveoli, possibly artefacts.

Cohn's test [Hermann Ludwig *Cohn*, German oculist, *1838.] A test for color vision by means

of a comparison of embroidery patterns of different colors.

Cohnheim's a'reas (kōn'hīm) [Julius *Cohnheim*, German pathologist, 1839–1884.] Polygonal mosaic-like figures, seen in the cross-section of a muscle examined under the microscope; they are bunches of sarcostyles. **C.'s fields,** C.'s areas. **C.'s frog,** a salt frog*. **C.'s the'ory,** the theory that tumors arise from cell rests, or embryonal cells left over, as it were, after the development of the fetus and its organs.

Cohnistreptothrix (ko-nĭ-strep'to-thriks). A genus of *Nocardiaceæ* or *Actinomycetes*, including many facultative aerobic fungi. *C. foer'steri*, a species found in concretions in the lacrymal canal. *C. israel'i*, a species found in certain cases of human and bovine actinomycosis. *C. ten'uis*, a species found in a nodular affection of the axillary hairs. *C. thibier'gi*, a species seen in a case of nodular growths in the subcutaneous tissues and muscles.

cohoba'tion [L. *cohobare*, to redistill.] Redistillation of a liquid, to obtain it in still greater purity.

cohosh'. The Indian name of several unrelated plants which have been used more or less in medicine. **black c.,** cimicifuga. **blue c.,** *Caulophyllum thalichoides*. **red c.,** *Actæa rubra*, baneberry or herb-christopher with red berries; **white c.,** *Actæa alba*, baneberry with white berries.

coil [L. *colligere*, to collect.] A structure consisting of a series of windings forming a ring or spiral. **c. gland,** sweat gland, glandula* glomiformis. **induc'tion c.,** see under *induction*.

coin-counting (koyn'kownt-ing). A sliding movement of the tips of the thumb and index-finger, occurring in paralysis agitans.

coinosite (koy'no-sīt). Cenosite.

coin sign or **test.** Bellmetal resonance *

coition (ko-ish'on) [*coire*, to come together.] Coitus.

coitophobia (ko-i-to-fo'bĭ-ah) [L. *coitus*, sexual intercourse, + G. *phobos*, fear.] An unreasoning apprehension or fear of the sexual act.

coitus (ko'ĭ-tus) [L.] Copulation, coition, sexual union.

cola (ko'lah). Kola (N.F.), the dried cotyledons of *Cola vera* or *C. acuminata* (*Sterculia acuminata*); the drug contains caffeine, theobromine, and a soluble principle, colatin; employed as a cardiac and nerve stimulant in doses of gr. 20–40 (1 3–2.6), or ʒi (4.0) of the N.F. fluid-extract

colal'gia [G. *kōlon*, colon, + *algos*, pain.] Colic; pain in the colon.

co'lanin. A yellowish powder composed of a mixture of bile acids with magnesium carbonate; recommended in the treatment of cholelithiasis in doses of gr. ¼–½ (0.015–0.03).

colasa'ya. Trade name of a tonic of calisaya bark, cola, iron, and phosphates.

cola'tion [L. *colare*, to strain.] Straining, filtering.

colatorium (ko-lah-to'rĭ-um) [L. a filter, strainer.] Hypophysis cerebri.

colchicein (kol'chis-e-in). A derivative, $C_{21}H_{23}NO_6 + \frac{1}{2}H_2O$, obtained from colchicum by hydrolysis; occurs in yellowish white powder or acicular crystals; used in gout in doses of gr. $\frac{1}{120}$–$\frac{1}{60}$ (0.0005–0.001).

colchicina (kol-che-se'nah) (U.S.) Colchicine, $C_{22}H_{25}NO_6$, an alkaloid, obtained from colchicum, occurring in the form of a pale yellow crystalline powder or scales, employed in gout in doses of gr. $\frac{1}{180}$–$\frac{1}{100}$ (0.0004–0.0006)

colchicin (kol'che-sĕn) Colchicina

colchicum (kol'chĭ-kum) (U.S.). Meadow saffron, the dried corm (*col'chici cor'mus*, U.S. and Br.), and the seed (*col'chici se'men*, U.S., Br.), of *Colchicum autumnale*, an herb of central and southern Europe; employed chiefly in the treatment of gout; dose of either corm or seeds, gr. 2–5 (0.13–0.3). The official preparations (U.S. and Br.) are a tincture made from the seeds, an extract from the corm, a wine from the seed (U.S.) or corm (Br.), and a fluid-extract from the seed (U.S.).

col'chisal. Colchisine and cannabis indica dissolved in methyl salicylate and evaporated to an amorphous yellow powder; employed in gout in dose of $\frac{1}{100}$ gr. (0.0006).

col'cothar [L.] Red oxide of iron, ferri* oxidum rubrum.

cold. 1. The opposite of heat; the sensation produced by anything of a low temperature, or by the abstraction of heat from the body. 2. A catarrhal affection, especially of the respiratory mucous membranes. **c. in the head,** coryza, rhinitis. **c. on the chest,** bronchitis.

cold-ri'gor point. The degree of lowered temperature at which the activity of a cell ceases and it passes into the narcotic or hibernating state.

cold-sore. Herpes labialis.

Cole's din'ner pill (N.F.). Purified aloes, mass of mercury, and jalap each gr. 1½ (0.08), antimony and potassium tartrate, gr. $\frac{1}{30}$ (0.0013).

colec'tomy [G. *kōlon*, colon, + *ektomē*, excision] Excision of a segment or all of the colon.

Coleman-Schaffer di'et (kol'man-shaf'er) [Warren *Coleman*, New York physician, *1869.] A diet for typhoid-fever patients; it is rich in protein with high carbohydrate ratio and a moderate amount of fat, consisting chiefly of cocoa, eggs cream, bread and butter, and milk sugar; the food is given in small quantities at frequent intervals

coleocele (ko'le-o-sēl) [G. *koleos*, sheath, + *kēlē*, tumor.] Colpocele.

coleocystitis (ko-le-o-sis-ti'(te')tis) [G. *koleos*, sheath, + *kystis*, bladder, + *-itis*.] Inflammation of both vagina and bladder.

coleot'omy [G. *koleos*, sheath, + *tomē*, incision.] 1 Incision into the pericardium. 2. Colpotomy.

coles (ko'lēz) [L.] Penis. **c. femini'nus,** clitoris.

Co'ley's flu'id, C.'s mixed tox'ins [William B. *Coley*, New York surgeon, *1862.] A mixture of sterilized cultures of *Streptococcus erysipelatos* and *Bacillus prodigiosus*, in the proportion of 100 to 30, with 20 of glycerin; employed in the treatment of inoperable sarcoma in hypodermic doses of ♏¼ (0.015) gradually increased.

colibacillary (ko-li-bas'il-a-re). Relating to *Bacillus coli*.

colibacillemia (ko-li-bas-il-le'mĭ-ŭ) [*colibacillus* + G. *haima*, blood.] The presence of colibacilli in the blood.

colibacilluria (ko-li-bas-il-u'rĭ-ah) [*colibacillus* + G. *ouron*, urine.] The presence of colon bacilli in the urine when voided.

colibacillus (ko''li-bă-sil'us). Colon bacillus, *Bacillus coli*.

col'ic [G. *kōlikos*, relating to the colon.] 1. Relating to the colon. 2. Spasmodic pains in the abdomen; enteralgia. **appendic'ular c.,** pain in the appendix vermiformis, occasioned by occlusion of its mouth or by fibrous involutionary changes. **bil'iary c.,** intense pain caused by the passage or impaction of a gallstone in the cystic or hepatic duct. **bil'ious c.,** more or less severe pain accompanying acute indigestion, diarrhea, and the presence of bile in the stools and vomitus. **copp'er c.,** an affection similar to lead c. occurring in chronic poisoning by copper **Dev'onshire c.,** lead c. **gas'tric c.,** gastralgia **hepat'ic c.,** hepat-

algia; biliary c. **hill c.,** hill diarrhea, a diarrhea common among those going to the hill country in India after a long stay in the hot regions **lead c.,** severe abdominal pain, with constipation, symptomatic of lead poisoning. **meco'nial c.,** abdominal pain of newborn infants. **mu'cous c.,** mucomembranous enteritis*, mucous colitis. **nephrit'ic c.,** (1) pain occasionally present in cases of acute renal inflammation; (2) renal c. **ova'rian c.,** ovarian neuralgia or pain due to a neoplasm or any other disease of the ovaries. **pain'ter's c.,** lead c **pancreat'ic c.,** severe pain, simulating biliary c., caused by the passage of a pancreatic concretion. **pseudomem'branous c.,** mucous c. **re'nal c.,** severe pain caused by the passage of a calculus through the ureter. **sabur'ral c.,** bilious c. **sal'ivary c.,** periodical attacks of pain in the region of a salivary duct or gland, accompanied by an acute swelling of the gland, occurring in cases of salivary calculus. **sat'urnine c.,** lead c **ster'coral c.,** pain induced by fecal obstruction in the intestine. **tu'bal c.,** pain due to spasmodic contraction of the oviduct excited by a blood clot or a bit of mucus in the tubes. **u'terine c.,** painful cramps of the uterine muscle sometimes occurring at the menstrual period. **vermic'ular c.,** appendicular c.

col'ica. 1. A colic artery, see under *arteria* 2 Colic, abdominal pain **c. hepat'ica,** biliary colic. **c. menstrua'lis,** dysmenorrhea. **c. muco'sa,** mucomembranous enteritis. **c. picto'num, c. picto'rum,** painter's colic. **c. scorto'rum** prostitutes' colic, abdominal pain occurring in prostitutes, attributed variously to neuralgia of the hypogastric plexus, to salpingitis, or to other inflammatory conditions of the internal genital organs.

colicolitis (ko-lĭ-ko-li'(le')tis). Inflammation of the colon due to the action of *Bacillus coli.*

colicoplegia (kol''ĭ-ko-ple'jĭ-ah) [G. *kolikos*, colic, + *plēgē*, stroke.] Lead poisoning marked by both colic and palsy.

col'ic-root. Dioscorea.

colicystitis (ko''lĭ-sis-ti'(te')tis) [*coli* bacillus + *cystitis.*] Inflammation of the bladder caused by the *Bacillus coli.*

colicystopyelitis (ko''le-sis''to-pi-ĕ-li'(le')tis). Inflammation of the pelvis of the kidney and the bladder caused by the presence of the colon bacillus.

coliform (ko'lĭ-form) [*coli*-bacillus + L. *forma*, form.] Resembling the colon bacillus, belonging to the coli-group.

co'li-group. A group of allied bacteria, including the typhoid, paratyphoid, and paracolon bacilli, *B. psittacosis*, and *B. coli.*

co''li-infec'tion. Infection with the colon bacillus.

colil'ysin. An hemolysin formed by *Bacillus coli.*

colione (kol'ĭ-ōn). Colyone

coliplication (ko-lĭ-pli-ka'shun) [*colon* + *plication.*] An operation for reducing the lumen of a dilated colon by making folds or tucks in its walls.

colipuncture (ko-lĭ-pung'chur). Puncture of the colon to relieve gaseous distention, colocentesis.

colitis (ko-li'(le')tis) [G. *kōlon* + *-itis.*] Inflammation of the mucous membrane of the colon. **mucous c.,** colic myxoneurosis; an affection of the mucous membrane of the colon, characterized by more or less colicky pain, constipation or diarrhea, sometimes alternating, and the passage of slimy pseudomembranous shreds and patches. **pseudomem'branous c.,** mucous c.

colitoxemia, colitoxæmia (ko-lĭ-toks-e'mĭ-ă) Colibacillemia.

colitoxicosis (ko-lĭ-toks-ĭ-ko'sis). Systemic poisoning with toxins of the colon bacillus.

coliuria (ko-li-u'rĭ-ah). Colibacilluria.

collæ'mia. Collemia.

col'laform. Glutoform.

coll'agen [G. *kolla*, glue, + *gennaō*, I produce] An albuminoid present in connective tissue, bone (*ossein*), and cartilage (*chondrin*); on boiling with water it is converted into gelatin.

collagen'ic. Producing gelatin, noting the tissues containing collagen

collapse' [L. *collabi*, to fall together.] 1. A condition of extreme prostration, similar to shock and due to the same causes, often with the added moment of a great loss of fluid, as in cholera. 2. To fall into a state of profound physical depression. 3. A falling together of the walls of a structure. **c. ther'apy,** the surgical treatment of pulmonary tuberculosis whereby the diseased lung is placed, totally or partially, temporarily or permanently, in a state of retraction and immobilization. **pul'monary c.,** post-natal atelectasis.

collapsotherapy (kol-lap''so-ther'ă-pĭ). Treatment of pulmonary tuberculosis and other affections of the lungs by means of artificial unilateral pneumothorax or oleothorax causing collapse and immobilization of the affected lung.

coll'ar-bone. Clavicle.

collar'gol, collar'golum. A trade name for colloidal silver, an allotropic form of silver, soluble in water; employed in septic conditions in dose of gr. ½ (0.02), or hypodermically in doses of 8 to 30 minims (0.5–2.0) of a 1–200 solution.

collat'eral [L. *col-*, together, + *lateralis*, relating to the side.] 1 Accompanying, running by the side of 2. Secondary or subordinate. 3. Of indirect, not lineal, descent or ascent. 4. A secondary or accessory blood-vessel or nerve accompanying the main stem. **c. bun'dle, c. circula'tion, c. em'inence, c. lig'aments,** etc., see the nouns.

collec'tive [L. *collectus*, *con-*, together, + *legere*, to gather.] Relating to a number of individuals taken together or acting in unison. **c. fruit,** a mass formed of the fruits of several neighboring flowers, like the pineapple or fig. **c. investiga'tion,** an inquiry into any subject conducted by a society or voluntary association, each member of which fills up a blank form containing questions relating to the matter under investigation; these answers are received by a committee whose duty it is to compare and tabulate them, and to formulate deductions and conclusions based upon them.

colle'mia, collæ'mia [*colloid* + G. *haima*, blood.] The presence of matter, especially urates, in colloid form in the blood.

Col'les-Beaumès law [See *Beaumès.*] Same as Colles's* law.

Col'les's fas'cia [Abraham *Colles*, Irish surgeon, 1773–1843.] The deeper layer of the perineal fascia. **C.'s frac'ture,** a fracture of the lower end of the radius with displacement of the hand backward and outward, an extension fracture; a flexion fracture in the same location is sometimes called a *reversed Colles' fracture.* **C.'s law,** the mother of a syphilitic infant, though she herself has never had any symptoms of the disease, is immune. **C.'s lig'ament,** C.'s reflex ligament, ligamentum* inguinale reflexum. **C.'s space,** the region beneath the perineal fascia which contains the bulbous urethra, in the male, the posterior scrotal or labial vessels and nerves, and certain of the perineal muscles.

colliculitis (kol-lik-u-li'(le')tis) [L *colliculus*, mound. + G. *-itis*.] Inflammation of the urethra in the region of the verumontanum (colliculus seminalis).

collic'ulus [L. mound, dim of *collis*, hill.] In anatomy, a small elevation above the surrounding parts. **c. facia'lis**, facial hillock, a flat thick portion of the eminentia medialis, just above the striæ medullares in the rhomboidal fossa; it is formed by the internal genu of the facial nerve. **c. infe'rior** [BNA], **c. cauda'lis** [NK], inferior hillock, posterior body, testis, the posterior of the quadrigeminal bodies on either side, composed chiefly of gray matter with a white capsule; it is smaller than the c. superior. **c. semina'lis** [BNA], verumontanum, caput gallinaginis, an elevated portion of the crista urethralis about the center of the pars prostatica, on either side of which open the prostatic ducts. **c. supe'rior** [BNA], **c. crania'lis** [NK], superior hillock, anterior body, natis, the anterior of the quadrigeminal bodies on either side; it consists of four layers of strata named, from above downward, stratum zonale, cinereum, opticum, and lemnisci. **c. urethra'lis**, c. seminalis.

collidine (kol'i-dēn). A ptomaine obtained from decomposing glue, occurring as an oily colorless liquid, of pleasant odor, but toxic, $C_9H_{11}N$.

col'lier's lung. Anthracosis.

Collier's tract (kol'yur). The tegmental portion of the fasciculus longitudinalis medialis.

coll'iform. Trade name of a mixture of gelatin and formaldehyde employed in antiseptic dressings.

coll'in. The diffusible form of gelatin, the type of the colloids(3).

Collin's os'teoclast (kŏ-laṅ') [Anatole *Collin*, instrument maker of Paris, 1831–1923.] An apparatus for fracturing a bone at any desired point, used in the correction of knock-knee. See cut under *osteoclast*.

collinso'nia [Peter *Collinson*, English botanist, 1694–1768.] Citronella, stonewort, the herb *Collinsonia canadensis*, astringent, tonic, diuretic, and diaphoretic; employed in eclectic practice in the treatment of clergyman's sore throat, digestive and urinary disorders, and hemorrhoids, in doses of ℥10–15 (0.6–1.0) of the specific preparation in syrup or water.

collinso'nin. An extract of collinsonia, employed to meet the same indications as the crude drug, in doses of gr. 2–3(0.13–0.2).

Collip unit [J. B. *Collip*, Canadian physician, contemporary.] A unit of parathyroid dosage: one one-hundredth of the amount of parathyroid extract solution necessary to increase by 5 mg. the amount of calcium in 100 cc. of blood at the end of 15 hours in a dog weighing 20 kilograms.

colliquation (kol-I-kwa'shun) [L. *col-*, together, + *liquare*, to cause to melt.] 1. Excessive discharge of fluid. 2. Softening. 3. Wasting away. **balloon'ing c.**, edematous softening followed by liquefaction of the cell protoplasm. **retic'ulating c.**, incomplete ballooning c., in which trabeculæ form in the protoplasm connecting the nucleus and cell mantle.

colliquative (kŏ-lik'wa-tiv). Noting a discharge, liquid in character and excessive in amount, as a c. diarrhea or a c. sweat.

collo'dion. Collodium. **blis'tering c.**, collodium cantharidatum **canthar'idal c.**, collodium cantharidatum. **contrac'tile c.**, collodium. **flex'ible c.**, collodium flexile. **hemostat'ic c.**, collodium stypticum. **styp'tic c.**, collodium stypticum.

collo'dium [G. *kolla*, glue, + *eidos*, appearance.] (U.S.) Collodion, made by dissolving pyroxylin, or gun-cotton, 40, in ether 750, and alcohol 250; in the B.P. '14 the proportions were 1, 36, and 12, respectively; on evaporation it leaves a glossy contractile film; employed as a protective to cuts or as a vehicle for the local application of medicinal substances. **c. bitu'minis sulphona'ti** (N.F.), collodion of sulphonated bitumen, a 10 per cent. solution of sulphonatal bitumen in flexible collodion. **c. cantharida'tum**, c. vesicans (Br.), cantharidal collodion, blistering collodion, composed of a powdered chloroform extract of cantharides 60, in flexible collodion 85; employed externally as a blistering fluid. **c. elas'ticum**, c. flexile. **c. flex'ile** (U.S. and Br.), flexible collodion, made by adding caster oil 30, Canada turpentine 50, to collodium 920; the B.P. has 1 caster oil, 2 Canada turpentine, and 48 collodium; used for the same purposes as collodium, over which its film possesses the advantage for certain cases of not contracting. **c. hæmostat'icum**, c. stypticum. **c. io'di**, iodized collodion; a 5 per cent. solution of iodine in flexible collodion; counter-irritant. **c. iodofor'mi**, iodoform-collodion; a 5 per cent. solution of iodoform in flexible collodion, employed locally. **c. salicyl'ici compos'itum** (N.F.), compound salicylated collodion; salicylic acid 11, extract of Indian hemp 2, alcohol 10, flexible collodion to make 100; employed externally for the removal of corns. **c. styp'ticum** (N.F.), styptic collodion, styptic colloid, collodium hæmostaticum, xylostyptic ether; made of tannic acid 20, in flexible collodion 80; employed as an astringent and local hemostatic. **c. tig'lii**, croton-oil collodion; a 10 per cent solution of croton oil in flexible collodion; counter-irritant. **c. vesi'cans** (Br.), c. cantharidatum.

coll'ogen. Collagen.

colloid (kol'loyd) [G. *kolla*, glue, + *eidos*, appearance.] 1. Glue-like. 2. A translucent, yellowish, homogeneous material of the consistency of glue, less fluid than mucoid or mucinoid, found in the cells and tissues in a state of colloid degeneration. 3. A substance such as gelatin (collin) or the cytoplasm, which, by reason of the size of its molecules, is slowly diffusible rather than soluble in water, its hydrates being gelatinous in consistence, and is incapable of passing through an animal membrane. 4. Colloidal metal.* **am'yl c.**, anodyne c. **an'odyne c.**, amyl c., amyl hydride and absolute alcohol, each ½ ounce, aconitine 1 gr. veratrine 6 grs., collodion 2 ounces; used as a local application for neuralgia and muscular pains. **bo'vine c.**, conglutinin. **c. degenera'tion**, see *degeneration*. **c. degenera'tion of the skin**, c. milium, hyaloma.* **c. equilib'rium**, a condition in which the colloids in the body fluids are stable; a rupture of this equilibrium gives rise to an anaphylactoid crisis, or colloidoclastic shock.* **c. solu'tion**, dispersoid or emulsoid, an apparent solution of any colloid substance. **disper'sion c.**, dispersoid. **emul'sion c.**, emulsoid, a colloid solution in which the substance is in the form of exceedingly minute film-covered droplets, infinitely smaller than those of an emulsion, the solution being more or less viscid. **hy'drophile** or **hydrophil'ic c.**, emulsion c., emulsoid.* **hydropho'bic c.**, dispersoid. **irrever'sible c.**, one which is not again soluble in water after having been dried at ordinary temperature. **lyophil'ic c.**, emulsion c. **lyopho'bic c.**, suspension c. **protec'tive c.**, a c. which has the power of preventing the precipitation of

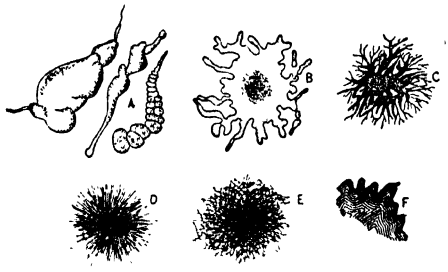
the sigmoid flexure, lying in the pelvis. **c. sigmoid'eum** [BNA], sigmoid flexure.

colonalgia (ko-lon-al'jĭ-ah) [G. *kōlon*, colon, + *algos* pain.] Colic; pain in the colon.

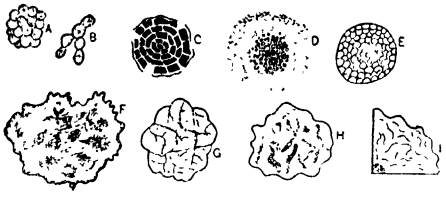
colon'ic. Relating to the colon.

colonitis (ko-lon-i'(e')tis). Colitis.

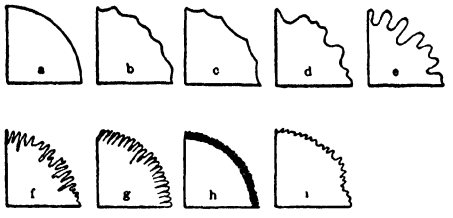
colonization (kol"o-ni-za'shun) [L. *colonia*, colony.] Innidiation



1



2



3

BACTERIAL COLONIES: 1. Type of colonies; A, cochleate B, ameboid; C, rhizoid; D, mycelioid; E, filamentous; F, curled. 2. Structure of colonies: A, conglomerate; B, toruloid or toruliform; C, alveolate; D, grumose in center; E, moruloid; F, clouded; G, reticulate; H, marmorated; I, gyrose. 3. Borders of colonies: a, entire; b, undulate; c, repand; d, lobate-lobulate; e, auriculate; f, lacerate; g, fimbriate; h, ciliate; i, erose. (From Chester's "A Manual of Determinative Bacteriology," The Macmillan Company, Publishers.)

colonopathy (ko-lon-op'ă-thy) [G. *kōlon*, colon, + *pathos*, disease.] Colopathy, any disordered condition of the colon.

colon'oscope. An elongated rectal speculum.

colonos'copy [G. *kōlon*, colon, + *skopeō*, I view.] Inspection of the upper portion of the rectum by means of an elongated speculum.

col'ony [L. *colonia*.] One of a number of groups of bacteria growing on a culture medium, each one due to the multiplication of an individual germ.

colopathy (ko-lop'ă-thĭ). Colonopathy.

colopex'ia [G. *kōlon*, colon, + *pēxis*, fixation.] Attachment of a portion of the colon to the abdominal wall.

colopexos'tomy [G. *kōlon*, colon, + *pēxis*, fixation, + *stoma*, mouth.] The establishment of an artificial anus by opening into the colon after its fixation to the abdominal wall.

colopexot'omy [G. *kōlon*, colon, + *pēxis*, fixation, + *tomē*, incision.] Incision into the colon after its fixation to the abdominal wall.

co'lopexy. Colopexia.

col'ophene. An aromatic colorless oil obtained by the distillation of oil of turpentine with an acid.

colopho'nium (kol-o-fo'nĭ-um) (Br.). Colophony.

col'ophony [*Kolophōn*, Summit, a town in Ionia.] Rosin, resina.*

coloproctitis [G. *kōlon*, colon, + *prōktos*, anus (rectum), + *-itis*.] Inflammation of both colon and rectum; proctocolitis.

coloproctostomy (ko-lo-prok-tos'to-mĭ) [G. *kōlon*, colon, + *prōktos*, anus (rectum), + *stoma*, mouth.] Establishment of a communication between the rectum and a segment of the colon not continuous with it.

coloptosia (ko-lop-to'sĭ-ah) [G. *kōlon*, colon, + *ptōsis*, a falling.] Downward displacement, or prolapse, of the colon, especially of the transverse portion.

color (kul'or) [L.] Hue, the quality other than shape and texture which an object presents to the eye. **complemen'tary col'ors,** two primary colors which, when combined, produce white light. **pri'mary c.,** one of the seven colors composing the solar spectrum; violet, indigo, blue, green, yellow, orange, red. **sim'ple c.,** primary c.

absence, achroma, achromia. **change,** metachrosis, metachromatism, metachromasia, achromasia, achromatosis, albinism, leucopathy. **deficiency,** hypochromia, **disordered perception,** chromatodysopia, chromatopsia, chromopsia, dyschromatopsia, color-blindness, achritochromasy, daltonism **diversity of,** heterochromia, pleochromia, pleochroism **increase,** hyperchromatism, hyperchromia, hyperchromatosis **measurement,** colorimetry, chromometry chromatometry. **measurement of sense of,** chromatoptometry, chromoptometry, chromoscopy. **subjective sensation,** phose, chromophose; *associated with other sensations*, chromesthesia, pseudogeusesthesia, phonopsia, pseudochromesthesia, pseudophotesthesia, echophotony.

col'or-blind"ness. Achromatopsia, daltonism, loss of perception of colors, usually of only one or two of the primary colors (red, green, or blue).

colorectitis (ko-lo-rek-ti'(te')tis) [G. *kōlon*, colon +, L. *rectum* + G. *-itis*.] Coloproctitis, proctocolitis

colorectos'tomy. Coloproctostomy

col'or-hearing. A variety of synesthesia in which a subjective sensation of color is caused by sound; or the reverse, phonopsia.

colorim'eter [L. *color* + G. *metron*, measure.] Chromatometer

col'or-index. "Valeur globulaire," C.I., a formula indicating the amount of hemoglobin in each erythrocyte $= \frac{h}{c}$ in which h stands for the estimated percentage of hemoglobin, and c equals the number of erythrocytes per cubic millimeter divided by 5,000,000; the average C.I. is about 0.85.

col'or-rad"icle. Chromophore, one of the constituents of an aniline dye upon which its specific color depends.

col'or-taste. A form of synesthesia in which the color-sense and taste are associated, stimulation of either inducing a subjective sensation on the part of the other as well, pseudogeusesthesia.

olostomy (ko-los'to-mĭ) [G. *kōlon*, colon, + *stoma*, mouth.] Establishment of an artificial anus by an opening into the colon.

olostra'tion. Infantile diarrhea attributed to the action of the colostrum.

olos'tric. Relating to the colostrum

colostrorrhea, colostrorrhœa (ko-los-tror-re'ah) [L. *colostrum* + G. *rhoia*, flow.] An abnormally profuse secretion of colostrum.

colos'trous. Relating to colostrum.

colostrum (ko-los'trum) [L.] A thin, white, opalescent fluid, the first milk secreted at the termination of pregnancy; it differs from the milk secreted later in containing more lactalbumin and lactoprotein. **c. cor'puscle,** one of numerous bodies present in the colostrum; they are supposed to be modified leucocytes containing fat droplets; galactoblast.

colot'omy [G. *kōlon*, colon, + *tomē*, incision.] Incision into the colon.

coloty'phoid fe'ver. Typhoid fever in which there is a special involvement with ulceration of the colon.

colpatresia (kol-pă-tre'zĭ-ah) [G. *kolpos*, sinus (vagina), + *atrētos*, imperforate.] Imperforation or occlusion of the vagina.

colpeurynter (kol"pu-rin'ter) [G. *kolpos*, sinus (vagina), + *eurynō*, I dilate.] A bag introduced empty into the vagina and then filled with water, used for dilating the canal.

colpeurysis (kol-pu'rĭ-sis). The operation of dilating the vagina.

colpitis (kol-pi'(pe')tis) [G. *kolpos*, sinus (vagina), + *-itis*.] Inflammation of the mucous membrane of the vagina. **c. emphysemato'sa,** inflammation of the vagina in which the mucous membrane is studded with small gas-cysts.

colpocele (kol'po-sēl) [G. *kolpos*, sinus (vagina), + *kēlē*, tumor.] Elytrocele; a hernia or any tumor projecting into the vagina.

colpoceliot'omy [G. *kolpos*, sinus (vagina), + *koilia*, belly, + *tomē*, incision.] Abdominal section through the vagina.

colpocleisis (kol-po-kli'sis) [G. *kolpos*. sinus, vagina, + *kleiō*. I close.] Operation for obliterating the lumen of the vagina.

colpocystitis (kol-po-sis-ti'(te')tis) [G *kolpos*, sinus (vagina), + *kystis*, bladder, + *-itis*.] Inflammation of both vagina and bladder.

colpocystocele (kol"po-sis'to-sēl) [G. *kolpos*, sinus (vagina), + *kystis*, bladder, + *kēlē*, hernia.] Prolapse of the bladder into the vagina.

colpocys'toplasty [G. *kolpos*, sinus (vagina), + *kystis*, bladder, + *plassō*, I mould.] The operative treatment of vesicovaginal fistula.

colpocystosyrinx (kol-po-sis-to-sir'inks). [G. *kolpos*, sinus (vagina), + *kystis*, bladder, + *syrinx*, pipe.] Vesicovaginal fistula.

colpocystot'omy [G. *kolpos*, vagina, + *kystis*, bladder, + *tomē*, incision.] Incision into the bladder through the vagina.

colpocysto-ureterotomy (kol"po-sis"to-u-re"tĕ-rot'o-mĭ) [G. *kolpos*, sinus (vagina), + *kystis*, bladder, + *ourēter*, ureter, + *tomē*, incision.] Incision into the ureter by way of the vagina and the bladder.

colpodesmorrhaphy (kol"po-dez-mor'ă-fĭ) [G. *kolpos*, sinus (vagina), + *desmos*, band + *rhaphē*, sewing.] Repair of a ruptured vaginal sphincter.

colpodynia (kol-po-din'ĭ-ah) [G. *kolpos*, vagina, + *odynē*, pain.] Neuralgic pain in the vagina, vaginodynia.

colpohyperplasia (kol-po-hi"pur-pla'zĭ-ah) [G. *kolpos*, sinus (vagina), + *hyper*, overmuch, + *plasis*, a forming.] A condition marked by thickening of the vaginal mucous membrane. **c. cys'tica,** an infectious form, occurring usually in pregnancy, in which the thickened mucous membrane is studded with retention cysts. **c. emphysemato'sa,** c. cystica in which the fluid in the cysts is partly or wholly replaced by a gas.

colpohysterect'omy. Hysterectomy, performed through the vagina.

colpohysteropexy (kol-po-his'ter-o-pek-sĭ) [G. *kolpos*, sinus (vagina), + *hystera*, uterus, + *pēxis*, fixation.] An operation for fixation of the uterus, performed through the vagina.

colpohysterorrhaphy (kol"po-his"ter-or'ă-fĭ) [G. *kolpos*, vagina, + *hystera*, uterus, + *rhaphē*, a sewing.] Colpohysteropexy.

colpohysterot'omy. Incision into the uterus, as for the removal of a fibroma, through the vagina.

colpomyco'sis. Inflammation of the vagina caused by the presence of *Leptothrix vaginalis*.

colpomyomectomy (kol-po-mi"o-mek'to-mĭ) [G. *kolpos*, sinus (vagina), + *myoma* + *ektomē*, excision.] Removal of a myoma of the uterus through the vagina.

colpomyomot'omy. Colpomyomectomy.

colpop'athy [G. *kolpos*, sinus (vagina), + *pathos*, suffering.] Any disease of the vagina.

colpoperine'oplasty [G *kolpos*, sinus (vagina), + *perinaion*, perineum, + *plassō*, I form.] Repair of a rupture of the perineum involving the vagina.

colpoperineorrhaphy (kol-po-per-ĭ-ne-or'ă-fĭ) [G. *kolpos*, sinus (vagina), + *perinaion*, perineum, + *rhaphē*, sewing.] A plastic operation for restoring the integrity of the vagina and perineum in cases of perineal tears.

col'popexy [G. *kolpos*, sinus (vagina), + *pēxis*, fixation.] Suture of a relaxed and prolapsed vagina to the abdominal wall.

col'poplasty [G. *kolpos*, vagina, + *plassō*, I form] Elytroplasty.

colpopol'ypus [G *kolpos*, sinus (vagina).] A polypus of the vagina.

colpoptosia (kol-pop-to'sĭ-ah) [G. *kolpos*, sinus (vagina), + *ptōsis*, a falling.] Prolapse of the vaginal walls.

colporrhagia (kol-pŏ-ra'jĭ-ah) [G. *kolpos*, sinus (vagina), + *-rhagia*.] Vaginal hemorrhage.

colpor'rhaphy [G. *kolpos*, sinus (vagina), + *rhaphē*, a sewing.] Elytrorrhaphy; repair of a rupture of the vagina by freshening and suturing the edges of the tear.

colporrhex'is [G. *kolpos*, sinus (vagina), + *rhēxis* rupture.] A tearing of the vaginal wall.

col'poscope [G. *kolpos*, sinus (vagina), + *skopeō* I view.] A vaginal speculum.

colpospasm (kol'po-spazm) [G. *kolpos*, sinus (vagina), + *spasmos*, spasm.] Spasmodic contraction of the vaginal wall.

colposteno'sis [G. *kolpos*, sinus (vagina), + *stenōsis*, narrowing.] Narrowing of the lumen of the vagina.

colpostenot'omy [G. *tomē*, incision.] Division of a colpostenosis, or stricture of the vagina.

colpotherm (kol'po-thurm) [G. *kolpos*, vagina, + *thermē*, heat.] A small electric lamp enclosed in a metal box which is introduced into the vagina in order to convey heat to the parts.

colpot'omy [G. *kolpos*, sinus (vagina) + *tomē*, incision.] Elytrotomy, a cutting operation in the vagina.

colpo-ureterocystotomy (kol-po-u-re"ter o-sis-tot'o-mĭ). Colpocysto-ureterotomy.

colpo-ureterot'omy [G. *kolpos*, sinus (vagina), + *ourētēr*, ureter, + *tomē*, incision.] Incision into a ureter through the vagina.

colpoxerosis (kol-po-ze-ro'sis) [G. *kolpos*, sinus (vagina), + *xērōsis*, dryness.] Abnormal dryness of the vaginal mucous membrane.

colt-ill. A term applied to strangles when affecting colts.

colts'foot. Tussilago, farfara (N.F.), employed as a popular remedy for cough. **false c.,** asarum, wild ginger.

colt's-tail. Erigeron.

col'umbin. Calumbin.

columbium (ko-lum'bi-um) [*Columbia.*] An element, symbol Cb, atomic weight 93.1, isolated first from samarskite and found also in columbite and tantalite in association with titanium. It is the same as niobium.

colum'bo. Calumba.

columella (kol-oo-mel'lah) [L. dim. of *columna*, column.] 1. A column, a small column. 2. In *Myxomycetes* the continuation of the pedicel in the center of the capsule, around which the sporangium is developed. **c. au'ris,** a bone in the ear of a bird corresponding to the stapes in mammals. **c. coch'leæ,** modiolus. **c. for'nicis,** one of the pillars of the fornix. **c. na'si,** the lower margin of the septum nasi.

column (kol'um) [L. *columna.*] An anatomical part or structure in the form of a pillar or cylinder funiculus, fasciculus. **ante'rior c.,** (1, gray) columna anterior; (2, white) funiculus anterior. **anterolat'eral c.,** funiculus lateralis. **Bertin's c.,** columna renalis. **Burdach's c.,** fasciculus cuneatus. **Clarke's c.,** nucleus dorsalis **direct' cerebell'ar c.,** fasciculus cerebellospinalis. **dor'sal c.,** (1) spinal c.; (2) posterior c. **Flechsig's c.,** fasciculus anterior proprius. **Goll's c.,** fasciculus gracilis. **Gowers' c.,** fasciculus anterolateralis superficialis **lat'eral c.,** funiculus lateralis **Morgagni's c.,** columna rectalis. **poste'rior c.,** (1, gray) columna posterior; (2, white) funiculus posterior. **rec'tal c.,** columna rectalis. **re'nal c.,** columna renalis. **respi'ratory c.,** fasciculus solitarius. **Rolan'do's c.,** a slight ridge on either side of the medulla oblongata. **Serto'li's c.,** one of the columnar figures in the testicle formed of aggregations of Sertoli's cells. **spi'nal c.,** dorsal c., vertebral c., the line of vertebræ from the pelvis to the head, forming a flexible bony case for the spinal cord. **Tuerck's c.,** fasciculus cerebrospinalis anterior. **vag'inal c.,** columna vaginalis **ven'tral c.,** anterior c. **ver'tebral c.,** spinal c. **vesic'ular c.,** a line of ganglion cells at the inner edge of the columna posterior.

colum'na, gen and pl. *colum'næ* [L.] Column **c. adipo'sa,** a rod or line of fatty matter passing upward to the hair-follicle from the subcutaneous connective tissue. **c. ante'rior** [BNA], anterior column, cornu anterius, anterior horn, the anterior portion of each gray column of the spinal cord. **colum'næ car'neæ,** trabeculæ carneæ [BNA]. **c. for'nicis** [BNA], column of the fornix anterior pillar of the fornix, one of two rounded, slightly diverging bundles passing from the anterior portion of the body of the fornix downward to the lateral wall of the third ventricle, passing in front of the foramen of Monro, and terminating in the mamillary body. **c. gris'ea,** gray column, a longitudinal mass of gray matter running through the center of each lateral half of the spinal cord, presenting on cross section a semilunar outline; each lateral column is divided arbitrarily into an anterior and a posterior column called, from its appearance on cross section, anterior and posterior cornu or horn. **c. latera'lis** [BNA], lateral column, cornu laterale, lateral horn; a projection of the gray matter of the spinal cord into the lateral funiculus, occurring especially in the thoracic region, between the anterior and posterior columns or horns opposite the location of the gray commissure. **c. na'si,** the fleshy termination of the septum nasi. **c. poste'rior** [BNA], posterior column, cornu posterius, posterior horn; the posterior portion of each gray column of the spinal cord **c. recta'lis,** Morgagni's rectal column one of a number of vertical ridges in the mucous membrane of the upper half of the anal canal. **c. rena'lis,** Bertin's column, one of the prolongations of cortical substance separating the pyramids of the kidney. **c. ruga'rum vagi'næ** [BNA], column of the vagina, one of two slight longitudinal ridges, anterior and posterior, in the vaginal mucous membrane. **c. vagina'lis,** one of the longitudinal ridges or cords in the vaginal mucous membrane. **c. vertebra'lis,** vertebral or spinal column, spine.

columnell'a [dim. of L. *columna*] A small column, columella.

columnization (kol-um-ni-za'shun). Filling the vagina with a tampon in order to prevent prolapse of the uterus.

colyone (ko'lĭ-ōn) [G. *kōlyōn*, pres. part. of *kōlyō*, I prevent.] Chalone.

colypeptic (ko-lĭ-pep'tik) [G. *kōlyō*, I hinder, + *pepsis*, digestion.] Retarding digestion.

colyseptic (ko-lĭ-sep'tik) [G. *kōlyō*, I hinder, + *sepsis*, putrefaction.] Antiseptic.

colytic (ko-lit'ik) [G. *kōlytikos*, preventing, hindering.] Inhibitory.

co'ma [G. *kōma*, deep sleep.] A state of profound unconsciousness from which one cannot be roused; it may be due to the action of an ingested poison, such as alcohol or opium, or of one formed in the body, as in uremic or diabetic c., to injury or disease of the brain, as in apoplexy, or to hysteria **c. carcinomato'sum,** c. occurring in the final stage of cancerous cachexia. **c. vigil,** see *vigil*

co'matose. In a state of coma

combi'ning pow'er. See under *valence*

Combre'tum [L. a rush or similar plant.] A genus of tropical plants. **C. sunda'icum,** jungle plant, anti-opium leaf, is said to have been successfully employed in the treatment of the opium habit.

combus'tible. Capable of rapid combination with oxygen, or of burning.

combustion (kom-bus'chun) [L. *combustio*, from *comburere*, to burn up.] Burning, the rapid oxidation of any substance accompanied with the production of heat and light. **slow c.,** decay. **sponta'neous c.,** the ignition of a mass of material by heat developed within it by the oxidation of the substances composing it.

Com'by's sign [Jules *Comby*, Parisian pediatrist, *1853.] An early sign of measles, consisting in thin whitish patches on the gums and buccal mucous membrane, formed of degenerated squamous epithelium.

com'edo, pl. *comedo'nes* [L. *comedere*, to eat up. Black head, a plug of sebaceous matter, capped with a blackened mass of dust and epithelial débris, filling the mouth of a sebaceous follicle

co'mes, pl. *com'ites* [L. a companion.] A blood-vessel accompanying another vessel or a nerve; the veins accompanying an artery, often two in number, are called *venæ comites* (*venæ comitantes* [BNA]).

com'frey. Symphytum officinale.

com'itans, pl. *comitan'tes* [L. *comitari*, to accompany.] Comes. **vena c.** [BNA], one of the veins running parallel with an artery.

com'ma-baci'llus. *Spirillum choleræ asiaticæ.*

com'ma-tract, Schultze's* bundle.

commen'sal [L. *con*, with, together + *mensa*, table.] Noting organisms which live together

neither bearing a parasitic relation to the other, without harm or prejudice to either.

commen'salism. Symbiosis, mutualism, the living together of two organisms, neither of which is parasitic on the other, to their mutual ad vantage.

comminuted (kom'ĭ-nu-ted) [L. *comminuire*, to break in pieces.] Broken into a number of fragments, noting especially a fractured bone.

comminution (kom-ĭ-nu'shun). A breaking into a number of small fragments.

commis'sion [L *commissio; committere*, to commit.] In insurance the amount paid to an agent who secures, or places the policy; when it is a percentage on the first premium, it is called a *brokerage;* when it is a smaller percentage of a stipulated number of subsequent commissions, it is called a *renewal commission.*

commissu'ra, gen. and pl *commissu'ræ* [L. a joining together, seam] Commissure. **c. ante'rior al'ba** anterior white commissure, a narrow band of white substance bordering on the anterior median fissure of the spinal cord in front of the anterior gray commissure. **c. ante'rior cer'ebri,** anterior commissure of the cerebrum, a white bundle crossing in the anterior wall of the third ventricle, from side to side between the two thalami in front of the columnæ (anterior pillars) of the fornix **c. ante'rior gris'ea,** anterior gray commissure, the portion of the gray commissure lying in front of the central canal, between it and the anterior white commissure. **c. arcua'ta,** c. inferior. **c. basa'lis** c. superior. **c. cine'rea,** c. grisea. **c. gris'ea,** gray commissure, massa* intermedia [BNA]. **c. habenula'rum,** commissure of the habenulæ, the decussation of fibers of the two striæ medullares, forming the dorsal portion of the habenula or peduncle of the pineal body. **c. hippocam'pi** [BNA], commissure of the hippocampus, lyra, psalterium, a small triangular space between the diverging crura of the fornix, occupied by a thin lamina of transverse fibers usually closely adherent to the under surface of the corpus callosum. **c. infe'rior,** inferior commissure, commissure of v. Gudden, a transverse fiber tract in the tuber cinereum just behind the optic chiasm. **c. labio'rum,** junction of the lips, angle of the mouth **c. labio'rum ante'rior,** the junction of the labia majora anteriorly at the mons pubis. **c. labio'rum poste'rior,** a slight fold uniting the labia majora posteriorly in front of the anus. **c. mag'na,** corpus callosum. **c. me'dia,** middle commissure, massa* intermedia [BNA]. **c. mol'lis,** soft commissure, massa* intermedia [BNA]. **c. oliva'rum,** fibers connecting the two olivary bodies. **c. op'tica,** chiasma opticum. **c. palpebra'rum latera'lis** [BNA]. **c. p. temporalis** [NK], forming the angulus oculi temporalis [NK], lateral palpebral commissure, external canthus, the outer extremity of the rima palpebrarum, or slit between the eyelids. **c. palpebra'rum media'lis** [BNA]. **c. p. nasalis** [NK], forming the angulus oculi nasalis [NK], medial palpebral commissure, internal canthus, inner extremity of the rima palpebrarum. **c. poste'rior cer'ebri,** posterior cerebral commissure, a thin band of white matter, crossing from side to side beneath the habenula of the pineal body and overlying the aditus ad aquæductum cerebri. **c. poste'rior,** **c. poste'rior gris'ea,** posterior commissure, posterior gray commissure, the portion of the gray commissure of the spinal cord lying posterior to the central canal. **c. supe'rior,** superior commissure, commissure of Meynert, a large transverse fiber tract in the upper part of the tuber cinereum. **c. ventra'lis al'ba,** c. anterior alba.

commissu'ral. Relating to a commissure

commissure (kom'ĭ-shūr). 1. A cranial suture. 2. Angle or corner of the eye, lips, or labia. 3. A bundle of nerve fibers passing from one side to the other in the brain or spinal cord; see *commissura.*

commotio (kŏ-mo'shyo) [L. *commovere*, to agitate.] Concussion. **c. cer'ebri,** concussion of the brain, a disturbance of the brain tissue caused by a blow on the head or a violent shaking, marked by nausea and vertigo followed by coma, with slow respiration and weak pulse. **c. ret'inæ,** a disturbance in retinal function, *i.e.* of vision following a blow on the eyeball or a violent shaking of the head.

commotion (kom-mo'shun) [L. *commotio.*] Concussion; the group of symptoms (tending to syncope, pallor, weak pulse) sometimes seen following heavy blows on the head, possibly due to molecular changes in the brain substance.

commu'nicans [L. communicating.] One of a numberof nerves; see under *nervus.*

communis (kŏ-mu'nis) [L. common.] Common, relating to more than one.

commutator (kom'u-ta-tor) 1. An appliance by which the direction of an electric current is reversed. 2. An appliance whereby the strength of an electric current is increased or diminished.

comp. Abbreviation for L. *compositus, a, um,* compound.

compact' [L. *compactus*, joined together.] Closely compressed, solid, dense

compar'ascope. A microscope accessory enabling the observer to compare two different slides.

compatibil'ity. The condition of being compatible.

compatible (kom-pat'ĭ-bl) [L. *con-*, with, + *pati*, to suffer, + *habilis*, fit.] Capable of being mixed without undergoing destructive chemical change or acting in therapeutic antagonism; said of the elements in a properly constructed pharmaceutical mixture.

compensa'tion [L *compensare*, to weigh together, counterbalance.] The supplying of a deficiency; the making up in one part for a loss in another. Specifically, the maintenance of the circulation, in cases of cardiac valvular defect, by hypertrophy with resulting increased force of the contractions of the heart muscle.

compen'satory. Counterbalancing a defect.

complaint (kom-plānt'). A malady or disease.

complaster (kom'plas-tur). Trade name of a preparation of calcined gypsum which is soluble in hot water; it is used for making moulds which can be washed away after the cast has hardened.

com'plement [L. *complementum*, that which completes.] According to Ehrlich's side-chain theory, the thermolabile substance in normal serum which is destructive to bacteria and other cells with which it is brought in contact by means of the amboceptor; it is composed of two molecular groups: the *toxophore* or *zymophore* group, which is the toxic substance, and the *haptophore* group by which it unites with the amboceptor. It is called also addiment, alexin, cytase, and end-body. **deflec'tion of the c., devia'tion of the c., diver'sion of the c.,** the fixation of complement in a serum by an antigen-antibody combination whereby it is rendered unavailable to complete a reaction in a second antigen-antibody combination for which complement is necessary; see Bordet*-Gengou, Neisser*-Wechsberg, and the Wassermann* reaction. **dom'inant c.,** the one of several different complements united to a pluriceptor which exerts the specific action. **fixa'tion of the c.,** deflection

of the c. **non-dom'inant c.**, any one of the several complements united to a pluriceptor which is not essential to the lytic action. **subor'dinate c.**, non-dominant c

complemen'tal, complemen'tary. Supplying a loss or deficiency.

com'plemented. United with complement and therefore active, noting interbodies or amboceptors.

complementoid (kom-ple-men'toyd) [*complement* + G. *eidos*, resemblance.] A complement which has lost its zymotoxic group while retaining its haptophore group; it can therefore still combine with the immune body and can excite the production of antiocomplements, but has lost its solvent or digestive action.

complemen'tophil, complemen'tophile [*complement* + G. *philos*, fond.] Having an affinity for complement, noting the atom group in the amboceptor which unites with the complement.

completion (kom-ple'shun). Union of antibodies or amboceptors with complement.

com'plex [L. *complexus*, woven together, infolded, surrounded.] 1. Syndrome, symptom-complex. 2. In psychology, all the ideas, feelings, impressions, etc., associated with a given subject. 3. Specifically, in psychoanalysis, an idea or group of ideas associated with a tone of unpleasantness which tends to keep it out of consciousness. 4. Electrical complex, that section of the electrocardiogram which is associated with the systole of the auricle or ventricle. The *auricular c.* consists of a positive wave, P, followed by a horizontal line or a slightly negative wave; the *ventricular c.* is formed by the positive waves R and T, and two negative waves framing R, namely Q (inconstant) at the beginning of the ascending limb and S at the termination of the descending limb; an *anomalous c.* is an auricular or ventricular c. which deviates markedly from the physiological type in the same heart and lead. 5. Intricate, complicated. **anom'alous c.**, see above, under (4). **auricular c.**, see above, under (4). **father c.**, Electra* complex. **mother c.**, Œdipus* complex. **ventric'ular c.**, see above, under (4).

complexion (kom-plek'shun). 1. The color and general condition of the skin, especially the skin of the face. 2. Temperament (obsolete).

complex'us [L. embracing, encircling.] Musculus semispinalis capitis.

com'plicated [L. *com-*, with, + *plicare*, to fold.] Complex, confused; noting a disease with which another has become associated, altering its symptoms and modifying its course.

complica'tion [L. *complicare*, to fold up.] A morbid process, occurring in the course of a disease, which is not an essential phenomenon of that disease; it may be a result of the primary disease or arise from entirely independent causes.

component (kom-po'nent) [L. *componere*, to compose.] A functional system formed of a collection of neurones. The components are the somatic and the splanchnic motor and sensory, conveying motor and sensory impulses to and from the parietes and viscera respectively.

Compos'itæ [L. *compositus*, composite.] An order of gamopetalous dicotyledonous plants; the inflorescence is a capitulum, the fruit an achene.

composition (kom-po-zish'un) [L. *componere*, to arrange.] In chemistry, the kind and number of atoms constituting the molecule of any substance. **c. pow'der,** pulvis myricæ compositus, compound powder of bayberry; bayberry root 60, ginger 30 capsicum and cloves each 5; carminative and stimulant in doses of gr. 10–15 (0.6–1.0).

com'pos men'tis [L. possessed of one's mind.] Of sound mind, sane.

compound'. To put together the ingredients of a remedy, according to the directions in a prescription or formula.

com'pound. 1. In chemistry a substance formed by the intimate chemical union of two or more elements, often differing entirely in physical characteristics from any of its components. 2. In pharmacy noting a preparation containing several ingredients as distinguished from one of the same name containing only one or a few. 3. Not simple, made up of two or more parts **acy'clic c.**, open-chain* c. **addi'tion c.**, a c. formed by the direct addition of an element or a radical to an existing c., and not by its substitution for an element or radical already present. **aliphat'ic c.**, open-chain* c. **aromat'ic c.**, closed-chain* c. **bi'nary c.**, a c. whose molecules contain only two elements or two atoms of different kinds, such as HCl. **closed-chain c.**, see under *chain*. **condensa'tion c.**, a complex c. resulting from the reaction of two more simple substances, with the splitting off of some other substance, such as alcohol or water. **con'jugated c.**, one formed by the union of two compounds and preserving more or less of the properties or characteristics of both. **cy'clic c.**, closed-chain* c. **fat'ty c.**, open-chain* c. **inorgan'ic c.**, one that contains no carbon atom, **non-po'lar c.**, one that does not ionize in solution; most of the organic compounds are non-polar. **o'pen-chain c.**, see under *chain*. **organ'ic c.**, any c. containing carbon, and usually hydrogen, oxygen, and nitrogen as well. **po'lar c.**, one that ionizes in solution, usually an inorganic c. **quar'ternary c.**, one that contains four different elements. **sat'urated c.**, one the valences of all the constituents of which are satisfied. **substitu'tion c.**, one formed by the substitution of a new element or radical for one already present. **ter'nary** or **ter'tiary c.**, one whose molecules contain only three elements or atoms of different kinds.

com'press. A pad of gauze or other material bandaged over a part where it is desired to make compression. **grad'uated c.**, one made of layers of cloth in such a way that it is thickest in the center, becoming thinner toward the periphery.

compression (kom-presh'un) [L. *comprimere*, to press together.] A squeezing together, the exertion of pressure on a body in such a way as to tend to increase its density. **cer'ebral c., c. of the brain,** a condition in which pressure is put upon the intracranial tissues by an effusion of blood, increase of cerebrospinal fluid, an abscess or neoplasm, or a depressed fracture of the skull.

compress'or. 1. A muscle contraction of which causes compression of any structure; see under *musculus*. 2. An instrument for making pressure on a part, especially on an artery to prevent loss of blood.

compresso'rium. Compressor(2).

Compto'nia [Henry *Compton*, Bishop of London, 1632–1713.] *Myrica*. **C. asplenifo'lia,** *Myrica asplenifolia*, sweet fern.*

compulsion (kom-pul'shun) [L. *compellere*, to urge.] In psychology, a sudden overpowering impulse to the commission of some act against the person's will.

cona'rial. Relating to the conarium or pineal body.

cona'rium [G. *kōnarion* (dim. of *kōnos*, cone), the pineal body.] Epiphysis cerebri, pineal gland or body, corpus* pineale [BNA].

concatenate (kon-kat'e-nāt) [L. *concatenare*, to link or chain together.] Noting the arrangement of a number of structures, enlarged lymph glands for example, in a row like the links of a chain.

Concato's disease' (kon-kah'to) [Luigi Maria *Concato*, Italian physician, 1825–1882.] Polyorrhomeningitis.

concave (kon'kāv) [L. *concavus*, arched or vaulted.] Having a spherically hollowed surface.

concav'ity. A hollow or depression, with more or less evenly curved sides, on any surface.

conca"vocon'cave. Concave on two opposing surfaces.

conca"vocon'vex. Concave on one surface and convex on the opposite surface.

concentration (kon"sen-tra'shun) [L. *con(cum)*, bringing together, + *centrum*, center.] 1. A preparation made by extracting a crude drug, precipitating from the solution, and drying; resinoid. 2. Increasing the strength of a fluid by evaporation. 3. Fixed attention of the mind upon a special subject. **hydrogen ion c.,** see under *hydrogen*.

concen'tric [L. *con*, together, + *centrum*, center.] Having a common center, noting two or more spheres, circles, or segments of circles, or bodies approaching these figures in shape.

con'cept [L. *conceptum*, something devised or understood.] An abstract idea or notion.

conceptacle (kon-sep'ta-kl) [L *conceptaculum: concipere*, to contain.] In botany, a cavity on the surface of the phallus of a cryptogam, in which spores are produced.

concep'tion [L. *conceptio*.] 1. Concept. 2. The act of forming a general idea or notion 3. The act of conceiving, or becoming pregnant. **imper'ative c.,** a concept which does not arise from association but appears spontaneously and refuses to be banished; obsession.

conceptive (kon-sep'tiv) [L. *conceptivus*, from *concipere*, to conceive.] Capable of conceiving.

concha (kong'kah) [L. a shell.] In anatomy, a structure comparable to a shell in shape, as the auricle or pinna of the ear or a turbinated bone in the nose; see the subtitles. **c. auric'ulæ,** the large hollow, or floor of the auricle, between the anterior portion of the helix and the antihelix; it is divided by the crus of the helix into the cymba above and the cavum below. **c. bullo'sa,** a cystic expansion of the turbinated bones, especially the middle turbinate, occurring in chronic rhinitis. **c. nasa'lis infe'rior,** inferior turbinated bone; a thin spongy bony plate with curved margins, on the outer wall of the lower part of the nasal fossa, separating the middle from the inferior meatus; it articulates with the ethmoid, lacrymal, superior maxillary, and palate bones. **c. nasa'lis me'dia,** middle turbinated bone; the lower and larger of two bony plates with up-curved margins, projecting from the inner wall of the ethmoidal labyrinth; it separates the superior from the middle meatus of the nose. **c. nasa'lis supe'rior,** superior turbinated bone; the upper of the bony plates with up-curved margins, projecting from the inner wall of the ethmoidal labyrinth; it forms the upper boundary of the superior meatus of the nose. **c. nasa'lis supre'ma,** supreme or highest or fourth turbinated bone, c. Santorini; the posterior portion of the c. superior, when unattached. **c. Santori'ni,** c. nasalis suprema. **c. sphenoida'lis** [BNA], sphenoidal c., the roof of the nasal cavities formed by the fusion of Bertin's* bones.

conchinine (kong'kin-ēn). Conquinine, quinidine*.

conchitis (kong-ki'(ke')tis). Inflammation of any concha.

conchoidal (kong-koy'dal). Shaped like a shell; having alternate convexities and concavities on the surface.

conchoscope (kong'ko-skōp) [L. *concha* + G. *skopeō*, I view.] A form of nasal speculum.

conchotome (kong'ko-tōm) [L. *concha*, turbinated bone, + G. *tomē*, incision.] A knife used in removing the whole or a part of a turbinated body.

concoc'tion [L. *con-*, together, + *coquere*, to cook] 1. Digestion. 2 A mixture of various solutions. 3. Abscess formation (obsolete).

concom'itant [L. *concomitare*, to accompany.] Accompanying; occurring at the same time: accessory.

con'crement [L. *concrescere*, to grow together.] A concretion; a deposit of calcareous material in a part.

concrescence (kon-kres'ens) [L. *con-*, together, + *crescere*, to grow.] 1. Coalescence, the growing together of originally separate parts. 2. In protozoology or cytology, conjugation. 3. In dentistry, the union of the roots of a tooth or of two adjacent teeth by an outgrowth of cementum.

concrete (kon-krēt'). Hardened, solidified into a mass.

concretion (kon-kre'shun) [L. *concrescere*, to grow together.] 1. A solidified or hardened mass, composed of foreign material or produced by inspissation of matter normal to the part; a calculus. 2. An adhesion or an intimate growing together of two parts. 3. The process of calculus formation. 4. The process of adhesion; coalescence. **c. cor'dis,** pericardial adhesions.

concussion (kon-kush'un) [L. *concutere*, to shake together.] 1. A violent shaking or jarring. 2 An injury of a soft structure, as the brain, resulting from a blow or violent shaking; commotio **cer'ebral c., c. of the brain,** commotio cerebri. **c. of the ret'ina,** commotio retinæ. **spi'nal c., c. of the spine,** an injury of the spinal cord caused by a violent jarring, marked by neurasthenic symptoms, muscular atrophy, and central and peripheral pains; railway spine.

concuss'or. A hammer-like instrument for tapping the parts as a form of massage.

condensation (kon-den-sa'shun) [L. *con-* together, + *densare*, to make thick.] 1. Compression, making more solid or dense. 2. The change of a gas to a liquid, or of a liquid to a solid. 3. In psychoanalysis a process of energy-sparing by making one symbol stand for a number of others 4. Making one part of a word do double service, as alco(hol)iday.

conden'ser. 1. An apparatus for reducing a gas to a liquid, or a liquid to a solid. 2. Abbé's* condenser. 3. An apparatus for the accumulation of electricity, such as the Leyden jar or any of its modifications.

condition (kon-dish'un). To train, referring to the reflexes in the behavioristic school of psychology.

con'dom [*Conton*, the inventor, said to have been a London physician of the eighteenth century.] A glove of rubber, gold-beater's skin, or similar substance for the penis, for use in the prevention of conception or of infection during coitus.

conduc'tance. Conductivity.

conduc'tion [L. *conducere*, to lead, conduct.] 1. The act of transmitting or conveying certain

forms of motion, such as heat, sound, or electricity from one point to another, without evident movement in the conducting body. 2. The transmission of stimuli of various sorts by living protoplasm. **air c.,** the normal passage of sound waves through the external auditory meatus. **av'alanche c.,** the discharge of an impulse from a neurone into a large number of neurones of the same physiological system, thus producing the liberation of a very large amount of nervous energy by a given stimulus. **bone c.,** the passage of sound waves through the bones of the head, to the internal ear. **osteotym'panal c.,** bone c.

conductiv'ity [L. *conducere*, to lead, conduct.] 1. The power of transmission or conveyance of certain forms of motion, as heat, sound, and electricity, without perceptible motion in the conductin body. 2. The property, inherent in living protoplasm, of transmitting stimuli.

conduc'tor. 1. A probe or sound with a groove through which a knife is passed in slitting open a sinus or fistula; a grooved director 2 Any substance possessing conductivity

condu'plicate [L. *con-*, with, + *duplicare*, to double.] Folded upon itself lengthwise.

conduran'go (N.F.). The bark of *Gonolobus condurango, Marsdenia condurango*, a shrub of Ecuador and Peru; alterative and at one time a reputed specific for cancer, especially cancer of the stomach, in doses of gr. 15–60 (1 0-4 0), or ʒ1 (4.0) of the N.F. fluidextract.

Con'dy's flu'id [Henry Bollmann *Condy*, English physician, nineteenth century.] A disinfectant composed of potassium permanganate, gr. 15 (1.0), in water, ʒ16 (500.0).

con'dylar. Relating to a condyle

con"dylarthro'sis [G. *kondylos*, condyle, + *arthrōsis*, a jointing.] A joint, like that of the knee, formed by condylar surfaces.

condyle (kon'dīl) [G. *kondylos*, knuckle.] A rounded articular surface at the extremity of a bone; specifically, in dentistry, the capitulum mandibulæ. See *condylus* and *epicondylus*.

condylec'tomy [G. *kondylos*, condyle, + *ektomē*, excision.] The cutting away of a condyle.

condylicus (kon-dil'ĭ-kus) [NK]. Relating to a condyle, condylar.

condylion (kon-dil'ĭ-on) [dim. of G. *kondylos*, condyle.] A point on the outer (lateral) or inner (medial) surface of the condyle of the mandible.

con'dyloid [G. *kondylos*, condyle, + *eidos*, resemblance.] Relating to or resembling a condyle. **c. pro'cess,** condyle; capitulum mandibulæ [BNA], the posterior or articular process of the ramus of the mandible.

condylo'ma, pl. *condylo'mata* [G. *kondylōma*, a knob.] A wart-like excrescence at the anus or vulva, or on the glans penis. **c. acumina'tum,** a projecting warty growth on the external genitals or at the anus, consisting of fibrous overgrowths covered by thickened epithelium, usually produced by the irritating discharges in chronic venereal disease; pointed or venereal wart, verruca acuminata, cauliflower excrescence. **c. la'tum,** pl *condylo'mata la'ta*, a syphilitic eruption of flat-topped papules, occurring in groups covered by a necrotic layer of epithelial detritus, and secreting a seropurulent fluid; they are found at the anus and wherever contiguous folds of skin produce heat and moisture. **c. subcuta'neum,** molluscum contagiosum. **flat c.,** c. latum. **pointed c.,** c. acuminatum.

condylo'matous. Relating to a condyloma.

condylot'omy [G. *kondylos*, condyle, + *tomē*, incision.] Division through, without removal of, a condyle.

con'dylus. Condyle. **c. latera'lis** [BNA], lateral condyle, (*a*) outer condyle of the femur; (*b*) external tuberosity of the tibia. **c. mandib'ulæ,** capitulum mandibulæ [BNA]. **c. media'lis** [BNA], medial condyle, (*a*) inner condyle of the femur; (*b*) internal tuberosity of the tibia. **c. occipita'lis** [BNA], occipital condyle, one of two elongated oval facets on the under surface of the occipital bone, one on each side of the foramen magnum, which articulate with the atlas.

cone [G. *kōnos*, a peg.] 1. A figure having a circular base with sides inclined so as to meet at a point above. 2. One of the flask-shaped figures in the layer of rods and cones in the retina 3. Conarium or pineal body. 4. The mechanical element of a tooth crown, cusp. **c. of light,** a bright area seen on inspection of the membrana tympani; it is triangular in shape, extending downward from the umbo. **fertiliza'tion c.,** a protuberance of the cytoplasm of the ovum at the point where the effective spermatozoon is attached. **implanta'tion c.,** the wedge-shaped origin of a neuraxon from the cell body of the neuron. **oc'ular c.,** the cone of light in the interior of the eyeball formed by the rays entering through the pupil and focussed on the retina.

-cone. Suffix noting the cusp of a tooth in the upper jaw.

cone-nose (kōn'nōz). *Conorhinus*.

cones'si. The bark of *Holarrhena antidysenterica*, an Indian tree, employed as an astringent and in the treatment of dysentery.

con'essine. An alkaloid, $C_{24}H_{40}N_2$, the active principle of conessi; a yellowish powder, anthelmintic and astringent.

confabula'tion [L. *confabulari*, to talk together; *fabula*, fable.] The making up of tales and recitals and a readiness to give a fluent answer with no regard whatever to facts, to any question put; a symptom of presbyophrenia

confectio, gen. *confectio'nis*, pl. *confectio'nes* (konfek'shyo) [L. *con*, together, + *facere*, to make.] Confection, conserve, electuary, a pharmacopeial preparation consisting of a drug mixed with honey or syrup; a soft solid, sometimes used as an excipient for pill-masses. **c. amyg'dalæ,** pulvis amygdalæ compositus. **c. aromat'ica,** pulvis cretæ aromaticus. **c. guai'aci compos'ita,** guaiac 2, sublimed sulphur 3, magnesium carbonate 2, ginger 1, molasses 12; a popular English remedy for gouty and "rheumatic" conditions. **c. pi'peris** (Br.), confection of pepper, composed of black pepper 2, powdered caraway 3, clarified honey 15; has been employed in the treatment of rectal disorders in doses of gr. 30–60 (2.0-4.0). **c. ro'sæ** (N.F.), **c. ro'sæ gal'licæ** (Br), confection of rose, made of powdered red rose leaves 8, sugar 64, clarified honey 12, stronger rose water 16; used as an excipient. **c. sen'næ** (N.F. and Br.), confection of senna, composed of senna 10, cassia 16, tamarind 10, prune 7, fig 12, sugar 55.5, oil of coriander 0.5; laxative in doses of ʒ1–2 (4.0–8.0) **c. sul'phuris** (Br.), confection of sulphur, electuary of sulphur, composed of sublimed sulphur 4 ounces, acid potassium tartrate 1 ounce, tragacanth 18 grains, syrup 2 fluidounces, tincture of orange 1 fluidounce, glycerin 1½ fluidounces; laxative in doses of ʒ1–2 (4.0–8.0).

confection (kon-fek'shun). Confectio.

confertus (kon-fur'tus) [L. *conferre*, to bring together.] Arranged closely together; confluent, coalescing.

confine'ment. Lying-in, giving birth to a child.

confluens sinuum (kon'flu-ens sin'u-um) [L. confluence of the sinuses.] [BNA] Torcular Herophili, a meeting-place, at the internal occipital protuberance, of the superior sagittal, straight, occipital, and two transverse sinuses of the dura mater.

con'fluent [L. *confluere*, to run together.] 1. Joining, running together; noting certain skin lesions which become merged, forming a patch; noting a disease characterized by lesions which are not discrete, or distinct one from the other. 2. Noting a bone formed by the blending together of two originally distinct bones.

con'formator [L *con-*, together, + *forma*, form.] An apparatus used by hatters for getting the shape of the head, and employed for the same purpose by anthropologists.

confrontation (kon"frun-ta'shun). The examination together of two persons, one with a disease, such as syphilis, the other presumably the person from whom the disease was contracted.

confusion (kon-fu'zhun) [L. con, together, + *fundere* (*fusus*), to melt.] The condition of being mixed (physically or mentally), a commingling, bewilderment.

confusional (kon-fu'zhun-al). Noting a mental state in which the person is bewildered or perplexed or unable to orientate himself, occurring often in amentia.

cong. Abbreviation for congius, a gallon.

congela'tion [L *con-*, together, + *gelare*, to freeze] 1. Freezing. 2. A frostbite.

congen'erous [L. *con-*, with, + *genus*, race.] Having the same function, noting certain muscles which are synergistic

congen'ital [L. *congenitus*, born with.] Existing at birth, referring to certain mental or physical traits or peculiarities, diseases, etc. *Congenital* is distinguished from *inborn* in that it is inclusive, for that which is congenital may be something existing from the ovum or acquired at the moment of birth; that which is inborn, on the other hand, is something engrafted upon the mind or body during the process of development. An infective disease may be congenital, but not inborn; a vice of metabolism is inborn, being a true developmental error, something acquired during the process of development, and not originating in intrauterine disease or injury.

conges'ted. Containing an abnormal amount of blood; in a state of congestion.

congestine (kon-jes'tēn). One of two antagonistic poisonous principles, the other being thalassin, isolated from *Anemone scultatus;* it causes itching, intense burning, and ulceration of the skin.

congestion (kon-jes'chun) [L. *congerere*, to heap up.] The presence of an abnormal amount of blood in the vessels of a part, due either to increased afflux or to an obstruction to the return flow. **ac'tive c.**, hyperemia, an increased flow of arterial blood to a part. **func'tional c.**, hyperemia occurring during functional activity of an organ. **hypostat'ic c.**, c. due to gravitation of venous blood to a dependent part in cases in which the circulation is feeble **pass'ive c.**, c. due to partial stagnation of blood in the capillaries and venules in consequence of obstruction to the return flow. **physiolog'ical c.**, functional c.

conges'tive. Relating to congestion

con'gius, pl. *con'gii* [L.] A gallon.

conglo'bate [L. *con-*, together, + *globare*, to make round.] In a single mass, noting the lymph glands, as distinguished from variously shaped secreting glands.

conglom'erate [L. *con-*, together, + *glomerare*, to make into a ball.] Composed of several parts aggregated into one mass; noting (*a*) certain large compound glands, (*b*) a plate culture with a group of similar colonies lying close together; see cut under *colony*, 2, A.

conglu'tin. A protein, contained in almonds and various seeds, resembling casein.

conglu'tinant [L. *conglutinare*, to glue together.] Adhesive, promoting the union of the lips of a wound.

conglutination (kon-glu-tin-a'shun) [L. *conglutinare*, to glue together.] 1. Adhesion, coalescence. 2. A reaction resembling agglutination, in which clumping of ox corpuscles occurs upon the addition of immune rabbit serum and fresh ox serum; the same occurs in the case of corpuscles of other animals, and there is also a bacterial conglutination.

conglutinin (kon-glu'tin-in). The substance in ox serum and other serum which brings about the reaction termed conglutination; it is non-specific.

Congo-red (kong'go-red). A coal-tar dye obtained from benzidine; used as a test for hydrochloric acid which turns it blue.

Congo-root. The root of *Psoralea melitotoides*, a plant in the southeastern United States; used as an aromatic bitter tonic.

$CO(NH_2)_2$. Urea, carbamide.

conhydrine (kon-hi'drēn). An alkaloid, $C_8H_{17}NO$; obtained from conium; also called oxyconiine.

co'ni. Plural of conus.

-conid. Suffix noting the cusp of a tooth in the lower jaw.

conid'ia. Plural of conidium

conid'ial. Relating to a conidium

conidiophore (kon-id'ĭ-o-fōr) [G. *phoros*, bearer.] The mycelial stalk of a fungus which bears conidia.

Conidiosporales (ko-nid"ĭ-o-spo-ra'lēs). An order of fungi which includes the genera *Acladium*, *Glenospora*, and *Trichothecium*.

conidiospore (kon-id'ĭ-o-spōr) [*conidium* + G. *sporos*, seed.] Conidium

conid'ium, pl. *conid'ia* [G. *konidion*, dim. of *konis*, dust.] A non-sexual unenclosed or walled spore, or exospore, of certain fungi, produced asexually.

coniine (ko'ne-ēn). The active principle, $C_8H_{17}N$, of conium; a colorless, odorless fluid; coniine hydrobromide, a crystalline powder, has been employed in doses of gr. $\frac{1}{100}$–$\frac{1}{20}$ (0.0006–0.003).

conine (ko'nēn). Coniine.

coniology (kon-ĭ-ol'o-jĭ) [G. *konis*, dust, + *-logia*.] The science which treats of dust and of its effects.

coniometer (ko-nĭ-om'e-tur) [G. *konis*, dust, + *metron*, measure.] A device for estimating the amount of dust in the air.

conio'sis [G. *konis*, dust.] Any disease or morbid condition caused by dust.

coni'um [G. *kōneion*, hemlock.] (N.F.) Conii fructus (Br.), the dried unripe fruit of *Conium maculatum*, poison hemlock, spotted cowbane poison or spotted parsley; the leaves, conii folia, are also official in B.P. Employed as a sedative, antispasmodic, and anodyne in doses of gr. 1–3 (0.06–0.2). The extract is official in N.F., the tincture and the juice (succus) in Br.

conjugata (kon-ju-gah'tah) [L. fem. of *conjugatus*, joined together.] [BNA] Conjugate, or antero-posterior, diameter of the pelvis.

conjugate (kon'ju-gāt) [L. *conjugatus*, joined together.] 1. Joined, paired. 2. The antero-posterior, or sacropubic, diameter of the pelvic inlet; c. diameter. **c. devia'tion of the eyes,** a condition in which both eyes are turned to the same side as a result of either paralysis or muscular spasm. **c. diam'eter,** diameter mediānus [NK], same as *conjugate* (2). **c. fo'ci,** in optics two points so situated in relation to each other that a ray from one, when refracted or reflected, strikes the other. **c. fora'men,** a foramen formed by the notches of two bones in apposition. **c. of the in'let,** same as *conjugate* (2). **c. of the out'let,** the distance from the tip of the coccyx to the lower edge of the symphysis pubis; see *obstetrical c. of the outlet*. **diag'onal c.,** the distance from the promontory of the sacrum to the lower edge of the symphysis pubis. **effec'tive c.,** the internal c. measured from the nearest lumbar vertebra to the symphysis, in spondylolisthesis. **exter'nal c.,** Baudelocque's diameter, the distance in a straight line between the depression under the last spinous process of the lumbar vertebræ and the upper edge of the symphysis pubis. **false c.,** (1) a line drawn from the promontory of the sacrum to the lower margin of the symphysis; (2) effective c. **inter'nal c.,** the distance from the promontory of the sacrum to the upper edge of the symphysis pubis. **obstet'rical c. of the out'let,** the c. of the outlet lengthened by the backward displacement of the coccyx.

conjuga'tion [L. *conjugare*, to join together.] The sexual union or fusion of two cells, with partition of the chromatin and subsequent division into two new cells.

conjuncti'va [L. fem. of *conjunctivus*, from *conjungere*, to connect; sc. *tunica*, coat.] The mucous membrane covering the anterior surface of the eyeball (*tunica conjunctiva bulbi*, ocular c.) and lining the lids (*tunica conjunctiva palpebrarum*, palpebral c.).

adhesion of opposing surfaces, symblepharon. **atrophy,** xerophthalmia. **bleeding from,** opthalmorrhagia. **dryness,** xerophthalmia, xerosis conjunctivæ, sclero-ophthalmia **edema,** chemosis, ophthalmedema. **growth** on, pterygium, pannus. **inflammation,** conjunctivitis, ophthalmia, ophthalmitis, pink-eye, ophthalmopyra, ophthalmopyorrhea, pyophthalmia, pyo-ophthalmitis, blennophthalmia, ophthalmoblennorrhea, granular lids, trachoma **junction of tarsal and bulbar,** fornix. **of eyeball,** c. bulbi. **of lids,** c. tarsi, c. palpebrarum. **pigmentation,** ophthalmomelanosis, siderosis conjunctivæ, argyria conjunctivæ. **scraping,** ophthalmoxysis. **tumor,** pinguicula.

conjunc'tival. Relating to the conjunctiva. **c. reac'tion,** a slight injection of the conjunctiva, in a person suffering from an infective disease, caused by the instillation of a dilute solution of the toxins of the same disease; called also ophthalmo-reaction, Wolff-Eisner reaction, Calmette reaction. **c. test,** c. reaction.

conjunc'tive. Joining, connecting, connective. **c. tis'sue,** connective* tissue.

conjunctivitis (kon-jung-tī-vi'(ve')tis). Inflammation of the conjunctiva. **acute' conta'gious c., acute' epidem'ic c.,** pink-eye, an acute mucopurulent conjunctivitis of epidemic type, due to the presence of the Koch-Weeks bacillus. **an'gular c.,** c. due to the presence of the diplobacillus of Morax-Axenfeld, the redness being usually most marked at the commissures. **c. petrif'icans,** an affection marked by deposits of organic lime salts, in the form of yellowish white, slightly elevated plaques on the palpebral conjunctiva. **crou'pous c.,** acute c. with membranous exudation without infiltration of the underlying conjunctiva. **diphtherit'ic c.,** an acute c., with exudation and infiltration of the conjunctiva. **follic'ular c.,** c. associated with the presence of granules of adenoid tissue on the inner surface of the lower lid. **gran'ular c.,** granular lids, trachoma.* **in'fantile pu'rulent c.,** ophthalmia neonatorum. **mem'branous c.,** an acute c. with the formation of a false membrane, with or without infiltration of the underlying conjunctiva. **phlycten'ular c.,** a circumscribed c. accompanied by the formation of small red nodules of lymphoid tissue (phlyctenulæ) on the conjunctiva. **prai'rie c.,** a chronic c., characterized by the presence of small white spots on the palpebral conjunctiva, especially of the lower lid. **pu'rulent c.,** c. with an abundant purulent discharge, usually gonorrheal in origin. **pus'tular c.,** phlyctenular c. **spring c.,** vernal c. **ver'nal c.,** a chronic c. beginning in the spring and continuing during the warm weather, to disappear with the advent of cold weather.

conjunctivo'ma. A homeoplastic tumor of the conjunctiva.

connec'tive [L. *connectere*, to bind together.] 1. Connecting, joining. 2. Anything which connects. 3. A nerve fibril uniting two ganglia **c. tis'sue,** the general supporting or uniting tissue of the body, formed of altered cells, with flattened nucleus, drawn out into long fibrils. **c. tis'sue group,** a collective name for mucous tissue, dentine, bone, cartilage, and ordinary c. tissue, all derived from the mesenchyma.

connecti'vum. A connective tissue; one of the connective-tissue group

Connell's suture [F. Gregory *Connell*, American surgeon, *1864.] 1. An intestinal suture for end-to-end anastomosis; the serous surfaces are apposed, the needle is passed through both in one thrust and back again, and the thread is tied on the inside of the bowel. 2. A mattress suture; see cut under *suture*.

Connell'an-King diplococ'cus [John J. *Connellan*, James Joseph *King* (*1882), New York physicians.] A diplococcus found in the crypts of the tonsils in cases of tonsillitis with signs of constitutional infection.

co'noid [G. *kōnos*, cone, + *eidos*, appearance.] Resembling a cone, cone-shaped. **c. lig'ament,** ligamentum conoideum. **c. tu'bercle,** tuberositas coracoidea.

conomyoidin (ko-no-mi'oy-din) [G. *kōnos*, cone, + *mys*(*myo*-), muscle, + *eidos*, resemblance.] Contractile protoplasm in the retinal cones.

Conoph'olis america'na [G. *kōnos*, cone, + *pholis*, scale] A scaly fleshy plant usually parasitic on the root of the oak; squaw-root, cancer-root.

Conorhi'nus [G. *kōnos*, cone, + *rhis*(*rhin*-), nose.] A genus of *Hemiptera*, the cone-noses. **C. megis'tus,** *Lamus megistus*, a species believed to be instrumental in the spread of the pathogenic agent of Chagas-Cruz disease, or parasitic thyroiditis. **C. sanguisu'ga** [L. *sanguis*, blood, + *sugere*, to suck], the blood-sucking cone-nose, an insect resembling the bedbug in appearance and habits.

conquinine (kon'kwin-ēn). Quinidina.

Conradi's line (kōn-rah'de) [Andrew Christian *Conradi*, Norwegian physician, 1809–1869.] A line extending from the base of the ensiform cartilage to the point of the apex beat of the

heart, corresponding approximately to the lower edge of the cardiac area.

Conradi-Drigalski a'gar (kŏn-rah'de-dre-gahl'ske) [Heinrich *Conradi*, German bacteriologist *1876. W. v. *Drigalski*, German bacteriologist, *1871.] Drigalski-Conradi agar.*

consanguin'ity [L. *con-*, with, + *sanguis(sanguin-)*, blood.] Blood-relationship.

conscious (kon'shus) [L. *conscius*, knowing.] 1. Aware, having present knowledge or perception of oneself, one's acts, and one's surroundings. 2. Noting something occurring with the perceptive attention of the individual, as a conscious act or idea, distinguished from automatic or instinctive.

consciousness (kon'shus-nes) [L. *conscire*, to know, to be aware of.] Awareness; perception of physical facts or mental concepts; sentient knowledge of one's surroundings: **doub'le c.,** a condition in which one lives in two seemingly unrelated mental states, being, while in one, unaware of the other or of the acts performed in the other.

consensual (kon-sen'shu-al) [L. *con-*, with, + *sensus*, sensation] Reflex, noting what is done in response to a stimulus without the cooperation of the will.

conserva'tion [L. *conservare*, to keep together] Preservation; the keeping from injury or loss.

conservative (kon-sur'vă-tiv). 1. Preservative 2. Opposed to radical or heroic measures of treatment. **c. sur'gery,** surgical treatment which aims to preserve and restore injured or diseased parts, avoiding operative mutilation or removal.

conserve (kon-surv') [L. *con-*, together, + *servare*, to keep.] A preparation made by covering a fresh drug with sugar to extract its virtues or by triturating a fresh drug to make a soft mass. Now used synonymously with confection.

consolida'tion [L. *consolidare*, to make firm.] Conversion into a firm dense mass; noting especially the change of the lung from a spongy to a solid condition by the filling of the alveoli with an exudate.

constipate (kon'sti-pāt). To cause a sluggishness in the action of the bowels.

con'stipated. Suffering from constipation; costive.

constipa'tion [L. *constipare*, to press together.] A condition in which the evacuations from the bowels are infrequent or incomplete, more or less fecal matter being retained in the intestine.

constitution (kon-stĭ-tu'shun) [L. *constituere*, to establish.] 1. The physical make up of the body, including the mode of performance of its functions, the activity of its metabolic processes, the manner and degree of its reactions to stimuli, and its power of resistance to the attack of pathogenic organisms. 2. In chemistry, the number and kind of atoms in the molecule and the relation which they bear to each other.

constitu'tional. 1. Relating to the constitution 2. General, relating to the system as a whole, not local.

constric'tion [L. *constringere*, to draw together] 1. Binding or contraction of a part. 2. A subjective sensation as if the body or any part were tightly bound or squeezed. 3. Stricture, stenosis.

constric'tor. 1. Anything which binds or squeezes a part. 2. A muscle the action of which is to narrow a canal, a sphincter; see under *musculus*.

construc'tive [L. *construere*, to build up.] Building up, relating to anabolism, anabolic.

consul'tant [L. *consultare*, to deliberate, ask advice.] 1. A physician or surgeon who does not take actual charge of a patient, but acts in an advisory capacity, deliberating with and counselling the personal attendant. 2. A member of a hospital staff who has no active service but stands ready to advise in any case, at the request of the attending physician or surgeon.

consulta'tion. A meeting of two or more physicians to consider the symptoms and course of the disease in any special case and to deliberate concerning the prognosis and the advisable therapeutic measures.

consult'ing staff. The body of specialists attached to a hospital who do not make stated visits, but serve in an advisory capacity when called upon for counsel by members of the attending staff.

consumption (kon-sump'shun) [L. *consumere*, to use up, waste.] 1. The using up of a material or force. 2. A wasting of the tissues of the body. 3. Tuberculosis, especially of the lungs or intestine

consump'tive. Relating to, or a sufferer from, consumption.

consump'tive's weed. Eriodictyon.

con'tact [L. *contactus*, a touching] 1. The touching or apposition of two bodies. 2. The closing of an electrical circuit. 3. A person who has been exposed to contagion **c. break'er,** interrupter, a device for rapidly opening and closing an electrical circuit. **c. point,** the part of the contact surface of a tooth which touches the adjacent tooth. **c. sur'face,** facies contactus [BNA], the surface of a tooth which looks toward its neighbor, either mesially or distally; proximal surface. **prox'imal c., prox'imate c.,** touching of the adjacent surfaces of two teeth.

contact-glasses. Thin hollow crown glass bowls gound so as to cover the eyes beneath the lids in contact with the sclera but separated from the cornea by a fluid meniscus; used in the correction of ametropia, enabling a clear image of a distant object to be focussed at the macula.

contagion (kon-ta'jun) [L. *contagio; contingere*, to touch closely.] 1. Contagium. 2. Transmission of an infectious disease by contact, either immediate or mediate, with the sick; one of the modes of infection. 3. The production of a psychopathic state or so-called functional nervous disease through imitation or autosuggestion **imme'diate c.,** one occurring as the result of direct contact with the sick. **me'diate c.,** one effected through the medium of persons or objects that have been in contact with the sick.

contagios'ity. Contagiousness.

contagious (kon-ta'jus). Relating to contagion; transmissible by contact with the sick, noting certain forms of infectious disease.

conta'giousness. The quality of being contagious or transmissible by contact, noting the nature of certain of the infective diseases, such as smallpox.

contagium (kon-ta'jĭ-um) [L.] The virus or essential causative substance of any infectious (not merely contagious) disease.

contam'inate [L. *contaminare*, to defile] To soil with infectious material.

contamina'tion [L. *contaminare*, to stain, defile.] 1. Pollution, soiling with infectious matter. 2. The Freudian term for a fusion and condensation of words

contem'plative. One who excites a sexual orgasm by lewd imaginings.

con'tent [L. *contentus* from *continere*, to contain.] 1. That which is contained within something else, usually in this sense in the plural form, *contents*. 2. In psychology, the form of a dream as presented to consciousness. **la'tent c.,** the symbolic

significance of a dream. **man'ifest c.,** the external form of a dream.

contiguity (kon-tĭ-gu'ĭ-tĭ) [L. *contiguus*, touching.] 1. Contact, without actual continuity; see *continuity*. 2. The occurrence of two or more mental impressions synchronously or in immediate succession. **amputa'tion in c.,** disarticulation, amputation through a joint. **law of c.,** when two ideas have once occurred in association they are likely so to occur again, and the more likely the more often they have been associated. **solu'tion of c.,** the breaking of contiguity, a dislocation or displacement of two normally contiguous parts.

contig'uous. Adjacent or in actual contact.

con'tinence [L. *continentia; continere*, to hold back.] Moderation, temperance, or self-restraint, in respect of the appetites

con'tinent. Temperate or abstinent as regards sexual indulgence.

continued (kon-tin'ūd) [L. *continuare*, to join.] Continuous, without intermission, noting especially a more or less protracted fever without apyretic intervals; a typhoid fever, for example, as contrasted with a succession of malarial paroxysms.

continuity (kon-tin-u'ĭ-tĭ) [L. *continuus*, continued.] Absence of interruption, a succession of parts intimately united. A single bone of the skull has the quality of *continuity* in all its parts; a cranial suture is marked by *contiguity* of the bones entering into its formation. **amputa'tion in c.,** amputation through a long bone, between the joints, as contrasted with disarticulation, or amputation in contiguity. **solu'tion of c.,** division of bones or soft parts which are normally continuous, as by a fracture, a laceration, or an incision.

contin'uous. Uninterrupted.

contour (kon-toor'). [L *contornare*, to turn around.] In dentistry, to restore the normal outlines of a broken or otherwise misshapen tooth.

con'tour (kon'toor). The outline of a part, the surface configuration.

contoured (ko -toord'). Noting a bacterial colony with irregularly undulating surface, as that of a relief map.

contra-(L.). A prefix signifying opposed, against.

contra-angles (kon'trah-ang'glz). Double or triple angles in the shank of an instrument by means of which the cutting edge or point is brought into the axis of the handle.

con"tra-ap'erture. Counteropening.

contraception (kon-trah-sep'shun). The prevention of conception.

contraceptive (kon-trah-sep'tiv) [L. *contra*, against, + *conceptive*.] An agent for the prevention of conception

contract' [L. *contrahere*, to draw together.] To shorten; to become reduced in size.

contrac'tile. Having the property of contracting.

contractil'ity. The ability or property of shortening or becoming reduced in size.

contractio (kon-trak'shyo) [L.] Contraction. **c. præ'via,** the narrowing of a segment of the uterus in advance of the descending fetus.

contraction (kon-trak'shun) [L. *contractio; contrahere*, to draw together.] 1. A shortening, noting the normal function of muscular tissue. 2. A more or less permanent shortening of a muscle. 3. A shrinkage or reduction in size. **an'odal clo'sure c.** (ACC or AnCC), the momentary c. of a muscle under the influence of the positive pole when the electrical circuit is established **an'odal o'pening c.** (AOC or AnOC), the momentary c. of a muscle under the influence of the positive pole when the circuit is broken. **automat'ic c.,** escaped ventricular c. **carpoped'al c.,** carpopedal* spasm. **cath'odal clo'sure c.** (CCC or CaCC), the momentary c. of a muscle under the influence of the negative pole when an electrical circuit is established. **cath'odal o'pening c.** (COC or CaOC), the momentary c. of a muscle under the influence of the negative pole when the circuit is broken. **Dupuytren's c.,** see *Dupuytren*. **escaped ventricular c.,** a spontaneous ventricular contraction occurring simultaneously with a delayed auricular systole, the idioventricular pacemaker not waiting for the belated impulse from the sinoauricular node. **front-tap c.,** c. of the calf muscles when the anterior surface of the leg is struck. **hour'glass c.,** constriction of the middle portion of a hollow organ, such as the stomach or the gravid uterus. **myotat'ic c.,** (1) reflex c. of a muscle induced by its passive stretching; (2) tendon reflex. **paradox'ical c.,** a tonic contraction of the anterior tibial muscles when a sudden passive dorsal flexion of the foot is made. **Westphal's c.,** paradoxical c.

contracture (kon-trak'chūr). A permanent muscular contraction due to tonic spasm or to loss of muscular equilibrium, the antagonists being paralyzed. **func'tional c.,** one that ceases during sleep or general anesthesia. **organ'ic c.,** one which is continuous whether the subject is conscious or unconscious. **Volkmann's c.,** see *Volkmann*.

contrad'olin [L. *contra*, against, + *dolor*, pain.] An analgesic composed of acetamide, phenol, and salicylic acid; dose, gr. 4–8 (0.25–0.5).

contrafissura (kon"trah-fĭ-shu'rah) [L. *contra*, against, counter, + *fissura*, fissure.] Fracture by contrecoup; fracture of a bone, as in the skull, at a point opposite that where the blow was received.

contraindicant (kon-trah-in'dĭ-kant). Indicating the contrary, that is to say, showing that a method of treatment which would otherwise be proper is forbidden by special circumstances in the individual case.

contraindication (kon-trah-in-dĭ-ka'shun). Any special symptom or circumstance which renders the use of a remedy or the carrying out of a surgical procedure inadvisable

contralat'eral [L. *contra*, opposite, + *latus*, side.] Relating to the opposite side, as when pain is felt or paralysis occurs on the side opposite to that of the lesion.

contramine (kon'trăm-mēn). A soluble white powder recommended for the treatment of syphilis and metastatic gonorrhea.

con'trast [L. *contra*, against, + *stare*, to stand.] A comparison in which the differences between two objects are shown. **c. stain,** a double stain by which some of the tissues or the general background of the specimen take on one color while the special object to be examined takes on the other, thereby rendering it more distinct.

contrastim'ulant [L. *contra*, against.] 1. Annulling the effect of a stimulant. 2. An agent whose action opposes that of a stimulant.

contrastim'ulus. Contrastimulant(2).

contratoxin (kon-trah-toks'in) [L. *contra*, against.] Trade name of a group of normal sera (combined reptilian and warm-blooded) obtained from animals naturally immune to the disease for which the special form of contratoxin is employed (tuberculosis, for example); it is stated to have a lytic action on various microorganisms without producing lysis of the red blood-cells.

contrecoup (kawn-tr-koo') [Fr. counter-blow.] Noting the manner of a contrafissura, or fracture of a bone, as in the skull, at a point opposite that at which the blow was received.

contrectation (kon-trek-ta'shun) [L. *contrectare*, to handle.] 1. Sexual dalliance. 2. The impulse to embrace one of the opposite sex.

control (kon-trōl') [L. *contra*, against, + *rotula*, roll; a counter-roll or ledger for check-accounts.] 1. To verify an experiment by means of another with the crucial condition omitted, as when a given amount of toxin is injected into two rabbits of equal weight, one receiving antitoxin, the other not; if the animal not receiving antitoxin (the control) dies, the assumption is that the other would also have succumbed without the protective injection of antitoxin. 2. Control-animal, control-experiment. 3. The regulation or maintenance of a function, action, or reflex. **asso'ciative automat'ic c.**, nerve impulses from the corpus striatum acting finally upon the muscles. **idiodynam'ic c.**, nervous impulses from the medulla which preserve the normal trophic condition of the muscles. **reflex' c.**, nerve impulses transmitted to the muscles to maintain normal reflex action. **syner'gic c.**, impulses transmitted from the cerebellum regulating the muscular activity of the synergic units of the body. **ton'ic c.**, nerve impulses which maintain a normal muscular tonus. **vestib'ulo-equilib'ratory c.**, nerve impulses transmitted from the semicircular canals, saccule, and utricle which serve to maintain the equilibrium of the body.

control'-an'imal. In laboratory or clinical experimentation the rabbit, guinea-pig, or other animal submitted to the same conditions as the others used for the experiment, with the crucial factor (such as the injection of antitoxin, the administration of a drug, etc.) omitted.

control'-exper'iment. An experiment, chemical or animal, used to check another, to verify the result, or to demonstrate what would have occurred had the essential factor been omitted.

contuse' [L. *contundere*, to bruise.] To bruise.

contu'sion. A bruise, a contused wound.*

co'nus [G. *kōnos*, a peg.] 1. Cone. 2. Posterior staphyloma in myopic chorioiditis. **c. arterio'sus**, the infundibulum, or left or anterior portion of the cavity of the right ventricle of the heart, which terminates in the pulmonary artery. **c. elas'ticus** [BNA], the thicker lower portion of the elastic membrane of the larynx. **c. medulla'ris**, medullary cone, terminal cone, the tapering lower extremity of the spinal cord. **c. vasculo'sus** [NK], one of Haller's* cones in the globus major of the epididymis.

convalescence (kon-val-es'ens) [L. *convalescere*, to grow strong.] The time elapsing between the termination of a disease and the patient's complete restoration to health.

convales'cent. 1. Getting well or one who is getting well. 2. Noting the period of convalescence.

convallam'arin [L. *amarus*, bitter.] A bitter glucoside obtained from convallaria; tonic and diuretic in doses of gr. ½–1 (0.03–0.06).

convalla'retin. A resinous substance obtained from convallarin by boiling with a dilute acid.

convalla'riæ flo'res [L. *convallis*, an enclosed valley; *flos*, flower.] The dried inflorescence of *Convallaria majalis*, lily of the valley; heart tonic and diuretic, employed as a substitute for digitalis in doses of gr. 5–7½ (0.3–0.5). **c. ra'dix** (N.F.), convallaria root, lily-of-the-valley root, the dried rhizome and roots of *C. majalis;* employed for the same purposes as the flowers and in the same doses. The N.F. has a fluidextract of both the root and the flowers; dose, ɱ8 (0.5).

convall'arin. An acrid glucoside obtained from convallaria; has been employed in cardiac troubles in doses of gr. ½–1 (0.03–0.06).

convection (kon-vek'shun) [L. *convehere*, to convey. The conveyance of heat in liquids or gases by change of position of the heated particles, as when the layer of water at the bottom of a pot rises and carries the heat from the fire with it.

convergence (kon-vur'jens) [L. *convergere*, to incline together.] 1. The tending of two or more objects toward a common point. 2. The direction of the visual lines to a near point. **am'plitude of c.**, the distance between the near point and far point of c. **ang'le of c.**, see under *angle*. **far point of c.**, the point to which the visual lines are directed when c. is at rest. **near point of c.**, the point to which the visual lines are directed when c. is at its maximum. **neg'ative c.**, the slight divergence of the visual axes when c. is at rest, as when looking at the far point of normal vision or during sleep. **pos'itive c.**, inward deviation of the visual axes even when c. is at rest, as in cases of convergent squint. **range of c.**, amplitude of c.

convergent (kon-vur'jent). Tending toward a common point.

conversa'tion-tube. An ear-trumpet with a flexible tube connecting the mouth-piece and ear-piece.

conversion (kon-vur'shun) [L. *convertere*, to turn round, to change] 1. Change, transmutation 2. Transformation of an emotion into a physical manifestation.

con'vex [L. *convexus*, vaulted, arched.] Noting a surface which is evenly curved or bulging outward, the segment of a sphere. **high c.**, the segment of a sphere of short radius. **low c.**, the segment of a sphere of long radius.

convex'ity. The state of being convex

convex"ocon'cave. Concavoconvex.

convex"ocon'vex. Convex on two opposite surfaces.

convolute (kon'vŏ-lūt) [L. *convolvere*, to roll together.] Rolled together with one part over the other; in the shape of a roll or scroll

con'voluted. Convolute. **c. bone,** turbinated bone concha* nasalis. **c. tu'bule,** the twisted or coiled portion of a uriniferous tubule, tubulus renalis contortus.

convolutio (kon-vŏ-lu'shyo) [L. *convolvere*, to roll together.] Convolution, gyrus.

convolu'tion [L. *convolutio*.] One of the prominent rounded elevations on the surface of the brain bounded by the fissures or sulci; see *gyrus*.

Convolvula'ceæ. An order of gamopetalous dicot yledonous, twining or trailing herbs, which includes the bindweed and scammony.

convol'vulin. A white odorless glucoside, $C_{31}H_{46}O_{16}$, obtained from jalap; purgative in doses of gr. ½–1½ (0.03–0.1).

Convol'vulus. A genus of twining plants of the natural order *Convolvulaceæ*. **C. altheoi'des,** a Mediterranean plant, the root of which is sometimes substituted for scammony. **C. pandura'ta,** manroot, wild jalap, wild scammony; the root yields a resin which is purgative and diuretic. **C. pur'ga,** jalap. **C. scammo'nium,** scammony. **C. turpe'thum,** turpeth-root.

convul'sant. Causing convulsions; convulsive, eclamptogenic, eclamptogenous.

convul'sion [L. *convulsio*, from *con-*, together, + *vellere*, to pull.] A violent involuntary muscular contraction. **clon'ic c.,** one in which the contrac-

tions are intermittent. the muscles alternately contracting and relaxing. **coor'dinate c.,** a clonic c. in which the movements are seemingly purposeful, being exaggerations of those which may occur naturally. **crow'ing c.,** laryngismus stridulus. **inter'nal c.,** a slight c. in a child, marked by a barely perceptible spasm, rigidity of the head and fixity of the eyes, with preservation of consciousness or only momentary unconsciousness. **mim'ic c.,** facial tic. **ton'ic c.,** one in which the contraction of the muscle is continuous.

convul'sive. Relating to convulsions; marked by or producing convulsions.

COOH. Formula for carboxyl, a radical characteristic of organic oxyacids.

Cooke's crite'rion [W. E. *Cooke.*] "If there is any band of nuclear material connecting the different parts of a nucleus, that nucleus for the purposes of the count cannot be said to be divided."

Coolidge tube (koo'lij) [William David *Coolidge*, American physical chemist, *1873.] An *x*-ray tube, in which the cathode consists of a tungsten wire spiral surrounded by a molybdenum tube; the tungsten spiral is heated by an electric current and the exact quality of the *x*-ray given off is regulated by varying the temperature of the cathode.

coo'lie-itch. Water-itch.

cootie (koo'tĭ). Army slang for the body louse, *Pediculus corporis* or *P. vestimenti.*

Coo'per's disease' [Sir Astley Paston *Cooper*, English surgeon, 1768–1841.] Chronic inflammation of the mamma, with the formation of cysts. **C.'s fas'cia,** the fascia covering the spermatic cord, fascia* cremasterica. **C.'s her'nia,** femoral h. with two sacs, the second passing through a defect in the superficial fascia and appearing immediately beneath the skin, the first being in the femoral canal. **C.'s her'niotome,** a slender bistoury with short cutting edge for dividing the constricting tissues at the neck of a hernial sac. **C.'s irr'itable breast,** neuralgia of the breast. **C.'s irr'itable tes'ticle,** neuralgia of the testicle. **C.'s lig'ament,** (1) one of numerous fibrous filaments connecting the mammary gland with the skin, retinacula cutis; (2) the portion of the transversalis fascia attached to the iliopectineal line and spine of the pubis; (3) a ligament connecting the olecranon to the coronoid process. **C.'s oint'ment,** arsenic 1, sulphur 1, spermaceti ointment 8. **C.'s reflec'ted ten'don,** a thin, semilunar expansion of the anterior aponeurosis of the transversalis abdominis muscle, sometimes prolonged beyond the conjoined tendon to be attached to the deep crural arch.

Coo'pernail's sign [George P. *Coopernail*, American physician, *1876.] Ecchymosis of the perineum and scrotum, or labia, in fracture of the pelvis.

coordination (ko-or-dĭ-na'shun) [L. *co-*, together, + *ordinare*, to arrange.] The harmonious working together of several muscles or muscle groups in the execution of complicated movements.

coossify (co-os'ĭ-fi) [L. *co-*, together, + *os*, bone, + *facere*, to make.] To unite into one bone.

copaiba (ko-pa'bah). (U.S. and Br.) Copaiva, balsam of copaiba or copaiva; the oleoresin of *Copaifera officinalis* and other species of *C.*, a South American plant; a yellowish viscid fluid of an aromatic odor and acid bitter taste; expectorant, diuretic, and stimulant to the respiratory and urogenital mucous membranes, in doses of ♏10–30 (0.6–2.0). **solid'ified c.,** massa copaibæ.

cope (kōp) [L. *capa*, cape, cap.] The metal plate covering the root of a tooth to be crowned.

copiopia (ko-pĭ-o'pĭ-ah) [G. *kopos*, fatigue, + *ōps*, eye.] Fatigue of the eye from over or improper use or strain.

copodyskinesia (ko-po-dis-kin-e'sĭ-ah) [G. *kopos*, fatigue, + *dys-*, bad, + *kinēsis*, movement.] Occupation neurosis,* such as writer's cramp.

cop'per [L. cuprum.] A metallic element several of the salts of which are employed in medicine; see *cuprum.* **c. group,** two members of the class of basylous elements, copper and mercury.

copp'eras [L. *cuprum*, copper, + *rosa*, flower.] Impure commercial ferrous sulphate, green vitriol; see *ferri* sulphas.*

cop'per-point. A crystal of copper sulphate contained in a wooden holder.

Coppet's law (kŏ-pa') [Louis Cas de *Coppet*, French physicist, 1841–1911.] Solutions having the same freezing point are equimolecular.

copremesis (ko-prem'e-sis) [G. *kopros*, dung, + *emesis*, vomiting.] Stercoraceous vomiting.*

copre'mia, copræ'mia [G. *kopros*, dung, + *haima*, blood.] The presence in the blood of waste products absorbed from the intestine; so-called intestinal autointoxication.

coprolagnia (kop-ro-lag'nĭ-ah) [G. *kopros*, dung, + *lagneia*, lust.] A form of sexual perversion in which the thought or sight of excrement causes pleasurable sensation.

coprolalia (kop-ro-la'lĭ-ah), [G. *kopros*, dirt, dung + *lalia*, form of speech.] The involuntary utterance of vulgar or obscene words.

coprolith (kop'ro-lith) [G. *kopros*, filth, + *lithos*, stone.] A hard mass consisting of inspissated feces.

coprol'ogy [G. *kopros*, feces, + *-ology.*] Scatology.

coproma (ko-pro'mă) [G. *kopros*, dung, + *-ōma.*] Scatoma,* stercoroma.

coprophagy (kŏ-prof'a-jĭ) [G. *kopros*, feces, + *phagō*, I eat.] The eating of human or animal excrement.

coprophil, coprophilic (kop'ro-fil, kop-ro-fil'ik) [G. *kopros*, dung, + *philos*, fond.] 1. Noting bacteria, protozoa, etc. occurring in fecal matter. 2. Relating to coprophilia.

coprophilia (kop-ro-fil'ĭ-ah) [G. *kopros*, dung, + *philos*, fond of.] A mental attraction, with a sexual element, for fecal matter.

coproplanesia (kop-ro-plan-e'sĭ-ah) [G. *kopros*, feces, + *planēsis*, a wandering.] The passage of feces through a fistula or artificial anus.

coproporphyrin (kop''ro-por'fi-rin) [G. *kopros*, feces.] Stercoporphyrin.

coprosta'sia [G. *kopros*, feces, + *stasis*, a standing.] Constipation, costiveness, fecal impaction.

coprosterin (ko-pros'ter-ĭn). Coprosterol.*

coprosterol (ko-pros'tĕ-rol) [G. *kopros*, feces, + (*chole*)*sterol.*] Coprosterin, stercorin, a derivative of cholesterol found in the feces, obtainable in the form of slender acicular crystals.

coprozoa (kop-ro-zo'ah) [G. *kopros*, feces, + *zōon*, animal.] Protozoa which can be cultivated in fecal matter, through not necessarily living in feces within the intestine.

coprozoic (kop-ro-zo'ik). Relating to coprozoa; coprophil.

cop'tis [G. *koptō*, I cut, the leaves looking as if cut (N.F.) The rhizome of *Coptis trifolia*, goldthread, canker-root, a plant of eastern North America; used as a masticatory in sore mouth and as a gargle in catarrhal sore throat and tonsillitis, and as a simple bitter tonic in dose of gr. 30 (2.0), or ♏30 (2.0) of the N.F. fluid extract.

coptosystole (kop-to-sis'to-lĭ) [G. *koptō*, I curtail, + *systole*.] A cutting off or curtailment of the ventricular systole.

cop'ula [L. yoke, joining.] 1. Zygote. 2. Amboceptor or immune body. 3. In anatomy a narrow part connecting two structures. 4 In legal phraseology, sexual intercourse.

copulation (kop-u-la'shun) [L. *copulatio*.] 1. Sexual union between two individuals, male and female; coitus. 2. In protozoology, conjugation between two cells which do not fuse but separate after mutual fertilization; observed in the infusoria.

cor, gen. *cor'dis* [L.] Heart. **c. adipo'sum**, fatty heart. **c. bilocula're**, a heart in which the intra-auricular and intraventricular septa are incomplete. **c. bovi'num**, a greatly hypertrophied heart. **c. hirsu'tum**, hairy heart, the heart in cases of fibrinous pericarditis in which the surface presents post mortem a shaggy appearance. **c. ju'venum**, a disorder of the heart associated with orthostatic albuminuria, marked by a systolic murmur, heaving apex beat, tachycardia, palpitation, and arrhythmia. **c. mo'bile**, movable heart, a heart which moves unduly on change of bodily position. **c. pen'dulum**, pendulous heart, an extreme form of c. mobile in which the heart appears to be suspended by the great vessels. **c. tomento'sum** [L. *tomentosus*, stuffed with hair or feathers, as a cushion], c. hirsutum. **c. trilocula're**, a heart in which either the intraventricular or the auricular septum is absent thus leaving only three cavities; when it is that the auricular septum is absent, the qualification biventricular is added.

coracoacromial (kor"ă-ko-ă-kro'mĭ-al). Relating to the coracoid and acromial processes.

coracobrachialis (kor"ă-ko-bra-kĭ-a'lis). Relating to the coracoid process of the scapula and the arm, noting a muscle, which see under *musculus*.

coracoclavic'ular. Relating to the coracoid process and the clavicle.

coracohumeral (kor"ă-ko-hu'mĕ-ral). Relating to the coracoid process and the humerus.

cor'acoid [G. *korax* (*korak-*), raven, curved door-handle, + *eidos*, appearance.] Shaped like a crow's beak or door-handle; noting a process of the scapula, *processus coracoideus*. **c. tuberos'ity**, tuberositas coracoidea.

cor'al cal'culus. A kidney stone moulded to the shape of the pelvis and calyces.

cor'allin. A yellow dye obtained by heating together sulphuric acid, phenol, and anhydrous oxalic acid. **red c.**, peony red, peonin, produced from c. by the action of ammonia.

corallorhi'za [G. *rhiza*, root.] Coral-root, dragon's-claw, the root of *Corallorhiza odontorhiza*, a leafless saprophytic herb of the eastern United States; diaphoretic in doses of gr. 15–30 (1.0–2.0).

coramine (kawr'am-ēn). Trade name of a 25 per cent. solution of pyridine-betacarbonic acid-diethylamide, recommended as a cardiac and respiratory stimulant in doses of mg. 16–32 (1.0–2–0) two or three times a day or oftener.

cord [L. *chorda*, a string.] 1. In anatomy, any long, string-like structure. 2. To become corded or string-like. **den'tal c.**, an aggregation of epithelial cells forming the rudimentary enamel organ. **gan'gliated c.**, the sympathetic nerve trunk, systema* nervorum sympathicum. **gen'ital c.**, an embryonic structure containing the initial Wolffian and Muellerian ducts. **psalte'rial cords**, stria vascularis [BNA]. **sex-cords**, epithelial columns formed of large spherical cells growing down from the Wolffian ridge in the embryo; they are the embryonic uriniferous tubules. **sperma'tic c.**, a cord formed by the vas deferens, up to its passage through the inguinal canal, together with the accompanying vessels and nerves. **spi'nal c.**, medulla spinalis. **umbil'ical c.**, the cord extending from the placenta to the umbilicus of the fetus, formed of the umbilical vein and two umbilical arteries embedded in Wharton's jelly. **vocal c.**, one of the four thyro-arytenoid ligaments; the upper pair constitutes the *false* vocal cords, the lower pair the *true* vocal cords, or those concerned in voice production.

cordial (kor'jyal) [see *cordiale*.] 1. A remedy supposed to stimulate the heart and raise the spirits. 2. A sweet aromatic liquor supposed to aid digestion. **neutrali'zing c.**, syrupus rhei et potassæ compositus (N.F.).

cordiale (kor-dĭ-a'le) [L. neut. of *cordialis*, something enheartening.] Cordial. **c. ru'bi fruc'tus**, blackberry cordial; equal parts of blackberry juice and of syrup, with 25 per cent. of a weak tincture of cinnamon, cloves, and nutmeg; a carminative, aromatic astringent, employed in diarrhea in doses of ʒ½–1 (15.0–30.0).

cor'diform [L. *cor(cord-)*, heart, + *forma*, shape.] Heart-shaped.

corditis (cor-di'(de')tis). Funiculitis, inflammation of the spermatic cord.

cor'dopexy. Chordopexy.

cor'dol. Tribromsalol.

cordot'omy. Chordotomy, section of the anterolateral pathways in the spinal cord for the relief of pain.

cor'dyl. Acetyltribromsalol.

Cordylobia anthropophaga (kor-dĭ-lo'bĭ-ah an-thropof'ă-gah) [G. *kordylē*, club, + *lobion*, lobe; *anthrōpos*, man, + *phagō*, I eat.] A fly of tropical Africa, the larva of which burrows into the skin producing a small inflammatory swelling.

core [L. *cor*, heart.] 1. The central mass of necrotic tissue in a boil. 2. The material filling the carbon shell of an impregnated electrode.* 3. A disease of cows in which semisolid concretions can be felt in the udder. 4. A disease of sheep caused by the presence of parasites in the liver. 5. A bar of iron around which is wound the wire of an electromagnet or of an induction coil.

coreclisis (kor-e-kli'sis) [G. *korē*, pupil, + *kleisis*, closure.] Occlusion of the pupil.

corectasia (kor-ek-ta'zĭ-ah) [G. *korē*, pupil, + *ektasis*, stretching out.] Dilatation of the pupil.

corectomedialysis (kor-ek"to-me-di-al'ĭ-sis) [G. *korē*, pupil, + *ektomē*, excision, + *dialysis*, a loosening.] Iridodialysis.

corec'tomy [G. *korē*, pupil, + *ektomē*, excision.] Iridectomy.

corecto'pia [G. *korē*, pupil, + *ektopos*, out of place.] Presence of the pupil to one side of the center of the iris.

coredialysis (kor-e-di-al'ĭ-sis) [G. *korē*, pupil, + *dialysis*, separation.] Iridodialysis.

coredias'tasis [G. *korē*, pupil, + *diastasis*, an interval.] Corectasia.

corel'ysis [G. *korē*, pupil, + *lysis*, a loosening.] The loosening of adhesions between the capsule of the lens and the iris.

coremorphosis (kor-e-mor-fo'sis) [G. *korē*, pupil, + *morphōsis*, formation.] The formation of an artificial pupil.

corenclisis (kor-en-kli'sis) [G. *korē*, pupil, + *enkleio*, I enclose.] Iridenclisis.

coreometer (kor-e-om'e-ter) [G. *korē*, pupil, + *metron*, measure.] An instrument for measuring the width of the pupil.

cor'eoplasty [G. *korē*, pupil, + *plassō*, I form.] The reestablishment of an occluded, or correction of a deformed, pupil.

corestenoma (kor-e-stĕ-no'mah) [G. *korē*, pupil, + *stenōma*, a narrow pass.] A narrowing of the pupil. **c. congen'itum,** a partial occlusion of the pupil by congenital out-growths from the iris.

coretomedialysis (kor-e-to"me-di-al'i-sis) [G. *korē*, pupil, + *tomē*, incision, + *dialysis*, a loosening.] Iridodialysis.

coret'omy [G. *korē*, pupil, + *tomē*, incision.] Iridotomy.

coriaceous (kor-e-a'shyus) [L. *corium*, leather.] Leathery, tough, noting the surface character of a bacterial colony.

coriamyrtin (ko-re-am'ur-tin). A glucoside, $C_{20}H_{26}O_{10}$, from coriaria leaves; an irritant and convulsant, resembling picrotoxin, sometimes given as a cardiac and respiratory stimulant in collapse, in dose of gr. $\frac{1}{10}$ (0.001).

corian'der. Coriandrum.

corian'drum [G. *koris*, bedbug, from the offensive odor of the plant.] (Br., N.F.) Coriander, the dried ripe fruit of *Coriandrum sativum*; a mild stimulant aromatic and corrective in doses of gr. 5–10 (0.3–0.6).

Coria'ria. A genus of plants of southern Europe, New Zealand, and South America. **C. myrtifo'lia,** a species the leaves of which are sometimes used to adulterate senna; they contain an irritant glucoside, *coriamyrtin*.

co'rium [L. leather.] Cutis vera, true skin; the deeper or connective-tissue layer of the skin, consisting essentially of fibrous connective tissue with interlacing elastic fibers and occasional nonstriated muscular fibers. It is composed of two layers: an outer, pars papillaris, stratum papillare, papillary layer, and an inner, pars reticularis, stratum reticulare, reticular layer.

Cor'lett's pyo'sis [William Thomas *Corlett*, American dermatologist, *1854.] Impetigo contagiosa bullosa, a contagious bullous eruption, beginning on the face and later becoming general, which after rupture becomes covered with light friable crusts.

corm [G. *kormos*, the bare trunk of a tree.] The underground stem of certain plants, giving off leaves from the upper surface and rootlets from the lower; it is of bulbous shape, but differs from a tree bulb in being of solid, fleshy consistency and not composed of superposed leaves; called also *solid bulb*, especially when it is enclosed in two or three layers of broad leaves.

cormophyte (kor'mo-fīt) [G. *kormos*, trunk of a tree, + *phyton*, plant.] In botany, any plant which has an axis of growth, with stems and leaves; opposed to thallophyte.

corn [L. *cornu*, horn, hoof.] 1. Clavus (1). 2. A small swelling between the bars of a horse's foot and the wall of the heel, occurring in the fore feet alone, generally on the inside heel. **hard c.,** the usual form of corn over a toe-joint. **seed c.,** a papilloma or wart on the foot. **soft c.,** a corn formed by pressure between two toes, the surface being macerated and yellowish in color.

corn [A.S.] 1. Any kind of grain; specifically, in America, Indian corn or maize. 2. A single grain of wheat, maize, or any cereal.

corn-cockle (kawrn' kok-l) [A.S. *coccel*, tares] *Lychnis* (*Agrostemma*) *githago*.

Cornaro's meth'od (kor-nah'ro) [Luigi *Cornaro*, Venetian layman, 1464–1566.] Preservation of health by a very abstemious diet, chiefly bread and meat with a light wine; by this means Cornaro restored his health and digestion which had been seriously impaired by excesses, and lived to the age of 102 years.

cornea (kor'ne-ah) [L. *corneus*, horny, sc. *tunica*, coat.] A transparent membrane, forming the anterior sixth of the outer coat of the eyeball; it is more curved than the sclera. **con'ical c.,** keratoconus.

discoloration, keratochromatosis. **examination,** keratoscopy. **grafting,** keratoplasty. **hernia,** keratocele. **incision,** keratotomy. **inflammation,** keratitis, corneitis, **instrument for measuring curvature of,** keratoconometer, keratometer, keratoscope. **knife for dividing,** keratome. **opacity,** keratoleucoma, albugo, nebula, caligo corneæ. **plastic surgery of,** keratoplasty. **protrusion,** keratectasia, staphyloma, keratoconus, keratoglobus, conical cornea, keratocele, buphthalmia, buphthalmus. **removal of part,** keratectomy. **rupture,** keratorrhexis. **softening,** keratomalacia **ulceration,** keratohelcosis.

cor'neal. Relating to the cornea.

corneitis (kor-ne-i'(e')tis). Keratitis.

cor'nel. Dogwood, cornus*.

corneoiritis (kor"ne-o-i-ri'(re')tis). Keratoiritis.

corneoscle'ra. The combined cornea and sclera, forming the external coat of the eyeball.

cor'neous [L. corneus.] Horny.

Cor'ner's tam'pon [Edred Moss *Corner*, English surgeon, *1872.] A plug of omentum stuffed into a wound of the stomach or intestine as a temporary tampon.

cor'ners. The deciduous incisors of the horse external to the intermediates.

cor'net, cornette' [Fr. dim. of *corne*, a horn.] A small ear-trumpet.

cor'neum. The horny layer of the skin.

cornic'ulum [L. dim. of *cornu*, horn] A cornu of small size. **c. laryn'gis,** cartilago corniculata.

cornifica'tion [L. *cornu*, horn, + *facere*, to make.] 1. Conversion into horn or a horny substance or tissue. 2. A callosity.

cornified (kor'nĭ-fīd). Converted into horn; horny.

cor'nin. An eclectic preparation, a resin from *Cornus florida* in the form of a brown bitter powder; used in malaria and as a tonic in doses of gr. 2–5 (0.13–0.3).

Cor'ning's method [James Leonard *Corning*, New York neurologist, 1855–1923.] 1. Induction of surgical anesthesia, without unconsciousness, by subarachnoid spinal injections of cocaine or one of its substitutes. 2. The induction of local anesthesia by the subcutaneous injection of a weak solution of cocaine, or one of its substitutes, the circulation being cut off from the field of operation by firm pressure with a ring, or by constriction of the base of the member when it is a finger or toe.

corn-silk. Stigma maydis, zea*.

corn-smut. Ustilago maydis.

cor'nu, gen. *cor'nus*, pl. *cor'nua*, [L. horn.] A horn. 1. Any structure composed of horny substance or resembling a horn in shape. 2. One of the coronal prolongations of the dental pulp. **c. Ammo'nis,** hippocampus [BNA]. **c. ante'rius,** anterior horn; (1) the anterior division of the lateral ventricle of the brain, extending forward and outward into the frontal lobe from the foramen of Monro; (2) columna anterior [BNA]. **c. cer'vi,** hartshorn. **c. cuta'neum,** cutaneous horn, an elongated, projecting outgrowth of the horny layer of the epidermis. **c. huma'num,** c. cutaneum. **c. infe'rius** [BNA], inferior horn, descending horn, the lowermost division of the lateral

ventricle of the brain, a prolongation of the pars centralis or body into the temporal lobe; it extends first outward and backward, then downward, and finally forward and inward, terminating about an inch behind the temporal pole. **c. latera'le,** lateral horn, columna* lateralis [BNA]. **c. ma'jus,** greater horn; the larger of the two processes on either side of the hyoid bone. **c. me'dium,** c inferius. **c. mi'nus,** lesser horn; the shorter of the two processes on either side of the hyoid bone. **c. of the spinal cord,** either one of the tracts of gray matter, seen on cross section of the cord, extending from the commissure toward the surface. **c. poste'rius,** posterior horn; (1) the posterior division of the lateral ventricle of the brain, extending backward into the occipital lobe; (2) columna posterior [BNA].

cor'nua. Plural of *cornu.*

cor'nual. Relating to a cornu.

cornucommissural (kor"nu-kom-i-shu'ral). Relating to one of the cornua and a commissure in the brain.

cornuco'pia [L horn of plenty.] One of the lateral recesses in the fourth ventricle of the brain.

cor'nus [L. *cornu,* horn.] (N.F.) The dried bark of the root of *Cornus florida,* dogwood; an astringent aromatic stomachic in doses of ♏15–60 (1 0–4 0) of the fluidextract; it is employed in eclectic practice as an efficient antiperiodic, in cases in which quinine disagrees, in doses of 10 to 30 drops of the specific medicine in water three or four times a day. The bark of another species, *C. circinata,* round-leaved dogwood, cornel, green osier, is also used in medicine, having similar properties to the preceding.

cornutine (kor'nu-tēn). An alkaloid obtained from ergot, said to cause convulsions.

cornutol (kor'nu-tol). Trade name of a specially prepared fluid extract of ergot.

corolla (ko-rol'ah) [L a little crown] The inner of the two envelopes of a flower with double perianth.

corom'eter [G. *korē,* pupil, + *metron,* measure.] An instrument for measuring the diameterof the pupil.

coro'na [L. crown.] Any structure, normal or pathological, resembling or suggesting a crown or a wreath. **c. cap'itis,** crown of the head, the topmost part of the head **c. cilia'ris,** ciliary crown or wreath, the circular figure on the inner surface of the ciliary body, formed by the processes and folds (plicæ) taken together. **c. den'tis,** crown of a tooth, the exposed portion covered with enamel. **c. glan'dis,** the prominent posterior border of the glans penis. **c. radia'ta,** radiate crown; (1) a fan-shaped appearance produced by the widely radiating fibers from the upper portion of the internal capsule; these fibers come from the cerebral peduncles, through both the tegmentum and the base of the peduncles, and from the thalamus; (2) an investment of the oöcyte, composed of several layers of epithelial cells derived from the discus proligerus of the Graafian follicle. **c. seborrho'ica,** a red band at the hair line along the upper border of the forehead and temples in certain aggravated cases of pityriasis capitis, or dermatitis seborrhoica of the scalp. **c. Ven'eris** [crown of Venus], a lenticular syphilide of the forehead parallel to the hairy border. **c. zinn'ii,** Haller's* circle (1).

coro'nad [L. *corona* + *ad,* to.] In a direction toward any corona.

cor'onal. Relating to a corona. **c. su'ture,** the line of junction of the frontal with the two parietal bones of the skull.

coronale (kor-o-na'le) [L. neuter of *coronalis,* coronal.] 1. The frontal bone. 2. One of the two most widely separated points on the coronal suture at the poles of the greatest frontal diameter.

corona'men [L. *coronare,* to crown.] Coronet.

corona'ria. A coronary artery, of the heart or stomach; see *arteria* coronaria.*

coronary (kor'o-na-rĭ) [L. *coronarius; corona,* a crown.] **corona'rius** [NK]. 1. Relating to a crown. 2. Encircling, noting various anatomical structures; see *arteria coronaria, ligamentum coronarium, sinus coronarius,* etc. **c. band,** a prominent circular ridge or band at the top of the hoof of the horse, merging posteriorly into the glomes of the plantar cushion; it is an organ of tactile sensation, enabling the animal to recognize the character of the surface upon which his foot rests. **c. cush'ion,** c. band. **c. sul'cus,** the depression on the external surface of the heart indicating the location of the auriculo-ventricular septum.

corone (kor-o'ne). [G. *korōnē,* crow.] The coronoid process of the mandible.

coroner (kor'o-nur) [L. *coronator,* crowner, crown officer.] An official whose duty it is to investigate cases of sudden death to determine the cause. In several of the United States the office has been replaced by that of medical examiner.

cor'onet [Fr. *coronette;* L. *corona,* crown.] The upper part of a horse's hoof, or the lower part of the pastern encircling the coffin, marked by a circlet of hair.

coronill'a. The dried herbage of several species of *Coronilla,* a genus of leguminous herbs, resembling broom in its medical properties; dose as a diuretic, gr. 5–10 (0.3–0.6).

coron'illin. A glucoside from coronilla; dose, gr. 1 (0.06).

coro'nion [G. dim of *korōnē,* crow.] The tip of the coronoid process of the mandible, a craniometric point.

coronitis (kor-o-ni'(ne')tis). Inflammation of the coronary cushion of the horse's hoof, resulting in imperfect horn formation; villitis.

coronium (ko-ro'nĭ-um) [L. *corona,* crown.] A hypothetical element alleged to have been discovered in volcanic gases; assumed by Nicholson to be one of the four protyles* out of which all the elements are formed.

cor'onoid [G. *korōnē,* a crow, + *eidos,* resembling.] Shaped like a crow's beak, noting certain processes and other parts of bones. **c. foss'a,** fossa coronoidea. **c. process,** processus coronoideus.

coroparelcysis (kor"o-par-el'si-sis) [G. *korē,* pupil, + *parelkō,* I draw aside.] An operation for displacing the pupil to one side in cases of central corneal opacity.

cor'oplasty [G. *korē,* pupil, + *plassō,* I form.] Any surgical procedure designed to restore the patency of the pupil of the eye.

coros'copy [G. *korē,* pupil, + *skopeō,* I view.] The shadow test, skiascopy.*

corot'omy. Coretomy, iridotomy.*

cor'pora. Plural of corpus.

cor'poral. Bodily, relating to the body.

corpor'eal. Physical, material, as distinguished from mental, psychical, or spiritual.

corpse [L. *corpus,* body.] A dead body, cadaver.

cor'pulence, cor'pulency [L. *corpulentia,* magnification of *corpus,* body.] Obesity.

cor'pus, gen. *cor'poris,* pl. *cor'pora* [L.] The body. Any body or mass. The main part of an organ or other anatomical structure, as distinguished from the caput (head) or cauda (tail)

c. adipo'sum buc'cæ, sucking-pad, an encapsuled mass of fat in the cheek on the outer side of the buccinator muscle, especially marked in the infant; supposed to strengthen and support the cheek during the act of sucking.

c. adipo'sum or'bitæ [BNA], fat body of the orbit, a mass of soft fat contained in the orbit.

c. al'bicans [L. *albicare*, to become or to be white], (1) a whitish body in the cortex of the ovary, the remains of the atrophied c. luteum; (2) c. mammillare, c. candicans.

c. alie'num, a foreign body.

c. amyla'ceum (pl. *cor'pora amyla'cea*), one of a number of small ovoid or rounded bodies having an irregularly laminated structure resembling a grain of starch, found in nervous tissue, in the kidney, lungs, and other organs, and also in certain tumors, inflammatory exudates, and blood-clots; they represent a degenerative process analogous to colloid degeneration.

c. Aran'tii, nodulus valvulæ semilunaris.

c. callo'sum [L. *callosus*, hard], the great tranverse commissure between the cerebral hemispheres, lying at the bottom of the longitudinal fissure, and covered on each side by the gyrus cinguli, it is arched from behind forward and is thick at each extremity (splenium and genu) but thinner in its long central portion (truncus); it turns upon itself at the genu and sends a thin extremity forward (the rostrum); the white fibers connecting the two hemispheres make transverse markings on the surface, but in addition there are four strands of gray matter (striæ longitudinales) running in an anteroposterior direction.

c. can'didans, c. mamillare.

c. caverno'sum clitor'idis, one of the two parallel columns of erectile tissue forming the body of the clitoris; they diverge at the root to form the crura.

c. caverno'sum con'chæ, plexus cavernosi concharum [BNA], erectile tissue in the mucous membrane covering the nasal turbinated bones.

c. caverno'sum pe'nis, one of two columns of erectile tissue lying side by side on the dorsum of the penis; they are separated posteriorly, forming the *crura penis*, and are attached to the inner portion of the arch of the pubis.

c. caverno'sum ure'thræ [BNA], corpus spongiosum the mesial column of erectile tissue, lying in the urethral sulcus, between and below the two corpora cavernosa penis; it forms an expansion at either extremity, the posterior being the *bulbus urethræ*, the anterior the *glans penis;* it is traversed by the urethra.

c. cilia're, ciliary body, a thickened portion of the tunica vasculosa of the eye between the chorioid and the iris; it consists of three parts or zones: orbiculus ciliaris, corona ciliaris, and musculus ciliaris.

c. denta'tum, dentate body; (1) nucleus dentatus [BNA]; (2) nucleus olivaris.

c. fimbria'tum [L. *fimbriatus*, fringed], (1) a white band on the edge of the cornu inferius of the lateral ventricle of the brain; (2) the outer, ovarian, extremity of the oviduct.

c. genicula'tum exter'num, external geniculate body, c. geniculatum laterale [BNA].

c. genicula'tum inter'num, internal geniculate body, c. geniculatum mediale [BNA].

c. genicula'tum latera'le [BNA], lateral geniculate body, external geniculate body; an oval mass formed by a bulging of the posterior part of the thalamus external to the pulvinar.

c. genicula'tum media'le [BNA], medial geniculate body, internal geniculate body; an elongated rounded elevation behind the pulvinar of the thalamus.

c. glandulo'sum, glandula prostata muliebris, spongy tissue at the orifice of the meatus urinarius in the female.

c. High'mori, c. highmoria'num, mediastinum testis.

c. hypothalam'icum, nucleus hypothalamicus.

c. lu'teum [L. *luteus*, golden-yellow], a yellowish body at the surface of the ovary marking the site of a ruptured Graafian follicle.

c. Luy'si, Luys' body, nucleus hypothalamicus.

c. mamilla're, pl. *cor'pora mamilla'ria* [BNA], mamillary body, one of two pea-sized white bodies lying at the base of the brain in the interpeduncular space in front of the substantia perforata posterior.

c. medulla're cerebell'i [BNA], the interior white substance of the cerebellum.

c. oken'se, Oken's body, Wolffian* body.

c. oliva're, oliva.

c. oryzoid'eum, one of the rice-like bodies found in hygromata, tendon-sheaths, and joints; similar bodies are sometimes seen in the sputum.

c. pampinifor'me, parovarium.

c. papilla're [BNA], papillary body, stratum papillare, the superficial portion of the corium, consisting of a close-meshed connective tissue containing a few flattened cells.

c. pinea'le [BNA], pineal body, pineal gland, conarium, epiphysis cerebri, a small flattened body, shaped somewhat like a pine cone (whence two of its names), lying in the depression between the two superior quadrigeminal bodies below the splenium of the corpus callosum; it is connected with the thalami by a hollow stalk, the habenula, but is not itself a part of the brain, containing few nervous elements; it is a rudimentary glandular structure, being composed of follicles containing epithelial cells and lime concretions, called brain-sand; its function is unknown to physiologists.

c. psalloi'des, (1) fornix [BNA]; (2) commissura hippocampi [BNA].

c. pyramida'le, pyramis medullæ oblongatæ.

corp'ora quadrigem'ina [BNA], quadrigeminal bodies, optic lobes, four rounded eminences forming the dorsal portion of the mesencephalon; together they constitute the lamina quadrigemina.

c. restifor'me [BNA], restiform body, inferior cerebellar peduncle, a bundle of nerve fibers on either side of the medulla, running upward, outward, and backward from the medulla to the cerebellum.

c. rhomboida'le, c. rhomboid'eum, c. dentatum (1).

c. spongio'sum, spongy body, c. cavernosum urethræ [BNA].

c. spongio'sum ure'thræ [BNA], the submucous coat of the female urethra, containing a venous network which insinuates itself between the muscular layers giving to them an erectile nature.

c. ster'ni, body of the sternum, mesosternum, gladiolus.

c. stria'tum, striate body, the caudate and lentiform (lenticular) nuclei considered as one structure, a striate appearance on section being caused by connecting bands of gray matter passing from one to the other nucleus through the intervening white matter of the internal capsule

c. trapezoï'deum [BNA], **c. trapezoid'es,** trapezoid body, a collection of transverse fibers running through the central portion of the pons, arising from the nucleus cochlearis.

c. triti'ceum, cartilago triticea.

c. u'teri, body of the womb, the part of the uterus above the orificium internum.

c. ver'tebræ [BNA], body of a vertebra

c. vit'reum, vitreous body.

corpuscle (kor'pus-l) [L. *corpusculum*, dim. of *corpus*, body.] 1. Primary atom, metabolon, electron. 2. Any small mass or body. 3. A blood cell. 4. A non-nucleated cell. **amniot'ic c., amyla'ceous c., am'yloid c.,** corpus amylaceum. **ax'ile c., ax'is c.,** the central portion of a tactile c. **Bennett's c., Bizzozero's c.,** etc., see the proper names. **blood c.,** blood cell, leucocyte or erythrocyte. **bone c.,** bone cell. **bul'boid c.,** corpusculum bulboideum. **calca'reous c.,** one of the dentinal cells of the teeth containing earthy salts. **car'tilage c.,** cartilage cell. **cement' c.,** one of the bone-forming cells in the cementum of the tooth. **chro'mophile c.,** Nissel's* body. **chyle c.,** a cell of the same appearance as a leucocyte, present in chyle. **colloid c.,** corpus amylaceum. **colos'trum c.,** a large granular cell in colostrum. **concen'tric c.,** Hassall's* corpuscle. **cor'neal c.,** a flattened connective-tissue cell found between the laminæ of fibrous tissue in the cornea. **dust c.,** see *hemoconia*. **end c.,** corpusculum nervorum terminale. **exu-**

da'tion c., exudation cell, a cell present in an exudate which assists in the organization of new tissue. **fer'tilizing c.**, spermatozoon. **gan'glion c., gen'ital c.**, one of the end corpuscles on the external genitals. **germ c.**, ovum. **ghost c.**, phantom c. **giant c.**, giant cell. **inflamm'atory c.**, exudation c. **lam'ellated c.**, corpusculum lamellosum. **lymph c., lymphat'ic c., lym'phoid c.**, a leucocyte found in the lymph and also in the blood. **mar'ginal c.**, Giannuzzi's crescent. **med'ullary c.**, odontoblast. **mi'gratory c.**, wandering cell. **milk c.**, one of the fat droplets in milk. **mollus'cum c.**, one of a number of minute bodies, whether protozoan parasites or degenerated cells it is undecided, found in the affected epithelial cells in molluscum contagiosum. **mucous c.**, a cell resembling a lymph corpuscle present in mucus. **mus'cular c.**, the nucleus of a striated muscular fiber. **nerve c.**, (1) neuron; (2) one of the nuclei under the neurilemma in a medullated nerve fiber. **nu'clear c.**, nucleolus. **oss'eous c.**, bone cell. **phantom c.**, ghost c., shadow c., a red blood cell which has lost its color through loss of its hemoglobin, achromatocyte. **plastic c.**, exudation c. **polar c.**, centrosome. **pus c.**, pyocyte, one of the leucocytes constituting the formed elements in pus. **red c.**, erythrocyte. **salivary c.**, one of the leucocytes present in saliva. **shadow c.**, phantom c. **splenic c.**, Malpighian c. **starch c.**, corpus amylaceum. **tactile c.**, corpusculum tactus. **tendon c.**, one of the connective-tissue cells present between the fibers of tendons. **ter'minal c.**, end c., corpusculum* nervorum terminale. **third c.**, Hayem's c., platelet. **thymus c.**, Hassall's c. **touch c.**, corpusculum tactus. **white c.**, leucocyte.

corpus'cular. Relating to a corpuscle.

corpus'culum, pl. *corpus'cula* [L. dim. from *corpus*, body.] Corpuscle. **c. bulboid'eum** [BNA], Krause's bulb-like corpuscle, end-bulb of Krause, one of the nerve terminals in the lips, glans penis, and other parts; it consists of a spheroid capsule enclosing elongated and polygonal cells between which are the club-shaped terminations of the nerve fibrils. **c. lamello'sum** [BNA], lamellated corpuscle of Vater, of Herbst, or of Pacini; one of the small oval bodies in the skin of the fingers, in the mesentery, and elsewhere, formed of concentric layers of connective tissue with a soft core in which the axis cylinder of a nerve runs, splitting up into a number of fibrils which terminate in bulbous enlargements. **c. nervo'rum articula're,** pl. *corpuscula nervo'rum articula'ria* [BNA], an articular nerve corpuscle, see *c. nervorum terminale.* **c. nervo'rum genita'le,** pl. *corpus'cula nervo'rum genita'lia* [BNA], genital nerve corpuscles, see *c. nervorum terminale.* **c. nervo'rum termina'le,** pl. *corpus'cula nervo'rum termina'lia* [BNA], one of the terminal corpuscles of the nerves; these are: Krause's bulb-like corpuscles, Vater's or Pacini's lamellated corpuscles, Meissner's touch corpuscles, genital and articular corpuscles. **c. re'nis** [BNA], Malpighian corpuscle, the capsula glomeruli and its inclosed capillaries in the kidney, in which the secretion of the water of the urine occurs. **c. tac'tus** [BNA], touch corpuscle, Meissner's or Wagner's corpuscle; one of very numerous oval bodies found in the papillæ of the corium, especially that of the fingers and toes; they consist of a connective-tissue capsule in which the axis-cylinder fibrils terminate in discoid or rounded enlargements.

corrective (kor-ek'tiv). 1. Counteracting, modifying or changing what is injurious. 2. A drug which modifies or corrects an undesirable or injurious effect of another drug.

Cor'rigan's cau'tery [Sir Dominic John *Corrigan*, Irish pathologist and clinician, 1802–1880.] A thick iron wire, with a disc or rounded button on its curved extremity, for use as a cautery. **C.'s disease',** (1) pulmonary cirrhosis; (2) insufficiency of the aortic valves. **C.'s line,** the blue line on the gums in cases of lead poisoning. **C.'s pulse,** the water-hammer pulse* of aortic insufficiency. **C.'s respira'tion,** the blowing expiration of typhus fever. **C.'s sign,** retarded pulsation in abdominal aneurysm.

cor'rigent [L. *corrigere*, to correct.] Corrective.

corrode (kŏ-rōd') [L. *corrodere*, to gnaw.] To wear away gradually by pressure, as in case of the tissues by a tumor or aneurysm, or by chemical action, as in case of the enamel of the teeth by acid secretions

corrosion (kŏ-ro'zhun) [L. *corrodere; con-*, together, + *rodere*, to gnaw.] Disintegration; specifically, in dentistry, the carious disintegration of the surface of a tooth, as distinguished from the wearing away of the surface by chemical or mechanical action; see *erosion.*

corrosive (kŏ-ro'siv). 1. Causing the wearing away or disintegration of any part or structure. 2. An agent which produces corrosion, such as an acid. **c. sub'limate,** mercuric chloride, hydrargyri chloridum corrosivum.

corr'osol. A proprietary remedy said to contain cacodylate and succinate of mercury with a local anesthetic; recommended as a mercurial for hypodermic use and said to be painless.

corr'ugator [L. *corrugare*, to wrinkle.] A muscle which draws together the skin, causing it to wrinkle. **c. cu'tis a'ni, c. supercil'ii,** see under *musculus.*

cor'tex, gen. *cor'ticis*, pl. *cor'tices* [L. bark.] 1. The bark or outer investment of the trunk, roots, and branches of a tree. 2. The outer portion of an organ such as the kidney, as distinguished from the inner, or medullary, portion 3. The external plicated layer of gray matter covering the hemispheres of the cerebrum and cerebellum.

Corti's arch (kor'te) [Alfonso *Corti*, Italian histologist, 1822–1888.] The arch formed by the junction of the heads of C.'s rods. **C.'s canal',** C.'s tunnel. **C.'s cells,** hair cells of the organ of C.; short columnar nucleated cells from the free extremity of which project a number of fine hair-like processes; there are two rows of these cells, one on either side of the tunnel of C. **C.'s gang'lion,** ganglion spirale. **C.'s mem'brane,** membrana tectoria. **C.'s or'gan,** organon spirale. **C.'s pil'lars,** C.'s rods. **C.'s rods,** pillar cells, supporting cells of the organ of C.; they consist of two sets, inner and outer, which rest with their bases wide apart on the basilar membrane, while their heads are in contact, forming thus a spiral duct, tunnel of C. **C.'s teeth,** Huschke's* teeth. **C.'s tun'nel,** the spiral canal in the organ of C., formed by the outer and inner pillar cells or rods of C.; it is filled with fluid and occasionally crossed by non-medullated nerve fibers.

cor'tical. Relating to the cortex, in any sense.

corticifugal (kor-ti-sif'ugal) [L. *cortex*, rind, bark, + *fugere*, to flee.] Passing in a direction away from the outer surface, noting especially nerve fibers conveying impulses away from the brain cortex.

corticipetal (kor-ti-sip'ĕtal) [L. *cortex*, rind, bark, + *petere*, to seek.] Passing in a direction toward the outer surface, noting especially nerve fibers conveying impulses toward the cerebral cortex.

cor"tico-efferent. Corticipetal.

cor"tico-aff'erent. Corticifugal.

corticospi'nal. Relating to the cerebral cortex and the spinal cord.

cor'tin. An extract of the cortical cells of the suprarenal glands, supposed to be a general tissue hormone, affecting both nervous and muscular tissues; adrenocortin.

corun'dum. Native crystalline aluminum oxide.

coruscation (kor-us-ka'shun) [L. *coruscare*, to flash] A subjective sensation as of a flash of light before the eyes

Corvisart's disease' (kor-ve-sar') [Jean Nicolas *Corvisart*, Parisian physician, 1755–1821.] Chronic hypertrophic myocarditis. **C.'s fa'cies,** the facies of cardiac insufficiency.

cor'ybantism [G. *korybas*, a priest of Cybele.] Wild delirium with hallucinations.

corydalin (kor-id'al-in). A brownish yellow bitter extractive from corydalis, employed in the skin affections of syphilis and scrofula, in doses of gr. 1–3 (0.06–0.2).

corydaline (kor-id'al-ēn). An alkaloid, $C_{18}H_{19}NO_4$, from corydalis; tonic and diuretic in doses of gr. ½–1 (0.03–0.06).

coryd'alis [G. *korydallis*, the crested lark, referring to the shape of the flower.] (N.F.) The tuber of *Corydalis* (*Bicuculla*) *canadensis*, turkey pea, wild hyacinth, turkey corn, squirrel corn; tonic and alterative in doses of gr. 10–15 (0 6–1 0), or ♏10 (0.6) of the N.F. fluidextract.

cor'yfin. The ethyl glycolic acid ester of menthol; a colorless oily fluid recommended as a substitute for menthol as an external application in headache, coryza, and catarrhal affections of the pharynx and nasopharynx.

cor'ymb [G. *korymbos*, a cluster of flowers.] A raceme in which the lower flower stalks are so much longer than the upper ones that they terminate on a level, forming a flat, or nearly flat, surface.

Corynebacterium (kŏ-ri"ne-bak-te'rĭ-um) [G. *korynē*, club, + *bacterium*.] A genus of the family *Mycobacteriaceæ*, containing slender, straight or slightly curved rods, sometimes clubbed, pointed, or branching, non-motile, not acid-fast. **C. ac'nes,**[0] acne bacillus, short to longer clavate rods, present in the lesions of acne. **C. diphthe'riæ,**[0] *Bacillus diphtheriæ*, Klebs-Loeffler bacillus, short to long, straight or slightly curved rods, occurring singly; serologically four types are recognized; the cause of diphtheria. **C. enzy'micum,**[0] *B. enzymicus*, clavate and beaded, pleomorphous rod-shaped organisms, found in the blood and joints in various pathological conditions. **C. fla'vidum,**[0] moderately long, clavate rods, found in the nasal and throat secretions, but not definitely pathogenic. **C. hodg'kinii,**[0] short, plump, beaded, wedge-shaped organisms found in the lymph nodes in some cases of pseudoleucemia, but not generally regarded as pathogenic. **C. hoff'mannii,** *C. pseudodiphthericum.*[0] **C. lymphoph'ilum,**[0] short, irregularly staining rods, some club-shaped, found in the lymph-nodes in certain cases of Hodgkin's disease, but not generally regarded as pathogenic. **C. o'vis,**[0] short, slender, rod-shaped organisms, some clavate, found in the diseased kidneys of sheep. **C. pseudodiphther'icum,**[0] Hoffmann's bacillus, ovoid, rod-shaped organisms, somewhat shorter than *C. diphtheriæ*, found in the secretions of the throat, but not pathogenic. **C. pseudotuberculo'sis o'vis,** and **C. tuberculo'sis mu'rium,** two organisms resembling *C. diphtheriæ* morphologically, but shorter, the first pathogenic for horses, sheep, and probably cattle as well as for laboratory animals, the second pathogenic for mice. **C. pyog'enes,** a species, or strain, found in certain cases of pyelonephritis and other suppurative diseases in cattle and other animals. **C. ty'phi,** *Fusiformis typhi*, Plotz* bacillus. **C. ul'cerans,** a species closely resembling *C. diphtheriæ* in young cultures, later becoming coccoid and resembling *C. pseudotuberculosis;* the clinical symptoms following infection resemble those of diphtheria, but do not yield to the antitoxin. **C. xero'sis,**[0] xerosis bacillus, an organism resembling *C. diphtheriæ*, found on the conjunctiva, often without symptoms; it is not improbably a commensal in conjunctivitis.

coryza (kŏ-ri'zah) [G.] Acute rhinitis,* cold in the head. **c. fœt'ida,** ozæna. **c. œdemato'sa,** an edema of the submucous connective tissue covering the middle and inferior turbinated bodies. **c. spasmod'ica,** hay-fever.

cory'zol. Trade name of a preparation containing oil of eucalyptus and formaldehyde, used in the treatment of coryza by inhalation.

cosaprin (ko'să-prin). Sodium acetsulphanilate, a light greenish crystalline powder or whitish masses, soluble in water; antipyretic in doses of gr. 4–8 (0.25–0 5).

Coschwitz's duct (kosh'vits) [Georgius Daniel *Coschwitz*, German physician, 1679–1729.] A supposed salivary duct said to proceed from the submaxillary and sublingual glands and to form an arch over the dorsum of the tongue; von Haller showed the duct to be a vein.

coscin'ium [G. *koskinon*, a sieve.] (B.A.) The dried stem of *Coscinium fenestratum*, an Indian herb; bitter tonic similar to calumba.

cosin (ko'sin). Coussin.

cosmesis (koz-me'sis) [G. *kosmēsis*, an adorning.] A regard in therapeutics, especially in surgical operations, for the appearance of the patient; a resort to an operation which will improve the looks, or avoidance of one which will mutilate or disfigure in any way.

cosmet'ic. Relating to cosmesis; noting anything, especially a surgical or dental operation which will improve the appearance of a person or prevent disfigurement.

cosmobion, pl. *cosmo'bia* (koz-mo'bĭ-on) [G. *kosmos*, a set form or order, + *bios*, life.] Any bilateral symmetrically developed organism, as distinguished from one in which the two sides are not symmetrical, *i.e.* a deformity.

cosmoline (koz'mo-lēn). Trade name of various preparations of solid and liquid paraffin, resembling vaseline.

cosotoxin (ko-so-tok'sin). One of the active principles of cusso, or brayera, an amorphous yellow powder, $C_{26}H_{34}O_{10}$.

cos'ta, gen. *costæ* [L.] Rib. **c. arcua'ta affix'a** [NK], c. vera, a true rib. **c. fluc'tuans,** floating rib. **c. fluc'tuans dec'ima,** Stiller's* sign. **c. spu'ria,** false rib. **c. ve'ra,** true rib.

cos'tal. Relating to a rib. **c. car'tilage,** the cartilaginous portion of a rib at its anterior extremity articulating with the sternum. **c. tuberos'ity,** tuberositas costalis.

costal'gia [L *costa*, rib, + G. *algos*, pain.] Pleuralgia

costec'tomy [L. *costa*, rib + G. *ektomē*, excision.] Exsection of a rib; costotomy.

costicar'tilage. Costal* cartilage.

cos'tiform [L. *costa*, rib, + *forma*, form.] Rib-shaped.

cos'tive [contraction from L. *constipare*, to press together.] Constipated, especially by reason of dryness of the feces rather than as a consequence of muscular atony.

cos'tiveness. Constipation; a condition in which the stools are infrequent, scanty, and dry.

costocen'tral. Relating to the ribs and the bodies of the thoracic vertebræ with which they articulate.

costochondral (kos-to-kon'dral). Relating to the costal cartilages.

costoclavic'ular. Relating to the ribs and the clavicle.

costocor'acoid. Relating to the ribs and the coracoid process of the scapula.

costogenic (kos-to-jen'ik) [L. *costa*, rib, + G. *genesis*, origin.] Pleurogenic (*2*).

costoinferior (kos-to-in-fe'rĭ-or). Relating to the lower ribs.

costoscap'ular. Relating to the ribs and the scapula.

costoscapula'ris. Musculus serratus anterior.

costoster'nal. Relating to the ribs and the sternum.

costosupe'rior. Relating to the upper ribs.

cos'totome [L. *costa*, rib, + G. *tomē*, incision.] An instrument, knife or shears, designed for cutting through a rib.

costot'omy. Division or exsection of a rib; costectomy.

costotransverse (kos-to-trans-vurs'). Relating to the ribs and the transverse processes of the vertebræ articulating with them **c. fora'men,** foramen transversarium [BNA] **c. lig'aments,** three ligaments, *anterior*, *middle*, or interosseous, and *posterior*, attaching the rib to the transverse process of a thoracic vertebra.

costovertebral (kos-to-vur'te-bral) Costocentral

costoxiphoid (kos-to-zĭ'foyd). Relating to the ribs and the xiphoid cartilage of the sternum.

Cotard's syn'drome (kŭ-tar'); [Jules *Cotard*, French neurologist, 1840–1887] A form of depressive insanity with delusions of negation and suicidal impulse.

cotar'git. Trade name of a compound of ferric chloride and cotarnine hydrochlorate; hemostatic.

cotarni'næ chlor'idum (U.S.). Cotarnine chloride, $C_{12}H_{14}O_3NCl.H_2O$, stypticin; occurs as a yellow, odorless, crystalline powder, soluble in water or alcohol; employed in hemorrhage, especially uterine hemorrhage, locally in 1 or 2 per cent. solution, or internally in doses of gr. ¼–2 (0.015–0.13).

cotarnine (ko-tar'nēn) [a transposition of narcotine]. An alkaloidal principle, $C_{12}H_{15}NO_4$, derived from narcotine by the action of oxydizing agents; astringent. **c. hydrochlo'ride,** cotarninæ chloridum (U.S.). **c. phthal'ate,** styptol, a yellow crystalline powder, employed as a uterine hemostatic in doses of gr. ¾ (0.05) from three to five times a day.

COTe. Abbreviation of cathodal opening tetanus.

co'to. The bark of an unidentified tree in Bolivia; employed as an astringent in diarrhea and the night sweats of phthisis in doses of gr. 1–7½ (0.06–0.5).

cotoin (ko'to-in). A bitter principle, $C_{14}H_{12}O_4$, obtained from coto bark, occurring in the form of a yellow crystalline powder; dose gr ½–2 (0.03–0.13). **c. formal'dehyde,** fortoin.

Cott'ing's opera'tion [Benjamin E. *Cotting*, American surgeon, 1812–1898.] Cutting off the flesh at each side of the toe in cases of ingrowing toenail.

cott'on. The white fluffy fibrous covering of the seeds of a plant of the genus *Gossypium;* used extensively in surgical dressings, and the bark of the root is employed as an emmenagogue; see *gossypium*.

cott'onoid. Trade name of a preparation of absorbent cotton for surgical use.

Cotugno's aq'ueduct, canal', etc. (ko-toon'yo). See under *Cotunnius*.

Cotun'nius's aq'ueduct [Latinized name of Domenico *Cotugno*, Neapolitan anatomist, 1736–1822.] Aquæductus vestibuli. **C.'s canal',** C.'s aqueduct. **C.'s disease',** sciatica. **C.'s liq'uid,** liquor Cotunnii, perilymph. **C.'s nerve,** nasopalatine nerve. **C.'s space,** the sac of the membranous labyrinth containing the endolymph.

cotyle (kot'i-le) [G. *kotylē*, a socket, cup] Acetabulum.

cotyle'don [G. *kotylēdōn*, the hollow of a cup.] 1 The rudimentary leaf in the seed or embryo of a plant. 2. One of the aggregations of villi on the chorionic surface of the placenta.

cot'yloid [G. *kotylē*, a small cup, + *eidos*, appearance.] 1. Cup-shaped, cup-like. 2. Acetabular, relating to the cotyloid cavity or acetabulum. **c. cav'ity,** acetabulum. **c. lig'ament,** labrum glenoidale of the acetabulum. **c. notch,** incisura acetabuli.

Cotylogon'imus [G. *kotylē*, cup, + *gonimos*, productive.] A genus of *Trematoda* or flukes, one species of which, *C. heteroph'yes*, occurs in dogs and cats in Egypt and has been found in a few cases in man.

couch-grass (kowch'gras). Triticum

couching (kow'ching) [Fr. *coucher*, to lay down, to put to bed.] Operation for cataract, consisting in displacing the lens downward out of the line of vision by means of a needle-shaped instrument, the *couching-needle*.

cough (kawf). 1. A sudden explosive forcing of air through the glottis, excited by an effort to expel mucus or other matter from the bronchial tubes or larynx. 2. To force air through the glottis by a series of expiratory efforts. **barking c.,** cynobex **compres'sion c.,** c. excited by a growth compressing one of the larger bronchial tubes. **ear-c.,** a reflex c., through the auricular branch of the pneumogastric, excited by irritation in the external auditory canal **hebet'ic c.,** a nervous c. occurring frequently at puberty, and sometimes simulating tuberculosis. **re'flex c.,** a c. excited reflexly by irritation in some distant part, as the ear or the stomach. **stom'ach c.,** a reflex c. excited at times by irritation of the gastric mucous membrane. **win'ter c.,** chronic bronchitis, of the aged especially, coming on with the advent of cold weather and continuing until late spring.

coulomb (koo-lom') [see *Coulomb's law*.] A unit of quantity of electricity, $\frac{1}{10}$ of the absolute electromagnetic unit, the amount furnished by a current of one ampère in one second; symbol Q.

Coulomb's law (koo-lom') [Charles Augustin de *Coulomb*, French physicist, 1736–1806.] The force of attraction or repulsion between two electrically charged bodies varies directly as the charge of electricity and inversely as the distance between the bodies.

coumarin (koo'mah-rin) [*coumarou*, native name of Tonka bean.] (N.F.) Cumarin, coumaric anhydride, ortho-oxycinnamic anhydride; a neutral

principle obtained from Tonka bean, *Dypterix (Coumarouma) odorata*, and made synthetically from salicylic aldehyde; antispasmodic and narcotic, and is used to disguise the odor of iodoform.

Councilmania (kown-sil-man'ĭ-ah) [William Thomas *Councilman*, American pathologist, 1854–1933.] A genus of amebas. **C. dissim'ilis**, a species formerly called *Endamœba dysenteriæ*, but differing from it morphologically and culturally, having a nucleus with a more or less dispersed chromosome. **C. lafleur'i**, a species resembling *Endamœba coli*. **C. ten'uis**, formerly called *Entamœba tenuis*.

coun'ter-die. The hollow reverse of a die, used in swaging.

counterextension (kown"tur-ek-sten'shun). The resistance, or back-pull, made to extension on a limb; in the case of extension made on the leg, for example, counterextension may be effected by raising the foot of the bed so that the weight of the body pulls against the weight attached to the limb.

counterirritant (kown"tur-ir'i-tant). 1. An agent which causes irritation or a mild inflammation of the skin with the object of relieving a deep-seated inflammatory process; a derivative. 2. Relating to or producing counterirritation.

counterirrita'tion. Derivation; irritation or mild inflammation (redness, vesication, or pustulation) of the skin excited for the purpose of relieving an inflammation of the deeper structures.

counteropening (kown-tur-o'pen-ing). A second opening made at the dependent part of an abscess or other cavity containing fluid, which is not draining satisfactorily through an opening previously made.

counter-poison (kown-tur-poy'zun). 1. Antidote. 2. Antitoxin.

counter-punc'ture. Counteropening.

coun'terstain. A second stain of different color, having affinity for other tissues or cells than those taking the primary stain, employed to render more distinct the parts taking the first stain

countertraction (kown-tur-trak'shun). Counter-extension.

coup de fouet (koo-de-foo-a') [Fr. stroke of a whip.] Lawn-tennis leg, rupture of the plantaris muscle.

coup de soleil (koo-de-sŏ-lay') [Fr.] Sunstroke.

couple (kup'l). To copulate, noting especially the performance of the act by the lower animals.

cour'ses [Fr. *course;* L. *cursus*, a running, flowing] Menses, catamenia.

court-plaster (kort'plas-tur). Thin silk coated with isinglass, used as a protective for slight cuts and abrasions.

Courvoisier's law (koor-vwah-ze-a') [Louis G. *Courvoisier*, Swiss surgeon, 1843–1918.] A tumor of the head of the pancreas occasions dilatation of the gall-bladder. **C.'s sign,** a greatly distended gall-bladder, in case of obstruction in the common duct, speaks in favor of a tumor rather than an impacted calculus.

Courvoisier-Terrier syndrome (koor-vwah-sĭ-a' ter-ĭ-a' sin'drōm). Retention jaundice, decoloration of the feces, and dilatation of the gall-bladder, indicating obstruction due to a neoplasm of Vater's ampulla.

coussein (koo'se-in). Koussein, a mixture of the active principles of cusso or brayera.

coussin (koo'sin). Cosin, koussin, brayerin; an active principle, glucoside, of cusso, employed as a teniacide in doses of gr. 20–40 (1.3–2.6).

cou'sso. Cusso.

Couton's disease' (koo-toń'). Tuberculous spondylosis.

couvercle (koo-ver'kl) [Fr. cover, lid.] An external coagulum.

couveuse (koo-vēz') [Fr. a brooder.] An incubator for premature infants.

cov'er-glass. A thin glass disc or scale covering the object examined under the microscope.

cover-slip (kuv'ur slip). Cover glass.

cowhage (kow'āj). Mucuna, the hairs of the pods of *Mucuna pruriens* employed as an anthelmintic acting as an irritant to both the worm and its host.

cow-hocked. A condition in the horse due to breadth of the pelvis or the inward direction of the tibial bones which brings the hocks too close to each other; the hind cannons run forward and the hind toes turn outward.

Cow'ling's rule. The dose of any drug for a child is that fraction of the adult dose obtained by dividing the age of the child at the nearest birthday by 24. See *Young's rule.*

cowl-muscle. Musculus trapezius, cucullaris.

Cow'per's cyst [William *Cowper*, London anatomist, 1666–1709.] A retention cyst of one of C.'s glands. **C.'s gland,** glandula bulbourethralis.

Cowpe'rian. Relating to Cowper,* as C. cyst and C. gland.

cowperitis (kow-per-i'(e')tis) Inflammation of Cowper's glands.

cow'pox. Vaccina, vaccinia.

cow's-tail. Erigeron.

cox'a, gen. and pl. *cox'æ* [L.] 1. Hip-bone, os innominatum. 2 Hip-joint. **c. pla'na,** osteochondritis deformans juvenilis. **c. val'ga,** a deformity due to curvature of the neck of the femur in which the thigh is in a state of abduction, the opposite of c. vara. **c. va'ra** [L. *varus*, crooked], curvature, usually rachitic, of the neck of the femur, causing adduction of the thigh and apparent shortening of the limb.

coxag'ra [L. *coxa*, hip, + G. *agra*, seizure.] 1. Gout in the hip-joint. 2. Coxalgia(1).

coxal'gia [L. *coxa*, hip, + G. *algos*, pain] 1. Coxodynia, pain in the hip. 2 Coxitis, hip-joint disease.

coxarthritis (koks-ar-thri'(thre')tis) [L. *coxa*, hip + G. *arthron*, joint, + *-itis*.] Coxalgia, coxitis, hip-joint disease.

coxarthrocace (koks-ar-throk'ă-se) [L. *coxa*, hip, + G. *arthron*, joint, + *kakos*, bad] Disease of the hip-joint.

coxitis (kok-si'(se')tis). Inflammation of the hip-joint; hip-joint disease.

coxodyn'ia [L. *coxa*, hip, + G. *odynē*, pain.] Pain in the hip-joint, coxalgia.

coxofem'oral. Relating to the innominate bone and the femur.

c. p. Abbreviation for chemically pure

Cr. Chemical symbol of chromium.

crab. 1. A crustacean, many varieties of which are edible. 2. A crab-louse. 3. A bruise. **c. hand,** an erysipelatoid eruption, or progressive cellulitis, of the hand following a scratch by the shell of a crab or other shellfish; seemingly occurring only in susceptible individuals. **c. louse,** *Phthirius inguinalis* or *P. pubis*, a parasite infesting the pubis and neighboring hairy parts of the body.

crabs'-eyes. 1. Jequirity, the seeds of *Abrus precatorius.* 2. Concretions from the stomach of the crawfish, *Astacus fluviatilis;* employed as eyestones for removing foreign bodies from the conjunctiva; and internally, in powder form, as an antacid in doses of gr. 10–30 (0.6–2.0).

cracked-pot sound. See under *resonance.*

cra'dle. A frame employed to keep the bedclothes from pressing on a fractured or wounded part.

craft-palsy (kraft'pawl-zĭ). A professional neurosis, such as writer's cramp.

Crafts' test [Leo M. *Crafts*, American neurologist, *1863.] Stroking with a blunt point upward over the dorsal surface of the ankle, the leg being horizontal and the muscles relaxed, causes dorsal extension of the great toe in cases of organic disease of the pyramidal tracts.

Craigia (kra'gĭ-ah) [Charles F. *Craig*, U. S. Army surgeon, *1872.] A genus of ameboid and flagellated protozoans, parasitic in the human intestine, causing dysentery-like symptoms; possibly the same as Paramœba. Two species are recognized, *Cr. hom'inis* and *Cr. mi'grans.*

craigiasis (kra-gi'a-sis) [see *Craigia.*] Infection with *Craigia hominis*, giving dysenteric symptoms.

Cramer's splint (Krah'mer) [Friedrich *Cramer*, German surgeon 1847–1903.] A flexible splint, consisting of two stout wires, parallel, with fine cross wires.

crame'ria. Krameria.

cramp. 1. A painful tonic muscular contraction; spasm. 2. Griping pain in the intestine; colic. 3. A professional neurosis, qualified, according to the occupation of the sufferer, as *seamstress's c.*, *telegrapher's c.*, *violinist's c.*, *writer's c.*, etc. **intermitt'ent c.,** tetany.

cramp-bark. The bark of *Viburnum opulus.*

Cramp'ton's line [Sir Philip *Crampton*, Irish surgeon, 1777–1858.] A line from the apex of the cartilage of the last rib downward and forward nearly to the crest of the ilium, then forward parallel with it to a little below the anterior superior spine; a guide to the common iliac artery. **C.'s muscle,** the radiating fibers of the ciliary muscle.

cra'nial. Relating to the cranium.

craniamphitomy (kra-nĭ-am-fit'o-mĭ) [G. *kranion*, skull, + *amphi*, around, + *tomē*, cutting.] A decompression operation of wide extent, the entire circumference of the calvarium being divided.

craniec'tomy [G. *kranion*, skull, + *ektomē*, excision.] Exsection of **a** portion of the skull. **lin'ear c.,** linear section, sometimes exsection of a strip of the skull to relieve compression of the brain.

cranio-au'ral. Relating to the skull and the ear

craniocele (kra'ne-o-sēl) [G. *kranion*, skull, + *kēlē*, hernia.] Encephalocele.

craniocer'ebral. Relating to the skull and the brain

cranioclasia, cranioclasis (kra-nĭ-o-kla'sĭ-ah, kra-nĭ-ok'la-sis) [G. *kranion*, skull, + *klasis*, a breaking.] Crushing of the fetal skull in cases of dystocia.

cra'nioclast [G. *kranion*, cranium, + *klaō*, I break in pieces.] An instrument like a strong forceps used for crushing and extracting the fetal head after perforation.

cra'nioclasty. Cranioclasia.

craniocleidodysostosis (kra"nĭ-o-klī"do-dis-os-to'sis) [G. *kranion*, skull, + *kleis(kleid-)*, key (clavicle), + *dys-*, bad, + *osteon*, bone, + *-ōsis.*] A congenital condition marked by deficient and defective ossification of the clavicles and bones of the skull and face.

craniofacial (kra"nĭ-o-fa'shal). Relating to both skull and face. **c. an'gle,** the angle made at the midpoint of the sphenoethmoidal suture by the meeting of the basifacial and basicranial axes **c. ax'is,** a straight line passing through the mesethmoid presphenoid, basisphenoid, and basioccipital bones **c. notch,** a defect in the osseous partition between the orbital and nasal cavities.

craniognomy (kra-nĭ-og'no mĭ) [G. *kranion* skull, + *gnōmē*, judgment.] Phrenology; the determination of the character, temperament, tendencies, etc., of the individual by a study of the external configuration of the cranium.

cra'niograph. An instrument for making drawings to scale of the diameters and general configuration of the skull.

craniog'raphy [G. *kranion*, skull, + *graphē*, drawing.] The art of representing by drawings, made from measurements, the configuration of the skull and the relations of its angles and craniometric points.

craniology (kra-nĭ-ol'o-jĭ) [G. *kranion*, skull, + *-logia*] The science dealing with variations in size, shape, and proportion of the cranium, especially with the variations characterizing the different races of men.

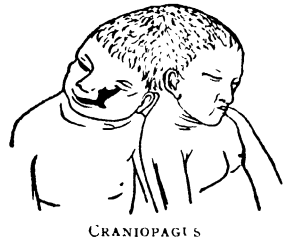
craniomalacia (kra"nĭ-o-mal-a'shĭ-ah) [G *kranion*, skull, + *malakia*, softness.] Softening of the bones of the skull.

craniom'eter. An instrument for measuring the diameters of the skull.

craniomet'ric. Relating to craniometry. **c. points,** the various prominences or other marks on the skull used as fixed points in craniometry; a list of these is given under *point*, they are defined under their respective titles, and are illustrated for the most part in Plate VII.

craniom'etry [G. *kranion*, skull, + *metron*, measure.] Measurement of the dry skull, after removal of the soft parts, and study of its topography.

craniop'agus [G. *kranion*, skull, + *pagos*, solid *pēgnymi*, I make fast] A twin monster with fused skulls; see *janiceps*, *syncephalus* **c. parasit'icus,** a variety of c. in which one fetus is rudimentary in form and parasitic on the other



CRANIOPAGUS

craniopharyngeal (kra"nĭ-o-far-in'je-al). Relating to the cavity of the skull and to the pharynx.

cra'niophore [G. *kranion*, skull, + *phoros*, bearing An apparatus for holding a skull while its angles and diameters are measured.

cra'nioplasty [G. *kranion*, skull, + *plassō*, I form The operative repair of a defect of the skull.

craniorrhachischisis (kra"ne-o-răk-kis'kĭ-sis) [G *kranion*, skull, + *rhachis*, spine, + *schisis*, cleaving.] Congenital fissure of the skull and spinal column.

craniosacral (kra-nĭ-o-sa'kral). Relating to the skull and the sacrum, a term applied to the craniobulbar and sacral ganglia and associated fibers which constitute the autonomic, as distinguished from the sympathetic nervous system

cranioschisis (kra-ne-os'kĭ-sis) [G. *kranion*, skull, + *schisis*, a cleavage.] Congenital fissure of the skull

cranios'copy [G. *kranion*, skull, + *skopeō*, I view. Examination of the skull in the living subject fo

phrenological, craniometrical, or diagnostic purposes.

craniospi'nal [G. *kranion*, skull, + L. *spina*, spine.] Craniorrhachidian, relating to the cranium and spinal column.

craniostenosis (kra"nĭ-o-stĕ-no'sis) [G. *kranion*, skull, + *stenōsis*, a narrowing.] A contraction of the cranial capacity or narrowing of its foramina by exostoses.

craniostosis (kra"nĭ-os-to'sis) [G *kranion*, skull, + *ostōsis*, bony framework.] Premature ossification of the skull and obliteration of its sutures.

craniotabes (kra"nĭ-o-ta'bēz) [G. *kranion*, skull, + L. *tabes*, a wasting.] Circumscribed craniomalacia; a disease marked by the presence of areas of thinning and softening in the bones of the skull, usually of syphilitic or rachitic origin.

craniotome (kra'nĭ-o-tōm). An nstrument designed for perforation and crushing of the fetal skull.

craniot'omy [G. *kranion*, cranium, + *tomē*, a cutting.] 1. Perforation of the head of the fetus, removal of the contents, and compression of the empty skull, when delivery by natural means is impossible. 2. Trephining; incision through one of the cranial bones, as for decompression.

craniotonos'copy [G. *kranion*, skull, + *tonos*, tone, + *skopeō*, I examine.] Auscultatory percussion of the cranium.

craniotrypesis (kra"nĭ-o-tri-pe'sis) [G. *kranion*, skull, + *trypēsis*, a boring.] Trephining of the skull.

craniotympan'ic. Relating to the skull and the middle ear

cranitis (kra-ni'(ne')tis) [G *kranion*, skull, + *-itis*] Inflammation of the bones of the skull.

cra'nium [L.; G. *kranion*.] Skull, the bones of the head collectively; in a more limited sense, the brain-pan, the bony case containing the brain, excluding the bones of the face. **c. cerebra'le,** cerebral cranium, calvaria, skull-cap **c. viscera'le,** visceral cranium, bones of the face.

crap'ulent, crap'ulous [L. *crapula*, drunkenness.] Drunken, suffering from alcoholic intoxication.

cra'sis [G. *krasis*, a mingling.] Constitution, temperament.

crassamen'tum [L. thickness.] Blood-clot, coagulum.

cratægus (kră-te'gus) [G. *krataigos*, a flowering thorny plant.] The ripe fruit of *Cratægus oxyacantha*, hawthorn; employed in eclectic practice in the treatment of various functional and organic cardiac disorders, especially when accompanied by rapid and irregular pulse; dose of the specific preparation 5–20 drops in water three or four times a day.

crater'iform [L. *crater*, bowl, + *forma*, shape] Hollowed like a bowl or a saucer.

crave (krāv) [A.S. *crafian*.] To desire strongly, to long for.

cra'ving. An urgent or imperative longing.

craw-craw. A term applied in West Africa to a vesiculopustular skin eruption, attended with itching. In some cases embryos of *Filaria perstans* have been found in the vesicles, but they are not usually recognized as the cause of the disease which is regarded by most authorities as simply a pustular eczema. The name has also been given to papular and pustular eruptions in the French Congo and on the Cameroon Coast.

craw'ley-root. Corallorhiza.

crealbin (kre-al'bin). An intestinal antseptic consisting of a mixture of albumin and creolin.

cream (krēm) [L. *cremor*.] 1. The upper fatty layer which forms in milk on standing or which is separated from it by centrifugalization, it contains about the same amount of sugar and protein as milk, but from 12 to 40 per cent more of fat. 2. Any whitish viscid fluid resembling cream. **cold c.,** unguentum aquæ rosæ. **c. of bis'muth,** cremor bismuthi, made by triturating 20 parts of hydrated oxide of bismuth with 80 parts of water; used externally as a soothing application. **c. of tar'tar,** potassii bitartras. **leu'cocyte c.,** the upper milky layer (containing the leucocytes) in a mixture of blood and salt solution, after the erythrocytes have been sedimented by centrifugalization.

cre'asote. Creosote.

cre'atine [G. *kreas(kreat-)*, flesh.] A crystallizable alkaloid, $C_4H_9N_3O_2$, obtained from the juice of flesh.

creatinase (kre'ă-tĭ-nāz). A deoxidizing ferment which converts creatine into creatinine.

creatine'mia, creatinæ'mia. The presence of creatine in the peripheral blood.

creatinine (kre-at'in-ēn). An alkaloidal derivative, $C_4H_7N_3O$, of creatine.

creatorrhea (kre-ă-tor-re'ah) [G. *kreas*, flesh, + *rhoia*, a flow.] The passage of undigested muscle fibers in the stool, as occurs in certain cases of pancreatic disease.

creatotoxism (kre-ă-to-toks'izm) [G. *kreas(kreat-)*, flesh, + *toxikon*, poison] Creotoxism, meat poisoning.

crèche (kresh) [Fr.] A day-nursery.

Credé's antisep'tic (kreh-da') [Benno C. *Credé*, German surgeon,*1847] Silver citrate, itrol. **C.'s oint'ment,** an ointment of collodial silver, 15, distilled water, 5, white wax, 10, benzoinated lard, 70 parts; dose, gr. 15–60 (1.0–4.0) by inunction. **C.'s sol'uble sil'ver,** collargol

Credé's meth'od (kreh-da') [Karl Siegmund Franz *Credé*, German gynecologist and obstetrician, 1819–1892.] 1. Instillation of one drop of a two per cent solution of silver nitrate into each eye of the newborn infant, to prevent ophthalmia neonatorum. 2. Resting the hand on the fundus uteri from the moment of the expulsion of the fetus, and gently rubbing in case of hemorrhage or failing contraction; then, when the afterbirth is loosened it is expelled by firm compression or squeezing of the fundus by the hand.

cree'ping erup'tion. Larva migrans.

cremas'ter [G. *kremastos*, hanging.] A thin sheet, partly muscle and partly fascia, enveloping the spermatic cord and testis; the muscular fibers are derived in part from the obliquus internus abdominis, the fascia from the general superficial fascia of the abdomen. In the female the structure is composed chiefly of fascia and partially envelops the round ligament of the uterus.

cremaster'ic. Relating to the cremaster muscle.

cremate (kre-māt') [L. *cremare*, to burn.] To consume by fire, especially to reduce the bodies of the dead to ashes in an intensely heated oven.

crema'tion. The process of cremating or consuming the bodies of the dead by heat, as a substitute for burial

cremato'rium, cre'matory. A furnace, with waiting room, chapel, and other accessories, in which the bodies of the dead are consumed by fire.

cremnopho'bia [G. *krēmnos*, precipice, + *phobos*, fear.] Morbid fear of precipices or steep places.

cremobismuth (kre-mo-biz'muth). Milk of bismuth, a suspension of bismuth subcarbonate in water in the proportion of gr. 40 to the

fluidounce; dose, 2 fluidrams (8.0) every 2 or 3 hours.

cremocarbonates (kre-mo-kar'bo-nāts). Trade name of a colloidal suspension of magnesium, bismuth, and calcium carbonates, 20 grains each of the first 2, and 10 grains of the last, with pancreatin, 4 grains, and chloroform, 1 minim, in each ounce; recommended as an antacid in doses of ½ to 2 teaspoonfuls according to age.

cre'mor [L.] Cream. **c. bismu'thi,** cream* of bismuth. **c. tar'tari,** cream of tartar, potassii* bitartras.

cre'na [L. a notch.] A notch, cleft. One of the notches into which the opposing projections fit in the cranial sutures. **c. a'ni** [BNA], anal or gluteal cleft, the sulcus between the nates. **c. clu'nium** [L. *clunis*, buttock], c. ani. **c. cor'dis,** one of the two furrows on the surface of the heart marking the division of the ventricles; sulcus longitudinalis.

cre'nate, cre'nated [L. *crena*, a notch.] Notched, indented; noting the outline of a shriveled red blood cell or of a bacterial culture. **c. leaf,** one having a margin with broad rounded teeth.

crena'tion. The process of becoming or state of being crenated.

crenother'apy [A. *krēnē*, spring, + *therapeia*, treatment] Crounotherapy.

Cre'nothrix [G. *krēnē*, a spring, well, + *thrix*, hair.] A genus of *Chlamydobacteriaceæ*, in which cell division occurs in one or three planes. **C. polyspo'ra,**[0] the only species, consists of unbranched filamentous organisms in sheaths containing iron oxide; they are water organisms forming greenish brown masses.

cre'oform. Geoform.

creolal'bin. Crealbin.

cre'olin. A blackish brown syrupy preparation of cresol; disinfectant in ½ to 2 per cent. solutions.

cre'osal. Tannosal, tannic acid ester of creosote; a brown amorphous powder with the odor of creosote; astringent and antiseptic in doses of gr. 5–15 (0.3–1.0).

cre'osoform. Creosote formaldehyde.

cre'osol. Homoguaiacol, a slightly yellowish aromatic liquid, $C_8H_{10}O_2$, distilled from guaiac or from beechwood tar; internal antiseptic in doses of ♏½–1 (0.03–0.06).

creosomag'nesol. An antiseptic mixture of creosote, magnesia, and potassa; dose, gr. 1–2 (0.06–0.13).

cre'osotal. Creosote carbonate.

creosote (kre'o-sōt). Creosotum. **beech'wood c.** creosote obtained from oleum fagi, or beechwood tar. **c. car'bonate,** creosoti carbonas (U.S.), creosotal, a thick yellowish liquid, odorless and tasteless; used as a substitute for creosote, and in the treatment of croupous pneumonia, in doses of ♏5–10 (0.3–0.6). **c. formal'dehyde,** creosoform, an oily liquid recommended in the treatment of tuberculous enteritis in doses of ♏5–30 (0.3–2.0), and locally as an antiseptic for ulcers, anthrax, and the skin lesions of tuberculosis. **c. phenylpro'pionate,** proposote, an amber-colored, oily liquid, with the odor of creosote and a bitterish taste, containing the equivalent of 50 per cent. of creosote; employed to meet the indications of creosote in general in doses of ♏5 to 10 (0.3 to 0.6 c.c.) 2 or 3 times a day. **c. phos'phate,** phosote, a thick, oily liquid of bitter, astringent taste; used in place of pure creosote in doses of ♏2–10 (0.13–0.6). **c. phos'phite,** creosote-phosphorous-ester, phosphotal, occurs in crystal form; employed as a substitute for pure creosote in doses of gr. 5–10 (0.3–0.6). **c. val'erate, c. vale'rianate,** eosote, a yellowish oily liquid; used to check gastric fermentation and in tuberculosis; dose, ♏2–10 (0.13–0.6).

creoso'tum [G. *kreas*, flesh, + *sōtēr*, preserver.] (U. S. and Br.) Creosote, creasote; a mixture of phenols chiefly guaiacol and creosol obtained during the distillation of wood-tar, preferably that derived from beechwood, occurring in the form of a colorless or yellowish oily liquid having a smoky aromatic odor and a pungent taste; it is employed in the treatment of tuberculosis by inhalation and internally in doses of ♏1–10 (0.06–0.6), and also in fermentative dyspepsia.

creotox'in. Any toxin or poisonous principle generated in meat by bacterial action.

creotox'ism [G. *kreas*, flesh meat, + *toxikon*, poison.] Poisoning by tainted meat.

crep'itant [L. *crepitare*, to crackle.] Crackling noting a fine râle heard in pneumonia and in certain other conditions.

crepita'tion. 1. Crackling; the quality of sound of a crepitant râle, resembling that heard on rubbing a lock of hair between the fingers. 2. The sensation felt on placing the hand over the seat of a fracture when the broken ends of the bone are moved.

crep'itus. 1. Crepitation. 2. A noisy discharge of gas from the intestine. **artic'ular c.,** the grating of a joint. **bo'ny c.,** crepitation (2). **c. in'dux, c. re'dux,** see *râle*.

cre'salol. Cresol, or cresyl, salicylate, a condensation product of salicylic acid with cresol, a white crystalline powder insoluble in water; employed in rheumatism and as an intestinal antiseptic in doses of gr. 5–15 (0.3–1.0).

cresamine (kres-am'in). A solution of 25 per cent. each of tricresol and of ethylenediamine; powerfully bactericidal.

cre'sapol. Trade name of a mixture of cresols in soap.

cres'atin. An oily liquid, metacresyl acetate, used externally in the treatment of diseases of the mucous membrane of the upper respiratory tract.

crescent (kres'ent) [L. *crescere*, to increase.] 1. Any figure of the shape of the moon in its first quarter. 2. The figure made by the gray columns or cornua on cross section of the spinal cord. 3. The primitive sexual form of the malignant malarial parasite, developing later into the gametocyte, or flagellated body. **artic'ular c.,** meniscus articularis [BNA]. **Gianuz'zi's c.,** see *Gianuzzi*. **myop'ic c.,** a white or grayish white crescentic patch in the fundus of the eye to the outer side of the optic disc, due to atrophy of the chorioid, in posterior staphyloma.

crescentic (kres-sen'tik). Shaped like a crescent, or the moon in its first quarter.

crescograph (kres'ko-graf) [L. *crescere*, to grow, + G. *graphō*, I draw or write.] A device for recording the degree and rate of growth.

cres'egol. See *egols*.

cre'sin. A clear brown liquid containing 25 parts of cresol in 75 parts of a solution of sodium cresoxylacetate; disinfectant.

cre'soform. A mixture of creosote and formaldehyde; employed as an external antiseptic and sometimes given internally in doses of gr. 10–30 (0.6–2.0).

cre'sol (U.S., Br.). Tolyl hydroxide, $C_6H_4.OH.CH_3$, a straw-colored liquid, a mixture of the three isomeric cresols, ortho-, meta-, and para-cresol, obtained from coal-tar. Its properties are sim-

ilar to those of carbolic acid (phenol), but it is less poisonous; dose m½–2 (0.03–0.12).

cresot'ic acid. Homosalicylic acid, oxytoluic acid; an acid occurring in three isomeric forms (ortho-, meta-, and para-), obtained from cresols; the sodium salt of paracresotic acid has been suggested as an antipyretic in doses of gr. 10–30 (0.6–2.0).

crest [L. *crista.*] 1. A ridge, especially a bony ridge; see *crista.* 2. The ridge of a horse's neck. **neu'ral c.,** the line along the neural canal where the neural folds meet. **tur'binated c.,** crista ethmoidalis; crista conchalis.

cres'yl. Cresol. **c. hy'drate,** cresol.

cresylate (kres'ĭ-lāt). A salt of cresylic acid, or cresol.

cresyl'ic acid. Cresol.

cres'ylone. Trade name of a preparation said to be similar to liquor* cresolis compositus.

cre'ta [L.] Chalk, calcium carbonate. **c. gal'lica,** French chalk, a magnesium silicate harder than talc. **c. præpara'ta** (U.S.), prepared chalk, purified native calcium carbonate, a grayish white amorphous powder, usually moulded into cones; employed as a mild astringent and antacid, in doses of gr. 10–30 (0.6–2.0).

cre'tin [Fr. *crétin.*] An idiotic dwarf, the subject of congenital myxedema.

cretinism (kre'tin-izm). Congenital myxedema, occurring both sporadically and endemically; it appears during the first three years of life and results in an arrest of bodily growth and of mental development, the subjects of the disease being dwarfed idiots. **fe'tal c.,** achondroplasia.

cretinistic (kret-in-is'tik). Cretinous.

cretinoid (kre'tĭ-noyd) [G. *eidos,* resemblance] Resembling a cretin; presenting symptoms similar to those of cretinism.

cretinous (kre'tĭ-nus). Relating to cretinism or a cretin.

crevice (krev'is) [Fr. *crevasse.*] A crack or small fissure, especially in a solid substance. **gin'gival c.,** subgingival space.*

crevicular (krĕ-vik'u-lar). Relating to any crevice, especially, in dentistry, to the gingival crevice or subgingival space.*

cribb'ing or **crib-biting.** A habit, formed by a horse when young, of biting at the manger or other objects; air is often sucked in at this time, hence the synonym wind-sucking.

crib'rate [L. *cribrum,* a sieve.] [NK]. Perforated like a sieve, or profusely pitted.

cribra'tion. 1. Sifting, passing through a sieve. 2. The condition of being cribrate or numerously pitted or punctured.

crib'riform [L. *cribrum,* a sieve, + *forma,* form.] Sieve-like; containing many perforations. **c. plate,** lamina cribrosa of the ethmoid bone.

cribrum (krib'rum) [L. a sieve.] Lamina cribrosa [BNA]. **c. benedic'tum,** area cribrosa [BNA].

Crichton-Browne's sign (kri'ton) [Sir James *Crichton-Browne,* English physician, *1840.] A slight tremor at the angles of the mouth and at the outer canthus of each eye in beginning general paresis.

cricoarytenoid (kri-ko-ă-rit'e-noyd). Relating to the cricoid and arytenoid cartilages.

cricoarytænoideus (kri-ko-ă-rit"e-no-id'e-us). One of two muscles, which see under *musculus.*

cri'coid [G. *krikos,* a seal-ring, + *eidos,* form.] Noting a cartilage of the larynx which resembles a seal-ring, cartilago cricoidea.

cricoidec'tomy [G. *ektomē,* excision.] Excision of the cricoid cartilage.

cricopharyn'geal. Relating to the cricoid cartilage and the pharynx; noting a muscle, *musculus cricopharyngeus.*

cricothyreoideus (kri"ko-thi-re-o-id'e-us). The cricothyroid muscle, see *musculus.*

cricothyreot'omy [G. *tomē,* incision.] Division of the cricoid and thyroid cartilages.

cricothy'roid. Relating to the cricoid and thyroid cartilages. **c. ar'tery,** arteria cricothyreoidea. **c. joint,** articulatio cricothyreoidea, articulation between the inferior cornu of the thyroid and the side of the cricoid cartilage on either side. **c. lig'ament,** ligamentum cricothyreoideum. **c. mem'brane,** membrana cricothyreoidea. **c. muscle,** musculus cricothyreoideus.

cricot'omy [G. *tomē,* incision.] Division of the cricoid cartilage.

cricotracheotomy (kri-ko-tra-ke-ot'o-mĭ). Division of the cricoid cartilage and the upper rings of the trachea, for respiratory relief in case of closure of the glottis.

criminology (krim-ĭ-nol'o-jĭ) [L. *crimen,* crime, + G. *-logia.*] Criminal anthropology; the branch of science which deals with the physical and mental characteristics of criminals.

crinogenic (krin-o-jen'ik) [G. *krinō,* I separate, + *gennaō,* I produce.] Causing secretion, stimulating a gland to increased function.

Cri'num asiat'icum. A plant of Asia, the poison bulb, the juice of which is powerfully emetic and is also used as an arrow poison. **C. ceylan'icum,** a plant of southeastern Asia which has properties similar to those of squill and has been used as a substitute for this drug

cripple (krip'l) [A. S. *creópan,* to creep.] A lame person.

Cripps' ob'turator [W. Harrison *Cripps,* English surgeon, *1869–1923.] A device for closing a gastric fistula. **C.'s opera'tion,** colostomy performed by an incision at right angles to a line drawn from the left anterior-superior spine of the ilium to the umbilicus.

cri'sis [G. *krisis,* a separation, crisis.] 1. A sudden change in the course of an acute disease. A disease which terminates by *crisis* is one in which a change for the better occurs suddenly (as in pneumonia), as distinguished from one which terminates by *lysis.** 2. A period of biological change, as puberty. 3. A paroxysmal pain in an organ or circumscribed region of the body occurring in the course of tabes dorsalis. **anaphylac'toid c.,** colloidoclastic shock.* **blood c.,** (1) a suddenly appearing leucocytosis, indicating a change for the better in the course of a grave blood disease; (2) sudden appearance of a large number of erythroblasts in the blood-stream. **bron'chial c.,** an attack of spasmodic coughing occurring in tabes dorsalis. **car'diac c.,** an attack of rapid heart action with suffocative dyspnea, occurring in tabes dorsalis. **clit'oris c.,** sexual excitement occuring paroxysmally in a woman suffering from tabes dorsalis. **Dietl's c.,** see *Dietl.* **gas'tric c.,** an attack, usually of several days' duration of severe pain in the abdomen or around the waist, accompanied by nausea and vomiting and occasionally diarrhea, occurring in the course of, or preceding, tabes dorsalis. **hepat'ic c.,** an attack of severe pain in the region of the liver in tabes dorsalis **intes'tinal c.,** an attack similar to a gastric crisis occurring in the intestine. **laryn'geal c.,** an attack of paralysis of the abductor, or spasm of the adductor, muscles of the larynx with dyspnea and noisy respiration, occur-

ring in tabes dorsalis. **nephral'gic c.**, renal c. **oc'ular c.**, severe pain in the eyes with lacrymation and photophobia occurring sometimes in the course of tabes dorsalis. **pharyn'geal c.**, an attack of repeated swallowing movements with abnormal sensations in the pharynx, occurring in tabes dorsalis. **rec'tal c.**, severe paroxysmal pain in the rectum in certain cases of tabes dorsalis. **re'nal c.**, severe pain, resembling renal colic, occurring sometimes in tabes dorsalis. **tabet'ic c.**, crisis (3). **thorac'ic c.**, severe constrictive pain in the chest, resembling that of angina pectoris, with muscular contractions, occurring as a form of tabetic crisis. **ves'ical c.**, severe pain in the bladder, occurring in paroxysms of some duration, in the course of tabes dorsalis. **vis'ceral c.**, a tabetic c. occurring in any of the thoracic or abdominal viscera.

Cris'mer's test [Léon *Crismer*, Belgian chemist, *1858.] For glucose: the suspected fluid is boiled with a 1–1000 solution of safranin and if glucose is present the yellow color is extinguished.

crispa'tion [L. *crispare*, to curl.] 1. A "creepy" sensation due to slight fibrillary muscular contractions 2. Retraction of a divided artery or of muscular fibers or other tissues when cut across.

crista, pl. *cristæ* (kris'tah) [L. crest.] A ridge crest, or elevated line projecting from a level or evenly rounded surface.

c. acus'tica, acoustic crest or ridge, c. ampullaris.

c. ampulla'ris [BNA], an elevation on the inner surface of each ampulla of the semicircular duct of the labyrinth corresponding to the sulcus ampullaris on the outer side; it is apparently an auditory terminal organ, consisting of hair cells and supporting cells similar to those of the macula acustica of the utricle and of the saccule.

c. ante'rior tib'iæ [BNA], **c. dorsa'lis tibiæ** [NK], crest of the tibia, shin; the sharp anterior margin of the tibia.

c. arcua'ta [BNA], arched ridge, a ridge on the anterior or external surface of the arytenoid cartilage separating the fovea triangularis above from the fovea oblonga below.

c. basila'ris, basilar crest; an inward triangular projection of the ligamentum spirale cochleæ to which is attached the membrana basilaris, forming the floor of the ductus cochlearis.

c. buccinato'ria [BNA], buccinator crest; a ridge passing from the base of the coronoid process of the mandible to the region of the last molar tooth; it gives attachment to the buccinator muscle.

c. concha'lis [BNA], turbinated crest, inferior turbinated crest; (1) a ridge on the vertical plate of the palate bone, about its middle, which articulates with the posterior part of the inferior turbinated bone; (2) a ridge on the lower part of the nasal process of the maxilla articulating with the inferior turbinated bone.

c. cu'tis [BNA], ridge of the skin, one of numerous ridges on the skin of the palms and soles, corresponding to rows of papillæ.

c. deltoid'ea, deltoid crest, the roughened prominence on the humerus where the deltoid muscle is inserted.

c. denta'lis, a ridge on the alveolar processes of the jaw-bones in the fetus.

c. dorsa'lis fib'ulæ [NK], anterior crest of the fibula.

c. dorsa'lis tib'iæ [NK], anterior crest of the tibia.

c. ethmoida'lis, ethmoidal crest; (1) **agger nasi** [BNA], a ridge on the upper part of the inner surface of the nasal process of the maxilla, giving attachment to the anterior portion of the middle turbinated bone; (2) [BNA], a ridge near the upper extremity of the vertical plate of the palate bone, articulating with the posterior portion of the middle turbinated bone; ethmoidal crest, superior turbinated crest.

c. falcifor'mis, falciform crest, a horizontal projection dividing the lamina cribrosa, or cribrum, at the fundus of the internal auditory meatus, into two unequal parts.

c. fem'oris [NK], **linea aspera** [BNA].

c. fronta'lis, frontal crest; a ridge arising at the termination of the sagittal sulcus on the cerebral surface of the frontal bone and ending at the foramen cæcum.

c gal'li [BNA], cock's comb; the anterior bulbate portion of the lamina perpendicularis of the ethmoid bone: projecting above the level of the cribriform plate; it gives attachment to the falx cerebri.

c. glute'a, gluteal crest or ridge, a line on the anterior surface of the femur, starting from about the level of the lesser trochanter and merging below into the outer lip of the linea aspera; it affords attachment to the gluteus maximus muscle, being at that point developed into an outstanding process, the tuberositas glutea or trochanter tertius.

c. hel'icis, crus helicis, prominent portion of the external ear, dividing the concha into the cymba above and the cavum conchæ below.

c. ili'aca [BNA], iliac crest, the curved superior border of the ilium.

c. infratempora'lis [BNA], infratemporal crest, pterygoid ridge of the sphenoid bone, a rough ridge marking the angle of union of the temporal and infratemporal surfaces of the greater wing of the sphenoid bone.

c. interos'sea [BNA], interosseous crest; (1) a ridge on the external border of the ulna and internal border of the radius, giving attachment to the interosseous membrane, (2) one of two ridges on the contiguous surfaces of the tibia and fibula respectively, giving attachment to the interosseous membrane.

c. intertrochanter'ica [BNA], intertrochanteric crest or ridge, intertrochanteric line, a rounded ridge passing over the posterior surface of the femur between the greater and lesser trochanters, marking the junction of the neck with the shaft.

c. lacrima'lis ante'rior [BNA], anterior lacrymal crest; a vertical ridge on the external surface of the nasal process of the maxilla, forming part of the nasal margin of the orbit

c. lacrima'lis poste'rior [BNA], posterior lacrymal crest; a vertical ridge on the external, orbital, surface of the lacrymal bone.

c. nasa'lis, nasal crest; a ridge along the line of union of the palate bones and the posterior part of that of the maxillæ, which articulates with the lower border of the vomer.

c. obturato'ria, obturator crest or ridge, a ridge running on the surface of the pubis from the spine to the upper border of the cotyloid notch.

c. occipita'lis exter'na [BNA], external occipital crest, linea nuchæ mediana, a ridge on the under surface of the occipital bone extending from the external occipital protuberance to the border of the foramen magnum.

c. occipita'lis inter'na, internal occipital crest, a ridge running from the internal occipital protuberance to the posterior margin of the foramen magnum, giving attachment to the falx cerebelli.

c. phal'lica [NK], **c. urethralis** [BNA].

c. pu'bis, crest of the pubis, termination of the pectineal line or pecten pubis.

cris'tæ sacra'les articula'res [BNA], irregular ridges on the posterior surface of the sacrum, one on either side of the crista media, formed by the fusion of the articular processes of the sacral vertebræ.

cris'tæ sacra'les latera'les [BNA], the rough irregular longitudinal projections on the posterior surface of the sacrum external to the sacral foramina, one on either side of the bone, corresponding to the lateral processes of the vertebræ.

c. sacra'lis me'dia [BNA], the ridge on the posterior surface of the sacrum formed by the fused vertebral spines.

c. sphenoida'lis [BNA], sphenoidal crest, ethmoidal crest; a vertical ridge of bone on the anterior surface of the body of the sphenoid bone which articulates with the perpendicular plate of the ethmoid, forming part of the bony septum of the nose.

c. spira'lis, spiral crest, lamina dentata, the finely serrated edge of the lamina spiralis ossea of the cochlea.

c. supramastoid'ea, c. temporalis (3), the posterior root of the zygomatic process of the temporal bone

c. supraventricula'ris [BNA], a slight ridge on the inner wall of the right ventricle, marking off the conus arteriosus.

c. tempora'lis, (1) linea temporalis of the frontal bone; (2) linea temporalis superior et inferior of the parietal bone; (3) c. supramastoidea of the temporal bone.

c. termina'lis [BNA], a crest marking the upper termination of the pectinate muscles in the right atrium of the heart, and bounding the sinus venarum cavarum.

c. tib'iæ, c. anterior tibiæ.

c. tuber'culi ma'jor'is [BNA], crest of larger tubercle, posterior bicipital ridge, posterior lip of the bicipital groove (sulcus intertubercularis), giving attachment to the pectoralis major muscle.

c. tuber'culi mi'nor'is [BNA], crest of smaller tubercle, anterior bicipital ridge, anterior lip of the bicipital groove, giving attachment to the teres major muscle.

c. tympan'ica [NK], a ridge on the annulus tympanicus.

c. urethra'lis [BNA], (1) c. phallica [NK], a longitudinal fold on the posterior wall, or floor, of the urethra extending from the uvula of the bladder into the membranous urethra; about the center of the prostatic portion it presents a raised ridge, the colliculus seminalis; (2) a conspicuous longitudinal fold in the mucous membrane on the posterior wall of the female urethra.

c. vestib'uli, crest of the vestibule, an oblique ridge on the inner wall of the vestibule of the labyrinth, bounding the recessus sphæricus above and posteriorly.

Cristispira[0] (kris-tĭ-spi'rah) [L. *crista*, ridge, crest, + G. *speira*, coil.] A genus of the family *Spirochætaceæ*, the species of which include long wavy organisms with a flattened longitudinal ridge, the so-called undulating membrane; they are parasitic in shellfish.

Critch'ett's opera'tion [George *Critchett*, London oculist, 1817–1882.] Removal of the anterior portion of the eyeball.

crith [G. *kirthē*, barley corn.] The weight of 1000 c.c. of hydrogen gas taken as the unit of weight of gases.

crit'ical. Relating in any way to a crisis of any kind.

CrO_3. Chromic anhydride, often improperly called chromic acid which is H_2CrO_4.

crocidismus (kro-si-diz'mus) [G. *krokē*, tuft of wool.] Carphologia.

Crocq's serum [Jean *Crocq*, Belgian physician, 1868–1925.] A 2 per cent. solution of sodium phosphate.

cro'cus [G. *krokos*, saffron.] (N.F. and Br.) Saffron, the dried stigmas of *Crocus sativus* (*C. officinalis*), employed occasionally in flatulent dyspepsia and as an antispasmodic in asthma and dysmenorrhea, in doses of gr. 5–30 (0.3–2.0).

Crom'bie's ul'cer. An ulcer of the gum between the last two molar teeth, occurring in sprue.

crook'ed-foot. Lack of symmetry in the two sides of a horse's hoof, due usually to bad farriery.

cro'nol. An analgesic consisting of amidopyrine and acetphenetidin of each 2½ grains, and caffeine ¼ grain in each tablet; dose, 1 to 3 tablets.

Crookes space (krooks) [Sir William *Crookes*, English physicist, 1832–1919.] A dark space at the cathode in a nearly exhausted tube through which a current of electricity is passed. **C.'s tube,** a glass tube with two electrodes between which an electrical discharge takes place in practically a vacuum. The cathode rays are given off in the tube and from the place where they strike, either the wall of the tube or a platinum disc within the tube, the *x*-rays arise.

cross (kraws) [Fr. *croix*, L. *crux*.] 1. Any figure in the shape of a cross formed by two intersecting lines, + or ×. 2. A point on the external surface of the heart where the groove marking the line of partition between the two ventricles intersects that marking the line of separation between atria and ventricles; crux. 3. The offspring of a male and female of different species, hybrid. **Ranvier's c.,** see *Ranvier.* **Red C.,** see *Red* Cross.*

cross-birth (kraws'burth). An abnormal presentation, neither of head nor of breech, the fetus lying transversely in the uterus, across the axis of the parturient canal; parodynia perversa.

crossed (krawst). 1. Decussating, X-shaped. 2. Affecting opposite sides of the body. **c. paral'ysis,** paralysis involving the muscles of the face on one side and those of the extremities on the other.

cross'eye. Squint, strabismus.*

cross-fertilization (kraws-fur-til-i-za'shun). Impregnation of the ovum of one flower by the male gamete of another, allogamy.

cross-fire (craws'fir). Therapeutic radiation applied by frequent change of position of the applicator or by means of two or more applicators at different points.

cross-foot. Talipes varus.

cross-legged (kraws'legd, kraws'leg-ed). With the legs crossed, the right foot being to the left and *vice versa;* noting a form of progression when the thighs are strongly adducted.

cross-pollina'tion. Dusting of the stigma or receptive surface of the ovule of one flower with pollen from another.

Cross stain. For phagocytes and bacteria: to a 2 per cent. solution of phenol in alcohol (95 per cent.) and glycerin, each 20 c.c., and distilled water, 100 c.c., are added crystal violet 0.06, and pyronin 0.20; the cytoplasm is stained lavender, the nuclei violet, and the bacteria a dark purple.

cross'way. The crossing of two nerve-paths. **sen'sory c.,** the postlenticular portion of the posterior limb of the internal capsule of the brain.

cro'talin [*Crotalus*, a genus of rattlesnakes.] 1. A protein in rattlesnake venom. 2. Trade name of a preparation made from rattlesnake-virus, which has been recommended in the treatment of epilepsy.

crotalism (kro'tal-ĭzm) [L. *Crotallaria sagittalis*, the weed "rattlebox."] Bottom-disease.

cro'talus. A homeopathic preparation of the venom of the rattlesnake, *Crotalus horridus*, triturated with milk-sugar; employed in ecchymoses, oozing of blood, hemorrhagic measles, etc., in doses of the 6th to 30th potency.

Cro'talus [G. *krotalon*, a rattle.] A genus of rattlesnakes.

crotaph'ion [G. *krotaphos*, the temple of the head.] The tip of the greater wing of the sphenoid bone, a point in craniometry.

crotchet (kroch'et) [Fr. *crochet*, a small hook.] 1. An instrument in the shape of a hook with a cutting edge on the concavity, employed for decapitation of the fetus. 2. The curved extremity of the superior occipitotemporal gyrus.

cro'tin. A mixture of poisonous albuminoids from the seeds of *Croton tiglium.*

Cro'ton. A genus of plants of the order *Euphorbiaceæ.* **C. aromat'icus,** an East Indian tree yielding lac. **C. elute'ria,** a shrub of the Bahama Islands, yielding cascarilla. **C. laccif'era,** *C. aromaticus.* **C. philippinen'sis,** an evergreen shrub of tropical Asia and Australia, yielding kamala. **C. tig'lium,** an Asiatic plant yielding croton-oil, oleum* tiglii.

croton'allin. A poisonous albuminoid, one of the constituents of crotin.

cro'ton-chlo'ral hy'drate. An old, and incorrect, term for butyl-chloral hydrate.

crotonglob'ulin. A poisonous albuminoid, one of the constituents of crocin.

crotonic acid (kro-ton'ik as'id). A poisonous acid, $C_4H_6O_2$, of the acetylene series, derived from croton-oil.

cro'ton-oil. Oleum tiglii.

cro'tonol. A vesicating derivative, $C_9H_{14}O_2$, derived from croton-oil.

crounother'apy (kroo"no-ther'ă-pĭ) [G. *krounos*, a spring, + *therapy*.] Treatment of disease by the internal administration of mineral waters, as distinguished from *balneotherapy* or the external use of the same.

croup (kroop) [a Scotch word, probably from A. S. *kropan*, to cry aloud.] 1. Any affection of the larynx in children, characterized by difficult and noisy respiration and a hoarse cough, sometimes marked anatomically by the formation of a pseudomembrane. 2. The rump; also, the part of the back of a horse behind the saddle. **catar'rhal c.**, acute catarrhal laryngitis in children. **false c.**, laryngitis stridulosa. **mem'branous c., pseudomem'branous c.**, laryngitis with fibrinous exudation; it may be a specific (diphtheritic) or a simple plastic inflammation. **true c.**, membranous c. **spasmod'ic c.**, laryngismus stridulus.

croup-kettle (kroop'ket-l). A vessel for boiling water, with a long spout to convey the steam into the sick room or under a steam tent.

croupous (kroo'pus). Relating to croup; marked by a fibrinous exudation. **c. pneumo'nia**, lobar pneumonia.

croupy (kroo'pĭ). Having the characteristics of croup, as a croupy cough.

crown [L. *corona*.] 1. Corona. 2. To attach an artificial crown to the natural root of a tooth. **artific'ial c.**, a crown of metal or porcelain fastened to the root of a natural tooth. **bell c.**, a conical tooth crown with base at the occlusal or masticatory surface. **cap c.**, a cap-shaped artificial tooth-crown fitted over the remains of the crown of a natural tooth. **collar c.**, an artificial crown with metal band fitting over the natural root of a tooth. **c. of a tooth**, corona dentis, the body of a tooth, the visible portion of a tooth uncovered by the gum. **c. of the head**, top of the head, vortex pilorum. **half-cap c.**, in dentistry an artificial crown, the metal band of which covers only the lingual surface of the tooth which supports it. **jack'et c.**, an artificial crown fitted to slip over the remains of the natural tooth. **Richmond c.**, collar c. **shell'c.**, cap c. **win'dow c.**, a cap c. which lacks the outer (buccal or labial) surface.

crowned. A veterinary term designating lesions and scars, somewhat circular in shape, of the knee of the horse.

crown'ing. 1. The capping of a tooth with a porcelain or gold cover. 2. The engagement of the fetal head at the vulva in childbirth.

crucial (kroo'shal) [L. *crucialis; crux*, cross.] 1. Decisive. 2. Crossed, cross-shaped. **c. lig'ament**, (1) ligamentum cruciatum cruris; (2) ligamentum cruciatum genu.

cru'cible [L. *crucibulum*.] A pot of clay or other material used for melting substances with great heat.

Cruciferæ [L. *crux* (*cruc-*), cross, + *ferre*, to bear.] An order of polypetalous dicotyledonous plants, which includes the radish, cress, mustard, cabbage, turnip, and nasturtium.

cru'ciform [L. *crux*(*cruc-*), cross, + *forma*, form.] Cross-shaped, crucial.

crude [L. *crudus*, raw, unripe.] Noting anything in its natural or unrefined state. **c. drug**, one in its natural state, or simply powdered for convenience of administration, as distinguished from an extract, tincture, alkaloid, or other preparation or derivative.

cru'or. Coagulated blood, crassamentum.

crupp'er. The rump of the horse; croup.

cru'ra. Plural of *crus*.

cruræus(kroo-re'us). Musculus vastus intermedius.

cru'ral. Relating to the leg or thigh, or any crus; femoral. **c. ar'tery**, arteria femoralis. **c. canal'**, canalis femoralis [BNA]. **c. fos'sa**, fovea femoralis. **c. ring**, annulus femoralis [BNA]. **c. sep'tum**, septum femorale. **c. sheath**, femoral sheath, the fascia enclosing the femoral vessels.

cru'rin. Quinoline-bismuth sulphonate.

crus, gen. *cru'ris*, pl. *cru'ra* [L.] 1. The leg, especially the segment between the knee and the ankle. 2. Any anatomical structure resembling a leg; usually (in the plural, *crura*) a pair of diverging bands or elongated masses. 3. [NK] A branch of a main artery. **c. anthel'icis**, crus of the antihelix, one of two ridges, inferior and superior, bounding the fossa triangularis, by which the antihelix begins at the upper part of the auricle. **c. bre've**, the short process of the incus, fitting into a depression (fossa incudis) in the epitympanic recess. **c. cer'ebri**, pedunculus cerebri [BNA]. **c. clitor'idis** [BNA], the continuation on each side of the corpus cavernosum of the clitoris which diverges from the body posteriorly and is attached to the pubic arch. **c. cor'poris caverno'sipe'nis**, c. penis. **c. for'nicis** [BNA], crus of the fornix, posterior pillar of the fornix, one of two flattened bands diverging from the posterior portion of the body and descending behind the optic thalami to enter the inferior (descending) horn of each lateral ventricle spreading out on the surface of the hippocampus to form the alveus, and terminating in the hippocampal fimbria. **c. hel'icis**, limb of the helix, a transverse ridge continuing backward the helix of the auricle, dividing the concha into an upper portion, *cymba*, and a lower portion, *cavum conchæ*. **c. interme'dium**, middle pillar of the diaphragm; the fibrous attachment of the diaphragm to the lateral surface of the body of the second lumbar vertebra on either side. **c. latera'le**, external pillar of the diaphragm: the fibrous attachment of the diaphragm to the arcuate ligament (arcus lumbocostalis) on either side. **c. lon'gum**, the long process of the incus terminating in the processus lenticularis or os orbiculare. **c. media'le**, internal pillar of the diaphragm; the fibrous attachment of the diaphragm to the anterolateral surface of the bodies of the first three or four lumbar vertebræ on the right side and of the first two or three on the left; when the crura or pillars of the diaphragm are spoken of, without further qualification, these medial, or internal, crura are meant. **c. pe'nis**, the posterior attached portion of the corpus cavernosum penis.

crush [ML. *cruscire*.] 1. To squeeze injuriously between two hard bodies. 2. A bruise or contusion from pressure between two solid bodies.

crust [L. *crusta*.] 1. An outer layer or covering 2. A scab. 3. The horny part of the hoof of a

horse. **lim'pet-shell c.,** the scab of syphilitic rupia. **milk c.,** crusta lactea.

crusta (krus'tah) [L. crust.] 1. Crust. 2. Basis pedunculi [BNA]. **c. fibro'sa,** cementum of a tooth. **c. inflammato'ria,** buffy* coat. **c. lac'tea,** milk crust, seborrhea of the scalp in an infant. **c. petro'sa** [L. *petrosus*, stony], substantia ossea, or cementum of a tooth. **c. phlogis'tica,** buffy* coat. **c. ventra'lis,** crusta (2), basis pedunculi.

crus'tal. Relating to a crust, specifically to the crusta, basis* pedunculi.

crustosus (krus-to'sus) [L.]. Crusted, referring to certain skin lesions.

crutch [A. S. *cryce*.] A long staff with padded cross-piece at the upper end to fit under the axilla, used to assist the lame in walking.

crutch-pal'sy. Paralysis of the musculospiral nerve due to compression by the fork of a crutch.

Cruveilhier's disease' (kru-vāl-ya') [Jean *Cruveilhier*, French pathologist and anatomist, 1791–1874.] 1. Ulcer of the stomach. 2. Progressive muscular atrophy. **C.'s fas'cia,** the superficial layer of the perineal fascia. **C.'s fossa,** fossa scaphoidea ossis sphenoidalis [BNA]. **C.'s joint,** the atlanto-odontoid joint between the arch of the atlas and the front of the odontoid process. **C.'s lig'aments,** the glenoid or plantar ligaments of the metatarsophalangeal articulations. **C.'s ul'cer,** C.'s disease (1).

crux (krooks) [L. cross.] Cross (2).

Cruz trypanosomi'asis [Oswaldo *Cruz*, Brazilian physician, 1871–1917.] Chagas' disease.

cry. 1. A loud inarticulate vocal utterance. 2. To make a loud vocal sound. 3. To weep. **arthrit'ic c.,** joint c. **c. of anger,** a passionate crying accompanied by kicking. **c. of hunger,** a fretful cry, sometimes with sucking of the fingers, ceasing as soon as the breast or bottle is given to the infant. **c. of illness,** a feeble c., better described as a moan. **c. of pain,** a continuous, or, if due to colic, intermittent cry, quite characteristic and hardly to be mistaken. **hydrocephal'ic c.,** a night c. occurring as a symptom of acute hydrocephalus, or tuberculous meningitis. **joint c.,** a night c. uttered by a sufferer from chronic tuberculous arthritis. **night c.,** a loud scream uttered by a child during sleep; it is sometimes without apparent significance, but often is a sign of beginning hip-disease or other form of tuberculous arthritis.

cryalgesia (kri-al-je'zĭ-ah) [G. *kryos*, cold, + *algos*, pain.] Pain caused by cold.

cryanesthesia, cryanæsthesia (kri-an-es-the'zĭ-ah) [G. *kryos*, cold, + *an-* priv. + *aisthēsis*, sensation.] A loss of the cold sense or cutaneous perception of cold.

cryesthesia cryæsthesia (kri-es-the'zĭ-ah) [G. *kryos*, cold + *aisthēsis*, sensation.] 1. A subjective sensation of cold. 2. Sensitiveness to cold.

crymodyn'ia [G. *krymos*, cold, + *odynē*, pain.] Cryalgesia, pain caused by cold.

crymophilia (kri-mo-fil'ĭ-ŭ) [G. *krymos*, cold, + *philia*, love.] A preference for cold, growing best at a low temperature, said of microorganisms in culture, cryophilia.

crymophilic (kri-mo-fil'ik). Preferring cold, noting microorganisms which grow best at low temperatures; cryophilic.

crymophylactic (kri-mo-fĭ-lak'tik) [G. *krymos*, cold, + *phylaxis*, guarding against.] Resistant to cold, said of certain microorganisms which are not destroyed even by freezing temperatures; cryophylactic.

crymother'apy [G. *krymos*, cold, + *therapeia*, treatment.] The employment of cold in the treatment of disease; cryotherapy.

cryocautery (kri-o-kaw'tur-ĭ) [G. *kryos*, cold, + *cautery*.] Any substance such as liquid air or carbon-dioxide snow, the application of which causes destruction of tissue by freezing.

cryogenine (kri-oj'en-ēn) [G. *kryos*, cold, + *gennaō*, I produce.] Phenylsemicarbazide $C_6H_5.NH.NH.CO.NH_2$; a coal-tar derivative, occurring as a white crystalline powder, odorless, with bitterish taste, employed as an antipyretic in doses of gr. 5–15 (0.3–1.0).

cryophylac'tic [G. *kryos*, cold.] Crymophylactic.

cryos'copy [G. *kryos*, frost, + *skopeō*, I examine.] The determination of the freezing point of a fluid, usually blood or urine, compared with that of distilled water; the greater the content of solids in the fluid the lower is the freezing point.

cryostase (kri'os-tāz). A mixture of camphor, phenol, saponin, and turpentine, employed as an external antiseptic.

cryotherapy (kri-o-ther'ă-pĭ) [G. *kryos*, cold, + *therapeia*, treatment.] Crymotherapy.

crypt [G. *kryptē*, from *kryptos*, concealed.] Follicle; a glandular tubule. **den'tal c.,** the space filled by the dental follicle. **Lieberkuehn's c., Morgagni's c.,** see the proper names. **syno'vial c.,** a diverticulum of the synovial membrane of a joint.

cryptanamnesia (krip-tan-am-ne'sĭ-ah) [G. *kryptos*, concealed, + *anamnēsis*, memory.] Subconscious memory.

cryptesthesia, cryptæsthesia (krip-tes-the'zĭ-ŭ) [G. *kryptos*, concealed, + *aisthesis*, sensation, perception.] Subconscious perception; awareness of facts or occurrences not ordinarily perceptible to the senses; intuition.

cryp'tic [G. *kryptikos*.] Hidden, occult, larvate

cryptitis (krip-ti'(te')tis). Inflammation of a follicle or glandular tubule.

cryp'tocarp [G. *kryptos*, concealed, + *karpos*, fruit.] Sporocarp.

cryptoceph'alus [G. *kryptos*, concealed, + *kephalē*, head.] A monster with an undeveloped and very small head.

Cryptococcus (krip-to-kok'us) [G. *kryptos*, concealed, + *kokkos*, berry.] A genus of fungi reproducing by budding only, no spores being in evidence; *Blastomyces*, *Zymonema*. *C. dermatitis*, the cause of one form of blastomycosis.

cryptocrystalline (krip-to-kris'tal-in). Having very minute crystals

cryptodid'ymus [G. *kryptos*, concealed, + *didymos*, twin.] A double monster, one fetus being parasitic and concealed within the other.

cryp'togam [G. *kryptos*, concealed, + *gamos*, marriage.] One of the group of plants without flowers and without embryo-containing seeds.

cryptog'amous. Marked by the absence of flowers and of embryo-containing seeds, noting a plant of the group *Cryptogamia*, a cryptogam.

cryptogenet'ic, cryptogen'ic [G. *kryptos*, concealed, + *genesis*, origin.] Of obscure, indeterminate origin; opposed to *phanerogenic*. **c. infec'tion** bacterial invasion of the body without apparent breach of the surface through which the organism could gain admittance.

cryp'tolith [G. *kryptē*, crypt, + *lithos*, stone.] A concretion in a gland follicle.

cryptomenorrhe'a, cryptomenorrhœ'a [G. *kryptos*, concealed, + *mēn*, month, + *rhoia*, flow.] The

occurrence each month of the general symptoms of the menses without any flow of blood.

cryptomnesia (krip-tom-ne'sI-ah). Cryptanamnesia.

cryptophthal'mia, cryptophthal'mus [G. *kryptos*, concealed, + *ophthalmos*, eye.] Congenital ankyloblepharon, or complete adherence of the tarsal margins of the eyelids, and symblepharon, or adherence of the eyelids to the globe of the eye together with abnormality of the eyeball and often of the orbit.

Cryptophyceæ (krip-to-fi'se-e) [G. *kryptos*, concealed, + *phykos*, seaweed.] Cyanophyceæ, an order of algæ containing the two families, *Nostocaceæ* and *Bacteriaceæ*, the former containing, the latter not containing chlorophyl.

cryptopine (krip'to-pēn) [G. *kryptos*, hidden, + *opion*, opium.] An alkaloid derived from opium, $C_{21}H_{23}NO_5$; a colorless, prismatic crystalline powder, slightly soluble in water; hypnotic and analgesic in doses of gr. $\frac{1}{2}$–$\frac{1}{8}$ (0.005–0.008).

cryptopodia (krip-to-po'dĭ-ah) [G. *kryptos*, concealed, + *pous(pod-)*, foot.] Diffuse fibromata of the feet giving to these extremities the appearance of pads.

cryptopyic (krip-to-pi'ik) [G *kryptos*, concealed, + *pyon*, pus.] Marked by concealed suppuration, noting a pyemia without apparent cause.

cryptoradiometer (krip"to-ra"dĭ-om'e-tur) [G. *kryptos*, concealed, + L. *radius*, ray, + G. *metron*, measure.] A device for estimating the degree of penetrative power of *x*-rays.

cryptorchid (kript-or'kid) [G. *kryptos*, concealed, + *orchis*, testicle.] One whose testes have not descended into the scrotum.

cryptorchidism (kript-or'kid-izm). The failure of descent of the testicles.

cryptorchis (kript-or'kis). Cryptorchid.

cryptorrhea (krip-to-re'ah) [G. *kryptos*, concealed, + *rhoia*, a flow, a flux.] Excessive activity of an endocrinous gland.

cryptorrheic, cryptorrhetic (krip-to-re'ik, krip-to-ret'ik) [see *cryptorrhea*.] 1. Relating to the normal secretion of an endocrinous gland. 2. Relating to cryptorrhea, or an excessive secretion of an endocrinous gland.

cryp'toscope [G. *kryptos*, concealed, + *skopeō*, I view.] Fluoroscope.

cryptoz'ygous [G *kryptos*, hidden, + *zygon*, yoke.] Having a narrow face as compared with the width of the cranium, so that, when the skull is viewed from above, the zygomatic arches are not visible.

crys'tal [G. *krystallos*, clear ice.] One of the figures of symmetrical shape assumed by certain salts and other chemical compounds. **asth'ma c.**, Charcot*-Leyden crystal. **ear c.**, otolith. **knife-rest c.**, a crystal of ammoniomagnesian phosphate. **sperm c., sper'min c.**, a crystal of spermin phosphate found in the semen; probably identical with Boettcher's or Charcot's crystals.

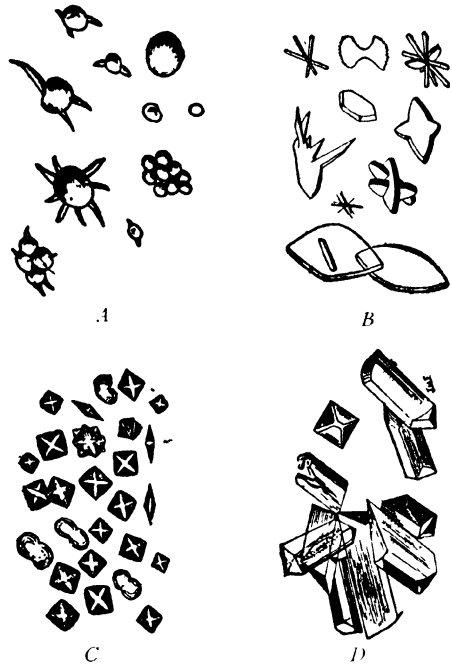
crystalli (kris-tal'I) [G. *krystallos*, ice.] Chicken-pox, varicella.

crys'tallin. 1. A globulin in the crystalline lens of the eye. 2. A solution of pyroxylin 1, in methyl alcohol 4, and amyl acetate 15; similar in properties and use to collodion.

crystalline (kris'tal-in, kris'tal-īn). 1. Clear, transparent. 2. Relating to a crystal or crystals. **c. hu'mor**, the substance forming with its enclosing capsule the crystalline lens. **c. lens**, the biconvex lens-shaped body behind the pupil of the eye, separating the aqueous from the vitreous humors, which serves to refract the rays of light entering the pupil and focus them on the retina

crystallitis (kris-tal-i'(e')tis). Phakitis.

crystalliza'tion. The assumption of a crystalline form when a vapor or liquid becomes solidified. **wa'ter of c.**, a definite number of molecules of water which certain substances must take up in order to assume a crystalline form; the presence of the water does not alter the chemical properties of the substance.



URINARY CRYSTALS: *A*, ammonium urate, *B*, uric acid; *C*, calcium oxalate; *D*, triple phosphate.

crys'talloid. 1. Resembling a crystal. 2. A body which in solution can pass through an animal membrane, as distinguished from a colloid which has not this property. 3. A crystal of organic or albuminoid matter.

crystallopho'bia [G. *krystallon*, crystal, + *phobos*, fear.] Morbid fear of glass objects.

crys'tallose. A saccharinate of sodium used like saccharine as a sweetener in place of sugar when carbohydrates are contraindicated.

crys'tal-violet. Hexamethylpararosaniline chloride, suggested as a substitute for gentian violet.

Cs. Chemical symbol of cesium.

CS_2. Carbon bisulphide, thiocarbonic anhydride.

Ct. Chemical symbol of *celtium*.

Ctenocephalus canis (ten-o-sef'ă-lus ka'nis) [G. *ktenōdēs*, like a cockle, + *kephalē*, head, + L. *canis*, dog.] The dog-flea which may transmit the plague bacillus from rats to dogs and dogs to man.

Cu. Chemical symbol of copper (*cuprum*).

cu'beb, cu'bebs. Cubeba.

cu'beba [Ar. and Hindu, *kababa*.] (U.S. and Br.) Cubeb, cubebs, the dried unripe, but fully grown fruit of *Piper cubeba*, a climbing plant of the East Indies; stimulant, carminative, and stomachic in doses of 3½–2 (2.0–8.0).

cubeb'ic acid. An amorphous yellow substance, $C_{13}H_{14}O_7$, obtained from cubeb.

cu'bebin. A bitter crystalline principle, $C_{10}H_{10}O_3$, obtained from cubeb; therapeutically inert.

cubicle (ku'bĭ-kl) [L. *cubiculum*, a bedroom.] A small bedroom; one of the compartments in a school bedroom formed by a low partition surrounding a bed. **c. meth'od**, hospital care of patients with contagious diseases, each being in a compartment separated from the general ward by a low partition, thus securing isolation while providing for light and ventilation.

cu'bital. Relating to the forearm, or more particularly to the ulna. **c. bone,** cuneiform bone. os* triquetrum. **c. nerve,** nervus ulnaris.

cubitocar'pal. Radiocarpal.

cu'bitus, gen. *cu'biti* [L. elbow.] Elbow. Forearm. Ulna. **c. val'gus,** deviation of the extended forearm to the inner side of the axis of the limb. **c. va'rus,** gunstock deformity of the elbow, deviation of the extended forearm outward from the axis of the limb.

cu'boid [G. *kybos*, cube, + *eidos*, resemblance.] Resembling a cube in shape. **c. bone,** os cuboideum.

cuboid'al. Cuboid; relating to the os cuboideum.

cucul'la [L. a cowl.] 1. The lower part of the trapezius muscle. 2. One of the nasal cartilages.

cuculla'ris [L. *cucullus*, a hood.] Musculus trapezius.

cucul'late [L. *cuculla*, *cucullus*, a cowl.] In botany, hood-shaped, noting a leaf or other structure.

cu'cumber [L. *cucumis*.] The edible fleshy fruit of *Cucumis sativus* and other species of *Cucumis*.

cu'cumber-shin. Curvature of the tibia with convexity forward.

Cu'cumis. A genus of plants including the cucumber.

Cucurbitaceæ (ku-kur-bĭ-ta'se-e) [L. *cucurbita*, gourd An order of polypetalous dicotyledonous plants; the corolla, however, being usually gamopetalous; it includes pumpkins, squashes, muskmelons and cucumbers.

cucur'bital. Cucurbitula.

cucurbitula (ku-kur-bit'u-lah) [dim. of L. *cucurbita*, gourd.] A small cupping-glass, cucurbital.

cucurbocit'rin (ku-kur''bo-sit'rin). An extract (glucoside) of watermelon seeds, recommended for the reduction of high blood pressure; see *citrin*.

cudbear (kud'bair). Persio (N.F.), a red-brown powder obtained from certain lichens, especially *Lecanora tartarea*, by heating with diluted ammonia and then treating with sulphuric acid and sodium chloride; it is used in the arts as a dye and in pharmacy as a coloring agent; see *tinctura persionis*.

cuff opera'tion. A method of nephropexy in which the renal capsule is split and peeled back, then folded several times and stitched to the muscles.

Cuguillère's se'rum (ku-ge-yer') [E. *Cuguillère*, French physician, contem orary.] A solution of allylum sulphide 1, tincture of myrrh 1, in Hayem's glycerinated serum 100; a light yellow syrupy fluid with a strong odor of garlic; employed hypodermically in tuberculosis in doses of 3½–4 (2.0–15.0).

Cuignet's meth'od (ku-e-nya') [Ferdinand Louis Joseph *Cuignet*, French ophthalmologist, *1823.] Retinoscopy.

cuirass (kwe-ras') [Fr. *cuirasse*, a breastplate.] A term in symptomatology and pathology having reference to the thorax. **tabet'ic c.,** an anesthetic area on the chest sometimes noted in cases of tabes dorsalis.

cul-de-sac, pl. *culs-de-sac* (kŭl-dĕ-sak') [Fr. bottom of a sack.] A blind pouch or tubular cavity closed at one end, diverticulum, cecum. **conjunc'tival c.,** the fold of junction of the ocular and the palpebral conjunctiva. **Doug'las's c.,** excavatio rectouterina [BNA]. **great'er c.,** fundus of the stomach. **less'er c.,** antrum pylori.

Cu'lex. A genus of mosquitos. **C. fati'gans,** the brown household mosquito of the tropics and subtropics; believed to be the intermediate host of several species of filaria and possibly of the contagium vivum of dengue. **C. pip'iens,** the brown household mosquito of Europe, the northern United States, and Canada. **C. quinquefascia'tus,** *C. fatigans*.

Culicidæ (ku-lis'i-de). A family of dipterous insects, including mosquitos, gnats, and midges.

cu'licidal [L. *culex(culic-)*, mosquito, + *cædere*, to kill.] Destructive to mosquitos.

cu'licide. An agent which destroys mosquitos.

culicifuge (ku-lis'ĭ-fūj) [L. *culex(culic-)*, mosquito, + *fugare*, to drive away.] 1. Driving away gnats and mosquitos. 2. An agent which keeps mosquitos from biting.

culm [L. *culmus*, a stem.] A hollow stem, with solid nodes, as the bamboo, bearing leaves at each node.

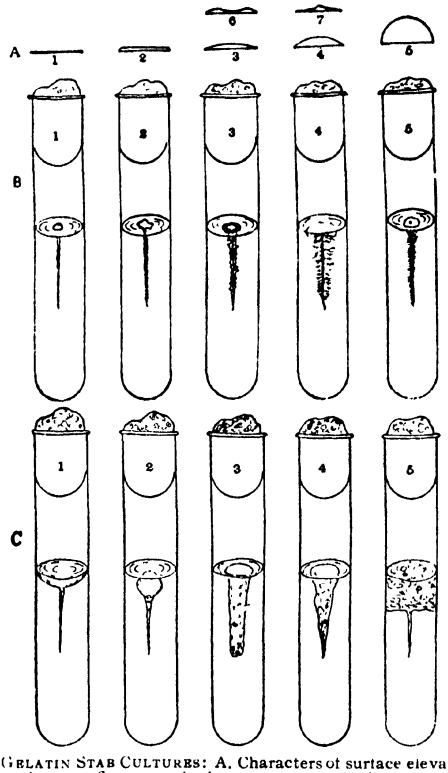
cul'men [L. summit.] [BNA] The anterior prominent portion of the monticulus of the vermis of the cerebellum.

cultiva'tion [L. *cultivare*, to cultivate.] Culture, **frac'tional c.,** the attempt to obtain a pure culture by taking a bit from a mixed culture and transferring it to a new medium; when this has developed into a colony, a minute portion of it is taken to form a new culture, and so on until a culture of a single species is obtained.

cul'tural. Relating to a culture of microorganisms.

culture (kul'chur) [L. *cultura*, tillage.] 1. The propagation of microorganisms on or in artificial media of various kinds. 2. A growth of microorganisms on or in an artificial medium such as bouillon, potato, agar jelly, etc. **drop c.,** hanging-drop c. **flask c.,** a c. on a gelatin or agar medium solidified on one side of a flat flask. **hang'ing-block c.,** a cube of solidified agar medium is inoculated and then sealed to a cover-glass and inverted over a moist chamber or hollowed slide. **hang'ing-drop c.,** a culture obtained in a drop of fluid medium on the under surface of a cover-glass resting on a hollowed slide. **liq'uid c.,** one made by introducing some of the material from a bacterial colony into a test-tube containing bouillon, whey, or other fluid medium **nail c.,** a tube c. in which the colony grows downward in the shape of an iron nail. **nee'dle c.,** stab c **plate c.,** one made in a solid medium spread evenly in a shallow dish. **pure c.,** one containing only one species of microorganism; a c. derived from a single cell. **roll-tube c.,** one made in a gelatin medium which is solidified on the inside of a test-tube by rolling the tube, horizontally held, in cold water or on a cake of ice. **shake c.,** one made by seeding a liquefied gelatin or agar culture, distributing the material thoroughly by agitation, and then allowing the medium to solidify in the tube held upright. **slant c.,** a culture made on the slanting surface of a medium which has been solidified in a test-tube inclined from the perpendicular so as to give a greater area than that of the lumen of the tube. **smear c.,** a c. obtained by smearing the infected material on the surface of a solidified medium. **sol'id c.,** one made on the surface, or in the interior of gelatin, agar, potato, or other solid medium. **stab c.,** a

tube of solid gelatin medium is inoculated by passing in a wire previously dipped in material containing the bacteria to be examined. **streak c.**, a liquefied gelatin or agar medium is poured out on a Petri plate and allowed to solidify, and is then inoculated along a series of parallel streaks by a wire dipped in the material to be cultivated. **stroke c.**, a c. made by drawing an infected platinum wire across the surface of a solid medium. **thrust c.**, stab c. **tube c.**, (1) one following the sowing of microorganisms on agar or other solid medium contained in a test-tube; (2) a culture made by inoculating bouillon or other fluid in a test-tube



GELATIN STAB CULTURES: A. Characters of surface elevation; 1, flat, 2, raised; 3, convex; 4, pulvinate; 5, capitate; 6, umbilicate; 7, umbonate. B. Characters of growth in depth in non-liquefying cultures; 1, filiform; 2, beaded; 3, echinate; 4, arborescent; 5, villous C. Types of liquefaction; 1, crateriform; 2, napiform; 3, saccate; 4, infundibuliform; 5, stratiform. (From Chester's "A Manual of Determinative Bacteriology," The Macmillan Company, Publishers)

Cul'ver's phys'ic. Leptandra. **C.'s root,** C.'s physic.

cu'marin. Coumarin.

cu'mene. Cumol, trimethylbenzene, a colorless liquid obtained from coal-tar, employed in the sterilization of catgut.

cum'in, cum'min [L. *cuminum*]. Kümmel, the dried ripe fruit of *Cuminum cyminum;* an aromatic stomachic, used for the relief of nausea and flatulence in doses of ʒ½–1 (2.0–4.0).

cu'mol. Cumene.

cumulative (ku'mu-la-tiv) [L. *cumulatus*, heaped up.] Increasing by successive additions. **c. ac'tion,** noting the action of a drug which develops suddenly and with considerable intensity, after perhaps a number of doses have been taken with no apparent, or but slight, effect.

cu'mulus [L. a heap.] A collection or heap of cells, noting the **c. oöph'orus** [BNA], c. proligerus, discus proligerus, a mass of epithelial cells surrounding the ovum in the Graafian follicle.

cuneate (ku'ne-āt) [L. *cuneare*, to make like a wedge.] Wedge-shaped.

cuneiform (ku'ne-i-form) [L. *cuneus*, wedge, + *forma*, form.] Wedge-shaped, cuneate. **c. bone,** one of four bones, one in the carpus and three in the tarsus; the carpal bone, pyramidal bone, os triquetrum [BNA], articulates with the semilunar, fusiform, and unciform; the tarsal bones are the 1st, 2d, and 3d (or internal, middle, and external) tarsal cuneiform bones articulate respectively with the 1st and 2nd metatarsal, 2nd cuneiform, and navicular; with the 2d metatarsal, 1st and 3rd cuneiform, and navicular; and with the 2d, 3d, and 4th metatarsal, 2d cuneiform, cuboid, and navicular bones

cuneocu'boid. Relating to the third cuneiform and the cuboid bones.

cu"neohysterec'tomy [L. *cuneus*, wedge, + G. *hystera*, uterus, + *ektomē*, excision.] Removal of a wedge-shaped piece from the body of the uterus for the correction of extreme flexion.

cuneonavic'ular. Relating to the cuneiform and the navicular bones.

cuneoscaph'oid. Cuneonavicular.

cu'neus [L. wedge.] The mesial aspect of the occipital lobe of each cerebral hemisphere, separated from the precuneus anteriorly by the parieto-occipital fissure and from the lingual gyrus inferiorly by the calcarine fissure.

cunic'ulus [L an underground passage.] The burrow of the itch-mite in the epidermis.

Cu'nila maria'na, C. origanoi'des. American or mountain dittany, wild basil; the herb is employed like other members of the *Labiatæ*, mint family, as a diuretic and diaphoretic in doses of ɱ5–30 (0.3–2.0) of a tincture.

Cunisset's test (ku-ne-sa'). For bile in the urine, a yellow color being produced on shaking the suspected fluid with chloroform.

cunnilinguist (kun"i-ling'gwist) [L *cunnus*, pudenda, + *lingua*, tongue.] A female pervert who makes lingual friction of the vulva of another

cun'nus [L.] Pudenda, vulva.

CuO. Cupric oxide, black oxide of copper.

Cu_2O. Cuprous oxide, red oxide of copper.

cuorin (ku'or-in). A lipoid substance existing in the heart muscle and found nowhere else; it is allied to lecithin, but is a diphosphatid, containing two phosphate group radicles instead of one.

cup [A. S *cuppe*.] 1. An excavated or cup-shaped structure, either anatomical or pathological. 2. A cupping-glass. 3. To apply a cupping-glass **dry c.,** a cupping-glass applied to the unbroken surface for the purpose of drawing blood to the part without abstracting any; see *wet c.* **glauco'matous c.,** an excavation of the optic disc occurring in glaucoma **op'tic c.,** the secondary ocular vesicle, made cup-shaped by pressure of the lenticular vesicle. **physiolog'ical c.,** a funnel-shaped excavation of the optic disc, an exaggeration of the normal depression, caused by the dragging of the ciliary muscle in efforts at accommodation. **ret'inal c.,** excavation of the optic disc. **wet c.,** a cupping-glass applied to a part previously scarified or incised, in order to draw away blood.

cu'pola. Cupula.

cupped (kupt). Hollowed, made cup-shaped.

cupp'ing. 1. Formation of a hollow, or cup-shaped excavation. 2. Application of a cupping-glass. **c. of the op'tic disc,** an exaggeration of the normal depression at the center of the optic disc, seen in cases of glaucoma.

cupp'ing-glass. A glass vessel, from which the air has been exhausted by heat or a special suction apparatus, applied to the skin in order to draw blood to the surface.

cuprammonia (ku-pră-mo'nĭ-ah). A mixture of a solution of copper hydroxide and aqua ammoniæ.

cuprar'gol. Copper albuminate, a greenish powder, employed in 2 per cent. solution in the treatment of conjunctivitis.

cuprase (ku'präz) [L. *cuprum*, copper, + *-ase*.] Trade name of colloidal copper hydroxide; it has been employed in the treatment of malignant disease.

cu'pratin. Trade name of an albuminate of copper.

cu'prea-bark [L. *cupreus*, coppery.] The copper-colored bark of *Remijia purdieana* and *R. pedunculata*, trees of Colombia, yielding quinine, quinidine, and cinchonine.

cupreine (ku'pre-ēn). An alkaloid, $C_{19}H_{22}N_2O_2 + 2H_2O$, from cuprea-bark, occurring in the form of colorless crystals.

cupres'sus oil. A volatile oil from the cypress, *Cupressus sempervirens*, employed in whooping-cough.

cupriasep'tol. Sulphocarbolate of copper, see under *cuprum*.

cuprohe'mol. A derivative of copper and hemol, recommended in tuberculosis in doses of gr. 1–2 (0.06–0.13).

cu'prol. A compound of copper and nucleinic acid, employed externally in conjunctivitis and as a stimulating application to sluggish ulcers.

cu'prum [L.] Copper, a metallic dyad element, symbol Cu, atomic weight 63.57; several of its salts are employed in medicine, the sulphate, however, being the only one official in U.S. and Br. **cu'pri ace'tas neutra'lis,** neutral copper acetate, crystallized verdigris, occurs in dark green crystals; locally is a stimulating caustic to ulcers; has been given in tuberculosis in doses of gr. $\frac{1}{12}$–$\frac{1}{2}$ (0.005–0.03). **c. alumina'tum,** aluminated copper, lapis divinus; made by fusing together 16 parts each of potassium alum, copper sulphate, and potassium nitrate and adding a mixture of 1 part each of alum and camphor; it is run into pointed sticks or broken up into small pieces; employed in substance or as a collyrium in a 4–1000 solution. **c. ammonia'tum,** ammoniated copper, ammoniosulphate of copper, obtained by dissolving one part of copper sulphate in 3 parts of ammonia water and adding 6 parts of alcohol; formerly used as an antispasmodic and nervine in doses of gr. $\frac{1}{4}$–2 (0.03–0.13). **cu'pri arse'nis,** copper arsenite, a green crystalline powder; used in anemia in doses of gr. $\frac{1}{200}$–$\frac{1}{166}$ (0.0003–0.0006). **cu'pri chlo'ridum,** copper chloride, has been used as an antiseptic in the treatment of water supplies, for which it is said to be stronger than copper sulphate. **c. cit'ricum,** copper citrate, a green or bluish green, odorless, crystalline powder, sparingly soluble in water; employed in practically the same doses and to meet the same indications as the other salts of copper. **cu'pri o'leas,** copper oleate, a greenish blue powder, obtained by precipitating a solution of castile soap with a solution of copper sulphate; employed in 1 to 20 per cent. ointment as a stimulant to indolent granulations. **cu'pri subace'tas,** copper subacetate, verdigris. **cu'pri sul'phas** (U.S. and Br.), copper sulphate, $CuSO_4.5H_2O$, blue stone, blue vitriol, occurs as large clear azure crystals; tonic and astringent in doses of gr. $\frac{1}{4}$–$\frac{1}{2}$ (0.015–0.03) and emetic in doses of gr. 3–5 (0.2–0.3); locally is styptic, astringent, and mildly escharotic, used largely in ophthalmic practice. **cu'pri sulphocar'bolas,** copper sulphocarbolate, cupriaseptol, light green crystals, soluble in water, employed as an antiseptic and hemostatic.

cup-shaped. Scyphoid.

cupula (ku'pu-lah) [L. a cup, dim. of *cupa*, a tub.] Cupola. 1. A fine striated membranous structure covering the hair cells of the crista ampullaris. 2. The dome-like apex of the cochlea. 3. The summit of one of the solitary glands of the intestine. **c. pleu'ræ** [BNA] cervical pleura, the dome-shaped roof of the pleural cavity extending up through the superior aperture of the thorax.

cupule (ku'pūl) [L. *cūpula*] 1. A hard cup-shaped involucre, developed below an inflorescence after fertilization, as in the acorn. 2. A receptacle, resembling the cupule of an acorn, in certain fungi.

Cupulif'eræ [L. *cupula*, a little cup, + *ferre*, to bear.] An order of monochlamydeous, dicotyledonous plants; it includes the oaks, birches, alders, and hazels.

curaçao (ku-ră-so') [*Curaçao*, one of the Dutch West India islands.] A liqueur or cordial made of alcohol, sugar, and bitter-orange peel.

curanjiin (ku-ran'jĭ-in). A bitter glucoside from *Curanga amara*, an East Indian shrub, tonic, febrifuge, and anthelmintic.

curara, curare, curari (ku-rah'rah, ku-rah're) Ourari, urari, wourara, wourali, woorari, etc., Indian arrow-poison, an extract of various poisonous plants, especially *Strychnos toxifera*, occurring as a blackish brown substance; internally it is practically inert, but subcutaneously is a muscular paralyzant, death occurring from paralysis of the respiration; employed chiefly in physiological experiments upon animals, dose, gr. $\frac{1}{10}$–$\frac{1}{4}$ (0.006–0.015).

curarine (ku'rah-rēn). The alkaloidal active principle of curare, occurring in the form of a yellowish amorphous powder; formula, $C_{19}H_{21}NO_4$, or $C_{18}H_{35}N$, or $C_{19}H_{26}N_2O$, according to various analysts; dose, gr. $\frac{1}{200}$–$\frac{1}{100}$ (0.0003–0.0006).

curariza'tion. The induction of a condition of extreme muscular exhaustion, simulating paralysis by the administration of curare.

cu'rarize. To induce motor, but not sensory paralysis by the administration of curare.

cura'tio paraffi'ni (N.F.) [L. *curatio*, treatment, cure.] Paraffin dressing, composed of resorcinol 1, oil of eucalyptus 2, olive oil 3, white petrolatum 12, and paraffin 82.

curb. Inflammation of the calcaneocuboid ligament in the horse, accompanied by a hard and painful swelling at the back of the hock; it is characterized by swelling and heat in the part, and generally by lameness.

cur'cas. A shrub of South America, an oil expressed from the nut of which possesses purgative properties like castor oil or croton oil.

curcuma (kur'ku-mah) [Ar. *kurkum*, saffron.] Turmeric, the rhizome of *Curcuma longa* or *C. rotunda* (*Amomum curcuma*), an Indian plant of the ginger family; was formerly employed as a stimulant and in the treatment of jaundice, but is now used only as a condiment.

curd. The coagulum of milk. **al'um c.,** milk coagulated by alum.

cure [L. *curare*, to care for.] 1. To heal, to make well. 2. A restoration to health. 3. [Ger. *Kur.*] A special method or course of treatment. **di'et c.,** a system of treatment by regulation of the diet. **econom'ic c.,** the arrest or betterment of a chronic disease, such as tuberculosis, to such an extent as to permit the patient to earn his living in some light occupation. **grape c.,** treatment of abdominal plethora by an exclusive diet of grapes. **hun'ger c.,** treatment of disease by restriction of the diet. **lead c.,** treatment of cancer by lead, Bell's* method (3). **milk c.,** treatment by means of an exclusive milk diet. **move'ment c.,** kinesitherapy. **terrain' c.,** see *terrain*. **water c.,** hydrotherapy. **whey c.,** treatment by drinking large amounts of whey.

curettage (ku-ret'ej). Scraping the interior of a cavity with the curette for the removal of new growths or other abnormal tissues

curette (ku-ret') [Fr.] 1. An instrument in the form of a loop, ring, or scoop, with sharpened edges, attached to a rod-shaped handle, employed to scrape the interior of a cavity for the removal of new growths or altered tissues. 2. To employ a curette.

FENESTRATED CURETTE.

curettement (ku-ret'ment). Curettage.

curie (ku're, ku-re') [Pierre *Curie*, French chemist, 1859–1906; Marie Sklodowska *Curie*, Polish chemist, *1867, widow of Pierre C.; the two were the discoverers of radium.] A unit of measurement of radium emanation, being the mass of particles emitted in equilibrium with 1 gram of pure radium.

curiegram (ku're-gram). A radium actinogram.

curietherapy (ku-re-ther'ă-pĭ). Treatment of disease by means of radium or its emanation.

cu'rine. A non-poisonous crystalline alkaloid of curare, $C_{18}H_{19}NO_3$.

curled (kurld). Occurring in wavy parallel lines, noting certain bacterial colonies, such as of the anthrax bacillus.

Cur'ling's ul'cer. [T. B. *Curling*, English surgeon, 19th century.] Ulcer of the duodenum associated with extensive, though superficial, burns.

curr'ent [L. *currens; currere*, to run.] A stream or flow of fluid, air, or electricity. **ac'tion c.,** an electrical current induced in a contracting muscle. **af'ter c.,** an electrical current induced in a muscle upon the closure of a constant current which has been passing through it. **al'ternating c.,** an electrical current the direction of which is constantly and rapidly reversed without being broken **ascen'ding c.,** an electrical current passing from the anode at the periphery to the cathode over the nerve center. **ax'ial c.,** the central, rapidly moving portion of the blood-stream in an artery. **centrif'ugal c.,** descending c. **centrip'etal c.,** ascending c. **con'stant c., contin'uous c.,** a nonalternating and unbroken electrical current. **d'Arsonval' c.,** high-frequency c. **descen'ding c.,** an electrical current passing from the anode over the nerve center to the cathode at the periphery. **direct' c.,** an electrical c., flowing always in one direction. a nonalternating c. **farad'ic c.,** see *faradic*. **galvan'ic c.,** see *galvanic*. **high-fre'quency c.,** an alternating electric current having a frequency of 10,000 or more per second; it produces no muscular contractions and does not affect the sensory nerves; d'Arsonval c., Tesla c. **high-poten'tial c.,** high-tension c. **high-ten'sion c.,** one in which there is a high degree of tension, increasing the electromotive force. **induced' c.,** see *induction*. **induc'ing c.,** the primary c. which gives rise to a secondary c., in the induction* coil. **interrup'ted c.,** a frequently broken electrical c. **lab'ile c.,** an electrical c. applied to the body by means of electrodes which are constantly shifted about. **Le Duc c.,** see *Le Duc*. **low-frequency c.,** sinusoidal c. **os'cillating c.,** an alternating c. with varying amperage. **Oudin c.,** see *Oudin*. **pri'mary c.,** inducing c. **reversed' c.,** a c. of changed direction. **sec'ondary c.,** induced c. **sinusoid'al c.,** an alternating c., the voltage of which rises from zero to a maximum and falls again to zero, when a reversed c. takes place; the curve of such a current is a true sine curve, alternately above and below the line, whence the name sinusoidal. The frequency of the alternation is only about 150 to 200 per second, hence this is sometimes called the low-frequency c. **stat'ic c.,** an electrical c. generated by a static* machine. **swelling c.,** an electrical c. of constantly changing strength. **Tes'la c.,** high-frequency c.

curric'ulum [L. a course, a race.] The regular course of study in a university or other institution of learning.

Curschmann's disease' (koorsh'mahn) [Heinrich *Curschmann*, German physician, 1846–1910.] Frosted liver. **C.'s spi'rals,** spirally twisted masses of mucus occurring in the sputum in bronchial asthma

cur'vature [L. *curvatura*.] A bending or flexure **an'gular c.,** the sharp bend in the spine in Pott's disease. **ante'rior c.,** kyphosis. **back'ward c.,** lordosis. **gin'gival c.,** the rounding of the gum along its line of attachment to the neck of a tooth. **lat'eral c.,** scoliosis. **Pott's c.,** angular c.

curve [L. *curvare*, to bend.] 1. Curvature, a nonangular continuous bend. 2. Chart; a graphic representation, by means of a continuous line of shifting direction, of the course of the temperature or pulse, of the numbers of cases of a disease in a given period, or of any other group of parts which might be otherwise presented by a table of figures; a sphygmogram or any other tracing made by a recording instrument. **aline'ment c.,** the line passing through the center of the teeth laterally in the direction of the curve of the dental arch. **buccal c.,** the line of the dental arch from the canine, or cuspid, tooth to the third molar. **com'pensating c.,** the curve formed by the occlusal, or grinding, surfaces of the premolar and molar teeth, especially of the lower artificial teeth so that they may be in contact with those of the upper arch. **den'tal c.,** dental arch, the bowed line of the teeth, comprising the alinement, buccal, compensating, and labial curves. **la'bial c.,** the curve of the dental arch between the two canine, or cuspid, teeth. **mus'cle c.,** myogram. **ten'sion c.,** the direction of the trabeculæ in cancellous bone tissue adapted to resist stress.

cus'camine. An alkaloid from cusco-bark.

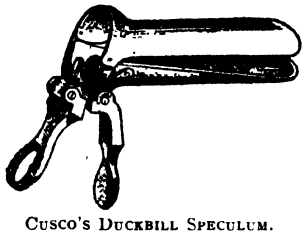
cus'co bark. The bark of *Cinchona pubescens*, containing several alkaloids.

Cusco's spec'ulum (kŭs-ko') [Edouard Gabriel *Cusco*, Paris surgeon, 1819–1894.] A bivalve duck-bill vaginal speculum. See illustration on page 268.

cuscon'idine. A cinchona alkaloid from cusco bark.

cusconine (kus'ko-nēn). A cinchona alkaloid, $C_{23}H_{26}N_2O_4$, from cusco bark; the same as aricine.

Cushing's suture [Hayward W. *Cushing*, Norwell, Mass., surgeon, contemporary.] A continuous intestinal suture. See cut under *suture*.



CUSCO'S DUCKBILL SPECULUM.

cushion (koosh'un). In anatomy, any structure resembling a pad or cushion. **cor'onary c.,** coronary* band. **epiglott'ic c.,** tuberculum epiglotticum. **Eusta'chian c.,** a prominence, formed by the margin of the cartilage, above and behind the pharyngeal orifice of the Eustachian tube **suck'ing c.,** corpus adiposum buccæ.

$CuSO_4$. Cupric sulphate, sulphate of copper, blue stone.

cusp [L. *cuspis*, point.] 1. One of the protuberances on the grinding surface of a tooth. 2. A little knob at the center of the free margin of a valve of the heart.

cus'pad [*cusp* + L. *ad*, to.] In a direction toward the cusp of a tooth.

cuspa'ria. Carony bark, angostura, angustura; the bark of *Cusparia angustura* (*Galipea cusparia*), a tree of the Orinoco basin; a simple bitter, employed also in the treatment of dysentery in doses of gr. 10–30 (0.6–2.0) of the powder, or ʒ½–1 (15.0–30.0) of a 5 per cent. infusion.

cus'pid [L. *cuspis*, a spike.] Cuspidate, having but one cusp; noting a **c. tooth,** one of the four canine teeth.

cus'pidate. 1. Cuspid. 2. In botany, terminating in a hard point.

cuspis (kus'pis) [L. a point.] Cusp.

cusso (koos'o) [an Abyssinian word.] (Br.) Kousso, brayera (N.F.); the dried female inflorescence of *Hagenia abyssinica* (*Brayera anthelmintica*), a tree of the elevated regions of Abyssinia; employed as a teniacide, in doses of ʒ½ (15.0) of the fluidextract, or ʒ½–1 (15.0–30.0) of the infusion.

cu'tal. Trade name of aluminum borotannate; a light brown powder, disinfectant and astringent, used in powder or ointment in the treatment of skin diseases. **sol'uble c.,** a compound of c. with tartaric acid, used for the same purpose as cutal, and also as an injection in gonorrhea.

cuta'neous [L. *cutaneus; cutis*, skin.] Relating to the skin.

cuticle (ku'tĭ-kl) [L. *cuticula*, dim. of *cutis*, skin.] Epidermis or outer horny layer of the skin. **den'tal c., enam'el c.,** cuticula dentis. **ker'atose c.,** the outer layer of the chorioid coat of the eye, next to the cornea. **c. of the root-sheath,** a thin layer of cells lining the hair-follicle.

cu'ticolor [L. *cutis*, skin.] Skin-color, flesh-color.

cuticula (ku-tik'u-lah) [L. dim. of *cutis*, skin.] The epidermis or cuticle. **c. den'tis,** enamel cuticle, Nasmyth's membrane, skin of the teeth; it consists of two extremely thin layers (the inner one clear and structureless, the outer one cellular) covering the enamel of recently erupted teeth. **c. pi'li,** cuticle of the root-sheath of a hair.

cutic"ulariza'tion. Healing of an abrasion of the skin or ulcer by the spread of epidermis over the surface.

cutidure (ku'tĭ-dūr) [L. *cutis*, skin, + *durus*, hard.] 1. The horny layer of the epidermis. 2. The coronary* band in the horse

cutigeral cavity (ku-tij'er-al) [L. *cutis*, skin, + *gerere*, to carry.] A semicylindrical gutter, extending along the inner portion of the upper part of the wall of a horse's hoof; it lodges the coronary band.

cu'tin [L. *cutis*, skin.] 1. The substance forming the cuticular layer of the stems and leaves of plants. 2. A specially prepared thin animal membrane used as a protective covering for wounded surfaces.

cutireaction (ku"tĭ-re-ak'shun) [*cutis*, skin, + *reaction*.] An irritative or inflammatory reaction in the skin, in certain infectious (usually chronic) or allergic diseases, following the application of an extract of the organism causing the infection or of a protein allergen; used as a diagnostic measure, most frequently in tuberculosis, but also for glanders, leprosy, typhoid fever, tinea, and syphilis, and various allergic conditions; there are three modes of obtaining the reaction, viz., the cutaneous, the intracutaneous, and the percutaneous; see *Lautier*, *Lignières*, *Moro*, and *Pirquet*. **differen'tial c.,** simultaneous inoculation of concentrated old tuberculin, a filtrate of human tubercle bacilli, and a filtrate of bovine tubercle bacilli, the object being to determine by the reaction whether the patient is suffering from human or from bovine infection, or is free from tuberculosis of any origin.

cu'tis [L.] Skin, integumentum* commune [BNA]. **c. anseri'na,** goose-flesh, contraction of the erectores pilorum muscles, under the influence of cold or fear, rendering prominent the mouths of the hair-follicles. **c. elas'tica,** a condition in which the skin is abnormally elastic and can be pulled out sometimes to an extraordinary distance, returning to its normal shape when released **c. laxa,** dermatolysis. **c. marmora'ta,** a transitory mottling of the skin caused by exposure of the skin to cold; livido reticularis. **c. pen'dula,** dermatolysis. **c. pen'silis,** dermatolysis. **c. ve'ra,** true skin, corium. **c. ver'ticis gyra'ta,** a condition of c. pendula of the scalp and forehead in which the skin lies in gyrate curves. **retinac'ula c.,** prolongations of the stroma of the mamma extending into the corium, Cooper's ligaments.

cutisector (ku"tĭ-sek'tor) [L. *cutis*, skin, + *sector*, a cutter.] 1. An instrument for cutting bits of epidermis for grafting. 2. An instrument for removing a section or cylinder of skin for microscopical examination

cutitis (ku-ti'(te')tis). Dermatitis.

cu"tituber'culin reac'tion. A diagnostic method in tuberculosis proposed by Lignières. The skin is shaved and scraped, but not scarified, and then six drops of undiluted tuberculin are rubbed in with a pledget of cotton. In cases of tuberculosis there is a slight local inflammatory reaction.

cutiza'tion. The transition from mucous membrane to skin at the mucocutaneous margins.

Cut'ler's solution. Equal parts of phenol, tincture of iodine, and chloral hydrate.

cu'tol. Cutal.

cut'weed. *Fucus vesiculosus.*

Cuvier's canal (kü-ve-a') [Georges Léopold Chrétien Frédéric Dagobert *Cuvier*, French scientist, 1769–1832.] Sinus venosus in the embryo. **C.'s ducts,** cardinal veins, veins in the young embryo which

convey the blood to the primitive heart. **C.'s sinus,** C.'s canal. **C.'s veins,** C.'s ducts.

Cy. Chemical symbol sometimes used, instead of CN, for cyanogen.

cyanalcohol (si-an-al'ko-hol). A substitution product in which cyanogen replaces the hydrogen in alcohol.

cyanate (si'an-āt). Any salt of cyanic acid containing the radical CNO.

cyanemia, cyanæmia (si-an-e'mĭ-ah) [G *kyanos*, blue, + *haima*, blood.] Imperfect aeration of the blood, that in the arteries resembling venous blood.

cyanephidrosis (si-an-ef-i-dro'sis) [G. *kyanos*, blue, + *ephidrōsis*, sweating.] The excretion of fluid of a bluish tint from the sweat-glands.

cyanhemoglo'bin. A compound of hemoglobin with hydrocyanic acid, formed in cases of poisoning with this substance.

cyanhidrosis (si-an-hi-dro'sis) [G. *kyanos*, blue, + *hidrōsis*, sweating.] Cyanephidrosis.

cyanhy'dric acid. Hydrocyanic acid.

cyan'ic acid [G. *kyanos*, dark blue.] An acid formed by the union of oxygen and cyanogen, having the formula CNHO; in its physical properties it is very similar to protoplasm, being fluid and transparent at low temperatures and coagulable by heat.

cyanide (si'an-id, si'an-īd). A compound of cyanogen with an element or another radical.

cyanochroia (si-an-o-kroy'ah) [G. *kyanos*, blue + *chroia*, the surface of the body.] Cyanosis.

cyanochroic, cyanochrous (si-an-o-kro'ik, si-an-ok'-rus). Cyanotic, cyanosed.

cyanocuprol (si''an-o-koo'prol). A double salt of potassium and copper cyanide recommended in the chemotherapy of tuberculosis.

cyanoderma (si-an-o-dur'mah) [G. *kyanos*, blue, + *derma*, skin] Cyanosis.

cyan'ogen [G. *kyanos*, dark blue, + *-genēs*, producing.] A compound of one atom each of carbon and nitrogen (CN). According to Pflüger this is the combination characteristic of life in its last analysis.

cyanop'athy [G. *kyanos*, blue, + *pathos*, suffering.] Blue disease of infants; cyanosis.

cyanophil, cyanophile (si'an-o-fil, si'an-o-fīl) [G. *kyanos*, blue, + *philos*, fond.] A cell or element readily taking a blue stain.

cyanoph'ilous. Readily stainable with a blue dye.

cyanophose (si'an-o-fōz). A phose of a bluish color.

Cyanophyceæ (si''an-o-fi'se-e) [G. *kyanos*, dark blue, + *phykos*, seaweed.] An order of algæ, containing two families: *Nostocaceæ*, containing chlorophyl, and *Bacteriaceæ*, containing no chlorophyl.

cyano'pia [G. *kyanos*, blue, + *ōps*, eye.] Cyanopsia.

cyanop'sia [G. *kyanos*, blue, + *opsis*, vision.] A condition in which all objects seem to be colored blue.

cyanosed (si'an-ōzd). Suffering from cyanosis.

cyanosis (si-an-o'sis) [G. *kyanos*, blue.] A dark bluish or purplish coloration of the skin and mucous membrane due to deficient oxygenation of the blood. **enterog'enous c.,** false cyanosis supposed to be caused by the absorption of toxic agents from the intestine; methemoglobin or sulphemoglobin is found in the blood. **false c.,** cyanosis due to the presence of an abnormal pigment, such as methemoglobin, in the blood, and not resulting from a deficiency of oxygen.

cyanot'ic. Relating to or marked by cyanosis.

cyarsal (si'ar-sal). A soluble, colorless powder, described as the cyan-mercurialized salicylate of potassium, containing 46 per cent. of mercury; recommended for intravenous administration in the treatment of syphilis.

cyasma (si-az'mah) [G. *kyēsis*, pregnancy.] Lenticular pigmentation of the skin in pregnant women.

cyathium (si-ath'ĭ-um) [G. *kyathos*, a cup.] An inflorescence having a tubular involucre, with alternating crescentic glandular appendages, enclosing one female flower surrounded by five groups of male flowers.

cy'athus [G. *kyathos*, cup.] Infundibulum, the hollow stalk of the hypophysis cerebri.

cyc'lamin. A saponin-like body, $C_{36}H_{24}O_{10}$, obtained from the tuber of the herb *Cyclamen europæum;* a white amorphous or minutely crystalline powder of a bitter acrid taste; emetic and purgative.

cyclarthrodial (si-klar-thro'dĭ-al). Relating to a cyclarthrosis or rotary joint.

cyclarthro'sis [G. *kyklos*, circle, + *arthrōsis*, articulation.] A rotary, or lateral ginglymus, joint.

Cyclaste'rion scarlatina'le [G. *kyklos*, round, + *astērion*, dim. of *astēr*, star.] A supposed protozoan parasite of the cutaneous cells in scarlet fever.

cycle (si'kl) [G. *kyklos*, circle.] A recurrent series of events. A recurring period of time. **car'diac c.,** the complete round of cardiac systole and diastole with the intervals between. **endog'enous c.,** the growth and reproduction of the malarial parasite, or other hematozoon, within the body of the vertebrate host. **exog'enous c.,** the sexual stage passed by the malarial parasite, or similar hematozoon, in the body of the invertebrate host. **forced c.,** a cardiac c. (auricular or ventricular) which is cut short by a forced beat. **life c.,** the entire life history of the malarial or other blood parasite in the bodies of the vertebrate and invertebrate hosts. **restored c.,** an auricular or ventricular cardiac c. which follows the returning c. and belongs to the period of normal rhythm. **returning c.,** an auricular or ventricular cardiac c. which begins with an extrasystole or a forced beat.

cyclectomy (si-klek'to-mĭ) [G. *kyklos*. circle, + *ektomē*, excision.] Ciliectomy. 1. Excision of a portion of the ciliary muscle or body. 2. Excision of a portion of the ciliary border of the eyelid.

cyclencephalia, cyclencephaly (si-klen-se-fa'lĭ-ah, si-klen-sef'ă-lĭ) [G. *kyklos*, circle, + *enkephalos*, brain] A monstrosity marked by a horseshoe fusion of the two cerebral hemispheres.

cy'clic. Occurring periodically, noting especially the course of the symptoms in certain mental affections. **c. com'pound,** closed-chain* compound. **c. flow'er,** one the leaves of which are arranged in whorls. **c. insan'ity,** circular insanity, a form in which different types, such as mania and melancholia, succeed each other, sometimes separated by an interval of apparent sanity; manic-depressive insanity. **c. vom'iting,** periodical vomiting.*

cyclicot'omy. Cyclotomy.

cyclitis (si-kli'(kle')tis) [G. *kyklos*, circle (ciliary body), + *-itis*.] Inflammation of the ciliary body. **plas'tic c.,** inflammation of the ciliary body, and usually of the entire uveal tract, with a fibrinous exudation into the anterior chamber and vitreous. **pure c.,** uncomplicated c., the iris not being involved in the inflammatory process. **pu'rulent c.,** suppurative inflammation of the ciliary body, including usually the iris. **se'rous c.,** simple c., serous iritis, punctate keratitis, descemetitis; simple inflammation of the

ciliary body without suppuration or plastic exudate.

cyclobarbital (si-klo-bar'bĭ-tal). Phanodorn.

cyclocepha'lia, cycloceph'aly [G. *kyklos*, round, + *kephalē*, head.] Cyclencephaly.

cyclochorioiditis (si-klo-ko-re-oy-di'(de')tis). Inflammation of the ciliary body and the chorioid coat of the eye.

cyclodialysis (si-klo-di-al'i-sis) [G. *kyklos*, circle (ciliary body), + *dialysis*, a separating, breaking up.] The establishment of a communication between the anterior chamber and the suprachorioidal space in order to relieve intraocular pressure in glaucoma.

cycloduction (si-klo̅-duk'shun) [G. *kyklos*, circle, + L. *ducere*, to draw.] Circumduction.

cycloform (si'klo-form). Isobutyl-para-aminobenzoate, occurring in the form of white crystalline scales; employed as a dusting powder for its local anesthetic effect, in burns, painful ulcers, tuberculous laryngitis, hemorrhoids, and to allay itching.

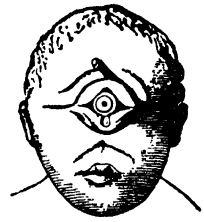
cycloid (si'kloyd) [G. *kyklos*, circle + *eidos*, resembling.] 1. Suggesting cyclothymia; a term applied to a physical type including rubicund, round-faced, jovial, happy-go-lucky individuals; see *schizoid*. 2. Noting a closed-chain* compound.

cyclophoria (si-klo-faw'rĭ-ah) [G. *kyklos*, circle, + *phora*, movement] Heterophoria caused by lack of equilibrium of the oblique muscles of the eye.

cyclo'pia [*Kyklōps* (*kyklos*, circle, + *ōps*, eye,) a mythological giant with one eye in the middle of the forehead.] Synophthalmia, a congenital defect in which the two orbits are fused into a single cavity containing one rudimentary eye. It is usually combined with cyclencephaly.

cycloplegia (si klo-ple'jĭ-ah) [G. *kyklos*, circle, + *plēgē*, stroke] Paralysis of accommodation, loss of power in the ciliary muscle of the eye.

cyclople'gic. 1. Relating to cycloplegia. 2. Anything which paralyzes the ciliary muscle and thus the power of accommodation.



SYNOPHTHALMUS, OR CYCLOPS.

cy'clops [see *cyclopia*.] A monster with fusion of the orbits into one.

cyclosal (si'klo-sal). Homocamfin.

cyclo'sis [G. *kykloō*, I whirl around.] The movement of the protoplasm and contained plastids within the protozoan cell.

cyclothymia (si-klo-thi'mĭ-ah) [G. *kyklos*, circle, + *thymos*, rage.] Manic-depressive psychosis, circular or cyclic insanity, especially when marked by attacks of mild form.

cyclothy'miac, cyclothy'mic. Relating to cyclothymia or cyclic insanity.

cy'clotome. A delicate knife for use in cyclotomy.

cyclot'omy [G. *kyklos*, circle, + *tomē*, incision.] Operation of cutting the ciliary muscle.

cyclo'tus [G. *kyklos*, a circle, + *ous*(*ōt*-), ear.] Synotus.

cydo'nium [G. *kydonion*, quince.] The seed of *Cydonia cydonia*, the quince, employed as a demulcent.

cyesedema, cyescedema (si-e-se-de'mŭ) [G. *kyēsis*, pregnancy, + *oidēma*, a swelling.] A general thickening of the cutis sometimes occurring during pregnancy and attributed to oversecretion of the growth hormone by the anterior lobe of the pituitary.

cyesiognosis (si-e-sĭ-og-no'sis) [G. *kyēsis*, pregnancy, + *gnōsis*, knowledge.] The diagnosis of pregnancy.

cyesiology (si-e-sĭ-ol'o-jĭ) [G. *kiēsis*, pregnancy, + *-logia*.] Obstetrics, the branch of medical science which has to do with pregnancy and parturition.

cye'sis [G. *kiēsis*.] Pregnancy.

Cyl. Abbreviation for cylinder, or cylindrical lens.

cyl'inder [G. *kylindros*, a roll.] 1. A geometrical figure formed by the revolution of a rectangle around one of its sides. 2. A cylindrical lens. 3. A renal cast *

cylindraxile (sil-in-drak'sil). Axis-cylinder.

cylin'dric, cylin'drical. Relating to, or of the shape of, a cylinder. **c. lens,** a lens one or both surfaces of which have the curve of a cylinder, either concave (minus) or convex (plus); a c. lens refracts the rays of light in only one of its principal meridians; it is used in eyeglasses to correct astigmatism.

cylin'driform [G. *kylindros*, cylinder, + L. *forma*, form.] Shaped like a cylinder.

cylindroadenoma (sil'in-dro-ad-e-no'mah). A tumor composed of colections of hyaline cylinders surrounding dilated capillaries of the lymph glands, and themselves surrounded by round cells.

cylin'drocell'ular. Relating to cylindrical cells.

cylindrodendrite (sil'in-dro-den'drīt) [(*axis*)*cylinder* + *dendrite*.] A process given off from an axis-cylinder process, or neuraxon; paraxon

cyl'indroid [G. *kylindros*, roll, cylinder, + *eidos*, appearance.] 1. Resembling a cylinder; more or less cylindrical. 2. A mucous cast, false cast, an elongated mass of mucus in the urine.

cylindro'ma, pl. *cylindro'mata* [G. *kylindros*, cylinder, + *-ōma*.] 1. A form of colloid cancer marked by epithelial ingrowths which appear to enclose the myxomatous stroma. 2. A tumor composed of a collection of hyaline cylinders, surrounding a central dilated capillary, and themselves surrounded by round cells.

cylindrosarco'ma. A sarcoma presenting the hyaline degeneration characteristic of a cylindroma.

cylindruria (sil-in-dru'rĭ-ah). The presence of renal cylinders or casts in the urine

cyll'in. Trade name of a dark alkaline liquid obtained from coal-tar; it contains a number of oxidized hydrocarbons, differing from phenols in having a diphenyl nucleus; antiseptic but not poisonous or caustic; employed internally in doses of ♏1–5 (0.06–0.3), and externally in lotions of the strength of 1 to 200 and in ointments.

cyllo'sis [G. *kyllōsis*.] Clubfoot.

cymarin (si'mar-in). Trade name of a preparation of apocynum, recommended as a diuretic and cardiac tonic in doses of gr. $\frac{1}{200}$–$\frac{1}{120}$ (0.0003–0.0005) by mouth or intramuscularly.

cym'ba con'chæ [G. *kymbē*, boat.] The upper, smaller, part of the concha lying above the crus helicis.

cymbocephalic, cymbocephalous (sim-bo-sĕ-fal'ik, sim-bo-sef'ă-lus) [G. *kymbē*, bowl, + *kephalē*, head.] Having a bowl-shaped skull, one with a depression of the upper surface.

cymboceph'aly. The condition of being cymbocephalic.

cyme (sīm) [G. *kyma*, a breaking wave.] In botany, a form of branching in which the axis of the parent stem terminates in a flower, the lateral shoots growing up above it. **bip'arous c.,** dischasium **hel'icoid c.,** a sympodial branching in which the axes are all on the same side. **scor'pioid c.,**

a sympodial branching in which the branches are placed alternately on one and the other side.

cynanche (sin-ang'ke) [G. *kynanchē*, a dog-collar.] Sore throat. **c. malig'na,** gangrenous pharyngitis. **c. sublingua'lis,** Ludwig's* angina. **c. tonsilla'ris,** tonsillitis, quinsy.

Cynanchum (si-nang'kum) [G. *kynanchē*, sore throat.] A genus of plants of southern and middle Europe, one species of which furnishes vincetoxicum.*

cynan'thropy [G. *kyōn(kyn-)*, dog, + *anthrōpos*, man.] A form of insanity in which the patient barks and growls, imagining himself to be a dog.

cynarase (si'nar-āz). A rennet ferment obtained from the plant, *Cynara cardunculus*.

cyniatrics (si-nī-at'riks) [G. *kyōn(kyn-)*, dog, + *iatrikē*, medical science.] The study and treatment of disease in the dog.

cyn'ic [G. *kyōn*, dog.] Dog-like, noting a spasm of the muscles of the face, *cynic spasm*, causing a grin like the snarl of a dog.

cyn'obex [G. *kyōn(kyn-)*, dog, + *bex*, cough.] A barking cough.

cynocephalus (si-no-sef'ă-lus) [G. *kyōn*, dog, + *kephalē*, head.] A monster with a head sloping back from the orbits, resembling that of a dog.

cynoglos'sum [G. *kyōn*, dog, + *glōssa*, tongue.] Hound's-tongue, the root of *Cynoglossum officinale*, formerly used in glandular tuberculosis.

cynophobia (si-no-fo'bĭ-ah) [G. *kyōn(kyn-)*, dog, + *phobos*, fear.] 1. Extreme aversion to, or unreasonable fear of, dogs. 2. Lyssophobia.

cynorex'ia [G. *kyōn(kyn-)*, dog, + *orexis*, appetite.] A voracious appetite, bulimia.

Cynorrhœstea (si-nor-res'te-ah) [G. *kyōn*, dog, + *rhaistēr*, destroyer.] Ixodoidea, the tick family.

cynothyrotoxin (si-no-thi-ro-toks'in) [G. *kyōn*, dog, + *thyroid*, gland, + *toxin*.] Term given by Berkeley to a substance or group of substances assumed to be present normally in the dog thyroid, but to be toxic in man.

Cy'on's ex'periment [Elie de *Cyon*, Russian physiologist, 1843–1912.] A stimulus applied to an intact anterior spinal nerve root produces a stronger muscular contraction than the same stimulus applied to the peripheral end of a divided nerve root. **C.'s nerve,** depressor nerve of the heart, a filament of the vagus.

cyophoria (si-o-for'ĭ-ah) [G. *kyophoreō*, I am pregnant.] Pregnancy.

cyophor'ic [G. *kyophoros*, pregnant.] Relating to pregnancy.

cyperus (si'per-us). Adrue.

cypho'sis, cyphot'ic. Kyphosis, kyphotic

cy'press oil. Oleum cupressi.

cyp'ridol. Hydriodol; a 1 per cent. solution of mercuric iodide (biniodide) in sterilized oil, used hypodermically in doses of 3 to 6 minims (0.2–0.4) in the treatment of syphilis.

cypridop'athy [G. *Kypris*, Venus.] Any venereal disease.

cypridophobia (si-prĭ-do-fo'bĭ-ah) [G. *Kypris*, Venus, + *phobos*, fear.] 1. A morbid dread of contracting venereal disease 2. An erroneous belief that one is suffering from venereal disease. 3. A morbid fear of the sexual act.

cyprip'edin. An eclectic concentration product from a tincture of the root of cypripedium; employed in neuralgia and hysteria in doses of gr. ½–2 (0.03–0.13).

cypripedium (sip-rĭ-pe'dĭ-um) [G. *Kypris*, Venus, + *pedion*, metatarsus.] (N.F.) The rhizome and roots of *Cypripedium hirsutum* (*C. parviflorum*), yellow lady's slipper, yellow moccasin flower, American valerian, male nervine; antispasmodic and nervine, in doses of gr. 5–30 (0.3–2.0). A fluidextract is official.

cypripho'bia. Cypridophobia.

Cy'prus fe'ver. Malta fever.

cyrtograph (sur'to-graf) [G. *kyrtos*, bent, + *graphō*, I write.] An instrument for recording the respiratory movements of the chest.

cyrtometer (sur-tom'e-ter) [G. *kyrtos*, bent, + *metron*, measure.] An instrument for determining the size and shape of the chest.

cyrtosis (sur-to'sis) [G. *kyrtos*, bent.] Any abnormal curvature of the spine or of the extremities.

cyst (sist) [G. *kystis*, bladder.] 1. A bladder. 2. An abnormal sac containing gas, fluid, or a semisolid material.

adventi'tious c., a c. resulting from the formation of an enclosing wall around a blood effusion or other foreign body.

allanto'ic c., a circumscribed dilatation of the urachus.

alveoloden'tal c., odontocele, a cyst in relation to an unerupted tooth either in the tissues over it (extracapsular) or originating from the aplastic tooth structures (intracapsular).

apoplec'tic c., an adventitious c. formed of the effused blood in apoplexy.

athero'matous c., a dermoid c., formed from immature epiblastic cells before the dermal structures have been developed, the sac containing therefore only a pultaceous mass.

blood c., sanguineous c.

bran'chial c., a congenital c. resulting from the nonclosure of a branchial cleft.

bursal c., a retention c. in a bursa.

butter c., an area of saponifying necrosis in a lipoma

chyle c., an embryonal c. of the mesentery, containing chyle.

colloid c., one with gelatinous contents.

com'pound c., multilocular c.; a mother c. containing daughter cysts.

cuta'neous c., cutic'ular c., any c. of the skin; dermoid c.

daughter c., a secondary c., a c., usually multiple, derived from a primary c.

degenera'tion c., involution c.

dentig'erous c., follicular odontoma, an expanded dental follicle, containing fluid and one or more teeth.

der'moid c., a tumor consisting of displaced epiblastic structures, the wall being formed of epithelium-lined connective tissue and containing epithelium, hair, and other appendages of the skin.

dilata'tion c., retention c.

disten'tion c., retention c.

echinococ'cus c., hydatid c.

endothe'lial c., a serous c. whose sac is lined with endothelium.

epen'dymal c., a circumscribed distention of some portion of the central canal of the spinal cord or of the cerebral ventricles.

epithe'lial c., dermoid c.

extravasa'tion c., hemorrhagic c.

exuda'tion c., a c resulting from distention of a closed cavity, such as a bursa, by an excessive secretion of its normal fluid contents

false c., adventitious c

follic'ular c., tubulocyst.

gas c., one with gaseous instead of the ordinary liquid or pultaceous contents.

hemorrhag'ic c., a c. resulting from the encapsulation of a mass of extravasated blood.

hydat'id c., a cyst formed by the lodgment in the liver or elsewhere of an echinococcus larva.

implanta'tion c., a cyst originating from a portion of skin grafted into the deeper tissues through some trauma, a traumatic dermoid cyst.

inclu'sion c., dermoid c.

involu'tion c., a mammary cyst occurring at the menopause, due to cystic degeneration of the gland.

lac'teal c., a retention c. in the mammary gland resulting from closure of a lactiferous duct.

Meibo'mian c., chalazion.

milk c., lacteal c.

Morgagn'ian c., hydatid of Morgagni, cystic dilatation of the long fimbria of the Fallopian tube.

mother c., a primary c. containing other (daughter) cysts within it. See *Mother-cyst.*

mucous c., a retention c. resulting from obstruction in the duct of a mucous gland.

multiloc'ular c., one containing several compartments formed by membranous septa; compound c.

necrot'ic c., one due to a circumscribed encapsulated area of necrosis with subsequent liquefaction of the dead tissue.

neural c., ependymal c.

nevoid c., one with an extremely vascular sac.

oil c., a c. resulting from fatty degeneration of the epithelial lining of a sebaceous, dermoid, or lacteal c.

oöphorit'ic c., an ovarian c arising from the ovary proper rather than from the parovarium.

parasit'ic c., one formed by the larva of a metazoan parasite, an hydatid or trichinal c.

parent c., mother c.

paroöphorit'ic c., an ovarian c. arising from the parovarium.

pilif'erous c., a dermoid c. containing hair.

prolifera'tion c., prolif'erative c., prolif'erous c., a mother c. containing daughter cysts; a c. with tumorous formation at one portion of the sac.

prolig'erous c., adenocarcinoma.

reten'tion c., a c. resulting from some obstruction to the excretory duct of a gland.

sanguin'eous c., hemorrhagic c.; a c. containing fluid blood.

seba'ceous c., wen, steatoma; a rounded tumor of variable size due to retention of the excretion in the sebaceous follicles.

sec'ondary c., daughter c.

secre'tory c., one due to retention of the normal secretion in a gland, following closure of the duct, or formation of fluid in a closed cavity more rapidly than it can be absorbed.

sequestra'tion c., a cystic tumor arising from a portion of true skin which was displaced and imprisoned in one of the lines of fissure of the body during the growth of the embryo.

serous c., a c. containing clear serous fluid, hygroma.

soap c., butter c.

sterile c., an hydatid c. without brood-capsules.

sublin'gual c., ranula.

subsyno'vial c., distention of a synovial follicle.

syno'vial c., thecal c.

tarsal c., chalazion.

thecal c., circumscribed distention of a tendon sheath; ganglion.

thyrolin'gual c., a c. in the midline of the neck resulting from non-closure of a segment of the primitive thyrolingual duct.

tu'bular c., tubulocyst.

umbil'ical c., vitellointestinal c.

uniloc'ular c., a simple c. having a single sac.

u'rachal c., allantoic c., a c. resulting from the non-obliteration of a segment of the urachus.

u'rinary c., one containing extravasated urine.

v.tellointes'tinal c., a small red sessile or pedunculated tumor at the umbilicus in an infant; it is due to the persistence of a segment of the vitellointestinal duct.

Wolffian c., a c. arising from any of the structures formed from the Wolffian body or duct.

cystadenoma, pl. *cystadeno'mata* (sist"ad-e-no'-mah) [G. *kystis,* bladder, + *adēn,* gland, + *-ōma.*] A tumor of glandular structure distended with the fluid product of continued gland secretion. **c. adamanti'num,** an incorrect term for adamantinoma. **c. par'tim sim'plex par'tim papillif'erum,** a c. consisting of a combination of the simple and papillary forms.

cystadenosarco'ma. A cystadenoma containing sarcomatous elements.

cys'tagen. Trade name for a special make of hexamethylenamina.

cystalgia (sis-tal'jĭ-ah) [G. *kystis,* bladder, + *algos,* pain.] Pain in the bladder, especially the urinary bladder.

cyst'amine. Trade name of a make of hexamethylenamine.

cystatro'phia, cystat'rophy [G. *kystis,* bladder, + *atrophia,* atrophy.] Atrophy of the bladder.

cystauchenitis (sis-taw-ken-i'(e')tis) [G. *kystis,* bladder, + *auchēn,* neck, + *-itis.*] Inflammation of the neck of the bladder; prostatitis.

cystauchenotomy (sis-taw-ken-ot'o-mĭ) [G. *kystis,* bladder, + *auchēn,* neck, + *tomē,* incision.] Incision into the neck of the bladder.

cystectasia, cystectasy (sist-ek-ta'sĭ-ah, sis-tek'ta-sĭ) [G. *kystis,* bladder, + *ektasis,* extension.] Dilatation of the bladder.

cystec'tomy [G. *kystis,* bladder, cyst, + *ektomē,* excision.] 1. Excision of the gall-bladder or of a portion of the urinary bladder. 2. Removal of a cyst.

cystein (sis'te-in). Alpha-amino-beta-thiopropionic acid, $CH_2(SH).CH(NH_2).COOH$, a protein cleavage product, sometimes found in the urine.

cystelco'sia, cystelco'sis [G. *kystis,* bladder, + *helkōsis,* ulceration.] Ulceration of the bladder.

cyst'elminth [G *kystis,* cyst, + *helmins(helminth-),* worm] Hydatid cyst.

cystenceph'alus [G. *kystis,* bladder, + *enkephalos,* brain.] A fetus with extreme internal hydrocephalus, so that the brain is little more than a sac distended with fluid.

cysten'desis [G. *kystis,* bladder, + *endesis,* a junction, binding together.] Suture of a wound in a bladder.

cyster'ethism [G. *kystis,* bladder, + *erethismos,* irritation.] Irritability of the bladder, vesical irritation.

cysthypersarcosis (sist-hi'per-sar-ko'sis) [G. *kystis,* bladder, + *hyper,* over, + *sarx,* flesh.] Hypertrophy of the wall of the bladder.

cys'tic [G. *kystis,* bladder, cyst.] 1. Relating to the urinary bladder or gall-bladder. 2. Relating to a cyst.

cysticercosis (sis-tĭ-sur-ko'sis). Invasion of the body by the larva of *Tænia solium.*

Cysticer'cus [G. *kystis,* bladder, + *kerkos,* tail.] A genus of bladder-worms, now known to be the encysted larvæ of various tapeworms; the generic name is, however, retained as a convenience in description **C. acanthot'rias,** an abnormal form of *C. cellulosæ.* **C. botryo'ides,** *C. racemosus.* **C. bo'vis,** the larva of *Tænia saginata.* **C. cellulo'sæ,** pork measles, the larva, encysted in the flesh of swine, of *Tænia solium;* it occurs also in man when the ova of *T. solium* have been ingested, being found in the brain, eye, cellular tissue, muscle, liver, etc. **C. multilocula'ris,** *C. racemosus.* **C. racemo'sus,** an abnormal variety, very irregular in shape, sometimes found at the base of the brain and not encysted.

cysticolithectomy (sis"tĭ-ko-lĭ-thek'to-mĭ) [*cystic (duct)* + *lithos,* stone, + *ektomē,* excision.] Operative removal of an impacted gallstone from the cystic duct.

cysticorrhaphy (sis-tĭ-kor'ră-fĭ) [*cystic* duct + G. *rhaphē,* a stitching.] Suture of the cystic bile duct.

cysticot'omy [*cystic*(duct) + G. *tomē,* incision.] An incision of the cystic bile-duct.

cystidolaparotomy (sis"tĭ-do-lap"ar-ot'o-mĭ) [G. *kystis,* bladder, + *lapara,* flank, + *tomē,* incision.] Incision into the bladder after a preliminary abdominal section.

cystidople'gia. Cystoplegia.

cystidotrachelotomy (sis"tĭ-do-trăk-ke-lot'o-mĭ) [G. *kystis*, bladder, + *trachēlos*, neck, + *tomē*, incision.] Cystauchenotomy.

cystifelleotomy (sis"tĭ-fel-e-ot'o-mĭ) [G. *kystis*, bladder, + L. *fel*, bile, + G. *tomē*, incision.] Cholecystotomy.

cys'tiform [G. *kystis*, bag, cyst, + L. *forma*, form] Cystic, cystoid.

cys'tin [G. *kystis*, bladder.] An amino-acid, a cleavage product of protein, $C_6H_{12}N_2S_2O_4$, sometimes occurring as a deposit in the urine, or forming a vesical calculus.

cystine'mia, cystinæ'mia [*cystin* + G. *haima*, blood.] The supposed presence of cystin in the peripheral blood.

cystinu'ria [*cystin* + G. *ouron*, urine.] The presence of cystin in the urine, usually associated with hepatic disease and jaundice.

cystirrha'gia. Cystorrhagia.

cystirrhe'a, cystirrhœ'a. Cystorrhea.

cys'tis [G. *kystis*] 1. Bladder, vesica. 2 A cyst. **c. fellea,** gall-bladder, vesica fellea [BNA]. **c. urina'ria,** urinary bladder, vesica urinaria [BNA].

cystistax'is [G. *kystis*, bladder, + *staxis*, trickling.] Oozing of blood from the mucous membrane of the bladder.

cystitis (sis-tī'(te')tis) [G. *kystis*, bladder, + *-itis*.] Inflammation of a bladder, especially the urinary bladder. **c. col'li,** inflammation of the neck of the bladder.

cys'titome. A small knife for use in dividing the capsule of the crystalline lens.

cystit'omy [G. *kystis*, bladder, sac, + *tomē*, incision.] 1. Incision of the capsule of the crystalline lens, capsulotomy. 2. Incision into the urinary bladder, cystotomy. 3. Incision into the gall-bladder, cholecystotomy

cystoadenoma (sis"to-ad-e-no'mah). Cystadenoma

cystocarcino'ma. A carcinoma in which cystic degeneration has occurred.

cys'tocarp [G. *kystis*, bladder, + *karpos*, fruit.] Sporocarp.

cystocele (sis'to-sēl) [G *kystis*, bladder, + *kēlē*, hernia] Hernia of the bladder.

cystocolos'tomy [G. *kystis*, bladder, + *kōlon*, colon, + *stoma*, mouth.] The formation of a communication between the gall-bladder and the colon, cholecystocolostomy.

cystodyn'ia [G *kystis*, bladder, + *odynē*, pain] Cystalgia, pain in the bladder.

cystoelytroplasty (sis-to-el'ĭ-tro-plas-tĭ) [G. *kystis*, bladder, + *elytron*, sheath, + *plassō*, I form.] Operation for the repair of vesicovaginal fistula.

cystoenterocele (sis-to-en'ter-o-sēl) [G. *kystis*, bladder, + *enteron*, intestine, + *kēlē*, hernia.] Hernial protrusion of portions of the bladder and of the intestine

cystoepiplocele (sis-to-ĕ-pip'lo-sēl) [G. *kystis*, bladder, + *epiploon*, omentum, + *kēlē*, tumor.] Hernial protrusion of portions of the bladder and of the omentum.

cystoepithelio'ma. An epithelioma which has undergone cystic degeneration.

cystofibro'ma. A fibroma in which cysts have formed.

Cystoflagella'ta [G. *kystis*, bladder, + L. *flagellum* whip.] A subclass of *Phytomastigophora* having a firm membranous envelope.

cys'toid [G. *kystis*, bladder, + *eidos*, appearance. Cystiform, bladder-like, resembling a cyst. A tumor resembling a cyst with pultaceous contents but without capsule.

cys'tolith [G. *kystis*, bladder, + *lithos*, stone.] A vesical calculus, a stone in the urinary bladder.

cystolithec'tomy [G. *kystis*, bladder, + *lithos*, stone, + *ektomē*, excision.] Removal of a stone from the bladder, especially of a calculus from the gall-bladder.

cystolithiasis (sis-to-lĭ-thi'a-sis) [G. *kystis*, bladder + *lithos*, stone] Stone in the bladder; the presence of a vesical calculus.

cystolith'ic. Relating to a vesical calculus.

cysto'ma, pl. *cysto'mata, cysto'mas.* A cystic tumor, a new growth containing cysts.

cystometer (sis-tom'ĕ-tur) [G. *kystis*, bladder, + *metron*, measure.] A device by means of which, water being pumped into the bladder, a record is obtained of the amount of fluid passed in, and of the changing pressure reactions of the bladder (desire to void, sense of fullness, and the pain of overdistension) caused thereby.

cystom'onas [G. *kystis*, bladder, + *monas*, a unit.] *Bodo.*

cystomor'phous [G. *kystis*, bladder, + *morphē*, form.] Cystoid, bladder-like, cyst-like.

cystomyoma (sis-to-mi-o'mah). A myoma in which cystic formation has occurred.

cystomyxoadenoma (sis"to-mik"so-ad-e-no'mah). A combined myxoma and adenoma in which cystic degeneration has occurred.

cystomyxo'ma. A myxoma in which cysts have formed.

cystonephro'sis [G. *kystis*, bag, + *nephros*, kidney.] The occurrence of cystic dilatation of the tubules of the kidney.

cystoneuralgia (sis-to-nu-ral'jĭ-ah). Neuralgia of the bladder; pain in the bladder without any apparent lesion to cause it, cystalgia, cystodynia

cystoparal'ysis. Paralysis of the bladder.

cys'topexy [G. *kystis*, bladder, + *pēxis*, fixation.] Surgical attachment of the gall-bladder or of the urinary bladder to the abdominal wall.

cys'toplasty [G. *kystis*, bladder, + *plassō*, I form.] Surgical repair of a defect in the bladder.

cystople'gia [G. *kystis*, bladder, + *plēgē*, a stroke.] Paralysis of the bladder

cystoproctos'tomy [G. *kystis*, bladder, + *prōktos*, anus, + *stoma*, mouth.] The operative establishment of an opening between the bladder and the rectum.

cystopto'sia, cystopto'sis [G. *kystis*, bladder, + *ptōsis*, a falling.] Prolapse of the vesical mucous membrane into the urethra

cystopu'rin. Proprietary name for a double salt or mixture of sodium acetate and hexamethylenetetramine; urinary antiseptic.

cystopyelitis (sis-to-pī-el-ī'(e')tis) [G. *kystis*, bladder, + *pyelos*, pelvis, + *-itis*] Inflammation of both the bladder and the pelvis of the kidney

cystopyelonephritis (sis-to-pī"el-o-ne-frī'(tre')tis) [G. *kystis*, bladder, + *pyelos*, pelvis, + *nephros*, kidney, + *-itis*.] Inflammation of the bladder, the pelvis of the kidney, and the kidney substance.

cystorectos'tomy [G. *kystis*, bladder, + L. *rectum* + G. *stoma*, mouth.] Cystoproctostomy.

cystorrha'gia [G. *kystis*, bladder, + *-rhagia*] Hemorrhage from the bladder.

cystor'rhaphy [G. *kystis*, bladder, + *rhaphē*, a sewing.] Suture of a wound in the bladder.

cystorrhe'a, cystorrhœ'a [G. *kystis*, bladder, + *rhoia*, a flow.] Cystirrhea; a mucous discharge from the bladder, vesical catarrh.

cystosarco'ma, pl. *cystosarco'mata, cystocarco'mas.* A sarcoma in which the formation of cysts has occurred.

cys'toscope [G. *kystis*, bladder, + *skopeō*, I examine.] A tubular instrument for use in examining the mucous membrane of the bladder.

cystos'copy. The inspection of the interior of the bladder by means of a cystoscope.

cystose (sis'tōz). Cystic, cystous, containing cysts.

cys'tospasm. Spasmodic contraction of the bladder.

cystospermitis (sis-to-sper-mi'(me')tis) [G. *kystis*, bladder, + *sperma*, seed, + *-itis*.] Inflammation of a seminal vesicle.

cystostax'is. Cystistaxis.

cystos'tomy [G. *kystis*, bladder, + *stoma*, mouth.] The formation of a more or less permanent opening into the urinary or gall bladder.

cys'totome [G. *kystis*, bladder, + *tomē*, a cutting.] An instrument for incising (1) the urinary or gall-bladder, or (2) the capsule of the lens in a cataract operation.

cystot'omy. Incision (1) into the urinary or gall-bladder, or (2) into the capsule of the crystalline lens (capsulotomy). **suprapu'bic c.,** epicystotomy.

cystotrachelotomy (sis-to-trak-el-ot'o-mī) [G. *kystis*, bladder, + *trachēlos*, neck, + *tomē*, incision.] Cystauchenotomy.

Cystotrypaneæ (sis-to-tri-pan'e-e). A tribe of trypanosomes infecting invertebrates.

Cystotrypanosoma (sis-to-tri-pan-o-so'mah). A genus of the tribe *Cystotrypaneæ* infecting invertebrates.

cystoureteritis (sis-to-u-re-ter-i'(e')tis). Inflammation of the bladder and of one or both ureters.

cystourethritis (sis-to-u-re-thri'(thre')tis). Inflammation of the bladder and of the urethra.

cystourethroscope (sis-to-u-re'thro-scope). An instrument combining the uses of a cystoscope and a urethroscope.

cytase (si'tāz) [G *kytos*, hollow (cell), + *-ase*, noting an enzyme.] Metchnikoff's term for alexin or complement, which he holds to be a digestive secretion of the leucocyte

cytas'ter [G. *kytos*, cell, + *astēr*, star.] Aster.

cytax (si'taks) [G. *kytos*, cell, + L. *taxare*, to estimate.] An apparatus for counting automatically the red cells, leucocytes, and lymphocytes of the blood and registering their relative proportions

cythæmolysis, cythemolysis (si-tem-(them-) ol'i-sis) [G. *kytos*, a hollow vesse' (cell), + *haima*, blood, + *lysis*, solution.] Destruction or solution of the blood corpuscles; hemolysis, hemocytolysis.

cythemolyt'ic (si-tem(them)-o-lit'ik). Relating to the destruction of blood cells.

cytheromania (sith"er-o-ma'nĭ-ah) [G. *Cythera*, one of the names of Aphrodite or Venus, + *mania*, frenzy.] Nymphomania.

cyt'isine. An alkaloid, $C_{11}H_{14}N_2O$, from the seeds of *Cytisus laburnum*, diuretic and nervine.

cytoarchitectonic (si"to-ar-kĭ-tek-ton'ik) [G. *kytos*, cell, + *architektonikē*, architecture.] Relating to the structural arrangement of cells.

cytobiology (si-to-bi-ol'o- jĭ) [G. *kytos*, cell, + *bios*, life, + *-ology*.] Cellular biology, cytology.

cytobiotaxis (si-to-bi-o-tak'sis) [G. *kytos*, cell, + *bios*, life, + *taxis*, arrangement.] Cytoclesis.

cy'toblast [G. *kytos*, cell, + *blastos*, germ.] The nucleus of a cell.

cytoblaste'ma [G. *kytos*, cell, + *blastēma*, sprout.] Cytoplasm.

cytocentrum (si-to-sen'trum) [G. *kytos*, cell, + *kentron*, center.] Centrosome.

cytocerastic, cytokerastic (si-to-ser(ker)-as'tik) [G. *kytos*, cell, + *kerastos*, mixed, mingled.] Relating to the process of change of a cell to a higher type

cytochem'ism (si-to-kem'izm) [G. *kytos*, cell.] The chemistry of the cells.

cytochemistry (si"to-kem'is-trĭ) [G. *kytos*, cell.] Chemistry in relation to cells.

cytochrome (si'to-krōm) [G. *kytos*, cell, + *chrōma*, color.] Noting a nerve cell containing only traces of a body with a nucleus about the size of an ordinary leucocyte.

cytochylema (si-to-ki-le'mah) [G. *kytos*, cell, + *chylos*, juice.] The more fluid portion of the cytoplasm.

cytocide (si'to-sīd) [G. *kytos*, cell, + L. *cædere*, to kill.] Destructive to cells.

cytocinesis (si-to-sin-e'sis) [G. *kytos*, cell, + *kinēsis*, movement.] Cytokinesis, the changes occurring in the protoplasm of the cell outside of the nucleus during cell-division.

cytoc'lasis [G. *kytos*, cell, + *klasis*, a breaking.] Fragmentation of the cells.

cytoclas'tic. Relating to cytoclasis; destructive of cells.

cytoclesis (si-to-kle'sis) [G. *kytos*, cell, + *klēsis*, a calling.] Cytobiotaxis, the grouping and seemingly conscious cooperation of cells in response to a "call" or "demand" from other cells, during both embryonic and extra-uterine life.

cytocyst (si'to-sist) [G. *kytos*, a hollow vessel (cell), + *kystis*, bladder.] The bladder-like remains of the blood-cell or tissue-cell of a vertebrate enclosing a mature schizont.

cytode (si'tōd) [G. *kytos* cell, + *eidos*, resemblance.] A cell, especially a non-nucleated cell; or a simple mass of protoplasm, plasson.

cytoden'drite [G. *kytos*, cell, + *dendron*, tree.] A dendrite given off directly from the body of the nerve-cell.

cytodiagno'sis [G *kytos*, a hollow (cell), + *diagnosis*.] Diagnosis of the cause and origin of an exudate by a study of its contained cells.

cytodier'esis (si-to-di-er'e-sis) [G. *kytos*, cell, + *diaresis*, division.] Cell-division, either mitosis or amitosis.

cytodis'tal [G. *kytos*, cell, + L *distare*, to stand off.] 1. Noting a neoplasm at a distance from the cells from which it took origin. 2. Noting the extremity of a nerve fibril or axis-cylinder at a distance from the cell-body.

cytogen'esis [G *kytos*, cell, + *genesis*, origin.] The origin and development of cells.

cytogen'ic. Relating to cytogenesis.

cytogenous (si-toj'en-us). Cell-forming, noting especially the connective-tissue cells.

cytoglo'bin. A globin obtained from leucocytes and lymphocytes.

cytohistogen'esis [G. *kytos*, cell, + *histos*, web, + *genesis*, production.] Structural development of a cell.

cytohy'aloplasm [G. *kytos*, cell, + *hyalos*, glass, + *plasma*.] The fibrillary network of the cytoplasm.

cy'toid [G. *kytos*, cell, + *eidos*, resemblance.] Resembling a cell, cytode.

cytokinesis (si-to-kin-e'sis). Cytocinesis.

cytological (si-to-loj'ĭ-kal). Relating to cytology.

cytol'ogy [G. *kytos*, cell, + *-logia*.] The anatomy, physiology, pathology, and chemistry of the cell.

cy'tolymph [G. *kytos*, cell, + L. *lympha*.] Cytohyaloplasm.

cytol'ysin [G. *kytos*, cell, + *lysis*, solution.] An antibody capable of effecting partial or complete destruction of an animal cell; it is usually not strictly specific, being capable of effecting hemolysis as well as of acting on other cells than the one which served as antigen.

cytol'ysis. The disintegration of a cel; see *cytolysin.*

cytolyt'ic [G. *kytos*, hollow (cell), + *lytikos*, solvent.] Relating to cytolysis; possessing a solvent or destructive action on cells.

cyto'ma [G. *kytos*, cell, + *-ōma.*] A cell-tumor, one formed of atypically arranged cells.

cytomachia (si-to-mak'ĭ-ah) [G *kytos*, cell, + *machē* battle.] "Battle of the cells;" the cellular activities occurring during infection by pathogenic microorganisms and the resistance to such infection by the cells of the body.

cytometaplasia (si"to-met-ă-pla'zĭ-ah) [G. *kytos*, cell, + *metaplasis*, transformation.] Change of form or function of a cell.

cytom'eter [G. *kytos*, cell, + *metron*, measure.] An accessory of the microscope, employed in counting and measuring cells, especially blood-cells.

cytomi'crosome [G. *kytos*, cell, + *mikros*, small, + *sōma*, body.] One of the granules forming an essential constituent of the cytoplasm, distinguished from the non-protoplasmic granules constituting the deutoplasm or paraplasm; thread granule.

cytom'itome [G. *kytos*, cell, + *mitos*, thread] Any portion of the fibrillary network of the cytoplasm.

cytomorpho'sis [G. *kytos*, cell, + *morphōsis*, a shaping.] The changes which the cell undergoes during the various stages of its existence.

cyton (si'ton) [G. *kytos*, cell.] The body of a nerve cell, as distinguished from its various processes.

cytope'nia [G. *kytos*, cell, + *penia*, poverty.] Poverty of the blood in cellular elements, hypocytosis.

Cytophaga[0] (si-tof'a-gah) [G. *kytos*, cell, + *phagō*, I eat.] A genus of bacteria of the order *Actinomycetales* including long, flexuous, rod-shaped organisms occurring singly and in chains; they hydrolyze cellulose and disintegrate vegetable fiber.

cytoph'agous [G. *kytos*, cell, + *phagō*, I eat.] Devouring or destructive to cells.

cytoph'agy. The devouring of other cells by the phagocytes.

cytophar'ynx [G. *kytos*, cell, + *pharynx.*] A funnel-shaped pit through which food particles enter the body in infusoria and certain other forms of protozoa.

cytophil, cytophile (si'to-fil, si'to-fīl) [G. *kytos*, cell, + *philos*, fond.] Having an affinity for cells, attracted by cells. **c. group,** the atom group in the amboceptor which binds it to the cell.

cytophylaxis (si-to-fi-lak'sis) [G. *kytos*, cell, + *phylaxis*, a guarding.] Protection of the cells against lytic agents.

cytophyletic (si-to-fi-let'ik) [G. *kytos*, cell, + *phylē*, a tribe.] Relating to the genealogy of a cell.

cy'toplasm [G. *kytos*, a hollow (cell), + *plasma*, thing formed.] 1. Protoplasm, the substance of a cell exclusive of the nucleus and various inclusions; it consists of a fine reticular structure, *spongioplasm*, enclosing in its meshes a colloid semifluid matter, the *cytochylema.* 2. The formative portion of the yolk as distinguished from the deutoplasm.

cytoplas'mic. Relating to the cytoplasm.

cytoplas'tin [G. *kytos*, cell.] The plastin substance of the cytoplasm, consisting of spongioplastin and paraplastin.

cytoprox'imal [G. *kytos*, cell, + L. *proximus*, nearest.] Noting the portion of a nerve-fibril or axis-cylinder near its origin from the nerve-cell.

cytopyge (si-to-pi'je) [G. *kytos*, cell, + *pygē*, buttocks.] The anal orifice found in certain of the infusoria.

cytoretic'ulum [G. *kytos*, a hollow body (cell), + L. *reticulum*, dim. of *rete*, a net.] Spongioplasm.

cytoryctes (si-to-rik'tēz) [G *kytos*, a hollow (cell), + *orykтēs*, a digger.] Guarnieri body, an intracelluar body, assumed to be the protozoan parasite of smallpox (*C. variolæ*) and of vaccina (*C. vaccinæ*), and other affections. **C. aptha'rum,** a supposed protozoan parasite of foot-and-mouth disease. **C. lu'is,** a minute flagellate protozoon, described by Siegel as present in the red blood-corpuscles in syphilis. **C. scarlati'næ,** a supposed protozoan parasite of scarlet fever. **C. vacci'næ,** the supposed protozoan cause of vaccina. **C. vari'olæ,** the supposed cause of smallpox, a protozoan parasite found in the skin lesions of that disease.

cytosine (si'to-sin) [G. *kytos*, cell.] A pyrimidine base obtained by the cleavage of certain complex nucleic acids.

cy'tosome [G. *kytos*, cell, + *sōma*, body] The cell body exclusive of the nucleus.

cytost (si'tost) [G. *kytos*, cell] Turck's name for a specific toxin liberated from the cell body as a result of injury to the same.

cytos'tasis [G. *kytos*, cell, + *stasis*, standing.] The arrest of leucocytes in a minute blood-vessel.

cy'tostome (si'to-stōm) [G. *kytos*, cell, + *stoma*, mouth.] The mouth opening in infusoria and certain other protozoa.

cytostromat'ic [G. *kytos*, cell.] Relating to the cell stroma.

cytotac'tic. Relating to cytotaxia.

cytotax'ia, cytotax'is [G. *kytos*, cell, + *taxis*, arrangement.] The attraction (*positive c.*) or repulsion (*negative c.*) of cells for one another.

cytother'apy [G. *kytos*, hollow vessel, cell, + *therapeia*, healing.] Opotherapy, organotherapy.

cytoth'esis [G. *kytos*, cell, + *thesis*, a placing.] The repair of injury in a cell; the restoration of cells

cytotox'ic. Cytolytic, destructive to cells

cytotox'in [G. *kytos*, a hollow (cell), + *toxin.*] A specific cell-destroying substance; cytolysin

cytotrochin (si-to-tro'kin) [G. *kytos*, cell, + *trochia*, track.] In chemotherapy the cytotropic element in the compound, which carries with it the active element.

cytotropic (si-to-trop'ik) [G. *kytos*, cell, + *tropē*, a turning.] Having an affinity for cells.

cytozo'ic [G. *kytos*, a hollow (cell), + *zō*, I live.] Living in a cell, noting certain parasitic protozoa.

cytozo'on [G. *kytos*, cell, + *zōon*, animal.] A protozoan cell-parasite.

cytozyme (si'to-zīm) [G *kytos*, cell, + *zymē* leaven] A hypothetical substance produced by tissue cells, leucocytes, and blood platelets which reacts with serozyme to produce thrombin; thrombokinase.

cytula (si'tu-lah) [L. dim. of G. *kytos*, cell.] The impregnated ovum.

cytu'ria [G. *kytos*, cell, + *ouron*, urine.] The passage of cells in unusual numbers in the urine

Czaplewski's bacil'lus (chă-plev'ske) [Eugen *Czaplewski*, German physician, *1865.] The pole bacterium, found sometimes in whooping-cough. **C.'s meth'od,** staining the tubercle bacillus with carbolic fuchsin, the contrast color being obtained by dipping the specimen in a solution of fluorescin 1, and methylene blue 5, in alcohol 100,

and then several times in a 5 per cent. methylene blue alcoholic solution without fluorescin.

Czermak's spa'ces (cher'mahk) [Johann Nepomuk *Czermak*, Austrian physician and physiologist, 1828–1873.] The interglobular spaces, or gaps in the dentine due to failure of calcification.

Czerny's anemia (cher'ni) [Adalbert *Czerny*, German pediatrist, *1863.] Alimentary anemia in infants due to insufficient nourishment. **c's diathesis,** exudative diathesis.*

Czerny's opera'tion (cher'ne) [Vincenz v. *Czerny*, Heidelberg surgeon, 1842–1916.] A radical hernia operation; the sac is ligated and cut off, the stump is returned to the abdomen and the edges of the opening are sutured. **C.'s su'ture,** the first row of the Czerny-Lembert intestinal suture; the needle enters the serosa and passes out through the submucosa or muscularis, and then enters the submucosa or muscularis of the opposite side and emerges from the serosa. The second row is the Lembert suture.

Czer'ny-Lem'bert su'ture [see *Lembert.*] An intestinal suture in two rows combining the Czerny and the Lembert sutures.

D

D. 1. Abbreviation; in prescription writing, for *da*, give, *detur*, *dentur*, let there be given; in electrodiagnosis, for duration, the current flowing the circuit being closed; in optics for diopter, and *dexter*, right; in dental formulæ, for deciduous. 2. symbol for the vitamin D potency of good cod-liver oil, multiples of which (5D, 100D, etc.) are used to designate the vitamin D potency of irradiated ergosterol (viosterol) or other substances.

Da Cos'ta's disease' [Jacob M. *Da Costa*, Philadelphia physician, 1833–1900.] Retrocedent gout.*

dacryadenitis (dak"re-ad-ĕ-ni'(ne')tis). Dacryoadenitis.

dacryagogatresia (dak-re-ă"go-gă-tre'sĭ-ah) [G. *dakry*, tear, + *agōgos*, leading, + *atresia*.] Obstruction or closure of a lacrymal duct.

dacryagogue (dak'rĭ-ă-gog) [G. *dakry* tear, + *agōgos*, leader.] 1. Lacrymal duct. 2. Promoting the flow of tears. 3. An agent which stimulates the lacrymal gland to secretion.

dacryoadenalgia (dak-rĭ-o-ad-en-al'jĭ-ah) [G. *dakryon*, tear, + *adēn*, gland, + *algos*, pain.] Pain in one of the lacrymal glands.

dacryoadenitis (dak-re-o-ad-en-i'(e')tis) [G. *dakryon*, tear, + *adēn*, gland, + *-itis*.] Inflammation of the acrymal gland.

dacryoblennorrhea (dak-rĭ-o-blen-or-re'ah) [G. *dakryon*, tear, + *blenna*, mucus, + *rhoia*, flow.] A discharge of mucus from a lacrymal duct.

dacryocele (dak'rĭ-o-sēl) [G. *dakryon*, tear, + *kēlē*, hernia.] Protrusion of the lacrymal sac.

dac'ryocyst [G. *dakryon*, tear, + *kystis*, sac.] The lacrymal sac, saccus lacrimalis [BNA].

dacryocystal'gia [G. *algos*, pain.] Pain in the lacrymal sac.

dacryocystitis (dak"re-o-sis-ti'(te')tis) [G. *dakryon*, tear, + *kystis*, bladder, + *-itis*.] Inflammation of the lacrymal sac.

dacryocys'titome. Dacryocystotome.

dacryocystoblennorrhea (dak-rĭ-o-sis"to-blen-or-re'ah). Chronic catarrhal dacryocystitis.

dacryocystocele (dak"rĭ-o-sis to-sēl) [G. *dakryon*, tear, + *kystis*, sac, + *kēlē*, hernia.] Protrusion of the lacrymal sac.

dacryocystopto'sia [*dacryocyst* + G. *ptōsis*, a falling.] Downward displacement of the lacrymal sac.

dacryocystorrhinostomy (dak"rĭ-o-sis"tor-ri-nos'to-mĭ) [G. *dakryon*, tear, + *kystis*, bladder, + *rhis(rhin-)*, nose, + *stoma*, mouth.] The establishment of an artificial opening between the tear-sac and the nasal cavity.

dacryocys'totome. A small knife for incising the lacrymal sac.

dacryocystot'omy [*dacryocyst* + G. *tomē*, a cutting.] Incision of the lacrymal sac.

dacryohelco'sis [G. *dakryon*, tear, + *helkōsis*, ulceration.] Ulceration of the lacrymal sac or duct.

dacryohemorrhea, dacryohæmorrhœa (dak"rĭ-o-hem-ŏ-re'ah) [G. *dakryon*, tear, + *haima*, blood, + *rhoia*, flow.] The shedding of bloody tears.

dac'ryolith [G. *dakryon*, tear, + *lithos*, stone.] Lacrymal calculus, tear-stone, a concretion in the lacrymal or nasal duct.

dacryolithiasis (dak"rĭ-o-lĭ-thi'a-sis). The formation and presence of a concretion in the lacrymal or nasal duct.

dacryoma (dak-rĭ-o'mah). A cyst formed by the accumulation of tears in an obstructed lacrymal duct.

dacryon (dak'rĭ-on) [G. a tear.] The point of junction of the frontonasal and vertical lacrymomaxillary sutures at the inner angle of the orbit.

dacryops (dak'rĭ-ops) [G. *dakryon*, tear, + *ōps*, eye.] The constant presence of an excess of tears in the eye, owing to narrowing of the punctum lacrimale.

dacryopyorrhea, dacryopyorrhœa (dak"rĭ-o-pi-ŏ-re'ah) [G. *dakryon*, tear, + *pyon*, pus, + *rhoia*, flow.] The discharge of pus from the lacrymal duct.

dacryopyo'sis [G. *dakryon*, tear, + *pyōsis*, suppuration.] Suppuration in the lacrymal sac or duct.

dacryorrhe'a, dacryorrhœ'a [G. *dakryon*, tear, + *rhoia*, flow.] An excessive flow of tears.

dacryosolenitis (dak-re-o-so-len-i'(e')tis) [G. *dakryon*, tear, + *sōlēn*, a channel, + *-itis*.] Inflammation of the lacrymal or nasal duct

dacryostenosis (dak"rĭ-o-stĕ-no'sis) [G *dakryon*, tear, + *stenōsis*, narrowing] Stricture of a lacrymal or nasal duct.

dacryosyr'inx [G. *dakryon*, tear, + *syrinx*, pipe.] A lacrymal fistula

dac'tyl [G. *daktylos*.] A finger or toe.

dactyl'ion [G. *daktylos*, finger.] The presence of adhesions, either congenital or acquired, between two or more fingers; dactylosymphysis syndactyly, syndactylism.

dactylitis (dak-til-i'(e')tis) Inflammation of one or more fingers.

dactyl'ium. Dactylion.

dactylocampsodynia (dak"tĭ-lo-kamp"so-din'ĭ-ah) [G. *daktylos*, finger, + *kampsis*, a bending, + *odynē*, pain] Painful contraction of one or more fingers.

dactylographer's cramp (dak-til-og'ră-furz kramp) [G. *daktylos*, finger, + *graphō*, I write.] Typewriter's cramp, an occupation neurosis, similar to writer's cramp.

dactylogryposis (dak-tĭ-lo-gri-po'sis) [G. *daktylos*, finger, + *grypōsis*, a curve.] Contraction of the fingers.

dactylol'ogy [G. *daktylos*, finger, + *logos*, word.] The use of the finger alphabet in talking.

dactylol'ysis [G. *daktylos*, finger or toe, + *lysis*, loosing.] Ainhum.

dactylomeg'aly [G. *daktylos*, finger, + *megas(megal-)* large.] Abnormal size of one or more of the fingers; megalodactylism, macrodactylism.

dactylos'copy [G. *daktylos*, finger, + *skopeō*, I examine.] An examination of the markings in prints made from the finger tips; employed as a method of personal identification. See *Galton's** *system*.

dac'tylospasm. Spasmodic contraction of the fingers.

dactylosymphysis (dak-tĭ-lo-sim'fi-sis) [G. *daktylos*, finger, + *symphysis*, a growing together.] Webbing of the fingers; adhesion, congenital or acquired, of two or more fingers; dactylion, syndactyly.

dactylus (dak'tĭ-lus) [G. *daktylos*, finger.] A finger or a toe; specifically a toe, as distinguished from *digitus*, a finger.

dæmonoma'nia. Demonomania, an insane belief that one is possessed of devils.

dæmonop'athy. Demonopathy, demonomania

dæmonopho'bia. Demonophobia.

Daf'fy's elix'ir [Thomas *Daffy*, English clergyman, *1680.] Tinctura sennæ composita.

D.A.H. Abbreviation for disordered action of the heart.

dai'sy. The quartan malarial parasite in its segmented or mature phase.

Da'kin's fluid or **solu'tion** [Henry Drysdale *Dakin*, New York biological chemist, *1888.] Crystallized washing soda, 400 grams (or dry sodium carbonate, 140 grams) is dissolved in 10 liters of tap water; chlorinated lime, 200 grams, is added, and the mixture shaken; after half an hour siphon off the clear solution, rejecting the sediment of calcium carbonate; filter through a plug of cotton and add 40 grams of boric acid, and the solution is ready for use; it will keep for about a week, precipitating slightly. It is a neutral sodium hypochlorite solution, similar to Labarraque's solution but without the excessive alkalinity of the latter.

Dal'by's carmin'ative. Mistura carminativa (N.F.).

Dal'rymple's disease' [John *Dalrymple*, English oculist, 1804–1852.] Cyclokeratitis. **D.'s sign,** in exophthalmic goiter the margins of the lids are unduly separated, the upper lid being retracted.

Dal'ton's law [John *Dalton*, English physicist and chemist, 1766–1844.] In a mixture of gases, which do not unite chemically, the pressure is equal to the sum of the pressures of all the gases in the mixture.

Dal'ton-Hen'ry law [John *Dalton*;* Joseph *Henry*, American physicist, 1797–1878.] In dissolving a mixture of gases a fluid will absorb as much of each gas in the mixture as if that were the only gas dissolved.

Dalto'nian. 1. Relating to John Dalton.* 2. A color-blind person.

daltonism (dawl'ton-izm) [John *Dalton** who suffered from red-blindness.] Color-blindness, especially red-blindness.

dam [A.S. *fordemman*, to stop up.] Any barrier to the flow of fluid; especially in surgery and dentistry, a sheet of thin rubber arranged so as to shut off the part operated upon from the access of fluid.

damian'a (N.F.). The dried leaves of *Turnera diffusa* or *T. aphrodisiaca*, a plant of Mexico and of Central America; stimulant, tonic, and laxative, and is reputed to have aphrodisiac properties; dose, gr. 20–40 (1.3–2.6), or ♏30 (2.0) of the fluidextract.

dam'mar. A resin resembling copal, obtained from various species of *Shorea* in the East Indies; it is used, dissolved in chloroform, for mounting microscopical specimens.

Damocrates' confec'tion (dam-ok'ra-tes) [Servilius *Damocrates*, Greek physician in Rome, first century, A.D.] A confection containing agaric, cinnamon, frankincense, galbanum, garlic, gentian, ginger, opium, valerian, and some thirty other ingredients; it formed a part of the original Warburg's* tincture.

Damoiseau's curve or **sign** (dam-wah-zo') [Louis Hyacinthe Céleste *Damoiseau*, French physician, 1815–1890.] In the case of a moderate pleural effusion the upper border of the area of dullness corresponds to a parabolic curve with convexity upward, the highest point of which is in the axillary line.

damp. 1. Humid, moist. 2. Atmospheric moisture. 3. Foul air in a mine, air charged with carbonic oxide or with various explosive hydrocarbon vapors **after d.,** air containing a large percentage of carbonic oxide. **fire d.,** methane.

Da'na's opera'tion [Charles Loomis *Dana*, New York neurologist, *1852.] Resection of the posterior spinal nerve roots for neuralgia, athetosis, and spastic paralysis.

Dance's sign [Jean Baptiste Hippolyte *Dance*, French physician, 1797–1832.] A slight retraction in the neighborhood of the right iliac fossa in some cases of intussusception.

dancer's foot. A painful periarthritic swelling under the head of the first metatarsal bone of the left foot, occurring in women who dance excessively in high-heeled slippers.

dan'cing disease', dan'cing ma'nia. Epidemic chorea. **d. spasm,** saltatory spasm.*

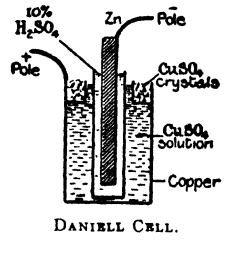
dandelion (dan'de-li-on) [Fr. *dent de lion*, lion's tooth] Taraxacum.

dan'druff. The presence of white scales in the hair of the scalp, due to the ordinary branny exfoliation of the epidermis, or to the greasy scales of seborrhea.

dan'dy fe'ver. Dengue

dan'iell [John Frederick *Daniell.**] A former unit of electromotor force, that furnished by one Daniell cell, about 1.1 volt.

Dan'iell cell or **el'ement** [John Frederick *Daniell*, English physicist, 1790–1845.] A galvanic cell in which a solution of copper sulphate, containing a copper plate, is separated by a porous earthen cylinder from a dilute sulphuric acid solution containing a zinc plate



DANIELL CELL.

Dan'ielssen's disease' [Daniel Cornelius *Danielssen*, Norwegian physician, 1815–1894.] Anesthetic leprosy; also called *Danielssen-Boeck* disease.

Danysz baci'llus (dan'is). [Jean *Danysz*, French bacteriologist of Polish birth, 1861–1928.] An organism similar to *B. typhi murium*, cultures of which have been used to destroy rats. **D. phenom'enon,** when toxin is added in divided portions, instead of all at once, to antitoxin the neutralizing effect of the latter is lessened. **D. vac'cine,** a vaccine made from the intestinal flora, said to be useful in certain cutaneous and gastroenteric disorders and in some cases of asthma.

Daph'ne [G. *daphnē*, bay-tree.] A genus of European shrubs, from several species of which mezereum* is obtained.

daph'netin Dioxycumarin, $C_9H_6O_4$, derived by hydrolysis from daphnin.

daph'nin. A glucoside, $C_{15}H_{16}O_9.2H_2O$, from mezereum.

d'Arcet's met'al (dar-sa'). An alloy of lead, bismuth, and tin, employed in dentistry.

Dar-es-Salaam bacillus. *Bacterium** *Dar-es-Salaam.*

Darier's disease' (dar-e-a') [Ferdinand Jean *Darier*, French physician, *1856.] Keratosis follicularis, psorospermosis follicularis vegetans.

dark-field conden'ser. An apparatus for throwing reflected light through the microscope field, so

that only the object to be examined is illuminated, the field itself being dark.

Darkshevitch's nu'cleus (dark-sha'vich) [Liverius *Darkshevitch* (or Darkschewitsch), Russian neurologist, *1858.] An accessory bulbar nucleus of the motor oculi, lying anterior to, and to the outer side of, the principal nucleus.

darsonvaliza'tion [A. *d'Arsonval*, French physiologist, *1851.] The application of a high frequency or d'Arsonval current* in the treatment of disease.

darto'ic, dar'toid [G. *dartos*, flayed.] Resembling dartos in its slow, involuntary contractions **d. tis'sue,** tissue resembling dartos.

dar'tos [G. skinned or flayed.] Tunica dartos, a network of non-striated muscular fibers in the lower layers of the skin of the scrotum. **d. mulieb'ris,** a thin layer of similar muscular ature in the skin of the labia majora.

dar'trous [Fr. *dartre*, herpes.] Herpetic.

Darwin'ian. 1. Relating to Charles Robert *Darwin*, English scientist, 1809–1882. 2. One who accepts the Darwinian theory. **D. ear,** an auricle in which the upper border is not rolled over to form the helix, but projects upward as a flat, sharp edge. **D. the'ory,** darwinism. **D. tu'bercle,** tuberculum auriculæ

darwin'ianism. Darwinism.

dar'winism. The doctrine of the origin of species, taught by Charles Darwin and expounded by him in his various works; the central assumptions are evolution by natural selection and survival of the fittest.

dasetherapy (das"e-ther'ă-pĭ) [G. *dasos*, forest, + *therapeia*, treatment.] Treatment of disease by residence in forests of pine and other balsamic trees.

date-cavity. See *mark*.

date-fever. Dengue.

da'tum-plane. A horizontal plane taken as the starting point for the measurements in craniometry.

Datu'ra [a Hindu word] A genus of solanaceous plants, from a species of which stramonium* is obtained.

daturine (dat'u-rēn) An alkaloid obtained from stramonium leaves, said to be isomeric with atropine and identical with hyoscyamine; antispasmodic, sedative, anodyne, and mydriatic; dose gr. $\frac{1}{150}$–$\frac{1}{120}$ (0.00025–0.0005).

Daubenton's an'gle (do-bahn-tawn') [Louis Jean Marie *Daubenton*, French physician, 1716–1799] An angle formed by the junction, at the opisthion, of lines coming from the basion and from the projection in the median plane of the lower border of the orbits. **D.'s line,** the occipital line passing between the opisthion and the nasion.

Daucus (daw'kus). A genus of plants of the order *Umbelliferæ*, containing the carrot, *D. carota*.

Daufresne's solution (do-frān'). A modified Dakin's solution: 200 gm. of bleaching powder is dissolved with vigorous shaking in 5 liters of water; 100 gm. dry sodium carbonate and 90 gm. sodium bicarbonate are dissolved with vigorous shaking in 5 liters of water; then, after filtration, the two solutions are mixed.

daughter-cell (daw'ter-sel). A cell formed by cytodieresis or division of a previous cell (mother-cell).

daughter-cyst (daw'ter-sist). Deutoscolex, a secondary cyst deve oped within the mother*-cyst of an echinococcus.

Davaine's' bacil'lus [Casimir Joseph *Davaine*, French physician, 1812–1882.] *Bacillus anthracis.*[0]

Davai'nea madagascarien'sis. A tapeworm found in man in Madagascar, Mauritius, Guiana, and elsewhere; the intermediary host is not known.

Da'vidsohn's sign [Hermann *Davidsohn*, Prussian physician, *1842.] Absence of illumination of the pupil when an electric light is placed in the mouth, indicating the presence of fluid or a solid tumor in the antrum of Highmore on the darkened side.

Da'vidson syr'inge. A rubber tube, armed with an appropriate nozzle, intersected with a compressible bulb, with valves so arranged that compression forces the fluid, into which one end of the tube is inserted, forward to the nozzle-end.

Daviel's opera'tion (dă-ve-el') [Jacques *Daviel*, French oculist, 1696–1762.] Cataract extraction by capsulotomy. **D.'s spoon,** a small spoon-like instrument for removing the remains of a cataract after discission.

Da'vis crown. An artificial crown attached by means of a pin cemented to both crown and root.

Da'vy's le'ver [Richard *Davy*, English surgeon, *1838.] A wooden sound which is passed into the rectum and makes pressure on one of the iliac arteries to arrest hemorrhage.

Da'vy's test [Edmund William *Davy*, Irish physician, 1826–1899.] For carbolic acid: to a few drops of the suspected fluid add double the quantity of a mixture of molybdic acid 1, and sulphuric acid 15; the presence of carbolic acid is indicated by a brownish color changing to purple.

Da'vy's yell'ow flu'id. Liquor chlori compositus.

day-blindness. Inability to see clearly in a bright light, hemeralopia.

day'mare. The occurrence of symptoms of oppression, resembling nightmare, while one is awake.

day-nur'sery. Crèche, a place where children may be cared for during the day while their mothers are at work.

day-sight. A condition in which vision is more distinct in a bright light; night-blindness, nyctalopia.

Day's test [Richard Hance *Day*, American physician, 1813–1892.] For blood: add to the suspected fluid, or the washing of a suspected stain, tincture of guaiac and afterward hydrogen peroxide; the presence of blood is indicated by a blue color.

Db. Chemical symbol of *dubhium*.

D.C. Abbreviation of (*a*) Dental Corps; (*b*) direct current; (*c*) Doctor of Chiropractic.

D.D.S. Abbreviation of Doctor of Dental Surgery.

De. Chemical symbol of *denebium*.

de- [L. *de*, from, away.] A prefix carrying often a privative or negative sense; denoting away from, cessation; it has sometimes an intensive force.

deacidification (de-ă-sid-i-fi-ka'shun). The removal or neutralization of acidity.

deaconess. A number of an order established in some Protestant countries, having duties corresponding to those of a Sister of Charity in the Catholic Church.

deactivation (de-ak-ti-va'shun). The process of rendering or of becoming inactive.

dead (ded). 1. Without life. 2. Numb. **d. space,** a cavity remaining after the closure of a wound, which is not obliterated by the pressure of the dressings.

dead-house. Mortuary (*2*).

deadly night'shade. Belladonna.

deaf (def) [A.S. deáf.] Unable to hear; hearing indistinctly, hard of hearing. **d. field, d. point,** a point where the acoumeter is not heard.

deaf-mute (def-mūt'). One who can neither hear nor speak, one who is deaf and dumb.

deafmu'tism. Inability to speak, due to congenital deafness or that occurring in early life.

deaf'ness. 1. Impairment or total loss of the sense of hearing. **apoplec'tiform d.,** Ménière's disease. **bass d.,** inability to hear low notes. **boil'er-maker's d.,** loss of hearing due to fatigue of the auditory nerve by the noise incident to riveting the inside of a boiler. **cer'ebral d.,** d. due to disease of the brain in the auditory area. **ceru'minous d.,** impairment of hearing due to the presence of a plug of cerumen in the external auditory meatus. **cor'tical d.,** d. resulting from a lesion of the cerebral cortex. **labyrin'thine d.,** loss of hearing due to disease of the internal ear. **mid'brain d.,** d. due to a lesion in the fillet region of the tegmentum. **mind d.,** d. due to inability to interpret the sounds heard. **mu'sic d.,** amusia. **nerve d.,** loss of hearing due to disease of the auditory nerve. **ner'vous d.,** d. due to disease of the acoustic centers in the cortex, of the auditory nucleus, or of the nerve terminals in the labyrinth. **progress'ive d.,** gradually increasing d. due to otosclerosis. **psy'chic d.,** mind d. **sen'sory d.,** mind d. **soul d.,** mind d. **throat d.,** d. due to closure of the pharyngeal orifice of the Eustachian tube. **tox'ic d.,** loss of hearing due to injury of the auditory nerve by certain drugs and poisons, such as quinine and tobacco. **word d.,** loss of the power to understand the spoken word, although the sound is heard.

dealbation (de-al-ba'shun) [L. *dealbare*, to whiten] Bleaching.

dealcoholization (de-al"ko-hol-i-za'shun). The removal of alcohol from a fluid; in histological technique, the removal of alcohol from a specimen which has been previously immersed in this fluid.

de'alin. Trade name of an antiseptic dressing powder, composed of sodium perborate, boric acid, magnesium carbonate, zinc oxide, starch, and talcum.

deamidase (de-am'ĭ-dāz). An enzyme which causes the decomposition of an amido-compound.

deamidize (de-am'ĭ-dīz). To decompose amido-acids.

deaminase (de-am'ĭ-nāz). An enzyme which causes the decomposition of an amino-compound.

deaminize (de-am'ĭ-nīz). To decompose amino-acids.

deaquation (de-ă-kwa'shun) [L. *de*, from, + *aqua*, water.] The removal of water from a fluid or chemical compound; dehydration.

dearterialization (de-ar-te"rĭ-al-i-za'shun). Changing the character of arterial blood to that of venous blood; deoxygenation of the blood.

dearticulation (de-ar-tik-u-la'shun). 1. Diarthrosis. 2. Dislocation. 3. Disarticulation.

death (deth). The cessation of life. **black d.,** the plague of the middle ages. **local d.,** death of a part of the body or of a tissue, necrosis, gangrene. **molec'ular d.,** caries. **somat'ic d.,** death of the entire body, as distinguished from local death.

death-rate (deth'rāt). The ratio of deaths to the population of a city or country for a given period, as estimated from the figures for this period for the year expressed as so many per thousand of the entire population.

death'-rattle. A gurgling or rattling in the throat of a moribund person, caused by an accumulation of mucus in the respiratory passages.

death'-struggle. Agony, death-throe, the final moments of life sometimes marked by muscular twitchings or uneasy tossing about.

death-throe (deth'thro). Death-struggle.

death-trance. Apparent death, a condition of suspended animation, marked by unconsciousness and barely perceptible respiration and heart-action.

debil'itant. 1. Weakening. 2. A quieting agent or one that subdues excitement.

debil'ity [L. *debilis*, weak.] Weakness.

debouch (dĕ-boosh') [Fr. *bouche*, mouth.] To open or empty into another part.

débouchement (da-boosh-mon') [Fr.]. Opening or emptying into another part.

Debout's pills (dĕ-boo') [Emile *Debout*, Belgian physician in Paris, 1811–1865.] Extract of colchicum and sulphate of quinine, of each gr. 1½ (0.1), powdered digitalis, gr. ¾ (0.05); for migraine.

Debove's disease' (dĕ-buv') [Maurice Georges *Debove*, Parisian physician, 1845–1920. Splenomegaly. **D.'s mem'brane,** a fine layer between the epithelium and the basement layer of the mucous membrane of the air-passages and intestine. **D.'s tube,** a large tube for gastric lavage, marked at 45 to 50 cm. from its eye to indicate when it is in the stomach.

débridement (da-brēd-mon') [Fr. *dé-*, away, + *bride*, bridle.] 1. Division of constricting or restricting bands. 2. Cutting away a zone of contused or infected tissue from a wound surface. Cf. *épluchage*.

decagram (dek'a-gram) [G. *deka*, ten.] A weight of 10 grams, equivalent to 154.32349 grains, or, roughly, 2½ drams, apothecaries' weight.

decalcifica'tion [L. *de-*, away, + *calx*(*calc-*), lime + *facere*, to make.] Removal of lime salts or calcareous matter.

decal'cify. To remove calcareous matter.

decal'cifying. 1 Removing, or capable of removing, the calcareous matter of the bones or teeth. 2. Coagulation-preventing, noting a physiological salt solution to which has been added 1 per cent. of sodium citrate.

decaliter (dek'ă-le-ter). A measure of 10 liters, the equivalent of 610.2 cubic inches, or, roughly, 10 quarts or 2½ gallons.

decal'vant [L. *decalvare*, to make bald] Removing the hair, making bald.

dec'ane. A paraffin, $C_{10}H_{22}$, in coal-tar.

decanormal (dek-ŭ-nor'mal) [G. *deka*, ten.] Noting a solution ten times the strength of a normal one.

decant' [L. *de*, from, + *canthus*, a corner.] To pour off gently the upper clear portion of a fluid, leaving the sediment in the vessel.

decanta'tion. Pouring off the clear upper portion of a fluid.

decap'itate [L. *de-*, away, + *caput*, head.] To remove the head; specifically to cut off the head of a fetus to facilitate delivery in cases of irremediable dystocia.

decapita'tion. The removal of a head, specifically of the fetal head in dystocia.

decap'itator. An instrument for separating the fetal head.

decapsula'tion. Depriving of a capsule or enveloping membrane. **d. of the kid'ney,** stripping off the capsule of the kidney, employed as a remedial measure in certain cases of chronic nephritis.

decarboniza'tion. The process of arterialization of the blood by oxygenation and the removal of carbon dioxide in the lungs.

decay (de-ka') [L. *de*, down, + *cadere*, to fall.] 1. The destruction of an organic substance by slow combustion, or gradual oxidation. 2. Putrefaction. 3. To deteriorate, to undergo slow combustion or putrefaction.

decentered, decentred (de-sen'turd). 1. Noting a lens so mounted that the visual axis does not pass through the axis of the lens. 2. Noting a lens thicker at one side than the other.

decentra'tion [L. *de*, from, + *centrum*, center.] Removal from the center.

decerebra'tion. Removal of the brain.

decer'ebrize. To move the brain, either in craniotomy or in animal experiments.

dechloridation (de-klor-i-da'shun). Method of reducing the amount of sodium chloride in the tissues and fluids of the body by abstention from the use of salt in the diet.

dechlorina'tion. Dechloridation.

dechlorura'tion [Fr.] Dechloridation.

decholin-sodium (de-ko'lin-so'dĭ-um). Sodium dehydrocholate.

decibel (des'ĭ-bel). A unit of the intensity and volume of sound.

decidua (de-sid'u-ah) [L. *deciduus*, falling off (qualifying *membrana*, membrane, understood).] The altered mucous membrane of the pregnant uterus, forming an envelope for the fetus. **d. basa'lis** [BNA], d. serotina, the part of the mucous membrane between the blastocyst and the uterine wall, at the place where the placenta will be formed. **d. capsula'ris** [BNA], d. reflexa, the layer which forms the outer investing envelope of the fetus. **d. membra'na,** d. capsularis. **d. menstrua'lis,** the succulent mucous membrane of the non-pregnant uterus at the menstrual period. **d. reflex'a** [L. turned back], d. capsularis. **d. seroti'na** [L. late], d. basalis. **d. ve'ra** [L. true], the mucous membrane lining the cavity of the pregnant uterus and not in immediate relation with the ovum.

decid'ual. Relating to the decidua.

deciduitis (de-sid-u-i'(e')tis) Inflammation of the decidua.

deciduo'ma. Syncytioma, chorioma.* **d. malignum,** chorioma malignum.

deciduosarcoma (de-sid''u-o-sar-ko'mah). Chorioma malignum.

deciduous (de-sid'u-us) [L. *decidere*, to fall down.] That which eventually falls off, not permanent. **d. denti'tion,** the first, temporary, dentition. **d. mem'brane,** decidua. **d. plant,** one the leaves, petals, etc., of which fall off the same season or year in which they are formed. **d. teeth,** milk teeth, teeth of the first dentition.

decigram (des'ĭ-gram) [L. *decimus*, tenth.] A weight of $\frac{1}{10}$ gram, the equivalent of 1.54 grains.

deciliter (des'ĭ-le-ter) [L. *decimus*, tenth.] A measure of $\frac{1}{10}$ liter, equivalent to 6.1028 cubic inches or 3.38 American, 3.52 English fluidounces.

decimeter (des'ĭ-me-ter) [L. *decimus*, tenth.] A linear measure of $\frac{1}{10}$ meter, equivalent to 3.937 inches.

decinor'mal [L. *decimus*, tenth, + *normal*.] One-tenth of normal, noting a solution of this strength; abbreviation $\frac{n}{10}$; see *solution*.

decip'ara [L. *decem*, ten, + *parere*, to bear.] A woman who has borne ten children; abbreviation, X-para.

decitellization (de-si''tel-i-za'shun) [L. *de*, from, + *citellus*, ground squirrel.] The extermination of ground squirrels, which are susceptible to plague; a term used by those engaged in antiplague work.

deck-plate. The upper thin portion of the medullary tube in the embryo; a layer of cells outside the epiblast in the embryo.

declination (dek-lĭ-na'shun). Deflection of the vertical meridian of the eye to one or the other side in consequence of rotation of the eyeball in its anteroposterior axis; *negative d.* is when the upper pole of the vertical diameter approaches the nose, *positive d,* is when it turns toward the temple.

dec'linator. A form of retractor by means of which certain parts are kept out of the way during an operation.

decline (de-klīn'). 1. A chronic progressive disease. 2. The stage of subsidence of the symptoms of an acute disease. 3. The period of catabolism or involution, coincident with beginning old age.

declive (de-klīv') [L. *declivis*, sloping downward.] [BNA.] Declivis, clivus monticuli, the posterior sloping portion of the monticulus of the vermis of the cerebellum.

declivis (de-kli'vis). Declive.

decoction (de-kok'shun) [see *decoctum*.] 1. The process of boiling. 2. Decoctum. **Zim'mermann's d.,** see *Zimmermann*. **Zitt'mann's d.,** a d of sarsaparilla, see *Zittmann*.

decoc'tum, gen. *decoc'ti*, pl. *decoc'ta* [L. boiled down, from *de*, down, + *coquere*, to boil.] Decoction, the pharmacopeial name for preparations made by boiling crude vegetable drugs, and then straining, in the proportion of 50 gm. of the drug to 1000 c.c. of water, approximately 12½ drams to the ounce. There are no official decoctions in the U.S.P.; in the B.P. decoctions of aloes, of pomegranate root, and of hematoxylon are official. **d. aca'ciæ cor'ticis** (B.A.), decoction of acacia bark; acacia bark 1, water 16; employed in diarrhea in doses of ℥ ½–2 (15.0–60.0), and locally as an astringent. **d. agrop'yri** (B.A.), decoction of agropyrum, or of triticum; agropyrum 1, water 20; dose ℥ ½–2 (15.0–60.0). **d. al'oes compos'itum,** compound decoction of aloes; extract of aloes 15, myrrh 11.3, saffron 11.3, potassium carbonate 7.5, extract of licorice 55, compound tincture of cardamom 400, water to make 1500; stimulant cathartic in doses of ℥ ½–1 (15.0–30.0). **d. cissam'peli** (B.A.), decoction of cissampelos; 1 part in 8 of water; dose, ℥ ½–2 (15.0–30.0). **d. grana'ti radi'cis** (Br.), decoction of pomegranate root, strength of 4 ounces to the pint; dose ℥ ½–1 (15.0–30.0). **d. hæmatox'yli** (Br.), decoction of hematoxylon, logwood 50, cinnamon bark 8, water 1000; dose, ℥ ½–2 (15.0–60.0). **d. hygroph'ilæ** (B.A.), decoction of hygrophila; 1 part of the herb in 10 parts of water; dose ℥ 1–2 (30.0–60.0). **d. ispaghu'læ** (B.A.), decoction of ispaghula; dose, ℥ ½–2 (15.0–60.0). **d. sappan'** (B.A.), decoction of sappan; sappan 1 ounce, cinnamon 30 grains, water 20 fluidounces; dose ℥ ½–2 (15.0–60.0).

décollement (da-kul-mon') [Fr. ungluing.] The operation of separating tissues or organs which are adherent, either normally or pathologically.

decompensa'tion. A failure of compensation in heart disease.

decompose (de-kom-pos') [L. de, from, down, + *componere*, to put together.] 1. To resolve a compound into its component parts, to disintegrate. 2. To decay.

decomposition (de-kom-po-zĭ'shun). Decay, disintegration, lysis.

decompres'sion. The removal of pressure. **cer'ebral d.,** removal of a small segment of the skull, usually in the subtemporal region, with incision of the dura, to relieve intracranial pressure. **d. disease', d. in'jury,** caisson disease. **d. opera'tion,** cerebral d.

deconges'tive. Having the property of reducing congestion.

decortica'tion [L. *de,* from, + *cortex(cortic-),* rind, bark.] Removal of the cortex, or external layer beneath the capsule from any organ or structure. **arte'rial d.,** periarterial sympathectomy, removal of the arterial sheath containing the sympathetic nerve fibers; Leriche's operation. **d. of the kid'ney,** decapsulation* of the kidney. **d. of the lung,** removal of the pleura, both pulmonary and costal, for the cure of chronic empyema. **pul'monary d.,** Fowler's operation, pleurectomy.

decortiza'tion. Decortication

decrepita'tion [L. *decrepitare,* to crackle.] The snapping of certain salts when heated; crackling.

decrudescence (de-kroo-des'ens) [L. *de.* from, + *crudescere,* to become bad.] Abatement of the symptoms of disease.

decubation (de-ku-ba'shun) [L. *de,* from, + *cubere,* to lie down, to keep one's bed.] The final period of an infectious disease from the disappearance of the specific symptoms to complete restoration of health and the end of the infectious period.

decu'bital. Relating to a bedsore.

decubitus (de-ku'bĭ-tus) [L. *decumbere,* to lie down.] 1. The position of the patient in bed, as *dorsal d., lateral d.* 2. A bedsore. **acute' d.,** a severe form of bedsore, occurring in hemiplegia, of purely neurotrophic origin. **Andral's d.,** see *Andral.*

decurrent (de-kur'ent) [L. *decurrere,* to run down.] 1. Extending downward; centrifugal. 2. In botany, noting a leaf prolonged along the stem below its point of insertion, as in the thistle.

decur'sus fibra'rum cerebra'lium [BNA]. The running down of the cerebral fibers; noting the course of certain tracts in the brain.

decur'tate [L. *decurtare,* to cut short.] Shortened, cut short.

decuss'ate [L. *decussare,* to mark with an X.] 1. To cross. 2. Crossed like the arms of an X. 3. In botany, noting opposite pairs of leaves, projecting from the stem alternately at right angles with the contiguous pairs.

decussatio (de-kŭ-sa'shyo) [L.] Decussation. **d. bra'chii conjuncti'vi** [BNA], a crossing of the fiber tracts of the tegmenta, originating from the brachia conjunctiva, behind the red nucleus. **d. fontina'lis,** fountain decussation, a mass of fibers between the red nuclei, arising from the cells of the nates or colliculus superior of the corpora quadrigemina and the central gray layer on either side; the fibers cross in the middle line and join the medial longitudinal fasciculus on the opposite side. **d. lemnisco'rum** [BNA], decussation of the lemniscus or fillet, sensory decussation of the medulla oblongata, an intercrossing of fibers in the median plane of the medulla or the dorsal aspect of the pyramids, immediately above the level of the decussation of the pyramids. **d. nervo'rum trochlear'ium** [BNA], the crossing of the fibers of the two trochlear nerves on the upper surface of the velum medullare anterius. **d. pyram'idum** [BNA], decussation of the pyramids, the intercrossing of the bundles of the crossed pyramidal tracts at the lower part of the medulla oblongata. **d. tegmento'rum** [BNA], decussation of the tegmenta, a crossing of the fiber tracts of the tegmenta lying nearest the median line in the region below the aqueduct where the tegmenta are united.

decussa'tion [L. *decussatio.*] 1. A crossing, especially of two nerve tracts; chiasm. 2. The point of crossing of two tracts. **d. of the fil'let,** decussatio lemniscorum. **foun'tain d.,** decussatio fontinalis. **mo'tor d.,** decussatio pyramidum. **op'tic d.,** optic chiasm. **pin'iform d.,** decussatio lemniscorum. **pyram'idal d.,** decussatio pyramidum. **sen'sory d.,** decussatio lemniscorum. **supe'rior pyram'idal d.,** decussatio lemniscorum.

dedentition (de-den-tish'un). Loss of teeth, especially the falling out of the teeth consequent upon senile atrophy of the alveoli.

dedolation (de-do-la'shun) [L. *dedolare,* to hew away.] A slicing wound made by a sharp instrument grazing the surface.

Deehan's ty'phoid reac'tion. A cutaneous test of typhoid fever similar to that of v. Pirquet in tuberculosis.

deelectronation (de-e-lek-tro-na'shun). Oxidation, the removal of electrons from an element during a chemical reaction.

Deen's test (dān) [Izaak Abrahamszoon van *Deen,* Dutch physiologist, 1804–1869.] Guaiac test, Almén's* blood test.

deep [A.S. *deóp.*] Beneath the surface.

deer-fly mal'ady. Tularemia*.

Deetjen's bod'ies (dāt'yen) [Hermann *Deetjen,* German physician, 1863–1915.] Blood platelets.*

defatiga'tion [L. *defatigare,* to tire out.] Weariness, exhaustion, extreme fatigue.

defecalgesiophobia (def"e-kal-je-sĭ-o-fo'bĭ-ah) [L. *defecatio* + G. *algēsis,* pain, + *phobos,* fear.] A dread of defecation on account of the pain attending the act.

defecation (def"e-ka'shun) [L. *defæcare,* to remove the dregs, purify.] The discharge of excrement from the rectum.

defective (de-fek'tiv) [L. *defectivus; deficere,* to fail, to lack.] 1. Imperfect. 2. A person (*a*) lacking in some physical quality, as one who is blind or a deaf-mute; or (*b*) a mental or moral degenerate.

defemination (de-fem-i-na'shun) [L. *de-,* away, *femina,* woman.] A weakening or loss of feminine characteristics.

defen'sive [L. *defendere,* to ward off.] Defending, preserving from injury. **d. pro'tein,** an antibody.

def'erens [L.] Ductus (or vas) deferens.

def'erent [L. *deferre,* to carry down.] Efferent, carrying away. **d. canal', d. duct,** vas deferens, ductus* deferens.

deferentectomy (def"e-ren-tek'to-mĭ) [L. (ductus) *deferens* + G. *ektomē,* excision.] Exsection of the ductus deferens, vasectomy.

deferential (def-e-ren'shal). Relating to the ductus (or vas) deferens.

deferentitis (de-fer-en-tī'(te')tis). Inflammation of the ductus (vas) deferens.

deferred distribu'tion (de-furd'). In life-insurance, a plan whereby the first apportionment of profits on the policy, the first dividend, is made at the end of a definite number of years.

deferred shoots (de-furd'). Shoots produced from buds which have remained dormant through one or more seasons.

deferves'cence [L. *defervescere,* to cease boiling.] Falling of an elevated temperature, abatement of fever.

defibrination (de-fi-brin-a'shun). Removal of fibrin from the blood after it has been drawn, in order to prevent clotting.

deficiency (de-fish'en-sĭ) [L. *deficere*, to fail.] A lacking, something wanting. **d. disease'**, insufficiency disease, one due to defective metabolism caused by a lack of vitamins or other essential constituents in the diet, or to a deficient secretion of some endocrine gland. **d. symp'tom**, a symptom expressive of a reduced amount or absence of the secretion of some endocrine gland.

definite (def'ĭ-nit). Noting a cymose inflorescence in which the oldest flower is at the apex of the axis in the center of a constant number of stamens.

definition (def-ĭ-nish'un) [L. *definire*, to limit.] In optics, the power of a lens to give a distinct image.

deflec'tion [L. *deflectere*, to bend aside.] 1. A moving to one side. 2. The bending of the light rays toward an opaque body. **d. of com'plement**, deviation of complement, fixation of complement; union of complement with unattached interbodies or amboceptors, leaving without complement those amboceptors which are attached to the bacteria, so that the bacteria are still active and capable of elaborating toxins; see also Bordet* phenomenon, Bordet*-Gengou test, Neisser*-Wechsberg phenomenon, Wassermann's* test.

deflora'tion. Deflowering, depriving of virginity.

deflorescence (de-flor-es'ens) [L. *deflorescere*, to fade, wither.] Disappearance of the eruption in scarlet fever or other of the exanthemata

deflu'vium [L. *defluere*, to flow down] A falling of the hair.

defluxio (de-fluk'shyo) [L.] Defluxion. **d. capillo'rum**, a falling out of the hair of the head. **d. cilio'rum**, a falling out of the eyelashes

deflux'ion [L. *defluere*, to flow down.] 1. A falling down or out, as of the hair. 2. A flowing down or discharge of fluid. 3. Congestion, flow of blood to a part.

deforma'tion [L. *de-*, away, + *forma*, form.] 1. A change of form from the normal 2 A deformity.

deform'ing. Causing a deviation from the normal form.

deform'ity. A deviation from the normal shape or size, resulting in disfigurement **gun'stock d.**, a d. resulting from condylar fracture at the elbow in which the axis of the extended forearm is not continuous with that of the arm but is displaced to one side.

defunctionalization (de-funk"shun-al-i-za'shun). Loss of function; causing a loss of function.

defunda'tion [L. *de*, away from, + *fundus*.] Excision of the fundus uteri.

defurfuration (de-fur"fu-ra'shun) [L. *furfur*, bran.] Branny desquamation, the shedding of the epidermis in the form of fine scales.

deganglionate (de-gang'glĭ-on-āt). To deprive of ganglia.

degen'eracy [L. *de*, from, + *genus(gener-)*, race.] A condition marked by deterioration of the mental or physical processes.

degenerate (de-jen'ur-āt) [L. *degenerare*.] 1. To pass to a lower level of mental or physical qualities; to fall below the normal type or state. 2. Below the normal; that has fallen to a lower level. 3. A person whose moral characteristics are below those of his race and generation. **infe'rior d.**, one who has the characteristics of degeneracy combined with a weak mentality. **supe'rior d.**, one who has the characteristics of degeneracy combined with high mental gifts or even genius.

degeneratio (de-jen-er-a'shyo) [L. *de*, from, + *genus*, race.] Degeneration. **d. mi'cans** [L. *micare*, to glitter], the formation of glistening hyaline masses from degenerating glia cells.

degenera'tion [L. *de*, from, + *genus*, race.] 1. Deterioration, sinking from a higher to a lower level of type. 2. A worsening of physical or mental qualities. 3. A retrogressive pathological change in cells or tissues in consequence of which the functioning power is lost and the living substance becomes converted into an inert mass. **ad'ipose d.**, fatty d. **adiposogen'ital d.**, dystrophia adiposogenitalis. **albu'minoid d.**, cloudy* swelling. **albu'minous d.**, amyloid d. **am'yloid d.**, a retrogressive conversion of certain of the connective-tissue elements into a translucent, homogeneous substance, called by Kekulé lardacein. **angiolith'ic d.**, calcareous degeneration of the walls of the blood-vessels. **ascend'ing d.**, centripetal Wallerian d. **athero'matous d.**, atheroma. **ba'cony d.**, amyloid d. **basophil'ic d.**, basophilia (2). **calca'reous d.**, calcification. **ca'seous d.**, caseation. **chee'sy d.**, caseation. **col'loid d.**, a degeneration similar to mucoid, in which the material is inspissated and has a concentric structure. **descend'ing d.**, centrifugal Wallerian d. **earth'y d.**, calcification. **fat'ty d.**, a retrogressive change associated with the appearance of granules or globules of fat in the cytoplasm, formed therein and not deposited from without. **fi'brinous d.**, a deposit of fibrin within cells becoming necrotic. **fi'broid d.**, **fi'brous d.**, sclerosis, displacement of the normal tissues by fibrous tissue. **glass'y d.**, hyaline d. **gran'ular d.**, basophilia (2). **gray d.**, d. of the white substance of the spinal cord the fibers of which lose their medullary sheath and become darker in color. **hy'aline d.**, a retrogressive change in the supporting connective-tissue fibrils of the coats of the arterioles, especially the inner, marked by swelling and fusion of the fibrils, forming a clear, translucent, structureless mass; it resembles, but is distinct from, amyloid degeneration, the staining reactions of the two being different. **hy'aloid d.**, amyloid d. **hydrop'ic d.**, a condition in which the cell absorbs water to such a degree that it bursts; this change occurring in a number of cells, results in the formation of a vesicle. **larda'ceous d.**, amyloid d. **mu'cinoid d.**, a term suggested by Greenfield and Lyon to include both mucoid and colloid d., the essential cellular changes in both being similar, the only difference being that in colloid d., the substance is firmer and more inspissated than in mucoid d., in which it is thin and jelly-like. **mu'coid d.**, a regressive change in the mucus-secreting cells, or a pathological exaggeration of normal mucus-secretion, in which the cells undergo a change similar to cloudy swelling with deposits of mucoid material in and between the cells; also a conversion of any of the connective tissues into a gelatinous or mucoid substance. **myelin'ic d.**, a deposit of lecithin and myelinic bodies in the cells, in phosphorus poisoning and autolysis; this deposit precedes the appearance of fatty globules and is accompanied by disintegration of the nucleus and a discharge of nuclear chromatin into the cytoplasm. **myxo'matous d.**, a form of mucoid degeneration occurring in myxedema and in various inflammatory conditions, as in the mucous polypi growing from mucous membranes. **Nissl d.**, see *Nissl*. **parenchy'matous d.**, cloudy swelling. **pol'ypoid d.**, the formation of numerous rather large thick papilliform projections from the

mucous membrane. **reac'tion of d.,** the electrical r. in a degenerated nerve and the muscles supplied by it; it consists in absence of response to both galvanic and faradic stimulus in the nerve and to faradic stimulus in the muscles. **red d.,** a necrotic change not infrequently occurring in uterine fibroids during pregnancy, marked by softening and a deep red or mahogany coloration. **sec'ondary d.,** degeneration of a nerve, affecting always the end which is cut off from its trophic center. **se'nile d.,** the process of involution occurring in old age. **vac'uolar d.,** a form of d. resembling the hydropic, but in lesser degree, in which there is a formation of vacuoles in the cells. **Walle'rian d.,** secondary d. following division, compression, or other injury of a nerve. **wax'y d.,** amyloid d. **Zen'ker's d.,** waxy or amyloid d. in muscular tissue, occurring in long continued fevers and also in anemia and various toxic conditions.

degen'erative. Relating to degeneration.

deglutition (dĕ-glu-tish'un) [L. *deglutire*, to swallow] Swallowing.

deglu'titive. Relating to deglutition.

degrease (de-grēs'). To remove fatty matter or grease.

degree' [Fr. *degré*; L. *gradus*, a step.] 1. A rank conferred by colleges and universities in recognition of the completion of a certain course of study or as a mark of honor. The most common medical degrees are Chirurgiæ Magister (C.M.), master in surgery; Medicinæ Bachelor (M.B.), bachelor of medicine; Medicinæ Doctor (M.D.), doctor of medicine. 2. One of the divisions on the scale of a thermometer, barometer, etc.

degusta'tion [L. *degustare*, to taste.] The sense of taste; tasting.

dehematize (de-hem'ă-tīz). To deprive of blood, either locally by pressure or generally by bleeding.

Dehio's test (da'he-o) [Karl Konstantinovitch *Dehio*, Russian physician, 1851–1927.] If an injection of atropine relieves bradycardia the condition is due to irritation of the vagus; if it does not, the condition is due to an affection of the cardiac musculature.

dehis'cence [L. *dehiscere*, to gape.] A splitting or bursting open.

dehiscent (de-his'ent). In botany, marked by dehiscence.

dehumaniza'tion. Loss of human characteristics; brutalization.

dehy'drate [L. *de*, from, + G. *hydōr(hydr-)*, water.] 1. To extract water from. 2. To lose water.

dehydra'tion. 1. Depriving of water. 2. Losing water. 3. Exsiccation (2).

dehydrocholate (de-hi-dro-ko'lāt). A salt of dehydrocholic acid.

dehydrocholic acid (de-hi-dro-ko'lik as'id). A fine colorless powder or needle-shaped crystals forming salts with the alkaline earths, it is produced by the deoxidization of cholic acid by treatment with nitric acid.

dehy'drogenize. To remove hydrogen from a compound.

dehyp'notize. To bring out of the hypnotic state.

deiterospinal tract (di'ter-o-spi"nal). Fibers leading from Deiters' nucleus into the spinal cord.

Deiters' cells (di'ters) [Otto Friedrich Karl *Deiters*, German anatomist, 1834–1863.] 1. Supporting cells in the organ of Corti, attached to the basilar membrane and receiving between their free extremities the hair-cells, or cells of Corti of the outer row. 2. Astrocytes or spider-cells of the neuroglia. 3. Nerve-cells of the first type, the neuraxons of which become the axis-cylinders of nerve-fibers. **D.'s nu'cleus,** the lateral vestibular nucleus, lying to the mesial side of the restiform body in the pons. **D.'s phalan'ges,** D.'s cells (1). **D.'s proc'ess,** the axis-cylinder process or neuraxon.* **D.'s ter'minal frames,** plate-like structures in the organ of Corti uniting D.'s cells (1) with Hensen's cells.

dejecta (de-jek'tah) [L. *dejicere*, to throw down.] The matter passed from the bowel, feces; excrementitious material in general.

dejection (de-jek'shun). 1. Melancholy, mental depression. 2. Matter passed from the bowels. 3. The passage of matter from the bowels, defecation

Déjerine's disease' (da-zhĕ-rēn') [Joseph Jules *Déjerine*, Parisian neurologist, 1849–1917.] Interstitial neuritis of infancy, causing muscular atrophy. **D.'s periph'eral neurota'bes,** multiple neuritis with ataxia.

Déjerine-Landouzy type. See *Landouzy*.

Déjerine-Lichtheim phenomenon (da-zhĕ-rēn'-likht'hīm fe-nom'e-non) [Joseph Jules *Déjerine*; Ludwig *Lichtheim*, German physician, 1845–1915.] In subcortical motor aphasia, the patient can indicate with his fingers the number of syllables in a word which, however, he cannot speak.

dekanormal (dek"ă-nor'mal) [G. *deka*, ten.] Having ten times the strength of normal, referring specifically to solutions.

delacerate (de-las'er-āt). To tear, to lacerate badly.

delacryma'tion. Lacrymation, excessive secretion of tears

delacta'tion. Weaning.

Del'afield's hematox'ylin [Francis *Delafield*, New York physician and pathologist, 1841–1915.] A stain for histological specimens; hematoxylin 4, ammonia-alum 52, absolute alcohol 25, methyl alcohol 100, glycerin 100, water 400

delamina'tion. A division into laminæ, specifically the division of the blastoderm into two layers, epiblast and hypoblast.

Delbet's sign (del-ba'). [Paul *Delbet*, French surgeon, 1866–1924.] In a case of aneurysm or a main artery, if the nutrition of the part below is well maintained despite the fact that the pulse has disappeared, the collateral circulation is efficient.

delbiase (del-bī'-āz') [After Pierre *Delbet*, Paris surgeon, contemporary.] Trade name of a preparation said to be a mixture of the halogen salts (chloride, bromide, iodide, and fluoride) of magnesium, claimed to promote the activity of the phagocytes.

deleterious (de-le-te'rĭ-us) [G. *dēlētērios*.] Injurious, noxious, harmful.

Del'hi boil, Del'hi sore [*Delhi*, a city in the Punjaub, British India.] Oriental boil.*

del'icate [L. *delicatus*, soft, luxurious.] Of feeble resisting power.

deligation (de-li-ga'shun) [L. *deligare*, to tie together.] Ligation, the application of a ligature.

delimita'tion [L. *delimitare*, to mark the limits.] Putting bounds or limits, marking off; preventing the spread of a morbid process in the body or of a disease in the community.

delinquent (de-ling'kwent) [L. *delinquere*, to fail.] One who has a tendency to the commission of criminal acts.

deliquesce (del-i-kwes') [L. *deliquescere*, to melt away.] To become damp or liquid by absorbing water from the atmosphere, said of certain salts.

deliquescence (del''i-kwes'ens). The process of deliquescing.

deliques'cent. Noting a solid substance which readily absorbs water from the air, becoming damp or liquid.

deliquium (de-lĭ'kwĭ-um) [L. *de*, down, + *liquere*, to melt.] 1. Deliquescence. 2. [L. *deliquere*, to fail.] A faint, syncope. **d. an'imi,** syncope.

delir'iant. 1. Causing delirium. 2. A toxic agent which produces delirium. 3. One who is delirious.

delirifacient (de-lir-ĭ-fa'shent) [L *delirium* + *facere*, to make.] 1. Causing delirium, deliriant. 2. A deliriant (2).

delir'ious. In a state of delirium.

delir'ium [L. *delirare*, to be crazy.] A condition of extreme mental, and usually motor, excitement, marked by a rapid succession of confused and unconnected ideas, often with illusions and hallucinations. **ac'tive d.,** d. accompanied by motor excitement. **acute' d.,** grave d. **anx'ious d.,** a condition of mild psychomotor disturbance in which the prominent note is a sort of incoherent apprehension or anxiety. **collapse' d.,** one caused by extreme physical depression induced by a shock, profuse hemorrhage, exhausting labor, etc. **d. alcohol'icum,** d. tremens. **d. ambitio'sum,** d. grandiosum. **d. cord'is,** extreme irregularity in rhythm and force of the heart's action. **d. grandio'sum,** d. of grandeur, d. in which the subject is filled with ideas of his own importance, wealth, or power. **d. mus'sitans** [L *mussitare*, to mutter], muttering d., a form common in low fevers in which the subject is unconscious, but constantly mutters incoherently. **d. of persecu'tion,** d. in which the subject has the delusion that he is being persecuted. **d. si'ne delir'io** [delirium without delirium], an abortive form of delirium tremens, in which all the symptoms of tremor, precordial distress, dyspepsia, anxiety, restlessness, and sweating are present, but in which mental confusion and hallucinations do not supervene. **d. tre'mens** [L. *tremere*, to dread], a form of acute insanity due to alcoholic poisoning, marked by sweating, tremor, atonic dyspepsia, restlessness, anxiety, precordial distress, mental confusion, and hallucinations **d. vesan'icum** [L. *vesania*, insanity], insanity. **grave d.,** acute d., a very pronounced and severe form of d. usually presaging the death of the patient. **low d.,** a form in which there is little excitement, either mental or motor, the ideas being confused and incoherent, but following each other slowly. **se'nile d.,** the mental feebleness of extreme old age; dotage. **tox'ic d.,** d. caused by the action of some poison. **traumat'ic d.,** d. following a severe injury.

delitescence (del-ĭ-tes'ens) [L. *delitescere*, to lie hidden.] 1 The sudden subsidence of symptoms; disappearance of a tumor or a cutaneous lesion. 2. Period of incubation of an infectious disease.

deliv'er [L. *deliberare*, to set free.] 1 To assist a woman in childbirth. 2. To extract from an enclosed place, as the child from the womb, a tumor from its capsule or surroundings, the crystalline lens in case of cataract, etc.

deliv'ery. 1. The passage of the child through the genital canal into the external world. 2. The final removal of the lens in cataract extraction. **post-mor'tem d.,** the extraction of the fetus after the death of its mother. **premature' d.,** the expulsion of a viable fetus, *i.e.* after the beginning of the seventh month.

delle (del'eh). The central, lighter colored portion of the erythrocyte in a stained blood specimen.

de"lomor'phous [G. *dēlos*, manifest, + *morphē*, form.] Of definite form and shape.

Delore's meth'od (dĕ-lōr') [Xavier *Delore*, French physician, 1828–1916.] The treatment of knock-knee by forcible manual correction and subsequent incasing in a plaster-of-Paris splint.

delouse (de-lows'). To free from infestation with lice, a term used especially in relation to the prophylaxis of typhus fever, trench fever, and other supposed louse-borne diseases.

Delpech's ab'scess (del-pesh') [Jacques Mathieu *Delpech*, French surgeon, 1777–1832.] An abscess appearing suddenly with but slight inflammatory symptoms, accompanied by marked adynamia.

delphinine (del'fin-ēn). An alkaloid, $C_{22}H_{35}NO_6$, from staphisagria, occurring in the form of white soluble crystals; employed in neuralgia, palpitation, and chronic rheumatism in doses of gr. $\frac{1}{60}$–$\frac{1}{30}$ (0.001–0.002), and externally, in 1 or 2 per cent. ointment, in pediculosis.

Delphin'ium [G. *delphinion*, larkspur.] A genus of plants of the order *Ranunculaceæ*. **D. aja'cis,** a species which, with the following, is a source of delphinium of the N.F. **D. consol'ida,** delphinium (N.F.), larkspur, the seeds of which have properties similar to those of stavesacre; it has also been used in dropsy and asthma in doses of ♏10 (0.6) of the N.F. tincture. **D. staphisa'gria,** stavesacre, staphisagria.*

del'ta [name of the Greek letter Δ, corresponding to the Roman D.] In anatomy, a triangular surface. **d. for'nicis,** lyra, commissura* hippocampi. **d. mesoscap'ulæ,** the flat triangular surface at the vertebral extremity of the spine of the scapula over which glides the tendon for the lower fibers of the trapezius muscle. **d. rays,** secondary electrons of slow speed which are produced when alpha particles strike matter, whether solid, liquid, or gaseous. **Galt'on's d.,** see *Galton*.

deltoid (del'toyd) [G. *delta*, the letter Δ, + *eidos*, resemblance.] Resembling the Greek letter Δ; relating to the deltoid muscle. **d. em'inence, d. impres'sion,** tuberositas deltoidea. **d. lig'ament,** ligamentum deltoideum. **d. muscle,** musculus deltoideus. **d. spine, d. tu'bercle,** a tubercle at the inner end of the anterior border of the clavicle, at the beginning of the d. impression.

deltoïdeus (del-to-id'e-us). The deltoid muscle, musculus* deltoideus.

de lunat'ico inquiren'do [L. as to inquiring regarding a lunatic.] The title of a writ appointing a commission to examine a person as to his mental state.

delusion (de-lu'zhun) [L. *deludere*, to deceive.] An immovable illusion or hallucination, a false belief or wrong judgment. **d. of grandeur,** expansive d., one in which the subject believes himself possessed of great wealth, intellect, power, etc. **d. of nega'tion,** a depressive delusion in which the victim imagines the world and all that relates to it have ceased to exist. **depres'sive d.,** one connected with sad or distressing ideas **expan'sive d.,** one connected with ideas of grandeur. **nihilis'tic d.,** d. of negation. **per'secutory d.,** a false notion that one is being persecuted. **somat'ic d.,** one having reference to an imaginary lesion or altered function of some organ or part of the

body. **sys'tematized d.,** a d. which is logically founded upon a false premise. **unsys'tematized d.** one of a group of disconnected illogical delusions.

delu'sional. Relating to a delusion or delusions.

demagnetize (de-mag'ne-tīz). 1. Dehypnotize, demesmerize. 2 To take away or destroy magnetism.

demarca'tion [L. *de*, off, + *marcare*, to mark.] A setting of limits, determining a boundary. **line of d.,** a zone of inflammatory reaction separating a gangrenous area from healthy tissue. **sur'face d.,** the line between paralyzed and functioning muscle.

Demarquay's symp'tom (de-mar-ka') [Jean Nicolas *Demarquay*, French surgeon, 1811–1875.] Absence of elevation of the larynx during deglutition, said to indicate syphilitic induration of the trachea.

dement'. 1. Suffering from dementia, demented. 2. One who is demented.

dement'ed. Dement, suffering from dementia or loss of reason.

dementia (de-men'shyah) [L. *de-* priv. + *mens*, mind.] Insanity characterized by more or less complete abolition of the mental faculties of reason, memory, etc. **acute' d.,** primary d. **appercep'tive d.,** Weygandt's term for the end process of dementia precox accompanied by extreme mental weakness. **cataton'ic d.,** catatonia (2). **chron'ic d.,** (1) secondary d.; (2) d. of unfavorable prognosis. **cu'rable d.,** amentia, acute d. **d. paralyt'ica,** paralytic dementia, general paresis.* **d. paranoi'des,** a disease beginning in early life with paranoid symptoms and terminating in dementia. **d. præ'cox** [L. precocious], a disease characterized by progressive mental weakness tending to dementia, occurring in adolescents or young adults. **hebephren'ic d.,** the simple and more quiet form of d. præcox, beginning with marked irritability and psychasthenia, followed by a stage of moderate maniacal excitement, which is succeeded by complete dementia. **pri'mary d.,** amentia, a form of acute d. occurring usually in the young, and often of favorable prognosis. **sec'ondary d.,** chronic d. following mania or melancholia, of unfavorable prognosis. **se'nile d.,** progressive mental deterioration with loss of memory, especially for recent events, and occasional intercurrent attacks of excitement, occurring in the aged. **ter'minal d.,** secondary d. **tox'ic d.,** d. occurring in the victim of a drug habit.

dement'ing. Tending to dementia.

demi- [Fr.; L. *dimidius*, half.] Semi-, hemi-, a prefix denoting half.

demigauntlet (dem"ĭ-gawnt'let). A glove-like bandage for the fingers and hand.

demilune (dem'ĭ-lūn) [Fr. half-moon] 1. The malarial crescent. 2. A crescentic cell; see *Adamkiewicz, Heidenhain,* and *Gianuzzi.* **d. bod'y,** a circular body of extreme transparency except for a crescentic punctate substance on one edge which contains hemoglobin; the body is much larger than a red cell but is thought possibly to be a degenerated red cell swollen by imbibition; it has been found in malaria and in convalescence from typhoid fever; the transparent portion is called the glass-body.

dem"imonstros'ity. A monstrosity in which the malformation is not so extreme as to render life impossible.

demineralization (de-min"er-al-i-za'shun). A loss or decrease of the animal constituents of the body or individual tissues. **coeffic'ient of d.,** the proportion of mineral compounds to the total dry residue of the urine; the average is 30 per cent.

dem"ipenn'iform. Demipectinate, penniform on one side only, noting certain muscles with fibers running at an acute angle from one side of a tendon.

demise (de-mīz') [Fr. *démise;* L. *dimittere*, to resign.] Death.

Demme's bacil'lus (dem'meh). A gram-positive bacillus with rounded ends, producing in guinea-pigs an eruption resembling erythema nodosum.

Demodex folliculorum (de'mo-deks fol-lik'u-lo-rum) [G. *dēmos*, tallow, + *dēx*, a wood-worm.] A minute parasite inhabiting the hair-follicles and ducts of the sebaceous glands; it seldom causes any irritation.

demog'raphy [G. *dēmos*, the people, + *graphō*, I write.] The science of statistics relating to man in general—vital statistics, comparative statistics of race, occupation, habitation, etc., in their relation to sickness and health, and to human progress.

demoniac (de-mo'nĭ-ak) [G. *daimōn*, a spirit.] 1. Frenzied. 2. One said to be possessed of evil spirits, a lunatic.

demonomania (de"mon-o-ma'nĭ-ah) [G. *daimōn*, a spirit, + *mania*, frenzy.] Dæmonomania, an insane belief that one is possessed of devils.

demonopathy (de-mon-op'ă-thĭ) [G. *daimōn*, a spirit, + *pathos*, suffering.] Demonomania.

demonophobia (de-mon-o-fo'bĭ-ah) [G. *daimōn*, a spirit, + *phobos*, fear.] A fear of the devil or of spirits.

dem'onstrator [L. *demonstrare*, to point out.] 1. An assistant to a professor of anatomy, surgery, etc., who prepares for the lecture by dissections, collection of patients, etc., or who instructs small classes supplementary to the regular lectures; a demonstrator corresponds in a general way to the Dozent of a German university. 2. The index-finger (obsolete).

De Mor'gan's spots [Campbell *De Morgan*, English physician, 1811–1876.] Reddish spots on the skin, sometimes observed in cases of cancer.

demorphinization (de-mor-fin-i-za'shun). 1. Removal of morphine from an opiate. 2. The gradual withdrawal of morphine as a method of cure of the morphine habit.

Demours's mem'brane (dĕ-moor') [Pierre *Demours*, French oculist, 1702–1795.] Descemet's* membrane.

demucosa'tion (de-mu-ko-sa'shun). Excision of the mucosa of any part.

demul'cent [L. *demulcere*, to smooth down.] Soothing, relieving irritation. 2. An agent, such as a mucilage or oil, which soothes and relieves irritation, especially of the mucous surfaces.

demyelination, demyelinization (de-mi-el-in-a'shun, de-mi-el-in-i-za'shun). Destruction of the myelin or medullary sheath of Schwann.

denarcotize (de-nar'ko-tiz). To remove narcotin from an opiate; to deprive of narcotic properties.

denatured (de-na'churd). Made unnatural, changed from the normal in any of its characteristics. **d. al'cohol,** alcohol* denaturatum.

dendraxon, dendraxone (den-drak'son) [G. *dendron*, tree, + *axōn*, axis.] Neuropodion, the terminal arborization of the neuraxon of a nerve-cell of the second type, or of Golgi.

den'dric. Relating to a dendron, noting a neuron with branching processes.

den'driform [G. *dendron*, tree, + L. *forma*, form.] Tree-shaped, branching, dendroid.

dendrite (den'drīt) [G. *dendritēs*, relating to a tree.] One of the branching protoplasmic processes of the nerve-cell, dendron.

dendritic (den-drit'ik). 1. Arborescent, dendriform. 2. Relating to the dendrites or protoplasmic processes of the nerve-cells. **d. cal'culus,** a renal stone moulded to the shape of the pelvis and calyces. **d. stone,** d. calculus.

dendroid (den'droyd) [G. *dendron*, tree, + *eidos*, appearance.] Tree-like, dendriform, arborescent, branching.

den'dron [G. a tree.] Dendrite, one of the branching processes of a neuron.

denebium (den-eb'ĭ-um). Thulium

Denecke's spiril'lum (den'ĕ-keh) [*Denecke*, German bacteriologist, contemporary.] *Vibrio tyrogenus.*

denematize (de-ne'mă-tīz) [L. *de*, from, + *nematoid.*] To free from infestation with nematoda.

dengue (den'ga) [Sp. a corruption of "dandy" fever.] Breakbone fever, dandy fever; a disease of tropical and subtropical regions, occurring epidemically, and marked by intense aching in the head, muscles, and joints, and fever; there are usually two paroxysms, separated by a quiescent interval, in the first of which there is an erythematous rash, in the second a roseola; the disease is thought to be due to a protozoan parasite transmitted by a mosquito of the genus *Aedes*.

denida'tion [L. *de*, from, + *nidus*, nest.] The exfoliation of the superficial portion of the mucous membrane of the uterus; stripping off of the menstrual decidua.

Denigès' test (dĕ-ne-zhes') [Georges *Denigès*, French biological chemist, *1859.] For uric acid: to the suspected substance nitric acid is added and then a little sulphuric acid and commercial benzene; the presence of uric acid (changed by the nitric acid to alloxan) is indicated by a blue color.

Den'man's sponta'neous evolu'tion [Thomas *Denman*, English obstetrician, 1733–1815.] A mode of spontaneous version occurring at or just above the brim in some cases of transverse presentation.

Denonvillier's aponeuro'sis (dè-nawn-ve-ya') [Charles Pierre *Denonvillier*, Paris surgeon, 1808–1872.] Rectovesical fascia, Tyrrell's fascia, an ill-defined fibromuscular layer extending from the posterior border of the superior leaflet of the middle aponeurosis of the perineum, behind the prostate. **D.'s lig'ament,** ligamentum puboprostaticum (pubovesicale) medium. **D.'s meth'od,** closing of an artificial anus by suture of the mucous membrane strengthened by a portion of the muscularis.

dens [L.] 1. Tooth. 2. [BNA] The odontoid process, a strong tooth-like process projecting upward from the body of the epistropheus, or axis, around which the atlas rotates. **d. angula'ris,** d. caninus. **d. bicus'pidus** (pl. *dentes bicuspidi*), bicuspid tooth, d. premolaris [BNA] **d. cani'nus** (pl. *dentes canini*) [BNA], canine tooth, having a crown of thick, conical shape and a long, slightly flattened conical root; there are two canine teeth in each jaw, one on either side between the incisors and the premolars, in both the deciduous and the permanent dentures. **d. cuspida'tus** (pl. *dentes cuspidati*), d. caninus. **d. decid'uus** (pl. *dentes decidui*) [BNA], first tooth, milk tooth, one of the twenty teeth belonging to the first or deciduous denture; the eruption of the milk teeth begins from the fifth to the seventh month and is usually completed about the end of the second year. **d. incisi'vus** (pl. *dentes incisivi*) [BNA], incisor tooth, having a chisel-shaped crown and a single conical tapering root; there are four incisor teeth in the anterior part of each jaw, in both the deciduous and the permanent dentures. **d. lac'teus,** milk tooth, d. deciduus. **d. mola'ris** (pl. *dentes molares*) [BNA], molar tooth, grinder, or multicuspidate, having a somewhat quadrangular crown with four or five tubercles or cusps on the grinding surface; the root is bifid in the lower jaw but has three conical fangs in the upper jaw; there are six molars in each jaw, three on either side behind the premolars; in the deciduous denture there are but four molars in each jaw. **d. multicus'pidus** (pl. *dentes multicuspidi*), d. molaris. **d. per'manens** (pl. *dentes permanentes*) [BNA], one of the thirty-two teeth belonging to the second or permanent denture; the eruption of the permanent teeth begins from the fifth to the seventh year and is not completed until the eighteenth to twenty-fifth year when the last of the wisdom teeth appears. **d. premola'ris** (pl. *dentes premolares*) [BNA], premolar tooth, bicuspid, having a crown flattened from before backward with two tubercles or cusps on the grinding surface, and a flattened root, single in the lower jaw, bifid or furrowed in the upper jaw; there are four premolars in each jaw, two on either side between the canine and the molars; there are no premolars in the deciduous denture. **d. sapien'tiæ** [L. *sapientia*, wisdom], d. serotinus. **d. seroti'nus** (pl. *dentes serotini*) [BNA], late tooth, wisdom tooth, the third molar tooth on each side in each jaw; the wisdom teeth erupt late, from the eighteenth to the twenty-fifth year, and often decay early; the root fangs are often fused, the separation being marked only by grooves. **d. sophronet'icus** [G. *sōphronētikos*, prudent.] d. serotinus. **d. succeda'neus,** one of the teeth which replace the deciduous teeth; incisor, cuspid, or bicuspid.

densimeter (den-sim'e-tur) [L. *densus*, thick, + G. *metron*, measure.] An instrument for measuring the density of a fluid.

density (den'sĭ-tĭ) [L. *densus*, thick.] 1. The compactness of a substance. 2. The quantity of electricity on a given surface or in a given time per unit of volume.

dentag'ra [L. *dens(dent-)*, teeth, + G. *agra*, seizure. 1. Toothache. 2. Tooth-forceps.

den'tal. 1. Relating to the teeth. 2. One of the consonants, *t*, *d*, *n*, which are formed with the tongue against the upper incisor teeth. **d. cord,** an epithelial structure giving origin to an enamel organ. **d. crypt,** the space filled by the d. follicle. **d. en'gine,** a machine run by foot power or electricity, by means of which a rapid rotary motion is imparted to a bur-drill or other instrument. **d. fol'licle,** the dental sac with its contents. **d. for'mula,** a statement in tabular form of the number of each kind of teeth in the jaw; the dental formula for the man is, for the milk teeth: $i.\frac{2-2}{2-2}$ $c.\frac{1-1}{1-1}$, $m.\frac{2-2}{2-2} = 20$; for the permanent teeth: $i.\frac{2-2}{2-2}$, $c.\frac{1-1}{1-1}$, $pm.\frac{2-2}{2-2}$, $m.\frac{3-3}{3-3} = 32$. **d. groove,** a depression along the border of the jaw in the embryo. **d. hy'gienist,** a person, usually a woman, who has had a year's special training in the art of dental prophylaxis and its teaching, but who is not a trained nurse. **d. in'dex,** the ratio of the dental length, or space occupied

by the premolar and molar teeth, to the length of the basinasal line; the formula is:

$$\frac{\text{dental length} \times 100}{\text{length of basinasal line}} = \text{dental index.}$$

d. ledge, d. shelf. **d. length,** the distance along the alveolar border between the anterior surface of the first premolar and the posterior surface of the third molar tooth in the upper jaw, *i.e.*, the space occupied by the molar and premolar teeth. **d. osteo'ma,** a small tumor arising from the cementum of a tooth. **d. papill'a,** dentinal papilla, one of the thickenings on the edge of the dental shelf, on the surface of each of which a cap is formed constituting the enamel organ for the teeth of the first dentition; lower down on the dental shelf other papillæ are formed for the development of the permanent teeth. **d. ridge,** the prominent border of the d. groove. **d. sac,** a connective-tissue covering to the developing tooth. **d. sheath,** dentinal* sheath. **d. shelf,** an invagination of the d. ridge covering the d. papillæ.

dental'gia [L. *dens(dent-)*, tooth, + *algos*, pain.] Odontalgia.

den'taphone. Dentiphone.

dentata (den-tah'tah) [L. fem. of *dentatus*, toothed.] Vertebra* dentata.

den'tate [L. *dentatus*, toothed.] Notched, toothed, cogged.

dentatum (den-tah'tum) [L. neut. of *dentatus*, toothed.] Nucleus dentatus.

den'tes [L. pl. of *dens*, tooth.] [BNA] Teeth.

dentic'ulate, dentic'ulated [L. *denticulus*, a small tooth.] 1. Finely dentated, notched, or serrated. 2. Having small teeth.

dentification (den-tĭ-fi-ka'shun) [L. *dens (dent-)*, tooth, + *facere*, to make.] Conversion into dental structure, said especially of a soft neoplasm becoming an odontoma.

den'tiform [L. *dens(dent-)*, tooth, + *forma*, form.] Tooth-shaped, pegged, odontoid.

dentifrice (den'tĭ-fris) [L. *dens(dent-)*, tooth, + *fricare*, to rub.] A tooth-powder, tooth-paste, tooth-wash; any preparation used in the cleansing of the teeth.

dentifricium (den-tĭ-fris'ĭ-um) (N.F.). Dentifrice, tooth powder; sodium perborate 50.00, powdered soap 50.00, sucrose 100.00, prepared chalk 400.00, precipitated calcium carbonate 400.00, oil of clove 0.50, oil of cinnamon 1.75, menthol 1.75, methyl salicylate 8.75, fluidextract of baptisin 8.75; other flavors may be used if preferred.

dentigerous (den-tij'er-us) [L. *dens(dent-)*, tooth, + *gerere*, to bear.] Having or containing teeth, as a *dentigerous cyst.*

dentila'bial [L. *dens*, tooth, + *labium*, lip.] Relating to the teeth and lips.

dentilingual (den-tĭ-ling'gwal) [L. *dens*, tooth, + *lingua*, tongue.] Relating to the teeth and tongue.

dentilinimentum (den-tĭ-lin-ĭ-men'tum) [L. *dens*, tooth, + *linimentum*, liniment.] Dental liniment, toothache drops. **d. aconi'ti compos'itum** (N.F.), compound dental liniment of aconite; menthol 36.0, chloroform 13.5, tincture of aconite to make 100. **d. aconi'ti et io'di compos'itum** (N.F.), compound dental liniment of aconite and iodine, counterirritant; menthol 2.2, iodine 2.2, chloroform 16.5, tincture of aconite to make 100.

den'tin. Dentine.

den'tinal. Relating to dentine. **d. bulb,** enamel* germ. **d. fi'bers,** the processes of the cells of the pulp of a tooth, contained in the d. tubules. **d. groove,** dental* groove, enamel groove. **d. papill'a,** one of the projections of underlying connective tissue pushing up into the enamel germ. **d. ridge,** dental* shelf. **d. sheath,** Neumann's sheath; a layer of tissue very resistant to the action of acids, which forms the walls of the d. tubules. **d. tu'bules,** canaliculi dentales; minute, wavy, branching tubes or canals in the dentine; they contain the d. fibers.

dentinal'gia [G. *algos*, pain.] Pain or tenderness in the dentine.

dentine (den'tēn) [L. *dens*, tooth.] The substance proper of a tooth, substantia* eburnea. **nan'oid d.,** undeveloped d., located especially in the roots of the forming teeth.

dentinifica'tion. The formation of dentine.

dentinitis (den-tin-ĭ'(e')tis). Inflammation of the dentine.

den'tinoid [G. *eidos*, resembling.] 1. Resembling dentine. 2. A small tumor arising from the dentine of a tooth.

dentinos'teoid [*dentine* + G. *osteon*, bone, + *eidos* resemblance.] Dentinoid (2).

dentiphone (den'tĭ-fōn) [L. *dens(dent-)*, tooth, + G. *phōnē*, sound.] A device for hearing by bone conduction; a fan-like piece of guttapercha or tin which is held against the upper teeth, receiving the sound waves and transmitting them through the bones of the head to the receiving apparatus of the ears; dentaphone, auriphone, audiphone.

den'tist. A dental surgeon; a practitioner who specializes in diseases of the teeth and adjacent parts.

den'tistry. Dental surgery; the science of the prevention and treatment of diseases of the teeth.

dentition (den-tish'un). 1. Eruption of the teeth. 2. The number, shape, and arrangement of the teeth characteristic of the genus or species. 3. Denture (1). **pri'mary d.,** the first d., the eruption of the milk teeth; it begins usually between the sixth and the eighth months and is completed between the twenty-eighth and the thirty-second months, or about the age of two and one-half years. **sec'ondary d.,** the eruption of the permanent teeth; it begins usually about the sixth year and is completed by the fifteenth year, except for the four posterior molars, or wisdom teeth, which do not erupt until between the eighteenth and the twenty-fifth years. **ter'tiary d.,** a third and imperfect eruption of teeth, occurring very rarely as an anomaly in adult life or even in beginning old age.

dentoalveolitis (den-to-al"ve-o-li'(le')tis). Pyorrhea alveolaris; for synonyms, see *alveolitis.*

den'toid [L. *dens(dent-)*, tooth, + *eidos*, resemblance.] Odontoid, dentiform.

dentoliva (dent"o-le'vah) [L. *dens(dent-)*, tooth + *oliva*, olive.] Olivary body, oliva.

denture (den'chūr) [Fr. from L. *dens*, tooth.] 1. The thirty-two permanent teeth, or the twenty deciduous teeth, taken together or forming a set. 2. A set of artificial teeth. **contin'uous-gum d.,** an artificial denture in which the porcelain teeth are fused to the platinum base. **full d.,** a complete set of teeth, natural or artificial, in both jaws. **partial d.,** a set of two or more artificial teeth in one or both jaws.

Denucé's lig'ament (dĕ-nú-sa') [Maurice *Denucé*, Bordeaux surgeon, 1850–1024.] A quadrilateral fibrous band forming part of the capsule of the superior radioulnar articulation, extending from the inferior border of the sigmoid cavity to the internal border of the neck of the radius

denucleated (de-nu'kle-a-ted). Deprived of a nucleus.

denudation (de-nu-da'shun) [L. *de*, from, + *nudus*, naked.] Depriving of a covering or protecting layer.

denutrition (de-nu-trish'un) [L. *de*, from, + *nutrio*, I nourish.] Want or failure of nutrition.

Denys's tuber'culin (den-ēs') [G. *Denys*, Belgian physician, contemporary.] A filtrate through porcelain of a bouillon culture of human tubercle bacilli; bouillon filtré, B.F.; see *tuberculin*.

Denys-Leclef phenom'enon (den-ēs-lĕ-kla') [G. *Denys; Leclef*, Belgian physicians, contemporary.] Phagocytosis occurring in the test-tube upon mixing leucocytes, microorganisms, and the immune serum belonging to them.

deobstruent (de-ob'stru-ent) [L. *de-* priv. + *obstruere*, to obstruct.] 1. Relieving or removing obstruction. 2. An agent which removes an obstruction to secretion or excretion; resolvent.

deo'dorant [L. *de-* priv. + *odorare*, to smell.] 1. Removing a smell, especially an unpleasant smell. 2. An agent which destroys odors, especially disagreeable odors.

deodorize (de-o'dor-īz). To free from odor, especially from an unpleasant odor.

deo'dorizer. A substance which converts the odoriferous products of decomposition into inodorous compounds, usually by a process of oxidation.

deontol'ogy [G. *deon(deont-)*, something obligatory, + *-logia*.] Ethics; in medicine the science of the duties and rights of the practitioner in relation to his colleagues and to his patients.

deopp'ilative [L. *de-* priv. + *oppilare*, to stop up] Removing obstructions, deobstruent.

deorsum (de-or'sum) [L.] Downward, turning downward.

deorsumduction (de-or"sum-duk'shun) [L. *deorsum*, downward, + *ducere*, to lead.] Bending or turning downward.

deorsumvergence (de-or"sum-vur'jens) [L. *deorsum* downward, + *vergere*, to incline, bend.] Bending or inclining downward, deorsumduction.

deor"sumver'sion [L. *deorsum*, downward, + *vertere*, to turn.] Deorsumduction, deorsumvergence.

deossifica'tion [L. *de-* priv. + *os*, bone, + *facere*, to make] Removal of the mineral constituents of bone.

deoxida'tion. Depriving a chemical compound of its oxygen

deox'idize. To remove oxygen from its chemical combination.

deoxygena'tion. Removing oxygen depriving of oxygen.

deo'zonize. To deprive of ozone.

depancreatize (de-pan'kre-a-tiz). To remove the pancreas by operation.

depersonaliza'tion. Amnesia in relation to a part of the body; loss of the sense of personal ownership in a limb or other part.

dephlogisticate (de-flo-jis'tĭ-kāt) [L. *de-* priv. + G. *phlogizō*, I set on fire, inflame.] To subdue in flammation.

depigmenta'tion. Depriving of pigment.

dep'ilate [L. *depilare*, to deprive of hair.] To pull out or otherwise remove the hair of a part.

depila'tion. Removal of hair.

depil'atory. Decalvant. 1. Having the property of removing hair; relating to depilation. 2. An agent which causes the falling out of hair.

deplete (de-plēt') [L. *de-* priv. + *plere*, to fill.] 1. To remove, empty; to cause evacuations. 2. To reduce the strength.

depletion (de-ple'shun). 1. The removal of accumulated fluids or solids. 2. A reduced state of strength from too free discharges.

depluma'tion [L. *deplumare*, to pull out feathers.] Falling out of the eyelashes.

depolariza'tion. The destruction, neutralization, or change in direction of polarity.

depo'larize. To deprive of polarity.

depo'larizer. A substance absorbing the liberated gases in an electric battery and so preventing polarization.

depos'it [L. *depositum; deponere*, to lay down.] A sediment, precipitate. **brick-dust d.**, a sediment of urates in the urine.

depravation (de-pra-va'shun) [L. *depravare*, to corrupt.] Deterioration, perversion.

depraved'. Deteriorated, perverted, corrupt.

depress'ant [L. *depressus; deprimere*, to press down] 1. Lowering the vital tone; reducing functional activity. 2. An agent which lowers nervous or functional activity, a sedative.

depressed (de-prest'). 1. Flattened from above downward. 2. Below the normal level or the level of the surrounding parts. 3. Below the normal functional level. 4. Dejected, lowered in spirits. **d. frac'ture,** fracture of the skull with sinking of a fragment below the level of the surrounding parts.

depress'ing. Couching.

depression (de-presh'un). 1. A sinking below the surrounding level. 2 A hollow or sunken area 3. Dejection, a sinking of spirits.

depress'ive. Pushing down, causing depression, literally or figuratively.

depressomotor (de-pres"o-mo'tor). 1. Retarding motor activity. 2 An agent which slows or retards motion.

depress'or. 1. Anything which depresses or retards functional activity. 2. An instrument used to push certain structures out of the way during an operation. **d. muscle,** see *musculus depressor*. **d. nerve,** a centripetal nerve, passing from the heart through the vagus to the bulb, stimulation of which causes a reflex fall of blood-pressure.

dep'rimens oc'uli [L. *deprimere*, to depress] Musculus rectus inferior.

depth. Distance from the surface downward **fo'cal d.,** penetration of a lens.

depulization (de-pu"li-za'shun) [L. *de*, from, + *pulex* (*pulic-*), flea.] Destruction of fleas which convey the plague bacillus from animals to man; a term used by those engaged in anti-plague work.

dep'urant [L. *depurare*, to purify.] 1. Purifying, removing waste products. 2. An agent which promotes the excretion and removal of waste material.

depuration (dep-u-ra'shun). Purification, removal of waste products or foul excretions.

dep'urative. Depurant.

DeR. Abbreviation for reaction of degeneration.

deradelphus (der-ă-del'fus) [G. *derē*, neck, + *adelphos*, brother.] A twin monster with a single head and neck.

deradenitis (der-ă-den-i'(e')tis) [G. *derē*, neck, + *adēn*, gland, + *-itis*.] Inflammation of the lymph glands in the neck, cervical adenitis.

deradenoncus (der-ad-e-non'kus) [G. *derē*, neck, + *adēn*, gland, + *onkos*, a tumor.] A swelling or tumor of the cervical lymph glands.

derangement (de-rānj'ment) [Fr.] 1. Disordering, a disturbance of the regular order or arrange-

ment. 2. Mental disturbance, insanity. **internal d.**, Hey's* internal derangement of the knee.

deratization (de-rat″i-za'shun) [L. *de*, from, + *rattus*, rat.] Extermination of rats; a term invented by those engaged in anti-plague work.

Derby bacillus. *Bacterium** *derby*.

Derbyshire neck (dar'bĭ-shēr) [*Derbyshire*, a county in England, where goiter is or was, common.] Goiter.

Der'cum's disease' [Francis Xavier *Dercum*, Philadelphia neurologist, 1856–1931.] Adiposis dolorosa.

derencephalocele (der-en-sef'al-o-sēl) [G. *derē*, neck, + *enkephalos*, brain, + *kēlē*, hernia.] A monstrosity in which the cranium is defective and the very small brain is contained, and partly extrudes through a defect, in the upper cervical spinal canal.

derencephalus (der-en-sef'al-us) [G. *derē*, neck, + *enkephalos*, brain.] A monster with open skull and with a very small brain enclosed in the upper cervical spinal canal.

der'ic [G. *deros*, skin.] Relating to the ectoderm, as distinguished from enteric.

der'ivant. Derivative.

derivation (der-i-va'shun) [L. *derivare*, to draw off.] 1. The drawing of blood or the body fluids to one part, by means of cupping, blisters, etc., to relieve congestion in another. 2. Descent, with modifications; evolution.

deriv'ative. 1. Relating to or producing derivation. 2. An agent which effects derivation.

derm, derma, dermis (durm, dur'mah, dur'mis) [G. *derma*.] 1. The outer integument, or skin. 2. Specifically, the corium or cutis vera.

Dermacentor (dur″mah-sen'tor) [G. *derma*, skin, + *kentōr*, a goader.] A genus of ticks, one species of which, **D. an'dersoni**, formerly called *D. venustus*, is the reputed agent in the spread of Rocky Mountain spotted fever. **D. matura'tus**, a species capable of carrying the Rocky Mountain spotted fever germ. **D. occidenta'lis**, a species found on dogs in western America, sometimes attacking man. **D. reticula'tus** is a common species attacking sheep, oxen, goats, and deer and sometimes troublesome to man; it is found in Europe, Asia, and America. **D. variab'ilis**, a species infesting dogs in eastern America.

Dermacentroxenus rickettsi (dur-mah-sen-troks'-e-nus rĭk'et-sĭ) [*Dermacentor* + G. *xenos*, host, + H. T. *Ricketts*, American pathologist, 1871–1910.] A paired, lanceolate, slender rod-shaped or minute rounded microorganism, suggested as possibly the pathogenic agent in Rocky Mountain spotted fever.

der'mad [G. *derma*, skin, + L. *ad*, to.] In the direction of the outer integument.

dermag'ra. Dermatagra.

dermahe'mia, dermahæ'mia. Dermathemia.

dermal (dur'mal). Relating to the skin, especially to the true skin or cutis vera.

dermalax'ia [G. *derma*, skin, + *malaxis*, softening.] Softening or relaxation of the skin.

dermal'gia. Dermatalgia.

dermametropathism (dur″mah-mĕ-trop'a-thizm) [*derma*, skin, + *metron*, measure, + *pathos*, disease.] A system of measurement of the intensity and nature of a skin disease by observing the markings made by drawing a blunt instrument across the skin.

dermamyiasis (der-mah-mi-i'a-sis). Myiasis of the skin. **d. linea'ris mi'grans œstro'sa**, creeping eruption.*

dermanaplasty (durm-an'ă-plas-tĭ) [G. *derma*, skin, + *anaplassō*, I form anew.] Skin-grafting.

Dermanys'sus galli'næ [G. *derma*, skin, + *nyssō*, I prick; L. *gallina*, hen.] The red hen-mite, a parasite of chickens, pigeons, and other birds, sometimes attacking man when it causes an itching eruption. **D. hirun'dinis** [L. *hirundo*, swallow], a mite of brownish purple color infesting the nests of swallows and occasionally attacking man.

dermapos'tasis [G. *derma*, skin, + *apostasis*, abscess.] Any disease of the skin attended with the formation of abscesses.

dermata'gra [G. *derma(dermat-)*, skin, + *agra*, a seizure.] 1. Pellagra. 2. A gouty affection of the skin. 3. Dermatalgia.

dermatalgia (dur-mă-tal'jĭ-ah) [G. *derma(dermat-)*, skin, + *algos*, pain.] Dermalgia, localized pain, usually with paresthesia, of the skin.

dermatauxe (dur-mă-tawk'se) [G. *derma(dermat-)*, skin, + *auxē*, enlargement.] Hypertrophy of the skin.

dermatergosis (dur″mat-ur-go'sis) [G. *derma*, skin, + *ergon*, work, + *-osis*.] Any occupational disease of the skin.

dermathemia, dermathæmia (dur-mă-te'mĭ-ah) [G. *derma(dermat-)*, skin, + *haima*, blood.] Dermahemia, dermohemia, hyperemia of the skin.

dermat'ic. Dermal.

dermatitis (dur-mă-ti'(te')tis) [G. *derma(dermat-)*, skin, + *-itis*.] Inflammation of the skin. **blastomyce'tic d.**, cutaneous blastomycosis.* **d. æstiva'lis** [L *æstivus*, summer], eczema recurring with the advent of hot weather. **d. ambustio'nis** [L. *ambustio*, a scorching], inflammation of the skin resulting from the action of heat. **d. artefac'ta**, feigned eruptions; inflammation of the skin caused by the application of various irritants. **d. atroph'icans**, a diffuse idiopathic atrophy of the skin, involving the appendages. **d. blastomycot'ica**, blastomycosis. **d. calor'ica**, d. ambustionis. **d. coccidioi'des**, a form of blastomycosis the fungus of which multiplies by sporulation without budding. **d. combustio'nis**, inflammation of the skin following a burn. **d. congelatio'nis**, frostbite, chilblain. **d. contusifor'mis** [L. resembling contusions], erythema nodosum. **d. Ditropeno'tus aureovir'idis**, straw itch.* **d. epidem'ica**, Savill's disease, an acute contagious disease marked by a vesicular dermatitis followed by desquamation; it is accompanied with more or less severe constitutional symptoms, conjunctivitis, pharyngitis, and enlargement of the cervical glands; it may terminate fatally especially when attacking the old and infirm. **d. erythemato'sa**, erythema. **d. excoriati'va infan'tum**, inflammation of the skin, with marked excoriation, occurring in infants. **d. exfoliati'va**, pityriasis rubra, an erythrodermia with branny desquamation. **d. exfoliati'va epidem'ica**, d. epidemica. **d. exfoliati'va infan'tum** or **neonato'rum**, keratolysis neonatorum, Ritter's disease, a generalized exfoliative dermatitis, accompanied with constitutional symptoms, affecting young infants, it is frequently fatal. **d. facti'tia**, d. artefacta. **d. gangræno'sa infan'tum**, more or less extensive gangrene of the skin in children, following chicken-pox or other pustular eruptions, or occurring spontaneously. **d. herpetifor'mis**, d. multiformis, pemphigus circinatus, Duhring's disease; a chronic disease of the skin marked by an itching eruption of no determinate form, though the lesions are apt to occur in groups; spontaneous healing may occur, but relapses are common. **d.**

hiema'lis [L. *hiems*, winter], winter itch, a recurrent eczema appearing with the advent of cold weather. **d. medicamento'sa,** drug eruption, any rash or other cutaneous lesion arising from the action of drugs taken internally. **d. multifor'mis,** d. herpetiformis. **d. papilla'ris capillit'ii,** sycosis nuchæ necrotizans. **d. Pediculoi'des ventrico'sus,** straw itch.* **d. re'pens** [L. sudden, unexpected] acrodermatitis perstans, a vesicular or bullous moist dermatitis of the upper extremities following an injury; it has a tendency to spread at the periphery while healing at the center. **d. seborrhœ'ica, d. seborrho'ica,** seborrheic inflammation of the skin, seborrhœa sicca, eczema seborrhœicum; an eruption of reddish patches covered with greasy scales; it occurs chiefly on the face and scalp, in the latter location producing dandruff. **d. sim'plex,** erythema simplex. **d. skiagraph'ica,** inflammation of the skin due to exposure to the action of the Roentgen rays. **d. variega'ta,** maculopapular erythrodermia.* **d. veg'etans,** a disease marked by the presence of red fungating masses arising from areas of eczema on the skin. **d. venena'ta** [L. *venenum*, poison], inflammation of the skin caused by irritants, such as poison ivy and various chemicals. **hyphomyce'tic d.,** a local infection with a hyphomycetous fungus, the lesions resembling those of lupus verrucosus. **malig'nant pap'illary d.,** Paget's* disease (2). **x-ray d.,** d. skiagraphica.

dermato-autoplasty (dur"mă-to-aw'to-plas-tĭ) [G. *derma*(*dermat-*), skin, + *autos*, self, + *plassō*, I form.] Skin-grafting with material taken from another part of the patient's own body.

Dermato'bia [G. *derma*(*dermat-*), skin, + *bios*, way of living.] A genus of flies of the family *Œstridæ*, found in tropical America. The larva of one species, *D. noxialis*, *D. cyaniventris* [bluebelly], (macaco-worm) is sometimes present in the subcutaneous tissues where it sets up inflammatory swelling with abscess formation.

dermatocele (dur'mă-to-sēl, dur"mă-to-se'le) [G. *derma*, skin, + *kēlē*, hernia.] Dermatolysis. **d. lipomato'sa,** a pedunculated lipoma undergoing cystic degeneration.

dermatocelido'sis [G. *derma*(*dermat-*), skin, + *kēlis*, a spot a stain.] A macular eruption; ephelides, freckles.

dermatocellulitis (dur-mă-to-sel-u-li'(le')tis). Inflammation of the skin and subcutaneous connective tissue.

dermatococcus (dur'mă-to-kok"us). A diplococcus found in certain cases of elephantiasis.

der"matoconio'sis [G. *derma*(*dermat-*), skin, + *konis*, dust.] A dermatitis caused by the irritation of dust to which those engaged in certain occupations are exposed.

der'matocyst. A cyst of the skin.

dermatodyn'ia [G. *derma*(*dermat-*), skin, + *odynē*, pain.] Dermatalgia.

dermatogen (dur'mă-to-jen) [G. *derma* (*dermat-*), skin, + (anti)*gen*.] An antigen bearing especially on diseases of the skin.

dermatoglyphics (dur-mă-to-glif'iks) [G. *derma*, skin + *glyphē*, carved work.] The surface markings (sharply sculptured ridges) of the skin, especially of the palmar and plantar regions.

dermatog'raphy [G. *derma*(*dermat-*), skin, + *graphō*, I write.] Dermography. 1. A descriptive treatise on the skin. 2. A form of urticaria in which wheals follow the mark made by a pencil or style on the skin

der"matohet'eroplasty [G. *derma*(*dermat-*), skin, + *heteros*, another, + *plassō*, I form.] Skin-grafting in which the material is derived from another person.

der'matoid [G. *derma*(*dermat-*), skin, + *eidos*, resemblance.] 1. Resembling skin. 2. Dermal, dermatic. 3. Desmoid (2).

der"matokelido'sis. Dermatocelidosis.

der'matol. Trade name of bismuth subgallate.

dermatol'ogist. A practitioner who devotes special attention to disease of the skin, a skin specialist.

dermatol'ogy [G. *derma*(*dermat-*) skin, + *-logia*.] The branch of medicine which has to do especially with diseases of the skin; the specialty of skin diseases.

dermatol'ysis [G. *derma*(*dermat-*), skin, + *lysis*, loosing.] Cutis pendula, a condition of hypertrophy of the skin which hangs down in places in loose folds.

dermato'ma [G. *derma*, skin.] A circumscribed thickening or hypertrophy of the skin.

dermatome (dur'mă-tōm). Dermatotome.

dermatomere (dur'mă-to-mēr) [G. *derma*(*dermat-*), skin, + *meros*, part.] A segment of the embryonic integument.

dermatomyces (dur"mă-to-mi'sēz) [G. *derma*(*dermat-*), skin, + *mykēs*, fungus.] Dermatophyte.

der"matomyco'sis [G. *derma*(*dermat-*), skin, + *mykēs*, fungus.] A skin disease due to the presence of a vegetable microparasite. **blastomyce'tic d.,** cutaneous blastomycosis. **d. furfura'cea** [L. branny], tinea versicolor. **d. trichophyti'na,** tinea trichophytina.

dermatomyo'ma [G. *derma*, skin, + *mys*, muscle, + *-ōma*.] A tumor, usually multiple, due to hyperplasia of the arrectores pilorum muscles or of the muscular coat of the small arteries.

dermatomyositis (dur-mă-to-mi-o-si'(se')tis) [G. *derma*(*dermat-*), skin, + *mys*, muscle, + *-itis*.] Acute myositis with involvement of the overlying skin, multiple myositis.*

dermatoneurology (dur"mă-to-nu-rol'o-jĭ) [G. *derma*(*dermat-*), skin, + *neuron*, nerve, + *-logia*.] That branch of dermatology or neurology which has to do with the dermatoneuroses.

dermatoneurosis (dur"mă-to-nu-ro'sis) [G. *derma* (*dermat-*), skin, + *neuron*, nerve.] Any disease of the skin of nervous, or seemingly nervous, origin; a cutaneous neurosis.

dermatonosol'ogy [G. *derma*(*dermat-*), skin, + *nosos*, disease, + *-logia*.] The science of the nomenclature and classification of diseases of the skin

dermaton'osus [G. *derma*(*dermat-*), skin, + *nosos*, disease.] Dermatosis.

dermatophiliasis (dur-mă-to-fĭ-li'a-sis). Infestation with *Dermatophilus penetrans*, or jigger; the impregnated female insect bores into the skin or under the nail and then becomes distended with eggs to the size of a pea.

Dermatophilus (dur-mă-tof'ĭ-lus) [G. *derma*, skin, + *philos*, fond.] A genus of fleas of the family *Sarcopsyllidæ*. **D. pen'etrans,** *Sarcopsylla* penetrans*, *Pulex penetrans*, jigger.

der'matophobe. Dermatosiophobe.

dermatophylaxis (dur"mă-to-fi-lak'sis) [G. *derma*, skin, + *phylaxis*, protection.] Protection of the skin against infection.

dermatophyte (dur'mă-to-fīt) [G. *derma*(*dermat-*), skin, + *phyton*, plant.] A vegetable microparasite of the skin.

dermatophytide (dur-mă-tof'i-tēd). A toxic rash sometimes accompanying a dermatophytosis.

dermatophyto'sis. Dermatomycosis.

dermatoplas'tic. Relating to dermatoplasty, or skin-grafting.

der'matoplasty [G. *derma(dermat-)*, skin, + *plassō*, I form.] Repair of defects of the skin; skin-grafting.

dermatopolyneuritis (dur"mă-to-pol-ĭ-nu-ri'(re') tis) [G. *derma (dermat-)*, skin, + *polys*, much, many, + *neuron*, nerve, + *-itis*.] Acrodynia, Swift's disease, erythredema, erythema* arthriticum epidemicum.

dermatorrhagia (dur"mă-tor-ra'jĭ-ah) [G. *derma (dermat-)*, skin, + *-rhagia*.] Hemorrhage from or into the skin. **d. parasit'ica,** a disease of the horse marked by numerous localized hemorrhages into the skin, due to the presence of a larva or worm.

dermatorrhe'a, dermatorrhœ'a [G. *derma(dermat-)*, skin, + *rhoia*, flow.] An excessive secretion of the sebaceous or sweat-glands of the skin.

dermatosclerosis (dur"mă-to-skle-ro'sis) [G. *derma (dermat-)*, skin, + *sclēroō*, I harden.] Sclerema.

dermatoscopy (dur-mă-tos'ko-pĭ) [G. *derma*, skin, + *skopeō*, I look at.] Inspection of the skin, usually with the aid of a lens of high magnification.

dermatosiophobe (dur-ma-to-si'o-fōb). One having an abnormal fear of acquiring some skin disease, dermophobe, dermatophobe.

dermatosiophobia (dur-mă-to-sĭ-o-fo'bĭ-ŭ) [*dermatosis* + G. *phobos*, fear.] A morbid dread of acquiring some skin disease.

dermato'sis. A skin disease of any nature. **angioneurot'ic d.,** a skin disease the lesions of which are caused by vasomotor disturbances.

dermatoskel'eton. Exoskeleton.

dermatosome (dur'mă-to-sōm) [G. *derma(dermat-)*, skin, + *sōma*, body.] A section or segment of the equatorial plate in mitosis.

dermatotherapy (dur"mă-to-ther'ă-pĭ) [G. *derma (dermat-)*, skin, + *therapeia*, treatment.] Treatment of skin diseases.

dermatothlasia (dur"mă-to-thla'zĭ-ah) [G. *derma*, skin, + *thlasis*, a bruising.] A tic or uncontrollable impulse marked by pinching and bruising of the skin.

dermatotome (dur'mă-to-tōm) [G. *derma (dermat-)*, skin, + *tomē*, cut, section.] 1. One of the fetal skin segments. 2. A delicate knife for incising the skin or excising small lesions.

dermatotropic (dur-mă-to-trop'ik) [G. *derma (dermat-)*, skin, + *tropē*, a turning.] Acting especially on the skin.

dermatoxerasia (dur"mă-to-ze-ra'sĭ-ah) [G. *derma*, skin, + *xērasia*, a dryness.] Xeroderma.

dermatozoiasis (dur"mă-to-zo-i'ă-sis) [G. *derma*, skin, + *zōon*, animal, + *-iasis*.] Dermatozoonosus, a disease of the skin caused by a metazoan parasite.

dermatozoon (dur-mă-to-zo'on) [G. *derma(dermat-)*, skin, + *zōon*, animal.] An animal parasite of the skin.

dermatozoonosus (dur-mă-to-zo-on'o-sus) [G. *derma (dermat-)*, skin, + *zōon*, animal, + *nosos*, disease] A disease of the skin caused by an animal parasite.

dermatozooplasty (dur'mă-to-zo'o-plas-tĭ) [G. *derma*, skin, + *zōon*, animal, + *plassō*, I form.] Skin-grafting with material taken from the skin of an animal.

dermatroph'ia, dermat'rophy [G. *derma(dermat-)*, skin, + *atrophia*.] Atrophy or thinning of the skin.

dermenchysis (dur-men'ki-sis) [G. *derma*, skin, + *enchysis*, a pouring in.] The subcutaneous administration of remedies.

dermepen'thesis [G. *derma*, skin, + *epenthesis*, insertion.] Dermatoplasty, skin-grafting.

der'mic. Dermal, dermatic, cutaneous; relating to the skin in general or to the cutis vera.

der'mis. Derma.

dermitis (dur-mi'(me')tis). Dermatitis.

der'moblast [G. *derma*, skin, + *blastos*, germ.] A portion of the mesoblastic layer from which the corium is developed.

dermocy'ma [G. *derma*, skin, + *kyma*, fetus.] Fetus in fetu.

der'mogen. Trade name of a preparation of zinc oxide, employed as a dusting powder.

dermograph'ia, dermog'raphism, dermog'raphy [G. *derma*, skin, + *graphō*, I write.] An exaggerated form of urticaria factitia in which writing or any figures, traced by a blunt-pointed instrument on the skin, will be reproduced as elevations or wheals.

dermohe'mia, dermohæ'mia. Dermathemia.

dermoid (dur'moyd) [G. *derma*, skin, + *eidos*, resemblance.] 1. Dermatoid, resembling skin. 2. Noting a congenital cystic tumor, filled with fluid or sebaceous matter, the walls of which are of dermal structure, sometimes giving origin to teeth, hair, and other dermal appendages. **d. cyst,** dermoid (2). **implanta'tion d., sequestra'tion d.,** see under *cyst*.

dermoidec'tomy [G. *ektomē*, excision.] Operative removal of a dermoid cyst.

der'mol. Trade name for bismuth chrysophanate, a yellowish brown powder, a mixture of bismuth oxide and chrysarobin; employed as a dusting powder and in the treatment of various skin diseases.

dermol'ogy. Dermatology.

dermomyco'sis. Dermatomycosis.

dermoneuro'sis. Dermatoneurosis.

dermonosol'ogy. Dermatonosology.

dermopath'ic. Relating to a skin disease.

dermop'athy [G. *derma*, skin, + *pathos*, suffering.] Any skin disease, dermatosis.

dermophlebitis (dur"mo-fle-bi'(be')tis) [G. *derma*, skin, + *phleps(phleb-)*, vein, + *-itis*] Inflammation of the superficial veins with the surrounding skin.

dermophobe (dur'mo-fōb.) Dermatosiophobe

der'moplasty. Dermatoplasty, skin-grafting.

dermoskel'eton [G. *derma*, skin, + *skeleton*.] Exoskeleton.

dermosynovitis (dur-mo-si-no-vi'(ve')tis). Perforating ulcer of the foot.

dermosyphilop'athy. A syphilide, any syphilitic affection of the skin.

dermotropic (dur-mo-trop'ik). Dermatotropic.

der"motuber'culin reac'tion. Cutireaction* of v Pirquet.

derodidymus (der"o-did'ĭ-mus) [G. *derē*, neck, + *didymos*, twin.] A twin monster as to the head and neck, but with a single body.

derrengadera (der-ren-gah-dar'ah) [Sp. *derrengado*, crooked.] Murrina, especially that form in which posterior paralysis is marked.

desam'idize [*des-*, prefix denoting asunder, + *amide* + *-ize*, suffix denoting action.] Deamidize, to decompose amino-acids.

desanima'nia [L. *des (dis-)*, apart, + *animus*, mind. + G. *mania*, frenzy.] Amentia, dementia.

Desault's appara'tus or **ban'dage** (dĕ-so') [Pierre Joseph *Desault*, French surgeon, 1744–1795.] A bandage for fracture of the clavicle; the elbow is bound to the side, a pad being previously placed in the axilla. **D.'s lig'ature,** ligature of the femoral artery in its passage through the adductor muscle, for the cure of popliteal aneurysm. **D.'s sign,** altered arc described by the trochanter, when the femur is rotated, in fracture of the neck; instead of describing an arc rotating around the head as a center, it simply turns around the axis of the shaft of the bone.

DESAULT'S BANDAGE.

Descartes' law (da-kart') [René *Descartes*, French savant and philosopher, 1596–1650.] For two given media, the sine of the angle of incidence bears a constant relation with the sine of the angle of refraction.

Descemet's mem'brane (des-ma') [Jean *Descemet*, French physician, 1732–1810.] Lamina elastica posterior.

descemetitis (des-e-mĕ-ti'(te')tis). Inflammation of Descemet's membrane on the posterior surface of the cornea; keratitis punctata, serous cyclitis

descemetocele (des-e-met'o-sēl) [G. *kēlē*, hernia] Hernia or protrusion of Descemet's membrane

descen'dens no'ni. The descending ramus of the nervus hypoglossus, formerly called the nonus or ninth cranial nerve.

descen'ding [L. *descendere*, to come down.] Running downward or toward the periphery.

descensus (de-sen'sus) [L.] Descent, falling, ptosis, procidentia. **d. tes'tis** [BNA], descent of the testicle from the abdomen into the scrotum shortly before the end of intrauterine life. **d. u'teri,** falling of the womb.

Deschamps' nee'dle (da shahn') [Joseph François Louis *Deschamps*, French surgeon, 1740–1825] A needle with a long shaft for passing sutures in the deep tissues.

De Seigneux's dila'tor (de-sa-nyœ') A modification of Bossi's* cervical dilator.

desensitization (de-sen-sĭ-ti-za'shun). The reduction or abolition of sensitivity, of susceptibility to infection, or of reaction to any foreign protein.

desensitize (de-sen'sĭ-tīz) [L. *de-* from, + *sensitize*.] To reduce or remove sensitivity* in any sense; to abate susceptibility to infection or to the action of a foreign protein.

Desh'ler's salve. Ceratum resinæ compositum.

desiccant (des'i-kant) [L. *desiccare*, to dry up.] 1 Drying. 2. An agent which absorbs or expels moisture, especially from the surface of the skin or mucous membrane.

des'iccate. To dry.

des'iccative. Desiccant.

des'iccator. A desiccant (2).

des'itin. Trade name of an ointment said to be composed of bolus alba, zinc oxide, or chlorinated extract of cod-liver oil, petrolatum, and lanolin, recommended in the treatment of burns and wounds.

Desmarre's dacryoliths (da-marz' dak'rĭ-o-liths). [Louis Auguste *Desmarre*, French oculist, 1810–1882.] White pseudoconcretions, composed of masses of *Nocardia foersteri*, found in the lacrymal canal.

desmitis (dez-mi'(me')tis) [G. *desmos*, a band. Inflammation of a ligament.

Desmobacte'ria. A term employed in certain classifications of microscopic fungi to denote the bacilli

desmocyte (dez'mo-sīt) [G. *desmos*, a band, + *kytos* a cell.] Any supporting tissue-cell.

desmocytoma (dez-mo-si-to'mah) [*desmocyte* + *-oma*.] Sarcoma, a tumor formed of desmocytes

desmodynia (dez-mo-din'ĭ-ah) [G. *desmos*, band, + *odynē*, pain.] Pain in a ligament.

desmogenous (dez-moj'en-us) [G. *desmos*, a band + *gennaō*, I produce.] Of connective-tissue or ligamentous origin or causation, noting, *e.g.*, a deformity due to contraction of ligaments, fascia or a cicatrix.

desmog'raphy [G. *desmos*, band, + *graphō*, describe.] A description of, or treatise on, the ligaments.

des'moid [G. *desmos*, a band(tendon), + *eidos* appearance, form.] Resembling in appearance a tendon or ligament; ligamentous, tendinous; of firm fibrous texture, noting a fibroid or scirrhous tumor. **d. reac'tion,** a method of testing the digestive power of the stomach by noting the time required for the solution of catgut; methyl ene blue may be enclosed in rubber tissue tied with catgut and swallowed; when the catgut is digested it sets free the dye which soon appears in the urine; or beads are threaded with small pieces of catgut and swallowed, they are then withdrawn at intervals by an attached thread and the condition of the catgut is noted. **d tu'mor,** connective-tissue tumor, desmoma.

desmol'ogy [G. *desmos*, band, + *-logia*.] The branch of anatomy dealing with the ligaments.

desmo'ma [G. *desmos*, a band, + *-ōma*.] A connective-tissue tumor.

des'mon [G. *desmos*, a yoke] Muller's term for amboceptor.

desmoneoplasm (dez-mo-ne'o-plazm) [G. *desmos* band, + *neos*, new, + *plasma*, a thing formed] Desmoma.

desmopathy (dez-mop'ă-thĭ) [G. *desmos*, band, + *pathos*, suffering] A disease of ligaments.

desmopex'ia [G. *desmos*, band, + *pēxis*, fixation] Attachment of the round ligaments of the uterus to the abdominal wall for the correction of uterine displacement.

desmoplastic (dez-mo-plas'tik) [G. *desmos*, a band or bond, + *plastikos*, relating to moulding.] Causing or forming adhesions.

desmopycnosis (dez-mo-pik-no'sis) [G. *desmos*, a band, + *pyknosis*, a packing close] Dudley's* operation.

desmosome (dez'mo-sōm) [G. *desmos*, a bond, + *sōma*, body.] A slight thickening in a cellular bridge; see bridge (3).*

desmot'omy [G. *desmos*, band, + *tomē*, incision.] The division of a ligament.

Desnos's disease' (da-no') [Louis Joseph *Desnos*, Parisian physician, 1828–1893] Splenopneumonia

D'Espine's sign (des-pēn) [Jean Henri *d'Espine*, Swiss physician, 1844–1931.] 1. Bronchophony over the spinous processes heard, at a lower level than in health, in pulmonary tuberculosis. 2. An echoed whisper following a spoken word, heard in the stethoscope placed over the seventh cervical or first or second dorsal spine, in cases of tuberculosis of the mediastinal glands.

despumation (des-pu-ma'shun) [L. *despumare*, to skim.] 1 The rising of impurities to the surface

of a liquid. 2. The skimming off of impurities on the surface of a liquid.

desquamate (des'kwă-māt) [L. *desquamare.*] To shred, peel, or scale off, noting the casting off of the epidermis in scales or shreds, or the shedding of the outer layer of any surface.

desquama'tion [L. *de,* from, + *squama,* scale.] The shedding of the cuticle in scales or shreds.

desquam'ative. Relating to or marked by desquamation from the skin or other surface. **d. nephri'tis,** inflammation of the kidney with loss of the epithelium of the renal tubules.

dessertspoon (de-zurt'spoon). A spoon larger than a teaspoon but smaller than a tablespoon, holding approximately two fluidrams.

Dessy's vac'cine. A polyvalent typhoid vaccine made from cultures of a large number of strains of the *Bacillus typhosus.*

dest. Abbreviation for **L.** *destilla,* distill, or *destillatus, a, um.,* distilled.

desternaliza'tion. Separation of the sternum from the costal cartilages.

det. Abbreviation, used in prescriptions, of Lat. *de'tur,* let there be given.

detergent (de-tur'jent) [L. *detergere,* to wipe off] 1. Cleansing. 2. A cleansing or purging agent.

deter'minant. 1. A corporate particle, upon the presence of which in the germ cell and its multiplication in the somatic cells developed therefrom depend the inherited characteristics of the future individual. 2. One of the lesser units composed of an aggregation of biophores which go to make up an id.

determination (de-tur-mĭ-na'shun) [L. *determinare,* to limit, determine.] 1. A change, for the better or for the worse, in the course of a disease. 2. A general move toward a given point. **d. of blood,** congestion, hyperemia.

determiner (de-tur'min-ur). Determinant (1).

deter'sive. Detergent.

dethyroidism (de-thi'roy-dizm) A condition dependent upon removal of the thyroid gland.

detor'tion. 1. Distortion. 2. Correction of club-foot or other distortion.

detoxicate (de-toks'ĭ-kāt) [L. *de,* from, + *toxicum,* poison.] To diminish or remove the poisonous quality of any substance; to lessen the virulence of any pathogenic organism.

detoxica'tion. 1. Recovery from the toxic effects of a drug. 2. Removal of the toxic properties from a poison.

detoxify (de-toks'ĭ-fi) [L. *de,* from, + *toxicum,* poison, + *facere,* to make.] Detoxicate.

Detre's cutireac'tion (deh'treh) [Ladislaus *Detre,* Hungarian physician, contemporary] See differential cutireaction.*

detrition (de-trish'un) [L. *detritus; deterere,* to rub off.] A wearing away by use or friction.

detritus (de-tri'tus) [L. *detritus,* rubbed off] Any broken-down material, carious or gangrenous matter, gravel, etc.

detrunca'tion. Decapitation; removal and delivery of the trunk of the fetus, the head being impacted.

detru'sor uri'næ [L. *detrudere,* to push down.] See under *musculus.*

detumescence (de-tu-mes'ens) [L. *de,* from, + *tumescere,* to swell up.] Subsidence of a swelling.

deutencephalon (dūt-en-sef'ă-lon) [G. *deuteros* second, + *enkephalos,* brain.] 'Tween-brain, diencephalon.*

deuteranopia (du-ter-an-o'pĭ-ah) [G. *deuteros,* second, + *anopia.*] Green-blindness, green being the second of the primary colors; see *protanopia* and *tritanopia.*

deu"teroal'bumose. A soluble albumose, precipitable by ammonium sulphate.

deuterocone (du'ter-o-kōn) [G. *deuteros,* second, + *kōnos,* cone.] The mesiolingual cusp of the upper premolar tooth in a mammal.

deuteroconid (du"ter-o-kon'id). The mesiolingual cusp of the lower premolar tooth in a mammal.

deuteroconidium (du"ter-o-kŏ-nid'ĭ-um) [G. *deuteros,* second, + *conidium.*] One of the reproductive elements derived from the protoconidium.*

deuterofi'brinose. A digestion product of fibrin.

deuteroglob'ulose. A product of the digestion of paraglobulin.

deuteromy'osinose. A digestion product of myosin.

deuteropathic (du"ter-o-path'ik) Relating to a secondary affection, or deuteropathy.

deuterop'athy [G. *deuteros,* second, + *pathos,* suffering.] A secondary disease or symptom.

deuteroplasm (du'ter-o-plazm) [G. *deuteros,* second, + *plasma,* thing formed.] Deutoplasm.

deuteroproteose (du"ter-o-pro'te-ōz) [G. *deuteros,* second, + *proteose.*] Secondary proteose, resembling peptone more nearly than native protein.

deuterotocia (du-ter-o-to'sĭ-ah) [G. *deuteros,* second, + *tokos,* birth] Deuterotoky.

deuterotoky (du-ter-ot'o-kĭ). Deuterotocia, a form of parthenogenesis in which the female has offspring of both sexes.

deuterotox'in. A hypothetical form of toxin in certain bacterial cultures, which has less marked affinity for antitoxin than has prototoxin.

deutiodide (du-ti'o-dīd). Biniodide.

deutip'ara [G. *deuteros,* second, + L. *parere,* to bear.] Secundipara.

deutobrochal (du-to-bro'kal) [G. *deuteros,* second, + *brochos,* mesh.] Noting the second stage in the development of the ovum, in which the nucleus enlarges and becomes oval in shape, and the chromatin becomes coarsely reticular.

deutobro'mide. Of two compounds of bromine with a base, the one which contains the greater number of bromine atoms.

deutochlo'ride. Bichloride.

deutoiodide (du-to-i'o-dīd). Biniodide.

deutomerite (du-tom'er-īt) [G. *deuteros,* second, + *meris,* part] The posterior nucleated portion of an attached cephalont, separated by an ectoplasmic septum from the anterior portion, or primite.

deu'toplasm. Deuteroplasm, the nutritive portion of the yolk made up of numerous refractile fatty and albuminoid bodies containing phosphorus and various salts.

deutoplas'mic. Relating to the deutoplasm.

deutopsyche (du-to-si'ke) [G. *deuteros,* second, + *psychē,* soul.] Diencephalon.

deutoscolex (du-to-sko'leks) [G. *deuteros,* second, + *skōlēx,* worm.] A daughter-cyst of an echinococcus.

deutospermatoblast (du-to-spur'mă-to-blast) [G. *deuteros,* second, + *sperma,* seed, + *blastos,* germ.] A cell forming the spermatozoan, resulting from the division of the primary spermatoblast.

Deutsch's maneu'ver (doych) [Eugen *Deutsch,* German obstetrician, *1866.] When, in internal version, the fetus becomes wedged at the internal strait, it is pushed up and rotated on the long axis of the body, thus facilitating the completion of version.

devel'opment [Fr. *développement.*] 1. Growth, expansion. 2. Evolution.

developmen'tal. Relating to or dependent upon development. **d. grooves,** the longitudinal

lines on the outer surface of a tooth. **b. lines,** d. grooves.

Deven'ter's diam'eters [Hendrik *Deventer*, Dutch obstetrician, 1651–1724.] The oblique diameters of the pelvic brim. **D.'s pel'vis,** a pelvis with shortened anteroposterior diameter.

Devergie's disease' (de-ver-zhe') [Marie Guillaume Alphonse *Devergie*, French physician, 1798–1879.] Pityriasis rubra pila is.

deviation (de-vi-a'shun) [L. *de* from, + *via*, way] 1. Deflection, a turning away or aside from the normal point or course. 2. A form of degeneracy in which, combined with mental and physical soundness, there is an almost indefinable departure in some direction from the normal average of the mental processes. **con'jugate d.,** the turning of two parts equally and simultaneously in the same direction. **d. of com'plement,** see *complement*. **d. to the left,** in a white-cell formula, indicating the presence of immature forms **d. to the right,** in a white-cell formula, indicating the absence of immature forms. **primary' d.,** the direction of the squinting eye away from the object when the latter is fixed by the sound eye **sec'ondary d.,** the turning of the normal eye away from the object when the latter is fixed by the squinting eye.

device (de-vīs') [F. *devise*.] A contrivance or instrument designed for a specific purpose.

deviom'eter. A form of strabismometer.

devisceration (de-vis-ur-a'shun) [L. *de-*, away, + *viscera*.] Evisceration.

devi'talize [L. *de-*, away, + *vita*, life.] To deprive of vitality or of vitalizing properties.

devolu'tion [L. *devolvere*, to roll down] Involution; catabolism; degeneration.

Dew's meth'od. Byrd*-Dew method.

dew-cure. The practice of walking with bare feet in the dew-moistened grass as a therapeutic measure; one of the practices of Kneippism.

Dewees' carmin'ative (de-wēz') [William Potts *Dewees*, Philadelphia obstetrician, 1768–1841] Mistura magnesiæ, asafœtidæ et opii (N.F.); tincture of opium 1, tincture of asafetida 7.5, magnesium carbonate 5, sugar 10, water to make 100; dose, ʒ ½–4 (2.0–16.0). **D.'s sign,** the pregnant woman expectorates a tough whitish mucus, the sputum having the appearance of a silver coin. **D.'s tinc'ture of guai'ac,** guaiac 4 ounces, sodium (or potassium) carbonate 90 grains, allspice 1 ounce, spirit of ammonia, 1 fluidounce, alcohol 15 fluidounces; dose ʒ ½–1 (2.0–4.0).

dew-point. The temperature at which the moisture in the atmosphere is precipitated in the form of dew.

dexiocar'dia. Dextrocardia.

dexiotrop'ic [G. *dexios*, right, + *tropos*, a turning.] Right-wound, running in a spiral from left to right; opposed to levotropic.

dex'ter, f. *dextra*, neut. *dextrum* [L.] Right (abbreviation, D.).

dextrad (deks'trad) [L. *dexter*, right, + *ad*, to.] Toward the right side.

dex'tral. A right-handed person.

dextral'ity. Right-handedness.

dex'tran, dex'trane. A gum, $C_6H_{10}O_5$, derived from molasses, unripe beet-root, and other substances.

dex'trase [*dextr(ose)* + *-ase*.] A sugar-splitting enzyme which converts dextrose into lactic acid.

dextraural (dek-straw'ral) [L. *dexter*, right, + *auris*, ear.] Right-eared; noting one who hears more distinctly with the right ear.

dextrin (deks'trin) [L. *dexter*, right.] British gum; one of a group of dextrorotatory carbohydrates formed during the hydrolysis of starch; by further hydrolysis it is converted into dextrose. **ani'mal d.,** glycogen.

dex'trinase. A ferment which converts starch into isomaltose.

dex'trinate. To convert into dextrin.

dextri'num. Dextrin. **d. al'bum** (N.F.), white dextrin, a mixture of several soluble dextrins with some unconverted starch.

dextrinu'ria. The passage of dextrin in the urine.

dex"trocar'dia. Malposition of the heart which occupies the right side of the chest.

dextrocardiogram (dek"stro-kar'-dĭ-o-gram). That part of the cardiogram which is the effect of the right ventricle.

dextrococaine (dek"stro-ko'kah-ēn). A dextrorotatory form of cocaine.

dex"trocom'pound. A dextrorotatory compound.

dextroc'ular [L. *dexter*, right, + *oculus*, eye.] Right-eyed; noting one who uses the right eye by preference in monocular work, such as the use of the microscope.

dextroduc'tion. Movement of the visual axis dextrad, or toward the right.

dex'troform. A compound of dextrin and formaldehyde, used locally, in solution, in the treatment of suppurative inflammations of the mucous membrane.

dex"troglu'cose. Dextrose.

dextrogyrate, dextrogyrous (dek-stro-ji'rāt, dek-stro-ji'rus) [L. *dexter* right, + *gyrare*, to turn] Dextrorotatory.

dextrogyration (dek"stro-ji-ra'shun). A twisting to the right.

dextroman'ual [L. *dexter*, right, + *manus*, hand.] Righthanded.

dextrop'edal [L. *dexter*, right, + *pes(ped-)*, foot.] Right-footed; noting one who uses the right leg in preference to the left, in hopping, for instance.

dextrophobia (deks-tro-fo'bĭ-ah)[L. *dexter*, right, + G. *phobos*, fear.] Fear of objects on the right side of the body.

dextrorotation (dek"stro-ro-ta'shun). A turning or twisting to the right.

dextroro'tatory [L. *dexter*, right, + *rotare*, to turn.] Turning the plane of polarization to the right noting certain crystals, solution of dextrose, etc.

dextrorse'. Turning downward from left to right, noting a screw or spiral, certain climbing plants, etc. Some of the older botanists used the term in the opposite sense of an upward turn from left to right.

dextrosaccharin (deks-tro-sak'ar-in). A compound of dextrose and saccharin, in the proportion of 2000 to 1.

dextrose (dek'stroz) [L. *dexter*, right.] Dextrosum (U.S.).

dex"trosinis'tral [L *dexter*, right, + *sinister*, left.] In a direction from right to left.

dextrosum (deks-tro'sum) (U.S., Br.). Dextrose, d-glucose, dextro-glucose, starch-sugar; grape-sugar, $C_6H_{12}O_6.H_2O$; a dextrorotatory monosaccharid (hexose) found, usually with levulose, in many sweet fruits; occurs as a white crystalline powder, or white granules, odorless and of a sweet taste; it is the sugar chiefly excreted in diabetes mellitus.

dextrosu'ria. Glycosuria, excretion of dextrose in the urine.

dextrotor'sion [L. *dexter*, right, + *torsio*, a twisting A twisting to the right.

dextrotrop'ic, dextrot'ropous [L. *dexter*, right, + G *tropos*, a turn.] Turning to the right.

dextrover'sion [L. *dexter*, right, + *vertere*, to turn.] Version toward the right.

dezy'motize. To disinfect, to destroy ferments.

d'Herelle's phenom'enon (dĕ-rel') [F. *d'Herelle* French physician, contemporary.] See under the letter *H*.

dhobie itch (do'be). A tropical and severe form of epidermophytosis.

D.Hy. Abbreviation of Doctor of Hygiene.

diabetes (di-ah-be'tēz) [G.] A term used to designate two diseases, *d. insipidus* and *d. mellitus*, having the symptom polyuria in common; when employed without qualification it signifies *d. mellitus*. **alimen'tary d.,** alimentary glycosuria. **bil'iary d.,** Hanot's* disease. **bronzed d.,** marked hypertrophic cirrhosis of the liver with extensive pigmentation of the viscera and skin (hemochromatosis), associated with glycosuria. **cer'ebral d.,** cerebrosuria, the excretion of cerebrose in the urine. **compos'ite d.,** a very severe form of d. mellitus in which a monosaccharide is formed even from protein, so that a carbohydrate-free diet fails to cause the disappearance of sugar from the urine. **con'jugal d.,** d. affecting husband and wife at the same time. **d. albumin'icus,** chronic nephrosis marked by a profuse albuminuria. **d. decip'iens** [L. *decipere*, to cheat], d. mellitus without polyuria and consequent thirst to warn of its presence. **d. in'nocens,** renal glycosuria, a condition in which there is an unusual permeability of the kidneys to sugar, the concentration of sugar in the blood remaining within normal limits. **d. insip'idus,** the habitual excretion of large amounts of pale urine of low specific loss of fluid. **d. levis,** a mild from of d. **d. melli'tus** [L. sweetened with honey], a disease of metabolism in which sugar is excreted continuously in larger or smaller quantities in the urine and is also present in the blood; the amount of urine is greatly increased, and the patient suffers from excessive thirst, sometimes bulimia, and progressive emaciation. **lipog'enous d.,** d. and obesity combined. **masked d.,** d. decipiens. **pancreat'ic d.,** d. evidently dependent upon a pancreatic lesion. **phlor'idzin** or **phlor'izin d.,** marked glycosuria following the experimental administration of phloridzin. **phosphat'ic d.,** phosphaturia, polyuria associated with emaciation, furunculosis, and other symptoms of diabetes mellitus, with an abnormal excretion of phosphates, without sugar, in the urine. **punc'ture d.,** experimental d. produced in animals by puncture of the floor of the fourth ventricle of the brain.

diabet'ic. 1. Relating to or suffering from diabetes 2. A subject of diabetes. **d. punc'ture,** Bernard's puncture, an experimental puncture in the floor of the fourth ventricle which is followed by glycosuria.

diabetide (di-ah-be'tēd) [Fr.] A skin eruption occurring as a manifestation of diabetes.

diabe'tin. Trade name for pure crystallized levulose employed instead of cane-sugar in diabetes

diabetogen'ic [G. *gennaō*, I produce.] 1. Causing diabetes. 2. Caused by diabetes.

diabetogenous (di-ă-bĕ-toj'en-us). Diabetogenic.

diabetograph (di-ah-be'to-graf) [G. *graphō*, I write.] An instrument for registering on a scale the proportionate amount of sugar contained in the urine in diabetes.

diabetom'eter [G. *metron*, measure.] A form of polariscope devised for the determination of the presence and of the amount of sugar in diabetic urine.

diabro'sis [G. *diabrōsis*, an eating through.] A corrosion; perforation by an ulcer.

diabrot'ic. 1. Corroding. 2. A corrosive.

diacetanilid (di-as''ĕ-tan'ĭ-lid). A substance obtained from acetanilid by the action of heat and glacial acetic acid; its action is similar to that of acetanilid.

diacetate (di-as'e-tāt). A salt of diacetic acid.

diacete'mia. A form of acidosis due to the presence of diacetic acid in the blood.

diace'tic acid. An acid, $CH_3.CO.CH_2COOH$, sometimes found in the urine in diabetes and other states associated with acidosis; called also acetoacetic acid.

diacetin (di-as'ĕ-tin). Acetidin glyceryl diacetate

diacetonu'ria. Diaceturia.

diaceturia (di-as-ĕ-tu'rĭ-ah). The excretion of diacetic acid in the urine.

diacetyl (di-as'et-il). A yellow liquid, $(CH_3CO)_2$ having the pungent odor of quinone. **d. peroxide,** $(CH_3CO)_2O_2$, employed in solution as an antiseptic.

diacetylmorphina (de-ă'set-il-mor-fe'nah). Diacetylmorphine, heroine, an alkaloid, $C_{17}H_{17}(O.C_2H_3O)_2ON$, prepared from morphine by acetylization; formerly employed for the relief of cough in doses of gr. $\frac{1}{20}$–$\frac{1}{12}$ (0.003–0.005). **diacetylmorphi'næ hydrochlor'idum,** diacetylmorphine hydrochloride, heroine hydrochloride, a white crystalline odorless powder, soluble in alcohol and in two parts of water; formerly employed for the relief of cough and in the treatment of asthma, in doses of gr. $\frac{1}{20}$–$\frac{1}{12}$ (0.003–0.005). Heroine and its salts have been dropped from the Pharmacopeia, and their importation into the United States has been forbidden.

diachorema (di-ă-ko-re'mah) [G. *diachōrēma*, excrement] Excrement, feces.

diachoresis (di-a-ko-re'sis) [G. *diachōrēsis*, excretion.] Defecation; the discharge of excrement or any excretion.

diachylon (di-ak'ĭ-lon) [G. *diachylos*, juicy.] Lead plaster, emplastrum* plumbi oleatis. **d. oint'ment,** unguentum* diachylon. **d. plas'ter** emplastrum* plumbi oleatis. **yel'low d.,** galbanum plaster, composed of turpentine 2, galbanum 16, Burgundy pitch 6, lead plaster 76; this was official in the U.S.P., 1880.

diacid (di-as'id) [G. *dis*, twice, + L. *acidus*, acid] Noting a base having two replaceable hydroxyl groups.

diacla'sia, diac'lasis [G. *dia*, through, + *klasis*, a breaking.] 1. Refraction. 2. A fracture produced intentionally, usually for the correction of a deformity.

di'acœle, diacœ'lia [G. *dia*, through, + *koilia*, a hollow.] The third ventricle of the brain.

diacrinous (di-ak'rĭ-nus) [G. *dia*, through, + *krinō*, I separate.] Exocrine, excreting by simple passage, as it were, through the cell; distinguished from *ptyocrinous*, or *apocrine*.

diacrit'ic. A diacritical mark or symptom.

diacrit'ical [G. *diakritikos*, able to distinguish.] Distinguishing, allowing of distinction; diagnostic

diad. Dyad.

diadel'phous [G. *di-*, two, + *adelphos*, brother.] In botany, noting stamens grouped in two sets united by their filaments.

diaderm (di'ah-durm) [G. *dia*, through, + *derma*, skin.] The blastoderm with two layers—ectoderm and entoderm, constituting the diblastula.

diadochocinesia, diadochocinesis (di-ad-o-ko-sin-e'se-ah; di-ad-o-ko-sin-e'sis) [G. *diadochos*, working in turn, + *kinēsis*, movement.] The normal power of alternately bringing a limb into opposite positions, as of flexion and extension or of pronation and supination.

diadochocinetic (di-ad-o-ko-sin-et'ic). Relating to diadochocinesia.

diadochokine'sia, diadochokinet'ic. Diadochocinesia, diadochocinetic.

diagnose (di-ag-nōz') [G. *diagignoskō*, I distinguish.] To determine the nature of a disease; to make a diagnosis; diagnosticate.

diagno'sis [G. *diagnōsis*, a deciding.] The determination of the nature of a disease. **clin'ical d.,** (1) a d. made from a study of the symptoms only; (2) a recognition of the symptoms of a disease without reference to its pathology. **d. by exclu'sion,** a d. made by excluding those affections to which some of the symptoms belong, leaving only one to which all the symptoms point. **differen'tial d.,** the determination as to which of two or more diseases with similar symptoms it is that the patient is suffering from. **lab'oratory d.,** a d. made by a chemical, microscopical, or bacteriological study of the various secretions and discharges. **patholog'ical d.,** (1) a diagnosis (sometimes a post-mortem d.) made from a study of the lesions present; (2) a diagnosis of the pathological conditions present, determined by a study and comparison of the symptoms **phys'ical d.,** a d. made by means of physical measures, such as auscultation, percussion, palpation, and inspection.

diagnos'tic. Relating to or aiding in diagnosis.

diagnos'ticate [G. *diagnōstikos*, able to discriminate.] To diagnose.

diagnostician (di-ag-nos-tish'an). One who is experienced in making diagnoses.

di'agram [G. *diagramma*.] A schematic picture, one that gives the salient features in a few lines, without being an exact representation of the object. **flo'ral d.,** flower-plan, the diagrammatic plan of a flower.

diagrammat'ic [G. *diagramma*, a diagram.] Relating to a diagram; of the nature of a diagram rather than an exact representation; schematic.

di'agraph. An instrument by which one can mechanically trace the outlines of a part.

di'al [L. *dies*, day.] A clock-face. **astigmat'ic d.,** a diagram of radiating lines, usually in series of three or four, numbered like the dial of a watch, employed as a rough test for astigmatism.

dial Ciba (di'al si'bah). Trade name of a preparation of diallylbarbituric acid, employed as a hypnotic in doses of 1½ to 4 grains.

dialacetin (di-al-as'ĕ-tin). Trade name of a compound or mixture of dial-Ciba and allyl-paracetamino-phenol, proposed as a remedy for epilepsy.

Dialister (di-ă-lis'tur). A genus of *Bacteriaceæ* consisting of very short, non-motile, rod-shaped organisms. **D. pneumosin'tes,** *B. pneumosintes*, the only species thus far described, discovered in the nasal secretions of patients in the beginning of influenza, but it is of doubtful pathogenicity.

diallyl (di-al'il). Noting a compound containing two allyl molecules.

dialuram'ic acid. Uranilic acid

dialypet'alous [G. *dialyō*, I separate, + *petalon*, leaf, petal.] Polypetalous.

dialysate (di-al'i-sāt). Anything separated from a solution by dialysis.

dialysep'alous [G. *dialyō*, I separate, + L. *sepalum*, sepal.] Polysepalous.

dial'ysis [G. a separation.] 1. The separation of crystalloid from colloid substances in a solution by interposing an animal membrane between the solution and pure water; the crystalloid substances pass through the membrane into the water on the other side, the colloids do not. 2. A fracture or solution of continuity of the soft parts. 3. Weakness, loss of strength.

di'alyze. To perform dialysis, to separate a substance from a solution by means of dialysis.

di'alyzer. A membrane for use in dialysis.

diamalt (di'ah-mawlt). Trade name of a malt preparation containing about 64 per cent. sugar dextrin 13 per cent., and protein 6.5 per cent.

diam'eter [G. *diametros; dia*, through, + *metron*, measure.] 1. A straight line connecting two opposite points on the surface of a more or less spherical or cylindrical body, or at the boundary of an opening or foramen, passing through the center of such body or opening. 2. The distance measured along such a line. **d. media'nus** [NK], conjugated.

diamide (di'ă-mīd, di'ă-mid). An amide derived from a double molecule of ammonia, the atoms of hydrogen being replaced by acid radicals.

diamine (di'ă-mēn, di'ă-min). An amine derived from a double molecule of ammonia, the atom of hydrogen being replaced by hydrocarbon radicals.

diaminu'ria. The presence of diamines in the urine.

diamorphinæ hydrochloridum (de-ah-mor-fe'na hedro-klor'ī-doom) (Br.). Diacetylmorphinæ hydrochloridum, heroine hydrochloride.

diam'ylene. Dipentene.

diapason (di-ah-pa'zun) [G. *diapasōn*.] Tuning-fork, used in determining the presence and degree of deafness.

diapede'sis [G. *dia*, through, *pēdēsis*, a leaping.] The transudation of blood or any of its formed elements, especially the erythrocytes, through the unruptured walls of the blood vessels.

diaphane (di'ah-fān) [G *diaphanēs*, transparent.] The membrane or layer of hardened protoplasm forming the cell-wall.

diaphanom'eter [G. *diaphanēs*, transparent, + *metron*, measure.] An instrument for testing fluids by their varying degrees of transparency.

diaphanom'etry [G. *diaphanēs*, transparent, + *metron*, measure.] The determination of the degree of translucency of a fluid, such as the urine

diaphan'oscope [G. *diaphanēs*, transparent, + *skopeō*, I examine.] An instrument for illuminating the interior of a cavity in order to determine the translucency of its walls.

diaphanos'copy. Examination of a cavity, such as the antrum of Highmore, by means of the diaphanoscope.

diaphemetric (di''ă-fe-met'rik) [G. *dia*, through, + *haphē*, touch, + *metron*, measure.] Relating to the determination of the degree of tactile sensibility.

diaphore'sis [G. *diaphorēsis; dia*, through, + *phoreō*, I carry.] Perspiration, sweating.

diaphoret'ic. 1. Relating to, or causing, perspiration. 2. An agent which increases the secretion of the sweat.

diaphragm (di'ah-fram) [G. *diaphragma*, a partition wall.] 1. Midriff, phren, the musculomembranous partition between the abdominal and thoracic cavities; it is two-dome shaped with concavities toward the abdomen; the upper surface is in relation with the heart and lungs, the under surface with the liver, stomach, and spleen. 2. A thin disc pierced with a hole of definite size, used in a microscope, camera, or other optical instrument in order to shut out

the marginal rays of light, thus giving a more direct illumination. **d. phenom'enon,** (1) Litten's phenomenon, a lowering of the line of retraction on the side of the chest (marking the insertion of the diaphragm) during inspiration, and elevation of the same during expiration; it is absent in cases of distention of the pleural sac; see paradoxical d. phenomenon; (2) retraction of the lower ribs synchronous with the cardiac systole in tetany. **paradox'ical d. phenom'enon,** in cases of pyopneumothorax or hydropneumothorax, the diaphragm of the affected side rises during inspiration and sinks during expiration. **pel'vic d.,** a shallow funnel-like partition formed by the levator ani and coccygeus muscles and their fasciæ; it is deficient anteriorly leaving a space closed by the diaphragma urogenitale.

diaphrag'ma [G.] Diaphragm. **d. pel'vis** [BNA], diaphragm of the pelvis, the levatores ani and the coccygei on either side of the inner surface of the pelvis. **d. sel'læ** [BNA], tentorium of the hypophysis, a fold of dura mater extending transversely across the sella and roofing over the hypophysis or pituitary body; it is perforated in its center for the passage of the infundibulum. **d. urogenita'le** [BNA], triangular ligament, urogenital trigone; a musculomembranous structure filling the space under the pubic arch not closed by the pelvic diaphragm.

diaphragmal'gia [G. *algos*, pain.] Pain in the diaphragm, diaphragmodynia.

diaphragmat'ic. Relating to the diaphragm.

diaphragmatitis (di-ăf-frag-mă-ti'(te')tis). Inflammation of the diaphragm.

diaphragmatocele (di"ah-frag-mat'o-sēl) [G. *kēlē*, hernia.] Hernia through an opening in the diaphragm.

diaphragmitis (di-ăf-frag-mi'(me')tis). Diaphragmatitis.

di"aphragmodyn'ia [G. *odynē*, pain.] Diaphragmalgia, pain in the diaphragm.

diaph'therin. Oxyquinaseptol.

diaph'thol. Quinaseptol.

diaph'ysis [G. a growing through.] 1. The shaft of a long bone, as distinguished from the epiphyses, or extremities, and apophyses, or outgrowths.

diaphyseal (di-ăf-fiz'e-al). Relating to the diaphysis or shaft of a long bone.

diaphysitis (di-ăf-ff-si'(se')tis). Inflammation of the shaft of a long bone.

diapiresis (di"ă-pi-re'sis) [G. *diapeirō*, I drive through.] The passage of colloidal or other particles of suspended matter through the unruptured walls of the blood vessels, diapedesis.

diap'lasis [G. a putting in shape.] Setting of a fracture or reduction of a dislocation; diorthosis.

di'aplex. Diaplexus.

diaplex'al. Relating to the diaplexus.

diaplex'us [G. *dia*, through, + L. *plexus*.] The choroid plexus of the third ventricle.

diaplyte (di'ă-plīt) [G. *diaplynō*, I wash thoroughly.] Thoroughly cleaned, a term applied to the Dreyer tuberculin.*

diapne'a, diapnœ'a. Diapnoe.

diapne'ic, diapnœ'ic. Diapnoic.

diapnoe (di-ap'no-e) [G. *diapnoē*, a wind-passage.] Perspiration, especially insensible perspiration.

diapno'ic, diapnot'ic. 1. Relating to, or causing perspiration, especially insensible perspiration. 2. A mild sudorific.

diapoph'ysis. [G. *dia*, through, + *apophysis*, an offshoot.] The upper articular surface of the transverse process of a vertebra.

diapye'sis [G.] Suppuration.

diapyet'ic. 1. Relating to, or causing suppuration 2. Anything provoking suppuration.

diare'mia. Diarrhemia.

diarrhea, diarrhœa (di-ah-re'ah) [G. *dia*, through, + *rhoia*, a flow, a flux.] An abnormally frequent discharge of more or less fluid fecal matter from the bowel. **cholera'ic d.,** summer d. **Co'chin Chi'na d.,** psilosis. **crap'ulous d.,** d. due to excesses at table. **d. al'ba,** white flux; (1) celiac* disease; (2) hill d.; (3) sprue (2). **d. chylo'sa,** celiac* disease. **d. urino'sa,** polyuria. **dysenter'ic d.,** a form in which the stools contain much mucus and may be streaked with blood. **hill d.,** a morning d., attended with tympanites, affecting Europeans resident in India when visiting the mountains. **lienter'ic d.,** lientery, d. in which undigested food appears in the stools. **mechan'ical d.,** d. due to obstruction to the portal circulation. **morn'ing d.,** a form in which there are several loose stools in the early morning and during the forenoon, the bowels being quiet during the remainder of the day and night. **mu'cous d.,** d with the presence of considerable mucus in the stools; mucomembranous enteritis. **sand d.,** d. occurring in cities on the Great Lakes following winter storms which soil the water supply. **se'rous d.,** d. characterized by watery stools. **sum'mer d.,** d. of infants in hot weather, usually an acute gastroenteritis due to the presence of a microorganism resembling the dysentery bacillus **trop'ical d.,** sprue (2). **vica'rious d.,** d. caused by an attempt on the part of the economy to relieve itself of water or excrementitious matters normally excreted by other channels. **wat'ery d.** serous d. **white d.,** d. alba.

diarrhemia, diarrhæmia (di-ă-re'mĭ-ah) [G. *dia*, through, + *haima*, blood (?)] Hydremia, with dropsy, in the sheep.

diarsenol (di-ar'sen-ol). Name given to the Canadian manufactured salvarsan.

diarthric (di-ar'thrik) [G. *di-*, two, + *arthron*, joint.] Biarticular, relating to two joints.

diarthrosis (di-ar-thro'sis) [G. articulation.] Articulus [NK], movable joint, one in which the opposing bones are not joined by a solid medium, but merely held in apposition, and can move more or less freely upon each other.

diarticular (di-ar-tik'u-lar) [G. *di-*, two, + L. *articulus*, joint.] Biarticular, diarthric.

diaschisis (di-as'kĭ-sis) [G. a splitting.] A sudden inhibition of function produced by an acute focal disturbance in a portion of the brain at a distance from the original seat of injury, but anatomically connected with it through fiber tracts.

diaspirin (di-as'pi-rin). Trade name of the succinic acid ester of salicylic acid, a white powder of a slightly acidulous taste, containing 77.1 per cent. of salicylic acid; employed in rheumatism, pleurisy, pericarditis, and influenza in doses of gr. 5–15 (0.3–1.0).

diastal'tic [G. *dia*, through, + *stellō*, I send.] Reflex.

diastase (di'as-tās). A ferment occurring in plants, which has the property of converting starch into sugar; a preparation containing it is employed in cases of indigestion of starchy foods; see *diastasum*.

diastasimetry (di"as-ta-sim'e-trĭ) [*diastase* + G. *metron*, measure.] Determination of the activity of a diastatic enzyme.

diastasis (di-as'ta-sis) [G. a separation.] 1. Separation of an epiphysis from the shaft of a long bone, occurring in the young without fracture of the bone. 2. Any simple separation of normally

joined parts. 3. The latter part of the diastole when the blood enters the ventricle slowly under venous pressure.

diastasum (di-as-ta'-sum) [G. *diastasis*, a difference, separation.] Diastase, a mixture of amylolytic enzymes prepared from an infusion of malt; used in cases of starch indigestion in doses of gr. 5–15 (0.3–1.0).

diastat'ic. 1. Relating to diastase. 2. Relating to a diastasis.

diaste'ma, pl. *diaste'mata* [*diastēma*, an interval.] 1. A fissure or abnormal opening in any part, especially if congenital. 2. An interval between two teeth, not occurring normally in man, but seen in dogs and many other of the lower animals. 3. The angle formed by the lingual surface of the upper canine or cuspid tooth and the proximal or anterior surface of the premolar, into which the lower canine fits when the jaws are closed.

diaste"matocra'nia [G. *diastēma(diastēmat-)*, an interval, + *kranion*, skull.] Congenital sagittal fissure of the skull.

diaste"matomye'lia [G. *diastēma(diastēmat-)*, interval, + *myelon*, marrow.] Spina bifida, especially one involving a large part of the spine.

diaste"matopye'lia [G. *diastēma(diastēmat-)*, interval, + *pyelos*, a pan(pelvis).] Congenital separation between the pubic bones.

dias'ter [G. *di-*, two, + *astēr*, star.] The double-star figure in mitosis, formed just before the division of the nucleus.

diastole (di-as'to-le) [G. *diastolē*, dilatation.] The dilatation of the heart cavities, during which they fill with blood; the diastole of the atria precedes that of the ventricles; diastole alternates rhythmically with systole or contraction of the heart musculature. **reflex' d.,** reflex vasodilatation; when the skin is stroked with a pressure of about two ounces by a hard smooth object, such as the end of a pen-holder, there is first a reddened line followed in a few seconds by a white line lasting a minute or two.

diastol'ic. Relating to the diastole.

diataxia (di-ăk-taks'ĭ-ah) [G. *di-*, two, + *ataxia*.] Ataxia affecting both sides of the body, as distinguished from hemiataxia.* **cer'ebral d.,** the ataxic type of cerebral birth palsy, the lesion being supposed to be a meningeal hemorrhage with thrombosis of the central veins on both sides anterior to the fissure of Rolando; the sensory counterpart of spastic diplegia, or Little's disease

diate'la [G. *dia*, through, between, + L. *tela*, web.] Velum interpositum, tela chorioidea ventriculi tertii.

diather'mal [G. *dia*, through, + *thermos*, heat.] Diathermanous, diathermic.

diather'manous [G. *dia*, through, + *thermainō*, I heat.] Permeable by heat rays.

diathermacy (di-ă-thur'mă-sĭ). The condition of being diathermic.

diather'mic. Relating to diathermy, diathermal, diathermanous. **d. ther'apy,** treatment of lupus, cancer, and other lesions by means of diathermy.

diathermy (di-ă-thur'mĭ) [G. *dia*, through, + *thermē*, heat.] Local elevation of temperature in the tissues, produced by a special form of high-frequency current; transthermia, thermopenetration. **medical d.,** d. of mild degree causing no destruction of tissue. **surgical d.,** d. of high degree causing cauterization of the tissues; electrocoagulation.

diath'esin. Salicylic alcohol, $C_7H_8O_2$, a phenol alcohol obtained from salicin; sometimes employed in rheumatism in doses of gr 7½–15 (0.5–1.0).

diath'esis [G. arrangement, condition.] A constitutional state predisposing to any disease or group of diseases. **contrac'tural d.,** a tendency to contractures in hysteria. **cys'tic d.,** a condition in which multiple cysts form in the liver, kidneys, and other organs. **dar'trous d.,** a predisposition to herpes, eczema, and certain other cutaneous disorders. **ex'udative d.,** a predisposition to interstitial and subcutaneous serous or fibrinous infiltrations; the subjects suffer from swollen lymph nodes, thickening of the tongue, pruritus, seborrhea, gastric and cardiac crises; the condition is aggravated by pilocarpine, but favorably affected by atropine and adrenalin. **gout'y d.,** goutiness. **hemorrhag'ic d.,** hemophilia. **neuropath'ic d.,** an inherited or congenital condition marked by an unstable, inadequate, or overirritable nervous system. **rheu'mic d.,** dartrous d. **spasmod'ic d.,** a constitutional tendency to convulsions especially in childhood. **stru'mous d.,** scrofulous disposition, a predisposition to glandular swellings. **uric-acid d.,** a supposed tendency to the formation of uric acid in excess, with resulting rheumatic and gouty symptoms.

diathet'ic. Relating to a diathesis.

diatom (di'ă-tŏm.) An individual of microscopic unicellular algæ, the shells of which compose a sedimentary infusorial earth.

diatom'ic. Noting a chemical compound or radical having two atoms; specifically a hydrate in which two hydrogen atoms are united to the radical by oxygen. **d. earth,** see *diatom*.

diatuss'in. Trade name of a remedy prepared from thymus and pinguicula, recommended for bronchitis, asthma, and whooping cough in doses of 1 to 5 drops in a little water.

diax'on, diax'one [G. *di-*, two, + *axōn*, axis.] Having two neuraxons, noting a nerve-cell* of the third type, or Cajal's cell.

diazo- (di-az'o) [G. *di-*, two, + Fr. *azote*, nitrogen.] A prefix denoting a compound containing two linked nitrogen atoms, united to an aromatic group and to an acid radical. **diazo-reac'tion,** Ehrlich's reaction; a reaction obtained by treating the urine in the manner to be described; it has an uncertain diagnostic value in typhoid fever and an unfavorable prognostic value in tuberculosis. To 1 inch of urine in the test-tube are added a like amount of a saturated solution of pure sulphanilic acid in 5 per cent. hydrochloric acid, and 2 drops of ½ per cent. solution of sodium nitrite; this is shaken until an abundant froth forms and then a little spirit of ammonia is poured down the side of the tube. A positive reaction is indicated by a pink coloration of the froth and sometimes, but less certainly, by a claret color of the subjacent urine.

diazoma (di-ă-zo'mah) [G.] Diaphragm.

diazyme (di'ă-zīm). Trade name of a preparation said to contain the amylolytic enzyme of the pancreatic juice without the other ferments; employed in starchy indigestion in doses of ʒ1–2 (4.0–8.0) of the essence or glycerole; *d. essence* has 18.5 per cent. of alcohol by volume as the menstruum, *d. glycerole* has about 60 per cent. of glycerin as the menstruum.

diba'sic [G. *di-*, two, + *basis*, base.] Bibasic; having two replaceable hydrogen atoms, noting an acid with a basicity of 2.

diblas'tula. An embryonal sac having two cell-layers, ectoderm and entoderm.

Dibothrioceph'alus [G. *di-*, two, + *bothrion*, dim. of *bothros*, a pit, + *kephalē*, head.] A genus of *Cestodea* or tapeworms; see *Diphillobothrium* and *Bothriocephalus*.

dibro'mide. A bromide containing twice as many bromine atoms as the monobromide.

dibro'min. Trade name of dibromobarbituric acid, a colorless, nearly odorless, slightly astringent, crystalline powder, employed in solution of 1:10,000 as an antiseptic and germicide for the irrigation of infected wounds and cavities and to impregnate gauze in surgical dressings.

dibromogall'ic acid. Gallobromol.

dical'cic. Noting a chemical compound having two calcium atoms in each molecule.

dicar'bonate. Bicarbonate.

dicelous, dicœlous (di-se'lus) [G. *di-*, two, + *koilos*, hollow.] Having two cavities or two surface excavations.

diceph'alous. Having two heads.

diceph'alus [G. *di-*, two, + *kephalē*, head] A monster with two heads.

dichasium [di-ka'sĭ-um) [G. *dichasis*, division] A cyme in which the lateral shoots are arranged in opposite pairs.

dichlamydeous (di-klam-id'e-us) [G. *di-*, two, + *chlamys*(*chlamyd-*), cloak.] Noting a flower having both calyx and corolla, or a double perianth.

dichloralantipyrine (di-klo"ral-an tĭ-pi'rēn). An analgesic and hypnotic compound of chloral and antipyrine given in doses of gr. 10–15 (0.6–1.0).

dichloramina (di-klor-ă-me'nŭ) (U.S.). Dichloramine-T, paratoluenesulphondichloramide, $C_6H_4(CH_3)(SO_2NCl_2)$, containing from 28 to 30 per cent. of active chlorine; occurs as pale yellow crystals or a yellowish crystalline powder, having an odor of chlorine, almost insoluble in water but soluble in eucalyptol and in chlorinated paraffin hydrocarbons (see paraffinum* chlorinatum); employed as an antiseptic in surgical dressings.

dichloramine-T (di-klor-am'ēn-te). Dichloramina.

dichlorethyl sulphide (di-klor-eth'il-sul'fid). One of the forms of mustard gas, a gas first used in the world war; contact with the skin causes vesication and sloughing, and inhalation often results in bronchopneumonia.

dichlorhy'drin. A colorless, odorless fluid prepared by heating anhydrous glycerin with 2½ parts of sulphur monochloride; a solvent of resins.

dichlo'ride. Bichloride.

dichlormeth'ane. Methylene bichloride.

dichlormethylether (di-klor-meth-il-e'thur). One of the forms of mustard gas* used in warfare.

dichogamy (di-kog'am-ĭ) [G. *dicha*, asunder, + *gamos*, marriage] In botany, maturity of anthers and stigma, or andrecium and gynecium, of an hermaphrodite flower at different times, thus preventing self-fertilization.

dichotomy (di-kot'o-mē) [G. *dichotomia*, a cutting in two.] 1. Division into two parts. 2. The payment of a commission to, or division of the fee with, the general practitioner by the consultant or surgeon.

Dichotophyme renalis (di-kot-o-fi'me re-na'lis). Eustrongylus gigas.

dichro'ic [G. *di-*, two, + *chrōa*, color.] Relating to dichroism.

dichroism (di'kro-izm). The property of seeming to be differently colored when seen under different aspects.

dichromic (di-kro'mik). Dichromate (1).

dichro'mate (di-kro'māt). 1. A color-blind person who can distinguish two colors, usually two complementary colors. 2. Bichromate.

dichromat'ic [G. *di-*, two, + *chrōma*, color.] 1. Having two colors. 2. Noting a partially color-blind person who can distinguish but two colors.

dichromophil, dichromophile (di-kro'mo-fil, di-kro'mo-fīl) [G. *di-*, two, + *chrōma*, color, + *philos*, fond.] Taking a double stain, noting a tissue or cell taking both acid and basic dyes in different parts.

dicinchonine (di-sin'ko-nin). A cinchona alkaloid found chiefly in red bark.

diciturin (di-sit'u-rin). Trade name of monopotassium diacetyl citrate, proposed for the treatment of acute and chronic rheumatism and gout in hourly doses of gr. 10 (0.6).

Dick meth'od [George F. *Dick*, *1881; Gladys H. Dick, *1881; Chicago physicians.] Prevention of scarlet fever by toxin-antitoxin injection, after the analogy of the Schick method in diphtheria.

dicliditis (dik-lĭ-di'(de')tis). Inflammation of a valve, especially a cardiac valve; valvulitis.

diclidot'omy [G. *diklis*(*diklid-*), valve, + *tomē*, incision] Operation of cutting a valve, especially incision of the rectal folds; valvotomy.

di'clinous [G. *di-*, two, + *klinē*, a bed.] In botany, unisexual, noting flowers having only stamens or pistils; opposed to hermaphrodite

dicodide (di-ko'did). Dihydrocodeinone acid tartrate, analgesic and hypnotic in dose of gr. $\frac{1}{12}$ (0.005).

dicoria (di-ko'rĭ-ah) [G. di-, two, + *korē*, pupil.] Diplocoria.

Dicroce'lium, Dicrocœ'lium [G. *dikroos*, forked, + *koilia*, bowels] A genus of *Trematoda* or flukes. **D. dendrit'icum, D. lancea'tum,** *Fasciola lanceolata, Distomum lanceolatum*, lancet fluke inhabiting the gall-bladder of many mammals, but rarely found in man. **D. lanceola'tum,** *D. lanceatum*.

dicrot'ic [G. *di-*, two, + *krotos*, a beating] Relating to dicrotism, noting a pulse with two beats for each cardiac systole. **d. notch,** the notch in a pulse-tracing which precedes the second or dicrotic wave. **d. pulse,** one with two well-marked beats for each ventricular contraction **d. wave,** the second rise in the tracing of a dicrotic pulse.

dic'rotism. The condition of a pulse having two beats to each cardiac systole.

diction (dik'shun) [L. *dicere*, to speak.] The choosing of words and their grammatical arrangement in sentences to express thought.

dictyosome (dik-tĭ-o-sōm) [G. *diktyon*, net, + *sōma*, body.] Spermatomere.

didac'tic [G. *didaskō*, I teach.] Instructive; noting specifically medical instruction given by set lectures or text-books, as distinguished from clinical instruction with the patient present

didactylism (di-dak'til-izm) [G. *di-*, two, + *daktylos*, finger or toe.] The condition of having but two fingers on a hand or two toes on a foot.

didel'phic [G. *di-*, two, + *delphys*, womb.] Having or relating to a double uterus.

didermoma (di-dur-mo'mah) [G. *di-*, two, + *derma*, skin, + *-ōma*.] A teratoid growth embracing two germ layers; bidermoma.

didymalgia (did-ĭ-mal'jĭ-ah) [G. *didymos*, twin (a testis), + *algos* pain.] Orchidalgia, pain in a testicle.

did'ymin. Trade name of an extract of the testicle of the bull; said to be aphrodisiac and tonic in doses of gr. 3–5 (0.2–0.3).

didymitis (did-ĭ-mi'(me')tis) [G. *didymos*, twin (testis), + *-itis*.] Orchitis, inflammation of a testicle.

didymium (di-dim'ĭ-um). A substance thought at the time of its discovery to be an element; it is found usually in combination with lanthanum and cerium; is said to be strongly antiseptic.

didymodynia (did"ĭ-mo-din'ĭ-ah) [G. *didymos*, twin (testis), + *odynē*, pain.] Didymalgia, orchidalgia.

Didymohelix (did-ĭ-mo-he'liks) [G. didymos, a twin, + *helix*, a coil.] A genus of the family *Chlamydobacteriaceæ* containing spiral filamentous organisms, sometimes single but usually two twisted together. **D. ferrugin'ea,**[0] a reddish brown organism found in iron-containing waters.

didymus (did'ĭ-mus) [G. didymos, a twin.] Testis.

didynamous (di-din'a-mus) [G. *di-*, two, + *dynamis*, power.] Noting a flower having four stamens arranged in two pairs, one of which is shorter than the other.

die. To cease to live. To become dead in whole or in part.

die. 1. A stamp for impressing a design or a special shape upon some softer material 2. In dentistry, a cast of the mouth over which is made the blank of an artificial denture.

diechoscope (di-ek'o-skōp) [G. *di-*, two, + *ēchō*, a sound, + *skopeō*, I examine.] A form of stethoscope by means of which two sounds in two different parts can be listened to at the same time

diecious, dicœcious (di-e'shus) [G. *di-*, two, + *oikia*, house.] Noting animals or plants that are sexually distinct, the individuals being of one or the other sex.

Dieffenbach's amputation (dēf'en-bakh) [Johann Friedrich *Dieffenbach*, German surgeon, 1792–1847.] Circular amputation at the hip-joint with temporary elastic ligature. **D.'s method,** a plastic operation for covering a defect by sliding a flap with broad pedicle.

dielectric (di-e-lek'trik) [G. *dia*, through.] Transmitting electric effects, although a non-conductor, as the air-gap between the slide-rod balls of a static electrical machine, across which the sparks may jump. **d. con'stant,** the inductive capacity of an insulating medium.

dielectroly'sis [G. *dia*, through.] Cataphoresis.

diencephalohypophyseal (di-en-sef"al-o-hi-po-fiz'e-al). Relating to the hypophysis cerebri or pituitary body.

diencephalon (di-en-sef'a-lon) [G. *dia*, through, + *enkephalos*, brain.] [BNA]. The inter-brain, between-brain, or 'tween-brain, the posterior division of the prosencephalon from which are developed the posterior part of the third ventricle, the optic thalami, pineal body, pituitary body, interpenduncular structures, and the optic nerve and retina; thalamencephalon.

Dientamœba (di-ent-ă-me'bah). A genus of Rhizopoda, one species of which, *D. fragilis*, is parasitic in the human intestine; it is of very small size and is found rarely.

die-plate. A die used in swaging or in making artificial cap-crowns.

dieresis (di-er'e-sis) [G. *diairesis*, a division.] Solution of continuity.

dieretic (di-er-et'ik). Relating to dieresis; dividing, ulcerating, corroding.

diesoph'agus. Dicesophagus.

diestrum (di-es'trum) [G. *di-*, two, + *oistros*, a mad desire.] An interval of abnormally short duration between two periods of heat in an animal.

di'et [G. *diaita*.] 1. Food and drink in general. 2. A prescribed course of eating and drinking, in which the amount and kind of food, as well as the times at which it is to be taken, are regulated by the physician. 3. To take only simple and easily digestible food in moderate amount.

di'etary. 1. Relating to the diet. 2. Diet (2).

dietet'ic. Relating to diet.

dietet'ics. The branch of therapeutics treating of food and drink in relation to health and disease.

dieth'yl. 1. One of the paraffin series of hydrocarbons, C_4H_{10} or $C_2H_5.C_2H_5$, found in petroleum; normal butane. 2. A prefix denoting the presence of two ethyl radicals in the molecule.

diethylamine (di-eth"il-am'ēn). A ptomaine derived from certain decaying food substances; it is not poisonous.

dieth'ylbarbitu'ric ac'id. Barbital, veronal.*

dieth"ylendi'amine. Piperazine.

diethylketone (di-eth"il-ke'tōn) Metacetone, propion; a clear liquid, used as a hypnotic in maniacal conditions in doses of ♏7½–22 (0.5–1.5).

diethylmalonylurea (di-eth"il-mal-o-nil-u-re'ŭ). Barbitalum.

dietitian (di-ĕ-ti'shun). An expert in dietetics; one versed in the practical application of diet in the prophylaxis and treatment of disease.

Dietl's cri'ses (de'tl) [Joseph *Dietl*, Austrian physician, 1804–1878.] Sudden attacks of paroxysmal lumbar and abdominal pain, with nausea and vomiting, occurring in cases of wandering kidney.

dietother'apy [G. *diaita*, diet, + *therapeia*, treatment.] The treatment of disease by regulation of the diet; trophotherapy, sitotherapy

Dieudonné's me'dium (de-e-dō-na') [Adolph *Dieudonné*, Munich physician, *1864.] An alkaline blood-agar medium for the cultivation of microorganisms; it consists of defibrinated ox blood 30, normal solution of potassium hydrate 30, cholera agar* 140.

Dieulafoy's as'pirator (de-e-lă-fwă') [Georges *Dieulafoy*, Paris physician, 1839–1911.] A large glass cylinder with piston and two openings with stopcocks, one for a tube with trocar and cannula, the other for the discharge tube. **D.'s the'ory,** appendicitis is always the result of the transformation of the appendicular canal into a closed cavity. **D.'s tri'ad,** hyperesthesia of the skin, reflex muscular contraction, and tenderness at McBurney's point in appendicitis.

differen'tial. Relating to or marked by a difference; distinguishing. **d. blood-count,** an enumeration of the number of corpuscles in a given amount (cubic millimeter) of blood, with determination of the approximate percentage of each variety of leucocyte.

differentiated (dif-er-en'shĭ-a-ted). Having a different character or function from the surrounding structures or from the original type, said of tissues, cells, or portions of the cytoplasm.

differentiation (dif-er-en-shĭ-a'shun). 1. The acquiring or the possession of character or function different from that of the original type; specialization. 2. Differential diagnosis.* **correl'ative d.,** d. due to the interaction of different parts of an organism. **self-d.,** d. resulting from the action of intrinsic causes

diffluence (dif'lu-ens) [L. *dis-*, asunder, + *fluere*, to flow.] Deliquescence, becoming fluid.

diffrac'tion [L. *diffractus; diffringere*, to break up.] The deflection of the rays of light in passing by the edge of an opaque body.

diffusate (dĭ-fu'zāt) [L. *diffundere*, to pour in different directions.] Dialysate; the soluble crystalloid substance separated by dialysis from the colloid matter in a mixture.

diffuse (dĭ-fūs') [L. *diffundere*, to pour in different directions.] Spread about, not circumscribed or limited. **d. disease'**, one which involves all or several of the tracts in the spinal cord; opposed to system disease.*

diffuse (dĭ-fūz'). To spread about, to scatter.

diffused (dĭ-fūzd'). Diffuse.

diffus'ible. 1. Capable of being diffused. 2. Invading or affecting all parts of the body rapidly, as a *d stimulant*.

diffusion (dĭ-fu'zhun). 1. A spreading about or scattering. 2. Dialysis. **d. cir'cle,** see under circle. **d. meth'od,** auxanographic* method. **d. shell** or **thimble,** a small vessel made of a semipermeable membrane through which peptone, but not serum albumin, can pass; used in performing the Abderhalden* test. **d. spot,** d. circle.

diflu"ordiphen'yl, difluorphen'yl. A colorless, crystalline powder of aromatic odor, an organic fluorine compound; used as an antiseptic dusting powder, or in ointment, in dermatological practice

dig'alen. The proprietary name of a solution of Cloetta's soluble digitoxin, about ¼ grain to the ounce; dose, ♏15 (1.0).

digas'tric [G. *di-*, two, + *gastēr*, belly.] 1. Having two bellies, noting especially a muscle with two fleshy parts separated by an intervening tendinous part. 2. Musculus digastricus. 3. Relating to the digastric muscle, noting a fossa or groove with which it is in relation, and a nerve supplying its posterior belly.

digas'tricus. The digastric muscle, see under *musculus*.

digen'esis [G. *di-*, two, + *genesis*, generation.] Reproduction in different ways in different generations, as seen in the non-sexual, or vertebrate, and the sexual, or invertebrate, cycles of the malarial and other blood-parasites

digenet'ic. Relating to or marked by digenesis.

digest (di-jest') [L. *digerere*, to divide, to dissolve.] 1. To soften by moisture and heat. 2. To hydrolyze or break up into simpler chemical compounds by means of ferments, noting the action of the secretions of the alimentary tract upon the food.

diges'tant. 1. Aiding digestion. 2. An agent which favors or assists the process of digestion.

digester (di-jes'tur). One who or that which digests; see *Papin's** *digester*.

digestion (di-jes'chun) [L. *digestio*.] The process whereby the ingested food is converted into material suitable for assimilation with consequent upbuilding of the tissues or the liberation of energy. **gas'tric d.,** that part of digestion, chiefly of the proteins, which is carried on in the stomach by the enzymes of the gastric juice. **intercell'ular d.,** d. in a cavity by means of secretions from the surrounding cells, such as occurs in the metazoa. **intes'tinal d.,** that part of d. which is carried on in the intestine, it affects all the food-stuffs—starches, fats, and proteins. **intracell'ular d.,** d. within the substance of a cell, such as occurs in the protozoa and in phagocytes. **pep'tic d.,** gastric d. **pri'mary d.,** d. in the alimentary tract. **sal'ivary d.,** the conversion of starch into sugar by the action of the salivary ferments. **sec'ondary d.,** the change in the chyle effected by the action of the cells of the body, whereby the final products of d are assimilated in the process of metabolism.

diges'tive. 1. Relating to digestion. 2. Digestant(2). **d. fever,** a slight rise in body temperature occurring during digestion.

diges'tol. Trade name of a digestant composed of pepsin, salol, and bismuth subnitrate.

digifolin-Ciba (dij-ĭ-fo'lēn se'bah). A preparation of digitalis containing the active glucosides of the drug free from extractive matter, administered by mouth, hypodermically, or intravenously.

digifortis (dij-ĭ-for'tis). A proprietary tincture of digitalis, standardized to a strength 50 per cent. greater than the official U.S.P. tincture.

diginutin (dij-ĭ-nu'tin). Trade name of a solution of the total glucosides of digitalis free from the inert extractives.

digipoten (dij-ĭ-po'ten). Trade name of a preparation of digitalis freed from digitosaponin; of the same strength as digitalis leaf, 1 gr. being equal in strength to 1 minim of fluidextract of digitalis.

digipuratum (dij-ĭ-pu-ra'tum). A dry extract of digitalis of definite strength, said to be freed from digitonin, employed in the same doses as digitalis leaves

digis'trophan. Trade name of a mixture of digitalis and strophanthus, in the proportional strength of 2 parts of digitalis leaves to 1 part of strophanthus seeds.

digit (dij'it) [L. *digitus*.] A finger or toe.

digital (dij'ĭ-tal). Relating to or resembling a digit or digits or an impression made by them. **d. cav'ity,** see under *cavity*. **d. fos'sa,** fossa trochanterica. **d. impres'sions,** digitate impressions.

digitalein (dij"i-tal'e-in). A glucoside from digitalis leaves; a white amorphous powder of very bitter taste; diuretic and cardiac in dose of gr. $\frac{1}{60}$ (0.001).

digitalin (dij-ĭ-tal'in). A glucoside of digitalis; often a mixture of various principles of uncertain strength and composition; see *digitalinum*. **French d.,** (1) an amorphous white or yellowish powder, chloroformic d., Homolle's d; (2) a crystallized substance occurring as needle-shaped crystals, Nativelle's d. **Ger'man d.,** digitalinum purum. **true d.,** digitalinum verum.

digitalinum (dij-ĭ-tal-e'num). Digitalin. **d. pu'rum,** German digitalin, of uncertain composition, containing chiefly digitonin with some true digitalin. **d. ve'rum,** true digitalin, a glucoside, $C_{35}H_{56}O_{14}$, occurring as a white amorphous or granular powder; dose, gr. $\frac{1}{60}$ (0.001).

digitalis (dij-ĭ-tah'lis) [L. *digitalis*, relating to the fingers.] (U.S.) **digitalis fo'lium** (Br.) The dried leaves of *Digitalis purpurea*, purple foxglove, ladies' fingers, taken from plants of the second year's growth at the beginning of flowering; cardiac tonic and diuretic in doses of gr. ½–2 (0.03–0.13). **d. dis'pert,** a mixture of the water soluble principles of digitalis leaves; dose, gr. 1½ (0.08). **d. pulvera'ta** (Br.), powdered digitalis; dose ½–1½ gr. (0.03–0.1).

digitalism (dij'ĭ-tal-izm). The poisonous symptoms caused by digitalis.

digitalization (dij-ĭ-tal-i-za'shun). Producing the physiological effects of digitalis.

digitalon (dij'ĭ-ta-lon). A non-alcoholic solution of the glucosides of digitalis; dose, ♏8–15 (0.5–1.0).

digitan (dij'i-tan). Trade name of a standardized dry extract of digitalis, formerly called digipuratum; it occurs as a greenish-yellow powder, odorless and of bitter taste, insoluble

in water but readily soluble in weak alkaline solutions; dose ½–2 gr. (0.03–0.13).

digitate (dij'ĭ-tāt). Marked by a number of finger-like processes or impressions. **d. impres'sions,** impressiones digitatæ, faintly marked depressions on the inner surface of the cranium, corresponding more or less nearly to the cerebral convolutions.

digita'tion [L. *digitatio.*] 1. A process resembling a finger. 2. A figure of a number of finger-like processes.

digitatio'nes hippocam'pi [L. pl. of *digitatio.*] [BNA] Digitations of the hippocampus, pes hippocampi; the slight grooves and notches on the thickened anterior extremity of the hippocampus major.

digiti (dij'ĭ-ti) [L. pl. of *digitus.*] Fingers. **d. hippocrat'ici,** Hippocratic* fingers **d. ma'nus,** fingers. **d. mor'tui,** dead fingers, a vasomotor disturbance possibly a mild form of Raynaud's disease, marked by a purplish or waxy white color of the fingers, with subnormal temperature and paresthesia. **d. pe'dis,** toes.

digitin (dij'ĭ-tin). An inert derivative of digitalis, probably the same as digitonin.

digitol (dij'ĭ-tol). Trade name of a specially prepared tincture of digitalis.

digitonin (dij-ĭ-to'nin). A substance, $C_{54}H_{92}O_{28}$, obtained from digitalis; it has no action upon the heart, so far as known; it is said to constitute about 50 per cent. of digitalinum purum.

digitos (dij'ĭ-tos). Trade name of a mixture of the water soluble active principles of digitalis.

digitoxin (dij-ĭ-tok'sin). A glucoside, $C_{34}H_{54}O_{11}$, obtained from digitalis; it occurs as a white crystalline powder of bitter taste; dose, gr. $\frac{1}{2000}$–$\frac{1}{1000}$ (0.0003–0.0006).

digitus, gen. and pl. *digiti* (dij'ĭ-tus) [L.] Finger or toe; specifically a finger as distinguished from *dactylus,* a toe. **d. annula'ris,** ring or fourth finger, d. medicus. **d. auricula'ris,** little or fifth finger, called auricular because used in scratching or cleaning the external auditory meatus. **d. exten'sus,** backward deviation of a finger. **d. flex'us,** permanent flexion of a finger. **d. ma'nus,** finger. **d. med'icus, d. medicina'lis,** the fourth or ring finger, medical finger because formerly supposed to have a direct nervous connection with the heart and to be therefore of significance in a diagnostic sense. **d. me'dius,** middle or third finger. **d. min'imus,** the little or fifth finger. **d. mor'tuus,** see *digiti mortui.* **d. pe'dis,** toe, dactylus. **d. recell'ens,** trigger finger.* **d. val'gus,** permanent deviation of one or more fingers to the ulnar side. **d. va'rus,** permanent deviation of one or more fingers to the radial side.

diglossia (di-glos'sĭ-ah) [G. *di-,* two, + *glōssa,* tongue.] A condition in which the tongue is bifid, or split longitudinally.

diglos'sus. One with a congenitally bifid tongue.

dignathus (di-gnath'us) [G *di-,* two, + *gnathos,* jaw.] A monster with double jaw.

dihybrid (di-hi'brid) [G. *di-,* two, + L. *hybrida.*] The offspring of parents differing in two characters.

dihy'drate. A compound with two hydroxyl radicals or one with two molecules of water.

dihy'dric. A chemical compound with two hydrogen atoms.

dihydrocodeinone (di-hi-dro-ko'de-ēn-ōn). Dicodide, $C_{18}H_{21}NO_3$, a synthetic preparation proposed for use as an analgesic and antitussive in doses of $\frac{1}{12}$ to 5 mgm. after meals.

dihydrocollidine (di-hi''dro-kol'i-dēn). A ptomaine in decaying animal matter.

dihydromorphinone hydrochloride (di-hī-dro-mor'fin-ōn hi-dro-klo'rīd). Dilaudide, a synthetic alkaloid for which marked analgesic properties are claimed.

dihydro-oxycodeinone (di-hi-dro-oks-ĭ-ko'de-ēn-ōn). Eucodal, a white crystalline, soluble powder, said to be powerfully analgesic in doses of 25 to 100 mgm.

dihydroresorcinol (di-hi''dro-re-zor'sĭ-nol). A substance obtained from resorcinol by the action of sodium amalgam with carbon dioxide, said to be antiseptic.

dihydroxyphthalophenone (di-hi-drok''sĭ-fthal-o-fe'nōn). Phenolphthalein.

dihypercytosis (di-hi''per-si-to'sis) [G. *di-,* two, + hypercytosis.] Hyperhypercytosis.

dihysteria (di-his-te'rĭ-ah) [G. *di-,* two, + *hystera,* uterus.] The presence of a double uterus.

diiodide (di-i'o-dīd). Biniodide.

dii''odobe''tanaph'thol. Iodonaphthol.

diiodoform (di-i-o'do-form). Iodethylene, ethylene periodide, ethylene tetraiodide, C_2I_4, prepared by adding an excess of iodine to acetylene iodide; a yellow crystalline powder insoluble in water, employed as a substitute for iodoform.

dii''odosalicyl'ic acid. Sanaform.

dii''odosalicyl'ic phe'nyl-es'ter. Diiodosalol.

diiodosalol (di-i''o-do-sal'ol). Phenyl diiodosalicylate, a crystalline powder, without odor or taste, a condensation product of phenol with diiodosalicylic acid; employed internally in rheumatism, and externally as an antiseptic dusting powder.

dike'tone. A ketone containing two atom groups (CO).

dil. Abbreviation for L. *dilue,* dilute, or *dilutus, a, um,* diluted.

dilaceration (di-las-er-a'shun) [L. *dilacerare,* to tear in pieces] 1. The formation of an aperture through a cataractous lens by piercing the center and prying apart the two halves. 2. A displacement of some portion of a developing tooth which is then further developed in its new relation.

dilata'tion [L. *dilatare,* to expand.] 1. Enlargement of a cavity, canal, or opening, occurring pathologically or made artificially. 2. The act of dilating or enlarging. **prognath'ian** or **prognath'ic d.,** d. of the pyloric end of the stomach out of proportion to that of the cardia or fundus, giving the undershot appearance of a bull-dog's jaw in the Roentgen picture.

dila'tor. 1. An instrument designed for enlarging a cavity, canal, or opening. 2. A muscle the function of which is to pull open any orifice. **d. con'chæ,** muscular fibers passing between the concha and the tragus of the external ear. **d. ir'idis,** the radiating fibers of the iris, contraction of which dilates the pupil. **d. tu'bæ,** musculus tensor veli palatini.

dilaudide (di-law'dēd). Dihydromorphinone hydrochloride, $C_{17}H_{19}O_3N \cdot HCl$, a synthetic alkaloid derived from morphine, employed as an analgesic and hypnotic in doses of gr. $\frac{1}{2}$ (0.005) equivalent to gr. $\frac{1}{3}$ (0.01) of morphine sulphate.

dill. Anethum.

diluent (dil'u-ent) [L. *diluere* to dilute.] 1. Diluting, making weaker or more watery. 2. An agent which reduces the strength of a solution or mixture. 3. A remedy which is supposed to increase the fluidity of the blood or any of the body fluids.

dilu'tion. 1. The act of reducing the strength of a mixture or solution. 2. A weakened solution. 3. In homeopathy, dynamization or potency.

dim. Abbreviation for L. *dimidius, a, um,* half; see also *ss.*

dimazon (di-ma'zon). Diacetylamino-azotoluene, a reddish yellow crystalline powder, recommended as a vulnerary and as an application to indolent ulcers, burns, etc. because of its alleged power of stimulating the growth of epithelium.

dimercuri'on. The bivalent mercuric ion.

dim'erous [G. *di-*, two, + *meros*, part.] Consisting of two parts.

dimethylacetal (di-meth-il-as'e-tal). Ethylidenedimethylester, a colorless liquid obtained by the interaction of aldehyde, methyl alcohol, and glacial acetic acid; employed as a general anesthetic like chloroform.

dimethylamine (di-meth''il-am'ēn). A ptomaine in decaying gelatin, and obtained from methyl iodide by the action of ammonia.

dimethylarsen'ic acid. Cacodylic acid

dimethylar'sin. Cacodyl.

dimethylxanthine (di-meth-il zan'thin). Theobromine.

dime'tria [G. *di-*, two, + *mētra*, womb.] Dihysteria.

di'mol. Trade name of a phenol derivative, employed as an intestinal antiseptic.

dimor'phic. Dimorphous.

dimor'phism [G. *di-*, two, + *morphē*, shape.] Existing in two forms: noting a difference of crystallization exhibited by the same substance, or a difference in form or outward appearance between individuals of the same species, whether of plants or animals.

dimor'phous. Having the property of dimorphism.

dimple (dim'pl). 1. An indentation, usually circular and of small area, in the chin, cheek, or sacral region; it is probably due to some developmental fault in the subcutaneous connective tissue, or in underlying bone. 2. A depression of similar appearance to 1, resulting from trauma or the contraction of scar tissue. 3. To cause dimples.

dimp'ling. 1. Causing dimples. 2. A condition marked by the formation of dimples, natural or artificial.
